A. I am recommending disallowance of these inflation related costs because these types of costs are not known and measurable in setting rates for service. These types of adjustments should not be used for ratemaking purposes because they do not provide a good index of cost increases, but rather reflect an overall broad, blanket-type economic adjustment that are typically applied to goods and services that may not be directly related to costs incurred by Peoples. Inflation adjustments do not address any particular or individual expense category. These are simply forecasts and predictions of cost estimates. As goods and services fluctuate over time, applying escalation adjustments to adjust costs is not a proper approach that should be utilized in setting rates for utility services. While such inflation types of adjustments are used to develop economic data as in changes to broad baskets of consumer goods and services such as housing, clothing, food, etc., utilizing inflation adjustments for ratemaking purposes is not reasonable.

Q. WHAT I ADJUSTMENT ARE YOU RECOMMENDING WITH RESPECT TO PEOPLES' GPIS FOR THE FPFTY PERIOD?

A. I am recommending a total adjustment of $27,819,503 related to the disallowance of the Inflation adjustments that are included in the balances for each of Peoples' categories of plant as detailed below:

1

TABLE I

Gas Production Plant - PNGD Mainline Extension Program (MLX)	Additions HTY-FTY	Additions FTY-STUB	Additions FPFTY
FPFTY Additions			$ 7,265,751
Inflation Rate			3.50%
Inflation Adjustment			**$ 254,301**
Transmission Plant - PNGD			
Mains Transmission Plant	$80,639,319	$11,107,893	$123,520,256
Measuring & Reg. Equipment	$1,382,850	$ 350,000	$ 2,840,000
Transmission Plant - PGD			
Mains Transmission Plant	$ 3,298,055	$ 321,401	$ 3,274,759
Measuring & Reg. Equipment	$ 412,945	$ 50,000	$ 500,000
Total	$ 85,733,169	$1,829,294	$130,135,015
Inflation Rate	2.31%	2.31%	2.40%
Inflation Adjustment	$ 1,980,436	$ 273,257	$ 3,123,240
Total Inflation Adjustment			**5,376,933**
Distribution Plant - PNGD			
Mains- Distribution Low Pressure	$ 113,638,696	$11,596,294	$118,183,270
Mains- Distribution Reg. Pressure	$ 128,444,177	$ 13,107,124	$133,580,843
Meas. & Reg. Equipment	$ 5,663,123	$ 1,008,432	$ 11,400,448
Service-Distribution Plant	$ 85,623,277	$10,112,778	$ 94,286,328
Meters- Distribution Plant	$ 5,383,138	$ 1,372,971	$ 5,679,100
Meters - ERT-Distribution Plant	$ 5,872,014	$ 282,038	$ 5,202,828
Distribution Plant - PGD			
Mains- Distribution Low Pressure	$ 8,804,457	$ 774,269	$ 7,909,211
Mains- Distribution Reg. Pressure	$ 4,435,329	$ 390,045	$ 3,984,340
Meas. & Reg. Equipment	$ 2,517,181	$ 270,108	$ 2,856,912
Service-Distribution Plant	$ 9,652,400	$ 706,212	$ 6,583,023
Meters- Distribution Plant	$ 531,755	$ 206,076	$ 949,588
Meters - ERT-Distribution Plant	$ 657,012	$ 114,667	$ 824,060
Total	$ 371,222,559	$ 39,941,014	$ 391,439,951
Inflation Rate	2.31%	2.31%	2.40%
Inflation Adjustment	$ 8,575,241	$ 922,637	$ 9,394,559
Total Inflation Adjustment			**$ 18,892,437**

General Plant - PNGD	$ 46,967,208	$ 2,607,242	$ 30,040,719
General Plant - PGD	$ 5,133,623	$ 113,666	$ 1,472,455
Total	$ 52,100,831	$ 2,720,908	$ 31,513,174
Inflation Rate	4.00%	4.00%	3.50%
Inflation Adjustment	$ 2,084,033	$ 108,836	$ 1,102,961
Total Inflation Adjustment			**$ 3,295,831**

GRAND TOTAL **$ 27,819,503**

Q. WHAT OTHER ADJUSTMENT DO YOU HAVE REGARDING PEOPLES' GPIS BALANCE?

A. In response to OCA Set 21-001, Peoples was asked about costs related to private property damages by the incident in Robinson on April 29, 2020 and the costs of replacement, as well as all incidences and claims arising out of the Robinson incident. Peoples provided total costs replacement of those facilities in the amount of $1,462,407. Peoples stated that the facilities were considered target assets eligible for replacement as part of Peoples LTIIP and as such were capitalized into rate base and included in the revenue requirement. Peoples stated that it was not making a claim related to the repair and / or replacement of any public or private property that resulted from the incident in Robinson on April 29, 2020 in this base rate case other than those assets provided of $1,462,407.

Q. WHAT IS YOUR RECOMMENDATION?

A. I am recommending disallowing these costs in rate base and from the revenue requirement. These costs should have been covered by insurance or through shareholder funding. Ratepayers should not be required to fund costs related to property damages or incidences resulting directly from Peoples' actions and occurring from Peoples' contractors in performing the work that caused the damages. The fact that this incident was not covered by insurance or through shareholder funding does not give Peoples the right to merely pass these costs onto ratepayers. This incident occurred under the auspices of Peoples' personnel and the responsibility of covering the costs should stay with Peoples.

My recommendation is also shown on my Exhibit DM-5.

2. Accumulated Depreciation

Q. WHAT HAS PEOPLES CALCULATED WITH RESPECT TO ITS ACCUMULATED DEPRECIATION?

A. Peoples computed accumulated depreciation in the amount of $1,456,324,493 as shown on Peoples' Exhibit 8, Schedule No. 2 page 3, and on Exhibit 5C as reflected in Peoples's Witness Mr. Spanos' depreciation study. Peoples' Witness Ms. Dawn Folks stated that the claim for Accrued (or Accumulated) Depreciation was supplied by Mr. Spanos and the appropriate measure of Accrued Depreciation for use as the deduction from the original cost in determining Peoples' rate base is Peoples Adjusted Book Depreciation reserve as of September 30, 2025. (Peoples Statement No. 11 page 8).

Q. WHAT IS YOUR RECOMMENDATION?

A. I am accepting Peoples's methodology related to its Accumulated Depreciation development. My recommended adjustments related to my GPIS adjustments of $27,819,503, the adjustment related to the incident occurrence related to the Robinson event and Peoples's proposed Depreciation Rates for each of Peoples' categories of plant. (Spanos Exhibit 5C – I-5 and my Exhibit DM-35). My adjustment is a decrease to Peoples's Accumulated Depreciation of $727,749. My recommendation is shown on my Exhibit DM-6.

3. Working Capital[6]

Q. WHAT IS INCLUDED IN PEOPLES' WORKING CAPITAL?

A. Peoples has included Materials and Supplies of $5,569,985, Prepayments of $5,776,406, Gas Storage Underground - Current balances of $46,876,831. Peoples calculated a Cash Working Capital Requirements of $36,256,917, as shown on Peoples Exhibit No. 8, Schedule No. 2, page 3. The total proposed Working Capital is as follows:

[6] I am accepting Peoples balances related to Materials and Supplies, Gas Stored Underground and Prepayments.

Gas Storage Underground - Current	$46,876,831
Materials and Supplies -	$ 5,569,985
Prepayments	$ 5,776,406
Cash Working Capital	$36,256,917[7]
Total	$94,480,139

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO PEOPLES' WORKING CAPITAL?

A. I am accepting Peoples' proposed balances related to Gas Storage Underground – Current, Materials and Supplies and Prepayments. My adjustments are related to my adjustments to Peoples' Operating and Maintenance (O&M) expenses that were used to calculate the Cash Working Capital balance of $36,256,917. In calculating my recommended working capital, I used Peoples's methodology along with my recommended O&M expense adjustments. My balances compute as follows:

	Peoples	PA OCA
Materials and Supplies	$ 5,569,985	$ 5,569,985
Prepayments	$ 5,776,406	$ 5,776,406
CWC	$36,256,917	$35,001,694
Gas Storage Underground	$46,876,831	$46,876,831
Subtotal	$94,480,139	$93,224,916

Q. WHAT CHANGES DO YOU HAVE REGARDING PEOPLES' CASH WORKING CAPITAL (CWC) REQUIREMENTS OF $36,256,917 AS NOTED ABOVE?

A. Using my recommended levels of O&M Expenses along with Peoples' CWC Factors as shown on Peoples' Exhibit KMS-1, for each of Peoples's CWC components, along with my recommended levels of expenses, taxes other than income taxes, and interest expense

[7] Peoples Exhibit KMS-1

on long-term debt my recommended level of CWC is $35,001,694 and is shown on my Exhibit DM-7.

4. Deferred Income Taxes and Excess ADIT

Q. WHAT DID PEOPLES PROPOSE WITH RESPECT TO ITS ACCUMULATED DEFERRED INCOME TAXES (ADIT)?

A. Peoples proposed an ADIT balance of $3,232,844 as shown Peoples' Exhibit No. 8, Schedule No. 2, page 3, and Peoples Exhibit No. 7 Schedule 8- Attachment 2. A detailed breakdown of the balance is reflected on Peoples' Exhibit No. 7 Schedule 8- Attachment 2. In its development of the ADIT balance of $3,232,844, Peoples's witness Ms. Saball stated that the development of Peoples' Deferred Income Taxes represents the flow through of accelerated depreciation (subject to the normalization rules) and based upon the settlement in Peoples's Related Tariff Sur-credits Associated with Tax Repairs Election in Docket No. P-2020-3021191 (TRS) there is an exception related to Section 481 (a) adjustment to the tax repairs change in accounting method. (Peoples' Statement No. 6 page 11). Pursuant to the Section 481 (a), which is the so-called catch up adjustment, Peoples has agreed to amortize the tax effect of that deduction in the manner set forth in the settlement of the TRS. (Peoples Statement No. 6 page 11). I will discuss the pertinent parts of Peoples's development of its Deferred Income Tax calculation below.

Q. WHAT DID PEOPLES CLAIM WITH RESPECT TO THE DEFERRED TAXES RELATED TO TAX DEPRECIATION AND BOOK DEPRECIATION?

A. Ms. Saball stated that as to accelerated depreciation related to property subject to the normalization requirements, Peoples records deferred taxes which is the accounting and ratemaking mechanism that implements the normalization requirement the Internal Revenue Service (IRS) imposed as a condition for using the liberalized depreciation methodologies allowed for income tax purposes. (Peoples Statement No. 6 page 12). The normalization requirement does not permit the tax benefit of the tax depreciation in excess of book depreciation to be flowed through to customers as a tax deduction in the year(s) those deductions occur. Instead the tax effects of those amounts are recorded as deferred taxes. These taxes will be paid to the government later in the life of the depreciable asset

when the relationship between book and tax depreciation reverses. (Peoples Statement No. 6 page 12).

Q. WHAT DID PEOPLES CLAIM REGARDING THE CATCH-UP ADJUSTMENT TO CUSTOMERS ON THE COMPANY'S DEFERRED INCOME TAX EXPENSE?

A. Ms. Saball stated that Peoples, when changing its accounting method for its Peoples Natural Gas Division (PNGD), is providing a rate reduction to customers through a sur-credit on customer bills over a five-year period in accordance with the terms of the TRS. The sur-credit is calculated based on the respective basis and rate at 7.89% (Pennsylvania Tax Rate) and at 21% (Federal Tax Rate). As the sur-credit is provided, the regulatory liability that accounts for the benefits to be returned, amortizes to and reduces Peoples's deferred income tax expense. The reduction is calculated at $20,947,437 in the FPFTY period. (Peoples' Statement No. 6 page 14, and Peoples Exhibit No. 7, Statement No. 8, line 39).

Q. WHAT DID PEOPLES CLAIM REGARDING ITS EXCESS ADIT ON THE PEOPLES DEFERRED INCOME TAXES?

A. Ms. Saball stated that the deferred tax expense is reduced by the flow-back to customers of a portion of the excess ADIT resulting from the reduction in the federal tax rate from 35% to 21% resulting from the Tax Cuts and Jobs Act of 2017. The balance was computed using the Average Rate Assumption Method (ARAM) and results in an adjustment of $1,757,485 in the HTY and $831,898 in the FPFTY periods. (Peoples Statement No. 6 page 14, and Peoples Exhibit No. 7, Statement 8 – Attachment 1 Line 37).

Q. WHAT DID PEOPLES STATE REGARDING ITS NET OPERATING LOSS (NOL)?

A. Ms. Saball stated that the Federal NOL is estimated to increase to over $1.1 billion by the FPFTY. This is due to the increasing level of tax deductions greater than book income. The State NOL utilized an offset 40% of the current year taxable income and the creation and utilization of Federal NOLs does not impact the overall federal income tax expense because deferrals of the benefits of the federal NOL are recorded to deferred income tax expense. (Peoples Statement No. 6 page 15). In response to OCA-Set 8 – 24, Peoples explained its NOL carryforward for both state and federal income tax purposes, which are

the result of tax greater than book timing differences. Increased capital spending has resulted in a greater level of tax depreciation and tax repairs. The NOL balance is due to Peoples' inability to monetize the NOL as a result of the 40% taxable income limitation imposed by currently enacted laws and the ongoing level of tax greater than book timing differences.

Q. WHAT HAS PEOPLES STATED REGARDING ITS TAX REPAIRS DEDUCTION?

A. Ms. Saball stated that Peoples made an election to define its units property under the IRS tangible property regulations which allowed Peoples to prospectively deduct as an operating expense on its income tax returns, the costs of certain asset improvements that otherwise would be capitalized and depreciated for income tax purposes (Tax Repair Election). As a result of making the tax repair election, Peoples was also required to calculate a one-time "catch-up deduction" that involved a restatement of Peoples tax books and records to conform to what they would have looked like if the new method had always been used. (Statement No. 6 page 27). The effect of the catch-up deduction was an additional tax deduction of about $425 million which was claimed as a deduction on the Peoples 2020 and 2021 Federal and State income tax returns. Peoples is currently in an NOL position which prevents it from currently receiving the cash benefit of the catch-up deduction. (Statement No. 6 page 28). Peoples stated that its Tax Repairs Surcharge Rider is based upon the surcharge the Company is currently using in its tariff. (OCA Set 8- 19).

Q. ARE YOU CHALLENGING MS. SABALL'S CLAIMS SUMMARIZED ABOVE?

A. No.

Q. DO YOU HAVE ANY OTHER ADJUSTMENTS TO PEOPLES' ADIT BALANCE?

A. No, I reviewed the responses to OCA Set 8-24, 25 and 27, related to Peoples's explanation of its NOL Carryforward, the catch-up adjustment and the adjustments related to the development of its Deferred Income Taxes to calculate the Rate Base balance ADIT of $3,232,844.

Q. WHAT IS YOUR TOTAL ADJUSTMENT RELATED TO PEOPLES' ADIT BALANCE?

A. As I made adjustments to Peoples' GPIS and the related adjustments to its Accumulated Depreciation, I am making adjustments to reflect the deferred tax associated with my GPIS adjustments. Using my recommended Accumulated Depreciation adjustment of $727,749, and Peoples's Deferred Tax Rate of 21%, my recommended Deferred Tax balance is an adjustment of $152,826. My recommendation is shown on my Exhibit DM-8.

D. OPERATING INCOME

1. Operating Revenues

Q. WHAT HAS PEOPLES PROPOSED AS ITS OPERATING REVENUE AT PRESENT RATES AND PROPOSED RATES?

A. As shown on Peoples Exhibit 2, Schedule 4, and on Exhibit 3 Schedule 15 Attachment A, Peoples has projected pro-forma revenues at present rates in the amount of $833,215,508. In computing its present rate revenues, the Company used a 20-year weather normalization period with a 65-year regression to normalize the revenues through the historic test year period ending December 31, 2022 (Peoples Statement No. 3 page 5). The Company calculated its proposed revenue at proposed rates under its FPFTY by adding its revenue requirement increase of $156,016,122 to its present rate revenue of $833,215,508 to arrive at its proposed revenues at proposed rates of $989,241,631. (Peoples' Company Exhibit No. 2 Schedule No. 4 page 2 of 7).

Q. DID PEOPLES UPDATE ITS OPERATING REVENUE SUBSEQUENT TO THE INITIAL FILING?

A. No, Peoples did not update its Operating Revenue subsequent to the initial filing.

Q. DO YOU HAVE ANY ADJUSTMENTS TO PEOPLES' PRESENT RATE REVENUE?

A. No I do not. My recommendation is shown on my Exhibit DM-9.

a. Weather Normalization Adjustment

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO ITS WEATHER NORMALIZATION ADJUSTMENT (WNA)?

A. In this proceeding, Peoples is requesting a WNA. Mr. Huwar stated that by implementing the WNA, Peoples will adjust the customer delivery charges based upon "normal historic weather patterns." If the weather a customer experiences is colder than normal weather, through a WNA mechanism, that customer would receive a credit on the bill. If the weather a customer experiences is warmer than normal, that customer would receive an additional charge on the bill. (Peoples Statement No. 1 page 14). Mr. Huwar claimed that a WNA mechanism provides the customer with more predictable winter bills and in turn stabilizes Peoples revenues for the same period. Mr. Huwar claims that a WNA mechanism has benefits for both the Company and the customer in that Peoples is able to bring in steady, predictable revenue while in turn, the customer is afforded stable distribution charges during typically high usage winter months. (Peoples Statement No. 1 page 14). Mr. Huwar opined that the Commission should approve Peoples' WNA Mechanism because he claims that it benefits both the customer and the Company to reflect normal weather for distribution changes on a monthly billed basis, and Peoples is engaged in modernizing its infrastructure, and it is important to keep utility revenues stable as possible in order to attract capital necessary to fund its modernization program. (Statement No. 1 page 15).

Q. DOES PEOPLES PROPOSE TO CHARGE THE WNA TO ALL CUSTOMERS?

A. No. Peoples proposes to assess the WNA only to the following classes of customers: residential including CAP, commercial SGS, and commercial MGS customers. Peoples claims that consistent with the revenue forecasting methodology, these customer classes are predominantly weather sensitive**.** (Peoples Statement No. 3, p. 17).

Q. FOR WHICH MONTHS DOES PEOPLES PROPOSE TO CHARGE A WNA?

A. The WNA will apply to services rendered during the heating season months, specifically October 1, through May 31. (Peoples Statement No. 3 page 17). According to the response to OCA-I-6, the WNA mechanism would not be reflected as a separate line item, but rather it would be included with the base delivery (distribution) charge component and shown in the total charge amount displayed as the delivery item on the bill. OCA Witness Ms.

Barbara Alexander provides more information on the way Peoples WNA will affect customers' bills.

Q. DOES PEOPLES CONSIDER THE WNA MECHANISM A DECOUPLING MECHANISM?

A. It is unclear because its witnesses contradict each other on that point According to Mr. Zarumba, the WNA is not a decoupling mechanism. Mr. Zarumba claims that a decoupling mechanism is designed to adjust revenue variation triggered by several variables introducing volatility in the utility revenue stream, but that Peoples' proposed WNA mechanism has a narrower focus and only adjusts for the variation in the normal Heating Degree Days in a specific time period. (Peoples Statement No. 15 page 56). Mr. Zarumba argues that the WNA mechanism only applies to the non-base load consumption and does not address reduction in usage associated with adopting more efficient end-use equipment, customer defection to other fuels and other similar variables. (Peoples Statement No. 15 page 56). However, Peoples' witness Paul R. Moul identifies the WNA as a revenue decoupling mechanism (Peoples Statement No. 13, p. 9). Despite the differences in Peoples' witnesses' characterization of the WNA, it is clear that the mechanism would operate to distribute weather risk to customers while stabilizing Peoples' revenues.

Q. HOW IS PEOPLES' PROPOSED WNA MECHANISM DIFFERENT FROM THAT OF PEOPLES CURRENT WEATHER NORMALIZATION METHODOLOGY?

A. According to the response to OCA Set 7-10, Peoples stated that presently, delivery charges on the customer's bill are based upon actual weather and not normalized weather. In response to OCA Set 8-22 (side by side comparison of rates), Peoples provided a comparison of its proposed WNA rate effect and its present methodology to calculate weather not normalized. The WNA shows a monthly adjustment of ($3.96), (page 2) as compared to the present rate calculation of ($3.56) or a difference of $0.40. This represents HDDs as normal to using the 20-year average of HDDs as normal in a case where weather is colder than normal. On page 3, the WNA calculation compared HDDs as normal to using the 20-year average HDDs as normal in a case where weather is warmer than normal. This shows an adjustment of $1.58 under the proposed WNA and the present adjustment of $2.38 or a difference of $0.80. see response to OCA-8-37 – effect of the current 20-year normalization period and Peoples proposed WNA mechanism.

Q. HOW IS PEOPLES' WNA CALCULATED?

A. According to witness Ms. Scanlon, the WNA is calculated and developed by dividing the normal number of Heating Degree Days (NHDDs) by the number of actual Heating Degree Days (AHDDs) to create a WNA factor (NHDD/AHDD). Peoples is proposing that the normal number of HDDs used in the WNA calculation will be based upon the HDDs utilized to develop the revenue requirement in this proceeding and would remain the same until a future base rate case proceeding. (Statement No. 3 page 16). Then, the customer's heat sensitive consumption is determined by subtracting the base load value – or the customer's average daily usage in the months of July and August, in MCF – from their actual usage that month, in MCF. Heat sensitive consumption is multiplied by the WNA factor, and added to the base load value, to determine the weather normalized usage in MCF, or what Peoples would have expected the customer to have used that month. The customer's actual usage is subtracted from their weather normalized usage to reach Peoples' normal weather adjustment to the customer's bill. The adjustment is multiplied by the distribution charge to calculate the WNA, charging the customer for the difference between their actual and expected usage.

By way of example, Ms. Scanlon, in Exhibit CAS-1, used an NHDD value of 914 and an AHDD value of 956, which produced a WNA factor of 0.956. Ms. Scanlon's next step in the WNA calculation was to determine the baseload amount (BLMM) of 2.2 Mcf and heat sensitive amount of the customer's actual monthly consumption (AMUM) of 13.5 Mcf. The result is the heat sensitive consumption for the month of 11.3 Mcf. (13.5 Mcf minus 2.2 Mcf). The heat sensitive consumption was then multiplied by the WNA factor developed as shown on Exhibit CAS-1 and added back to the baseload amount to calculate a weather normalization consumption amount of 13.0 Mcf. The difference between the weather normalization consumption amount and the customer's actual total monthly consumption is the weather normalized adjusted Mcf (WNAM) amount of (0.50). The amount was then multiplied by the distribution rate charge of $3.9608 to arrive at the weather normalization adjustment dollar amount of $(1.98) that will be included on a customer bill. (Statement No. 3 page 16-17). Below is the WNA calculation:

Normal Heating Degree Days	914 NHDD
Actual Heating Degree Days	956 AHDD
WNA Factor (914/956)	0.956
Total Monthly MCF Consumption	13.5 AMUM
Base Load MCF Consumption	2.2 BLMM
Heat Sensitive MCF (13.5 – 2.2)	11.3
Weather Normalization Billing Mcf (2.2 + (0.956 x 11.3)	13.0 WNBM
Weather Normalization Adjustment (13.0 -13.5)	(0.50)
Distribution Charge as of 10/1/2023	$3.9608
WNA ($0.50 x $3.9608)	($1.98)

As one can see in the calculation above, this is a complex model that will make it difficult for customers to understand what exactly is included in their bill, which will not be shown on the bill because Peoples intends to include this calculation in its distribution charge and shown as a total amount on customers' bills.

Q, HOW DOES THE COMPANY PROPOSE CALCULATING THE "NORMAL" NUMBER OF HDDS IN A GIVEN YEAR?

A. The Company has proposed determining the "normal" number of HDDs by averaging the number of HDDs over the past 20 years with the results of a 65-year regression model. The regression model uses the number of HDDs in each year for the past 65 years to create a linear equation where the independent variable is the number of years from the beginning of the sample, and the dependent variable is the number of HDDs in the year. The results of the regression model "predict" the number of HDDs in a given year. However, Peoples anticipates that the prediction of the regression model will be too low for use in the WNA, which is why they propose averaging the regression model's results with the 20-year average temperature. (Statement No. 3 pages 5-6). Both the results of the regression model and the 20-year average predict an annual number of NHDDs, not a monthly number, though a monthly number is used to calculate the WNA charge.

Q. HOW DOES PEOPLES PROPOSE CALCULATING THE "NORMAL" NUMBER OF HDDS IN A GIVEN MONTH, FOR THE PURPOSES OF THE WNA?

A. Peoples is using an "average of day method" to determine the number of NHDDs in a given month. Specifically, Peoples took the number of HDDs for each individual day from January 1, 2013 until December 31, 2022 and averaged the value (for example, all of the HDD values for January 1 were added together and divided by 10). All daily averaged values are added together to create an average year, either leap or non-leap. Then, the averaged values for each day were divided by the sum of the averaged year to determine the average daily percentage of HDDs each day represented in a given year. This percentage is then multiplied by the annual normal number of HDDs – calculated as outlined above – to create a daily normal value. Daily normal values are added up for each month to create the NHDD value used in the WNA calculation. (OSBA Set I-012).

Q. DO ANY OTHER REGULATED PENNSYLVANIA GAS UTILITIES HAVE A WNA MECHANISM?

A. Yes, according to the response to OCA Set I-4, Columbia Gas and UGI have a pilot WNA program. Peoples are unaware of the remaining utilities having pilot WNA programs (PGW, National Fuel). In response to OCA Set 7-9, Peoples' stated that the following Pennsylvania gas utilities have received approval for a WNA: (1) National Fuel – June 15, 2023); (2) UGI Gas – September 15, 2022; (3) Columbia Gas – May 23, 2013 and; (4) PGW – August 8, 2022.

Q. IS PEOPLES ENTITLED TO IMPLEMENT ITS WNA PROPOSAL SIMPLY BECAUSE OTHER REGULATED GAS UTILITIES MAY HAVE WNAs?

A. No. Peoples has to justify and demonstrate that its proposed WNA is just and reasonable and that its proposal produces rates that are reasonably recoverable from ratepayers. Just because other regulated gas utilities in Pennsylvania have a WNA implemented, does not give carte blanche approval for Peoples to have one also. Peoples should support its own WNA mechanism and its development on its own and not rely on the fact that other regulated gas utilities in Pennsylvania have one, especially considering the differences between Peoples' proposed WNA and the others implemented in Pennsylvania.

Q. IS PEOPLES' WNA PROPOSAL SIGNIFICANTLY DIFFERENT THAT THE WNAs THAT OTHER UTILITIES HAVE IMPLEMENTED?

A. Yes. Ms. Scanlon stated that Peoples' WNA is based upon a 65-year regression for the periods ending December 31, 2022, which Peoples believed provides for a reasonable basis for the WNA. Currently, the natural gas distribution companies which have a Commission-approved WNA utilize a 20-year average to determine the "normal" number of HDDs. Peoples is proposing to use the average of the 65-year regression model result with the average of the 20-year due to the concept of gradualism, so that the negative slope of the 65-year model is less likely to predict a normal number of HDDs higher than the actual HDDs in a given month. The 65-year regression model produces a result of 5,240 HDDs. In Peoples Natural Gas Division's last base rate case in 2018, the HDDs employed in the forecasting model were 5,416, In order to transition from the prior methodology to this new methodology Peoples are utilizing an average of 20-year average and the new methodology. (Statement No. 3 page 5-6).

Further, Peoples is not proposing a deadband because Peoples' witness Mr. Zarumba stated that it will reduce the effectiveness of the WNA and reduce the value to both Peoples and customers. (Statement No. 15 page 57). Mr. Zarumba stated that the policy goal of the WNA is to reduce the revenue fluctuations associated with non-normal weather conditions. The dead band implicitly stated that the policy goal of the WNA is less important for smaller weather variations than significant weather variation. (Statement No. 15 page 57). Currently, three of the four utilities which have a Commission-approved WNA utilize a deadband. Only PGW, a cash flow utility, does not have a deadband, but as explained by other witnesses in this case, the lack of consumer protections that have existed for PGW's WNA led to significant and harmful overbilling that warranted emergency action by PGW.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING PEOPLES'S WNA MECHANISM?

A. I am recommending that the Commission not adopt Peoples's proposed WNA mechanism. The definition of a WNA has nothing to do with how much natural gas a customer is using. It has to do with the weather outside the home. Adopting a WNA would push more volatility onto customers, reducing the risk of recovery away from Peoples. A WNA may increase customers' bills month to month based upon adjustments related to weather, and

not based upon gas usage. Peoples stated that the WNA will bring steady and predictable revenues during the winter months (when customer usage typically increases). Peoples stated that it will reduce some of the volatility associated with weather on a customer's bill. (which means the volatile risk will be passed onto customers, and away from Peoples). Peoples stated that it will keep rates stable, which may increase revenues recovery from customers. (Peoples Statement No. 1, page 15). Rate stability that is driven by artificial constructs such as the WNA is not likely a virtue that customers will appreciate as it will very likely have the effect of increasing customers' bills despite decreased gas usage. This inverse relationship will be both frustrating to customers and bears little to no relationship to cost causation. Peoples stated that instituting a WNA will increase in revenues due to Peoples engaging in modernizing its infrastructure, (Peoples' Statement No. 1 page 15) reducing the risk recovery and placing the risk onto ratepayers. This is problematic as a regulated company is not guaranteed 100% of its revenue requirement recovery, it is given the opportunity to recover these costs. Peoples should not expect all of its known and measurable costs be recovery from ratepayers, and business decision risks or financial risks should remain with Peoples as it would if it were forced to compete in an open market rather than its exclusive franchise.

Q. WHAT ARE YOUR OTHER REASONS FOR DISALLOWING A WNA?

A. Weather cannot be predicted accurately and with certainty. On certain days when weather is warmer than usual, the WNA will have the effect of increasing a residential customer's bill as shown in response to OCA-8-22 (page 3 of 3). On certain days when weather is colder than usual, the WNA will have the effect of decreasing a residential customer's bill as shown in response to OCA-8-22 (page 2 of 3). As an example, in February of this year, weather has been warmer than usual, and if the WNA was in effect, residential customers would be paying a higher rate. (opposite of reducing rates due to less gas usage). Conversely, if weather were colder than normal during a winter period, residential customer would be paying a lower rate. (opposite of increasing rates due to more gas usage). In sum, weather changes constantly, and in the event that winter weather is or becomes warmer than usual, residential customers would be paying a higher rate, even though residential customers are actively conserving gas usage in those periods. Peoples'

proposed WNA inappropriately adjusts rates without considering other changes in total revenues and expenses. Under Peoples' WNA proposal, no matter how much natural gas is actually used, or the reason for variation in the customer's usage from "normal" levels, the customers would pay for a normalized level of natural gas usage whether they use that natural gas or not. A given level of revenues would result regardless of the amount of natural gas purchased by Peoples. Peoples has not demonstrated that its revenue recovery is unstable nor has demonstrated that its recovery of costs is inadequate. Therefore, it would be inappropriate for Peoples to implement a WNA because it would not be a just and reasonable rate.

Q. WHAT IS YOUR RECOMMENDATION REGARDING PEOPLES' WNA PROPOSAL?

A. I am recommending that Peoples WNA proposal should be rejected for all of the reasons stated above and the reasons stated by the other OCA witnesses as well.

2. OPERATION AND MAINTENANCE EXPENSES

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO ITS OPERATION AND MAINTENANCE EXPENSES (O&M)?

A. Mr. Wachter stated that Peoples total O&M Expenses for the FPFTY period is $227,010,806 (Peoples' Exhibit No. 4 Schedule 1). This is comprised of total O&M Expenses of $223,598,704 of expenses at present rates and $3,412,102 for additional uncollectible expenses shown on Exhibit No. 2 Schedule 4.

Q. HOW DID PEOPLES DEVELOP ITS O&M EXPENSES TO SET RATES FOR SERVICE?

A. According to Mr. Wachter, he started with the per books O&M expenses of $192,351,147 for the HTY as shown on Exhibit 4 Schedule 1. To that balance Mr. Wachter made HTY, FTY and FPFTY adjustments to determine the normal level of O&M expenses of $203,039,623 for the FTY and $223,598,704 for the FPTY periods. (Peoples Statement No. 2 page 9).

a. Gas Supply Expenses

Q. WHAT DID PEOPLES PROPOSE REGARDING ITS GAS SUPPLY EXPENSES?

A. Peoples proposed an annualized Gas Supply Expense for its FPFTY period of $317,688,615 as shown on Peoples' Exhibit 2 Schedule 4 page 2. (See also Exhibit No. 3 Schedule No. 15 Attachment C).

Q. DO YOU HAVE ANY ADJUSTMENTS TO PEOPLES' GAS SUPPLY EXPENSE?

A. No I am accepting Peoples' proposed Gas Supply Expense of $317,688,615. My recommendation is shown on my Exhibit DM-10.

b. Labor

Q. WHAT DID PEOPLES PROPOSE WITH RESPECT TO ITS LABOR EXPENSE?

A. As shown on Peoples' Exhibit 4, Schedule 1, page 4, Peoples proposed to increase Labor Expenses from its HTY period of $55,181,109 to $69,463,580 for its FPFTY period, an increase of $14,282,471. Included in Peoples's calculation of its Labor are increases and adjustments related to Merit Increases. (3.25% for Clerical Union Labor and Non-Union Labor, 4.00% for Manual Union Employees) during the FTY and FPFTY periods; Increases related to Progression and Promotion to its Clerical – Union and Manual Union Employees and; Additional Employee Headcount and Vacancies to be filled through the FTY and FPFTY periods. (Exhibit 4, Schedule 1, page 5). Peoples reflected normalized labor costs that reflects the impacts of the Service Agreement between Peoples and PNG. (Peoples Statement No. 2 page 10). Peoples utilized an O&M Labor Percentage based upon a blended rate between PNGD labor ratio of 44.75% and PGD labor ratio of 60.34% to arrive at an annualized adjustment of $7,422,979 (Peoples' Exhibit No. 4 Schedule 1 page 5). Peoples total Labor Expense was based upon a full complement of employees of 1,465 as of the FPFTY period. (Statement No. 2 page 12).

Q. WHAT DID PEOPLES PROPOSED WITH RESPECT TO ITS LABOR CLAIM OF FILLING ESTIMATED VACANCIES?

A. I noted that Peoples is proposing to include 29 full time employees in the future test year and an additional 8 full time employees in the FPFTY period. (OCA Set 7-21) These additional employees will add $411,975 to Peoples' Labor Expense. (OCA-Set 7-21 which refers to I&E RE-06. Peoples has not provided a date in which these expected employees

are to be hired and placed in their positions, nor has provided a timeline of the hiring process. I believe that not all of these employees will be hired during the FTY and the FPFTY periods. Companies typically always have a level of vacancies throughout any given year due to terminations, retirements, layoffs and the inability to hire employees to fit within the companies' organization. Given that additional employees will be hired periodically throughout the FPFTY period up to September 30, 2025, I am recommending a vacancy rate ratio be implemented.

Q. WHY ARE YOUR RECOMMENDING A VACANCY RATE RATIO?

A. I am recommending a vacancy rate adjustment, because in response to OCA-Set 7-24, Peoples stated that the additional 53 employee proposed to be included in its Labor costs is now 64 additional employees, as they were not included in the original labor adjustment. Further, Peoples has added an additional labor cost of $411,975 for which Peoples have not revised its labor cost, nor has provided estimated average salaries for these additional employees. It is uncertain whether or not Peoples will actually hire the number of employees it has proposed. Peoples has not offset this balance with a vacancy credit. (OCA Set 7-24). According to Mr. Wachter (Peoples' Statement No. 2 page 11), routine and / or normal position vacancies which occur as a result of termination, or retirements were assumed to be filled by employees with equivalent pay or by temporary employees while the positions are being filled. Mr. Wachter added in expected routine/normal vacancies as of the end of the HTY as well as added the salaries related to incremental FTE employees expected in the FTY. Mr. Wachter stated that a certain level of vacancies is expected during the FTY and the FPFTY. Peoples estimated that 29 FTEs and 8 FTEs will be vacant on average during the FTY and the FPFTY, respectively, and expects to be at pre-COVID average vacancy levels by September 30, 2025, the end of the FPFTY. (Peoples' Statement No. 2 page 12). In response to OCA Set 7–21 and 24, Peoples amended its level of employees to 72 open positions with 45 to be filled in the FTY and 19 in the FPFTY and 8 remaining vacant past the FPFTY period. (I&E RE-006).

Q. HOW DID YOU CALCULATE YOUR VACANCY RATE RATIO ADJUSTMENT?

A. In response to OCA-7-20, Peoples provided a vacancy rate ratio of 2.7% which is to be expected in 2024. I took Peoples' Per Books balance as of August 31, 2023 of $55,181,109 and added the annualization adjustment of $7,422,979 to arrive at $62,604,088. I then added $1,948,704 to arrive at Mr. Wachter's annualized FTY labor balance of $64,552,792 (Peoples' Statement No. 2 page 12 and Peoples's Exhibit No. 4, Schedule No. 1 page 5). I then took the expected vacancy rate of 2.7% and multiplied that by the FTY labor balance of $64,552,892 to arrive at $1,742,925. My adjustments are shown on my Exhibit DM-11.[8]

c. <u>Short Term Incentive Program (STI) /Incentive Compensation</u>

Q. WHAT DID PEOPLES PROPOSE RELATED TO ITS STI INCENTIVE COMPENSATION?

A. Peoples has proposed to include total STI-Incentive Compensation of $5,624,024 for the FPFTY period as shown on Exhibit 4, Schedule 1, pages 2 and 6. Peoples began with an Incentive Compensation Balance Per books of $6,823,130 HTY period. Peoples made adjustments to its STI-Incentive Compensation in the HTY normalized period of ($1,609,771), $280,149 in the FTY period and $130,516 in the FPFTY period. Peoples then allocated its STI-Incentive Compensation in the same manner as it allocates its Labor Charges to Capital using a Combined O&M Labor Percentage factor to arrive at the FPFTY balance of $5,624,024. **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL).**

Q. PLEASE DESCRIBE PEOPLES STI-INCENTIVE COMPENSATION PROGRAM.

A. Mr. Wachter stated that it is important for Peoples to recover this expenses in order to retain talent and Peoples must offer benefits comparable to other companies. Offering Incentive Compensation in one way for Peoples to retain talent by offering market-based incentives

[8] Any differences are due to rounding

to Company employees. (Peoples' Statement No. 2 page 14). Mr. Wachter stated that the Company has undertaken research to ensure that it offers market-based compensation and incentive programs. Eliminating or reducing these programs would have a significant impact on the Company's ability to attract and retain competent employees. (Peoples' Statement No. 2 page 14). As detailed in OCA Set 7-28, Peoples's provided a breakdown of its total proposed STI as follows:

(BEGIN HIGHLY CONFIDENTIAL)

(END HIGHLY CONFIDENTIAL)

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE LEVEL OF STI-INCENTIVE COMPENSATION TO BE INCLUDED IN REVENUE REQUIREMENT?

A. I am recommending that Peoples' STI that was or expected to be paid out for Financial Performance of **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** be disallowed from Peoples' revenue requirement increase. My recommendation is based upon the fact that this type of incentive compensation payments is aligned with Peoples' **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** with minimal or

[9] Differences due to rounding

none being attributable to the benefit of customers, nor related to customer service performances and measures, safety and environmental issues, and other customer related issues. I do not believe that ratepayers should pay for this type of incentive compensation, which promotes shareholders' interest and the alignment of shareholder growth. While I am not opposing Peoples's STI plan, what I am opposing are the costs related to Peoples' recovery of its STI related to financial performance through ratepayers. The shareholders, not the ratepayers, should be required to fund the STI that is related to financial performance and other incentive compensation that relates to financial performance.

Q. WHAT OTHER ADJUSTMENT DO YOU HAVE WITH RESPECT TO PEOPLES' STI-INCENTIVE COMPENSATION?

A. I am recommending disallowance of Peoples' Diversity, Equity and Inclusion (DEI) costs of **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)**. I believe this type of incentive does not provide ratepayer benefits in the provision of safe and reliable utility service. These types of incentive costs reflect organizational frameworks which seek to promote the fair treatment and full participation of all people who have been subject to discrimination. I do not see a nexus between DEI and ratepayer benefits in the areas of customer service, customer engagement or customer participation. I believe these types of incentive costs should be borne by Peoples' or its shareholders. If Peoples believes these incentive costs do provide customer benefits then Peoples should be burdened with providing the dollars and not the ratepayers.

Q. WHAT ARE YOUR RECOMMENDATIONS RELATED TO PEOPLES' OTHER STI INCENTIVE COSTS?

A. I am accepting Peoples' remaining balance of **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)**. I believe these remaining STI incentives appear to benefit customers in the areas of **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)**.

d. Pension Expense

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS PENSION EXPENSE?

A. Peoples has proposed and has calculated its Pension Expense based upon a two-year average of contributions made in 2022 of $5,670,000 and $5,670,000 in 2023. (Peoples' Statement No. 2 page 14, Exhibit No. 4 Statement No. 1 page 10). Peoples began with an HTY balance of $4,497,434 and adjusted the balance to $1,172,566 to arrive at the 2-Year average contribution balance of $5,670,000.

Q. WHAT IS YOUR RECOMMENDATION?

A. In response to OCA-7-31, Peoples provided a schedule of Pension Contributions for the five year period 2018-2022. Peoples stated that the pension funding amount for the Essential Utilities, Inc. Retirement Income Plan is determined each year based upon the recommendation of management and subject to approval by Essential's Retirement and Employee Benefits Committee. The balances are as follows:

2018	$735,802
2019	$2,290,746
2020	$560,190
2021	$5,343,118
2022	$5,408,063

These annual contributions have fluctuated from a high of $5,408,063 in 2022 to a low of $560,190 in 2020. Peoples stated that the funding amount will be an amount greater than or equal to the minimum required contribution and less than or equal to the maximum tax-deductible contribution. Given the yearly variances, it is reasonable to normalize the costs as the prior costs show varying fluctuations over the five-year period (2018-2022). Using my five-year normalization period results in a normalized balance of $2,867,584 ($14,337,919/5).

My recommendation is shown on my Exhibit DM-13.

e. Post-Retirement Other Than Pensions (PBOP)

Q. WHAT HAS PEOPLES PROPOSED AND CALCULATED RELATED TO ITS POST-RETIREMENT BENEFITS OTHER THAN PENSIONS?

A. Peoples has proposed a PBOP balance for its FPFTY period of $2,414,041 as shown on Peoples Exhibit 4 Schedule 1 page 2 and 11. Peoples began with its HTY balance of $2,864,116 and adjusted this balance by $779,921 (net expense) and ($450,075) (FTY Adjustment). Peoples amortized the recovery of its prior period net under-collection of $1,634,119, amortized over a two-year period. (Peoples' Statement No. 2 page 15). The FTY balance is $2,414,041. Pursuant to the Commission Order in Docket No. R-00943111 Peoples has been accounting for PBOPs on the same basis that these costs are recovered in rates, which is on an accrual basis consistent with FAS 106 and the prior Commission Order. (Peoples Statement No. 2 page 14). Under Peoples existing benefits programs, the total FPFTY PBOP expenses is calculated at $2,414,041 which is the projections provided by Peoples actuary as well as the previously discussed amortization period. (Peoples' Statement No. 2 page 15). Peoples is proposing to track the actual PBOP costs and amortize the cumulative difference between actual and projected costs in Peoples next base rate proceeding. The amount to be tracked is $779,921. This treatment is consistent with the past ratemaking treatment of these costs and anticipates that differences between the rate allowance and actual accruals be tracked and amortized over a period to be determined by Peoples in the next base rate proceeding. (Peoples Statement No. 2 page 15).

Q. WHAT IS YOUR RECOMMENDATION?

A. In reviewing the response to OCA-Set 7- 31, Peoples provided a schedule of PBOP costs for the five years period 2018-2022. The balances are as follows:

2018	$1,472,143
2019	$1,186,742
2020	$1,473,256
2021	$1,636,734
2022	$1,246,063

As in the Pension Contributions, PBOP costs have fluctuated from a high of $1,636,734 in 2021 to a low of $1,186,742 in 2019. As in my recommendation to normalize Pension Costs over a five-year period, I am recommending normalizing PBOB costs over the same five year period. Using a five-year normalization period would result in a balance of $1,438,988 ($7,194,938/5). I have placed my adjustment on my Exhibit DM-14 Line 1, or an adjustment of $208,991 for a HTY Book Balance of $1,438,988. I am also adjusting my recommended employee vacancy to Labor Expense. I used the ratio of Peoples' Labor Balance of $69,463,581 to Peoples' PBOP Balance of $2,414,040 to arrive at a percentage of 3.475%. I then took my recommended Labor Balance of $67,720,883 and multiplied it by 3.475% to arrive at a PBOP Balance of $2,353,301, a reduction of $60,739. The sum of these two adjustments is $148,251. My recommendation is shown on my Exhibit DM-14.

f. Benefits Compensation Adjustment

Q. WHAT DID PEOPLES PROPOSE RELATED TO ITS BENEFITS COMPENSATION ADJUSTMENT?

A. Peoples has proposed a level of its Benefits Compensation Adjustment of $20,985,623 for the FPFTY period which include the cost of the benefits for vacant positions filled and annualized for changes in costs relative to the anticipated results from future open seasons. (Peoples' Statement No. 2 page 15-16). Medical and other benefits were increased based upon information provided by third-party benefits consultants. 401(k) benefits were increased consistent with merit increases utilized to develop the labor claim. (Peoples' Statement No. 2 page 16). Peoples began with an HTY period balance of $17,283,769 as shown on Peoples's Exhibit 4 Schedule 1 page 2 and 12 on an annualized basis. Peoples then added $2,277,950 to annualize the benefits under the FTY period. (Exhibit No. 4 Schedule 1 page 12). Peoples adjusted its FTY Benefits by adding $1,423,904 during its FPFTY period. (Peoples's Exhibit No. 4 Schedule No. 1 page 12 of 33).

Q. WHAT IS INCLUDED IN PEOPLES' BENEFITS COMPENSATION ADJUSTMENT?

A. According to Peoples response to OCA-7-32 Other Benefits consists of VEBA benefits, Recruiting, Tuition Reimbursement, Employee Relations, Safety Functions, and Other Miscellaneous Employee Benefits.

Q. WHAT IS YOUR ADJUSTMENT TO PEOPLES' BENEFITS COMPENSATION ADJUSTMENT?

A. Since I incorporated a vacancy ratio adjustment of 2.7% to arrive at my Labor balance $67,720,883, I am adjusting Peoples's Benefits Compensation accordingly. I took Peoples' proposed FPFTY Benefits of $20,985,623 and divided that by Peoples' proposed Labor Expense in the FPFTY of $69,463,581 to arrive at a ratio of 30.21%. I then took my recommended Labor Expense of $67,720,883and multiplied that by 30.21%[10] to arrive at a Benefits Expense of $20,458,479. This is a reduction of $527,144.

Q. WHAT ARE YOUR OTHER ADJUSTMENTS?

A. As per Peoples' Exhibit 19- RR -30, Peoples included costs related to Employee Service and Safety Awards of $221,500, and Employee Events of $32,937. Peoples has provided no further information related to these expenses. In response to OCA Set 7-32, Peoples was asked to provide a detailed breakdown of costs and description of the elements included in the Benefits Compensation adjustment. I do not believe Peoples' fully justified related to Employee Service and Safety Awards or Employee Events costs, nor has provided whether these costs relate to ratepayer benefits. I am recommending disallowance of these costs totaling $254,437. My recommendation is shown on my Exhibit DM-15.

g. <u>Outside Services - Contracted</u>

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS OUTSIDE SERVICES – CONTRACTED?

A. Peoples proposed total Outside Services – Contracted in the amount of $28,657,932 for the FPFTY period (Peoples's Exhibit 4 Schedule 1 page 2 and 13). Peoples began with its HTY balance of $24,124,704 and made adjustments for inflation of 3.75% during the FTY period

[10] In response to I&E RE-22, Peoples' calculated a benefits adjustment of 30% of Labor using a two-year average cost per employee salary.

and 3.75% during the FPFTY period. These inflation increases represented the recent 5-year annualized increases in these costs. (Peoples' Statement No. 2 page 17). Peoples also included $2,592,893 in the FTY period that relates to anticipated costs associated with its Bridge Work, Pressure Tests, Additional Pig-Run Costs, Additional Pipeline maintenance/corrosion costs and Additional right of way maintenance. (Peoples' Statement No. 2 page 16-17).

Q. DO YOU HAVE ANY ADJUSTMENTS WITH RESPECT TO PEOPLES OUTSIDE SERVICES-CONTRACTED?

A. Yes. My first adjustment is to Peoples' inclusion of inflation related increases to adjust its FTY and FPFTY period balances. The Company's 3.75% inflation adjustment in the FTY period amounts to an increase of $904,595 and in the FPFTY period of $1,035,740 for a total inflationary increase of $1,940,335. These inflationary adjustments are not actually known and measurable because they do not reflect the true cost of expenses. Inflation adjustments are typically blanket adjustments or increases which do not directly relate to actual costs expected to be incurred by Peoples in the period in which rates are to be set. Costs should be based upon evidence or documentation that supports Peoples' adjustments. More definitive types of increases or adjustments are contractually related increases or escalation adjustments that are predetermined in contracts or service agreements entered into by Peoples and third-party vendors. Essentially, my recommended Outside Services – Contracted retains the balance at the HTY period. With respect to Peoples' adjustment to its Bridge Work, Pressure Tests, Additional Pig Run Costs, Pipeline Maintenance/Corrosion and Right of Way costs of $2,592,893, I am recommending normalizing these costs over three-years or $864,298 annually, in the same manner as I normalized rate case expenses as discussed in section w of my testimony. Peoples has not specifically identified whether these costs are annual costs or one-time costs. Mr. Wachter stated that these costs are included in the FTY and the FPFTY periods. Mr. Wachter has not stated that these costs are recurring, therefore, my normalization adjustment benefits future periods between rate case proceedings.

Q. WHAT IS YOUR RECOMMENDATION?

A. My recommendation with respect to Peoples' Outside Services - Contracted is an adjustment of $3,668,930 and is shown on my Exhibit DM-16.

h. <u>Outside Services – IT</u>

Q. WHAT HAS PEOPLES PROPOSED REGARDING ITS OUTSIDE SERVICES – IT?

A. Peoples proposed a total balance related to its Outside Services – IT of $10,223,964 as shown on Peoples Exhibit No. 4 Schedule 1 page 2 and 14). Peoples began with a Per Books balance in the HTY period of $8,596,499 and added an inflation adjustment of 2.39% or $205,356 in the FTY, and an inflation adjustment of 2.39% or $236,958 in the FPFTY periods. Peoples stated that these inflation increases represented a 5-year annualized increase in these costs. (Peoples' Statement No. 2 page 17). Peoples also included $1,117,550 in the FTY period, and an additional $67,600 in the FPFTY period related to various adjustments on maintenance contracts and new software systems. (Peoples' Statement No. 2 page 17).

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO PEOPLES OUTSIDE SERVICES – IT COSTS?

A. As discussed previously in my testimony, my first adjustment is to Peoples' inclusion of inflation related increases to adjust its FTY and FPFTY period balances. The Company's 2.39% inflation adjustment in the FTY period amounts to an increase of $205,356 and in the FPFTY period of $236,958 for a total inflationary increase of $442,314. My arguments for removing these inflationary types of adjustments are the same arguments that I previously discussed above. Costs should be based upon evidence or documentation that supports Peoples's adjustments. More definitive types of increases or adjustments are contractually related increases or escalation adjustments that are predetermined in contracts or service agreements entered into by Peoples and third-party vendors. Essentially, my recommended Outside Services – IT stays the balance at the HTY period. With respect to the adjustments for IT software maintenance contracts, I am recommending normalizing these costs over three-years or $372,517 annually, in the same manner as I normalized rate

case expenses as discussed in section w of my testimony. Peoples has not specifically identified whether these costs are annual costs or one-time costs. Mr. Wachter stated that these costs are included in the FTY and the FPFTY periods. Mr. Wachter has not stated that these costs are recurring, therefore, my normalization adjustment benefits future periods between rate case proceedings.

Q. WHAT IS YOUR RECOMMENDATION?

A. My recommendation related to Outside Services – IT is an adjustment of $1,187,347 and is shown on my Exhibit DM-17.

i. <u>Outside Services – A&G</u>

Q. WHAT DID PEOPLES PROPOSE REGARDING ITS OUTSIDE SERVICES – A&G?

A. Peoples proposed a total expense level of $3,383,833 for its FPFTY period related to its Outside Services – A&G as shown on Exhibit 4 Schedule 1 page 2 and 15. The Company began with its HTY period of $2,955,571. Peoples included an inflation adjustment of 7.00% or $206,890 in its FTY period, and an additional 7.00% inflation adjustment or $221,372 in its FPFTY period. The total adjusted expenses from the HTY period to the FPFTY period is an increase of $428,262. The 7.00% increase represents the recent 5-year annualized increase in this costs in determining the FTY and FPFTY expense. (Peoples' Statement No. 2 page 17).

Q. WHAT ARE YOUR ADJUSTMENTS?

A. My first adjustment is to Peoples' use of inflation factors of 7.00% or $206,890 in the FTY period and an additional 7.00% or $221,372 in the FPFTY period for a total Inflation adjustment of $428,262. As I previously stated above, in my Outside Services – Contracted Expense adjustments, I am removing the Inflation Adjustments in the FTY and the FPFTY periods. These costs are not reflective of true costs and are not under any service contract adjustments or escalation clause adjustments that are predetermined by Peoples and third-party vendors.

Q. WHAT IS YOUR RECOMMENDATION?

A. My recommendation is to reduce Peoples' proposed Outside Services - A&G by $428,262. My recommendation is shown on my Exhibit DM-18.

j. Building Lease Adjustment

Q. WHAT DID PEOPLES PROPOSE WITH RESPECT TO ITS BUILDING LEASES?

A. Peoples proposed a Building Lease balance of $4,584,081 for its FPFTY period. (Peoples' Exhibit 4 Schedule 1 page 2 and 16). Peoples began with its HTY period balance of $6,184,363 and reduced that balance by $1,600,282 related to capitalization to arrive at a balance of $4,584,081. Peoples adjusted this balance by the HTY balance of $3,902,706 to arrive at an adjustment of $681,375. Peoples did not make any adjustments in the FTY and in the FPFTY periods.

Q. WHAT IS INCLUDED IN THE COMPANY'S BUILDING LEASE EXPENSE?

A. These Building Leases relate to the Company's main office and call center operations in Pittsburgh, PA and in Etna and Grove City field office facilities. (Peoples' Statement No. 2 page 18).

Q. ARE YOU AWAITING ANY ADDITIONAL INFORMATION FROM PEOPLES THAT MAY FURTHER INFORM YOUR POSITION REGARDING PEOPLES' CLAIMED LEASE EXPENSE?

A. Yes. I am awaiting Peoples' response to an inquiry I made through the discovery process in an attempt to gauge whether any of Peoples' lease expense should be allocated to its unregulated affiliates that may also be sharing the premises. Pending the information I am awaiting; I must reserve the right to make adjustments to this expense in the future if warranted.

Q. WHAT IS YOUR RECOMMENDATION?

A. At this time, based upon my review of the updated responses to OCA-8-1, and OCA-8-2, I have no adjustments. For now, I am accepting the Company's proposed FPFTY balance of $4,584,081, an adjustment of $681,375. My recommendation is shown on my Exhibit

DM-19; however, it is subject to change pending further information I am awaiting from Peoples.

k. Corporate Insurance

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS CORPORATE INSURANCE?

A. Peoples proposed a Corporate Insurance balance in its FPFTY period of $9,080,331 as shown on Peoples' Exhibit 4 Schedule 1 page 2 and 17. Peoples' Corporate Insurance is composed of Property Insurance, Other Miscellaneous Insurance and Workers Compensation Insurance. The breakdown is as follows:

Per Books	$5,213,687	
Combined Adjustments	$2,218,101	42.55%
Inflation Adjustment FTY	$ 773,601	13.1%
Inflation Adjustment FPFTY	$ 874,843	13.1%
Total	$9,080,331	

Peoples made adjustments to its Insurance by annualizing the most recent premium invoices and increased these costs by 13.1% which represents the average total premium increases experienced from the 2023 invoices as compared to the 2022 premiums and the premium increased experienced from the 2022 invoice as compared to the 2021 premiums. (Peoples Statement No. 2 page 18). Peoples stated that it affirmed the reasonableness of this increase with its third-party insurance brokers, which were feedback from the brokers about the upcoming rates.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. In response to OCA-8-3, which refers to the response to I&E RE-27, Peoples was asked to provide support for the proposed 13.1% increase in total premiums. (actually 12.9%). Peoples provided a list of premium invoices for certain of its insurance brokers for the 2021-2023 time period. (I&E RE-27-D and E). Given that these cost estimates are feedback related, and industry date for forecasts beyond this horizon is scarce, as market dynamics can shift dramatically, Peoples' proposal to include 13.1% in each of the FTY and FPFTY

periods is speculative. (Peoples's Statement No. 2 page 18). Further, the feedback information appears to be not a long-term trend but cyclical in nature, which, in my opinion, can change as quickly as they have arisen. I am recommending removal of the 13.1% Premium Increases in each of the FTY period of $773,601 and FPFTY period of $874,943 or a total adjustment of $1,648,544. Peoples proposes an overall increase of its Corporate Insurance of $3,866,644 or 74.16% over current costs of $5,213,687. Peoples adjusted its Corporate insurance by 42.55% to normalize the period from the HTY book balance of $5,213,687 to $2,218,101 or $7,431,788. Peoples then adjusted this balance by 13.1% in each of the FTY and FPFTY periods to arrive at a balance of $9,080,331. (Peoples's Exhibit 4 Schedule 1 page 17).

Q. WHAT IS YOUR RECOMMENDATION?

A. My recommendation disallows Peoples' Premium increases of $773,601 in the FTY and $874,943 in the FPFTY, for a total disallowance of $1,648,544. This is shown on my Exhibit DM-20.

l. Injuries and Damages

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO ITS INJURIES AND DAMAGES EXPENSES?

A. Peoples proposed a level of Injuries and Damages of $2,460,710 for its FPFTY period as shown on Peoples's Exhibit 4 Schedule 1 page 2 and 18. Peoples utilized a three-year average of Injuries and Damages expenses for The Month Ending (TME) August 2023, August 2022 and August 2021 ($2,310,473). Peoples then added an Inflation Factor of 3.20% ($73,935) in the FTY period and an additional Inflation Factor of 3.20% ($76,301) in the FPFTY period.

Q. WHAT ARE YOUR ADJUSTMENTS TO THE PEOPLES' INJURIES AND DAMAGES EXPENSE?

A. My first adjustment is to Peoples' use of Inflation Factors of 3.20% in the FTY period and 3.20% in the FPFTY period for a total adjustment of $150,236. As I indicated previously in my testimony, I removed these inflationary adjustments because they do not reflect the true costs of expenses to be incurred by Peoples. The use of the three-year average that Peoples has proposed takes into consideration the adjustments from year to year, without

adding additional costs such as inflation to develop the balance. In response to OCA Set 8-5, Peoples stated that the adjustments from the balance in August 2021, August 2022 and August 2023 were based upon the three-year average of claims history.

Q. WHAT IS YOUR RECOMMENDATION?

A. I am recommending that $150,236 be removed from Peoples' Injury and Damages. My recommendation is shown on my Exhibit DM-21.

m. Travel

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO TRAVEL?

A. Peoples proposed a balance in its Travel Expenses of $1,014,712 for the FPFTY period. (Peoples' Exhibit No. 4 Statement No. 1 page 2 and 19). Peoples began with its HTY balance of $931,017 and adjusted this balance to include an inflation increase of 4.40% ($40,947) in the FTY and an additional adjustment of 4.40% ($42,748) in the FPFTY periods. Mr. Wachter stated that the increases of 4.40% represents the recent 5-year annualized increase in these costs determining the FTY and FPFTY expenses. (Peoples' Statement No. 2 page 19).

Q. WHAT IS THE BREAKDOWN OF THESE COSTS?

A. In response to OCA Set 8-6, Peoples provided a breakdown of these costs. In that response, Peoples' included costs related to Entertainment of $216,702, Travel and Entertainment Expenses of $237,700, Travel Expense of $229,022 for a total of $683,424. People's also included $570,544 related to Community Relations for a grand total of $1,253,968, an increase of $239,256 over Peoples proposed balance of $1,014,712. My recommendation is shown on my Exhibit DM-22. In response to I&E RE-28, Peoples provided the following breakdown for its FPFTY period: Travel Expenses $158,284; Travel-Meals $27,335; Entertainment Expenses $587,297; Entertainment Expenses Non-Ded $57,679 and Travel & Entertainment Expenses $184,117 for a total of $1,014,712. Given that Peoples has proposed a recovery of $1,104,712, I am using that balance to make my adjustments.

Q. WHAT ARE YOUR ADJUSTMENTS?

A. My first adjustment is to Peoples' use of Inflation Factors of 4.40% in the FTY period and 4.40% in the FPFTY period for a total adjustment of $83,695. As I indicated previously in my testimony, I removed these inflationary adjustments because they do not reflect the true costs of expenses to be incurred by Peoples. My second adjustment is to removal Entertainment Expenses of $587,297, Entertainment Expenses Non-Ded of $57,679, and Travel and Entertainment Expenses of $184,117 for a total disallowance of $829,093.

Q. WHY ARE YOUR REMOVING THE EXPENSES RELATED TO ENTERTAINMENT?

A. Peoples has not provided any such need for these expenses as required in the response to OCA Set 8-6. While I understand the need for travel to perform the duties in a company, ratepayers should not be required to pay for costs that are not related in the provision of utility services. Peoples's response to OCA Set 8-6 does not provide any useful information to evaluate the reasonableness of these costs, nor provides any comfort that Peoples' is requesting ratepayers to absorb costs associated with entertainment, in addition to not knowing what sort of entertainment these costs represent.

Q. WHAT IS YOUR RECOMMENDATION?

A. My recommendation is a total disallowance of $912,788 as shown on my Exhibit DM-22.

n. <u>Company Memberships</u>

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS COMPANY MEMBERSHIPS?

A. Peoples proposed a balance of $832,200 related to Company Memberships for its FPFTY period as shown on Peoples's Exhibit 4 Schedule 1 page 2 and 20. Peoples began with an HTY balance of $797,132 and adjusted for Inflation of 2.18% or $17,345 in the FTY period, and an additional Inflation of 2.18% or $17,722 in the FPFTY period. Mr. Wachter stated that the Company Memberships costs has been adjusted for expected increases. (Peoples' Statement No. 2 page 20).

Q. DID PEOPLES PROVIDE A BREAKDOWN OF THESE COSTS?

A. Yes, in response to OCA Set 8-7, which refers to I&E RE-29, Peoples provided a breakdown summing up to the HTY balance of $797,132.

Q. WHAT ARE YOUR ADJUSTMENTS TO PEOPLES' MEMBERSHIPS?

A. I first removed the Inflation Related adjustments of 2.18% in the FTY period of $17,345, and 2.18% in the FPFTY period of $17,722 for a total adjustment of $35,067. As I stated previously in my testimony, these types of adjustments do not reflect the true costs of expenses expected to be incurred by Peoples.

Q. WHAT OTHER ADJUSTMENTS DO YOU HAVE REGARDING THE PEOPLES' EMPLOYEE EXPENSES?

A. I have adjustments related to certain Peoples' Memberships that I consider to be fraternal, social or sports club related. In 66 Pa.C.S. Section 1316.1, Recovery of club dues, "no public utility may charge to its customers as a permissible operating expense for ratemaking purposes membership fees, dues or charges to fraternal, social or sports clubs or organization." As I reviewed Peoples Exhibit No. 19, Schedule RR-31 and RR-32, I have determined that certain of Peoples' Company Memberships relate to and fall under the categories of social organization, chambers of commerce, convention and vacation visitors bureaus and lobbying related expenses.

In reviewing Peoples's Exhibit 19 RR-31 and 32 I believe that certain of the Company's Membership costs that are related to Community Development, Chambers of Commerce, tourism, health and energy related associations should not be recovered from ratepayers, as these types of costs do not provide any benefit to them. These types of costs mainly benefit Peoples as being good corporate citizens, advocacy on policy issues before State and Governmental agencies, social and fraternal related, and civic related initiatives. Ratepayers of Peoples should not be required to pay for such costs that do not benefit them with respect to distribution gas utility service.

Q. PLEASE IDENTIFY WHICH COSTS YOU ARE DISALLOWING.

A. In some of People' Company Memberships expenses, I recommending that the following costs be disallowed as I believe they do not provide any direct benefit to customers The following Table provides a breakdown:

TABLE IV.

Organization	Type	Selected Company Expense	OCA Disallow
Curate Solutions	Civic Related	$ 11,928	$ 11,928
Energy Association of PA	Lobbying	$168,522	$168,522
Pittsburgh Area COC	Civic Related	$ 1,402	$ 1,402
PA COC Business/Industry	Lobbying	$ 16,850	$ 16,850
COC for Greater Phila.	Civic Related	$ 5,000	$ 5,000
Women's Bus. Enter. Nat Council	Civic Related	$ 8,500	$ 8,500
TOTAL DISALLOWANCE		$212,202	$212,202

In response to OCA Set 8-7, and reviewing the description of these dues, believe these do not benefit ratepayers as they represent Chambers of Commerce dues, subscriptions to municipalities, lobbying expenses and other civic related purposes

Q. WHAT IS YOUR RECOMMENDATION?

A. Based upon the above, I am recommending that $212,202 as listed above be disallowed from Peoples' Company Membership expenses. These expenses do not appear to benefit ratepayers in the provision of distribution gas utility service, nor do they provide any direct benefits to ratepayers as far as customer service, safety, reliability or other service performance metrics.

Q. WHAT IS THE TOTAL PEOPLES' COMPANY MEMBERSHIP COSTS YOU ARE DISALLOWING?

A. I am recommending that $212,202 of costs as indicated above be disallowed, in addition to the removal of inflation related adjustments of $17,345 in the FTY period, and $17,722 in the FPFTY period, for a total of $247,269. My recommendations are shown on my Exhibit DM-23.

o. Licenses and Permits

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS LICENSES AND PERMITS?

A. Peoples proposed a balance of $746,067 related to Licenses and Permits for its FPFTY period as shown on Peoples' Exhibit 4 Schedule 1 page 2 and 21. Peoples began with an HTY balance of $677,424 and adjusted for Inflation of 3.62% or $33,712 in the FTY period, and an additional Inflation of 3.62% or $34,933 in the FPFTY period. Mr. Wachter stated that the Company Memberships costs has been adjusted for expected increases. (Peoples' Statement No. 2 page 21).

Q. WHAT ARE YOUR ADJUSTMENTS TO PEOPLES' LICENSES AND PERMITS?

A. I first removed the Inflation Related adjustments of $33,712 in the FTY period and $34,931 in the FPFTY period for a total adjustment of $68,645. As I stated previously in my testimony, these types of adjustments do not reflect the true costs of expenses expected to be incurred by Peoples.

Q. WHAT ARE YOUR TOTAL RECOMMENDATIONS?

A. I am recommending a total balance of $677,424 related to the removal of Peoples' inflation adjustments of $68,645. My recommendation is shown on my Exhibit DM-24.

p. Utilities and Fuels Used in Company Operations

Q. WHAT HAS PEOPLES PROPOSED REGARDING ITS UTILITIES AND FUELS USED IN COMPANY OPERATIONS?

A. Peoples has proposed a level of Utilities and Fuels Used in Company Operations of $2,949,856 for the FPFTY period as shown on Peoples' Exhibit 4 Schedule 1 page 2 and 22. Peoples began by using its HTY per books balance of $2,938,901 and removing $161,285 related to the use of gas in Company operations. Peoples then adjusted the HTY–adjusted balance by an inflation factor of 3.05% or $84,825 in the FTY period, Peoples included a 3.05% inflation factor or $87,415 to calculate its FPFTY balance. Mr. Wachter stated that the remaining costs in this category were increased for the FTY and the FPFTY based upon recent increases in this category. (Peoples Statement No. 2 at 20).

Q. WHAT ADJUSTMENTS DO YOU HAVE RELATED TO THE COMPANY'S UTILITIES AND FUELS USED IN ITS OPERATIONS?

A. As I have done in prior adjustments, I removed the FTY inflation adjustment of 3.05% or $87,825 and 3.05% or $87,415 for the FPFTY period for a total removal of $172,240. In response to OCA Set 8-9, Peoples stated that but for Wireless utility costs, there are no contracts for other costs.

Q. WHAT IS YOUR RECOMMENDATION?

A. My adjustment is a decrease of $172,240 related to the removal of the inflation adjustments in the FTY and the FPFTY periods. My recommendation is shown on my Exhibit DM-25.

q. <u>Advertising</u>

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO ITS ADVERTISING EXPENSE?

A. Peoples has proposed a total Advertising Expense of $1,423,933 for the FPFTY period as shown on Peoples' Exhibit 4 Schedule 1 page 2 and 23. Peoples stated that it included only expenses that satisfy at least one criteria set forth in Section 1316(a) of the Public Utility Code. (Statement No. 2 page 20).

Q. HOW DID PEOPLES DEVELOP ITS FPFTY PERIOD BALANCE?

A. Peoples began with its HTY balance of $1,516,137 and subtracted $179,141 related to certain advertising expenses shown in response to OCA Set 8-10, to arrive an adjusted HTY balance of $1,336,997. Peoples then added 3.20% or $42,784 in the FTY period and 3.20% or $44,153 in the FPFTY period for inflation adjustments for a total balance of $1,423,934.

Q. WHAT TYPES OF ADVERTISING EXPENSES ARE INCLUDED IN THE PEOPLES' BALANCE?

A. Peoples has included Advertising Expenses related to digital media, creative production and ad creation, traditional broadcast, print, PR Firm and other (public health, conservation of energy, explanation of billing practices) and other advertising expenses. (Peoples Exhibit No. 4 Schedule 4 page 2 of 2).

Q. WHAT DOES THE PA PUBLIC UTILITY CODE PROVIDE ABOUT WHAT SHOULD BE RECOVERED BY RATEPAYERS REGARDING ADVERTISING EXPENSES?

A. In 66 Pa.C.S.§1316, "no public utility may charge to its customers as a permissible operating expense for ratemaking purposes any direct or indirect expenditure by the utility for political advertising. The commission shall also disallow as operating expense for ratemaking purposes expenditures for other advertising, unless and only to the extent that the commission finds that such advertising is reasonable and meets one or more of the following criteria:

(1) Is required by law or regulation.
(2) Is in support of the issuance, marketing or acquisition of securities or other forms of financing.
(3) Encourages energy independence by promoting the wise development and use of domestic sources of coal, oil or natural gas and does not promote one method of generating electricity as preferable to other methods of generating electricity.
(4) Provides important information to the public regarding safety, rate changes, means of reducing usage or bills, load management or energy conservation.
(5) Provide a direct benefit to ratepayers.
(6) Is for the promotion of community service or economic development.

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING PEOPLES'S ADVERTISING EXPENSES?

A. To be consistent with my other adjustments, I am removing the Company's Inflation Adjustments of 3.20% or $42,784 for the FTY period, and 3.20% or $44,153 for the FPFTY period for a total removal of $86,937.

Q. WHAT OTHER ADJUSTMENTS DO YOU HAVE WITH RESPECT TO PEROPLES' ADVERTISING EXPENSES?

A. In reviewing Peoples' Exhibit No. 4 Schedule 4, the majority of Peoples' Advertising Expense are related to Explanation of Billing Practices of $1,165,063 or 87% of the total Advertising in the HTY of $1,336,996. Given that this criteria are related to information billing practices, bills, and rate changes, I am accepting these costs to be included in

Peoples' Advertising Expenses. My adjustment is a reduction of $86,937 related to the Inflation Adjustment and is shown on my Exhibit DM-26.

r. Fleet Maintenance and Fuel

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO ITS FLEET MAINTENANCE AND FUEL?

A. Peoples proposed a level of Fleet Maintenance and Fuel of $1,170,488 for the FPFTY period as shown on Peoples's Exhibit 4 Schedule 1 page 2 and 24. Peoples began with its HTY balance of $1,099,110 and added an FTY inflation adjustment of 3.20% or $35,128 and a FPFTY inflation adjustment of 3.20% or $36,250. Mr. Wachter stated that he adjusted these categories for expected increases based upon historical experience in determining the FTY and the FPFTY expense. (Peoples' Statement No. 2 page 21).

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. As I adjusted out the inflation factors for the FTY and the FPFTY periods in my other expense adjustments, I am making the same adjustments for Fleet Maintenance & Fuel, which reduces Peoples's adjustments by $35,128 and $36,250, respectively.

Q. WHAT IS YOUR RECOMMENDATION?

A. My recommendation is an adjustment of $71,378 related to the FTY and FPFTY inflation factors. My recommendation is shown on my Exhibit DM-27.

s. Materials & Supplies

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO ITS MATERIALS & SUPPLIES?

A. Peoples has proposed a balance to its Materials & Supplies of $11,848,247 as shown on Peoples' Exhibit 4 Schedule 1 page 2 and 25. Peoples began with its HTY balance of $10,459,149 and added a 2.94% or $307,733 inflation adjustment in its FTY period, and a 2.04% or $338,640 inflation adjustment in its FPFTY period. Peoples also included an

adjustment of $742,725 as an additional incremental adjustment for the expected increase in average cost per fault, higher number of faults expected and the higher cost of anodes. (Peoples Statement No. 2 page 21).

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING PEOPLES' MATERIALS & SUPPLIES?

A. I removed the Inflation Adjustments of $307,733 and $338,640, a total of $646,373, in Peoples' FTY and FPFTY periods, respectively. I then reviewed the response to OCA-Set 8-12. I removed a portion of the cost related to the increase in the average cost per fault of $742,725, to remove $49,932 associated with a 5% inflation rate to materials as identified in response to I&E RE-36-D. The base cost is reflected as $692,793. Peoples included the additional cost related to a planned increase within the Damage Prevention and Leak Survey departments.

Q. WHAT IS YOUR RECOMMENDATION FOR MATERIALS AND SUPPLIES?

A. My recommendation is an adjustment of $646,373 related to the FTY and FPFTY inflation factors and the disallowance of the $49,932 related to a 5% inflation rate. This results in a total disallowance of $794,686. My recommendation is shown on my Exhibit DM-28.

t. <u>Other O&M</u>

Q. WHAT DID PEOPLES PROPOSE RELATED TO ITS OTHER O&M?

A. Peoples proposed a FPFTY balance of $23,696,894 as shown on Peoples's Exhibit 4 Schedule 1 page 2 and 26. Peoples began with a HTY balance of $14,965,499 and added an inflation factor of 2.94% or $440,321 in the FTY and an additional inflation factor of 2.94% or $449,212 in the FPFTY period, for a total adjustment of $888,533. Peoples adjusted this balance to remove $138,125 related to the cost of operating the building at 225 N. Main Street in Butler, Pennsylvania as Peoples received approval to sell this building on October 26, 2023. (Peoples Statement No. 2 page 21). Mr. Wachter added an adjustment in the amount of $7,979,987 related to services provided from Essentials Utilities via PNG Companies (the parent company of PNG and PG). These costs represent normalized costs of such items. (Peoples' Statement No. 2 page 21).

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. My first adjustment is to remove the inflation adjustments of $440,321 in the FTY and $449,212 in the FPFTY periods, for a total disallowance of $889,533. My reasons for the disallowance are consistent to what I have done in prior inflation adjustments removals. To recap, I am recommending disallowance of all inflation related adjustments because I believe these types of adjustments are not known and measurable in setting rates for service and should not be used for ratemaking purposes. These types of adjustments do not provide a good index of known cost increases, but rather reflect an overall broad, blanket-type economic adjustment that are typically applied to all goods and services that may not be directly related or attributable to costs incurred by Peoples.

Q. WHAT IS YOUR NEXT ADJUSTMENT?

A. In response to OCA Set 7-30, which refers to I&E RE-11, Peoples provide costs that are included and allocated from Essential Services to Peoples related to incentive compensation. That amount is **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)**. In the same manner as I allocated the metric component to Peoples' STI Incentive, I am a doing the same here. Using the balance of **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)**. My reasons for the disallowance related to Financial Performance are the same in my STI Incentive Compensation section testimony.

Q. WHAT ARE YOUR TOTAL ADJUSTMENTS TO PEOPLES' OTHER O&M?

A. My total adjustments to Peoples's Other O&M are the disallowance of the inflation adjustments of $889,533, and the disallowance of the Incentive Compensation of **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)**, a total disallowance of $1,775,040. This is shown on my Exhibit DM-29.

u. Debt Issuance Costs

Q. WHAT DID PEOPLES PROPOSE WITH RESPECT TO ITS DEBT-ISSUANCE COSTS?

A. Peoples proposed a Debt Issuance Costs of $404,371 under its FPFTY period as shown on Peoples's Exhibit 4 Schedule 1 page 2 and 27. Mr. Wachter stated that People recently refinanced the revolving credit facility for debt borrowed for less than one-year, which is used to help finance capital expenditures and to fund working capital, particularly in the summer months when revenues are low. Mr. Wachter has included one year's worth of the amortization amounting to $404,371. (Peoples' Statement No. 2 page 22).

Q. WHAT IS YOUR RECOMMENDATION?

A. I am accepting Peoples' proposal. I have no changes to Peoples' adjustments. These costs appear to be known and measurable. These debt issuance costs are expected to be used to help finance capital expenditures and to fund working capital as stated above by Mr. Wachter. In the event additional information is received with respect to the Company's claim for debt issuance costs, I reserve the right to change my recommendation. My recommendation is shown on my Exhibit DM-30. In response to OCA Set 8-14, Peoples stated that these costs are not recovered via interest expense and therefore, it is necessary to claim these costs in O&M.

v. Payment Processing

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS PAYMENT PROCESSING FEE?

A. Peoples proposed a FPFTY balance of $2,015,819 under the FPFTY period as shown on Peoples's Exhibit No. 4 Schedule 1, page 2 and 28. Peoples began with a HTY balance of $1,451,959 and to that balance Peoples added $124,419 related to the adoption estimate of extending payment to the Peoples Gas Division. Peoples then adjusted this balance by 7.82% in the FTY of $123,273 and an additional adjustment of 7.82% or $132,913 in the FPFTY periods related to the additional adoption of this payment channel based upon the percentage increase for the twelve months ended (TME) August 31, 2023, as compared to the TME August 31, 2022. The final adjustment of $183,256 reflects a 10% increase in costs the Company expects to incur on such costs upon the expiration of the existing

contract in February 2025. (Peoples' Statement No. 2 page 23-24). Peoples witness Mr. Wachter stated that currently, Peoples' customers make payment through various channels such as mail, web and automatic telephone (IVR). The costs associated with third party payment processing for certain web, IVR and walk-in payments including credit cards at the Peoples Natural Gas Division are borne by customers via base rates. However, for the Peoples Gas Division, such payments are currently borne by the individual customers making such payments. (Peoples Statement No. 2 page 22). Peoples is proposing to pay all costs associated with customer payments directly to its service providers and recover such costs from all customers via base rates rather than a customer – paid transaction costs. If approved, all customers of both divisions will be able to select the payment channel of their choice without consideration of additional convenience or transaction fees subject to certain limitations. (Peoples Statement No. page 22).

Q. HOW DO THESE COSTS BENEFITS CUSTOMERS?

A. Mr. Wachter stated that this will improve the customer experience and align it with the Peoples Natural Gas Division and thus improve customer satisfaction. Customer have frequently voiced dissatisfaction with having to pay transaction fees for making payments. These Processing Fees will eliminate the convenience fees for electronic payments, eliminate the transaction fees for bill payment at authorized walk-in locations, encourage customers use of authorized agents, increase customer satisfaction by allowing customers to pay via the channel of their choice and encourage payment from those who have limited means. (Peoples' Statement No. 2 page 23).

Q. WHAT IS YOUR RESPONSE?

A. Peoples provides sufficient rationale for including these costs generally, but not for its projection of increased adoption. Peoples assumes that additional adoption of this payment channel based upon the percentage increase for the twelve months ending August 31, 2023 as compared to August 31, 2022 will be 7.82% in the FTY and in the FPFTY. Peoples has not provided any evidence to support additional adoption nor provided any support that customers will partake in this payment channel. While it may make sense that some

additional households will increase their update of these payment methods, because we do not have the data any projection about these additional adoptions in the payment channel appear to be speculative in nature. Peoples has included $124,419 related to the adoption for Peoples Gas (PGD) which should be sufficient to cover the payment channel for both entities. Regarding the recovery of additional 10% or $183,256 due to the expiration of Peoples' existing contract in February 2025, this also appears speculative. While it is reasonable to predict that costs will increase when a contract expires, Peoples has provided no further evidence to support this 10% increase.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am recommending disallowing 50% of the 7.82% in FTY or $61,637 and 50% of the 7.82% or $66,457 in the FPFTY for a total of $128,094. I am also recommending 50% of the disallowance of the 10% or $91,628 for the increase in costs Peoples expects to incur upon the expiration of the existing contract expiring in February of 2025. The increase for the contract is simply too speculative at this juncture and should retain an incentive to try to reduce costs on that contract when it comes up for renewal like it would if it were in a competitive environment rather than serving a captive rate base. Furthermore, Peoples has projected that they will be on every two year rate cycle and, thus, we will have a better sense in 2 years what the cost increases are as a result of these contracts as well as any increased update rate as a result of this policy change. My total disallowance is $219,722. My recommendation is shown on my Exhibit DM-31.

w. <u>Rate Case Expenses</u>

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS RATE CASE EXPENSE?

A. Peoples has proposed Rate Case Expenses of $2,062,000 amortized over a two-year period for an annual amount of $1,031,000 as shown on Peoples's Exhibit 4 Schedule 1 page 2 and 29.

Q. WHEN WERE PEOPLES LAST BASE RATE FILINGS?

A. Mr. Wachter stated that Peoples filed base rate case proceedings in 2010, 2012 and 2019. (Peoples Statement No. 2 page 25). The reason for the seven year lapse between 2012 and

2019 was a result of the rate stay out period resulting from the acquisition of the Equitable Gas Company. Further, the main reason for the time that had elapsed between 2019 and this case was the result of the Company receiving accounting and regulatory approval regarding its treatment of the tax repair election in Docket No. P-2020-3021191. Peoples projects two years to be the approximately length of time between the filing of this proceeding and the filing of Peoples' next base rate proceeding given the Company's LTIIP commitments for infrastructure replacement. (Peoples' Statement No. 2 page 25).

Q. WHAT ARE YOUR RECOMMENDATIONS?

A. I am accepting Peoples' Rate Case Expenses in the amount of $2,062,000 but it should be normalized. I am also making an adjustment to Peoples' Rate Case Expense by using a 3.00 year normalization based upon Peoples' Rate Case Expenses in 2008, 2010, 2012, 2019 and this instant rate proceeding which was filed in December 2023. (OCA Set 8-16).

Q. WHAT ARE YOUR SPECIFIC ADJUSTMENTS?

A. I reviewed the response to the Company's OCA Set 8-16 which refers to the response to I&E RE-39 Peoples filed Rate Case proceedings in the following years:

Year	**Entity**	**Docket No.**	
2008	Equitable	R-2008-2029325	
2010	Peoples	R-2010-2201702	
2012	Peoples	R-2012-2285985	
2019	Peoples	R-2018-3006818	
2023	Peoples	R-2023-3044549	
15 years between 2008 and 2023			
Normalization Period		15/5 proceedings	3 years

Based upon the above I am recommending normalizing Peoples' rate case expenses to 3 years. This results in an annual recovery for Rate Case Expenses of (2,062,000/3 years) $687,333, a reduction of $343,667. My recommendation is shown on my Exhibit DM-32.

x. Uncollectible Accounts

Q. WHAT HAS PEOPLES PROPOSED RELATED TO ITS UNCOLLECTIBLE ACCOUNTS?

A. Peoples has proposed an Uncollectible Accounts Expense of $13,635,520 for the FPFTY period as shown on Peoples's Exhibit No 4 Schedule 1 page 2 and 30. Peoples developed its Uncollectible Accounts Expense based upon the relationship between write-offs and revenues. (Peoples Statement No. 2 page 26). Peoples' witness Mr. Wachter stated that he used a normalized three-year average of write-offs as the basis for his adjustment. calculated an uncollectible write – off rate by the use of a three – year average of write offs as the basis for the adjustment. A 2.20% uncollectible rate was used for the residential customer class. (Peoples's Statement No. 2 page 26). No normalization adjustments were used for the commercial and industrial write-offs. (Peoples' Statement No. 2 pages 27). Peoples adjusted its Uncollectible balance by $3,412,102 by multiplying the $156,095,549 of additional revenues by the 2.20% rate uncollectible rate. (Peoples' Exhibit No. 2 Schedule 4).

Q. WHAT IS YOUR RECOMMENDATION?

A. I am accepting Peoples' methodology regarding its uncollectible accounts expense under present rate revenues of $13,635,520. What I am adjusting is my recommended revenue requirement increase of $7,645,946 multiplied by the Company's 2.20% uncollectible account rate to arrive at a recommended uncollectible account expense of $168,211. My recommendation is shown on my Exhibit DM-33. This is carried over to my Exhibit DM-4 Line 3, O&M Expense.

y. Interest on Customer Deposits

Q. WHAT DID PEOPLES PROPOSE WITH RESPECT TO ITS CUSTOMER DEPOSITS?

A. Peoples proposed an interest balance on its Customer Deposits of $284,603 using a 7% interest rate and based upon an average Customer balance of $4,065,751 as shown on Peoples' Exhibit 4 Schedule 1 page 2 and 32. Peoples did not project any adjustment for

its FTY and its FPFTY periods as the Company has not projected any changes to the Customer Deposits balance. (Peoples's Statement No. 2 page 28).

Q. WHAT IS YOUR RECOMMENDATION?

A. I do not have any adjustments to Peoples' Customer Deposits. I am accepting the Peoples' proposal. My recommendation is shown on my Exhibit DM-34.

3. DEPRECIATION EXPENSE

Q. WHAT HAS PEOPLES PROPOSE WITH RESPECT TO ITS DEPRECIATION AND AMORTIZATION EXPENSE?

A. Peoples proposed a Depreciation and Amortization Expense of $129,015,596 as shown on Peoples's Exhibit 2 Schedule 4 and Peoples's witness Mr. Spanos Exhibit 5C page I-5. Peoples has also proposed a five-year amortization of net salvage accrual of $5,204,001 as shown on Mr. Spanos Exhibit 5C page I-5 and I-10.

Q. DID PEOPLES HAVE DEPRECIATION STUDIES PERFORMED FOR USE IN THIS RATE PROCEEDING?

A. Yes. In Peoples Statement No. 14 page 2, Mr. Spanos stated that depreciation studies were conducted for Peoples as of August 31, 2023, August 31, 2024 and September 30, 2025.

Q. WHAT ARE YOUR RECOMMENDATIONS RELATED TO PEOPLES' DEPRECIATION AND AMORTIZATION EXPENSE?

A. I do not have any adjustments to Peoples' depreciation studies nor any adjustments to Peoples' development of its depreciation and amortization expense, or its net salvage accrual. My adjustments reflect my recommended disallowance of plant additions that I have discussed under my Gas Plant In Service balance section. I multiplied my disallowed plant additions by Peoples (Mr. Spanos) depreciation rates as shown on Mr. Spanos'

Exhibit 5C, and shown on my Exhibit DM-35, by plant category. This produces a disallowance in depreciation expense of $727,743.[11]

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE PEOPLES' NET SALVAGE VALUE OF $5,204,001?

A. No. I am accepting Peoples's proposed five-year amortization of its Net Salvage (2020-2024).

4. TAXES OTHER THAN INCOME

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO TAXES OTHER THAN INCOME TAXES?

A. Peoples proposed total Taxes Other than Income in the amount of $15,353,107 as shown on Peoples' Exhibit No. 2 Schedule No. 4 and Exhibit No. 6 Schedule No. 2. These taxes are comprised of related payroll taxes, property taxes, PUC Assessments, sales and use taxes and other.

Q. HOW WERE THE PAYROLL, PUC ASSESSMENTS, PROPERTY, AND OTHER TAXES COMPUTED?

A. According to People's witness Mr. Hanechak, the payroll related taxes, an experience factor based upon historical test year balances and carried that experience factor over to the FPFTY labor. (Peoples's Statement No. 10, page 2). The PUC Assessments were adjusted from the historical year to reflect the most recent assessment by the PUC using a five-year weighted average increase. Property taxes were increased by using a three-year weighted average of the first eight months of each year. (OCA Set 8-32) (Peoples's Statement No. 10 page 3). Mr. Hanechak stated that Peoples had one adjustment to the other category related to Emissions Fees from the present rates balance of $1,261,000 to the FPFTY period of $1,679,000, a difference of $441,000. (Peoples's Statement No. 10 page 3).

[11] Any differences due to rounding

Q. WHAT ARE YOUR ADJUSTMENTS AND YOUR RECOMMENDED LEVEL OF TAXES OTHER THAN INCOME TAXES?

A. I am accepting Peoples' methodology in the calculation of its Taxes Other Than Income. I am making adjustments to Peoples' FICA, FUTA and SUTA taxes that reflect my recommended Labor balance, which includes my adjustments to the Company's vacancy positions and my adjustments to the Company's STI. I removed costs associated with certain STI compensation, and my incorporation my use of a vacancy rate ratio. In calculating my recommended payroll taxes, I am accepting Peoples' use of the Experience Factor as reflected on Peoples' Exhibit No. 6 Schedule 2.

Q. WHAT IS YOUR OTHER ADJUSTMENT TO TAXES OTHER THAN INCOME?

A. I adjusted the Property Taxes to reflect the changes in my recommended GPIS balance. I used the Company's Property tax level of $1,064,828 to the Company's proposed GPIS balance of $5,587,906,895 to calculate a composite Property tax rate of 0.00032%. My adjustment is as follows:

Payroll Taxes	$6,159,904
Property Taxes	$1,055,458
Assessments	$3,435,715
Other	$4,281,000
Total	$14,932,078

My recommendation is shown on my Exhibit DM-36.

5. INCOME TAXES

Q. WHAT DID PEOPLES CALCULATE WITH RESPECT TO ITS INCOME TAXES?

A. Peoples proposed total Income Taxes of ($59,295,394). This is comprised of Net Federal Income Taxes of ($59,276,394), (Peoples' Exhibit 7 Schedule 8 Attachment 1 Line 42), and State Income Taxes of ($18,714), (Line 28). Peoples included Federal Deferred Income Tax ($59,276,679) (Line 41) and $0 for Federal Current Income Taxes (Line 35). Peoples

made a calculation to deduct interest expense using the interest synchronization method (Rate Base times weighted average cost of debt of 1.98% - Exhibit 2 Schedule 4 page 5), or $84,085,080. This is also shown on Peoples' Exhibit 7 Schedule 8 Attachment 1 Line 2).

Q. WHAT OTHER ADJUSTMENTS DID PEOPLES MAKE TO COMPUTE ITS INCOME TAX EXPENSE?

A. According to Ms. Saball, Peoples incorporated adjustments related to the realization of its Pennsylvania State Net Operating Income Loss carryforward, the effects of the tax treatment of its repairs pursuant to the terms of the Joint Petition for Settlement and Approval of Tax Repairs, (OCA Set 8-19) Sur-credit, (OCA Set 8 – 25 and, 29) and Peoples' catch up adjustment. (OCA Set 8 - 30) and the effects of its tax treatment of repairs under Revenue Procedure 2023-15 (OCA Set-8-20) (Gas Safe Harbor), which was recently issued by the Internal Revenue Service (IRS) on April 14, 2023. Finally, Ms. Saball incorporated the reduction in the Pennsylvania Corporate Net Income tax rate. (Peoples Statement No. 6 page 4). Ms. Saball adjusted Peoples' taxable income (Operating Income less Interest Expense) by taking the permanent adjustments related to Meals and Entertainment, Tax Repairs, and Property Basis Difference which calculated to a balance of ($388,317,736) (Peoples' Exhibit No. 7 Schedule No. 8 Line 10 Column I). Ms. Saball then adjusted deferred adjustments related to deferred adjustments to depreciation, Section 163 interest, Contribution in Aid of Construction, cost of removal, and Property basis difference (book and tax depreciation) to compute a balance of ($41,830,224) (Peoples' Exhibit No. 7 Schedule No. 8 Attachment 1 Line 18, Column I). The total Flow Through adjustments are ($388,317,736) and the total Deferred Adjustments are ($41,830,224) for a total balance of ($430,147,960). (Peoples's Exhibit No. 7 Schedule No. 8 Attachment 1 Line 19, Column I).

Q. WHAT DID MS. SABALL INCLUDE IN THE CALCULATION OF PEOPLES' STATE TAXABLE INCOME?

A. Ms. Saball stated that Peoples regulated operations have produced tax net operating losses (NOLs) for Pennsylvania income tax purposes. As of September 30, 2025, Peoples has projected that it will have a state net operating income loss carryforward (NOLC) of over $2 billion. Under Pennsylvania law, this NOLC can offset state taxable income, subject to

both taxable income and time limitations. (Peoples' Statement No. 6, page 10). Pennsylvania law limits the NOLC offset to a percentage of the state taxable income produced. This limit was 35% in 2018 and 2019, and 40% in 2020 and thereafter. (Peoples' Statement No. 6 page 10). This results in a State Taxable Income before the NOL of ($221,271,410) (Peoples Exhibit No. 7 Schedule No. 8 Attachment 1 Line 23 Column I) and a PA Income Tax Expense of ($18,714) (Peoples' Exhibit No. 7 Schedule No. 8 Attachment 1 Line 28 Column I).

Q. WHAT DID MS. SABALL INCLUDE IN THE CALCULATION OF PEOPLES' FEDERAL TAXABLE INCOME?

A. Ms. Saball stated that State Income Taxes are deductible for Federal Tax purposes. Ms. Saball calculated total Federal Taxable Income of ($219,263,596) (Peoples' Exhibit No. 7 Schedule No. 8 Attachment 1 Line 29 Column I) and multiplied that balance by the 21% Federal Income Tax to calculate a Federal Income Tax balance of ($46,041,425). (People's Exhibit No. 7 Schedule No. 8 Attachment 1 Line 32 Column I). Peoples offset this balance by the current year NOL limit of $46,041,425 (OCA Set 8-24) to produce a Federal Income Tax Expense of $0. (Peoples' Statement No. 6 page 11, and Peoples' Exhibit No. 7 Schedule No. 8 Attachment 1, Line 35 Column I).

Q. WHAT DID MS. SABALL STATE REGARDING PEOPLES' DEFERRED INCOME TAX BALANCE OF ($59,276,679)?

A. Ms. Saball stated that Pennsylvania regulatory policy is generally to charge customers a level of tax expense equal to the taxes the utility expects to pay currently. This is referred to as the flow-through tax accounting. There are exceptions to this policy as it relates to Federal tax benefits of accelerated depreciation (which is subject to the tax normalization rules). (Peoples' Statement No. 6 page 11). Also, due to the Settlement of the Petition for Accounting and Regulatory Approvals and Approval of Related Tariff Sur-credits Associated with Tax Repair Election in Docket No. P-2020-3021191 (the TRS) for Peoples' there is also an exception for the Section 481 (a) adjustment related to the tax repairs change in accounting method. Section 481 (a) adjustment is related to the catch-up adjustment in that Peoples' agreed to amortize the tax effect of that deduction in the manner set forth in the settlement of the TRS. (Peoples' Statement No. 6 page 10). Peoples has also included the flow-through of excess accumulated deferred income taxes (Excess

ADIT). Ms. Saball stated that the Excess ADIT is related to the deferred tax expense which is reduced by the flow-back to customers of a portion of the Excess ADIT resulting from the reduction in federal tax rate from 35% to 21% resulting from the Tax Cuts and Jobs Act of 2017 (TCJA) tax rate reduction. (Peoples's Statement No. 6 page 14). The balance included in the calculation of the Federal Income Tax is ($831,898). (OCA Set 8-26). Peoples's Exhibit No. 7 Schedule 8 Attachment 1 Line 37 Column I).

Q. WHAT DID MS. SABALL STATE REGARDING NOLC REFLECTED IN THE TAX EXPENSE?

A. Ms. Saball stated that the Federal NOLC is estimated to increase to over $1.1 billion in the FPFTY which is due to the increasing level of tax deductions greater than book income. State NOLCs utilized offset 40% of the current year taxable income. The creation and utilization of Federal NOLs does not impact the overall federal income tax expense because deferral of the benefits of the Federal NOL are recorded to deferred income tax expense, and the tax consequence of the creation and utilization of the state NOLC are not reflected in deferred income tax expense. (Peoples' Statement No. 6 page 15).

Q. WHAT IS INCLUDED IN PEOPLES' FEDERAL DEFERRED INCOME TAX BALANCE?

A. Ms. Saball stated that Peoples' total projected deferred income tax expense at the FPFTY period is $59,276,678. (Peoples' Statement No. 6 page 15) (Peoples's Exhibit No. 7 Schedule No. 8 Attachment 1 Line3 36-41 Column I). Peoples calculated total Income Taxes of $59,295,304. The components of this balance are as follows:

Federal Income Tax Deferred at 21%	$ 8,544,081
Amortization of Excess ADIT	($ 831,898)
Current Year Federal NOL	($ 46,041,425)
Amortization of 481 (a) Tax Repairs	($20,947,437)
Total Deferred FIT	($59,276,680
PA Deferred Taxes	($ 18,714)
Total	($59,295,3944)

Q. WHAT ARE YOUR RECOMMENDED FEDERAL INCOME TAXES AND RECOMMENDED STATE INCOME TAXES?

A. I reviewed the methodology that Peoples used to compute its Federal and State Income Taxes along with the adjustments related to its Schedule M, Deferred Adjustments, PA NOL Utilizations, Federal NOL, and the components that are included in the Federal Deferred Income Taxes and I accept Peoples' methodology. I also reviewed the Peoples' EDIT flow-back related to the TCJA of 2017. I have no adjustments to Peoples' methodology that was used to develop its Federal and State Income Tax calculation. My adjustments reflect my recommended flow through adjustments related to my adjustments to Peoples' Rate Base balances, and Operating income adjustments. Using Peoples' methodology and the excel workpapers as shown on Peoples' Exhibit No. 7, Schedule No. 8 Attachment 1 and Attachment 2, and the Income Tax rate of 21% and a PA State Income Tax Rate (SIT) of 8.09%, (OCA Set 8-31) I am making adjustments that are related to my recommended Operating Income as follows:

Federal Income Tax Expense - Current	$0
PA State Income Tax Expense - Current	($18,714)
Deferred Income Taxe Expense - Current	($91,325,720)
Total Income Tax Expense - Current	($91,344,434)

Q. DID YOU MAKE ANY ADJUSTMENTS TO PEOPLES' SCHEDULE M ITEMS AND DEFERRED ADJUSTMENTS?

No, I am accepting the Company's adjustments.

Q. WHAT IS YOUR ADJUSTMENT RELATED TO PEOPLES' INTEREST EXPENSE CALCULATION?

A. Using my recommended Rate Base Balance of $4,207,419,461 and using OCA witness Rothschild's recommended cost of debt of 2.185%, my recommended Interest Expense is $91,932,115.

Q. WHAT IS YOUR TOTAL INCOME TAX EXPENSE?

A. My total Income Tax Expense is ($91,344,434) which is $32,049,042 lower than Peoples' ($59,295,394), which is shown on my Exhibit DM-37.

E. ACT 40 REQUIREMENTS (Act 40 of 2016)

Q. WHAT ARE THE ACT 40 REQUIREMENTS?

A. Act 40 took effect on August 11, 2016, which among other things, eliminated the consolidated tax savings adjustment. Prior to Act 40, the Company would have been required to adjust its revenue increase request downward to reflect tax savings associated with filing taxes as part of a parent or holding company. This practice recognized that the Company's ratepayers only paid through rates those taxes that the Company actually paid. Act 40 requires the Company to continue its performance of the consolidated tax savings calculation and provide that consolidated tax savings differential as part of its rate case filing. In part, Act 40 states:

> If an expense or investment is allowed to be included in a public utility's rates for ratemaking purposes, the related income tax deductions and credits shall also be included in the computation of current or deferred income tax expense to reduce rates. If an expense or investment is not allowed to be included in a public utility's rates, the related income tax deductions and credits, including tax losses of the public utility's parent or affiliated companies, shall not be included in the computation of income tax expense to reduce rates. The deferred income taxes used to determine the rate base of a public utility for ratemaking purposes shall be based solely on the tax deductions and credits received by the public utility and shall not include any deductions or credits generated by the expenses or investments of a public utility's parent or any affiliated entity. The income tax expense shall be computed using the statutory income tax rates.

Act 40 further states:

> REVENUE USE- If a differential accrues to a public utility resulting from applying the ratemaking methods employed by the commission prior to the effective date of subsection (a) for ratemaking purposes, the differential shall be used as follows:

(1) Fifty percent to support reliability or infrastructure related to the rate-base eligible capital investment as determined by the commission; and
(2) Fifty percent for general corporate purposes.

As a result, ratepayers now pay taxes in excess of those taxes that the Company actually pays, and the revenue use requirement specifies how those additional revenues are to be applied. Section 1301.1 (b) requires the Company to use 50% of that differential for reliability or infrastructure related capital investment and the remaining 50% for general corporate purposes.

Q. HAS PEOPLES CALCULATED A CONSOLIDATED TAX EXPENSE ADJUSTMENT (CTA)?

A. According to Ms. Saball, Peoples has calculated a CTA, but not for the purposes of flowing through as a ratemaking adjustment to federal income tax expense (Peoples' Statement No. 6 page 22). Ms. Saball stated that with the passage of Act 40, a utility's tax expense for regulatory purposes is calculated on a stand – alone basis and is not subsidized by its affiliates. (Peoples Statement No. 6 page 22).

Q. HAS PEOPLES SATISFIED THE FIRST REQUIREMENT UNDER ACT 40 – 50% OF THE DIFFERENTIAL SPENT ON INFRASTRUCTURE REPLACEMENT?

A. It appears so. According to Ms. Saball, under the FPFTY pipe replacement spending under the LTIIP program will be $508 million. Section 1301.1 (b) requires that $36.7 million (50% of $73 million consolidated tax adjustment) to be spent on infrastructure replacement. For the FPFTY, Peoples will spend 14 times the amount required. (Peoples' Statement No. 6 page 23).

Q. WHAT IS PEOPLES' PROPOSAL FOR THE OTHER 50% OF THE DIFFERENTIAL, WHICH SECTION 1301.1(b)(2) STATES MUST BE USED FOR "GENERAL CORPORATE PURPOSES"?

A. Peoples does not appear to propose a specific treatment for the other 50% of the differential, which Section 1301.1(b)(2) states must be used for "general corporate purposes."

Q. WHAT DO YOU CONCLUDE FROM PEOPLES' FAILURE TO SPECIFY A USE FOR THE 50% OF THE DIFFERENTIAL THAT ACT 40 REQUIRES TO BE USED FOR "GENERAL CORPORATE PURPOSES"?

A. Peoples has identified no specific ways in which that 50% of the differential would be used in any way to benefit Pennsylvania ratepayers. One might conclude from this that Peoples therefore basically intends to use that money for the benefit of its stockholders, and not apply it in any manner to provide a quantifiable ratepayer benefit or in a manner that directly benefits service to Pennsylvania customers.

Q. WHAT DOES "GENERAL CORPORATE PURPOSES" AS USED IN ACT 40 MEAN?

A. Because Peoples is a regulated utility in Pennsylvania, its "general corporate purpose" is to provide regulated utility service in the Commonwealth of Pennsylvania. While the term "general corporate purposes" is rather vague, consistent with that general corporate purpose of regulated utilities, general corporate purposes would include uses for such "differential" revenues as supporting capital expenditures necessary to execute utility business plans, paying off debt, funding construction projects, paying dividends, paying for maintenance and operating expenses, investing in utility plant in Pennsylvania, and providing a source of working capital. Many of these uses for "general corporate purposes" would have a quantifiable benefit to Pennsylvania ratepayers. As I read the entirety of Act 40, the "revenue use differential" addressed in the Act for "general corporate purposes" should mean public utility purposes and uses that result in having some identifiable and quantifiable benefit to Pennsylvania and Peoples ratepayers, rather than just resulting in a windfall of $2.7 million annually (based on the new 21 percent federal income tax rate) to Peoples' shareholders or affiliates.

Q. WHAT SPECIFIC RECOMMENDATION DO YOU HAVE IN THE CURRENT PEOPLES RATE CASE FOR APPLYING THE 50% OF THE "REVENUE USE" DIFFERENTIAL THAT ACT 40 REQUIRES TO BE FOR "GENERAL CORPORATE PURPOSES"?

A. I have reflected the 50% differential for general corporate purposes as a source of non-investor-supplied funding for utility working capital. This is a balance of $27,460 and shown on my Exhibit DM-3.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

APPENDIX A

–

RESUME OF DANTE MUGRACE

DANTE MUGRACE

Education

Master Business Administration, MBA Strategic Management, Pace University, Lubin School of Business, New York, NY, 2010

Master Public Administration, MPA, Kean University, Union, NJ, 2001

Bachelor of Science, BS. Accounting, St. Peter's University, Jersey City, NJ, 1983

Position

Senior Consultant – PCMG and Associates	2014 – present
Senior Consultant – Snavely King Majoros and Associates	2013 – 2014
Independent Consultant	2012 – 2013
Bureau Chief/Administrative Analyst/Accountant – New Jersey Board of Public Utilities	1983 – 2011

Professional Experience

Mr. Mugrace has 35 years' experience in all aspects of regulatory accounting and policy including processing, analyzing and evaluating utility rate case petitions before Public Service Commissions. Mr. Mugrace examines and evaluates rate filings, contracts, agreements and rate matters regarding utility operations and provides recommendations as to best course of action. Additionally, Mr. Mugrace analyzes and reviews utility regulatory matters and sets forth recommendations for resolution of issues, calculates total revenue requirement needed to cover operating expenses and rate of return; researches and evaluates regulatory utility matters to assess impact on various classes of customers, regarding rates, service, compliance and cost of service provisions, as well as annual true-up and tracking mechanisms.

Prior to undertaking consulting assignments, Mr. Mugrace was the Bureau Chief Utility Rate Manager for the New Jersey Board of Public Utilities, in which role he managed and assigned tasks to a staff of 12 professionals and supervisory personal in the daily administrative, financial and managerial functions of the Division. Mr. Mugrace's primary duties were to determine whether the utility had sufficient revenues to cover its operating expenses and earn a return on its plant investment and to ensure that the utility provided safe, reliable and continuing utility service to its customers. Mr. Mugrace set rates and charges for utility companies, which had revenues of up to $500 million, and ensured that the revenue requirement provided for recovery of all operating expenses, return on investment and depreciation. Mr. Mugrace was also responsible for reviewing and verifying that the companies' property, plant and equipment (up to $2.5 billion) were used and useful in providing service to its customers. Mr. Mugrace coordinated and met with the New Jersey State Department of Environmental Protection to

determine whether water and wastewater utilities were complying with state regulations and were adhering to any regulatory agency directives or orders. Mr. Mugrace developed ways to minimize the rising costs of water utility services by investigating alternative rate structures, analyzing engineering mechanisms and techniques, looking into the feasibility of mergers and acquisitions within the water industry and reviewing financing, and rate alternatives to minimize the impact on ratepayers. Mr. Mugrace was responsible for ensuring that the rate-case process adhered the statutory timeframe for preparing, reviewing and recommending findings to the Board Commissioners on financial operations, costs, revenues and operating expenses, prior to the litigation proceedings. Mr. Mugrace also examined alternative rate recovery mechanisms and clauses, phase-ins of revenue requirements, deferral mechanisms and pass-through of rate charges. Mr. Mugrace assumed the role of Director during transition periods and Administrative changes. Finally, Mr. Mugrace conducted the recruitment and hiring of employees for placement within the Division and the Board.

COMPANY RESPONSES TO INTERROGATORIES

EXHIBIT DM-39

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VII-002

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Please provide all Inflation Related Factors and Consumer Price Indices that are included in the Company's development of its revenue requirement increase of $156,026,122. (O&M Expenses and Capital Expenditures). What is the dollar value (revenue requirement impact) with respect to the Company's inclusion of all of its Inflation Related Factors and Consumer Price Indices?

Answer: Please see attachment which provides all Inflation Related Factors and Consumer Price Indices that are included in the Company's development of its revenue requirement increase of $156,026,122 for both O&M Expenses and Capital Expenditures.

Submit Date: 2/16/2024

OCA - Set 7 - #2

O&M Expenses

There were only two categories whereby the CPI rate was used. Below are the amounts requested:

	FTY	FPFTY	
Injuries & Damages	73,935	76,301	Exhibit 4, Schedule 1, page 18 of 33, Lines 9 & 12
Advertising	42,784	44,153	Exhibit 4, Schedule 1, page 23 of 33, Lines 5 & 8
Total	**116,719**	**120,454**	

Capital Expenditures

In order to project capital expenditures in the FTY and FPFTY the Company utilized the following methodologies:

	2024	2025	2026	2027	2028	
LTIIP, overall cost per m	2.31	2.4	2.5	2.62	2.82	
GP, increase factor	4.00%	3.50%	3.00%	3.00%	3.00%	
MLX increase factor	-5.00%	3.50%	3.00%	3.00%	3.00%	new starting point of 95% of actual

The methodologies for the categories:

LTIIP - Used the run rates (cost per mile) developed from (i) the portfolio of work we have for 2024 and (ii) a regression line based on 2018-2022 actuals. Please note because these run rates are based in part on actuals they reflect changes based a combination of factors including, but not limited to, portfolio, damage prevention, restoration requirements, corrosion faults, leak repairs, bid price, contractor services renewals, competitive bids, and general inflation. Thus the rate of change in LTIIP is higher than the change rates used in the other programs.

GP - The Company has experienced an average increase in cost per mile of about 8% from 2019 through 2023. To be conservative the company utilized 4% in 2024 and then reduced it to 3.5% in 2025 and 3% thereafter

MLX - The Company has experienced an average increase in cost per mile of about 15% from 2020 through 2023. To be conservative the company utilities 95% of the original projection in 2024 and then an increase rate of 3.5% in 2025 and 3% thereafter

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXI-001

Witness: Becker, Paul **Title:** Vice President Construction &Engineering

Question: Reference Peoples' Response to OCA Set 18, Question 8. Please answer the following question without limiting the response to the confines of the $305,206.10 amount that Peoples identified in each of its responses to OCA Set 18, Question 8.

Reference the Commission Order entered in the matter captioned Pennsylvania Public Utility Commission, Bureau of Investigation and Enforcement v. Peoples Natural Gas Company LLC; M-2023-3024990 on February 1, 2024. Specifically, reference the Supplemental Record response identified on pages 11-12 of the Order which claim that "The costs of replacing the private property damage by the incident in Robinson on April 29, 2020 totaled $305,206.10." Please provide the following information, noting that this question seeks information about all incident costs and is not intended to be limited to the $305,206.10 identified in the Order:

a. Is Peoples Natural Gas Company LLC making a claim in this base rate case for any distribution line replacement necessary from the incident in Robinson on April 20, 2020? If so, identify the amount claimed and the basis for including the claim in this case. Note that for purposes of this question, "a claim" is not intended to be limited to the $305,206.10 identified in the Commission's Order, but it is intended to encompass all claims arising from the incident in Robinson on April 20, 2020.

b. Identify, by category, cost, and basis, any claims that Peoples Natural Gas Company, LLC is making in this base rate case related to the repair and/or replacement of any public and private property that resulted from the incident in Robinson on April 29, 2020. Note that for purposes of this question, "claims" is not intended to be limited to the $305,206.10 identified in the Commission's Order, but it is intended to encompass all claims related to the repair and/or replacement of any public and private property that resulted from the incident in Robinson on April 29, 2020.

c. Can Peoples confirm that all costs related to the Robinson incident on April 29, 2020 will be covered by insurance and/or through shareholder funding? Note that for purposes of this question, "costs" are not intended to be limited to the $305,206.10 identified in the Commission's Order, but are intended to encompass all costs related to the repair and/or replacement of any public and private property that resulted from the incident in Robinson on April 29, 2020.

Answer: a. As stated in the Joint Petition at M-2023-3024990 at page 7, "the Company replaced approximately 4,552 feet of steel pipe and 133 service lines." The total cost for the replacement

of those facilities was $1,462,406.60. The facilities were considered target assets eligible for replacement as part of the Company's LTIIP and as such were capitalized into rate base, thus they are included in the revenue requirement in this proceeding.

b. The Company is not making any claim(s) related to the repair and/or replacement of any public or private property that resulted from the incident in Robinson on April 29, 2020 in this base rate case other than those assets provided in the response to subpart a.

c. No. There were costs related to the Robinson incident that were not covered by insurance and/or through shareholder funding namely those identified in the response to subpart a.

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-024

Witness: Saball, Christine **Title:** Vice President Tax

Question: Refer to Peoples Statement No. 6 page 10. Please provide a brief explanation and development of the Company's Net Operating Loss carryforward of over $2 billion. What resulted in this carry-forward balance of over $2 billion? How many years has the Company proposing to carry-forward this balance for ratemaking purposes?

Answer: The Company's Net Operating Loss ("NOL") carryforwards for both state and federal income tax purposes are the results of tax greater than book timing differences. Increased capital spend has resulted in a greater level of tax depreciation and tax repairs. The carry-forward balance of the Company's gross state NOL (not tax effected) of over $2 billion is due to the Company's inability to monetize the NOL as a result of the 40% taxable income limitation imposed by currently enacted laws and the ongoing level of tax greater than book timing deductions.

The Company proposes to include this balance in ratemaking purposes as long as it has not been monetized, however as discussed in Peoples Statement No. 6, pages 20-21, there is a 20 year carryforward limitation for the use of the State NOL under currently enacted laws which could create a valuation allowance. In the event that the Company is unable to monetize the entire NOL carryforward, the Company will need to defer for recovery amounts that have already been refunded to customers but that will never be monetized by the Company.

Question Number: OCA-VIII-019

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Refer to Peoples Statement No. 2 page 36. What is the Tax Repair Surcharge Rider the Company is proposing to include in this proceeding? Please provide the calculation showing the development of this Surcharge Rider.

Answer: The proposed Tax Repair Surcharge for the Peoples Natural Gas Division is based on the surcharge the Company is currently using in our tariff. This surcharge was calculated and filed with the PUC on March 21, 2023. The surcharge % is applied to the base rate customer and delivery charges to determine the amount per Mcf that is applied to the customer bill. The calculation for the surcharge is attached.

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-025

Witness: Saball, Christine **Title:** Vice President Tax

Question: Refer to Peoples Statement No. 6 page 14. Please show where each of the following balances are shown and calculated in the Company's Exhibit No. 7 Schedule 8 (or if on another Exhibit/Schedule):

a) Sur-credit calculation of $407.2 million

b) Federal Deduction of $390.9 million

Answer: Items a) and b) above both refer to the deduction for the 481(a) catch-up adjustment. The higher amount of $407.2 million is the State Deduction. The calculation of the Federal and State deductions are included in the attachment to OCA Data Request Set 8, Question #19. The amortization of the 481(a) catch-up adjustment amount is reflected in the Company's Exhibit No. 7 Schedule 8 Attachment 1 page 2 of 16 line 39 as a reduction to tax expense in this case. The offset to revenue is included in Exhibit No. 3. In addition, the Company has included the unamortized balance of the grossed-up Regulatory Liability for the 481(a) adjustment along with the related ADIT-tax gross-up in Schedule 8 Attachment 1 page 3 of 16 lines 42, 54 and 66 as a net reduction to rate base.

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-027

Witness: Saball, Christine **Title:** Vice President Tax

Question: Refer to Company Statement No. 6 page 16. The Company stated that the Rate Base ADIT balance is calculated at $47,366,959. Is this balance reflected in the Company's Rate Base (Exhibit No. 8 Schedule No. 2 page 3 of 5 (Combined)? Company Exhibit No. 8 Schedule No. 2 page 3 of 5 shows Deferred Income Taxes and EADIT at $3,232,844 under the FPFTY. Please reconcile these two balances.

Answer: The $47,366,959 represents the balance of ADIT on a combined basis of the normalized rate base timing differences at the current statutory tax rates. There are other tax balances in rate base that are discussed in Company Statement No. 6, pages 16 to 20. The $3,232,844 as shown on Company Exhibit No. 8, Schedule No. 2, page 3 of 5 is the total of all the tax balances in rate base. This agrees to the amount on Company Exhibit No. 7, Schedule 8, page 3 of 16, line 67.

Docket Number: R-2023-3044549

Question Number: OCA-XV-005

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference the revised and omitted exhibits filing that Peoples submitted in this case on February 16, 2024. Please provide the following information:

a. Please confirm that Line 4 of Exhibit No. 4, Schedule No. 1, page 2 is not impacted by Peoples' revision to Exh. 4, Sch. 1, pg. 11. If Exhibit No. 4, Schedule No. 1, page 2 is impacted, please provide an updated version of this page.

b. Please confirm that Peoples' revision to Exh. 4, Sch. 22, pgs. 1-4 does not impact the revenue requirement of the History Test Year, Future Test Year, or Fully Projected Future Test Year provided by Peoples in this proceeding.

c. If any corrections are carried over to Exhibit 4, Schedule 1, Peoples should update that schedule as well.

d. Please update Exhibit No. 4 Schedule No. 1 page 2 of 33, to update its request for Post-Retirement Benefits other than Pension (Exhibit No. 4 Schedule No. 1 page 11).

e. Indicate whether any of the corrections and omissions have a revenue requirement impact in this case from the as-filed position. If so, identify the impact(s) and specify how each impact is calculated.

Answer: a. The revision to Exh. 4, Sch. 1, pg. 11 does impact Exhibit No. 1, page 2. Peoples will file the revised Exhibit No. 4, Schedule 1 under separate cover.

b. The revision to Exh. 4, Sch. 22, pgs. 1-4 does not impact the revenue requirement.

c. Peoples will file the revised Exhibit No. 4, Schedule 1 under separate cover.

d. Peoples will file the revised Exhibit No. 4, Schedule 1 under separate cover.

e. The revised Exhibit No. 4, Schedule 1 to be filed under separate cover will outline all changes to the revenue requirement.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-I-004

Witness: Huwar, Michael **Title:** President Peoples

Question: Reference Peoples' Statement No. 1, the Direct Testimony of Michael Huwar, pp. 14-15 whereby Mr. Huwar poses and answers the question "Does Anyone Else Use a WNA Mechanism?" Provide the following information:

a. In Mr. Huwar's identification of PGW, Columbia, National Fuel, and UGI as Pennsylvania gas utilities with WNA mechanisms, did Mr. Huwar perform any research of whether any of the named entities' WNA mechanisms were operating on only a pilot basis? If so, provide any results.

b. In Mr. Huwar's identification of PGW, Columbia, National Fuel, and UGI as Pennsylvania gas utilities with WNA mechanisms, did Mr. Huwar perform any research of whether any of the named entities' WNA mechanisms relied upon deadbands to limit application of the WNA? If so, provide any results.

c. In Mr. Huwar's identification of PGW, Columbia, National Fuel, and UGI as Pennsylvania gas utilities with WNA mechanisms, did Mr. Huwar perform any research of whether any of the named entities' WNA mechanisms excluded certain months from the formula to limit rate volatility? If so, provide any results.

Answer:

a. Yes, Mr. Huwar is aware that Columbia is on its second, 5-year pilot for its WNA program. Mr. Huwar is also aware that UGI's tariff notes that its WNA is a pilot. Mr. Huwar is unaware of whether PGW or NFG have WNAs that are considered "pilots" as their tariffs do not state it.

b. Yes, Mr. Huwar is aware that Columbia, NFG and UGI currently have 3% deadbands for their respective WNA programs, as described in their tariffs. PGW's tariff states that its deadband is 1%.

c. Yes, Mr. Huwar is aware that according to their tariffs, the WNAs of UGI and NFG are in place for October through May. Columbia's WNA currently spans the months of November through May. PGW's tariff states that its WNA is in effect from October through May (except for 2021-2022 which excluded May).

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-I-006

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference Peoples' Statement No. 3, the Direct Testimony of Carol Scanlon, p. 17 whereby Ms. Scanlon addresses how the WNA will be reflected on customers' bills. Please indicate whether the WNA amount will be reflected as a separate line item on the customers' bills and provide a sample bill for both a residential customer and a residential CAP customer that reflects Peoples' proposed bill treatment of the WNA.

Answer: The WNA amount would not be reflected as a separate line item on the bill, rather it would be included with the base delivery (distribution) charge component and shown in the total charge amount displayed as the delivery line item on the bill. Since the WNA mechanism effectively normalizes the delivery revenue, this will aid the customer in seeing charges on their bill that are more aligned with the weather most recently experienced. Refer to Attachment A for a sample residential customer bill. The delivery line item that will include the WNA amount is designated with a red box.

Residential CAP customer bills do not display the specific current charge types that a residential bill does. The WNA amount would be included in the "Actual Usage Bill" amount shown on a residential CAP customer's bill. Refer to Attachment B for a sample residential CAP customer bill. The actual usage bill amount line item that will include the WNA amount is designated with a red box. The Company notes that a CAP customer's payment is based upon a percentage of income. This would not change as a result of the WNA charge.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VII-031

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Refer to Company Exhibit No. 4 Schedule 1 (page 10 and 11). (Pension Adjustment and Post-Retirement Benefits other than Pension).

a) Please provide a schedule breaking down the components and calculations of Post-Retirement Benefits Other than Pensions Costs for the Per Books balance of $1,229,997, the adjustment of $1,634,119, and the adjustment of ($450,075).

b) Please provide a schedule breaking down the components and calculations of the Pension costs for the Per Books balance of $4,497,434, and the breakdown of the net contributions of $5,670,000 (2022-2023 Contributions).

c) Please provide a schedule and a breakdown of Pension Costs and Post-Retirement Benefits Other than Pensions for the past five-year period (2018-2022).

Answer: A. The per books balance is the difference between the expense allowed by the PUC in docket R-2010-2201702 and the gross actuarial expense ($1,471,654 - $75,752) less capitalization of ($165,905). The PBOB adjustment of $1,634,119 represents the prior 2 year average expense amortization. The adjustment of ($450,075) has been restated on I&E RE-18 to $26,377 representing the difference between the FTY and HTY Net Expense ($1,256,374 - $1,229,997).

B. The pension funding amount for the Essential Utilities, Inc. Retirement Income Plan is determined each year based on the recommendation of management and subject to approval by Essential's Retirement and Employee Benefits Committee. The funding amount will be an amount greater than or equal to the minimum required contribution and less than or equal to the maximum tax-deductible contribution.

C. Please refer to Attachment A.

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VII-032

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Refer to Company Exhibit 4 Schedule 1 page 12 (Benefits Compensation Adjustment). Please provide the following information:

a) a detailed breakdown and description of the Per Books balance of $16,409,732 related to Medical, Dental, Vision, Life Insurance, Long-Term Disability Insurance, 401K plans and other such programs, the adjustment to arrive at the $874,037 balance;

b) the adjustment to arrive at the $2,277,050 balance (FTY);

c) the adjustment to arrive at the $1,423,904 balance (FPFTY).

d) please also reconcile the balance of $16,409,732 to the balance shown on Company Exhibit No. 4 Schedule 1 of $16,406,605; and

e) please identify all third party consultants that provided information that was relied upon to support these adjustments.

Answer: A. Please refer to I&E RE-20 for a detail break out of the per books balance and Attachment A for the adjustment calculation.

B & C. Please see Attachment B.

D. The balance shown on Exhibit No. 4 Schedule 1 of $16,406,605 is correct and the $16,409,732 on page 12 is overstated by $3,127.

E. Please refer to I&E RE-22 for third party consultants that provided information used to support the adjustments.

Question: Refer to Company Exhibit No. 4 Schedule 1 page 27 of 33. (Debt Issuance Costs). Please provide the following information:

a) Do these Debt Issuance Costs require Commission approval? Please explain;

b) Please provide a schedule that shows the development and calculation of the $404,371 balance;

c) What is the Company's rationale to include these costs in rates?

Answer: a) These costs are associated with the Company's Intercompany Demand Note ("Revolver") with its parent company, PNG Companies LLC. Such demand note is approved by the PUC.

b) Please refer to the attachment.

c) These are valid costs associated with the Company's use of the above mentioned Revolver and are not recovered via interest expense. As such, it is necessary to claim these costs in O&M.

Docket Number: R-2023-3044549

Question Number: OCA-VIII-020

Witness: Saball, Christine **Title:** Vice President Tax

Question: Refer to Peoples Statement No. 2 page 35. Please show where the Company has calculated and reflected its estimated current repair deduction (Catch-up adjustments) in the Company's filing (Exhibit No. and Schedule No.).

Answer: The current and ongoing tax repairs deductions are reflected in Exhibit No. 7 Schedule 8 Attachment 1 page 2 of 16 line 7. The amount is calculated based on an estimated percentage of capital spend qualifying for tax repairs. As discussed in Company Statement No. 2 beginning on page 31, the catch-up adjustments (or 481(a) adjustment) from the calculations prior to the new IRS rules (gas safe harbor) are being returned to customers of the Peoples Natural Gas Division through the Tax Repair Surcredit and the Company is proposing to refund the additional tax benefits resulting from the gas safe harbor rules, etc. through the Tax Repair Surcredit pursuant to the terms of the Settlement at Docket No. P-2020-3021191. Please refer to the response to OCA-VIII-19 for the detail of the revenue credit.

Question Number: OCA-VIII-022

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Refer to Company Statement No. 3 page 16 and Company Exhibit CAS-1. Please provide the rate and revenue impact on a residential customer using the Company's current 20-year average weather normalization period (Statement No. 3 page 5) and the Company's proposed weather normalization adjustment. Please provide a side-by-side comparison showing all calculations. Please provide all calculations in a life Microsoft Excel Spreadsheet worksheet format.

Answer: Based upon the Company's interpretation of this request, refer to the attachment. Page 1 of the attachment displays the rate case proposed HDDs spread by month compared to the 20-year average HDDs spread by month.

Pages 2 and 3 of the attachment show a side-by-side calculation, using Exhibit CAS-1, for a residential customer in the month of February and applying each of the HDD methodologies presented on page 1 of the attachment. Note that the actual HDD's (Line No. 2 of the WNA calculation) and the customer's monthly and baseload consumption (Line Nos. 4 and 5) are assumptions for purposes of this example.

Page 2 shows a side-by-side WNA calculation that compares using the rate case proposed HDD's as "normal" to using the 20-year average HDDs as "normal" in a case where weather is colder than normal.

Page 3 shows a side-by-side WNA calculation that compares using the rate case proposed HDD's as "normal" to using the 20-year average HDDs as "normal" in a case where weather is warmer than normal.

Witness: Saball, Christine **Title:** Vice President Tax

Question: Refer to Peoples Statement No. 6 page 10. Please provide a brief explanation and development of the Company's Net Operating Loss carryforward of over $2 billion. What resulted in this carry-forward balance of over $2 billion? How many years has the Company proposing to carry-forward this balance for ratemaking purposes?

Answer: The Company's Net Operating Loss ("NOL") carryforwards for both state and federal income tax purposes are the results of tax greater than book timing differences. Increased capital spend has resulted in a greater level of tax depreciation and tax repairs. The carry-forward balance of the Company's gross state NOL (not tax effected) of over $2 billion is due to the Company's inability to monetize the NOL as a result of the 40% taxable income limitation imposed by currently enacted laws and the ongoing level of tax greater than book timing deductions.

The Company proposes to include this balance in ratemaking purposes as long as it has not been monetized, however as discussed in Peoples Statement No. 6, pages 20-21, there is a 20 year carryforward limitation for the use of the State NOL under currently enacted laws which could create a valuation allowance. In the event that the Company is unable to monetize the entire NOL carryforward, the Company will need to defer for recovery amounts that have already been refunded to customers but that will never be monetized by the Company.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-026

Witness: Saball, Christine **Title:** Vice President Tax

Question: Please provide the calculation and development of the Company's proposed Excess ADIT of $1,757,485 (HTY) shown on Company Exhibit No. 7 Schedule No. 8 line 37 and for the FTY and the FPFTY periods.

Answer: Please refer to the attachment.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-029

Witness: Saball, Christine **Title:** Vice President Tax

Question: Refer to Company Statement No. 6 page 30. Please provide the calculation in the development of the Rider Tax Repair Sur-credit of $27.845 million. Please identify all Exhibits and Schedules in which this Rider Tax Repair Sur-credit is shown.

Answer: Please refer to the response to OCA-VIII-19 for the detail of the revenue credit. The difference between the ~$29M provided in OCA-VIII-19 and the $27.8M referenced in the question is a result of different gross up factors to reflect the phase down of the Pennsylvania corporate net income tax. The surcredit is included in Exhibit 7, Schedule 8 Attachment 1. The revenue reduction is included in Line 1 and the reduction to tax expense is reflected on Line 39. It is included as a credit to revenue in Exhibit No. 3.

Submit Date: 2/19/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-030

Witness: Saball, Christine **Title:** Vice President Tax

Question: Refer to Company Statement No. 6 page 36. Please show where the Company reflected the one-time catch up adjustment of $36,461,137 in its filing (Exhibit No. and Schedule No.). Please provide the calculation of this one-time adjustment.

Answer: The $36,461,137 one-time catch adjustment is not reflected in this base rate filing. As explained in Company Statement No. 2 page 35, the Company is proposing to include this amount in the Tax Repairs Surcredit Rider. See Attachment for support for the calculation.

Submit Date: 2/16/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-032

Witness: Hanechak, Rudolph **Title:** Financial Analysis & Budget Manager

Question: Refer to Company Exhibit No. 6 Schedule 2 page 2. Please provide the tax rates that were used to develop the FICA, the Unemployment Tax, the Property Tax, the PUC assessment, the Sales and Use Tax and Other Category. Please provide the HTY, the FTY and for the FPFTY periods.

Answer: A. Please refer to Exhibit No. 6 Schedule 2 page 3 for a schedule of Payroll tax rates.

B. An effective rate was not used to develop the per books amount for the Property Tax. The per books amount represents the actual expense incurred for the twelve months ended August 31, 2023. The FTY and FPFTY were developed using an annual weighted average increase of 3.04%.

C. An effective rate was not used to develop the per books amount for the PUC assessment. The per books amount represents the actual expense recorded. Rather than using an estimated effective rate, the 2023 Pro-Forma period adjusts the per book amounts to the most recent PUC invoice. The most recent PUC Assessment invoice was $3,109,691. The FTY and FPFTY include an annual weighted average increase of 5.1%.

D. The Per Books sales and use tax, as shown on Exhibit No. 6 is the actual sales and use tax expense incurred for the twelve months ended August 31, 2023. This amount was rounded and held constant for all future periods presented in the case.

E. An effective rate was not used to develop the per books amount for the Other Taxes. The per books amount represents the actual expense incurred for the twelve months ended August 31, 2023. The FTY and FPFTY consists of the estimated emissions fees subject to the Inflation Reduction Act of 2022. For further information on these Emissions Fees please refer to the Statement No. 4 – the Direct Testimony of Edward Palombo.

Submit Date: 2/16/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VIII-037

Witness: Scanlon, Carol **Title:** Rates Manager

Question: What effect does the Company's proposed WNA have on a residential customer with respect to the current 20-Year average regarding rates? Please provide the calculation to show the difference in revenues between the proposed WNA and the current 20-Year average.

Answer: Based upon the Company's interpretation of this request, refer to the response to OCA-VIII-22 for a side-by-side example of the WNA calculation using the rate case proposed HDD's as "normal" to using the 20-year average HDDs as "normal" for an individual residential customer.

Refer to the response to CAUSE-I-16 for the impact to a typical residential customer's revenue for each year since 2019 if Peoples proposed WNA had been in effect. The response to CAUSE-I-16 is derived using the assumption that the rate case proposed HDD's of 5,341 is considered normal weather for each of those years.

Submit Date: 2/16/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OSBA-I-012

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference Peoples Statement No. 3, Weather Normalization Mechanism

a. Please provide the proposed normal heating degree days for each billing cycle that applies to Residential, SGS and MGS customers in the FPFTY, with supporting calculations for the derivation of the normal value in MS Excel electronic format.

b. Please indicate how the Company proposes to address the circumstances that arose in the PGW WNA debacle (see Docket Nos. R-2022-3034229, P-2022-3034264), namely a billing period with unusually low actual HDDs and heating load adjustment multiples that result in extreme billing adjustments, particularly for customers with unusually high non-heating loads.

c. Please explain why July/August is used to derive non-heating base loads rather than a statistical approach. Please also indicate whether cooking and hot water loads in July and August are affected by vacations.

d. Please explain how non-heating base loads will be derived for customers without billing information for the previous summer months.

e. Please identify any automatic checks proposed by the Company to flag unusual billing events that may be magnified by the WNA, such as a billing period with an unusually high heating load per degree day compared to historic norms.

f. Please confirm that the Company's proposed mechanism relies on the assumption that heating load is linearly related to HDDs. If you cannot confirm, please explain your response.

Answer: a. Refer to the attachment. On the "Daily AHDD and NHDD Calc" tab, refer to the tables in columns BT through CF, rows 15-91 for the tables of NHDD by month and day for Leap Years versus Non-Leap Years. These are the NHDD that will be used for the WNA mechanism. Peoples would add the HDD's from these tables that coincide with the billing days in the customer's bill cycle to calculate the NHHD.

In order to derive the daily NHDD's as displayed in the two tables, Peoples calculated the average degree days per day using the last 10 years of AHDD data as the basis. Next, Peoples applied this average to the monthly amount of HDDs as proposed in this case, and then took that result times the annual HDDs proposed as normal in this case. For example, January 1 of a

non leap year = (Jan monthly spread x Daily % of 10yr avg of Jan 1st % of all January) x Annual NHDD. Refer to the attachment labeled (a)-2 for an illustrative example of this.

b. Peoples anticipates that the automatic checks identified in subpart (e) of this response will capture outliers that could result in an extreme billing adjustment.

c. Refer to the attachment. Peoples analyzed monthly HDD data for the ten (10) year period of 2013-2022 to determine months with near zero HDDs. July and August have average HDD of 1.40 and 3.30, respectively. A normal probability was calculated each month, testing the probability that any month would have zero HDD and be included in the baseload calculation. July and August were determined to have a statistically significant normal probability (34.1% and 21.3%). The only other month with a positive value was September, with a probability of 4.9%. September was rejected because the normal probability was significantly lower than July and August. It should also be noted that September had a mean HDD of 58.30, which is 4,046% higher than July and 9,548% higher than August, which supports Peoples conclusion that September HDD behavior is significantly different than July and August.

d. Peoples proposes to use a “standard” base load per rate class for customers that do not have prior billing information for one or both of the non-heating months of July and August. Refer to the attachment for the proposed standard base load amounts. Consistent with Exhibit 19, RR-8, the standard base load amounts are established using the normalized use per customer (UPC) for PNGD & PGD combined based upon a three-year average UPC with conservation per rate class.

e. Peoples has several automatic checks in place that will flag unusual activity prior to billing:

(1) Meter reads are out of tolerance

(2) Billing and/or Invoicing (Dollars billed) are out of tolerance

(3) Each day the billing team also reviews bills with the highest and lowest Mcf and dollar amounts to confirm accuracy.

f. Yes, confirmed.

I. STATEMENT OF QUALIFICATIONS

Q. PLEASE STATE YOUR NAME, TITLE, AND BUSINESS ADDRESS.

A. My name is Aaron L. Rothschild. My title is President, and my business address is 15 Lake Road, Ridgefield, CT.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am President of Rothschild Financial Consulting ("RFC").

Q. PLEASE STATE YOUR EDUCATIONAL ACHIEVEMENTS AND PROFESSIONAL DESIGNATIONS.

A. I have a B.A. degree in mathematics from Clark University (1994) and an M.B.A. from Vanderbilt University (1996).

Q. PLEASE DESCRIBE YOUR BUSINESS EXPERIENCE.

A. I performed financial analysis in the telecom industry in the United States and Asia Pacific from 1996 to 2001, investment banking consulting in New York, complex systems science research regarding the power sector at an independent research institute, and I have prepared rate of return testimonies since 2002. See Appendix F for my resume.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION, OR OTHER STATE COMMISSIONS? IF SO, WHICH COMMISSIONS?

A. Yes. I have testified before the Pennsylvania Public Utility Commission. My expert witness experience also includes testifying in over 75 cost of capital proceedings before

the following state commissions: California; Colorado; Connecticut; Delaware; District of Columbia; Florida; New Hampshire; New Jersey; Maryland; North Dakota; Pennsylvania; South Carolina; Tennessee; and Vermont. See Appendix G for the list of dockets for each of my testimonies.

Q. ON WHOSE BEHALF ARE YOU PROVIDING THIS TESTIMONY?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

II. PURPOSE

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. The purpose of my testimony is to address the cost of capital for Peoples Natural Gas Company LLC ("Peoples" or the "Company") which includes the following three components:

1. Cost of Equity ("COE")
2. Cost of Debt
3. Capital Structure

Based on my analysis of these cost of capital components, I recommend an allowed rate of return for ratemaking purposes, including an appropriate authorized return on equity ("ROE"), authorized cost of debt, and authorized capital structure.

Q. PLEASE DEFINE THE COE, COST OF DEBT, AND CAPITAL STRUCTURE.

A.

1. **COE:** My COE recommendation is my opinion of the return investors require to provide equity capital to Peoples based on current capital markets. Since investors must pay the market price of a stock to make an investment, investors' required returns are based on the return they expect to receive on the market price of stocks. In other words, Peoples' COE is forward-looking and "market-based." My recommendation is consistent with the following legal standards set by the United States Supreme Court for a fair rate of return: (1) "The return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks"[1] and (2) "[S]ufficient to . . . support its credit and . . . raise the money necessary for the proper discharge of its public duties."[2]
2. **Cost of Debt:** My cost of debt recommendation is based on the actual cost of debt paid by the utility to its sources of credit. For example, if a utility has issued a bond with a 3% interest rate three years ago, its authorized cost of debt should be 3%, even if interest rates are currently higher or lower than 3%.
3. **Capital Structure:** Capital structure is the percentage of equity and debt that makes up the finances of a utility. For example, if a utility raises $1 million of equity capital and $1 million of debt capital, we say it has a capital structure containing 50% equity and 50% debt. The utility has the burden of proof to demonstrate that its requested capital structure for regulatory purposes produces the lowest, reasonable overall cost

[1] Fed. Power Comm'n v. Hope Nat. Gas Co., 320 U.S. 591, 603 (1944).
[2] Bluefield Water Works & Improvement Co. v. Pub. Serv. Comm'n of the State of W. Va. 262 U.S. 679, 692-693 (1923).

of capital. My capital structure recommendation is based on my review of Peoples' justification for its requested regulatory capital structure, the capital structure ratios of other gas utility companies, and the capital structure of Peoples' ultimate parent, Essential Utilities, Inc.. As discussed below, the reported capital structure of a regulated subsidiary is often not representative of how the regulated utility was financed. For example, the parent of a regulated utility can report funds raised through debt financing at the holding company level as equity financing on the books of its regulated utility subsidiary. Therefore, it is important to make sure Peoples' authorized capital structure would not overcharge consumers by including a higher common equity ratio than is appropriate.[3]

Q. WHAT IS THE DIFFERENCE BETWEEN PEOPLES' COST OF EQUITY AND ITS AUTHORIZED RETURN ON EQUITY?

A. The COE is the market-based return investors expect to earn on the market value of any given stock. In other words, the COE is the return investors expect to earn on the market price of equity. As it applies to this proceeding, it is the return investors require to provide equity capital to Peoples. The appropriate authorized ROE is based on the Commission's determination of the COE at the time of the proceeding, after reviewing the evidentiary record, which incorporates investor expectations and balances the needs of ratepayers. Once the Commission issues an authorized ROE, the market-based cost of equity will continue to fluctuate as capital markets inevitably continue to change. The authorized ROE is based on a snapshot of the COE, which is constantly changing.

[3] A higher common equity ratio, all else equal, results in higher rates for consumers because equity is more expensive than debt.

Q. PLEASE DEFINE THE APPROPRIATE RATE OF RETURN.

A. The appropriate Rate of Return (ROR) is based upon the weighted overall cost of capital (WACC) of the current costs of debt and equity at the time of this proceeding. The weighted cost rate is calculated by multiplying the capital structure ratios of the sources of capital (debt, preferred equity, and common equity) times their respective cost rates.

WACC = Cost of Debt X Debt Ratio + COE X Common Equity Ratio + Cost of Preferred Equity X Preferred Equity Ratio.

Q. CALCULATING THE COST OF EQUITY IS A HIGHLY TECHNICAL TOPIC. HOW CAN A DECISION MAKER WHO IS NOT SPECIALIZED IN FINANCE BEST USE THE CONTENT OF THIS TESTIMONY?

A. My testimony includes a thorough technical analysis, including the use of specialized mathematical models. Models are required to determine the cost of equity like a map is required to plan a road trip. Maps and models are useful because they simplify the complexity and vastness of reality into a form that is understandable and useful. A map of Pennsylvania that left out no details would be the same size as the state and thus unusable. A model that included every detail of financial markets (e.g., the trading activity of every single stock investor on earth) would be unusable as well. It is critical to remember that models are simplifications of reality and there are arguably as many "models" as there are investors. My ROE recommendation is based on the best tools I am aware of to calculate Peoples' COE; however, I urge the Commission to test the reasonableness of my model results by comparing them to model results from sources that have nothing to do with this proceeding. For example, I recommend that the Commission consider the long-term equity

return expectations of pension funds and leading financial institutions like the ones shown in Table 4 on page 14.

Q. HAVE YOU REVIEWED PEOPLES' RATE CASE FILING AND DIRECT TESTIMONY?

A. Yes.

III. INTRODUCTION AND SUMMARY OF CONCLUSIONS

Q. HOW IS YOUR TESTIMONY ORGANIZED?

A. First, I will provide a summary of my recommendations, an overview of cost of equity concepts, and explanation of how current capital markets relate to my cost of equity calculations. Second, I will provide a more detailed discussion of current capital markets and how key parameters are impacting equity costs. Third, I will provide my capital structure and cost of debt recommendation. Fourth, I will provide an explanation of the various models I use in my cost of equity calculations. Lastly, I will provide an evaluation of Peoples' rate of return testimony.

Q. PLEASE PROVIDE A SUMMARY OF YOUR RECOMMENDATIONS.

A. I recommend the following cost of capital for Peoples' gas distribution operations:

- An overall cost of capital of 6.20% (6.02% - 6.37%)
- An ROE of 8.02% (7.67% - 8.37%)
- A capital structure containing 50.00% common equity and 50.00% long-term debt
- A debt cost rate of 4.37%

A summary of my cost of capital recommendations for Peoples' gas distribution operations is presented in Table 1 below.

TABLE 1: ALR RECOMMENDED RANGE MIDPOINT - PEOPLES NATURAL GAS COMPANY LLC
Docket No. R-2023-3044549

	Capital Structure Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	50.00%	4.37%	2.19%
Short-Term Debt	0.00%	0.00%	0.00%
Preferred Equity	0.00%	0.00%	0.00%
Common Equity	50.00%	8.02%	4.01%
Rate of Return			6.20%

Exhibit ALR-1

If the Commission decides to use Peoples' requested capital structure instead of my recommended capital structure, it would be appropriate to reduce Peoples' authorized ROE because it has lower financial risk. A higher common equity ratio means less debt, a lower chance of financial stress (financial risk), and therefore a lower cost of equity. On the other hand, a lower common equity ratio means more debt, a higher chance of financial stress (financial risk), and therefore a higher cost of equity. Based on a regression analysis of dozens of utility companies, I found a 0.04% reduction in the cost of equity for every 1% increase in the common equity ratio. Applying the results of this regression analysis, I determined that Peoples' authorized ROE should be reduced from 8.02% (7.67% - 8.37%) to 7.84% (7.49% - 8.19%) if their requested regulatory capital structure is used to set rates.

Q. ARE YOU RECOMMENDING A SPECIFIC ROE OF 8.02% OR AN ROE RANGE OF 7.67% TO 8.37%?

A. I recommend both a range of appropriate ROEs and a specific point within that range that I consider to be the most appropriate. It is not possible to measure Peoples' COE with the

precision of measuring temperature with a thermometer. However, my recommended ROE range of 7.67% to 8.37% already eliminates the extreme ends of the results of my models and provides the Commission with a range of ROEs I feel confident will allow Peoples to raise the capital it needs to provide safe and reliable service. I also recommend a specific point of 8.02% within that range that I feel best reflects Peoples' COE.

Q. PLEASE SUMMARIZE HOW YOU DETERMINED YOUR 8.02% COST OF EQUITY RECOMMENDATION FOR PEOPLES.

A. To arrive at my recommendations, I applied the Constant Growth form of the Discounted Cash Flow ("DCF") Model[4] to a proxy group of 5 publicly traded gas utility companies ("RFC Gas Proxy Group")[5] using data available through February 29, 2024. I also used a Capital Asset Pricing Model ("CAPM") analysis as a check on the DCF results, and to ensure the Commission is able to consider how inflation and interest rates are impacting Peoples' cost of equity. I use a proxy group to calculate Peoples' cost of equity because Peoples does not have publicly traded stock data needed for COE models.[6] Additionally, using a proxy group provides more reliable results because it is less likely to be skewed by specific circumstances or anomalies faced by any individual company.

As shown in Table 2 below, Cost of Equity Model Results, the high-end results of my three cost of equity models, including eight variations of the CAPM, range between

[4] The constant growth DCF model is a variant, or version, of the single-stage DCF model that uses a consistent, never-changing growth rate component in perpetuity.

[5] The RFC Gas Group consists of the following five entities: Atmos Energy Corp, Ni Source Inc, Northwest Natural Gas, One Gas, Inc. and Spire, Inc. As I explain later in my testimony, Peoples' witness Moul included eight companies in his proxy group, including all five in the RFC Gas Group; however, I excluded the other three companies Mr. Moul included because they were not in the same risk category as they have considerably more unregulated business operations.

[6] Peoples' parent Essential Utilities has publicly traded stocks, but Essential Utilities owns many utility companies in different states. Therefore, Essential Utilities' stock is not the same as Peoples.

8.07% and 9.43%, with an upper quartile of 8.48%. The low-end results of my three cost of equity models, including eight variations of the CAPM, range between 7.50% and 9.42%, with a lower quartile of 7.78%.

TABLE 2: COST OF EQUITY MODEL RESULTS		
DCF	**Low**	**High**
Constant Growth - Sustainable Growth	8.06%	8.09%
Constant Growth - Option-Implied Growth	9.42%	9.43%
Non-Constant Growth	8.40%	8.74%
CAPM		
Spot (Feb. 29, 2024)		
Risk Free Rate - 3-Month T Bill	7.69%	8.09%
Risk Free Rate - 30-Yr T Bond	7.50%	8.07%
3-Mo. Weighted Average (Dec. 2023 to Feb. 2024)		
Risk Free Rate - 3-Month T Bill	7.82%	8.22%
Risk Free Rate - 30-Yr T Bond	7.62%	8.18%
Outer Quartile Range	**7.78%**	**8.48%**
Midpoint of Range	**8.13%**	

Exhibit ALR-2

Q. ARE YOUR COE MODELS BASED ON ESTABLISHED METHODOLOGIES?

A. Yes. My constant growth DCF model is used by major financial institutions. J.P. Morgan Chase uses the sustainable growth form of the DCF method, as I do, in its 2019 Long-Term Capital Market Assumptions publication.[7] *Principles of Corporate Finance*, a leading financial textbook used in business schools and investment banks around the world, recommends using the very same method I use to calculate the cost of equity for regulated energy utility companies.[8] As discussed in Section F. Capital Asset Pricing Model on page 59, my CAPM is based on methodologies used by Value Line, the Chicago Board of

[7] 23rd Annual Edition, Long-Term Capital Market Assumptions - Time-tested projections to build stronger portfolios, pp. 62-63.
[8] Brealey, Myers, and Allen (2017), Principles of Corporate Finance, 12th Edition, McGraw-Hill Irwin, New York, page 86-87.

Options Exchange (CBOE), and published in peer-reviewed academic journals (e.g., The Review of Financial Studies). My CAPM method has also been recognized by state utility commissions. On April 9, 2020, the Public Service Commission of South Carolina stated the following:

> Amongst the three witnesses, Consumer Affairs Rothschild's approach was unique in that he included the use of both historical and forward-looking, market-based data in his analysis. Based on the testimony and facts presented, the Commission therefore adopts the recommended ROE of 7.46% proposed by witness Rothschild.[9]

In California's 2017 Water Cost of Capital proceedings, a company witness acknowledged the validity of RFC's method. California Administrative Law Judge Bemesderfer stated the following:

> [O]n cross-examination Vilbert [California Water Service Company witness] admitted that Rothschild's use of the method [b x r method] was "reasonable" and that Rothschild had "implemented the methodology correctly" in arriving at his Water Proxy Group ROE of 8.25%.[10]

Q. HOW DO YOUR RECOMMENDATIONS COMPARE TO THE RECOMMENDATIONS OF PEOPLES' WITNESS, MR. MOUL?

A. As shown in Table 3 on page 13, my 8.02% cost of equity and capital structure recommendations result in a 6.20% overall rate of return. Mr. Moul's 11.75% cost of equity and capital structure recommendations result in an overall rate of return of 8.40%.

[9] Order Ruling on Application for Adjustment in Rates, Docket No. 2019-290-WS, Order No. 2020-306, April 9, 2020, page 43.
[10] Proposed Decision of ALJ Bemesderfer, p.19, Public Utility Commission of California, Application No. 17-04-001 (February 6, 2018).

TABLE 3: RECOMMENDATION COMPARISON - ROTHSCHILD AND MOUL

	Cost of Equity	Cost of Debt	Common Equity %	Debt %	Rate of Return
Rothschild [1]	8.02%	4.37%	50.00%	50.00%	6.20%
Moul [2]	11.75%	4.37%	54.67%	45.33%	8.40%

[1] Exhibit ALR-1
[2] Mr. Moul's Direct Testimony, Exhibit PRM-1, page 1 of 29

Mr. Moul and I recommend a different cost of equity for Peoples because we have fundamentally different analytical approaches. I focus on using market data (e.g., stock prices, bond yields, stock option prices) to measure investors' expectations as much as possible. On the other hand, Mr. Moul relies almost exclusively on non-market data, including economists' interest rate forecasts even when market data is available. He increases his DCF result from 10.47% to 11.88% by implementing his so-called leverage adjustment.[11] As discussed below, this adjustment is inappropriate and should be rejected. The Commission has denied Mr. Moul's leverage adjustment in past cases.[12]

I do not agree with Mr. Moul on the appropriate cost of equity for Peoples for many reasons. The reasons I have come to different conclusions include: (1) Mr. Moul's use of non-market data such as interest rate forecasts; (2) the growth rates applied in the Constant Growth DCF model; (3) the implementation of the CAPM; (4) the inclusion of a non-market-based model, the Expected Earnings Analysis; (5) adding a leverage adjustment to his DCF and CAPM results; and (6) adding a size premium adjustment to his CAPM result.

I recommend a different ROE[13] for Peoples than its witness Mr. Moul for many reasons.

[11] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 24, line 20 and page 25, line 1.
[12] Docket No. R-2017-2640058, Opinion and Order, Page 93
[13] My ROE recommendation is based on Peoples' current market-based COE. As stated previously, the authorized ROE is based on a snapshot of the COE which is constantly changing. In the context of this case my recommended COE and ROE are synonymous.

Q. PLEASE PROVIDE A SUMMARY OF HOW YOUR COST OF EQUITY RECOMMENDATION COMPARES TO THE RETURN EXPECTATIONS OF MAJOR FINANCIAL INSTITUTIONS.

A. As shown in Table 4 below, major financial institutions are informing their clients to expect returns on the overall market (S&P 500) of 6.4% to 9.0%. As stated above, Peoples' authorized ROE should be based investors' expectations as indicated by capital market data, not the opinions of small groups of people including those of major financial institutions. However, I chose to include the equity return expectations of major financial institutions to encourage the Commission to consider why Mr. Moul's 11.75% ROE is significantly higher than the financial mainstream. If there is a good reason for Peoples' COE to be hundreds of basis points higher than the equity return expectations of major financial institutions, I have not seen it.

TABLE 4: U.S. EQUITY RETURN EXPECTATIONS AMONG MAJOR FINANCIAL INSTITUTIONS

Duff & Phelps / Kroll (September 2023) [1]	**9.0%**
Horizon Actuarial Services, LLC Survey - 20 Year Horizon (August 2023) [2]	
U.S. Equity - Large Cap (5.6-10.2%, 50% Percentile - 7.3%)	**7.3%**
U.S. Equity - Small / Mid Cap (5.1-10.9%, 50% Percentile - 7.6%)	**7.6%**
J.P. Morgan Asset Management - Equity Long-Term Returns (2023) [3]	**7.9%**
Charles Schwab - 10-year U.S. Large Cap Returns (January 2024) [4]	**6.2%**

Note: Duff & Phelps acquired Kroll in 2021 and rebranded itself as Kroll.
[2] Horizon Actuarial Services, LLC, Survey of Capital Market Assumptions Survey, August 2023, page 18.
Survey participants Include: Bank of New York Mellon, BlackRock, Goldman Sachs Asset Management, J.P. Morgan Asset Management, Merrill, Morgan Stanley Wealth Management, Royal Bank of Canada, UBS.
[3] J.P. Morgan Asset Management - 2024 Long-Term Capital Market Assumptions, 2023, page 12.
[4] Schwab's 2024 Long-Term Capital Market Expectations, January 2, 2024.

The returns on equity shown in Table 4 are anticipated equity returns across the broader stock market, including sectors such as US Large Cap and companies like Tesla and Amazon. These expectations would be expected to be higher than those for utility

stocks because most companies that make up the S&P 500 operate in highly competitive markets. Regulated utility companies like Peoples do not operate in a highly competitive market. Therefore, it is surprising that Mr. Moul recommends an ROE (11.75%) that is significantly higher than financial professionals expect to earn on investments in companies that are operating in highly competitive markets.

Even my cost of equity recommendation of 8.02% (7.67% to 8.37%) for Peoples is in the middle to upper part of the range of these expectations, which should give the Commission more confidence that if they adopt my recommendation, Peoples will be able to raise the capital it needs to provide safe and reliable service.

Q. DO YOU HAVE ADDITIONAL EVIDENCE THAT MR. MOUL'S 11.75% ROE RECOMMENDATION IS HIGHER THAN PEOPLES' MARKET-BASED COE?

A. Yes. The market-to-book ratios of gas utility companies show that investors expect a market return significantly less than 11.75%. The average future expected return on book equity for the five companies in my RFC Gas Proxy Group is 8.60%.[14] If the market price of gas utility stocks was equal to book value then investors could expect to earn a market return equal to about 8.60%. But the market price of gas utility stocks is about one and a half times the book value,[15] which means that investors likely expect to earn less than 8.90% or 11.75%. Appendix A explains why a market-to-book ratio significantly above one means that the market-based COE is significantly less than the expected return on book equity.

[14] Exhibit ALR-3, page 1.
[15] Exhibit ALR-3, page 1, 2 Retention Rate, a) Market-to-Book Ratio.

Q. PLEASE COMPARE PEOPLES' REVENUE REQUIREMENT IF YOUR RECOMMENDATIONS ARE ADOPTED INSTEAD OF MR. MOUL'S.

A. If my 8.02% cost of equity recommendation and capital structure recommendation are used to set rates for Peoples, the rate of return portion of the revenue requirement will be about $324.9 million. On the other hand, if Mr. Moul's 11.75% cost of equity recommendation and capital structure recommendation are used to set rates, the rate of return portion of the annual revenue requirement will be $461.1 million. As shown in Table 5 below, if Mr. Moul's rate of return recommendations are adopted instead of mine, consumers will pay approximately $136.19 million more per year.

TABLE 5: ANNUAL REVENUE IMPACT VS. REQUESTED - PEOPLES NATURAL GAS COMPANY LLC
($ million)

	Rate of Return Portion of Revenue Requirement	Difference Moul Rothschild
Rothschild	$324.91	
Moul	$461.10	$136.19

Source/Inputs:		
Requested Rate Base [1]	$	4,244.7
Federal income tax rate		21.00%
State income tax rate		7.50%
Uncollectable Expense		1.03%

[1] Volume 4, Exhibit 11 Schedule No. 1

Q. YOU RECOMMEND THAT PEOPLES SHOULD BE AUTHORIZED TO EARN AN ROE EQUAL TO ITS MARKET-BASED COST OF EQUITY OF 8.02% (7.67% TO 8.37%). PLEASE EXPLAIN MORE REGARDING THE IMPORTANCE OF DETERMINING THE MARKET-BASED COE AS ACCURATELY AS POSSIBLE.

A. As discussed above, Peoples' authorized ROE should be in line with its market-based COE. In other words, the cost of equity is the return investors expect to earn when they purchase the equity (or stock) of a company. This makes sense because investor-owned utility companies (IOUs) raise money from investors.

Q. DO ACCOUNTING FIGURES AND AUTHORIZED ROES IN OTHER PROCEEDINGS REVEAL THE MARKET-BASED COE?

A. No. It would be insufficient and inaccurate to determine the cost of equity based on accounting information (e.g., revenue, net income, equity book value, or return on book equity) alone, as doing so neglects to account for the information that is revealed through investor's actions in the market. The return investors expect can come in the form of capital gains (stock price appreciation) or dividend payments. As investors buy and sell stock in the market, they convey information about their return expectations and therefore the underlying cost of equity (companies with different risk profiles will have different costs of equity). This is why an accurate COE can only be established by incorporating capital market prices (e.g., stocks, stock options).

Authorized ROEs in other proceedings are applied to rate base, which is nearly identical to book value. Therefore, as explained further below, authorized ROEs in other proceedings do not reflect the market-based COE alone. In fact, the ratio of market prices to book value (market-to-book ratio) indicates that the COE for gas utility companies is significantly lower than authorized ROEs.

Peoples' authorized ROE in this proceeding should not be based on accounting information alone or authorized ROEs of gas utility companies in other proceedings without considering the stock price of those utilities.

Q. DO ANY ROE WITNESSES USE A DIFFERENT DEFINITION FOR THE COST OF EQUITY?

A. All ROE witnesses I have encountered over my more than 20 years in the industry, including Mr. Moul, define the cost of equity as market-based somewhere in their

testimony. Mr. Moul correctly states that he uses "market-determined models."[16] However, as discussed above, Mr. Moul's approach significantly relies on the personal opinions of equity analysts in both his CAPM and DCF analysis instead of the supply and demand of stocks and bonds as indicated by market data. Calculating the cost of equity should be an interpretive approach (e.g., using market data to measure investors' expectations as Mr. Moul did in some parts of his testimony) rather than a speculative one (e.g., using interest rate forecasts instead of investors' expectations as revealed in the market yield).

Q. IS YOUR MARKET-BASED COST OF EQUITY RECOMMENDATION BASED ON YOUR OPINION OF FUTURE STOCK PRICE RETURNS?

A. No. I do not pretend to be able to predict the future. Capital markets are unpredictable and, as explained above, it is investors' expectations that matter since they are the ones providing the capital. Therefore, I provide an expert interpretation of investors' return expectations as indicated by the current market prices of stocks, bonds, and stock options, without attempting to predict future prices.

I do use Value Line and Zacks analyst forecasts to estimate the market-based cost of equity in my Discounted Cash Flow (DCF) analyses. However, I do not use them mechanically and I go to great lengths to distill the sustainable growth component to ensure it is in line with investors' long-term expectations, including using a DCF model that is based only on market data (stock option prices). My Capital Asset Pricing Model (CAPM) is based on a direct measurement of investors' expectations as indicated by market prices instead of analyst forecasts, which have proven to be unrealistic. On May 16, 2022,

[16] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 10, lines 7-15, Page1, line 22 and Page 2, line 1.

McKinsey stated that "analysts' near-term forecasts are often overly optimistic and don't always correctly reflect operating performance."[17]

Q. YOU STATED ABOVE THAT ROES AUTHORIZED IN OTHER PROCEEDINGS SHOULD NOT BE USED TO SET THE AUTHORIZED ROE IN THIS PROCEEDING. CAN YOU ELABORATE ON WHY PREVIOUS PROCEEDINGS' ROES ARE NOT AN APPROPRIATE GAUGE FOR PEOPLES' COE?

A. As discussed in Appendix A, when the market to book ratio of a gas utility company is significantly above one, as they are now,[18] it indicates that the utility's COE is lower than its authorized ROE.[19]

In his 1970 book *The Economics of Regulation: Principles and Institutions*, regulatory economist Alfred Kahn explained why the cost of equity is lower than authorized returns when market to book ratios are significantly above one:[20]

> [T]he sharp appreciation in the prices of public utility stocks, to one and half and then two times their book value during this period, reflected ... a growing recognition that the companies in question were in fact being permitted to earn considerably more than their cost of capital. ... The source of the discrepancy between market and book value has been that commissions have been allowing r's [returns on equity] in excess of k [market cost of equity]; if instead they had set r equal to k, or proceeded at some point to do so ... the discrepancy between market and book value ... would have disappeared, or would never have arisen.

[17] David Kohn, Vartika Gupta, Tim Koller, Werner Rehm, *Do consensus estimates accurately reflect operating performance?*, May 16, 2022.
[18] See Exhibit ALR-3, page 1. The market to book ratios of the companies in my proxy group averaged 1.56 over the year ending February 29, 2024.
[19] An authorized ROE is applied to rate base, which is nearly identical to the return on the book value of equity; therefore, authorized ROEs are nearly identical to return on book equity.
[20] Alfred Kahn, *The Economics of Regulation: Principles and Institutions*, Mass. Inst. Tech. at 48 (fn. 69), 50 (1970).

A utility company's COE should not be based on authorized ROEs, which are accounting returns. The COE is set based on what investors in the market expect for a given risk profile. In the case of a utility stock, an increasing market value results in a lower return on market for the same expected return on book, all else equal.

IV. COST OF EQUITY IN TODAY'S FINANCIAL MARKETS

Q. WHY DO YOU CONSIDER CAPITAL MARKETS IN GENERAL?

A. My COE models are designed to reflect capital market conditions. However, it is important to "cross-check" the model results because capital markets are complicated. I consider capital market data in general like a ship captain might use visual landmarks, by comparing them with electronic navigation aids like GPS, and cross-referencing with nautical charts to confirm their position. This process of cross-checking helps to identify and correct any discrepancies or errors in any single source.

Q. PLEASE SUMMARIZE CAPITAL MARKET DEVELOPMENTS THAT IMPACT THE COST OF EQUITY.

A. Market developments that have impacted the cost of equity include:

1. **Inflation and interest rates.** The Federal Reserve (the Fed) has increased short-term interest rates (the Federal Funds rate) from near 0% to a range of 5.25% - 5.50% as of February 29, 2024 to fight inflation.[21] Long-term interest rates have increased as well. Inflation data released on November 14, 2023, indicated that inflation may finally be under control and the core inflation rate has continued to

[21] Federal Reserve Bank of New York. https://www.newyorkfed.org/markets/reference-rates/effr.

decline since then. As shown on Chart 2 on page 26, investors expect the Federal Reserve to start lowering the federal funds next year, but market data indicates that in recent months investors have revised their expectations and now believe the Fed will not decrease the Federal Funds rate as fast. Chart 2 shows that as of December 29, 2023, investors expected the Fed to reduce the Federal Funds Rate to about 3.50% by September 2026. As of February 29, 2024, they expected the Fed to reduce this rate to a little under 4.0%. Long term interest rates risen since December 29, 2023, as well, with the yield on the 30-year U.S. Treasury bond increasing from about 4.0% to about 4.4%. As shown on Chart 3 and Chart 5 starting on page 28, investors expect inflation to decrease sharply over the next few years and long-term interest rates to remain near current levels in coming decades.[22]

2. Stock price performance. Gas utility stocks have been underperforming the overall market (S&P 500) for some time. Chart 6 on page 32 shows that over the past six months ending February 29, 2024, gas utility stocks are down 3.56% while the S&P 500 is up 13.06%. All else being equal, this normally indicates an increasing COE. However, the S&P 500 has been highly impacted by the stock price movements of seven companies known as the "Magnificent Seven"[23]. These seven companies disproportionally impact the value of the S&P 500 index because these companies are very large[24] and this index is market-cap weighted. Therefore,

[22] Using the yield curve to measure investors' interest rate expectations is a common technique in finance. However, it is only an approximation because other factors can impact the current shape of the yield curve. For example, investors often require an extra yield to purchase bonds with longer-maturity dates. This is known as a term-premium. It is possible that the current term-premium is impacting my calculations and investors expect the yield on the 10-year U.S. Treasury bond to remain flat in the near term or even decrease.

[23] Apple, Alphabet, Meta Platforms, Microsoft, NVIDIA, Amazon and Tesla.

[24] As of February 2, 2024, the combined market capitalization of the Magnificent Seven is about $12.5 while the market capitalization of all the companies in the S&P 500 is $42 trillion.

the underperformance of gas utility stocks is not as large as compared when compared to the average stock in the S&P 500 index.

3. **Stock price volatility, expected return on the overall market, and market risk premium**. As shown on Chart 9 on page 36, investors' volatility expectations for the overall market decreased considerably between October 2022 and December 2023, nearing historical lows in June 2023. Despite a spike in late September and early October 2023, market volatility expectations remain significantly lower than the highs of October 2022. This lower market volatility translates into lower expectations for overall market returns, and therefore a significantly lower market risk premium – considerably beyond the low levels that may have been expected due to the increasing risk-free rate. In fact, this decrease in the market risk premium more than offsets the effect of the first two factors listed above and has led to a lower cost of equity today than in late 2022. The volatility expectations for the companies in the RFC Gas Proxy Group have not declined with the overall market in over the past year and remain significantly higher than for the overall market.

4. **Probability of a large stock price drop (Option Implied Skewness).**[25] As shown in Chart 11 on page 39, despite relatively high volatility expectations for the companies in the RFC Gas Proxy Group, investors' expectations regarding the chance of a large drop in utility stock prices remain below those for the overall market, which indicates that the relative cost of equity for gas utility companies remains below the overall market.

[25] Option-implied skewness represents investors' expectations regarding the asymmetry of the probability distribution for stock price movements. Option-implied skewness is further discussed in Section IV. D. Investor-Perceived Downside Risk (Option-Implied Skewness).

5. Term Structure of COE. Consistent with easing concerns regarding inflation and increasing interest rates, market data indicates that investors expect the COE for the broader market and utility companies to remain fairly stable in the future. A stable term structure of COE is a good sign that gas utility companies, including Peoples, will be able to raise the capital they need to fund assets with long useful lives at a reasonably low cost of equity.

I elaborate on each of the points above in the following sections.

A. Inflation and Interest Rates

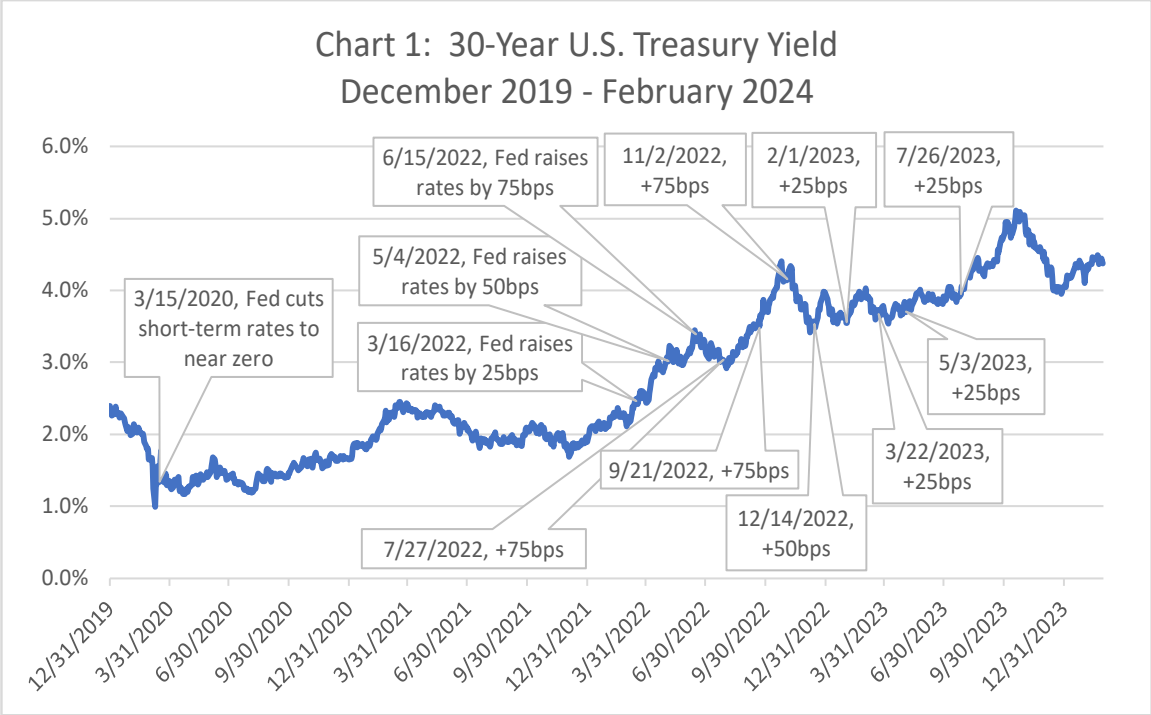
Q. PLEASE DISCUSS THE CURRENT INFLATION AND INTEREST RATE ENVIRONMENT AND WHAT IT INDICATES REGARDING THE COST OF EQUITY.

A. Starting in March 2022, the Fed has increased the benchmark federal-funds rate by a cumulative 5 percentage points (i.e., 25 basis points) to a 22-year high. As of December 31, 2023, the benchmark rate is 5.25% to 5.50%. In its last meeting in January 2024, the Federal Reserve decided to leave the federal funds target rate unchanged for the fourth consecutive meeting. Fed Chairman Jerome Powell stated that "Inflation has eased notably over the past year but remains above our longer-run goal of 2 percent."[26] As shown in Chart 2 on page 26, market data shows that investors expect the Fed to start cutting the Federal Funds rate in 2024.

The Federal Funds rate is important because it can impact the cost of long-term borrowing and the cost of equity. As shown in Chart 1 on page 24, the yield on the 30-year U.S. Treasury bond has increased along with the Federal Funds rate, increasing from

[26] Transcript: Fed Chief Jerome Powell's Post Meeting Press Conference, January 31, 2024. https://www.wsj.com/articles/transcript-fed-chief-powells-postmeeting-press-conference-29ce7b9f

2% at the start of 2022 to 4.38% as of February 29, 2024. The cost of equity has increased along with the Federal Funds Rate and the yield on Treasury Bonds, but not one for one. As discussed above, the market-based COE for gas utility stocks is below authorized ROEs because the market-to-book ratios of these stocks is above one. As elaborated upon starting on page 39, market data indicate that investors expect the cost of equity to remain relatively low over the coming years.



Higher inflation can impact the cost of equity because it can impact interest rates. Higher interest rates, all else equal, generally indicate a higher cost of equity for gas utility companies because fixed income investments become relatively more attractive when they start paying a higher rate (e.g., a bond with an interest rate of 3% is more attractive to investors, all else equal, than when they are paying a 2% rate). However, as discussed above, the cost of equity for utility companies has likely been decreasing because the cost of equity for the overall market has been declining. Additionally, the Commission can be

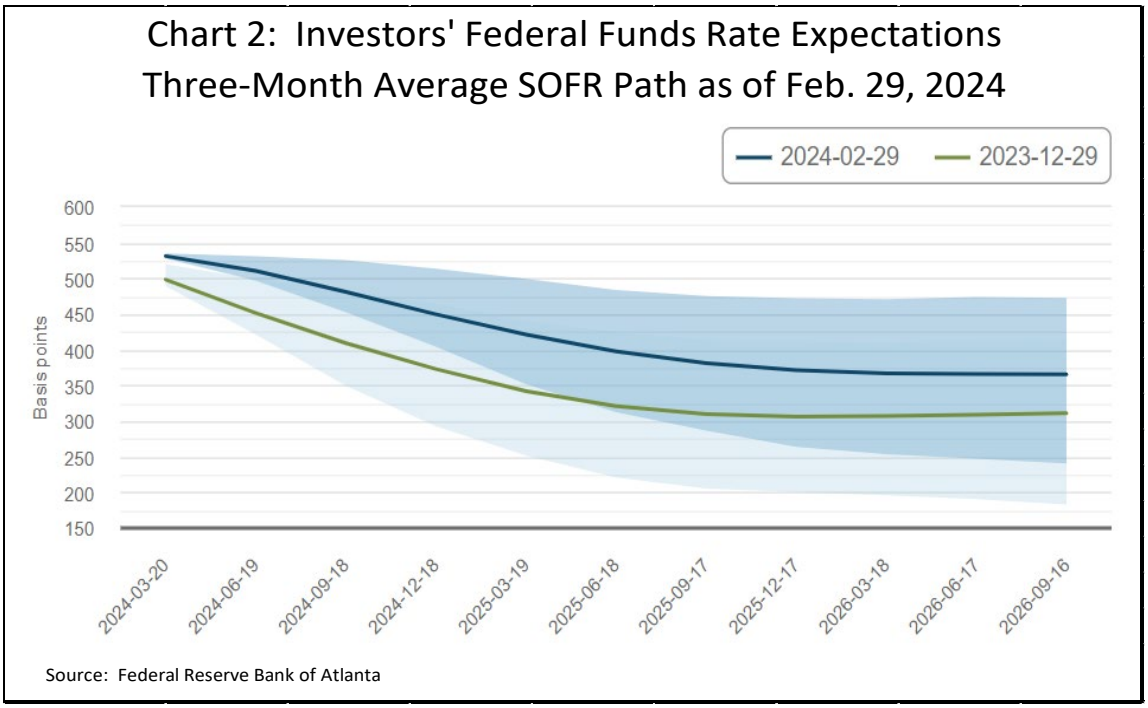
confident that the 8.02% COE I calculated reflects interest rate changes because it is based on market data, including the changing market yields on government bonds.

Q. WHAT DOES MARKET DATA INDICATE REGARDING INVESTORS' CURRENT INFLATION AND INTEREST RATE EXPECTATIONS?

A. As shown in Chart 2 on page 26, the Federal Reserve Bank of Atlanta estimated that as of February 29, 2023, investors expect the three-month average Federal Funds rate[27] will most likely decrease from its current range of 5.25%-5.50% to an expected value of under 4.0% in 2026. The same chart shows that about two months prior (December 29, 2023), investors expected the Federal Funds rate would decrease to a little over 3% in 2026.

I use the Federal Reserve Bank of Atlanta market-implied probabilities because it is based on investors' expectations as indicated by option prices, future prices, and swap spreads. As discussed considerably above, market-based expectations like those provided by the Federal Reserve Bank are more appropriate to consider when calculating the cost of equity than economist/analyst projects for many reasons.

[27] The Federal Funds rate guides overnight lending among U.S. banks, but this short-term rate impacts the interest rates on debt with longer maturities.



Q. YOU STATED THAT THE FEDERAL RESERVE BANK OF ATLANTA USES MARKET DATA TO CALCULATE INVESTORS' EXPECTATIONS REGARDING THE FEDERAL FUNDS RATE. IS THERE A WAY TO MEASURE INVESTORS' INFLATION AND LONG-TERM INTEREST RATE EXPECTATIONS AS WELL?

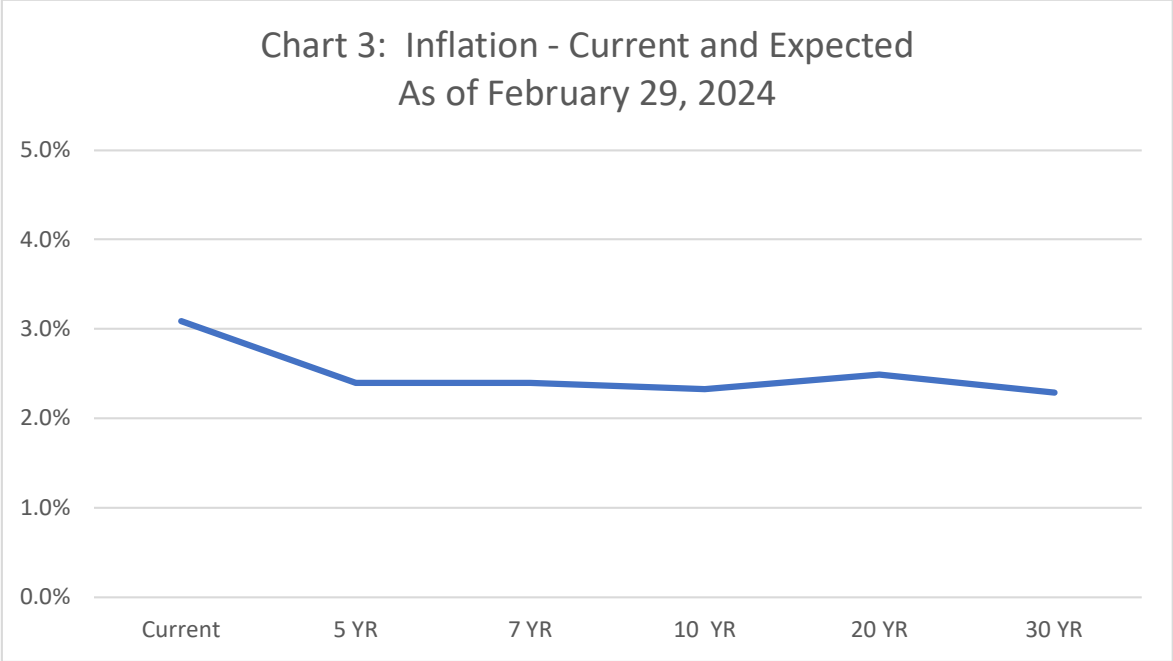
A. Yes. Regarding inflation, it is possible to measure investors' expectations directly simply by subtracting the interest rate of nominal Treasuries and TIPS (Treasury Inflation - Protected Securities) of comparable maturities. This difference is referred to as the "breakeven inflation rate" because it represents what inflation would have to be for an investor to "break even" or make the same return on both nominal Treasuries and TIPS. For example, if the yield on a nominal 10-year Treasury is 2.5% and TIPS of the same duration are 1.5%, an investor would make the same real return on both bonds if the inflation rate is 1% over the next 10 years.

Nominal yield – real yield = breakeven inflation rate

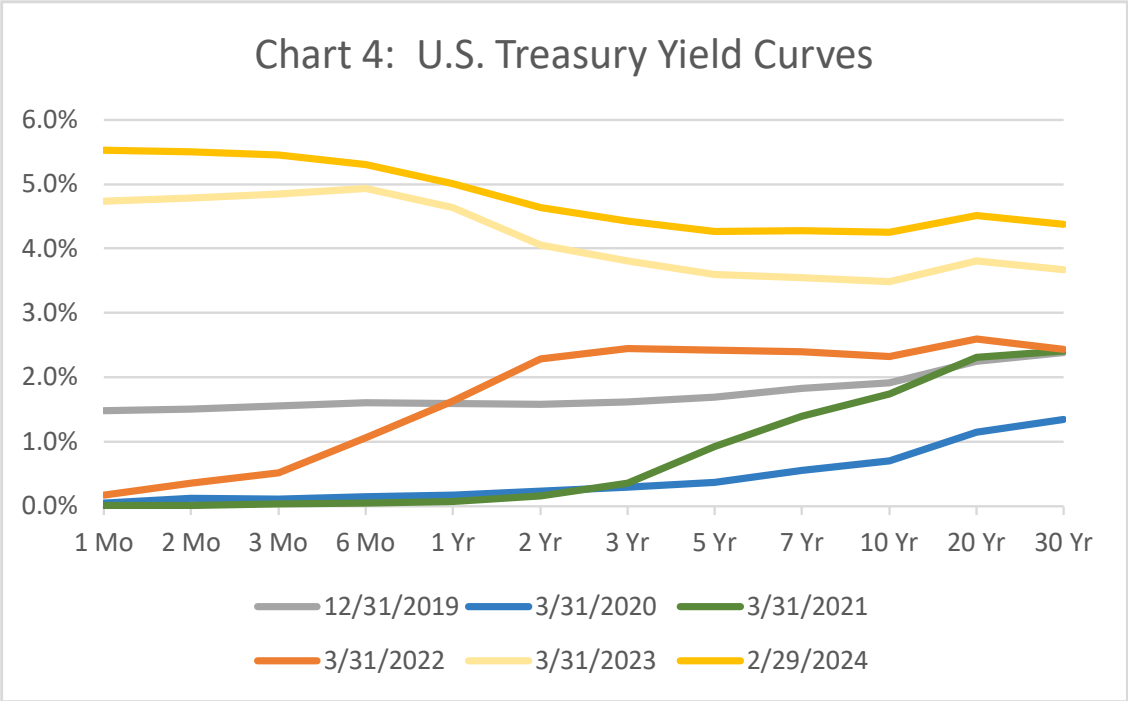
In this case, investors' breakeven inflation rate is 1% (2.5% - 1.5% = 1%).

It makes sense that investors' inflation expectation is equal to the breakeven inflation rate because if investors, on average, believed that inflation was going to be 10%, in the example above, they would buy TIPS and expect to make exceptional profits. The investor who purchases TIPS would earn 1.5% + 10% inflation = 11.5%. The investor who purchased the nominal Treasury would lose 7.5% (2.5% yield — 10% inflation rate). With such large relative returns to be made buying TIPS in this hypothetical example, investors would bid up the price of TIPS and drive down the yield until investors expect the same real return on nominal Treasuries and TIPS. And in this way, the relationship between the market yields on TIPS vs. nominal Treasury bonds is a self-balancing safe measurement of investors' expectation of inflation.

As indicated by the difference between nominal-treasuries and TIPS, Investors expect the Fed's actions will reduce the inflation rate substantially in the coming years. As shown on Chart 3 on page 28, the relative market price of inflation-protected bonds as compared to regular Treasury bonds as of February 29, 2024, indicates that investors expected the inflation rate to decline from the current 3.09% to only 2.40% over the next 5 years and to about 2.29% over the 30-year horizon.



Regarding interest rates, it is possible to use the yield curve to calculate investors' expectations regarding future interest rates. An upward sloping yield curve indicates investors expect higher interest rates and a downward sloping yield curve indicates investors expect lower interest rates in the future. As shown in Chart 4 on page 29, the yield curve went from being significantly upward sloping on March 31, 2021 to mostly downward sloping as of February 29, 2024.



Consistent with a declining yield curve, Chart 5 on page 30 shows that as of February 29, 2024, investors expected long-term interest rates (10-year U.S. Treasury Bond) to decline slightly over the next 20 years, increasing from 4.25% as of February 29, 2024 to 4.77% over the next ten years and then falling to 4.12% over the 20-year time frame. As discussed above, using the yield curve to measure investors' interest rate expectations is a common technique in finance. However, it is only an approximation because other

factors can impact the current shape of the yield curve.

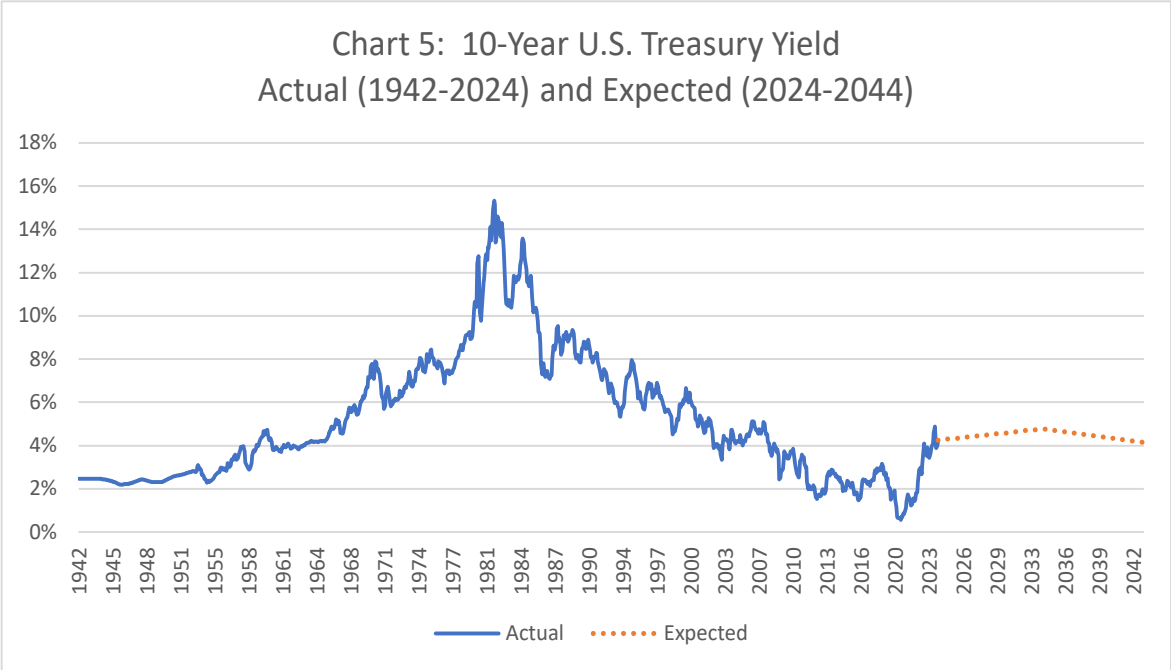


Chart 5 above also shows that although long-term interest rates have increased since reaching historical lows in 2020 and 2021, they remain below interest rates from the 1970s and 1980s when the yield on the 10-year U.S. Treasury bond climbed over 14%.

Q. HOW DO YOU RESPOND TO PEOPLE WHO CLAIM TO KNOW WHAT INTEREST RATES WILL BE IN THE FUTURE?

A. It is important to recognize that current long-term Treasury bond yields represent a direct observation of investor expectations and there is no need to use "experts" to determine market-based cost of equity.

Many economists and forecasters will continue to be quoted in the press prognosticating on possible developments that are truly unpredictable. Fed Chairman

Jerome Powel really stated "the economy has surprised forecasters in many ways since the pandemic and…the economic outlook is uncertain…"[28]

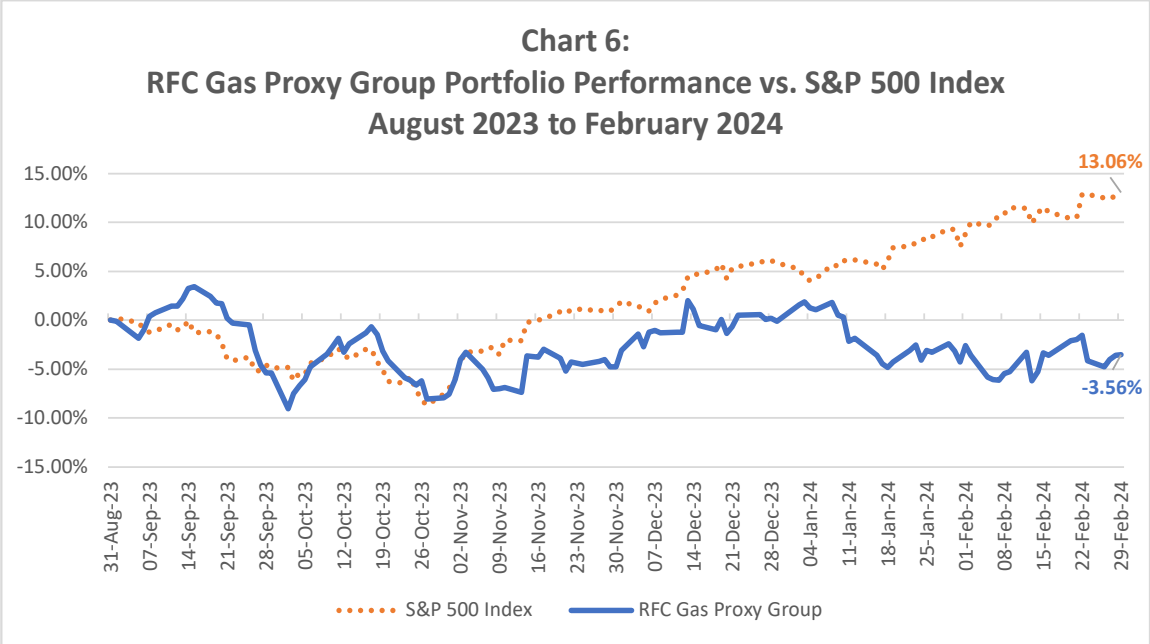
I recommend that the Commission consider that capital markets are highly unpredictable, and it is possible that interest rates will increase, remain the same, or decrease in the future. Consumers' rates should be based predominantly on investors' expectations as indicated by capital market data. While incorporating economists' opinions can be valuable to an extent, it is crucial to recognize our fallibility regarding predicting capital market behavior, including what interest rates will be next year.

[28] Transcript: Fed Chief Jerome Powell's Postmeeting Press Conference, January 31, 2024. https://www.wsj.com/articles/transcript-fed-chief-powells-postmeeting-press-conference-29ce7b9f

B. Stock Price Performance

Q. HOW HAVE UTILITY STOCKS PERFORMED DURING THIS TIME OF HIGH INFLATION AND INCREASING INTEREST RATES?

A. As shown in Chart 6 below, as of February 29, 2024, the S&P 500 is up 13.06% for the last six months while the Utility Proxy Group is down 3.56%.



Q. DO DECREASING GAS UTILITY STOCKS MEAN A HIGHER COST OF EQUITY?

A. All else equal, declining utility stocks can indicate an increasing cost of equity. In this case market data indicates that the cost of equity for utility stocks increased somewhat along with raising interest rates, but not nearly as much as the increase in the yields on U.S. Treasury Bonds. Additionally, market data indicates that the COE for utility companies mostly declined in 2023 despite the relative underperformance of utility stocks.

C. Volatility Expectations

Q. PLEASE DISCUSS CURRENT STOCK PRICE VOLATILITY EXPECTATIONS AND WHAT THEY INDICATE REGARDING THE COST OF EQUITY.

A. Volatility, uncertainty, and risk are synonymous. There are two primary types of volatility: "realized volatility" and "implied volatility." The former is based on historical returns, which may or may not represent future volatility. On the other hand, implied volatility is calculated from options data, which indicates investors' future expectations for volatility. As discussed below, the "term structure" of volatility indicates investors' volatility expectations over different forward-looking time periods (i.e., 1 month, 1 year, etc.).

Q. PLEASE EXPLAIN THE "TERM STRUCTURE OF VOLATILITY."

A. Investors can expect volatility to increase or decrease over time. In general (i.e., in "normal" financial markets), investors expect higher volatility for longer time horizons. For example, investors generally expect the chance stock prices will increase or decrease by 10% in 1 year to be greater than the chance of a 10% (annualized) move over the next 30 days. This makes sense because there is more uncertainty regarding economic and stock market changes the further in the future you look out.

However, during the height of a crisis, when volatility generally tends to rise in the short-term, investors often expect volatility to decrease in coming months or years. In other words, investors expect the current capital market hurricane to pass and the winds to die down. During the peak of implied volatility in mid-March 2020, shortly after the World Health Organization declared COVID-19 a pandemic, the data indicated that investors expected stock price volatility to decrease over time. This implies that investors expected the riskiness of equity investments to decrease over time. As shown in Chart 7 on page 34,

before the COVID-19 outbreak, investors expected volatility to increase from less than 15% annually at the 1-month time frame to about 20% annually at the 24-month time frame. Investors' volatility expectations peaked in March 2020. At that time, investors expected stock price volatility would decrease from over 70% at the 1-month time frame to about 38% at the 24-month time frame. Chart 7 also shows that investors' volatility expectations were higher for all time frames when Russia invaded Ukraine as compared to 2021, but as of February 29, 2024 volatility expectations have dropped back to 2019 levels over the 11-month time-frame and only slightly higher than the 2019 out to 24 months.

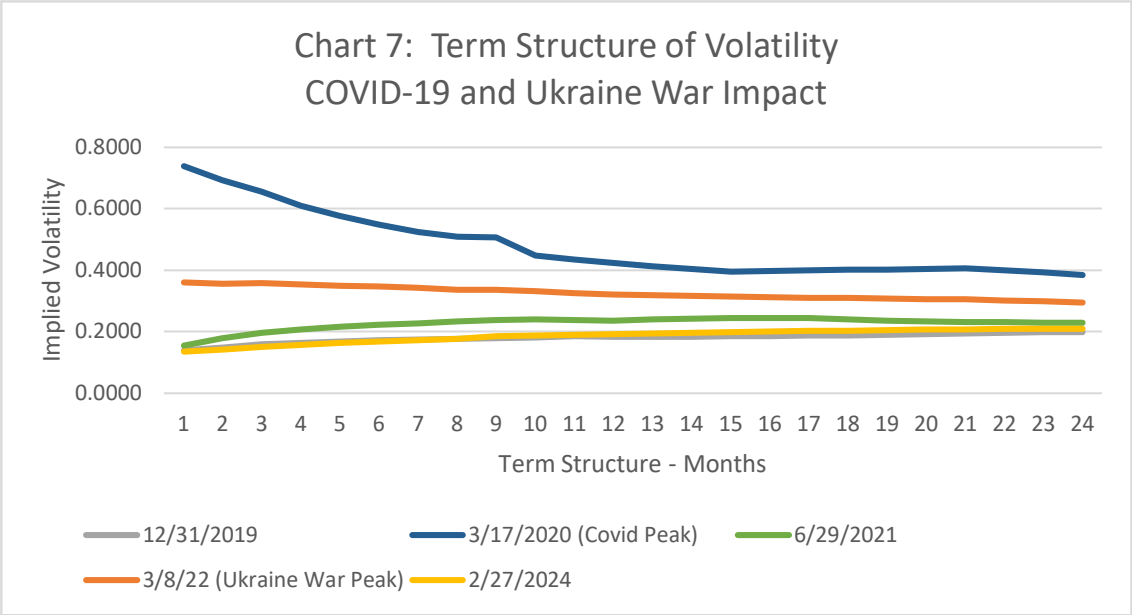


Chart 8 on page 35 provides a 3-dimensional surface[29] to show how the term structure of volatility has evolved since before the COVID-19 outbreak and how it has changed during and since the outbreak. Chart 7 above is simply five selected cross sections of the same data in the surface in Chart 8. In the surface chart, one can see that December 31, 2019, the term structure of volatility is almost flat, increasing slightly from the 1-month

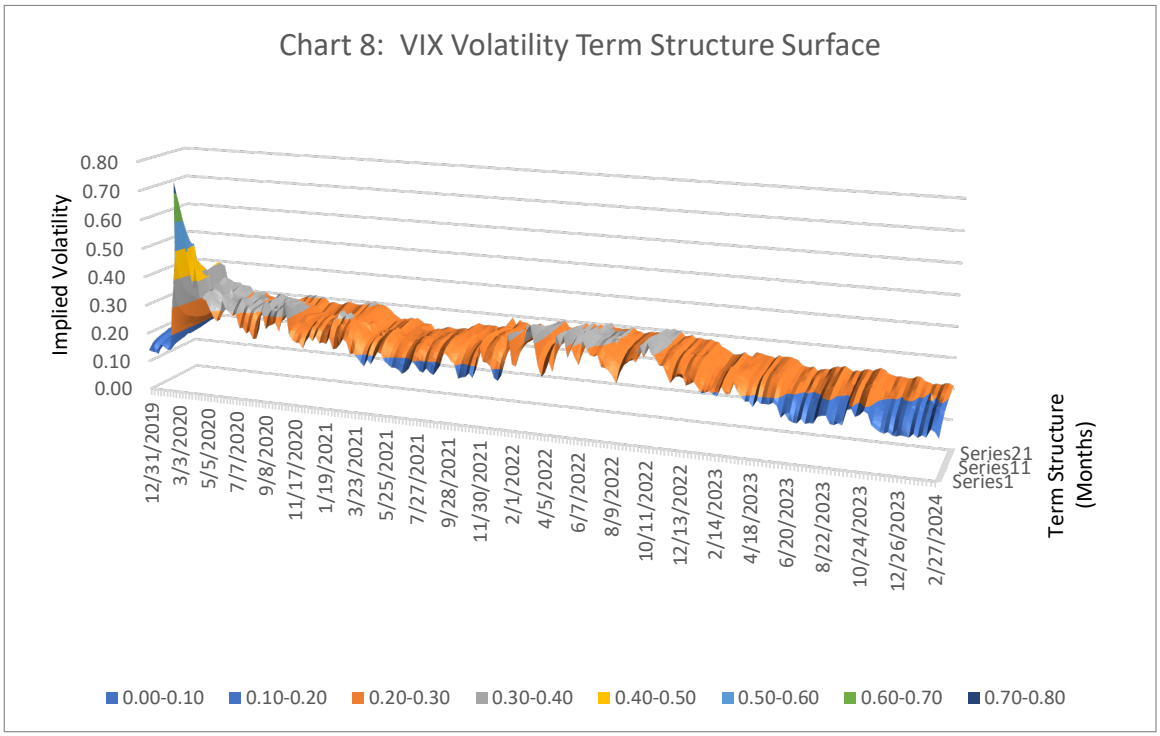
[29] The X axis shows the implied volatility. The Y axis shows the data. The Z axis shows market expectation of future implied volatility of different time frames. Series1 = 1 month and Series24 = 24 months.

to the 24-month time frame. In mid-March 2020, the implied volatility increased over every time period in comparison to December 31, 2019, but one can see that investors expected a declining term structure of volatility. By the end of July 2020, the implied volatility for all time periods had decreased, and the declining term structure moved to a more typical structure in which investors expected higher volatility over longer time periods. As of the end of February 2024, the term structure of volatility has reached historical lows and is now slightly increasing over the 24-month time frame.

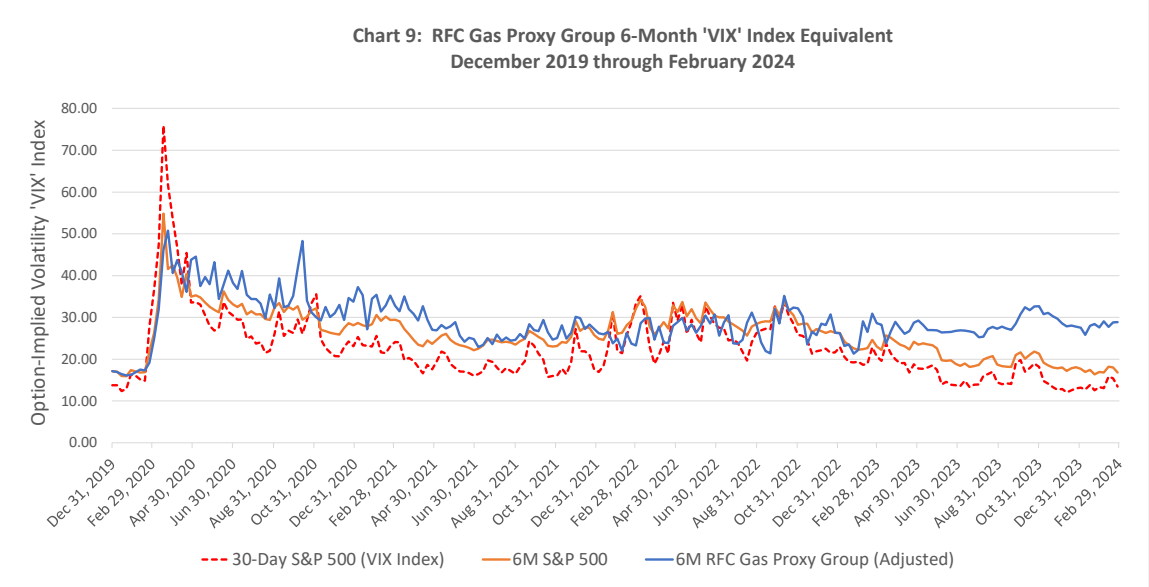


Q. HOW HAVE VOLATILITY EXPECTATIONS FOR GAS UTILITY COMPANIES COMPARED TO VOLATILITY EXPECTATIONS FOR THE S&P 500?

A. The solid orange line in Chart 9 on page 36 shows investors' stock price volatility expectations for the overall market (S&P 500) increased significantly as COVID-19 infections spread to the U.S. and continued to grow exponentially around the world. The solid orange line shows volatility expectations over the next 6 months. On December 31,

2019, investors expected an annualized change of 13.78% over the next 30 days. In mid-March 2020, investors' volatility expectations peaked at over 80% (on March 16, 2020, a point not actually shown on the chart, which has weekly data on Tuesdays). As of the end of February 27, 2024, investors expect an annualized change of 13.43%.

The blue line in Chart 9 shows that investors' adjusted[30] 6-month volatility expectations for my RFC Gas Proxy Group, as indicated by their stock option prices, increased along with the market in mid-March 2020, but to a significantly lesser degree. Investors' 6-month adjusted volatility expectations for gas utility companies were for the most part higher than for the S&P 500 from May through August 2020, remained very comparable through March 2020, and have increased above the expectations for the market since then through the end of 2/27/2024.



[30] The implied volatility for individual stocks and small groups of stocks is almost always higher than the overall market because of the effects of diversification, even when the underlying stocks in the smaller portfolio are less risky, as is the case with gas utility companies. As a result, Chart 9 adjusts the 6-month expected volatility for the RFC Gas Proxy Group by the difference with the 6-month expected volatility for the S&P 500 Index on December 31, 2019 to facilitate the comparison throughout the chart.

As discussed above, changes in implied volatility do not paint the full cost of equity picture. We must consider implied covariance, or how much investors expect the volatility of returns for gas utility companies to correlate with the overall market (e.g., S&P 500 Index).

D. Investor-Perceived Downside Risk (Option-Implied Skewness)

Q. YOU EXPLAINED EARLIER THAT GAS UTILITY STOCKS HAVE UNDERPERFORMRED THE OVERALL MARKET RECENTLY. WHAT DOES STOCK OPTION DATA SHOW REGARDING INVESTORS' CONCERN THAT GAS UTILITY STOCKS WILL HAVE A LARGE DROP COMPARED TO THAT OF THE OVERALL MARKET?

A. Stock option prices provide considerable information regarding investors' expectations. The most well-known measure of investors' expectations as measured by stock option prices is the VIX Index (or Volatility Index). The VIX Index is a measure of investors' volatility expectations and is referred to as the "fear index" because, all else equal, higher volatility expectations indicate higher uncertainty, risk, and scared investors.[31] However, volatility expectations are only one piece of a multi-dimensional puzzle that reveals the market-based cost of equity. After volatility expectations, the next dimension to explore (referred to as the "third moment" in statistics) is skewness. Option-Implied skewness reflects investors' expectations regarding the asymmetry of the probability distribution.

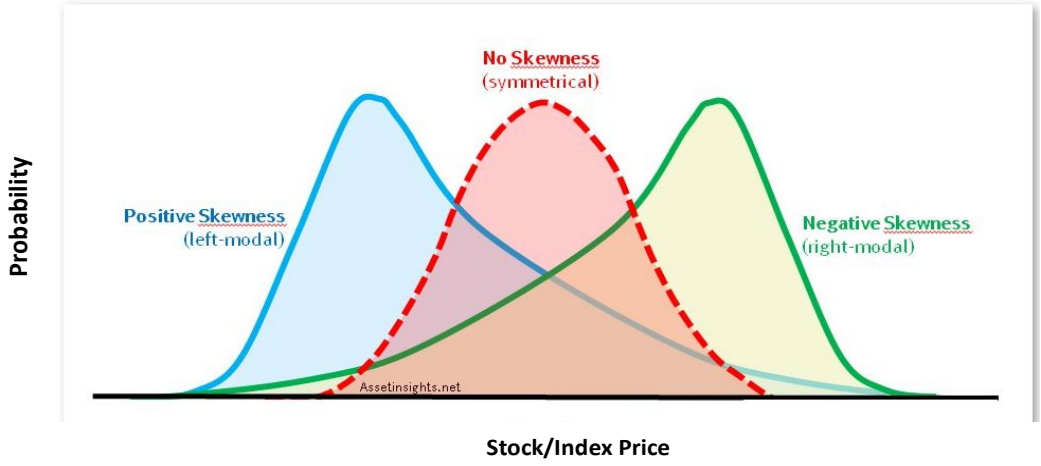
Option-implied probability distributions are almost always negatively skewed for stock market indexes (e.g., S&P 500) and individual stocks, which means that investors

[31] Some investors like high volatility because it provides the opportunity to earn a lot of money quickly if the market moves in their favor. For example, an investor that shorts Microsoft, will make a lot of money if the stock drops by a large amount. However, investors who buy utility stocks generally prefer low volatility and low risk.

almost always think there is a greater chance of a large decrease in stock prices than large increases. The Chicago Board of Options Exchange ("CBOE") also publishes an index based on option-implied skewness referred to as the SKEW Index.

As shown in Chart 10 below, the probability distribution that is negatively skewed has a tail that is longer on the left. A probability distribution with positive skewness has a longer tail on the right. The right and left tails of a probability distribution with no skewness are symmetrical. If the option-implied skewness looked like the red probability distribution in Chart 10 below it would mean that investors believed there was an equal chance that stock prices would move up or down by a certain amount.

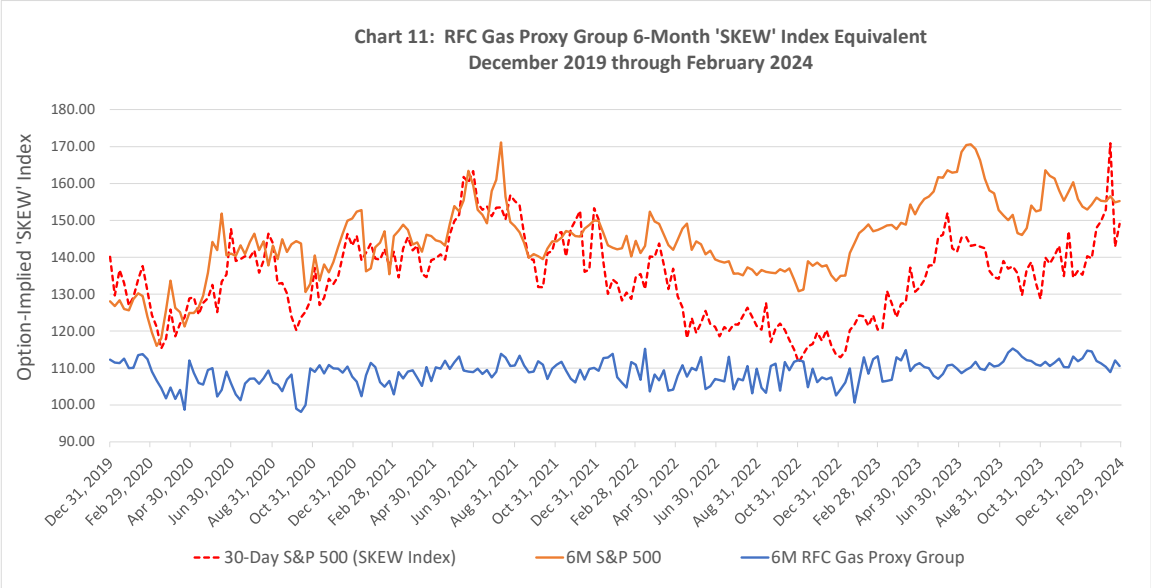
Chart 10: Probability Distributions with and without Skewness



Q. WHAT DOES THE SKEW INDEX REVEAL REGARDING THE IMPACT OF THE COVID PANDEMIC AND THE WAR IN UKRAINE ON PEOPLES' COST OF EQUITY?

As shown in Chart 11 on page 39, comparing the SKEW Index to an equivalent metric based on gas utility company stock options indicates that as 2023 comes to a close, investors have expected the chance of gas utility stocks suffering from a large drop in

investment is much lower than their expectations the overall market will experience a large drop. This indicates the cost of equity for gas utility companies has likely remained lower relative to the overall market as interest rates have increased.



E. Term Structure of Beta Coefficients and COE

Q. DO UTILITY INVESTORS EXPECT THE COST OF EQUITY TO INCREASE IN THE FUTURE?

A. No. As discussed above, I would agree that the COE for gas utility companies has increased since lows reached in 2021. However, capital market data show that their COE has been declining in recent months and investors expect the COE to remain relatively stable when considering time frames past about 16 months.

Q. PLEASE EXPLAIN HOW YOU DETERMINED THAT INVESTORS EXPECT THE COE FOR GAS UTILITY COMPANIES TO REMAIN RELATIVELY FLAT IN THE FUTURE.

A. Investors can expect the cost of capital (both debt and equity) to increase or decrease over time. How the cost of capital changes based on different investment horizons is referred to as its "term structure." This fundamental concept is easy to understand by thinking about mortgage interest rates. Any homeowner knows that the interest rate on a 30-year mortgage will almost always be higher than that of a 10-year mortgage. Along the same lines, rate of return witnesses sometimes make two cost of debt recommendations, one for short-term debt and one for long-term debt.

The same logic applies to the cost of equity. However, in regulatory proceedings, rate of return witnesses generally calculate a single COE to make a single ROE recommendation, rarely if ever addressing the term structure of the COE. The COE for gas utility stocks has increased since 2021, the term-structure of COE analysis indicates that investors expect the COE for gas utility stocks to remain relatively stable in the future.

Standard COE models used in utility proceedings do not have the capacity to measure the COE over different time periods. However, stock options do allow us to measure the COE over different time periods because there are many stock option contracts that expire over different time periods. Option contracts for each expiration period allow us to calculate option-implied beta coefficients[32], market risk premia, and thus the resulting COE for each investment horizon. Unfortunately, option contracts for gas utility companies

[32] As described in more details below, a historical beta is a measure of the covariation of the return on an individual security with the return on the market portfolio. Most published betas are based exclusively on historical return data. However, I also calculate option-implied betas based on investors' expectations of the probability distribution of future returns.

only go out five to nine months into the future, but there are a number of electric utility stocks that trade options that often go out to almost two years or beyond. In addition, investors trade options on the S&P 500 with expirations approaching or sometimes beyond five years. Using these data, we can construct the term structure of beta, the market risk premium, and the COE for these electric utilities, which are indicative of the term structure of these parameters for gas utility companies.

The resulting term structures for the beta coefficients and the COE of the eight electric utility companies currently trading options with expirations over 12 months[33] are presented in Chart 12 and Chart 13 on page 42. Chart 12 shows that option-implied betas for these electric utilities are roughly 1 at the 7 month investment horizon, dropping to about 0.52 at the 7 month horizon and settling at settling under 0.70 after the 10 month horizon, which means that investors expect the risk of investing in these electric utilities to be stable or decrease over longer investment horizons. Chart 13 shows that the COE for these electric utilities also reaches a high of 7.2% at the 17-month horizon and is about 7.0% at the 5-year horizon.

[33] The eight electric utility companies AEP, D, DUK, EXC, FE, NEE, PPL, and SO are defined as the RFC Electric LEAPS Proxy Group, which I use in this testimony to calculate the term structure of COE. HE also trades options with expirations over 12 months but was excluded from this group because of the recent fires in Hawaii. SRE trades options with expirations barely above 12 months and has been excluded to allow consistency in this proxy group if this analysis is updated in subsequent months.

2

Despite Mr. Moul's assertion that "high interest rates clearly point to high capital costs prospectively"[34], an examination of capital market data suggests otherwise. While the cost of equity for gas utility companies did increase from lows reached in 2021, market data indicate a mostly declining cost of equity in 2023 and that investors anticipate that it will be flat to decreasing over the next five years.

V. COST OF EQUITY CALCULATION

A. Overview

Q. PLEASE PROVIDE AN OVERVIEW OF YOUR PERSPECTIVE REGARDING HOW CAPITAL MARKETS RELATE TO THE COE AND THE OVERALL COST OF CAPITAL.

A. The cost of capital is the return investors require to provide capital to Peoples based on current capital markets. To measure the cost of equity accurately, it is critical to use current market data because it increases the chance that the authorized ROE will match Peoples' market-based COE when it needs to raise equity capital. My analysis is built upon a measure of investor's forward-looking expectations using current market data. The use of such data and my forward-looking models becomes even more important in this case, where Peoples is projecting what its cost of equity should be for a fully projected future test year ending on September 30, 2025.

As discussed above, my COE recommendation is my opinion of the return investors require to provide equity capital to Peoples based on current capital markets. My

[34] Mr. Moul's Direct Testimony, Page 45, lines 11-12.

recommendation is consistent with the following legal standards set by the United States Supreme Court for a fair rate of return: "[t]he return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks"[35] and "sufficient to… support its credit and… raise the money necessary for the proper discharge of its public duties."[36]

Because the cost of equity is not a published figure like a bond yield, some interpretation is required to determine the appropriate market price. My cost of equity recommendation is based on my computation of what the market indicates investors require (return on investment) to provide capital to companies with comparable risk to Peoples.

As explained below, I use current market prices (e.g., stocks, bonds, options), which measure investors' expectations directly, instead of relying solely on historical data and analyst forecasts.

A COE based on current market prices (market-based) is superior to a COE based on historical data (non-market-based) for two reasons:

1. The COE that Peoples has to pay investors is based on capital markets. Inflation and interest rate developments are not a secret and therefore market-based COE models will reflect investors' changing expectations.
2. Capital markets are unpredictable. Regarding capital markets' unpredictability, investment guru Warren Buffet gave the following advice to investors: "[t]hey should not listen to a lot of the jabbering about what

[35] *Fed. Power Comm'n v. Hope Nat. Gas Co.* v. Hope Nat. Gas Co., 320 U.S. 591, 603 (1944).
[36] Bluefield Water Works & Improvement Co. v. Pub. Serv. Comm'n of the State of W. Va, 262 U.S. 679, 692-693 (1923).

the market is going to do tomorrow, or next week or next month because nobody knows."[37]

Current capital markets are our best source of investors' expectations regarding future capital markets. Current market prices of stocks and bonds reflect investors' forecasts for long-term interest rates and capital markets in general.

Q. HOW DID YOU ARRIVE AT YOUR COE RECOMMENDATION?

A. To arrive at my recommendation, I applied the DCF, including a Constant Growth and a Non-Constant Growth method, and a CAPM analysis to a group of similar companies ("RFC Gas Proxy Group") using data available through February 29, 2024, as discussed below. In all of my models, I use both historical averages and the most recently available spot data for the inputs wherever it is possible and applicable.

Q. CONSIDERING THAT STOCK AND OPTION PRICES AND BOND YIELDS CHANGE DAILY, WOULD IT NOT BE BETTER TO USE HISTORICAL AVERAGES EXCLUSIVELY FOR THE INPUTS IN YOUR MODELS?

A. Not necessarily. Most people would agree that the use of spot market data, the value of a particular input on a particular day, can lead to COE results that can vary over short periods of time. It may therefore be tempting to find a more stable value based on historical averages that are not overly influenced by short-term fluctuations in capital markets. When doing a forward-looking analysis, however, it is equally important to look at the most recent market data as an indication of trends and where a given value is more likely to be

[37] PBS News Hour, June 26, 2017, Part 1 – America should stand for more than just wealth, says Warren Buffett available at www.pbs.org/newshour/show/pbs-newshour-full-episode-june-26-2017.

in the future. This is a broad and generally accepted principle, as made clear in the following example.

Using historical stock prices to make the point clear, if Company A's stock price were to go up linearly over the course of one year from $50 to $100, its average stock price over that year would be $75. If Company B's stock price declined linearly from $100 to $50 over the same year, it would have the same exact average stock price of $75. But most people would agree that predicting both stock prices at $75 over the near future would be overly simplistic and leave readily accessible data unused. Without relying on any additional data, at the very least, it would stand to reason that in the near future, Company A's stock price is more likely to be between $75 and $100 than Company B's stock price, and that Company B's stock price is more likely to be between $50 and $75 than Company A's stock price. These observations cannot be made by looking at the yearly averages alone and must take the most recent data into special consideration.

This does not eliminate concerns regarding the effect of daily fluctuations in market data, especially during periods of volatility. As a result, it is important to consider both averages and recent spot values when using market data for forward-looking analyses. That is precisely my approach when using market data that are expected to continue to fluctuate, such as stock prices, dividend yields, betas, and market risk premia.

Q. CAN A DIFFERENCE OF ONE DAY IN THE SELECTION OF SPOT DATA HAVE A SIGNIFICANT POSITIVE OR NEGATIVE EFFECT ON ROE

RESULTS? IF SO, HOW DO YOU GO ABOUT CHOOSING WHICH DAY TO USE FOR MARKET-BASED SPOT DATA?

A. Daily fluctuations in stock prices, resulting dividend yields, betas, etc., all have an impact on resulting ROE calculations, especially when using recent spot values for market data. Such is the nature of market data, which change from day to day. This is rightfully noted as a potential risk of using spot data, but given the stated benefits of using recent spot data for forward-looking analyses, there are ways to address such potential pitfalls.

For this reason, it is very important to establish consistent methodologies that eliminate the possibility of personal bias, especially when using spot market data. I consistently use the last trading day of the last full calendar month before my schedule preparations for all market-based spot data and as the last day for all historical market-data averages.

It is important to keep in mind that even averages fluctuate over time, and all responsible data analysts must find a consistent and reproducible way to "freeze time" to work with such fluctuations while eliminating bias.

It is also important to point out once again that I use recent spot market data to establish one benchmark for market-based inputs, which are balanced by the use of historical averages, as stated previously.

B. Proxy Group Selection

Q. WHAT PROXY GROUPS DID YOU USE TO CALCULATE PEOPLES' COE?

A. My comparable proxy group, shown on Table 6 below and referred to as the RFC Gas Proxy Group, consists of the following 5 publicly traded gas utility companies covered by Value Line:

TABLE 6: RFC GAS PROXY GROUP COMPOSITION

	Company Name	Ticker
1	ATMOS ENERGY CORP.	ATO
2	NI SOURCE INC.	NI
3	N.W. NATURAL	NWN
4	ONE GAS, INC.	OGS
5	SPIRE INC.	SR

My proxy group includes five of the eight companies that are in Mr. Moul's Gas Group. I chose to exclude the following three companies from Mr. Moul's proxy group because I believe they are not in the same risk category as Peoples: (1) Chesapeake Utilities Corp., (2) New Jersey Resources Corp, (3) Southwest Gas Corp.

Q. DID YOU CONSIDER ADDING CHESAPEAKE UTILITIES CORP, NEW JERSEY RESOURCES CORP, AND SOUTHWEST GAS CORP. TO YOUR PROXY GROUP?

A. Yes. I considered adding them to my proxy group by submitting an interrogatory to Mr. Moul regarding percentage of operating income of each of the eight (8) companies in Mr. Moul's proxy group derived from (a) regulated gas distribution operations and (b) total regulated distribution operations, including water, gas, and electricity. His response

confirmed my understanding that these companies are not in the same risk category as Peoples because each of these companies have significant unregulated operations. In response to OCA-XII-006 Mr. Moul reported the following data regarding the percentage of revenues and earnings from regulated operations and assets dedicated to regulated operations. As can be seen below, Chesapeake Utilities Corp, New Jersey Resources Corp, and Southwest Gas Corp receive only 62%, 39% and 39% of their revenues from regulated operations respectively. On the other hand, the percentage of revenues from regulated operations for the five companies in my proxy group range between 88% and 100% with an average over 95%.

OCA-XII-006 Attachment

	Regulated and total Revenues		
Company	Percent	Regulated	Total
		($000)	
Atmos Energy Corp.	96%	$ 4,031,936	$ 4,201,662
Chesapeake Utilities Corp.	62%	422,894	680,704
New Jersey Resources Corp.	39%	1,127,417	2,905,979
NiSource, Inc.	100%	5,838,100	5,850,600
Northwest Natural Gas	95%	989,752	1,037,353
One Gas, Inc.	100%	2,578,005	2,578,005
Southwest Gas Corp.	39%	1,935,069	4,960,009
Spire, Inc.	88%	1,945,600	2,198,500
Average	77%		

Q. WHEN SELECTING HIS PROXY GROUP DID MR. MOUL CONSIDER THE IMPACT OF DECOUPLING MECHANISMS LIKE THE WEATHER NORMALIZATION ADJUSTMENT (WNA) PEOPLES IS PROPOSING IN THIS

CASE OR PEOPLES' EXISTING DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)?

A. Although Mr. Moul claims he considered these mechanisms, his claims do not bear out. On page 9 of his testimony, Mr. Moul claims that a "common characteristic" of most of his Gas Group companies is that they have "rate stabilization mechanisms" like weather normalization, decoupling, and infrastructure riders. However, a deeper dive into Mr. Moul's claim revealed that Mr. Moul's analysis of WNAs for Gas Group companies was limited to the Forms 10-K reported by each company online. Importantly, Mr. Moul's analysis did not include any underlying comparative risk analysis into how each "WNA" or DSIC-type mechanism was calculated or the specific details of how those mechanisms compare to Peoples existing DSIC or WNA. Therefore, Mr. Moul has not demonstrated that his analysis reflects the impacts or potential impacts of their proposed WNA or existing DSIC on investor expectations.

C. Discounted Cash Flow

Q. PLEASE SUMMARIZE THE RESULTS OF YOUR DCF MODELS.

A. I used both the constant growth form of the DCF method, which determines growth based on the sustainable retention growth procedure, and a non-constant growth DCF method. The results of my constant growth DCF model range between 8.06% and 8.09% when using a sustainable growth rate and between 9.42% and 9.43% when using an option-

implied growth rate.[38] The results of my non-constant growth DCF method indicate a COE of between 8.40% and 8.74% for the RFC Gas Proxy Group.[39]

Q. WHAT IS THE DISCOUNTED CASH FLOW METHOD?

A. The DCF method is an approach to determine the COE. The method recognizes that investors purchase common stock to receive future cash payments. These payments come from: (a) current and future dividends, and (b) proceeds from selling stock. A rational investor will buy stock to receive dividends and ultimately to sell the stock to another investor at a gain. The price the new owner is willing to pay for stock is related to that buyer's expectation of future flow of dividends and the future expected selling price. The value of the stock is the discounted value of all future dividends until the stock is sold plus the value of proceeds from the sale of the stock.

D. Constant Growth Form of the DCF Model

Q. YOU STATE YOU USED THE CONSTANT GROWTH FORM OF THE DCF MODEL. WHAT IS THE CONSTANT GROWTH FORM OF THE DCF MODEL?

A. The constant growth form of the DCF model is a form of the DCF method that can be used in determining the COE when investors can reasonably expect that the growth of retained earnings and dividends will be constant.

Retained earnings are funds that a company keeps in its treasury, so that they are available for future needs, such as capital expenditures, debt payments, and new investments. These retained earnings show investors whether the company is growing,

[38] Exhibit ALR-3, page 1.
[39] Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4.

which, in turn, is a measure of the future indicator of dividends and the value of a company's stock.

Q. DESCRIBE HOW THE CONSTANT GROWTH MODEL WORKS.

A. The constant growth model is described by this equation k= D/P + g, where: [40]

k= cost of equity (COE);
D=Dividend; and
P=Market price of stock at time of the analysis

and where:

g=the growth rate, where g= br + sv;
b=the earnings retention rate;
r=return on common equity investment (referred to below as "book equity");
v=the fraction of funds raised by the sale of stock that increases the book value of the existing shareholders' common equity; and
s=the rate of continuous new stock financing

The constant growth model is therefore correctly recognized to be:

k=D/P + (br +sv)

The COE demanded by investors is the sum of two factors. The first factor is the dividend yield. The second factor is growth (dividends and stock price). The logical relationship among these factors is as follows: the dividend yield is calculated based on current dividend payments while growth indicates what dividends and stock price will be in the future.

Q. WHAT OTHER FACTORS IMPACT HOW ONE USES THE CONSTANT GROWTH FORM OF THE DCF MODEL?

A. Sufficient care must be taken to be sure that the growth rate "g" is representative of the constant sustainable growth. To obtain an accurate constant growth DCF result, the

[40] M. GORDON, *Cost of Capital to a Public Utility*, p. 32-33 (MSU Public Utility Studies 1974).

mathematical relationship between earnings, dividends, book value and stock price must be respected.

The basic difference between the use of an analysts' earnings per share growth rate in the constant growth DCF formula and using the "br" (b (the earnings retention rate) X r (rate of return on common equity investment)) approach is that the "br" form, if properly applied, eliminates the mathematical error caused by an inconsistency between the expectations for earnings per share growth and dividends per share growth. Because it eliminates that error, the results of a properly applied "br" approach will be superior to the answer obtained from other approaches to the constant growth form of the DCF model. This is not to say that even a properly applied "br" approach will be perfect. The self-correcting nature of a properly applied "br" to forecasted differences in earnings per share and dividends per share growth rates helps to mitigate the resultant error but should not be viewed as the perfect way to quantify the impact of expected non-constant growth rates.

Q. HOW HAVE YOU IMPLEMENTED THE CONSTANT GROWTH FORM OF THE DCF MODEL IN THIS CASE?

A. I have applied the constant growth form of the DCF model by staying true to the mathematically derived "k=D/P + (br + sv)" form of the DCF model. I have also taken care to fully allocate all future expected earnings to either future cash flow in the form of dividends ("D") or to retained earnings (the retention rate, "b"). This extra accuracy is obtained only when the retention rate "b" is derived from the values used for "D" and "r," rather than independently.

Q. PLEASE EXPLAIN HOW YOU OBTAINED THE VALUES YOU USED IN THE CONSTANT GROWTH FORM OF THE DCF METHOD.

A. The DCF model generally calls for the use of the dividend expected over the next year. A reasonable way to estimate next year's dividend rate is to increase the quarterly dividend rate by half of the current actual quarterly dividend rate. This is a good approximation of the rate that would be obtained if the full prior year's dividend were escalated by the entire growth rate.[41]

I obtained the stock price—"P"—used in my DCF analysis from the closing prices of the stocks on February 29, 2024. I also obtained an average stock price for the 12 months ending February 29, 2024 by averaging the high and low stock prices for the year.

I based the value of the future expected return on equity— "r" —on the average return on book equity expected by Value Line, adjusted in consideration of recent returns. I also made a computation that was based on a review of both the earned return on equity consistent with analysts' consensus earnings growth rate expectations and on the actual earned returns on equity. For a stable industry such as utility companies, investors will typically look at actual earned returns on equity as one meaningful input into what can be expected for future earned returns on book equity. See Exhibit ALR-3, page 1.

[41] For example, assume a company paid a dividend of $0.50 in the first quarter a year ago, and has a dividend growth rate of 4 % per year. This dividend growth rate equals (1.04)^4-1=0.00985 % per quarter. Thus, the dividend is $0.5049 in the second quarter, $0.5099 in the third quarter, and $0.5149 in the fourth quarter. If that 4 % per annum growth continues into the following year, then the dividend would be $0.5199 in the 1st quarter, $0.5251 in the 2nd quarter, $0.5303 in the 3rd quarter, and $0.5355 in the 4th quarter. Thus, the total dividends for the following year equal $2.111 (0.5199 + 0.5251 + 0.5303 + 0.5355). I computed the dividend yield by taking the current quarter (the $0.5149 in the 4th quarter in this example) and multiplying it by 4 to get an annual rate of $2.06. I then escalated this $2.06 by half the 4 % growth rate, which means it is increased by 2 %. $2.06 x 1.02= $2.101, which is within one cent of the $2.111 obtained in the example.

This return on book equity expectation used in the DCF method to compute growth must *not* be confused with the COE. Since the stock prices for the comparative companies are substantially higher than their book value, the return investors expect to receive on their market price investment is considerably less than the anticipated return on book value. If the market price is low relative to book value, the COE will be higher than the future expected return on book equity, and if the market price is high, then the return on book equity will be less than the COE.

In addition to growing through the retention of earnings, utility companies also grow by selling new common stock. Selling new common stock increases a company's growth. I quantified this growth caused by the sale of new common stock by multiplying the amount that the actual market-to-book ratio exceeds 1.0, by the compound annual growth rate of stock that Value Line forecasts. The results of that computation are shown on line 4 of Exhibit ALR-3, page 1.

Pure financial theory prefers concentrating on the results from the most current price because investors cannot purchase stock at historical prices. There is a legitimate concern, however, about the potential distortion of using just a single price. I present DCF results based on the most recent stock pricing data (February 29, 2024) as well as the average of the high and low stock price over the past 12 months to obtain a range of reasonable values. As shown in Exhibit ALR-3, page 1, the DCF result based on the average of the high and low stock price for the year ending February 29, 2024 is 8.06%. The DCF result based on the stock price as of February 29, 2024 is 8.09%. Exhibit ALR-3, page 1, shows more of the specifics of how I implemented the constant growth form of the DCF model for the RFC Gas Proxy Group.

Q. PLEASE EXPLAIN HOW YOU DETERMINED WHAT VALUE TO USE FOR "r" WHEN COMPUTING GROWTH IN YOUR CONSTANT GROWTH FORM OF THE DCF MODEL.

A. The inputs I considered are shown in Footnote [C] of Exhibit ALR-3, page 1. The value of "r" that is appropriate to use in the DCF formula is the value anticipated by investors to be maintained on average in the future. This Exhibit shows that the average future return on equity forecasted by Value Line for the RFC Gas Proxy Group between 2024 and 2027-29 is 9.00%. The same footnote also shows that the future expected return on equity derived from the Zacks consensus forecast is 8.62%, and that the actual returns on equity earned by the RFC Gas Proxy Group on average were 7.93% in 2021, 9.64% in 2022, and 9.05% in 2023. Based on the combination of the forecasted return on equity derived from the Zacks consensus, the recent historical actual earned returns, and Value Line's forecast, I made the DCF growth computation using a 8.60%[42] value of "r".

Q. WHAT COE IS INDICATED BY THE CONSTANT GROWTH FORM OF THE DCF METHOD THAT YOU RELY ON FOR YOUR RECOMMENDATION?

A. The result of my DCF analysis using the Constant Growth form of the DCF indicates a COE range of between 8.06% and 8.09% for the RFC Gas Proxy Group.[43] Since these DCF findings use analysts' forecasts to derive sustainable growth (in part) and on analysts' forecasts of dividend growth and book value growth in the non-constant form of the DCF method, the results should be considered as conservatively high. This is because, as

[42] I used 8.60% in consideration of historical returns, Zacks's projections, and Value Line projected returns for the RFC Gas Proxy Group.
[43] Exhibit ALR-3, page 1.

previously mentioned above, analysts' forecasts of such growth have been notoriously overstated.

My results are not as influenced by overly-optimistic analysts' forecasts as would have been the case had I merely used analysts' five-year earnings growth rate forecasts as a proxy for long-term growth. This is because the DCF methods I use compute sustainable growth rates, rather than growth rates that can exaggerate the growth rate due to assuming that a relatively short-term forecast (5 years) will remain indefinitely.

E. Non-Constant Growth Form of the DCF Model

Q. PLEASE EXPLAIN HOW YOU IMPLEMENTED THE NON-CONSTANT GROWTH FORM OF THE DCF MODEL.

A. The non-constant growth form of the DCF model determines the return on investment expected by investors based on an estimate of each separate annual cash flow the investor expects to receive. For the purpose of this computation, I have incorporated Value Line's detailed annual forecasts to arrive at the specific non-constant growth expectations that an investor who trusts Value Line would expect. This implementation is shown on Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4. In the first stage, cash flow entry is the cash outflow an investor would experience when buying a share of stock at the market price. The subsequent years of cash flow are equal to the dividends per share that Value Line forecasts. For the intermediate years of the forecast period in which Value Line does not provide a specific dividend, the annual dividends were obtained by estimating that dividend growth would persist at a compound annual rate. The cash flow at the conclusion of the forecast period includes both the final year's dividend as projected by Value Line and the

proceeds from selling the stock. The stock price used to determine the proceeds from selling the stock was obtained by estimating that the stock price would grow at the same rate at which Value Line forecasts book value to grow.

Q. WHY DID YOU USE BOOK VALUE GROWTH TO PROVIDE THE ESTIMATE OF THE FUTURE STOCK PRICE?

A. For any given earned return on book equity, earnings are directly proportional to the book value. Furthermore, book value growth is the net result after the company produces earnings, pays a dividend and also, perhaps, either sells new common stock at market price or repurchases its own common stock at market price.

Once these cash flows are entered into an Excel spreadsheet, the compound annual return an investor would achieve as a result of making this investment was obtained by using the Internal Rate of Return (IRR) function built into the spreadsheet. As shown on Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4, this multi-stage DCF model produced an average indicated COE of 8.74% based on the year-end stock price, and 8.40% based on average prices for the year ending February 29, 2024 for the RFC Gas Proxy Group.

Q. WHAT COST OF EQUITY DOES YOUR NON-CONSTANT GROWTH DCF METHOD INDICATE?

A. My non-constant growth DCF method indicates a cost of equity of between 8.40% and 8.74%.[44]

[44] Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4.

F. Capital Asset Pricing Model

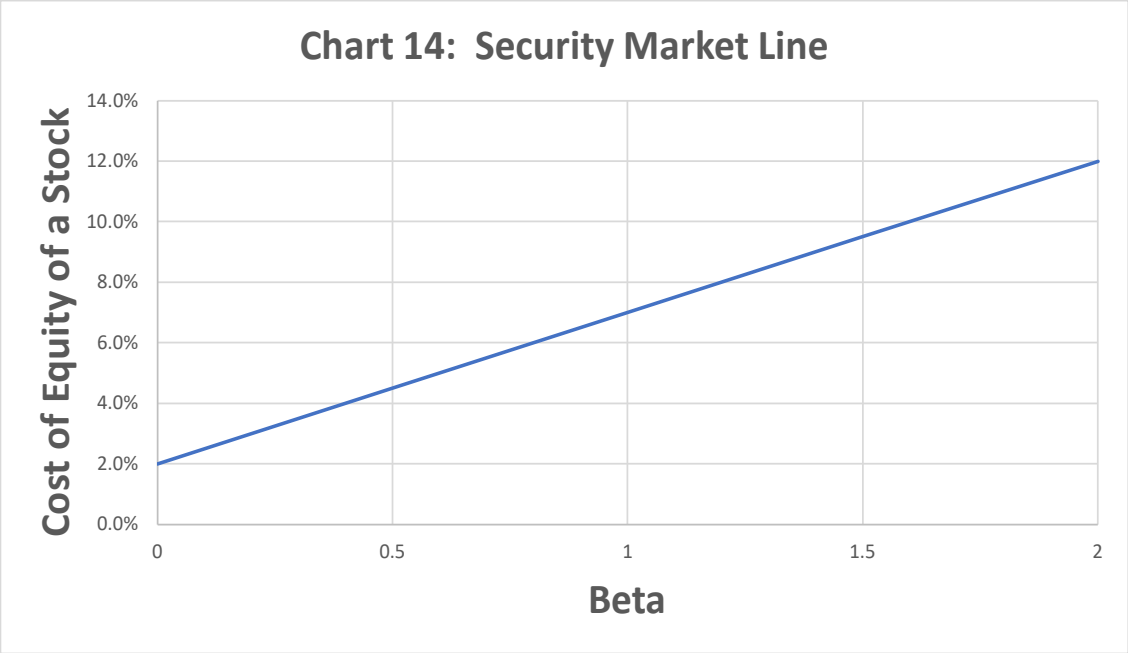
Q. PLEASE DESCRIBE THE CAPM.

A. CAPM stands for "Capital Asset Pricing Model." The CAPM relates return to risk; specifically, it relates the expected return on an investment in a security to the risk of investing in that security. The riskier the investment, the greater the expected return (i.e., the cost of equity) investors require to make that investment.

Investors in a firm's equity face two types of risks: (1) firm-specific risk and (2) market risk (financial analysts refer to this market risk as systematic risk). Firm-specific risk refers to risks unique to the firm, such as management performance and losing market share to a new competitor. Investors can reduce firm-specific risk by purchasing stocks as part of a diverse portfolio of companies if they construct the portfolio to cause the firm-specific risk of individual companies to balance out. Market-related risk refers to potential impacts from the overall market, such as a recession or interest rate changes. This risk cannot be removed by diversification, so the investor must bear it no matter what. Because the investor has no option but to bear market risk, the investor's cost of equity will reflect that risk.

The price of a stock with a beta of 1 tends to move with the market. If the market increases by 1%, the stock is also expected to increase by about 1%, and vice versa. The price of a stock with a beta greater than 1 tends to be more volatile than the market. For example, a stock with a beta of 1.5 will on average be 50% more volatile than the market. If the market rises by 1%, the price of a stock with a beta of 1.5 is expected to rise by 1.5%, and if the market falls by 1%, the stock price is expected to decrease by 1.5%. The price of a stock with a beta less than 1 tends to be less volatile than the market.

The CAPM predicts that for a given equity security, the cost of equity has a positive linear relationship to how sensitive the stock's returns are to movements in the overall market (e.g., S&P 500). A security's market sensitivity is measured by its beta.[45] As shown in Chart 14 below, the higher the beta of a stock, the higher the company's cost of equity—the return required by the investor to invest in the stock.



Here is the standard CAPM formula:

$$K = Rf + \beta i * (Rm - Rf)$$

Where:

K is the cost of equity;
Rf is the risk-free interest rate;
Rm is the expected return on the overall market (e.g., S&P 500);
[Rm – Rf] is the premium investors expect to earn above the risk-free rate for investing in the overall market ("equity risk premium" or "market risk premium"); and
βi (Beta) is a measure of non-diversifiable, or systematic, risk.

[45] The covariation of the return on an individual security with the return on the market portfolio.

Q. PLEASE EXPLAIN HOW YOU IMPLEMENTED THE CAPM.

A. First, I determined appropriate values or ranges for each of the three model inputs: (a) Risk-Free Rate, (b) Beta, and (c) Equity Risk Premium. Second, I used the equation above to calculate the cost of equity implied by the model. Below I will explain how I calculated the three model inputs and summarize the CAPM cost of equity numbers resulting from those inputs. Table 7 and Table 8 on page 77 show the results of my CAPM.

Risk-Free Rate

Q. WHAT RISK-FREE RATE DID YOU USE IN YOUR CAPM?

A. It is generally preferable to use the market yield on short-term U.S. Treasury yields as the risk-free rate because these bonds have a beta close to zero. *Principles of Corporate Finance* states: "The CAPM… calls for a short-term interest rate."[46] However, I chose to use a risk-free rate based on both long- and short-term Treasury yields because it is reasonable to consider a risk-free rate that would apply to both long- and short-term investors. My short-term risk-free rate is based on the yield of 3-month U.S. Treasury bills and my long-term risk-free rate is based on the yield of 30-year U.S. Treasury bonds. In line with my Spot and Weighted Average CAPM approaches, I use both spot values as of February 29, 2024 and weighted averages over the 3 months ending on that date for these two yields.

As outlined in Exhibit ALR-4, page 2, my spot and weighted average short-term risk-free rates are 5.45% and 5.43%, respectively. My spot and weighted average long-term risk-free rates are 4.38% and 4.24%, respectively.

[46] BREALEY, MYERS, AND ALLEN, *Principles of Corporate Finance*, p. 228, (McGraw-Hill Irwin, New York, 12th ed. 2017).

U.S. government bonds are reasonable to use as a risk-free rate because they have a negligible risk of default. The value of short-term U.S. Treasury bills has a relatively low exposure to swings in the overall market. The value of long-term U.S. Treasury bonds is relatively more exposed to the market and therefore must be used with caution.

Q. WHAT IS YOUR RESPONSE TO ANALYSTS WHO CLAIM THAT THE CAPM SHOULD BE IMPLEMENTED WITH A RISK-FREE RATE BASED ON A LONG-TERM INTEREST RATE (E.G., YIELD ON 30-YEAR TREASURY BOND) AND/OR BASED ON INTEREST RATE FORECASTS INSTEAD OF MARKET YIELDS.

A. As discussed in Appendix D, a CAPM analysis that uses a risk-free rate based only on long-term interest rates may overstate the COE because these bonds do not have a zero beta. It is not appropriate to use a risk-free rate based on interest rate forecasts because it often does not represent investors' expectations.

Q. CURRENTLY YOUR RISK-FREE RATE BASED ON SHORT-TERM INTEREST RATES IS HIGHER THAN YOUR RISK-FREE RATE BASED ON LONG-TERM INTEREST RATES. HOW DOES THIS IMPACT YOUR CAPM RESULTS?

A. It is rare for short-term interest rates to be higher than long-term interest rates because, as stated above, they are less risky than long-term bonds. At first, it seems nonsensical for an investor to accept an interest rate that is over 1% less (4.38% vs. 5.45% as of February 29, 2024). However, as shown in Chart 2 on page 26, the Federal Reserve Bank of Atlanta estimated that as of February 29, 2024, investors expect short-term interest rates to decrease in 2024 and 2025. This means that it is rational for investors to lock in a 4.38% interest rate on long-term bonds now if they expect short-term interest rates to decline below 4.38%

in the near future. It is like a homeowner deciding to lock in a 30-year mortgage at a higher rate (e.g., 5%) than to take an adjustable-rate mortgage rate with a lower interest rate (e.g., 4%) because if short-term rates increase above 5% in the future, they could end up paying more over the life of the mortgage.

As this relates to CAPM results, this is one of the rate circumstances when a short-term risk-free rate likely overstates the COE because investors expect the relatively higher short-term interest rate to be temporary. Another way to put it is the following: investors expect that the interest income from short-term treasuries (3-months) will be lower than the interest income from long-term treasuries (30-years) over the long-term.

Beta

Q. WHAT BETA DID YOU USE IN YOUR CAPM?

A. Since the cost of equity should be based on investor expectations, I chose to use two betas. My "forward beta" is based on forward-looking investor expectations of non-diversifiable risk. My "historical blended" is based on historical return data over 6-month, 2-year, and 5-year periods.

Most published betas are based exclusively on historical return data. For example, Value Line publishes a 5-year historical beta for each of the companies it covers. However, it is also possible to calculate betas based on investors' expectations of the probability distribution of future returns. This probability distribution of future returns expected by investors can be calculated based on the market prices of stock options.

Q. WHAT IS A STOCK OPTION?

A. A stock option is the right to buy or sell a stock at a specific price for a specified amount of time. A call option is the right to buy a stock at a specified exercise or strike price on or before a maturity date. A put option is the right to sell a stock at a specified exercise or strike price on or before a maturity date. For example, a call option to purchase 100 shares of Apple Computer stock for $230 on January 17, 2020, allows the owner the option (not the obligation) to buy Apple stock for $230 on that date. At the end of July 2019, Apple stock was trading at about $215 per share. Why would anyone pay for the right to buy a stock higher than the current price? Investors who purchased those call options thought there was a chance Apple stock would be trading higher than $230 on January 17, 2020, and those options gave those investors the right to buy Apple stock for $230 and profit by selling it at the market price on that date, if it was higher. The price of Apple's stock was $317.98 at the close of trading on January 17, 2020. Therefore, the investor who purchased this call option for $635 on July 31, 2019, earned a profit of $8,163[47] at expiry on January 17, 2020. On the other hand, the investor who purchased an Apple put option with the same expiration date and strike price on July 31, 2019, would have lost the price of the option ($2,248) and gained nothing on the expiration date because the right to sell Apple stock for $230 when the price is over $300 is worthless.

The market prices of put options and call options provide information regarding the probability distribution of future stock prices expected by investors. Using established techniques, I am able to use price data for stock options of my RFC Gas Proxy Group companies and the S&P 500 Index to determine investors' return expectations, including

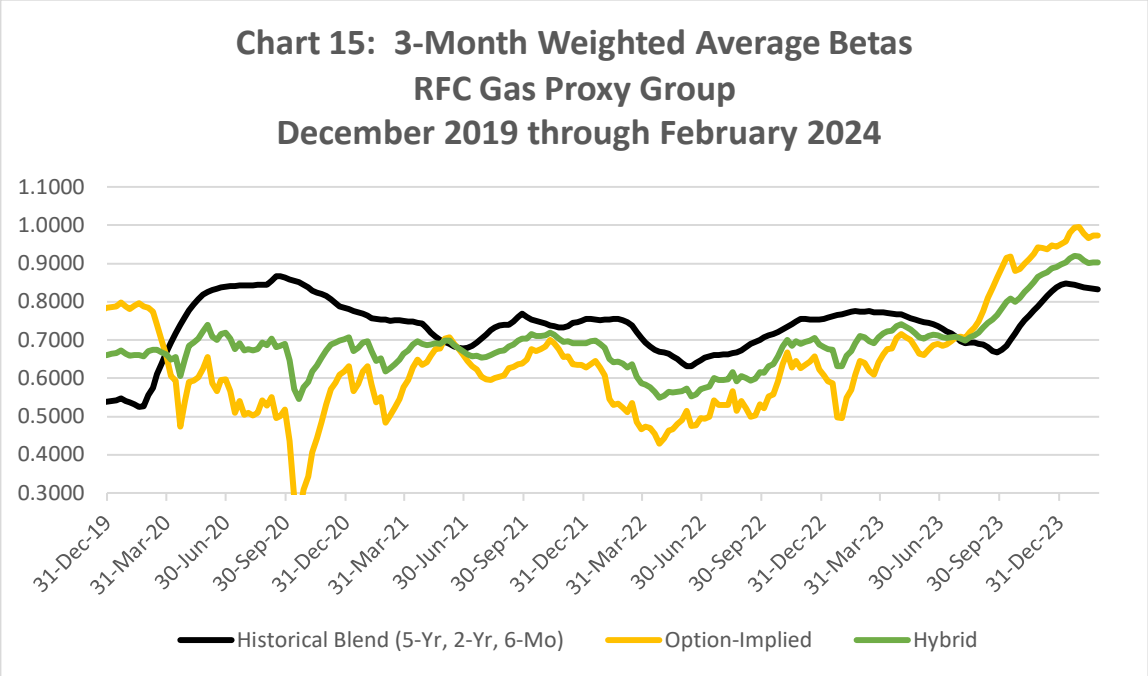
[47] $8,163 profit from exercising call option ($31,798 from selling at $317.98 market price - $23,000 cost to purchase at $230) - $635 ($6.35 X 100) option purchase price. Note: Each call option is the right to purchase 100 shares.

the relationship (covariance) between the return expectations for individual RFC Gas Proxy Group companies and those for the overall market (S&P 500). This covariance between the expected returns for my RFC Gas Proxy Group and for the S&P 500 indicates what investors expect betas will be in the future. I refer to betas based on option price calculations as "option-implied betas."

Q. PLEASE EXPLAIN HOW YOU CALCULATED THE BETAS USED IN YOUR CAPM.

A. Traditionally, the betas used in CAPM calculations are calculated from historical returns. This approach has strengths and weaknesses. An alternative way to calculate betas is to incorporate investors' return expectations by calculating option-implied betas as explained in the previous paragraph. As discussed below, I have chosen to use both historical and option-implied betas in my CAPM analysis. I chose to use option-implied betas in my CAPM analysis because, among other reasons, studies have found that betas calculated based on investor expectations (option-implied) provide information regarding future perceived risks and expectations.[48]

[48] Bo-Young Chang & Peter Christoffersen & Kris Jacobs & Gregory Vainberg. Option-Implied Measures of Equity Risk, *Review of Finance*, Vol. 16, Issue 2, pp. 385-428 (April 2012) available at https://academic.oup.com/rof/article/16/2/385/1584560.



As shown in Chart 15 above, stock option prices indicate that investors likely expect higher historical betas for the RFC Gas Proxy Group in the future.

Exhibit ALR-4, page 3 contains the last three months of data used in creating Chart 15 above, which is what I use in my CAPM analysis. Specifically, I use the following two betas in my CAPM analysis:

1. **Historical Blend:** 50% (6 months) + 30% (2 years) + 20% (5 years).
2. **Forward Beta:** 100% Option-Implied Beta (6 months).

Q. WHY DO YOU USE PERIODS OF 6 MONTHS, 2 YEARS, AND 5 YEARS FOR YOUR HISTORICAL BETA CALCULATIONS, AS OPPOSED TO RELYING EXCLUSIVELY ON THE 5-YEAR PERIOD USED BY VALUE LINE?

A. Using shorter periods for the return regression analysis portion of the historical beta calculation allows me to see if the correlation between the returns of each of the companies in my RFC Gas Proxy Group and those of the S&P 500 Index has changed in the last 2

years or 6 months. Using a 5-year period exclusively tends to make recent changes in the correlation more difficult to identify because of the weight of 5 years of data.

Q. WOULD YOU AGREE THAT CHANGES IN MARKET DYNAMICS WILL HAVE A LARGER EFFECT ON 6-MONTH HISTORICAL BETAS THAN THEY WILL ON 2-YEAR OR 5-YEAR HISTORICAL BETAS?

A. Yes. As with other historical metrics based on a given time period, say, average stock prices, the longer the time horizon under consideration, the more data points are considered, and the smaller the effect of any one given change in the data set.

Q. IS THIS LARGER EFFECT ON 6-MONTH HISTORICAL BETAS FROM CHANGES IN MARKET DYNAMICS A GOOD OR A BAD THING?

A. The answer depends on what the beta will be used for. I would argue that in any attempt to forecast the beta coefficient of a company for any forward-looking analysis such as the cost of capital calculations in this proceeding, more recent historical data should be given more relevance than data from 5 or 10 years ago. The weight of 10 years of data can make a beta coefficient react extremely slowly to market developments. Even pronounced permanent market changes can take more than 6 months to have a detectable effect on a 10-year beta.

As with using spot values and averages of historical market data, I believe the right answer is not to use *either* 6-month historical betas or historical betas with longer horizons, but to consider *both*. For this reason, I have created my historical blended betas, which take into consideration 6-month, 2-year, and 5-year historical betas.

Q. DO YOU THINK IT IS A GOOD IDEA TO RELY ON 6-MONTH HISTORICAL BETAS DESPITE MARKET DEVELOPMENTS IN THE PAST YEAR THAT SOME WOULD CALL "MARKET DISLOCATIONS?"

A. Financial markets are constantly in flux due to the influence of countless factors. So-called "market dislocations," are just some of the numerous factors that are constantly affecting markets. To attempt to separate any one specific factor from "real" underlying market dynamics would be an exercise in futility.

Furthermore, predicting the duration and impact of any single influencing factor on financial markets is extremely challenging, if not impossible. In 2008, when interest rates plummeted to unprecedented lows, numerous analysts deemed this a temporary anomaly. Contrary to these expectations, rates not only persisted at these low levels for more than ten years but dropped even further in response to the unforeseen COVID-19 pandemic, which significantly affected the global economy and financial markets.

So, in response, yes, I think it is a good idea to use 6-month historical betas to measure recent and current market dynamics regardless of recent developments. I use them as part of my historical blended betas in conjunction with longer-term historical betas and forward-looking, option-implied betas to achieve the most reasonable result.

Q. GIVEN THE SHORTER PERIOD COVERED BY 6-MONTH HISTORICAL BETAS, CAN THEY STILL BE CONSIDERED STATISTICALLY SIGNIFICANT? HOW MANY DATA POINT PAIRS ARE USED IN THE CALCULATION OF YOUR 6-MONTH HISTORICAL BETA COEFFICIENTS?

A. A 6-month historical beta based on weekly returns calculated weekly is calculated using 26 closing price points for a company and for its corresponding market index, in this case

the S&P 500 Index. This translates into 25 pairs of return data that are then used in the regression analysis. This is most certainly enough data to achieve statistical significance as addressed further below.

Furthermore, as stated above, the recent improvement in my calculation of historical betas of using weekly returns on every day of the week as opposed to using only one day of the week, as Value Line does, has the added benefit of providing significantly more data pairs to be used in the regression analysis used to calculate beta. For 6-month historical betas, instead of relying on 25 return pairs, the regression is performed on 117 return pairs.

Q. PLEASE EXPLAIN HOW YOU CALCULATED OPTION-IMPLIED BETAS.

A. Calculating option-implied betas of a company requires (1) obtaining stock option data for that company and a market index, (2) filtering the stock option data, (3) calculating the option-implied volatility for the company and for the index, (4) calculating the option-implied skewness for the company and for the index, and (5) calculating option-implied betas for the company based on implied volatility and skewness for the company and for the index. There are various ways one could choose to perform the steps above, but I chose to filter stock option data and calculate option-implied volatility[49] and skewness[50] following the same methodology used by the Chicago Board of Options Exchange (CBOE)

[49] CBOE Volatility Index White Paper (2018) available at https://cdn.cboe.com/resources/indices/srvix-white-paper.pdf. Please note that the cover page says, "proprietary information." However, this document has been in the public domain for over 3 years.

[50] The CBOE SKEW Index (2010) available at: https://cdn.cboe.com/resources/indices/documents/SKEWwhitepaperjan2011.pdf. Please note that the cover page says, "proprietary information." However, this document has been in the public domain for over 3 years.

in the calculation of their widely-used VIX (or Volatility Index) and SKEW Index, respectively.

I start my process with publicly available trading information for all the options for a given security (company or index) for a complete trading day. I then filter the option data as described by the CBOE using the following guidelines:

1. Use the mid-quote or mark (average of bid and ask) as the option price.
2. Use only out-of-the-money call and put options.
    - Determine the "moneyness" threshold where absolute difference between call and put prices is smallest (using CBOE "Forward Index Price" formula).
    - Include "at-the-money" call and put options and use average of call and put prices as price for "blended" option.
3. Exclude all zero bids.
4. Exclude remaining (more out-of-the-money) options when two sequential zero bids are found.

I then apply the series of formulas clearly described in both of the CBOE's white papers to the remaining options to calculate Option-Implied Volatility and Option-Implied Skewness. In the words of the CBOE, each of its two indices is "an amalgam of the information reflected in the prices of all of the selected options." To be clear, Implied Volatility is not exactly the same as the VIX Index, and Implied Skewness is not exactly the same as the SKEW Index, but both indices are directly based on their corresponding statistical value.

After calculating the daily option-implied values as discussed above, I calculate the weekly average of these daily values.[51] This approach results in stable weekly data points due to the weekly averaging. Even the most recent "spot" option-implied beta value represents an average of a full week of option-implied beta values.

Option-Implied Volatility reflects investors' expectations regarding future stock price movements. Option-Implied Skewness reflects investors' expectations regarding how implied volatility changes for strike prices that are closer and further to the current value of the underlying stock price.

The CBOE calculates Times to Expiration by the minute—as do I. The Time to Expiration of traded options cannot be changed and varies from day to day. For the sake of consistency, the CBOE calculates the VIX and SKEW indices on a "30-day" basis by interpolating for two sets of options with Times to Expiration closest to the 30-day mark. I prefer to focus on as long of a time horizon as possible for forecasting purposes. Option Times to Expiration vary significantly for various stocks but can consistently be found to go out to 6 months (180 days) for utility companies. Therefore, for the sake of consistency, I have chosen to calculate 6-month volatility and skewness where possible. Occasionally, Times to Expiration for a given stock do not go out to 180 days. If the greatest Time to Expiration available is 171 days (95%) or greater, I use the volatility and skewness for that group of options as a proxy for the 180-day volatility and skewness, respectively.

Finally, once I have calculated the option-implied volatility and skewness for each company and index using the methodology described above, I calculate option-implied

[51] I interpolate option-implied beta values for a given company in the rare instances where all daily values for a given company are not available for a given week. This has the effect of maintaining a constant representation of all companies in the proxy group across all periods, thus further improving the stability of proxy group option-implied betas over time.

betas using the following formula developed by Christoffersen, Chang, Jacobs and Vainberg (2011): [52]

$$\beta_i = \left(\frac{SKEW_i}{SKEW_m}\right)^{1/3} \left(\frac{VAR_i}{VAR_m}\right)^{1/2}$$

Where:

β_i: $option-implied\ beta\ of\ security\ (e.g. stock, fund)$;
$SKEW_i$: $skewness\ of\ security$;
$SKEW_m$: $skewness\ of\ overall\ market\ (S\&P\ 500)$;
VAR_i: $variance\ of\ company$;
VAR_m: $variance\ of\ overall\ market\ (S\&P\ 500)$.

Q. YOU CALCULATE YOUR OPTION-IMPLIED BETAS BASED ON A 6-MONTH HORIZON. WOULD IT NOT BE BETTER TO USE A LONGER FORECASTING HORIZON?

A. The methodology I use to calculate my option-implied betas "allows for the computation of a complete term structure of beta for each company so long as the options data are available,"[53] so there is nothing inherent in the methodology that limits it to a certain time horizon.

For many applications, including cost of capital, one could argue that the longer the time horizon for the option-implied betas, the better. However, the limitation on the forecasting horizon is always set by the longest expiration period of the options currently traded in the market. Some companies trade options with expiration periods up to 2 or 3 years into the future. As evidenced by the exhaustive option data in my working papers,

[52] Bo-Young Chang & Peter Christoffersen & Kris Jacobs & Gregory Vainberg, Option-Implied Measures of Equity Risk, *Review of Finance* Volume 16, Issue 2, pp. 385-428 (April 2012) available at https://academic.oup.com/rof/article/16/2/385/1584560.
[53] Peter Christoffersen, Kris Jacobs, and Gregory Vainberg, *Forward-Looking Betas*, p. 24 (April 25, 2008) available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=891467.

the maximum expiration period for the options of the companies in my RFC Gas Proxy Group is approximately 8 months. None of the 5 companies ever trade options with expiration periods of more than 8 months. New options are issued roughly every 3 months for all of these companies, so the maximum expiration period on any given trading day is somewhere between 5 and 8 months. For consistency across companies in my proxy group and across dates within the 3-month period on which my analysis is focused (December 2023 through February 2024), I chose to use 6 months for the time horizon of my option-implied betas. If the maximum expiration period for the options of a given company on a given day is less than 6 months, I use the maximum expiration period as an approximation for the target 6-month horizon.

Simply because some may argue that it may be preferable to use longer time horizons in place of or in addition to a 6-month horizon, it does not mean that a 6-month option-implied beta is of no relevance or cannot be used. That would be tantamount to saying you cannot use a 1-year Value Line Earnings Per Share estimate, or that the minimum relevant forecast is 2 or 3 years. In fact, for purposes of option-implied betas, it would be difficult to say if a time horizon of 1 year, for instance, is necessarily always better than a time horizon of 6 months. An option-implied forward-looking beta, even with a time horizon of less than 6 months, is still a useful tool in interpreting the current expectations of investors at any given time.

A final strong argument in support of using 6-month option-implied betas in a cost of capital calculation looking years into the future is that, as expanded upon starting on page 124, the authors of the paper on which I based my option-implied betas concluded that their predictive powers are not limited to 6 months into the future. In fact, they

conclude that 6-month option-implied betas have stronger predictive power than 6-month, 1-year, or 5-year historical betas when attempting to forecast betas 1 or 2 years into the future.

Market Risk Premium

Q. PLEASE EXPLAIN HOW YOU CALCULATED THE EQUITY RISK PREMIUM USED IN YOUR CAPM.

A. Traditionally, the risk premium used in CAPM calculations is derived from historical returns and/or equity analyst projections. The former approach is historically accurate but does not take into account investors' expectations for future market risks and returns. The latter approach is based on analyst projections, which are not appropriate since they do not reflect current investor expectations. A superior market-based way to calculate the equity risk premium is to use option-implied return expectations, which is the approach I have used.

My equity risk premium is the expected return on the S&P 500 minus the risk-free rate. I calculate an expected return on the S&P 500 by using stock options traded on this index. To begin with, I use exactly the same methodology used by the Chicago Board of Options Exchange to filter stock option data and calculate option-implied volatility and skewness,[54] as described in detail in the Beta section on page 69. The volatility and skewness calculated in this way describe a probability function representing the possible trajectories for the S&P 500 implied by the options market. The resulting skewed probability function can be closely approximated by a log-normal function using

[54] As used in the calculation of their widely-used VIX (or Volatility Index) and SKEW Index, respectively.

established statistical formulas, which then make it straightforward to calculate the expected growth for the S&P 500 for any given cumulative probability. A cumulative probability of 50% represents the median of the probability distribution, or the option-implied market consensus, which is how I arrive at my calculation of expected market growth.

Once the option-implied growth rate of the S&P 500 has been estimated as described above, I add the dividend yield and subtract the risk-free rate to arrive at the market risk premium, as laid out in Exhibit ALR-4, page 4 and Exhibit ALR-4, page 6. In line with my Spot and Weighted Average CAPM approaches, I use both spot values as of February 29, 2024 and weighted averages over the 3 months ending on that date for option-implied growth, dividend yields, and short- and long-term risk-free rates in these calculations to arrive at a total of 4 estimated values for the market risk premium. The market risk premia I use in my Weighted Average CAPM analysis with short- and long-term risk-free rates are 2.87% and 4.06%, respectively. The market risk premia I use in my Spot CAPM analysis with short- and long-term risk-free rates are 2.70% and 3.77%, respectively.[55]

Q. DID YOU TAKE INTO CONSIDERATION THE DIFFERENCE IN VOLATILITIES ACROSS EXPIRATION PERIODS IN THE OPTIONS TRADED ON THE S&P 500?

A. Yes. The volatility implied by the options market changes over time as investors' perception of risk changes. For example, during a crisis, implied volatility generally

[55] Both market risk premia happen to be the same because short- and long-term risk free rates happen to be the same as of February 29, 2024.

increases as investors expect that stock market prices have a greater chance of large swings compared to times when there is no crisis. As discussed earlier, investors also often have different volatility expectations over different time periods. For example, on any given day, investors might expect volatility to be relatively high over the next 30 days and to decrease over the next year or longer. The same holds true for skewness, even though it is less intuitive to understand changes in skewness than in volatility. Because of these changes across option expiration periods, I take a weighted average of the entire term structure of the option-implied volatility and skewness, which for the S&P 500 typically goes out to 54 to 61 months[56], interpolating where necessary, and giving the most weight to the option expiration period of 12 months.

CAPM Results

Q. PLEASE SUMMARIZE THE RESULTS OF YOUR CAPM.

A. Table 7 and Table 8 on page 77 show the results of my Weighted Average CAPM and Spot CAPM Analyses, respectively.

[56] Prior to November 2021, the longest expiration period for stock options traded on the S&P 500 was 36 months.

Weighted Average CAPM

TABLE 7: CAPITAL ASSET PRICING MODEL (CAPM) - INDICATED COST OF EQUITY
WEIGHTED - All Inputs Weighted From December 2023 to February 2024

	3-Month Treasury Bill		30-Year Treasury Bond	
	Historical Blended Bet	Forward Beta	Historical Blended Bet	Forward Beta
Risk-Free Rate	5.43%	5.43%	4.24%	4.24%
Beta	0.83	0.97	0.83	0.97
Risk Premium	2.87%	2.87%	4.06%	4.06%
CAPM	7.82%	8.22%	7.62%	8.18%

Please see Appendix E for a chart showing how the results of my CAPM analysis applied to the RFC Gas Proxy Group have changed over time since the onset of the Covid pandemic.

VI. CAPITAL STRUCTURE AND COST OF DEBT

Q. IS PEOPLES REQUESTED CAPITAL STRUCTURE OF 54.67% COMMON EQUITY AND 45.33% DEBT APPROPRIATE?

A. No. Peoples' requested capital structures are not appropriate for setting rates in this proceeding since it has a significantly higher common equity ratios (54.67%) than the average common equity ratio used by other gas utility companies in the country (47.2%)[57] and the consolidated capital structure being used by its parent Peoples' parent Essential Utilities, Inc. (about 47.5%).[58]

Q. WHAT CAPITAL STRUCTURE DO YOU RECOMMEND BE USED FOR PEOPLES' OVERALL COST OF CAPITAL?

A. I recommend using a capital structure consisting of 50.00% equity and 50.00% debt, based on the average common equity ratios of the companies in my proxy group. A common equity ratio of 50.00% is on the high side of reasonableness because it is above the mean 47.2% and median (48.5%) common equity ratio of the 5 gas distribution companies in the RFC Gas Proxy Group. I believe absent evidence from Peoples in support of the need for a different capital structure, using the capital structure that more closely aligns with that of the proxy group is consistent the Commission's duty to set just and reasonable rates that consider both the utility and its investor's needs as well as the needs of ratepayers.

Additionally, Peoples' parent (Essential Utilities, Inc.) has common equity ratio of about 48.50%.[59] There is no reason I am aware of for Peoples to have a significantly higher

[57] Exhibit ALR-5, page 5.
[58] Essential Utilities Value Line Report, January 5, 2024.
[59] Essential Utilities, Inc., Value Line Company Report, October 6, 2023.

common equity ratio than Essential Utilities, Inc., which includes non-utility operations.[60] Authorizing a regulatory capital structure for Peoples with a common equity ratio higher than other comparable utility companies without justification will result in unreasonably high rates. As shown in Table 3 on page 13, my recommendations, including my capital structure recommendation, result in an overall rate of return of 6.20%. Mr. Moul's recommendations result in an overall rate of return of 8.40%. Capital structure has a major impact on revenue requirement. If the Commission adopts an equity component of the capital structure ratio that is higher than I've recommended, there should be an additional reduction to the authorized ROE.

It can't be overlooked that the authorized capital structure can have a large impact on the utility company's revenue requirement. If my cost of equity recommendation is applied to Mr. Moul's recommended capital structure it will require a revenue requirement of approximately $7 million more.

If Mr. Moul's capital structure recommendations are adopted it is important to make an adjustment the overall ROR to account for the financial risk difference between her capital structure recommendation and that of the companies in the RFC Gas Proxy Group which have a significantly lower average common equity ratio (47.2%) than the common equity ratios recommend by Mr. Moul. A higher common equity ratio means less debt, a lower chance of financial stress (financial risk), and therefore a lower COE. On the other hand, a lower common equity ratio means more debt, a higher chance of financial stress

[60] Aqua Resources is a non-utility subsidiary of Essential Utilities, Inc., providing operations and maintenance contracts, and system maintenance. You would expect a company with un-regulated operations to have a higher common equity ratio (lower percentage of debt) than a regulated subsidiary like Peoples because they are riskier. Riskier companies have less predictable earnings so they must keep their interest payments low so they can make sure they can cover their interest payments.

(financial risk), and therefore a higher COE. Based on a regression analysis of dozens of utility companies, I found a 0.04% reduction in the cost of equity results for every 1% increase in the common equity ratio. Therefore, if the Commission authorizes a capital structure with a higher common equity ratio for a specific applicant, then the authorized ROE for that applicant should be reduced by 0.04% for every 1% its authorized common equity ratio exceeds that of the proxy group.[61]

Q. IN AQUA'S ACQUSITION OF PEOPLES[62], THE COMMISSION APPROVED A NON-UNANIMOUS SETTLEMENT THAT CONTAINED CERTAIN PROVISIONS ABOUT PEOPLES' DEBT LEVEL. PARAGRAPH 51 OF THE SETTLEMENT INDICATES THAT "THE PEOPLES COMPANIES[63]" WILL MAINTAIN A DEBT RATIO AT AN ANNUAL LEVEL OF NO MORE THAN 50% (INCLUSIVE OF SHORT TERM DEBT, BUT EXCLUSIVE OF GOODWILL) FOR AT LEAST FIVE-YEAR POSTING CLOSING. DOES THAT COMMITMENT IMPACT YOUR RECOMMENDED CAPITAL STRUCTURE?

A. No. The debt ratio commitments should not be operative here because of timing and also because of the adverse and inequitable rate impact that they would impact on ratepayers, which are inconsistent with the representations that peoples made in the acquisition proceeding.

[61] Earlier in testimony I provide the specific adjustments required if Mr. Moul's capital structure recommendation is used to set rates.
[62] Joint Application of Aqua America et al. to Approve a Change in Control of Peoples Natural Gas Company LLC et al, Docket Nos. A-2018-3006061, Opinion and Order, January 16, 2020 ("Acquisition Settlement").
[63] Peoples Companies" includes Peoples Natural Gas and Peoples Gas (Acquisition Settlement, p. 1)

Q. PEOPLES' DEBT RATIO SETTLEMENT COMMITMENT WAS INTENDED TO BE IN PLACE FOR AT LEAST FIVE YEARS POST-CLOSING OF THE ACQUISTION. WHAT DOES THAT MEAN FOR PURPOSES OF THIS CASE?

A. For purposes of this case, it means that the term of Peoples' fully projected future test year, which ends on September 30, 2025, extends beyond the five-year year time period outlined in the acquisition settlement. I note that the acquisition transaction closed on March 16, 202064, meaning that the five-year debt ratio commitment would end in March 2025, which is six months earlier than the end of the test period Peoples' built its rate case upon. It would be inequitable and incongruent to permit Peoples to use a test period that projects well-into the future, but to artificially constrain its debt ratio levels to an expired commitment. In totality, for this case it means that Peoples' debt ratio levels should not be constrained basing the acquisition closing date.

Q. (BEGIN CONFIDENTIAL [redacted]

[64] See Joint Applicants' Letter of June 30, 2002 at Docket No. A-2018-3006061 advising of closing date.
[65] Peoples Confidential Volume 12, Exhibit 18, ROR-4, pp. 56-65 of 71.
[66] As Peoples witness Moul recognized in Peoples Statement No. 13, p. 3, Peoples is a wholly-owned subsidiary of PNG Companies, LLC, which is ultimately owned by Essential Utilities, Inc. As Mr. Moul acknowledges on page 15 of his testimony, Peoples itself has no rating on its debt; therefore, Mr. Moul's analysis included a review of PNG Companies' credit quality ratings.

[redacted] (END CONFIDENTIAL)

Q. WHAT COST OF DEBT DO YOU RECOMMEND?

A. I recommend adopting Peoples' requested cost of debt of 4.37%.

[67] Peoples Confidential Volume 12, Exhibit 18, ROR-4, pp. 56-59.

VII. EVALUATION OF PEOPLES' RATE OF RETURN TESTIMONY

Q. PLEASE SUMMARIZE THE TESTIMONY OF MR. MOUL.

A. Mr. Moul concluded that a reasonable ROE for Peoples is 11.75%, which includes 25 basis points in recognition of the Company's strong management performance.[68] He claims that his ROE recommendation should be "considered in the context of the Company's higher risk characteristics" compared to the companies in his proxy group.[69] Mr. Moul arrived at his recommendation based upon his own versions of the Discounted Cash Flow ("DCF") model, Risk Premium analysis, Capital Asset Pricing Model ("CAPM") and the Comparable Earnings approach. Mr. Moul testified that, "At any point in time, a single method can provide an incomplete measure of the cost of equity depending upon extraneous factors that may influence market sentiment."[70] Mr. Moul adds a leverage adjustment to his DCF result and the size adjustment to his CAPM method. Mr. Moul applied his four cost of equity methods to his "Gas Group" of 8 gas utility companies. The results of Mr. Moul's four cost of equity methods are shown on Table 9 below.

TABLE 9: MR. MOUL'S COST OF EQUITY RESULTS

METHOD	Model Results
Discounted Cash Flow (DCF)	11.88%
Risk Premium (RP)	11.50%
Capital Asset Pricing Model (CAPM)	15.42%
Comparable Earnings (CE)	12.70%

[1] Mr. Moul's Direct Testimony, Exhibit PRM-1, Page 2 of 29.

[68] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 51, lines 4-8.
[69] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 51, lines 8-11.
[70] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 6, lines 4-6.

Q. WHAT IS YOUR OVERALL REACTION TO MR. MOUL'S TESTIMONY?

A. Mr. Moul's DCF result is 10.47% before adding 1.41% for a "leverage adjustment."[71] Mr. Moul's DCF result is unreasonably above the market-based cost of equity before including his inappropriate adjustments. Below I will explain why Mr. Moul's adjustments are inappropriate and the flaws in Mr. Moul's DCF method.

B. DCF Method

Q. DOES MR. MOUL CONSIDER THE DCF METHOD HIS PRIMARY METHOD FOR DETERMINING THE COST OF EQUITY?

A. No. He claims that the DCF method has limitations.[72]

Q. WHAT FORMULA DOES MR. MOUL USE IN HIS DCF ANALYSIS?

A. Dividend Yield (D/P) + Growth Rate (g) + leverage Adjustment (lev).[73]

Q. DOES MR. MOUL PROPERLY APPLY THE SIMPLIFIED OR CONSTANT DCF METHOD?

A. No. Mr. Moul adds a growth component to a dividend yield even though his growth analysis gives earnings per share growth forecasts by analysts the greatest emphasis.[74] It is only a DCF method if the dividend yield is computed properly, and the growth rate used is derived from a careful study of what future sustainable growth in cash flow is anticipated by investors.

[71] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 29, lines 13-14.
[72] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 25, lines 3-12.
[73] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 38, line 2.
[74] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Schedule 9.

Q. HOW DID MR. MOUL CALCULATE HIS GROWTH RATE FOR HIS DCF METHOD?

A. On page 22, lines 13-14 of Mr. Moul's testimony he says "…IBES/First Call, Zacks, and Value Line provide the best indication of investor expectations."[75] Mr. Moul states, "DCF growth rates should not be established by a mathematical formulation" and believe that a growth rate of 6.75% is a "reasonable estimate of investor-expected growth of the Gas Group."[76] Below are the five-year projected earnings per share rates by the four investment research firms he chose:

IBES/First Call: 5.57%

Zacks: 5.46%

Value Line: 7.31%

Mr. Moul's 6.75% growth rate is higher than the average of I/B/ES and Zacks' growth forecasts. The average of Value Line's earnings forecasts for the 8 companies in Mr. Moul's Gas Group is 7.31%, but this includes a 10% growth rate for Southern Gas Holdings Inc. If investors consider Southern Gas' growth rates to be an outlier and not representative of Gas Group's growth prospects, Mr. Moul's DCF result of 10.47% significantly overstates People's cost of equity. Additionally, Value Line's average projected growth in divides per share (5.25%), book value per share (5.69%), and cash flow per share (6.38%) for his Gas Group are all lower than Mr. Moul's 6.75% growth rate.[77]

[75] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 32, lines 9-10 (emphasis in original).
[76] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 32, lines 13-16.
[77] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Exhibit PRM-1, page 17 of 29.

Q. IS MR. MOUL'S METHODOLOGY TO DETERMINE THE GROWTH RATE TO USE IN HIS DCF MODEL APPROPRIATE?

A. No. Mr. Moul mentions the "b x r" method on pages 26-28 of his direct testimony but he does not use it. As stated above, Mr. Moul uses analyst five-year earnings per share growth without attempting to reconcile the retention rate used for computing growth with the retention rate he used to compute the dividend yield. This is analogous to failing to reconcile the money you are taking out of your checking account with your future balance, i.e., the basic balancing of a checkbook.

Q. CAN YOU PLEASE SUMMARIZE WHY A FUTURE ORIENTED "B X R" METHOD IS SUPERIOR TO A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE FORECAST IN PROVIDING A LONG-TERM SUSTAINABLE GROWTH RATE?

A. Yes. The primary cause of sustainable earnings growth is the retention of earnings. A company can create higher future earnings by retaining a portion of the prior year's earnings in the business and purchasing new business assets with those retained earnings. There are many factors that can cause short-term swings in earnings growth rates, but the long-term sustainable growth is caused by retaining earnings and reinvesting those earnings. Factors that cause short-term swings include anything that causes a company to earn a return on book equity at a rate different from the long-term sustainable rate. Assume, for example, that a particular utility company is regulated so that it is provided with a reasonable opportunity to earn 9.0% on its equity. If the company should experience an event such as the loss of several key customers, or unfavorable weather conditions which cause it to earn only 6.0% on equity in a given year, the drop of 9% earned return on equity

to a 6% earned return on equity would be concurrent with a very large drop in earnings per share. In fact, if a company did not issue any new shares of stock during the year, a drop from a 9% earned return on book equity to a 6% earned return on book equity would result in a 33.3% decline in earnings per share over the period.[78] However, such a drop in earnings would not be any indication of what is a long-term sustainable earnings per share growth rate. If the drop were caused by weather conditions, the drop in earnings would be immediately offset once normal weather conditions return. If the drop were from the loss of some key customers, the company would replace the lost earnings by filing for a rate increase to bring revenues up to the level required for the company to be given a reasonable opportunity to recover its cost of equity.

For the above reasons, changes in earnings per share growth rates that are caused by non-recurring changes in the earned return on book equity are inconsistent with long term sustainable growth, but changes in earnings per share because of the reinvestment of additional assets is a cause of sustainable earnings growth. The "b x r" term in the DCF equation computes sustainable growth because it measures only the growth which a company can expect to achieve when its earned return on book equity "r" remains in equilibrium. If analysts have sufficient data to be able to forecast varying values of "r" in future years, then a complex, or multi-stage DCF method must be used to accurately quantify the effect. Averaging growth rates over sub-periods, such as averaging growth over the first five years with a growth rate expected over the subsequent period, will not provide an appropriate representation of the cash flows expected by investors in the future

[78] By definition, earned return on equity is earnings divided by book value. Therefore, whatever level of earnings is required to produce earnings of 6% of book would have to be 33.3% lower than the level of earnings required to produce a return on book equity of 9%.

and, therefore, will not provide an acceptable method of quantifying the cost of equity using the DCF method. The choices are either a constant growth DCF, in which one "b x r" derived growth rate should be used, or a complex DCF method in which the cash flow anticipated in each future year is separately estimated. Mr. Moul has done neither.

Q. WHY ARE ANALYSTS' FIVE-YEAR CONSENSUS GROWTH RATES NOT INDICATIVE OF LONG-TERM SUSTAINABLE GROWTH RATES?

A. Analysts' five-year earnings per share growth rates are earnings per share growth rates that measure earnings growth from the most currently completed fiscal year to projected earnings five years into the future. These growth rates are not indicative of future sustainable growth rates in part because the sources of cash flow to an investor are dividends and stock price appreciation. While both stock price and dividends are impacted in the long-run by the level of earnings a company is capable of achieving, earnings growth over a period as short as five years is rarely in synchronization with the cash flow growth from increases in dividends and stock prices. For example, if a company experiences a year in which investors perceive that earnings temporarily dipped below normal trend levels, stock prices generally do not decline at the same percentage that earnings decline, and dividends are usually not cut just because of a temporary decline in a company's earnings. Unless both the stock price and dividends mirror every down swing in earnings, they cannot be expected to recover at the same growth rate that earnings recover. Therefore, growth rates such as five-year projected growth in earnings per share are not indicative of long-term sustainable growth rates in cash flow. As a result, they are inapplicable for direct use in the simplified DCF method.

Q. IS THE USE OF FIVE-YEAR EARNINGS PER SHARE GROWTH RATES IN THE DCF MODEL ALSO IMPROPER?

A. A raw, unadjusted, five-year earnings per share growth rate is usually a poor proxy for either short-term or long-term cash flow that an investor expects to receive. When implementing the DCF method, the time value of money is considered by equating the current stock price of a company to present value of the future cash flows that an investor expects to receive over the entire time that he or she owns the stock. The discount rate required to make the future cash flow stream, on a net present value basis, equal to the current stock price is the cost of equity. The only two sources of cash flow to an investor are dividends and the net proceeds from the sale of stock at whatever time in the future the investor finally sells. Therefore, the DCF method is discounting future cash follows that investors expect to receive from dividends and from the eventual sale of the stock. Five-year earnings growth rate forecasts are especially poor indicators of cash flow growth even over the five years being measured by the five-year earnings per share growth rate number.

Q. WHY IS A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATOR OF THE FIVE-YEAR CASH FLOW EXPECTATIONS FROM DIVIDENDS?

A. The board of directors changes dividend rates based upon long-term earnings expectations combined with the capital needs of a company. Most companies do not cut the dividend simply because a company has a year in which earnings were below sustainable trends, and similarly they do not increase dividends simply because earnings for one year happened to be above long-term sustainable trends. Therefore, over any given five-year period, earnings growth is frequently very different from dividend growth. In order for earnings

growth to equal dividend growth, at a minimum, earnings per share in the first year of the five-year earnings growth rate period would have to be exactly on the long-term earnings trend line expected by investors. Since earnings in most years are above or below the trend line, the earnings per share growth rate over most five-year periods is different from what is expected for earnings growth.

Q. WHY IS THE FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATION OF FUTURE STOCK PRICE GROWTH?

A. If a company happens to experience a year in which earnings decline below what investors believe are consistent with the long-term trend, then the stock price does not drop anywhere near as much as earnings drop. Similarly, if a company happens to experience a year in which earnings are higher than the investor-perceived long-term sustainable trend, then the stock price will not increase as much as earnings. In other words, the P/E (price/earnings) ratio of a company will increase after a year in which investors believe earnings are below sustainable levels, and the P/E ratio will decline in a year in which investors believe earnings are higher than expected. Since it is stock price that is one of the important cash flow sources to an investor, a five-year earnings growth rate is a poor indicator of cash flow both because it is a poor indicator of stock price growth over the five years being examined and is equally a poor predictor of dividend growth over the period.

Q. ARE YOU SAYING THAT ANALYSTS' CONSENSUS EARNINGS PER SHARE GROWTH RATES ARE USELESS AS AN AID TO PROJECTING THE FUTURE?

A. No. Analysts' EPS growth rates are, however, very dangerous if used in a simplified DCF without proper interpretation. While they are not useful if used in their "raw" form, they can be useful in computing estimates of what earned return on equity investors expect will

be sustained in the future, and as such, are useful in developing long-term sustainable growth rates.

Q. BESIDES GROWTH RATE, ARE THERE ANY OTHER DCF ANALYSIS INPUTS THAT MR. MOUL HAS ESTIMATED INCORRECTLY?

A. Yes. Mr. Moul made an unjustifiable "leverage adjustment."

Q. PLEASE DESCRIBE THE LEVERAGE ADJUSTMENT PROPOSED BY MR. MOUL IN THIS PROCEEDING.

A. Mr. Moul has proposed a leverage adjustment addition to his DCF derived cost of equity, stating "In order to make the DCF results relevant to the capitalization measured at book value (as is done for rate setting purposes), the market-derived cost rate must be adjusted to account for the difference in financial risk."[79] He then goes on to say: "Because the ratemaking process uses ratios calculated from a firm's book value capitalization, further analysis is required to synchronize the financial risk of the book capitalization with the required return on the book value of the firm's equity."[80] Because of this alleged higher financial risk, Mr. Moul recommends adding 1.41%[81] to the DCF derived cost of equity.

Q. JUST BECAUSE THE MARKET VALUE CAPITAL STRUCTURE CONTAINS A HIGHER PERCENTAGE OF COMMON EQUITY THAN BOOK VALUE CAPITAL STRUCTURE, DOES THIS MEAN THE MARKET VALUE CAPITAL

[79] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 33, lines 20-21.
[80] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 34, lines 10-13.
[81] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 38, line 3.

STRUCTURE HAS LOWER FINANCIAL RISK THAN THE BOOK VALUE CAPITAL STRUCTURE?

A. No. Market value capital structure and book value capital structure are two completely different ways of measuring the same thing. Concluding that a market value capital structure is lower in risk because it contains more equity than the book value based capital structure for the same company is as inconsistent and illogical as claiming that a person who weighs 150 pounds could lose weight simply by stepping on a scale that measures weight in kilos instead of pounds. Financial risk is determined by a company's ability to meet its cash flow obligations. The most common and perhaps most important single measure of financial risk is the pretax interest coverage ratio. The interest coverage ratio is computed by dividing the sum of interest expense and pre-tax income by interest expense. This number is useful because it gives bondholders a sense of how far earnings would have to decline before a company would not be able to meet its interest payments. For example, if a company has an interest coverage ratio of 3.0, this means that at its current earnings rate, its earnings available for both payment of interest and pre-tax earnings, is three times as much as is needed to make its interest payments.

Q. DOES A DECLINE IN MARKET PRICE LOWER THE COVERAGE RATIO?

A. Lowering the market value does not directly cause a change in the coverage ratio computation. Therefore, changing from a market value orientation to a book value orientation does no more to change a company's financial risk than the weight of a person was influenced by switching to a scale calibrated in kilos instead of pounds.

Q. DO INVESTORS UNDERSTAND THAT AS PART OF THE REGULATORY PROCESS ALLOWED RETURNS ARE APPLIED TO BOOK VALUE?

A. Yes, they do. This is a process that has been going on for decades and it is hard to argue that investors are not aware of this. By recommending this leverage adjustment, Mr. Moul is implying that investors forget this after each rate case. Evaluating the cost of equity based on a comparative group is like taking a snapshot of their expectations. After this snapshot is taken, it is then applied to the individual company so even if the allowed return affected the expectation of the investors in the comparative group it would be after the snapshot was taken.

Q. DOES MR. MOUL'S LEVERAGE ADJUSTMENT GO AGAINST ORIGNAL COST RATEMAKING?

A. Yes. Mr. Moul claims, "The need for the leverage adjustment arises when the results of the DCF model (k) are to be applied to a capital structure that is different from the capital structure indicated by the market price (P)."[82] In other words, Mr. Moul is saying that as a consequence of original cost ratemaking, an upward adjustment is needed. When a company has a market to book value above 1, and is thus over earning, applying the correct rate of return to the book value could have downward pressure on the stock price. No matter what logic is applied to the reason for adding a value to the rate of return, the leverage adjustment distorts the natural market dynamic between a regulated utility's stock price and its allowed rate of return.

[82] Mr. Moul's Direct Testimony, Peoples Statement No. 13, page 34, lines 2-4.

C. Risk Premium Method

Q. PLEASE SUMMARIZE MR. MOUL'S RISK PREMIUM ANALYSIS.

A. Mr. Moul explains that, "With the Risk Premium approach, the cost of equity capital is determined by corporate bond yields plus a premium to account for the fact that common equity is exposed to greater investment risk than debt capital."[83] In this approach, he computes a 11.50% cost of equity by summing a prospective yield for long-term public utility debt (5.00%) and his estimate of an equity risk premium (6.50%).[84] His prospective yield for long-term public utility debt of 5.00% is based on adding a 1.25% spread to Blue Chip Financials projected yields on U.S. Treasury bonds. Mr. Moul calculates the equity risk premium (6.50%) of this approach by measuring large company stock returns over long-term corporate bonds based between 1926-2022 and presents the results in the following three categories based on the relative level of interest rates.

- Low Interest Rate: 7.13%
- Average Across All Interest Rates: 5.96%
- High Interest Rates: 4.76%[85]

From these data, he has "utilized" a 6.50% equity risk premium, which is between the premiums during low interest rates (7.13%) and an average of the premiums during the entire historical period (5.96%).[86]

[83] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 38, lines 16-18.
[84] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 42, lines 11-15.
[85] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Exhibit PRM-1, Page 22 of 29.
[86] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 42, lines 1-10.

Q. DOES MR. MOUL'S RISK PREMIUM METHOD PRODUCE A REASONABLE RESULT?

A. No. Mr. Moul's equity risk premium method result of 11.50% is excessive primarily because the equity risk premium component of 6.50%[87] is unreasonably high. A 6.50% equity risk premium is out of line with market data, academic studies and the results of his own sources.

Mr. Moul uses historical data from Kroll's SBBI Yearbook to support his claim that "the equity risk premium increases as interest rates decline, and it declines as interest rates increase."[88] He claims that this historical data supports his 6.50% equity risk premium component.[89] However, his analysis based on historical data is flawed because he failed to consider if investors expect future returns to be different than past returns. His own source, the Kroll SBBI Yearbook, considered if investors might consider future equity returns to be different than the past. The authors of this book looked beyond historical data and concluded that "the current [price-to-earnings] ratio is the market's best guess for the future of corporate earnings."[90] Based on this current market data, the Kroll 2023 SBBI Yearbook calculated a…geometric supply-side equity risk premium of 4.39%."[91] In September 2023, Kroll found an equity risk premium of 5.5%, which is 1% lower than his estimate. It should be further noted that Kroll's 4.39% and 5.50% equity risk premium calculations are in comparison to U.S. Treasury bonds, not the corporate bond yields used in Mr. Moul's analysis. Since corporate bond yields are higher than U.S. Treasury bonds,

[87] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 42, lines 8-10.
[88] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 41, lines 9-14.
[89] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 42, lines 1-10.
[90] Kroll 2023 SBBI Yearbook, Page 199.
[91] Kroll 2023 SBBI Yearbook, Page 197-199.

Mr. Moul's equity risk premium would be expected to be lower than those calculated by Kroll. Instead, his 6.50% is significantly higher. Therefore, the results of his own source indicate that his 11.50% COE result is excessive.

Consistent with Kroll's supply-side equity risk premium analysis I found an equity risk premium to be considerably lower than claimed by Mr. Moul. As shown in Table 7 and Table 8 on page 77, I found an equity risk premium of between 2.70% and 4.06%, which provides additional evidence that his 11.50% COE result is excessive.

D. CAPM Method

Q. PLEASE SUMMARIZE MR. MOUL'S CAPM METHOD.

A. Mr. Moul explains that, "To compute the cost of equity with the CAPM, three components are necessary: a risk-free rate of return ("Rf"), the beta measure of systematic risk ("β"), and the market risk premium ("Rm-Rf") derived from the total return on the market of equities reduced by the risk-free rate of return."[92] He uses a risk free rate of 3.75% based on interest rate forecasts and recent trends in long term Treasury yields.[93] His market premium portion of his CAPM analysis (9.68%) is based on the forecasted S&P 500 returns.[94] He adds a "small size adjustment" of 1.02% to account for the relatively small size of Peoples relative to the companies in the Gas Group.[95]

[92] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 43, lines 3-7.
[93] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 46, lines 1-2.
[94] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 46, lines 15-17.
[95] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 46, lines 18-23 and Page 47, lines 1-11.

Q. DO YOU AGREE WITH THE RESULTS OF MR. MOUL'S CAPM ANALYSIS?

A. No, I do not agree with results of Mr. Moul's CAPM analysis because I believe that they significantly and inaccurately overstate the Company's cost of equity.

The arithmetic average return that Mr. Moul uses overstates the historical risk premium by over 200 basis points. The 2023 SBBI Yearbook shows that investors actually earned a compounded annual return of 10.1%[96] between 1926 and 2022. The arithmetic mean return of 12.21%[97] is possibly valuable to stockbrokers and fund managers attempting to predict future bonuses, but not for calculating the cost of equity. A Dow Jones Newswire article stated, "Some financial advisers rely too heavily on a formula known as the arithmetic average, which can be misleading when investing for the long term. Financial advisors who use this formula may be overstating your potential profit and leading you to take risks you might otherwise avoid…"[98] Mr. Moul's prospective risk premium calculation is based on a DCF analysis that is not based on sustainable growth. His DCF analysis for the S&P 500 has a growth component of an astounding 12.47%.[99]

Q. IS MR. MOUL'S ADDER FOR A SMALL SIZE EFFECT AN APPROPRIATE PART OF A CAPM ANALYSIS?

A. No. Mr. Moul's premium adder for the relatively small size of Peoples is unjustifiable. A proper analysis of the data from Ibbotson SBBI/Morningstar shows that size is a diversifiable risk and therefore does not impact the cost of equity. Professor Aswath Damodaran said the following regarding the supposed "small cap premium." Even if you

[96] Kroll 2023 SBBI Yearbook, page 2-23.
[97] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Exhibit PRM-1, Page 25 of 29.
[98] Kaja Whitehouse, To Financial Advisors and Fuzzy Math, Dow Jones Newswires October 8, 2003.
[99] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Schedule 13, page 2 of 3.

believe that small cap companies are more exposed to market risk than large cap ones, this is an extremely sloppy and lazy way of dealing with that risk, since risk ultimately has to come from something fundamental (and size is not a fundamental factor).[100]

Q. DO THE RESULTS OF RECENT STUDIES PROVIDE ADDITIONAL EVIDENCE THAT SMALLER FIRMS DO NOT HAVE A HIGHER COST OF EQUITY THAN LARGE FIRMS?

A. Yes. A 2018 study conducted by scholars at AQR Capital Management and Yale University found that "the size effect diminished shortly after its discovery and publication."[101] The authors of this research found that data errors plagued the early studies regarding the relationship between firm size and return. They found that the data in the earlier studies did not include delisted companies and since smaller firms are delisted more often than larger stocks, the biased data (referred as a "delisting bias") made the returns of smaller stocks look higher than reality.[102]

Mr. Moul's CAPM is inflated because he takes steps to increase his results for a so-called small firm effect that has been put into serious question by recent research. Therefore, his CAPM overstates Peoples' cost of equity because the risk premium potion of this method is impacted by these exaggerated returns.

E. Comparable Earnings Method

Q. PLEASE EXPLAIN THE COMPARABLE EARNINGS METHOD PRESENTED BY MR. MOUL.

A. Mr. Moul selected a group of non-regulated companies that he believes to be of comparable risk to the Electric Group. After selecting the companies, he presents the historic and Value Line expected return on book equity. See Schedule 14 [2 of 3], of Mr. Moul's direct testimony. The final column of numbers on this table is the "Projected 2026-28." However, what he labels as the projected 2026-28 return is actually the return on book equity that Value Line forecasts, not the return that Value Line projects investors will receive on their investment as a result of purchasing the common stock at current prices. According to Mr. Moul's Schedule 14, the total return expected by Value Line on the book equity of these industrial companies is between a 7.00% and a high of 55.0%, for an average of 20.6% (13.3% excluding companies with values > 20%).

Q. IS THIS METHOD VALID?

A. No. Mr. Moul has attempted to determine the cost of equity that would be demanded by investors on the market price of a company comparable to Peoples by comparing it to the historic and projected returns on book equity of a selection of industrial companies. Leaving aside the problems with actually being able to select companies that are comparable, the overriding problem with Mr. Moul's comparable earnings analysis is that it did not address the cost of equity at all. It simply considered the returns on book equity that were achieved and are expected to be achieved by Value Line in the next 3 to 5 years. The earned return on book equity is an entirely different concept from the cost of equity.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE ROE INCREMENT OF 25-BASIS POINTS REQUESTED BY PEOPLES BASED ON CLAIMED EXEMPLARY MANAGEMENT PERFORMANCE?

A. As explained above, The appropriate authorized ROE is based on the Commission's determination of the COE at the time of the proceeding. The COE is the market-based return investors expect to earn on the market value of any given stock. If the Commission decides to authorize Peoples an ROE that is higher than Peoples' market-based COE for its claimed superior management performance, I strongly encourage the Commission use my ROE recommendation of 8.02% (7.67% - 8.37%) without any adjustment for management performance. Mr. Moul's 11.50% ROE recommendation, before his recommended 25-basis point recognition for management performance, is significantly above Peoples' market-based COE and should not be the starting point for any increase to Peoples' ROE to recognize management performance. I also note that OCA witnesses Evrard, Mugrace, Alexander and Colton have each provided rationale for rejecting Peoples' request for 25-basis points, and I will defer to those witnesses individually to explain their positions, for my purposes. It is important to recognize that my analysis here demonstrates that Peoples' requested ROE should be rejected because it is higher than its market-based COE.

Q. PLEASE SUMMARIZE YOUR ANALYSIS OF MR. MOUL'S TESTIMONY.

A. Mr. Moul recommends that the Company be allowed a return on equity of 11.75%. Mr. Moul's DCF result of 11.88% is above the market-based COE because (1) it has an unsustainable growth rate component (6.75%) and (2) he adds a leverage adjustment that misrepresents the basics of evaluating a company's cost of equity. Without his leverage

adjustment his DCF result is 10.47% which is still unreasonably high. Mr. Moul's Risk Premium method was developed based upon an improper mathematical approach to quantifying historic actual returns. Mr. Moul's CAPM approach relies on an excessive market risk premium, an improper inflation of the "beta" because of a high market-to-book ratio, and an invalid "size premium." The incorrect claim that investors demand a higher cost of equity to invest in a small company (referred to as "size premium") is manufactured by an incorrect use of data. Mr. Moul's Comparable Earnings method is not really an equity costing method at all, as no consideration was given to investor's reactions to the earned returns on book equity.

VIII. CONCLUSION

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN THIS CASE.

A. Based on the evidence presented in my testimony, I conclude that the cost of equity allowed for Peoples should be between 7.67% to 8.37% (recommended at 8.02%). Based on my recommended common equity ratio of 50.00%, that results in an overall cost of capital of between 6.02% and 6.37% (recommended at 6.20%).

If the Commission decides to use Peoples' requested capital structure of 54.67% common equity and 45.33% debt instead of my recommended capital structure, I recommend a reduced authorized ROE of 7.84% (7.49% - 8.19%) to account for the lower financial risk of a capital structure with more equity. Consistent with the testimony of other OCA witnesses, the Company has not demonstrated that it is entitled to a management performance adder.

My recommendations satisfy the requirements of *Hope* and *Bluefield* that regulated utility companies should have the opportunity to earn a return commensurate with returns on investments in other enterprises having corresponding risks. My recommendations are consistent with legal standards set by the United States Supreme Court and market data and will allow Peoples to raise capital on reasonable terms while fulfilling its obligation to provide safe and reliable service.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

APPENDIX A. MARKET TO BOOK RATIOS AND THE MARKET-BASED COE

Q. PLEASE EXPLAIN WHY A MARKET TO BOOK RATIO OF SIGNIFICANTLY ABOVE ONE INDICATES THAT THE COST OF EQUITY FOR GAS UTILITY COMPANIES IS LOWER THAN THE EXPECTED RETURN ON BOOK EQUITY?

A. Calculating the cost of equity (investors' equity return expectations) is more complicated than calculating the return on a rental property, but the same concept applies regarding the relationship between market returns and book returns. If an investor purchases an apartment for $100,000 and expects to receive $500 per month ($500 X 12 = $6,000 per year) in rent, he or she will expect an annual return of 6% ($6,000/$100,000) on their investment. When the investor purchases the apartment, he would record the book value as $100,000 and the market value as $100,000 unless he determined that the purchase price was higher or lower than the market value. If the value of the apartment increases to $350,000, for example, the market to book ratio would increase to approximately 3.5, and therefore, his return on book value would remain at about 6% while his return on the market value of the apartment would decrease to about 1.7%.

In this rental property example, an increasing market value results in a lower expected return on market (1.7%) compared to expected return on book (6%) if the rent price remains constant. Rent prices do not increase to maintain an expected 6% return on book value; they are set by what the rental market reasonably can bear. The same is true of utility stocks. You do not establish an ROE based on a constant return on book (accounting) returns, it is set based on what investors in the market expect that market to return. In the case of a utility stock, an increasing market value results in a lower return on

market for the same expected return on book. As this rental property example demonstrates, there is nothing inconsistent about investors expecting a lower return on the market price of an investment than on the book value of an investment. In fact, with market to book ratios of gas utility companies significantly above one it would be surprising if investors expected a return on market equal, or anywhere close, to return on book.

APPENDIX B. FUTURE-ORIENTED "B X R" METHOD

Q. ARE YOU AWARE OF CLAIMS ALLEGING THAT THE "BR" APPROACH TO THE CONSTANT GROWTH DCF MODEL IS FLAWED BECAUSE IT RELIES ON THE VALUE OF THE FUTURE EXPECTED RETURN ON BOOK EQUITY "R" TO ESTIMATE WHAT THE EARNED RETURN ON EQUITY SHOULD BE?

A. Yes. One common criticism is that it is not reasonable for the DCF to indicate a COE (market return) that is different (lower or higher) than the expected return on book equity (accounting). There are multiple reasons why this concern is unfounded:

1. The constant growth form of the equation using "br" is:

$$k = D/P + (br + sv)$$

In this equation, "k" is the variable for the COE, and "r" is the future expected return on equity. The COE, "k," is not the same variable as the future expected earned return on equity, "r." In fact, there often is a large difference between the two.

2. The correct value to use for "r" is the return on book equity expected by investors as of the time the stock price and dividend data are used to quantify the D/P term in the equation. Therefore, even if future events occur that may change what investors expect for "r," the computation of the COE "k" remains correct as of the time the computation was made.

3. The ability of a commission's ROE decision to influence future cash flow expectations is not unique to the retention growth DCF approach. The five-year analysts' earnings per share growth rate is a computation that is directly influenced by what earnings per share will be in 5 years. Allowed ROEs

impact earning – higher allowed returns lead to higher earnings growth because the higher allowed returns the more earnings are available for reinvestment.

Q. CAN CHANGES IN THE ACTUAL EARNED RETURNS IMPACT GROWTH ABOVE AND BEYOND WHATEVER GROWTH RESULTS FROM EARNINGS RETENTION?

A. Yes, but large short-term changes in earnings per share caused by a perceived change in the future expected earned returns are unsustainable. The new perceived earned return on book equity should be part of the computation, but the one-time growth spurt to get there is no more indicative of the sustainable growth required in the constant growth DCF formula than the temporary negative growth that occurs when a company has a bad year.

Q. CAN YOU PLEASE SUMMARIZE WHY A FUTURE-ORIENTED "B X R" METHOD IS SUPERIOR TO A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE FORECAST IN PROVIDING A LONG-TERM SUSTAINABLE GROWTH RATE?

A. The primary cause of sustainable earnings growth is the retention of earnings. A company is able to create higher future earnings by retaining a portion of the prior year's earnings in the business and purchasing new business assets with those retained earnings. There are many factors that can cause short-term swings in earnings growth rates, but the long-term sustainable growth is caused by retaining earnings and reinvesting those earnings. Factors that cause short-term swings include anything that causes a company to earn a return on book equity at a rate different from the long-term sustainable rate. Assume, for example, that a particular utility company is regulated so that it is provided with a reasonable

opportunity to earn 9% on its equity. Should the company experience an event such as the loss of several key customers, or unfavorable weather conditions, which cause it to earn only 6% on equity in a given year, the drop from a 9% earned return on equity to a 6% earned return on equity would be concurrent with a very large drop in earnings per share. In fact, if a company did not issue any new shares of stock during the year, a drop from a 9% earned return on book equity to a 6% earned return on book equity would result in a 33.3% decline in earnings per share over the period.[103] However, such a drop in earnings would not be an indication of what is a long-term sustainable earnings per share growth rate. If the drop were caused by weather conditions, the drop in earnings would be immediately offset once normal weather conditions return. If the drop were from the loss of some key customers, the company would replace the lost earnings by filing for a rate increase to bring revenues up to the level required for the company to be given a reasonable opportunity to recover its cost of equity.

For the reasons above, changes in earnings per share growth rates that are caused by non-recurring changes in the earned return on book equity are inconsistent with long-term sustainable growth, but changes in earnings per share because of the reinvestment of additional assets is a cause of sustainable earnings growth. The "b x r" term in the DCF equation computes sustainable growth because it measures only the growth which a company can expect to achieve when its earned return on book equity "r" remains in equilibrium. If analysts have sufficient data to be able to forecast varying values of "r" in future years, then a complex, or multi-stage DCF method must be used to accurately

[103] By definition, earned return on equity is earnings divided by book value. Therefore, whatever level of earnings is required to produce earnings of 6% of book would have to be 33.3% lower than the level of earnings required to produce a return on book equity of 9%.

quantify the effect. Averaging growth rates over sub-periods, such as averaging growth over the first five years with a growth rate expected over the subsequent period, will not provide an appropriate representation of the cash flows expected by investors in the future and, therefore, will not provide an acceptable method of quantifying the cost of equity using the DCF method. The choices are either a constant growth DCF, in which one growth rate derived using "b x r" should be used, or a complex DCF method in which the cash flow anticipated in each future year is separately estimated. Mr. Moul have done neither. Instead, he mechanically adds analysts' five-year earnings per share growth rate to the dividend yield.

Q. WHY ARE ANALYSTS' FIVE-YEAR CONSENSUS GROWTH RATES NOT INDICATIVE OF LONG-TERM SUSTAINABLE GROWTH RATES?

A. Analysts' five-year earnings per share growth rates are earnings per share growth rates that measure earnings growth from the most currently completed fiscal year to projected earnings five years into the future. These growth rates are not indicative of future sustainable growth rates in part because the sources of cash flow to an investor are dividends and stock price appreciation. While both stock price and dividends are impacted in the long run by the level of earnings a company is capable of achieving, earnings growth over a period as short as five years is rarely in synchronization with the cash flow growth from increases in dividends and stock prices. For example, if a company experiences a year in which investors perceive that earnings temporarily dipped below normal trend levels, stock prices generally do not decline at the same percentage that earnings decline, and dividends are usually not cut just because of a temporary decline in a company's earnings. Unless both the stock price and dividends mirror every down swing in earnings,

they cannot be expected to recover at the same growth rate that earnings recover. Therefore, growth rates such as five-year projected growth in earnings per share are not indicative of long-term sustainable growth rates in cash flow. As a result, they are not applicable for direct use in the simplified DCF method.

Q. IS THE USE OF FIVE-YEAR EARNINGS PER SHARE GROWTH RATES IN THE DCF MODEL ALSO IMPROPER?

A. Yes. A raw, unadjusted, five-year earnings per share growth rate is usually a poor proxy for either short-term or long-term cash flow growth that an investor expects to receive. When implementing the DCF method, the time value of money is considered by equating the current stock price of a company to the present value of the future cash flows that an investor expects to receive over the entire time that he or he owns the stock. The discount rate required to make the future cash flow stream, on a net present value basis, equal to the current stock price is the cost of equity. The only two sources of cash flow to an investor are dividends and the net proceeds from the sale of stock at whatever time in the future the investor finally sells. Therefore, the DCF method is discounting future cash flows that investors expect to receive from dividends and from the eventual sale of the stock. Five-year earnings growth rate forecasts are especially poor indicators of cash flow growth, even over the five years being measured by the five-year earnings per share growth rate number.

Q. WHY IS A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATOR OF THE FIVE-YEAR CASH DIVIDEND GROWTH EXPECTATIONS?

A. The board of directors of a company changes dividend rates based upon long-term earnings expectations combined with the capital needs of a company. Most companies do not

decrease dividends simply because a company has a year in which earnings were below sustainable trends, and similarly they do not increase dividends simply because earnings for one year happened to be above long-term sustainable trends. Therefore, over any given five-year period, earnings growth is frequently very different from dividend growth. In order for earnings growth to equal dividend growth, at a minimum, earnings per share in the first year of the five-year earnings growth rate period would have to be exactly on the long-term earnings trend line expected by investors. Since earnings in most years are above or below the trend line, the earnings per share growth rate over most five-year periods is different from what is expected for dividend growth.

Q. WHY IS THE FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATION OF FUTURE STOCK PRICE GROWTH?

A. If a company happens to experience a year in which earnings decline below what investors believe is consistent with the long-term trend, then the stock price does not drop anywhere near as much as earnings drop. Similarly, if a company happens to experience a year in which earnings are higher than the investor-perceived long-term sustainable trend, the stock price will not increase as much as the earnings. In other words, the P/E ratio of a company will increase after a year in which investors believe earnings are below sustainable levels, and the P/E ratio will decline in a year in which investors believe earnings are higher than expected. Since stock price is one of the important cash flow sources to an investor, a five-year earnings growth rate is a poor indicator of cash flow, both because it is a poor indicator of stock price growth over the five years being examined, and because it is equally a poor predictor of dividend growth over the period.

Q. ARE YOU SAYING THAT ANALYSTS' CONSENSUS EARNINGS PER SHARE GROWTH RATES ARE USELESS AS AN AID TO PROJECTING THE FUTURE?

A. No. Analysts' EPS growth rates are, however, very dangerous if used in a simplified DCF without proper interpretation. While they are not useful if used in their "raw" form, they can be very useful in computing estimates of what earned return on equity investors expect will be sustained in the future, and as such, are useful in developing long-term sustainable growth rates. This is exactly what I do in the application of my Constant Growth DCF Analysis.

APPENDIX C. NON-CONSTANT GROWTH FORM OF THE DCF MODEL

Q. YOUR NON-CONSTANT GROWTH DCF MODEL USES ANNUAL EXPECTED CASH FLOWS. SINCE DIVIDENDS ARE PAID QUARTERLY RATHER THAN ANNUALLY, HOW DOES THIS SIMPLIFICATION IMPACT YOUR RESULTS?

A. I used the annual model because it is easier for observers to visualize what is happening. Modeling cash flows to be annual rather than when they are actually expected to occur causes a small overstatement of the COE.

Q. WHY IS IT A SMALL OVERSTATEMENT OF THE COE IF YOU HAVE MODELED DIVIDENDS TO BE RECEIVED SOME MONTHS AFTER INVESTORS ACTUALLY EXPECT TO RECEIVE THEM?

A. The process of changing from an annual model to a quarterly model would require two changes, not just one. A quarterly model would show dividends being paid sooner and would also show earnings being available sooner. A company that receives its earnings sooner, rather than at the end of the year, has the opportunity to compound them. Since revenues, and therefore earnings, are essentially received every day, a company that is supposed to earn an annual rate of 9.00% on equity would have to earn only 8.62% if the return were compounded daily.[104] This reduction from 9.00% to 8.62% would then be partially offset by the impact of the quarterly dividend payment to bring the result of switching from the simplifying annual model closer to, but still a bit below 9.00%.

[104] $(1+.0862/365)^{365}=1.09 = 9.00\%$.

Q. BY USING CASH FLOW EXPECTATIONS AS THE VALUATION PARAMETER, DOES THE NON-CONSTANT DCF MODEL STILL RELY ON EARNINGS?

A. Yes. It relies on an expectation of future cash flows. Future cash flows come from dividends during the time the stock is owned and capital gains from the sale of the stock once it is sold. Since earnings impact both dividends and stock price, the non-constant DCF model still relies on earnings.

Every dollar of earnings is used for the benefit of stockholders, either in the form of a dividend payment, or earnings reinvested for future growth in earnings and/or dividends. Earnings paid out as a dividend have a different value to investors than earnings retained in the business. Recognizing this difference and properly considering it in the quantification process is a major strength of the DCF model and is why the non-constant DCF model as I have set forth is an improvement over either the price-to-earnings ratio (P/E ratio) or dividend/price (D/P) methods. Comparing the P/E ratios and the dividend yield (D/P) are helpful as a rule of thumb, but they must be used with caution because, among other reasons, two companies with the same dividend yield can have a different COE if they have different retention rates. A DCF model is more reliable than these rules of thumb because it can account for different retention rates, among other factors.

Q. WHY IS THERE A DIFFERENCE TO INVESTORS IN THE VALUE OF EARNINGS PAID OUT AS A DIVIDEND COMPARED TO THE VALUE OF EARNINGS RETAINED IN THE BUSINESS?

A. The return on earnings retained in the business depends upon the opportunities available to that company. If a regulated utility reinvests earnings in needed "used and useful" utility assets, then those reinvested earnings have the potential to earn at whatever return is

consistent with ratemaking procedures allowed and the skill of management in prudently operating the system.

When an investor receives a dividend, he can either reinvest it in the same or another company or use it for other things, such as paying down debt or paying living expenses. Although an investor could theoretically use the proceeds from any dividend payments to simply buy more stock in the same company, when an investor increases his investment in a company by purchasing more stock, the transaction occurs at market price. However, when the same investor sees his investment in a company increase because earnings are retained rather than paid as a dividend, the reinvestment occurs at book value. Stated within the context of the DCF terminology: earnings retained in the business earn at the future expected return on book equity "r," and dividends used to purchase new stock earn at the rate "k." When the market price exceeds book value (that is, the market-to-book ratio exceeds 1.0), retained earnings are worth more than earnings paid out as a dividend because "r" will be higher than "k." Conversely, when the market price is below book value, "k" will be higher than "r," meaning that earnings paid out as a dividend earn a higher rate than retained earnings.

Q. IF RETAINED EARNINGS WERE MORE VALUABLE WHEN THE MARKET-TO-BOOK RATIO IS ABOVE 1.0, WHY WOULD A COMPANY WITH A MARKET-TO-BOOK RATIO ABOVE 1.0 PAY A DIVIDEND RATHER THAN RETAIN ALL OF THE EARNINGS?

A. Retained earnings are more valuable than dividends only if there are sufficient opportunities to profitably reinvest those earnings. Regulated utility companies are allowed to earn the cost of capital only on assets that are used and useful in providing utility

service. Investing in assets that are not needed may not produce any return at all. For unregulated companies, opportunities to reinvest funds are limited by the demands of the business. For example, how many new computer chips can Intel profitably develop at the same time?

Q. UNDER THE NON-CONSTANT DCF MODEL, IS IT NECESSARY FOR EARNINGS AND DIVIDENDS TO GROW AT A CONSTANT RATE FOR THE MODEL TO BE ABLE TO ACCURATELY DETERMINE THE COST OF EQUITY?

A. No. Because the non-constant form of the DCF model separately discounts each and every future expected cash flow, it does *not* rely on any assumptions of constant growth. The dividend yield can be different from period to period, and growth can bounce around in any imaginable pattern without harming the accuracy of the answer obtained from quantifying those expectations. When the non-constant DCF model is correctly used, the answer obtained is as accurate as the estimates of future cash flow.

APPENDIX D. CAPITAL ASSET PRICING MODEL

Risk Free Rate

Q. WHAT IS YOUR RESPONSE TO ANALYSTS WHO CLAIM THAT THE CAPM MUST BE IMPLEMENTED WITH A LONG-TERM INTEREST RATE (E.G., YIELD ON 30-YEAR TREASURY BOND) AS AN ESTIMATE OF THE RISK-FREE RATE COMPONENT OF THE CAPM?

A. When looking for a security to calculate an estimate of the risk-free rate, it could be argued that it is appropriate to find one with a term or maturity that best matches the life of the asset being financed. In that sense, the 30-year Treasury bond yield can be argued to be ideal for this specific application. However, it is equally important to find a security that has a beta coefficient with the overall market as close to zero as possible, because by the very definition of the risk-free rate in the CAPM model, its movements should have no correlation to the movements of the market. And this is where the problem with the 30-year Treasury bond yield arises, as it has an established non-zero beta. The 3-month Treasury bill yield has a considerably lower beta, and therefore is superior in that respect to the 30-year Treasury bond yield. Neither one is a perfect fit on both fronts, which is why I have chosen to consider both as proxies for the risk-free rate to establish a range for my CAPM results.

Q. HOW DO YOU RESPOND TO ANALYSTS WHO CLAIM THAT THE RISK-FREE RATE SHOULD BE BASED ON INTEREST RATE FORECASTS FROM FIRMS SUCH AS BLUE CHIP FINANCIAL?

A. It is important to recognize that current long-term Treasury bond yields represent a direct observation of investor expectations and there is no need to use "expert" forecasts such as

Blue Chip to determine the appropriate risk-free rate to use in a CAPM analysis or any other cost of equity calculations.

Many economists and forecasters will continue to be quoted in the press prognosticating on possible developments that are truly unpredictable. The Nobel Laureate Economist Daniel Kahneman stated the following regarding forecasting:

> It is wise to take admissions of uncertainty seriously, but declarations of high confidence mainly tell you that an individual has constructed a coherent story in his mind, not necessarily that the story is true.[105]

Historical Beta

Q. PLEASE EXPLAIN HOW YOU CALCULATE HISTORICAL BETAS.

A. I calculate historical betas following the methodology used by Value Line, with some modifications. Specifically, Value Line adheres to the following guidelines:

1. Returns for each security are regressed against returns for the overall market in the following form:

$$\ln (p^{I}_{t} / p^{I}_{t-1}) = a_{I} + B_{I} * \ln (p^{m}_{t} / p^{m}_{t-1})$$

Where:

- p^{I}_{t} is the price of the security I at time t
- p^{I}_{t-1} is the price of the security I one week before time t
- p^{m}_{t} and p^{m}_{t-1} are the corresponding values of the market index
- B_I is the regression estimate of Beta for the security against the market index

2. The natural log of the price ratio is used as an approximation of each return and no adjustment is made for dividends paid during the week.

[105] DANIEL KAHNEMAN, *Thinking Fast and Slow*, p. 212 (New York: Farrar, Straus, and Giroux, 2011).

3. Weekly returns are calculated on one day of the week, with a stated preference for Tuesdays to minimize the effect of holidays as much as possible.
4. Betas calculated using the regression method above are adjusted as per Blume (1971)[106] using the following formula:

$$\text{Adjusted } B_I = 0.35 + 0.67 * \text{Calculated } B_I$$

There are four differences between my historical beta calculations and Value Line's calculations:

1. The first significant difference is that whereas Value Line uses the New York Stock Exchange Composite Index as the market index, I use the S&P 500 Index.
2. Another important difference is that whereas Value Line calculates weekly returns on one day of the week, with a stated preference for Tuesdays, I calculate weekly returns on all days of the week.
3. Value Line only calculates betas every 3 months in their quarterly company reports, whereas I use the same consistent methodology to calculate betas every week during the most recent 3 complete months (December 2023 through February 2024).
4. Value Line always uses a 5-year period for the return regression,[107] whereas I calculate historical betas for periods of 6 months, 2 years, and 5 years, as shown in Chart 15 on page 66.

[106] M. Blume, On the Assessment of Risk, *The Journal of Finance*, Vol. XXVI (March 1971) available at www.stat.ucla.edu/~nchristo/Fiatlux/blume2.pdf.
[107] They offer betas calculated over different time periods on their website, including 3 years and 10 years.

In the following pages, I explain my rationale for making the four modifications above to Value Line's beta calculation methodology.

Q. WHY DO YOU CALCULATE YOUR HISTORICAL BETAS VS. THE S&P 500 INDEX INSTEAD OF THE NEW YORK STOCK EXCHANGE (NYSE) COMPOSITE INDEX, AS VALUE LINE DOES?

A. A critical factor in the calculation of a beta coefficient is the choice of index to represent the overall market. Using exactly the same beta calculation methodology with a different market index will result in different values of beta for a given company or portfolio – sometimes drastically different values. It is easy to jump to the conclusion that this points to a flaw in CAPM theory, as different values of beta would result in a different implied cost of equity. However, another key component of the CAPM, the market risk premium, also depends on the choice of the market index, which in theory would have an offsetting effect on the cost of equity calculation. This points to the most important aspect of selecting a market index for a CAPM analysis, which is to be consistent and use the same index for the calculation of beta as for the calculation of the market risk premium. This is a fundamental concept of the CAPM and using betas based on one index with a market risk premium based on a different index yields invalid results.

As stated above, Value Line calculates its published betas based on the NYSE Composite Index. Most methodologies used to calculate the market risk premium, including those I rely on, are based on the S&P 500 Index, so using them in the CAPM together with Value Line betas exactly as published would yield invalid results.

For this reason, I calculate my historical betas versus the S&P 500 Index, making my CAPM approach entirely consistent.

As an aside related to my option-implied betas, using the S&P 500 Index consistently throughout my CAPM has the added benefit that this index has a much larger number of options traded, which makes the calculation of option-implied betas more reliable.

Q. WHY DO YOU CALCULATE YOUR HISTORICAL BETAS USING WEEKLY RETURNS ON EVERY DAY OF THE WEEK AS OPPOSED TO USING ONLY ONE DAY OF THE WEEK, AS VALUE LINE DOES?

A. Using one day of the week to calculate weekly returns for use in the regression analysis used to calculate historical betas has the unintended effect of generating different values of betas depending on the day of the week that is used. To clarify, if one were to use Value Line's precise methodology for calculating a 5-year historical beta for a given company using weekly returns calculated on Tuesdays, the resulting beta value would be different than the resulting value if one were to use the same exact methodology, but using weekly returns calculated on Wednesdays, or any other day of the week. Even though 5-year historical betas should in theory be quite stable and should not change very much from one day to the next, calculating returns on only one day of the week results in differences that can be significant and make no sense conceptually.

I only became aware of this side-effect recently, but it is easy to understand why it happens. Even though there is some correlation due to some overlap, the set of weekly returns calculated on Mondays is a completely different set of numbers than the set of weekly returns calculated on Tuesdays. As a result, there are five 5-year betas that can result from Value Line's methodology, and even though the Monday beta for a given

company will change slowly from week to week, the change between the Monday beta and the Tuesday beta, calculated just one trading day apart, can be quite significant.

Since I became aware of this undesirable effect, I began calculating my historical betas based on an all-encompassing set of weekly returns calculated on every trading day in the beta calculation period. This methodology has the effect of averaging out the five possible betas that could result from using only one day of the week for the return calculations,[108] as Value Line does. In this way, a 5-year beta calculated on any two consecutive trading days would only change minimally, as it should.

Using a daily calculation of weekly returns could be criticized for the resulting overlap in a weekly return from Monday to Monday with that from Tuesday to Tuesday. However, given that the overlap is consistent and equal for the net effect of every trading day, no trading day is given undue weight in the regression. Even though the effect of each trading day appears 5 times in the weekly return data, there are also 5 times the total number of weekly returns in the overall set used in the regression, so any individual trading day has the same relative weight than in Value Line's methodology. The fact that the resulting beta value of this aggregate approach turns out to be a sort of average of the five possible values that would result from Value Line's methodology on different days of the week is the final confirmation that this is the superior approach for calculating a historical beta based on weekly returns.

Using a daily calculation of weekly returns has the added marginal benefit of providing more data pairs to be used in historical beta calculations for shorter periods, such

[108] The resulting beta is not a direct arithmetic or geometric average of the other five betas, but rather a regression based on the union of all five possible sets of weekly returns.

as for 6-month historical betas, where instead of 25 return pairs, the regression is performed on 117 return pairs.

Q. ARE THERE ADDITIONAL BENEFITS TO DOING YOUR OWN HISTORICAL BETA CALCULATIONS?

A. Doing my own historical beta calculations using Value Line's established methodology allows me to see how beta values change from week to week and to use the most up-to-date beta calculations instead of relying on stale beta values that can be more than 3 months old.

Q. HOW MANY DATA POINT PAIRS ARE NECESSARY TO ESTABLISH A STATISTICALLY SIGNIFICANT CORRELATION BETWEEN TWO VARIABLES IN A REGRESSION ANALYSIS, SUCH AS THE ONE USED TO ESTABLISH BETA COEFFICIENTS?

A. Establishing a minimum number is somewhat subjective, though various authorities on statistics argue the number is between 3 and 8 data pairs. While one can broadly correctly generalize that the more data point pairs one uses, the more certain one can be about the significance of the results of any correlation analysis, this is very different from stating that one cannot achieve statistical significance with a relatively low number of data pairs. In fact, it is important to realize that one can achieve statistical significance with less than 10 data pairs, and that even hundreds of data pairs do not guarantee statistical significance. For precisely this reason, statisticians have developed a tool that helps determine statistical significance based on the number of data pairs in a regression analysis.

A "table of critical values" of Pearson's correlation, which can be readily found online[109] or in most statistics books, tells a statistician that for 25 data point pairs (implying N-2=23 "degrees of freedom"), a correlation, or beta, coefficient of 0.505 or higher will occur *by chance* with a probability of only 0.01.[110] As explained in more detail in the text regarding how to use the table of critical values,[111] any beta coefficient above this level, and certainly above the 0.910 3-month average for the recent 6-month betas for my RFC Gas Proxy Group, by definition are considered statistically significant. The threshold for statistical significance for 117 data point pairs (implying 115 "degrees of freedom"), is so low that it is not even included in the table of critical values. The maximum "degrees of freedom" listed is 100, with an already very low threshold of 0.254.

Historical Blended Beta

Q. HOW DID YOU DECIDE ON THE RELATIVE WEIGHTS YOU ALLOCATE TO EACH COMPONENT OF YOUR HISTORICAL BLENDED BETAS? IS THERE ANY ACADEMIC SUPPORT FOR YOUR APPROACH?

A. I am not aware of any academic study specifically focused on the optimal relative weight of historical betas to predict future betas. However, the authors of the paper I relied upon for guidance on the calculation of my option-implied betas did attempt to quantify the predictive power of 6-month option-implied ("forward-looking") betas as well as that of 6-month ("180-day"), 1-year, and 5-year historical betas by back-testing historical predictions with actual *expost* results, or "realized" betas, for the 30 companies in the Dow

[109] University of Connecticut, *r Critical Value Table*, available at: https://researchbasics.education.uconn.edu/r_critical_value_table/#
[110] In fact, many researchers use a more lenient "alpha level" of 0.05 for determinations of statistical significance.
[111] University of Connecticut, *Statistical Significance: Is there a relationship (difference) or isn't there a relationship (difference)?* available at https://researchbasics.education.uconn.edu/statistical_significance

Jones Index. In addition to using each of the betas above independently, they also measured the predictive power of a "mixed" beta consisting of a simple average of the six-month option-implied beta and the 6-month historical beta.

Their conclusions for predicting 6-month future betas are as follows:

> The forward-looking beta outperforms the other methods ten times, and the same is true for the 180-day historical beta. The mixed beta is the best performer in seven cases, and the 1-year historical beta in three cases. The 5-year historical beta is always outperformed by at least one other method, and it often ranks last. The 180-day historical beta clearly dominates the two other historical methods.[112]

Their conclusions for predicting 1-year and 2-year future betas are as follows:

> Somewhat unexpectedly, the performance of the forward-looking beta compared to that of the 180-day historical beta is much better [for the one-year prediction] than [for the six-month prediction], and this conclusion carries over to [the two-year prediction]. The mixed beta also perform [sic] well. It is perhaps not surprising that the performance of the 180-day historical beta [for the one- and two-year predictions] is poorer than [for the six-month prediction], because the horizons used in the construction of realized betas are no longer equal to 180 days. What is harder to explain is why the correlation between realized beta and forward-looking beta is in many cases higher [for the one- and two-year predictions] than [for the six-month prediction]. Finally, it is also interesting that the 1-year and 5-year historical betas do not perform well [for the one-and two-year predictions]. In summary, [for the one-year prediction] either the forward-looking beta or the mixed beta is the best performer in nineteen out of thirty cases. [For the two-year prediction], this the case twenty-two times out of thirty.[113]

Their conclusions strongly support the use of 6-month historical betas, 6-month option-implied betas, and/or an average of the two as predictors of future betas 6 months, 1 year, or 2 years into the future. Therefore, considering a historical blended beta in conjunction with option-implied betas to calculate the cost of equity is consistent with

[112] Peter Christoffersen, Kris Jacobs, and Gregory Vainberg, *Forward-Looking Betas*, p. 16 (April 25, 2008) available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=891467.
[113] Id. at 17.

research findings that coming historical and option-implied betas is the best predictor of future betas.

I decided on the composition of my historical blended betas primarily based on the conclusions of the authors above. Though the predictive power of longer-term historical betas seems to be quite reduced, it is not zero, so in an effort to preserve the effect of longer-term market trends in my historical blended betas, I chose to incorporate 5-year historical betas.

Market Risk Premium

Q. WHICH CUMULATIVE PROBABILITY DID YOU USE TO ESTIMATE THE OPTION-IMPLIED GROWTH OF THE S&P 500 IN THE CALCULATION OF YOUR MARKET RISK PREMIUM AND WHY?

A. I used a cumulative probability of 50.0% in the calculation of my option-implied growth for the S&P 500, which results in a value of 6.69% as of February 29, 2024 and a value of 6.81% for the weighted average of the 3 months ending on that date. As stated above, a cumulative probability of 50% represents the median of the probability distribution, or in this case the option-implied market consensus, which is why I have chosen to use this level.

As a matter of fact, using the same probability distribution derived from the options market described above, one can also calculate the cumulative probability implied by a given cost of capital. For instance, using the same risk-free rates and betas for the RFC Gas Proxy Group in my CAPM analysis, Mr. Moul's recommended ROE of 11.75% implies an average market risk premium of 7.7%, an average overall market return of 12.5%, average growth for the S&P 500 of 11.0%, and a cumulative probability of 66.0%. In other words, to achieve the required market growth of 11.0%, reality would have to

exceed 66.0% of the scenarios investors currently see as plausible for the market in aggregate, considerably more than the median market consensus at 50%. To put this into perspective, it is important to note that values on the tails of the probability function get increasingly separated, requiring an ever-increasing growth rate for every additional percentage in the cumulative probability, and making it impossible to ever arrive at 100%.

Using exactly the same methodology using the betas of the RFC Gas Proxy Group, my recommended 8.02% ROE implies an average market risk premium of 3.5%, an average overall market return of 8.4%, average growth for the S&P 500 of 6.9%, and a cumulative probability of 50.3%.

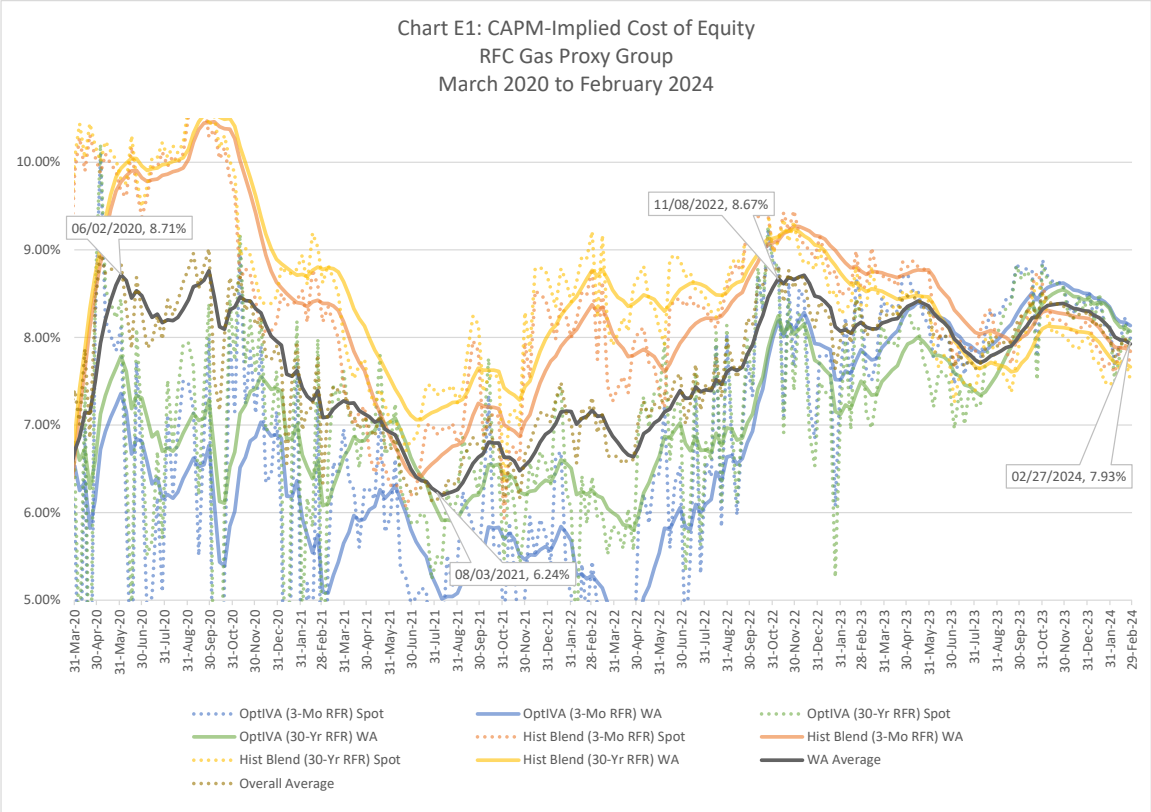
Q. ARE THE CUMULATIVE PROBABILITIES YOU REFER TO IN THIS CASE DIRECTLY COMPARABLE TO THE CUMULATIVE PROBABILITIES YOU HAVE USED OR REFERRED TO IN PRIOR TESTIMONIES YOU HAVE FILED?

A. In late 2020, after significant efforts related to the complexities in processing extremely large volumes of option data, I was finally able to use option-implied volatility and option-implied skewness to come up with a log-normal function that approximates the probability distribution of the possible trajectories for the S&P 500 implied by the options market as of any given day, as explained above. All of the testimonies I have filed since then, starting in 2021, have used this complete and superior approach along with a cumulative probability of 50%, representing the median of the probability distribution, or the option-implied market consensus, to estimate expected market growth. Any references to cumulative probability in these testimonies are directly comparable.

Prior to incorporating skewness into the approximation, I used a normal function to estimate the same probability distribution referred to above. Using a normal distribution

as an approximation is a simplification used commonly in economics, including in the Black-Scholes formula for a single option. However, unlike a skewed log-normal function, a normal function has the same median and mean, meaning that when applied in this case, the option-implied market consensus of this simplified approximation implies market growth of 0%. As a result, before using log-normal functions, I had to resort to finding an adequate level of cumulative probability above 50% to estimate market growth, which is admittedly somewhat subjective. To be conservative, I often used a cumulative probability of 68.3%, which is the probability found within one standard deviation of the mean of a normal distribution, which I understood would lead to a conservatively high estimate for market growth. It is important to point out that the cumulative probabilities of the simplified normal function approximation I used in cases before 2021 cannot be directly compared to the cumulative probabilities of the superior log-normal function approximation, which takes skewness into account. The considerably improved approximation based on a log-normal function eliminates all subjectivity in arriving at the implied market consensus and allows a much better measure of implied cumulative probabilities of deviations from that market consensus.

APPENDIX E. CAPM-IMPLIED COST OF EQUITY FOR RFC GAS PROXY GROUP OVER TIME SINCE ONSET OF COVID PANDEMIC



Notes regarding the content of this chart:

- *The information in this chart is the property of Rothschild Financial Consulting ("RFC") and may not be used for any purpose without the express written consent of RFC. Even when the underlying data are publicly available from another source, the results of analyses performed by RFC and the way of presenting the data are and remain the property of RFC.*

- *The data presented herein may not agree 100% with past recommendations by RFC for numerous reasons, including differences in the underlying proxy group and the fact that this chart represents only results based on the CAPM, whereas RFC usually bases recommendations on the CAPM and other models, such as various forms of the DCF.*

APPENDIX F. RESUME OF AARON L. ROTHSCHILD

SUMMARY

Financial professional providing U.S. public utility commissions financial tools and expert testimony to assist in rate setting for regulated utility companies (e.g., regulated electric distribution providers, natural gas pipelines). Relevant experience includes developing and applying methodologies that directly measure investors' equity return expectations based on stock option prices, applied mathematics research for utility industry as an affiliate of the New England Complex Systems Institute, and serving as Head of Business Analysis for a major U.S. telecom firm in Asia Pacific.

EXPERIENCE

Rothschild Financial Consulting, Ridgefield, CT **November 2001- present**
Independent consulting firm specializing in utility sector
President

- Provide financial expert testimony (e.g., rate of return and M&A) to regulators, policy makers, foundations, and consumer groups in utility rate case proceedings, including representing the California Public Advocates Office and the Wild Tree Foundation in the ongoing California water and energy cost of capital proceedings
- Developed cost of equity models that have been adopted by the Public Service Commission of South Carolina in 2020 (decision upheld by the South Carolina Supreme Court in September 2021) and the Connecticut Public Utilities Regulatory Authority in September 2021
- Developing market-based cost of equity methodology in ongoing regulated natural gas pipeline case before the Federal Energy Regulatory Commission (FERC), including proposing replacing equity analyst earnings per-share forecasts (IBES, Value Line) with options-implied growth expectations to determine authorized return on equity (ROE)
- Present at utility regulation conferences (NARUC/NASUCA and MARC) regarding rate of return, power purchase agreements, complex systems science, and subsidy auctions

360 Networks, Hong Kong **January 2001 - October 2001**
Pioneer of the fiber optic telecommunications industry
Senior Manager

- Business development and investment evaluation
- Negotiated landing rights and formed local partnerships in Korea, Japan, Singapore, and Hong Kong for $1 billion undersea cable project
- Structured fiber optic bandwidth swapping agreement with Enron and Global Crossing
- Established relationships with Hong Kong based Investment Bankers to communicate Asia Pacific objectives and accomplishments to Wall Street

Dantis, Chicago, IL **July 2000- December 2000**
Start-up managed data-hosting services provider
Director

- Built capital raise valuation models and negotiated with potential investors
- Team raised $100M from venture capital firm through valuation negotiations and internal strategic analysis

MFS, MCI-WorldCom, Chicago, Hong Kong, Tokyo September 1996- July 2000
American Telecommunications Company
Head of Business Analysis for Japan operations

- Managed staff of 5 business development analysts
- Raised $80M internally for Japanese national fiber network expansion plan by conducting an investment evaluation and presenting findings to CEO of international operations in London, UK
- Built financial model for local fiber optic investment evaluation that was used by business development offices in Oak Brook, IL and Sydney, Australia

EDUCATION

Vanderbilt University, Nashville, TN 1994-1996
MBA, Finance

- Completed business plan for Nextlink Communications in support of their national fiber optic network expansion, including identifying opportunities from passage of Telecom Act of 1996
- Developed analytical framework to evaluate predictability of rare events
- Provided financial and accounting analysis to Chicago's consumer advocate, the Citizens Utility Board (CUB) as a summer intern

Clark University, Worchester, MA 1990 - 1994
BA, Mathematics

APPENDIX G. TESTIFYING EXPERIENCE OF AARON L. ROTHSCHILD

Filed Rate of Return Testimonies:

California

- Pacific Gas and Electric, Application 22-04-008 et al, Rate of Return/Cost of Capital Mechanism, January 2024
- Liberty Utilities, Application A.23-05-004, Rate of Return, August 2023
- San Gabriel Water Company, Application 23-05-001, Rate of Return, August 2023

Sources:

[A] Value Line: Most current data available at time of schedule preparation. 2028 data is VL forecast for 2027-29.

[B] Straight line interpolation based on Value Line data, assuming constant dividend growth for 2025-28.

[C] Straight line interpolation based on Value Line data, assuming constant book value growth for 2025-28.

[D] EOD Data: Market Data as of February 29, 2024.

[E] Stock Price projected assuming constant Market to Book Ratio (Exhibit ALR-5, page 1) and using VL projected Book Value.

[F] Cash Flow from purchasing stock on March 1, 2024, receiving dividends through 2028, and selling on February 29, 2028.
Negative number in 2024 reflects cash outflow required to purchase stock.
Cash flow sources are 1) dividends and 2) proceeds of stock sale.
4 of 4 dividends assumed received in 2024 and 0 of 4 in 2028 based on purchase and sale date.

[G] Total return on equity to investor who purchased, held, and sold stock as described above,
assuming Value Line projections of Dividends and Book Value are correct and
assuming Stock Price grows at same rate as Book Value.
DCF result is an Internal Rate of Return computation made using the "IRR" function built into Microsoft Excel
based on projected cash flows from 2024 to 2028.

Sources:

[A] Value Line: Most current data available at time of schedule preparation. 2028 data is VL forecast for 2027-29.

[B] Straight line interpolation based on Value Line data, assuming constant dividend growth for 2025-28.

[C] Straight line interpolation based on Value Line data, assuming constant book value growth for 2025-28.

[D] EOD Data: Market Data as of February 29, 2024.

[E] Stock Price projected assuming constant Market to Book Ratio (Exhibit ALR-5, page 1) and using VL projected Book Value.

[F] Cash Flow from purchasing stock on March 1, 2024, receiving dividends through 2028, and selling on February 29, 2028.
Negative number in 2024 reflects cash outflow required to purchase stock.
Cash flow sources are 1) dividends and 2) proceeds of stock sale.
4 of 4 dividends assumed received in 2024 and 0 of 4 in 2028 based on purchase and sale date.

[G] Total return on equity to investor who purchased, held, and sold stock as described above,
assuming Value Line projections of Dividends and Book Value are correct and
assuming Stock Price grows at same rate as Book Value.
DCF result is an Internal Rate of Return computation made using the "IRR" function built into Microsoft Excel
based on projected cash flows from 2024 to 2028.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XII-006

Witness: Moul, Paul Title: Managing Consultant, P. Moul & Associates

Question: Reference Schedule 3 [2 of 2] of Mr. Moul's direct testimony, Peoples Statement No. 12. Please provide the percentage of operating income of each of the eight (8) companies in Mr. Moul's proxy group derived from (a) regulated gas distribution operations and (b) total regulated distribution operations, including water, gas, and electricity.

Answer: a. Please refer to the attachment.

b. There are only two companies in the group that provide electric utility service. For Chesapeake, gas distribution represents 91% of regulated revenues. NiSource obtains 69% of its regulated revenue from gas distribution, 71% of its regulated earnings from gas distribution, and 68% of its regulated assets from gas distribution.

Submit Date: 2/26/2024

VII.	**TARIFF REVISIONS FOR FLEX RATES**	**46**

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Clarence L. Johnson. My business address is 3707 Robinson Ave, Austin, Texas 78722.

Q. ON WHOSE BEHALF ARE YOU PRESENTING TESTIMONY IN THIS PROCEEDING?

A. I am presenting testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS YOUR CURRENT EMPLOYMENT?

A. I am self-employed as a consultant providing technical analysis, advice, and testimony regarding energy and utility regulatory issues.

Q. DO YOU HAVE PREVIOUS EXPERIENCE AS AN EXPERT ON REGULATED UTILITY MATTERS?

A. Yes. I have 40 years of experience as a utility regulatory expert, including 25 years as director of regulatory analysis for the Texas Office of Public Utility Counsel ("OPC"). As a consultant, I have provided expert advice, assistance, and testimony on utility-related issues to a number of parties. My clients have included state consumer advocate offices, customer groups, and various coalitions of municipalities in Texas. Municipalities in Texas act as original jurisdiction regulators over electric utility and gas utility rates within city boundaries. I have previously filed testimony in PECO, First Energy, and Duquesne rate cases in Pennsylvania.

Q. HAVE YOU PROVIDED AN ATTACHMENT WHICH DETAILS YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL EXPERIENCE?

A. Yes. Please see Appendix A. This includes a list of testimony over my career.

Q. PLEASE OUTLINE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I have a B.S. in Political Science and a M.A. in Urban Studies from the University of Houston. My graduate degree is in an interdisciplinary program offered by the University of Houston's College of Social Science, which incorporated substantial training in economics, including course work in the application of cost-benefit analysis to public policy. During my previous tenure at OPC, I gained experience in virtually all phases of economic review required for the ratemaking process. I was chairman of the Economics and Finance Committee of the National Association of State Utility Consumer Advocates ("NASUCA") and served as a presenter for NASUCA's workshops and panels on cost allocation and rate design, demand-side management incentives, market power, load retention rates and electric utility competition.

I have previously filed testimony in approximately 170 proceedings at the Public Utility Commission of Texas, Texas Railroad Commission, Pennsylvania Public Utility Commission, Maryland Public Service Commission and Connecticut Public Utility Regulatory Authority.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS CASE?

A. My testimony will address cost allocation and rate design issues pertaining to the Peoples Natural Gas Company LLC ("Peoples" or "Company") base rate increase requested in this

docket. For purposes of comparability only, my analysis generally utilizes the revenue requirements and schedules filed by the Company. My use of Peoples' filed costs and revenues is not agreement or acceptance of the Company's requested revenues. OCA witnesses Dante Mugrace and Aaron Rothschild will address the Company's proposed revenue requirement and authorized rate of return.

Q. WHAT DOCUMENTS HAVE YOU REVIEWED IN PREPARING THIS TESTIMONY?

A. I reviewed relevant testimony and exhibits in Peoples' rate case filing. I also propounded interrogatories to the Company and reviewed the responses and accompanying attachments.

II. SUMMARY

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

A. My recommendations are as follows:

- My testimony opposes the customer classification of distribution mains. The minimum system concept, which Peoples utilizes for classifying 48% of mains on a customer basis, is flawed, inconsistent with cost causation, and contrary to Commission precedent.
- My testimony recommends adoption of the Peak & Average method as the demand allocation for mains.
- The Company identified $1.3 million of costs associated with six account executives who assist large commercial and industrial customers. My testimony recommends assigning these costs to the MGS, MLS, and LGS classes in the CCOS study.

- My principal recommendation is to adopt the Peak & Average CCOS study, as adjusted for the account executive cost above, as the method of allocating the system base revenue increase to customer classes.
- The Company proposes an increase up to 48% in the residential customer charge. This is an excessive and unreasonable increase which adversely affects low usage customers, reduces customers' control over their gas bill, and discourages customers from undertaking energy efficiency measures. My analysis indicates that a customer charge of $9.00 would recover costs which vary directly with the number of customers. My recommendation is to adopt a $14.50 residential customer charge, which is the current customer charge for most Peoples' residential customers.
- The Company proposes the Weather Normalization Adjustment tariff, which would automatically charge or credit customers for weather which is above or below the Company's calculation of normal historic weather patterns as calculated based in heating degree days. My recommendation is to reject this proposal.
- The Company proposes to expand the negotiated rate contract tariff by including electricity as a competitive alternative that justifies negotiated rate treatment. My recommendation is to reject this proposal.

III. CLASS COST OF SERVICE STUDY

A. Overview

Q. WHAT IS A CLASS COST OF SERVICE STUDY (CCOSS)?

A. The CCOSS is a fully allocated cost study that distributes the Company's costs to customer classes. The intent of the study is to allocate costs based on cost causation, generally resulting in a portion of costs allocated on causal measures and the remainder of indirect costs following those costs. The CCOSS is at best a general benchmark for evaluating customer class cost responsibility. The CCOSS can provide guidance to the regulator, but considerations other than the CCOSS also are appropriate in determining the ultimate allocation of costs among customer classes. The CCOSS provides rates of return for each customer class at current and proposed class rates. Sometimes the class rates of return are divided by the total retail rate of return to arrive at a relative rate of return (RROR). The relative rate of return (or unitized return) at present rates may be used as a benchmark for guiding the direction of revenue changes at the class level. The CCOSS also provides class required revenues based upon equalized rates of return (all classes' revenue produce the proposed overall retail rate of return). The class revenues at equalized rates of return can be used as a rough target for apportioning class revenue increases, but the results at equalized rates of return do not necessarily dictate the exact levels of class revenue requirement . The class revenues may depart from equalized rates of return in order to recognize rate gradualism, relative risks associated with serving each class, or other non-cost considerations. However, the resulting revenues indicated by the CCOSS may provide

useful information regarding the equitable distribution of a system revenue increase among customer classes.

Q. HOW IS THE COST CAUSATION CRITERION APPLIED IN THE CCOSS?

A. Some costs are incurred directly to serve only an individual customer or set of customers. But these instances are relatively rare. Many of a utility's costs are indivisible.

The provision of gas utility services is predominated by common and joint costs, which either support the overall enterprise or produce shared benefits for all or most customers. These costs often are assigned based upon indirect, and often weak, measures of causation. For example, overhead costs, such as Board of Director fees, might be allocated based upon measures as diverse as revenues, labor costs, energy sales, plant or demand. No single objective economic basis supports the allocation of these costs; therefore, the allocation decisions are subjective or based on ratemaking conventions. Ideally, the analyst selects a method that best recognizes the manner in which customer classes' characteristics contributed to the incurrence of utility investments and expenses. The manner in which a utility plans and installs an investment often informs the analyst's evaluation of causal factors related to classification or allocation of the investment.

The three major steps of the embedded cost of service study are functionalization, classification, and allocation. Functionalization is the procedure for separating costs into functional segments, such as production, transmission, and distribution. The next two accounting steps, classification and allocation, facilitate the recognition of causation. The classification procedure, which pools costs into general categories of causation (i.e., demand, customer, commodity), is an intermediate step in determining the allocation

factors that are used to divide costs among jurisdictions and customer classes. The allocation step determines the appropriate percentage of a particular FERC account which is attributed to each customer class.

Q. CAN YOU PROVIDE MORE DETAIL REGARDING THE DEVELOPMENT OF ALLOCATION FACTORS FOR DISTRIBUTION COST OF SERVICE STUDIES?

A. Yes. The principal external allocation factors in the CCOSS are customer, demand, and energy use allocators. Customer allocators are based on class customer count as a percentage of total retail customer count. Sometimes weighting factors are applied to the customer count in order to reflect differences in cost per customer. For instance, customer allocators applied to service drops may be weighted to reflect the differences in the cost of average service drops for each customer class.

The predominant demand allocation factor for the distribution system is non-coincident peak demand (NCP). NCP is based on the maximum demand for the class. Since classes may incur peak demand in different time periods, the NCP method is said to reflect demand diversity on the system. Each class's demand allocator is the ratio of the class peak demand relative to the sum of all classes' maximum demands. Commodity or throughput allocation factors, based on annual usage, are used to represent Average Demand in the CCOSS. Peak Demand and Average Demand reflect distinct dimensions of causality and the manner in which customers benefit from the system.

Indirect costs in the CCOSS usually are allocated on the basis of internal allocation factors which "follow" the allocation of direct costs. An example is the labor allocator, which may be used to allocate administrative & general expenses; the labor allocator will

be driven by the labor portion of accounts which are classified as customer, demand, or both. A substantial portion of the customer and demand costs in the CCOSS will consist of indirect costs which are not inherently customer or demand related, but which follow the customer/demand classification of other accounts. This explains in part why the results of a CCOSS frequently are sensitive to small changes in the customer/demand classification for certain accounts.

Q. PLEASE DESCRIBE YOUR REVIEW OF THE CCOSS PRESENTED BY THE COMPANY.

A. My analysis focused on the CCOSS for Peoples combined divisions. I evaluated the studies for consistency and accuracy in the allocation of costs among classes. Based on my review, the allocation or classification of several CCOSS elements were identified as insufficiently justified or warranting improvement. My testimony proposes modifications to the treatment of those costs in the CCOSS, discussed in subsections III.(B) through III.(C) below. These changes affect my recommendations with respect to class revenue distribution. My recommendations focus on a limited number of CCOSS issues; omission of other issues should not be construed as agreement with all other aspects of the Company's cost studies. The OCA does not agree with the proposed revenue requirements in the CCOSS and OCA witnesses Mugrace and Rothchild make alternative recommendations concerning the overall revenue requirement that should be approved in this case. Thus, the revised versions of the CCOSS should be used only to examine class cost relationships rather than absolute revenue levels.

B. Distribution Mains

Q. WHAT PORTION OF THE DISTRIBUTION PLANT ALLOCATION WILL YOU ADDRESS?

A. This section of my testimony will address Peoples' classification and allocation of distribution mains. The gas utility's cost structure is dominated by mains that deliver consumable gas from the transmission or production source to the network of end users. The CCOSS classification of mains plant investment indirectly dictates the allocation of related O&M expenses, as well as much of the utility's administrative expense and general plant. Therefore, the decisions with respect to allocation of mains cost are an overwhelming factor in determining class results.

Q. HOW DOES PEOPLES CLASSIFY DISTRIBUTION MAINS?

A. Peoples proposes a CCOSS for the combined system which classifies Mains 48% to Customer and 52% to Demand, with Demand based solely on the basis of Design Day Demand.[1] Peoples utilizes the minimum system method to support the customer component of its proposal. The Company also presents an alternative CCOSS which classifies Mains only to Demand, with Demand based on a Peak & Average methodology. The Company's preferred CCOSS study, which allocates almost half of Mains cost on a customer basis, is detrimental to residential customer interests because a customer allocation assigns 92% of the cost to the residential class. By contrast, the Design Day

[1] Design Day Demand is based on a Max Day requirement for meeting typically 1 in 15 year Heating Degree Day (HDD) conditions. Mains customer percentages are from Response to OCA V-5 (attachment omitted) and OCA V-7, which are jointly attached as CJ Exhibit 4.

allocation factor assigns 61% and Peak & Average assigns 57% of cost to the residential class. [2]

Q. WHAT IS YOUR POSITION REGARDING THE CLASSIFICATION AND ALLOCATION OF DISTRIBUTION MAINS?

A. I disagree with the Company's proposal to classify part of distribution mains as customer-related. In my view, Peak & Average is more appropriate. My testimony will first address my objection to classifying mains as customer-related, and subsequently explain my support for Peak & Average as the best approach to classifying and allocating mains.

Q. PLEASE ELABORATE ON THE APPROPRIATE METHOD FOR DETERMINING CLASSIFICATION OF DELIVERY INFRASTRUCTURE.

A. My principal recommendation is to classify 100% of mains as demand-related (Max Demand and Average Demand) and classify 100% of services and meters as customer-related. By establishing a clear demarcation for facilities classified as either 100% demand-related or 100% customer-related, the regulatory authorities avoid the complications associated with relying upon minimum system studies. A 2020 manual on regulatory practices refers to this classification as the basic customer method and concluded that the method is "the most equitable solution for the vast majority of utilities."[3] Similarly, the National Association of Regulatory Commissioners (NARUC) Gas Utilities Rate Design Manual refers to the "basic system theory" as classifying only those facilities

[2] Tab "Factors" in Attachment to Response to OCA V-1(a).

[3] Electric Utility Cost Allocation for a New Era, A Manual" (p. 145) Regulatory Assistance Project, Lazar, Chernick, and Marcus (Jan. 2020). "The basic customer method counts only customer specific plant as customer-related and the entire shared distribution network as demand or energy related."

which vary directly with the number of customers, such meters, regulators, and taps, as customer related.[4]

1. Minimum System Method Is Flawed

Q. HOW DOES THE COMPANY DETERMINE THAT 48% OF MAINS SHOULD BE CLASSIFIED AS CUSTOMER?

A. Peoples relies on the minimum system methodology to quantify the customer classification ratio.[5] This requires the development of a minimum system study that produces the 48% classification input to the CCOSS.

Q. WHAT IS A MINIMUM DISTRIBUTION SYSTEM STUDY?

A. The minimum system study attempts to develop the cost of a hypothetical distribution system with no gas load carrying capability. Because the minimum system, in theory, does not reflect the cost of sizing the main to carry any volume of gas, the analyst assumes that the costs are not demand-related and should be allocated on a customer basis. Most such studies either identify minimum size plant components or perform a statistical regression analysis to determine the hypothetical cost of a system which has zero load carrying capability. The nature of a minimum system study—developing a theoretical cost structure for a distribution system which is uninfluenced by demand—can produce a wide range of results, depending on the assumptions made by the analyst. The minimum system concept is an abstraction. In this case, the Companies did not perform a zero intercept study, but

[4] NARUC Gas Utility Rate Design Manual at 23, 1968.
[5] Peoples Statement No. 15 at page 15.

instead used the minimum size mains (defined as 2 inch diameter) with an adjustment to remove any load carrying capability associated with that size.[6]

Q. GIVEN THAT THE MINIMUM SYSTEM IS AN ABSTRACTION, SHOULD THE COMMISSION RELY UPON IT TO ALLOCATE COSTS?

A. In my opinion, no. The two inch main, which is used as the minimum size main, is adjusted to remove the cost of gas carrying capability—essentially adjusting the cost to zero or no-load size. Zero inch mains do not exist because no one would ever manufacture or purchase distribution mains which are incapable of delivering gas. Therefore, estimating the cost is speculative. Given this lack of realism, we can only hypothesize whether such a phantom system would be required to meet safety standards, to be buried, or to incur indirect costs such as stores and construction overhead. These are factors included in the two inch main cost which are caused by external requirements other than the number of customers. I am unconvinced that the cost produced by this method will vary with changes in the number of customers on the system.

Q. DO ANY REGULATORY TREATISES SUPPORT YOUR SKEPTICISM THAT THE MINIMUM SYSTEM IDENTIFIES COSTS WHICH VARY WITH THE NUMBER OF CUSTOMERS?

A. The foundational *Principles of Public Utility Rates* addresses this question. Although the example is related to electric distribution lines, the conclusion is also applicable to gas

[6] The zero intercept method uses a statistical equation to project the price of a main if the size is extrapolated to zero load. Although the method is supposed to predict a zero size main cost, the statistical method raises other concerns about the reliability of the result.

mains. Dr. James Bonbright's critique of the minimum distribution system concept is frequently cited by cost analysts:

> [T]he annual costs of this phantom, minimum sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs…. Their inclusion among the customer costs is defended on the ground that, since they vary directly with area of the distribution system (or else with the lengths of the distribution lines, depending on the type of distribution system), they therefore vary indirectly with the number of customers.
>
> What this last-named cost imputation overlooks, of course is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this system. For it makes no allowance for the density factor (customers per linear mile or per square mile). Indeed, if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs of a minimum-sized distribution system.[7]

The implication of Dr. Bonbright's conclusion is that this "residual" cost of the distribution system (i.e. the cost ascribed to the customer classification) is not closely related to either demand or customer factors, but instead varies on the basis of less easily discerned geographic variables such as customer density.

Q. EVEN IF THE MINIMUM PLANT STUDY IDENTIFIES COSTS WHICH ARE NEITHER CUSTOMER NOR DEMAND-RELATED, DOES IT FOLLOW THAT SUCH COSTS SHOULD BE ALLOCATED ON CUSTOMER COUNT?

A. No, consistent with Dr. Bonbright's conclusion that the hypothetical minimum costs should be regarded as inherently unallocable:

[7] James C. Bonbright, *Principles of Public Utility Rates*, Columbia University Press, 347-349 (1961).

> If the cost is neither demand nor customer related…to which cost function does it then belong? The only defensible answer, in my opinion, is that it belongs to none of them. Instead, it should be recognized as a strictly unallocable portion of total costs.[8]

As noted in the previous passage, the accuracy of a customer allocator is distorted by variations in spatial density among customers. A number of other factors, which are not clearly related to either customers or demand, such as economies of scale in facility costs, safety requirements, and minimizing gas losses influence distribution costs. Dr. Bonbright's conclusion that the minimum system investment should be treated as "unallocable" is consistent with allocating those costs in proportion to the remaining allocable costs, a typical method for allocating costs without a clear causal basis. Because distribution investment is overwhelmingly allocable on a demand basis, classifying the residual minimum plant amount as demand-related achieves basically the same result.

Q. IN STATEMENT 15, PEOPLES WITNESS ZARUMBA JUSTIFIES A CUSTOMER CLASSIFICATION BECAUSE "THE TOTAL INSTALLED FOOTAGE OF DISTRIBUTION MAINS IS INFLUENCED BY THE NEED TO EXPAND THE DISTRIBUTION SYSTEM GRID TO CONNECT NEW CUSTOMERS TO THE SYSTEM." (PAGE 22) DO YOU AGREE?

A. No. The assumption that the footage of "the distribution system grid" varies with number of customers is unrealistic. Adding customers to the system without increasing peak demand does not necessarily lead to more footage of mains. The previously cited RAP

[8] Bonbright at 347-349.

Manual [9] provides several examples: (1) dividing a home into two dwellings adds new customers likely without any additional utility investment other than perhaps a new meter; (2) the shared distribution investment on a block with four large customers can be the same as a block with 20 smaller customers who have the same aggregate load characteristics; and (3) the prospect of adding revenues from a few new commercial customers may induce the utility to spend considerably more to extend the distribution system than it would invest for adding dozens of residential customers.

Q. YOU MENTIONED THAT THE COMPANY'S MINIMUM SYSTEM STUDY INCLUDED AN ADIUSTMENT TO REMOVE CAPACITY COST FROM THE 2 INCH MINIMUM SIZE MAINS. DO YOU VIEW THE ADJUSTMENT AS ADEQUATE?

A. No. The 5.6% reduction to the minimum system cost is likely insufficient.[10] The ability to perform such an adjustment is almost intractable, since speculative assumptions are necessary to develop the cost of a delivery system which cannot carry load. The Company's calculation essentially assumes that 2-inch main plant cost can be adjusted by a percentage equal to the ratio of 2-inch pipe capacity per mile to system design day capacity per mile. The adjustment does not apply a unit dollar cost to the 2-inch main capacity per foot, and therefore sheds little light on the more difficult question of the cost or value of the main's load carrying capability. The demand adjustment is intended to correct the double-

[9] Electric Utility Cost Allocation for a New Era, A Manual" (p. 147) Regulatory Assistance Project, Lazar, Chernick, and Marcus (Jan. 2020). Although the Manual refers to electric utilities, distribution mains are directly analogous to distribution conductors.

[10] For the combined system, the minimum system share of total mains is reduced from 51% to 48%.

counting of demand costs inherent in the minimum system, which overcharges low use and residential class customers.[11] However, the Company's adjustment cannot tell us whether the adjustment or credit to those customers is adequate or accurate.

Q. DO YOU HAVE ANY EVIDENCE THAT THE COMPANY'S ADJUSTMENT TO THE MINIMUM SYSTEM STUDY IS INSUFFICIENT?

A. Yes. Other methodologies have been used to estimate the cost of mains with no load carrying capacity. Limiting the minimum cost component to labor installation without materials and equipment is sometimes utilized by utilities to estimate zero load cost without the complexity of a zero intercept model.[12] Labor installation costs are assumed to be the component cost that is required to install a main regardless of load. The labor installation ratio for 2-inch mains is 3.8% - 30%, depending on whether indirect and restoration costs are included in the total cost.[13] This suggests that the adjusted minimum system classification percentage should be no more than 15.3% instead of 48%.[14] This illustrates that an adjustment to remove demand can produce varying results, depending on method.

[12] Electric Utility Cost Allocation for a New Era, A Manual" (p. 148) Regulatory Assistance Project, Lazar, Chernick, and Marcus (Jan. 2020). The installed labor cost method was developed by National Economic Research Associates (NERA) to estimate a zero load minimum system.

[13] Peoples Response to OCA V-15, which is attached as Exhibit CJ-5 and OCA V-7, which is attached as Exhibit CJ-4, p. 2 of 2. The responses include ranges based on soil hardness, and I have reflected the mid-points of the ranges.

[14] 30% X 51% = 15.3%

Q. IS THE COMPANY'S MINIMUM SYSTEM CLASSIFICATION OF MAINS SYMMETRIC WITH THE TREATMENT OF SERVICE LINES?

A. No. The Company classifies 100% of service lines as customer related, even though a symmetric treatment would classify a portion of services as demand. The same logic for applying a minimum system method to mains would also apply to services. Services vary to a significant extent with the number of customers. However, the size of a service line ultimately must be large enough to meet the customer's maximum demand. For that reason, varying sizes of service lines are available for different types of customers. If a minimum system study had been prepared for service lines, a percentage of that account would be classified as demand.[15] As stated previously, my view is that Mains should be classified 100% to demand and services as 100% customer based on the predominant cost causation criteria. However, the Company's approach to mains and services is inconsistent because a similar rationale for utilizing a minimum system could be applied to both components of the distribution delivery system. Doing so would have reduced the net customer classification for the distribution system. Unlike most utilities' CCOSS, Peoples does not weight the service line customer allocator by the average size and length of the lines for each class, which may increase the concern about the proper classification of services. The incomplete application of the minimum system method provides an additional reason for rejecting the Company's proposed classification of mains.

[15] The installed labor cost percent for 2 inch services is 37% of project cost, suggesting that the demand percentage could be in excess of 50%.

Q. IS YOUR REJECTION OF THE MINIMUM DISTRIBUTION METHOD CONSISTENT WITH COMMISSION PRECEDENT APPLICABLE TO NATURAL GAS DISTRIBUTION UTILITIES?

A. Yes. In a 2021 order in the Columbia Gas base rate case,[16] the Commission rejected the utility's proposed minimum system analysis and customer allocation of mains. Moreover, the Commission confirmed that the decision is consistent with previous precedent in Pennsylvania.

> [W]e remain of the opinion that although mains serve customers, it is the throughput that determines the type of main investment because it is the load that determines the main investment, not the number of customers served. The existence of one customer, five customers, or ten customers does not determine the amount of mains investment. Mains investment is driven by the loads placed on it, not by the number of customers served.[17]

The Commission cited the description of the Columbia minimum system study "where the entire distribution mains system is hypothetically comprised of only 2-inch pipe," and agreed with OCA that the goal of the Company's study is to assign mains investment "based on merely connecting customers to the system, as opposed to supplying gas to customers – which is how the distribution system actually works on a day-to-day basis."[18]

---

16 *PA. PUC v*. Columbia Gas of Pennsylvania, Inc., R-2020-3018835, Order and Opinion, (February 19, 2021).

17 Ibid. Order and Opinion at 217.

18 Ibid. Order and Opinion at 215.

Q. PLEASE SUMMARIZE YOUR CONCLUSION.

A. The Company's classification of a portion of Mains as customer-related should be rejected. The customer classification dictated by the minimum system study is unreasonable because the study is unreliable and based upon speculative assumptions and the results are contrary to Commission precedent.

2. Peak & Average Is Most Appropriate Method For Mains

Q. IS IT REASONABLE TO CLASSIFY MAINS AS 100% DEMAND CLASSIFICATION?

A. Yes. The next question, though, is how demand should be measured; namely, what is the preferred allocator for mains demand? My recommendation is Peak & Average. In this case, Peak & Average is comprised of 50% Design Day Demand (Max Demand) and 50% Average Demand. Average Demand is equivalent to average annual usage or throughput.

Q. IS THE PEAK & AVERAGE METHOD CONSISTENT WITH COMMISSION PRECEDENT APPLICABLE TO NATURAL GAS DISTRIBUTION UTILITIES?

A. Yes. In the previously-mentioned 2021 order in the Columbia Gas case,[19] the Commission reiterated its support for the Peak & Average method to allocate mains cost.

> Furthermore, distribution mains exist and are related to both annual demands and peak demand. Both annual and peak demands must be recognized in the allocation of distribution mains cost if the allocation is to be in accord with the principle of cost-causality. It is not reasonable to allocate distribution mains investment based solely on design peak day demands…The basic reason Columbia

[19] *PA. PUC v*. Columbia *Gas of Pennsylvania, Inc*., R-2020-3018835, Order and Opinion, (February 19, 2021).

invests in its distribution system is to meet the annual demands for gas by customers.[20]

The opinion and order cited several previous Commission gas utility orders adopting the Peak & Average method.[21] The Commission confirmed its support for the reasoning in the 1994 National Fuel Gas Distribution decision that Peak & Average is appropriate because integrated systems are designed to serve accumulated loads over time and not just current engineering criteria.[22]

Q. CAN 100% PEAK DEMAND BE USED TO ALLOCATE DEMAND COSTS?

A. That would be an improvement on the Design Day/Customer method used by the Company's CCOSS. However, as noted in the *Columbia Gas* decision, the Commission does not view a pure Design Day allocation as reasonable. Demand has multiple dimensions, and a method based solely on Design Day demand is incomplete. design day demand is an important factor in sizing mains, but average demand recognizes the integrated nature of the gas distribution system. The integrated distribution system is not static and evolves over time with the changing patterns of small and large customers' accumulated consumption and revenues. Therefore, a more comprehensive measure of demand includes both peak demand and average demand.

Columbia Gas of Pa., 69 Pa. P.U.C. 138 (1989); and Pa. PUC v. Philadelphia Gas Works, Docket No. R-00061931 (Order entered September 28, 2007)

22 Ibid. 2021 Columbia Gas Order and Opinion at 216.

Q. IS THE PEAK & AVERAGE METHOD JUSTIFIED BY A HIGH LEVEL VIEW OF CAUSATION?

A. Yes. The gas distribution business is established to deliver gas to customers through mains. The business objective is to deliver gas in all months of the year, and commensurately collect revenues from the full 12 months of the year. The business would not exist without annual usage and revenues. Annual usage is equivalent to the average demand component of Peak and Average. The Peak & Average method recognizes that the Company must serve both average monthly demand plus an incremental cost for sizing mains sufficient to cover extreme weather conditions. If a gas utility was built to serve only one day per year, the business would not be practicable, because the price per billing unit would be excessive. Load diversity[23] is one of the important characteristics which makes public utility service economical.

Q. DOES THE PROCESS OF EXTENDING MAINS TO SERVE NEW CUSTOMERS PROVIDE ANOTHER EXAMPLE OF THIS VIEW?

A. Yes. The gas distribution utility evaluates the feasibility of extending mains to new customers and may determine a contribution in aid of construction (CIAC) for the customer. In evaluating the CIAC amount, the utility will consider the expected demand for sizing the new segment, plus the expected annual revenues generated by the

[23] Economies of load diversity is based on serving different types of customer loads with varying load profiles.

investment.[24] By considering revenues, the gas utility takes into account annual usage. Average demand is a measure of annual usage.

Q. PLEASE EXPLAIN HOW ECONOMIES OF SCALE PROVIDES THE RATIONALE FOR INCLUDING BOTH PEAK DEMAND AND AVERAGE DEMAND IN THE ALLOCATION METHODOLOGY.

A. Economies of scale provide one of the justifications for regulated monopoly service, and the network of gas mains is a key example of this principle. Holding all else constant, doubling the diameter of a pipe results in a four-fold increase in capacity or volume. However, the increase in cost necessary to achieve the increase in volume is substantially smaller. In simplest terms, this is a classic case in which the incremental cost of adding extra capacity to meet more severe weather conditions will be less, in real terms, than the average cost. The Company's minimum system study provides evidence of economies of scale in the real cost of mains. The capacity per foot for larger mains in the aggregate (more than 2 inches) is more than 22 times the equivalent capacity per foot of 2 inch mains. However, the real cost of the higher capacity mains is only about twice the cost per foot of 2 inch mains.[25] As a result, the relationship between peak demand and incremental main cost is not even reasonably close to a one-to-one ratio. Due to economies of scale, the

[24] The Peoples Service Expansion Tariff (Appendix C, Tariff No. 8) states that the CIAC will be "calculated for each service extension project based on the projected revenue and costs for each extension."

[25] According to the minimum system study, the 2 inch main's capacity is 68 therms per mile, and, by inference, the average capacity of above-2 inch mains is 1,507 therms per mile. The real cost of 2 inch mains is $65 per mile and, for above 2 inch mains, $125 per mile. Attachment to Response to OCA V-1(h).

relationship between peak demand and main cost is not linear. Therefore, peak demand is not a direct measure of cost causation and should not be the sole allocator of demand.

Q. GIVEN THE ECONOMIES IN INCREASING THE SIZE OF MAINS, WHY IS THE AVERAGE & PEAK METHOD SUPERIOR TO PEAK DEMAND-ONLY?

A. Average demand recognizes that a constant annual level of demand can be served at average cost. However, the incremental cost of serving peak demand above base demand is less than average cost due to economies of scale. Consequently, the inclusion of average demand in the method effectively reduces the weight given to peak demand. As peak demand increases, main costs increase at a decreasing rate; therefore, tempering the peak demand signal in the method is appropriate. Peak & Average is composed of 50% peak demand and 50% average demand. Assigning equal ratios to design day demand and average demand provides a more balanced recognition of cost causation than peak day demand alone.

Q. WHAT OTHER ADVANTAGES ARISE FROM COMBINING AVERAGE DEMAND WITH THE PEAK RESPONSIBILITY MEASURE?

A. Peoples utilizes design day demand as the measure of peak responsibility, and it is a relatively narrow version of max day demand. Design day demand is developed based on extreme weather conditions and typically can be expressed as 1 day in 15 or 20 years. Rather than relying upon one day in a 15 or 20 year period to measure peak demand, some utilities use multiple peak days during an annual period to measure peak demand. Consumption in near peak days is probabilistically related to the annual max day, and consumption on those days may be relevant and informative. Furthermore, utilities may use multiple peak days (such as 12 monthly peaks) to avoid a free rider situation, whereby off-peak seasonal loads pay nothing for using the network of mains. The inclusion of average demand in the allocation process can correct this limitation by supplementing the narrow design day allocation with usage during all 365 days of the year.

Q. IS THE COMPANY'S CURRENT INFRASTRUCTURE SPENDING DRIVEN PRIMARILY BY GROWTH IN DESIGN DAY DEMAND?

A. No. Peoples is undertaking the replacement of 871 miles of mains at a cost of $1.512 billion.[26] The driving force for this investment is safety improvement and reduction in gas leakage.[27] A commodity classification is appropriate for activities aimed at reducing gas losses, and the average demand component of Peak & Average is equivalent to a commodity allocation factor.

Q. CAN YOU SUMMARIZE THE RETURNS PRODUCED BY THE PEAK & AVERGE METHOD TO THE COMPANY'S CCOSS?

A. The Company's proposed CCOSS classifies and allocates mains as 48% Customer and 52% Design Day Demand. My recommendation is to classify and allocate mains on a Peak & Average basis, which is comprised of 50% Design Day Demand and 50% Average Demand. As shown below, the Residential current rate of return improves from below average to above average. The Residential relative rate of return is 72% under the Company's CCOSS and 112% if Peak & Average is used to classify/allocate mains.

Method	Total	RES	SGS	MGS	LGS
Return @ Cur. Rates - Demand/Peak and Avg	5.51%	6.24%	3.18%	2.72%	7.13%
Return @ Cur. Rates - Min System/Design Day	5.51%	3.99%	5.06%	10.79%	17.08%

[26] Peoples Statement No. 1 at page 12.

[27] Peoples Statement No. 1 at page 13. "The Company will systematically replace older and more vulnerable sections of its pipeline made of leak-prone materials in order to reduce its overall scope of greenhouse gas emissions."

Q. PLEASE SUMMARIZE YOUR RECOMMENDATION.

A. My recommendation is to adopt the Peak & Average method as the measure of demand. This approach is consistent with Commission precedent, recognizes the gas utility's business objectives of delivering gas both on the max day and throughout the year, and addresses the impact of economies of scale on the installation of mains to serve both average daily load and additional capacity to meet extreme weather conditions.

C. Customer Account Representatives

Q. DOES PEOPLES HAVE CUSTOMER ACCOUNT REPRESENTATIVES WHO PRIMARILY ASSIST LARGE CUSTOMERS?

A. Yes. Peoples identified the costs of six major customer account executives who assist large industrial/commercial customers.[28] The cost of these employees is $1.339 million, and the Company states that the personnel support and assist Medium General Service (MGS) and Large General Service (LGS) customers. My recommendation is to assign these costs only to the MGS , LGS, and Mainline classes. These costs are currently allocated primarily based on customers or account payroll, which allocates most of the costs of these personnel to classes with small customers, such as residential and small general service. Assigning these costs to classes with large customers is consistent with cost causation.

Q. WHY DO UTILITIES EMPLOY ACCOUNT EXECUTIVES SPECIFICALLY TO ASSIST LARGE COMMERCIAL AND INDUSTRIAL CUSTOMERS?

A. Large customer accounts tend to be more complex than other accounts and require specialized knowledge and more intensive assistance. Furthermore, given the amount of revenues per customer generated by large accounts, utilities are motivated to provide individualized customer service in order to retain the customers in the service territory. Peoples states that these personnel act as the primary point of contact for industrial/large

[28] Peoples' Response to OCA Interrogatory V-17 is attached as Exhibit CJ-6

commercial customers; work with new service requests from large customers to obtain internal information and determine if the Company can serve the customers; evaluate new technologies; and negotiate and renew discounted rate contracts.[29]

Q. HOW DID YOU REALLOCATE THE MAJOR CUSTOMER ACCOUNT REPRESENTATIVE COST?

A. My recommendation is to assign these expenses to the LGS, MLS, and MGS classes. Because the activities are not specifically tracked to the specific rate class level, I have allocated the $1.3 million cost between those three classes based on revenues. Based on revenues, the expenses are allocated 51% to MGS, 43% to LGS, and 6% to MLS. An offsetting reduction is made to the Customer Assistance line of the CCOSS.

D. Results of Revised CCOSS

Q. HOW DID YOU EVALUATE THE IMPACT OF THE RECOMMENDED CLASS COST OF SERVICE MODIFICATIONS?

A. I revised the Company's CCOSS model in accordance with III. (A) – (B). A summary of the results for the OCA class cost of service are shown on the Schedule I include as Exhibit CJ-1. The revenue requirements reflect the Company's request. My use of the class cost of service results does not imply agreement with the Company's proposed revenue requirement. Instead, the Company's revenue requirements is utilized in order to provide an apples-to-apples comparison.

[29] Ibid.

Q. PLEASE SHOW THE DIFFERENCES IN RELATIVE RATES OF RETURN AT PRESENT RATES.

A. The table below is based on the distribution CCOSS filed by the Company and the CCOSS revised by OCA. The relative rate of return ("RROR") shows the extent that classes' present revenues produce rates of return, which are higher or lower than the system earned rate of return. A RROR above 1.0 indicates a class that is above average, in terms of compensatory rates, and a RROR below 1.0 indicates a class that is below average. The RROR, below, reflects present rates. The increase at equalized rate of return is shown on Exhibit CJ-1. The table below provides the class differences in Company proposed base revenue requirement based on the OCA CCOSS vs. the Peoples CCOSS.

OCA Recommended CCOSS		(Company Request)				
(000's)	**Total**	**RES**	**SGS**	**MGS**	**LGS**	**MLS**
Total Base Revenues	$678,599	450,261	$67,294	91,419	52,951	16,675
Relative ROR-curr. Rates	1	1.145	0.583	0.463	1.819	-0.979
Company CCOSS	678,599	508,816	60,325	60,135	32,726	16,597
Relative ROR-Curr. Rates	1	0.72	0.92	1.96	4.96	-0.95
Base Rev Difference		$(58,555)	6,969	31,284	20,225	77

Q. PLEASE SUMMARIZE THE COMPARISON OF THE RESULTS OF THE CLASS COST OF SERVICE STUDIES.

A. The OCA CCOSS moves the position of the residential class from below cost in the Company study to well above cost after OCA's modifications. At the Company's requested revenue requirement, OCA's study indicates that the Residential base revenues should be $58.5 million less than the Company's CCOSS.

IV. CLASS REVENUE DISTRIBUTION

Q. PLEASE DISCUSS SOME GENERAL LIMITATIONS OF THE CCOSS AS IT APPLIES TO CLASS REVENUE DISTRIBUTION.

A. If major changes in class relationships occur in the CCOSS, gradualism can be considered in the revenue distribution process. Depending on context, the cost of service study results should be tempered by gradualism considerations. In addition, the class cost of service results should be viewed as a snapshot of cost conditions that can change over time. Moreover, because the CCOSS may be quite sensitive to changes in allocation or classification choices, "cost based rates" are best viewed as representing a reasonable band around the CCOS results, rather than exact price points.

Q. HOW DID YOU DEVELOP YOUR RECOMMENDED REVENUE DISTRIBUTION?

A. My primary recommendation is to utilize the Peak & Average CCOSS, as adjusted previously in my testimony, to determine the distribution of the class revenue increases. In my view, this is consistent with Commission precedent and establishes a reasonable framework for a fair and equitable division of the system revenue requirement. Exhibit CJ-1 reflects the revenue increase (at Peoples requested revenue increase) based on OCA's recommended revenue requirement and thus shows my proposed allocation of the distribution revenue increase to customer classes. A comparison of the proposed distribution revenue increase, based on the Company's proposed distribution system base revenue increase is shown in the table above.

	RES	SGS	MGS	LGS	MLS
Current Base Revs	347,867	$ 43,991	57,024	48,982	6,997
Company Increase	132,254	19,861	$ 18,436	3,187	0
Company Base Revs	480,121	63,852	75,460	52,169	$ 6,997
Company Pct. Increase	38.0%	45.1%	32.3%	6.5%	0.0%
OCA CCOS Rev Increase	102,395	23,302	34,395	$ 3,968	9,678
OCA CCOS Rev Distr.	450,261	$ 67,294	91,419	52,951	16,675
OCA CCOS Pct. Increase	29.4%	53.0%	60.3%	8.1%	138.3%

Q. DID YOU PREPARE AN ALTERNATIVE RECOMMENDED SPREAD OF THE REVENUE INCREASE IN THE EVENT THAT THE COMMISSION FAVORS A GRADUALISM APPROACH?

A. My secondary revenue spread recommendation provides a standard approach to gradualism constraints applicable to class base revenue increases. My primary recommendation uses only my proposed Peak & Average CCOSS result because it is consistent with the Commission's revenue distribution approach in the aforementioned 2021 Columbia Gas case. Gradualism is a subjective consideration, and I realize that the Commission could favor moderating the impact on SGS and MGS classes. If the Commission substantially reduces the overall revenue increase, as proposed by other OCA witnesses, the appeal of gradualism should diminish for the spread across customer classes. This alternate proposal applies 150% as the percent of system average constraint applied to SGS and MGS classes. Furthermore, for the LGS class, 50% of system average is applied as the floor for percent increase. The schedule included as Exhibit CJ-2 sets out the alternative revenue distribution proposal.

Q. DID YOU APPLY RATE MODERATION TO THE MAINLINE REVENUE INCREASE?

A. No. The newly created Mainline class is different and is like a sub-class within LGS. Mainline customers are paying negotiated contract rates and their bills will be unaffected by gradualism constraints. The revenue increase allocation to Mainline is a construct which is supposed to prevent inter-class cross subsidies. Therefore, the Mainline revenue

increase should reflect full cost of service. The Company asserts that the MLS class should pay accurate allocated embedded costs.[30] The alternate revenue spread is summarized below. The system ratio represents the class percentage increase relative to the system average increase.

Alternative Gradualism Revenue Distribution (000s)

	Total	RES	SGS	MGS	LGS	LGS-MLS
Current Rev	$504,861	347,867	43,991	57,024	$48,982	6,997
Increase	173,738	103,511	22,700	$29,424	8,425	9,678
Base Rev	678,599	451,378	66,691	86,448	57,407	16,675
% Incr.	34.4%	29.8%	51.6%	51.6%	17.2%	138.3%
Incr Ratio		86.5%	149.9%	149.9%	50.0%	401.9%

Q. DO YOU EXPECT THE OVERALL PROPOSED DISTRIBUTION REVENUE INCREASE TO BE LESS THAN THE COMPANY'S FILED REQUEST?

A. Yes. OCA presents revenue requirement testimony which proposes downward adjustments to the system revenue requirement. I recommend the proportionate scale back of the class revenue distribution recommendation in order to reflect the adopted revenue requirement.

[30] Peoples Statement No. 15 at 50.

V. RESIDENTIAL CUSTOMER CHARGE

Q. WHAT IS THE COMPANY'S PROPOSAL REGARDING THE RESIDENTIAL CUSTOMER CHARGE?

A. The Company proposes to increase the residential customer charge from the current level of $14.50 (PNGD) and $15.75 (PGD) to a single month fixed charge of $21.50.[31] This is a 48% and a 37% increase in the monthly charge, respectively.

Q. DO YOU AGREE WITH PEOPLES' RECOMMENDED INCREASE IN THE RESIDENTIAL CUSTOME CHARGE?

A. No. As a matter of regulatory principles and policy, the absolute level of the fixed customer charge should be limited so that it provides the customer more control over the size of the monthly bill. The customer charge is the least informative part of a utility's rate design, and an excessive customer charge is inconsistent with energy conservation objectives because it diminishes the price signal provided by usage rates.

Q. WHAT ARE THE POLICY REASONS FOR ENSURING THE RESIDENTIAL CUSTOMER CHARGE IS NOT EXCESSIVE?

A. An excessive customer charge can distort appropriate price signals for residential customers. The dominant economic function of a customer charge is to ration access to the utility system. That objective conflicts with the policy basis for regulating monopolies and is counter to the concept of the essential service character of gas for home heating and

[31] Peoples Exh. RNZ-6 at page 4 of 4; Peoples Exh. RNZ-6, page 2 of 4.

cooking. Public policy encourages universal service, rather than limiting public access to regulated monopoly service. Except for its role in rationing access to the system, the customer charge provides no meaningful price signal that is relevant to resource allocation. This contrasts with volumetric charges which are controlled by the consumer's usage decisions. A tenet of rate design is that lowering the customer charge will increase the proportion of costs recovered through a usage-sensitive rate (i.e., price per mcf). That result is more consistent with energy conservation goals and provides pricing policies appropriate for consumption of finite natural resources. By allowing customers to control their utility bill with conservation, minimizing the customer charge is aligned with the Company's stated goal of reducing greenhouse gases and limiting emissions.[32] In addition, a policy that minimizes the customer charge is more equitable to low usage and low income residential customers.[33]

Q. WHAT IS THE APPROPRIATE BENCHMARK FOR SETTING THE CUSTOMER CHARGE?

A. In my view, the customer charge should only recover costs which *directly* vary with the number of customers. This perspective is consistent with the NARUC Gas Distribution Utility Rate Design Manual, which states that customer costs should vary directly with the number of customers.[34] When new residential customers initiate service or existing customers leave the system, the primary increase or decrease in cost pertains to billing,

---

32 Peoples Statement No. 1 at page 13.

33 See also, OCA St. No 6, OCA witness Colton.

34 NARUC Gas Distribution Rate Design Manual (1968) at 22 lists customer charge "expenses of metering, reading, billing, collecting, and accounting, as well as those costs associated with capital investment in metering equipment and in customers' service connections."

collection, and metering. In some cases, a service line may have to be extended to a new customer. Therefore, a compensatory customer charge can be based on the following *direct* cost components: O&M expense for meters, services, meter reading, and customer accounting, and return and depreciation on meter, regulator, and service investment, minus credits for customer-related late fee and connection charges. In my view, general overhead, such as administrative and general expense[35] and general plant should be excluded from the customer charge computation, because these costs do not vary directly with number of customers. This approach has been termed the "direct cost method" or "basic customer charge." A computation of this customer charge benchmark is shown on the schedule attached as Exhibit CJ-3. The basic customer charge is **$9.00**, which is the minimum benchmark. So long as the customer charge covers the direct costs of becoming a customer and provides a contribution to recovery of shared indirect costs, the charge does not produce a cross-subsidy within the residential class. Therefore, the current PNGD and PGD customer charges produce an approximate 62% "contribution" to shared indirect costs and continue to be more than adequate.[36]

[35] The Company's (no minimum system) CCOS study classifies and allocates to the residential class $25.9 of A&G expense as customer-related, even though A&G expense, by definition, consists of costs which cannot be associated with particular functions of the utility. [Combined CCOSS, Tab "Min Cust Cost" N381]

[36] $14.65 (weighted average of divisional customer charges) divided by $9.00 basic customer charge.

Q. PLEASE EXPLAIN HOW THE DIRECT COST CALCULATION GUIDES YOUR EVALUATION OF THE RESIDENTIAL CUSTOMER CHARGE.

A. The avoidable customer costs are those costs which would be eliminated when a customer leaves the system. As stated by the Company, if a customer terminates service and is not replaced by another customer at the same premises, "the only costs that cease when a meter is removed are O&M associated with customer inquiries, and customer billing processing of meter reads."[37] Thus, the direct costs included in my computation of a $9.00 basic customer charge exceed the avoidable cost, confirming the reasonableness of my method. I have included customer accounting expenses except for uncollectible Account 904. The customer allocator assigns $13.3 million of uncollectible expense (write-offs) to the residential class. This is an example of an expense classified as customer-related in the CCOS study which is not appropriately collected in the customer charge. There is no evidence that bad debt expense is directly caused by the number of customers, as opposed to the size of customers' bills. High bills are likely a causal reason for consumers' inability to pay utility bills, leading to the conclusion that most if not all bad debt expense should be collected through the usage rate. Furthermore, the customer charge comprises less than 20% of the average monthly residential bill. [38] Therefore, most of the cost underlying the bad debt is derived from usage rates. The direct cost calculation confirms that the current divisional customer charges are more than compensatory. My understanding is that the Commission historically favored a "basic customer cost" composed of costs for

[37] Peoples Response to OCA-V-27, which is attached as Exhibit CJ-7.
[38] For example, the PNGD average bill is $74, and the customer charge is $14.24.

meter/service drops, meter reading, and billing.[39] I recommend that the Commission continue the basic customer charge method.

Q. DOES THE BASIC CUSTOMER COST INCLUDE PLANT COSTS ASSOCIATED WITH NETWORK DISTRIBUTION, SUCH AS MAINS?

A. No. Sec. III.B. of my testimony explains why mains should be classified as demand. To the extent that any relationship exists between network distribution costs and customer count, it is indirect, because intervening variables such as geography, population density, and soil conditions obscure causation. Only distribution plant associated with the customer premises, such as service lines and meters, are includable in the customer charge. Mr. Zarumba states that he believes that the appropriate calculation of the residential customer charge includes mains, thereby resulting in a $41 monthly charge[40]; however, he recommends the lower $21.50 customer charge because Commission precedent does not support inclusion of main cost in the customer charge.

Q. PLEASE RESPOND TO THE COMPANY'S ARGUMENTS SUPPORTING ITS RATE DESIGN.

A. In weighing the appropriateness of a limited or broadly composed customer charge, the Commission should consider the effect on energy efficiency goals. Even though Mr. Zarumba lists "energy conservation and energy efficiency" among his rate design principles, high customer charges tend to inhibit energy conservation. His proposed 37% -

[40] Peoples Statement No. 15 at pages 31- 34

48% increase in the residential customer charge is not consistent with his stated objective of energy conservation. Minimizing the customer charge provides the ratepayer with a greater ability to control his/her bill on the basis of usage. For that reason, an excessive customer charge can promote wasteful energy consumption. Mr. Zarumba identifies "revenue stability" as an attribute of the proposed rate design. Public utilities like Peoples have an incentive to propose higher monthly fixed charges because they contend the fixed charges produce less financial risk; however, they do not propose to compensate customers for the lower risk through a reduction in the allowable return on equity. Without such explicit compensation to ratepayers, the utilities' frequent argument in favor of the "revenue stability" aspect of fixed charges is not a reasonable policy basis for substantial percentage increases in the customer charge.

Q. CAN YOU PROVIDE AN ILLUSTRATION OF THE IMPACT OF CUSTOMER CHARGE METHODS ON ENERGY CONSERVATION?

A. Yes. If the customer charge is maintained at an interval between PGD's and PNGD's current customer charge, for instance, and the residential class proposed revenue requirement stayed the same, the Company's proposed delivery usage rate at the Company's proposed revenues would increase 17%.[41] This also would have the effect of increasing the bill savings for customers who undertake energy saving activities. As an example, many newer appliances do not have pilot lights, and this design change reduces wasted energy. For instance, for a residential customer who replaced all of a hypothetical

[41] For demonstrative purposes, my illustration uses a $14.75 customer charge and the Company's proposed residential base revenue requirement, to show that the residential delivery rate has to increase from $5.63 to $6.58 per mcf if the customer charge is 30% lower than the Company's proposal. As noted below, my recommendation is a $14.50 customer charge.

home's gas pilot lights (range, fireplace, water heater, furnace) with new appliances without pilot lights, the annual bill savings from the eliminated pilot alone would increase from $125 to $147 in a scenario with a $6.75 reduction in the $21.50 proposed customer charge.[42] The potential bill savings can be much higher with the purchase of high efficiency (high AFUE rating) furnaces.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE RESIDENTIAL CUSTOMER CHARGE?

A. In my opinion, a reasonable approach would generally maintain the current pricing of the residential customer charge. However, since PNGD and PGD currently have separate customer charges which will be merged into a uniform rate, my proposal sets the customer charge at the current charge paid by the vast majority of Peoples' customers. Consequently, I recommend fixing the residential customer charge at the PNGD residential charge, $14.50. Setting the customer charge at $14.50 will exceed my estimate of basic customer costs, and it will continue the customer charge level applicable to most residential customers.[43]

[42] The pilot lights usage and costs were calculated on Peoples' appliance energy calculator, https://www.peoplesgasdelivery.com/savings/gas-calculator comparing scenarios using Peoples' proposed delivery rate/customer charge and the delivery rate which accompanies an illustrative lower customer charge at the same proposed revenues.

[43] Approximately 90% of residential customers are in the PNGD.

VI. WEATHER NORMALIZATION ADJUSTMENT

Q. PLEASE DESCRIBE PEOPLES' WEATHER NORMALIZATION ADJUSTMENT PROPOSAL.

A. The Company proposes a weather normalization adjustment (WNA) that it claims will adjust the customer delivery charges based on normal historic weather patterns. The WNA would be imposed during heating season months of October 1 through May 31, and it would be assessed only to the classes of customers that Peoples deems to be weather-sensitive customer classes: residential customers including CAP, commercial SGS and commercial MGS customers.[44] The adjustment is intended to reflect a normalization of individual customers' billing units, implementing a credit during colder than normal weather and an additional charge if weather is warmer than normal. For purposes of the adjustment, Peoples assumes that normal winter weather is based on the mean of 20 year average heating degree days (HDD)[45] and a lower HDD estimate derived from a linear trend over the past 65 years. The Company defines normal weather as 5,341 HDD, which is the average of 20 years HDD (5,443) and the 65 year regression trend (5,240).[46]. The Company's tariff attempts to separate individual customers' base load usage from weather

---

44 Peoples Statement No. 4 at page 17.

45 A Heating Degree Day (HDD) is a measure of how cold the temperature is on a given day by comparing the mean outdoor temperature recorded for a location to the standard temperature of 65 degrees Fahrenheit. Thus, a day with a mean temperature of 40 has 25 HDDs. https://www.eia.gov/energyexplained/units-and-calculators/degree-days.php

46 Peoples Statement No. 4 at pages 16-17.

sensitive usage by assuming that July and August consumption represents base load monthly use.

Q. ARE YOU CONCERNED THAT THE NET IMPACT WILL NOT BENEFIT RATEPAYERS?

A. Yes. Mr. Zarumba states that "it is generally agreed that weather is becoming milder (i.e., warmer) over time" and that the "average number of HDD for each year are decreasing.[47] If Mr. Zarumba is correct, then the implication is that customers are likely to see more WNA charges than credits.

Q. HAS THE COMPANY PROVIDED HISTORICAL INFORMATION WHICH CONFIRMS THAT THE NET IMPACT IS LIKELY TO BE DETRIMENTAL TO WEATHER SENSITIVE CUSTOMERS?

A. Yes. The Company was asked to provide historical revenue information regarding the impact of normalizing weather fluctuations. In response the Company's attachment showed that weather was abnormally warm in five of the last six years.[48] In response to OCA Interrogatory XI-17, the Company confirmed that the "cumulative revenue over that period was a decrease compared to normal weather, so theoretically if the WNA was in place there would have been a net charge to weather sensitive customers." According to the Attachment to V-26, the warmer weather in 2023 alone produced a revenue impact of $8.45 million. The Company asserts that the revenue impact is not based on the WNA proposed in this case, because it does not use 5,341 HDD currently proposed for the WNA.

[47] Peoples Statement No 15 at 53.
[48] People's Responses to OCA V-26 and XI-17, which are jointly attached as Exhibit CJ-8.

Despite this reservation, the recent historical impact appears to confirm that the cumulative impact of a weather adjustment will result in net charges to customers.

Q. DO YOU RECOMMEND THE ADOPTION OF PEOPLES' WNA PROPOSAL?

A. No. Automatic rate adjustments between rate cases should be avoided because they weaken traditional regulatory principles and unreasonably shift risk to customers. I realize that regulatory authorities have at times made exceptions to traditional ratemaking and adopted trackers or riders that operate between rate cases. At a minimum, to qualify for such treatment, the utility should be required to demonstrate that the automatic tariff is necessary to avoid significant financial damage to the Company or that the subject of the rider poses a threat to the utility's financial stability. The Company has not presented evidence that the lack of a WNA poses that type of financial threat. Indeed, Mr. Zarumba seems to take the position that the revenue impact of the WNA is not substantial.[49]

Q. WHY ARE AUTOMATIC ADJUSTMENTS SUCH AS THE WNA INCONSISTENT WITH RATE MAKING PRINCIPLES?

A. First, allowing tracker type tariffs shifts business risk from the utility's shareholders to its customers and diminishes the incentive for the utility to control costs. The regulatory lag inherent in fixing rates through periodic base rate cases is a powerful incentive for utilities to manage and minimize costs.[50] A National Regulatory Research Institute (NRRI) report

[49] For example, Peoples says that that the WNA will not affect the frequency of rate cases, which implies that the revenue impact will not significantly affect the Company's financial position, Company's Responses to OCA Interrogatories X - 18 (a) and OCA I-1(d).

[50] Economists have posited that the AJ-Effect (referring to authors Averch and Johnson) demonstrates an incentive for utilities to overbuild and gold-plate investments. But subsequent literature concluded that regulatory lag is a constraint on excessive utility spending because it provides a countervailing incentive to manage costs.

states that the utility has "a strong incentive to control costs between rate cases" because the "mechanics of traditional rate making" fixes the price and not the earnings of the utility.[51] The WNA undermines this regulatory framework by eliminating the impact of weather on earnings. Weather is an expected business risk of the public utility industry, especially a public utility that has weather sensitive usage, and protecting the utility from that risk will decrease pressure to minimize costs between rate proceedings. Second, the WNA involves single issue ratemaking, sometimes referred to as "piecemeal ratemaking." Changing rates for only one component of the ratemaking process—in this case, normalizing weather—is unfair because other cost components recovered in rates may have declined or even ceased to exist--which may surmount the impact of a revenue decrease due to weather.

Q. ARE THESE TWO REASONS RELATED?

A. Yes. As NRRI states, "Commissions rely on regulatory lag as an important tool in motivating utilities to act efficiently and prudently…"[52] Productivity improvements flow to the utility's bottom line between rate cases, and the benefit to the utility can offset the deterioration of revenues caused by weather conditions. It's also possible that the WNA will ignore cost impacts which are related to weather in a systematic way. Warming

[51] "Alternative Rate Mechanisms and Their Compatibility with State Utility Commission Objectives," (page 8) Costello, NRRI, 2014.

[52] Ibid. NRRI at 10.

weather may decrease facility maintenance expense, thereby offsetting the revenue reduction to some extent.

Q. DO YOU HAVE ANY CONCERNS THAT THE WNA MAY LEAD TO UNEXPECTED CUSTOMER IMPACTS AND CONSUMER COMPLAINTS?

A. Yes. The recent experience with PGW gas utility's weather adjustment mechanism provides an illustration of unexpected impacts. Two years ago customers received "puzzlingly" high charges in the month of May when customers ordinarily reduced their heating use.[53] PGW found that temperatures for the month of May over the past 10 years have become "unusually divergent from the current normal."[54] PGW implemented $12 million in refunds and amended the weather normalization tariff to exclude May. The shoulder months may be a particular cause for concern since at times they can seem more similar to summer than winter. Attributes of "simplicity, understandability, and public acceptability" are among the criteria for a sound rate structure.[55] The WNA is a complicated formula, which is not well understood by the public and could lead to customer confusion or complaint. Furthermore, from the customer's perspective, the WNA produces a charge without a concomitant increase in delivered gas. The WNA is normalizing the billing units rather than imposing a charge or credit for providing an increase or decrease

53 "PGW Ordered to Stop Adjusting Customers' Bills to Account for May Weather Fluctuations" WHYY News, Sept, 25, 2023. https://whyy.org/articles/pgw-bill-adjustments-may-normalization-weather-fluctuations/

54 Ibid.

55 *Principles of Public Utility Rates* at 291 (1962), James Bonbright.

in service. This is analogous to take or pay tariffs that are generally disfavored by consumers.

Q. IS THERE ANY EVIDENCE IN THIS CASE THAT PEOPLES' CUSTOMERS ARE CONCERNED BY THE COMPLEXITY OF THE WNA CHARGE?

A. Yes. During a public input hearing held in this case on March 5, 2024, in Monroeville, PA, Peoples customer Nick Hoffman testified that the calculation of the WNA is complex and that customers would have a hard time verifying the accuracy of the charge or credit. Mr. Hoffman also testified that given warming weather trends, the WNA could be a large amount, making any potential error to also be large. Additionally, Mr. Hoffman rightly acknowledged that the WNA relies upon a complex equation, with many variables and input which could be more open to errors and abuse. Peoples PIH-Ex NH-1.

Q. IS THE CALCULATION OF BASELOAD CONSUMPTION IMPORTANT TO CALCULATING WNA CREDITS OR CHARGES?

A. Yes. The WNA tariff assumes that the customer's July and August consumption constitutes the baseload consumption occurring in each month and deducts that from the winter month usage to arrive at weather sensitive load. However, that assumption may turn out to be incorrect if the customer is on vacation in those months or appliances were out of service for part of July or August. This would result in an overstatement of the customer's weather sensitive demand during the winter months. The Company asserts that

its personnel would attempt to flag apparent anomalies in customer bills.[56] However, the effectiveness and precision of this process is unknown.

Q. WILL THE WNA RESULT IN DISINCENTIVES FOR ENERGY EFFICIENCY?

A. That could be an indirect result for customers whose energy efficiency initiative takes place during periods of lower than normal weather. Peoples asserts that the WNA "would not address reductions in usage associated with adopting more efficient end-use equipment."[57] However, the WNA potentially mutes the bill impact of energy efficiency actions. No matter how much the customer reduces consumption, ultimately their bill will be adjusted for a normalized level of service. I used the Company's WNA calculator in Attachment 1 to OCA Interrogatory 1-1 to illustrate a hypothetical energy efficiency scenario. In this example, the monthly HDDs are 40% below normal and the customer energy efficiency actions reduce usage of both baseline and weather sensitive load by 50%. The customer's expected energy efficiency bill savings of $44 are partially offset by the $23 weather normalization adjustment. From the customer's standpoint, more than one-half the energy efficiency bill savings must be returned to the Company because the efficiency actions

---

56 Peoples Response to OSBA Interrogatory 1-12 (attachment omitted), which is attached as Exhibit CJ-9.

57 Peoples Statement 15 at 56. Peoples recognizes that "whether the mechanism eliminates or limits disincentives for promotion of energy efficiency" is a criteria for evaluating rates such as the WNA. Peoples Response to OCA Interrogatory I-1.

occurred when weather was extremely mild. In this somewhat extreme example, the customer may perceive the WNA as a disincentive for deploying more efficient appliances.

Q. IN ESTABLISHING A NORMAL WEATHER LEVEL, THE COMPANY INCLUDES A LINEAR ANALYSIS TO REDUCE THE 20 YEAR AVERAGE NORMAL WEATHER TO REFLECT A WARMING TREND. DO YOU AGREE?

A. No. While a warming trend may exist, that doesn't mean the Company can reasonably predict future normal HDDs. The linear regression analysis is statistically weak.[58] The R^2 statistic indicates that the analysis explains only 37% of the variation in HDDs. This may suggest that additional variables are necessary for a better prediction. The disadvantage associated with the regression aspect of the WNA is compounded by the decision not to include a dead band in the tariff. My recommendation is to reject both the WNA in its entirety and the complexity added by the linear regression analysis to estimate HDDs.

VII. TARIFF REVISIONS FOR FLEX RATES

Q. DOES PEOPLES PROPOSE A TARIFF REVISION FOR RATE 20 PERTAINING TO FLEXIBLE RATES?

A. Yes. Peoples is proposing revisions to Rule 20 of its tariff to permit electricity to be considered a competitive alternative for purposes of negotiating discounted rates for commercial and industrial customers.[59] The proposed tariff revisions permit Peoples to provide negotiated discount rates in response to competition from alternative fuel sources. The tariff revision states that electricity offered by an electric distribution utility is a

[58] Statistics provided in the Attachment to Peoples Response to OCA Interrogatory I-9 (b). In addition to R^2 discussed above, the Omnibus (prob) indicates that the normal distribution condition may not be met.

[59] Peoples Statement No. 7 at pages 2-6.

competitive alternative.[60] The current tariff language is more limited. The current language states: "Electricity delivered by an electric distribution company shall not constitute a competitive alternative for purposes of natural gas flex rate eligibility or amount, unless the electric distribution company offers an electric distribution flexed rate to the customer.[61]"

Q. DO YOU AGREE WITH THE TARIFF REVISION RELATED TO GAS DISTRIBUTION FLEX RATES AND ELECTRIC COMPETITION?

A. No. The previous language is more reasonable inasmuch as it precludes the offering of flex rates in response to electric utility competition unless the electric distribution company offered a flexed rate to the customer. In my view, the Commission should avoid an expansion of the negotiated rate authority. Negotiated discounted rates should be allowed only in a careful and limited manner because they pose a significant risk of undue price discrimination within Peoples' rate classes. It would be unreasonable to offer a flex rate to customers where the electric utility has not offered the customer a flex rate to that customer. The mere possibility that an electric utility *might* offer a flexed rate at some point is an insufficient basis for Peoples to discount its rates to that customer.

60 Peoples Exh. DF-2, Gas-PA PUC No. 48, Original Page No. 33.
61 Ibid.

Q. THE COMPANY CLAIMS THAT THE EVALUATION PROCESS WILL ENSURE THAT THE FLEX RATES RELATED TO ELECTRIC COMPETITION ARE BENEFICIAL TO PEOPLES' OTHER RATEPAYERS. SHOULD THE COMMISSION HAVE A BROADER PERSPECTIVE?

A. Yes. The Commission regulates both electric distribution and gas distribution utilities and should be concerned about the impact on the customer base of both utilities. The full cost tariffs of both utilities represent the Commission's determination of just and reasonable rates. When the gas utility and electric utility compete based on their full cost tariff offering, regulation should encourage customers to choose the rate that is most cost-effective for the customer. This form of competition benefits ratepayers of both utilities because it reflects long run costs, prevents intra-class price discrimination, and limits competitive revenue losses to situations in which the utility is not cost-effective. Peoples claims that natural gas is cheaper than electricity for many end uses, and if that is true, Peoples should prevail in its competition with the electric distribution company without the need to offer a flexed rate. Moreover, if the competing electric distribution company knows that Peoples can offer a flex rate only in response to an electric utility flex rate, this may discourage the electric distribution company from seeking authority to offer flex rates. However, if the gas utility is allowed to offer a discounted rate in order to undercut the electric utility's full cost tariff, the electric utility may believe it has no other option than to seek authorization for its own flex rates. That type of discounted rate price war is not in

the interest of captive customers of either utility, and it would force the Commission to weigh into competition between the Pennsylvania electric and gas industries.

Q. ARE THERE ANY ADDITIONAL POLICY REASONS WHY PERMITTING PEOPLES TO REVISE RULE 20 TO PERMIT ACCESS TO ELECTRICITY TO ESTABLISH A COMPETITIVE ALTERNATIVE IS INEQUITABLE?

A. Yes. Virtually any type of customer that Peoples services, including residential customers, could elect to convert to electricity if they determined to do so. Peoples' does not propose discounted rate treatment to customers served by the residential tariff simply on the basis that they may convert to electricity, and this exemplifies not only the disparity of Peoples' proposal, but also of the fallacy of extending competitive alternative criteria to include access to electricity. [62] Access to electricity is far too extensive for it to be used a qualifying basis for commercial and industrial customers to access discounted rates, and more must be required to ensure that Peoples' rates are just, reasonable, and non-discriminatory.

Q. WHAT IS YOUR RECOMMENDATION?

A. I recommend rejection of the Rule 20 tariff revision which includes electric distribution utilities as competitors for purposes of authorizing flex rates.

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes.

[62] Potentially, the tariff may enable Peoples to extend a rate discount to residences in large multi-unit complexes which are served by commercial tariffs.

VERIFICATION

I, Clarence L. Johnson, hereby state that the facts above set forth in my Direct Testimony, OCA Statement 4, are true and correct to the best of my knowledge, information and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: March 22, 2024

Signature: 
Clarence L. Johnson

Address: 3707 Robinson Ave
Austin, Texas 78722

SUMMARY OF QUALIFICATIONS

CLARENCE JOHNSON

EDUCATION

Bachelor of Science, Political Science, University of Houston.

Master of Arts, College of Social Science (Interdisciplinary/Urban Studies), University of Houston.

EXPERIENCE

Mr. Johnson has more than 35 years' experience as an expert witness and analyst related to electric and telecommunications utility issues.

CURRENT EMPLOYMENT

Mr. Johnson currently provides professional consulting and analytical analyses regarding regulatory and public policies related to public utilities and the energy industry.

PREVIOUS EMPLOYMENT 1983-2008

From September 1983 to June 2008, Mr. Johnson was a Regulatory Analyst for the Office of Public Utility Counsel. He was the professional staff person with primary responsibility for advising the Public Counsel on economic and regulatory policy issues. His responsibilities included: presenting expert testimony on regulatory matters; research related to rate filings of regulated public utilities; acting as a non-testifying expert and advising attorneys in cross-examination of witnesses and development of trial exhibits for utility regulatory proceedings; analyzing policies and practices for regulating public utilities; and preparing comments on proposed Public Utility Commission rules; assisting financial and economic staff in the development and preparation of testimony; providing expert testimony on selected issues; preparation of reports to the Legislature regarding the utility regulatory process.

EMPLOYMENT BEFORE 1983

During the period 1977 to 1983, Mr. Johnson extensively engaged in analysis and supervision of public interest advocacy programs. He directed two non-profit corporations involved in public policy research from 1978 to 1980 and 1982 to 1983, respectively; responsibilities included overall management of the corporations, negotiation and management of grants and contracts, supervision of research activities, and presentations of research findings to legislative and administrative governmental entities. From 1980 to 1982, he also performed policy analysis and substantive research on the impact of governmental policies for two publicly-funded entities. His responsibilities for the statewide support center for legal services programs in Texas assessed the effect of federal and state regulatory changes upon indigent clients. As an analyst for the Texas State Senate's Natural Resources

Committee, Mr. Johnson was responsible for research related to low-level radioactive waste disposal and low-head hydropower, and the committee's staff's interim report on energy conservation.

AWARDS Mr. Johnson was the recipient of the first annual Texas Outstanding Public Service Award in 1988.

MEMBERSHIP American Economic Association.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-V-005

Witness: Zarumba, Ralph **Title:** Consultant, Black & Veatch Management Consulting, LLC

Question: Please provide the percentage of distribution Mains investment which is classified as minimum size or minimum system.

Answer: The Mains minimum system cost as a percentage of all Main pipe sizes for the Combined entity is as 51.27% (unadjusted). When adjusting for the capacity related portion of the minimum system the percentage is 48.37%. Please see excel row 13, columns G in the “Min System Results” tab in response OCA-V-1, Attachment OCA-5-1h. For adjusted minimum system please refer to rows 15-51, columns B-E in the same tab.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-V-007

Witness: Becker, Paul **Title:** Vice President of Construction & Engineering

Question: What is the smallest size main installed on the Company's distribution system? What is the unit cost of this sized Main? What percentage of the cost of this sized Main is installation cost?

Answer: The smallest size Main is 2 inches. Cost per foot using 2022 book cost is shown in the table attached. Labor cost is 24-36% of installing 2" distribution mainline only. This percentage is not based on comparing labor cost to the total project cost.

Submit Date: 2/13/2024

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-V-017

Witness: Zarumba, Ralph **Title:** Consultant, Black & Veatch Management Consulting, LLC

Question: Identify the number of executives, marketing personnel, and customer assistance staff, including customer service representatives, who are involved primarily in contacts with the Company's current or prospective large commercial or industrial customers. This includes Staff involved in economic development and negotiating non-tariff customer contracts. Provide the following information as well:

a. Provide the annual cost for these Company personnel and identify the FERC accounts in which the amounts are recorded;

b. Identify the particular rate classes supported by the personnel. Indicate the class allocation methods used on these costs in the Class Cost of Service Study; and

c. Describe the types of services performed by the staff listed in 'a.'

Answer: A. Company Personnel:

- Luke Ravenstahl, Vice President Sales & Marketing

- Doug Bush, Director, Strategy & Corporate Development

- Sean Coughlan, Manager, Large Volume Sales

- Roselle Hamlett, Senior Sales Specialist

- Ronald Bondo, Senior Sales Specialist

- Jason Greenblatt, Senior Sales Specialist

The total fully loaded costs (salary plus benefits) are $1,338,516. The FERC Accounts used are 417.1, 911, 912, 920.

B. The rate classes supported for this personnel are as follows:

PNG Rates

- Rate MGS (Medium General Service)
- Rate LGS (Large General Service)
- Rate GS-T (General Service – Transportation) MGS and LGS

PG Rates

- Rate Schedule MGS – Medium General Service
- Rate Schedule LGS – Large General Service
- Rate MGS – T (Medium General Service Transportation Service)
- Rate LGS – T (Large General Service Transportation Service)

C. This team serves as the primary point of contact and account managers for our large commercial and industrial customers. Examples of this type of work include routine account maintenance with issues such as billing and operational questions or concerns. They also take the lead on new large commercial and industrial requests for service. They partner with the potential customer and various internal departments to obtain the necessary information to evaluate the request and determine our ability to serve. In addition, the team is responsible for identifying new economic development projects and technologies that will enhance and grow the usage of natural gas in our operating system. In addition, this team negotiates or renews discounted rate contracts. The steps involved in the process include but are not limited to: obtaining a signed affidavit from the customer confirming they have a competitive alternative, validating and confirming that the alternative is a viable option, assisting in the company's fixed cost analysis, sharing and negotiating the proposed discounted rate with the customer, partnering with the legal team to develop a fully executable agreement, executing the agreement.

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-V-027

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: If a customer terminates service and is not replaced by a new customer at the same premises, please identify any customer classified costs which would cease to be incurred or any resulting savings in customer classified costs.

Answer: The only costs that cease when a meter is removed are O&M associated with customer inquiries, and customer billing processing of meter reads.

Submit Date: 2/13/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-V-026

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Please provide the following information regarding the Company's weather normalization adjustment proposal:

a. Please explain and quantify the estimated annual impact on Company revenues caused by the lack of a weather normalization adjustment tariff; and

b. Has the Company determined the net annual change in revenues over each of the last five years if the weather normalization tariff had been in place? If so, provide the year by year impact.

Answer: a. Peoples' projected revenues in this proceeding are determined using normalized weather of 5,341 HDDs. Without a weather normalization adjustment, weather sensitive revenues will fluctuate, higher or lower, depending on the difference in HDDs as compared to 5,341. With a weather normalization adjustment in place, the Company's weather sensitive revenues would be consistent with the revenue projections based upon 5,341 HDDs annually. As stated in the direct testimony of Ralph Zarumba at Peoples Statement No. 15, page 56, the WNA mechanism provides symmetric protection to customers (emphasis added) and the Company for revenue variations in usage associated with non-normal weather.

Refer to the response in part (b) for recent historical fluctuations in revenue related to weather sensitive customers during the calendar year periods of 2019 – 2023.

b. Refer to the attachment. The Company notes the attached table is not an analysis based upon the Company's WNA proposal in this case but does represent the fluctuations in revenue related to weather sensitive customers during the calendar year periods of 2019 – 2023. The Company also notes that over a length time the total weather related cumulative impact of the WNA mechanism is expected to be zero or near zero.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XI-017

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference the attachment that Peoples provided as part of its answer to OCA Set 5, Question 26. Assuming that a WNA had been in place, please explain whether the negative sign for total weather related impact indicates that weather sensitive customers would have incurred a net charge or net credit for the cumulative years shown.

Answer: The attachment to OCA-5-26 shows historical fluctuations in revenue related to weather sensitive customers. The cumulative revenue over that period was a decrease compared to normal weather, so theoretically if the WNA was in place, there would have been a net charge to weather sensitive customers.

However, as noted in the response to OCA-5-26, the Company respectfully points out that the data provided in the response to OCA-5-26 is not an analysis based upon the Company's WNA proposal in this case.

Refer to the response to CAUSE-I-16 which is an analysis of the impact for a typical customer from 2019 – 2022 if the WNA proposed in this case was in place. The main difference is the number of HDDs used in the calculation as normal. The response to CAUSE-I-16 compares the impact of actual HDDs during 2019 – 2022 versus 5,341 HDD's, the normal HDD's the Company is proposing in this case. The response to OCA-5-26 does not factor 5,341 HDDs as normal weather, but rather the respective normal HDDs in each of those years. Therefore, OCA-V-26 is not as indicative of what the WNA impact would be based on the WNA proposal in this proceeding.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OSBA-I-012

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference Peoples Statement No. 3, Weather Normalization Mechanism

a. Please provide the proposed normal heating degree days for each billing cycle that applies to Residential, SGS and MGS customers in the FPFTY, with supporting calculations for the derivation of the normal value in MS Excel electronic format.

b. Please indicate how the Company proposes to address the circumstances that arose in the PGW WNA debacle (see Docket Nos. R-2022-3034229, P-2022-3034264), namely a billing period with unusually low actual HDDs and heating load adjustment multiples that result in extreme billing adjustments, particularly for customers with unusually high non-heating loads.

c. Please explain why July/August is used to derive non-heating base loads rather than a statistical approach. Please also indicate whether cooking and hot water loads in July and August are affected by vacations.

d. Please explain how non-heating base loads will be derived for customers without billing information for the previous summer months.

e. Please identify any automatic checks proposed by the Company to flag unusual billing events that may be magnified by the WNA, such as a billing period with an unusually high heating load per degree day compared to historic norms.

f. Please confirm that the Company's proposed mechanism relies on the assumption that heating load is linearly related to HDDs. If you cannot confirm, please explain your response.

Answer: a. Refer to the attachment. On the "Daily AHDD and NHDD Calc" tab, refer to the tables in columns BT through CF, rows 15-91 for the tables of NHDD by month and day for Leap Years versus Non-Leap Years. These are the NHDD that will be used for the WNA mechanism. Peoples would add the HDD's from these tables that coincide with the billing days in the customer's bill cycle to calculate the NHHD.

In order to derive the daily NHDD's as displayed in the two tables, Peoples calculated the average degree days per day using the last 10 years of AHDD data as the basis. Next, Peoples applied this average to the monthly amount of HDDs as proposed in this case, and then took that result times the annual HDDs proposed as normal in this case. For example, January 1 of a

non leap year = (Jan monthly spread x Daily % of 10yr avg of Jan 1st % of all January) x Annual NHDD. Refer to the attachment labeled (a)-2 for an illustrative example of this.

b. Peoples anticipates that the automatic checks identified in subpart (e) of this response will capture outliers that could result in an extreme billing adjustment.

c. Refer to the attachment. Peoples analyzed monthly HDD data for the ten (10) year period of 2013-2022 to determine months with near zero HDDs. July and August have average HDD of 1.40 and 3.30, respectively. A normal probability was calculated each month, testing the probability that any month would have zero HDD and be included in the baseload calculation. July and August were determined to have a statistically significant normal probability (34.1% and 21.3%). The only other month with a positive value was September, with a probability of 4.9%. September was rejected because the normal probability was significantly lower than July and August. It should also be noted that September had a mean HDD of 58.30, which is 4,046% higher than July and 9,548% higher than August, which supports Peoples conclusion that September HDD behavior is significantly different than July and August.

d. Peoples proposes to use a “standard” base load per rate class for customers that do not have prior billing information for one or both of the non-heating months of July and August. Refer to the attachment for the proposed standard base load amounts. Consistent with Exhibit 19, RR-8, the standard base load amounts are established using the normalized use per customer (UPC) for PNGD & PGD combined based upon a three-year average UPC with conservation per rate class.

e. Peoples has several automatic checks in place that will flag unusual activity prior to billing:

(1) Meter reads are out of tolerance

(2) Billing and/or Invoicing (Dollars billed) are out of tolerance

(3) Each day the billing team also reviews bills with the highest and lowest Mcf and dollar amounts to confirm accuracy.

f. Yes, confirmed.

Submit Date: 3/4/2024

Peoples Natural Gas Company LLC	:	

DIRECT TESTIMONY OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

March 22, 2024

I. INTRODUCTION AND SUMMARY OF RECOMMENDATIONS

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member/owner of Barbara Alexander Consulting LLC. I am a consultant on consumer protection and customer service issues associated with utility regulation. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. PLEASE DESCRIBE YOUR BACKGROUND AND QUALIFICATIONS.

A. I opened my consulting practice in March 1996, after nearly ten years as the Director of the Consumer Assistance Division of the Maine Public Utilities Commission. While there, I managed the resolution of informal customer complaints for electric, gas, telephone, and water utility service, and testified as an expert witness on consumer protection, customer service and low-income issues in rate cases and other investigations before the Commission. My current consulting practice is directed to consumer protection, customer service and low-income issues associated with both regulated utilities and retail competition markets. I have testified on behalf of national and state consumer and public advocate representatives in over 30 states and Canadian jurisdictions. I have published widely on consumer protection, service quality, universal service, and retail competition policies and programs. I have assisted the Pennsylvania OCA in its restructuring activities concerning electricity and natural gas since 1997, numerous rulemaking proceedings relating to customer service, reliability of service, and consumer protection regulations, and submitted testimony on behalf of the OCA in merger and sale proceedings and base rate cases involving Pennsylvania electric and natural gas distribution companies and

Pennsylvania water and sewer utilities. Most relevant to this proceeding, I submitted testimony on behalf of the OCA in the proposal by Aqua America, Inc. (Aqua) to purchase the Peoples Natural Gas LLC (Peoples) and its natural gas distribution companies in Pennsylvania (Docket Nos. A-2018-300606L A-2018-3006062 and A-2018-3006063).[1]

I attach my Resume as Exhibit BA-1.

Q. WHAT IS THE PURPOSE OF THIS TESTIMONY?

A. I am filing Direct Testimony in response to the application by Peoples to increase its base rates for natural gas distribution service filed on December 29, 2023. My testimony addresses the customer service and consumer protection implications for the increase in rates for residential customers if Peoples' request is approved. I will also opine on the Company's proposal for a Weatherization Normalization Adjustment tariff.

Q. PLEASE DESCRIBE THE PROPOSAL FOR RATE INCREASES FILED BY PEOPLES.

A. If approved, the Company's proposal would provide its Peoples Natural Gas Division (PNGD) with an annual revenue increase of increase of $148,558,437, or approximately 20%, and Peoples Gas Division (PGD) with an annual revenue increase of $7,466,250, or approximately 8.5%. Combined, the Company would receive an annual revenue increase of $156,024,687, or approximately 18.7%, on a total annual revenue basis. I will refer to "Peoples" to mean the Peoples Natural Gas Company LLC.

The Company also seeks Commission approval to consolidate the retail rates and tariffs of the PNGD and the PGD. Peoples also proposes Tariff revisions in its filing[2], including the following items: (1) the implementation of a Weather Normalization

[1] This transaction was approved with conditions in the Commission's Opinion and Order issued on October 3, 2019.
[2] Peoples Statement No. 11, pp. 13-15.

Adjustment (WNA); and (2) adjusting its Tax Repairs Surcredit, Tax Cuts and Jobs Act Surcharge, and Allegheny Valley Capacity Charge.

Peoples has proposed 25 basis points be added to Peoples' estimate of an 11.50% cost of equity[3], due to the Company's management performance

Peoples provides natural gas service to over 700,000 residential, commercial and industrial customers in southwestern and western Pennsylvania, including Allegheny, Armstrong, Beaver, Blair, Butler, Cambria, Clarion, Fayette, Greene, Indiana, Jefferson, Lawrence, Mercer, Somerset, Venango, Washington, and Westmoreland counties.

Q. WHAT IS THE CONNECTION BETWEEN YOUR DISCUSSION OF SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE AND THE RATE INCREASE PROPOSED BY PEOPLES?

A. A public utility in Pennsylvania is statutorily obligated to provide adequate and reasonable service to its customers. A public utility must justify its rates based on, among other things, its ability to perform its essential quality of service and customer service functions at an adequate and reasonable performance level. Accordingly, where a public utility is seeking a rate increase – especially a significant one, and, where, as in this case, the utility is asking for a reward in the form of a higher rate of return based on its performance, it is appropriate to review the performance of that utility and to compare such performance to other Pennsylvania utilities. Therefore, my evaluation of Peoples' customer service and consumer protection policies is directly related to the Commission's consideration of Company's general rate increase.

[3] Peoples Statement No. 13, pp. 1-2.

Furthermore, Peoples seeks an incentive in this case under Section 523 of the Public Utility Code in the form of the Commission's adoption of the higher end of the Company's requested return on equity of based on its management performance. My evaluation of Peoples' customer service and consumer protection policies is directly related to the Commission's consideration of Company's request for the higher return on equity.

My analysis and findings should inform the Commission on the reasonableness of Peoples' significant rate increase request. Where I identify deficiencies in Peoples' customer service performance, I recommend that the Commission order improvements in specific areas as a condition of any rate increase and consider adopting any rate increase and rate of return that reflects the inadequate customer service I have documented. This approach is mandated by the statutory guidelines of Section 523 governing public utility rate cases in which the Commission must evaluate the "efficiency, effectiveness, and adequacy of service."[4]

Q. DO YOU HAVE EXHIBITS TO YOUR TESTIMONY?

A. Yes. I attach the following exhibits to my testimony:

- Exhibit BA-1: CV of Barbara R. Alexander
- Exhibit BA-2: Peoples Response to OCA-XIV-030
- Exhibit BA-3: Peoples Response to OCA-XIV-21 and OCA-VI-14 with attachments
- Exhibit BA-4: Peoples Response to OCA-VI-015 with attachments
- and OCA-XIV-018 with attachments
- Exhibit BA-5: Peoples Response to OCA-VI-21, 22, and 24

[4] 66 Pa. C.S. 523.

Q. Exhibit BA-6: Peoples Response to OCA-I-02 and attachments.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

A. My recommendations as reflected in my testimony below are as follows:

- Customer Service Performance: I recommend that Peoples be required to maintain its current service quality and customer service performance as reflected in its test year 2023 results as a condition of any rate increase approved in this proceeding. In addition, I recommend that Peoples evaluate the potential for extending the hours of its call center to accommodate those customers who are employed during normal business hours and implement extended call center hours if justified and at a reasonable cost.
- Complaint analysis: Peoples' analysis of customer complaints, whether handled internally as disputes, or externally by BCS as informal complaints, needs to improve. I recommend that Peoples be required to conduct a regular and proper root cause analysis of its complaint trends, both for internal disputes and BCS informal complaints that document infractions and verified violations. This recommendation should require a professionally conducted root cause analysis and report on findings, including identification of trends, evaluation, steps to reform or avoid repeated trends, and internal steps taken to take proper internal enforcement action where needed within 3 months and quarterly updates to stakeholders.
- Termination Procedure: Peoples should be required to develop and implement detailed training programs to ensure compliance with the Commission's specific regulations relating to personal contact, particularly with respect to the obligation to attempt personal contact "immediately" prior to actual termination of service. This

compliance filing and detailed implementation plan should be filed within 3 months of a final order in this proceeding after consultation and review by stakeholders.

- Shared Service Premises: Peoples' policies and disclosures to tenants should conspicuously disclose the tenants' rights to remain with gas service under these conditions:

1) Peoples should allow tenants to affirmatively request that their personal information not be provided to the landlord/owner.
2) Peoples' policies and disclosures should reflect that landlords may not retaliate against their tenants for 1) the tenant exercising their right to pay the utility bill to continue service under the landlord's name, and 2) to recover this payment by deducting the payment from their rental payment.
3) Peoples should accept from tenants; medical certificates and protection from abuse orders, or court orders issued by a court of competent jurisdiction in the Commonwealth, which provide clear evidence of domestic abuse.
4) Peoples should not terminate a landlord/tenant account during the months of December through March for households with income at or below 250% of the federal poverty income guidelines.

- Weatherization Normalization Adjustment: I support the recommendation of the previously referenced OCA witnesses that this method by which Peoples can make rate adjustments outside of a base rate case should be rejected. Customers desiring bill stability to mitigate volatility can and should be encouraged to enroll in budget billing. This has far more consumer-friendly impact than a WNA.

- Bill Payment Fees: I agree with Peoples' proposal to eliminate the bill payment fees for Peoples Gas Division customers and include those costs in rates.

- Billing for Non-Basic Charges: My primary recommendation is that the Commission investigate this program, particularly with regard to whether regulated ratepayers are subsidizing the marketing, billing, and collection of unregulated non-basic services provided by Peoples' unregulated affiliate. Furthermore, there are issues relating to the marketing materials and disclosures that should be further reviewed and evaluated. I also note that the OCA has recently served discovery seeking additional information in an attempt to confirm whether ratepayers are subsidizing services as part of this case, and therefore I reserve the right to supplement my position on this matter if necessary.

- Supplier Charges in Excess of Default Service: First, I recommend that Peoples conduct consumer education to its customers to alert them when they are paying more for service than default service. The goal here is to ensure that these customers are aware of this fact so they can decide what action to take. They may be paying more because they want to do so, but more likely it is out of inattention to an expiring contract. This would allow customers the ability to choose whether to renegotiate their contract with their supplier, shop and choose another supplier, or return to default service. There is no preordained outcome that "should" result from this education other than ensuring that customers are aware of the price that they are paying. Second, Peoples' bills should more clearly reflect that the customer is paying for service and whether it is higher of lower than the default service price. This is another way to accomplish the goal of educating customers. Once way to do this is for Peoples to calculate what the bill would be under

default service. For customers with lower priced supply contracts this will ensure a positive reinforcement that they are saving money through their NGS. For customers with a higher priced supply contract, it will ensure that these customers are aware of this fact and allow them to make an informed decision about their options.

- Additional profits for management performance: Ratepayers should not pay additional profits to a public utility for maintaining a level of customer service quality and customer performance for the call center, billing, and meter reading that was promised as a result of commitments made in prior proceedings. There is no evidence of above average performance. Furthermore, I have identified a number of areas in which Peoples' current performance requires significant improvement and my recommendations have identified conditions for approval of any rate increase in this proceeding. As a result, there is no basis to support any reward in the form of higher profits due to "management efficiency" as requested by Peoples in this request to increase base rates.

II. SUMMARY OF PEOPLES' CUSTOMER SERVICE AND CONSUMER PROTECTION PERFORMANCE

Q. PLEASE IDENTIFY THE SPECIFIC CONDITIONS FOR PEOPLES' CUSTOMER SERVICE PERFORMANCE THAT WERE ADOPTED IN PRIOR PROCEEDINGS.

A. The Peoples natural gas distribution companies have been the subject of numerous mergers and acquisitions, all of which were resolved with customer service performance standards and reforms to expand and improve its low income universal service programs. In 2013

the Commission's Order approving the acquisition of Equitable Gas by Peoples[5] reflected the following agreed upon conditions:

- Peoples will maintain field offices in its service territory and staffing levels that are sufficient to provide safe and reliable service (Settlement ¶ 59).
- Services that are currently performed for Equitable outside of the Equitable service area in Pennsylvania, such as call center support, customer billing and payment and customer relations, will be returned to the Peoples service area within five years after Closing (Settlement ¶ 79).
- For a period of not less than five years, Peoples will provide corporate contributions and community support in southwestern Pennsylvania in a total amount that is at least equivalent to the amount provided by Peoples ($1.0 million) and Equitable ($400,000) in 2012 (Settlement ¶ 78).
- Peoples will commit to achieve and maintain specific quality of service metrics for its Peoples and Equitable Divisions:

  a. Call Center: 82% calls answered within 30 seconds;
  b. Call Center: Average Busy-out Rate less than 0.25%;
  c. Call Center: Average Call Abandonment Rate that is no higher than 3% for 2014-2016 and 2.5% for 2017-2018;
  d. Percent response within 60 minutes to emergency calls of at least 98.5% for 2014-2016 and 99% for 2017-2018; and,
  e. Peoples TWP agrees to extend the customer service metrics agreed to in the SteelRiver acquisition of Peoples TWP, at Docket No. A-2010-2210326, for an additional two years commencing January 1, 2014. (Settlement ¶ 66, Appendix D).

[5] Opinion and Order, Docket Nos. A-2013-2353647 et al., (Order entered Nov. 14, 2013); Initial Decision at 35-62, Docket No. A-2013-2353647 et al., (Nov. 1, 2013).

- Peoples will provide a report to the statutory parties each calendar year following assumption of customer service functions by the staff of Peoples or its affiliates regarding its achievement of the service quality metrics. Such reports shall continue for three calendar years after assumption of such functions by the staff of Peoples or its affiliates. If the Company has not achieved an identified metric, the report will explain the reasons for the failure and the Company's detailed plan to reach the service quality metric. Peoples will then convene a collaborative with OCA, I&E and the OSBA to discuss such report (Settlement ¶ 67).
- Peoples will establish a Universal Service Advisory Group that will include community based organizations ("CBOs"), Low-Income Advocates, the OCA and other interested stakeholders and will meet quarterly to discuss all universal service issues, including recommendations concerning: Low Income Usage Reduction Program ("LIURP"), LIURP eligibility, Earned Income Tax Credit ("EITC") concerns, and landlord issues that may present a barrier to customer participation (Settlement ¶ 73).
- Peoples will develop and employ best practices from the experience of Peoples and Equitable under their universal service programs and those of other companies identified by the Universal Service Advisory Group (Joint Applicants Statement No. 4-R, p. 28).
- After Closing, Peoples will continue to fund Equitable's Customer Assistance Program ("CAP") consistent with its needs analysis approved in conjunction with Equitable's currently approved Universal Services Plan (Settlement ¶ 72).

- Peoples will manage Equitable's CAP program similar to that of Peoples in that it will partner with an agency that: (a) can substantially increase the number of intake sites; (b) is an administrator of utility CAP programs for the electric distribution companies or natural gas distribution companies in their territory; (c) recruits and partners with multi-service agencies; and, (d) uses a case management system to track and monitor referrals and enrollments into utility programs (Settlement ¶ 74).
- The shareholders of Peoples and Peoples TWP commit to increase their total donation (administrative and matching) to the Dollar Energy Fund by 10% for the next five years following Closing. Peoples will review possible ways to increase outreach to customers to attempt to increase customer contributions and will provide a report to the Commission and OCA (Settlement ¶ 76).
- Peoples will increase expenditures for the Peoples (by $150,000 per year) and Equitable Divisions (by $100,000 per year) on LIURP in the first four years after Closing. Peoples TWP also will increase expenditures (by $25,000 per year) on LIURP for a period of four years, 2014 through 2017. These increases will be funded by shareholders for the four-year period. Any funds not used in one year will roll-over into the next calendar year. Funding on this basis will continue until the effective date of rates set in the next base rate proceeding (Settlement ¶ 77).

Q. DID PEOPLES PRESENT INTERNAL CUSTOMER SERVICE GOALS IN THE AQUA-PEOPLES MERGER PROCEEDING?

A. Yes. In 2018, Aqua America Inc., Aqua Pennsylvania Inc., Aqua Pennsylvania Wastewater Inc. and Peoples filed a Joint Application that eventually led to the acquisition of Peoples by Aqua. The Commission approved Aqua's acquisition of Peoples, subject to the terms of a settlement that obligated Peoples to honor

commitments that included customer service goals[6]. Specifically, Peoples adopted Customer Service Commitments in the following areas, which it agreed to honor for a five-year period[7]:

- Call Center Service Level 82%
- % of Calls Abandoned 2.0%
- Busy-Out Rate 0%
- % of Bills Not Rendered Each Billing Period .008%
- % of Meters Not Read w/in 6 Months .15%
- % of Meters Not Read w/in 12 Months .015%
- % of Company Disputes Not Answered w/in 30 Days 1%

Q. HOW DO THESE PRIOR INTERNAL PERFORMANCE STANDARDS COMPARE TO PEOPLES' RECENT AND CURRENT PERFORMANCE?

A. Peoples' 2022 performance as reported to the Commission[8] was as follows:

- Call Center Service Level (% calls answered in 30 seconds) 85%
- % of Calls Abandoned 3.0%
- Busy-Out Rate 0%
- % of Bills Not Rendered Each Billing Period .0%
- % of Meters Not Read w/in 6 Months 0%
- % of Meters Not Read w/in 12 Months .0%
- % of Company Disputes Not Answered w/in 30 Days 0%

[6] Opinion and Order (Public Version), Docket Nos. A-2018-3006061 et al., (Order entered January 24, 2020)
[77] Id. at 153.
[8] 2022 Customer Service Performance Report (September 2023). https://www.puc.pa.gov/filing-resources/reports/customer-service-performance-reports/

When comparing the performance goals required to be implemented in 2020 for five years with the actual performance in 2022 (reflecting the merger and unification of the Peoples natural gas distribution service districts), Peoples has maintained its previous required goals for the most part.

Q. HAS THERE BEEN ANY SIGNIFICANT CHANGE IN PERFORMANCE IN 2023?

A. Peoples reports that in 2023, 85.9% of PNGD customer calls were answered within 30 seconds and 85% of PGD customer calls answered within 30 seconds, performance typical of 2022. The 2023 abandonment rate, however, varied at 3% for PNGD customers and 1.8% for PGD customers.[9] Again, there is no significant improvement compared to the 2019 goals.

Q. ARE THERE OTHER INDICATORS OF COMPLIANCE AND COMPLAINT HANDLING THAT YOU HAVE REVIEWED AND THAT SHOULD BE CONSIDERED IN YOUR EVALUATION?

A. Yes. There are three areas. First, Peoples has maintained a response time for emergency calls of 24 to 25 minutes in the first six months of 2023 but this response time increases in the second half of the year to 26 to 27 minutes.[10] The Commission's Terminations and Reconnections data for 2022 and 2023 indicates a 40% increase in terminations by Peoples, the highest of any natural gas distribution company except Philadelphia Gas Works, but accompanied by an 49% increase in reconnections.[11] In addition, I have reviewed the Company's performance in handling customer complaints and the performance in

[9] Peoples Response to OCA-VI-004, Part A and Part B.
[10] Peoples Response to OCA-VI-004, Part E.
[11] https://www.puc.pa.gov/filing-resources/reports/terminations-for-electric-gas-water-companies/

compliance as reported by the Commission's Bureau Consumer Services in the UCARE Report.[12] The 2022 and 2023 Reports shows the 2022 and 2023 results for major natural gas distribution companies, including Peoples:

BCS Categories	2022	2023	Comments
Residential Customer Complaints	344	348	1% increase
Residential Payment Arrangement Requests (PARs)	1018	1145	12% increase
Inquiries	272	297	9% increase
% Justified[13] Residential Customer Complaints	3.8%	3%	Slightly down
% Justified[14] PARs	1.5%	3%	Increase
Response Time to Complaints and PARs (Days)	4.7/1.9	5.6/1.8	Increase/No change
Verified Infractions[15] (Chapter 56)	13	33	Significant Increase

Q. WHAT TRENDS ARE APPARENT FROM THIS HISTORICAL AND MOST RECENT INFORMATION?

A. The call center performance remains at a reasonable level and other indicators that compare 2019 objectives with 2022-2023 performance indicate results that remain within the zone

[12] https://www.puc.pa.gov/filing-resources/reports/consumer-activities-report-evaluation/
[13] The BCS defines a Justified Consumer Complaint as "A consumer complaint where, prior to BCS intervention, the company did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, tariffs or guidelines when the consumer brought the complaint to the company's attention. The justified consumer complaint rate equals the number of justified consumer complaints for each 1,000 residential customers."
[14] The BCS defines a Justified PAR as, "A Payment Arrangement Request where, prior to BCS intervention, the company did not comply with Commission regulations, reports, Secretarial Letters, tariffs or guidelines. The justified payment arrangement request rate equals the number of justified payment arrangement requests for each 1,000 residential customers."
[15] The BCS defines an Infraction as "A misapplication or infringement of a Commission regulation, particularly the standards and billing practices for residential utility service."

of reasonableness. However, there is a steady decline in performance when reflected in the BCS reports in terms of customer complaints and compliance. The increase in Infractions in 2023 is particularly concerning, particularly when accompanied by the evidence I present below concerning the lack of any complaint analysis or root cause evaluation of customer complaints, complaint trends or compliance issues.

Q. DO YOU HAVE ANY RECOMMENDATIONS AS A RESULT OF THIS PRESENTATION OF HISTORICAL AND CURRENT CUSTOMER SERVICE INDICATORS?

A. I recommend that Peoples be required to maintain its current service quality and customer service performance as reflected in its test year 2023 results as a condition of any rate increase approved in this proceeding. There are other issues that I will discuss below that do require improvement.

III. PEOPLES DOES NOT PROPERLY EVALUATE CUSTOMER COMPLAINTS TRENDS AND BCS FINDINGS

Q. PLEASE DESCRIBE HOW PEOPLES TRACKS AND EVALUATES CUSTOMER COMPLAINTS.

A. Peoples creates spreadsheets to list complaints by topic.[16] I attach Peoples' response to OCA-XIV-030 and attachment as Exhibit BA-2. There is no evidence of management's investigation of root causes and identification of reforms and internal actions to respond to routine root cause analysis. Peoples does document and review any BCS identification of infractions and justified complaints. A review of the documentation of how Peoples

[16] Peoples Response to OCA-XIV-030. This response provided a document that listed counts of complaints by category.

responds shows that management investigates the noted non-compliance (or alleged non-compliance) and takes action based on that evaluation of the specific incident.[17] I attach Peoples Response to OCA-XIV-21 and OCA-VI-14 with attachments as Exhibit BA-3.

Q. DOES THE DOCUMENTATION PROVIDED BY PEOPLES CONSTITUTE A PROPER ROOT CAUSE ANALYSIS?

A. No. Peoples' response is not a root cause analysis because there is no attempt to find similar instances that did not result in a customer complaint or BCS finding. Furthermore, Peoples' alleged "root cause analysis" typically results in a "coaching" of the employee who handled the complaint without investigating whether there is a defect in the manner or content of the internal training that led to repeated instances of the same failure noted in BCS complaints. While I note that some situations did involve an internal system change, which is no doubt a proper response, the lack of any attempt to investigate similar instances, the lack of internal audits and attempt to find complaints that could be avoided by evaluating internal disputes (in addition to waiting for the BCS to find the failures), and the lack of any management evaluation of why these instances of non-compliance occurred or how they might be prevented result in a continuing concern about the lack of proper evaluation of complaint data. A proper analysis would require an investigation into complaint trends and identification of underlying causes that may contribute to an increase in volume of complaints in a certain area, a pattern or practice of complaint findings (whether due to internal review or based on a review of BCS complaints in specific areas of compliance), and the documentation of how reforms or changes in policies or training

[17] Peoples Response to OCA XIV-21 and attachments; Peoples Response to OCA-VI-14 and attachment.

result in improvement.

Q. HAS PEOPLES CONDUCTED AN AUDIT OR REVIEW OF ITS CALL CENTER TO EVALUATE COMPLIANCE WITH CHAPTER 56 AND RELATED REQUIREMENTS?

A. No. Rather, the Company relies on the individual review of complaints as they occur.[18]

Q. PLEASE DESCRIBE A PROPER ROOT CAUSE ANALYSIS.

A. A root cause analysis is a fact-based exercise in which the underlying cause or causes of an undesirable outcome are identified and specific remedial steps are identified and determined to result in correcting or improving the previously identified undesirable result. A list of customer complaints by category is not a root cause analysis.

> A root cause is defined as a factor that caused a nonconformance and should be permanently eliminated through process improvement. The root cause is the core issue—the highest-level cause—that sets in motion the entire cause-and-effect reaction that ultimately leads to the problem(s).
>
> Root cause analysis (RCA) is defined as a collective term that describes a wide range of approaches, tools, and techniques used to uncover causes of problems. Some RCA approaches are geared more toward identifying true root causes than others, some are more general problem-solving techniques, and others simply offer support for the core activity of root cause analysis.
>
> There are many methodologies, approaches, and techniques for conducting root cause analysis, including:
>
> 1. **Events and causal factor analysis:** Widely used for major, single-event problems, such as a refinery explosion, this process uses evidence gathered quickly and methodically to establish a timeline for the activities leading up to the accident. Once the timeline has been established, the causal and contributing factors can be identified.
> 2. **Change analysis:** This approach is applicable to situations where a system's performance has shifted significantly. It explores changes made in people,

[18] Peoples Response to OCA-XIV-005.

equipment, information, and more that may have contributed to the change in performance.

3. **Barrier analysis:** This technique focuses on what controls are in place in the process to either prevent or detect a problem, and which might have failed.
4. **Management oversight and risk tree analysis:** One aspect of this approach is the use of a tree diagram to look at what occurred and why it might have occurred.
5. **Kepner-Tregoe Problem Solving and Decision Making:** This model provides four distinct phases for resolving problems:
    1. Situation analysis
    2. Problem analysis
    3. Solution analysis
    4. Potential problem analysis[19]

According to the publications developed by the American Society for Quality, and other comparable publications[20], a proper analysis of any "root cause" requires the identification of "symptoms," which are not actual causes but signs of existing problems, and "first level causes," which are the causes that directly lead to a problem; and "higher level causes," which are links in the chain of cause-and-effect relationships that ultimately create the problem. Peoples' compilation of individual customer complaints and their identification of the individual complaint resolution reflects "symptoms" and not the actual underlying cause of that reflects identification of patterns and the underlying facts that contributed to the complaint and complaint patterns.

Q. WHAT IS YOUR RECOMMENDATION IN LIGHT OF THIS CONCERN?

A. Peoples' analysis of customer complaints, whether handled internally as disputes, or externally by BCS as informal complaints, needs to improve. I recommend that Peoples be required to conduct a regular and proper root cause analysis of its complaint trends, both

[19] https://asq.org/quality-resources/root-cause-analysis

[20] There is an extensive body of literature used in the medical community to conduct root cause analysis and develop plans to prevent adverse events. See, e.g., https://www.cms.gov/medicare/provider-enrollment-and-certification/qapi/downloads/guidanceforrca.pdf

for internal disputes and BCS informal complaints that document infractions and verified violations. This recommendation should require a professionally conducted root cause analysis and report on findings, including identification of trends, evaluation, steps to reform or avoid repeated trends, and internal steps taken to take proper internal enforcement action where needed within 3 months and quarterly updates to stakeholders.

IV. PEOPLES' TERMINATION PROCEDURES DO NOT REFLECT COMPLIANCE WITH THE OBLIGATION TO ATTEMPT PERSONAL CONTACT IMMEDIATELY PRIOR TO TERMINATION.

Q. PLEASE IDENTIFY THE REQUIREMENTS THAT PEOPLES MUST FOLLOW TO TERMINATE SERVICE FOR A RESIDENTIAL CUSTOMER.

A. The Commission's regulations require public utilities to attempt contact with the customer immediately prior to termination of service. This "knock on the door" obligation is intended to attempt personal contact to determine whether the termination should go forward and to identify specific consumer rights and remedies. Chapter 56 of the Commission's regulations address the personal contact requirements associated with involuntary disconnection of service:

> *§ 56.93. Personal contact.*
>
> (a) Except when authorized under § 56.71, § 56.72 or § 56.98 (relating to interruption of service; discontinuance of service; and immediate termination for unauthorized use, fraud, tampering or tariff violations), a public utility may not interrupt, discontinue or terminate service without attempting to contact the customer or responsible adult occupant, either in person, by telephone or electronically with the customer's consent, to provide notice of the proposed termination at least 3 days prior to the scheduled termination using one of the methods in this section. If personal contact by one method is not possible, the public utility is obligated to attempt another method.
>
> (1) Phone contact shall be deemed complete upon attempted calls on 2 separate days to the residence between the hours of 8 a.m. and 9 p.m. if the calls were made at various times each day,

with the various times of the day being daytime before 5 p.m. and evening after 5 p.m. and at least 2 hours apart. Calls made to contact telephone numbers provided by the customer shall be deemed to be calls to the residence.

(2) If contact is attempted in person by a home visit, only one attempt is required. The public utility shall conspicuously post a written termination notice at the residence if it is unsuccessful in attempting to personally contact a responsible adult occupant during the home visit.

(3) Contact by e-mail, text message or other electronic messaging format consistent with the Commission's privacy guidelines and approved by Commission order. The electronic notification option is voluntary and shall only be used if the customer has given prior consent approving the use of a specific electronic message format for the purpose of notification of a pending termination. Electronic contact shall be deemed complete if, after attempted transmittal, no message is received indicating that the transmittal was undeliverable or otherwise not received. If the public utility receives notification that the transmittal was undeliverable or otherwise not received, the public utility shall attempt to contact the customer either in person or by telephone, consistent with the requirements of this section.

(b) The content of the 3-day personal contact notice must include the earliest date at which termination may occur and the following information:

(1) The date and grounds of the termination.

(2) What is needed to avoid the termination of service.

(3) How to contact the public utility and the Commission.

(4) The availability of the emergency medical procedures.

(c) The public utility shall ask the customer or occupant if he or she has questions about the 10-day written notice the public utility previously sent.

§ 56.94. Procedures immediately prior to termination.

Immediately preceding the termination of service, a public utility employee, who may be the public utility employee designated to perform the termination, shall attempt to make personal contact with a responsible adult occupant at the residence of the customer.

(1) *Termination prohibited in certain cases.* If evidence is presented which indicates that payment has been made, a serious illness or medical condition exists, or a dispute or complaint is properly pending or if the employee is authorized to receive payment and payment in full is tendered in any reasonable manner, then termination may not occur. However, if the disputing party does not pay all undisputed portions of the bill, termination may occur.

(2) *Methods of payment.* Payment in any reasonable manner includes payment by personal check unless the customer within the past year has tendered a check which has been returned for insufficient funds or for which payment has been stopped.

(3) *Dishonorable tender of payment after receiving termination notice*. After a public utility has provided a written termination notice under § 56.91 (relating to general notice provisions and

contents of termination notice) and attempted contact as provided in § 56.93 (relating to personal contact), termination of service may proceed without additional notice when:

(i) A customer tenders payment which is subsequently dishonored under 13 Pa.C.S. § 3502 (relating to dishonor).

(ii) A customer tenders payment with an access device, as defined in 18 Pa.C.S. § 4106(d) (relating to access device fraud), which is unauthorized, revoked or canceled.

(iii) A customer tenders payment electronically that is subsequently dishonored, revoked, canceled or is otherwise not authorized and which has not been cured or otherwise paid in full within 3 business days of the public utility's dishonored payment notice to the customer under § 56.93(a).

§ 56.97. Procedures upon customer or occupant contact prior to termination.

(a) If, after the issuance of the initial termination notice and prior to the actual termination of service, a customer or occupant contacts the public utility concerning a proposed termination, a public utility shall fully explain:

(1) The reasons for the proposed termination.

(2) All available methods for avoiding a termination, including the following:

(i) Tendering payment in full or otherwise eliminating the grounds for termination.

(ii) Entering a payment arrangement.

(iii) Paying what is past-due on the most recent previous company negotiated or Commission payment arrangement.

(3) Information about the public utility's universal service programs, including the customer assistance program. Refer the customer or applicant to the universal service program of the public utility to determine eligibility for a program and to apply for enrollment in a program.

(4) The medical emergency procedures.

(b) The public utility shall exercise good faith and fair judgment in attempting to enter a reasonable payment arrangement or otherwise equitably resolve the matter. Factors to be taken into account when attempting to enter into a reasonable payment arrangement include the size of the unpaid balance, the ability of the customer to pay, the payment history of the customer and the length of time over which the bill accumulated. Payment arrangements for heating customers shall be based upon budget billing as determined under § 56.12(8) (relating to meter reading; estimated billing; customer readings). If a payment arrangement is not established, the company shall further explain the following:

(1) The right of the customer to file a dispute with the public utility and, thereafter, an informal complaint with the Commission.

> (2) The procedures for resolving disputes and informal complaints, including the address and telephone number of the Commission: Public Utility Commission, Box 3265, Harrisburg, Pennsylvania 17105-3265, (800) 692-7380.
>
> (3) The duty of the customer to pay any portion of a bill which the customer does not dispute.
>
> *§ 56.112. Postponement of termination pending receipt of certificate.*
>
> If, prior to termination of service, the public utility employee is informed that an occupant is seriously ill or is affected with a medical condition which will be aggravated by a cessation of service and that a medical certification will be procured, termination may not occur for at least 3 days. If a certification is not produced within that 3-day period, the public utility may resume the termination process at the point where it was suspended.

In addition, Chapter 14 of the Public Utility Code added requirements to halt disconnection and offer additional payment options to customers who are the subject of a protective order to prevent domestic violence. These rights are also applicable to the interaction between Peoples employees and customers "immediately prior" to disconnection.

Q. HAS PEOPLES PROVIDED ANY TRAINING MATERIALS FOR ITS FIELD PERSONNEL TO DOCUMENT TRAINING AND COMPLIANCE WITH THESE POLICIES?

A. No. When asked to provide such information, the training materials provided by Peoples do not instruct the field personnel on these specific requirements or train the field personnel on the obligation to obtain personal contact and how to handle the various situations in which personal contact is achieved. I attach Peoples Response to OCA-VI-015 with attachments and OCA-XIV-018 with attachments as Exhibit BA-4. There is no documentation that field personnel understand these obligations or that Peoples properly

implements these rights and remedies.[21] Peoples stated, "Peoples does not formally document management's oversight of field compliance with this specific procedural requirement; however overall compliance to Company standard procedures is conducted and documented by management through field observations in conjunction with the Company's Job Site Safety Observation Program." No evidence of training or "observation" on the personal contact requirements was provided.

Q. WHAT IS YOUR RECOMMENDATION IN LIGHT OF THIS CONCERN?

A. Peoples should be required to develop and implement detailed training programs to ensure compliance with the Commission's specific regulations relating to personal contact, particularly with respect to the obligation to attempt personal contact "immediately" prior to actual termination of service. This compliance filing and detailed implementation plan should be filed within 3 months of a final order in this proceeding after consultation and review by stakeholders.

V. PEOPLES' IMPLEMENTATION OF APPLICABLE LANDLORD/TENANT LAW REQUIRES REFORM

Q. PLEASE IDENTIFY YOUR CONCERN WITH PEOPLES' POLICIES WHEN THERE IS A SHARED PREMISE, THAT IS, MULTIPLE TENANTS WITH ONLY ONE METER.

A. According to Peoples' policy, when there is a shared premise, only the owner can obtain service. Peoples defines a "shared premise account" as where one meter serves multiple

[21] Peoples Response to OCA-VI-015 requested the field service training materials to implement these provisions of Chapter 56. The responsive materials did not include any information on these specific obligations or how to implement these requirements. See, also, Peoples Response to OCA-XIV-018 where a further attempt was made to obtain relevant materials.

units. An applicant for service at such a location must present proof of ownership and gas service must be in the owner's name.[22] This policy is consistent with the Commission's rules that protect tenants from foreign load, i.e., paying for load that is not theirs or that is for common spaces, but it raises serious concerns with respect to the implementation of the Discontinuance of Service to Leased Premises Act (DSLPA). I am informed that in situations where a landlord is behind on his payment of the gas bill and facing disconnection of service to the premises, a tenant can obtain service in his/her own name if the property is individually metered even if the owner of the property is not in residence. I understand that if a property has multiple tenants and only one meter, that tenants can retain service by paying the current and future monthly bills. Under DSLPA tenants are protected from a landlord's retaliation for deducting the gas bill from the landlord's rent.

Q. IN LIGHT OF THIS CONCERN, WHAT IS YOUR RECOMMENDATION?

A. Peoples' policies and disclosures to tenants should conspicuously disclose the tenants' rights to remain with gas service under these conditions:

- Peoples should allow tenants to affirmatively request that their personal information not be provided to the landlord/owner.
- Peoples' policies and disclosures should reflect that landlords may not retaliate against their tenants for 1) the tenant exercising their right to pay the utility bill to continue service under the landlord's name, and 2) to recover this payment by deducting the payment from their rental payment.
- Peoples should accept from tenants; medical certificates and protection from abuse

[22] Peoples Response to OCA-VI-015, page 40 of 62. This material is included in Exhibit BA-4.

orders, or court orders issued by a court of competent jurisdiction in the Commonwealth, which provide clear evidence of domestic abuse.

- Peoples should not terminate a landlord/tenant account during the months of December through March for households with income at or below 250% of the federal poverty income guidelines.

VI. PEOPLES PROPOSAL FOR A WEATHERIZATION NORMALIZATION ADJUSTMENT SHOULD BE REJECTED

Q. WHAT ASPECT OF THIS PROPOSAL DO YOUADDRESS?

Q. My testimony is supplemental to that of OCA Witnesses Evard, Mugrace, Johnson, and Colton. The intent of this proposed rate adjustment mechanism is to allow Peoples to change its rates based on a formula that reflects the comparison of its own calculation of the most recent weather to a predetermined baseline. There is no action by the customer that will impact the calculation. The rate adjustment protects Peoples' revenues and provides no obvious benefit to customers. This type of rate adjustment is opaque to customers and likely to be correctly viewed as a benefit to the utility's shareholders outside of a normal rate case. Furthermore, Peoples proposes to not even list this rate adjustment on its bills but rather include it in a change in the customer's "delivery charge."[23] In light of the obvious volatility of weather and ongoing impacts of climate change as well as customer choices about heating systems, it is incumbent on Peoples to engage in purchasing of natural gas supply and implementing its investments in its distribution

[23] Peoples Response to OCA-I-006.

system to ameliorate the impact of more volatile weather on customer bills and rates.

Q. WAS THERE TESTIMONY AT THE PUBLIC INPUT HEARING THAT SUPPORTS YOUR CONCERNS ABOUT THE CUSTOMER ACCEPTANCE OF THIS PROPOSED WEATHERIZATION NORMALIZATION ADJUSTMENT?

A. Yes. Mr. Nick Hoffman testified in opposition to the WNA, suggesting that he did not view this rate adjustment as "neutral," stating, "It seems doubtful that WNA would be revenue neutral because a warmer month does not guarantee a colder month is inevitable. We have been in a warming trend. So it seems we will be paying a new charge for the majority of months it applies, October through May, or 7 of the 12 months in a year."[24]

Q. WHAT IS YOUR RECOMMENDATION CONCERNING THE WNA?

A. I support the recommendation of the previously referenced OCA witnesses that this method by which Peoples can make rate adjustments outside of a base rate case should be rejected. Customers desiring bill stability to mitigate volatility can and should be encouraged to enroll in budget billing. This has far more consumer-friendly impact than a WNA.

VII. PEOPLES' BILL PAYMENT FEES SHOULD BE ELIMINATED FOR PEOPLES GAS CUSTOMERS

Q. DOES PEOPLES CHARGE ADDITIONAL FEES FOR CERTAIN BILL PAYMENT METHODS USED BY ITS CUSTOMERS?

A. Peoples has eliminated additional fees for most payment methods for Peoples Natural Gas Division customers. However, Peoples Gas Division customers are charged $1.95 for credit card payment, $1.95 for "eAccount" payment, and $1.95 for payment via the

[24] Public Input Transcript, March 5, 2024, page 49.

phone/IVR.[25]

Q. WHAT IS YOUR RECOMMENDATION?

A. I agree with Peoples' proposal to eliminate the bill payment fees for Peoples Gas Division customers and include those costs in rates.

VIII. PEOPLES PROGRAM TO INCLUDE NON-BASIC CHARGES FOR AFFILIATED AND UNAFFILIATED PROVIDER PROGRAMS SHOULD BE INVESTIGATED

Q. DOES PEOPLES INCLUDE NON-BASIC CHARGES ON ITS RESIDENTIAL CUSTOMER BILLS?

A. Yes. Peoples bills for "Peoples Protection Program" charges.[26] These programs offer to protect the customer's water and sewer service, gas service line, heating and cooling appliances, and in-house and exterior electric lines. The programs are marketed to Peoples customers with bill inserts.[27] They appear on the Peoples bill under the heading "Non-Basic Service Charges" and are labeled "Peoples Protection Program."[28] While Peoples does not include unpaid "protection program" charges on termination notices, these charges are included in negotiated payment plans with customers.[29]

Q. WHO PROVIDES THESE SERVICES TO PEOPLES' CUSTOMERS?

A. An unregulated affiliate Reliable HomeWorks provides the protection program services.[30] This entity is listed as an unregulated affiliate of Essential Utilities.[31] The website for this

[25] Peoples Response to OCA-VI-010.
[26] Peoples Response to OCA-VI-020.

[29] Peoples Response to OCA-XIV-013
[30] Peoples Response to OCA-XIV-006.
[31] Peoples Response to OCA-VII-006 and attachment.

entity does not identify its affiliation with Peoples or Essential Utilities.

Q. HOW MANY CUSTOMERS ARE ENROLLED IN THESE PROGRAMS AND DOES THE REVENUE REQUIREMENT IN THIS PROCEEDING INCLUDE ANY REVENUES FOR BILLING AND COLLECTING THESE UNREGULATED CHARGES?

A. As of January 1, 2024, Peoples had 65,787 residential customers enrolled in one or more services and Reliable HomeWorks had 16,098 residential customers enrolled in one or more services. There are no revenues related to providing access to Peoples' customer lists or the billing and collection of the services fees for these programs included in the revenue requirement in this base rate case for the test year.[32]

Q. DO YOU HAVE ANY CONCERNS ABOUT THE MARKETING MATERIALS FOR THESE SERVICES?

A. Peoples provided marketing materials that has been sent to its customers.[33] These materials are included in Peoples' customer bills as inserts. The call center also has scripts that market the program to Peoples' customers. The marketing materials emphasize that the customer is "not protected," can incur costs of up to $7,500 or $1,500, depending on the service promoted, and do not inform customers that the prices charges for these services are not regulated by the Commission or that these services are available by other unaffiliated providers. The Reliable HomeWorks materials do not inform the customer of its relationship to Peoples. Customers are enrolled without any signature and are sent the detailed terms and conditions after agreeing to subscribe. Finally, I am concerned that the

[32] Peoples Response to OCA-XIV-008.
[33] Peoples Response to OCA-XIV-009.

program operates with a negative option renewal[34] if the price changes or the initial term is completed.

Q. WHAT IS YOUR RECOMMENDATION?

A. My primary recommendation is that the Commission investigate this program, particularly with regard to whether regulated ratepayers are subsidizing the marketing, billing, and collection of unregulated non-basic services provided by Peoples' unregulated affiliate. Furthermore, there are issues relating to the marketing materials and disclosures that should be further reviewed and evaluated. I also note that the OCA has recently served discovery seeking additional information in an attempt to confirm whether ratepayers are subsidizing services as part of this case. I have not received a reply to the discovery in the time necessary to review it and to incorporate it into my testimony , and therefore I reserve the right to supplement my position on this matter if necessary.

IX. PEOPLES CUSTOMERS SERVED BY NATURAL GAS SUPPLIERS ARE CONTRIBUTING TO OVERDUE BILLS AND BAD DEBT CHARGES.

Q. PLEASE DESCRIBE THE DATA PROVIDED BY PEOPLES CONCERNING THE BILL IMPACTS OF ITS CHOICE PROGRAM FOR NATURAL GAS SUPPLY SERVICE.

A. As of December 2023, 80,325 residential customers were served by a Natural Gas Supplier (NGS). Those customers typically pay more than default service and in May 2023 and

[34] The term "negative option renewal" refers broadly to a category of transactions where the subscription or service contract will automatically continue or renew unless the consumer takes an affirmative action to prevent it from continuing or renewing.

December 2023, 99% of the shopping customers were paying more than default service with 86% paying twice as much for gas supply compared to default service. I am concerned that these shopping customers are contributing to overdue bills that result in credit and collection costs, such as customer call center activity, negotiation and collection of payment arrangements, and termination of service. I attach the Peoples Response to OCA-VI-21, VI-22, and VI-24 as Exhibit BA-5.

Q. WHY IS THE IMPACT OF NATURAL GAS SUPPLIER CHARGES IMPORTANT TO ADDRESS IN THIS RATE CASE?

A. The impact should be addressed in this case because it has a clear and demonstrable impact on customers' bills by making them more expensive. The impact is explained more thoroughly by witness Roger Colton in OCA Statement 6, as he explains that unaffordable bills result in collection costs and uncollectible expenses that are ultimately passed on to other ratepayers. These prices above default service price contribute to unaffordability for residential customers generally and lower income customers specifically due to increased collection costs and potential write offs. Thus, I believe that Peoples has an obligation to mitigate such costs, and my recommendations here are targeted to ensuring that Peoples begin to take steps towards mitigation.

Q. WHAT IS YOUR RECOMMENDATION?

A. First, I recommend that Peoples conduct consumer education to its customers to alert them when they are paying more for service than default service. The goal here is to ensure that these customers are aware of this fact so they can decide what action to take. They may be paying more because they want to do so, but more likely it is out of inattention to an

expiring contract. This would allow customers the ability to choose whether to renegotiate their contract with their supplier, shop and choose another supplier, or return to default service. There is no preordained outcome that "should" result from this education other than ensuring that customers are aware of the price that they are paying. Second, Peoples' bills should more clearly reflect that the customer is paying for service and whether it is higher of lower than the default service price. This is another way to accomplish the goal of educating customers. Once way to do this is for Peoples to calculate what the bill would be under default service. For customers with lower priced supply contracts this will ensure a positive reinforcement that they are saving money through their NGS. For customers with a higher priced supply contract, it will ensure that these customers are aware of this fact and allow them to make an informed decision about their options.

X. PEOPLES' PROPOSAL FOR ADDITIONAL PROFITS IN ITS RATE OF RETURN SHOULD BE REJECTED.

Q. DOES ANY PERFORMANCE AS YOU HAVE PRESENTED ABOVE JUSTIFY ADDITIONAL PROFITS IN THE FORM OF A MANAGEMENT PERFORMANCE ADDER TO THE RATE OF EQUITY?

A. No. Ratepayers should not pay additional profits to a public utility for maintaining a level of customer service quality and customer performance for the call center, billing, and meter reading that was promised as a result of commitments made in prior proceedings. There is no evidence of above average performance. Furthermore, I have identified a number of areas in which Peoples' current performance requires significant improvement and my recommendations have identified conditions for approval of any rate increase in this

proceeding. As a result, there is no basis to support any reward in the form of higher profits due to "management efficiency" as requested by Peoples in this request to increase base rates.

Q. IS THERE ADDITIONAL EVIDENCE THAT SUPPORTS YOUR RECOMMENDATION RELATING TO HOW PEOPLES NOTIFIED ITS CUSTOMERS OF THIS RATE INCREASE?

A. Yes. Peoples sent the same public notice of this rate case to all its customers without separating the notices to its two divisions even though the bill impacts differ between those two divisions. I am attaching Peoples notices, as provided in response to OCA I-002, as Exhibit BA-6. I found this particularly concerning since customers would have to call the Company to figure out which of the bill impact notices applied to their service. While in the future the Company's' proposal to unify tariffs for its two districts, assuming that is approved, will not require anything other than a single public notice, I bring this to the Commission's attention in light of Peoples' request for an additional profit in this case for management performance.

Q. ASIDE FROM THE NOTICE ISSUE YOU IDENTIFIED, IS THERE OTHER EVIDENCE IN THIS CASE THAT DEMONSTRATES THAT CUSTOMERS' ACCESS TO IMPORTANT INFORMATION IS LIMITED?

A. Yes. During the March 6 public input hearing held in this case at 6 p.m., Peoples' customer Mark Krenitsky testified that Peoples' customer service access by phone ends at 5:00 p.m., making it hard for customers who work to have time to call due to the limited hours. Mr.

Krenitsky also testified that having customer service access by phone until 7:00 p.m. would make calling more accessible for those who work and be consistent with the customer service hours that his other utility provider maintains.[35] I reviewed Peoples' website and it confirmed that customer service center hours were limited to Monday through Friday, from 7 a.m. through 5 p.m.[36] In my opinion, limiting the live customer service hours for customers to traditional "business hours" imposes a barrier upon access to customer service. The time limitations that Peoples imposes upon live customer service access are inconsistent with the any type of customer service performance that warrants ratepayers paying a premium for "management performance."

Q. DO YOU HAVE A RECOMMENDATION CONCERNING THE CALL CENTER HOURS?

A. Yes. I recommend that Peoples conduct an evaluation of the potential for extending the call center hours to accommodate customers who are employed during normal business hours. This evaluation should consider changes in staffing levels to reflect the volume of calls during the call center hours and implement expended business hours when the Company determines that this can be done with reasonable costs.

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes. However, I reserve the right to supplement this testimony for pending discovery responses.

Prior Employment

DIRECTOR

1986-96

Consumer Assistance Division

Maine Public Utilities Commission *Augusta, Maine*

One of five division directors appointed by a three-member regulatory commission and part of commission management team. Direct supervision of 10 employees, oversight of public utility consumer complaint function, appearance as an expert witness on customer services, consumer protection, service quality and low income policy issues before the PUC. Chair, NARUC Staff Subcommittee on Consumer Affairs.

SUPERINTENDENT

1979-83

Bureau of Consumer Credit Protection
Department of Professional and Financial Regulation *Augusta, Maine*

Director of an independent regulatory agency charged with the implementation of Maine Consumer Credit Code and Truth in Lending Act. Investigations and audits of financial institutions and retail creditors, enforcement activities, testimony before Maine Legislature and U.S. Congress.

Education

JURIS DOCTOR

1973-76

University of Maine School of Law *Portland, Maine*

Admitted to the Bar of the State of Maine, September 1976. Currently registered as "inactive."

B.A. (WITH DISTINCTION) IN POLITICAL SCIENCE 1964-68

EXHIBIT BA-3

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XIV-021-(U)

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: The materials provided in response to OCA-VI-013 reflected non-compliance matters relating to the safety and operation of the natural gas distribution service. Please provide the notices and communications with the results implemented by Peoples that were received from the Commission with regard to BCS complaint investigations, notices of justified complaints, complaint infractions, or decisions on formal complaints since January 1, 2021.

Answer: Please note this is a supplemental response to the originally submitted response to OCA-XIV-21. The original question was interpreted as only being related to the NC letters referenced.

Bureau of Consumer Services activities and citations are provided in response to a number of interrogatories including:

• Response to OCA III Question 9 includes all citations received from BCS in 2023, along with the Company’s actions taken as a result of the infraction.

• Response to OCA VI Question 4, part 'k' provides a monthly count of informal BCS complaints for the period January 1, 2022 through December 31, 2022.

• Response to OCA VI Question 4 part 'n' provides a monthly count of infractions as determined by BCS.

• Response to OCA VI Question 14 includes description of Company’s root cause analysis process along with historical examples of each type of action.

Refer to the attachment for 2022 citations, which similarly to 2023, includes the actual citation notification from BCS, followed by the Company's action taken as a result of the citation.

BCS CASE NUMBER: 3823658	CASE OPEN DATE: 3/17/2022
UTILITY: Peoples Natural Gas (NGDC) FKA Dominion Peoples	COMPLAINANT: [redacted]
UTILITY CONTACT/ADDRESS: Rita Urbaniak Peoples Natural Gas 375 North Shore Drive Pittsburgh PA 15212	COMPLAINANT ADDRESS: [redacted]
ACCOUNT NUMBER: [redacted]	

Based on the informal investigation, BCS is recording the following informally verified infractions.

INFRACTION: 56.163(1)
DATE OF OCCURRENCE: 3/21/2022
DESCRIPTION: 56.163(1): THE REPORT SUBMITTED TO THE BUREAU OF CONSUMER SERVICES WAS NOT PROVIDED IN A TIMELY MANNER OR DID NOT INCLUDE ALL RELEVANT MATERIAL REQUIRED BY STAFF AS THE REPORT DID NOT INCLUDE INFORMATION as to when the service was re-established into the customer's name, after it went from Dion Peoples to the Landlord William Fabina's names. Also, the Company did not include copy of the rebill/make-up bill sent to the customer, i.e. for service from 12/6/2021 - 2/4/2022 when the service finalized from Dion Peoples' name, or until (((unknown date))) when it was taken out of LL's name, and put back again into the customer's name, respectively.

CORRECTIVE ACTION: 56.163(1) Reviewed with agent and sent to credit manager for review/correction.

Bureau of Consumer Services

Notification of Informally Verified Infraction

Faxing/Mailing Date: 1/20/2022

BCS CASE NUMBER: 3815127	CASE OPEN DATE: 11/29/2021
UTILITY: Peoples Natural Gas (NGDC) FKA Dominion Peoples	COMPLAINANT: [redacted]
UTILITY CONTACT/ADDRESS: Rita Urbaniak Peoples Natural Gas 375 North Shore Drive Pittsburgh PA 15212	COMPLAINANT ADDRESS: [redacted]
ACCOUNT NUMBER: [redacted]	

Based on the informal investigation, BCS is recording the following informally verified infractions.

INFRACTION: 56.191(c)(2)(iv)
DATE OF OCCURRENCE: 11/19/2021
DESCRIPTION: 56.191(C)(2)(IV): THE UTILITY FAILED TO PROPERLY AMORTIZE OVER 24 MONTHS RECONNECTION AMOUNTS FOR A CUSTOMER OR APPLICANT AT OR BELOW 150% OF POVERTY.

CORRECTIVE ACTION: 56.191 (c) (2) (iv) Reviewed and provided training on business process.

BCS CASE NUMBER: 3841168	CASE OPEN DATE: 5/26/2022
UTILITY: Peoples Natural Gas (NGDC) FKA Dominion Peoples	COMPLAINANT: [redacted]
UTILITY CONTACT/ADDRESS: Rita Urbaniak Peoples Natural Gas 375 North Shore Drive Pittsburgh PA 15212	COMPLAINANT ADDRESS: [redacted]
ACCOUNT NUMBER: [redacted]	

INFRACTION: TITLE66.1501
DATE OF OCCURRENCE: 5/26/2022
DESCRIPTION: 66.1501 THE COMPANY FAILED TO MAINTAIN ADEQUATE, EFFICIENT, SAFE AND REASONABLE SERVICE AND FACILITIES AND/OR MAKE REPAIRS NECESSARY FOR THE ACCOMMODATION, CONVENIENCE AND SAFETY OF THE CUSTOMER.

INFRACTION: 56.163(1)
DATE OF OCCURRENCE: 6/7/2022
DESCRIPTION: 56.163(1): THE REPORT SUBMITTED TO THE BUREAU OF CONSUMER SERVICES DID NOT INCLUDE ALL RELEVANT MATERIAL REQUIRED BY STAFF AS THE REPORT DID NOT INCLUDE INFORMATION REGARDING THE NUMBER OF NO GAS COMPLAINTS FILED BY THIS CUSTOMER FOR THE LAST TWO YEARS, THE LENGTH OF TIME HE WAS WITHOUT SERVICE EACH TIME, AND THE CAUSE FOR THE LOSS OF SERVICE.

Action: Title66.1501 Operations made aware of this complaint. The Gas Operations Supervisor worked with the customer throughout winter regarding service interruptions. Peoples did take steps in attempt to alleviate the situation for the customer – such as installing a drip. The permanent fix was a main line replacement.

56.163(1) Complaint reviewed verbally with the Customer Relations Department regarding responses to these types of complaints.

Bureau of Consumer Services

Notification of Informally Verified Infraction

Faxing/Mailing Date: 9/16/2022

BCS CASE NUMBER: 3859717	CASE OPEN DATE: 8/24/2022
UTILITY: Peoples Gas Company (fka Peoples TWP)	COMPLAINANT: [redacted]
UTILITY CONTACT/ADDRESS: K. Englert Peoples TWP 375 North Shore Drive Pittsburgh PA 15212	COMPLAINANT ADDRESS: [redacted]
ACCOUNT NUMBER: [redacted]	

Based on the informal investigation, BCS is recording the following informally verified infractions.

INFRACTION: 56.36(b)(1) DATE OF OCCURRENCE: 8/24/2022 DESCRIPTION: 56.36(B)(1) : THE COMPANY DENIED CREDIT TO AN APPLICANT BUT FAILED TO INFORM THE APPLICANT IN WRITING OF THE REASON(S) FOR THE DENIAL.

COMPANY ACTION: 56.36(b)(1) Verbal review with representative completed. Rules surrounding denial letters are reinforced throughout the year.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VI-014

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: Provide documents that reflect a root cause analysis of customer complaints undertaken since January 1, 2021.

Answer: Peoples thoroughly reviews every BCS informal complaint to determine the root cause of the complaint. The compliance specialists are expected to not only prepare a response to the specific complaint, but to also determine the root cause of the complaint. This root cause analysis may require action in a number of ways: 1) individual coaching for a Customer Operations employee; 2) mass reinforcement training to Customer Operations team members; 3) company process change needed; 4) system enhancement needed.

Coaching opportunities for individual agents are provided every Monday to the Customer Operations leadership team. The weekly spreadsheet includes details such as the date the error occurred, the representative/application/process involved in the error, and a summary of the issue. An example is provided in the attachment.

The attachment also provides an example of a system enhancement need that was identified through root cause analysis of a BCS citation regarding denial letters which took place in early 2023.

In some cases, the Company collaborates directly with BCS on root cause analysis. In the example provided in the attachment under the heading 'Collaboration and Process Changes' Peoples responded to an infraction received regarding mailing address changes by meeting with members of BCS staff (Matt Hrivnak and Bobbi Anderson) to discuss best practices of other utilities, resulting in an updated procedure with Customer Operations. The attachment contains more details on this situation, including the citations.

Because root cause analysis is an informal process for all incoming BCS complaints, the Company does not have a root cause analysis tracker or report identifying historical actions taken as a result of these findings.

Submit Date: 2/12/2024

Attachment to OCA-VI-14

Examples of root cause analysis actions, as described in response to OCA-VI-14.

- **Weekly Coaching Opportunities**
  Each week the compliance department distributes a weekly coaching opportunity document to outside departments. This document includes details such as the date the error occurred; the representative/application/procedure involved in the error and a summary of what occurred.

Compa	Date Added to Tracke	Date of Error	Person reportin g Erro	Discovered via	Business Agreement No. and Customer Name	Employee or System/App /Procedure involved	Supervisor Last Nar	Category	Comments
PNG	10/24/2023	10/17/2023		PAR				Credit - Denial Letter	DOS letter not sent
PNG	10/24/2023	10/20/2023		PAR				Credit - Denial Letter	DOS letter not sent
PNG	10/24/2023	10/20/2023		PAR				Credit - Denial Letter	DOS letter not sent
PNG	10/24/2023	10/20/2023		PAR				Credit - Reconnection	Reconnection quote not recorded/Customer was referred to LC, LX, and DEF with Level 2 Income
PNG	10/25/2023	10/9/2023		PAR				Credit - Reconnection	Referred Level 2D to LIHEAP
PNG	10/25/2023	10/9/2023		PAR				Credit - Medical	Advised of medical option past final bill due date
PNG	10/25/2023	10/9/2023		PAR				Credit - Denial Letter	DOS is missing address/meter information, and contains incorrect information for reconnecting service (not eligible for LIHEAP or medical)
PNG	10/25/2023	10/10/2023		PAR				Credit - Denial Letter	Corrected DOS not sent as noted in IR.
PNG	10/26/2023	10/23/2023		PAR				Credit - Denial Letter	DOS letter not sent

- **System Enhancement**
  On 01/26/23 a citation was received as the issued denial letter did not specify the customer's name under which the balance accrued. In February an update to our denial letter format was completed to include this information on the credit denial letter when applicable

- **Collaboration and Process Changes**
  Peoples received infraction below 56.91(a) for failure to provide a 10 day notice to customer. Peoples attempted to defend this citation. A prior 10 day termination which was sent to the service address had been returned to Peoples from the postal office with a return sticker with updated mailing address. Peoples used this mailing address to send future correspondence. No additional correspondence was returned however customer stated not receiving mail.

  July 2023 Peoples compliance supervisor and director met with PUC to discuss how best to better process and avoid issue in the future.

  In August 2023 a procedure change was created.

INFRACTION: 56.81
DATE OF OCCURRENCE: 4/19/2023
DESCRIPTION: 56.81: THE UTILITY THREATENED TO TERMINATE SERVICE, OR TERMINATED SERVICE, WITHOUT FIRST ESTABLISHING GROUNDS FOR TERMINATION FOUND IN THIS SECTION.

INFRACTION: 56.91(a)
DATE OF OCCURRENCE: 4/19/2023
DESCRIPTION: 56.91(A): THE UTILITY FAILED TO PROVIDE A 10-DAY NOTICE OF TERMINATION.

The 4/19/2023 infraction of 56.91(a) has been removed from the informal record.

The 4/19/2023 infraction of 56.81 will remain verified in the informal record, as even though the utility followed their own procedure for changing an address, this customer did not request the address change. The notice was mailed to an address other than the customer's service address, which prevented this customer from receiving the written notification prior to the termination of service.

EXHIBIT BA-4

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VI-015

Witness: Thomas, Robert **Title:** Field Customer Service Director

Question: Provide the field service training associated with collections and termination of service.

Answer: All Peoples Field Customer Service Technicians are required to complete a four-hour training course focusing on collections and the associated termination of service as part of the basic Field Customer Service Operator Qualification program. This course entails an introduction to the credit-related programs and literature that are available to customers. This course also emphasizes the Company standard procedures related to terminating services. Please refer to the training materials attached.

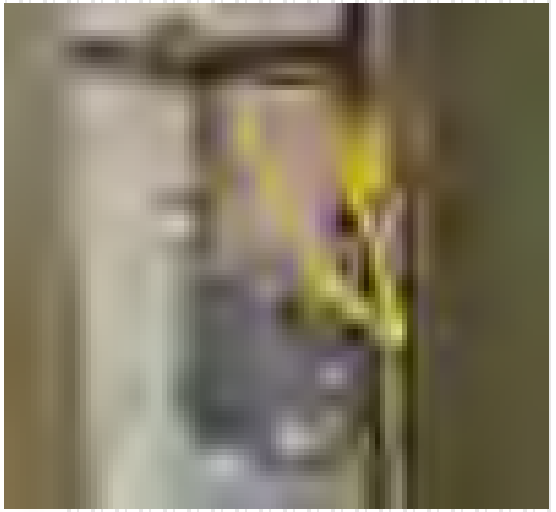
THEFT OF SERVICE



PEOPLES℠

Restoring Service (Outside/Inside Meter Set)

Service is Found On at Meter and Customer is Home

- Obtain Actual Meter Reading
- Contact Operations Center to Verify Gas should be Off
- Take Picture of Lock Stop in On Position (Lock Stop Not Damaged)
- Contact Theft Department and Report Findings while on site.
- Follow Job Procedure 508 – Meter Turn On

If Lock Stop is Damaged, follow same sequence and replace the damaged Lock Stop.

Restoring Service (Outside Meter Set)

Service is Found On at Meter and Customer is Not Home

- Obtain Actual Meter Reading
- Contact the Operations Center to Verify Gas should be Off.
- Take Picture of Lock Stop in On Position (Lock Stop Not Damaged)
- Contact Theft Department and Report Findings while on site.
- Turn Off Gas and Complete an Outside Safety Check.
- Post Door Card

If Lock Stop is Damaged, follow same sequence and replace the damaged Lock Stop.

Meter of Record Not at Location

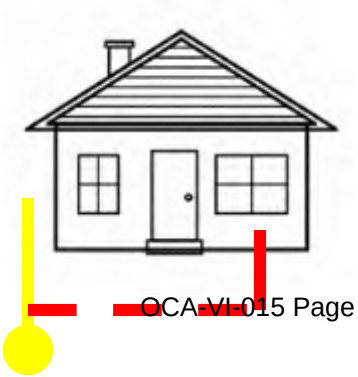
- Record Meter Number and Obtain Actual Meter Reading.
- Contact the Operations Center to Verify Meter Number.
- Contact Theft Department and Report Findings while on site.
- Reclaim Meter Found.
- Install New Meter Job Procedure 520
- Restore Service Job Procedure 508

Meter Found Off and Pinlocked (Single Meter) Gas Appliance Operating

- Turn Off all Appliance Valves
- Turn Off Gas at Curb Stop
- Drop Meter and Verify Lock Stop has Not been Drilled Out.

If Lock Stop has **Not been Drilled Out.**

- Cap Off Service Line Riser
- Turn Gas On at Curb Valve
- Verify if there is Gas at the Appliances
- If Gas is Verified at the Appliances, Possible Underground By-Pass
- Contact Theft Department while on Site and Report Findings.



Meter Found Off and Pinlocked (Multiple Meter Set) Gas Appliance Operating

- Check for Inter-Connect between House Line Piping
- If Inter-Connect is found, take Picture
- Contact Operations Center and Theft Department and report findings.

Meter Index Tampering

- Ensure Red Index Caps are Installed.
- Check for Damaged Meter Index Dials
- Check for Magnets on ERT'ed Meters (this could effect electronic reading).

Meter Change
(Gas Found Coming Out of Outlet Piping)

- Possible Inter-Connect with House Line
  (Multiple Meter Sets)
- Free Gas Customer?
- Possible Underground By-Pass.

Commercial Meters

- If the customer's meter is obstructed and a visual assessment of the meter can't be made for an extended period, suspect gas theft.

- Numerous account name changes to avoid a usage history and detection

Commercial Meter Set
(Company By-Pass Installed)

- Ensure Company By-Pass is Off and Locked.
- Visually Inspect By-Pass for Possible Tampering
- Verify Lock is properly Engaged

Production/Producer Meters

- Electronic corrector tampering. Verify parameters are set correctly for the corrector. 10 cf vs 100 cf., pressure are examples.
- Watch for a pattern of missing correctors in and area.
- Underground by-pass installed.
- Increase random visits to all PO's
- Chart integration; Ensure the correct chart is installed. Volume measurement is correctly set, 10 cf. vs. 100 cf.
- Volume of gas passing through meter increases unexpectedly.
- Excessive changing of producer's name on account.

Production/Producer Meters

- Action Items
  - Increase random visits to all PO sites thought to be involved with theft
  - Zero tolerance for gas theft involving producers
  - Focus on producers caught with repeated guideline violations.

PEOPLES

MYTHS AND STEREOTYPES

- People on limited and fixed incomes have to make difficult decisions regarding money and face judgement from others.
- Many people who do not live in poverty blame the poor for their circumstances.
- Myths and stereotypes negatively impact those living in poverty.

PEOPLES

MYTHS AND STEREOTYPES

- Myths: True or False?

The poor are unmotivated and have weak work ethics.

Social mobility is possible by working hard.

People on welfare stay on welfare.

Poor people have more children to get more welfare.

Poverty is a minority issue.

Poor people tend to abuse drugs and alcohol.

MYTHS AND STEREOTYPES

- The Reality
  - Two thirds of people living in poverty work an average of 1.7 jobs and 83% of children from low income families have at least one employed parent.
  - The current economy requires workers to be more skilled than in the past and jobs for unskilled workers don't pay enough. Also, many can't afford the cost of a secondary education.
  - More than half of those receiving assistance stop receiving assistance after a year.
  - Poverty is not solely a minority issue. Poverty affects people of all races.
  - Poor people are no more likely to abuse alcohol or drugs.

WORKING WITH LIMITED INCOME CUSTOMERS

- Sensitivity
- Understanding
- Avoid assumptions and labeling
- Avoid labeling
  - Our customers call because there is a need.
  - What is their need?
  - How can we help?

PEOPLES

Summary

- A great number of people live in poverty and many are the customers we serve.
- Myths about poverty create barriers.
- Understanding poverty helps us to provide assistance to the limited income customers we serve.
- Our programs provide a safety net and give us the tools to help customers.

Questions and Answers

Thank you!

PEOPLES

Credit Overview

Collections Supervisor, Arlee Ando

User Without a Contract (UWO)

- Initiated by the company
- Purpose of posting is to determine if an occupant is using gas service without establishing an account
- 72 hour posting (business days)
- Reasons why we might post UWO:
  - The company is made aware that the customer is deceased
  - The company receives return mail
  - The company is made aware, through a third party (for example, a neighbor) that the customer of record no longer resides at the premise

10 Day Discontinuance

- Initiated by the current customer
- Purpose of the posting is to give an occupant the opportunity to open an account to avoid interruption of service
- "Will anyone be affected when we shut off the service at this property?
- Reasons why we might post a 10 Day Discontinuance:
  - Landlord of a single family premise (not a shared premise) has a new tenant that has not applied for service
  - Customer is moving out and a roommate of theirs will be staying
  - Customer is moving out and their ex-significant other is staying
- Posted for 10 calendar days

30 Day Discontinuance

- Initiated by the current customer
- Purpose of the posting is to give new owner time to transfer the gas service to their name
  - Can also be used when property is vacant and owner wants to shut off service
  - Tenants must be notified 30 days prior to gas being shut off
- Shared Premise only
  - One meter services multiple units
  - Shared premise requires gas service be in the **owner's name** only
- Reasons why we might post a 30 Day discontinuance
  - Property is switching ownership
  - Property is vacant
  - Property is being demolished
- Posted for 30 calendar days

Termination Process

Residential Term Process (DNP)

- Account must be at least 10 days in arrears and bal >= $120
  - CAP customers must be at least 5 days in arrears and 2 CAP payments behind
- 10 Day Termination Notice is issued
- 2 attempts at personal contact by phone are made 4 business days after term notice is sent
  - If invalid phone number/no contact made a 72 hour posting w/o is dropped
- 72 hours after personal contact is completed a DNP w/o is dropped

Comm/Industrial Term Process (DNP)

- Account must be at least 10 days in arrears and balance >=$120
- 5 Day Termination Notice is issued
- 2 attempts at personal contact are made 2 business days after term notice is sent
  - If invalid phone number/no contact made the a 72 hour posting w/o is dropped
- 72 hours after personal contact is completed a DNP order will drop

Landlord Term Process (37 Day)

- Shared Premise accounts only
  - One meter serves multiple units
  - Ex: apartment building, duplex with one meter, comm space with apartment above and only one meter
  - service at a shared premise is required by law to be in the name of the property owner
- Must be 10 days in arrears and balance >=$300
- Sent to collections group for review through a manual work item
- 37 Termination notice issued and work item completed in SAP
  - Sent first class and certified mail
- 6 calendar days after term- LL1 and LL2 posting w/o drop
  - Notices will be posted in common areas to notify tenants of pending termination
  - One of the notices must be posted after 6 pm or on a weekend
- 30 calendar days after LL1/LL2 completed a DNP w/o drops

Landlord Term Process (37 Day)

- Shared Premise accounts only
  - One meter serves multiple units
  - Ex: apartment building, duplex with one meter, comm space with apartment above and only one meter
  - service at a shared premise is required by law to be in the name of the property owner
- Must be 10 days in arrears and balance >=$300
- Sent to collections group for review through a manual work item
- 37 Termination notice issued and work item completed in SAP
  - Sent first class and certified mail
- 6 calendar days after term- LL1 and LL2 posting w/o drop
  - Notices will be posted in common areas to notify tenants of pending termination
  - One of the notices must be posted after 6 pm or on a weekend
- 30 calendar days after LL1/LL2 completed a DNP w/o drops

Medical Certificates

- If a customer has a medical necessity for gas service we will send a Medical Certification Form to their doctor so that the doctor can certify the need for gas service
- If gas is on we provide the customer 5 days to have the form signed and returned by their doctor
- If doctor certifies gas service is medically necessary a 30 day hold will be added to the customer account
  - Customer still has obligation to pay bill during this time as account will go back into termination once hold expires if it is not brought current

Medical Certificates

- If a customer has a medical necessity for gas service we will send a Medical Certification Form to their doctor so that the doctor can certify the need for gas service
- If gas is on we provide the customer 5 days to have the form signed and returned by their doctor
- If doctor certifies gas service is medically necessary a 30 day hold will be added to the customer account
  - Customer still has obligation to pay bill during this time as account will go back into termination once hold expires if it is not brought current

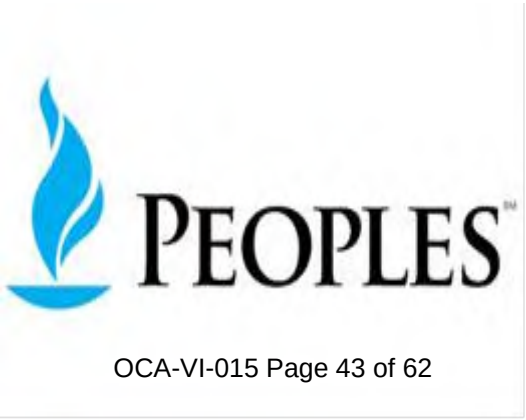
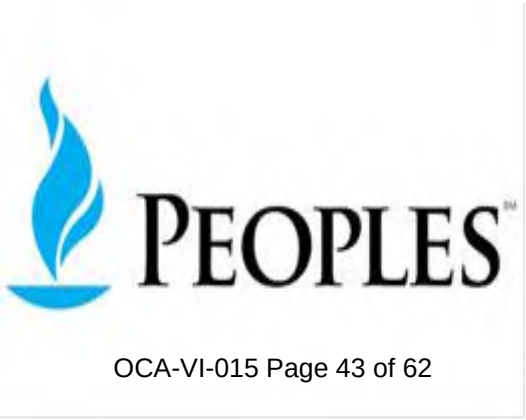
Peoples Programs to Help Customers

Presentation For FCS 3/22/2023



Peoples Programs to Help Customers

Presentation For FCS 3/22/2023



Safe Comfort Programs

- Peoples offers a number of programs for its limited income, special needs customers
  - Customer Assistance Program (CAP)
  - Low Income Usage Reduction Program (LIURP)
  - Customer Assistance Referral and Evaluation Services (CARES)
  - Gatekeeper Program
  - Low Income Home Energy Assistance Program (LIHEAP)
  - LIHEAP/Crisis (Emergency Assistance)
  - Dollar Energy Fund grant (DEF)
  - Helps At Peoples Now (HAPN) 412.208.6850

Customer Assistance Program (CAP)

- CAP is a special payment plan for low-income, payment troubled customers at or below 150% of the federal poverty level. (E-CAP at or below 200% with account balance, termination notice or broken payment agreement)
- The program is funded by ratepayers and administered by the Company
- Ratepayers who qualify pay 4%, 5%, 6% or 11% of their monthly gross income for natural gas service or their budget amount if lower than payment based on income
- Customers receive monthly CAP credits when the usage bill is higher than the CAP payment
- CAP customers are exempt from late payment fees and security deposits
- Administered by Dollar Energy Fund

CAP Payment Plan

- The CAP payment is based on household size and monthly income
- The monthly income times 4,5,6 or 11 percent equals the minimum monthly payment

Federal Poverty Status	Percent of Income
0-50%	4%
51-100%	5%
101-150%	6%
151-200%	11%

- **In addition to meeting income guidelines, 2D customers must also have a balance of $800 or more**
- If the calculated CAP amount exceeds the monthly budget amount, the budget amount will be accepted as the CAP payment

CAP Agreements

Customers enrolled in CAP agree to:

- Pay the monthly CAP payment on time
- Enroll, if eligible, in the Company's weatherization program
- Apply for LIHEAP, Crisis and DEF.
- Report changes in income &/or family size within 30 days
- Provide meter reading access at least quarterly
- Recertify annually/LIHEAP recipients recertify every 2 years

CAP Enrollment

- CAP enrollment is currently open and not limited to a specific number of participants.
- Arrearage Forgiveness
  - Pre-program CAP arrears are forgiven monthly (1/36 of their pre-CAP balance is credited each month when they make their CAP payment.

CAP Benefits

- Customer CAP benefits-True/False
  - Affordable monthly payments, based on ability to pay
  - Monthly CAP credits
  - Monthly arrearage forgiveness
  - Exemption from late payment char
  - Security deposit exemption

Low Income Usage Reduction Program (LIURP)

Low Income Usage Reduction Program (LIURP)

- LIURP

  A PUC mandated program designed to help limited income customers with high gas usage to reduce consumption

  The free program offers installation of weatherization measures and repairs to existing housing for limited-income families, provided that the home is in satisfactory condition. The program offers consumer education programs in conjunction with weatherization efforts, to educate customers on how to conserve energy

  Peoples implements the program through a contract with CLEAResult

LIURP

- Who qualifies:
  - Single family homes with residential heat
  - 12 consecutive months of gas service
  - Annual household income must be at or below 150 % of the FPL
    - some exceptions for special needs will be made, up to 200% of the FPL
  - Must be home owner or have landlord permission
  - CAP customers are prioritized
  - Customer usage must be 140 MCF/YR (Peoples and PEGC) and 120 MCF/YR (PTWP) or greater per year

LIURP

The most common weatherization measures are:

- *Home Energy Audit*

  Detailed walk through of the house to help understand the home's deficiency and directs to improve so that it will give the home owner the most savings, comfort and safety. The audit can help save a homeowner 20-30% or more on their heating and cooling cost
- *Heating system improvements and replacement*

  Tune up, minor repairs and retrofits when necessary, the company installs 92 % plus efficiency furnaces
- *Insulation*

  The program offers attic insulation, sidewall, knee –wall, sill plate and other types of insulation

LIURP

- *Infiltration (areas where cold leaks in)*

  Caulking, weather stripping, door sweeps, switch & outlets gaskets, sealing unused fire places, construct doors or repairs.
- *Hot Water Treatment*

  Includes tank wraps, pipe insulation.
- *Conservation education*

  Once the installment of the measures is performed, the educational contractor visits the customer to provide education and conservation tips

Emergency Furnace/Line Repair Assistance

- Peoples provides emergency furnace and line repair assistance to homeowners experiencing issues with the heating system or gas line leak failure

Requirements:

- ✓Home owner
- ✓Income within 200 for the FPL

Customer Assistance Referral and Evaluation Services (CARES)

Customer Assistance Referral and Evaluation Services (CARES)

The CARES program provides comprehensive services for customers who have a true inability to pay their gas bills and have special needs such as:

- Serious medical condition
- Mental health condition
- Learning disability
- Recent unemployment
- Single parent issues
- Recent change in marital status
- A protection for abuse order (PFA)

CARES

The program offers:

- Comprehensive assessment, referrals and assistance.
- Enrollment and assistance to apply for available energy assistance programs
- Partnering with social agencies to provide joint services to solve customer issues
- Assistance to customers in applying for community resources
- Home visit assessments in severe situations i.e. homebound customer unable to communicate by phone, unable to read etc
- Account monitoring to prevent termination of service

Gatekeeper Program

- The Gatekeeper program is a part of the CARES program and is designed to aid older adults who need help, but may not be able to access it themselves
  - Employees are trained to recognize certain danger signals in the elderly such as: change in behavior, signs of confusion or disability
  - Older adults and those with special needs can receive additional help
- Gatekeepers are:
  - Customer Service personnel
  - Meter Readers
  - Any other Customer Contact Personnel
  - Social Agency Case Worker

Gatekeeper Program

The program offers:

- The program offers the same benefits as the CARES program
- The Customer Relations Specialists will work closely with the referral source to obtain information regarding the case
- In severe cases, a termination hold will be placed on the account

LIHEAP, LIHEAP Crisis, Dollar Energy Fund and Third Party Payments

Thank you!

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XIV-018

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Provide the field training materials that instruct the field personnel on the implementation of 52 Pa. Code Sec. 56.334 and identify and provide documents that reflect management’s oversight of field personnel compliance with this and related provisions if the field agent obtains contact with a responsible adult at the premises prior to termination of service.

Answer: Attached are the field training materials that instruct the field personnel on the implementation of 52 Pa. Code Sec. 56.334. Peoples does not formally document management's oversight of field compliance with this specific procedural requirement; however, overall compliance to Company standard procedures is conducted and documented by management through field observations in conjunction with the Company's Job Site Safety Observation program.

Submit Date: 3/5/2024

Credit Overview

Collections Supervisor, Arlee Ando

Postings

- User Without a Contract
  10 Day Discontinuance
  30 Day Discontinuance

User Without a Contract (UWO)

- Initiated by the company
- Purpose of posting is to determine if an occupant is using gas service without establishing an account
- 72 hour posting (business days)
- Reasons why we might post UWO:
  - The company is made aware that the customer is deceased
  - The company receives return mail
  - The company is made aware, through a third party (for example, a neighbor) that the customer of record no longer resides at the premise

10 Day Discontinuance

- Initiated by the current customer
- Purpose of the posting is to give an occupant the opportunity to open an account to avoid interruption of service
- “Will anyone be affected when we shut off the service at this property?
- Reasons why we might post a 10 Day Discontinuance:
  - Landlord of a single family premise (not a shared premise) has a new tenant that has not applied for service
  - Customer is moving out and a roommate of theirs will be staying
  - Customer is moving out and their ex-significant other is staying
- Posted for 10 calendar days

30 Day Discontinuance

- Initiated by the current customer
- Purpose of the posting is to give new owner time to transfer the gas service to their name
  - Can also be used when property is vacant and owner wants to shut off service
  - Tenants must be notified 30 days prior to gas being shut off
- Shared Premise only
  - One meter services multiple units
  - Shared premise requires gas service be in the **owner's name** only
- Reasons why we might post a 30 Day discontinuance
  - Property is switching ownership
  - Property is vacant
  - Property is being demolished
- Posted for 30 calendar days

Termination Process

- Residential
  Commercial/Industrial
  Landlord/37 Day

Residential Term Process (DNP)

- Account must be at least 10 days in arrears and bal >= $120
  - CAP customers must be at least 5 days in arrears and 2 CAP payments behind
- 10 Day Termination Notice is issued
- 2 attempts at personal contact by phone are made 4 business days after term notice is sent
  - If invalid phone number/no contact made a 72 hour posting w/o is dropped
- 72 hours after personal contact is completed a DNP w/o is dropped

Comm/Industrial Term Process (DNP)

- Account must be at least 10 days in arrears and balance >=$120
- 5 Day Termination Notice is issued
- 2 attempts at personal contact are made 2 business days after term notice is sent
  - If invalid phone number/no contact made the a 72 hour posting w/o is dropped
- 72 hours after personal contact is completed a DNP order will drop

Landlord Term Process (37 Day)

- Shared Premise accounts only
  - One meter serves multiple units
  - Ex: apartment building, duplex with one meter, comm space with apartment above and only one meter
  - service at a shared premise is required by law to be in the name of the property owner
- Must be 10 days in arrears and balance >=$300
- Sent to collections group for review through a manual work item
- 37 Termination notice issued and work item completed in SAP
  - Sent first class and certified mail
- 6 calendar days after term- LL1 and LL2 posting w/o drop
  - Notices will be posted in common areas to notify tenants of pending termination
  - One of the notices must be posted after 6 pm or on a weekend
- 30 calendar days after LL1/LL2 completed a DNP w/o drops

Medical Certificates

- If a customer has a medical necessity for gas service we will send a Medical Certification Form to their doctor so that the doctor can certify the need for gas service
- If gas is on we provide the customer 5 days to have the form signed and returned by their doctor
- If doctor certifies gas service is medically necessary a 30 day hold will be added to the customer account
  - Customer still has obligation to pay bill during this time as account will go back into termination once hold expires if it is not brought current

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-VI-022

Witness: Kolich, Steven **Title:** Gas Supply Director

Question: Has Peoples Natural Gas Company LLC done any evaluation of the bill impacts of Natural Gas Supplier (NGS) charges compared to the gas supply default service in the period January 2022 -December 2023? If so, please provide such evaluation and data.

Answer: Peoples periodically compares the bill effect of customers who select an NGS for their supply to the default gas supply service. The attached report depicts what P1 customers who have selected a NGS pays compared to the default gas supply services in a snap shot in time. The data represents only the transportation customers that Peoples bills for on behalf of the NGS. This report is not generated on a regular basis and is only compiled per management's request.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-I-002

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Provide a copy of the notices of proposed rate changes that Peoples issued to customers in the Peoples Natural Gas Division and to customers in the Peoples Gas Division. For each notice, provide the following information:

a. Does the notice identify which Peoples' Division serves the customer (i.e. Peoples Natural Gas or Peoples Gas)?

b. If the answer to subsection a is "no" indicate why not.

c. If the answer to subsection a is "no" indicate what steps, including step-by-step identification of telephone prompts and average wait times, that a customers would have to undertake to determine which Peoples' Division provides their service.

Answer: Refer to Attachment A for a copy of the bill insert included with the customer's bill.

Refer to Attachment B for a copy of the newspaper notice.

a. No.

b. The Company's proposal in this proceeding is to unify the distribution rates of the two divisions. As a result, the Company's approach was to notice customers on the proposed rate changes for all customers. This is consistent with Peoples' approach in the 2018 base rate case proceeding when the Company proposed to unify the former Peoples Division with the former Equitable Division. Further, specific to the newspaper notice, due to overlapping service territories in certain areas, the Company believed having the information together would cause less confusion for customers.

c. There are two ways a customer can determine which division serves them from their bill as outlined below. The Company's website includes this information in the FAQs.

- General information phone number listed at the top of the bill

  - 1-800-764-0111 – Peoples Natural Gas Division
  - 1-800-222-5101 - Peoples Gas Division

- Address shown on the portion of the bill that is detached and sent in with their payment

  - PO Box 644760 – Peoples Natural Gas Division
  - PO Box 747105 – Peoples Gas Division

The customer can also call the Customer Service Center to confirm which division serves them.

Submit Date: 2/2/2024

NOTICE OF PROPOSED RATE CHANGES

To Our Customers:

Peoples Natural Gas Company ("Peoples" or the "Company") *is filing a request with the Pennsylvania Public Utility Commission ("PUC") to increase your natural gas distribution rates as of February 27, 2024. This notice describes the Company's rate request, the PUC's role, and what actions you can take.*

Peoples, which includes the Peoples Natural Gas Division and the Peoples Gas Division, has collectively requested an overall net distribution rate increase of $156.0 million per year. In this filing, Peoples is proposing to unify the distribution rates of the two divisions. This filing also includes a request for the approval of a Weather Normalization Adjustment (WNA) as an alternative rate mechanism in accordance with 66 Pa. C.S. § 1330. The WNA would adjust certain customers' bills to reflect normalized weather conditions. In addition, Peoples is proposing revisions to existing Riders, including the Tax Repairs Surcredit ("TRS"), the Tax Cuts and Jobs Act Surcharge ("TCJA") and the Allegheny Valley Capacity Charge ("AVC"). Changes to these existing Riders and application thereof may apply to one or both divisions. Under the Company's proposal, the WNA, AVC and TRS will apply to both divisions. The TCJA will only apply to Peoples Gas Division customers.

If you are a **Peoples Natural Gas Division** customer and if the Company's entire request is approved:

- The total bill for a Peoples Natural Gas Division residential customer using 80 Mcf per year would increase from $73.16* to $88.79 per month or by 21.4%.
- The total bill for a Peoples Natural Gas Division commercial customer using 250 Mcf per year would increase from $174.25* to $212.76 per month or by 22.1%.
- Rates for a Peoples Natural Gas Division industrial customer using 1,750 Mcf per year would increase from $1,126.15* to $1,282.10 per month or by 13.8%.

If you are a **Peoples Gas Division** customer and if the Company's entire request is approved:

- The total bill for a Peoples Gas Division residential customer using 80 Mcf per year would increase from $84.00* to $90.35 per month or by 7.6%.
- The total bill for a Peoples Gas Division commercial customer using 250 Mcf per year would increase from $214.03* to $214.83 per month or by 0.4%.
- Rates for a Peoples Gas Division industrial customer using 1,750 Mcf per year would decrease from $1,310.04* to $1,297.34 per month or by 1.0%.

To find out which division you are in, your customer class or how the requested increase may affect your natural gas bill, contact Peoples at **1-800-764-0111**. The rates requested by the Company may be found in

Continued on other side…

PNGC 2024 Rate Change Notice Insert.indd 1 12/27/23 10:17 AM

Continued from other side…

the Company's Proposed Tariff, PA PUC No. 48. You may examine the material filed with the PUC which explains the requested increase and the reasons for it. A copy of this material is kept at Peoples' office. Upon request, the Company will send you the Statement of Reasons for Tariff No. 48, explaining why the rate increase has been requested.

The state agency which approves rates for public utilities is the PUC. The PUC will examine the requested rate increase and can prevent existing rates from changing until it investigates and/or holds hearings on the request. The Company must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some or none of the request or may reduce existing rates.

The PUC may change the amount of the rate increase or decrease requested by the utility for each division and customer class. As a result, the rate charged to you may be different than the rate requested by the Company and shown above.

There are three ways to challenge a Company's request to change its rates:

1. You can file a formal complaint. If you want a hearing before a judge, you must file a formal complaint. By filing a formal complaint, you assure yourself the opportunity to take part in hearings about the rate increase request. All complaints should be filed with the PUC before February 27, 2024. If no formal complaints are filed, the Commission may grant all, some or none of the request without holding a hearing before a judge.

2. You can send us a letter telling why you object to the requested rate increase. Sometimes there is information in these letters that makes us aware of problems with the Company's service or management. This information can be helpful when the PUC investigates the rate request.

Send your letter or request for a formal complaint form to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

3. You can be a witness at a public input hearing. Public input hearings are held if the Commission opens an investigation of the Company's rate increase request and if there is a large number of customers interested in the case. At these hearings you have the opportunity to present your views in person to the PUC judge hearing the case and the Company representatives. All testimony given "under oath" becomes part of the official rate case record. The hearings are held in the service area of the Company.

For more information, call the PUC at 1-800-692-7380. You may leave your name and address so you can be notified of any public input hearings that may be scheduled in this case.

* Please note that this amount excludes the one-time GCA Refund Credit in effect from Oct–Dec 2023.

Summary of Recommendations			82

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger D. Colton. My business address is 34 Warwick Road, Belmont, MA.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

A. I am owner of the firm of Fisher Sheehan & Colton, Public Finance and General Economics of Belmont, Massachusetts. In that capacity, I provide technical assistance to a variety of federal and state agencies, consumer organizations and public utilities on rate and customer service issues involving water/sewer, natural gas and electric utilities.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of the Office of Consumer Advocate.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND.

A. I work primarily on low-income utility issues. This involves regulatory work on rate and customer service issues, as well as research into low-income usage, payment patterns, and affordability programs. At present, I am working on various projects in the states of New Hampshire, Massachusetts, Connecticut, Maryland, Pennsylvania, Ohio, Michigan, and Wisconsin. My clients include state agencies (e.g., Pennsylvania Office of Consumer Advocate, Maryland Office of People's Counsel, Connecticut Office of Consumers Counsel), federal agencies (e.g., the U.S. Department of Health and Human Services), community-based organizations (e.g., Cleveland Legal Aid Society, Legal Action of Chicago, Sierra Club), and private utilities (e.g., Toledo Water, Entergy Services). Examples of my work include my current projects to assist the Connecticut Office of Consumers Counsel (OCC) in the annual generic review of the low-income affordability initiatives of that state's utilities by the Public Utilities Regulatory Authority. I am also

assisting the Massachusetts Attorney General's Office (AGO) in the generic investigation by the Department of Public Utilities (DPU) into the design of low-income affordability programs. I am currently under contract to develop a universal service plan for Nova Scotia. In addition to state-specific and utility-specific work, I engage in national work throughout the United States. For example, I have recently completed a project with the Natural Resources Defense Council to develop a tool by which to assess the financial impact of differing types of low-income bill assistance. A brief description of my professional background is provided in Exhibit RDC-1, which is attached to my testimony.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A. After receiving my undergraduate degree in 1975 (Iowa State University), I obtained further training in both law and economics. I received my law degree in 1981 (University of Florida). I received my Master's Degree (Regulatory Economics) from the MacGregor School at Antioch University in 1993.

Q. HAVE YOU EVER PUBLISHED ON PUBLIC UTILITY REGULATORY ISSUES?

A. Yes. I have published three books and more than 80 articles in scholarly and trade journals, primarily on low-income utility and housing issues. I have published an equal number of technical reports for various clients on energy, water, telecommunications and other associated low-income utility issues. A summary of my publications is included in Exhibit RDC-1.

Q. HAVE YOU EVER TESTIFIED BEFORE THIS OR OTHER UTILITY COMMISSIONS?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("PUC" or "Commission") on numerous occasions regarding utility issues affecting low-income customers and customer service. My testimony has specifically included testimony in various proceedings involving low-income program design and operation, along with various rate design issues as they affect low-income customers. I have also testified in regulatory proceedings in 42 states (other than Pennsylvania) and various Canadian provinces on a wide range of utility issues. A list of the jurisdictions in which I have testified is listed in Exhibit RDC-1.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR DIRECT TESTIMONY.

A. The purpose of my Direct Testimony is to review the impact of Peoples rates on low-income customers. I will further review the reasonableness of the design and implementation of the low-income bill payment assistance programs offered by the Company. More specifically, I will examine:

- The overall affordability of Peoples Natural Gas rates;
- The impact that the unaffordability of Peoples bills has on collections by the Company;
- A series of recommendations regarding the appropriate Peoples response to the unaffordability of its bills to low-income customers;
- The adverse impact that the proposed increases in the residential customer charges will have on low-income customers;
- The reasonableness of the Company's proposed Weather Normalization Adjustment (WNA) given its impacts on low-income customers;

- The reasonableness of the Company's request for a 0.25% adder to its return on equity due to claims of "strong management";
- The disproportionate impact of inflation on low-income households;
- The reasonableness of proposed changes in the Peoples tariff; and
- The reasonableness of proposed changes in the bad debt offset to the Peoples universal service rider.

Q. DOES YOUR TESTIMONY INCLUDE RECOMMENDATIONS OF ACTIONS THAT PEOPLES SHOULD TAKE?

A. Yes. I address each recommendation topically in specific sections of my testimony below. I also include a summary of recommendations at the end of my testimony for ease of reference.

Part 1. The Affordability of Peoples Rates.

Q. PLEASE DESCRIBE THE FIRST PART OF YOUR AFFORDABILITY ANALYSIS.

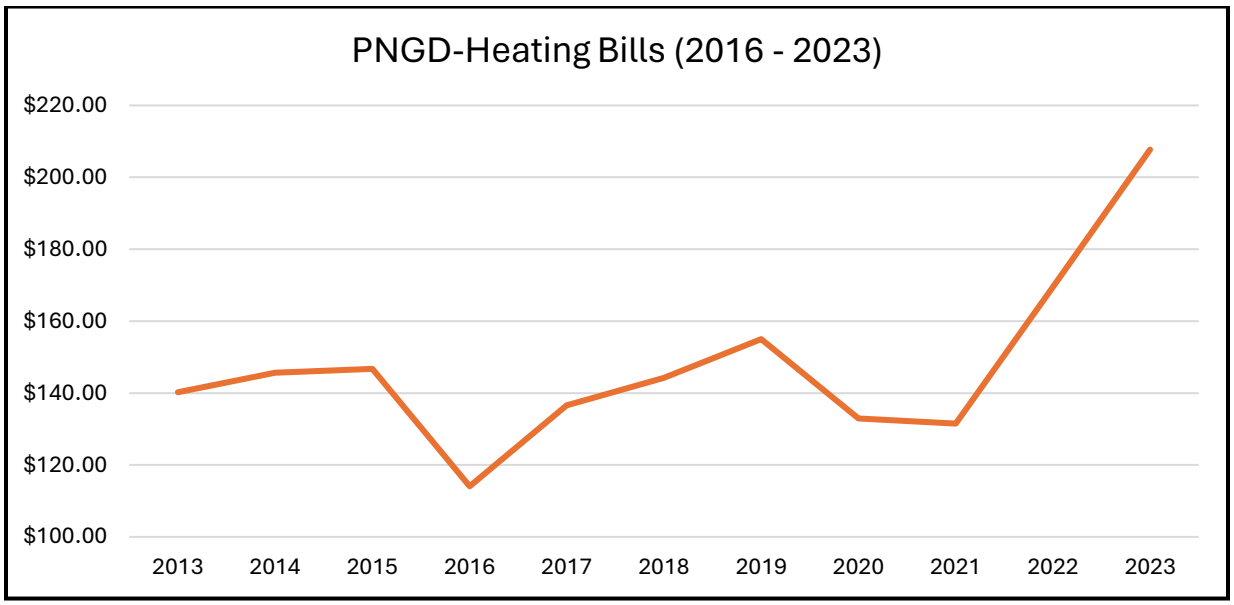
A. In the first part of my affordability analysis, I examine typical residential heating bills at PNGD rates[1] as reported each year by the Pennsylvania Public Utility Commission.[2] The Chart below presents PNGD[3] monthly heating bills (15 MCF) for the years 2016 through 2023. The data shows that while there was a dip in rates for PNGD in 2020 and 2021, there

[1] I did not examine PGD rates. That operating division was Equitable Gas in 2016 through 2019, only becoming Peoples Gas in 2020.

[2] Pennsylvania Public Utility Commission Rate Comparison Report (annual), available at https://www.puc.pa.gov/filing-resources/reports/rate-comparison-reports/

[3] Throughout my testimony, I will use the following nomenclature. When I refer to the Peoples Natural Gas Company LLC, I will use "Peoples" Or "PNG"). When I refer to the Peoples Natural Gas Division operating company, I will refer to "PNGD." When I refer to the Peoples Gas Division operating company, I will refer to "PGD." In the limited number of instances where I use data from years before the Company began to report consolidated data, I will refer to the company as PNGD.

has been a sharp increase in PNGD rates over the period I examined. A PNGD bill (at 15 MCF) of $114.07 in 2016 had increased to $207.71 by 2023.



This increase in bills helps to demonstrate the increasing unaffordability of natural gas to low-income customers in the utility's service territory. I compare the growth in PNGD bills to the growth in the mean and median First Quintile (Q1) incomes for PNGD's service territory over the same time period.[4] Table 1 below shows the growth in PNGD bills by indexing each year's bill to the 2016 bill.[5] This index is then used to compare changes in

[4] I begin with the Zip Codes that comprise the Company's service territory. (OCA-09-01). I matched those zip codes to Census data reported through the American Community Survey (5-year data). The Census Bureau rank orders all households in a geographic area by the level of their annual income. It then divides that ranking into five equal parts (each part which is called a "quintile"). The "First Quintile" (sometimes known as the "lowest quintile") is the one-fifth of households with the lowest incomes. U.S. Census Bureau, Table B19081 (with Pennsylvania zip codes available at https://data.census.gov/table?q=B19081:%20Mean%20Household%20Income%20of%20Quintiles&g=040XX00US42$8600000).

[5] The 2016 index is set equal to 100. If bills increase relative to 2016, the index becomes greater than 100. If bills decrease relative to 2016, the index becomes less than 100. This indexing is not uncommon. For example, it is how the U.S. Department of Labor reports changes in the Consumer Price Index. See e.g., Consumer Price Index for All Urban Consumers (1982 – 1984 = 100 unless otherwise noted), available at https://www.bls.gov/news.release/cpi.t01.htm

PNG bills to changes: (1) the average Q1 mean income; and (2) the median Q1 mean income for the study period.[6]

The Table shows that while the PNGD heating bill index increased to 148.52 from 2016 to 2022, the index of the Q1 income for PNG's service territory increased to only 1.26. PNGD's heating bill index then sharply increased further to 182.09 in 2023; 2023 Census data has not yet been made publicly available. In this rate case, Peoples proposes to increase its rates even further.

In addition to comparing the heating bill index to the index of Q1 incomes, Table 1 also shows what the Q1 incomes would have needed to be in order to keep up with the increases in PNGD's natural gas bills. By 2022, for example, rather than the *actual* average Q1 mean income of $17,360 in the PNG service territory, the average Q1 mean income would have needed to grow to $20,429 (more than $3,000 more) in order to keep up with PNGD bills. The average Q1 mean income would need to have grown to more than $25,000 in 2023 in order to keep up with the growth in PNGD heating bills. Similar results are seen for how the need for growth in the median Q1 mean income to keep up with PNGD heating bills far outstrips the actual growth in such incomes.

[6] The same indexing process was used for Q1 incomes, with 2016 being set equal to 100. The Census reports the mean income for each quintile for each geographic area (in this instance, zip codes). The "average Q1 mean income" is thus the average of the Q1 mean incomes reported for PNG zip codes. The "median Q1 income" is the median of the Q1 mean incomes reported for PNG zip codes.

Table 1. Indexed Change in PNGD Bills (2016 – 2023)
(2016 = 100) (PA PUC Annual Bill Comparison Report)

	Htg Bill / Htg Bill Index		Avg Q1 Mean Income			Median Q1 Mean Income		
	Heating Bill ($s)	Heating Bill Index	Actual	Index	At PNGD Htg Index	Actual	Index	At PNGD Htg Index
2016	$114.07	100	$13,755	100	---	$13,134	100	---
2017	$136.61	119.76	$14,347	1.04	$16,472	$13,665	1.04	$15,729
2018	$144.22	126.43	$14,742	1.07	$17,390	$14,016	1.07	$16,605
2019	$154.99	135.87	$15,258	1.11	$18,689	$14,665	1.12	$17,846
2020	$132.89	116.50	$15,959	1.16	$16,024	$15,224	1.16	$15,301
2021	$131.49	115.27	$16,378	1.19	$15,855	$15,526	1.18	$15,140
2022	$169.42	148.52	$17,360	1.26	$20,429	$16,509	1.26	$19,507
2023	$207.71	182.09	---	----	$25,046	---	100	$23,916

Q. HAVE YOU EXAMINED THE AFFORDABILITY OF PNGD BILLS RELATIVE TO THE Q1 INCOME?

A. Yes. I begin by noting that the PUC has determined that natural gas heating bills (i.e., bills as a percentage of income) should not exceed 4% of income for households with income at or below 50% of Federal Poverty Level (FPL), and it should not exceed 6% of income for households with income between 50% and 150% of FPL.[7] I then proceed by examining the natural gas Bill-to-Income Ratio for Q1 incomes in the Company service

[7] 52 Pa. Code § 69.265(2)(i)(B).

territory at existing and proposed rates.[8] I find that the average Bill-to-Income Ratio for households with Q1 incomes is 7.8% for bills at existing rates, increasing to 9.4% for bills at proposed rates. The mismatch between the growth in natural gas heating bills and Q1 incomes leaves customers with Q1 income markedly in excess of the maximum affordable natural gas burdens as defined by the Commission.

Q. DID YOU EXAMINE AFFORDABILITY USING ANY OTHER INDICIA OF LOW-INCOME STATUS?

A. Yes. In addition to examining Q1 incomes, I considered affordability at different ranges of the Federal Poverty Level (FPL). I examined the following ranges of FPL: (1) at or below 50% FPL; (2) 50% to 100% FPL; (3) 100% to 125% FPL; AND (4) 125% to 150% FPL. At each FPL range, I consider not only the average bill burden, but I examine both the ***breadth*** of unaffordability and the ***depth*** of unaffordability. The breadth of unaffordability examines how frequently unaffordable burdens occur (i.e., if there are 1,000 customers with unaffordable burdens, that is a broader unaffordability than if there are 800 customers with unaffordable burdens). The depth of unaffordability examines the degree of unaffordability (i.e., a bill burden of 12% of income is a deeper degree of unaffordability than a bill burden of 9% of income). Table 2 presents the data on average bill burdens at different ranges of FPL.

The data shows that at existing rates, PNGD customers with income at or below 50% of FPL have bill burdens that exceed the PUC's maximum affordable burden by more than

[8] For "existing" rates, I use the sum of the monthly median low-income bills (without CAP) for the most recent twelve months including a complete heating season (October 2022 – September 2023). (OCA-09-05). For "proposed" rates, I increase that bill resulting given the 21.2% rate increase proposed in this proceeding. (RNZ-6).

three-fold. At proposed rates, on average, the Company's bill burdens at this range of FPL exceed the affordable burden by four times (16% vs. 4%). While bill burdens are more affordable in the higher FPL ranges examined, the data shows the increase in burdens resulting from the rates being proposed by the Company in this proceeding.

Table 2. Average Bill Burdens by Range of Federal Poverty Level (FPL) at Existing and Proposed Rates (Peoples Natural Gas)

	Existing Rates	Proposed Rates
At or below 50% FPL	13.2%	16.0%
50% to 100% FPL	7.0%	8.5%
100% to 125% FPL	4.7%	5.7%
125% to 150% FPL	3.8%	4.7%

The ultimate conclusions from the data above, however, are limited by the fact that they present data on average. The discussion below turns to a more disaggregated examination of affordability.

Q. PLEASE EXPLAIN YOUR FINDINGS ON UNAFFORDABILITY AT EXISTING RATES.

A. Table 3 shows the data on the distribution of PNGD burdens by FPL range at existing rates. At existing rates, fewer than 150 customers with income less than 50% of FPL would have natural gas burdens of less than 12% of income. Nearly 30,000 (29,951) customers in this FPL range have burdens (at existing rates) of between 12% and 15% of income. In addition, more than 34,500 customers with income between 50% and 100% FPL have bill burdens (at existing rates) of between 6% and 8% of income. While bills at higher ranges of FPL are more affordable, the Table shows how sensitive to income the affordability of PNGD bills are. While 14,410 customers with income at 125% to 150% of income have

natural gas burdens of between 3% and 4% of income, only 37 customers at the next lower FPL range (100% to 125%) do. In that FPL range, 16,835 customers have natural gas burdens of between 4% and 5% of income.

Table 3. The Breadth and Depth of Unaffordability by FPL Range
At Existing Rates

0 – 50% FPL		50 – 100% FPL		100 – 125% FPL		125 – 150% FPL	
Bill Burden	# Customers with Burden	Bill Burden	# Customers with Burden	Bill Burden	# Customers with Burden	Bill Burden	# Customers with Burden
<6%	0	<2%	0	<2%	0	<2%	0
6% - 9%	7	2% - 4%	0	2% - 3%	5	2% - 3%	15
9% - 12%	139	4% - 6%	120	3% - 4%	37	3% - 4%	14,410
12% - 15%	29,951	6% - 8%	34,505	4% - 5%	16,835	4% - 5%	6,943
15% - 18%	1,181	8% - 10%	672	5% - 6%	4,424	5% - 6%	16
18% - 21%	0			6% - 7%	4		
Total	31,278	Total	35,297	Total	21,305	Total	21,384

The data clearly shows that PNGD bills, particularly at the lowest ranges of FPL, are unaffordable even at existing rates.

Q. DID YOU DO THE SAME ANALYSIS FOR PROPOSED RATES?

A. Yes. Table 4 presents the same data except using bills at the Company's proposed rates as the basis for assessment. The data shows that, at the Company's proposed rates, unaffordability is noticeably broader and deeper. In the FPL tier with income at or below 50% of FPL, for example, at proposed rates, more than 30,700 customers would have bill burdens of between 15% and 21% of income. Customers with income in the tier of 50% to 100% FPL overwhelmingly (n=34,386) have burdens of 8% to 10% of income (rather

than 6% to 8%). In the tier of 100% to 125% of FPL, a substantial number of customers exceed the PUC's 6% affordable burden at the Company's proposed rates.

Table 4. The Breadth and Depth of Unaffordability by FPL Range
At Proposed Rates

0 – 50% FPL		50 – 100% FPL		100 – 125% FPL		125 – 150% FPL	
Bill Burden	# Customers with Burden	Bill Burden	# Customers with Burden	Bill Burden	# Customers with Burden	Bill Burden	# Customers with Burden
<6%	0	<4%	0	<2%	0	<2%	0
6% - 9%	1	4% - 6%	12	2% - 3%	0	2% - 3%	11
9% - 12%	31	6% - 8%	869	3% - 4%	5	3% - 4%	24
12% - 15%	902	8% - 10%	34,386	4% - 5%	80	4% - 5%	17,944
15% - 18%	28,937	10% - 12%	30	5% - 6%	16,185	5% - 6%	3,389
18% - 21%	1,391			6% - 7%	5,020	6% - 7%	16
>21%	16			7% - 8%	15		
Total:	31,278	Total:	35,297	Total:	21,305	Total:	21,384

As is clear, the depth of unaffordability, particularly for the Company's lowest income customers, substantially increases given the rates which Peoples proposes in this proceeding. When using the PUC's demarcation of an affordable burden as the guide at each FPL tier, PNGD's low-income customers will be substantially worse off given the Company's proposed rates than they would be if those proposed rates were denied or scaled back.

Q. WHY IS YOUR DISCUSSION OF UNAFFORDABLE BURDENS IMPORTANT OR RELEVANT GIVEN THE COMPANY'S CONVERSION OF ITS CUSTOMER ASSISTANCE PROGRAM (CAP) TO A PERCENTAGE OF INCOME PLAN (PIP)?

A. While Peoples conversion of its Customer Assistance Program (CAP) to a Percentage of Income Plan (PIP) will largely protect CAP participants from the harms of increasing rates, CAP is only helpful for those low-income customers who, indeed, are program participants. The data, however, shows that the Company serves a relatively small proportion of its low-income customer base. While I make specific recommendations below with respect to how the Company might increase that participation, my observation here is limited to the fact that even given the Company's CAP, there is a significant low-income customer population that is *not* participating in CAP that will be adversely affected by the Company's proposed rate increase. According to the Company, for example, it has identified 51,072 Confirmed Low-Income customers on its system. (OCA-09-02).[9] Of those Confirmed Low-Income customers, however, only 29,091 (57%) are CAP participants. In absolute terms, in other words, Peoples has nearly 22,000 customers from whom the Company has received information to reasonably identify them as "low-income" but who do not participate in CAP.

Even this number, however, understates the problems facing low-income customers on the Company's system. According to the PUC's Bureau of Consumer Services (BCS) 2022 annual report on universal service and collections performance (published September

[9] Unless I explicitly note to the contrary, data provided in response to discovery refers to data for Peoples as a whole, not separately to PNGD or PGD.

2023) (hereafter "BCS 2022 Report"),[10] Peoples has an estimated 146,971 low-income customers.[11] Peoples, in other words, has confirmed the low-income status of only 35% of its estimated low-income customer base (51,072 / 146,971 = 0.347). The Company has then enrolled only 57% of that sub-population of Confirmed Low-Income customers into CAP. Overall, Peoples has enrolled less than 20% of its estimated low-income customer population into CAP (29,091 / 146,971 = 0.198).

Q. IS YOUR OBSERVATION THAT PEOPLES ENROLLS FEWER THAN ONE-IN-FIVE OF ITS LOW-INCOME CUSTOMERS IN CAP A CRITIQUE OF THE COMPANY'S CAP OUTREACH?

A. While I will make specific recommendations regarding CAP enrollment later in my testimony, my purpose here is ***not*** to critique or criticize Peoples CAP outreach. Instead, my purpose here is to observe that when CAP misses 80% of the low-income population, the existence of CAP cannot be used as a reason to ignore the broader harms of Peoples' proposed rates to the low-income population as a whole.

Q. WHAT DO YOU CONCLUDE?

A. A consideration of affordability is a critical task to undertake within the structure of any utility rate case. As bills become increasingly unaffordable, the payment difficulties of those customers who face unaffordability become increasingly substantial as well. As I will demonstrate later in this testimony, this conclusion can be well-documented for

[10] BCS (Sept. 2023). Universal Service Programs and Collections Performance, 2022 Report, available at https://www.puc.pa.gov/media/2573/2022-universal-service-report-final.pdf

[11] Beginning in 2020, the 2020 annual report, Peoples began reporting its data to BCS on a consolidated basis. Accordingly, all BCS data after 2019 which I cite is for Peoples as a whole, not for PNGD or PGD separately.

Peoples. One impact of the unaffordability I discuss, in other words, is its impact on the operating costs (e.g., collection costs, working capital, uncollectible expenses) that are then normalized and passed on to other ratepayers. Also, Peoples proposals such as increasing the residential customer charge, have disproportionate adverse effects on low-income customers who already are facing substantial unaffordability.

Moreover, establishing a return on equity is fundamentally predicated on balancing customer and investor interests. It is necessary for the Pennsylvania PUC to understand the customer interests in order to appropriately balance them against the competing investor interests. The obligation of the Commission in deciding on the appropriate return on equity (ROE) and the reasonable mix of debt and equity securities should balance consumer and investor interests. (*FPC v. Natural Gas Pipeline Co.*, 315 U.S. 575, 606-607 - 608). Indeed, of the consumer issues that are important drivers of the just and reasonable ROE determination, one of the most significant is the concern about affordability. If a sizable portion of customers cannot afford to pay the rates approved by the PUC, the PUC can hardly be said to have approved just and reasonable rates. Such concerns should bear directly on the determination of the fair ROE. In addition, as a utility such as Peoples adds more and more expensive plant, this increases rates, which may in turn put downward pressure on the just and reasonable ROE not for financial reasons, but because of affordability concerns.

In sum, the concerns I identify with respect to the unaffordability of Peoples rates can (and should) be considered even outside the consideration of the specific proposals I advance with respect to specific low-income initiatives.

Part 2. Affordability and Peoples Credit and Collections.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I expand upon my discussion of the impact which an increase in Peoples' rates would have on low-income customers. In particular, I examine the collections performance of Peoples with respect to the Company's Confirmed Low-Income customers.

Q. PLEASE EXPLAIN THE FIRST COLLECTIONS METRIC YOU EXAMINE.

A. The first metric I examine involves the average arrears. Table 5 presents data for the average arrears of residential customers and the average arrears of Confirmed Low-Income customers by year for the three years 2020 through 2022.[12] As can be seen, in 2020, the average arrearage for a Confirmed Low-Income customer was nearly 40% larger than for a residential customer generally. By 2021 and 2022, the average arrears for a Confirmed Low-Income customer was more than 50% higher. Accompanying the unaffordability of Peoples bills to its low-income population, in other words, is the increased nonpayment of those bills.

[12] 2022 is the last year of data reported. 2020 is the first year that Peoples reported combined data for what, in previous years, had been separately reported for Peoples and for Peoples (Equitable).

Table 5. Average Arrears: Residential vs. Confirmed Low-Income (2020 – 2022)
(BCS 2022 Report on Universal Service Programs and Collections Performance)

	Residential	Confirmed Low-Income	Ratio (Conf'd LI to Residential)
2020*	$449.90	$617.26	1.37
2021	$466.51	$718.87	1.54
2022	$394.22	$599.51	1.52

* Beginning in 2020, Peoples began reporting combined data for what, in prior years, had been separate reporting for Peoples and for Peoples (Equitable)

A higher arrears imposes costs on the utility, which costs must be paid by remaining ratepayers. Even setting aside any collection efforts that Peoples would direct toward customers in arrears, the higher arrears would impose a higher working capital cost. For each week/month that a bill remains unpaid, Peoples would incur either an out-of-pocket expense for borrowing replacement money, or would incur the corresponding opportunity cost for not having those funds to invest.

The second metric I examine involves not the size of the arrearage that is being carried, but rather the percentage of customers who are in arrears. Data from the annual BCS report documents that Confirmed Low-Income customers are not only deeper in arrears, but a higher percentage of Confirmed Low-Income customers are in arrears as well. The BCS data shows that the percentage of Confirmed Low-Income customers in arrears reaches nearly two times higher than the percentage of residential customers as a whole that are in arrears. In 2022, for example, while 7.4% of all residential customers were in arrears 14.0% of Confirmed Low-Income customers were.

Table 6.Percent of Customers in Arrears: Residential vs. Confirmed Low-Income (2020 – 2022) (BCS 2022 Report)

	Residential	Confirmed Low-Income	Ratio (Conf'd LI to Residential)
2020*	8.4%	15.8%	1.88
2021	6.0%	10.9%	1.82
2022	7.4%	14.0%	1.89

* Beginning in 2020, Peoples began reporting combined data for what, in prior years, had been separate reporting for Peoples and for Peoples (Equitable)

What the data shows is that the higher average arrears of Confirmed Low-Income customers is not offset by a lower total percentage of accounts in arrears. Instead, exactly the opposite occurs. Not only are more Confirmed Low-Income customers in arrears, but they are, on average, further in arrears.

The third metric I examine involves service disconnections for non-payment (DNPs). According to the BCS 2022 Report on universal service programs and collections performance, "Termination of public utility service is the most serious consequence of customer nonpayment and is viewed as a last resort when customers fail to meet their payment obligations."[13] As with the level of arrears, the unaffordability of Company bills has a particularly adverse impact on the Company's low-income customers. In the past two years, Confirmed Low-Income customers of Peoples have had service disconnected for nonpayment at a rate 40% to 50% higher than the rate of service disconnections for residential customers as a whole.

Table 7. Termination Rate: Residential vs. Confirmed Low-Income (2020 – 2022)

[13] According to the BCS 2022 Report: "The termination rate is calculated by dividing the number of service terminations by the number of residential customers, allowing for a comparison of termination activities regardless of the number of residential consumers. Any significant increase in a termination rate could indicate a trend or pattern that the Commission may need to investigate."

(BCS 2022 Report)			
	Residential	Confirmed Low-Income	Ratio (Conf'd LI to Residential)
2020*	0.1%**	0.0%	---
2021	4.0%	5.5%	1.38
2022	2.6%	3.9%	1.50

* Beginning in 2020, Peoples began reporting combined data for what, in prior years, had been separate reporting for Peoples and for Peoples (Equitable)
** Disconnection rates were nearly non-existent due to COVID-related disconnection restrictions imposed by the PUC.

As with carrying arrears, nonpayment service disconnections have a rate impact on remaining customers. Not only is there an out-of-pocket cost associated with the process of disconnection, but there is the likelihood of lost future revenue as well. Peoples provided, for each of its operating divisions, for 2021 through 2023 (YTD), the number of disconnected accounts that were not reconnected; it further provided a distribution of the length of time accounts remained without service even when they were reconnected. (OCA-09-21). The Company's data shows that in nearly every year, for each of its operating divisions, Confirmed Low-Income customers were not only less likely to have service reconnected, but in addition, when service was reconnected, Confirmed Low-Income customers remained off-system for a longer period of time.

Table 8. Percent Accounts Disconnected Not Reconnected (2021 – 2023) (OCA-09-020)[14]

	PNGD		PGD	
	Confirmed Low-Income	Residential	Confirmed Low-Income	Residential
2021	16.1%	8.9%	17.8%	8.7%
2022	4.9%	7.5%	10.7%	7.3%
2023	9.0%	4.5%	8.0%	3.9%

Finally, the data demonstrates that only in 2022 (for the PNGD) was the percentage of disconnected accounts that were not reconnected higher for residential customers as a whole than for Confirmed Low-Income customers. More typically, nearly two times more Confirmed Low-Income customers with disconnected service did not have that service reconnected.

Even when reconnected, however, Confirmed Low-Income customers tend to experience a longer time off-system prior to that reconnection of service. The data in Table 9 below shows the percentage of Confirmed Low-Income customers who remained without service for seven or more days prior to having their service reconnected after a nonpayment disconnection. Nearly one-in-three Confirmed Low-Income customers who are disconnected, and then reconnected, nonetheless remain without service for seven or more days. More than one-in-five of reconnected Confirmed Low-Income customers are without service for 14 days or more.

[14] This is an instance where the Company provided data for the Company as a whole (Peoples Natural Gas Company LLC), as well as for each of its operating divisions (PNGD, PGD). Each of those sets of data are presented.

Table 9. Percent of Customers Who were Reconnected by Days Off-System Prior to Reconnection (Confirmed Low-Income vs. Residential) (2023) (OCA-09-20)

Days Prior to Reconnection	Peoples Natural Gas Company LLC	Peoples Natural Gas Company	Peoples Gas Company
7 - -14 days	9.2%	9.2%	9.0%
>14 days	22.1%	22.0%	23.5%
7 or more days	31.3%	31.2%	32.4%

Each day without service represents lost revenue to the utility. To the extent that Peoples loses that revenue, those dollars must be made up through increased rates to other customers. Adequately addressing the issues of low-income unaffordability, therefore, has direct impacts on the rates charged to other customers even outside the specific low-income initiatives Peoples undertakes.

Q. IN YOUR ANALYSIS OF THE COMPANY'S DISCONNECTION DATA, DOES THERE APPEAR TO BE ANY RELATIONSHIP BETWEEN THE INCREASED DISCONNECTION OF SERVICE FOR NON-PAYMENT AND ZIP CODES WITH THE HIGHEST PERCENTAGE OF BLACK HOUSEHOLDERS?

A. Yes. I begin by noting that based on the information I have reviewed, I have seen no indication of intentional discrimination on the part of the Company; however the data does appear to show a correlation or relationship between the increased disconnection of service for non-payment and zip codes with the highest percentage of black householders. In reaching this conclusion, I began by identifying the 40 zip codes with the highest percentage of Black householders in the Company's service territory. I calculated the percentage of total Peoples customers living in those zip codes. I then examined the number of nonpayment disconnections that occurred in those zip codes and calculated the percentage of total Peoples disconnections occurring in those zip codes. The data is set

forth in Table 10 below. The data shows that 29% of the Company's total customer base resides in the 40 zip codes with the greatest percentage of Black householders. In contrast, between 38% and 47% of the total number of the Company's nonpayment service disconnections occur in those 40 zip codes.

Table 10. Percent Population in Peoples Service Territory versus Percent Disconnections in Peoples Service Territory with High Penetration of Black Population/Householders

	2021	2022[15]	2023
% total customers in 40 zip codes with greatest % of Black householders	---	29%	---
% of total customers with income <150 % FPL in 40 zip codes with greatest % of Black householders	---	23%	---
% disconnections for nonpayment in 40 zip codes with greatest % of Black householders	45%	47%	40%

Table 10 further shows that this disproportionate number of disconnections does not occur in these zip codes with a high penetration of Black householders because of a higher penetration of low-income households in those zip codes. Indeed, the percentage of total Black householders with income at or below 150% FPL is lower than the percentage of total Black householders overall in the 40 study zip codes. While 29% of the total Black householders live in these 40 zip codes, only 23% of the total population with income at or below 150% of Poverty does so.

Equivalent results can be reached through a corresponding analysis beginning with the number of disconnections per zip code. I identified all zip codes with 500 or more disconnections in the most recent 36 months. The number of disconnections in those 44 zip codes represented 60.8% of all disconnections which Peoples performed in that time

[15] Census data available only for 2022.

period. Those 44 zip codes, however, represented 66.2% of all Black householders in the Company's service territory. The disproportionate percentage of disconnections cannot be attributed to low-income status. Within these 44 zip codes with high numbers of disconnections, only 20.5% of the population lives with income at or below 150% FPL. Thus, the result does not appear to be a function of lower income of households in those 40 zip codes.

Q: PLEASE EXPLAIN WHY THIS DATA AND INFORMATION IS RELEVANT IN THIS CASE?

A: This information is relevant to quality-of-service concerns and the provision of service on fair and equitable terms within Peoples' service territory. Peoples is likely not even aware of this correlation, and I think it is important to shed light onto it to ensure that it can be remedied in the near term.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that Peoples conduct a root cause analysis to determine what is driving this disproportionate level of utility disconnections within the 40 zip codes with the highest penetration of Black households. Once this root cause analysis is conducted, Peoples should commit to taking steps to address the cause with the commitment of reducing disproportionate disconnections within these zip codes. My recommended root cause analysis is intended to be consistent with the definition of and standard for the root cause analysis that OCA witness Alexander outlines in OCA Statement 5. The extent to which Peoples mitigates the disproportionate disconnection of service for nonpayment in zip codes with high penetrations of Black households should be reviewed in Peoples next base rate case.

Part 3. Specific Recommendations to Respond to Low-Income Unaffordability.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I consider a series of recommendations that Peoples should adopt to respond to the unaffordability of natural gas bills that I have identified above. In my discussion below, I do not recommend changes to the structure or operation of the Peoples universal service program as filed in its most recent Universal Service and Energy Conservation Plan (USECP). Instead, I have reviewed Peoples procedures and operations outside of its USECP to assess the ways in which such procedures and operations can be improved to integrate total Company operations more fully with the Peoples USECP.

Q. PLEASE EXPLAIN THE ROLE WHICH SUCH RECOMMENDATIONS PLAY IN A BASE RATE PROCEEDING.

A. The role of providing affordable service in a base rate proceeding has been identified throughout my discussion above. When rates are unaffordable to low-income customers, that unaffordability affects the rates charged to other customers. I have documented, for example, how the unaffordability of bills leads to higher levels of arrears by low-income customers. Those higher levels of arrears not only lead to Peoples incurring out-of-pocket expenses devoted to the collection of those arrears, they lead to higher levels of expenses such as the higher levels of working capital associated with the revenue that has been billed but not collected. Since working capital is a capital expense, there is also an equity return associated with it, with a corresponding additional tax impact. The rate impact, in other words, is greater than the impact on the initial level of working capital expense. I have also documented above how the unaffordability of Peoples rates leads to a stream of lost revenue. This lost revenue occurs as low-income customers have service disconnected

with no reconnection. This process not only causes Peoples to lose the revenue that is comprised of the unpaid bills at the time of disconnection, but also causes the Company to lose any revenue associated with the bills that would have been associated with future bills. Moreover, as I documented above, even when service is reconnected, low-income customers remain off-system for long-periods of time prior to the reconnection, each day of which represents a lost sale (and thus lost revenue).

My recommendations below recognize these impacts which low-income unaffordability have on rates. Without needing to propose modifications to the structure of Peoples USECP, the recommendations explain how Peoples can improve the service it offers to low-income customers to mitigate the adverse rate impacts of unaffordable bills.

A. Identifying Confirmed Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I identify how the Company fails to comply with PUC regulations regarding the identification of "confirmed low-income" customers. I recommend changes that would bring Peoples into compliance with the PUC's regulations.

Q. HOW DOES PEOPLES CURRENTLY IDENTIFY "CONFIRMED LOW-INCOME" CUSTOMERS?

A. When asked to "please identify all categories or identifiers that Peoples include when calculating its 'confirmed low income customer' count," the Company responded:

> Peoples counts all CAP participants, as income documentation or the zero income form are submitted to confirm low income status. In addition to CAP

> participation, Peoples also considers receipt of LIHEAP cash or crisis grants within the past 24 months as indicative of confirmed low income.

(CAUSE-PA-II-003).[16] This procedure by Peoples is too narrow. It fails to comply with the PUC's regulations regarding how to define a "confirmed low-income" customer. The PUC's regulations explicitly define a "confirmed low-income" customer for Natural Gas Distribution Companies. The PUC regulation states:

> *Confirmed low-income residential account*—Accounts where the NGDC has obtained information that would reasonably place the customer in a low-income designation. This information may include receipt of LIHEAP funds (Low-Income Home Energy Assistance Program), self-certification by the customer, income source or information obtained in § 56.97(b) (relating to procedures upon rate-payer or occupant contact prior to termination).[17]

As can be seen, "confirmed low-income" status is ***not*** limited to CAP participants and LIHEAP recipients. It would include ***any*** information that "would reasonably place the customer in a low-income designation." The regulation explicitly provides that such information can be provided through "self-certification by the customer." It can also include information obtained when seeking to establish a payment plan or otherwise to resolve a pending disconnection (56 Pa. Code § 56.97(b)). "Self-certification" may include not merely self-certification of the level of income, but, pursuant to the PUC regulation, certification of the ***source*** of income. For example, customers who receive SNAP (Supplemental Nutrition Assistance Program, formerly known as Food Stamps) assistance, Medicaid, Temporary Aid to Needy Families (TANF), free School Lunch, and other similar

[16] The referenced Peoples' discovery response is attached to my testimony as Exhibit RDC-2.

[17] 52 Pa. Code § 62.2.

benefits will, by the vary receipt of those benefits, be "reasonably place[d]. . .in a low-income designation."

Appropriately and accurately identifying the Company's "confirmed low-income" customers is not only important from the perspective of CAP outreach (e.g., Peoples agreed in the Settlement of its 2018 rate case to provide a stand-alone notice to Confirmed Low-Income" customers prior to a nonpayment disconnections), but also qualifies such customers for various fee waivers. Moreover, the PUC's regulations provide that a customer is exempt from a cash security deposit "when the customer provides *income documents or other information* that he or she is eligible for state benefits based upon household income eligibility requirements that are consistent with those of the public utility's customer assistance program."[18] (emphasis added).

Q. WHAT DO YOU RECOMMEND?

A. Peoples should modify its policies and procedures regarding the identification of "confirmed low-income" customers to conform with the PUC's regulations, including self-certification of low-income status ("This information may include receipt of LIHEAP funds (Low-Income Home Energy Assistance Program), self-certification by the customer"). Peoples should include these modified policies and procedures in its residential tariff.

[18] 56 Pa. Code § 56.41(4).

B. Nonpayment Disconnections of Confirmed Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I address the need of Peoples to take more effective actions to use its universal service program to prevent the disconnection of service for nonpayment to Confirmed Low-Income customers. This discussion addresses not the structure of the Peoples USECP, but rather addresses how Peoples interacts with customers who do *not* participate in the programs.

Q. WHY DO YOU ADDRESS THE DISCONNECTION OF SERVICE IN PARTICULAR?

A. There are three reasons why the disconnection of service should be considered in particular. First, in all the ways I have discussed in detail above, the disconnection of service has rate implications to all customers. Minimizing disconnections would minimize these adverse rate impacts. Second, as BCS notes in its most recent annual report on universal service programs and collection performance, "Termination of public utility service is the most serious consequence of customer nonpayment and is viewed as a last resort when customers fail to meet their payment obligations."[19] It is thus appropriate to assess whether service terminations are, in fact, being used by Peoples as a "last resort." Third, as BCS states: "Universal Service is a collective name applied to the policies, protections and services that *help low-income customers maintain electric and natural gas service*. . ." (emphasis added).[20] Given that "universal service" is intended to "help low-income customers

[19] BCS 2022 Report, at 15.

[20] Id., at 3, citing Electricity Generation Customer Choice and Competition Act, 66 Pa. C.S. § 2803 and Natural Gas Choice Competition Act, 66 Pa. C.S. § 2202.

maintain. . .natural gas service," it is appropriate to assess whether that objective is being achieved. Finally, the Settlement of the 2019 Peoples rate case acknowledged the need to improve Company efforts to enroll customers in CAP as an alternative to the disconnection of service. The 2019 Settlement provided in relevant part:

> Within 6 months, Peoples Natural will adopt a procedure under which it will not disconnect service to a confirmed low-income customer for nonpayment without first providing a stand-alone Plain English notice to that customer of the customer's right to enter into CAP and an explanation of CAP's arrearage forgiveness benefits. Peoples Natural will develop the Plain English notice in collaboration with its Universal Service Advisory Group.

(Petition for Settlement, para. 59, page 14, Docket No. R-2018-3006818). It is appropriate to determine in this proceeding, therefore, whether that agreement achieved the results it was intended to achieve. If not, further effort would be appropriate.

Q. IS THE PEOPLES UNIVERSAL SERVICE PROGRAM SUCCESSFUL IN "HELPING LOW-INCOME CUSTOMERS MAINTAIN NATURAL GAS SERVICE"?

A. Not entirely. There is significant information documenting the extent to which the Company's universal service program is not helping low-income customers to maintain natural gas service. I consider the extent to which Peoples is disconnecting service to Confirmed Low-Income customers. Peoples' data shows not only that the Company is continuing to disconnect service to a substantial number of Confirmed Low-Income customers, but also that the average arrears at the time of disconnection remains substantial as well. The data is set forth in Table 11 below.

To assume that Peoples has effectively communicated the possibility of enrolling in CAP, and making pre-program arrears subject to forgiveness, to Confirmed Low-Income customers, one would need to assume that nearly 4,200 Confirmed Low-Income customers –remember a "Confirmed Low-Income" customer is a customer from whom Peoples has already received information that would reasonably identify that customer as "low-income"—would *choose* to have their service disconnected rather than to enroll in the Company's CAP. One would further need to assume that these nearly 4,200 customers would choose to pay all or part of their arrears in order to reconnect their service, and to retain those pre-disconnection arrears on their accounts to be paid in the future rather than subjecting those arrears to forgiveness.

Table 11. Confirmed Low-Income Disconnections and Average Arrears at Time of Disconnection (OCA-09-19)

	Nonpayment Disconnections: Confirmed Low-Income	Average Arrears at Time of Disconnection
2021	5,177	$893
2022	4,506	$636
2023	4,179	$642

This data is consistent with the data presented in Table 7 above. That Table shows that the termination rate (i.e., number of nonpayment disconnections divided by the number of customers) remains 50% higher for Confirmed Low-Income customers than it is for residential customers in general. Other data provided by Peoples reveal an even higher number of nonpayment disconnections for Confirmed Low-Income customers: (1) 8,063 (2021); (2) 6,508 (2022); and (3) 5,781 (2023). (OCA-09-21).

The data shows that most, but not all, Confirmed Low-Income customers are reconnected.

Peoples reports the following Confirmed Low-Income customers that were disconnected by not reconnected: (1) 1,306 not reconnected of 8,063 disconnected (2021); (2) 354 not reconnected of 6,508 disconnected (2022); and (3) 512 not reconnected of 5,781 disconnected (2023). (OCA-09-21). These reconnections demonstrate that the Company can and does make contact with these Confirmed Low-Income customers.

Q. WHAT DO YOU FIND?

A. The data above clearly shows that the written communications agreed to in the Settlement of the 2019 Peoples rate case are not effectively working to help low-income customers (defined to be Confirmed Low-Income customers) to retain utility service. Notwithstanding these written communications, thousands of Confirmed Low-Income customers are having their service disconnected for nonpayment, and a portion of those disconnected customers do not have their service reconnected.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that, in addition to Peoples providing a stand-alone written communication with Confirmed Low-Income customers as agreed to in the 2019 rate case settlement, prior to the disconnection of a Confirmed Low-Income customer, Peoples adopt a procedure, developed in collaboration with its Universal Service Advisory Group (USAG), under which it will seek to make personal contact with the customer subject to disconnection. In that personal contact, the Company shall offer the Confirmed Low-Income customer the opportunity to apply for the Company's CAP and arrearage forgiveness program. If the customer expresses a desire to make such application, Peoples will postpone the disconnection for a reasonable period of time to allow the application process to be completed. In short, I recommend that the procedure agreed to in the 2019 Settlement be

expanded to include an effort to make personal contact in addition to the written contact contemplated by that Settlement.

C. Deferred Payment Agreements for Confirmed Low-Income Customers.

Q. PLEASE EXPLAIN YOUR THIRD RECOMMENDATION.

A. My third recommendation is that Confirmed Low-Income customers who are negotiating a deferred payment agreement (DPA) with the Company, as well as customers from whom the Company receives information placing them in an income tier of 0% to 150% FPL, should be provided a stand-alone written Plain English notice informing those customers of their right, in the alternative, to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions). Through that opportunity, rather than needing to agree to retire their arrears over an extended period of time, the Confirmed Low-Income customer would be allowed to enroll in CAP and, upon making appropriate payments, receive a forgiveness of their underlying arrearages. This written communication would be provided to Confirmed Low-Income customers, those customers from whom Peoples had already previously received sufficient information to reasonably establish their low-income status.

Q. PLEASE EXPLAIN THE NEED FOR SUCH COMMUNICATION.

A. Peoples reports that it enrolls significant numbers of Confirmed Low-Income customers in deferred payment arrangements through which customers agree to retire arrearages over an extended period of time. The data shows that Peoples entered into 2,223 new payment arrangements with Confirmed Low-Income customers in 2021 (February – December); 2,487 new payment arrangements with Confirmed Low-Income customers in 2022, and 3,027 new payment arrangements with Confirmed Low-Income customers in 2023. (OCA-09-16).

These payment arrangements, however, are largely unsuccessful. The Company states that it cannot provide data on the number of DPAs that are defaulted since customers are not removed from their DPA due to a failure to pay. (OCA-09-16(f)). However, insights can be gained into the number of Confirmed Low-Income customers that default on their payment plans by examining the number of "payment-troubled customers." According to BCS, "A payment troubled customer is a customer who has failed to maintain one or more payment arrangements in a 1-year period."[21] The Peoples data reported by BCS on payment arrangements for Confirmed Low-Income customers and payment-troubled Confirmed Low-Income customers is set forth in Table 12 below.

[21] BCS 2022 Report (2022), at 11, citing 52 Pa. Code § 54.72 or § 62.2 .

Table 12. Number of Deferred Payment Arrangements and Number of Payment-Troubled Customers (Confirmed Low-Income Customers) (Peoples) (2021 – 2023) (BCS 2022 Report)			
	2020	2021	2022
Number of Payment Arrangements	5,603	8,926	7,015
Number of Payment-Troubled Customers	9,514	9,430	9,219

As can be seen, for the most recent three years reported by BCS (2020 – 2022), the number of Confirmed Low-Income customers who are "payment-troubled" (i.e., had defaulted on one or more payment plans in a 12-month period) far exceeds the number of Confirmed Low-Income customers who are on payment plans.

Moreover, it is possible to gain additional insights into the success of DPAs for low-income customers. Company data is presented in the Table below. The ratio of successful DPAs (for customers with income at or below 150% FPL) is, however, relatively low. In 2022 and 2023, the ratio of successful plans to total existing plans was somewhat over 0.60, while in 2021, the ratio was much lower.[22]

[22] The 2021 ratio was likely affected by the economic crisis associated with the COVID-19 pandemic.

Table 13. Number of Existing and Successful DPAs by Lowest Income Range (defined by Chapter 14, section 1405(b), 66 Pa. C.S. § 1405(b)) (at or below 150% FPL) (OCA-09-18)			
	Avg No. of Existing Plans	Number of Successful Plans	Ratio Successful Plans to Existing Plans[23]
2021	13,691	6,206	0.453
2022	12,314	7,910	0.642
2023	15,994	9,879	0.618

Company customer service representatives would generate information through the DPA process that would demonstrate whether a customer would be eligible for CAP. When asked how customer service representatives determined household income in order to place customers in the correct DPA as governed by Chapter 14, Section 1405(b), Peoples responded:

> Customer Service Representatives at Peoples Natural Gas request income and occupancy information from customers when establishing a payment arrangement. The customer's gross monthly income and household size are used to determine the length of the payment arrangement.

(OCA-09-18)[24]. If those customer service representatives know that a household's income and household size would place the customer in Income Tier 1 (at or below 150% FPL) for purposes of negotiating a DPA, they would also know that the customer's income and household size would qualify that customer for CAP (and the corresponding arrearage forgiveness).

Q. WHAT DO YOU FIND?

[23] This is not a percentage. The plans which are not listed as "successful" are not necessarily "unsuccessful." They could instead continue to be active.

[24] The referenced Peoples' discovery response is attached to my testimony as Exhibit RDC-3

A. Offering a low-income customer a deferred payment arrangement, even a long-term deferred payment arrangement, is not a recipe for success if the reason the customer is in arrears in the first instance is that bills for current service are unaffordable. In those situations, all a deferred payment arrangement does is to begin with the unaffordable bill and *add* an additional installment payment through which to retire the arrears. In those instances, it should not be surprising that substantially more than half of Confirmed Low-Income payment arrangements default in any given year (i.e., yielding a "payment-troubled customer"). The remedy for unpaid bills by low-income customers is not to place those customers on a deferred payment arrangement, but rather to enroll those customers in CAP (with its arrearage forgiveness provisions). Through that remedy, Peoples would not merely address the unpaid bill, but would also address the underlying cause of the unpaid bill. Doing so would not only benefit the low-income customer, but it would also benefit the Company and its remaining customers as well.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that before Peoples enters into a DPA with a customer which the Company either: (1) knows to be a Confirmed Low-Income customer; or (2) has generated information through the DPA process documenting that the customer is in the Tier 1 income range (at or below 150% FPL), it should be required to provide the customer a stand-alone Plain English notice to that customer of the customer's right to enter into CAP and an explanation of the advantages of CAP's arrearage forgiveness benefits. As it agreed to do with the pre-termination stand-alone written notice, Peoples should develop this Plain English notice in collaboration with its Universal Services Advisory Group.

D. Cold Weather Survey CAP Enrollment.

Q. PLEASE EXPLAIN YOUR FOURTH RECOMMENDATION.

A. My fourth recommendation is that customers who have had service disconnected for nonpayment, and who remain disconnected at the time of the Company's Cold Weather Survey (CWS) undertaken for the PUC, should be provided a written, stand-alone, Plain English notice of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

Q. UPON WHAT DO YOU BASE THIS RECOMMENDATION?

A. I have reviewed the results of the PUC's Cold Weather Survey performed at the beginning of the winter heating season each year.[25] I examined data from the three years 2021 through 2023. The data in Table 14 below shows the extent to which residential customers which the Company has disconnected during the non-cold weather months remain without service at the beginning of the next cold weather heating season. Over the past three years, between 1,700 and 2,000 customers who have had service terminated for nonpayment remain without heating service. While the number of customers remaining without heating service declined in 2022 and 2023, the percentage of customers that had service disconnected, and who remained disconnected, has increased. In 2021, 22.8% of the 8,872 customers surveyed remained without heating at the start of the cold weather months, while by 2023, the percentage increased to 27.3%.

[25] Electric, Gas and Water Cold Weather Survey Results, available at https://www.puc.pa.gov/filing-resources/reports/electric-gas-water-cold-weather-survey-results/

Table 14. Cold Weather Survey Results (2021 – 2023)
(Peoples Natural Gas)

	2021	2022	2023
Number surveyed	8,872	6,476	6,278
Vacant	1,019	887	790
Reconnected (DPA or other)	5,833	3,890	3,774
Not contacted	1,697	1,440	1,227
Occupied with service off	323	250	487
Using alternative source of heating	98	26	101
No heating	2,020	1,698	1,714
Percent without heat	22.8%	26.2%	27.3%

It would seem unreasonable to assume that, if given a meaningful choice either to enter the cold weather season without heating service or to enroll in a program that would not only limit their future bills to an affordable percentage of income, but would also provide a forgiveness of their pre-existing arrears, customers would choose to enter the winter months without heating service while, at the same time, retaining the arrears that led to their service being disconnected for nonpayment in the first instance.

Q. WHY SHOULD PEOPLES FIND IT IMPORTANT TO OFFER CAP ENROLLMENT AS AN OPTION TO CUSTOMERS WHO WOULD OTHERWISE ENTER THE COLD WINTER MONTHS WITHOUT HEATING SERVICE?

A. As I note above, the statutory purpose of Pennsylvania's universal service programs is to "help low-income customers maintain electric and natural gas service. . ."[26] This purpose would be furthered by helping to identify customers who have had their heating service disconnected by Peoples, and who remain without heat, as low-income and then facilitating their enrollment in CAP (along with its arrearage forgiveness).

Q. WHAT DO YOU RECOMMEND?

A. I recommend that Peoples adopt a procedure under which it will provide a stand-alone Plain English notice to customers found to be without heating service at the time of the Company's Cold Weather Survey of the customer's right to enter into CAP and an explanation of CAP's arrearage forgiveness benefits. Peoples should develop the Plain English notice in collaboration with its Universal Service Advisory Group.

E. Confirmed Low-Income Customers with Substantial Arrears.

Q. PLEASE EXPLAIN YOUR FIFTH RECOMMENDATION.

A. My fifth recommendation is that Confirmed Low-Income customers achieving a minimum arrears should receive a stand-alone written Plain English notice of their right to enter into CAP along with an explanation of CAP's arrearage forgiveness benefits. There is no question that Peoples has substantial numbers of Confirmed Low-Income customers that

[26] BCS 2022 Report, at 3, citing Electricity Generation Customer Choice and Competition Act, 66 Pa. C.S. § 2803 and Natural Gas Choice Competition Act, 66 Pa. C.S. § 2202.

have high arrears. According to the Company's own data, in 2023 as set forth in Table 15 below, Peoples had between 2,500 and more than 5,000 Confirmed Low-Income customers with arrears exceeding $300 in any given month.

Table 15. Number of Confirmed Low-Income (non-CAP) Accounts with Arrears $300+ (by month) (OCA-09-14) (February 2021 – December 2023)

202101	202102	202103	202104	202105	202106	202107	202108	202109	202110	202111	202112
xxx	3,153	3,255	3,291	2,829	2,428	2,245	2,012	1,833	1,742	1,737	1,662
202201	202202	202203	202204	202205	202206	202207	202208	202209	202210	202211	202212
1,814	2,063	2,476	2,948	3,187	3,456	3,254	2,594	2,377	2,419	2,573	2,888
202301	202302	202303	202304	202305	202306	202307	202308	202309	202310	202311	202312
3,452	3,889	4,522	4,881	5,045	4,340	3,520	3,206	2,783	2,530	2,685	2,733

I choose $300 as the lower threshold to examine because $300 is roughly equal to the median Confirmed Low-Income arrears (excluding CAP participants) of $291 over the last 36 months. (OCA-09-09).[27]

As I noted above, the PUC has previously observed how enrollment of low-income customers into CAP can be expected to help low-income customers improve their payment patterns. I cited above where the Commission reasoned that "enrolling low-income customers into CAPs as early as possible generally puts them in the best position to maintain good payment habits and avoid accruing utility debt."

Peoples' own evaluation of its CAP in 2017[28] supports this conclusion. The Peoples evaluation examined the percentage of bills paid by low-income customers prior to entering

[27] The referenced Peoples' discovery response is attached to my testimony as Exhibit RDC-4.

[28] APPRISE, Inc. (August 2017). Peoples Natural Gas 2017 Universal Service Program, Evaluation, Final Report, at 77, available at https://www.puc.pa.gov/General/pdf/USP_Evaluation-Peoples.pdf

CAP compared to the percentage of bills paid by those customers during their CAP participation. That comparison results in a metric referred to as the "bill payment coverage ratio" (i.e., the percentage of billed dollars actually paid). The bill payment coverage ratio places dollars of payments in the numerator and dollars of bills in the denominator to determine the percentage of bills that have been paid.

The Peoples data is set forth in Table 16 below. The Table makes two comparisons. First, the Table shows the bill payment coverage ratio for the year before participants enrolled in CAP and the bill payment coverage ratio for the first full year of CAP participation. Second, the Table shows the percentage change for CAP participants (pre-CAP vs. in-CAP) compared to the "net change" relative to a low-income comparison group. The net change subtracts the change within the comparison group from the change in the CAP participant group. If the bill payment coverage ratio for the CAP participants improved by 15%, for example, and the payment coverage ratio for the comparison group improved by 3%, the net change for CAP participants is 12%. In contrast, if the payment coverage ratio for CAP participants improved by 15%, and the payment coverage ratio for the comparison group declined by 3%, the net change for the CAP participants is 18%. The "net change," in other words, is the change for CAP participants relative to what their change would have been had they been in the comparison group.

Table 16. Total Bill Payment Coverage Ratios Peoples Gas Customer Assistance Program (CAP) Participants				
	Test Year Enrollees			Net Change Relative to Comparison Group
	Pre-CAP	In CAP	Change	
Peoples Gas (2017)[29]	85%	123%	39%	36%

The Peoples evaluation found that the Company's CAP yielded a net improvement of 36% in the bill payment coverage ratio for CAP participants. This improvement is precisely what the PUC was referencing when it observed that CAP "would generally put [low-income customers] in the best position to maintain good payment habits and avoid accruing utility debt." My recommendation below is designed to place Peoples Confirmed Low-Income customers in the best position to maintain good payment habits and avoid accruing *additional* utility debt.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that when Confirmed Low-Income customers accrue an unpaid balance of $300, Peoples provide a stand-alone written Plain English notice informing those customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

[29] APPRISE, Inc. (August 2017). Peoples Natural Gas 2017 Universal Service Program, Evaluation, Final Report, at 77, available at https://www.puc.pa.gov/General/pdf/USP_Evaluation-Peoples.pdf

F. Request for Deposits from Existing Customers.

Q. PLEASE EXPLAIN YOUR SIXTH RECOMMENDATION.

A. My sixth recommendation is tied to the Company's Tariff setting forth provisions regarding "Rules for Deposits – Residential Customers." In particular, Rule 3.D provides in relevant part:

> The Company may require an existing or terminated Customer to post a security deposit in order to reestablish credit under any of the following circumstances, after giving the Customer due notice of its intention to require a security deposit in accordance with prevailing Commission regulations:
>
> 1) The existing Customer has been delinquent on any two (2) consecutive bills or three (3) or more bills within the preceding twelve (12) month period.
>
> 2) The existing Customer has failed to comply with a material term or condition of a settlement or payment agreement, as defined in applicable Commission regulations.
>
> 3) The Customer's utility service has been terminated and the Customer desires reconnection.

My testimony above establishes, in detail, that Peoples has thousands of Confirmed Low-Income customers who are substantially in arrears (having missed two consecutive bills or three or more bills within the preceding 12 months); who have negotiated, but defaulted on, a deferred payment arrangement (i.e., are "payment-troubled"); or who have had service terminated and seek reconnection. Having been identified as a "Confirmed Low-Income customer" means that, by definition, the customer has provided Peoples with sufficient information to reasonably lead Peoples to conclude that the customer is low-income. By PUC regulation, these customers should be exempt from having a cash security deposit imposed. (52 Pa. Code § 56.41(B)(4)). Peoples should take the opportunity to solicit the enrollment of such Confirmed Low-Income customers into CAP.

Q,. WHAT DO YOU RECOMMEND?

A. I recommend that, in those instances where Peoples would otherwise request a cash security deposit pursuant to its Rule 3.D, the Company should, as an alternative to that deposit demand, provide a stand-alone written Plain English notice informing these customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions). In addition, Peoples should explain that customers who are income-eligible for CAP are also exempt from security deposits.

Q. PLEASE EXPLAIN WHY YOUR RECOMMENDATIONS, DESPITE BEING DUPLICATIVE OF EACH OTHER, SHOULD NEVERTHELESS BE ADOPTED.

A. My recommendations above are intentionally duplicative. Experience in multiple programs documents that more effective program outreach is associated with making multiple "touches" with the potential participant population. Through adoption of the recommendations I advance above, Peoples increases the number of touches with its Confirmed Low-Income customers, and does so in different, yet interdependent, circumstances. The recommendations involve not only Peoples better identifying their Confirmed Low-Income customers, but also Peoples telling their Confirmed Low-Income customers that: (1) enrollment in CAP is an alternative to having your service disconnected for nonpayment; (2) enrollment in CAP is an alternative to entering into an unaffordable deferred payment arrangement; (3) enrollment in CAP is an alternative to entering the winter heating season without heating service; (4) enrollment in CAP is an alternative to posting a cash security deposit; and (5) enrollment in CAP is an alternative to continuing to carry arrears (with the costs and stresses that those arrears impose). The multiple touches

through adoption of these recommendations can reasonably be expected to increase CAP enrollment without need to adopt modifications to Peoples underlying universal service program. As I have discussed throughout my testimony, this improved enrollment not only benefits the low-income customers who choose to enroll in CAP, but will also benefit the Company and all remaining ratepayers by reducing costs and enhancing revenues.

G. Utilizing Speech Analytics in Identifying Potential CAP Enrollees.

Q. PLEASE EXPLAIN YOUR FINAL RECOMMENDATION.

A. My final recommendation in this section of my testimony involves the use of linguistic analytics by Peoples to help the Company's customer service representatives to identify low-income customers who might be eligible for enrollment in CAP. In particular, this software, which Peoples already uses for other purposes, could also be used to help identify customers who are low-income and facing payment difficulties.

Q. PLEASE EXPLAIN YOUR FOCUS ON IDENTIFYING LOW-INCOME CUSTOMERS HAVING PAYMENT DIFFICULTIES.

A. In its 2019 Order revising the CAP Policy Statement, the PUC discussed the role of payment-troubled status in enrolling low-income customers in CAP.[30] While the general consensus of the parties providing comments to the PUC was that payment-troubled status should not be an *eligibility* requirement for CAP,[31] the Commission was encouraged to use payment-troubled status as a *targeting* criteria. Peoples was one of the commenters

[30] 2019 Amendments to Policy Statement on Customer Assistance Program, 52 Pa. Code § 69.261–69.267, M-2019-3012599 , Final Policy Statement and Order, Docket M-2019-3012599 (September 19, 2019).

[31] Id., at 42, 43 – 45 (Most EDCs and NGDCs do not currently require income-eligible households to be payment-troubled to qualify for their CAPs.)

indicating that payment-troubled status should not be an eligibility criterion for CAP enrollment.[32] Ultimately, the PUC reasoned:

> We note that enrolling low-income customers into CAPs as early as possible generally puts them in the best position to maintain good payment habits and avoid accruing utility debt. Waiting until a customer has broken a payment agreement or otherwise fallen into arrears could make it harder for a household to succeed in a CAP.[33]

Available technology can assist Peoples in fulfilling the goal of CAP to "maintain good payment habits" by identifying customers potentially eligible for CAP early in the process of responding to payment difficulties. By identifying these customers early in the process, not only will Peoples best serve its low-income customer base, but it will also maximize the use of CAP to help control the costs of nonpayment that I have discussed throughout my testimony (e.g., collection costs, uncollectibles, working capital, and the like).

Q. WHAT "TECHNOLOGY" WOULD ASSIST PEOPLES TO IDENTIFY LOW-INCOME CUSTOMERS HAVING PAYMENT DIFFICULTIES?

A. Peoples uses Verint Automated Call Monitoring and Speech Analytics (hereafter "Verint") as a software package through which it engages in speech pattern analytics or linguistic analytics, used to review call center conversations. (OCA-10-009).[34] Peoples describes its use of Verint in the call center context when it stated in relevant part:

> The Company utilizes Speech Analytics in order to assist with the Quality Monitoring of emergency phone calls. The Emergency Call Terms below are detected by the system in order to confirm that the phone call is properly categorized as an emergency call. The phrases, beginning with "Greeting" and ending with "Closing", below are what the system listens for in order to

[32] Id., at 46.

[33] Id., at 46.

[34] The referenced Peoples' discovery response is attached to my testimony as Exhibit RDC-5.

> confirm the call was handled properly. Company representatives are required to communicate all of these points over the course of the emergency phone call. A Quality Monitoring Associate will then review the results and listen to the phone call to ensure the system captured all results accurately.

(OCA-10-010).[35] The software, in other words, "listens" for particular phrases in a call center conversation "in order to confirm the call was handled properly." In using Vivent to review calls to assess whether "emergency calls" are properly handled, Peoples uses the software to search for key terms. Peoples states that its "emergency call terms" include: "Smell Gas, Smell, power NEAR equipment, Hit NEAR Line, Leak, Odor, Evacuate, Vacate, Headache, NEAR Shortness, Carbon NEAR Alarm, Carbon NEAR Detector, Symptoms NEAR headache, Understand NEAR precautions, Hissing, Hit NEAR line AND smell, May or may not, unable to vacate, Smell NEAR inside, Smell NEAR outside, Overheating appliance." (OCA-10-10).

Q. HOW COULD SPEECH ANALYTICS SOFTWARE BE USED TO FACILITATE CAP ENROLLMENT AND THE IDENTIFICATION OF CONFIRMED LOW-INCOME CUSTOMERS?

A. While Peoples currently uses Vivent only to "confirm that the phone call is properly categorized as an emergency call," using the terms that Peoples deems to be associated with "emergency calls," that need not be the case. When OCA asked Peoples to "identify and provide a detailed description of the internal processes, procedures, or practices employed to determine what terms, phrases, or other speech patterns will be employed in the application of the speech pattern analytics or linguistic analytics software to the review

[35] The referenced Peoples' discovery response is attached to my testimony as Exhibit RDC-6.

of call center calls. . .'" Peoples simply referred back to its use of the Vivent software. (OCA-10-12).[36]

Speech pattern analytics can also be used to determine whether calls to the Peoples call center are "handled properly" for purposes of identifying Confirmed Low-Income customers and customers who would benefit from enrollment in the Company's universal service programs. Terms, phrases and speech patterns associated with low-income status, payment difficulties, unaffordability, or seeking low-income assistance for energy or other life necessities (e.g., food, housing, medical care) could be identified such that Vivent would search for them to identify universal service calls. "Proper handling" would include approving delays in collection activities pending applications for and approval of program enrollment; identification in the Company's information system of Confirmed Low-Income customer status; and extending available low-income protections.

Q. DOES THE IMPORTANCE OF IDENTIFYING LOW-INCOME CUSTOMERS END WITH CONSIDERATIONS OF WHETHER THOSE CUSTOMERS ARE ENROLLED IN CAP?

A. No. The importance of confirming the low-income status of Peoples customers extends far beyond whether those customers are enrolled in CAP. For example, PUC regulations require that:

> Notwithstanding subsection (a), a public utility may not require a cash deposit from an applicant who is, based upon household income, confirmed to be eligible for a customer assistance program. An applicant is confirmed to be eligible for a customer assistance program by the public utility if the applicant provides income documents or other information attesting to his or her

[36] The referenced Peoples' discovery response is attached to my testimony as Exhibit RDC-7.

> eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.[37]

In addition, aside from being applicable to "applicants," the Commission has further extended this prohibition to existing customers as well.[38] Moreover, aside from deposits, Peoples customers with income at or below 150% of the FPL are protected from the involuntary disconnection of service for nonpayment during cold weather months.[39] Finally, Peoples waives certain fees for low-income customers, including turn-on fees (for turn-ons after nonpayment disconnections) and high bill investigations. While the implication of identifying low-income customers having perhaps the greatest financial benefit to low-income customers is enrollment in CAP, such enrollment is not the exclusive impact of appropriately identifying low-income customers.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that Peoples be directed to extend the use of its Vivent Speech Analytics software to assist with the Quality Monitoring of phone calls involving, or potentially involving, universal service programs and other low-income customers. Peoples should be directed to involve its USAG in the identification and selection of Low-Income and Universal Service Terms to be detected by the system in order to confirm that phone calls are properly being identified and handled. Regular six-month reports on the results of the Speech Analytics reviews should be provided to the USAG.

[37] 52 Pa. Code § 56.32(e).

[38] 52 Pa. Code § 56.41(B)(4).

[39] 66 Pa. C.S. § 1406(e).

Part 4. The Proposed Increase to the Residential Customer Charge.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I address how the 48% increase in the residential customer charge, from $14.50 per month to $21.50 per month for customers of the PNGD, and from $15.75 to $21.50 for PGD, as proposed by Peoples,[40] will have a disproportionate adverse impact on low-income customers.[41] Particularly given the affordability issues I have discussed in detail above relating to Peoples' low-income customers, this additional burden on these customers should not be approved.

As I discuss above with respect to the overall increase in rates, the adoption of a percentage of income-based CAP by Peoples does not adequately protect low-income customers. Only a small fraction of Peoples' low-income customers participate in the Company's CAP. More than 80% of Peoples' estimated number of low-income customers, and more than half of Peoples' Confirmed Low-Income customers, are not enrolled in CAP.

[40] Peoples Exh. RNZ-6 at page 4 of 4.

[41] For purposes of my analysis, I reviewed only the proposed customer charge increase for residential customers of the PNGD because those customers faced the steepest increase. I do acknowledge that Peoples is also proposing to raise the customer charge of the residential customers of its PGD from $15.75 to $21.50, and while I oppose it because it imposes a similar burden and it objectionable for the same reasons set forth in my analysis, for purposes of illustrating the most critical impact of the proposal, unless I explicitly note otherwise, I address the PNGD customer charge in crease.

Q. DOES THE IMPACT ON CAP CUSTOMERS AFFECT LOW-INCOME CUSTOMERS NOT PARTICIPATING IN CAP?

A. Yes. Even though the percentage of low-income customers participating in CAP is small, increasing the customer charge to these customers has an adverse impact on other low-income customers. When the residential customer charge is increased, the total cost of the CAP program increases as well. This occurs because the increased bills to the CAP customers participating in the percentage of income program component of CAP will be passed through to other ratepayers on a dollar-for-dollar basis. While the individual (percentage of income) CAP participants are protected from the increased fixed customer charge, in other words, the CAP program as a whole is not. Other ratepayers, including non-participating low-income ratepayers, will pay this increase. Even with LIURP and other conservation activities by CAP customers, these increased costs will remain.

Q. DOES THE PEOPLES' PROPOSAL TO INCREASE ITS RESIDENTIAL CUSTOMER CHARGE IMPOSE PARTICULAR HARMS ON LOW-INCOME CUSTOMERS?

A. Yes. The proposed 48% increase in its fixed monthly charge will have serious implications for low-income customers. Increasing the fixed monthly customer charge increases the portion of a bill that a low-income customer cannot avoid by adjusting the customer's usage. This increase in the part of the total bill that is comprised of fixed charges impedes the ability of low-income customers to control their bills through a reduction in their usage.

Q. WHAT DO YOU MEAN WHEN YOU DISCUSS LOW-INCOME EFFORTS TO "REDUCE CONSUMPTION"?

A. "Reducing consumption" is not merely associated with energy efficiency improvements. Low-income households, especially vulnerable low-income households (e.g., elderly, disabled, families with children), will take actions to try to reduce their bills to more affordable levels, frequently involving substantial household deprivation or the undertaking of substantial risks. Available research documents that low-income households also seek to reduce bills by reducing consumption through actions such as closing parts of their home; reducing heating temperatures (even if to unsafe or unhealthy levels); or substituting the use of ovens or stoves to heat limited areas of their homes rather than using their heating systems to heat the entire home. The National Energy Assistance Directors Association (NEADA) performs a periodic Congressionally-funded survey of the impacts of unaffordable home energy bills. The most recent survey, known as the National Energy Assistance (NEA) Survey, was performed in 2018 (published in December 2018).[42] Data on three actions which low-income households take to reduce their energy consumption when they do not have sufficient money to pay their utility bills is presented in the Table below.

Two observations are readily apparent from this data. First, taking dramatic actions to reduce home energy consumption is not at all uncommon within the low-income population when those customers do not have sufficient money to pay their home energy bills. From one-in-five (21%: 100 – 150% of Poverty) to one-in-three (34%: 0 – 50% of

[42] Apprise, Inc., 2018 National Energy Assistance Survey, Final Report, available at RESOURCE LIBRARY – Selected Reports – Energy Survey Research and Policy Analysis – APPRISE – Applied Public Policy Research Institute for Study and Evaluation

Poverty) customers close off parts of their home in almost every month, or in "some months," when they cannot afford to heat their homes. From one-in-four customers (26%: 0 – 50% of Poverty) reduce the temperature in their homes to unsafe or unhealthy levels in almost every month or in some months. One-in-ten (or more) low-income customers use their kitchen stove or oven to heat their homes when they have insufficient money to pay their utility bills. Second, the extent to which these actions occur increases as incomes decrease in nearly every instance. Households with incomes less than 50% of the FPL more frequently take these actions in almost every month or some months than do households with income at 100% to 150% of FPL.

Table 17. Energy Reduction Actions in Response to Inability-to-Pay by Range of Federal Poverty Level[43] (each attributed to "not having enough money to pay energy bill")

	Closed Off Part of Home			Kept Temp at Unsafe or Unhealthy Level			Used Kitchen Stove or Oven to Heat		
	0-50%	51-100%	100-150%	0-50%	51-100%	100-150%	0-50%	51-100%	100-150%
Almost every month	10%	14%	7%	8%	3%	3%	1%	1%	1%
Some months	24%	13%	14%	18%	12%	10%	14%	11%	8%
1 – 2 months	12%	10%	11%	7%	8%	9%	22%	19%	14%
Never / No	54%	63%	67%	67%	76%	76%	63%	69%	77%
Don't know/refused	0%	0%	<1%	0%	1%	2%	0%	0%	1%

As the Table above documents, because of the very fact of their poverty, low-income customers make considerable sacrifices in their homes to reduce their consumption in order

[43] Apprise, Inc., 2018 National Energy Assistance Survey, Final Report, available at RESOURCE LIBRARY – Selected Reports – Energy Survey Research and Policy Analysis – APPRISE – Applied Public Policy Research Institute for Study and Evaluation

to pay their home energy bills. Not all efforts to reduce consumption involve efforts to make energy efficiency investments.

The households who are forced into engaging in these unsafe and unhealthy activities in their struggle to keep their home energy bills affordable are impeded in their efforts by Peoples' proposal to increase its fixed monthly customer charge by 48% (from $14.50/month to $21.50/month). Peoples' proposal makes a higher part of the customer's monthly bill unavoidable through reduced consumption. Accordingly, those low-income customers taking such actions will face a smaller bill reduction as a result of their action should the Peoples' proposed increase in the fixed monthly customer charge be approved, potentially incentivizing more dangerous usage-reduction measures.

Q. TO WHAT EXTENT DO LOW-INCOME CUSTOMERS FACE AN INABILITY-TO-PAY?

A. In addition to my examination of energy burdens discussed above, I have also considered inability-to-pay by reference to Pennsylvania data reported in the Census Bureau's most recent PULSE Household Survey. As of the time I write this testimony, the most recent PULSE Household Survey was for the two-week time period ending February 5, 2024.[44] While the Census Bureau does not report data for specific utility service territories, it does provide state-specific information for Pennsylvania.

The Pennsylvania PULSE Survey data shows that nearly four-of-ten households (37.3%) with annual income less than $25,000 had a "very difficult" time paying for their usual

[44] Available at https://www.census.gov/data/tables/2024/demo/hhp/cycle01.html

household expenses "in the past seven days" (as of the time of the Survey). More than three-of-five households (62.9%) at that income level had either a "very difficult" time or a "somewhat difficult" time paying their usual household expenses. As incomes increased, the difficulty in paying usual household expenses decreased, but nonetheless remained high. For households with annual income between $25,000 and $35,000, 15% had a "very difficult" time, but more than 44% (44.5%) had either a "very difficult" or a "somewhat difficult" time in paying their usual household expenses. It was not until annual incomes exceeded $50,000 that the percentage of households finding it "not at all difficult" or just "a little difficult" exceeded the percentage of households finding it "somewhat difficult" or "very difficult" to pay their usual household expenses.

Table 18. Difficulty Paying for Usual Household Expenses in Last 7 Days (Pennsylvania) (January 9, 2024 – February 5, 2024) (Household PULSE Survey)

	Difficulty paying for usual household expenses in the last 7 days				
	Not at all difficult	A little difficult	Somewhat difficult	Very difficult	Total
Less than $25,000	11.8%	25.3%	25.6%	37.3%	100.0%
$25,000 - $34,999	18.5%	37.1%	29.5%	15.0%	100.0%
$35,000 - $49,999	29.7%	22.0%	18.8%	29.5%	100.0%
$50,000 - $74,999	36.8%	30.8%	16.5%	16.0%	100.0%
$75,000 - $99,999	37.8%	35.2%	15.8%	11.1%	100.0%
$100,000 - $149,999	41.7%	41.4%	9.7%	7.2%	100.0%
$150,000 - $199,999	45.8%	40.1%	8.4%	5.7%	100.0%
$200,000 and above	74.1%	16.0%	5.2%	4.6%	100.0%

Given this PULSE Household Survey data, it is unreasonable to make it even more difficult for Peoples residential customers to be able to reduce their monthly utility bills by reducing their consumption.

Q. CAN YOU PLACE THE PROPOSED INCREASE IN THE PNGD AND PGD RESIDENTIAL CUSTOMER CHARGE INTO SOME CONTEXT RELATING TO ITS IMPACT ON LOW-INCOME CUSTOMERS?

A. Yes. According to the Company, as of January 31, 2024, Peoples serves an estimated 135,425 estimated low-income customers in its PNGD customer base and an estimated 13,048 low-income customers in its PGD customer base. (CAUSE-PA-II-012). An increase in the residential monthly customer charge from $14.50 to $21.50 ($7.00 per month), therefore, imposes an increased financial burden on PNGD customers of $84 per year, while the increase in the PGD residential customer charge from $15.75 to $21.50 ($5.75) imposes an increased burden of $69 per year. Even after subtracting 26,842 CAP participants from the PNGD estimated low-income customers, and 2,249 CAP participants from the PGD estimated low-income customers, the remaining low-income customer base, therefore would be charged an additional $9.9 million each year in unavoidable charges.[45] Remember, this is *not* the total customer charge, but rather is *only* the *increase* in the customer charge. To place this dollar figure in context, Peoples' customers have received $7,714,523 in LIHEAP cash grants in the 2023 – 2024 program year to date. (OCA-09-33).[46] The increase in the unavoidable charges that would be imposed on low-income

[45] PNGD: $84/year x (135,425 estimated low-income – 26,842 CAP participants) = $9,120,972. PGD: $69/year x (13,048 estimated low-income – 2,249 CAP participants) = $745,131.

[46] The referenced Peoples' discovery response is attached to my testimony as Exhibit RDC-8. Comparisons are not made to the 2022 – 2023 or 2021 – 2022 LIHEAP program years. In those years, federal LIHEAP appropriations were significantly increased in response to the economic crisis associated with the COVID-19 health pandemic. For example, one White House announcement stated:

> Pennsylvania has received a record $480.5 million for the Low Income Home Energy Assistance Program (LIHEAP) available this fiscal year (October 2021 to September 2022). As part of a state-by-state breakdown of funding, the Administration reported that in addition to an annual appropriation of $182.8 million for Pennsylvania, the state received an additional $297.7 million in funds from the American Rescue Plan – *more than double the state's typical annual funding*. The total of $480.5 million *is the*

Peoples customers due to the proposed increase in the residential customer charge, in other words, is nearly 30% higher than the *total* LIHEAP funding for basic cash grants received by Peoples customers thus far in Program Year 2024 (starting in October 2023).[47] For every $1 in LIHEAP funding that is being provided to Peoples' low-income customers, Peoples proposes to take $1.30 away from those low-income customers in the form of an increased unavoidable fixed monthly customer charge.

Q. WHY ISN'T THIS PROBLEM ASSOCIATED WITH THE RATE INCREASE AS A WHOLE RATHER THAN ASSOCIATED WITH THE INCREASED CUSTOMER CHARGE IN PARTICULAR?

A. In part, the problem *is* associated with the rate increase when viewed as a whole. In large part, however, the problem is associated with the increased customer charge because there is nothing that a household can do to avoid this monthly fee. Even if low-income customers could reduce their usage, they would not be able to avoid any part of the proposed increase associated with the fixed monthly customer charge.

Q. DOES THE PEOPLES' PROPOSED INCREASE TO THE FIXED MONTHLY CUSTOMER CHARGE ALSO IMPEDE USING LOW-INCOME ENERGY EFFICIENCY TO REDUCE OVERALL BILL INCREASES?

---

highest amount Pennsylvania has ever received in LIHEAP to help families struggling with the costs of home heating.

(emphasis added), available at LIHEAP-pennsylvania.pdf (whitehouse.gov) According to a White House announcement, the American Rescue Plan more than doubled LIHEAP funding nationally. It noted that "This is the largest appropriation in a single year since the program was established in 1981." (Id.)

[47] Peoples customers received additional LIHEAP Crisis funding. This funding, however, is not used to pay bills for current service, but rather used to help retire arrears which lead to the loss, or threatened loss, of service due to nonpayment disconnections.

A. Yes. The types of barriers to low-income investments in energy efficiency are precisely the types of barriers that are made even more problematic by an increase in the fixed monthly customer charge. In assessing these barriers to low-income energy efficiency investments, I matched the zip codes which Peoples listed as comprising its service territory (OCA-9-01) to Census data for the same zip codes. This data analysis demonstrates that:

- Peoples' zip codes have high penetrations of low-income and very low-income households.[48] At these income levels, Peoples customers have insufficient discretionary funds to invest in energy efficiency, even if such investments would be cost-effective in the short- or medium-term. The extent of low-income households in Peoples' service territory was discussed in detail above. The increase in fixed monthly customer charges makes it more difficult for investments to be cost-effective, making the lack of discretionary investment income an even greater impediment.
- Peoples' zip codes reveal high mobility within the low-income population. Mobility is primarily measured by the percentage of households that have changed residences within the past year.[49] Frequent mobility makes it more difficult for low-income households to invest in energy efficiency. A low-income household will not make an energy efficiency investment that has a three-year payback if that household does not expect to live in its home for three years.
- Peoples' zip codes have an extremely high prevalence of low-income households with high and extremely high shelter burdens.[50] High burdens are

[48] The number of households by income are provided in Table B19001 of the American Community Survey (5-year data), available at https://data.census.gov/table/ACSDT5Y2022.B19001?q=B19001:%20Household%20Income%20in%20the%20Past%2012%20Months%20(in%202022%20Inflation-Adjusted%20Dollars)&g=040XX00US42$8600000. The population by Poverty Level is provided in ACS Table C17002 (5-year), available at https://data.census.gov/table/ACSDT5Y2022.C17002?q=C17002:%20Ratio%20of%20Income%20to%20Poverty%20Level%20in%20the%20Past%2012%20Months&g=040XX00US42$8600000

[49] American Community Survey, 5-year, 2020, Table B07010, available at https://data.census.gov/table/ACSDT5Y2022.B07010?q=b07010&g=040XX00US42$8600000

[50] American Community Survey, 5-year, 2020, Table B25074, available at https://data.census.gov/table?q=B25074:%20Household%20Income%20by%20Gross%20Rent%20as%20a%20Percentage%20of%20Household%20Income%20in%20the%20Past%2012%20Months&g=040XX00US42$8600000

shelter burdens that exceed 30% of income. Extremely high burdens are shelter burdens that exceed 50% of income. Data for the Peoples service territory demonstrates that as household incomes decrease, the prevalence of high shelter burdens, and extremely high shelter burdens, dramatically increase. High shelter burdens make it difficult for low-income households to invest in energy efficiency. A low-income household that is struggling to pay its underlying housing costs does not have the discretionary income to invest in usage reduction measures, even if that investment might be cost-effective. Since, by definition, fixed monthly customer charges cannot be reduced by reducing consumption, increasing the fixed monthly customer charge by 50% (as Peoples proposes to do) makes it less likely that energy efficiency investments would be cost-effective in a time period that would allow low-income households to recover their investment in a resource-constrained environment.

Q. HAVE YOU BEEN ABLE TO REVIEW THE HARMS THAT ARISE FOR LOW-INCOME CUSTOMERS AS A RESULT OF THEIR INABILITY TO RESPOND TO BILL UNAFFORDABILITY BY REDUCING BILLS THROUGH REDUCED USAGE?

A. Yes. I have examined various indicators of bill payment difficulties for low-income customers as compared to residential customers as a whole. The data is presented in the Table below. Overall, the payment patterns of Peoples' Confirmed Low-Income customers are consistently worse than the payment patterns of the Company's residential customers as a whole. The percentage of accounts in arrears is consistently two or more times higher for Confirmed Low-Income customers than for residential customers. The average arrearage level for Confirmed Low-Income customers is consistently substantially higher than the average arrearage level for residential customers as a whole. The fact that the Company disconnects service to Confirmed Low-Income customers at a rate 50% higher than the overall residential disconnection rate was demonstrated in Table 7 above. The gross write-off rate for Confirmed Low-Income customers is consistently three to four times higher than it is for residential customers as a whole. As can be seen, the very

customers for whom the Company is making it more difficult to respond to an inability-to-pay are those customers that have the greatest payment difficulties.

Table 19. Peoples Collections: Residential vs. Confirmed Low-Income (2020 – 2022)[51]

	Residential			Confirmed Low-Income		
	2020	2021	2022	2020	2021	2022
Pct accounts in debt	8.4%	6.0%	6.8%	15.8%	10.9%	14.0%
Pct billings in debt	4.7%	3.3%	2.7%	24.8%	10.4%	7.8%
Average arrears	$449.90	$466.51	$394.22	$617.26	$718.87	$599.51
Gross write-off	2.5%	1.9%	1.6%	9.0%	7.0%	4.7%

Q. DO THESE PAYMENT DIFFICULTIES COST LOW-INCOME CUSTOMERS ADDITIONAL MONEY IN INCREASED BILLS?

A. Yes. When low-income customers have an inability to pay their bills in a full and timely fashion, as is documented above, the Company's response is to increase those unpaid bills even further. PNGD imposes a late payment charge of 1.5% a month on the full, unpaid balance.[52] This monthly fee is an annualized fee of 19.56% per year. PGD imposes a late payment charge of 1.25% a month on the full, unpaid balance.[53] This monthly fee is an annualized fee of 16.08% per year.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the residential customer charge determined by OCA witness Clarence Johnson should be approved.

[51] BCS 2022 Report.

[52] PNGD tariff: Gas – PA PUC No. 48, Original Page No. 26.

[53] PGD Tariff: Gas – PA PUC N. 8, Original Page No. 26.

Part 5. The Proposed Weatherization Normalization Adjustment.

Q. PLEASE DESCRIBE THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the Peoples' proposal to adopt a Weather Normalization Adjustment (WNA). (Peoples Statement 3, at pp. 15, et seq.; see also, Peoples St. 15, at 54-57). According to Peoples witness Zarumba (Peoples St. 15), "non-normal weather" has impacts on both customers and the Company. "The impact on customers triggered by non-normal weather is variation in the level of bills. The variation can be especially problematic when severe weather occurs, and customers' bills increase." (Peoples St. 15, at 55). He continues to assert that when there is a variation in weather, "the Company's revenues fluctuate. However, the majority of the Company's cost structure related to delivery base rates is fixed. Therefore, under- and over-earning occurs." (Id.) He concludes by asserting that "the Weather Normalization Mechanism provides systematic protection to customers and the Company for revenue variations in usage associated with non-normal weather." (Id., at 56).

Company witness Scanlon finally asserts that "the WNA program will not impact the amount a CAP customer is expected to pay but rather only impact the 'full tariff' charges that costs of the program will be calculated on." (Peoples St. 3, at 18).

Q. IS THE PROTECTION OF CAP CUSTOMERS SUFFICIENT TO PROTECT LOW-INCOME CUSTOMERS GENERALLY?

A. No. As I have testified above, Peoples has identified a fraction of its estimated number of low-income customers as Confirmed Low-Income customers. Peoples has then enrolled a small fraction of its Confirmed Low-Income customers into

CAP. More than 80% of the low-income customer base of Peoples is not enrolled in CAP. Even to the extent that what Ms. Scanlon asserts is accurate, it is not applicable to the vast majority of Peoples' low-income customers.

Q. IN WHAT WAY DOES PEOPLES' PROPOSED WNA DISPROPORTIONATELY ADVERSELY AFFECT LOW-INCOME CUSTOMERS?

A. Low-income customers have a lesser ability than residential customers as a whole to adjust their usage in response to changes in winter heating month temperatures. As a result, Peoples' WNA bill adjustments will be imposed more frequently on low-income customers than they will be on residential customers generally. In my discussion below, I consider three different actions to reduce natural gas space heating usage: (1) insulating one's home; (2) air-sealing one's home (as measured by the how "drafty" the home is); and (3) installing a programmable thermostat. The data is taken from the 2020 Residential Energy Consumption Survey (RECS) undertaken by the Energy Information Administration of the U.S. Department of Energy (EIA/DOE). 2020 is the most recent RECS data for which data has been published.[54]

Table 20 below shows the distribution of how well insulated homes are by household income in Pennsylvania. The Table shows the percentage of households at the different income levels in the entire population. For example, 23.3% of all households have income below $30,000. Households at that income level are under-represented in those homes that are well-insulated (23.3% in total population vs. 19.7% in households with well insulated

[54] Table 20 through Table 22 are based on 2020 RECS microdata, available at https://www.eia.gov/consumption/residential/data/2020/index.php?view=microdata

homes) and over-represented in both those households that are poorly insulated (33.6% with income below $30,000) and those completely lacking insulation (61.2% with income below $30,000).

Table 20. Insulation by Income for Households Heating with Natural Gas (Pennsylvania) (2020)

Income	Well-Insulated	Adequately Insulated	Poorly Insulated	Not Insulated	Total
$0 - $29,999	19.7%	18.6%	33.6%	61.2%	23.3%
$30,000 - $49,999	12.3%	16.9%	18.5%	15.9%	15.9%
$50,000 - $59,999	3.7%	11.5%	9.8%	6.3%	8.8%
$60,000 - $74,999	13.2%	13.6%	11.0%	0.0%	12.5%
$75,000 - $99,999	13.9%	13.6%	9.1%	10.7%	12.7%
$100,000 - $149,999	17.8%	13.5%	8.0%	5.9%	13.3%
$150,000+	19.4%	12.3%	10.1%	0.0%	13.4%
Total	100.0%	100.0%	100.0%	100.0%	100.0%

Table 21 below reveals the same pattern with the extent to which homes have been air-sealed. The Table presents data on how frequently a home feels drafty, disaggregated by income ranges. Low-income households are substantially over-represented in those populations of households whose homes are drafty "all the time" (23.3% of total population with income below $30,000 vs. 44.2% of the population with homes that are drafty "all the time") and of households whose homes are drafty "most of the time" (23.3% of total population vs. 38.4% of the population with homes that are drafty "most of the time"). In contrast, households with the highest incomes are substantially under-represented in households reporting that their homes are drafty "all" or "most" of the time.

Table 21. Homes by How Often Home is Drafty by Income for Households Heating with Natural Gas (Pennsylvania) (2020)

Income	All the time	Most of the Time	Some of the Time	Never	Total
$0 - $29,999	44.2%	38.4%	20.8%	18.6%	23.3%
$30,000 - $49,999	11.5%	16.4%	15.2%	17.3%	15.9%
$50,000 - $59,999	12.7%	11.4%	11.0%	5.2%	8.8%
$60,000 - $74,999	12.7%	10.7%	9.8%	16.1%	12.5%
$75,000 - $99,999	5.8%	7.5%	15.3%	12.3%	12.7%
$100,000 - $149,999	0.0%	10.9%	13.3%	15.9%	13.3%
$150,000+	13.1%	4.7%	14.6%	14.7%	13.4%
Total					

Finally, Table 22, also based on 2020 RECS microdata as cited above, documents that low-income households are over-represented in those populations lacking a programmable thermostat while being under-represented in those populations having a programmable thermostat. While 23.3% of the total population has income below $30,000, 33.7% of the population with no thermostat, and 29.8% of the population with a manual thermostat, do so. In contrast to the 23.3% of the population with income less than $30,000, only 16.8% of the population have programmable thermostats, and only 7.2% of the population with "smart" (internet connected) thermostats, do so.

Table 22. Gas Heated Homes with Programmable Thermostats by Income (Pennsylvania) (2020)

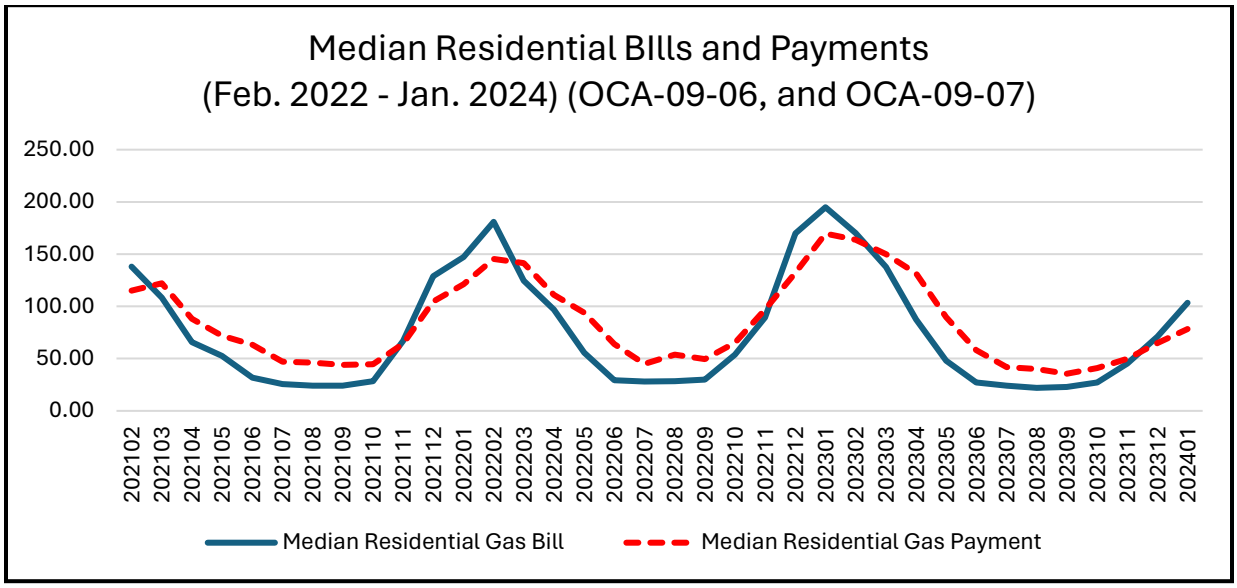
Income	No therm	Manual Therm	Programmable Therm	Smart / Internet Therm	Total
$0 - $29,999	33.7%	29.8%	16.8%	7.2%	23.3%
$30,000 - $49,999	13.1%	18.5%	14.6%	9.6%	15.9%
$50,000 - $59,999	9.6%	10.0%	7.7%	7.0%	8.8%
$60,000 - $74,999	14.8%	12.5%	13.6%	5.0%	12.5%
$75,000 - $99,999	7.3%	12.9%	14.3%	7.6%	12.7%
$100,000 - $149,999	15.8%	9.2%	14.6%	29.0%	13.3%
$150,000+	5.8%	7.1%	18.3%	34.6%	13.4%
Total	100.0%	100%	100.0%	100.0%	100.0%

Together, the data in Table 20 through Table 22 setting forth the most recent Pennsylvania data from the RECS (2020), it is clear that lower-income households have a far more difficult time in being able to control their weather-sensitive natural gas heating load.

Q. IS THERE A BETTER WAY THAN ADOPTION OF THE PROPOSED WNA TO PROTECT LOW-INCOME CUSTOMERS FROM BILL FLUCTUATIONS CAUSED BY FLUCTUATIONS IN WEATHER?

A. Yes. Enrolling residential customers on budget billing would provide more transparent and consistent protections to residential customers from the volatility in home heating bills. Budget billing allows a customer to spread annual bills in equal installments over the course of the year. By enrolling in budget billing, a customer will know from month-to-month what their natural gas bill will be. The Chart below shows the impact of fluctuations in monthly heating bills on residential customers. The Chart tracks median monthly residential bills for Peoples customers (the solid line) compared to median residential payments (the dashed line). As the Chart demonstrates, at the median (i.e., the mid-point),

residential customers pay less than their bills during the cold weather months while paying more than their median bills during the shoulder and warmer weather months.



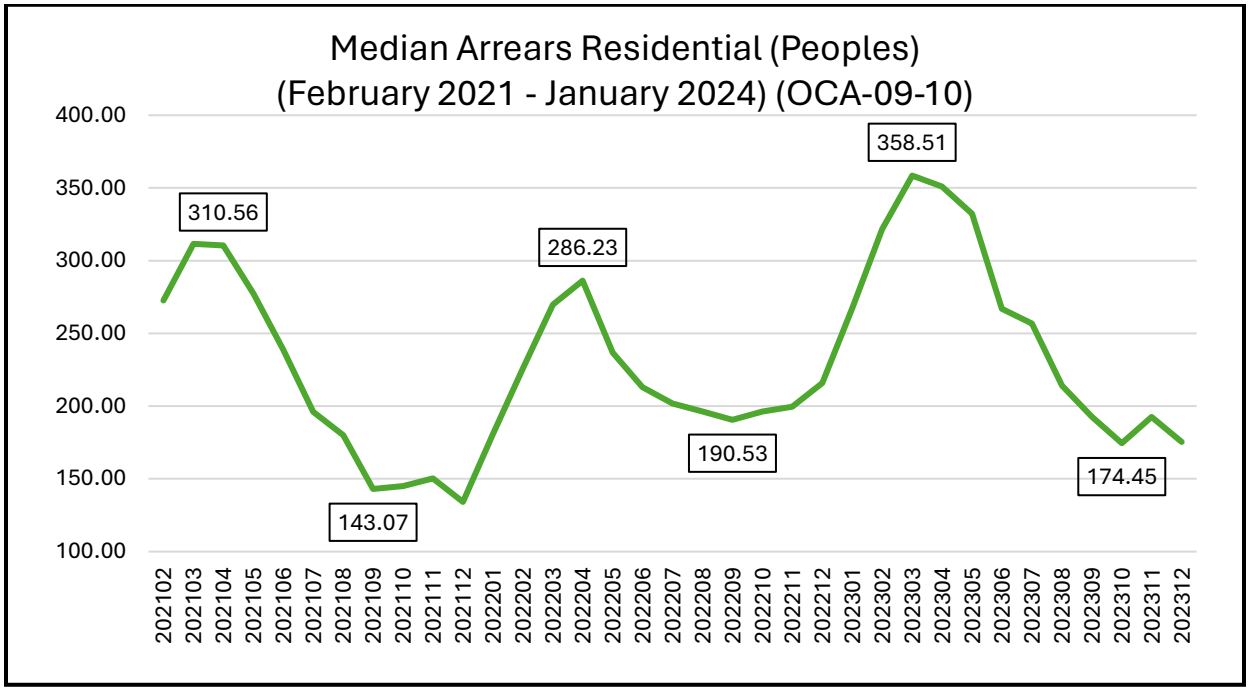
In addition, contrary to Peoples argument about the impact of year-over-year bills, it is evident from the data above that the somewhat higher bills in 2022 did not change the residential payment patterns[55].

Q. IS THERE AN IMPACT OF THESE SEASONAL PAYMENT PATTERNS ON THE COMPANY?

A. Yes. The seasonal payment patterns that I have identified below creates instability in the receipt of revenue by the Company. As bills increase in excess of the payments which residential customers make on a monthly basis, the arrears carried by those customers increase as well. The Chart below presents the median residential arrears, by month, for the past 36 months (February 2021 – January 2024). (OCA-09-10). The data shows that the median residential arrears more than doubled from September 2021 through April 2022

[55] Peoples discovery response to OCA-09-6 is attached to my testimony as Exhibit RDC-9. Comparisons

(from $143 to $286), and nearly doubled from September 2022 through April 2023 (from $191 to $359). By September 2023, median residential arrears had again fallen to their seasonal low ($174).



The seasonal variation in bills and payments, leading to the substantial seasonal variation in arrearage balances, not only has an adverse impact on the residential customers carrying such arrears (whether it is increased bills due to the imposition of late charges or the household impacts of having unpaid bills), but has an adverse impact on the utility as well.

Q. WHAT DO YOU CONCLUDE?

A. If Peoples truly wants to provide "systematic protection to customers. . .for revenue variations in usage associated with non-normal weather," increasing enrollment in its Budget billing program is a better tool to use than adoption of the proposed WNA. Budget billing spreads annual bills in levelized payments over the course of a year. In so doing, it will accomplish three objectives: (1) it will make bills more predictable for residential

customers (which is most important for low-income residential customers); (2) it will stabilize the receipt of revenues over the course of the year; and (3) it will allow residential customers the opportunity to make payments that more closely align with their bills, to the benefit of both the customers and the Company.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the recommendations of OCA witnesses Evrard, Mugrace and Johnson be adopted with respect to the Company's proposed Weather Normalization Adjustment and that the proposed Weather Normalization Adjustment should be denied.

Part 6. The Requested Equity Adder to Reflect Claims of Superior Management.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the request by Peoples to have an addition of 0.25% be added to the "determination of the return on common equity proposed by Mr. Moul to bring it to the high end of the range of returns being considered.' (People St. 1, at 25 – 26). Peoples witness Huwar reasoned that "Peoples has become a critically valuable business to the region and to the state. Its impact has made a positive difference in the lives of people and the prosperity of its customers in many ways. We believe our importance will continue to grow into the future." (Id., at 26). Mr. Moul proposes the 0.25% adder in light of "strong management performance." (People St. 13, at 52). In this section of my testimony, I will review Peoples' "management performance" to assess whether the requested 0.25% adder is merited. I note that my testimony on this issue is supplemental to that offered by OCA witnesses David Evrard (OCA St. 1), Dante Musgrace (OCA St. 2), Aaron Rothschild (OCA St. 3), and Barbara Alexander (OCA St. 5). I address the issue from a perspective that is in addition to that of these other OCA witnesses.

Q. IS THERE A SPECIFIC ASPECT OF MANAGEMENT PERFORMANCE THAT YOU WILL DISCUSS?

A. Yes. I will examine whether the Company has developed and implemented an integrated approach to managing its credit and collections. While this discussion may consider low-income issues at some points, it is not focused on low-income issues. The management control of collectibles is an issue that goes beyond exclusively responding to low-income inability-to-pay.

Q. DOES PEOPLES ENGAGE IN "STRONG MANAGEMENT PERFORMANCE" WITH RESPECT TO ITS CREDIT AND COLLECTIONS?

A. No. While credit and collections performance may well implicate low-income customers on occasion, it also includes a broader inquiry into the Company's performance relative to all residential customers. When my discussion below is limited to the treatment of low-income customers, I will explicitly note so.

I first note that Peoples not only has a substantial number of residential customers in debt, but also that that number is increasing. While at the height of the COVID crisis in 2020, Peoples had 49,461 residential customers in debt, that number dipped to 35,565 in 2021. By 2022, that number had increased by nearly 25% (to 43,869).[56] This was independent of the payment patterns of low-income customers which I have discussed throughout my testimony. The residential customers in debt as a percentage of all residential customers increased from 6.0% in 2021 to 7.4% in 2022.[57]

[56] BCS 2022 Report, at 21.

[57] Id., at 21.

Peoples is not responding to this increase in the number of residential accounts in debt by increasing the percentage of accounts in debt being placed on payment arrangements. In 2020, when customers were not being removed from agreements due to COVID, the percentage of customers in debt on agreement reached 26.4%. In 2021, that percentage fell to 22.5%, while in 2022, the percentage fell even further.

Table 23. Residential Accounts in Debt On Agreement and Not On Agreement

	# On Agreement	# NOT On Agreement	Total In Debt	Pct on Agreement
2020	13,040	36,421	49,461	26.4%
2021	7,988	27,577	35,565	22.5%
2022	9,813	34,056	43,869	22.4%

Similarly, the percentage of Peoples residential *dollars* in debt that Peoples had on agreement has consistently declined, from 52.6% in 2020, to 51.2% in 2021, and then to 50.8% in 2022.[58]

Even those residential customers that are entering payment arrangements for their past-due balances demonstrate a declining performance by Peoples. The PUC tracks the average "Bills Behind" (number of bills past-due) for customers on arrangements for Pennsylvania utilities. The number of Bills Behind for its accounts on arrangement is getting bigger and bigger for Peoples customers. While in 2020, residential accounts on arrangements were 7.35 Bills Behind, by 2022, that Bills Behind figure had increased by nearly 50%, to 10.93.[59] The Company, in other words, is leaving its residential arrears longer and longer

[58] Id., at 28.

[59] Pennsylvania PUC, Collections Data for the Major Electric, Gas and Water Companies, annual reports available at https://www.puc.pa.gov/filing-resources/reports/quinquennial-report-pursuant-to-section-1415/

before it succeeds in placing those arrears on a payment arrangement through which the unpaid balances can be retired.

Simply getting customers on agreement, however, does not mean that those customers successfully retire their underlying arrears. The PUC tracks the number of what it calls "payment-troubled" customers. An account that is "payment-troubled" refers to an account that has defaulted on one or more payment agreements within the preceding twelve months. According to the BCS 2022 Report, Peoples has experienced between 17,910 (2022) and 19,732 (2020) payment-troubled customers per year.[60] The number of payment-troubled customers (i.e., defaulted payment plans) on the Peoples system, in other words, has consistently remained roughly two times higher than the number of active payment arrangements (2022 ratio = 1.83-to-1).

Table 24. Number of Residential Customers in Debt on Payment Arrangements vs. Payment-Troubled Customers (2020 – 2022)[61]

	In Debt on Arrangement	Payment Troubled	Ratio: Payment-Troubled to On Arrangement
2020	13,040	19,732	1.51
2021	7,988	18,647	2.33
2022	9,813	17,910	1.83

As can be seen, even when Peoples enters into a payment arrangement with its residential customers, more often than not that arrangement results in a default, leading the customer to be categorized as "payment-troubled."

[60] Universal Service Program & Collections Report, BCS 2022 Report, at 12. Available at https://www.puc.pa.gov/media/2573/2022-universal-service-report-final.pdf

[61] Id., at 12, 20.

Q. DO YOU HAVE ANY FINAL OBSERVATION ABOUT PEOPLES MANAGEMENT PERFORMANCE REGARDING COLLECTIONS?

A. Yes. Peoples appears to have an unreasonable reliance on the use of nonpayment disconnections as a collection device. The Table below, for example, compares the number of residential nonpayment disconnections to the number of residential accounts in arrears on payment arrangements. The low number of disconnections in 2020 reflects restrictions imposed on Pennsylvania utilities by the PUC. In 2021, for every customer Peoples had on an active payment arrangement, it had disconnected 3.0 residential accounts for nonpayment. In 2022, the ratio declined, but nonetheless, Peoples disconnected 1.6 residential accounts for nonpayment for every account in debt that was on a payment arrangement.

Table 25. Number of Residential Customers in Debt on Payment Arrangements vs. Payment-Troubled Customers (2020 – 2022)[62]

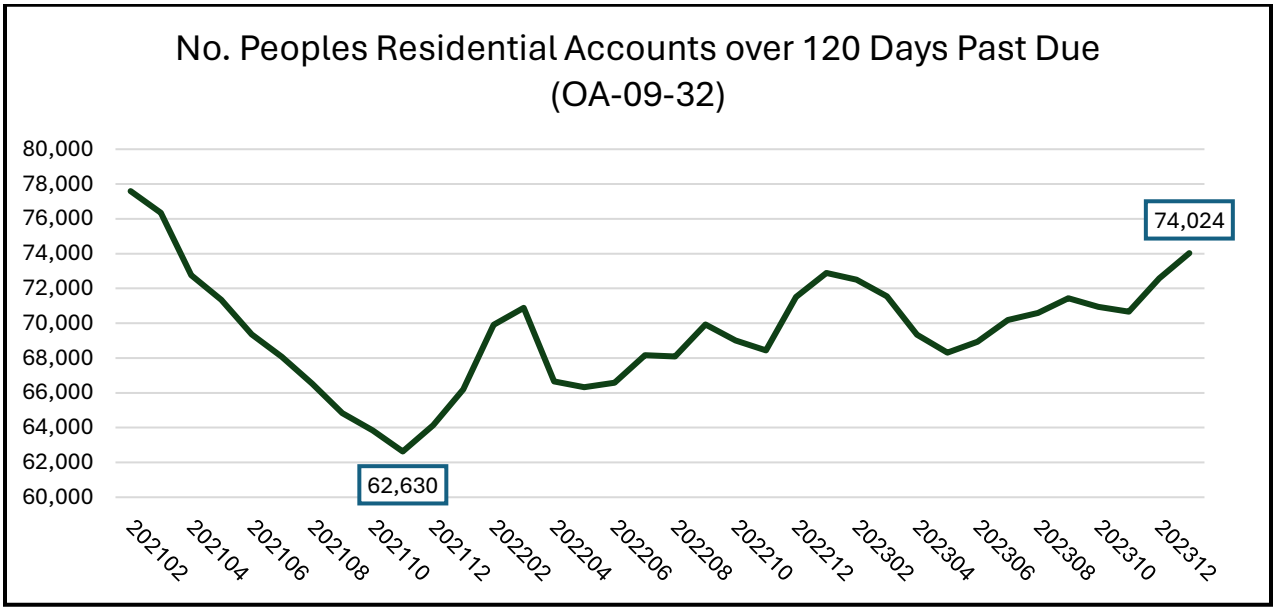
	In Debt on Arrangement	Nonpayment Disconnections	Ratio: Nonpayment Disconnections to Pyt Arrangements
2020	13,040	823	0.1
2021	7,988	23,754	3.0
2022	9,813	15,335	1.6

As I had observed above, BCS states that "termination of public utility service is the most serious consequence of customer nonpayment and is viewed *as a last resort* when customers fail to meet their payment obligations." (emphasis added). It is of concern when a utility such as Peoples is pursuing nonpayment disconnections far more often than it is enrolling residential customers in payment arrangements.

[62] Id., at 16, 20.

Q. DO YOU HAVE ANY FINAL OBSERVATIONS ABOUT THE COLLECTIONS BY PEOPLES?

A. Yes. The Chart below shows the number of residential Peoples accounts that have arrears that are 120 days or more past due. (OCA-09-32). The Chart includes data from February 2022 through January 2024 (i.e., the most recent 36 months available). The improvement in collections once COVID-related collections restrictions imposed by the PUC were lifted is evident. The number of accounts with arrears 120 or more days in arrears dropped from nearly 78,000 in February 2021 to just over 62,000 in October 2010.



The Chart above, however, presents concerns with respect to management performance by Peoples in more recent months. Since October 2021, the number of Peoples accounts with arrears over 120 days in age has been consistently increasing. The 74,024 accounts that are 120+ days in arrears in January 2024 was nearly 20% higher than the 62,630 accounts with 120+ day arrears in October 2020. The consistent month-to-month deterioration in Peoples collections performance over that time period is evident.

Q. WHAT DO YOU CONCLUDE?

A. Based on the data and discussion I review above, I find that Peoples does not have a "strong management performance" to justify the Company's requested increase in its return on equity. A comprehensive review of the Company's credit and collection management performance reveals numerous shortcomings that indicate a less than stellar management performance. Accordingly, I recommend that the Commission adopt the return on equity found to be reasonable by OCA witness Rothschild.

Part 7. Peoples Requested Equity Return and the Impact of Inflation.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the testimony of Peoples witness Paul Moul regarding his consideration of the impacts of inflation on his proposed return on equity. Mr. Moul testified that his "cost of equity analysis reflects the impact of high levels of inflation, which have not been seen for four decades. Indeed, the rate of inflation spiked upward to 9.1% in June 2022, and as of October 2023, it was 3.2%." (Peoples St. 13, at 5).

As I testified above, the process of setting a reasonable return on equity does not exclusively consider the interests of investors. Instead, as I noted, the courts have held that setting a reasonable return on equity must involve a balancing of the interests of investors and ratepayers. To the extent that the impacts of inflation on investor interests are considered, therefore, the impacts of inflation on ratepayer interests must be considered as well.

Q. DOES INFLATION HAVE A PARTICULARLY ADVERSE IMPACT ON LOWER INCOME HOUSEHOLDS?

A. The impact of inflation is felt most severely by low-income households. Research by the U.S. Department of Labor's Bureau of Labor Statistics, the agency that calculates and reports the "rate of inflation" (i.e., the Consumer Price Index [CPI]) each month, reports that "consumers with different incomes experience inflation quite differently."[63] According to this research, households earning lower incomes spend a higher share of their household budget on household necessities such as rent, food and medical care.

Table 26. Household budget shares of expenditure items for lowest and highest income quartiles, 2017–2018[64]

Expenditure	Lowest Income Quartile	Highest Income Quartile
Rent (including owner's equivalent rent	34.93%	27.93%
Food at home	9.44%	6.58%
Medical care	8.36%	8.09%
Household utilities	4.36%	2.73%
Motor fuels	3.46%	3.42%
Motor vehicle operation	3.44%	3.40%
Telephone service	2.32%	2.00%

This difference in the consumption basket of lower and higher income households is significant in that the prices of goods and services that had larger budget shares for lower income households have risen faster than all other items. In particular, the BLS researchers found, "prices for motor fuel, medical care, fuel and utilities, and shelter rose faster than the overall average. . ."[65] "Because the lowest income households dedicate

[63] Klick and Stockburger (December 2022). Spotlight on Statistics: Inflation Experiences for Lower and Higher Income Households, U.S. Department of Labor, Bureau of Labor Statistics, available at https://www.bls.gov/spotlight/2022/inflation-experiences-for-lower-and-higher-income-households/home.htm

[64] Id.

[65] Id.

more of their spending on these categories," the BLS researchers found, "their overall inflation rates grew faster than highest income households."

Table 27. Average price change by item, 2005–2020
(starred items defined by BLS to be household necessities)[66]

Item	2005–2020 average 12-month change
Tuition, other school fees, and childcare	4.03%
Motor Fuel*	3.45
Medical Care*	3.28
Rent*	3.06
Food away from home	2.86
Fuel and utilities*	2.71
All items	2.00
Food at home*	1.89
Lodging away from home	1.16
Recreation	0.74
New and used motor vehicles	0.43
Apparel	-0.10
Telephone services*	-0.20

Similar findings were reached by researchers at the Federal Reserve Bank of Dallas.[67] These researchers found that:

[66] Id.

[67] Jayashankar and Murphy (January 2023). High inflation disproportionately hurts low-income households, Federal Reserve Bank of Dallas, available at https://www.dallasfed.org/research/economics/2023/0110

> Families have grappled with surging prices over the past 18 months, as the cost of meeting basic needs rose. Consumer prices were 7.1 percent higher in November 2022 than a year earlier.
>
> Although inflation may have peaked, prices remain elevated, with food costs up 10.6 percent, gasoline rising 10.1 percent, rent increasing 7.9 percent and medical care services up 4.4 percent.
>
> Drawing upon recent household survey data, we show that high inflation is disproportionately hurting low-income households, including Black and Hispanic households and renters.[68]

The Federal Reserve researchers found that the "stress" being placed on households by high inflation is much greater than for low-income households., They explained:

> Prior research suggests that inflation hits low-income households hardest for several reasons. They spend more of their income on necessities such as food, gas and rent—categories with greater-than-average inflation rates—leaving few ways to reduce spending. When prices rise, middle-income households may react by consuming cheaper goods and buying more generic brands. Low-income households do not have the same flexibility; in many cases, they are already consuming the cheapest products.
>
> Additionally, many low-income households lack the ability of higher-income households to stock up when prices are discounted, buy in bulk and save, delay purchases if there is an opportunity to save in the future or buy more cheaply online. Low-income households are also likely to have smaller cash buffers to tide them over a period of high inflation.
>
> The recent Household Pulse Survey data confirm these tendencies. Households with incomes ranging from $25,000 to $35,000 in 2021 were about 19.3 percentage points more likely to be very stressed by inflation than households with incomes in the $75,000 to $100,000 range.

The data is clear and it is consistent. Lower income families expend a greater share of their income on necessities (which tend to have higher inflation rates); have smaller financial cushions; and may have less of an ability to switch to lower-priced alternatives. As Lael

[68] Id.

Brainard, a member of the Board of Governors of the Federal Reserve System, concluded, "All Americans are confronting higher prices, but the burden is particularly great for households with more limited resources."[69]

Q. WHAT DO YOU CONCLUDE?

A. The testimony of Peoples witness Moul does not present a complete story about the stress which inflation has placed on utility stakeholders. Just as inflation may have placed stress on the utility, it has also placed stress on utility ratepayers. Indeed, the inflation experienced in recent years has placed far more stress on lower income ratepayers than it has placed on others. Increasing energy prices, which would be exacerbated by the higher return on equity sought by Peoples in this proceeding, is one of the major drivers of the inflation affecting lower-income households. Given its obligation to balance the interests of investors and ratepayers in setting a reasonable return on equity, the greater adverse impacts that inflation has imposed on low-income ratepayers should be considered by the PUC in establishing a return of return.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the return on equity and capital structure found to be reasonable by OCA witness Rothschild should be adopted.

[69] Brainard (April 2022). Variations in the inflation experiences of households, available at https://www.federalreserve.gov/newsevents/speech/brainard20220405a.htm

Part 8. Peoples Proposed Tariff Changes.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my Testimony, I respond to the Tariff changes which Peoples proposes for its residential "rules." One of those changes involves Rule 3.C (Gas-PA PUC No. 48, Original Page 19), which reads in relevant part:

> If an Applicant is required to post a security deposit, the Applicant may, in the alternative:
>
> (1) Furnish a written guaranty from a third party, which can, to the Company's satisfaction, establish credit in Applicant's favor sufficient to assure payment to the Company upon demand of an amount equal to that which would otherwise be required in a security deposit.

In addition to "furnishing a written guaranty" as referenced in the Company's tariff, the Company should add a sub-section (2) which would read in relevant part:

> (2) Provide income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the public utility's Customer Assistance Program.

This language mirrors the language of 52 Pa. Code § 56.32(e). In addition, a similar change should be made to Rule 3.D (Original Page 20). This modification should add an unnumbered paragraph immediately after Rule 3.D(2), which unnumbered paragraph would read:

> Notwithstanding subsection (D), the Company may not require a cash deposit from a customer who is, based upon household income, confirmed to be eligible for a customer assistance program. A customer is confirmed to be eligible for a customer assistance program by the public utility if the customer provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.

This language mirrors 52 Pa. Code § 56.41(B)(4) extending the exemption from deposits to customers as well as to applicants. Note that the regulation does not require a customer to be a CAP participant. Rather, a customer need only be "*eligible for* a customer assistance program." (emphasis added).

Q. IS THERE A SECOND MODIFICATION THAT YOU RECOMMEND TO THE PROPOSED CHANGE IN PEOPLES "RULE 3' ("RULES FOR DEPOSIT – RESIDENTIAL CUSTOMERS")?

A. Yes. Peoples Rule 3 provides that the Company may require a deposit if, among other things, "the Applicant is unable to establish creditworthiness to the satisfaction of the Company through the use of a generally accepted credit scoring methodology which employs standards for using the methodology that fall within the range of general industry practice." (Rule 3.E(2), Gas-PA PUC No. 48, Original Page No. 19).

This provision, standing alone, carries with it an elevated risk of discrimination, even if unintentionally. Under federal equal credit opportunity law, for example, it is unlawful to discriminate against a person in a credit transaction --the ECOA makes clear a utility transaction is a "credit transaction" under the statute—based on the consumer's receipt of public assistance. To the extent that a Peoples "credit scoring methodology" considers whether a consumer is employed and, if so, for how long, that reliance on the lack of employment (or the lack of long-term employment) may have the effect of discriminating against consumers who lack employment because they receive public assistance (one of the protected classes under ECOA). In addition, any consideration of whether a consumer is a homeowner, as well as about whether a consumer is banked or unbanked, has a high probability of having racially disparate impacts. It will come as no surprise, for example,

that the National Association of Realtors found that the homeownership gap for Blacks and Hispanics has grown even bigger in recent years.[70] So does the question of whether a consumer has a bank account (credit card, loan or other credit reference) have distinct racial implications.[71] Accordingly, I recommend that Rule 3.E(2) be modified to add the following language: ". . .that fall within the scope of general industry practice, *provided that the methodology does not directly, or have the effect of, discriminating based on a protected class as set forth in the federal Equal Credit Opportunity Act.*" (new language emphasized).

Part 9. Bad Debt Offset for Universal Service Rider.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the Company's proposal to combine the "bad debt offset" applied to the universal service rider. The offset is applied to the incremental number of CAP participants which exceeds the base number of participants. The offset reflects the extent to which low-income customers who do not participate in CAP cause the utility to incur bad debt expense. That bad debt expense is incorporated into rates in the base rate case. Having already incorporated those uncollected dollars into rates, to the extent that these low-income customers move into CAP, it would then be inappropriate to *again* collect those same dollars in the form of CAP credits that are granted to CAP

[70] Meredith Dunn, et al. (2023). 2023 Snapshot of Race and Home Buying in America, National Association of Realtors, available at https://www.nar.realtor/research-and-statistics/research-reports/snapshot-of-race-and-home-buying-in-america

[71] Testimony of Lisa Rice, President and CEO of National Fair Housing Alliance,(December 1, 2022), Fairness in Financial Service: Racism and Discrimination in Banking, Before the Committee on Banking, Housing and Urban Affairs, U.S. Senate available at https://www.banking.senate.gov/imo/media/doc/Rice%20Testimony%2012-1-222.pdf

participants. To do that would be to double-collect the same dollars. Neither the question of whether to impose an offset, nor the question of what percentage that offset should be, is at issue in this proceeding. I accept the Company's proposal regarding the percentage offset to be applied and regarding how to combine the offsets for the two operating divisions. The only issue involves what number should be set as the base CAP participation over which the CAP offset is applied.

Q. DOES THE PEOPLES PROPOSED BASE NUMBER OF CAP PARTICIPANTS OVER WHICH THE BAD DEBT OFFSET IS APPLIED NEED TO BE ADJUSTED?

A. Yes. Peoples proposes to maintain its base CAP participation at 33,800 over which it will apply the proposed bad debt offset. That base CAP participation combines a base CAP enrollment of 32,300 for Peoples Natural Gas Division with a base CAP enrollment of 2,500 for Peoples Gas Division. (Peoples St. 3, at 29).

Q. IS THAT BASE NUMBER A REASONABLE NUMBER?

A. No. When OCA asked Peoples for the number of CAP participants disaggregated by zip code, the sum of the participants reached only 29,091. (OCA-09-02). Peoples proposes, in other words, to use a base figure that is more than 16% higher than its current participation rate. It would not be reasonable to project a growth in CAP participation to the 33,800 figure proposed to be used by Peoples. According to the annual BCS report on universal service programs and collections performance, Peoples had a CAP participation of: (1) 28,892 in 2020; (2) 32,126 in 2021; and (3) 29,761 in 2022.[72] As can be seen, CAP

[72] BCS 2022 Report, at 60.

participation has actually *declined* somewhat for Peoples since the most recent data published by BCS.

I note that not even Peoples believes that it will achieve a base participation rate of 33,800. The Company's "revenue at proposed rates based on forecasted bills and volumes for the 12 months ended September 30, 2025" projects that Peoples Gas Division will have 28,143 CAP bills while the Peoples Natural Gas Division will have 341,779 CAP bills. (Peoples Exh. 3, Schedule No. 15, Attachment E, at page 1 of 6). The combined total (369,922) implies an average CAP participation rate for the 12 months ending September 30, 2025 (i.e., October 2024 – September 2025) of 30,827 (369,922 / 12 = 30,827).

Q. WHAT DO YOU RECOMMEND?

A. I recommend that Peoples be directed to use a CAP base participation of 30,800. This reflects the combined projected CAP participation for the year starting October 2024, as presented in the Company's own filing in this proceeding, rounded to the nearest 100.

Summary of Recommendations

Q. PLEASE SUMMARIZE THE RECOMMENDATIONS YOU HAVE MADE THROUGHOUT YOUR TESTIMONY ABOVE.

A. I recommend that:

1. The concerns I identify with respect to the unaffordability of Peoples rates can (and should) be considered even outside the consideration of the specific proposals I advance with respect to specific low-income initiatives. These concerns should be incorporated into PUC decision making regarding issues ranging from the proposed rate design to the appropriate return on equity.

2. Peoples conduct a root cause analysis to determine what is driving this disproportionate level of utility disconnections within the 40 zip codes with the highest penetration of Black households. Once this root cause analysis is conducted,

Peoples should commit to taking steps to address the cause with the commitment of reducing disproportionate disconnections within these zip codes. This root cause analysis is intended to be consistent with the definition of and standard for the root cause analysis that OCA witness Alexander outlines in OCA Statement 5. The extent to which Peoples mitigates the disproportionate disconnection of service for nonpayment in zip codes with high penetrations of Black households should be reviewed in Peoples next base rate case.

3. Peoples should modify its policies and procedures regarding the identification of "confirmed low-income" customers to conform with the PUC's regulations, including self-certification of low-income status ("This information may include receipt of LIHEAP funds (Low-Income Home Energy Assistance Program), *self-certification by the customer*. . ."). Peoples should include these modified policies and procedures in its residential tariff.

4. In addition to Peoples providing a stand-alone written communication with Confirmed Low-Income customers as agreed to in the 2019 rate case settlement, prior to the disconnection of a Confirmed Low-Income customer, Peoples adopt a procedure, developed in collaboration with its Universal Service Advisory Group (USAG), under which it will seek to make personal contact with the customer subject to disconnection. In that personal contact, the Company shall offer the Confirmed Low-Income customer the opportunity to apply for the Company's CAP and arrearage forgiveness program. If the customer expresses a desire to make such application, Peoples will postpone the disconnection for a reasonable period of time to allow the application process to be completed. In short, I recommend that the procedure agreed to in the 2019 Settlement be expanded to include an effort to make personal contact in addition to the written contact contemplated by that Settlement.

5. Before Peoples enters into a DPA with a customer which the Company either: (1) knows to be a Confirmed Low-Income customer; or (2) has generated information through the DPA process documenting that the customer is in the Tier 1 income range (at or below 150% FPL), it should be required to provide the customer a stand-alone Plain English notice to that customer of the customer's right to enter into CAP and an explanation of the advantages of CAP's arrearage forgiveness benefits. As it agreed to do with the pre-termination stand-alone written notice, Peoples should develop this Plain English notice in collaboration with its Universal Services Advisory Group.

6. Peoples adopt a procedure under which it will provide a stand-alone Plain English notice to customers found to be without heating service at the time of the Company's Cold Weather Survey of the customer's right to enter into CAP and an

explanation of CAP's arrearage forgiveness benefits. Peoples should develop the Plain English notice in collaboration with its Universal Service Advisory Group.

7. When Confirmed Low-Income customers accrue an unpaid balance of $300, Peoples provide a stand-alone written Plain English notice informing those customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

8. In those instances where Peoples would otherwise request a cash security deposit pursuant to its Rule 3.D, the Company should, as an alternative to that deposit demand, provide a stand-alone written Plain English notice informing these customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

9. Peoples be directed to extend the use of its Vivent Speech Analytics software to assist with the Quality Monitoring of phone calls involving, or potentially involving, universal service programs and other low-income customers. Peoples should be directed to involve its USAG in the identification and selection of Low-Income and Universal Service Terms to be detected by the system in order to confirm that phone calls are properly being identified and handled. Regular six-month reports on the results of the Speech Analytics reviews should be provided to the USAG.

10. The residential customer charge determined by OCA witness Clarence Johnson should be approved.

11. The recommendations of OCA witnesses Evrard, Mugrace and Johnson be adopted with respect to the Company's proposed Weather Normalization Adjustment and that the proposed Weather Normalization Adjustment should be denied.

12. The Commission adopt the return on equity and capital structure found to be reasonable by OCA witness Rothschild.

13. Given its obligation to balance the interests of investors and ratepayers in setting a reasonable return on equity, the greater adverse impacts that inflation has imposed on low-income ratepayers should be considered by the PUC in establishing a return on equity.

14. In addition to "furnishing a written guaranty" as referenced in the Company's tariff, the Company should add a sub-section (2) which would read in relevant part:

> Provide income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.

This language mirrors the language of 52 Pa. Code § 56.32(e).

15. In addition, a similar change should be made to Rule 3.D (Original Page 20). This modification should add an unnumbered paragraph immediately after Rule 3.D(2), which unnumbered paragraph would read:

> Notwithstanding subsection (D), the Company may not require a cash deposit from a customer who is, based upon household income, confirmed to be eligible for a customer assistance program. A customer is confirmed to be eligible for a customer assistance program by the public utility if the customer provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.

This language mirrors 52 Pa. Code § 56.41(B)(4) extending the exemption from deposits to customers as well as to applicants.

16. Rule 3.E(2) be modified to add the following language: "that fall within the scope of general industry practice, *provided that the methodology does not directly, or have the effect of, discriminating based on a protected class as set forth in the federal Equal Credit Opportunity Act.*" (new language emphasized).

17. Peoples be directed to use a CAP base participation of 30,800. This reflects the combined projected CAP participation for the year starting October 2024 rounded to the nearest 100.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Exhibit RDC-1: Summary Vitae

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-003

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: Please identify all categories or identifiers that Peoples includes when calculating its "confirmed low income customer" count.

Answer: Peoples counts all CAP participants, as income documentation or the zero income form are submitted to confirm low income status. In addition to CAP participation, Peoples also considers receipt of LIHEAP cash or crisis grants within the past 24 months as indicative of confirmed low income.

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-IX-018

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: By year for the most recently completed three Fiscal Years, and the current year to date, provide:

a) The number of deferred payment arrangements entered into by residential customers disaggregated by the income tiers set forth in Chapter 14, section 1405(b), 66 Pa. C.S. § 1405(b);

b) The number of deferred payment arrangements which defaulted disaggregated by the income tiers set forth in Chapter 14, section 1405(b), 66 Pa. C.S. § 1405(b); and

c) The number of deferred payment arrangements successfully completed disaggregated by the income tiers set forth in Chapter 14, section 1405(b), 66 Pa. C.S. § 1405(b).

Answer: Please see attached Excel file.

The Company is unable to provide stats on defaulted agreements since customers are not removed from their payment arrangements for failure to pay.

Submit Date: 2/23/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-X-009

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: Please identify and provide a detailed description of any software used within the immediately preceding 36 months, or intended to be used in the coming 36 months, by the Company which engages in speech pattern analytics or linguistic analytics, used to review call center conversations:

a. For in-house call center staff;

b. For third party contractor call center staff

Answer: a. The Company has Verint Automated Call Monitoring and Speech Analytics

b. The Company doe not use third party contractors.

Submit Date: 2/23/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-X-010

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: Please identify and provide a detailed description of all terms, phrases, or other speech patterns searched for or otherwise utilized within the immediately preceding 36 months in the application of the speech pattern analytics or linguistic analytics software to the review of call center calls.

Answer: The Company utilizes Speech Analytics in order to assist with the Quality Monitoring of emergency phone calls. The Emergency Call Terms below are detected by the system in order to confirm that the phone call is properly categorized as an emergency call. The phrases, beginning with "Greeting" and ending with "Closing", below are what the system listens for in order to confirm the call was handled properly. Company representatives are required to communicate all of these points over the course of the emergency phone call. A Quality Monitoring Associate will then review the results and listen to the phone call to ensure the system captured all results accurately.

Emergency Call Terms

- Smell Gas, Smell, power NEAR equipment, Hit NEAR Line, Leak, Odor, Evacuate, Vacate, Headache, NEAR Shortness, Carbon NEAR Alarm, Carbon NEAR Detector, Symptoms NEAR headache, Understand NEAR precautions, Hissing, Hit NEAR line AND smell, May or may not, unable to vacate, Smell NEAR inside, Smell NEAR outside, Overheating appliance.

Greeting

- “Thank you for calling Peoples Gas, Please state the nature of your emergency.”

Willingness statement

- “I would be happy to help you with that.”
- “ I will be able help to help or assist you”

Safety precautions are to be read to the customer.

- Do not turn on or off any electrical switches (ex. lights, TV) or plug/unplug any appliances • Do not use any phones, including cell phones • Do not start a car, operate an automatic garage door, or use power equipment • Do not smoke, use lighters, matches or other open flames • Do not attempt to locate a leak • Evacuate the building where the gas odor exists

• From a safe distance, be ready to provide access to the property so our technician can investigate Ask, “Do you understand these precautions?” Ask, “Will an adult be available to provide access to premises?” or “Will you remain in the area?” If inside gas odor, Ask, “Is anyone unable to vacate the premises?” • “Our technician will be there within an hour”

Hold terms (are not to be used for and emergency call)

- “May I place you on hold” “Bear with me” “Brief Hold” “one moment” “on hold” “hold" "put you NEAR hold” “one minute” “hold for just” “thanks for holding” “thanks for waiting”

Closing

- “Thank you for calling Peoples Gas”

Submit Date: 2/23/2024

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

April 18, 2024

Q. ARE YOU THE SAME AARON L. ROTHSCHILD WHO SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING ON MARCH 22, 2024?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony addresses the direct testimony of the Anthony Spadaccio, who submitted testimony on behalf of the Pennsylvania Public Utility Commission's Bureau of Investigation & Enforcement ("I&E").[1]

Q. PLEASE SUMMARIZE THE RECOMMENDATIONS IN MR. SPADACCIO'S DIRECT TESTIMONY THAT YOU ARE ADDRESSING IN YOUR REBUTTAL TESTIMONY.

A. In his direct testimony, Mr. Spadaccio recommended an authorized return on equity ("ROE") of 9.96% and a capital structure of 54.67% common equity and 45.33% long-term debt.[2] I oppose each of those recommendations, and I will explain why in this rebuttal testimony

Q. DOES THE ANALYSIS PROVIDED IN YOUR DIRECT TESTIMONY DEMONSTRATE THAT PEOPLES' AUTHORIZED ROE SHOULD BE LOWER THAN 9.96% AND ITS AUTHORIZED CAPITAL STRUCTURE SHOULD HAVE A LOWER COMMON EQUTIY RATIO THAN 54.67%?

A. Yes. My direct testimony provided an analysis that demonstrated that Peoples' authorized ROE should be 8.02%, which is within the appropriate range of 7.67% and 8.37%, and that

[1] Mr. Spadaccio's Direct Testimony, I&E Statement No. 2.
[2] Mr. Spadaccio's Direct Testimony, I&E Statement No. 2, p. 6.

its appropriate capital structure would contain 50.00% common equity and 50.00% long-term debt.[3]

Q. WHAT IS YOUR OVERARCHING CRITICISM OF MR. SPADACCIO'S ROE RECOMMENDATION OF 9.96%?

A. Mr. Spadaccio's recommended 9.96% ROE for Peoples is higher than warranted given the market based data and proxy group applicable to this case. I provided significant evidence in my direct testimony (OCA Statement 3) that Peoples' cost of equity is significantly lower than 9.96%.[4] As indicated above, my market-based cost of equity model results show that Peoples' cost of equity is between 7.67% to 8.37%, with a midpoint of 8.02%. Mr. Spadaccio's recommendation is based exclusively on his Discounted Cash Flow ("DCF") result of 9.96%. He provides a Capital Asset Pricing Model ("CAPM") analysis for comparative purposes, but not as a check on his DCF results. Below I explain why Mr. Spadaccio's DCF is flawed and produces unreasonably high cost of equity results.

Q. BEFORE YOU DISCUSS THE FLAWS WITH MR. SPADACCIO'S DCF MODEL, CAN YOU PROVIDE SOME ADDITIONAL EVIDENCE THAT HIS 9.96% DCF RESULT IS EXCESSIVE?

A. Yes. In my direct testimony, I showed that the equity return expectations of major financial institutions are between 6.2% to 7.9% for the overall stock market,[5] [6] which includes most *unregulated* companies that operate in highly competitive markets as opposed to Peoples which operates in a rate regulated market with a captive customer base. I encourage the

[3] OCA Statement 3, p. 8.
[4] OCA Statement 3, pp. 43-77.
[5] OCA Statement 3, p. 14, Table 4.
[6] Duff & Phelps / Kroll, as mentioned in Table 4, is not mentioned here as they are a financial risk and advisory firm, not a major financial institution like J.P. Morgan Asset Management or Charles Schwab.

Commission to consider why Mr. Spadaccio's 9.96% ROE is significantly higher than the expectations of investors in the financial mainstream. If there is a good reason for Peoples' cost of equity to be over a hundred basis points higher than the equity return expectations of major financial institutions, I have not seen it and Mr. Spaddacio has not explained it. Peoples is a regulated monopoly with relatively low investment risks, and therefore it is implausible that its cost of equity is so much higher than the equity return expectations of major financial institutional for companies that face significantly more investment risk than Peoples.

Q. DID MR. SPADACCIO'S DCF MODEL PRODUCE A RELIABLE COST OF EQUITY ESTIMATE FOR PEOPLES?

A. No. Mr. Spadaccio's DCF result of 9.96% is excessive because his growth rate of 5.91%[7] is unreasonably high. His growth rate component is excessive because it is based on analysts' five-year earnings per share growth rate forecasts for the companies in his proxy group without accounting for how much of these earnings investors expect will be retained in the business and how much they will pay out as dividends. As explained in my direct testimony, these analyst growth rate forecasts are not indicative of future sustainable growth rates in part because the sources of cash flow to an investor are dividends and stock price appreciation. While both stock price and dividends are impacted in the long-run by the level of earnings a company is capable of achieving, earnings growth over a period as short as five years is rarely in synchronization with the cash flow growth from increases in dividends and stock prices.

[7] Mr. Spadaccio's Direct Testimony, I&E Statement No. 2, p. 27, ln 14.

Q. CAN YOU PROVIDE AN EXAMPLE THAT EXPLAINS WHY USING ONLY ANALYST EARNINGS PER SHARE GROWTH RATES CAN PRODUCE AN EXCESSIVE DCF RESULT?

A. Yes. Mechanically using analyst earnings per share growth rates as a growth rate in a DCF model is like calculating how much money someone will have in the bank at retirement by counting only income and ignoring expenses. The estimate will not be accurate unless you also account for how much money is taken out along the way. A DCF model that does not account for the percentage of earnings that will be paid out to investors as a dividend is not a reliable way to calculate the cost of equity. In this case, Mr. Spadaccio's 9.96% DCF result should not be the basis for Peoples' authorized ROE because it is higher than Peoples' cost of equity. Should Mr. Spadaccio's ROE recommendation be adopted it would result in Peoples' consumers paying inappropriate (i.e., beyond what is necessary for Peoples to raise equity capital on reasonable terms) and unreasonable profits to investors that would be unnecessarily and unfairly burdensome to those consumers by making essential utility service more expensive and less accessible. Regulated monopolies like Peoples "have no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures." Rather "[t]he return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties."[8] The analysis presented in my direct testimony demonstrates that a 9.96% return is in line

[8] *Bluefield Water Works & Improvement Co. v. Pub. Serv. Comm'n of the State of W. Va.* 262 U.S. 679, 692-693 (1923).

with anticipated returns on investments in highly profitable unregulated companies. In the context of a regulated monopoly like Peoples, a 9.96% return would go against regulatory principles, and could unnecessarily jeopardize ratepayers' access to service.

Q. DO MAJOR FINANCIAL INSTITUTIONS IMPLEMENT A DCF MODEL WITH A GROWTH RATE BASED ON ANALYSTS' PROJECTED GROWTH RATE IN EARINGS PER SHARE, AS MR. SPADACCIO HAS DONE?

A. As far as I am aware, major financial institutions understand that it is not appropriate to mechanically add analyst earnings per share (EPS) growth rates to a dividend yield to calculate the cost of equity. J.P. Morgan Chase uses the sustainable growth form of the DCF method, as I do, in its 2019 Long-Term Capital Market Assumptions publication.[9]

Q. YOUR SUSTAINABLE GROWTH DCF MODEL PRODUCED A COST OF EQUITY RESULT OF BETWEEN 8.06% AND 8.09%. WHY IS THIS RANGE OF RESULTS A BETTER MEASURE OF PEOPLES' COST OF EQUITY THAN THE DCF METHOD USED BY MR. SPADACCIO?

A. As discussed in my direct testimony, my results[10] are not as influenced by overly-optimistic analysts' forecasts as would have been the case had I merely used analysts' five-year earnings growth rate forecasts, as Mr. Spadaccio did,[11] as a proxy for long-term growth. This is because the DCF methods I use compute sustainable growth rates, rather than growth rates that can exaggerate the growth rate due to assuming that a relatively short-term forecast (5 years) will remain indefinitely.

[9] OCA Statement 3, p. 11, lines 6-8.
[10] OCA Statement 3, exhibit ALR-3, p. 1.
[11] Mr. Spadaccio's Direct Testimony I&E Statement No. 2, p. 27, lines 6-9.

CAPM

Q. MR. SPADACCIO CHOSE TO USE THE CAPM AS A COMPARISON TO HIS DCF ANASLYIS. PLEASE RESPOND.

A. Mr. Spadaccio's CAPM result of 10.91% does not provide a useful comparison to his DCF model because the market risk premium component he selected (8.17%) is excessive. As discussed in my direct testimony, I determined that investors are currently demanding a market risk premium of between 2.7% and 4.06% which results in a CAPM indicated cost of equity of between 7.50% and 8.22%.[12] My market risk premium of 2.70% to 4.06% is more reliable than that used by Mr. Spadaccio's because it is based on a direct measure of investors' expectations as indicated by stock option prices.

Q. WHY IS THE MARKET RISK PREMIUM COMPONENT IMPORTANT IN THE CAPM ANALYSIS?

A. The market risk premium is a measure of the additional return investors require to invest in equity as compared to lower risk debt (generally U.S. Treasury bonds). Miscalculating this number can result in an inaccurate estimate of the cost of equity. The market risk premium is an important component of the CAPM model. This model estimates that cost of equity by adding a market risk premium to a risk free rate[13], including making adjustments for the relative risk of utility companies (adjustment is referred as the beta coefficient). Therefore, should one be wrong in their calculation of the market risk premium, the rest of their calculations would be skewed accordingly.

---

[12] Exhibit ALR-4, page 1 and page 5.

[13] Generally, the yield on a U.S. Treasury security is considered a risk free rate because the chance of default is very low and much lower than for debt issued by corporations.

Q. WHAT IS THE DOWNSIDE OF HAVING AN EXCESSIVE MARKET RISK PREMIUM COMPONENT IN THE CAPM ANALYSIS?

A. As described above, because the market risk premium is used in CAPM analysis, the downside of having an excessive market risk premium component in the CAPM analysis is that it would result in an excessive cost of equity that does not accurately reflect a return that is "reasonably sufficient to assure confidence in the financial soundness of the utility, and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties."[14] The market risk premium component of the CAPM is the like the foundation of a house. If you get this wrong, the house will not pass a building inspection no matter how perfect the other components (e.g., plumbing, electrical).

Q. ARE THERE ANY SOURCES THAT DEMONSTRATE THAT MR. SPADACCIO'S 8.17% MARKET RISK PREMIUM COMPONENT IS EXCESSIVE?

A. Yes. Duff & Phelps / Kroll, a source relied upon by Mr. Moul in his CAPM analysis, calculated a "geometric supply-side equity risk premium of 4.39%" based on their own analysis of historical market returns over the past 98 years.[15] If Mr. Spadaccio had used a market risk premium component of 4.39%, his CAPM analysis he would have obtained an 8.27% cost of equity, which is very close to my recommended range. Instead, Mr. Spadaccio has employed a market risk premium component that veers far above what is an accurate representation of investors' equity return expectations (which is equal to or greater

[14] *Bluefield Water Works & Improvement Co. v. Pub. Serv. Comm'n of the State of W. Va.* 262 U.S. 679, 692-693 (1923).
[15] Kroll 2023 SBBI Yearbook, pp. 197-199.

than the cost of equity); therefore, the Commission should disregard Mr. Spadaccio's resulting flawed CAPM analysis.[16]

CAPITAL STRUCTURE

Q. WHAT IS YOUR OVERARCHING CRITICISIM OF MR. SPADACCIO'S CAPITAL STRUCTURE WITH A RECOMMENDED 54.67% COMMON EQUITY RATIO?

I disagree with Mr. Spadaccio that it is appropriate to use Peoples' claimed capital structure with a 54.67% common equity, and Mr. Spadaccio analysis is both flawed and contradictory. As explained in my direct testimony, the Commission should authorize a capital structure with 50% common equity and 50% debt.[17] Spadaccio' recommended capital structure that, by his own admission, is "suboptimal."[18] However, he justified this recommended suboptimal capital structure simply because it falls within the range of capital structure ratios of the companies in his proxy group in 2022.[19] As I explain below, Mr. Spadaccio's claim is made with not only the recognition that a 50/50 capital structure is "optimal" but also with the admission that Peoples' equity ratio is "well above the average and near the highest end of the proxy group's equity ratios."[20]

---

[16] The equity return expectations of investors and the cost of equity are not necessarily the same. For example, if an investor had a cost of equity of 7% and equity return expectations of 10%, they would be happy to invest. However, investors, by definition, would not make an investment when the cost of equity is higher than the expected return on equity. The equity return expectations of investors are useful to know because they can provide a ceiling for the cost of equity.

[17] OCA Statement 3, p. 8.

[18] On page 12 of his Direct Testimony Mr. Spadaccio said, "Although I believe a capital structure of 50% long-term debt and 50% common equity is optimal when trying to balance the financial integrity of a utility as well as trying to control costs to ratepayers, in this proceeding,"

[19] Mr. Spadaccio's Direct Testimony I&E Statement No. 2, p. 12, lines 5-7.

[20] Mr. Spadaccio's Direct Testimony I&E Statement No. 2, p. 12, lines 15-16.

Q. WHAT IS THE BASIS OF MR. SPADACCIO'S CAPITAL STRUCTURE RECOMMENDATON OF 54.67% EQUITY AND 45.33% DEBT?

A. Mr. Spadaccio explained that he supports Peoples' requested capital structure of 54.67% equity and 45.33% debt because it falls with the range of capital structure ratios of the companies in his proxy group.[21]

Q. ARE THERE FLAWS THAT EXIST WITH MR. SPADACCIO'S ADOPTION OF PEOPLES' REQUESTED CAPITAL STRUCTURE?

A. Yes. It is important to recognize that Mr. Spadaccio's adoption of Peoples' claimed capital structure is at odds with his recommendation. As discussed above, Mr. Spadaccio adopted Peoples' requested capital structure despite his belief that a capital structure of 50% common equity and 50% long-term debt "is optimal when trying to balance the financial integrity of a utility as well as trying to control costs to ratepayers, in this proceeding."[22] In fact, Mr. Spadaccio quantifies the impact ratepayers would face if Peoples' capital structure prevails and he calculates that ratepayers would pay approximately an additional $17.9 million if Peoples' claimed capital structure is approved than they would under a 50/50 "optimal" capital structure.[23]

[21] Mr. Spadaccio's Direct Testimony, I&E Statement No. 2, pp. 11-12.
[22] Mr. Spadaccio's Direct Testimony, I&E Statement No. 2, p. 12, lines 3-5.
[23] Mr. Spadaccio's Direct Testimony, I&E Statement No. 2, p. 13.

Q. ASIDE FROM MR. SPADACCIO'S RECOGNITION OF SAVINGS UNDER THE "OPTIMAL" 50/50 CAPITAL STRUCTURE FOR PEOPLES, IS HIS ADOPTION PEOPLES' CLAIMED CAPITAL STRUCTURE CONTRADICTED IN ANOTHER RESPECT?

A. Yes. Mr. Spadaccio's justification to use a suboptimal capital structure to set rates for Peoples does not support his position. Only one outlier company in his proxy group (Atmos Energy) has a capital structure with a common equity ratio that is higher than 54.67% in 2022.[24] In fact, Mr. Spadaccio admits that six of seven companies in his proxy group have a capital structure with an equity ratio less than 50% for the most recent five-year average, and that five of those seven are below the 50% mark for the most recently available year of data, 2022. Significantly, the common equity ratio range of the other six companies in his proxy group range between 34.67% and 51.23% with an average common ratio of 41.53%.[25] These facts demonstrate that Mr. Spadaccio's adoption of Peoples' capital structure is inconsistent with the actual capital structures used by the gas utilities that he claims to have relied upon in his analysis. Further, these facts are so far at odds with Mr. Spadaccio's analysis that they directly contradict his recommendation.

[24] Atmos had a 60.58% common equity in 2022 (Mr. Spadaccio's Direct Testimony I&E Statement No. 2, Schedule 2).

[25] This was calculated by averaging the common equity ratio of all the companies in his proxy group, except Atmos. The common equity ratios averaged are 51.23%, 34.76%, 37.35%, 42.61%, 44.44%, and 38.77%. (Mr. Spadaccio's Direct Testimony I&E Statement No. 2, Schedule 2.)

Q. DO YOU CONTINUE TO RECOMMEND THAT PEOPLES' CAPITAL STRUCTURE BE SET AT 50.00% COMMON EQUITY AND 50.00% LONG-TERM DEBT?

A. Yes. Closer scrutiny of Mr. Spadaccio's analysis lends additional support for my position that an authorized capital structure of 50% common equity and 50% debt would be more than sufficient for Peoples.[26] I continue to strongly encourage the Commission to authorize a capital structure with a 50% common equity and 50% debt for Peoples.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

[26] My own analysis, as indicated on page 78 in my direct testimony, also demonstrates that a common equity ratio of 50% is on the high side of reasonableness because it is above the mean (47.2% and median (48.5%) common equity ratio of the natural gas distribution companies in my RFC Gas Proxy Group.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Clarence L. Johnson. My business address is 3707 Robinson Ave, Austin, Texas 78722.

Q. ON WHOSE BEHALF ARE YOU PRESENTING TESTIMONY IN THIS PROCEEDING?

A. I am presenting testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony was submitted as OCA Statement 4 on March 22, 2024.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY IN THIS CASE?

A. I will rebut the testimony of Mr. Richard Baudino on behalf of Peoples Industrial Intervenors (PII) in PII Statement No. 1, the Bureau of Investigation and Enforcement's (I&E) witness Mr. Ethan Cline in I&E Statement No. 3, and Mr. Robert Knecht on behalf of the Office of Small Business Advocate (OSBA) in OSBA Statement No. 1.[1] I have focused on certain areas of disagreement, and the scope of this testimony does not indicate agreement with other statements by the witnesses which I did not rebut.

[1] For purposes of clarity, my reference to OSBA Statement No. 1 is intended to identify the testimony labeled as "OSBA Statement No. 1 REVISED as served by the OSBA on March 28, 2024.

II. SUMMARY

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

A. My conclusions are as follows:

- PII witness Mr. Baudino's advocacy for classifying mains as customer-related is contrary to the principle of cost causation and should be rejected.
- I&E witness Mr. Cline's revenue allocation proposal includes an error which affects his recommended gradualism constraint. Furthermore, he relies too much on the residential class to finance gradualism.
- OSBA witness Mr. Knecht's revenue allocation recommendation is reliant on the customer classification of mains and decreases the weight given to Peak & Average. As a result, I recommend denial of his class revenue recommendation.
- Mr. Cline's proposed residential customer charge is excessive and should be rejected.
- Mr. Baudino's proposal to reallocate revenue shortfalls from discounted rates to other classes is inconsistent with the principle of cost causation and it should be rejected.
- Both Mr. Knecht and Mr. Cline criticize the Company's proposed weather normalization adjustment (WNA) but accept the adoption of a WNA mechanism. However, issues raised in their testimony support my recommendation that the WNA should be rejected and should reasonably lead the Commission to conclude that the WNA is neither just nor reasonable and that it should **not** be adopted.

CUSTOMER CLASSIFICATION OF MAINS

Q. DO ANY WITNESSES ARGUE THAT CLASS REVENUE ALLOCATION SHOULD BE BASED EXCLUSIVELY ON A CLASS COST OF SERVICE STUDY (CCOS) THAT CLASSIFIES A SUBSTANTIAL PART OF MAINS AS CUSTOMER-RELATED?

A. Yes. Mr. Baudino contends that cost causation of mains is driven in large part by the number of customers in a class. His testimony suggests a hypothetical in which one main serves an industrial customer and another main serves 750 residential customers, with the industrial customer's peak usage equaling the 750 residential customers' aggregate peak usage.[2] He concludes that it is "obvious" that the utility will have to install far more footage to serve the residential customers than the industrial customer, and that this extra investment is caused by the number of customers.[3] Mr. Knecht's testimony for OSBA makes a similar argument that "it requires more footage of mains to connect many smaller customers than one larger customer, even if the total demand is not the same"[4]

Q. DO YOU AGREE WITH MR. BAUDINO THAT THE CUSTOMER CLASSIFICATION OF MAINS REFLECTS COST CAUSATION?

A. No. Mr. Baudino's hypothetical does not prove that there is a direct relationship between the number of Peoples' customers and its investment in mains. James Bonbright's foundational textbook points out the major flaw in his argument. The length of the common facilities do not vary directly with the number of customers. The customer classification

---

2 PII Statement No. 1 at 9.
3 Ibid.
4 OSBA Statement 1 at 23.

"makes no allowance for the density factor (customers per linear mile or per square mile)" and "if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs."[5] In this case, the service area for residential customers in Peoples' urban service areas is likely quite dense. On the other hand, Peoples' large industrial customers' facilities are more likely to be located in areas with less customer density. In addition, Mr. Baudino's example is overly simplistic because it does not recognize that the Company's system of mains is a network with looping facilities and varied pressurization aimed at serving all customers in the aggregate.

Q. CAN YOU PROVIDE AN EXAMPLE OF THE INFLUENCE OF DENSITY ON INDUSTRIAL CUSTOMERS' MAINS?

A. Yes. Table 1, below, shows the main extensions for the five largest industrial customers over the last five years in the Peoples' service area.[6]

Table 1

Main Extension to Largest Industrial Customers (a)		
	Mcf Usage	**Length of Extension (ft.)**
Customer A	100,000	2,700
Customer B	85,519	2,270
Customer C	60,000	1,137
Customer D	14,875	6,821
Customer E	5,460	3,015
Average	**53,171**	**3,189**
(a) Last Five Years		

[5] James Bonbright, *Principles of Public Utility Rates*, Columbia University Press, 347-349 (1961).
[6] Company's Response to OCA XVII-9, which I am attaching as Exhibit CJ-R-1.

For these five industrial customers, the average main length is 3,189 feet. However, on average in Peoples' service area, 28 customers are served by that length of mains.[7] The average customers per foot would likely be higher in urban areas. The allocation of main costs on a per customer basis would result in a miniscule percentage assignment to these industrial customers. However, because density is ignored, the allocation is distorted by the 2,800% difference in average customers for that length of main. In addition, the average annual use for these five industrials is many times greater than the aggregate usage of 28 residential customers.

Q. DISCUSS THE RELEVANCE OF TABLE 1 ABOVE TO THE CLASSIFICATION OF MAINS.

A. First, as mentioned above, Table 1 provides an example of how an intervening variable like density can distort a customer allocation. Second, it demonstrates the causal connection between average annual use and the decision to extend a main. The Company is unlikely to extend a main for a half mile in order to serve a single customer—unless the customer is likely to produce sufficient annual revenues to justify the investment. As discussed in my direct testimony, the Company takes into account annual revenues in requiring a customer contribution for main extensions,[8] and annual usage is a determinant of annual revenues. This contradicts Mr. Baudino's assertion that average annual use is not related to cost causation.

---

[7] Calculation based on Company's Response to OCA XVIII-3. This response indicates a system average 47 customers per mile. The average main length in Table 1 is approximately 60% of a mile, which was multiplied times 47 customers to arrive at 27 customers.

[8] OCA Statement 4, pp. 21-22.

Q. WHAT IS YOUR CONCLUSION WITH RESPECT TO MAINS CLASSIFICATION?

A. I continue to urge the Commission to adopt the Peak & Average CCOSS and reject a customer classification of mains. As stated by I&E witness Mr. Cline, the P&A method is consistent with Commission precedent, and further the Commission's orders do not accept the notion that the number of customers causes the cost of mains.[9]

III. I&E CCOS AND REVENUE DISTRIBUTION

Q. DO YOU AGREE WITH I&E WITNESS CLINE'S CCOSS AND CLASS REVENUE DISTRIBUTION RECOMMENDATIONS?

A. Although I agree with much of his recommendation, his ultimate class revenue distribution is not well founded. Before discussing my area of disagreement, I would point out that his recommendation prior to developing the base revenue increase spread is largely consistent with my testimony.

- Mr. Cline states that the Peak & Average (P&A) allocation of mains previously has been accepted by the Commission and should be adopted in this case.
- I agree with his position that the CCOSS based on P&A should be the foundation for the class revenue distribution, rather than an "averaging" of methods as proposed by the Company.
- Mr. Cline proposes a gradualism constraint by proposing a class percentage increases of no more than 150% of the system average increase. My proposed alternative gradualism recommendation also utilizes a 150% gradualism target..

[9] I&E Statement No. 3, pp. 26-27.

- Similar to my testimony, Mr. Cline applies his revenue distribution method to the Company's base rate revenue requirement.

Q. WHY IS THE I&E RECOMMENDED CLASS REVENUE INCREASE INCONSISTENT WITH THE PRECEDING RECOMMENDATIONS?

A. Mr. Cline appears to have made a mathematical error in determining the appropriate gradualism constraint. He states that the 53.2% and 59.2% increase for the small general service (SGS) and medium general service (MGS) classes based on the CCOSS result is not reasonable because both increases exceed the "generally accepted rule" that class increases should be within 1.5X of the system average increase.[10] Mr. Cline then goes on to describe the gradualism threshold as 35.8% which is 1.5 times a system average base increase of 23.9%. However, this calculation is incorrect, as shown by the system revenue increase numbers on both the table at page 38 of his testimony as well as his I&E Statement 3, Exhibit No. 7, Schedule 7. As shown on his table, the proposed base revenue increase is $173,737, 538 and current base rate revenue is $504,861,227. Dividing the former into the latter produces the correct system base revenue increase percentage of **34.4%.** 1.5 times that system increase is **51.6%**, not 35.8%. Thus, the error produces a discrepancy in the gradualism percentage increase for the SGS and MGS classes. The system percentage increase of 34.4% and the 1.5x target of 51.6% is confirmed by Exhibit CJ-2 of my direct testimony.

[10] On page 37 of I&E Statement 3, Mr. Cline's testimony inadvertently transposes the Large General Service class,"LGS", for the MGS class.

Q. HOW DOES MR. CLINE'S INCORRECT PERCENTAGE INCREASE AFFECT HIS DEVELOPMENT OF THE CLASS REVENUE RECOMMENDATION?

A. Mr. Cline's error required him to reallocate $20.8 million of required revenues from the SGS and MGS classes to the Residential and LGS classes. [11] However, the "revenue deficiency" created by the gradualism constraint should be much smaller. My testimony utilized the correct 1.5X percentage target and, as a result, only $5.57 million is reallocated from the SGS and MGS classes in order to limit the SGS and MGS percentage increases to 51.6%.

Q. DO YOU HAVE ADDITIONAL DISAGREEMENT WITH MR. CLINE'S GRADUALISM ADJUSTMENT?

A. Yes. Mr. Cline allocates 85.6% of the revenue deficiency created by gradualism to the Residential class and only 14.3% to the LGS/ MLS class.[12] Mr. Cline's proposal requires the residential class to finance an excessive percentage of the gradualism cost. As a result of his proposed allocation, the Residential class, which has a rate of return well above system average, would also bear a base revenue percentage increase (34.9%) above system average (34.6%).[13] Consequently, the I&E revenue distribution proposal is inequitable. On the other hand, his recommendation requires the LGS to pay a percentage increase which is only 38% of system average. [14]This is not a balanced treatment of the Residential and LGS classes.

---

11 Cline direct testimony, I&E Statement No. 3 at 37; $7.595 million + $13.292 million. Again, because of his mathematical error, these amounts are incorrect, but I present them here because that is what he uses.

12 $17.887 million reallocated to Residential and $3.0 million reallocated to LGS.

13 I&E Statement 3 at 38.

14 Ibid., 13.1% /divided by 34.6%.

Q. WHAT IS AN ALTERNATIVE APPROACH TO BALANCING THE COST OF GRADUALISM BETWEEN THE RESIDENTIAL AND LGS CLASS?

A. The LGS class increase should represent a more reasonable proportion of the system average percentage increase. My testimony proposes that the LGS class should pay at least 50% of the system average percentage increase. The upper end target of 1.5X (SGS and MGS) and lower end target of 0.5X (LGS) is a reasonable and symmetric band for class revenue increases. Based on this approach and considering the correct calculation of $5.57 million is reallocated from the SGS and MGS classes, the Residential class increase is 29.8%, which is 86.5% of system average, and the LGS increase is 17.2%, which is 50% of system average.[15] Therefore, my proposal assigns a below system average increase to both classes which currently produce a relative rate of return above 100%.

IV. OSBA CCOSS AND PROPOSED CLASS REVENUES

Q. DOES OSBA WITNESS MR. KNECHT DISCUSS CCOSS CONCEPTS AND PRESENT A MODIFICATION TO THE CCOSS?

A. Yes. Mr. Knecht explains that considerable disagreement surrounds the classification of mains on a customer basis.[16] He opines that the methodologies for quantifying the customer classification of mains are "theoretically and conceptually weak."[17] However, despite this weakness, Mr. Knecht produces a CCOSS which incorporates a modified version of the customer classification percentage used by the Company. In addition, Mr. Knecht discusses the Average & Excess (AE) methodology as a replacement for the P&A

15 OCA Statement 3, Exhibit CJ-2.
16 OSBA Statement No. 1, p. 23.
17 Ibid.

method, but since he does not recommend or prepare a CCOSS based on that methodology, I will not respond to his comments regarding AE.[18]

Q. PLEASE DESCRIBE THE MODIFIED VERSION OF THE COMPANY'S DESIGN DAY-MINIMUM SYSTEM CCOSS UTILIZED BY MR. KNECHT.

A. Peoples proposed a CCOSS which classifies mains as 52% Design Day Demand and 48% Customer. Mr. Knecht prepares a variant of that study which classifies mains as 71% Design Day Demand and 29% Customer. In order to quantify its proposed customer percentage, the Company offers a minimum system study based on 2-inch mains and makes an adjustment to remove the demand-carrying capability of 2-inch mains. Mr. Knecht develops a zero-intercept study to replace the Company's minimum system study, which supposedly represents the cost of a system of mains with zero demand capability.[19]

Q. DO YOU AGREE WITH MR. KNECHT'S ZERO INTERCEPT STUDY WHICH HE USES TO QUANTIFY CUSTOMER CLASSIFICATION PERCENTAGES?

A. No. Although Mr. Knecht's customer classification percentage is an improvement on the Company's minimum system study, the zero intercept method does nothing to address the overarching lack of cost causality between the number of customers and mains, as discussed in Sec. II of this testimony and in my direct testimony. The zero-intercept method is intended to resolve potential double counting of demand capability in the minimum system. The Company's approach applies an adjustment which supposedly removes demand costs from the minimum system. The zero intercept study results appear to confirm

[18] I do not recommend the traditional AE method, because it is simply a circuitous route to a peak demand allocation.

[19] OSBA Statement 1 at 26, 34.

that the Company's adjustment method is inadequate and is consistent with my direct testimony that "an adjustment to remove demand can produce varying results, depending on method."[20] However, in my view, the zero intercept study performed by Mr. Knecht raises more questions than it answers and should not be adopted in this proceeding.

Q. IS THE ZERO-INTERCEPT METHOD SUBJECT TO CONCEPTUAL AND STATISTICAL FLAWS?

A. Yes. Based on the Company's records of installed costs per foot for different main diameters, the method uses linear trend analysis to "predict" the cost per foot of a zero-inch main.[21] The validity of this approach is dubious because the concept of zero-inch mains is based on fictitious distribution components. Zero inch mains do not exist because no one would ever manufacture or purchase distribution mains which are incapable of delivering gas. Given this lack of realism, we can only hypothesize whether such a phantom system would be required to meet safety standards, to be buried, or to incur indirect costs such as stores and construction overhead. The zero intercept study fits a line or curve to data regarding existing main sizes and costs, producing a predicted cost at the point that the line is equal to zero inches diameter. However, the technique raises inherent questions of statistical validity. Statistics tenets advise caution in extrapolating beyond the limits of the available data[22]—in this case, the prices of hypothetical zero inch mains. The assumptions necessary to make this extrapolation cannot be tested or verified. The

---

[20] OCA Statement. 4 at 16. My direct testimony suggested that an alternate method for removing demand capability from the minimum system would result in a customer classification percentage of 15.3%.

[21] Mr. Knecht used the LINEST function of Excel.

[22] "Regression analysis is limited only to the range of actual observations. It is these observations, not qualitative reasoning, that are used to quantify the relationship between *x* and *y*." Statistics for Modern Business Decisions at 495. Lawrence Lapin, Hardcourt, Brace, Inc. 1973.

instructions for the LINEST Excel function used by Mr. Knecht states, "the y-values predicted by the regression equation may not be valid if they are outside the range of y-values you used to determine the equation."[23]

Q. ARE YOU SKEPTICAL OF MR. KNECHT'S ZERO-INTERCEPT STUDY?

A. Yes. His workpapers reveal that he performed eight linear analyses (steel and plastic linear and quadratic equations for the Peoples Natural Gas Division (PNGD) and Peoples Gas Division (PGD), with separate underlying mains data for each division.[24] The differences between predicted zero inch main cost is often quite large depending on the linear or quadratic form of the analysis. The variations of the method produce such disparate results that one can question the accuracy of the method or at least the subjective judgements necessary to apply the method:

- The predicted linear value for the PGD steel mains is negative. Mr. Knecht chose the quadratic form for the PGD instead, but the predicted zero inch main cost/foot derived from the four steel main equations for PGD and the PNGD are in a range of -$4, $30, $32, and $142. This wide range justifies some degree of skepticism. Arguably, the negative predicted cost per foot could have been truncated at zero.
- The predicted zero-inch cost per foot for PNGD steel mains is 15% higher than the actual cost per foot of PNG's 2-inch mains. 2-inch mains should not be more costly than the theoretical zero-inch mains.

---

[23] "LINEST Function," Microsoft Support, https://support.microsoft.com/en-us/office/linest-function-84d7d0d9-6e50-4101-977a-fa7abf772b6d

[24] The information referenced was provided by the OSBA to all parties, Judge Long, and designated Commission Staff from the Bureau of Technical Utility Services via email on March 28, 2024, and it was labeled "IEc-WP3MinSysZ-0328, tab "Detail 376-Mains ZI RDK," columns AA – AJ." The worksheet is too voluminous to append to my testimony.

- Mr. Knecht's study predicts that zero-inch plastic mains would cost $9 per foot in the PGD service area and $26 per foot in the PNGD service area. His analysis raises two important questions: (1) Why wouldn't the theoretical costs of zero-inch mains be nearly the same for the two divisions? (2) Is this just a distortion created by the differing vintage and diameter of mains installed in the two divisions?

Q. IS MR. KNECHT'S ANALYSIS TYPICAL OF THE ISSUES THAT ARISE WITH THE ZERO INTERCEPT METHOD?

A. Yes. The Regulatory Assistance Project's Cost Allocation Manual criticizes the zero intercept methodology, concluding that the "zero-intercept regression analysis is so abstract that it can produce a wide range of results, which vary depending on arcane statistical methods and the choice of types of equipment to include or exclude from an equation."[25]

Q. EVEN IF THE ZERO-INTERCEPT ANALYSIS CURES THE DOUBLE COUNTING OF DEMAND PROBLEM ASSOCIATED WITH THE COMPANY'S STUDY, DOES IT JUSTIFY CLASSIFYING MAINS ON A CUSTOMER BASIS?

A. No. The 2021 order in the Columbia Gas case states: "Mains investment is driven by the loads placed on it, not by the number of customers served."[26] Mr. Knecht's analysis does not demonstrate that cost causation links customers and mains investment. Therefore, Mr. Knecht's CCOSS should be rejected.

[25] *Electric Cost Allocation For A New Era*, A Manual at 148, Lazar, Chernick, and Marcus, available at chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://www.raponline.org/wp-content/uploads/2023/09/rap-lazar-chernick-marcus-lebel-electric-cost-allocation-new-era-2020-january.pdf

[26] *PA. PUC v. Columbia Gas of Pennsylvania, Inc.*, R-2020-3018835, Order and Opinion at 217 (February 19,2021).

Q. DO YOU AGREE WITH OSBA'S PROPOSED REVENUE DISTRIBUTION?

A. No. Mr. Knecht bases his proposed revenue allocation, in part, on his CCOSS which includes the zero-intercept study's 29% customer classification. Since I oppose the use of this method, I also oppose his proposed class revenue allocation.

Q. WHAT IS THE FRAMEWORK OF MR. KNECHT'S CLASS REVENUE ALLOCATION?

A. The Company's revenue increase is based on averaging the results of its Design Day/MinSys CCOSS with the results of the Peak & Average CCOSS. Mr. Knecht proposes to average the Company's proposal--which itself is an average--with OSBA's Design Day/ZI CCOSS. Effectively, the Company's proposed revenue allocation is 51% Design Day Demand, 24% Customer, and 25% Average Demand.[27] Similarly, Mr. Knecht's proposed revenue allocation is 61% Design Day Demand, 27% Customer, and 13% Average Demand. Compared to the Company's proposed revenue distribution, Mr. Knecht's proposed average of averages has the effect of increasing the reliance upon Design Day Demand, increasing the weight given to customer count, and decreasing the weight given to Average Demand. My direct testimony opposes classifying mains on a customer basis, and it follows that giving greater weight to the customer classification is moving in the wrong direction. Although Mr. Knecht's zero-intercept study implies that the Company's CCOSS places too much weight on the customer classification, Mr. Knecht's revenue recommendation is a roundabout approach to *increasing* the weight

[27] The Company's recommended CCOSS is 52% Design Day and 48% Customer. The Peak & Average CCOS is 50% Design Day and 50% Average Demand. The revenue allocation, in effect, averages those percentages.

given to the customer classification in the Company's revenue allocation. In my view, Mr. Knecht's "averaging of averages" is an unreasonable and arbitrary method for calculating the class revenue increases.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS ON MR. KNECHT'S REVENUE ALLOCATION RECOMMENDATION?

A. Yes. I have difficulty understanding the sources and basis for the revenue increase numbers in his recommendation. Mr. Knecht's revenue recommendation is based on a People's combined base revenue increase which is $21.021 million less than the Company's claimed base revenue increase.[28] His revenue recommendation is based upon a 30.5% base revenue increase rather than 34.4% reflected in the Company's request. I cannot determine the reason for this difference, and obviously the variance will affect Mr. Knecht's application of 1.5X gradualism constraints. Furthermore, the CCOSS sources for the Company's proposed revenue distribution do not match the class base revenue requirements used by Mr. Knecht to develop his revenue allocation.[29] Since I object to the method and framework for Mr. Knecht's revenue allocation, any further effort to resolve or respond to these more detailed discrepancies is unnecessary.

Q. PLEASE SUMMARIZE YOUR CONCLUSION.

A. The Commission should reject Mr. Knecht's CCOSS, because it is simply another variant

[28] As noted in Sec.III, the Company's claimed base revenue increase is $173.7 million. Instead, $152.7 million is reflected on Table IEc--6 on page 45 of Mr. Knecht's testimony, OSBA Statement No. 1.

[29] For example, through the discovery process, OSBA submitted a series of workpapers followed by a series of corrections of those workpapers. IEc-WP-Revenue Allocation Rate Design (Corrected 4-4-24) Tab "RevAlloc Corrected", which was circulated by OSBA to parties but is too voluminous to include here, does not match data from Exhibit 11Ec-CD simulation (Confidential) Tab "COS Summary" or Exhibit 11Ec-P&A simulation (Confidential) Tab "COS Summary." Note that a version of the latter file was submitted through the discovery process and mis-labeled as "A&E simulation."

of classifying mains on a customer basis. Furthermore, I recommend denial of OSBA's proposed revenue spread because it is based on two CCOS studies (Demand/Min Sys and Demand/Zero Intercept) which classify mains on a customer basis.

V. I&E CUSTOMER CHARGE RECOMMENDATION

Q. WHAT IS I&E WITNESS CLINE'S RECOMMENDED RESIDENTIAL CUSTOMER CHARGE?

A. Mr. Cline recommends setting the residential customer charge at $20.00, instead of the $21.50 requested by the Company[30] . He also recommends applying a scale-back to the customer charge to the extent that the Commission grants a lower base rate increase.

Q. DO YOU AGREE WITH MR. CLINE'S RECOMMENDED CUSTOMER CHARGE?

A. No. Mr. Cline presents no discussion or analysis of the appropriate accounts to include in the customer charge. His recommendation is based on the $19.96 residential customer unit cost that falls out of the Company's Peak & Average CCOSS.[31] He has accepted the Company's choice of accounts to include in the customer charge, without any consideration as to whether they vary with the number of customers. As stated in the NARUC Gas Utility Rate Design Manual, customer costs are those costs found to "vary *directly* with the number of customers served rather than the amount of utility service supplied," including

30 I&E Statement No. 3, pp. 33-34.
31 I&E Statement No. 3 at 32.

"metering, reading, billing, collecting and accounting," as well as "metering equipment and in customers' service connections."[32] (emphasis added)

Q. WHY IS MR. CLINE'S $20.00 CUSTOMER CHARGE RECOMMENDATION FLAWED?

A. Mr. Cline just accepts the customer unit cost computed by the Company's CCOSS without determining whether the components vary with the number of customers. A large portion of the $20.00 unit cost consists of indirect costs which are unaffected by the addition or departure of customers. In my direct testimony, I calculated a customer charge of $9.00 based solely on costs which are directly caused by the number of customers.[33] Mr. Cline's recommended $20.00 customer charge is 222% of direct customer costs.[34] In other words, his recommended customer charge is comprised of indirect costs which are 1.2 times greater than direct costs.

Q. CAN YOU PROVIDE EXAMPLES OF THE INDIRECT COSTS WHICH ARE INCLUDED IN MR. CLINE'S CUSTOMER CHARGE RECOMMENDATION?

A. Yes. Administrative & General (A&G) expenses are a major part of the indirect costs included in I&E's $20.00 customer charge. A&G expense is by definition "not chargeable directly to a particular utility operating function."[35] Examples of the A&G expenditures included in the customer charge: $11.4 million for executive and officer salaries (A920) and associated office supplies and equipment (A921); $11.4 million for outside services, including fees for attorneys, accountants, actuaries, consultants, and other professionals

---

32 *NARUC Gas Distribution Rate Design Manual* (1989) at 22.
33 OCA Statement 4 at 34.
34 20 divided by 9.
35 18 CFR Part 201, FERC Uniform System of Accounts.

(A923); $3.6 million for injuries and damages, including insurance premiums or reserves for injuries and damages suffered by employees or the public (A925); and $1.08 million for miscellaneous general expenses, including general advertising primarily designed to improve the image of the utility or the industry, and other general expenses such as industry association dues and stockholder meetings (A930). These are costs which do not vary directly with the number of customers and are not appropriate for recovery through a fixed customer charge, which has as its sole function restricting access to the system. A more reasonable rate design will recover such indirect costs through a usage charge which provides customers with pricing information that can influence their decisions.

Q. WHAT IS YOUR RECOMMENDATION?

A. The Commission should reject Mr. Cline's proposed $20.00 customer charge as excessive. As I demonstrated in my direct testimony, the current $14.50 customer charge paid by the majority of residential customers recovers direct customer costs and provides a reasonable contribution to common cost, thereby satisfying economic criteria for avoidance of cross subsidies. This approach is also consistent with policy objectives such as energy conservation, protecting the environment, and equitable prices for low income customers. Mr. Cline's scale-back recommendation is not unreasonable, but it would be unnecessary if the proposed customer charge was set closer to the current fixed charge.

VI. TREATMENT OF MLS DISCOUNT RATE SHORTFALLS

Q. PLEASE DESCRIBE MR. BAUDINO'S TREATMENT OF REVENUE SHORTFALLS IN THE MLS CLASS.

A. Essentially, Mr. Baudino is claiming that the Company's favorable CCOSS changes for Mainline customers is not good enough. The Company proposes that the LGS customers who qualify should be included in a new MLS class. However, these customers take discounted rate service which does not produce revenues equal to allocated cost. The Company assigns the shortfall from discounted rates to the customer's underlying class (LGS, in the case of MLS), and states that other classes do not bear the shortfall associated with discounted flex rates.[36] As part of his revenue allocation recommendation, Mr. Baudino proposes to spread the $9.6 million revenue shortfall caused by MLS discounted rates across all customer classes.[37]

Q. DO YOU AGREE WITH MR. BAUDINO'S PROPOSED REALLOCATION OF THE $9.5 MILLION SHORTFALL?

A. No. Mr. Baudino's proposal is not consistent with cost causation. The revenue shortfall from discounted rates is caused by the competitive circumstances and negotiated rates paid by the specific customers within the class. Customers' commercial decisions within each class are ultimately the cause of the revenue shortfall. Furthermore, standard regulatory practice directly assigns revenues to each customer class. Allocating customers' revenue

[36] Peoples Statement No. 15 at 37.
[37] PII Statement No. 1 at 16.

responsibility to other classes is a significant departure from this practice and interferes with the cost of service process.

Q. PLEASE DISCUSS THE IMPLICATIONS OF COMPETITIVE DISCOUNT RATES FOR RATE SETTING.

A. Customer classes with competitive options, such as LGS and MLS, impose significant business risk on the gas utility. The business risk involves the potential loss of industrial load or lost revenue caused by responding with negotiated rates. In theory, this risk is reflected in the gas utility's cost of equity. The CCOSS targets class revenue requirements based on the system average rate of return. But if the CCOSS reflected the class specific business risk associated with competitive pressure, the LGS and MLS base revenue requirement would be based on rate of return targets higher than the system average. [38] Mr. Baudino's proposal is inequitable because classes with high risk of load loss can export their revenue losses from negotiated contracts to other classes, while simultaneously targeting a revenue requirement based on an average rate of return instead of the higher return associated with the class's business risk. Therefore, the direct assignment of the revenue shortfall to the industrial class may compensate, in part, for the omission of an adjustment for class business risk. As Dr. Bonbright stated, in his discussion of large industrial customers who impose the risk of revenue shortfalls: "If based on advance estimates of 'cost of service' these rates should therefore incorporate an appropriate

[38] Higher than system average rate of return targets for industrial and commercial classes also implies below system average rate of return targets for residential and SGS classes.

allowance for the risk factor—for a risk factor well in excess of that which would be appropriate in an estimate of the cost of supplying the more stable, residential service."[39]

Q. IS MR. BAUDINO'S PROPOSAL FOR ALLOCATING THE COST OF INDUSTRIAL DISCOUNT RATES CONSISTENT WITH HIS TREATMENT OF THE COST OF CUSTOMER ASSISTANCE PROGRAMS AND THE LOW INCOME USAGE REDUCTION PROGRAM?

A. No. Mr. Baudino assigns the costs of low income assistance programs directly to the residential class because the customers who benefit from the programs are residential. The allocation of these low income program costs to all ratepayers could be justified more easily than Mr. Baudino's proposal because they are a social cost favored by governmental and public policy. However, in my experience, industrial and commercial intervenors generally oppose the system wide allocation of CAP and LIURP costs on grounds of cost causation.

Q. WHAT IS YOUR CONCLUSION?

A. The Commission should reject Mr. Baudino's proposal to allocate revenue shortfalls in the MLS class to residential and other classes. LGS customers benefit from the flex rate program and should bear the cost of the program. The Company already has provided an allocation benefit to the LGS class by implementing favorable treatment of MLS customers in the class cost of service study. Mr. Baudino's proposal favors the LGS class in a more expansive way by transferring revenue shortfalls caused by LGS customers to other classes.

[39] Bonbright, *Principles of Public Utility Rates* (1961) at 365.

VII. WEATHER NORMALIZATION ADJUSTMENT

Q. PLEASE SUMMARIZE THE RECOMMENDATIONS OF I&E WITNESS MR. CLINE AND OSBA WITNESS MR. KNECHT REGARDING THE COMPANY'S PROPOSED WEATHER NORMALIZATION ADJUSTMENT (WNA).

A. Mr. Cline accepts the WNA but recommends that the normal weather period should be based fully on the 20 year average heating degree days (HDD) without the partial inclusion of HDDs predicted by the 65 year regression analysis.[40] Mr. Cline also recommends the inclusion of a 3% deadband be imposed as a condition of approving the WNA.[41] For his part, Mr. Knecht also accepts the WNA, including the Company's proposal to define normal annual HDDs based on both the 20 year average HDD and the HDDs predicted by the 65 year regression analysis.[42] Mr. Knecht also describes several flaws in the WNA and suggests that the WNA should be conditioned on the Company addressing those issues.

Q. DO YOU AGREE WITH THEIR RECOMMENDATIONS?

A. While I do not disagree with Mr. Cline's recommended use of the 20 year average HDDs (without the 65 year regression) to normalize test year weather, even if Peoples were to accept the 20 year average, the WNA is flawed in other respect that warrant its rejection. As I explain below, I disagree with both witnesses' acceptance of the WNA because the conditions for approval that they recommend are insufficient to convert the WNA into a

40 I&E Statement No 3, pp. 19-20.
41 I&E Statement No. 3, p. 16.
42 OSBA Statement No, 1 at 51

just and reasonable rate. In fact, both witnesses' critique of the Company's WNA would support denial of the proposal and I continue to recommend that it be denied.

Q. DOES MR. CLINE ADDRESS THE POLICY REASONS THAT SUPPORT HIS RECOMMENDATION TO IMPLEMENT A WNA IN THE PEOPLES' SERVICE AREA?

A. No. He focuses on comparing the Peoples' proposed WNA with the WNA mechanisms adopted for several other regulated gas utilities in Pennsylvania. The fact that WNA mechanisms have been adopted in other gas utility rate cases, is not sufficient to demonstrate that the WNA mechanism should be adopted in Peoples' current rate case. The faulty logic of such a position is akin to arguing that a revenue requirement determination made in a Columbia Gas rate case ought to automatically entitle Peoples to the same level of revenue that Columbia Gas received. Mr. Cline absolves Peoples of much of its burden to support the WNA. In particular, aside from also lacking any meaningful comparison of how Peoples' WNA proposal would be calculated and applied as compared to other utilities WNAs, there are clear distinctions that Mr. Cline ignores. Specifically, as noted in Mr. Cline's exhibits, at least two of the four gas utilities with WNA tariffs adopted the WNA as a pilot program.[43] Generally, pilot programs are intended to gather information on rate making mechanisms in order to evaluate problems in the program and determine the need for improvements or discontinuation. The Company could have presented a

[43] I&E Exhibit No. 3, Schedule 5, OCA-I-004. Note that the Company's response also indicates that it is unaware whether the remaining two gas utilities also implemented the WNA as a pilot program.

detailed evaluation of the impact of these WNA programs implemented by other gas utilities in order to support its proposal—but it did not do so.

Q. WHAT IS MR. CLINE'S REASONING FOR RECOMMENDING A DEADBAND?

A. Mr. Cline cites a commission order in the 2021 Columbia Gas case, stating that "without an extraordinary set of circumstances" there is no reason reconcile revenues for day-to-day business risk.[44] Mr. Cline opines that the WNA is a departure from traditional ratemaking that "should only occur due to circumstances that are an extraordinary departure from normal operating conditions…"[45] However, Mr. Cline does not address why abnormal weather conditions now constitute an extraordinary departure from normal business operations, given that Peoples has operated a gas utility business for decades without a WNA. Historically abnormal weather conditions were considered a normal business risk for the gas utility.

Q. HAS MR. CLINE SUPPORTED HIS POSITION WITH ANY CALCULATION OR ANALYSIS OF HOW APPLYING A 3% DEADBAND WOULD PROTECT PEOPLES' CUSTOMERS FROM THE VOLATILITY OF A WNA?

A. No. Mr. Cline provides no calculation or analysis, as he simply asserts that "a 3% deadband is a reasonable provision to add to a WNA mechanism because it allows for a range of what is considered "normal" weather in which the Company's Commission-approved rates would be applied without adjustment." [46] It remains unclear what range Mr. Cline relies upon, how he calculated it, and why it is reasonable.

---

44 I&E Statement 3 at 14.
45 I&E Statement 3 at 15.
46 I&E Statement no. 3 at 15-16.

Q. IS IT REASONABLE TO REQUIRE PEOPLES TO DEMONSTRATE EXTRAORDINARY CIRCUMSTANCES IN ORDER TO JUSTIFY IMPLEMENTING A WNA?

A. Yes. However, this test should not be limited to the context of whether a deadband should be imposed but it should also be a threshold for determining whether an automatic weather adjustment is justified at all. As I suggested in my direct testimony, the Company should be required to show, at a minimum, that a WNA is required to avoid a significant and extraordinary financial threat to the utility. The utility has not made such a showing, and the Company's testimony and discovery responses imply that the financial impact of the weather risk over time is not significant.[47]

Q. EVEN IF THE COMPANY COULD DEMONSTRATE THAT ABNORMAL WEATHER POSES A SIGNIFICANT FINANCIAL RISK FOR THE UTILITY, DOES THAT INDICATE OTHER ADJUSTMENTS ARE NECESSARY IN ORDER TO IMPLEMENT THE WNA?

A. Yes. If the WNA largely attenuates the normal business risk arising from abnormal weather, the recommended cost of equity should be adjusted to recognize the reduction in risk. While I defer to OCA witness Rothschild to address Peoples' business risk, I am not aware that such an adjustment has been proposed by I&E or the Company.

Q. DOES MR. KNECHT CRITICIZE FEATURES OF THE COMPANY'S WNA?

A. Yes. However, he ultimately accepts the WNA, provided that his concerns are "resolved." But Mr. Knecht is not clear on what actions the Company must take to resolve those

[47] For instance, in response to OCA V-26(b), the Company says it expects the future cumulative impact of the WNA on revenues to be zero or near zero over a length of time.

concerns.[48] In my view, many of Mr. Knecht's observations and criticisms are sufficient to find that the WNA should be denied.

Q. DOES MR. KNECHT CRITICIZE THE WNA'S LACK OF TRANSPARENCY FROM THE STANDPOINT OF ORDINARY CONSUMERS?

A. Yes. For instance, in footnote 89 (page 53) his testimony notes: "Peoples indicates that it will not use a separate WNA charge but will simply hide the effect of the WNA in the volumetric charges." In my opinion, this is a serious issue which will confuse and frustrate customers. For instance, customers may be frustrated when their reduced gas usage during moderate weather results in a surcharge, but their bill provides no information as to why that occurs. Furthermore, he states that the WNA "weakens price signals for energy conservation during extreme periods" and that traditional ratemaking treatment for extreme weather is "more consistent with cost causation." [49] In a discovery response, Mr. Knecht stated that his concerns about WNA are "related to inaccurate and unreasonably large bill adjustments due either to low actual heating degree day billing periods, or due to the default assumption that the difference between actual usage and average prior summer usage is necessarily and entirely due to space heating."[50] All of these issues are difficult, if not impossible, to correct, and in my view warrant rejection of the proposed WNA.

---

48 On pages 54-55 of OSBA Statement No. 1, Mr. Knecht describes actions the Company should consider, but the described actions are either vague are inadequate to fully correct the issues. These conditions appear to include placing limits to application of WNA triggered by HDD criteria, not applying WNA to new customers until summer usage is established, and a few other conditions that are surrounding HDDs. None of these conditions include imposing a deadband.

49 OSBA Direct Testimony (Revised) at 53.

50 OCA-OSBA-1-5. I note that I am attaching this response as OCA Exhibit CJ-R-2.

Q. WHAT IS YOUR CONCLUSION?

A. My position remains the same as it was in my direct testimony. The Company's proposed WNA Tariff should be denied, because: (1) the Company has failed to demonstrate that extraordinary circumstances justify departure from important principles of traditional regulatory practice; (2) single issue rate making unreasonably allows the Company to reflect changes in a single component of rates without recognizing potential off-setting changes in other components; (3) The WNA is likely to produce more increases in gas bills than credits, given the long term warming trends; (4) The WNA may be perceived by customers as a disincentive to energy conservation; and (5) the tariff will likely cause customer confusion regarding billing changes resulting from the weather adjustments.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XVII-009

Witness: Ravenstahl, Luke **Title:** Vice President Sales & Marketing

Question: Within the last five years, has the Company extended distribution mains by more than 1,000 feet to serve a new industrial customer? Without identifying the customer, for each of the five largest such customers, provide the customer's Annual Throughput and the distance of the main extension.

Answer: Yes.

Customer 1- Estimated annual usage: 100,000 Mcf; Mainline extension distance: 2,700 feet

Customer 2 - Estimated annual usage: 86,519 Mcf; Mainline extension distance: 2,270 feet

Customer 3 - Estimated annual usage: 60,000 Mcf; Mainline extension distance: 1,137 feet

Customer 4 - Estimated annual usage: 14,875 Mcf; Mainline extension distance: 6,821 feet

Peoples Natural Gas Company LLC 2023 Base Rate Case
Docket No. R- 2023-3044549

OSBA Responses to OCA Set I

OCA-OSBA-I-5

5. Please clarify whether Mr. Knecht recommends a deadband as a condition for approving the WNA proposal.

Response:

In my testimony, I did not recommend a deadband as a necessary condition for approval of the Company's WNA proposal. However, I would not object to the adoption of a reasonable deadband. My concerns with WNA mechanisms, however, are more related to inaccurate and unreasonably large bill adjustments due either to low actual heating degree day billing periods, or due to the default assumption that the difference between actual usage and average prior summer usage is necessarily and entirely due to space heating.

SURREBUTTAL TESTIMONY

OF

DAVID T. EVRARD

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

Date Served: May 3, 2024

TABLE OF CONTENTS

Introduction 1

Response to Peoples Witness Wachter 2

Response to Peoples Witness Moul 6

Response to Peoples Witness Scanlon 7

Response to Peoples Witness Becker 13

Conclusion 14

Introduction

Q. Please state your name and business address.

A. My name is David Evrard and my business address is 555 Walnut Street, 5th Floor, Harrisburg, PA.

Q. By whom are you employed and in what capacity?

A. I am employed by the Office of Consumer Advocate (OCA) as an Assistant Consumer Advocate.

Q. Have you previously submitted testimony in this case?

A. Yes. My direct testimony was submitted as OCA Statement 1 on March 22, 2024.

Q. What is the purpose of your surrebuttal testimony in this case?

A. I am responding to the rebuttal testimony of the following witnesses who testified on behalf of Peoples Natural Gas Company LLC (Peoples): Andrew Wachter,[1] Carol Scanlon,[2] Paul Becker,[3] and Paul R. Moul.[4]

Q. Before you respond to the identified Peoples' witnesses, do you have any introductory comments?

A. Yes. As I previously indicated in my direct testimony, I am not acting as an OCA attorney in this proceeding. Therefore, it is important to recognize that my testimony should not be interpreted as offering a legal opinion on any topic I discuss. Instead, my testimony is offered on the basis of policy. This distinction is important, because anywhere that I may refer to decisions by regulatory agencies or courts, or refer to statutes and regulations, should not be considered as me offering a legal opinion, but as supporting my position on

[1] Peoples Statement No. 2-R
[2] Peoples Statement No. 3-R
[3] Peoples Statement No. 5-R
[4] Peoples Statement No. 13-R.

the basis of policy. Finally, I wish to note that the fact that I have not offered surrebuttal testimony on any given issue should not be construed as my agreement with that particular issue.

Q. Have you prepared Exhibits to accompany your surrebuttal testimony?

A. No; however, for purposes of this testimony, I refer to both Exhibit DE-1 and to Exhibit DE-2, which were attached to my direct testimony. Exhibit DE-1 outlined the factors under Section 1330 of the Public Utility Code concerning Peoples' proposed Weather Normalization Adjustment (WNA). Additionally, Exhibit DE-2 contained a summary of the public input testimony offered by consumers during the course of the six public input hearings held in this case from March 5 through March 7, 2024.

Response to Peoples Witness Wachter

Q. In your direct testimony, you testified that as part of its claim for a management efficiency premium, Peoples sought to indirectly have customers pay for Peoples' corporate citizenship activity. Did Peoples witness Wachter attempt to support corporate citizenship costs?

A. Yes. While Mr. Wachter addresses Peoples' "partnerships" with Pittsburgh-based sports teams such as the Pittsburgh Steelers, Pittsburgh Penguins, Pittsburgh Pirates, and Altoona Curve under the umbrella of advertising expenses, he extends his argument beyond that scope. Specifically, Mr. Wachter argues that Peoples' partnerships with major and minor league sports franchises "are catalysts for economic development in the City of Pittsburgh and the Western Pennsylvania region" and that it creates "a positive community brand" which he claims provides customers with direct benefits.[5]

[5] Peoples Statement No. 2-R, pp. 40-42.

Q. Do Mr. Wachter's claims about purported benefits of Peoples' partnerships with professional sports teams change your position that Peoples is seeking customer funding for corporate citizenship goals?

A. No. If anything, Mr. Wachter doubled-down on the notion that Peoples is entitled to spend customers' money to sponsor major league sports teams that it elects to sponsor, and that heightens my original concerns. While OCA witness Mugrace will address Peoples' expense claims related to sports advertising and sponsorships in OCA Statement 2SR, from a policy perspective, it is unjust and unreasonable to require customers to fund Peoples' sports advertising and sponsorship costs by embedding those costs in rates charged to consumers for essential utility service. To the extent that Mr. Wachter alleges that Peoples uses its partnerships to share information about "key customer services and vital safety messages" with "concentrated groups of customers and with the public" those general claims are not demonstrated[6]. It may be reasonable for Peoples to utilize venues such as sporting events as a part of its outreach activities for their programing, but those costs are discrete and insular from their advertising and sponsorship costs and the two concepts – outreach about program offerings versus pursuing corporate good will through advertising and sponsorship – should not be conflated.

Q. Please outline your concerns about Peoples' decision to spend customer money to fund sports partnerships.

A. Peoples has not offered any evidence that there is a nexus between its business decision to spend money sponsoring Pittsburgh-based sports teams and providing natural gas utility service to customers who it now seeks to charge for those sponsorships. From a policy

[6] Peoples Statement No. 2-R, p. 41.

perspective, requiring customers to pay to sponsor sports teams at Peoples' discretion, resulting in increased costs for essential utility service, inappropriately links regulated utility rates and corporate sponsorship activity in a way that undermines the purpose of utility regulation.

Q. Did Mr. Wachter also respond to your assertion that Peoples did not clearly identify any costs savings or operational efficiencies resulting from the acquisition by Essential?

A. Yes. Mr. Wachter claims that any costs savings benefits that were achieved have been reflected in the filing through adjustments made to the Company's historic test year. Mr. Wachter also commented that no requirement was established in the Essential Acquisition that required the company to demonstrate or report cost savings. Despite his disclaimer, Mr. Wachter identified tax savings benefits that he indicates were "passed onto customers since the Essential Acquisition [were] the adoption of the IRS Unit of Property rules" and he also quantified several types of credits and donations that resulted from commitments that Peoples made in its Tax Repairs Petition filed at Docket No. P-2020-3021191.[7]

Q. Are you disputing Mr. Wachter's claims about Peoples' fulfillment of the obligations made in its Tax Repairs Petition?

A. No. I do not dispute Mr. Wachter's claims; however, pointing to an intervening Tax Repairs proceeding does not cause me to change my position that Peoples previously expressed a commitment to pass along any future costs savings or rate benefits from *operational efficiencies* in future rate proceedings.[8] In this case, it remains unclear whether and to what extent any operational efficiencies have conveyed benefits to customers. The lack of clarity

[7] Peoples Statement No. 2R, pp. 59-60.
[8] OCA Statement 1, p. 10.

remains an issue, and it is underscored by many unsubstantiated cost increases that OCA witness Mugrace identifies in OCA Statement 2SR.

Q. Did Mr. Wachter also respond to your comments in direct testimony regarding Peoples' excessive rate of return request in this case despite claimed affirmative public benefits that would result from the acquisition by Essential?

A. In part, but he appears to misconstrue my position. Mr. Wachter appears to understand my direct testimony as a claim that Peoples' capital structure and return on equity are directly tied to the ownership of Essential Utilities, which he says is baseless.[9] However, it is important to understand that I have not addressed Essential's capital structure and return on equity, as I leave those matters to the expertise of OCA witness Rothschild. My point in mentioning Essential in any discussion of Peoples' capital structure and return on equity was limited to the context that, in terms of equity and risk, these metrics will prove to be very expensive for customers and thus, it did not appear that the acquisition conferred risk reduction benefits to customers. On the contrary, it appears that Peoples' anticipates greater investment risk after the acquisition, and that rate detriment is worthy of recognition.

Q. Why is Peoples' purported increase in investment risk worthy of recognition in this rate case?

A. As I mentioned in my direct testimony, Peoples is seeking a management performance adder of 25 basis points in this case. and therefore, as the decision to complete the acquisition was a business decision that Peoples' management made, the rate consequences of that decision certainly matter in the context of any discussion of exemplary management. I discuss this in more detail in my response to Peoples' witness Paul Moul, below.

[9] Peoples Statement No. 2-R, p. 60.

Q. Is Mr. Wachter correct that your discussion of Essential's acquisition of Peoples is baseless?

A. Not at all. While it may be an inconvenient topic for this case, among other things, Peoples included a management performance claim in this case. By doing so, in my opinion, all aspects of management, including the prudency of business decisions and acquisition consequences to customers, should be part of the analysis of whether customers should be compelled to pay a premium for what Peoples characterizes as exemplary management. As I indicated in my direct testimony, OCA witness Mugrace calculated the dollar impact of the management performance adder to be approximately $7.46 million in additional annual revenue for Peoples; therefore, evaluating the prudency and impact of Peoples' business decisions and their impact upon customers is not baseless when it could cost customers in excess of $7 million annually.

Response to Peoples Witness Moul

Q. In a similar vein to Mr. Wachter, witness Moul criticizes your direct testimony by claiming that your discussion of Essential's acquisition of Peoples is at odds with the standards for a fair rate of return. How do you respond?

A. Like Mr. Wachter, Mr. Moul appears to both misconstrue my testimony and ignore that Peoples' claimed rate of return includes a request for an additional 25 basis points for exemplary management performance. While I will defer to OCA witness Rothschild's expertise in any analysis of Essential Utilities as it may relate to Peoples' rate of return claim, Mr. Moul's statement that "there is no need to consider the Essential affiliation" is at odds with his simultaneous claim that Peoples' exemplary management performance

should be recognized through a higher return on equity.[10] As I explained in my response to Mr. Wachter, Peoples' decision to consummate the acquisition and to flow the consequences of it through to customers is a management decision that warrants consideration in any determination that would require customers to pay a premium for exemplary management.

Response to Peoples Witness Scanlon

Q. As part of her rebuttal testimony, did Peoples' witness Scanlon discuss portions of the public input testimony you addressed in your direct testimony?

A. Yes. Ms. Scanlon indicated that while she did not attend the March 5 public input hearing where he testified, she read the transcript of Peoples' customer, Mr. Hoffman, regarding his criticisms of Peoples' WNA proposal. Ms. Scanlon identified his criticisms as including that the WNA is complex and difficult to understand, his focus on the impact that warmer weather will have on WNA charges, and his complaint about DSIC-related billing errors.[11]

Q. What response did Ms. Scanlon offer regarding Mr. Hoffman's public input testimony?

A. Ms. Scanlon appears to claim that any of Mr. Hoffman's concerns about WNA complexity should be assuaged by the fact that other Pennsylvania natural gas distribution companies already have WNAs in place, and that Peoples will eventually develop education materials and customer service training to explain the WNA charge. Additionally, Ms. Scanlon claims that Mr. Hoffman's focus on warmer weather impacts upon the WNA miss the "other side of the coin" which she alleges is that Peoples will not recover additional distribution revenues due to colder weather that results in relatively higher usage by

[10] Peoples Statement No. 13-R, pp. 46-47.
[11] Peoples Statement No. 3-R, pp. 10-11.

customers. Finally, Ms. Scanlon concludes by claiming that Mr. Hoffman's bill did not contain any errors.[12]

Q. Do you agree that Ms. Scanlon's rebuttal testimony adequately addresses the concerns that Mr. Hoffman raised?

A. No. Although I am unable to comment upon whether Mr. Hoffman's bill contained any errors, I note that Ms. Scanlon's testimony omits the portion of Mr. Hoffman's public input testimony on the bill error issue. Specifically, Mr. Hoffman testified that he contacted Peoples three times by telephone to get the DSIC portion of his bill explained by a customer service agent. On the first occasion, regardless of whether there was an error, he testified that he was issued a credit. On the third billing issue call, Mr. Hoffman indicated that Peoples' representatives transferred his call to accounting, but that no one could explain how the DSIC was calculated and he was ultimately told, incorrectly, that the PUC calculates the DSIC.[13] Ms. Scanlon omitted those portions of Mr. Hoffman's testimony in her conclusion that Mr. Hoffman's bill did not contain any errors, but I think the full context is important because it provides a foundation for Mr. Hoffman's concerns about the WNA charge's complexity. If Peoples currently has difficulty answering questions about the DSIC surcharge – one that is relatively less complicated than the WNA – then it is legitimate for Mr. Hoffman and the public to be skeptical of the Company's ability to plainly, concisely, or clearly explain the WNA. Additionally, identifying that other utilities have WNAs in place and that Peoples will eventually develop educational materials does nothing to address Mr. Hoffman's concerns about how Peoples' WNA will be calculated on his bill. Finally, it does not appear that Mr. Hoffman misses the other side of the coin

[12] Peoples Statement No. 3-R, pp. 10-12.
[13] Peoples PIH-Ex NH 1.

by not acknowledging that the WNA will not recover costs during colder weather. On the contrary, Mr. Hoffman expressly acknowledged that Peoples is "offering a credit if the weather is colder" but he testified that it "seems doubtful that the WNA would be revenue neutral because a warmer month does not guarantee a colder month is inevitable."[14]

Q. Did Ms. Scanlon address OCA's criticism of Peoples' WNA proposal?

A. Yes. Throughout her rebuttal testimony, Ms. Scanlon responds to OCA's opposition to Peoples' WNA proposal. I note that OCA witnesses Mugrace, Johnson, and Alexander will also respond to Ms. Scanlon's various claims in OCA Statements 2SR, 4SR, and 5SR, respectively; however, I am confining my response to the Commission's alternative ratemaking policy factors that Ms. Scanlon addresses on pages 24 through 34 of her Rebuttal Testimony.

Q. Before you begin your response to Ms. Scanlon, have you already addressed the Commission's distribution rate considerations for evaluating the justness and reasonableness of alternative ratemaking proposals?

A. Yes. I previously addressed each of the factors in depth in my direct testimony in DE Exhibit 1, pp. 1-8. Because I have not changed my position on any of these factors, and for the purposes of brevity, I will not reiterate my analysis again here. Instead, I note that while I disagree with Ms. Scanlon's analysis in totality, I will address only the points that are not already included in Exhibit DE-1.

[14] Id. at 1.

Q. Do you dispute Ms. Scanlon's claim that revenue and cost causation are not misaligned in the WNA because the WNA does not alter the cost of service model?

A. Yes. The fact that the WNA does not alter Peoples' cost of service model is not determinative. Instead, in my opinion, what is determinative is that the WNA seeks to recover revenue for costs that Peoples is not incurring to provide service. Put differently, the WNA provides Peoples with revenue that is not at all tied to the cost of service, but which instead is tied to *not providing* service because the WNA charge is assessed when warmer weather results in less gas service being provided. In this sense, there is a clear disconnect between the WNA and cost-causation.

Q. Does Ms. Scanlon claim that the WNA mechanism does not disincentivize energy efficiency programs?

A. Yes. Ms. Scanlon argues that the WNA applies only to the distribution portion of a customer's bill and claims that customers will still realize savings on the commodity portion of their bill.[15]

Q. Does the fact that the WNA will only apply to the distribution component of customers' bills mean that it will not disincentivize energy efficiency programs?

A. No. While Ms. Scanlon is technically correct, customers react to price signals and are unlikely to make the distinction that Ms. Scanlon relies upon here. Regardless of the characterization of the type of costs that the WNA recovers, the end result is still the same: the WNA would cause customers to have a higher bill when using less gas, sending the signal that using less gas does not always translate to a lower bill.

[15] Peoples Statement No. 3-R, p. 26.

Q. Have any of the claims that Ms. Scanlon raises in her response to your analysis of all distribution rate consideration factors included in Exhibit DE-1 cause you to change your position on any of the fourteen factors you analyzed?

A. No. I stand by my analysis that each factor weighs against the WNA, but in combination, all fourteen failed factors make it clear that Peoples has failed to establish that the WNA is a just and reasonable rate.

Q. Did Ms. Scanlon respond to your testimony regarding Peoples' rate case notices?

A. Yes. In my direct testimony, I expressed concerns regarding the fact that Peoples' rate notices were issued on a combined basis to customers of both the Peoples Natural Gas division (PNGD) and the Peoples Gas division (PGD) without advising the customer of which division provided their service. As I explained, the service division distinction was critically important here where the total bill for a PNGD residential customer using 80 Mcf per year was projected to increase from $73.16 to $88.79 per month or by 21.4%., but the total bill for a Peoples Gas Division residential customer using 80 Mcf per year was only projected to increase from $84.00 to $90.35 per month or by 7.6%. I also indicated that the public input hearing testimony yielded questions about the 80Mcf metric used to calculate the increases set forth on Peoples notices to customers.[16] Ms. Scanlon responded to my comments on the notices and the 80Mcf usage metric[17].

Q. How did Ms. Scanlon respond to the concerns you identified about Peoples notices?

A. Ms. Scanlon claims that Peoples' notice complied with the Commission's requirements and that she agreed with me that the consolidated notice will likely not be an issue in the future because Peoples' proposal in this case would unify division rates. Additionally, she

[16] OCA Statement 1, pp. 14-15.
[17] Peoples Statement No. 1, pp. 35-37.

claimed that the 80Mcf usage factor that Peoples' identified in its notices is based on an "average" customer's usage, but that Peoples would re-evaluate it for the next notice requirement.

Q. Did Ms. Scanlon's response assuage your concern about Peoples' notices?

A. Only in part. I do agree that if Peoples' request to merge division rates is approved as requested in this case, that the confusion about operating divisions should not occur in the future. However, if Peoples' request to merge division rates is not approved, I recommend that Peoples be required to provide customers with future notices that designate their service division. Additionally, I acknowledge Peoples' commitment to re-evaluate its Mcf usage for future noticing. Yet, I think it is important to recognize that Peoples had control over when and how the instant rate filing would be submitted. This is evident in that Peoples knew it would be required to submit a rate filing by the end of 2023. The filing consists of thousands of pages including fifteen pieces of supporting testimony, and there is no doubt that planning for and compiling the case was a major undertaking for the Company. Nevertheless, despite that careful planning, the notice Peoples provided to customers put the onus on them to figure out which rate increase would apply to them. I submit that Peoples could have used the lead time and customer-funded resources to design a notice that did not place that burden on customers. I recommend that the Commission consider Peoples' decision to issue such a notice in this case when it considers Peoples' request for an exemplary management performance award of 25 basis points.

Response to Peoples Witness Becker

Q. As part of your direct testimony, you summarized some of the testimony provided by Peoples' customers during the public input hearings held in this case. Did Peoples witness Becker respond to any of the information that you summarized?

A. Yes. On pages 9-10 of my direct testimony, I referenced the testimony of a customer who stated that his meter was installed in front of a window and that it posed a safety concern. Additionally, I referenced the testimony of another customer who indicated that he had been waiting for Peoples to test his meter for weeks, but that Company field technicians did not keep appointments to perform the testing. In response, Mr. Becker testified that the customer who testified that his meter posed a safety issue was incorrect because the meter placement did not obstruct an emergency fire exit. Additionally, Mr. Becker claimed that it reviewed the issues regarding the customer who was awaiting meter testing and that it did not identify records of any missed appointments. Mr. Becker also indicated that Peoples has been in contact with the customer and that it is waiting for him to submit paperwork so that the work he is awaiting can be performed[18].

Q. What is your response to the information that Mr. Becker provided regarding the customers' service concerns?

A. My response is that I appreciate Mr. Becker's update, although it is unclear whether the customers agree with his assessment of the issues they described. I appreciate that Peoples responded to these customers and believe that the customers' ability to bring these important concerns to in-person public input hearings is an important part of the rate case process. While I will defer to OCA witness Alexander on her recommendation for Peoples

[18] Peoples Statement No. 5-R, pp. 4-6

to evaluate an extension of its call center hours to make live customer service hours more accessible outside of traditional business hours[19], I believe that public policy goals are best served when Peoples' employees make time to hear and respond to customer concerns.

Conclusion

Q. Has any of the rebuttal testimony positions you addressed above caused you to alter your overall recommendation made in direct testimony?

A. No. I continue to recommend that the Commission adopt, in totality, the adjustments and recommendations of all OCA witnesses in this case. While I will not summarize all OCA recommendations, they include the following: that Peoples receive an increase in annual operating revenue of no more than $13,018,740 (which is $143,007,382 lower than Peoples' request), that Peoples' WNA proposal be rejected, and that Peoples' capital structure, overall rate of return, including its allowed return on equity, be set at the levels recommended by OCA witness Rothschild

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does.

I. PURPOSE OF SURREBUTTAL TESTIMONY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dante Mugrace. My business address is 22 Brooks Avenue, Gaithersburg, MD 20877.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS DOCKET?

A. Yes. I submitted Direct Testimony on March 22, 2024, which was marked as OCA Statement No. 2. My qualifications and experience are attached to my Direct Testimony.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my Surrebuttal Testimony is to address the Rebuttal Testimonies of Company witnesses Wachter, Scanlon, Becker, Saball, Hanechak, Folks, Snyder, and Spanos. I am also making certain adjustments to proposals in my testimony and a revised calculation of the Company's revenue requirement that incorporates the effects of my adjustments. To the extent that I do not respond to or address a particular issue or argument, I defer to my Direct Testimony on those issues. I also note that I incorporated the adjustments that the rebuttal witnesses addressed in their testimonies regarding several Rate Base and O&M Expense adjustments.

Q. HAS THE COMPANY UPDATED OR ADJUSTED THE COST OF SERVICE AS FILED?

A. As stated by Company witness Mr. Wachter, the Company identified three adjustments during the discovery process. Mr. Wachter stated that the Company is not proposing an increase greater than the amount filed. (Statement No. 2-R at 5). Mr. Wachter stated that to the extent the Commission disallows other expenses or reduces the Company's proposed rate of return, the Company requests that the full adjustment be adopted. These are an increase in labor expense of $538,590; an increase in PBOP expense of $476,452; and a reduction in Licenses and Permits expense of $18,697. (Statement No. 2-R at 5). The impact on these changes would have increased the overall claim increase in revenue by $996,345, excluding cash working capital. (Statement No. 2-R at 6).

Q. DO YOU HAVE ANY CORRECTIONS WITH RESPECT TO YOUR DIRECT TESTIMONY RECOMMENDATIONS ON THE OVERALL REVENUE REQUIREMENT?

A. Yes. In reviewing my direct testimony exhibits, I noted a miscalculation with respect to Rate Base (Exhibit DM-3), and specifically with the total deductions of $11,142,035 that related to deferred income taxes, customer advances and customer deposits. In my direct testimony, I inadvertently added these deductions rather than subtracting these deductions to calculate my total Rate Base balance. By correcting the error my adjusted Rate Base balance should have been $4,185,135,391. With my revised adjustments to correct the Rate Base balance, I have calculated a revised recommended revenue requirement increase of $5,912,391, instead of my as-filed revenue requirement increase of $7,701,077.

Q WHAT ARE YOU RECOMMENDING IN YOUR SURREBUTTAL TESTIMONY THAT INCORPORATE YOUR ADJUSTMENTS TO THE REVISED DIRECT REVENUE REQUIREMENT POSITION?

A. I am recommending the following. This includes and incorporates my adjustments to my revenue requirement that I have addressed above related to my direct testimony:

- My recommended Rate Base balance is $4,184,352,477, which is $30,772,687 lower than the Company's proposed Rate Base balance of $4,215,125,164. It is also $782,914 lower than my revised direct position.
- My overall Rate of Return is 6.20% based upon OCA witness Mr. Rothschild's recommendation which includes a common equity component of 8.02%.
- My recommended Operating Revenue at Present Rates is computed at $833,215,510, which is the same as the Company's Present Rate Revenue of $833,215,510
- My recommended Operation and Maintenance Expenses are $206,331,194, which is $20,679,612 lower than the Company's proposed Operation and Maintenance Expenses of $227,010,806.
- My recommended Income Taxes are ($89,541,785) which is ($30,246,393) lower than the Company's proposed Income Taxes of ($59,295,392).
- Overall, based upon each of these components, I recommend a revenue requirement increase of $13,018,740 which is $143,007,382 lower than the Company's proposed revenue requirement of $156,026,122. This recommendation includes my revised

recommendation on direct of $5,912,391, in addition to $7,106,349 in revenue requirement increases identified as permissible in my surrebuttal testimony, following the clarification presented by Peoples in rebuttal.

Q. DO YOUR SURREBUTTAL RECOMMENDATIONS INCLUDE ANY ADJUSTMENTS TO MR. WACHTER'S UPDATED COST OF SERVICE REFLECTING AN INCREASE OF $996,345?

No. My adjusted my revenue requirement increase does not include the updated claims that Mr. Wachter identified as adjustments to the expense components in the amount of $996,345. In my view, the Company should not be able to receive a greater increase in revenue requirement for specific expenses than the amount requested in the initial filing. However, to the extent that the Commission believes that the Company should be able to recover these additional costs, Mr. Wachter's cost of service update does not include costs which are prudent and reasonable. His updates should be ignored for the purposes of determining Peoples' overall revenue requirement increase, for the reasons provided below in the sections regarding labor and post-retirement benefits other than pension (PBOP) expense.

II. REVENUE REQUIREMENT ISSUES

A. Utility Plant in Service- Working Capital Components - Accumulated Depreciation - Deferred Income Taxes - Other Rate Base Components.

Q. WHAT DID MR. BECKER STATE REGARDING YOUR OMISSION OF INFLATION ADJUSTMENTS TO CAPITAL EXPENDITURES?

A. Company witness Mr. Becker claimed that actual costs of pipeline construction have increased over time. (Statement No. 5-R at 7). He opined that the pattern is well established, and the trend is clearly increasing. Mr. Becker provided information on the Employment Cost Index (ECI) as of December 2023, which he claims reflect that post-COVID inflation is "absolutely real and spiked to 9.1% in June 2022." He opined that to omit inflation in its entirety on future investments or expenses seems to ignore the real world and what Pennsylvanians and a company doing business in Pennsylvania know to be true. (Statement No. 5-R at 8). Mr. Becker stated that rather than ignoring inflation, the debate should be about the reasonableness of the inflation factor. He further stated that

the inflation factors used by Peoples fall in line with the ranges of both the ECI and the known contractor increases and thus should be considered reasonable. Mr. Becker stated that if these projected costs do not increase as projected, the Company will use those funds for additional projects. (Statement No. 5-R at 8).

Q. WHY ARE YOU RECOMMENDING REMOVAL OF THESE INFLATION ADJUSTMENTS TO CALCULATE AND ADJUST THE COMPANY'S CAPITAL EXPENDITURES?

A. As I stated in more detail in my direct testimony, I am continuing to recommend disallowance of inflation adjustments because these inflation related adjustments are not known and measurable or prudent in nature in setting rates for utility service, particularly when one factors in that Peoples is projecting rates one-full year into the future when it uses a Fully Projected Future Test Year. These types of inflation increases do not provide a good index or pattern of increased costs over time. Inflation type adjustments do not address or provide any particular increase or individual expense category but rather they are simply forecasts and predictions of future costs estimates which may or may not be realized. Goods and services fluctuate over time, but not proportionately. While such types of inflation factors or adjustments are useful to develop economic data, they should not be used to develop and set rates for services under a ratemaking methodology. Rates, once set, are collected until they change in another rate case and, thus, have to be set reasonably, prudently, and foreseeably.

Q. WHAT ELSE DO YOU WANT TO ADD?

A. Inflation related adjustments, whether they are in the range of reasonableness or used to set utility rates for services prospectively, are not the type of expenditure adjustments that should be used in the development of rates for utility service. They cannot be predicted with certainty or accuracy. The Company has not provided any additional information or evidence showing that these cost increases will be realized or present in its FPFTY period. Inflation related adjustments are characterized as overall blanket increases applied to economic data related to consumer goods and services which fluctuate over time. When setting rates for services, if inflation adjustments were utilized, and if those increased costs did not materialize when rates are set by the Commission, the Company will have

recovered costs greater than its costs of service and over-recovered costs which ratepayers will not be able to get back.

Q. IF THE COMMISSION AUTHORIZES THE COMPANY TO RECOVER COSTS IN EXCESS OF THE COST OF SERVICE, WILL RATEPAYERS RECOVER THE AMOUNT THEY WERE OVER-CHARGED?

A. It would be difficult for the Commission to claw back the over-recovery once final rates are set. While Mr. Becker noted that if the projected costs of planned projects do not increase as projected, the Company will use those funds available for additional projects, he did not identify whether those additional projects will occur during the FPFTY period or beyond the FPFTY period. If beyond the FPFTY period, then it is beyond the test year time period, and the scope that the Commission can use to set rates for service. Moreover, basic ratemaking principles require that costs should be prudently incurred and documented and known and measurable. Inflationary costs cannot be precisely determined because there is no way to pinpoint a particular cost and determine whether that particular cost has been affected by the use of an inflation factor. Costs must be valid and reliable with appropriate data to measure the expenditures adjustments.

Q. HOW DID COMPANY WITNESS MS. FOLKS RESPOND TO YOUR ADJUSTMENTS TO PEOPLES' PLANT IN SERVICE?

A. Ms. Folks stated that she did not agree with my recommendation to remove inflation adjustments and that removing inflation adjustments ignores the reality of costs increasing over time. (Statement No. 11-R at 2).

Q. WHAT IS YOUR RESPONSE TO MS. FOLKS?

A. While she may characterize automatic cost increases as "real world reality" it is important to note that Peoples is a regulated public utility that carries a burden of proving that it will incur the costs claimed in this case. Simply claiming that costs increases are "reality" is not enough to warrant charging ratepayers millions more in rates as a course of business. More is required. Moreover, even in the competitive environment, companies do not always simply pass cost increases onto consumers, they have to weigh whether doing so will lead to consumers seeking alternatives. As a provider of monopoly utility service, Peoples' customers cannot seek alternatives and, therefore, it is incumbent upon the

Commission to impose the kind of restraint that would be exercised by competition. Thus, I do not believe this issue is as straightforward as Ms. Folks suggests.

Q. HOW DID MR. BECKER RESPOND TO YOUR ADJUSTMENT THAT DISALLOWS THE COST OF REPLACING THE BARE STEEL PIPE IN THE ROBINSON INCIDENT?

A. Mr. Becker stated that he did not agree with my adjustment, as he claimed that the steel pipelines in Robinson were not damaged as a result of the incident. (Statement No. 5-R at 8-9). Mr. Becker stated that pipeline did not rupture and that they "could have safely remained in service despite the incident." Despite Mr. Becker's claim that the pipelines were not damaged and that they were safe, he claims that Peoples replaced them at the direction of the Commission's Gas Safety Division. (Statement No. 5-R at 9).

Q. WHAT IS YOUR RESPONSE?

A. Mr. Becker provided no further reasoning for requiring these costs to remain in rate base, but his claim that the pipeline could have safely remained in the ground adds an additional basis for my denial of the replacement costs. (OCA-XXVII-002, which is attached as Exhibit DM-SR-38). However, even though replacement of the bare steel pipe was required by the Commission, but-for Peoples' underlying over pressurization event, there is no evidence that ratepayers would be paying to replace the impacted pipeline in the FPFTY, and Peoples confirmed that, but-for the Robinson incident, the pipeline replacement would not have been accelerated (OCA-XXVII-002). Mr. Becker stated that this incident was not covered by insurance (OCA-XXI-001) nor through shareholder funding. Importantly, Peoples provided correspondence that demonstrated that the Commission's Pipeline Safety Division directed it to accelerate replacement of assets that were affected by the overpressure incident (OCA-XXVII-001 and attachment, included in Exhibit DM-SR-38). Therefore, Peoples' replacement appears to have been made with the determination that the pipeline was impacted by the over pressurization incident As I stated in my direct testimony, ratepayers should not be responsible to pay for costs to replace plant, whether the plant is replaced through an accelerated process or through other means, if the Company would have replaced the plant at a future time beyond the FPFTY. The Company decided to replace this pipe through an accelerated process and stated that it would have been

replaced in the future under the Company's LTIIP, but this is wholly at odds with its claim that the pipeline could have safely remained in the ground, depriving ratepayers of the use of it earlier than necessary. Mr. Becker's claim that the Robinson bare steel pipes could have safely remained in service and not been replaced shows that the Company did not contemplate replacing the plant by the end of the FPFTY. (Statement 4-R at 9). Peoples has not overcome the fact that, but-for the Robinson incident, the pipeline replacement costs would not be part of this case.

Q. WHAT DID MS. SNYDER STATE REGARDING YOUR CASH WORKING CAPITAL (CWC) BALANCE?

A. Ms. Snyder did not agree with my adjustments to the Company's CWC. (Statement No. 12-R at 3). Ms. Snyder stated that I made different expense adjustments that impact the CWC claim and which the Company does not accept, so the associated cash working capital adjustments should not be accepted. Ms. Snyder stated that my cash working capital is not correct because I did not include or mention adjustments to short-term debt and the total adjustments should only include long-term debt. (Statement No. 12-R at 4).

Q. WHAT IS YOUR RESPONSE?

A. My adjustments reflect the flow-through of my recommended adjustments to various rate base and operating expense adjustments using the Company's methodology and format. With respect to short-term debt as an inclusion to determine interest expense, I did not include this to compute my recommended interest expense. (Exhibit DM-SR-3 and 7). My adjustments are solely related to the Long-Term Debt interest expense as shown on my Exhibit DM-SR-2.

Q. DID MS. SNYDER MAKE ANY ADJUSTMENTS TO THE COMPANY'S CWC?

A. Yes. She adjusted the CWC by a decrease of $195,165 and arrived at an updated CWC balance of $35,661,101. (Statement No. 12-R at 4). The Company's as filed CWC was $36,256,917.

Q. WHAT ADJUSTMENTS DO YOU HAVE RELATED TO THE COMPANY'S CWC?

A. With my updated revenue requirement proposal, my recommended CWC is $35,117,204 as shown on my Exhibit DM-SR-3.

B. OPERATING INCOME

1. Operating Revenues

Q. HOW HAS THE COMPANY RESPONDED TO YOUR OPPOSITION TO THE COMPANY'S PROPOSED WEATHER NORMALIZATION ADJUSTMENT (WNA)?

A. Company witness Ms. Scanlon claimed that the issue of complexity of the programs that were raised by me and by other OCA witnesses, should not be viewed as a reason for rejection. (Statement No. 3-R at 9). Ms. Scanlon stated that there are other Pennsylvania natural gas distribution companies that have Commission approved WNAs in place, which supports the notion that, while the WNA contains multiple steps, customers are able to understand the nature of the mechanism. Ms. Scanlon stated that other mechanisms such as the universal service charge rider are included in the distribution charge rate and displayed on the customer's bill as the delivery item for presentation purposes. (Statement No. 3-R at 9). Ms. Scanlon stated that the Company is anticipating customer education and awareness of the WNA and will ensure training for customer service center representatives to be able to walk a customer through what the WNA is and how it is calculated. (Statement No. 3-R at 10). Ms. Scanlon stated that the Company is taking necessary steps towards alleviating customer concerns. (Statement No. 3-R at 10). Ms. Scanlon stated the Company anticipates that over a length of time the total weather-related cumulative impact is expected to be zero or near zero. (Statement No. 3-R at 10).

Q. WHAT IS YOUR RESPONSE TO MS. SCANLON'S CLAIMS THAT CUSTOMERS WILL UNDERSTAND THE WNA?

A. First, Mr. Scanlon's continued reliance on other utilities to support Peoples' WNA proposal is both telling and concerning. This case is about Peoples' WNA proposal and relying on the experience of other utilities to support it is insufficient, particularly here where there is no evidence that customers understand WNA proposals. The existence of other WNAs in

Pennsylvania also does not mean that the WNA is easy to calculate or understand for consumers, who should be able to determine how their bill is calculated or how it changes from month to month, especially for customers who have only ever received service from Peoples. Finally, I note that for customers to understand the WNA charge, they need to be able to identify the charge and basis for it. This will not be possible because under Peoples' proposal, the charge will not be listed as a separate line item on customers' bills. If customers cannot see their WNA charge, it is unclear how they are supposed to understand the charge.

Q. HOW DO YOU RESPOND TO MS. SCANLON'S CLAIMS THAT THE CUMULATIVE WNA IMPACT WILL BE ZERO?

A. This is a strange claim for them to make as it undercuts their need to impose the charge. If over time, the effect is zero then why charge it? If the answer is that they need revenue in the interim and it is only in the long term that the effect is zero, then this clearly demonstrates that they are shifting all risk of weather-related uncertainty and load to captive consumers – who are likely far less positioned to bear that risk – as opposed to retaining it themselves as a rate-regulated provider of monopoly service.

That said, I do not think that the Company can determine with certainty that total weather-related cumulated impact will be zero or near zero if the WNA is implemented. Climate change is real and will impact people in some way, shape, or form. The mere fact that the Company is using climate change to adjust its revenues during days when weather fluctuates in the opposite direction in the winter season will have the effect of placing additional burdens and all the risks on ratepayers for uncontrolled weather and weather patterns. Ratepayers should not be put in a position to pay for or absorb costs related to climate change while the Company bears little or minimal risks. Climate change affects not only customers but the Company as well, and the Company's WNA adjustments provide no guard rails to protect the customers while the Company is able to collect additional revenues when weather patterns become abnormal. I believe there are too many variables in implementing the WNA. In addition, the fact that other natural gas distribution companies have a WNA in place, does not support the fact that Peoples should also have one also. Ms. Scanlon raises the Philadelphia Gas Works WNA mechanism that has

experienced unusually large and unanticipated charges to customers but states that Peoples will not experience the same situation (Statement No. 3-R at 12-13). Ms. Scanlon provides no further information to justify the Company's position on its WNA, but for the use of different weather, different Heating Degree Days, and different delivery rate. I am still recommending that Peoples not implement a WNA in this proceeding. Other OCA witnesses provide additional reasons why the WNA should be rejected.

2. OPERATION AND MAINTENANCE EXPENSES

a. Labor/Vacancy Adjustments

Q. WHAT DID COMPANY WITNESS MR. WACHTER STATE WITH RESPECT TO YOUR ADJUSTMENTS TO LABOR AND LABOR RELATED EXPENSES?

A. Mr. Wachter stated that he did not agree with my labor vacancy adjustment of 2.7% (Statement No. 2-R at 16). Mr. Wachter stated that the Company's proposed vacancy level represents more normalized and expected vacancy levels going forward. Mr. Wachter stated that the Company has seen increased levels of vacancy but is expected that levels will revert to pre-COVID vacancies. Mr. Wachter stated that there is an expectation that the recent spike in turnover as part of the post-COVID "Great Resignation" was an anomaly and does not represent the future. (Statement No. 2-R at 17).

Q. WHAT IS YOUR RESPONSE REGARDING LABOR ADJUSTMENT TO VACANCIES?

A. In all organizations, there is always a level of vacancies that will not be filled at any given point of time. This is due to employees retiring, leaving the company, getting fired, being laid off, etc. My 2.7% vacancy ratio does not incorporate COVID impacts that have occurred in 2020 and, in part, 2021. My vacancy rate ratio applies to Peoples' expected 2024 levels of full-time employment. (OCA-Set 7-20). In that response, 2% is related to terminations and 4% is related to retirements. Mr. Wachter claimed that 52 of the open positions as of August 31, 2023 have been filled, but he has not identified whether any employees have left the Company or updated whether this is net of termination or retirements. The Company has not identified any dates as to when the remaining additional

vacancies will be filled, or whether they would be filled at all. Allowing the Company to recover additional expenses for all of its proposed vacancies will cause the Company to over-earn from day one once new rates become effective.

Q. WHAT DID MR. WACHTER STATE REGARDING THE COMPANY'S UPDATED VACANCIES?

A. Mr. Wachter stated that if my vacancy ratio adjustment is accepted the amount should be reduced by $247,205 as I did not remove the Company's as-filed vacancy adjustment prior to my calculation. (Statement No. 2-R at 18).

Q. WHAT IS YOUR RESPONSE?

A. I am unsure how the Company calculated the $247,205 adjustment, as Mr. Wachter did not provide a calculation as to how he arrived at that adjustment. Given this, I am still recommending my vacancy rate ratio of 2.7% with an adjustment of ($1,742,925) as shown on my Exhibit DM-SR-11.

Q. DO YOU AGREE WITH MR. WACHTER THAT, IN THE EVENT OF A RATE SCALE BACK, THE COMPANY SHOULD RECEIVE AN ADDITIONAL $538,590 IN LABOR EXPENSE?

A. No. As I stated above, the Commission should not authorize a utility to be able to recover expenses in excess of the amount requested in an initial filing. Further, Mr. Wachter did not substantiate his claim that the Company should receive an additional $538,590 for its labor expenses. The discovery response cited by Mr. Wachter indicated that the Company underestimated its labor expense by $411,976 (not $538,590) because "the original filing included an estimated average salary whereas the revised schedule was prepared by position." (APW-R-1 at 39). The Company elected not to submit its filing using a more accurate schedule of the O&M cost of labor; Peoples should not be able correct its use of a less accurate number during the course of litigation merely because it is higher than the amount requested in the initial filing. Peoples had access to identical information at the time of its filing and upon issuing its response to this discovery request and, if it wished to recover labor expense by position, then it should have done so, instead of recovering through an estimated average salary. In addition, Mr. Wachter did not describe how he

arrived upon the final adjustment of $538,590 when the discovery response upon which his update is based evidences an adjustment of $411,976.

Q. DOES MR. WACHTER'S UPDATE CHANGE YOUR RECOMMENDATION OF THE USE OF A VACANCY RATE RATIO?

A. No. I still recommend the usage of vacancy rate ratio. It is a more accurate method to determine the number of full-time employees the Company will retain during the test year periods than the method used by the Company either in its initial filing or updated recommendation.

b. 5-Year Average Annual Increases / Inflation Adjustments

Q. WHAT HAS MR. WACHTER STATED WITH RESPECT TO HOW THE COMPANY USED 5-YEAR AVERAGE ANNUAL INCREASES TO MAKE ADJUSTMENTS TO CERTAIN HTY EXPENSES?

A. Mr. Wachter stated that the Company used a five-year historical percentage experienced change for each expense type individually and applied it to the HTY balances to determine the amount of change in balance to expect. (Statement No. 2-R at 10). Mr. Wachter stated that using a five-year average increase methodology utilizes known and recently incurred activity for each specific expense amount. Mr. Wachter further stated that a standard inflation adjustment is often based upon broad inflation indicators or even one over-riding inflation metric applied to different expense categories, and an inflation adjustment is an approach that weighs various categories into one, such as CPI – the Consumer Price Index. (Statement No. 2-R at 10-11).

Q. WHAT DID MR. WACHTER STATE REGARDING YOUR DISALLOWANCE OF INFLATION?

A. Mr. Wachter stated that I am proposing to disallow any sort of percentage increase referred to as inflationary adjustments that are not actually known and measurable as they do not reflect the true cost of expenses. Mr. Wachter stated that he does not agree with my adjustments related to inflation. He stated that the Company's utilization of historic trends is sufficient evidence of the proposed increase, and it is unreasonable to believe that these costs are not going to increase over the 25-month projected period in this proceeding especially considering the wide-spread inflation being experienced across the world. Mr.

Wachter stated that by not allowing a reasonable methodology to project increases, such as Company-experienced increases by specific categories, I am effectively reverting to utilization of historic test year balances which is contrary to the methodology widely accepted in Pennsylvania base rate cases. (Statement No. 2-R at 13).

Q. WHAT IS YOUR RESPONSE?

A. Costs change over time, but not proportionately or evenly across the board. While historical trends are a good indicator of past costs, applying this method to set expenses to be recovered prospectively may not be representative of what the Company is expected to incur. The Company cannot predict with certainty or assurance what level of inflation will occur throughout 2024 and throughout the FPFTY 2025 period. Mr. Wachter's claim that wide-spread inflation is being experienced across the world is an inappropriate characterization of costs adjustments when setting rates for service in the United States, or, specifically, in Pennsylvania. That cost increases are being experienced in other parts of the county or the world is not a suitable argument to claim in this proceeding and in the Commonwealth of Pennsylvania. The Company has not provided any further information except for the utilization of five-year averages of cost adjustments. While the Company has characterized the five-year average as actual costs incurred between 2017-2021, this period covers the COVID-19 pandemic in which costs fluctuated greatly, abnormally and extraordinarily. Costs began to stabilize in 2022. Basic ratemaking principles require costs to be known and measurable and not simply determined by applying any sort of index to calculate future costs. While cost increases are likely over time, simply generally claiming that costs are anticipated to increase by X% is insufficient to substantiate the claimed increases, and more should be required before ratepayers must pay for projected increased costs.

Q. WHAT DID MR. WACHTER CLAIM REGARDING HIS INFLATIONARY ADJUSTMENTS?

A. Mr. Wachter stated that the Company did apply a standard inflationary adjustment to its Injury and Damages and Advertising costs by the use of the CPI. Mr. Wachter stated that due to the fluctuating nature of these categories and types of expenses, it was more reasonable to use an index-based approach. (Statement No. 2-R at 14).

Q. WHAT DID MR. WACHTER STATE REGARDING YOUR DISALLOWANCE?

A. Mr. Wachter did not agree with my disallowance of these expenses stating that inflation is a real thing and is expected in all expense categories over time. He argued that utilizing an actual experienced inflation factor to project these costs is a reasonable approach. (Statement No. 2-R at 15). He stated that during 2022 and 2023 monthly inflation was an average of 5.49%. (Statement No. 2-R at 15).

Q. WHAT IS YOUR RESPONSE?

A. As the Company indicated on page 11 of Statement No. 2-R, these Inflation Adjustments represent $6.755 million of expenses that the Company proposes to pass onto ratepayers. These types of adjustments are not the sort of cost adjustments that should be used to set rates for service. I note that the Company identified that during 2022-2023 inflation was averaging at 5.49%, monthly. Costs of service should be set prospectively. Inflationary costs cannot be predicted with certainty because there is no way to pinpoint a particular cost and determine whether that particular cost has been affected by inflation, or if it has been affected to the same extent as other costs within the same account. I believe that inflation adjustments are not a known and measurable adjustment in computing rates for service, and do not provide a good index of cost increases, but rather are overall blanket-type adjustments that are applied to all goods and services, that may not directly relate to costs incurred by the Company. It is simply a forecast or prediction of cost adjustments which may or may not occur or be realized. While inflation adjustments are used to develop economic data, they should not be used for ratemaking purposes. The costs of goods and services fluctuate, the costs increase and decrease over time. The Company has not provided any evidence that all of its costs that it applied an inflation factor to have actually increased. The Company has not provided any proof from its vendors, third party suppliers, or updated services agreements that specifically address annual increases or annual adjustments to the products and services supplied to the Company. Basic ratemaking principles require that, in order for costs to be included in the revenue requirement, these costs must be just and reasonable, prudently incurred, and known and measurable. The Company has the opportunity to recover all of its costs in rates, but is not guaranteed to do so. My recommendation is the same as under my Direct Testimony. All

Inflation Adjustments should be removed from the Company's revenue requirement equation.

c. Short-Term Incentive Program (STIP)

Q. WHAT DID MR. WACHTER STATE REGARDING YOUR ADJUSTMENT TO THE COMPANY'S STIP?

A. Mr. Wachter stated that I did not provide any support for my position regarding the disallowance of the Company STIP in the amount of $2,562,451 related to financial performance and also included in other O&M expenses of $885,507 (Statement No. 2-R at 19).

Q. WHAT WAS MR. WACHTER'S EXPLANATION ON WHY HE DISAGREED WITH YOUR ADJUSTMENTS TO INCENTIVE COMPENSATION?

A. Mr. Wachter stated that my proposal should be rejected for three reasons: 1) the overall level of incentive compensation claimed is part of a fair, market-based level of total compensation; 2) there are no regulations that prohibit utilities from recovery of incentive compensation that is tied to financial metrics and: 3) financial metrics provide customers a direct benefit by incentivizing employees to be good financial stewards of company and ultimately customer funds. (Statement No. 2-R at 19-20). Mr. Wachter's argument is that Peoples must offer benefits comparable to other companies in order to retain talent by offering market-based compensation and incentive programs, and eliminating or reducing these programs would have a significant impact on the Company's ability to attract and retain competent employees. Mr. Wachter stated that he is not aware of any regulations that prohibit utilities from recovery of incentive compensation tied to financial metrics. Mr. Wachter addressed a Commission Order that rejected the argument that was made to disallow recovery of certain employee compensation costs because they contained certain financial metrics beyond metrics related to duties directly related to the provision of service, and that the fact the program included a financial metric does not disqualify it from allowance as an expense for inclusion in the rate base. (Statement No. 2-R at 22). Mr. Wachter stated that financial metrics incentivize employees to be good financial stewards of the company and, ultimately, customer resources, thus they provide customers a direct benefit. He argues that financial incentives drive employees to be efficient with the costs

they incur while still achieving the mission to make customers' lives better. Mr. Wachter claims such savings delay the need for future rate cases and this compensation is also tied to and aimed at improving operational effectiveness. (Statement No. 2-R at 22).

Q. WHAT IS YOUR RESPONSE?

A. The Company has the right and the opportunity to provide its employees with market-based and comparable compensation as other companies offer. While the Company assumes that such compensation may be at a fair and reasonable level to include in rates, there should be no assumption that all of these costs should be recovered. The Company has the opportunity to recover these costs for ratemaking purposes only if they are prudent and reasonable and to the benefit of ratepayers. It is not the responsibility of ratepayers to be required to recover the costs, as it is clearly the responsibility of the Company to share in the burden of absorbing these costs. The Company should not have unfettered access to ratepayers' money when it does not benefit ratepayers. I am also not arguing for eliminating these incentive programs, but rather the costs related to financial metrics and performance should be the risk that the Company bears. While I understand the importance of providing incentive compensation to employees, I do not believe that certain incentive compensation should be recoverable from ratepayers, when the incentive compensation does not provide any specific benefits in the form of customer services, satisfaction, safety and reliability to ratepayers. I believe that certain types of incentive compensation should only be recovered from ratepayers if it provides such benefits as described above. I do not believe that benefits related to the Company's financial performance, such as **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** should be recovered from ratepayers, as these types of performance incentives provide no benefit to ratepayers, but rather provide benefits to shareholders. In my opinion, part of the Company's argument is that, in order to provide safe and reliable service to its customers, it has to incent employees. This appears to be an all-or-nothing approach to compensation in that, without appropriate incentive compensation, employees

[1] The source for this information is Confidential Volume 12, Ex. 19, RR-27, Attachment B, p. 8 of 12.

would not be able to perform their duties or be good financial stewards. I note that the Company's incentive compensation related to financial performance is comprised of **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** of the total compensation requested in this proceeding.

Q. WHAT OTHER OPPOSITION DID MR. WACHTER RAISE REGARDING YOUR DISALLOWANCE TO CERTAIN OF THE COMPANY'S STIP?

A. Mr. Wachter did not agree with my disallowance of incentive compensation related to Diversity, Equity and Inclusion (DEI) of $512,615. (Statement No. 2-R at 23). He stated that my arguments are contradictory in that these types of compensation do not provide ratepayer benefits and that if Peoples believe these incentive costs do provide customer benefits then Peoples should be burdened with providing the dollars and not the ratepayers. (Statement No. 2-R at 23). Mr. Wachter stated that he was aware of comments made by the OCA on the Commission's Diversity at major jurisdictional utilities Policy Statement and that he was not aware that an argument was made that any costs associated with the amended policy would not be recoverable. (Statement No. 2-R at 23-24 and Exhibit No. APW-R-6).

Q. WHAT IS YOUR RESPONSE?

A. The Company has provided no evidence to support this initiative or whether the DEI actually produced benefits it was originally proposed to do because no DEI goals and evaluating metrics are established to demonstrate ratepayer value. While Mr. Wachter is correct that the OCA submitted a comments recognizing the value of workplace diversity, those comments do not somehow translate into a basis for approving claimed DEI incentive costs that Peoples has not supported. This is particularly true where there are no positive ratepayer benefits that have been demonstrated to accrue for payment of these incentives. While the Company touts the benefits of DEI, as shown on Company Exhibit APW-R-5, it has not provided or proven that these benefits were present and have actually resulted in superior customer experiences. I did not see any information included in the Company's filing that reflects DEI initiatives and the benefits accrued to ratepayers. (Company Exhibit No. 19, RR-27). While DEI initiatives may benefit the Company and its customers, Peoples still bears the burden of demonstrating that this is true in the context of their

particular programs and offerings. My rejection of these expenses is specific to this case where Peoples has not demonstrated those benefits, it is not because of the nature of the expenses.

Q. DID MR. WACHTER PROVIDE ADDITIONAL SUPPORT FOR THE COMPANY'S CLAIM THAT DEI INCENTIVE COMPENSATION DIRECTLY BENEFITS RATEPAYERS COMPARED TO THE COMPANY'S INITIAL FILING?

A. No. Mr. Wachter provided no indication that the Company's DEI incentive compensation is tied specifically to providing ratepayers with improved quality of service, customer service, safety, or reliability. **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** (Company Exhibit No. 19, RR-27). Therefore, Mr. Wachter's claim that DEI incentives provide benefits to ratepayers, specifically and based on the facts of this case, instead of the Company, generally, is not supported by his rebuttal testimony, attached exhibits, or the Company's initial filing. My recommendation is to disallow these costs from the Company's incentive compensation.

Q. HAS MR. WACHTER'S EXPLANATION CHANGED YOUR MIND WITH RESPECT TO THE COMPANY STIP CLAIM?

A. No. As I stated previously above, ratepayers should not be burdened by costs that do not specifically benefit them. Just as Mr. Wachter stated there are no regulations that prohibit a utility from recovering incentive compensation tied to financial performance, there are no specific regulations that allow or require recovery. Costs are and should be based upon prudent use of ratepayer money, as well as reasonable and appropriate uses. Mr. Wachter's statement that eliminating or reducing these programs would have a significant impact on the Company's ability to attract and retain competent employees is without merit, as the

Company's shareholders would absorb the difference between what the Company can recover from ratepayers. The Commission is not required to allow the Company to recover all of its proposed expenses in rates, but rather expenses that are reasonable and prudent in nature.

d. Corporate Insurance

Q. WHAT DID COMPANY WITNESS MR. WACHTER STATE REGARDING YOUR ADJUSTMENT TO CORPORATE INSURANCE?

A. Mr. Wachter disagrees with my removal of the Company's adjustments related to Corporate Insurance which adjusted the expense by 13.10% in the FTY and in the FPFTY periods. He stated that the insurance expense increase represents the average total premium increase experienced from the 2023 invoices as compared to the 2022 premiums and the premium increase experienced from the 2022 invoice as compared to the 2021 premiums. (Statement No. 2-R at 26). Mr. Wachter stated that the Company further affirmed the reasonableness of this increase by its third-party insurance brokers. (Statement No. 2-R at 26).

Q. WHAT IS YOUR RESPONSE?

A. My recommendation has not changed from my Direct Testimony. The Company has not provided any updated evidence or documentation in support of its proposed 12.91% increase, nor does it appear that it received any updates from its insurance provider that costs are expected to increase. The Company is utilizing its past cost increases to justify future costs increases with no concrete information received from a third-party insurance broker to determine any increases, but for industry data forecasts which state that these "forecasts beyond this horizon is scarce." (Statement No. 2-R at 26 line 7). The Company has provided no evidence to support this adjustment.

e. Employee Expenses

Q. WHAT HAS COMPANY WITNESS MR. WACHTER STATED WITH REGARD TO YOUR ADJUSTMENT TO EMPLOYEE EXPENSES?

A. Mr. Wachter opposes the removal of $221,500 for Employee Service and Safety awards, and the removal of $32,937 for Employee events. Mr. Wachter stated that these awards

are an important component of the Company's recognition programs and as part of the workplace culture survey completed in mid-2018, the results revealed that employees felt the Company could improve both recognition and reward program objectives and frequency. (Statement No. 2-R at 28). The Company approved the reinstatement of service awards to reward employees' on-going commitment of their careers to Peoples. This was intended to encourage a more frequent and broader recognition of the behaviors and achievements that reflect excellent performance and contributions to Peoples' values, mission and vision. (Statement No. 2-R at 28).

Q. WHAT IS YOUR RESPONSE?

A. If the Company believes that these costs incentivize employees to perform their duties and provide a comradery among the employees, then the Company's shareholders should pay for these awards. These costs reflect achievements for employees' ongoing commitment to their careers at the Company and are essentially anniversary awards. While I commend the Company recognizing employees for staying at the Company, recognizing their performance and contributions to the Company to achieve Peoples' values, mission and vision, I do not believe that ratepayers should be paying for costs based upon these criteria or how long an employee is employed at the Company. Employees are already receiving incentive compensation, which I am recommending an allowance for in rates, related to customer service, performance and other customer related issues. To ask for ratepayers to pay for other types of employee or service awards that reflect longevity is not reasonable and should not be allowed for recovery.

Q. WHAT DID MR. WACHTER STATE ABOUT THE OTHER DISALLOWED EXPENSES YOU RECOMMENDED IN YOUR DIRECT TESTIMONY?

A. Mr. Wachter opposes the removal of $32,937 related to events, as he argues that the Company has demonstrated that these programs are prudent costs that reflect reasonable and important costs aimed at retaining and attracting employees. (Statement No. 2-R at 29). These events reflect employee gatherings (not related to utility regulation or operations) such as the Lernerville Raceway event, Special Olympics polar plunge event, team lunches and other similar costs. (Statement No. 2-R at 30).

Q. WHAT IS YOUR RESPONSE?

A. Ratepayers should not be paying for costs, through their utility bills, to allow employees to partake in this type of entertainment. The Company is in the regulated business of providing gas service to customers, at reasonable rates, in a safe and proper manner. Employees are hired by the Company to perform their duties and responsibilities in a proper manner, and in turn, receive compensation, which includes non-salary benefits, such as admission to events outside of work hours. The Company should not ask for costs and expenses to be recovered from ratepayers, over and above the employee's compensation not related to their duties and performance, particularly where the costs are so far outside of the spectrum of utility service that they extend to employees attending events at a raceway. These costs do not provide safe, proper and reliable service to customers, and the Company has not specifically identified how attending sporting events, tailgating and going to entertainment venues benefits customers. These are not the sort of expenses a public utility under the purview of the Commission should include in the day to day costs of operating a natural gas company.

f. Travel and Entertainment Expenses

Q. WHAT DID MR. WACHTER STATE REGARDING YOUR ADJUSTMENT TO TRAVEL AND ENTERTAINMENT EXPENSES?

A. Mr. Wachter has an issue with my removal of $829,093 of travel and entertainment expense (Statement No. 2-R at 31). He stated that these expenses benefit customers and represent valid travel costs, employee events, sports sponsorships, and other such as meals, overtime, business related and working meals. (Statement No. 2-R at 32).

Q. WHAT IS YOUR RESPONSE?

A. In reviewing the further breakdown of the Company's travel and entertainment expenses, shown on Statement No. 2-R, at 32, I note that these costs are mainly for attending employee events, sporting events and other non-related utility operations expenses. Such costs are clearly beyond the scope of reasonableness for inclusion in the Company's revenue requirement, as ratepayers will see no direct benefit from Peoples' employees attending sporting events, tailgating, or leadership training events. In response to OCA-

Set 8-6, which refers to I&E RE-028, I did not remove the costs related to Travel Expenses of $158,284. I continue to argue against allowing ratepayers to pay for these travel and entertainment expenses when the detail on such travel is still unidentified or lack of description for such costs.

g. Company Memberships

Q. WHAT HAS MR. WACHTER STATED WITH REGARD TO YOUR ADJUSTMENTS TO COMPANY MEMBERSHIPS?

A. Mr. Wachter stated that my adjustments to the Company's Memberships costs are not merely social organizations. Mr. Wachter stated that these costs clearly provide benefits to customers. (Statement No. 2-R at 35). He provides no further argument for inclusion of these costs but for an explanation and identification of certain organizations.

Q. WHAT IS YOUR RESPONSE?

A. My argument as stated in my Direct Testimony has not changed. These costs do not comport to costs associated with Company Memberships, but rather to organizations in the form of membership fees, such as Chamber of Commerce dues, convention and vacation visitors' bureaus and lobbying related expenses, that make the Company a good corporate citizen. Organizations which provide economic development to areas where the Company services and policy analysis on regulatory issues provide no demonstrable benefit to ratepayers. The notion that "a strong economy in the state provides a clear benefit to customers" is too far removed from utility service to justify inclusion in the revenue requirement, as there is no direct connection to providing customers with adequate service, customer service, safety, or reliability. (Statement No. 2-R at 34 lines 4-5). In 66 Pa. C.S. Section 1316.1, regarding the recovery of club dues, it states that "no public utility may charge to its customers as a permissible operating expense for ratemaking purposes membership fees, dues or charges to fraternal, social or sports clubs or organizations." As such, ratepayers cannot be charged for costs associated with these types of expenses.

h. Advertising

Q. WHAT HAS MR. WACHTER STATED WITH REGARD TO YOUR PROPOSED ADVERTISING EXPENSE ADJUSTMENT?

A. While Mr. Wachter did not specifically address my adjustments to the Company's Advertising expenses, he did address my previous disallowance of my inflation adjustments.

Q. WHAT IS YOUR RESPONSE?

A. Again, these types of adjustments are not the sort of cost adjustments that should be used to set rates for service. Costs of service should be set prospectively. Inflationary costs cannot be predicted with certainty because there is no way to pinpoint a particular cost and determine whether that particular cost has been affected by inflation. I believe that inflation adjustments are not a known and measurable adjustment in computing rates for service, and do not provide a good index of cost increases, but rather are overall blanket-type adjustments that are applied to all goods and services, that may not directly relate to costs incurred by the Company. The Company has not provided any evidence that all of its costs that it applied an inflation factor to have actually increased. My recommendation is the same as under my Direct Testimony. All Inflation Adjustments should be removed from the Company's revenue requirement equation. Peoples can always seek additional rate relief if inflation-based increases materialize; however, ratepayers cannot do so. Absent additional support demonstrating that the increases that Peoples projects will materialize, ratepayers may overpay for essential utility service without recourse.

i. Fleet Maintenance and Fuel, License and Permits, Injury and Damages, and Utilities and Fuels

Q. WHAT HAS MR. WACHTER STATED IN RESPONSE TO YOUR ADJUSTMENT REGARDING FLEET MAINTENANCE AND FUEL AND OTHER RELATED COSTS THAT ARE IMPACTED BY INFLATION?

A. As stated previously, Mr. Wachter opposes my adjustment to the Company's inflation related adjustments in the FTY and in the FPFTY periods.

Q. WHAT IS YOUR RESPONSE?

A. As previously stated above, I am recommending that all inflation adjustments be removed from the Company's revenue requirement equation.

j. Materials and Supplies

Q. WHAT DID MR. WACHTER STATE WITH REGARD TO YOUR MATERIALS AND SUPPLIES ADJUSTMENT?

A. Mr. Wachter stated that my adjustment to remove 2.94% of inflation costs in the FTY and in the FPFTY periods totaling $646,373, and 5% of inflation related to expected increases resulting from increased costs per fault or $49,932. He did not agree with my adjustment to remove additional costs related to planned increase within the Damage Prevention and Leak Survey Departments. (Statement No. 2-R at 43).

Q. WHAT IS YOUR RESPONSE?

A. Mr. Wachter's expectation that the "average cost per fault, higher number of faults expected and the higher cost of anodes recently experienced" will increase or continue to increase is not sufficient to change my opinion, as it is still an inflationary adjustment. (Statement No. 2-R at 43). As previously stated above, I am recommending that all inflation adjustments be removed from the Company's revenue requirement equation.

k. Other O&M

Q. WHAT DID MR. WACHTER STATE REGARDING YOUR ADJUSTMENT TO THE COMPANY'S PROPOSED O&M EXPENSE?

A. Mr. Wachter stated that I made an adjustment related to incentive compensation of **$**885,507.

Q. WHAT IS YOUR RESPONSE?

A. As I stated previously in my argument related to incentive compensation, I am recommending disallowance of these costs that relate to **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** While Mr. Wachter addressed my adjustments in other O&M expense

of $885,507, I did not see Mr. Wachter's Other O&M section in Statement No. 2-R (page 19), that discusses this adjustment.

l. Payment Process Fee

Q. WHAT DID MR. WACHTER CLAIM REGARDING YOUR ADJUSTMENTS TO THE COMPANY'S PROPOSED PAYMENT PROCESSING FEES?

A. Mr. Wachter alleged that I was comfortable with the recovery of these costs including the recovery of such costs related to the Peoples Gas Division customers but did not recommend full recovery of the Company's proposal. (Statement No 2-R at 53).

Q. WHAT IS YOUR RESPONSE?

A. As I previously testified to in my direct testimony, I believe these adjustments are too speculative and uncertain to be included in the Company's revenue requirement. While I understand that the Payment Processing Fee initiative will improve customer experience and customer satisfaction, the increase to be expected prospectively is not 100% certain. While some households may take advantage of this payment method, there is no additional information provided by the Company to show the full proposed increase to be recovered through the FPFTY period. While it is reasonable to predict an increase in these costs, there is no evidence to support the full increase requested. I am continuing to recommend 50% of the Company's proposed Payment Processing Fee adjustment, to provide latitude due to an anticipated increase in customer participation, though it was not substantiated sufficiently to justify allowing 100% of the requested increase.

m. Uncollectible Accounts Expense

Q. WHAT DID MR. WACHTER STATE REGARDING YOUR UNCOLLECTIBLE ACCOUNTS EXPENSE ADJUSTMENT?

A. Mr. Wachter stated that, although I accepted the Company's methodology to calculate the uncollectible accounts expenses, my overall adjustment should be rejected as the ultimate recovery of uncollectible accounts expense should be calculated based upon the rate increase approved in this proceeding. (Statement No. 2-R at 55-56).

Q. WHAT IS YOUR RESPONSE?

A. My recommended uncollectible accounts expenses reflects the flowthrough of adjustments that relate to my overall recommended revenue requirement. Mr. Wachter believes that the Commission should approve the full revenue requirement proposal and therefore rejects my recommended uncollectible accounts expenses based upon my recommended revenue requirement as they are unreasonable. The Company cannot have it both ways. Whatever the Commission determines to be the revenue requirement in this proceeding, the uncollectible accounts expense balance should reflect that revenue requirement and not the full proposed revenue requirement of $155.095 million.

n. Rate Case Expenses

Q. WHAT HAS COMPANY WITNESS WACHTER STATED WITH REGARD TO YOUR ADJUSTMENT TO RATE CASE EXPENSES?

A. Mr. Wachter did not agree with my 3-year amortization period of rate case expenses. (Statement No. 2-R at 44). Mr. Wachter stated that Peoples had seven years elapse between the 2012 and 2019 periods as a result of the stay out period committed to in the Company's acquisition of the Equitable Gas Company, and as a result of the Company receiving accounting and regulatory approval with respect to the treatment of the tax repair election in Docket No. P-2020-3021191. (Statement No. 2-R at 44).

Q. WHAT IS THE REASON THE COMPANY HAS SELECTED A TWO-YEAR AMORTIZATION PERIOD?

A. Mr. Wachter stated that the Company projected two years to be the approximate length of time between the filing of this proceeding and the filing of the Company's next base rate proceeding given the Company's LTIIP commitment for infrastructure replacement. (Statement No. 2-R at 45).

Q. WHAT IS YOUR RESPONSE?

A. Instead of amortizing rate case expenses, the Commission normalizes these costs for ratemaking purposes. The use of a three-year normalizing period is based on the history of past rate filings, and typically acts a guide to rate case frequency. Since the Company filed its past rate cases in years 2008, 2010, 2012, 2019 and in 2023, a 15-year span, this

computes to an approximate 3.00 years, on average, between rate case filings. My recommended 3-year period is more than reasonable given the Company's history and frequency of rate case filings. The Company's projected 2-year period to file its next base rate case is just a projection, which can change. If Peoples begins to file rate cases every 2 years then the normalization period will eventually catch up with this projection, but until or unless that occurs, I continue to recommend a 3-year normalization period for rate case expenses at the levels indicated on my Exhibit DM-SR-32 which is based on their actual average time between rate cases.

o. Pension Expense

Q. WHAT HAS MR. WACHTER STATED REGARDING YOUR ADJUSTMENT TO PENSION EXPENSE?

A. Mr. Wachter did not agree with my 5-year average of pension contributions. He stated that the pension funding approach has changed since the acquisition of the Company by Essential Utilities on March 16, 2020, and thus recent history is a better indicator of future costs than past practice especially prior to the Essential acquisition. Mr. Wachter argued that the most recent two years are the best indicator. (Statement No. 2-R at 47-48).

Q. WHAT IS YOUR RESPONSE?

A. The fact that Peoples was acquired by Essential and that the funding approach has changed since the acquisitions does not change the fact that these costs fluctuate from year to year. The Commission can consider the Company's process of calculating the amount of pension costs to be included in a pension plan, but it does not have to accept the Company's argument that its funding approach has changed. The actual costs in prior years have not

changed, under management oversight of either Essential or its predecessor. A breakdown of the Company's 5-years of Pension funding is as follows (OCA Set 7-31):

- 2018 $735,802
- 2019 $2,290,746
- 2020 $560,190
- 2021 $5,343,118
- 2022 $5,408,063

The Company has proposed to adjustment its Pension Expense to $5,670,000 in the FPFPY period. Given these yearly fluctuations and variability, I am continuing to recommend a 5-year average of pension contributions.

p. PBOP Expense

Q. WHAT HAS MR. WACHTER STATED REGARDING YOUR ADJUSTMENT TO PBOP EXPENSE?

A. Mr. Wachter did agree with my 5-year average of PBOP expenses. He did not agree with my adjustment related to the PBOP with respect to the use of a vacancy credit adjustment. (Statement No. 2-R at 48).

Q. WHAT IS YOUR RESPONSE?

A. As discussed above under Pension Expense, these costs have fluctuated from year to year and the fact that Peoples was acquired by Essential does not change the level of costs paid in prior years. This adjustment provides the Company with an additional $148,251 of expenses.

Q. DO YOU AGREE WITH MR. WACHTER THAT, IN THE EVENT OF A RATE SCALE BACK, THE COMPANY SHOULD RECEIVE AN ADDITIONAL $476,452 IN PBOP EXPENSE?

A. No. As I stated above, the Commission should not authorize a utility to be able to recover expenses in excess of the amount requested in an initial filing. Further, Mr. Wachter did not substantiate his claim that the Company should receive an additional $476,452 for its labor expenses. Similarly to the labor expense update described above, the Company merely indicated in the discovery response forming the basis of the update that their use of

an estimate in the initial filing would lead to recovering a lesser amount than a more specific number identified in response to a discovery request. (APW-R-1 at 43). The Company's use of an estimate at the outset does not justify a later attempt during the course of litigation to receive a higher recovery at a more specific amount. Further, as with the labor expense, Mr. Wachter does not provide evidence or calculations to support the ultimate figure of $1,256,374, as neither the cited discovery response or the source of information cited by the discovery response, include the numbers which would support the Company's update, if they existed. (APW-R-1 at 43[2]).

Q. DOES MR. WACHTER'S UPDATE CHANGE YOUR RECOMMENDATION OF THE USE OF A VACANCY RATE RATIO?

A. No. I still recommend the usage of vacancy rate ratio to determine PBOP adjustments. It is a more accurate method to determine the number of full-time employees the Company will retain during the test year periods than the method used by the Company either in its initial filing or updated recommendation, and PBOP flows from the number of employees retained.

q. Outside Services – Contracted and IT

Q. WHAT HAS MR. WACHTER STATE RELATED TO MY ADJUSTMENTS TO OUTSIDE SERVICES CONTRACTED, IT AND A&G EXPENSES?

A. Mr. Wachter did not agree with my removal of the inflation factors in the FTY and in the FPFTY periods related to the Company's Outside Services – Contracted, IT and A&G. (Statement No. 2-R at 50, 51 and 53). With respect to Outside Services – Contracted, Mr. Wachter stated that the remainder of the adjustment of $1,728,595 is related to an incorrect proposal to normalize the expenses for Pig Runs, Pipeline Maintenance and Corrosion costs and Right of Ways costs. Mr. Wachter stated that these costs represent incremental costs in the claim (Statement No. 2-R at 50). With respect to Outside Services – IT, Mr. Wachter stated that the balance of $1,117,550 represents recurring annual costs that should be

[2] This page states that "The revised claim amount is $1,256,374 net of capitalization ($1,815,569 - $559,195) based upon the final response to Exhibit 19, RR-39 for additional details. However, Exhibit No. 19, RR-39 Page 2 of 2 does not evidence the calculation of the number $1,815,569 or the number $559,195.

included in the revenue requirement and should not be normalized. (Statement No. 2-R at 51-52).

Q. WHAT IS YOUR RESPONSE?

A. After reviewing and evaluating Mr. Wachter's argument on these costs, I am accepting the Company's annual adjustment related to Outside Services – Contracted with respect to the annual costs for the Bridge Work, Pressure Tests, Additional Pig Runs, Additional Pipeline Maintenance/Corrosion and Additional Right of Way Maintenance totaling $2,592,893. I am also accepting the Company's Outside Services – IT with respect to the annual costs related to various tax software maintenance, financial software maintenance, document storage, safety, Security Information and Event Management (SEIM) and HR Information System for employee management totaling $1,117,500. These are reflected on my Exhibit DM-SR-16 and 17.

3. DEPRECIATION AND AMORTIZATION EXPENSE

Q. WHAT DID COMPANY WITNESS SPANOS STATE WITH REGARD TO YOUR ADJUSTMENTS TO DEPRECIATION AND AMORTIZATION EXPENSE?

A. Mr. Spanos stated that my basis to adjust my depreciation expenses was the result of my proposal to eliminate the application of inflation factors to some of the capital additions proposed in the rate case. (Statement No. 14-R at 2). Mr. Spanos also stated that my recommended accumulated depreciation balance was the result of my changes in plant. (Statement No. 14-R at 2). Mr. Spanos stated that the specific amounts that is changed by account is required in order to properly adjust the development of the book reserve and forecasted expense at the account level because each account is individually developed based on the remaining life calculation. (Statement No. 14-R at 4). Mr. Spanos stated that I took a high level, functional rate which is not only inaccurate for the future test year but then is magnified for the fully forecasted future test year. Depreciation requires account by account development of plant balances and book reserve development each year. (Statement No. 14-R at 4).

Q. WHAT IS YOUR RESPONSE?

A. I disagree with Mr. Spanos' claim that I essentially oversimplified the entire development of the depreciation components. My understanding for ratemaking purposes is that it is appropriate and reasonable to use a composite rate of depreciation to calculate adjustments. My use of depreciation rates was based upon Mr. Spanos's Exhibit 5B and 5C. It is reasonable to use composite rates of depreciation to calculate adjustments to plant in service and for the related accumulated depreciation and accumulated deferred income taxes. For other adjustments related to Company witness Ms. Saball on the adjustments to book depreciation, I address this aspect under my Income Tax portion of my surrebuttal testimony below.

4. TAXES OTHER THAN INCOME

Q. WHAT HAS COMPANY WITNESS MR. HANECHAK CLAIMED REGARDING YOUR ADJUSTMENT TO TAXES OTHER THAN INCOME?

A. Mr. Hanechak stated that he did not agree with my adjustments to payroll taxes related to my vacancy rate ratio credit and incentive compensation adjustments. (Statement No. 10-R at 2). Mr. Hanechak stated that if my position was accepted then the adjustment of my vacancy credit and incentive compensation are accurate. (Statement No. 10-R at 2-3). Mr. Hanechak did not agree with my adjustment to Property Taxes, citing to the rebuttal testimony of Mr. Becker and Ms. Folks. (Statement No. 10-R at 3). Mr. Hanechak stated that I erred in my calculation of the property tax ratio of 0.00032 and that I should have used a property tax ratio of 0.0001906. (Statement No. 10-R at 4).

Q. WHAT IS YOUR RESPONSE?

A. Since I made adjustments to the Company's Labor Expense, I made corresponding adjustments to the Company's Payroll Taxes, which are flow-through adjustments to properly account for the reduction of Labor Expense. Mr. Hanechak did not address any inconsistencies in my methodology to compute Payroll Taxes; he just argued that my adjustments to the Company's Payrolls Taxes, as a result to my adjustments to Labor Expense, should be denied. With respect to the property tax adjustment, I am accepting Mr. Hanechak's property tax ratio of 0.0001906 which produces an adjustment of ($5,581) instead of ($9,370).

5. INCOME TAXES

Q. WHAT DID MS. SABALL STATE IN REGARD TO YOUR ADJUSTMENT TO THE COMPANY'S INCOME TAXES?

A. Ms. Saball stated that my adjustment to the accumulated deferred income tax balance was incorrect because I did not account for the impact on tax depreciation. She stated that my disallowance of the inflation adjustments in the plant balance, all the components of the taxpayer's tax expense, depreciation expense or reserve for deferred taxes would need to be adjusted under the IRS normalization rules. (Statement No. 6-R at 2-3). Ms. Saball has calculated the impact of my proposed adjustment to the deferred tax balance under the normalization requirements by including the tax impact of reduced tax depreciation. The net result is a decrease in the deferred tax liability of $85,995. (Statement No. 6-R at 3). Ms. Saball also recalculated my federal income taxes to show the change on the PA NOL adjustment which resulted in a total tax expense of ($88,776,727). (Statement No. 6-R at 4).

Q. WHAT IS YOUR RESPONSE?

A. I reviewed Ms. Saball's adjustment calculation as shown on Ms. Saball's Exhibit CLS-1, 2 and 3, and based upon my understanding of Ms. Saball's explanation, calculated my updated adjustments into my revenue requirement schedules. My updated adjustment is ($89,541,785). The difference is due to my updated revenue requirement adjustments, as I testified to previously, to correct an error in my direct testimony. I also updated the adjustments to depreciation expense, accumulated depreciation and accumulated deferred income taxes, accordingly.

D. Act-40 Requirements (Act 40 of 2016)

Q. WHAT DID MR. SABALL STATE REGARDING YOUR ADJUSTMENTS TO THE COMPANY'S CONSOLIDATED TAX ADJUSTMENT AND ACT 40 OF 2016?

A. Ms. Saball stated that I did not challenge the Company's spending of $36.7 million on infrastructure replacement. Ms. Saball stated that the Company addressed the requirements of Act 40 have been satisfied. (Statement No. 6-R at 5). She stated that the Company's position is that because far more that 100% of the funds will be used on infrastructure

replacement no adjustment to non-investor supplied funds for utility working capital is appropriate and therefore there should be no consolidated tax adjustment applied in this case. (Statement No. 6-R at 5).

Q. WHAT IS YOUR RESPONSE?

A. The Company should not benefit from the use of and compliance with Act 40 without any specific uses related to reliability and infrastructure projects and for general corporate purposes. Ms. Saball stated that the Company addressed the requirements of Act 40 as being satisfied. With respect to the 50% of the differential to be used for general corporate purposes, the Company has not identified or specifically demonstrated how the differential is to be used. Act 40 requires that 50% be spent on reliability or infrastructure and 50% be spent on general corporate purposes; it does not permit that less be spent on a general corporate purpose if the total amount spent on reliability or infrastructure exceeds 50% of the NOL. (66 Pa. C.S. § 1301.1(b)). When ratepayers are already supporting the Company's infrastructure and reliability investments and general corporate purpose expenses through rates, more information and support is needed to show that the additional revenue now being provided by ratepayers is actually being used and not simply going to shareholders. The Company should provide evidence of actual applications of its differential to reliability or infrastructure related investments and its general corporate purposes in a manner that reduces ratepayer obligations.

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

COMPANY RESPONSES TO INTERROGATORIES

EXHIBIT DM-SR-38

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXVII-001

Witness: Becker, Paul **Title:** Vice President Construction &Engineering

Question: Reference Peoples Statement No. 5R, pp. 8-9, where witness Paul Becker testifies that “the PUC Gas Safety Division directed Peoples to accelerate the replacement” of bare steel pipe in Robinson for which OCA witness Mugrace recommended exclusion of the replacement cost. Provide any and all documentation demonstrating that the PUC Gas Safety Division directed Peoples to accelerate the replacement.

Answer: Please see attached.

Submit Date: 4/29/2024

Becker, Paul

From: Horensky, Robert <rhorensky@pa.gov>
Sent: Tuesday, May 5, 2020 10:39 AM
To: Gregorini, Joseph
Cc: Palombo, Edward A; Thomas, Robert M; Kline, David; Matse, Matthew; Kanaskie, Richard
Subject: Peoples Gas Overpressure- NRC 1276429-Indiana County- Robinson, PA

[External email: Use caution with links and attachments]

Mr. Gregorini-

On April 29th, an overpressure incident occurred on Peoples Gas's distribution system in Robinson, PA in Indiana County. This was reported to the NRC at #1276429. Peoples Gas over-pressured the mains, services and customer piping while performing maintenance at a district regulator station. The system is a one way feed and supplied by a single regulator with a pressure relief and bypass. This event affected 227 homes and businesses.

Having reviewed the data provided to I&E Safety thus far for the Robinson overpressure incident, I&E Safety has the following safety related requirements of Peoples Gas. This email will be followed by a formal letter that will be sent via email:

1. Accelerate the replacement of the following gas assets:
    a. All bare steel piping affected by the overpressure .
    b. All metallic service lines that are not under Cathodic Protection and any leaking service.
    c. Any asset that has leaked as a result of the overpressure.
2. Repair and replace any customer owned service line that is leaking.
3. Provide I&E Safety with a timeframe of the scheduled replacement work.
4. Continue daily leak survey of all mains and services until all of the bare steel mains and services are replaced .
5. Perform a walking leak survey of all mains and services once weekly until all replacements are complete.
6. Provide Dave Kline and Matt Matse with daily leak survey results. The results should be tabulated and comprehensive.
7. Monitor any post incident appliance failures and develop a program to address.
8. Provide the public in Robinson with an update of the event and Peoples efforts to remediate. Notify this office of this awareness effort.
9. Access any and all structures immediately where piping, or appliances, downstream of the meter or curb valve was, or could have been, affected by overpressure on 4/29.
10. Consider immediate review of low pressure regulator station maintenance policy and procedures.
11. Consider immediate review of low pressure regulator station configurations.
12. Consider immediate review of Operator Qualification training for regulator technicians.
13. Consider immediate review of Quality Assurance/Quality Control for regulator station work involving low pressure systems.
14. Consider immediate review of Quality Assurance/Quality Control for regulator station work involving systems with one way feeds.
15. Continue to work with I&E Safety Engineers during the course of the investigation.

Sincerely,

Rob Horensky, Manager
Safety Division
Bureau of Investigation and Enforcement
Pennsylvania Public Utility Commission

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXVII-002

Witness: Becker, Paul **Title:** Vice President Construction &Engineering

Question: Reference Peoples Statement No. 5R, p. 9, where witness Paul Becker testifies that the bare steel pipelines were not damaged as a result of the Robisnon incident and that they would have been replaced in the future under the Company's LTIIP. Confirm or deny: but for the Robinson incident, the pipeline replacement would not have been accelerated. If anything other than a confirmation, explain the basis for Peoples' response.

Answer: Confirmed. The bare steel pipelines in Robinson would have been replaced in the future as part of the LTIIP.

XI. CONCLUSION....39

I. INTRODUCTION AND SUMMARY OF MR. MOUL'S COMMENTS

Q. ARE YOU THE SAME AARON ROTHSCHILD WHO SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING ON MARCH 22, 2024 AND REBUTTAL TESTIMONY ON APRIL 18, 2024?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my Surrebuttal Testimony is to respond to the following issues addressed in Peoples Natural Gas Company LLC (Peoples or company) witness Mr. Paul Moul's Rebuttal Testimony, specifically, his inaccurate assertions that:

- I make inconsistent statements regarding the use of analyst forecasts, historical data, and forward-looking market data
- My cost of equity recommendation fails to reflect higher interest rates
- Application and reasonableness of my Constant Growth DCF Model
- My application of the CAPM is defective
- My conclusions regarding Mr. Moul's leverage adjustment are erroneous
- I have not shown that Peoples is not entitled to some form of management performance recognition by the Commission
- The appropriate capital structure for Peoples should be more equity-rich
- The companies in my proxy group should be expanded

As addressed below, Mr. Moul's criticisms are invalid and should be rejected. If I do not address an issue raised in the company's rebuttal, it does not mean I agree with the testimony.

Q. BEFORE YOU BEGIN YOUR RESPONSE TO MR. MOUL, DO YOU HAVE ANY CORRECTIONS TO YOUR DIRECT TESTIMONY THAT YOU WISH TO ACKNOWLEDGE HERE?

A. Yes. On page 14 of my direct testimony, OCA Statement 3, Table 14 contained a reference to Duff and Phelps (September 2023). The Duff Phelps reference should have been "Duff and Phelps (February 8, 2024)." It is important to note that my analysis in this case relied upon the February 8, 2024, source, and that I identified this correction to Peoples and all parties on April 8, 2024, when I submitted discovery responses. For purposes of clarity, I am submitting a corrected Table 4 below:

TABLE 4: U.S. EQUITY RETURN EXPECTATIONS AMONG MAJOR FINANCIAL INSTITUTIONS	
Duff & Phelps / Kroll (February 8, 2024 Report, as of March 31,2024) [1]	**9.0%**
Horizon Actuarial Services, LLC Survey - 20 Year Horizon (August 2023) [2]	
U.S. Equity - Large Cap (5.6-10.2%, 50% Percentile - 7.3%)	**7.3%**
U.S. Equity - Small / Mid Cap (5.1-10.9%, 50% Percentile - 7.6%)	**7.6%**
J.P. Morgan Asset Management - Equity Long-Term Returns (2023) [3]	**7.9%**
Charles Schwab - 10-year U.S. Large Cap Returns (January 2024) [4]	**6.2%**

Q. TURNING NOW TO YOUR RESPONSE TO MR. MOUL, ON PAGE 23 OF HIS REBUTTAL TESTIMONY, MR. MOUL CLAIMS THAT YOU MAKE INCONSISTENT CLAIMS REGARDING THE USE OF ANALYST FORECASTS, HISTORICAL DATA, AND FORWARD-LOOKING MARKET DATA. PLEASE RESPOND.

A. Below I respond to the following 6 claims made my Mr. Moul:

1. On page 23, lines 4-6 of Mr. Moul's rebuttal testimony, he claims that my recommendation that the return on equity (ROE) should be "market-based" and "forward-looking contradicts my criticisms of using forecasts.

My response: Mr. Moul misconstrues my testimony. The main point I make throughout my direct testimony, is that there is a difference between expert forecasts (e.g., analyst 5-year EPS growth rate forecasts) and investors' expectations (e.g., option-implied growth). Expert forecasts are based on the opinions of a relatively small group of people and publications. On the other hand, investor expectations are based on the market behavior of millions of people around the world. When faced with the choice between these two, investors' expectations should be given priority over expert forecasts because they are based on more extensive data and, after all, investors are the ones providing the capital to utility companies.

2. On page 23, lines 7-15 of Mr. Moul's rebuttal testimony, he states that I use historical data despite simultaneously claiming that I use primarily forward-looking market data.

My response: I do use historical data, as does every rate of return witness that I know of; however, it is preferable to measure a utility's cost of equity (COE) by measuring investors' expectations directly using current capital market data (e.g., stock prices, stock option prices). My COE calculations also incorporated historical data, which is something that all rate of return witnesses/financial modelers have to do to some degree, including me, because of inevitable limitations of capital market data.

3. On page 23, lines 16-20 of Mr. Moul's rebuttal testimony, he implies that my stated preference for forward-looking data contradicts my conclusion that using analyst's forecasts would be speculative. Additionally, he implies that I am contradicting myself by claiming that my market-based method is forward-looking on the one hand, and on the other hand I believe capital markets are unpredictable.

My response: As discussed in response to claim 1 above, my forward-looking market-based COE is based on investors' expectations. Measuring investor expectations directly using capital market data is different than using analyst forecasts. To what degree investors are influenced by analyst forecasts is difficult to determine and likely continually changes. After all, not all analyst forecasts are the same. Leaving aside the appropriateness of using analyst forecasts in cost of

equity calculations, calculating the cost of equity should be an interpretive approach (e.g., using market data to measure investors' expectations as Mr. Moul did in some parts of his testimony) rather than a speculative one (e.g., trying to predict what the market will do in the future better than other investors to make a profit as a trader would do). Also, investors have forward-looking expectations that we can investigate despite the unpredictable nature of capital markets. There is nothing inconsistent or contradictory in my statements.

4. On page 23, lines 21-22 of Mr. Moul's rebuttal testimony, he claims that I contradict myself by relying on historic data in my DCF model, yet I criticize his use of historical data.

My response: Please see my response to Mr. Moul's claim 2 above.

5. On page 24, lines 1-4 of Mr. Moul's rebuttal testimony, he claims that I contradict myself by criticizing his use of non-market data when I use non-market data (i.e., book value data in my analysis and historical data for my CAPM risk-free rate).

My response: First, regarding the risk-free rate components of my CAPM, Mr. Moul's claim that I use historical data is misleading. As explained on page 61, lines 19-21 of my direct testimony, I use both the spot market yields of U.S. treasury bond/bills as of February 29, 2024, and a weighted average over the 3-month ending on that date. The spot data that I use, by any standard, is not historical. I also use

3 month "historical" averages because the value of a particular input on a specific day can lead to COE results that can vary over short periods of time. Therefore, using data over a recent period, such as 3 months, is a process of smoothing capital market data, which is often turbulent. I also use historical book value returns in my DCF analysis for "smoothing" purposes to make sure current future expected returns on book equity are sustainable.

6. On page 24, lines 5-8 of Mr. Moul's rebuttal testimony, he claims that I use analyst forecasts despite criticizing him for using them.

My response: Please see my response to claim 1 above.

7. On page 23, lines 4-6 of Mr. Moul's rebuttal testimony, he states that my claim that "forecasts as being unreliable" contradicts my recommendation that Peoples authorized ROE should be based on current market data and not on historical authorized ROEs in other proceeding.

My response: Please see my response to claim 1 and 2 above.

II. APPLICATION OF CONSTANT GROWTH DCF

Q. PLEASE SUMMARIZE MR. MOUL'S CRITICISM OF YOUR APPLICATION OF THE DCF METHOD.

A. Mr. Moul makes the following criticisms of my constant growth DCF method:

1. My constant growth DCF model produces unreliable results;
2. Growth rate component should be based on analyst Earnings Per Share (EPS) growth rates;
3. My approach is inferior to his because it relies on non market-based data.

Q. MR. MOUL CLAIMS THE RESULTS OF YOUR CONSTANT GROWTH DCF MODEL ARE NOT REASONABLE. DO YOU AGREE?

A. No. Mr. Moul claims that the results of my Constant Growth DCF Model are not reasonable because, among reasons, they are not higher than the cost of debt by a reasonable margin.[1] He does not explain how much higher the cost of equity should be than the cost of debt or what metrics his criticism is based on. The cost of equity expectations of major financial institutions indicate that the margin between my 8.02% cost of equity recommendation and the cost of debt is reasonable.

My 8.02% cost of equity recommendation is 364 basis points[2] higher than the market yield on the 30-year U.S. Treasury bond. The margin between my 8.02% recommendation and the cost of debt (e.g., market yield on U.S. Treasury bonds) is about the same as the cost of equity recommendations of major financial institutions and published research, including publications relied on extensively by Mr. Moul. He uses data from the SBBI Yearbook (owned by Kroll) to determine the appropriate equity risk premium for public utilities starting on page 41 of his direct testimony. As shown on page 14, Table 4 of my direct testimony, Kroll determined the cost of equity for the overall

[1] Mr. Moul's rebuttal testimony, page 3, line 1-5.

[2] 8.02% - 4.38% (yield on 30-year U.S. Treasury bond as of February 29, 2024).

market is 9.0%, which is 462 basis points higher than the market yield on the 30-year U.S. Treasury bond. However, as explained on pages 14-15 of my direct testimony, Kroll's 9.0% cost of equity is for the overall stock market (e.g., US Large Cap, S&P 500),[3] which should be higher than the return expectations for buying utility stocks because regulated monopoly utilities are lower risk than most, if not all, unregulated companies in the S&P 500, like Tesla and Amazon.

Q. STARTING ON PAGE 25 OF HIS REBUTTAL TESTIMONY, MR. MOUL CLAIMS THAT IT IS MORE APPROPRIATE TO USE EPS GROWTH RATES AS THE GROWTH COMPONENT OF A DCF MODEL THAN RETENTION GROWTH RATES. HOW DO YOU RESPOND?

A. I disagree. It does not make mathematical sense to use analyst five-year EPS growth rate forecasts without attempting to investigate what percentage of earnings companies are likely to pay out as dividends and what percentage they are likely to retain in the business (i.e., the retention rate). This is analogous to failing to reconcile the money you are taking out of your checking account with your future balance, i.e., the basic balancing of a checkbook.

J.P. Morgan explained that its equity assumptions methodology considers five return drivers (including earnings growth and dividends). Pertinently, J.P. Morgan explained that its equity return assumptions methodology:

> ties together complex interrelationships among these factors to ensure that retained earnings and gross dilution imply a future book value that is

[3] The S&P 500 is a stock market index that includes 500 of the largest U.S. companies, including 11 sectors to show the health of the U.S. stock market and broader economy. The Dow Jones Industrial Average, 30 of the largest U.S. companies, is another commonly used measure of equity markets in general.

> consistent with projected return on equity and future earnings. This framework – analogous to Robert Higgins' sustainable growth rate (SGR) concept – ensures that higher shareholder payouts, for instance, would come at the expense of slower earnings growth, all else the same. Our methodology uses trailing, not forward, earnings, which tend to be more stable.[4]

Thus, exclusive reliance on analysts' 5-year EPS growth rates, as Mr. Moul has done, without considering multiple factors that ensure sustainable growth, is inappropriate. As reflected in my Exhibit ALR-3, page 1, consistent with the multi-factor approach relied upon by J.P. Morgan in its 2019 Long-Term Capital Market report, I have also used a sustainable growth rate method to compute my DCF results.

Q. ON PAGE 27, LINES 15-23 AND PAGE 28, LINES 1-3 OF HIS REBUTTAL TESITMONY, MR. MOUL CLAIMS THAT YOU SHOULD HAVE DIRECTLY USED THE EARNINGS PER SHARE GROWTH RATE FORECAST OF 5.76% BY ZACKS IN YOUR DCF APPROACH. PLEASE RESPOND.

A. I strongly disagree. As discussed above, it is not appropriate to mechanically use analyst EPS growth rate forecasts in a constant growth DCF model because it does not ensure that the mathematical relationship between earnings, dividends, book value and stock price are respected. If a utility company is experiencing a short-term period of high earnings growth because they are recovering from a period of low earnings, for example, using analyst 5-year EPS growth rate forecasts in a DCF model will overstate the COE because these growth rates are not sustainable. In other words, the company's relatively high growth rate

[4] J.P. Morgan contributes to the Blue Chip Economic Forecasts relied on by Mr. Moul in his rebuttal and direct testimonies.

will not continue indefinitely. Investors know that short-term growth rates that result from a recovery will eventually slow.

Q. ON PAGE 27, LINES 2-4 OF HIS REBUTTAL TESITMONY, MR. MOUL CLAIMS THAT THE COMMISSION HAS NOT PREVIOUSLY ADOPTED A RETENTION GROWTH APPROACH IN THE DCF ANALYSIS. PLEASE RESPOND.

A. If Mr. Moul is correct that the Commission has never adopted a retention growth approach, I urge the Commission to consider the evidence that I present in my direct testimony that shows that my DCF approach is a more reasonable approach than mechanically using analyst EPS growth rates as a proxy for growth, as Mr. Moul has done. Simply claiming that an approach has not previously been adopted is an insufficient basis of dispute, because under that rationale, the Commission would be constrained in establishing just and reasonable rates and only stagnant decisions would be possible.

Q. ON PAGE 5, LINES 14-16 OF HIS REBUTTAL TESTIMONY, MR. MOUL STATES THAT ANALYSTS' PROJECTIONS OF FUTURE GROWTH ARE THE ONLY REASONABLE EVIDENCE OF THE DCF GROWTH RATE AND THE RETENTION GROWTH RATE THAT HE USED IS ENTIRELY INAPPROPRIATE AND HAS NEVER BEEN ADOPTED IN PENNSYLVANIA. PLEASE RESPOND.

A. I disagree. As discussed above there are numerous mathematical issues with relying solely on analysts' projections of future growth as the growth component of a DCF model. It is unlikely that investors consider the basic mathematical relationship between dividends, retaining earnings and capital available to a company to grow future earnings.

Additionally, as discussed above, J.P. Morgan understands that relying only on analysts' projections is not reasonable as they have considered retention rates as I have done. Regarding this Commission's past decisions, my job is to provide an independent cost of capital analysis that it can use to determine the appropriate ROE and capital structure for Peoples. It is not appropriate to confine my independent analysis to only that which Mr. Moul claims has previously been adopted,

Q. ARE THERE ADDITIONAL REASONS WHY IT IS NOT APPROPRIATE TO USE ANALYST 5-YEAR EPS GROWTH RATE FORECASTS AS THE GROWTH COMPONENT IN A DCF MODEL?

A. Yes. A study conducted by McKinsey & Company in 2010 found that "analysts have been persistently over optimistic for the past 25 years with estimates ranging from 10 to 12 percent a year, compared with actual earnings growth."[5]

On average, analysts' forecasts have been almost 100 percent too high.[6] Additionally, the further a projection predicts into the future, the likelihood of the projection being correct decreases. Capital markets, on the other hand, are notably less giddy in their predictions. Except during the market bubble of 1999-2001, actual price-to-earnings ratios have been 25 percent lower than implied P/E ratios based on analyst forecasts.

To my knowledge, financial publications do not recommend using EPS growth rates to calculate the cost of equity in a DCF model. McKinsey & Company continues to

[5] Marc H. Goedhart, Rishi Raj and Abhishek Saxena, *Equity Analysts: Still too bullish*, Spring 2010.

[6] Ibid.

advise its clients to be cautious about the reliability of analysts' forecasts. On May 16, 2022, McKinsey stated that "analysts' near-term forecasts are often overly optimistic and don't always correctly reflect operating performance."[7]

Even if equity analysts' forecasts were not upwardly biased, as discussed in my Direct Testimony, adding earnings per share growth forecasts to a dividend yield without considering the retention rate produces a flawed result. Using an earnings per share growth forecast as the growth component in a DCF model is like measuring how much money you will have in your bank account by simply adding up your paychecks. If you do not consider what percentage of your paycheck you will retain in your account and what percentage you will spend, your calculations will not be accurate.

Q. ARE YOU SAYING THAT ANALYSTS' CONSENSUS EARNINGS PER SHARE GROWTH RATES ARE USELESS AS AN AID TO PROJECTING THE FUTURE?

A. No. Analysts' EPS growth rates are, however, very dangerous if used in a simplified DCF which does not consider factors such as dividend per-share growth and book value per share growth as it could result in unsustainable growth rates. For example, if a company has a slow earnings year followed by a strong recovery, this potentially high earnings growth rate is unlikely to be maintained in the long-term, and therefore result in an unrealistic and/or unsustainable projection. Analysts' five-year earnings-per-share growth rates forecasts are not useful if used without considering other sensitivities. However, if used as part of a holistic analysis that considers other factors, the analysts' five-year

[7] David Kohn, Vartika Gupta, Tim Koller, Werner Rehm, *Do consensus estimates accurately reflect operating performance?*, May 16, 2022.

earnings-per-share growth rates forecasts can be useful in computing estimates of what earned return on equity investors expect will be sustained in the future, and as such, are useful in developing long-term sustainable growth rates.

Q. MR. MOUL CLAIMS ON PAGE 21, LINES 8-10 OF HIS REBUTTAL TESTIMOY THAT A FUNDAMENTAL TENET OF FINANCE IS THAT THE COST OF EQUITY MUST BE HIGHER THAN THE COST OF DEBT BY A MEANINGFUL MARGIN TO COMPENSATE FOR THE HIGHER RISK ASSOCIATED WITH A COMMON EQUITY INVESTMENT. PLEASE RESPOND.

A. I agree with Mr. Moul that equity is riskier than debt and therefore it is reasonable for investors to demand a higher turn to invest in equity than debt. However, I disagree with Mr. Moul regarding how much of a premium investors require to invest in equity. My COE recommendation for Peoples is 365 basis points higher than the Company's cost of debt (8.02% - 4.37%), which is based on a careful analysis of equity market data. Mr. Moul's criticism is a straw man argument as my COE recommendation for Peoples is, in fact, higher than Peoples' cost of debt. If investors required a greater premium my COE models would have produced a higher COE result.

Q. MR. MOUL STATES ON PAGE 27, LINES 5-7 OF HIS REBUTTAL TESTIMONY THAT YOU DO NOT AND CANNOT EXPLAIN WHY AN INVESTOR EXPECTED RETURN OF 8.60% SHOULD BE REDUCED TO 8.06% OR 8.09%

IN THIS CASE, PARTICULARLY SINCE RATES ARE SET ON BOOK VALUE (NET ORIGINAL COST). PLEASE RESPOND.

A. Mr. Moul is conflating accounting returns and market-based returns. The 8.60% Mr. Moul is referring to is the future expected return on book equity published by Value Line and implied by Zack's forecasts. In other words, this 8.60% is an accounting figure (based on expected return on the book value of equity), not investors' expected returns (based on expected return on the market value of equity). I provided an explanation of the difference between expected return on book equity (accounting returns) and expected return on the market price of a stock on page 103, and page 104, lines 1-5 of my direct testimony. If Pennsylvania consumers' rates are set based on expected accounting returns instead of market returns, they will be significantly overcharged. An authorized ROE should be commensurate with the returns the investors expect to earn when investing in other enterprises having corresponding risks. This investment is made at the market price of a utility's stock, not the accounting value.[8] The average market price of the gas utility stocks in my proxy group is between 1.42- and 1.56-times book value. If investors are willing to pay about 1.5 times the book value for an expected 8.60% return on book value for gas utilities, they are expecting to earn a return significantly less than 8.60% on market value. Therefore, it makes sense that my Constant Growth DCF indicates a market-based cost of equity of between 8.06% and 8.09%.[9]

[8] For example, if you were to log in to your brokerage account you would not be able to purchase American States Water's stock for $19.45 (it's current book value according to Value Line). Instead, you would have to pay $87.76 (the closing price of its on August 1, 2022, according to Yahoo Finance).

[9] Mr. Rothschild's direct testimony, Exhibit ALR-3, page 1.

If Mr. Moul were correct that we should use investors' expected *accounting* returns to determine Peoples' authorized ROE, there would be no purpose in producing rate of return testimonies and conducting hearings. Using Mr. Moul's logic, setting Peoples' authorized ROE would be a mechanical exercise of looking up published accounting returns. In other words, stock prices, interest rates, and other capital market data would be irrelevant.

Q. MR. MOUL STATES ON PAGE 27, LINES 9-10 OF HIS REBUTTAL TESTIMONY THAT YOU HAVE NOT DEMONSTRATED THAT RETENTION GROWTH DETERMINES INVESTOR EXPECTRED RETURN RATES. PLEASE RESPOND.

A. I disagree. As discussed earlier in this testimony, it does not make mathematical sense to use analyst five-year EPS growth rate forecasts without attempting to investigate what percentage of earnings companies are likely to pay out as dividends and what percentage they are likely to retain in the business (i.e., the retention rate). Mr. Moul's use of analysts' 5-year EPS growth rate as a proxy for growth is like a money manager telling you that you will have enough money to retire in 20 years by only estimating your income for the next 5 years. In order to determine if you will have enough money to retire in 30 years you must consider how much money you are saving (retaining) and how much money you are spending (paying out as dividends). Also, you must consider if your current income is sustainable over the next 30 years, not just the next 5 years, as Mr. Moul has done in his DCF method. The growth rate component of my sustainable growth DCF method appropriately accounts for the retention rate, which makes mathematical/logical sense because it recognizes the mathematical interrelationship between book value, dividends,

and earnings. However, the validity of my DCF method does not hinge on investors and or utility executives being logical about calculating growth rates. For example, if investors expected utility executives to persistently waste retained earnings on unprofitable projects, we would see a discrepancy between the results of DCF model and the results of other COE models that are not being distorted by the effects of wasted retained earnings. The results of sustainable growth DCF model are between 8.06% and 8.09%, which is within the range of my CAPM, a method that is not impacted by my DCF growth rate, result of between 7.50% and 8.22%.[10]

Q. PLEASE EXPLAIN WHY A MARKET TO BOOK RATIO OF BETWEEN 1.42 AND 1.56 INDICATES THAT THE COST OF EQUITY FOR GAS UTILITY COMPANIES IS LOWER THAN THE EXPECTED RETURN ON BOOK EQUITY.

A. Calculating the cost of equity (investors' equity return expectations) is more complicated than calculating the return on a rental property, but the same concept applies regarding the relationship between market returns and book returns. If an investor purchases an apartment for $100,000 and expects to receive $500 per month ($500 X 12 = $6,000 per year) in rent, he or she will expect an annual return of 6% ($6,000/$100,000) on their investment. When the investor purchases the apartment, he would record the book value as $100,000 and the market value as $100,000 unless he determined that the purchase price was higher or lower than the market value. If the value of the apartment increases to $150,000, for example, the market to book ratio would increase to 1.5, and therefore, his

[10] Exhibit ALR-2.

return on book value would remain at about 6% while his return on the market value of the apartment would decrease to about 4.0%.

In this rental property example, an increasing market value results in a lower expected return on market (4.0%) compared to expected return on book (6%) if the rent price remains constant. Rent prices do not increase to maintain an expected 6% return on book value; they are set by what the rental market reasonably can bear. The same is true of utility stocks. You do not establish an ROE based on a constant return on book (accounting) returns, it is set based on what investors in the market expect that market to return. In the case of a utility stock, an increasing market value results in a lower return on market for the same expected return on book. As this rental property example demonstrates, there is nothing inconsistent about investors expecting a lower return on the market price of an investment than on the book value of an investment. In fact, with market to book ratios of gas utility companies significantly above one it would be surprising if investors expected a return on market equal, or anywhere close, to return on book.

Q. ON PAGE 28, LINES 5-21 AND PAGE 29, LINES 1-5 OF HIS REBUTTAL TESTIMONY, MR. MOUL CLAIMS THAT YOU ARE MISTAKEN THAT MARKET-TO-BOOK RATIOS ABOVE 1 INDICATES THAT THE COE FOR GAS UTILITY COMPANIES IS LOWER THAN THE EXPECTED RETURN ON BOOK EQUITY. PLEASE RESPOND.

A. I strongly disagree. Mr. Moul tries to demonstrate that my position on the relationship between market-to-book ratios, authorized ROEs, and the market-based COE is false by pointing to historical data. He claims that if investors expected to receive a lower market return than book return then utility stock prices would have reverted to their book value

over time. I would agree with Mr. Moul that the market-to-book ratios of gas utility stocks have not reverted to their book value. However, the fact that market-to-book ratios for utility companies have remained above 1 persistently for many decades indicates that authorized ROEs for gas utility companies have been higher than their market-based COE and therefore, consumers have been overpaying for a long time. The average market to book ratios of the 5 companies in the RFC Gas Proxy group is about is about 1.5.[11] Please see Appendix A of my direct testimony regarding why market-to-book ratios for gas utility companies indicates that their COE is lower than their authorized ROEs.

Q. MR. MOUL CLAIMS THAT THE DCF IS SLOW TO REACT TO CHANGES IN BOND YIELDS, NECESSITATING THE NEED FOR CAPM/RISK PREMIUM. PLEASE RESPOND.

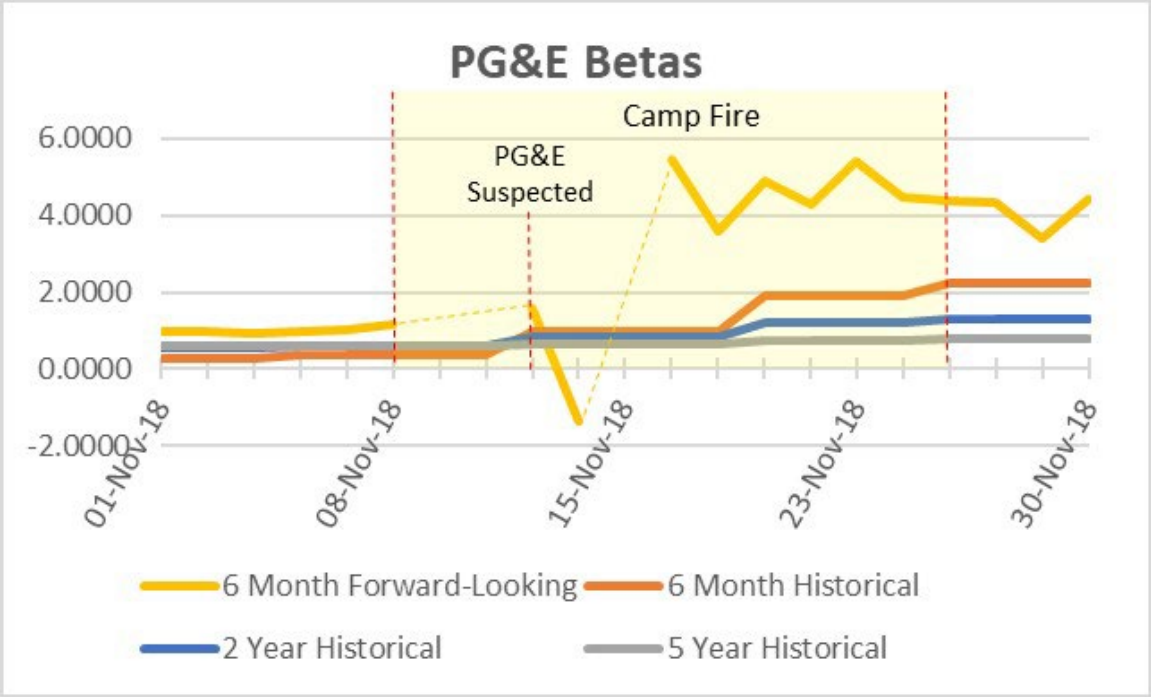
A. I believe that both the DCF and CAPM models can take time to react to changes in bond yields and capital markets in general if the analyst uses only historical data and or analyst forecasts. Analyst forecasts, even if they reflect investors' expectations, can take time to change if for no other reason that many publications do not publish their projections every day. For example, Value Line publishes their company reports every 3 months. A COE model that uses only historical data can take time to adjust because it takes time for changes in bond yields to impact model inputs, such as 5-year historical betas used in the CAPM, because the influence of the most recent capital market data on these betas will be overwhelmed by the influence of the hundreds of thousands of capital market data points

[11] Exhibit ALR-3, page 1. The market to book ratio for the year ending 2/29/2024 and as of 2/29/2024 is 1.56 and 1.42 respectively.

that stretch back many years. In summary, I do not believe that the DCF model is any more or less able to reflect changes in capital market conditions compared to the CAPM and Risk Premium analyses. It depends on the way the model is implemented. I use stock option prices in my CAPM and DCF methodologies, so they are better able to measure changes in the cost of equity. Although I do not use a risk premium method myself, I would also say that there are appropriate ways to implement such a methodology and inappropriate ways.

Q. CAN YOU GIVE AN EXAMPLE THAT DEMONSTRATES YOUR COE METHODS THAT USE STOCK OPTION PRICES CAN MEASURE WHEN INVESTORS'S EXPECTATIONS CHANGE?

A. Yes. As shown in the chart below, shortly after investors started to understand that PG&E was exposed to potential wildfire liabilities as a result of the 2018 forecast fire referred to as the Camp Fire, option-implied betas immediately reflected investors' changing expectations and PG&E's higher cost of equity. After initially falling negative for a day during the initial market turmoil caused by the fire, option-implied betas jumped up from near 1.0 to mostly over 4.0. On the other hand, 5-year historical betas hardly reacted.



This chart shows that my COE models are able to measure when the cost of equity changes, whether it is because of changing bond yields or potential wildfire liabilities. On the other hand, Mr. Moul's CAPM, which is based on 5-year historical betas can take months or even years to adjust to capital market changes.

Q. ON PAGE 9 OF HIS REBUTTAL TESTIMONY MR. MOUL CLAIMS THAT THE COMMISSION SHOULD CONSIDER THE HIGH LEVEL OF CAPITAL BORROWING COSTS WHEN DECIDING THE RETURN ON EQUITY IN THIS CASE. PLEASE RESPOND.

A. I agree that the Commission should consider the level of capital borrowing costs in this proceeding. However, it is important to recognize that a 1% increase in interest rates/cost of debt does not necessarily mean that the cost of equity will also increase by 1% increase. In fact, capital market data shows that the cost of equity for most gas utility companies

declined in 2023 as interest rates increased. As shown on page 128 of my direct testimony, the CAPM indicated cost of equity for gas utility companies peaked at 8.67% in November 2022 and has fallen to under 8% as of February 2024. Over that period, the yield on the 30-year U.S. Treasury bond has increased from about 4.25% to 4.5%[12] which demonstrates that the cost of equity and interest rates do not always move in the same direction, as Mr. Moul implies.

III. CAPM ANALYSIS

Q. PLEASE SUMMARIZE MR. MOUL'S CRITICISMS OF YOUR CAPM METHODOLOGY.

A. Regarding my CAPM results (7.50% - 8.22%), Mr. Moul states "[by] any reasonable standard, such low returns are simply not credible."[13] The only evidence he provides for this conclusion is by referring to the results of his and Mr. Spadaccio's CAPM, of 12.07% and 10.91% respectively.

Mr. Moul spends considerable time claiming that my CAPM is not reliable because it is "unconventional."[14] He criticizes many of the specific components of my CAPM, including using stock options to calculate forward betas.

[12] See Chart 1 on page 24 of my direct testimony. This chart shows that the yield on the 30-year U.S. Treasury Bond was about 4.25% in November 2022 and about 4.5% by February 2024.

[13] Mr. Moul's rebuttal testimony, page 42, line 2-3.

[14] Mr. Moul's Rebuttal Testimony, Page 43, lines 1-3.

Q. WHAT IS YOUR GENERAL RESPONSE TO MR. MOUL'S CRTICISMS OF YOUR CAPM METHODOLOGY?

A. Throughout his testimony, Mr. Moul changes his criteria for determining the appropriate ROE for Peoples, continues to use COE models that have been proven to be flawed, and criticizes my approach in ways that are illogical and inconsistent with the facts (e.g., he falsely claims that my methods have not been supported in other cases, but my testimony clearly describes that it was adopted by the South Carolina Public Service Commission). As stated on page 12, lines 5-9 of my direct testimony, on April 9, 2020, the South Carolina Public Service Commission stated the following regarding my CAPM methodology:

> Amongst the three witnesses, Consumer Affairs Rothschild's approach was unique in that he included the use of both historical and forward-looking, market-based data in his analysis. Based on the testimony and facts presented, the Commission therefore adopts the recommended ROE of 7.46% proposed by witness Rothschild.

Mr. Moul claims that my CAPM should not be relied upon because it is "unconventional" among other reasons.[15] According to Mr. Moul, the Commission should only rely on common models that he claims are used by Rate of Return witnesses and investors, despite their obvious flaws (e.g., Value Line's 5-year historical betas that vary based on arbitrary data choice). On the other hand, I have been testing models for years and continually eliminate the ones that prove to be flawed. My work to continually improve the accuracy of COE models led to the development of my CAPM methodology, which includes measuring investors' expectations directly using stock option prices. My improved methods have been empirically tested using capital market data, applied for many

[15] Mr. Moul's Rebuttal Testimony, Page 43, lines 1-3

years, and as stated above, have been adopted in previous cases. Continuous improvement of COE models is required to ensure that regulated utility companies have access to the capital they need while also protecting consumers.

Mr. Moul's criticisms of my CAPM are based on his outright protest against the possibility of progress in COE modeling. This is at the expense of not adjusting to changing capital market conditions, including the massive, expanded use of stock options by investors[16] and the continuing results of research focusing on improving statistical techniques to best measure complex systems with power law distributions, including stock markets.

The Federal Energy Regulatory Commission (FERC) has recognized that it is important to evaluate and revise COE models. FERC concluded that it may not be appropriate to use Value Line betas in a CAPM analysis because the beta component should be based on the same exchange as the risk premium component of the model. Value Line is based on the New York Stock exchange.[17] According to FERC, Mr. Moul's CAPM is not appropriate because it is not based on the S&P 500.

Q. ON PAGE 42, LINES 17-19, OF HIS REBUTTAL TESTIMONY MR. MOUL SAYS THAT HER DOES NOT KNOW OF ANY OTHER WITNESS IN PUBLIC UTILITY RATE CASES THAT USES 'HISTORICAL BLENDED' BETAS AND YOU HAVE

[16] https://www.investors.com/research/options/options-trading-today-after-50-years-of-growth/

[17] 174 FERC ¶ 63,024 UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION, Docket Nos EL17-41-001 at 196

NOT SHOWN, NOR COULD SHOW, THAT INVESTORS USE YOUR BETAS. PLEASE RESPOND.

A. As discussed below, it is not possible to determine what models investors use. It is also not possible to determine what data they use. Therefore, I must evaluate and decide on the appropriate models and data to use based on their merits. Starting on page 66 of my direct testimony I explain why I use a historical blended beta in my CAPM analysis that includes periods of 6 months, 2 years, and 5 years, as opposed to relying exclusively on the 5-year period used by value line. Using shorter periods for the return regression analysis portion of the historical beta calculation allows me to see if the correlation between the returns of each of the companies in my RFC Gas Proxy Group and those of the S&P 500 Index has changed in the last 2 years or 6 months. Using a 5-year period exclusively tends to make recent changes in the correlation more difficult to identify because of the weight of 5 years of data.

Financial markets are constantly in flux due to the influence of countless factors. So-called "market dislocations," are just some of the numerous factors that are constantly affecting markets. To attempt to separate any one specific factor from "real" underlying market dynamics would be an exercise in futility.

Furthermore, predicting the duration and impact of any single influencing factor on financial markets is extremely challenging, if not impossible. In 2008, when interest rates plummeted to unprecedented lows, numerous analysts deemed this a temporary anomaly. Contrary to these expectations, rates not only persisted at these low levels for more than ten years but dropped even further in response to the unforeseen COVID-19 pandemic, which significantly affected the global economy and financial markets.

The use of historical blended betas, including 6-month historical betas, is logical because historical blended betas can better measure recent and current market dynamics than just using the 5-year historical betas used exclusively by Mr. Moul. I believe my historical blended betas in conjunction with forward-looking, option-implied betas are logical and appropriate.

Q. ON PAGE 42, LINES 4-6, MR. MOUL CLAIMS THAT YOU USE DATA THAT IS NOT AVAILABLE TO INVESTORS. PLEASE RESPOND.

A. This is simply false. The data I have used is available to any investor that has access to the internet. This means the data I use is more widely available than the data Mr. Moul has used. The betas used by Mr. Moul (Value Line's published 5-year historical betas) are based on the past and therefore it is unlikely they measure current investors' expectations regarding utility betas in particular, and risk and return in general. It is inappropriate to use backward looking measures when data regarding current investor expectations is not available. The purpose of this proceeding is to determine the current, market-based cost of equity. Not only is using historical betas inconsistent with the purpose of this proceeding, research discussed below shows that CAPM results based on historical betas are not consistent with CAPM theory. In other words, Mr. Moul is criticizing me for not implementing the CAPM in a way that has been falsified.

Q. MR. MOUL CLAIMS THAT IT IS UNUSUAL FOR A RATE OF RETURN WITNESS TO CONSIDER THE YIELD ON THE 3-MONTH TREASURY BILL

AS A PROXY FOR THE RISK FREE RATE COMPONENT OF A CAPM ANALYSIS IN RATE CASES. PLEASE RESPOND.

A. I would agree that most rate of return witnesses use the yields on long-term bonds (e.g., 30-year U.S. Treasuries) as a proxy for the risk-free rate, as I do. However, just because this is the practice used by most rate of return witnesses does not mean it is appropriate. Decisions made by rate of return witnesses should be based on the merits or we risk being dogmatic. The problem with using the yield on long-term U.S. Treasury bonds as a proxy for a risk-free rate is that they are not risk free due to opportunity cost. On the other hand, short-term U.S. Treasury bonds are basically risk free. For example, the yield on 3-month U.S. Treasury bills increased from 0.08% to 4.53% between January 3, 2022, and January 3, 2023. The owner of a 3-month U.S. Treasury bill with a $1 million face value would have lost only $11,000 if this change in yield happened on a single day. In comparison, the value for a zero coupon 30-year U.S. Treasury bond would fallen by over $700,000. Clearly 30-year U.S. Treasury bonds are not risk free and 3-month U.S. Treasury bills are nearly risk free. Silicon Valley Bank's collapse in 2023 was possible because of billions of dollars of losses associated with their holding of "risk free" long-term U.S. Treasury bonds that lost their value as interest rates increased.

Q. PLEASE RESPOND TO MR. MOUL'S CLAIM THAT YOUR METHOD IS UNUSUAL AND NON-STANDARD.

A. As explained in my direct testimony, my CAPM is based on methodologies used by Value Line, the Chicago Board of Options Exchange (CBOE), and published in peer-reviewed academic journals (e.g., The Review of Financial Studies). Additionally, it is far from unusual to use stock options to measure investor expectations. For example, the Federal

Reserve Bank of Minneapolis uses stock options to measure implied probability distributions on the S&P 500. The Federal Reserve Bank of Atlanta uses options and futures contracts to measure investors' expectations regarding the federal funds rate.

There are thousands of papers published every year regarding the use of stock options. In 2023 alone, Google scholar reports over 12 thousand papers related to the following search term "using stock options to measure investors' expectations regarding stock returns."[18] Additionally, Microsoft recently released an analytical tool called Projection that shows the expected change in equity prices based on stock option prices. Regarding Projection, Microsoft states the following:

> Projection democratizes advanced methods for visualizing the sentiment of options market participants that were formerly restricted to academics and institutional investors and makes them free for anyone to use. This type of tool is commonly used by professionals to:
>
> - Assess the market implied risk involved in owning an asset
> - Estimate the market implied range of possible outcomes for an asset's future performance.
> - Compare against other sources of market opinion, such as Wall Street analysts' ratings.[19]

Q. PLEASE RESPOND TO MR. MOUL'S CLAIM ON PAGE 42, LINES 2-3 OF HIS REBUTTAL TESTIMONY THAT YOUR CAPM RESULTS ARE UNREASONABLE BY ANY STANDARD MEASURE.

A. My CAPM results (7.50% - 8.22%) are in the middle to upper part of the range of the expectations published by major banks and brokerage houses (6.20% to 9.0%). These

[18] https://scholar.google.com/scholar?hl=en&as_sdt=0%2C7&as_ylo=2023&q=using+stock+options+to+measure+investors%27+expectations+regarding+stock+returns&btnG=

[19] https://www.msn.com/en-us/money/chart?id=a1nwgh&timeFrame=Max&chartType=line&projection=true

equity return expectations are for the overall stock market (e.g., US Large Cap, S&P 500), which should be higher than the return expectations for buying utility stocks because regulated monopoly utilities are lower risk than most, if not all, unregulated companies in the S&P 500, like Tesla and Amazon.

Q. ON PAGE 42 LINE 3 OF HIS REBUTTAL TESTIMONY, MR. MOUL CLAIMS THAT ALL OF YOUR CAPM RESULTS ARE BELOW YOUR DCF RETURN. PLEASE RESPOND.

A. This is false. As show on Table 2, page 11, of my direct testimony, two of my CAPM results are above my sustainable growth DCF results.

Q. ON PAGE 42 OF HIS REBUTTAL TESTIMONY, MR. MOUL CLAIMS THAT YOU SHOULD HAVE USED BETAS THAT ARE WIDELY USED BY INVESTORS INSTEAD OF MANUFACUTRING YOUR OWN "PHANTOM" BETAS. PLEASE RESPOND.

A. Implementing a COE model, including the CAPM, does not require an analyst to know what model(s) or beta coefficients investors use. Some investors buy stocks because of a friend's recommendation, a comment made on cable news or a late-night tweet. The number of models used by investors is unknowable and arguably as numerous as individual investors and constantly changing over time. Mr. Moul's claim that a CAPM methodology should be implemented mechanically with Value Line's published 5-year historical betas because "it is well known" that investors use Value Line betas ignores the complexity of how billions of human beings make decisions. There is a distinction that Mr. Moul ignores between Value Line's approach to calculate betas and Value Line's published betas.

Simply because a beta is published by Value Line does not mean that investors use, or are even aware of, the ever-changing Value Line beta. Additionally, Value Line publishes many different betas for the same company, not just the 5-year historical betas used by Mr. Moul. Regardless of what models investors use, or how they make their investment decisions, their return expectations, and the appropriate cost of equity for Peoples, are represented in the prices investors are willing to pay for stocks, bonds, and options. As such, Mr. Moul's criticisms are without merit.

Q. PLEASE RESPOND TO MR. MOUL'S CLAIM THAT IT IS "WELL KNOWN" THAT INVESTORS RELY ON VALUE LINE DATA AND I SHOULD HAVE USED VALUE LINE BETAS IN MY CAPM.

A. Mr. Moul provides no source of his assertion that it is well known that investors rely on value line data to measure the cost of equity. In my experience, this is not the case and I am highly skeptical of the assertion that the average investor uses Value Line betas to determine the cost of equity or determine what stock to purchase.

Q. ARE YOU AWARE OF RESEARCH THAT PUTS INTO QUESTION THE USEFULNESS OF VALUE LINE'S PROJECTIONS?

A. Yes. A research report published by the Journal of Banking & Finance found that "Value Line's long-term stock return projects are extremely overoptimistic and have no predictive power…"[20] The results of this report provide additional evidence that investors are unlikely to blindly rely on Value Line's data as Mr. Moul suggests.

[20] Andrew C. Szakmary, C. Mitchell Conover & Carol Lancaster. An examination of Value Line's long-term projections. Journal of Banking & Finance, August 2007.

IV. LEVERAGE ADJUSTMENT

A. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING MR. MOUL'S LEVERAGE ADJUSTMENT?

A. No. As stated on page 93 of my Direct Testimony, Mr. Moul's leverage adjustment goes against original cost rate making and should be rejected. Further, the Commission has denied Mr. Moul's leverage adjustment in past cases.[21] I think it is also important to acknowledge that Mr. Moul has, seemingly in a course of business, consistently recommended leverage adjustments for every Pennsylvania public utility company for which he has served as an expert witness since 2018. I am including Mr. Moul's responses to OCA's discovery as Exhibit ALR-1-SR, and they demonstrate that in the 21 cases that Mr. Moul has identified, he has recommended a leverage adjustment in every single one of them.

Q. STARTING ON PAGE 34 OF MR. MOUL'S REBUTTAL TESTIMONY HE CONTINUES TO DEFEND HIS LEVERAGE ADJUSTMENT BY CLAIMING THAT FOR DCF RESULTS TO BE RELEVANT IN THE RATE-SETTING CONTEXT, THE MARKET-DERIVED COST RATE CANNOT BE USED WITHOUT MODIFICATION. PLEASE RESPOND.

A. As stated in my direct testimony, I do not agree with Mr. Moul's use of a leverage adjustment. Mr. Moul explains that the "the leverage adjustment is necessary to make the market-derived DCF results applicable in the rate-setting [context]."[22] Investors

[21] Docket No. R-2017-2640058, Opinion and Order, Page 93.

[22] Mr. Moul's Rebuttal Testimony, Page 34, lines 2-4.

understand that authorized ROEs are applied to book value and almost certainly take this into account when making investment decisions. Additionally, as explained in Appendix A of my direct testimony, market-to-book ratio ratios above one indicates that the cost of equity for gas utility companies is lower than the expected return on book equity. The way Mr. Moul's leverage adjustment works, the higher the market-to—book ratio the greater the adjustment. Therefore, the more authorized ROEs out of line actual market-based cost of equity the higher the leverage adjustment. In does not make sense to charge consumer more because they are already overpaying.

V. SMALL SIZE EFFECT

Q. ON PAGE 43, LINES 12-14 OF HIS REBUTTAL TESTIOMNY, MR. MOUL STATES THAT THE SBBI/MORNINGSTAR YEARBOOK CLEARLY DEMONSTRATES THAT THE SIMPLE CAPM DOES NOT REFLECT THE RETURN THAT IS ASSOCIATED WITH SMALL SIZE. PLEASE RESPOND.

A. As discussed in my direct testimony, Mr. Moul's premium adder for the relatively small size of Peoples is unjustifiable. First, with a requested rate base of over $ 4 billion[23], Peoples is not a small company by any standard. Nevertheless, a proper analysis of the data from Ibbotson SBBI/Morningstar shows that size is a diversifiable risk and therefore does not impact the cost of equity. Professor Aswath Damodaran said the following regarding the supposed "small cap premium." Even if you believe that small cap companies

[23] Volume 4, Exhibit 11 Schedule No. 1

are more exposed to market risk than large cap ones, this is an extremely sloppy and lazy way of dealing with that risk, since risk ultimately has to come from something fundamental (and size is not a fundamental factor).[24]

Additionally, a 2018 study conducted by scholars at AQR Capital Management and Yale University found that "the size effect diminished shortly after its discovery and publication."[25] The authors of this research found that data errors plagued the early studies regarding the relationship between firm size and return. They found that the data in the earlier studies did not include delisted companies and since smaller firms are delisted more often than larger stocks, the biased data (referred as a "delisting bias") made the returns of smaller stocks look higher than reality.[26]

Mr. Moul's CAPM is inflated because he takes additional steps to increase his results for a so-called small firm effect that has been put into serious question by recent research. Therefore, his CAPM overstates Peoples' cost of equity because the risk premium potion of this method is impacted by these exaggerated returns.

[25] Ron Alquist, Ronen Israel, and Tobias Moskowitz, Fact, Fiction, and the Size Effect, *The Journal of Portfolio Management*, Fall 2018, page 3.

[26] Ron Alquist, Ronen Israel, and Tobias Moskowitz, Fact, Fiction, and the Size Effect, *The Journal of Portfolio Management*, Fall 2018, page 5.

VI. RISK PREMIUM METHOD

Q. ON PAGE 45, LINES 9-16, MR. MOUL CLAIMS THAT YOUR RISK PREMIUM, BASED ON THE KROLL SUPPLY-SIDE RISK PREMIUM (4.39%), IS LOWER THAN THE RISK PREMIUM PORITON OF HIS MARKET RISK PREMIUM APPROACH (6.5%) IS UNSUPPORTED BECAUSE IT IS NOT BASED ON ACTUAL MEASURABLE RETURNS. PLEASE RESPOND.

A. First, I do not use the Kroll supply-side equity risk premium analysis in any of my COE models as claimed by Mr. Moul. Nevertheless, I continue to believe that Kroll's equity risk premium analyses, including a resent finding that the equity risk premium is 5.5% shows that Mr. Moul's 6.5% equity risk premium portion of his Market Risk Premium Method is excessive. It should be further noted that Kroll's 4.39% and 5.50% equity risk premium calculations are in comparison to U.S. Treasury bonds, not the corporate bond yields used in Mr. Moul's analysis. Since corporate bond yields are higher than U.S. Treasury bonds, Mr. Moul's equity risk premium would be expected to be lower than those calculated by Kroll. Instead, his 6.50% is significantly higher. Therefore, the results of his own source indicate that his 11.50% COE result is excessive.

Finally, his claim that Kroll's equity risk premium analysis does not rely on "actual measurable returns" revealed by historical data is incorrect. Kroll's supply-side equity risk premium analysis is based on capital market data between 1926 and 2022.[27]

[27] Kroll 2023 SBBI Yearbook, Page 198.

VII. COMPARABALE EARNINGS APPROACH

Q. ON PAGES 45-46 OF HIS REBUTTAL TESTIMONY, MR. MOUL CONTINUES TO DEFEND HIS COMPARABLE EARINGS APPROACH BY CLAIMING THAT IT SATISFIES THE COMPARABILITY STANDARD ESTABLISHED IN THE HOPE CASE. DO YOU AGREE WITH MR. MOUL?

A. No. Mr. Moul's comparable earnings approach does not satisfy the comparability standard established in Hope Nat. Gas Co., 320 U.S. 591,603(1944) as he claims, because investors are not able to earn the return on book equity figures used in this method. As discussed on page 5 of my direct testimony, the legal standards set by the United State Supreme Court require that "The return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."[28] Investors are not able to earn the return on book equity unless the market-to-book ratios of these companies are the same. Mr. Moul has not demonstrated that the market-to-book rations of the companies that he uses in his analysis are anywhere near 1. Therefore, I continue to support my recommendation that the results of Mr. Moul's Comparable Earnings Approach should be disregarded.

VIII. MANAGEMENT PERFORMANCE RECOGNITION

Q. DID MR. MOUL PROVIDE ANY ADDITIONAL EVIDENCE IN HIS REBUTTAL TESTIMONY THAT LEADS YOU TO CHANGE YOUR RECOMMENDATION

[28] Fed. Power Comm'n v. Hope Nat. Gas Co., 320 U.S. 591, 603 (1944).

THAT PEOPLES' ROE SHOULD NOT RECEIVE AN ADDER FOR MANAGEMENT PERFORMANCE?

A. No. As stated on page 100 of my direct testimony, if the Commission decides to authorize Peoples an ROE that is higher than Peoples' market-based COE for its claimed superior management performance, I strongly encourage the Commission use my ROE recommendation of 8.02% (7.67% - 8.37%) without any adjustment for management performance. In addition to the reasons that I identified in my direct testimony, and which other OCA witnesses have indicated in their testimonies, it is also important to note that Mr. Moul consistently recommends adjustments for management performance seemingly as a course of business, noting that since 2018, he recommended management performance adders for 18 of the 21 Pennsylvania public utility cases in which he provided expert testimony. Exhibit ALR-1-SR. Thus, Mr. Moul's recommendation should be considered in the context that, in his opinion, over 85% of Pennsylvania public utilities had exemplary management performance.

IX. CAPITAL STRUCTURE

Q. ON PAGE 4 OF HIS REBUTTAL TESIMONY, MR. MOUL CLAIMS THAT YOUR RECOMMENDED CAPITAL STRUCTURE IS FACTUALLY WRONG AND CONTRARY TO LONG-STANDING COMMISSION PRACTICE AND PRECEDENT. PLEASE RESPOND.

A. I disagree with Mr. Moul that my capital structure recommendation is contrary to Commission practice and precedent. On page 11 of his rebuttal testimony, Mr. Moul explains that "The Company's actual capital structure ratios are entirely reasonable and

acceptable." I don't disagree that that the Commission should authorize a reasonable capital structure, but the problem in this case is that Peoples' capital structure, as proposed by Mr. Moul, is unreasonable and unfairly prejudices ratepayers. As shown on Exhibit ALR-5, page 5 of my direct testimony, the average common equity ratio used by the 5 companies in my proxy group is 47.2%, significantly less than the 54.67% common equity ratio recommended by Mr. Moul. Mr. Moul's recommended capital structure is not reasonable because it is fundamentally inconsistent with the capital structure ratios used by gas utility companies to raise capital. Therefore, I continue to recommend that Peoples' regulatory capital structure should have a common equity ratio of 50.0%.

X. COMPANIES IN MY PROXY GROUP

Q. ON PAGES 13 AND 14 OF HIS REBUTTAL TESTIMONY MR. MOUL ARGUES THAT HIS PROXY GROUP OF 7 GAS UTILTIY COMPANIES IS MORE APPROPRIATE THAN YOUR PROXY GROUP OF 5 GAS UTILITY COMPANIES. PLEASE RESPOND.

A. My RFC Gas Proxy Group includes 5 of the 8 companies in Mr. Moul's proxy group. I stand by my choice to not include 3 of the companies in my proxy group (Chesapeake Utilities Corp., New Jersey Resources Corp, and Southwest Gas Corp) because I believe they are not in the same risk category as Peoples. Mr. Moul claims that it is appropriate to include these 3 companies in a COE analysis because all of them have greater than 64% of

their assets dedicated to utility operations.[29] The five companies in my proxy group have between 80% and 100% of assets dedicated to utility operations, which indicates they are a better fit than 3 of the 8 companies in Mr. Moul's proxy group which all have less than 80% of assets dedicated to utility operations.[30] Peoples is a regulated public utility and the companies I excluded from my group are not fairly comparable to Peoples' level of risk as a regulated public utility. On the facts of this case, I do not believe that reliance upon these excluded entities provides a fair comparison that should be used as any basis for establishing rates for Peoples' customers. Reliance upon the excluded companies would require the Commission to consider unregulated risk that Peoples' investors are not facing, and it would transfer that artificial risk onto Peoples' ratepayers.

XI. CONCLUSION

Q. PLEASE SUMMARIZE YOUR REACTION TO MR. MOUL'S REBUTTAL TESTIMONY.

A. Mr. Moul's criticisms of my Direct Testimony should be rejected. If adopted, my cost recommendations would allow Peoples to raise the capital it needs to provide safe and reliable service because my recommendations are consistent with investors' return expectations.

[29] Mr. Moul's Rebuttal Testimony, Page 14, lines 3-5.

[30] Mr. Moul's Rebuttal Testimony, Page 14, lines 2-3.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-II-010

Witness: Moul, Paul **Title:** Managing Consultant, P. Moul & Associates

Question: Please provide a chronological list of utility cost of capital testimonies submitted by Paul R. Moul in Pennsylvania since 2018 and include the following information:

a. Identify the company for whom Mr. Moul testified;

b. Identify the case docket number; and

c. Identify the cost of equity that Mr. Moul recommended;

d. Identify the method(s) used to calculate a recommended cost of equity in each case;

Answer: Please refer to the Microsoft Excel spreadsheet that is attached.

Submit Date: 1/30/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-II-011

Witness: Moul, Paul **Title:** Managing Consultant, P. Moul & Associates

Question: For each of the cases identified in response to OCA Set II, Question 10, provide the following information:

a. Indicate whether Mr. Moul recommended that a leverage adjustment be made to account for claimed differences in market value and book value differences; and

b. For each case, indicate whether Mr. Moul recommended a risk adjustment to account for the size of the company.

Answer:
a. Mr. Moul has proposed a leverage adjustment in all of the cases listed on the attachment to the response to interrogatory OCA-II-10. Many of these cases have been resolved by settlements that do not address the rate of return issue. In the three cases where the Commission set the equity return on non-settled cases, there was no recognition provided for the leverage adjustment. The Commission included a leverage adjustment in the list of cases provided below.

- January 10, 2002 for Pennsylvania-American Water Company in Docket No. R-00016339 -- 60 basis points adjustment.
- August 1, 2002 for Philadelphia Suburban Water Company in Docket No. R-00016750 --80 basis points adjustment.
- January 29, 2004 for Pennsylvania-American Water Company in Docket No. R-00038304 (affirmed by the Commonwealth Court on November 8, 2004) -- 60 basis points adjustment.
- August 5, 2004 for Aqua Pennsylvania, Inc. in Docket No. R-00038805 -- 60 basis points adjustment.
- December 22, 2004 for PPL Electric Utilities Corporation in Docket No. R-00049255 --45 basis points.
- February 8, 2007 for PPL Gas Utilities Corporation in Docket No. R-00061398 -- 70 basis points adjustment

b. Please refer to the attachment provided in response to interrogatory OCA-II-10.

Submit Date: 1/30/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-II-012

Witness: Moul, Paul **Title:** Managing Consultant, P. Moul & Associates

Question: For each of the cases identified in response to OCA Set II, Question 10, provide the following information:

a. If Mr. Moul recommended an upward adjustment to return on equity to account for management performance, identify the recommendation

b. For each of Mr. Moul's identified recommendations in subsection (a), indicate whether the case concluded with adoption of Mr. Moul's recommendation.

Answer:

a. Please refer to the attachment provided in response to interrogatory OCA-II-10.

b. The Commission has adopted a return on equity above the midpoint of the range of reasonable returns to recognize the exemplary performance of a utility's management in numerous cases. This process has resulted an additional increment to the equity return where the Commission added 25 basis points to the return in the case of West Penn Power Company, 22 basis points to the return in the case of Aqua Pennsylvania, 12 basis points to the return in the case of PPL Electric Utilities, 5 basis points in UGIU – Electric Division, and 25 basis points in the most recent Aqua Pennsylvania rate case. The range for management performance has been 5 to 25 basis points.

SURREBUTTAL TESTIMONY
OF
CLARENCE L. JOHNSON

ON BEHALF OF
OFFICE OF CONSUMER ADVOCATE

May 3, 2024

SURREBUTTAL TESTIMONY OF CLARENCE JOHNSON

I. INTRODUCTION....1

II. SUMMARY....1

III. CLASSIFICATION OF MAINS IN THE CCOSS....3

A. PII WITNESS BAUDINO....3

B. PEOPLES WITNESS ZARUMBA....7

IV. LARGE CUSTOMER SERVICE PERSONNEL....12

V. CLASS REVENUE DISTRIBUTION....15

VI. RESIDENTIAL CUSTOMER CHARGE....20

VII. WEATHER NORMALIZATION ADJUSTMENT (WNA)....22

VIII. DISCOUNT RATES TARGETED AS ELECTRICITY COMPETITION....28

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Clarence L. Johnson. My business address is 3707 Robinson Ave, Austin, Texas 78722.

Q. ON WHOSE BEHALF ARE YOU PRESENTING SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. I am presenting surrebuttal testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). I note that I previously submitted direct testimony, OCA Statement 4, and rebuttal testimony, OCA Statement 4R, in this case on March 22, 2024 and April 18, 2024, respectively.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS CASE?

A. My surrebuttal testimony will address the following rebuttal testimony of Peoples Industrial Intervenors (PII) witness Mr. Richard Baudino , Peoples witnesses Ms. Carol Scanlon, Mr. Luke Ravenstahl, Mr. Ralph Zarumba, and Office of Small Business Advocate (OSBA) witness Mr. Robert Knecht.

II. SUMMARY

Q. PLEASE SUMMARIZE THE ISSUES DISCUSSED IN YOUR SURREBUTTAL TESTIMONY.

A. My conclusions are as follows:

- Contrary to the rebuttal testimony of Mr. Baudino, Mr. Zarumba, and Mr. Knecht, distribution mains should be classified and allocated based on the Peak & Average method. I disagree with their recommendation that a portion of main costs is customer-

related.

- Mr. Baudino, Mr. Zarumba, and Mr. Knecht propose class revenue allocations that rely too heavily on cost of service studies which classify the costs of mains as customer-related, which in turn allocates an excessive amount of the revenue increase to the residential class. For that reason, their rebuttal of OCA's revenue allocation should be rejected.
- The costs associated with personnel dedicated to serving current and prospective large commercial and industrial customers should be assigned to the MGS, LGS, and MLS classes. Mr. Zarumba's rebuttal testimony accepting this adjustment to the allocation of customer service costs is reasonable. The rebuttal testimony of Mr. Baudino and Mr. Knecht opposing or curbing this allocation change is contrary to cost causation and should be rejected.
- The residential customer charge should be limited to recovery of costs which vary directly with the number of customers. Mr. Zarumba's rebuttal testimony incorrectly claims that my "basic customer charge" calculation is an inappropriate marginal cost analysis. His rebuttal testimony erroneously characterizes my customer charge recommendation and should be rejected.
- The Company's Weather Normalization Adjustment (WNA) is an unsupported and unjustified proposal which shifts the risk of weather impact to customers. The WNA is also inconsistent with giving ratepayers price signals for energy efficient actions. The rebuttal testimonies of Mr. Zarumba and Ms. Scanlon fail in their attempt to justify the

proposed WNA, relying heavily upon the existence of other utilities' mechanisms instead of supporting Peoples' proposal.

- The Company's proposal to revised Tariff Rule 20 to establish electricity as a competitive option which justifies discounted rates should be denied. Mr. Ravenstahl's rebuttal testimony defending the request relies upon reasons which are not consistent with the public interest. I stand by my position in direct testimony that the Commission should avoid this unjustified expansion of negotiated rate authority because of the significant risk of price discrimination within Peoples' rate classes where mere claims of electric competition is an insufficient basis for discounted rates.

III. CLASSIFICATION OF MAINS IN THE CCOSS

A. PII WITNESS BAUDINO

Q. MR. BAUDINO ASSERTS THAT A 50% WEIGHTING OF AVERAGE DEMAND AND PEAK DEMAND IN THE PEAK & AVERAGE METHOD (P&A) HAS "NO ANALYTICAL BASIS OR SUPPORT.[1]" DO YOU AGREE WITH HIS ASSERTION?

A. No. The 50% weighting of average demand and peak demand is based on the Commission's traditional application of Peak & Average in gas utility cases. However, as noted in my direct testimony, economies of scale provide an analytic basis for P&A results. System average demand represents the size of mains that would be required to serve a constant rate of daily usage. The pipes required to serve this constant rate of usage would be considerably smaller than pipes sized to meet max day usage. The incremental cost of

[1] PII St. No. 1 at 5.

sizing mains to meet maximum daily demand is represented by the peak demand ("design day demand") component of P&A. The system load factor is the ratio of system max day demand to system average day demand. However, this ratio does not reflect economies of scale that affect the incremental cost of serving peak demand. Increasing the size of pipes is subject to a decreasing rate of higher cost. A reasonable rule of thumb for the economy of scale factor is 0.5.[2] The Peoples' combined system load factor is approximately 26%.[3] Adjusting the load factor for economies of scale, the appropriate ratio between average day demand and max day demand is 50.9% average demand and 49.1% peak demand.[4] Therefore, the traditional use of 50% as the weighting factor for average demand and peak demand is a reasonable approximation to recognize the impact of economies of scale. As stated in my direct testimony, the incremental cost for increasing the diameter of mains to serve peak demand is less than average cost, due to economies of scale.[5] Therefore, a reasonable approach tempers the emphasis on peak demand by also recognizing average demand.

---

2 Scale Economies and The 0.6 Rule," (M. Tribe and R. Alpine) *Engineering Costs and Production Economics*, 10 (1986) 271-272. The scale factor based on the relationship between surface area and volume for tanks and pipelines is 0.667 and 0.50, respectively.

3 The information referenced was provided by the OSBA to all parties, Judge Long, and designated Commission Staff from the Bureau of Technical Utility Services via email on March 28, 2024, and it was labeled "IEcWP4 Allocation Factors0328," Tab "Ext Factor Summary" Cell d14 The worksheet is too voluminous to append to my testimony

4 Scale factors are applied as an exponent. Therefore, $26^{.50}\% = 50.9\%$. The weighting factor peak demand is 49.1% (1 minus the adjusted load factor).

5 OCA Statement 4 at 23.

Q. DO YOU AGREE WITH MR. BAUDINO'S CLAIM THAT ECONOMIES OF SCALE RELATED TO INCREASINGLY LARGER PIPE SIZES "HAS NO RELEVANCE[6]" TO THE CLASSIFYING AND ALLOCATION OF TOTAL MAIN COSTS?

A. No. Cost causality for installing mains has more than a single dimension. The relationship between main size and main cost is not linear, due to economies of scale. Allocating the total cost based on max day demand assumes a linear relationship exists between main cost and higher usage on peak days. This assumption is inappropriate and can be corrected by using the P&A method, as I have just described.

Q. MR. BAUDINO CLAIMS THAT THE COMPANY'S ONGOING INVESTMENT IN REPLACEMENT AND REPAIR OF LEAK-PRONE MAINS DOES NOT JUSTIFY ALLOCATING 50% OF MAINS COST ON AVERAGE DEMAND.[7] IS HE CORRECT?

A. No. As discussed in my direct testimony, leak prone mains cause commodity losses, and therefore efforts to repair the leaks should be allocated on an average demand basis. Mr. Baudino apparently views this as a minor contributor to cost causation. However, as stated in my direct testimony, the investment program is $1.512 billion, which constitutes a substantial increase to total current mains investment.[8] Mr. Baudino also claims that leak repair is part of the Company's responsibility to deliver gas during the system peak. But his argument ignores the fact that gas leakage occurs throughout the year. The system peak

6 PII Statement No. 1 at 5.
7 PII Statement No. 1 at 6-7.
8 OCA Statement 4 at 24.

day is one out of 365 days, and leaks occurring on any of the 365 days are a concern both for safety and minimizing gas losses.

Q. ON PAGE 8 OF HIS REBUTTAL TESTIMONY, MR. BAUDINO DISAGREES WITH YOUR DISCUSSION OF DR. BONBRIGHT'S *PRINICIPLES OF PUBLIC UTILITY RATES* BECAUSE THE TEXTBOOK'S CRITICISM OF THE MINIMUM SYSTEM METHOD IS BASED ON AN ELECTRIC UTILITY. WHY IS MR. BAUDINO'S OBJECTION MISGUIDED?

A. Dr. Bonbright's critique of the minimum system method is based on the lack of causal connection between the number of customers and the mileage of distribution facilities, and that critique is valid beyond the electric industry. Dr. Bonbright points out that customer density distorts any relationship between customers and delivery facility costs. This criticism applies whether the delivery facility costs are based on mileage of conductors or mileage of mains. Mr. Baudino omits critical content from Dr. Bonbright, who actually stated that "in order to simplify the exposition of a typical fully apportioned cost analysis," he would refer to a hypothetical electric utility company. Importantly, Dr. Bonbright also indicated that the classification of utility plant into customer, energy/volumetric, and demand components applies to both gas and electric rates.[9] Aside from omitting critical context, Mr. Baudino's rebuttal testimony appears to be contradictory on this point, because he then proceeds to rely upon a 2004 PPL Electric case to validate the use of the minimum system concept.[10]

[9] *Principles of Public Utility Rates* at 346 (Bonbright) 1961.
[10] PII Statement No. 1-R at 8.

B. PEOPLES WITNESS ZARUMBA

Q. MR. ZARUMBA CRITICIZES YOUR QUOTATION OF DR. BONBRIGHT'S *PRINCIPLES OF PUBLIC UTILITY RATES,* ASSERTING THAT RELYING UPON A MORE RECENT 1988 EDITION OF THE BOOK WOULD BE A BETTER SOURCE OF INFORMATION.[11] DO YOU AGREE?

A. No. I intentionally chose to quote the original 1961 textbook[12] because it is recognized as foundational to the study of utility regulation and it is the version which has influenced so many experts and scholars in the field.[13] This is the only version solely authored by Dr. Bonbright: the 1988 edition was published five years after Dr. Bonbright's death, with additions and edits made by two other authors. [14] Moreover, Mr. Zarumba never addresses or focuses upon the insight provided by Dr. Bonbright's analysis of the minimum system concept. The only causal connection between customer count and distribution investment is the linear feet of installed lines or pipes. But the relative density of customer locations distorts the usefulness of this relationship. As stated by Dr. Bonbright, "if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs..."[15] As discussed in my rebuttal testimony of Mr. Baudino, large commercial and industrial customers tend to have lower spatial density,

---

11 Peoples Statement No. 15-R at 28.

12 The referenced quotations discuss the minimum system concept and are excerpted at OCA Statement 4 at 13.

13 The index to Alfred E. Kahn's *The Economics of Regulation* (1988) references 25 citations to Bonbright's 1961 *Principles of Public Utility Rates*.

14 Mr. Johnson provided the Company with a web link for downloading the 1961 edition of Bonbright's *Principles of Public Utility Rates*, PNG-OCA-I-004.

15 James C. Bonbright, *Principles of Public Utility Rates*, Columbia University Press, 347-349 (1961).

given the nature of their industrial processes and large structures. Urbanized residential customers tend to be more densely populated, frequently located in multi-family dwellings.

Q. MR. ZARUMBA GOES ON TO DISCUSS THE DESIGN EFFORT AND LABOR COSTS REQUIRED TO DIG A TRENCH FOR A MAIN, STATING THAT A LARGE PERCENTAGE OF THE MAIN COST IS INCURRED BEFORE THE CUSTOMER EVER USES ONE UNIT OF GAS.[16] DOES THIS JUSTIFY ALLOCATING THE COSTS ON THE BASIS OF THE CUSTOMER COUNT?

A. No. After describing the construction and engineering activities causing these indirect costs, he makes a conclusory statement that "as a result the costs…are fundamentally customer-related in nature." The existence of engineering overhead and construction labor expense does not create a customer-related cost.[17] The design, engineering, and trench activities are required regardless of the number of customers. The main could be serving one large industrial customer or dozens of residential customers—in either case, similar non-pipe related costs are required. Mr. Zarumba tries to argue that a portion of main cost is not caused by demand—but this does not prove that the cost is caused by the number of customers. To some extent, a portion of main costs may be influenced by terrain, locations of population centers, and the geographic configuration of the service area. I would describe those factors as franchise costs which are more justifiably allocated based on the customers' usage of the utility system. In my opinion, the Peak & Average method reasonably reflects the general allocation appropriate for franchise costs.

---

16 Peoples Statement No. 15-R at 28-29.

17 If this were true, then electric utilities would allocate power generation plants as a customer cost, since much of the plant cost is comprised of engineering, design effort, and construction labor cost.

Q. MR. ZARUMBA DISAGREES WITH DR. BONBRIGHT'S QUOTATION THAT SOME PORTION OF MINIMUM SYSTEM COST SHOULD BE TREATED AS UNALLOCABLE, CALLING THAT VIEW "QUESTIONABLE FROM A POLICY PERSPECTIVE.[18]" IS THIS A REASONABLE VIEW OF DR. BONBRIGHT'S CAUTIONARY STATEMENT?

A. No. I think he misses the point that some costs may not fit clearly into demand or customer costs, leading cost analysts to force them into the customer category where the costs do not belong. Dr. Bonbright states:

> [The cost analyst] is the prisoner of his own assumption that "the sum of the parts equals the whole." He is therefore under impelling pressure to "fudge" his cost apportionments by using the category of customer costs as a dumping ground for costs that he cannot plausibly impute to any of his other cost categories.[19]

Mr. Zarumba's conclusion that some construction costs are fundamentally customer-related treats the customer category as a default classification. This approach inappropriately uses the customer classification as a "dumping ground" for costs which do not fit into clear categories.

[18] Peoples Statement No. 15-R at 28.
[19] Bonbright at 349.

Q. MR. ZARUMBA CRITICIZES YOUR POSITION THAT THE COMPANY'S MINIMUM SYSTEM MODEL CONTINUES TO INCLUDE CAPACITY COSTS. HIS CRITICISM CLAIMS THAT YOUR TESTIMONY ERRONEOUSLY CONTENDS THAT LABOR INSTALLATION COSTS ARE RELATED TO CAPACITY.[20] IS THIS A CORRECT INTERPRETATION OF YOUR TESTIMONY?

A. No. Mr. Zarumba misunderstands the labor installation ratio methodology. My direct testimony states that the Company's small 5.6% reduction to the minimum system is insufficient to remove capacity costs.[21] My testimony suggested that alternative methodologies for achieving a no capacity cost minimum system demonstrate that the adjustment should have been larger. As an example, an alternative methodology includes only labor installation cost, with no material cost, because the labor cost tends to vary less with the size of main. This analysis showed that a "no capacity" minimum system should be no higher than 15.3% of total main cost, compared to the Company's 48%.[22] Contrary to Mr. Zarumba's claim, the installed labor cost method assumes that construction labor costs do *not* vary with the size of the pipeline. Therefore, his subsequent discussion of the impact of rock or soil on labor cost is irrelevant. More importantly, his rebuttal does not demonstrate that all capacity costs were removed from the Company's minimum system. If one accepts Mr. Knecht's zero intercept methodology, as another example, that result

---

20 Peoples Statement No. 15-R at 30-31.

21 If capacity costs are not completely removed from the minimum system, the resulting customer classification will overcharge low use customer classes (primarily the residential class), due to double counting the allocation of demand costs. OCA Statement 4 at 14-15.

22 OCA Statement 4 at 16.

would suggest that the Company's 5.6% adjustment should be four times larger, thus implying that significant demand-related costs continue to be double counted by the Company's minimum system method.

Q. AT PAGE 25, MR. ZARUMBA CITES THE NARUC GAS DISTRIBUTION RATE DESIGN MANUAL AS SUPPORT FOR A DEMAND/CUSTOMER METHOD OVER THE PEAK & AVERAGE METHOD.[23] DOES THAT SOURCE SUPPORT ONLY USING THAT METHOD FOR CLASSIFYING MAINS?

A. No. The manual describes various methods used by rate experts and regulatory authorities. After describing the minimum system method, the manual explains that the "basic system method" is an alternative methodology:

> The contra argument to the inclusion of certain distribution costs as customer costs is that mains and services are installed to serve the demands of consumers and should be allocated to that function. Under this basic system theory, only those facilities, such as meters, regulators, and service taps, are considered to be customer-related, as they *vary directly with the number of customers* on the system. (emphasis added) [24]

The Manual also recognizes the Peak & Average method as a valid allocation for mains, stating that the method is a "compromise between coincident and non-coincident peak demand methods" and after allocating a portion of main cost based on average use, "the remaining costs are considered to have been incurred to meet the individual peak demands of classes of service…"[25]

---

[23] I note that PII witness Baudino made the same claim on page 8 of his rebuttal testimony, and therefore my response here applies to his claim as well.

[24] NARUC Gas Distribution Rate Design Manual at 23.

[25] Ibid. at 27-28.

IV. LARGE CUSTOMER SERVICE PERSONNEL

Q. DO OTHER PARTIES COMMENT ON YOUR PROPOSED ASSIGNMENT OF LARGE CUSTOMER SERVICE PERSONNEL TO THE MGS, LGS, AND MLS CLASSES?

A. Yes. The OCA CCOSS assigned the cost of customer service representatives who are dedicated to serving large commercial and industrial customers to the MGS, LGS, and MLS classes. On behalf of the Company, Mr. Zarumba agreed that an adjustment should be made, and accepted a direct assignment of these costs to those three classes but reduced the size of the adjustment.[26] Mr. Baudino opposed the adjustment, arguing that the cost amount came from an interrogatory response which was not clear.[27] Mr. Knecht said that the adjustment may be conceptually justified but contends that it allocates too much cost to the MGS class.[28]

Q. CAN YOU RESPOND TO MR. BAUDINO'S AND MR. KNECHT'S COMMENTS?

A. Yes. Mr. Baudino focuses on the wording of the OCA interrogatory which requested the costs of staff involved primarily in contacts with current and proposed large commercial and industrial customers. He says that the Company's response does not clarify whether the identified staff persons are involved in solely serving those customers. He asserts that the adjustment cannot be accepted without more information regarding those individuals' duties.[29] The primary response to Mr. Baudino's concern is that the Company witness largely agreed with the adjustment and accepted the direct assignment of service costs to

---

26 Peoples Statement No. 15-R at 34.
27 PII Statement No. 1-R at 10.
28 OSBA Statement No. 1-R at 5.
29 PII Statement No. !-R at 10.

MGS, LGS, and MLS classes. The Company is the only party which knows these individuals' duties and responsibilities and the Company accepted the allocation revision. Furthermore, the Company interrogatory response, which I previously included in my direct testimony as Exhibit CJ-6, characterizes the identified personnel as the "team[that] serves as the primary point of contact and account managers for our large commercial and industrial customers," and it contains a detailed description of their duties.

Mr. Knecht opines that the personnel probably devote more time to LGS customers than MGS customers, because of the greater complexity of the meters and billing issues. He disagrees with an allocation between these two classes that is based on revenues. In his view, an allocation in excess of 50% to MGS is excessive.[30] He suggests that he may propose an alternative volumetric allocation of the large customer service costs as part of his surrebuttal testimony.[31] I do not necessarily object to Mr. Knecht's impression that the personnel spend more time on LGS customers than MGS, nor would I necessarily oppose a volumetric allocation between MGS and LGS/MLS. However, I would note that his justification for a different allocation to the MGS class is based solely on his opinion as opposed to any data or evidence supplied by the Company. But I do oppose his suggestion that he might prefer no adjustment because the size of the issue is small. The relatively minor issue he raises regarding the allocation to the MGS class does not justify allocating 98% of the expense to residential and small commercial classes who receive no benefit from these service personnel.

[30] My adjustment assigned 50.5% of the cost to MGS.
[31] OSBA Statement No. 1-R at 5.

Q. WHAT IS YOUR RESPONSE TO MR. ZARUMBA'S RECOMMENDATION ON THIS ISSUE?

A. Mr. Zarumba agrees in concept with my recommended allocation adjustment for large customer service personnel. However, "after further detailed review" he determined that a portion of the identified cost was not included in revenue requirements and another fraction of the cost was included in capital costs which are difficult to track. Therefore, he proposed reducing the large commercial/industrial customer service costs to $728,049 instead of $1.3 million.[32] Given the administrative difficulty of adjusting capital costs at this point in the proceeding, I am agreeable to reducing the direct assignment to $728,048, provided that the Company presents a more complete identification of this cost in its next rate case. I recommend that the Company directly assign the large customer service allocation for both capital and expense components related to the large customer personnel in the CCOSS filed in its next rate case. In addition, Mr. Zarumba revised the large customer allocator by using the allocation factors for the underlying accounts excluding the residential and small commercial classes. I do not object, because it appears that the allocation among the MGS, LGS, and MLS classes (50% MGS, 45% LGS, 5% MLS) is virtually the same as my proposal.[33]

[32] Peoples Statement No. 15-R at 34.

[33] Peoples Exhibit RNZ-R-4;RNZ-R-2B-Rebuttal CCOSS Average & Peak. Sheet: "Rebuttal Adjustment Incr."

V. CLASS REVENUE DISTRIBUTION

Q. PLEASE DISCUSS THE PARTIES' REVENUE ALLOCATION METHODS AS SET OUT IN THEIR REBUTTAL TESTIMONY.

A. Three parties (Peoples, PII, and OSBA) attempt to average CCOSS methods as the framework for their revenue increase allocation recommendations. Two parties (OCA and I&E) prepare revenue allocations based on applying gradualism constraints to the Peak & Average (P&A) CCOSS. The former group opposes the OCA and I&E revenue allocation proposals because they do not agree with selecting the P&A as the appropriate cost of service methodology. My direct testimony addresses the reasons for adopting P&A and this surrebuttal testimony addresses rebuttal arguments presented by Mr. Baudino and Mr. Zarumba regarding the appropriate CCOSS method.

Q. DOES OSBA PRESENT A DIFFERENT APPROACH TO AVERAGING CCOSS METHODS?

A. Yes. Mr. Zarumba and Mr. Baudino favor averaging the results of the P&A and Demand/Customer CCOSS, albeit with a more favorable result for LGS and MLS in Mr. Baudino's revenue allocation. Mr. Knecht, on behalf of OSBA, proposes averaging the OSBA recommended Demand/Customer CCOSS with the results of the Company's revenue allocation proposal, which is, itself, and averaging of methods.[34] The revenue allocation proposed in Mr. Knecht's direct testimony was based on a different total revenue increase percentage (30.5%) than the revenue increase used by all of the other parties (34.4%). Therefore, my rebuttal testimony was unable to fully evaluate and compare his

[34] OSBA Statement 1 at 45.

revenue allocation proposal with the proposals of other parties. In his rebuttal testimony, Mr. Knecht restates and compares his revenue allocation at the 34.4% total increase, as well as the 30.5% stated in his direct testimony. For that reason, my surrebuttal testimony will briefly focus on Mr. Knecht's revenue allocation proposal.

Q. DO YOU AGREE WITH MR. KNECHT'S APPROACH TO REVENUE ALLOCATION?

A. No, even if one accepts the notion that revenue allocation recommendations should be based on averaging CCOSS methods, Mr. Knecht's proposal is illogical. Mr. Knecht's proposed Demand/Customer CCOSS is based on revising the customer percentage in the Company's Demand/Customer CCOSS. According to Mr. Knecht, the zero intercept study he implemented produces a more accurate customer percentage because it excludes capacity costs from the minimum system.[35] Therefore, assuming he is correct, the more logical approach to his revenue allocation would *substitute* the OSBA Customer/Demand CCOSS for the Company's Customer/Demand CCOSS before averaging the results with the Peak & Average CCOSS.

Q. HAVE YOU COMPARED THIS MORE LOGICAL AVERAGING APPROACH TO THE OSBA AND COMPANY REVENUE ALLOCATION PROPOSALS SHOWN ON MR. KNECHT'S REBUTTAL TABLE R-3?

A. Yes. For purpose of the comparison, I averaged the results of Mr. Zarumba's Rebuttal P&A CCOSS with Mr. Knecht's Customer/Demand (CD) CCOSS. If one accepts Mr. Knecht's claim that his CD CCOSS is an improvement over the Company's CD CCOSS,

[35] OSBA Statement No. 1-R at 3-4.

this is the more reasonable method of deriving a revenue allocation, because it simply substitutes his CD CCOSS for the Company's CD CCOSS. Then I compared the results of the average of his CCOSS and Mr. Zarumba's P&A CCOSS with the proposed revenue allocation displayed in Mr. Knecht's Rebuttal Table 3-R. As shown in the table below, using a 50-50 average of Mr. Knecht's CD CCOSS and Mr. Zarumba's Rebuttal P&A CCOSS produces more favorable results for the residential class than either the Company's or OSBA's revenue allocation recommendations. I do not support this average approach to revenue allocation because I oppose utilizing a customer/demand CCOSS for revenue allocation. However, the comparison demonstrates that a more reasonable approach to using the customer/demand CCOSS would have reduced the revenue allocation to the residential class. Both the OSBA and Peoples' revenue allocation proposals assign an excessive part of the revenue increase to the residential class.

	Company Total Rev Increase					
	Total	**RES**	**SGS**	**MGS**	**LGS**	**MLS**
Zarumba Rebuttal P&A	$173,738	$105,836	$23,237	$32,893	$2,225	$9,547

P&A
IEcWP7Ec PNC CCOS

Q. MR. ZARUMBA DISCUSSES GRADUALISM LIMITS APPLIED TO THE PARTIES' REVENUE ALLOCATION PROPOSALS. DO YOU GENERALLY AGREE?

A. Yes. He asserts that a maximum increase of 1.5 times the system average increase is reasonable[36]. In his rebuttal of Mr. Baudino's position, Mr. Zarumba states that a floor to the minimum class increase should also be adopted. My direct testimony presents an alternative gradualism revenue allocation (OCA Statement 3, Exhibit CJ-2) which applies a 1.5 times system average maximum limit to SGS and MGS revenue increases and a floor of 0.5 times system average minimum increase to the LGS class. Adoption of my recommended alternative revenue allocation is reasonable and consistent with gradualism policy.

Q. MR. KNECHT, ON PAGE 13 OF HIS REBUTTAL TESTIMONY, SUGGESTS THAT THE SHORTFALL ASSOCIATED WITH THE MLS DISCOUNTED RATES SHOULD BE ALLOCATED TO ALL CUSTOMERS AND NOT JUST THE LGS CLASS. DO YOU AGREE?

A. No. My rebuttal testimony[37] opposed Mr. Baudino's recommendation on this issue, and the reasoning set forth therein is equally applicable to Mr. Knecht's support of Mr. Baudino's position. General allocation of the revenue shortfall is contrary to cost causation, because the customers who benefit from the negotiated rates originated in the LGS class. Furthermore, it results in an allocation of the discounted rate program cost to the residential

[36] Peoples Statement No. 15-R at 37.
[37] OCA Statement 4R at 19-22.

class, which is particularly inequitable given the direct assignment of CAP and LIURP program costs to the residential class.

Q. MR. BAUDINO ARGUES THAT YOUR REVENUE ALLOCATION INCREASES LGS RATES BY AN EXCESSIVE PERCENTAGE. DO YOU AGREE?

A. No. Exhibit CJ-3, which was included with my direct testimony, OCA Statement 4, sets forth my proposed distribution of the class revenue increases as limited by gradualism constraints. Based on the Peak & Average CCOSS, two classes produce excessive relative rates of return at present rates: Residential and LGS. My gradualism proposal placed a floor (minimum increase) for the LGS class equal to 50% of the system average increase. The residential class receives an increase which is 87% of the system average increase. Therefore, the class producing the highest relative rate of return bears a minimum increase equal to 50% of system average. The residential class, which also produces an above average relative rate of return, bears an increase 13% below the system average. This is reasonable and consistent with the traditional application of gradualism. In addition, the 50% floor applied to the LGS class is symmetric with the 150% of system average cap placed on the MGS and SGS increases.

Q. MR. KNECHT CONTENDS THAT OCA'S CLASS REVENUE ALLOCATION, EVEN AS LIMITED FOR GRADUALISM, PRODUCES EXCESSIVE INCREASES TO THE COMMERCIAL CLASSES ON A DIVISIONAL BASIS. CAN YOU RESPOND TO THAT CRITICISM?

A. Yes. My recommendation is based on the assumption that the Company is moving toward uniform rates in this proceeding. Therefore, the gradualism limits are properly based on

system, rather than division, revenues. Mr. Knecht's reference to "eye popping" increases is in part caused by the magnitude of the system revenue increase, which will likely decline substantially if the Commission reduces the requested revenue requirement. The classes' relative increase percentages on a divisional basis reflect the disparity in current rate levels between the two divisions. If Mr. Knecht believes the revenue increase assigned to SGS or MGS on a system basis is too high on a percentage basis in the Peoples Natural Gas Division (PNGD), the appropriate remedy is to request transitional rates for those two classes which reduce the disparity in the magnitude of revenue increase applied to each division. To my knowledge, Mr. Knecht did not make sure a request.

VI. RESIDENTIAL CUSTOMER CHARGE

Q. MR. ZARUMBA CLAIMS THAT YOUR CUSTOMER CHARGE TESTIMONY EMBRACES THE CONCEPT OF MARGINAL COST PRICING.[38] HE OPPOSES YOUR APPROACH BECAUSE HE CLAIMS IT IS INCONSISTENT WITH ALLOCATED CLASS COST OF SERVICE. IS THIS OBJECTION WELL-FOUNDED?

A. No. Mr. Zarumba says that my objective of limiting the customer charge to costs which vary with the number of customers is contrary to the theory of the CCOSS which allocates embedded costs among customer classes. However, his testimony confuses class cost allocation --which allocates total costs to customer classes--with rate design, which develops rates to recover costs within each customer class. Marginal and incremental cost principles are frequently considered in the rate design process because price efficiency is

[38] Peoples Statement No. 15-R at 39.

an important criterion for evaluating rates. Cost allocation is concerned with fairly apportioning total costs among customer classes. Rate design focuses on the component rates charged to end use consumers and should consider several pricing objectives, including public policy, economic efficiency, and the manner in which the customers respond to prices. From an economic perspective, residential rates should convey usable pricing information to the end user so that they can respond by controlling their usage of utility service. In a two part tariff (fixed charge and usage charge), the monthly fixed customer charge conveys no useful pricing information to customers other than rationing access to the utility system. For this reason, my testimony quantified a basic customer cost composed of only those accounts which vary directly with the number of customers. So long as the customer charge recovers this basic cost, plus a reasonable contribution to common cost, the resulting fixed monthly charge is consistent with economic principles and is subsidy-free. Therefore, I concluded that the current PNGD customer charge ($14.50) satisfies this criterion and should not be changed. The residential revenue increase is instead collected through the usage rate which conveys the most useful price signal to customers.

Q. MR. ZARUMBA STATES THAT YOUR CUSTOMER CHARGE ANALYSIS IS NOT SUFFICIENT AS A MARGINAL COST STUDY. PLEASE RESPOND TO HIS REBUTTAL AT PAGE 39.

A. He raises a straw man argument. I did not represent my basic customer charge analysis to be marginal costs. However, my evaluation considered marginal cost principles because that concept is fundamental to efficient pricing. Mr. Zarumba states that an appropriate

marginal cost study would include the costs of meters, regulators, service lines, associated O&M expenses, and customer support.[39] As shown on OCA Statement 4, Exhibit CJ-3, my calculation of basic customer costs included the direct costs of those specific accounts. Therefore, his rebuttal argument that my customer charge analysis is deficient in some way should be rejected.

VII. WEATHER NORMALIZATION ADJUSTMENT (WNA)

Q. MR. ZARUMBA SAYS THAT YOUR REFERENCE TO MR. COSTELLO'S NRRI REPORT REGARDING ALTERNATIVE RATE MECHANISMS IS NOT APPLICABLE TO PEOPLES' PROPOSED WNA BECAUSE THE NRRI REPORT DOES NOT ADDRESS THAT SPECIFIC RATE MECHANISM.[40] WHAT IS YOUR RESPONSE TO THIS POINT?

A. My direct testimony quoted the NRRI Report to support the well-known principle that regulatory lag is one of the most important tools for incentivizing utility cost efficiency. This is not a new concept and has been accepted by regulatory economists for decades. Although Mr. Zarumba contends that the WNA is not intended to avoid regulatory lag, he states at page 18 that the WNA is "designed to provide a revenue level closer to that which the Commission approves in this rate request." This statement is a perfect description of a rate mechanism which has the aim of reducing the impact of regulatory lag on utility revenues. The "incentive" related to regulatory lag does not depend on whether the name of the alternative rate mechanism references "performance based ratemaking." Instead the pertinent issue is the way that regulatory lag imposes revenue risks on the utility, rather

[39] Peoples Statement No. 15-R at 39.
[40] Ibid. at 17-18.

than customers, thereby creating an incentive to control costs between rate cases. To the extent that alternate rate mechanisms such as WNA chip away at suppressing the revenue risks associated with regulatory lag, the greater is the utility's sense of "guaranteed revenues" which in turn leads to less incentive for controlling costs. I note that Mr. Zarumba cites with seeming approval the NRRI report's discussion of the rationale for revenue decoupling mechanisms.[41] However, the NRRI report's discussion [42]of revenue decoupling also states: "The major concern with revenue decoupling is that, while ostensibly beneficial to the utility, the gains to customers are less transparent.[43]"

Q. MR. ZARUMBA PERFORMED A SEVEN YEAR STUDY OF CUSTOMER BILLS AND CONCLUDED THAT IT PROVES THE WNA PROVIDES SYMMETRIC IMPACTS ON CUSTOMERS AND THE COMPANY.[44] DO YOU AGREE WITH HIS CONCLUSION?

A. No. The bottom line of his analysis is that the cumulative impact of the WNA during the seven-year time period he analyzed, extending from 2016 through 2022, would have been $9.9 million in higher revenue charges.[45] This supports my direct testimony that recent historical net weather impact confirms that the cumulative impact of the WNA will be net charges to customers. [46] Since climatic changes are associated with a declining trend in

41 Ibid. at 18-19.
42 Alternative Rate Mechanisms and Their Compatibility with State Utility Commission Objectives," (page 40) Costello, NRRI, 2014.

45 Ibid. at 14.
46 OCA Statement 4 at 40-41.

heating degree days, over the long term the WNA is likely to produce higher charges than credits.

Q. MR. ZARUMBA SAYS THAT HIS REVIEW OF CUSTOMER BILLS OVER A SEVEN YEAR PERIOD SHOWED THAT THE WNA CAUSES FEW UNUSUAL BILL IMPACTS. DOES THIS DEMONSTRATE THAT THE COMMISSION SHOULD NOT BE CONCERNED ABOUT LARGE BILL INCREASES CAUSED BY THE WNA?

A. No. Mr. Zarumba concedes that the shoulder months (October and May) are more vulnerable to bill abnormalities caused by the WNA. These extreme bill events may be infrequent, but when they do occur, the impact on affected residential customers is extreme. The average base rate bill increase caused by the WNA among the "unusual" bills he flagged is 238%.[47] The frequency of these bills may seem exceedingly small at .07% over seven years, but the frequency is more noticeable during the month when the problem arises (approximately 2.6% of May 2018 bills[48]). In addition, Mr. Zarumba's review assumed that a customer bill is abnormal only if it increased 100% or more due to WNA. In my experience, most customers would view increases in levels of less than 100% as problematic. For instance, if the WNA produces 50% bill increases, I would expect many affected customers will complain. Mr. Zarumba states that his review did not determine how many bills incurred a 50% increase.[49] Mr. Zarumba does not propose any revisions to

---

47 PNG-OCA Interrogatory XXVI-7, with is attached to this document as Exhibit CJ-1-SR.

48 12,700 excessive bills in May 2018 is divided into 482,435 residential customers for Peoples in 2018. The residential customer count was provided on page 26 of the Commission's Pennsylvania Natural Gas Outlook Report dated January 2020, and it is available at https://www.puc.pa.gov/NaturalGas/pdf/Gas_Outlook_Report-2019.pdf

49 PNG-OCA Interrogatory XXV1-8, which is attached to this document as Exhibit CJ-2-SR.

the tariff to ameliorate high bills during the shoulder months. Moreover he does not explain how the Company intends to identify excessive bills caused by WNA and how the Company would "rectify" such excessive bills.

Q. MR. ZARUMBA DISAGREES WITH YOUR CONCLUSION THAT THE WNA MAY REDUCE CUSTOMERS' INCENTIVE TO ENGAGE IN ENERGY EFFICIENT ACTIONS.[50] IS HIS RESPONSE CONVINCING?

A. No. First, he does not address the hypothetical I presented, which showed that customers engaging in energy efficient actions could perceive that the WNA transfers a large portion of the customers' expected energy savings to the Company. Second, he argues that decoupling revenues and sales improves the Company's incentive to support energy efficiency programs.[51] The Company already has energy efficiency programs to assist customers that are paid for by customer rates, it is not at all clear what sort of incentive Mr. Zarumba is referring to other than a generality. Moreover, in this proceeding the Company proclaims its support for programs targeted at reducing its carbon emissions which would presumably be met, at least in part, through conservation. Third, Mr. Zarumba's contention at page 19 is that the WNA "lessens the impact on the relationship between consumption and revenues.[52]" This statement essentially means that it reduces the customer's incentive to engage in energy efficiency. As a matter of economic theory, prices are the driving force

50 I note that Peoples' witness Scanlon makes virtually identical claims on pages 24 through 27 of Peoples statement No. 3-R; therefore, my response here applies to her claims as well.

51 Peoples Statement No. 15-R at 19.

52 Peoples Statement No. 15-R at 8-9.

for consumption decisions. If the relationship between prices and consumption is severed, then the customers' incentive to engage in conservation activities will also be reduced.

Q. MR. ZARUMBA DISCUSSES THE 65 YEAR REGRESSION EQUATION WHICH THE COMPANY PARTIALLY USES TO MODEL ANNUAL HEATING DEGREE DAYS. HE STATES THAT YOUR CONCERN REGARDING A LOW R-SQUARE STATISTIC IS UNFOUNDED. WHAT IS YOUR RESPONSE?

A. Mr. Zarumba states that the model was tested for autocorrelation; however, that is not the concern I raised. The model's adjusted R-squared is 0.37 which indicates that 63% of the variation in the model is unexplained. Explaining only 37% of the variation in the dependent variable is typically considered to be a weak predictive model. Given the variability in HDDs from year to year, the model is not particularly useful for predicting the future annual HDDs. Given the low explanation provided by the Company's model, the question arises whether the complexity added to the rate making process by regression analysis is worth the value of the limited improvement it makes in predicting future HDDs.

Q. PEOPLES' WITNESS SCANLON ATTEMPTS TO DISTINGUISH PEOPLES' PROPOSED WNA FROM THE "UNANTICIPATED" WNA CHARGES THAT PGW CUSTOMERS EXPERIENCED . HOW DO YOU RESPOND?

A. While it is understandable that Peoples wishes to distinguish its WNA proposal from PGW's experience with the WNA,[53] Ms. Scanlon's comments do not alleviate my concerns. First, although Ms. Scanlon claims that, "in her opinion" the chances are

[53] On pages 43-44 of my direct testimony, OCA Statement No. 4, I provided more detail about PGW's WNA producing a scenario that resulted in PGW's WNA producing am unexpected impact that resulted in PGW implementing $12 million in refunds and excluding the month of May from its WNA calculation.

"extremely low" that Peoples' WNA would produce the same WNA results that PGW experienced in 2022[54], the basis for her opinion involves too many disclaimers to be meaningful. Specifically, Ms. Scanlon indicates that her "general understanding of PGW's situation" is based upon the public record at Docket No. R-2022-3034229 and that she does not have customer -specific information as to what happened nor "in-depth knowledge of the issue.[55]" Ms. Scanlon also admits that she is "not aware of the triggering event(s)" that caused PGW's WNA charge issues, but that, in the "extremely rare circumstance that an unusual WNA situation occurs," Peoples will address it "reasonably.[56]" From my perspective, given all of the disclaimers about lack of detailed knowledge of PGW's experience, and her acknowledgment that an unusual WNA situation could occur, Ms. Scanlon's attempt to assuage concerns about the WNA is not persuasive.

Q. HAS ANY WITNESSES' TESTIMONY IN SUPPORT OF PEOPLES' WNA PROPOSAL CAUSED YOU TO CHANGE YOUR RECOMMENDATION THAT THE WNA BE REJECTED IN THIS CASE?

A. No. Instead, Peoples' attempt to defend the WNA reveals that the underlying basis for implementing the WNA appears to be that other utilities have done so, and therefore it ought to be entitled to do so as well. Beyond this, Peoples' complex proposal would unnecessarily transfer weather-related revenue risk on to customers. Peoples' representations about PGW's experience being unlikely here provide no guarantees to customers when coupled with the reality that Peoples' understanding of PGW's experience

54 Peoples Statement No. 3-R at 12-13.
55 Ibid. at 13.
56 Ibid.

is limited. Furthermore, as explained by other OCA witnesses, including David Evrard, Dante Mugrace, Barbara Alexander, and Roger Colton, there are several other defects in Peoples' WNA proposal, such as a lack of consumer protections for customers. Therefore, I stand by my recommendation that the WNA should be rejected.

VIII. DISCOUNT RATES TARGETED AS ELECTRICITY COMPETITION

Q. DOES PEOPLES' WITNESS MR. RAVENSTAHL ATTEMPT TO REBUT YOUR TESTIMONY OBJECTING TO ELECTRICITY AS A COMPETITIVE ALTERNATIVE?

A. Yes. The Company requested that Rule 20 tariff be revised to provide for electricity to be a competitive alternative for purposes of negotiating discounted rates for commercial and industrial customers. The existence of electric utilities as competitors would permit Peoples to engage in negotiated commercial/industrial discounted gas distribution contracts. The current tariff does not allow flex rates in response to electricity competition unless the electric utility competitor offers flex rates.[57] My direct testimony recommended that the requested tariff change should be denied. Mr. Ravenstahl opposes my position.

[57] The current tariff language states: "Electricity delivered by an electric distribution company shall not constitute a competitive alternative for purposes of natural gas flex rate eligibility or amount, unless the electric distribution company offers an electric distribution flexed rate to the customer."

Q. MR. RAVENSTAHL SAYS THAT PEOPLES WANTS TO COMPETE AGAINST ELECTRICITY SIMILAR TO OTHER PENNSYLVANIA GAS UTILITIES. HE MENTIONS THAT THE OTHER GAS UTILITIES HAVE WEBSITES WHICH PROVIDE A GAS SAVINGS CALCULATOR VS. ELECTRICITY AND PROPANE.[58] DOES THIS REFUTE YOUR TESTIMONY?

A. No. Mr. Ravenstahl provides no explanation or details regarding the way that Columbia Gas, PGW, UGI, or National Fuels use flex rates to compete with electric providers. The savings calculators for gas versus electricity appear to be aimed at residential customers and home appliances.[59] Mr. Ravenstahl states that Peoples does not intend or anticipate the offering of discounted rate options for residential customers.[60] Moreover, my recommendation in no way prevents Peoples from providing a residential home appliance savings calculator on its website.[61] I think it is entirely reasonable for Peoples to encourage customers to compare gas tariffs to electric tariffs. But the issue in this case pertains to negotiated discounted rates and not full cost standard tariffs.

---

58 Peoples Statement 7-R at 6.

59 For example: https://www.ugi.com/gas-for-homes/growth-extension-tariff/calculator/ and https://www.columbiagaspa.com/services/add-or-convert-to-gas/calculate-your-savings . UGI also has a business calculator for savings, but there is no indication that the savings calculation goes beyond standard tariff rates and energy efficient appliance rebates. https://www.ugi.com/gas-for-business/

60 Peoples Statement 7R, page 8.

61 In fact, my testimony used the Peoples gas appliance usage calculator as indicated at OCA Statement 4 page 38 (footnote 42).

Q. DOES MR. RAVENSTAHL'S ASSERTION THAT THE COMPANY HAS NO INTENT TO OFFER DISCOUNTED RATES TO RESIDENTIAL CUSTOMERS RAISE QUESTIONS ABOUT THE COMPANY'S REQUEST IN THIS CASE?

A. Yes. Access to electricity is ubiquitous for all customer classes and the availability of electricity should not be used as a qualifying basis for commercial and industrial customers to receive discounted rates. Active competition exists between electric and gas appliances within the residential class, yet Mr. Ravenstahl states that the residential consumers are the only customer class which will not be eligible for discounted rates pursuant to proposed tariff Rule 20. Given this limitation, the Company's proposal may be both inequitable and discriminatory.

Q. MR. RAVENSTAHL DISAGREES WITH YOUR CONCERN THAT A DISCOUNT RATE PRICE WAR COULD ARISE BETWEEN ELECTRIC AND GAS UTILITIES BECAUSE "RESIDENTIAL CUSTOMERS WILL NOT BE OFFERED DISCOUNTS.[62]" DOES HIS STATEMENT ADDRESS YOUR CONCERN?

A. No. He does not address the potential for a price war over serving commercial and industrial end users. My testimony pointed out that the Commission should be concerned about the impact of discounted rates on the captive customers of both the electric utility and the gas distribution utility. Captive customers of both entities can be adversely impacted by loss of load or, alternatively, negotiated rates which permit large customers to avoid paying a fair share of utility common costs. Given these negative consequences, the Commission should not encourage electric and gas utilities to compete with each other on

[62] Peoples Statement No. 7-R at 8.

the basis of discounted rates instead of full cost tariffs. A price war may occur when both utilities engage in negotiated flex rates. When the competing electric utility knows that the tariff only allows Peoples to offer a flex rate in response to an electric utility flex rate, this may discourage the electric distribution company from seeking authority to offer flex rates. However, if the gas utility is allowed to offer a discounted rate in order to undercut the electric utility's full cost tariff, at this point the electric utility may believe it has no other option than to seek authorization for its own flex rates. The public interest is served by allowing gas utility discounted rates only if the electric utility has offered the customer a flex rate proposal, as provided by the current tariff language.

Q. MR. RAVENSTAHL SAYS THAT YOU FAIL TO ACKNOWLEDGE THE POLITICAL LANDSCAPE IN WHICH THE INFLATION REDUCTION ACT OFFERS REBATES OR GRANTS FOR CONSUMERS TO MOVE FROM NATURAL GAS TO ELECTRICITY.[63] DOES HIS CLAIM SUPPORT THE COMPANY'S REQUESTED TARIFF PROVISION?

A. No. The relevance of this argument is unclear. If the Company contends that the tariff revision is necessary in order to undermine enacted public policy objectives, this is hardly a persuasive argument. Furthermore, the federal law's rebates and grants to the states are largely aimed at residential dwellings and appliances.[64] As noted previously, Mr. Ravenstahl makes clear that Peoples has no intention of offering discounted rates to residential customers.

63 Peoples Statement No. 7-R at 8-9.

64 https://www.energy.gov/scep/home-electrification-and-appliance-rebates

Q. WHAT IS YOUR RECOMMENDATION?

A. The current tariff language for tariff Rule 20 should remain unchanged. The Company's request to deem electricity as a competitive option as proposed should be denied.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes.

VERIFICATION

I, Clarence L. Johnson, hereby state that the facts above set forth in my Surrebuttal Testimony, OCA Statement 4SR, are true and correct to the best of my knowledge, information and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: May 3, 2024 Signature:

Clarence L. Johnson

Address: 3707 Robinson Ave
Austin, Texas 78722

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXVI-007

Witness: Zarumba, Ralph **Title:** Consultant, Black & Veatch Management Consulting, LLC

Question: Reference Mr. Zarumba's Rebuttal Testimony, Peoples St. No. 15-R at page 20. Confining the review to only May 2018, what is the percentage of "unusual bills?" What is the average discrepancy (percent above normal May bill) for bills which were higher than expected?

Answer: May 2018 accounted for 70% of the total unusual bills. The second question is ambiguous, however we are interpreting this question as a request for the average increase for customers with 100%+ increases to the base rate portion of their bill. For May 2018 bills that had a 100%+ increase to the base rate portion of their bills, the average percentage increase was 238%. The Company is continuing to evaluate additional customer protections to put in place.

Submit Date: 4/30/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXVI-008

Witness: Zarumba, Ralph **Title:** Consultant, Black & Veatch Management Consulting, LLC

Question: Reference Mr. Zarumba's Rebuttal Testimony, Peoples St. No. 15-R at page 20. Mr. Zarumba indicates that the analysis defined "unusual bills" as bills which were 100% higher than the base bill. Please define with more specificity what this description means. Does Mr. Zarumba know the equivalent percentage for bills which were 50% higher than the base bill?

Answer: Unusual bill increases were based on the increase to the base rate portion of a customer's bill. The base rate portion of the bill refers to the sum of the base monthly customer charge ($14.50 PNG rate) and the base MCF delivery charges. The analysis used $3.9608 (PNG rate) for the base MCF delivery rate. Since the percentage increases were based on the base rate portion of the bill, the effective increases on the total bill would be less since the cost-of-gas is not included. An analysis was not performed for a 50% increase to the base portion of the bill.

Submit Date: 4/30/2024

SURREBUTTAL TESTIMONY OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

May 3, 2024

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member/owner of Barbara Alexander Consulting LLC. I am a consultant on consumer protection and customer service issues associated with utility regulation. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed Direct Testimony identified as OCA Statement 5 on behalf of the OCA on March 22, 2024.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. I am filing Surrebuttal Testimony in response to the Rebuttal testimony filed by various witnesses for Peoples. Specifically, I will file Surrebuttal in response to the following witnesses for Peoples: Michael Huwar, Peoples St. No. 1-R; Andrew Wachter, Peoples St. No. 2-R; Carol Scanlon, Peoples St. No. 3-R; Edward Palombo, Peoples St. No. 4-R; Rita Black, Peoples St. No. 9-R, and Heather Doyle-Conley, Peoples St. No. 16-R.

Q. AS A RESULT OF YOUR CONSIDERATION OF THE RESPONSE TO YOUR RECOMMENDATIONS BY PEOPLES, DO YOU HAVE ANY SUBSTANTIVE CHANGES?

A. No. I maintain my initial and recommendations as reflected in my testimony below, which are as follows:

- **Customer Service Performance**: I recommend that Peoples be required to maintain its current service quality and customer service performance as reflected in its test year 2023 results as a condition of any rate increase approved in this proceeding. In

addition, I recommend that Peoples evaluate the potential for extending the hours of its call center to accommodate those customers who are employed during normal business hours and implement extended call center hours if justified and at a reasonable cost.

- **Complaint analysis**: Peoples' analysis of customer complaints, whether handled internally as disputes, or externally by BCS as informal complaints, needs to improve. I recommend that Peoples be required to conduct a regular and proper root cause analysis of its complaint trends, both for internal disputes and BCS informal complaints that document infractions and verified violations. This recommendation should require a professionally conducted root cause analysis and report on findings, including identification of trends, evaluation, steps to reform or avoid repeated trends, and internal steps taken to take proper internal enforcement action where needed within 3 months and quarterly updates to stakeholders.
- **Termination Procedure**: Peoples should be required to develop and implement detailed training programs to ensure compliance with the Commission's specific regulations relating to personal contact, particularly with respect to the obligation to attempt personal contact "immediately" prior to actual termination of service. This compliance filing and detailed implementation plan should be filed within 3 months of a final order in this proceeding after consultation and review by stakeholders.

- **Shared Service Premises**: Peoples' policies and disclosures to tenants should conspicuously disclose the tenants' rights to remain with gas service under these conditions:
  1) Peoples should allow tenants to affirmatively request that their personal information not be provided to the landlord/owner.
  2) Peoples' policies and disclosures should reflect that landlords may not retaliate against their tenants for 1) the tenant exercising their right to pay the utility bill to continue service under the landlord's name, and 2) to recover this payment by deducting the payment from their rental payment.
  3) Peoples should accept from tenants; medical certificates and protection from abuse orders, or court orders issued by a court of competent jurisdiction in the Commonwealth, which provide clear evidence of domestic abuse.
  4) Peoples should not terminate a landlord/tenant account during the months of December through March for households with income at or below 250% of the federal poverty income guidelines.
- **Weatherization Normalization Adjustment**: I support the recommendation of OCA's other witnesses that this method by which Peoples can make rate adjustments outside of a base rate case should be rejected. Customers desiring bill stability to mitigate volatility can and should be encouraged to enroll in budget billing. This has far more consumer-friendly impact than a WNA.
- **Bill Payment Fees**: I agree with Peoples' proposal to eliminate the bill payment fees for Peoples Gas Division customers and include those costs in rates.

- **Billing for Non-Basic Charges**: My primary recommendation is that the Commission investigate this program, particularly with regard to whether regulated ratepayers are subsidizing the marketing, billing, and collection of unregulated non-basic services provided by Peoples' unregulated affiliate. Furthermore, there are issues relating to the marketing materials and disclosures that should be further reviewed and evaluated.
- **Supplier Charges in Excess of Default Service**: First, I recommend that Peoples conduct consumer education to its customers to alert them when they are paying more for service than default service. The goal here is to ensure that these customers are aware of this fact so they can decide what action to take. They may be paying more because they want to do so, but more likely it is out of inattention to an expiring contract. This would allow customers the ability to choose whether to renegotiate their contract with their supplier, shop and choose another supplier, or return to default service. There is no preordained outcome that "should" result from this education other than ensuring that customers are aware of the price that they are paying. Second, Peoples' bills should more clearly reflect that the customer is paying for service and whether it is higher of lower than the default service price. This is another way to accomplish the goal of educating customers. Once way to do this is for Peoples to calculate what the bill would be under default service. For customers with lower priced supply contracts, this will ensure a positive reinforcement that they are saving money through their NGS. For customers with a higher priced supply contract, it will ensure that these customers are aware of this fact and allow them to make an informed decision about their options.

- **Additional profits for management performance**: Ratepayers should not pay additional profits to a public utility for maintaining a level of customer service quality and customer performance for the call center, billing, and meter reading that was promised as a result of commitments made in prior proceedings. There is no evidence of above average performance. Peoples' customers should not pay higher rates for achieving its promised commitments in prior proceedings or meeting "average" performance or compared to other Pennsylvania utilities. Furthermore, I have identified a number of areas in which Peoples' current performance requires significant improvement and my recommendations have identified conditions for approval of any rate increase in this proceeding. As a result, there is no basis to support any reward in the form of higher profits due to "management efficiency" as requested by Peoples in this request to increase base rates.

Q. HOW IS YOUR SURREBUTTAL TESTIMONY ORGANIZED?

A. I will respond to each of the Peoples' witnesses that addressed the evidence and recommendations in my Direct Testimony.

I. RESPONSE TO PEOPLES WITNESS MICHAEL HUWAR CONCERNING "EXEMPLARY MANAGEMENT PERFORMANCE"

Q. HOW DOES MR. HUWAR RESPOND TO YOUR REJECTION OF THE COMPANY'S REQUEST FOR INCREASED PROFITS TO REWARD ITS MANAGEMENT PERFORMANCE.

A. Mr. Huwar does not provide any new evidence to support Peoples' request for an increase

in its return on equity for "exemplary management performance." Rather, he states that I and other witnesses have ignored the "exemplary" performance by only pointing out where performance is below average.[1] He also generally claims that "in many categories, the Company is exceeding the Commission's goals.[2]"

Q. HOW DO YOU RESPOND?

A. First, Mr. Huwar's claim of "exemplary" is not defined except insofar as he points to recent improvements in selected categories or comparing Peoples' performance compared to other Pennsylvania Natural Gas Distribution Companies (NGDC) in published Commission customer service reports. At no point does Mr. Huwar define his reference to Commission "goals" since there are no such "goals," merely reported information on an annual basis. Nor does he defend the "average" or "above average" performance in selected categories as "exemplary." Peoples' performance is adequate in many areas, below average in others, and above average in several categories measured by the Commission for all NGDCs as I pointed out in my Direct testimony. However, there is no basis for concluding that Peoples' performance overall merits higher profits and higher rates from its customers. Peoples' performance that is within the bounds of acceptable performance is not "exemplary." Ratepayers should not have to pay more to obtain adequate service or service that complies with prior commitments as I described in my Direct that were derived from the settlement of the acquisition of Equitable Gas by Peoples[3]

[1] Peoples St. No. 1-R, at 2-3.
[2] Ibid., page 3.
[3] Opinion and Order, Docket Nos. A-2013-2353647 et al., (Order entered Nov. 14, 2013); Initial Decision at 35-62, Docket No. A-2013-2353647 et al., (Nov. 1, 2013).

or the settlement that approved the acquisition of Peoples by Aqua Pennsylvania.[4] Finally, Peoples should not be rewarded with higher profits for achieving its internal performance standards. As I documented, Peoples has maintained or achieved most of its promised goals and performance. That performance does not constitute the basis for a reward, particularly in light of the higher incidence of infractions for customer complaints that I documented.

II. RESPONSE TO PEOPLES WITNESS RITA BLACK CONCERNING CUSTOMER SERVICE PERFORMANCE AND COMPLAINT ANALYSIS

Q. HOW DOES PEOPLES WITNESS BLACK RESPOND TO YOUR PRESENTATION OF CUSTOMER SERVICE PERFORMANCE AND COMPLAINT ANALYSIS?

A. Ms. Black does not provide any additional evidence on People's customer service performance. Rather she argues that Peoples' performance in some customer service performance areas measured in Commission reports have deteriorated less than other NGDCs,[5] a point that I fail to understand would support their claim to "exemplary" performance. With regard to complaint analysis, her response to my evidence and conclusion that Peoples does not properly conduct root cause analysis or properly audit its customer call center(s) to determine compliance is also unreasonable.

[4] Opinion and Order (Public Version), Docket Nos. A-2018-3006061 et al., (Order entered January 24, 2020)
[5] Peoples St. No. 9-R, pages 23-24.

Q. MS. BLACK CLAIMS THAT PEOPLES EVALUATES EVERY COMPLAINT FILED WITH THE BCS TO DETERMINE ITS ROOT CAUSE. PLEASE RESPOND.

A. Ms. Black states, "As noted in the Company's responses to discovery, Peoples does evaluate every case received to determine the root cause of the complaint. Our team of specialists evaluate every aspect of the customer's concern to determine if anything is amiss. If we find something was not handled properly, the next step is to determine whether this was due to human error, system error or process error."[6] However, at no point does she describe the proper root cause analysis I documented in my Direct testimony. Glaringly, there is no description of how any individual complaint is evaluated to find additional instances that gave rise to the complaint or determine why any pattern or practice exists and what gave rise to such pattern or practice. Looking at individual complaints is the problem here, not the solution.

Q. MS. BLACK STATES THAT SYSTEM AND PROCESS CHANGES ARE IDENTIFIED AND THAT ALL AFFECTED CUSTOMERS ARE IDENTIFIED FOR CORRECTION[7]. PLEASE RESPOND.

A. Ms. Black's description is what should occur. However, her description of what happens regarding the spreadsheets I reviewed and cited in my Direct is not reflected in any internal summary or report that demonstrates the identification of patterns or underlying causes by going beyond individual complaints or when system or internal training defects are identified and what steps are taken in response. Ms. Black does not provide any documents or materials to her Rebuttal testimony with regard to this assertion. Furthermore, as I

[6] Ibid., page 25.
[7] Ibid., pages 25-26.

documented, the typical result of "coaching" the individual representative is also not a reasonable response to an analysis of patterns and practices that a proper root cause analysis would explore.

III. RESPONSE TO PEOPLES WITNESS EDWARD PALOMBO CONCERNING FIELD TERMINATION PROCEDURES

Q. MR. PALOMBO RESPONDS TO YOUR TESTIMONY CONCERNING THE LACK OF EVIDENCE REGARDING PROPER FIELD TERMINATION PROCEDURES. DO YOU AGREE?

A. No. Mr. Palombo does not provide any evidence to counter my conclusion that Peoples' field termination procedures do not comply with the personal contact requirements of Chapter 56 of the Commission's rules, but states that, "Peoples is willing to further evaluate its training program to determine if it can enhance the documentation of compliance to this section of the Code."[8] I interpret this response to agree with my recommendation that Peoples should develop internal training and compliance procedures as a condition of the approval of any rate increase in this proceeding. Whether Peoples complies with the required personal contact requirements has yet to be documented. Those training materials must reflect the specific disclosures and customer rights I identified in my Direct testimony. The fact that Peoples was unable to document any training materials relating to these personal contact requirements is a major concern that contributes to my overall recommendation to reject additional profits based on "exemplary" management performance.

[8] Peoples St. No. 4-R, page 14.

IV. RESPONSE TO PEOPLES WITNESS EDWARD PALOMBO ON CUSTOMER EDUCATION CONCERNING RETAIL CHOICE

Q. MR. PALOMBO STATES HE IS "OPEN" TO DISCUSSIONS ABOUT ADDITIONAL CUSTOMER EDUCATION ON RETAIL CHOICE AND BUT THAT COMMISSION APPROVAL WOULD BE REQUIRED.[9] PLEASE RESPOND.

A. There is no obligation of which I am aware that requires Peoples to seek Commission approval to educate its customers about retail choice, how their supplier price compares to default service, or provide alerts to customers about when their supplier price changes. Peoples bills and collects supplier charges and threatens termination of service for nonpayment of those unregulated charges pursuant to its Purchase of Receivables policy. As documented in my Direct testimony, Peoples' customers served by suppliers pay more and incur significant collection and bad debt costs. Data provided by Peoples demonstrated that in May 2023 and December 2023, 99% of the shopping customers were paying more than default service customers, with 86% of shopping customers paying twice as much for gas supply compared to default service customers. Well-designed and factual information provided to customers who shop in a timely manner could allow those customers to take action to make their bills more affordable should they choose to do so. The information could also help customers make informed decisions that may result in decreased collections costs for Peoples. I continue to recommend that Peoples take the initiative to provide timely information on comparing default supply service with the customer's supplier rate and

[9] Ibid., page 15.

dollar amount on the customer bill and consider conducting consumer education in ways that could include communicating with customers via text messaging and sending bill alerts when supplier prices increase.

V. RESPONSE TO PEOPLES WITNESS HEATHER DOYLE-CONLEY CONCERNING TENANT PROTECTIONS

Q. MS. DOYLE-CONLEY REJECTS YOUR RECOMMENDATIONS TO ENSURE CERTAIN RIGHTS TO TENANTS IN SHARED PREMISES. PLEASE RESPOND.

A. For purposes of context, his issue arises when the landlord/owner fails to make timely payments to Peoples. Peoples provides standard notices to tenants that allows the tenants to make payments on current bills to avoid termination of service. However, Peoples explicitly rejects my recommendation that Peoples provide certain rights to tenants with respect to Protection from Abuse orders (PFAs), arguing that the landlord should not receive those protections, stating:

> Lastly, I disagree with Ms. Alexander's proposal regarding Protection from Abuse Orders ("PFAs"). PFAs protect the victim of domestic abuse from bills accrued by their abuser and provide other protections, such as an additional notice prior to termination. However, since we are discussing tenants' rights, and the tenant is not responsible for the utility bill, it would not be appropriate for the landlord to receive those protections.[10]
>
> PFAs protect the victim of domestic abuse from bills accrued in the name of their abuser and provide additional notice, such as the 48-hour notice prior to termination. It is not appropriate to provide PFA protections to a landlord because their tenant has a PFA. Peoples already has a process for accepting medicals provided by tenants but does not agree to accept a PFA from a tenant.[11]

[10] Peoples St. No. 16-R, page 8.
[11] Ibid., page 12.

I disagree with this policy.

Q. PLEASE EXPLAIN WHY PEOPLES' POLICY TO DENY PFA RIGHTS TO TENANTS IS UNREASONABLE.

A. First, there is no lawful or regulatory basis for this policy distinction that I am aware of. Second, if Peoples is willing to provide medical emergency rights to a tenant, there is no basis for refusing to provide the PFA rights. Third, while there are some practical implementation steps that would need to be considered, the flat out refusal to provide these protections to tenants when they would be available to these same individuals as customers is not defensible. I continue to recommend that Peoples must reform its policies in this regard as a condition of any rate increase in this proceeding.

VI. RESPONSE TO PEOPLES WITNESS CAROL SCANLON CONCERNING THE WEATHERIZATION NORMALIZATION ADJUSTMENT PROPOSAL

Q. MS. SCANLON ATTEMPTS TO DISMISS YOUR CONCERN ABOUT THE LACK OF BILL DISCLOSURE FOR THE WNA. PLEASE RESPOND.

A. First, my testimony is supplemental to that of OCA Witnesses Evard, Mugrace, Johnson, and Colton, all of whom continue to reject the implementation of the WNA mechanism. My input on this proposal is to identify the lack of customer understanding of and acceptance of this rate adjustment that Peoples proposes not to identify on the customer bill but to include in an opaque adjustment to its "delivery charge." Second, Ms. Scanlon's statement that because other Pennsylvania gas utilities have implemented an WNA, that "…this supports the notion that while WNA calculation contains multiple steps, customers

are able to understand the nature of the mechanism"[12] is without any evidentiary basis. Nor does she support such an allegation in her testimony. In my over 40 years' experience in representing customers in utility proceedings, I can attest that customers rarely understand how their bills are calculated and they certainly don't understand the mechanisms of changing rates outside of publicly announced and transparent base rate cases. However calculated, this mechanism is designed to protect Peoples and its earnings and not customers who will not have any opportunity to take action to avoid the results of this calculation. Peoples' refusal to identify the WNA as a line item on customers' bills is telling in that it is squarely at odds with any claims that customers will understand the charge. On the contrary, because Peoples' proposes to embed the WNA charge into its delivery charge, it appears that customers will not even be able to identify whether and when they are paying WNA charges.

VII. RESPONSE TO PEOPLES WITNESS ANDREW WACHTER CONCERNING THE BILLING OF NON-BASIC CHARGES

Q. PLEASE SUMMARIZE MR. WACHTER'S RESPONSE TO YOUR TESTIMONY ON THIS ISSUE.

A. Mr. Wachter states that since the prior Management Audit did not raise any issue regarding the Company's affiliated transaction, there is no basis for further concern. However, he does also state that Peoples will cooperate in any Commission review if it is deemed necessary.[13]

[12] Peoples St. No. 3-R, page 9.
[13] Peoples St. No. 2-R (Public), page 58.

Q. PLEASE RESPOND TO MR. WACHTER'S TESTIMONY ON THIS ISSUE.

A. Mr. Wachter failed to address any of the concerns I raised in my testimony concerning the use of customer information by the third-party contractors to market these services to Peoples customers, the disclosures in the marketing materials, or the concerns about whether regulated rates properly reflect the costs and revenues to Peoples for this program. My concerns are heightened by the recent discovery responses on this issue. While Peoples states that the Company does not provide customer lists to their partners in selling non-basic services[14] and that the Company does not issue market these services to its customers at its call center,[15] the bills issued to customers label these services as "Peoples Protection Services" as I documented in my Direct testimony.[16] Furthermore, Peoples' website promotes these "Peoples Protection Programs" to its customers and includes unpaid "protection" program fees in negotiated payment plans.[17] It is clear to me that Peoples promotes these non-basic services to its customers such that there is an intent to market these programs on behalf of these providers.[18] However, the actual revenues that Peoples has included in this rate case appear very small in comparison to the billing and marketing services provided by Peoples. Specifically, Company shows the amount for HomeServe revenues of $734 and for the IGS Energy Home Service revenues of $10,045.[19] Peoples also stated that it did not include any revenues in this case for "protection services" offered by its affiliated entity, Reliable HomeWorks.[20] Given that Peoples bills over 65,000

[14] Peoples Response to OCA-XXIV-004, attached as Exhibit BA-1-SR.
[15] Peoples Response to OCA-XXIV-005, attached as Exhibit BA-2-SR
[16] OCA Statement No. 5, page 28.
[17] https://www.peoples-gas.com/get-gas/energy/protect/#
[18] Peoples Response to OCA-XIV-009, attached as Exhibit BA-3-SR.
[19] Peoples Response to OCA-XXII-003 and XXII-004, attached as Exhibit BA-4-SR.
[20] Peoples Response to OCA-XIV-008, attached as Exhibit BA-5-SR.

customers for one or more of these programs, these revenues appear to be insufficient. All of these issues need further Commission investigation and consideration of additional consumer protections. As an immediate matter, I recommend that Peoples not include any non-basic charges in negotiated payment plans and take steps to educate customers who are experiencing payment difficulty on how to reduce unpaid charges by eliminating optional and non-basic services.

VIII. RESPONSE TO PEOPLES WITNESS ANDREW WACHTER CONCERNING INCREMENTAL COSTS FOR IMPLENTING OCA RECOMMENDATIONS

Q. MR. WACHTER LISTS OCA RECOMMENDATIONS THAT HE CLAIMS WILL RESULT IN HIGHER COSTS AND ASKS FOR APPROVAL TO INCLUDE INCREMENTAL COSTS FOR FUTURE RECOVERY. PLEASE RESPOND.

A. Mr. Wachter's claim that these recommendations to either comply with current commitments, meet otherwise required standards, or comply with reasonable policies will result in incremental costs is without evidence.[21] Peoples has not properly evaluated whether its current expense in these areas could be allocated more efficiently or whether any of these recommendations could be implemented instead of other and perhaps less effective or unnecessary expenses. It is Peoples' obligation to allocate its internal expenditure priorities to meet regulatory obligations and customer service expectations. Not every change requires "incremental" costs.

[21] Ibid., page 62.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXIV-004

Witness: Ravenstahl, Luke **Title:** Vice President Sales & Marketing

Question: Based on the responses to OCA-XXIII-1 and XXIII-2, is it correct that Peoples does not provide any information to HomeServe or IGS Home Energy Services that enables these entities to target their non-basic services to Peoples' customers? If this is not correct, identify specifically how these entities obtain the information that would allow them to target or offer non-basic services to Peoples' customers.

Answer: That is correct. The Company does not provide any customer information to HomeServe or IGS Home Energy Services.

Submit Date: 4/29/2024

IMPORTANT REMINDER

For Property at

PEOPLES
An Essential Utilities Company

Status: Not Covered
Offer: Sewer Service Line Protection Coverage for $4.75/month
Offer Expires in 30 days
Contact us: **1-866-215-1610**

Thank you for enrolling in Peoples Gas Service Line Protection Program. We would like to offer you additional protection for your home.

Our records show your sewer service line is not currently protected by **Peoples Sewer Service Line Protection Program**†. Your exterior sewer service line can unexpectedly back-up and possibly result in a complicated repair costing up to $7,500 or more. Peoples can protect your sewer service line for just $4.75 per month. Once active, if you experience a covered back-up in your sewer service line, Peoples *will make the arrangements* for a contractor to do the repair work and *we will pay the bill*†† when the work is finished.

Enjoy added peace of mind! With this limited time offer if you enroll in the next 30 days, we will send you a complimentary water LeakAlertor 6000†††, an automatic water leak detection device for toilets. This is an easy-to-install device that is placed on your toilet and detects and alerts you to problems each time that toilet is flushed. The LeakAlertor 6000 offers audible and visual alerts when a problem is detected and can save you the stress and expense of a leaking or running toilet.

Please enroll today by returning the form below, calling our professional representatives at **1-866-215-1610** or visiting **peoples-gas.com/protect.**

Sincerely,

Vivian Sabatini
Director, Marketing

P.S. Learn about our other protection programs by calling 1-866-215-1610.

† Complete terms and conditions mailed upon enrollment and available online at www.peoples-gas.com/protect or by calling 1-866-215-1610.
†† Program coverage is capped at $7,500.00.
††† Please allow 2-4 weeks for shipping. Subject to change or cancellation without notice, does not cover repairs or water bill costs.

YES, HELP ME AVOID EXPENSIVE REPAIRS.

I want to protect my sewer service line with **Peoples Sewer Service Line Protection Program.**

Peoples Protection Program (PPP)

Heating Protection Program (006)

- For just **$5.95**/month, customers can protect against costly repairs to a primary **natural gas-fueled heating unit** (furnace or hot water boiler) that is less than 20 years old.
- Maximum Coverage is **$500** annually.

Natural Gas Furnace

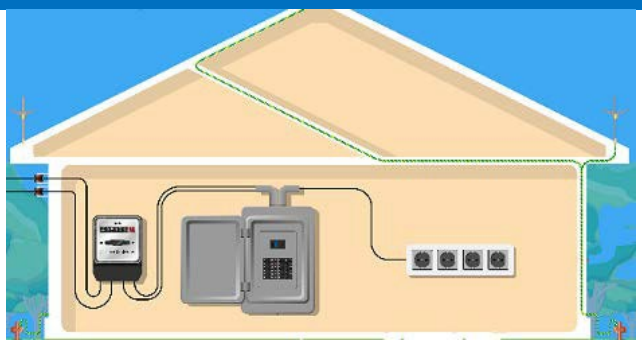
Cooling Protection Program (007)

- For just **$5.95**/month, customers can protect against costly repairs to an **electric-powered central air conditioning unit** that is less than 20 years old.
- Maximum Coverage is **$500** annually.

Central Air

In-House Electric Line (017)

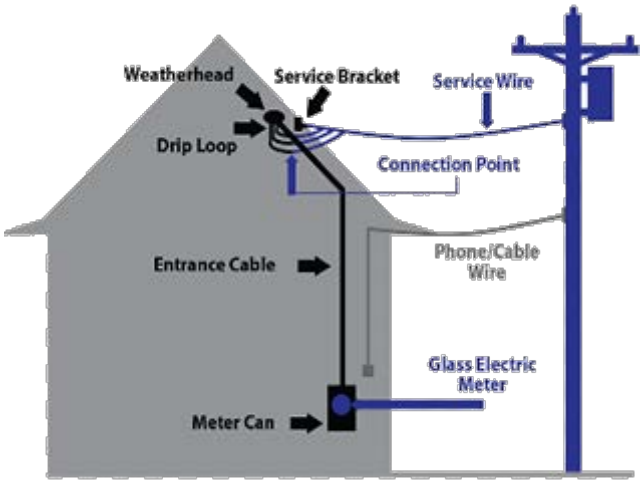
- An **electric in-house line** includes inside wiring within the dwelling, from the point of entry into the breaker panel or fuse box, including breakers, boxes, fuses, receptacles, switches and wiring.
- Paying just **$3.95** per month, customers can avoid costly repairs if an electrical problem or failure with the wiring or with these components is encountered.
- Maximum Coverage is **$2,000**/annually.



Electric in-house line covers inside electrical wiring

Exterior Electric Line (018)

- An **electric service line** involves exterior wiring which can have problems and cause a power failure (*illustrated in* **black**)
- Electric company is responsible for **Service Wire** from pole to weatherhead and electric meter (*illustrated in* **blue**)
- For just **$3.95**/month, customers can protect against costly repairs and get their power up and running as quickly as possible.
- Maximum Coverage is **$2,000** annually.



Electric Service Line runs down from the **Service Wire** entrance

Peoples Protection Program (PPP)

Combo Upgrade

When a customer wants to cancel a single program enroll to in a Bundled Plan:

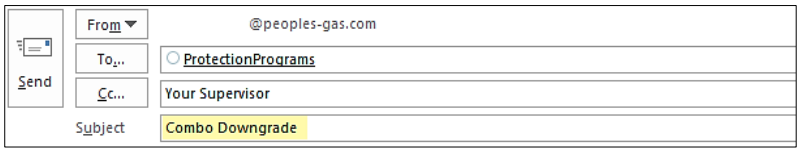
1. Do **not** **Unenroll** the Single Plan because coverage will END immediately!
2. **Enroll** the new Bundled Plan & provide the **Cover Date**
3. **Explain**: "To prevent a gap in coverage, your current plan will be canceled when your new plan is effective. Please carefully review the program **Terms & Conditions** you'll receive by mail."
4. **Email** ProtectionPrograms@peoples-gas.com & CC: **Your Supervisor** with details

Example:
Account 1000123456 | 123 Maple St, Pittsburgh PA 15555 | Phone 412-867-5309.
Enrolled Jane Jones on new <*Gas Service Line*> Bundled plan effective mm/dd/yy.
Please cancel the current on the new Bundled Plan effective date.

Combo Downgrade

When a customer wants to cancel a program in a Bundled Plan:

1. Do **not** **Unenroll** the Bundled Plan because coverage will END immediately!
2. **Enroll** the new Single Plan
3. **Explain**: "To prevent a gap in coverage, your current plan will be canceled when your new plan is effective. Please carefully review the program **Terms & Conditions** you'll receive by mail."
4. **Email** ProtectionPrograms@peoples-gas.com & CC: Your Supervisor with details



Example:
Account 1000123456 | 123 Maple St, Pittsburgh PA 15555 | Phone 412-867-5309.
Enrolled Jane Jones on single <*Gas Service Line*> plan effective mm/dd/yy.
Please cancel the Bundled Plan on new plan effective date.

PROTECT YOURSELF FROM COSTLY REPAIRS TO YOUR GAS LINES

LEARN MORE ABOUT PEOPLES LINE PROTECTION PROGRAMS AT **Peoples-Gas.com/Protect**

Follow Us: **@peoplesnatgas**

TO ENROLL, CALL 1-866-215-1610

Your outside natural gas service line is your responsibility. **Give yourself peace of mind for as little as $3.75 a month.**

PEOPLES™

You use natural gas to heat your home and cook your food. It is probably even responsible for the hot water you use to bathe and wash your dishes.

Your natural gas service and in-house lines are your responsibility.

They can unexpectedly fail. Peoples can help.

Repairs to natural gas service lines and in-house lines can be costly and inconvenient. Gain peace of mind with Peoples Line Protection Program.
For as little as $3.75 per month, **Peoples Gas Service Line Protection Program** will give you the peace of mind of knowing:

- costly repairs or replacements to your natural gas service line are covered.
- you will receive 24 hour claim response with a single phone call to Peoples.
- you don't have to find your own contractor you can trust. All work will be completed by a qualified professional from the Peoples network.
- your monthly charge for Peoples Line Protection Programs will appear on your gas bill.

To enroll, call 1-866-215-1610

See reverse for details about Programs and Package Offers.

Note: Piping systems are specific to your location. Meters are sometimes located farther away from buildings or close to roadways, with longer service lines and, occasionally, underground house lines.

Peoples Responsibility

Customer Responsibility

WHAT'S MY RESPONSIBILITY?

Peoples Protection Program

Terms and Conditions and Frequently Asked Questions

Commercial accounts are not eligible for the Program and will not be provided coverage.

BASICS FOR ALL PROGRAMS

- **When would coverage start?** Coverage starts the first day of the month FOLLOWING the due date of the Peoples utility bill and confirmation of payment recent. So, as long as the customer makes the payment by the due date of their NEXT bill, the coverage will begin on the first of the next month.

  TIP: The enrollment screen calculates the anticipated coverage start date.

- **Are customers locked into a contract?** Customers may cancel anytime; however, protection programs may not be cancelled within 12 months of a covered line/equipment replacement or repair under the program. Participation is automatically canceled if the customer ends their service with Peoples.
- **How are customer payments applied to protection plans?** Customer payments will be applied to the current and outstanding natural gas charges FIRST. Any remaining funds will be applied in the following order if the customer has more than one program: Gas Service Line Protection Program (first priority), the Gas Underground House Line Protection Program, the Gas In-House Line Protection Program, the Water Service Line Protection Program, the Line Protection Restoration Program(s), the Sewer Service Line Protection Program and the Heating/Cooling Protection Program (last priority).
- **What steps does a customer take when they have a claim?** Make one toll-free call to our Claims area at 1-866-215-1610. Work will be performed by Peoples' network of authorized service providers. Services will be dispatched based upon available times during normal business hours (8:00 am – 5:00 pm), Monday through Friday, except holidays. The Contractor will contact the customer within eighteen (18) hours to schedule the work.
  NOTE: Peoples assumes no liability for, and will not reimburse the customer for any services completed by an unauthorized third party contractor.
- **Condition of gas service line, gas house line, water service line, sewer service line**
  The line must be in good working order at the time of the Customer's enrollment. Peoples reserves the right to inspect the line for this purpose within sixty (60) days of Customer's enrollment.

Enrollment

- **Is the customer required to sign anything?** No, with the enrollment, customers will receive the Terms and Conditions, a helpful reference with specific details of the protection we provide as well as all of the information they need for submitting claims, contact information, and other requests.
- **What if a customer wants to enroll but is not in the targeted pilot area?**
  Because we only have contractors ready to do the work in the target area, we are not currently able to go outside of that area. Obtain contact information for Inside Sales to follow up with the customer.
- What if I miss a payment and come to find I have a problem with the unit, can I still file a claim?
  You pay your coverage a month in advance. If you miss a payment, you risk suspension of your coverage.
  NOTE: Contract goes into suspended status after missing a payment. If three payments are missed the contract is terminated. Contracts are also terminated if the customer moves out.

Continued on other side

RESTORATION

Additional coverage ($2 month) is available to customers enrolled in **Gas Service Line**, **Underground House Line** and/or **Water Service Line** Protection Programs.

- **What is covered?**

  Grass Restoration: Restoration of the existing grass or mulch bed located over the area disturbed by any excavation completed with the associated line repair. Includes tamping, adding topsoil and either reseeding and covering the reseeded area with straw OR laying sod.

  Concrete or Asphalt Restoration: Covers the repair or replacement of existing concrete or patching of asphalt for items such as driveway sections, sidewalk pads, curbs or walkways that were disturbed by any excavation made in conjunction with a line protection program.

- **Coverage is limited to $1,000 per restoration.** If the cost of a restoration will exceed $1,000, the customer will be allowed to choose where to allocate the restoration allowance. (e.g., the entire $1,000 allowance may be applied to concrete replacement instead of grass restoration).

Sewer Service Line Protection Program does NOT have additional restoration coverage available. When a line is repaired or replaced, site restoration is limited to backfilling. The Program does not cover restoration of lawns, gardens, trees, shrubbery, walls, fences, paved or concrete surfaces, gravel, and structures.

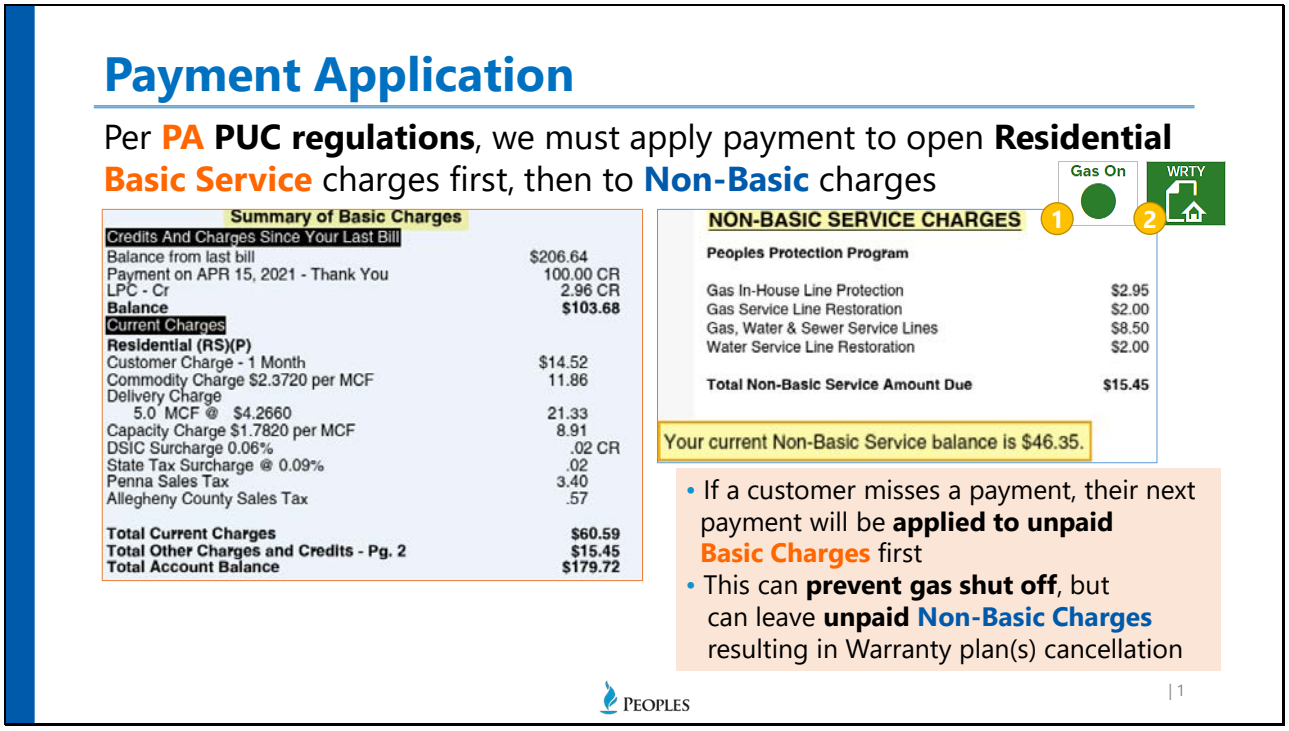
PPP Plans & Payment Application Rules



52 Pa. Code § 56.273.
Application of partial payments between public utility and other service.

Payments received by a public utility *without written instructions* that they be applied to merchandise, appliances, special services, meter testing fees or other **non-basic charges**
and which are insufficient to pay the balance due for the items plus amounts billed for basic public utility service shall **first be applied to the basic charges** for residential public utility service.

If a customer misses a payment, the next payment must be **applied to unpaid Basic Charges** first:
- this can **prevent gas shut off**
- this might **result in Warranty plan(s) cancellation**

Question Number: OCA-XXII-004

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference Peoples' Response to OCA Set 20, Question 11 whereby Peoples identified HomeServe and the Manchester Group LLC, d/b/a IGS Energy Home Services as third-party providers of non-basic services that bill and collect their products on the bills of Peoples' customers. With respect to Manchester Group LLC, d/b/a IGS Energy Home Services, please identify any revenues paid by Manchester Group LLC, d/b/a IGS Energy Home Services that are reflected and recorded in Peoples' rate filing. As part of this responses, provide citations to the filing for the reflection of the revenue.

Answer: Please see attached. The billing fee revenue for IGS Energy Home Services is included in Exhibit 3, Schedule 15, Attachment C under FERC Acct 495 (other gas revenues).

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XIV-008

Witness: Ravenstahl, Luke **Title:** Vice President Sales & Marketing

Question: Identify the number of Peoples customers (by customer class) who have enrolled in one or more “warranty” services, the amount billed, the amount collected, and the revenues included in Peoples revenue requirement in this base rate case filing for the test year.

Answer: As of January 1, 2024, the Peoples’ Protection Program had 65,787 active residential customers enrolled in one or more protection services and Reliable HomeWorks had 16,098 active residential customers enrolled in one or more protection services. There are no revenues related to these programs included in the Peoples’ revenue requirement in this base rate case filing for the test year.

Surrebuttal Testimony of Roger Colton

on behalf of

Pennsylvania Office of Consumer Advocate

OCA Statement 6SR

May 3, 2024

Table of Contents

Part 1.	Response to Peoples witness Dawn Folks	1
Part 2.	Response to Peoples witness Andrew Wachter	2
Part 3	Response to Peoples witness Heather Doyle-Conley	5
Part 4.	Response to Peoples witness Carol Scanlon	14
Part 5.	Response to Peoples witness Rita Black	17

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger D. Colton. My business address is 34 Warwick Road, Belmont, MA.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED DIRECT TESTIMONY ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes, I am. I submitted OCA Statement 6 on March 22, 2024.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY.

A. The purpose of my Surrebuttal Testimony is to respond to the testimonies of the following Peoples Natural Gas (PNG or Peoples) rebuttal witnesses:

- Dawn Folks (Peoples Statement 11-R).
- Andrew Wachter (Peoples Statement 2-R).
- Heather Doyle-Conley (Peoples Statement 16-R).
- Carol Scanlon (Peoples Statement 3-R). and
- Rita Black (Peoples Statement 9-R).

Part 1. Response to Peoples Rebuttal Witness Folks.

Q. DID MS. FOLKS RESPOND TO ANY OF THE PROPOSED TARIFF CHANGES YOU RECOMMENDED IN YOUR DIRECT TESTIMONY?

A. Yes. I recommended three specific additions or modifications to Peoples tariff language, each of which Ms. Folks said that Peoples accepts. (Peoples St. 11-R, at 4 – 5). Ms. Folks incorporated these additions and/or modifications into a redline version of the Company's proposed tariff. (Exh. DMF-1R). Accordingly, these three recommendations are not further discussed.

Part 2. Response to Peoples Rebuttal Witness Wachter.

Q. TO WHAT ASPECT OF MR WACHTER'S REBUTTAL TESTIMONY DO YOU WISH TO RESPOND?

A. Mr. Wachter responds to three recommendations I advanced in my Direct Testimony. He does not explicitly *oppose* these recommendations, but rather states that "the Company appreciates Mr. Colton's further feedback and continues to assess the implications." (Peoples St. 2-R, at 61).[1] The three recommendations are for Peoples to adopt a procedure under which:

1. Before the Company enters into a DPA with a customer which the Company either: (1) knows to be a Confirmed Low-Income customer; or (2) has generated information through the DPA process documenting that the customer is in the Tier 1 income range (at or below 150% FPL), it will provide the customer a stand-alone Plain English notice to that customer of the customer's right to enter into CAP and an explanation of the advantages of CAP's arrearage forgiveness benefits. As it agreed to do with the pre-termination stand-alone written notice, Peoples should develop this Plain English notice in collaboration with its Universal Services Advisory Group.

2. It will provide a stand-alone Plain English notice to customers found to be without heating service at the time of the Company's Cold Weather Survey of the customer's right to enter into CAP and an explanation of CAP's arrearage forgiveness benefits. Peoples should develop the Plain English notice in collaboration with its Universal Service Advisory Group.

3. When Confirmed Low-Income customers accrue an unpaid balance of $300, the Company will provide a stand-alone written Plain English notice informing those customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

(OCA St. 6, at 83 – 84).

[1] My response to Mr. Wachter's Rebuttal Testimony is limited to the "Public Version" of his Rebuttal.

Q. WHAT RESPONSE DO YOU HAVE TO MR. WACHTER'S REBUTTAL TESTIMONY?

A. Mr. Wachter asserts that the recommendations I make "could have cost implications" to the Company. (Peoples St. 2-R, at 61). He quotes a response I provided to Company discovery as "admitting" that I did not complete a specific "assessment of the costs," (Id.), although he concedes that I did provide my assumptions about the cost implications (which he did not repeat and did not dispute). (Id.). Mr. Wachter did not further respond to the information presented in that discovery response (OCA response to Peoples Set 4, Question 1). A copy of that discovery response is attached to this Surrebuttal Testimony as Exhibit RDC-1-SR. The cost discussion in that Exhibit relate to the following recommendations addressed by Mr. Wachter:

- Regarding providing notice to low-income customers entering into payment plans was provided in response to sub-section 5 of this discovery response;
- Regarding providing notice to customers contacted through the PUC's Cold Weather Survey was provided in response to sub-section 6 of this discovery response; and
- Regarding providing notice to low-income customers with a minimum arrears of $300 was provided in response to sub-section 7 of this discovery response.

To summarize the discovery response for these three specific recommendations, I note that I did not ignore the costs. I instead found that in the unlikely event that any costs Peoples may incur would not be subsumed by other savings, or offset by increased revenues, that may result from implementing the recommendations, such costs cannot be determined.

Q. HOW DID MR. WACHTER CONCLUDE HIS DISCUSSION OF YOUR RECOMMENDATIONS?

A. Mr. Wachter concludes by stating that "the Company is proposing that certain accommodations be made for future recovery of incremental costs incurred as a result of recommendations made by the other parties in this proceeding."

Q. DO YOU AGREE WITH MR. WACHTER?

A. No. First, it is unclear whether Peoples is accepting my recommendation and even less clear whether any costs to implement them would materialize in the future. Importantly, when Mr. Wachter states that my recommendations "could have cost implications," based on the information presented in Exhibit RDC-1-SR, it is clear that those "cost implications" are more likely to involve reduced expenditures and increased revenues. His proposal for "certain accommodations" is therefore speculative, unclear and unsupported. Accordingly, it should be denied. The cost of implementing my recommendations would be minimal. Peoples current annual cost of using the Verint software was $61,589 in 2022 and $108,847 in 2023. (OCA-XXV-001) (attached as Exhibit RDC-2-SR). The annual cost of providing notice to Confirmed Low-Income customers of the availability and advantages of CAP has ranged from less than $15,000 to less than $25,000 in 2022 and 2023. (OCA-XXXV-003) (attached as Exhibit RDC-3-SR). The cost of serving additional CAP customers is not a factor that Peoples considers in reviewing possible CAP enrollment. (OCA-XXV-005) (attached as Exhibit RDC-4-SR).

Part 3. Response to Peoples Rebuttal Witness Doyle-Conley.

Q. PLEASE RESPOND TO MS. DOYLE-CONLEY'S REBUTTAL TESTIMONY REGARDING YOUR RECOMMENDATION THAT PEOPLES PROVIDE NOTICE OF THE AVAILABILITY OF CAP TO CUSTOMERS FROM WHOM PEOPLES SEEKS A NEW OR INCREASED DEPOSIT.

A. I recommended that when Peoples seeks a new or increased deposit from a residential customer, the Company be required to provide a stand-alone written notice to that customer of the availability of CAP and the advantages of CAP's arrearage forgiveness provisions. As I noted in my Direct Testimony, Peoples' tariff allows it to require an existing customer to post a new or increased deposit if: (1) the customer has been delinquent on any two consecutive bills or three or more bills within the preceding twelve month period; (2) the customer has failed to comply with a "material term or condition" of a settlement or payment agreement; or (3) the customer has had utility service disconnected. (OCA St. 6, at 42).

I further provided extensive testimony establishing that it was disproportionately likely that a customer meeting any one or more of these three conditions would be a low-income customer. Ms. Doyle-Conley's rebuttal testimony did not dispute this factual documentation.

Ms. Doyle-Conley did, however, oppose my recommendation on providing notice on the grounds that "a notice is not required since the Company already does not charge a deposit when customer (sic) reports low income and customers are educated about CAP upon reporting low income." (Peoples St. 16-R at 5). Her rebuttal testimony, however, illustrates the problem, not the solution. Peoples' relief from deposits extends *only* to customers who

have already "report[ed] low-income." According to the Public Utility Commission's Bureau of Consumer Services (BCS), however, while Peoples had 108,055 Confirmed Low-Income customers (i.e., those who have "reported low-income"), the Company has nearly 150,000 estimated low-income customers. More than one-quarter of Peoples's low-income customers, in other words, have not already reported low-income.[2]

Moreover, Ms. Doyle-Conley's rebuttal testimony states that customers "are educated about CAP *upon reporting low income*." (Peoples St. 16-R, at 5) (emphasis added). Again, however, as the BCS 2022 annual data cited above shows, more than one-quarter of Peoples's low-income customers have *not* reported their low-income status to the Company.[3] Before imposing a substantial financial obligation on their customers, who may be entitled to an exemption from that obligation, the least Peoples could do is to provide notice to those customers of their right to enroll in CAP, or to be exempt from the deposit that would otherwise be "required" by Peoples, by establishing their low-income status even if not enrolling in CAP.

Q. PLEASE RESPOND TO MS. DOYLE-CONLEY'S REBUTTAL TESTIMONY REGARDING THE ARREARS OF CONFIRMED LOW-INCOME CUSTOMERS.

A. Ms. Doyle-Conley responded to my Direct Testimony regarding the high level of arrears by low-income customers by asserting that these high levels could be attributed to the shutoff moratorium in place during COVID. She asserted that "balances for residential

[2] Bureau of Consumer Services (September 2023). 2022 Report on Universal Service Programs and Collections Performance, at 8, 9 (108,095 Confirmed Low-Income / 146,971 Estimated Low-Income = 0.74).

[3] As noted immediately above, while Peoples had nearly 150,000 estimated low-income customers, it had identified only 108,055 Confirmed Low-Income customers.

consumers, both generally and confirmed low income, climbed during 2020 and 2021 while these special provisions were in place and began heading downwards again in 2022." (Peoples St. 16-R, at 6). Without dismissing the impact of COVID on residential arrears, and with no need to address whether the shutoff moratorium was the cause of any increase in arrears, Ms. Doyle-Conley's rebuttal testimony simply does not reflect the historical record. The data is set forth Table 1 below. As is demonstrated, in every year since at least 2013, the average arrears of Confirmed Low-Income customers were substantially higher than the average arrears of residential customers generally. Since Confirmed Low-Income is a subset of the broader residential category, the difference, of course, would be even greater than indicated here if the comparison were made between Confirmed Low-Income customers and residential customers without those low-income customers.

Table 1. Average Arrears Residential vs. Confirmed Low-Income (2014 – 2022)
(BCS Annual Reports on Universal Service Programs and collection Performance)

	Residential	Confirmed Low-Income	Ratio (Conf'd LI to Residential)
2013	$391.62	N/R	---
2014	$380.25	$557.11	1.47
2015	$359.44	$460.32	1.28
2016	$198.86	$257.69	1.30
2017	$203.16	$261.83	1.29
2018	$222.25	$280.54	1.26
2019	$243.45	$301.90	1.24
2020	$449.90	$617.26	1.37
2021	$466.51	$718.87	1.54
2022	$394.22	$599.51	1.53

*Beginning in 2020, Peoples began reporting combined data for what, in prior years, had been separate reporting for Peoples and Peoples (Equitable).

As can be seen, while the level of arrears certainly increased in 2020 relative to 2016 through 2019, the unpaid balances in recent years closely reflect the unpaid balances from earlier years. More importantly, as I testified to, in *every* year, the arrears of Confirmed Low-Income customers are greater than the arrears of residential customers in general.

Finally, Ms. Doyle-Conley asserts that Confirmed Low-Income customer arrears would be higher because Confirmed Low-Income customers include customers who receive LIHEAP crisis grants, whose unpaid balances are higher. However, she overstates the impact of Crisis grants on Confirmed Low-Income averages.

Table 2. LIHEAP Cash Recipients vs. LIHEAP Crisis Recipients (OCA-IX-33)		
LIHEAP Program Year	LIHEAP Cash Households	LIHEAP Crisis Households
2020-2021	45,412	5,809
2021-2022	57,516	4,798
2022-2023	60,636	6,099
2023-2024 YTD	20,769	655

As Table 2 shows, using People' own data, the number of LIHEAP Crisis recipients is relatively minor relative to all LIHEAP recipients.

Q. DOES THE REBUTTAL TESTIMONY OF MS. DOYLE-CONLEY PROVIDE ANY SUPPORT FOR THE RECOMMENDATIONS YOU MADE IN YOUR DIRECT TESTIMONY?

A. Yes. Ms. Doyle-Conley makes the unqualified statement that "customers often enroll in CAP *as a result of collections activities*. . ." (Peoples St. 16-R, at 7) (emphasis added). Despite this recognition of "collections activities" being one of the key points of contact where low-income customers will enroll in CAP, as I noted in my Direct Testimony:

- Data provided by Peoples reports a high number of nonpayment disconnections for Confirmed Low-Income customers: (1) 8,063 (2021); (2) 6,508 (2022); and (3) 5,781 (2023). (OCA-09-21).

- Data provided by Peoples reports that more than half of all payment arrangements which the Company enters into with Confirmed Low-Income customers default. The number of Confirmed Low-Income customers reported to be "payment-troubled" (defined to be an account that has defaulted on one or more payment arrangements in the previous twelve months) has been: (1) 9,514 in 2020; (2) 9,430 in 2021; and (3) 9,219 in 2022. (2022 BCS Report).

Overall, from 2021 through 2023, Peoples implemented from two to nearly four times more disconnections of Confirmed Low-Income customers than it entered into new payment arrangements. Peoples disconnected service to: (1) 8,063 Confirmed Low-Income accounts

in 2021; (2) 6,508 Confirmed Low-Income accounts in 2022; and (3) 5,781 Confirmed Low-Income accounts in 2023 (OCA-09-19), while entering into (1) 2,223 new payment arrangements with Confirmed Low-Income customers in 2021; (2) 2,487 new payment arrangements with Confirmed Low-Income customers in 2022; and (3) 3,027 new payment arrangements with Confirmed Low-Income customers in 2023. (OCA-09-16).

The data above is limited to those low-income customers who Peoples *knows* to be low-income. As I noted above, in fact, Peoples has confirmed the low-income status of but a fraction of its total estimated low-income customer base.

Despite these failures, Peoples witness Doyle-Conley testified that Peoples opposed providing further personal notice to customers of the right of low-income customers to enter into CAP, with its attendant arrearage forgiveness provisions, asserting that the Company was already doing a perfectly adequate job.

Q. PLEASE RESPOND TO MS. DOYLE-CONLEY'S REBUTTAL TESTIMONY REGARDING THE RACIALLY DISPARATE IMPACTS OF PEOPLES NONPAYMENT SERVICE DISCONNECTIONS.

A. Ms. Doyle-Conley opposes having Peoples perform a root cause analysis to determine why Peoples disproportionately disconnects service for nonpayment to Black households holding incomes constant. The only basis for her opposition is her blanket assertion that "The Company does not disconnect service based on demographics and does not discriminate." (Peoples St. 16-R, at 10).

Ms. Doyle-Conley does not dispute this fact (Peoples St. 16-R, at 10 – 11), that Peoples's "data does appear to show a correlation or relationship between the increased disconnection

of service for non-payment and zip codes with the highest percentage of Black householders." (OCA St. 6, at 20). Based on the information that is currently available, the relationship cannot be explained by reference to factors other than race. (Id., at 20 – 22). I concluded in my Direct Testimony that "Peoples is likely not even aware of this correlation, and I think it is important to shed light onto it to ensure that it can be remedied in the near term." (Id., at 22). No reason was given for refusing to conduct a root cause analysis into why the data shows a correlation between the increased disconnection of service for non-payment and zip codes with the highest percentage of Black householders.

All Ms. Doyle-Conley argues is that Peoples does not *intentionally* discriminate, a conclusion that I explicitly reported I found no evidence of in the first instance. That lack of intentionality, however, neither addresses nor remedies the fact that Peoples the data demonstrates that fact that Peoples service disconnection practices disproportionately disconnect service to Black households for nonpayment independent of other factors.

Q. DOES PEOPLES ACKNOWLEDGE IN ANY WAY THAT IT MAY ENGAGE IN DISCRIMINATORY CONDUCT EVEN IF THAT CONDUCT LACKS INTENTIONALITY?

A. Yes. Even in this rate case, Peoples explicitly acknowledges that conduct could be discriminatory, even if there is a lack of any intentional discrimination and that such discrimination would be inappropriate. The Company agreed to include in its tariff language regarding the imposition of cash security deposits that it may use a "generally accepted credit scoring methodology" only "provided that the methodology does not directly, *or have the effect of*, discriminating based on a protected class as set forth in the federal Equal Credit Opportunity Act." (Exh. DMF-1R) (emphasis added). Having

recognized that its actions would be objectionable if they "have the effect of discriminating," even if no "direct" or "intentional" discrimination exists, it is not clear *why* Peoples opposes undertaking a root cause analysis to understand why its disconnection policies "have the effect of discriminating" against zip codes disproportionately comprised of Black households. This willful blindness policy toward the potential disparate impact of its disconnections should be rejected. The root cause analysis I recommend, along with the need to take remedial action when the root cause is determined, should be adopted.

Q. PLEASE RESPOND TO MS. DOYLE-CONLEY'S REBUTTAL TESTIMONY REGARDING THE USE OF PEOPLES' LINGUISTIC ANALYTICS SOFTWARE FOR PURPOSES OF IDENTIFYING CONFIRMED LOW-INCOME CUSTOMERS AND ENROLLING CUSTOMERS IN CAP.

A. Ms. Doyle-Conley opposes the use of the Company's existing speech analytics software to identify low-income customers. (Peoples St. 16-R, at 11). She asserts that is not "needed" given that "Peoples Customer Service Representatives are trained and skilled in identifying low income customers and as normal course of business refer customer (sic) to CAP." (Id.) Despite this "training" and "normal course of business," over the three years 2021 through 2023, Peoples disconnected service for nonpayment to 20,352 customers that the Company *knew* to be low-income rather than enrolling those customers in CAP. (OCA-09-21).[4]

[4] To the extent that some customers may have had service disconnected for nonpayment more than once, this number have some double-counting of the number of Confirmed Low-Income accounts disconnected for nonpayment.

The "training" and "skill" of Customer Service Representatives is not placed at issue by my recommendation to expand the use of Peoples's speech analytics software to identify customers who should be placed in CAP. The software I recommend that Peoples use is not new, but is *existing* software used by the Company. Moreover, that existing Verint software is now used to support actions which the Company's Customer Service Representatives are "trained and skilled in doing in" handling "emergency" calls.

As I noted in my Direct Testimony, the value-added that would be gained by expanding the use of the Verint software to support CAP enrollment is to identify those words and phrases not involved with an explicit customer statement of low-income status that would help the Customer Service Representative identify potential low-income customers. As I explained, in addition, "terms, phrases and speech patterns associated with low-income status, payment difficulties, unaffordability, or seeking low-income assistance for energy or other life necessities (e.g., food, housing, medical care) could be identified such that Vivent would search for them to identify universal service calls." (OCA St. 6, at 47).

Moreover, the identification of low-income customers, while used to identify customers who should be enrolled in CAP, would be used for other purposes as well. "Proper handling" would include approving delays in collection activities pending applications for and approval of program enrollment; identification in the Company's information system of Confirmed Low-Income customer status; and extending available low-income protections." (Id.) I noted that "While the implication of identifying low-income customers having perhaps the greatest financial benefit to low-income customers is enrollment in CAP, such enrollment is not the *exclusive* impact of appropriately identifying low-income customers." (Id., at 48) (emphasis added).

Part 4. Response to Peoples Rebuttal Witness Scanlon.

Q. WHAT IS YOUR FIRST RESPONSE TO THE REBUTTAL TESTIMONY OF PEOPLES WITNESS CAROL SCANLON?

A. Ms. Scanlon addresses my recommended modification to the CAP offset included in the Peoples tariff. She states that "the Company accepts Mr. Colton's recommendation of a combined base participation rate of 30,800." (Peoples St. 3-R, at 38). Accordingly, I offer no further discussion of this issue.

Q. WHAT IS YOUR SECOND RESPONSE TO THE REBUTTAL TESTIMONY OF PEOPLES WITNESS SCANLON?

A. Ms. Scanlon dismisses my concerns about the impact of the Company's proposed Weather Normalization Adjustment (WNA) by stating that I am "primarily concerned with low income customers that are not enrolled in CAP." (Peoples St. 3-R, at 17). What she fails to note is that this "primary concern" extends to ***most*** of Peoples low-income customers. According to the most recent (2022) BCS Report on Universal Service Programs and Collections Performance, while Peoples had an estimated 146,971 low-income customers, it has enrolled only 28,367 of those low-income customers (19%) into CAP. Peoples reported that for the most recent month available, it had 29,091 CAP participants. (OCA-9-2). This participation was ***lower*** than the CAP participation in 2017 (30,486), 2018 (30,619), 2020 (31,202), and 2021 (32,421), and only 2.5% higher than 2022 (28,367).[5] Despite Ms. Scanlon's statement that enrollment of low-income customers in CAP being

[5] Participation in 2017, 2018 and 2019 is the sum of participation for Peoples and for Peoples (Equitable). Beginning in 2020, data for the two utilities was reported together.

the "first goal," in this proceeding, Peoples has opposed each recommendation made on how to improve that enrollment.

Q. PLEASE RESPOND TO MS. SCANLON'S DISCUSSION OF BUDGET BILLING.

A. Ms. Scanlon asserts that I recommend that the Company's proposed WNA and the Company's Budget Billing are "interchangeable." (Peoples St. 3-R, at 18). That misstates my testimony. It was the direct testimony of Peoples witness Zarumba that asserted that one purpose of the Company's proposed WNA was to "provide[…] systematic protection to customers. . .for revenue variations in usage associated with non-normal weather." (Peoples St. 15, at 56). Witness Zaruma asserted that "The impact on customers triggered by non-normal weather is variation in the level of bills. The variation can be especially problematic when severe weather occurs, and customers' bills increase." (Peoples St. 15, at 55).

My testimony is simply that, to the extent that one objective of a WNA is to provide "systematic protection to customers for variations in usage associated with non-normal weather," a far ***better*** way to accomplish that objective would be to increase participation in budget billing. The data simply does not support the argument by Company witness Zarumba and Company witness Scanlon that year-over-year changes in bills due to changes in weather have an impact on customer payment patterns. (OCA St. 6, at 65) ("contrary to Peoples argument about the impact of year-over-year bills, it is evident from the data above that the somewhat higher bills in 2022 did not change the residential payment patterns"). The impact on customer payments (and thus the way to provide "systematic protection to customers") is not to adopt to focus on year-over-year bills, but rather to focus on month-over-month bills. Peoples' data on median arrears (February 2021 – January 2024) shows

that the median residential arrears more than doubled from September 2021 through April 2022 (from $143 to $286), and nearly doubled from September 2022 through April 2023 (from $191 to $359). By September 2023, median residential arrears had again fallen to their seasonal low ($174). (OCA St. 6, at 65 – 66). The WNA proposed by Peoples would not change this pattern. If the Company's objective is truly to "provide systematic protection to customers," focusing on expanding the use of budget billing would offer a better protection while avoiding the wide range of adverse impacts that the WNA would impose on low-income customers.

Q. DOES MS. SCANLON DISPUTE THE ADVERSE IMPACTS THAT THE PROPOSED WNA WILL HAVE ON THE COMPANY'S LOW-INCOME CUSTOMERS?

A. No. I provided data that is both recent and state-specific documenting that low-income customers have a lesser ability than residential customers as a whole to adjust their usage in response to changes in winter heating month temperatures. I found that as a result, "Peoples' WNA bill adjustments will be imposed more frequently on low-income customers than they will be on residential customers generally." (OCA St. 6, at 61). Ms. Scanlon's response was that CAP enrollment would protect such low-income customers, ignoring the fact that more than eight out of every ten of the Company's low-income customers are not enrolled in CAP.

Part 5. Response to Peoples Rebuttal Witness Black.

Q. PLEASE IDENTIFY HOW MS. BLACK'S REBUTTAL TESTIMONY RESPONDS TO THE CONCERNS YOU HAD EXPRESSED REGARDING THE IDENTIFICATION OF "CONFIRMED LOW-INCOME" CUSTOMERS ON THE COMPANY'S SYSTEM.

A. Ms. Black seems to assert that there is a discrepancy between how the Company identifies Confirmed Low-Income customers in the data it provides to the Commission through its universal service reporting requirements and how the Company *actually* identifies such customers. What there is *no* discrepancy about is that when Peoples was explicitly asked to "please identify all categories or identifiers that Peoples includes when calculating its 'confirmed low income customer' count," the Company responded:

> Peoples counts all CAP participants, as income documentation or the zero income form are submitted to confirm low income status. In addition to CAP participation, Peoples also considers receipt of LIHEAP cash or crisis grants within the past 24 months as indicative of confirmed low income.

(CAUSE-PA-II-003).[6] There is also no dispute that this limited definition of "Confirmed Low-Income" is in non-compliance with the PUC's regulations. (52 Pa. Code § 62.2.).

Ms. Black states that the issue involves Peoples definitions, not Peoples practices. She asserts that the limited definition of "Confirmed Low-Income" customers was used *only* for purposes of reporting data to the PUC's Bureau of Consumer Services. She states further that "verbal attestation is used across the board to allow for the waiver of fees and deposits and protections related to collections and terminations." (Peoples St. 9-R, at 5).

[6] This discovery question, and the response thereto, were attached to OCA St. 6 as Exhibit 2.

She asserts that "it is important to clarify that the Company uses self-attestation for all manner of eligibility consideration including, but not limited to waiver of fees, waiver of deposits, establishing payment arrangements and restoration requirements." (Peoples St. 9-R, at 4).

Ms. Black proposes to "resolve" the reporting of Confirmed Low-Income customers by having the Company "modify our reporting for confirmed low income for 2024 activity to include self-attestation data in the annual Universal Service Report." (Peoples St. 9-R, at 6).

Q. DOES MS. BLACK'S PROPOSED "RESOLUTION" ADDRESS YOUR CONCERNS?

A. No. There continue to be problems that have been created by the failure of Peoples to abide by the clear definition of "confirmed low-income" in the PUC's regulations for natural gas utilities. These problems are only partially related to reporting. They are also substantive. From a reporting perspective, the implication of Ms. Black's testimony is that Peoples decision to vary its reporting from the PUC's regulatory definition, as well as from its own recordkeeping, means that the BCS annual reporting of data on Confirmed Low-Income customers for Peoples is wrong. While it is not possible to have BCS redo it annual reports to include corrected data for Peoples, neither should it be necessary for BCS to wait until Peoples reports its 2024 data to make corrections. BCS's publication of 2024 data will not be released until the Fall of 2025 at the earliest. Peoples should be directed to file corrected 2023 data with BCS for BCS to be able to incorporate this corrected data into its 2023 annual report on Universal Service Programs and Collections Performance to be published in the Fall or Winter of 2024.

The substantive problem associated with Ms. Black's Rebuttal Testimony is even deeper. Ms. Black refers twice to Peoples use of "verbal attestation" and "self-attestation" as a basis upon which Peoples determines whether or not a customer is "low income." She does not, however, explain what information Peoples will require customers to provide through this "verbal attestation" or "self-attestation." Pursuant to the Commission's regulation, a customer is not required to provide Peoples, even through a "self-attestation" or "verbal attestation," what their exact income is. All that is required is that the customer provide Peoples with information that would "reasonably place the customer in a low-income designation." A customer's self-attestation of the receipt of public assistance (e.g., Supplemental Nutrition Assistance Program [SNAP], welfare, Supplemental Security Income [SSI], Medicaid), for example, would all place a customer in a "low-income designation." For purposes of establishing the customer's "Confirmed Low-Income" status, it would not matter what specific dollar level of income allows the customer to receive such assistance. The mere fact of receiving such assistance would be sufficient to meet the PUC's definition.

This problem with Ms. Black's references to "self-attestation" and "verbal attestation" is not theoretical. The Company states with respect to the waiver of reconnect fees, for example, that "All customers are *asked to provide household size and monthly income* during the reconnection process. If a customer's *self-reported income* places them at or below 150% FPL the reconnection fee is automatically waived by the billing system." (CAUSE-PA-1-010) (emphasis added). So, too, did People say that "Customer service representatives are *trained to update income and occupancy information* from all customers during the reconnection process. If *the income and occupancy information*

provided by the customer places them at or below 150% Federal Poverty Level, the reconnection fee is automatically waived by the billing system." (CAUSE-PA-I-11). (emphasis added). As can be seen, even if self-attested, Peoples requires customers to disclose their actual dollar levels of income and household composition to be identified as "low-income." That requirement goes beyond what the PUC's regulation allows.

The PUC's regulation does not require a customer to provide "household size and monthly income" (CAUSE-PA-I-10), or to provide "income and occupancy information" (CAUSE-PA-I-11) in order to provide information that would "reasonably place the customer in a low-income designation." Ms. Black's references to "self-attestation" and "verbal attestation" does not resolve the problem of the Company's non-compliance with the PUC regulation regarding the identification of Confirmed Low-Income customers.

Q. WHAT DO YOU RECOMMEND?

A. I reiterate the recommendation in my Direct Testimony (OCA St. 6, at 83, Recommendation #3). Peoples should modify its policies and procedures regarding the identification of "confirmed low-income" customers to conform with the PUC's regulations, including self-certification of low-income status. Peoples should include these modified policies and procedures in its residential tariff. Within this modified tariff language should be included a list of public assistance programs, mutually agreed to by the Company and its Universal Service Advisory Group, (USAG) participation in which would reasonably place the customer in a low-income designation. The Company should explicitly acknowledge that a customer *may* provide, but is *not required* to provide, either the household's actual dollar level of income or the household composition in order to provide sufficient information to reasonably place them in a low-income designation.

Q. DO YOU HAVE ANY FINAL RESPONSE TO THE REBUTTAL TESTIMONY OF COMPANY WITNESS BLACK?

A. Yes. Ms. Black makes two related statements relating to "the general concern of affordability for low income households." First, she asserts that the Company's "call center does an exceptional job of identifying CAP eligible customers and explaining the program." (Peoples St. 9-R, at 9). Second, in a related vein, she asserts that "[a]s the leader of the Community Assistance Programs department at Peoples, affordability and availability of resources are always top of mind." (Peoples St. 9-R, at 19). It is simply not necessary to conclude that Peoples is "unconcerned" or that the Company is doing a "bad job" in order to conclude further that the Company can do better. The data quite clearly shows that Peoples can do better. As I noted above, for example,

- The enrollment in Peoples's CAP program in 2023 was *lower* in the most recent month for which data was available (29,091) than the CAP participation in 2017 (30,486), 2018 (30,619), 2020 (31,202), and 2021 (32,421), and only 2.5% higher than it was in 2022 (28,367).

- Over the three years 2021 through 2023, Peoples disconnected service for nonpayment to 20,352 customers that the Company *knew* to be low-income rather than enrolling those customers in CAP. (OCA-09-21).[7]

- Over the three years 2020 through 2022, Peoples's low-income customers defaulted on 28,163 payment arrangements.

Thus, I continue to make the outreach recommendations I included in my Direct Testimony.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

[7] To the extent that some customers had service disconnected for nonpayment more than once, this number may be somewhat overstated.

Pa. P.U.C. v. Peoples Natural Gas Company, LLC
Docket Nos. R-2023-3044549
Interrogatories of Peoples Natural Gas Company
Set IV to OCA

PNG-OCA-IV-001:

Reference OCA St. No. 6 – Direct Testimony of Roger Colton. Please provide an assessment of the costs of all recommendations made by Mr. Colton. If such assessments are unavailable, please explain why the cost implications were ignored and how Mr. Colton reconciles the costs associated with his recommendations with affordability for Peoples' customers.

Response Date: April 8th, 2024

Responding Witness: Roger D. Colton

Response: This question mischaracterizes Mr. Colton's position by stating that he "ignored" cost implications. Mr. Colton did not ignore cost implications, but as he is not employed by Peoples or with sufficient access to the information necessary to determine whether, when, and how Peoples would prudently incur costs to implement his recommendations, he could not quantify costs at the time of his testimony. The response below further considers each of the recommendations as summarized in Mr. Colton's direct Testimony (OCA St. 6, at 82 – 85) in the order that they were summarized:

1. The concerns I identify with respect to the unaffordability of Peoples rates can (and should) be considered even outside the consideration of the specific proposals I advance with respect to specific low-income initiatives. These concerns should be incorporated into PUC decision making regarding issues ranging from the proposed rate design to the appropriate return on equity.

   - **Cost assessment:** While there was no specific "assessment of the costs" of this recommendation, the recommendation should yield net savings to ratepayers in the alternative to considering investor interests on a stand-alone basis.

2. Peoples conduct a root cause analysis to determine what is driving this disproportionate level of utility disconnections within the 40 zip codes with the highest penetration of Black households. Once this root cause analysis is conducted, Peoples should commit to taking steps to address the cause with the commitment of reducing disproportionate disconnections within these zip codes. This root cause analysis is intended to be consistent with the definition of and standard for the root cause analysis that OCA witness Alexander outlines in OCA Statement 5. The extent to which Peoples mitigates the disproportionate disconnection of service for

nonpayment in zip codes with high penetrations of Black households should be reviewed in Peoples next base rate case.

- **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation. Given the fundamental regulatory (and other legal) requirement that Peoples Gas not engage in discrimination in its rates and services, it seemed unreasonable to consider the possibility that Peoples might decide *not* to engage in a root cause analysis of why Peoples disproportionately disconnects services in Black zip codes (controlling for income), and then adopt remediation of those root causes, on the grounds that it might "cost too much" to do so.

3. Peoples should modify its policies and procedures regarding the identification of "confirmed low-income" customers to conform with the PUC's regulations, including self-certification of low-income status ("This information may include receipt of LIHEAP funds (Low-Income Home Energy Assistance Program), *self-certification by the customer*. . ."). Peoples should include these modified policies and procedures in its residential tariff.

   - **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation in that the recommendation imposes no obligation other than compliance with the unambiguous terms of PUC regulations. It seemed unreasonable to consider the possibility that Peoples might decide *not* to comply with the PUC's regulations on the grounds that it might "cost too much" to comply with the regulation. No cost would be incurred by adding language to the tariff in compliance with the PUC's regulation.

4. In addition to Peoples providing a stand-alone written communication with Confirmed Low-Income customers as agreed to in the 2019 rate case settlement, prior to the disconnection of a Confirmed Low-Income customer, Peoples adopt a procedure, developed in collaboration with its Universal Service Advisory Group (USAG), under which it will seek to make personal contact with the customer subject to disconnection. In that personal contact, the Company shall offer the Confirmed Low-Income customer the opportunity to apply for the Company's CAP and arrearage forgiveness program. If the customer expresses a desire to make such application, Peoples will postpone the disconnection for a reasonable period of time to allow the application process to be completed. In short, I recommend that the procedure agreed to in the 2019 Settlement be expanded to include an effort to make personal contact in addition to the written contact contemplated by that Settlement.

- **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation. No such overall cost assessment was deemed necessary. According to the independent evaluation of the Peoples universal service programs (APPRISE, Inc. (August 2017). Peoples Natural Gas 2017 Universal Service Program Evaluation, Final Report, available at https://www.puc.pa.gov/General/pdf/USP_Evaluation-Peoples.pdf), the "cost" of "collection actions" was $5.46 for a service termination with an additional cost of $0.27 for a "termination processing step," while the cost of a "call" was only $0.01. (Peoples Natural Gas 2017 Universal Service Program Evaluation, at 84). Irrespective of the number of calls made, therefore, it would be cost-effective for Peoples to attempt to avoid the cost of a service termination standing alone, or the combined cost of a service termination plus the termination processing step ($0.01 for a call versus $0.27 plus $5.46 for the termination processing step plus the termination: $5.73 total). There is no cost associated with submitting the language to the Low-Income Advisory Group as recommended.

  Finally, as BCS notes, the purpose of Peoples universal service programs, which purpose is established by statute, is to "help low-income customers maintain electric and natural gas service. . ." (OCA St. 6, at 38, citing BCS 2022 Report, at 3). BCS further notes that "The Acts also require the PUC to ensure that universal service and energy conservation policies are appropriately funded and available in each electric and natural gas distribution territory." (BCS 2022 Report, at 3, citing 66 Pa. C.S. §§ 2203(8), 2804(9)). The statute does *not* provide or allow for Peoples to refuse to make its programs available on the grounds that the Company believes that so doing "costs too much."

5. Before Peoples enters into a DPA with a customer which the Company either: (1) knows to be a Confirmed Low-Income customer; or (2) has generated information through the DPA process documenting that the customer is in the Tier 1 income range (at or below 150% FPL), it should be required to provide the customer a stand-alone Plain English notice to that customer of the customer's right to enter into CAP and an explanation of the advantages of CAP's arrearage forgiveness benefits. As it agreed to do with the pre-termination stand-alone written notice, Peoples should develop this Plain English notice in collaboration with its Universal Services Advisory Group.

   - **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation. According to the independent

evaluation of the Peoples universal service programs (APPRISE, Inc. (August 2017). Peoples Natural Gas 2017 Universal Service Program Evaluation, Final Report, available at https://www.puc.pa.gov/General/pdf/USP_Evaluation-Peoples.pdf), the cost of a "letter" in Peoples' collection actions was between $0.04 and $0.13 per letter. (2017 Universal Service Program Evaluation, at 83).

In total, it would be reasonable to expect the overall cost of collection to decline through an enrollment of Confirmed Low-Income customers in CAP. The Peoples program evaluation reported that "there was a significant decline in the cost of collections of $6.52 for the treatment group as compared to the comparison groups." 2017 Universal Service Program Evaluation, at 84. For Equitable, the Peoples Natural Gas Universal Service Program Evaluation reported that "there was a statistically significant increase in the cost of collections. . .of $3.15." Given the disproportionate share of Confirmed Low-Income customers served by the Peoples Division, as compared to the Equitable Division, it was deemed reasonable to conclude that the cost savings from Peoples customers would exceed the cost increases from Equitable customers.

Moreover, the evaluation of the Peoples Natural Gas universal service program reported that participants in the Peoples Natural Gas CAP (which at the time was not a percentage of income program) resulted in a 36% net increase in the percentage of bill paid. (OCA St. 6, at Table 16). Accordingly, according to Peoples own program evaluation, not only would enrollment in CAP reduce the cost of collections, but it would ***also*** increase the percentage of bill being paid.

The findings of the 2017 Evaluation are corroborated by the most recent Bureau of Consumer Services (BCS) annual report on Universal Service Programs and Collections Performance (2022) (available at https://www.puc.pa.gov/media/2573/2022-universal-service-report-final.pdf). According to the BCS report, the average arrears of a Confirmed Low-Income customer on an arrangement was $1,046.70 (2022 BCS Report, at 30), remembering that this recommendation is directed toward Confirmed Low-Income customers who would otherwise be on a payment agreement ("before Peoples enters into a DPA [Deferred Payment Agreement]. . ."). Moreover, this most recent BCS data reported that while Peoples had 7,015 Confirmed Low-Income customers on agreement (2022 BCS Report, at 15), it ***also*** had 9,219 Confirmed Low-Income customers

who were "payment-troubled," defined by the PUC to be a customer who had defaulted on one or more payment arrangements in the past twelve months. (2022 BCS Report, at 11, 12). There were, in other words, more Confirmed Low-Income customers who had defaulted on one or more payment arrangements in a one-year period than there were Confirmed Low-Income customers on payment arrangements.

In contrast, BCS reported that Peoples CAP participants paid 84.1% of their CAP bill in 2020; 91.5% of their CAP bill in 2021; and 75.7% of their CAP bill in 2022. (2022 BCS Report, at 66).

Through Mr. Colton's recommendation, therefore, Peoples would be encouraging customers who owe more than $1,000 in arrears each to enroll in a program in which participants have made between 76% and 92% of their annual payments,

Given that the Company's own data indicates that a letter costing $0.10 would both reduce the cost of collection and increase the percentage of bill paid (likely even more than the 2017 Evaluation indicated given that the Evaluation results were relative to ***all*** low-income customers while the recommendation was limited to those who were already in arrears by more than $1,000), and that the BCS data confirms that the recommended action would avoid enrolling a Confirmed Low-Income customer in a payment plan, more than half of which end in default each year, and instead enroll those customers in CAP yielding payment rates of between 75% and 92% of their total bill each year, it did not seem reasonable to expect Mr. Colton's recommendation to impose substantial costs, if any. There is no cost associated with submitting the language to the Low-Income Advisory Group as recommended.

Finally, as BCS notes, the purpose of Peoples universal service programs, which purpose is established by statute, is to "help low-income customers maintain electric and natural gas service. . ." (OCA St. 6, at 38, citing BCS 2022 Report, at 3). BCS further notes that "The Acts also require the PUC to ensure that universal service and energy conservation policies are appropriately funded and available in each electric and natural gas distribution territory." (BCS 2022 Report, at 3, citing 66 Pa. C.S. §§ 2203(8), 2804(9)). The statute does ***not*** provide or allow for Peoples to refuse to make its programs available on the grounds that the Company believes that so doing "costs too much."

Pa. P.U.C. v. Peoples Natural Gas Company, LLC
Docket Nos. R-2023-3044549
Interrogatories of Peoples Natural Gas Company
Set IV to OCA

6. Peoples adopt a procedure under which it will provide a stand-alone Plain English notice to customers found to be without heating service at the time of the Company's Cold Weather Survey of the customer's right to enter into CAP and an explanation of CAP's arrearage forgiveness benefits. Peoples should develop the Plain English notice in collaboration with its Universal Service Advisory Group.

- **Cost assessment:** While Mr. Colton undertook no specific "assessment of the costs" associated with this recommendation, he considered the following as to costs. This recommendation is directed toward customers whose Peoples service has been disconnected for nonpayment within the past year. The statutory section cited in the testimony states that it applies to "premises where heat related service has been terminated within the past year for any of the grounds in § 56.81 (relating to authorized termination of service) or § 56.98. . ." The statute provides that a natural gas utility such as Peoples "shall, within 90 days prior to December 1, survey and attempt to make post-termination personal contact with the occupant or a responsible adult at the premises. . ." There is, therefore, no necessary incremental cost associated with making, or attempting to make, personal contact with the occupant "or a responsible adult" at the service premises being surveyed. Doing so is already mandated by statute.

  The question thus involves a reasonable consideration of the cost of preparing "a stand-alone Plain English notice" as recommended. The fact that that stand-alone notice informs the customer of their "right to enter into CAP and an explanation of CAP's arrearage forgiveness benefits" would impose no costs. The *content* of a "stand-alone Plain English notice" would not affect the cost of a notice one way or the other.

  According to the independent evaluation of the Peoples universal service programs (APPRISE, Inc. (August 2017). Peoples Natural Gas 2017 Universal Service Program Evaluation, Final Report, available at https://www.puc.pa.gov/General/pdf/USP_Evaluation-Peoples.pdf), the cost of a "letter" in Peoples' collection actions was between $0.04 and $0.13 per letter. (2017 Universal Service Program Evaluation, at 83). The cost of a "letter" is a reasonable surrogate for the cost of a "stand-alone Plain English notice."

  Recognizing that this recommendation is directed toward customers whose service has already been disconnected for nonpayment, as Mr. Colton noted in his Direct Testimony, a failure to reconnect the customer "not only causes Peoples to lose the revenue that is comprised of the unpaid bills at the time of disconnection, but also causes the Company to lose any revenue associated with

the bills that would have been associated with future bills." (OCA St. 6, at 24). According to Peoples, Confirmed Low-Income customers had an average arrears at the time of disconnection of $893 in 2021, $636 in 2022, and $642 in 2023. (OCA St. 10, at Table 11).

Even if Peoples could successfully enroll a customer in a payment arrangement at a premise which had been disconnected within the past year, and neither reconnected before the Cold Weather Survey nor reconnected at the time of the Cold Weather Survey through negotiation of a payment arrangement (either of which reconnections would place the customer outside the scope of this recommendation) (the recommendation is limited to "customers found to be without heating service at the time of the Company's Cold Weather Survey"), it is unlikely that such a payment arrangement for a Confirmed Low-Income customer would yield long-term success. The most recent BCS data reported that while Peoples had 7,015 Confirmed Low-Income customers on agreement (2022 BCS Report, at 15), the Company ***also*** had 9,219 Confirmed Low-Income customers who were "payment-troubled," defined by the PUC to be a customer who had defaulted on one or more payment arrangements in the past twelve months. (2022 BCS Report, at 11, 12). There were, in other words, more Confirmed Low-Income customers who had defaulted on one or more payment arrangements in a one-year period than there were Confirmed Low-Income customers on payment arrangements.

In contrast to this failure to enroll a Confirmed Low-Income customer in CAP, successfully enrolling a Confirmed Low-Income customer in CAP would involve the customer participating in a program which, BCS reported that Peoples CAP participants paid 84.1% of their CAP bill in 2020; 91.5% of their CAP bill in 2021; and 75.7% of their CAP bill in 2022. (2022 BCS Report, at 66).

In short, rather than either losing the revenue from the arrears at the time of disconnection (along with all future revenue) if a Confirmed Low-Income Cold Weather Survey participant was not reconnected, or enrolling that Confirmed Low-Income Cold Weather survey participant in a payment arrangement which has a greater than 50% likelihood of defaulting, enrolling the Confirmed Low-Income Cold Weather survey participant in CAP would place the customer on a rate under which Peoples will receive between 76% and 92% of future bill payments.

There is no cost associated with submitting the language of the written notice to the Low-Income Advisory Group as recommended.

Finally, as BCS notes, the purpose of Peoples universal service programs, which purpose is established by statute, is to "help low-income customers maintain electric and natural gas service. . ." (OCA St. 6, at 38, citing BCS 2022 Report, at 3). BCS further notes that "The Acts also require the PUC to ensure that universal service and energy conservation policies are appropriately funded and available in each electric and natural gas distribution territory." (BCS 2022 Report, at 3, citing 66 Pa. C.S. §§ 2203(8), 2804(9)). The statute does *not* provide or allow for Peoples to refuse to make its programs available on the grounds that the Company believes that so doing "costs too much."

7. When Confirmed Low-Income customers accrue an unpaid balance of $300, Peoples provide a stand-alone written Plain English notice informing those customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

   - **Cost assessment:** See response to Question 5, Question 6, and Question 8.

8. In those instances where Peoples would otherwise request a cash security deposit pursuant to its Rule 3.D, the Company should, as an alternative to that deposit demand, provide a stand-alone written Plain English notice informing these customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

   - **Cost assessment:** The Company's Rule 3.D set forth in its tariff provides for the demand for a deposit from an "existing customer" under any one of three circumstances: (1) the existing Customer has been delinquent on any two (2) consecutive bills or three (3) or more bills within the preceding twelve (12) month period, (2) the existing Customer has failed to comply with a material term or condition of a settlement or payment agreement, as defined in applicable Commission regulations, or (3) the Customer's utility service has been terminated and the Customer desires reconnection. Each of these circumstances demonstrates that the customer has had difficulty in paying their bills to Peoples.

     In contrast to responding to these payment difficulties by increasing the bill further through the imposition of a cash security deposit, or a higher cash security deposit, it would be reasonable to expect the overall cost of collection to decline through an enrollment of Confirmed Low-Income

customers in CAP. The Peoples program evaluation reported that "there was a significant decline in the cost of collections of $6.52 for the treatment group as compared to the comparison groups." 2017 Universal Service Program Evaluation, supra, at 84. For Equitable, the Peoples Natural Gas Universal Service Program Evaluation reported that "there was a statistically significant increase in the cost of collections. . .of $3.15." Given the disproportionate share of Confirmed Low-Income customers served by the Peoples Division, as compared to the Equitable Division, it was deemed reasonable to conclude that the cost savings from Peoples customers would exceed the cost increases from Equitable customers.

Moreover, the evaluation of the Peoples Natural Gas universal service program reported that participants in the Peoples Natural Gas CAP (which at the time was not a percentage of income program) resulted in a 36% net increase in the percentage of bill paid. (OCA St. 6, at Table 16). Accordingly, according to Peoples own program evaluation, not only would enrollment in CAP reduce the cost of collections, but it would ***also*** increase the percentage of bill being paid. The increase would likely be even greater than the increase documented in the Peoples evaluation since the Evaluation considered ***all*** customers whereas the recommendation applies to customers who have a demonstrated past difficulty in paying.

The findings of the 2017 Evaluation are corroborated by the most recent Bureau of Consumer Services (BCS) annual report on Universal Service Programs and Collections Performance (2022) (available at https://www.puc.pa.gov/media/2573/2022-universal-service-report-final.pdf). Remember that this recommendation is directed toward Confirmed Low-Income customers who would otherwise have met one of three criteria. The first criterion set forth in Rule 3.D is that the customer was delinquent on any two (2) consecutive bills or three (3) or more bills within the preceding twelve (12) month period. According to BCS, Peoples Confirmed Low-Income customers had an average arears of $617.26 in 2020, $718.37 in 2021, and $599.51 in 2022.

Mr. Colton's recommendation is consistent with the PUC's prior findings with respect to CAP. As Mr. Colton noted in his direct testimony, the PUC has held that "enrolling low-income customers into CAPs as early as possible generally puts them in the best position to maintain good payment habits and avoid accruing utility debt. Waiting until a customer has broken

a payment agreement or otherwise fallen into arrears could make it harder for a household to succeed in a CAP." (OCA St. 6, at 45).

The second criterion is that a customer had failed to comply with a material term or condition of a settlement or payment agreement. The average arrears of a Confirmed Low-Income customer on an arrangement was $1,046.70 (2022 BCS Report, at 30). The third criterion is that a customer has had service terminated. Confirmed Low-Income customers had an average arrears at the time of disconnection of $893 in 2021, $636 in 2022, and $642 in 2023. (OCA St. 10, at Table 11). Under each circumstance, Peoples has substantial arrears at risk and prior collection efforts have not been successful.

In contrast to each of the three indicators of payment difficulty in the Peoples Rule 3.D (i.e., non-payment of bills; default on a payment arrangement; disconnection of service for nonpayment), BCS reported that Peoples CAP participants paid 84.1% of their CAP bill in 2020; 91.5% of their CAP bill in 2021 and 75.7% of their CAP bill in 2022. (2022 BCS Report, at 66). It is thus reasonable to conclude that, given that the recommendation applies only to customers with these three indicators of payment difficulty, that Peoples would not collect a greater percentage of its past-due and future billings through continued collection actions than it would by enrolling the customer in CAP.

Given that the Company's own data indicates that a letter costing $0.10 would both reduce the cost of collection and increase the percentage of bill paid (likely even more than the 2017 Evaluation indicated given that the Evaluation results were relative to ***all*** low-income customers while the recommendation was limited to those who were already demonstrably having bill payment difficulties, it did not seem reasonable to expect Mr. Colton's recommendation to impose substantial costs, if any.

Finally, as BCS notes, the purpose of Peoples universal service programs, which purpose is established by statute, is to "help low-income customers maintain electric and natural gas service. . ." (OCA St. 6, at 38, citing BCS 2022 Report, at 3). BCS further notes that "The Acts also require the PUC to ensure that universal service and energy conservation policies are appropriately funded and available in each electric and natural gas distribution territory." (BCS 2022 Report, at 3, citing 66 Pa. C.S. §§ 2203(8), 2804(9)). The statute does ***not*** provide or allow for Peoples to

refuse to make its programs available on the grounds that the Company believes that so doing "costs too much."

There is no cost associated with submitting the language of the written notice to the Low-Income Advisory Group as recommended.

9. Peoples be directed to extend the use of its Vivent Speech Analytics software to assist with the Quality Monitoring of phone calls involving, or potentially involving, universal service programs and other low-income customers. Peoples should be directed to involve its USAG in the identification and selection of Low-Income and Universal Service Terms to be detected by the system in order to confirm that phone calls are properly being identified and handled. Regular six-month reports on the results of the Speech Analytics reviews should be provided to the USAG.

   - **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation set forth in Mr. Colton's testimony. No new software or technology is required by this recommendation. Instead, the recommendation involves extending the use of software that Peoples Gas already has already installed and is already using. No specific process is used to determine what terms, phrases or speech patterns will be searched for through the Vivent software. When OCA requested that Peoples "identify and provide a detailed description of the internal processes, procedures, or practices employed to determine what terms, phrases, or other speech patterns will be employed in the application of the speech pattern analytics or linguistic analytics software to the review," Peoples simply referred back to its use of the Vivent software. (OCA St. 6, at 46 – 47, citing OCA-10-12, attached as OCA Exh. RDC-6 and OCA Exh. RDC-7).

10. The residential customer charge determined by OCA witness Clarence Johnson should be approved.

   - **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation set forth in Mr. Colton's Direct Testimony. A fuller discussion of the rate ramifications of adoption of this recommendation can be found in the Direct Testimony of OCA Witness Clarence Johnson.

Pa. P.U.C. v. Peoples Natural Gas Company, LLC
Docket Nos. R-2023-3044549
Interrogatories of Peoples Natural Gas Company
Set IV to OCA

11. The recommendations of OCA witnesses Evrard, Mugrace and Johnson be adopted with respect to the Company's proposed Weather Normalization Adjustment and that the proposed Weather Normalization Adjustment should be denied.

    - **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation set forth in Mr. Colton's Direct Testimony. For all the reasons set forth in Mr. Colton's Direct Testimony, however, adoption of this recommendation would result in reduced rates to low-income customers.

12. The Commission adopt the return on equity and capital structure found to be reasonable by OCA witness Rothschild.

    - **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation set forth in Mr. Colton's Direct Testimony. All discussion of costs of Mr. Rothschild's return on equity and capital structure, compared to the return on equity and capital structure recommended by Peoples, was included in the Direct Testimony of Mr. Rothschild.

13. Given its obligation to balance the interests of investors and ratepayers in setting a reasonable return on equity, the greater adverse impacts that inflation has imposed on low-income ratepayers should be considered by the PUC in establishing a return on equity.

    - **Cost assessment:** While there was no specific "assessment of the costs" associated with this recommendation, it was expected that there would be financial savings to ratepayers to the extent that the Commission balanced the interests of residential customers, including low-income customers, with investors in setting a reasonable return on equity rather than exclusively considering investor interests in setting that equity return.

14. In addition to "furnishing a written guaranty" as referenced in the Company's tariff, the Company should add a sub-section (2) which would read in relevant part:

    > Provide income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.

This language mirrors the language of 52 Pa. Code § 56.32(e).

- **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation in that the recommendation imposes no obligation other than compliance with the unambiguous terms of 52 Pa. Code § 56.32(e). It seemed unreasonable to consider the possibility that Peoples might decide *not* to comply with the Pennsylvania statute on the grounds that it might "cost too much" to comply with the statute. No cost would be incurred by adding the recommended language to the Company's tariff.

15. In addition, a similar change should be made to Rule 3.D (Original Page 20). This modification should add an unnumbered paragraph immediately after Rule 3.D(2), which unnumbered paragraph would read:

> Notwithstanding subsection (D), the Company may not require a cash deposit from a customer who is, based upon household income, confirmed to be eligible for a customer assistance program. A customer is confirmed to be eligible for a customer assistance program by the public utility if the customer provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.

This language mirrors 52 Pa. Code § 56.41(B)(4) extending the exemption from deposits to customers as well as to applicants.

- **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation in that the recommendation imposes no obligation other than compliance with the unambiguous terms of 52 Pa. Code § 56.41(B)(4). It seemed unreasonable to consider the possibility that Peoples might decide *not* to comply with the Pennsylvania statute on the grounds that it might "cost too much" to comply with the statute. No cost would be incurred by adding the recommended language to the Company's tariff.

16. Rule 3.E(2) be modified to add the following language: "that fall within the scope of general industry practice, *provided that the methodology does not directly, or have the effect of, discriminating based on a protected class as set forth in the federal Equal Credit Opportunity Act.*" (new language emphasized).

Pa. P.U.C. v. Peoples Natural Gas Company, LLC
Docket Nos. R-2023-3044549
Interrogatories of Peoples Natural Gas Company
Set IV to OCA

- **Cost assessment:** There was no specific "assessment of the costs" associated with this recommendation in that the recommendation imposes no obligation other than compliance with the unambiguous terms of the federal Equal Credit Opportunity Act (ECOA). It seemed unreasonable to consider the possibility that Peoples might decide *not* to comply with the ECOA on the grounds that it might "cost too much" to avoid discrimination against protected classes of customers. No cost would be incurred by adding the recommended language to the Company's tariff.

17. Peoples be directed to use a CAP base participation of 30,800. This reflects the combined projected CAP participation for the year starting October 2024 rounded to the nearest 100.

- **Cost assessment:** While there was no specific "assessment of the costs" of this recommendation, the recommendation is expected to result in a decrease in costs to the residential customers of Peoples. The recommendation lowers the base projected CAP participation threshold at which the bad debt offset established by the Tariff becomes effective, thus increasing the offset and decreasing rates.

VERIFICATION

I, Roger D. Colton, hereby state that the facts set forth in my response to Peoples Natural Gas Company LLC's Interrogatories, Set IV, Question 1, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: April 8, 2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXV-001

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Please provide the cost per year, for the three most recent years, of using the Vivent software.

Answer: The Company assumed that OCA is referring to Verint. As such, the the annual cost for using Verint are:

2021 $299,387

2022 $61,589

2023 $108,847

Submit Date: 4/29/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXV-003

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: Please provide the cost by year, for the three most recent years, of implementing paragraph 59 of the 2018 rate case settlement.

Answer:

Year	Cost
2021	$19,921
2022	$14,570
2023	$24,363

Submit Date: 4/29/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXV-005

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: Confirm or deny. It is Peoples policy that the Company will not place limits on its CAP enrollment because the cost of enrolling additional low-income customers is too high. If anything other than an unqualified "confirmed," please describe in detail the level of CAP cost which, if reached, is the maximum CAP cost that Peoples is willing to spend on CAP.

Answer: Confirm. Peoples' CAP does not have an enrollment ceiling and all income eligible customers who meet the application and recertification requirements are eligible to participate.

Submit Date: 4/29/2024

DIRECT TESTIMONY

AND EXHIBITS

OF

RICHARD A. BAUDINO

ON BEHALF OF

PEOPLES INDUSTRIAL INTERVENORS

J. KENNEDY AND ASSOCIATES, INC.

MARCH 22, 2024

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
	:	
V.	:	**Docket No. R-2023-3044549**
	:	
PEOPLES NATURAL GAS COMPANY LLC	:	

DIRECT TESTIMONY OF RICHARD A. BAUDINO

Q. Please state your name and business address.

A. My name is Richard A. Baudino. My business address is J. Kennedy and Associates, Inc. ("Kennedy and Associates"), 570 Colonial Park Drive, Suite 305, Roswell, Georgia 30075.

Q. What is your occupation and by whom are you employed?

A. I am a consultant to Kennedy and Associates.

Q. Please describe your education and professional experience.

A. I received my Master of Arts degree with a major in Economics and a minor in Statistics from New Mexico State University in 1982. I also received my Bachelor of Arts Degree with majors in Economics and English from New Mexico State in 1979. In October 1989, I joined the utility consulting firm of Kennedy and Associates as a Senior Consultant where my duties and responsibilities covered substantially the same areas as those during my tenure with the New Mexico Public Service Commission Staff. I became Manager in July 1992 and was named Director of Consulting in January 1995. Currently, I am a consultant with Kennedy and Associates. Exhibit ____(RAB-1) summarizes my expert testimony experience.

Q. On whose behalf are you testifying?

A. I am testifying on behalf of Peoples Industrial Intervenors ("PII").

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to address the following issues in Peoples Natural Gas Company's ("Peoples" or "Company") current rate proceeding:

1. Cost allocation and the Company's class cost of service studies ("CCOSS").
2. Peoples' proposed allocation of its proposed revenue increase to customer classes.
3. Rate design for the LGS class.

In addressing these issues, I will respond to the Direct Testimony of Peoples witness Ralph Zarumba.

Q. Please summarize your conclusions and recommendations for the Pennsylvania Public Utility Commission ("Commission").

A. My conclusions are recommendations are as follows:

1. Mr. Zarumba performed two CCOSS to analyze customer class responsibility for the Company's claimed costs to serve each class.
2. The two CCOSS were: (1) the Demand/Peak and Average CCOSS; and (2) the Minimum System/ Design Day CCOSS.
3. The Company's Minimum System/Design Day CCOSS is the appropriate study to guide the Commission in its assessment of customer class cost responsibility and for the allocation of any revenue increase the Commission may allow in this case.
4. Based on the range of CCOSS results presented by the Company, the combined system LGS tariff class should receive a revenue reduction in this proceeding. The customers in this class are paying far more than their fair share of Peoples' cost to serve them.

5. If the Commission decides not to reduce revenues for the combined LGS tariff class in this case, then this class should receive no increase.

Customer Class Cost Allocation

Q. What is the purpose of a class cost of service study?

A. A CCOSS allocates and assigns the total cost of providing utility service to the classes of customers receiving that service.

Q. How is a class cost of service study developed?

A. The development of a class cost of service study consists of three steps: functionalization, classification, and allocation. Functionalization refers to the process by which the Company's investments and expenses are identified and segregated into different cost categories. For Peoples, these functional categories include transmission, distribution, metering and billing, and various customer accounts and service expenses.

Second, once functionalization is complete, the utility's costs are classified into categories of demand-related, commodity-related, and customer-related costs in order to facilitate their allocation to customers by applying cost causation principles. In general, all non-gas distribution costs are either responsive to changes in natural gas peak demand or to the number of customers.

Demand-related costs are those that are needed to serve the winter peak demands of distribution customers. They are fixed and do not vary with the monthly and annual commodity consumption of the utility's customers. On pages 23 and 24 of the National Association of Regulatory Utility Commissioners ("NARUC") Gas Distribution Rate Design Manual dated June 1989 ("1989 NARUC Manual"), demand- or capacity-related costs are described as follows:

> "Demand or capacity costs vary with the quantity or size of plant and equipment. They are related to maximum system requirements which the system is designed to serve during short intervals and do not directly vary with the number of customers or their annual usage. Included in these costs are: the capital costs associated with production, transmission and storage plant and their related expenses; the demand cost of gas; and most of the capital costs and expenses associated with that part of distribution plant not allocated to customer costs, such as the costs associated with distribution mains in excess of the minimum size."

Customer-related costs are associated with the number of customers and are incurred to connect customers to the system. They are independent of the customer's demand and throughput requirements. Primary examples of customer-related costs are investments in meters, services, and a portion of main investment incurred to extend the distribution system to the customer's premises and conform to local and national codes and standards. In addition, such accounting functions as meter reading, bill preparation and revenue accounting are generally considered customer-related costs.

Commodity-related costs are costs that vary with the amount of gas consumed by customers. The vast majority of Peoples' non-gas costs are demand-related (fixed) or related to the customer function. Consequently, only a very small amount of the Company's non-gas costs are considered to be related to the commodity function.

Third, the functionalized and classified costs are allocated to the various customer classes based on each class' contribution to the respective cost classifications. In general, demand-related costs are allocated based on each class' contribution to the maximum, or peak, demand placed on the system by the classes or by the customers within the classes. Customer-related costs are allocated based upon the number of customers in each class, weighted to account for the complexity of servicing the needs

of the different classes of customers. Commodity-related costs are generally allocated based upon throughput.

Q. Why is a CCOSS important?

A. A CCOSS illustrates the costs a utility incurs to serve each customer class. It is widely accepted that costs should be allocated among customer classes on the basis of cost causation. That principle is perhaps the most universally accepted tenet of allocating costs that cannot be directly assigned to a particular customer class. As such, costs should be allocated to those classes on the basis of how or why those costs are incurred by the utility. The results of such studies are normally used in assigning cost and revenue responsibilities to various customer classes.

Q. Do you support the premise that cost causation principles should guide the allocation of costs to the various customer classes?

A. Yes. Rates that are based on consistently applied cost causation principles are just and reasonable and further the cause of stability, conservation, and economic efficiency. Other factors such as simplicity, gradualism, economic development, and ease of administration may also be taken into consideration when determining the final allocation of the revenue requirement among classes, but the fundamental starting point and guideline should be the cost of serving each customer class produced by the CCOSS.

Q. Please summarize Mr. Zarumba's approach to the development of the two CCOSS he presented in this proceeding.

A. Mr. Zarumba began a detailed discussion of his CCOSS approaches on page 7 of his Direct Testimony. Mr. Zarumba presented three sets of CCOSS for:

- Peoples' combined system.

- The Peoples Natural Gas Division ("PNGD")
- The Peoples Gas Division ("PGD")

On page 8 of his Direct Testimony, Mr. Zarumba presented three major rate design changes proposed by the Company:

1. Combine PNGD and PGD rates into a single rate design.
2. Eliminate the PNGD transition rates for LGS customers on PNGD.
3. Institute a new LGS-Mainline class of customers that is based on the use of the transmission and distribution system.

In constructing his CCOSSs, Mr. Zarumba generally followed the functionalization, classification, and allocation steps I discussed previously. Regarding the classification of distribution mains, Mr. Zarumba employed the Minimum System approach, which he described beginning on page 14 of his Direct Testimony. This study separated the costs of the Company's distribution mains into demand and customer related cost components. These costs are then allocated to customer classes based on design day peak demand and number of customers. Mr. Zarumba pointed out the following in his Direct Testimony:

> "It is widely accepted that distribution mains (Account No. 376) are installed to meet both system peak period load requirements and to connect customers to the gas utility's system. Therefore, to ensure that the rate classes that cause the incurrence of this plant investment or expense are charged with its cost, distribution mains should be allocated to the rate classes in proportion to their peak period load requirements and numbers of customers.
>
> There are two cost factors that influence the level of distribution mains facilities installed by a gas utility in expanding its gas distribution system. First, the size of the distribution main (i.e., the diameter of the main) is directly influenced by the sum of the peak period gas demands placed on the gas utility's system by its customers. Secondly, the total installed footage of distribution mains is influenced by the need to expand the distribution system grid to connect new customers to the

> system. Therefore, to recognize that these two cost factors influence the level of investment in distribution mains, it is appropriate to allocate such investment based on both peak period demands, and the number of customers served by the gas utility."[1]

On page 28, lines 3 through 8 of his Direct Testimony Mr. Zarumba noted that he used two different demand allocation methods: the peak method and the peak-and-average method. He also performed CCOSSs with and without a customer component for the classification and allocation of distribution mains. He testified that he used this approach "to minimize the potential controversy associated with selecting particular cost allocation methods …"

On page 30 of his Direct Testimony Mr. Zarumba summarized the results of his two CCOSS approaches as applied to Peoples' combined system. The "Demand/Peak and Avg" results refer to his CCOSS that employed the peak and average method to classify and allocate demand costs and which did not employ the minimum size system to classify and allocate the costs of distribution mains. The "Min System/Design Day" results refer to the CCOSS that allocated demand costs based on class peak demands and which used the minimum size system study to classify and allocate the costs of distribution mains.

Q. Did Mr. Zarumba recommend using either of the two CCOSS approaches to guide revenue allocation to the customer classes?

A. No. My understanding of Mr. Zarumba's testimony is that he presented both CCOSS approaches to form a range of outcomes for customer class cost responsibility.

[1] Zarumba Direct Testimony, page 21, line 17 through page 22, line 9.

Q. Do you have any concerns with Mr. Zarumba's CCOSS approaches?

A. Yes. I have concerns with his Demand/Peak and Avg CCOSS. For ease of reference throughout the remainder of my testimony, I will refer to this CCOSS as the "Peak and Average" CCOSS. I will also refer to the "Min System/Design Day" CCOSS as "Demand/Customer."

Q. Please explain your concerns with the Peak and Average CCOSS.

A. The fixed costs of the Company's transmission and distribution mains should be classified as either demand or customer related. Mr. Zarumba and I agree on this principle. Peak winter demand is the primary driver of Peoples' investment in gas distribution facilities, particularly mains. The Company must have sufficient capacity available on its system to satisfy the peak winter heating demand. If the peak winter demand increases, the Company may need to invest in additional mains to serve the load.

During non-winter months, the situation is very different because substantial excess capacity exists on the system. As such, use of the Company's distribution system during these months does not cause additional fixed costs to be incurred by the Company. In fact, high load factor customers provide valuable margins to the Company during off-peak months when the demands of residential heating customers are very low. Consequently, throughput, which varies substantially during the year, is not what causes Peoples' investment in the *fixed costs* of transmission and distribution mains.

In a similar manner to peak winter demand, if the number of customers increases, the Company may need to expand its distribution system investment. Thus, the number

of customers connected to the distribution system is another important causative factor in distribution main investment.

This point can be illustrated with a simple example. Assume that there is a single industrial customer on Peoples' system with a peak demand of 300 dekatherms ("Dth"). Further assume that elsewhere on the system, there is a neighborhood of 750 residential customers with a peak demand of 300 Dth. It is obvious that in order to connect all of those residential customers to its system, the Company will have to invest in far more footage of smaller distribution mains to serve 750 customers than it would have to invest to serve the one industrial customer. That extra investment in distribution mains is due solely to the number of customers on the system and is unrelated to the peak demands or volume usage of those customers.

To conclude this discussion, fixed costs that do not vary with consumption should not be classified as variable, or commodity-related, costs. This points to the fatal flaw in the peak-and-average approach to demand allocation. Mr. Zarumba explained on page 17 of his Direct Testimony that the peak-and-average method gives equivalent weight to both peak demand and average demand. Average demand is simply total throughput divided by 365 and effectively allocates one-half of demand-related costs by throughput. This method causes the allocation of costs to customer classes to be inaccurate and inequitable. For example, high load factor customers in the LGS class who use gas more evenly throughout the year are economically harmed by a costing method that classifies fixed costs as commodity-related. This is because their high yearly throughput causes them to be allocated more fixed costs that are mistakenly classified as variable, or commodity-related, even though throughput does not drive fixed costs. This is especially the case with off-peak usage in the summer.

Alternatively, a low load factor residential customer who uses gas mostly in the winter for heating is unduly benefitted by this approach. In this instance, the residential customer's relatively low load factor results in an allocation of fixed costs that are too low relative to the fixed costs actually caused by this customer class. Of course, this situation would also apply to low load factor commercial and industrial customers.

Q. What is your CCOSS recommendation?

A. For the reasons stated above, I recommend that the Commission adopt the Demand/Customer CCOSS. Approval of the Demand/Customer CCOSS will appropriately align the CCOSS with cost causation for a winter peaking system with excess capacity in the non-winter months.

Q. Please describe Mr. Zarumba's proposed new LGS-Mainline customer class.

A. On page 48 of his Direct Testimony, Mr. Zarumba explained that he added two new tariff classes to the CCOSS: Mainline LGS Transmission customers and Mainline LGS Non-Transmission customers. Mainline LGS Transmission customers do not use the Company's high pressure distribution system, the costs of which are included in Account 376 – Regulated Mains. Thus, Mainline LGS Transmission customers are not allocated any of the costs in Account 376. Mainline LGS Non-Transmission customers use neither regulated mains nor the Company's transmission system because they are connected directly to interstate pipelines. Thus, these customers are not allocated any costs from Account 376 or the transmission mains account.

It is my understanding that these two categories of Mainline LGS customers are included in the LGS-Mainline customer class in Mr. Zarumba's alternative CCOSSs.

Q. Do you support the inclusion of the LGS-Mainline class for purposes of Peoples' CCOSS evaluation?

A. Yes. The customers included in the LGS-Mainline class are uniquely situated in terms of where they take service on the Company's system. In addition, these customers are all taking service under special contracts that are not based on the cost to serve them. Mr. Zarumba explained that use of these special contracts "captures pricing equal to that of their competitive alternatives which is below the proposed LGS Mainline tariff"[2]. However, the tariff does not establish a clear formula for determination of the minimum charge paid by customers, noting only that customers will pay a customer charge based on throughput. By separating the LGS-Mainline customers into their own rate class in the CCOSS, their contribution toward the Company's cost of service may be measured by their class rate of return on allocated rate base and compared to the system average rate of return.

Even more importantly, the LGS-Mainline customers must be separated from the other LGS customers (i.e., the LGS customers receiving service under Peoples' tariff rates) so that the LGS tariff customers' contribution toward the allocated cost to serve them may be accurately measured and assessed.[3] Since the special contract rates are much lower than the LGS tariff rates, combining the LGS-Mainline customers into the LGS class as a whole will distort the CCOSS results for the LGS tariff customers.

---

2 Zarumba Direct Testimony, page 50, lines 4 through 6.

3 For ease of reference, I will refer to the LGS customer group that is not LGS-Mainline as the "LGS tariff" class.

Q. Do the summary CCOSS results presented on page 30 of Mr. Zarumba's Direct Testimony show the LGS and LGS-Mainline class results separately?

A. No. The summary CCOSS results presented by Mr. Zarumba only show the combined LGS class without the LGS-Mainline results shown separately. Please refer to Table 1 below for the class rates of return from the two CCOSS for the combined system with LGS and LGS-Mainline shown separately.

TABLE 1
CCOSS Class Rates of Return and Relative Rates of Return

	Total	RES	SGS	MGS	LGS	LGS Mainline
Demand/Customer CCOSS						
Rate of return @current rates	5.51%	3.99%	5.06%	10.79%	27.33%	-5.24%
Relative Rate of Return		0.72	0.92	1.96	4.96	(0.95)
Peak and Average CCOSS						
Rate of return @current rates	5.51%	6.24%	3.18%	2.72%	10.29%	-5.24%
Relative Rate of Return		1.13	0.58	0.49	1.87	(0.95)

Table 1 demonstrates the importance of evaluating CCOSS results for the LGS class with the LGS-Mainline customers in a separate rate class. The Demand/Customer and Peak and Average CCOSS both clearly show that LGS-Mainline customers' special contract rates are not only below the allocated cost to serve, but they are also generating negative rates of return. Alternatively, the LGS tariff class has by far the highest rates of return of any customer class for both CCOSSs.

Table 1 also presents the relative rate of return ("RROR"), which measures each class rate of return relative to the system rate of return at current rates. A RROR greater than 1.0 means that a customer class rate of return is greater than the system average. Such a class should receive a revenue increase less than the system average increase. For example, assume that the system average revenue increase is 10%. A class RROR greater than 1.0 indicates that class should receive an increase lower than 10%,

assuming any rate increase at all is even appropriate. An RROR less than 1.0 indicates a class return that is below the system average rate of return and that the class should receive an increase greater than the system average increase.

Table 1 shows an RROR for the LGS class that ranges from 1.87 to 4.96. Another way to view these results is that the current return on rate base for the LGS tariff customers is about 2 to 5 times greater than Peoples' current rate of return depending on the CCOSS.

Q. What is the overall conclusion regarding the CCOSS results for the LGS class?

A. The striking conclusion is that *both* CCOSSs show LGS tariff customers are paying current rates that are grossly in excess of the cost to serve them. These CCOSS results provide clear guidance to the Commission in its decision on revenue allocation in this proceeding. I will provide further analysis and recommendations for revenue allocation in the next section of my Direct Testimony.

Class Revenue Allocation

Q. Summarize Mr. Zarumba's recommended revenue allocation in this proceeding.

A. Mr. Zarumba's recommended revenue allocation is summarized in a table on page 39 of his Direct Testimony. His proposed revenues by class are based on the mean CCOSS results for each class at the Company's proposed rate of return on rate base. This table shows full CCOSS revenue requirements at Peoples' requested rate of return for the LGS class ranging from $49.3 million to $69.0 million. Mr. Zarumba's proposed revenue for LGS is $59.2 million, representing the midpoint of this range.

Q. Does Mr. Zarumba's table show the CCOSS revenue requirement results for LGS tariff and LGS-Mainline separately?

A. No. In order to assess the reasonableness of Mr. Zarumba's proposed class revenue, LGS tariff and LGS-Mainline CCOSS revenue should be shown separately. Please refer to Table 2, which shows CCOSS revenue from the two CCOSSs for LGS tariff and LGS-Mainline.[4]

TABLE 2
Peoples Gas Customer Class CCOSS Revenue Requirement @ Cost of Service Return

Rate Class	Revenues @ Current Rates	Customer/Dmd CCOSS	Peak & Avg CCOSS	Mean	Peoples Proposed Revenue
RES-Base Rates	$347,866,631	$508,820,648	$451,420,813	$480,120,731	$480,120,731
SGS-Base Rates	$43,991,391	$60,323,814	$67,379,366	$63,851,590	$63,851,590
MGS-Base Rates	$57,024,004	$60,132,252	$90,788,231	$75,460,242	$75,460,242
LGS-Base Rates	$48,982,267	$32,724,719	$52,411,209	$42,567,964	$52,169,360
LGS-MAINLINE-Base Rates	$6,996,935	$16,597,423	$16,599,237	$16,598,330	$6,996,935
Total	$504,861,227	$678,598,857	$678,598,857	$678,598,857	$678,598,857

Table 2 shows the following with respect to the LGS tariff and LGS-Mainline customer classes:

1. The mean of the CCOSS range for LGS tariff customers is $42.6 million while revenue at current rates is $49.0 million. If Mr. Zarumba had applied the same approach to the LGS tariff class that he did for Residential, SGS, and MGS then LGS tariff customers should have received a revenue *decrease* of -$6.4 million.
2. The difference between revenue at current rates and the mean CCOSS revenue requirement for LGS-Mainline is about $9.6 million.

[4] Table 2 was taken from the Demand/Customer CCOSS for the combined system provided by Peoples in response to OCA-5-001, Revenue Summary tab. It is also shown on Peoples Exhibit RNZ-4, page 3 of 3.

3. Mr. Zarumba essentially added the LGS-Mainline revenue shortfall of about $9.6 million to the mean CCOSS revenue for LGS tariff customers, resulting in proposed revenues of $52.2 million.

4. The total increase for the combined LGS classes, $3.2 million, will be borne entirely by LGS tariff customers. This results in a percentage increase of 6.5%.

Q. Is it correct to keep the entire $9.6 million revenue shortfall from LGS-Mainline within the LGS tariff class?

A. No, it is incorrect to do so and, in my opinion, violates basic ratemaking principles of cost causation and fairness.

To put this into a broader perspective, it is useful to review the Direct Testimony of Peoples witness Luke Ravenstahl on the subject of competitive customers. Mr. Ravenstahl testified as follows:

> "Some of our commercial customers, and most industrial customers, have more than one energy service option available to them. These competitive customers support the operational needs of the Company's system and also offset the cost of service for other non-competitive customers as for example, they generate additional revenue that offsets the rates of non-competitive customers. In order to ensure we maintain these accounts, it is necessary to flex our maximum delivery rates to remain competitive."[5]
>
> "Moreover, Peoples has a legal duty to its customers to maintain just and reasonable rates. One way of doing so is to maintain a reasonable customer load. If discounted customers were to reduce or eliminate production at facilities on Peoples' system or to switch to alternative sources of fuel, this would have a substantial negative impact on the Company's non-discounted customer rates. This is because the incremental cost to serve these customers is less than the discounted revenue generated as natural gas customers of Peoples. *That is, although the discounted customers do not pay full tariffed rates, they still generate millions of dollars in annual revenue for Peoples and contribute to the Company's fixed costs*. However, if those competitive customers leave the Company's system, the Company's non-discounted customer rates

[5] Ravenstahl Direct Testimony, page 2, lines 14 through 19.

could be increased to offset the lost revenue in future base rate cases." (italics added)[6]

Mr. Ravenstahl's testimony clearly demonstrates that the negotiated rates and revenues from Peoples' competitive customers provide a benefit to *all tariff customers on its system.* It is both incorrect and unfair to burden the LGS tariff customers with the entire CCOSS revenue shortfall from LGS-Mainline customers. I strongly recommend the Commission reject this approach to revenue allocation.

Q. Please present your recommended revenue allocation for Peoples' combined system.

A. I recommend that the Commission adopt the following principles regarding the $9.6 million difference between the LGS-Mainline special contract revenues and the allocated cost to serve these customers:

1. None of Peoples' rate classes is directly responsible for the $9.6 million shortfall based on cost causation principles.
2. To the extent there is a benefit from having LGS-Mainline customers with negotiated contracts on Peoples' system, all other rate classes share in that benefit.
3. Since all other rate classes benefit from the existence of LGS-Mainline customers on Peoples' system, all other rate classes should share fairly and equitably in the $9.6 million cost of service shortfall from that class.

These three principles form the basis for my recommended revenue allocation to the Commission, which consists of the following steps:

[6] Ravenstahl Direct Testimony, page 3, lines 9 through 19.

1. For purposes of this case only, I recommend that the Commission adopt the midpoint CCOSS revenue requirement for Residential, SGS, MGS, and LGS tariff (without LGS-Mainline) customer classes. This midpoint is shown in the "Mean" column of Table 2 above. Although I recommend the Commission adopt the Demand/Customer CCOSS, using the midpoint CCOSS revenue requirement for each class is a reasonable first step in aligning customer class revenues and cost responsibility and is consistent with Mr. Zarumba's approach.

2. The $9.6 million mean CCOSS shortfall from the LGS-Mainline class should be allocated to the other customer classes based on each class's percentage share of the midpoint CCOSS revenues excluding the LGS-Mainline class.

Please refer to my Exhibit ___(RAB-2), which presents the detailed calculations for these two steps. Table 3 presents a summary of current and PII proposed class revenues based on my recommended approach. I also included my recommended Demand/Customer CCOSS revenues as a comparison to PII's proposed revenues.

TABLE 3
PII Proposed Revenue Allocation

Rate Class	Revenues @ Current Rates	Demand/Customer CCOSS Revenues	PII Proposed Revenue	Dollar Increase	Percentage Increase/ (Decrease)	Peoples Proposed Increase Pct.
RES-Base Rates	$347,866,631	$508,820,648	$487,084,213	$139,217,582	40.0%	38.0%
SGS-Base Rates	$43,991,391	$60,323,814	$64,777,668	$20,786,278	47.3%	45.1%
MGS-Base Rates	$57,024,004	$60,132,252	$76,554,687	$19,530,683	34.2%	32.3%
LGS-Base Rates	$48,982,267	$32,724,719	$43,185,353	($5,796,914)	-11.8%	6.5%
LGS-MAINLINE-Base Rates	$6,996,935	$16,597,423	$6,996,935	$0	0.0%	0.0%
Total	$504,861,227	$678,598,857	$678,598,857	$173,737,629	34.4%	34.4%

Table 3 and Exhibit ___(RAB-2) show that an equitable allocation of the LGS-Mainline CCOSS shortfall produces increases to Residential, SGS, and MGS that are moderately higher than the Company's recommendation. PII recommended

Residential increase is only 1.16 times the system average increase. This is a very reasonable multiple of the system average increase. The SGS increase of 1.38 times the system average increase is higher but is not unreasonable. The MGS increase is near the system average.

The recommended decrease in revenues to the LGS tariff class recognizes the fact that LGS customers' rates are far too high based on the full range of CCOSS results and that customers in this rate class deserve relief. This decrease comes without an unduly large rate impact on other classes. I recommend that the Commission adopt my recommended revenue allocation to Peoples' combined rate classes in this proceeding.

Q. If the Commission decides not to give any class a revenue decrease while increasing revenues to other customer classes, then what is your revenue allocation recommendation?

A. If the Commission declines to order a reduction in LGS tariff revenues in this case, then I recommend that the LGS combined system tariff class (excluding LGS-Mainline customers) receive no increase in revenues in this case.

Q. Does your recommended revenue allocation imply support for Peoples' requested revenue increase in this case?

A. No. I am using the Company's proposed revenue requirement only for the illustrative purpose of showing the results of my proposed revenue allocation.

Q. How should your revenue allocation recommendation change if the Commission orders a lower revenue increase in this case?

A. I recommend a proportional percentage decrease in the dollar increase shown in my Table 3 above. For example, if the Commission reduces the Company's increase by 20%, then the class increases and the LGS tariff decrease should be reduced by 20%.

LGS Rate Design

Q. Do you accept Peoples' proposed consolidation of LGS tariffs in this case?

A. PII does not oppose Peoples' proposed consolidation of its LGS tariffs for the PNGD and PGD systems.

Q. Do you accept Mr. Zarumba's recommended elimination of transition rates for the LGS class?

A. Yes.

Q. What is your recommendation to the Commission for the consolidated rate design for Peoples' LGS tariff class?

A. First, I recommend that the Commission order the Company to continue its current customer charges for the PNGD LGS customer class for the combined system LGS tariff class. The current customer charges for LGS tariff customers are:

25,000 – 49,999 MCF/Year	$ 575
50,000 – 99,999 MCF/Year	$ 750
100,000 – 199,999 MCF/Year	$1,400
Over 200,000 MCF/Year	$1,600

Second, I recommend that the Commission order Peoples to scale back Mr. Zarumba's proposed delivery charges for its combined system LGS tariff customers in order to implement the proposed revenue reduction of -$5.8 million shown in my Table 3.

Q. Does this conclude your Direct Testimony?

A. Yes.

OF

RICHARD A. BAUDINO

ON BEHALF OF

PEOPLES INDUSTRIAL INTERVENORS

J. KENNEDY AND ASSOCIATES, INC.

MARCH 22, 2024

RESUME OF RICHARD A. BAUDINO

EDUCATION

New Mexico State University, M.A.
Major in Economics
Minor in Statistics

New Mexico State University, B.A.
Economics
English

Thirty-nine years of experience in utility ratemaking and the application of principles of economics to the regulation of electric, gas, and water utilities. Broad based experience in revenue requirement analysis, cost of capital, rate of return, cost and revenue allocation, and rate design.

REGULATORY TESTIMONY

Preparation and presentation of expert testimony in the areas of:

Cost of Capital for Electric, Gas and Water Companies
Electric, Gas, and Water Utility Cost Allocation and Rate Design
Revenue Requirements
Gas and Electric industry restructuring and competition
Fuel cost auditing
Ratemaking Treatment of Generating Plant Sale/Leasebacks

RESUME OF RICHARD A. BAUDINO

EXPERIENCE

1989 to Present: **Kennedy and Associates: Director of Consulting, Consultant** - Responsible for consulting assignments in revenue requirements, rate design, cost of capital, economic analysis of generation alternatives, electric and gas industry restructuring/competition and water utility issues.

1982 to 1989: **New Mexico Public Service Commission Staff: Utility Economist** - Responsible for preparation of analysis and expert testimony in the areas of rate of return, cost allocation, rate design, finance, phase-in of electric generating plants, and sale/leaseback transactions.

REBUTTAL TESTIMONY

OF

RICHARD A. BAUDINO

ON BEHALF OF

PEOPLES INDUSTRIAL INTERVENORS

J. KENNEDY AND ASSOCIATES, INC.

APRIL 18, 2024

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
	:	
V.	:	**Docket No. R-2023-3044549**
	:	
PEOPLES NATURAL GAS COMPANY LLC	:	

REBUTTAL TESTIMONY OF RICHARD A. BAUDINO

Q. Please state your name and business address.

A. My name is Richard A. Baudino. My business address is J. Kennedy and Associates, Inc. ("Kennedy and Associates"), 570 Colonial Park Drive, Suite 305, Roswell, Georgia 30075.

Q. What is your occupation and by whom are you employed?

A. I am a consultant to Kennedy and Associates.

Q. Did you present Direct Testimony in this proceeding?

A. Yes. I presented Direct Testimony on behalf of Peoples Industrial Intervenors ("PII").

Q. What this the purpose of your Rebuttal Testimony?

A. The purpose of my Rebuttal Testimony is to respond to the Direct Testimony submitted by Mr. Clarence Johnson, witness for the Office of Consumer Advocate ("OCA"), Mr. Robert Knecht, witness for the Office of Small Business Advocate ("OSBA"), and Mr. Ethan Cline, witness for the Bureau of Investigation and Enforcement ("I&E"). The subjects I will address include cost and revenue allocation.

Response to Mr. Johnson

Q. Does Mr. Johnson recommend the Peak and Average approach to the classification and allocation of distribution mains for Peoples Natural Gas Company's ("Peoples" or "Company") Class Cost of Service Study?

A. Yes. Beginning on page 19 of his Direct Testimony Mr. Johnson explains why he recommends the Peak and Average method for classifying and allocating the cost of the Company's distribution mains in the Class Cost of Service Study ("CCOSS"). The main reasons he presented are as follows:

1. It is consistent with Pennsylvania Public Utility Commission ("Commission") precedent.
2. Peak demand and average demand together are a more comprehensive measure of demand than peak demand alone.
3. Due to economies of scale, the relationship between peak demand and main cost is not linear. Therefore, peak demand is not a direct measure of cost causation.
4. Peoples' current infrastructure spending is not driven by growth in peak demand, but by safety improvements and reduction in gas leakage.

Q. Regarding the first reason you listed, Mr. Johnson cited the Commission Order in R-2020-3018835 dated February 19, 2021. Please address whether this Order establishes a precedent for Peoples in this case.

A. On the advice of counsel, it is PII's position that the Order cited by Mr. Johnson, as well as by I&E witness Mr. Cline, does not necessarily establish a precedent for Peoples. In PII's view, the parties in this case may present arguments and evidence to the Commission regarding the appropriate CCOSS methodology, including the

Customer/Demand CCOSS upon which Mr. Zarumba and I rely. Notably, OSBA witness Mr. Knecht presented a thoughtful discussion of past Commission cases regarding gas distribution CCOSS methodologies and presented his own Customer/Demand CCOSS for the Commission's consideration. I will address Mr. Knecht's CCOSS later in my Rebuttal Testimony. However, I believe that the preponderance of evidence in this case, including operational characteristics specific to Peoples' system, supports the Commission giving at least partial weight to the Customer/Demand CCOSS for Peoples.

Regarding the issue of Commission precedent, PII will address this subject in greater detail in its briefs.

Q. Please respond to the second point regarding Mr. Johnson's claim that peak demand and average demand together are a more comprehensive measure of demand.

A. The use of peak system demands, not average demands, is supported by the National Association of Regulatory Utility Commissioners Gas Distribution Rate Design Manual dated June 1989 ("NARUC Manual"). On pages 23 and 24, the NARUC Manual describes demand, or capacity costs as follows:

> "Demand or capacity costs vary with the quantity or size of plant and equipment. *They are related to maximum system requirements which the system is designed to serve during short intervals and do not directly vary with the number of customers or their annual usage.* Included in these costs are: the capital costs associated with production, transmission and storage plant and their related expenses; the demand cost of gas*; and most of the capital costs and expenses associated with that part of distribution plant not allocated to customer costs*, such as the costs associated with distribution mains in excess of the minimum size." (italics added)

Note that the description of demand costs stated that these costs do not vary with annual usage. In my opinion, this further supports using design day peak demands for the allocation of the demand-related portion of mains to customers. It does not support a 50% weighting of annual usage or throughput to allocate demand-related distribution costs.

Q. Please clarify what you mean when you refer to "design day peak demands." Are design day peak demands used in both the "Demand/Customer" and "Peak and Average" CCOSSs?

A. Yes. Design day peak demands are used to allocate demand-related main costs in both the Demand/Customer and Peak and Average CCOSSs that were presented by the Company in Mr. Zarumba's Direct Testimony and Exhibits. Mr. Zarumba explained that design day peak demand "directly measures the gas demand requirements of the Company's firm service customers, which create the need for the Company to acquire resources, build facilities, and incur millions of dollars in fixed costs on an ongoing basis."[1] Effectively, Demand/Customer CCOSS focuses on the design day peak demand used by the natural gas system, while the Peak and Average CCOSS contains the added component of the utility's average demand for purposes of allocating demand-related costs. I wanted to clarify this point for the Commission since the Demand/Customer nomenclature did not specifically state that it employed a design day peak demand allocation of demand-related main costs.

[1] Direct Testimony of Ralph Zarumba, page 20, lines 4 through 6.

Q. Does weighting average usage, or throughput, by 50% in the Peak and Average method have any analytical foundation?

A. No. The 50% weighting of peak and average demands has no analytical basis or support. It is an arbitrary weighting that incorrectly assumes that peak and average demand play an equal role in cost causation with respect to distribution mains. With substantial excess capacity in the non-winter months, it is obvious that gas distribution companies must invest in distribution mains to deliver gas to customers during peak winter periods. From the Company's perspective, Mr. Zarumba made it abundantly clear that average demands do not play a role in gas system design and planning. Mr. Zarumba stated the following on page 18, lines 13 through 16:

> "From a gas engineering perspective, a peak demand design criterion is always utilized when designing a gas distribution system to accommodate the gas demand requirements of the customers served by that system. As such, cost causation with respect to demand related costs is unrelated to average demand characteristics."

There is no evidence that gas distribution utilities size and build their systems to meet average demand and Mr. Zarumba made this clear on behalf of Peoples. If cost causation is unrelated to average demand from a utility company's perspective, then the Peak and Average approach to the CCOSS must be rejected because of the 50% weighting of average demand.

Q. Please respond to the third point regarding economies of scale.

A. Mr. Johnson merely demonstrated that economies of scale exist in the cost of distribution mains on page 22 of his Direct Testimony. However, economies of scale related to increasingly larger pipe sizes have no relevance with respect to how the *total cost* of distribution mains should be classified and allocated. Rather, it is the overarching importance of meeting peak winter demands of Peoples' customers and

connecting those customers to the distribution system that should be reflected in the Company's CCOSS, not average demands and/or throughput.

On page 23, lines 5 through 7 Mr. Johnson testified as follows:

> Average demand recognizes that a constant annual level of demand can be served at average cost. However, the incremental cost of serving peak demand above base demand is less than average cost due to economies of scale. Consequently, the inclusion of average demand in the method effectively reduces the weight given to peak demand.

Mr. Johnson accurately stated that including average demand in the Peak and Average method reduces the weight given to peak demand, and inappropriately so in my view. However, there is no basis for his statement that average demand recognizes that a constant level of demand can be served at average cost. Mr. Johnson presented no evidence that the Company plans and costs out its distribution system to serve "average demand" or that "average cost" has any relevance at all. Moreover, Mr. Johnson has not presented any calculations as to what the average cost is. As Mr. Zarumba stated, peak demand is always used to design Peoples' system, not average demand. It is for this reason that the Demand/Customer CCOSS Mr. Zarumba and I recommend is the superior measure of cost responsibility for Peoples' system. It does not use average demand, but it incorporates design day peak demand to allocate demand-related costs of mains to customers.

Q. Please respond to the fourth point you presented.

A. Peoples' ongoing investments in reducing system leaks and improving system safety do not justify allocating 50% of distribution mains on the basis of average demand or throughput. These types of investments are part of operating the gas system in a prudent manner. In fact, they are a part of Peoples' responsibility to deliver gas to its

customers during the system peak and are consistent with allocating the demand portion of the cost of mains on the basis of class contribution to system peak.

Q. Beginning on page 11, Mr. Johnson explains his views as to why the minimum system method is "flawed". Is the allocation of distribution main costs on a customer and demand basis consistent with the NARUC Manual?

A. Yes. The NARUC Manual discusses a number of methodologies and approaches to cost allocation. With respect to the allocation of distribution main costs, the NARUC Manual states that "[a] portion of the costs associated with the distribution system may be included as customer cost." (NARUC Manual at 22.) The NARUC Manual states further that, "[o]ne argument for inclusion of distribution related items in the customer cost classification is the zero or minimum size theory." (*Id.*) In the interest of completeness, the NARUC Manual also stated that the inclusion of such costs as customer costs "can be controversial." However, the minimum system and zero-intercept methods of classifying distribution main costs are included in the NARUC Manual, along with the Average and Peak method.

The Demand/Customer CCOSS employs a minimum size system method to classify the total costs of distribution mains into demand-related and customer-related costs. Mr. Zarumba provided a detailed explanation of this approach on pages 14 through 15 of his Direct Testimony and provided work papers supporting his minimum system analysis. He noted that the minimum system approach is supported by the NARUC Electric Utility Cost Allocation Manual and Gas Rate Fundamentals published by the American Gas Association. In conclusion, the minimum system approach is well supported in the regulatory literature as well as by the operational characteristics of Peoples' system.

Q. On page 13 of his Direct Testimony, Mr. Johnson cited Dr. Bonbright's critique of the minimum distribution system in support of his arguments against the Minimum System approach to allocate customer-based costs for the Demand/Customer CCOSS in this case. Please respond to this portion of Mr. Johnson's Direct Testimony.

A. First, the quote from Dr. Bonbright applies to electric distribution systems, not gas distribution mains. Second, the Commission has relied on the minimum system concept for certain electric distribution facilities contrary to Dr. Bonbright's opinion on the subject.

In his Direct Testimony in this case, Mr. Knecht cited to the Commission's Order in R-00049255 as an example of the Commission's reliance on a minimum size system study for certain electric system accounts for PPL Electric. I reviewed that Order as well as the Recommended Decision of the Administrative Law Judge in that docket. Pages 142 through 143 of Recommended Decision described PPL Electric's approach to its CCOSS and noted:

> "Secondary distribution system plant was separated into demand and customer components using a "minimum size system study," which determined the current cost of the "minimum size" distribution system necessary to provide reliable distribution service to customers. PPL Electric St. 5-R, p. 6; Ex. JMK3, p. 10. The cost of the minimum system is classified as customer-related, the remainder of secondary distribution costs is classified as demand related."

On page 144, the Administrative Law Judge concluded that "the Commission rely primarily on the Company's study for guidance."

Q. On page 17 of his Direct Testimony, Mr. Johnson stated that the Company classified 100% of service lines as customer related where a "symmetric treatment" to the Company's classification of mains would classify a portion of services as demand. Does this argument have merit?

A. No. Services are considered customer-related costs, not demand related regardless of the CCOSS approach for classifying mains. As Mr. Zarumba pointed out on pages 28 and 29 of his Direct Testimony, the Company conducted a special study for allocating the cost of services to customer classes based on the size of the customers. This study was provided by the Company in response to OCA-5-001g. Given that services costs are considered customer-related costs, it would not be appropriate to apply a minimum size study to service costs.

Q. What are your conclusions regarding Mr. Johnson's critique of the minimum size system approach and the Demand/Customer CCOSS?

A. Mr. Johnson's critique does not affect my support for the Demand/Customer CCOSS approach. My testimony supporting the Demand/Customer CCOSS, Mr. Zarumba's support for a Demand/Customer CCOSS in his Direct Testimony, and my responses to Mr. Johnson's critique provide ample support for the Commission's consideration of the Demand/Customer CCOSS in this case, even if it does not fully rely upon it for cost and revenue allocation. A Demand/Customer CCOSS approach and the minimum size system study are well supported by the NARUC Manual as acceptable approaches to cost allocations studies for gas distribution utilities.

Q. On page 25 of his Direct Testimony, Mr. Johnson recommended direct assignment of $1.339 million of customer service costs to customers in the MGS, LGS, and Mainline classes. Do you agree with this direct assignment?

A. No. OCA Interrogatory V-17 requested cost information for Company personnel who are "involved primarily in contacts with the Company's current or prospective large commercial or industrial customers." However, OCA has drawn inappropriate conclusions from the interrogatory response as it does not confirm whether the personnel identified in the response are solely committed to customers in the MGS, LGS, and Mainline classes or if they have other responsibilities as well. Without more detailed information about all of the duties of these personnel, I would not recommend direct assignment of the associated $1.339 million at this time.

Q. On page 27 of his Direct Testimony, Mr. Johnson provided a comparison of his proposed Peak and Average CCOSS with the one sponsored by Mr. Zarumba. Please comment on the results of Mr. Johnson's CCOSS.

A. The LGS tariff class still has the highest relative rate of return ("RROR") at current rates of 1.819. Even if the Commission adopted Mr. Johnson's CCOSS, which I do not support, the LGS tariff class should receive an increase significantly below the system average. The table on page 29 of Mr. Johnson's Direct Testimony shows full progress to cost-of-service would result in a rate increase of 8.1% for LGS tariff customers compared to the system average of 34.4%.

Q. Please address Mr. Johnson's proposed alternative revenue allocation that he presented on page 31 of his Direct Testimony.

A. Mr. Johnson's proposed alternative revenue allocation capped the increases for the SGS and MGS classes at 150% of the system average increase while applying a floor

percentage increase to LGS that is 50% of the system average increase (17.2%). I disagree with this proposed level of increase for LGS customers, as it is far too high based on the midpoint of results for the Demand/Customer and Peak and Average CCOSSs. It is far higher than even the Peak and Average CCOSS results indicate for Mr. Johnson's flawed study.

Q. Finally, should the Commission combine the increase for Mainline into the increase for LGS tariff customers?

A. No, definitely not. I addressed the unreasonableness of this proposal on page 15 of my Direct Testimony. If the Commission finds that it cannot assign Mr. Johnson's proposed increase to the Mainline customer class, it should allocate that increase to all other customers based on each class's proportionate share of the total cost of service as I recommended in my Direct Testimony.

Response to Mr. Knecht

Q. How did Mr. Knecht allocate the cost of mains in his alternative CCOSS?

A. Mr. Knecht used a modified Customer/Demand ("CD")[2] method that (a) did not segregate regulated pressure and low-pressure mains and (b) used a zero-intercept approach to classifying distribution mains as demand-related and customer-related.

Q. Should Mr. Knecht have segregated distribution mains into regulated and low-pressure mains as Peoples' CD CCOSS did?

A. Yes, most definitely. Mr. Knecht erroneously combined regulated and low-pressure distribution mains in his alternative CCOSS and allocated the total cost of mains to all classes. However, Peoples clearly stated in its response to OSBA-1-16 that it does not

[2] While I refer to the Company's first CCOSS as a "Demand/Customer" method, Mr. Knecht refers to the same model as the "Customer/Demand" method.

serve LGS customers by the low-pressure system. Mr. Zarumba made this very clear in his Direct Testimony as well.[3] What Mr. Knecht has done is allocate distribution mains costs to LGS customers for which they are not responsible and for which they should not pay in their rates.

Mr. Knecht questioned the Company's response to OSBA-1-16(e) and the number of customers taking service on the low-pressure system. However, this is no basis for allocating any of the low-pressure system to the LGS rate class, which has no customers on the low-pressure system. I strongly recommend that the Commission reject Mr. Knecht's unreasonable allocation of distribution mains. Mr. Knecht's erroneous allocation of distribution mains renders his recommended CD CCOSS unusable by the Commission for cost and revenue allocation.

Q. Did Mr. Knecht accept Mr. Zarumba's recommended demand allocator based on design day demands?

A. It is my understanding that Mr. Knecht agreed in concept with using design day demands. However, he disagreed with the design day demand for the LGS class and substituted his own demand numbers that are based on recent actual peak demands for LGS. Mr. Knecht explained his concerns with the LGS peak demand on page 36, lines 1 through 14 of his Direct Testimony. On page 39, line 21 of his Direct Testimony Mr. Knecht mentioned that he adjusted the Rate LGS design day demand level in his alternative CD CCOSS, which I will address below.

[3] Zarumba Direct Testimony, page 26, lines 5 through 23.

Q. Did Mr. Knecht provide an adequate explanation of how he adjusted the LGS design day demand?

A. No. My review of Mr. Knecht's testimony indicates that he presented no explanation of how he conducted his proposed LGS design day demand adjustment, the numbers he used to make the adjustment, and why the number he used more reasonably represents design day demand for the LGS class than the number used by Mr. Zarumba.

A detailed explanation of his LGS design day demand adjustment should have been included in Mr. Knecht's Direct Testimony so it could be properly examined and responded to by the parties in this case. In my view, it would be highly inappropriate for Mr. Knecht to offer a more detailed explanation of this adjustment in his Rebuttal or Surrebuttal Testimony, as the time would be very limited for other parties to analyze and respond to this adjustment. Moreover, Mr. Knecht did not give the Commission the requisite ground to adopt his adjustment. Given the lack of support for his adjustment, the Commission should reject his recommended LGS design day demand number.

Q. Did you examine Mr. Knecht's work papers in an attempt to ascertain the basis for his LGS design day demand number?

A. Yes. I examined Mr. Knecht's cost allocation workpapers. Based on my review, it appears that Mr. Knecht followed these steps in revising the LGS rate class design day demand:

1. Using annual peak data supplied by the Company in Exhibit No. 17, COS-10, Mr. Knecht averaged the two highest peak day requirements for LGS

customers shown on pages 2 through 4. The dates for these peak days were 12/23/2022 and 1/26/2022.

2. Mr. Knecht did not use LGS peak day data for 2/16/2021, which showed much lower volumes for LGS customers for the combined systems.

3. In calculating his alternative design day allocator, Mr. Knecht kept the overall total Company design day number of 1,386 MMcf.

4. Mr. Knecht then scaled up the LGS design day MMcf number based on his average of the two peak day requirements in 2022.

5. Mr. Knecht then scaled back the MMcf design day demand requirements for Residential, SGS, and MGS customers in order to maintain the total Company design day demand of 1,386 MMcf.

My review of Mr. Knecht's allocation factor work paper revealed that he actually *adjusted all of the design day demands for all of the classes*, not just the LGS class. His LGS design day demand did indeed increase, but all of the other class design day demands decreased in order to maintain the originally filed total Company design day demand. Rebuttal Table 1 provides a comparison of design day demands as filed by the Company and by Mr. Knecht.

Rebuttal Table 1
Design Day Comparison (MMcf)

	Peoples Design Day	Knecht Design Day
Residential	790	771
SGS	149	145
MGS	212	207
LGS	235	262
Total Combined System	1,386	1,386

Rebuttal Table 1 shows how Mr. Knecht adjusted all of the customer class design day demand in order to increase the LGS demand based on the two peak day requirement readings from Exhibit 17, COS 10. Mr. Knecht did not explain this in his Direct Testimony. The effect of this adjustment is to shift cost responsibility to the LGS class and away from the other rate classes.

Q. Did Mr. Knecht provide any analysis that supports reducing design day demands for the Residential, SGS, and MGS classes from the Company's calculations?

A. No. Mr. Knecht did not challenge the Company's design day demands for other rate classes in his Direct Testimony. In fact, Mr. Knecht testified:

> "The Company's method may serve to understate the contribution of more temperature-sensitive loads to design day demands, as the non-linear effects within January are not reflected in the method. However, I see no obvious way to recognize those effects without daily metered data by class. As such, I take no exception to the Company's analysis, pending clarification for the details of the averaging calculations." (underline added)

If I understand Mr. Knecht's testimony correctly, he stated that the Company's design day method may understate the contribution of temperature-sensitive loads. Such loads would include the Residential class, for example. However, Mr. Knecht's adjusted design day demands reduced the contribution of temperature-sensitive classes even more, with design day demand reductions to Residential, SGS, and MGS.

Mr. Knecht's adjusted class design day demand calculations are seriously flawed and without foundation or merit. The Commission should reject Mr. Knecht's proposed design day demand allocators for all customer classes.

Q. On page 33, lines 20 through 22 Mr. Knecht stated that he developed a zero-intercept classification approach for his recommended CCOSS. Please respond to Mr. Knecht's zero-intercept study.

A. The zero-intercept method is one of two methods commonly used to classify distribution mains into demand-related and customer-related portions of total costs. The minimum size method was used by Mr. Zarumba in his Demand/Customer CCOSS. In theory and in practice, I have no objection to a properly performed zero-intercept study. However, Mr. Knecht failed to provide a detailed description of how he performed his zero-intercept study. He merely referenced the work paper containing the data and calculations he employed. Without further explanation of how he performed his study, including framework for his analysis, the assumptions regarding his use of linear and quadratic calculations, his regression analysis, and the development of the distribution main data in the referenced work paper, the Commission should not rely on his study for this case.

Q. On page 46 of his Direct Testimony, Mr. Knecht presented his proposed class revenue allocation. Please comment on his proposal.

A. Mr. Knecht's proposed CCOSS is fatally flawed and cannot be relied upon by the Commission for revenue allocation. Thus, I recommend that the Commission reject his proposed revenue allocation as presented in Table IEc-7.

Mr. Knecht's table also does not provide an accurate representation of the percentage revenue increase to LGS tariff customers. For purposes of Table IEc-7, Mr. Knecht combined the LGS tariff and LGS Mainline classes into a single LGS class. However, his proposed revenue increase of $5.6 million would only be collected from the LGS tariff customers. Based on Mr. Knecht's calculations, the current revenues for LGS

tariff customers less negotiated rate customers are $45.5 million. The $5.6 million increase would be 12.3% for the rest of the LGS class.

Response to I&E Witness Cline

Q. Which CCOSS approach did Mr. Cline support in his Direct Testimony?

A. Mr. Cline supported the Company's Peak and Average CCOSS. My disagreements with this CCOSS method were addressed in detail in my Direct Testimony and in my above response to Mr. Johnson, so I will not repeat them here.

Q. How did Mr. Cline approach class revenue allocation?

A. Mr. Cline began with revenue allocation based on the results of the Peak and Average CCOSS as shown on page 36 of his Direct Testimony. Mr. Cline then tempered the rate impact on the SGS and LGS classes using the rule of 1.5 times the system average increase. He presented the I&E recommended revenue allocation on page 38 of his Direct Testimony.

Q. Please comment on Mr. Cline's proposed revenue allocation.

A. First, I do not agree with relying solely on the results of the Peak and Average CCOSS to allocate the Company's revenue increase. Both Mr. Zarumba and I recommended the midpoint of the CCOSS results of the Demand/Customer and Peak and Average CCOSS in our Direct Testimonies and I maintain this recommendation in my Rebuttal Testimony.

Second, Mr. Cline miscalculated the system average increase in his tables on pages 36 and 38. The total system increase is 34.4%, not 23.9% as calculated by Mr. Cline. A 1.5 times system average increase of 34.4% would be 51.6%, not the 35.9% shown in Mr. Cline's table on page 38. This would substantially reduce the amount of revenue to be reallocated to Residential and LGS classes. If the Commission adopts the 1.5

times rule proposed by Mr. Cline, then revenues from SGS and MGS should be reallocated to the Residential and LGS classes based on each class's proportionate share of the total allocated cost of service.

Q. Please provide a comparison that shows each party's recommended revenue allocation at Peoples' requested base revenue increase.

A. I compiled such a comparison in Rebuttal Table 2 below. Since Mr. Knecht used a different number for the Company's base revenue increase, his numbers were not directly comparable to those presented by Mr. Zarumba, Mr. Johnson, Mr. Cline, and me. Thus, I did not include Mr. Knecht's recommended revenue allocation in this table. Note also that I corrected Mr. Cline's erroneous total system average percentage increase consistent with my testimony above. Finally, the numbers for Mr. Johnson's recommendation in the OCA column reflect his primary revenue allocation recommendation at the Company's requested revenue increase as presented on page 29 of his Direct Testimony. Mr. Johnson also presented a secondary revenue spread proposal on page 31.

Rebuttal Table 2
Comparison of Parties' Revenue Allocation Proposals
Peoples Requested Base Revenue Increase

	Peoples		PII		OCA		I&E	
	Dollars	Percentage	Dollars	Percentage	Dollars	Percentage	Dollars	Percentage
Residential	$132,254,100	38.0%	$139,217,582	40.0%	$102,395,000	29.4%	$121,441,858	34.9%
SGS	$19,860,199	45.1%	$20,786,278	47.3%	$23,302,000	53.0%	$15,792,910	35.9%
MGS	$18,436,238	32.3%	$19,530,683	34.2%	$34,395,000	60.3%	$20,471,617	35.9%
LGS-Tariff	$3,187,093	6.5%	($5,796,914)	-11.8%	$3,968,000	8.1%	$6,428,942	13.1%
LGS-Mainline	$0	0.0%	$0	0.0%	$9,678,000	138.3%	$9,602,303	137.2%
Total	$173,737,629	34.4%	$173,737,629	34.4%	$173,738,000	34.4%	$173,737,630	34.4%

Q. Does this conclude your Rebuttal Testimony?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
	:	
V.	:	**Docket No. R-2023-3044549**
	:	
PEOPLES NATURAL GAS COMPANY LLC	:	

SURREBUTTAL TESTIMONY OF RICHARD A. BAUDINO

Q. Please state your name and business address.

A. My name is Richard A. Baudino. My business address is J. Kennedy and Associates, Inc. ("Kennedy and Associates"), 570 Colonial Park Drive, Suite 305, Roswell, Georgia 30075.

Q. What is your occupation and by whom are you employed?

A. I am a consultant to Kennedy and Associates.

Q. Did you present Direct and Rebuttal Testimony in this proceeding?

A. Yes. I presented Direct and Rebuttal Testimony on behalf of Peoples Industrial Intervenors ("PII").

Q. What this the purpose of your Surrebuttal Testimony?

A. The purpose of my Surrebuttal Testimony is to respond to certain portions of the Rebuttal Testimony submitted by Mr. Ralph Zarumba, witness for Peoples Natural Gas Company ("Peoples" or "Company") and Mr. Clarence Johnson, witness for the Office of Consumer Advocate ("OCA").

Response to Mr. Zarumba

Q. Beginning on page 32 of his Rebuttal Testimony Mr. Zarumba listed four corrections and refinements to the class cost of service studies ("CCOSS") he presented in his Direct Testimony. Please summarize these corrections and refinements.

A. The CCOSS corrections and refinements accepted by Mr. Zarumba are as follows:

1. Correction to the CUST-902 allocator recommended by Mr. Knecht. Mr. Zarumba accepted this correction in principle but modified Mr. Knecht's calculation as explained on pages 32 and 33 of his Rebuttal Testimony.
2. Correction to the CUST-908 allocator recommended by Mr. Knecht. Mr. Zarumba accepted this correction in principle but modified Mr. Knecht's calculation as explained on page 33 of his Rebuttal Testimony.
3. Collections allocator revision based on Mr. Knecht's recommendation. Mr. Zarumba accepted this revision in principle, but revised Mr. Knecht's calculation as explained on page 33 of his Rebuttal Testimony. Mr. Zarumba added Mr. Knecht's recommended approach to the PGD component of the calculation.[1]
4. Agreed in concept with Mr. Johnson's reallocation of large industrial customer support costs but revised the calculation advocated by Mr. Johnson.

With respect to the first three items above, in summary, while Mr. Zarumba accepts Mr. Knecht's corrections in principle, it is his further modifications to the calculations that render these corrections appropriate. Regarding the reallocation of large industrial

[1] In his testimony, Mr. Zarumba refers to Peoples Gas Division and Peoples Natural Gas Division as "PG" and "PNG" respectively, where I refer to the divisions as "PGD" and "PNGD".

customer support costs, Mr. Zarumba testified that only $728,048 of the $1,338,516 identified by Mr. Johnson is included in the Company's revenue requirement in Federal Energy Regulatory Commission ("FERC") accounts 912, 920, 926, and 408.1. Mr. Zarumba created line items for these costs and allocated them directly to the MGS, LGS, and LGS-Mainline classes in his two CCOSS.

Q. Do you accept the corrections and revisions included in the revised CCOSS presented by Mr. Zarumba in his Rebuttal Testimony?

A. Yes. The revisions described by Mr. Zarumba are reasonable and I accept them in his revised CCOSSs.

Q. What is your revised revenue allocation proposal based on the revised CCOSSs presented by Mr. Zarumba in his Rebuttal Testimony?

A. Surrebuttal Table 1 below presents my revised class revenue allocation proposal based on the revised CCOSS. As noted below, because the resulting revisions do not significantly change my CCOSS, my recommended cost allocation has not changed. Specifically, the approach is the same as in my Direct Testimony, which includes:

1. The mean, or average class cost of service revenue requirement for the Demand/Customer CCOSS and the Peak and Average CCOSS.[2] I used the mean CCOSS revenue requirement for the Residential, SGS, MGS, and LGS tariff customer classes.
2. LGS-Mainline revenues remained unchanged from current revenues. In other words, no increase was applied to the LGS-Mainline class consistent with the Company's recommendation.

[2] The Demand/Customer CCOSS is identified by Mr. Zarumba as the Minimum System/Design Day CCOSS in his Direct and Rebuttal Testimonies. I use the Demand/Customer designation consistent with my Direct and Rebuttal Testimonies.

3. The difference between LGS-Mainline current revenues and mean CCOSS revenues, $9,546,999, is spread to all tariff classes based on each class's percentage of total cost of service revenues less LGS-Mainline.

Surrebuttal Table 1
PII Recommended Allocation of LGS-Mainline CCOSS Shortfall and Proposed Revenues

Rate Class	Revenues @ Current Rates	Mean CCOSS Rev. Req.	Pct. Of CCOSS Excluding LGS-Mainline	Allocation of LGS-Mainline Shortfall	PII Proposed Revenue	$ Increase	Percentage Increase
RES-Base Rates	$347,866,631	$482,391,301	72.9%	$6,956,204	$489,347,505	$141,480,875	40.7%
SGS-Base Rates	$43,991,391	$63,702,169	9.6%	$918,601	$64,620,770	$20,629,380	46.9%
MGS-Base Rates	$57,024,004	$74,603,276	11.3%	$1,075,798	$75,679,074	$18,655,070	32.7%
LGS-Base Rates	$48,982,267	$41,358,177	6.2%	$596,395	$41,954,572	($7,027,694)	-14.3%
LGS-MAINLINE-Base Rates	$6,996,935	$16,543,934			$6,996,935	$0	0.0%
Total	$504,861,227	$678,598,857	100.0%	$9,546,999	$678,598,857	$173,737,630	34.4%

Compared to my Direct Testimony, the CCOSS responsibility for the LGS tariff class declined such that the recommended revenue reduction increased to (14.3)%. The Residential class increase rose slightly to 40.7%. The SGS increase rose to 46.9% but is still a reasonable multiple of 1.36 times the system average increase. I continue to recommend this approach to revenue allocation be adopted by the Pennsylvania Public Utility Commission ("Commission") in this proceeding. If the Commission decides that no class should receive a decrease in this case, then I recommend that the LGS tariff class receives no increase and that the $7.028 million revenue reduction be used to reduce the increases for the other tariff classes based on their proportionate share of the mean CCOSS revenue requirement excluding the LGS classes.

Please note that the numbers presented in Surrebuttal Table 1 present class revenue allocation at the Company's requested revenue increase. Neither I nor PII supports Peoples' increase in this case. If the Commission authorizes a lower increase, then the class revenue increases shown in Surrebuttal Table 1 should be proportionately scaled back as I recommended in my Direct Testimony.

Q. On page 37, line 9 of his Rebuttal Testimony Mr. Zarumba showed that your testimony recommended that the rates for PG and PNG should not be harmonized in this case. Is this correct?

A. No. This is a misunderstanding of my Direct Testimony. I did not advocate that the rates for PGD and PNGD should not be harmonized in this case. Rather, I do not oppose the Company's proposed rate harmonization for its PGD and PNGD systems.

Response to Mr. Johnson

Q. On page 19, lines 4 through 5 of his Rebuttal Testimony Mr. Johnson testified that you claimed "that the Company's favorable CCOSS changes for Mainline customers is not good enough." Please respond to Mr. Johnson's testimony on this point.

A. Mr. Johnson's testimony is patently erroneous. I never claimed, either in my Direct or Rebuttal Testimonies, that the Company's CCOSS treatment of Mainline customers was "not good enough." Mr. Zarumba's proposed separation of LGS tariff and LGS Mainline customers into separate classes is a welcome change to Peoples' CCOSS approach and enables a much clearer picture of LGS tariff customers' cost of service responsibility. The picture that emerged in both of the Company's CCOSSs is that LGS tariff customers are paying rates that resulted in the highest rate of return of all classes of customers on the system. My revenue allocation recommendation moves all classes reasonably toward their respective cost responsibilities as measured by the Demand/Customer CCOSS. Moreover, my revenue allocation recommendation represents a balance between the Demand/Customer and Peak and Average CCOSS in recognition of the Company's CCOSS approach in this proceeding.

Q. On page 19, line 15 Mr. Johnson stated that your proposed reallocation of the LGS Mainline revenue shortfall "is not consistent with cost causation." Is this statement correct?

A. No. I explained in my Direct Testimony that none of the tariff classes are responsible for the cost of service shortfall from the LGS Mainline class, as this shortfall results directly from the special contracts provided to customers within this class. Simply because this class's title contains the words "LGS" does not mean that there is any specific tie to those LGS customers not on a special contract. In this respect, the LGS tariff customers are no different from any of the other full tariff service classes, such as the Residential class. The LGS tariff customers do not have competitive alternatives and do not qualify for special contracts. It would be unfair to saddle these customers with the full LGS Mainline cost of service shortfall, as they are no more responsible for that shortfall than the SGS, MGS, and Residential classes. All tariff classes benefit from the LGS Mainline customers being connected to Peoples' system and contributing to fixed costs that would otherwise have to be paid by the rest of the customers. Therefore, all customer classes should share in the cost of service shortfall from the LGS Mainline class.

Q. On page 20, line 5 through page 21, line 2 Mr. Johnson discussed business risk that involves "the potential loss of industrial load or lost revenue caused by responding with negotiated rates." Please address Mr. Johnson's arguments.

A. Mr. Johnson asserted that if the CCOSS targeted class specific business risk associated with competitive pressure, the MGS and LGS base revenue requirement would be based on rate of return targets higher than the system average. This assertion lacks proper foundation and support. Mr. Johnson failed to present any analytical basis for

his claim that the MGS and LGS tariff classes are riskier than the SGS and Residential classes. The LGS tariff class does not have the risk of lost revenue that the LGS Mainline class does since the LGS tariff customers presumably do not have competitive options and take service at full tariff rates, not on negotiated rates. This is also the case for the MGS tariff customers. Thus, there is no good reason to assume that full tariff MGS and LGS customers should be assigned a higher rate of return than full tariff SGS or Residential customers. Moreover, no party in this case, including Mr. Johnson, proposed any rate of return differential for the LGS and MGS classes in their Direct Testimonies. Mr. Johnson's assertion should be rejected.

Q. On page 21, lines 7 through 15 Mr. Johnson testified as to why he believes your proposal for allocating the cost of industrial discount rates is inconsistent with your treatment of the costs of Residential customer assistance programs and the low income usage reduction program. Is this correct?

A. No. The costs associated with Residential class programs such as customer assistance and low income usage reduction programs directly benefit Residential customers only and so the costs of those programs should be confined to the Residential class. In fact, the treatment of these costs is similar to the treatment of large industrial customer support costs that Mr. Johnson proposed in his Direct Testimony, wherein such costs are directly assigned to the MGS and LGS classes. Mr. Zarumba accepted Mr. Johnson's proposed direct assignment of these costs in his Rebuttal Testimony with modifications that I previously discussed. Based on Mr. Zarumba's Rebuttal, I accepted this direct assignment to the MGS and LGS classes here in my Surrebuttal Testimony.

The reallocation of the cost-of-service shortfall from the LGS-Mainline class is completely different from the direct assignment of costs I just discussed. The negotiated contracts that serve LGS-Mainline customers are a benefit to all customer classes because they enable Peoples to retain load that would otherwise be lost to competitive alternatives. To the contrary, all of the customers benefitting from Peoples' customer assistance program are captive customers without competitive alternatives. It is important to understand that if the LGS Mainline customers had not been retained on Peoples' system, all of the tariff customers would have had to pick up the entirety of the fixed cost contribution from Mainline customers. Obviously, these lost fixed costs would not be directly assigned in totality to the LGS tariff customers. Accordingly, LGS tariff customers are no more responsible for the LGS Mainline revenue shortfall than any other service class. Therefore, the Commission should allocate this shortfall based on the method I described in my Direct Testimony and as modified here in my Surrebuttal Testimony. Mr. Johnson's flawed argument should be rejected.

Q. Does this conclude your Surrebuttal Testimony?

A. Yes.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: I&E-RE-009

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume 8, Exhibit 19, RR-26 concerning labor. Provide the following:

A. Employee counts, total and broken down by company by union and non-union categories for the TME August 31, 2021, 2022, HTY 2023, 2024 YTD actual, FTY 2024, and FPFTY ending September 30, 2025;

B. Number of employee positions that have been eliminated, by company, by month broken down by union and non-union since the commencement of the HTY and that are expected to be eliminated during the FTY and the FPFTY; and

C. Number of vacant positions, by company, by month, by union and non-union for the following years: TME August 31, 2021, 2022, and HTY 2023, and 2024 YTD broken down by union and non-union.

Answer: A. Please see Attachment A. 2024 YTD is not yet available.

B. On January 1, 2023 there were 40 non union positions transferred to Essential Utilities. No further eliminations are planned during the FTY and FPFTY.

C. Please see Attachment B. The data is not readily available by company or union and non-union but we are able to provide total vacancies by quarter for all of PNG Companies (Q1 2021 through Q3 2023). 2024 YTD is not yet available.

Pittsburgh, PA 15222

Re: PA Public Utility Commission, *et al*. v. Peoples Natural Gas Company LLC
Docket Nos. R-2023-3044549, *et al.*

Dear Judge Long:

On December 29, 2023, Peoples Natural Gas Company LLC, which includes Peoples Natural Gas Division ("PNGD") and Peoples Gas Division ("PGD") (collectively, "Peoples" or "the Company") filed Original Tariff GAS – PA PUC No. 48 ("PA PUC No. 48"), along with supporting exhibits, standard data responses and testimony required to be submitted in conjunction with a tariff change seeking a general rate increase.

Peoples has since discovered that there were two errors and one omission with respect to its December 29, 2023 base rate filing. Specifically, Peoples discovered that Exhibit 1, Schedule 6 – *Gas Stored Underground* – was inadvertently excluded from the December 29, 2023 filing. Additionally, Peoples has discovered errors in Exhibit 4, Schedule 22, and Exhibit 4, Schedule 1, page 11.

Attached is Exhibit 1, Schedule 6, which was omitted from the original filing. Also attached is Exhibit 4, Schedule 22, and Exhibit 4, Schedule 1, page 11, which contained errors reflected in the original filing. Those errors have since been corrected and are reflected in the enclosed. Clean and redline versions of the corrections to Exhibit No. 4, Schedules 22 and 1 (page 11) are being provided. Peoples intends to submit the enclosed clean versions of Exhibit 4, Schedules 22 and 1 (page 11) for the record in this proceeding, as well as the previously omitted Exhibit 1, Schedule 6 – *Gas Stored Underground*.

Copies will be provided as indicated on the Certificate of Service.

Respectfully submitted,

Nicholas A. Stobbe

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: I&E-RE-018

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume 1, Exhibit 4, Schedule 1, p. 11 concerning Post Retirement Benefits Other than Pensions. Provide the following:

A. Supporting documentation for the FPFTY Net Expense of $779,921 for PNG (line 7);

B. For Peoples' last three base rate cases, state the dollar amount of each Post Retirement Benefits Other than Pensions expense claim and the method used to determine the claim (i.e. accrual, cash-basis, or some other method);

C. If the claims as detailed in response to Part B above were based on something other than accrual or cash contributions in any of the last three base rate cases, provide a detailed explanation for each; and

D. Provide the post-retirement benefits other than pensions on a pay-as-you-go basis by year for the TME August 31, 2021, 2022, HTY 2023, FTY 2024, and FPFTY 2025.

Answer: A. The Original FPFTY Net Expense of $779,921 was based on an estimate. The revised claim amount is $1,256,374 net of capitalization ($1,815,569 - $559,195) based upon the final response to Exhibit 19, RR-39 for additional details. A revised Exhibit 4, Schedule 1 will be filed.

B. See Attachment A Table 1 for the PBOPs included in the three prior Peoples Natural Gas Division rate cases.

C. N/A

D. Please see Attachment A Table 2 for the pay-as-you-go basis for TME August 31, 2021, 2022, and 2023. For the future periods the company anticipates making contributions consistent with the expense claim amount of $1,256,374.

Submit Date: 2/7/2024

I&E RE-18 Attachment A
Table 1

Peoples Natural Gas Division prior three rate cases - PBOP's

Rate Case	PBOPs Claim	Method
2010 (Peoples Natural Gas Division)	$1,975,509	Accrual basis, consistent with FAS 106 and PUC order at R-00953318.
2012 (Peoples Natural Gas Division)	$1,860,719	Accrual basis, consistent with FAS 106 and PUC order at R-00953318.
2018 (Peoples Natural Gas Division)	$2,320,140	Accrual basis, consistent with FAS 106 and PUC order at R-00953318.

Table 2

Post-retirement benefits other than pensions on a pay-as-you-go basis

	TME 8/31/21	TME 8/31/22	TME 8/31/23
PNG	$ 2,320,498	$ 2,390,206	$ 2,629,355

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: I&E-RE-049

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume 1, Exhibit 4, Schedule 1, p. 11 and Peoples Statement No. 2, pp. 14-15 concerning Post Retirement Benefits Other than Pensions (PBOPs). Provide the following:

A. Funding status of Peoples' PBOPs plan as of:

1. December 31, 2021;

2. December 31, 2022;

3. December 31, 2023.

B. Justification for the Peoples' claimed two-year amortization period for prior period undercollection of PBOPs costs; and

C. Breakdown of PBOPs costs capitalized and expensed by company by year for the TME August 31, 2021, 2022, 2023, 2024 YTD, 2024 FTY claim, and FPFTY ending September 30, 2025 claim.

Answer: A. The funding status was 126.1% as of 12/31/21, 132.94% as of 12/31/22, the funding status as of 12/31/23 is not yet available.

B. Based upon the Company's capital levels and the fact that the tax repairs benefit will be fully included in rates, the Company anticipates filing a rate case within two years.

C. Please see Attachment A. PGC included costs during the TME August 31, 2021 with all PBOP's cost incurred on PNG for the remaining periods.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: I&E-RE-027

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume 1, Exhibit 4, Schedule 22, Peoples Volume 1, Schedule 1, p. 17, and Peoples Statement No. 2, pp. 18-19 concerning corporate insurance:

A. Explain the decrease of $1,528,869 ($5,035,015 - $3,506,146) between the TME August 31, 2021 and 2022;

B. Explain the increase of $1,707,541 ($5,213,687 - $3,506,146) between the TME August 31, 2022 and 2023;

C. Provide a breakdown of corporate insurance expensed and capitalized by company by year for the TME August 31, 2021, 2022, 2023, 2024 YTD, 2024 FTY claim, and FPFTY ending September 30, 2025 claim;

D. Copies of 2021, 2022 and 2023 statements or invoices to support the 13.1% increase in total premiums;

E. Copy of the feedback received by the Company from its third-party brokers to support the Company's increase in insurance rates;

F. Copy of the two most recent invoices for Property Insurance and Workers Compensation insurance identifying the time period covered; and

G. Detailed breakdown of Other Misc. Insurance under Columns 2 and 5 by company.

Answer: Please refer to included attachments for responses to Parts A-G. The invoices provided support a total increase in premiums of 12.9%, as opposed to 13.1%.

Submit Date: 2/7/2024

Due to a restatement of Exhibit 4, Schedule 22 that is included as a Supplemental attachment under I&E-RE-1, the TME August 31, 2022 total is $4,710,028, which is a decrease of $324,987 from TME August 31, 2021. The main driver of this decrease is related to a reduction in General Property Insurance.

Due to a restatement of Exhibit 4, Schedule 22 that is included as a Supplemental attachment under I&E-RE-1, the TME August 31, 2022 total is $4,710,028, which is an increase of $503,659 to TME August 31, 2023. The main driver of this increase is related to a Excess Liability/Surty Insurance.

A. Detailed breakdown and description of each of the advertising programs listed in response to I&E-RE-33, Part A.5, PR Firm – Other advertising programs;

B. Samples for each of the advertising programs listed in response to I&E-RE-33, Part A.5, PR Firm – Other advertising programs, including, but not limited to brochures, notices, bill inserts, maintenance tips, and publications provided to customers under each of these advertising programs.

Answer: a & b. See the attachments.

Submit Date: 3/6/2024

Period: 9/1/22 - 8/31/23 (TME August 31, 2023)

Listing	Cost	Explanation	Sample
OTHER	$1,370,197		
A	$150,808		
Project Hyde Park Safety Improvement	$5,000	Peoples contributed to the Hyde Park Volunteer Fire Department located in Hyde Park, Pa. The donation was used to facilitate the improvement of the dock facility that Hyde Park VFD and other emergency service providers use to deploy personnel and equipment for river rescue efforts.	On-site activation, no samples available.
Marcellus Shale Coalition	$15,000	Peoples collaborated with other Marcellus Shale Coalition members on the development of the web site Natural Gas for the Next Generation (www.natgasnextgen.com).	Screenshots of web page - Marcellus Shale Coalition Sample
Mark-IM.com	$318	Mark-IM is the vendor that operates our online company store for employees to purchase clothing with the Peoples logo.	Screenshot - Mark-IM Sample
Pennsylvania One Call System Inc	$3,000	As a longtime partner with the Pennsylvania One Call System, Peoples was a sponsor of a local Safety Days event held for contractors in Western Pennsylvania, as well as the organization's annual golf outing. This support helps PA One Call in their mission to protect Pennsylvania residents from the dangers stemming from damage to underground utility lines, both in loss of utility service as well as risk of harm to persons or property.	Safety Days sample - Pennsylvania One Call System Inc Sample
Pittsburgh Downtown Partnership	$125,000	Peoples serves as the presenting sponsor of the annual Holiday Market organized by the Pittsburgh Downtown Partnership. This widely acclaimed community event is a major economic driver during the holiday season, supporting businesses of all sizes. Peoples utilizes the advertising elements that come with the sponsorship to drive awareness toward its Gift of Warmth program to help customers who are struggling to pay their bills, as well as other Customer Assistance Programs. The sponsorship also serves for general branding and awareness, conferring a level of credibility for the organization and generate more trust among our customer base that we are committed to support causes the improve quality of life for people in the region. https://downtownpittsburghholidays.com/holiday-market https://www.youtube.com/watch?v=XjUOzuYVIMU https://www.youtube.com/watch?v=IVNkCDKDFsk	Ad samples uploaded - Pittsburgh Downtown Partnership Sample
Tall Timber Group	$2,490	Advertising in regional business trade publication BreakingGround	Ad sample & Publication - Tall Timber Group Sample
B	$3,500		
Allegheny Conference on Community	$2,000	Sponsorship of Conference's Clean Clean Energy Action Forum.	Onsite activation - no samples to share. Invoice uploaded - Allegheny Conference Sample
Carnegie Mellon University	$1,500	Sponsorship of CMU Energy Week held by Wilton E. Scott Insitute for Energy Innovation at Carnegie Mellon University	Onsite activation - no samples to share. Invoice uploaded - Carnegie Mellon University Sample
C	$1,165,063		
Lozinak Professional Baseball LLC	$205,521	Peoples is the naming rights sponsor of the Altoona Curve minor league baseball team. This includes numerous avenues for advertising, including through the team's website, printed programs, and various signage and awareness opportunities at the ballpark. Peoples utilized this for important safety messages including Damage Prevention (Call 811 Before You Dig) and How to Detect a Natural Gas Leak. Peoples also leveraged the sponsorship for customer appreciation actions including tickets to a Curve game for Blair County residents, promoting the benefits of natural gas service to prospective new customers, and general awareness.	2023 Proof of Performance report - Lozinak Professional Baseball LLC sample
Pittsburgh Penguins LP	$69,979	During the 2022 and 2023 National Hockey League Seasons, Peoples was an in-game sponsor of the Pittsburgh Penguins. Through this partnership, Peoples communicated important natural gas safety messages to attendees of Penguins games, primarily around Carbon Monoxide safety and awareness. The sponsorship also served for general awareness, as being associated with a major professional sports team confers a level of credibility for the organization and generate more trust among our customer base.	Samples and 2023-24 deliverable report uploaded - Pittsburgh Penguins Samples

Listing	Cost	Explanation	Sample
Pittsburgh Pirates	$37,370	During the 2022 Major League Baseball Season, Peoples was an in-game sponsor of the Pittsburgh Pirates. Through this partnership, Peoples communicated important natural gas safety messages to attendees of Pirates games, primarily around Damage Prevention (Call 811 Before You Dig), as that is a prominent safety campaign during the baseball season. The sponsorship also served for general awareness, as being associated with a major professional sports team confers a level of credibility for the organization and generate more trust among our customer base.	Samples uploaded - Pittsburgh Pirates Samples
Pittsburgh Steelers LLC	$852,193	During the 2022 and 2023 National Football League Seasons, Peoples was an in-game sponsor of the Pittsburgh Steelers. Through this partnership, Peoples communicated important natural gas safety messages to attendees of Steelers games, primarily around overall Natural Gas Safety (How to Detect a Natural Gas Leak through Sight, Smell and Sound). The sponsorship also served for general awareness, as being associated with a major professional sports team confers a level of credibility for the organization and generate more trust among our customer base.	Samples uploaded - Pittsburgh Steelers Samples
E	$50,826		
Brand Makers LLC	$14,020	Promotional products used as giveaways at a variety of public, industry and internal events to increase engagement.	Samples not readily available.
Capital Analytics Associates	$5,500	Sponsorship of Invest Pittsburgh 2023 Conference	Sample uploaded - Capital Analytics Associates Sample
First Choice Telephone Answering Service	$225	First Choice is the operator of our media hotline, answering calls 24/7/365 that may come in from members of the media and contacting the company's on-call Media Relations representative, who then gathers information and responds to the media inquiry.	No samples available
J Mac Cycling LLC	$500	Peoples employee is part of a small cycling team, J Mac Cycling. We sponsored his team and in exchange, the Peoples logo is placed on the cycling team's uniforms.	Sample uploaded - J Mac Cycling sample
Lakemont Park	$1,000	Peoples served as a sponsor for Lakemont's Holiday Lights on the Lake event in both 2022 and 2023. Our logo was included in promotional materials for the event both online and on-site.	Sample uploaded - Lakemont Park Sample
Local Government Academy	$1,200	Peoples sponsored The Annual Promoting Excellence in Local Government Golf Outing, held by Local Government Academy. The organization provides municipal governments with education resources, and the outing specifically supports the Michael Lynch Scholarship Foundation.	On-site activation, no samples available.
Mark-IM.com	$24,838	For the purchase of clothing with the company logo on it, worn by staff while working in the field as well as during company volunteer events. Branded clothing, when paired with ID badges, helps ensure customers that our employees are who they claim to be, providing important peace of mind. Having employees wear apparel with the Peoples logo also brings visibility to the company, which is valuable whether in community service or professional functions.	Samples of shirts offered by Mark-IM and our online store page - Mark-IM sample
PA Mobile AG Lab	$2,000	Peoples sponsored the Pennsylvania Mobile Agriculture Lab at the Butler County Farm Show. Peoples logo featured on Lab signage and transportation at the show.	On-site activation, no samples available.
Rapps Packaging	$1,543	Labels for Peoples' Eat Drink Help (EDH) community program. Through EDH, Peoples partners with a small business and a local charity. Peoples provides 1,000 labels to create awareness for all 3 entitites, which are placed on the business' products. Once the supply of labels is exhausted, Peoples makes a $1,000 donation to the charity on behalf of the company and participating small business. In 2024, EDH will reach and exceed the milestone of $200,000 donated to local community causes since the program's start in 2016.	Samples uploaded - Rapps Packing Sample

Re: Pennsylvania Public Utility Commission
v.
Peoples Natural Gas Company LLC
Docket Nos. R-2023-3044549

Dear Counsel:

Enclosed you will find Interrogatories of the Office of Consumer Advocate, Sets 13-15, in this matter.

In accordance with the discovery modifications adopted in Administrative Law Judge Long's Prehearing Conference Order issued on February 5, 2024, we request Peoples Natural Gas Company, LLC provide verified answers to these inquiries within ten (10) days of service. Also, please forward the verified answers as they are completed, rather than waiting until the responses to the full set are completed.

We would appreciate it if you would communicate any objections you may have to these interrogatories as soon as possible.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XV-005

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference the revised and omitted exhibits filing that Peoples submitted in this case on February 16, 2024. Please provide the following information:

a. Please confirm that Line 4 of Exhibit No. 4, Schedule No. 1, page 2 is not impacted by Peoples' revision to Exh. 4, Sch. 1, pg. 11. If Exhibit No. 4, Schedule No. 1, page 2 is impacted, please provide an updated version of this page.

b. Please confirm that Peoples' revision to Exh. 4, Sch. 22, pgs. 1-4 does not impact the revenue requirement of the History Test Year, Future Test Year, or Fully Projected Future Test Year provided by Peoples in this proceeding.

c. If any corrections are carried over to Exhibit 4, Schedule 1, Peoples should update that schedule as well.

d. Please update Exhibit No. 4 Schedule No. 1 page 2 of 33, to update its request for Post-Retirement Benefits other than Pension (Exhibit No. 4 Schedule No. 1 page 11).

e. Indicate whether any of the corrections and omissions have a revenue requirement impact in this case from the as-filed position. If so, identify the impact(s) and specify how each impact is calculated.

Answer: a. The revision to Exh. 4, Sch. 1, pg. 11 does impact Exhibit No. 1, page 2. Peoples will file the revised Exhibit No. 4, Schedule 1 under separate cover.

b. The revision to Exh. 4, Sch. 22, pgs. 1-4 does not impact the revenue requirement.

c. Peoples will file the revised Exhibit No. 4, Schedule 1 under separate cover.

d. Peoples will file the revised Exhibit No. 4, Schedule 1 under separate cover.

e. The revised Exhibit No. 4, Schedule 1 to be filed under separate cover will outline all changes to the revenue requirement.

Submit Date: 3/4/2024

I&E Exhibit No. 1
Schedule 14
Page 3 of 6

Peoples Natural Gas Company LLC
§ 53.53 III.E

17. State whether any adjustments have been made to expenses in order to present such expenses on a basis comparable to the manner in which revenues are presented in this proceeding (i.e.—accrued, billed or cash).

* * * * * * * * * * * * * * * * * *

Expenses have been adjusted to a basis comparable to the adjusted normal level of revenues. Refer to Exhibit No. 4, Schedule No. 1, pages 2-4 for a detail of all expense adjustments. Peoples Natural Gas Division is referred to as "PNG" and Peoples Gas Division is referred to as "PGC" in Exhibit 4.

REVISIONS:

Please note that this revised Exhibit 4, Schedule No. 1 increases the claim for O&M expense by $996,345 based upon adjustments determined during discovery. There were three adjustments: 1) increase in expense of $538,590 as referenced in the response to I&E-RE-6; 2) increase in expense of $476,452 as referenced in the response to I&E-RE-18; and 3)reduction in expense of $18,697 as referenced in the response to I&E-RE-30. Please note that this has a dollar-for-dollar impact on the revenue requirements (i.e. a $996,345 increase to revenue requirement).

The Company intends to make this update in its rebuttal case, along with other adjustments, if any, that the Company may agree to resulting from other parties' direct testimony.

ECONOMY | CENTRAL BANKING

Fed Begins Pivot Toward Lowering Rates as Inflation Declines

Officials don't rule out further hikes while penciling in three rate cuts in 2024

By Nick Timiraos Follow

Updated Dec. 13, 2023 6:32 pm ET

WASHINGTON—Slowing inflation prompted Federal Reserve Chair Jerome Powell to pivot away from raising interest rates and toward considering when to cut them, igniting a rally on Wall Street.

The Fed held its benchmark federal-funds rate steady at a 22-year high on Wednesday and offered every reason to think that its most recent increase this past July probably marked the end of the most aggressive cycle of hikes in four decades.

At a press conference, Powell focused instead on the risk of causing unnecessary harm to the economy by leaving rates too high as inflation falls. "We're aware of the risk that we would hang on too long," he said. "We're very focused on not making that mistake."

All three major stock indexes climbed, with the Dow industrials up 512 points or 1.4% to 37090, a record close. Yields on the 10-year Treasury note declined 0.173 percentage point to 4.032%, the lowest level since August.

Officially, the Fed's policy statement indicated policy makers left the door open to raising rates again. "It is far too early to declare victory, and there are certainly risks," Powell said.

But Powell's comments made the carefully crafted policy communiqué feel stale less than an hour after it was released by suggesting officials had turned their attention to rate cuts. "There's a general expectation that this will be a topic for us, looking ahead. That's really what happened in today's meeting," he said.

Powell's remarks, along with new projections showing Fed officials anticipated three rate cuts next year, marked a notable U-turn. For more than a year, he had warned that they would raise rates as much as needed to lower inflation even if that triggered a recession.

The comment about rate cuts was surprising because just two weeks ago during an appearance at Spelman College in Atlanta, Powell said it was too soon to speculate about when lower rates might be appropriate.

The Federal Reserve, led by Chair Jerome Powell, has held its benchmark rate steady at three consecutive meetings. PHOTO: BRENDAN SMIALOWSKI/AGENCE FRANCE-PRESSE/GETTY IMAGES

"Powell played Santa Claus early," said Diane Swonk, chief economist at KPMG. "It was a 180-degree shift, right there."

Powell indicated officials were turning their attention to rate cuts because inflation has declined much faster than they expected. In their latest projections, they expected core prices, which exclude volatile food and energy items, to rise 3.2% this quarter from a year ago, down from their September projection of 3.7%. They see core inflation of 2.4% at the end of next year, down from their September expectation of 2.6%.

Government data released Wednesday morning suggest that core prices registered a very mild rise in November as measured by the

Fed's preferred inflation gauge, which will be released by the Commerce Department later this month. Wall Street forecasters said that could put core inflation on track to reach or even dip below 2% on a six-month annualized basis, and it could drop the 12-month rate to 3.1%. The Fed targets 2% annual inflation.

"I welcome the progress," Powell said. "We just need to see more."

Powell said it was too soon to say whether the last stretch of inflation reduction would prove harder than the ground covered so far. "We kind of assume that it will get harder from here, but so far, it hasn't," he said.

With Wednesday's decision, the Fed has held its fed-funds rate steady at three consecutive policy meetings in a range between 5.25% and 5.5%.

In September, officials had projected one more hike this year followed by two cuts next year, taking the fed-funds rate to around 5.1%. On Wednesday, officials projected they would lower it to around 4.6% by the end of 2024, the equivalent of three quarter-point reductions from the current level.

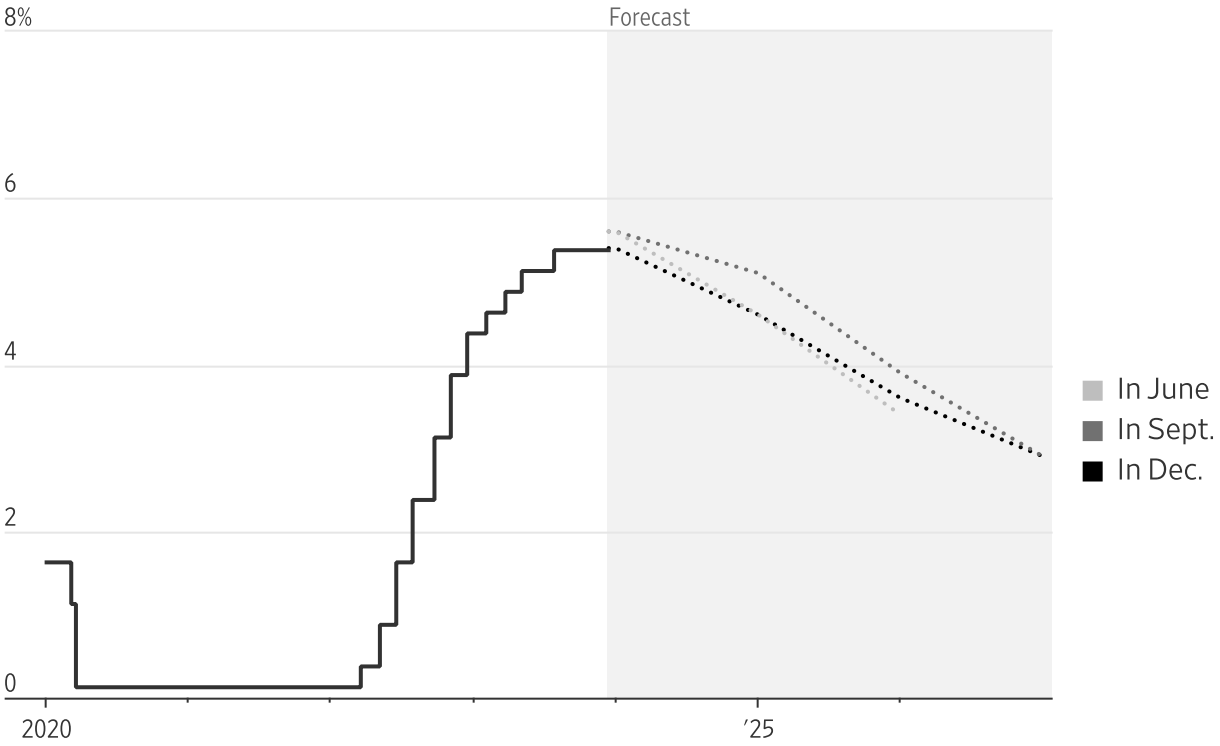
Investors in interest-rate futures markets dialed up bets that the Fed would begin cutting rates in March, placing a roughly 80% probability of lower rates, according to CME Group.

The U.S. economic outlook has brightened in recent months because inflation and wage growth are slowing. That would give the Fed more room to lower rates rapidly if the economy weakens more than officials expect, and it could open the door to cuts even if the expansion doesn't stall.

One year ago, many economists anticipated that Fed officials would have to raise rates to levels that would create enough slack—such as unemployed workers and idled factories—to significantly slow inflation. But healed supply chains and an influx of workers into the labor force are curbing wage and price increases without causing broad economic weakness.

"This has worked out beautifully. Things are going very well from their perspective," said William Dudley, a former president of the New York Fed.

Federal-funds rate target



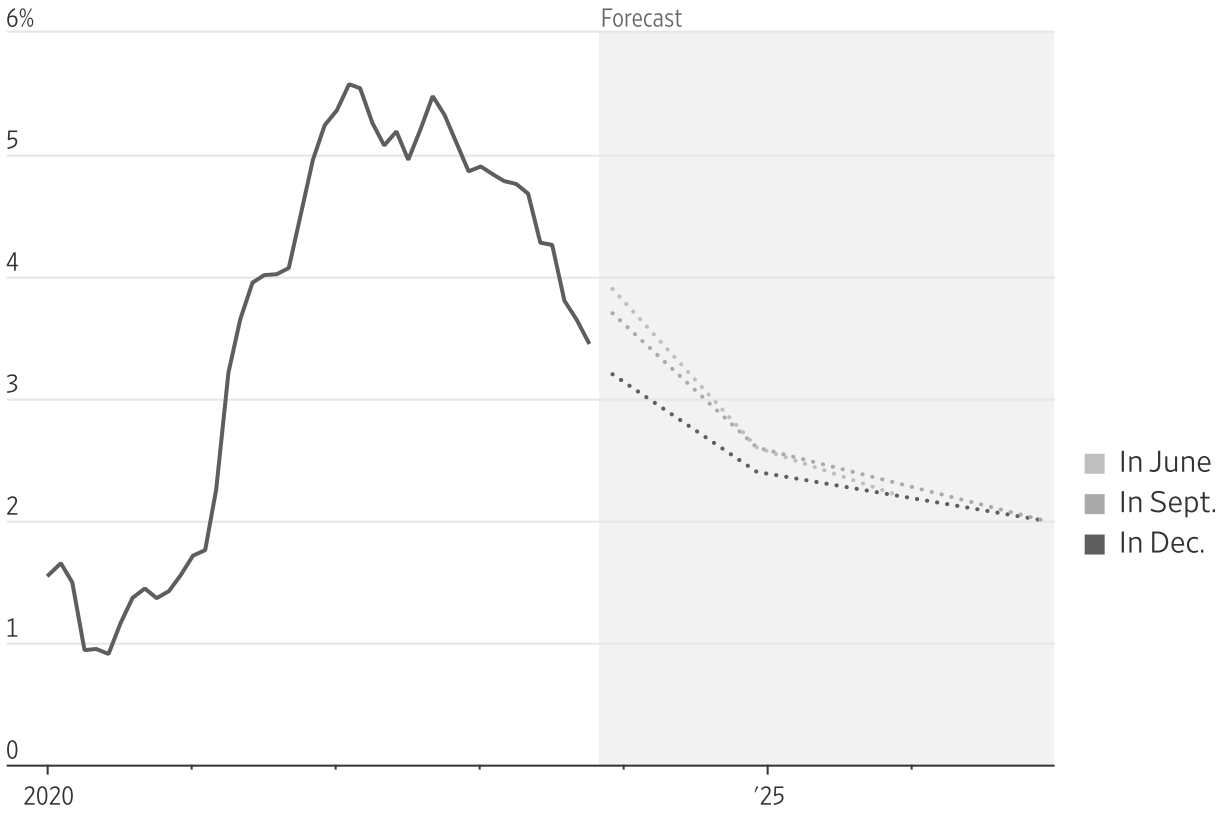
Notes: Midpoint of range; forecasts are the median value projected at the end of each year
Source: Federal Reserve

The labor market has been cooling but remains solid. The unemployment rate ticked down to 3.7% last month from 3.9% in October, and private-sector employers have added an average of 130,000 jobs a month over the past six months, down from 228,000 during the six months before that.

Powell repeated his view that officials could lower rates next year simply because inflation is well on its way to their 2% target. Holding rates steady as inflation falls would lead inflation-adjusted or "real" rates to rise, which the Fed doesn't want. Officials could lower nominal rates simply to prevent real interest rates from turning too tight.

"You wouldn't wait to get to 2% [inflation] to cut rates," Powell said. "It would be too late. You'd want to be reducing" the amount of "restriction on the economy well before you get to 2%."

Change in core prices from a year earlier



Notes: Seasonally adjusted personal consumption expenditure prices excluding food and energy costs; forecasts are the median value projected at the end of each year

Still, officials don't want a premature declaration of victory over inflation to cause market rallies that might make it harder to sustain the slower economic growth they believe necessary to conquer inflation.

Before cutting rates, "you'd want to be highly confident that you were going to be able to pull off" maintaining inflation around 2%, said Dudley. "Things are going to be very tricky this coming year. This is going to be more art than science."

Swonk said Powell's comments on Wednesday suggested officials were comfortable with some easing in financial conditions now after a bond-market selloff this fall had pushed up a range of borrowing costs for auto loans, mortgages and business debt.

"They clearly don't want to look like they are the enemy of growth with inflation coming down," she said. "Financial conditions easing are going to stimulate the economy enough to slow down the deceleration of inflation, and I think the Fed is comfortable with that."

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: I&E-RR-004

Witness: Moul, Paul **Title:** Managing Consultant, P. Moul & Associates

Question: Reference Peoples Statement No. 13, p. 8, lines 17-19. Identify the companies in Mr. Moul's Gas Group that are not susceptible to bypass.

Answer: Mr. Moul did not study in detail the bypass threat of each company in his proxy group. However, he is aware that bypass is usually a threat to LDCs when there are a number of interstate pipelines in close proximity to large volume users served by an LDC or when customers of the LDC are in close proximity to gas producing wells. As to the issue of bypass by interstate pipelines, most LDCs, including companies in the Gas Group, are faced with this threat, which can be greater or less than the risk experienced by Peoples. Relevant here, Peoples has six interstate pipelines traversing its service territory at numerous locations. As to bypass that might be associated in proximity to producing wells, only Atmos Energy, NiSource and ONE Gas have extensive operations in gas producing regions. Companies such as Chesapeake, New Jersey Natural, Northwest, Southwest, and Spire are not similarly situated.

Submit Date: 1/19/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: I&E-RR-010

Witness: Moul, Paul **Title:** Managing Consultant, P. Moul & Associates

Question: Reference Peoples Statement No. 13, p. 51, lines 5-11:

A. State whether Mr. Moul is aware of any natural gas distribution utilities throughout the United States that have been granted a Commission authorized 11.75% or higher cost of common equity in the past two years.

B. If the answer to I&E-RR-13-D Part A is yes, identify which company/companies have been authorized such cost of common equity and in what jurisdiction.

Answer:

A. Mr. Moul has not researched this issue.

B. See the response to (A) above.

Submit Date: 1/19/2024

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION AND BUSINESS ADDRESS.

A. My name is Jason Harvey. I am a Fixed Utility Valuation Engineer in the Pipeline Safety Section of the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement's ("I&E") Safety Division. My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. WHAT IS YOUR EDUCATIONAL AND EMPLOYMENT EXPERIENCE?

A. I attended the University of Pittsburgh at Johnstown and earned a Bachelor of Science Degree in Civil Engineering Technology in 1998. I joined the Pennsylvania Public Utility Commission's Safety Division in April 2021. Prior to 2021, I worked for the Pennsylvania Department of Transportation (PennDOT) from 2004 to 2021, where I worked in Construction, Roadway/Bridge Design, and Traffic. Prior to 2004, I worked for the Pennsylvania Department of Environmental Protection (PA DEP) from 1999 to 2004, where I worked in the Bureau of Waterways Engineering in the Stream Improvements Section.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my testimony is to address Peoples Natural Gas Company's ("Peoples" or "Company") pipeline replacement and leak management. More

specifically, I will address the following issues:

A. Federal and state regulations applicable to Peoples;

B. Peoples' Distribution Integrity Management Plan ("DIMP");

C. Peoples' Long Term Infrastructure Improvement Plan ("LTIIP").

D. Pipeline replacement and cost; and

E. Pipeline Leaks

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit to Accompany Statement No. 4 contains schedules relating to my direct testimony.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS?

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in a rate proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. DID ANY COMPANY WITNESS PROVIDE TESTIMONY ON PEOPLES' PIPELINE REPLACEMENT?

A. Yes, Peoples witnesses Huwar[1], Palombo[2], and Becker[3], each discuss the Company's plans for pipeline replacement.

DIMP REGULATIONS

Q. WHAT FEDERAL AND STATE REGULATIONS ARE APPLICABLE TO PEOPLES' PIPELINE REPLACEMENTS?

A. Peoples is mandated to adhere to the Distribution Integrity Management Program under CFR 49 Part 192.1001-192.1015, Subpart P of the Code of Federal Regulations. Additionally, Peoples, which is seeking to continue a previously approved Distribution System Improvement Charge ("DSIC") mechanism, is required to submit an LTIIP pursuant to 52 Pa Code §121.1 and §121.3.

Q. WHAT ARE THE REQUIREMENTS OF DIMP?

A. DIMP requires a natural gas utility to perform the following risk management strategies:

1. Demonstrate knowledge of the gas distribution system;
2. Identify the threats to its facilities;
3. Evaluate and rank the risks of threats to the facilities;

[1] Peoples Statement No. 1, pp. 11-27.
[2] Peoples Statement No. 4, pp. 6-17.
[3] Peoples Statement No. 5, pp. 2-9.

4. Identify and implement measures to reduce risk;

5. Measure performance, monitor the results, and evaluate effectiveness;

6. Periodically evaluate and make improvements to the program; and

7. Report the results.[4]

Throughout the process, DIMP regulations require Peoples to develop a strategy to identify the risks to its pipeline facilities and to create a plan or plans to mitigate and reduce these risks. The Company determines its pipeline replacement plan by risk ranking the different pipeline types and then replacing the pipe based on the highest risk ranking.

Q. WHY MUST A NATURAL GAS DISTRIBUTION COMPANY COMPLY WITH DIMP REGULATIONS?

A. The Pipeline and Hazardous Materials Safety Administration ("PHMSA") created DIMP regulations in 2010 and operators were given until August 2, 2011, to write and implement their DIMP programs to reduce the number of US Department of Transportation ("US DOT") reportable incidents.[5] DIMP Plans are ever evolving

[4] CFR 49 Part 192.1007(a)-(g).

[5] A PHMSA reportable incident means any of the following events: (1) An event that involves a release of gas from a pipeline, or of liquefied natural gas, liquefied petroleum gas, refrigerant gas, or gas from an LNG facility, and that results in one or more of the following consequences: (i) A death, or personal injury necessitating in-patient hospitalization; (ii) Estimated property damage of $129,300 or more, including loss to the operator and others, or both, but excluding cost of gas lost; (iii) Unintentional estimated gas loss of three million cubic feet or more; (2) An event that results in an emergency shutdown of an LNG facility. Activation of an emergency shutdown system for reasons other than an actual emergency does not constitute an incident. (3) An event that is significant in the judgment of the operator, even though it did not meet the criteria of paragraphs (1) or (2) of this definition.

documents built with a purpose to address threats, reduce risk, and allow for safer operations of natural gas facilities.

LTIIP INTRODUCTION

Q. WHY MUST A NATURAL GAS DISTRIBUTION COMPANY FILE AN LTIIP?

A. A natural gas distribution company must submit an LTIIP for Commission approval to be eligible to recover the reasonable and prudently incurred costs regarding the repair, improvement, and replacement of eligible property through the use of a DSIC. The LTIIP must show the acceleration of the replacement of aging infrastructure by the utility and be sufficient to ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers.[6]

Q. WHAT ARE THE REQUIREMENTS OF AN LTIIP?

A. The LTIIP must include the following elements:

1. Identification of types and age of eligible property owned and operated by the utility for which it is seeking DSIC recovery;
2. An initial schedule for planned repair and replacement of eligible property;
3. A general description of location of eligible property;

[6] See 52 Pa. Code § 121.1.

4. A reasonable estimate of quantity of eligible property to be improved or repaired;

5. Projected annual expenditures and means to finance the expenditures;

6. A description of the manner in which infrastructure replacement will be accelerated and how repair, improvement, or replacement will ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers;

7. A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe, and reliable manner; and

8. A description of a utility's outreach and coordination activities with other utilities, Department of Transportation, and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP. The LTIIP must address only the specific property eligible for DSIC recovery.[7]

RELATIONSHIP BETWEEN DIMP AND LTIIP

Q. WHY DOES I&E REVIEW THE COMPANY'S DIMP PLAN?

A. DIMP requirements are part of the Federal Pipeline Safety Code. As I noted

[7] See 52 Pa Code § 121.3.

above, distribution pipeline operators are required to comply with 49 CFR 192 Subpart P-Gas Distribution Pipeline Integrity Management. Included in this subpart are, among other requirements, the requirements to identify threats, evaluate and rank risk, identify, and implement measures to address risk and measure performance, monitor results, and evaluate effectiveness. Lastly, the process must include a periodic evaluation and demonstrate improvement in risk reduction. The I&E Safety Division evaluates compliance with these requirements. If risk scores are not being reduced, if risk indicators are flat or increasing, if mitigation measures or replacement numbers are lagging, safety concerns are raised. Assuming a company is adequately addressing the riskiest assets, the risk is expected to reduce over time. If risk is increasing, I&E Safety Division would be concerned whether:

- Risk is being calculated in an effective manner;
- The company is mitigating risk effectively for the proper asset; and
- The company is mitigating the asset aggressively enough to reverse the non-decreasing level of risk.

Q. WHAT IS THE CONNECTION BETWEEN PIPELINE SAFETY'S REVIEW OF DIMP AND LTIIP PROGRAMS?

A. The rate of replacement for risky pipelines (of which bare steel and wrought iron pipelines are historically the highest risk asset in most distribution systems) is monitored, measured, and recorded. This replacement data is reviewed during

DIMP inspections and during rate cases for those companies that claim a large capital expenditure for pipeline replacements. Another tool to monitor pipeline replacement is the LTIIP filed for those companies using DSIC to recover costs for eligible projects. The LTIIP is a forward-looking plan for main replacements that is not particular to specific mains or assets, but as asset groups system-wide. For the pipelines, the LTIIP lists the mileage to be replaced per year and usually an overall timeline goal when all that asset is to be removed from service. This LTIIP is created by the company based on the company's analysis and with the company's projections. If, for example, during a rate case, it is determined that system leaks are increasing on an asset, and, therefore, the risk is increasing since leaks are a major part of the risk calculation algorithm for most companies, then from a Safety Division standpoint, I&E has elevated concerns. This then turns attention to that company's LTIIP. If the risk is increasing, or relatively flat, and the company is not meeting the replacement goals established by the company in the LTIIP, I&E Safety Division concerns are further elevated in that more of this high-risk asset is remaining in service in any given year and will remain in service for a longer period of time if replacement rates are not improved. Furthermore, it indicates that the company is not meeting its own replacement goals stated in the LTIIP and filed with the Commission. If the company is meeting its LTIIP goals but risks are not improving, the LTIIP and any related replacement or mitigation efforts may need to be more aggressive.

Q. WHAT IS THE RELATIONSHIP BETWEEN LTIIP, DIMP, AND I&E PARTICIPATING IN RATE CASES?

A. I&E Safety Division's goal through intervention in base rate cases is to bring to light safety impacts with the interconnected relationships between risk calculations, asset replacement and mitigation, costs, LTIIPs, and risk factor indicators, such as incidents and leaks. I&E Safety also recognizes that increases in spending on risk mitigation and asset replacement also places an increased burden on rate payers to cover these increased expenditures.

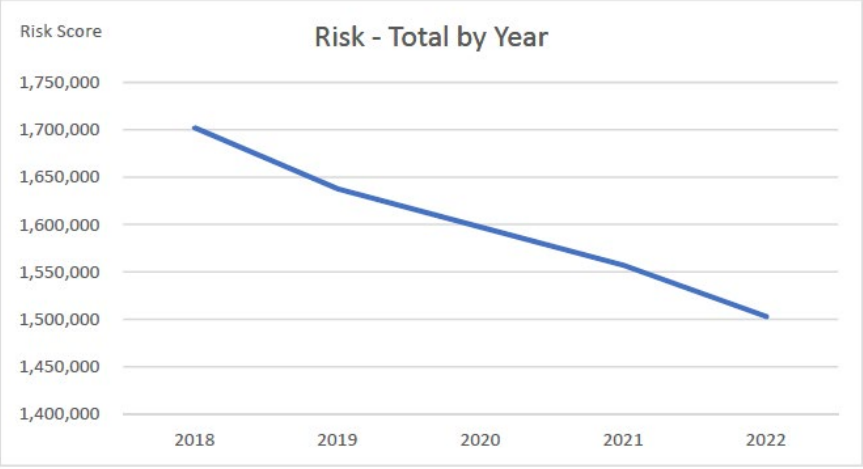
PEOPLES' RISK OVERVIEW

Q. HOW DOES THE COMPANY EVALUATE RISK?

A. The Company uses two risk models, the Leak Repair Risk Model (ICAM) and the Mainline Replacement Prioritization Risk Model (MRPRM). Risk is calculated by multiplying the likelihood of failure by the consequence of failure for mains and services, and then those values are added together. Other factors taken into consideration to evaluate and rank risk include such items as population density and Subject Matter Expert (SME) input. Peoples' primary method for reducing overall risk to the distribution and transmission systems is pipeline replacement.

Q. IN YOUR OPINION, IS MEASURED RISK REDUCTION DIRECTLY PROPORTIONAL TO THE AMOUNT OF INVESTMENT INTO RISK MITIGATION?

A. No, not necessarily. A decrease in DIMP calculated risks depends on the proper allocation and application of dollars and the appropriate implementation of preventative measurements to effectively mitigate risk. An effective DIMP will examine the benefits of the application of additional efforts to mitigate risk and where those efforts should be applied to maximize risk reduction. Peoples has demonstrated through the DIMP plan that to mitigate risk, Peoples must replace its risky pipe. Peoples' risky pipe is bare steel, cast iron, and wrought iron. Compliance with DIMP is not optional, and Peoples has chosen pipeline replacement as one of the methods of risk reduction. The graph below demonstrates how the Peoples' pipeline replacement program has reduced its system risk.[8]



[8] I&E Exhibit No. 4, Schedule 2.

Q. WHAT ARE THE COMPANY'S RISKIEST ASSETS THAT SHOULD BE PRIORITIZED FOR REPLACEMENT?

A. The riskiest assets in a pipeline system have historically been bare steel, cast iron and wrought iron pipe.[9] These materials are more susceptible to corrosion leaks over time and display a higher leak rate per mile than other materials in pipeline systems. As shown later in my testimony, the Company's bare steel, cast iron, and wrought iron leak rates on a per mile basis are higher than other facilities that Peoples proposes to replace in addition to the highest risk pipe material.

PEOPLES' PIPE REPLACEMENT

Q. HOW DOES PEOPLES' LTIIP ADDRESS PIPELINE REPLACEMENT?

A. The Company filed its modified LTIIP with the Commission in 2020 at Docket No. P-2020-3021942 and Docket No. P-2020-3022053. More recently, the Company filed a petition with the Commission on March, 15, 2024 for approval of a major modification to their existing LTIIP for 2021 to 2025 time frame. The Company's LTIIP is a multiyear program primarily focused on the replacement of distribution and transmission bare steel and cast/wrought iron pipelines, which are more susceptible to failure from corrosion, cracks, and leakage.

[9] I&E Exhibit No. 4, Schedule 6.

Q. CAN YOU DISCUSS HOW PEOPLES PRIORITIZES PIPELINE REPLACEMENTS?

A. The Company is engaged in four major capital pipeline work programs. The programs include the Company's LTIIP, the Gathering Pipeline Replacement Program ("GP"), the Goodwin Tombaugh Program ("GT"), and the Mainline Extension Program ("MLX"). As I previously stated, the Company's LTIIP is a multiyear program primarily focused on the replacement of distribution and transmission bare steel and cast/wrought iron pipelines, which are most susceptible to failure from corrosion, cracks, and leakage. The GP Replacement Program is annually targeting the replacement and/or abandonment of bare steel gathering pipelines. The GT Program focuses on the replacement and conversion of an aging legacy gathering system. The MLX Program includes the construction of mainlines, meters, and services associated with new customers and territories.[10]

Q. WHAT IS THE COMPANY'S STATED TIME FRAME IN THE LTIIP FOR PIPELINE REPLACEMENT?

A. Peoples' LTIIP states that the Company will replace all bare steel, cast iron, and wrought iron pipe in its system by 2034.[11]

[10] Peoples Statement No. 5, pp. 2-4.
[11] I&E Exhibit No. 4, Schedule 1.

Q. DESCRIBE PEOPLES' PAST REPLACEMENT SCHEDULE.

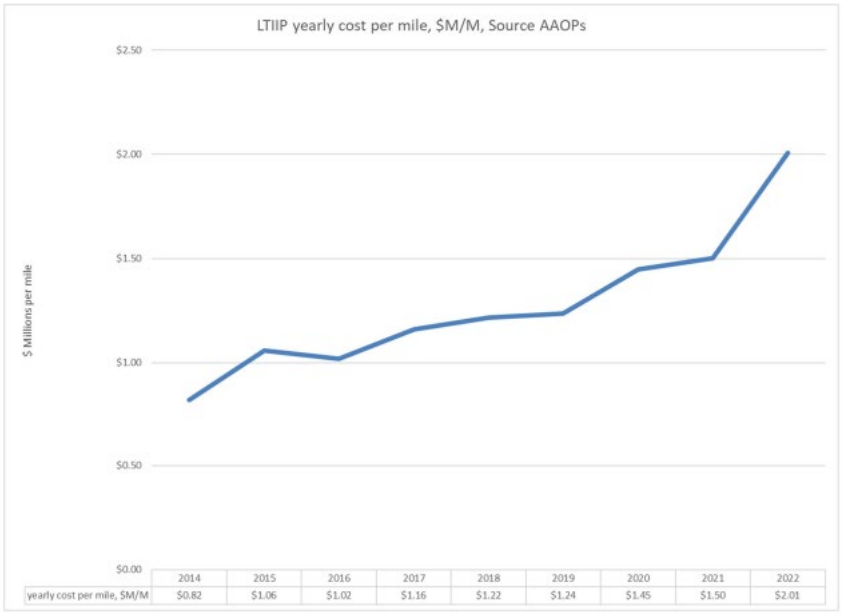
A. Peoples provided summaries of the Company's pipeline capital work accomplishment in each of the four major programs.[12] The LTIIP Program has replaced approximately 485 miles. The GP Program has replaced or abandoned over 200 miles of bare steel gathering pipeline, and the GT Program has replaced or abandoned 151 miles of the targeted GT pipe. The MLX Program has installed approximately 131 miles of new mainline pipe.[13]

Q. WILL PEOPLES MEET THE REPLACEMENT GOALS IN ITS LTIIP PLAN?

A. Conceivably. In my opinion, I am concerned that Peoples will not meet the target of replacing all cast/wrought iron and bare steel mains by 2034 due largely in part to the increasing cost per mile.[14] The graph and table on the next page demonstrate the yearly increases in cost per mile.[15] From 2020-2022, Peoples costs increased approximately 17% each year. In fact, the average cost per mile from 2019-2023 increased over 72%. The Company's investment costs have had to increase to meet the LTIIP commitments.[16] In its 2022 DOT Annual Report (Form PHMSA F7100.1-1),[17] Peoples shows that it has approximately 2,543.4

[12] Peoples Statement No. 5, pp. 4-7.
[13] Peoples Statement No. 5, pp. 2-4.
[14] I&E Exhibit No. 4, Schedule 3.
[15] I&E Exhibit No. 4, Schedule 4.
[16] I&E Exhibit No. 4, Schedule 4.
[17] I&E Exhibit No. 4, Schedule 5.

miles of bare steel, cast, and wrought iron mains remaining. The replacement rate of 211.95 miles of main per year is an achievable goal; however, the Company will have to allocate additional funding to meet the 2034 goal. Based on the anticipated average mileage replacement, Peoples remains on track to meet the 2034 goal. Additionally, if other materials such as pre-1982 plastic pipe and unprotected coated steel is added to the priority pipe category and prioritized for replacement over replacing additional bare steel, cast iron, and wrought iron, it will be even more challenging to meet the 2034 replacement goal.



PIPELINE REPLACEMENT COSTS

Q. HAVE YOU REVIEWED PEOPLES' PIPELINE REPLACEMENT COSTS?

A. Yes. The cost per mile includes the following costs: design/inspection, materials,

construction/labor, pavement restoration, and permits.[18] A summary break down of costs could not be provided by the Company.[19]

Q. ARE PEIPELINE REPLACEMENT COSTS INCREASING?

A. Yes. Peoples' pipeline replacement costs are increasing. The total pipeline replacement cost on a per mile basis from 2019 to 2023 increased from $1,240,000 per mile to $2,140,000 per mile, or a 72.5% increase during that time.[20]

Q. WHEN PIPELINE REPLACEMENT COSTS INCREASE, DOES THAT ADDITIONAL SPENDING REDUCE THE FUNDS AVAILABLE FOR PIPELINE REPLACEMENT?

A. Yes. Logically, the more money Peoples spends per mile on replacement costs, the fewer miles of pipeline can be replaced annually. This in turn reduces the number of miles of risky mains and services removed and slows the total pipeline risk reduction.

LEAK RATES

Q. DISCUSS PEOPLES' LEAK MANAGEMENT PROGRAM.

A. Peoples defines a "leak" as an unintentional escape of gas from the pipeline. Peoples has a leak management program that classifies leaks on its system as

[18] I&E Exhibit No. 4, Schedule 3.
[19] I&E Exhibit No. 4, Schedule 10.
[20] I&E Exhibit No. 4, Schedule 3.

Grade 1, Grade 2, and Grade 3.[21] A Grade 1 leak is the most hazardous and requires immediate repair. Grade 2 leaks are re-evaluated every three months and are required to be repaired within 12 months. The Grade 3 leaks are to be re-evaluated during the next required leakage survey or annually, whichever is less. Grade 3 leaks can remain active unless they are reclassified as Grade 1 or 2. If all leaks were repaired by the Company upon discovery, a leak management program would not be required.

Q. WHAT ARE PEOPLES' LEAK STATISTICS FROM 2019 TO 2023?

A. Over the last five years, the number of Grade 1, 2, and 3 leaks found on bare steel mains and services have generally been trending downward.[22] The number of leaks found on wrought iron mains have slightly increased; however, the leak rate per mile is comparable to bare steel. More specifically, from 2019 to 2023, Peoples reported a yearly average of 0.14 leaks per mile of bare steel main and a yearly average of 0.12 leaks per mile of wrought iron. During the same period, Peoples reported a yearly average of 0.05 leaks per mile of cast iron.[23] The number of open leaks at the end of the year on mains and services is also trending downward.[24] The graph on the next page outlines Peoples leak reduction over the

[21] Peoples Statement No. 4, pp. 7-8.
[22] I&E Exhibit No. 4, Schedule 6.
[23] I&E Exhibit No. 4, Schedule 7.
[24] I&E Exhibit No. 4, Schedule 8.

last five calendar years.[25]

Q. HOW COULD PEOPLES REDUCE ITS LEAKS PER MILE STATISTICS?

A. Obviously, Peoples can continue to reduce its leaks by continuing to eliminate and replace the risky pipeline assets from its system. Peoples provided data that shows their leak rate per mile of pipeline has been increasing slightly on bare steel, wrought iron, and cast iron.[26] With this slight increase in leakage rates, Peoples should continue to review pipeline replacements to insure they are removing the risky pipe and reversing the increasing leak trends.

RECOMMENDATIONS

Q. WHAT IS YOUR OPINION REGARDING PEOPLES' PIPELINE REPLACEMENT?

A. In my opinion, Peoples should increase or continue its pipeline replacement as proposed in the LTIIP, in an effort to continue to reduce risks to the Company's

[25] I&E Exhibit No. 4, Schedule 9.
[26] I&E Exhibit No. 4, Schedule 6.

systems, as required under DIMP regulations (CFR 49 Part 192.1001-192.1015 Subpart P). Although Peoples has established yearly replacement targets to ensure that it stays on track to meet the goal of having all bare steel, cast iron, and wrought iron pipe out of the system by 2034, I recommend that Peoples continues to focus on increasing its efforts to maintain its replacement rate to ensure that it meets the original commitment set in the LTIIP.

While the removal of bare steel, cast iron, and wrought iron pipe is beneficial for the safety and risk reduction of the system, in my opinion, Peoples should consider first generation plastic for future pipeline replacement projects. Therefore, I recommend that Peoples monitor and capture data on leaks for first generation plastic in their risk reduction data collection. I also recommend that the installation year of plastic pipe should be tracked when a leak is discovered. This will allow Peoples to determine an accurate leak rate on first generation plastic and identify which years or generations of plastic have a higher risk of failing. My recommendation is to track the installation year of plastic pipe, which will aid in a more accurate risk ranking and identification of materials that are the riskiest and need to be replaced.

In April 2021, Commission issued a Management and Operations Audit for Peoples with the recommendation that the Company continues its bare steel replacement efforts. This is a recommendation that I agree with and support.

Q. DO YOU HAVE ANY FURTHER RECOMMENDATIONS FOR PEOPLES?

A. Yes. When Peoples establishes a plan for pipeline replacement, the Company does not itemize the cost per mile to forecast spending levels to accomplish goals and complete known and anticipated work based on historical spending and anticipated price changes.[27] Peoples should continue to work on driving down all costs associated with pipeline replacement by analyzing itemized costs. Development of a plan that reduces replacement costs would allow completion of additional pipeline replacement projects. The Company includes design/inspection, materials, construction/labor, pavement restoration, and permits in their plan. To maximize budget, I recommend that Peoples consider breaking the cost per mile into at least the following categories: design/inspection, materials, construction/labor, restoration, and permits. Tracking expenses in smaller categories will allow Peoples to collect more detailed data, on how and where their funding is being utilized. This may aid in easing budget challenges for pipeline replacement projects.

Q. ARE YOUR RECOMMENDATIONS STATED ABOVE COMPLETE AS OF THE WRITING OF YOUR DIRECT TESTIMONY?

A. Yes. Based on the information provided by Peoples in discovery responses to

[27] I&E Exhibit No. 4, Schedule 3.

date, my recommendations are complete at this time. I reserve the right to supplement my discussion and recommendations based on any additional information received.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

I&E Statement No. 1-R

Christopher Keller

Bureau of Investigation & Enforcement

Concerning:

Low-Income Usage Reduction Program
Hardship Fund

TABLE OF CONTENTS

INTRODUCTION 1

RESPONSE TO CAUSE-PA WITNESS HARRY GELLER 2

RESPONSE TO PWPTF WITNESS JENNIFER WARABAK..... 5

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christopher Keller. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME CHRISTOPHER KELLER WHO SUBMITTED THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 1 AND I&E EXHIBIT NO. 1?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to the direct testimony of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA) witness Harry Geller concerning his recommended increases to Peoples Natural Gas Company LLC's (Peoples or Company) Low-Income Usage

Reduction Program (LIURP) budget and the maximum Hardship Fund grant.[1] I will also respond to the direct testimony of Pennsylvania Weatherization Providers Task Force (PWPTF) witness Jennifer Warabak concerning her recommended increase to Peoples' LIURP and Hardship Fund budgets.[2]

Q. DOES YOUR REBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1-R supports my rebuttal testimony.

RESPONSE TO CAUSE-PA WITNESS HARRY GELLER

Q. SUMMARIZE CAUSE-PA WITNESS HARRY GELLER'S DIRECT TESTIMONY REGARDING PEOPLES' LIURP BUDGET AND HARDSHIP FUND.

A. Mr. Geller recommends the Company increase its LIURP budget to 2023 levels and by the percentage increase in rates to residential customers as a result of this proceeding.[3] Mr. Geller also recommends the Company increase its maximum Hardship Fund grant to $600 and increase Peoples' Hardship Fund budget by the percentage increase in rates to residential customers resulting from this proceeding.[4]

[1] CAUSE-PA Statement No. 1.
[2] PWPTF Statement No. 1.
[3] CAUSE-PA Statement No. 1, pp. 29-33.
[4] CAUSE-PA Statement No. 1, pp. 33-36.

Q. WHAT IS THE BASIS FOR MR. GELLER'S RECOMMENDATION REGARDING LIURP FUNDING?

A. Mr. Geller states his recommendation is due to an unmet need for LIURP services based on Peoples' current and anticipated low-income customer base and for the potential increase in rates as a result of this proceeding.[5]

Q. DO YOU AGREE WITH MR. GELLER'S RECOMMENDATION TO INCREASE LIURP FUNDING?

A. No. I recommend that no increase to the budgeted LIURP amount be allowed. While Mr. Geller's recommendation is well-intentioned, it is inappropriate to consider an increase in the LIURP budget in this base rate case proceeding for the following reasons.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. In response to CAUSE-PA-I-4,[6] Peoples has demonstrated it was unable to exhaust its LIURP budget for the last five years on a total combined basis between the Peoples Natural Gas Division and the Peoples Gas Division. Furthermore, the rate increase resulting from this base rate proceeding will affect neither the income eligibility of customers nor the cost of completing LIURP services, so there is no

[5] CAUSE-PA Statement No. 1, pp. 29-33.
[6] I&E Exhibit No. 1-R, Schedule 1.

basis to align an increase to the LIURP budget with the percentage increase in rates resulting from this proceeding.

Q. ARE THERE ANY OTHER REASONS THE COMMISSION SHOULD REJECT MR. GELLER'S RECOMMENDATION TO INCREASE THE LIURP BUDGET IN THIS PROCEEDING?

A. Yes. The Commission recently issued orders associated with Peoples 2019-2024 Universal Service and Energy Conservation Plan[7] (USECP) and Peoples Gas Company LLC USECP,[8] where the parties had an opportunity to review and make recommended changes to these plans. It is inappropriate to grant an increase to the LIURP budget in this base rate proceeding as proposed by Mr. Geller without consideration and evaluation of all the program's performance indicators and provision of comments by all stakeholders and interested parties.

Q. WHAT IS THE BASIS FOR MR. GELLER'S RECOMMENDATION REGARDING INCREASED FUNDING FOR THE HARDSHIP FUND?

A. Mr. Geller states his recommendation is based on an unmet need for emergency assistance for low-income customers to maintain gas services and the potential increase in rates pending the outcome of this proceeding.[9]

---

7 *Peoples Natural Gas Company LLC Universal Service and Energy Conservation Plan for 2019-2024*, Docket No. M-2018-3003177 (Order entered on May 12, 2022).

8 *Peoples Gas Company LLC Universal Service and Energy Conservation Plan for 2019-2024*, Docket No. M-2020-3021343 (Order entered on May 12, 2022).

9 CAUSE-PA Statement No. 1, pp. 33-36.

Q. DO YOU HAVE ANY CONCERNS ABOUT MR. GELLER'S RECOMMENDATIONS REGARDING THE HARDSHIP FUND?

A. Yes. Although I am not arguing against Mr. Geller's recommendation to increase funding for hardship grants, he does not explicitly state how his proposed increase is to be funded. As the current program for hardship grants is primarily funded by shareholders and not recovered from ratepayers, I recommend that this should continue and that this increase to funding of hardship grants be funded entirely by the Company and its shareholders.

RESPONSE TO PWPTF WITNESS JENNIFER WARABAK

Q. SUMMARIZE MS. WARABAK'S TESTIMONY CONCERNING PEOPLES' LIURP BUDGET AND HARDSHIP FUND.

A. Ms. Warabak recommends the Company increase its LIURP budget to provide 50 additional LIURP jobs per year with an estimated cost per job of $8,000 resulting in an increase in LIURP funding of $400,000 ($8,000 x 50 jobs) with any unused funds carried over to the following year.[10] Ms. Warabak also recommends the Company increase its Hardship Fund by the percentage increase in rates to residential customers as a result of this proceeding and for the funding to be distributed in accordance with the percentage of low-income customers in the counties serviced by the Company.[11]

[10] PWPTF Statement No. 1, pp. 6-8.
[11] PWPTF Statement No. 1, pp. 7-8.

Q. WHAT IS THE BASIS FOR MS. WARABAK'S RECOMMENDATION REGARDING LIURP FUNDING?

A. Ms. Warabak claims her recommendation is based on an unmet need for LIURP services based on the number of low-income customers relative to the number of low-income customers it anticipates will receive LIURP services in 2024. Ms. Warabak calculates her recommended addition to the Company's LIURP budget using a speculative 50 jobs and applying this to a typical LIURP job cost of $8,000 for an increase to the Company's current LIURP budget for jobs of $400,000 (50 jobs x $8,000).[12]

Q. DO YOU AGREE WITH MS. WARABAK'S RECOMMENDATION?

A. No. While Ms. Warabak's recommendation is well-intentioned, it is inappropriate to consider an increase in the LIURP budget in the instant proceeding. As mentioned above in response to Mr. Geller's recommended increase to LIURP, the Company has shown it has been unable to exhaust the existing budget,[13] and Ms. Warabak has not shown that Peoples would utilize the increased budgeted funds. Additionally, Ms. Warabak does not provide adequate support for how Peoples would complete the additional jobs and exhaust its existing LIURP budgeted funds. Ms. Warabak's argument is simply too speculative.

[12] PWPTF Statement No. 1, pp. 6-7.
[13] I&E Exhibit No. 1-R, Schedule 1.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR RECOMMENDATION TO DENY THESE PROGRAM INCREASES IN THIS PROCEEDING?

A. Yes. While my responses to the witnesses' recommendations explained above specifically relate to the witnesses' failure to provide support for Peoples' ability to utilize the additional funding, it is important to note that these LIURP program costs are directly funded by ratepayers who do not receive assistance from low-income programs. It is unreasonable to implement an increase to LIURP when the Company's ability to utilize these additional funds is uncertain. Additionally, it is unreasonable for ratepayers who are not receiving assistance from LIURP to pay for the additional proposed costs to LIURP when it is not certain that the additional funds will be utilized.

Q. ARE THERE ANY RECENT COMMISSION DECISIONS THAT SUPPORT YOUR RECOMMENDATION TO DENY THE INCREASE TO LIURP FUNDING AS PROPOSED BY MR. GELLER AND MS. WARABAK?

A. Yes. In a recent PECO Energy Company – Gas Division proceeding the Commission did not consider CAUSE-PA's proposals relating to CAP and other universal service program issues within the context of the base rate proceeding

because they would be more properly considered in its USECP proceeding.[14] The Commission referenced a Columbia Gas of Pennsylvania, Inc. (Columbia Gas) proceeding[15] in which it concluded, "[t]hat energy burdens should not be considered separately from other parts of the Company's CAP and universal service programs but should be considered as part of the Company's entire universal service plan, including the need for changes and associated costs."[16] It should be noted that in the Columbia Gas proceeding the Commission rejected a similar proposal related to the Health and Safety Pilot Program from CAUSE-PA.[17] In that proceeding, the Commission agreed with the Administrative Law Judge's recommended decision denying any change to the pilot program until its effectiveness can be evaluated.[18]

Q. WHAT IS THE BASIS FOR MS. WARABAK'S RECOMMENDATION REGARDING THE INCREASE IN THE HARDSHIP FUND?

A. Ms. Warabak's assertion is that the increase will help customers deal with the increase in rates during difficult economic times.[19]

[19] PWPTF Statement No. 1, p. 7.

Q. DO YOU HAVE ANY CONCERNS ABOUT MS. WARABAK'S RECOMMENDATIONS REGARDING THE HARDSHIP FUND?

A. Yes. As mentioned above in response to Mr. Geller's recommended increase to the Hardship Fund, I am not arguing against Ms. Warabak's recommendation to increase funding for hardship grants. However, similar to Mr. Geller, she does not explicitly state how her increase is to be funded. As the current program for hardship grants is primarily funded by shareholders and not recovered from ratepayers, I recommend that this should continue and that this increase to funding of hardship grants be funded entirely by the Company and its shareholders.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christopher Keller. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME CHRISTOPHER KELLER WHO SUBMITTED THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 1 AND I&E EXHIBIT NO. 1?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of Peoples Natural Gas Company LLC (Peoples or Company) witnesses Andrew P. Wachter,[1] Rudolph Hanechak,[2] and Krista Snyder.[3]

---

[1] Peoples Statement No. 2-R.
[2] Peoples Statement No. 10-R.
[3] Peoples Statement No. 12-R.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1-SR contains schedules that support my surrebuttal testimony. In this surrebuttal testimony, I will also make references to my direct testimony[4] and its accompanying exhibit.[5]

SUMMARY OF I&E OVERALL UPDATED POSITION

Q. PLEASE SUMMARIZE THE COMPANY'S UPDATED OVERALL CLAIMED REVENUE REQUIREMENT.

A. In rebuttal testimony, the Company updated its requested increase presenting an increase of $157,067,000 to present rate revenues of $833,216,000, resulting in a total overall revenue requirement of $990,283,000.[6]

Q. PLEASE SUMMARIZE YOUR ADJUSTMENTS AS CONTAINED IN THIS SURREBUTTAL TESTIMONY.

A. The following table summarizes my recommended adjustments to Peoples' updated position.

[4] I&E Statement No. 1.
[5] I&E Exhibit No. 1.
[6] I&E Exhibit No. 1-SR, Schedule 1.

	Company Claim	I&E Adjustment	I&E Recommended Allowance
O&M Expenses:			
Labor Expense	$69,890,492	($2,272,848)	$67,617,644
Payroll Taxes	$6,571,623	($213,648)	$6,357,975
Pension Expense	$5,670,000	($1,286,880)	$4,383,120
Post Retirement Benefits Other Pensions	$2,890,493	($894,141)	$1,996,352
Other Employee Benefits	$21,101,610	($686,208)	$20,415,402
Corporate Insurance	$9,080,331	($2,085,969)	$6,994,362
Advertising Expense	$1,423,934	($1,370,197)	$53,737
Rate Case Expense	$1,031,000	($564,132)	$466,868
Total O&M Expense Adjustments		($9,374,023)	
Rate Base Adjustments:			
Cash Working Capital	$35,661,101	($393,256)	$35,267,845
Total Rate Base Adjustments		($393,256)	

Q. WHAT IS I&E'S TOTAL UPDATED RECOMMENDED REVENUE REQUIREMENT?

A. I&E's updated total recommended revenue requirement is $932,394,000. This recommended revenue requirement represents an increase of $89,866,000 to the I&E-adjusted present rate revenues of $842,528,000. This total recommended increase incorporates adjustments made in this testimony and those made in the direct testimony of I&E witnesses Anthony Spadaccio[7] and Ethan Cline.[8]

[7] I&E Statement No. 2-SR.
[8] I&E Statement No. 3-SR.

The following table summarizes the I&E surrebuttal position:

Peoples Natural Gas Company LLC		TABLE I

Rate of Return	5.52%		5.78%		7.43%

LABOR EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR LABOR EXPENSE.

A. In direct testimony, I recommended an allowance of $67,187,660 for labor expense, or a reduction of $2,275,920 ($69,463,580 - $67,187,660) to Peoples' claim. My recommendation was based on an adjustment for average historic vacancy levels in order to reflect a more accurate employee complement in the

FPFTY.[9]

Q. DID THE COMPANY PROVIDE AN UPDATED LABOR EXPENSE CLAIM?

A. Yes. The Company provided an update to its labor expense claim. The Company's updated claim is $69,890,492 or an increase of $426,912 ($69,890,492 - $69,463,580) to the Company's initial claim.[10] The revision was made in response to I&E-RE-6 which included an additional 11 positions that were not included in the Company's original claim.[11]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR LABOR EXPENSE?

A. Yes. Company witnesses Andrew P. Wachter and Rudolph Hanechak disagrees with my labor expense recommendation.

Q. SUMMARIZE MR. WACHTER'S RESPONSE.

A. Mr. Wachter disagrees with my vacancy level adjustment and asserts that the Company's vacancy adjustment is the vacancy level to be expected going forward. Mr. Wachter references an article that he opines demonstrates the increased turnover during COVID-19 and the "Great Resignation" was an anomaly and does

[9] I&E Statement No. 1, pp. 4-8.
[10] Peoples Exhibit No. APW-R-1, p. 5.
[11] Peoples Exhibit No. APW-R-1, pp. 38-39.

not represent future vacancy levels. Finally, Mr. Wachter states that the Company's pre-COVID-19 vacancy levels for Peoples Natural Gas Division and Peoples Gas Division was 13 vacancies in 2018.[12]

Q. SUMMARIZE MR. HANECHAK'S RESPONSE.

A. Mr. Hanechak simply states that he does not agree with my vacancy adjustment.[13]

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER'S ASSERTION THAT THE INCREASE IN TURNOVER WAS AN ANOMALY DUE TO COVID-19 AND THE "GREAT RESIGNATION" AND DOES NOT REPRESENT FUTURE VACANCY LEVELS?

A. My average vacancy level was calculated using the period from the fourth quarter of 2021 through the third quarter of 2023 which is the most recent data available. It is highly unlikely that the Company's vacancy level will return to the 2018 average of 13 positions by the FPFTY especially considering that the most recent quarter, the third quarter of 2023, shows 60 vacant positions which is more than four times the number of vacant positions in 2018. As stated in my direct testimony, applying a more recent average historic vacancy levels is needed to reflect a more accurate employee complement in the FPFTY. My recommendation more accurately represents labor expense for the FPFTY.[14]

[12] Peoples Statement No. 2-R, pp. 16-18.
[13] Peoples Statement No. 10-R, p. 2.
[14] I&E Statement No. 1, pp. 5-6.

Q. DO YOU AGREE WITH THE COMPANY'S UPDATED CLAIM?

A. No. I continue to recommend an adjustment for average historic vacancy levels in order to reflect a more accurate employee complement in the FPFTY.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR LABOR EXPENSE?

A. Yes. Based on the Company's updated claim, I recommend an allowance of $67,617,644 for labor expense, or a reduction of $2,272,848 ($69,890,492 - $67,617,644) to Peoples' updated claim based on an adjustment for average historic vacancy levels in order to reflect a more accurate employee complement in the FPFTY.[15]

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR UPDATED LABOR EXPENSE VACANCY ADJUSTMENT.

A. I calculated an estimated FPFTY average salary per employee of $47,351 ($69,890,492 ÷ 1,476) based on the Company's updated FPFTY claim for labor expense of $69,890,492 divided by the Company's updated FPFTY employee count 1,476 (1,465[16] + 11[17]).

I then multiplied the additional 48 vacancies as discussed in my direct testimony[18] by the updated average salary of $47,351 to arrive at my

[15] I&E Statement No. 1, pp. 4-8.
[16] I&E Exhibit No. 1, Schedule 1, p. 2.
[17] Peoples Exhibit No. APW-R-1, pp. 38-39.
[18] I&E Statement No. 1, p. 7.

recommended reduction of $2,272,848 ($47,351 x 48) to labor expense, or a recommended allowance for labor expense of $67,617,644 ($69,890,492 – $2,272,848).

PAYROLL TAXES

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PAYROLL TAXES.

A. In direct testimony, I recommended an allowance of $6,355,411 for payroll taxes, or a reduction of $216,212 ($6,571,623 - $6,355,411) to the Company's claim. My recommendation was based on recognition of the labor expense reduction for my vacancy adjustment and on the percentage of total payroll taxes to total payroll.[19]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR PAYROLL TAXES?

A. Yes. Company witness Rudolph Hanechak disagrees with my payroll tax recommendation for the same reasons that he disagrees with my labor expense recommendation. Mr. Hanechak states that if my recommendation for labor expense is accepted by the Commission, he agrees with my adjustment to payroll taxes.[20]

[19] I&E Statement No. 1, pp. 8-10.
[20] Peoples Statement No. 10-R, pp. 2-3.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR PAYROLL TAXES?

A. Yes. Based on the Company's updated claim for labor expense, I recommend an allowance of $6,357,975 for payroll taxes, or a reduction of $213,648 ($6,571,623 - $6,357,975) to Peoples' claim based on recognition of the labor expense reduction for my vacancy adjustment, and on the percentage of total payroll taxes to total payroll as discussed in my direct testimony.[21] My recommendation is calculated as follows:

FPFTY Payroll Tax Claim		$6,571,623
FPFTY Updated Labor Expense Claim	÷	$69,890,492
% Payroll Taxes to Labor Expense Claim		9.4%
I&E Labor Expense Adjustment from Above	x	$2,272,848
I&E Payroll Tax – Recommended Adjustment		$213,648

PENSION EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PENSION EXPENSE.

A. In direct testimony, I recommended an allowance of $4,383,120 for pension expense, or a reduction of $1,286,880 ($5,670,000 - $4,383,120) to the Company's claim. My recommendation was based on a three-year average of cash contributions as opposed to the Company's use of the average of the two highest

[21] I&E Statement No. 1, pp. 8-10.

years of cash contributions which is inappropriate as the Company's pension plan has recently been shown to be overfunded. My recommendation of applying a three-year average provided a more reasonable amount given the recent overfunded status.[22]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR PENSION EXPENSE?

A. Yes. Company witness Andrew P. Wachter responded to my pension expense recommendation. Mr. Wachter states that the Company's pension funding approach has changed since the Company was acquired by Essential Utilities, Inc. (Essential) and the use of a two-year average is the best indicator. Mr. Wachter, however, does acknowledge that my use of a three-year average is not unreasonable as it represents the first three calendar years since the acquisition of the Company by Essential. Finally, Mr. Wachter states that ratepayers have benefited from the Company contributing more to its pension than the accrual amount over the past "_" years and that the Company's projected pension contributions in this proceeding is fair.[23]

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER?

A. As stated in my direct testimony, the Company based its claim on the average of the two highest years of cash contributions, which I believe is inappropriate given

[22] I&E Statement No. 1, pp. 10-12.
[23] Peoples Statement No. 2-R, pp. 47-48.

the Company's pension plan has recently been shown to be overfunded. This indicates that the pension plan has been more than 100% fully funded for the last two years and therefore does not support the Company's requested claim. Therefore, applying a three-year average provides a more reasonable allowance given the recent overfunded status.[24] Finally, as I stated above, Mr. Wachter agrees that my recommendation is reasonable.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR PENSION EXPENSE?

A. No. I continue to recommend an allowance of $4,383,120 for pension expense, or a reduction of $1,286,880 ($5,670,000 - $4,383,120) to the Company's claim. My recommendation based on a three-year average of cash contributions is reasonable given the recent overfunded status.[25]

POST RETIREMENT BENEFITS OTHER THAN PENSIONS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR POST RETIREMENT BENEFITS OTHER THAN PENSIONS (PBOPs).

A. In direct testimony, I recommended an allowance of $1,996,352, or a reduction of $417,689 ($2,414,041 - $1,996,352) to Peoples' as-filed claim. My recommendation was based on a 53-month amortization period rather than the

[24] I&E Statement No. 1, pp. 10-12.
[25] I&E Statement No. 1, pp. 10-12.

Company's claimed two-year amortization of the prior period net under collection of PBOP costs. My recommendation was consistent with my rate case expense recommendation to normalize rate case expense over 53 months which would minimize any over or under recovery of this prior period PBOP expense.[26]

Q. DID THE COMPANY PROVIDE AN UPDATED CLAIM FOR PBOPs?

A. Yes. The Company provided an update to its PBOPs claim. The Company updated claim is $2,890,493 or an increase of $476,452 ($2,890,493 - $2,414,041) to the Company's initial claim.[27] The revision was made to provide an update to the FPFTY Net Expense of $779,921 as it was based on an estimate and has been updated to $1,256,373, or an increase of $476,452.[28] The Company continues to amortize the recovery of a prior period net under collection of PBOP costs over two years which is consistent with its rate case expense normalization claim of two years.[29]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR PBOPs?

A. Yes. Company witness Andrew P. Wachter responded to my PBOP recommendation. Mr. Wachter disagrees with my 53-month amortization period rather than the Company's claimed two-year amortization of the prior period net

[26] I&E Statement No. 1, pp. 12-14.
[27] Peoples Statement No. 2-R, p. 5.
[28] I&E Exhibit No. 1, Schedule 5.
[29] Peoples Statement No. 2-R, pp. 48-49.

under collection of PBOP costs for the same reasons he disagrees with my rate case expense normalization period.[30] Additionally, Mr. Wachter opines that I made an adjustment to PBOPs based on my vacancy adjustment for labor expense.[31]

Q. DO YOU ACCEPT THE COMPANY'S UPDATED CLAIM FOR PBOPs?

A. No. I accept the revision to update to the FPFTY Net Expense to $1,256,373. However, I continue to recommend a 53-month amortization period rather than the Company's claimed two-year amortization of the prior period net under collection of PBOP costs.

Q. DID YOU RECOMMEND AN ADJUSTMENT TO PBOPs BASED ON YOUR VACANCY LEVEL ADJUSTMENT FOR LABOR EXPENSE?

A. No. My recommendation in direct testimony was based on a 53-month amortization period rather than the Company's claimed two-year amortization of the prior period net under collection of PBOP costs.[32] I did not recommend an adjustment to PBOPs based on applying a vacancy adjustment.

[30] Peoples Statement No. 2-R, p. 48.
[31] Peoples Statement No. 2-R, p. 18.
[32] I&E Statement No. 1, p. 14.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR PBOPs?

A. Yes. While I continue to recommend a 53-month amortization period for prior period net under collection of PBOP costs, I am updating my recommendation to reflect the Company's revision for FPFTY Net Expense to $1,256,373. This results in an updated recommended allowance of $1,996,352, or a reduction of $894,141 ($2,890,493 - $1,996,352) to Peoples' updated claim based on a 53-month amortization period rather than the Company's claimed two-year amortization of the prior period net under collection of PBOP costs.[33] My recommendation is consistent with my rate case expense recommendation to normalize rate case expense over 53-months which would minimize any over or under recovery of this prior period PBOP expense.[34]

OTHER EMPLOYEE BENEFITS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OTHER EMPLOYEE BENEFITS.

A. In direct testimony, I recommended an allowance of $20,294,992 for other employee benefits expense, or a reduction of $687,504 ($20,982,496 - $20,294,992) to the Company's claim. My recommendation was based on recognition of the labor expense reduction for my vacancy adjustment; and, on the

[33] I&E Exhibit No. 1-SR, Schedule 2.
[34] I&E Statement No. 1, pp. 12-14.

average health insurance expense per employee.[35]

Q. DID THE COMPANY UPDATE ITS CLAIM FOR OTHER EMPLOYEE BENEFITS?

A. Yes. The Company provided an update to its other employee benefits claim. The Company is now requesting a claim of $21,101,610 or an increase of $119,114 ($21,101,610 - $20,982,496) to the Company's initial claim.[36] The Company did not provide any specific reason for the revision to the Company's original claim.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR OTHER EMPLOYEE BENEFITS?

A. Yes. Company witness Andrew P. Wachter disagrees with my other employee benefits recommendation. Mr. Wachter simply states that he disagrees with my recommended adjustment to other employee benefits for the same reasons that he disagrees with the Office of Consumer Advocate (OCA) witness Dante Mugrace.[37] Mr. Wachter further states that he disagrees Mr. Mugrace's adjustments related to employee service and safety awards and employee events.[38]

[35] I&E Statement No. 1, pp. 15-16.
[36] Peoples Exhibit No. APW-R-1, p. 5.
[37] OCA Statement No. 2.
[38] Peoples Statement No. 2-R, pp. 28-31.

Q. DID YOU MAKE ANY ADJUSTMENTS TO OTHER EMPLOYEE BENEFITS RELATED TO EMPLOYEE SERVICE AND SAFETY AWARDS OR EMPLOYEE EVENTS?

A. No. As stated in my direct testimony, my recommendation was based on recognition of the labor expense reduction for my vacancy adjustment, and, on the average health insurance expense per employee.[39] It should be noted that Mr. Wachter did not address the basis for my recommended adjustment made in direct testimony.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR OTHER EMPLOYEE BENEFITS?

A. Yes. Based on the Company's updated claim, I recommend an allowance of $20,415,402 for other employee benefits, or a reduction of $686,208 ($21,101,610 - $20,415,402) to Peoples' updated claim based on recognition of the labor expense reduction for my vacancy adjustment, and, on the average health insurance expense per employee.[40] My recommendation is calculated as follows:

FPFTY Other Employee Benefits Expense Claim	$21,101,610
FPFTY Employee Count	÷ 1,476
Average Other Employee Benefits Expense per Employee	$14,296
Average Vacancies from Salaries and Wages	x 48
I&E Other Emp. Ben. Exp – Total Recommended Adj.	$686,208

[39] I&E Statement No. 1, pp. 15-16.
[40] I&E Statement No. 1, pp. 15-16.

OUTSIDE SERVICES – CONTRACTED

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OUTSIDE SERVICES – CONTRACTED.

A. In direct testimony, I recommended an allowance of $27,847,075 or a reduction of $810,857 ($28,657,932 - $27,847,075) to the Company's claim. My recommendation was based on applying the capitalization percentage from the historic test year (HTY), since the HTY better reflects the recent actual capitalization percentage for outside services – contracted.[41]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR OUTSIDE SERVICES – CONTRACTED?

A. Yes. Company witness Andrew P. Wachter disagrees with my outside services – contracted recommendation. Mr. Wachter states that the costs that are added in the FTY and FPFTY are 100% expensed, which resulted in the reduction in the capitalization ratio.[42]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR OUTSIDE SERVICES – CONTRACTED?

A. Yes. I am withdrawing my recommendation after reviewing the information provided by the Company in rebuttal testimony explaining that 100% of this claim is properly expensed.

42 Peoples Statement No. 2-R, pp. 49-50.

CORPORATE INSURANCE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CORPORATE INSURANCE.

A. In direct testimony, I recommended an allowance of $6,994,362 for corporate insurance, or a reduction of $2,085,969 ($9,080,331 - $6,994,362) to the Company's claim. My recommendation was based three adjustments. My first adjustment applied the increase from 2022 to 2023 of 8.77% in corporate insurance to the FTY and FPFTY. My second adjustment multiplied my recommended increase of 8.77% by corporate insurance expense rather than by the total corporate insurance (expensed and capitalized) as done by the Company. My third adjustment applied a three-year average of the capitalization percentage for corporate insurance.[43]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR CORPORATE INSURANCE?

A. Yes. Company witness Andrew P. Wachter responded to my corporate insurance recommendation. Mr. Wachter disagrees with my recommendation to increase corporate insurance by 8.77% for the FTY and FPFTY and states that an increase of 13.1% for both the FTY and FPFTY is reasonable as it represents the increase in premiums from 2021 premiums to the 2022 invoice. Mr. Wachter opines that the 13.1% increase is reasonable based on the Company's feedback from its third-

[43] I&E Statement No. 1, pp. 19-24.

party insurance brokers. He states that my adjustments for multiplying my recommended increase by corporate insurance expense rather than by the total corporate insurance (expensed and capitalized) and applying a three-year average of the capitalization percentage for corporate insurance are not unreasonable.[44]

Q. DO YOU AGREE WITH MR. WACHTER THAT USING THE PREMIUMS FROM 2021 AND THE INVOICE FROM 2022 IS REASONABLE?

A. No. As stated in my direct testimony, an increase of 13.1% is unreasonable considering corporate insurance has fluctuated with amounts of $5,035,015, $4,710,028, and $5,213,687 for the twelve months ended August 31, 2021, August 31, 2022, and the HTY ended August 31, 2023, respectively.[45] Additionally, the Company did not provide the requested feedback from its third-party brokers to support an increase in total premiums that is referenced by Mr. Wachter.[46] Therefore, my recommendation to use the increase of 8.77%, which is the increase from 2022 to 2023, for the FTY and FPFTY is reasonable and appropriate.[47]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR CORPORATE INSURANCE?

A. No. I continue to recommend an allowance of $6,994,362 for corporate insurance, or a reduction of $2,085,969 ($9,080,331 - $6,994,362) to the Company's claim

[44] Peoples Statement No. 2-R, pp. 20-22.
[45] I&E Exhibit No. 1, Schedule 4, p. 5.
[46] I&E Exhibit No, 1, Schedule 8, p. 6.
[47] I&E Statement No. 1, pp. 19-24.

based on a applying the increase from 2022 to 2023 of 8.77% in corporate insurance to the FTY and FPFTY, multiplying my recommended increase of 8.77% by corporate insurance expense rather than by the total corporate insurance (expensed and capitalized), and applying a three-year average of the capitalization percentage for corporate insurance because corporate insurance has fluctuated significantly for the last three years and the Company failed to provide the requested feedback from its third-party brokers to support an increase of 13.1%.[48]

ADVERTISING EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR ADVERTISING EXPENSE.

A. In direct testimony, I recommended an allowance of $53,737 for advertising expense, or a reduction of $1,370,197 ($1,423,934 - $1,370,197) to Peoples' claim. My recommendation was based on the removal of advertising related to sponsorships and sports partnerships under the PR Firm – other advertising programs of $1,370,197 as these are more representative of goodwill advertising, or promotional advertising, that would provide little (if any) benefit to ratepayers. Additionally, not all customers who attend sporting events at these venues are Peoples ratepayers, and many Peoples ratepayers may never attend sporting events, therefore, not receiving exposure to these advertisements. So, even if the Company is holding out these payments as safety and e-billing promotions, there

[48] I&E Statement No. 1, pp. 19-24.

would be more effective and potentially less costly ways to reach the ratepaying community. Finally, if Peoples is spending money in an attempt to benefit the overall community in some way, this is inappropriate since it becomes more of a charitable contribution over which ratepayers have no say as to who receives the money but yet the Company requires that they pay for these activities**.** Therefore, ratepayers should not be required to finance Peoples' decision to pay for such advertising.[49]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR ADVERTISING EXPENSE?

A. Yes. Company witness Andrew P. Wachter responded to my advertising expense recommendation. Mr. Wachter disagrees with my recommendation for removal of advertising related to sports partnerships and other event partnerships. Mr. Wachter opines that the sports partnerships and other event partnerships meet at least one of the criteria in Section 1316(a) of the Public Utility Code. Mr. Wachter opines that these costs are an important part of the Company's outreach program and directly benefit customers. Finally, Mr. Wachter opines that these advertisements provide a direct benefit to the community and the Company's customers.[50]

[49] I&E Statement No. 1, pp. 24-27.
[50] Peoples Statement No. 2-R, pp. 35-43.

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE THAT THE ADVERTISING COSTS ASSOCIATED WITH SPORTS AND EVENT PARTNERSHIPS ARE AN IMPORTANT PART OF THE COMPANY'S OUTREACH PROGRAM AND DIRECTLY BENEFIT CUSTOMERS?

A. No. Mr. Wachter states that the Company's partnerships with major sports teams directly benefit customers since the Company is able to share customer service and safety messages to a large group of customers and the public via various forms of advertising on topics such as e-billing, other safety information, to promote "Call 811", etc.[51]

While I agree with Mr. Wachter that this type of advertising would possibly benefit ratepayers in providing safe and reliable service, as stated in my direct testimony, not all attendees at sporting events are Peoples' ratepayers, and many Peoples ratepayers may never attend sporting events. Therefore, this advertising is not directly targeted to Peoples' ratepayers. So, even if the Company is holding out these payments as safety and e-billing promotions, there are more effective and likely less costly ways to more directly reach the ratepaying community.[52]

Additionally, the Company's advertising with major sports teams goes beyond the scope of providing information for safety and e-billing promotions. For example, the stadium for the Altoona Curve, a minor league baseball team, is named after the Company.[53] And for PPG Paints Arena, the stadium for the

[51] Company Statement 2-R, pp. 39-41.
[52] I&E Statement No. 1, p. 26, lines, 8-13.
[53] Around PNG Field | Curve (milb.com), Accessed on April 24, 2024.

Pittsburgh Penguins, one of the gate entrances is named after the Company with the Peoples logo at the Fifth Avenue and Washington Place entrance.[54] Neither of these advertisements offer any benefits in providing safe and reliable service to ratepayers and are not an important part of the Company's outreach program that directly benefits customers.

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE THAT THE ADVERTISING COSTS ASSOCIATED WITH SPORTS AND EVENT PARTNERSHIPS PROVIDE A DIRECT BENEFIT TO THE COMMUNITY AND THEIR CUSTOMERS?

A. No. Mr. Wachter opines that the Company's sponsorship with major sports teams spurs economic growth and a positive community for Western Pennsylvania and cites a 2018 study on the revenue generated by major sports teams in the City of Pittsburgh. However, as stated in my direct testimony, if the Company is spending money in an attempt to benefit the overall community in some way, it is more representative of a charitable contribution.[55] For example, ratepayers who are not sports fans may not want a portion of their gas payment to go towards team sponsorships that presumably benefit the overall community, and they have no option to remove the portion of their bill that is allocated towards the Company's sponsorship of professional sports teams.

[54] http://www.ppgpaintsarena.com/ppg-paints-arena/entrance-gates, accessed on April 24, 2024.
[55] I&E Statement No. 1, pp. 25-27.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR ADVERTISING EXPENSE?

A. No. I continue to recommend an allowance of $53,737 for advertising expense, or a reduction of $1,370,197 ($1,423,934 - $53,737) to Peoples' claim for all of the reasons discussed above.

RATE CASE EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR RATE CASE EXPENSE.

A. In direct testimony, I recommended rate case expense be normalized over a period of 53 months resulting in an annual expense of $466,868 [($2,062,000 ÷ 53 months) x 12 months], or a reduction of $564,132 ($1,031,000 - $466,868) to the Company's claim. I disagreed with the Company's claimed two-year normalization period because it was not supported by the Company's historic filing frequency, was speculative in nature, and the Commission has agreed with I&E that the normalization period be based on actual historic filing frequency rather than future speculation.[56]

Using the Company's last three base rate case filing dates and the date of the current filing, an average interval is computed to be 53 months ((59 mo. + 83 mo. + 16 mo.) ÷ 3 intervals). The Company's requested 24-month recovery period is not supported by its historic filing record. Thus, the claimed two-year

[56] I&E Statement No. 1, pp. 27-33.

normalization period should be rejected as it would result in an unreasonable and unsupported increase in rates.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. Yes. Company witness Andrew P. Wachter disagreed with my recommendation that rate case expense be normalized over a 53-month period. Mr. Wachter states that I ignored the reason for the seven years between the 2012 case and the 2019 case due to the stay-out period from the settlement of the Company's acquisition of Equitable Gas Company (Equitable). Mr. Wachter asserts that I ignored the reason that the Company has not filed a base rate case since 2019 which was due to the Company receiving Accounting and Regulatory approval regarding its treatment of the tax repair election in 2020. Mr. Wachter states that the Company's two year normalization period is the estimated time for filing its next base rate case proceeding due to the Company's long-term infrastructure improvement plan (LTIIP) commitments. Finally, Mr. Wachter disagrees that the cases I provided to support my position are relevant due to Peoples' unique circumstances.[57]

[57] Peoples Statement No. 2-R, pp. 44-47.

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE THAT YOU IGNORED THE STAY-OUT PERIOD AS A RESULT OF THE ACQUISITION OF EQUITABLE?

A. No. In the settlement of the Company's acquisition of Equitable, it was agreed that the Company would not file a base rate case until at least January 1, 2018.[58] However, the Company did not file its next base rate case until January 28, 2019, or more than a year after the end of the stay-out period. Furthermore, Mr. Wachter, in his rebuttal testimony in the Company's 2018 base rate case, stated that the Company did not file a base rate case sooner due to efficiencies gained from the Equitable acquisition.[59] This demonstrates that the Company did not need to file a base rate case before the end of the stay-out period which actually supports my recommendation for a longer normalization period.

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE THAT YOU IGNORED THE COMPANY RECEIVING ACCOUNTING AND REGULATORY APPROVAL REGARDING ITS TREATMENT OF THE TAX REPAIR ELECTION IN 2020?

A. No. As stated in my direct testimony, I recognize that the Company received Accounting and Regulatory approval regarding its treatment of the tax repair election in 2020, however, Peoples has not filed a base rate case since 2019 (approximately five years ago). I believe that a two-year normalization period is

[58] Docket No. A-2013-2353647, Settlement Agreement, paragraph 27.
[59] Docket No. R-2018-3006818. Peoples Statement No. 3-R, p. 43, lines 6-8.

inappropriate and lacks the proper support. If Peoples were to file base rate cases with greater frequency, its normalization period will be shortened in future rate proceedings.[60]

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE THAT THE TWO-YEAR NORMALIZATION BASED ON THE COMPANY'S LTIIP IS SUFFICIENT?

A. No. As stated in my direct testimony, the Commission has cited the importance of considering the involved utility's history regarding the frequency of rate case filings as an essential element in determining the normalized level of rate case expense for ratemaking purposes.[61] While the Commission allows utilities to normalize this expense, it is not appropriate to do so over a time period that is based on mere speculation of future filings or a simple statement that the Company plans to file another rate case within two years based on forecasted LTIIP capital expenditures.

Additionally, as stated in my direct testimony, the 2012 PPL base rate case[62] actually demonstrates that the use of historic filing frequency is more reliable as PPL was granted a 24-month normalization period, but it did not file its next base rate case until March 31, 2015[63] which was 36 months after the 2012

[60] I&E Statement No. 1, pp. 29-31.
[61] I&E Statement No. 1, pp. 27-28.
[62] PA PUC v. PPL Electric Utilities Corporation, Docket No. R-2012-2290597, pp. 47-48 (Order Entered December 28, 2012).
[63] PA PUC v. PPL Electric Utilities Corporation, Docket No. R-2015-2469275, p. 3 (Order Entered November 19, 2015).

base rate case proceeding. In contrast, I&E's recommendation of 32-months based on historic filing frequency was more accurate.[64]

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE THAT THE CASES YOU PROVIDED AS SUPPORT ARE NOT RELEVANT?

A. No. The Commission has had a long-standing history of relying on historic filing frequency. As stated in my direct testimony, the Commission has historically stated that it considers prudently incurred rate case expense as an ongoing expense, occurring at irregular intervals, related to the rendering of utility service. The Commission has also cited the importance of considering the involved utility's history regarding the frequency of rate case filings as an essential element to determine the normalized level of rate case expense for ratemaking purposes.[65] Additionally, I included in my direct testimony six base rate cases citing the importance of historic filing frequency for determining rate case expense.[66]

Q. WHAT RECENT COMMISSION DECISIONS DID YOU RELY UPON TO SUPPORT YOUR RECOMMENDATION FOR A RATE CASE FILING INTERVAL BASED ON HISTORIC FILING FREQUENCY?

A. I referenced six base rate cases filed by Emporium Water Company,[67] and the City

[64] I&E Statement No. 1, pp. 31-32.
[65] I&E Statement No.1, pp. 27-28.

[67] *PA PUC v. Emporium Water Company*, Docket No. R-2014-2402324, p. 50 (Order Entered January 28, 2015).

of DuBois,[68] Columbia Gas of Pennsylvania, Inc.,[69] PECO Energy Company – Gas Division,[70] Philadelphia Gas Works (PGW),[71] and Columbia Water Company,[72] where the Commission adopted I&E's recommendation based on historic filing frequency.[73]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. No. I continue to recommend that rate case expense be normalized over 53 months as the Company's historic filing frequency does not support the two-year normalization period claimed by the Company.[74]

UNCOLLECTIBLE ACCOUNTS EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR UNCOLLECTIBLE ACCOUNTS EXPENSE.

A. In direct testimony, I did not recommend a specific allowance for uncollectible accounts expense. I&E's recommendation is based on the cumulative

[68] *PA PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150, pp. 65-66 (Order Entered March 28, 2017); *PA PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150, p. 13 (Order Entered May 18, 2017).

[71] *PA PUC v. Philadelphia Gas Works*, Docket No. R-2023-3037933, Opinion and Order, pp. 65-66 (Order Entered November 9, 2023).

[72] *PA PUC v. Columbia Water Company*, Docket No. R-2023-3040258, Opinion and Order, p. 34 (Order Entered January 18, 2024).

[73] I&E Statement No. 1, pp. 32-33.

[74] I&E Statement No. 1, pp. 27-33.

recommended adjustments made by all I&E witnesses and based on the process known as iteration, which effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims. I&E's recommendation for uncollectible accounts expense is not a final recommendation as the Company's claims must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order which could change the allowance for uncollectible accounts expense.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. Yes. Company witness Andrew P. Wachter responded to my uncollectible accounts expense recommendation. Mr. Wachter states that my adjustments were unreasonable and contrary to Commission precedent and should not be accepted. Mr. Wachter also states that uncollectible accounts expense should be based on the rate increase approved in this proceeding.[75]

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER?

A. As I stated above, I&E's recommendation is not a final recommendation.[76] The I&E recommendation is based on the cumulative recommended adjustments made by all I&E witnesses through the process known as iteration, which effectively

[75] Peoples Statement No. 2-R, pp. 55-57.
[76] Peoples Statement No. 12-R, p. 3.

prevents the determination of a precise calculation until all adjustments have been made to the Company's claims. I agree with Mr. Wachter that uncollectible accounts expense should be based on the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order regarding the Company's claims.

CASH WORKING CAPITAL

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CASH WORKING CAPITAL (CWC).

A. In direct testimony, I recommended a total allowance of $35,564,531 or a decrease of $692,386 ($36,256,917 - $35,564,531) to the Company's claim. My recommendation was based on my adjustments to O&M expenses.[77]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR CASH WORKING CAPITAL?

A. Yes. Company witness Krista Snyder responded to my CWC recommendation. Ms. Snyder simply states that she did not agree with my recommendation for CWC.[78]

[77] I&E Statement No. 1, pp. 55-57.
[78] Peoples Statement No. 12-R, p. 3.

Q. DID THE COMPANY PROVIDE AN UPDATE TO CWC?

A. Yes. The Company's updated claim for CWC is $35,661,101.[79]

Q. DO YOU AGREE WITH THE COMPANY'S UPDATED CLAIM?

A. No.

Q. DO YOU HAVE AN UPDATE FOR I&E RECOMMENDED ADJUSTMENTS TO O&M EXPENSES?

A. Yes. All O&M expense adjustments that are cash-based expense claims are included when determining the Company's overall CWC requirement. Therefore, I have included cash-based O&M recommendations when computing the overall recommended CWC allowance.

Q. SUMMARIZE WHERE EACH OF THE RECOMMENDED O&M EXPENSE ADJUSTMENTS ARE REFLECTED IN THE CWC COMPUTATIONS.

A. <u>Gas Purchase Costs – Expense Lag Days</u>

I&E witness Cline recommended an increase to gas purchase costs of $4,5481,129, [80] which is reflected as an increase to the Gas Purchase Costs Lag Days calculation.[81]

---

[79] Peoples Exhibit KMS-R-1.
[80] I&E Statement No. 3-SR.
[81] I&E Exhibit No. 1-SR, Schedule 3, p. 1, line 1.

Payroll - Expense Lag Days:

I recommended a reduction to labor expense of $2,272,848 which is reflected as a reduction to the Payroll Expense Lag Days calculation.[82]

Pension and Benefits – Expense Lag Days:

The following recommended adjustments are reflected in the Pension and Benefits Expense Lag Days calculation:[83] pension expense adjustment of $1,286,880, PBOPs adjustment of $894,141, and other employee benefits adjustment of $686,208 as discussed above, producing a total decrease of $2,867,229 to the Pension and Benefits Expense Lag Days calculation.[84]

Taxes Other Than Income Taxes – Expense Lag Days:

I recommended a reduction to payroll taxes of $213,648 which is reflected as a reduction to the Taxes Other Than Income Taxes Lag Days calculation.[85]

Other O&M Expenses – Expense Lag Days:

The following recommended adjustments are reflected in the Other O&M Expenses - Expense Lag Days calculation:[86] corporate insurance adjustment of $2,085,969, advertising expense adjustment of $1,370,197, and rate case expense

[82] I&E Exhibit No. 1-SR, Schedule 3, p. 1, line 2.
[83] I&E Exhibit No. 1-SR, Schedule 3, p. 1, line 3.
[84] I&E Exhibit No. 1-SR, Schedule 3, p. 2.
[85] I&E Exhibit No. 1-SR, Schedule 3, p. 1, line 4.
[86] I&E Exhibit No. 1-SR, Schedule 3, p. 1, line 5.

adjustment of $564,132 as discussed above, producing a total decrease of $4,020,298 to the Other O&M Expense – Expense Lag Days calculation.[87]

Summary of I&E-Updated Recommended CWC Allowance:

Q. BASED ON THE ABOVE SURREBUTTAL TESTIMONY, WHAT IS YOUR UPDATED RECOMMENDED ALLOWANCE FOR CWC?

A. Based on reflecting all of I&E's recommended adjustments as discussed above, my updated recommendation for CWC is an allowance of $35,267,845 or a decrease of $393,256 ($35,661,101 - $35,267,845) to the Company's revised claim.[88]

Q. IS YOUR UPDATED RECOMMENDATION FOR CWC A FINAL RECOMMENDED ALLOWANCE?

A. No. Similar to what I stated in direct testimony, all adjustments to the Company's claims must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

[87] I&E Exhibit No. 1-SR, Schedule 3, p. 3.
[88] I&E Exhibit No. 1-SR, Schedule 3, p. 1, line 10.

INTRODUCTION OF WITNESS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Anthony Spadaccio. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst Supervisor.

Q. ARE YOU THE SAME ANTHONY SPADACCIO WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2 AND THE SCHEDULES IN I&E EXHIBIT NO. 2?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address statements made in the rebuttal testimony of Peoples Natural Gas Company LLC (Peoples or Company) witness Paul R. Moul (Peoples Statement No. 13-R) and the Pennsylvania Office of Consumer Advocate (OCA) witness Aaron L. Rothschild (OCA Statement 3R)

regarding rate of return topics including the cost of common equity and the overall fair rate of return that will be applied to the Company's rate base.

SUMMARY OF MR. ROTHSCHILD'S REBUTTAL TESTIMONY

Q. SUMMARIZE MR. ROTHSCHILD'S RESPONSE IN REBUTTAL TESTIMONY TO YOUR RECOMMENDATIONS MADE IN DIRECT TESTIMONY.

A. Mr. Rothschild takes issue with my overall return on equity (ROE) recommendation including certain aspects of my Discounted Cash Flow (DCF) and Capital Asset Pricing Model (CAPM) analyses. Additionally, he disagrees with my acceptance and use of the Company's actual capital structure.[1]

Q. WHAT IS MR. ROTHSCHILD'S SPECIFIC CRITICISM REGARDING YOUR DCF ANALYSIS?

A. Mr. Rothschild opines that the result of my DCF analysis is unreasonably high because I rely on five-year earnings per share growth rate forecasts which are not indicative of future sustainable growth rates.[2]

[1] OCA Statement 3R, p. 2, lines 11-14.
[2] OCA Statement 3R, p. 4, lines 11-21.

Q. HOW DO YOU RESPOND TO MR. ROTHSCHILD'S CRITICISMS OF YOUR DCF ANALYSIS?

A. First, it should be noted, in the context of recommending an appropriate return on equity and overall rate of return, I&E's role is to perform an unbiased analysis using current and reputable sources. In determining an appropriate growth rate for my DCF analysis, I relied upon the forecasted earnings estimates from Value Line, Yahoo! Finance, and Zacks.[3] These resources are trusted and used industry wide, including by most Company, advocate, and Commission witnesses who submit rate of return testimony. Mr. Rothschild, Mr. Moul, and I all utilize these sources in our respective DCF analyses.

Next, the estimates I use from the sources listed above are five-year growth forecasts which are not short-term, nor are they intended to be viewed as sustainable indefinitely as Mr. Rothschild seems to suggest is my intention.[4] I believe the five-year growth estimates are reasonable as they cover the time period of the Fully Projected Future Test Year (FPFTY) and rate case filing frequency of many utilities. In this proceeding, I&E witness Christopher Keller determines the Company's historical rate case filing frequency to be 53 months[5] or approximately 4.42 years ($53 \div 12 \approx 4.42$).

Finally, the Commission has repeatedly confirmed I&E's DCF methodology for determining a fair return on common equity. Specifically, in the

[3] I&E Exhibit No. 2, Schedule 6.
[4] OCA Statement No. 3R, p. 6, lines 15-20.
[5] I&E Statement No. 1, p. 30, lines 5-7.

2020 Columbia Gas rate case, and the 2023 Columbia Water rate case the Commission agreed with the ALJ's recommendation to use I&E's cost of equity methodology, which included using five-year growth estimates in the DCF analysis.[6]

Q. WHAT IS MR. ROTHSCHILD'S SPECIFIC CRITICISM REGARDING YOUR CAPM ANALYSIS?

A. Mr. Rothschild opines that the result of my CAPM analysis is not useful as a comparison to my DCF result because my calculated market risk premium (MRP) is excessive.[7] He asserts that the MRP is an important variable of the CAPM model, and if the MRP is miscalculated, the rest of the calculations would be skewed accordingly.[8] Ultimately, Mr. Rothschild recommends the Commission disregard my "flawed" CAPM analysis.[9]

Q. HOW DO YOU RESPOND TO MR. ROTHSCHILD'S CRITICISMS OF YOUR CAPM ANALYSIS?

A. To an extent, there is some merit to Mr. Rothschild's argument. I believe the differences in our applications of the CAPM illustrate just how subjective the

9 OCA Statement No. 3R, p. 9, lines 1-2.

inputs of this cost of equity model can be. The results of the CAPM analyses from Mr. Rothschild, Mr. Moul, and myself vary wildly. For example, Mr. Rothschild presents CAPM results as low as 7.50%[10] which is 792 basis points (15.42% - 7.50%) lower than Mr. Moul's CAPM result of 15.42%.[11] Markedly, the result of my CAPM analysis sits comfortably in the middle at 10.91%.[12] Specific to Mr. Rothschilds criticism, as similarly noted above, I employed reputable and widely accepted sources including Value Line, Blue Chip Financial Forecasts, and the historical overall market returns for the past 98 years in determining each component of my CAPM, including the MRP and ultimately the final CAPM result.

In direct testimony, I thoroughly discuss the disadvantages of the CAPM and explain why the DCF is the superior model.[13] In the end, as I explain below, I do not base my recommendation on the CAPM, I simply provide the results as a comparison.

Q. SUMMARIZE MR. ROTHSCHILD'S RESPONSE CONCERNING YOUR RECOMMENDED CAPITAL STRUCTURE.

A. Mr. Rothschild disagrees with my recommended capital structure largely because it conflicts with my acknowledgement that a 50% common equity and 50% long-

[10] OCA Statement No. 3, p. 77, Table 8.
[11] Exhibit PRM-1 Schedule 1.
[12] I&E Statement No. 2, p. 32, ln. 8.
[13] I&E Statement No. 2, p. 17, ln. 9 through p. 20, ln. 2.

term debt capital structure is theoretically optimal. He argues that my adoption of the Company's claimed actual capital structure is inconsistent with the average actual capital structures used by gas utilities.[14]

Q. WHAT IS YOUR RESPONSE TO MR. ROTHSCHILD'S REBUTTAL TESTIMONY REGARDING YOUR RECOMMENDED CAPITAL STRUCTURE?

A. Generally, with few exceptions such as municipalities and smaller investor-owned utilities with largely contributed capital, the actual and FPFTY capital structure of a company and/or the parent company should be reviewed and applied in the cost of equity analysis to truly reflect the utility's financing structure (capitalization ratio) that will be used to finance the utility's rate base. Based on this fundamental procedure and comparing the Company's actual capital structure with the proxy group's capital structure range, the Company's claimed capital structure is reasonable in this case. It is difficult to assess the reasonableness of a company's capitalization ratio because there are pros and cons of higher debt or higher equity in the capital structure ratio. For example, a higher debt ratio may result in higher financial risk and borrowing costs which negatively impacts ratepayers. Conversely, an excessively high equity ratio results in ratepayers having to fund an unnecessarily high return.

[14] OCA Statement No. 3R, p. 7, ln. 3 through p. 12, ln. 7.

As stated in my direct testimony, although it isn't always feasible, I believe a capital structure of 50% common equity and 50% long-term debt is ideal and optimal when trying to balance the financial risks of a company as well as controlling costs to ratepayers.[15] However, applying a 50/50 capital structure to every utility in every case as Mr. Rothschild seems to suggest is short-sighted. I believe motivation to make the best financing decisions possible while considering financial risks and affordability to ratepayers would be reduced if a utility believes the Commission will automatically adopt a 50/50 capital structure. For example, it would be financially beneficial for a utility to have an actual debt ratio greater than 50% and an equity ratio lower than 50% only to have it artificially brought to 50/50 during a rate case. In this example, the utility would unnecessarily be collecting the more expensive calculated cost of equity on part of its long-term debt portion which would not be beneficial to ratepayers. Further, the greater long-term debt percentage could possibly lead to a credit rating downgrade and higher debt costs. Using company specific information that is known, measurable, and reasonable, whenever possible, more accurately results in a fair overall rate of return. I will note, however, that there are a few limitations and exceptions as previously mentioned, which is precisely the reason we review the capital structure information of a proxy group.

Further, my recognition that a 50/50 capital structure is theoretically

[15] I&E Statement No. 2, p. 12, ln. 1 through p. 14, ln. 7.

optimal is intended to illustrate that Mr. Moul's various other adjustments to his calculated cost of equity are unnecessary. Since the Company is benefiting from a more equity heavy capital structure, I believe any further consideration regarding financial risk is unwarranted.

Finally, other than in the 2023 Columbia Water rate case, I&E has historically been very consistent in adopting a company's claimed/actual capital structure in rate proceedings, especially when it falls within the range of capital structures of the proxy group derived from information provided by S&P Global Market Intelligence – Data Management Solutions. Notably, in this single instance, where I&E strayed from this methodology and in fact recommended a 50/50 capital structure, the Commission rejected the positions of both I&E and OCA, stating:[16]

> On consideration of the record evidence, we are persuaded by Columbia's argument that an actual capital structure should be utilized in setting an overall rate of return in this proceeding….At the outset, we reinforce that an actual capital structure represents the Company's decision, in which it has full discretion, on how to capitalize its rate base. This actual capitalization forms the basis upon which Columbia attracts capital.

For comparison, in that proceeding, Columbia's actual claimed equity ratio that led to I&E's 50/50 recommendation was 63.34%, much higher than People's claim of 54.67% in this proceeding.

[16] *Pa. PUC v. Columbia Water Company,* Docket No. R-2023-3040258, p. 83 (Order entered January 18, 2024).

SUMMARY OF MR. MOUL'S REBUTTAL TESTIMONY

Q. SUMMARIZE MR. MOUL'S RESPONSE IN REBUTTAL TESTIMONY TO YOUR RATE OF RETURN RELATED RECOMMENDATIONS.

A. Mr. Moul provides updates to his cost of equity analysis, disputes my recommendations regarding an appropriate proxy group, my reliance on and application of the Discounted Cash Flow (DCF) method, the DCF growth rate, and disallowance of his leverage adjustments to the DCF and beta of his Capital Asset Pricing Model (CAPM). Further, Mr. Moul disagrees with the appropriate risk-free rate to use and my exclusion of a size adjustment in my CAPM analysis, my disagreement with his use of the Risk Premium (RP) and Comparable Earnings (CE) methods, and my recommended disallowance of additional basis points for management performance. Finally, Mr. Moul suggests that the Commission-determined Distribution System Improvement Charge (DSIC) rates should serve as a benchmark cost of equity in this proceeding.

PROXY GROUP

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR PROXY GROUP.

A. Mr. Moul claims that I erroneously omitted Southwest Gas Holdings, Inc. from my proxy group. He argues that I incorrectly employed the criterion that 50% or more of a company's revenues must be generated from the regulated gas utility industry as opposed to using both income and the percentage of assets. He claims

that margins on non-utility business segments within the companies in our proxy groups are dissimilar to the utility business.[17]

Q. DO YOU AGREE WITH MR. MOUL'S ASSERTION THAT THE PERCENTAGE OF GAS UTILITY ASSETS TO TOTAL ASSETS IS A MORE APPROPRIATE CRITERION?

A. No. Calculating the percentage of utility assets that make up the total assets of a company is not always a reliable way of determining if a business is primarily a regulated utility. Assets are accounted for at the original cost minus depreciation, which means that the value of an asset depends on its age. Therefore, it is possible for the regulated utility segment of a company to have assets that are predominately depreciated. Although a utility may have assets that are significantly depreciated, it does not always indicate the level of business a company does. A company, or its parent company, can have most of its utility assets depreciated but still do more business as a utility than as another business.

Another reason that the percentage of utility business is not always accurately represented by using the percentage of utility assets to total assets is that there are differences between businesses in the amount of capital needed. Generally, a utility company requires a higher level of assets (asset value) to produce a comparatively small level of cash flow while another business may need

[17] Peoples Statement No. 13-R, p. 13, ln. 3 through p. 14, ln. 10.

only a small amount of assets to produce a large level of cash flow. Therefore, comparing the assets of a gas utility segment to the total assets of a company is not an appropriate criterion as it could be misleading.

Q. PLEASE REITERATE WHY YOU ELIMINATED SOUTHWEST GAS HOLDINGS, INC. FROM YOUR PROXY GROUP.

A. As explained in my direct testimony, Southwest Gas Holdings, Inc. was excluded for not meeting my criterion that 50% or more of revenues must be generated from regulated gas utility operations. Again, this criterion is important because revenues represent the percentage of cash flow a company receives from each business line related to providing a good or service. If less than 50% of revenues come from the gas distribution sector, the companies are not comparable to the subject utility as they do not provide a similar level of regulated business.[18]

Q. DO YOU HAVE ANY CHANGES TO YOUR PROXY GROUP?

A. No. For the reasons discussed above, the percentage of revenue is an appropriate criterion. As Southwest Gas Holdings, Inc. includes an insufficient percentage of regulated gas revenues of 39%,[19] it should not be included in the proxy group and compared to Peoples.

[18] I&E Statement No. 2, p. 10, lines 1-12.
[19] Peoples Statement No. 13-R, p. 14, ln. 2.

DISCOUNTED CASH FLOW

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. Mr. Moul agrees that results of a DCF analysis should be given weight, but he asserts that use of multiple methods provides a superior foundation to determine the cost of equity. He compares the DSIC rate determined by the Commission in the Quarterly Earnings Summary Reports to the rates calculated using market data. He further disagrees with my results based on the outcomes of certain individual companies and disputes my growth rate analysis. Finally, Mr. Moul disagrees with my recommendation to reject his leverage adjustment.[20]

EXCLUSIVE USE OF THE DCF

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR USE OF THE DCF.

A. Mr. Moul asserts that the use of more than one method provides a superior foundation for the cost of equity determination. He claims that the use of more than one method will capture the multiplicity of factors that motivate investors to commit their capital to a particular enterprise.[21]

[20] Peoples Statement No. 13-R, p. 14, ln. 12 through p. 22, ln. 8.
[21] Peoples Statement No. 13-R, p. 15, lines 1-6.

Q. WERE ANY METHODS OTHER THAN THE DCF EMPLOYED IN YOUR ANALYSIS?

A. Yes. Although my recommendation was based on the results of my DCF analysis, I also employed the CAPM as a comparison. For the reasons discussed in my direct testimony, the DCF method is the most reliable.[22] Although no one method can capture every factor that influences an investor, including the results of methods less reliable than the DCF does not make the end result more reliable or more accurate. In direct testimony, I cited several cases that illustrate the methodology I employed is consistent with the methodology historically used by the Commission in base rate proceedings as recently as 2017, 2018, 2020, and 2021.[23]

However, as indicated in my direct testimony,[24] the Commission recently deviated from prior Commission practice when it indicated in the 2022 Aqua Pennsylvania, Inc. (Aqua) rate case order that its method "for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies"[25] and that "I&E's DCF and CAPM produce a range of reasonableness for the ROE … ."[26] Similarly, most recently, the Commission's 2024 Columbia Water rate case order relied on the results of I&E's DCF and CAPM analyses for determining Columbia Water's

[22] I&E Statement No. 2, p. 17, ln. 9 through p. 18, ln. 15.
[23] I&E Statement No. 2, p. 17, lines 14-16.
[24] I&E Statement No. 2, p. 21, ln. 16 through p. 22, ln. 5.
[25] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154 (Order entered May 16, 2022).
[26] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 178 (Order entered May 16, 2022).

ROE.[27] In my direct testimony, I fully explain why the CAPM should not be used as a primary method and continue to express those concerns in this proceeding as to why it should only be used as a comparison to, not a check of, the DCF. Thus, I disagree with a method that provides the CAPM comparable weight to the DCF method.[28] In fact, my illustration in this surrebuttal testimony of the extreme variation in results achieved by the CAPM analyses between Mr. Rothschild and Mr. Moul only highlights the unreliability and subjectivity of the CAPM method, further invalidating its use for establishing an appropriate ROE for ratemaking.

DSIC RATES

Q. SHOULD THE COMMISSION CONSIDER THE AUTHORIZED DSIC RATE ESTABLISHED IN THE QUARTERLY EARNINGS SUMMARY REPORTS AS AN APPROPRIATE MEASURE TO DETERMINE THE COST OF EQUITY IN THIS PROCEEDING?

A. No. Mr. Moul's comparison between the I&E recommended return on equity in this proceeding and the Commission's DSIC rate is misguided. My understanding is that the DSIC rate is designed to encourage its use and to incentivize accelerated pipeline replacement and infrastructure upgrades to bring aging infrastructure closer to meeting safety and reliability requirements in between base rate filings. To suggest the cost of equity must be at or above the DSIC rate in this base rate

[27] *Pa. PUC v. Columbia Water Company,* Docket Nos. R-2023-3040258, p. 105 (Order entered January 18, 2024).
[28] I&E Statement No. 2, p. 19, ln. 15 through p. 21, ln. 1.

proceeding is inappropriate and not in the public interest. Additionally, the DSIC rate establishes a benchmark above which a utility company is considered "overearning" for use of the DSIC mechanism. As such, the DSIC rate should not serve as a proper measurement of a subject utility's cost of equity in a base rate proceeding since the DSIC rate is routinely higher than any return on equity approved in such base rate proceedings. In fact, 66 Pa. C.S. § 1358(b)(3) states the following:

> The distribution system improvement charge shall be reset at zero if, in any quarter, data filed with the commission in the utility's most recent annual or quarterly earnings report show that the utility will earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the distribution system improvement charge.

Finally, the DSIC mechanism serves to lower a utility's risk because it reduces the lag time in the recovery of a company's capital outlays. DSIC spending requires preapproval of eligible plant via a Long-Term Infrastructure Improvement Plan so there is little question as to the prudence of those expenditures.

Q. ARE THERE ANY POTENTIAL PROBLEMS WITH AWARDING A RETURN ON EQUITY THAT IS EQUAL TO OR HIGHER THAN THE DSIC RATE?

A. Yes. First, if a company achieves the awarded return that is above the DSIC rate, it eliminates the possibility for the utility to utilize the DSIC mechanism until its

earnings fall below the DSIC rate. Further, if a company believes it will receive a return higher than the DSIC rate in a litigated base rate proceeding, it will remove the incentive to use the DSIC mechanism between rate filings and may encourage the more frequent filing of base rate cases. Additionally, it may encourage litigation as opposed to settlement of cases, since companies may improperly believe this is the new norm, which will increase rate case costs to customers.

Therefore, in my opinion, the DSIC rate should generally be an incentive rate that is higher than a return on equity percentage granted in a rate proceeding.

EVALUATING THE DCF BASED ON INDIVIDUAL RESULTS

Q. SUMMARIZE MR. MOUL'S RESPONSE IN REBUTTAL TESTIMONY REGARDING THE RESULTS OF YOUR DCF.

A. Mr. Moul explains that when some results are unreasonable on their face, the reliability of, or the witness' application of, that method must be questioned. He points to the results of two companies in my proxy group (Chesapeake Utilities and One Gas Inc.) and claims that they fall into the category of unreasonableness. Mr. Moul attempts to support his theory by arguing that the return on equity for these companies fails to provide a sufficient spread over the current 5.55% yield on A-rated public utility bonds.[29]

[29] Peoples Statement No. 13-R, p. 21, ln. 1 through p. 22, ln. 12.

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S ATTEMPT TO DISAGGREGATE YOUR RESULTS?

A. The 9.96% result of my DCF analysis offers a 5.59% margin over the undisputed 4.37% cost of debt (9.96% - 4.37% = 5.59%). My recommended cost of equity is well more than double the Company's claimed cost of debt and provides a 4.41% margin (9.96% - 5.55% = 4.41%) over Mr. Moul's claimed 5.55% yield on A-rated public utility bonds. I certainly believe these measures satisfy Mr. Moul's statement that, "It is a fundamental tenet of finance that the cost of equity must be higher than the cost of debt by a meaningful margin to compensate for the higher risk associated with a common equity investment."[30]

GROWTH RATE

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR GROWTH RATES.

A. Mr. Moul argues that the Yahoo! Finance and Zacks growth rate projections for Northwest Natural Gas Co. and One Gas Inc are outliers as they are too far below the 6.75% growth rate he used. He suggests that had I eliminated these estimates, the result of my DCF analysis would have increased from 9.96% to 10.48%.[31]

[30] Peoples Statement No. 13-R, p. 21, lines 8-10.
[31] Peoples Statement No. 13-R, p. 21, ln. 14 through p. 22, ln. 8.

Q. DO YOU AGREE WITH MR. MOUL'S RECALCULATION OF YOUR DCF RESULTS BASED ON THE REMOVAL OF COMPANIES DUE TO THEIR GROWTH RATES BEING TOO LOW?

A. No. First, although he claims Northwest Natural Gas Co. is one of the companies with too low of a growth rate, he instead eliminates the DCF result for Chesapeake Utilities. Presumably, Mr. Moul is aware that Northwest Natural Gas Co. has a higher than the average dividend yield which is why he left it in his recalculation of my results. That aside, his recalculation results in a DCF that is 52 basis points (10.48% - 9.96%) higher than my recommendation, yet still 127 basis points (11.75% - 10.48%) below his own cost of equity recommendation.

Mr. Moul's decision to remove these estimates only serves to inflate the DCF result, as his argument lacks objective rationale and defeats the purpose of using a proxy group. Mr. Moul himself states, "[t]he principal purpose of assembling a barometer group is to avoid relying on data for a single company that may not be representative and to thereby smooth out any abnormalities."[32] This acknowledgement is counterintuitive to his suggestion to remove individual companies from my analysis due to growth estimates he deems are too low. Ironically, and worth noting, Mr. Moul employs the very same growth estimates for the companies and sources he is criticizing in his own proxy group and analysis.[33]

[32] Peoples Statement No. 13-R, p. 21, lines 1-3.
[33] Peoples Exhibit PRM-1, Schedule 9.

Finally, while he takes issue with the 4.33% and 4.67% estimates, which are 158 (5.91% - 4.33%) and 124 (5.91% - 4.67%) basis points lower than my average growth rate estimate of 5.91%, he is not concerned with the 7.27% and 8.00% growth estimates for Atmos Energy Corp. and NiSource Inc., respectively. These estimates are 136 (7.27% - 5.91%) and 209 (8.00% - 5.91%) basis points, respectively, higher than the average.

LEVERAGE ADJUSTMENT

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING HIS LEVERAGE ADJUSTMENT.

A. First, Mr. Moul states that credit rating agencies do not measure the market-required cost of equity for a company, nor are they concerned with how it is applied in the rate-setting context. Rather, the credit rating agencies are only concerned with the interests of lenders and the timely payment of principal and interest by companies. Then, Mr. Moul questions my references to prior Commission orders. Finally, Mr. Moul disagrees with my claim that investors base their decisions on the book value of a company's debt and equity.[34]

[34] Peoples Statement No. 13-R, p. 30, ln. 14 through p. 33, ln. 17.

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S REBUTTAL TESTIMONY CONCERNING CREDIT RATING AGENCIES?

A. Mr. Moul has actually supported my argument that his proposed leverage adjustment is not needed by stating that the credit rating agencies are only concerned with the timely payment of principal and interest by utilities. Mr. Moul's stated need for the leverage adjustment is based on his assertion that the difference between the book value capital structure and his market value capital structure poses a financial risk difference.[35]

Financial risk does in fact relate to the capital structure of a company, but it is created by the financing decisions (the use of debt or equity) and the amount of leverage or debt with which a company chooses to finance its assets. Financial risk and the book value capital structure of a company are represented in the financial statements, which are part of what is evaluated by rating agencies. Mr. Moul agrees with me that credit rating agencies use a company's booked debt obligations, found in the financial statements, in their analysis to assess financial risk and determine creditworthiness.[36]

Q. SUMMARIZE MR. MOUL'S RESPONSE TO YOUR REFERENCE TO PRIOR COMMISSION ORDERS.

A. Mr. Moul refers to the discussion in my direct testimony about six recent cases

[35] Peoples Statement No. 13, p. 33, lines 10-17.
[36] Peoples Statement No. 13-R, p. 31, lines 1-4.

where the Commission has rejected a "leverage adjustment." He explains that even though the Commission declined to make a "leverage adjustment" in a prior Aqua Pennsylvania case, it does not invalidate its use. Further, he states, "Notably, the Commission did not repudiate the leverage adjustment in the Aqua case, but instead arrived at an 11.00% return on equity for Aqua by including a separate return increment for management performance."[37] Next, Mr. Moul claims that the adjustment proposed in the City of Lancaster case was much different than what he proposes in this case. Then, regarding UGI Electric Utilities, Inc. – Electric Division (UGI Electric), Mr. Moul acknowledges the Commission granted a "management performance increment," not a leverage adjustment when arriving at the allowed equity return. As for the Columbia Gas case, Mr. Moul concedes that the Company accepted I&E's return on equity recommendation, which did not include a leverage adjustment or addition of points for management performance. Additionally, in the 2020 PECO Gas case, he argues that the Commission arrived at an equity return on the higher side without a leverage adjustment, therefore no adjustment was warranted. Finally, in the 2021 Aqua case, Mr. Moul acknowledges that the Commission set the cost of equity without a leverage adjustment.[38]

[37] Peoples Statement No. 13-R, p. 31, lines 16-20.
[38] Peoples Statement No. 13-R, p. 31, ln. 22 through p. 32, ln. 18.

Q. WHAT IS YOUR RESPONSE TO MR. MOUL REGARDING THE REFERENCED PRIOR COMMISSION ORDERS IN YOUR DIRECT TESTIMONY?

A. In this proceeding, Mr. Moul is recommending a 141-basis point "leverage adjustment." To be clear, the Commission did in fact refuse to accept the leverage adjustment in the Aqua case by stating "…we reject the ALJ's recommendation to allow a 65 basis point leverage adjustment."[39] The management performance points awarded to Aqua were case-specific and in no way related to the proposed leverage adjustment. Regarding the City of Lancaster case, the Commission did not reject the leverage adjustment based on the manner in which it was calculated, but rather, the Commission stated, "…the ALJ's recommendation is in error as any adjustment to the results of the market based DCF as we have previously adopted are unnecessary and will harm ratepayers."[40] Regarding the UGI Electric case, the Commission concluded that "…an artificial adjustment in this proceeding is unnecessary and contrary to the public interest. Accordingly, we decline to include a leverage adjustment in our calculation of the DCF cost of equity."[41] Regarding the most recent Columbia Gas case, the Commission stated,

> … we have adopted the ALJ's recommendation to use I&E's DCF methodology utilizing I&E's dividend yield of 3.34% and growth rate of 6.52%. As noted above, the ALJ did not specify a recommended cost of equity for Columbia in their

[39] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket No. R-00072711, pp. 38-39 (Order entered July 31, 2008).
[40] *Pa. PUC v. City of Lancaster – Bureau of Water*; Docket No. R-2010-2179103, p. 101 (Order entered July 14, 2011).
[41] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058, pp. 93-94 (Order entered October 25, 2018).

> Recommended Decision. However, we note that I&E's methodology results in an ROE of 9.86%.[42]

The ALJ's Recommended Decision stated the following:

> The ALJ agrees with BIE's reasoning that Columbia Gas' calculated return on equity was flawed for five reasons: (1) the weights given to the results of the Company's CAPM, RP, and CE analyses; (2) certain aspects of Columbia's discussion of risk; (3) Columbia Gas' application of the DCF including the forecasted growth rate and leverage adjustment used; (4) Columbia's inclusion of a size adjustment, reliance on the 30-year Treasury Bond for the risk- free rate, and the use of a double-adjusted *beta* in the CAPM analysis; and (5) the Company's request for an additional 20 basis points for "strong management performance" is unjustified.[43]

While the Company accepted I&E's DCF return without regard to the leverage adjustment or management performance in the last base rate case, in the Recommended Decision, the ALJ clearly rejected the Company's proposed leverage adjustment and the Commission agreed with the ALJ's Recommended Decision.

In the PECO Energy – Gas Division case, the Commission stated,

> … we have adopted the ALJ's recommendation to use I&E's DCF methodology and to use I&E's CAPM calculation as a check on the reasonableness of the DCF determined cost of equity. Therefore, we shall adopt the ALJ's recommended 10.24% cost of equity. In our view, this is an appropriate cost of equity for PECO given the record developed in this proceeding.[44]

---

[42] *Pa. PUC v. Columbia Gas of Pennsylvania*; Inc. Docket No. R-2020-3018835, p. 141 (Order entered February 19, 2021).

[43] *Pa. PUC v. Columbia Gas of Pennsylvania*; Inc. Docket No. R-2020-3018835, Recommended Decision, pp. 184-185.

[44] *Pa. PUC v. PECO Energy Company – Gas Division*. Docket No. R-2020-3018929, p. 171 (Order entered June 22, 2021).

In the Recommended Decision, the ALJ agreed with I&E's recommended cost of equity which did not include a leverage adjustment.[45]

Finally, regarding the 2021 Aqua base rate case, the Commission did in fact reject the Company's proposed leverage adjustment as follows,

> We find I&E's arguments in opposition to the Company's position to be persuasive. For example, as I&E observed, credit rating agencies assess financial risk based upon a company's booked debt obligations and the ability of its cash flow to cover the interest payments on those obligations. The agencies use a company's financial statements, and not the company's market capital structure, in conducting their analysis. It is a company's financial statements that affect the market value of the stock, and, therefore, the financial statements and the book value capital structure are relied upon in an analysis such as that done by rating agencies. I&E St. 2 at 40; I&E St. 2-SR at 10. Accordingly, we find that the record in this proceeding supports rejecting the Company's requested leverage adjustment.[46]

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S ASSERTION THAT INVESTORS DO NOT BASE THEIR DECISIONS ON BOOK VALUE, BUT RATHER THE RETURN THEY EXPECT TO EARN ON THE DOLLARS THEY INVEST?

A. Investors purchase securities such as stocks at market value as opposed to book value. In doing so, they accept the returns and associated risks implied by market prices. However, financial statements, which are based on book values, show the entire true financial position of a company, providing the foundation for

[45] *Pa. PUC v. PECO Energy Company – Gas Division*. Docket No. R-2020-3018929, Recommended Decision, p. 215.

[46] *Pa. PUC v. Aqua Pennsylvania, Inc*. Docket No. R-2021-3027385, pp. 166-167 (Order entered June 22, 2021).

investment and financing decisions. For example, financial institutions such as banks lend money based on actual book values and not the current price of a stock. Further, almost all financial ratios used in financial analysis utilize at least one book value variable from either the income statement or the balance sheet.

Mr. Moul's assertion that investors are unconcerned with the book value debt, or "some accounting value of little relevance to them,"[47] of a utility is unsupported. Clearly an investor takes the financial risk of the utility into consideration when determining a required return. In addition, the market capitalization information included in Value Line's reports and discussed by Mr. Moul is not the same as market value capital structure. Market capitalization refers to the number of shares outstanding multiplied by the current price. A market value capital structure refers to the ratio of market debt to market equity, which, to my knowledge, is not included in Value Line's reports. Therefore, Mr. Moul's contention that Value Line includes market capitalization data does not offer any support for his leverage adjustment.

Q. HAS YOUR RECOMMENDATION CHANGED FROM DIRECT TESTIMONY REGARDING MR. MOUL'S LEVERAGE ADJUSTMENT?

A. No. For the reasons discussed above, I continue to recommend that Mr. Moul's 141-basis point leverage adjustment be rejected.

[47] Peoples Statement No. 13-R, p. 33, lines 10-12.

INFLATION

Q. DOES THE DCF ADEQUATELY FACTOR IN RECENT INFLATIONARY TRENDS?

A. Yes. My DCF calculation includes a spot stock price when determining the dividend yield and analysts who generate forecasted earnings growth rates should take inflation into consideration as well; therefore, it contains the most up-to-date projected information of any model. Thus, Mr. Moul's concerns of increasing inflation[48] are adequately covered by use of the DCF as a primary model for determining an appropriate return on equity.

CAPITAL ASSET PRICING MODEL

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR APPLICATION OF THE CAPM.

A. Mr. Moul opines that my CAPM analysis understates the cost of equity for a few reasons, including my use of the yield on 10-year Treasury Notes for my risk-free rate, failure to use leverage adjusted betas, and rejection of his size adjustment.[49] Each of these topics are discussed in more detail below.

[48] Peoples Statement No. 13-R, p. 20, lines 19-21.
[49] Peoples Statement No. 13-R, p. 37, lines 19-21.

RISK-FREE RATE

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR USE OF THE YIELD ON THE 10-YEAR U.S. TREASURY NOTE.

A. Mr. Moul claims that by using the 10-year Treasury Note, I introduced a systematic understatement of CAPM returns. He opines that his use of the yield on a 30-year U.S. Treasury Bond is more appropriate than my use of the yield on a 10-year Treasury Note because 30-year bonds are "more a reflection of investor sentiment of their required returns…" and are also less susceptible to "policy initiatives of monetary officials…". Additionally, he provides a recalculation of my risk-free rate to use in the CAPM formula.[50]

Q. DO YOU AGREE WITH MR. MOUL THAT USING THE YIELD OF A 30-YEAR U.S. TREASURY BOND IS MORE APPROPRIATE DUE TO A LONGER-TERM BOND BEING LESS SUSCEPTIBLE TO FEDERAL POLICY ACTIONS?

A. No. As explained in my direct testimony,[51] I chose the 10-year Treasury Note as it balances the short-comings of the short-term T-Bill and the 30-year Treasury Bond. Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with the market risk. In addition, long-term treasury bonds bear the risk of unexpected inflation.

[50] Peoples Statement No. 13-R, p. 38, ln. 9 through p. 40, ln. 3.
[51] I&E Statement No. 2, p. 29, ln. 15 through p. 30, ln. 12.

As such, my choice of a 10-year Treasury Note is more appropriate. Additionally, as mentioned in my direct testimony, the Commission has recently agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[52]

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR CALCULATION OF THE RISK-FREE RATE USED IN THE CAPM FORMULA.

A. Mr. Moul opines that I have incorrectly given the same weight to the yield on the 10-year Treasury Note for the second quarter of 2024 as I do for the entire five-year period encompassing 2025 to 2029. He then recalculates the risk-free rate by averaging the 10-year Treasury yield forecasts by year from 2024 through 2028 in an attempt to increase my calculated risk-free rate.[53]

Q. DO YOU AGREE WITH MR. MOUL'S ANALYSIS OF YOUR RISK-FREE RATE?

A. No. Mr. Moul's new calculation proposes to give equal weight to each separate year from 2024 to 2028. The flaw with this approach is that the further out into the future one forecasts, the less reliable and more speculative the estimates become; therefore, to give the less reliable estimates equal weight would not be

[52] *Pa. PUC v. UGI Utilities, Inc. – Electric Division,* Docket No. R-2017-2640058, p. 99 (Order entered October 25, 2018).

[53] Peoples Statement No. 13-R, p. 38, ln. 21 through p. 39, ln. 7.

appropriate. It is more appropriate to weight the quarters and years as I have done in my direct testimony.[54] My calculation provides a more accurate estimation of the risk-free rate during the FPFTY, as the further out one forecasts, the less reliable the information becomes.

More importantly, what Mr. Moul fails to recognize is that my risk-free rate of 3.88% is higher than 3.75%[55] risk-free rate he uses in his own CAPM analysis. Therefore, his criticisms of my risk-free rate are pointless and carry no weight.

LEVERAGED ADJUSTED BETAS

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING THE USE OF LEVERAGED ADJUSTED BETAS.

A. Mr. Moul simply claims that I failed to use leveraged adjusted betas.[56] He does not offer an explanation beyond what he argued in his direct testimony.

Q. IS THE USE OF "LEVERAGED ADJUSTED BETAS" IN CAPM ANALYSIS APPROPRIATE?

A. No. Mr. Moul's adjustment only serves to inflate the result of his CAPM analysis which I have discussed in greater detail in my direct testimony.[57] Value Line is a well-known and trusted source that both investors and the Commission rely upon,

[54] I&E Exhibit No. 2, Schedule 9.
[55] Peoples Statement No. 13, p. 46, lines 1-2.
[56] Peoples Exhibit PRM-1, Schedule 13, p. 2.
[57] I&E Statement No. 2, p. 56, ln. 9 through p. 57, ln. 9.

therefore, it is not necessary to make any type of adjustment to the Value Line betas. Additionally, it is worth mentioning again that a stock with a price movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Due to being regulated and the monopolistic nature of utilities, very rarely do they have a beta equal to or greater than one. Therefore, in this case, to apply an adjusted beta of 1.10 to the entire industry or gas proxy group as Mr. Moul has done is completely irrational.

SIZE ADJUSTMENT

Q. SUMMARIZE YOUR DIRECT TESTIMONY REGARDING A SIZE ADJUSTMENT.

A. In direct testimony, I stated that Mr. Moul's 102-basis point CAPM size adjustment is unnecessary because none of the technical literature he cited in his direct testimony supporting investment adjustments related to the size of a company is specific to the utility industry. In addition, I presented an article by Dr. Annie Wong that demonstrates there is no need to make an adjustment for the size of a company in utility rate regulation. Further, I noted that the Commission has recently rejected the application of a size adjustment to the CAPM cost of

equity calculation where it agreed that the same literature the Company cites is not specific to the utility industry.[58]

Q. SUMMARIZE MR. MOUL'S RESPONSE IN REBUTTAL TESTIMONY REGARDING A SIZE ADJUSTMENT.

A. Mr. Moul states that enormous changes have occurred in the industry since the article "Utility Stocks and the Size Effect: An Empirical Analysis" by Dr. Annie Wong was published. He also references the Fama/French study, "The Cross-Section of Expected Stock Returns," to illustrate that his size adjustment is a separate factor from beta that helps explain systematic risk and returns. Additionally, Mr. Moul opines external factors, such as loss of larger customers and unexpected changes in expenses, can affect the financial performance of a small company.[59]

Q. DOES THE TIME THAT HAS ELAPSED SINCE AN ARTICLE WAS WRITTEN NECESSARILY INVALIDATE ITS RESULTS?

A. No. Although Mr. Moul states that enormous changes have occurred in the industry since the 1960s, he presents no evidence that these "changes" have caused the need for a size adjustment. To the contrary, Dr. Wong's study demonstrated that one does *not* need to be made in the regulated utility industry.

[58] I&E Statement No. 2, p. 57, ln. 11 through p. 60, ln. 5.
[59] Peoples Statement No. 13-R, p. 40, ln. 5 through p. 41, ln. 17.

As stated in my direct testimony, absent any credible article to refute Dr. Wong's findings, Mr. Moul's size adjustment to his CAPM results should be rejected.

Q. DOES THE FAMA/FRENCH STUDY REFUTE DR. WONG'S ARTICLE?

A. No. As stated in my direct testimony, Dr. Wong's article presents evidence that although a size effect may exist for industrial stocks, it does not exist for utility stocks. As the Fama/French study is not specific to utility stocks, it does not demonstrate that a size effect exists in the utility industry. In addition, the size effect that exists for industrial stocks varies to such an extent that it is difficult to predict. The difficulty in predicting the effect of size is demonstrated in the variance from year to year of the measurement of difference between the annual returns on the large and small-capitalization stocks of the NYSE/AMEX/NASDAQ in the Ibbotson *Stocks, Bonds, Bills & Inflation: 2015 Yearbook*. As stated on page 100 of the SBBI Yearbook,

> While the largest stocks actually declined in 2001, the smallest stocks rose more than 30%. A more extreme case occurred in the depression-recovery year of 1933, when the difference between the first and 10th decile returns was far more substantial. The divergence in the performance of small- and large- cap stocks is evident. In 30 of the 89 years since 1926, the difference between the total returns of the largest stocks (decile 1) and the smallest stocks (decile 10) has been greater than 25 percentage points.

Page 109 states,

> In four of the last 10 years, large-capitalization stocks (deciles 1-2 of NYSE/AMEX/NASDAQ) have outperformed small-capitalization stocks (deciles 9-10). This has led some market

> observers to speculate that there is no size premium. But statistical evidence suggests that periods of underperformance should be expected.

Page 112 states,

> Because investors cannot predict when small-cap returns will be higher than large-cap returns, it has been argued that they do not expect higher rates of return for small stocks.

Q. ARE MR. MOUL'S CONCERNS REGARDING THE IMPACT OF LOSING LARGE CUSTOMERS OR UNEXPECTED INCREASES IN EXPENSES VALID?

A. No. Regulated utility companies have the option to file base rate cases to address declining revenues and to recover the increasing costs of doing business in addition to emergency rate relief provisions for large unforeseen impacts. In contrast, non-utility businesses that may be significantly impacted by events of this nature due to small operating size do not have these opportunities. Further, while a smaller utility may pay higher prices for services and materials just due to volume buying power, the actual costs are part of the revenue requirement presented by that company, so to increase the return to account for the potential size disadvantage would only further unfairly burden ratepayers who are already likely paying higher utility bills to recover the higher operating costs.

Q. WHAT IS YOUR RECOMMENDATION REGARDING MR. MOUL'S SIZE ADJUSTMENT?

A. I continue to recommend that his use of the 1.02% size adjustment be disallowed in calculating the CAPM.

Q. MR. MOUL HAS RECALCULATED YOUR CAPM RESULTS.[60] DO YOU AGREE WITH HIS RECALCULATION?

A. No. Mr. Moul's recalculation is incorrect for a couple of reasons. As stated in both my direct testimony and above, he used an inaccurate risk-free rate and an unnecessary size adjustment. Because of these factors, the recalculation of my CAPM results as Mr. Moul illustrates is unreliable and unnecessary.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR CAPM ANALYSIS?

A. Yes. My recommended cost of equity is primarily based upon my DCF analysis for the reasons explained above and in my direct testimony. I present a CAPM analysis to the Commission for comparison, not recommendation purposes as the inputs are highly subjective, and other than beta, not company or industry specific.

[60] Peoples Statement No. 13-R, p. 39, ln. 8 through p. 40, ln. 3.

RISK PREMIUM

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING THE RISK PREMIUM METHOD.

A. Mr. Moul opines that the RP approach should be given serious consideration because it is straight-forward, understandable, and uses a company's own borrowing rate. He claims it provides a direct and complete reflection of a utility's risk and return. Mr. Moul also states that I make an unfounded assertion that the RP method does not measure the current cost of equity as directly as the DCF.[61]

Q. DO YOU AGREE WITH MR. MOUL THAT THE RP METHOD PROVIDES A DIRECT AND COMPLETE REFLECTION OF A UTILITY'S RISK AND RETURN?

A. No. The RP method produces an indirect measure when compared to the DCF method.

Q. PLEASE COMMENT ON THE INDIRECT MEASURE OF THE RP METHOD VERSUS THE MORE DIRECT MEASURE OF THE DCF METHOD.

A. Mr. Moul claims my statement, that the Risk Premium method does not measure

[61] Peoples Statement No. 13-R, p. 43, ln. 24 through p. 45, ln. 7.

the current cost of equity as directly as the DCF, is without foundation. However, in my direct testimony, I have clearly illustrated how the two measures are different.[62] The main reason is that the RP method determines the rate of return on common equity indirectly by observing the cost of debt and adding to it an equity risk premium. The DCF measures equity more directly through the stock information (using equity information), whereas the RP method measures equity indirectly using debt information.

COMPARABLE EARNINGS

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING THE CE METHOD.

A. Mr. Moul claims that using the CE method satisfies the comparability standard established in the *Hope* case. Additionally, he states, "the financial community has expressed the view that the regulatory process must consider the returns that are being achieved in the non-regulated sector to ensure that regulated companies can compete effectively in the capital markets."[63]

Q. DO YOU BELIEVE THAT THE COMPANIES USED BY MR. MOUL IN HIS CE METHOD ANALYSIS ARE COMPARABLE TO PEOPLES?

A. No. As explained in my direct testimony,[64] the companies in Mr. Moul's analysis

[62] I&E Statement No. 2, p. 15, ln. 6 through p. 24, ln. 17.
[63] Peoples Statement No. 13-R, p. 45, ln. 18 through p. 46, ln. 13.
[64] I&E Statement No. 2, p. 37, lines 1-17.

are not utilities, and therefore, are too disparate to be used in a CE analysis. For example, the criteria Mr. Moul uses to choose the companies in his CE group results in the selection of companies such as Altria Group Inc. (Tobacco), Corteva Inc. (Chemical), Harris Corp. (Aerospace/Defense), Ingredion Inc. (Food Processing), Monster Beverage Corp. (Beverage), Quest Diagnostics Inc. (Medical Services), Tyler Technologies (IT Services), and Watsco Inc. (Retail Building Supply) just to name few.[65] All these companies operate in industries very different from a utility company and operate under varying degrees of regulation. Also, a large majority, if not all the companies Mr. Moul uses in his analysis, are not monopolies as utilities largely are. This means that they have significantly more competition and would require a higher return for the added risk. Further, the CE method should be excluded because it is entirely subjective as to which companies are comparable and it is debatable whether historical accounting returns are representative of the future.

MANAGEMENT PERFORMANCE POINTS

Q. SUMMARIZE THE COMPANY'S REBUTTAL TESTIMONY REGARDING MANAGEMENT PERFORMANCE POINTS.

A. Mr. Moul continues to advocate for 25 additional basis points to the cost of equity as he believes Peoples has performed in an exemplary manner. As in his direct

[65] Peoples Exhibit PRM-1, Schedule 14.

testimony, he points to Mr. Huwar's testimony for support.[66] Further, Mr. Moul claims that I simply disagree with Peoples' claimed excellent performance without addressing or refuting any of the items highlighted by the Company's witnesses.[67]

Mr. Huwar reiterates his direct testimony, arguing that the factors he itemizes support 25 additional basis points under 66 Pa. C.S. § 523 for exemplary management performance.[68] He states, "[t]he Company agrees with Mr. Spadaccio in his assertion that it has used its above average performance in areas which fall under its responsibilities under 66 Pa C.S.A. Section 1501 to justify its claim for a management performance adjustment." He claims that I do not dispute the Company's claims of above average performance, rather I just ignore the claimed achievements and effectively disregard the provisions of 66 Pa. C.S. § 523.[69]

Q. WHAT IS YOUR RESPONSE TO THE COMPANY'S REBUTTAL TESTIMONY REGARDING THE CONSIDERATION OF ADDITIONAL BASIS POINTS FOR MANAGEMENT PERFORMANCE?

A. As discussed in greater detail in my direct testimony,[70] I maintain that Peoples, or any utility company for that matter, should not reap additional rewards for programs funded by ratepayers or for meeting their obligations under 66 Pa C.S.A.

[66] Peoples Statement No. 13-R, p. 46, ln. 15 through p. 47, ln. 8.
[67] Peoples Statement No. 13-R, p. 47, lines 1-3.
[68] Peoples Statement No. 1-R, p. 2, lines 4-15.
[69] Peoples Statement No. 1-R, p. 4, lines 12-19.
[70] I&E Statement No. 2, p. 60, ln. 15 through p. 65, ln. 10.

§1501. Also, while I am aware that under 66 Pa C.S.A. §523 the Commission shall consider a utility's performance, it is not mandatory that the Commission grant additional points.

Further, the issuance of equity points to recognize management performance must always be done on a case-by-case basis. Again, as discussed in my direct testimony, the situation in the 2021 Aqua case was very specific to that company rescuing troubled water and wastewater systems and preventing health and safety concerns regarding drinking water. This scenario does not apply to Peoples.

Finally, while I don't dispute the Company's specific accomplishments identified by Mr. Huwar, I must emphasize my primary argument, that for any company, true strong management performance is earning a higher return through its efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to shareholders. Therefore, the benefits of "exemplary performance" are already realized. It is nonsensical to support the idea that since ratepayers fund the initiatives and accomplishments Mr. Huwar mentions, ratepayers should then in turn fund a higher equity return for Peoples' investors.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS CONCERNING THE COMPANY'S CLAIM REGARDING MANAGEMENT PEFORMANCE?

A. Yes. While I am aware of the current levels of inflation and high interest rates, I

believe it is important not to overburden ratepayers.

Additionally, and perhaps most importantly, I must reiterate that most of the programs the Company discusses are ultimately *funded by ratepayers* and any savings resulting from cost cutting measures would likely be offset by the addition of basis points for management performance as ratepayers would have to fund those additional costs as well. This defeats the purpose of efforts to reduce costs to benefit ratepayers.

Q. HAS YOUR RECOMMENDATION REGARDING THE COMPANY'S REQUEST FOR ADDITIONAL BASIS POINTS FOR MANAGEMENT PERFORMANCE CHANGED?

A. No. I continue to recommend that any additional basis points for management performance be rejected.

OVERALL RATE OF RETURN

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING YOUR RECOMMENDED RETURN ON EQUITY OR OVERALL RATE OF RETURN?

A. Yes. A report issued by Regulatory Research Associates, a group within S&P Global Market Intelligence,[71] announced that the average ROE authorized for gas

[71] Regulatory Research Associates, "Major energy rate case decisions in the US – January-March 2024, Quarterly update on decided rate cases," *S&P Global Market Intelligence*, April 19, 2024.

utilities in rate cases decided in the first quarter of 2024 was 9.78%, which is within 18 basis points of my recommended ROE in this proceeding.

Q. HAS YOUR OVERALL RATE OF RETURN RECOMMENDATION CHANGED FROM YOUR DIRECT TESTIMONY?

A. No. My recommended cost of equity and overall rate of return remain unchanged from my direct testimony.

Q. WHAT IS YOUR OVERALL RATE OF RETURN RECOMMENDATION?

A. I recommend the following rate of return for Peoples:

I&E
Summary of Cost of Capital

Type of Capital	Ratio	Cost Rate	Weighted Cost
Peoples Natural Gas Company LLC			
Long-Term Debt	45.33%	4.37%	1.98%
Common Equity	54.67%	9.96%	5.45%
Total	100.00%		7.43%

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission in the Bureau of Investigation and Enforcement ("I&E") as a Fixed Utility Valuation Engineer.

Q. ARE YOU THE SAME ETHAN H. CLINE THAT SUBMITTED I&E STATEMENT NO. 3 AND I&E EXHIBIT NO. 3 ON MARCH 22, 2024?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony submitted by witnesses on behalf of Peoples Natural Gas LLC ("Peoples" or "Company"): Andrew P. Wachter (Peoples St. No. 2-R), Carol A. Scanlon (Peoples St. No. 3-R), Luke Ravenstahl (Peoples St. No. 7-R), Dawn M. Folks (Peoples St. No. 11-R), and Ralph Zarumba (Peoples St. No. 15-R). I will also address the rebuttal testimony submitted on behalf of the Office of Consumer Advocate ("OCA") by Clarence L. Johnson (OCA St. 4R), Office of Small

Business Advocate ("OSBA") by Robert D. Knecht (OSBA St. No. 1-R), and Peoples Industrial Intervenors ("PII") by Richard A. Baudino (PII St. No. 1-R).

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. No. However, I will refer to my direct testimony and exhibit in this surrebuttal testimony.

FPFTY REPORTING REQUIREMENTS

Q. WHAT DID YOU RECOMMEND REGARDING PLANT ADDITIONS THAT PEOPLES PROJECTS TO BE IN SERVICE DURING THE FPFTY ENDING SEPTEMBER 30, 2025?

A. I recommended that the Company provide the Bureau of Investigation and Enforcement and the Office of Consumer Advocate an update that includes actual plant additions and retirements for the twelve months ending August 31, 2024, and for the twelve months ending September 30, 2025 to be submitted no later than March 1, 2026, under this docket number (I&E St. No. 3, p. 3).

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples' witness Folks agreed with my recommendation on page 3 of Peoples Statement No. 11-R.

DISCOUNT RATE CUSTOMERS

Q. WHAT DID YOU RECOMMEND CONCERNING THE DISCOUNT RATE CUSTOMERS?

A. For any discount rate customers that have not had their competitive alternatives verified for longer than ten years at the time of the Company's next base rate case, I recommended that the Company provide a competitive alternative analysis for each of those customers and justify the customers' discount rates as part of its filing in the next base rate case. Further, I recommended that the Commission order the Company to provide a competitive alternative analysis for each discount rate customer that has not been verified within ten years of each of Peoples' prospective base rate cases in perpetuity. (I&E St. No. 3, p. 6)

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. First, the Company reaffirmed that it is in support of ensuring discounts offered are appropriate and in the interests of all ratepayers. Second, the Company disagreed with my recommendation to provide a competitive alternative analysis for each discount rate customer for those customers who have not had their competitive alternatives verified in more than ten years. Instead, the Company proposed to limit any new contract terms to 10 years and for any contract term greater than 10 years, the Company could commit to completing a re-evaluation and verification of the competition every 10 years. (Peoples St. No. 7-R, p. 3)

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED ALTERNATIVE TO YOUR RECOMMENDATION?

A. Yes. The Company's proposal to limit agreements to 10 years and complete re-evaluations and verifications of competitive alternatives every 10 years for longer term contracts is reasonable.

Q. DID YOU RECOMMEND ANY ADJUSTMENTS TO THE COMPANY'S METHOD OF REFLECTING THE REVENUE RECEIVED AND EXPENSES INCURRED TO SERVE DISCOUNT RATE CUSTOMERS IN ITS COST OF SERVICE STUDIES?

A. Yes. I recommended that the discount rate customers be separated into their own, separate customer class with an appropriate allocation and/or assignment of the costs to serve the discount customers. (I&E St. No. 3, p. 10).

Q. DID THE COMPANY AGREE WITH YOUR RECOMMENDATION TO SEPARATE DISCOUNT RATE CUSTOMERS INTO THEIR OWN SEPARATE CUSTOMER CLASSES IN THE NEXT BASE RATE CASE?

A. No. Peoples witness Zarumba stated on page 36 of Peoples Statement No. 15-R that he disagrees with my recommendation, that retaining discount customers on the Peoples system provides a contribution to fixed costs benefiting all customers, and the allocated cost of service associated with these customers is relevant to determine the costs of serving the customer class irrespective of the discount.

Q. IS MR. ZARUMBA'S STATEMENT RESPONSIVE TO YOUR RECOMMENDATION?

A. No. Separating discount rate customers into their own, separate customer class would not have any effect on the retention of those customers as the contracts themselves would not be affected. The purpose of a separate customer class for discount rate customers, as I stated on page 10 of I&E Statement No. 3, is to show whether the revenue received from the classes that formerly included discount rate customers is sufficient to recover the cost of providing service to the various classes. My recommendation does not allocate any additional costs to discount customers, but instead provides additional transparency to the costs that are not recovered due to the discount. Therefore, I continue to recommend discount rate customers be separated into their own cost of service class.

Q. WHAT DID YOU RECOMMEND REGARDING THE COMPANY'S PROPOSAL TO INCLUDE ELECTRIC SERVICE AS A VIABLE COMPETITIVE ALTERNATIVE?

A. As I described on page 11 of I&E Statement No. 3, the inequity in eligibility for discounted rates from electric service being considered a viable competitive alternative would not result in just and reasonable rates. Therefore, I recommended the Commission reject the Company's proposal to include electric service as a viable competitive alternative.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. The Company disagreed with my recommendation for four reasons. First, the Company claimed that electricity is clearly competitive with natural gas. Second, low-income customers will be unaffected because the Company does not anticipate or intend to provide discounted rate options for residential customers. Third, prior to Peoples' last base rate case the Company's tariff included provisions to allow for considering electricity as competitive alternative and that provision was removed as part of the settlement of the Company's last base rate case. Fourth, the Company claims that several other Pennsylvania Natural Gas Distribution Companies ("NGDC") all reference electricity as a competitive alternative on their company websites.

Q. DO YOU AGREE THAT ELECTRICITY IS COMPETITIVE WITH NATURAL GAS?

A. I agree that the cost of electricity and the cost of natural gas are both variable and, at times, electric service could be competitive with natural gas. However, that variability is another reason why electric service should not be considered a viable competitive alternative. It is not reasonable to guarantee discounted rates to a customer for a period of up to 10 years due to an alternative that may not be competitive for the entire period of the contract.

Q. DO YOU AGREE THAT LOW-INCOME RESIDENTIAL CUSTOMERS WOULD NOT BE AFFECTED BY CUSTOMERS BEING GRANTED DISCOUNTED RATES DUE TO ELECTRIC ALTERNATIVES?

A. Yes. If the Company's commitment to not offer discounts to residential customers and to only allocate revenue shortfalls within the same customer class are followed, the low-income residential customers would not be affected by discounted rates.

Q. DID YOU MENTION CUSTOMERS OTHER THAN LOW-INCOME RESIDENTIAL CUSTOMERS WHO COULD BE HARMED BY ELECTRIC-ALTERNATIVE DISCOUNTS?

A. Yes. On page 11 of I&E Statement No. 3, I mentioned that smaller commercial customers who could not afford the investment necessary to switch from natural gas service to electric service would also be harmed by allowing electric service as a viable alternative for the purposes of discounted rates.

Q. DID THE COMPANY ADDRESS THE POTENTIAL HARM TO SMALL COMMERCIAL CUSTOMERS?

A. No. The Company did not address the harm to smaller commercial customers who are unable to afford the investment necessary to switch from natural gas service to electric service. This harm would also apply to smaller industrial customers in the

same manner. Allowing electric service as a viable alternative is unfair to those customers and therefore not in the public interest.

Q. PLEASE RESPOND TO PEOPLES' CLAIM THAT ELECTRIC SERVICE WAS INCLUDED AS A VIABLE ALTERNATIVE IN PEOPLES' TARIFF PRIOR TO THE PREVIOUS BASE RATE CASE AND WAS REMOVED ONLY AS A PART OF THE SETTLEMENT OF THAT CASE (PEOPLES ST. NO. 7-R, P. 6).

A. Peoples' prior inclusion of electric service as a viable alternative does not mean that it should be re-included after the present proceeding. As the Company noted, it was removed from the tariff as part of the settlement of the prior base rate case. Whenever a base rate case is settled, the Commission must nevertheless determine the proposed settlement to be in the public interest. The agreement of the parties to remove electric service as a viable alternative as part of the settlement was accepted by the Commission.

Q. PLEASE ADDRESS THE OTHER NGDCS THAT PEOPLES CLAIMS INCLUDE ELECTRIC SERVICE AS A COMPETITIVE ALTERNATIVE.

A. The Company's statement regarding the other NGDCs allowing electric service as a competitive alternative is misleading. Specifically, Columbia Gas of Pennsylvania's ("Columbia Gas") tariff regarding flexible rate provisions states "In the sworn affidavit submitted by the customer, the following must be

documented: (a) The customer has alternate fuel capability in place and operable or would otherwise construct facilities to obtain *gas service* from an alternate source;"[1] (*emphasis added).* The tariff for National Fuel Gas Distribution Corporation ("NFG") makes no mention of electric service as a viable alternative. Philadelphia Gas Works' tariff only refers to alternate fuel sources in reference to interruptible service, which is not the same as Peoples' discounted rates. The tariffs for Pike County Light and Power Company and UGI Utilities, Inc. – Gas Division each make no mention of discounted rates at all. Additionally, Peoples' mention of cost savings calculators on the websites of each company refers to residential service, which, as established by the Company, is not eligible for discounted service. Therefore, the Company's plea to be treated the same as its peer companies across Pennsylvania is based upon incorrect assumptions and should be rejected.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. For the reasons described above, I continue to recommend the Commission reject the proposal to include electric service as a viable competitive alternative.

[1] Columbia Gas of Pennsylvania, Inc. Supplement No. 181 to Tariff Gas – Pa. P.U.C. No. 9 Second Revised Page No. 69 Canceling First Page No. 69.

WEATHER NORMALIZATION ADJUSTMENT

Q. WHAT DID YOU RECOMMEND REGARDING PEOPLES' PROPOSED WEATHER NORMALIZATION ADJUSTMENT?

A. I recommended that Peoples' Weather Normalization Adjustment ("WNA") be approved on the condition that a 3% deadband is included. My recommendation maintains consistency with the Commission's previous ruling and with existing WNAs of Columbia, NFG, and UGI. (I&E Ex. No. 3, p. 15).

Q. WHAT PARTIES RESPONDED TO YOUR RECOMMENDATION?

A. Peoples witness Scanlon disagreed with my recommendation to include a 3% deadband for the reasons described below. OCA witness Johnson also disagreed based on position of the OCA that the WNA should be rejected entirely.

Q. WHY DOES THE COMPANY NOT AGREE WITH YOUR RECOMMENDATION TO INCLUDE A 3% DEADBAND IN THE WNA?

A. Peoples witness Scanlon did not agree with my recommendation to include a 3% deadband for three reasons. First, Ms. Scanlon claimed that a deadband reduces the effectives of the WNA. Second, Ms. Scanlon claimed that the 2021 Columbia Gas Order should not apply to Peoples' WNA because it compares the full billing cycle of actual Heating Degree Days ("HDD") to the comparable full cycle of normal HDDs and not day-to-day weather fluctuations. Third, Ms. Scanlon

suggested that including a deadband in the WNA would make it more difficult for customers to understand. (Peoples St. No. 3-R, pp. 6-8).

Q. DO YOU AGREE THAT INCLUDING A DEADBAND REDUCES THE EFFECTIVENESS OF A WNA?

A. No. A deadband does not reduce the effectiveness of a WNA because there is no need to adjust for weather within the 3% surrounding the established normal HDD.

Q. WHAT IS THE BASIS FOR PEOPLES' POSITION THAT THE 2021 COLUMBIA GAS ORDER SHOULD NOT APPLY TO ITS WNA PROPOSAL?

A. Ms. Scanlon referenced on pages 6-7 of Peoples Statement No. 3-R that my cite to the 2021 Columbia Gas Order which stated that "without an extraordinary set of circumstances, there is no need for Columbia to reconcile day-to-day temperature variations that are part of normal business." She then implied that this Order does not apply to Peoples' WNA proposal because it does not reconcile day-to-day temperature changes, but rather compares a customer's full billing cycle of actual HDDs to the comparable full cycle of normal HDDs and, therefore, any day-to-day weather fluctuations will be flushed out.

Q. DO YOU AGREE WITH THE COMPANY'S POSITION THAT THE 2021 COLUMBIA GAS ORDER DOES NOT APPLY TO PEOPLES' WNA PROPOSAL?

A. No. While it is true the Peoples' WNA reconciles HDDs on a billing-cycle basis, the 2021 Columbia Gas Order is still applicable because Columbia Gas' WNA, which the Order specifically applies to, also reconciles HDDs on a billing-cycle basis. Therefore, there is no difference between Peoples' proposed WNA and the Columbia Gas WNA that the Order is specifically addressing.

Q. WHAT RATIONALE DOES MS. SCANLON PROVIDE FOR HER POSITION THAT A 3% DEADBAND WILL MAKE THE WNA MORE DIFFICULT FOR CUSTOMERS TO UNDERSTAND?

A. On pages 7-8 of Peoples Statement No. 3-R, Ms. Scanlon uses the example of a case where the variation in weather is 3.1% versus 3.0% in which the WNA would be applied to a 0.1% change in weather. The Company claims that this could create more complexity and confusion for customers.

Q. DO YOU AGREE THAT A 3% DEADBAND WOULD CAUSE ADDITIONAL CONFUSION FOR CUSTOMERS?

A. No. As previously referenced, there are currently several Pennsylvania NDGCs that currently employ a WNA that includes a deadband. I am unaware of any additional customer confusion that resulted from the inclusion of a deadband.

Additionally, in response to the Company's example, there is no difference between a WNA adjustment applied to a 0.1% change in weather caused by a variation of 3.1% versus 3.0% and one caused by a variation of 0.1% versus 0.0%.

Q. DID OCA WITNESS JOHNSON DISAGREE WITH YOUR RECOMMENDATION TO INCLUDE A 3% DEADBAND IN THE COMPANY'S PROPOSED WNA?

A. OCA witness Johnson's testimony was mostly regarding its position that the WNA should be rejected in total. However, regarding my recommendation for the 3% deadband, Mr. Johnson did claim that I provided no calculation or analysis regarding why I selected 3% for the deadband. (Peoples St. 4R, pp. 22-27)

Q. WHY DID YOU SELECT 3% FOR YOUR DEADBAND RECOMMENDATION?

A. My 3% deadband is based on the Commission's prior 2021 Columbia Gas Order which established that 3% represents "normal" weather. I have no evidence that would support a change to the Commission's ruling on what represents normal weather, therefore my recommendation remains consistent with what the Commission previously established.

Q. DO YOU OPPOSE THE ABILITY OF THE OCA TO RECOMMEND THE WNA BE REJECTED IN TOTAL?

A. No. While I do not necessarily share the same concerns detailed by the OCA, I do not oppose its ability to express those concerns regarding the WNA.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. I continue to recommend that any WNA approved by the Commission be on the condition that a 3% deadband be included.

PRESENT RATE REVENUE

WEATHER ADJUSTMENT

Q. WHAT NORMALIZED HDD AND PRESENT RATE REVENUE DID YOU RECOMMEND?

A. I recommended the Company use 5,443 HDD as its normalized HDD in the FPFTY, which was based on the 20-year average calculation. The resulting adjustment is to increase the combined present rate revenue by $9,311,915 from $833,215,509 to $842,527,424 as shown on the table below.

Q. ARE THERE ANY CORRECTIONS YOU NEED TO MAKE?

A. Yes. Peoples' witness Wachter correctly pointed out that I inadvertently did not include an adjustment for Gas Supply Expenses in my direct testimony. Therefore, as stated on Peoples Statement No. 2-R, p. 10, the proposed rate

increase of I&E should be increased by $4,548,129 from $83,525,000 to $88,073,129.

Q. DID THE COMPANY OTHERWISE AGREE WITH YOUR RECOMMENDATION TO USE 5,443 HDD AS ITS NORMALIZED HDD IN THE FPFTY?

A. No. Peoples witness Zarumba provided further discussion of why the Company prefers an average of a 65-year regression analysis and the 20-year average to determine the HDDs in the FPFTY. Specifically, on pages 6-11 of Peoples Statement No. 15-R, Mr. Zarumba provides further detail and comparisons regarding the 65-year regression analysis compared to the regression – average analysis and the 20-year average analysis.

Q. WHAT ADDITIONAL SUPPORT DID MR. ZARUMBA PROVIDE TO SUPPORT THE COMPANY'S PROPOSED HDD?

A. On pages 9-11 of Peoples Statement No. 15-R, Mr. Zarumba provided a comparison of the results of the three types of analyses mentioned above for the time periods of 2003-22 and 1993-22 by totaling the net errors and dividing the net errors by the total HDD for the periods. Mr. Zarumba then claimed that the regression analysis provided the most accurate forecast, the regression – 20-year average produced the second most reliable results, and the straight 20-year average provided the least reliable results.

Q. DOES MR. ZARUMBA'S TESITMONY ASSUAGE YOUR CONCERNS REGARDING THE COMPANY'S PROPOSED HDD PROJECTION?

A. No. While Mr. Zarumba's testimony provides further detail into the statistical reasons why he selected a 65-year regression analysis as compared to other regression analyses, I do not agree that his testimony provides explanation for why the Commission should approve the HDDs generated by averaging the 65-year regression analysis and the 20-year average analysis. In particular, Mr. Zarumba's testimony makes the percentage errors shown on Figures 2 and 3 on page 10 of Peoples Statement No. 15-R look significantly different. However, the actual numerical differences of at most approximately 0.2% are de minimis and do not prove that the results of the regression analysis are significantly better than the 20-year average when compared to actual, historical weather data.

Q. DOES MR. ZARUMBA'S TESTIMONY PROVIDE ANY FURTHER INSIGHT INTO WHY THE COMPANY IS DECIDING TO ALTER ITS HISTORIC METHOD FOR CALCULATING HDDS?

A. No. Mr. Zarumba's statistical analysis does not explain why a rolling, historic average calculation of HDD was historically acceptable to the Company, the Commission, and the other NGDCs as detailed in the chart below, however, is not in the present base rate case.

NGDC	Docket No.	Testimony Ref.	HDD methodology
Columbia Gas	R-2018-2647577	St. No. 2, p. 4	20 yr. Average
Columbia Gas	R-2020-3018835	St. No. 2, p. 5	20 yr. Average
Columbia Gas	R-2021-3024296	St. No. 2, p. 4	20 yr. Average
Columbia Gas	R-2022-3031211	St. No. 2, pp. 4-5	20 yr. Average
NFG	R-2022-3035730	St. No. 13, p. 6	15 yr. Average
UGI Gas	R-2021-3030218	St. No. 8, p. 7	15 yr. Average

Q. DOES PEOPLES TESTIMONY SHOW ANY INCONSISTENCY IN ITS DISCUSSION OF HDD?

A. Yes. Peoples witnesses Scanlon and Zarumba simultaneously compare statistical results to weather predictions while determining HDDs and state that weather is inherently unpredictable when justifying the WNA (Peoples St. No. 3-R, pp. 19-20 and Peoples St. No. 15-R, pp. 4, 12). This inconsistency is similar to that of the Company's request to be treated the same as its peer companies across Pennsylvania when discussing competitive alternatives (Peoples St. No. 7-R, p. 6) but ignoring both peer companies and Commission precedent when discussing WNA, HDDs, and cost of service methodologies as discussed throughout my surrebuttal testimony.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. For the reasons discussed above, I continue to recommend the Commission use 5,443 HDD as calculated by the 20-year average methodology.

COST OF SERVICE

Q. WHICH COST OF SERVICE STUDY DID YOU RECOMMEND THE COMMISSION USE TO ALLOCATE THE REVENUE INCREASES AMONG THE DIFFERENT CUSTOMER CLASSES IN THIS PROCEEDING?

A. I recommended the Commission base its allocation on the peak and average COSS that does not allocate the cost of mains on a customer basis as provided by the Company on Peoples Volume 4, Exhibit No. IV, Section 53.53 (IV-B-1(B)) to allocate the final revenue increases among the different customer classes. (I&E St. No. 3, p. 26).

Q. WHICH PARTIES RESPONDED TO YOUR RECOMMENDATION?

A. Peoples witness Zarumba, OSBA witness Knecht, and PII witness Baudino each disagreed with my recommendation on the basis of the allocation of mains. OCA witness Johnson disagreed with my recommended allocation based on a mathematical error.

Q. WHAT METHODOLOGY FOR THE ALLOCATION OF MAINS DO WITNESSES ZARUMBA, KNECHT, AND BAUDINO SUPPORT?

A. Mr. Zarumba stated on page 24 of Peoples Statement No. 15-R that he does not believe it is appropriate to exclude any customer component from mains classification. Mr. Knecht stated on page 5 of OSBA Statement No. 1-R that he retains his recommendation that the Commission consider all of the cost allocation methods offered by the experts in this proceeding to allocate the rate increase among the classes in a fair and reasonable manner. Mr. Baudino stated on page 17 of PII Statement No. 1-R that he does not agree with relying solely on the results of the Peak and Average CCOSS to allocate the Company's revenue increase and maintains his support of the Company's proposed allocation of the midpoint between the Peak and Average and Demand/Customer studies.

Q. WHAT SUPPORT DO THESE PARTIES PROVIDE FOR IGNORING COMMISSION PRECEDENT?

A. Mr. Knecht referred back to his direct testimony and the "lengthy discussion" of the history of cost allocation where his conclusion was that Commission precedent has only limited applicability to this case (OSBA St. No. 1, p. 31). This statement conclusion was relied upon by Mr. Zarumba on pages 24-25 of Peoples Statement No. 15-R.

Q. DO YOU AGREE THAT COMMISSION PRECEDENT HAS ONLY LIMITED APPLICABILITY TO THIS CASE?

A. No. The history that Mr. Knecht uses to muddy the waters of what should be clear precedent is faulty and misleading. First, Mr. Knecht references the results of cases in which the Average and Excess methodology is used. Second, Mr. Knecht referred to the results of a non-unanimous settlement that included the customer component of mains. Third, Mr. Knecht stated that the Commission has approved the use of a customer component for joint-use electric distribution plants. (OSBA St. No. 1, pp. 28-32).

Q. IS THE HISTORY OF THE AVERAGE AND EXCESS METHODOLOGY PERTINENT IN THIS CASE?

A. No. Neither the Company nor any other parties have proposed the use of the Average and Excess cost of service methodology in this case. Therefore, the Commission's history with this methodology has no bearing on this case.

Q. SHOULD THE RESULTS OF A NON-UNANIMOUS SETTLEMENT SET PRECEDENT?

A. No. It is my understanding that settlements, non-unanimous or otherwise, do not set precedent as they are compromises between parties in order to reach an amicable resolution. In my experience, during settlement discussions allocation methodology is often set aside in favor of finding a mix of revenue allocations that

all parties find reluctantly acceptable. Additionally, Mr. Knecht stated on page 31 of OSBA Statement No. 1 that the Commission declined to issue a finding regarding the appropriate cost allocation methodology to adopt in the non-unanimous settlement while then deciding to use that non-decision as precedent anyway.

Q. SHOULD THE ALLOCATION OF ELECTRIC PLANT BY AN EDC HAVE ANY BEARING ON THE ALLOCATION OF MAINS BY AN NGDC?

A. No. The Commission specifically rejected comparing an electric distribution company with an NGDC because it is an apples-to-oranges comparison, because cost causation for electric distribution companies and NDGCs are different (2021 Columba Gas Order, pp. 214-215).

Q. DID THE OSBA RECOGNIZE THE HISTORY OF THE COMMISSION REJECTING INCLUSION OF A CUSTOMER COMPONENT FOR MAINS COSTS?

A. Yes. On page 28 of OSBA Statement No. 1, Mr. Knecht stated "[w]ith respect to the issue of mains plant classification, the Commission has generally rejected the inclusion of a customer component for mains costs…" Mr. Knecht then attempted to undercut this statement with a reference to joint-use electric distribution plant which, as I established above, has no bearing on this case.

Q. DID THE PARTIES SUFFICIENTLY SUPPORT THEIR CLAIM THAT THE COMMISSION SHOULD INCLUDE A CUSTOMER COMPONENT FOR MAINS CLASSIFICATIONS?

A. No. The underlying theory behind the Company, PII, and OSBA's alternatives, namely that mains should be allocated at least partially by number of customers, has consistently been rejected by the Commission. None of the parties have provided any new data or information in this case that would justify the Commission suddenly reversing course on its well-established position on this issue.

Q. WAS THERE A MATHEMATICAL ERROR IN THE CALCULATION OF THE SYSTEM AVERAGE INCREASE IN YOUR DIRECT TESTIMONY?

A. Yes. Several parties pointed to a mathematical error in my calculation of the system average increase in reference to my gradualism limit on pages 36 and 38 of I&E Statement No. 3. Specifically, the system average increase should be 34.4% and 1.5 times the system average increase should be 51.6% instead of the 35.8% as stated in my direct testimony. (PII St. No. 1-R, pp. 17-18, OCA St. No. 4R, pp. 7-8).

Q. DO YOU WISH TO CHANGE YOUR ALLOCATION RECOMMENDATION?

A. Yes. An analysis of the OCA's proposed allocation and the correction of my

mathematical error shows that my corrected allocation would be similar to that of OCA witness Johnson. Therefore, I withdraw my original allocation and support the allocation proposed by OCA witness Johnson in OCA Exhibit CJ-2.

Q. DID ANY PARTIES ADDRESS THE LGS ML CLASS?

A. Yes. OSBA witness Knecht took issue with the allocation of any cost to the LGS ML rate class as it consists solely of negotiated rate customers and those rates are, therefore, unaffected by tariff rate increases (OSBA St. No. 1-R, pp. 11-12).

Q. HOW SHOULD THE EXCESS REVENUE REQUIREMENT ASSIGNED TO THE LGS ML RATE CLASS BUT NOT RECOVERED THROUGH THE NEGOTIATED RATES BE RECOVERED?

A. As I discussed on pages 9-10 of I&E Statement No. 3, the Company proposed, and I agreed, that any revenue shortfalls from discounted rates should be recovered from other customers in that tariff class. Therefore, any difference between the allocated revenue requirement in the LGS ML class and the revenues recovered from those customers should be recovered from the other LGS customers.

Q. WHAT DID YOU RECOMMEND REGARDING COST OF SERVICE FOR NEGOTIATED RATE CUSTOMERS?

A. On pages 28-29 of I&E Statement No. 3, I recommended that discount rate customers be separated into their own customer class in the Company's COSS in

the next base rate case.

Q. DOES THE FACT THAT THE LGS ML RATE CLASS CONSISTING SOLELY OF NEGOTIATED RATE CUSTOMERS SATISFY YOUR RECOMMENDATION TO SEGREGATE NEGOTIATED RATE CUSTOMERS INTO THEIR OWN RATE CLASS?

A. No. While the LGS ML rate class, at this time, consists solely of negotiated rate customers, not all of the Company's negotiated rate customers fall in that rate class. Therefore, the existence of the LGS ML rate class does not satisfy my recommendation.

Q. HOW DID THE COMPANY RESPOND TO YOUR RECOMMENDATION TO SEPARATE DISCOUNT RATE CUSTOMERS INTO THEIR OWN RATE CLASS?

A. Mr. Zarumba disagreed with my recommendation based on his reasoning that retaining these customers on the Peoples system provides a contribution to fixed costs benefiting all customers and the allocated cost associated with these customers is relevant to determine the costs of serving the customer class irrespective of the discount (Peoples St. No. 15-R, p. 36).

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. Separating the discount customers into their own rate class would have no

effect on the retention of those customers or determining the costs of serving those customers or the other customers in the non-discount rate class. As I stated on page 29 of I&E Statement No. 3, "[a] clear picture of the overall revenue shortfall would allow the Commission to appropriately evaluate the allocation of that shortfall and determine the proper allocation of that shortfall, whether to spread it across all revenue classes or to continue the Company's policy of other customers in the same rate class recovering the revenue shortfall."

CUSTOMER COST ANALYSIS

Q. WHICH CUSTOMER COST ANALYSIS DID YOU SUPPORT IN YOUR DIRECT TESTIMONY?

A. As I stated on pages 31-32 of I&E Statement No. 3, the only result that should be considered when determining the residential customer charge is the $19.96 of the Peak and Average Minimum Cost study. I will further discuss my customer charge recommendation below.

Q. DID ANY PARTIES RESPOND TO YOUR CUSTOMER COST ANALYSIS RECOMMENDATION?

A. Yes. OCA witness Johnson did not agree with my recommendation to determine the residential customer charge based on the Peak and Average customer cost analysis provided by the company because he claims that includes costs that are unaffected by the addition or departure of customers (OCA St. No. 4R, p. 17).

Q. DO YOU AGREE WITH MR. JOHNSON'S ARGUMENT THAT A CUSTOMER COST ANALYSIS SHOULD INCLUDE ONLY COSTS THAT CHANGE WITH THE ADDITION OR SUBTRACTION OF A SINGLE CUSTOMER?

A. No. While I&E has supported this methodology in past cases, the Commission specifically rejected this methodology in the disposition of the fully litigated UGI Utilities, Inc. – Electric Division's base rate (Docket No. R-2017-2640058, p. 174 (Order entered October 25, 2018). Because the direct customer cost analysis methodology was rejected by the Commission, I determined that the costs included in the Company's Peak and Average customer cost analysis were consistent with what was approved by the Commission in the 2017 UGI Electric base rate case.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. I continue to recommend that the Commission base the customer charge under proposed revenue on the Company's provided Peak and Average customer cost analysis.

<u>CUSTOMER CHARGE</u>

Q. DID YOU RECOMMEND ANY ADJUSTMENTS TO THE COMPANY'S PROPOSED CUSTOMER CHARGES?

A. Yes. I recommended that the proposed residential customer charge, at the

Company's full requested increase, be reduced by $1.50 from $21.50 to $20.00 in order to be consistent with the results of the Peak and Average customer cost analysis. Additionally, as discussed below, I recommended that the customer charges be included in any scale back in the event that the Commission grants less than the full increase. (I&E St. No. 3, pp. 33-34)

Q. DID ANY PARTIES RESPOND TO YOUR CUSTOMER CHARGE RECOMMENDATION?

A. Yes. The Company stated that my recommended residential customer charge is similar to the Company's proposal (Peoples St. No. 15-R, p. 38). OCA witness Johnson disagreed with my customer charge recommendation based upon our differing approaches to the customer cost analysis (OCA St. 4R, p. 18).

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. I continue to recommend the residential customer charges at the fully requested increase be set at $20.00 and be included in any scale back of rates as discussed below.

PROPOSED REVENUE ALLOCATION

Q. HOW SHOULD THE COMPANY'S RATES BE DETERMINED?

A. The Company's rates should be set based on the cost of service study the Commission determines is the most reasonable method of allocation in the present

base rate proceeding. As I discussed above, I believe that the OCA's proposed allocation is the most reasonable method of allocation.

SCALE BACK OF RATES

Q. WHAT SCALE BACK METHODOLOGY DID YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE?

A. If the Commission grants less than the Company's requested increase, I recommended that the Commission scale-back rates based upon the cost of service study that it approves in a proportional manner. I recommended all customer charges and usage rates for each rate class that received a proposed increase should be scaled back. (I&E St. No. 3, p. 38).

Q. DID ANY PARTIES DISAGREE WITH YOUR SCALE BACK RECOMMENDATION?

A. No.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

COMMONWEALTH OF PENNSYLVANIA

March 28, 2024

The Honorable Mary D. Long
Administrative Law Judge
Pennsylvania Public Utility Commission

Pittsburgh, PA 15222

Re: Peoples Natural Gas Company LLC (Peoples Natural Gas Division and Peoples Gas Division) Base Rate Case Filing Original Tariff GAS – PA PUC No. 48 / Docket No. R-2023-3044549

Dear Judge Long:

Pursuant to Interim Order dated March 25, 2024, enclosed please find Direct Testimony and Exhibits of Robert D. Knecht, labelled OSBA Statement No. 1 REVISED and associated Exhibits IEc-1 through IEc-3, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-captioned proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

ROBERT D. KNECHT

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Non-Residential Rate Classes
Allegheny Valley Connector
Gathering System
Cost Allocation
Flex Rates
Revenue Allocation and Rate Harmonization
Rate Design
Weather Normalization Clause
UPC Trends

Date Served: March 28, 2024

Date Submitted for the Record: _____

DIRECT TESTIMONY OF ROBERT D. KNECHT

1. Introduction and Context

Q. Mr. Knecht, please state your name and briefly describe your qualifications.

A. My name is Robert D. Knecht (*he/Mr.*). I am an independent economic consultant, specializing in the preparation of analysis and expert testimony in the field of regulatory economics. For more than 30 years, I was a Principal IEc, and I served as Treasurer of that firm for 15 years. I obtained a B.S. degree in Economics from the Massachusetts Institute of Technology in 1978, and a M.S. degree in Management from the Sloan School of Management at M.I.T. in 1982, with concentrations in applied economics and finance. My résumé and a listing of the expert testimony filed in utility regulatory proceedings during the past five years are included in Exhibit IEc-1.

I have represented the OSBA in numerous base rate proceedings before the Commission since 1994, for both electric and natural gas utilities. I have not, heretofore, participated in a Peoples Natural Gas base rate proceeding, although I did testify in earlier proceedings involving a forerunner to the Peoples Gas Division, the T.W. Phillips Gas & Oil Company. I also participated in Peoples Natural Gas proceedings involving its acquisition by Aqua America, Inc. at Docket No. A-2018-3006061 et al., and in the tax repairs proceeding at Docket No. P-2020-3021191.

Q. Please describe your assignment in this matter.

A. I am appearing in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). The OSBA requested that I review the Peoples Natural Gas Company LLC ("Peoples" or "the Company") filing to evaluate whether the rates proposed for small business customers are consistent with sound economics and regulatory principles. My analysis focuses primarily on issues of cost allocation, revenue allocation and rate design, along with targeted analysis of certain revenue requirement issues. If I have not addressed a particular issue, it cannot be inferred that I agree with Peoples' proposal for that topic.

Q. Please provide a brief description of the organizational background for the Company.

A. Working backward in time:

- Peoples currently consists of two divisions, the Peoples Natural Gas Division ("PNG Division") and the Peoples Gas Division ("PG Division"). [1]
- Both divisions serve geographical areas in southwestern Pennsylvania.[2]
- The current company resulted from the formal merger of the two predecessor companies to those divisions, approved by the Commission in August 2022.
- Both of these Companies were acquired from the investment firm SteelRiver Infrastructure Partners by Aqua America, Inc. (now Essential Utilities, Inc.), in a transaction approved by the Commission in early 2020.
- While it was owned by SteelRiver, the Peoples Natural Gas entity acquired the Equitable Gas Company in 2013.

[1] At present, the PNG Division and the PG Division have separate tariffs, although certain utility functions have been consolidated, and tariff structures have been partially harmonized. To try to maintain clarity, I refer to the combined entity as "Peoples" or "the Company," and the individual entities as the "PNG Division" and the "PG Division."

[2] Several counties served by Peoples are also served by Columbia Gas of Pennsylvania in the southwestern part of the Commonwealth.

- Prior to its acquisition by SteelRiver in 2011, the Peoples Gas entity was the T.W. Phillips Gas & Oil Company.

Q. Please provide the context for your evaluation of the Company's filing.

A. OSBA attempted to obtain the Company's strategic plan and its long-term load forecast in order to provide context for my evaluation. The Company apparently has neither, aside from an unprioritized listing of strategic goals and a reference to its LTIIP.[3] The LTIIP is essentially a business-as-usual capital investment program, wherein the Company plans to replace its obsolescent facilities, to continue its automated meter read program, and to increase over-pressure protection efforts..[4]

The key elements to the Company's filing that are addressed in this testimony are the following:

- An overall increase in revenues of $156 million for the fully projected future test year ("FPFTY") ending September 30, 2025, of which $152.7 million comes from base rates, an increase of approximately 30.5;[5]

- Tariff unification and harmonization of most base rates and gas supply "demand" charges for the PNG and PG Divisions;[6]

- Differentiated increases by rate class, ranging from modest net decreases (the PG Division SGS and MGS classes) to a nearly 50 percent increase (the PNG Division Rate SGS class).[7]

---

[3] OSBA-I-1

[4] https://www.puc.pa.gov/pcdocs/1681422.pdf

[5] IEc WP2 Reevenue Allocation Rate Design. My electronic workpapers are listed in Exhibit IEc-2 and will be circulated with this testimony. for this testimony, I include DSIC, TRS, TCJA, STAS and MFC tariff charges in "base rates." Gas cost revenues are excluded.

[6] The PNG Division TRS rider and the PG Division TCJA rider will remain differentiated, and some gas cost charges will be differentiated pending the next Section 1307(f) proceeding.

[7] IEc WP2.

- A 34 percent increase to gas suppliers for use of the gathering system, which will recover 28 percent of gathering system costs;[8]

- Implementation of a new Rate MLS mainline service class for large customers sited in close proximity to transmission lines;

- Adoption of a new mechanism for deriving normal heating degree days ("HDDs");

- Implementation of a weather-normalization adjustment tariff mechanism for the Residential, SGS and MGS classes.

Q. Would the large proposed rate increase for Peoples result in rates for small business customers that are outside the range of those at other Pennsylvania natural gas distribution companies ("NGDCs")?

A. Pure like-to-like comparisons across utilities are difficult, and conclusions from such comparisons should be viewed with some caution. Nevertheless, I compiled a comparison of base rates charges across Pennsylvania NGDCs for residential and small/medium commercial customers, summarized in Table IEc-1 below.

[8] Exhibit RNZ-3.

Table IEc-1 Residential and Small Commercial Average Rates ($/mcf)		
	Residential	**Small Commercial**
National Fuel Gas	$5.10	$3.77
PNG Division Current	**$5.77**	**$3.50**
UGI Gas	$7.05	$4.93
PECO Gas	$7.12	$5.62
PNG/PG Proposed	**$8.32**	**$5.55**
PG Division Current	**$8.74**	**$6.50**
Philadelphia Gas Works	$9.91	$6.93
Columbia Gas of PA	$11.56	$8.45
Base rates exclude PGC, DSIC, GPC, MFC, STAS, TCJA, TRS, and Universal Service charges. Sources: IEc WP6 Rate Comparison		

Table IEc-1 generally indicates that the proposed increase would move rates for the PNG Division from among the lowest in the Commonwealth to the upper tier of rates, although remaining below those for PGW and Columbia Gas of PA.[9]

Q. How is the balance of your testimony organized?

A. This testimony has the following sections:

- Section 2 provides an overview of the non-residential rate classes in both the PNG and PG Divisions.

[9] The PGW rates reflect the results of a recent PGW base rates proceeding. It is my understanding that Columbia Gas will submit another base rates filing in the near future.

- Section 3 addresses the Company's proposed rate treatment regarding costs associated with the Allegheny Valley Corridor ("AVC"), both in general and regarding the Company's proposed changes in this proceeding.

- Section 4 addresses the rate treatment for costs associated with the Company's natural gas gathering system.

- Section 5 addresses cost allocation issues.

- Section 6 addresses the Company's proposals with respect to competitive "flex" rate customers, as well as the Company's proposal to implement a Main Line Service ("MLS") rate.

- Section 7 addresses the Company's proposals for revenue allocation among the rate classes, as well as the proposal to harmonize the PNG Division and PG Division rates.

- Section 8 addresses rate design issues affecting small and medium business customers.

- Section 9 presents out evaluation of the Company's proposals with respect to defining "normal" weather conditions, and the related proposal for a weather normalization adjustment ("WNA") mechanism.

- Section 10 presents the results of my statistical analysis of trends in gas use-per-customer.

2. Review of Non-Residential Rate Classes

Q. Before getting into the details of your analysis of the filing, please summarize the rate classes under which businesses take service from Peoples.

A. The Company's tariff has a number of schedules under which non-residential customers take service. These tariff schedules are generally distinguished by size of customer as measured by annual throughput and type of service. Service types include sales service, in which customers purchase gas supplies from the utility, and transportation service, in which customers purchase gas supplies from competitive natural gas suppliers (NGSs). Customers who take transportation service may purchase balancing service from the Company.

The Company has been harmonizing the tariffs for the PNG Division and the PG Division over the past few years, such that rate class names and eligibility requirements are the same. However, substantial tariff charge differences remain.

Both divisions offer the major categories of non-residential service described below. The PNG Division tariff has separate tariff schedules for sales service to the individual rate classes, and then a standalone tariff schedule for transportation service which has separate charges for each sub-class. The PG Division has separate rate schedules for each sales category and each transportation service category. The Company proposes to retain the PNG Division approach in the consolidated tariff.

The Company's tariff generally includes three levels of non-residential service, denoted SGS, MGS and LGS.[10] Rate SGS applies to customers with annual volume up to 1,000 mcf; MGS applies to customers with annual volume from 1,000 to 25,000 mcf, and LGS applies to customers with volume above 25,000 mcf.

In total, the non-residential rate classes represent about 58 percent of the Company's total throughput, or about 75.0 of Peoples' total 130.4 billion cubic feet ("Bcf") in the FPFTY.

[10] A separate tariff schedule applies to transportation customers, namely Rate GS-T, but the base rate charges align between the sales and transportation rates.

Customer size varies widely, ranging from small businesses that consume less than 100 mcf per year to very large industrial customers with more than one Bcf per year.

Finally, the tariffs for the Company's larger rate classes allow for discounted, negotiated "flex" rates, for customers who have the potential to economically use an alternative fuel or to bypass the distribution system to interstate pipelines or local supply. Rates for these customers are therefore set based on market or competitive alternative conditions rather than utility cost to serve. To allow the Company to set regular tariff rates based on allocated cost, the customers who currently have flexed rates are segregated into a separate class for cost allocation purposes.

Table IEc-2 below provides an illustrative summary of the key attributes of the non-residential customers in each rate class in each division.

Table IEc-2
Summary of Peoples Non-Residential Rate Classes

	PNG Division				PG Division		
	SGS	**MGS**	**LGS**		**SGS**	**MGS**	**LGS**
Customers	44,507	5,074	232		3,930	441	29
Class Bcf per Year	9.65	16.21	37.59		0.83	1.51	9.23
Avg mcf/Customer	217	3,194	162.317		211	3,420	321,184
Load Factor	19.7%	23.4%	53.8%%		15.3%	18.2%	58.2%
Transport %	31%	80%	99%		15%	63%	100%
Negotiated Rate %	0.1%	0.5%	54.8%		0.1%	1.9%	71.1%
Avg. Current Rate excl. COG $/mcf	$3.93	$3.00	$1.25		$6.76	$4.79	$0.71

Notes: Transport and negotiated rate percentages are volumetric.
Sources: IEc WP2 Revenue Allocation Rate Design

I have a few observations regarding the SGS and MG classes. First, the PNG Division SGS and MGS classes are more than 10 times larger than the PG Division in total, although per-

customer average annual volumes are about the same. PG class load factors are also moderately lower. Shopping rates are a little lower at PG than PNG. Few SGS or MGS customers are eligible for negotiated rates in either division, but a majority of Rate LGS volumes are subject to flex rates. Flex rates are the primary reason for the much lower average base rates paid by LGS, compared to the SGS and MGS customers.

As part of my review of non-residential customers, I attempted to develop an understanding of the mix of customers in the general service classes by business category. The Company does not track this information.[11] For the non-residential classes, the Company does track its revenues segregated between "commercial" and "industrial" customers. However, like many utilities, a "commercial" customer is any non-residential customer that does not qualify as industrial, or which is a master-metered multifamily residence.[12] A summary of the commercial/industrial split is shown in Table IEc-3 below and detailed further in IEc WP2 Revenue Allocation Rate Design. For each rate class, Table IEc-3 reports the percentage of combined PNG/PG load, split between commercial/industrial, and split between sales/shopping. In general, virtually all customers and over 90 percent of the volumes in both the SGS and MGS classes are deemed to be "commercial." SGS customers, however, are much more likely to take sales service for gas supply from the Company, while MGS customers are more likely to take transportation service (i.e., "shop"). LGS customers, by contrast, are much more weighted toward the "industrial" category, and the vast majority of both commercial and industrial LGS loads are served through transportation service.

[11] OSBA-I-2. This response includes a reference to OCA-VI-1, but that response is unrelated to the makeup of the general service classes. The Pennsylvania Small Business Advocate has directed us to obtain detail regarding the makeup of small business customers taking service from certificated public utilities as part of my review. I am advised by counsel that OSBA may challenge the adequacy of the Company's responses in this respect in settlement negotiations or in its briefs in this matter.

[12] See Appendix D, Proposed Tariff, Original Page No. 8. Based on the language in the tariff, it appears that any residential building that is not individually metered is deemed to be "commercial."

Table IEc-3 Load Mix for Peoples Non-Residential Customers			
	Total	**Sales**	**Transport**
SGS Summary			
Commercial	99.3%	69.5%	29.8%
Industrial	0.7%	0.5%	0.2%
Total	100.0%	69.9%	30.1%
MGS Summary			
Commercial	92.0%	20.7%	71.3%
Industrial	8.0%	0.7%	7.3%
Total	100.0%	21.3%	78.7%
LGS Summary			
Commercial	16.1%	0.4%	15.8%
Industrial	83.9%	0.0%	83.8%
Total	100.0%	0.4%	99.6%
Source: IEc WP2			

The Company's tariff defines a "small business customer" as either a commercial or industrial customer with annual usage below 300 mcf, regardless of whether that customer is, in fact, a business. Using this definition, all small businesses take service under Rate SGS, but many Rate SGS customers would not qualify as small businesses.[13] As such, it is impossible to derive any information regarding the makeup of small businesses in the Company's customer base.

[13] Pursuant to the Small Business Advocate Act, a small business is "[a] person, sole proprietorship, partnership, corporation, association or other business entity which employs fewer than 250 employees and which receives public utility service under a small commercial, small industrial or small business rate classification."

For this testimony, I focus my attention on impacts of the Company's proposals on the Rate SGS classes, although I also consider impacts on Rate MGS customers, who likely have fewer than 250 employees and who are often otherwise unrepresented in rate proceedings.

3. <u>Allegheny Valley Connector ("AVC")</u>

Q. Please provide your understanding of the AVC assets.

A. The record evidence is minimal. Ms. Scanlon indicates only that "[t]he AVC facilities consist of transmission and storage facilities that are used to provide service to customers."[14] In response to OSBA request for a more detailed explanation, the Company indicated only that "AVC capacity is able to provide supply to all regions of PNG and PG through multiple delivery points and company interconnects, with the exception of the Grove City area which does not have a physical delivery point from AVC."[15] As such, I am aware only that the AVC facilities represent upstream transmission and storage capacity. Peoples categorizes the AVC costs as gas supply costs, pursuant to advice of counsel.[16]

Q. How are the AVC costs recovered from customers?

A. The Company deems that, for legal reasons, these costs are upstream gas supply costs to be recovered in gas supply charges. Best I can determine, these costs are allocated to the various rate classes based on an allocation method that was put in place in 2013 when the assets were absorbed into the current company through the merger between Peoples and Equitable, and the allocation factors at the time remain in place, regardless of changes in class volumes or other factors since that time.[17] The costs are recovered in non-bypassable "demand" charges to all customers in each rate class, both sales and transportation service.[18]

Q. Why are the AVC costs an issue in this proceeding?

---

[14] Peoples Statement No. 3 at 22.

[15] OSBA-I-13(a).

[16] OSBA-I-13(b) Attachment

[17] OSBA-I-13. Note that it is not clear whether the allocation factors reflect actual usage of the AVC system, as the Company did not or could not provide volumes on the system by rate class in OSBA-I-13(e).

[18] The Company refers to the AVC charge as the "AVC demand charge," but it is in fact a volumetric charge. The AVC demand charge applies to both sales and transportation service customers.

A. The Company currently collects these costs only from PNG division customers.

It proposes to expand recovery of these costs to encompass the PG Division customers. The Company does not propose any conceptual change to the revenue requirement for AVC costs, the cost allocation method, the long-standing allocators, or the rate recovery method for these costs. The impact of the proposed changes is to shift some gas supply cost recovery from PNG division customers to PG division customers, in the amount of about approximately $6.5 million. This change serves to only slightly offset a portion of the proposed large rate increase for PNG Division customers in this proceeding.

Q. Do you have any issues regarding the Company's approach to AVC costs?

A. I have preliminary concerns, subject to developing a better understanding of the history for this issue and for consideration as to whether this issue is better addressed in the next PGC proceeding.

With those caveats, the Company's approach has potentially problematic aspects. First, the allocation of costs has not been updated since about 2013. Adding the PG customers into the recovery base will not affect the cost allocation because the allocators are fixed. This does not appear to be consistent with the Company's logic that the PG customers may all be able to benefit from the AVC capacity. If that is, in fact, the case, then the allocators should change. For example, suppose all of the PG customers were small businesses. If all of those customers can now share in the benefit of the AVC capacity, surely the allocation of AVC costs to small businesses should increase.

Second, the recovery of costs from both sales and transportation customers does not appear to reflect the relative use of the AVC system. Per OSBA-I-13(e), some 70 percent of volumes on the AVC system are related to retail sales customers, whereas retail sales customers comprise 46 percent of overall load.

Third, the approach charges all customers for the AVC capacity, regardless of whether the customers directly benefit from that capacity. For Peoples' gas sales customers, this is a reasonable approach, because that charge blends a variety of upstream transmission and storage costs. However, it is less obvious why it is appropriate to apply the AVC demand

charge to all transportation customers. Socializing the cost of the AVC capacity to all transportation appears to provide an inequitable competitive advantage to NGSs who are able to use that capacity relative to those who cannot. An alternative approach would be to impose usage-based charges on transportation service customers or their NGSs through the supplier tariff. In this alternative, only those transportation customers who use the AVC would be obligated to pay for it.

Q. What is your recommendation at this time?

A. Based on the information available, I recommend that the Commission defer any approval of the approach proposed by the Company to the PGC proceeding. I will continue to evaluate this issue and consider the responses of other parties in rebuttal testimony before offering a specific proposal.

4. <u>Gathering System Rate Treatment</u>

Q. Please provide your understanding of Peoples' gas gathering system.

A. Peoples' gathering system consists of a series of gas pipes, compressors and metering/regulating equipment that are interconnected to gas producing facilities, to transport gas from the wellhead into the gas distribution system, where it is then transported to end users. Gathering volumes have been declining, but still represent some 28 BCF. The gathering system generally operates at low pressure. About 2400 load customers are served directly from the gathering system.[19] Mr. Zarumba derives the Company's revenue requirement for the gathering system at $33.0 million.[20]

Q. Please explain the Company's proposed cost allocation and cost recovery mechanism for its gathering system costs.

[19] OSBA-I-15(d)

[20] Exhibit RNZ-3.

My understanding of the Company's allocation method is based on the allocation workpapers supplied by the Company in discovery.[21] The Company proposes to allocate gathering system costs as follows.

- Gathering system plant costs in accounts 325 through 337 are classified as volumetric, and then allocated among the various rate classes using an allocation factor based indirectly on class volumes, as described below.

- To develop the allocators, the Company first splits the costs between PNG and PG Divisions, at a 73/27 ratio, which appears to be based on the Company's judgment regarding the use of the gathering system.[22]

- Each division's cost is then split between system gas supply and transportation service, presumably also based on the Company's estimate of usage of the gathering system. A significant majority of the costs are ascribed to transportation customers, at 88 percent for the PNG Division and 76.5 percent for the PG Division.[23]

- For each division, the segregated costs are then allocated based on respective class volumes; i.e., the sales service cost portion being allocated based on sales volumes and transport service costs are allocated based on transportation service volumes. Transportation service costs are further segregated between Priority One and other transportation service customers by class in this allocation, based on HTY volumes.

- Revenues from gas producers are then deducted from allocated costs, and the balance of the costs are then recovered as part of base distribution rates from all customers within each class. Mr. Zarumba calculates that gas suppliers will provide revenues of $7.0 million at current rates and $9.4 million at the Company' proposed

[21] OCA-V-001g Attachment.

[22] See OSBA-I-15(c).

[23] See OCA-V-001g Attachment.

rates, representing about 21 and 28 percent of the $33.0 million in gathering system costs respectively.

Q. Is this a reasonable approach?

A. Conceptually, this approach has a couple of problems.[24]

First, the Company indicates that the primary benefits of the gathering system are (a) that it provides access to lower cost gas for Peoples' customers, and (b) it provides access to market for gas producers.[25] As such, the gathering system is a gas supply asset, and it would be more properly considered to be part of gas supply costs.[26]

For system gas supply costs, it would not be unreasonable to simply treat these costs in the same manner as all other gas supply costs and recover the costs in the volumetric PGC charge to all gas sales customers. In that way, the benefits of lower cost gas and the costs of the gathering system are balanced.

For transportation customers, however, the benefits accrue only to transportation customers who purchase gas that is supplied through the gathering system. Thus, a volumetric charge to all transportation customers would contain a mismatch between the customers who use the gathering system and those who pay for it.

The problems are compounded by the allocation approach.

First, it is unclear why the Company chooses to allocate the costs among the rate classes based on all volumes, once the costs have been split between sales and transportation. A more accurate approach would be to allocate the costs based on the actual volumes in the

[24] The issue of allocating gathering system costs may be further complicated by the fact that that the costs for the Goodwin-Tombaugh project may be included in the gathering system costs per OCA-VIII-23. However, Exhibit DF-1 indicates that the G-T costs are being assigned to distribution mains account 376. I therefore assume that G-T costs are not reflected in the costs functionalized to "gathering" in the Company's ACOSS.

[25] OSBA-I-15(a).

[26] Although the Company does not make the argument, it may be reasonable to consider that the gathering system allows the Company to avoid high pressure transmission costs, as I understand that the supplies are delivered into the distribution system at low pressure.

gathering system used by each class. This approach may, however, be precluded by data availability issues, if the Company is unable to segregate usage of the gathering system by NGSs on a class-by-class basis.[27]

A more fundamental problem is that the Company proposes to recover gathering system costs from all customers within each class, irrespective of the fact that the benefit of the gathering system applies almost entirely to transportation service customers. For example, Peoples assigns Rate MGS 16.8 percent of gathering system costs. However, only a small fraction of the gathering system volumes is related to sales service customers, estimated by Peoples at 6.5 percent. Meanwhile, the sales customer share of overall MGS volumes is 21.3 percent. Because the gathering system costs are recovered equally from sales and transport customers, the Company's approach to allocating gathering system costs implicitly requires MGS sales customers to pay the gathering system costs incurred by transportation customers.[28]

A conceptually superior method would be to recover gathering system costs from the PGC customers, NGSs and gas producers who use the system.[29] This approach would result in a more accurate assignment of costs in two ways, first through a more accurate allocation of the costs among rate classes based on actual usage, and second through a more accurate recovery of costs within each rate class from the customers who actually benefit from the gathering system.

Q. Do you have a specific recommendation?

A. It is unlikely that the Company or the Commission would implement a change of this magnitude in the recovery method for gathering system costs without a thorough evaluation by the Company. I therefore recommend that the Commission direct the Company to

[27] OSBA-I-15.

[28] IEc WP4.

[29] A reasonable share of costs related to serving load customers on the gathering system should be deducted from the gathering system revenue requirement.

evaluate an alternative approach to recovery of gathering system costs in its next base rates proceeding. Conceptually, the Company should:

- Develop a total revenue requirement for the gathering system using the approach posited by Mr. Zarumba;
- Deduct the revenues derived from producers, using the judgement-based approach currently used by the Company;
- Evaluate whether a credit for avoided high-pressure transmission costs is appropriate;
- Deduct a reasonable cost for the deemed cost to serve the end-use customers on the gathering system, potentially reflecting a percentage of the distribution revenues provided by those customers;
- Segregate the net gathering system costs between sales and transportation service customers, using the best information available;
- Recover the sales portion of the costs in the PGC;
- Recover the transportation portion of the costs through a charge in the gas supply tariff to the NGSs and transportation customers who directly rely on the gathering system for supply.

5. Cost Allocation

5.1 Cost Allocation Overview

Q. What is the purpose of a utility's allocated cost of service study ("ACOSS")?

A. The primary criterion for setting regulated utility rates is the cost incurred by the utility for providing the service.[30] To assign costs to specific customers, utilities aggregate customers into rate classes, within which the customers have similar load sizes, seasonal consumption, peak demand patterns, and other characteristics. An ACOSS is an analytical tool with which the utility's total cost (or "revenue requirement") is allocated among each of the rate classes. These allocated costs are then used as a key input in determining the total revenues that the utility plans to recover from each rate class through tariff rates.

An ACOSS is generally described as consisting of three steps. The ACOSS first segregates costs based on the specific functions performed by the utility ("functionalization"). For an NGDC, this typically involves gas supply, transmission, storage/load balancing, distribution and customer service. In this matter, the Company also has a separate gathering system function. The Company also proposes to sub-functionalize its distribution service into "regulated pressure" and "low pressure" service.

The second step is denoted "classification," in which costs are grouped in categories based on a cost causation factor. For NGDCs, these factors are usually (a) costs that vary with overall consumption of gas, (b) costs that vary with peak demands, and (c) costs that vary with number of customers. For the first category, the nomenclature includes "energy-related," "commodity-related," or "average demand-related" costs, which are all arithmetically equivalent. Costs that vary with peak demand are those related to aspects of the system that must be sized to meet maximum load conditions. Different components of the utility system are often sized to meet different peak demand measures. The third category are costs that vary with the number of customers, including meters and service lines, and (sometimes) aspects of the distribution system associated with interconnecting customers. I note that some gas utilities also include classification categories involving

[30] The Commonwealth Court affirmed this basic principle, referring to cost of service as the "polestar" criterion. Lloyd v. Pennsylvania Public Utility Commission, 904 A.2d 1010, 1020 (Pa. Cmwlth. 2006).

"excess demand" or "excess volumes," typically for costs related to load balancing. These classifications represent the difference between peak demand and average demand, or peak season volumes and average volumes.

The third step is "allocation," in which the classified costs are distributed among the rate classes. Allocation methods generally include direct assignment methods, in which costs are tracked in the accounting system by class, allocation using physical factors including annual volumes, peak demands, or customer count (weighted or unweighted), of allocated using "internally developed allocators," in which allocation factors for certain general cost items (e.g., general plant) are indirectly developed based on the allocation of more direct costs (e.g., distribution plant, or distribution labor).

In using the results from an ACOSS to develop class revenue requirements, utilities and regulatory authorities usually have a longer-term goal of moving the revenue recovered from each class as close as possible to the costs allocated to that class. That is, in each proceeding, regulators try to move class revenues more into line with cost-based rates. Thus, rate classes whose revenues substantially exceed allocated costs are assigned either relatively low rate increases or rate decreases. Rate classes whose revenues are well below allocated costs are assigned larger rate increases than those classes whose revenues are only slightly below allocated costs.

In addition to class revenue requirement issues, an ACOSS can provide useful cost information regarding the specific nature of utility tariff charges. In particular, an ACOSS provides a cost basis for the relative magnitude of the various individual tariff charges, including the customer charge, demand charges, and commodity charges.

Q. How does an ACOSS assign costs to the various rate classes?

A. The underlying principle of an ACOSS is that costs are assigned to the rate classes that *cause* the utility to incur those costs. This principle of cost causation is both equitable and economically efficient. It is equitable because costs are borne by those customers who cause them. It is economically efficient because the price signal for consumption from a particular rate class is reasonably consistent with the cost incurred by the utility to provide the service. In that way, the consumer receives the correct price signal for determining whether to

purchase more or less of the utility service. In effect, the consumer balances the value received from the purchase of that service against the utility's cost of providing the service.

Q. What are the major areas of contention for an NGDC ACOSS?

A. Natural gas distribution mains typically represent a very large share of an NGDC's rate base. Moreover, the methods used by NGDCs for assigning those costs among classes, most notably the "classification" step but also functionalization and allocation issues, produce wildly disparate results. As such, the methods chosen for assigning mains costs among the various rate classes are usually the most contentious in distribution base rates proceedings.

Q. What has the Company put forward with respect to ACOSS analysis?

A. On behalf of the Company, Mr. Ralph Zarumba has filed an electronic ACOSS model as CONFIDENTIAL Exhibit 11. The electronic model contains the flexibility to be simulated across several dimensions. First, costs can be allocated separately for the PNG Division and the PG Division, or as a combined entity. Second, the model can be simulated separately with and without the Company's proposed Rate MLS. Third, the model can be simulated under alternative mains classification and allocation methods.

Q. Have you developed an alternative version of the ACOSS?

A. Although my normal procedure is to develop an independent model to verify the calculations in the Company's filing, I am unable to do so in this proceeding due to the significant complexity of the model and resource constraints. However, I have used the Company's electronic model to develop an alternative simulation reflecting the recommended methodological changes I present in this testimony.

For the reasons discussed in Section 7 below, I did not see a need to develop separate simulations for the PNG and PG Divisions, nor was it necessary to develop separate simulations that segregate the proposed Rate MLS class. The revenue allocation and rate implications of harmonizing rates between the PNG and PG Divisions are also discussed in Section 7.

5.2 Mains Cost Functionalization

Q. Please describe the issue related to the functionalization (or sub-functionalization) of gas distribution mains in this proceeding.

A. As detailed by Mr. Zarumba, the Company proposes to segregate its gas mains costs between those that operate at "regulated pressure," and those that operate at "low pressure." The Company proposes to assign the regulated pressure system costs to all customer classes (excluding demands for those customers who take service directly from transmission mains), while allocating the low-pressure system costs to all customers in the R, SGS and MGS rate classes.

Q. Is this proposal reasonable?

A. In general, I agree that making a serious effort to better align specific distribution system assets with the customers who are served by those assets will improve cost allocation.

However, in this case, Peoples has employed an inappropriately biased approach. In particular, the Company has credibly concluded that low-pressure system assets should not be assigned to the Rate LGS class, because no LGS customers take service at low pressure.[31] However, the Company has unreasonably assumed that all regulated pressure system assets are used to serve customers in the downstream low-pressure system. In fact, it is likely that some significant aspects of the regulated-pressure system are used only to serve customers who take service at the higher pressure, and therefore should not be assigned to customers taking service at low pressure. Moreover, the Company has assumed that all customers in the R, SGS and MGS classes take service at low pressure, when in fact the Company reports that about 453,000 customers take low-pressure service whereas the Company allocates the low-pressure system to 700,000 RS, SGS and MGS customers.[32] This problem is

[31] OSBA-I-16.

[32] OSBA-I-16(e). I note that OSBA-I-17(a) appears to suggest that all RS, SGS and MGS customers take service at low pressure, although the Company may have misinterpreted that IR given the figures provided in OSBA-I-16.

compounded by the Company's determination that, for classification purposes, there is no distinction between the regulated-pressure and low-pressure systems.[33]

A better approach for this type of sub-functionalization was undertaken by Columbia Gas of Pennsylvania.[34] In particular, based on its analysis for its 2019 base rates case, Columbia determined that some 28 percent of its regulated pressure system costs were not associated with providing service to lower pressure systems.[35] Since that time, however, Columbia has determined that the sub-functionalization is no longer necessary or appropriate, as it is aggressively phasing out its low-pressure operations.[36]

5.3 Mains Cost Classification

Q. Please discuss the issue of allocating mains costs.

A. As I indicated earlier, classifying mains costs is often one of the most contentious aspects of an NGDC's cost allocation study, for three primary reasons. First, mains represent a substantial portion of the Company's rate base. Since expenses are typically allocated in the same manner as plant, mains cost allocation represents the primary basis upon which other costs are allocated (O&M, and indirectly, A&G). Second, mains are "joint use" assets, meaning that many of the system mains are used by more than one customer class at a time. As such, economic theory provides only limited guidance as to how such costs should be allocated. Moreover, it is difficult to identify the specific factors which cause the costs to be incurred. Finally, the different theories used by cost allocation analysts produce substantially different cost allocation results, and thus the choice of a specific methodology will have a significant impact on the rates paid by each rate class.

With respect to the theory of how mains costs should be allocated, there are some areas of general agreement. First, there is agreement that the cost allocation should, to the extent practicable, reflect "cost causation," such that costs are assigned to the rate classes that cause

[33] OSBA-I-37.

[34] See citation provided in OSBA-I-15.

[35] See RDK Workpapers filed at Docket No. R-2018-2647577 (RDK WP2).

[36] OSBA-I-15.

the costs to be incurred. There is also general agreement that NGDC mains must be installed to interconnect all the utility's customers, and they must have sufficient capacity to reliably meet the peak demands of the firm service customers served under design conditions.[37] Finally, there is general agreement that mains costs exhibit significant economies of scope and scale. That is, it is more cost effective for one utility to serve a particular geographic area than to allow for competition in gas delivery. In addition, as the carrying capacity of a main increases, its cost increases at a much lower rate. Thus, all other factors being equal, the cost per unit of maximum carrying capacity for any particular main declines as mains diameter increases.

After that, agreement ends. Some (but far from all) analysts believe that, because the system must interconnect many customers, some portion of mains costs are causally related to customer count (i.e., that some mains costs should be *classified* as customer-related). The supporting argument for this position is that it requires more footage of mains to connect many smaller customers than one larger customer, even if total demand is the same. In addition, a NGDC is more likely to be able to use larger, less costly pipe to serve larger customers than to serve smaller customers. There is some statistical evidence in support of this relationship, but it is far from universally accepted.[38] To that end, there are methodologies that have been developed for estimating such a "customer component" of mains costs, but they are theoretically and conceptually weak.[39]

In addition, most analysts believe that at least some component of mains costs should be allocated on the basis of peak demand, because mains must be sized to meet the peak. However, some analysts believe also that a causal relationship nevertheless exists between mains costs and the annual system throughput. Finally, analysts disagree strongly about how the benefit of scale economies should be reflected in mains cost allocation. One set of analysts argues that scale economies mean that more costs should be allocated on a

[37] PGW confirms that its distribution system is sized to meet customers' design day demands. PICGUG-I-3.

[38] http://publicsde.regie-energie.qc.ca/projets/235/DocPrj/R-3867-2013-B-0005-Demande-Piece-2013_11_15.pdf

[39] See http://publicsde.regie-energie.qc.ca/projets/235/DocPrj/R-3867-2013-C-ACIG-0028-Preuve-RappExp-2015_02_26.pdf at Exhibit IEc-3 in that document.

throughput basis, while other analysts argue that these same scale economies imply that more costs should be allocated on a customer basis.

This dispute has endured for decades. The conceptual arguments offered today are little changed from those advanced when one of use (Mr. Knecht) first became involved with utility cost allocation in the early 1990s, and doubtless extend much further back in time. This issue cannot be resolved based on those arguments, at least in part because much of the actual cost causation is dependent on the topology of the utility's actual distribution system and its customer mix.

In my view, the only potential method for developing a more accurate and utility-specific evaluation of mains cost causation would be a system modelling approach, in which mains costs are assigned to customers downstream based on design system conditions. In that way, costs are assigned based on causation.

Are there difficulties with this approach? Of course. How do you address the issue that some mains are fully depreciated while some are new and much higher cost? How is excess capacity reflected, so as to not overburden customers downstream from little used mains? There are many questions, but they cannot be resolved until utilities undertake the effort. Such a study simply cannot be performed by external analysts in the context of a utility base rates case.

Thus, one potential approach is simply to live with the precedent established by the regulator and utility past practice. While this approach may be unsatisfying to the theoretician, it at least has the benefit of retaining a more stable cost allocation result from rate case to rate case.

A second approach is to use a variety of methods, to at least put some boundaries around the problem. I have adopted this latter approach in this proceeding.

Q. Please describe the mains classification/allocation methods that have been advanced in Pennsylvania NGDC base rates proceedings.

A. The three methods most recently used in Pennsylvania NGDC cost allocation studies are the customer-demand ("CD") method, the average-and-excess ("A&E") method, and the peak-

and-average method. While these methods are sometimes referred to as allocation methods, they are more accurately described as cost classification methods. Algebraically, the CD allocation method can be described as:

$$CD_i = W_{CD} * [P_i/P_T] + (1-W_{CD}) * [C_i/C_T]$$

Where: P is peak demand, C is number of customers, W is the weighting factor, i is the customer class, and T is the total utility.

Q. Please explain the CD Method.

A. The CD method is based on the cost causation hypothesis that mains are sized to meet peak demand and are extended to provide service to the customer base. Thus, in the CD method, mains costs are classified into demand and customer components. The demand component of cost is then allocated using some measure of peak demand, and the customer component is allocated using some measure of the number of customers. While this method has theoretical appeal in terms of cost causation, the available quantitative methods for classifying the costs are imperfect.

Q. Within the CD method, how are the weighting factors determined?

A. The methods most commonly used are both based on the conceptual idea that the customer component of mains costs is the cost of the system with little or no carrying capacity, such that all costs above that amount are related to increases in demand.[40] In the "minimum system" approach, the "customer-related" cost is measured as the cost of the system if it consisted entirely of the smallest size main currently used on the system. The minimum system approach is often criticized for implicitly including "demand-related" costs in the customer component, because the minimum system has some carrying capability. Thus, some analysts attempt to make an adjustment for the carrying capability of the minimum system, but there is no obvious or standard way to do so.

[40] As I discuss elsewhere, this theoretical concept is suspect, in that (a) there is no reason to conclude that the non-demand component of costs is solely related to number of customers, and (b) this approach fails to reflect the customer-related costs of expanding the length of the distribution system to serve more customers. Nevertheless, until NGDCs undertake a more detailed modeling of their systems, this is the approach that is used.

The alternative to the minimum system approach is the "zero-intercept" method, in which a statistical relationship between mains cost and mains diameter is derived, and the cost of a theoretical zero-diameter pipe is derived from the statistical relationship. This approach generally produces a smaller customer component for costs than the minimum system approach, and it avoids the complaint that it has any load carrying capability. The zero-intercept approach, however, is often criticized because the statistical analysis is not directly based on measured costs and it requires judgement in the selection of the statistical methods employed.

Q. Please explain the A&E allocation method.

A. As its name implies, the A&E method is a weighted average of costs classified as relating to "average demand" and costs classified to "excess demand.". Average demand is simply total throughput divided by 365 days. For cost allocation purposes, it is arithmetically identical to a total throughput allocator. Excess demand is the difference between peak demand and average demand. Thus, for a "100% load factor" customer who uses the same amount of gas every day, the excess demand is zero. As a formula:

$$A\&E_i = W_{AE} * [A_i/A_T] + (1-W_{AE}) * [(P_i-A_i)/(P_T-A_T)]$$

Where A represents average demand.

With respect to the issue of the weighting factor, the traditional A&E methodology uses system load factor as the weight for the average demand component.

Q. Please explain the peak-and-average ("P&A") approach.

A. Mr. Zarumba describes the P&A method as a "more simplistic" version of the A&E approach.[41] I respectfully disagree with this characterization of the P&A method, particularly for natural gas distribution utilities.

The P&A allocator is a simple weighted average of a peak demand allocator and an average demand (i.e., volumetric) allocator, typically with 50/50 weighting in Pennsylvania.

[41] Peoples Statement No. 15 at 17.

$$P\&A_i = W_{PA} * [A_i/A_T] + (1-W_{PA}) * [P_i/P_T]$$

As such, the P&A allocator explicitly assumes that half of mains costs are causally related to annual throughput. Since none of the distribution system is designed to meet average demands (or customers would be very cold during a polar vortex), the P&A allocator is not consistent with cost causation.[42]

By contrast, the A&E allocation factor is conceptually similar to a peak demand allocator, because it is based on an *average* demand factor and a *peak minus average* demand factor. In fact, under specific conditions, the A&E allocator and the peak demand allocator produce identical results.[43] Those conditions are (a) the weighting factor is the coincident peak system load factor (the ratio of system average demand to system peak demand), and (b) peak system demand equals the sum of the peak demands of the individual classes (i.e., there is no demand diversity across classes). Because load factor weighting of the A&E allocator is common, and because NGDC peak demands are strongly dependent on extreme weather conditions and thus exhibit little diversity within a particular geographic area, an A&E allocator for an NGDC tends to be very similar to simple peak allocator. As such, the A&E classification approach is more consistent with cost causation than the P&A approach.

Q. Does the Commission have a policy regarding mains cost allocation?

A. For Peoples, the Company indicates that the Commission has not affirmatively ruled in respect of its cost allocation methodology since at least 2008.[44]

The Commission's revealed preference, both explicit and implicit, is that it does not have a standard policy regarding mains cost allocation, and that it intends to evaluate the issue on a case-by-case basis.[45] Nevertheless, in its recent decisions, the Commission indicates that it

[42] In this respect, I fully agree with Mr. Zarumba. See Peoples Statement No. 15 at 18.

[43] Those conditions are (a) the weighting factor is the system load factor (the ratio of average demand to peak demand), and (b) peak system demand equals the sum of the peak demands of the individual classes (i.e., no demand diversity).

[44] OSBA-I-7.

[45] Non-Proprietary Version Opinion and Order, Docket No. R-2020-3018929, Order Entered June 22, 2021 ("PECO Order"), at 230-231.

has relied substantially on precedent with respect to mains cost allocation, despite having some consistencies in the approved method across NGDCs.[46]

With respect to the issue of mains plant classification, the Commission has generally rejected the inclusion of a customer component for mains costs, although it has approved the use of a customer component for joint-use electric distribution plants, where the cost causation logic is the same. The Commission also affirmatively non-unanimous settlement that implicitly relied in part on cost allocation evidence that relied on an alternative method.

Regarding the allocation method for mains, the Commission has approved both P&A and A&E methods, as summarized below:

National Fuel Gas (1994):	83 Pa. PUC 262 (1994)	P&A
PPL Gas (2007):	R-00061398	A&E
PGW (2007):	R-00061931	A&E
Columbia Gas (2021)	R-2020-3018835	P&A[47]
Columbia Gas (2022)	R-2022-3031211	--[48]
PECO Gas (2021)	R-2020-3018929	A&E
PGW (2023)	R-2023-3037933	A&E

I did not participate in the NFG matter.

In the case involving PPL Gas, the Commission approved an allocation of mains costs using a variant on the A&E allocation method advanced by the utility expert witness. In that proceeding, the approved weighting was 40 percent to average demand and 60 percent to excess demand.[49]

[46] Opinion and Order, Docket No. 2020-3018835, Order Entered February 19, 2021 ("Columbia Order"), at 213-214.

[47] In its decision, the Commission correctly observed that no party offered an A&E approach in the proceeding. Columbia Order at 214.

[48] See discussion below.

[49] PA PUC et al. v. PPL Gas Utilities Corporation, R-00061398, Order Entered February 8, 2007, page 112 – 114.

In the 2007 PGS proceeding, the Commission approved the mains cost allocation method advanced by the Office of Trial Staff ("OTS"), now the Bureau of Investigation and Enforcement ("I&E"), in which (a) mains were deemed to have a zero customer component, and (b) mains were to be allocated using an "average and excess" ("A&E") allocation factor for all mains costs. [50] In particular, the methodology advocated by OTS used a 50/50 weighting of the "average" and "excess" components of the A&E allocation factor.[51] The Commission also indicated that " . . . we find that the allocation of distribution mains investment costs should be done using both annual and peak demands." The A&E methodology was applied to the Company's compliance filing in that proceeding, and was also used in the Company's 2010 base rates case.

In the Columbia Gas proceeding at Docket No. R-2020-3018835, the Commission adopted the OCA proposal to rely on a 50/50 weighted P&A allocation factor. The Commission indicated:

> Furthermore, distribution mains exist and are related to both annual demands and peak demands. Both annual and peak demands must be recognized in the allocation of distribution mains cost if the allocation is to be in accord with the principle of cost-causality. It is not reasonable to allocate distribution mains investment based solely on design peak day demands as in Columbia's Customer-Demand ACCOSS. The basic reason Columbia invests in its distribution system is to meet the annual demands for gas by customers. Additionally, a portion of the total cost of distribution service is related to installing a system with enough throughput capacity to meet design peak demands in excess of annual demands.[52]

It should be noted that no party had put forward an A&E allocation methodology in that proceeding, and thus it was presumably not an option for the Commission. The Commission

[50] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-00061931, Order entered September 28, 2007, page 80.

[51] See, e.g., Docket No. R-00061931, OSBA Statement No. 2 at 19. However, PGW reports that it has no knowledge of the weighting scheme adopted by the Commission. OSBA-I-6(c).

[52] Opinion and Order, Pennsylvania Public Utility Commission, Docket Nos. R-2020-3018835 et al., Order Entered February 19, 2021, at 217-218.

also explicitly rejected consideration of a mains cost allocation methodology that included a customer component of costs.

In a subsequent litigated PECO Gas base rates proceeding, the Commission approved the Company's proposed A&E allocation method, that produced an allocation factor substantially similar to a peak demand allocator. In so doing, the Commission stressed the importance of peak demand as a cost causation factor for mains costs, citing to the gas distributions system being designed to meet peak demands, the need to assign considerable weight to the excess demand component of costs, the problematic double counting of average demand in the P&A allocator in both the peak component and the average demand component, and the P&A overstatement of the cost of service of more efficient gas users.[53] The Commission also declined to establish a standard methodology for mains cost allocation, concluding that cost causation may vary among the various NGDCs.[54]

In the 2021 PECO Gas matter, the Commission indicated that the A&E method was more appropriate than the P&A method used in the Columbia matter because PECO's ". . . distribution mains system is designed to meet the demands of its system on a design day that all customers can be served. . . . Therefore, we conclude that the excess demand component of PECO's distribution mains system garners considerable weight in the balance of mains costs."[55] As Columbia Gas (and all other Pennsylvania NGDCs) also size their mains to meet design day demand, it is unclear whether the Commission made some specific finding regarding the topology of the PECO Gas system that makes the A&E method more appropriate. As I participated in both the PECO Gas and Columbia Gas proceeding, I do not recall that any evidence was presented that PECO Gas' distribution planning criteria were different from those used by Columbia Gas. As such, the Commission's logic in the PECO Gas matter would appear to reasonably apply to all Pennsylvania NGDCs.

[53] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-2020-3018929 et al., Order Entered June 17, 2021, at 228-231. The Commission did not directly address the issue of the treatment of interruptible service within the A&E allocator.

[54] *Id*.

[55] PECO Order, at 229.

In the most recent Columbia Gas base rates proceeding at Docket No. R-2022-3031211, the Commission approved a non-unanimous settlement that could only be cost justified by reflecting the views of a party that relied on a cost allocation analysis that included a customer component to mains costs. While the Commission declined to issue a finding regarding the appropriate cost allocation method to adopt, it did not require that a non-unanimous settlement be consistent with Commission precedent for cost allocation. In that proceeding, the Commission ruled:

> We note that even in cases in which the revenue allocation methodology is litigated, a determination regarding which ACCOSS should be used should be determined on a case-by-case basis. We have observed that 'the inherent distinctions between utilities and rate cases may result in different methodologies to be reasonable for different reasons. In other words, the best-suited ACCOSS may depend on the circumstances of the situation on a case-by-case basis.'[56]

The classification of mains costs was recently litigated for PGW at Docket No. R-2023-3037933. In that matter, the Commission confirmed the use of a 50/50 A&E method, primarily on the basis of precedent. The Commission concluded:

> Based on a review of the respective advocates' arguments in support of the record ACCOSSs before us, we believe that the Company's proposed AED [A&E] methodology is reasonable and best suited for this proceeding. We agree with the ALJs, PGW, and the OCA that the use of the AED methodology generally adheres with prior Commission directives. Indeed, Commission precedent, including the proceeding for the 2007 PGW Rate Case, and the recent proceeding in Columbia 2021, weigh against the idea that mains costs include a customer component. Further, we agree with the ALJs that the Parties advocating for the CD method did not sufficiently justify a departure from the AED method, nor did they develop weightings for the use of the CD method.[57]

[56] PUC v. Columbia Gas of Pennsylvania, Inc. Docket No. R-2022-3031211 (Order entered December 8, 2022) at 107, footnote 30.

[57] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-2023-3037933, Order Entered November 9, 2023, at 137.

As the Commission has made it clear that the mains cost allocation methods can vary both between NGDCs and for a particular NGDC from case to case (at least for the purpose of evaluating non-unanimous settlements), I conclude that Commission precedent has only limited applicability to this case.

Q. Are there conceptual reasons why the CD method should be considered in the context of this proceeding?

A. There are reasons of economies of scale, and industry practice.

The economist's concept of "economies of scale" is that it is often less expensive, *per unit of demand*, to serve a large customer than to serve a small customer. For that reason, many prices in both regulated and unregulated markets include volume discounts. A similar situation applies to distribution mains. It is very likely that an NGDC will need to install many more feet of distribution main to serve 50 residential customers, each with a design day demand of 1.5 Mcf per day, than it would to serve one commercial customer with peak demand of 75 Mcf per day. Therefore, it will cost the NGDC more, per unit of peak demand, to serve the 50 residential customers than to serve the one commercial customer.

Regarding industry practice, there is, of course, no standard practice for classifying mains costs, and there is some diversity among NGDCs and regulators regarding the methodologies chosen. With that caveat, however, the CD approach is within industry norms. In its text, Gas Rate Fundamentals, the American Gas Association ("AGA") indicates distribution mains have both a peak demand and customer component.[58] That text details the cost causation rationale as follows:

> The closer a plant item (e.g., a meter and service line) is located to a customer, the more that particular item is related to the specific requirements of that customer. Thus, the customer component of distribution costs reflects the theoretical distribution system that would be needed to serve customers at nominal or minimal load conditions.[59]

[58] Gas Rate Fundamentals, Fourth Edition. American Gas Association, 1987. See Table 7-4 at page 142 and the example cost allocation study at page A-17. The implied demand/customer classification split for joint-use distribution mains in the AGA sample study is 68 percent demand, 32 percent customer.

[59] Id., page 136.

In addition to AGA, NARUC's "Gas Distribution Rate Design Manual" recognizes that segregating mains costs into demand and customer components is one of the standard classification methodologies used in the industry. Moreover, in its cost allocation example, the NARUC manual splits distribution mains costs into 80 percent demand, 20 percent customer components.[60]

Moreover, the issue of cost classification applies also to the electric distribution plant, where similar arguments are made both in support of and opposed to demand-customer classification splits. For example, in the last PPL Electric base rates case, the Commission generally relied on a cost allocation study that used a "minimum system" approach for classifying distribution costs into customer and demand components.[61]

Q. What approach does the Company take with respect to mains classification?

A. For its revenue allocation proposal, the Company relies on an average of two separate simulations for assigning mains costs, namely a method in which mains are classified into customer and peak demand components ("CD" method), and a simulation in which mains costs are classified into "average demand" and "peak demand" components ("P&A" method). The Company makes a modest adjustment to the CD allocation method to reflect the load carrying capability of the minimum system. These two methods produce widely disparate results, particularly for the larger customers on the system.

Q. What analysis did you perform regarding mains cost classification for this proceeding?

A. To supplement the Company's analysis, I developed a zero-intercept classification approach. A comparison of the classification factors is shown in Table IEc-4 below, and my analysis is detailed in IEc WP3 Minsys Z-I.

[60] National Association of Regulatory Utility Commissioners, "Gas Distribution Rate Design Manual," 1989, page 46.

[61] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-00049255, entered December 22, 2004, pages 81 to 82. Note also that the Commission more explicitly approved the use of cost allocation studies that included demand-customer classification splits for electric distribution, at Docket No. R-00922378 (pages 198-202) for West Penn Power and Docket No. R-00943271 (pages 193-198) for Pennsylvania Power & Light Co.

Table IEc-4 Summary of Distribution Mains Cost Classification Customer Cost Share (%)			
	PNG	**PG**	**Combined**
Peoples MinSys	52.8%	46.4%	51.3%
Peoples Minsys Adjusted	50.6%	40.7%	48.4%
IEc Zero-Intercept	29.1%	29.3%	29.1%
Sources: IEc WP3 Minsys Z-I			

Q. What approach do you take for mains cost allocation in this proceeding?

A. My alternative simulation of the Company's ACOSS model uses a modified CD method, based on (a) not segregating regulated-pressure and low-pressure mains due to the deficiencies in the Company's approach discussed above, and (b) using my zero-intercept cost classification factors. As discussed in Sections 7 and 8 below, I rely both on my simulation and the Company's ACOSS analysis for revenue allocation and rate design purposes.

5.4 Design Day Demand Allocator

Q. Do you agree with Mr. Zarumba's argument that the measure for peak demand for an NGDC allocated cost of service study should be design day demand?[62]

A. I do. By definition, gas distribution systems are built to meet design requirements. No NGDC plans only to meet the actual peak demands in recent prior years.

Q. Please describe the Company's method for deriving the design demand allocator.

A. The Company describes its method in OCA-XI-2. It indicates that the systemwide design day demand is derived using a statistical analysis of historical daily sendout, which is then used to estimate demand under design conditions (74 HDD or -9.0 degrees F.). This statistical analysis generally indicates that consumption increases more than proportionally

[62] Peoples Statement No. 15 at 19-21.

with HDDs, in that it (a) includes an "HDD-squared" independent variable, and (b) an above-average January "dummy" variable.[63]

The Company then allocates the design day demands to the various rate classes ". . . based on historical normalized usage factors for base load and heat load."[64] Based on my interpretation of the workpapers provided with OCA-XI-2, it appears that this allocation is based on:

- Specifying a measure of both class daily baseload demand, average daily January load by class, and average January HDDs, although the specific method for doing so is not specified in the workpapers;[65]
- Deriving a class average January heating load as the difference between daily January average and baseload;
- Calculating January class heating load per degree day based on an unspecified HDDs for January (presumably consistent with the average January load);
- Deriving unadjusted class design day demand from base load plus heating use per HDD multiplied by design HDD;
- Normalizing the unadjusted class design day demands to the system demand. Note that the class-specific design day demands as derived;
- Segregating design day demands between divisions based on overall design day relationship for 2023 PGC case.[66]

Q. Please describe your concern regarding design day demands.

[63] The statistical analysis and design day estimate also rely on a "twoday46" independent variable, which is not defined in the workpapers.

[64] From a practical cost allocation perspective, the systemwide design day demand is not particularly relevant; the only calculation that affects allocated costs is the allocation of the design day demand.

[65] My calculations using the monthly data in IEc WP1 Monthly Load Analysis show similar but not identical results.

[66] OSBA-I-36.

A. While the details are not available, the methodology is not unreasonable. Using average class-specific January loads is a reasonable approach in light of the non-linear relationship between load and HDDs. The Company's method may serve to understate the contribution of more temperature-sensitive loads to design day demands, as the non-linear effects *within* January are not reflected in the method. However, I see no obvious way to recognize those effects without daily metered data by class. As such, I take no exception to the Company's analysis, pending clarification for the details of the averaging calculations.

However, it appears that actual peak demands on recent peak days have substantially exceeded the "design" demands for that class used in the ACOSS. Peoples argues that Rate LGS actual class peaks would likely exceed design day peaks, because LGS customers are not heat sensitive and are therefore likely to have higher individual customer peaks than those for a design day requirement.[67] While this argument has some merit, it does not explain why Rate LGS demands on actual peak days far exceeded the assumed design conditions, without any apparent interruption of service.

5.5 Technical Issues

Q. Please provide your assessment of the Company's treatment of storage costs in its ACOSS.

A. The Company's approach to storage costs is partially explained by Statement No. 15. Mr. Zarumba explains that storage lines and metering equipment (Accounts 353 and 355), representing about a quarter of storage plant costs, are related to the Dice Storage Field, which provides balancing for unexpected load fluctuations for both sales and transportation service customers. The costs are allocated based on winter throughput volumes weighted by monthly storage utilization.

The majority of storage costs, consisting primarily of wells, well equipment and compressor station, are not directly addressed by Mr. Zarumba but are allocated based on design day demands inclusive of both sales and transportation service customers.

[67] OSBA-I-34.

Conceptually, storage costs should generally be allocated based on measures of "excess" volume, representing the difference between winter loads and average loads. An excess load measure correctly recognizes that very high load factor customers contribute very little to the need for storage assets, particularly those assets that are filled in summer and discharged in winter (like the Dice Storage Field).[68] As such, using excess volume and excess demand allocators would be a theoretically superior approach to the Company's method.

In addition, depending on the specific requirements for NGSs, transportation customers often provide most or all of the seasonal balancing they require. As such, it is not obvious that it is appropriate to assign a full share of the Company's storage asset costs to transportation customers.

Overall, storage costs are relatively small, and my understanding of the specific functions of the storage assets is limited.[69] Therefore, I have not, as yet, developed an alternative proposal.

Q. Please comment on the weighted average customer allocator used for allocating meter reading expense Account 902.

A. The Company proposes to allocate subcomponents of the costs for this account based on number of customers, number of large C&I meters, and a combination of the two allocators. However, first, the Company appears to have a spreadsheet error regarding the allocation of the large C&I meters, such that the costs are vastly overstated in the combined allocation factor. Second, the Company simply assumes that all C&I meters have the same cost, when in fact the meters for SGS customers are far smaller than those for LGS customer, and therefore a weighted approach should be employed. I have made both adjustments in IEc WP4 Allocation Factors.

.

[68] OSBA-I-27.

[69] The Company's filing contains little information about the nature and purpose of the storage assets included in the base rates revenue requirement.

Q. Do you have other technical observations regarding the Company's ACOSS analysis?

A. I have the following observations, some of which have de minimis impacts:

- The Company's allocation of Account 908 customer service costs appears to have an inadvertent spreadsheet error, in which intra-residential costs are incorrectly allocated to all customer classes.[70] A corrected version is included in IEc-WP4 Allocation Factors.

- As discussed above, the Company proposes to allocate regulated-pressure and low-pressure mains separately. However, both the accumulated depreciation and depreciation expense appear to be lumped together and allocated in proportion to the combined mains plant. Because the accumulated depreciation percentages are substantially different between regulated and low-pressure mains, a more accurate method for allocating the costs would be to separately allocate both the accumulated depreciation and depreciation expense separately. The Company concludes that doing so would have only a minor impact.[71] Because I do not advocate segregation of mains costs into the low- and regulated-pressure systems, I have not made any correction for this factor.

- The Company imposes more rigorous payment requirements on non-residential customers than it does for the residential class.[72] In my experience, this treatment results in materially lower collections lags for non-residential customers, and consequently a lower contribution to cash working capital costs. Ideally, the allocation factor for cash working capital should reflect the relative revenue lag for the various rate classes. The Company, however, has declined to provide revenue

[70] Correctly calculated, this allocator appears to reasonably reflect the CAP administrative costs identified in OSBA-I-19.

[71] OSBA-I-18.

[72] OSBA-I-22.

lag by rate class.[73] I therefore have not attempted to adjust the ACOSS for this bias.

- The Company's allocator for collections costs is based on unweighted receivables aging. As older receivables require more collections efforts, I have replaced the Company's allocator with a weighted approach, based on the age of the receivables.[74]

- In my experience, A&G costs (Accounts 920-932) are increasing as a share of utility revenue requirements. Peoples' claimed A&G costs amount to more than $62 million, or some 12 percent of O&M costs. Like most utilities, Peoples allocates these costs based on broad internally developed allocation factors, such as labor and plant. I endeavored to obtain more detailed information regarding the specific nature of these costs to attempt to develop a more accurate allocation approach, but the Company's response directed us to a separate listing of total costs by account.[75] I have therefore not modified the Company's proposed treatment for these costs at this time, pending a more detailed response from the Company.

Q. How do the results of your cost allocation analysis compare to the Company's results?

A. A comparison of class revenue-cost ratios at present rates is shown in Table IEc-5 below. As shown, my alternative simulation generally produces revenue-cost ratios between the two methods used by the Company for classes other than Rate LGS. The Rate LGS class is assigned higher costs in my approach primarily due to the changes to mains cost functionalization, as well as to the adjustment of the Rate LGS design day demand level. Thus, the LGS revenue-cost ratio in my simulation is lower than that reported in the Company's analysis, but still above system average.

[73] OSBA-I-23.

[74] See calculations in IEc WP4 Allocation Factors.

6. Flex Rate Customers and Rate MLS

Q. Please summarize the economic and regulatory issues surrounding Peoples' "flex rate" customers.

A. In general, utility tariff charges are set based on allocated cost of service and other rate design criteria, and these tariff charges apply to all customers within the rate class. However, under certain conditions, it can be beneficial to all customers to allow the utility to negotiate rate discounts from the regular tariff rates to retain customers who have lower-cost competitive options. These options include alternative fuel, pipeline bypass, and in the case of western Pennsylvania, "gas-on-gas competition" from other NGDCs.[76] The specific criteria where negotiated discounts are in the interests of all ratepayers are the following:

- Negotiated rates exceed the incremental cost of providing service to the customer. Thus, for example, if Peoples needs to upgrade its distribution system to continue to provide service to a flex rate customer, the negotiated rates must be sufficient to justify that expenditure.

[76] NGDCs do not "compete" for customers in overlapping service territories on the basis of cost or service. They have historically "competed" on the basis of which NGDC can offer the largest rate discount to those customers who have options and pass the cost for those discounts on to captive customers who do not have options.

- In the case of alternative fuel competition, negotiated tariff rates plus the cost of gas are set at or near the full delivered cost of the alternative fuel plus the customer's costs of conversion.

- In the case of pipeline bypass, negotiated tariff rates are justified only if there is a credible engineering plan for how the customer could physically bypass the NGDC. If that criterion is met, the negotiated tariff rate plus the cost of gas should be set at or near the customer's full cost for bypassing the NGDC and taking service directly from the pipeline. This cost necessarily includes obtaining the necessary permits to allow for such bypass.

- In the case of NGDC "competition," the Commission has determined that where customers are served in overlapping NGDC service territories, the minimum flex rate that can be charged is the lowest regular tariff rate of the NGDCs serving the customer's location.[77]

Q. Have you evaluated whether Peoples' flex rate customers meet these criteria?

A. I reviewed the Company's filing at the conceptual level. The Company has 17 flex rate customers, with the vast majority of the flex rate volume in the Rate LGS class.[78] My review encompassed Mr. Ravenstahl's testimony and the Company's responses to a variety of discovery requests on this subject.[79] Based on that review, I conclude that the criteria and approach undertaken by the Company are consistent with the criteria stated above. I have not, at this time, reviewed the specifics of the discounts for individual flex rate customers.

The issue of the treatment of flex rate discounts for revenue allocation is addressed in Section 7 below.

[77] *Opinion and Order,* Pennsylvania Public Utility Commission, Docket Nos. P-2011-2277868 and I-2012-2320323, Order Entered May 4, 2017, page 52. To my knowledge, there has not been a firm resolution as to how the lowest applicable tariff rate should be defined. See *Opinion and Order,* Pennsylvania Public Utility Commission, Docket Nos. P-2011-2277868 and I-2012-2320323, Order Entered June 13, 2019.

[78] See IEc WP8 Flex Rate Shortfall HIGHLY CONFIDENTIAL.

[79] PNG Statement No. 7, OCA-XI-5, OCA-XI-7, OCA-XI-8, OSBA-I-20, OSBA-I-29

Q. Please provide your understanding of the Company's proposed Rate MLS.

A. Within the Rate LGS class, the Company has 13 customers who are located in close proximity to either interstate transmission mains or the Company's transmission mains. The Company proposes to establish a separate class for these customers, with the eligibility requirements of a minimum of 500 mmcf per year and a location within 1000 feet of a transmission main. MLS volumetric rates would be differentiated depending on whether the customer uses the Peoples transmission system or connects directly to an interstate pipeline.

The Company's cost allocation approach for this proposed class is to include it as an option within the ACOSS model presented by Mr. Zarumba. Mr. Zarumba's analysis indicates that the effect of including the MLS class in the ACOSS model simulation is simply to split allocated costs between the LGS class and the MLS class, with no impact on the other rate classes. In effect, the Company (reasonably) does not include the design day demands of transmission-connected customers in its demand allocators for distribution system costs, regardless of whether the MLS customers are treated as a separate class for ACOSS simulation.

From a practical perspective, the Company anticipates that there would only be a small impact in this proceeding associated with implementing Rate MLS. Almost all MLS-eligible customers already have flex rates that are lower than the cost-based rates proposed for Rate MLS. As such, those customers would have no need to change tariff classes, at least until their contracts turn over. The Company indicates that there is one current flex rate customer whose rates would be lower on the proposed Rate MLS, which would result in a reduction of about $339,000 in FPFTY revenues.[80]

Q. Do you agree with the Company's proposal to establish a separate MLS tariff class?

A. I do. The current LGS class is a mixed bag of customers, some of whom use the distribution system and some who do not. As the objective of defining rate classes is to aggregate customers with similar costs to serve, the current rate class eligibility rules do not meet the basic criteria. The Company has, to a large extent, been setting tariff charges for the LGS

[80] PII-III-4.

class that are based on the cost to provide service through the distribution system, and then providing what appear to be large competitive flex rate discounts to most or all of the MLS-eligible customers.

I conclude, therefore, that establishing a separate Rate MLS class will help clarify the issue as to how much of the flex rate discounts provided to large customers are related to cost to serve differentials within the current LGS classes, and how much are due to competitive considerations.[81]

The implications of Rate MLS for revenue allocation are addressed in Section 7 below.

7. Revenue Allocation and Rate Harmonization

Q. What is revenue allocation?

A. Revenue allocation is the assignment of the dollar net increase or decrease to each of the Company's rate classes in a base rates proceeding. In contrast, *rate design* determines how the allocated revenue is recovered from individual ratepayers within each class. From a cost recovery standpoint, revenue allocation addresses *inter-class* cross-subsidization issues, while rate design addresses *intra-class* cross-subsidization issues.

Q. What are the primary economic and regulatory criteria for revenue allocation?

A. In general, allocated cost is the primary criterion used by regulators in the revenue allocation process. Most utilities and regulators adopt a policy in a base rates proceeding of attempting to move revenues more into line with allocated costs by varying the magnitude of the rate increases for the individual classes. However, regulators also subject the rate increases to other non-cost criteria of ratemaking. Of the traditional rate design criteria, the most common non-cost considerations in the revenue allocation process are:

- the *gradualism* principle (or avoidance of "rate shock"), in which large rate increases for individual customers or classes of customers are avoided; and

[81] My rough analysis in IEc WP8 Flex Rate Discounts HIGHLY CONFIDENTIAL suggests that a significant portion of the flex rate discounts reported by the Company are cost-to-serve differences.

- the *value of service* principle, which is often used to mitigate rate increases for customers or customer classes with relatively elastic demand. [82]

Using these criteria, the utility will develop a proposal for assigning the increase in the revenue requirement among the classes that reflects both cost and non-cost considerations. With this proposal, the ACOSS can be simulated at both present and proposed rates to evaluate the magnitude of "progress" that has been made toward the policy of achieving cost-based rates.

Q. Please summarize the process used by Peoples for its proposed revenue allocation in this proceeding.

A. The Company's proposal is to allocate the rate increase such that the proposed rates will result in a revenue that is equal to the average allocated cost from the CD and P&A ACOSS simulations.[83] The Company's proposed revenue allocation is summarized in Table IEc-6 below, and detailed in IEc WP2 Revenue Allocation Rate Design. As shown, the Company's proposal results in a slight average rate decrease for Rate LGS customers, an increase for SGS customers well above system average, and increases for the Residential and MGS classes that are in the ballpark of system average.

While rate gradualism is difficult to define, the Company's proposal is within the range of the typical rule of thumb that has been applied in other cases in Pennsylvania, namely that of limiting the increase to 1.5 or 2.0 times the system average increase. In light of the enormous magnitude of the overall proposed increase, I believe a 1.5 times system average cap should be the upper limit for class average increases in this proceeding.

[82] See, for example, Principles of Public Utility Rates, Second Edition, Bonbright, Danielsen, Kamerschen, 1988, pages 383 to 387. The criteria in this text apply to the overall development of a utility rate structure. The criteria that I discuss in this testimony are those that apply to the revenue allocation portion of the process, which is only one aspect of the overall development of utility rates.

[83] I note that Mr. Zarumba refers to the indexed rate of return metric to demonstrate that the Company's proposed revenue allocation moves class revenues closer to allocated costs. As detailed in Appendix A, the indexed rate of return metric can produce counterintuitive and unreliable results with respect to revenue allocation. However, because the Company generally proposes that revenue allocation move rates fully in line with allocated costs, the indexed rate of return does not distort the results. For my analysis, I rely on the normalized revenue-cost ratio method, for the reasons detailed in Appendix A.

I also observe that the Company's proposal for the SGS class is not far from a 1.5:1.0 ratio. As discussed further in the next section, this approach limits the Company's ability to harmonize Rate SGS rates between the PNG and PG divisions, without violating gradualism concerns. For example, the Company's proposed increase for the PNG Division SGS class is over 49 percent, above the 1.5:1.0 constraint (in addition to being simply eye-watering).

Table IEc-6
Peoples Revenue Allocation Proposal ($mm)

	Current Revenues	Proposed Increase	Percent Increase	Proposed Revenues
Residential	$348.2	$118.7	34.1%	$467.0
SGS	$43.5	$18.3	42.0%	$61.9
MGS	$55.9	$16.4	29.3%	$72.3
LGS	$53.7	($0.7)	-1.3%	$52.9
Total	**$501.3**	**$152.7**	**30.5%**	**$654.0**

Revenue values reflect all class revenues excluding gas costs.
Sources: IEc WP2 Revenue Allocation Rate Design

Q. What is your alternative revenue allocation proposal?

A. For revenue allocation in this proceeding, I recommend using an average of the cost allocation results I present in this testimony, and the cost allocation results relied upon by the Company for its revenue allocation. The calculations are shown in IEc WP2 Revenue Allocation Rate Design and summarized in Table IEc-7 below. As shown, my proposal would result in a modest rate increase for the LGS class, an increase for the Residential class that is nearly identical to the Company's proposal, and modestly lower increases for the SGS and MGS classes than that proposed by the Company.

Table IEc-7 IEc Revenue Allocation Proposal ($mm)				
	Current Revenues	**Proposed Increase**	**Percent Increase**	**Proposed Revenues**
Residential	$348.2	$118.4	34.0%	$467.0
SGS	$43.5	$16.8	38.6%	$61.9
MGS	$55.9	$11.9	21.2%	$72.3
LGS	$53.7	$5.6	10.5%	$52.9
Total	**$501.3**	**$152.7**	**30.5%**	**$654.0**
Revenue values reflect all class revenues excluding gas costs. Sources: IEc WP2 Revenue Allocation Rate Design				

Q. Does the Company's proposal to harmonize the rates between the PNG and PG Divisions have implications for revenue allocation?

A. As discussed above, the issues regarding rate harmonization are primarily those of the magnitude of the impacts and the timing for the harmonization. For evaluating whether the impact of rate harmonization violates the normal rules for rate gradualism, I conclude that no individual class rate increase for either division should exceed 1.5 times the system average increase.

The Company's proposal, however, fails that test, as the proposed base rate increase for the SGS class is (an eyepopping) 49.8 percent, which is 1.64 times the system average base rate increase of 30.5 percent. Thus, to comply with the normal constraints of gradualism, either the Company's proposed revenue allocation to the SGS class must be reduced, or full harmonization of the PNG and PG Division Rate SGS tariffs should be deferred until the next base rates proceeding.

In the context of my revenue allocation proposal, however, full harmonization of the SGS class rates would result in an increase for the PNG Division customers that is just slightly above the 1.5 times limit (1.51). As such, it will remain a painful increase for those customers, but it lies within the rule of thumb I have adopted in other base rate proceedings in Pennsylvania. Reductions in the overall increase, of course, will help.

Q. On that subject, do you have any recommendations regarding the revenue allocation treatment of a reduction in the overall proposed increase?

A. For this proceeding, under my revenue allocation proposal, all rate classes are assigned material percentage rate increases. In this context, there is no reason why the traditional "proportional scaleback" approach would be unreasonable, on a combined class basis. In that approach, each class' assigned increase at the full revenue requirement is reduced by the ratio of the overall allowed increase to the Company's proposed overall increase.

8. Rate Design Issues

Q. Please describe the base rate tariff structure for the SGS and MGS rate classes.

A. The base rates charges for both classes consist of a customer charge and a volumetric charge. For both classes, the customer charge is differentiated depending on the size of the customer, with the SGS class split at 500 mcf per year, and the MGS class split at 2,500 mcf per year. Table IEc-8 below summarizes the Company's current and proposed base rate charges for the two classes.

Table IEc-8
Peoples Proposed Rate Design: SGS and MGS

	PNG Division Current Rate	PG Division Current Rate	Proposed Harmonized Rate	Percent Increases (PNG/PG)
Rate SGS				
Customer Charge (<500) $/mo.	$20.00	$35.00	$25.00	25.0%/-28.6%
Customer Charge (>500) $/mo.	$40.00	$65.00	$50.00	25.0%/-23.1%
Delivery Charge $/mcf	$2.6994	4.5485	$3.8628	68.5%/-10.8%
Rate MGS				
Customer Charge (<2500) $/mo.	$85.00	$75.00	$105.00	23.5%/40.0%
Customer Charge (>2500) $/mo.	$130.00	$150.00	$150.00	15.4%/-14.3%
Delivery Charge $/mcf	$2.6668	4.8604	$3.8268	43.5%/-21.3%
Source: IEc WP2				

Note in reviewing this table that a significant majority of SGS customers fall in the "under 500 mcf per year" category, whereas the "under 2500 mcf per year" customers in Rate MGS represent a little over 60 percent of the customer base.

As shown, the current volumetric delivery rates for Rate SGS and Rate MGS are little different, despite significant differences in the cost to serve, especially for the current PNG Division customers. (This relationship is likely contributing significantly to the proposed large increase for SGS customers in this proceeding.)

For evaluating the split between revenue recovery through the customer charge and the volumetric delivery charge, I considered both the ACOSS cost implications and the practices of other Pennsylvania NGDCs.

As detailed in IEc WP6, the customer charges for smaller general service classes are reasonably similar, while the charges for medium general service customers vary widely. Table IEc-9 below provides a summary of the customer charges for smaller general service customers. As shown, the Company's current SGS customer charges for the smaller customer in the PNG and PV Divisions effectively span the range, from lowest (PNG) to highest (PG). The Company's proposed customer charge for SGS under 500 mcf would put it at the bottom of the range of current customer charges. The proposed charge for customers over 500 mcf would be near the top of the range, although still below the Columbia Gas high.

Table IEc-9 Pennsylvania NGDC: Small Commercial Customer Charges	
	$/month
PNG Division SGS (< 500 mcf) Current	**$20.00**
Peoples SGS (< 500 mcf) Proposed	**$25.00**
National Fuel Gas Dist'n C&PA (< 250 mcf)	$27.00
UGI Gas N/NT	$27.38
PGW GS-C	$27.65
PECO Gas GC	$29.86
Columbia Gas SGSS/SCD/SGDS (<644 Dth)	$29.92
PG Division SGS (<500 mcf) Current	**$35.00**
National Fuel Gas Dist'n C&PA (>250 mcf)	$37.00
PNG Division SGS (>500 mcf) Current	**$40.00**
Peoples SGS (>500 mcf) Proposed	**$50.00**
Columbia Gas SGSS/SCD/SGDS (>644 Dth)	$57.00
PG Division SGS (>500 mcf) Current	**$65.00**
Sources: IEc WP6 Rate Comparison	

In terms of allocated costs, I have considered both the fully loaded customer costs (in the IEc ACOSS simulation) and the Company's minimum customer cost calculations (which excludes certain costs that are classified as customer-related).

For the SGS class, the ACOSS results imply a customer cost of $22.20 to $34.73. The ACOSS results do not provide any cost basis for the differential between under- and over-500 mcf customers, and the Company has not made any effort to undertake such an evaluation. Because the under-500 mcf customer charge is well within the allocated cost range for smaller customers in the SGS class, and because the Company proposes to retain the relationship between the two current charges for the PNG Division, I take no exception to the Company's proposed SGS customer charges.

For the MGS class, the ACOSS results imply a cost range of $70.64 to $88.47 per month. These values are far below the customer charges proposed by Peoples ($105.00 and $150.00). I therefore recommend that no increase be assigned to the PNG Division Rate

MGS customer charges, and that the harmonized Rate MGS customer charges be set at that level. The volumetric delivery charge proposed by Peoples should then be adjusted upward to recover the reduced customer charge revenues. I estimate that, under Peoples' proposed revenue allocation, this would require a volumetric delivery charge for Rate MGS of $3.9375 per mcf, about 2.9 percent above the Company's proposal [84]

9. Normal Heating Degree Days and the Weather Normalization Mechanism

Q. What is the Company's proposal for "normal" weather for deriving its FPFTY loads?

A. For most residential and commercial customers, natural gas is used primarily for space heating purposes. As such, gas consumption is dependent on ambient temperature and other weather factors, and it can vary substantially from year to year with weather fluctuations. Average temperature for a particular period is reflected in a metric called heating degree days ("HDDs"), which for each day are measured as the difference between 65 degrees Fahrenheit and the actual average temperature for the day. Thus, if the average temperature on a day is 28° F., the HDDs for that day equal 37. HDDs are then summed for the period being evaluated. In effect, HDDs represent a measure of both average temperature and the period duration, and thus are an indicator of the volumetric need for space heating in that period.

For test year load forecasting, NGDCs generally rely on "normal" HDDs. Traditionally, normal HDDs were based on 30-year historical averages. However, over the past couple decades, average temperatures have been trending upward, and the 30-year average proved to be a biased estimator. NGDCs have addressed this issue in various ways, often by shortening up the period over which the average is calculated.

In this proceeding, Peoples proposes to directly reflect the trend increase in average temperatures with a statistical analysis of the trend in annual HDDs for the past 65 years. The Company's analysis indicates that annual HDDs exhibit a statistically significant trend decrease of about 14 HDD per year. Mr. Zarumba concludes that because the trend value is statistically significant, the trend forecast is the appropriate measure for defining "normal."

[84] OSBA-I-24.

However, for the FPFTY in this proceeding, the Company proposes to ease its way into using trend analysis, and to split the difference between two methods for deriving normal HDD. The first is the 20-year average HDD, and the second is the trend value for the FPFTY. This results in a normal HDD of 5341, that being the average of 5416 (20-year) and 5240 (trend).

Q. How have you evaluated this issue?

A. I confirmed the Company's statistical trend analysis. I then evaluated the accuracy of the various measures for forecasting purposes. That is, for each possible forecasting method, I examined how that method would have performed as a forecasting tool for a base rates proceeding with a FPFTY. Thus, for example, to test the 20-year averaging method for a hypothetical base rate proceeding for a 2017 FPFTY, I calculated the 20-year HDD average through 2015 and compared it to the actual 2017 HDDs. I repeat this analysis for all potential FPFTY years from 1989 through 2022, for a variety of forecasting methods including 10, 20 and 30 year averages, and the trend analysis approach posited by the Company. The detailed results are shown in IEc WP5 HDDs.

As shown in the workpapers, incorporating a trend into the FPFTY forecasts would have produced lower average forecast errors than any of the pure averaging methods. However, my analysis suggests that applying the Company's proposal for this proceeding, namely using an average of the 20-year method and the trend method, appears to be slightly better than relying only on the trend approach.

As such, I take no exception to the Company's proposed method for deriving normal annual HDDs.

Q. What is the Company's proposal for a weather normalization adjustment ("WNA") mechanism in this proceeding?

A. Some Pennsylvania NGDCs have adopted WNA mechanisms, which are quite similar in their structure.[85] A WNA is a form of rate decoupling mechanism, in which the Company is permitted to reconcile its revenues between those approved in the base rates case and those

[85] Reference PGW, Columbia ("pilot"), UGI and NFG mechanisms.

actually earned. A WNA mechanisms permits this reconciliation for reasons related to weather variances. If the weather is warmer than normal, the NGDC is permitted to earn supplemental revenues to make up the shortfall; if weather is colder than normal, the NGDC credits the ratepayer with a lower bill for base rates.[86]

Like the mechanisms at other Pennsylvania NGDCs, the Peoples WNA would segregate the metered load for each customer in each billing period into a base load component and a heating load component. The heating load component would then be adjusted by the ratio of normal HDDs for that period to actual HDDs for that period. The billed amount, in effect, would then be the sum of the base load and the adjusted heating load.

Q. Pursuant to Act 58 of 2018, the Commission's Policy Statement at Docket No. M-2015-2518883 contemplates the consideration of full and partial rate decoupling mechanisms in Pennsylvania.[87] How does the WNA compare to broader rate decoupling mechanisms?

A. The WNA mechanism as used in Pennsylvania is a partial rate decoupling mechanism, which has at least three advantages over broader rate decoupling mechanisms. First, the WNA provides mutual risk reduction benefits to both NGDC and ratepayer, in the form of revenue/bill stability. The NGDC gets more stable revenues; the ratepayer gets a more stable bill. In theory, the more stable NGDC revenues should reduce its risk, and thus its allowed rate of return.[88] In extremely cold conditions, the ratepayer gets a lower base rates bill under the WNA than it would without a WNA. In contrast, revenue decoupling mechanisms for non-weather variances generally involve an increase in risk for ratepayers and reduced risk for the NGDC. Consider economic fluctuations. In an unexpected economic downturn, a broad rate decoupling mechanism will impose higher charges on ratepayers to make up for the overall downturn in load, at the same time that the ratepayers are suffering the effects of

[86] Gas supply charges are not subject to the WNA. Thus, weather fluctuations will continue to cause bill fluctuations with respect to gas supply.

[87] See also Commission Order at Docket No. M-2018-3003269

[88] In practice, however, I observe that the proliferation of revenue decoupling mechanisms coincided with an increase in the risk premium for equity returns awarded by regulators.

the economic downturn. The NGDC, by contrast, is insulated from the effects of the economic downturn. Thus, as rate decoupling mechanisms go, the WNA is more balanced than broader mechanisms.

The second advantage is that the WNA mechanism can be adopted in "real time." Weather normalization adjustments can be calculated within the billing period in which the variance between actual and normal weather occurs. This avoids the intergeneration inequity problems of broader rate decoupling mechanisms.

The third advantage is that the WNA mechanism can be customer-specific. Weather normalization adjustment mechanisms can be designed to specifically reflect the weather-related usage of the individual customer. As such, it is a fairer mechanism than broader rate decoupling mechanisms, which have little or no linkage between the cause of the revenue variance and the recovery mechanism.

Q. Are there general concerns about the working of WNA mechanisms?

A. Yes, there are several.

First, use of a WNA mechanism means that a customer is being billed for a level of gas consumption that is not metered, but is only estimated. As such, it is often difficult to explain to customers why their rates appear to fluctuate up and down each month, or why there is a mysterious "WNA" charge/credit on their bills that is not related to any specific metered consumption amount.[89]

Second, the WNA mechanism weakens price signals for energy conservation during extreme periods. Under the WNA, a ratepayer has a lower per-mcf incentive to reduce usage during unusually cold periods than it does under traditional volumetric rates. As gas distribution systems are designed, at least in part, to meet extreme weather demands, the traditional rate approach is more consistent with cost causation and with how costs are allocated in the ACOSS.

[89] Peoples indicates that it will not use a separate WNA charge, but will simply hide the effect of the WNA in the volumetric charges. OSBA-I-4.

Third, the "heating load" that is subject to the WNA adjustment is not necessarily heating load. It is the difference between an arbitrary baseload and the customer's actual consumption in the month. Thus, the "heating load" could include many forms of consumption that are not heating related. First, the base load amount may be estimated incorrectly. The baseload is derived from load in the prior summer, which may be understated due to customer vacations, or may simply not be a representative period. If it is set too low, the "heating load" derived by difference is overstated, and the adjustments from the WNA are similarly overstated. In addition, any fluctuation in loads from normal will be ascribed to heating load and subject to WNA multipliers, regardless as to whether that load is related to space heating. Consider houseguests, which may serve to increase hot water and cooking loads, all of which would be considered heating load in the difference-based WNA mechanism.

Fourth, problems can be exacerbated in periods where actual HDDs are low, such as a warm spell in the spring. Unless protections are in place, an unadjusted WNA might produce very large multipliers, if, say, the normal HDDs are 300 and the actual HDDs are 30. For customers who happen to have an unusual load in that period, the WNA would charge that load at a factor of 10:1.[90]

Q. Has the Company adopted mechanisms to minimize these problems?

A. Generally, it has not.[91] If the Commission adopts the proposed WNA, I recommend that the following protections be adopted:

- To avoid problems similar to those experienced by PGW's WNA in 2022, the WNA should be modified such that the WNA not apply when actual HDDs for a billing period are below 100 HDDs. This will avoid the potential for the extreme multipliers exhibited in PGW.

[90] The PGW mechanism did, in fact, produce such anomalous results in the spring of 2022.

[91] OSBA-I-12.

- Rather than make an arbitrary assumption about usage rates for new customers, the WNA should simply not apply to new customers until actual summer usage is established.

- The Company should develop a process for monitoring customers' implied heating usage per degree day, to determine whether the Company's use of a residual approach for deriving the heating load is producing wide variations in assumed heating load per degree day.

Q. Do you have any other specific technical concerns regarding the implementation of the WNA mechanism?

A. I am concerned about the response to OSBA-I-12(a). Based on my interpretation of the response, it appears that the Company proposes to use an average of the past 10 years to define normal *daily* HDDs that are necessary for deriving the billing period normal HDD for each individual customer. My concern is that the average annual HDD for that period appears to have been 5389 HDDs, modestly higher (colder) than the 5341 normal value used for load forecasting. Thus, based on my understanding of the Company's proposal, if the actual HDDs in FPFTY 2025 exactly meet the 5341 normal value used for load forecasting, the Company will be permitted to increase its charges for heating load by about 0.9 percent.

I therefore recommend that the Company clarify its proposed method for deriving normal HDDs for individual billing periods to ensure that they are consistent with the annual normal HDDs used for load forecasting.

Q. What, then, is your recommendation regarding the proposed WNA mechanism?

A. From both a regulatory and ratepayer perspective, WNA mechanisms have advantages and disadvantages. At a minimum, I do not believe that the Company's WNA should be adopted unless and until the concerns cited above are resolved.

In general, however, because rate decoupling mechanisms are explicitly contemplated in the Commission's policy statement, the Commission has approved similar mechanisms at other NGDCs, I take no general exception to Peoples adoption of a WNA in this proceeding, subject to resolution of the specific issues detailed above.

10. Billing Determinants for the FPFTY

Q. What analysis have you undertaken with respect to the Company's load forecast and billing determinants for the FPFTY?

A. The magnitude of the Company's proposed rate increase is based on the future test year revenue requirement less the revenues that would be generated under current rates. To derive the current rate revenues, the Company must develop a load forecast for each class, and then derive the billing determinants from that load forecast. Current approved tariff charges can be applied to the billing determinants in the "proof of revenue" analysis to calculate the current rate revenues.

In general, for base rate proceeding load forecasts for most customers, NGDCs begin with a historical measure of gas usage levels for each category of customer (sometimes by rate class, sometimes using alternative customer groupings), adjust those usage levels to comport with the "normal" weather assumptions in the test year, and further adjust those values for changes in both the customer count and the usage per customer in the FPFTY. For the largest customers, load forecasts are typically developed based on direct consultations with the customer.

In this proceeding, the Company generally follows that procedure. For the Residential, SGS, and MGS classes, the Company relies on a historical measure of use-per-customer, which it weather normalizes, and then it applies a 0.5 percent downward adjustment for conservation. For the LGS customers, forecast use per customer is set based on historical levels.[92]

The Company's support for the conservation adjustment factor of 0.5 percent is based on reported weather-normalized use per customer aggregated into broad residential and commercial categories over the past eight years.[93] That analysis suggests an average decline,

[92] Peoples Statement No. 3 at 5-8.

[93] OSBA-I-5.

but there is significant variability in the trend, and the use of aggregate statistics can mask non-conservation effects.

Q. What analysis have you prepared regarding the Company's UPC estimates?

A. I conducted a statistical assessment of the conservation declines for the heat sensitive classes, using the detailed reviewed the Company's analysis of its proposed adjustments to the use-per-customer for the Residential, SGS and MGS rate classes, and a more detailed level than that prepared by the Company. In particular, I conducted a statistical analysis of the monthly gas consumption by rate class provided in OSBA-I-05. In that analysis, I developed a statistical model for each rate class reflecting actual heating degree days ("HDDs") in that month and a trend variable, to evaluate the reasonableness of the Company's assumptions that weather-normalized use per customer is declining for all rate classes except Rate LGS.

This analysis is presented in some detail in IEc WP1. To a large extent, the statistical analysis did not show a statistically significant trend effect, either for a total class load analysis or a per-customer analysis. A summary of the implications of that analysis is shown in Table IEc-10 below. That table includes only the results for Rates R, SGS and MGS, as per-customer usage for the largest customers is very sensitive to the changes for a relatively small number of customers.

Based on this analysis, I recommend that the Company's conservation adjustment factor be rejected, and that use per customer for the temperature sensitive classes be based on historical average use per customer.

Table IEc-10 Statistical Evidence for Trends in Gas Consumption				
	PNG Consumption		**PG Consumption**

Q. Does this conclude your direct testimony?

A. Yes, it does.

APPENDIX A

MEASURES OF PROGRESS TOWARD COST BASED RATES

PENNSYLVANIA UTILITY COST AND REVENUE ALLOCATION

Introduction

The Pennsylvania Commonwealth Court held that cost of service is "the polestar" criterion for assigning a utility rate increase among the various rate classes.[94] Parties to Pennsylvania base rates proceedings generally agree that this criterion implies that the revenues for each class at the rates approved by the Commission should be closer to allocated costs than the rates in place when the rate case is filed. Thus, parties to the proceeding will typically compare some metric for cost recovery under "proposed rates" with that same metric for cost recovery under "current rates." This comparison can show (a) *whether* the proposed rates result in class revenues that are closer to allocated costs, and (b) *how much* progress the proposed rates make toward moving class revenues toward allocated costs.

While different metrics are used for this analysis, the most common metric in Pennsylvania is the "indexed rate of return" metric (also called the "relative rate of return" or "unitized rate of return" metric). This appendix demonstrates why the indexed rate of return is not a reliable metric for identifying whether proposed rates are closer to allocate costs than current rates, and that even where the indexed rate of return correctly implies that there is progress toward cost-based rates, it is not a reliable indicator of the amount of progress that is achieved.[95] This appendix also compares the indexed rate of return to three other metrics for evaluating progress toward cost-based rates, namely the dollar subsidy, the rate of return differential, and revenue-cost ratio metrics.

[94] Lloyd v. Pennsylvania Public Utility Commission, 904 A.2d 1010, 1020 (Pa. Cmwlth. 2006).

[95] This problem with the indexed rate of return metric was identified in OSBA-sponsored testimony at least as early as 1994. This critique has been presented in expert testimony many times since. No credible rebuttal to these basic conclusions has been submitted, but the widespread use of this flawed metric continues.

The Structure of the Cost Allocation Study

The indexed rate of return metric is derived from the method that is most often used for utility cost allocation in Pennsylvania. When a utility or regulator develops a revenue requirement for a test year, it simply sums all of the individual cost items for that year, including operating and maintenance ("O&M"), administrative and general ("A&G"), depreciation, taxes other than income, income taxes and allowed return on rate base. Thus, the objective of a cost allocation study should be to simply allocate each of these cost elements to the various rate classes. Because the allowed return and associated income tax are derived from rate base, the cost allocation study allocates all net plant and other rate base items to the various rate classes, and the return and income taxes can then be allocated in proportion to rate base.

Cost allocation studies in Pennsylvania, however, are most often conducted on a class rate of return basis. That is, the cost allocation study calculates a class rate of return by taking revenues, deducting the allocated O&M, A&G, depreciation and taxes other than income, to produce a pre-tax class net income. Income taxes are then most often allocated based on the calculated pre-tax class income, and a net income by class value is derived by difference. The allocated pre-tax and net income figures are thus not a cost of capital, but represent the implied return provided by each class under the revenues (current or proposed) used in the cost allocation study. These net income values are then divided by the allocated rate base, to produce percentage class rates of return.[96] Thus, with this approach to cost allocation, there is a desire by utilities and regulators to develop a metric for evaluating progress toward cost-based rates that is based on the class rates of return produced by the cost allocation study.

Defining Progress Toward Cost-Based Rates

It is not necessarily obvious what it means to "move rates more into line with allocated cost" between current and proposed rates. At the simplest level, one could argue that if the current rate revenues for a particular class are below the allocated cost for that class at the full proposed

[96] Some Pennsylvania utilities also calculate cost of service using a "levelized rate of return" method, in which return and income tax costs are allocated such that each class produces the system average rate of return. This approach is arithmetically equivalent to allocating return and income tax costs in proportion to rate base, as described above.

revenue requirement, any increase in rates will move that class's revenues closer to allocated cost. However, the objective of this exercise is to measure the progress toward cost-based rates for each rate class compared to that for all of the other classes. Thus, a revenue allocation proposal must be evaluated for its impact on all of the rate classes.

Also at the simplest level, of course, a proposed revenue allocation will by definition move rates more into line with allocated cost if each class's revenues are moved exactly to the full proposed allocated cost of service. Or, equivalently, rates are exactly cost-based when each class's revenues are set such that the class produces the system average rate of return. Therefore, there is no question that moving a class exactly to an indexed rate of return of unity (1.0) is necessarily consistent with making rates more cost-based.

In many base rate proceedings, however, moving rates fully into line with allocated costs cannot be achieved due to consideration of other rate design factors, most notably "rate gradualism," which serves to limit the increase for any particular class of customers in any rate proceeding, and has the aim of gradually moving rates into line with allocated cost.

Thus, in terms of determining whether a particular rate proposal moves rates into line with allocated cost, this appendix takes the position that there is progress toward cost-based rates if the proposed relative rate increases across the various classes, when followed for a number of base rates proceedings (in which there is no change in the relative cost structure), will eventually result in cost-based rates. Thus, for any particular metric, it is important to consider not only the difference between the metric and current rates and proposed rates in one base rates case, but also what that metric will imply going into the next base rates case.

As shown further in the numerical example below, this standard for defining progress implies that for classes with revenues below allocated cost at current rates (or, equivalently, with a class rate of return below system average), progress can only be achieved by assigning that class a rate increase above the system average increase. This, of course, is just plain common sense. If a class is under-recovering costs, it should be assigned an above average increase. As shown below, however, the indexed rate of return metric fails at common sense.

The Numerical Example

This appendix takes the approach of defining a specific numerical example, and showing the implications of various different metrics on different rate increase scenario. The calculations associated with this example are also provided in MS Excel electronic format (IEc WP5), and parties are able to simulate alternative examples to evaluate the rigor of this analysis.

The example attached to this appendix shows the arithmetic impacts of a single two-class utility example under four different rate increase proposals. Each page shows the implications of a different revenue-cost metric, namely the indexed rate of return, dollar subsidy, differential rate of return, the revenue-cost ratio and the normalized revenue-cost ratio.

The example involves two rate classes, A and B, in which each generates the same revenue at current rates, but in which Class A has a moderately higher cost to serve. The four rate increase scenarios are (I) an across-the-board increase in which both classes get the same percentage increase, (II) a scenario with a moderately higher percentage increase for Class B, and (III) a slightly higher percentage increase for Class A, and (IV) a moderately higher percentage increase for Class B.

The common-sense answer is that the across-the-board scenario (I) should show no progress toward cost-based rates, Scenario II should indicate that revenues are moving farther away from costs, and Scenarios III and IV should show that revenues are moving slightly and modestly closer to allocated costs. The discussion of each metric below highlights where the metric produces results that are at odds with these expectations.

To evaluate the question as to whether there is consistent progress toward cost-based rates, the metrics are evaluated at both proposed rates in the "current" base rates proceeding, and for what the values would imply going into the next base rates case after a uniform increase in costs.

The Indexed Rate of Return Metric

The indexed rate of return metric is measured as the class rate of return divided by the system average rate of return, at current and proposed rates. If revenues are fully in line with allocated costs, the class indexed rate of return is unity (1.0). Thus, if a class has an indexed rate

of return at present rates that is higher than system average, it is deemed to be over-recovering costs, and conversely, where the indexed rate of is below unity, the class is under-recovering allocated costs.

As a standalone measure for relative cost performance, there is nothing wrong with the indexed rate of return metric – for any particular system average rate of return scenario, the farther a class's indexed rate of return is from unity, the farther it is from allocated costs.

Moreover, since an indexed rate of return of unity represents cost-based rates, it is conceptually appealing to conclude that if the indexed rate of return moves closer to unity, there is progress toward cost-based rates. Moreover, it is similarly appealing to conclude that progress toward cost-based rates could be measured by how much closer the index gets toward unity between current and proposed rates. Unfortunately, this intuitive approach fails in the actual arithmetic.

Utilities have used this approach for decades in Pennsylvania. While it is not clear why alternative methods have not been adopted, it may be that the metric is attractive to both utilities and regulators in that it tends to show significant progress toward.[97] cost-based rates when in fact there is little such progress. This then allows utilities to claim that they are following the cost standard without having to make politically unpopular decisions regarding differentiating rate increases among the various rate classes.

When applied in an actual example, the indexed rate of return fails even the simplest test. In the example shown, the current rates class rates of return are 2.50% and 5.71% for Classes A and B respectively, producing indexed rates of return of 0.625 and 1.429 relative to the system average return of 4.00%. When a 30% increase is applied to both classes, the system average rate of return rises to 8.00%, and the class returns rise to 6.25% and 10.00% respectively, yielding indexed rates of return of 0.781 and 1.250.

[97] The Commission has, on occasion, adopted methods other than indexed rate of return. See, for example, *Pennsylvania Public Utility Commission v. City of Bethlehem -- Water Department*, Docket No. R-2020-3020256, Order entered April 15, 2021, at 36.

Thus, despite the fact that both classes get the same percentage increase and common sense says that there should be no progress toward cost-based rates, the indexed rate of return metric not only implies that there is progress, but that there is significant progress. The Class A indexed rate of return moves from 0.625 to 0.781, which appears to imply that the class has moved 42 percent of the way to cost-based rates.[98]

The fallacy of this logic is shown in the implications for the next rate case. When costs increase, the system average rate of return falls back to its lower level and the indexed rate of return metrics all shift farther away from unity. Thus, as shown, an across-the-board increase in the current rate case followed by an across-the-board cost increase for the next case will demonstrate that, in fact, there is no progress toward cost-based rates and the indexed rates of return are right back where they started.

The other revenue increase scenarios show similar problems with the indexed rate of return metric. In Scenario II, despite a smaller percentage increase for the higher-cost Class A, the indexed rate of return again implies that there is progress toward cost-based rates, which is obviously nonsense. This is again demonstrated by the implications for the next base rates case, which understandably show that rates are farther out of line than they were going into the current rate case. It is simply unreasonable to believe that assigning larger percentage increases to the rate class that is already over-recovering costs will somehow reduce inter-class subsidies. And yet that is the implication of the indexed rate of return metric.

In Scenarios III and IV, the indexed rate of return does produce the correct directional answer, namely that rates are moving more into line with allocated cost. But the indexed rate of return metric implies that both scenarios result in enormous progress toward cost-based rates, when in fact there is relatively little progress, particularly in Scenario III. As shown in the example, despite a small differential in the rate increases, the indexed rate of return implies that revenues

[98] "Progress" is measured by how much the metric has moved divided by how far it needs to move to become fully cost-based. Thus, in the residential class example, the index moves from 0.625 to 0.781, a difference of 0.156, compared to moving fully to cost-based rates, which would require the index to move from 0.625 to 1.000, a difference of 0.375. Progress is measured as 0.156/0.375, or 42 percent.

have moved 50 percent of the way toward allocated cost. Realistically, however, as shown in the implications for the next base rates case, the actual progress is much lower.

Thus, the indexed rate of return metric is a wholly unreliable guide for evaluating progress toward cost-based rates in a utility rate proceeding, because it (a) may show progress toward cost-based rates when in fact revenues are moving farther away from costs, and (b) will overstate the magnitude of progress toward cost-based rates when progress is occurring.

The Dollar Subsidy Method

While the indexed rate of return metric is the most common approach used by Pennsylvania utilities, the Commission has also supported the use of the dollar subsidy metric. In an order involving the City of Bethlehem – Water Department, the Commission concluded:

> "As noted by the OSBA, the proper yardstick for measuring the degree of movement toward cost of service is the change in the absolute level of class subsidies at present and proposed rates."[99]

In the dollar subsidy method, the total cost to provide service is calculated using the method described above, in which each component to cost, including return and income taxes, is allocated to each cost. The difference between current rate revenues and the allocated cost is the dollar subsidy.[100]

In allocating the return and income tax costs under the "current rates" evaluation, the values used represent only the return that the utility would achieve and the income taxes that it would incur if it were assigned no rate increase. These values therefore do not represent the utility cost of capital, but simply residual values of what is left from current rate revenues after O&M, A&G, depreciation and other taxes are deducted.

[99] *Pennsylvania Public Utility Commission v. City of Bethlehem -- Water Department*, Docket No. R-2020-3020256, Order entered April 15, 2021, at 36.

[100] This appendix uses the term "subsidy" as the difference between revenues and fully allocated cost in a utility cost allocation study. Theoretical economics generally defines subsidy based on incremental cost concepts, rather than fully allocated cost.

When the dollar subsidy metric is applied to the four alternative revenue allocation proposals in the attached example, it implies the following:

- For the across-the-board increase, the dollar subsidy metric indicates that the dollar value of the revenue-cost difference increases under proposed rates, implying that rates are moving farther away from costs. In dollar terms, that conclusion is correct, although in percentage terms the subsidies remain the same.

- When a larger increase is assigned to Class B, the dollar subsidy metric indicates correctly that rates are moving farther away from allocated cost, and that the problem will be worse with the next base rates proceeding.

- When a modestly larger increase is assigned to Class A, the dollar subsidy metric implies that there is no progress toward cost-based rates in the current rate proceeding, and that the situation will be worse in the next base rates case. In effect, even though the slightly higher rate increase for Class A will (eventually) lead to cost-based rates, the dollar subsidy method implies that there is no progress.

- When a materially larger increase is assigned to Class A, the dollar subsidy metric correctly indicates that there is progress toward cost-based rates.

Thus, overall, the dollar subsidy metric will tend to slightly understate progress toward cost-based rates, but the distortion is far smaller (and in the opposite direction) of that of the indexed rate of return metric.

The Differential Rate of Return

The differential rate of return metric is similar to the indexed rate of return metric, in that both approaches calculate class rates of return and current and proposed rates, and compares each class's return to the system average. However, where the indexed rate of calculates the *ratio* of class to average return, the differential rate of return calculates the *difference* between class and average rates of return. In the indexed rate of return, cost-based rates are achieved with an indexed rate of return of unity (1.0); for the differential rate of return, cost-based rates are achieved with a differential rate of return of zero.

When applied to the four revenue allocation scenarios in the example, the differential rate of return produces results that are nearly the same as the dollar subsidy method. That is, the differential rate of return calculation will slightly understate progress toward cost-based rates, but the results are much less distorted than those from the indexed rate of return metric.

Revenue-Cost Ratio

The revenue cost ratio is similar to the dollar subsidy metric, except rather than taking the difference between revenues and allocated costs, it takes the ratio of revenues to allocated cost. Like the indexed rate of return, cost-based rates are achieved at a revenue-cost ratio of unity (1.0 or 100 percent).

Unlike the indexed rate of return metric, however, the revenue-cost ratio generally does not distort the implications of a revenue allocation proposal. As shown in the example, in all four revenue allocation proposals, the revenue-cost ratio correctly indicates when there is progress toward cost-based rates and when there is not.

The only downside to this unadjusted revenue-cost ratio approach is that the progress toward cost-based rates in the current case is not the same as that going into the next base rates case. This results because the mix of operating costs allocated to each class is different from the mix of rate base costs. This minor distortion is addressed in the final metric below.

Normalized Revenue-Cost Ratio

The normalized revenue-cost ratio makes a technical correction to the revenue-cost ratio metric to reduce the distortion associated with using a non-cost parameter, namely the residual return and income tax costs, as a measure of cost at current rates. This metric uses fully allocated costs including the utility's allowed return on capital as the cost metric at both current and proposed rates. In this metric, however, the revenues at current rates are "normalized" by applying the system average rate increase to each class. Thus, in this metric, the current rates revenue-cost ratio is the revenues that would be earned from each class if an across-the-board rate increase were applied divided by the fully allocated class revenue requirement. This is then compared to the revenue-cost ratio that results from the actual proposed revenue allocation.

As shown in the attached example, this metric correctly shows the progress toward cost-based rates in each of the scenarios, and it also correctly predicts what each class' revenue-cost performance will be going into the next base rates case if there is no change in the underlying cost structure.

Summary

The indexed rate of return is a metric that has intuitive appeal, in that cost-based rates are achieved when the index is at unity (1.0), and that it would seem therefore that moving the index closer to 1.0 would represent progress toward cost-based rates.

Alas, it is not that simple. As shown in the examples attached, and as evidenced in hundreds of utility rate proceedings in Pennsylvania, the indexed rate of return is not a reliable metric for gauging progress toward cost-based rates for any particular revenue allocation proposal. It may give a directionally correct answer, and it may not. And even when it does correctly show progress, it implies that there is much more progress toward cost-based rates than actually exists.

Of the five metrics evaluated in this review, the indexed rate of return is the only metric to fail the test and imply that there is progress toward cost-based rates when there is none, and even when rates are moving substantially away from allocated cost.

All the other metrics evaluated in this review are superior to the indexed rate of return approach. The dollar subsidy and differential rate of return have a modest disadvantage in that they may imply that there is no progress toward cost-based rates when in fact some small progress is occurring. This is a relatively modest disadvantage since the distortion is much smaller than that in the indexed rate of return, and moreso because it will encourage Pennsylvania utilities and regulators to adopt revenue allocation proposals that are more aggressive in moving revenues into line with allocated cost, consistent with the legal standard that cost of service be the polestar criterion.

Overall, however, the revenue-cost metric, particularly the normalized revenue-cost metric, does not suffer from the distortions of any of the other methods, and is the most reliable of the methods on offer.

RÉSUMÉ AND EXPERT TESTIMONY LIST

FOR

ROBERT D. KNECHT

Overview

Mr. Knecht has more than 40 years of economic consulting experience, focusing on the energy, utility, metals and mining industries. For the past 30 years, Mr. Knecht's practice has primarily involved providing analysis, consulting support and expert testimony in regulatory matters, primarily involving electric and natural gas utilities. Mr. Knecht's work includes many aspects of utility regulation, including industry restructuring, cost unbundling, cost allocation, rate design, rate of return, customer contributions, energy efficiency programs, smart metering programs, treatment of stranded costs and utility revenue requirement issues. He has consulted to state advocacy agencies, industrial customer groups, law firms, regulatory agencies, government agencies and utilities, in both the United States and Canada. He has provided expert testimony in more than one hundred separate utility proceedings.

In addition to his work with regulated utilities, Mr. Knecht has consulted on international industry restructuring studies, prepared economic policy analyses, participated in a variety of litigation matters involving economic damages, and developed energy industry forecasting models.

Mr. Knecht served as a Principal of IEc for 33 years, and as its Treasurer for 15 years. He is currently an independent consultant who remains affiliated with IEc.

Education

Master of Science, Management (Applied Economics and Finance), Sloan School of Management, M.I.T.

Bachelor of Science, Economics, Massachusetts Institute of Technology

Select Project Experience

For more than 25 years, Mr. Knecht has provided consulting services, analysis and expert testimony before the Pennsylvania Public Utility Commission on all manner of regulatory proceedings to the **PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE**. In addition to expert testimony, Mr. Knecht has assisted OSBA with the development of public policy positions, litigation strategy, and longer term strategy.

For the **ATTORNEY GENERAL OF THE STATE OF RHODE ISLAND**, Mr. Knecht provided consulting and expert witness services in an acquisition proceeding involving PPL Corporation's proposed acquisition of Narragansett Electric from National Grid. Mr. Knecht's testimony addressed financial, economic, environmental, tax, operating cost and rate implications.

For the **NEW BRUNSWICK PUBLIC INTERVENER,** Mr. Knecht provides consulting and expert witness services in a variety of regulatory proceeding before the New Brunswick Energy and Utilities Board involving New Brunswick Power, Enbridge Gas New Brunswick, and petroleum products. Mr. Knecht has addressed issues of load forecasting, costs forecasting, cost of capital, allocation of corporate overhead costs, utility cost allocation, revenue allocation, market-based rate design, cost-based rate design, and rate decoupling.

For **L'ASSOCIATION QUÉBÉCOISE DES CONSOMMATEURS INDUSTRIELS D'ÉLECTRICITÉ (AQCIE) AND LE CONSEIL DE L'INDUSTRIE FORESTIÈRE DU QUÉBEC (CIFQ)**, Mr. Knecht provided analysis, consulting advice and expert testimony before the Régie de l'énergie in regulatory matters involving Hydro Québec Distribution and TransÉnergie. This work includes revenue requirement, power purchasing, cost allocation, treatment of cross-subsidies, and rate design.

For the **INDEPENDENT POWER PRODUCERS SOCIETY OF ALBERTA**, Mr. Knecht provided consulting advice, analysis and expert testimony before the Alberta Energy and Utilities Board in a series of proceedings involving the restructuring of the electric utility industry, the unbundling of rates, and the development of transmission rates.

Rebuttal Testimony and Exhibits of

ROBERT D. KNECHT

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Cost Allocation
Flex Rates
Revenue Allocation

Date Served: April 18, 2024

Date Submitted for the Record:

REBUTTAL TESTIMONY OF ROBERT D. KNECHT

1. Introduction and Context

Q. Mr. Knecht, please state your name and briefly describe your qualifications.

A. My name is Robert D. Knecht. I submitted direct testimony and associated exhibits earlier in this proceeding as OSBA Statement No. 1 REVISED, and my qualifications were presented therein.

Q. Please describe the purpose of this rebuttal testimony.

A. This rebuttal testimony addresses only cost allocation and revenue allocation issues, in response to the direct testimony of the following witnesses:

- Mr. Ethan H. Cline, I&E Statement No. 3
- Mr. Clarence L. Johnson, OCA Statement No. 4
- Mr. Richard A. Baudino, PII Statement No. 1

Cost allocation issues are reviewed in Section 2. Revenue allocation issues, including the treatment of negotiated rate ("flex rate") customers, are addressed in Section 3.

2. Cost Allocation Issues

Q. Please summarize the key cost allocation issues you raised in your direct testimony.

A. The major recommendations in my direct testimony regarding the Company's allocated cost of service study ("ACOSS") include the following:

- The Company's proposal to bifurcate distribution mains between regulated-pressure and low-pressure system, to fully charge all customers for the entire regulated-pressure system, and to exempt LGS customers from contributing to all low-pressure system costs is not justified by the evidence and is inconsistent with the practices of other Pennsylvania natural gas distribution companies ("NGDCs.").

- The Company's design day demand level for the LGS class in the peak demand allocation factor appears to be materially lower than actual peak day Rate LGS demands served by the Company.

- Distribution mains costs should be classified into customer-related and demand-related components, with demand costs allocated based on design day demands. The established approach for doing so is a minimum system analysis, wherein the customer component reflects the cost of the system that is not related to load. Concerns regarding the load carrying capability of some minimum system analyses can be addressed through the use of a "zero-intercept" methodology.

- The Company's allocation of Account 902 meter reading costs appears to have an inadvertent spreadsheet error which over-assigns costs to the LGS class.

- I also identified other technical corrections to the ACOSS with relatively small impacts on overall allocated costs.

Q. Do any of the other parties address the issue of segregating mains between regulated-pressure and low-pressure systems?

A. No. On that subject, however, I observe that the Pennsylvania Office of Consumer Advocate ("OCA") opposed similar proposals in the Company's last base rate case and in Columbia's 2012 base rates case.[1] In both cases, OCA presented cost causation arguments and cited strongly to the Commission's decision in Matter R-00942991 involving National Fuel Gas, wherein a similar bifurcation of mains was rejected.[2]

Q. Do any of the other parties address your concerns regarding design day demands for the LGS class?

[1] Docket No. R-2012-2321748 (Columbia), OCA Statement No. 3 (Watkins) at 9; and Docket No. R-2018-3006818 (PNG), OCA Statement No. 3 (Watkins), at 17-20. Note that OCA continued to oppose Columbia's sub-functionalization of mains in subsequent proceedings, even with Columbia's efforts to more closely match mains costs to the customers using those mains as discussed in my direct testimony. *See* Docket No. R-2014-2406274, OCA Statement No. 3 (Watkins) at 19-22; Docket No. R-2015-2468056, OCA Statement No. 3 (Mierzwa) at 7-9.

[2] Pa. PUC v. Nat'l Fuel Gas Distribution, 83 Pa. PUC 262, 318-321 (1994).

A. No.

Q. Please review the parties' positions regarding the classification and allocation of mains costs.

A. The various experts fall into two general categories. OCA witness Johnson and I&E witness Cline support classifying and allocating mains costs half based on design day peak demand and half based on average annual demand, denoted the "peak-and-average" or "P&A" approach. PNG witness Zarumba, PII witness Baudino and I all conclude that cost causation for mains should involve segregating costs into a customer component, related to the higher costs of extending the distribution system to attach smaller customers, and a design day demand component, reflecting that individual mains must be sized to meet downstream design day demand. This approach is denoted the "CD" method.[3] However, this group uses both the P&A and CD methods in developing revenue allocation recommendations for this proceeding.

In this proceeding, there are three experts who rely on a variety of methods for classifying and allocating mains costs in this proceeding, and two experts who rely on a single methodology. The experts favoring the use of multiple methods (Zarumba, Baudino, Knecht) make similar arguments regarding the flaws in the peak-and-average ("P&A") methodology relied upon by the other witnesses (Cline, Johnson). These include:

- Mains must be sized to meet design day demands of downstream customers.[4]
- Mains are not sized to meet annual average demands.[5]

[3] Mr. Zarumba developed a "minimum system" approach to classifying mains costs, which he adjusts slightly for the load carrying capability of the minimum system. Mr. Baudino does not challenge that approach. I included consideration of a zero-intercept approach to mains classification, which is an alternative approach for excluding load carrying capability in the minimum system.

[4] PNG Statement No. 15 at 18, PII Statement No. 1 at 8, OSBA Statement No. 1 REVISED at 34.

[5] PNG Statement No. 15 at 18-19, PII Statement No. 1 at 8, OSBA Statement No. 1 REVISED at 34.

- The gas distribution system must be extended to attach the customers, and extending the system to serve many smaller customers is more costly than serving fewer larger customers.[6]

In respect of Commission precedent, the history is presented in significant detail in my direct testimony. Based on that review, I conclude that the Commission's position is more nuanced than that suggested by Mr. Cline's direct testimony.[7] The Commission has also indicated that it would evaluate mains cost classification and allocation on a case-by-case basis.[8]

I therefore retain my recommendation that the Commission consider all of the cost allocation methods offered by the experts in this proceeding to allocate the rate increase among the classes in a fair and reasonable manner.

Q. OCA witness Mr. Johnson recommends a modification to the allocation of customer service costs, wherein costs associated with large customer care are assigned only to the MGS and LGS classes. Do you agree with his proposal?

A. I agree that customer service costs for large customers should be assigned to the classes that benefit from those services. I respectfully disagree that Mr. Johnson's proposal to allocate those costs between MGS, LGS and LGS ML based on revenues. In my experience, most large customer care costs involve large industrial customers with complex metering and billing issues. By contrast, Mr. Johnson allocates over half of those costs to the MGS class. Moreover, the magnitude of the impact of this proposal is quite small, as the costs involved are only $1.3 million. Should it be necessary for me to update my ACOSS analysis in surrebuttal, I will incorporate Mr. Johnson's recommendation, albeit with a volumetric allocator which would assign a more realistic (but probably still excessive) 27 percent of the costs to Rate MGS.

[6] PNG Statement No. 15 at 6, PII Statement No. 1 at 9, OSBA Statement No. 1 REVISED at 32.

[7] I&E Statement No. 3 at 27. Mr. Cline cites only to one decision in support of this claim.

[8] OSBA Statement No. 1 REVISED at 31 and footnote 56.

4. Revenue Allocation and Flex Rate Customers

Q. By way of background, please address the magnitude of the Company's proposed rate increase in this proceeding, and the large differences between your revenue allocation analysis and that of the other rate witnesses.

A. In this proceeding, the Company's claimed revenue deficiency is $156.0 million.[9] The Company proposes to recover that claimed deficiency with a $2.4 million increase in gathering system fees, a $0.9 million increase in late fees, and $152.7 million net increase in tariff charges. The tariff charges include a variety of charges and tariff riders that are generally related to base rates costs. A summary of the Company's proposed rate increases is shown in Table IEc-R1 below:

Table IEc-R1
Peoples Proposed Revenue Increases $mm

	Current Revenues	Proposed Revenues	Proposed Increase	Percent Increase
Customer and Delivery Charges	**$504.9**	**$678.6**	**$173.7**	**34.4%**
DSIC/STAS	$28.1	0	($28.1)	
TRS/TCJA	($38.6)	($34.2)	$4.3	
MFC/GPC/SCR	$10.1	$9.7	($0.4)	
Sub-Total Tariff Excl COG	**$501.3**	**$654.0**	**$152.7**	**30.5%**
Late Fees	$5.4	$6.4	$0.9	
Gathering Fees	$7.0	$9.4	$2.4	
Miscellaneous Revenues	$1.8	$1.8	$0.0	
Cost of Gas	$317.7	$317.7	$0.0	
Total	**$833.2**	**$989.2**	**$156.0**	**18.7%**
Sources: IEc WPR1 Revenue Allocation Rate Design				

Messrs. Cline, Johnson and Baudino all prepare their evaluations of the revenue deficiency using the $173.7 million figure shown in the first row of Table IEc-R1, whereas my analysis

[9] OCA Statement No. 2 at 4, I&E Statement No. 1 at 3.

was based on the non-gas tariff revenue increase of $152.7 million.[10] I used the $152.7 million for analysis and comparison in this proceeding for the following reasons.

First, the Company's proposed rates reflect the roll-in of the DSIC and, to a much smaller extent, the STAS.[11] As those charges are proportional to base rates, the reduction in the DSIC/STAS are directly related to the proposed increase in the case. Moreover, ratepayers are already paying those charges, and thus the actual bill impact when the proposed rates go into effect will be the increase net of the roll-in of DSIC charges. For that reason, in my experience, Pennsylvania utilities generally evaluate the rate increases based on the combined effects of the increase in the base tariff charges and the impact of zeroing out the DSIC.

Second, both the TRS and the TCJA are tax credit items, related to assets that are included in base rates costs.[12] The TCJA credit declines as a result of the filing, because the test year taxes are derived at the lower corporate income tax rate specified in the TCJA.

The MFC, GPC and SCR are tariff riders related to recovery of costs associated with the gas supply function beyond the cost of gas, including uncollectibles, procurement costs, and costs for administering the retail choice program. The costs associated with these functions are included in the Company's revenue requirement, and they are part of the costs allocated in the ACOSS.

[10] Mr. Cline makes reference to total revenues, but he appears to rely on the customer/delivery charge revenues shown in Table IEc-R1 for his recommendations.

[11] The Distribution System Improvement Charge ("DSIC") is a tariff mechanism through which costs related to investments made by regulated Pennsylvania public utilities above those reflected in regular rates may be directly passed through to customers, generally subject to a 5 percent cap. The State Tax Adjustment ("STAS") is a true-up mechanism related to changes in state taxes subsequent to those reflected in a base rates proceeding.

[12] The Tax Repairs Surcredit ("TRS") is a rate rider credit to PNG customers associated with the tax effects of a change in the depreciation method for PNG division assets. The Tax Cut and Jobs Act rider is a credit to ratepayers related to the federal government adoption of the TCJA in 2017, which lowered the statutory corporate income tax rate.

Thus, my comparison analysis in this testimony is generally based on the net $152.7 million increase, but I have included comparisons of revenue allocation proposals at the $173.7 million level.

Q. Please summarize the positions of the parties.

A. A summary of the results is shown in Table IEc-R2 ($152.7 million) and Table IEc-R3 ($173.7 million) below.

Table IEc-R2
Comparison of Revenue Allocation Proposals
All Non-Gas Tariff Revenues

	Total	Residential	SGS	MGS	LGS	LGS ML
Increase $000						
Peoples	152,716	118,734	18,305	16,398	1,209	-1,929
OSBA	152,717	118,421	16,811	11,854	5,631	0
I&E*	152,715	107,921	14,237	18,434	2,521	9,602
OCA I	152,715	88,875	21,746	32,357	60	9,678
OCA II	152,715	89,991	21,144	27,386	4,517	9,678
PII	152,715	125,697	19,230	17,493	-7,776	-1,929
Percent Increase						
Peoples	30.5%	34.1%	42.0%	29.3%	2.5%	-32.3%
OSBA	30.5%	34.0%	38.6%	21.2%	11.8%	0.0%
I&E*	30.5%	31.0%	32.7%	33.0%	5.3%	160.6%
OCA I	30.5%	25.5%	49.9%	57.9%	0.1%	161.9%
OCA II	30.5%	25.8%	48.6%	49.0%	9.5%	161.9%
PII	30.5%	36.1%	44.2%	31.3%	-16.3%	-32.3%

* The I&E revenue allocation is shown in the table at page 38 of I&E Statement No. 3, but that table appears to have an inadvertent arithmetic error in deriving the system average percentage increase. I expect that correcting this error would result in a very different revenue allocation proposal, in light of Mr. Cline's reliance on the P&A ACOSS method.

An alternative version of this Table using the $173.7 million increase is shown in Appendix A.

* The I&E revenue allocation is shown in the table at page 38 of I&E Statement No. 3, but that table appears to have an inadvertent arithmetic error in deriving the system average percentage increase. I expect that correcting this error would result in a very different revenue allocation proposal, in light of Mr. Cline's reliance on the P&A ACOSS method.

An alternative version of this Table using the $173.7 million increase is shown in Appendix A.

Sources: IEc WP R1

Both Tables IEc-R2 and IEc-R3 show that the Residential class represents a large share of current rates revenues, and is assigned a large share of the overall rate increase by all parties. Peoples, OSBA, PII and (to a lesser extent) I&E all assign that class rate increases modestly above system average, while OCA assigns a large but modestly below average increase.

Small commercial (and a few industrial) customers in Rate SGS attract above-average increase recommendations from all parties, ranging substantially from 32.7 to 49.9 percent.

Medium commercial and industrial customers in Rate MGS similarly face a wide array of proposed increases, with OCA proposing increases far in excess of system average, I&E and PII proposing increases modestly above system average, Peoples proposing a modestly below average increase and OSBA with a below average increase.

Increases to the customers who are included in the LGS and the proposed LGS Mainline ("LGS ML") class are complicated by the lack of information regarding the current rate revenues associated with the customers who are implicitly included in the LGS ML class in the COSS analysis.[13] For the purpose of preparing my analysis of the Company's proposed revenue allocation split between LGS and LGS ML, I relied on the values reported in the Exhibit 11 workbook, at worksheet Revenue Recon 1, cells Z84 to AB90. That exhibit indicates that the current LGS ML base rate revenues are $6.997 million, with a net credit of $1.018 million in unspecified riders (which I believe to be primarily the TRS/TCJA credits less the DSIC charge). The COSS exhibit does not specify the Company's proposed base rate revenues for LGS ML, although I expect that those are unchanged as the LGS ML customers are all flex rate customers. However, the COSS exhibit does indicate that the proposed LGS ML rates will have a rate rider credit of $2.947 million, presumably reflecting the DSIC reset. This implies a net reduction in LGS ML revenues of $2.974 - $1.018 = $1.956 million in the net charges to the LGS ML customers, which is the value shown in Table IEc-R2.[14]

In evaluating the other parties' revenue allocation proposals, I assume that they take no exception to the Company's proposed change in rate rider revenue for LGS ML, and thus I include that effect in the net increase shown in Table IEc-R2.

With that background, the parties all propose an increase for the LGS class (excluding LGS ML customers) that is well below the system average, with PII proposing a large rate decrease. (Note the PII decrease shown in Table IEc-R2 reflects the combined effects of

[13] OSBA requested a breakout of LGS ML revenues in OSBA-I-6(a), but the Company declined to provide that information.

[14] To my knowledge, the Company has not explained why flex rate LGS ML customers should be assigned a net rate decrease in this proceeding.

Mr. Baudino's proposed base rate reduction and the reduction from the DSIC being zeroed out.) For the LGS ML customers, I&E and OCA generally advocate setting the presumed revenues from the class at allocated cost, whereas Peoples, PII and OSBA generally apply a zero base rate increase.

Q. Please expand on the issue of revenue allocation to flex rate customers and the positions of the parties with respect to Rate LGS ML.

A. By definition, revenues from flex rate customers are not based on tariff charges, but are set through negotiation based on the cost of the customers' competitive alternatives. The Company generally agrees that rate discounts to flex rate customers should be no more than that necessary to prevent those customers from leaving the system. To my knowledge, no party has challenged the Company's compliance with that principle. Thus, it can be reasonably assumed that the current rates being charged to all flex rate customers represent the maximum revenues for the class, and that no increase to those customers is possible without a significant risk of losing those customers to their competitive alternatives.

For Rate LGS ML, Peoples' witness Mr. Zarumba indicates that LGS ML customers ". . . are all served under special contracts but are classified as LGS customers." [15]

The positions of the parties are as follows.

Mr. Cline representing I&E makes the very reasonable proposals that (a) Peoples be required to regularly update its competitive analyses for flex rate customers, and (b) that it be required to separately allocate costs to flex rate customers in the next base rates case. I agree with both recommendations. However, I believe that segregating the LGS ML class for cost allocation goes a long way toward achieving Mr. Cline's cost allocation recommendation, because the LGS ML customers are all flex rate customers and represent a significant share of the overall flex rate revenues.[16] However, Mr. Cline assigns a $9.6 million increase to

[15] Peoples Statement No. 15 at 47.

[16] Base rate revenues for Rate LGS ML are $7.0 million, which represents the vast majority of the volumetric flex rate revenues reported in the proof of revenues ($8.2 million), as well as the vast majority of the current rate revenues for flex rate revenues reported in OSBA-I-29 (which are confidential).

that class (offset somewhat by the DSIC effect), to bring revenues in line with allocated cost. Mr. Cline does not explain how a rate increase can be assigned to flex rate customers, much less an increase of over 160 percent.

OCA witness Mr. Johnson recognizes that LGS ML customers are negotiated rate customers and that ". . . their bills will be unaffected by gradualism constraints." Nevertheless, Mr. Johnson proposes to increase revenues from LGS ML customers by $9.7 million in both scenarios (also somewhat offset by rate rider effects) to reflect the fully allocated cost of service, because ". . . Mainline is a construct which is supposed to prevent inter-class subsidies."[17] I respectfully disagree with Mr. Johnson's characterization of Rate LGS ML. Rate LGS ML is a separate class of customers who have a very different cost to serve than other Rate LGS customers, because they do not use the gas distribution system. As such, a separate class is justified based on cost characteristics. Segregating the Rate LGS ML customers has the added benefit that it segregates most of the flex rate customers, which, as Mr Cline correctly notes, aids in determining whether the non-flex rate LGS customers are or are not covering their allocated costs.[18]

As I interpret it, both the Company and PII assume that the current rates for the LGS ML customers will remain in effect, and that the LGS ML customers will benefit from zeroing out the DSIC. I disagree with this assumption. Because parties generally agree that revenues from flex rate customers should be maximized, there is no justification for the Commission to grant a net rate reduction for this class, particularly recognizing that the class is currently under-recovering allocated costs.

My proposal is that the revenue increase to LGS ML customers, inclusive of rate rider effects, should be zero. The LGS ML flex rate customers obviously find the current rates inclusive of the DSIC charges to be acceptable. To the extent the Company is contractually obligated to zero out the DSIC without that reduction being rolled into base rates, any

[17] OCA Statement No. 4 at 30.

[18] Mr. Baudino makes a similar argument. PII Statement No. 1 at 11.

shortfall should be the responsibility of the Company for failing to maximize flex rate customer revenues.

Q. Mr. Baudino makes the argument that the revenue shortfall associated with flex rates to the LGS ML customers should not be assigned entirely to the Rate LGS class for recovery, but should be borne by all rate classes. Do you agree?

A. I do. Retaining the margin from customers who would otherwise opt for competitive alternatives benefits all customers. Thus, the shortfall between fully allocated costs and market-based revenues should reasonably be shared among all customer classes. In my direct testimony, I did not make an explicit adjustment for this reallocation, as I concluded that much of the shortfall associated with flex rates was cost-based. I therefore applied my proposed revenue allocation mechanism to the combined LGS classes. This resulted in an allocation to the combined LGS class of $5.6 million, reflecting my alternative allocation of costs.

To evaluate whether this allocation was unreasonable if no increase is assigned to the LGS ML customers, I developed two alternative reallocations of the LGS ML shortfall to the other rate classes, based on the results of my alternative ACOSS. As detailed in RDK WPR1 Revenue Allocation Rate Design, that analysis implies a revenue allocation of $4.5 to $5.1 million to the non-ML LGS class (on the $142.7 million increase basis). I therefore conclude that it is not unreasonable to apply the LGS revenue allocation proposal in my direct testimony to the non-ML LGS class, while setting the net increase for the LGS ML class to zero.

Q. What are the implications of the various proposals on rate increases for the SGS and MGS customers in the PNG Division and the PG Division?

A. No party challenged the Company's proposal to harmonize rates for the two divisions. For both the SGS and MGS classes, this generally requires that PNG Division customers face an increase that is modestly larger than that for the combined class, and the PG Division customers generally see a rate decrease.

I therefore evaluated the implications of each of the revenue allocation proposals for the SGS and MGS rate classes. To do so, I accepted the Company's proposed customer charge for

each class, and I adjusted the volumetric charges to produce each party's recommended revenue allocation for each class. The implications of the various parties' revenue allocation proposals on the SGS and MGS rate classes for the PNG Division and the PG Division are shown in Table IEc-R4, based both on the $152.7 million and $173.7 million increases. The proposed class increases are compared to the common "rule-of-thumb" cap for rate gradualism, namely an increase that is 1.5 times system average.

Table IEc-R4
Implications of Parties' Revenue Allocation Proposals by Division
Percent Increase

	RATE SGS			RATE MGS		
	PNG	**PG**	**Combined**	**PNG**	**PG**	**Combined**
All Non-Gas Revenues ($152.7 million increase): 1.5X system average = 45.7%						
Peoples	49.8%	-10.6%	42.0%	35.8%	-14.0%	29.3%
OSBA	46.2%	-12.7%	38.6%	27.2%	-19.3%	21.2%
I&E	39.9%	-16.3%	32.7%	39.6%	-11.6%	33.0%
OCA I	58.2%	-5.7%	49.9%	65.8%	4.6%	57.9%
OCA II	56.7%	-6.6%	48.6%	56.4%	-1.2%	49.0%
PII	52.1%	-9.3%	44.2%	37.8%	-12.7%	31.3%
Customer/Commodity Charge Only ($173.7 million increase): 1.5X system average = 51.6%						
Peoples	54.8%	-15.8%	45.1%	40.5%	-19.0%	32.3%
OSBA	51.2%	-17.8%	41.8%	32.0%	-23.8%	24.4%
I&E	45.0%	-21.2%	35.9%	44.3%	-16.8%	35.9%
OCA I	63.2%	-11.3%	53.0%	70.2%	-1.8%	60.3%
OCA II	61.7%	-12.1%	51.6%	60.9%	-7.1%	51.6%
PII	57.1%	-14.6%	47.3%	42.5%	-17.8%	34.2%

Source: IEc WPR1 Revenue Allocation Rate Design

As shown, the Company's proposal for the PNG SGS class is modestly higher than the 1.5 times system average rule-of-thumb constraint for gradualism. The PII revenue allocations for the PNG SGS class are further above the normal limit. And the OCA revenue

allocations, even adjusted for gradualism, produce increases for both the PNG SGS and PNG MGS customers that are well in excess of the normal limit for gradualism, with eye-popping increases up to 70 percent.

Table IEc-4 would appear to indicate that parties other than I&E and OSBA gave little heed to the implications for rate class increases on a division basis, which of course is how current rates are set. Thus, if the Commission adopts a revenue allocation proposal offered by Peoples, OCA, or PII, I recommend that the Company's proposal to consolidate the rates for the PNG and PG division be rejected, and that separate rates be maintained to avoid unduly high percentage increases on the rates paid by the PNG Division SGS and MGS customers.

Q. Please summarize your concerns with the revenue allocation recommendations of the other parties.

A. My review is summarized as follows:

Intervenor ACOSSs rely on inappropriate sub-functionalization of mains costs (Peoples, OCA, I&E, PII);

Intervenor ACOSSs rely on a design day demand allocator for Rate LGS that is well below actual peak demands (Peoples, OCA, I&E, PII);

Some intervenor revenue allocation proposals are based solely on the P&A ACOSS method, which is not consistent with cost causation (OCA, I&E);

Some intervenor revenue allocation proposals assign large rate increases to negotiated "flex" rate customers that cannot be imposed without risking the loss of the customers and their associated margin (OCA, I&E);

Some intervenor revenue allocation proposals for the small and medium general service classes result in rate increases that exceed the normal limits for rate gradualism on a combined class basis (OCA for SGS and MGS), and on a current divisional rate class basis (Peoples SGS, OCA SGS and MGS, PII SGS).

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

Re: Peoples Natural Gas Company LLC (Peoples Natural Gas Division and Peoples Gas Division) Base Rate Case Filing Original Tariff GAS – PA PUC No. 48 / Docket No. R-2023-3044549

Dear Judge Long:

Enclosed please find Surrebuttal Testimony and Exhibits of Robert D. Knecht, labelled OSBA Statement No. 1S and associated Exhibits IEc-S1 and IEc-S2, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-captioned proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

Date Served: May 3, 2024

Date Submitted for the Record: _____

SURREBUTTAL TESTIMONY OF ROBERT D. KNECHT

1. Introduction and Context

Q. Mr. Knecht, please state your name and briefly describe your qualifications.

A. My name is Robert D. Knecht. I submitted direct testimony, rebuttal testimony and associated exhibits earlier in this proceeding, and my qualifications were presented therein.

Q. Please describe the purpose of this surrebuttal testimony.

A. This surrebuttal testimony responds to the rebuttal testimony submitted by the following witnesses:

- Company witnesses Mr. Andrew P. Wachter, Ms. Carol A. Scanlon, Ms. Dawn M. Folks, and Mr. Ralph Zarumba;
- Pennsylvania Office of Consumer Advocate ("OCA") witness Mr. Clarence L. Johnson;
- Peoples Industrial Intervenors ("PII") witness Mr. Richard A. Baudino.

This testimony is organized by subject matter, and it follows the same organization as my direct testimony.

2. Review of Non-Residential Rate Classes

No rebuttal testimony was presented on this subject.

3. Allegheny Valley Connector ("AVC")

Q. Please address the testimony surrounding the AVC issue.

A. The Company describes the AVC system as upstream transmission and storage capacity. Beyond that, the Company provided little information regarding the use of the AVC system in direct testimony and OSBA discovery, and it similarly provides little in rebuttal. The costs are deemed to be gas supply costs, which are recovered in non-bypassable "demand" charges to all customers in each rate class, both sales and transportation service.

Ms. Scanlon's rebuttal testimony accurately and concisely summarizes my concerns regarding the Company's method for recovering these costs as ". . . (1) the allocation of [AVC] costs has not been updated since about 2013, (2) the recovery of [AVC] costs from both sales and transportation customers does not appear to reflect the relative use of the AVC system, and (3) the appropriateness of applying AVC costs to all transportation customers [who may not use the AVC capacity].[1]

Ms. Scanlon generally agreed with the recommendation in my direct testimony that this issue be deferred to the Company's current Section 1307(f) PGC case. From a procedural perspective, I now believe this issue would be more thoroughly addressed if the Company would undertake and present a careful evaluation of the issue in a rate proceeding, rather than attempting to address the issue starting in the middle of the current PGC case.

I therefore recommend that the Commission direct Peoples to undertake an evaluation of the cost recovery method for the AVC costs to address the three issues cited by Ms. Scanlon, and that it file its results in the 2025 Section 1307(f) proceeding.

4. Gathering System Rate Treatment

Q. Please summarize the issues regarding the treatment of gathering system costs.

A. Peoples' proposes to recover about 29 percent of Peoples' gathering system costs from the gas producers on the system.[2] For the balance of the costs, the Company proposes to socialize these costs, allocating them among rate classes in a way that does not reflect class usage of the gathering system, and requiring all customers in each class to pay for the system regardless of whether the customer benefits from the system. In general, the gathering system is disproportionately used by transportation customers.

[1] It should be recognized that while Peoples socializes the AVC costs, the AVC capacity disproportionately benefits Peoples' PGC customers. To my knowledge, transportation customers have not objected to this method in this proceeding.

[2] Exhibit RNZ-3 page 2.

A better method would be to recover gathering system costs from the PGC customers, the NGSs, and the gas producers who use the system.[3] This approach would result in a more accurate assignment of costs in two ways. First, there would be a more accurate allocation of the costs among rate classes based on actual usage. Second, costs would be recovered from the specific customers who benefit from the gathering system. I therefore recommended that the Company evaluate whether the recovery of net gathering system costs could be recovered directly from the customers who benefit from that system. I laid out a set of detailed considerations, including the potential for recovering the costs from the PGC charge and gas supply tariff charges to NGSs.

Mr. Zarumba provides non-quantitative rebuttal testimony that both PGC and transportation customers benefit from the gathering system, and therefore both groups should pay for that system. That issue was never in doubt. The problem is that Mr. Zarumba makes no quantitative showing that his allocation methodology reasonably reflects usage of the gathering system.

The questions that I raised in my direct testimony are (a) whether the costs of the gathering system are reasonably shared between PGC sales customers and transportation customers, and (b) whether the use of the gathering system by transportation customers is reasonably recovered by the specific customers who use that system. As shown in my direct testimony, the answer to both questions under the Company's proposal is "no." Mr. Zarumba's rebuttal addresses none of my concerns. The basic issue is that Mr. Zarumba's method disproportionately recovers costs from sales customers.

Mr. Wachter argues only that gathering system costs are base rate costs, and that Peoples is legally precluded from recovering such costs in the PGC charge. While I cannot comment on Mr. Wachter's legal analysis, I conclude that his concern is not a bar to developing a tariff mechanism for recovering gathering system costs from the specific customers who benefit from them. For example, for the PGC customers, it would be straightforward to establish a base rates charge that applies only to PGC customers associated with system gas supply

[3] A reasonable share of costs related to serving load customers on the gathering system should be deducted from the gathering system revenue requirement.

procured through the gathering system, much in the way the current GPC charge currently functions.

For transportation customers, Mr. Wachter makes no assertions regarding the legality of recovering these from the gas suppliers who use the gathering system for transportation service. As these suppliers are using utility assets to transport gas, they should be treated like any other base rates customer.

I therefore retain my recommendation that, for its next base rates proceeding, the Company prepare and file an evaluation as to how the Company can more accurately recover the costs of the gathering system from the customers who benefit from that system.

5. Cost Allocation

5.1 Cost Allocation Overview

No rebuttal testimony addressed this issue.

5.2 Mains Cost Functionalization

Q. Please summarize the mains cost functionalization debate.

A. In my direct testimony, I objected to the Company's sub-functionalization of mains costs between the regulated-pressure and the low-pressure systems. While the Company's method attempts to reflect the fact that larger customers do not use the low-pressure system, it fails to recognize that portions of the regulated system are not used to serve small customers, and that many smaller customers also do not use the low pressure system. This inaccurately biases the cost allocation in favor of large customers. Until these errors are fixed (as Columbia Gas did), mains should be allocated in aggregate.

The Company neither rebutted this testimony, nor did it modify its allocated cost of service study ("ACOSS") to reflect my recommended modification.

The OCA remained silent on this issue.

Mr. Baudino, representing PII, opposes my recommendation, arguing that it is inappropriate to allocate low pressure system costs to Rate LGS customers who do not use that system. I agree. However, I also agree that it is inappropriate to allocate the portions of the regulated

pressure system that are dedicated to large customers to those customers who do not use it, and it is inappropriate to allocate the low-pressure system to small customers who do not use it. Moreover, there is solid Commission precedent that rejects the Company's approach.[4]

If Peoples wants to move closer to a direct assignment method for mains costs that are differentiated based on service pressure, it should do so on an unbiased and more careful basis. It has not.

I therefore retain the approach in my direct testimony, and I apply consistent treatment of regulated-pressure and low-pressure mains in my surrebuttal ACOSS.

5.3 Mains Cost Classification

Q. Please summarize the mains cost classification debate.

A. In this proceeding, three witnesses argue that cost causation considerations imply that mains costs should be classified into peak demand and customer components (the "CD" method), namely Mr. Zarumba (Peoples), Mr. Baudino (PII) and me (OSBA). We agree that the minimum system approach to classification will overstate the customer component of costs due to the load carrying capability of the minimum system method, although we disagree with respect to how to do so. Mr. Zarumba adopts an adjustment mechanism that remains unexplained, which Mr. Baudino apparently support. I proposed consideration of the zero-intercept methodology. Despite this cost causation agreement, we all use a combination of the results from the CD method and the peak-and-average ("P&A") method to develop revenue allocation proposals, to reflect Commission precedent.

Mr. Cline representing I&E supports the P&A method for mains classification for reasons of Commission precedent but did not file rebuttal testimony. Mr. Johnson (OCA) also supports the P&A method.

Regarding this fundamental disagreement, I conclude that the basic arguments for the relative advantages of the two approaches are set out in direct and rebuttal testimony of the various parties and need no further argument.

[4] Pa. PUC v. Nat'l Fuel Gas Distribution, 83 Pa. PUC 262, 318-321 (1994).

Q. Please respond to the critques of your zero-intercept classification analysis.

A. Mr. Zarumba acknowledges that the zero-intercept approach is a standard one, and he offers no rebuttal to my direct testimony.

Mr. Baudino complains that I did not present a detailed description of the zero-intercept analysis in the text of my testimony, but merely provided my detailed workpapers. As Mr. Baudino also acknowledges, the zero-intercept analysis is one of the standard approaches, and the methodology for undertaking such analysis is relatively straightforward. I am quite certain Mr. Baudino is capable of understanding the analysis in my workpapers. Moreover, Mr. Baudino would subject me to a much higher standard than he applies to the Company. Like my zero-intercept analysis, the Company makes a quantitative adjustment in its filing for the load carrying capability of the minimum system. That method was neither included nor detailed in its filing and was demonstrated (without explanation) only through discovery. Even with the benefit of the discover, the Company's method is (a) not standard, (b) not explained in testimony, and (c) shown only in the details of Mr. Zarumba's workpapers. Why Mr. Baudino does not require the same detailed explanation from the Company that he apparently requires of me is unknown.

Moreover, regarding my testimony, I responded to three rounds of interrogatories from the Company regarding my direct testimony, and I made myself available to both the OCA and the Company for informal discovery regarding questions relating to my direct testimony and associated workpapers. Mr. Baudino undertook no efforts to pursue formal or informal discovery with respect to any questions he may have had regarding my workpapers. As such, I believe that Mr. Baudino's complaint has no merit.

Mr. Johnson takes the position that the zero-intercept approach cannot be used because it involves extrapolating the cost of mains outside the range of the independent variables in the statistical analysis, namely by applying the regression equation to a theoretical zero-diameter main. This application is an example of "unconditional forecasting," in that the independent variables are known with certainty. Under these conditions, it is true that the level of uncertainty for the forecast is higher than that for estimated values within the range of actual

inputs.[5] Nevertheless, it is obvious than many economists use historical regression analysis to produce forecasts that rely on independent variables beyond those for the historical period.

Moreover, the statistical analysis in the zero-intercept construct is hardly the only aspect of uncertainty in the allocators applied to mains. Load forecasts, which support the average demand used in the P&A allocator, are often developed using regression analysis, both for trends and weather sensitivity. Similarly, design day demands are typically developed based on a historical statistical relationship between load and temperature, and that statistical equation then applied to extreme design day conditions. Doing so almost always involves extrapolating the regression results that lie well beyond the actual historical temperature observations used in the regression analysis. These design day demands are then used to develop the peak component of the P&A allocator. By Mr. Johnson's standard, both the peak and the average demand allocators in his recommended P&A allocator should be rejected, because they too are very uncertain, and they involve extrapolation of a historical pattern beyond the actual historical levels.

The basic facts regarding my zero-intercept analysis are that both Mr. Zarumba and Mr. Baudino concede that the zero-intercept is one of the standard approaches for addressing the load carrying capability of the minimum system. The data I relied upon was developed by Mr. Zarumba, and it reflects the Company's actual costs to install mains by material and by diameter, adjusted for inflation over the long-term. In my experience, the development of this data set represents best practices, and it is better than that used by some other utilities. Consistent with standard practice, I prepared statistical regression analyses, split between steel and plastic mains, and further split between the PNG and PG divisions, that showed the relationship between the Company's actual cost for mains and the diameter of the mains. Not surprisingly, the results are dominated by the PNG division because it is ten times the size. I employed linear and quadratic forms for the statistical analysis, also consistent with normal practice, and I selected the statistical equation with the better fit.

[5] Econometric Models and Economic Forecasts, Pindyck, R.S. and D.L. Rubinfeld, McGraw-Hill Book Company, c. 1956, Section 6.1, pp. 159-168.

In short, all of the methods offered in this proceeding for allocating mains costs involve significant uncertainty. Perhaps the only conclusion that can be stated with absolute confidence is that gas distribution utilities cannot and do not size mains to meet average demand, because if they did so, their customers would freeze in the dark.

5.4 Design Day Demand Allocator

Q. Please summarize the design day demand allocator issue.

A. In my direct testimony, I cited to the Company's filing Exhibit No. 17, COS-10, which indicated that the actual peak day demands for the LGS class were much higher than the design day demands used in the Company's ACOSS. In so doing, I had assumed that the Company had daily metering information for a significant portion of the LGS loads.

Peoples' witness Dawn Folks responds to my concern by explaining that the Company's filing material was inaccurate and unreliable, although the Company does not appear to have corrected its exhibit.

However, I reviewed the design day estimates that I developed by rate class using statistical analysis of monthly data, and it does not appear that the Company's reported actual values for peak day conditions for the LGS class are consistent with my statistical analysis of the temperature sensitivity of the LGS load. I therefore conclude that Ms. Folks rebuttal appears to be correct, and I modified my surrebuttal ACOSS to use the Rate LGS design day demand value developed by the Company.

Mr. Baudino also raises issues regarding the derivation of the LGS design day demand in his rebuttal testimony. While I respectfully disagree with his analysis in many respects, his concern is mooted by my adoption of the Company's parameter in my surrebuttal ACOSS.

5.5 Technical Issues

Q. Please summarize the technical issues.

A. In my direct testimony, I identified technical errors and inconsistencies in the allocation factors for Accounts 902, 908 and the collections allocator, and I proposed alternatives. In rebuttal, Mr. Zarumba generally accepted those corrections, with his own modest adjustments and corrections to my analysis. In total, the differences between Mr. Zarumba's

rebuttal allocation factors and my proposed factors have minimal impact on the results of the cost allocation study, I accept his adjusted allocators in my surrebuttal ACOSS.

As discussed in my rebuttal testimony, I agreed with Mr. Johnson that costs for large customer service should be recovered only from large customers, but I proposed a different allocator than did Mr. Johnson. In his rebuttal, Mr. Zarumba also agreed conceptually with Mr. Johnson, but he made some modest adjustments to the underlying costs. I incorporated all of these considerations in my surrebuttal ACOSS. The overall effect of these changes is also small.

5.6 Cost Allocation Results

Q. How do the results of your cost allocation analysis compare to those in your direct testimony?

A. A working electronic version of my surrebuttal ACOSS is filed with this testimony as IEc WPS1 Surrebuttal ACOSS. A comparison of class revenue-cost ratios at present rates is shown in Table IEc-S1 below.

Table IEc-S1
Comparison of Cost Allocation Results
Normalized Revenue-Cost Ratios at Current Rates

	Peoples CD Rebuttal	Peoples A&E Rebuttal	IEc ZI Direct	IEc ZI Surrebuttal
Residential	91.8%	103.7%	97.4%	96.6%
SGS	97.2%	86.9%	96.5%	94.6%
MGS	127.0%	83.2%	115.4%	112.5%
LGS	161.3%	111.5%	106.6%	118.9%
Total	**100.0%**	**100.0%**	**100.0%**	**100.0%**

Sources: IEc WP7 IEc ACOSS Alternative CONFIDENTIAL

As shown in Table IEc-S1, my surrebuttal ACOSS reduces costs assigned to the LGS class and shifts those costs to the other classes. This change is driven primarily by modifying the design day demand allocator for the LGS class to reflect Peoples' rebuttal testimony that it filed an erroneous exhibit.

6. Flex Rate Customers and Rate MLS

Q. What aspects of your testimony on the subject of flex rate customers and Rate MLS were rebutted?

A. Mr. Baudino indicates that I failed to reflect that Rate MLS customers are negotiated rate customers, and that any rate increase assigned to the LGS class will be borne by non-MLS customers. I acknowledged this oversight in my rebuttal testimony, and I have incorporated that consideration into my surrebuttal revenue allocation proposal below.

7. Revenue Allocation and Rate Harmonization

Q. What are the implications of the previous sections on your recommendations for revenue allocation and rate harmonization?

A. Based on the results of the surrebuttal ACOSS, I updated my revenue allocation analysis using the methodology applied in my direct testimony, and with the considerations that I included in my rebuttal testimony. I therefore developed two alternative revenue allocation options for this surrebuttal.

The first is based on the methodology that I used in my direct testimony, in which the shortfall from the LGS-MLS rate class is not reallocated among the other rate classes. This approach would be consistent with the positions of the Company and OCA that any shortfall from the LGS-MLS class should be recovered from other LGS customers.

However, as I explained in my rebuttal testimony, I agree conceptually with Mr. Baudino that retaining the competitive LGS-MLS customers benefits all customers, and that a reallocation is therefore appropriate.[6] I therefore developed an alternative revenue allocation proposal with a reallocation of the LGS-MLS shortfall. As was the case in my rebuttal analysis, I considered two alternative methods for reallocating the LGS-MLS shortfall in this analysis. I also retained my recommendation that no rate increase be assigned to any class.

[6] I have consistently taken this position in numerous base rates proceedings in Pennsylvania where discounted flex rates are justified by competitive conditions.

The details of my proposal are shown in IEc WP2S Revenue Allocation Surrebuttal. A summary is shown in Table IEc-S2 below.

Table IEc-S2
IEc Surrebuttal Revenue Allocation Proposals

	Peoples Proposal		IEc Surrebuttal No MLS Reallocation		IEc Surrebuttal With MLS Reallocation	
	$mm	**%**	**$mm**	**%**	**$mm**	**%**
Residential	$118.73	34.1%	$120.41	34.6%	$122.15	35.1%
SGS	$ 18.31	42.0%	$ 17.41	40.0%	$17.63	40.5%
MGS	$ 16.40	29.3%	$ 12.65	22.6%	$12.93	23.1%
LGS	($0.72)	-1.5%	$2.24	4.2%	$0	0.0%
LGS-MLS	--	0.0%			$0	0.0%
Total	**$152.72**	**30.5%**	**$152.72**	**30.5%**	**$152.72**	**30.5%**

Revenue values reflect all class revenues excluding gas costs.
Sources: IEc WPS2 Revenue Allocation Surrebuttal

As shown in Table IEc-S2, my revenue allocation proposals are only modestly different from that offered by the Company, with the largest impact being a lower increase for the MGS rate class. This difference reflects primarily my alternative sub-functionalization of mains costs as discussed above. Also, with the modification to the design day demand allocators, my approach implies a zero increase for the Rate LGS class when the shortfall from the competitive LGS-MLS class is reallocated to all other classes.

Q. Is this proposal consistent with rate gradualism?

A. The rule-of-thumb for rate gradualism in Pennsylvania has generally been that no rate class should experience an increase that is more than 1.5 times the system average. As I explained in my direct testimony, this evaluation should be undertaken for the PNG and PG divisions separately, as that is how the rate increases will be imposed. I also indicated that the Company's proposal would result in an increase for the PNG Division SGS class that is more than 1.5 times the system average.

No party submitted rebuttal to this aspect of my direct testimony.

With the changes to the cost allocation and revenue allocation calculations discussed above, my revenue allocation proposals result in an increase for the PNG Division SGS class of at least 1.56 times the system average. To keep the PNG Division SGS increase at 1.50 times system average, $0.94 million would need to be shifted away from that class. That amount could be shifted to other rate classes, or it could be shifted to the PG Division SGS class (which is assigned a rate decrease). The latter approach would defer full harmonization of the base rate tariff charges until the next base rates case.[7]

8. Rate Design Issues

Q. Please summarize your rate design recommendations from your direct testimony.

A. For the SGS class, the base rate tariff consists of a monthly customer charge, differentiated for customers above and below 500 mcf per year, and a volumetric charge. I did not take issue with the Company's proposal. For the MGS class, the base rate tariff consists of a monthly customer charge, differentiated for customers above and below 2500 mcf per year, and a volumetric charge. I concluded that the allocated customer cost for this class was well below the current charges, and therefore no increase in the customer charge was justified.

Q. Did any party rebut these recommendations?

A. No.

9. Normal Heating Degree Days and the Weather Normalization Mechanism

Q. In your direct testimony, you expressed concerns about the proposed WNA producing anomalous results, particularly in periods with relatively low actual levels of heating degree days ("HDDs") or when customers have relatively high usage due to factors other than HDDs. How does the Company respond?

A. Mr. Zarumba conducted an analysis of the impact of the proposed WNA on the Company's historical bills for the past five years, and he concludes that anomalous results occur only in 0.07 percent of the bills. However, Mr. Zarumba limits his definition of anomalous results

[7] Note that even under the Company's proposal PG Division SGS customers will be subject to the TCJA rider which will not apply to the PNG Division customers.

to cases in which the base bill increase is over 100 percent. That is quite a high standard for an anomaly.

Moreover, Mr. Zarumba's analysis does not attempt to identify how often customers have high usage rates that are not related to heating degree days. Thus, for a customer who has an unusually high gas use in a particular month that is due to factors other than temperature (e.g., houseguests, or a small commercial customer with a surge in business activity), a month in which HDDs are "only" 50 percent above normal will see its extra non-heat usage multiplied by a factor of 1.5 due to the WNA. And that customer will not appear in Mr. Zarumba's analysis as a problem.

Moreover, even under Mr. Zarumba's approach, there were some 18,000 bills with anomalous results.

In terms of protection for customers, the Company's response in discovery is that it is ". . . continuing to evaluate additional customer protections to put in place."[8] As I indicated in my direct testimony, until these specific concerns are addressed, I recommend against adoption of the Company's proposed WNA mechanism.

Q. Please address your concern regarding a potential mismatch between the HDD value used by the Company to forecast weather-normalized load and the HDDs used to develop base levels for the HDD mechanism.

A The Company uses a combination of a 20-year average and a trend regression method to forecast annual normal HDDs of 5,341. The Company indicated that it used a 10-year average HDD level to set the base level for the WNA, which I calculated to be 5,389 as shown in my workpapers. However, based on Ms. Scanlon's rebuttal testimony and a more careful review of the Company's workpapers, I recognize that the Company normalizes the 10-year average such that the values used for the WNA base levels total to 5,341. I therefore withdraw my concern.

[8] OCA-XXVI-007.

10. Billing Determinants for the FPFTY

Q. Please review the issue regarding FPFTY loads.

A. The Company's load forecast for the test year assumes a downward adjustment in the test year to reflect energy conservation. For my direct testimony, I conducted a detailed statistical analysis of the Company's actual consumption levels by class by month, and I detected no evidence of a systematic downward trend to consumption that was not explained by changes in heating degree days.

Peoples' witness Scanlon provides rebuttal testimony, but it does not address the statistical evidence upon which my conclusions were based. Ms. Scanlon simply refers to a Time Magazine article indicating that the government will be mandating more efficient appliances in 2027.

There is little doubt that the efficiency of new gas-fired appliances has been and will continue to improve. For load forecasting, however, the question is not only whether new appliances are more efficient, but also how customers will react to having more efficient appliances. It would not be surprising, for example, if gas users might spend their efficiency savings from a new heating system on simply keeping their houses warmer, thereby offsetting net effect on their gas consumption (but having improved welfare).

Evaluating this tradeoff requires data analysis, which the Company has not undertaken. I therefore retain my recommendation that the Company's billing determinants be modified to take out the arbitrary and unsupported conservation factor.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXVI-007

Witness: Zarumba, Ralph **Title:** Consultant, Black & Veatch Management Consulting, LLC

Question: Reference Mr. Zarumba's Rebuttal Testimony, Peoples St. No. 15-R at page 20. Confining the review to only May 2018, what is the percentage of "unusual bills?" What is the average discrepancy (percent above normal May bill) for bills which were higher than expected?

Answer: May 2018 accounted for 70% of the total unusual bills. The second question is ambiguous, however we are interpreting this question as a request for the average increase for customers with 100%+ increases to the base rate portion of their bill. For May 2018 bills that had a 100%+ increase to the base rate portion of their bills, the average percentage increase was 238%. The Company is continuing to evaluate additional customer protections to put in place.

Peoples Natural Gas Company LLC	:	

DIRECT TESTIMONY
OF
DAN WEAVER

on behalf of the

PENNSYLVANIA INDEPENDENT
OIL & GAS ASSOCIATION

Dated: March 22, 2024

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. I am Dan Weaver, President and Executive Director of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. WHAT IS PIOGA?

A. PIOGA is a trade association representing oil and natural gas interests throughout Pennsylvania. PIOGA was formed by the April 1, 2010 merger of the Pennsylvania Oil and Gas Association known as POGAM into the Independent Oil and Gas Association of Pennsylvania (IOGA of PA), and the name changed to its present name. PIOGA's members include oil and natural gas producers and Commission-licensed natural gas suppliers and marketers (NGSs) that deliver natural gas produced from Pennsylvania conventional and unconventional formations to the pipeline systems of both divisions of Peoples Natural Gas Company LLC (Peoples) – Peoples Natural Gas Division (PNGD) and Peoples Gas Division (PGD) – for system supply as well as for Peoples' transportation customers. PIOGA and its producer members were long-term participants in the collaborative Production Enhancement Services (PES) agreements and programs with Peoples starting in the early 2000s. PIOGA producers agreed to pay transportation rates in return for Peoples'providing relaxed water vapor content standards based upon regulator set pressure and contributed to the installation of compression and dehy facilities on various Peoples systems to increase the availability and throughput of Pennsylvania-produced conventional natural gas on the legacy Peoples Natural Gas pipeline system. The PES program was terminated as part of the settlement of Peoples last base rate case in 2019 in which Rate AGS was established for the Peoples Division.

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. I am a Penn State University graduate with a degree in History. I was born and raised in in the heart of the historic oil industry, Oil City, Pennsylvania. I served 11 years as a Museum Educator at the Drake Well Museum in Titusville and one two-year term as the Manager of the Friends of Drake Well Museum. I was instrumental in the creation of the Drake Well Museum Mobile Energy Education Training Unit (MEET-U trailer), a portable classroom that has traveled over 200,000 miles to provide information about energy to students and the public in Pennsylvania, Ohio, West Virginia, and New York. Prior to becoming PIOGA President and Executive Director, I was Director of Public Outreach at PIOGA where I was responsible for communications and public education. I launched the PIOGA Energy Education Program (PEEP), a "teach-the-teachers" program for educators in grades 5 through 8, to provide age-appropriate energy curriculum for future generations.

Q. WHAT DO YOU DO AS PRESIDENT AND EXECUTIVE DIRECTOR OF PIOGA?

A. I work closely with elected leaders, regulators and the civic community to advance responsible development of Pennsylvania oil and natural gas and to promote a favorable environment for the success of the exploration, production, transportation and downstream use of Pennsylvania natural gas. To support these efforts, I direct and participate in PIOGA's lobbying and educational outreach activities, committee meetings, preparation of public comments, and technical training workshops. I also provide information in support of our litigation, including participating in negotiations with Peoples regarding matters affecting the operations of our producer and NGS

members on the Peoples pipeline systems. These activities address rates, terms and conditions of service concerning our producer and NGS members.

Q. WHAT IS YOUR EXPERIENCE IN THE OIL AND NATURAL GAS INDUSTRY?

A. I consider myself the conductor of the orchestra – I may not have played every instrument, but I know what they should look and sound like. I have been intimately involved with the oil and gas industry for nearly two decades, including conventional and unconventional. I have spent time on both rotary and percussion drillings, while making holes and servicing wells. I have been on well completion jobs including sand notching, nitrogen fracs and high volume multistage lateral stimulations. I have had the opportunity to work with and learn from some of the most technically proficient leaders and operators in the industry as to how our industry works.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of PIOGA.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY PUC PROCEEDINGS?

A. Yes. I have provided written testimony in Peoples' purchased gas costs (PGC) proceedings as well as in matter involving National Fuel Distribution Corporation's tariff requirement that NGSs enter into a Data Security Agreement requiring NGSs to purchase and carry cybersecurity insurance with coverage of no less than $5 million per incident (Docket No. C-2020-3019621). I also provided written testimony concerning remediation of the Goodwin Gathering System and reduced payment for retainage on the Goodwin system in the proceeding in which the Commission approved the acquisition of the Peoples' companies by the Aqua America, Inc. companies (Docket Nos. A-2018-3006061, A-2018-3006062 and A-2018-3006063).

Q. ARE YOU FAMILIAR WITH PEOPLES' TESTIMONY IN THIS MATTER?

A. Yes, I am familiar with the testimony of Micheal Huwar, Andrew Wachter, Carol Scanlon, Edward Palombo, Dawn Folks and Ralph Zarumba concerning the issues PIOGA is addressing in this proceeding.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to describe PIOGA's relationship with Peoples and our reactions to Peoples' proposals that affect the operations of our producer and NGS members. I also identify the issues addressed by the testimony of PIOGA's other witnesses.

Q. WHAT IS PIOGA's RELATIONSHIP WITH PEOPLES?

A. PIOGA has developed good working relationship with Peoples beginning with the PES agreements and programs I mentioned earlier and continuing with the Peoples-Producers Cooperation Committee (PPCC) created after the termination of the PES Project Review Committee following Peoples' 2019 base rate case. Peoples collaborated with PIOGA to mitigate the costs to producers of the extremely high level of lost and unaccounted for gas on the Goodwin gathering system. Peoples also supports PIOGA's activities on behalf of its members by allowing producers and NGSs to pay an additional penny/Mcf on the gathering fee and remitting that money to us.

We believe Peoples has the same understanding of our relationship, as shown by Mr. Huwar's statements that Peoples:

- "prioritizes and supports the utilization of the available and affordable energy supply we have right here in Southwestern Pennsylvania"
- works with producers "to optimize the incredible asset of natural gas for the benefit of this Commonwealth and Southwestern Pennsylvania"

- "continues to support and encourage local production of natural gas in whatever ways we can"
- considers "the local producers on our system as partners in making sure this region and our Commonwealth realize the full economic benefits of having this incredible abundance of gas supply right beneath our feet"

Q. WHAT ARE PEOPLES' PROPOSALS THAT AFFECT THE OPERATIONS OF PIOGA'S PRODUCER AND NGS MEMBERS THAT PIOGA IS ADDRESSING?

A. We are addressing: (i) Peoples' proposal to unify the PNGD and PGD tariffs; (ii) Peoples proposal to apply the Allegheny Valley Connector (AVC) capacity charge to the PGD system; and (iii) issues concerning the rate, terms and conditions of existing and proposed Rate AGS and Peoples' proposal to apply PNGD's Rate AGS to the PGD system.

Q. WHAT ARE PIOGA's REACTIONS TO THESE PROPOSALS?

A. PIOGA supports the unification of the tariffs of the two divisions, with some changes to address our concerns with the rate, terms and conditions of existing and proposed Rate AGS and the Master Interconnect and Measurement Agreement (MIMA) required by Rate AGS. We support application of the AVC charge to the PGD because of the benefits concerning Peoples' transportation program described in Peoples' testimony.[1]

Q. WHAT ARE PIOGA's CONCERNS WITH RATE AGS AND THE MIMA?

A. We believe the terms and conditions of existing and proposed Rate AGS, as well as certain provisions of the MIMA, significantly diminish the value of the service provided under Rate AGS. We also believe that the tariff unification proposal goes too far in applying Rate AGS to the PGD system and not far enough with respect to water vapor content standards set forth in the MIMAs for the three legacy utilities.[2] We are also

[1] Peoples Statement (St.) No. 3 (Scanlon) at 24:14-21.

[2] PIOGA Exhibit DW-1 (Peoples' responses to PIOGA-I-6 (Peoples Division, p.7; Equitable Division, p.8) and PIOGA-I-7 (Peoples Gas Division).

concerned that Peoples has not stated whether or how the revenues received from the Rate AGS fee would be used to provide value to producers for the service. The Rate AGS "Character of Service" language disclaims any obligation to do so, and Peoples' testimony seems to indicate that the revenues will be used for leak detection and repair work and waste methane fees required by the 2022 Inflation Reduction Act (IRA).[3]

Q. HOW DO THE TERMS AND CONDITIONS OF RATE AGS DIMINISH THE VALUE OF THE SERVICE PROVIDED UNDER RATE AGS?

A. Rate AGS "Character of Service" language provides that:

> The Company's only obligation under this Rate Schedule shall be to receive gas from any gathering receipt point and to permit that gas to flow against the existing pressure in the Company's facilities. Peoples shall not be obligated to lower such line pressure by compression or otherwise to accommodate receipts from local Appalachian producers under this Rate Schedule.

Peoples asserts the value of the service under Rate AGS is access to its system,[4] but we believe this language and certain provisions in the MIMA significantly diminish, and may remove, that value, by allowing Peoples to limit and restrict the flow of conventional production into the system when some accommodations could be made to facilitate producers' operations without jeopardizing Peoples' ability to operate its pipeline system safely and reliably. PIOGA witness Marc Jacobs provides support for the "value of service" and MIMA issues while PIOGA witness James Brant provides an example of a Peoples accommodation.

Q. HOW DOES PIOGA PROPOSE TO ADDRESS THIS ISSUE IN THE LANGUAGE OF RATE SCHEDULE AGS?

[3] Peoples St. No. 4 (Palombo) at 18:9 – 19:7.

[4] PIOGA Exhibit DW-2 (Peoples' response to OSBA-I-15.a.): "Value to producers of access to Peoples gathering system - Means to move gas - in some cases, to move it at a lower cost than other alternatives, in other cases, it is their only option to move gas."

A. PIOGA proposes that the "Character of Service" language for Rate AGS for the PNGD system be revised as follows to show that the service actually provides value beyond simple access to Peoples system while preserving Peoples' ability to operate its pipeline system safely and reliably as it does now.

CHARACTER OF SERVICE

The Company's obligation under this Rate Schedule is, insofar as it can consistently do so, to receive all conventional gas the party has available during the term of the MIMA, at the full flow of the gas from any receipt point into the Company's system and to permit that gas to flow against the varying pressures from time to time maintained in the pipelines; provided, however, the Company may restrict the flow or discontinue the taking of gas temporarily, when and for such length of time as in its commercially reasonable judgment, based upon considerations of safe and reliable operation of its pipelines and facilities, customer demand, gas quality and repair and maintenance requirements, it deems necessary to maintain the integrity of its system.

Peoples shall not be obligated to lower such line pressure by compression or otherwise to accommodate receipts from local Appalachian producers under this Rate Schedule, but shall use all reasonable efforts to notify producers to adjust their producer regulator set points to allow conventional production to flow in response to higher pipeline pressures, not to exceed pipeline MAOP.

Service under this Rate Schedule shall be subject to Operational Flow Orders pursuant to Item 24 of the Rules and Regulations of this Tariff. Nothing in this Rate Schedule shall limit the Company's right to interrupt service or to take other action as may be required to alleviate conditions, which threaten the integrity of its system.

Notwithstanding anything contained herein to the contrary, in the event that the pressure of the party's gas at the point of delivery becomes too high, in the Company's opinion, for the safe operation of the Company's pipeline system, the Company may choke back or control the flow of the gas to reduce such pressure to a point of safety.

We believe this language is consistent with how Peoples operates its system to facilitate the introduction of lower pressure gas from conventional wells into its system.[5]

[5] PIOGA Exhibit DW-3 (Peoples' responses to PIOGA-II-2 and PIOGA-VI-5).

Q. WHY DOES PIOGA BELIEVE THE TARIFF UNIFICATION PROPOSAL GOES TOO FAR IN APPLYING RATE AGS TO THE PGD?

A. PIOGA's concerns are legal and historical. The legal concern arises from Peoples' 2018 purchased gas costs (PGC) proceeding in which the Commission rejected PIOGA's definitions for gathering and distribution lines concerning Peoples proposal to impose a producer retainage charge to recover a portion of the unaccounted for gas (UFG) expense on gathering lines. Peoples argued, and the Commission agreed, that Peoples' definitions of "gathering" pipelines in that proceeding were in alignment with the definitions set forth in the gas pipeline safety regulations of the federal Department of Transportation (DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA) and the PUC, as well as the Federal Energy Regulatory Commission (FERC) "modified primary function test" for classifying pipeline for accounting purposes (Docket Nos. R-2018-2645278 [Peoples-Peoples Division] and R-2018-3000236 [Peoples-Equitable Division]).

Unlike in the 2018 PGC case with respect to the legacy Peoples Natural Gas and Equitable Gas systems, in this case Peoples acknowledges that the PGD system has no pipelines classified as "gathering" per FERC's Chart of Accounts or PHMSA's gas pipeline safety regulations, or the PUC's gas pipeline safety regulations, which are the same as PHMSA's.[6] The pipeline structure and operation of the TW Phillips system did not change when Peoples acquired the system in 2011. That system had no pipelines classified as gathering per FERC, PHMSA and PUC requirements, and that did not change after Peoples' acquisition. While in this case Peoples argues that the PGD system

[6] Peoples St. No. 4 (Palombo) at 15:4-5 ("PGD does not have a Gathering System per its Books and Records"); 22:3-4 ("the PG system does not have gathering pipelines as defined by federal DOT code or by the FERC Chart of Accounts gathering definition"); PIOGA Exhibit DW-2 (Peoples' response to OSBA-I-15.d.) ("there are no DOT or FERC accounting gathering pipelines on the PG system").

has pipelines and facilities "that function more like gathering,"[7] these pipelines and facilities function the same way now as they did under TW Phillips' ownership. I am not a lawyer, but it seems to me that these pipelines cannot be the basis for a fee for using a "gathering" system if their function has not changed and they have never been classified as "gathering" in accordance with the PUC's determination in the Peoples Division-Equitable Division 2018 PGC case.

As confirmed in the testimony of PIOGA witness Marc Jacobs, our historical concern is based upon the fact that the TW Phillips system, which is now the PGD system, never had a gathering fee. I believe this is explained by the fact that the system never had any pipelines classified as gathering per FERC, PHMSA and PUC requirements. I also note that while the PGD Rate GS is titled "Gathering Service", the word "gathering" is not otherwise used in the rate schedule and was not used in the Gas Purchase Agreement (GPA) for Rate GS to describe PGD the pipelines covered by Rate GS. The GPA was not used after PGD started using the first version of the MIMA in March 2017.[8]

Q. WHAT IS PIOGA's RESPONSE TO PEOPLE'S RATIONALE FOR APPLYING PNGD'S $0.26 RATE AGS FEE TO THE PGD SYSTEM?

A. Peoples' rationale is that producers and customers both benefit from gathering systems so both groups should share in bearing the costs of those systems. But the PGD system does not have a gathering system or gathering pipelines, so that rationale doesn't apply to Peoples' proposal to apply PNGD Rate AGS to the PGD system. That explains why the

[7] Peoples St. No. 4 (Palombo) at 15:6 ("[Peoples] does have systems that serve a similar purpose to the PNGD Gathering system."); 22:4-5 ("[Peoples] does have facilities that move local production to the Company's distribution system."); PIOGA Exhibit DW-2 (Peoples' response to OSBA-I-15.d.) ("there are pipelines that function more like gathering that move local production to distribution areas").

[8] PIOGA Exhibit DW-4 (Peoples' responses to PIOGA-I-2 (with GPA attachment) and PIOGA-III-1 (without attachments)).

TW Phillips system never had a gathering fee before Peoples acquired it and why it never had one after Peoples acquired it. Producers on the TW Phillips system didn't pay a fee for use of the pipelines and facilities that Peoples now says are functioning as gathering pipelines despite never having been classified as such as required by the applicable regulations if these pipelines were functioning as gathering pipelines. The TW Phillips customers paid for the costs of operating these facilities. We don't believe that uniformity, consistency, standardization and administrative ease provide valid reasons to impose a fee for the use of "gathering" pipelines that are not now, and never have been, gathering pipelines.

Q. WHAT IS PIOGA's PROPOSAL CONCERNING THE LEVEL OF PNGD'S $0.26 RATE AGS FEE?

A. Peoples' Rate AGS fee of $0.26/Mcf is "set on a negotiated basis using value of service considerations rather than cost-of-service as a guide."[9] We believe that the fee overstates the value of the service provided under Rate AGS as explained above and as shown in the testimony of the other PIOGA witnesses referenced above. Accordingly, we believe this fee should be reduced even if PIOGA's proposals for changes in the language of Rate AGS and the MIMA are accepted because the value of the service is overstated because of the "only obligation" language. Peoples acknowledges that "[t]here is no specific formula or methodology to determine the allocation [gathering pipeline costs] to producers and customers."[10] Peoples also acknowledges that "[t]here is a practical limit to how much of the gathering system costs can be recovered from producers" because the market prices "that producers will receive for their gas purchased by Peoples for system

[9] Peoples St. No. 15 (Zarumba) at 10:3-5.

[10] PIOGA Exhibit DW-5 (Peoples' response to PIOGA-II-3).

supply . . . are low by historical standards and it is likely that this has contributed to the reduction of production from conventional wells since 2012."[11] We fully agree with these statements.

Despite our opposition to application of PNGD's Rate AGS to the PGD system, we are not opposed to sharing with customers – through a system-wide spreading of conventional production costs that involves gathering pipelines to include production that does not – the costs of pipelines and facilities producers use to provide low cost natural gas to customers. We believe that a reasonable cost spreading is a blended rate involving the reduction of the $0.26/Mcf rate based upon the percentage of volumes that do not involve gathering pipelines compared to the total volumes that involve both. The percentage of year-over-year (2017-2023) conventional volumes on the PGD system (67,513,134) compared to the total volumes on both divisions (236,963,249) is about 29%.[12] Applying this percentage to the $0.26/Mcf rate results in a reduction of $0.08, for a system-wide blended rate of $0.18/Mcf. We believe our proposal brings together the existing and differing programs of the two divisions and sets a producer paid fee structure establish a reasonable and ongoing producer revenue contribution consistent with Peoples' value of service considerations.

To be consistent with the facts concerning the lack of gathering pipelines on the PGD system, the rate schedule imposing any such charge on the PGD system could not have language referring to "gathering" lines or a "gathering system" or reference a "gathering" rate, nor could the PGD Master Interconnect and Measurement Agreement (MIMA).

[11] Peoples St. No. 4 (Palombo) at 19:11-16.

[12] PIOGA Exhibit DW-6 (Peoples' response to PIOGA-I-8).

Instead, the PGD rate schedule should be titled "Rate Transportation Service" instead of "Rate Appalachian Gathering Service" and the "Availability" language should be revised as follows: "Service under this rate schedule is available to any party desiring to transport gas through the Peoples Gas Division ~~gathering~~ system, provided that:" and "The transportation ~~gathering~~ rate is $0.18 per Mcf, plus applicable retainage*."

Peoples' Fully Projected Future Test Year (FPFTY) projects a $7.8 million contribution from conventional producers from a system-wide fee of $0.26/Mcf.[13] PIOGA's proposed fee of $0.18/Mcf would reduce that contribution to $5.4 million.

Q. WHY DOES PIOGA BELIEVE THE TARIFF UNIFICATION PROPOSAL DOES NOT GO FAR ENOUGH WITH RESPECT TO WATER VAPOR CONTENT STANDARDS?

A. Peoples emphasizes that it has operated, and will continue to operate, both divisions – in other words, all three legacy utility systems – as one integrated pipeline system, and that unifying the two tariffs is the next step in this process. Peoples has explained how more consistent and standard gas quality requirements improve the safe and reliable operation of an integrated system:

> Peoples believes standardizing gas quality is a more effective and efficient way to operate as one utility to meet or exceed tariff gas quality requirements across the system. It also allows for standardizing operating procedures which is more efficient in training and transfer of job skills across the entire system. Standard gas quality requirements can also help prevent claims that some producers may be getting preferential treatment if they are held to less stringent gas quality requirements at their delivery points than other producers. All of these contribute to improving safe and reliable service to customers.[14]

[13] Peoples St. No. 4 (Palombo) at 22:20 – 23:2.

[14] PIOGA Exhibit DW-7 (Peoples' response to PIOGA-V-2).

PIOGA fully agrees with Peoples' explanation. PIOGA witness Marc Jacobs explains why the moisture curve water vapor content standards on the legacy Peoples Natural Gas system should be the standards across Peoples' fully integrated pipeline system.

Q. WHAT DO YOU HAVE TO SAY ABOUT THE DECLINE IN LOCAL CONVENTIONAL PRODUCTION ON THE PEOPLES SYSTEM?

A. We acknowledge Peoples' data showing that the level of local conventional production on the Peoples system has been consistently declining. DEP data[15] confirms that from 2019 to the present, only five conventional gas only wells have been dug, and three of those appear to be home use wells based on the operator names. We also agree with Peoples that the low price environment conventional producers face is likely the primary reason for this situation because of the costs of well drilling, completion and operation, and acknowledge that the low price environment is beyond Peoples' control. However, PIOGA cannot stand by and do nothing to try to help conventional producers reduce their operation costs and increase their deliveries of conventional production on the Peoples system. In view of the price benefits to Peoples' customers from local conventional production and, more broadly, the benefits to conventional producers, their families and their businesses as well as to the local economies where their production facilities are located, we are relying on Peoples' commitment to continue "to support and encourage local production of natural gas in whatever ways we can" in proposing some operational changes concerning Rate AGS and the MIMA that will enable conventional producers to reduce their operation costs and increase deliveries of conventional production while not

[15] PIOGA Exhibit DW-8 (DEP data - conventional wells drilled 1/1/2019-3/20/2023).

jeopardizing Peoples' ability to operate its pipeline system safely and reliably. Our MIMA proposals are set forth in the testimony of Marc Jacobs.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties that affect PIOGA's interests.

VERIFICATION

I, Dan Weaver, hereby state that:

The foregoing testimony, marked as PIOGA St. No. 1, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above.

The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter.

I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Dan Weaver

PIOGA Exhibit DW-1

Peoples' responses to PIOGA-I-6 (Peoples Division, p.7; Equitable Division, p.8) and PIOGA-I-7 (Peoples Gas Division).

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-I-006

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Natural Gas Division (PNGD) existing Rate AGS. What are the water vapor standards on the PNGD system?

Answer: Water Vapor - PNGD will authorize water content to the chart as Schedule 1 to this Appendix B attached. However, Peoples maintains the right to require a lower (more stringent) water vapor content than the level set forth in Appendix B if the water vapor levels at specific receipt point(s) are detrimentally affecting customer service or creating operational issues.

Submit Date: 2/20/2024

APPENDIX B TO MASTER AGREEMENT
INSPECTIONS AND GAS QUALITY

SECTION I
ROUTINE INSPECTIONS OF INTERCONNECT FACILITIES

1.01 **Interconnect Facility(ies) Maintenance**. Peoples shall have the right to periodically inspect Producer's records and the Interconnect facilities to verify that all operating and maintenance functions are being performed effectively. If Producer cannot provide adequate documentation, or if Producer's operating and maintenance procedures are inadequate as determined by Peoples, Producer will have seventy-two (72) hours to produce proper documentation and/or revise inadequate procedures. If, after the seventy-two hour period, documentation is not provided and/or procedures are not modified, Peoples retains the right to take further action as it deems necessary including the right to shut-in the Interconnect until adequate documentation/procedures have been verified and secured.

1.02 **Changes to Interconnect Facility.** The Producer has an obligation to notify Peoples in writing 24 hours prior to changes to Producer Interconnect facilities that would require modifications to an Interconnect, Peoples' System or Gas composition, and Peoples shall have the right to reject changes to the Interconnect Facility. Peoples retains the right to take action as it deems necessary in its reasonable discretion, including the right to shut-in the Interconnect, in the event notification does not occur. The cost of any damages as a result of changes to Producer's Interconnect Facility will be borne entirely by the Producer; provided, that if Peoples or its designee accesses and operates Producer's Interconnect Facility, Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's access or operation of the Producer's Interconnect Facility. Peoples shall replace, fix and repair, at its cost, any portion of Producer's Interconnect Facility that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of Peoples' accessing or operating the Facility.

1.03 **Interconnect Facility Operations.** Peoples shall have the right to shut-in the Interconnect immediately if meter set equipment is not operating properly, an overpressure condition exists, design limitations are exceeded, or safe operating conditions are compromised. Furthermore, Peoples has the right to keep the Interconnect shut-in until the Producer makes the necessary provisions to rectify the situation. If the abnormal conditions repeatedly arise, Peoples has the right to shut-in the Interconnect indefinitely.

1.04 **Interconnect Facility Inspections.** Peoples shall have the right to inspect the Interconnect Facility including, but not limited to, the following: calibrate the meter; inspect regulators; inspect valves; and inspect and calibrate Gas quality facilities. If during the course of these inspections, Peoples determines, using commercially reasonable discretion, that installation procedures where not followed, equipment was not maintained, or equipment was modified to not comply with specifications established in this Master Agreement, Peoples has the right to shut-in the Interconnect until corrective actions by the Producer occur and additional inspections performed. If continued inspection violations occur, Peoples has the right to shut-in the Interconnect indefinitely. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's inspection in calibrating the meter, inspecting regulators, inspecting valves, and inspecting and calibrating gas quality equipment within the Producer's Interconnect Facility. Peoples shall replace, fix and repair, at its cost, any portion of Producer's Interconnect Facility that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of the activities described above.

1.05 **Reserved.**

1.06 **Reserved.**

1.07 **Annual Measurement Equipment Testing**. All measurement equipment shall be inspected and tested by a Peoples Approved Vendor once each calendar year not to exceed fifteen (15) months from the

previous inspections at Producer's expense. This annual inspection must be completed by technicians trained to operate pressure regulating equipment in accordance with the manufacturer's procedures and specifications. Peoples reserves the right to request documentation for regular testing and technician training. The annual testing shall include, but is not limited to the following equipment: Check Valve, Regulator(s) Lock-up test, Electronic corrector (EGM) calibration, meter calibration and spot sample Gas analysis (frequency according to section 2.01 of this Appendix B) at the Interconnect. Inspection reports shall be submitted, within 30 days after the yearly inspection date, to Peoples. In the event the Producer fails to submit the yearly inspection reports, Peoples shall have the right to periodically inspect Producer's records to determine if measuring equipment has been inspected and tested, as required by the Master Agreement. If Producer cannot provide documentation, within five (5) days of Peoples' request, Producer is required to immediately shut-in the Interconnect at which measurement and testing records are deficient, for a period of one week, or until the Producer can provide proof that the measuring equipment has been inspected and tested, and is working properly, whichever is longer. If Producer cannot provide documentation that its measuring equipment has been inspected and tested on additional occasions, Peoples retains the right to take further action at its discretion, including the right to require the shut-in of the applicable Interconnect for additional time periods. If Producer repeatedly violates this provision, Peoples has the right to permanently discontinue accepting Gas from wells that Producer has dedicated to said Interconnect Facility.

SECTION II
GAS QUALITY REQUIREMENTS

2.01 **General.** Before Peoples permits the flow of Gas from a New Facility into the Peoples' System, Producer will provide a Gas sample analysis by a Peoples Approved Vendor and Peoples shall review the Gas sample analysis to verify that it is of marketable quality. Producer will contract with a Peoples Approved Vendor to perform an initial (within one (1) year of the execution of this Agreement) Gas quality sample analysis and provide inspection report to Peoples for each Interconnect Facility that have not otherwise been tested by Producer or Peoples within the year prior to the execution of this Agreement. Receipt Point(s) with daily volumes at or above 1,000 mcf/day will be required to have a Gas quality sample analysis conducted on an annual basis. Receipt Point(s) with daily volumes below 1,000 mcf/day will be required, after obtaining the initial analysis, to have a Gas quality sample analysis' conducted every five (5) years thereafter, unless the Gas sample analysis does not meet Peoples specifications, requirements and/or standards, as set forth in this Agreement, including any Appendixes, Exhibits, Addendums, Schedules and Amendments, in which case, Peoples will require the Interconnect to be shut in until Gas sample meets Peoples specifications. Peoples reserves the right to require more frequent Gas quality sample analyses in order to address operational, safety or service related issues. The initial and ongoing Gas sample analyses shall include testing for water vapor, N2, O2, CO2, CH4 (methane through pentane), heating value (BTU - dry and saturated), specific gravity by a certified tester using GPA 2261-13 and GPA 2172-09 standards and shall conform with the following specifications:

(a) Liquids – The Gas shall be free of water and hydrocarbons in liquid form at the temperature and pressure at which the Gas is delivered.

(b) Moisture Content – The Gas shall not have water content in excess of seven (7) pounds of water per million cubic feet of Gas measured at standard conditions of 14.73 psia and 60°F, unless otherwise approved by an authorized representative of Peoples or as set forth in Schedule 1. The moisture content of the Gas shall be such that it is of marketable quality, and does not cause any safety or operational problems or other adverse effects on Peoples' System or any downstream systems to which the Gas may flow. Producer will be advised of any additional or specific moisture content limits for the Interconnect, or of any changes in such limits, should they be required.

(c) Water Vapor – Peoples will authorize water content according to the chart attached as Schedule 1 to this Appendix B. However, Peoples maintains the right to require a lower (more stringent) water vapor content than the level set forth in Appendix B if the water vapor levels at specific Receipt Point(s) are detrimentally affecting customer service or creating operational issues.

(d) Carbon Dioxide and Other Inerts – The Gas shall not contain more than four percent (4%) by volume of total combined inerts such as carbon dioxide, nitrogen, argon, and helium; provided that the total carbon dioxide content shall not exceed two percent (2.0%) by volume.

(e) Dust, Gums and Solid Matter – The Gas shall be commercially free of dust, gums, gum-forming constituents, or other liquid or solid matter which might become separated from the Gas in the course of transportation through pipeline.

(f) Heating Value – Unless otherwise approved, in writing, by Peoples, the Gas delivered shall contain not less than 967 BTU per standard cubic foot and shall not exceed 1,100 BTU per standard cubic foot of Gas calculated as the gross saturated value at 14.73 psia and 60° Fahrenheit, and a utilization factor of one thousand three hundred (1,300) plus or minus six percent (6%), the utilization factor being defined as that number obtained by dividing the heating value of the Gas by the square root of its specific gravity. Gas accepted by the Company that contains less than 967 BTU per cubic foot will be enhanced to ensure that Gas delivered by the Company to its end-use customers shall meet the heating value requirements set forth in applicable regulations, orders or laws. The Producer may be responsible for the costs of such enhancement.

(g) Temperature – The temperature of the Gas delivered into the Peoples' System shall not exceed 100°F unless approved by an authorized representative of Peoples. The temperature shall not be less than 40°F as delivered to Peoples' System after passing through all regulation, measuring and over protection equipment.

(h) Oxygen – The Gas shall not contain more than 2,000 parts per million (0.2% of one percent) of oxygen by volume.

Should circumstances warrant more in-depth Gas sample analyses, such as the suspected or known presence of other constituents, Peoples reserves the right to require testing for additional compounds including not limited to the following:

(a) Hydrogen Sulfide – The Gas shall not contain more than four (4) parts per million on a volumetric basis, or three-tenths (0.3) of a grain of hydrogen sulfide per one hundred (100) cubic feet.

(b) Total Sulfur – The Gas shall not contain more than 170 parts per million, on a volumetric basis, or ten (10.0) grains of total sulfur per one hundred (100) standard cubic feet.

(c) Carbon Monoxide – The Gas shall not contain more than one-tenth percent (0.1%) by volume of carbon monoxide.

(d) Gasoline - Not contain more than two-tenths (0.2) of a gallon of gasoline per one thousand (1,000) standard cubic feet unless otherwise approved by an authorized representative of Peoples.

(e) Bacteria – The Gas, including any associated liquids, shall not contain any microbiological organism, active bacteria, or bacterial agent capable of causing or contributing to: (i) injury to Peoples' pipelines, meters, regulators, or other facilities and appliances through which Producers Gas flows; or (ii) interference with the proper operation of Peoples' System. Microbiological organisms, including, but not limited to, sulfate reducing bacteria (SRB) and acid producing bacteria (ACB), when considered as a possibility, shall be tested for their existence utilizing the American Petroleum Institute test method API-R38 or other acceptable test method as determined by both Parties.

(f) Siloxane – All Gas delivered through an Interconnect into Peoples' System that includes Gas from landfill well(s) or gathering lines fed by landfill Gas sources shall meet the following on-going testing protocol:

Test Results, mg of SI / Nm^3	Action
≤ 0.4	November through February = once per week March through October = twice per month
0.40 - 0.60	Test daily until results are below 0.40
3 consecutive results ≥ 0.60 or a single test ≥ 1.0	Shut in gas until start-up conditions are re-established

2.02 **Gas Odorant.** Peoples will perform Gas odorant tests to confirm that the Gas delivered at the Producer's Interconnect Facility is properly odorized. If is found to have insufficient odor, then Producer will be required to purchase and install odorizing units and monitoring equipment according to Peoples' specifications and as set forth herein. The Producer is also responsible for the maintenance of this facility including the costs of odorant supply needed to maintain a sufficient odor in all Gas delivered at the Producer's Interconnect Facility. Odorizing units and monitoring equipment specifications

(a) Equipment and Ownership. The Producer will own the odorizer with associated equipment necessary to operate and deliver odor (odorizer system) and is responsible for all costs associated with operating the system. Peoples will approve the design of the odorizer system, whereinafter the Producer will purchase and install the odorizer system. Peoples may choose to be present for the installation and shall have the right to test the system after its installation. Thereafter, Peoples will operate and maintain the odorizer systems and, where applicable, a thermal electric generator (unless a public electric power supply can be made available to the site), together with necessary valves, tubing and fittings, in order to properly odorize Gas delivered to measurement equipment. If the odorizer system is located outside of the Interconnect Facility location, the Producer shall provide site access to Peoples, as described in Section 1.03 of Appendix A, for the site where the odorization system is located. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's accessing or operating Producer's odorizer system. Peoples shall also replace, fix and repair, at its cost, any portion of Producer's odorizer system that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of operating the odorizer system.

(b) Upgrades. If Producer should desire to upgrade or replace any of the currently existing odorizers or generators, all equipment must be subject to the review and approval of Peoples.

(c) Refill. Peoples will manage the filling and refilling (or tank exchange) of the odorant to make sure, that sufficient odorant is available for Gas delivered to the measurement equipment.

(d) Odorant Cost. Producer will reimburse Peoples, upon receipt of its invoices, for the cost of odorant, including all future tank refills.

(e) Odorizer Site. Producer will provide and maintain, at its own cost, perimeter fencing around the Odorizer sites to enclose and protect the odorizers and related equipment.

(f) Communication Cost. Producer will reimburse Peoples, upon receipt of its invoices, for the monthly cost of public telephone or cellular service for the communications equipment used to monitor the operation of the odorizers and the odorant level and for the monthly cost of electrical service used to operate and maintain the odorizers, if electric power is provided to the odorizers from a public supplier.

(g) Maintenance Cost. Producer will reimburse Peoples, upon receipt of its invoices, for the cost of any regular, periodic, and other odorizer maintenance service, including all labor and necessary

replacement parts or equipment, to assure the continued efficient operation of the odorizers. This includes reserve parts held in Peoples' stock to enable timely and proficient resolutions.

2.03 **Gas Quality Inspections.** If Gas sample analysis indicates that any of the Gas quality specifications, requirements and/or standards set forth in this Master Agreement have not been met, Peoples may refuse deliveries until the Producer makes the necessary provisions to fully comply with the Gas quality requirements.

2.04 **Gas Quality Inspections**. After initial deliveries are received, Peoples reserves the right to periodically sample Gas at the measurement equipment to validate the Gas quality. If the analysis indicates that Gas quality specifications, requirements and/or standards set forth in this Master Agreement are not met, Peoples has the right to shut in the Interconnect indefinitely until the Producer makes the necessary provisions to fully comply. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's accessing Producer's measurement equipment. Peoples shall also replace, fix and repair, at its cost, any portion of Producer's measurement equipment that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of accessing the equipment.

2.05 **Remedies.** Should any of the above substances enter Peoples' System and cause damage to metering, regulating and/or other equipment, or interruption of service, Producer shall reimburse Peoples for the costs to repair such damage and for any related costs which Peoples may incur to restore service to, and/or repair facilities of, its customers, including payments made by Peoples to customers in settlement of claims arising out of interruption of Gas service; provided that Producer was notified that Peoples was invoking indemnification under Section 13.03 and Producer was given the opportunity to defend against the claim prior to such settlement agreement.. Any such costs may be deducted from payments due Producer for Gas delivered. In addition, if the Gas delivered fails, in Peoples' reasonable opinion, using commercially reasonable discretion, to meet the quality specifications set forth herein, Peoples may elect to refuse to take all or any portion of such Gas until the Producer bring the Gas into conformity with such specifications. In the case of any such refusal, Producer agrees to exercise all due diligence to bring such Gas into conformance with the specifications set forth herein. Peoples has the right to shut in the Interconnect indefinitely until the Producer makes the necessary provisions to meet the Gas quality standards. Peoples may also elect to require continuous Gas quality monitoring with fail safe shut off as a provision to accept existing or new deliveries. Damages as a result of Gas quality violations are the responsibility of the Producer and the Interconnect shall be shut-in until damages are paid in full.

Front Street, Creighton PA 15030
Latitude: 40.583586, Longitude: -79.775129

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-I-007

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Gas Division (PGD) existing Rate GS- Gathering Service.

a. What are the water vapor standards on the PGD system?

b. Is Peoples proposing any changes to these standards in this proceeding? Please explain your answer.

Answer: a. ALLOWABLE WATER VAPOR LEVEL (#/MMSCF) VS. LOCATION

1. Producer meters connected to pipelines on the suction side of a Peoples compressor will be subject to 40#/mmscf water vapor standard.

2. All other Producer meters will be subject to 20#/mmscf water vapor standard.

Peoples reserves the right to require more stringent water vapor standards in limited and specific situations where Peoples has determined through water vapor testing that the water vapor levels at identified production meter points are affecting customer service or creating operational issues.

b. Not at this time

Submit Date: 2/20/2024

PIOGA Exhibit DW-2

Peoples' responses to OSBA-I-15.a. & OSBA-I-15.d.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OSBA-I-015

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4 at 15-24; Exhibit EAP-1; Peoples Statement No. 15 at 10, Exhibit RNZ-3, Exhibit 11, allocation of gathering system costs:

a. Please explain more fully the "value-based considerations associated with producers' access to Peoples' gathering system" cited in Statement No. 15. In particular, please discuss the relative value of the gathering system to the various categories of customers (i.e., rate classes, sales versus transportation).

b. Please identify the specific customers and volumes by rate class that benefit from the difference between the $3.48 per mcf and $3.08 per mcf cited in Statement No. 4.

c. Re the "GatherVolumes" allocator in Exhibit 11:

i. Please explain how the volumes were derived;

ii. Please segregate the volumes for each class between sales service and transportation service volumes;

iii. Please provide the number of customers served by volumes flowing through the gathering system in each rate class, split between sales and transportation service customers.

Answer: a. Value to Peoples customers of producer's access to Peoples gathering system - Access to sources of lower cost gas.

Value to producers of access to Peoples gathering system - Means to move gas - in some cases, to move it at a lower cost than other alternatives, in other cases, it is their only option to move gas.

b. All system supply customers benefit since the local production will assist in lowering the overall gas commodity charge for all class of customers purchasing their commodity from Peoples. However, Peoples cannot identify by class how the difference between local production and interstate supplies would affect customers who purchase their commodity from a NGS, since Peoples doesn't have knowledge of how the NGS would allocate that price difference to the mix of customer rate class they serve.

c.

i. FPFTY Gathering volumes by division, system supply and transport (P1, NP1) were estimated by the Company. These volumes were then allocated to the classes based on FPFTY throughput sales. Please refer to the "Gathering Allocator" tab in Attachment OCA-5-001g (COSS External Factors). Note, cells E59 and E67 use the term "HTY" but should state "FPFTY."

ii. Please refer to Excel rows 6-8 in the "Gathering Allocator" tab in Attachment OCA-5-001g (COSS External Factors)

iii. Please see 15 (d) for total customers by class served from gathering. Peoples cannot distinguish sales verse transport customers by pipeline system.

Submit Date: 3/4/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OSBA-I-015d-f

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4 at 15-24; Exhibit EAP-1; Peoples Statement No. 15 at 10, Exhibit RNZ-3, Exhibit 11, allocation of gathering system costs:

d. Re Statement No. 4, page 17, please specify the number of customers and annual volumes by division and by rate class for customers served directly from the gathering system.

e. Please explain how loads for customers served directly from the gathering system are balanced.

f. Please explain generally why it is appropriate for all customers in a particular class to bear the cost of the gathering system when only a subset of customers in the class rely upon that system. In particular, please explain whether it would be more appropriate to recover the net costs of the gathering system as a gas supply charge to the customers who use the system.

Answer: d. There are 2,250 residential customers, 104 commercial customers, and 1 industrial customer served directly from gathering pipelines on the PNG system. Although there are no DOT or FERC accounting gathering pipelines on the PG system, there are pipelines that function more like gathering that move local production to distribution areas. These pipelines directly serve 1,662 residential customers, 83 commercial customers, and 1 industrial customer.

e. If the volumes delivered into the gathering system are greater than the direct customer consumption, the excess gas is delivered into other parts of the system through district regulating stations and/or compressor stations. If the volumes delivered into the gathering system are less than the direct customer consumption, additional gas is supplied to the gathering system to maintain adequate pressure and volumes to serve the customers.

f. Suppliers that serve transportation customers also have access to purchase the lower cost gas available from local production. For that reason, it is not more appropriate to recover the net costs of the gathering system as a gas supply charge to the customers who use the system.

Submit Date: 3/4/2024

PIOGA Exhibit DW-3

Peoples' responses to PIOGA-II-2 and PIOGA-VI-5

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-II-002

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4 (Palombo) at p.18, lines 2-3. Please describe every way that Peoples operates its gathering and distribution systems to facilitate the introduction of lower pressure gas from conventional wells into its system.

Answer: Peoples operates the systems below Maximum Allowable Operating Pressures (MAOP) to comply with PHMSA regulations, and allow for pressure buildups but prevent over pressurization of the systems. Conventional local production is delivered to the systems such that the regulator set points of the production meters are set to allow for this pressure build up but not exceed MAOP. Set points can vary depending on seasonal temperatures, where customer demand may be higher or lower.

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-VI-005

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Has Peoples allowed deliveries into its system at pressures higher than the regulator set point(s)? If so, please explain why and if Peoples raised the producer regulator set point(s) to allow producer gas to flow? If not, please explain why not.

Answer: Peoples obligations and requirements are to operate the pipeline systems within the MAOPs. Regulator set points can be adjusted and vary across the system to provide the most efficient operating pressures and optimal supply blend to maintain safe reliable service, so long as every set point is within the allowable MAOP.

PEOPLES TWP LLC
GAS PURCHASE AGREEMENT
NO. #Y-XX

THIS AGREEMENT, made and entered into this ___ day of <Month>, 20__, by and between **<COMPANY NAME>** a <state>_____, having a business address of <ADDRESS>, <CITY>, <STATE> <ZIP>, hereinafter referred to as "Seller", and **PEOPLES TWP LLC**, a Pennsylvania limited liability company, having its principal office at 205 North Main Street, Butler, Pennsylvania 16001, hereinafter referred to as "Buyer".

WITNESSETH THAT:

WHEREAS, Seller is engaged in the business of producing natural gas and has, or will have, available for sale and delivery to Buyer a supply of natural gas from certain wells drilled, or to be drilled, in the Commonwealth of Pennsylvania; and

WHEREAS, Seller desires to sell and deliver to Buyer all of the natural gas produced from the well(s) described herein and from any other well(s) which may subsequently be made subject to this Agreement, and Buyer is willing to purchase said natural gas, upon the terms and conditions hereinafter set forth;

NOW, THEREFORE, the parties hereto, in consideration of the mutual promises contained herein, and intending to be legally bound hereby, have agreed and do hereby agree as follows:

SECTION I
GAS SOLD; RESERVATIONS BY SELLER;
DEDICATION; OPTION TO PURCHASE

1. Subject to the conditions hereinafter set forth, Seller hereby agree to produce and deliver and hereby sell to Buyer all the natural gas produced or that may be produced and saved by Seller from (2) wells hereinafter more particularly described as follows:

Name of Well	**Permit No.**	**Township**	**County**

all of which natural gas constitutes a gas reserve which, together with said well(s) and the pipelines and other facilities used by Seller to deliver natural gas from said well(s) to Buyer and all additions, replacements, and betterments thereto, Seller hereby dedicates to the performance and fulfillment of its obligations under this Agreement. Said well or wells are now held and operated by the Seller on tracts or parcels of land, hereinafter sometimes referred to as "the dedicated acreage", under and by virtue of the following described instruments for oil and gas purposes:

Name of Well	Description of Instrument

Except where otherwise expressly indicated, recordation references are to instruments duly of record in the Office of the Recorder of Deeds of the County in which the well(s) are located.

2. Seller excepts and reserves from this Agreement such quantities of gas produced and saved as may be required by Seller for use in its own operations for the production of oil and gas from said premises and also such quantities as the lessors thereof may be entitled to, under the provisions of the lease, for domestic purposes or for heat and light in the residences of said lessors, and as may be given or sold to the owners of the overlying surface for like domestic purposes.

3. Such rights of entry, use and occupation of the surface of said lands as are or may become vested in or held by Seller are hereby permitted to be used by Buyer under this Agreement.

4. Seller agrees not to permit the lease or leases embracing the gas dedicated to this Agreement to lapse or expire, or become forfeited, or to be surrendered for cancellation, during the term of this Agreement. Seller agrees, in its operations, not to waste gas that may be produced from any well drilled upon said dedicated acreage. Seller further agrees and binds itself not to dispose of any of the gas produced from or underlying the dedicated acreage to any other persons or company during the term of this Agreement, except for any gas with respect to which Buyer elects not to exercise the option to purchase granted to it by Seller in sub-section 5 of this Section I.

5. Seller hereby grants to Buyer the exclusive right and option during the term hereof to purchase, for the price and on the terms and conditions determined by Buyer to be applicable to similar newly drilled wells, all of the natural gas that may be produced during the term hereof from each and any additional well or wells to be drilled on the above described dedicated acreage or on any tract or parcel of land subsequently made subject to this Agreement. Within ten (10) days after completion of any such well(s), Seller shall give written notice to Buyer of such completion, and Buyer may exercise its option to purchase gas from such well(s) by giving written notice to Seller within twenty (20) days after receipt of Seller's notice of completion.

SECTION II
BUYER'S PURCHASE OBLIGATION; GAS VOLUME

1. Subject to the terms and conditions hereof, Buyer hereby purchases and agrees to pay for the natural gas to be produced and delivered by Seller hereunder. Buyer agrees, insofar as it can consistently do so, having regard for its other related interests, to take all the gas Seller has available during the term of this Agreement, at the full flow of said gas from Seller's pipeline into Buyer's pipeline against the varying pressures from time to time maintained in said lines; provided, however, that it is expressly understood and agreed that Buyer may restrict the flow or discontinue the taking of gas temporarily, when and for such length of time as in its judgment it is deemed

expedient so to do, its judgment being based upon consideration of market demand, relative price of the gas covered hereunder, convenient operation of its then existing pipeline facilities, repair and maintenance requirements, storage capacity, the line pressure it deems necessary to maintain, the competitive and other conditions in the various fields in which it is purchasing gas, and such other factors as it deems relevant. It is further expressly understood and agreed that from the first day of May of each year to the thirty-first day of October following, inclusive, Buyer may at its option restrict the flow or discontinue the taking of Seller's gas during all or a portion of said period. In the event Buyer, pursuant to the provisions of this sub-section 1 of Section II, determines to take less than the full flow of natural gas from the well or wells dedicated hereto, Buyer shall so notify Seller in writing, by email or by telefax, and Seller agree promptly to suspend production in whole or in part, as required.

2. Notwithstanding anything contained herein to the contrary, in the event that the pressure of Seller's natural gas at the point of delivery becomes too high, in Buyer's opinion, for the safe operation of Buyer's pipeline system, Buyer may choke back or control the flow of natural gas to reduce such pressure to a point of safety.

3. Buyer makes no representations concerning the pressure which will be maintained in its pipelines from time to time or other factors which may affect the quantity of gas which Seller may be able to deliver to Buyer.

SECTION III
TERM; COMMENCEMENT OF DELIVERIES

1. This Agreement shall be effective as of the date hereof and shall continue and remain in full force and effect for a primary term ending <MONTH> XX, 20__ and from year to year thereafter unless terminated on said date or any anniversary thereof by either party upon not less than sixty (60) days' advance written notice to the other party; provided, however, that (a) with respect to natural gas sold and purchased hereunder prior to the expiration of the term of this Agreement, the provisions of this Agreement, including without limitation Sections IV 3., VI 4., VII, VIII 2. and IX, and the respective rights, obligations and liabilities of Seller and Buyer hereunder shall continue to be effective and shall remain in full force and effect for a period of four (4) years after the expiration of such term and (b) if Seller fails or is unable to deliver to Buyer a quantity of gas from all wells drilled on the dedicated acreage sufficient to justify, in Buyer's opinion, the expense of the further operation of Buyer's gas measuring equipment, Buyer, upon ten (10) days' prior written notice, may at its option terminate this Agreement.

2. Deliveries of gas hereunder shall commence as soon as (a) all necessary facilities have been constructed and the well or wells have been connected to Buyer's pipeline and (b) Seller has furnished to Buyer all required documents and information concerning the well(s) and the above-described dedicated acreage.

SECTION IV
CONNECTION SITE; DELIVERY POINT; POSSESSION

1. Seller shall promptly construct and place in operation the necessary gathering line to connect said well or wells at a suitable site (the "Connection Site") designated by Buyer with Buyer's __-inch (X") diameter pipeline located on property now or formerly of _____ in _____ Township, _____ County, _____, and shall, at its own cost and expense, secure and maintain the necessary rights-of-way and related surface rights for Buyer's regulator, metering and other connection facilities at the Connection Site. One meter, the related fittings and other necessary equipment required at the Connection Site, including but not limited to any over-pressure safety equipment, shall be

provided and installed by Buyer at Seller's sole cost and expense as soon as reasonably possible after Seller's gathering line is operational and any necessary rights-of-way and related surface rights for Buyer's connection facilities have been furnished by Seller. If Seller does not remit payment for said facility and installation charges within ten (10) days after receiving Buyer's invoice for same, then Buyer may at its option deduct all or any portion of such charges from payments otherwise due to Seller under the terms of this or any other gas purchase agreement between Seller and Buyer.

2. The point of delivery (the "Delivery Point") for all gas purchased hereunder shall be at the inlet side of Buyer's meter at the Connection Site. Title to all gas delivered hereunder shall be considered as passing to and vesting in Buyer at the Delivery Point.

3. Seller shall be deemed to be in control and possession of the gas hereunder until it shall have been delivered to Buyer at the Delivery Point, after which Buyer shall be deemed to be in control and possession thereof. Buyer shall have no responsibility with respect to any gas hereunder until it is delivered to Buyer at the specified Delivery Point or because of anything which may be done, happen, or arise with respect to said gas before such delivery; and Seller shall have no responsibility with respect to said gas after its delivery to Buyer or because of anything which may be done, happen, or arise with respect to said gas after delivery of said gas to Buyer, except as hereinafter provided in Section VI, in accordance with the terms and conditions of this Agreement. Seller assumes the full cost and expense, as well as full and complete liability and responsibility, for collecting, gathering, and transporting the gas to the Delivery Point hereunder at the quality hereinafter specified.

SECTION V
MEASUREMENT

1. All gas purchased hereunder shall be measured by an orifice, turbine or displacement type meter or other approved measuring device of equal accuracy. Said meter shall be owned, installed, maintained, and read by Buyer.

2. The quantity of natural gas delivered to Buyer shall be determined as follows:

(i) The unit of volumetric measurement shall be a standard cubic foot of gas at a pressure base of fourteen and seventy-three hundredths (14.73) pounds per square inch absolute, a temperature base of sixty degrees (60°) Fahrenheit (five hundred twenty degrees (520°) absolute) and without adjustments for water vapor.

(ii) For orifice meter measurements, the methods of computation shall conform with the recommendations contained in Report No. 3 of the Gas Measurement Committee of the American Gas Association, including any revisions made thereto, applied in a practical manner. The specific gravity of the gas being measured shall be determined at the beginning of delivery and as often thereafter as conditions may warrant.

(iii) For displacement or turbine meters or other approved measuring devices, the meter readings at varying pressures shall be converted to gas quantities at base conditions set forth in sub-section 2(i) of this Section V.

(iv) In connection with the use of any type of measuring device, an atmospheric pressure of fourteen and four tenths (14.4) pounds per square inch shall be assumed, with no allowance for variation in atmospheric

pressure. The flowing gas temperature may be recorded at the Buyer's discretion. In the absence of a flowing gas temperature recorder, a temperature of sixty degrees (60°) Fahrenheit will be assumed.

3. In the event the meter used for measuring the natural gas delivered to Buyer hereunder is out of service or is determined by Buyer to be inaccurate by more than plus or minus two (2) percent for any period of time, during which time delivery of gas is continued by Seller to Buyer, then the quantity of natural gas delivered during such a period shall be estimated by Buyer by comparing the quantity of natural gas delivered during a like period and under similar conditions when the meter was in service and measuring the natural gas accurately, which estimation will be accepted by Seller.

4. If Seller challenges the accuracy of any meter in use under this Agreement and requests to have the meter tested, Buyer shall test the meter under suitable conditions in the presence of Seller if Seller wishes to exercise the right to be present or represented at such test. If the meter on test shall prove to be accurate within plus or minus two (2) percent, the cost of testing and repairing the same shall be borne by the Seller, but if the meter on test proves to be in error by more than plus or minus two (2) percent, then the cost of testing and repairing the same shall be borne by Buyer. Any resultant aggregate error exceeding two percent (2%) of computed delivery shall be adjusted in accordance with sub-section 3 of this Section V. Any such adjustment shall be made for a period not to exceed thirty (30) days prior to the date of the challenge by Seller.

5. In the event different prices may become effective under this Agreement for natural gas being produced from different wells located on said dedicated acreage hereinbefore described, Buyer may, at its option, provide and install at Seller's sole cost and expense a meter on Seller's well gathering line or field gathering line in order to measure the natural gas being produced from said tract or tracts of land for which a different price is to be paid, or, in the alternative, it may accept Seller's meter readings as hereinafter provided, which meter readings shall be subject to verification and correction through the inspection of Seller's records at reasonable times and intervals. Any natural gas delivered by Seller and measured by Buyer with such a meter on Seller's pipeline, will not be deemed delivered by Seller to and possession taken by Buyer under Section IV until such gas enters the measurement facilities on Buyer's pipeline, and any line loss occurring before natural gas enters Buyer's measurement facilities on Buyer's pipeline shall be the responsibility of Seller. Rights of way required by Buyer for ingress and egress to and from any field meter or meters and the related surface rights for such meter sites shall be furnished by Seller to Buyer free of cost for locations previously approved by Buyer. In the event that Buyer elects to accept Seller's meter readings, Seller shall submit to Buyer all individual well meter readings registering through Buyer's meter at the Connection Site within five (5) days following the end of each monthly measuring period. Payment for any such gas will not be made until Buyer receives said meter readings. If Seller's measurement is by orifice meter, Seller shall furnish to Buyer a copy of the applicable chart or charts.

SECTION VI
QUALITY

1. Seller agrees to install, operate and keep in efficient operating condition, at Seller's own expense, drips, separators, dehydrators, alcohol bottles, gas cleaners, and any other equipment necessary to insure that the gas delivered from each well hereunder shall be clean and commercially free from dust, objectionable odors or other solid or liquid matter which might interfere with its merchantability or cause injury to or interference with proper operation of the lines, regulators, meters or other equipment through which it flows. Seller also agrees to operate and keep in efficient

operating condition, regulators, relief valves, and any other equipment necessary to avoid excessive pressure in Buyer's and/or Seller's line.

2. The gas delivered from each well hereunder shall not contain: more than seven (7) pounds of water in a vapor state per million cubic feet; more than 0.3 grains of hydrogen sulfide per one hundred (100) cubic feet of gas; more than twenty (20) grains of total sulfur per one hundred (100) cubic feet of gas; more than four percent (4%) by volume of a combined total of carbon dioxide (CO_2) and nitrogen (N_2) components, provided, however, that the total carbon dioxide content shall not exceed two percent (2%) by volume; and more than two tenths of one percent (0.2%) by volume of oxygen (O_2). Seller agrees to make every effort to keep the gas completely free of oxygen. The presence and amount of any of the aforementioned substances shall be determined by Buyer using appropriate testing equipment.

3. All gas delivered hereunder shall have a minimum heat content of nine hundred eighty (980) British Thermal Units (Btu) per cubic foot (saturated) as measured on a Cutler-Hammer calorimeter, or the equivalent, and a utilization factor of one thousand three hundred (1,300) plus or minus six percent (6%), the utilization factor being defined as that number obtained by dividing the heating value of the gas by the square root of its specific gravity. The initial Btu determination shall be made by Buyer at its expense. Subsequent Btu determinations requested by Seller or Buyer shall be made by Buyer at Seller's expense.

4. Should any of the above substances enter Buyer's facilities and cause damage to metering, regulating and/or other equipment, or interruption of service, Seller shall reimburse Buyer for the costs to repair such damage and for any related costs which Buyer may incur to restore service to, and/or repair facilities of, its customers, including payments made by Buyer to customers in settlement of claims arising out of interruption of gas service. Any such costs may be deducted from payments due Seller for gas delivered. In addition, if the gas delivered fails in Buyer's opinion to meet the quality specifications set forth herein, then Buyer may elect to refuse to take all or any portion of such gas until the Seller bring the gas into conformity with such specifications. In the case of any such refusal, Seller agrees to exercise all due diligence to bring such gas into conformance with the specifications set forth herein.

5. Seller agrees to allow Buyer to take necessary well samples at such intervals of time as may be designated by Buyer to permit testing of the gas produced to determine the quality of the gas being sold by Seller.

6. Nothing contained herein is intended or shall be construed to exclude, modify, limit or negate any warranties, express or implied, as may be provided by law, including without limitation warranties of merchantability and fitness for a particular purpose.

SECTION VII
PAYMENTS; APPOINTMENT OF AGENT; WITHHOLDING

1. Payments for all gas delivered hereunder shall be made on or about the twenty-fifth (25th) day of each month for the gas delivered during the preceding measuring period. Such payments shall be made to the agent designated in sub-section 2 of this Section VII and shall be accompanied by a statement showing the quantity of gas delivered hereunder during the applicable period. Each statement of the quantity of natural gas delivered shall be conclusive upon the Seller unless objections in writing are made by Seller and received by Buyer within thirty (30) days after Seller has received such statement.

The parties acknowledge that other agreements exist between Seller and Buyer, which are not incorporated herein, that may result in either party owing payments under those agreements. The parties now agree that financial netting shall be permitted under this Agreement and either party shall have the right to request netting to apply in a particular payment period. Under the financial netting, the requesting party may calculate the net amount of all undisputed amounts due and owing, and/or past due, arising under this Agreement with amounts due and owing, and/or past due, arising under the other agreements. After such netting, the party owing the greater amount shall make a single payment of the net amount to the other party in accordance with this Section 7.

2. Seller hereby appoints as its agent:

Name: _____
Address: _____
_____

to whom all payments shall be paid and to whom all statements and checks shall be sent by United States mail, postage prepaid, addressed as indicated above until changed by Seller by certified or registered letter addressed to Buyer. Said agent is authorized to give the necessary receipts and acquittances to Buyer and to make adjustments and settlements under this Agreement, and Buyer shall have no obligation with respect to, or responsibility for, the application of any gas purchase proceeds paid to said agent. Although the terms and conditions of this Agreement extend to and are binding upon all parties hereto and their respective personal representatives, heirs, successors and assigns, in no event will Buyer issue, or be required to issue, more than one (1) monthly check in payment of the emoluments hereunder. If at any time more than one (1) person, party or entity becomes entitled to payment hereunder for the emoluments hereunder or in the event said agent shall resign or be discharged or shall otherwise be unable or unwilling so to act, Buyer may withhold further payment of money for purchase of natural gas hereunder, without liability for interest, until Buyer is furnished by Seller with the necessary documentation (properly executed and acknowledged by all necessary parties) designating an agent or a new agent, as the case may be, to receive such payment, for all parties interested in such payment.

3. Seller agrees, where applicable, to make complete and proper royalty payments, if any, due to the owners of the oil and natural gas underlying the tract or tracts hereinbefore described and further agrees to make complete and proper payments, if any, to the person, persons or companies owning working interests in any well or wells subject to this Agreement. In no event shall Buyer be obligated to make royalty, overriding royalty, or working interest payments for natural gas purchased hereunder.

4. If Seller fails to comply with any of the covenants or terms herein contained, Buyer may immediately withhold, without liability for interest, all payments due to Seller under the terms of this Agreement, and, at Buyer's option, may suspend taking delivery of said natural gas until all necessary actions have been taken by Seller and all adjustments have been made by Seller so that in Buyer's opinion Seller are fully complying with all covenants and terms of this Agreement.

5. In the event Buyer mistakenly pays excessive amounts to Seller for natural gas sold and purchased hereunder, which overpayments are caused by or result from a mistake of fact or law, miscalculation, coercion, duress, fraud, governmental or regulatory constraint, ignorance or want of knowledge, then Seller agrees that it will, within thirty (30) days following the date Buyer

furnishes Seller with a statement setting forth the amount due, make restitution of such excessive amounts to Buyer, without liability for payment of interest; provided, however, that Seller's obligation to make such restitution shall be limited to excessive amounts mistakenly paid by Buyer to Seller within the period commencing four (4) years prior to the date on which Buyer's demand for restitution is made hereunder. In the event of Seller's failure to make such restitution within said thirty (30) day period, then Buyer may deduct from payments otherwise due to Seller for the natural gas sold and purchased under this or any other gas purchase agreement between Seller and Buyer an amount equivalent to the excessive amounts mistakenly paid by Buyer to Seller. Nothing in this Agreement shall be construed as a waiver or relinquishment by Buyer of its rights to such excessive amounts mistakenly paid.

SECTION VIII
PURCHASE PRICE

1. Purchase Price. The purchase price per million British Thermal Units (per MMBtu), as such quantity of natural gas is determined under sub-section 1 below, to be paid by Buyer to Seller for all gas delivered hereunder shall be equal to the following, as of the first day of every calendar month ("Monthly Calculation Dates") during the term hereof:

(i) an MMBTU price equal to 100% of the Inside F.E.R.C.'s Gas Market Report, "Price of Spot Gas Delivered to Pipelines," for deliveries of Appalachian production into Dominion Transmission Inc.'s dry transmission system for first of month. The specific posting to be used for the pricing of all production hereunder shall be that set forth under the column labeled "Index" and described as "Dominion Transmission Inc.: Appalachia," for gas produced and delivered to the designated Delivery Points(s).

All calculations of prices hereunder shall be rounded to the nearest whole cent. The initial purchase price shall be the purchase price computed as of the Monthly Calculation Date immediately preceding the date of this Agreement.

Notwithstanding the provisions of this sub-section 1, Seller and Buyer expressly agree that Buyer shall have the right from time to time in its sole discretion upon written notice to Seller to change the frequency of purchase price adjustments hereunder, delete one or more of the components, add or substitute one or more new components, or otherwise modify the components or method of computation, utilized in determining the purchase price hereunder, provided that no such modification shall result in a purchase price lower than the purchase price Buyer is offering at the time of such modification for new supplies of Pennsylvania gas under Buyer's new gas purchase agreements for dedicated or non-dedicated gas supplies.

2. Btu Calculation. The purchase price provided herein is expressed per MMBtu. For purposes of applying such purchase price, all payments for gas sold and purchased hereunder shall be calculated by multiplying the following: (a) the applicable purchase price provided above; (b) a fraction, the numerator of which is the total heat content as determined in accordance with sub-section 3 of Section VI hereof, and the denominator of which is 1000; and (c) the volume of gas delivered to Buyer as determined under Section V hereof, and expressed in thousands of cubic feet (Mcf).

3. No Other Adjustments. It is expressly understood and agreed that the purchase price specified herein shall constitute full and adequate compensation to Seller for the gas to be delivered hereunder, for all of Seller's production-related and other costs, and for all of Seller's severance and other taxes, notwithstanding that Seller may be entitled to a higher price and/or additional compensation with respect to such costs and taxes pursuant to any applicable law, rule or regulation.

4. Cost Recovery. Notwithstanding any other provisions of this Agreement, if any order, opinion, determination, decision, enactment or regulation of the Pennsylvania Public Utility Commission, Federal Energy Regulatory Commission, or of any other governmental authority (Federal or State), or of any legislative body or court, may in Buyer's judgment have the effect, for any reason, either directly or as a precedent, of preventing Buyer's full and prompt recovery, as part of its purchased gas costs, of any portion of the purchase price already paid Seller or to be paid Seller in the future, then Buyer, in addition to its right to refund hereinafter specified, with the next monthly payment after the date of such order, opinion, determination, decision, enactment or regulation, or at such later date as it may elect, may in Buyer's sole discretion reduce the purchase price hereunder to that price level which will in Buyer's judgment enable Buyer to recover promptly its full costs. In such case, the price provisions applicable to Seller's deliveries of gas to Buyer shall be deemed modified as appropriate to assure Buyer its full cost recovery for gas previously purchased and for future purchases, and Seller shall refund to Buyer an amount equal to the difference between any purchase price previously paid and the reduced price level which will in Buyer's judgment enable Buyer to recover its full costs. Any such refund amount shall be paid by Seller to Buyer within thirty (30) days following the date Buyer furnishes Seller with a statement setting forth the amount due, or Buyer, at its option, may deduct such amount from payments otherwise due to Seller under the terms of this or any other gas purchase agreement between Seller and Buyer.

SECTION IX
TITLE WARRANTY; INDEMNIFICATION

1. Seller warrants generally the title to the natural gas delivered and sold hereunder to Buyer and that at the time of delivery said natural gas is or will be free and clear of all liens, encumbrances and claims whatsoever. Seller further warrants that at the time of delivery Seller will have good right and title to sell said natural gas as aforesaid, and Seller agrees to indemnify Buyer and save it totally harmless from all suits, claims, actions, debts, levies, damages, costs, losses and expenses (including legal fees and expenses) of any nature arising from or out of adverse claims of any kind or nature asserted by anyone whatsoever to said natural gas, including without limitation claims, suits, actions and demands which may arise due to the non-payment of landowner royalties, overriding royalties and rentals thereon or therefrom.

2. In the event any adverse claim to or against the natural gas sold and delivered hereunder, or any part thereof, is made by any person, Buyer may withhold payment for the natural gas to which the adverse claim pertains, without liability for payment of interest on the amounts withheld, or may refuse to accept delivery of such natural gas, until the dispute as to the ownership of said natural gas is settled by agreement between Seller and such adverse claimant or by the final decree of a court of competent jurisdiction. If litigation results from any such adverse claim, Buyer may pay any money withheld by it hereunder into court without further liability therefor, or may interplead all claimants to such natural gas, including Seller.

3. Seller and Seller's Agent, jointly and severally, for themselves and on behalf of their respective heirs, personal representatives, successors and assigns, hereby assume all risks with

respect to and all liability for and shall protect, indemnify and hold harmless Buyer, its successors, assigns, directors, officers, employees and agents, jointly and severally, from and against, any and all claims, costs, fines, penalties, demands, actions, controversies, obligations, liabilities, expenses (including legal fees and expenses), losses, damages and causes of action of every kind and character asserted by any person or persons or entity or entities, which, by allegation or in fact, arise out of or in any way relate to any act or omission of Seller and/or Seller's Agent, or their respective agents, employees, representatives, subcontractors or invitees, on or about the above-described dedicated acreage or in connection with Seller's performance of its obligations under this Agreement, including, without limitation, the drilling, completion, reworking, operation and/or maintenance of any wells and related facilities utilized in or dedicated to the performance of Seller's obligations under this Agreement, it being expressly understood and agreed that for purposes of this indemnity Seller hereby waives any protection which may be available to it under the Pennsylvania Workers Compensation Act or any other similar state or federal law.

4. Buyer at its option may deduct all or any portion of any claim for indemnity hereunder from payments otherwise due to Seller under the terms of this or any other gas purchase agreement between Seller and Buyer.

SECTION X
WELL & WELL CONDITIONS; WELL DATA

1. Seller shall equip each well on the dedicated acreage hereinbefore described with a valve suitable for gauging the pressure of natural gas in the well, and Buyer shall have the privilege of gauging such pressures at all reasonable times during the term of this Agreement. The gas producing wells on said dedicated acreage shall be and remain continuously connected to Seller's gathering lines for production deliveries, except to the extent that disconnection is required as wells are being repaired. Seller shall operate all wells in a reasonable and prudent manner and keep the same in good condition in order to maximize the production of natural gas.

2. Seller shall make the well or wells subject to this Agreement available to Buyer for inspection and/or testing at any reasonable times during the term of this Agreement.

3. Without the prior written consent of Buyer, Seller shall not use any mechanical means or accessory equipment to pump or compress the natural gas produced hereunder in order to aid its delivery into Buyer's pipeline.

4. If requested by Buyer, Seller shall furnish Buyer, within ten (10) days of any such request, copies of the completion report, all well logs, test results, and such other data as Buyer may reasonably request with respect to the well or wells subject to this Agreement.

SECTION XI
TAXES

Seller and Buyer shall each pay all taxes of every kind as respectively assessed to or levied on each, without right of contribution by the other, and neither the price to be paid for gas nor any other provision of this Agreement shall be affected by an increase or decrease in the rate or amount or the repeal of an existing tax imposed on either party, or by the enactment of a new tax.

SECTION XII
PERSONS BOUND; TRANSFERS BY SELLER

1. All terms, covenants, conditions and obligations of this Agreement shall inure to the benefit of and be binding upon the parties hereto and their respective heirs, personal representatives,

successors and assigns, and shall be in the nature of covenants running with Seller's interest in the dedicated acreage and wells hereinbefore described.

2. Any sale or assignment by Seller of its interest in said dedicated acreage or the wells hereinbefore described or its interest in this Agreement or its interest in any other property, real or personal, required for or dedicated to the performance of this Agreement, shall be made expressly subject to the rights of Buyer hereunder and with provision that the assignee or purchaser shall assume and covenant to perform all of the Seller's obligations hereunder. Seller shall give prompt notice in writing to Buyer of any sale or assignment or other disposition of all or any part of its interest in the dedicated acreage and wells hereinbefore described and covered by this Agreement and shall furnish to Buyer copies of any relevant documents evidencing transfer or assignment of said Seller's interest. Until said notice and relevant documents have been given and furnished to Buyer, Buyer may withhold all payments that may become due hereunder, without liability for interest.

SECTION XIII
FORCE MAJEURE

In the event either party is rendered unable, wholly or in part, by Force Majeure to carry out its obligations under this Agreement, other than demand payments of amounts due hereunder, then the obligations of such party, so far as they are affected by such force majeure, shall be suspended during the continuance of any inability so caused. However, the party claiming the existence of force majeure shall use all reasonable efforts to remedy any situation which may interfere with the performance of its obligations hereunder. The term "Force Majeure" as used herein, and as applied to either party hereto, shall mean acts of the law, acts of God, strikes, lockouts, or other labor disturbances, acts of the public enemy, war, blockades, insurrections, riots, epidemics, fires, floods, washouts, arrests, and restraint of rulers and people, civil disturbances, explosions, breakage or accidents to machinery or lines of pipe, freezing of wells or pipelines, partial or entire failure of such wells, or any other cause, whether of the kind herein enumerated, or otherwise, not reasonably within the control of the party claiming suspension. It is understood that settlement of strikes, lockouts, or labor disturbances shall be entirely within the discretion of the party having the difficulty and that the above requirement that any Force Majeure shall be remedied with all reasonable dispatch shall not require the settlement of strikes, lockouts, or labor disturbances by acceding to the demands of the opposing party when such course is inadvisable in the discretion or judgment of the party having the difficulty.

SECTION XIV
COMMUNICATIONS

Unless otherwise provided herein, all notices, requests, demands or other communications which are required or contemplated by this Agreement, shall be in writing and sent by United States mail, postage prepaid, to the parties at the following addresses until changed by either party by written notice to the other party:

Seller: <COMPANY NAME>
Address: _____
_____
Attention: _____
Phone: (XXX) XXX-XXXX
Email address: _____
FAX: (XXX) XXX-XXXX

Buyer: Peoples TWP LLC

FAX: (724) 287-5041

SECTION XV
MISCELLANEOUS

1. This Agreement, insofar as it is affected thereby, shall be subject to all present and future valid and applicable laws and to the valid and applicable present and future rules, regulations or orders of any regulatory agency or authority having jurisdiction. Nothing contained herein shall be construed as affecting Seller's or Buyer's rights to contest the validity or applicability of any such rules, laws, regulations or orders.

2. This Agreement represents the entire understanding of the parties with respect to the subject matter hereof and supersedes and merges herein all prior negotiations, understandings, agreements, and representations. No change, waiver, modification, or amendment of this Agreement shall be binding or of any effect unless in writing duly signed by the party against which such change, waiver, modification, or amendment is sought to be enforced.

3. Whenever this Agreement makes reference to "this Agreement" or to any provision "hereof", or words to similar effect, such reference shall be construed to refer to the within instrument unless the context clearly requires otherwise. The titles of the Sections herein have been inserted as a matter of convenience of reference only and shall not control or affect the meaning or construction of any of the terms and provisions hereof. As used in this Agreement, the plural shall include the singular and the singular shall include the plural whenever appropriate.

4. This Agreement shall be governed by, construed and interpreted in accordance with the laws of the Commonwealth of Pennsylvania. If any one or more of the provisions of this Agreement shall be held to be invalid, illegal or unenforceable in any respect, such invalidity or unenforceability shall not affect any other provision of this Agreement, which shall be construed as if such invalid, illegal or unenforceable provision had never been contained herein.

IN WITNESS WHEREOF, the parties hereto have duly executed this Agreement as of the day and year first above written.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-III-001

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' responses to PIOGA-I-7 and OCA-IV-1.

a. What were the water vapor content standards on the TW Philips system immediately before its acquisition by Peoples Natural Gas Company, PNG Companies LLC, or Steel River Infrastructure Fund North America LP , as appropriate, in May 2011? Please provide the documents that show the standards in effect at that time.

b. Did the Peoples' companies enforce the water vapor standards of the legacy TW Phillips system at all points of custody transfer following acquisition? Please explain your answer.

c. Did the Peoples companies change the water vapor standards on the legacy TW Phillips system after acquiring it? If so, please specify the changes and explain why they were made, and provide documents that show the changes.

Answer: a. Water vapor contents under prior owners are not relevant to current gas quality requirements. Current owners do not know if prior owners had different business strategies relative to local production, or what may have been acceptable gas quality to protect facilities from fluids and provide safe reliable service to customers, and prevent service interruptions related to gas quality issues.

b. As it is unrealistic to monitor all points of custody transfer, Peoples conducts random audits at producer meters to monitor and enforce water vapor standards. When offenders are discovered, Peoples aims to resolve the issue with the producer, and if unsuccessful, will ultimately shut in the meter.

c. In 2020, the standard Master Interconnect Measurement Agreement (MIMA) for PG was amended and revised for more consistent and standard gas quality requirements . Standard MIMA is attached.

Peoples' response to PIOGA-II-3

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-II-003

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4 (Palombo) at p.19, lines 11-12. Please explain the basis for this statement and describe all the factors that affect the practical limit.

Answer: Since both producers and customers benefit from local production, Peoples believes it is fair for producers and customers to share in the recovery of all gathering costs. There is no specific formula or methodology to determine the allocation to producers and customers. Factors considered in developing the gathering fees were to be fair and equitable to customers and producers. With price per Dth producers receive for gas purchases projected to remain low, Peoples recognized the importance to set a gathering fee for producers that would maintain the economics for producers and encourage them to continue to produce and deliver local production. Peoples also aimed to balance additional costs to customers with affordable energy costs. Peoples believes the proposed recovery allocation to producers and customers accomplishes these objectives.

PIOGA Exhibit DW-6

Peoples' response to PIOGA-I-8

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-I-008

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4 (Palombo) at p.12, line 20 – p.11, line-3.

a. Please provide the volumes of local gas produced and delivered from conventional wells into the Peoples system, by year and Division (Peoples Division, Peoples Equitable Gas Division, Peoples Natural Gas Division and Peoples Gas Division, as appropriate), for 2017 through 2023.

b. Please specify the volumes in your response to a. above that were delivered into the (i) gathering systems, (ii) distribution systems and (iii) transmission systems of the Divisions.

Answer: a. Conventional production for 2017-2023. The Peoples Natural Division and Peoples Equitable Division are reported as PNGD beginning in 2020, after the base rate case that combined the entities.

	PNGD	PEGD	PGD	Total
2017	20,520,005	6,776,964	11,704,301	39,001,270
2018	20,996,077	6,373,001	10,790,052	38,159,130

Peoples' response to PIOGA-V-2

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-V-002

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' response to PIOGA-III-1.c. Please explain how more consistent and standard gas quality requirements improved the safe and reliable operation of the system.

Answer: Peoples' believes standardizing gas quality is a more effective and efficient way to operate as one utility to meet or exceed tariff gas quality requirements across the system. It also allows for standardizing operating procedures which is more efficient in training and transfer of job skills across the entire system. Standard gas quality requirements can also help prevent claims that some producers may be getting preferential treatment if they are held to less stringent gas quality requirements at their delivery points than other producers. All of these contribute to improving safe and reliable service to customers.

PIOGA St. No. 2

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	Docket No. R-2023-3044549
Office of Consumer Advocate	:	Docket No. C-2024-3045268
Office of Small Business Advocate	:	Docket No. C-2024-3045385
v.	:	
	:	
Peoples Natural Gas Company LLC	:	

DIRECT TESTIMONY
OF
D. MARC JACOBS, Jr.

on behalf of the

PENNSYLVANIA INDEPENDENT
OIL & GAS ASSOCIATION

Dated: March 22, 2024

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. I am D. Marc Jacobs, Jr., Senior Vice President of Penneco Oil Company, Inc. (Penneco) which is a producer member of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. WHAT IS PENNECO?

A. Penneco is a conventional oil and gas operator headquartered in Delmont, Pennsylvania with the majority of its managed assets and infrastructure located in the southwest quadrant of the Commonwealth.

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. I graduated from a midwestern state seminary with a Bachelor of Science Degree in Pastoral Theology in 1984. Immediately following, I joined Penneco in a family-principal leadership position and have been there ever since.

Q. WHAT DO YOU DO AS SENIOR VICE PRESIDENT?

A. I manage the production and infrastructure, regulatory compliance, plugging activities, and our UIC operations along with daily nuances and decision-making typical to a family business.

Q. WHAT IS YOUR EXPERIENCE IN THE OIL AND NATURAL GAS INDUSTRY?

A. In my 40 years in the industry, I have facilitated and managed our drilling and completions, our well site and pipeline construction, gas measurement and compression operations, and assisted in evaluation of prospects and development strategies.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of PIOGA.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY PUC PROCEEDINGS?

A. No.

Q. WHY ARE YOU PROVIDING TESTIMONY IN THIS PROCEEDING?

A. I am providing testimony because Penneco delivers conventional production to the Peoples Natural Gas Company LLC (Peoples) pipeline system, and I have experience with Penneco's operations on the pipelines of all three legacy utilities that Peoples now operates as a fully integrated system – the Peoples Natural Gas Division (PNGD), comprising the legacy Peoples and Equitable Gas utilities, and the Peoples Gas Division (PGD), the former legacy TW Phillips utility Peoples acquired in 2011.

Q. ARE YOU FAMILIAR WITH PEOPLES' TESTIMONY IN THIS MATTER?

A Yes, I am familiar with the testimony of Micheal Huwar, Edward Palombo, Dawn Folks and Ralph Zarumba concerning the issues I am addressing in my testimony.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to support PIOGA's positions and proposals set forth in Dan Weaver's testimony concerning Peoples' tariff unification proposals, and Rate AGS and the Master Interconnect and Measurement Agreement (MIMA) required for service under PNGD's existing Rate AGS and Peoples' proposed Rate AGS for the PGD. Specifically, I explain why the moisture curve water vapor content standards on the legacy Peoples Natural Gas system should be the standards across Peoples' fully integrated pipeline system. I also explain how deliveries of gas into Peoples' pipelines at pressures higher than the producer regulator set points on those pipelines adversely affect the ability of those producers to deliver their gas into the Peoples system. I also explain how Peoples has responded to Penneco's production being shut-in in that situation and others. Finally, I identify certain provisions in the MIMA and explain how the provisions

should be revised to facilitate producers' operations and deliveries of conventional production to add value to the Rate AGS service without jeopardizing Peoples' ability to operate its pipeline system safely and reliably.

Q. WHAT WAS THE GATHERING FEE IMPOSED ON PRODUCERS' DELIVERIES INTO THE LEGACY TW PHILLIPS SYSTEM?

A. TW Phillips never imposed a gathering fee on producers for deliveries into its system.

Q. WHY DIDN'T TW PHILLIPS IMPOSE A GATHERING FEE ON PRODUCERS' DELIVERIES INTO THE LEGACY TW PHILLIPS SYSTEM?

A. I do not know why TW Phillips did not impose a gathering fee historically, but it suggests that TW Phillips may have had a model that profited despite not having a gathering fee. It may also be because TW Phillips didn't have gathering pipelines, as explained in Dan Weaver's testimony.

Q. WHAT ARE THE WATER VAPOR CONTENT STANDARDS ON THE PEOPLES DIVISION PIPELINE SYSTEM?

A. Peoples Division has maintained the water vapor content standards established on the legacy Peoples Natural Gas Company's system starting in the early 2000s by the collaborative Production Enhancement Services (PES) agreements and programs referenced in the testimony of PIOGA witness Dan Weaver. After the acquisition of the legacy Equitable Gas system, the Peoples Equitable Division has maintained that system's water vapor content standard. Peoples acquired the legacy TW Phillips system in 2011 and maintained the historic, relaxed enforcement application of the previous owner until shortly before imposing the legacy Equitable Gas system standards through

an updated version of the MIMA in 2020.[1] The current water vapor contents for the three legacy utility systems are set forth in PIOGA Exhibit DW-l.

Q. WHAT ELSE CAN TELL US ABOUT THE HISTORY OF THE WATER VAPOR CONTENT STANDARDS ON THE PGD SYSTEM?

A. Based on my experience delivering our gas to the TW Phillips system, it was never brought to our attention that any of their pipelines had a water vapor content problem. We never had to dry our gas and I'm not aware of TW Philips's having to enforce its standard by temporary or long-term shut-ins of conventional production. Peoples' discovery responses are consistent with my experience on the TW Phillips system before and after Peoples 2011 acquisition. Peoples did not begin performing producer meter audits until 2019, and after that it seems that the number of warnings and temporary shut-ins were minimal and did not result in significant customer service interruptions or outages, damage to customer appliances and facilities, or threats to the safe and reliable operation of the system.[2] Also, Peoples has installed only one dehy unit on the PGD system, and that was in September 2019.[3]

In addition, the current water vapor content standards on the PGD system are the same as those on the legacy Equitable Gas system, which are the most stringent on the Peoples system.

[1] PIOGA Exhibit DW-4 (Peoples' responses to PIOGA-I-2 and PIOGA-III-1); PIOGA Exhibit DMJ-1 (Peoples' responses to PIOGA-I-7 and PIOGA-III-1-(U) (supplemental) & 1.c. (without attachment)).

[2] PIOGA Exhibit DMJ-2 (Peoples' responses to PIOGA-III-1.c. (with attachment) and 2, and PIOGA-V-1).

[3] PIOGA Exhibit DMJ-2 (Peoples' response to PIOGA-III-2).

Q. WHAT CAN YOU TELL US ABOUT THE HISTORY OF THE WATER VAPOR CONTENT STANDARDS ON THE LEGACY PEOPLES NAURAL GAS COMPANY SYSTEM?

A. Based on my experience, the legacy Peoples Natural Gas Company system has operated without significant operational problems due to water vapor content issues since the current standards – which we refer to as the "moisture curve" – were established in the early 2000s. Unlike the standards on the other two legacy utility systems, these standards consider the system pressure at the receipt points. The lower the system pressure, the higher the vapor allowance. The higher the pressure, the more stringent the vapor limit. Peoples had achieved the perfect nexus of pressure and vapor content to manage efficient tolerances while insuring maximum, economic flow from producers. The water vapor standards required by the legacy Equitable Gas standards are nearly impossible to achieve physically due to desiccant drying properties at low pressure. Beyond the physical limitations, the economics of meeting these standards with the current and projected gas prices is completely unsustainable for conventional producers.

Q. WHAT IS PIOGA'S POSITION CONCERNING PEOPLES' PROPOSAL TO MAINTAIN THE DIFFERENT WATER VAPOR CONTENT STANDARDS ON THE PEOPLES SYSTEM

A. As PIOGA witness Dan Weaver states, we believe the standards on the Equitable Division and the PGD system should be the same, and they should be the current moisture curve standards on the Peoples Division system.

Q. WHY DOES PIOGA BELIEVE THE STANDARDS SHOULD BE THOSE ON THE PEOPLES DIVISION SYSTEM?

A. Our position is based upon the history I provide above and the reasons Peoples relies upon to support its tariff unification, as well as the benefits of consistent and standard gas quality requirements to both Peoples and producers for operations of Peoples' fully

integrated system, as stated in PIOGA Exhibit DW-2. Having one set of water vapor content standards across the Peoples system provides the same type of operational and administrative benefits for producers as for Peoples. In addition, there is a significant cost benefit to producers in having the Peoples Division moisture curve standards, as I explained above. Peoples has attempted to foster an incentive for increased conventional volumes via the PNGD Rate AGS. However, producers may be better enticed to invest in production growth if they didn't have to spend $1/Mcf for drying the gas to the current enforcement specs on the Equitable Division and PGD systems. Having the Peoples Division moisture curve standards would be more meaningful to conventional producers and result in the best opportunity for conventional producers to invest in aging assets to enhance production.

Q. HOW WOULD BEING REQUIRED TO MEET THE WATER VAPOR STANDRDS ON THE PGD SYSTEM AFFECT PENNECO'S OPERATIONS ON THAT SYSTEM?

A. Maintaining the requisite vapor levels at the former Equitable receipt points has always been a challenge due to the limits of desiccant chemistries and effectiveness at low pressure, but most recently, since about the time of the Peoples acquisition, desiccant prices have sky-rocketed turning any remaining profit margin upside down. Conventional operators are in desperate need of a lifeline and the previously mentioned "moisture curve" water vapor scale applied to all Peoples systems may be just the relief needed for viability.

Peoples audited two of our single well systems – one well, one receipt point – each producing 2 mcf/d and shut us off for a vapor level violation. We installed small desiccant vessels on each at a cost of $1,000 and flow was restored after about a month. Penneco has 29 CO meters on the PGD system (legacy TW Phillips receipt points) with

an approximate daily volume over 400 mcf. If we are forced to achieve the vapor levels represented in the MIMA on all of our PGD system connection points, the installation and maintenance costs will cause us to seriously re-evaluate the viability and status of assets dependent on those receipt points.

Q. WHAT IS A PRODUCER REGULATOR?

A. A producer regulator is a devise designed to maintain the downstream receipt point pressure to the prescribed system specs. As the producer receipt point pressure creeps toward the regulator set point, the flow through the regulator becomes restricted or shut off.

Q. WHO DETERMINES THE PRESSURE AT WHICH PRODUCER REGULATORS ARE SET?

A. The system owner/operator – Peoples in this case.

Q. WHAT HAPPENS TO DELIVERIES OF CONVENTIONAL PRODUCTION WHEN PEOPLES ALLOWS GAS TO FLOW ON PIPELINES WITH PRODUCER REGULATORS AT PRESSURES HIGHER THAN THE PRODUCER REGULATOR SET POINTS AT THE RECEIPT POINTS?

A. If the conventional producers' regulators are set properly, the gas flow at the receipt point stops.

Q. WHAT IS PENNECO'S EXPERIENCE WITH THIS SITUATION?

Penneco has a single well system that was purchased from TW Phillips years ago in Plum Borough on the Peoples Division system. The well and Peoples' meter are in a back yard of a home in a development of homes. Initially, when the set point was around 30 psi, the well was capable of flowing approximately 20 Mcf/d. We have been through multiple system downgrades over the years, with the set point being reduced from 30 psi to 8 psi, the most recent of which was 8 psi allowing no flow between May 25, 2022 and December 19, 2022, because the Peoples line pressure was 10 psi. We did flow 8 mcf

briefly between December 19, 2022 and December 27, 2022. The higher pressure gas is flowing from somewhere on this line, and it's not from us.

Were it not for our catalytic heater burning 3 mcf/month, we would be in jeopardy of an Active Status violation with PA DEP for this well. The greater issue is the pressure build-up on the old well positioned in a housing development. We only need a pound or two to feed, but the pipeline pressure is higher than our set point. Each year since the single digit line pressure set points were enforced, we have been able to flow just enough to keep active status with the PA DEP. As of today, we have flowed no volume in 2023 putting us in compliance jeopardy. We only need a set point increase of a pound for a limited basis for the sake of preserving our active status. But a few pounds would allow us to flow and reduce the pressure on the old well if Peoples were able to give us flow-preference over transmission or pipeline supplemental volumes.

Q. WHAT IS AN ACTIVE STATUS VIOLATION WITH PA DEP?

A. DEP treats failure to report production from a well for one year as an abandonment of the well.

Q. WHAT ARE THE CONSEQUENCES OF AN ACTIVE STATUS VIOLATION WITH PA DEP?

A. DEP requires abandoned wells to be plugged. Also, leases have "held by production" provisions that ensure production and threaten termination if there is no production for a certain period of time. Abandoning a well for lack of production can, if the well is on land leased by the producer, result in the loss of the lease if that is the only well on the leased premises. Fortunately, that is not the case with this well because we have another well on this leased land that is feeding into a different receipt point.

Q. HOW MUCH WOULD IT COST PENNECO TO PLUG THIS WELL?

We've had to start preparations for plugging this well, which we believe could cost between $80,000 - $100,00 because of the need to build a road and adapting the grade around the well to accommodate a rig, flare off the existing reservoir volumes prior to the plugging process, and implementing the requisite plugging design for the old, cemented packer well-construction typical of its vintage. It's difficult to know how much it will cost to plug conventional wells like this because the cost depends upon many factors, such as open-hole caving after shooting off and pulling the tubing above the packer – in which case we would be required to drill or wash out the open-hole to the tubing stub prior to cementing.

Q. HOW DO THESE ACTIVITIES AND COSTS COMPARE TO PLUGGING WELLS GENERALLY?

A. These activities and costs are typical for conventional wells of this vintage, i.e., around the 1960s. For newer, cased wells, the cost can be much less due to later construction design and materials but, with any plug job, the actual cost is difficult to predict because you don't know what you will run into until you start the work, and sometimes even while the work is being done.

Q. WHAT IS PENNECO'S EXPERIENCE WITH OTHER FLOW RESTRICTIONS?

A. Penneco experiences seasonal restrictions at various receipt points due to transitional supply and demand dynamics in the Spring and Fall. Typically, the inconsistent system pressures only last a few weeks to a month during each transition period.

Q. HOW DOES PENNECO BECOME AWARE OF THESE RESTRICTIONS?

A. There is no notice prior to the restriction. We simply assume the reason based on the timing.

Q. WHAT IS PENNECO'S EXPERINECE OPERATING UNDER THE PNGD MIMA?

A. Penneco has been operating under the PNGD MIMA since July 2020. This experience has revealed some issues that create uncertainty for producers' operations. Other MIMA provisions, if enforced across the board could have significant adverse effects on producers' operations. Others could provide cost savings for producers without jeopardizing Peoples' ability to operate its pipeline system safely and reliably.

Q. WHAT MIMA PROVISIONS CREATE UNCERTAINTY FOR PRODUCERS?

A. The MIMA provisions I reference are the same in the existing PNGD MIMA and the MIMA proposed for the PGD system. There are many MIMA provisions that have no restrictions on the time periods during which Peoples may restrict the flow or discontinue the talking of producers' gas. These provisions are identified in my Exhibit 3.[4] The general provision is under Article VI, INTERCONNECTION OPERATIONS, 6.01 Gathering Obligations: "As set forth elsewhere in this Agreement, it is expressly understood that Peoples may restrict the flow or discontinue the taking of Gas temporarily."

Q. HOW CAN THIS PROVISION BE CHANGED TO REMOVE THE UNCERTAINTY YOU'VE IDENTIFIED?

A. PIOGA proposes that a reasonable time restriction be inserted, which I believe is nine (9) months, as follows: "As set forth elsewhere in this Agreement, it is expressly understood that Peoples may restrict the flow or discontinue the taking of Gas temporarily, <u>not to exceed nine (9) consecutive months</u>." This would remove the jeopardy of an Active

[4] PIOGA Exhibit DMJ-3 (Peoples response to PIOGA-IV-2).

Status violation with PA DEP and the loss of leases for failing to comply with the "hold by production" provisions.

Q. WHAT MIMA PROVISIONS COULD HAVE SIGNIFICANT ADVERSE EFFECTS ON PRODUCERS' OPERATIONS?

A. Article VI, INTERCONNECTION OPERATIONS, 6.04 "Peoples Shut-in of Interconnect" provides as follows:

> Peoples retains the unilateral right to immediately shut-in or cause Producer to shut-in any Interconnect that, in Peoples' sole judgment, using commercially reasonable discretion, threatens the integrity and safe operation of Peoples' System. Additionally, if Peoples is purchasing the Gas from a particular Receipt Point, upon thirty (30) days advance written notice, Peoples may shut-in or cause Producer to shut-in that Receipt Point for economic reasons.

Peoples acknowledges that the last sentence of this provision allows Peoples to lower regulator set points and indefinitely stop the flow of producer gas at a particular Interconnect or Receipt Point.[5]

Article VI, INTERCONNECTION OPERATIONS, 6.05(a) "Producer Shut-in and Discontinuance" provides as follows:

> Producer shall provide thirty (30) days advance notice to Peoples of its intention to shut-in or discontinue delivery of Gas at any Receipt Point, after which notice the Parties shall engage in a good-faith discussion to determine if Peoples consent must be conditioned or withheld. If the shut-in or discontinuance is caused by an emergency event, Producer shall notify Peoples as quickly as possible, but in no event more than 24 hours after the event.

Article VI, INTERCONNECTION OPERATIONS, 6.05(c) provides as follows:

> If a shut-in occurs, Peoples shall have the right to remove its facilities at the Interconnect Point and terminate the Exhibit governing that Receipt Point.

Article X, MEASUREMENT, 10.17 "Low Volumes for Receipt Points" provides:

[5] PIOGA Exhibit DMJ-4 (Peoples response to PIOGA-IV-3).

(a) In the event that Producer does not deliver to Peoples an average of three (3) Dekatherms of Gas per Day at each Receipt Point during any ninety (90) consecutive day period, then Peoples may permit the low volume delivery to continue or notify Producer of the low volume situation to initiate a discussion of the operational and commercial circumstances of the Receipt Point, including line pressures impacting the Receipt Point.

Q. HOW CAN THESE PROVISIONS BE CHANGED TO MITIGATE POTENTIAL SIGNIFICANT ADVERSE EFFECTS ON PRODUCERS' OPERATIONS?

A. PIOGA suggests that the following changes can mitigate potential significant adverse effects on producers. Concerning 6.04, we suggest adding the following provision at the end:

> <u>As soon as possible after the threat to the integrity and safe operation of the system or the economic reasons no longer exist, if Peoples will use best efforts to limit flows of transmission or pipeline supplemental volumes to give conventional production flow-preference.</u>

Concerning 6.05(a), a compressor may be down for a rebuild or a producer system out of service for maintenance for an unanticipated reason other than an emergency event. PIOGA suggests that this provision include the word "unplanned" to account for this situation so that producers are not in jeopardy if violating this provision, as follows: "If the shut-in or discontinuance is caused by an emergency <u>or other unplanned</u> event, ..."

Concerning 6.05(c), we suggest adding the following at the end: "<u>only after Peoples has communicated cause and the producer given good-faith opportunity to forecast a remedy</u>."

Concerning 10.17, PIOGA acknowledges that Peoples reduced the 10 Dekatherms per day average through negotiations with PIOGA as a result of the settlement of the 2019 base rate case in 2020 to the current 3 Dekatherms per day average. However, many producers have conventional wells that produce less than 3 Dekatherms per day but are

still productive. PIOGAS suggests it is reasonable to reduce the 3 Dekatherms per day average to 1 to allow these wells to continue flowing so these producers could avoid the jeopardy of Active Status violations with PA DEP and the loss of leases for failing to comply with the "hold by production" provisions, as I explained above.

Q. WHAT MIMA PROVISION COULD BE CHANGED TO PROVIDE COST SAVINGS FOR PRODUCERS WITHOUT JEOPARDIZING PEOPLES' ABILITY TO OPERATE ITS PIPELINE SYSTEM SAFELY AND RELIABLY?

A. Appendix B, 1.07 "Annual Measurement Equipment Testing" provides, as pertinent to this question (emphasis added):

> All measurement equipment shall be inspected and tested by a Peoples Approved Vendor once each calendar year not to exceed fifteen (15) months from the previous inspections at Producer's expense. . . The annual testing shall include, but is not limited to the following equipment: Check Valve, Regulator(s) Lock-up test, Electronic corrector (EGM) calibration, meter calibration and spot sample Gas analysis (frequency according to section 2.01 of this Appendix B) at the Interconnect. **Inspection reports shall be submitted within 30 days after the yearly inspection date.** In the event the Producer fails to submit the yearly inspection reports, Peoples shall have the right to periodically inspect Producer's records to determine if measuring equipment has been inspected and tested, as required by the Master Agreement. If Producer cannot provide documentation, within five (5) days of Peoples' request, **Producer is required to immediately shut-in the Interconnect at which measurement and testing records are deficient, for a period of one week, or until the Producer can provide proof that the measuring equipment has been inspected and tested, and is working properly, whichever is longer.** If Producer cannot provide documentation that its measuring equipment has been inspected and tested on additional occasions, **Peoples retains the right to take further action at its discretion, including the right to require the shut-in of the applicable Interconnect for additional time periods**. If Producer repeatedly violates this provision, **Peoples has the right to permanently discontinue accepting Gas from wells that Producer has dedicated to said Interconnect Facility**.

Peoples has informed me that Penneco need not submit these reports but that they should be available upon request. I assume other producers have also been so informed. This

makes sense because this a lot of paperwork for producers to submit and for Peoples to review and retain. PIOGA suggests that this provision be changed o reflect Peoples' actual practice, as we understand it, as follows:

> Inspection reports shall be submitted ~~within 30 days after the yearly inspection date~~ upon request. In the event the Producer fails to submit the yearly inspection reports when requested, . .

This change will preserve all of Peoples' enforcement authority under this provision while relieving producers and Peoples from unnecessary activities and expense.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties' testimony that affect PIOGA's interests.

VERIFICATION

I, D. Marc Jacobs, Jr. hereby state that:

The foregoing testimony, marked as PIOGA St. No. 2, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above.

The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter.

I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

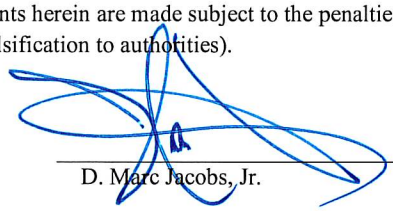
The foregoing testimony, marked as PIOGA St. No. 2, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above.

The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter.

I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).



D. Marc Jacobs, Jr.

Dated: March 22, 2024

PIOGA Exhibit DMJ-1

Peoples' responses to PIOGA-I-7 and PIOGA-III-1-(U) (supplemental) & 1.c. (without attachment)

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-I-007

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Gas Division (PGD) existing Rate GS- Gathering Service.

a. What are the water vapor standards on the PGD system?

b. Is Peoples proposing any changes to these standards in this proceeding? Please explain your answer.

Answer: a. ALLOWABLE WATER VAPOR LEVEL (#/MMSCF) VS. LOCATION

1. Producer meters connected to pipelines on the suction side of a Peoples compressor will be subject to 40#/mmscf water vapor standard.

2. All other Producer meters will be subject to 20#/mmscf water vapor standard.

Peoples reserves the right to require more stringent water vapor standards in limited and specific situations where Peoples has determined through water vapor testing that the water vapor levels at identified production meter points are affecting customer service or creating operational issues.

b. Not at this time

Submit Date: 2/20/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-III-001

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' responses to PIOGA-I-7 and OCA-IV-1.

a. What were the water vapor content standards on the TW Philips system immediately before its acquisition by Peoples Natural Gas Company, PNG Companies LLC, or Steel River Infrastructure Fund North America LP , as appropriate, in May 2011? Please provide the documents that show the standards in effect at that time.

b. Did the Peoples' companies enforce the water vapor standards of the legacy TW Phillips system at all points of custody transfer following acquisition? Please explain your answer.

c. Did the Peoples companies change the water vapor standards on the legacy TW Phillips system after acquiring it? If so, please specify the changes and explain why they were made, and provide documents that show the changes.

Answer: a. Water vapor contents under prior owners are not relevant to current gas quality requirements. Current owners do not know if prior owners had different business strategies relative to local production, or what may have been acceptable gas quality to protect facilities from fluids and provide safe reliable service to customers, and prevent service interruptions related to gas quality issues.

b. As it is unrealistic to monitor all points of custody transfer, Peoples conducts random audits at producer meters to monitor and enforce water vapor standards. When offenders are discovered, Peoples aims to resolve the issue with the producer, and if unsuccessful, will ultimately shut in the meter.

c. In 2020, the standard Master Interconnect Measurement Agreement (MIMA) for PG was amended and revised for more consistent and standard gas quality requirements . Standard MIMA is attached.

Submit Date: 3/1/2024

PIOGA Exhibit DMJ-2

Peoples' responses to PIOGA-III-1.c. (with attachment) and 2, and PIOGA-V-1)

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-III-001

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' responses to PIOGA-I-7 and OCA-IV-1.

a. What were the water vapor content standards on the TW Philips system immediately before its acquisition by Peoples Natural Gas Company, PNG Companies LLC, or Steel River Infrastructure Fund North America LP , as appropriate, in May 2011? Please provide the documents that show the standards in effect at that time.

Submit Date: 3/1/2024

MASTER INTERCONNECT AND MEASUREMENT AGREEMENT

THIS MASTER INTERCONNECT AND MEASUREMENT AGREEMENT is entered into this ____ day of _____ 2023, by and between **Peoples Natural Gas Company LLC**, a Pennsylvania limited liability company, with an office located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212 (hereinafter referred to as "Peoples"), and [PRODUCER**]**, a _____[state] _____[type of company], with an office at [ADDRESS] (hereinafter referred to as "Producer"). As used in this Agreement, Peoples and Producer are also referred to individually as a "Party" and collectively as the "Parties."

WHEREAS, Peoples owns and operates certain Gas facilities and pipelines located in the Commonwealth of Pennsylvania (the "Peoples' System");

WHEREAS, Producer has available certain supplies of Gas which it desires to have delivered onto Peoples' System;

WHEREAS, this Agreement shall supersede, in its entirety, and terminate without cause, any previously executed Agreement(s) between the Parties for the transport and/or purchase of Gas for the Receipt Point(s) identified herein, including, but not limited to, prior Transportation Agreements, Gas Purchase Agreements, Production Enhancement Agreements, Field Purchase Agreements, Measurement Operating Agreements and Interconnection Agreements; however agreements related to blending and compression requirements, such as Gathering Interconnect Compression Agreements and Blending Service and Operation Agreements, shall not be terminated and shall continue pursuant to their terms and conditions.

NOW THEREFORE, in consideration of the promises and covenants contained herein, Peoples and Producer hereby agree as follows:

ARTICLE I
PURPOSE AND PROCEDURES

1.01 **Master Agreement**. This Master Agreement establishes the general terms and conditions under which Producer will deliver Gas onto Peoples' System at specified Receipt Point(s) through Interconnection Facility(ies), and thereafter the Gas shall either be transported through Peoples' System or sold directly to Peoples for whatever use deemed necessary and appropriate by Peoples.

1.02 **Exhibits**. The terms and conditions of each particular transaction whereby Producer will deliver Gas onto Peoples' System at specified Receipt Point(s) shall be included in individual Exhibits (hereinafter "Exhibit" or "Exhibits"). Information contained in the Exhibits shall include, but not be limited to:

(a) The designation for the transportation or sale of Gas for specific Receipt Point(s);

(b) The meter number and location at the Receipt Point;

(c) The time period (hereinafter "Service Term") during which the Gas is to be sold to Peoples or delivered onto Peoples' System;

(d) Applicable prices, rates and associated fees; however, the Parties agree that the Construction and Installation Fees, and any other operation, installation, or maintenance

types fees addressed in the Master Agreement, shall not be included on the Exhibit and shall instead be identified in separate written format(s), such as an invoice;

1.03 **Appendices and Exhibits as Part of Agreement**. Appendices to the Master Agreement establish additional terms and conditions required as a part of the Master Agreement. The entire agreement between the Parties shall include those provisions contained in the Master Agreement, the Appendices, and any effective Exhibits. The Appendices and each duly executed Exhibit are hereby incorporated into and made a part of this Master Agreement. The provisions of each respective Exhibit shall apply only to the Producer Sales Volume(s) subject to such Exhibit; however, the provisions of this Master Agreement and Appendices shall apply to all volumes in all Exhibits.

ARTICLE II
DEFINITIONS

2.01 **Definitions.** For the purposes of this Master Agreement, the following terms, when capitalized herein, shall have the meanings set forth below:

(a) "**Authorizations**" means any and all approvals, permits, licenses, franchises, or other authorizations required by any federal or state governmental authority which are necessary for the performance of a Party's obligations hereunder.

(b) "**Btu**" means a British thermal unit.

(c) "**Commission"** means the Pennsylvania Public Utility Commission that regulates the intrastate sales and transportation of Gas.

(d) **"Construction and Installation Fee"** means the fees charged to Producer for the actual labor, tools, materials, equipment and overhead expenses for the development, design and construction activities relative to completing the New Facilities contemplated by this Master Agreement.

(e) **"Contract Price"** means, in the instance in which Gas is sold to Peoples by Producer, the price paid for Gas delivered and taken as set forth in any then-effective Exhibit.

(f) **"Day"** means a period of twenty-four (24) consecutive hours, coextensive with a "day" as defined by the North American Energy Standards Board ("NAESB").

(g) "**Dekatherm**" means one million (1,000,000) Btus or one MMBtu.

(h) "**Existing Facility(ies)**" means Producer owned, operated or managed equipment and facilities, including, but not limited to, any measurement equipment transferred from Peoples to Producer pursuant to this Agreement, installed upstream of the Interconnect prior to October 29, 2019 that involve, at a minimum: (i) measurement equipment of whatever type used to determine the Producer Sales Volumes; (ii) any gas quality device of whatever type used to determine the quality of the gas being delivered to Receipt Point(s); (iii) any over-pressure control system of whatever type being used to protect Peoples' System's maximum pressure limitations; and (iv) any and all other equipment and devices installed from Producer's pipeline riser coming out of the ground from Producer's pipeline system through the measurement equipment and to the Interconnect. This term includes all of the above Producer owned, operated or managed equipment and facility(ies) (i) sold or assigned to an affiliated or legally associated company of that producer or (ii)

required to be moved to another Peoples' pipeline as a result of the abandonment of a Peoples pipeline pursuant to Sections 6.07, 10.17.

(i) **"FERC"** means the Federal Energy Regulatory Commission or any successor federal agency that regulates, or has the authority to regulate, the transportation of Gas in interstate commerce by pipeline.

(j) **"Gas**" means a mixture of hydrocarbon and non-hydrocarbon gases that satisfies the requirements of Article IX of this Master Agreement.

(k) **"Gathering Rate"** means for any Gas delivered by Producer onto Peoples' System at a Receipt Point which is subject to this Master Agreement, Producer shall pay to Peoples a gathering fee as set forth in an Exhibit hereto.

(l) "**Interconnect**" means the point of connection between the Producer's Existing Facility(ies) or New Facility(ies) and Peoples' System, comprised of the insulator, pipeline extension, riser, and the isolation valves installed downstream of the insulator, all owned by Peoples.

(m) "**Interconnect Facility(ies)**" means the Producer-owned Existing Facility(ies) and New Facility(ies) connected to Peoples' System at the Interconnect in accordance with the Master Agreement as amended from time-to-time.

(n) "**Mcf**" means one thousand (1,000) cubic feet of Gas.

(o) "**MMBtu**" means one million (1,000,000) Btu's or one Dekatherm.

(p) "**Modification to an Existing Facility**" means any non-emergency replacement, upgrade or downgrade on Existing Facility(ies).

(q) "**New Facility(ies)**" means Producer owned, operated or managed equipment and facilities (i) installed upstream of the Interconnect after October 29, 2019 through which Producer will deliver Gas onto Peoples' System at specified Receipt Point(s) and (ii) approved, designed, constructed and operated as set forth in herein, including any Existing Facility(ies) (i) sold or assigned to a non-affiliated party of Producer or a party with whom Peoples does not have a current master interconnection and measurement agreement with Peoples.

(r) "**Peoples Approved Vendor**" means any vendor Peoples has approved to provide the services required by the Master Agreement to be performed on behalf of the Producer by an independent contractor to comply with the Master Agreement; a list of approved vendors is posted on Peoples website, which list may change from time-to-time.

(s) RESERVED

(t) "**Producer Sales Volume(s)**" means the volume(s) of Gas measured at and credited to the Producer's Receipt Point(s) for the Production Period as determined and reported to Peoples by the Producer Chart Process, or as measured in accordance with Section 10.11.

(u) **"Production Period"** means a span of approximately thirty (30) days, which may or may not conform to the calendar month, during which time Producer's Gas will be measured

for delivery and purchase payment purposes. Production Periods shall be identified by the name of the month in which the period ends.

(v) "**Production Statement**" means the statement generated each calendar month by Peoples that details the Production Period and, for each Receipt Point, Producer Sales Volume(s) in Mcfs and MMBtus.

(w) **"Receipt Point(s)"** means the point(s) of receipt, or meter(s), of Producer's supplied Gas as set forth in the Exhibit specific to said point of receipt.

(x) **"Retainage Percentage"** means, for any Gas delivered by Producer onto Peoples' System at a Receipt Point which is subject to this Master Agreement, Peoples shall withhold a retainage percentage as set forth in an Exhibit hereto.

ARTICLE III
APPLICATION FOR NEW FACILITIES AND MODIFICATION TO EXISTING FACILITIES

3.01 **Application/Notification.** Producer shall submit to Peoples in writing the application for connecting a New Facility, and a notification request for any Modification to an Existing Facility.

3.02 **Application to Connect New Facility.** Within the application for connection of a New Facility, the Producer shall provide accurate information to Peoples concerning the following: (i) the location of the proposed connection utilizing the latitude and longitude coordinates on a USGS map; (ii) well plats, if applicable; (iii) the proposed maximum allowable operating pressure of the Producer's gathering line that will feed into the Receipt Point; (iv) the desired date for completion of the connection; (v) the Producer's estimated maximum, minimum and average amount of Gas to be delivered through the connection on a daily basis; (vi) the source of Gas; (vii) the Producer's estimated maximum, minimum and average receipt pressure through the connection; and (viii) any other information required by Peoples for the specific connection, including, but not limited to, Gas quality and odor intensity test results.

3.03 **Consideration of Application to Connect New Facility.** Peoples shall respond to the feasibility of Peoples' System's accepting delivery of Gas through the proposed New Facility connection and whether the application is approved, rejected or requires additional information or consideration. If the application is approved, Producer shall advance the application according to Article IV. If the application is rejected, Peoples shall explain the reason(s) for the rejection and may suggest alternatives that may, in Peoples' commercially reasonable discretion, be acceptable to Peoples, and Producer shall respond to the alternatives. If the application is acceptable but requires additional information or consideration, Peoples shall specify the additional information that, in Peoples' commercially reasonable discretion, may be required or the concerns requiring additional consideration for approval, and Producer shall provide the additional information or address the concerns requiring additional consideration. Thereafter Peoples shall approve the application if (1) its concerns have been satisfied and (2) no material changes in System conditions have occurred which would render the application no longer acceptable to Peoples.

3.04 **Modification to Existing Facilities.** Producer shall provide notice of Modification to an Existing Facility which shall include the current Peoples' meter station name, PO # being utilized to identify the existing Interconnect, and the details of the Modification. Provided the Modification is in accordance with the conditions in this Agreement and such Modification does not cause operational, safety or service related concerns, as determined by Peoples using commercially reasonable discretion, Peoples shall approve the Modification by providing written notice to Producer.

ARTICLE IV
INTERCONNECT DESIGN, INSTALLATION, ACTIVATION AND MAINTENANCE

4.01 **New Facility Design Specifications.** After approval of an application a for a New Facility connection, Producer shall submit to Peoples, for approval, the complete design, specifications and construction plans for the proposed New Facility. Producer agrees to make those changes to such design and construction plans as Peoples, in its commercially reasonable discretion, believes are necessary for the safe and reliable delivery of Gas into the Peoples' System.. If the plans are approved, Peoples' response shall provide the Producer with the construction date when Peoples will endeavor to make the tap onto Peoples' System. If the plans require modification, Peoples shall specify the modifications that Peoples, in its commercially reasonable discretion, believes are necessary for the safe and reliable delivery of Gas into the Peoples' System. Producer shall resubmit the plans that address the modifications that Peoples requests and Peoples shall respond whether the resubmitted plans are approved or denied.

4.02 **Equipment Requirements for New Facility.**

(a) The New Facility shall be comprised of equipment that includes: (i) Gas measurement equipment; (ii) two forms of overpressure protection; (iii) certain interconnect piping facilities including a check valve and an insulated/welded tie-in connection; and (iv) such other equipment as may be required by Peoples at the New Facility. Peoples shall specify the type of equipment to be provided by Producer and Producer shall not install any non-Peoples approved equipment at the New Facility. The minimum engineering and technical specifications for the New Facility are further detailed in Appendix A.

(b) Unless waived in writing by Peoples, all costs associated with the New Facility shall be the Producer's responsibility and any such costs paid by Peoples shall be reimbursed by Producer through the Construction and Installation Fee. If Producer does not remit payment for the Construction and Installation Fee within thirty (30) days after receiving Peoples' invoice for same, then Peoples may, at its sole option, shut-in the Interconnect until payment is made and may require all future payments for other operation, installation, or maintenance related work to be made in advance.

4.03 **New Facility Construction.** Scheduling of installation of the New Facility must be coordinated with Peoples. No New Facility construction shall commence until Producer has satisfied all of its prerequisite obligations under this Master Agreement and Peoples has notified Producer in writing that construction may commence. Producer and Peoples shall coordinate the construction of their respective facilities (New Facility and Interconnect).

4.04 **Activation of New Facility and Interconnect.** Producer shall notify Peoples in writing that Producer is ready to activate the New Facility and Interconnect. Activation of the New Facility and Interconnect shall be contingent upon readiness of Peoples, Peoples' acceptance of Gas analysis results as submitted by Producer, and completion of construction as specified and agreed upon by and between Peoples and Producer. Peoples shall have the right to conduct a separate Gas analysis for verification purposes. Peoples and Producer shall coordinate the installation, testing, and physical final tie-in to Peoples' System: Peoples shall perform the physical tie-in and Producer shall set the meter and commence the flow of Gas. Peoples shall develop all operations associated with purging the meter set and piping into service and, after physical tie-in, coordinate and oversee all such operations. After completion of all such operations, the New Facility and Interconnect shall be activated.

4.05 **Commencement of Operation of New Facility and Interconnect**. Producer shall notify Peoples, in writing, when the New Facility and Interconnect is complete, tested, and ready for operation.

Unless otherwise indicated, deliveries of Gas through the New Facility and Interconnect may commence as soon after activation as all Authorizations have been granted, the requisite documents have been submitted, and Producer has satisfied the terms and conditions of this Master Agreement.

4.06 **Debris and Obstructions.** At all times, Producer's New Facilities and Existing Facilities shall be cleared of all debris and obstructions.

4.07 **Maintenance.** Producer is responsible for, and shall assume the initial costs of landscaping, sign posting, painting, and final, post-construction cleanup at and around the New Facility.

4.08 **Identification.** A meter set identification sign shall be posted at each New Facility, and if not already done so, at each Existing Facility location. The sign shall, at a minimum, list the name of the Producer and the telephone number (including area code) where the Producer, or its operator, can be reached at all times (i.e. emergency contact number). Producer shall be responsible to replace and/or update the notification information as it changes, from time-to-time.

4.09 **As-built Drawings.** If requested by Peoples, Producer shall develop an "as-built" location drawing of the New Facility. The "as-built" drawing shall include all equipment from the inlet side of the Gas measurement equipment to the tie-in with Peoples' System. This detailed drawing shall include centerline measurements, valve, regulator, meter identification, pipe size(s) and type(s), and telemetering details. Producer shall provide a copy of this drawing (AutoCAD format) to Peoples, upon request. Upon request, Producer shall provide an "as-built" location drawing of any Existing Facility, when Peoples determines that such drawing is needed, in its commercially reasonable discretion, to rectify operational, safety or service related concerns.

4.10 **Telemetry**.

(a) For a New Facility electronic Gas measurement and communications equipment installed as part of the New Facility shall include equipment for monitoring, recording, and transferring data deemed essential by Peoples. Producer shall acquire, install and pay the on-going operating expenses for the electronic Gas measurement and communications equipment to provide Peoples, at a minimum, real-time information related to pressure, temperature, Gas flow and Gas quality (i.e., chromatograph) for any Receipt Point with a daily volume above 1,000 mcf/day. For any Receipt Point with a daily volume below 1,000 mcf/day, Peoples will not require telemetry, but will require a corrector unless the Receipt has an existing chart recorder that is operating in good working condition.

(b) For an Existing Facility, electronic Gas measurement and communications equipment shall be required when Peoples provides at least sixty (60) days advance notice to Producer detailing required modifications to the existing telemetry equipment, if any, which are required, as determined by Peoples' commercially reasonable discretion, to rectify operational, safety or service related concerns. In which case, the telemetry equipment shall be modified to include equipment for monitoring, recording, and transferring data deemed essential by Peoples. Producer shall acquire, install and pay the on-going operating expenses for the electronic Gas measurement and communications equipment to provide Peoples, at a minimum, real-time information related to pressure, temperature, Gas flow and Gas quality (examples of such equipment shall include, but not be limited to a chromatograph or in-line moisture analyzer).

ARTICLE V
FACILITIES OWNERSHIP

5.01 **Peoples' Facilities.** Peoples shall own, and Peoples or its designee shall design, install, operate, and maintain, all facilities and equipment on the downstream side of the isolation valve which connects the Peoples' System to the Producer's New Facility or Existing Facility as more specifically described in the Appendices and on the Typical Gas Purchase Meter Set drawing, a copy of which is maintained on the Peoples' producer services section of its website.

5.02 **Producer's Facilities.** Producer shall own, and Producer or its designee shall design, install, operate, and maintain all facilities and equipment upstream of the Interconnect. The location and positioning of the New Facility or Existing Facility shall be in accord with Peoples' standard design specifications as more specifically described in the Appendices and on the Typical Gas Purchase Meter Set drawing, a copy of which is maintained on the Peoples' producer services section of its website.

ARTICLE VI
INTERCONNECTION OPERATIONS

6.01 **Gathering Obligations.** Peoples will receive Gas from Producer at the Receipt Point, provided that if any person or entity besides Producer is flowing Gas through the Interconnect, all such persons or entities utilizing the Interconnect have entered into valid agreements with Peoples. Peoples shall receive Gas from the Receipt Point and permit that Gas to flow against the existing pressure in Peoples' facilities. Peoples shall not be obligated to lower existing line pressure by compression or otherwise to accommodate receipts from the point of interconnection. As set forth elsewhere in this Agreement, it is expressly understood that Peoples may restrict the flow or discontinue the taking of Gas temporarily. Peoples shall not be obligated to add any facilities or expand the capacity of its pipeline system in any manner in order to provide the services hereunder. Nothing in this Master Agreement or any applicable Exhibit shall limit Peoples' right to interrupt service or to take other action on a non-discriminatory basis as may be required to alleviate conditions which threaten the integrity of its system.

6.02 **Environmental Responsibility.** Each Party represents that no hazardous substance as that term is defined in the Federal Comprehensive Environmental Response Compensation Liability Act (CERCLA), petroleum or petroleum products, "asbestos material" as that term is defined in 40 CFR 61.41 (1987), polychlorinated biphenyls (PCBs), or "solid waste" as that term is defined in the Federal Resource Conservation Recovery Act (RCRA), will be leaked, spilled, deposited or otherwise released by either Party on the other Party's property. In the event that any of said above referenced materials are discovered on said property, each Party shall immediately notify the other Party of the discovery and existence of said materials. In the event of either Party's breach of the representations contained in this section, the full responsibility for the handling, remediation, treatment, storage or disposal of any such hazardous substance, petroleum or petroleum product, asbestos material, PCBs or solid waste discovered on said property, including the handling of such materials in compliance with all environmental laws including federal, state and local laws, rules and regulations, shall remain with such Party and such Party shall indemnify the other Party for any loss, injury, theft, damage to persons or property, or fines, penalties or compliance order issued by any governmental agency relating to pollution or protection of the environment including without limitation, laws and regulations relating to emissions, discharges, releases or threatened releases of chemicals, pollutants, contaminants, waste petroleum, toxic substances and hazardous substances occurring on said property. This section shall survive the termination of this Master Agreement.

6.03 **Facility Improvements.** Peoples retains the unilateral right to change the operations of its System and/or upgrade its System; provided, however, that such changes must be consistent with good utility practices and not violate local, state or Federal requirements. Such operational changes may require the adjustment and/or addition of equipment to an Existing Facility or a New Facility by the Producer in order to maintain delivery of Gas volumes; the cost of such adjustment and/or addition of equipment to will be borne entirely by the Producer.

6.04 **Peoples Shut-in of Interconnect.** Peoples retains the unilateral right to immediately shut-in or cause Producer to shut-in any Interconnect that, in Peoples' sole judgment, using commercially reasonable discretion, threatens the integrity and safe operation of Peoples' System. Additionally, if Peoples is purchasing the Gas from a particular Receipt Point, upon thirty (30) days advance written notice, Peoples may shut-in or cause Producer to shut-in that Receipt Point for economic reasons.

6.05 **Producer Shut-in and Discontinuance.**

(a) Producer shall not shut-in or discontinue delivery of Gas at any Receipt Point without first obtaining Peoples' consent, which consent will not be unreasonably withheld, but may be conditioned in the event the shut-in or discontinuance of the Gas delivery may, as determined by Peoples using commercially reasonable discretion, result in an operational, safety or service related concern on Peoples' System.

(b) Producer shall provide thirty (30) days advance notice to Peoples of its intention to shut-in or discontinue delivery of Gas at any Receipt Point, after which notice the Parties shall engage in a good-faith discussion to determine if Peoples consent must be conditioned or withheld. If the shut-in or discontinuance is caused by an emergency event, Producer shall notify Peoples as quickly as possible, but in no event more than 24 hours after the event.

(c) If a shut-in occurs, Peoples shall have the right to remove its facilities at the Interconnect Point and terminate the Exhibit governing that Receipt Point.

6.06 **Notice of Interruption of Gas Delivery at Receipt Point.**

(a) Peoples shall be notified of any and all repairs, changes, or other actions that may result in any interruption or discontinuance of Gas delivery at a Receipt Point as set forth in this paragraph. Unless caused by an emergency event, Producer shall advise Peoples in writing at least five (5) business days before taking the Receipt Point out of service for repairs or for any other reason that is anticipated to last more than seven calendar (7) days. When an emergency event occurs at the Receipt Point Producer shall notify Peoples as quickly as possible, but in no event more than 24 hours after the event. After Producer has completed all repairs to the Receipt Point or is otherwise prepared to resume delivery of Gas at the Receipt Point, Producer shall immediately reconnect the Receipt Point to Peoples' System and resume service, subject to ten (10) days' advance notification to Peoples, provided that the notice may be less than ten (10) days, however, Peoples may require the full ten (10) days to arrange for the reinstated flow of Gas through the Receipt Point.

6.07 **System Abandonment.** In the event Peoples should ever abandon, retire or cease to operate, in whole or in part, facilities used to purchase and/or transport Gas on a system-wide basis, or throughout a geographic portion of its system, (as opposed to one-off facility abandonments that are addressed in subsection 10.17(c)), Peoples shall advise the Producer(s) of the abandonment, retirement or cessation of operation as soon as reasonably practicable. Peoples may, in its commercially reasonable discretion, either terminate this Master Agreement, or terminate an Exhibit specific to the Receipt Point(s) impacted, upon at least ninety (90) days' written notice to Producer. During such ninety (90) day period, Peoples and Producer shall continue to engage in good-faith discussions, if so requested by Producer, to reasonably assist Producer in locating alternative delivery points for the Gas flowing through the impacted Receipt Point(s).

ARTICLE VII
OPERATIONAL COSTS AND PAYMENTS TO BE BORNE BY PRODUCER

7.01 **Gas Quality and Monitoring Costs.** Producer agrees to install, operate and keep in efficient operating condition, at Producer's own expense, the equipment necessary to insure that the gas delivered from each well hereunder meets the gas quality and other operational standards and requirements contained in this Master Agreement, Producer also agrees to install, own, operate and keep in efficient operating condition, equipment necessary, including, but not limited to, Type OSE Slam-Shut Valves if required by Peoples, to avoid excessive pressure in Peoples' and/or Producer's line. Producer shall be solely responsible for all costs and charges associated with monitoring, ensuring and maintaining the quality of Gas delivered into Peoples' System to meet the requirements in Article IX and all costs associated with quality remediation for Gas that does not meet those requirements. Peoples shall have access to Producer's Interconnect Facility and shall have the right, but not the obligation, to operate such Facility in the event Peoples determines, using commercially reasonable discretion, that its operation is required to prevent or alleviate operational, safety or service related concerns on Peoples' System; in such event, Peoples shall provide notice to the Producer of such operation as soon as practical and in-advance, when reasonable. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's access or operation of Producer's Interconnect Facility. Peoples shall replace, fix and repair, at its cost, any portion of Producer's Interconnect Facility that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of Peoples' access or operation of the Facility.

7.02 **Producer Interconnect Facilities Costs.** Producer shall be solely responsible for all costs and charges associated with monitoring, ensuring and maintaining the safe and reliable operation of pipeline, measurement, compression, regulation, dehydration, and any other appurtenant equipment associated with the Interconnect Facilities, which are upstream of the Interconnect. Peoples reserves the right to refuse receipts and/or deliveries through the Interconnect if Peoples, in its sole judgment, using commercially reasonable discretion, deems the operation of these facilities to threaten the safety or reliability of the Peoples' System.

7.03 **Royalty Payments**. Producer shall be solely responsible for all royalty, overriding royalty, and working interest payments attributable to Gas delivered to Peoples under this Master Agreement. In no event shall Peoples be obligated to make any royalty, overriding royalty, or working interest payments for Gas purchased under this Master Agreement.

ARTICLE VIII
ADDITIONAL WELLS

8.01 **Completion of Wells**. No well shall be added to any existing Receipt Point(s) without first obtaining the prior written consent of Peoples. All requests for new well additions shall be accompanied by a well plat, completion report, estimated flow rate and Gas quality sample, at the meter, and/or at the new well location, to evaluate the feasibility if adding the Gas deliveries from the new well to the existing Receipt Point(s). Peoples reserves the right, at its sole discretion, to request other information to inform its evaluation concerning the new well.

8.02 **Introduction of Well Gas**. At the time of introduction of Producer's well Gas into Peoples' System, a Peoples' representative shall operate the valves at the meter. During this operation, Producer and Peoples shall provide experienced personnel at the meter site.

8.03 **Producer's Facilities**. Producer shall promptly furnish the pipe, and shall construct and place in operation a suitable gathering pipeline to connect those wells currently or subsequently included under this Master Agreement to Peoples' System at the Receipt Point(s). Producer's meter site shall be cleared of all debris and obstructions before it is connected at the Receipt Point(s). Producer shall install all drips complete with automatic shut off and other devices necessary to separate fluids from the Gas in

Producer's gathering pipelines. Producer shall operate such drips and other devices so that all Gas delivered under this Master Agreement will meet at all times Peoples' gas quality specifications set forth in Article IX or Peoples' transporter's gas quality specifications. Peoples shall have access to such drips and other devices at the meter site and shall have the right, but not the obligation, to operate such drips and other devices in the event Peoples determines, using commercially reasonable discretion, that its operation is required to prevent or alleviate an operational, safety or service related concerns on the Peoples system; in such event, Peoples shall provide notice to the Producer of such operation as soon as practical.

8.04 **New Well Costs**. Producer shall be solely responsible for all costs associated with drilling, operating, and connecting new wells including, but not be limited to, hook-up fees; usage fees; all costs associated with the construction of gathering lines, tie-in lines, drip lines, measurement, compression, regulation and connection facilities; and all costs attributable to rentals, except as otherwise provided in this Master Agreement.

8.05 **General**. The wells located upstream of Receipt Point(s) shall remain continuously connected to Producer's gathering lines for production deliveries, except to the extent that disconnection is required for well repairs. Producer's Gas which is governed by an Exhibit A for the purchase of Gas cannot be diverted to other buyers without the express written consent of the Peoples, which consent shall not be unreasonably withheld, but may be conditioned in the event the deviation of gas may, as determined by Peoples using commercially reasonable discretion, result in an operational, safety or service related concern on the Peoples system. Producer shall provide ninety (90) days advance notice to Peoples of its intention to divert gas from upstream wells to other buyers; after which notice the Parties shall engage in a good-faith discussion to determine if Peoples consent must be conditioned or withheld. Producer shall operate such wells in a reasonable and prudent manner at all times and shall keep such wells in good condition in order to ensure the gas delivered onto the Peoples system meets the requirements and standards set forth in this Agreement, including any Appendixes, Exhibits, Addendums, Schedules and Amendments.

8.06 **Timing of Well Repairs**. To the extent possible, Producer shall make all necessary well repairs between May 1 and October 31 of the calendar year.

8.07 **Notice of Well Repairs**. Unless caused by an emergency event Producer shall advise Peoples in writing at least five (5) business days before taking any well located upstream of Receipt Point(s) out of production for repairs which are anticipated to last for more than seven calendar (7) days. When an emergency event occurs which impacts the availability of the Receipt Point, Producer shall notify Peoples as quickly as possible, but in no event more than 24 hours after the event. After Producer has completed all repairs, Producer shall immediately reconnect the well and resume production, subject to authorization for turn-in by Peoples' field personnel.

ARTICLE IX
PRESSURE, GAS QUALITY AND HEATING VALUE

9.01 **Regulation.** Peoples may require regulation and shall require over-pressure protection at the Receipt Point(s) under this Master Agreement. Such regulation shall maintain delivery pressures suitable to pressures in Peoples' System. Peoples shall specify and/or approve the type of regulators to be used and shall specify pressure ranges, and operating settings. All costs associated with such equipment, including installation costs, shall be the Producer's responsibility and any such costs paid by Peoples shall be reimbursed by Producer through the Construction and Installation Fee.

9.02 **Compression.** Producer shall not use any mechanical means or accessory equipment to pump or compress Gas to aid its delivery into Peoples' System without first obtaining and executing the Peoples' standard Compression Agreement.

9.03 **Pressure in Peoples' System.**

(a) Peoples makes no representations concerning the pressure that will be maintained in its pipeline system from time-to-time, or any other factors, which may affect the quantity of Gas that Producer may be able to deliver to Peoples. Subject to Section 6.03 Peoples has the right to upgrade, when necessary, pipeline operating pressures with no obligation to Producer other than providing notification of such matters.

(b) Although regulators are part of Producers' Interconnect Facilities and therefore owned by Producers, Peoples shall operate these regulators as provided by this Master Agreement. Accordingly, Peoples shall indemnify and hold harmless Producers for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's access or operation of the regulators when setting the maximum allowable pressure set points within the Interconnect Facilities. Peoples shall replace, fix and repair, at its cost, any portion of Producers' Interconnect Facilities that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of operating the regulators within the Facilities.

9.04 **Gas Quality.** All Gas delivered through an Interconnect into Peoples' System shall at all times meet or exceed the Gas quality specifications set forth in Appendix B hereto, as well as any quality and heat content requirements established by the operator of the downstream pipeline system(s) on which the Gas is ultimately transported.

9.05 **Siloxane.** All Gas delivered through an Interconnect into Peoples' System that includes Gas from landfill well(s) or gathering lines fed by landfill gas sources shall at all times meet, or exceed, the Gas quality siloxane specifications set forth in Appendix B hereto, as well as any siloxane specifications established by any operator of the downstream pipeline system(s) on which the Gas is ultimately transported. Before Peoples permits any flow of any amount of Gas into the Peoples' system, Producer shall provide Peoples with a certified siloxane analysis from a Peoples-approved agency denoting that the Gas proposed to be delivered into Peoples' System meets and/or exceeds those requirements. Peoples shall require monthly siloxane analysis tests performed by the Producer and timely submitted to Peoples. Peoples shall have the right to witness siloxane sampling and witness custody of that sample from source to destination. In the event Producer does not provide siloxane analysis, Peoples reserves the right to shut-in the Interconnect until said analysis is provided.

In the event Producer Gas quality, including, but limited to, siloxane causes damage to Peoples System, equipment, downstream pipeline, downstream equipment, downstream customer pipeline and/or downstream customer equipment, the Producer will be responsible for all costs to remedy the damage upon documentation proving Producer has caused the damage.

9.06 **Temperature.** Gas delivered through an Interconnect into Peoples' System shall not exceed 100° F. Gas having a temperature greater than 100° F may be delivered into Peoples' System only upon prior written approval by Peoples.

9.07 **Gas Taken and Co-mingled.** Peoples shall accept Gas taken and measured at the Receipt Point(s) in accordance with this Master Agreement. Such Gas shall be taken in its natural state, except as otherwise provided in this Master Agreement, subject to any modification thereof required by this Master

Agreement, at the pressure of the Gas flowing from Producer's pipelines into Peoples' System, against the varying pressures from time to time maintained therein.

ARTICLE X
MEASUREMENT

10.01 **Measurement Equipment.**

(a) Gas delivered to or received from Peoples' System through the Interconnect shall be measured at a site satisfactory to Peoples using measurement equipment designated by Peoples and owned by Producer. The requirements in this Section 10.01 shall not apply to any Existing Facility, unless the meter is nonfunctioning or inaccurate which requires Producer to immediately self-shut-in until the meter is replaced or Peoples provides at least sixty (60) days advance notice to Producer detailing modifications to the existing Interconnection Facilities which are required, in Peoples' commercially reasonable discretion, to rectify accuracy, operational, safety or service related concerns.

(b) The measurement facilities will be required to use electronic gas measurement (EGM), and the Producer is required to forward monthly EGM item trail(s) and audit trail(s) to one of Peoples' approved integration companies (which list of approved companies shall be maintained on the Peoples website) by the 28th of the month. The integration company will forward corrected volume(s) to Peoples once a month for processing of credit/payment. Producer is required to use the same integration company for both volume collection and meter testing.

(c) The measurement equipment for New Facilities shall be designed, installed, operated, maintained and owned by: (i.) Producer; or (ii.) Producer's designee as set forth in the Appendices. Producer is responsible for maintaining the accuracy of the measurement equipment and shall do so according to the Annual Measurement Equipment Testing requirement in Appendix B, Section 1.07. If Peoples determines, using commercially reasonable discretion, the measurement equipment is not accurate, Peoples may shut in the Interconnect until Producer corrects the deficiency. If repeated defects occur, Peoples reserves the right to shut in the Interconnect indefinitely. At any time after the termination of an Exhibit, Peoples shall have the right to remove its Interconnect facilities associated with the Receipt Point(s) identified in the terminated Exhibit. Producer shall be solely responsible for and shall bear the full costs of delivering Gas to the Receipt Point(s). Producer shall not modify the measurement equipment without the prior written consent of Peoples.

10.02 **Pipeline Safety.** Producer agrees to operate, maintain, test, and repair the meter set as a prudent operator in accordance with 49CFR DOT Part 192, PAPUC Chapter 59, and all other applicable state regulations and requirements, applicable industry codes and standards at Producer's expense.

10.03 **Check Measurement.** Producer may install, maintain and operate, at its sole cost and expense, check measuring equipment; provided, however, that such equipment shall be installed in a manner that will not interfere with the operation of the measuring equipment required by this Master Agreement.

10.04 **Orifice Meters.** Orifice meters installed in such measuring stations shall be constructed and operated in accordance with American National Standard Institute ("ANSI") standards, American Petroleum Institute ("API") 2530, American Gas Association ("AGA") AGA Report No. 3, Orifice Metering of Natural Gas and Other Related Hydrocarbon Fluids, Second Edition, dated September 1985, and any subsequent modifications and amendments thereto.

10.05 **Positive Displacement Meters.** Positive Displacement Meters installed at the measurement site shall be constructed and operated in accordance with provisions of AGA Measurement Committee Report No. 6 (AGA Report No. 6) dated January 1971 and any subsequent amendment or revisions thereto.

10.06 **Turbine Meters.** Turbine Meters installed at the measurement site shall be constructed and operated in accordance with the provisions of AGA Measurement Committee Report No. 7 (AGA Report No. 7), First Revision, dated November 1984, and any subsequent modifications and amendments thereto.

10.07 **Ultrasonic Meters.** Ultrasonic Meters installed at the measurement site shall be constructed and operated in accordance with the provisions of AGA Measurement Committee Report No. 9 (AGA Report No. 9), dated June 1998 and any subsequent modifications and amendments thereto.

10.08 **Electronics.** When and where electronic equipment and flow computers are installed at the measurement site, the Gas may have its volume, mass and/or energy content determined and computed in accordance with the applicable industry standards including, but not limited to, API 21.1, AGA Report Nos. 3, 5, 6, and 7 and any subsequent modifications and amendments thereto.

10.09 **Testing and Calibration**:

(a) Peoples shall have the right, at any time, to verify the accuracy of measurement equipment beyond the Producer Annual Measurement Equipment Testing requirements in Appendix B, Section 1.04, on all Receipt Points used in the measurement of Gas hereunder and shall do so at its expense. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's access or operation of the measurement equipment when verifying the accuracy of the measurement equipment. Peoples shall replace, fix and repair, at its cost, any portion of Producer's Interconnect Facilities that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of verifying the accuracy of the measurement equipment within the Facilities. Producer may request a special test be performed as described in Section 10.10 below.

(b) If during any test of the measuring equipment, an adjustment or calibration error is found which results in an incremental adjustment to the calculated hourly flow rate through each meter run in excess of two percent (2%) of the correct flow rate (whether positive or negative and using the correct flow rate as the percent error equation denominator), then any previous recording of such equipment shall be corrected to zero error in computing deliveries for any period during which the error existed (and which is either known definitely or agreed to by both Parties) and the total flow for the period predetermined in accordance with the provisions of Section 10.11 below. If the period of error cannot be determined or agreed upon between the Parties, such correction shall be made over a period extending over the last one-half (1/2) of the time elapsed since the date of the latest test, not exceeding a correction period of six (6) months.

(c) If, during any test of the measuring equipment, an adjustment or calibration error is found which results in an incremental adjustment to the calculated hourly flow rate which does not exceed two percent (2%) of the adjusted flow rate (as described in part (b) of this Section), all prior recording shall be considered to be accurate for quantity determination purposes.

(d) All equipment shall, in any case, be adjusted at the time of the test to record correctly.

10.10 **Special Test.** In the event Producer desires a special test (a test not scheduled by Peoples under the provisions of subsection 10.9(a) above) of any measuring equipment, seventy-two (72) hours advance notice in writing shall be given to Peoples, and both Parties shall cooperate to secure a prompt test of the accuracy of such equipment. If the measuring equipment tested is found to fall under the provisions of Paragraph 10.9(b) above or if an inspection of the primary measurement equipment indicates no problems, Peoples shall have the right to bill Producer for the cost of such special test including any labor, and other costs pertaining to such special test and Producer shall pay such costs.

10.11 **Measuring Adjustment.** If, for any reason, any measurement equipment is: (i) out of adjustment; (ii) out of service; or (iii) out of repair, and the total calculated hourly flow rate through each meter run is found to be in error by an amount of the magnitude described in subsection 10.9(b) above, the Producer Sales Volume(s) may be determined by Peoples in accordance with the first of the following methods which is, in Peoples' sole opinion, feasible:

(a) by using the registration of any mutually agreeable check metering facility, if installed and accurately registering (subject to testing as described in subsection 10.9(a) above;

(b) where parallel multiple meter runs exist, by calculation using the registration of such parallel meter runs; provided that they are measuring Gas from upstream and downstream headers in common with the faulty metering equipment, are not controlled by separate regulators, and are accurately registering;

(c) by correcting the error by re-reading of the official charts, or by straightforward application of a correction factor to the quantities recorded for the period (if the net percentage of error is ascertainable by calibration, tests or mathematical calculation); or

(d) by estimating the quantity, based upon deliveries made during periods of similar conditions when the meter was registering accurately.

Peoples will not be required to use check measurement, parallel measurement, re-read charts or estimates for more than three (3) consecutive billing periods. If Producer fails to fix the measurement equipment, Peoples may, at its discretion, upon advance notice, cause the shut in of the Interconnect. Failure to shut in will result in no credit for Gas delivered through a Receipt Points that is not recording for more than three (3) consecutive billing periods.

The estimated readings or deliveries so determined shall be used in determining the Producer Sales Volumes delivered for any known or agreed upon applicable period. In case the period is not known or agreed upon, such estimated deliveries shall be used in determining the quantities of Gas delivered hereunder during the latter half of the period from the date of the immediately preceding test to the date the measurement equipment has been adjusted to record accurately. The recordings of the measurement equipment during the first half of said period shall be considered accurate in computing Producer Sales Volumes.

10.12 **Measurement Corrections.** If an error is discovered in the Producer Sales Volumes, such error shall be adjusted within thirty (30) days of the determination thereof; provided, however, that any claim for adjustment shall be made within twenty-four (24) months of the Production Period in which the claimed error occurred. Such time limits shall not apply in the case of a deliberate act of omission or misrepresentation, or mutual mistake of fact.

10.13 **Termination.** If in Peoples' reasonable judgment, the Producer has tampered with the measurement equipment so as to misrepresent the actual volume of Gas delivered through the Receipt Point,

Peoples has the right to immediately shut-in the Interconnect Facility for an indefinite period of time. The Interconnect will remain shut-in until Peoples and Producer reach an agreement as to the most accurate Producer Sales Volumes during the period in question and the Producer provides restitution to the satisfaction of Peoples. If Peoples determines, using commercially reasonable discretion, that measurement equipment has been tampered with by Producer, Peoples reserves the right to remove its facilities at the Interconnect and, in its commercially reasonable discretion, terminate this Master Agreement and any other agreement(s) between Producer and Peoples, or any other natural gas company owned, or operated, by Peoples or its parent company, including, but not limited to, Peoples Gas KY LLC, Peoples Gas WV LLC, and Delta Natural Gas Company, Inc.

10.14 **Data and Records Retention.** Peoples and Producer shall retain and preserve for a period of at least two (2) years all measurement data, original test data, charts, and other similar records, in such Party's possession and shall provide requested documentation to the other Party upon thirty (30) days' written notice.

10.15 **Volume and Quality Determination.** The measurement of the quantity and quality of all Gas received and delivered hereunder shall be conducted in accordance with the following:

(a) Unit of Volume. The unit of volumetric measurement shall be a standard cubic foot of Gas at a pressure base of fourteen and seventy-three hundredths (14.73) pounds per square inch absolute, a temperature base of sixty degrees (60°) Fahrenheit (five hundred twenty degrees (520°) absolute) and without adjustments for water vapor. The unit of volume for measurement shall be one (1) cubic foot of Gas. To determine the Gross Heating Value of the unit of volume, such measured volumes will be converted to Mcf by multiplying by 1,000 and then, at the Company's discretion, multiplied by either (i) the Company's system average MMBtu/Mcf factor if the Receipt Point heat value has not been determined or (ii) the Receipt Point's Gross Heating Value per thousand cubic foot determined by a Gas sample analysis or Gas chromatograph to determine the MMBtus received, delivered and credited as the Producer Sales Volume at the Receipt Point hereunder. The Parties agree that nothing in this Master Agreement shall preclude either Party from proposing a modification to the unit of volume components defined herein in a future purchase Gas cost proceeding at the Commission.

(b) Orifice Meter Volume Computations. Computations of Gas Volumes from measurement data shall be made in accordance with ANSI/API2530 (AGA Report No. 3), Orifice Metering of Natural Gas and Other Related Hydrocarbon Fluids, Second Edition, dated September 1985, and any subsequent amendments or revisions.

(c) Positive Displacement Meter Volume Computation. Computation of Gas Volumes from data shall be in accordance with the AGA Measurement Committee Report No. 6 (AGA Report 6), dated January 1971, and any subsequent amendments or revisions.

(d) Turbine Meter Volume Computations. Computations of Gas Volumes from data shall be in accordance with AGA Measurement Committee Report No. 7 (AGA Report 7), First Revisions, dated November 1984, and any subsequent amendments or revisions.

(e) Ultrasonic Meter Volume Computations. Computations of Gas Volumes from data shall be in accordance with AGA Measurement Committee Report No. 9 (AGA Report 9), dated June 1998, and any subsequent amendments or revisions.

(f) Electronic Devices and Flow Computers Volume Computations. Computation of Gas Volumes from data or devices shall be in accordance with API 21.1, AGA Measurement Committee Report Nos. 3, 5, 6, and 7 and any subsequent amendments or revisions.

(g) Assumed Atmospheric Pressure. In connection with the use of any type of measuring device, an atmospheric pressure of fourteen and four tenths (14.4) pounds per square inch shall be assumed, with no allowance for variation in atmospheric pressure. The flowing Gas temperature may be recorded at Peoples' discretion. In the absence of a flowing Gas temperature recorder, a temperature of sixty degrees (60°) Fahrenheit will be assumed.

(h) Gross Heating Value. At least yearly, the Gross Heating Value of the Gas stream at each Receipt Point hereunder shall be determined by calculating the Gross Heating Value from an in-line chromatograph or a Gas analysis of a spot or continuous Gas sample except that for Receipt Point(s) with daily volumes below 1,000 mcf/day, the Gross Heating Value determination shall be required every five (5) years after the initial determination. The spot or continuous sample shall be taken at a suitable point to be representative of the Gas being analyzed.

(i) Other Tests. Other tests to determine water content, sulfur, and other impurities in the Gas shall be conducted by Peoples as necessary and shall be conducted in accordance with standard industry testing procedures.

(j) New Test Methods. If at any time during the term hereof, a new method or technique is developed with respect to Gas measurement, such new method or technique may be substituted for the method set forth in this Article when such methods or techniques are in accordance with the currently accepted standards of the American Gas Association, if mutually agreed upon by the Parties.

10.16 **Right of Inspections.** Peoples shall have the right to inspect equipment installed on the Interconnect Facility, measurement charts and other measurement or testing data at all times during business hours; but the reading, calibration and adjustment of such equipment and changing of charts shall be done by Producer, or its designee, unless agreed to otherwise by the Parties.

10.17 **Low Volumes for Receipt Points.**

(a) In the event that Producer does not deliver to Peoples an average of three (3) Dekatherms of Gas per Day at each Receipt Point during any ninety (90) consecutive day period, then Peoples may permit the low volume delivery to continue or notify Producer of the low volume situation to initiate a discussion of the operational and commercial circumstances of the Receipt Point, including line pressures impacting the Receipt Point. The Parties shall engage in a good-faith discussion to determine if there is a mutually agreeable basis for the Receipt Point to remain on Peoples' System. If a resolution is not possible, the Receipt Point may be terminated, in which case Peoples may remove its Interconnect facilities, as they relate to such Receipt Point(s), by giving Producer notice in writing sixty (60) days prior to the effective date of termination.

(b) In the event that the amount of Gas, or the quality of Gas, passing through any Receipt Point(s) is less than the measurement equipment minimum design requirements for accurate measurement, Peoples shall have the right to shut-in service from Producer until: (i) Producer has provided adequate supply to meet such design requirements and has proven to Peoples that such volumes exist; and/or (ii) the measurement equipment and Interconnect Facilities

have been redesigned and installed for the effective and efficient measurement of the revised volumes within the accuracy allowed and required by Peoples; and/or (iii) Producer has proposed, and Peoples has accepted in its sole discretion, an alternate method to accurately measure the volumes.

(c) Peoples may in its sole discretion, for operational, safety or unaccounted for Gas mitigation reasons, abandon pipelines connected to any Receipt Point. Prior to the abandonment, Peoples shall provide sixty (60) days advance notice to the Producer of its intention to abandon the facilities and, during such sixty (60) day period, shall engage in a good-faith discussion with Producer to determine if there is a mutually agreeable arrangement by which the Receipt Point(s) impacted by the abandonment may remain on the system. If a resolution during said period is not possible, Peoples may proceed with the pipeline abandonment and Interconnect termination. The Producer in its sole discretion may reconnect to Peoples at the nearest pipeline not affected by the abandonment.

ARTICLE XI
TERM

11.01 **Term.** This Term of this Master Agreement shall become effective upon its execution by both Parties and shall continue in full force and effect for a period of five (5) years thereafter ("Master Agreement Term"), unless earlier terminated as provided herein. At the end of the Master Agreement Term, the Master Agreement shall automatically renew on a month-to-month basis until terminated by either party upon thirty (30) days' prior written notice to the other party.

The term of service for each specific Receipt Point shall be as set forth in Exhibit A (the "Service Term"). To the extent that the Service Term for any specific Interconnection extends beyond the Master Agreement Term, then the Master Agreement shall remain in full force and effect for the specific Interconnection until the expiration or termination of the applicable Service Term.

The obligations of (i) Producer to indemnify Peoples and (ii) Peoples to indemnify Producer pursuant hereto shall survive the termination or cancellation of this Master Agreement and the Exhibits. Termination of this Master Agreement will result in the termination of all Exhibits and the disconnection of all Receipt Points governed by Exhibit A's. Costs associated with disconnection will be the responsibility of the Producer.

Upon termination of this Master Agreement, Peoples shall have the right to remove all its facilities from the Interconnect of the Receipt Point(s) identified in the Exhibit As hereto.

ARTICLE XII
BILLING AND PAYMENT

12.01 **Quantities Deemed Conclusive.** The Production Statement of the Producer Sales Volume(s) shall be deemed conclusive unless Producer forwards an objection to Peoples in writing within sixty (60) days after the receipt of the Statement.

12.02 **Withholding Payments** In the event of any adverse claim to or against the proceeds of this Master Agreement or any Gas delivered under this Master Agreement, or any part thereof, or against the proceeds of any other Gas supply and/or delivery contract that Peoples, any other natural gas company owned, or operated, by Peoples or its parent company, including, but not limited to, Peoples Gas KY LLC, Peoples Gas WV LLC, and Delta Natural Gas Company, Inc., has with Producer, is made by any person, Peoples may, upon written notice to Producer, refuse to receive Gas under this Master Agreement, as the

case may be, until the dispute is settled by agreement between Producer and such adverse claimant or by a final decree of a court of competent jurisdiction.

In the event the Producer fails to comply with any of the covenants or terms herein contained, Peoples may immediately withhold, without liability for interest, all payments due to Producer under the terms of this Master Agreement.

12.03 **Adjustments**. In the event that Peoples mistakenly overpays or underpays Producer for Gas purchased under this Master Agreement, and such overpayment or underpayment is the result of a mistake of law or fact, miscalculation, coercion, duress, fraud, governmental or regulatory constraint, then Producer or Peoples, as the case may be, shall promptly, upon demand by the other Party, make appropriate refund or adjustment in such overpayments or underpayments, without liability for the payment of any interest by either Party; provided, however, that the obligation of either Party to make restitution under this Master Agreement shall be limited to mistaken payments made within the period commencing four (4) years prior to the date on which demand for refund or adjustment is made. In the event of Producer's refusal or inability to refund any overpayments, Peoples may withhold payment for Gas purchased under this Master Agreement or any other contract between Peoples, any other natural gas company owned, or operated, by Peoples or its parent company, including, but not limited to, Peoples Gas KY LLC, Peoples Gas WV LLC, and Delta Natural Gas Company, Inc., and Producer in an amount equivalent to the overpayment, without liability for the payment of any interest on the amount withheld. Nothing in this Master Agreement shall be construed as a waiver or relinquishment by Peoples or Producer of its rights to recover any such overpayments or underpayments.

12.04 **Late Payments.** Charges billed to Producer, for which payment has not been received by Peoples in full by the due date indicated on the invoice, will be assessed a late-payment charge of two percent (2%) per month on the unpaid balance. If Producer's failure to pay any undisputed amount continues for fifteen (15) days after the due date, then Peoples, in addition to any other remedy it may have, may (a) shut in the Receipt Point until Peoples has received payment in full; (b) deduct the unpaid amount from any payments accruing to Producer under any agreement between the Producer and Peoples; (c) take Gas in kind from Producer in satisfaction of obligations; or, (d) terminate the Exhibit associated with the Receipt Point and/or terminate the entire Master Agreement, upon ten (10) days written notice to Producer. Peoples reserves its rights to exercise any and all remedies at law appropriate to collect any amounts due hereunder, including interest, not timely paid by Producer.

ARTICLE XIII
FAILURE TO PERFORM

13.01 **Suspension.** If Producer fails to comply with any of the covenants contained in this Master Agreement, or any other Gas supply and/or delivery agreement between Producer and any other natural gas company owned, or operated, by Peoples or its parent company, including, but not limited to, Peoples Gas KY LLC, Peoples Gas WV LLC, and Delta Natural Gas Company, Inc., Peoples may refuse to allow Gas to flow through the Interconnect until, in Peoples' sole opinion, Producer is fully complying with all of the terms and conditions of this Master Agreement. Peoples, in its sole judgment, shall have the right to shut-in the Interconnect immediately if equipment is not operating properly, an overpressure condition exists, design limitations are exceeded, or safe operating conditions are compromised. Furthermore, Peoples has the right to keep the Interconnect shut-in until the Producer makes the necessary provisions to rectify the situation. If the abnormal conditions repeatedly arise, Peoples has the right to shut-in the Interconnect indefinitely and/or to terminate this Master Agreement.

Producer shall reimburse Peoples for any damages caused by Producer failing to comply with any of the covenants contained in this Master Agreement, including payments made by Peoples to other affected

customers in settlement of claims arising out of such service if Producer was notified that Peoples was invoking indemnification under Section 13.03 and Producer was given the opportunity to defend against the claim prior to such settlement agreement. To the extent any damages required to be paid hereunder are liquidated, the Parties acknowledge that the damages are difficult or impossible to determine, otherwise obtaining an adequate remedy is inconvenient and the liquidated damages constitute a reasonable approximation of the harm or loss.

If litigation results from any dispute between Producer and Peoples, Peoples may pay any money withheld under this Master Agreement to a court of competent jurisdiction without any further liability, or may interplead all claimants, including Producer. The prevailing party in a litigated dispute between Peoples and Producer shall have the right to collect from the other party its reasonable costs and necessary disbursements and attorneys' fees incurred in enforcing this Master Agreement.

13.02 **Damages.** IN NO EVENT WILL EITHER PARTY BE LIABLE OR RESPONSIBLE FOR, EITHER UNDER THIS ARTICLE XIII, UNDER ANY THEORY OF LIABILITY OR UNDER ANY OTHER TERM OR PROVISION OF THIS MASTER AGREEMENT, FOR ANY LOSS OF PROFITS, LOSS OF BUSINESS, INTERRUPTION OF BUSINESS OR FOR INDIRECT, INCIDENTAL, SPECIAL, PUNITIVE OR CONSEQUENTIAL DAMAGES OF ANY KIND, EVEN IF A PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

13.03 **Indemnity.**

(a) Producer agrees to indemnify, hold harmless and provide a defense for Peoples, its officers, directors, affiliates, agents, employees and contractors against any third party claims for any liability, loss or damage whatsoever (including, without limitation, claims for royalties, taxes, fees or other charges) occurring in connection with or relating in any way to: (i) breach of this Master Agreement by Producer; (ii) the negligence, willful misconduct or other tortious act(s) or omission(s) by Producer, its officers, directors, affiliates, agents, employees or contractors; (iii) the Gas prior to its delivery to Peoples at the Interconnect Facility; and/or (iv) the Gas to the extent the claim, liability, or damage arises as a result of the quality of the Gas delivered by Producer or other condition of the Gas. Such indemnification shall include, but not be limited to, all costs and reasonable attorneys' fees, whether or not such liability, loss or damage results from any demand, claim, action, or cause of action, by any person, association or entity, public or private, that is not a party to this Master Agreement.

(b) Peoples agrees to indemnify, hold harmless and provide a defense for Producer, its officers, directors, affiliates, agents, employees and contractors against any third party claims for any liability, loss or damage whatsoever occurring in connection with or relating in any way to: (i) the negligence, willful misconduct or other tortious act(s) or omission(s) by Peoples' when accessing, operating, adjusting, changing, or repairing any Producer-owned facilities or equipment in accordance with Peoples' rights to do so granted by this Master Agreement and (ii) the negligence, willful misconduct or other tortious act(s) or omission(s) by Peoples' when accessing, operating, adjusting, changing, or repairing any of the Producer facilities not pursuant to Peoples' rights to do so granted by this Master Agreement. Such indemnification shall include, but not be limited to, all costs and reasonable attorneys' fees, whether or not such liability, loss or damage results from any demand, claim, action, or cause of action, by any person, association or entity, public or private, that is not a party to this Master Agreement.

13.04 **Shut-In Remedy.** In any instance set forth in this Master Agreement in which Peoples has the right to shut-in an Interconnect, Peoples shall further have the right to remove its facilities associated

with the Interconnect and terminate this Master Agreement if whatever action resulted in the shut-in has not been remedied in the amount of time set forth in this Master Agreement, or if no exact time is set, within a reasonable timeframe as determined by Peoples.

ARTICLE XIV
REGULATORY APPROVALS

14.01 **Initial Regulatory Filing Requirements.** Both Peoples and Producer are responsible for identifying and obtaining any governmental and/or regulatory approvals that may be required for construction and operation of the facilities contemplated by this Master Agreement.

14.02 **Changes in Regulation Results in Material Adverse Effect.** If any other governmental agency, whether state or federal, takes any action or issues any determination that directly or indirectly results in a material adverse change to any provision of this Master Agreement, then the materially adversely affected Party (hereinafter "Affected Party") may either:

(a) continue to fulfill its obligations under this Master Agreement as altered by the change in regulation; or

(b) seek to renegotiate the affected terms of this Master Agreement by giving notice to the other Party within thirty (30) days of the material adverse change. If the Affected Party elects to renegotiate the terms of this Master Agreement, both Parties shall be obligated to renegotiate in good faith.

ARTICLE XV
GENERAL REPRESENTATIONS AND WARRANTIES

15.01 **Producer's General Representations and Warranties.** Producer makes the following general representations and warranties:

(a) Producer is duly organized, validly existing, and in good standing under the laws of the state in which it is organized and/or has full power and authority to execute and deliver this Master Agreement and to perform its obligations hereunder;

(b) Producer holds all necessary corporate authorizations and by the execution and delivery of this Master Agreement will not violate its Articles of Incorporation, Limited Liability Company Agreement or other applicable governing agreement or any applicable laws or regulations;

(c) There is no litigation, investigation, administrative proceeding or other action existing, pending, or threatened that would materially adversely affect the ability of Producer to fulfill its obligations under this Master Agreement;

(d) Producer's signatories possess authority to execute this Master Agreement such that a legal, valid, and binding obligation enforceable against Producer is created; and

(e) Producer shall be deemed to be in control and possession of the Gas hereunder until it shall have been delivered to Peoples at the Receipt Point. Producer assumes the full cost and expense, as well as full and complete liability and responsibility, for collecting, gathering, and transporting the Gas to the Receipt Point hereunder at the quality hereinafter specified.

15.02 **Peoples' General Representations and Warranties.** Peoples makes the following general representations and warranties:

(a) Peoples is duly organized, validly existing, and in good standing under the laws of the state in which it is organized and/or has full power and authority to execute and deliver this Master and to perform its obligations hereunder;

(b) Peoples holds all necessary corporate authorizations and by the execution and delivery of this Master Agreement will not violate its Articles of Incorporation, Limited Liability Company Agreement or other applicable governing agreement or any applicable laws or regulations;

(c) There is no litigation, investigation, administrative proceeding or other action existing, pending, or threatened that would materially adversely affect the ability of Peoples to fulfill its obligations under this Master Agreement; and

(d) Peoples' signatories possess authority to execute this Master Agreement such that a legal, valid, and binding obligation enforceable against Producer is created.

ARTICLE XVI
ASSIGNMENT

16.01 **Assignment of this Master Agreement.** This Master Agreement shall be binding upon and inure to the benefit of the successors, assigns, personal representatives, and heirs of the respective Parties hereto, and the covenants, conditions, rights and obligations of this Master Agreement shall run for the full term of this Master Agreement. No assignment of this Master Agreement, in whole or in part, will be made without the prior written consent of the non-assigning party, which consent will not be unreasonably withheld or delayed; provided, either party may transfer its interest to any parent or affiliate by assignment, merger or otherwise without the prior approval of the other party. Upon any transfer and assumption, the transferor shall not be relieved of or discharged from any obligations hereunder.

Producer shall give prompt notice in writing to Peoples of any sale or assignment or other disposition of all or any part of its interest in the Interconnect Facilities hereinbefore described and covered by this Master Agreement and Exhibit(s). Producer shall furnish to Peoples copies of any relevant documents evidencing the transfer or assignment of said Producer's interest. Until said notice and relevant documents have been given and furnished to Peoples, Peoples, upon written notice to Producer, may shut-in the Interconnect hereunder, and/or escrow any payments required hereunder, without liability. In the event that Producer fails to promptly provide said notice and relevant documents, Peoples shall have the right to terminate this Master Agreement, and/or any Exhibits, upon fifteen (15) days' notice.

ARTICLE XVII
NOTICE

17.01 **Notices.** Following execution and activation of this Master Agreement, all communications, invoices and payments ("Notices") required hereunder may be sent by a nationally recognized overnight courier service, hand delivered, by electronic mail, or by First Class U.S. mail; provided that for any Notices sent via electronic mail, a duplicate copy must also be sent via one of the other delivery methods described herein.

17.02 **Receipt of Communications.** Any notice required or permitted under this Master Agreement shall be in writing. Notice shall be deemed to have been received: (i) when sent by overnight mail or courier, on the next business day after it was sent or such earlier time as is confirmed by the receiving Party; (ii) when delivered by hand, at the time it is delivered to an officer or to a responsible employee of the receiving Party; and (iii) when delivered via First Class U.S. Mail, two (2) business days after mailing. Either Party may change its address or telephone number at any time by promptly giving notice of such change to the other Party. Either Party may modify any notice information specified above by written notice to the other Party.

ARTICLE XVIII
MISCELLANEOUS

18.01 **Choice of Law.** This Master Agreement shall be governed by and interpreted in accordance with the laws of the Commonwealth of Pennsylvania, without regard to the State's conflict of laws principles. This Master Agreement shall be deemed to have been executed in Pennsylvania.

18.02 **Construction of this Master Agreement.** No presumption shall operate in favor of or against either Party as a result of any responsibility either Party may have had for drafting this Master Agreement.

18.03 **Execution.** This Master Agreement may be executed in one or more counterparts, each of which shall be deemed an original, and all of which together shall constitute one and the same instrument. As used herein, the singular of any term shall include the plural.

18.04 **Captions.** The article and section captions of this Master Agreement are for purposes of reference only and shall not affect the meaning of any provision of this Master Agreement.

18.05 **Amendments.** This Master Agreement may only be amended or modified by written instrument signed by the duly authorized representatives of Producer and Peoples.

18.06 **Severability.** If any provision of this Master Agreement is held by any court of competent jurisdiction to be illegal, invalid, unenforceable, or in conflict with any law of the Commonwealth of Pennsylvania, the validity of the remaining provisions of this Master Agreement shall not be affected, and the rights and obligations of the Parties shall continue in full force and effect to the full extent permitted by law. If any provision of this Master Agreement is held invalid, illegal, unenforceable or in conflict with any

Pennsylvania law, the Parties shall meet promptly and negotiate in good faith a replacement provision to effectuate the intent of the Parties.

18.07 **Confidentiality.** This Master Agreement and all notices, statements, correspondence, and other communications or documents relating to the negotiation and administration of this Master Agreement are non-public, confidential, and proprietary ("Proprietary Information"). Each Party shall keep such Proprietary Information strictly confidential for a period ending two (2) years after the expiration or termination of this Master Agreement, except as may be required to comply with any statute or order of a court or government agency having subject matter jurisdiction, the Parties shall not disclose, reveal or divulge any Proprietary Information to any person or entity without the prior written consent of the other Party.

18.08 **Audits.**

(a) Accounting Audits: Peoples shall have the right to audit Producer's accounting records and other documents relating to materials delivered by or on behalf of Producer for Peoples' account for any calendar year within the twenty-four (24) month period following the end of such calendar year. This provision shall continue in full force and effect for a period of twenty-four (24) months from the effective date of termination of this Master Agreement.

(b) Field Audits: Producer gives Peoples permission to periodically come onto Producer's property in order to audit the Interconnect Facility to determine if it is in compliance under the terms of this Master Agreement. Permission for ingress/egress includes personnel, vehicles, and other equipment deemed necessary by Peoples. Peoples shall have permission to perform all operating and maintenance functions associated with verifying the integrity and functionality of equipment, piping, and appurtenances. If, in Peoples' judgment, modifications are necessary in order to assure proper operation of the equipment, Peoples shall notify Producer and describe the modifications and shut in the Interconnect. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities resulting from Peoples' or its designee's intentional or negligent actions during a field audit. Peoples shall replace, fix or repair, at its cost, any portion of Producer's Interconnect Facility that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of operating or attempting to maintain the Producer's Interconnect Facility.

18.09 **Waiver.** Any waiver by either Party of performance due by the other Party under the terms of this Master Agreement shall not operate as a waiver of any or all of such Party's rights with respect to all prior or subsequent obligations of the other Party.

18.10 **Incorporation of Appendices.** Each Appendix hereto is made subject to the terms and conditions hereof, and is fully incorporated into this Master Agreement by reference.

18.11 **Entire Agreement.** The entire agreement between the Parties shall include those provisions contained in this Master Agreement, which includes the Appendices and any effective Exhibit. In the event of a conflict between the terms of any Appendix and the terms of this Master Agreement, the terms of the Master Agreement shall govern. In the event of a conflict between the terms of any Exhibit and the terms of this Master Agreement, which includes the Appendices, the terms of the Exhibit shall govern.

18.12 **Force Majeure** In the event either party is rendered unable, wholly or in part, by Force Majeure to carry out its obligations under this Master Agreement, other than demand payments of amounts due hereunder, then the obligations of such party, so far as they are affected by such force majeure, shall be suspended during the continuance of any inability so caused. However, the party claiming the existence

of force majeure shall use all reasonable efforts to remedy any situation, which may interfere with the performance of its obligations hereunder. The term "Force Majeure" as used herein, and as applied to either party hereto, shall mean acts of the law, acts of God, strikes, lockouts, or other labor disturbances, acts of the public enemy, war, blockades, insurrections, riots, epidemics, fires, floods, washouts, arrests, and restraint of rulers and people, civil disturbances, explosions, breakage or accidents to machinery or lines of pipe, freezing of wells or pipelines, partial or entire failure of such wells, or any other cause, whether of the kind herein enumerated, or otherwise, not reasonably within the control of the party claiming suspension. It is understood that settlement of strikes, lockouts, or labor disturbances shall be entirely within the discretion of the party having the difficulty and that the above requirement that any Force Majeure shall be remedied with all reasonable dispatch shall not require the settlement of strikes, lockouts, or labor disturbances by acceding to the demands of the opposing party when such course is inadvisable in the discretion or judgment of the party having the difficulty.

This Master Agreement, as amended from time to time, constitutes the entire agreement between the Parties for the transportation and/or purchase and sale of Gas and supersedes all previous offers, negotiations, understandings and agreements between the Parties with respect to the transportation and/or purchase and sale of Gas. There are no agreements, modifications, conditions or understandings, written or oral, expressed or implied, pertaining to the transportation and/or purchase and sale of Gas which are not contained in this Master Agreement.

SIGNATURE PAGE IMMEDIATELY FOLLOWS

IN WITNESS WHEREOF, Peoples and Producer have duly executed this Master Agreement to be effective as of the day and year first written above.

APPENDIX A TO MASTER AGREEMENT
MINIMUM ENGINEERING & TECHNICAL SPECIFICATIONS

SECTION I
DESIGN OF INTERCONNECT FACILITIES

1.01 **General.** Producer shall be responsible for all aspects of the design and construction of a New Facility, subject to the terms and conditions of the Master Agreement, unless specifically noted otherwise by Peoples. Producer shall be responsible for maintaining any Existing Facility and New Facility to the specifications set forth in the Master Agreement, including all Appendices and Exhibits. Peoples reserves the right to inspect an Existing Facility and a New Facility to ensure it complies with the specifications and is operable; in the event said facility does not meet with the specifications or is inoperable, the Interconnect may be shut-in until the Producer remedies the deficiency(ies).

1.02 **Materials**. All material and equipment furnished for a New Facility shall be new and shall satisfy: (i) the generally accepted industry standards; and (ii) the specifications set forth in this Appendix.

1.03 **Site/Land Acquisition**

(a) Producer shall provide Peoples with the necessary rights-of-way, permits, and related surface rights including the rights of ingress, egress and regress necessary for Peoples to access the location of the New Facility. Producer shall also provide, if required, a right of way necessary for the tie-in of proposed New Facility to Peoples' System that is free of all costs and from all claims and liabilities for damages arising out of installation or the construction of the New Facility. To the extent that Producer has not previously provided Peoples with the necessary rights-of-way, permits, and related surface rights including the rights of ingress, egress and regress necessary for Peoples to access the location of an Existing Facility, and Peoples is hindered from accessing the location, Peoples shall have right to shut in the Interconnection, remove its facilities associated with the Interconnect and terminate the portion of the Exhibit applicable to the Interconnection.

(b) Producer and Peoples must agree beforehand to the location of the New Facility as well as the final tie-in location.

(c) Producer shall satisfy itself as to the character and types of surface and subsurface materials to be encountered in construction of the New Facility.

(d) Producer's right-of-way shall be cleared of all debris and obstructions before the New Facility is tied into Peoples' System. For Existing and New Facilities, Producer's right-of-way shall be maintained such that regular access to the Interconnection may be obtained.

(e) A New Facility shall be readily accessible, located in an area that is not susceptible to vehicular or other damage but as near as practical to the final tie-in point. Peoples reserves the right to require that a New Facility be enclosed within a locked fence or building. In the event of safety or operational concerns, Peoples reserves the right to require that an Existing Facility be enclosed within a locked fence or building.

(f) The meter set shall be readily accessible, located in an area that is not susceptible to vehicular or other damage but as near as practical to the final tie-in point

(g) All costs associated with Producer's obligations under this section shall be the Producer's responsibility and any such costs paid by Peoples shall be reimbursed by Producer through the Construction and Installation Fee.

(h) To the extent that Peoples is at any time required to pay for such rights-of-way or such costs or claims or liabilities, then such amounts and related expenses shall be incorporated within the Initial Construction and Installation payment made under this Master Agreement.

1.04 **Responsibility for Interconnect Facility Equipment**. The following table establishes the design, construction, operation, maintenance and cost responsibility for certain aspects of the Interconnect Facilities. All of the following design specifications designated as the Producer's responsibility shall be incorporated into the design and construction of the Receipt Point at Producer's sole cost unless waived by Peoples. Excluding Measurement Equipment, for which requirements are set forth in Section 10.01 of the Master Agreement, and Pressure/Flow Control Equipment, for which requirements are set forth in Section 4.01 of the Master Agreement, the Parties specifically agree that the design specifications identified in this Section 1.04 shall not apply to any Existing Facility(ies), unless required by the Pennsylvania Public Utility Commission or in order to address operational, safety or service related issues, in which case Peoples agrees to provide at least sixty (60) days advance notice to Producer documenting the operational, safety or service related issues and detailing required modifications to the existing Receipt Points(s).

PG = Peoples; S/T = Producer
TBD = To be determined at the Design Specification Stage per Section 4.01 of the Agreement.

1.05 **Inlet Filter.** Filter/filter-separator facilities installed upstream of the Interconnect Facility at Receipt Point(s) must be considered and based upon specific Gas analysis. This Section 1.05 shall not apply to any Existing Facility, unless required by the Pennsylvania Public Utility Commission or in order to address operational, safety or service related issues, in which case Peoples agrees to provide at least sixty (60) days advance notice to Producer documenting the operational, safety or service related issues and detailing required modifications to the Existing Facility,

1.06 **Freeze Prevention.** In circumstances where heavier hydrocarbons and/or water vapor may be present within the Gas stream, Producer shall incorporate freeze protection measures into the design of the Interconnect Facility. The method and design of the freeze protection measures shall be submitted to the Peoples for approval and no construction shall commence until such time as Producer receives written approval from Peoples. If Producer's freeze protection measures involve the use of Gas for fuel, then the tap for such fuel supply line shall be made upstream of the measuring equipment, such that Producer bears the costs of the fuel. This Section 1.06 shall not apply to any Existing Facility, unless required by the Pennsylvania Public Utility Commission or in order to address operational, safety or service related issues, in which case Peoples agrees to provide at least sixty (60) days advance notice to Producer documenting the operational, safety or service related issues and detailing required modifications to the Existing Facility. Freeze protection measures which may be acceptable to Peoples include the following:

(a) Methanol Injection – should be installed downstream of meters

(b) Catalytic heaters / heat trace - for regulator bodies

(c) Indirect water bath heaters – for large pressure cuts and large flow volumes

(d) All Gas provided and delivered to Peoples shall have a temperature of no less than 45° F.

1.07 **Regulating and Overpressure Protection.** Peoples may require regulation and shall require over-pressure protection for all Receipt Point(s) under this Master Agreement. Such regulation shall deliver pressures suitable to pressures in Peoples' System. Peoples shall specify and/or approve the type of regulators to be used and shall specify pressure ranges, and operating settings. Producer will contract with a Peoples Approved Vendor to perform annual inspection and lock up test of each regulating and overpressure device, and provide inspection reports to Peoples.

(a) A primary pressure-limiting device shall be required whenever the Peoples' System has the possibility of realizing pressures exceeding the Peoples' pipeline MAOP.

(b) Overpressure protection devices shall be set such that pressures may not exceed the maximum allowable operating pressure for the facility into which Producer is delivering Gas.

(c) Overpressure protection devices must be designed to prevent a single incident from affecting the operation of the Interconnect.

(d) Security valves, monitor regulators, or control valves should be used for overpressure protection.

(e) Overpressure protection devices shall consist of a stand-alone valve operating on a pneumatic signal taken directly from the pipeline.

(f) If pilot loaded valves are used, the pilots shall not bleed when they are not operating. Pilot bleeds should be routed to downstream piping.

1.08 **Control Valves**

(a) Control valves shall be sized using the highest flow rate compounded with the lowest delivery pressure.

(b) All flow control valves should be installed to fail in the open position or in the last set positions, as applicable.

(c) Peoples shall approve the type and brand of control valve.

(d) Downstream taps for pressure control valves shall be noted on detail drawings, and shall also possess a pressure transducer for stations designed with telemetry.

1.09 **Miscellaneous Valves and Piping**

(a) Blow-down valves shall be installed to provide for venting of all sections.

(b) Meter header piping shall be sized for 1.5 times the total combined area of the total meter runs.

(c) Isolation valves will be installed on either side of regulators, meters, and control valves.

(d) Piping shall be Standard Weight unless approved otherwise by Peoples.

1.10 **Emergency Valve.** The design and installation shall include an emergency valve (ball valve preferred) located at least twenty-five (25) lineal feet (point to point) but not to exceed fifty (50) lineal feet from the tie-in with Peoples' System. The emergency valve shall be readily accessible, easily operated, and sufficiently marked for quick identification.

1.11 **Peoples Tie-in and Tap Sizing.** Peoples shall provide for the sizing and actual installation of tap for tie-in of a New Facility to Peoples' System. Producer shall provide data necessary for the sizing of the tap.

1.12 **Gas Chromatograph.** Auxiliary equipment may be required for measurement of Btu variations. Peoples shall have the final decision as to the type of Gas analysis required.

1.13 **Dehydration.** Gas received by Peoples at Receipt Point(s) shall be consistent with the requirements in Appendix B, Schedule 1 and contain no free liquids. In accordance with Section 7.01 of the Master Agreement, Peoples has the right to discontinue and/or terminate any Receipt Point(s) where Gas delivered contains free liquids.

1.14 **Dew Point Tester.** When deemed necessary by Peoples, Producer shall incorporate an on-line dew point tester as part of the Interconnect Facility. The unit shall be set such that any Gas volumes detecting

water content levels in excess of contractual specifications shall result in the automatic closure of an in-line valve thereby preventing further delivery of Gas into system. Valve shall remain closed until an acceptable water moisture content of the Gas can be provided. This Section 1.14 shall not apply to any Existing Facility, unless required by the Pennsylvania Public Utility Commission or in order to address operational, safety or service related issues, in which case Peoples agrees to provide at least sixty (60) days advance notice to Producer documenting the operational, safety or service related issues and detailing required modifications to the Existing Facility.

1.15 **Corrosion Coupon Tap.** When specified by Peoples, Producer shall provide for an in-line valve tap for installing corrosion coupons.

1.16 **Check Valve.** All Interconnect Facilities shall be installed with a check valve of some type so as to assure Gas flows in the direction proposed by this Master Agreement. Producer will contract with a Peoples Approved Vendor to perform annual inspection of each check valve and, in accordance with Appendix B, Section 1.07, shall provide the inspection report to Peoples.

1.17 **Building, fences, and site security**

(a) Buildings, or shelters, shall be provided to protect electronic Gas measurement and control equipment, as well as to act as noise barriers, protection from damage, and for meeting compliance with local ordinances. All buildings, shelters, fences, or the like, shall be designed to permit safe access around all facility piping and equipment. Designs for buildings, shelters, fences, or the like shall be submitted to Peoples' approval prior to installation or modification.

(b) Unless waived by Peoples in its reasonable discretion, all Interconnect Facility shall be fenced, consisting of chain link fencing eight feet (8') in height complete with three (3) strands of barbed wire, and at a minimum; one pedestrian gate and one truck gate installed at opposing ends of the site. This sub-section 1.17(b) shall not apply to any Existing Facility, unless required by the Pennsylvania Public Utility Commission or in order to address operational, safety or service related issues, in which case Peoples agrees to provide at least sixty (60) days advance notice to Producer documenting the operational, safety or service related issues and detailing required modifications to the Existing Facility.

(c) The site selected must be large enough to hold all equipment and accommodate all activities required for normal and maintenance operations.

1.18 **Power and telephone.** If required, Producer shall provide electric power and telephone at site.

SECTION II
INSTALLATION, TESTING, and INSPECTION

2.01 **Testing**

(a) All measurement equipment shall be tested in accordance with specifications provided by Peoples. Peoples shall specify minimum test pressure and test duration. Tests shall be conducted using a recording chart of which Peoples shall receive the original or a clear copy of the original test chart.

(b) Peoples shall not activate the New Facility and Interconnect until a copy (or original) of the test chart has been received and approved.

2.02 **Inspection**

(a) Peoples reserves the right to inspect all New Facilities during construction.

(b) Prior to startup of construction, Producer shall provide three (3) days' notice to Peoples.

(c) All girth welds must be 100% radiographically inspected and approved.

(d) Producer shall be responsible for all expenses, including inspection by Peoples, relative to construction inspections of the New Facilities.

APPENDIX B TO MASTER AGREEMENT
INSPECTIONS AND GAS QUALITY

SECTION I
ROUTINE INSPECTIONS OF INTERCONNECT FACILITIES

1.01 **Interconnect Facility(ies) Maintenance**. Peoples shall have the right to periodically inspect Producer's records and the Interconnect facilities to verify that all operating and maintenance functions are being performed effectively. If Producer cannot provide adequate documentation, or if Producer's operating and maintenance procedures are inadequate as determined by Peoples, Producer will have seventy-two (72) hours to produce proper documentation and/or revise inadequate procedures. If, after the seventy-two hour period, documentation is not provided and/or procedures are not modified, Peoples retains the right to take further action as it deems necessary including the right to shut-in the Interconnect until adequate documentation/procedures have been verified and secured.

1.02 **Changes to Interconnect Facility.** The Producer has an obligation to notify Peoples in writing 24 hours prior to changes to Producer Interconnect facilities that would require modifications to an Interconnect, Peoples' System or Gas composition, and Peoples shall have the right to reject changes to the Interconnect Facility. Peoples retains the right to take action as it deems necessary in its reasonable discretion, including the right to shut-in the Interconnect, in the event notification does not occur. The cost of any damages as a result of changes to Producer's Interconnect Facility will be borne entirely by the Producer; provided, that if Peoples or its designee accesses and operates Producer's Interconnect Facility, Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's access or operation of the Producer's Interconnect Facility. Peoples shall replace, fix and repair, at its cost, any portion of Producer's Interconnect Facility that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of Peoples' accessing or operating the Facility.

1.03 **Interconnect Facility Operations.** Peoples shall have the right to shut-in the Interconnect immediately if meter set equipment is not operating properly, an overpressure condition exists, design limitations are exceeded, or safe operating conditions are compromised. Furthermore, Peoples has the right to keep the Interconnect shut-in until the Producer makes the necessary provisions to rectify the situation. If the abnormal conditions repeatedly arise, Peoples has the right to shut-in the Interconnect indefinitely.

1.04 **Interconnect Facility Inspections.** Peoples shall have the right to inspect the Interconnect Facility including, but not limited to, the following: calibrate the meter; inspect regulators; inspect valves; and inspect and calibrate Gas quality facilities. If during the course of these inspections, Peoples determines, using commercially reasonable discretion, that installation procedures where not followed, equipment was not maintained, or equipment was modified to not comply with specifications established in this Master Agreement, Peoples has the right to shut-in the Interconnect until corrective actions by the Producer occur and additional inspections performed. If continued inspection violations occur, Peoples has the right to shut-in the Interconnect indefinitely. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's inspection in calibrating the meter, inspecting regulators, inspecting valves, and inspecting and calibrating gas quality equipment within the Producer's Interconnect Facility. Peoples shall replace, fix and repair, at its cost, any portion of Producer's Interconnect Facility that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of the activities described above.

1.05 **Reserved.**

1.06 **Reserved.**

1.07 **Annual Measurement Equipment Testing**. All measurement equipment shall be inspected and tested by a Peoples Approved Vendor once each calendar year not to exceed fifteen (15) months from the previous inspections at Producer's expense. This annual inspection must be completed by technicians trained to operate pressure regulating equipment in accordance with the manufacturer's procedures and specifications. Peoples reserves the right to request documentation for regular testing and technician training. The annual testing shall include, but is not limited to the following equipment: Check Valve, Regulator(s) Lock-up test, Electronic corrector (EGM) calibration, meter calibration and spot sample Gas analysis (frequency according to section 2.01 of this Appendix B) at the Interconnect. Inspection reports shall be submitted, within 30 days after the yearly inspection date, to Peoples. In the event the Producer fails to submit the yearly inspection reports, Peoples shall have the right to periodically inspect Producer's records to determine if measuring equipment has been inspected and tested, as required by the Master Agreement. If Producer cannot provide documentation, within five (5) days of Peoples' request, Producer is required to immediately shut-in the Interconnect at which measurement and testing records are deficient, for a period of one week, or until the Producer can provide proof that the measuring equipment has been inspected and tested, and is working properly, whichever is longer. If Producer cannot provide documentation that its measuring equipment has been inspected and tested on additional occasions, Peoples retains the right to take further action at its discretion, including the right to require the shut-in of the applicable Interconnect for additional time periods. If Producer repeatedly violates this provision, Peoples has the right to permanently discontinue accepting Gas from wells that Producer has dedicated to said Interconnect Facility.

SECTION II
GAS QUALITY REQUIREMENTS

2.01 **General.** Before Peoples permits the flow of Gas from a New Facility into the Peoples' System, Producer will provide a Gas sample analysis by a Peoples Approved Vendor and Peoples shall review the Gas sample analysis to verify that it is of marketable quality. Producer will contract with a Peoples Approved Vendor to perform an initial (within one (1) year of the execution of this Agreement) Gas quality sample analysis and provide inspection report to Peoples for each Interconnect Facility that have not otherwise been tested by Producer or Peoples within the year prior to the execution of this Agreement. Receipt Point(s) with daily volumes at or above 1,000 mcf/day will be required to have a Gas quality sample analysis conducted on an annual basis. Receipt Point(s) with daily volumes below 1,000 mcf/day will be required, after obtaining the initial analysis, to have a Gas quality sample analysis' conducted every five (5) years thereafter, unless the Gas sample analysis does not meet Peoples specifications, requirements and/or standards, as set forth in this Agreement, including any Appendixes, Exhibits, Addendums, Schedules and Amendments, in which case, Peoples will require the Interconnect to be shut in until Gas sample meets Peoples specifications. Peoples reserves the right to require more frequent Gas quality sample analyses in order to address operational, safety or service related issues. The initial and ongoing Gas sample analyses shall include testing for water vapor, N2, O2, CO2, CH4 (methane through pentane), heating value (BTU - dry and saturated), specific gravity by a certified tester using GPA 2261-13 and GPA 2172-09 standards and shall conform with the following specifications:

(a) Liquids – The Gas shall be free of water and hydrocarbons in liquid form at the temperature and pressure at which the Gas is delivered.

(b) Moisture Content – The Gas shall not have water content in excess of seven (7) pounds of water per million cubic feet of Gas measured at standard conditions of 14.73 psia and 60°F, unless otherwise approved by an authorized representative of Peoples or as set forth in Schedule 1. The moisture content of the Gas shall be such that it is of marketable quality, and does not cause any safety or operational problems or other adverse effects on Peoples' System or any downstream systems to which the Gas may flow. Producer will be advised of any additional or specific moisture content limits for the Interconnect, or of any changes in such limits, should they be required.

(c) Water Vapor – Peoples will authorize water content according to the chart attached as Schedule 1 to this Appendix B. However, Peoples maintains the right to require a lower (more stringent) water vapor content than the level set forth in Appendix B if the water vapor levels at specific Receipt Point(s) are detrimentally affecting customer service or creating operational issues.

(d) Carbon Dioxide and Other Inerts – The Gas shall not contain more than four percent (4%) by volume of total combined inerts such as carbon dioxide, nitrogen, argon, and helium; provided that the total carbon dioxide content shall not exceed two percent (2.0%) by volume.

(e) Dust, Gums and Solid Matter – The Gas shall be commercially free of dust, gums, gum-forming constituents, or other liquid or solid matter which might become separated from the Gas in the course of transportation through pipeline.

(f) Heating Value – Unless otherwise approved, in writing, by Peoples, the Gas delivered shall contain not less than 967 BTU per standard cubic foot and shall not exceed 1,100 BTU per standard cubic foot of Gas calculated as the gross saturated value at 14.73 psia and 60° Fahrenheit, and a utilization factor of one thousand three hundred (1,300) plus or minus six percent (6%), the utilization factor being defined as that number obtained by dividing the heating value of the Gas by the square root of its specific gravity. Gas accepted by the Company that contains less than 967 BTU per cubic foot will be enhanced to ensure that Gas delivered by the Company to its end-use customers shall meet the heating value requirements set forth in applicable regulations, orders or laws. The Producer may be responsible for the costs of such enhancement.

(g) Temperature – The temperature of the Gas delivered into the Peoples' System shall not exceed 100°F unless approved by an authorized representative of Peoples. The temperature shall not be less than 40°F as delivered to Peoples' System after passing through all regulation, measuring and over protection equipment.

(h) Oxygen – The Gas shall not contain more than 2,000 parts per million (0.2% of one percent) of oxygen by volume.

Should circumstances warrant more in-depth Gas sample analyses, such as the suspected or known presence of other constituents, Peoples reserves the right to require testing for additional compounds including not limited to the following:

(a) Hydrogen Sulfide – The Gas shall not contain more than four (4) parts per million on a volumetric basis, or three-tenths (0.3) of a grain of hydrogen sulfide per one hundred (100) cubic feet.

(b) Total Sulfur – The Gas shall not contain more than 170 parts per million, on a volumetric basis, or ten (10.0) grains of total sulfur per one hundred (100) standard cubic feet.

(c) Carbon Monoxide – The Gas shall not contain more than one-tenth percent (0.1%) by volume of carbon monoxide.

(d) Gasoline - Not contain more than two-tenths (0.2) of a gallon of gasoline per one thousand (1,000) standard cubic feet unless otherwise approved by an authorized representative of Peoples.

(e) Bacteria – The Gas, including any associated liquids, shall not contain any microbiological organism, active bacteria, or bacterial agent capable of causing or contributing to: (i) injury to Peoples' pipelines, meters, regulators, or other facilities and appliances through which Producers Gas flows; or (ii) interference with the proper operation of Peoples' System. Microbiological organisms, including, but not limited to, sulfate reducing bacteria (SRB) and acid producing bacteria (ACB), when considered as a possibility, shall be tested for their existence utilizing the

American Petroleum Institute test method API-R38 or other acceptable test method as determined by both Parties.

(f) Siloxane – All Gas delivered through an Interconnect into Peoples' System that includes Gas from landfill well(s) or gathering lines fed by landfill Gas sources shall meet the following on-going testing protocol:

Test Results, mg of SI / Nm^3	Action
≤ 0.4	November through February = once per week March through October = twice per month
0.40 - 0.60	Test daily until results are below 0.40
3 consecutive results ≥ 0.60 or a single test ≥ 1.0	Shut in gas until start-up conditions are re-established

2.02 **Gas Odorant.** Peoples will perform Gas odorant tests to confirm that the Gas delivered at the Producer's Interconnect Facility is properly odorized. If is found to have insufficient odor, then Producer will be required to purchase and install odorizing units and monitoring equipment according to Peoples' specifications and as set forth herein. The Producer is also responsible for the maintenance of this facility including the costs of odorant supply needed to maintain a sufficient odor in all Gas delivered at the Producer's Interconnect Facility. Odorizing units and monitoring equipment specifications

(a) Equipment and Ownership. The Producer will own the odorizer with associated equipment necessary to operate and deliver odor (odorizer system) and is responsible for all costs associated with operating the system. Peoples will approve the design of the odorizer system, whereinafter the Producer will purchase and install the odorizer system. Peoples may choose to be present for the installation and shall have the right to test the system after its installation. Thereafter, Peoples will operate and maintain the odorizer systems and, where applicable, a thermal electric generator (unless a public electric power supply can be made available to the site), together with necessary valves, tubing and fittings, in order to properly odorize Gas delivered to measurement equipment. If the odorizer system is located outside of the Interconnect Facility location, the Producer shall provide site access to Peoples, as described in Section 1.03 of Appendix A, for the site where the odorization system is located. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's accessing or operating Producer's odorizer system. Peoples shall also replace, fix and repair, at its cost, any portion of Producer's odorizer system that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of operating the odorizer system.

(b) Upgrades. If Producer should desire to upgrade or replace any of the currently existing odorizers or generators, all equipment must be subject to the review and approval of Peoples.

(c) Refill. Peoples will manage the filling and refilling (or tank exchange) of the odorant to make sure, that sufficient odorant is available for Gas delivered to the measurement equipment.

(d) Odorant Cost. Producer will reimburse Peoples, upon receipt of its invoices, for the cost of odorant, including all future tank refills.

(e) Odorizer Site. Producer will provide and maintain, at its own cost, perimeter fencing around the Odorizer sites to enclose and protect the odorizers and related equipment.

(f) Communication Cost. Producer will reimburse Peoples, upon receipt of its invoices, for the monthly cost of public telephone or cellular service for the communications equipment used to monitor the operation of the odorizers and the odorant level and for the monthly cost of electrical service used to operate and maintain the odorizers, if electric power is provided to the odorizers from a public supplier.

(g) Maintenance Cost. Producer will reimburse Peoples, upon receipt of its invoices, for the cost of any regular, periodic, and other odorizer maintenance service, including all labor and necessary replacement parts or equipment, to assure the continued efficient operation of the odorizers. This includes reserve parts held in Peoples' stock to enable timely and proficient resolutions.

2.03 **Gas Quality Inspections.** If Gas sample analysis indicates that any of the Gas quality specifications, requirements and/or standards set forth in this Master Agreement have not been met, Peoples may refuse deliveries until the Producer makes the necessary provisions to fully comply with the Gas quality requirements.

2.04 **Gas Quality Inspections**. After initial deliveries are received, Peoples reserves the right to periodically sample Gas at the measurement equipment to validate the Gas quality. If the analysis indicates that Gas quality specifications, requirements and/or standards set forth in this Master Agreement are not met, Peoples has the right to shut in the Interconnect indefinitely until the Producer makes the necessary provisions to fully comply. Peoples shall indemnify and hold harmless Producer for any and all environmental, health and safety liabilities directly resulting from Peoples' or its designee's accessing Producer's measurement equipment. Peoples shall also replace, fix and repair, at its cost, any portion of Producer's measurement equipment that Peoples or its designee intentionally or negligently harms, damages or breaks as a result of accessing the equipment.

2.05 **Remedies.** Should any of the above substances enter Peoples' System and cause damage to metering, regulating and/or other equipment, or interruption of service, Producer shall reimburse Peoples for the costs to repair such damage and for any related costs which Peoples may incur to restore service to, and/or repair facilities of, its customers, including payments made by Peoples to customers in settlement of claims arising out of interruption of Gas service; provided that Producer was notified that Peoples was invoking indemnification under Section 13.03 and Producer was given the opportunity to defend against the claim prior to such settlement agreement.. Any such costs may be deducted from payments due Producer for Gas delivered. In addition, if the Gas delivered fails, in Peoples' reasonable opinion, using commercially reasonable discretion, to meet the quality specifications set forth herein, Peoples may elect to refuse to take all or any portion of such Gas until the Producer bring the Gas into conformity with such specifications. In the case of any such refusal, Producer agrees to exercise all due diligence to bring such Gas into conformance with the specifications set forth herein. Peoples has the right to shut in the Interconnect indefinitely until the Producer makes the necessary provisions to meet the Gas quality standards. Peoples may also elect to require continuous Gas quality monitoring with fail safe shut off as a provision to accept existing or new deliveries. Damages as a result of Gas quality violations are the responsibility of the Producer and the Interconnect shall be shut-in until damages are paid in full.

SCHEDULE 1 TO
APPENDIX B TO MASTER AGREEMENT
WATER VAPOR CONTENT

ALLOWABLE WATER VAPOR LEVEL (#/MMSCF) VS. LOCATION

1. Producer meters connected to pipelines on the suction side of a Peoples compressor will be subject to 40#/mmscf water vapor standard.
2. All other Producer meters will be subject to 20#/mmscf water vapor standard.

Peoples reserves the right to require more stringent water vapor standards in limited and specific situations where Peoples has determined through water vapor testing that the water vapor levels at identified production meter points are affecting customer service or creating operational issues.

EXHIBIT A-__
to
Master Agreement

Additional Terms and Conditions Governing Transportation of Gas

This Exhibit A ("Exhibit") is made part of and is subject to the terms and conditions of the Master Agreement made and entered into by and between **Peoples Natural Gas Company LLC**, with an office located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212 (hereinafter referred to as "Peoples"), and **[Producer]** with an office at [Address] (hereinafter referred to as "Producer"). Producer and Peoples are also referred to herein individually as a "Party" and collectively as the "Parties."

This Exhibit A-__ shall supersede, in its entirety, and terminate without cause, any the previously executed Agreement(s) between the Parties for the transport of Gas for the Receipt Point(s)identified herein including, but not limited to, prior Transportation Agreements, Gas Purchase Agreements, Production Enhancement Agreements, Field Purchase Agreements, Measurement Operating Agreements and Interconnection Agreements; however agreements related to blending and compression requirements, such as Gathering Interconnect Compression Agreements and Blending Service and Operation Agreements, shall not be terminated and shall continue pursuant to their terms and conditions.

The Service Term Start Date for each individual Receipt Point shall be the latter of _____ or the first day of the immediately succeeding Production Period in which Producer delivers Gas to Peoples at the Receipt Point. The Service Term End Date for each individual Receipt Point shall be _____. After this initial term, this Exhibit will automatically renew for month-to-month periods unless either Producer or Peoples provides written notice of termination to the other party at least (thirty) 30 days prior to the expiration date. If either party terminates a Receipt Point, the Producer's Interconnect Facility(ies) will be disconnected and the Interconnect shall be abandoned unless a subsequent Exhibit is executed within thirty (30) calendar days.

The Rates for Gathering are subject to the applicable tariff in effect at the time of delivery into the Peoples' System. These charges are subject to change. Rates for certain qualifying incremental conventional production, and for unconventional horizontal production and landfill production shall be determined by Peoples based on supporting information provided to Peoples by the Producer and in accordance with the applicable tariff and shall be specified in Schedule 1 to this Exhibit. The Receipt Point(s) and applicable Retainage Percentage and Gathering Rate shall be identified in Schedule 1 to Exhibit A-__, which is attached hereto and made a part hereof.

This Exhibit shall become effective upon its execution by both Peoples and Producer and shall continue in full force and effect through the end of the latest Service Term End Date set forth herein, including any extensions thereof. The obligations of Producer to make payment hereunder and the obligation of Producer to indemnify Peoples, and Peoples to indemnify Producer, pursuant hereto shall survive the termination or cancellation of the Master Agreement and this Exhibit. Peoples shall have the right to terminate this Exhibit, upon thirty (30) days advance written notice to Producer, if Gas has not flowed for the previous period of twelve (12) consecutive months, or if Peoples or its designee has caused the Interconnect Facilities to be disconnected or removed.

SIGNATURE PAGE IMMEDIATELY FOLLOWS

IN WITNESS WHEREOF, Peoples and Producer have duly executed this Exhibit on this _____ day of _____, 20____.

SCHEDULE 1 TO
EXHIBIT A-__ TO MASTER AGREEMENT
RECEIPT POINT(S), RETAINAGE PERCENTAGE AND GATHERING RATE

Unless otherwise set forth below, the Retainage Percentage and the Gathering Rate for the following Receipts Point(s) are subject to the applicable tariff in effect at the time of Gas delivery into the Peoples' System and are subject to change.

Receipt Point(s)	Special Terms for Unconventional Wells

EXHIBIT A-__
to
Master Agreement

Additional Terms and Conditions Governing the Purchase of Gas

This Exhibit A ("Exhibit") is subject to the terms and conditions of the Master Agreement made and entered into by and between **Peoples Natural Gas Company LLC**, with an office located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212 (hereinafter referred to as "Peoples"), and **[PRODUCER]** with an office at [ADDRESS] (hereinafter referred to as "Producer"). Producer and Peoples are also referred to herein individually as a "Party" and collectively as the "Parties."

This Exhibit A-__ shall supersede, in its entirety, and terminate without cause, the previously executed Agreement(s) between the Parties for the purchase of Gas for the Receipt Point(s) identified herein, including, but not limited to, prior Transportation Agreements, Gas Purchase Agreements, Production Enhancement Agreements, Field Purchase Agreements, Measurement Operating Agreements and Interconnection Agreements; however agreements related to blending and compression requirements, such as Gathering Interconnect Compression Agreements and Blending Service and Operation Agreements, shall not be terminated and shall continue pursuant to their terms and conditions.

The following sets forth the additional terms and conditions whereby Peoples shall purchase Gas from Producer at the specific Receipt Point(s) identified in this Exhibit.

1. **Sale and Purchase Obligations**. Producer shall produce and sell to Peoples, and Peoples shall take and pay for, quantities of Gas delivered to the Receipt Point(s) set forth below. Peoples shall have no obligation to pay for any Gas until such time as it has been produced and delivered to the designated Receipt Point(s). Except in instances where Peoples and Producer agree otherwise, Producer's sale shall be a full requirements sale where all Gas produced shall be delivered to Peoples. Notwithstanding the foregoing, Peoples may reduce or suspend its purchases under this Master Agreement in the event that Peoples has insufficient pipeline capacity or insufficient market demand to facilitate the sale and/or use of Producer's Gas. Upon notice to Producer, Producer shall promptly comply with Peoples' reduction or suspension request. As provided for in Section 6.07 of the Master Agreement, in the event Peoples should ever cease, in whole or in part, to sell Gas directly to end-use customers (otherwise known as providing merchant or sales service), then Peoples may, in its sole discretion, terminate this Exhibit, or the Master Agreement, upon at least sixty (60) days written notice to Producer.

2. **Agency**. Peoples reserves the right to act as Producer's agent to market the production dedicated hereunder while continuing to pay Producer the price set forth in this Exhibit. All other terms and conditions of the agreement shall remain in full force and effect.

3. **Title to Gas**. Producer warrants that it will have good and merchantable title to or will have the right to sell all Gas delivered under this Master Agreement and that such Gas will be free and clear of all liens, encumbrances, and adverse claims by third parties. Producer shall indemnify and hold Peoples harmless from any and all suits, claims, actions, debts, levies, accounts, damages, costs, losses, and expenses of any nature arising from or out of any adverse claims of any kind or nature asserted by any person or entity concerning such Gas, including, but not limited to any claims, suits, actions, or demands that may arise due to the nonpayment of any landowner royalties, overriding royalties, or rentals.

4. **Possession, Control, and Liability**. Title to all Gas purchased under this Master Agreement shall pass from Producer to Peoples at the Receipt Point(s). As between the Parties to this Master Agreement, Producer shall be deemed to be in possession and control of the Gas to be delivered to Peoples until

Producer delivers the Gas to Peoples at the Receipt Point(s), and Peoples shall be deemed in possession and control thereafter.

5. **Peoples' Monthly Production Statement and Payment**. On or before the last business day of each calendar Month during the term of this Master Agreement, Peoples shall: (i) send Producer a Production Statement, in either hardcopy or electronic form, reflecting the Producer Sales Volume(s) during the relevant Production Period; and (ii) make payment to Producer by check or by automated clearinghouse (ACH) direct deposit pursuant to a separate ACH direct deposit agreement.

6. **Producer's Agent**. Although the terms of this Master Agreement extend to and are binding upon all Parties hereto, their respective heirs, successors, personal representatives and assigns, in no event will Peoples remit, or be required to remit, payment to more than one (1) payee per month in exchange for the Gas produced and sold hereunder. Accordingly, Producer hereby appoints the following Agent to receive all statements and payments hereunder:

   Name: _____ (the "Agent")
   Address: _____
   _____

   The Agent is authorized to give the necessary receipts and acquaintances to Peoples and to make adjustments and settlements under this Master Agreement, and Peoples shall have no obligation with respect to, or responsibility for, the application of any Gas purchase proceeds paid to the Agent. If at any time the Agent shall resign or be discharged or shall otherwise be unable or unwilling so to act, Peoples may withhold further payment of money for purchase of Gas hereunder, without liability for interest, until Peoples is furnished by Producer with the necessary documentation (properly executed and acknowledged by all necessary parties) designating a new agent, as the case may be, to receive such payment, for all parties interested in such payment.

7. **Royalties**. In no event will Peoples be obligated to make royalty, over-riding royalty or working interest payments for Gas purchased under this Master Agreement.

8. **Regulatory Authorities**. Peoples shall use reasonable efforts to obtain the necessary regulatory approvals from the Commission to recover the prices paid to Producer for Gas purchased under this Master Agreement. If the Commission issues an order, opinion, act, regulation, or rule that prohibits Peoples from recovering as part of Peoples' Gas cost recovery proceeding the full price paid to Producer for Gas purchased under this Master Agreement, then Peoples may at any time: (i) credit the difference between the price paid for Gas under this Master Agreement and the amount permitted to be recovered through Peoples' rates against amounts due Producer; or (ii) receive a refund of such amounts directly from Producer upon request by Peoples.

9. **Taxes**. Producer shall pay or cause to be paid all taxes, fees, levies, penalties, licenses or charges imposed by any government authority ("Taxes") on or with respect to the Gas upstream of Receipt Point(s) and all Taxes at the Receipt Point(s). Peoples shall pay or cause to be paid all Taxes on or with respect to the Gas downstream of Receipt Point(s). If a party is required to remit or pay Taxes which are the other Party's responsibility hereunder, the Party responsible for such Taxes shall promptly reimburse the other Party for such Taxes. Any Party entitled to an exemption from any such Taxes or charges shall furnish the other Party any necessary documentation thereof.

10. **Service Term**. The Service Term Start Date for each individual Receipt Point shall be the latter of the _____ or the first day of the immediately succeeding Production Period in which Producer delivers Gas to Peoples at the Receipt Point. The Service Term End Date for each individual transaction shall be _____. After this initial Service Term, this Exhibit will automatically renew from month-

to-month periods unless either Producer or Peoples provides written notice of termination to the other party at least thirty (30) days prior to the expiration date. If either party terminates a Receipt Point Exhibit, the Producer will be disconnected and the Interconnect shall be abandoned unless a subsequent Exhibit is executed within thirty (30) calendar days.

11. **Receipt Point(s)**. The Receipt Point(s), Retainage Percentage, Gathering Rate and Purchase Price shall be identified in Schedule 1 to Exhibit A-__, which is attached hereto and made a part hereof.

12. **Rates**. The rates for gathering charges are subject to the applicable tariff in effect at the time of delivery into the Peoples system. These charges are subject to change. Rates for certain qualifying incremental conventional production, and for unconventional horizontal production and landfill production shall be determined by Peoples based on supporting information provided to Peoples by the producer and in accordance with the applicable tariff. The Receipt Point(s) and applicable Retainage Percentage and Gathering Rate shall be identified in Schedule 1 to Exhibit A-__, which is attached hereto and made a part hereof.

This Exhibit shall become effective upon its execution by both Peoples and Producer and shall continue in full force and effect through the end of the latest Service Term End Date set forth herein, including any extensions thereof. The obligations of Peoples to make payment hereunder for Gas which has been delivered and the obligation of Producer to indemnify Peoples, and Peoples to indemnify Producer, pursuant hereto shall survive the termination or cancellation of the Master Agreement and this Exhibit. Peoples shall have the right to terminate this Exhibit, upon thirty (30) days advance written notice to Producer, if Gas has not flowed for the previous period of twelve (12) consecutive months, or if Peoples or its designee has caused the Interconnect facilities to be disconnected or removed.

IN WITNESS WHEREOF, Peoples and Producer have duly executed this Exhibit on this _____ day of _____, 20____.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-III-002

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' response to PIOGA-I-7. Have the Peoples companies installed any drying apparatus on the legacy TW Phillips system after acquiring it? If not, please explain why not. If so, please specify:

i. the apparatus installed;

ii. the pipelines on which it was installed;

iii. the dates of the installations; and

iv. the water vapor standards to which each apparatus dried the gas.

Answer: Yes. A unit was installed at the Kinter compressor facility, upstream of the compressor engines. Below is the requested information:

i. JW Williamson 500,000 BTU tri-Ethylene Glycol Dehy

ii. Depending on the time of year, the gas can be delivered into either the storage pool, or high pressure pipelines

iii. September 2019

iv. The unit settings are such that the gas is dried to approximately 7-8# during the winter when gas is typically delivered to pipelines, but possibly slightly higher in the 12# range during the summer when the gas is being injected to storage.

Submit Date: 3/1/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-V-001

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' response to PIOGA-III-1.b. For the period June 2011 through January 2024 on the legacy TW Philips system, please identify how many incidents of noncompliance with the system's water vapor standards were discovered.

a. how many of these incidents were resolved without shutting-in production;

b. how many of these incidents resulted in shutting-in production;

c. how many of these incidents jeopardized the safe and reliable operation of the system; and

d. how many of these incidents resulted in damage to the system or customers' facilities or gas usage appliances?

Answer: Peoples did not start to perform producer meter audits on the PG system until 2019. From 2019-2023, Peoples discovered 28 violations and 123 warnings, for a total of 151 incidents of water vapor gas quality issues.

a. All 123 warnings were resolved without shutting-in production

b. The 28 violations resulted in a temporary shut-in of production until the issues were resolved. All were turned back on.

c. While it is impossible to determine if any specific incident jeopardizes safe and reliable operations, all occurrences can contribute to corrosion problems, service interruptions for water or freeze offs, and overall general integrity of the facilities.

d. There is no way to determine if a specific incident contributed to damage to customer appliances or facilities. However, excessive water content creates customer outages due to freeze offs pipes, meters, regulators, and other equipment. In addition, specific customers with CNG fueling stations for their fleet experience outages when the water content is too high to operate their facility.

Submit Date: 3/14/2024

PIOGA Exhibit DMJ-3

PIOGA Exhibit DMJ-3 (Peoples response to PIOGA-IV-2)

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-IV-002

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' response to PIOGA-I-2.a. Re "6.01 Gathering Obligations. . . . As set forth elsewhere in this Agreement, it is expressly understood that Peoples may restrict the flow or discontinue the taking of Gas temporarily."

a. Please identify where else in the MIMA Peoples is authorized to restrict the flow or discontinue the taking of gas temporarily.

b. Are there any restrictions on the time periods during which Peoples may restrict the flow or discontinue the taking of gas pursuant to Section 6.01 or any of the provisions identified in your response to a. above? If so, please specify the provision(s) and the associated restriction(s). If not, please explain why not for each such provision.

Answer: a. Sections 6.04, 7.02, 13.04, Appendix A 1.03, Appendix A 1.13, Appendix B 1.01, Appendix B 1.04, Appendix B 2.01

b. No specific time periods. Flows may be restricted for various operational and/or compliance reasons. And when resolved with collaboration with producers, restriction is lifted.

Submit Date: 3/11/2024

PIOGA Exhibit DMJ-4

Peoples response to PIOGA-IV-3

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-IV-003

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples' response to PIOGA-I-2.a. Re "6.04 Peoples Shut-in of Interconnect", does Peoples' authority to shut-in, or cause Producer to shut-in, (a) any Interconnect to protect the integrity and safe operation of the Peoples' System or (b) a Receipt Point for economic reasons, include lowering regulator set points and indefinitely stopping the flow of producer gas at a particular Interconnect or Receipt Point? If so, please explain why. If not, please explain why not.

Answer: Yes. Peoples may lower set points for various operational reasons such as (but not limited) to prevent line pressure buildup during low customer demands, reduce operating pressure to safely address potential hazardous leaks, isolate line segments for pipeline replacement tie-in connections, stop the flow of gas due to a line pull, etc. Peoples may also lower set points to flow additional interstate deliveries to meet pipeline and storage obligations.

Peoples Natural Gas Company LLC	:	

DIRECT TESTIMONY
OF
JAMES V. BRANT

on behalf of the

PENNSYLVANIA INDEPENDENT
OIL & GAS ASSOCIATION

Dated: March 22, 2024

Q. PLEASE STATE YOUR NAME AND BUSINESS POSITION.

A. I am James V. Brant, Vice President of Land, Rights of Way and Facilities for the Kriebel Companies.

Q. PLEASE DESCRIBE THE KRIEBEL COMPANIES.

A. The Kriebel Companies (Kriebel) are the companies independently owned by the Kriebel family that acquire natural gas reserves in western Pennsylvania for drilling and operating traditional shallow, or conventional, gas wells. These companies are: Kriebel Minerals, Inc.; Kriebel Well Services, Inc.; Kriebel Resources Co., LLC; and Kriebel Wells. The Kriebel Companies are members of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. WHAT DO YOU DO AT KRIEBEL AND WHAT IS YOUR WORK HISTORY AT KRIEBEL?

A. As the vice president of land and exploration activities for the Kriebel Companies, I manage leasing, rights-of way acquisitions, pipeline installation and any issues, division orders and farm taps. I am responsible for supervising the pipeline mapping of Kriebel wells and am also a member of Kriebel's marketing team, which is responsible for developing market options for new wells. I joined Kriebel in 1982 as a landman, responsible for obtaining oil and natural gas leases and pipeline rights-of-way along with meter taps on utilities pipelines. I was promoted to Director position in 1993 and VP in 2023. I am also a member of PIOGA's Market Development Committee and I participate in the Peoples-Producers Cooperation Committee (PPCC) meetings when I can.

Q. WHAT DO YOU DO AT KRIEBEL AND WHAT IS YOUR WORK HISTORY AT KRIEBEL?

A. As the VP of land and exploration activities for the Kriebel Companies, I manage leasing, rights-of way acquisitions and pipeline installation and any issues, division orders and

farm taps. I am responsible for supervising the pipeline mapping of Kriebel wells and am also a member of Kriebel's marketing team, which is responsible for developing market options for new wells. I joined Kriebel in 1982 as a landman, responsible for obtaining oil and natural gas leases and pipeline rights-of-way. I was promoted to director in 1993 and VP in 2023. I am also a member of PIOGA's Pipeline and Natural Gas Market Development Committee and a PIOGA representative on the Peoples/Equitable Gas Project Review Committee.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of PIOGA.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY PUC PROCEEDINGS?

A. Yes, I provided written rebuttal testimony concerning the Office of Consumer Advocate's (OCA) proposal for separate retainage charges for the then-Peoples Natural Gas Company LLC's and then-Peoples Natural Gas Company LLC – Equitable Division's distribution and gathering facilities for the recovery of lost and unaccounted for gas (LUFG) costs in the companies' 2017 purchased gas costs cases (Docket Nos. R-2017-2586310 and R-2017-2586318).

Q. WHY ARE YOU PROVIDING TESTIMONY IN THIS PROCEEDING?

A. I am providing testimony because Kriebel delivers conventional production to the Peoples Natural Gas Company LLC (Peoples) pipeline system, and I have experience with Kriebel's operations on the pipelines of all three legacy utilities that Peoples now operates as a fully integrated system – the Peoples Natural Gas Division (PNGD), comprising the legacy Peoples and Equitable Gas utilities, and the Peoples Gas Division (PGD), the former legacy TW Phillips utility.

Q. ARE YOU FAMILIAR WITH PEOPLES' TESTIMONY IN THIS MATTER?

A Yes, I am familiar with the testimony of Micheal Huwar, Edward Palombo, Dawn Folks and Ralph Zarumba concerning the issues I am addressing in my testimony.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to support certain aspects of PIOGA's positions and proposals set forth in Dan Weaver's testimony concerning Rate AGS and the Master Interconnect and Measurement Agreement (MIMA) required for service under PNGD's existing Rate AGS and Peoples' proposed Rate AGS for the PGD. Specifically, I explain how deliveries of gas into Peoples' pipelines at pressures higher than producer regulator set points on those pipelines adversely affect the ability of those producers to deliver their gas into the Peoples system. I also explain how Peoples has responded to Kriebel's inability to deliver its conventional production in that situation.

Q. WHAT ARE PRODUCER REGULATORS?

A. Producer regulators are regulators that are on the upstream side of producers' meters that measure the gas that producers deliver into a pipeline. In this case the Peoples pipeline system. For example, the Peoples Indiana Loop pipeline has a maximum operating pressure (MAOP) of 203 psig with a producer regulator set point of 185 psig. If Peoples line pressure reaches 185 psig, the regulator in my exhibit labeled 1 and 2[1] will shut the producers gas in.

Q. WHO DETERMINES THE PRESSURE AT WHICH PRODUCER REGULATORS ARE SET?

A. Peoples.

[1] PIOGA Exhibit JVB-1 (Peoples Typical Gas Purchase Meter Set).

Q. WHAT HAPPENS TO DELIVERIES OF CONVENTIONAL PRODUCTION WHEN PEOPLES ALLOWS GAS TO FLOW ON PIPELINES WITH PRODUCER REGULATORS AT PRESSURES HIGHER THAN THE PRODUCER REGULATOR SET POINTS AT THE RECEIPT POINTS?

A. The producers' gas is shut-in.

Q. WHAT IS KRIEBEL'S EXPERIENCE WITH THIS SITUATION?

A. Early in the first quarter of 2023 our production group ask me my thoughts on why we were shut-in on the Peoples Greensburg Loop being that we were in the winter months of the year. I told them that I would look into the problem and get back to them. I knew that Peoples had adjusted regulators based on where producers were on the system. Some were set at 65 psig and some were set at 70 psig.

Q. WHAT DID YOU DO AND WHAT WAS THE RESULT OF YOUR INQUIRY?

A. I placed a call to Peoples supervisor Tom Rosso based in the Greensburg office. I explained the issue we were having and he explained to me that they were bringing gas in at the Reed Station interconnect at 72 psig so as not to lose Latrobe Steel as a customer. I explained to Tom that Peoples' bringing gas in off EQT's AVC pipeline at Reed Station at a pressure higher than our regulator set points was shutting us in. I went on and said that if Peoples was going to continue bringing gas into the gathering line at 72 psig, we should be able to raise our regulator set points. Tom was very helpful and we came up with a solution to set seasonal regulator set points, adjusting for cold weather on October 30th at 75 psig and then lowering said pressures back down on April 30$^{th.}$. The solution has worked great ever since from Kriebel's point of view, and I have not received any negative feedback from Peoples.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties that affect PIOGA's interests.

VERIFICATION

I, James V. Brant, hereby state that:

The foregoing testimony, marked as PIOGA St. No. 3, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth in above.

The facts set forth above are true and correct to the best of my knowledge, information and belief, and that I expect to be able to prove the same at a hearing held in this matter.

I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

James V. Brant

SURREBUTTAL TESTIMONY
OF
D. MARC JACOBS, Jr.

on behalf of the

PENNSYLVANIA INDEPENDENT
OIL & GAS ASSOCIATION

Dated: May 3, 2024

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. I am D. Marc Jacobs, Jr., Senior Vice President of Penneco Oil Company, Inc. (Penneco) which is a producer member of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes, I submitted direct testimony on behalf of PIOGA, marked as PIOGA Statement (St.) No. 2.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is address certain subjects in the rebuttal testimony of Peoples Natural Gas Company LLC (Peoples) witness Edward Palombo, Peoples St. No. 4-R, concerning the relationship between Peoples and PIOGA and our member companies, operating conditions on the Peoples system , and water vapor content standards on the Peoples integrated pipeline system.

Q. WHAT IS YOUR RESPONSE TO MR. PALOMBO'S COMMENTS CONCERNING THE RELATIONSHIP BETWEEN PEOPLES AND PIOGA?

A. I can state that PIOGA is pleased with Mr. Palombo's confirmation of Peoples' continued commitment to maintaining and enhancing the overall long-term relationship between Peoples and PIOGA and our member producers and marketers. We fully agree that both organizations recognize and understand how local production can benefit producers, Peoples and its' customers, and the proposals in my direct testimony are intended to continue our long history of collaboration and cooperation to identify opportunities where both organizations can improve our core businesses: allow producers to deliver locally produced natural gas, and allow Peoples to manage its pipeline system to provide safe, reliable gas service to customers at an affordable price.

More specifically, my direct testimony is primarily addressing three (3) concerns: 1) maximize throughput of conventional production; 2) limit restrictions that unnecessarily hamper throughput; and 3) prevent unnecessary compliance jeopardy with the Pennsylvania Department of Environmental Protection (PA DEP) related to production and plugging wells; all while still providing Peoples with the management latitude it needs to continue to operate its system safely and reliably. In this testimony I offer clarification of two of my proposals that may have been misunderstood.

But before I get to that, I want to say that PIOGA agrees that the situation concerning one of our producer member's shut-in of a production meter on the Peoples' system due to different regulator set pressures at various delivery points, discussed by Mr. Palombo, is a prime example where Peoples and PIOGA can collaborate to mutually benefit each other and system operations. I am pleased to say that a shut-in situation involving pipeline pressure experienced by my company that I described in my direct testimony (pp.7-8) is another example. Since my testimony was served, the line pressure situation has been resolved and production is flowing through that meter, reducing the pressure build-up on this old well positioned in a housing development and preserving the well's Active Status with DEP.

Q. WHAT ARE THE PROPOSALS YOU'D LIKE TO CLARIFY?

A. To remove the jeopardy of an Active Status violation with PA DEP, I proposed that the general provision in the Master Interconnect and Measurement Agreement (MIMA) concerning Peoples authority to temporarily restrict the flow or discontinue the taking of gas, Article VI, INTERCONNECTION OPERATIONS, 6.01 Gathering Obligations, include a reasonable time period restriction: "As set forth elsewhere in this Agreement, it is expressly understood that Peoples may restrict the flow or discontinue the taking of

Gas temporarily, not to exceed nine (9) consecutive months." Mr. Palombo described my proposal as suggesting "the Commission limit the duration Peoples can restrict pressures and flows to nine months" and responded that this proposal was not reasonable because "[i]t is not practical to place a limit on the duration of the restriction since it is unknown how long it may take to resolve the operating issue."

I am clarifying two points concerning Mr. Palombo's description: I am proposing that **Peoples** make this change to its MIMA, not the Commission, and my proposal is nine (9) **consecutive** months. I am not aware of the Commission in the past having been asked to approve People's MIMA or changes to it, and the requirement that the 9 months be consecutive is important. We understand that how long it may take to resolve an operating issue is unknown, but it seems that with collaboration and cooperation, how to resolve even the most serious operating issue could be determined within 9 consecutive months. It seems unreasonable for producers to have to operate with the uncertainty of an unlimited "temporary" restriction.

Another point that requires clarification involves the consequence of an Active Status violation with PA DEP. Producers understand that plugging and abandonment of wells is a typical activity of the exploration and production business, and there is immediately a future liability for plugging and abandoning a well the day it is drilled. We are not seeking to avoid these costs or asking Peoples to be a backstop for producers to avoid these costs for any reason, and certainly not by allowing a producer to deliver unauthorized low volumes or low-quality gas to maintain a well's Active Status. We ARE seeking to avoid incurring these costs unnecessarily and prematurely, that is, before a well has ceased being productive. This clarification applies equally to my proposal to

reduce the MIMA Article X, MEASUREMENT, 10.17(a) "Low Volumes for Receipt Points" 3 Dekatherms per day average to 1 to allow these low flow but still productive wells to continue flowing.

Q. WHAT IS YOUR RESPONSE TO PEOPLES' DESCRIPTION OF PIOGA'S PROPOSAL FOR A SYSTEMWIDE WATER VAPOR CONTENT STANDARD?

Mr. Palombo states that "PIOGA is proposing that the Company relax its current standards." That is not accurate. PIOGA is requesting that the current standard on the legacy Peoples Natural Gas Company system, which has been in place for nearly 20 years, be applied systemwide. I note that Peoples did not dispute my direct testimony (p.5, lines 4-15) concerning the history of the moisture curve standard on the legacy Peoples Natural Gas Company system, including that "Peoples had achieved the perfect nexus of pressure and vapor content to manage efficient tolerances while insuring maximum, economic flow from producers." Nor did Peoples dispute my testimony that the water vapor content standards on the legacy Equitable Gas system "are nearly impossible to achieve physically due to desiccant drying properties at low pressure," and that "the economics of meeting these standards with the current and projected gas prices is completely unsustainable for conventional producers."

Q. IS THERE ANYTHING ELSE IN MR. PALOMBO'S REBUTTAL TESTIMONY YOU'D LIKE TO ADDRESS?

A. Yes. Peoples also did not respond in testimony to two (2) of my proposals: 1) the addition of an advance communication requirement and opportunity to cure to MIMA Article VI, INTERCONNECTION OPERATIONS, 6.05(c) concerning Peoples' right to remove its facilities and terminate the Exhibit governing the Receipt Point for a shut-in well; and 2) changing the MIMA Appendix B, 1.07 "Annual Measurement Equipment Testing" requirement to submit inspection reports within 30 days to submission "upon request." I

am hopeful that this indicates Peoples views these as reasonable requests and does not oppose them.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties' testimony that affect PIOGA's interests.

VERIFICATION

I, D. Marc Jacobs, Jr. hereby state that:

The foregoing testimony, marked as PIOGA St. No. 2-S, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above.

The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter.

I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

SURREBUTTAL TESTIMONY
OF
DAN WEAVER

on behalf of the

PENNSYLVANIA INDEPENDENT
OIL & GAS ASSOCIATION

Dated: May 3, 2024

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. I am Dan Weaver, President and Executive Director of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes, I submitted direct testimony on behalf of PIOGA, marked as PIOGA Statement (St.) No. 1.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is respond to the rebuttal testimony of Peoples Natural Gas Company LLC (Peoples) witness Edward Palombo, Peoples St. No. 4-R, concerning water vapor content standards, application of the Peoples Natural Gas Division (PNGD) Rate AGS to the Peoples Gas Division (PGD), and operating conditions on the Peoples system.

Q. WHAT IS PEOPLES' POSITION CONCERNING PIOGA's PROPOSAL FOR A UNIFORM WATER VAPOR CONTENT STANDARD ACROSS THE PEOPLES SYSTEM?

A. Although Peoples agrees with PIOGA that "[o]ne consistent standard is the most efficient and effective way to ensure gas quality, and reduce or prevent customer outages associated with fluids, help mitigate corrosion of pipelines and facilities, and maintain safe and reliable service to customers," Peoples opposes PIOGA's proposal for one consistent water vapor content standard across the three legacy systems that Peoples asserts it operates as an integrated pipeline system.

Q. WHAT ARE PEOPLES' WATER VAPOR CONTENT STANDARDS UNDER ITS TARIFF UNIFICATION PROPOSAL?

A. Mr. Palombo describes the current PNGD water vapor standards as a combination of the legacy Peoples Natural Gas Company and legacy Equitable Gas Company water vapor standards listed in the current consolidated PNGD Master Interconnect Measurement Agreement (MIMA), and states that Peoples "is proposing to have these standards that are currently in the MIMA also apply to producers on the PGD system so that all producers across the entire Peoples system have the same standards." (St. No. 4-R at p.3, line 15 through p.4, line 6).

Q. DOES PEOPLES' PROPOSAL RESULT IN ALL PRODUCERS ACROSS THE ENTIRE PEOPLES SYSTEM HAVING THE SAME WATER VAPOR CONTENT STANDARDS?

A. No, because as the current PNGD MIMA shows, the moisture curve applies only to the legacy Peoples Natural Gas Company system and the 40#/mmscf or 20#/mmscf water vapor standards apply only to the legacy Equitable Gas Company system.[1] Peoples initially stated that it is not proposing any change to the current water vapor standards on the PGD system, which are the same as the ALLOWABLE WATER VAPOR LEVEL (#/MMSCF) VS. LOCATION standards on the legacy Equitable Gas system.[2] But in a recent discovery response Peoples states that it agrees to apply the existing moisture curve applicable to the legacy Peoples Natural Gas Company system to the legacy Peoples Gas Division facilities, but only when producers on the PGD system are paying a gathering fee; and even though producers are paying a gathering fee on the legacy

[1] PIOGA Exhibit DW-1 (Peoples' response to PIOGA-I-6 (Peoples Division – ALLOWABLE WATER VAPOR LEVEL (#/MMSCF) VS. REGULATOR SET PRESSURE (PSI), p.7 of 8; Equitable Division - ALLOWABLE WATER VAPOR LEVEL (#/MMSCF) VS. LOCATION, p.8 of 8).

[2] PIOGA Exhibit DW-1 (Peoples' response to PIOGA-I-7 (Peoples Gas Division).

Equitable Gas system, Peoples' proposal is that he water vapor requirements "specific to the legacy Equitable facilities will remain in place."[3] So it is apparent that under both of Peoples' proposals, producers across the entire Peoples system would not have the same standards across the entire Peoples system. Under the original proposal, the legacy Peoples Natural Gas Company system would have the moisture curve standard while the legacy Equitable and legacy PGD (TWP) systems would have the different legacy Equitable Gas system standards, and under the new proposal the legacy Peoples Natural Gas Company system and legacy PGD (TWP) systems would have the moisture curve standard while the different legacy Equitable Gas system standards would remain in place. These different standards do not comport with the "the most efficient and effective way to ensure gas quality, and reduce or prevent customer outages associated with fluids, help mitigate corrosion of pipelines and facilities, and maintain safe and reliable service to customers" that, as I stated in my direct testimony,[4] PIOGA and Peoples agree upon – one consistent standard. PIOGA's proposal is the only one that does. PIOGA's proposal also avoids the problem of differential treatment for producers based upon the point of connection to Peoples' system.

Q. HOW DOES PEOPLES DESCRIBE PIOGA's PROPOSAL FOR A UNIFORM WATER VAPOR CONTENT STANDARD ACROSS THE ENTIRE PEOPLES SYSTEM?

A. The following statements in Mr. Palombo's rebuttal testimony do not accurately describe the status of PIOGA's proposed uniform moisture curve standard on the Peoples system:

[3] PIOGA Exhibit DW-9 (Peoples' response to PIOGA-X-1).

[4] PIOGA St. No. 1 at p.12, line 12 through p.13, line 3.

- The original water vapor standards and moisture curve of the legacy Peoples Natural Gas Company requested by PIOGA are not currently in effect on Peoples' system. (St. No. 4-R at p.3, lines 9-15)

- "The current PNGD water vapor standards . . . include use of the water vapor curve." (St. No. 4-R at p.3, lines 15-18)

- "PIOGA is proposing that the Company . . . revert back to legacy PNGD standards that no longer apply." (St. No. 4-R at p.4, lines 9-10)

- "The Company agrees to use of a water vapor or moisture curve to determine the allowed level of water vapor in production gas delivered to the Company facilities. The moisture curve referenced by witness Jacobs is included in the water vapor requirements in the MIMA." (St. No. 4-R at p.4, lines 13-16)

Despite contradicting each other, these statements along with Peoples new proposal in its recent discovery response show that Peoples could apply PIOGA's proposed uniform standard across its entire system without jeopardizing its ability to operate its pipeline system safely and reliably – for a price.

Q. WHAT IS PIOGA's RESPONSE TO THIS NEW PROPOSAL?

A. The new proposal shows why the language in PNGD's existing Rate AGS should be changed as PIOGA proposes. As explained in my direct testimony, the "character of service" language in PNGD's existing Rate AGS that Peoples proposes to apply to the PGD system imposes only one obligation on Peoples – to permit Appalachian producers' gas "to flow against the existing pressure in the Company's facilities" – and specifically disclaims any obligation "to lower such line pressure by compression or otherwise to accommodate receipts from local Appalachian producers." So Peoples wants producers of lower-cost, base load conventional gas that provides benefits to customers to pay additional fees for application of a water vapor content moisture curve standard that has been in place on the legacy Peoples Natural Gas Company system since 2005, without

any assurance that the additional fees would result in any change in Peoples' operation of its system to enable increased deliveries of their gas.

In Peoples' 2019 base rate case, the witness for Snyder Brothers, Inc. (SBI) explained the value to producers of the Peoples Production Enhancement Services (PES) agreements and program [also referred to as Peoples Production Enhancement Program (PEP)] I mentioned in my direct testimony:

> Peoples started its Production Enhancement Program ("PEP") in early 2002. It began as a three-year agreement with various producers on a voluntary basis, where Peoples would install and operate compression facilities to lower gathering system line pressure to allow more local gas to flow and reduce summer shut-ins. Producers who were part of this agreement paid a per thousand cubic feet ("Mcf") charge to help fund facility enhancements to Peoples' gathering system. The program was expanded in 2005 when dehydration investment was added to the types of potential PEP Program facility enhancements in order to improve local gas production quality so producers would need to do less dehydration prior to the point of entry. The program was amended and then renewed, and the PES Program is still in effect today. It is voluntary for Pennsylvania Independent Oil and Gas Association ("PIOGA") producers who choose to participate. In general, these programs helped bring more local gas into the Peoples system; however, the individual producers may not necessarily have all experienced production increases as a result of the PEP and PES Programs.[5]

Peoples' witness Joe Gregorini also explained the purpose of the PES program and the use of PES revenues:

> [T]the Peoples Division operates the PA PES program which represents a series of voluntary agreements that Peoples entered into with many, but not all, natural gas producers on the Peoples system. The voluntary PA PES program, which began in 2002, is designed to increase the flow of locally produced gas into the Peoples systems through the installation and operation of compression facilities, dehydration equipment and strategic delivery interconnections with other systems. For the HTY 12-month period ending

[5] PIOGA Exhibit DW-10, Docket No. R- 2018-3006818, SBI St. No. 1, Direct Testimony of Diane Meyer Burgraff, at p.4, line 21 through p.5, line 11. Available at https://www.puc.pa.gov/pcdocs/1758201.pdf.

September 30, 2018, Peoples recovered $7.0 million in PA PES gathering rate revenues from participating producers on the Peoples Division.[6]

Ms. Burgraff's testimony also set forth the amounts for 2012-2018 that Peoples recovered in PES program revenues and the amounts of those revenues Peoples spent on capital investments for PES program projects that would reduce gathering UFG and/or upgrade Peoples' gathering systems:

Table 1

YEAR	PES REVENUE (IN $MIL)	PES CAPITAL INVESTMENT (IN $MIL)
2012	$ 12.4	$ 0.6
2013	$11.3	$ 0.4
2014	$10.4	$ 1.2
2015	$ 9.0	$ 2.0
2016	$ 7.2	$ 0.3
2017	$ 7.2	$ 0.8
2018	$ 7.1	$ 3.0
TOTAL	$ 64.6	$ 8.3

Peoples' responses to SBI-Peoples-I-29 and SBI-Peoples-I-31 are attached to my Direct Testimony as Exhibit 1 (EDB-1).[7]

Finally, Ms. Burgraff's testimony quoted a 2015 letter from Jeffry Nehr, Vice President of Peoples Gas Supply and Business Development, showing the services producers were receiving for the PES fees they were paying:

1. Continued operation and maintenance of utility compression;
2. Negotiated water vapor standard;
3. Access to Equitrans AVC Capacity; and
4. Peoples/IOGA-PA gathering investment of $1,500,000 annually to enhance deliverability of Pennsylvania production on the Peoples system through new interconnections with the Equitable and Peoples TWP systems.

[6] PIOGA Exhibit DW-11, Docket No. R- 2018-3006818, Peoples St. No. 2, Direct Testimony of Joseph A. Gregorini, at p.20, line 21 through p.21, line 9. Available at https://www.puc.pa.gov/pcdocs/1604087.pdf.

[7] PIOGA Exhibit DW-10, SBI St. No. 1 at p.6, lines 5-16.

> Peoples' September 23, 2015, letter from Jeffry Nehr is attached to my Direct Testimony as Exhibit 2 (EDB-2).[8]

In stark contrast to the service provided to producers under PNGD Rate AGS's "only obligation" character of service provision, it is clear that the PES program provided substantial value to conventional producers.

Q. WHAT IS PEOPLES' POSITION RE PIOGA's PROPOSED RATE AGS LANGUAGE?

A. Peoples opposes any change to the language of Rate AGS and asserts that:

> Rate AGS has been developed and established so that Peoples can also provide a level of service to Appalachian producers to foster a business relationship that takes advantage of the benefits of local production gas. Gas that is produced locally presents value for producers to sustain a profitable business, while assisting Peoples in procuring natural gas for customers in a most cost-effective environment. The balance for Peoples is to accomplish this without sacrificing safe operations and reliable service. The language proposed by PIOGA aims to remove the flexibility for Peoples to make the most prudent daily operational decisions that meets this balance. To revise the language to lift the restrictions and operate the system that meets producers' expectations to freely flow conventional gas at all times, or not have the ability to adjust pressures that ensure safe operations, or shut-in meters that deliver low quality gas, is not consistent with being a prudent operator or providing reliable service.[9]

Q. WHAT IS PIOGA's RESPONSE TO PEOPLES' CLAIMS?

A. Peoples' claims are not based on an accurate description of PIOGA's proposed language or the history of Rate AGS. First of all, Peoples developed the PES program to foster a business relationship with Appalachian producers. But with all due respect to Peoples, Rate AGS was initially called "Apollo Gathering Service" and was not "developed" by the legacy Equitable Gas Company for the same purpose as Peoples' developed the PES program. As explained by Ms. Burgraff in her direct testimony in Peoples' 2019 base rate

[8] PIOGA Exhibit DW-10, SBI St. No. 1 at p.7, lines 6-18.

[9] Peoples St. No. 4-R at p.13, lines 10-21.

case, Equitable Gas first proposed Rate AGS in a 2003 proceeding seeking PUC approval to acquire the PA-North Gathering System located in its Apollo District "for use in the public service" and "so as not to allow a third party to acquire the system that could place 520 essential human needs customers at risk."[10] Ms. Burgraff explained that because Equitable Gas was in a rate moratorium until January 2006, it did not propose to raise customer rates for the increased rate base, operation and maintenance expenses, and depreciation expenses that would normally increase due to the acquisition; instead, Equitable proposed to charge producers on the pipeline system to recoup its rate base and operation and maintenance costs during the moratorium.[11] Ms. Burgraff observed that Equitable Gas reacquired gathering facilities over the period beginning in 1999 until 2004 and placed these facilities in rate base, and concluded that "[t]hese facilities were never purchased to primarily benefit producers and were instead purchased to assist in meeting Equitable's obligation to secure low cost gas for end-use customers."[12]

Secondly, PIOGA's proposed language[13] neither states nor suggests that PIOGA expects Peoples: (i) to operate its system "to freely flow conventional gas at all times;" or (ii) "not [to] have the ability to adjust pressures that ensure safe operations, or shut-in meters that deliver low quality gas." Nor would PIOGA's proposed language: (i) prevent Peoples from operating its pipeline system as described in Mr. Palombo's rebuttal testimony at p.8, line 21 through p.11, line 5; (ii) . require Peoples to allow producers' meters to operate outside the appropriate guidelines to transport local production; or (iii)

[10] PIOGA Exhibit DW-10, SBI St. No. 1 at p.2, lines 7-10.

[11] PIOGA Exhibit DW-10, SBI St. No. 1 at p.2, lines 10-15.

[12] PIOGA Exhibit DW-10, SBI St. No. 1 at p.3, line 21 through p.4, line 3.

[13] PIOGA St. No. 1 at p.7, lines 5-30.

remove the flexibility for Peoples to make the most prudent daily operational decisions to provide a level of service to Appalachian producers that fosters a business relationship that takes advantage of the benefits of local production gas, enables producers to sustain profitable businesses, assists Peoples in procuring natural gas for customers in a most cost-effective environment, and enables Peoples to accomplish all this without sacrificing safe operations and reliable service.

PIOGA served the following discovery (Set X) on Peoples concerning its claims about the effects of PIOGA's proposed language (emphasis added):

> 6. Reference Peoples Statement No. 4-R (Palombo) at p.8, line 21 through p.11, line 5. Please **identify** PIOGA's proposals that would prevent Peoples' operation of its pipeline system as described in the referenced portion of Mr. Palombo's rebuttal testimony, and **explain** how PIOGA's proposals would do so.
>
> 7. Reference Peoples Statement No. 4-R (Palombo) at p.12, lines 17-20. Please **identify** PIOGA's proposals concerning adjusting regulator set points that would require Peoples to allow producers' meters to operate outside the appropriate guidelines to transport local production.
>
> 8. Reference Peoples Statement No. 4-R (Palombo) at p.13, lines 13-18. Please **identify** the language proposed by PIOGA that would remove the flexibility for Peoples to make the most prudent daily operational decisions that meets the balance described in the referenced testimony, and **explain** how PIOGA's language would do so.
>
> 9. Reference Peoples Statement No. 4-R (Palombo) at p.13, lines 18-21. Please **identify** the language proposed by PIOGA that would remove Peoples' ability (a) to adjust pressures that ensure safe operations or (b) to shut-in meters that deliver low quality gas, and **explain** how PIOGA's language would do so.

The instructions for Set X included the following:

> (a) As used herein, "describe", "explain", "identify" and "specify" mean to set forth fully, in detail and unambiguously, each and every fact of which Peoples has knowledge relevant to the answer called for by the request.[14]

[14] PIOGA Exhibit DW-12 (PIOGA Set X to Peoples).

Peoples' response to all four of these discovery requests references: (i) my proposed Rate AGS language that, in Peoples view, provides "when and why Peoples can restrict the flow of gas or lower line pressures;" (ii) PIOGA witness Marc Jacobs' nine (9) *consecutive* month restriction concerning temporary flow restrictions and meter shut-ins for adjustments to operating pressures; and (iii) Mr. Jacobs' provision for "Peoples to make best efforts to limit flows of transmission or pipeline supplemental volumes to give conventional production flow-preference."[15] Peoples asserts that (i) and (ii) above "clearly reduce the ability for Peoples to make daily, weekly, or monthly decisions on how to operate its system most prudently and safely and provide reliable service to rate paying customers," but does not explain how these provisions do so. Likewise, Peoples asserts that (iii) above "limits Peoples from making quick and appropriate decisions on the most optimal blend of supplies to meet customer demands," but does not explain how it does so.

Thirdly, my proposed Rate AGS language is based upon terms and conditions in Section II, BUYER'S PURCHASE OBLIGATION; GAS VOLUME, Nos. 1 & 2, of the Rate GS-Gathering Service Gas Purchase Agreement (GPA) used by the PGD prior to its adoption of a MIMA in March 2017,[16] and adopts *verbatim* the 2nd paragraph of the "Character of Service" section of existing PNGD Rate AGS. As I note above, Peoples had the opportunity to explain in discovery responses how any of these proposed provisions would adversely affect Peoples' ability to operate its system in the manner described in Mr. Palombo's rebuttal testimony, but Peoples did not do so.

[15] PIOGA Exhibit DW-13 (Peoples response to PIOGA-X-6).

[16] PIOGA Exhibit DW-4 (Peoples response to PIOGA-I-2.c. at pp. 5 & 6 of 60).

Finally, Peoples response to the discovery requests quoted above states that "Peoples has contractual obligations with interstate pipelines that may impact deliveries at various points across the system, which have to factor in to where and how much gas needs to be delivered."[17] Peoples' allowing higher pressure gas to flow on its gathering pipelines because of contractual obligations with interstate pipelines, rather than to maintain the integrity of its pipeline system, diminishes the value of the gathering service by placing a higher value on these contractual obligations than on deliveries of lower-cost, base load conventional gas that provides benefits to customers. We agree with Mr. Palombo's statements that Peoples' determining "the optimal regulator set pressure that can maximize the local production AND maintain system operations at safe and reliable levels" is a challenge, and that Peoples' adjusting regulator set pressures for operational reasons to maintain system operations at safe and reliable levels, or seasonally, is unavoidable. And we agree that this does not diminish the value of the gathering service, but not because the "service is still provided to all other producer meters that are operating within the appropriate guidelines to transport local production" as Mr. Palombo asserts. In these situations, lower regulator set points are appropriate, but lower regulator set points are not appropriate for producers whose production is shut-in because Peoples is allowing higher pressure gas to flow on its gathering pipelines because of contractual obligations with interstate pipelines.

[17] PIOGA Exhibit DW-13 (Peoples response to PIOGA-X-6).

Q. WHAT IS PIOGA'S RESPONSE TO PEOPLES' REASONS FOR OPPOSING PIOGA'S RATIONALE AGAINST APPICATION OF PNGD RATE AGS TO THE PGD SYSTEM?

A. Peoples' asserts that PNGD's Rate AGS gathering fee is not based upon the classification of pipelines as gathering in accordance with the federal Department of Transportation (DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA) regulations or the Federal Energy Regulatory Commission (FERC) natural gas chart of accounts. This assertion ignores the history of Rate AGS on the legacy Equitable Gas Company system. It also ignores Peoples' justification for imposition of PNGD's Rate AGS gathering fee in Peoples 2019 base rate case and the producer retainage charges in Peoples' 2018 PGC proceedings, and for the PUC's approval of these fees and charges – producers' use of the gathering system and contribution to Peoples' recovery of gathering system costs. Ms. Burgraff's direct testimony in Peoples 2019 base rate case set forth the history of the legacy Equitable Gas Company's Rate AGS, which is the basis for PNGD's Rate AGS. As of the late 1990s the legacy Equitable Gas Company owned no gathering facilities because it had transferred all of its gathering facilities to other affiliates in years prior to that time period; Equitable began to reacquire gathering facilities in 1999 with the Carnegie Gas acquisition, then followed with the PA-North Gathering system and then acquired the Crooked Creek gathering system.[18] As stated above, the legacy Equitable Gas Company first proposed Rate AGS in a 2003 proceeding seeking PUC approval to acquire the PA-North Gathering System. Ms. Burgraff further explained that in Equitable's 2004 PGC proceeding at Docket No. R-00049154, Rate AGS — Apollo Gathering Service — became Rate AGS — Appalachian Gathering Service and the

[18] PIOGA Exhibit DW-10, SBI St. No. 1 at p.2, lines 18-19; 21-22; p.3, lines 5-8; and p.4, lines4-6.

Availability clause expanded the applicability of the rate from the Apollo District gathering pipelines to pipelines throughout Equitable's entire service territory. In Equitable's 2008 base rate case at Docket No. R-2008-2029325, Equitable's cost-of-service study showed all non-gas costs of the gathering system as assigned to producers.[19] In addition to the facts set forth in my direct testimony concerning Peoples' two 2018 purchased gas costs (PGC) proceedings,[20] Peoples' direct testimony and briefs in those proceedings clearly relied upon the classification of the Peoples-Peoples Division and Peoples-Equitable Division pipelines as gathering per the DOT/PHMSA classification of pipelines and the FERC natural gas chart of accounts classification to support its producer retainage charge:

> **Direct Testimony**
> Peoples Natural Gas is continuously challenged to reduce UFG on its pipelines that gather gas from local production wells. The gathering system comprises approximately 2,100 miles of older, low pressure pipe, much of which has provided service for producers and customers for many years and is nearing the end of its useful life. The customers are generally scattered across the gathering system in relatively rural areas and there are very few areas where there are high concentrations of customers. Since the Commission adopted regulations requiring industry-wide UFG reporting, when possible by pipeline system function, beginning in 2014, Peoples Natural Gas has segmented the loss attributable to the gathering pipelines from the loss attributable to other functional pipeline systems.
>
> The Company is proposing to charge conventional gas producers a retainage rate of 2% for gas gathered into the system. This would be the beginning of a long-term process of rationalizing the costs and the recovery of the costs of systems that were constructed primarily for the purpose of gathering gas rather than serving end use customers.[21]

[19] PIOGA Exhibit DW-10, SBI St. No. 1 at p.3, lines 3-8.

[20] PIOGA St. No.. 1 at p.8, lines 3-13.

[21] Docket No. R-2018-2645278, Peoples-Peoples Division, Peoples Natural Gas St. No. 1, Direct Testimony of Lynda W. Petrichevich, at p.9, line:23 through p.10, line 9 and p.13, lines13-17. Available at https://www.puc.pa.gov/pcdocs/1560820.pdf.

Main Brief[22]

Conventional gas producers should pay at least a portion of the UFG on the gathering systems for several reasons. First and foremost, conventional producers are the primary beneficiaries of the gathering system because it often provides the only way to move their gas to market. (pp.5-6)

[I]t is completely reasonable that the Company adheres to and applies the Commission's and PHMSA's definitions to classify pipelines. (p.18)

[T]he Company's classification of pipelines based on their primary function is consistent with FERC practice. (p.18)

The classification of pipelines should be driven by the definitions and analyses used by the Commission, PHMSA, and FERC. (p.20)

Likewise, Peoples' direct testimony in its 2019 base rate case also relied upon classification of the pipelines as gathering per PHMSA and FERC regulations to support its Rate AGS gathering fee:

Producers benefit from gathering lines because, in most cases, it is their only means to get their gas production to a market.[23]

Gathering system costs are incurred to provide a market for supplies produced by local wells and to provide cost effective gas supplies to customers. In my opinion, it is appropriate for both producers and customers to share in paying these costs.[24]

The gathering system lowers the amount of interstate pipeline capacity that is required to serve customers and lowers pipeline demand costs recovered from all sales and transportation customers. In addition, customers served directly from the gathering system receive their service from gathering pipelines and not distribution pipelines. Finally, some of Peoples Natural Gas' distribution areas are served only by local gas from the gathering systems.[25]

Producers derive substantial benefit from the gathering facilities as it is their source to a market.[26]

[24] PIOGA Exhibit DW-11, Peoples St. No. 2 at p.18, lines 11-13.

[25] PIOGA Exhibit DW-11, Peoples St. No. 2 at p.18, lines 18-23.

[26] PIOGA Exhibit DW-11, Peoples St. No. 2 at p.19, lines 1-2.

Peoples currently charges amounts to producers for gathering system costs through gathering fees on its Equitable Division and through the PA Production Enhancement Service ("PA PES") program fees on the Peoples Division.[27]

Q. WHAT IS THE SIGNIFICANCE OF THE APPLICATION OF THE FEE TO DELIVERIES INTO DISTRIBUTION AND TRANSMISSION PIPELINES?

A. Peoples' assertion that "the gathering fee is collected regardless if the pipeline is classified under DOT or FERC as distribution, transmission, or gathering has no significance. Peoples has emphasized that the vast majority of conventional gas is delivered into the gathering systems and, as shown above, the gathering fee as well as the producer retainage charges are not used for producers to contribute to the recovery of the costs of the distribution and transmission systems. When asked if PNGD pipelines not classified under DOT or FERC as gathering are included in Peoples' overall cost of gathering service, Peoples responded "no."[28] Mr. Palombo's statement that "[t]he AGS service and associated gathering fees are applied at any delivery point to help recover some of the costs to operate and maintain pipelines and facilities that receive and transport local production gas" is not an accurate statement of Peoples' justification for the fees as shown above because it omits any mention of "gathering" pipelines and facilities. His statement that "Peoples believes this is a fair and equitable sharing between customers and producers for recovery of total gathering cost of service" is an accurate statement of Peoples' recovery of costs to which the gathering fees contribute.

[27] PIOGA Exhibit DW-11, Peoples St. No. 2 at p.19, line 22 through p. 20, line 1.

[28] PIOGA Exhibit DW-14 (Peoples response to PIOGA-X-4).

Q. WHAT IS THE SIGNIFICANCE OF THE RATE INCREASE PROPOSED IN THIS CASE WITH RESPECT TO THE APPLICATION OF THE PNGD RATE AGS GATHERING FEE TO THE PGD SYSTEM?

A. It has no significance because the gathering fee is not a cost of service-based rate. Mr. Palombo's statement that "[u]nder PIOGA's alternative proposal [for a reduced gathering (PNGD system) or transportation (PGD system) fee], producers would not bear any of the rate increase proposed in this case" and Peoples belief "that producers should pay some portion of rising costs that drive this proceeding" are simply not applicable. When asked to identify the portions of the (a) rate increase proposed in this proceeding and (b) rising costs that drive this proceeding that are attributable to producers are included in the total gathering cost of service, Peoples simply referred to the increased cost of gathering service in this case compared to the cost of gathering service in the 2019 base rate case.[29] While this information is not fully responsive to the questions, the increase could be explained by the inclusion of the PGD pipelines that are not classified as gathering but that Peoples asserts "function more like gathering than distribution." But if pipelines "function more like gathering than distribution" they should be classified as gathering under the "modified primary function test," which Peoples argued in its 2018 PGC cases is determinative, as stated above.

Q. WHAT IS THE SIGNIFICANCE SOME LEGACY TW PHILLIPS PIPELINES HAVING BEEN CLASSIFIED AS GATHERING IN THE PAST?

A. In response to my testimony that the PGD system can't have a "gathering" fee when it has no pipelines classified as gathering per DOT and FERC regulations, Peoples states that the "PGD (legacy TW Phillips) did in fact have DOT classified gathering and

[29] PIOGA Exhibit DW-15 (Peoples response to PIOGA-X-5).

production pipelines but reclassified them to distribution as part of segmenting business functions prior to their acquisition by Peoples." This reclassification occurred in 2001,[30] and Peoples acquired the legacy TW Phillips system in 2011. That the PGD system had some pipelines classified as gathering in the past provides no support for application of PNGD's Rate AGS to the PGD system because these pipelines are not now classified as gathering. Peoples had over 12 years to reclassify these pipelines as gathering if indeed they "function more like gathering than distribution," but Peoples did not do so. Finally, Mr. Palombo's statement that the pipelines reclassified from gathering to distribution "have been discussed in testimony and identified as the pipelines that 'function more like gathering than distribution' in receiving and transporting local production gas" is confusing in view of a Peoples discovery response. When asked if PGD pipelines that were reclassified by TW Phillips from gathering to distribution prior to Peoples' acquisition of the legacy TW Phillips system are included in Peoples' overall cost of gathering service, Peoples responded "no."[31]

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties that affect PIOGA's interests.

[30] PIOGA Exhibit DW-16 (Peoples response to PIOGA-X-3-Revised).

[31] PIOGA Exhibit DW-14 (Peoples response to PIOGA-X-4).

VERIFICATION

I, Dan Weaver, hereby state that:

The foregoing testimony, marked as PIOGA St. No. 1-S, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above.

The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter.

I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Dan Weaver

PIOGA Exhibit DW-9

Peoples' response to PIOGA-X-1

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-X-001

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4-R (Palombo) at p.4, lines 13-16. Does Peoples agree to the use of a water vapor or moisture curve to determine the allowed level of water vapor in production gas delivered to all of the Company facilities? If not, please explain why not.

Answer: Peoples agrees to use the existing moisture curve in the PNG MIMA for production on the legacy Peoples Natural Gas Division (PNGD) facilities, and will apply it to the legacy Peoples Gas Divisions (PGD or TWP) facilities once PGD is paying a gathering fee. The water vapor requirements in the current PNGD MIMA specific to the legacy Equitable facilities will remain in place.

PEOPLES NATURAL GAS COMPANY, LLC	:	

DIRECT TESTIMONY OF DIANE MEYER BURGRAFF
ON BEHALF OF
SNYDER BROTHERS, INC ("SBI")

I. WITNESS BACKGROUND

Q. PLEASE STATE YOU NAME AND BUSINESS ADDRESS.

A. My name is Diane Meyer Burgraff. My address is 37 Whittaker's Mill Road, Williamsburg, VA 23185.

Q. PLEASE DESCRIBE BY WHOM YOU ARE EMPLOYED AND IN WHAT CAPACITY.

A. I am an independent consultant employed by Snyder Brothers, Inc., VEC Energy LLC, and Snyder Armclar Gas Co., LP (collectively, "SBI").

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE

A. Please see Attachment A to this testimony.

Q. PLEASE DESCRIBE THE PURPOSE OF THIS TESTIMONY.

A. The purpose of this testimony is to explain the reasons why Rate AGS as proposed should be rejected and, in the alternative, to make recommendations as to how Rate AGS should be changed if approval for some form of Rate AGS is to occur.

II. HISTORY OF RATE AGS

Q. PLEASE DESCRIBE THE HISTORY OF RATE AGS.

A. Rate AGS, initially called Apollo Gathering Service, was proposed for the first time in Equitable Gas Company's ("Equitable" or "Equitable Division") April 1, 2003 Application filing at Docket No. G-00031009, for approval to acquire gathering facilities in Armstrong and Indiana Counties from its affiliate, Equitable Field Services. Equitable referred to the facilities as the PA-North Gathering System, even though Equitable was serving end-use customers from the system. Equitable explained in the Application filing that the acquisition was (a) for use in the public service and (b) was needed so as not to allow a third party to acquire the system that could place 520 essential human needs customers at risk. Equitable did not propose to raise rates to its customers due to the acquisition but stated that normally rate base, operation and maintenance expenses, and depreciation expenses would increase. Equitable was in a rate moratorium until January 2006, so it could not raise base rates. Instead, it proposed to charge producers along the pipeline system route (which was limited to its Apollo District) to recoup its rate base and operation and maintenance costs.

The rate, Apollo Gathering Service, changed dramatically by way of a one-paragraph mention at the very end of the testimony of Mr. Narkevic in 1307(f) testimony in 2004 at Docket No. R-00049154, when Rate AGS—Apollo Gathering Service—became Rate AGS—Appalachian Gathering Service. While described in testimony of Mr. Narkevic as a minor wording change to the Rate AGS tariff page, in reality the wording change was not minor at all. The Availability clause on the tariff page expanded the applicability of the rate from the Apollo District to Equitable's entire service territory, and the rate schedule was renamed. Thus, Rate AGS—Appalachian Gathering Service—was born in a proceeding

where no party affected by the wording change and the expanded applicability of the rate was a party to the case, namely producers.

Prior to that 2004 Equitable 1307(f) case, Equitable owned no gathering facilities as of the late 1990's because it had transferred all of its gathering facilities to other affiliates in years prior to that time period. Equitable began to reacquire gathering facilities in 1999 with the Carnegie Gas acquisition, then followed with the aforementioned PA-North Gathering system in 2001, and then acquired the Crooked Creek gathering system sometime between 2003-2006. In Equitable's 2004 1307(f) case at Docket No. R-00049154, Equitable proposed the six-year amortization of $6.6 million related to five capital improvement projects for their newly acquired gathering system and to recover those costs from system supply customers as gas-related demand costs. This project was called the Northern Asset Optimization Project or "NAOP." This was proposed in the same proceeding when Mr. Narkevic was expanding Rate AGS. Mr. Quinn, for Equitable in that proceeding, stated in his Rebuttal Testimony that "the vast majority of the benefits associated with the project (the NAOP) will accrue to PGC ratepayers." Rebuttal Testimony of John M. Quinn, Page 10, Lines 1-2, *Pennsylvania Public Utility Commission, et al. v. Equitable Gas Company* at Docket Nos. R-00049154 and R-00049154C0001 (June 21, 2004). All of the governmental parties were opposed to recovery of the NAOP non-gas costs through gas cost rates in that case and believed that all of those costs should be in base rates and recovered from end-use customers. None of the governmental parties mentioned producers as a party that should pay for the NAOP investment. Over the period beginning in 1999 until 2004, Equitable acquired gathering facilities. Why would a public utility buy gathering facilities to primarily benefit producers and place these facilities in rate base? The simple answer is they did not buy these systems

to benefit producers. These facilities were never purchased to primarily benefit producers and were instead purchased to assist in meeting Equitable's obligation to secure low cost gas for end-use customers.

Equitable continued Rate AGS in its tariff when it filed and settled its 2008 base rate case at Docket No. R-2008-2029325. In Equitable's 2008 base rate case, Equitable's cost-of-service study showed all non-gas costs of the gathering system as assigned to producers. In a span of four years, Equitable had completely changed its story about who was responsible for gathering system costs.

Thus, Rate AGS, which began the practice of charging producers for non-gas costs associated with a gathering system, came to be during a rate moratorium as a way to enable Equitable to recover its costs of acquiring a gathering system serving 520 residential customers in the Apollo District, who should have been responsible for the costs. It took hold in a case where no producer was represented. It lives on because of settlements. It has never been a rate litigated to conclusion in any base rate case and has stayed in Equitable's tariff simply because of a settlement among parties in its 2008 base rate case.

III. HISTORY OF THE PRODUCTION ENHANCEMENT SERVICES PROGRAM

Q. WHILE EQUITABLE WAS EXPANDING RATE AGS, WHAT WAS PEOPLES DOING IN TERMS OF ITS GATHERING SYSTEM COST RECOVERY?

A. Peoples Gas (prior to becoming Peoples Division) was busy developing its Production Enhancement Services Program ("PES") at nearly the same time as Equitable was expanding Rate AGS. Peoples started its Production Enhancement Program ("PEP") in early 2002. It began as a three-year agreement with various producers on a voluntary basis, where Peoples would install and operate compression facilities to lower gathering system line pressure to

allow more local gas to flow and reduce summer shut-ins. Producers who were part of this agreement paid a per thousand cubic feet ("Mcf") charge to help fund facility enhancements to Peoples' gathering system. The program was expanded in 2005 when dehydration investment was added to the types of potential PEP Program facility enhancements in order to improve local gas production quality so producers would need to do less dehydration prior to the point of entry. The program was amended and then renewed, and the PES Program is still in effect today. It is voluntary for Pennsylvania Independent Oil and Gas Association ("PIOGA") producers who choose to participate. In general, these programs helped bring more local gas into the Peoples system; however, the individual producers may not necessarily have all experienced production increases as a result of the PEP and PES Programs.

Q. WAS THE PES PROGRAM ADDRESSED IN THE SETTLEMENT OF PEOPLES 2012 BASE RATE CASE AT DOCKET NO. R-2012-2285985?

A. Yes. The settlement of the Peoples' 2012 base rate case at Docket No. R-2012-2285985 addressed the PES Program as follows: Peoples was to utilize $3.8 million of the $7.6 million of PES Program revenues in excess of costs of providing Production Enhancement Services to reduce unaccounted for gas ("UFG") on Peoples' gathering system or for upgrades to Peoples' gathering system. The remaining $3.8 million of PES Program revenue in excess of costs was to be used to offset sales and transportation rates for end-use customers.

Q. HAS PEOPLES REDUCED UNACCOUNTED FOR GAS ON ITS GATHERING SYSTEM IN THE LAST SEVERAL YEARS?

A. Peoples still has an unaccounted for gas percentage on its combined gathering system of 8.9%, so it has not made much headway in that regard. Peoples' response to SBI-Peoples-I-

18 is attached to my Direct Testimony as Exhibit 1 (EDB-1). Peoples has had a UFG percentage on the gathering facilities of close to 9% or over 9% since 2016, and it is not certain whether they separately measured gathering system UFG prior to that time, but high levels of gathering UFG have been an issue for Peoples for many years.

Q. WHAT AMOUNTS HAS PEOPLES RECOVERED IN PES PROGRAM REVENUES OVER THE YEARS SINCE ITS INCEPTION, AND WHAT HAS IT SPENT ON CAPITAL INVESTMENTS FOR PES PROGRAM PROJECTS THAT WOULD EITHER REDUCE GATHERING UFG AND/OR UPGRADE ITS GATHERING SYSTEM?

A. Peoples was only able to provide information from the years 2012-2018 for both revenue and capital investment, as shown below. Information prior to 2012 was not readily available, according to Peoples.

Table 1

YEAR	PES REVENUE (IN $MIL)	PES CAPITAL INVESTMENT (IN $MIL)
2012	$ 12.4	$ 0.6
2013	$11.3	$ 0.4
2014	$10.4	$ 1.2
2015	$ 9.0	$ 2.0
2016	$ 7.2	$ 0.3
2017	$ 7.2	$ 0.8
2018	$ 7.1	$ 3.0
TOTAL	$ 64.6	$ 8.3

Peoples' responses to SBI-Peoples-I-29 and SBI-Peoples-I-31 are attached to my Direct Testimony as Exhibit 1 (EDB-1).

Q. DID PEOPLES SPEND ANY OF THE PES DOLLARS ON OPERATION AND MAINTENANCE EXPENSES?

A. In response to discovery at SBI-Peoples-I-31 (EDB-1), Peoples stated that some examples of expense items using PES Program revenues include compression rentals, engine overhauls, pipeline pigging, and field equipment communications.

Q. WHAT ARE PRODUCERS GETTING IN EXCHANGE FOR THE PES FEES THEY ARE PAYING?

A. In Peoples' September 23, 2015, letter from Jeffry Nehr, Vice President of Peoples Gas Supply and Business Development, the following services were to be continued from the prior PES Agreement:

1. Continued operation and maintenance of utility compression;
2. Negotiated water vapor standard;
3. Access to Equitrans AVC Capacity; and
4. Peoples/IOGA-PA gathering investment of $1,500,000 annually to enhance deliverability of Pennsylvania production on the Peoples system through new interconnections with the Equitable and Peoples TWP systems.

Peoples' September 23, 2015, letter from Jeffry Nehr is attached to my Direct Testimony as Exhibit 2 (EDB-2).

Q. LOOKING AT TABLE 1 ABOVE SHOWING PES PRORGAM REVENUES AND CAPITAL INVESTMENT, IS IT FAIR TO SAY THAT THE PES PROGRAM WAS BENEFICIAL TO PEOPLES MORE SO THAN FOR PRODUCERS OR END-USE CUSTOMERS?

A. Yes. The PES Program clearly generated revenue well in excess of capital expenditures (even factoring in a rate design credit to other customer classes), and so it appears that it benefited Peoples' owners more than it did the producers or end-use customers.

Q. DID PEOPLES OBTAIN PAPUC APPROVAL TO CHARGE PRODUCERS FOR RETAINAGE ON THE GATHERING SYSTEM IN PEOPLES' 2018 1307(F) CASE?

A. Yes. Ironically, after all of these years of Peoples collecting a sizeable amount of PES Program revenue from producers with the stated goal of the PES settlement in the 2012 base rate case to use funds, specifically $3.8 million, to improve UFG on the gathering system and upgrade the gathering system, Peoples prevailed in the 2018 1307(f) proceeding at Docket No. R-2018-264527 in its argument that producers should now help fund the UFG problem on the Peoples gathering system through an additional approach: retainage. Rate GS (Gathering Service) was approved by the PAPUC as an addition to Peoples' tariff in the fall of 2018, at the conclusion of Peoples' 2018 1307(f) case, to allow the recovery of 2% retainage on conventional well production entering the Peoples system through a gathering or distribution line. Peoples Gas Division's currently approved Rate GS, Equitable Gas Division's currently approved Rate AGS, and the proposed Rate AGS combining the Peoples and Equitable Divisions are attached to my Direct Testimony as Exhibit 3 (EDB-3).

It seems that Peoples continues to look to others to blame and to charge for its high gathering system UFG. It should be Peoples owners, and not the producers, absorbing at least 2% of

the retainage on the gathering system as their share of the responsibility for the ongoing high levels of UFG that are still not addressed.

IV. PEOPLES PROPOSAL IN THIS PROCEEDING

Q. PLEASE DESCRIBE PEOPLES CURRENT APPROACH FOR RECOVERY OF THE NON-GAS COSTS RELATED TO THE GATHERING SYSTEM.

A. Currently Peoples (Peoples Division and Equitable Division) have a variety of ways they are recovering non-gas costs related to gathering facilities. For the Equitable Division, there is in place Rate AGS (Appalachian Gathering Service, attached hereto as Exhibit 3 (EDB-3)), a fully negotiated rate, which recovers all or some of Equitable Division's non-gas gathering system costs. For the Peoples Division, there are two methods for recovery of gathering system non-gas costs. First, the PES Program recovers from some producers, on a voluntary basis, a portion of non-gas gathering system costs. PES is not a tariffed service. It is an agreement with a portion of the PIOGA-member producers. Second, there are sales service and transportation rates on the Peoples Division system that recover the remaining portion of non-gas gathering system costs. Note that Peoples' currently approved Rate GS (attached hereto as Exhibit 3 (EDB-3)) is only for recovery of retainage and not non-gas costs.

Q. WHAT IS PEOPLES PROPOSING IN THIS PROCEEDING WITH RESPECT TO GATHERING SYSTEM NON-GAS COST RECOVERY?

A. Peoples is proposing a two-pronged combined Rate AGS to be effective for both the Peoples and Equitable Divisions. The first prong, Rate AGS applicable to both Peoples and Equitable Division conventional gas production, has a minimum and a maximum rate and is indexed to gas supply prices. The second prong of the Rate AGS proposal is applicable to production from non-conventional sources (Marcellus shale and Utica shale gas and landfill gas). For

gas from unconventional sources, Peoples is proposing a fully negotiated rate with no maximum or minimum. This proposed two-prong Rate AGS will, as proposed, recover approximately one-third of the non-gas gathering system costs from unconventional producers at a negotiated rate and from conventional producers at the proposed minimum rate. Those non-gas costs, not recovered through Rate AGS, were allocated to sales and transportation customers. Those costs are about two-thirds of the non-gas costs of the gathering system. The PES agreement for the Peoples Division is proposed to be eliminated.

Q. SINCE THE EQUITABLE DIVISION ALREADY HAD IN PLACE A RATE AGS RECOVERING GATHERING SYSTEM NON-GAS COSTS, IS IT PEOPLES PROPOSAL IN THIS CASE TO UTILIIZE THE EXISTING TARIFF LANGUAGE ALREADY IN THE EQUITABLE RATE AGS TARIFF AND MAKE IT APPLICABLE TO ALL PEOPLES AND EQUITABLE PRODUCERS?

A. No. The existing Rate AGS rate (attached hereto as Exhibit 3 (EDB-3)) in the Equitable tariff is applicable to gas delivered into the gathering system or the distribution system. Equitable's tariff does not address gas coming to the transmission system. Gathering and distribution systems are generally lower pressure systems and typically the gas entering those systems would be from conventional production wells. Peoples new proposed Rate AGS (attached hereto as Exhibit 3 (EDB-3)) is expanded to include all Pennsylvania gas including non-conventional supplies entering any delivery point on its pipeline system including transmission lines. Also, unlike the existing Rate AGS for Equitable, which is a fully negotiable rate, the new proposed Rate AGS differs in other ways such as it has a maximum and minimum rate for conventional supplies and an indexing mechanism.

V. COST ALLOCATION

Q. HAS THE PAPUC EVER APPROVED RECOVERY OF NON-GAS GATHERING SYSTEM COSTS FROM ANY ENTITY, OTHER THAN END-USE CUSTOMERS, THROUGH A FINAL ORDER WHERE THE ISSUE WAS LITIGATED?

A. No, not to my knowledge. Mr. Gregorini discusses in Peoples Statement No. 2 on Page 37, Lines 11-13, that the Commission approved a gathering service tariff and fee structure for Equitable before its merger with Peoples. The approval of the gathering tariff by the Commission was as part of a settlement among the parties, which involved a negotiation and was not as a result of a fully litigated case as to Rate AGS. I am not aware of any utilities in Pennsylvania other than the Peoples Companies (Peoples, Equitable, and TW Phillips) that have gathering investments in local distribution company ("LDC") rate base.

If the PAPUC were to order rate base cost recovery from producers in this proceeding, that decision would serve to redefine the word "public" in public utility service to include producers as part of the public and redefine rate base as property used and useful in the public service including service to producers. Producers would become public utility customers.

Q. IS PEOPLES' COST ALLOCATION TO CUSTOMER CLASSES CONSISTENT WITH ITS COST ALLOCATION IN PRIOR PEOPLES AND EQUITABLE BASE RATE CASES WHEN MR. FEINGOLD SERVED AS A WITNESS?

A. No. Mr. Feingold has served as a Peoples witness on cost allocation studies dating back to the 1980s and served as the cost allocation and rate design witness in Peoples' 1983 base rate case at Docket No. R-832315 and as the rate design witness in Peoples' 1986 base rate case at Docket Nos. R-850270 and R-860310. He has had knowledge of then Peoples Gas' (now

Peoples Division) pipeline system including its gathering system for more than thirty-five years. He also recommended, while serving as the rate design witness for Peoples in its 1986 base rate proceeding, that Peoples introduce a gathering system transportation rate for Peoples to recover gathering system costs from end-use customers who used the gathering system for transporting gas. Then, as today, there were and still are end-use customers served directly from the gathering system. Mr. Feingold did not, in the 1986 case, recommend charging producers for a portion of gathering system costs. His approach to gathering system cost allocation in base rate case class cost allocation studies has changed since then from case to case and from year to year, but the function of Peoples' gathering system has not changed at all.

Q. DID MR. FEINGOLD SERVE AS THE COST-OF-SERVICE WITNESS FOR EQUITABLE IN ITS 2008 BASE RATE CASE AT DOCKET NO. R-2008-2029325?

A. Yes.

Q. DID MR. FEINGOLD DO A COST ALLOCATION STUDY THAT INCLUDED, AS A CUSTOMER CLASS, RATE AGS IN EQUITABLE'S 2008 BASE RATE CASE AT DOCKET NO. R-2008-2029325?

A. Yes. In that proceeding, Equitable proposed a negotiable gathering system rate. Mr. Feingold performed a class cost-of-service allocation study using Rate AGS producer ratepayers as a class of customer. He directly assigned all gathering system costs to producers under Rate AGS in his 2008 study, even though there were over 3,600 end-use customers served from the gathering system, and he was aware of that when he supported that recommendation.

Q. DID MR. FEINGOLD SERVE AS THE COST-OF-SERVICE WITNESS FOR PEOPLES IN ITS 2012 BASE RATE CASE AT DOCKET NO. R-2012-2285985?

A. Yes.

Q. DID MR. FEINGOLD USE THE SAME APPROACH FOR COST ALLOCATION FOR GATHERING SYSTEM COSTS IN PEOPLES' 2012 BASE RATE CASE AT DOCKET NO. R-2012-2285985 THAT HE USED IN EQUITABLE'S 2008 BASE RATE CASE?

A. No, he did not. He used a completely different approach. In Peoples' 2012 base rate case, he did not have a producer class of customer in his class cost-of-service study as he did in the Equitable case in 2008. He instead used PES Program revenues of $7.65 million to credit to the cost-of-service before doing the class cost-of-service allocation study for end-use customer classes. While that approach in the 2012 case provides end-use customers with a credit for producer contributions to costs of the gathering system, it does not show the class cost-of-service for the producer class of customer.

Q. WHAT HAS MR. FEINGOLD DONE IN THE INSTANT COMBINED PROCEEDING REGARDING ALLOCATION OF GATHERING SYSTEM COSTS TO PRODUCERS?

A. Mr. Feingold has indicated through response to SBI-Peoples-I-4 (attached hereto as Exhibit 1 (EDB-1)) that producers should be held responsible for some or all of the costs of Peoples' gathering system. He did not, however, do a class cost-of-service study that included customer class Rate AGS in this proceeding as he did for Equitable's last base rate case when he was the cost allocation witness. He explains in Peoples Statement No. 11, Page 9, Line 19 through Page 10, Line 3, that it would not be helpful in rate design since rates for the class

were being developed using value of service principles. He instead used the same approach as he used in Peoples' 2012 base rate case by crediting Rate AGS producer revenues to the class cost-of-service study for end-use customer classes. This approach does not show a producer class in the class cost-of-service study.

Q. DID MR. FEINGOLD, USING PRINCIPLES OF COST CAUSATION, ASSIGN GATHERING SYSTEM COSTS TO A PRODUCER CLASS OF CUSTOMERS IN EQUITABLE'S 2008 RATE CASE, WHEN EQUITABLE PROPOSED THAT RATE AGS BE NEGOTIABLE OR VALUE-OF-SERVICE BASED?

A. Yes. The approach used in 2008 for Equitable for cost allocation by Mr. Feingold is completely contrary to his rationale and approach in this proceeding where he argues that a cost-of-service study for the producer class of customers should not be performed because it would be of no value since the rates for the producer class of customers are being set using value-of-service principles. Peoples Statement No. 11, Page 9, Lines 21-23 and Page 10, Lines 1-3, *Pennsylvania Public Utility Commission, et al. v. The Peoples Natural Gas Company LLC* at Docket No. R-2018-3006818 (Jan. 28, 2019). A fully negotiable rate using value of service principles was the proposal in Equitable's 2008 case when Mr. Feingold did perform a class cost-of-service study that included the producer customer class.

Q. HAS MR. FEINGOLD SHOWN CONSISTENCY IN HIS COST-OF-SERVICE OPINIONS AND STUDIES OVER THE LAST THIRTY-FIVE YEARS FOR NON-GAS GATHERING SYSTEM COSTS OWNED BY A PENNSYLVANIA LDC?

A. No. He has assigned no non-gas costs of the gathering system to producers (Peoples' 1983 and 1986 base rate cases), then all non-gas gathering system costs to producers (Equitable's 2008 base rate case), and then some of the non-gas costs to producers (Peoples' 2012 and

2019 base rate cases). Mr. Feingold's position on both producer responsibility for gathering system costs and appropriateness of inclusion of a class cost-of-service study for a producer class of customers has varied from case to case over the last 35 years with no explanation for his changing opinion. In Mr. Feingold's testimony, he explains that the most important considerations he relies on for determining cost allocation methodologies are "cost causality," a sound rationale and theoretical basis, "stability of results over time," and "logical consistency and completeness." Peoples Statement No. 11, Page 19, Line 13 through Page 20, Line 6, *Pennsylvania Public Utility Commission, et al. v. The Peoples Natural Gas Company LLC* at Docket No. R-2018-3006818 (Jan. 28, 2019). The inconsistency demonstrated in allocation of non-gas gathering system costs over the last thirty-five years falls short of incorporating those considerations.

What has remained consistent in the last thirty-five years is the function of the gathering system.

Q. IS MR. FEINGOLD CORRECT THAT VALUE-OF-SERVICE PRINCIPLES ARE BEING USED IN THIS PROCEEDING BY PEOPLES TO SET RATE AGS?

A. No, not for conventional gas supplies. Rate AGS will apply the same indexed rate to all producers supplying gas from conventional wells. Rate AGS rates will not be set based on producer negotiation relative to conventional gas supplies or any consideration of individual producers' options for other markets for their gas supply. Peoples suggests that its minimum rate of $0.26 per Mcf was, in part, based on discussions with PIOGA, but a one-size fits all minimum rate is hardly the same as a value-of-service based rate since the value-of-service to each producer may, and likely will, vary depending on a producer's alternatives. Mr. Feingold has changed the definition of "value-of-service" from one that looks at the

producer's options and costs for marketing its supply to one that looks at the wholesale market price for gas.

Q. IN YOUR OPINION, SHOULD PRODUCERS BE RESPONSIBLE FOR THE NON-GAS COSTS OF PEOPLES' GATHERING SYSTEM?

A. No. The gathering system was installed to move local gas, including at the time Peoples-owned production wells, to end-use customers. The gathering system is still serving the same function that it has served since it was installed and is still serving the same function it did thirty-five years ago when Mr. Feingold had a completely different opinion on who should pay for it. Mr. Feingold can argue that times were different then, but Peoples was serving retail and transportation customers in 1986 just as it does today, and many of the same gathering lines are still moving gas to those end-users, some of whom are probably still in the same homes or businesses.

VI. MAXIMUM AND MINIMUM RATES FOR RATE AGS

Q. WHAT IS PEOPLES' PROPOSED MAXIMUM RATE FOR RATE AGS AND HOW WAS IT DEVELOPED?

A. Peoples is proposing the maximum for Rate AGS for conventional gas supplies be set at the full cost for the gathering system plus allocated overheads on a per Mcf basis. Mr. Feingold calculates the total cost of the gathering system to be $0.76 per Mcf. Recall that Mr. Feingold, in this proceeding, did not opt to do a class cost-of-service study that included the class of customer called producers, so the producer class cost-of-service study cannot be used as a guide to set rates for producers. The selection of the entire full cost of the gathering system on a per Mcf basis as the maximum rate for Rate AGS ignores the fact the Peoples has proposed in this case to recover two-thirds of the cost of the gathering system from end-

use customers. Any movement upward in Rate AGS by way of Peoples' proposed indexing mechanism from the minimum rate of $0.26 cents per Mcf (used in the proof of revenue) toward the maximum rate of $0.76 per Mcf, will result in over-recovery of non-gas costs of the gathering system. Taken to the extreme, if Rate AGS moved all the way to the maximum rate of $0.76 per Mcf as a result of the gas price index feature of proposed Rate AGS, Peoples would recover costs as follows: two-thirds of the non-gas gathering system costs from end-use customers as designed in the proof of revenue and then an additional almost 100% of the costs of the gathering system from producers at the $0.76 per Mcf maximum rate, resulting in an over-recovery of the costs of the gathering system by close to two-thirds.

Q. WHAT IS YOUR OPINION AS TO THE MAXIMUM RATE PROPOSAL FOR RATE AGS?

A. It is my opinion that the recommendation for the maximum rate as proposed by Peoples be rejected. Peoples, the party with the burden of proof in this proceeding, has offered no justification for the reasoning as to why the maximum rate for Rate AGS is reasonable. The only explanation offered by Peoples is to describe how the rate was mathematically derived and no explanation as to why it makes sense. The Rate AGS maximum rate can result in significant cost over-recovery. This is not a reasonable result and this proposal should be rejected. Peoples' owners are the beneficiaries of this proposal and not producers or end-use customers.

Q. IS THERE AN ERROR IN THE MAXIMUM RATE CALCUATION THAT HAS BEEN CORRECTED BY MR. FEINGOLD?

A. Yes. In response to SBI-Peoples-II-24 (attached hereto as Exhibit 1 (EDB-1)), I questioned Mr. Feingold's inclusion of purchased gas costs as a component of cash working capital in

the maximum gathering system rate proposed. Mr. Feingold corrected his total gathering cost-of-service in that discovery response in response to my inquiry, but Peoples has not yet shown any correction to the proposed maximum rate.

Q. TURNING TO THE MINIMUM RATE PROPOSAL FOR RATE AGS FOR CONVENTIONAL GAS SUPPLY, WHAT IS PEOPLES PROPOSING?

A. Peoples is proposing a minimum rate of $0.26 per Mcf.

Q. HOW DID PEOPLES ARRIVE AT ITS MINIMUM RATE?

A. Peoples stated, in response to SBI-Peoples-I-7 (attached hereto as Exhibit 1 (EDB-1)), its rationale with no specifics as to why the rate level of $0.26 was chosen for the minimum rate as proposed for conventional gas supply. Peoples mentions "discussions with PIOGA" in its response to SBI-Peoples-I-7 as a reason for the rate level. For a rate level that seems so specific at $0.26, there is no justification for the rate level itself provided by Peoples, the party who bears the burden of proof in this proceeding.

Peoples' response to SBI-Peoples-I-7 suggests the $0.26 rate minimum is based on the value-of-service to producers. Mr. Feingold, in his Direct Testimony, offers his view on value-of-service principles in rate design by quoting the NARUC Gas Rate Design in Peoples Statement No. 11, Page 38, Lines 5-7, *Pennsylvania Public Utility Commission, et al. v. The Peoples Natural Gas Company LLC* at Docket No. R-2018-3006818 (Jan. 28, 2019):

> When using value of service principles, we normally look not to the cost of providing the service, but rather to the alternatives available to the customer.

Peoples has not offered any studies that attempt to quantify the alternatives available to producers, that would be useful to guide Peoples in determining the value-of-service to producers for rate setting purposes. The alternatives that would be available to producers mentioned, but not quantified, in Peoples' response to SBI-Peoples-I-51 (attached hereto as

Exhibit 1 (EDB-1)) include shutting in production, reworking of wells to increase production, or laying pipelines to alternative markets. All of these alternatives are producer-specific, and a $0.26 rate for all conventional producers certainly is not a value-of-service based rate.

Peoples has provided nothing to support its $0.26 minimum rate other than vague references to discussions with PIOGA and its own judgement.

My opinion, however, after review of discovery in SBI-Peoples-I-9 (attached hereto as Exhibit 1 (EDB-1)), is that it appears that Peoples' PES Program customers are paying an average fee of $0.26 per Mcf at present rates, so that average PES Program fee is possibly the source of the $0.26 minimum rate for Rate AGS proposed by Peoples for conventional supplies. It would be helpful if Peoples would explain its rationale if this is, in fact, the source of the $0.26 proposed rate. An average fee of $0.26 in the PES Program means that some producers are paying a fee lower than $0.26 and some are paying no fee at all because they opted out of the voluntary program.

Q. DID YOU REQUEST INFORMATION IN SUPPORT OF THE $0.26 RATE MINIMUM FOR CONVENTIONAL PRODUCTION IN PROPOSED RATE AGS?

A. Yes. In response to discovery at SBI-Peoples-II-7 (attached hereto as Exhibit 1 (EDB-1)), I requested workpapers, contemporaneous notes, or any other documents that support the $0.26 rate proposal. Peoples responded that it took no notes that supported the $0.26 rate when the discussions with PIOGA took place and Peoples offered no other rationale.

Q. TO SUMMARIZE THE RATE AGS MAXIMUM AND MINIMUM RATE PROPOSALS, WHAT IS YOUR OPINION?

A. As to the maximum rate, if implemented as proposed, it could result in significant over-recovery of non-gas costs by recovering the same costs twice, once from producers and again

from all end-use customers, which is unreasonable. The minimum rate level has no supporting documentation as to how the level was derived or why a specific rate level represents a value-of-service to all producers.

VII. GRADUALISM AND PEOPLES' RATE DESIGN

Q. DOES PEOPLES' RATE INCREASE HAVE A DISPROPORTIONATE IMPACT ON PEOPLES' PRODUCERS AS COMPARED TO EQUITABLE'S PRODUCERS?

A. Yes. Approximately 17% of Peoples' producers who flow that gas into the Peoples system are getting more than a 150% increase, on average, in their rate as shown by Peoples' response to SBI-Peoples-II-28 (attached hereto as Exhibit 4 (EDB-4)). The impact on Equitable's producers is much less, as can be seen in Peoples' response to SBI-Peoples II-28. This rate increase for those producers getting an increase on both the Peoples and Equitable Divisions can hardly be characterized as gradual and these rate spikes could have an impact on quantity of local gas supply coming to Peoples. Producers that are getting these large increases may look to other markets for their supply. This result would be detrimental to end-use customers. This percentage rate increase is unreasonable for some producers and if this proposal is approved the rate increases to those producers getting increases needs to be adjusted to incorporate the concept of gradualism.

I recommend, if Rate AGS is approved (although I strongly recommend against its approval), for all producers getting a rate increase from a current PES Program fee, that the increase be limited to the same overall percentage increase that is applicable on average to end-use customers at the conclusion of this proceeding. For producers who are currently paying no PES Program fee at all, their increase should be set at the current straight average rate paid by all producers on the Peoples system who are getting a rate increase as a result of this

proceeding, as shown in SBI-Peoples-II-28, increased by the overall average rate increase that will be applicable to end-use customers at the end of this proceeding.

For producers who are currently paying no PES Program fee at all, the recommended increase would be set at $0.10 adjusted upward by the overall average rate increase assigned end-use customers at the conclusion of this proceeding, but that the $0.10 rate adjusted rate also be negotiable to take into consideration value-of-service to the producer and the value of the low-cost gas to the end-use customers.

VIII. INDEXING OF RATE AGS

Q. PEOPLES, IN ITS TARIFF FOR RATE AGS, REFERS TO AN INDEX OF RATE AGS TO GAS COSTS. DOES INDEXING OF NON-GAS COSTS TO A GAS PRICE INDEX MAKE ANY SENSE?

A. No, for a number of reasons that I will discuss.

First, the gathering system costs to be recovered are non-gas costs or base rate costs and do not vary with the price of gas supply.

Second, it seems that Peoples' theory for indexing the rate is that as gas prices rise, producers can afford to pay more toward gathering system non-gas costs, but there has been no evidence provided by Peoples of the value that producers place on Rate AGS service other than the explanation by Mr. Gregorini that discussions with PIOGA were in part responsible for the selection of the $0.26 minimum rate. SBI-Peoples-I-7 (EDB-1). Just because a party can afford to pay more for a service does not mean they will value it more and want to pay more for it. Peoples has offered no explanation or support for the proposal that the value a producer would place on the service would increase or decrease with the price of gas supply index. This proposed index is not related to increased investment by Peoples, but rather to its theory

that the producers who get a higher gas price for their supply will place more value on the service and be willing to pay more under Rate AGS.

Third, with respect to recovery of gathering system costs, Peoples' proposal to use an indexed rate to recover gathering system costs from producers is inconsistent with the recovery of the remainder of gathering system costs from end-use customers. Peoples has not proposed sales and transportation rates that are tied to gas price index for their share of gathering system costs.

It should be noted that the Peoples Division and Equitable Division have a DISC (Distribution System Improvement Charge) in place (Rider E to their tariffs) that allows for recovery between base rate cases of repairs, improvements, or replacement of property in certain plant accounts. Account 332 (Field Lines) and 334- (M&R Station Equipment-Purchased Gas-Meters) are among the included accounts eligible for DISC recovery. Both of these accounts are part of Gathering Plant in Service and together represent more than half of the original cost dollars in the gathering system. Peoples is therefore already getting an indexing of sorts for gathering investment, but to be clear, the DISC relates to allowed recovery of incremental capital investment made by Peoples between rate cases. Peoples' proposed index has nothing to do with that concept, but rather just permits over-recovery of costs related to plant investment already in service.

The final reason Peoples' proposed index should be rejected is that any increase in the price of gas will raise the level of Rate AGS and will result in an over-recovery of non-gas costs to the benefit of Peoples' owners and not its customers.

Q. REFERRING TO PROPOSED RATE AGS IN THE RATE SECTION OF THE TARIFF PAGE, PLEASE EXPLAIN THE 12.4% THAT IS USED ON THE TARIFF PAGE TO GET TO THE RATE AGS INDEX PRICE.

A. With respect to the derivation of the 12.4% quoted in the Rate AGS proposed tariff (attached hereto as Exhibit 3 (EDB-3)), it is just a percentage that was derived after the $0.26 minimum rate was determined. SBI-Peoples-I-49 (attached hereto as Exhibit 1 (EDB-1)). Recall that the $0.26 rate is not a rate that has any justification by Peoples other than Peoples' description that it was derived after discussions with PIOGA. The 12.4% was the percentage produced when the 12-month average Dominion South Point gas supply price was divided by the $0.26 rate.

Q. DOES PEOPLES OFFER ANY EXPLANATION OF THE RATIONALE FOR INDEXING OF RATE AGS TO GAS SUPPLY PRICES AT DOMINION SOUTH POINT?

A. In response to SBI-Peoples-I-14 (attached hereto as Exhibit 1 (EDB-1)), Mr. Gregorini stated "The applicable rate under Rate AGS is tied to the local gas market index in order to increase producer contributions as market prices increase to help offset the share of costs paid by Peoples' ratepayers."

Q. IS MR. GREGORINI CORRECT THAT PEOPLES' END-USE CUSTOMERS' SHARE OF COSTS WILL BE OFFSET IF PEOPLES' RATE AGS IS APPROVED AND THE PRICE OF GAS SUPPLY FOR DOMINION SOUTH POINT RISES?

A. No, he is not. Peoples did not propose any true-up mechanism or reconciliation mechanism in this case to accomplish what Mr. Gregorini is describing. If Rate AGS is approved as

proposed, and gas supply prices rise, it is Peoples' owners and not end-use customers that will be receiving the benefit.

Q. PLEASE SUMMARIZE YOUR OPINION ON THE RATE INDEXING PROPOSAL FOR RATE AGS.

A. The rate is ill-conceived. Non-gas costs should not be indexed, and this proposal could result in significant cost over-recovery to the benefit of Peoples' owners and to the detriment of all producers and end-use customers.

IX. RATE AGS FOR GAS PRODUCERS NOT USING THE GATHERING SYSTEM

Q. WHAT IS PEOPLES' PROPOSAL REGARDING CHARGING RATE AGS TO RECOVER NON-GAS GATHERING SYSTEM COSTS TO PRODUCERS WHO MAKE NO USE OF THE GATHERING SYSTEM?

A. As stated in the Rate AGS proposed tariff, "Gathering of natural gas from unconventional sources, including but not limited to horizontally drilled Marcellus and Utica shale gas and landfill gas, shall be negotiated and agreed to within the MIMA." The MIMA refers to the Master Interconnect and Measurement Agreement, an agreement between Peoples and a producer. It sets forth the terms and conditions for delivery of gas into the Peoples system.

Q. DOES THIS MEAN PEOPLES IS PROPOSING TO CHARGE RATE AGS TO GAS THAT IS NOT FLOWING THROUGH PEOPLES' GATHERING SYSTEM?

A. Yes. Peoples is proposing to charge a fully negotiated rate for the recovery of non-gas gathering system costs with no maximum or minimum on gas volumes coming from unconventional sources whether or not the producer actually uses the gathering system as a point of entry for the supply. In the Peoples and Equitable Divisions, the vast majority of non-conventional supplies use the distribution system (and in some cases the transmission

system) as a point of entry into the Peoples system, and not the gathering system. SBI-Peoples-I-17 and SBI-Peoples-III-10 (attached hereto as Exhibit 1 (EDB-1)). Only two non-conventional wells, both on the Equitable Division system, with an annual throughput in the Historic Test Year ("HTY") of 387,166 Mcf, flow into the gathering system. SBI-Peoples-I-14 (EDB-1). No gas from unconventional sources flows into Peoples' gathering system. Peoples is projecting to recover in the Fully Projected Future Test Year ("FPFTY"), at proposed rates, $740,603 annually from gas volumes from unconventional sources on the Equitable system and $223,169 annually on the Peoples system. SBI-Peoples-I-9 (EDB-1).

Q. DO YOU AGREE WITH PEOPLES' PROPOSAL TO RECOVER NON-GAS COSTS OF PEOPLES' GATHERING SYSTEM FROM PRODUCERS WHO DO NOT EVEN USE THE GATHERING SYSTEM?

A. No, I do not. Peoples, who has the burden of proof, has not offered any rationale at all as to why non-conventional producers not using the gathering system would bear any responsibility for paying for it.

Q. IN WHAT WAYS DOES GAS RETAINAGE HAVE A BEARING ON THIS CASE?

A. In SBI-Peoples-I-40 (attached hereto as Exhibit 1 (EDB-1)), SBI asked why producers who bring gas supplies directly into the transmission or distribution system would be charged under the new proposed Rate AGS when they make no use of the gathering system.

Peoples had a two-pronged response to that inquiry. In its first prong of the response, Peoples references SBI-Peoples-I-42 (attached hereto as Exhibit 1 (EDB-1)), which explains a PAPUC recent Order in the last Peoples 1307(f) case at Docket Nos. R-2018-2645278 and R-2018-3000236, approving a retainage charge of 2% for producers who flow gas directly into the gathering system. Peoples apparently thinks that the PAPUC Order in that

proceeding is relevant to this case regarding the issue of gas supply point of entry and use or non-use of the gathering system.

The second prong of the response to SBI-Peoples-I-40, was not responsive to the question asked because it referenced Mr. Gregorini's testimony in Peoples Statement No. 2, Page 23, Lines 16-23 and Page 24, Lines 1-3, *Pennsylvania Public Utility Commission, et al. v. The Peoples Natural Gas Company LLC* at Docket No. R-2018-3006818 (Jan. 28, 2019). Mr. Gregorini does not address in the lines referenced the issue of why producers would be charged for a gathering pipeline system that they do not use, nor does he address this important question anywhere in his testimony. Neither prong of Mr. Gregorini's response to SBI-Peoples-I-40 was responsive to the question asked.

Q. WHAT WAS DECIDED ON THE ISSUE OF RETAINAGE IN PEOPLES' LAST 1307(F) CASE THAT PEOPLES WANTS TO BELIEVE IS RELEVANT TO THE ISSUE OF CHARGING PRODUCERS FOR NON-GAS COSTS OF THE GATHERING SYSTEM WHEN THEY ARE NOT DELIVERING GAS INTO THE GATHERING SYSTEM?

A. In the last 1307(f) case, Peoples requested through a new Rate GS, a retainage percentage from producers for gas flowing into Peoples Division gathering system from *conventional* wells. The vast majority of gas from conventional wells enters the Peoples system through gathering lines. Peoples and Equitable have significantly higher unaccounted for gas on the gathering systems, 8.7% and 9.2 % respectively, than they have on the remainder of their pipeline systems. SBI-Peoples-I-18 (EDB-1). Peoples' proposal in its 2018 1307(f) case, to recover retainage from conventional producers, was described by Peoples as a way to encourage producer participation in reducing UFG on Peoples' gathering system.

Peoples argued that, since the vast majority of the gas supply from conventional wells flows into the gathering system, it was easier administratively to just have one retainage rate that applied to all conventional well gas entering the Peoples system, since only a small additional amount entered the Peoples system directly through distribution lines. It is interesting to note that Peoples made no mention of conventional well supply flowing directly into transmission lines in the 2018 1307(f) case even though Peoples has conventional supplies coming in through transmission lines.

Peoples' second argument for the insertion of a 2% retainage rate on conventional gas supply from producers in the Peoples Division tariff Rate GS was the need for consistency with the existing Equitable tariff Rate AGS. Since Rate AGS in Equitable's tariff allowed for the recovery of retainage of volumes from local gas producers, Peoples argued it wanted consistency with Equitable's tariff language for Peoples' tariff on the retainage issue. Upon examination, Peoples' proposal was not consistent with the then-effective Equitable tariff after all because the Equitable tariff had a negotiated retainage level not a specified percentage.

Peoples' third argument for the insertion of the 2% retainage charge on conventional gas supply from producers dealt with point of entry of conventional gas supplies. Peoples argued that, from a consistency standpoint, Equitable's tariff allowed for the recovery of retainage on gas supply through Rate AGS, not only for gas flowing into the gathering system but also for gas being injected directly into the distribution system. Note that Equitable's tariff does not mention gas coming into the transmission system.

The Commission agreed in its order at the conclusion of the 1307(f) 2018 case that *conventional* well supply would have the same retainage rate, set at 2%, for producers

regardless of whether the conventional supplies were entering from the gathering system or the distribution system. This is discussed on pages 70-76 of the Final Order at Docket Nos. R-2018-2645278 and R-2018-3000236 (attached hereto as Exhibit 5 (EDB-5)) in the discussion of PIOGA Exception No. 6. Rate GS was approved for insertion into the Peoples Division tariff. (EBD-3). The important point to take away from this subject is that Peoples was only granted Commission authority in its last gas cost proceeding to collect 2% retainage from producers delivering *conventional* gas supply and only on gas entering through gathering lines or distribution lines as an entry point. The Order from Peoples last 1307(f) case make no mention at all of recovering retainage on non-conventional gas supply nor does it address the transmission system as a point of entry for any supplies. Peoples' filing in accordance with the Commission's Order in the last 1307(f) case does not comply with that Order since Peoples' newly minted Rate GS tariff now states: "any party desiring to deliver conventional well supply directly into the Company's system." The tariff language as stated is overly broad and would permit deliveries into Peoples' transmission system, which was not contemplated in the Order from the 2018 1307(f) case. Peoples estimates that is has 238,736 Mcf annually coming into the transmission system that are conventional supplies. SBI-Peoples-III-10 (attached hereto as Exhibit 1 (EDB-1)). Peoples has broadened its tariff language to include transmission lines in its compliance filing from the last 1307(f) case without PAPUC approval, and it appears, in doing so, that Peoples has also opened the door for the proposal made in this proceeding. It is an example of a minor wording change with bigger, long-term implications.

Q. TURNING TO THE INSTANT PROCEEDING, HOW DOES THE 2018 PEOPLES 1307(F) ORDER HAVE ANY RELEVANCE?

A. Again, with reference to the response to SBI-Peoples-I-40 (EDB-1), Peoples uses the Order from the 2018 1307(f) case as a justification for why their proposal in the present case—to charge Rate AGS for the recovery of non-gas gathering system costs from producers on all Pennsylvania supply, both conventional gas supply and gas from unconventional sources, and regardless of point of entry into Peoples' pipelines including transmission lines—is reasonable. Peoples' 2018 1307(f) case made no mention of non-conventional gas supplies and did not address the transmission system as a point of entry. The inclusion of the distribution system as an entry point was added to help Peoples with an administrative burden issue. The case dealt with having producers who used the gathering system (conventional supplies) help contribute toward gathering system retainage to lessen the burden of gathering system UFG on end-use customers.

Now Peoples wants to use that approval from the last 1307(f) case for the 2% retainage on conventional supplies as a justification to charge to all producers of Pennsylvania supply a fully negotiable rate for recovery of non-gas gathering plant investment and related costs on all gas coming into the Peoples system (from conventional and non-conventional sources) regardless of whether the producer even uses the gathering system.

In Rate AGS as proposed (EDB-3), the tariff states:

> Gathering of natural gas from unconventional sources, including but not limited to, horizontally drilled Marcellus and Utica shale gas and landfill gas, shall be negotiated and agreed to within the MIMA.

What started as a request by Peoples in a gas cost case to expand their proposal on 2% retainage from conventional well gas supply entering the gathering system to include the

additional minimal amount of conventional gas well supply that flows directly into distribution lines, in order to ease what Peoples characterized as administrative burden, now has an entirely new dimension in this proceeding as it is being used as a justification in proposed Rate AGS to the expand point of entry of supplies to include all pipeline systems and to expand all Pennsylvania sources of supply to include both conventional and unconventional supplies. The reason put forth by Peoples in its 2018 1307(f) case, for the minor additional expansion of retainage to include the conventional supplies directly entering into the distribution system, was simply to ease an administrative burden and with a minimal impact on total retained volumes in their proposal.

Peoples' proposed Rate AGS, if approved, will impact all non-conventional gas supply delivered into the Peoples system regardless of point of entry. This new proposal is also inconsistent with the Equitable Division's existing tariffed Rate AGS, because Peoples' proposed Rate AGS applies to all supply coming in through transmission lines while Equitable's existing Rate AGS does not. (EDB-1). This seemingly minor wording change on point of entry and conventional versus non-conventional supplies is not minor at all and is a familiar tactic if we recall how Rate AGS was born as described earlier in my testimony. The convenient omission of tariff language can sometimes be as important or even more so than the language that is included.

Q. SHOULD THE ORDER IN PEOPLES' LAST 1307(F) CASE HAVE ANY BEARING ON THIS CASE OR BE CITED AS PRECEDENT IN THIS CASE?

A. No. The issue in the 2018 1307(f) Peoples gas cost case was limited to whether it was appropriate to assess retainage of conventional well gas entering into the Peoples system through a gathering line and the minimal additional conventional supply that flows directly

into a distribution pipeline, in order to reduce gathering system UFG for end-use customers. The Order in Peoples 2018 1307(f) case dealt with charging retainage of 2% to conventional well producers using the gathering system to help ease the end-user cost burden associated with high levels of gathering system UFG.

Q. SHOULD PEOPLES EXISTING TARIFF RATE GS (GATHERING SERVICE) AS IT NOW APPEARS IN PEOPLES DIVISION CURRENTLY APPROVED TARIFF BE REVISED TO CORRECT A MISTAKE?

A. Yes, to make it clear that gas is only to be retained on conventional gas supplies coming into a gathering line or a *distribution* line. The Rate GS as it presently appears in Peoples tariff does not comply with the Commission Order in Peoples' 2018 1307(f) case because it states that 2% retainage will apply to all conventional gas supplies, and it is not specific on point of entry, thus allowing for retainage on conventional supply entering through a transmission line, in violation of the Commission Order at Docket No. R-2018-2645278. Peoples did not request, and the Commission did not grant, retainage on supply coming into Peoples through a transmission line. This omission of tariff language should be corrected, especially if this incorrect and overly broad point-of- entry tariff language that now appears in Peoples Division tariff for Rate GS is going to be used as a justification or precedent to expand applicability of the proposed Rate AGS to unconventional supplies entering through a transmission line or distribution line. It seems to be another use of the minor wording change or language omission tactic.

Q. AS TO THIS PROCEEDING AND PEOPLES PROPOSAL TO CHARGE ALL PRODUCERS A NEGOTIATED RATE UNDER RATE AGS FOR GAS FROM UNCONVENTIONAL SOURCES, REGARDLESS OF THE POINT OF ENTRY INTO PEOPLES SYSTEM, WHAT IS YOUR OPINION?

A. Peoples, who has the burden of proof, has not provided any proof of the reasonableness of its proposal.

If Peoples uses the argument that (a) the PAPUC Order in Peoples' 2018 1307(f) gas cost case supports its proposal on this issue, it does not. That case limited the recovery of retained volumes from conventional gas well supply only and only for gas entering through a gathering line and the minor additional conventional supply that flows directly into a distribution pipeline to ease an administrative burden issue cited by Peoples.

If Peoples argues that (b) its proposal is consistent with the Equitable tariff on the issue of point of entry of supplies and therefore should be approved, it is not. Equitable's present tariff Rate AGS only mentions charging Rate AGS on gas supply coming into gathering pipelines or directly into distribution lines but is silent on the issue of charging for gas entering transmission lines. Peoples' proposal in this proceeding is not consistent with either argument (a) or (b).

Peoples has provided no argument or defense for the reasonableness of its proposal in this case. There is no justification for charging Rate AGS to recover gathering pipeline investment and related costs from producers who make no use of the gathering system. This proposal should be rejected as unreasonable and without justification, and the language discussing the assessment of a negotiated Rate AGS on unconventional supplies should be stricken from Peoples' proposed Rate AGS tariff.

Q. EVEN THOUGH PEOPLES' PROPOSAL FOR RATE AGS AS IT APPLIES TO NON-CONVENTIONAL SUPPLIES IS COMPLETELY NEGOTIABLE WITH NO MAXIMUM OR MINIMUM APPLICABLE RATE, WHAT HAS PEOPLES ASSUMED IN THIS CASE RELATIVE TO REVENUE AT PROPOSED RATES FOR NON-CONVENTIONAL GAS SUPPLY ENTERING THE PEOPLES SYSTEM?

A. In response to SBI-Peoples-I-9 (EDB-1), for "System 2," which is defined in response to SBI-Peoples-II-9 (attached hereto as Exhibit 1 (EDB-1)) as "non-conventional production," Peoples has assumed revenues for the FPFTY using a rate of $0.26 per Mcf for the Peoples Division non-conventional supplies and a rate of $0.22 per Mcf for the Equitable Division non-conventional supplies. This rate for Peoples is identical to the rate minimum Peoples plans to charge conventional gas producers under proposed Rate AGS, and for Equitable the rate is only $0.04 less than for conventional producers under proposed Rate AGS. In each case, there is no individually negotiated rate shown for each producer, as SBI-Peoples-I-9 requested. This suggests that there will be no individual negotiation with producers; instead, just Peoples and Equitable will dictate their price for the non-conventional producers to pay for a gathering system that those producers do not even use, without any consideration of the impact on local gas supply levels for end-use customers.

Q. IS PEOPLES DIVISION CURRENTLY CHARGING PRODUCERS OF NON-CONVENTIONAL SUPPLIES A RATE OR FEE FOR INJECTING GAS INTO THE PEOPLES DIVISION SYSTEM?

A. Yes, according to response to discovery in SBI-Peoples-I-9 (EDB-1), the Peoples Division is charging a fee of $0.16 per Mcf on 858,142 Mcf of non-conventional gas coming into the

Peoples system for a total annual revenue at present rates of $137,335. This fee of $0.16 is through the PES Program after the PIOGA $0.01 fee has been removed. Whether those supplies are entering the Peoples system through a distribution line or a transmission line is not clear, but response to SBI-Peoples-I-14 (EDB-1), Peoples made it clear that it has no non-conventional supplies directly entering the gathering system. It is not clear what the producers who are paying the $0.16 are getting in return for their fees, unless it is less stringent water vapor standards, since they clearly would not benefit from other purported PES Program benefits that involve upgrades to the gathering system.

Q. IS THE EQUITABLE DIVISION CURRENLTY CHARGING PRODUCERS OF NON-CONVENTIONAL SUPPLIES RATE AGS FOR INJECTING GAS INTO THE EQUITABLE DIVISION SYSTEM?

A. Yes. Referring to Peoples' response to SBI-Peoples-I-9 (EDB-1), the Equitable Division shows it is charging a rate of $0.22 per Mcf on 3,366,376 Mcf of non-conventional gas entering the Equitable Division system and a total revenue at present rates of $740,603. Peoples' response to SBI-Peoples-I-14 (EDB-1) indicates that only 387,366 Mcf for the HTY of non-conventional gas supply flowed into Equitable's gathering system, so the balance of gas supplies of almost 3,000,000 Mcf must flow directly into its distribution system since the Equitable Division does not have authority under its Rate AGS tariff to assess producers who deliver gas directly into a transmission line. It is not clear what these customers are getting in return for their rate since the bulk of the non-conventional supply does not use the gathering system.

Q. WHAT CAN WE CONCLUDE FROM EXAMINIATION OF DISCOVERY RESPONSE SBI-PEOPLES-I-9?

A. Regardless of what the Peoples Division and Equitable Division are doing today with respect to non-conventional gas supplies and charging producers fees or rates, the issue at hand is who should bear the cost responsibility moving forward for the non-gas costs of the Peoples Division and Equitable Division combined gathering system and what is fair and reasonable. Clearly, gas supplies that are not flowing into the gathering system are not using the system. Whether producers who actually flow their supplies *into* the gathering system should help pay for it is another issue to be decided in this proceeding, but there is no reason at all to charge producers Rate AGS for recovery of non-gas gathering system costs if they *make no use* of the gathering system. Peoples has offered no reason for why it makes sense to do so. The language in Rate AGS to charge unconventional supply for Rate AGS should be stricken.

X. PIOGA FEE

Q. IS PEOPLES BILLING A FEE ON BEHALF OF PIOGA?

A. Yes, the Equitable Division is billing a $0.01 fee per Mcf on all Pennsylvania volumes entering the system. Equitable is acting as a billing and collections agent for PIOGA. On the Peoples Division system, PIPSCO bills the PIOGA fee in the PES Program bill that goes to producers. PIPSCO, according to Peoples' response to SBI-Peoples-III-10 (EDB-1), is likely a subsidiary of PIOGA. It seems an odd business relationship that a company the size of Peoples can bill for all of its other services, but chooses to farm-out its PES Program revenue billing of over $5 million per year to a company that they have such little knowledge of, that Peoples does not even know who owns it, and in doing so agrees that a trade association can also tack on a fee to be billed to PES Program customers that covers

administrative costs of the trade association. When Mr. Gregorini was asked in discovery why they are billing PIOGA fees, his answer was a non-answer as to why they bill the PIOGA $0.01 fee on behalf of this trade association. SBI-Peoples-III-3 (attached hereto as Exhibit 1 (EDB-1)). Peoples does not bill for any other trade association.

Q. DO YOU HAVE ANY RECOMMENDATION AS TO PIOGA FEES BILLED BY THE PEOPLES AND EQUITABLE DIVISIONS?

A. Yes. PIOGA administrative fees, or for that matter, the fees of any trade association, are not appropriate fees to include in the bill of a public utility, unless they are part of the costs of providing utility service and included on the books of the utility as a general and administrative operation and maintenance expense or are a non-utility service being billed by the utility, such as appliance service work, or similar. These fees are not in that category. The Peoples and Equitable Divisions should not be acting in the role of a no-cost billing and collection agent for any trade association's fees and this practice should be discontinued immediately. These are not costs of providing any utility service, and they have no place on any utility bill. It is also inappropriate for a trade association such as PIOGA or its affiliate or subsidiary to bill for any of Peoples' services and include their own administrative fees on the same bill. These practices should also be immediately discontinued. The benefits to PIOGA from this arrangement are clear while the benefits to Peoples from this arrangement are less obvious. The practice of co-branding implies that a mutually beneficial relationship exists between the co-branders. If no such relationship exists, then these practices should be terminated. If it is beneficial for Peoples' customers for Peoples to bill and collect PIOGA administrative fees, Peoples should disclose what those benefits are.

XI. LOCAL GAS BENEFITS

Q. DO PEOPLES' END-USE CUSTOMERS BENEFIT FROM LOCAL GAS SUPPLY?

A. Yes. Peoples acknowledges that local gas is a benefit to end-use customers.

Q. DO YOU AGREE WITH MR. GREGORINI'S ANALYSIS OF THE COST OF LOCAL SUPPLIES VERSUS INTERSTATE SUPPLIES THAT HE DESCRIBES IN PEOPLES STATEMENT NO. 2, PAGE 17, LINES 1-19?

A. Not entirely. The fixed costs of the gathering system do not vary with the amount of gas purchased, so I think it is misleading to include sunk costs – the fixed costs of $0.76 – in the comparison that Mr. Gregorini shows in Peoples Statement No. 2 JAG Exhibit 1. I would remove that line item from the comparison. That line item would only be relevant if the gathering system costs became gas costs and they are not. Thus, the revised comparison would show that local gas is even more beneficial from a cost standpoint than Mr. Gregorini shows in his exhibit and the rate comparison should read $2.0509 per Mcf for local gas and $3.3687 for interstate supply. This cost savings should be taken into consideration when making policy decisions that could affect future availability of low-cost Pennsylvania supply.

Q. HOW DOES LOCAL SUPPLY HELP LOWER PIPELINE DEMAND COSTS?

A. As shown in Peoples' response to SBI-Peoples-II-26 (attached hereto as Exhibit 1 (EDB-1)), we can see that over the years from 2015 to the present, savings in demand costs have ranged from $2.9 to $4.4 million annually to end-use customers by the use of local gas. Clearly local gas provides a benefit to end-use customers and these benefits need to be taken into consideration when evaluating charges to producers and the impact that those charges could have on local supply availability to end-use customers.

XII. SHIFTING OF BASE RATE COSTS TO GAS COSTS

Q. DOES THE PROPOSAL TO RECOVER GATHERING SYSTEM INVESTMENT AND RELATED COSTS FROM PRODUCERS RESULT IN THE SHIFTING OF NON-GAS COSTS TO GAS COSTS?

A. Yes, the old adage that there is no such thing as a free lunch is true in this Rate AGS proposal. One of the questions that needs answering is who the winners are and who the losers are in the shifting of non-gas costs out of base rates and into gas costs. At first blush, this proposal shifts costs away from end-use customers so they would be the winners. They are not the winners upon closer inspection. End-use customers are not benefitted if the gathering system investment and related cost recovery is either (a) just shifted from non-gas costs to gas costs and/or (b) if the shift results in the loss of lower cost Pennsylvania supply.

Q. WILL THE SHIFT OF GATHERING SYSTEM COST RECOVERY OUT OF BASE RATES JUST SHIFT THESE COSTS FROM BASE RATES TO GAS COSTS?

A. A producer, like any other business, will pass through increased costs if it can contractually do so. Producers will pass along Rate AGS costs through gas prices if they can do so under the terms of their supply contracts. The producer's costs will be made even higher if gas supply prices rise and the indexed Rate AGS rises as a result of the Rate AGS indexing mechanism proposed. This will result in even more costs to recover from end-use customers through gas supply prices. Non-gas costs are not indexed in base rates, but they will be under proposed Rate AGS.

If the producer is unable to pass along the Rate AGS costs, because of contractual limitations, it will bear the burden of these higher costs without the ability to recover them. This, of

course, will make the producer look to other markets for its gas. If low-cost Pennsylvania supply moves from the Peoples system, it is the end-use customers that are harmed as a result.

Q. HOW IS THE INDEXING OF RATE AGS HELPFUL TO END-USE CUSTOMERS?

A. It is not helpful at all. Gathering system non-gas costs would not be indexed if they were in base rates. As proposed, the indexing of Rate AGS just benefits Peoples' owners if gas prices rise.

Q. TO SUMMARIZE, IS THE SHIFTING OF COST RECOVERY OF GATHERING SYSTEM INVESTMENT AND EXPENSES FROM NON-GAS COSTS TO GAS COSTS A BENEFIT TO END-USE CUSTOMERS?

A. No. Non-gas gathering system costs are not going to go away simply because they are no longer in end-users' base rates. These costs will either be recovered through gas supply prices or will result in less local Pennsylvania supply on the Peoples system or combination of both. These costs are part of the infrastructure that brings Pennsylvania low-cost supplies to end-users. Charging the supplier does not make the cost disappear, but doing so may make the low-cost gas disappear. It is a bad policy decision to approve the shifting of rate base costs into purchased gas costs and to embrace a proposal that could result in the loss of low-cost supply to all of Peoples' end-use customers.

XIII. DECLINE IN CONVENTIONAL PRODUCTION

Q. DO YOU HAVE ANY EVIDENCE THAT THE IMPLEMENTATION OF RATE AGS ON THE EQUITABLE SYSTEM CAUSED A PRODUCER TO MOVE GAS TO OTHER MARKETS?

A. Yes. Since the beginning of 2009, SBI has moved 15,736,416 Mcf from the Equitable system because of the implementation of Rate AGS on the Equitable system. Instead of going to

Equitable end-use customers, this low-cost supply went to other markets. SBI built new infrastructure or used existing infrastructure to move that low-cost supply off of the Equitable system. It is Equitable's end-use customers who were the losers as a result. I do not have similar information for other producers, but I think that it is likely that SBI was not the only producer to move supply from the Equitable system because of Rate AGS, to the detriment of Equitable's end-use customers.

The Peoples Division and Equitable Division producers have other market options for their supplies even though Peoples seems to fail to recognize or does not care about this fact in its proposal to recover non-gas costs from producers. Producers have market options, and this fact needs to be taken into consideration when making the policy decision as to whether or not to move non-gas costs into gas supply costs and shift cost recovery of rate base to producers.

Ultimately, it is the end-use customers on the Peoples system who will bear the added cost burden of higher priced interstate supplies as producers tire of the added costs on the Peoples system and move their supplies off the Peoples system to other markets.

Q. MR. GREGORINI IN HIS TESTIMONY DESCRIBES THE DECLINE IN LOCAL PRODUCTION FROM CONVENTIONAL WELLS IN PEOPLES STATEMENT NO. 2, PAGE 14, LINE 1. WHEN ASKED IF THE IMPLEMENTATION OF RATE AGS ON THE EQUITABLE SYSTEM COULD BE A REASON FOR THAT DECLINE, WHAT WAS HIS RESPONSE?

A. In response to SBI-Peoples-II-2 (attached hereto as Exhibit 1 (EDB-1)), Mr. Gregorini replied "No" to the question, "Can Mr. Gregorini say with certainty that none of the decline in volume on the Equitable system is related to Rate AGS?" He cannot say with certainty

that the decline in production on the Equitable system was not related to the implementation of Rate AGS.

Q. HAS PEOPLES IMPLEMENTED ANY PRICE INCENTIVE MECHANISMS TO ENCOURAGE NEW PRODUCTION IN DISTRIBUTION AREAS WHERE LOCAL GAS IS THE ONLY SOURCE OF SUPPLY?

A. No. Peoples, in response to SBI-Peoples-I-35 and SBI-Peoples-II-17 (attached hereto as Exhibit 1 (EDB-1)), has stated it has not needed any incentive mechanisms to get the supply it needs in these isolated areas. As conventional supplies continue to decline, the implementation of Rate AGS for Peoples is not helpful in encouraging the development of local low-cost supply in isolated areas where local gas is the only source of supply. Currently there are 903 end-use customers on the Peoples' combined system that have local gas as their only source of supply and 3,515 customers that are served directly from the gathering system. SBI-Peoples-I-12 and SBI-Peoples-I-13 (attached hereto as Exhibit 1(EDB-1)).

Again, Peoples is failing to look at the implications of shifting rate base cost recovery to producers and those implications include the impact on end-use customers served using local supply.

From a policy standpoint, these impacts need to be taken into consideration.

XIV. MIMA AGREEMENT AND WATER VAPOR

Q. DO YOU HAVE ANY CONCERNS WITH THE PROPOSED RATE AGS AS IT RELATES TO WATER VAPOR CONTENT OF PENNSYLVANIA SUPPLY ENTERING THE PEOPLES GATHERING SYSTEM?

A. Water vapor content of gas supply is specified in the MIMA accompanying proposed Rate AGS and the same language appears in the MIMA accompanying the existing PES

Agreement. Water vapor content is specified as a maximum of seven (7) pounds per million cubic feet unless allowed to be higher by negotiation. The PES Program, since it was not a mandatory program, allowed the producers the option to self-treat their supply, if necessary, in order to obtain a gas quality acceptable for injection into Peoples' gathering system and forego payment of the PES Program charge. Alternatively, producers could pay the PES Program fee and be allowed to deliver gas into Peoples' gathering system using less stringent water vapor standards through a negotiation of these less stringent standards as per the MIMA. The PES Program fee included contributions to enhance or install water dehydration facilities on Peoples' gathering system.

Under Rate AGS, Peoples is proposing a mandatory fee of either a minimum of $0.26 for conventional supplies or an unknown to-be-negotiated rate for unconventional supplies and no agreement at all in proposed Rate AGS or the referenced MIMA to relax water vapor standards. Since proposed Rate AGS recovers a portion of the non-gas cost of the gathering system, the proposed rate will include any dehydration facilities that were enhanced as a result of the payment of the PES Program fees by producers, as well as any other dehydration facilities that are part of the gathering system. Thus, Rate AGS should allow its ratepayers the same level of relaxed water vapor standards that were given to former PES Program fee-payers. The fee-payers under the PES Program were paying for relaxed water vapor standards and the same should apply for Rate AGS ratepayers. The MIMA accompanying proposed Rate AGS allows for, but does not require, a negotiation of water vapor standards from the maximum of seven (7) pounds per million cubic feet requirement. The MIMA accompanying proposed Rate AGS should state that the water vapor standards are fully negotiable, and no maximum water vapor content should be stated. The benefit of relaxed

water vapor standards for those producers who signed the PES Agreement was a major reason, in my client's view, as to why the PES Program was so well subscribed in 2015. In 2015, at the time the PES Agreement was being renewed and extended, Peoples changed its tariff to tighten water vapor standards for non-PES Program subscribers.

If Peoples does not agree to relax water vapor standards in a producer's MIMA and a producer must pay Rate AGS and also pay to self-treat the gas to the seven (7) pounds of water per million cubic feet standard in order to deliver the gas into Peoples' gathering system, as set forth in the MIMA on page 2 of Appendix B (attached hereto as Exhibit 6 (EDB-6)), then the cost of Rate AGS to the producer is even higher than the stated rate. SBI-Peoples-I-28 (attached hereto as Exhibit 1 (EDB-1)). Producers will be paying in Rate AGS for dehydration but also will be required to self-treat before the gas enters the Peoples system to meet the seven (7) pound standard which will require their own dehydration investment as well.

Peoples' proposed Retail Tariff and Supplier Tariff also make mention of the seven (7) pound per million cubic feet water vapor standard.

I recommend, as part of removing proposed Rate AGS from Peoples' tariff, that the maximum seven (7) pound per million cubic feet language be removed from Peoples' proposed Retail and Supplier Tariffs and also from the MIMA and that maximum water vapor content be a negotiable item as part of the MIMA. Alternatively, if Rate AGS in some form is to be approved, then I would recommend that dehydration by Peoples be provided as service for the rate paid by producers and that no additional dehydration be required from Pennsylvania producers at point of entry of Pennsylvania supplies.

XV. RECOMMENDATIONS AND SUMMARY

Q. WHAT ARE YOUR RECOMMENDATIONS FOR RATE AGS?

A. My recommendations are as follows

1. Rate AGS, as proposed, should be rejected in its entirety for the Peoples Division. Producers have paid more than a fair share of gathering system costs already (assuming any share at all is fair) through PEP and PES Program fees and gathering system retainage. The voluntary PES Program should remain in effect.

2. Rate AGS's proposed minimum rate is not supported by any evidence as to its reasonableness or fairness and must be rejected for all of the reasons described in my testimony. It results in a rate spike for some producers and does not conform to principles of gradualism.

3. Rate AGS's proposed maximum rate is not supported as to its reasonableness or fairness, can result in significant over-collection of fixed costs of the gathering system to the enrichment of Peoples' owners and must be rejected for all of the reasons described in my testimony.

4. Rate AGS's indexing is not supportable as to its reasonableness or fairness since there is no supportable reason to index non-gas costs and this proposal will result in over-collection of non-gas costs. This proposal must be rejected for all of the reasons described in my testimony.

5. Rate AGS, in the present tariff of the Equitable Division, should be limited to gas flowing into the gathering system only. Producers flowing gas into transmission or distribution lines should not be forced to pay non-gas costs of the gathering system when they are not using that system.

6. If Rate AGS for Peoples is not approved, Peoples' proposed Retail and Supplier Tariffs and the MIMA Agreement should all be changed to eliminate mention of the seven (7) pounds per million cubic feet of gas as the maximum allowable water vapor content of gas and instead should be silent on the issue of maximum water vapor standard. Producers should, through the MIMA, be able to negotiate water vapor standards that are reasonable for Peoples and for the producer based on the individual situation and the point of delivery.

7. If Rate AGS is not approved for the Peoples Division, the existing tariff page for Rate GS for the Peoples Division should be changed immediately to comply with the PAPUC Order in the last 2018 1307(f) gas cost case that limits the retainage to conventional supplies coming into a gathering line or *distribution* line. The current tariff language is overly broad and vague as to point of supply entry.

8. Equitable Division's Rate AGS should have the words "with a minimum" stricken from the Rates section of the tariff to make it clear that retainage is 2%, as Commission approved, from the 2018 1307(f) gas cost case and not a *minimum* of 2%.

9. Equitable Division's Rate AGS existing tariff language needs to be changed. The words "as well as to deliver gas directly into the Company's distribution system" should be stricken from the tariff in the Applicability section of Rate AGS in the Equitable Division tariff. Producers who do not use the gathering system should not be charged for it.

Q. IF THE PAPUC DECIDES TO APPROVE RATE AGS IN SOME FORM FOR BOTH THE PEOPLES AND EQUITABLE DIVISION PRODUCERS, WHAT WOULD YOU RECOMMEND FOR THE STRUCTURE OF RATE AGS?

A. I would recommend the following changes to proposed Rate AGS if rate AGS will be approved, but to be clear my primary recommendation is that Rate AGS be eliminated from the Peoples tariff:

1. If Rate AGS is allowed to become effective in some form, it should be a maximum rate not exceeding $0.26 Mcf (assuming that $0.26 cents is the current average PES Program fee) applied only to supplies flowing into the gathering system and applicable only to those producers already paying at least $0.26 per Mcf in either a PES Program fee or under Equitable Division's Rate AGS. There should be no indexing of the rate.

2. To address the issue of gradualism as discussed in my testimony, for those producers currently paying less than $0.26 per Mcf either through a PES Program fee or through the Equitable Division's Rate AGS, the rate increase for such producers should not exceed the overall average rate increase for end-use customers as allowed in either a final order or settlement of this proceeding. For those producers not currently paying a PES Program fee at all, their new fee under Rate AGS should be set at the current straight average rate currently being charged to producers on the Peoples system that are getting a rate increase, which is $0.10, and then that rate should be increased by the overall average increase for end-use customers as allowed in either a final order or settlement of this proceeding. In setting the rate for all producers who flow gas into the gathering system, these rates should allow for downward flexibility, if needed, to reflect value-of- service to producers and with

the goal of keeping low-cost supplies on the Peoples system for the benefit of end-use customers. A one size fits all approach is not good for producers or end-use customers.

3. Rate AGS, if permitted to take effect should not be expanded to include non-conventional supplies that do not use the gathering system. The Peoples Division has no non-conventional supplies flowing into the gathering system and the Equitable Division has only two wells with 387,166 Mcf annually that flow directly into the gathering system. Producers who do not use the gathering system should not be assigned gathering system costs.
4. Rate AGS for the recovery of non-gas costs, if allowed to take effect for the Peoples Division in some form, should be limited to gas flowing into the gathering system only and not into the distribution system or the transmission system. The administrative burden argument, used by Peoples in its 2018 1307(f) gas cost case as a reason why gas from conventional wells should have a 2% retainage applied whether the gas flowed into a gathering line or a distribution line, should not be permitted to be used in this proceeding as an excuse to charge producers for non-gas costs of a pipeline system they do not use. Producers who flow their supplies directly into a distribution line or a transmission line are not making use of the gathering system and should not be paying for the non-gas costs of the gathering system.
5. If Rate AGS in some from is allowed to take effect, the language referencing a water vapor standard should be stricken from Peoples' Retail Tariff, the Supplier Tariff, and also from the MIMA. If Rate AGS is imposed on Peoples' producers, then Peoples should provide all dehydration for the Pennsylvania supplies entering the gathering system in exchange

for payment of the rate and Pennsylvania gas supplies at the gathering system point of entry should be accepted without dehydration by producers.

Q. ARE THERE ANY OTHER RECOMMENDATIONS YOU WOULD LIKE TO MAKE?

A. Yes. Peoples should discontinue billing and collecting PIOGA fees in its Equitable Division. In the Peoples Division, it should instruct the billing agent, PIPSCO, to stop billing and collecting PIOGA fees as part of PES Program billings and should also stop any billing of PIOGA fees in bills Peoples Division sends directly to producers that are not sent through PIPSCO. Moving forward, regardless of whether Rate AGS is approved as proposed, in some other form, or not approved at all, Peoples should no longer collect fees on behalf of PIOGA or any other trade association unless and until it can demonstrate how ratepayers are benefitted by such a practice.

Q. ARE THERE ANY OTHER ISSUES YOU WOULD LIKE TO ADDRESS?

A. Yes. If there is any outstanding discovery or yet to be received revisions to discovery, I reserve the right to supplement or amend my testimony.

Q. DOES THIS CONLCUDE YOUR TESTIMONY?

A. Yes. Thank you.

Attachment A

Diane Meyer Burgraff received her B.S. from West Virginia University in 1972 with a major in Mathematics and received her M.B.A. from the University of Pittsburgh in 1974 with an emphasis on Finance and Accounting. She also graduated from a six-week full time executive education program from the University of Pittsburgh in 1990. She was employed for almost twenty-five years with the Peoples Natural Gas Company in Pittsburgh, PA. There the former Ms. Meyer, held positions of increasing responsibility beginning as a Cost Analyst working on base rate cases and PGC filings and capital budget project analyses. She was promoted to Assistant Director of Rates from 1981-1984, and then to Director of Rates from 1984-1990. She was elected Vice President of Financial and Rates from 1991 until a corporate realignment in 1997 when many financial responsibilities moved to CNG Corporate. After 1997 until her departure from Peoples Gas in 1999, she was Vice President of Rates and Regulatory Affairs. As Financial Vice President, the former Ms. Meyer was responsible for Accounting, Treasury, Rates and Budget functions including taxes, payroll, bill payment processing, general and plant accounting, cash management, rates, long term planning and budgeting, and gas well accounting. For two years she was also responsible for the Information Technology area. Approximately 150 people reported to her as Financial Vice President.

At Peoples Gas, Ms. Meyer testified in every base rate case from 1981-1999, approximately eight of them during that time frame, most of the gas cost proceedings during that time frame, and many other complaint cases and other cases involving her former employer in various courts.

Since leaving Peoples Gas, Diane Meyer Burgraff has worked as an independent consultant and expert witness and has testified on behalf of PA Office of Consumer Advocate and the WV

Consumer Advocate Division of the Public Service Commission. She has also submitted testimony for clients such as IOGA of PA (now PIOGA), IECPA, and natural gas suppliers.

Mrs. Burgraff resides in Williamsburg, VA. She serves as an Executive Partner at the Mason School of Business at The College of William and Mary.

DIANE MEYER BURGRAFF

ON BEHALF OF

SNYDER BROTHERS, INC ("SBI")

APRIL 29, 2019

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Russell Feingold

SBI-I-4 From a cost-causation standpoint and not a value of service standpoint, does Mr. Feingold believe that producers should be held responsible for some or all of the costs of Peoples' gathering system?

Response: Yes.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-7 Please provide workpapers, documents, emails, and any other documentation used to derive the minimum rate proposed for Rate AGS and the maximum rate proposed for Rate AGS.

Response: Peoples established the proposed minimum gathering rate at $0.26 per Mcf because it represents a rate level that could be assessed to producers in a low-natural gas market period and, in our judgement, would not lead to potential producer shut-ins and may help to mitigate declining production trends. The proposed minimum rate and this supporting rationale was in part based on feedback received from PIOGA during discussions regarding a revised Rate AGS rate structure to replace the existing PA PES program at the Peoples Division and the AGS tariff at the Equitable Division. Those discussions focused on ways to establish a reasonable and ongoing producer contribution to offset end-use customer's charges and that would also not create an economic disincentive for conventional produces to continue to produce gas supplies into the Peoples' systems.

The maximum Rate AGS rate is equal to the fully allocated gathering cost of service for the fully projected future test year as set forth in Peoples Exhibit RAF-3 to witness Feingold's testimony.

Respondent: Joseph Gregorini

SBI-I-9 Please provide workpapers showing how Rate AGS revenues at present rates and at proposed rates were developed. Please list the producer by letter or number, not a name, such as producers A, B, etc. For each producer list the future test year volumes, rate at present and at proposed rates, and revenue that when added together produce the Revenue at present and at proposed rates for Rate AGS.

Response: See attached. The development of the Rate AGS revenues was calculated by system, rather than by discrete producer.

Data Requests

Respondent: Joseph Gregorini

SBI-I-12 How many sales customers and transportation customers by class are served directly from the Peoples Division and the Equitable Division gathering systems? Please provide this information separately for the Peoples Division and the Equitable Division and separately by rate schedule if available.

Response: Peoples has approximately 3,515 meters directly connected to gathering systems.

Division	Retail	Transportation	Grand Total
EGCP	2,138	192	2,330
PNGC	913	272	1,185
Grand Total	3,051	464	3,515

The requested information by rate schedule is not readily available.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-13 Reference Peoples Statement No. 2, Page 18, Lines 22-23. How many customers by class of customer on the Peoples Division gathering system and the Equitable Division gathering system are located in areas where gas supply coming from the Peoples Division or the Equitable Division gathering system is the only source of supply? Please provide this information separately for the Peoples Division and the Equitable Division. If the information is only available in aggregate form, please provide the information in that form.

Response: The table below details the number of customers by class, by system type, where local production currently is the only source of supply. Absent the local production in these areas, it is possible that gas service to these customers may be able to be maintained with revisions to Peoples' facilities to create bi-directional feeds and create new delivery points into the systems.

Owner and class	Distribution	Gathering	Grand Total
Residential	588	268	856
Commercial	35	11	46
Industrial	1	-	1
Grand Total	624	279	903

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-14 Reference Peoples Statement No. 2, Page 14, Lines 7-8.

a. Provide the total volume of non-conventional gas that flowed through the Peoples Division and the Equitable Division gathering systems in the historic and future test periods. Please provide this information separately for the Peoples Division and the Equitable Division. If the information is only available in aggregate form, please provide the information in that form.

b. Provide the volume referenced in (a) that went to off-system markets for the Peoples Division and the Equitable Division. Please provide this information separately for the Peoples Division and the Equitable Division. If the information is only available in aggregate form, please provide the information in that form.

Response:

a. Two non-conventional wells flow into the gathering system, both are located on the Equitable Division, and they had a total throughput for the historic test period of 387,166 Mcf. Peoples does not estimate future test period production by well.
b. None of the volumes from subpart (a). were nominated off-system.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-17 Does any Pennsylvania gas supply enter Peoples' system directly into transmission or distribution lines?

a. If the response is "yes", then provide the annual amount of that supply for the historical and future test periods for the Peoples Division and the Equitable Division. Please provide this information separately of the Peoples Division and the Equitable Division. If the information is only available in aggregate form, please provide the information in that form.

Response: Yes. Peoples does have local production that enters into Peoples transmission and distribution lines. The majority of which (85%) is from non-conventional production.

The annual amount for the historical test period for the Peoples Division is 1.115 Bcf and for the Equitable Division is 6.045 Bcf. Peoples does not estimate production for the future test year by this breakout.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-18 What is the percentage of UFG on the Peoples Division gathering system and the Equitable Division gathering system for the historic year or most recent twelve-month period available? Please provide this information separately for the Peoples Division and the Equitable Division. If the information is only available in aggregate form, please provide the information in that form.

Response: The gathering systems on Peoples Division have 8.7% UFG for the twelve month reporting period ended August 31, 2018. The gathering system on the Equitable Division has 9.2% UFG for the same period. These two systems provide for a total gathering loss rate of 8.9% for all of Peoples over the same twelve month period.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-28 Now that the PES Program is being abandoned and the proposed new Rate AGS is a mandatory charge from producers to recover gathering system base rate costs, which includes dehydration equipment, will those formerly added more stringent water vapor standards be eliminated since suppliers will now be paying for dehydration investment through their Rate AGS? Insofar as your response references any work papers, documents, emails, or any other documentation, please provide copies thereof.

Response: No. The dehydration equipment owned and operated by Company along with the gas quality provisions contained in the tariff are both necessary to protect Peoples' pipeline systems and to ensure that natural gas of adequate quality is delivered to customers.

Data Requests

Respondent: Joseph Gregorini

SBI-I-31 Please list PES Program funds by year from the inception of the PES Program and how those funds were invested by project and by property account on Peoples' books.

Response: Refer to the attachment for the requested information for 2012-2018. The requested information prior to 2012 is not readily available because it was managed and housed in a financial system no longer utilized and maintained by the Company. The PES Program funds are committed by Peoples and the producers through the Project Review Committee (PRC) for both capital and expense to enhance or maintain throughput of Pennsylvania produced natural gas. People's accounting system tracks the capital but not the expense associated with the PRC projects. Some examples of expense items include compression rentals, engine overhauls, pipeline pigging and field equipment communications.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-35 What, if anything, is Peoples doing to encourage or provide incentive for producers to drill new gas wells for the benefit of customers served in isolated areas where production is declining, and the customers are served from gathering lines and run the risk of losing natural gas as their energy source due to pipeline abandonment? Please describe any incentives Peoples is offering to encourage well production in these areas. Insofar as your response references any work papers, documents, emails, or any other documentation, please provide copies thereof.

Response: Refer to the proceeding and Recommended Decision in Pa PUC Order dated August 11, 2016 in Docket Nos. R-2016-2528562 and R-2016-2529260. Per this Order, the Company received approval of a price incentive mechanism that can be offered to local producers to encourage the production of local gas in specific areas where the Company may require local gas supplies for the efficient operation of its system. To date, Peoples has not utilized this mechanism because it has been able to utilize other more cost effective supply options to ensure the availability of supplies. Peoples intends to continue to explore the possible use of this price incentive when and where it may be needed.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-40 If a producer injects Pennsylvania gas directly into Peoples' transmission or distribution system and does not make use of Peoples' gathering system, why would they be charged a negotiated rate under Rate AGS or any rate at all under Rate AGS? Insofar as your response references any workpapers, documents, emails, or any other documentation, please provide copies thereof.

Response: Refer to the response to SBI-I-42 regarding local gas entering non-gathering systems. Regarding non-traditional local gas entering the distribution or transmission system, refer to Peoples Statement No. 2, page 23, lines 16 through 23 and Page 24, lines 1 through 3.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-42 Does Peoples charge the two (2) percent retainage charge on Pennsylvania gas supply that does not use Peoples' gatheringsystem? If yes, why?

Response: Yes. Application of the producer retainage charge was approved by the PUC in Docket Nos. R-2018-2645278 and R-2018-3000236 (Peoples Natural Gas 1307(f)-2018 Proceeding).

Below is an excerpt from the PUC Order, pages 75 and 76:

Peoples has given several reasons it believes applying the proposed charge to both distribution and gathering system is more efficient than having a different application for the Rate GS tariff for the Peoples Division and a different Rate AGS tariff for Equitable. For instance, Peoples has indicated that it modelled the proposed producer charge after Equitable's Rate AGS tariff which applies both gathering fees and retainage to production entering both its distribution and gathering lines. PNG St. 1-R at 27. According to Peoples, this is to prevent the Company from having to introduce different rules depending on which company's system a well ties into. PNG St. 1-R at 27; Peoples Gas St. 1-R at 26; PNG R.B. at 15. Secondly, Peoples avers the difference between applying the charge to only a gathering system when compared to applying it to both distribution and gathering systems is so minimal that it is not worth the challenges the Company would face in proposing two different tariffs for the two divisions of the Company. PNG M.B. at 16. Peoples argue [sic] a recalculation based on the volumes from gathering system-only compared to both gathering and distribution system results in an increase from 2.0% to 2.17%, a less than 10% difference. Tr. at 56. Finally, Peoples contends the proposed Rate GS tariff also avoids the possibility of differential treatment for producers based on their point of connection to Peoples' system. PNG R. Exc. at 21-22. Here, we find the reasons given by Peoples to support its proposed retainage charge to be reasonable. We further note that PIOGA has not presented any evidence in this proceeding to demonstrate that the application of the proposed producer charge to both gathering and distribution system similar to Equitable's already-existing Rate AGS is unreasonable.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-49 Reference Peoples Statement No. 2, Page 22, Lines17-23 and Peoples Natural Gas Exhibit No. JAG – 2. Please provide the derivation of the 12.4% referred to in Rate AGS and provide all supporting documents.

Response: Refer to the attachment. The average natural gas market price in our region (DTI South Point) for the FPFTY was projected to be $2.10 per Dth, as of January 2019. This price and projected period represents a low natural gas market price period and one where higher gathering charges could detrimentally affect local supplies into the systems. The 12.4% factor was derived from: 1) the average projected natural gas market price in our region (DTI South Point) for the FPFTY of $2.10 per Dth; and 2) the proposed minimum gathering rate of $0.26 per Mcf as described in response to SBI-I-7.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-I-51 As a rate that is being set based on value of service principles, what are the costs of alternatives that are available to producers that Peoples used in determining the value of service for Rate AGS? Please list the cost of each alternative and how that was used in rate setting.

Response: The cost of alternatives for producers would include shutting in production, reworking wells to improve production, or laying new pipelines to alternative markets. The Company has not quantified the costs of these alternatives.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-II-2 Reference Peoples Statement No. 2, Page 14, Line 1.

a. Please provide by year, beginning in 2012, the volumes of conventional local production separately for Equitable and Peoples.
b. Can Mr. Gregorini say with certainty that none of the decline in volume on the Equitable System is related to Rate AGS?

Response:

a. The following table lists the conventional production for the years 2012-2018. Note: The conventional production data for the Equitable division is only available for 2014-2018, since the Peoples' acquisition of the Equitable Gas utility assets.

	PNG	EGC
2012	35,805,144	N/A
2013	33,631,385	N/A
2014	28,430,737	8,466,212

Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-II-7 Reference Peoples' response to SBI-Peoples-I-7. Please provide all workpapers, contemporaneous notes, and any other documents that support the assertion that "feedback" received by Peoples from PIOGA was a basis for the minimum rate proposal of $0.26 for Rate AGS.

Response: Peoples did not take contemporaneous notes or work papers when that discussion took place.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-II-9 Reference Peoples' response to SBI-Peoples-I-9. What are System 1 and System 2 as referenced in Peoples' response?
a. Please explain what each system is and why the rate is different for each system.

Response: System 1 refers to conventional production and System 2 refers to non-conventional production. The EGC System 2, which is non-conventional production would pay a negotiated rate under Rate AGS, whereas the other systems would pay the market based rate.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-II-17 Reference Peoples' response to SBI-Peoples-I-35. Please provide a copy of the price incentive mechanism referred to in response to SBI-Peoples-I-35.

Response: Below is the price incentive mechanism approved in Peoples' 2016 1307(f) proceeding. There is no "copy" per se.

Production incentives, in the form of higher gas purchase prices, may be offered in discrete areas of the Company's system that: (a) are experiencing declining receipts of local gas volumes, would improve service reliability with additional local gas volumes, and have no current economically viable alternative to receipts of local gas to serve customers; or (b) have limited sources of gas supply feeding the system, would improve service reliability with additional supply feeds, and have no current economically viable alternatives to such additional supply feeds in order to improve service reliability.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Russell Feingold

SBI-II-24 Reference Peoples' response to SBI-Peoples-I-48. Please explain why producers receiving service under Rate AGS should be charged for a return component for the working capital that Peoples must keep on hand to pay purchased gas costs before revenue receipt.

Response: Peoples' total gathering cost of service was derived under the presumption that the responsibility for these costs would be shared between the utility's end-use customers and gas producers. However, recognizing that gas producers do not cause Peoples to incur a working capital component to accommodate the lag associated with the timing of the payment and receipt of revenues related to purchased gas costs, the total gathering cost of service of $26,559,887 used to establish the maximum rate under Rate AGS should be reduced by $78,893, or 0.3%. The document entitled, SBI-II-24 Attachment 1 provides the supporting basis for this calculation.

Respondent: Joseph Gregorini

SBI-II-26 Reference Peoples Statement No. 2, Page 18, Lines 19-20. Please provide a calculation of the reduction in pipeline demand costs that is enjoyed by Peoples' sales and transportation customers because of the use of local gas for the HTY, FTY, FPFTY, and the five calendar years preceding the HTY.

Response: The reduction in pipeline demand costs can be calculated by multiplying the local gas peak day supply times Peoples average demand costs for all other pipeline transportation services.

The estimated cost reduction for the HTY, FTY and FPFTY would be:

		Peak Day Local Supply	Peoples' Average Demand Cost Interstate	Estimated Cost
	YEAR	Dth	Pipelines	Reduction
HTY/FTY/FPFTY^	2019	28,496	$ 8.48	$ 2,899,753
	2018	34,008	$ 8.36	$ 3,411,683

	2016	34,008	$ 8.38	$ 3,419,844
	2015*	44,187	$ 8.38	$ 4,443,445
	^Use 2018 as a proxy for each of the HTY, FTY and FPFTY			
	*Prior to October 2015 Peoples Division and Equitable Division			
	had separate gas cost rates.			

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-III-3 Does Peoples bill or collect fees on behalf of any other trade association?

a. If the response is "no," then why is Peoples collecting fees for PIOGA?
b. Does PIOGA pay for this service, or is Peoples receiving compensation in some other form from PIOGA for this service?
c. If the response is "yes," then what is Peoples' compensation for this service?

Response: No.

a. Under the current program, Peoples collects its PA PES fees and a $0.01/Mcf fee (on behalf of PIOGA) directly from producers that sell gas to Peoples. It does this by netting those fees against the amounts that Peoples pays for gas purchases from those same producers. Peoples already has in place an invoice process with these producers so assessing PA PES fees in this manner creates no additional administrative responsibilities.
b. No.
c. N/A.

Docket No. R-2018-3006818
Peoples Natural Gas Company LLC
Data Requests

Respondent: Joseph Gregorini

SBI-III-10 Reference Peoples' response to SBI-Peoples-II-17.

a. For the 1.115 Bcf coming into the transmission and distribution system for the Peoples Division for the HTY, please provide a breakdown as follows: transmission-conventional, transmission-non-conventional, distribution-conventional, distribution-non-conventional.

b. Please provide the same breakdown described in part (a) for the 6.045 Bcf of gas coming into the Equitable Division system for the HTY.

Response:

a. For the Peoples Division, 789,453 Mcf out of the 1.115 Bcf is from non-conventional production of which 1,838 Mcf came into a transmission line and 787,615 came into a distribution line. The conventional volumes are not routinely aggregated between production entering the transmission lines versus distribution lines so that breakout is not readily available. However, Peoples estimates 238,736 Mcf came into a transmission line and 87,181 Mcf came into a distribution line.

b. For the Equitable Division, our original response to SBI-II-17 inadvertently omitted a couple production meters therefore the correct amount is 6.577 Bcf of which all is non-conventional and enters a distribution system.

PEOPLES

Re: IOGA-PA / Peoples Production Enhancement Service Agreement

Dear Producer:

Peoples Natural Gas Company and the Independent Oil & Gas Association of Pennsylvania have entered into an agreement effective April 2016, to extend the existing Production Enhancement Service Agreement (PES) that is set to expire and would eliminate certain benefits and services fees associated with the existing interstate pipeline agreement.

The PES program has been in effect since the mid 2000's with two major goals of the program; enhance deliverability of PA production and to integrate services to economize the cost of meeting the water vapor requirements for pipeline quality natural gas. Enhancements made to the systems include installing compressor stations and pipeline interconnects, upgrading and installing pipelines, strategically located water dehydration system to bring the production into compliance with pipeline quality gas. We believe all parties have benefited from this agreement and believe it is in the best interest of all to extend the agreement.

During the term of the extended PES agreement each producer will continue to receive the benefits of the PES program, however the parties have agreed to eliminate the off-system pipeline capacity fee (currently $0.1659/MCF billed each month as part of PES) and the current gas retainage charge for off-system deliveries resulting in annual producer cost savings of $6,000,000. The services that will continue to include:

1. Continued operation and maintenance of existing utility compression
2. Negotiated water vapor standard
3. Access to Equitrans AVC capacity
4. Peoples/IOGA-PA gathering investment of $1,500,000 annually to enhance the deliverability of PA production on the Peoples system through new interconnections with the Equitable and Peoples TWP systems

The details of the new fees, and the other provisions of the agreement, are included in the attached "Amendment to Production Enhancement Service Agreement".

The effective date of the agreement is the beginning of Peoples' April 2016 production period. Peoples must have 80% participation by volume in the program or the new agreement with IOGA-PA will be terminated. Therefore, your timely attention and execution of the attached documents is critical to the implementation of this agreement.

In order to implement the terms of the agreement for the April 2016 production period, the enclosed Amendments to Production Enhancement Agreement must be returned to Peoples at the following address by November 1, 2015:

Leslie Tafel Peoples Natural Gas Company 225 North Shore Drive, Pittsburgh, PA 15212

Both parties plan to renegotiate the fees on Exhibit B when Peoples is eligible to file a new rate case with the Pennsylvania Public Utility Commission. The effective date of those new rates cannot occur prior to January 1, 2018.

Sincerely,

Jeffrey S. Nehr

Jeffrey S. Nehr

RATE GS – GATHERING SERVICE
(C)

AVAILABILITY

Service under this rate schedule is available to any party desiring to deliver conventional well gas directly into the Company's system, provided that there exists: (1) a gas purchase agreement with the Company or an executed Rate GS Service Agreement; and (2) compliance with the provisions of this Rate Schedule and with all other provisions of this Tariff.

RATES

All volumes of gas received at any point under this service will be subject to a 2.0% retainage rate.

TERM

The term for service shall be a minimum of one (1) year from the commencement of deliveries of gas supplies.

CHARACTER OF SERVICE

The Company's only obligation under this Rate Schedule shall be to receive gas from any conventional well and to permit that gas to flow against the existing pressure in the Company's facilities. The Company shall not be obligated to lower such line pressure by compression or otherwise to accommodate receipts from local producers under this Rate Schedule.

Service under this Rate Schedule shall be subject to Operational Flow Orders pursuant to Section 22 of the Rules and Regulations of this Tariff. Nothing in this Rate Schedule shall limit the Company's right to interrupt service or to take other action as may be required to alleviate conditions which threaten the integrity of its system.

(C) Indicates Change.

RATE AGS – APPALACHIAN GATHERING SERVICE

APPLICABILITY

These rates shall be applicable throughout the territory served by the Company.

AVAILABILITY

Service under this rate schedule is available to any party desiring to transport gas through the gathering system as well as to deliver gas directly into the Company's distribution system, provided that there exists: (1) a gas purchase agreement with the Company or an executed Rate AGS Service Agreement; and (2) compliance with the provisions of this Rate Schedule and with all other provisions of this Tariff.

RATES

All volumes of gas received at any point under this service will be subject to a gathering rate (billed in dekatherms) and a retainage rate with a minimum of 2%. All rates for this service shall be determined by negotiation. **(C)**

SURCHARGES AND RIDERS

Customers served under this rate schedule are subject to Rider E Distribution System Improvement Charge (DSIC) except that the DSIC rate may be reduced or eliminated for any customer with competitive alternatives or negotiated contracts.

TERM

The term for service shall be a minimum of one (1) year from the commencement of deliveries of gas supplies.

CHARACTER OF SERVICE

Equitable's only obligation under this Rate Schedule shall be to receive gas from any Appalachian receipt point and to permit that gas to flow against the existing pressure in Equitable's facilities. Equitable shall not be obligated to lower such line pressure by compression or otherwise to accommodate receipts from local Appalachian producers under this Rate Schedule.

Service under this Rate Schedule shall be subject to Operational Flow Orders pursuant to Section 11.13 of the Rules and Regulations of this Tariff. Nothing in this Rate Schedule shall limit Equitable's right to interrupt service or to take other action as may be required to alleviate conditions which threaten the integrity of its system.

(C)Indicates Change

PEOPLES NATURAL GAS COMPANY LLC

RATES AND RULES GOVERNING THE FURNISHING OF NATURAL GAS SERVICE TO RETAIL GAS CUSTOMERS

ISSUED: January 28, 2019
BY: Morgan K. O'Brien
President
375 North Shore Drive
Pittsburgh, PA 15212

EFFECTIVE: March 29, 2019

NOTICE

This tariff combines Tariff Gas – PA PUC No. 45 for the Peoples Division and Tariff Gas – PA PUC No. 46 for the Equitable Division. Upon approval of this Tariff Gas – PA PUC No. 47, all Peoples Natural Gas customers (including the former Peoples and Equitable Divisions) will be subject to the rates and rules set forth herein.

This tariff makes changes to existing rates.

LIST OF CHANGES

Page	Page Description	Revision Description
2, 2A, 2B	List of Changes	List of Changes
3, 4	Summary of Rates	Summary of prices for each rate schedule and rider updated.
3A, 4A	Summary of Rates	Pages removed; no longer needed.
5	Table of Contents	"Ratepayer" changed to "Customer". Rate GL added from Equitable Division tariff. Rider names updated.
6	Definitions of Terms	Applicant definition updated. "Ratepayer" changed to "Customer". "Customer" definition added.
7	Definitions of Terms	"Ratepayer" changed to "Customer". "Ratepayer" definition removed.
8	Classification of Customers	"Ratepayer" changed to "Customer". Definition of residential, commercial, and industrial customer modified.
9	Classification of Customers	"Ratepayer" changed to "Customer".
10	Rates Available Under This Tariff	"Ratepayer" changed to "Customer". Rate GL added from Equitable tariff.
11	Description of Territory	Additional cities/boroughs and townships included.
12	Description of Territory	Additional boroughs and townships included.
14	Description of Territory	Additional boroughs and townships included.
15	Description of Territory	Additional townships included.
16	Description of Territory	Additional cities/boroughs and townships included.
16A	Description of Territory	Additional townships included.
17	Rules and Regulations	Additional language added for conditions of furnishing service to customers. "Ratepayer" changed to "Customer". Transfer fees and connect fees eliminated.
18	Rules and Regulations	Moved cash deposit language into part b. "Ratepayer" changed to "Customer".
19	Rules and Regulations	"Ratepayer" changed to "Customer". Calculation of interest rate for commercial and industrial deposits modified to match residential calculation. Additional descriptive language added for cases where Applicant cannot furnish a cash deposit.
20	Rules and Regulations	Modified language for connection of service. Meter installation specifications from Equitable tariff included. Residential main allowance added.
20A	Rules and Regulations	New Page Added
21	Rules and Regulations	"Ratepayer" changed to "Customer". Turn-on fees updated. Winterizing and collection language added.
22	Rules and Regulations	Non-liability language added. "Ratepayer" changed to "Customer". Measurement of gas language modified.
23	Rules and Regulations	"Ratepayer" changed to "Customer". Accepted forms of payment added. Billing cycle language added.
24	Rules and Regulations	Billing cycle language added. Final bill language added. Dishonored Payment language from Equitable Division tariff added.
25	Rules and Regulations	"Ratepayer" changed to "Customer". Obstruction of meter language added. Meter ownership language added.
26	Rules and Regulations	Rule 15 moved to page 26. Renamed Section 17 "Emergency Curtailment". Language added to Section 16. "Ratepayer" changed to "Customer". Moved "Discontinuance of Service and Curtailment" section to page 27.
27	Rules and Regulations	Renamed Section 17 "Emergency Curtailment". Removed "Gas Shortage Curtailment Related to Long-Term Supplies" section. Old language from Page 29 moved here.
28	Rules and Regulations	Deleted old Section 17 language. Moved appendix to this page.

LIST OF CHANGES (CONTINUED)

53	Rate GS-SB – General Service – Standby	"Ratepayer" changed to "Customer".
54	Rate GS-SB – General Service – Standby	"Ratepayer" changed to "Customer". Customer charges updated.
55	Rate GS-SB – General Service – Standby	Language moved to page 54. Page now intentionally left blank.
57	Rate Appalachian Gathering Service	New rate added.
58	Rate GL – Gas Lights	Rate added from Equitable Division's tariff.
60	Rate CER – Competitive Energy Rate	Rate language modified. "Ratepayer" changed to "Customer".
61	Rider A – State Tax Surcharge	Rider renamed. Rate Revised.
62	Rider B – Recovery of Purchased Gas Costs	Rider renamed. "Ratepayer" changed to "Customer".
63	Rider B – Recovery of Purchased Gas Costs	Rider renamed. "Ratepayer" changed to "Customer".
63A	Rider B – AVC Capacity Charge	Rider renamed. "Ratepayer" changed to "Customer".
63B	Rider B – AVC Capacity Charge	Rider renamed. "Ratepayer" changed to "Customer".
64	Rider C – Transition Cost Mechanism	Rider renamed. "Ratepayer" changed to "Customer".
65	Rider C – Transition Cost Mechanism	Rider renamed. "Ratepayer" changed to "Customer".
66	Rider Supplier Choice	Rate Revised. Ratepayer" changed to "Customer".
67	Rider E – Merchant Function Charge	Rider renamed. Rate Revised. "Ratepayer" changed to "Customer".
68	Rider F- Universal Service	Rider renamed. Rate revised. "Ratepayer" changed to "Customer". Bad debt offset percentage updated.
69	Rider G – Gas Procurement Charge	Rider renamed. Rate revised. "Ratepayer" changed to "Customer".
71	Rider H – Ratepayer Trust Rate Credit	Rider eliminated.
72	Rider H – Ratepayer Trust Rate Credit	Rider eliminated.
73	Rider J – Rager Mountain Storage Credit	Rider eliminated.
74	Rider K – Distribution System Improvement Charge (DSIC)	Rider renamed. Rate revised.
75	Rider K – Distribution System Improvement Charge (DSIC)	Riders renamed.
76	Rider K – Distribution System Improvement Charge (DSIC)	Rider renamed.

PEOPLES NATURAL GAS COMPANY LLC

GAS—PA PUC NO. 47
ORIGINAL PAGE NO. 57

RATE APPALACHIAN GATHERING SERVICE

AVAILABILITY

Service under this rate schedule is available to any party desiring to transport gas through the gathering system, as well as to deliver gas directly into the Company's distribution and transmission system, provided that:

(1) a Master Interconnect and Measurement Agreement ("MIMA") has been executed between the Company and the party; and

(2) the party is in compliance the MIMA, the provisions of this Rate Schedule and with all other provisions of this Tariff.

RATES

The gathering rate ($/Mcf) will be set on a monthly basis in an amount equal to 12.4% of the beginning of the month price ($Dth) published in Platts, Gas Daily publication, under the heading Appalachia, Dominion, South Point, but in no event shall be less than $0.26 per Mcf, plus applicable retainage. The gathering rate shall not exceed the fully allocated cost of service associated with gathering system, as determined in the most recent base rate case proceeding.

Gathering of natural gas from unconventional sources, including but not limited to, horizontally drilled Marcellus and Utica shale gas and landfill gas, shall be negotiated and agreed to within the MIMA.

TERM

The terms for gathering service shall be a set forth in the MIMA.

CHARACTER OF SERVICE

The Company's only obligation under this Rate Schedule shall be to receive gas from any gathering receipt point and to permit that gas to flow against the existing pressure in the Company's facilities. Peoples shall not be obligated to lower such line pressure by compression or otherwise to accommodate receipts from local Appalachian producers under this Rate Schedule.

Service under this Rate Schedule shall be subject to Operational Flow Orders pursuant to Item 24 of the Rules and Regulations of this Tariff. Nothing in this Rate Schedule shall limit the Company's right to interrupt service or to take other action as may be required to alleviate conditions, which threaten the integrity of its system.

PIOGA Exhibit DW-11

Docket No. R- 2018-3006818, Peoples St. No. 2
Direct Testimony of Joseph A. Gregorini

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2018-3006818
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
JOSEPH A. GREGORINI,
SENIOR VICE PRESIDENT, CHIEF OPERATING OFFICER
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: January 28, 2019
DATE ADMITTED: _____

Peoples Statement No. 2

PREPARED DIRECT TESTIMONY OF
JOSEPH A. GREGORINI

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Joseph A. Gregorini. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or "Company") as Senior Vice President, Chief Operating Officer.

Q. PLEASE STATE BRIEFLY YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.

A. I graduated from The Pennsylvania State University in November 1982 with a Bachelor of Science Degree in Mineral Economics. In January 1983, I began full-time employment with the Federal Energy Regulatory Commission ("FERC") as an Economist in the Allocation and Rate Design Branch of the Office of Pipeline and Producer Regulation. While at the FERC, I participated as a member of the FERC staff in various kinds of proceedings, including base rate and certificate proceedings.

In July 1986, I left the FERC and joined Equitable Gas Company ("Equitable") as an Energy Planner in Equitable's Energy Planning Department.

In August 1987, I joined Peoples as a Rate Analyst and was promoted to Senior Rate Analyst in March 1989. In these positions, my responsibilities have included the

preparation and coordination of rate case components and other filings and the preparation of Peoples' cost of service and rate design studies.

In December 1997, I was promoted to the position of Supervisor, Rates and Regulatory Affairs. In 1999, my position was reclassified to Manager, Pricing and Regulatory Affairs. In April of 2010, I was promoted to Peoples' Vice President, Rates and Regulatory Affairs. In 2016, I was promoted to Senior Vice President of Rates, Reliability, and Sales. Currently, my role is Senior Vice President, Chief Operating Officer. In that capacity, I am responsible for directing Gas Operations, Customer Operations, and Gas Reliability (Gas Supply, Gas Control, GIS/Planning, and Safety/Training) as well as overseeing the Company's Sales and Marketing and efforts.

Q. PLEASE LIST THE FILING REQUIREMENTS THAT YOU ARE SPONSORING AS WITNESS.

A. Please refer to Appendix A for a complete list of the filing requirements for which I am the responsible witness.

Q. WHAT ARE YOUR RESPONSIBILITIES FOR PURPOSES OF THIS PROCEEDING?

A. My responsibilities which I will describe in separate sections of my testimony are:

1. Safety Programs
2. Peak Day and Annual Gas Supply Plan
3. Local Production - Gathering and Cost Recovery
4. Operations Capital Work Plan

5. UFG Mitigation
6. Other Operations Initiatives
7. Extension of Facilities – Tariff Modification

SAFETY PROGRAMS

Q. PLEASE DESCRIBE SOME OF THE COMMITMENTS PEOPLES HAS MADE TO THE SAFE OPERATION OF ITS PIPELINE SYSTEM.

A. One of Peoples' core values is Safety. This means that, in every strategic or operational issue that we consider, we incorporate the expected effect on Safety in our decision-making process. We want Safety to permeate our Company's culture so our employees are thinking of Safety at all times, at home, on their way to and from work, and while they are on the job. We want them to focus on their own personal safety as well as that of our customers and of the operation of our pipeline system.

One way we have done this is to include a Safety component in everyone's incentive compensation goals. In addition, all Operations Department employees also have a pipeline compliance component included in their performance expectations and incentive compensation goals. We also have engaged our Compliance Process Managers, Safety Department, and the entire Operations leadership team on a regular basis by conducting weekly safety conference calls where injuries, accidents, operating guidelines (Job Procedures and Standard Operating Procedures or "SOPs"), line hit damages, and near miss safety incidents are reviewed. In addition, we have implemented procedures for ongoing safety observations of work activities by supervisors and rapid dissemination of injury

details to the all field leadership and union personnel. We also work closely with our union to solve all safety related issues and to communicate and advance safety initiatives throughout the organization. A component of this is management's and employees' commitment to operational and safety training at our Training Center where employees obtain hands-on experience through controlled simulations of emergency events and other real life situations that enhance their safety awareness and hone their emergency response capability. We have also perfected our compliance work tracking system. This system schedules our prescribed, routine maintenance, compliance check work and provides for information system tracking of our planning and progress.

Q. PLEASE DESCRIBE THE COMPANY'S EMPLOYEE SAFETY PROGRAM.

A. Peoples' Employee Safety Program is multi-dimensional and includes numerous activities focused on accident prevention and compliance with applicable safety regulations. Safety is supported through active participation by operations leadership, a strong union management partnership, and engagement with industry organizations.

The three cornerstones of Peoples' Employee Safety Program are:

- Training and Education - where technical skills, emergency response, and specialized safety training is provided to employees, contractors, and external partners.
- Awareness and Communication – where weekly and monthly safety meetings, pre-job briefings, safety alerts, and intranet website resources are used to inform and refresh safety messaging.

- Investigations, Observations, and Safety Analysis – where safety incidents and risks are thoroughly investigated, discussed, trended, and mitigated.

Finally, and in recognition of the success of safety prioritization and program implementation, Peoples was the recipient of two Energy Association of Pennsylvania's Job Safety Awards in 2018, the Motor Vehicle Fleet Safety Achievement Award and the Safety Improvement Award.

Q. EARLIER YOU MENTIONED THE COMPANY'S TRAINING PROGRAM, COULD YOU DESCRIBE IT IN MORE DETAII.

A. Peoples operates an in house training facility in McKeesport, PA that provides multi-week introductory training for new hires, training for employees entering new job classifications, initial and refresher operator qualification (OQ) training on covered tasks performed by each field classification for both employees and contractors, and supplemental training for field personnel. By providing training internally, as opposed to using a 3rd party vendor, Peoples is able to ensure training captures company-specific processes and procedures and allows us to provide direct oversight of rigorous testing methods.

In addition to providing training to employees and contractors, the training team also conducts community outreach sessions for audiences beyond those affiliated with Peoples. These sessions include:

- First Responder Training: Emergency training for local volunteer fire departments
- Natural Gas Construction Heat Installation Training
- Natural gas utility and pipeline field skills training: This program is to prepare a new potential workforce for a career in the gas and pipeline industry.

Q. ARE THERE OTHER NOTEWORTHY SAFETY RELATED INITIATIVES THAT YOU WOULD LIKE TO DISCUSS?

A. Yes. Peoples has initiated steps to begin implementation of an enterprise-wide safety management system. The Company has also recently begun a self-review of its system and job procedures and SOPs in light of the unfortunate events that occurred in Boston, Massachusetts in September 2018 involving over-pressurization of a low-pressure pipeline system.

Q. PLEASE DESCRIBE THE SAFETY MANAGEMENT SYSTEM INITIATIVE

A. Safety Management Systems (SMSs) involve a systematic approach to managing safety; including the structures, policies, and procedures an organization uses to direct and control its activities. Because SMSs have proven to be successful in many industries (aviation, nuclear power, and chemical manufacturing industries to name a few), pipeline operators in partnership with American Petroleum Institute (API), U.S. Pipeline and Hazardous Materials Safety Administration (PHMSA), and state regulators developed API Recommended Practice 1173 to bring the benefits of SMSs to pipeline operations. API 1173 provides pipeline operators the framework to review an existing SMS or develop and implement a new pipeline SMS. The framework builds upon an operator's existing practices by drawing upon industry experiences, lessons learned, and existing standards. Particular emphasis is placed on proactive thinking of what can go wrong in a systematic manner, clarifying safety responsibilities throughout the pipeline operator's organization

(including contractor support), and the important role of top management and leadership at all levels.

Peoples has recognized the value of adopting API 1173 and developed three phases over a 2-year timeline for implementing an SMS. Phase 1 of the program focuses on developing the SMS team that will conduct an assessment and gap analysis of the current overall safety program verses the API 1173 recommendations. The assessment will identify and prioritize the focus areas for developing the plans and resources to fill the gaps, and assess impacts to the organization. Phase 2 involves executing the implementation plan; assessing the impacts to the organization; resolving process changes; and evaluating work load distribution. Phase 3 establishes the ongoing responsibilities and support, the actions for continuous improvement, and the methodology for tracking and communicating progress. Full implementation of the program is estimated to be 4Q 2020.

Q. PLEASE DESCRIBE THE BOSTON INCIDENT SELF-REVIEW

A. The Boston, MA pipeline incident involved the over-pressurization of a low pressure distribution system, supplied by multiple underground regulating stations reducing pressure from a higher pressure system, in an urban residential and commercial area. Because Peoples has many similar distribution systems, we proactively decided to initiate a Self-Review of all relevant facilities, tasks, job procedures, and emergency plans that reference Over Pressure Protection (OPP). The objectives of the review were to conduct an asset profile of all low pressure systems; a thorough review all SOPs and Job Aids that involve OPP; propose and consider SOP enhancements in light of the incident; develop

immediate/short term/long term action plans for operations; and update Communications and Incident Management Plans as necessary.

As a result of the Self Review, Peoples implemented several immediate action plans and SOP changes, conducted a complete field inventory of all underground regulating facilities and sensing lines, and developed emergency simulations and table top exercises to simulate a similar large scale incident. We are also evaluating the operational benefits of revising engineering standards for the designs of new regulating stations to include a redundant form of OPP; considering the retrofit of existing regulating stations to install redundant OPP; and evaluating all low pressure distribution systems for full relief capacity to prevent over pressurization.

Q. PLEASE DESCRIBE THE COMPANY EFFORTS TO REDUCE FACILITY DAMAGES.

A. Peoples is consistently implementing measures to improve our line locating performance. Among the recently implemented measures are routine root cause investigations and operations-wide conference calls, involving all construction, field operations and field customer service managers and supervisors to review utility fault damages as "lessons learned" exercises. Peoples has also invested in state of the art locating equipment such as marker balls, "snake" service line locators and a vacuum excavator to improve line locating performance. Five vacuum excavation vehicles are scheduled for delivery in 2019, with additional vehicles to be added in 2020.

A significant step toward reducing facility damages and improving our line locating performance occurred in 2014 through early 2015 as we transitioned all Peoples

companies' line locating work in house to be performed solely by Peoples' employees. As shown in the chart below, this initiative has resulted in year-over-year improvements in our rate of utility fault damage ("UFD") percentage. UFDs are those situations where the utility operator is responsible (e.g. inaccurate mapping, line marking errors) for a damage occurring to its own facility.

Year	UFD Rate
2013	22.3%
2014	19.8%
2015	16.5%
2016	16.2%
2017	16.0%
2018	15.9%

Q. PLEASE DESCRIBE HOW ACT 50, THE ONE-CALL LAW, HAS AFFECTED THE COMPANY'S DAMAGE PREVENTION EFFORTS?

A. The Act 50 One-Call laws have brought several procedural changes to Peoples. These changes include additional damage reporting to PA One Call and the PUC including -- damages incurred to our facilities by outside parties and damages caused to other party's facilities by our personnel -- and maintenance of the locations of abandoned pipelines on our maps so that we are able to more effectively locate abandoned pipelines. In addition to these ACT 50 related changes and in support of ways to reduce risk across our system, Peoples also recently performed an in-depth damage prevention process review that

involved, among other things, a best practices review. As a result of this analysis the Company will:

1. use construction inspectors to further ensure safe digging practices by our contractors;
2. use the newly acquired vacuum excavator equipment to determine facility locations when normal locating practices are inconclusive;
3. make additional facility information available to the job site;
4. provide refresher training for locators that will also provide a forum for sharing best practices; and
5. develop education on safe excavation practices and intervention procedures to be used in response to routine offenders.

Q. PLEASE DESCRIBE WHAT THE COMPANY HAS DONE AND PLANS TO DO GOING FORWARD TO MANAGE THE RISKS ASSOCIATED WITH LEAKAGE.

A. Let me start by mentioning that Peoples has in place extensive leak management SOPs that are designed to ensure safe and reliable delivery of natural gas to our customers. Peoples recently implemented additional enhanced operating procedures to further ensure safety across the system. These enhancements include adoption of: 1) the Gas Piping Technology Committee ("GPTC") Leak Classification and Action Criteria for Grade 1, 2, and 3 leaks; 2) newer operating procedures designed to identify and replace shorter sections of leak prone pipelines instead of repairing those sections; and 3) procedures on the handling of Grade 1 leaks (potentially most hazardous leaks) which require that Grade 1 leaks only be vented as a last resort, Peoples' Operations Management personnel being directly involved

and consulted in Grade 1 leak situations, and vented Grade 1 leaks being monitored on a daily basis during frost/frozen ground conditions. Later in my testimony I also describe other effective leak mitigation measures that include the accelerated replacement of older higher-risk bare steel pipelines under our Long Term Infrastructure Improvement Plan ("LTIIP") and our Unaccounted for Gas ("UFG") mitigation plan.

PEAK DAY AND ANNUAL GAS SUPPLY PLAN

Q. AS THE WITNESS SUPPORTING THE ANNUAL AND PEAK REQUIREMENTS AND SUPPLY VOLUME PROJECTIONS USED IN THIS FILING, PLEASE GENERALLY DESCRIBE HOW PEOPLES FORMULATES ITS ANNUAL GAS SUPPLY PLAN.

A. Each year, Peoples Natural Gas projects its total system requirements and available sources of supply. On the requirements side of the analysis, Peoples develops throughput projections by various requirements categories including usage by class of customer. The Company then adds monthly projections for company use and lost and unaccounted for gas to arrive at total projected system requirements on a monthly basis.

Certain operational considerations play a role in the requirements analysis. For example, there are portions of Peoples Division's service territory that are not physically interconnected with the main portion of Peoples' facilities, particularly in the Grove City area. Similarly, there are portions of Equitable Division's service territory that require support from specific interstate pipeline delivery points at times of high demand. As a result, Peoples needs to project specifically the requirements that it will have in those areas

in order to assure that it will have supplies available from the particular sources of supply that it is able to call on to serve those areas.

On the supply side of the analysis, Peoples pursues a least-cost reliable-service strategy through a combination of local and interstate assets and supplies. Local assets include an on-system storage facility and the gathering system, which allows Peoples to enhance the delivery of gas supplies produced locally in western Pennsylvania. The Company's interstate assets are comprised of a portfolio of transportation and storage services with five interstate pipelines that provides Peoples with access to a variety of supply source locations. Using this gas supply portfolio, Peoples uses an economic dispatch approach that also takes into account reliability, operational requirements, and contractual obligations. Under that approach, Peoples reviews the cost of its various sources of supply and plans to use those that are least costly. The Company starts by base loading local supplies; that is, using local gas first. From there the Company then turns to the existing pipeline supply assets and existing gas supply agreements. These include the firm transportation and storage service agreements with interstate pipelines and the long-term firm gas supply commodity agreement with EQT Energy.

Q. HOW DOES PEOPLES TYPICALLY DETERMINE ITS CUSTOMERS' REQUIREMENTS AND ASSOCIATED GAS SUPPLIES ON A DESIGN PEAK DAY?

A. Peoples uses a forecasting model that employs a number of variables including temperature, wind speed, and historical consumption levels. The values accorded the temperature and wind speed variables are minus 9 degrees Fahrenheit and 15.8 miles per

hour respectively. The values assigned to consumption levels and the other variables change over time. Using send-out data for the four years ended May 2018 the Company calculated a total system peak day design requirements of 1,282 MMcf per day.

Q. WILL THE COMPANY SUPPLY THE ENTIRETY OF THE 1,282 MMCF FOR ITS CUSTOMERS?

A. No. Peoples is responsible to ensure supplies of 1,014 MMcf to meet sales and Priority One customer's design day requirements as well as other system usage requirements. The supply of 1,014 MMcf per day reflects a combination of local gas volumes (29.3 MMcf), on-system storage design day supply (32.0 MMcf), and interstate delivered suppliers (952.7 MMcf). The remaining supplies (268.4 MMcf) will be acquired by third-party suppliers to satisfy the usage requirements of Non-Priority One transportation customers.

Q. PLEASE DESCRIBE HOW LOCAL GAS PURCHASES FROM CONVENTIONAL WELLS ARE USED TO SATISFY SYSTEM GAS SUPPLY NEEDS.

A. Peoples and natural gas suppliers operating on our system use natural gas produced from local shallow wells as a base load supply to meet customer's usage requirements. However, since 2012, local gas produced and delivered from conventional wells into the Company's system has declined year-over-year. In 2012, Peoples (including the Equitable Division) received supplies from conventional wells totaling approximately 48.3 BCF. In 2017, a total of approximately 30.1 Bcf of conventional production was delivered into the Peoples' systems. Over this six-year period, this represents a total decline of 18.2 Bcf, or

38%. A reversal of this ongoing decline is not expected. The conventional production volume level for the 11 months ended November 30, 2018 is 27.7 Bcf.

Q. DOES PEOPLES HAVE A POLICY REGARDING ADDITIONAL MARCELLUS SHALE WELL PRODUCTION?

A. Peoples' current role in the development of Marcellus Shale has been to provide producers of unconventional gas with similar access to both on-system and off-system markets as provided to conventional producers. Peoples has been able to accept Marcellus Shale production into its systems on a case by case basis, using the same analysis for Marcellus Shale production tap requests that it uses for conventional production tap requests. The analysis includes (i) the location and quantity of gas supply, (ii) the unused pipeline capacity at the proposed injection point, (iii) the anticipated gas quality and the investment required to resolve gas quality issues, and (iv) the impact of the production on existing base load supplies from local and interstate alternatives.

Peoples' market fundamentally benefits from having access to additional direct feed local Marcellus Shale production. It provides a replacement supply for declining conventional production volumes. Also, local gas supplies, including gas produced into the Peoples' system from both conventional and Marcellus wells, represent a lower cost supply than interstate delivered gas. Peoples plans to remain involved in finding opportunities to utilize Marcellus Shale gas produced in Peoples' service territory, and that activity will continue to benefit Peoples' market.

LOCAL PRODUCTION - GATHERING AND COST RECOVERY

Q. PLEASE DESCRIBE GENERALLY THE TRADITIONAL GATHERING PIPELINE SYSTEM.

A. Both the Peoples and Equitable Divisions have distribution systems that serve customers in and near the natural gas production regions of Pennsylvania. In fact, it was natural gas from the western Pennsylvania gas fields that originally served the customers of both Divisions.

Gathering systems are pipeline facilities that have the primary purpose of moving conventionally produced gas from production fields to transmission and distribution facilities for delivery to end use customers. In contrast, distribution pipelines generally are a system of mains and service lines that primarily function to deliver natural gas to individual homes and businesses. However, in some instances, customers and small distribution systems are connected directly to gathering systems in rural areas where it is not economic to extend pipelines from the major distribution centers because of the low density of potential customers.

In addition to gathering pipelines, gathering systems also typically include compression facilities and equipment to monitor and treat the gas. Gathering compressors are used to increase the flow of local production by raising the gathering pipeline pressure to the pressure of the pipeline that the gathering pipeline feeds into, typically a transmission pipeline or higher pressure gathering pipeline or higher pressure distribution pipeline. Gas monitoring and treatment is another part of a gathering system. Peoples requires producers to remove water and other contaminants from the gas delivered to the gathering system. In some cases,

the gas is further treated by Peoples at compressor stations where dehydration facilities are installed to remove water prior to delivering gas to transmission or distribution systems.

There are also situations where Peoples receives locally produced gas directly into its distribution and transmission systems. This production can be from both conventional and unconventional sources.

Q. DO GAS PRODUCERS BENEFIT FROM GATHERING SYSTEMS?

A. Yes. Producers benefit from gathering lines because, in most cases, it is their only means to get their gas production to a market. The gas produced into the gathering systems originates from conventional wells. Generally, gathering systems cannot be used to receive and deliver higher pressure gas produced from unconventional sources such as Marcellus Shale.

Q. DO CUSTOMERS BENEFIT FROM LOCAL PRODUCTION AND GATHERING SYSTEMS?

A. Yes. Customers receive a notable cost savings benefit from local production delivered into the Peoples' systems. Production directly feeding utility pipelines avoids costly interstate pipeline charges, which include fixed reservation charges for interstate pipeline reservation space, usage charges to cover variable interstate pipeline costs and retainage to cover gas loss and gas used in interstate pipeline operations. In some cases, gas purchased in the interstate market may require more than one interstate pipeline contract to bring gas to Peoples' city-gate.

Q. HAS THE COMPANY PREPARED A COMPARISON OF THE COST PER MCF OF DELIVERING GAS THROUGH INTERSTATE PIPELINES TO THE COST OF DELIVERING GAS THROUGH THE GATHERING SYSTEM?

A. Yes. Peoples Natural Gas Exhibit No. JAG-1 provides this comparison for the projected twelve months ended October 31, 2020 (Fully Projected Future Test Year - "FPFTY"). It shows that gas produced into and delivered through the gathering systems is notably less costly than gas procured on and delivered from Peoples' interstate pipeline suppliers. The total average cost of gas delivered via the gathering system for the FPFTY is estimated at $2.81 per Mcf. The total average cost of gas delivered via the interstate systems for the FPFTY is estimated at $3.37 per Mcf. This results in an estimated cost savings of $0.56 per Mcf or $7.0 million per year for the local gas purchased by Peoples' for our on-system customers alone. Customers that purchase local gas supplies from third party marketers can reasonably be expected to receive a similar cost per Mcf savings benefit. As noted in Peoples Natural Gas Exhibit No. JAG-1, this analysis reflects the various costs incurred by Peoples' ratepayers for the FPFTY which include: the projected average commodity cost of gas delivered to the Peoples' system; Peoples' costs to own and operate the gathering systems (including gathering UFG); and interstate pipeline costs for capacity, retainage, and delivery. Mr. Feingold calculated and presented testimony in support of the projected non-gas costs incurred by Peoples to own and operate the gathering systems.

Q. DOES INTERSTATE PIPELINE GAS AND LOCAL GAS SERVE THE SAME PURPOSES?

A. While both supply sources provide the gas supply needed by the customer, pipeline gas is much more flexible in that it is provided to the Company at significantly higher pressure which is required in peak periods of usage and for injection into storage. The amount of pipeline gas entering the Company's system can also more easily be adjusted up or down to meet the daily gas consumption swings due to weather. In addition, pipeline gas generally meets higher quality standards relating to containing impurities and water and creates fewer operational problems.

Q. HOW SHOULD THE BASE RATE COSTS OF THE GATHERING SYSTEM BE RECOVERED?

A. Gathering system costs are incurred to provide a market for supplies produced by local wells and to provide cost effective gas supplies to customers. In my opinion, it is appropriate for both producers and customers to share in paying these costs.

Q. WHAT FACTORS SHOULD BE CONSIDERED IN ALLOCATING THESES COSTS BETWEEN CUSTOMERS AND LOCAL SUPPLIERS?

A. As I have noted previously, customers benefit from obtaining local gas at a cost lower than interstate pipeline gas. The gathering system lowers the amount of interstate pipeline capacity that is required to serve customers and lowers pipeline demand costs recovered from all sales and transportation customers. In addition, customers served directly from the gathering system receive their service from gathering pipelines and not distribution pipelines. Finally, some of Peoples Natural Gas' distribution areas are served only by local gas from the gathering systems.

Producers derive substantial benefit from the gathering facilities as it is their source to a market. In addition, Peoples Natural Gas operates its gathering and distribution systems to facilitate the introduction of lower pressure gas from conventional wells into its system.

While it is difficult to quantify these benefits, it is clear that both producers and customers benefit from the gathering systems.

Q. HOW DOES PEOPLES PROPOSE TO RECOVER THE COSTS OF THE GATHERING SYSTEMS?

A. There is a practical limit to how much of the gathering system costs can be recovered from producers. Currently, the average price that producers received for their gas when purchased by Peoples for system supply is $2.27/Mcf for the twelve months ended September 30, 2018. The projected average market price that producers will receive for their gas purchased by Peoples for system supply is $2.16/Mcf for the projected twelve months ended October 31, 2020 (FPFTY). These prices are low by historical standards and it is likely that this has contributed to the reduction of production from conventional wells since 2012.

Given the relatively low historic and projected prices for local gas and the historical and ongoing declines in conventional production, the Company is concerned that without a change to the current gathering fee structure paid by producers, we will continue to experience declines in local gas available to customers on our system.

Peoples currently charges amounts to producers for gathering system costs through gathering fees on its Equitable Division and through the PA Production Enhancement

Service ("PA PES") program fees on the Peoples Division. The Company proposes to terminate these charges and fees and institute a uniform gathering service rate for all conventional gas production that will start at a base level and increase as the price of gas increases. The proposal is set forth in a new tariff rate schedule – Appalachian Gathering Service -- that is attached to my testimony as Peoples Natural Gas Exhibit No. JAG-2.

Q. PLEASE EXPLAIN THESE EXISTING GATHERING PROGRAMS AND THE ASSESSMENT OF CHARGES TO PRODUCERS.

A. The current structure for assessing gathering related charges on the Equitable Division and Peoples Division differ.

At the Equitable Division and well before Equitable Gas Company was acquired and merged with Peoples in 2013, a gathering tariff service and fee structure was approved by the Commission and put in place. That service, which currently exists today, is provided under Rate AGS – Appalachian Gathering Service. Under Rate AGS any conventional natural gas producers desiring to produce gas into and transport gas on the distribution or gathering systems are subject to a gathering rate and a gas retainage charge. It is not a voluntary program. All producers transporting conventional local production on the system are subject to gathering rates and retainage charges which are determined through negotiation. For the HTY 12-month period ending September 30, 2018, Peoples recovered $7.2 million in gathering rate revenues on the Equitable Division.

Unlike the Equitable Division, the Peoples Division does not have a tariffed gathering service. Instead, the Peoples Division operates the PA PES program which represents a series of voluntary agreements that Peoples entered into with many, but not

all, natural gas producers on the Peoples system. The voluntary PA PES program, which began in 2002, is designed to increase the flow of locally produced gas into the Peoples systems through the installation and operation of compression facilities, dehydration equipment and strategic delivery interconnections with other systems. For the HTY 12-month period ending September 30, 2018, Peoples recovered $7.0 million in PA PES gathering rate revenues from participating producers on the Peoples Division. I should also note that in the most recent 1307(f) 2018 case at Docket Nos. R-2018-2645278 and R-2018-3000236, Peoples Division received Commission approval to begin assessing a retainage charge of 2% to all conventional well producers.

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSAL TO INSTITUTE A UNIFORM GATHERING RATE FOR CONVENTIONAL GAS PRODUCTION.

A. Before I describe the mechanics of the gathering pricing proposal I would like to point out that our gathering rate proposal is designed to bring together the existing and differing programs of the two Divisions and set a producer paid gathering fee structure that attempts to establish a reasonable and ongoing producer revenue contribution (to offset the customer's share of gathering costs) that also does not create an economic disincentive for conventional gas producers to continue to produce low cost gas supplies into the Peoples' systems. This proposal eliminates the voluntary aspect of the legacy Peoples' PA PES program. All conventional gas producers will be required to pay the same uniform gathering fee for any gas produced into and transported on the distribution or gathering systems. The proposal also will adjust and tie the gathering rate to market natural gas prices so that if we experience future market price increases from the current historically

low levels, producers will receive higher prices for their gas produced into the Peoples systems and in turn will be able to increase revenue contributions to help offset the gathering system costs borne by customers in future Peoples rate cases. As set forth and described in Peoples Natural Gas Exhibit No. JAG-2, a gathering rate will be assessed to any party desiring to transport gas through the gathering system, as well as deliver locally produced gas directly into the Company's distribution or transmission systems.

Lastly I'd like to point out that this proposal addresses the recovery of gathering related non-gas costs and does not address the assessment of gas retainage charges to producers. Peoples plans to continue to assess the gas retainage rates currently charged to producers. Any revisions to the current gas retainage charges will be addressed in ongoing 1307(f) purchased gas cost proceedings.

Q. WHAT IS THE GATHERING RATE STRUCTURE APPLICABLE TO GAS DELIVERED INTO THE GATHERING SYSTEMS OR CONVENTIONAL GAS PRODUCED AND DELIVERED INTO THE DISTRIBUTION OR TRANSMISSION SYSTEMS?

A. That gathering rate will be based on a minimum charge of $0.26/Mcf and will be subject to monthly adjustment as natural gas market prices change. The monthly gathering rate will be set at a level equal to the higher of $0.26/Mcf or 12.4% of the first of the month Dominion South Point Appalachia Index market price as published in Platts, Gas Daily. The maximum gathering rate will be set equal to the fully allocated gathering cost of service rate. As determined by Peoples witness Feingold, the maximum gathering cost of service rate for the FPFTY is $0.76/Mcf.

Q. WHAT IS THE PROPOSED LEVEL OF THE GATHERING CHARGE PER MCF FOR GAS DELIVERED INTO THE GATHERING SYSTEMS OR CONVENTIONAL GAS PRODUCED AND DELIVERED INTO THE DISTRIBUTION OR TRANSMISSION SYSTEMS AND HOW MUCH REVENUE DOES THE COMPANY PROJECT TO RECOVER IN THE FULLY PROJECTED FUTURE TEST YEAR?

A. Based on latest projected average Dominion South Point Appalachia Index market price for the FPFTY of $2.10/Dth and the gathering rate parameters discussed above, a uniform gathering rate of $0.26/Mcf would be applicable for the FPFTY period. The annual volume projection of conventional production that will be subject to the gathering fee for the FPFTY is 31.3 Bcf. This volume projection was based on recent actual production levels adjusted to reflect current production decline trends. The resulting revenues to be paid for by conventional well producers for the FPFTY is $8.2 million.

Q. YOU MENTIONED EARLIER IN YOU TESTIMONY THAT PEOPLES ALSO RECEIVES UNCONVENTIONAL SUPPLIES INTO ITS SYSTEMS. ARE THERE GATHERING FEES ASSESSED TO PRODUCERS BY PEOPLES FOR UNCONVENTIONAL SUPPLIES AND IF SO WHAT ARE THE EXPECTED ANNUAL REVENUES?

A. Yes. As set forth in the new tariff rate schedule – Appalachian Gathering Service (Peoples Natural Gas Exhibit No. JAG-2), Peoples will charge a rate for gathering natural gas produced from unconventional sources that will be determined through negotiation. It's

important that this rate be negotiable because Peoples needs to compete with midstream and interstate pipelines to acquire this gas supply. Marcellus producers generally have multiple options to get their gas to market. Based on the negotiated rate currently charged to existing unconventional producers and the associated expected annual volumes produced from unconventional sources for the FPFTY, Peoples projects to generate $740,763 in annual gathering fees from unconventional gas producers for the FPFTY period.

Q. BASED UPON THE COMPANY'S FPFTY PROJECTION OF RECOVERIES UNDER THE GATHERING CHARGES TO CONVENTIONAL AND UNCONVENTIONAL PRODUCERS HOW MUCH OF THE GATHERING COSTS WILL BE RECOVERED?

A. The Company projects that it will recover $8.9 million, or approximately 33% of the $26.6 million in costs for the gathering system identified by Mr. Feingold.

Q. HOW DOES THE COMPANY PROPOSE TO RECOVER THE REMAINDER OF THE GATHERING COSTS THAT ARE NOT PROJECTED TO BE RECOVERED FROM PRODUCERS?

A. We have directed Mr. Feingold to allocate the remaining costs to the various customer classes. He uses a volumetric allocation factor to assign gathering plant and associated expenses to customer classes based on the percentage of annual gas volumes in each class supplied by Pennsylvania gas producers.

.

OPERATIONS - CAPITAL WORK PLAN

Q. PLEASE DESCRIBE THE COMPANY's PIPELINE REPLACEMENT PROGRAM.

A. In 2011, Peoples began a comprehensive infrastructure replacement program that targets the removal and replacement of all cast iron and unprotected bare steel pipelines and associated services. On September 22, 2017, Peoples filed a combined distribution Long-Term Infrastructure Improvement Plan ("LTIIP") for the Peoples Division, Equitable Division, and Peoples Gas (Formerly Peoples TWP) for 2017-2021 outlining the planned pipeline replacement for the aforementioned time period. In addition, within the filing, the Peoples Companies committed to replace all currently identified at risk[1] distribution pipe by 2034. The current combined LTIIP, which covers the distribution systems, was approved by the PUC in January 2018.

Q. WHAT APPROACH IS PEOPLES TAKING TO CARRY OUT THE PIPELINE REPLACEMENT PLAN?

A. Peoples is undertaking a hybrid contractor and employee approach to carry out the plan. Peoples uses contractors to install mains, service and perform restoration, while the Company's employees perform the work they are expert in, such as inspections, tie-ins, and work involving live gas. This hybrid approach is the most efficient and cost effective method for the Company as Peoples will avoid the significant upfront investment in pipeline installation equipment, facilities, and fleet. Peoples has negotiated five-year

[1] At risk pipe is unprotected bare steel, cast iron, copper, wrought iron or any other at-risk pipe.

contracts with two of our largest contractors in the areas with the most construction and have negotiated three-year contracts with others in outlying areas. In addition, Peoples has hired 118 additional construction related employees since December 2016.

Q. HOW MANY MILES OF PIPE HAVE BEEN RETIRED RECENTLY FROM THE PEOPLES SYSTEM UNDER ITS PIPELINE REPLACEMENT PROGRAM?

A. Between 2013 and 2018, the Company retired the following miles of pipelines under the replacement programs.

YEAR	PEOPLES	EQUITABLE	TOTAL
2013	38.8	20.1	58.9
2014	30.7	22.4	53.1
2015	35.0	30.9	65.9
2016	37.6	25.8	63.4
2017	47.5	40.5	88.0
2018	99.0	47.0	146.0

From 2013 through 2018, Peoples has replaced and/or retired 475 miles of pipelines at both the Peoples and Equitable Divisions under pipeline replacement programs.

Q. HOW MANY MILES OF PIPE DOES PEOPLES PLAN TO REPLACE IN IN ITS CURRENTLY APPROVED LTIIP?

A. In the Company's current LTIIP, Peoples proposed the following replacement miles for the years 2018-2021.

YEAR	PEOPLES	EQUITABLE	TOTAL
2018	73	53	126
2019	59	66	125
2020	63	63	126
2021	68	54	122

It's important to note that Peoples exceeded its 2018 LTIIP mileage goal of 126 miles by actual removing 146 miles of higher risk pipelines.

Q. HOW MUCH DOES PEOPLES PROPOSE TO SPEND ON LTIIP PROJECTS AND HOW MANY MILES OF PIPE DOES PEOPLES PROPOSE TO REPLACE IN 2019 AND 2020?

A. In the currently approved LTIIP Peoples expects to replace 125 miles in 2019 and 126 miles 2020. The LTIIP categories and associated capital spending for 2019 and 2020 in our currently approved LTIIP are shown immediately below

Approved LTIIP Spending

LTIIP Categories	2019	2020
Pipeline Replacements	$168.2 m	$171.7 m
Metering - ERT Program	$7.0 m	$7.0 m
Others – Regulators	$2.5 m	$2.5 m
Other Metering	$6.0 m	$6.0 m
Tracking and Traceability	$2.8 m	$0.0 m
Total Approved LTIIP	$186.5 m	$187.2 m

Q. PLEASE GENERALLY DESCRIBE THE OPERATIONS GROUP'S PART OF PEOPLES' CAPITAL BUDGET.

A. Peoples Natural Gas Company's Capital Budget for calendar years 2019 and 2020 totals $257.4 M and $280.9 M respectively. The Operations portion of these funding levels, which covers everything except Fleet, Facilities, Tools, Work Equipment and IT/Telecom related expenditures, is 87% of the total budget or $222.5 M and $244.0 M respectively. The majority of the Operations capital budget is dedicated to completing the Company's LTIIP and the Gathering UFG reduction plan. Over the 2-year period, these plans will result in the replacement/abandonment of 312 miles of pipeline, replacement of 37,250 company owned service lines and 9,661 customer owned service lines, changing out 24,000 meters, upgrading/replacing 80 regulating stations, completing the Smart Meter Program at the Peoples Division, upgrading approximately 124,000 old 40G ERT devices at the Equitable Division to 500 G technology and moving an additional 500 inside meters per year outside.

Another 5% of the Operation's capital budget is targeted to other non-LTIIP maintenance and compliance activities to maintain safe and reliable operations. Activities include compressor station overhauls and enhancements, regulating station odorization, and new pipeline interconnects.

The remaining portion of the Operation's capital budget, is focused on extending our pipeline facilities and installing new meters to serve new customers.

Q. WHAT ARE THE FTY AND FPFTY AMOUNTS FOR THE OPERATIONS PORTION OF THE CAPITAL BUDGET?

A. The Peoples' total Capital Budget spend for the FTY and FPFTY are $276.8 M and $296.6 M respectively. The Operation's portion of the FTY and FPFTY capital budget is $234.7 M and $256.3 M or approximately 85% which is consistent with the calendar budget levels. Also consistent with the calendar year budgets, is the composition of the Operation's budget of LTIIP & UFG Gathering Plans at 87%, new customer facilities investment at 9% and the balance for non-LTIIP related maintenance and compliance activities.

Q. PLEASE DESCRIBE THE COST SAVINGS IN PIPELINE REPLACEMENT THAT THE COMPANY HAS REALIZED DUE TO THE MERGER BETWEEN PEOPLES AND EQUITABLE?

A. One of the benefits of the merging the Peoples and Equitable businesses was the ability to avoid the replacement of duplicative pipelines in our overlapping service territories. The Company estimates that by avoiding the replacement of duplicative pipelines it saved over $41 million in capital expenditures through 2017, about $10 million per year. Peoples also

experienced meaningful cost savings in 2018 as well but because we are still analyzing the results of 2018 pipeline replacement activities, the exact cost savings estimate for 2018 is not available at this time.

Q. PLEASE DESCRIBE THE COMPANY'S INITIATIVE TO IMPLEMENT ENCODER RECEIVER TRANSMITTER (ERT) METERING TECHNOLOGY.

A. In 2016, the Peoples Division began a five-year plan to implement ERT technology on all customer meters. The technology is used to transmit data from meters over a short range so a utility vehicle can collect meter data without a worker physically reading each meter. Since then, Peoples has accelerated the program and projects to finish these installations by December 2019, which is during the beginning of the Fully Projected Future Test Year. Peoples will also begin a multi-year program in 2020 to replace older generation ERT equipment that is aging and have battery units that are near the end of their useful lives.

As shown above, Peoples' LTIIP capital work plan includes $7.0 million in 2019 and $7.0 million in 2020 for investment related to the ERT program.

Q. HOW IS PEOPLES ADDRESSING THE GOODWIN-TOMBAUGH GATHERING SYSTEMS?

A. The Goodwin-Tombaugh systems are gathering systems that were acquired from EQT Corporation by Peoples' parent company in December 2013 as part of the acquisition of Equitable. Consistent with the terms of the Commission approved settlement in the acquisition case, at closing these gathering systems were transferred to a new unregulated sister company of Peoples – PNG Gathering LLC. These systems are not owned by

Peoples but Peoples has been the system operator since closing. Beginning in 2014, Peoples undertook immediate steps to establish safe and reliable operations of both gathering systems. These steps included: clearing and mowing of right-of-ways ("ROWs"); GPS and GIS mapping all Goodwin-Tombaugh asset records (lines, producer taps, customers, interconnections and other facilities); replacement and installation of line markers; incorporating Goodwin-Tombaugh facilities into the Peoples' damage prevention program; and establishment of numerous odor inspection sites with ongoing (quarterly) odorization surveys. Since that time Peoples has performed ongoing maintenance and compliance activities such as: ROW mowing, line walling and leak surveys; managing, classifying and repairing leaks under its normal compliance program; identifying and abandoning zero flow production meters; certain remediation pipeline projects; and ongoing updates to mapping data as a result of field verifications. In addition to these maintenance/compliance activities Peoples has been undertaking an ongoing assessment program to develop a long-term plan regarding the possible remediation of some or all of these systems. In the very near future, Peoples will be meeting with the state parties including Commission staff, the Office of Consumer Advocate and the Office of Small Business Advocate to discuss and review Peoples' proposed plan and recommendations. Following those discussions Peoples will present to and file a plan with the Commission. Peoples has not included any operating/maintenance or capital costs in claim in this rate case.

UNACCOUNTED FOR GAS ("UFG") MITIGATION

Q. PLEASE DESCRIBE WHAT THE OPERATIONS GROUP IS DOING TO ADDRESS THE REDUCTION OF THE COMPANY'S UFG.

A. The Peoples' gathering systems are the largest contributor to UFG. Accordingly, Peoples presented in the 2018 1307(f) proceeding (R-2018-2645278 and R-2018-3000236) its plan to aggressively implement a UFG Mitigation Plan to Address Gathering Pipelines. Some of the plan components include:

1. Establishment of a dedicated and ongoing UFG team to identify and implement effective UFG mitigation measures on the gathering and distribution systems;
2. Segmentation program to enhance the identification of mitigation target areas on the gathering systems;
3. Find-it/Fix-it program - Peoples is transitioning to a program to annually leak survey bare steel gathering lines and prioritize for repair any found leaks;
4. The accelerated removal and replacement of 115 miles of at-risk gathering pipelines for the 2018 – 2021 period;
5. Mapping and Gas Measurement enhancements; and
6. Enhancements to theft-of-service processes and procedures.

Q. IN ADDITION TO THE UFG MITIGATION PLAN, HAS PEOPLES SET TARGETS REGARDING GATHERING UFG?

A. Yes. In the Settlement of Peoples' 2018 1307(f) proceeding, R-2018-2645278 and R-2018-3000236, the Company agreed to a gathering UFG target of 9.0% for the twelve months ending August 31. 2019, 8.5% for the year ending August 31, 2020, and 7.5% for the year ending August 31, 2021.

OTHER OPERATIONS INITIATIVES

Q. ARE THERE ANY OPERATIONAL INITIATIVES THAT YOU WOULD LIKE TO DISCUSS?

A. Yes. Some of these are a result of state or federal regulatory initiatives while some are Company driven initiatives to improve the overall customer experience. They include:

- Inside Meter Programs – In May 2014, the Commission adopted a final rulemaking order that amended § 59.18 (relating to meter, regulator and service line location) to be consistent with Federal regulations. One of the major requirements resulting from these regulations is that many existing meters currently located inside of a building must be relocated outside. The regulations require that Gas utilities shall have 20 years from the effective date of this regulation to complete replacement of existing facilities in compliance with the requirements. Peoples estimates that it has approximately 4,800 inside meters that will need to be relocated outside by 2034. Of these inside meters, we estimate that about 800 meters have been or will be associated with pipeline replacement projects and have or will be relocated outside as part of the pipeline replacement work under the existing approved LTIIP. The remaining eligible inside meters, which total about 4,000, will be relocated outside as part of a 10-year program that will begin in 2019. Peoples plans to relocate approximately 400 – 500 of these non-LTIIP inside meters per year over the 10 year program.

Projected capital expenditures associated with the non-LTIIP meters relocation project is $1.6 million in 2019 and $1.7 million in 2020.

- DOT Transmission Integrity Rule 2.0 – This DOT rulemaking which is known as the "Transmission Integrity Mega Rule" is expected to be issued in three separate final rulemakings in 2019 and 2020. It is expected to require additional pipeline assessments in areas beyond high consequence areas that weren't previously in scope. This rule may also result in integrity assessments for pipe and fittings that don't have reliable records documenting previous pressure tests and material attributes. We will continue to monitor developments with this rule and will be prepared to change our strategy and operations moving forward to ensure compliance with any new regulations that are established.
- DOT Tracking and Traceability – Peoples wants to be prepared to support the upcoming DOT Tracking & Traceability rule that requires pipe and related components be tracked and traced through bar coding technology. It will allow Peoples to track the location where pipe and components are installed, the date of installation and the parties involved with installation. It will also trace important information associated with the pipe and components including manufacturer, production data, lot information, material, size, pressure and temperature ratings and other related data. Peoples projects to incur a total of $5.03 million in capital expenditures from late 2018 through 2019 for necessary hardware and software in support of this program.
- Customer Experience - In July 2018, Peoples began a pilot program of offering customers the ability to schedule appointments within a two-hour timeframe in

the Waynesburg and Ginger Hill locations. The Company has continued to expand these offerings throughout other locations and plans a full roll out of this program in all areas by the second quarter of 2019. Customers have responded positively to the program. In addition, this program improved the Company's Can't Get In ("CGI") rate. The CGI rate for the two-hour appointment orders is less than half of standard orders.

Further, last year we implemented a pilot program in some of our shop locations where our field customer service employees are now able to take customer payments when they are at a customer's home working a credit order. This avoids the inconvenience of terminating and then reestablishing service for those customers able and willing to make a payment to avoid possible termination. We look to expand this program in 2019.

Our field employees engage with customers on a daily basis. We provide them with resources such as customer friendly handouts regarding natural gas pipelines and business cards with our 1-800-400-WARM phone line to encourage customers to call and get help with their gas bill. Particularly when they arrive at a home of a customer facing termination or whose service is off due to lack of payment, our employees encounter customers in real need of support. We recognize that customers who struggle to pay the gas bill often struggle to manage other basic necessities such as rent, food or medical care. Our employees were very concerned for the customers they were encountering and wanted to find a way to help. As a result, we created a program we call "Help At Peoples Now' or HAPN. Under this program we

established a dedicated phone line that all field employees could use, while still at the customer's home, to reach someone in our Customer Relations department. Our Customer Relations team can immediately step into action, helping customers access Peoples CAP or Emergency Furnace & Line Repair Program or connect them to other resources such as food pantries, community agencies and programs of other utilities. This employee partnership has great benefits, not only to the customers who receive invaluable assistance, but to the employees involved as well.

EXTENSION OF FACILITIES – TARIFF MODIFICATION

Q. PLEASE DESCRIBE PEOPLES' CURRENT MAIN EXTENSION POLICY.

A. As detailed in section 4 of existing Peoples Natural Gas' tariff, the Company uses an economic analysis when a customer requests the Company to extend its facilities to serve them. This analysis compares the net present value ("NPV") of the customer's projected future revenue to the cost the Company would incur to add that customer. If the projected revenues are greater than the projected costs, the Company will extend facilities without cost to the customer. However if projected costs are greater than projected revenues, Peoples requires the customer to pay a contribution in aid of construction (CIAC) or as an alternative, at the Company's discretion, the customer may take service under Pilot Rider MLX, Mainline Extension Service. The CIAC is the amount required to make the analysis whole. Peoples performs the same analysis if multiple potential customers asked to be served off a single extension of facilities.

Q. PLEASE EXPLAIN RATE MLX.

A. Under Rate MLX, customers pay a higher delivery rate, as noted in the tariff, in lieu of providing a CIAC for Peoples to extend facilities to serve them. The Company selects the rate tier based upon the minimum delivery rate required for Peoples to cover the investment costs to extend facilities. All customers taking service from the extension pay the same MLX delivery rate.

Q. SINCE THE PURPOSE OF MLX IS TO ENABLE MORE PEOPLE TO ELECT NATURAL GAS SERVICE, WHY IS PEOPLES CONSIDERING A MODIFICATION TO ITS CURRENT MAINLINE EXTENSION POLICY AT THIS TIME?

A. One of the more significant barriers for residential customers to receive or convert to natural gas is the CIAC. While Rider MLX helps to reduce this barrier by spreading the cost of a customer contribution over a period of time, it does not reduce the overall cost a customer must pay to have the Company extend its main to serve them. Given the plentiful supply of low-cost gas from Marcellus Shale in Pennsylvania, this is an ideal opportunity to help more people convert to natural gas and enjoy the cost savings of this efficient natural resource.

Q. WHAT DOES PEOPLES PROPOSE TO ASSIST POTENTIAL CUSTOMERS WHO WISH TO USE NATURAL GAS?

A. To help more Pennsylvanians enjoy the benefits of natural gas, Peoples is proposing a tariff change that, alone and in combination with MLX, will further encourage more people to elect natural gas service. We are proposing an allowance of 150 feet of main line per residential applicant without the need for an economic analysis in normal situations. This proposal also is designed to simplify the calculation and application of the main line extension policy which currently is based on a detailed economic evaluation. Our proposal will make the rules for extending service to residential customers more transparent and easier to understand. It will also simplify the administrative calculation in determining and establishing residential customer contributions.

Q. DOES THE COMPANY CURRENTLY OFFER ANY FOOTAGE ALLOWANCE FOR CUSTOMERS TO CONNECT TO PEOPLE'S SYSTEM?

A. No, the Company does not currently offer customers any mains footage allowance to connect to its natural gas system. Currently, all extensions are evaluated based on a detailed economic evaluation.

Q. IS THE COMPANY AWARE OF ANY NGDCS WHO OFFER A FOOTAGE ALLOWANCE TO RESIDENTIAL CUSTOMERS?

A. Yes, the Company's affiliate, Delta Gas, offers 100 feet of main line allowance per customer in Kentucky. In West Virginia, where Peoples WV operates, gas utilities are required to extend mains 100 feet for each customer, at no cost to the customer. In addition, Columbia Gas of Pennsylvania offers a 150 foot per customer main line allowance, Valley Energy offers a combination of up to 200 feet of service per customer and or main extension per customer.

Also, Columbia Gas of Ohio, Columbia Gas of Maryland, Delmarva Power (DE), Duke Energy (OH) and Dominion East (OH) are some of the many companies who offer extensions of mainline without charge to applicants.

Q. WHAT IS PEOPLES' MAIN EXTENSION TARIFF CHANGE PROPOSAL?

A. Peoples proposed tariff change would only apply to residential extensions. For each residential applicant that requests a main line extension, Peoples would install the first 150 feet of main line without charge to the customer in normal situations. At the discretion of the Company, certain projects, which contain abnormal underground conditions, such as crossing a stream or state highway, or visible ledge, or rock that will affect excavation or excessive permitting fees would not be eligible for the 150 foot allotment. For those projects without the abnormal conditions, as more applicants join in a single project to extend gas facilities, the Company will be able to install greater length of main without charge to the applicants. For example, on a single project with four customers electing to receive natural gas, the Company will install up to 600 feet of main line without requiring a CIAC.

For extension projects greater than 150 feet per customer, the Company will determine the required customer contribution by subtracting 150 feet per customer from the actual average foot per customer associated with the specific mainline extension project. That difference would then be multiplied by the actual cost per foot associated with the extension project to determine the customer contribution required for each customer within the project area. For example, if a residential customers required a 200 foot line extension, the Company would calculate the contribution amount based on the cost to extend facilities by 50 feet. The applicants would be required to pay this up front or through Rider MLX.

Q. HOW DID THE COMPANY DETERMINE 150 FEET WAS THE APPROPRIATE OFFER?

A. Please see Exhibit JAG-3. Peoples calculated the miles of road and housing units in its service territory and found that there was an average of 128 feet of road per every housing unit. Since Peoples is also pursuing a program to expand gas service into rural areas, the Company also calculated the miles of road and housing units for the Company's rural area outside of Allegheny County and found that there was an average of 180 feet of road per every housing unit in the more rural areas of the Company's service territory. By offering a 150 foot allowance to each applicant, the Company is providing an allowance equivalent to the average distance of extending its main from one housing unit to the next within its service territory.

Q. WHAT WILL BE THE RATEMAKING TREATMENT OF THE ALLOWANCE?

A. The cost of all facilities installed will be included in rate base in future proceedings and revenues will be reflected for the new customers added in future proceedings. If further customers are connected to facilities constructed within the allowance, no credit would be provided to the original customers added as part of the extension. If a CIAC is required, and new customers are later added to the extension, the Company's existing rules regarding provision of a credit under its main extension rules will continue to apply. Peoples is not reflecting any additional revenues or capital in this case for the main line allowance proposed in this case.

Q. WILL THIS PROPOSAL REPLACE THE USE OF THE COMPANY'S PILOT RIDER MLX?

A. No, Peoples will continue to offer Rider MLX to customers as an option for customers who require an extension greater than 150 feet and those not eligible under the 150 foot provision.

Q. PLEASE SUMMARIZE YOUR TARIFF CHANGE PROPOSAL.

A. Peoples proposes to adopt a streamlined approach that will extend its main 150 feet without charge to an applicant for each applicant that applies for a line extension. In this way, the Company is simplifying the process for the customer and addressing a barrier many applicants face when they wish to select natural gas as their heating source, the cost of the main line extension. The proposal will make it easier for applicants to select natural gas service.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as other issues arise during the course of this proceeding. Thank you.

Total Delivered Cost		$ 2.8109	/ Mcf			$ 3.3687	/ Mcf	

$ 0.5577 Local Gas Discount

* Based on weighted average cost of all existing Peoples interstate FT and storage contracts.

1/ DTI Appalachian Index Price as estimated for the FPFTY - November 2019 through October 2020

2/ Commodity Cost for Local Purchases is 103% DTI App Index and interstate supplies are converted from Dth to Mcf at 1.04 system average Btu.

3/ Gathering retainage level recovered from producers on the Peoples Division and Equitable Division.

4/ Gathering Fee is the producer paid fee under Peoples' proposed Appalachian Gathering Service rate schedule for the FPFTY - November 2019 - October 2020.

APPALACHIAN GATHERING SERVICE

AVAILABILITY

Service under this rate schedule is available to any party desiring to transport gas through the gathering system, as well as to deliver gas directly into the Company's distribution and transmission system, provided that:

(1) a Master Interconnect and Measurement Agreement (MIMA) has been executed between the Company and the party; and

(2) the party is in compliance with the MIMA, the provisions of this Rate Schedule and with all other provisions of this Tariff.

RATES

The gathering rate ($/Mcf) will be set on a monthly basis in an amount equal to 12.4% of the beginning of the month price ($/Dth) published in Platts, Gas Daily publication, under the heading (C) Appalachia, Dominion, South Point, but in no event shall be less than $0.26 per MCF, plus applicable retainage. The gathering rate shall not exceed the fully allocated cost of service associated with gathering system, as determined in the most recent base rate case proceeding.

Gathering of natural gas from unconventional sources (including but not limited to horizontally drilled Marcellus and Utica shale gas and landfill gas), shall be negotiated and agreed to within the MIMA.

TERM

The terms for gathering service shall be a set forth in the MIMA.

CHARACTER OF SERVICE

The Company's only obligation under this Rate Schedule shall be to receive gas from any gathering receipt point and to permit that gas to flow against the existing pressure in the Company's facilities. Peoples shall not be obligated to lower such line pressure by compression or otherwise to accommodate receipts from local Appalachian producers under this Rate Schedule. Service under this Rate Schedule shall be subject to Operational Flow Orders pursuant to Item 23 of the Rules and Regulations of this Tariff. Nothing in this Rate Schedule shall limit the Company's right to interrupt service or to take other action as may be required to alleviate conditions, which threaten the integrity of its system.

PIOGA Exhibit DW-12

PIOGA Set X to Peoples

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	Docket No. R-2023-3044549
	:	
Peoples Natural Gas Company LLC	:	
	:	

PIOGA INTERROGATORIES and REQUESTS FOR DOCUMENTS, SET X
to
PEOPLES NATURAL GAS COMPANY LLC

The Pennsylvania Independent Oil & Gas Association (PIOGA) hereby propounds the following interrogatories and requests for documents to Peoples Natural Gas Company LLC (Peoples) to be answered by those officers, employees, or agents who may be cognizant of the requested facts and who are authorized to answer on behalf of the Company.

INSTRUCTIONS

(a) As used herein, "describe", "explain", "identify" and "specify" mean to set forth fully, in detail and unambiguously, each and every fact of which Peoples has knowledge relevant to the answer called for by the request.

(b) As used herein, "relates to" or "relating to" mean referring to, concerning, responding to, containing, regarding, discussing, describing, reflecting, analyzing, constituting, disclosing, embodying, defining, stating, explaining, summarizing, or in any way pertaining to.

(c) These interrogatories are continuing. You are required to change, supplement and correct all answers to conform to available information, including information that first becomes available after answers are served.

(d) These instructions apply to all interrogatories and document requests hereafter propounded by PIOGA in this proceeding, whether or not included with or attached to subsequent interrogatories and document requests.

(e) If Peoples believes that any request set forth in these interrogatories and document requests is ambiguous or unclear in any way, please notify the undersigned PIOGA counsel as soon as possible so that the request may be properly clarified prior to the preparation of a written response.

PIOGA INTERROGATORIES and DOCUMENT REQUESTS, SET X
to
PEOPLES NATURAL GAS COMPANY LLC

Docket No. R-2023-3044549

1. Reference Peoples Statement No. 4-R (Palombo) at p.4, lines 13-16. Does Peoples agree to the use of a water vapor or moisture curve to determine the allowed level of water vapor in production gas delivered to all of the Company facilities? If not, please explain why not.

2. Reference Peoples Statement No. 4-R (Palombo) at p.4, lines 16 through p.5, line 1. Please identify where in PIOGA's direct testimony that PIOGA states or suggests that gas quality standards, other than water vapor content, that are in the current MIMA and tariff should not be applied.

3. Reference Peoples Statement No. 4-R (Palombo) at p.7, lines 11-16.

   a. Please identify the pipelines that the legacy TWP system pipelines had classified as (i) DOT gathering and (ii) DOT production prior to reclassifying them to distribution prior to their acquisition by Peoples.

   b. When were these pipelines first classified as (i) DOT gathering and (ii) DOT production? Please provide all documents showing when these classifications occurred and the reasons for the classifications.

   c. When did the legacy TWP system reclassify these pipelines to distribution. Please provide all documents showing when this reclassification occurred and the reasons for the reclassification.

4. Reference Peoples Statement No. 4-R (Palombo) at p.7, lines 5-11 and 17-20, and Peoples Exhibit RNZ-3.

   a. Are PNGD pipelines not classified under DOT or FERC as gathering included in Peoples' overall cost of gathering service? If so, please identify them, state the costs of these pipelines included in Peoples' overall cost of gathering service, and identify where these costs are shown in Peoples Exhibit RNZ-3.

b. Are PGD pipelines that were reclassified from gathering to distribution prior to Peoples' acquisition of the legacy TW Phillips system included in Peoples' overall cost of gathering service? If so, please identify them, state the costs of these pipelines included in Peoples' overall cost of gathering service, and identify where these costs are shown in Peoples Exhibit RNZ-3.

5. Reference Peoples Statement No. 4-R (Palombo) at p.8, lines 3-6.

   a. Please identify the portions of the (a) rate increase proposed in this proceeding and (b) rising costs that drive this proceeding that are attributable to producers.

   b. Please identify where the portions identified in your response to 3.a. above are included in Peoples Exhibit RNZ-3.

6. Reference Peoples Statement No. 4-R (Palombo) at p.8, line 21 through p.11, line 5. Please identify PIOGA's proposals that would prevent Peoples' operation of its pipeline system as described in the referenced portion of Mr. Palombo's rebuttal testimony, and explain how PIOGA's proposals would do so.

7. Reference Peoples Statement No. 4-R (Palombo) at p.12, lines 17-20. Please identify PIOGA's proposals concerning adjusting regulator set points that would require Peoples to allow producers' meters to operate outside the appropriate guidelines to transport local production.

8. Reference Peoples Statement No. 4-R (Palombo) at p.13, lines 13-18. Please identify the language proposed by PIOGA that would remove the flexibility for Peoples to make the most prudent daily operational decisions that meets the balance described in the referenced testimony, and explain how PIOGA's language would do so.

9. Reference Peoples Statement No. 4-R (Palombo) at p.13, lines 18-21. Please identify the language proposed by PIOGA that would remove Peoples' ability (a) to adjust pressures that ensure safe operations or (b) to shut-in meters that deliver low quality gas, and explain how PIOGA's language would do so.

Respectfully submitted,

Kevin J. Moody, Esq.
General Counsel
Pennsylvania Independent Oil & Gas Association
212 Locust Street, Suite 300
Harrisburg, PA 17101-1510

PIOGA Exhibit DW-13

Peoples response to PIOGA-X-6

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-X-006

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4-R (Palombo) at p.8, line 21 through p.11, line 5. Please identify PIOGA's proposals that would prevent Peoples' operation of its pipeline system as described in the referenced portion of Mr. Palombo's rebuttal testimony, and explain how PIOGA's proposals would do so.

Answer: PIOGA has offered several suggested language revisions that directly affect how Peoples should operate its systems to accommodate conventional production. For example, witness Weaver proposes replacing the current language in the Rate AGS with additional provisions of when and why Peoples can restrict the flow of gas or lower line pressures. Also, with respect to flow restrictions and meter shut-ins for adjustments to operating pressures, witness Jacobs specifically proposes a nine (9) month restriction where Peoples does not adjust pressures, except for cases of emergencies or unplanned activities. Both of these suggested revisions clearly reduce the ability for Peoples to make daily, weekly, or monthly decisions on how to operate its system most prudently and safely and provide reliable service to rate paying customers. Witness Jacobs also proposes adding provisions for "Peoples to make best efforts to limit flows of transmission or pipeline supplemental volumes to give conventional production flow-preference". While he caveats the proposed language with "as soon as possible after the threat to the integrity and safe operation of the system of the economic reason no longer exists", this still limits Peoples from making quick and appropriate decisions on the most optimal blend of supplies to meet customer demands. Peoples has contractual obligations with interstate pipelines that may impact deliveries at various points across the system, which have to factor in to where and how much gas needs to be delivered.

Submit Date: 4/29/2024

PIOGA Exhibit DW-14

Peoples response to PIOGA-X-4

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-X-004

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4-R (Palombo) at p.7, lines 5-11 and 17-20, and Peoples Exhibit RNZ-3.

a. Are PNGD pipelines not classified under DOT or FERC as gathering included in Peoples' overall cost of gathering service? If so, please identify them, state the costs of these pipelines included in Peoples' overall cost of gathering service, and identify where these costs are shown in Peoples Exhibit RNZ-3.

b. Are PGD pipelines that were reclassified from gathering to distribution prior to Peoples' acquisition of the legacy TW Phillips system included in Peoples' overall cost of gathering service? If so, please identify them, state the costs of these pipelines included in Peoples' overall cost of gathering service, and identify where these costs are shown in Peoples Exhibit RNZ-3.

Answer: a. No

b. No

Submit Date: 4/29/2024

PIOGA Exhibit DW-15

Peoples response to PIOGA-X-5

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-X-005

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4-R (Palombo) at p.8, lines 3-6.

a. Please identify the portions of the (a) rate increase proposed in this proceeding and (b) rising costs that drive this proceeding that are attributable to producers.

b. Please identify where the portions identified in your response to 3.a. above are included in Peoples Exhibit RNZ-3.

Answer: Overall, the producers contribute to various increases in costs that drive the rate increase. The most explicit indication is the overall cost of the gathering system in this case of $32,982,446 (see Exhibit RNZ-3 attached to Peoples Statement No. 15 - the Direct Testimony of Ralph Zarumba) compared to the cost of the gathering system in the last case of $26,559,887.

Submit Date: 4/29/2024

PIOGA Exhibit DW-16

Peoples response to PIOGA-X-3- Revised

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-X-003

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4-R (Palombo) at p.7, lines 11-16.

a. Please identify the pipelines that the legacy TWP system pipelines had classified as (i) DOT gathering and (ii) DOT production prior to reclassifying them to distribution prior to their acquisition by Peoples.

b. When were these pipelines first classified as (i) DOT gathering and (ii) DOT production? Please provide all documents showing when these classifications occurred and the reasons for the classifications.

c. When did the legacy TWP system reclassify these pipelines to distribution. Please provide all documents showing when this reclassification occurred and the reasons for the reclassification.

Answer: a. In 2000, T. W. Phillips (now the Peoples Gas Division or PGD) reported 1,509 miles of distribution, 44 miles of transmission, and 1,542 miles of gathering on the annual DOT reports. In 2001, PGD initiated a project to reclassify gathering and some transmission pipe to distribution where applicable. Subsequently, in the 2001 annual DOT reports, PGD reported 3,086 miles of distribution, 40 miles of transmission, and 0 miles of gathering. The 1,509 mile increase of distribution is primarily attributed to the reclassification of all gathering lines.

b. The pipelines were classified as gathering when they were originally installed.

c. As stated in (a), the lines were reclassified in 2001. Please reference the 2000 and 2001 annual DOT reports that are available to the public on the PHMSA website.

Submit Date: 5/1/2024

PENNSYLVANIA WEATHERIZATION PROVIDERS TASK FORCE

PWPTF Statement No. 1

Direct Testimony of Jennifer Warabak

In Re: Peoples Natural Gas Company, LLC

Docket Number: R-2023-3044549
C-2024-3045268
C-2024-3045385

Q. Please state your full name and business address.

A. Jennifer Warabak, 165 Amber Lane, PO Box 1127, Wilkes-Barre, Pennsylvania 18703-1127.

Q. By whom are you employed and in what capacity?

A. I am employed by the Commission on Economic Opportunity (CEO) as Executive Director. I am submitting this testimony on behalf of the Pennsylvania Weatherization Providers Task Force as a member of the Task Force.

Q. What are the interests of the Task Force in this rate case?

A. The Pennsylvania Weatherization Providers Task Force, Inc., is a Pennsylvania non-profit corporation and a statewide association of thirty-seven (37) organizations providing utility assistance and energy conservation services in each of the Commonwealth's sixty-seven counties. The Task Force, through its member agencies, a number of which are Pennsylvania community-based organizations, administers universal service programs for a number of utility companies. The Task Force members serve low-income ratepayers and it is part of our responsibility to our constituency to advocate for their interests in regulatory proceedings and this proposed request will certainly have an impact upon those low-income ratepayers. In addition to the affordability of transmission and distribution rates, the Task Force is particularly interested in the adequacy and operation of a company's universal service program.

Q. What background and experience in energy issues qualify you to submit testimony in this case?

A. I was appointed as the acting Executive Director of the Commission on Economic Opportunity in October 2022. I have been employed at CEO for over 20 years and during my tenure I have been involved in numerous energy related programs that CEO operates. From 2004 to 2016, I was CEO's Energy Services Coordinator where I supervised CEO's energy programs. During that time, I managed eight hardship utility programs and managed the LIHEAP Crisis program for Luzerne County on behalf of the Pennsylvania Department of Human Services as well as other utility customer assistance programs for several utility companies. In 2016 I became CEO's Program and Planning Coordinator where I evaluated program effectiveness and recommended modifications and/or improvements across the spectrum of programs offered by CEO, in the areas of energy, housing, job training etc.

During my tenure in those positions, CEO's experience and the expertise of its staff in energy programs has been recognized on state and national levels. CEO's energy related programs have been acknowledged by receipt of a Superior Achievement Award from the United States Department of Energy. CEO has weatherized more than 27,000 homes under the U.S. Department of Energy Weatherization Assistance Program. CEO also serves as a subcontractor for universal programs operated by several Pennsylvania gas and electric utility companies. CEO is also the PA Department of Public Welfare's contracted operator of the crisis component of the Low-Income Home Energy Assistance Program (LIHEAP) in Luzerne and Wyoming Counties. CEO was also a major contractor for PPL in the Low-Income Renewable Energy Pilot, and secured funding and installed

several solar thermal water heating systems for the former PG Energy and UGI Gas Division.

Q. Before addressing the specifics of your testimony, does the Task Force take a position on whether the Company's rate increase should be granted?

A. Our main focus is on the funding and availability of universal service programs and opposing rate designs that discourage conservation. In this case, we do not necessarily oppose a rate increase, but do oppose any rate increase unless it is accompanied by measures that would provide additional relief to the Company's customers, particularly low-income customers, from the effects of a rate increase.

Q. Please describe the other areas of your testimony.

A. My testimony will address the Company's proposal to increase the fixed monthly charge for residential customers as well as proposals to help low-income customers deal with any resulting rate increase.

In its request for a rate increase the Company does not propose any additional increase in funding or measures that would help low-income customers deal with the proposed rate increase. Further, an increase in the fixed monthly charge, as requested by the Company, would negatively impact a customer's motive and ability to conserve energy. The company's proposal if granted would increase rates, discourage conservation and leave a customer with less ability to conserve energy and less ability to reduce their bills. Despite the impact of its proposal on residential customers, and in particular low-

income customers, the Company's proposal offers nothing in the way of changes or increases in funding to its low-income programs, programs that would help mitigate the negative impact of the Company's proposals especially considering these difficult economic times.

Despite these difficult financial times for all, if approved, the Company's proposal would provide its Peoples Natural Gas Division (PNGD) with an annual revenue increase of $148,558,437, or approximately 20%, and Peoples Gas Division (PGD) with an annual revenue increase of $7,466,250, or approximately 8.5%. Combined, the Company would receive an annual revenue increase of $156,024,687, or approximately 18.7%, on a total annual revenue basis. If Peoples' request is approved, the total bill for PNGD residential customer using 80 Mcf per year would increase from $73.16 to $88.79 per month or by 21.4%. The total bill for a PGD residential customer using 80 Mcf per year would increase from $84.00 to $90.35 per month or by 7.6%. Despite these substantial requests for increases in rates, the Company requests a substantial rate increase and nothing additional to help low-income customers.

Q. What rate design issue would you like to address?

A. In this case the Company is proposing to increase its fixed monthly charge for its PGND from $14.50 to $21.50, an increase of nearly 50%. For its PGD it proposes to increase the fixed monthly charge from $15.75 to $21.50. I am concerned about this proposal and the Task Force opposes any increase to the fixed monthly customer charges.

Part of the proposed increase to residential customer's rates will be due to this increase in the fixed monthly customer charge. This increase in the monthly fixed charge

concerns me, as it has the Commission, because it discourages conservation and impacts a customer's ability to save money through conservation; as the Company moves towards charging customers based upon the Company's fixed costs and away from a customer's consumption there is less incentive, and ability, to conserve. One of the only defenses a family, particularly a poor family, has against the sharp increases in energy costs is to conserve – lower the thermostat, seal air leaks, change filters regularly, add more insulation, get a more efficient heating unit, etc. The Company's proposal to increase the fixed costs greatly impacts a customer's motive to conserve and the ability to lessen the impact of any rate increase. The combined effect of an increase in rates and an increase in fixed monthly charges, without any changes to universal service funding or other measures to help low-income customers, not only results in higher rates but also lessens the ability of customers to deal with those increases. In particular, the negative impact would be particularly harsh on the Company's low-income customers and the Company's proposed request ignores the interests of its low-income customers.

Q. How does the effect of the Company's requests impact upon your testimony in this case?

A. I believe that should a rate increase be granted there should be relief offered in the form of increases to universal funding programs and other relief that would help low-income customers deal with any increase granted. For a typical residential customer, these requested increases are substantial, but for a low-income customer, the effects can be dramatic, especially in this economic climate. High utility costs are not the only challenge for a poor person. Our agencies have been helping low-income people for

years and know firsthand that they face financial challenges on many fronts -- housing, energy costs, food and health care -- and a dramatic increase in any of those areas can have a devastating impact.

It is for these reasons that if an increase is granted it should be conditioned upon an increase in funding and relief to the Company's low-income customers.

Q. Should a request for a rate increase be granted what type of measures would you suggest be implemented for low-income customers?

A. In discovery responses in this case the Company indicated as of January 2024, PNGD had 135,425 estimated low-income customers and PGD had 13,048 estimated low-income customers. The average annual income of their confirmed low-income customers just over $19,00. As a result of this proceeding rates are likely to increase, a customer's ability to conserve will decrease (if the fixed monthly charge is increased) yet no additional relief is being provided to customers that would allow them to increase their conservation of energy and decrease their monthly bills.

Q. Turning now to universal service programs what issues would you like to address?

A. I want to address the Company's low-income usage reduction program (LIURP). Despite their large number of low-income customers, the Company estimates that its LIURP program it will serve 374 customers in 2024 with a budget of $3,030,000.

We are proposing increased funding for LIURP because there is an unmet need for LIURP services as indicated by the number of the Company's low-income customers

relative to the number it anticipates will receive LIURP services in 2024.

Q: Do you have any recommendations regarding the funding level for LIURP?

A: Yes. I am recommending that should a rate increase be granted then the number of customers served annually be increased by 50. That would begin to meet the unmet need for LIURP services. Based upon the LIURP budget of $3,030,000 serving 374 customers, the approximate average LIURP cost is just over $8,000 so to increase the number of jobs by 50 would mean an annual LIURP funding of $400,000.

Q. Are there any other universal service topics that you want to address?

A. Yes. The Task Force recommends that the Company's contribution to its hardship fund be increased commensurate with the percentage increase in rates to the residential class that results from this proceeding. Although modest in comparison to other universal service funding, the proposal will help customers deal with a rate increase in these difficult economic times.

I also recommend that hardship funding be distributed in accordance with the percentage of low-income customers in the counties served by the Company.

Q. Can you please summarize your recommendations?

A. Yes. The Task Force is recommending the following:

1. That the Company's request to increase its fixed residential monthly customer charge be denied;

3. That annual funding for LIURP be increased by $400,00 and that any unused funds be carried over and added to the following year's funding;

4. That the Company's contribution to its Hardship fund be increased commensurate with the percentage increase in residential rates that result from this proceeding;

5. That Hardship funds be distributed in accordance with the percentage of low-income customers in the counties served by the Company.

Q. Does this conclude your testimony?

A. Yes
