[a] Transfer Affecting Exposures at Beginning of Year

[b] Transfer Affecting Exposures at End of Year

[c] Sale with Continued Use

Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2013 through 2022 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2018 are calculated in the following manner:

Exposures at age 0	= amount of addition	= $750,000
Exposures at age ½	= $750,000 - $ 8,000	= $742,000
Exposures at age 1½	= $742,000 - $18,000	= $724,000
Exposures at age 2½	= $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½	= $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2013-2022
SUMMARIZED BY AGE INTERVAL

Experience Band 2013-2022 Placement Band 2008-2022

Year Placed	Exposures, Thousands of Dollars — Annual Survivors at the Beginning of the Year										Total at Beginning of Age Interval	Age Interval
	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
2008	255	245	234	222	209	195	239	216	192	167	167	13½-14½
2009	279	268	256	243	228	212	194	174	153	131	323	12½-13½
2010	307	296	284	271	257	241	224	205	184	162	531	11½-12½
2011	338	330	321	311	300	289	276	262	242	226	823	10½-11½
2012	376	367	357	346	334	321	307	297	280	261	1,097	9½-10½

2014		460[a]	455	444	432	419	405	390	374	356	1,952	7½-8½
2015			510[a]	504	492	479	464	448	431	412	2,463	6½-7½
2016				580[a]	574	561	546	530	501	482	3,057	5½-6½
2017					660[a]	653	639	623	628	609	3,789	4½-5½
2018						750[a]	742	724	685	663	4,332	3½-4½
2019							850[a]	841	821	799	4,955	2½-3½
2020								960[a]	949	926	5,719	1½-2½
2021									1,080[a]	1,069	6,579	½-1½
2022										1,220[a]	7,490	0-½
Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2013-2022, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2013-2022 Placement Band 2008-2022

(Exposure and Retirement Amounts are in Thousands of Dollars)

Age at Beginning of Interval	Exposures at Beginning of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Beginning of Age Interval

12.5	323	44	0.1362	0.8638	48.90
13.5	167	26	0.1557	0.8443	42.24
					35.66
Total	44,780	1,606			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips have been conducted periodically. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during these field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

During the extensive period of years our firm has been conducting depreciation studies for the Company, the field trips have resulted in the review of operations of all the Company's facilities numerous times. The following is a list of the locations visited during the more recent field trips.

Judgment

The survivor curve estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during the field trips and other conversations with management; and the survivor curve estimates from previous studies of this company and other gas companies.

For 23 plant accounts and subaccounts for which survivor curves were estimated, the statistical analyses resulted in good to excellent indications of the survivor patterns experienced. Generally, the information external to the statistics led to no significant departure from the indicated survivor curves for the following accounts:

Account No.	Account Title
351.00	Structures and Improvements - Major
351.00	Structures and Improvements - Other
353.00	Lines
366.10	Compressor Station Structures - Major
366.10	Structures and Improvements - Other
366.20	Measuring and Regulating Station Structures - Other
366.30	Other Structures
367.00	Mains
368.00	Compressor Station Equipment
369.00	Measuring and Regulating Station Equipment
375.00	Structures and Improvements - Major
375.00	Structures and Improvements - Other
376.00	Mains
378.00	Measuring and Regulating Station Equipment - General
380.00	Services
381.00	Meters
382.10	Meter Installations
390.00	Structures and Improvements - Major
390.00	Structures and Improvements - Other
392.10	Transportation Equipment - Cars
392.20	Transportation Equipment - Light Trucks
392.30	Transportation Equipment - Heavy Trucks
396.00	Power Operated Equipment

Account 376, Mains, which represents 42 percent of the total depreciable plant, is used to illustrate the manner in which the study was conducted for the groups for which the statistical analysis was a significant factor in the judgment of the prior and future survivor curves. Aged retirement and other plant accounting data were compiled for the years 1946 through 2019. These data were coded by type of transaction, year in which the transaction took place, and year in which the gas plant was placed in service. The data were analyzed by the retirement rate method.

The 1946-2019 and 1990-2019 experience bands provided the statistical bases for the survivor curve estimate. The experience bands selected for the analyses are long enough to smooth short-term fluctuations and provide an indicator of the probable retirement patterns to be experienced in the future.

The rates of retirements of distribution mains have remained relatively stable throughout the period of available data. Discussions with operating and management personnel related to the reasons for retirement indicated that, since 1959, only coated and protected pipe have been installed, and uncoated pipe is being replaced as needed. It is expected that in the future the rates of retirement during older age intervals will increase, as the majority of uncoated pipe attains these ages. Also, more stringent regulations regarding leak detection and elimination will tend to cause greater rates of retirement in the future.

The Iowa 65-R2.5 is a reasonable interpretation of the significant portions of the stub survivor curves through age 70. The Iowa 65-R2.5 and the original survivor curves are plotted on page VI-66. The calculations of the original survivor curves are presented on pages VI-67 through VI-74.

The major structures included in Accounts 351, Structures and Improvements; 366.1, Compressor Station Structures; 375, Structures and Improvements; and 390, Structures and Improvements, were separated from the smaller structures in those accounts for purposes of the study. The major structures group consists of 13 structures or complexes of significant size and of a nature that the life span procedure is appropriate. The life spans assigned to the major structures were typically 55 to 70 years from the date of the major installation and varied within this range based on individual circumstances, such as size, condition, type of construction, location, and management's plans.

The Iowa 75-R1.5 interim survivor curve was judged appropriate for the major structures based on a statistical analysis of the interim retirements experienced during 1962-2019, 1990-2019 and 2005-2019, our observations of the buildings, consideration of the type of facilities which will be retired during the estimated life spans, and a review of the interim survivor curves derived for similar structures of other gas companies. The Iowa 75-R1.5 and the original survivor curve are plotted on page VI-116. The calculation of the original survivor curve is presented on pages VI-117 through VI-125.

Generally, the survivor curve estimates for the remainder of the accounts, which comprise a minor portion of the total depreciable original cost, were based on judgments which considered the nature of the plant and equipment, reviews of available historical retirement data, and a general knowledge of the service lives for similar equipment in other gas companies.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of August 31, 2024, the estimated book depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the average service life procedure and for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$\text{Composite Remaining Life} = \frac{\left(\frac{\text{Book Cost}}{\text{Life}} \times \text{Remaining Life}\right)}{\frac{\text{Book Cost}}{\text{Life}}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$\text{Composite Remaining LIfe} = \frac{\sum \text{Whole Life Future Accruals}}{\sum \text{Whole Life Annual Accruals}}$$

or

$$\text{Composite Remaining Life} = \frac{\sum \text{Book Cost} - \text{Calc. Reserve}}{\sum \text{Whole Life Annual Accrual}}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through future accruals. However, the calculation is based at the equal life group level rather than the vintage group level and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 9-L3 Survivor curve and an August 31, 2024 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., August 31 in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 9-L3 survivor curve and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

TOTAL			100.00000						

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval, the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than the first year (2024), the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For example, the figure 12.57599794820 for 2023 equals one-half of 0.04530419880 plus all of the succeeding figures in column 5. Only two thirds of the annual accrual for the

vintage's current age interval group is included in the summation because the equal life group for that interval expires at the midpoint of the current year.

The summation of annual accruals (column 7) for installations during 2024 is calculated on the basis of an in-service date at the midpoint of twelve months, i.e., six months prior to August 31. Inasmuch as the overall calculation is centered on August 31, 2024, the accrual for 2024 installations (during the twelve months) represents only one-half of one year, one-third of the year prior to August 31 plus two-thirds year following August 31. For this reason, the first figure in column 7, for vintage 2024, equals the group annual accrual for 2024 plus one-half of the group annual accruals for each of the subsequent years.

The average percent surviving, derived from the Iowa 9-L3 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group as of August 31, 2024.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable gas plant in service. The accounts and their amortization periods are as follows:

Account	Amortization Period, Years
391.00, Office Furniture and Equipment	
Furniture	20
Equipment	10
Computer Equipment	5
393.00, Stores Equipment	25
394.00, Tools, Shop and Garage Equipment	
Tools and Work Equipment	15
397.00, Communication Equipment	
Structures	25
Radio	15

For the purpose of calculating annual amortization amounts as of August 31, 2024, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization

period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced salvage is incorporated in the results of the study, as it was reported on the Company's books and records for the period January 1, 2019 through August 31, 2023. The data for the last four months of 2023 are based on estimated experience. Results of the calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing salvage, no adjustments for salvage were made to the annual accruals and accrued depreciation calculated for each individual account. There were no exclusions from the 2019 through 2023 net salvage accrual.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-10 summarize the results of the depreciation study as of August 31, 2024. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of August 31, 2024, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book reserve to August 31, 2024. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended August 31, 2024. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2019 through 2023.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and gross salvage and cost of removal for the years 2019-2023 are presented in three sections.

The section beginning on page VI-2 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for gas plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-2. The tabulations of experienced and estimated net salvage by year by account for the five-year period, 2019-2023, are presented in the section beginning on page VIII-2.

In the first section, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in the second section and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 on page V-10.

Peoples Natural Gas Company, LLC
375 North Shore Drive, Suite 600
Pittsburgh, PA 15212-5322

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant as of September 30, 2025. The results of our study as of August 31, 2024 are presented in our report titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2024". The same methods, procedures and estimates are used in both studies.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates as of September 30, 2025.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages I-3 through I-9 summarize the results of the depreciation study as of September 30, 2025. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of September 30, 2025, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book reserve to September 30, 2025. Table 3 sets forth the calculations of the depreciation accruals for the thirteen months ended September 30, 2025. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2020 through 2024.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-6. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2020 through 2024, beginning on page III-2.

	:	
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF

RALPH N. ZARUMBA,

BLACK & VEATCH MANAGEMENT CONSULTING, LLC

DATE SERVED: December 29, 2023

DATE ADMITTED: _____ Peoples Statement No. 15

I. Introduction and Qualifications

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ralph Zarumba. My business address is 736 Central Street, Evanston, Illinois.

Q. BY WHOM AND IN WHAT CAPACITY ARE YOU EMPLOYED?

A. I am a subcontractor to Black & Veatch Management Consulting, LLC ("Black & Veatch"). Prior to my retirement, I was a Managing Director at Black & Veatch leading the Natural Gas and Electricity Regulatory Practice.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A. I received a Bachelor of Science in Economics from Illinois State University in Normal, IL, and a Master of Arts in Economics from DePaul University in Chicago, IL.

Q. PLEASE SUMMARIZE YOUR QUALIFICATIONS.

A. I have over thirty-eight (38) years of experience in the energy industry, primarily focusing on the fields of regulatory and economic consulting for regulated industries. My work experience, presentation of expert testimony, and other industry-related activities are detailed in Appendix A.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITIES COMMISSION ("PPUC") OR ANY OTHER REGULATORY AUTHORITY?

A. I have not presented testimony before the PPUC. However, I have presented testimony before several other regulatory authorities over the past 35 years. My expert testimony has dealt with various matters involving regulatory industries, including cost-of-service and pricing. A listing of my appearances in proceedings and expert reports is included in Appendix A.

Q. HAVE YOU PREVIOUSLY PREPARED COST-OF SERVICE-STUDIES AND RATE DESIGNS?

A. Over my utility consulting career, I have conducted numerous allocated and marginal cost-of-service studies for gas and electric utilities. I have also prepared or reviewed rate structures and pricing designs for numerous gas and electric utilities operating in North America and abroad.

Q. HAVE YOU TAUGHT AND LECTURED ON REGULATORY TOPICS IN ACADEMIC SETTINGS?

A. Yes. I have taught and lectured on cost-of-service and pricing at Michigan State University and the University of Missouri. I have also taught regulatory principles in various seminars

on behalf of the United States Agency of International Development (USAID) in various developing countries.

Q. ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A. I am appearing on behalf of Peoples Natural Gas ("Peoples" or "the Company"). Specifically, the Company requested that I conducted a cost-of-service studies to determine the embedded costs of serving its customers and to develop its class revenue and rate design proposals.

I. Overview of Testimony

Q. PLEASE PROVIDE AN OVERVIEW OF YOUR TESTIMONY.

A. My testimony will discuss the cost-of-service and rate design issues in this proceeding. The specific issues which I will address will include:

- Testimony supporting the cost-of-service studies for the Peoples Natural Gas ("PNG") division, Peoples Gas ("PG") division and the combined Peoples entity;
- Testimony supporting the proposed rate designs for the combined Peoples entity;
- Support for several new rate designs proposed by the Company;
- Testimony supporting the estimated number of Heating Degree Days ("HDD") supporting the Company's revenue forecast; and
- Testimony supporting the proposed Weather Normalization Mechanism.

Q. PLEASE LIST THE FILING REQUIREMENTS THAT YOU ARE SPONSORING.

A. Peoples Exhibit RNZ-1 provides a listing of the filing requirements which I am responsible for in this proceeding.

Q. ARE YOU SPONSORING ANY OTHER EXHIBITS IN YOUR TESTIMONY?

A. Yes. I am sponsoring the following exhibits related to the Company's cost-of-service studies, class revenue requirement and rate design proposals:

- Peoples Exhibit RNZ-2: Minimum Customer Cost Analysis;
- Peoples Exhibit RNZ-3: Derivation of the Total Gathering Cost-of-Service;
- Peoples Exhibit RNZ-4: Proposed Class Revenue Apportionment;
- Peoples Exhibit RNZ-5: Proposed Rates; and
- Peoples Exhibit RNZ-6: Residential Monthly Bill Comparison.

A. Peoples Proposed Rate Classes

Q. PLEASE DESCRIBE THE REQUESTED COMBINATION OF TARIFFS THE COMPANY IS REQUESTING IN THIS PROCEEDING.

A. In this proceeding, the Company wishes to combine Peoples Natural Gas LLC and Peoples Natural Gas divisions into a single operating entity with a unified set of rates and tariffs. Currently, the two companies operate under separate tariffs. My exhibits detail the cost-of-service for the two separate entities and a rate design for the combined utility.

II. Theory of Allocated Cost-of-service Studies

Q. PLEASE STATE THE PURPOSE OF A COST-OF-SERVICE STUDY.

A. An allocated (sometimes referred to as embedded) cost-of-service study is an analysis of costs that assigns to each customer or rate class its proportionate share of the Company's total cost-of-service (i.e., the Company's total revenue requirement). The results of these studies can be utilized to determine the relative cost-of-service for each class and to help determine the individual class revenue requirements to be used in developing prospective rates for each class.

Q. ARE THERE CERTAIN GUIDING PRINCIPLES THAT SHOULD BE FOLLOWED WHEN PERFORMING A CLASS COST-OF-SERVICE STUDY?

A. Yes. First, the fundamental and underlying philosophy applicable to all cost studies pertains to the concept of cost causation for purposes of allocating costs to customer groups. Cost causation addresses the question, "Which customer or group of customers causes the utility to incur particular types of costs?" To answer this question, it is necessary to establish a link between a utility's customers and the costs incurred by the utility in serving those customers.

The essential element in selecting and developing a reasonable cost-of-service study allocation methodology is the establishment of relationships between customer requirements, load profiles, and usage characteristics on the one hand and the costs incurred by the Company in serving those requirements on the other hand. For example, providing

a customer with gas service during peak periods can have much different cost implications for the utility than service to a customer who requires off-peak gas service.

A natural gas distribution system is designed to meet three primary objectives:

- Extend distribution services to all customers entitled to be attached to the distribution system;
- Meet the aggregate peak design day capacity requirements of all customers entitled to service on the peak day; and
- Deliver volumes of natural gas to those customers either on a sales or transportation basis. There is generally a direct link between the manner in which costs are defined and their subsequent allocation.

Customer-related costs are incurred to attach a customer to the distribution system, meter any gas usage, and maintain the customer's account. Customer costs are a function of the number of customers served and continue to be incurred whether or not the customer consumes any gas. They may include capital costs associated with minimum size distribution mains, services, meters, regulators and customer service and accounting expenses.

Demand or capacity related costs are associated with plant that is designed, installed, and operated to meet maximum hourly or daily gas flow requirements, such as distribution mains, or more localized distribution facilities which are designed to satisfy individual customer maximum demands. Gas supply-related contracts also have a capacity-related component of cost relative to the Company's requirements for serving daily peak demands and the winter peaking season.

Commodity-related costs are those costs which vary with the throughput sold to or transported for customers. Costs related to gas supply are classified as commodity related to the extent they vary with the amount of gas volumes purchased by the Company for its sales service customers.

III. Peoples Cost-of-Service Studies

Q. PLEASE DESCRIBE THE PEOPLES COST-OF-SERVICE STUDIES.

A. The Peoples cost-of-service study is composed of three (3) separate studies:

- A study for Peoples Natural Gas Division;
- A study for Peoples Gas Division; and

A study of the combined divisions.

It should be noted that that the cost-of-service studies for Peoples Gas and Peoples Natural Gas, the legacy divisions, only captured the revenue deficiencies of those organizations.

Q. WHY WERE MULTIPLE STUDIES PERFORMED?

A. Given that the Company is proposing to combine the tariffs of multiple divisions in this proceeding, I felt that performing cost-of-service studies on the separate divisions and the combined entity would provide valuable information regarding the combination of the rates of the two companies and if changes in the rates were justified.

Q. ARE CHANGES TO THE OVERALL RATE DESIGNS JUSTIFIED BASED UPON THE COST-OF-SERVICE STUDIES?

A. The following changes to the rate designs are proposed:

- Combining the PG and PNG rates into a single rate design;
- The transition rates which were implemented in the previous case are no longer required and are being eliminated; and
- A new rate schedule is proposed splitting LGS into multiple categories based upon use of the transmission and distribution system.

Q. WHAT WAS THE SOURCE OF THE COST DATA ANALYZED IN PEOPLES' COST-OF-SERVICE STUDIES?

A. All cost-of-service data has been extracted from the Company's total cost-of-service (i.e., total revenue requirement) contained in this filing. Where more detailed information was required to perform various subsidiary analyses related to certain plant and expense elements, the data were derived from the historical books and records of the Company.

Q. WHAT CLASSES OF SERVICE WERE INCLUDED IN THE COMPANY'S COST-OF-SERVICE STUDIES?

A. The customer classes reflected in Peoples' cost-of-service studies are Residential Service (RS), Small General Service (SGS), Medium General Service (MGS), and Large General Service (LGS).

Q. DO THESE RATE CLASSES INCLUDE BOTH SALES AND TRANSPORTATION SERVICE CUSTOMERS?

A. Yes. These customer classes are configured as combined classes that include both sales service and transportation service customers. Therefore, the RS class includes residential customers served under Peoples' Rates RS, the SGS class includes small commercial and industrial customers served under Peoples' Rates SGS, GSS and GS-T, the MGS class includes medium-sized commercial and industrial customers served under Peoples' Rates MGS and GSL and GS-T, and the LGS class includes large commercial and industrial customers served under Peoples' Rates LGS, GSL, GST and GS-T. A gas utility's class cost-of-service study should recognize that sales service and transportation service customers both require delivery service to physically move gas on its gas system. For example, it costs a gas utility the same amount to have a service line and meter in place at a customer's premises, irrespective of whether the gas moving through the service line and meter is customer-owned gas transported by the utility, or gas it owns that is sold to the customer. Similarly, the volume of gas used by a customer during a peak period establishes the customer's contribution to the system peak. A gas utility's pipeline system does not need to be larger or smaller if the customer, instead of the utility, owns the gas as it moves through its gas system. Therefore, the allocation of distribution costs for sales service and transportation service for the same customer should be based on allocation factors that include both sales and transportation load characteristics.

Q. PLEASE EXPLAIN WHY THE COST-OF-SERVICE STUDIES YOU PREPARED DO NOT INCLUDE A RATE CLASS FOR GATHERING SERVICE.

A. Peoples' cost-of-service studies do not include a separate rate class for gathering service since Peoples is proposing that its gathering service rates be set on a negotiated basis using value of service considerations rather than cost-of-service as a guide. As such, a cost-of-service study for Peoples which includes a gathering service rate class would provide no value in determining the revenue and rate levels for gathering service to local producers that are reflective of the value-based considerations associated with producers' access to Peoples' gathering system.

Nevertheless, as I explain later in this testimony. I have determined the cost-of-service associated with Peoples' gathering system and compared that to the contributions by producers under present and proposed charges for informational purposes.

Q. WHAT STEPS DID YOU FOLLOW TO PERFORM THE COMPANY'S COST-OF-SERVICE STUDIES?

A. I followed three broad steps to perform the cost-of-service studies generally accepted in natural gas and electricity ratemaking in preparing allocated cost-of-service studies:

- functionalization;
- classification; and
- allocation.

Q. WHAT FUNCTIONS DOES THE COMPANY PROVIDE TO CUSTOMERS?

A. For Peoples, the functional cost categories associated with gas service include:

- Gas Supply;
- Gathering;
- Storage;
- Transmission; and
- Distribution.

I should note that the gas supply function simply reflects Peoples' gas supply costs and revenues presented and reviewed within Peoples' annual 1307(f) process. Since that function is addressed in a separate proceeding, we have excluded it from the cost-of-service study.

Q. WHAT COST CLASSIFICATIONS WERE ADOPTED FOR THE COST-OF-SERVICE STUDY?

A. The three cost classifications used in this study are:

- customer;
- demand or capacity; and
- commodity or energy.

Q. HOW WERE COSTS ALLOCATED?

A. Costs typically are allocated based on customer, demand, commodity, or revenue-related allocation factors.

Q. HOW ARE THE COST AND UTILITY RELATIONSHIPS YOU PREVIOUSLY DISCUSSED ESTABLISHED?

A. To establish these relationships, the cost analyst must analyze the Company's gas system design and operations, accounting records, and system and customer load data (e.g., annual and peak period gas consumption levels). From the results of those analyses, methods of direct assignment and "common" cost allocation methodologies can be chosen for all the utility's plant and expense elements.

Q. AS PART OF YOUR WORK, DID YOU REVIEW AND ANALYZE THE COMPANY'S GAS SYSTEM DESIGN AND OPERATIONS?

A. Yes. Since it is widely recognized that a utility's plant in service components provide the most direct link to a utility's gas service requirements, I initially focused my efforts on better understanding the nature and operation of the Company's gas system. This effort included review of the Company's gathering, storage, transmission, and distribution systems and the types and levels of costs incurred in connecting various sized customers to its distribution system.

Q. PLEASE DESCRIBE THE MOST IMPORTANT CONSIDERATIONS YOU RELIED UPON IN DETERMINING THE COST ALLOCATIONS METHODOLOGIES THAT WERE USED TO PERFORM THE COMPANY'S CLASS COST-OF-SERVICE STUDY?

A. As stated above, it is important to recognize the cost causative characteristics of the cost elements which are allocated within any class cost-of-service study. Additionally, the cost analyst needs to develop data in a form that is compatible with and supportive of rate design proposals. Of further concern is the availability of data for use in developing alternative cost allocation factors. In evaluating any cost allocation methodology, consideration should be given to:

- Recognition of cost causality;
- Results which are representative of the true costs of serving different types of customers;
- A sound rationale or theoretical basis;
- Stability of results over time;
- Logical consistency and completeness; and
- Ease of implementation.

B. Functionalization

Q. PLEASE DESCRIBE THE FUNCTIONALIZATION PROCESS ADOPTED IN YOUR COST-OF-SERVICE ANALYSIS.

A. The Peoples COS model functionalizes costs into five components. These components are:

- Gas Supply;
- Gathering;
- Storage;

- Transmission, and
- Distribution.

Each of the FERC account costs and revenues are either directly assigned to one of these functions or allocated to multiple functions. General Plant and Intangible plant are examples of types of costs that are allocated to multiple functions.

C. Classification

a. Classification of Distribution Mains

Q. WHAT APPROACH DID YOU ADOPT TO CLASSIFY DISTRIBUTION MAINS BETWEEN DEMAND AND CUSTOMER RELATED FACILITIES?

A. I used the Minimum System Approach. The Minimum System approach, which is the method utilized in the Company's previous cost studies, is intended to reflect the engineering considerations associated with installing distribution mains to serve gas customers. That is, the method utilizes actual installed investment units to determine the minimum distribution system rather than a statistical analysis based upon the investment characteristics of the entire distribution system.

Q. DO PROFESSIONAL REFERENCES EXIST WHICH SUPPORT THE USE OF THE MINIMUM SYSTEM APPROACHES?

A. Yes. Two of the more commonly accepted literary references relied upon when preparing embedded cost-of-service studies, (1) Electric Utility Cost Allocation Manual, by John J.

Doran et al, National Association of Regulatory Utility[1] (NARUC), and (2) Gas Rate Fundamentals, American Gas Association[2], both describe minimum system concepts and methods as an appropriate technique for determining the customer component of utility distribution facilities.

Q. WHAT SIZE DISTRIBUTION MAIN WAS ADOPTED IN YOUR MINIMUM SYSTEM APPROACH?

A. I adopted a 2-inch diameter distribution main in my minimum system study.

Q. DID YOU MAKE ANY ADJUSTMENT TO THE RESULTING CUSTOMER COST COMPONENT FOR DISTRIBUTION MAINS BASED ON THE USE OF THE MINIMUM SYSTEM APPROACH?

A. Yes. To recognize that the minimum sized distribution main (a 2-inch diameter main) also has some level of capacity carrying capability, an adjustment was made to the level of the customer cost component to exclude a portion of the costs of distribution mains from the customer cost classification category. Those excluded costs were classified as capacity related and treated in the same manner as other capacity-related costs for cost allocation purposes.

D. Allocation

a. Allocation of Demand Related Costs

Q. PLEASE DESCRIBE THE KEY ISSUES RELATED TO THE ALLOCATION DEMAND-RELATED COSTS WITHIN A GAS UTILITY'S COST-OF-SERVICE STUDY?

A. A complex part of the allocation process is the allocation of demand-related costs. Several approaches have been used to develop allocation factors for the demand components of costs. In fact, it is not unusual for more than one demand cost allocation methodology to be used in a cost-of-service study. Despite numerous methods to allocate demand costs, it is fair to say that three basic methodologies form the foundation for the allocation process. These three methodologies are:

- Peak Demand Allocations;
- Average and Excess Demand Allocations; and
- Non-Coincident Demand Allocations.

These demand allocation methodologies are discussed below.

Peak Demand Allocation is premised on the notion that investment in capacity is determined by the Company's peak load or peak loads. Under this methodology, demand-related costs are allocated to each customer class or group in proportion to the demand coincident with the system peak or peaks of that class or group. The Peak Demand Allocation process might focus on a single peak, such as the highest daily demand occurring during the test period. Other variations might include the average of several cold

days, or the expected contribution to the system peak on a design day. In some instances, it may be appropriate to determine the peak demand responsibility on an hourly basis rather than a daily basis where hourly requirements dictate a company's investment in distribution facilities.

The Average and Excess Demand Allocation methodology, also referred to as the "used and unused capacity" method, allocates demand related costs to the classes of service on the basis of system and class load factor characteristics. Specifically, the portion of utility facilities and related expenses required to service the average load is allocated on the basis of each class' average demand. The portion of these facilities is derived by multiplying the total demand related costs by the utility's system load factor. The remaining demand related costs are allocated to the classes based on each class' excess or unused demand (i.e., total class non-coincident demand minus average demand).

A more simplistic version of this methodology is the Peak and Average methodology. This cost methodology gives equivalent weight to peak demands and average demands. As is the case with the Average and Excess method, it has the effect of allocating a portion of the utility's demand-related costs on a commodity-related basis. The Non-Coincident Demand Allocation methodology recognizes that certain facilities, in particular distribution facilities, are designed to serve local peaks which may or may not be coincident with the system peak loads. Using this methodology, demand costs are allocated on the basis of each group's (rate class), maximum demand, irrespective of the time of the system peak.

Q. HOW HAVE DEMAND-RELATED COSTS BEEN ALLOCATED IN THE COMPANY'S COST-OF-SERVICE STUDY?

A. Peoples' cost-of-service studies use either a coincident peak demand or peak and average allocation factor, both derived on a design day basis, for allocating its capacity related costs to the various customer classes. Capacity costs for the Company consist of the capacity costs associated with city-gate facilities and the capacity portion of the Company's distribution system.

Q. WHY DOESN'T AVERAGE DEMAND (I.E., ANNUAL GAS THROUGHPUT VOLUMES DIVIDED BY 365) INFLUENCE THE OCCURRENCE OF DEMAND-RELATED COSTS?

A. By sizing plant investment for peak period demands, the gas utility can satisfy its service obligation throughout the year. If a gas utility's system was sized and installed to accommodate average gas demands, it would be unable to accommodate system peak demands. From a gas engineering perspective, a peak demand design criterion is always utilized when designing a gas distribution system to accommodate the gas demand requirements of the customers served by that system. As such, cost causation with respect to demand related costs is unrelated to average demand characteristics.

Additionally, use of average demand characteristics for the allocation of demand-related costs penalizes customers that exhibit efficient gas consumption characteristics (i.e., customers with high load factors) and encourages the inefficient use of the gas utility's system by customers with low load factors. Clearly, under-utilization of a gas utility's system is a result that it can hardly encourage, recognizing that higher system utilization will result in lower unit costs to all customers.

For the above-stated reasons, it is inappropriate to rely upon only a commodity-based allocation factor, as derived from annual gas throughput volume, for purposes of allocating demand related costs to a gas utility.

Q. WHY DID YOU CHOOSE TO UTILIZE THE COMPANY'S DESIGN DAY DEMAND RATHER THAN ITS ACTUAL PEAK DAY DEMAND AS A DEMAND ALLOCATOR?

A. Use of a gas utility's design day demand is superior to using its actual peak day demand, or a historical average of multiple peak day demands over time, for purposes of deriving demand allocation factors for a number of reasons. These include:

- A gas utility's system is designed, and consequently costs are incurred, to meet design day demand. In contrast, costs are not incurred on the basis of an average of peak demands;
- Design day demand is more consistent with the level of change in customer demands for gas during peak periods and is more closely related to the change in fixed plant investment over time; and
- Design day demand provides more stable cost allocation results over time.

Q. PLEASE EXPLAIN WHY THE COMPANY'S DESIGN DAY DEMAND BEST REFLECTS THE FACTORS THAT ACTUALLY CAUSE COSTS TO BE INCURRED?

A. The Company must consistently rely upon design day demand in the acquisition of its upstream gas supply-related resources and in the design of its own distribution facilities required to service its firm service customers. And perhaps more importantly, design day demand directly measures the gas demand requirements of the Company's firm service customers, which create the need for the Company to acquire resources, build facilities, and incur millions of dollars in fixed costs on an ongoing basis. In my opinion, there is no better way to capture the true cost causative factors of the Company's operations than to utilize its design peak day requirements within its cost-of-service study.

Q. WHAT LEVEL OF FIRM DEMAND REQUIREMENTS MUST THE COMPANY CONSIDER IN DESIGNING ITS GAS DISTRIBUTION SYSTEM TO DELIVER GAS UNDER ALL CIRCUMSTANCES?

A. Peoples designs its system, and has sufficient capacity, to serve the delivery or transportation requirements of all its sales and transportation service customers. Therefore, the demands of all customers will be treated on an equivalent basis for purposes of cost allocation based on peak demands.

Q. WHY IS THE USE OF DESIGN DAY DEMAND CLOSELY RELATED TO THE CHANGE IN THE COMPANY'S FIXED PLANT INVESTMENT OVER TIME?

A. The change in its design day demand serves as the primary input into the Company's ongoing decisions to install distribution system facilities to meet firm customer demands for gas delivery service.

Regarding plant investment for meeting growth, the construction cost estimates associated with connecting a new customer to the Company's gas distribution system are always based upon the capacity level necessary to meet each customer's peak hour demands. An appropriate proxy for the peak hour demands used in distribution cost estimating is the customer's design day demand.

Q. PLEASE EXPLAIN WHY THE USE OF DESIGN DAY DEMAND PROVIDES MORE STABLE COST ALLOCATION RESULTS OVER TIME?

A. By definition, a gas utility's design day peak is as stable a determinant of planned capacity utilization as you can derive. If it was not a stable demand determinant, the design of a gas utility's system and supply portfolio would tend to vary and make the installation of facilities a much more difficult task. Therefore, use of design day demands provides a more stable basis than any of the other demand allocators available based on either actual peak day demand or the averaging of multiple peak days.

Q. HOW WAS THE INVESTMENT IN DISTRIBUTION MAINS CLASSIFIED AND ALLOCATED IN THE COMPANY'S COST-OF-SERVICE STUDY?

A. It is widely accepted that distribution mains (Account No. 376) are installed to meet both system peak period load requirements and to connect customers to the gas utility's system. Therefore, to ensure that the rate classes that cause the incurrence of this plant investment or expense are charged with its cost, distribution mains should be allocated to the rate classes in proportion to their peak period load requirements and numbers of customers.

There are two cost factors that influence the level of distribution mains facilities installed by a gas utility in expanding its gas distribution system. First, the size of the distribution main (i.e., the diameter of the main) is directly influenced by the sum of the peak period gas demands placed on the gas utility's system by its customers. Secondly, the total installed footage of distribution mains is influenced by the need to expand the distribution system grid to connect new customers to the system. Therefore, to recognize that these two cost factors influence the level of investment in distribution mains, it is appropriate to allocate such investment based on both peak period demands, and the number of customers served by the gas utility.

b. Treatment of the Gathering System Costs

Q. HOW WERE THE COSTS OF THE COMPANY'S GATHERING SYSTEM ALLOCATED IN ITS COST-OF-SERVICE STUDY?

A. Peoples' gathering system is used to transport gas supplies delivered to its gas distribution system for its system supply and its end-use customers from local production facilities located within its service area. The plant and associated expenses for Peoples' gathering system were allocated to its classes of service based on the percentage of annual gas volumes in each class supplied by Pennsylvania gas producers that moved through the Company's gathering system. It is important to note that a portion of the costs of Peoples' gathering system allocated to its classes of service was effectively assigned to the local gas producers connected to Peoples' gas system by crediting the revenues proposed to be generated from the gathering services provided by Peoples to the same rate classes that received an allocated portion of Peoples' gathering cost-of-service.

c. Treatment of Storage

Q. HOW WERE THE COSTS OF THE COMPANY'S UNDERGROUND STORAGE FACILITIES ALLOCATED IN ITS COST-OF-SERVICE STUDIES?

A. Peoples currently owns and operates the Dice Storage Field, which has 1,530,000 Mcf of storage capacity and 32,000 Mcf of maximum design day withdrawal capacity. Peoples' underground storage is used to generally support the unplanned daily balancing requirements of its sales and transportation service customers. Based on a five-year historical review of the daily withdrawal activity of this facility, it was determined that gas volumes are primarily withdrawn from this storage facility on most days during the months of November through May. As a result, Peoples' Storage Lines and Storage M&R Equipment were allocated to the rate classes in proportion to the total gas sales and transportation volumes for each class during the six-month period of December through May.

d. Allocation of A&G Costs

Q. HOW WERE ADMINISTRATIVE AND GENERAL EXPENSES ALLOCATED IN THE COMPANY'S COST-OF -SERVICE STUDIES?

A. Peoples' cost-of-service studies allocated these expenses on a specific account-by-account basis rather than on an aggregate basis. Specifically, administrative and general expenses of a utility typically pertain to the following cost categories:

(1) labor;

(2) plant or rate base;

(3) O&M expenses; or

(4) some combination of the above categories.

In the Company's cost-of-service study, each of its administrative and general accounts was related to one or more of these categories. These categories were then used as a basis to establish an appropriate allocation factor for each account. The allocation factors chosen were broad-based to specifically recognize the Company-wide nature of administrative and general expenses.

Specifically, supervision, office supplies, and expenses, administrative expenses transferred (Account Nos. 920, 921 and 922) and employee pensions and benefits (Account No. 926) were allocated using a labor-related allocation factor derived based on all non-A&G labor costs incurred by the Company. Similarly, the plant allocation factors discussed above were derived based on the Company's total plant investment. For example, the total Production. Storage, Transmission, and Distribution plant in service by function were used to allocate property insurance (Account No. 924) and injuries and damages (Account No. 925) to the rate classes.

Outside services (Account No. 923) include support activities provided to Peoples directly by its outside service providers and internal service organizations. These activities relate to various general business functions supporting the Company's gas utility operations. Due to the general nature of these costs and their corporate-wide applicability, the non-gathering costs were allocated to the Company's customer classes using a labor-based

allocation factor reflecting labor-related costs across all of Peoples' non- A&G cost accounts.

Q. HOW WERE TAXES OTHER THAN INCOME TAXES ALLOCATED IN THE COMPANY'S COST-OF-SERVICE STUDY?

A. Peoples' cost-of-service studies allocated these expenses in a manner to reflect the specific cost causative factors associated with the Company's specific tax expense categories. Specifically, these taxes can be cost classified based on the tax assessment method established for each tax category (i.e., property and payroll). As a result, taxes other than income taxes of a utility typically can be grouped into the following categories:

(1) plant;

(2) labor; and

(3) gas supply related.

In the cost-of-service study, each of Peoples' taxes other than income taxes accounts was related to one of the above stated categories with one exception. These categories were then used as a basis to establish an appropriate allocation factor for each tax account. The one exception is for Other General Taxes which consists of emission taxes related to Gathering. These taxes were therefore directly assigned to the Gathering functions.

Q. HOW WERE INCOME TAXES ALLOCATED IN THE COMPANY'S COST-OF-SERVICE STUDIES?

A. Aggregate Income Taxes (income taxes at current rates plus income tax change at proposed rates) were allocated based on rate base.

E. Other Cost-of-Service Study Issues

Q. HOW DID YOU RECOGNIZE THE FACT THAT THE COMPANY OPERATES BOTH LOW AND REGULATED PRESSURE DISTRIBUTION MAINS?

A. This operating condition was recognized in the Company's cost-of-service studies by treating the plant and associated expenses for its low-pressure gas distribution system differently compared to the treatment of the plant and associated expenses for its regulated pressure gas distribution system. The manner in which various sizes of customers rely upon the Company's gas distribution system determined how each portion of Peoples' gas distribution system was allocated to its rate classes. Specifically, the plant and associated expenses for Peoples' regulated pressure distribution mains were assigned to all rate classes, while the plant and associated expenses for its low-pressure distribution mains were assigned only to the Residential Service, Small General Service, and Medium General Service rate classes. This treatment reflects the fact that larger customers (primarily industrial customers) included in the Company's Large General Service rate class do not require Peoples' low pressure distribution mains to receive gas utility service. The nature of their gas loads and higher gas delivery pressure requirements requires that they be served from Peoples' regulated pressure gas distribution system. In fact, because of such gas demand requirements, these customers are not connected to Peoples' low-pressure gas distribution system, nor can they be served indirectly through a back-feeding of gas from such facilities. As a result, the cost causative characteristics of these plant and expense

elements dictate that they should be treated for cost allocation purposes in the manner just described.

Also, as is discussed later in my testimony, the Company has identified a group of customers (i.e., Mainline customers) who do not use the Company's high-pressure distribution network. These customers have been moved into a new tariff class and no high-pressure mains costs have been allocated to this tariff class.

Q. WHY HAVE YOU PERFORMED MULTIPLE STUDIES IN THIS PROCEEDING?

A. By performing cost-of-service studies under various cost allocation methodologies, the boundaries of cost responsibility may be identified. The results can then be used as a tool to guide the Company's revenue allocation and rate design.

Given adequate time and resources, each individual investment and expense could be analyzed to determine how it is used and what created the need for the investments and operating expenses and classified accordingly. Such a detailed cost classification study would, perhaps, be more accurate, but very costly to perform. However, the results of such a detailed and extensive cost-of-service study (assuming that data is available to accomplish it) may not be any more useful for revenue allocation and rate design than the cost-of-service studies filed in this proceeding, particularly when the cost analyst considers: (1) the need to ameliorate customer impacts; (2) the limitations of cost tracking of rates designed for a broad class of customers; and (3) the time and financial constraints in preparing a rate filing. The use of more than one cost allocation methodology attempts

to recognize the level of judgment inherent in performing cost-of-service studies and provides this Commission with a reasonable and useable range of results.

In view of these considerations, and to minimize the potential controversy associated with selecting particular cost allocation methods, I have decided to use two common demand cost allocation methods (the peak method and the peak and average method), with and without a customer component of distribution mains, to determine a range of rate of return values for purposes of evaluating class cost responsibility. I will describe that evaluation later in my testimony.

F. Special Studies

Q. PLEASE DESCRIBE THE SPECIAL STUDIES YOU CONDUCTED FOR PURPOSES OF ALLOCATING OTHER DISTRIBUTION PLANT INVESTMENT.

A. Regarding the Company's major plant accounts, a combination of direct assignments and weighting factors were developed to allocate the following plant accounts:

- Services - Account No. 380;
- Meters - Account No. 381; and
- Industrial Measuring & Regulating Station Equipment - Account No. 385.

The weighting factors reflect any differences in the unit costs that the customer groups cause the Company to incur. For example, the average cost of a meter to serve a Residential Service customer was approximately $198.00, compared to the average cost of a meter to serve a Medium General Service customer of approximately $3,073.00. In addition, the cost of a service line for a residential customer costs less, on a per unit basis, than the cost

of a service line to serve an industrial service customer. The use of weighting factors takes these unit cost differences into account when assigning costs to these two customer classes.

Q. PLEASE DESCRIBE THE METHOD USED TO ALLOCATE RESERVE FOR DEPRECIATION AND DEPRECIATION EXPENSE.

A. These items were allocated on the same basis as their associated plant accounts.

Q. HOW WERE DISTRIBUTION-RELATED OPERATIONS AND MAINTENANCE EXPENSES ALLOCATED IN THE COMPANY'S CLASS COST-OF-SERVICE STUDY?

A. In general, these expenses were allocated on the basis of the cost allocation methods used for the Company's corresponding plant accounts. A utility's operation and maintenance expenses generally are thought to support the utility's corresponding plant-in-service accounts. That is, the existence of the particular plant facilities necessitates the incurrence of cost (i.e., expenses) by the utility to operate and maintain those facilities. As a result, the allocation basis used to allocate a specific plant account will be the same basis as used to allocate the corresponding expense account. For example, Maintenance of Services - Account No. 892, is allocated on the same basis as its investment in Services - Account No. 380. With the Company's detailed analyses supporting its assignment of plant in service components, where feasible, it was deemed appropriate to rely upon those results in allocating related expenses in view of the overall conceptual acceptability of such an approach.

G. Results of the Cost-of-Service Study

Q. PLEASE DISCUSS THE RESULTS OF THE COMPANY'S COST-OF-SERVICE STUDIES.

A. Referring to IV-B-1(E) of Exhibit 11, Schedule 1, the following cost-of-service study results at present rates for the future test year are summarized in the table below:

Method	Total	RES	SGS	MGS	LGS
Return @ Cur. Rates - Demand/Peak and Avg	5.50%	6.20%	3.20%	2.70%	7.10%
Return @ Cur. Rates - Min System/Design Day	5.50%	4.00%	5.10%	10.80%	17.10%

Q. PLEASE DESCRIBE THE CONTENTS OF EXHIBIT RNZ-2.

A. Peoples Exhibit RNZ-2 - Cost Analysis Supporting Customer Charges for All Rate Schedules - presents the components of the customer-classified costs for each of Peoples' customer classes. This information is extracted from the cost-of-service studies which are presented in Exhibit 11, Schedule 1.

Q. HAVE YOU PREPARED A MINIMUM SYSTEM CUSTOMER ANALYSIS THAT RELIES UPON THE COMMISSION'S PAST REGULATORY PREFERENCES AND PRECEDENTS ADDRESSING THIS ISSUE?

A. Yes. While I believe that the Company's customer cost analysis presented in Exhibit 11, Schedule 4 is the most appropriate method to derive a gas utility's customer-related cost-of-service for purposes of setting its monthly customer charges, I do recognize that in the past this Commission has relied, at least in part, on a minimum customer analysis approach

that excludes certain costs that, in my opinion, are also appropriately classified as customer related costs. As a result, I have also prepared a customer cost analysis that was guided by the Commission's decision in the Aqua Pennsylvania Rate Case in Docket R00038805. This cost analysis is presented in Peoples Exhibit RNZ-2. It shows that the level of the monthly customer charge for the Company's Residential Service rate class should be equal to at least $22.15 per month.

Q. HOW CAN THE COST-OF-SERVICE STUDY RESULTS PROVIDE GUIDELINES FOR THE PROPOSED RATE DESIGN?

A. Results of a cost-of-service study provide cost guidelines for use in evaluating class revenue levels and class rate structures. With regard to rate class revenue levels, the rate of return results show that certain rate classes are being charged rates that recover less than their indicated costs of service. Obviously, because this condition exists, rates for other rate classes provide for recovery of more than the indicated costs of serving these other rate classes. By adjusting rates in accordance with the cost study, rate class revenue levels can be brought closer in line with the indicated costs of service, resulting in movement of rate class rates of return toward the system average rate of return and resulting in rates that are more in line with the cost of providing service.

Concerning cost justification of rates within each rate class, the classified costs, as allocated to each class of service in the cost study, provide cost information that can be of assistance in determining the need for changes in the relative levels of demand charges (if they exist), customer and commodity rate block charges.

Q. ARE THE RESULTS OF A UTILITY'S COST-OF-SERVICE STUDY ALWAYS RELEVANT FOR ALL TYPES OF SERVICES?

A. No. This situation applies to Peoples' competitively situated customers, where rates are based on their competitive characteristics. Competitive customers should be established at a price level where they are recovering in excess of out-of-pocket costs and therefore reducing the overall requirement reducing costs for all customers. For these customers, the price the customer is willing to pay for gas delivery service relative to available alternatives has much more influence on the relative profitability (i.e., rate of return on net rate base) than cost causation does, as measured by a gas utility's cost-of-service study. This view is shared by NARUC in its Gas Rate Design Manual, where it states that "[s]etting rates based on value of service bears little relationship to setting them based on cost-of-service. When using value of service principles, we normally look not to the cost of the utility providing the service, but rather to the cost of alternatives available to the customer." Therefore, the guidelines I discussed above are most useful when evaluating the costs to serve customers in the Company's RS, SGS and MGS rate classes, and less useful when evaluating its LGS rate class which includes most of the Company's competitively situated customers who are priced on a negotiated (i.e., value of service) basis. In addition, as I pointed out earlier in my testimony, cost-of-service study results for Peoples' gathering service to local gas producers (other than the derivation of Peoples' total functionalized cost of gathering) do not provide the sole basis for adjustments to the current level of rates for this service.

Q. PLEASE DESCRIBE HOW THE UNIT COST ANALYSIS PRESENTED IN EXHIBIT 11 WAS PREPARED.

A. The cost-of-service compiles the functionalized, classified, and allocated expenses and rate base data for each class of service. The system average rate of return is applied to the allocated rate base to determine the required net income. This is then grossed up to account for the income tax related revenue responsibilities. The sum of the expense related revenue requirement and the rate base related revenue requirement yields the total revenue requirement for each component of cost at the system average rate of return. The computer model makes this calculation for each of the various cost components (i.e., the customer, demand and commodity portions of the supply, gathering, storage, and distribution functional categories). The functionally classified costs are unitized by dividing the total costs by the appropriate number of billing units. Customer-related costs are divided by the number of bills, demand related costs are divided by the contribution to peak demand and commodity-related costs are divided by the number of Mcf delivered. It should be noted that a monthly customer cost is calculated for each customer class, as well as unit commodity and demand costs.

Page 153 of IV-B-1(A) and IV-B-1(B) (Exhibit 11, Schedule 1) presents the unitized cost-of-service study results (at the Company's proposed rate of return on rate base) described above.

Q. CAN THE RESULTS OF THE UNIT COST ANALYSIS BE USED FOR RATE DESIGN?

A. Yes, if three-part rates (i.e., customer, demand, and commodity) were set at the unit cost levels, the Company's operating expenses and rate of return on investment based on its pro-forma test year would be recovered (assuming customer counts, gas deliveries and other billing determinants were as projected). The unit cost analyses also provide valuable unbundled cost information for the design of portions of the tariff.

Q. CAN THE UNIT COST ANALYSIS PROVIDE GUIDANCE ON THE APPROPRIATE LEVEL OF MONTHLY CUSTOMER CHARGES?

A. Yes. For example, Peoples' cost-of-service studies show that a full cost-based customer charge for its Residential Service class is supportable within a range of between $22.15 (Minimum Customer Cost) and $41.85 (Minimum System / Design Day Cost) per month. The unit cost analysis could also be used to establish separately metered contract demand charges where the cost of demand metering can be justified or where a reasonable method of estimating customer demands can be derived.

Q. ARE THE TOTAL FUNCTIONALIZED COST OF THE GATHERING SYSTEM DERIVED IN THE COST-OF-SERVICE STUDY?

A. Yes. The functionalization phase of Peoples' cost-of-service study identifies the specific plant components and expenses that comprise the gathering function and allocates other indirect costs that are necessary to support the gathering function. This process determines Peoples' fully loaded cost of gathering service. Peoples Exhibit RNZ-3 summarizes the rate base, expenses, rate of return on rate base (as proposed) and, federal income taxes that

comprise Peoples' total gathering cost-of-service. These cost components are derived from the cost-of-service study presented in Exhibit 11, Schedule 1, IV-B-1(A), Pages 63 to 72, which provides each of the detailed plant and expense components that comprise Peoples' gathering function. As a point of comparison, Peoples Exhibit RNZ-3 also provides Peoples' gathering service revenues at present .and proposed rates.

IV. PEOPLES' PROPOSED CLASS REVENUES

Q. PLEASE DESCRIBE THE APPROACH FOLLOWED TO ALLOCATE THE $173.7 MILLION BASE RATE REVENUE INCREASE TO VARIOUS CUSTOMER CLASSES.

A. As described earlier, the apportionment of revenues among rate classes consists of deriving a reasonable balance between various criteria or guidelines related to utility rate design. The various criteria that were considered in the process included:

(1) cost-of-service;

(2) class contribution to present revenue levels; and

(3) customer impact considerations.

Complicating the allocation of the revenue increase is the combination of the PNG and PG rates and tariffs. The significant differences in the level of the existing rates introduces challenges to developing tariffs.

These criteria were evaluated for each of the Company's rate classes. Based on this evaluation, adjustments to the present revenue levels in certain rate classes were made so

that the rates proposed by Peoples moved class revenues closer to the costs of serving those rate classes.

Q. PLEASE PROVIDE THE RATE OF RETURNS ("ROR") PRODUCED BY EACH TARIFF CLASS UNDER PRESENT RATES.

A. Peoples Exhibit RNZ-4 provide two reference points based on the cost-of-service studies presented by Peoples.

Q. DO YOU BELIEVE THAT ALLOCATING THE RATE INCREASE USING EITHER COST-OF-SERVICE STUDY IS APPROPRIATE?

A. No. I believe that adopting the results from either cost-of-service study to allocate the rate changes ignores the principle of gradualism which should be considered in any rate design exercise.

Q. WHAT IS THE PROPOSED ALLOCATION OF THE REVENUE REQUIREMENT TO EACH TARIFF CLASS?

A. Based upon input from the Company and the results of the cost-of-service analyses, I prepared the proposed revenues and associated increases as provided in the Peoples Exhibit 11.

Q. DOES THE PROPOSED ALLOCATION OF THE REVENUE REQUIREMENT PROVIDE MOVEMENT FOR EACH CLASS TOWARD COST-OF-SERVICE?

A. This approach resulted in reasonable movement of the class relative rates of return on net rate base towards unity or 1.00. The results are provided in Exhibit 11, Schedule 1, IV-B-1(A), Page 1.

Q. EARLIER IN YOUR TESTIMONY YOU MENTIONED THAT BECAUSE THE COMPANY HAS COMPETITIVELY SITUATED CUSTOMERS INCLUDED IN THE SGS, MGS AND LGS RATE CLASSES, ANY INCREASE IN CLASS REVENUES ASSIGNED TO THOSE RATE CLASSES COULD NOT BE RECOVERED FROM SUCH CUSTOMERS. HOW WILL THE OTHER CUSTOMERS IN THESE RATE CLASSES BE IMPACTED BY THE INCREASES IN REVENUES TO THESE RATE CLASSES UNDER THE COMPANY'S INTERCLASS REVENUE PROPOSAL?

A. The standard rates of the other customers were increased to recover the entirety of the revenue increase assigned to each of these three rate classes. In other words, any discounts which competitive customers were provided were recovered from the other customers in that tariff class. In doing so, the Company was mindful of the unique customer impact considerations in these rate classes recognizing the fewer number of customers and decreased level of gas volumes under which any revenue increase could be recovered through the Company's standard rates. As such, it is important to understand that any

greater level of revenue sought from these rate classes will have a disproportionate impact on the level of the Company's standard rates proposed for these rate classes.

V. Proposed Rate Design

H. Rate Design Principles and Changes in the Structural Peoples Rate Design.

Q. CAN YOU PLEASE DESCRIBE THE KEY OBJECTIVES YOU SOUGHT TO ACHIEVE IN THE DESIGN OF THE PEOPLES' PROPOSED RATES?

A. Yes. In general, I sought to achieve the following objectives when developing the proposed rate design:

- Achieve fair and equitable rate levels (reflective of the cost to serve);
- Avoid undue discrimination between and within rate classes;
- Rates should be stable, understandable, and provide customer choices;
- Create economically efficient pricing for natural gas delivery service;
- Rates should encourage energy conservation and energy efficiency; and
- Rates should allow a utility to recover its revenue requirement in a manner that maintains revenue stability and minimizes year-to-year under or over-collections.

Q. PLEASE DESCRIBE THE CHANGES IN THE PEOPLES GAS STRUCTURAL RATE DESIGN.

A. We are proposing the following structural changes:

- In the previous request, Peoples implemented transition tariffs for certain customers to mitigate rate increases. We are proposing that customers served under transition rates be moved to the standard rate design for those classes;
- A Mainline rate design is proposed for LGS customers who are not served by the company's distribution and/or transmission system; and
- The tariffs of PNG and PG are being combined.

I. Proposed Revenue Targets

Q. WHAT ARE THE PROSPOED REVENUE TARGETS FOR EACH RATE CLASS?

A. The table below provides the target base rate revenue for each rate class based upon the average of the two cost-of-service approaches previously discussed in my testimony.

	Revenues at Current Rates	Minimum System/Design Day	Demand/Peak & Average	Mean	Rate Design Target	Rate Design Proposed Revenues	Percent Increase	Proposed Revenues as a Percent of Target
RES	$347,866,631	$508,820,648	$451,420,813	$480,120,731	$480,120,731	$480,120,731	38%	100%
SGS	$43,991,391	$60,323,814	$67,379,366	$63,851,590	$63,851,590	$63,852,921	45%	100%
MGS	$57,024,004	$60,132,252	$90,788,231	$75,460,242	$75,460,242	$75,459,798	32%	100%
LGS	$55,979,202	$49,322,142	$69,010,446	$59,166,294	$59,166,294	$59,166,294	6%	100%
Total	$504,861,227	$678,598,857	$678,598,857	$678,598,857	$678,598,857	$678,599,743	34%	100%

J. Residential Rate Design

Q. PLEASE DESCRIBE THE PROPOSED RESIDENTIAL RATE DESIGN.

A. As I previously discussed in my testimony, Peoples Natural Gas and Peoples Gas are combining their tariffs in this proceeding. I am proposing the same distribution rates for residential customers of the two entities.

Q. DOES A SIGNIFICANT DIFFERENCE EXIST BETWEEN THE RESIDENTIAL DISTRIBUTION RATES OF PNG AND PG?

A. The overall structure of the distribution rates for both divisions is the same. They include a monthly fixed charge and a volumetric charge. However, the overall levels of these charges differ. PG's rates are higher than the PNG rates.

Q. HOW DO THE PRESENT REVENUES OF THE COMBINED ENTITY COMPARE TO THE RESULTS OF THE ALLOCATED COST-OF-SERVICE STUDY?

A. The residential customers of the combined entities are recovering 72 percent of the allocated cost-of-service.

Q. PLEASE DETAIL YOUR PROPOSED RESIDENTIAL DISTRIBUTION RATE DESIGN.

A. The proposed distribution rate design is detailed in Peoples Exhibit RNZ-5.

Q. ARE THE PROPOSED RATES SUPPORTED BY THE COST-OF-SERVICE STUDY?

A. If the proposed rates are adopted, the Residential class will produce revenues at 100 percent of the targeted cost-of-service level. The proposed monthly fixed charge of $21.50 is below the level detailed in the unit cost analysis of $41.85, and the Minimum Customer Cost of $22.15. The proposed volumetric charge is $5.6304.

Q. HAVE YOU PREPARED A BILL IMPACT ANALYSIS FOR A TYPICAL RESIDENTIAL CUSTOMER?

A. Yes. I have prepared bill impacts for a typical residential customer consuming 80 Mcf per year. Separate bill impacts have been prepared for legacy PNG and PG customers. A legacy typical PNG customer will experience an overall impact of 21.2 percent increase, including the cost of gas and riders. In contrast PG customers will experience an increase of 7.5 percent, including gas costs and riders. The residential typical bill analysis is detailed in Peoples Exhibit RNZ-6.

Q. IN THE COMPANY'S PREVIOUS CASE, CERTAIN RESIDENTIAL CUSTOMERS WERE PLACED ON A TRANSITIONAL RATE DESIGN TO AVOID ADVERSE RATE INCREASES. HOW WERE THESE CUSTOMERS TREATED IN THE PROPOSED RATE DESIGN?

A. It was determined that residential transitional customers would not experience adverse impacts if they were placed on the proposed residential tariffs. I propose to eliminate the residential transitional rate class.

K. Small General Service

Q. PLEASE DESCRIBE THE PROPOSED SMALL GENERAL SERVICE RATE DESIGN.

A. Similar to the Residential rate design, The SGS customers of the combined entities are recovering 69 percent of the allocated cost-of-service.

Q. DOES A DIFFERENCE EXIST BETWEEN THE SMALL GENERAL SERVICE DISTRIBUTION RATES OF PNG AND PG?

A. The overall structure of the distribution rates for both divisions is the same. They include a monthly fixed charge and a volumetric charge. However, the overall levels of these charges differ. PG's rates are higher than the PNG rates.

Q. PLEASE DETAIL YOUR PROPOSED SMALL GENERAL SERVICE DISTRIBUTION RATE DESIGN.

A. The present and proposed distribution rate designs are detailed in Peoples Exhibit RNZ-5.

Q. ARE THE PROPOSED RATES SUPPORTED BY THE COST-OF-SERVICE STUDY?

A. The proposed monthly fixed charges of $25.00 and $50.00 are generally supported by the Company's preferred cost-of-service study of $43.62, and exceeds the Minimum Customer Cost of $23.83. At proposed rates, the SGS class recovers 100 percent of the allocated revenue requirement.

Q. HAVE YOU PREPARED A BILL IMPACT ANALYSIS FOR A TYPICAL SMALL GENERAL SERVICE CUSTOMER?

A. Yes. I have prepared bill impacts for a typical Small General Service customers consuming 250 (Tier 1 customers) and 750 Mcf (Tier 2 customers) per year. Separate bill impacts have been prepared for legacy PNG and PG customers.

- Tier 1 (0-499 Mcf per year) Small General Service Customers: A legacy Tier 1 PNG customer will experience an overall typical bill increase of 22.1 percent, including the cost of gas and riders. In contrast, PG customers will experience an increase of 0.4 percent.
- Tier 2 (500-999 Mcf per year) Small General Service Customers: A legacy Tier 2 PNG customer will experience an overall increase of 22.1 percent, including the cost of gas and riders. In contrast, PG customers will experience an increase of 2.5 percent.

The typical bills are detailed in Exhibit RNZ-6.

L. Medium General Service

Q. PLEASE DESCRIBE THE PROPOSED MEDIUM GENERAL SERVICE RATE DESIGN.

A. Similar to the Small General Service rate design, the Medium General Service rates for PG and PNG are being combined.

Q. DOES A SIGNIFICANT DIFFERENCE EXIST BETWEEN THE MEDIUM GENERAL SERVICE DISTRIBUTION RATES OF PNG AND PG?

A. The overall structure of the distribution rates for both divisions are the same. They include a monthly fixed charge and a volumetric charge. However, the overall levels of these charges differ. The PG's rates are higher than the PNG rates.

Q. HOW DO THE PRESENT MGS REVENUES OF THE COMBINED ENTITY COMPARE TO THE RESULTS OF THE ALLOCATED COST-OF-SERVICE STUDY?

A. The combined entities are currently recovering 76 percent of the allocated cost-of-service revenues.

Q. PLEASE DESCRIBE THE PROPOSED MEDIUM GENERAL SERVICE DISTRIBUTION RATE DESIGN.

A. The proposed distribution rate designs is detailed in the Exhibit RNZ-5.

Q. ARE THE PROPOSED RATES SUPPORTED BY THE COST-OF-SERVICE STUDY?

A. The proposed monthly fixed charges of $105 and $150 are partially within the range supported by the Minimum Customer Cost Study ($90.43) and the Minimum System/Design Day methods ($117.05). The proposed volumetric charges are $3.8268 per Mcf.

Q. HAVE YOU PREPARED A BILL IMPACT ANALYSIS FOR A TYPICAL MGS CUSTOMERS?

A. Yes. I have prepared bill impacts for a typical Medium General Service customers consuming 1,750 and 13,750 Mcf per year. Separate bill impacts have been prepared for legacy PNG and PG customers.

- Tier 1 (1,000-2,499 Mcf per year) Medium General Service Customers: A legacy Tier 1 PNG customer will experience an overall increase of 13.8 percent, including the cost of gas and riders. In contrast, PG customers will experience a decrease of 1.0 percent.
- Tier 2 (2,500-24,999 Mcf per year) Small General Service Customers: A legacy Tier 2 PNG customer will experience an overall increase of 13.4 percent, including the cost of gas and riders. In contrast, PG customers will experience a decrease of 3.9 percent.

The typical bills are detailed in Exhibit RNZ-6.

Q. IN THE COMPANY'S PREVIOUS CASE, CERTAIN MEDIUM GENERAL SERVICE CUSTOMERS WERE PLACED ON A TRANSITIONAL RATE DESIGN TO AVOID ADVERSE RATE INCREASES. HOW WERE THESE CUSTOMERS TREATED IN THE PROPOSED RATE DESIGN?

A. It was determined that Medium General Service transitional customers would not experience adverse impacts if they were placed on the proposed residential tariffs. I propose to eliminate the residential transitional rate class.

M. Large General Service

Q. PLEASE DESCRIBE THE PROPOSED LARGE GENERAL SERVICE RATE DESIGN.

A. Similar to the other rates for PG and PNG, LGS rates for both divisions are being combined. Further, we are proposing an expansion of the LGS tariff to provide a Mainline service rate for customers who do not use the high-pressure distribution system.

Q. DOES A SIGNIFICANT DIFFERENCE EXIST BETWEEN THE LARGE GENERAL SERVICE DISTRIBUTION RATES OF PNG AND PG?

A. The overall structure of the distribution rates is the same for both divisions. They include a monthly fixed charge and a volumetric charge. However, the overall levels of these charges differ. PG's rates are higher than the PNG rates. Exhibit RNZ-6 details the present rates for the two entities.

Q. ARE YOU PROPOSING ANY CHANGES TO THE LGS TARIFF RATE DESIGN?

A. Yes. I am proposing an expansion of the LGS Tariff. The expansion is a pricing option for customers who are:

- Connected directly to the Company's transmission system and not using the distribution system; or
- Connected directly to interstate pipelines through facilities constructed by the Company.

I will refer to the above two groups of customers as "Mainline Customers".

Q. ARE THE MAINLINE CUSTOMERS CURRENTLY SERVED UNDER THE LGS TARIFF RATES?

A. No. The Mainline customers are all served under special contracts but are classified as LGS customers. The Mainline customer Mcf sales and revenues captured in the FPFTY are 22,422,445 Mcf and $7.0 million in present base revenues.

Q. PLEASE DESCRIBE THE COMPANY'S REGULATED DISTRIBUTION SYSTEM – ACCT. 376. AND WHAT RATE CLASSES ARE SERVED BY THAT DISTRIBUTION SYSTEM.

A. The Company operates a high-pressure and low-pressure distribution system. The low-pressure and high-pressure distribution systems are both captured in Account 376 – Mains. For the purposes of the cost-of-service study, Account 376 is separated into the high- and

low-pressure systems. All customers served under the LGS tariff are not interconnected to the low-pressure system and therefore not allocated any cost associated with these investments. However, LGS customers are allocated a portion of the high-pressure distribution system.

Q. DO ALL LGS CUSTOMERS USE THE COMPANY'S DISTRIBUTION ASSETS?

A. No. As I described previously in my testimony, the Mainline customers are served through the Company's transmission system or interconnections to interstate pipelines.

Q. DOES THE DESIGN OF THE EXISTING LGS CORRECTLY REFLECT THE EMBEDDED COST TO SERVE THESE CUSTOMERS?

A. No. In the case of customers served by the Company's transmission system, the existing LGS rate design captures the embedded cost of the High-Pressure distribution system not used by these customers. In the case of customers served through a People's interconnection to an interstate pipeline, those customers also avoid the Company's transmission system.

Q. HOW DID YOU DEVELOP THE PROPOSED RATE DESIGNS?

A. I added two new tariff classes to the cost-of-service study, Mainline LGS Transmission customers and Mainline LGS Non-Transmission customers.

Q. PLEASE DESCRIBE THE DESIGN OF MAINLINE LGS TRANSMISSION SERVICE.

A. Mainline LGS Transmission customers do not use the high-pressure distribution system, Account 376 – Regulated Mains. Account 376 – Regulated Mains. Therefore, Mainline LGS transmission customers are not allocated Account 376 – Regulated Mains costs. All other cost allocations are consistent with the other LGS customers.

Q. PLEASE DESCRIBE THE DESIGN OF MAINLINE LGS NON-TRANSMISSION SERVICE.

A. Mainline LGS Non-Transmission customers do not use the Company's transmission system because they are interconnected to interstate pipelines. Therefore, Mainline LGS transmission customers are not allocated Account 376 – Regulated Mains costs and transmission mains. All other cost allocations are consistent with the other LGS customers.

Q. DOES THE CREATION OF THE MAINLINE LGS TARIFFS REDUCE THE SIZE OF THE CURRENT DEFINITION OF LGS CUSTOMERS?

A. The sum of the three tariffs, LGS, Mainline LGS transmission and Mainline LGS Non-transmission, equals the traditional definition of LGS customers. The Mainline LGS customers constitute 48 percent of the Mcf sales and 13 percent of the revenues of the total LGS tariff class.

Q. DO YOU ANTICIPATE CUSTOMER MOVEMENT FROM THE CURRENT LGS RATE TO THE PROPOSED LGS MAINLINE RATE?

A. I do not anticipate any customers will move from their current special contracts to the proposed LGS Mainline tariff. The special contracts which they are served under captures pricing equal to that of their competitive alternatives which is below the proposed LGS Mainline tariff.

Q. WILL THE CUSTOMERS RECEIVING SERVICE UNDER MAINLINE LGS TARIFFS RECEIVE A "WINDFALL" BY TAKING SERVICE ON THE PROPOSED TARIFF?

A. No. The development of Mainline LGS service reflects the accurate embedded cost to serve these customers which was previously not reflected in the existing LGS tariff. Creating the Mainline LGS tariff eliminates an implicit cross-subsidy in the embedded cost-of-service study. The proposed rates are based upon cost-of-service principles and any reallocation of the revenue requirement is supported by cost-of-service principles. The existing tariffs allocate costs to Mainline customers for facilities which they do not use.

Q. IF MAINLINE CUSTOMERS ARE SERVED AT A PRICE BELOW THE MAINLINE LGS RATE ARE THEY BEING SUBSIDIZED BY THE OTHER CUSTOMERS WHICH THE COMPANY SERVES?

A. If Mainline LGS customers have competitive alternatives below that of the proposed Mainline LGS rate, but above the Company's out-of-pocket costs, they are not being cross-

subsidized by other customers. The fact that the Mainline customers are not paying the embedded cost-of-service is not evidence a subsidy has been created. As I stated above, the Mainline customers have competitive alternatives providing a lower cost alternative to service under the Company's standard rates.

Q. PLEASE DETAIL YOUR PROPOSED LARGE GENERAL SERVICE DISTRIBUTION RATE DESIGN.

A. The proposed distribution rate design is detailed in Exhibit RNZ-5.

Q. ARE THE PROPOSED RATES SUPPORTED BY THE COST-OF-SERVICE STUDY?

A. The proposed monthly fixed charges range from $800.00 to $1,920.00 are in some cases above that which is supported by the Minimum Customer Cust Study of $959.20 and, $1,027.31 in the Minimum System/Design Day cost-of-service study. The proposed volumetric charges range from $1.5319 and $2.4602 per Mcf.

Q. HAVE YOU PREPARED A BILL IMPACT ANALYSIS FOR TYPICAL LGS CUSTOMERS?

A. Yes. I have prepared bill impacts for a typical Large General Service customers which is detailed in Exhibit RNZ-6.

Q. IN THE COMPANY'S PREVIOUS CASE, CERTAIN LARGE GENERAL SERVICE CUSTOMERS WERE PLACED ON A TRANSITIONAL RATE DESIGN TO AVOID ADVERSE RATE INCREASES. HOW WERE THESE CUSTOMERS TREATED IN THE PROPOSED RATE DESIGN?

A. It was determined that Large General Service transitional customers would not experience adverse impacts if they were placed on the proposed LGS tariffs. I propose to eliminate the LGS transitional rate class.

VI. Heating Degree Day Estimation

Q. WHY IS IT NECESSARY TO ESTIMATE THE EXPECTED LEVEL OF HEATING DEGREE DAYS ("HDD") WHEN ESTIMATING THE TEST YEAR REVENUES.

A. The number of HDDs varies from year-to-year based upon normal random variation in weather. Random variation is normal. A significant quantity of Peoples sales is weather-sensitive. In other words, if HDD are above the expected level, sales would be expected to be in excess of the test year estimate. Conversely, if HDD are below the expected below the expected level, sales will be below the test year estimate.

Q. THE TESTIMONY OF COMPANY WITNESS SCANLON PROPOSES USING 5,341 HDD AS AN ESTIMATE FOR NORMAL WEATHER FOR THE TEST YEAR. DO YOU BELIEVE ADOPTING 5,341 HDD IS APPROPRIATE?

A. Yes, I believe that adopting 5,341 HDD is a conservative estimate of weather for the test year.

Q. PLEASE DESCRIBE WHY YOU BELIEVE THAT 5,341 HDD IS AN CONSERVATIVE ESTIMATE.

A. Company Witness Scanlon developed the estimated HDD based an average of two approaches to estimating HDD. The first approach is based upon a 20-year average of HDD for the Company's service area. Using historical data to estimate the test-year level of HDDs has been used in the past. Implicit in using a multi-year average is that the mean number of HDD does not change over time, only variation from year-to-year.

Q. IF HDD ARE CHANGING OVER TIME DOES THE 20-YEAR AVERAGE REFLECT THE TREND IN THE DATA?

A. It is generally agreed that weather is becoming milder (i.e., warmer) over time. Therefore, the average number of HDD for each year are decreasing. In other words, a trend exists in the HDD data and the mean number of HDD experienced over time is decreasing.

The trend of decreasing HDD is inconsistent with the use of a 20-year average which assumes that the mean of the HDD is constant over time. Use of the 20-year HDD average will overstate the expected HDD level in the future because it fails to recognize the trend of declining HDD (i.e., warmer weather). Simply put, the 20-year average introduces a bias in the analysis overstating HDD.

Q. HAS THE COMPANY DEVELOPED AN APPROACH WHICH ESTIMATES THE TREND IN THE ANNUAL NUMBER OF HDD?

A. Yes. A regression analysis was developed which estimated the trend in HDD over time. The regression used 65 years of data and produced a negative coefficient for the time variable. The negative coefficient for the time variable produces estimated HDD which slightly decreases every year.

Therefore, adopting the averaging methodology of the 20-year average will not capture the trend of decreasing HDD. The 65-year regression captures the trend of decreasing HDD. Therefore, averaging the results of the two approaches will provide a conservative (slightly overstated) level of HDD for the test-year.

N. Weather Normalization Mechanism

Q. PLEASE DESCRIBE THE CHALLENGES TRIGGERED BY NON-NORMAL WEATHER FOR A NATURAL GAS DISTRIBUTION UTILITY AND ITS CUSTOMERS.

A. A significant variation occurs in the heating load triggered by non-normal weather. Significant variation in heating load can occur from year-to-year, which burdens the natural gas distribution utility and customers.

Q. WHAT ARE THE IMPACTS OF THE VARIATION IN WEATHER ON CUSTOMERS?

A. The impact on customers triggered by non-normal weather is variation in the level of bills. The variation can be especially problematic when severe weather occurs, and customers' bills increase.

Q. WHAT ARE THE IMPACTS OF THE VARIATION IN WEATHER FOR THE COMPANY?

A. The Company's revenues fluctuate. However, the majority of the Company's cost structure related to delivery base rates is fixed. Therefore, under- and over-earning occurs.

Q. WHAT ARE THE POTENTIAL REMEDIES TO THE CHALLENGES INTRODUCED BY WEATHER VARIATION?

A. Regulatory authorities in the United States have introduced a number of mechanisms addressing revenue variation triggered by weather variation and other factors. The Company proposes a Weather Normalization Mechanism to remedy the weather normalization problem specifically.

Q. WHAT IS THE OBJECTIVE OF THE PROPOSED WEATHER NORMALIZATION MECHANISM?

A. The Weather Normalization Mechanism provides symmetric protection to customers and the Company for revenue variations in usage associated with non-normal weather.

Q. IS THE WEATHER NORMALIZATION MECHANISM A REVENUE DECOUPLING MECHANISM?

A. No. A Revenue Decoupling Mechanism is designed to adjust revenue variation triggered by several variables introducing volatility in the utility revenue stream. The proposed Weather Normalization Mechanism has a narrower focus and only adjusts for the variation in normal Heating Degree Days ("HDD") in a specific time period. The Weather Normalization mechanism only applies to the non-base load consumption. The Weather Normalization Mechanism would not address reductions in usage associated with adopting more efficient end-use equipment, customer defection to other fuels, and other similar variables.

Q. PLEASE DESCRIBE HOW THE COMPANY'S PROPOSED WEATHER NORMALIZATION MECHANISM WILL OPERATE.

A. The proposed Weather Normalization mechanism will adjust the delivery base rate volumetric component of the customer's bill, reflecting the revenues associated with weather-sensitive load. The mechanism will be applied on a customer-by-customer basis.

Q. DOES A WEATHER NORMALIZATION MECHANISM REDUCE THE RISK OF THE UTILITY?

A. I defer questions about risk to the Company's cost of capital witness, Mr. Moul.

Q. IS A DEADBAND INLCUDED IN THE COMPANY'S PROSPOED WEATHER NORMALIZATION MECHANISM?

A. No. I believe that dead bands reduce the effectiveness of the Weather Normalization Mechanism and therefore reduce their values to both the Company and customers. The policy goal of the Weather Normalization Mechanism is reduce the revenues fluctuations associated with non-normal weather conditions. The dead band implicitly states that the policy goal of the Weather Normalization Mechanism is less important for smaller weather variation than significant weather variation.

VII. Conclusions

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS AND RECOMMENDATIONS WITH REGARD TO PEOPLES' COST-OF-SERVICE STUDIES, CLASS REVENUES AND RATE DESIGN.

A. My conclusions and recommendations for the Company's cost-of-service studies, class revenues and rate design are as follows:

- The range of results from the Company's two cost-of-service studies should be accepted by the Commission as a guide to evaluate and set Peoples' class revenues and rate design in this proceeding;
- The Commission should accept the Company's proposed apportionment of non-gas revenues to its rate classes because it reasonably balances the various criteria that were

considered by the Company in the revenue apportionment process which included: (1) cost-of-service; (2) class contribution to present revenue levels; and (3) customer impact considerations; and

- The Commission should approve the rate design proposed by the Company because it reasonably satisfies the key rate design objectives I presented earlier in my testimony, including: (1) achieve fair and equitable rate levels that are reflective of the cost to serve; (2) avoid undue discrimination between and within rate classes; (3) rates should be stable, understandable, and provide customer choices; (4) create economically efficient pricing for natural gas delivery service; (5) rates should encourage energy conservation and energy efficiency; and (6) rates should allow a utility to recover its revenue requirement in a manner that maintains revenue stability, and minimizes year-to-year under or over collections.

Q. DOES THIS COMPLETE YOUR PREPARED TESTIMONY?

A. Yes. I reserve the right to submit supplemental testimony as additional issues arise during the course of this proceeding. Thank you.

WITNESS AREAS OF RESPONSIBILITY
(LIST OF SECTION)

Section	Subject Matter
53.53	
III-A-45	Explanation of any differences between the basis or procedure used in allocations of revenues, expenses, depreciation and taxes in the current rate case and that used in the prior rate case.
III-A-47	Schedule showing rate of return on facilities allocated to serve wholesale customers
IV-B-1	Cost of Service Studies under Present and Proposed Tariffs
IV-B-2	Statement of Testimony Describing the Complete Methodology of the Cost-of-Service Studies
IV-B-3	Complete Description and Back-Up Calculations for All Allocation Factors.
IV-B-7	Graph of present and proposed base rates on hyperbolic cross section paper.
IV-B-9	Cost Analysis Supporting Minimum Charges for All Rate Schedules.
IV-B-10	Cost analysis supporting demand charges for all tariffs which contain demand charges.
IV-B-12	Supply a tabulation of base rate bills for each rate schedule comparing the existing rates to proposed rates. The tabulation should show the dollar difference and the per cent increase or decrease.
Exhibit	
VI.III.COS.2	Detailed explanation describing how contributions in aid of construction and customer advances are reflected in the Company's cost of service study.
VI.III.COS.8	Company's rate design models and cost of service study on an IBM PC-compatible computer disk in Lotus 1-2-3-or Quattro format. If the models consist of more than one file, please include information on all files on the disk and what they contain. If not available in Lotus 1-2-3 or Quattro format, please provide in ASCII format.

VI.III.COS.19 Workpapers showing the development of each allocation factor reflected in the Company's cost of service study. Include a description of each allocation factor, all calculations performed to develop the allocators and all supporting documentation, studies or other information relied upon to determine the allocators.

VI.III.COS.20 All workpapers, calculations and supporting documentation for the functionalization and classification performed for the Company's cost of service study.

PREPARED REBUTTAL TESTIMONY OF
RALPH ZARUMBA
ON BEHALF OF
PEOPLES NATURAL GAS COMPANY, LLC

DATE SERVED:
DATE ADMITTED: _____

Peoples Statement No. 15-R

PREPARED REBUTTAL TESTIMONY OF
RALPH ZARUMBA

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ralph Zarumba. My business address is 736 Central Street, Evanston, Illinois.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a subcontractor to Black & Veatch Management Consulting, LLC ("Black & Veatch"). Prior to my retirement, I was a Managing Director at Black & Veatch, leading the Natural Gas and Electricity Regulatory Practice.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. My direct testimony is outlined in Peoples Statement No. 15.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am responding to various parties in this proceeding on the following topics:

- The forecasted number of Heating Degree Days (“HDD”) included in the fully projected future test year (“FPFTY” or “test year”).
- The proposed Weather Normalization Adjustment (“WNA”) mechanism.
- The revised allocated cost of service study, and.
- The revised proposed rate design.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. I am sponsoring the following additional exhibits.

- Appendix A, my resume, was inadvertently not included in my direct testimony.
- Exhibit RNZ-R-1 which is the revised cost of service summary.
- Exhibit RNZ-R-2 includes the revised cost of service models under the Minimum System and Peak and Average approaches. These models are provided electronically.
- Exhibit RNZ-R-3 is the cost of service external factors models which is provided electronically.
- Exhibit RNZ-R-4 is the revised base rate design based on the revised cost of service studies, which is filed electronically.
- Exhibit RNZ-R-5 is the base rate comparison.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony is organized as follows:

- A section summarizing my conclusions and recommendations.
- Discussions addressing the regression analyses that resulted in an estimated 5,341 HDD for the test year.
- Other Parties concerns about the Company's proposed Weather Normalization Adjustment.
- Other Parties concerns regarding the Company's cost of service studies.
- A revised rate design based upon the cost of service study changes.

Q. WHAT ARE YOUR RECOMMENDATIONS AND CONCLUSIONS.

A. My recommendations and conclusions are as follows:

- After responding to the other parties in this proceeding, I believe that an estimate of 5,341 HDD for the FPFTY remains accurate.
- The Company has illustrated that its Weather Normalization Adjustment mechanism, as proposed, should be approved in this proceeding. (Also see the rebuttal testimony of Carol Scanlon regarding WNA).
- I recommend the adoption of the cost of service study using the design day, and the minimum system approaches.
- The revenue allocations based upon the average design day and peak and average cost of services approaches provide an appropriate basis for revenue allocation.
- The proposed tariff, Rate MLS, should be approved and opened to all eligible customers.
- The amended rate design detailed in the Exhibit RNZ-R-4 should be approved.

II. PEOPLES APPROACH TO ESTIMATING HEATING DEGREE DAYS IS ACCURATE AND SHOULD BE ADOPTED

Q. PLEASE SUMMARIZE THE COMPANY'S PROPOSAL TO ESTIMATE HDD FOR THE FPFTY.

A. The Company has proposed to estimate the HDD for the Test Year as the arithmetic average of a 20-year average of HDD and a regression analysis using 65 years of data in which the estimated HDD is a function of time. The resulting proposed HDD for the Test Year is 5,341.

Q. PLEASE SUMMARIZE THE CONCERNS OF THE INTERVENING PARTIES REGARDING THE PEOPLES PROPOSAL FOR ESTIMATING HDD.

A. The following parties have filed testimony that addresses the Company's approach to estimating HDDs.

- I&E Witness Cline stated that he does not support using the 65-year regression to estimate HDD. He has further proposed to use 5,443 HDD instead of 5,341 HDD for the test year.
- OCA Witness Johnson stated that the R^2 in the regression is weak.
- OSBA Witness Knecht adopted the regression analysis approach but has produced slightly different results.

Q. PLEASE EXPLAIN THE PURPOSE AND THEORY OF USING A REGRESSION ANALYSIS.

A. The number of HDDs has gradually been diminishing over time. In my direct testimony, I provided a regression analysis that supports that conclusion. Therefore, using traditional approaches to estimate HDD, such as adopting a 20- or 30-year average, will overstate HDD and, therefore, overstate sales in the Company's sales forecast.

Q. WHY WILL A 20 OR 30 YEAR AVERAGE OF HDD OVERSTATE THE EXPECTED LEVEL OF HDD?

A. Using multi-year averages assumes that no trend exists in the time series. In other words, the average (i.e., mean) changes over time. Therefore, any projection of HDD relying on multi-year averages will overstate HDD and the Company's sales forecast.

Q. HOW DOES A REGRESSION ANALYSIS IMPROVE THE LOAD FORECAST?

A. The regression analysis captures the trend in decreasing HDD in the fitted equation.

Q. DOES THE REGRESSION ANALYSIS INCLUDED IN YOUR DIRECT TESTIMONY RESPOND TO THE CRITICISMS OF MR. CLINE, MR. JOHNSON AND MR. KNECHT?

A. Yes. The following discussions address their concerns.

Q. PLEASE DESCRIBE HOW A REGRESSION ANALYSIS IS PERFORMED AND TESTED FOR VALIDITY.

A. A properly constructed regression analysis captures all systematic variation in the data. The residuals of the regression equation (i.e., the difference between the actual and predicted values) are randomly distributed. An independent variable cannot predict the random variation in a data series.

Q. PLEASE DESCRIBE THE STATISTICS COMMONLY USED TO EVALUATE A REGRESSION ANALYSIS.

A. The statistics which are commonly used to evaluate a regression analysis are:

- The Coefficient of Determination, or the R^2 Statistic. It is the proportion of variation that is explained by the independent variable(s).
- The t-Statistic is a ratio of the difference between the mean of the two sample sets and the variation within the sample sets. The t statistic provides evidence that the estimated coefficient is statistically significant.
- The Durbin-Watson Statistic is a test for autocorrelation. Autocorrelation is the degree of correlation of a variable's values over time.

Q. AFTER REVIEWING THE TESTIMONY OF THE INTERVENING PARTIES, ARE YOU CHANGING YOUR PROPOSAL FOR THE REGRESSION ANALYSIS ESTIMATING HDD?

A. No, I can address the concerns expressed by I&E Witness Cline, OSBA Witness Knecht and OCA Witness Johnson. To address their concerns, I ran regression analyses using different lengths of time. The results are provided in Table 1 below.

- 65 years (original regression).
- 60 years.
- 55 years.
- 50 years.
- 40 Years
- 30 years
- 10 years.

Table 1 - Results of the Regression Analyses

Regression	Constant Coefficient	Trend Coefficient	Adjusted R^2	t-Statistic for the Trend Variable	Durbin-Watson Statistic	F-Statistic	F-Statistic Probability
30 Years	5656	(11.46)	0.058	-1.674	1.971	2.802	10.50%
20 Year	5626	(17.39)	0.051	-1.422	1.89	2.021	17.20%
10 Years	5569	(31.51)	-0.043	-0.793	1.704	0.6281	45.10%
65 Years	6187	(14.14)	0.370	-6.214	1.622	38.61	0.00%
60 Years	6113	(14.04)	0.319	-5.35	1.566	28.62	0.00%
55 Years	6068	(14.73)	0.295	-4.862	1.493	23.64	0.00%
50 Years	5971	(14.01)	0.222	-3.875	1.433	15.02	0.00%
40 Years	5710	(9.64)	0.078	-2.072	1.848	4.295	4.51%

Q. PLEASE COMMENT ON THE RESULTS OF THE VARIOUS REGRESSION ANALYSES.

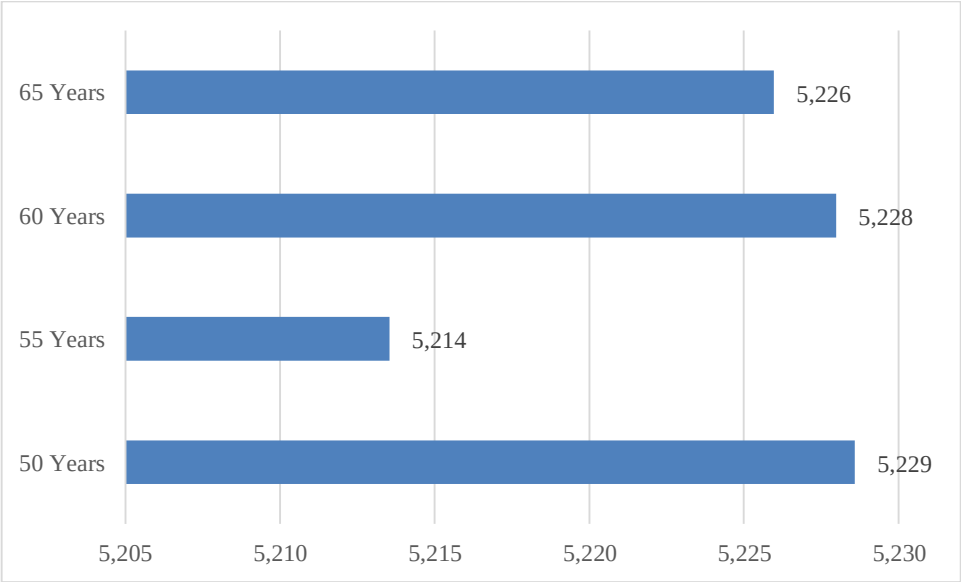
A. I rejected the results of the regression analyses using 30, 20, and 10 years of data due to a very low R^2, poor F Statistic, and, in the case of the 10 year regression, a very low t-statistic for the trend variable. It should be noted that the 10 and 20 year regression results would have provided the lowest level of HDD and generated the weakest sales for the Company. With the exception of the 40 year regression, the other models result in very similar trend coefficient estimates (14.01-14.73), which represents the number of HDDs that can be expected to decrease each year. The consistency of the estimated trend coefficients suggests the models are stable and consistent. The 65 year model, which I advocate adopting, has a Durbin-Watson statistic indicating that the residuals (i.e., the actual less

predicted value) are randomly distributed; in other words, all systematic information in the data has been captured.

Q. HAVE YOU ESTIMATED THE PREDICTED VALUES FOR THE REGRESSION ANALYSES?

A. Yes. The graph below provides the predicted values of the models for the year 2025.

Figure 1 - 2025 Predicted Heating Degree Days



The projected HDD projections of the various models are extremely similar, suggesting that the 65 year model reliably projects future HDDs.

Q. PLEASE COMMENT ON OCA WITNESS JOHNSON'S CONCERNS THAT THE R^2 IS STATICALLY WEAK AND SUGGESTS THAT VARIABLES MAY EXIST THAT WOULD EXPLAIN THE REMAINING VARIATION IN THE DATA.

A. Mr. Johnson's concerns are unfounded. First, the Durbin-Watson statistic suggests no autocorrelation exists in the model, and all systematic variation is captured in the regression equation. In other words, Mr. Johnson's concern about missing explanatory variables has been addressed. Second, HDD data tends to vary randomly from year to year. By definition, random variation cannot be modeled.

Q. OSBA WITNESS KNECHT PROSPOES A DIFFERENT REGRESSION ANALYSIS PREDICTING HDD. PLEASE COMMENT.

A. Mr. Knecht provided a regression analysis similar to what I filed in my direct testimony, except he specified log-linear equations using 65 years of data. The predicted value they produced for 2025 is very similar to what I produced in my 65 year regression and, therefore, supports my original proposal.

Q. I&E WITNESS CLINE STATED THAT HE DOES NOT SUPPORT USING THE 65 YEAR REGRESSION TO ESTIMATE HDD. HE HAS FURTHER PROPOSED TO USE 5,443 HDD INSTEAD OF 5,341 HDD FOR THE TEST YEAR. PLEASE COMMENT.

A. The objective of any forecast is to provide the most accurate estimation of behavior for the test year. I believe a regression analysis approach captures the decreasing trend in HDD, which I described above. In order to further support the proposed HDD, I have compared the results of a projection using only a regression analysis, a 20 year moving average, and the Company's proposed blended regression analysis/20 year moving average approach. I prepared analyses for two time periods: 2003-22 and 1993-22. I summed the net errors and

divided the net errors by the total HDD for the periods. The graphs below illustrate the results.

Figure 2 - Percentage Errors from Various Heating Degree Day Forecasts – 2003-22

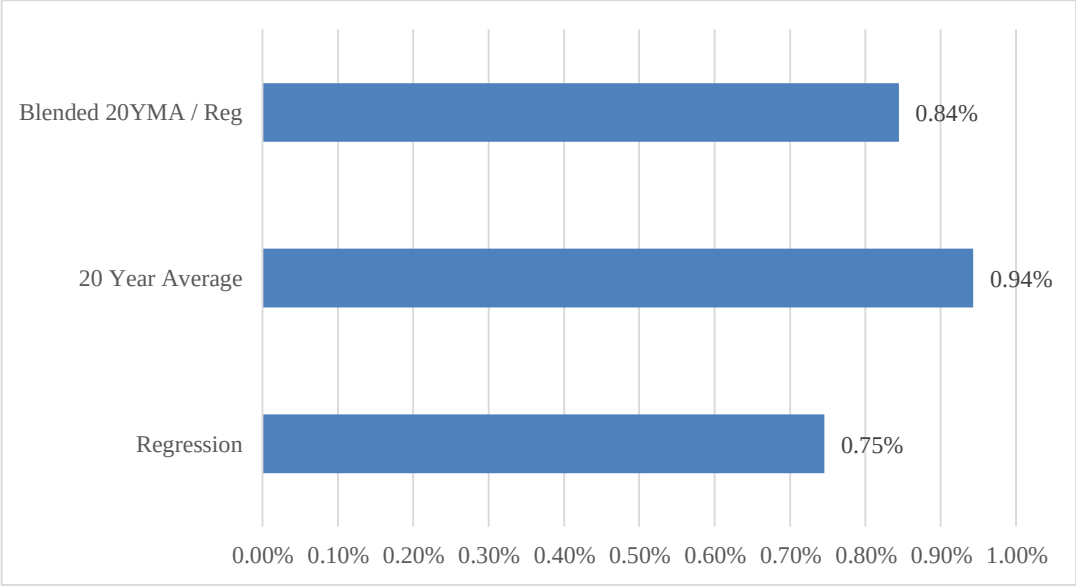


Figure 3- Percentage Errors from Various Heating Degree Day Forecasts - 1993-2022

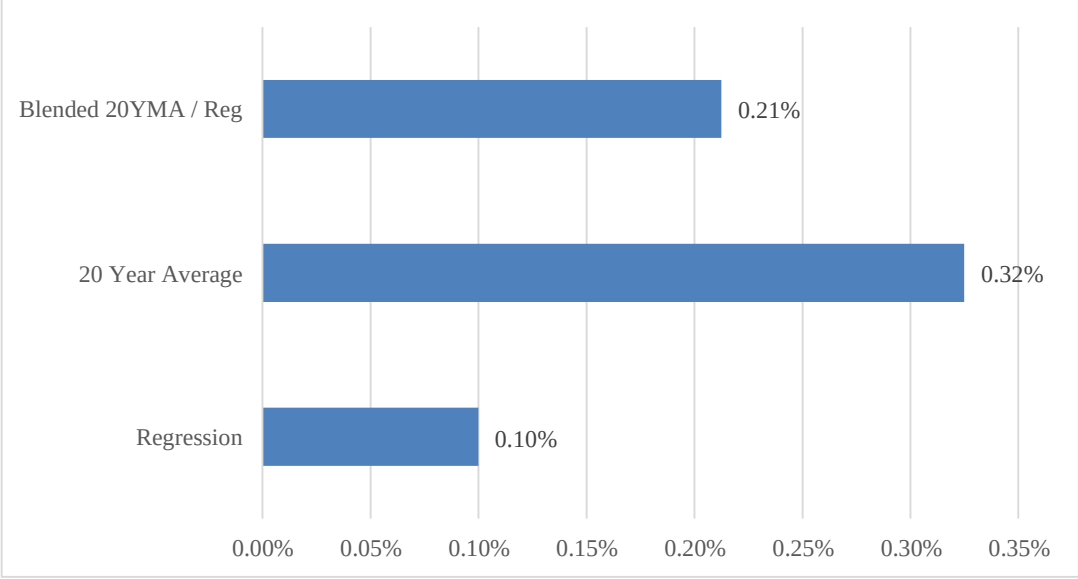

In both cases, the regression analyses produce the most accurate forecast over the time periods analyses. The blended regression analysis / 20 year moving average produces the

second most reliable results. The 20-year moving average produces the least reliable results.

I therefore conclude that the Company's proposal to use the blended regression analysis / 20-year moving average approach is superior to the 20 year moving average forecast of HDDs.

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS.

A. Given the rigor of the statistics supporting the 65 year model and the consistency of the results of the various time periods modeled, I believe the 65 year regression analysis provides accurate projections of future HDD. This was further verified by OSBA Witness Knecht, who independently arrived at virtually identical results adopting a different specification of the equation.

III. PEOPLES PROPOSED WEATHER NORMALIZATION ADJUSTMENT (WNA)

Q. WHAT PARTIES HAVE FILED TESTIMONY ADDRESSING THE PROPOSED WNA?

A. Parties who have filed testimony addressing the proposed WNA include.

- I&E Witness Cline.
- OCA Witnesses Johnson and Alexander.
- OSBA Witnesses Knecht and Ewen.
- CAUSE-PA Witness Geller

A. PARTY POSITIONS ON THE COMPANY'S WEATHER NORMALIZATION MECHANISM

Q. DO ANY PARTIES IN THIS PROCEEDING REJECT THE IMPLEMENTATION OF THE WNA?

A. OCA Witnesses Johnson and Alexander oppose the implementation of the WNA, as does CAUSE-PA' Witness Geller. The other parties either support the implementation of the WNA as proposed or with modifications to the Company's original proposal.

Q. PLEASE SUMMARIZE OCA'S CONCERNS ABOUT THE PROPOSED WNA, WHICH LEADS THEM TO RECOMMEND REJECTION OF THE MECHANISM.

A. OCA Witness Johnson claims that the WNA weakens traditional regulatory principles and shifts the risk to customers (OCA Statement No. 4 p. 41).

Q. IS IT YOUR OPINION THAT THE PROPOSED WNA MECHANISM SHIFTS RISK TO CUSTOMERS?

A. No. The WNA mechanism is designed to be symmetric and limit risk equally for customers and the Company. The WNA mechanism moves revenues towards those approved in the rate request. The formula for the adjustment to the volumetric charge of the tariff is based on the ratio of normal HDD to actual HDD. The weather behavior is random and not skewed to be warmer or colder than normal for a specific period. Therefore, OCA's claims that the WNA shifts risk to customers are unfounded.

Q. HAVE YOU TESTED YOUR HYPOTHESIS THAT THE IMPACT OF THE WNA IS SYMMETRIC?

A. Yes. The Company has provided residential customer data for each customer for the past 7 years. With that data, I have prepared analyses to measure the impact of the WNA on individual customers and the residential customers as a whole.

Q. WHAT DID YOU USE IN THE SEVEN (7) YEARS OF DATA?

A. I used actual customer usage for 7 years. Any given year will have HDD, which will be above or below normal, thus impacting usage. The sum of HDD for 2016 through 2022 produces an average HDD, which is close to normal but still slightly warmer than average. I feel using multiple years of data provides a more rigorous analysis.

Q. WERE ALL CUSTOMERS USED IN THE ANALYSIS?

A. I excluded customers who did not have a full year of data because of the seasonal aspect of the WNA. Using customers with incomplete data could introduce inaccuracies in the analysis results.

Q. HOW DID YOU TEST THE WNA'S DESIGN TO DETERMINE THE WNA'S IMPACT?

A. I calculated the base distribution portion of each customer's bill with and without the WNA. The base distribution tariff I used for the calculation is the Company's current PNG tariff.

Q. WHAT ARE THE RESULTS OF THE ANALYSIS?

A. The table below provides a summary of the bill comparison. In total, the results of the analysis indicate that the WNA produces slightly more revenue than distribution tariffs without the WNA. However, it should be noted that the result is expected because the sum of the HDD for the 7 years is slightly below normal. It should be noted that the data used in the analysis are not billing determinants. The data is a sample to measure customer impacts, not billing determinants. Therefore, the data is not adjusted to reflect normal weather and would be expected to produce a slightly above or below normal result.

Table 2 – Impacts of the Weather Normalization Mechanism – 2016-22

Year	No. of Bills – Decreased	No. of Bills – Increased	$ Decrease	$ Increase	Net $ Impact
2016	738,322	2,697,543	($1,488,445)	$12,538,443	$11,049,998
2017	1,150,361	2,467,970	($2,489,027)	$15,935,965	$13,446,938
2018	2,421,268	1,196,389	($22,018,240)	$8,158,156	($13,860,084)
2019	1,939,522	1,502,413	($8,551,058)	$4,696,034	($3,855,024)
2020	982,283	2,771,266	($4,217,709)	$11,837,959	$7,620,249
2021	1,934,388	1,819,233	($6,590,751)	$6,481,817	($108,933)
2022	2,357,903	1,615,369	($9,618,625)	$5,243,101	($4,375,524)
Total	11,524,047	14,070,183	($54,973,856)	$64,891,474	$9,917,619

Q. PLEASE DISCUSS THE VARIATION IN THE IMPACTS FROM YEAR TO YEAR.

A. The annual results demonstrate that the WNA can benefit the Company in some years and, in other years, benefit customers based on weather patterns. The net impact over the entire period was an increase of $9,917,619 over the base charges without the WNA of $1.49 billion or 0.66 percent. The slight increase in revenues is consistent with the HDD data for those years, which were 2 percent below normal. **Error! Reference source not found.Error! Reference source not found.** provides the HDD by year.

Table 3 – Heating Degree Days by Year – 2016-22

Year	Actual HDDs	Normal HDDs	Actual vs Normal HDDs
2016	5017	5368	-7%
2017	4892	5341	-8%
2018	5664	5341	6%
2019	5398	5341	1%
2020	5157	5368	-4%
2021	5139	5341	-4%
2022	5648	5341	6%
Avg	5274	5349	-1%

Q. WHAT IMPACT DOES THE WNA HAVE ON YEARS WHEN THE WEATHER IS SEVERE?

A. In years when the weather is severe (i.e., significantly colder than normal), the WNA limits the impact on bills, making them more affordable. Note that the years 2018, 2019 and 2022 were colder than normal. Table 2 above and **Error! Reference source not found.** below illustrates the distribution of bill's impacts with the WNA. Overall, these tables show that 45% of customer bills benefited from the WNA and experienced lower bills than if the WNA did not exist.

Table 4 - Distribution of Bills with Increases and Decreases Triggered by the WNA

Bill Impact (% Change) Bins	2016	2017	2018	2019	2020	2021	2022	Total
-100 to -75%	0	0	0	0	0	0	0	**0**
-75 to -50%	0	0	0	0	0	0	0	**0**
-50 to -15%	6	16	897,192	24,406	257,969	61,028	133,631	**1,374,248**
-15 to -10%	56	10,787	664,959	316,094	166,185	207,653	503,147	**1,868,881**
-10 to -5%	65,523	206,504	435,757	723,309	148,358	636,468	617,323	**2,833,242**

Q. OCA WITNESS JOHNSON STATES THAT THE UTILITY SHOULD DEMONSTRATE THAT THE WNA MECHANISM IS REQUIRED TO AVOID SIGNIFICANT DAMAGE TO CUSTOMERS (OCA STATEMENT NO. 4 P. 41).

A. The WNA assists in avoiding significant damage to customers by limiting the bill's impact on them. However, I disagree with Mr. Johnson that the only criteria that should be applied to any regulatory mechanism is that it avoids significant customer damage. First, the analysis I included above demonstrates that during years with especially severe weather, the WNA shields customers from high bills. Second, regulatory mechanisms are implemented to support the balanced goals of serving the customers and providing the

utility with a reasonable opportunity to earn their return. The WNA is a mechanism that protects customers from unhedged weather risks. Warmer-than-normal weather does not adversely impact customers because bills are lower than normal. However, when extreme cold weather occurs, which is greater than what was assumed to develop rates, customers are exposed to the risk of higher bills than normal. Further, the WNA provides a mechanism which reduces under- and over-recovery of the authorized level of revenues by the utility. Both features of the WNA support the goal of proper regulatory policy.

Q. HAVE YOU PREPARED AN ANALYSIS TESTING YOUR CLAIM THAT WEATHER RISKS ARE UNHEDGED?

A. Yes. I have prepared an analysis of the seven historical years comparing actual and normal weather patterns. The past 7 years have provided something relatively close to normal weather. However, in 2018, HDDs were 6 percent higher than normal in a specific year, which would reduce customers' bills. As shown in Table 4, 67% of customer bills in 2018 received a bill decrease. Conversely, in 2017, the weather was 8% percent below normal, which increased 68% of customer bills.

Q. OCA WITNESS JOHNSON STATES THAT THE WNA MECHANISM WILL NOT REDUCE THE FREQUENCY OF RATE CASES AND WEAKENS THE INCENTIVES TO CONTROL COSTS. SUPPORTING HIS CLAIM, HE REFERENCES AN NRRI REPORT BY MR. KENNETH COSTELLO (OCA STATEMENT NO. 4 P. 41). PLEASE COMMENT.

A. Mr. Johnson misunderstands the rationale of the WNA. The WNA is designed to provide a revenue level closer to that which the Commission approves in this rate request. The WNA does not impact the cost structure of the utility. Mr. Johnson's reference to controlling costs is more appropriately focused on Performance-Based Ratemaking mechanisms. No Performance-Based Ratemaking mechanisms are proposed in this proceeding.

Further, I have reviewed the NRRI Report by Mr. Costello, and I believe Mr. Johnson mischaracterizes the content.

- The NRRI Report does not address WNA mechanisms.
- Mr. Costello avoids commenting on specific alternative rate mechanisms in his paper. Mr. Costello states:

This paper excludes endorsing specific rate mechanisms since it argues that their efficacy is case-specific and depends essentially on the weights commissioners place on the different objectives ascribed to ratemaking. The challenge for commissions, then, is to weigh these objectives and measure (if possible) the effect of a rate mechanism on each one and the overall public interest. Assigning weights requires judgment by commissions, while examining the effect demands data and other unbiased information derived from sound analytical methods. This paper addresses the latter task. If a commission assigns a top priority to economic efficiency, for example, it would tend to favor mechanisms that set prices compatible with marginal-cost principles and provide utilities with strong incentives for technological advances and productivity.

The NRRI Report discusses revenue decoupling mechanisms, which some parties have characterized as being similar to the proposed WNA. Mr. Costello lists the following rationales for revenue decoupling mechanisms.

- It eliminates the disincentive for utilities to promote energy efficiency.
- Standard rate design places the utility at risk for recovering its fixed costs, with the risk increasing in recent years because of declining usage per customer.
- RD is superior to alternative rate designs in achieving revenue stability and promoting energy efficiency.
- It would result in small annual rate adjustments, either upward or downward.

Q. OCA WITNESS JOHNSON STATES THE WNA WILL PROVIDE A DISINCENTIVE TO ENERGY EFFICIENCY. DO YOU AGREE?

A. No, I disagree that the WNA will provide a disincentive to energy efficiency. I believe that the WNA mechanism removes the barriers to implementing energy efficiency because it lessens the impact on the relationship between consumption and revenues. For example, see the paper published by the National Renewable Energy Laboratory, "Decoupling Policies: Options to Encourage Energy Efficiency Policies for Utilities."[1]

Q. PARTIES IN THE PROCEEDING HAVE EXPRESSED CONCERNS ABOUT THE PHILADELHIA GAS WORKS ("PGW") WNA. WHAT IS YOUR INTERPRETATION OF THE ISSUES THAT PGW ENCOUNTERED WITH THEIR WNA?

[1] www.nrel.gov/docs/fy10osti/46606.pdf

A. PGW encountered unexpected bill impacts, primarily during the transition month of May.

Q. HAS PEOPLES ANALYZED ITS PROPOSED WNA AND DETERMINED IF SIMILAR ISSUES COULD OCCUR?

A. First, I note that Peoples cannot be compared to PGW as though it is an apples to apples comparison. I note that Peoples and PGW do not have the same customer profiles, weather, billing and more. As I stated previously, Peoples has analyzed individual customer data for the years 2016 through 2022 to analyze the behavior of the WNA. The analysis does identify the infrequent times that certain customers experienced distribution bill impacts that were out of the ordinary. The takeaway is that the mechanism worked as intended and without unusual results, 99.93% of the time.

Q. PLEASE EXPLAIN WHAT HAPPENED IN THE ANALYSIS THAT PRODUCED UNUSUAL RESULTS 0.07% OF TIME.

A. Certain customers exhibited behavior inconsistent with weather trends. Specifically, a small subset of customers increased usage when HDD was below normal. The result was an unusual increase in the distribution charge to those customers.

Q. WHEN DID THIS BEHAVIOR OCCUR?

A. First, for purposes of this analysis, I assume an unusual increase to be when the base bill increase is above 100% due to the WNA. Almost all instances of this behavior occurred in May and October, primarily in the years 2018 and 2019, with 70% of the instances being

in May 2018. The total increase for the 18,233 (0.07%) bills that experienced an increase above 100% was $1.5 million.

Q. WHAT IS THE COMPANY'S POSITION WITH RESPECT TO PGW CONCERNS?

A. The analysis I've performed, analyzing over 40 million bills, 25 million bills impacted in WNA months, over a seven year period for the Company, illustrates that its WNA mechanism, as proposed, yields intended results 99.93% of the time. As such, the Company is confident that its WNA mechanism will be implemented accurately and it is extremely likely that it will produce the intended impact of normal weather.

IV. ALLOCATED COST-OF-SERVICE ISSUES

Q. WHAT PARTIES HAVE FILED TESTIMONY ADDRESSING PEOPLES COST-OF-SERVICE STUDY?

A. The following parties have filed testimony addressing the Peoples Cost-of-Service Study

- I&E Witness Cline.
- OCA Witness Johnson.
- OSBA Witness Knecht.
- PII Witness Baudino

I will address each issue individually and address the arguments made by each witness.

A. MAINS CLASSIFICATION/ALLOCATION AND SEGREGATION

1. Summary of Positions

Q. WHAT APPROACH DO YOU BELIEVE IS APPROPRIATE FOR THE CLASSIFICATION AND ALLOCATION OF DISTRIBUTION MAINS?

A. I believe distribution mains should be functionalized as demand and customer based on a minimum cost study for cost-of-service classification purposes. For allocation purposes, the demand component of mains is allocated to the classes using a design day allocator.

Q. DID YOUR REVENUE ALLOCATION ADOPT YOUR PROSPOED COST-OF-SERVICE APPROACH?

A. No. For revenue allocation purposes I averaged the minimum system/design day approach with a Peak and Average methods. The midpoint of the results of the two studies is the basis of revenue allocation.

Q. WHICH MAINS CLASSIFICATION AND ALLOCATION APPROACHES WERE PROPOSED FOR COST-OF-SERVICE IN THIS PROCEEDING?

A. The following table includes the Company's position and my understanding of the positions of the other witnesses in their direct testimony. Depending on one's perspective, the Peak and Average methods could be portrayed differently. Therefore, in the table below, I show two perspectives for the I&E and OCA Peak and Average methods, although they are both mathematically equivalent.

Table 5 - Summary of Parties Positions - Classification and Allocation of Mains

Party/Witness	Mains Cost-of-Service	
	Classification	**Allocation**
Peoples, Zarumba	MinSystem 48% Customer 52% Demand	Number of Customers Design Day
I&E (Cline) and OCA (Johnson)	Demand 100%	Peak and Avg 50% Design Day 50% Throughput
	Peak and Avg 50% Commodity 50% Demand	Peak and Avg Throughput Design Day
PII, Baudino	MinSystem 48% Customer 52% Demand	Number of Customers Design Day
OSBA, Ewen/Knecht	Zero Intercept 29% Customer 71% Demand	Number of Customers Design Day (Modified)

Q. AFTER REVIEWING THE TESTIMONY OF THE PARTIES IN THIS PROCEEDING, HAVE YOU CHANGED YOUR PROPOSAL FOR YOUR PREFERRED COST-OF-SERVICE METHODOLOGY OR ULTIMATE REVENUE ALLOCATION METHODOLOGY?

A. No. It should be noted that the other parties in this proceeding are divided in their proposals for the cost-of-service study and revenue allocation approach.

Q. WHERE DOES YOU POSITION OF COST OF SERVICE RELATIVE TO THE OTHER PARTIES IN THIS PROCEEDING?

A. From a policy standpoint the cost of service study I sponsored is aligned with PII Witness Baudino and OSBA Witness Knecht in terms of a portion of Mains being classified as customer related. However, the approach I proposed for revenue allocation finds a midpoint between those parties and I&E Witness Cline and OCA Witness Johnson.

2. Customer Component of Mains Classification/Allocation

Q. PLEASE DESCRIBE YOUR APPROACH TO THE CLASSIFICATION OF MAINS.

A. In my direct testimony, I described the approach I adopted, classifying a portion of mains as customer-related and the balance as demand-related using the minimum system approach. See page 14 if Peoples Statement No. 15. The result of the analysis classified mains as 48 percent customer and 52 percent demand.

Q. DO YOU BELIEVE IT IS APPROPRIATE TO EXCLUDE ANY CUSTOMER COMPONENT FROM MAINS CLASSIFICATION AS OCA AND I&E HAVE PROPOSED?

A. No. I am not aware of any precedent specific to Peoples Gas where the Commission ruled on the customer component of Mains. Second, the Commission's policy regarding natural gas and electric distribution-related facilities has varied between cases. OSBA Witness Knecht states:

> We note that even in cases in which the revenue allocation methodology is litigated, a determination regarding which ACCOSS should be used should be determined on a case-by-case basis. We have observed that 'the inherent distinctions between utilities and rate cases may result in different methodologies to be reasonable for different reasons. In other words, the best-suited ACCOSS may

depend on the circumstances of the situation on a case-by-case basis.[2]

Given the lack of specific precedent for Peoples Gas and the Commission's statement on determining the appropriate COS on a case-by-case basis, I agree with Mr. Knecht that "Commission precedent has only limited applicability to this case.[3]"

Q. ASIDE FROM PAST COMMISSION PRECEDENT, WHY SHOULD MAINS CLASSIFICATION INCLUDE A CUSTOMER COMPONENT?

A. While methodologies for classifying mains can vary across utilities and regulators, using a customer component is within industry norms. Both the American Gas Association ("AGA") text Gas Rate Fundamentals[4] and NARUC's "Gas Distribution Rate Design Manual"[5] recognize the segregation of Mains into a customer and distribution component. Second, using a commodity-based allocation factor (such as the peak and average method) provides little insight, if any, into how the utility incurs costs to provide service. The rationale for using a commodity-based allocation factor is usually discussed by cost analysts supporting such a method by arguing that the gas distribution system would not be built if it were not for customers' commodity consumption. Their argument relies upon the concept I characterize as the "commodity delivery function." A "commodity delivery

[2] PUC v. Columbia Gas of Pennsylvania, Inc. Docket No. R-2022-3031211 (Order entered December 8, 2022) at 107, footnote 30.

[3] Ewen/Knecht Direct testimony, page 32 lines 3-4

[4] Gas Rate Fundamentals, Fourth Edition. American Gas Association, 1987. See Table 7-4 at page 142 and the example cost allocation study at page A-17. The implied demand/customer classification split for joint-use distribution mains in the AGA sample study is 68 percent demand, 32 percent customer

[5] National Association of Regulatory Utility Commissioners, “Gas Distribution Rate Design Manual,” 1989, page 46

function" relates to the notion that a gas distribution utility delivers a commodity through its distribution system. In other words, these cost analysts view the "commodity delivery function" as the reason for the existence of gas distribution utilities, which is why those facilities were originally installed. It is obvious that all customers utilize the utility's gas distribution system to receive delivery service throughout the year, that fact provides little, if any, insight into the manner in which the utility incurs costs to provide such service.

In reality, customers value the availability of the design day capacity when it is needed and are willing to pay for that capacity because of the importance of service reliability under design day conditions. Once capacity is available to serve the design day, commodity use during all other days of the year has no impact at all on a utility's delivery system costs. Simply stated, annual usage does not cause any delivery system costs to be incurred by the utility. The installation of additional distribution mains (i.e., main extensions) to move gas from the existing system to new customers is more correctly thought of as being customer-related. For larger customers, the unit cost is lower than for smaller customers simply because they require either larger diameter or higher pressure mains to serve their higher design day demands – and those mains have lower unit costs due to the economies of scale inherent in a utility's gas distribution system.

Any commodity-based allocation method will assign higher total costs to larger customers based on the use of commodity when system unit costs are either the same or less for these higher commodity users. This allocation violates the fundamental principle of cost causation because these larger customers cause the same or less unit cost to be incurred by the utility.

Q. WHAT ARE THE RESULTS OF USING A COMMODITY-BASED METHODOLOGY FOR ALLOCATING MAINS?

A. As the cost analyst relies more heavily on the concept of a "commodity delivery function" to establish a cost allocation method for distribution mains, the resulting cost allocation factor based on a greater weighting of commodity volumes would quickly cause a result where the unit cost to serve each customer class would be identical. This would occur because the customers' use of the utility's gas distribution system, as measured by annual volume, would create a cost allocation factor that simply assigns costs to the utility's classes of service on a pro-rata basis without regard for either economies of scale or customers' annual load factors.

Q. WHAT PARTIES DISAGREE WITH THE ADOPTION OF THE MINIMUM SYSTEM APPROACH?

A. OCA Witness Johnson disagrees with the adoption of the Minimum System Approach. Mr. Johnson claims the Minimum System Approach is flawed because it is an abstraction. He quoted Bonbright, who stated these costs were unallocable. Further, he stated the Company did not perform a Zero-Intercept Study.

Q. IN HIS TESTIMONY, MR. JOHNSON STATES THAT BONBRIGHT REJECTS THE ADOPTION OF THE MINIMUM SYSTEM APPROACH. PLEASE COMMENT.

A. I have performed cost studies, both embedded and marginal cost of service, and the analyses used to prepare these studies rely upon analyses that Mr. Johnson refers to as "abstractions."

Mr. Johnson's quote refers to the 1961 edition of that publication. Curiously, the more recent 1988 edition of "Principles of Public Utility Rates" omits that language. I suggest that relying on the more recent edition of the publication provides a more reliable source of information.

I further believe the concept of "unallocable" is questionable from a policy perspective. If we accept the concept of unallocable, does that mean those costs should be ignored? Mr. Johnson suggests that these costs should not be ignored, they should all be allocated based upon demand, which he advocates in this proceeding. I believe that Mr. Johnson's proposal is arbitrary.

The minimum system approach is widely adopted in the industry and referenced in cost allocation manuals published by NARUC. The minimum system concept recognizes that a large portion of a gas utility's total cost of distribution mains must be borne regardless of customers' peak day or annual use. To illustrate this point, it is useful to summarize a gas utility's process for physically connecting new customers. To extend gas service to a typical residential subdivision, the utility must first design the gas system. Based on this design, the utility determines the length and size of pipe needed to serve the area and procures the necessary material. A field crew is then dispatched to the site, together with the facilities and equipment required to install the natural gas facilities. The activities necessary to install gas mains include digging a trench, installing the main into the trench, and backfilling the trench. Pipeline boring (i.e., a trenchless installation method) may be necessary to install

some main segments if the utility is unable to open a trench for a portion of the line due to existing surface conditions along the route of the main. After the main is installed, it will be pressure tested, tied into the existing gas system, and purged and filled with natural gas. The main is then ready to provide utility service to the new customers. These steps are necessary regardless of how much gas the new customers are projected to use during the year or during a peak day. The design work must still be completed, the crews, materials, and equipment dispatched to the site, the trench dug, the main installed in the trench, the trench backfilled, testing performed, and the other activities performed.

The additional costs associated with any larger mains required are mostly the incremental material costs of the larger mains themselves, the additional labor involved with digging a wider trench for very large mains, and possibly the need for additional equipment to handle larger diameter mains. As a result, a large percentage of the costs of providing gas delivery service to a gas utility's customers are incurred before they ever use one unit of gas. These are the costs the gas utility must incur simply to extend its gas distribution system to customers, irrespective of whether they will demand a small or large volume of gas on a peak day. As a result, the costs of such a minimum system are fundamentally customer-related in nature.

Q. ON PAGE 26 OF HIS TESTIMONY, OSBA WITNESS KNECHT DISCUSS THE APPLICATION OF THE ZERO-INTERCEPT METHOD. IS THE ADOPTION OF THE ZERO INTERCEPT METHOD A VALID APPROACH TO CLASSIFY MAINS?

A. Yes, the Zero Intercept method is a recognized method for classifying mains as customer- and demand-related[6]. Conceptually, the Zero Intercept and minimum systems are similar because they both recognize that some portion of the distribution system is required to serve customers regardless of the usage level.

Q. MR. JOHNSON'S TESTIMONY PROVIDES AN EXAMPLE OF A HOME BEING SPLIT FROM A SINGLE DWELLING INTO TWO DWELLINGS AS AN EXAMPLE OF WHERE A SMALL INCREMENTAL INVESTMENT IS REQUIRED. PLEASE COMMENT.

A. Mr. Johnson's hypothetical example identifies a highly unusual situation. The splitting of single residences into multiple residences is unusual and not a firm foundation for policymaking.

Q. MR. JOHNSON STATES THAT THE ADJUSTMENT TO REMOVE THE CAPACITY OF A 2" MAIN IS LIKELY INSUFFICIENT. PLEASE COMMENT.

A. I discount Mr. Johnson's statement because he provides no credible evidence to support his statement. In contrast, my direct testimony contains a discussion of the analysis we followed to support the estimate of 5.6%.

Mr. Johnson states that other methodologies exist to estimate the cost of mains with no load capacity. He relies upon an installation that includes labor and no materials and deduces that the cost of labor is 3.8% to 30% of the total cost. However, I see no

[6] National Association of Regulatory Utility Commissioners, "Electric Utility Cost Allocation Manual," 1992, page 92

relationship in the labor component of installing a 2" main and the capacity of that main. All else held equal, a 2" main has a specific capacity regardless of the labor cost installed during the installation of that main. A simple example is to assume the installation of a 2" main in loose soil compared to the same installation in rock. The labor cost of trenching is significantly greater if rock needs to be excavated rather than soil. However, Mr. Johnson appears to believe that the cost differential for the two identical pipelines would have different capacities.

Q. MR. JOHNSON STATES THAT THE CLASSIFICATION OF MAINS IS NOT SYMMETRIC WITH THE TREATMENT OF SERVICE LINES. PLEASE COMMENT.

A. First, adopting the minimum system approach for mains is not contingent on adopting the minimum system approach for services. Further, The Company installs mains based on customer type (i.e., various customer types would receive a specific sized main). Therefore, the application of a minimum system approach under these circumstances would result in services being 100% customer-classified, which is the identical result proposed in my study.

B. DESIGN DAY ALLOCATOR

Q. WHAT DOES OSBA PROPOSE WITH REGARDS TO THE DESIGN DAY ALLOCATOR?

A. OSBA proposes to essentially replace the LGS design day value with recent peak demand values which are higher than the design day value. The design day values for the remaining classes are essentially re-scaled so the that the total company design day value does not

change. Peoples witness Ms. Folks addresses this issue in her rebuttal testimony and has stated there should not be an adjustment to the design day allocator. Therefore, for cost-of-service purposes I continue to use the same allocator used in my direct testimony.

C. COST-OF-SERVICE CORRECTIONS AND REFINEMENTS

Q. PLEASE SUMMARIZE THE COST-OF-SERVICE CORRECTIONS AND REFINEMENTS YOU ARE ACCEPTING FROM THE OTHER PARTIES

A. **Error! Reference source not found.** below lists the various corrections and refinements accepted by the company.

Table 6 - Other Cost-of-Service Corrections and Refinements

Issue#	Correction/Refinement Summary	Witness	Company Rebuttal Position
1	CUST-902 allocator corrections	OSBA Knecht)	Accepted in concept but with a revision to the OSBA calculation
2	CUST-908 allocator corrections	OSBA (Knecht)	Agreed in concept but with a revision to the OSBA calculation
3	**Collections allocator:** Receivables used in the allocator should be weighted.	OSBA (Knecht)	Agreed in concept but with a revision to the OSBA calculation
4	**Large industrial customer support costs:** Reallocation of $1.3 million of labor costs to MGS and LGS only.	OCA (Johnson)	Agreed in concept but with a revision to the OCA calculation

Q. PLEASE EXPLAIN YOUR REVISIONS TO OSBA'S ADJUSTMENTS FOR THE CUST-902, CUST-908 AND COLLECTIONS ALLOCATORS.

A. For CUST-902 (meter reading expenses) I agree conceptually with the formula correction proposed by Mr. Knecht. However, Mr. Knecht's calculations assign a higher weight to GM&R (large commercial and small and large industrial) customers. According to the

Company, there is no difference in meter reading costs within the GM&R customers. Therefore I have not added a weighting factor to those customers.

For the "Cust-908" (Customer Service/Information) allocator I agree conceptually that there needs to be a formula correction. However, Mr. Knecht's revisions were only applied to the PNG component and not to the PG component. I have made the correction to both components which flow through to the combined entity allocator.

The "Collections" allocator is used to allocate forfeited discounts (including late fee revenue) to the classes. Mr. Knecht proposes to weight the receivables used to develop the allocator. His adjustment assigns receivables with greater arrearage periods with more weight, presumably to recognize a higher likelihood and or magnitude of late fees associated with those receivables. The adjustment was only made to the PNG component. The overall adjustment has a relatively small impact and I have accepted the adjustment conceptually but also added the weighting factor to the PG component. In future rate cases the company may look into a more precise weighting calculation than that used by Mr. Knecht.

Q. WHAT OTHER COST-OF-SERVICE ISSUES WERE PRESENTED BY THE PARTIES?

A. Mr. Knecht's testimony provided comments related to storage costs, Mains accumulated depreciation, cash-working capital, and A&G costs. However, no specific adjustment calculations were provided. I have not made any adjustments for these items.

Q. WHAT IS YOUR RESPONSE TO OCA WITNESS JOHNSON'S ADJUSTMENT FOR LARGE CUSTOMER SUPPORT COSTS?

A. Based on a data request response from the Company, Mr. Johnson proposes to reallocate $1,338,516 of labor costs related to support of large industrial customers to just the MGS, LGS, and LGS-Mainline classes. He proposes the reallocation should be based on revenues at current rates for those classes. I agree conceptually that these costs should be allocated to just the MGS and LGS classes. However, after a further detailed review by the Company, is was determined that $284,718 is related to FERC account 417.1 which is not an expense included in revenue requirement. It was also determined that $325,750 were booked as capital costs. Given the low dollar impact and complications of tracing dollars into capital I have not made an adjustment for the $325,750. Only $728,048 of the $1,338,516 is included in revenue requirement and cost-of-service expenses for FERC accounts 912, 920, 926 and 408.1. I have created line items in the cost-of-service model to reverse these amounts out from the applicable FERC accounts and then reallocate those costs to just the MGS, LGS, and LGS-Mainline classes. In order to be consistent with the allocators already being used for the specific FERC accounts involved, my reallocation uses the same factors assigned to those accounts but with the residential and SGS portions removed.

Q. WHAT IS THE NET IMPACT OF THE ADJUSTMENTS YOU HAVE ACCEPTED OR MODIFIED, AS SHOWN IN ERROR! REFERENCE SOURCE NOT FOUND.**?**

A. The net impact of these adjustments relative to the Company's filed position in direct testimony is shown below.

Table 7 - Rebuttal Cost-of-Service Adjustments

Class	Revenues @ Current Rates	Cost of Service			Rate Design Target	
		MinSys/ Design Day	Demand/ Peak&Avg	Mean	Revenues	% Change From Direct
As Filed-Direct						
RES	$347,866,631	$508,820,648	$451,420,813	$480,120,731	$480,120,731	
SGS	$43,991,391	$60,323,814	$67,379,366	$63,851,590	$63,851,590	
MGS	$57,024,004	$60,132,252	$90,788,231	$75,460,242	$75,460,242	
LGS	$48,982,267	$32,724,719	$52,411,209	$42,567,964	$52,169,360	
LGS-Mainline	$6,996,935	$16,597,423	$16,599,237	$16,598,330	$6,996,935	
Total	**$504,861,227**	**$678,598,857**	**$678,598,857**	**$678,598,857**	**$678,598,857**	
Rebuttal						
RES	$347,866,631	$511,080,159	$453,702,442	$482,391,301	$482,391,301	0.47%
SGS	$43,991,391	$60,175,651	$67,228,687	$63,702,169	$63,702,169	-0.23%
MGS	$57,024,004	$59,289,827	$89,916,725	$74,603,276	$74,603,276	-1.14%
LGS	$48,982,267	$31,509,466	$51,206,887	$41,358,177	$50,905,176	-2.42%
LGS-Mainline	$6,996,935	$16,543,753	$16,544,115	$16,543,934	$6,996,935	0.00%
Total	**$504,861,227**	**$678,598,857**	**$678,598,857**	**$678,598,857**	**$678,598,857**	0.00%

Q. HAVE YOU INCORPRATED THESE ADJUSTMENTS INTO A REVISED SET OF BASE RATES?

A. Yes. I have proportionately adjusted all base rates within each class by the percentage change noted in **Error! Reference source not found.**[7]. For example, the residential rates (customer and consumption) were increased by the 0.47% shown in **Error! Reference source not found.**. A summary of the revised rates is shown in Exhibit RNZ-R-4 and RNZ-R-5. RNZ-R-4 includes the calculation of the revised rates.

[7] Since the revenues shown in **Error! Reference source not found.** include negotiated customer revenues, the actual change applied to non-negotiated customers for non-residential classes is slightly different than what is shown in **Error! Reference source not found.**. The actual % changes are -0.24% (SGS), -1.14% (MGS), and -2.48% (LGS).

D. COST-OF-SERVICE TREATMENT FOR DISCOUNT CUSTOMERS

Q. ON P. 10 OF HIS TESTIMONY I&E WITNESS CLINE STATES "…I RECOMMEND THAT THE DISCOUNT RATE CUSTOMERS BE SEPARATED INTO THEIR OWN, SEPARATE CUSTOMER CLASS WITH AN APPROPRIATE ALLOCATION AND/OR ASSIGNMENT OF THE COSTS TO SERVE THE DISCOUNT CUSTOMERS." DO YOU AGREE WITH MR. CLINE'S PROPOSAL?

A. No, I disagree with Mr. Cline's proposal that in the next rate case discount customers should be separated into their own class of service.

Q. PLEASE EXPLAIN YOUR CONCERNS WITH MR. CLINE'S PROSPOAL.

A. The customers receiving discounts are customers with a competitive alternative to services from Peoples. However, retaining these customers on the Peoples system provides a contribution to fixed costs benefiting all customers. The allocated cost of service associated with these customers is relevant to determine the costs of serving the customer class irrespective of the discount.

V. <u>OVERALL REVENUE ALLOCATION</u>

Q. PLEASE SUMMARIZE THE PARTY'S POSITIONS REGARDING THE ALLOCATION OF THE REVENUE INCREASE.

A. The positions of the parties regarding the allocation of the revenue increase are.

- I&E Witness Cline recommends allocating revenue based on P&A but adopting a 1.5 times system average limit (except for MLS).

- OCA Witness Johnson proposed an alternative revenue allocation and proposed an alternative scale back of rates if the full increase is not granted.
- OSBA Witness Knecht recommends that a 1.5 times system average rate increase be the support boundary.
    - Revenue allocation should be based upon the average of the Company results and their cost-of-service study.
    - The rates of PG and PNG should not be harmonized in this case.
- PII Witness Baudino recommends that Rate LGS customers not receive a rate increase. Further, he recommends that the shortfall from Rate LGS customers who are on competitive rates should not be entirely recovered from non-competitive rate LGS customers.
    - Proposed a proportional scale-back approach.

Q. WHAT IS YOUR RESPONSE TO THE INTERVENING PARTIES RECOMMENDATIONS?

A. First, intervening parties representing specific customer groups have an incentive to recommend cost-of-service studies which serve their constituencies as the baseline. My direct testimony recommends a revenue allocation baseline using two accepted cost-of-service approaches.

Second, adopting a standard of a maximum increase of 1.5 times the average increase is reasonable and achieves the goal of gradualism.

Third, I disagree with PII Witness Baudino's recommendation that LGS customers should receive a decrease. I have previously agreed with several parties that a cap on the increase

of 1.5 times the average increase should exist in the final rate design. Consistent with the policy of a cap on increases, a floor to the minimum increase should also exist.

VI. RATE DESIGN

A. RESIDENTIAL RATE DESIGN

Q. PLEASE DESCRIBE PARTIES RECOMMENDATIONS FOR THE RESIDENTIAL RATES DESIGN.

A. The recommendations for the changes to the proposed residential rate design are as follows:

- I&E Witness Cline recommends that the residential customer charge (at the full increase) be reduced from $21.50 to $20.00. The customer charge should also be scaled back based upon the ordered revenue increase compared to the Company's requested increase.

- OCA Witness Johnson argues that the residential customer charge should only recover costs that directly vary with the number of customers and proposes a $9.00/month customer charge. OCA Witness Colton also supports the $9.00/month residential customer charge.

Q. PLEASE COMMENT ON THE RECOMMENDED CHANGES TO THE COMPANY'S PROPOSED RATE DESIGN.

A. I believe that the proposed residential customer charge is appropriate and cost-based. However, I also acknowledge that other factors influence rate design. The proposed residential customer charge proposed by Mr. Cline is similar to the Company's proposal. I reject the OCA proposal and Mr. Johnson's supporting methodology.

Q. WHAT CONCERNS DO YOU HAVE WITH MR. JOHNSON'S METHODOLOGY?

A. Mr. Johnson's approach is predicated upon the assumption that the customer charge should only recover cost that vary with the number of customers. That assumption is contrary to the theory behind an allocated cost of service study which allocates costs to each customer class or rate element based upon the average embedded cost of the utility. Mr. Johnson appears to be embracing the concept associated with a marginal cost analysis.

Q. WHY IS MR. JOHNSON'S APPROACH MORE CONSISTENT WITH THE MARGINAL COST ANALYSIS?

A. A marginal cost analysis measures the change in costs associated with adding another unit of output to the utility. In the case of a natural gas distribution company, the costs are the marginal customer cost (i.e., monthly fixed charge) which is and the marginal distribution cost (i.e., the volumetric charge).

Q. IF THE COMPANY WAS PREPARING A MARGINAL COST STUDY, WOULD MR. JOHNSON'S ESTIMATES BE APPROPRIATE REPRESENTATIONS OF THESE COSTS.

A. No. Estimates of marginal customer costs would include the cost of the meter, regulating station, service, associated O&M expenses as well as customer support.

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS.

A. I reject Mr. Johnson's analysis because it more closely resembles that which is used in a marginal cost analysis. I therefore reject Mr. Johnson's proposal.

B. RATE MLS

Q. PLEASE SUMMARIZE PARTIES POSITION ON THE PROPOSED RATE MLS

A. Parties in this proceeding have adopted the following positions regarding Rate MLS:

- I&E Witness Cline proposes to exempt Rate MLS from the 1.5 times system average revenue increase cap (check).
- OSBA Witness Knecht supports the establishment of rate MLS.
- PII Witness Baudino supports the establishment of rate MLS, but recommends that Rate MLS be separated from the customer classes in future cost-of-service studies.

Q. PLEASE RESPOND TO THE PARTIES RECOMMENDATIONS.

A. My response are:

- Rate MLS is new tariff and currently all potential customers who would take service under this tariff are currently served under special contracts. Therefore, the 1.5 times system average rate cap would not apply to those customers because it would be a voluntary tariff change for a customer to move to Rate MLS.
- I agree with Mr. Baudino that it would be appropriate to separate Rate MLS customers from Rate LGS customers in the cost-of-service study in the Company's next rate request.

C. GATHERING SYSTEM COSTS

Q. WHAT PARTIES IN THIS PROCEEDING TAKE ISSUE WITH THE COMPANY'S PROPOSED TREATMENT OF GATHERING SYSTEM COSTS?

A. OSBA Witness Knecht proposed an alternative treatment of Gathering System Costs.

Q. PLEASE SUMMARIZE OSBA'S PROPOSALS.

A. Mr. Knecht state in testimony:

> A conceptually superior method would be to recover gathering system costs from the PGC customers, NGSs and gas producers who use the system. This approach would result in a more accurate assignment of costs in two ways, first through a more accurate allocation of the costs among rate classes based on actual usage, and second through a more accurate recovery of costs within each rate class from the customers who actually benefit from the gathering system. (OSBA Statement No. 1 p. 16)

Mr. Knecht further states that it is unlikely that these changes can be implemented in the timeframe of this proceeding.

Q. WHAT IS YOUR RESPONSE TO THE OSBA'S RECOMMENDATIONS REGARDING THE COST ALLOCATION OF GATHERING SYSTEM COSTS?

A. I will address each of his three main points separately:

- I do not agree with either of Mr. Knecht's assertions that there is a conceptually superior method to the method utilized by the Company. The Company utilized an appropriate method of allocating these costs by first identifying the gathering volumes by the PG and PNG entities by system supply and transport. These volumes were then allocated to the classes based on through-put for each class. The sum of the PNG and PG allocated volumes for each class is the allocator used to allocate gathering costs and revenues. This is consistent with my understanding

based upon discussions with Company personnel that all customers benefit from use of the gathering system. Specifically, sales customers (primarily residential) receive the benefit of the lower cost gas in the Purchased Gas Cost rates and transportation customers receive the benefit of the lower cost gas based upon the local gas procured on their behalf by third-party marketers procuring local gas.

- I do not agree this needs to be addressed in a future rate case based upon my description above.
- I do agree that it is unlikely that Mr. Knecht's changes could be implemented at this point of the proceeding.

Refer to page 59 of the rebuttal testimony of witness Andrew Wachter at Peoples Statement No. 2-R for additional discussion of this matter.

VII. CONCLUSIONS

Q. Please summarize your conclusions.

A. My conclusions are:

- I accept, with some modification, the corrections proposed by Mr. Knecht for the "Cust-902", "Cust-908" and "Collections" allocators and the reallocation of costs related to Larger Customer support cost proposed by Mr. Johnson.
- The analyses included in my testimony supports the adoption of 5,341 HDD for the test year. The regression analysis which I included in my direct and rebuttal testimony is rigorous and provides an accurate estimate of future HDD.

- The WNA, as proposed, should be approved. The analyses I previously discussed in this rebuttal testimony rigorously tests the proposed WNA.

- The cost of service studies which I prepared, after capturing small corrections, provides a reasonable basis for allocating the costs to the Company's tariff classes. I reject proposals for adopting the Peak and Average approach and ignoring evidence supporting that a significant portion of the cost of distribution mains is customer-related. My recommendation regarding cost of service are generally shared by OSBA Witness Knecht and PII Witness Baudino.

- Inasmuch as I support the adoption of a cost of service study adopting the concept of a design day and a minimum system, I have proposed a revenue allocation based upon the average of that study and a study adopting the Peak and Average Approach. Adoption of the averaging approach for revenue allocation recognizes the diversity of opinions that exist for cost of service analysis and provides a measure of gradualism for rate increases.

- The Company should proceed with the integration of the legacy Peoples Natural Gas and Peoples Gas Tariffs.

- The proposed Rate MLS provides a tariff option which is more accurately aligned with the cost of service of those customers. The proposed rate offering recognizes that these customers generally do not rely upon the Company's distribution mains and therefore should not allocated the costs of these assets.

- The revised Cost of service evidence supports a proposed residential monthly charge of $21.60. I&E Witness Cline supports a monthly fixed charge which is slightly lower, $20.00

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Appendix A

Ralph Zarumba

rzarumba@nexus-economics.com
+1-312-342-4387

Ralph Zarumba is a regulatory economist with thirty-nine years of experience. He has worked in fifteen countries, assisting utilities, regulators, customer groups, developers, and other industry participants. He has appeared as an expert witness in regulatory and legal proceedings in twenty-four jurisdictions in North America.

REPRESENTATIVE PROJECT EXPERIENCE

Embedded Cost of Service Analysis

- Sponsored an embedded cost of service study and pricing design for CenterPoint Minnesota Natural Gas.
- Sponsored an embedded cost of service study and pricing design for Liberty Utilities New Brunswick natural gas.
- On behalf of Heritage Gas (Nova Scotia), prepared a cost allocation for a natural gas storage field presented before the Nova Scotia Utility and Review Board.
- Mr. Zarumba provided testimony in the proceedings reviewing the 2014 Nova Scotia Power Cost-of-Service study.
- Mr. Zarumba prepared and sponsored a cost-of-service filing supporting a Reliability Must-Run filing on the Cayuga Operating Company before the FERC and the NYPSC.
- Mr. Zarumba provided testimony in the proceedings reviewing the 2014 Nova Scotia Power Cost-of-Service study.

Pricing and Marginal Cost Studies

- On behalf of Enbridge Gas, New Brunswick appeared as an expert witness on marginal cost analysis and its application to pricing in the New Brunswick Power rate request.
- Mr. Zarumba is the principal author and expert witness of an Electric Marginal Cost of Service Study for Montana-Dakota Utilities for their Montana service area.
- On behalf of Bermuda Electric Power Company, prepared a marginal cost of service study, an allocated cost of service study, and a pricing design proposal implementing movement to access charges.
- On behalf of Puerto Rico Electric Power Authority, managed that company's first regulated rate request. It was the witness supporting pricing design, the marginal cost of service, an embedded cost

of service study, an electric rating period study, proposals for unbundling tariffs into functional components, and detailed testimony addressing compensation for Distributed Energy Resources.

- As an advisor to the Ontario Energy Board assisted in developing a proposal to change electric distribution pricing into a fully fixed tariff design and eliminate the volumetric (i.e., KWH. charge) component.
- Prepared a Pricing Strategy for the South Carolina Public Service Company (Santee Cooper).
- Prepared testimony proposing Retail Conjunctive Billing Pricing filed in Illinois and Wisconsin, filed before the Illinois Commerce Commission and the Wisconsin Public Service Commission.
- Negotiated complex service contracts with thermal energy customers, leading to a major Wisconsin Electric Steam System expansion.
- Prepared ancillary service pricing proposals based on market-based mechanisms for San Diego Gas and Electric Company.
- Prepared an analysis of pricing mechanisms for optional renewable energy products for a Midwestern public power association.

Regulatory Policy

- Prepared a white paper on rate mitigation mechanisms for the Ontario Energy Board.
- On behalf of the Ontario Energy Board, Mr. Zarumba co-authored a study that identified factors that could impede the combination of regulated distributors in that Province.
- On behalf of the Ontario Energy Board, prepared a white paper addressing the apportionment of regulatory commission costs to stakeholders.
- Developed electric regulatory rules for several Southeastern European countries.
- Mr. Zarumba led an effort for the Province of Alberta, which compared the cost of providing distribution services for Rural Electric Associations versus Investor-Owned Utilities.

Generation Market Analysis

- For a major public power generation, the owner prepared a strategy of internal coal versus natural gas generation dispatch protocols, including the treatment of liquidated damages.
- On behalf of Nalcor, I co-authored a report on the feasibility and economics of the proposed development of the Lower Churchill Hydroelectric project.
- Prepared several electric market price forecasts for many regions of the United States and Central America.
- Supported the electric pricing and infrastructure analysis for a Least-Cost Resource Plan for San Diego County.
- Prepared an analysis of coal-fired electric generation technology saturation in the Western Electric Coordinating Council.

- Developed a long-run electric generation expansion plan for the Railbelt System in Alaska used in a Department of Energy Study investigating the feasibility of a natural gas pipeline in Alaska.
- Managed a team that prepared a long-term capacity and energy forecast for a medium-sized municipal utility.
- On behalf of Manitowoc Public Utilities, prepared a resource plan evaluating various generation expansion options.

Large Power Procurement

- During the time period 2004 through 2008, Mr. Zarumba, on behalf of the Metropolitan Transit Authority and the Port Authority of New York and New Jersey, assisted the New York Power Authority (NYPA) in procuring electric generation capacity and energy in RFP 3, RFP 4 and RFP 5. Mr. Zarumba worked with representatives of the City of New York and NYPA, including Mr. Gil Quiniones, who was initially the President of the New York Economic Development Corporation and later the Chief Operating Officer of NYPA. These procurements resulted in contracting for a utility-scale combined-cycle combustion turbine in Queens, a High Voltage Direct Current (HVDC) transmission line between Manhattan and North New Jersey, and various renewables.
- From 1997 through 1999 Mr. Zarumba advised the Build Owners and Managers of Chicago (BOMA/Chicago) on procuring a preferred energy supplier to their membership. BOMA/Chicago estimated their building load (i.e., load excluding tenants) of approximately 700MW. Mr. Zarumba and the BOMA/Chicago team interviewed over one dozen bidders. As a result of the solicitation, a preferred supplier who served BOMA/Chicago for approximately ten years was chosen.
- The Metropolitan Transit Authority operates commuter rail lines that extend into Connecticut, requiring approximately 45MW of load. From 2004 through 2008, he developed a procurement process that provided significant savings for generation services.
- In 2006, Mr. Zarumba was jointly retained by the Chicago Transit Authority and Metra for their first retail power procurement. Mr. Zarumba developed Request for Proposal documents, reviewed legal agreements, and designed the proposal evaluation processes.

Electric Transmission

- Presented testimony before the Alberta Energy Regulator applying marginal cost theory developing a proposed electric transmission tariff.
- Assisted the Long Island Power Authority in purchasing distribution, transmission, and regulatory assets and prepared that utility's non-jurisdictional open-access transmission tariff.
- Prepared the pricing portion of a FERC open access tariff (Docket No. ER96-96-43.000) for San Diego Gas and Electric Company; testified on revenue requirements and pricing, including opportunity costs.
- Prepared a Reliability Must-Run for the Cuyahoga Generating Station, filed with the Federal Energy Regulatory Commission and the New York Public Service Commission.

Revenue Requirements

- On behalf of FirstEnergy, I prepared a Time Study that quantified the capitalization of Administrative and General Expenses. The study was prepared in response to a request from the Federal Energy Regulatory Commission.
- Prepared several Cash Working Capital studies for various distributors and transmitters in the Province of Ontario filed before the Ontario Energy Board.
- For a confidential client, prepared a benchmarking analysis of the costs of regulatory proceedings associated with introducing new electric generation.
- Managed a project for Commonwealth Edison Company in their Electric Rate Request (Illinois Commerce Commission Docket No. 10-467) in which a Cash Working Capital study was provided.
- Assisted Indianapolis Power & Light in preparing a cost recovery plan for Energy Efficiency and Demand Side Management Expenditures.
- On behalf of the Missouri River Electric Cooperative, I managed a project team that completed a Remaining Life Study for the Western Minnesota Municipal Power Agency.
- For Heritage Gas (Nova Scotia) prepared a cost allocation for a natural gas storage field presented before the Nova Scotia Utility and Review Board.
- On behalf of the Ontario Energy Board, prepared a white paper addressing the apportionment of regulatory commission costs to stakeholders.
- Prepared ancillary service pricing proposals based on market-based mechanisms for San Diego Gas and Electric Company.

Valuations and Estimation of Damages

- On behalf of the Government of the Province of Newfoundland, prepared a valuation of certain hydroelectric generating units expropriated by the Province after the closure of the Abitibi Pulp and Paper Mill.
- Mr. Zarumba has prepared several studies preparing valuations of specific generating assets facing market-based pricing in North America.
- As a contractor to NERA Economics assisted in preparing a study quantifying the damages associated with an accident at the Hawthorne Generating Station.

Management Audit and Affiliate Code of Conduct

- Led the regulatory and financial review for a management audit of Jersey Central Power & Light on behalf of the New Jersey Board of Public Utilities.
- On behalf of a coalition of marketers and energy service companies, Mr. Zarumba presented testimony before the Illinois Commerce Commission addressing affiliate rules and code of conduct.

- Mr. Zarumba presented testimony before the Wisconsin Public Service Commission addressing affiliate rules and code of conduct on behalf of a coalition of marketers and energy service companies.

Demand Response

- Assisted the Building Owners and Managers of Chicago (BOMA/Chicago) in developing a program where they can bid demand response based ancillary services into the PJM market.
- Prepared a presentation for the Public Utilities Commission of Ohio on Commercial and Industrial Dynamic Pricing and Demand Response in an unregulated regulatory environment.

Merger, Acquisition, and Divestiture

- On behalf of the Minnesota Public Service Commission. Mr. Zarumba co-authored an analysis of the merger savings associated with the proposed Primergy Merger (the proposed combination of Northern States Power and Wisconsin Energy). The analysis included a detailed review of cost savings emanating from the merger and regulatory commitments made by the companies to regulatory authorities in Minnesota.
- For Manitowoc Public Utilities, an analysis evaluating the divestiture of its transmission assets to the American Transmission Company.

International

- Assisted the Israel Public Utility Authority with electric tariff reviews for the Israel Electric Company and the Jerusalem District Electric Company.
- During the time period 2007 through 2017, assisted the Albanian Electric Regulator in several rate requests, trained staff, and conducted negotiations involving the privatization of the electric distribution system.
- Mr. Zarumba assisted the electric regulator in the Republic of Macedonia with various regulatory issues, including pricing design, revenue requirements, and privatization issues. Included in the assistance was the development of market designs for the electricity sector.
- I completed a tariff implementation plan proposal for privatizing the Bulgarian Electric Utility's distribution companies.
- Led a team to implement regulatory procedures and methodology for the electric power industry in Bosnia and Herzegovina.
- Conducted a of the electric power market in El Salvador, including a quantification of the level of generation market power using the Lerner Index.

PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED SURREBUTTAL TESTIMONY OF RALPH ZARUMBA ON BEHALF OF PEOPLES NATURAL GAS COMPANY, LLC

DATE SERVED:
DATE ADMITTED: May 3, 2024

Peoples Statement No. 15-SR

PREPARED SURREBUTTAL TESTIMONY OF
RALPH ZARUMBA

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ralph Zarumba. My business address is 736 Central Street, Evanston, Illinois.

Q. BY WHOM ARE YOU EMPLOYED, AND IN WHAT CAPACITY?

A. I am a subcontractor to Black & Veatch Management Consulting, LLC ("Black & Veatch"). Prior to my retirement, I was a Managing Director at Black & Veatch, leading the Natural Gas and Electricity Regulatory Practice.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 15, and my rebuttal testimony is set forth in Peoples Statement No. 15-R.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. My surrebuttal testimony responds to the rebuttal testimony of the following parties.

- Office of Consumer Advocate (“OCA”) Rebuttal Testimony of Clarence Johnson.
- Office of Small Business Advocate (“OSBA”) Rebuttal Testimony of Robert Knecht.
- Peoples Industrial Intervenors (“PII”) Rebuttal Testimony of Richard Baudino.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. My surrebuttal testimony includes the following exhibits.

- Exhibit RNZ-SR-1 – Base Rate Comparison
- Exhibit RNZ-SR-2 – Rate Design Workpaper

Q. HOW HAVE YOU ARRANGED YOUR SURREBUTTAL TESTIMONY?

A. My surrebuttal testimony is arranged as follows:

- I address rebuttal testimony relating to the Weather Normalization Adjustment ("WNA").
- I address rebuttal testimony concerning the Cost of Service Study.
- I address rebuttal testimony concerning the Revenue Allocation and the Rate Design.

I. <u>WEATHER NORMALIZATION MECHANISM</u>

Q. WHAT PARTIES HAVE ADDRESSED THE WNA IN THEIR REBUTTAL TESTIMONY?

A. OCA Witness Clarence Johnson addresses the WNA in his rebuttal testimony. His testimony is in response to the testimony of the Bureau of Investigation and Enforcement ("I&E") Witness Mr. Cline and OSBA Witness Mr. Knecht.

Q. PLEASE SUMMARIZE MR. JOHNSON'S POSITION ON THE PROPOSED WNA.

A. Mr. Johnson continues to oppose the WNA based on policy reasons.

Q. PLEASE STATE YOUR UNDERSTANDING OF MR. JOHSON'S CRITICISM OF MR. CLINE'S POSITION REGARDING THE WNA.

A. Mr. Johnson believes I&E Witness Cline's direct testimony supporting the adoption of the proposed Peoples WNA based upon the Pennsylvania Public Utility Commission's ("Commission") support of similar mechanisms provides insufficient evidence (OCA Statement 4R[1]) to support the adoption of the Peoples WNA.

Q. MR. JOHNSON'S STATES[2] THAT IT IS NECESSARY FOR PEOPLES TO DEMONSTRATE EXTRAORDINARY CIRCUMSTANCES TO JUSTIFY A WNA. DO YOU AGREE WITH MR. JOHNSON'S RECOMMENDATION?

A. No, I do not. For example, Mr. Johnson uses the term "extraordinary circumstances" but is unclear about the definition of the term. Given that the WNA is designed to address variation in HDD, I have also been advised by counsel that there is no regulation or statute in Pennsylvania supporting Mr. Johnson's claim. The Company will address this issue further in Briefs if necessary.

Q. WHAT ARE MR. JOHNSON'S CONCERNS ABOUT HOW THE WNA IMPACTS RISK?

A. Mr. Johnson states that the "…WNA largely attenuates the normal business risk arising from normal weather…"[3] Mr. Moul, the Peoples Witness addressing cost of capital issues

[1] Exhibit OCA Statement 4R, page 23.
[2] Exhibit OCA Statement 4R, page 25.
[3] Ibid.

will address the risk impacts of the WNA and does so in his direct, rebuttal and surrebuttal testimonies in this proceeding.

Q. DOES THE WNA ADDRESS THE HDD VARIATION RISK TO WHICH CUSTOMERS ARE EXPOSED?

A. Yes. Mr. Johnson ignores the WNA's benefits to customers through the levelization of distribution charges, which avoids significant bill increases during very cold weather events. The WNA is effectively a "collar" that provides risk reduction value to customers. If HDD are above normal, the collar reduces the amount a customer is required to pay. Conversely, if HDD are below normal, the bill is increased to reflect normal weather patterns. OCA focuses almost exclusively on the impacts of warmer than normal weather. The WNA protects customers from the impacts of colder than normal weather by reducing their bills in these months. Contrary to OCA's suggestions, even though average temperatures have warmed in recent years, we still experience colder than normal weather and certain months can be significantly colder than normal. Without the mitigating effects of the WNA, customers can experience much higher bills in these months.

Q. PLEASE PROVIDE EXAMPLES OF HOW THE WNA PROVIDES SYMMETRIC PROTECTION TO CUSTOMERS AND THE COMPANY.

A. In my rebuttal testimony, I provided a multiyear analysis of residential customer bills and the impact of the WNA. In that analysis, 2018 was the most severe (i.e., had the greatest number of HDD). Given that the weather was colder than normal, the WNA would have produced lower bills for customers and reduced the level of Peoples base rate revenues.

Conversely, 2017 was a mild year. (i.e., had less than normal HDD). In this case, the WNA would have produced higher bills for customers. Table 1 below provides a comparative monthly bill impact[4] of the WNA for these two extreme years.

Table 1 Distribution of Bill Impacts from WNA for 2017 and 2018

WNA Months	**2017**	**2018**
Jan	$855,689	($8,005,752)
Feb	$5,353,579	$1,756,641
Mar	$2,869,267	$1,975,812
Apr	$1,843,785	($5,307,937)
May	$1,856,844	$1,828,259
Oct	$1,493,093	$200,534
Nov	($402,686)	($2,907,870)
Dec	($422,634)	($3,399,771)
Total	**$13,446,938**	**($13,860,084)**

The above example provides evidence supporting the following:

- The WNA provides a collar that protects customers from extreme weather variation.
- In the case of extreme weather events, the WNA provides bills to customers that are closer to that which they would have received during normal weather.

Q. MR. JOHNSON REPEATS OSBA WITNESS KNECHT'S CONCERNS THAT THE WNA PROVIDES LARGE BILL ADJUSTMENTS IN CIRCUMSTANCES OF

[4] Bill impacts are based on using the PNG distribution rate of $3.9608.

LOW ACTUAL HDD OR WHEN THE NON-HEATING USAGE MAY NOT BE ACCURATELY REPRESENTED[5]. PLEASE COMMENT.

A. One of the solutions proposed by Mr. Knecht to address this issue was to not charge the WNA for months with less than 100 HDD. In surrebuttal, Mr. Johnson disagrees that this will effectively address the issue. However, I believe that Mr. Knecht's proposal is problematic. The WNA is calculated on a customer basis based upon the meter read dates of each customer. The following challenges are associated with Mr. Knecht's 100 HDD proposal.

- It is possible that during some billing months some customers would be subject to the WNA and others would not be based upon their meter read dates and the associated weather patterns of a customer's billing cycle. Implementing a WNA mechanism with a trigger where some customers are subjected to the WNA and others are not on a specific month is confusing and potentially introduces equity issues when some customers are subjected to the WNA and others are not during the same revenue month.

- Inasmuch as most customers have billing cycles capturing a similar number of days, variation occurs where billing cycles have more or less days than an average billing cycle. As a result, application of the 100 HDD introduces practical challenges which make implementation of the proposal problematic.

In summary, the analysis included in my rebuttal testimony demonstrates that the increase to the base rate portion of a customer's bill was less than 100% for 99.03% of the bills rendered for a multiyear period. The high confidence level produced by our analyses

[5] Exhibit OCA Statement 4R, page 26.

suggests the WNA operates properly. Frankly, very few regulatory mechanisms perform as designed with a similarly high level of certainty.

II. PEOPLES COST OF SERVICE STUDY

A. RESPONSE TO PII WITNESS BAUDINO

Q. PLEASE RESPOND TO MR. BAUDINO'S REBUTTAL TESTIMONY REGARDING THE COST OF SERVICE STUDY.

A. Mr. Baudino and I are aligned on the cost-of-service study methodology.

B. RESPONSE TO OCA WITNESS JOHNSON

Q. AFTER REVIEWING THE REBUTTAL TESTIMONY OF OCA WITNESS JOHNSON, HAVE YOU CHANGED YOUR POSITION ON THE COST OF SERVICE STUDY?

A. No. I believe that the cost of service study based upon classification of a portion of mains classified as customer related and the adoption of the demand day to allocate costs is the most appropriate approach to performing a cost of service study.

Q. IN HIS REBUTTAL TESTIMONY, MR. JOHNSON SUGGESTS THAT A "DOUBLE-COUNTING" MAY EXIST IF THE MINIMUM SYSTEM APPROACH IS ADOPTED. DO YOU AGREE WITH MR. JOHNSON?

A. No, I do not. Mr. Johnson references a Public Utilities Fortnightly article published in 1981 by Mr. George Sterzinger. I have reviewed the article and concluded the following:

- The referenced article is over 40 years old. The relevance of a publication of that age is questionable since it relied upon survey results. Given the publication date of Mr. Sterzinger's article, it is not unreasonable to conclude that the survey occurred in the 1970s.

- Mr. Sterzinger alternatively discusses marginal cost and allocated cost analyses. The studies which I sponsored and those submitted by the other cost of service witnesses in this proceeding are embedded cost of service studies – which are separate and distinct from Mr. Sterzinger's analyses.

- The article addresses electric cost of service analysis, not natural gas distribution systems.

- The double-counting issue allegedly occurring is associated with the capacity of the minimum system. Mr. Sterzinger proposes:

> One way to solve the double allocation problem would be to determine, for each piece of minimum equipment, the demand level it would be capable of serving, and then adjusting the demand allocation factors used to allocate the costs of all equipment of that type in order to assure that minimum use customers and the residential class were not charged twice.[6]

Q. HAS THE "DOUBLE-COUNTING" PROBLEM BEEN ADDRESSED IN YOUR STUDY?

A. Yes. In the study I included in my direct testimony[7] I included a detailed estimate of the capacity associated with the Minimum Distribution System. In that analysis I concluded

[6] Sterzinger, George J. "The Customer Charge and Problems of Double Allocation of Costs, Public Utilities Fortnightly, July 2, 1981.

[7] Workpapers for the minimum cost study are shown in Peoples response to OCA data request 5-1 as Attachment OCA 5-1(h).

that the Minimum Distribution System captured 5.6% percent of the capacity which was deducted from the calculation thus addressing the concerns raised in Mr. Sterzinger's article. It should be noted that the calculation of the capacity of the Minimum Distribution System was previously raised by Mr. Johnson in his direct testimony to which I responded in my rebuttal testimony.

Q. IN YOUR REBUTTAL TESTIMONY[8] YOU ADDRESSED MR. JOHNSON'S CONCERNS RELATED TO THE ALLOCATION OF LARGE CUSTOMER SUPPORT COSTS. DO YOU HAVE ANY FURTHER ADJUSTMENTS TO THE REALLOCATION OF THESE COSTS YOU PROPOSED IN YOUR REBUTTAL TESTIMONY?

A. No.

C. RESPONSE TO OSBA WITNESS KNECHT

Q. DO YOU AGREE WITH OSBA WITNESS KNECHT THAT "TO FULLY CHARGE ALL CUSTOMERS FOR THE ENTIRE REGULATED-PRESSURE SYSTEM, AND TO EXEMPT LGS CUSTOMERS FROM CONTRIBUTING TO ALL LOW-PRESSURE SYSTEM COSTS IS NOT JUSTIFIED BY THE EVIDENCE AND IS INCONSISTENT WITH THE PRACTICES OF OTHER PENNSYLVANIA NATURAL GAS DISTRIBUTION COMPANIES?

[8] Peoples Statement 15-R, page 34.

A. No. In my discussions with the Company it has been confirmed that LGS customers do not take service from low pressure mains. In response to Mr. Knecht's suggestion that not all customer classes should be allocated the regulated mains (i.e., some distribution mains may not use the regulated distribution system), the Company states that given the complex nature of the Company's system of mains it is impossible to conclude with absolute certainty that the situation does not exist. However, the Company believes that it is reasonable to conclude that customers using the low pressure systems are almost always connected to the regulated pressure system.

Q. DO YOU AGREE WITH OSBA WITNESS KNECHT THAT THE LGS DESIGN DAY ALLOCATOR VALUE SHOULD BE ADJUSTED?

A. No. As stated in my rebuttal testimony, this issue is addressed by Peoples Witness Dawn Folks in her rebuttal testimony.

Q. DO YOU HAVE ANY FURTHER UPDATES TO THE FERC 902, FERC 908 AND COLLECTIONS ALLOCATOR CORRECTIONS AND REFINEMENTS MENTIONED IN YOUR REBUTTAL TESTIMONY?

A. No.

III. <u>REVENUE ALLOCATION AND RATE DESIGN</u>

A. RESPONSE TO PII WITNESS BAUDINO

Q. PLEASE STATE MR. BAUDINO'S POSITION ON THE ALLOCATION OF THE REVENUE REQUIREMENT.

A. Mr. Baudino and I are aligned on the adoption of using the mean value results of the Peak and Average and the Design Day Approach when determining the revenue allocation. However, Mr. Baudino's approach includes an additional adjustment to re-allocate the LGS-Mainline short fall of $9.6 million to all of the classes based on each class's mean COS revenue requirement[9]. The effective result of this adjustment is proposed LGS revenues that are $5.8 million lower than revenues at current rates. As stated in my rebuttal testimony, I have previously agreed with several parties that a cap on the increase of 1.5 times the average increase should exist in the final rate design. Consistent with the policy of a cap on increases, a floor to the minimum increase should also exist.[10]

Q. MR. BAUDINO STATES "THERE IS NO EVIDENCE THAT GAS DISTRIBUTION UTILITIES SIZE AND BUILD THEIR SYSTEMS TO MEET AVERAGE DEMAND…"[11]. PLEASE COMMENT.

A. I have proposed adopting the mean of the Peak and Average and the Demand Day Approach which recognizes that divergent opinions exist on the proper cost allocation approach. Further, I believe the adoption of the mean of the two approaches as a vehicle for revenue allocation provides gradualism and moves all customer classes closer to cost of service. However, as I previously stated in this testimony, I believe that the Minimum

[9] PII Statement No. 1, Exhibit RAB-2. See also the associated supporting workpaper "Direct Tables and RAB-2.xlsx."
[10] Peoples Statement No. 15-R, page 37.
[11] PII Statement No.1-R page 5.

System/Design Day approach, recognizing that a portion of distribution mains are properly classified as customer-related, is the proper approach to performing a cost of service study given the characteristics of the Peoples system.

B. RESPONSE TO OCA WITNESS JOHNSON

Q. IN OCA STATEMENT 4R[12] MR. JOHNSON SUGGESTS THAT THE RISKS OF REVENUE SHORTFALLS SHOULD BE ASSIGNED TO THAT TARIFF CLASS. PLEASE COMMENT.

A. Mr. Johnson suggests that LGS customers introduce more risk to serve than other customer classes. Mr. Johnson goes on to state that "… an appropriate allowance for the risk factor…"[13] should be incorporated into the cost of service and rate design. In response, I believe competitive customers are not introducing additional risk to the Company and the other customers, rather, they are making a contribution to the fixed costs of the system which reduces the overall revenue requirement. The negotiated prices which competitive customers are paying is in excess of incremental costs and are subject to change if the alternative service opportunities available to the customer should no longer be available.

Q. DID OCA WITNESS JOHNSON OPINE ON THE RESIDENTIAL MONTHLY FIXED CHARGE IN HIS REBUTTAL TESTIMONY?

[12] OCA Statement 4R page 20.
[13] OCA Statement 4R pages 20-21.

A. Yes. Mr. Johnson disagreed[14] with I&E Witness Cline's proposal for a residential monthly fixed charge of $20.00. As a reference, the Company's proposed residential monthly fixed charge in rebuttal testimony is $21.60 which is relatively close to Mr. Cline's proposal.

No new evidence has been introduced in Mr. Johnson's rebuttal testimony to support his proposal. Therefore, my position on the residential monthly fixed charge remains unchanged, and I believe my rebuttal proposal for $21.60 is accurate and cost justified.

C. RESPONSE TO OSBA WITNESS KNECHT

Q. OSBA WITNESS KNECHT RECOMMENDS THAT THE LEGACY PG AND PNG RATES NOT BE COMBINED AT THIS TIME. PLEASE COMMENT.

A. OSBA Witness Knecht expresses concern that the rate cap of 1.5 times the system average is violated in some cases for the rate design proposals when the class rate impacts are measured on a legacy company basis.

Q. DO YOU BELIEVE THE CLASS REVENUE INCREASES MUST BE NO MORE THAN 1.5 TIMES THE SYSTEM AVERAGE?

A. From a combined entity perspective adopting a standard of a maximum increase of 1.5 times the average increase is reasonable and achieves the goal of gradualism. From a

[14] OCA Statement 4R page 18.

legacy company perspective, I do not believe the increases must be no more than 1.5 times the system average.

Q. IF THE COMMISSION ACCEPTS THAT IN ORDER TO ACHIEVE A GOAL OF GRADUALISM, MR. KNECHT'S STANDARD OF 1.5 TIMES THE SYSTEM AVERAGE FOR THE LEGACY COMPANIES IS A STANDARD THAT MUST BE ACHIEVED, WOULD A SIGNIFICANT CHANGE TO YOUR REBUTTAL REVENUE ALLOCATION AND RATE DESIGN BE REQUIRED?

A. No. I have prepared an alternative rate design which achieves Mr. Knecht's goal of capping the PG and PNG entity class increases to 1.5 times the system average. The complete rate design is detailed in Exhibit RNZ-SR-2 and summarized in Table 3 below. A summary of revised base rates resulting from this methodology is shown in Exhibit RNZ-SR-1. I adopted the following process in developing the proposed rate design.

- I calculated the revenue reduction to Rate SGS to achieve a 51.6% increase for the PNG division which is 1.5 times the system average increase of 34.4%. The reduction in total SGS revenues from my rebuttal position is $1,180,448. The alternative rate design reduced the SGS volumetric charge from my rebuttal position of $4.5378 to $4.4251, a 2.48% decrease. I maintained my rebuttal proposed monthly fixed charge at $24.94 (0-499 Mcf/yr) and $49.88 (500-999 Mcf/yr).

- I redistributed the SGS rate reduction to the other customer classes on an equal percentage of revenue basis. The revenues were allocated as shown in Table 3 below.

Table 2 – SGS Revenue Re-allocation

	Rebuttal Revenues	Rebuttal Revenues Excluding SGS		SGS Revenue Reallocated to Non SGS	Surrebuttal Rev. Target
Res	$482,391,301	$482,391,301	78.5%	$926,071	$483,317,372
SGS	$63,702,169			($1,180,448)	$62,521,721
MGS	$74,603,276	$74,603,276	12.1%	$143,220	$74,746,496
LGS	$57,902,111	$57,902,111	9.4%	$111,158	$58,013,269
Total	$678,598,857	$614,896,688	100.0%	$0	$678,598,857

- The increase in the other classes to achieve the revenue requirement was applied to the volumetric charges. The percent change from my rebuttal position for the other classes consumption charge is 0.3% increase (Residential), 0.22% increase (MGS) and a 0.24% increase for LGS.

- After completing the rate design, I tested the results to ensure that the revenue movement had not triggered a violation of the 1.5 of the average system increase for another tariff class. The updated revenue percent increases from current rates is shown in Table 4 below.

Table 3- Percent Increase by Entity and Class

Class	PNG	PG	Combined
Residential	45.20%	-2.93%	38.94%
SGS	51.62%	-17.57%	42.12%
MGS	39.17%	-19.88%	31.08%
LGS	2.84%	8.72%	3.63%
Total	40.40%	-4.92%	34.41%
			1.5
System Avg x 1.5			51.62%

It should be noted that the rate impact problems are relatively small when my rebuttal revenue allocation proposal is adopted. However, as Mr. Knecht details in his Table IEc-

R4, the rate impact problem is more severe in some of the alternative revenue allocations (e.g., OCA I and OCA II).

Q. DOES THIS REALLOCATION IMPACT THE LGS MAINLINE RATES?

A. Yes. However, it should first be noted that both LGS Mainline rates are virtually identical under either the MinSystem/Design Day method or the Peak and Average method. As such, I propose to adjust the volumetric LGS Mainline rates by the same increase (0.24%) that was applied to the LGS class due to the SGS class reallocation described above. A comparison of the LGS Mainline rates is shown below in Table 5.

Table 4 – LGS Mainline Rates

	Direct MinSystem/Design Day	Rebuttal MinSystem/Design Day	Surrebuttal
LGS Mainline - No Transmission			
LGS No Trans. Customer Charge	$1,920.00	$1,872.44	$1,872.44
LGS No Trans. Consumption Charge	$0.4422	$0.4365	$0.4376
LGS Mainline - Incl Transmission			
LGS Incl. Trans. Customer Charge	$1,920.00	$1,872.44	$1,872.44
LGS Incl. Trans. Consumption Charge	$0.7430	$0.7411	$0.7429

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

BASE RATE COMPARISON

		Current Rates				Proposed Base Rates			Surrebuttal % Change From Rebuttal

PREPARED REJOINDER TESTIMONY OF
RALPH ZARUMBA
ON BEHALF OF
PEOPLES NATURAL GAS COMPANY, LLC

DATE SERVED: May 8, 2024
DATE ADMITTED: _____

Peoples Statement No. 15-RJ

PREPARED REJOINDER TESTIMONY OF
RALPH ZARUMBA

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ralph Zarumba. My business address is 736 Central Street, Evanston, Illinois.

Q. BY WHOM ARE YOU EMPLOYED, AND IN WHAT CAPACITY?

A. I am a subcontractor to Black & Veatch Management Consulting, LLC ("Black & Veatch"). Prior to my retirement, I was a Managing Director at Black & Veatch, leading the Natural Gas and Electricity Regulatory Practice.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. My direct testimony is outlined in Peoples Statement No. 15, my rebuttal testimony is set forth in Peoples Statement No. 15-R, and my surrebuttal testimony is set forth in Peoples Statement No. 15-SR.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. My rejoinder testimony aims to respond to the following parties.

- The Commission's Bureau of Investigation and Enforcement ("I&E").
- The Pennsylvania Office of Consumer Advocate ("OCA").
- The Pennsylvania Office of Small Business Advocate ("OSBA").
- The Peoples Industrial Intervenors ("PII").

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No, I am not sponsoring any additional exhibits.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. My rejoinder testimony addresses the following topics.

- Separating Discount Customers into their own tariff class.
- The Weather Normalization Adjustment ("WNA") Mechanism.
- The Heating Degree Day ("HDD") Estimate Used in the Test Year.
- The Cost of Service Study.
- The Revenue Allocation.
- Treatment of the Gathering System.
- The Pricing Design.

II. <u>WEATHER NORMALIZATION ADJUSTMENT MECHANISM</u>

Q. WHAT PARTIES ADDRESSED THE WNA IN THEIR SURREBUTTAL TESTIMONY?

A. The following parties addressed the WNA in their surrebuttal testimony.

- I&E Witness Cline.
- OCA Witness Johnson.
- OSBA Witness Knecht.

Q. WHAT ARE MR. CLINE'S RECOMMENDATIONS REGARDING THE WNA?

A. Mr. Cline supports the adoption of the WNA. However, contrary to my testimony, he recommends a 3 percent deadband.[1] This issue is addressed by Peoples Witness Scanlon.

Q. WHAT IS MR. KNECHT'S POSITION REGARDING THE WNA?

A. Mr. Knecht has expressed concerns about specific high bill impacts, which occur in a tiny percentage of monthly bills and, therefore, do not support the adoption of the WNA.[2] Mr. Knecht's concerns are addressed by Peoples Witness Scanlon.

Q. DOES OCA WITNESS JOHNSON CONTINUE TO RECOMMEND REJECTION OF THE WNA?

A. Yes. His objections and my responses are listed below.

- Reference to Costello Article. Mr. Johnson quotes Mr. Costello, stating that it is a well-known regulatory principle that regulatory lag is an important tool for incentivizing utility behavior[3]. However, utility management can do nothing to influence the weather. I continue to believe that Mr. Johnson's reference to Mr. Costello's article is being made out of context and, therefore, should be ignored.

[1] Exhibit I&E Statement No. 3-S, page 10.
[2] Exhibit OSBA Statement No. 1S, page 13.
[3] Exhibit OCA Statement 4SR, page 22-3.

- Mr. Johnson's reference to my rebuttal testimony where he states that "The bottom line of his analysis is that the cumulative impact of the WNA during the seven-year time period he analyzed, extending from 2016 through 2022, would have been $9.9M in higher revenue charges"[4] Mr. Johnson ignored that the $9.9M over seven years constitutes 0.66% of total base rate revenues over seven years, which is explained as slightly warmer than normal weather in that time period.

Q. IN HIS SURREBUTTAL, MR. JOHNSON STATES THAT YOU DID NOT ADDRESS HIS ARGUMENTS THAT THE WNA PROVIDES DISINCENTIVES TO ENERGY EFFICIENCY[5].

A. I reject Mr. Johnson's statement because customer investment in energy efficiency responds to long-term energy consumption and cost trends, not the volatility in distribution system consumption charges that the WNA avoids.

III. FORECAST HEATING DEGREE DAYS USED IN THE TEST-YEAR

Q. WHAT PARTIES HAVE FILED SURREBUTTAL TESTIMONY ADDRESSING THE HDD FORECAST?

A. The following parties provided evidence addressing the projected number of HDDs to develop the test year.

- I&E witness Cline stated "Mr. Zarumba's statistical analysis does not explain why a rolling, historic average calculation of HDD was historically acceptable to the Company,

[4] Ibid.
[5] Exhibit OCA Statement 4SR, page 25.

the Commission, and the other NGDCs as detailed in the chart below, however, is not in the present base rate case."[6] I respond to Mr. Cline's concern that the use of regression analysis improves the approach and provides a more accurate forecast and the resulting test year estimate of revenues.

- OCA Witness Johnson reiterated his concern that the model only explains 37% of the variation in the data.[7] My rebuttal and surrebuttal testimony addresses Mr. Johnson's concerns. In them, I explain the proper interpretation of a regression analysis. My surrebuttal testimony addresses the question of whether the modeled regression equation explains all systematic behavior in the data. The remaining movement in the data is random and cannot be modeled.

Q. **COST OF SERVICE ANALYSIS**

Q. WHAT PARTIES FILED SURREBUTTAL TESTIMONY ON THE COST OF SERVICE STUDY?

A. I&E Witness Cline, OCA Witness Johnson, OSBA Witness Knecht, and PII Witness Baudino filed surrebuttal testimony.

1. Customer Component of Distribution Mains

Q. WHAT PARTIES OBJECT TO CLASSIFYING A PORTION OF DISTRIBUTION MAINS AS CUSTOMER-RELATED?

A. I&E Witness Cline rejects classifying a portion of mains as customer-related and responds to OSBA Witness Knecht's testimony the Commission has rejected this approach in the

[6] Exhibit I&E Statement No. 3-S, page 6.
[7] Exhibit OCA Statement 4SR, page 26.

past[8]. OCA Witness Johnson stands by his quote from Bonbright[9] stating that the minimum system costs as "unallocable" and an analysis stating, "The existence of engineering overhead and construction labor expense does not create a customer-related cost.17 The design, engineering, and trenching activities are required regardless of the number of customers."[10].

I reject the argument of I&E Witness Cline. I agree with OSBA Witness Knecht that the policy history of cost of service analysis in Pennsylvania is unclear. Still, more importantly the two commonly used approaches to performing analyses classifying main as demand or customer, the Minimum System and the Zero Intercept approach, have been performed in this proceeding which provided reliable results supporting a customer functionalization of mains.

Q. MR. JOHNSON REITERATES HIS CLAIM THAT THE 1961 EDITION OF BONBRIGHT IS THE AUTHORITATIVE EDITION OF THAT BOOK AND CITES 25 REFERENCES WHICH ALFRED. E. KAHN USED IN HIS 1988 EDITION OF THE *ECONOMICS OF REGULATION*.[11] PLEASE COMMENT.

A. Mr. Johnson's statement is questionable. The second edition of Kahn was published in June 1988[12], and the second edition of Bonbright, which was published in March 1988. Given the lag between the writing of a book and its publication, it is reasonable to assume that

[10] Exhibit OCA Statement 4SR 8.
[11] Exhibit OCA Statement 4SR page 7, footnote 13.
[12] https://mitpress.mit.edu/9780262610520/the-economics-of-regulation/

Kahn did not have access to the more recent edition of Bonbright when his second edition was published.

2. Allocation of the Revenue Requirement

IV. REVENUE ALLOCATION

Q. PLEASE DESCRIBE THE REVENUE ALLOCATION PROPOSALS IN PARTIES SURREBUTTAL TESTIMONY.

A. I&E witness Cline and OCA witness Johnson propose using the peak and average cost-of-service method for revenue allocation[13]. Mr. Knecht proposes an average of his zero-intercept cost-of-service method and the Company's revenue allocation in its direct testimony[14]. Mr. Knecht also offers an alternative method that includes the reallocation of the LGS-ML shortfall to all of the classes[15]. PII witness Baudino uses the Company's revenue allocation method with one adjustment to reallocate the LGS-ML shortfall to all of the classes instead of just the LGS class.

Q. HOW DO YOU RESPOND TO I&E AND OCA'S REVENUE ALLOCATION POSITIONS.

A. I continue to believe that a customer component should be recognized in the cost-of-service. I believe that averaging the minimum system/design day method and the peak and average cost-of-service methods is a reasonable compromise for revenue allocation purposes.

[13] I&E Statement 3-25, page 18 and pages 27-28.
[14] "IEc WP2S Revenue Allocation Rate Design Surrebuttal" workpaper, tab "RecAlloc Surrebuttal", line 22.
[15] Exhibit OSBA Statement 1S, page 10.

Q. MR KNECHT'S SURREBUTTAL TESTIMONY[16] REITERATES HIS POSITION THAT IN ORDER TO KEEP THE PNG DIVISION SGS INCREASE TO 1.5 TIMES THE SYSTEM AVERAGE, EITHER 1) REVENUE COULD BE REALLOCATED TO OTHER CLASSES OR 2) FULL RATE HARMONIZATION SHOULD BE DEFERRED UNTIL THE NEXT BASE RATE CASE. WHAT IS YOU OPINION ON THIS MATTER?

A. First, I do not believe rate harmonization should be deferred until the next base rate case. As stated in my surrebuttal testimony[17], if the Commission decides that the maximum revenue increase of 1.5 times the system average should be applied to the divisional level, it would not require a significant reallocation of revenues to the other classes. Nevertheless, my surrebuttal testimony describes how this reallocation could be performed[18].

Q. HOW DO YOU RESPOND TO MR. BAUDINO'S CONTENTION THAT THE LGS-ML SHORTFALL SHOULD BE ALLOCATED TO ALL OF THE CLASSES?

A. As stated in my surrebuttal testimony[19], if the Company were to accept this PII position, the effective result of this adjustment is proposed LGS revenues that are $5.8 million lower than revenues at current rates.

V. RESIDENTIAL MONTHLY FIXED CHARGE

Q. WHAT PARTIES FIELD SURREBUTTAL TESTIMONY ADDRESSING THE RESIDENTIAL MONTHLY FIXED CHARGE?

[16] Exhibit OSBA Statement 1S, pages 11-12.
[17] Exhibit Peoples Statement No. 15-SR, pages 14-16.
[18] Ibid.
[19] Exhibit Peoples Statement N0 15-SR, page 11.

A. I&E Witness Cline filed surrebuttal testimony reiterating his proposal for the monthly residential fixed charge at $20.00 per month. He further stated that the proposed $20.00 customer charge be scaled back if the Company is not granted less than the full increase.[20] Mr. Cline and I come to slightly different results based upon the cost of service analysis supporting our calculations. Mr. Cline's proposed monthly fixed charge is "consistent with the results of the Peak and Average customer cost analysis."[21] The different cost of service studies used in this explains the difference in our results.

Q. DO YOU AGREE WITH MR. CLINE'S PROPOSAL?

A. I continue to disagree with the methodology which Mr. Cline used to prepare his proposal but recognize that the results of the two analyses are not significantly different.

Q. WHAT IS MR. JOHNSON'S OPINION REGARDING THE RESIDENTIAL MONTHLY FIXED CHARGE?

A. Mr. Johnson proposed that the residential monthly fixed charge should be maintained at the current PNGD level of $14.50. He states, "…residential rates should convey usable pricing information to the end user so that they can respond by controlling their usage of utility service. In a two-part tariff (fixed charge and usage charge), the monthly fixed customer charge conveys no useful pricing information to customers other than rationing access to the utility system."[22]

[20] Exhibit I&E Statement No. 3-S, page, page 27.
[21] Exhibit I&E Statement No. 3-S, page, 27.
[22] Exhibit OCA Statement 4SR page 21.

Q. DO YOU FIND MR. JOHNSON'S TESTIMONY PERSUASIVE?

A. No. I reiterate my earlier testimony that his analysis appears to be drawing on marginal cost principles when adopting the basic customer charge. He claims "…my evaluation considered marginal cost principles because the concept is fundamental to efficient pricing."[23] I reject these statements because:

- No party filed a marginal cost study in this proceeding.
- Mr. Johnson presumes that collecting the balance of the revenue requirement from the volumetric charge is efficient. The conclusion is not supported by any evidence in this proceeding.

Further, this statement concisely illustrates our disagreement. I believe that in a two-part tariff, both the monthly fixed charge and the volumetric charge provide valuable information to a customer. Establishing the monthly fixed charge at too low of a price provides an incentive to customers to inefficiently establish services. For example, if a customer desires to use natural gas to heat a garage or tool shed, a low monthly fixed charge provides the incentive to request a service from the Company instead of investing in a pipeline from their home to the garage or tool shed. The low usage used by the garage or the tool shed would not provide the margins necessary to support the investment by the Company, thus triggering cost-shifting from other customers. The result is clearly inefficient and not sending a proper price signal to customers.

[23] Ibid.

VI. ALLOCATION OF GATHERING SYSTEM COSTS

Q. PLEASE STATE OSBA WITNESS KNECHT'S CONCERNS REGARDING THE COMPANY'S PROPOSED TREATMENT OF GATHERING SYSTEM COSTS.

A. Mr. Knecht expresses concern that the Company's proposed allocation of gathering system costs recovers those costs from both sales and transportation customers, but he claims that transportation customers benefit from the gathering system. Further, he states that the benefits of the gathering system are limited to legacy PGC customers. He concludes that the Company should, in its next rate request, prepare and file an evaluation as to how the Company can more accurately recover gathering system costs[24].

Q. PLEASE RESPOND TO MR. KNECHT'S RECOMMENDATION.

A. First, I do not support different treatment of the recovery of gathering system costs from PGC and PNG customers. The merger of the legacy companies was approved by the Commission, and the continued treatment of the combined entity as two separate entities prolongs the transition process. Second, both transportation and sales customers benefit from the gathering system as providing *potential* access to natural gas supplies for both transportation and sales customers. Therefore, I believe that my proposed allocation of gather system costs is reasonable.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

[24] Exhibit OSBA Statement 1S, page 3-4.

EXHIBIT NO. 1

PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REBUTTAL TESTIMONY OF
MICHAEL HUWAR, PRESIDENT
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: 4-18-2024 Peoples Statement No. 1-R
DATE ADMITTED: _____

PREPARED REBUTTAL TESTIMONY OF
MICHAEL HUWAR

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Michael Huwar. My business address is Peoples Natural Gas Company LLC, 375 North Shore Drive, Suite 600, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples Natural Gas," "Peoples," or the "Company") as President. I am also the President of Peoples Natural Gas' direct parent, PNG Companies LLC ("PNG"). On January 1, 2023, Peoples Natural Gas was merged with Peoples Gas Company LLC and two divisions were formed.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth as Peoples Statement No. 1.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will respond to the testimony of the witnesses who raised concerns with the management efficiency adjustment component of the Company's proposed return on equity in this proceeding. Specifically, I will respond to certain issues identified by the Office of Consumer Advocate ("OCA") witness Alexander and the Bureau of Investigation and Enforcement ("I&E") witness Spadaccio.

Management Effectiveness Adjustment

Q. WHAT IS THE COMPANY PROPOSING WITH RESPECT TO MANAGEMENT EFFECTIVENESS IN THIS PROCEEDING?

A. As outlined in my direct testimony as well as the direct testimony of witness Moul, the Company proposed to include an adjustment of 25 basis points to its proposed return on equity for its exemplary management performance. I note that I have been advised by counsel that, under Pennsylvania law, the Pennsylvania Public Utility Commission ("Commission") shall consider the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates. Specifically, the Commission can make "adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate." See 66 Pa. C.S. § 523(a).

In my direct testimony, as well as in the testimony of other Company witnesses, we have offered support for and evidence of above average performance, efficiency, effectiveness and adequacy of service such that the Commission should consider an appropriate upwards adjustment to the Company's rate of return.

Q. WHAT IS OCA'S POSITION WITH RESPECT TO THE COMPANY'S REQUEST FOR A MANAGEMENT EFFICIENCY ADJUSTMENT?

A. Overall, OCA claims that the Company has not offered evidence to support a management efficiency adjustment. OCA's witness Alexander claims that "there is no basis to support any reward in the form of higher profits due to 'management efficiency' as requested by Peoples.[1]" Specifically, witness Alexander points to specific areas she deems as requiring

[1] Alexander Direct, at page 9.

significant improvement, citing the need for improvement as a reason the Company should not be awarded additional profits for management performance[2].

OCA witness Colton attempts to link the Company's management performance to its credit and collections processes, arguing that the Company does not have strong management performance due to the number of residential customers in debt[3].

Company Witness Doyle-Conley will address both Ms. Alexander's proposed areas of improvement[4] as well as Mr. Colton's specific concerns regarding the Company's credit and collection procedures[5].

Q. WHAT IS YOUR RESPONSE TO OCA'S CLAIMS CONCERNING MANAGEMENT PERFORMANCE?

A. I disagree with OCA's contention that we have not provided any evidence of above average performance. In my direct testimony pages 16-18, I provide examples of certain customer service metrics reflecting the Company's above average performance benchmarked with other Pennsylvania utilities. In many categories the Company is exceeding the Commission's goals and even leading its peers with the highest scores and percentages in various categories. On page 19 of my direct testimony, I include the Company's outstanding leaks metrics on its system. The Company has reduced its outstanding leaks by 83% since 2019[6]. Additionally, Company witnesses, Palombo and Becker, in their direct testimonies, provide evidence of the Company's exemplary performance with

[2] *Id.* at 1.
[3] Colton Direct, at page 68.

[5] *Id*. at 5-7.
[6] Represents the year end leaks outstanding as reported in the annual DOT distribution report.

metrics concerning safety and compliance, as well as infrastructure investment progress. The Company has provided evidence that it does show above average performance.

Q. WHAT IS I&E'S POSITION WITH RESPECT TO THE COMPANY'S REQUEST FOR A MANAGEMENT PERFORMANCE ADJUSTMENT?

A. I&E witness Spadaccio asserts that the topics used to support the Company's claim for a management effectiveness adjustment fall within the categories of reliability, customer satisfaction, and safety that are required of every public utility company under 66 Pa C.S.A. Section 1501. Further, Mr. Spadaccio claims that additional basis points for management performance defeats the purpose of cost cutting measures that would benefit ratepayers[7].

Q. WHAT IS YOUR RESPONSE TO I&E'S ASSERTIONS REGARDING MANAGEMENT PERFORMANCE?

A. The Company agrees with Mr. Spadaccio in his assertion that it has used its above average performance in areas which fall under its responsibilities under 66 Pa C.S.A. Section 1501 to justify its claim for a management performance adjustment. Moreover, Mr. Spadaccio does not deny that the Company's performance is above average. Rather, Mr. Spadaccio disregards the above average performance altogether and this has the effect of treating the Company's exemplary, above average performance in the same way as a company with just average performance. Mr. Spadaccio's assertions effectively disregard the provisions of Section 523 of the Public Utility Code.

Q. PLEASE FURTHER EXPLAIN THE COMPANY'S EXEMPLARY PERFORMANCE.

[7] Spadaccio Direct, at pages 61-65.

A. Peoples consistently provides safe and reliable natural gas service to its customers at reasonable rates. This is the product of a dedicated and knowledgeable workforce that is constantly seeking to improve its quality of service and control costs. As part of its commitment to providing low-cost natural gas delivery service to its customers, the Company has committed significant resources to improving its infrastructure. In his direct testimony in this proceeding, on pages 4-6, Company witness Becker provides metrics which illustrate the robust capital investments the Company has made to its system, outlining its four major capital pipeline work programs. The Company is continuing to invest in bettering its system and improving its facilities for the benefit of its customers. Notably, the Company's ability to control costs is evidenced by its reasonable installation costs per mile, despite its vast urban footprint with complex projects. As Company witness Becker illustrates in his testimony, pages 3-4, Peoples' LTIIP pipeline replacement cost per mile compares favorably with other Pennsylvania LDCs.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Andrew P. Wachter, and my business address is 375 North Shore Drive, Suite 600, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as Director, Finance and Regulation for PNG Companies LLC ("PNG"). I provide services to Peoples Natural Gas Company LLC ("Peoples" or the "Company") and its two divisions: the Peoples Natural Gas Division ("PNGD") and the Peoples Gas Company Division ("PGD"). As Director, Finance and Regulation, I oversee the Rates and Regulatory department and the Financial, Planning and Analysis department at Peoples and its affiliates.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 2.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am presenting updates to the Company's original filing. In addition, I am presenting testimony in rebuttal of certain expense positions and recommendations of the Bureau of Investigation and Enforcement ("I&E") witnesses Ethan H. Cline and Christopher Keller, the Office of Consumer Advocate ("OCA") witnesses David Evrard, Dante Mugrace and Barbara Alexander, and the Office of Small Business Advocate ("OSBA") witness Robert D. Knecht. I will also address certain comments made at the Public Input Hearings.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am also sponsoring fourteen (14) additional exhibits **(Exhibit Nos. APW-R-1 through APW-R-14**).

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I have arranged my rebuttal testimony by subject matter. Where more than one witness has addressed the same subject matter with testimony that I wish to rebut, I address all of that testimony in the same section. I will address the following issues in the order listed.

- Updates to Original Filing
- 5-Year Average Annual Increases
- Inflation Adjustments
- Labor/Vacancy Adjustments
- Incentive Compensation

- Corporate Insurance
- Employee Expenses
- Travel and Entertainment Expenses
- Company Memberships
- Advertising Expenses
- Materials and Supplies
- Rate Case Expense
- Pension Expense
- PBOP Expense
- Outside Services – Contracted
- Outside Services – IT
- Outside Services – A&G
- Payment Processing Expenses
- Uncollectible Accounts Expense
- Non-Basic Service From Third Party Programs
- Gathering System Charges
- Synergy Savings
- Cost of Other Proposals
- Public Input Hearing Comments

II. UPDATES TO THE COMPANY'S ORIGINAL FILING

Q. HAS THE COMPANY UPDATED OR ADJUSTED THE COST OF SERVICE AS FILED?

A. The Company identified three adjustments during the discovery process. However, we are not updating the as filed revenue requirement claim as we are not proposing an increase greater than the amount filed. However, to the extent that the Commission disallows other expenses or reduces the Company's proposed rate of return, the Company requests that the full adjustments described below be adopted.

Q. CAN YOU SUMMARIZE THE ADJUSTMENTS IDENTIFIED ON THE AMOUNT OF RATE INCREASE REQUESTED?

A. Yes. Below are the adjustments:

1. increase in labor expense of $538,590 as referenced in the response to I&E-RE-6;
2. increase in PBOP expense of $476,452 to update the original estimate in the filing as referenced in the response to I&E-RE-18; and
3. reduction in licenses and permits expense of $18,697 as referenced in the response to I&E-RE-30.

The referenced interrogatory responses and revised Exhibit No. 4 are included in the Highly Confidential **Exhibit No. APW-R-1**.

Please note that there is an increase in Cash Working Capital associated with these adjustments.

Q. PLEASE EXPLAIN THE IMPACT THESE ADJUSTMENTS HAVE ON THE COST OF SERVICE AS FILED?

A. The impact of these changes would have increased the overall claimed increase in revenues by approximately $996,345, excluding the cash working capital amount.

III. RESPONSE TO OTHER PARTIES ADJUSTMENTS

A. GAS SUPPLY EXPENSE

Q. DO ANY OF THE PARTIES MAKE AN ADJUSTMENT TO GAS SUPPLY EXPENSE?

A. No. However, I&E Witness Cline proposes an adjustment to gross present rate revenue including gas supply expense revenue without a corresponding proposed adjustment to gas supply expense.

Q. PLEASE EXPLAIN FURTHER.

A. As described in Peoples Statement No. 3-R – the Rebuttal Testimony of Carol Scanlon, I&E Witness Cline proposes to change the Heating Degree Days (HDDs) the Company utilizes to developing its existing revenue at present rates. In calculating his proposed revenue adjustment of $9,311,915 (see I&E Statement No. 3 – Direct Testimony of Ethan H. Cline, starting on Page 20, Row 13), Cline utilized gross revenue including gas cost revenue. I&E Witness Cline's error in excluding an offsetting increase in gas supply expense that is also impacted by his proposed change in HDDs. Please note that we do not

agree with the HDD adjustment. This is discussed further in Peoples Natural Gas Statement No. 3-R – the Rebuttal Testimony of Carol Scanlon.

Q. HOW DOES MR. CLINE'S FAILURE TO ADJUST GAS SUPPLY EXPENSES AFFECT HIS BASE RATE PROPOSAL?

A. Mr. Cline's failure to adjust gas supply expenses affects the base rate increase because his derivation of the base rate increase is based upon total revenues, including gas cost revenues, and not based on distribution revenues alone. His $9,311,915 adjustment to revenues includes $4,763,786 related to distribution revenues and $4,548,129 related to gas cost revenues. He is decreasing the Company's proposed revenue increase by both distribution and gas cost revenue. If his adjustment is accepted, which I disagree with, it should only reduce the Company's base rate request by the distribution revenue portion of $4,763,786.

Q. WHAT IS THE RESULT OF THIS CORRECTION TO THIS PROPOSED ADJUSTMENT?

A. If I&E Witness Cline's proposed adjustment is accepted then an additional gas supply expense of $4,548,129 must be included in the case. This increases the proposed rate increase of I&E from $83,525,000 to $88,073,129.

The chart below compares the gross revenue at existing rates as filed to the response to I&E-RS-3 as utilized by Mr. Cline in his adjustment. The additional gas cost revenue of $4,5458,129 is highlighted.

	Ex 3 as Filed	Response to I&E-RS-3	Change in Revenues
	Total	Total	Total
Sales			
Base Rate Revenue	$ 351,764,838	$ 355,395,361	$ 3,630,523

Overall Total	**833,215,508**	**842,527,424**	**9,311,915**

Q. PLEASE CONTINUE.

A. As shown above, present rates were increased by $4,548,129 but gas cost expense was not adjusted. As shown on the table below from page 4 of I&E Statement No. 1 – the Direct Testimony of Christopher Keller, he proposes a $9,500 thousand adjustments to O&M expense and a $216 thousand adjustments to taxes other than income.

Peoples Natural Gas Company LLC		TABLE I			
R-2023-3044549		INCOME SUMMARY			
Dollar Amounts in Thousands					
	9/30/25	INVESTIGATION & ENFORCEMENT			
	Proforma	[----------			]

Rate of Return	5.54%		5.90%		7.43%

The below from page 2 of I&E Statement No. 1 – the Direct Testimony of Christopher Keller, detail the $9,500 thousand adjustments to O&M expense and a $216 thousand adjustments to taxes other than income and clearly shows that gas costs are not included.

	Company Claim	I&E Adjustment	I&E Recommended Allowance
O&M Expenses:			
Labor Expense	$69,463,580	($2,275,920)	$67,187,660
Payroll Taxes	$6,571,623	($216,212)	$6,355,411
Pension Expense	$5,670,000	($1,286,880)	$4,383,120
Post Retirement Benefits Other Pensions	$2,414,041	($417,689)	$1,996,352
Other Employee Benefits	$20,982,496	($687,504)	$20,294,992
Outside Services - Contracted	$28,657,932	($810,857)	$27,847,075
Corporate Insurance	$9,080,331	($2,085,969)	$6,994,362
Advertising Expense	$1,423,934	($1,370,197)	$53,737
Rate Case Expense	$1,031,000	($564,132)	$466,868
Total O&M Expense Adjustments		($9,715,360)	
Rate Base Adjustments:			
Cash Working Capital	$36,256,917	($692,386)	$35,564,531
Total Rate Base Adjustments		($692,386)	

Q. WHAT ARE THE CONSEQUENCES OF INCLUDING GAS COST REVENUE BUT EXCLUDING THE OFFSETTING GAS COST EXPENSE ADJUSTMENT.

A. This mistake overstates base rate revenue at existing rates thus understating the overall rate increase proposed by I&E. As such, the proposed rate increase of I&E should be adjusted from $83,525,000 to $88,073,129.

B. <u>5-YEAR AVERAGE ANNUAL INCREASES</u>

Q. PLEASE SUMMARIZE HOW THE COMPANY USED 5-YEAR AVERAGE ANNUAL INCREASES TO MAKE ADJUSTMENTS TO CERTAIN HTY EXPENSES.

A. In order to appropriately project how certain expenses are expected to change during the FTY and FPFTY, the Company used a 5-year historical percentage experience change for each expense type individually and applied it to the HTY balances to determine the amount of change in balance to expect.

Q. HOW IS APPLYING THE 5-YEAR AVERAGE INCREASE DIFFERENT THAN APPLYING A STANDARD INFLATION ADJUSTMENT?

A. Utilizing a 5-year average increase methodology, as described above, utilizes known and recently incurred activity for each specific expense account. Whereas a standard inflation adjustment often is based upon broad inflation indicators or even one over-riding inflation

metric applied to different expense categories. An inflation adjustment is an approach that weights various categories into one such as CPI – the Consumer Price Index.

Q. WHAT IS OCA WITNESS MUGRACE RECOMMENDING WITH RESPECT TO APPLYING A 5-YEAR AVERAGE INCREASE?

A. OCA Witness Mugrace is proposing to disallow any sort of percentage increases as he refers to them as inflationary adjustments that are not actually known or measurable as they do not reflect the true cost of expenses. In various places he claims that "Costs should be based upon evidence or documentation that supports Peoples' adjustments. More definitive types of increases or adjustments are contractually related increases or escalation adjustments that are predetermined in contracts or service agreements entered into by Peoples and third-party vendors".

The table below summarizes all adjustments that OCA Witness Mugrace's deems to be inflationary:

	FTY	FPFTY	Total
Outside Services - Contracted	$ (904,595)	$(1,035,740)	$(1,940,335)
Outside Services - IT	$ (205,356)	$ (236,958)	$ (442,314)
Outside Services - A&G	$ (206,890)	$ (221,372)	$ (428,262)
Corporate Insurance	$ (773,601)	$ (874,943)	$(1,648,544)
Injuries & Damages	$ (73,935)	$ (76,301)	$ (150,236)
Travel	$ (40,947)	$ (42,748)	$ (83,695)
Company Memberships	$ (17,345)	$ (17,722)	$ (35,067)
Licenses & Permits	$ (33,712)	$ (34,931)	$ (68,643)
Utilities & Fuels	$ (84,825)	$ (87,415)	$ (172,240)
Advertising	$ (42,784)	$ (44,153)	$ (86,937)
Fleet	$ (35,128)	$ (36,250)	$ (71,378)
Materials & Supplies	$ (307,733)	$ (338,640)	$ (646,373)
Other O&M	$ (440,321)	$ (449,212)	$ (889,533)
Payment Processing	$ -	$ (91,628)	$ (91,628)
Total	$(3,167,171)	$(3,588,014)	$(6,755,185)

Please note $6,518,012 of the above adjustments relate to categories whereby the Company used the multi-year average methodology. Such methodology was not used for either the Injuries & Damages or the Advertising categories both of which will be discussed in the next section of my testimony.

Q. DO YOU AGREE WITH MR. MUGRACE'S RECOMMENDATION TO DISALLOW THE APPLICATION OF A 5-YEAR AVERAGE ANNUAL INCREASE FOR THESE EXPENSES?

A. No. He first claims that "Costs should be based upon evidence or documentation that supports Peoples' adjustments." I would argue that utilizing historic trends (i.e., a 5-year average increase) is sufficient evidence of the proposed expense. It is unreasonable to believe that these costs are not going to increase over the 25-month projected period (FTY and FPFTY) in this proceeding especially considering the wide-spread inflation being experienced across the world.

He further explains that "More definitive types of increases or adjustments are contractually related increases or escalation adjustments that are predetermined in contracts or service agreements entered into by Peoples and third-party vendors." When available the Company did utilize this information. However, this should not be a binary test for recoverability as many of these expenses are not incurred as part of contracts or service agreements entered into by Peoples.

I further note that no other party took exception to our approach to our projection methodology.

Q. IS THERE PRECEDENT FOR THE APPROACH THAT THE COMPANY TOOK?

A. Yes. In Aqua Pennsylvania's most recent base rate proceeding at Docket No. R-2021-3027385, the Commission adopted a three-year average increase to adjust the company's general liability insurance claim. The three-year average increase was I&E's proposal, and the Commission adopted it over Aqua Pennsylvania's five-year average increase proposal. However, I note that no party has proposed a different period for determining the average annual increase in this proceeding.

Q. DOES MUGRACE'S APPROACH TO PERCENTAGE ADJUSTMENTS EFFECTIVELY UTILIZE A HISTORIC TEST YEAR ("HTY") METHODOLOGY RATHER THAN A FULLY PROJECTED FUTURE TEST YEAR ("FPFTY") METHODOLOGY?

A. Yes. By not allowing a reasonable methodology to project increases, such as recent average Company-experienced increases by specific expense categories, he effectively reverts to utilization of historic test year balances. This approach is contrary to methodology widely accepted in Pennsylvania base rate cases. Further, this could have broader implications if a HTY approach was utilized.

C. <u>INFLATION ADJUSTMENT ITEMS</u>

Q. DID THE COMPANY APPLY A STANDARD INFLATION ADJUSTMENT TO ANY EXPENSE ITEMS?

A. Yes, the Company applied a standard inflation adjustment to both the Injuries & Damages ($150,236 adjustment) and the Advertising ($86,937 adjustment) categories of expenses.

Q. HOW DID THE COMPANY DETERMINE THE INFLATION AMOUNT?

A. The Company utilized the CPI – Consumer Price Index for both of these categories.

Q. WHY DIDN'T THE COMPANY PROPOSE A 5-YEAR AVERAGE ANNUAL INCREASE FOR THESE ITEMS INSTEAD OF AN INFLATION ADJUSTMENT?

A. Due to the fluctuating nature of these categories and types of expenses it was more reasonable to use an index-based approach.

Q. WHAT DOES MR. MUGRACE PROPOSE WITH RESPECT TO THE INFLATION ADJUSTMENT FOR THESE EXPENSES.

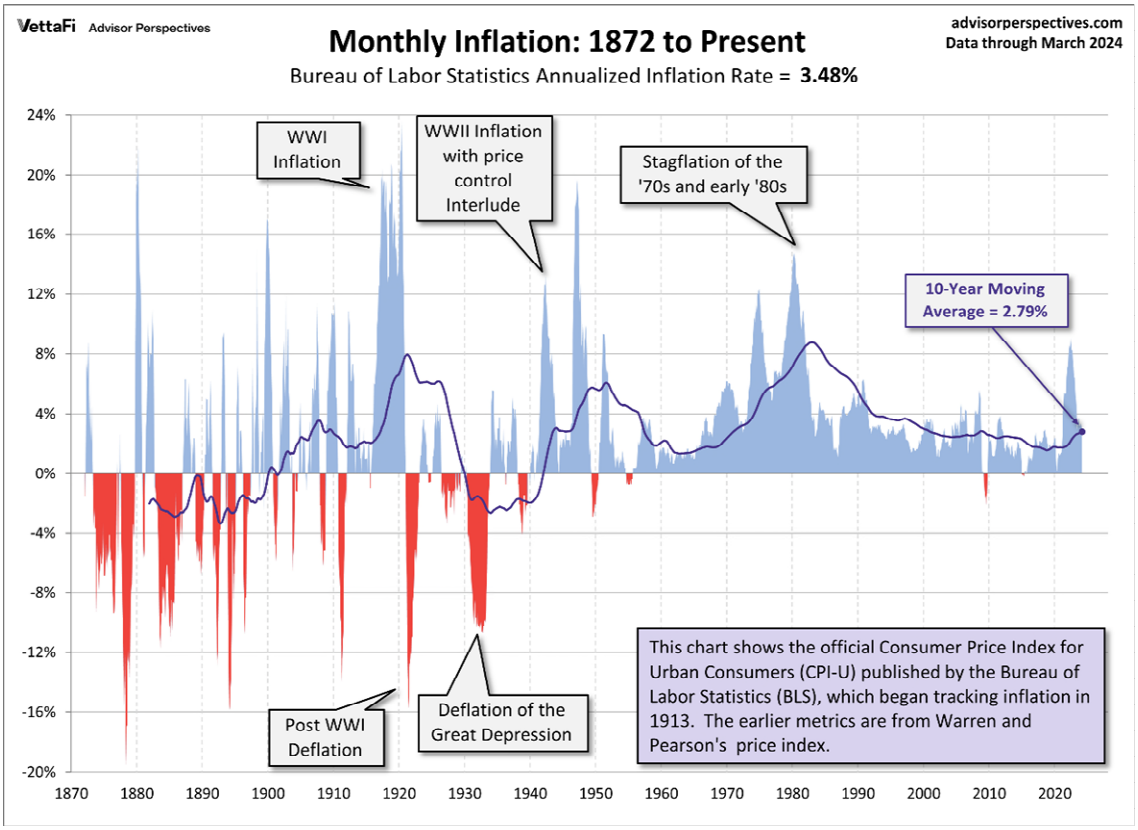
A. Mr. Mugrace proposes to disallow the Company's $150,236 increase in Injuries & Damages expense and the Company's $86,937 increase in Advertising expense.

Q. DO YOU AGREE WITH MR, MUGRACE'S ADJUSTMENTS?

A. No.

Q. WHY IS IT REASONABLE TO INCLUDE AN INFLATION FACTOR FOR THESE ITEMS?

A. As stated above, inflation is a real thing and is expected in all expense categories over time. Utilizing an actual experienced inflation factor to project these costs is a reasonable approach. The table below from VettaFi Advisor Perspectives shows the history of inflation based upon data from Bureau of Labor Statistics data which shows that inflation has occurred in most months for the last six decades.



During 2022 and 2023 monthly inflation was averaged 5.49%.

Q. HAS THE COMMISSION APPROVED AN INFLATION ADJUSTMENT FOR ANY UTILITIES IN RECENT CASES?

A. Yes, the Commission has recently approved an inflation adjustment for PECO Gas for several expenses in its 2020 base rate proceeding at Docket No. R-2020-3018929. Like

the PECO case, herein the Company has limited the general inflation adjustment to only a few categories of expenses.

Q. DID MR. MUGRACE PROPOSE ANY ADDITIONAL INFLATION ADJUSTMENTS TO PEOPLES' CLAIM?

A. Yes. Mr. Mugrace proposed similar adjustments to capital expenditures. Please note that Company witness Paul Becker will address OCA Witnesses Inflation adjustment related to capital expenditures in his rebuttal testimony Peoples Natural Gas Statement No. 5-R.

D. <u>LABOR/VACANCY ADJUSTMENTS</u>

Q. PLEASE EXPLAIN THE LABOR/VACANCY ADJUSTMENTS PROPOSED BY I&E AND OCA REGARDING LABOR AND LABOR RELATED EXPENSES.

A. Both the OCA and I&E make proposed adjustments related to increasing the level of vacant positions to be included in the FPFTY labor claim. OCA Witness Mugrace proposed a vacancy rate of 2.7% and I&E witness Keller suggests that 56 open positions be used rather than the Company's proposed 8 positions.

Q. DO YOU AGREE WITH THESE ADJUSTMENTS?

A. I do not.

Q. WHY SHOULD THE COMPANY'S CLAIM REGARDING EMPLOYEE HEADCOUNT BE ACCEPTED?

A. Our proposed vacancy level represents more normalized and expected vacancy levels going forward. In recent years the Company has seen increased levels of vacancy. However, it is expected that levels will revert to pre-COVID vacancies. As shown in the article entitled "The Great Resignation Is Over: Quitting has fallen to a three-year low" as published by the SHRM (Society for Human Resources Management) attached as **Exhibit No. APW-R-2** there is an expectation that the recent spike in turnover as part of the post-COVID "Great Resignation" was an anomaly and does not represent the future. As such, it is more appropriate to use the Company's proposal.

Mr. Mugrace made a statement that "It is uncertain whether or not Peoples will actually hire the number of employees it has proposed." (OCA Statement No. 2, Page 26 lines 15-16) The Company continues to hire vacant positions. For example, as shown in the CONFIDENTIAL response to I&E-RE-6 attached as **Exhibit No. APW-R-3**, 52 of the open positions as of August 31, 2023 have been filled as of the time of the response.

Further, pre-COVID the average vacancy level for all of PNG Companies (including entities other than PNGD and PGD) averaged 13 vacancies in 2018 prior to COVID.

Q. DOES I&E'S REDUCTION TO THE COMPANY'S EMPLOYEE HEADCOUNT AFFECT OTHER EXPENSES?

A. Yes. I&E proposed related adjustment to benefits of $527,144 and payroll taxes (to be addressed in Statement No. 10-R – the Rebuttal Testimony of Rudolph Hanechak). These adjustments should also be rejected for the reasons stated above.

Further, it is inappropriate to apply the vacancy ratio to PBOP expense. This expense is a future liability for retirement expenses that is a result of having the employee and it is not an expense that should be normalized.

Q. DOES OCA'S REDUCTION TO THE COMPANY'S EMPLOYEE HEADCOUNT AFFECT OTHER EXPENSES?

A. Yes. OCA also adjusted benefits by $687,504 and payroll taxes (to be addressed in Statement No. 10-R – the Rebuttal Testimony of Rudolph Hanechak). These adjustments should be rejected for the reasons stated above.

Q. IF I&E'S AND OCA'S EMPLOYEE HEADCOUNT ADJUSTMENTS ARE DENIED, SHOULD THESE RELATED ADJUSTMENTS ALSO BE DENIED?

A. Yes.

Q. IF MR. MUGRACE'S VACANCY RATIO ADJUSTMENT IS ACCEPTED IS THE AMOUNT CORRECT?

A. It is not. His methodology double counts the original eight FTE vacancies that were included in the Company's filing as he did not remove our as filed vacancy adjustment prior to calculating his adjustment. This amount is $247,205. Thus, his adjustment, if accepted should be reduced by this amount.

E. INCENTIVE COMPENSATION

Q. OCA PROPOSES TO REDUCE THE COMPANY'S CLAIM FOR INCENTIVE COMPENSATION BY $2,562,451 (OCA St. No. 2, pp. 27-29). PLEASE SUMMARIZE THE BASIS FOR OCA'S PROPOSED ADJUSTMENT TO INCENTIVE COMPENSATION.

A. He recommends this adjustment as this amount relates to the financial performance of the Company as it promotes shareholder interest and does not benefit customers.

Please note that Mr. Mugrace makes an adjustment in other O&M of $885,507 for similar reasons. This will be discussed in the Other O&M section below.

Q. DOES MR. MUGRACE PROVIDE ANY SUPPORT FOR HIS POSITION ON INCENTIVE COMPENSATION?

A. He does not other than stating that "minimal or none being attributable to the benefit of customers, nor related to customer service performances and measures, safety and environmental issues, and other customer related issues." (OCA St. No. 1, p. 28 and 29)

Q. PLEASE EXPLAIN WHY YOU DISAGREE WITH OCA'S PROPOSED ADJUSTMENT TO INCENTIVE COMPENSATION.

A. OCA's proposal on incentive compensation should be rejected for three main reasons: 1) the overall level of incentive compensation claimed is part of a fair, market-based level of total compensation; 2) there are no regulations that prohibit utilities from recovery of

incentive compensation that is tied to financial metrics and a recent UGI Utilities, Inc. – Electric Division ("UGI") Commission order (Docket No. R-2017-2640058) supports this position; and 3) financial metrics provide customers a direct benefit by incentivizing employees to be good financial stewards of company and ultimately customer funds.

Q. PLEASE EXPLAIN HOW PEOPLES INCENTIVE COMPENSATION IS PART OF A FAIR, MARKET-BASED LEVEL OF TOTAL COMPENSATION.

A. As discussed in my Direct Testimony, Peoples Statement No. 2, to retain talent, Peoples must offer benefits comparable to other companies. Offering Incentive Compensation is one way for Peoples to retain talent by offering market-based incentives to Company employees. The Company has undertaken research to ensure that it offers market-based compensation and incentive programs. Eliminating or reducing these programs would have a significant impact on the Company's ability to attract and retain competent employees. Based upon feedback from our Human Resources department it is their understand that most utilities offer incentive compensation.

Further, as explained in the Highly Confidential response to Interrogatory No. OCA-VII-26 (attached in **Exhibit No. APW-R-4**) Compensation programs are regularly reviewed to ensure market competitiveness to attract, retain, and reward talented employees necessary to provide safe and reliable service. The Company utilizes several compensation surveys to compare itself against market data and trends. Further, benchmarking against the market is done internally by human resources utilizing various third-party sources based upon third-party survey information. In 2023, the survey sources

utilized included: Salary.com, Willis Towers Watson, and American Water Works Association. Compensation programs are regularly reviewed to ensure market competitiveness to attract, retain, and reward talented employees necessary to provide safe and reliable service.

In addition, the Company has an Executive Compensation Committee that has retained an independent compensation consultant, Pay Governance LLC, to assist in designing our executive compensation program and assessing its competitiveness through benchmarking peer analysis and other methodologies. **(BEGIN HIGHLY CONFIDENTIAL)** [redacted] **(END HIGHLY CONFIDENTIAL)**

Q. DOES MR. MUGRACE OBJECT TO THE OVERALL LEVEL OF INCENTIVE COMPENSATION OR THE PROGRAMS THEMSELVES?

A. No. He does not. Specifically, he states "While I am not opposing the Company's STI plan what I am opposing are the costs related to the Company's recovery of its STI related to financial performance through ratepayers" (OCA St. No. 1, p. 29).

Q. PLEASE EXPLAIN YOUR SECOND REASON WHY THE OCA'S POSITION ON INCENTIVE COMPENSATION SHOULD BE REJECTED.

A. I am not aware of, and I have been advised by counsel that there are no regulations that prohibit utilities from recovery of incentive compensation that is tied to financial metrics. Further, as part of the UGI's recent base rate case proceeding (Docket No. R-2017-2640058) an argument was made to disallow recovery of certain employee compensation costs because they contained certain financial metrics beyond metrics related to duties directly related to the provision of service. The Order in that proceeding rejected that argument. In particular, the order specifically stated that "the fact that the program includes a financial metric does not disqualify it from allowance as an expense for inclusion in the rate base". (*See e.g., UGI 2016 Order* at 74)

Q. REGARDING YOUR THIRD REASON TO REJECT OCA'S POSITION, PLEASE EXPLAIN WHY THESE COSTS PROVIDE A DIRECT BENEFIT TO THE CUSTOMERS.

A. Financial metrics incentivize employees to be good financial stewards of company and ultimately customer resources thus they provide customers a direct benefit. I point out that the impact most employees have on financial targets is to achieve their O&M budgets. As such, this drives employees to be efficient with the costs they incur while still achieving our mission to "Make Customers Lives Better". Such savings ultimately delay the need for future rate cases. Further, this compensation is also tied to and aimed at improving operational effectiveness.

Q. MR. MUGRACE ALSO RECOMMENDS THAT THE COMPANY'S DIVERSITY, EQUITY AND INCLUSION ("DEI") INCENTIVE COMPENSATION COSTS BE DENIED IN THE AMOUNT OF $512,615. (OCA ST. NO. 2, p. 29) DOES THE COMPANY AGREE WITH THIS ADJUSTMENT?

A. No. it does not. Mr. Mugrace makes two contradictory arguments in this testimony on this topic. First, he argues that this type of compensation does not provide ratepayers benefits. He argues that these are organization frameworks of fair treatment and that "I do not see a nexus between DEI and ratepayer benefits in the areas of customer service, customer engagement or customer participation" (OCA St. No. 1, p. 29). Second, he states that "If Peoples believes these incentive costs do provide customer benefits then Peoples should be burdened with providing the dollars and not the ratepayers." (OCA St. No. 1, p. 29).

These two arguments seem to contradict each other. On one hand he seems to use lack of customer benefit as the basis for disallowance but then goes and says even if it benefits customers it should still be disallowed.

Q. PLEASE FURTHER EXPLAIN THE COMPANY'S POSITION ON THIS MATTER.

A. As it is hard to rebut Mr. Mugrace's circular arguments, I will provide support for why these costs are appropriate. Although I could cite various third-party articles, etc. such as the Harver research entitled "7 Benefits Of Diversity In Customer Service At Your Company" attached as **Exhibit No. APW-R-5**, I will share three statements made by the OCA in the Amended Policy Statement on Diversity at Major Jurisdictional Utilities

proceeding at Docket No. M-2023-3038267 attached as **Exhibit No. APW-R-6**. Further, I am not aware that an argument was made that any costs associated with the Amended Policy Statement on Diversity would not be recoverable. Below are the three statements:

1. "The OCA supports the Commission's adoption of the proposed Diversity Policy Statement as being beneficial to consumer interests. The Commission proposes to encourage major jurisdictional utilities and major telecommunications utilities to incorporate diversity into their employment and procurement practices. Public utilities operate in national, state, and local economies that encompass a diverse citizenry that comprise utility workforces and contractors. It is good business practice for utilities to incorporate diversity in their employment and procurement practices because it helps to ensure that utilities will employ a qualified workforce and procure quality goods and services at reasonable costs." (page 4)
2. "Additionally, public utilities provide service to diverse consumers of the Commonwealth. Thus, fostering diversity in their employment and procurement practices can aid utilities in creating value for their customers and the communities they serve." (page 4)
3. "…the OCA supports the Commission's proposal in its Diversity Policy Statement to encourage major telecommunication utilities to report on their diversity programs, as such policy may improve transparency, which benefits consumers." (page 4)

Each of these statements clearly demonstrates that the OCA has proclaimed that encouraging diversity benefits customers. Therefore, it is a reasonable conclusion that

incentives to employees to support diversity efforts would be reasonable costs to recover in base rates.

Additionally, I provide the Statement from Commissioner Kathryn L. Zerfuss attached as **Exhibit No. APW-R-7** whereby the Commissioner made the following statements regarding the benefits of diversity:

- "The utilities' diversity programs impact and strengthen the relationship between utilities and the customers that live and work in their communities and, ultimately, the way customers are served." (page 2)

This statement by Commissioner Zerfuss supports diversity programs as key parts of a company's strategy and as beneficial to customer relationships both of which support that a goal that incentives diversity at Peoples is reasonable.

F. CORPORATE INSURANCE

Q. PLEASE EXPLAIN OCA'S PROPOSED ADJUSTMENT TO THE COMPANY'S CLAIM FOR CORPORATE INSURANCE.

A. OCA proposes to deny the Company an increase in insurance expense during both the FTY and FPFTY. Mr. Mugrace claims they are speculative and cyclical in nature.

Q. ARE THE COMPANY'S PROPOSED PREMIUM INCREASES REASONABLE?

A. Yes. For the FPFTY, I increased the insurance expense by 13.1%[1] which represents the average total premium increase experienced from the 2023 invoice as compared to the 2022 premiums and the premium increase experienced from the 2022 invoice as compared to the 2021 premiums. The Company further affirmed the reasonableness of this increase with our third-party insurance brokers. The third-party brokers shared with us the following feedback about upcoming rates:

Industry data for forecasts beyond this horizon is scarce, as market dynamics can shift dramatically. This is illustrated in various lines of coverage:

- *Excess Liability:*
  - *Historically stable, with occasional modest increases.*
  - *However, from 2018 to 2020, the market experienced a seismic shift due to nuclear verdicts, resulting in carriers reducing their capacity. They transitioned from providing $25 million layers to $10 million or $15 million while maintaining similar pricing to the prior $25 million, causing significant cost increases for policyholders.*

- *D&O:*
  - *Leading up to the COVID-19 pandemic, the public D&O market witnessed a surge in securities litigation and claim payouts. This trend was further amplified by the increasing number of SPACs, contributing to higher premiums.*
  - *Similar to the Excess Liability market, D&O coverage experienced a substantial decrease in available capacity, with $25 million chunks becoming scarce.*

- *Cyber:*
  - *The cyber insurance market underwent a radical transformation due to the rising incidence of ransomware attacks and inadequate protection by businesses. This led to triple-digit rate increases, reduced capacity, and, in extreme cases, some insureds being left without coverage.*
  - *While the rate increases were not as dramatic, the cyber market evolved due to the heightened requirements set by insurance companies. Businesses invested significant time and resources in enhancing their cybersecurity, resulting in a notable decline in claims activity and a stabilization of this previously volatile market.*

[1] Please note this percentage was slightly revised to 12.91% in the response to I&E-RE-27.

- *Property:*
    - *Currently, the property insurance market is facing a challenging phase, often referred to as a "hard market." The industry collectively hopes for this to be a cyclical pattern but currently sees no end to issues, particularly those related to weather, which are driving claims.*

The examples provided emphasize how rapidly insurance markets can change. Predicting market conditions 3-5 years ahead remains a challenging task, as evidenced by the persistence of nuclear verdicts and extreme weather-related claims. The volatility in the insurance market is likely to continue as long as these trends persist.

Q. PLEASE EXPLAIN I&E'S PROPOSED ADJUSTMENT TO THE COMPANY'S CORPORATE INSURANCE CLAIM.

A. I&E Witness Keller proposes three adjustments to the Company's claim for insurance: 1) utilizing an 8.77% increase rather than the 13.1% proposed by the Company (represents the increase experienced by the Company from 2022 to 2023); 2) changing which number the increase is multiplied by; and 3) utilizing a three-year average of capitalization.

Q. DO YOU AGREE WITH I&E'S ADJUSTMENT?

A. No. I do not. For the reasons explained above our percentage increase is reasonable and I&E's recommended increase of 8.775 should be denied.

I&E's second adjustment is not unreasonable. I&E's third adjustment to utilize a three-year average of capitalization is not unreasonable. However, the Company's methodology is reasonable as well.

G. EMPLOYEE EXPENSES

Q. THE OCA PROPOSED TO REMOVE $221,500 OF EXPENSE FOR EMPLOYEE SERVICE AND SAFETY AWARDS. (OCA St. No. 2, p. 33). OCA ALSO PROPOSES TO DECREASE THE COMPANY'S EXPENSES FOR EMPLOYEE EVENTS OF $32,937. (OCA St. No. 1, p. 33). WHAT IS THE REASONING?

A. He claims that the Company did not fully justify these costs and did not provide the ratepayer benefits.

Q. WHY DOES THE COMPANY INCUR THESE EXPENSES AND WHAT ARE THE BENEFITS TO CUSTOMERS?

A. Service Awards are another important component of the Company's recognition programs. As part of the workplace culture survey completed in mid-2018 the results revealed that employees felt the Company could improve both recognition and reward program objectives and frequency. In particular, non-union employees specifically noted that the discontinuation of the service anniversary awards was one component of their dissatisfaction with recognition at the Company. With a seasoned, experienced workforce capable of effectively and efficiently addressing customer needs, the Company approved the reinstatement of service awards to reward employees' on-going commitment of their careers to Peoples. This is intended to encourage a more frequent and broader recognition of the behaviors and achievements that reflect excellent performance and contributions to Peoples' values, mission, and vision. They report being very pleased and appreciative that Peoples is recognizing that they have committed their careers to the company.

Peoples has a comprehensive Safety Program. One component of this program is providing employees the opportunity to earn Safety Awards. Employees can earn these awards in one of two ways. The first way is if a shop works the entire month without incurring an OSHA Recordable Injury or Responsible Motor Vehicle Accident, each employee in that shop is eligible for a $25 Gift Card. The second is associated with the President's Award for Excellence in Safety. The President's Award for Safety is an individual large and small shop award / honor earned for not incurring any OSHA Recordable Injuries or Responsible Motor Vehicle Accidents during the entire calendar year. In appreciation for their efforts, the prize for the first-place winners in each category is a $75 gift card, steak lunch, and ½ day off.

The Occupational Safety and Health Administration ("OSHA") issued a Memorandum on October 11, 2018 (attached is **Exhibit No. APW-R-8**) which explains the value of these types of incentives/award programs.

Q IS THERE ANYTHING ELSE YOU WOULD LIKE TO ADD?

A. Yes. OCA's proposal to decrease the Company expenses by $32,937 for employee events should also be rejected.

Q. WHY SHOULD THE COMMISSION NOT ACCEPT OCA'S ADJUSTMENTS?

A. The Company has demonstrated that these programs are prudent costs that reflect reasonable and important costs aimed at retaining and attracting employees. These costs mainly relate to the costs associated with an employee gatherings such as the Lernerville

Raceway event, the Special Olympics Polar Plunge event, team lunches and other similar costs.

These costs are an integral part of the Company's employee recognition and engagement program. As discussed above, an engaged workforce provides significant benefits which directly benefit customers. Below is an excerpt from an article by Gallup entitled "The Benefits of Employee Engagement" (attached as **Exhibit No. APW-R-14**) which shows the benefits of employee engagement:

> *"When comparing employee engagement levels, Gallup found that top- and bottom-quartile business units and teams had the following differences in business outcomes*:*
> - *81% in absenteeism*
> - *58% in patient safety incidents (mortality and falls)*
> - *18% in turnover for high-turnover organizations*
> - *43% in turnover for low-turnover organizations*
> - *28% in shrinkage (theft)*
> - *64% in safety incidents (accidents)*
> - *41% in quality (defects)*
> - *10% in customer loyalty/engagement*
> - *18% in productivity (sales)*
> - *23% in profitability*

Q. ARE THERE ANY COMMISSION ORDERS THAT RELATE TO RECOGNITION EVENTS SUCH AS THESE?

A. Yes. I have been advised by counsel that the Commission in the most recent UGI Utilities, Inc. – Electric Division ("UGI") proceeding at Docket No. R-2017-2640058 approved similar employee recognition costs.

Q. I&E PROPOSES A SIMILAR ADJUSTMENT. PLEASE EXPLAIN.

I&E proposes an adjustment of $687,504 to employee expenses related to the vacancy adjustment discussed above.

Q. SHOULD THE COMMISSION ACCEPT EITHER OF I&E'S PROPOSED ADJUSTMENTS?

A. No, for the reasons stated above.

H. TRAVEL AND ENTERTAINMENT EXPENSES

Q. OCA ALSO PROPOSES TO REMOVE CERTAIN TRAVEL AND ENTERTAINMENT EMPLOYEE EXPENSES. (OCA St. No. 2, p. 40). WHAT IS THE BASIS FOR THIS ADJUSTMENT?

A. OCA proposes to remove $829,093 of travel and entertainment expense as Mr. Mugrace claims that the Company did not provide useful information to evaluate the reasonableness of such costs.

Q. PLEASE EXPLAIN THESE EXPENSES AND HOW THESE PROGRAMS BENEFIT CUSTOMERS?

A. Below is a detail of these types of expenses and the reasoning for their appropriate inclusion.

Description	Amount	Reason for Inclusion
Travel expense	$184,117	These costs represent valid travel costs such as mileage reimbursement, airfare, lodging, tolls, meals while traveling, etc.
Employee Events	$219,298	These costs mainly relate to the costs associated with an employee picnic, an annual baseball

Description	Amount	Reason for Inclusion
		game and tailgate, an employee leadership training event and other similar costs.
Sports Sponsorship Related expense	$323,690	Costs represent costs related to corporate functions at sporting venues and other company events. These costs include the value of the tickets received in conjunction with the advertising partnerships the Company has with the various sports teams among other costs. These tickets are used for employee recognition and other such business purposes.
Other	$101,988	Represents other employee related costs such as other reimbursable meals incurred during approved overtime, business related meals and working meals
Total	**$829,093**	

I. COMPANY MEMBERSHIPS

Q. OCA PROPOSES TO DISALLOW CERTAIN EXPENSES RELATED TO THE COMPANY'S CORPORATE MEMBERSHIPS. (OCA St. No. 2, pp. 41-43). OCA ARGUES THAT THESE EXPENSES SHOULD BE DISALLOWED BECAUSE THESE MEMBERSHIPS DO NOT BENEFIT RATEPAYERS. DO YOU AGREE?

A. I do not. In addition to the adjustment for the Company's 5-year trend (rebutted above), Mr. Mugrace proposes an adjustment of $212,202 as he does not believe the Company should recover membership costs related to the following organization as he claims they do not benefit customers: Curate Solutions ($11,928), Energy Association of PA ($168,522), Pittsburgh Area Chamber of Commerce ($1,402), Chamber of Commerce for Greater Philadelphia ($16,850) and the Women's Business Enterprise National Council, Inc ($8,500). As described below, these organizations do benefits customers:

- Curate Solutions - Curate is a civic intelligence company that empowers organizations to monitor risk in local government discussions. It helps companies to stay ahead of policy changes within cities, counties, and school districts with AI-powered local legislative tracking software. Curate scans meeting minutes, agendas, planning, and other documents from more than 12,000 local government entities, helping companies to mitigate risks and spot opportunities. This is a tool that helps the sales team identify upcoming projects. This clearly benefits customers by the fact that expansion of our service creates added revenue opportunities to cover shared costs.
- Energy Association of PA - The Energy Association of Pennsylvania facilitates the collaboration on issues before the PUC thus improving the regulatory process by providing a common response to policy issues such as new regulations.
- Pittsburgh Area Chamber of Commerce - PAACC is a leader in providing and optimizing business growth strategies for professionals in 34 communities, including Moon, Robinson, Findlay, and North Fayette Townships. Its mission is to provide resources and information to advance and maximize economic vitality through advocacy, education and networking to its members and its regional business community. This organization helps foster economic development in the region. A strong economy in the region provides a clear benefit to customers.
- Chamber of Commerce for Greater Philadelphia - The Chamber serves businesses in 11-county Greater Philadelphia regions, encompassing Southeastern Pennsylvania, Northern Delaware, and Southern New Jersey. It is a leading voice

for businesses of all sizes and industries in the Greater Philadelphia area. They advocate for their members and seek opportunities to drive a pro-growth policy that advances economic development and job creation in the region. This organization helps foster economic development in the state. A strong economy in the state provides a clear benefit to customers.

- Women's Business Enterprise National Council, Inc - The Women's Business Enterprise National Council (WBENC) is a leading non-profit organization dedicated to helping women-owned businesses thrive. WBENC was founded in 1997 to develop a nationwide standard for women-owned business certification. Since then, the organization has grown to become the largest third-party certifier of businesses owned, controlled, and operated by women in the United States and a leading advocate for women-owned businesses in corporate and government supply chains. A 501c (3) non-profit, WBNEC partners with fourteen regional partner organizations (see Women's Business Enterprise Center East above) to provide its world-class standard of certification to women-owned businesses throughout the country and offers programming and resources to help women-owned businesses thrive. Supported by corporate and government members dedicated to supplier diversity and investing in the development of women-owned businesses as suppliers. This is a Supplier Diversity Council for Women-owned Companies. We attend several events and utilize their databases to identify and engage women-owned businesses. This supports our supply chain diversity efforts which benefits customers as described in the Incentive Compensation section above.

Based upon the above description it is clear these memberships provide a clear benefit to customers and thus OCA's recommendation should be denied.

J. ADVERTISING EXPENSES

Q. PLEASE EXPLAIN I&E'S PROPOSAL TO EXCLUDE $1,370,197 OF ADVERTISING EXPENSE (I&E St. No. 1, pp. 24-27.)

A. I&E recommend removal of 100% of $1,370,197 of Other Advertising program costs related to Sports Partnerships and Advertising based upon the assertion that these costs may be more representative of goodwill advertising or promotional advertising, that non-customers may benefit from these costs and that there could be a more effective and potentially less costly way to reach customers.

Below is a detail of the costs Mr. Keller proposes to disallow with our explanation of such costs and the basis for their recoverability.

Listing	Cost	Explanation
Project Hyde Park Safety Improvement	$5,000	Peoples contributed to the Hyde Park Volunteer Fire Department located in Hyde Park, Pa. The donation was used to facilitate the improvement of the dock facility that Hyde Park VFD and other emergency service providers use to deploy personnel and equipment for river rescue efforts.
Marcellus Shale Coalition	$15,000	Peoples collaborated with other Marcellus Shale Coalition members on the development of the web site Natural Gas for the Next Generation (www.natgasnextgen.com).
Mark-IM.com	$318	Mark-IM is the vendor that operates our online company store for employees to purchase clothing with the Peoples logo.
Pennsylvania One Call System Inc	$3,000	As a longtime partner with the Pennsylvania One Call System, Peoples was a sponsor of a local Safety Days event held for contractors in Western Pennsylvania, as well as the organization's annual golf outing. This support helps PA One Call in their mission to protect Pennsylvania residents from the dangers stemming from damage to underground utility lines,

Listing	Cost	Explanation
		both in loss of utility service as well as risk of harm to persons or property.
Pittsburgh Downtown Partnership	$125,000	Peoples serves as the presenting sponsor of the annual Holiday Market organized by the Pittsburgh Downtown Partnership. This widely acclaimed community event is a major economic driver during the holiday season, supporting businesses of all sizes. Peoples utilizes the advertising elements that come with the sponsorship to drive awareness toward its Gift of Warmth program to help customers who are struggling to pay their bills, as well as other Customer Assistance Programs.
Tall Timber Group	$2,490	Advertising in regional business trade publication Breaking Ground
Allegheny Conference on Community	$2,000	Sponsorship of Conference's Clean Energy Action Forum.
Carnegie Mellon University	$1,500	Sponsorship of CMU Energy Week held by Wilton E. Scott Institute for Energy Innovation at Carnegie Mellon University
Lozinak Professional Baseball LLC	$205,521	Peoples is the naming rights sponsor of the Altoona Curve minor league baseball team. This includes numerous avenues for advertising, including through the team's website, printed programs, and various signage and awareness opportunities at the ballpark. Peoples utilized this for important safety messages including Damage Prevention (Call 811 Before You Dig) and How to Detect a Natural Gas Leak.
Pittsburgh Penguins LP	$69,979	During the 2022 and 2023 National Hockey League Seasons, Peoples was an in-game sponsor of the Pittsburgh Penguins. Through this partnership, Peoples communicated important natural gas safety messages to attendees of Penguins games, primarily around Carbon Monoxide safety and awareness.
Pittsburgh Pirates	$37,370	Peoples was an in-game sponsor of the Pittsburgh Pirates. Through this partnership, Peoples communicated important natural gas safety messages to attendees of Pirates games, primarily around Damage Prevention (Call 811 Before You Dig), as that is a prominent safety campaign during the baseball season.

Listing	Cost	Explanation
Pittsburgh Steelers LLC	$852,193	During the 2022 and 2023 National Football League Seasons, Peoples was an in-game sponsor of the Pittsburgh Steelers. Through this partnership, Peoples communicated important natural gas safety messages to attendees of Steelers games, primarily around overall Natural Gas Safety (How to Detect a Natural Gas Leak through Sight, Smell and Sound).
Brand Makers LLC	$14,020	Promotional products used as giveaways at a variety of public, industry and internal events to increase engagement.
Capital Analytics Associates	$5,500	Sponsorship of Invest Pittsburgh 2023 Conference
First Choice Telephone Answering Service	$225	First Choice is the operator of our media hotline, answering calls 24/7/365 that may come in from members of the media and contacting the company's on-call Media Relations representative, who then gathers information and responds to the media inquiry.
J Mac Cycling LLC	$500	Peoples employee is part of a small cycling team, J Mac Cycling. We sponsored his team and in exchange, the Peoples logo is placed on the cycling team's uniforms.
Lakemont Park	$1,000	Peoples served as a sponsor for Lakemont's Holiday Lights on the Lake event in both 2022 and 2023. Our logo was included in promotional materials for the event both online and on-site.
Local Government Academy	$1,200	Peoples sponsored The Annual Promoting Excellence in Local Government Golf Outing, held by Local Government Academy. The organization provides municipal governments with education resources, and the outing specifically supports the Michael Lynch Scholarship Foundation.
Mark-IM.com	$24,838	For the purchase of clothing with the company logo on it, worn by staff while working in the field as well as during company volunteer events. Branded clothing, when paired with ID badges, helps ensure customers that our employees are who they claim to be, providing important peace of mind. Having employees wear apparel with the Peoples logo also brings visibility to the company, which is valuable whether in community service or professional functions.
PA Mobile AG Lab	$2,000	Peoples sponsored the Pennsylvania Mobile Agriculture Lab at the Butler County Farm Show. Peoples logo featured on Lab signage and transportation at the show.

Listing	Cost	Explanation
Rapps Packaging	$1,543	Labels for Peoples' Eat Drink Help (EDH) community program. Through EDH, Peoples partners with a small business and a local charity. Peoples provides 1,000 labels to create awareness for all 3 entities, which are placed on the business' products. Once the supply of labels is exhausted, Peoples makes a $1,000 donation to the charity on behalf of the company and participating small business. In 2024, EDH will reach and exceed the milestone of $200,000 donated to local community causes since the program's start in 2016.
Total	**$1,370,197**	

Q. WHAT WAS THE BASIS FOR INCLUDING THE ABOVE REFERENCED ADVERTISING COSTS IN THE CLAIM?

A. There are three main reasons. First, Peoples claim for advertising expenses reflects only expenses which satisfy at least one of the criteria set forth in Section 1316(a) of the Public Utility Code which are as follows:

1. Advertising that is required by law or regulation is addressed, for example, by costs projected for notices to ratepayers of proposed changes in our rates, pamphlets that advise them of their rights as consumers, and information on means of using their energy services more effectively and efficiently.
2. Advertising that is in support of financing.
3. Advertising that encourages energy independence is addressed, for example, by costs projected for publications that educate consumers on the use of domestic natural gas as a heating fuel instead of oil, or as a motor vehicle fuel instead of gasoline.
4. Advertising that provides important information to the public regarding the pipelines being replaced as part of our infrastructure replacement program

and safety messages such as “Call before you dig” and explanations of gas odorization. Rate changes, means of reducing usage or bills, and energy conservation are addressed, for example, by costs projected for notices of changes in rates, for publications that provide maintenance tips and information on home winterization, budget payment programs, for billing and payment options as well as for the availability of public funds for payment of utility bills, and for bill inserts.

5. Advertising that provided a direct benefit to ratepayers is represented by most if not all of our projected advertising costs, in that those costs are designed to keep all of our ratepayers or targeted groups of our ratepayers well informed of issues of interest to them, including information related to our infrastructure replacement program.

6. Advertising that is for the promotion of community service or economic development.

Second, these costs are integral components of the Company’s advertising and outreach program and directly benefit our customers.

Through these relationships, Peoples is able to share information about key customer services and vital safety messages with large, concentrated groups of customers and with the public. These opportunities include print ads in sports programs, radio spots during games, digital and video ads on scoreboards and stadium televisions, on-site promotion such as banners, wraps and decals, and digital advertising on widely-visited

team websites. These advertising and outreach programs focus on safety, e-billing, e-account and other key messages.

In recent years Peoples introduced an e-billing solution. One aspect of these partnerships is focused on increasing customer awareness of the e-Billing solution. Every day, more people turn to digital solutions in all facets of their lives, and Peoples has met that customer expectation by launching a free, e-Billing solution through the Peoples e-Account customer portal. By choosing e-Billing, customers' bills, usage, and account information, as well as required Commission messages, are presented and stored in one secure location.

Many of Peoples' e-Billing ads provide customers with a link to enroll directly from their stadium seats. In the time it takes for a racing pierogi to "round first" in PNC Park, a Peoples customer can reduce their carbon footprint, make a payment, and never have to worry about misplacing a gas bill again. Further, it strengthens the Company's relationship with customers thus making them more likely to pay.

In addition to cutting down on clutter and adding convenience for customers, e-billing is an essential initiative in Peoples' commitment to protecting the environment. Every year, Peoples sends over 8.4 million paper bills. If all Peoples customers switched to e-Billing, we would annually save 33.5 tons of paper, or approximately 6,700 trees. Additionally, this would reduce billing costs.

Another important aspect of these partnerships is focused on increasing customer and public awareness of critical safety information in the seasons which most closely correspond to the potential dangers.

Peoples leverages its partnerships with the Pittsburgh Pirates and Altoona Curve to promote "Call 811" safe digging practices, using print and video advertising at the two respective ballparks.

The Company is also working with other partners to focus campaigns on other key safety initiatives. The Peoples' communications assets for the Pittsburgh Steelers partnership will focus on regulatory messaging surrounding the "3 S's: Sight, Sound, Smell," informing the public about recognizing natural gas leaks. The Pittsburgh Penguins messaging focuses on educating the public about the dangers and prevention of carbon monoxide poisoning.

Sharing these vital safety messages serves to directly protect Peoples customers and the public, including the customers of all other utility companies in the region.

Peoples' sports partnerships deliver significant value to customers by increasing awareness of high-demand services and important safety messages in a timely manner, while also contributing to significant, holistic economic growth within Peoples' service territory. Sports partnerships allow Peoples to inform customers about valuable services, highlight crucial safety messages, and empower regional economic growth. The ongoing health of the company is directly connected to this growth. By supporting popular sporting events and thoughtfully leveraging corresponding message opportunities, Peoples upholds its commitment to the customers and communities it serves and provides them a direct benefit.

Third, they provide a direct benefit to our community and thus our customers. Although these partnerships are integral aspects of our advertising campaigns related to

billing practices, safety, environmental and other messaging these partnerships have further benefits.

Section 1316(a) of the Public Utility code sets forth criteria regarding the recoverability of advertising expenses incurred by a utility. The last item listed, (6), states that advertising that "is for the promotion of community service or economic development" is recoverable.

Peoples' partnerships with the Pittsburgh Pirates, Penguins, Steelers and other teams also fits under item (6) as these major league sports franchises are catalysts for economic development in the City of Pittsburgh and the Western Pennsylvania region, as well as are regional leaders in community service.

A 2018 study by PricewaterhouseCoopers LLC estimated that the Pittsburgh major league sports franchises generated approximately $88 million in revenue to the City of Pittsburgh and helped create over 10,000 jobs between 2012-2016. In addition, these franchises are engaged in many community service projects throughout the region, promoting healthy lifestyles and civic pride among local residents. This study showed that Pittsburgh sports teams have:

- Created 10,100 annual jobs.
- Induced $6 billion in direct and indirect spend in the region over five years.
- Attracted and retained major companies and employers.
- Attracted almost 4 million people to the city each year.
- Generated nearly $41.5 million in advertising value each year to raise the profile of Pittsburgh regionally, nationally, and globally.

By sponsoring the major league sports franchises, Peoples helps spur economic development in the region and creates a positive community brand for Western Pennsylvania, which makes the region a more attractive place for businesses to locate and create jobs and has a direct benefit for our customers. Attached as **Exhibit No. APW-R-9** are letters received in 2019 from the Pittsburgh Penguins, Pittsburgh Steelers and Pittsburgh Pirates affirming the impact of our partnerships.

K. MATERIALS AND SUPPLIES

Q. PLEASE EXPLAIN OCA'S PROPOSED ADJUSTMENTS TO MATERIALS AND SUPPLIES EXPENSES.

A. OCA proposed to remove Materials and Supplies expense related to inflationary adjustments as fully described in Section III. B. of my testimony above. In addition, OCA is proposing to remove $49,932 associated with additionally expected increases resulting from increased costs per fault.

Q. DO YOU AGREE WITH THESE ADJUSTMENTS?

A. No, I do not agree. I explained why OCA's proposed elimination of the 5-year average increase (or inflation) should be denied above.

I also disagree with OCA's adjustment to remove the additional cost related to the planned increase within the Damage Prevention and Leak Survey Departments. This incremental adjustment was added for the expected increase in average cost per fault, higher number of faults expected and the higher cost of anodes recently experienced.

L. RATE CASE EXPENSE

Q. BOTH OCA AND I&E PROPOSE ADJUSTMENTS TO THE COMPANY'S RATE CASE EXPENSE CLAIM. PLEASE SUMMARIZE THESE ADJUSTMENTS.

A. OCA Witness Mugrace proposes a 3-year amortization of rate case expense and I&E Witness Keller proposes a 53-month amortization of rate case expense rather than the Company's two-year amortization. I note that no party objected the underlying claim for rate case expense.

Q. DO YOU AGREE WITH EITHER OCA OR I&E'S RECOMMENDATION REGARDING THE AMORTIZATION PERIOD?

A. No. I do not.

Q. PLEASE EXPLAIN PEOPLES' BASIS FOR A TWO-YEAR AMORTIZATION PERIOD AS ORIGINALLY PROPOSED.

A. Peoples filed rate cases in 2010, 2012 and 2019. The reason seven years elapsed between the 2012 case and the 2019 case was a result of the stay out period committed to in the Company acquisition of the Equitable Gas Company. Further, the main reason for the time that has elapsed between the 2019 case and this case was the result of the Company receiving Accounting and Regulatory approval regarding its treatment of the tax repair election in Docket No. P-2020-3021191. Specifically, the Company changed its tax accounting method to define its unit of property under the IRS's tangible property

regulations, which allowed the Company to prospectively deduct, as an operating expense on its income tax returns, the costs of certain asset improvements that otherwise would be capitalized and depreciated for tax purposes. Peoples projects two years to be the approximate length of time between the filing of this proceeding and the filing of Peoples' next base rate proceeding given the Company's LTIIP commitments for infrastructure replacement. For example, the Company is projected to have capital expenditures of over $1 billion for the combined FTY and FPFTY and expects this to continue beyond the FPFTY.

Q. WHAT IS THE COMPANY'S PROJECTED LTIIP SPEND FOR THE TWO CALENDAR YEARS SUBSEQUENT TO THE FPFTY?

A. We anticipate spending over $475 million and $550 million on LTIIP alone in calendar years 2026 and 2027, respectively.

Q. DID YOU PREPARE AN ANALYSIS REGARDING LTIIP COMMITMENTS AND SUFFICIENCY OF DSIC RECOVERY?

A. Yes. I have prepared **Exhibit No. APW-R-10**. This schedule illustrates that under both the OCA and I&E's proposed rate increases that DSIC revenue is insufficient to provide an adequate return on two years of LTIIP capital expenditures for infrastructure replacement beyond the FPFTY. I note that even if the entire rate increase proposed by the Company is approved that DSIC revenue would be insufficient to provide adequate revenue requirement on LTIIP capital expenditures during 2026 and 2027. Further, this

analysis does not take into account the Company's anticipated cost increases expected during 2026 and 2027 as well as further capital expenditures related to non-LTIIP needs.

As such, this schedule more than supports a two-year amortization of rate case expenses.

Q. WHY ARE BOTH OCA AND I&E'S AMORTIZATION PERIOD FLAWED?

A. Both ignore significant factors why history is not an appropriate indicator of future circumstance in this instance. First, both I&E and OCA ignore the undisputed fact that the reason seven years elapsed between the 2012 case and the 2019 case was a result of the stay out period committed to in the Company acquisition of the Equitable Gas Company. Second, both I&E and OCA ignore the undisputed fact that the main reason for the time that has elapsed between the 2019 case and this case was the result of the Company receiving Accounting and Regulatory approval regarding its treatment of the tax repair election. This election alone reduced the Company's revenue requirement by over $100 million dollars.

Q. WHAT IS THE APPROPRIATE CALCULATION TO DETERMINE THE COMPANY'S RECENT RATE CASE FILING HISTORY?

A. The Company's two-year amortization is more appropriate to use and is quite frankly conservative.

Q. I&E CITES OTHER COMPANIES AS EXAMPLES TO SUPPORT ITS POSITION. ARE THESE REFERENCES RELEVANT?

A. No. They are not. The unique facts and circumstance of Peoples should be considered rather than the unknown facts and circumstance of the other companies. The information provided above regarding the circumstances unique to Peoples supports the argument that a two-year amortization is appropriate.

Q. DO YOU AGREE WITH THESE PROPOSED ADJUSTMENTS?

A. For the reasons stated above, I do not. The Company's original proposal of a two-year normalization should be accepted.

M. PENSION EXPENSE

Q. PLEASE EXPLAIN I&E'S AND OCA'S PROPOSED ADJUSTMENTS TO THE COMPANY'S PENSION EXPENSE.

A. I&E Witness Keller proposes utilizing a 3-year average of pension contributions for pension expense and OCA Witness Mugrace proposes utilizing a 5-year average of pension contributions for pension expense.

Q. DO YOU AGREE WITH I&E'S OR OCA'S PROPOSED ADJUSTMENTS?

A. I do not. The pension funding approach has changed since the acquisition of the Company by Essential Utilities ("Essential") on March 16, 2020, and thus recent history is a better indicator of future costs than past practice especially prior to the Essential acquisition. The

most recent two years are the best indicator. However, a 3-year average such as that proposed by I&E Witness Keller is not unreasonable as that represents the first three calendar years after the Essential acquisition of Peoples.

Q. DO YOU BELIEVE THAT THE COMPANY'S PROPOSAL IN THIS CASE IS FAIR TO RATEPAYERS?

A. Yes. Ratepayers have received the benefit of the Company contributing more to pensions than the accrual amount over the past _ years. It is fair for ratepayers to include the Company's projected contribution in rates in this proceeding.

N. PBOP EXPENSE

Q. PLEASE EXPLAIN I&E'S AND OCA'S PROPOSED ADJUSTMENTS TO THE COMPANY'S PBOP EXPENSE

A. I&E Witness Keller proposes a 53-month amortization of PBOP Expense to be consistent with his rate case expense recommendation and OCA Witness Mugrace proposes a 5-year amortization of PBOP expense. Further, OCA Witness Mugrace proposes an adjustment related to his vacancy credit adjustment which is addressed above.

Q. DO YOU AGREE WITH I&E'S OR OCA'S PROPOSED ADJUSTMENTS?

A. I do not for the same reasons as discussed above in Section L – Rate Case Expense.

Q. ARE THERE ANY OTHER CHANGES NECESSARY IF THE COMPANY'S PBOP CLAIM IS ADJUSTED?

A. Yes. In my direct testimony, Peoples Statement No. 1, consistent with prior cases, I proposed to track actual PBOP costs and amortize the cumulative difference between actual and projected costs in the Company's next base rate proceeding. The amount to be tracked was $779,921 as calculated on Line 10 on page 11 of **Ex. 4, Sch. 1**. The tracking excluded the amortization of prior period amounts. This treatment is consistent with the past ratemaking treatment of these costs by both divisions. The Company anticipates that differences between the rate allowance and actual accruals be tracked and amortized over a period to be determined in the Company's next base rate proceeding.

If PBOP expense is changed then the amount to be tracked must also change.

O. <u>OUTSIDE SERVICES - CONTRACTED</u>

Q. I&E PROPOSES A REDUCTION IN OUTSIDE SERVICES – CONTRACTED OF $810,857. BASED UPON USING THE COMPANY CAPITALIZATION PERCENTAGE FROM THE HTY. IS THIS ADJUSTMENT REASONABLE?

A. No. I&E's calculation incorrectly assumes that the costs added in the FTY and FPFTY would have a similar capitalization rate as those costs incurred in the HTY. That is not the case. The costs added in the FTY and FPFTY are 100% expenses thus causing the reduction in the capitalization rate in those years. The chart below illustrates this.

	Expense	Capital	Total	Ratio
HTY	$ 34,406,069	$ (10,281,365)	$ 24,124,704	-29.9%
5-Year Avg Increase	1,290,228	(385,551)	904,676	-29.9%
Specific Adjustments	2,592,893	-	2,592,893	0.0%
Total	$ 38,289,190	$ (10,666,917)	$ 27,622,273	-27.9%

Q. PLEASE EXPLAIN OCA'S PROPOSED ADJUSTMENT TO OUTSIDE SERVICES – CONTRACTED.

A. Overall, OCA proposed a total adjustment of $3,668,930. Of this amount, $1,940,335 relates to the elimination of the 5-year average increase discussed above in Section III. B. of my testimony and should be rejected. The remaining adjustment of $1,728,595 relates to an incorrect proposal to normalize expenses for Pig Runs, Pipeline Maintenance and Corrosion costs and Right of Way costs.

As the table below provides these costs represent appropriate incremental costs in the claim.

	PNG	PG	DESCRIPTION
BRIDGE WORK	$675,000	$75,000	Required atmospheric remediation for exposed pipe on bridges. This work is required for compliance and integrity of the bridge lines. The work will include inspection of the lines on the bridges and subsequent remediation. Remediation will include replacing hangers and pipe supports, wrapping and/or painting the pipe, and general maintenance.
PRESSURE TESTS	810,000	90,000	These are part of the prescriptive pipeline integrity management program. Pressure testing of sections is required on three lines.
ADDITIONAL PIG RUNS	450,000	50,000	Internal line inspection "ILI" of Transmission Pipelines as mandated by Federal Code; PHMSA, Subpart O of 49 CFR part 192, which prescribes

	PNG	PG	DESCRIPTION
			requirements for managing pipeline integrity in HCAs and requires that operators perform pipeline assessments.
ADDITIONAL PIPELINE MAINTENANCE/ CORROSION	285,371	31,708	Ground Bed and Rectifier needs due to age and condition. These units typically have a 25-30 year working lifespan. We typically have 320 at any given time, due to differing decades of installation, depleting, etc. They get replaced and updated to maintain the requirements of CFR 192.465 (A) (B) 1 & 2.
ADDITIONAL RIGHT OF WAY MAINTENANCE	110,206	15,608	Process of cutting or trimming vegetation within the right of way of gas lines. The ROW must be clear for the overall operation and maintenance of our gas lines to allow for any ongoing maintenance/inspection activities
TOTAL	$2,330,577	$262,316	

P. OUTSIDE SERVICES – IT

Q. PLEASE EXPLAIN OCA'S PROPOSED ADJUSTMENT TO OUTSIDE SERVICES – IT.

A. In addition to the adjustment to eliminate the Company's 5-year average increase adjustments addressed in Section III. B. above, Mr. Mugrace proposes a normalization adjustment of $745,033 based upon his claim that Peoples has not identified whether these costs are annual or one-times costs. This adjustment was derived by taking the Company's proposed adjustment of $1,117,550 and dividing it by three and then subtracting that from the original claim amount of $1,117,550.

Q. WHAT IS YOUR RESPONSE TO THE OCA'S ADJUSTMENT?

A. The OCA adjustment of $372,517 should be rejected. Below is a table of the claimed expenses with support (as provided in discovery) that these costs are recurring, annual costs that should be included in the revenue requirement.

Provider	Description	Amount	Frequency	Reference to Support[2]
ASI	Tax Provision Software Maintenance	$22,000	Annual/ Recurring	Page 15 in contract states billing frequency is annually
Blackline	Financial Process management Software Maintenance	$52,500	Annual/ Recurring	Page 2 in contract states that subscription can be renewed 60 days prior to end of current Subscription, which is currently 9/30/24
Box Services	Document Storage and sharing application	$16,000	Annual/ Recurring	Page 1 in contract states billing frequency is annually
Cority	Safety Incident Management	$73,500	Annual/ Recurring	Page 1 of contract states term of agreement is through May 31, 2025
Reliaquest (Splunk)	SIEM Application (Security Information and Event Management system.)	$228,550	Annual/ Recurring	The contract attached as **Exhibit No. APW-R-11** shows that this is an annual expense.
Workday	HRIS – HR Information System for employee management	$725,000	Annual/ Recurring	Page 1 of contract states term is through June 2026, with an annual fee of $1,299,930
Total		**$1,117,500**		

[22] Support provided in response to Interrogatory No. I&E-RE-24, Part E attached as **Exhibit No. APW-R-13**

This table illustrates these are clearly appropriate annual costs to be recovered in full in the revenue requirement. Mr. Mugrace's normalization adjustment is flawed and should be rejected.

Q. <u>OUTSIDE SERVICES – A&G</u>

Q. DID ANY PARTY MAKE AN ADJUSTMENT TO OUTSIDE SERVICES – A&G BEYOND WHAT WAS DISCUSSED IN SECTION III. B. ABOVE?

A. No.

R. <u>PAYMENT PROCESSING EXPENSES</u>

Q. PLEASE EXPLAIN OCA'S PROPOSED ADJUSTMENT TO THE COMPANY'S PAYMENT PROCESSING EXPENSE?

A. Overall, OCA is comfortable with the recovery of these costs including the recovery of such costs related to the Peoples Gas Division customers. However, OCA is only proposing recovery of 50% of the two adjustments the company proposes.

Q. PLEASE DESCRIBE THE COMPANY'S PROPOSED ADJUSTMENTS TO PAYMENT PROCESSING EXPENSES.

A. There were three types of adjustments made to payment processing expenses. The first adjustment of $124,419 was made to reflect the cost of extending such payments to the Peoples Gas Division customers. It was calculated as follows:

PGC Adoption Estimate	
PNG HTY Average Monthly Payments	88,896
PNG HTY Average Number of Customers (Res. & Comm)	636,247
Percentage Adoption	14.0%
x PGC HTY Average Number of Customers (Res. & Comm)	63,317
PGC Projected # of Payments - Monthly	8,847
Net fee per Payment	$ 1.17
PGC Adoption Adjustment-Monthly	$ 10,368
PGC Adoption Adjustment-Annual	$ 124,419

The second adjustment was to reflect the cost of additional adoption of this payment channel based upon the percentage increase for the twelve-months ended (TME) August 31, 2023, as compared to the TME August 31, 2022 (7.82%). Both the FTY and FPFTY were adjusted for a total of $256,185. The third adjustment of $183,256 was made to reflect a 10% increase in these costs the Company expects to incur upon the expiration of the existing contract in February of 2025.

Q. WHAT IS THE BASIS FOR OCA'S ADJUSTMENT?

A. First, he recommends only 50% recovery of the Company's increase in adoption adjustment of $256,185 thus disallowing $128,094 of the Company's claim. Second, he recommends only 50% recovery of the Company's increase associated with the upcoming contract expiration of $183,256, thus allowing only $91,628 of the Company's claim.

I do find it noteworthy that Mr. Mugrace is comfortable with a portion of our proposed increase based upon history in Payment Processing expense but is unwilling to admit there is any increase necessary in the various categories discussed in Section III. B. of my testimony above.

Q. SHOULD THE COMPANY'S CLAIM BE ACCEPTED?

A. Yes, it should be accepted for various reasons. The Company's increase in adoption rate is reasonable and conservative. Below is a chart of number of payments experienced by PNGD during the first three full calendar years after adoption and the related percentage increase year over year:

	# of Payments	% Change
8/31/2021	801,488	
8/31/2022	956,712	19.37%
8/31/2023	1,031,485	7.82%
Total	2,789,685	

As you can see, the average increase over the last two years was 13.6% and would have been reasonable to use. However, the Company utilized the change from 8/31/22 to 8/31/23 to be conservative.

OCA's challenge to the expected increase in costs upon the expiration of the in February of 2025 of 10% is inappropriate. The contract is over 5 years old and thus the Company proposal is an increase of about 2% per year rather than OCA's proposed increase of about 1% per year. Further, the articles included in **Exhibit No. APW-R-12** indicate that the 10% increase proposed by the Company may be low.

S. UNCOLLECTIBLE ACCOUNTS EXPENSE

Q. DOES OCA ACCEPT THE COMPANY'S METHODOLOGY FOR CALCULATING UNCOLLECTIBLE ACCOUNT EXPENSE?

A. Yes, OCA accepts the Company's methodology for determining the percentage of uncollectible accounts expense. OCA St. No. 2, p. 54. However, the OCA adjusts the overall level of uncollectible expense to reflect its proposed revenue increase.

Q. WHAT IS YOUR RESPONSE TO THE OCA'S ADJUSTMENT?

A. For the reasons noted in the Company' rebuttal testimony, the OCA's revenue adjustments are unreasonable and, in many circumstances, contrary to Commission precedent. Therefore, the OCA's adjustment to uncollectible accounts expense also should not be accepted. The ultimate recovery of uncollectible accounts expense should be calculated based on the rate increase approved in this proceeding.

Q. DOES ANY OTHER PARTY MAKE AN ADJUSTMENT TO UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. Although no other party provided testimony on uncollectible accounts expense it appears that I&E Witness Keller makes an adjustment to uncollectible accounts expense in Table 1 on page 4 of his direct testimony (OCA Statement No. 1). Upon reviewing the Excel workpapers provided, it appears that Mr. Keller adjusts the overall level of uncollectible expense to reflect I&E's proposed revenue increase.

Q. WHAT IS YOUR RESPONSE TO THE I&E'S APPARENT AND UNSUPPORTED ADJUSTMENT?

A. For the reasons noted in the Company' rebuttal testimony, the I&E's revenue adjustments are unreasonable and, in many circumstances, contrary to Commission precedent. Therefore, the I&E's adjustment to uncollectible accounts expense also should not be accepted. The ultimate recovery of uncollectible accounts expense should be calculated based on the rate increase approved in this proceeding.

T. NON BASIC SERVICES FROM THIRD-PARTY PROVIDERS

Q. WHAT DOES OCA WITNESS ALEXANDER PROPOSE WITH RESPECT TO THE COMPANY ALLOWING THIRD PARTIES TO OFFER NON-BASIC SERVICES?

A. OCA Witness Alexander proposes that the Commission investigate whether regulated ratepayers are subsidizing any costs associated with marketing, billing, and collection of unregulated non-basic provided by Peoples' unregulated affiliate.

Regarding OCA's claim that they did not receive a reply to the discovery[3] at the time of filing their Direct Testimony is misleading. I wanted to clarify that the Company responded to this discovery on time. Rather, OCA did not have the discovery in time as it did not serve the discovery in time to receive it back prior to filing of their Direct Testimony. OCA Set XX was served on March 11, 2024, 10 days prior to the due date for their Direct Testimony. The Company timeline filed responses on March 21, 2024.

[3] The Company assumes this is in reference to OCA Set XX served on March 11, 2024.

Q. PLEASE RESPOND TO MS. ALEXANDER'S RECOMMENDATIONS.

A. The Company is confident that it is appropriately handling this billing and relationship with its affiliate. Peoples most recent management audit issued April 2021 at Docket Nos. D-2020-3018771, D-2020-3018773, D-2020-3018774 included a comprehensive review of affiliate transactions and there were no findings related to non-basic chargers. As such, a special investigation is unnecessary as there are already avenues for review of such charges in place.

However, if further review is deemed necessary the Company will fully cooperate with any such review as it does with all reviews and audits performed by the PUC.

U. GATHERING SYSTEM CHARGES

Q. OSBA WITNESS KNECHT ARGUES THAT THE COMPANY SHOULD RECOVER GATHERING SYSTEM COSTS IN THE COMPANY'S PURCHASED GAS COST ("PGC") PROCEEDINGS. (OSBA ST. NO. 1, P. 13-17) IS THIS A REASONABLE REQUEST?

A. No, it is both unreasonable and unlawful. Peoples owns the gathering system assets, and they are used to provide utility service to customers. Therefore, Peoples is allowed to earn a return on and of the gathering system assets. It is my understanding that NGDCs cannot legally recover costs for owning utility infrastructure in PGC rates. Costs for owning utility infrastructure are recovered in base rates, and Peoples has recovered its gathering system costs in its prior rate cases. Therefore, OSBA's proposal cannot be accepted.

Q. DO YOU AGREE WITH HIS RECOMMENDATION?

A. I do agree that is too late in this proceeding to implement changes. However, I do not agree with his proposed change to the allocation of costs.

V. SYNERGY SAVINGS

Q. OCA WITNESS EVRARD ARGUES THAT THE COMPANY DID NOT CLEARLY SET FORTH ANY COST SAVINGS OR OPERATIONAL EFFICIENCIES RESULTING FROM THE ACQUISITION BY ESSENTIAL. (OCA Statement No. Pages 10 to 13) PLEASE RESPOND TO MR. EVRARD'S ASSERTIONS.

A. Mr. Evrard mainly makes two claims. First, he claims that it is unclear whether cost savings and operational efficiencies anticipated in the Aqua-Peoples acquisition are captured or reflected in the revenue requirement; Second, Mr. Evrard further tries to tie the request for capital structure and Return on Equity to the ownership of Essential Utilities.

Regarding cost savings, any benefits achieved over the last four years have been reflected in O&M as the Company utilized a HTY plus approach to developing the revenue requirement in this case. In other words, adjustments were made to the HTY costs which would include the benefits of the Essential acquisition. Further, no requirement was established in the Essential Acquisition proceeding which required the Company to report or demonstrate cost savings.

One of the biggest savings/benefits passed onto customers since the Essential Acquisition was the adoption of the IRS Unit of Property rules ("Tax Repairs"). Peoples

voluntarily filed a petition at Docket No. P-2020-3021191 whereby it made the following commitments which benefited customers:

- Refund 100% of the Tax Repairs Catch-Up deduction to customers via a special surcredit (Rider Tax Repairs Surcredit) that began on August 1, 2021. This surcredit has provided an annual refund to customers in excess of $29 million since inception. This credit was provided to customers in advance of such tax benefit being monetized by the Company.
- File a base rate case no later than December 31, 2023 to ensure the prospective impact of Tax Repairs was reflected in base rates.;
- Provided $5.0 million of rate credits which were used to offset the impact the COVID-19 pandemic had on customers.; and
- Provided a $500,000 non-recoverable donation to the Dollar Energy Fund for low-income customer grants.

I note that Mr. Huwar's Statement No 1-R in this proceeding explains the many efficiencies and improvements in service that the combined Peoples is providing to its customers.

Regarding Mr. Evrard's second claim that capital structure and Return on Equity are tied to the ownership of Essential Utilities is baseless. Company Witness Paul Moul prepared an evaluation of both capital structure and ROE that drove the claim for such items in the case, and this was unrelated to the Essential acquisition or ownership.

W. COST OF OTHER PROPOSALS

Q. DID PARTIES MAKE RECOMMENDATIONS THAT COULD RESULT IN INCURRING ADDITIONAL COSTS?

A. Yes. OCA Witness Alexander made the following recommendations that would potentially impact costs. The Company sent discovery to obtain any cost assessment completed by the witness on her recommendations and no assessments were completed.

- evaluate the potential for extending the hours at a reasonable cost;
- professionally conduct a complaint root cause analysis and report on findings, including identification of trends, evaluation, steps to reform or avoid repeated trends, and internal steps taken to take proper internal enforcement action where needed within months and quarterly updates to stakeholders;
- conduct consumer education to alert them when they are paying more for service than default service from an NGS; and
- Present on the bill whether the NGS charges are higher/lower than default service.

In addition, OCA Witness Colton made various recommendations that could have cost implications such as the following listed below. In the response to discovery, Mr. Colton admitted that he did not complete a specific "assessment of the costs" for his recommendation but did provide his assumptions about the implications. The Company appreciates Mr. Colton's further feedback and continues to assess the implications.

- Provide a notice about CAP to customers they are entering into a payment arrangement with;
- Provide a notice about CAP to customers in the cold weather survey; and

- Notify low income customers about CAP when there balance reaches more than $300.

Q. WERE THESE COSTS INCLUDED IN THE REVENUE REQUIREMENTS PROPOSED BY THESE PARTIES?

A. No. As such, the Company is proposing that certain accommodations be made for future recovery of incremental costs incurred as a result of recommendations made by the other parties in this proceeding.

IV. PUBLIC INPUT HEARING COMMENTS

Q. Please address the concerns raised at the Public Input Hearings regarding the Company's accounting methods.

A. While Company Witness Mitole in her Direct Testimony at Peoples Statement No. 8 addresses the Company's accounting methods and the systems in place for Peoples, I'll briefly address the concerns raised by Mr. Culbertson at the March 5, 2024 Public Input Hearing here.[4] First, Mr. Culbertson contends that Peoples "systems of accounts" is not public information and that Peoples must follow generally accepted accounting principles ("GAAP"). The Company's financial results are publicly available as the Company files annually files the Gas Annual Report each April with the PUC. This report provides an extensive level of detail of the Company's books and records. Further, I add that the

[4] Public Input Hearing Tr. 126-129.

Company compliance with GAAP is audited annually by a Big Four Accounting Firm.

Second, Mr. Culbertson suggests that Peoples' capitalized costs are unaudited and that "imprudent and unreasonable" costs must be removed from the rate base. I agree that Peoples should not recover "imprudent and unreasonable" costs; in that vein, Peoples is not seeking to recover "imprudent and unreasonable" costs in this proceeding, as no such costs from Peoples exist. Moreover, as to Mr. Culbertson's contentions that the Company's costs are "unaudited," such position is meritless. Indeed, this proceeding – with the participation of many parties, including the Office of Consumer Advocate, the Commission's Bureau of Investigation and Enforcement ("I&E"), the Office of Small Business Advocate ("OSBA"), and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), among others – serves as a fulsome audit of the Company's claimed costs sought to be recovered. Additionally, I note that Mr. Cuthbertson mistakenly contends that the acquisition of Peoples by Essential Utilities, Inc. was not approved by the Commission. In fact, it was at Docket Nos. A-2018-3006061, *et al.*, on January 24, 2020. As mentioned above, the Company compliance with GAAP is audited annually by a Big Four Accounting Firm.

V. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
	:

	:	
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REBUTTAL TESTIMONY OF
EDWARD A. PALOMBO,
VICE PRESIDENT, RELIABILITY
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: April 18, 2024 Peoples Statement No. 4-R
DATE ADMITTED: _____

PREPARED REBUTTAL TESTIMONY OF
EDWARD A. PALOMBO

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Edward A. Palombo. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or "Company") as Vice President, Reliability.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 4.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will be addressing comments from PIOGA witnesses Weaver, Jacobs, and Brant, regarding topics of gas quality, gathering fees, and operating conditions. I will also touch on the overall long-term relationship between Peoples and PIOGA, and a continued commitment to maintain and enhance the relationship and address OCA Witness Alexander's testimony on Termination Procedures and certain Supplier Matters.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I will be addressing the testimony by the major topics as opposed to by witness.

Q. BRIEFLY DESCRIBE THE RELATIONSHIP BETWEEN PEOPLES AND PIOGA, AND ITS' MEMBER COMPANIES.

A. As stated by PIOGA witness Weaver, Peoples and PIOGA have developed a good business relationship dating back to the 1990s. We both recognize and understand how local production can benefit producers, Peoples and its' customers. We have a history of collaboration and cooperation to identify opportunities where both organizations can improve their core businesses: allow producers to deliver locally produced natural gas, and Peoples to provide safe, reliable gas service to customers at an affordable price.

A prime example of this is included in witness Brant's testimony where his company (Kriebel) experienced a shut-in of a production meter to the Peoples' system due to different regulator set pressures at various delivery points, both production and interstate, in the near vicinity. Mr. Brant directly reached out to Peoples' operating personnel and discussed how adjusting the set pressures at delivery points may allow his production to flow again. Peoples' operations team made pressure adjustments at some of the delivery points, and in fact the production meter in question did resume flowing gas. Without a strong business relationship where both sides respect and understand each other's viewpoints, this direct communication and resolution would not have been reached. This is just one of many instances where Peoples and PIOGA collaborate to mutually benefit each other and system operations.

GAS QUALITY STANDARDS

Q. WHAT COMMENTS RELATED TO GAS QUALITY WILL YOU BE ADDRESSING?

A. Witnesses Weaver and Jacobs both offer testimony regarding gas quality, specifically water vapor content, and generally support standardization across the system. One consistent standard is the most efficient and effective way to ensure gas quality, and reduce or prevent customer outages associated with fluids, help mitigate corrosion of pipelines and facilities, and maintain safe and reliable service to customers. However, Mr. Weaver and Mr. Jacobs propose that the standard water vapor standards should revert to the original water vapor standards and moisture curve of the legacy Peoples Natural Gas Company.

Q. ARE THE WATER VAPOR STANDARDS REQUESTED BY PIOGA CURRENTLY IN EFFECT ON PEOPLES SYSTEM?

A. No, they are not. The current PNGD water vapor standards are a combination of the legacy Peoples Natural Gas Division ("PNGD") and legacy Equitable Gas Company (EGC") water vapor standards as listed in the current Master Interconnect Measurement Agreement (MIMA) and include use of the water vapor curve. This was accomplished when the Peoples and Equitable divisions were merged in the prior base rate case, and a consolidated MIMA was implemented for the current PNGD system. These combined PNGD/EGC standards are what currently apply.

Q. IS THE COMPANY PROPOSING TO APPLY THE COMBINED PNGD/EGC STANDARDS TO PRODUCERS ON THE PEOPLES GAS DIVISION (PGD) SYSTEM?

A. Yes. The Company is proposing to have these standards that are currently in the MIMA also apply to producers on the PGD system so that all producers across the entire Peoples system have the same standards.

Q. WHAT IS PIOGA PROPOSING?

A. PIOGA is proposing that the Company relax its current standards and revert back to legacy PNGD standards that no longer apply.

Q. DO YOU AGREE WITH PIOGA'S PROPOSAL?

A. No. The Company agrees to use of a water vapor or moisture curve to determine the allowed level of water vapor in production gas delivered to the Company facilities. The moisture curve referenced by witness Jacobs is included in the water vapor requirements in the MIMA. However, the other standards that are in the current MIMA and tariff must also apply. The gas quality requirements in the PNGD tariff are listed below.

PEOPLES NATURAL GAS COMPANY LLC

GAS—PA PUC NO. 47
ORIGINAL PAGE NO. 35

RULES AND REGULATIONS

31. GAS QUALITY

Unless otherwise agreed to by the Company through separate agreement, gas delivered by a supplier or producer shall not contain more than:

(a) Seven (7) pounds of water per million cubic feet on an approved dew point apparatus.
(b) Two (2) percent by volume of carbon dioxide.
(c) Four (4) percent by volume total inerts including carbon dioxide, nitrogen, argon, and helium provided that total carbon dioxide content shall not exceed two (2) percent by volume.
(d) Twenty-five hundredths (0.25) grains of hydrogen sulfide per 100 cubic feet.
(e) Ten (10) grains of total sulfur per 100 cubic feet.
(f) Two tenths (0.2) percent by volume oxygen.

Gas delivered into the Company's system should be free from oil, water, salt, gum, dust, and other foreign substances that might interfere with the marketability of the gas. Unless otherwise agreed to by the Company, the gas delivered shall contain not less than 967 Btu per cubic foot and shall not exceed 1,100 Btu per cubic foot (as determined by calorimeter test @ 60 degrees Fahrenheit and saturated with water vapor). Gas accepted by the Company that contains less than 967 Btu per cubic foot will be enhanced to ensure that gas delivered by the Company to customers shall meet Commission heating value requirements and the Company may charge for this.

Q. WHY IS IT IMPORTANT THAT THE CURRENT MIMA STANDARDS NOT BE REDUCED?

A. As previously stated, the water content in the gas stream can have negative effects on pipeline operations, both from a material integrity perspective as well as reliable gas service. The current standards have evolved over the years based upon operational issues Peoples has experienced. High water content does not just potentially have negative impact immediately on the system, it can also build up over time (months, or even years), and result in costly remediations to resolve. In efforts to reduce and minimize these negative effects, Peoples can use past issues to evaluate the water vapor standards to best determine the optimal requirements that prevent similar future operational issues.

Q. HOW DO THE CURRENT MIMA STANDARDS COMPARE TO STANDARDS IMPOSED BY INTERSTATE PIPELINES?

A. Peoples current water vapor standards are lower than the water vapor requirements for producer deliveries to other pipelines, such as interstate transmission lines, and midstream pipelines. For example, Peoples has interconnects with Equitrans where off-system deliveries of local production to the interstate system can be supplied. Equitrans has a strict 7#/MMcf water vapor content that must be met to deliver the volumes, with no exceptions. Interstate pipelines have strict guidelines for gas quality, and zero tolerance if those requirements are not met. If the moisture limit even slightly exceeds the acceptable level, and for a very short period of time, Equitrans has an automated valve at the point of demarcation they will close immediately without notice to Peoples. Over the years, Peoples experienced many unexpected shut-ins at the Equitrans interconnects, and ultimately invested capital to install additional gas conditioning and glycol units to maintain moisture content below the requirement.

RATE AGS

Q. WHAT COMMENTS REGARDING GATHERING FEES AND RATE AGS WILL YOU BE ADDRESSING?

A. I will be addressing the over-arching concept of offering a gathering service, whether or not it is appropriate to charge a gathering fee on the PGD system, and the value of the service and fees.

Witnesses Weaver and Jacobs offer testimony that tariff AGS and a gathering fee should not be applied to PGD since there never was a gathering fee, primarily on the premise that there are no gathering assets as classified by DOT on the PGD system. They

do however propose an alternative of $0.18 per Mcf fee as compared to the $0.26 currently charged on the PNGD system and proposed for the PGD system.

Q. DO YOU AGREE WITH THEIR ASSESSMENT?

A. I do not agree for several reasons. First and foremost, PNGD does not collect a gathering fee based upon the DOT classification of pipe or the Federal Energy Regulatory Commission ("FERC") natural chart of accounts classification. The gathering fee is collected regardless if the pipeline is classified under DOT or FERC as distribution, transmission, or gathering. The AGS service and associated gathering fees are applied at any delivery point to help recover some of the costs to operate and maintain pipelines and facilities that receive and transport local production gas. Secondly, PGD (legacy TW Phillips) did in fact have DOT classified gathering and production pipelines but reclassified them to distribution as part of segmenting business functions prior to their acquisition by Peoples. These assets have been discussed in testimony and identified as the pipelines that "function more like gathering than distribution" in receiving and transporting local production gas.

With respect to the gathering fee, the current $0.26 per Mcf charged to producers represents about a third of the overall cost of gathering service, with the balance absorbed by customers. Peoples believes this is a fair and equitable sharing between customers and producers for recovery of total gathering cost of service. In addition, Peoples has not proposed an increase to the fee in this filing, it has proposed to apply the existing PNGD fee to production that is delivered to PGD, which is not currently subject to any fee beyond producer retainage. PIOGA's proposed fee of $0.18/Mcf would result in recovery of

approximately the same level of revenues that is currently being recovered from producers on the PNGD system even though the fee is expanded to production delivered to PGD. Under PIOGA's alternative proposal, producers would not bear any of the rate increase proposed in this case, and producers that currently deliver gas to PNGD would see a rate decrease. Peoples believes that producers should pay some portion of rising costs that drive this proceeding.

OPERATIONAL ISSUES

Q. WHAT OPERATIONAL ITEMS WILL YOU BE ADDRESSING?

A. I will address operational items that can impact the potential to flow gas into the Peoples system, such as regulator set points, pipeline operating pressures, system maintenance and construction. I will also discuss why it is important for Peoples to establish operating and gas quality requirements and monitor producer delivery points for compliance with these guidelines. Witnesses Jacobs and Brant provided comments regarding Peoples' operating practices that they state reduces the level of gathering service, and their ability to produce gas. Specifically, they question regulator set pressures, the provisions for restricting flow or shutting in meters.

Q. PLEASE GIVE AN OVERVIEW OF HOW PEOPLES OPERATES THE GATHERING SYSTEMS.

A. Peoples has approximately 5,700 producer meters that interconnect to the Peoples systems. These meters serve as points of demarcation between producer and Peoples facilities, much like city gate stations with interstate pipelines. Peoples is required by PHMSA to establish

a Maximum Allowable Operating Pressure (MAOP) on every pipeline it owns and operates. The MAOP is the highest pressure the pipelines can operate safely to prevent failures or ruptures that could lead to catastrophic incidents. Peoples has sole responsibility to ensure their pipeline pressures do not exceed the MAOP and create an over pressurization event. If this occurs, a catastrophic incident could occur. In addition, Peoples could receive a notice of violation of federal codes and face a potential penalty for non-compliance with the regulations.

Q. HOW DOES PEOPLES COMPLY WITH REGULATIONS TO PREVENT AN OVER PRESSURIZATION EVENT ON THE GATHERING SYSTEMS?

A. The regulator set pressure at each producer meter determines the delivery pressure to the pipeline system. Peoples establishes the regulator set pressure at the producer meters to ensure operations are below the MAOP of the system. All 5,700 producer meters represent an opportunity to exceed MAOP and over pressurize the system. Peoples conducts random audits at producer meters to verify the pressure is set at the appropriate set point. If the set pressure is too high, Peoples communicates with the producer to adjust the pressure back to the acceptable level to stay within the MAOP. If the producer does not comply, Peoples will shut-in the meter to avoid an MAOP violation.

Q. ARE ALL REGULATORS SET AT THE SAME PRESSURE IN A GATHERING SYSTEM?

A. Not in every case. Peoples attempts to maintain consistent set pressures within a system, but that is not always practical. Peoples uses pressure/flow modeling to determine the set

pressures to optimize the system to operate within MAOP; and to transport production gas; and to maintain gas service to customers. The Peoples' systems have a variety of pipelines with different diameters, materials, and age, as well as different customer load demands, all of which contribute to the pressure loss across the system.

The physical location of a production meter can influence the regulator set point. If the meter is located in an area of the system with minimal customer demand, less volume may be required to maintain gas service, and a lower set pressure may be more optimal to prevent pressure build-up in the pipeline. The opposite can be true: if the area has large customer demand, a higher set pressure may be requested to flow more gas. Pipe diameters can also be a contributing factor in determining set pressures. If the meter is delivering into a smaller diameter pipeline, a higher set pressure may be required to maintain sufficient line pressure to transport the production gas to customer demand. If the meter is delivering into a large diameter pipe, a lower set pressure may be adequate. The vintage and material of a pipeline can also determine what pressure the regulator should be set. Older bare steel pipes can be more susceptible to significant leaks or failures at higher pressures. Therefore, producer meters near these older pipelines may have a regulator set pressure lower than other meters in the same system to mitigate potential leaks or failures.

Q. ARE REGULATOR SET POINTS STATIC OR CAN THEY BE ADJUSTED?

A. Depending on operating conditions, regulator set points may need to be adjusted. Peoples may need to reduce the operating pressure of a pipeline due to many various reasons: maintenance and construction activities downstream of the producer meter, significant leak repairs or line pulls, decreased customer demand during non-heating season, etc. In these

instances, Peoples asks producers to lower their regulator set pressures to meet the lower operating pressure requirements, recognizing this could restrict the volume of gas the producer may deliver. Peoples primary concern is to operate the pipeline safely while maintaining gas service to customers, therefore this decision to lower set pressures comes after evaluation and modeling to ensure safe and reliable service. The duration of the restriction varies depending on the operational issue that created the lower operating pressure. Peoples cannot predict the extent or duration of the restriction, nor can they always estimate how long it will take to complete the necessary repairs and remediations. Witness Jacobs suggests that the Commission limit the duration Peoples can restrict pressures and flows to nine months, primarily so that producers can avoid the jeopardy of Active Status of the well as defined by the Pa. Department of Environmental Protection ("DEP") for low-producing wells, and so that producers can avoid potential plugging and abandoning costs.

Q. IS PIOGA'S SUGGESTION REASONABLE?

A. No. It is not practical to place a limit on the duration of the restriction since it is unknown how long it may take to resolve the operating issue. Additionally, plugging and abandonment of wells is a typical activity of the exploration and production business. The day a well is drilled, there immediately is a future liability for plugging and abandoning it. Peoples cannot be expected to be the backstop to avoid these costs by just allowing a producer to deliver low volumes or low-quality gas to maintain Active Status on a well.

Regulator set points may also be adjusted seasonally. During non-heating months, Peoples' total volumes delivered to customers decreases, subsequently less total supplies

into the system are required to serve the customers, systems can operate at lower pressures, and regulator set points can be lowered. If regulator set points remain at higher pressures during low customer demand, pressure build-up can occur in the pipelines that could result in over pressurization, additional leakage, or worst-case pipeline failures.

The goal for Peoples is to operate the gathering systems prudently and safely, within prescribed federal guidelines; receive and transport as much local production the system will allow; and maintain gas service to all customers. As previously discussed, Peoples collaboratively works with producers to adjust regulator set points where possible to allow local production to flow into the system, while not compromising pipeline safety and reliable service to customers.

Q. WHAT IMPACT DOES ADJUSTING REGULATOR SET POINTS OR SHUTTING-IN METERS HAVE ON PRODUCERS?

A. Peoples recognizes the regulator set pressures can directly impact the volume of gas delivered by producers. The challenge is to determine the optimal regulator set pressure that can maximize the local production AND maintain system operations at safe and reliable levels. Adjusting regulator set pressures for operational reasons, or seasonally is unavoidable. However, this does not diminish the value of the gathering service as suggested by witness Weaver. The gathering service is still provided to all other producer meters that are operating within the appropriate guidelines to transport local production.

The intent of the random producer meter audits is to ensure all producers are complying with the pressure requirements, and to avoid any assertion of partiality of one producer over another. Any producer meter that is found in violation of set pressures faces

potential shut-in, not as a punitive measure but to ensure the safe operation of the pipelines. To reiterate, shutting-in a meter for violating set pressures does not diminish the value of the gathering service. It is a means to maintain a fair and level playing field for all producers and protect the Peoples system.

Q. DO YOU AGREE WITH THE REVISIONS TO THE "CHARACTER OF SERVICE" LANGUAGE IN RATE AGS AS PROPOSED BY PIOGA?

A. I do not agree. The current langue in the "Character of Service" is adequate as stated. Peoples primary business function is that of a regulated local distribution company that provides safe and reliable service to customers. Rate AGS has been developed and established so that Peoples can also provide a level of service to Appalachian producers to foster a business relationship that takes advantage of the benefits of local production gas. Gas that is produced locally presents value for producers to sustain a profitable business, while assisting Peoples in procuring natural gas for customers in a most cost-effective environment. The balance for Peoples is to accomplish this without sacrificing safe operations and reliable service. The language proposed by PIOGA aims to remove the flexibility for Peoples to make the most prudent daily operational decisions that meets this balance. To revise the language to lift the restrictions and operate the system that meets producers' expectations to freely flow conventional gas at all times, or not have the ability to adjust pressures that ensure safe operations, or shut-in meters that deliver low quality gas, is not consistent with being a prudent operator or providing reliable service.

TERMINATION PROCEDURES

Q. PLEASE EXPLAIN OCA WITNESS ALEXANDER'S RECOMMENDATION REGARDING TERMINATION PROCEDURES.

A. OCA Witness Alexander makes the following recommendation:

> *Peoples should be required to develop and implement detailed training programs to ensure compliance with the Commission's specific regulations relating to personal contact, particularly with respect to the obligation to attempt personal contact "immediately" prior to actual termination of service. This compliance filing and detailed implementation plan should be filed within 3 months of a final order in this proceeding after consultation and review by stakeholders.*

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. Peoples currently employs a training program that promotes compliance to Pennsylvania State Code §56.97. Although the Peoples training materials do not specifically illustrate the requirement of "attempting personal contact immediately prior to actual termination", this process is communicated verbally to employees during their Operator Qualification training. The Peoples training materials contain high level bullet points to guide the classroom discussion; therefore, they do not spell out every word that is shared with the employees being trained. Peoples is willing to further evaluate its training program to determine if it can enhance the documentation of compliance to this section of the Code.

CERTAIN SUPPLIER MATTERS

Q. PLEASE EXPLAIN THE TWO RECOMMENDATIONS THAT OCA WITNESS ALEXANDER MAKES REGARDING SUPPLIER MATTERS.

A. OCA Witness Alexander makes two recommendations. First, she recommends that Peoples undertake customer education to alert customers who are purchasing their commodity from a third party supplier if they are paying higher than default service. Second, she recommends that the Peoples bill clearly states whether the charges from a third party supplier are higher than default service.

Q. DO YOU AGREE WITH THESE RECOMMENDATIONS?

A. Additional education regarding Energy Choice can benefit all customers in making the best decision in selecting a natural gas supplier, especially customers who may be paying higher prices than the default service gas price from the utility. Currently, PNG includes the utility gas price, referred to as the Price To Compare (PTC), on the customer bill. This is intended to give the customers a comparison of the default utility gas price against their current supplier price. Peoples is open to discussion of providing additional details to customers in deciding whether or not to renegotiate with their current supplier, to shop and choose another supplier, or return to default service. However, I am advised by counsel that the Commission's policy on advising shopping customers is for the utility to post the price to compare. Peoples respectfully submits that any change to that policy should be considered in a generic proceeding where all interested parties views and positions can be evaluated.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REBUTTAL TESTIMONY OF
PAUL BECKER
VICE PRESIDENT, CONSTRUCTION & ENGINEERING
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: April 18, 2024 Peoples Statement No. 5-R
DATE ADMITTED: _____

PREPARED REBUTTAL TESTIMONY OF
PAUL BECKER

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Paul Becker. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President, Construction and Engineering.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 5.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. To respond to the recommendations outlined in the testimony of the Bureau of Investigation and Enforcement's ("I&E") witness, Mr. Harvey, the quality-of-service concerns stated in the testimony of the Officer of Consumer Advocate's ("OCA") witness Mr. Evrard and to address the concerns of OCA witness Mugrace.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I have arranged my testimony into three separate sections based on my responses to each of the identified witnesses.

Response to I&E witness Harvey re: LTIIP

Q. PLEASE COMMENT ON MR. HARVEY'S RECOMMENDATION (PAGE 18, LINES 4-6) THAT "PEOPLES CONTINUES TO FOCUS ON INCREASING ITS EFFORTS TO MAINTAIN ITS REPLACEMENT RATE TO ENSURE THAT IT MEETS THE ORIGINAL COMMITMENT SET IN THE LTIIP."

A. Peoples agrees to this recommendation and moreover suggests it has demonstrated a keen focus on doing just that. Since 2016, Peoples has met or exceeded the replacement mileage in each year of its then applicable LTIIPs. That is eight years in a row. This achievement has been accomplished while the mileage targets increased from 80 in 2016 to 181 in 2023 or by almost 125%. Mr. Harvey is correct that focus is the key. The organizational structure at Peoples is designed to provide that focus and has proven the ability to execute. Moving forward, assuming fair and reasonable rate case treatments/outcomes, Peoples plans to file an LTIIP covering the calendar years 2026-2030 which will reflect increases in LTIIP mileages (from 184 in 2026 to 221 in 2030).

Q. PLEASE COMMENT ON MR. HARVEY'S RECOMMENDATION (PAGE 18, LINES 10-11) TO MONITOR AND CAPTURE DATA ON LEAKS FOR FIRST GENERATION PLASTIC IN THEIR RISK REDUCTION DATA COLLECTION AND INCLUDE THE INSTALLATION YEAR.

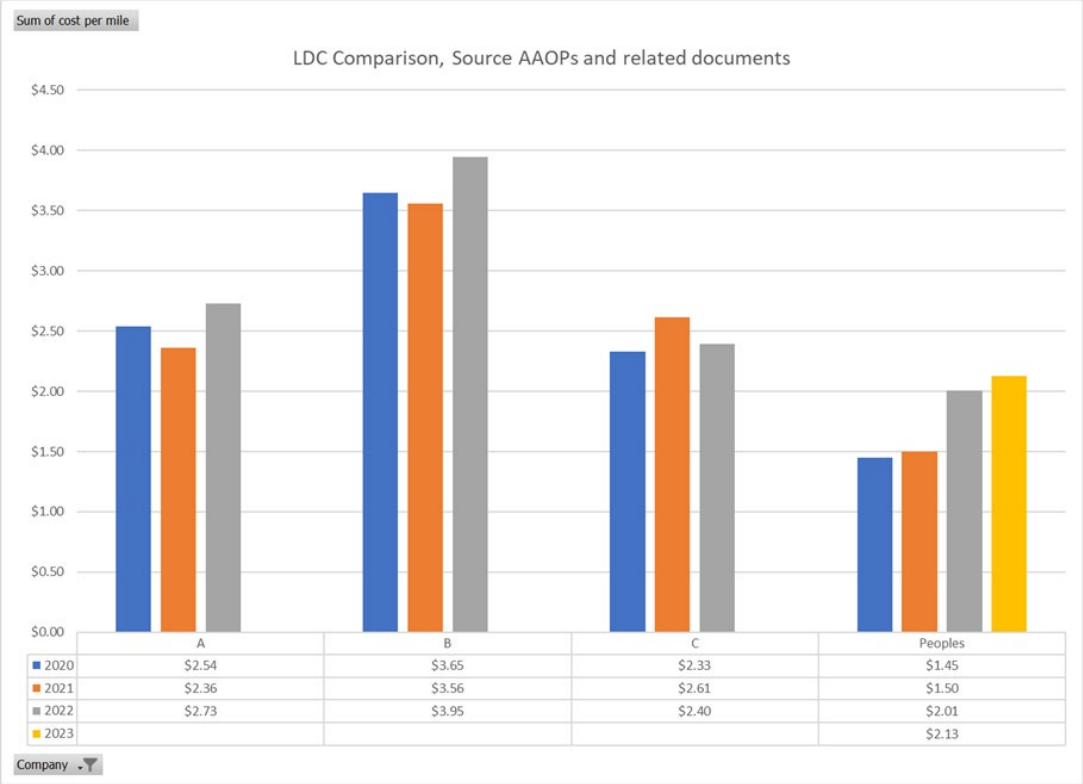
A. Peoples agrees with the recommendation. Gathering such data is reasonable and Peoples will do so. If such data would support risk ranking first generation plastic over bare steel Peoples would adjust its replacement asset type targets accordingly.

Q. PLEASE COMMENT ON THE RECOMMENDATION (PAGE 18, LINES 18-21) TO CONTINUE ITS BARE STEEL REPLACEMENT EFFORTS.

A. As stated above, moving forward, assuming fair and reasonable rate case treatments/outcomes, Peoples plans to file an LTIIP covering the calendar years of 2026-2030 which will reflect increases in LTIIP mileages (from 184 in 2026 to 221 in 2030).

Q. PLEASE COMMENT ON MR. HARVEY'S RECOMMENDATION (PAGE 19, LINES 11-13) TO CONSIDER BREAKING THE COST PER MILE INTO AT LEAST THE FOLLOWING CATEGORIES: DESIGN/INSPECTION, MATERIALS, CONSTRUCTION/LABOR, RESTORATION AND PERMITS.

A. Peoples agrees to pursue a further break down of its costs into categories, which Peoples expects to result in the recommended breakdown. I also want to point out that Peoples' LTIIP pipeline replacement cost per mile compares favorably with other Pennsylvania LDCs. Please see the chart below. The data used for this comparison was obtained from the Annual Asset Optimization Plans of the respective companies with a focus on the cost of mains and services. (Specific company data removed). The cost per mile was calculated by dividing the cost of mains and services (when available) by the total actual LTIIP eligible miles reported.



Response to OCA Witness Evrard re: Quality of Service

Q. IN HIS TESTIMONY ON PAGE 11, AS WELL AS VIA SUMMARY IN EXHIBIT DE-2, PAGE 1., OCA WITNESS EVRARD ASSERTS THE FOLLOWING: "ONE CUSTOMER STATED THAT HE HAD A METER INSTALLED IN FRONT OF A WINDOW, WHICH IS A VIOLATION OF THE COMMISSION'S REGULATIONS AND POSES A SAFETY CONCERN." PLEASE COMMENT ON THIS PARTICULAR CONCERN RAISED BY MR. EVRARD.

A. Peoples has reviewed the customer account records and customer meter location. The Company disagrees with the assertion that there is a violation of the Commission's regulations with respect to the meter's location. Further, the Company disagrees that the location of the meter poses a safety concern.

Q. PLEASE EXPLAIN WHY THE METER PLACEMENT AND LOCATION AT THIS PARTICULAR PREMISES DOES NOT VIOLATE COMMISSION REGULATIONS.

A. The customer contends that since his meter is below a window, it violates Commission regulations governing meter locations. However, I note that the customer fails to take the full text of the regulation into consideration. The full text of the applicable regulation states the following: "Meters and service regulators may not be installed in the following locations: (i) Beneath or in front of windows or other building openings that may directly obstruct emergency fire exits." 52 Pa. Code § 59.18.

Section 59.18 permits the location of a meter below a window if the meter does not directly obstruct an emergency fire exit. It does not prohibit the location of a meter below any window.[1] The meter at issue here does not block an emergency fire exit. Specifically, the meter itself sits near and in front of a glass block window which is not considered an emergency fire exit. Therefore, there is no violation of Section 59.18.

Q. PLEASE EXPLAIN WHY THE METER LOCATION AT THIS PARTICULAR PREMISES DOES NOT POSE A SAFETY CONCERN.

A. The meter at issue does not pose a safety concern as it is not blocking an emergency fire exit. If the customer would need to exit the premises for any reason, emergency or not, the meter is not in the way of any exit and is several feet away from any conceivable evacuation path.

[1] *Culbertson v. Columbia Gas of Pa., Inc.,* 2021 PA. PUC LEXIS 587, *20, Docket No. F-2017-2605797 (Opinion and Order entered Dec. 16, 2021) *Petition for Reconsideration Denied (Opinion and Order entered Aug. 25, 2022).*

Q. IN HIS TESTIMONY ON PAGE 9, AS WELL AS VIA SUMMARY IN EXHIBIT DE-2, PAGE 1., OCA WITNESS EVRARD NOTES THAT THE "OTHER CUSTOMER TESTIFIED THAT HE HAD BEEN WAITING FOR THE COMPANY TO TEST HIS METER FOR FOUR WEEKS, HAD REPEATED ISSUES RECEIVING SERVICE FROM THE COMPANY'S FIELD TECHNICIANS BECAUSE THEY DID NOT KEEP THEIR APPOINTMENTS, AND THAT THE COMPANY'S CALL CENTER HOURS MADE IT DIFFICULT TO GET HELP." PLEASE COMMENT ON THIS PARTICULAR SERVICE CONCERN RAISED BY MR. EVRARD.

A. The Company has reviewed this particular customer account and situation. The Company has no record of any missed appointments. The Company does have records of telephone conversations with the customer explaining the process for reconnecting his natural gas service. At the particular premises in question, natural gas service was disconnected in 2019. This means that before restoring service, the Company requires the customer to provide it with a Service Installation Record ("SIR") from an OQ plumber which signifies that the customer's service line is ready to be hooked up to the Company's facilities.

According to the Company's records, the customer contacted the Company to restore service at the premises at the end of 2023. Since that time, the Company has had several points of contact with the customer, including at and after the Public Input Hearings in the instant proceeding. The Company has explained the process to the customer and is waiting for the SIR paperwork for this premises. When the Company receives the required paperwork, it will schedule the connection work to be performed.

Response to OCA witness Mugrace re: Inflation Rate

Q. PLEASE COMMENT ON MR. MUGRACE'S RECOMMENDATION TO OMIT INFLATION FROM RATE CONSIDERATION RELATED TO CAPITAL EXPENDITURES.

A. As noted on the Chart on page 8 of my direct testimony, actual costs of pipeline construction have increased over time. This is fact. The pattern is well established, and the trend is clearly increasing. Increasing costs for labor and services is well documented in macroeconomic Employment Cost Index ("ECI"). The most recent report (Dec 2023) showing a 12 month increase of 4% or more.

NEWS RELEASE
BUREAU OF LABOR STATISTICS
U. S. DEPARTMENT OF LABOR

Transmission of material in this release is embargoed until 8:30 a.m. (ET) Wednesday, January 31, 2024

USDL-24-0146

Technical information: (202) 691-6199 • ncsinfo@bls.gov • www.bls.gov/eci
Media contact: (202) 691-5902 • pressoffice@bls.gov

EMPLOYMENT COST INDEX – DECEMBER 2023

Compensation costs for civilian workers increased 0.9 percent, seasonally adjusted, for the 3-month period ending in December 2023, the U.S. Bureau of Labor Statistics reported today. **Wages and salaries** increased 0.9 percent and **benefit costs** increased 0.7 percent from September 2023. (See chart 1 and tables A, 1, 2, and 3.)

Chart 1. Three-month percent change, seasonally adjusted, civilian workers, total compensation

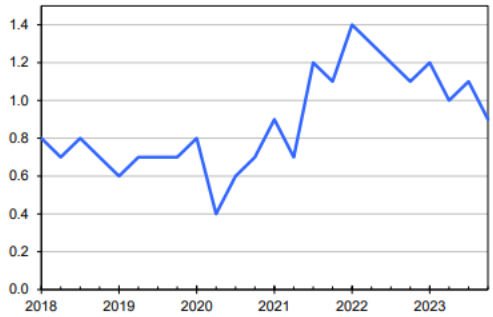


Chart 2. Twelve-month percent change, not seasonally adjusted, civilian workers

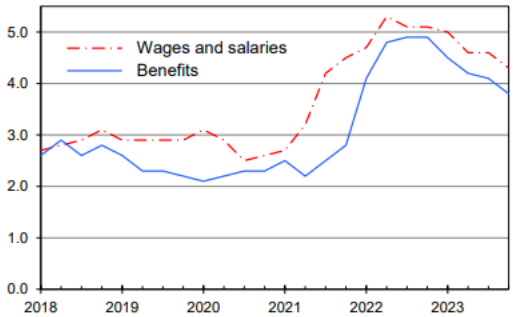

Post Covid Inflation is absolutely real and spiked to 9.1% in June 2022[2]. The Company's capital work programs are primarily completed by contract workforce. In addition to the evidence mentioned above, I offer the following table of the Company's contract labor price increases which clearly indicate rising costs:

Annual unit price increases	2020	2021	2022	2023	2024
A	2%	2%	3%	5%	2%
B	3%	3%	9%	5%	3%
C	2%	2%	6.25%	4.25%	4.25%

Thus, to omit inflation in its entirety on future investments/expenses seems to ignore the real world and what Pennsylvanians and a company doing business in Pennsylvania, know to be true. Rather than the extreme view of ignoring inflation in its entirety, the debate in this proposed rate case should be about the reasonableness of the inflation factor. The inflation factors used by Peoples and noted by Mr. Mugrace (2.3%-4.0%) clearly fall in line within the ranges of both the ECI and the known Contractor increases and thus should be considered reasonable. Nevertheless, if the projected costs of planned projects do not increase as projected, the Company will use those available funds for additional projects.

Q. DO YOU AGREE WITH MR. MUGRACE'S RECOMMENDATION TO EXCLUDE THE COST OF REPLACING THE BARE STEEL PIPE IN THE ROBINSON INCIDENT? IF NOT, PLEASE EXPLAIN WHY.

[2] Moul Direct, at page 5.

A. No. The bare steel pipelines in Robinson were not damaged as a result of the incident. The pipelines did not rupture and they remained in service, despite the incident. They could have safely remained in service at the time and not been replaced. These facilities would have been replaced in the future under the Company's LTIIP. However, the replacement of the bare steel pipelines was accelerated after the incident primarily because the PUC Gas Safety Division directed Peoples to accelerate the replacement. These costs should not be disallowed simply because the replacement of the facilities was accelerated. All of the $1,462,407 that OCA Mugrace proposes to exclude from rate base was to replace bare steel pipe that is considered at risk pipe. Peoples did exclude the costs of the damaged customer equipment from rate base.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

DATE ADMITTED: _____

PREPARED REBUTTAL TESTIMONY OF
CHRISTINE SABALL

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christine Saball, and my business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as Vice President, Tax for Essential Utilities, Inc. ("Essential"), the parent company of Peoples Natural Gas Company LLC ("Peoples" or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 6.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My testimony responds to certain portions of the Direct Testimony submitted by the Office of Consumer Advocate ("OCA"). Specifically, I will be responding to the following pieces of testimony and the identified issues raised therein: OCA Statement No. 2, the Direct Testimony of Dante Mugrace on behalf of the OCA, regarding adjustments to accumulated deferred income taxes, total income tax expense and the consolidated tax adjustment.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. I am sponsoring the **Exhibit CLS-1 through Exhibit CLS-3**.

CALCULATION OF FEDERAL AND STATE INCOME TAX EXPENSE AND ADIT

Q. PLEASE DESCRIBE THE ADJUSTMENT MR. MUGRACE IS PROPOSING TO ACCUMULATED DEFERRED INCOME TAXES?

A. Mr. Mugrace recommends an adjustment to the Deferred Tax balance (or "ADIT") related to the proposed disallowance of the Inflation adjustments included in the calculation of Peoples FPFTY plant balances of $27,819,503 (OCA Statement 2, page 9 Table I). In Exhibit DM-6, he calculates the associated impact of the decrease in book depreciation resulting in his adjustment to Accumulated Depreciation of $727,743. Mr. Mugrace then recommends an adjustment to the Deferred Tax balance of $152,826 to reflect the 21% deferred Federal income tax impact of the Accumulated Depreciation adjustment. I note that the depreciation adjustment itself is addressed in the Peoples Statement No. 14-R – the Rebuttal Testimony of John Spanos.

Q. DO YOU AGREE WITH THE CALCULATION OF THE ADJUSTMENT TO ACCUMULATED DEFERRED INCOME TAXES FOR THE PROPOSED ADJUSTMENT TO PLANT?

A. No, I do not. When Mr. Mugrace adjusted Peoples FPFTY plant balances and accumulated depreciation he did not account for the impact on tax depreciation expense. To calculate the impact on accumulated deferred taxes, the disallowance of the Inflation adjustments included in the calculation of Peoples FPFTY plant balances, all the components of the taxpayer's tax expense, depreciation expense or reserve for deferred taxes would need to

be adjusted under the IRS normalization rules. Section 168(i)(9)(B)(i) of the Internal Revenue Code provides that one way the requirements of the normalization method of accounting (§ 168(i)(9)(A)) will not be satisfied is if the taxpayer, for ratemaking purposes, uses a procedure or adjustment which is inconsistent with such requirements. Internal Revenue Code Section 168(i)(9)(B)(ii) states "such inconsistent procedures and adjustments include the use of an estimate or projection of the taxpayer's tax expense, depreciation expense, or reserve for deferred taxes under §168(i)(9)(A)(ii), unless such estimate or projection is also used, for ratemaking purposes, with respect to all three of these items and with respect to the rate base". I have calculated the impact that Mr. Mugrace's proposed adjustment to the deferred tax balance under the normalization requirements by including the tax impact of reduced tax depreciation. The net resulting adjustment to ADIT is a decrease of the deferred tax liability in the amount of $85,995. In addition, since the Company continues to be in a taxable loss position in the FPFTY, in accordance with normalization requirements, the method life tax depreciation difference is also reflected in the change to the Federal net operating loss resulting in no net change to the ADIT balance due to the proposed adjustment to plant (see **Exhibit CLS-1**).

Q. DOES MR. MUGRACE PROPOSE ANY OTHER ADJUSTMENTS TO THE TAX CALCULATIONS?

A. Yes. In Exhibit DM-37, Mr. Mugrace makes an adjustment to pre-tax operating income in the amount of ($139,454,930) and a corresponding adjustment to total tax expense of ($32,049,040).

Q. DO YOU AGREE WITH THE CALCULATION OF THE ADJUSTMENT TO TOTAL TAX EXPENSE?

A. No, I do not. In Exhibit DM-37, the calculation of Federal Taxable Income Before NOL on line 16, does not account for the Current Year PA NOL Adjustment in adjusted Present Rates calculated by the OCA. As described in my Direct Testimony, page 15, lines 9-16, the tax impact of the PA NOL either increases or decreases current state income tax expense. The calculation must include the impact of the change on the PA NOL Adjustment, so the Federal taxable income does not include a current state tax benefit that is not part of Federal taxable income. The resulting adjustment to tax expense is ($29,285,535) for total income tax expense of ($88,776,727). See **Exhibit CLS-2**.

Q. SHOULD ANY OTHER ADJUSTMENTS BE CONTEMPLATED AS A RESULT OF THE PROPOSED ADJUSTMENT TO TOTAL INCOME TAX EXEPNSE?

A. Yes. A change to the deferred tax expense in total income tax expense must be carried through to adjust accumulated deferred income taxes. The ($29,285,535) decrease to total income tax expense results in a $16,485,401 decrease to ADIT/increase to rate base after applying the pro rata normalization adjustment required for the FPFTY. See **Exhibit CLS-3**.

CONSOLIDATED INCOME TAX ADJUSTMENT

Q. PLEASE SUMMARIZE MR. MUGRACE'S POSITION REARDING THE COMPANY'S SATISFACTION OF THE REQUIREMENTS UNDER ACT 40.

Mr. Mugrace does not challenge that the Company is required to spend $36.7 million on infrastructure replacement under Section 1301.1(b), and that projected spend under the LTIIP program of $508 million for the FPFTY is fourteen times this amount. Mr. Mugrace states that it appears the Company has satisfied the first requirement under ACT 40. Mr. Musgrace then states that the Company does not specify how the 50% of the differential that is required to be used for "general corporate purposes" will benefit Pennsylvania ratepayers and therefore the Company, by default does not satisfy the second requirement under Act 40. Mr. Mugrace recommends an adjustment of $27,460 for non-investor-supplied funding for utility working capital.

Q. DID THE COMPANY SPECIFY HOW THE REQUIREMENTS OF ACT 40 WERE SATISFIED?

Yes. In Statement 6, page 24 the Company addresses how the requirements of Act 40 are satisfied. The Company's position is that because far more than 100% of the funds will be used on infrastructure replacement, no adjustment to non-investor supplied funding for utility working capital is appropriate and therefore there should be no Consolidated Tax adjustment applied in this case.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes, it does. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REBUTTAL TESTIMONY OF LUKE RAVENSTAHL VICE PRESIDENT OF SALES AND MARKETING PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED:4-18-2024
DATE ADMITTED: _____

Peoples Statement No. 7-R

PREPARED REBUTTAL TESTIMONY OF
LUKE RAVENSTAHL

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Luke Ravenstahl. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President of Sales and Marketing.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 7.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony is in response to the Bureau of Investigation and Enforcement ("I&E") witness Cline's direct testimony, as well as the direct testimony of the Office of Consumer Advocate ("OCA") witness Johnson.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. See Exhibit LR-R1 attached hereto.

Q. WHAT ARE THE TOPICS YOU INTEND TO ADDRESS IN THIS TESTMONY?

A. The two topics I will focus on include testimony regarding discounted rate customers, and secondly, the ability to discount for electricity as competitive alternative to natural gas service.

DISCOUNTED RATE CUSTOMERS

Q. WHAT DOES I&E WITNESS CLINE ASSERT WITH RESPECT TO THE COMPANY'S DISCOUNTED CUSTOMERS?

A. Mr. Cline asserts that the Company should not provide excessive discounts[1] and that the Company should re-evaluate discount rates for customers that have not had their rates verified in longer than 10 years[2].

Q. PLEASE DESCRIBE YOUR POSITION AS IT PERTAINS TO MR. CLINE'S TESTIMONY REGARDING DISCOUNTED RATE CUSTOMERS.

A. We agree with Mr. Cline that "providing excessive discounts to customers would be harmful to both the company and its customers as the Company's other customers make up for the lost revenue that results when discount rate customers pay less than tariff rates"[3]. However, to be clear, discounted rates are necessary in order to retain customers on our system in order to provide a net benefit to all customers. Without such discounts, a customer would be lost and thus all revenue that is covering a portion of the Company's revenue requirement would be lost. Our objective in negotiations with competitive customers is to maximize the revenue received without losing the customers to the competitive alternative.

[1] See Cline Direct, page 8.
[2] See Cline Direct, page 6.
[3] See Cline Direct, page 8.

As I noted in my direct testimony, Peoples agreed to new parameters with respect to competitive rate discounts in our last base rate case and has complied with those provisions.[4] Further, and in the spirit of that approach, we have reduced our number of negotiated contracts from 42 to 17. Several discounted delivery rate customers also had their competitive options and associated discounts reviewed and approved or were unopposed in prior 1307(f) settlements. We are in support of ensuring discounts offered are appropriate and in the interests of all ratepayers.

Q. MR. CLINE SUGGESTS THE COMPANY SHOULD RE-EVALUATE DISCOUNT RATES FOR CUSTOMERS UNDER CONTRACT THAT HAVE NOT HAD THEIR RATES VERIFIED FOR LONGER THAN 10 YEARS. DO YOU AGREE?

A. No. Given that existing negotiated customers have already agreed to terms and entered into legally binding agreements, we think a more appropriate solution would be to consider this issue prospectively. We agree with Mr. Cline that an evaluation every 10-years is reasonable and that future contract terms should reflect that accordingly. We believe a more appropriate solution would be to limit any new contract terms to 10 years. Prior to entering into a contract, we would verify the competitive alternative by following our process described in the Company's response to OCA 1-011, attached hereto as Ex. LR-R1.

If, for any reason, the Company determined a need to offer a contract term greater than 10 years, the Company could commit to completing a re-evaluation and verification of the competition every 10 years.

[4] See the Joint Settlement in Docket No. R-2018-3006818.

Q. ON PAGE 10 OF HIS TESTIMONY, MR. CLINE STATES THAT IN THE NEXT RATE CASE THE COMPANY SHOULD SEPARATE DISCOUNT CUSTOMERS INTO THEIR OWN CLASS. DO YOU AGREE?

A. No. As I understand Cost of Service and Rate Classes, they are usually determined by cost causation. As such, it is unlikely that all discounted customers would have similar cost causation and thus it may be difficult to group them into one customer class. Please refer to Rebuttal Statement No. 15-R for further discussion.

ELECTRICITY AS A COMPETITIVE ALTERNATIVE

Q. WHAT DOES I&E WITNESS CLINE ASSERT WITH RESPECT TO THE COMPANY'S PROPOSAL TO INCLUDE ELECTRICITY AS A COMPETITIVE ALTERNATIVE?

A. Mr. Cline recommends the Commission reject the Company's proposal to include electric service as a viable competitive alternative. Mr. Cline asserts that doing so would result in inequitable eligibility of discounted rates[5].

Q. PLEASE DESCRIBE YOUR POSITION AS IT PERTAINS TO MR. CLINE'S TESTIMONY REGARDING ALLOWING ELECTRICITY AS A COMPETITIVE OPTION.

A. We disagree with Mr. Cline and believe that electricity should be deemed a competitive alternative along with all other energy sources. It is clear that electricity is competitive

[5] See Cline Direct, pages 11-12.

with natural gas insofar as many equipment and appliance applications offer both natural gas and electric options. Customers consistently compare the costs and benefits of electricity to natural gas when making decisions. To further illustrate, the Company has a current customer who has a pending project to displace certain gas-fired equipment with electric equipment. This particular customer is one of the top volumetric consumers on our system, consistently ranking in the top 5 in annual consumption. If the project is funded, an electric alternative would displace a significant amount of natural gas consumption. We anticipate additional similar potential conversions will be contemplated by other large Peoples customers. Without the revenue contributions of discounted customers who ultimately reduce the overall system costs, other non-discounted customers will ultimately remit higher distribution costs.

Q. MR. CLINE ARGUES THAT ALLOWING ELECTRICITY AS A COMPETITIVE ALTERNATIVE WOULD NOT BE FAIR TO LOW-INCOME CUSTOMERS. DO YOU AGREE?

A. No. Peoples does not anticipate nor intend to provide discounted rate options for residential customers – and thus, there is no inequitable application of a discount for low-income customers. Rather, the ability to consider electricity as a competitive alternative would apply to commercial and industrial customers, and not residential customers. Currently, tariff flex rate provisions only apply to commercial and industrial customers. As a result, we disagree that low-income customers would be impacted by this change.

Q. HAS PEOPLES EVER HAD THE ABILITY TO DISCOUNT FOR ELECTRICITY AS A COMPETITVE ALTERNATIVE?

A. Yes. For decades, prior to our last rate case, Peoples' tariff included provisions to allow for considering electricity as competitive alternative. In the Company's last base rate case, settlement terms included the removal of that ability, and we compromised and conceded that issue. Our request in this case is to reinstate the ability to discount for electricity, the same as many other PA gas utilities. I further note that during the last rate case there were no customers that received a discount as a result of electricity being the sole competitive alternative.

Q. ARE YOU AWARE OF OTHER PENNSYLVANIA GAS UTILTITIES THAT USE ELECTRICITY AS A COMPETITIVE ALTERNATIVE AND PROVIDE DISCOUNTS? IS THERE PRECEDENT IN PENNSYLVANIA?

A. Yes. Columbia Gas of PA, National Fuel, UGI, PGW, and Pike County Light and Power all reference electricity as a competitive alternative on their company websites. Many include cost savings calculators comparing the cost of natural gas to propane, fuel oil and electricity. Peoples is requesting to be treated the same as our peer companies across Pennsylvania.

Q. WHAT DOES OCA WITNESS JOHNSON ASSERT WITH RESPECT TO USING ELECTRICITY AS A COMPETITIVE ALTERNATIVE.

A. Mr. Johnson recommends that the Company's proposed tariff revision which includes electricity as a competitive alternative be rejected[6].

Q. PLEASE DESCRIBE YOUR POSITION AS IT PERTAINS TO MR. JOHNSON'S TESTIMONY REGARDING ALLOWING ELECTRICITY AS A COMPETITIVE OPTION.

A. We disagree with Mr. Johnson and believe that electricity should be deemed a competitive alternative along with all other energy sources. It is clear that electricity is competitive with natural gas insofar as many equipment and appliance applications offer both natural gas and electric options. Customers consistently compare the costs and benefits of electricity to natural gas when making decisions. As the Company previously referenced, a top five consumer on its system is going to potentially move some of its equipment from natural gas powered to electric powered. While it is ultimately the consumer's choice with respect to the equipment they use, customers do compare natural gas and electric and we should, as well. We anticipate additional similar potential conversions will be contemplated by other large Peoples customers. Therefore, the Company should be able to use electricity as a competitive alternative.

Q. MR. JOHNSON ARGUES THAT ALLOWING ELECTRICITY AS A COMPETITIVE ALTERNATIVE WOULD RESULT IN A DISCOUNTED PRICE WAR AND THAT ALL CUSTOMERS COULD CONVERT TO ELECTRICITY. DO YOU AGREE?

[6] See Johnson Direct, at 49.

A. No. Peoples does not anticipate nor intend to provide discounted rate options for residential customers. Rather, the ability to consider electricity as a competitive alternative would apply to commercial and industrial customers, rather than residential customers. As a result, we disagree that this would result in price wars because residential customers would not be offered discounts. As mentioned above, Peoples had this provision in its tariff prior to the last base rate case and a "price war" did not occur.

Q. ON PAGE 48 OF HIS TESTIMONY, MR. JOHNSON STATES THAT "PEOPLES CLAIMS THAT NATURAL GAS IS CHEAPER THAN ELECTRICITY FOR MANY END USES, AND IF THAT IS TRUE, PEOPLES SHOULD PREVAIL IN ITS COMPETITION WITH THE ELECTRIC DISTRIBUTION COMPANY WITHOUT THE NEED TO OFFER A FLEXED RATE." PLEASE RESPOND.

A. First, the Company's claim that natural gas is cheaper than electric is supported. Please see the Direct Testimony of Michael Huwar in this case, specifically page 23. According to the American Gas Association, natural gas costs are and will cost significantly less than other fuels for many years to come.

However, Mr. Johnson fails to acknowledge the current political and environmental landscapes in our country which are pushing consumers towards electrification. In doing so, legislation like the Inflation Reduction Act, offers rebates and/or grants for consumers to move from one energy source to another, such as from natural gas to electric. Current or future customers should not be penalized for choosing to stay with natural gas. Allowing electricity to be deemed as a competitive alternative gives current and potential consumers a more level playing field and the ability to maintain energy choice. Ultimately, if the

natural gas utility loses customers to the electric sector, the existing natural gas customers, some of which may choose to stick with natural gas, will bear the increased costs of choosing their preferred energy source.

Q. DO YOU HAVE ANY FURTHER COMMENTS FOR MR. JOHNSON?

A. Yes. I want to reiterate that other gas utilities in Pennsylvania currently have the ability to use electricity as a competitive alternative, so clearly others Pennsylvania utility stakeholders deem electricity as a valid potential source of competition for natural gas.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-I-011

Witness: Ravenstahl, Luke **Title:** Vice President Sales & Marketing

Witness: Scanlon, Carol **Title**: Rates Manager

Question: Reference Peoples' Statement No. 7, the Direct Testimony of Luke Ravenstahl, p. 2 whereby Mr. Ravenstahl testifies that when contracts are newly negotiated or renewed, the Company performs its normal assessment, which includes verification of the competitive alternative and a fixed cost analysis. Provide the following information:

a. Identify the step-by-step process that the Company uses to verify the existence of a competitive alternative; and

b. Identify the step-by-step process that the Company uses to perform the fixed cost analysis Mr. Ravenstahl referenced.

Answer: a. Peoples requires the customer to provide us, via a confidential affidavit, a viable competitive alternative. The customer conducts an analysis of the economic and operational viability of the alternative and shares the analysis and any supporting information with us. We then validate and confirm the viability of a competitive alternative before proceeding with or considering a negotiated rate. It should also be noted that if an alternative energy rate is negotiated, it's only valid through the term of the contract. At that point, the process starts over, and we re-evaluate to determine if the customer's competitive alternative is still viable before we consider continuing with a negotiated rate.

b. The first step of the fixed cost analysis is to project the amount of annual revenue that will be received from the customer. The next step is to determine the annual incremental costs of service for the customer. The annual incremental costs of service consist of the following components:

- Return on Rate Base
- Annual Depreciation
- Associated Income Taxes

In order to determine the return on rate base, Peoples first identifies any dedicated facilitates used to serve the customer. The net book value of the facilities is calculated as the original cost of the facilities less accumulated depreciation. The net book value is then multiplied by the current return rate to arrive at the return on rate base. The current return rate is based upon the capital structure and cost of capital filed in the Company's most recent PUC earnings report at the time the analysis is prepared. The annual depreciation expense is calculated as the original cost of the dedicated facilities times the current annual depreciation rate based upon the FERC coding for the type of asset being valued. The associated income taxes are calculated as the amount of federal and state income taxes that will be assessed on the return on rate base amount less interest expense. Once the annual incremental costs of service components are calculated, the final step of the analysis, is to take the projected annual revenue less the sum of the annual incremental costs of service components. If the result is a positive number, it indicates the projected annual revenues exceed the annual incremental costs to serve the customer. Therefore, the customer is contributing to the overall fixed costs, which benefits the other ratepayers. In short, the other ratepayers benefit by having the customer with a negotiated rate on Peoples' system versus Peoples' not serving that customer.

PREPARED REBUTTAL TESTIMONY OF
RITA F. BLACK
DIRECTOR, COMMUNITY ASSISTANCE PROGRAMS
ESSENTIAL UTILITIES

DATE SERVED: April 18, 2024 Peoples Statement No. 9-R
DATE ADMITTED: _____

PREPARED REBUTTAL TESTIMONY OF
RITA F. BLACK

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rita F. Black and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Director of Community Assistance Programs. In this role, I lead assistance programs for Peoples Natural Gas Company LLC[1] ("Peoples", "Peoples Natural Gas" or "the Company"), Aqua Pennsylvania Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua PA"), as well as these companies' affiliated regulated utilities operating in other states.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 9.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will respond to aspects of the direct testimony submitted by Ms. Barbara Alexander on behalf of the Office of Consumer Advocate ("OCA"), Mr. Roger Colton on behalf of OCA, Ms. Jennifer Warabak on behalf of Pennsylvania Weatherization Providers Task Force and

[1] Peoples Natural Gas Company LLC currently has two tariffed divisions under the PUC, "Peoples Natural Gas Division" and "Peoples Gas Division".

Mr. Harry Geller, on behalf of The Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"). In particular, my rebuttal testimony will focus on issues related to low income customers addressed by the above mentioned witnesses as well as topics raised by Ms. Alexander with regards to Bureau of Consumer Services ("BCS") interactions which are within my area of responsibility.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. I am sponsoring Exhibits RFB-R1, RFB-R2, RFB-R3, RFB-R4 and RFB-R5.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I will first review and respond to the testimony of parties as they relate to low income issues and universal service programs as these issues were addressed by a number of witnesses. These issues include:

- Peoples' reporting definition of 'confirmed low income';
- CAP enrollment;
- Proposed increase to Peoples hardship fund;
- Proposed increase to Peoples Low Income Usage Reduction Program ("LIURP") budget; and
- Impact of proposed rates on low income affordability.

I will then address the concerns raised by Ms. Alexander regarding Peoples' root cause analysis of informal complaint cases filed by consumers with BCS.

CONFIRMED LOW INCOME DEFINITION

Q. PLEASE DESCRIBE THE CONCERN RAISED BY WITNESSES IN THIS CASE REGARDING PEOPLES DEFINITION OF CONFIRMED LOW INCOME.

A. Mr. Geller for CAUSE-PA and Mr. Colton for OCA provided testimony regarding the definition that Peoples uses for the reporting of 'confirmed low income' consumers. As noted in discovery, and reiterated in the testimony of these two witnesses, for reporting purposes, Peoples considers low income status to be confirmed if the customer has received a Low Income Home Energy Assistance Program ("LIHEAP") grant within the past two years, or if the customer is participating in CAP. Peoples used these two parameters as they are two methods of income validation. To receive a LIHEAP grant, a customer must provide income documentation to the state. To participate in CAP, the customer must provide income documentation to the Company, although the Company also accepts participation in LIHEAP as verification of income eligibility for the purposes of CAP participation. As these two methods ensure income was verified, it is therefore confirmed. By contrast, customers contacting the Company to begin service or to discuss payment arrangements provide verbal income information, which is not only unverified, but often outdated. For example, if a customer moved into a home within the Company's service territory ten years ago and noted their household income at that time was less than 150% of the Federal Poverty Limit ("FPL"), and the customer has not updated this information within those ten years, a query of the Company's system to identify low income customers would include this consumer, even though their current income may not be within the low income threshold. For this reason, the Company used validated income as a proxy for confirmed low income customer counts in annual PA PUC reporting.

Q. WITNESS COLTON INCLUDED THE PENNSYLVANIA PUBLIC UTILITY CODE DEFINITION OF CONFIRMED LOW INCOME IN HIS TESTIMONY (PAGE 25, LINES 7 THROUGH 12). PLEASE RESPOND TO HIS STATEMENT THAT PEOPLES IS NOT COMPLYING WITH THIS DEFINITION.

A. As noted in the definition, confirmed low income refers to 'Accounts where the NGDC has obtained information that would reasonably place the customer in a low-income designation.' It goes on to mention receipt of LIHEAP as well as self-certification by the customer obtained in response to interactions as described in §56.97(b) which relates to contact prior to termination. Peoples obtains self-attestation of income at a number of points within the life cycle of a customer, not only when facing termination. At the start of service, the Company asks for income information in order to determine if a security deposit and connection fee should be waived and as an opportunity to refer income eligible customers into universal service programs.

It is important to clarify that the Company uses self-attestation for all manner of eligibility consideration including, but not limited to, waiver of fees, waiver of deposits, establishing payment arrangements and restoration requirements. Customers are only required to provide proof of program eligibility for the Company's universal service programs and hardship fund, the former being funded by residential ratepayers. The limited use of the Confirmed Low Income definition by the Company for reporting purposes has not been the standard by which consumers are able to access protections and benefits.

Q. WITNESS GELLER STATED, WHEN REFERRING TO THE REPORTED CONFIRMED LOW INCOME DEFINITION, "THIS INCONSISTENCY AND UNDERCOUNTING DETRIMENTALLY IMPACTS THE ABILITY OF CUSTOMERS TO ACCESS CERTAIN PROTECTIONS…"[2]. WOULD YOU LIKE TO RESPOND TO THIS STATEMENT?

A. Yes. I want to assure the parties to this case that while there has been disagreement about the definition under which the Company has reported its confirmed low income customer counts, there is no variance between the parties and the Company with regards to access to protections and programs intended to support low income customers. As I described in the prior answer, verbal attestation is used across the board to allow for waiver of fees and deposits and protections related to collections and termination. It also is used in outreach efforts as well. The only services or provisions that require proof of low income status are the universal service programs described in the Company's Universal Service and Energy Conservation Plan ("USECP").

Q. DO YOU HAVE A PROPOSED RESOLUTION REGARDING THE REPORTING OF CONFIRMED LOW INCOME CUSTOMER COUNTS?

A. Yes. While the Company has used the working definition of LIHEAP within the past 2 years and/or CAP participation as indicators of confirmed low income in its reports to the PUC, I understand the concerns raised by the witnesses to this case about the exclusion of self-attested low income status. As noted earlier in my testimony, verbal income can become very stale, particularly if a customer is not payment troubled and has little, if any,

[2] Geller, page 7, lines 17 and 18.

interaction with the Company. Our intention in using the more limited definition was to provide a more timely picture of low income consumers by using validated income. We will modify our reporting for confirmed low income for 2024 activity to include self-attestation data in the annual Universal Service Report.

I do wish to further clarify that our reported confirmed low income counts in the Universal Service Report is unrelated to the needs assessment that the Company completes as part of its USECP. The needs assessment, using census data shared by BCS, is used to develop our programs as suggested by Mr. Geller in his testimony[3].

CAP ENROLLMENT

Q. PLEASE PROVIDE A GENERAL DESCRIPTION OF WITNESS TESTIMONY WITH REGARDS TO CAP ENROLLMENT.

A. Witnesses Geller and Colton provided extensive testimony regarding CAP enrollment levels for Peoples and described their concerns regarding current enrollment levels. Simply stated, their testimony notes CAP enrollment is lower than desired.

Q. DO YOU SHARE THIS CONCERN REGARDING DECREASED CAP ENROLLMENT LEVELS?

A. Yes. The Company provides quarterly CAP participation levels to both BCS and its Universal Service Advisory Group ("USAG"). In fact, the Company raised this issue at its USAG meeting in January as shown in the deck attached as Exhibit RFB-R1. It will also be a primary focus of the April meeting as well. And, CAP participation is the focus of the

[3] Geller, Page 10, lines 3 through 9.

Company's Consumer Education and Outreach Plan ("CEOP"), the most recent version of which was filed at the beginning of March and is attached as Exhibit RFB-R2. Further, we have replaced a retiring member of our staff with a new hire whose prior work experience was obtained at a social service agency where she had direct contact on a daily basis with our customers. Her experience and educational background are key to the ongoing development of our CEOP and have increased our visibility in the community, all in an effort to improve participation, not only in CAP, but in other universal service programs and LIHEAP.

Q. ACCORDING TO HIS TESTIMONY, MR. GELLER IS CONCERNED ABOUT THE TARIFF CHANGE, SUPPORTED IN YOUR DIRECT TESTIMONY, TO REMOVE REFERENCE TO AUTOMATIC ENROLLMENT OF CUSTOMERS INTO CAP. WOULD YOU LIKE TO RESPOND TO HIS COMMENTS ON THIS ISSUE?

A. Yes. As Mr. Geller noted in his testimony, the particular tariff provision that would allow for automatic enrollment into CAP pre-dates April 3, 2000. The Company has been unable to determine exactly when and under what pretenses this provision was added to the tariff. The decision to remove the provision was simply to bring the tariff into compliance with the Company's currently approved USECP, which does not include a provision for automatic enrollment. It in no way reflects "eliminating pathways to enrollment"[4] as it was not an approved method of enrollment. The USECP process includes important stakeholder input, including from some of the same parties to this proceeding, to ensure

[4] Geller Page 24, Line 20.

that a utility's programs are appropriately operated and funded. It is the suitable forum for discussion and approval of program enrollment methods.

Q. MR. GELLER RECOMMENDS THAT PEOPLES FILE A PETITION TO AMEND ITS USECP TO PERMIT AUTO-ENROLLMENT AND AUTO-RECERTIFICATION.[5] PLEASE RESPOND TO HIS RECOMMENDATION.

A. In that section of his testimony, Mr. Geller notes that the Company should work with its USAG to develop the details of an automated enrollment/recertification program such as he describes. I do agree that any considerations that would significantly change enrollment should be a topic of discussion with the USAG. Its members, not only those who represent parties, but those who represent individual non-profits and social service agencies, are a valuable sounding board and provide critical input into our programs. I am also looking ahead to the benefit of data sharing that we are expecting to receive from a data sharing agreement with the Department of Human Services for LIHEAP recipients, hopefully in the fall of 2024. That data sharing could open a door to ease of enrollment for more consumers which would be most beneficial. Further, BCS has just submitted its Universal Service Working Group ("USWG") Report[6] to the Commission. The USWG working sessions delved into issues such as auto-enrollment from data sharing. I believe that initiating a petition to provide auto-enrollment is premature, given the activity currently underway at the Commission on issues such as common applications, common administrator, and common website, in addition to the DHS data sharing provision.

[5] Geller, Page 27, Lines 12 through 17.
[6] M-2023-3038944

Q. HOW DOES PEOPLES ENCOURAGE ENROLLMENT INTO CAP?

A. Outreach and education are critical activities to drive low income customers to participate in programs that can improve their affordability. We have strong educational pieces in place at critical points in the collection process, for example. We provide a plain language CAP notice to customers who have indicated their low income status historically, but are not enrolled in CAP, prior to the issuance of a termination notice. This notice is provided at Exhibit RFB-R3. This document was developed with input from the USAG.

Additionally, all termination notices include information on currently available energy assistance programs, such as LIHEAP and the Company's hardship fund. Above all, we encourage customers to call Peoples and talk to our call center team. Our call center does an exceptional job of identifying CAP eligible customers and explaining the program.

We also use broad promotional methods to increase awareness of our programs. Such broad methods include providing program information in our bill inserts, regular email campaigns, transit advertising, social media advertising and participation in local community events. Local community events serve a dual purpose for Peoples. We seek events that are in the neighborhoods that are most vulnerable to limited income to connect with individual customers. These events also allow our programs to become more visible to the larger audience, which typically includes community members that may not be individually eligible, but may have a family member, friend, coworker or other social connection that could benefit. The community events are always evolving. For example, in the month of March, we began setting up a table to meet with our customers who are utilizing the Giant Eagle Mobile Market in Homewood, a disadvantaged community in Pittsburgh. The Mobile Market brings a scheduled grocery store opportunity to

neighborhoods that are food deserts and we expect this touchpoint to be a helpful gateway to CAP enrollment.

Q. YOU MENTIONED THE STAND-ALONE PLAIN LANGUAGE NOTICE PROVIDED PRIOR TO TERMINATION TO ENCOURAGE CAP ENROLLMENT. MR. COLTON RAISED CONCERNS IN HIS TESTIMONY REGARDING THE EFFECTIVENESS OF THIS NOTICE. WOULD YOU LIKE TO RESPOND?

A. Yes. Mr. Colton provides statistics regarding the number of confirmed low income customers who were disconnected and not reconnected as evidence that this particular notice is not working as intended to prevent utility shut-off. Further, he states "To assume that Peoples has effectively communicated the possibility of enrolling in CAP, and making pre-program arrears subject to forgiveness…one would need to assume that nearly 4,200 Confirmed Low-Income customers…would choose to have their service disconnected rather than to enroll in the Company's CAP."[7] Mr. Colton is attempting to draw a simple throughline between the Company informing customers about CAP and disconnection, reaching the conclusion that our efforts are not sufficient. All of us operating in the utility space, from utility employees to regulators to low income advocates and social service agencies understand that while CAP and LIHEAP are incredible resources for household stabilization and affordability, far too many eligible customers do not participate. There are many reasons why eligible households do not take advantage of resources that would be beneficial, and this challenge is not limited to utility assistance programs broadly, or

[7] Colton, Page 29, Lines 1 through 7.

Peoples in particular. It is my belief that the Commission initiated the CEOP requirement in order to take steps to address this long-standing problem across all utility CAPs.

Mr. Colton further suggests that an additional personal contact requirement be made prior to termination to offer CAP. He notes that if the customer chooses to begin the CAP application process, the Company should postpone disconnection[8]. The Company already provides personal contact prior to termination, and this is the third step in the process for known low income customers, as they would have received the stand-alone plain language CAP notice, followed by the termination notice, before receiving the personal contact. Further, if at any point in the collections process the customer shows interest in applying for CAP and begins the application, a hold is placed on termination to allow time for the customer to complete the enrollment process.

Q. DOES MR. COLTON MAKE A FURTHER RECOMMENDATION REGARDING ADDITIONAL NOTICES FOR CAP ENROLLMENT?

A. Yes. Mr. Colton also recommends the development of a stand-alone notice to be provided to a customer choosing to establish a deferred payment plan and for customers who are included in the cold weather survey.[9] He suggests this notice be developed with input from the USAG.

Q. WHAT IS YOUR RESPONSE TO THIS RECOMMENDATION?

[8] Colton, Page 30, lines 14 through 23.
[9] Colton, Pages 35 and 36.

A. All customers presenting with income at or below 150% FPL are offered CAP when payment arrangements are discussed. Peoples' call center staff are well versed in the benefits of CAP and encourage customers to enroll in CAP rather than establishing a deferred payment plan. For some customers facing arrearages, the prospect of making a verbal payment arrangement in a few moments to stop termination is seen as easier than applying for CAP as CAP requires proof of income. I do not share Mr. Colton's opinion that another notice, mailed to the customer following the creation of their deferred payment arrangement, will increase motivation to apply for CAP. I do, however, see value in incorporating a plain language CAP notice into the cold weather survey packet and will include this topic in the April USAG in order to ensure that any changes necessary to the cold weather survey packet, prior to the 2024 fall heating season, can be completed in a timely manner.

Q. MR. COLTON ALSO RECOMMENDS A STAND-ALONE NOTICE REGARDING CAP FOR CUSTOMERS WITH LOW INCOMES AND ARREARAGES.[10] PLEASE RESPOND TO THIS RECOMMENDATION.

A. I believe this would be redundant. A customer with arrears of $300, the threshold of which Mr. Colton recommends should be eligible for such a notice[11], would be eligible for a disconnection notice and therefore would first receive the current stand-alone notice to enroll in CAP to prevent termination. A second stand-alone notice, as recommended by Mr. Colton, would not be of value as the Company already sends a stand-alone notice.

[10] Colton, Page 38, Lines 17 through 19.
[11] Colton, Page 39, Line 4.

Q. WOULD YOU LIKE TO ADDRESS ANY OTHER CONCERNS RAISED BY WITNESSES TO THIS CASE WITH REGARDS TO CAP ENROLLMENT?

A. Yes. Mr. Geller recommends that Peoples "screen all new and moving customer for income level at the time their service is established."[12] I want to assure Mr. Geller and other parties to this case that this is the standard operating procedure at Peoples. Customers starting or transferring service are asked about household income in order to determine if certain fees, such as connection fees or security deposits are to be waived. Verbal income information is used to not only waive those items, but also to screen for CAP eligibility. Customers meeting the income guideline for CAP are advised of the program and offered application information, including a soft transfer to Dollar Energy Fund to start the process immediately, if they so choose.

Further, the Company has strong relationships with local resettlement organizations that support immigrant populations. As part of its ongoing effort to reach households with incomes below 50% FPL, Peoples developed these relationships and a working process by which the resettlement agency can work directly with a member of the Community Assistance Programs team to not only establish service for an immigrant family, but to, at the same time, enroll that customer into CAP. For most of these families, there is not yet an income source at the time of their resettlement. Through our initiative, they are enrolled in CAP using the zero income form, providing them with the CAP minimum payment of $25 per month, until they reach their recertification date at six months.

[12] Geller, Page 28, lines 5 through 7.

COMPANY'S HARDSHIP FUND

Q. PLEASE DESCRIBE RECOMMONDATIONS MADE BY WITNESSES IN THIS PROCEEDING WITH REGARDS TO THE COMPANY'S HARDSHIP FUND?

A. Witness Warabak, on behalf of Pennsylvania Weatherization Providers Task Force, provided two recommendations regarding the hardship fund. First, she suggested the Company's contribution should be increased commensurate with the increase in rates approved in this proceeding and secondly, that the hardship funds be distributed according to the level of low income consumers residing in the counties of the Company's service territory.[13] Mr. Geller also provided two recommendations regarding the hardship fund. Similar to Ms. Warabak, he recommended an increase commensurate with the increase approved in this proceeding and he also recommended an increase to the maximum grant amount from the current $500 to $600.[14]

Q. PLEASE RESPOND TO THE RECOMMENDATION THAT THE HARDSHIP FUND BE INCREASED COMMENSURATE WITH THE RATE INCREASE APPROVED IN THIS PROCEEDING.

A. In his testimony, Mr. Geller recommended such an increase "to address unaffordability felt by low income customers at both present and proposed rates."[15] Hardship programs are funds of last resort. They were developed with the intention of providing a resource to prevent termination or restore service for customers who had fallen behind on utility bills and have no other resources with which to pay for their utility service. Because Peoples

[13] Warabak, Page 8, Numbers 4 and 5.
[14] Geller, Pages 35 and 36.
[15] Geller, Page 36, Lines 5 and 6.

provides CAP participation eligibility up to 200% FPL, the same threshold as the Company's hardship fund, it is my opinion that the Company's suite of universal service programs are designed appropriately to manage customers who face financial difficulty due to any number of factors, from external economical challenges to changes in Peoples' rates. Therefore, I do not believe an increase to the hardship fund is necessary.

Q. WITNESS WARABAK RECOMMENDED THAT HARDSHIP FUNDING BE DISTRIBUTED BASED ON LOW INCOME POPULATIONS WITHIN THE COUNTIES OF THE COMPANY'S SERVICE TERRITORY. PLEASE REPOND TO THIS RECOMMENDATION.

A. Ms. Warabak's testimony included the statement that "hardship funding be distributed in accordance with the percentage of low-income customers in the counties served by the Company."[16], however, she did not provide a basis for this recommendation. The Company's hardship fund is available to all income qualified residential customers of the Company, regardless of physical location within the Company's service territory. This is an important aspect of the Company's program that should remain intact as adding a geographical limitation on available dollars could prevent otherwise eligible customers from receiving needed assistance.

Q. PLEASE RESPOND TO MR. GELLER'S RECOMMENDATION REGARDING INCREASING THE MAXIMUM GRANT FROM $500 TO $600.

[16] Warabak, Page 7, lines 16 and 17.

A. I disagree with this recommendation. Peoples has offered an expanded CAP enrollment pilot for several years. Under this expansion of CAP eligibility, customers with incomes between 151 and 200% FPL that have accrued arrearages are eligible to participate in CAP. When the hardship grant is available, customers receive the maximum hardship grant of $500 first, then the remaining balance is established as pre-CAP and becomes eligible for Arrearage Forgiveness while the customer participates in CAP. An increase of $100 to those receiving the maximum will only accelerate the depletion of the hardship fund without providing additional support to maintain utility service as CAP is already providing that important safety net.

LIURP BUDGET

Q. PLEASE DESCRIBE RECOMMENDATIONS PROVIDED BY WITNESSES TO THIS CASE WITH REGARDS TO LIURP.

A. Similar to the hardship fund increase proposal, both Mr. Geller and Ms. Warabak proposed increases to the Company's LIURP budget. Specifically, Ms. Warabak recommended an increase of $400,000 and Mr. Geller recommended an increase equal to the 2023 spend, which included carryover from the prior year, along with a further increase commensurate with the increase in approved rates in this proceeding.

Q. WHAT IS THE BASIS FOR THE $400,000 INCREASE PROPOSED BY MS. WARABAK?

A. Ms. Warabak recommended that funding be increased to support completion of an additional 50 jobs per year. Using the average LIURP job cost of $8,000, she calculated

an increase to LIURP funding of $400,000.[17] She did not provide details on her recommended increase of 50 jobs beyond a desire to provide services to more eligible consumers as a way to increase the ability of a household to conserve.

Q. PLEASE DESCRIBE MR. GELLER'S LIURP BUDGET INCREASE PROPOSAL.

A. Mr. Geller based his suggested budget on 2023 actual spending for each division and further suggested a percentage increase equal to the approved residential rate increase from this proceeding.[18] He states these increases are necessary to address current need as well as increased needs resulting from approved rates in this proceeding.

Q. DO YOU AGREE WITH EITHER OF THESE PROPOSED LIURP INCREASES?

A. I do not. I appreciate the concerns raised by these witnesses that LIURP budgets should be appropriate to the need of the eligible customer base. However, I believe a realistic budget that can be fully utilized in a given year is the most appropriate use of ratepayer dollars dedicated to these programs. I think it's helpful to recall the purpose of LIUPR as noted in regulation:

§ 58.1. Purpose.
This chapter requires covered utilities to establish fair, effective and efficient energy usage reduction programs for their low income customers. The programs are intended to assist low income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs. The programs are also intended to reduce the residential demand for electricity and gas and the peak demand for electricity so as to reduce costs related to the purchase of fuel or of power and concomitantly reduce demand which could lead to the need to construct new generating capacity. The programs should also result in improved health, safety and comfort levels for program recipients.

[17] Warabak, Page 7, Lines 4 through 8.
[18] Geller, Page 33, lines 6 through 13.

The purpose of LIURP is broad. It was designed to improve health and safety, conserve energy and also support affordability by reducing household bills. To qualify for LIURP, participants must be both low income and significantly high energy users. In this case, I proposed to reduce the limit for LIURP participation of Peoples Natural Gas Division consumers to 120 MCF annually to align Peoples Natural Gas Division customers with Peoples Gas Division customers' current threshold. Mr. Geller noted his support of this proposal in his direct testimony. It is my hope that by lowering the threshold to 120 and thereby broadening the number of eligible households across the Company's service territory, we will see an increase in the number of LIURP jobs completed and will begin to fully spend the LIURP budget in the year it is intended, eliminating carryover. If we find that more annual dollars are needed to support the eligible customer base, the increase to the LIURP budget should occur through the USECP petition process. To increase budgets at this time, without having fully spent program budgets for the past few years, is inconsiderate of the cost to residential ratepayers who fund this program.

Q. CAN YOU PLEASE FURTHER EXPLAIN YOUR CONCERN REGARDING RESIDENTIAL RATEPAYERS WHO FUND LIURP AND OTHER UNIVERSAL SERVICE PROGRAMS?

A. Yes. The costs of the Company's universal service programs are funded through riders which apply to residential, non-CAP customers. On an annual basis, we project the expected costs of LIURP, CAP and Emergency Furnace and Service Line Repair ("EFSLR"). We also adjust for actual costs in this rate setting process. In the case of CAP and EFSLR, if actual costs are different than projected costs, the rider is adjusted

accordingly. However, all dollars allocated to LIURP, whether spent in the year or not, continue to be attributed to LIURP as they are carried over from year to year. For this reason, it is important that the LIURP budget balance the needs of the potential eligible population and the residential ratepayers who fund them. In my opinion, the decision to change LIURP budgets should be made through the USECP process, by which stakeholders and BCS are able to contribute their experience with other utility programs, along with evaluating the needs assessment of the Company's service territory, to set an annual budget that meets the goals noted in §58.1.

IMPACT OF PROPOSED RATES ON AFFORDABILITY

Q. BRIEFLY DESCRIBE CONCERNS RAISED BY WITNESSES IN THIS PROCEEDING REGARDING THE IMPACT OF THE PROPOSED INCREASE ON LOW INCOME HOUSEHOLDS.

A. Witnesses Warabak, Geller and Colton each mentioned their concern about the impact of the proposed increases on low income households. Some of the concerns raised were specific to the proposed customer charge and the Weather Normalization Adjustment. While these two issues will be addressed by other witnesses on behalf of Peoples, I would like to respond to the general concern of affordability for low income households.

Q. PLEASE CONTINUE.

A. As the leader of the Community Assistance Programs department at Peoples, affordability and availability of resources are always top of mind. We know that if we can identify low income households early on in the lifecycle of their service with Peoples, we can improve

overall affordability by waiving fees and deposits, supporting their participation in LIHEAP, CAP and the Company's hardship fund and providing support to their household in the form of EFSLRP and LIURP. We advocate for LIHEAP funding, participate in all available programs, such as Pennsylvania Homeowners Assistance Program, and spend time in our communities promoting universal service programs.

I also recognize the cost of providing service to all of our consumers. The investment in our distribution system is significant and ensures improved safety and reliability for many years to come. These investments and the cost of providing services ultimately increase the cost to utility consumers through rates. For those with incomes at or below 150% FPL, CAP is an affordable option. Peoples was one of the first utilities to file a request to update its USECP to reflect the new affordability guidelines set forth by the Commission in 2019. In addition to reducing our percentage of income payments amounts from 8, 9 and 10% of income to 4, 5 and 6% of income, we also eliminated other fees that CAP customers paid, including CAP Plus (formerly $5) and the $5 pre-CAP copayment amount. Customers participating in CAP are not charged late payment fees, even if they miss a payment, which is an important benefit for low income households as noted by Mr. Colton in his testimony[19]. Further, if a customer enrolls in CAP with a balance, not only is that balance eligible for Arrearage Forgiveness benefits equal to 1/36th of the pre-CAP balance per month for each payment made, if they miss a payment and make up that payment at a later date, they are able to obtain the associated Arrearage Forgiveness benefit.

[19] Colton, Page 59, Lines 5 through 10.

I understand that for low income households, any increase in rates can be daunting. However, I am confident that the CAP offered by Peoples provides an affordable option to mitigate the impact of increased rates on those most vulnerable to changes in their monthly expenses.

Q. PLEASE ADDRESS THE CONCERNS RAISED AT THE PUBLIC INPUT HEARINGS REGARDING AFFORDABILITY OF RATES.

A. I personally attended all of the public input hearings and fully appreciate the concerns raised by the customers that testified about the requested increase in rates. Peoples understands that customers are concerned with the affordability of gas utility service as well as rising costs in other utilities or basic living expenses. Peoples works to mitigate costs where it is reasonably able to do so. For instance, many of Peoples' goods and services are procured through competitive bidding processes, and employee salaries and compensation are targeted to be competitive in the market in order to ensure that the Company continues to offer high quality service at appropriate cost levels. As described in the Direct Testimony of Paul Becker, Peoples must undertake significant infrastructure improvement projects in order to continue providing safe and reliable service to our customers. As shown in Witness Becker's rebuttal, Peoples maintains very reasonable costs for its infrastructure project work. This important work is a primary driver for the proposed rate increase.

Additionally, I would note that Peoples has reached out directly to several of the customers who testified at the Public Input Hearings. We sought to resolve specific concerns those witnesses mentioned in their testimonies and provided information about

our assistance programs as appropriate. One such example is our direct contact with Mr. Hoffman, a customer who testified at the March 5, 2024, 1 p.m. Public Input Hearing held at the Community College of Allegheny County, Boyce Auditorium, regarding his concerns about the calculation of the Distribution System Improvement Charge ("DSIC"). I spoke with Mr. Hoffman right after the hearing and we agreed that following up with members of our billing and rates team to provide a more in-depth description of how this particular charge was calculated would be helpful to him. Our internal team members followed up with him to provide the information needed to explain the calculation of the charge and resolve his concerns. For more information about this particular customer contact, please see the rebuttal testimony of Company witness, Carol Scanlon.

Lastly, regarding affordability, I would like to point out that natural gas costs are and will continue to bet significantly less than other fuels for many years to come[20]. Therefore, the Company will work hard to keep costs as low as possible while maintaining its commitment to providing safe and reliable service to its customers.

ROOT CAUSE ANALYSIS

Q. IN HER DIRECT TESTIMONY, WITNESS ALEXANDER, ON BEHALF OF OCA, PROVIDED STATISTICS REGARDING PEOPLES PERFORMANCE IN A NUMBER OF CATEGORIES MEASURED BY BCS. [21] WOULD YOU LIKE TO EXPOUND ON THOSE STATISTICS?

[20] See Huwar Direct, at page 23. https://playbook.aga.org/share/residential-prices
[21] Alexander, Page 15.

A. Yes. I believe context is always important in evaluating performance. In this particular case, while Ms. Alexander provided a comparison between 2022 and 2023 performance for Peoples in each of the categories, she did not benchmark that performance against Peoples' peers.

For example, on line one of her chart on page 15, she notes that Residential Customer Complaints rose by 1%. This is the lowest increase in complaints across the Major Natural Gas Distribution Companies ("NGDC") group. In fact, overall, Residential Customer Complaints for NGDCs increased by 9% from 2022 to 2023, with some NGDCs seeing increases exceeding 20%. In my experience, this shows exceptional performance by Peoples in satisfying customer concerns.

In the second category, Residential Payment Arrangement Requests ("PARs"), she notes that Peoples' rate increased by 12%. The overall increase in PARs for the NGDC group is 31%, showing that Peoples is far below the average for its group, and significantly below some of its peers who are experiencing increases of 30 and 41%. In the category of Inquiries, Peoples increase is 9% while the overall NGDC average is 13%.

Moving on to Justified Residential Complaints, while Ms. Alexander notes Peoples' rate is slightly down from 3.8% to 3%, it should also be recognized that the average for the NGDC grouping is 10%, more than three times the rate experienced by Peoples. Justified PARs average 4% for the NGDC group, while Peoples' 2023 rate was 3%. In fact, Peoples is second in the grouping behind UGI with a Justified PARs average of 2%, with all other NGDCs in the group exceeding 3%. The currently available 2023 Quarterly Update to UCARE Report for January to December 2023 containing these statistics is provided as Exhibit RFB-R4.

Q. WHY ARE THESE STATISTICS IMPORTANT?

A. The number of informal complaints received by BCS is an important indicator of a utility's performance. If customers are able to resolve concerns with their utility, it is not necessary for the customer to contact BCS for assistance. The number of PARs cases and associated rate of PARs can typically be correlated to collections activities. When customers have exhausted their opportunities for payment arrangements with their utilities, they have the right to contact BCS to request a further payment arrangement. The Justified Residential Complaint and Justified PARs ratings are particularly instructive as they are defined as "A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters or tariffs.". Further, according to BCS "The justified consumer complaint rate is a normalized ratio useful for comparing utility performance over time among the various utility companies." (Refer to Exhibit RFB-R5, Utility Consumer Activities Report and Evaluation 2022, Page 20). As reflected in the statistics I mentioned above, Peoples is performing exceptionally well with regard to Justified Residential Complaints in comparison with its peers and its Justified PARs are also below the average of the NGDC group.

Q. MS. ALEXANDER RAISES CONCERNS ABOUT HOW PEOPLES EVALUATES COMPLAINT TRENDS AND BCS FINDINGS. WOULD YOU LIKE TO RESPOND?

A. Yes. Ms. Alexander claims "There is no evidence of management's investigation of root causes and identification of reforms and internal actions to respond to routine root cause

analysis."[22] I strongly disagree with this characterization. As noted in the Company's responses to discovery, Peoples does evaluate every case received to determine the root cause of the complaint. Our team of specialists evaluate every aspect of the customer's concern to determine if anything is amiss. If we find something was not handled properly, the next step is to determine whether this was due to human error, system error or process error. If we find the case is due to human error, the specialist documents the incident in a spreadsheet that is shared with the employee's supervisor on a weekly basis so individual coaching can occur to prevent future similar mistakes. If the issue was caused by the billing system, for example, it is immediately escalated to IT and leadership in the Customer organization for resolution. If a process issue is found, our Compliance Supervisor works directly with Customer organization leadership and training to revise the process and ensure proper training and documentation occurs. It is the expectation for every member of the Compliance team that they determine the root cause of the customer's complaint as part of their process in responding to BCS.

Ms. Alexander states, "Peoples response is not a root cause analysis because there is no attempt to find similar instances that did not result in a customer complaint or BCS finding."[23] This is patently untrue. As I described, we look for system and process change that require modification and in the case of system issues, all affected accounts are identified for correction. Further, the coaching spreadsheet we use is cumulative. It allows our team members to identify trends in employee errors, leading to increased training for

[22] Alexander, Page 16, Lines 21 and 22.
[23] Alexander, Page 17, Lines 6 and 7.

agents and important notices sent to all Customer organization team members to highlight an issue that has arisen.

Q. MS. ALEXANDER NOTED AN INCREASE IN VERIFIED INFRACTIONS FROM 13 IN 2022 TO 33 IN 2023. SHE NOTES THIS IS A SIGNIFICANT INCREASE.[24] PLEASE RESPOND TO THIS INCREASE IN INFRACTIONS.

A. Sixty percent of the citations received in 2023 surrounded restoration terms quoted to customers following termination of service and denial letters issued. In all cases, coaching was provided to the individual employees who made these errors and enhancements to the system and training opportunities were also identified to improve performance in this area. Peoples' commitment to improving compliance does not end with the review of the citation. Because denial letters and restoration terms were an area of needed improvement, training held in March of this year, to prepare customer service representatives for the end of winter moratorium, reinforced these items.

Q. DO YOU HAVE ANY CLOSING REMARKS IN RELATION TO THE ROOT CAUSE ANALYSIS ISSUE?

A. Yes. I believe the results we have consistently achieved, from the number of informal cases to the justified complaint rates, reflect that Peoples has imbedded root cause analysis into its daily handling of customer complaints. If we were not identifying and resolving problems, our results would find us at the bottom of our peer group, rather than the top. I disagree with Ms. Alexander's recommendation that a "professionally conducted root

[24] Alexander, Page 15, Table found on line 3.

cause analysis and report on findings…where needed within 3 months and quarterly updates to stakeholders[25]" is necessary.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

[25] Alexander, Page 20, Lines 2 through 5.

PEOPLES USAG

JANUARY 24, 2024

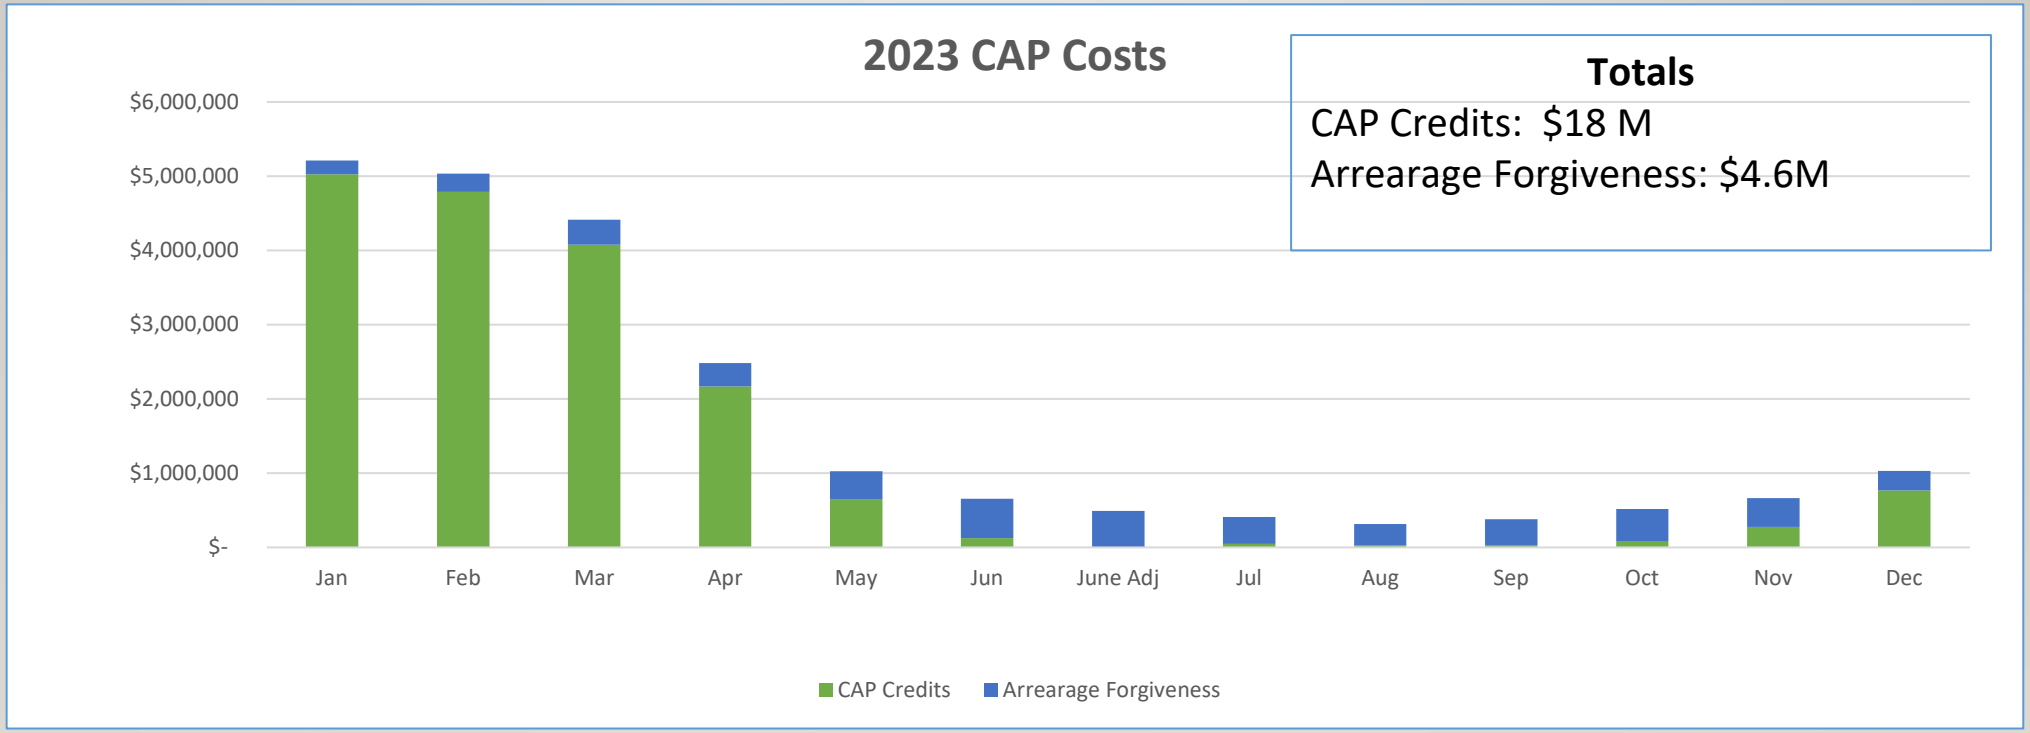
AGENDA

- Program Statistics
- Base Rate Case Filed
- CAP Enrollment
- 2024 Advisory Group Planning

CURRENT CAP PARTICIPATION

	October USAG	December
Peoples Division	30,126	28,159
Peoples Gas LLC	2,542	2,338
Total	**32,668**	**30,497**

CAP BENEFITS COST TRACKING



2022 costs were $21.9 million

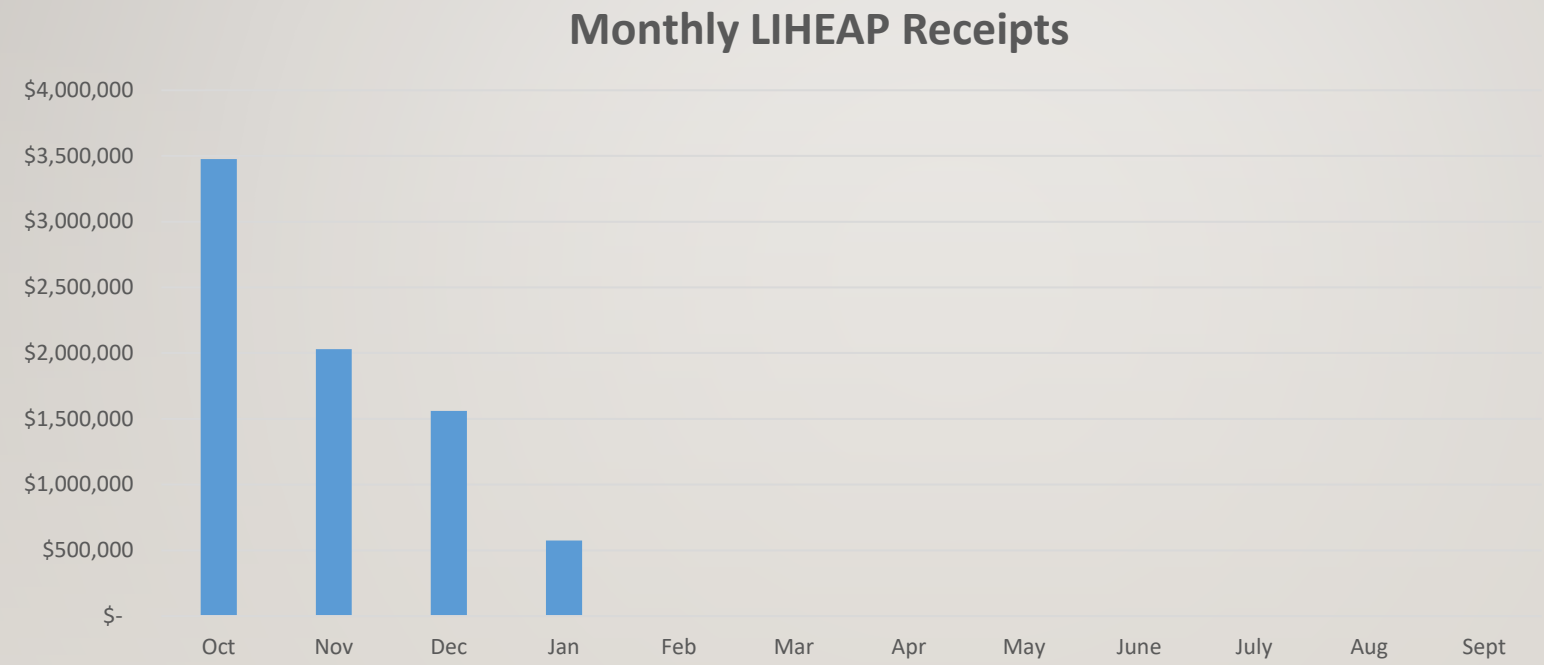
DOLLAR ENERGY FUND

Dollar Energy	Grant program opened 10/1/23
Grants provided through 1/19/24 Funds currently available	$174,090 to 410 households $781,579 current balance*

*Benefit of Dollar Energy Fund winter fundraising efforts will be added to the Fund.

Reminder: Peoples Natural Gas and Peoples Gas were combined into one Fund last year.

LIHEAP UPDATE



$19.5 million rec'd in 2022/2023 year.

$7.6 million program year-to-date receipts

LIHEAP Cash minimum $300/ LIHEAP Crisis maximum $1,000

Program scheduled to close April 5th.

LIURP UPDATE

	Peoples Natural Gas	Peoples Gas
2023 Spend	$3,469,514	$301,075
Completed Jobs	290	27
Former Peoples Division	176	
Former Equitable Division	*114*	
2024 Budget	*$2,753,076*	$511,410

**Please note: Figures above are preliminary as year-end closing processes are still underway.*

The former Equitable Gas has been fully integrated into Peoples Natural Gas and all jobs and dollars are reported to the PUC under Peoples Natural Gas.

BASE RATE CASE FILING

- Peoples filed a request with the PA Public Utility Commission in late December.
- The filing brings Peoples Natural Gas and Peoples Gas together in one tariff and one rider for the recovery of Universal Service program costs.
- Generally programs at both companies have the same eligibility requirements, with the exception of LIURP
  - Peoples Natural Gas requires 140 MCF annually for participation
  - Peoples Gas requires 120 MCF annually for participation
  - We proposed the combined LIURP program should use the lower threshold (120 MCF)

CAP PARTICIPATION

January 2023 USAG Meeting

Current CAP Participation

	October USAG	Current
Peoples Division	30,161	30,111
Peoples Gas LLC	2,539	2,548
Total	32,700	32,659

Today

CURRENT CAP PARTICIPATION

	October USAG	December
Peoples Division	30,126	28,159
Peoples Gas LLC	2,542	2,338
Total	**32,668**	**30,497**

Enrollment levels have been flat all year and are now dipping lower

LOW CAP PARTICIPATION

- During the pandemic, dismissal for failure to recertify was paused.
- Customers could enroll with verbal income if income documentation was not easily attainable during the pandemic.
- Gas rates in 2023 decreased, lowering residential bills
- Participation in LIHEAP is generally flat as well, despite outreach efforts
- Other natural gas utilities are also reporting flat and/or lower than desired participation

2024 FOCUS AREAS

- Increased efforts at Dollar Energy Fund to ensure all grant recipients are also enrolled in CAP.
- Direct calls underway to LIHEAP recipients not on CAP to gain verbal income and permission to enroll in CAP.
- Enroll Emergency Repair Program participants in CAP if they are not yet participating (with customer permission).
- Working with Dollar Energy Fund on IVR improvements to improve experience & keep customers engaged.

Other utility best practices we should consider?

DISCUSSION: WHAT KEEPS ELIGIBLE CUSTOMERS FROM ENROLLING/REMAINING IN CAP?

- Awareness?
- Difficulty in applying?
- Confusion with LIHEAP?
- Problems with outreach messaging?
- What else?

Re: M-2018-3003177 - Peoples Natural Gas Company 2019-2024 USECP
M-2020-3021343 - Peoples Gas Company 2019-2024 USECP
P-2020-3017641 - Amendment to Peoples Natural Gas Company 2015-2018 USECP
M-2014-2432515 - Peoples Natural Gas

Dear Secretary Chiavetta:

Please accept this Corrected Status Update that corrects the March 1, 2024 filing at Docket M-2020-3021343.

On behalf of the Peoples Natural Gas Company LLC ("Peoples"), Peoples is providing its Customer Education and Outreach Plan (the "CEOP"), along with a report on outreach activities during 2023 and various sample outreach materials.

Peoples continues to work closely with the Peoples Universal Service Advisory Group (the "USAG") on the development and refinement of its CEOP. The 2024 focus areas include the scheduling of events in partnership with groups in the North and South hills of Pittsburgh, evaluating the benefit of events that Peoples attends, identifying new events to participate in, and a general promotion of programs through various community groups. With regard to collaborative efforts with other utilities, the 2024 plan also focuses on working with other utilities to develop multi-utility outreach programs.

Please contact the undersigned at (724) 944-8114 or Rita Black, Director, Community Assistance Programs, at (412) 208-6530, should you have any questions or concerns regarding this matter.

Sincerely,

Stephen R. Perrott
Associate Counsel

375 North Shore Drive, Pittsburgh, PA 15212 • peoples-gas.com srperrott@peoples-gas.com

Peoples Natural Gas and Peoples Gas Consumer Education and Outreach Plan

Purpose: To provide a multi-pronged approach to consumer education with the goal of connecting eligible populations, for whom CAP is the most beneficial plan, to enrollment. In addition to CAP, promotion of other universal service programs, such as LIURP and Hardship Fund, along with external resources, such as LIHEAP, will be emphasized in appropriate activities. A detailed map of advertising and outreach efforts for CAP and LIHEAP, including the number of expected impressions, is provided as an attachment.

General Audience Education & Outreach Activities

Activity	Frequency
Annual focused bill inserts	Singular section of fall insert; expanded sections in November and December inserts
Website self-screening tool	Available 24/7
Website program information	Available 24/7
Social Media Advertisements	Multi-season messaging; aligning with colder weather; opening of energy assistance programs, etc.
Community education	Posters/handouts provided to schools, churches, agencies regarding LIHEAP and CAP. Transit and other paid media advertising promoting LIHEAP occurs throughout the heating season. LIURP outreach is also conducted, particularly in target areas.

Target Audience Education & Outreach Activities

Activity	Details
Incoming callers screened for eligibility	Application for service; bill payment discussions; termination/restoration calls; PFA calls; emergency repair & LIURP screening calls and PUC cases.
Help at Peoples Now (HAPN Program)	Field employees utilize dedicated phone line to refer customers for assistance with CAP and energy assistance to avoid termination.
Plain English Notice (prior to Termination)	Mailed via US mail to accounts identified as low income (FPL <=150% FPL) prior to termination notice mailing.
Termination Notices	Contain eligibility information regarding CAP and energy assistance.
Hardship Grant applications at Dollar Energy Fund agencies	Benefits of CAP described; customers enroll remaining balances after grant into CAP.
LIHEAP recipient identification	List generated weekly of LIHEAP grants received that week on accounts that are not currently enrolled in CAP to be used for outreach.
Community Events	Provide representatives and materials to local events: senior fairs, resource fairs, etc.
Western PA Utility Partnership Activities	Joint promotion of programs through coordinated outreach. Peoples and other

	western PA utilities have joined with the Greater Pittsburgh Food Bank to develop and distribute a utility support flyer. Work currently underway with other utilities and Pennsylvania Utility Law Project to develop a universal CAP application.
Supporting At-Risk Populations	Coordination with resettlement agencies to support enrollment in CAP at the time of initiation of service for refugees and immigrants. Peoples plans to continue to develop this model to include organizations helping those transitioning from homeless to housed.
Employee Outreach	Provide materials for employees to distribute in their communities (schools, libraries, etc.) Information shared each heating season on Peoples' intranet and electronic bulletin boards in all Peoples' locations to encourage employees to share information with their communities.
LIURP Outreach	LIURP outreach is conducted through community events such as food bank distributions or resource fairs. All LIURP participants are additionally screened for CAP & LIHEAP. LIHEAP applications are mailed annually to LIURP participants. Post-inspectors provide CAP & LIHEAP flyer as part of their inspection and visit to further educate participants.

Annual Training/Community Education Opportunities

Association	Training/Support
Project Destiny (Pittsburgh's north side)	Multi-pronged support including regular training for field workers who visit customer homes; case management assistance to enroll customers in CAP, resolve terminations, etc.; participation in bi-monthly resource meetings.
BeUtilityWise (Allegheny County & Johnstown)	Annual participation in planning, program development and presentations to attendees regarding CAP.
Allegheny County Area Agency on Aging Community Partner Meetings (PA Link)	Quarterly meetings with Area Agency on Aging Staff and other community partners to share resources
Greater Pittsburgh Food Bank Partnership	Distribution of CAP/LIHEAP information in food boxes; LIURP and CAP/LIHEAP outreach at food distribution sites.
Beaver Human Services Forum	Participate in monthly resource meetings and promote programs within network.
State Legislator Events	Provide presentations and one-on-one assistance, distribute materials, etc.

Resource Fairs	Held throughout the service territory, Peoples staff answer questions/distribute information
Train the Trainer events	Offer training to additional local agencies, community partners.
Outreach mailings	Targeting school districts with a high percentage of low income students; local churches; family support centers, social service organizations.

Special Needs/Limited English Proficiency/Protection From Abuse

- Outreach materials (posters/handouts) are currently prepared in both English and Spanish translations. As other languages from resettled community members increase the need for materials in other languages, Peoples will work with its partners to provide translated materials.
- Language Line used for LEP customers.
- All PFA customers screened for CAP and LIHEAP.
- All customers receiving other Universal Service programs (LIURP, Emergency Repair Program, CARES) are screened for CAP and LIHEAP.
- Support to vulnerable customers provided by CARES representatives when customers are having difficulty understanding and/or completing steps to enroll in CAP and apply for LIHEAP.
- Help at Peoples Now – Field employees provided with education and dedicated phone line to reach customer program staff to help customers that need CAP or other income eligible programs. Field employees also carry business cards to be given to customers to encourage them to call for assisstance.

CAP Enrollment Methods

Method	Availability
Via telephone (most commonly used method)	Monday through Friday from 8 a.m. to 4:30 p.m.; customers that must provide income documentation can submit those via email, fax, or US mail.
Dollar Energy Fund Screening Agency	Applications by appointment with local agency.
Self-service online application	Applications available at https://www.hardshiptools.org/MyApp/
Paper Application	Available through Peoples' CARES team.

Ease of Enrollment Efforts

- No income documentation required if customer has received LIHEAP.
- Customers who receive Hardship Grants that do not cover their entire balance are enrolled into CAP for remaining balance.
- Income submitted to other utility programs managed by CAP administrator (Dollar Energy Fund) can be used, with customer's authorization, to avoid multiple submissions.

- Applicants to Duquesne Light's CAP can provide their permission for DLC to share their data with Peoples to enroll in CAP.

2023 Lessons Learned

Activity	
Facebook Live Event	Very little engagement; 11 viewers during event. No participation from audience.
Mission of Mercy	The format and flow of the event has changed since Peoples first began participating. The community tabling is now limited and has very little interaction with patients. Going forward, Peoples will provide its program information to be included in the resource bags given to all incoming attendees.
Community Baby Showers/Family Fun Events	A number of these events were attended in 2023, however there is very little engagement in these types of settings. Peoples will prioritize 2024 events that are more resource focused.

2024 Outreach Focus Areas

Activity	
Agency 'Office Hours'	Schedule events in partnership with North Hills Community Outreach and South Hills Interfaith Movement. Events will offer customers opportunities to ask questions about their accounts, provide documents for CAP recertification, etc. Potentially expand to other agencies in different geographical areas.
Community Relationship Building	Continue to identify and connect with social workers, agency members, church leaders, school resource officers and others to promote programs.
Income below 50% FPL emphasis	Maintain partnerships with transitional/resettlement organizations (Jewish Family & Community Services; Hello Neighbor; Bethany Christian Services, etc.)
Partnering with western PA utilities	Working with electric, gas and water utilities in the western PA area to identify and develop multi-utility outreach opportunities.
Monthly CEOP internal meetings	Evaluate events attended for benefit; identify new events/contacts; continuous improvement of CEOP.

Date	Organization	Type (In person, Web, Radio, Telephone)	Program (CAP, LIHEAP, LIURP, Weatherization)	Outreach Material Taken	Audience (i.e. customers, social service providers)	Number of Participants	Area (Where is event located?)	Notes

MAKING GAS BILLS MORE AFFORDABLE

If your household income is at or below the limits provided below, you may be eligible. Please try our confidential online eligibility tool ProgramFinder, located at peoples-gas.com/help or call 1-800-400-WARM (9276) to learn more.

LOW INCOME HOME ENERGY ASSISTANCE PROGRAM (LIHEAP)

Provides grants for customers with limited incomes. LIHEAP is not a loan. It is a government grant applied directly to help pay your Peoples heating bill.

PEOPLES CUSTOMER ASSISTANCE PROGRAM (CAP)

Is an affordable monthly payment plan, based on income, for customers who meet income guidelines. Participants make reasonable payments to maintain gas service and can earn credits to reduce their balance each month.

2023 – 2024 INCOME GUIDELINES

HELP WHEN YOU NEED IT MOST

Your Pennsylvania utilities want to help you find the assistance you need. Funds are available now. Don't miss out!

There are also other types of customer assistance programs available that can help lower your monthly utility bills.

Most assistance programs are available to people that are at or below 150% of the federal poverty level (please see chart below). However, some programs provide help to those with higher incomes. Please contact your utility companies today to find out if you qualify!

2022-2023 Annual Household Federal Income Guidelines 150% Federal Poverty Level

HOUSEHOLD SIZE	MONTHLY INCOME
1	$1,699
2	$2,289
3	$2,879
4	$3,469
5	$4,059
6	$4,649
7	$5,239
8	$5,829
	More than 8 members, add $590

COMMUNITY SERVICES

Monthly Resource EVENT!

Wednesday November 15th

10:00am – Noon

Where: Carnegie of Homestead Library 510 E 10th Avenue, 15120

Everyone is Welcome & All Services/Information are FREE!

Who Will Be Here:

Rainbow Kitchen Community Services: providing information about programs and services offered; other available programs and resources in the community
Allies for Health+Wellness: providing information about programs & services; free testing for HIV, Hepatitis C, Syphilis
Animal Friends: program information and free pet food
Community Life: providing program information about helping older adults to live independently at home
CSL Plasma: providing information about the importance of donating plasma
Deb's Clothing Closet: providing free clothing for men & children
Dress for Success: providing clothing, accessories & employment assistance to women
Duquesne Light Duquesne Light Universal Services/Holy Family Institute: completing applications for Customer Assistance Program (CAP) and Dollar Energy and providing 2023/24 LILHEAP information
First Class Marketing: Affordable Connectivity Program. Free cellphone or table to qualified individuals
Goodwill: providing program information for youth and adults, including free job trainings and GED
PA Women Work: helping women find financial stability through empowerment, employment & economic independence
Peoples Gas Company: providing information about utility assistance and programs
Steel Valley Family Center: providing information about programs and services offered
Unity Recovery: non-clinical, peer-based recovery support services to individuals, family members, and loved ones. Increasing recovery capital through achieving goals related to things such as employment, education, financial health, personal safety, relationships, and more.

And More!!

Hope to see you there!

Enrolling in the Customer Assistance Program (CAP) Will Stop Termination

When you sign up, any balance you owe is frozen. You will receive a credit towards that balance every month when you make your CAP payment.

CAP has several benefits:

- **Lower monthly payment.**
- **No late fees.**
- **Pay off your frozen balance faster.**

To learn more and apply:

Call Peoples today at 1-800-400-9276 Monday through Friday from 7 a.m. to 5 p.m. to learn more and apply over the phone. You can also apply online at https://www.hardshiptools.org/MyApp/.

You may be eligible if the gross income (income before taxes) for adults in the household is at or below:

Number of people in your household	Total Monthly Income (before taxes)
1	$1,823
2	$2,465
3	$3,108
4	$3,750
5	$4,393
6	$5,035
7	$5,678
8	$6,320
For each extra person, add:	$642

PEOPLES NATURAL GAS

Quarterly Update to UCARE Report

January – December 2023

Introduction

The quarterly update to the annual UCARE presents data on customer service performance for jurisdictional utilities in the electric, gas, water and telecommunications industries. The update provides a snapshot of overall BCS activity including the volume of Consumer Complaints, Payment Arrangement Requests (PARs) and Inquiries. Industry specific tables show the volume of activity for the major utilities within the electric, gas, water, municipal water, municipal sewer and telecommunications industries. The quarterly update contains current information that can be reviewed by utility management, consumers, Commission staff and other interested parties. The Commission will continue to produce the annual UCARE report which will present more detailed findings regarding utility performance.

*Infraction data on this page is subject to change if the utility disputes infraction(s) or BCS staff discovers additional infraction(s). Final infraction statistics will appear in the annual UCARE report.

Glossary of Terms

Consumer Complaint – Complaint to BCS involving billing, service, rates and other issues not related to requests for payment terms.

Infraction – A misapplication or infringement of a Commission regulation, particularly the standards and billing practices for residential utility service.

Inquiry – Consumer contact to BCS that require no follow-up investigation beyond the initial contact.

Major Electric Distribution Companies – Electric distribution companies with more than 100,000 residential customers.

Major Local Telecommunications Companies – Local telecommunications companies with more than 50,000 residential customers.

Major Natural Gas Distribution Companies – Natural gas distribution companies with more than 100,000 residential customers.

Major Water Utilities – Non-municipal water utilities with annual revenues of $1,000,000 or more for three years in a row are classified as "Class A." The tables in this report present individual statistics for the two largest Class A water companies, PAWC and Aqua, and for the "Other Class A" companies as a whole. The "Other Class A" water companies are Audubon Water, Columbia Water, Community Utilities, Newtown Artesian Water, Veolia Bethel, Veolia PA, and York Water.

Municipal Water and Sewer Utilities – Pittsburgh Water & Sewer (PWSA), a municipal utility, came under the Commission's regulatory authority effective 04/01/18. PWSA informal complaint data is designated as PWSA-Water or PWSA-Sewer based upon the nature of the complaint. Since PWSA's transition to PUC regulation is ongoing, as described in the annual UCARE report, it is premature for BCS to report data regarding justified consumer complaints/PARs or infractions.

Payment Arrangement Request (PAR) – Consumer request for payment plans in the following situations: suspension/termination of service is pending, service is suspended/terminated and in need of restoration, or the customer wants to retire an arrearage.

Justified Consumer Complaint – A consumer complaint where, prior to BCS intervention, the company did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, tariffs or guidelines when the consumer brought the complaint to the company's attention. The justified consumer complaint rate equals the number of justified consumer complaints for each 1,000 residential customers.

Justified PAR – A Payment Arrangement Request where, prior to BCS intervention, the company did not comply with Commission regulations, reports, Secretarial Letters, tariffs or guidelines. The justified payment arrangement request rate equals the number of justified payment arrangement requests for each 1,000 residential customers.

Response Time – The time span in days from the date BCS first contacts the utility regarding a consumer complaint or PAR, to the date on which the utility provides BCS with its report.

Consumer Access to the PUC ..... Inside Back Cover

Executive Summary

The Bureau of Consumer Services presents its annual assessment of the major utilities in the 2022 Utility Consumer Activities Report and Evaluation (UCARE). Assembled in one comprehensive report, the UCARE focuses on case handling activity relative to the major electric, gas, water, and telecommunications utilities. The annual UCARE reports and the quarterly UCARE snapshots posted on the PUC website have been prepared to meet the statutory reporting requirement of 66 Pa.C.S. § 308(d) and to communicate to the public and the utility industry how jurisdictional utilities performed relative to informal complaint activity in 2022.

As reflected in the data presented in the report, the number of complaints received was impacted starting in 2020 due to the direct and indirect effects of the COVID-19 pandemic and efforts to address the public health crisis. The COVID-19 pandemic impacted other data as well, such as EDCs and NGDCs conducting fewer terminations and reconnections in 2020, compared to previous years. In 2022, terminations and reconnections were much closer to pre-pandemic levels.

Due to the low volume of complaints about the non-major companies in 2022, BCS presents a summary table listing the non-major companies with five or more residential informal complaints in Appendix C. The informal complaints in Appendix C include both Consumer Complaints and payment arrangement requests (PARs).

Assistance programs for the electric and gas industries are presented in the Universal Service Programs and Collections Performance reports, while assistance programs for the water and telecommunications industries are highlighted in Chapters 9 and 10 of the annual UCARE report.

In 2022, BCS received a total of 115,609 contacts by consumers. Of those contacts, 47,727 needed further investigation (NFIs), which was up from the previous year but still less than the pre-COVID year 2019. BCS also received 16,953 contacts that were addressed on the initial contact. These First Contact Resolutions (FCRs) may also represent some non-jurisdictional dismissals. The top reasons for contact were calls regarding termination or suspension of service and non-jurisdictional complaints.

Billing disputes were the number one reason for Consumer Complaints in the electric, gas, and water industries in 2022. The number one reason for residential telecommunications Consumer Complaints is unsatisfactory service.

Prior to 2022, BCS used a third party to conduct the BCS Feedback Survey, sampling complainants who have contacted BCS. In 2022, BCS took the function in-house and found opportunities to recalibrate the survey process by changing the delivery of the surveys from USPS hard copy to electronic methods, taking advantage of new technology. This change allowed BCS to separate the Intake function, those staff who open the complaints, from the Investigative function. The survey sampling percentage and number of surveys sent were significantly increased from an annual average of approximately 5,000 surveys to over 31,000 Intake surveys and over 28,000 Investigative surveys in 2022.

1. Introduction

This Utility Consumer Activities Report and Evaluation (UCARE) is prepared annually by the Public Utility Commission's (PUC's) Bureau of Consumer Services (BCS) in accordance with the requirements found at 66 Pa.C.S. § 308.1(a). The report details utility compliance with statutes and regulations concerning residential customer service and billing matters as reflected in:

- Title 66 (Public Utility Code):
  - Chapter 14 Responsible Utility Customer Protection Act
  - Chapter 15 Service and Facilities
  - Chapter 22 Natural Gas Choice and Competition Act
  - Chapter 28 Electricity Generation Customer Choice and Competition Act
  - Chapter 30 Alternate Form of Regulation of Telecommunications Services
- 52 Pa. Code:
  - Chapter 53 Tariffs for Noncommon Carriers
  - Chapter 54 Electricity Generation Customer Choice
  - Chapter 55 Noncarrier Rates and Practices
  - Chapter 56 Standards and Billing Practices for Residential Utility Service
  - Chapter 57 Electric Service
  - Chapter 59 Gas Service
  - Chapter 62 Natural Gas Supply Customer Choice
  - Chapter 63 Telephone Service
  - Chapter 64 Standards and Billing Practices for Residential Telephone Service
  - Chapter 65 Water Service
  - Chapter 111 Marketing and Sales Practices for the Retail Residential Energy Market
- Utility Tariffs approved by the PUC:
  - Electric Tariffs
  - Natural Gas Tariffs
  - Water/Wastewater Tariffs
  - Telecommunications Tariffs

The data presented in this report is obtained from informal complaints received by the BCS in 2022 concerning the electric, natural gas, water and telecommunications industries under the PUC's jurisdiction. For comparative purposes, the 2022 data in this report is presented alongside data from prior years. Where appropriate, some of the data presented in this report is based on a statistically valid sampling of informal complaints and is noted as such throughout the report.

Impact of COVID-19 Pandemic

The information in this report cannot be adequately analyzed without first acknowledging the impact of the COVID-19 pandemic. The unprecedented challenges significantly impacted the global economy. Federal and state governments and utilities implemented emergency policy measures and operational adjustments. The PUC office buildings were closed to the public from March 16, 2020, until Aug. 2, 2021, with limited BCS staff working remotely for the first few weeks. The PUC Hotline was initially open to take emergency calls only. BCS was fully operational by July 1, 2020.

To address public health and safety concerns, on March 6, 2020, former Governor Tom Wolf issued a Proclamation of Disaster Emergency in response to the COVID-19 pandemic (*Emergency Proclamation*).[1] On March 13, 2020, former Chairman Gladys Brown Dutrieuille issued an *Emergency Order* which prohibited jurisdictional public utilities from terminating service during the duration of the *Emergency Proclamation* unless termination of service was necessary to ameliorate a safety emergency or unless otherwise determined by the Commission. The *Emergency Order* also encouraged utilities to reconnect previously terminated service if such action could be done safely.[2]

On Oct. 13, 2020, the Commission entered an Order modifying the *Emergency Order* (October 2020 Order).[3] The October 2020 Order lifted the termination moratorium for certain customers effective Nov. 9, 2020, but continued the termination moratorium for "protected customers" at or below 300% of the Federal Poverty Income Guidelines (FPIG), under certain conditions, and established protections for certain residential and small business customers. The termination moratorium and protections established by the October 2020 Order expired on March 31, 2021.

As shown throughout this report, the pandemic impacted the number of complaints received in 2020 and 2021 compared to previous years. Although complaint levels in 2022 started to rise more closely to pre-pandemic levels, BCS expects anomalous caseload activity to continue for the next several years and will monitor trends to assess related impacts and recovery efforts.

2. The Bureau of Consumer Services (BCS)

The Pennsylvania PUC's BCS was established by 66 Pa.C.S. § 308. BCS is charged with investigating and issuing final determinations on all informal complaints. BCS began investigating and writing decisions on informal complaints in April 1977. Since that time, BCS has resolved over 4.1 million informal complaints.

Informal Complaints Received by BCS

Informal complaints provide an avenue for consumers to voice concerns and seek assistance from a neutral party. These are the foundation for BCS's compliance monitoring of utility performance. Complainants are required by statute and Commission regulations to attempt to resolve problems directly with utilities prior to filing a complaint or requesting a payment arrangement with the PUC. Although exceptions are permitted for extenuating circumstances, BCS generally handles complaints where the utility and its customers could not find mutually satisfactory resolutions to problems.

Contacts to BCS generally fall into three basic categories, including:

- FCRs (First Contact Resolution complaints),
- NFIs (complaints that Need Further Investigation), primarily consisting of Consumer Complaints and Payment Arrangement Requests (PARs), and
- GIs (General Inquiries do not require detailed customer information or investigation).

BCS collectively refers to the FCR and NFI categories as "informal complaints." FCRs in previous reports were formerly referred to as "inquiries." These complaints are informal complaints resolved during the first contact or call-back. FCRs include informal complaints that do not require further investigation on the part of BCS.

BCS reclassified some contacts that originated as NFIs into the General Inquiry (GI) category because it is not appropriate to count these contacts as informal complaints. Examples include complaints that were found to be duplicates, complaints filed against the wrong utility, and complaints where customers had not previously contacted their utilities. GIs may be included within the FCRs. FCRs are excluded from the analysis in this report.

When a consumer contacts the PUC with an informal complaint against a utility, BCS notifies the utility that a complaint or PAR has been filed. The utility sends all records concerning the complaint to BCS, including records of its contacts with the complainant. A BCS investigator reviews the records, interacts with both the complainant and utility as necessary, renders a decision, and closes the complaint.

In 2022, BCS received 115,609 contacts from consumers including 47,727 contacts that required further investigation (NFIs) and 16,953 FCRs. BCS determined 88% of the 2022 complaints investigated and reviewed were appropriately handled by the subject utilities prior to BCS intervention.

BCS introduced its bilingual Artificially Intelligent Virtual Agent (Aiva) to the PUC website's complaint page in June 2022 and to the BCS Hotline in late July 2022. Aiva facilitates call handling and case intake. Aiva also provides a new option to assist Spanish speaking complainants. Performance statistics for Aiva will be presented in the 2023 UCARE report.

The primary focus of this report is NFI complaints. NFI complaints are categorized as Consumer Complaints and PARs. Consumer Complaints and PARs are taken in by BCS for further investigation. BCS

classifies Consumer Complaints as **disputes** related to utility billing, service delivery and repairs, etc. PARs are classified as contacts where the primary request is to establish payment terms.

BCS Management of Informal Complaint Data

To manage and use its complaint data effectively, BCS maintains both an internal complaint database and the Consumer Services Information System (CSIS), maintained by the Pennsylvania State University. These systems enable BCS to aggregate and analyze the thousands of informal complaints it receives annually to identify trends and issues. The analysis is used by BCS to generate reports to the Commission, utilities, Legislators, and the public, presenting information regarding utility performance, industry trends, investigations, new policy issues, and the impact of utility or Commission policy.

Most of the data presented in this report is derived from the CSIS database; however, some statistics may be derived from BCS's complaint database, the Collections Reporting System (CRS), the Local Exchange Carrier Reporting System (LECRS), and the Compliance Tracking System (CTS). The CRS (for electric and gas) and the LECRS (for telecommunications) provide valuable resources for measuring changes in utility collection performance, including the number of residential service terminations. The CTS maintains data about the number and type of apparent infractions attributable to the major utilities.

BCS Complaints Appealed

The Public Utility Code provides an appeal process for informal complaint decisions when a complainant does not agree with the outcome or result of a BCS determination. Complainants can file a formal appeal and seek a decision from a presiding officer in the PUC's Office of Administrative Law Judge (OALJ). The following table shows the rate of NFI informal complaints appealed to OALJ and the percentage of BCS informal complaints overturned. The appeal rate is typically below 1% and the percentage of BCS NFI complaints overturned is less than 1%.

Informal Complaint Appeal Rate

Year	Informal BCS NFI Complaints	BCS NFI Complaints Appealed	Percent of BCS NFI Complaints Appealed	BCS NFI Decisions Overturned by OALJ	Percent Overturned
2018	64,668	597	0.92%	2	0.00%
2019	59,111	511	0.86%	3	0.01%
2020	13,297	401	3.02%	3	0.02%
2021	28,474	244	0.86%	0	0.00%
2022	47,727	403	0.84%	0	0.00%

BCS Feedback Survey

Through 2021, BCS used a third party to survey a sampling of complainants who have contacted BCS. In a recent internal review of this program, BCS found opportunities to recalibrate the survey process to take advantage of new technology and BCS took the function in-house beginning in 2022. BCS changed the delivery of the surveys from USPS hard copy to electronic methods. This change allowed BCS to separate the Intake function, those staff who open the complaints, from the Investigative function. BCS can more timely survey and monitor each separate role.

The new survey sampling has been significantly increased. In 2021 and prior, there were an average of approximately 5,000 surveys distributed annually. Starting in 2022, BCS has distributed over 31,000 Intake surveys and over 28,000 Investigative surveys. These changes ensure that the surveys represent statistically valid sample size, accurately reflect the performance of all related staff, and align practices with more current and timely survey methods.

The following table presents additional information about how complainants rated the service they received from BCS intake staff in 2022. According to the survey results for the intake staff on the table that follows, 97.8% of complainants who contacted BCS in 2022 rated the person they spoke with on the phone as "very polite" or "fairly polite."

Ratings of BCS Service – Intake

How easy was it to reach the PUC's Bureau of Consumer Services (BCS)?	
	2022
Very easy	59.6%
Fairly easy	29.2%
Somewhat Difficult	7.3%
Difficult	3.5%
Don't recall	0.2%
Was this the first time you contacted BCS about this problem?	
	2022
Yes	71.9%
No	25.2%
Don't recall	2.7%
If you contacted BCS by phone, how polite was the first person who helped you?	
	2022
Very polite	93.4%
Fairly polite	4.4%
Not very polite	0.7%
Not at all polite	0.5%
Don't recall	0.2%
Did not speak to a person	0.0%
Did the person seem interested in helping you with your problem?	
	2022
Very interested	86.6%
Fairly interested	10.2%
Not very interested	1.6%
Not at all interested	0.7%
Don't recall	0.3%
Did not speak to a person	0.3%
Do you feel like the person you spoke with at the PUC understood your problem?	
	2022
Yes	96.3%
No	2.6%
Don't recall	0.6%
Did not speak to a person	0.3%

The following table presents additional information about how complainants rated the service they received from BCS investigators in 2019, 2020, 2021 and 2022. According to the survey results for the investigators on the table that follows, 62.9% of complainants who contacted BCS in 2022 rated the BCS's service as "excellent" or "good." When asked if they would contact the PUC again for help, 69.0% of complainants said "yes." BCS found many factors influence the survey results. As an example, oftentimes those who respond to the surveys are individuals who did not receive a favorable informal decision and they are not pleased with the outcome. BCS takes those factors into consideration when looking at the percentages in the tables below.

Ratings of BCS Service – Investigators

How would you rate the service you received from the PUC (BCS)?				
	2019	2020	2021	2022*
Excellent	48.9%	55.0%	58.4%	51.1%
Good	22.7%	17.5%	24.6%	11.8%
Fair	13.4%	12.8%	8.6%	10.0%
Poor	15.0%	14.8%	8.4%	26.1%
How quickly did the PUC handle your request?				
	2019	2020	2021	2022*
Very quickly	38.6%	43.5%	45.0%	44.3%
Fairly quickly	24.7%	25.4%	35.5%	28.6%
Not very quickly	15.7%	12.7%	7.5%	9.2%
Not at all quickly	15.9%	13.9%	5.4%	9.6%
Don't recall	2.3%	2.0%	0.6%	1.4%
Have not heard from PUC	2.9%	2.5%	6.2%	6.0%
How easy to understand was the information the PUC gave you in writing?				
	2019	2020	2021	2022*
Very easy	44.9%	41.9%	59.4%	38.4%
Fairly easy	19.1%	20.7%	19.6%	14.4%
Not very easy	3.5%	3.0%	3.6%	3.3%
Not at all easy	2.5%	2.0%	2.1%	4.8%
Don't recall	3.2%	7.7%	1.6%	2.5%
Did not receive anything in writing	26.9%	24.7%	13.7%	35.2%
If you had another problem with a utility, would you contact the PUC again?				
	2019	2020	2021	2022*
Yes	81.0%	77.8%	85.0%	69.0%
No	7.2%	10.2%	5.7%	14.0%
Not sure	11.8%	12.0%	9.3%	16.1%

*The survey process was brought in-house in 2022 where the delivery methods were changed from hard copy to electronic and survey sampling was drastically increased.

Complaints Excluded from Analysis by BCS

The majority of contacts and complaints taken in by BCS fall into the categories described earlier in this chapter. However, certain contacts to BCS fall into categories that were excluded from the analyses later in this report. Examples of contacts and complaints that were excluded include:

- non-jurisdictional complaints,
- information requests that did not require investigation, and
- complainants who did not contact the utility prior to contacting the Commission.

Commercial complaints were also excluded from the data used in the analyses. Although BCS's regulatory authority has largely been confined to residential accounts, the Bureau handled 1,399 complaints from commercial complainants in 2022, including 384 complaints related to loss of utility service.

Mediated Complaints Sent to OALJ from BCS

Residential complaints always outnumber commercial complaints to BCS and BCS typically has limited jurisdiction in commercial complaint matters. BCS investigators may attempt to mediate a mutually acceptable agreement between the commercial complainant and the utility. Many commercial complaints are referred to the Office of Administrative Law Judge's Mediation Unit for Alternative Dispute Resolution or they may choose to file a formal complaint by contacting the Secretary's Bureau.

** Due to the UGI Gas merger, effective Jan. 1, 2020, the UGI Gas data includes UGI Central and UGI North.

3. Categories of Residential Consumer Complaints

Total Volume

The following table compares the volume of all residential NFI complaints to the volume of all commercial NFI complaints handled by BCS in 2022.

Total Volume of NFIs
Consumer Complaints and Payment Arrangement Requests (PARs) to BCS in 2022*

Industry	Consumer Complaints		Payment Arrangement Requests	
	Residential	Commercial**	Residential	Commercial**
Electric	6,868	587	23,058	201
Gas	2,423	168	9,408	167
Water	1,234	102	1,991	15
Telecommunications	1,201	148	13	0
Other***	117	10	15	1
Total	**11,843**	**1,015**	**34,485**	**384**

* This table represents "investigated complaints" only, and not those complaints handled on the first call.
** All complaints that involved commercial accounts were deleted from the analyses in the subsequent chapters.
*** Wastewater and steam heat complaints are designated as "other" in this table and the tables that follow.

Consumer Complaints Analyzed by BCS

Most Consumer Complaints regarding the electric, gas, water, wastewater and steam heat industries deal with matters covered in Chapter 14 the Responsible Utility Customer Protection Act, and Chapter 56 Standards and Billing Practices for Residential Utility Service.

For the telecommunications industry, most of the complaints found in the Consumer Complaint category deal with matters covered by Chapter 30, Alternative Form of Regulation of Telecommunications Services, Chapters 63 and/or 64, Telephone Service and Standards and Billing Practices for Residential Telephone Service. Most Consumer Complaints represent complainants who contacted the Commission when they were unable to reach a mutually satisfactory resolution with the utility.

Consumer Complaints by Industry*
2019-22

Industry	2019	2020	2021	2022
Electric	8,007	4,568	5,421	7,455
Gas	2,579	1,355	1,836	2,591
Water	1,194	1,055	1,370	1,336
Telecommunications	1,445	1,337	1,708	1,349
Other	75	53	42	127
Total	**13,300**	**8,368**	**10,377**	**12,858**

* Table includes both residential and commercial Consumer Complaints.

As shown in the table above, electric and gas utilities accounted for 78% of all Consumer Complaints investigated by BCS in 2022.

In 2022, 58% of these complaints were electric (7,455 complaints) and 20% of these complaints were natural gas (2,591 complaints), while telecommunications utilities totaled approximately 10% (1,349 complaints), and water utilities accounted for 10% (1,336 complaints).

The following table presents a comparison of the number of residential and commercial Consumer Complaints for 2019, 2020, 2021 and 2022.

Consumer Complaints to BCS in 2019-22

Industry	Consumer Complaints							
	Residential				Commercial			
	2019	2020	2021	2022	2019	2020	2021	2022

Other	70	48	41	117	5	5	1	10
Total	**12,590**	**7,844**	**9,657**	**11,843**	**710**	**524**	**720**	**1,015**

Classification of Consumer Complaints

BCS categorizes residential complaints into 14 categories for each of the electric, gas, and water utilities and 11 categories for each of the telecommunications utilities. Tables showing the percent of complaints in each category appear in the following industry chapters. The tables represent all of the complaints that were evaluated by BCS staff. BCS analyzes the categories that generate the most complaints

or problems and often discusses its findings with individual utilities and works with them to make necessary revisions to their complaint handling procedures.

Payment Arrangement Requests

PARs are requests for payment arrangement terms that fall into one of the following situations:

- Suspension/termination of service is pending,
- Service has been terminated and the complainant needs payment terms to have service restored, or
- The complainant wants to eliminate a debt or a past-due balance.

Act 201 of 2004[4] changed the rules that apply to cash deposits, reconnection of service, termination of service, payment arrangements, and the filing of termination complaints by consumers for electric, gas and water. The goal was to increase timely collections while ensuring that service is available to all customers based on equitable terms and conditions.[5] The law is applicable to Electric Distribution Companies (EDCs), water distribution utilities, and Natural Gas Distribution Companies (NGDCs) with an annual operating income in excess of $6 million.[6] On Oct. 22, 2014, Chapter 14 was revised and renewed for a period of 10 years. On Feb. 28, 2019, the Commission amended Chapter 56 to make the regulations consistent with the Chapter 14 updates.[7] BCS is required to provide a report detailing the impact of Chapter 14 every five years. The recent quinquennial report, *The Sixth Report to The General Assembly and The Governor Pursuant to Section 1415 – Implementation of Chapter 14*, was provided to the General Assembly and the Governor on Jan. 31, 2020.[8] The next report is due in December 2024, the same year the general assembly must renew Chapter 14 before it expires.

Telecommunications utilities are not covered by Chapter 14. For the telecommunications industry, most of the complaints found in the PAR category deal with matters covered by Chapter 30, Alternative Form of Regulation of Telecommunications Services, Chapters 63 and/or 64, Telephone Service and Standards and Billing Practices for Residential Telephone Service. For the telecommunications industry, PARs are principally contacts to BCS or to utilities involving a request for payment terms for arrearages associated with basic service. Although Chapter 64 uses the term “payment agreement,” “payment arrangement” has been used throughout this report for consistency.

All of the measures in this report pertaining to PARs are based on assessments of contacts to BCS from individual complainants. As with Consumer Complaints, almost all complainants contacted their utility prior to contacting BCS. During 2022, BCS handled 34,869 PARs from customers of the utilities under the Commission’s jurisdiction.

Payment Arrangement Requests (PARs) by Industry*
2019-22

Industry	2019	2020	2021	2022
Electric	30,055	2,768	11,244	23,259
Gas	12,054	1,449	5,237	9,575
Water	3,628	674	1,592	2,006
Telecommunications	23	13	13	13
Other	51	25	11	16
Total	**45,811**	**4,929**	**18,097**	**34,869**

* Table includes both residential and commercial PARs.

As in past years, most requests for payment arrangements in 2022 involved electric or gas utilities. As shown in the table above, 67% (23,259 complaints) of PARs in 2022 were from electric customers and 27% (9,575 complaints) were from gas customers. Also, 6% (2,006 complaints) of PARs in 2022 came from customers of various water utilities and 1% (16 complaints) of PARs in 2022 came from telecommunications customers. The following table presents a comparison of the number of residential and commercial PARs for 2019, 2020, 2021 and 2022.

Payment Arrangement Requests (PARs) to BCS in 2019-22

Industry	Payment Arrangement Requests							
	Residential				Commercial			
	2019	2020	2021	2022	2019	2020	2021	2022
Electric	29,907	2,731	11,028	23,058	148	37	216	201
Gas	11,931	1,421	5,095	9,408	123	28	142	167
Water	3,604	668	1,578	1,991	24	6	14	15
Telecommunications	23	12	13	13	0	1	0	0
Other	49	25	10	15	2	0	1	1
Total	**45,514**	**4,857**	**17,724**	**34,485**	**297**	**72**	**373**	**384**

With respect to the commercial cases, BCS cannot make payment arrangements for those accounts. Due to its limited jurisdiction over commercial cases, BCS does not issue decisions regarding commercial disputes with no residential end use. Instead, BCS investigators give commercial customers information regarding the utility position or attempt to mediate a mutually acceptable agreement regarding the disputed matter. Many such cases are referred to the Office of Administrative Law Judge's Mediation Unit for Alternative Dispute Resolution where an attempt is made to mediate a resolution between the utility and its customer.

First Contact Resolution (FCR) Complaints

Formerly labeled as "Inquiries," the total number of FCRs BCS received in 2022 was 16,953. FCRs are contacts that did not require follow-up investigation beyond the initial contact or call-back. The FCRs for 2022 include contacts to the BCS via the Consumer Complaint Hotline, mail, website, fax and email.

BCS classifies certain PARs as FCRs; therefore, they are not represented in the number of PARs in the tables in this report. For example, BCS does not issue payment decisions for complainants that are actively enrolled in utility Customer Assistance Programs (CAPs) or requests to restore or avoid suspension / termination of toll or non-basic telecommunications service. Similarly, if a complainant has recently been through the BCS payment arrangement process and calls again with a new request, without a change in income or significant change in circumstances[9], BCS does not open a new PAR complaint for investigation (NFI/PAR). In these instances, BCS dismisses the complaint at the initial contact and classifies the contact as an FCR.

As previously mentioned, BCS reclassified some contacts that originated as NFIs into the General Inquiry (GI) category. The GIs are excluded from analysis within this report. They are not counted as informal complaints. Reclassified GIs (1,231 complaints in 2022) accounted for 7% of FCRs in 2022 and are included in the tables below.

[9] 66 Pa.C.S. § 1402 Definitions of "Change in Income" and "Significant Change in Circumstance" in conjunction with 66 Pa.C.S. § 1405 Payment Arrangements.

FCR Reason for Contact Categories in 2022

Reason for Contact	Number	Percent*
Termination or suspension of service	3,532	20.8%
PUC has no jurisdiction	2,517	14.9%
Unable to open new PAR – service on	2,125	12.5%
Request for general information	1,465	8.6%
CAP inquiry/contact	1,344	7.9%
Billing dispute	1,081	6.4%
Competition issues and requests for information	671	4.0%
Rate protest	468	2.8%
Service (utility facilities)	419	2.5%
Applicant/deposit issue	400	2.4%
People-delivered utility service**	282	1.7%
Unable to open new PAR – service off	128	0.8%
Weather outage	17	0.1%
Rate complaint	0	0.0%
Cramming**	0	0.0%
Slamming**	0	0.0%
Other miscellaneous reasons***	1,445	8.5%
Reason for contact is not available	1,059	6.3%
Total	**16,953**	**100.2%**

* Total percent may be more or less than 100% due to rounding.
** Please refer to the Glossary of Terms.
*** Some of the Other category includes contacts related to Sales Issues, Lifeline/Link-up, Healthcare facilities, etc.

4. Commodity Supplier Activity

Electric and Natural Gas Supplier Activity

Deregulation of the electric and natural gas supply industries occurred in Pennsylvania through the passage of the Electricity Generation Customer Choice and Competition Act in 1996 and the Natural Gas Choice and Competition Act in 1999. Prior to the enactment of these laws, customers in Pennsylvania procured their electricity and/or natural gas from utility companies that generated, transmitted and distributed the energy to the customer. Under energy competition, consumers in Pennsylvania have the choice to purchase electricity and/or natural gas from a supplier that is a different company than the utility; thereby allowing the consumer to choose their energy supply based on several factors, including price, or in the case of electricity, by the source of the power supplied to the customer. Currently, Pennsylvania has a robust competitive energy supply market, with over 450 electric generation suppliers and over 335 natural gas suppliers licensed with the Commission. In 2022, on average, over 1.2 million residential electric customers and over 330,000 natural gas customers were served by competitive suppliers.

As indicated in the following table, in 2022 BCS received 2,845 contacts related to competitive supplier issues in the energy industries.

All Competition-Related Contacts by Industry 2019-22

Industry	2019	2020	2021	2022
Electric	3,490	2,353	1,954	2,465
Gas	454	307	294	380
Total	**3,944**	**2,660**	**2,248**	**2,845**

Of the 2,845 total contacts received about competitive supplier issues in 2022, 955 or 34% pertained to slamming. Slamming is the illegal practice of switching a customer's supplier or provider without permission. The following table presents the number of slamming NFI complaints received by BCS.

Slamming NFIs (Consumer Complaints and PARs) by Industry 2019-22

Industry	2019		2020		2021		2022	
	Residential	Commercial	Residential	Commercial	Residential	Commercial	Residential	Commercial
Electric	912	50	562	44	533	60	654	93
Gas	102	1	76	3	87	7	106	13
Total	**1,014**	**51**	**638**	**47**	**620**	**67**	**760**	**106**

There were 866 NFI complaints about slamming in 2022. Residential consumers filed 760 NFI complaints or 88%, commercial consumers filed the remaining 106 or 12% of slamming NFIs. Of the residential slamming NFIs, 654 were from the electric industry and 106 were from the natural gas industry.

The Commission views slamming as a very serious violation of consumer regulations and has articulated a "zero tolerance" policy against slamming.[10]

Appendix D-1 identifies the types of competition complaints tracked by BCS. In addition to slamming, bill disputes are prevalent among competition complaints to BCS.

[10] L-00970121, Public Meeting of May 21, 1998.

5. Residential Consumer Complaints from Non-Major Utilities

Residential Consumer Complaints for Non-Major Utilities

Historically, the primary focus of BCS's review of utilities' complaint handling has been on the performance of the major electric, gas, water and telecommunications utilities. For the past several years a limited amount of complaint information for the non-major utilities and the other service providers was included in the UCARE report.

Utilities are considered a non-major utility in the following circumstances. A non-major electric utility is an EDC with less than 100,000 residential customers or an electric generation supplier (EGS). A non-major gas utility is an NGDC with less than 100,000 residential customers or a natural gas supplier (NGS). A non-major water utility is a municipal water utility or a non-municipal water utility with revenues of either less than $1 million annually or greater than $1 million annually for no more than two consecutive years. A non-major telecommunications utility is an Incumbent Local Exchange Carrier (ILEC) that served less than 50,000 residential customers, a competitive local exchange carrier, a long-distance company, an IXC, a reseller, or an eligible telecommunications carrier.

In 2022, BCS observed a decrease in the overall number of residential Consumer Complaints for the non-major utilities when compared with the pre-pandemic year of 2019, with the exception of the non-major telecommunication utilities.

Residential Consumer Complaints by Industry for Non-Major Utilities*
2019-22

Industry	2019	2020	2021	2022
Electric	1,690	1,188	1,028	1,522
Gas	381	210	228	297
Water	31	27	22	13
Telecommunications	87	134	145	139
Total	**2,189**	**1,559**	**1,423**	**1,971**

* See Appendix C.

BCS staff investigated the total number of Consumer Complaints with the non-major utilities, including suppliers, under the Commission's jurisdiction. The majority of complaints against non-major utilities involved slamming and billing disputes. These two complaint categories accounted for:

- 69% of non-major electric utility complaints
- 63% of non-major gas utility complaints
- 38% of non-major water utility complaints
- 15% of non-major telecommunications utility complaints

Appendix C presents a summary of the residential informal complaints (Consumer Complaints and PARs) that are not included in the analysis within the electric, gas, water and telecommunications chapters. The table lists the non-major utilities for these industries, the electric generation and natural gas suppliers and providers of telecommunications services that had five or more residential Consumer Complaints in 2022.

6. Performance Measures

Informal complaints are an indicator of utility complaint-handling performance. Utility customers are required to contact their utility about a problem prior to contacting BCS. BCS reviews utility records to evaluate the handling of each complaint. The informal compliance evaluation process includes several assessments that form the basis of the performance measures presented in the industry chapters of this report[11], with the exception of the number of terminations and termination rate. Many of the performance measures are shown as rates, calculated per 1,000 residential customers. Appendix A provides the number of residential customers for the major companies in each of the industries in 2019, 2020, 2021 and 2022.

Informal Compliance Process and Infractions

The BCS informal compliance evaluation process includes notifying a utility of an alleged infraction or violation of a statute or regulation and provides written clarifications of Chapters 14, 30, 56, 63 or 64 and the policies of the Commission and BCS.

The utility has an opportunity to respond and may dispute the infraction by providing details and supporting documentation to disprove the infraction. BCS provides a final determination to the utility regarding the infraction. If the information about the infraction is accurate, BCS expects the utility to take corrective action to address the problem or any deficiencies that led to the infraction. Examples of corrective action may include modification of a system or correction of a systems issue; revision of utility procedures/practices, the text of a notice, bill or letter; and/or additional staff training.

The informal compliance process is designed to help BCS identify systemic errors and to ensure compliance by the utilities. One example of a systemic error is a termination notice that does not comply with the requirements of Chapter 56. Each recipient of the notice is affected by that error. When an error is discovered, BCS requires utilities to investigate the scope of the problem and take corrective action.

Total Complaint Rate

The Total Complaint Rate is the number of all complaints (FCRs and NFIs combined) for each 1,000 residential customers. This calculation allows the reader to make comparisons among utilities of various sizes of the overall BCS activity.

Consumer Complaint Rate

The calculation of the Consumer Complaint rate (Consumer Complaints per 1,000 residential customers) permits the reader to make comparisons among utilities of various sizes. Consumer Complaint rates and statistically significant changes in Consumer Complaint rates from one year to the next are often indicative of patterns and trends that it should investigate. BCS considers the “justified Consumer Complaint

[11] It is important to note that this is not the only report BCS produces to assess utility performance. For example, residential termination and reconnection statistics for electric, gas, and water utilities are reported by the utilities as required by Chapter 56 at § 56.231 and posted on the PUC website at https://www.puc.pa.gov/filing-resources/reports/terminations-for-electric-gas-water-companies/.

rate" (justified Consumer Complaints per 1,000 residential customers) a better indicator of a utility's complaint handling performance.

Justified Consumer Complaint Rate

BCS policy analysts review a statistically valid sampling of complaints and utility records to determine if the utility took appropriate action when handling its consumer contacts. BCS uses the complaint evaluation process to identify whether the utility followed the correct procedures prior to the intervention of BCS. This approach focuses strictly on the utility's compliance with applicable statutes and regulations.

A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters or tariffs. The "justified Consumer Complaint rate" reflects both volume and percent of complaints found justified. It is the number of justified consumer complaints per 1,000 residential customers. The justified consumer complaint rate is a normalized ratio useful for comparing utility performance over time among the various utility companies.

BCS monitors the complaint rates and justified rates of the major utilities. When BCS finds below-average performance, it may indicate improper dispute handling. In the industry chapters that follow, BCS compares the Consumer Complaint rates, the justified Consumer Complaint rates, and the overall percent of justified Consumer Complaints of the major utilities.

Percent of Justified Consumer Complaints

The percent of justified Consumer Complaints is the estimated number of justified complaints divided by the total number of complaints received. This measures all of the complaints, rather than the statistically valid sample of complaints evaluated.

Response Time to Consumer Complaints

When a consumer contacts BCS with a complaint about a utility, the utility is notified. The utility sends BCS the record of its contacts with the complainant about that specific complaint. The utility has up to 30 days to send BCS its initial informal complaint report or up to five days if the complainant is without service.

"Response time" is the number of days from the date BCS first contacts the utility regarding a complaint to the date on which the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS Consumer Complaints.

Average response time includes all residential EDC Consumer Complaints except complaints processed through CURE (Customer & Utility Resolution Effort). CURE is a voluntary program designed to better manage workload, improve customer satisfaction, and reduce costs. The utility contacts the complainant and attempts to achieve a resolution. If mutual satisfaction is reached, the utility and complainant notify BCS the informal complaint can be closed without further investigation, and the utility isn't required to submit a full utility report.

In the following industry chapters, response time is presented as the average of a utility's responses in the tables titled Average Response Time to BCS.

Payment Arrangement Request (PAR) Rate

BCS may offer a payment arrangement to a complainant in accordance with Chapter 14. The volume of PARs may fluctuate from year to year, or even from month to month, depending upon utility collection strategies and economic factors. The calculation of the PAR rate (PARs per 1,000 residential customers) permits the reader to make comparisons among utilities. Unusually high or low rates and significant changes in rates from one year to the next may indicate areas that need further investigation or Commission action.

Justified Payment Arrangement Request (PAR) Rate

The justified payment arrangement request (PAR) rate is a normalized ratio useful for comparing utility performance among the various utility companies.

Many PARs to BCS are undisputed, with no other problem associated with the request. There is an automated process for the majority of these complaints that BCS refers to as AutoPAR. *AutoPARs are not evaluated, therefore, they are not included in the estimated number of justified complaints. AutoPARs are included in the total number of PAR complaints received by BCS.*

In complaints where the utility claims there are disputed factors in addition to the PAR or a complainant is ineligible for a PUC payment plan, a BCS investigator reviews the record manually and issues a decision or determination.

In an evaluation of a statistically valid sampling of disputed PAR complaints, BCS policy analysts determine if the utility complied with regulations and statutes. BCS monitors the justified PAR rates for below-average performance and improper dispute handling. These are the complaints that appear in the justified PAR tables within this report. The justified PAR rate is the ratio of the estimated number of justified PARs per 1,000 residential customers. In the chapters that follow, BCS compares the justified PAR rates of the major utilities.

Percent of Justified Payment Arrangement Requests (PARs)

The percent of justified PARs is the estimated number of justified complaints divided by the total number of PAR complaints received. The measure takes into account all of the complaints, including AutoPARs, rather than the statistically valid sample of PAR complaints evaluated in the informal compliance process.

Response Time to Payment Arrangement Requests

When a complainant contacts BCS for a PAR, BCS notifies the utility. The utility sends BCS the record of its contacts with the complainant about that specific concern, including the results of the most recent payment negotiation, if any. The utility has up to 30 days to send BCS its initial informal complaint report or up to five days if the complainant is without service.

“Response time” is the number of days from the date BCS first contacts the utility regarding a complaint to the date the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility’s response to BCS PAR complaints.

The calculation for average response excludes undisputed PARs and CURE complaints. CURE is a voluntary program designed to better manage workload, improve customer satisfaction, and reduce costs. The utility contacts the complainant and attempts to achieve a resolution. If mutual satisfaction is reached, the

utility and complainant notify BCS the informal complaint can be closed without further investigation, and the utility isn't required to submit a full utility report.

In the following industry chapters, response time is presented as the average of a utility's responses in the tables titled Average Response Time to BCS.

Termination Rate

The termination statistics and the number of residential customers for the electric, gas and water utilities are drawn from reports required by Chapter 56 at § 56.231. Telecommunications termination statistics and number of residential customers are drawn from reports required by Chapter 64 at § 64.201.

BCS views termination of utility service as a utility's last resort when customers fail to meet their payment obligations. The "termination rate" allows the reader to compare termination activity between utilities.

Previously the termination rate for the telecommunications industry was calculated in the UCARE reports as the number of terminations for each 1,000 residential customers; however, the termination rate for the telecommunications industry is now being calculated consistent with the other industries as defined below.

The termination rate for all industries is the number of service terminations divided by the number of residential customers.

Infraction Rate

BCS compares utilities of various sizes within an industry by using a measure called the infraction rate. The infraction rate is the number of verified infractions for each 1,000 residential customers.

The infraction rate tables in the chapters that follow do not show the causes of the individual infractions, repetitive occurrences due to systemic issues or indicate the level of seriousness of infractions related to health and safety.

This compliance measure shows industry trends over time. Generally, trends may change as complaints for that year continue to be evaluated into the new year, and utilities may subsequently challenge a BCS determination. For example, complaints closed in November and December may not be evaluated by BCS until the new year, and utilities may subsequently challenge BCS infractions. Thus, the total number of infractions for the year may change from the number cited in the current report. BCS will update the 2022 infraction rates in the 2023 report.

Infraction rates are shown for 2019, 2020, 2021 and 2022 in the upcoming industry chapters. The electric, gas, and water industry chapters show the 2022 infractions of Chapter 56, Chapter 14 and other regulations, and the telecommunications industry chapter shows the infractions of Chapters 30, 63, 64 and other regulations.

BCS Performance Measures and Industry Chapters

The tables in the following industry chapters present the data alphabetically by utility name for major utilities, as defined within the sections.

Universal Service and Energy Conservation Programs / Other Low-Income Programs

Universal service and energy conservation programs help utility customers maintain service and conserve energy. While not a performance measure that is reviewed during the compliance evaluation process, BCS monitors and evaluates these programs to help the Commission fulfill its oversight responsibilities, increasing the effectiveness of utility collections while protecting the public's health and safety.

Electric and gas universal service programs include: Customer Assistance Programs (CAP); Low-Income Usage Reduction Programs (LIURP); Hardship Fund Programs; and Customer Assistance and Referral Evaluation Services (CARES) programs. An explanation of each of these programs is included in the Glossary of Terms.

In September 2023, the Commission released the 23rd annual report on Universal Service Programs and Collections Performance, which presents 2022 universal service and collections data for the major electric and natural gas distribution companies. The Universal Service Programs and Collections Performance reports are available on the Commission's website at: https://www.puc.pa.gov/filing-resources/reports/universal-service-reports/

Water and telecommunications utilities also offer programs to assist low-income customers. At the end of the water and telecommunications chapters that follow, readers will find highlights of these programs.

7. Electric Industry

In 2022, the Commission had jurisdiction over 15 electric distribution companies (EDCs). The majority of Consumer Complaints and PARs are about the seven major EDCs: Duquesne Light Co. (**Duquesne**), PECO Energy Co. (**PECO**), PPL Electric Utilities Inc. (**PPL**), and the four FirstEnergy companies – Metropolitan Edison Co. (**Met-Ed**), Pennsylvania Electric Co. (**Penelec**), Pennsylvania Power Co. (**Penn Power**), and West Penn Power Co. (**West Penn**). This chapter will focus exclusively on those seven utilities.

The statistics in the tables on the pages that follow depict the performance of each of the seven major electric utilities in 2022. The major electric utilities are those that have more than 100,000 residential customers. The tables in this chapter also include UGI-Electric, a large non-major EDC with fewer than 100,000 residential customers. In some circumstances, statistics for the non-major utilities can skew the industry averages in ways that do not fairly represent industry performance. For this reason, BCS excluded the statistics involving UGI-Electric when it calculated the electric industry averages. PECO's statistics include data for both electric and gas service. BCS also removed supplier complaints from the data it used to prepare the tables on Consumer Complaints and PARs and addresses these complaints in a separate section of the report.

Total Complaint Rate

The following table shows the Total Complaint Rate, which is the number of all complaints (FCRs and NFIs combined) for each 1,000 residential customers.

2019-22 Residential Total Complaint Numbers/Rates
Major Electric Distribution Companies

Utility	2019		2020		2021		2022	
	Number	Rate	Number	Rate	Number	Rate	Number	Rate

Average of Rates*		**9.33**		**1.86**		**3.68**		**6.79**

* Does not include UGI-Electric.
+ PECO statistics include electric and gas.

Consumer Complaints

During 2022, BCS handled 6,868 Consumer Complaints from residential electric consumers of the various EDCs (5,353) and EGSs (1,515). The seven major EDCs represented 76% (5,234) of the total Consumer Complaints.

Consumer Complaint Categories

The following table shows the number and percentage of 2022 complaints in each of the 14 categories used by BCS policy analysts for compliance evaluation. These categories are for all evaluated residential complaints filed with BCS.

Of the 2,956 Consumer Complaints evaluated, the top three categories of EDC complaints for 2022 account for 41% of the total: 21% billing disputes, 10% service interruptions, and 10% termination or PAR procedures. See Appendix D-1 for an explanation of complaint categories.

*** Based on a probability sample of complaints.

**** Electric Industry column does not include UGI-Electric.

\+ PECO statistics include electric and gas.

Consumer Complaint Rate, Justified Consumer Complaint Rate, and Percent of Justified Consumer Complaints

The following tables show the Consumer Complaint Rate, the Justified Consumer Complaint Rate, and the Percent of Justified Consumer Complaints for each major EDC in 2019, 2020, 2021 and 2022. A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The Consumer Complaint rate is the number of Consumer Complaints for each 1,000 residential customers.

The justified Consumer Complaint rate is the estimated number of justified Consumer Complaints for each 1,000 residential customers based on a statistically valid sampling of complaints. The justified Consumer Complaint rate is a normalized ratio useful for comparing utility performance among the various companies. It is not a percentage.

From 2019 to 2022, the justified Consumer Complaint rates for PECO, Penelec and West Penn increased, the rates for Duquesne and Met-Ed remained stable, and the rates decreased for Penn Power, PPL and UGI-Electric. The 2022 justified Consumer Complaint rates for Duquesne, Met-Ed, PECO, Penelec and West Penn were greater than the 2022 industry average.

The percent of justified Consumer Complaints is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified Consumer Complaints represents a utility's individual performance.

Consumer Complaint Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS Consumer Complaints. Average response time includes all residential EDC Consumer Complaints except complaints processed through CURE.

Duquesne, PECO and UGI-Electric had the shortest Consumer Complaint response times in 2022, while Penelec and PPL took the most time to respond.

2019-22 Average Response Time to BCS

Payment Arrangement Requests

During 2022, BCS handled 23,058 PARs from residential electric customers of the various EDCs (22,954) and EGSs (104). The seven major EDCs represented 97% (22,472) of the total PARs.

PAR Rate, Justified PAR Rate, and Percent of Justified PARs

The following tables show the PAR Rate, the Justified PAR Rate, and the Percent of Justified PARs for each major EDC in 2019, 2020, 2021 and 2022. A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The PAR rate is the number of PARs for each 1,000 residential customers.

The justified PAR rate is the estimated number of justified PARs for each 1,000 residential customers based on a statistically valid sampling of complaints. It is not a percentage. The justified rate is a normalized ratio useful for comparing utility performance among the various companies.

From 2019 to 2022, the justified PAR rates for all of the EDCs decreased. The 2022 justified PAR rates for Penelec, Penn Power and UGI-Electric were greater than the 2022 industry average.

The percent of justified PARs is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified PARs represents a utility's individual performance.

PAR Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date on which the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS PAR complaints. The calculation for average response excludes undisputed PARs and CURE complaints.

There was a wide range of PAR response times among the major EDCs in 2022, from a low of 6.4 days for PECO to a high of 15.1 days for Penn Power.

Termination and Reconnection of Service

Each month, the electric utilities report to the Commission the number of residential accounts that they terminated for non-payment during the previous month. They also report the number of previously terminated residential accounts that they reconnected during the month. Some EDCs maintain a fairly consistent pattern of termination behavior, while others fluctuate from year to year. The number of reconnections varies from year to year and from utility to utility, depending on a variety of factors. The EDC reconnects a customer's terminated service when a customer either pays their debt in full or makes a significant payment on the debt and agrees to a payment arrangement for the balance owed to the utility or presents a medical certificate.

The following tables indicate the annual number of residential accounts each of the seven largest EDCs terminated and reconnected in 2019, 2020, 2021 and 2022. The first table also presents the termination rates for each of these utilities. The termination rate is the number of service terminations divided by the number of residential customers, expressed as a percent. Due to the Covid 19 pandemic, residential terminations were

suspended from March 13, 2020, to March 31, 2021. Utilities were encouraged to reconnect residential customers for health and safety reasons. This significantly impacted 2020 utility terminations and reconnections.

Compliance

BCS provides utilities with written notice of alleged violations or infractions of the statutes and regulations found during BCS complaint handling. Utilities are provided opportunity to review and respond or appeal. The use of "infraction rate" is intended to help the Commission monitor and maintain customer services at the same level of quality for all distribution customers, regardless of who supplies their electricity under retail competition (66 Pa.C.S. § 2807(d)).

The infraction rates in the table that follows are based on informal complaints that residential consumers filed with BCS from 2019 through 2022. Infractions identified on complaints involving competition issues are included in the infraction statistics. The Infraction Category tables present detailed information about the infractions identified in 2022 complaints to the BCS.

The infraction rate is the number of informally verified infractions per 1,000 residential customers. Dividing per 1,000 customers normalizes the data for comparison purposes. The infraction rate is not a percentage. The categories with dispute-handling and credit standards and deposits are high percentage infraction areas. Appendix B-1 provides a list of the infractions included in each infraction category.

\+ PECO statistics include electric and gas.

8. Natural Gas Industry

In 2022, the Commission had jurisdiction over 21 natural gas distribution companies (NGDCs). The majority of Consumer Complaints and PARs are about the five major NGDCs: Columbia Gas of Pennsylvania Inc. (**Columbia**), National Fuel Gas Distribution Corp. (**NFG**), Peoples Natural Gas Co. (**Peoples**), Philadelphia Gas Works (**PGW**), and UGI Gas f/k/a UGI South (**UGI Gas**). This chapter will focus exclusively on those five utilities.

On Oct 3, 2019, at Docket No. R-2018-3006818, et al., the Commission approved the merger of People Natural Gas' separate Peoples and Equitable rate districts into a single rate district known as Peoples Natural Gas LLC. Although this change took effect when Peoples Natural Gas LLC's amended tariff became effective on Oct. 29, 2019, the 2019 data was based on the separate rate districts. Effective Jan. 1, 2020, the Peoples data includes Peoples-Equitable.

On Oct. 4, 2019, at Docket No. R-2018-3006814, et al., the Commission approved the merger of the UGI Utilities, Inc. separate rate districts – UGI Central, UGI North and UGI South – into one rate district existing as UGI Utilities, Inc. – Gas Division. Although this change took effect when UGI's amended tariff became effective on Oct. 11, 2019, UGI Utilities' 2019 data was based on the separate rate districts. Effective Jan. 1, 2020, the UGI Gas data includes UGI Central f/k/a UGI Central Penn and UGI North f/k/a UGI Penn Natural Gas.

The statistics in the tables on the pages that follow depict the performance of each of the five major gas utilities in 2022. The major gas utilities are those that have more than 100,000 residential customers.

Total Complaint Rate

The following table shows the Total Complaint Rate, which is the number of all complaints (FCRs and NFIs combined) for each 1,000 residential customers.

2019-22 Residential Total Complaint Numbers/Rates
Major Natural Gas Distribution Companies

Utility	2019		2020		2021		2022	
	Number	Rate	Number	Rate	Number	Rate	Number	Rate
Columbia	852	2.13	257	0.63	639	1.57	1,004	2.45

+ Due to the Peoples Natural Gas merger, effective Jan. 1, 2020, the Peoples data includes Peoples-Equitable.
++ Due to the UGI Gas merger, effective Jan. 1, 2020, the UGI Gas data includes UGI Central and UGI North.

Consumer Complaints

During 2022, BCS handled 2,423 Consumer Complaints from residential natural gas customers of the various NGDCs (2,164) and natural gas suppliers (NGSs) (259). The five major NGDCs represented 88% (2,126) of the total Consumer Complaints.

Consumer Complaint Categories

The following table shows the number and percentage of 2022 complaints in each of the 14 categories used by BCS policy analysts for compliance evaluation. These categories are for all evaluated residential complaints filed with BCS.

Of the 1,254 Consumer Complaints evaluated, the top three categories of NGDC complaints account for almost half (45%) of the total: 23% billing disputes, 14% termination or PAR procedures, and 8% discontinuance/transfer. See Appendix D-1 for an explanation of complaint categories.

** Categories are for all evaluated residential complaints filed with BCS. See Appendix D-1 for an explanation of complaint categories.

Consumer Complaint Rate, Justified Consumer Complaint Rate, and Percent of Justified Consumer Complaints

The following tables show the Consumer Complaint Rate, the Justified Consumer Complaint Rate, and the Percent of Justified Consumer Complaints for each major NGDC in 2019, 2020, 2021 and 2022. A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The Consumer Complaint rate is the number of Consumer Complaints for each 1,000 residential customers.

The justified Consumer Complaint rate is the estimated number of justified Consumer Complaints for each 1,000 residential customers based on a statistically valid sampling of complaints. The justified Consumer Complaint rate is a normalized ratio useful for comparing utility performance among the various utility companies. It is not a percentage.

From 2019 to 2022, the justified Consumer Complaint rates for Peoples and PGW increased, while the rates for Columbia, NFG and UGI Gas decreased. The 2022 justified Consumer Complaint rate for PGW was greater than the 2022 industry average.

The percent of justified Consumer Complaints is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified Consumer Complaints represents a utility's individual performance.

2022 Residential Consumer Complaint Rates, Justified Consumer Complaint Rates, and Percent of Justified Consumer Complaints Major Natural Gas Distribution Companies

Utility	Consumer Complaint Rate	Justified Consumer Complaint Rate	Percent of Justified Consumer Complaints
Columbia	0.41	0.00	0.6%

Consumer Complaint Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS Consumer Complaints. Average response time includes all residential NGDC Consumer Complaints except complaints processed through CURE.

Peoples had the shortest Consumer Complaint response times in 2022, while PGW took the most time to respond.

2019-22 Average Response Time to BCS
Residential Consumer Complaints
Major Natural Gas Distribution Companies

Utility	Number of Days			
	2019	2020	2021	2022
Columbia	6.9	9.6	10.3	8.2

+ Due to the Peoples Natural Gas merger, effective Jan. 1, 2020, the Peoples data includes Peoples-Equitable.
++ Due to the UGI Gas merger, effective Jan. 1, 2020, the UGI Gas data includes UGI Central and UGI North.

Payment Arrangement Requests

During 2022, BCS handled 9,408 PARs from residential natural gas customers of the various NGDCs (9,397) and NGSs (11). The five major NGDCs represented 99% (9,320) of the total PARs.

PAR Rate, Justified PAR Rate, and Percent of Justified PARs

The following tables show the PAR Rate, the Justified PAR Rate, and the Percent of Justified PARs for each major NGDC in 2019, 2020, 2021 and 2022. A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The PAR rate is the number of PARs for each 1,000 residential customers.

The justified PAR rate is the estimated number of justified PARs for each 1,000 residential customers based on a statistically valid sampling of complaints. It is not a percentage. The justified rate is a normalized ratio useful for comparing utility performance among the various companies.

From 2019 to 2022, the justified PAR rates for Columbia and PGW increased, while the rates decreased for NFG, Peoples and UGI Gas. The 2022 justified PAR rates for PGW was greater than the 2022 industry average.

The percent of justified PARs is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified PARs represents a utility's individual performance.

PAR Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date on which the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS PAR complaints. The calculation for average response excludes undisputed PARs and CURE complaints.

There was a wide range of PAR response times among the major EDCs in 2022, from a low of 2.4 days for Peoples to a high of 14.4 days for PGW.

Termination and Reconnection of Service

Each month, the electric utilities report to the Commission the number of residential accounts that they terminated for non-payment during the previous month. They also report the number of previously terminated residential accounts that they reconnected during the month. Some NGDCs maintain a fairly consistent pattern of termination behavior, while others fluctuate from year to year. The number of reconnections varies from year to year and from utility to utility, depending on a variety of factors. The NGDC reconnects a customer's terminated service when a customer either pays their debt in full or makes a significant payment on the debt and agrees to a payment arrangement for the balance owed to the utility or presents a medical certificate.

The following tables indicate the annual number of residential accounts each of the five largest NGDCs terminated and reconnected in 2019, 2020, 2021 and 2022. The first table also presents the termination rates for each of these utilities. The termination rate is the number of service terminations divided by the number of residential customers, expressed as a percent. Due to the Covid 19 pandemic, residential terminations were suspended from March 13, 2020, to March 31, 2021. Utilities were encouraged to reconnect residential

customers for health and safety reasons. This significantly impacted 2020 utility terminations and reconnections.

++ Due to the UGI Gas merger, effective Jan. 1, 2020, the UGI Gas data includes UGI Central and UGI North.

Compliance

BCS provides utilities with written notice of alleged violations or infractions of the statutes and regulations found during BCS complaint handling. Utilities are provided the opportunity to review and respond or appeal. The use of "infraction rate" is intended to help the Commission monitor and maintain customer services at the same level of quality for all distribution customers, regardless of who supplies their natural gas under retail competition (66 Pa.C.S. § 2206(a)).

The infraction rates in the table that follows are based on the review of informal complaints that residential consumers filed with BCS from 2019 through 2022. Infractions identified on complaints involving competition issues are included in the infraction statistics. The Infraction Category tables present detailed information about the infractions identified in complaints to the BCS.

The infraction rate is the number of informally verified infractions per 1,000 residential customers. Dividing per 1,000 customers normalizes the data for comparison purposes. The infraction rate is not a percentage. The credit standards and deposits category is a high percentage infraction area. Appendix B-1 provides a list of the infractions included in each infraction category.

9. Water Industry

In 2022, 74 water utilities were regulated by the PUC. Tables in this chapter present Consumer Complaint and PAR information. The water utilities are categorized into three groupings based on the amount of the utility's annual revenue, including Class A water utilities, Class B water utilities, and Class C water utilities. Some municipal water utilities are subject to PUC regulation because they operate beyond their municipal boundary; however, the data for municipal water utilities is not included in this report.

Class A water utilities generate annual revenues of $1 million or more for three consecutive years. In 2022, nine Class A water utilities served residential customers including:

- Aqua Pennsylvania Inc. (**Aqua**)
- Audubon Water Co. (**Audubon**)
- Columbia Water Co. (**Columbia**)
- Community Utilities of PA (**Community Utilities**)
- Newtown Artesian Water Co. (**Newtown Artesian**)
- Pennsylvania American Water Co. (**PAWC**)
- Veolia Water Bethel f/k/a SUEZ Water Bethel (**Veolia Bethel**)
- Veolia Water PA f/k/a SUEZ Water PA (**Veolia PA**)
- York Water Co. (**York**)

The number of residential customers served by these utilities in 2022 ranged from 2,452 residential customers for Veolia Water Bethel to 642,776 residential customers for PAWC.

Data for the Class A water utilities in this chapter are presented two ways; PAWC and Aqua are presented individually by utility and the rest are combined under the category of "Other Class A" utilities. Data representing Class A industry averages includes combined data for all Class A water utilities (both the individual data for PAWC and Aqua, as well as the combined data from the "Other Class A" utilities).

Compared to Class A water utilities, Class B and Class C utilities have lower annual revenues and typically fewer residential customers.

In 2022, seven Class B utilities were operating in Pennsylvania. These utilities had annual revenues between $200,000 and $999,999 and served 303 to 1,353 residential customers.

In 2022, there were 36 Class C utilities. The annual revenue for these utilities was less than $200,000 and they served customers ranging from one to 550.

The Commission has limited jurisdiction over municipally owned water and sewer utilities. The Commission's jurisdiction is limited to regulating the rates and service of customers that are outside the boundaries of the municipalities.

Chapter 32, Water and Sewer Authorities in Cities of the Second Class was added to Title 66 of the Public Utility Code on Dec. 21, 2017. The addition of Chapter 32 resulted in full PUC regulation of the Pittsburgh Water & Sewer Authority (PWSA), effective April 1, 2018. Although PWSA is a municipal water and sewer authority, 66 Pa.C.S.A. § 3202 provides that Commission laws, regulations, orders, etc. apply to PWSA in the same manner as a public utility. A Municipal Water and Sewer section distinguishes PWSA from the major public water utilities as PWSA works to implement policies and procedures that will fulfill the requirements of

PUC laws, regulations, and policies. PWSA is addressed later in this chapter in the Municipal Water, Sewer and Stormwater section.

Most residential Consumer Complaints and PARs to BCS concern the Class A water utilities. The tables on the pages that follow are specific to the Class A water utilities in 2022.

Total Complaint Rate

The following table shows the Total Complaint Rate, which is the number of all complaints (FCRs and NFIs combined) for each 1,000 residential customers.

2019-22 Residential Total Complaint Numbers/Rates

** Calculated based on the rates of Aqua, PAWC, and "Other Class A" utilities as a whole.

Consumer Complaints

During 2022, BCS handled a total of 1,234 Consumer Complaints from residential customers of the various water utilities. The major Class A water utilities represented 85% (1,047) of the total Consumer Complaints.

While a majority of Consumer Complaints involved the Class A water utilities in 2022, the Commission devoted a significant amount of attention to the smaller water utilities to help educate them about customer service and billing compliance concerns.

During 2022, BCS handled 13 complaints for small water utilities, with 38% (5 complaints) involving billing disputes.

Consumer Complaint Categories

The following table shows the number and percentage of 2022 complaints in each of the 14 categories used by BCS policy analysts for compliance evaluation. These categories are for all evaluated residential complaints filed with BCS.

Of the 725 Consumer Complaints evaluated in 2022 for the Class A water utilities, approximately 35% concerned billing disputes. See Appendix D-1 for an explanation of complaint categories.

**** Calculated based on the rates of Aqua, PAWC, and "Other Class A" utilities as a whole.

Consumer Complaint Rate, Justified Consumer Complaint Rate, and Percent of Justified Consumer Complaints

The following tables show the Consumer Complaint Rate, the Justified Consumer Complaint Rate, and the Percent of Justified Consumer Complaints for each Class A water utility in 2019, 2020, 2021 and 2022. A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The Consumer Complaint rate is the number of Consumer Complaints for each 1,000 residential customers.

The justified Consumer Complaint rate is the estimated number of justified Consumer Complaints for each 1,000 residential customers based on a statistically valid sampling of complaints. The justified Consumer Complaint rate is a normalized ratio useful for comparing utility performance among the various utility companies. It is not a percentage.

The Large Class A average justified Consumer Complaint rate increased from 0.12 in 2019 to 0.21 in 2022.

The percent of justified Consumer Complaints is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified Consumer Complaints represents a utility's individual performance.

2022 Residential Consumer Complaint Rates, Justified Consumer Complaint Rates, and Percent of Justified Consumer Complaints Major Class A Water Utilities

** Estimated based on the number of Consumer Complaints in CSIS: 2020 as of June 4, 2021; 2021 as of Sept. 10, 2022; and 2022 as of May 5, 2023.

*** The percent of justified Consumer Complaints is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified Consumer Complaints represents a utility's individual performance.

**** Calculated based on the rate of "Other Class A" utilities as a whole.

***** Calculated based on the rates of Aqua, PAWC, and "Other Class A" utilities as a whole.

Consumer Complaint Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS Consumer Complaints. Average response time includes all residential Class A water Consumer Complaints except complaints processed through CURE.

The Large Class A water utility average response time decreased from 21.2 days in 2019 to 11.3 days in 2022.

2019-22 Average Response Time to BCS
Residential Consumer Complaints
Major Class A Water Utilities

Utility	Number of Days			
	2019	2020	2021	2022

Payment Arrangement Requests

During 2022, BCS handled 1,991 PARs from residential water customers of the various water utilities. The major Class A water utilities represented 97% (1,936) of the total PARs.

PAR Rate, Justified PAR Rate, and Percent of Justified PARs

The following tables show the PAR Rate, the Justified PAR Rate, and the Percent of Justified PARs for each Class A water utility in 2019, 2020, 2021 and 2022. A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The PAR rate is the number of PARs for each 1,000 residential customers.

The justified PAR rate is the estimated number of justified PARs for each 1,000 residential customers based on a statistically valid sampling of complaints. It is not a percentage. The justified rate is a normalized ratio useful for comparing utility performance among the various utility companies.

The Large Class A average justified PAR rate decreased from 0.60 in 2019 to 0.33 in 2022.

The percent of justified PARs is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified PARs represents a utility's individual performance.

2022 Residential Payment Arrangement Request (PAR) Rates, Justified PAR Rates, and Percent of Justified PARs Major Class A Water Utilities

PAR Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date on which the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS PAR complaints. The calculation for average response excludes undisputed PARs and CURE complaints.

Aqua's response time decreased by 14.1 days from 15.6 days in 2019 to 1.5 days in 2022, and PAWC's response time decreased by 6.1 days from 12.3 days in 2019 to 6.2 days in 2022.

Termination and Reconnection of Service

Each month, the electric utilities report to the Commission the number of residential accounts that they terminated for non-payment during the previous month. They also report the number of previously terminated residential accounts that they reconnected during the month. Some water utilities maintain a fairly consistent pattern of termination behavior, while others fluctuate from year to year. The number of reconnections varies from year to year and from utility to utility, depending on a variety of factors. The water utility reconnects a customer's terminated service when a customer either pays their debt in full or makes a significant payment on the debt and agrees to a payment arrangement for the balance owed to the utility or presents a medical certificate.

The following tables indicate the annual number of residential accounts each of the Class A water utilities terminated and reconnected in 2019, 2020, 2021 and 2022. The first table also presents the termination rates for each of these utilities. The termination rate is the number of service terminations divided by the number of residential customers, expressed as a percent. Due to the Covid 19 pandemic, residential terminations were suspended from March 13, 2020, to March 31, 2021. Utilities were encouraged to reconnect residential customers for health and safety reasons. This significantly impacted 2020 utility terminations and reconnections.

Compliance

BCS provides water utilities with written notice of alleged violations or infractions of the statutes and regulations found during BCS complaint handling. Utilities are provided opportunity to review and respond or appeal. The use of "infraction rate" is intended to help the Commission monitor and maintain customer services at the same level of quality for all customers.

The infraction rates in the table that follows are based on the review of informal complaints that residential consumers filed with BCS from 2019 through 2022. The Infraction Category tables present detailed information about the infractions identified in 2022 complaints to the BCS.

The infraction rate is the number of informally verified infractions per 1,000 residential customers. Dividing per 1,000 customers normalizes the data for comparison purposes. The infraction rate is not a percentage. The reconnection of service category is a high percentage infraction area. Appendix B-1 provides a list of the infractions included in each infraction category.

Municipal Water, Sewer and Stormwater

The Commission's jurisdiction over municipal water and sewer utilities, including stormwater, is limited to regulating the rates and service of customers that are outside the boundaries of the municipalities. However, with the passage of Act 65 of 2017, Chapter 32 was added to Title 66 of the Public Utility Code. The enactment of this law resulted in the PUC gaining regulatory authority over the Pittsburgh Water and Sewer Authority (**PWSA**) regarding the provision of utility water, wastewater and stormwater service, effective Apr. 1, 2018. This section was added to this report to separate and distinguish municipal water, sewer, and stormwater data from the data of the major water utilities. In this section, only PWSA data is included.

Act 65 required PWSA to file a Compliance Plan with the PUC detailing how the authority would bring its existing operating systems and procedures into compliance with applicable rules, regulations, and orders of the Commission. The law mandated the PUC to conduct an in-depth review of PWSA's Compliance Plan to ensure the Authority's compliance with the Public Utility Code and the Commission's regulations. The Commission's review of the PWSA Compliance Plan, which was filed by the Authority on Sept. 28, 2018, at Docket No. M-2018-2640802 (water) and Docket No. M-2018-2640803 (wastewater), was divided into a two-stage process. Stage 1 focused on urgent infrastructure remediation and improvement and the revenue and financing requirements of maintaining service that supports public health and safety, followed by Stage 2, which focused on PWSA billing and collection issues and the development of a proposed PWSA stormwater tariff. The PUC finalized the Stage 1 proceeding on February 4, 2021. The Stage 2 proceeding pertaining to PWSA billing and collections issues was concluded by the PUC on July 14, 2022, followed by the finalization of the Stage 2 stormwater proceeding on August 25, 2022.

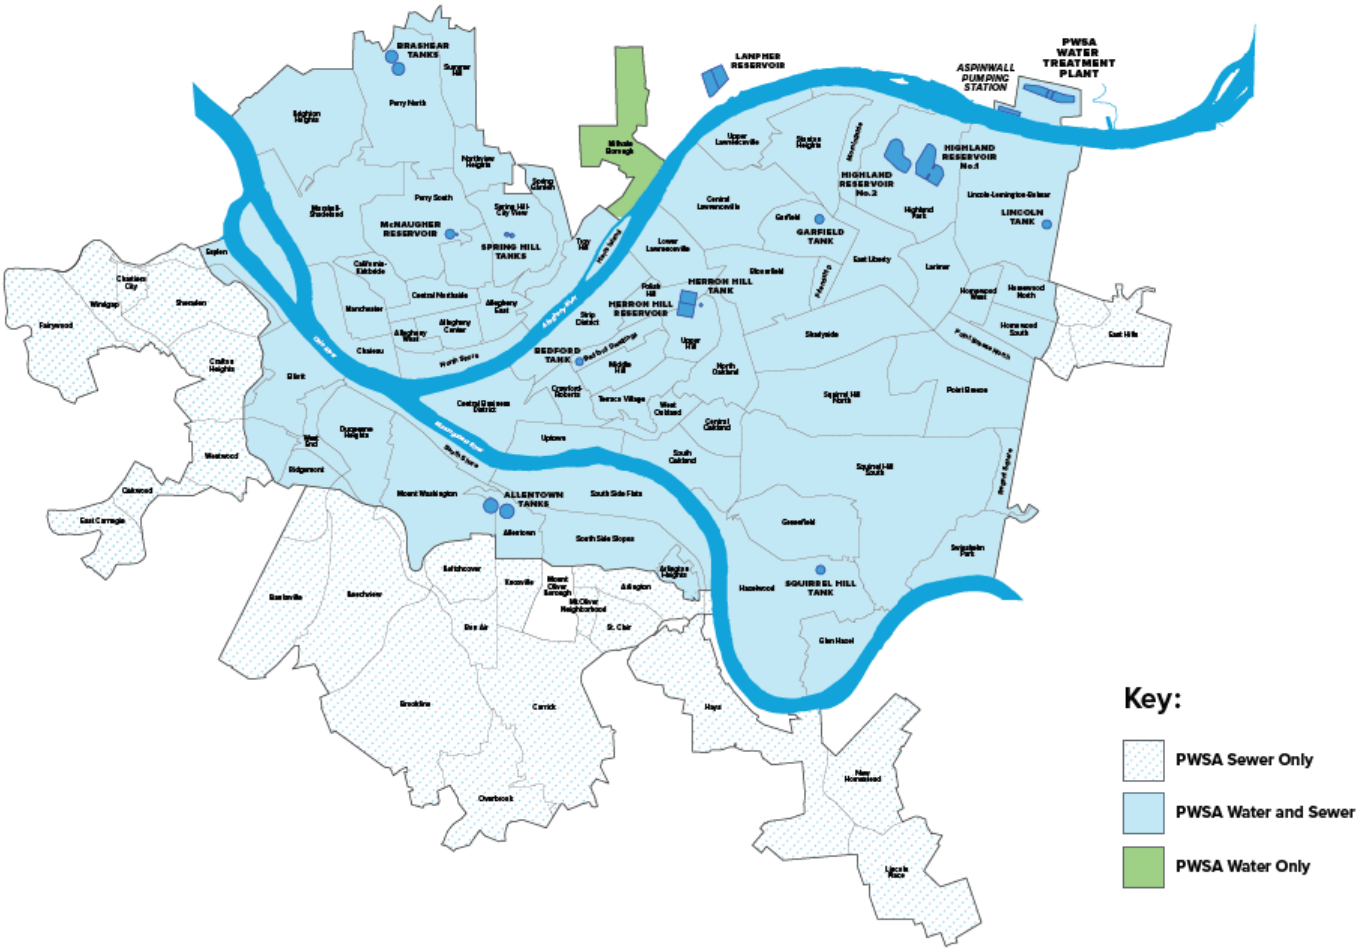
Stage 2 Compliance Plan: Chapters 14 & 56, DSLPA and Collections: On March 14, 2022, a Joint Petition for Settlement Regarding PWSA's April 9, 2021, Stage 2 Compliance Plan: Chapters 14 & 56, DSLPA and Collections was filed by the Pittsburgh Water and Sewer Authority, the PUC's Bureau of Investigation and Enforcement, the Office of Consumer Advocate (OCA), Pittsburgh UNITED, and the City of Pittsburgh. The Joint Petition was approved without modification through the issuance of a Recommended Decision by Administrative Law Judge Eranda Vero and Administrative Law Judge Gail M. Chiodo on May 19, 2022, with provisions for the submission of Exceptions and Replies to Exceptions on the Recommended Decision. With no Exceptions or Replies to Exceptions filed, the PUC issued an Order dated July 14, 2022, which approved the March 14, 2022, Joint Petition concerning the Stage 2 Compliance Plan: Chapters 14 & 56, DSLPA and Collections.

Stage 2 Compliance Plan: Stormwater: On Jan. 20, 2022, PWSA submitted a Revised Stage 2 Compliance Plan: Stormwater. On June 9, 2022, a Joint Petition for Settlement Regarding PWSA's Jan. 20, 2022, Stage 2 Compliance Plan: Stormwater (Revised) was filed by PWSA, OCA, Pittsburgh United, and the City of Pittsburgh. The Joint Petition was approved without modification through the issuance of a Recommended Decision by Administrative Law Judge Eranda Vero and Administrative Law Judge Gail M. Chiodo on July 19, 2022, with provisions for the submission of Exceptions and Replies to Exceptions on the Recommended Decision. With no Exceptions or Replies to Exceptions filed, the PUC issued an Order dated August 25, 2022, which approved the July 19, 2022, Joint Petition concerning the Stage 2 Compliance Plan: Stormwater (Revised)

In response to the final Orders entered on July 14, 2022, and Aug. 25, 2022, as explained above, PWSA was required to submit Compliance Tariffs that reflect the stipulations in each of the final Orders. By Secretarial Letter dated Nov. 17, 2022, the PUC announced that Supplement No. 1 to Tariff Storm Water – Pa. P.U.C. No. 1 was effective on November 2, 2022.

PWSA is the largest water, sewer and stormwater authority in Pennsylvania and currently serves nearly 100,000 residential customers throughout the City of Pittsburgh and surrounding communities. In addition to providing water, wastewater, and stormwater services, PWSA provides wastewater conveyance to city residents served by the Pennsylvania-American Water Co. and provides water to Millvale Borough residents, whose water system was acquired by the Authority in 2009. The map below provides a detailed illustration of the territory currently served by PWSA. It is important to note that PWSA also provides billing services for the ALCOSAN, whose charges for sewage treatment appear on the billing statements of PWSA customers.

PWSA Service Areas



Given its divergent services and customer base, PWSA regulation is often complex. For these reasons, the PWSA informal complaint data presented in this chapter are designated as PWSA-Water or PWSA-Sewer based upon the nature of the complaint. As an example, a PWSA-Sewer complaint may involve the sewer service, but the customer may receive both water and sewer bills or just a sewer bill from PWSA. In addition to providing water and sewer services, PWSA also provides stormwater services and serves approximately 5,366 Stormwater only customers. With the enactment of PWSA's stormwater fee on Jan. 12, 2022, the PUC, for the first time, acquired regulatory authority over the provision of stormwater services by a jurisdictional utility.

The data provided in the tables below include PWSA informal complaint activity for 2022. It should be clarified that PUC regulatory jurisdiction over PWSA was not effective until Apr. 1, 2018. Contacts prior to April 1, 2018, were tracked and categorized as FCRs. In addition, it is important to note that data on PWSA

infractions is not provided in this section as it is for the major water utilities. Despite the conclusion of the compliance proceedings for Stage 1 and Stage 2 as identified above, BCS is continuing to monitor PWSA's implementation of compliance initiatives emanating from the Stage 1 and Stage 2 proceedings. Therefore, it is premature for BCS to report this data currently. BCS will publish PWSA infraction data in future UCARE reports.

Total Complaint Rate

The following table shows the Total Complaint Rate, which is the number of all complaints (FCRs and NFIs combined) for each 1,000 residential customers.

2019-22 Residential Total Complaint Numbers/Rates
Municipal Water and Sewer Utilities

Utility	2019		2020		2021		2022	
	Number	Rate	Number	Rate	Number	Rate	Number	Rate
PWSA-Water	380	3.89	273	2.79	276	2.82	271	2.73
PWSA-Sewer	128	1.31	67	0.68	47	0.48	47	0.47
Total	**508**		**340**		**323**		**318**	
Average of Rates		**2.60**		**1.74**		**1.65**		**1.60**

First Contact Resolutions (FCRs)

The following table shows the number of residential FCR complaints.

2019-22 Residential FCRs
Municipal Water and Sewer Utilities

Utility	2019	2020	2021	2022
PWSA-Water	72	69	73	63
PWSA-Sewer	26	11	19	13
Average	**98**	**80**	**92**	**76**

Consumer Complaints

The following table shows the Consumer Complaint Rate, which is the number of Consumer Complaints for each 1,000 residential customers.

2019-22 Residential Consumer Complaint Numbers/Rates
Municipal Water and Sewer Utilities

Utility	2019		2020		2021		2022	
	Number	Rate*	Number	Rate*	Number	Rate*	Number	Rate*

Average of Rates		**1.26**		**1.11**		**1.02**		**1.01**

* The Consumer Complaint rate is the number of Consumer Complaints for each 1,000 residential customers.

Consumer Complaint Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date on which the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS PAR complaints. The calculation for average response excludes undisputed PARs and CURE complaints.

The average response time for PWSA increased from 8.7 days in 2019 to 13.2 days in 2022.

2019-22 Average Response Time to BCS
Residential Consumer Complaints
Municipal Water and Sewer Utilities

Utility	Number of Days			
	2019	2020	2021	2022
PWSA-Water	8.4	8.8	11.1	13.0
PWSA-Sewer	10.2	8.0	10.1	14.8
Average	**8.7**	**8.7**	**11.1**	**13.2**

Payment Arrangement Requests

The PAR Rate is the number of PARs for each 1,000 residential customers.

2019-22 Residential Payment Arrangement Request (PAR) Rates
Municipal Water and Sewer Utilities

Utility	2019		2020		2021		2022	
	Number	Rate*	Number	Rate*	Number	Rate*	Number	Rate*

PWSA-Sewer	48	0.49	21	0.21	8	0.08	8	0.08
Total	**175**		**53**		**35**		**42**	
Average of Rates		**0.90**		**0.27**		**0.18**		**0.21**

* The PAR rate is the number of PARs for each 1,000 residential customers.

PAR Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date on which the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS PAR complaints. The calculation for average response excludes undisputed PARs and CURE complaints.

From 2019 to 2022, the average response time for PWSA increased by 5.3 days, from 5.6 days to 10.9 days.

2019-22 Average Response Time to BCS
Residential Payment Arrangement Requests (PARs)
Municipal Water and Sewer Utilities

Utility	Number of Days			
	2019	2020	2021	2022
PWSA-Water	5.7	6.8	8.9	10.4
PWSA-Sewer	7.0	7.1	10.3	8.1
Average	**5.6**	**6.6**	**9.5**	**10.9**

Termination and Reconnection of Service

The termination rate is the number of service terminations divided by the number of residential customers, expressed as a percent. The number of PWSA terminations represents the total number of residential customers who were terminated. This total includes customers who received combined water and sewer services, customers who only received sewer service, and those customers who received water service only. The number of PWSA reconnections represents the total number of residential customers who were reconnected. This total includes customers who received combined water and sewer services, customers who only received sewer service, and those customers who received water service only. Due to the Covid 19 pandemic, residential terminations were suspended from March 13, 2020, to March 31, 2021. Utilities were

encouraged to reconnect residential customers for health and safety reasons. This significantly impacted 2020 utility terminations and reconnections.

Residential Service Terminations/Termination Rates
Municipal Water and Sewer Utilities

Utility	Residential Service Terminations				Termination Rates*			
	2019	2020**	2021	2022	2019	2020**	2021	2022
PWSA	2,437	206	177	440	2.49	0.21	0.18	0.44

* The termination rate is the number of service terminations divided by the number of residential customers, expressed as a percent.

** Due to the Covid 19 pandemic, residential terminations were suspended from March 13, 2020, to March 31, 2021. This significantly impacted 2020 utility terminations and reconnections.

Residential Service Reconnections
Municipal Water and Sewer Utilities

Utility	2019	2020*	2021	2022
PWSA	2,029	137	257	151

* Due to the Covid 19 pandemic, residential terminations were suspended from March 13, 2020, to March 31, 2021. Utilities were encouraged to reconnect residential customers for health and safety reasons. This significantly impacted 2020 utility terminations and reconnections.

Stormwater Complaints

In 2022, PWSA began assessing a separate stormwater fee to fund stormwater projects and initiatives necessary to improve stormwater management in Pittsburgh. BCS tracks the number of PWSA complaints that contain a stormwater component. The following table shows the total number of residential PWSA informal complaints in 2022, compared to the number of complaints that included a dispute regarding stormwater. Overall, in 2022, 7% of the residential informal complaints for PWSA included a dispute regarding stormwater.

2022 Stormwater Complaints
Residential Informal Complaints (Consumer Complaints and PARs)
Municipal Water and Sewer Utilities

Utility	Total Number of Complaints	Total Number of Complaints with a Stormwater Component	% of Complaints with a Stormwater Component
	2022	2022	2022
PWSA-Water	208	9	4%
PWSA-Sewer	34	9	27%
Total	**242**	**18**	**7%**

Programs That Assist Low-Income Customers

Several water utilities voluntarily operate programs to assist low-income customers in maintaining water service.

Aqua Pennsylvania Inc. (Aqua) – The Helping Hand Program is for customers at 200% of the federal poverty level and below. Prior to April 2020, a customer account must have been more than 21 days past due with at least $110 unpaid water bills to qualify for the program. Beginning April 2020, program requirements were relaxed due to the COVID-19 pandemic and various outreach methods, including proactive outreach and support to the low-income customer base not enrolled on the program, were used to increase customer awareness of the program. The relaxed requirements continued through 2022. Additionally, all eligible customers enrolled in the program received a credit and all Helping Hand customers that made a payment during the month received a $25 credit.

Each household enrolled in the Helping Hand program receives a conservation kit that contains water saving devices. The customer also receives water usage and conservation information. Customers who make their payments on time and in full receive a credit of $25 per month applied to their arrearage.

At the end of December 2022, there were 688 active participants in the Helping Hand program. The company provided $55,950 in arrearage forgiveness credits to 2,238 program participants.

Aqua received approval in its recent base rate proceeding to initiate a Customer Assistance Program (CAP) for its customers. Building upon the assistance provided through Helping Hand, the CAP maintains the $25 per month credit towards pre-programs arrearages for timely payments made. It also incorporates a tiered discount program, providing the highest level of discount to those with the lowest incomes. As with Helping Hand, incomes up to 200% of Federal Poverty Level can qualify. Customers must provide income documentation or complete a Zero Income Form to enroll and will be recertified on a recurring basis according to their income type. Customers with high usage may be identified for a conservation kit or kits can also be requested by participants.

As the rollout of the program was dependent on significant billing system changes, only about a dozen customers were enrolled at the end of 2022, but that figure has already grown to 500 as of April 2023. A comprehensive consumer education and outreach plan was developed and is underway in 2023.

Pennsylvania American Water Co. (PAWC) – In 1991, PAWC established the “Help to Others” (H2O) program. Beginning March 8, 2021, the H2O program increased the benefit to its water customers by providing an 85% discount on their monthly service fees – a savings of about $15 per month in 2022 and a 10% discount on their volumetric water usage. In addition to a discount for water, PAWC increased the discount for wastewater customers. A 30% discount was provided on the total wastewater billing for customers who qualified. There were 28,759 customers in 2022 who were billed at the discounted rate (as of December 2022).

The H2O program also provides water-saving devices and conservation education. Nearly 1,800 income-eligible customers during the 2022 calendar year were provided with water-saving devices.

As part of the H2O program, PAWC participates with the Dollar Energy Fund to provide cash grants of up to $500 per year for qualifying water and wastewater customers. Dollar Energy Fund is a hardship fund administrator that provides cash assistance to utility customers who need help in paying their utility bills. In 2022 PAWC’s annual contribution for grants to income-eligible water customers was $500,000. The company’s contribution for wastewater grants to income-eligible customers was $100,000.

During the 2022 calendar year, PAWC's shareholders and customers provided $380,174 in hardship fund benefits to 1,238 water customers for an average benefit of $307. In addition, PAWC's shareholders provided $71,333 in grants for the 2022 calendar year for wastewater customers. The funds provided benefits to 215 customers for an average benefit of $332.

Pittsburgh Water and Sewer Authority (PWSA) – PWSA's internal PGH2O Cares team administers its customer assistance programs for low income, residential customers in need.

The Bill Discount Program provides a percentage-based reduction of fixed monthly water, wastewater conveyance and stormwater charges for customers who are at or below 150% of the Federal Poverty Level. In 2022, bill discounts increased to 100% of the fixed monthly water and wastewater conveyance base charges and 85% of the stormwater charges. A total of 6,073 customers were enrolled in the Bill Discount Program. PGH2O Cares personnel proactively reach out to customers to recertify for the Bill Discount Program every two years. For customers with past due balances who are enrolled in the Bill Discount Program, PWSA credits their account in the amount of $30 for each on-time, monthly payment in an active payment plan to assist with reducing their arrears. In 2022, PWSA provided 9,113 Arrearage Forgiveness Credits, expunging $261,900 in customer debt.

The Hardship Grant Program extends grants up to $300 per year for customers who are at or below 150% of the Federal Poverty Level. The PGH2O Cares team accepts grant applications from customers without a termination notice or sincere effort of payment. In 2022, PWSA provided $80,910 in grants to 337 customers for an average benefit of $240.

The Winter Moratorium provides confirmed low-income customers who are at or below 300% of the Federal Poverty Level with the assurance that their water service will not be terminated due to non-payment from December 1st through March 31st. The PGH2O Cares team provides payment counseling and payment arrangements to those customers with past due charges.

The Community Environmental Project offered private side lead line replacements for customers who are at or below 300% of the Federal Poverty Level. PWSA started construction in late 2018 and the program was completed in early 2021. Private side service line materials were funded by a $1.8 million settlement with the Pennsylvania Department of Environmental Protection. During the program, PWSA worked at 732 locations, verified that 308 of these locations did not have either public or private lead service lines, and replaced 389 private and 288 public lead service lines. A total of over $4.3 million was spent on the program, including the $1.8 million associated with private lead service line replacements.

In October 2020, PWSA rolled out a Line Replacement Reimbursement Program. This income-based reimbursement program provides for 100% reimbursement of private side lead service line replacement costs for customers who are at or below 300% of the Federal Poverty Level, with a decreasing reimbursement percentage to 500% of the Federal Poverty Level, after which water customers are eligible for a $1,000 stipend if they hire a private plumber and replace their own private lead service line. During 2022, a total of 303 applications were approved for reimbursement, and 33 reimbursements were paid at a total cost of nearly $167,000.

PWSA customers who are billed for sewage treatment charges on behalf of the Allegheny County Sanitary Authority (ALCOSAN) are also eligible for assistance through ALCOSAN's Clean Water Assistance Fund. This program follows the same income requirements as PWSA's Bill Discount Program. In 2022, ALCOSAN provided $155,510 in grants to 3,849 eligible PWSA customers.

Veolia Water Bethel (Veolia Bethel) – Veolia Bethel implemented the "Veolia Cares" program in 2005. Veolia Cares is a nonprofit 501(c)(3) organization that provides financial assistance to customers who experience a temporary financial crisis caused by such occurrences as a job loss, severe illness, casualty or extensive military service. Cash grants up to $300 are provided to qualifying customers who are first screened by the Salvation Army for eligibility. To be eligible for a grant, customers must have made a nominal payment within the last 90 days. During the 2022 program year, the utility did not provide any grants.

Veolia Water Pennsylvania (Veolia PA) – Veolia PA implemented the "Veolia Cares" program in 2005. Veolia Cares is a nonprofit 501(c)(3) organization that provides financial assistance to customers who experience a temporary financial crisis caused by such occurrences as a job loss, severe illness, casualty or extensive military service. Cash grants up to $300 are provided to qualifying customers who are first screened by the Salvation Army for eligibility. To be eligible for a grant, customers must have made a nominal payment within the last 90 days. During the 2022 program year, the utility provided grants totaling $10,603 to qualifying customers.

York Water Co. – In 2005, the York Water Co. established the "York Water Cares" program. This program offers qualified customers up to $120 in arrearage forgiveness benefits and plumbing repairs. The repairs are designed to help the customer conserve and reduce overall water usage.

The utility expended $544 in 2022 for customer plumbing repairs and enrolled a total of three new customers in 2022 in the York Water Cares program. As of program end 2022, eight customers received arrearage forgiveness benefits totaling $390 for an average benefit of approximately $48 per customer. The utility anticipates an annual savings of $825 in 2022 in costs for termination proceedings that may be avoided as a result of customer participation in the York Water Cares program.

Federal Low Income Household Water Assistance Program (LIHWAP) – On January 4, 2022, LIHWAP opened in Pennsylvania to assist in providing relief to residential water and wastewater customers who had difficulty paying their bills. The Federal government recognized that the COVID-19 pandemic amplified unaffordability concerns for many families. This temporary Federal emergency grant program:

- restored water and wastewater service to 760 homes in Pennsylvania;
- prevented 10,200 Pennsylvania families from having their water and wastewater services disconnected; and
- served over 38,000 Pennsylvania families in total.

By October 2022, Pennsylvania's $43.2 million LIHWAP budget was fully spent and the program ended.

10. Telecommunications Industry

During 2022, BCS handled Consumer Complaints related to basic voice service, broadband, Lifeline, payment arrangement requests (PARs) and FCRs from the customers of a variety of telecommunications service providers, including incumbent local exchange carriers (ILECs), competitive local exchange carriers (CLECs), long-distance companies, resellers and eligible telecommunications carriers (ETCs).

In 2022, there were 536 providers of telecommunications services with certificates of public convenience in Pennsylvania. Of these, 35 were ILECs. The ILECs included 30 non-major utilities that each served less than 50,000 residential customers and five major utilities that each served over 50,000 residential customers. In 2022, based on § 64.201 reporting, Pennsylvania local exchange carriers supplied service to an average of 796,589 residential telecommunications service access lines each month.

Because the five major ILECs provided voice telecommunications service to the vast majority of those telecommunications access service lines (an average of 672,934 residential service lines each in 2022), this chapter will focus on the five major ILECs – Brightspeed f/k/a CenturyLink (**Brightspeed**), Frontier Communications Commonwealth Telephone Co. (**Frontier Commonwealth**), Verizon North LLC (**Verizon North**), Verizon Pennsylvania LLC (**Verizon PA**), and Windstream Communications (**Windstream**).

Since 2017, BCS has included information related to broadband access service disputes within the telecommunications section of the annual UCARE. The Chapter 30 Broadband information currently provided in the report includes the information contained in the Pennsylvania Broadband Bill of Rights. Specifically, pursuant to Chapter 30 of the Code, Pennsylvania consumers have the right to obtain service from all ILECs covered by Chapter 30, which includes the five major ILECs, within ten (10) business days of the request for broadband access service and the service must meet the following broadband speed requirements: 1.544 megabits per second (Mbps) download and 0.128 Mbps upload.

The majority of broadband related complaints received by BCS include a dispute regarding voice telecommunications service. For tracking and evaluative purposes, BCS assigns a telecommunications quality of service "reason for contact" code to these complaints. BCS identifies issues related to jurisdictional broadband by using a special indicator on the complaint; however, that indicator does not track the specific Chapter 30 issue at this time.

When BCS identifies instances when the ILEC may have failed to meet their Chapter 30 obligations, the ILEC is notified of the infraction. These informal infractions are reported later in this chapter in the Infraction Categories tables.

Unlike the electric, gas, and water chapters, the analyses of the five utilities that appear in this chapter include complaints about competition-related issues such as slamming, competition-related service complaints and billing problems. This is the 18th year that competition-related complaints are included in the analyses of the telecommunications utilities.

Act 183 of 2004 replaced the original Chapter 30 that expired due to the sunset provisions included in the Act. Among other issues, it provided the opportunity for an ILEC to petition the Commission for a determination of the competitive status of its services that are also offered by other providers. On March 4, 2015, the Commission entered an Opinion and Order at Docket Nos. P-2014-2446303 and P-2014-2446304, which granted competitive reclassification for basic local exchange telecommunications services in

153 of the 504 Verizon PA and Verizon North wire centers throughout the state.[12] The reclassification temporarily waived certain sections of 52 Pa. Code, Chapters 63[13] and 64[14] for a maximum of five years or until the Commission promulgates a final rulemaking addressing competitive reclassification.

On Sept. 21, 2020, the Commission initiated a rulemaking for Chapters 63 and 64 in response to changes in competitive market conditions in the telecommunications industry and to address whether the waivers granted in the 2015 Verizon Reclassification order should be made permanent on an industry wide basis. In August 2022, the Commission finalized the rulemaking making many of the temporary waivers from the Reclassification Order permanent, rescinding obsolete regulations, and creating several new regulations. The new regulations allow for electronic billing, and electronic suspension and termination notices, and require regulated LECs to provide consumers with an annual confidentiality statement.

The finalized regulations also made the Automatic Customer Transfer (warm transfer) available to all regulated LECs. Warm transfer is a voluntary process used to resolve consumer complaints. Currently, only Verizon and Frontier telecommunications utilities participate in the process. Verizon has participated in the process since 2012, while Frontier began their participation in October 2021. When a complainant contacts BCS to file an informal complaint involving Verizon or Frontier, the customer is offered an opportunity for a "warm transfer" back to the utility to attempt to resolve the complaint one last time directly with the utility. If the utility resolves the complaint to the customer's satisfaction, the utility submits an abbreviated report to BCS and the informal complaint is withdrawn or closed. BCS may ask for additional information from the utility if the customer is not satisfied and the case will be investigated further by BCS staff.

2020-22 Warm Transfers Completed
Residential Informal Complaints (Consumer Complaints and PARs)
Major Local Telecommunications Utilities

Utility	Total Number of Complaints			Total Number of Warm Transfers Completed			% of Warm Transfers Completed		
	2020	2021	2022	2020	2021	2022	2020	2021	2022

Consumer Complaints

Although BCS handled Consumer Complaints about different types of telecommunications service providers in 2022, the complaints predominantly came from the residential customers of the five major ILECs.

During 2022, BCS handled 1,201 Consumer Complaints from residential customers of the various telecommunications service providers. The five major ILECs represented 88% (1,062) of the total Consumer Complaints, while 14 Consumer Complaints were received for the non-major ILECs. In 2022, 71 Consumer Complaints were from residential customers of the CLECs operating in Pennsylvania, and BCS handled 41 Consumer Complaints regarding ETCs that provide Lifeline services. The remaining Consumer Complaints in 2022 were from residential customers of other telecommunications providers such as long-distance carriers, resellers and Voice over Internet Protocol (VoIP).

Consumer Complaint Categories

The following table shows the number and percentage of 2022 Consumer Complaints in each of the 11 categories used by BCS policy analysts for compliance evaluation. These categories are for all evaluated residential complaints filed with BCS.

Of the 862 Consumer Complaints evaluated, the top category of telecommunications complaints accounts for three quarters of the total: 75% unsatisfactory service complaints. See Appendix D-2 for an explanation of complaint categories.

* Based on residential complaints opened in 2022 and evaluated by BCS as of May 5, 2023.
** Categories are for all evaluated residential complaints filed with BCS. See Appendix D-2 for an explanation of complaint categories.
*** Based on a probability sample of complaints.

Consumer Complaint Rate, Justified Consumer Complaint Rate, and Percent of Justified Consumer Complaints

The following tables show the Consumer Complaint Rate, the Justified Consumer Complaint Rate, and the Percent of Justified Consumer Complaints for each major telecommunications utilities in 2019, 2020, 2021 and 2022. A complaint is considered “justified” if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The Consumer Complaint rate is the number of Consumer Complaints for each 1,000 residential customers.

The justified Consumer Complaint rate is the estimated number of justified Consumer Complaints for each 1,000 residential customers based on a statistically valid sampling of complaints. The justified Consumer Complaint rate is a normalized ratio useful for comparing utility performance among the various utility companies. It is not a percentage.

From 2019 to 2022, the justified Consumer Complaint rates increased for Brightspeed and Frontier Commonwealth, while the rates decreased for Verizon North, Verizon PA and Windstream. Frontier Commonwealth had a 2022 justified Consumer Complaint rate that was higher than the industry average.

The percent of justified Consumer Complaints is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified Consumer Complaints represents a utility's individual performance.

2022 Residential Consumer Complaint Rates, Justified Consumer Complaint Rates, and Percent of Justified Consumer Complaints Major Local Telecommunications Utilities

Utility	Consumer Complaint Rate	Justified Consumer Complaint Rate	Percent of Justified Consumer Complaints
Brightspeed	1.61	0.94	58.3%
Frontier Commonwealth	3.58	2.66	74.3%
Verizon North	0.36	0.21	58.6%
Verizon PA	1.57	0.94	60.1%
Windstream	1.19	0.51	42.7%
Average	**1.66**	**1.05**	**61.4%**

* Based on a probability sample of complaints

*** The percent of justified Consumer Complaints is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified Consumer Complaints represents a utility's individual performance.

Consumer Complaint Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS Consumer Complaints. Response time to Consumer Complaints for the telecommunications utilities is calculated using all categories of Consumer Complaints, including automatic customer transfers (also known as Warm Transfer).

Verizon PA had the shortest Consumer Complaint response time in 2022, while Brightspeed took the most time to respond.

2019-22 Average Response Time to BCS
Residential Consumer Complaints
Major Local Telecommunications Utilities

Utility	Number of Days			
	2019	2020	2021	2022
Brightspeed	17.1	21.1	21.7	25.5
Frontier Commonwealth	12.9	10.3	13.0	19.7
Verizon North	14.0	13.8	13.3	17.1
Verizon PA	13.3	13.4	15.1	14.2
Windstream	16.1	12.6	15.4	16.0
Average	**13.6**	**13.5**	**16.7**	**17.0**

Payment Arrangement Requests (PARs)

Telecommunications service consists of three components: basic service, non-basic service and toll service. BCS does not handle requests for payment arrangements that involve toll or non-basic services because with respect to telecommunications payment arrangements, the PUC does not exert payment arrangement jurisdiction over competitive services. For the telecommunications industry, PARs are principally contacts to BCS or to utilities involving a request for payment terms for arrearages associated with basic service. Failure to enter into a payment arrangement or pay arrearages due for basic service may result in suspension, and subsequent termination, of basic service.[15] Suspension of basic telecommunications service involves the temporary cessation of service without the consent of the customer, while termination of basic service is the permanent cessation of service. The majority of PARs are from customers who contact BCS to request payment arrangements after they have received a suspension notice.

Under Chapter 64, a customer contact in response to a suspension notice is a dispute (as the term is defined in Section 64.2) only if the contact includes a disagreement with respect to the application of a provision of Chapter 64. Where telecommunications complaints involving telecommunications service suspension are concerned, failure to negotiate a payment arrangement does not in itself mean that a dispute

[15] Suspension or termination of basic local exchange service can also occur when a customer refuses to voluntarily transition their service from traditional copper to fiber during an ILEC's network transformation.

exists. Consequently, in this report, telecommunications complaints that involve PARs have been separated from telecommunications PARs that also involve a dispute. For the telecommunications industry, PARs that involve a dispute are classified as Consumer Complaints. During 2022, BCS handled 13 PARs from residential customers of the various telecommunications service providers. The five major telecommunications utilities represented 85% (11) of the totals PARs.

The 2019, 2020, 2021 and 2022 justified PAR rates and response times for the major telecommunications utilities are presented in the tables that follow.

PAR Rate, Justified PAR Rate, and Percent of Justified PARs

The following tables show the PAR Rate, the Justified PAR Rate, and the Percent of Justified PARs for each major telecommunications utility in 2019, 2020, 2021 and 2022. A complaint is considered "justified" if it is found that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, or tariffs. BCS evaluates a statistically valid sampling of complaints for each utility.

The PAR rate is the number of PARs for each 1,000 residential customers.

The justified PAR rate is the estimated number of justified PARs for each 1,000 residential customers based on a statistically valid sampling of complaints. It is not a percentage. The justified rate is a normalized ratio useful for comparing utility performance among the various utility companies.

The percent of justified PARs is the estimated number of justified complaints divided by the total number of complaints received (multiplied by 100). The percent of justified PARs represents a utility's individual performance.

** The percent of justified PARs is the estimated number of justified complaints divided by the total number of PARs received (multiplied by 100). The percent of justified PARs represents a utility's individual performance.

PAR Response Time

Response time is the number of days from the date BCS first contacts the utility regarding a complaint to the date on which the utility provides BCS with its initial informal complaint report. Response time quantifies the speed of a utility's response to BCS PAR complaints. The calculation for average response is calculated using all categories of PARs, including automatic customer transfers (also known as Warm Transfer).

From 2019 to 2022, the average response time to PARs for Verizon PA and Windstream increased, while the average response time decreased for Brightspeed, Frontier Commonwealth and Verizon North.

2019-22 Average Response Time to BCS
Residential Payment Arrangement Requests (PARs)
Major Local Telecommunications Utilities

Utility	Number of Days			
	2019	2020	2021	2022
Brightspeed	21.7	0.0	26.0	0.0
Frontier Commonwealth	19.0	12.4	13.0	8.0
Verizon North	1.0	0.0	0.0	0.0
Verizon PA	5.9	10.7	10.1	11.3
Windstream	0.0	3.5	8.0	18.5
Average	**12.0**	**10.1**	**13.1**	**9.6**

Termination of Service

Chapter 64 defines suspension as a temporary cessation of service without the consent of the customer. Termination of service, according to Chapter 64, is the permanent end of service after a suspension without the consent of the customer. Most PARs are complaints relating to the termination of telecommunications service and are registered during the suspension phase. Many customers who have their basic service suspended are able to make payment arrangements and avoid termination. Those seeking to restore service are treated by the service providers as applicants.

Previously the termination rate for the telecommunications industry was calculated in the UCARE reports as the number of terminations for each 1,000 residential customers; however, the termination rate for the telecommunications industry is now being calculated consistent with the other industries as defined below. The 2019-2021 termination rates have been updated in the table below.

The termination rate is the number of service terminations divided by the number of residential customers, expressed as a percent. Due to the Covid 19 pandemic, residential terminations were suspended from March 13, 2020, to March 31, 2021. This significantly impacted 2020 utility terminations.

Residential Service Terminations/Termination Rates
Major Local Telecommunications Utilities

Utility	Residential Service Terminations				Termination Rates*			
	2019	2020**	2021	2022	2019	2020**	2021	2022
Brightspeed	5,736	636	3,912	4,308	5.34	0.63	4.15	5.24
Frontier Commonwealth	2,268	720	1,548	1,152	2.84	0.98	2.28	1.82
Verizon North	2,556	588	2,316	1,332	2.26	0.57	2.57	1.67
Verizon PA	14,232	3,288	13,536	7,308	2.59	0.66	3.16	1.96
Windstream	2,976	1,692	2,592	3,192	3.94	2.27	3.31	4.25
Total	**27,768**	**6,924**	**23,904**	**17,292**				
Average					**3.00**	**0.81**	**3.15**	**2.57**

* The termination rate is the number of service terminations divided by the number of residential customers, expressed as a percent.

** Due to the Covid 19 pandemic, residential terminations were suspended from March 13, 2020, to March 31, 2021. This significantly impacted 2020 utility terminations and reconnections.

Compliance

BCS provides utilities with written notice of alleged violations or infractions of the statutes and regulations found during BCS complaint handling. Utilities are provided opportunity to review and respond or appeal. The use of "infraction rate" is intended to help the Commission monitor and maintain customer services at the same level of quality for all telecommunications customers, regardless of who provides their telecommunications services.

The infraction rates in the table that follows are based on informal complaints that residential complainants filed with BCS from 2019 through 2022. The Infraction Category tables present detailed information about the infractions identified in 2022 complaints to the BCS.

The infraction rate is the number of informally verified infractions per 1,000 residential customers. Dividing per 1,000 customers normalizes the data for comparison purposes. The infraction rate is not a percentage. The category with customer trouble reports is consistently a high percentage infraction area. Appendix B-2 provides a list of the infractions included in each infraction category.

Commission Infraction Rates*
Major Local Telecommunications Utilities

Utility	2019	2020	2021	2022
Brightspeed	0.32	0.45	3.26	2.08

Universal Service Programs

As part of its ongoing responsibilities, BCS monitors the universal service programs of local telecommunications companies and ETCs. For the telecommunications industry, universal service programs[16] include Lifeline Service (Lifeline),[17] Lifeline 100 Service (Lifeline 100)[18] through Verizon PA and Verizon North and the Verizon PA Universal Telephone Assistance Program (UTAP). These programs ensure that low-income consumers have access to telecommunications service by providing discounts or credits for telecommunications service. The Commission approved the implementation of Pennsylvania's first universal service program for local telecommunications companies in 1989.[19] In December 1997, the Commission approved Lifeline service plans for 44 incumbent telecommunications utilities which led to the statewide implementation of telecommunications utilities' Lifeline programs in 1998.

Lifeline

The Commission's May 19, 2005, Final Lifeline Order (Final Order), at Docket No. M-00051871 expanded the Lifeline program eligibility to be consistent with the Federal Communications Commission's (FCC) programs.[20] The Final Order added an income-only based factor (income at or below 135% of the federal poverty guidelines) as a new criterion for Pennsylvania's Lifeline program eligibility. Second, the Final Order directed all carriers designated by the Commission as Eligible Telecommunication Carriers (ETCs)[21] to implement the Lifeline provisions contained in Chapter 30. Under these provisions,[22] ETCs are to inform new and existing customers about the availability of Lifeline services. They also must permit eligible Lifeline service customers to purchase any number of optional services (i.e., call waiting) at the tariffed rates for these services.

In August 2010, the Commission adopted the final Policy Statement on the Commonwealth of Pennsylvania Guidelines for Designation and Annual Recertification as an ETC for purposes of Federal Universal Service Support (ETC Guidelines).[23] Designation as an ETC for provision of Lifeline service permits the wireline and wireless providers to participate in the federal Universal Service Fund's (USF) Lifeline program in order to receive low-income support from the federal USF.[24]

On March 2, 2012, the FCC issued a Final Rule[25] which reformed and began to modernize the federal USF Lifeline program. The reforms were intended to accomplish the following: (1) strengthen protections against waste, fraud and abuse; (2) improve program administration and accountability; (3) improve

[16] With the exception of UTAP, these programs are supported fully or in part by federal universal service funds.
[17] Lifeline f/k/a/ Lifeline 135 in previous UCARE reports.
[18] Lifeline 100 f/k/a Lifeline in previous UCARE reports.
[19] The Link-Up America Program was the first universal service program. The FCC eliminated this program in 2012.
[20] FCC Report and Order and Further Notice of Proposed Rulemaking in the Matter of Lifeline and Link-Up, at CC Docket No. 04-87, WC Docket No. 03-109.
[21] Jurisdictional ETCs include all ILECs and other providers of communications services that have obtained ETC designation from the state commission or the FCC. The Commission designates wireless providers as ETCs. ETCs may receive federal universal service funding.
[22] 66 Pa. C.S. § 3019 (f)(1-4).
[23] Docket No. M-2010-2164741, July 29, 2010, which codifies the guidelines at 52 Pa. Code § 69.2501.
[24] 47 U.S.C. § 214(e)(3-4) In a community where no telecommunications utility provides services supported by federal universal support mechanisms, the FCC (for interstate) and PUC (for intrastate) will determine which telecommunications utility is best able to provide such service. Any telecommunications utility ordered to provide such service will be designated as an ETC for that community and become eligible to receive universal service support. This is the carrier of last resort (COLR) obligation.
[25] 47 C.F.R. Part 54 – Universal Service

enrollment and consumer disclosures; (4) initiate modernization of the program for broadband; and (5) constrain the growth of the program to reduce the burden of all who contribute to the federal USF.

The Commission's Nov. 9, 2016, Order at Docket No. M-2016-2566383 adopted the eligibility criteria from the FCC's Lifeline and Link Up Reform and Modernization, Third Report and Order (2016 Order), WC Docket No. 11-42 released Apr. 27, 2016. Effective Dec. 2, 2016, eligibility for Lifeline support was streamlined to include the following programs: Supplemental Nutrition Assistance Program (SNAP), Medicaid, Supplemental Security Insurance (SSI), Federal Public Housing Assistance and Veterans Pension Benefits. The income-based eligibility (135% of Federal Poverty Guidelines) did not change. The Commission's order required ETCs designated by the Commission to adhere to all federal ETC rules, regulations and standards including: (1) broadband as a supported service; (2) minimum service standards for broadband; (3) mobile voice and mobile broadband access services;[26] (4) the establishment of a National Verifier; and (5) port freeze rules.[27] Port freeze rules were eliminated in a subsequent Lifeline order.

Currently Lifeline is offered by ILECs, CLECs, and certain wireless, cable and satellite companies. As of Dec. 31, 2022, there were 254,489 low-income Pennsylvania consumers enrolled in Lifeline. Wireless, cable, and satellite ETCs provided Lifeline service to 246,164 of those consumers. The vast majority of Lifeline participants (246,158) in Pennsylvania chose a wireless ETC to provide their service. The following table shows enrollment activity for the major telecommunications utilities' Lifeline programs in 2019, 2020, 2021 and 2022. Information regarding total Lifeline enrollment can be found in the Lifeline Tracking Report.

2019-22 Lifeline Service Activity

Utility	Total Number of Customers Who Received Lifeline Service				Total Number of Customers Enrolled as of December			
	2019	2020	2021	2022	2019	2020	2021	2022
Brightspeed	760	685	502	445	607	474	412	369
Frontier Commonwealth	848	780	602	558	733	565	528	447
Verizon North*	1,903	1,518	1,374	1,186	1,042	925	800	668
Verizon PA*	10,190	8,484	7,542	6,532	7,828	6,965	6,017	4,944
Windstream	1,220	1,053	1,204	1,189	906	923	941	867
Total	**14,921**	**12,520**	**11,224**	**9,910**	**11,116**	**9,852**	**8,698**	**7,295**

* Includes customers enrolled in both the Lifeline and Lifeline 100 programs.

As of Dec. 1, 2022, the monthly Lifeline credit for stand-alone voice service is $5.25, or $9.25 for bundled service that meets the minimum standards for broadband. The monthly discount for the Verizon companies' Lifeline 100 is $7.75.

[26] As of Dec. 1, 2019, the minimum standard for wireless talk is 1,000 minutes, the minimum wireless broadband usage is 2 GB per month on a 3G or better network. For bundled service, only one service must meet the minimum standard. The minimum standard for fixed broadband is 18 Mbps download and 2 Mbps upload, with minimum usage of 1,000 GB per month.

[27] In its 2016 Lifeline Order, the FCC established port freeze rules, during which Lifeline subscribers were not eligible to change providers. The port freeze for voice only service was 60 days, the port freeze for broadband and wireless broadband service was 12 months.

As of Dec. 1, 2022, the minimum broadband standard for Lifeline subscribers who receive wireline service is 25 Mbps download and 3 Mbps upload, with a minimum of 1,280 GB of usage each month. If the wireline provider is unable to meet minimum speed standard, they must provide the highest performing broadband service available with at least 4 Mbps download and 1 Mbps upload. For Lifeline subscribers who receive service through wireless ETCs, the minimum standard is 4.5 GB per month of 3G or better mobile data.

Universal Telephone Assistance Program

Verizon PA implemented UTAP along with its Lifeline service program as part of a settlement agreement that was approved by the Commission Aug. 4, 1995 (P-00930715, P-00950958). Verizon PA is the only utility that offers a financial assistance program that helps existing Lifeline 100 customers and qualified Lifeline 100 applicants (with a pre-existing basic service arrearage) to restore their basic telecommunications service. The Dollar Energy Fund manages UTAP and distributes funds to qualified customers and Lifeline applicants. The following table shows the number of customers enrolled in the Verizon PA Lifeline 100 program and the UTAP grants provided in 2019, 2020, 2021 and 2022.

2019-22 Verizon PA Lifeline 100 and UTAP Summary

	2019	2020	2021	2022
Total Number of Customers Enrolled as of December	3,435	2,814	2,446	2,282
Number of Customers Given Assistance	13	4	0	0
Total Amount of Funds Distributed	$994	$247	$0	$0
Average Grant Amount	$76.46	$61.75	$0.00	$0

Automatic Notification Program

The Lifeline service automatic notification provision at 66 Pa.C.S. § 3019(f)(5) requires that all jurisdictional ETCs provide the Department of Human Services (DHS), formerly the Department of Public Welfare, with service descriptions, subscription forms, contact telephone numbers and service area information so DHS can notify its clients about the availability of Lifeline service. In 2005, a working group consisting of representatives of the PUC, Pennsylvania Telephone Association, the Office of Consumer Advocate and the Pennsylvania Utility Law Project worked with DHS to implement this provision. Commission staff coordinated with members of the working group to develop subscription forms and listings of utility contacts by county. Commission staff continues to provide DHS with copies of informational brochures and a link to the Commission's website for information about utilities that offer Lifeline programs.

ETC Designation

In its 2005 First Universal Service Report and Order, the FCC established minimum requirements for telecommunications carriers to be designated as ETCs and encouraged states that exercise jurisdiction over ETC designation to adopt the same requirements.[28] This order applied to both wireline and wireless carriers.

[28] See Matter of Federal-State Joint Board of Universal Service, First Report and Order, CC Docket No. 96-45, 20 FCC Rcd 6371 (released March 17, 2005).

On Apr. 11, 2008, the FCC conditionally designated TracFone Wireless, Inc. (TracFone) as the first wireless ETC in PA. The FCC's designation allowed TracFone to provide Lifeline service and receive reimbursement for Lifeline from the Federal USF but did not make the utility eligible for USF high-cost support.[29] At the time of the FCC designation, Pennsylvania had not yet exerted jurisdiction over wireless providers for the purpose of ETC designation.

On Aug. 2, 2010, the PUC entered its Final Policy Statement Order, at Docket No. M-2010-2164741. This order adopted the FCC minimum requirements for ETC designation but also established additional state specific requirements.[30] On Dec. 22, 2010, Virgin Mobile USA, LP became the first wireless ETC designated by the PA PUC.

Non-Traditional ETC Designation

In 2018, the FCC conducted the Connect America Fund Phase II, Auction 903 to allocate support to provide broadband in certain eligible areas across the United States. Auction 903 ran from July 24, 2018, to Aug. 21, 2018. Pennsylvania had five winning bidders that will deploy broadband at 54,812 locations for a total of $56,831,061 in support over 10 years. Among the auction winners were several non-traditional telecommunications providers including an electric cooperative and two satellite providers.

On Dec. 7, 2020, the FCC released the results of the Rural Digital Opportunity Fund, Auction 904. Pennsylvania had 13 winning bidders that will deploy broadband to 184,505 eligible locations for a total of $368,743,200 in support over 10 years. The winners included traditional telecommunications providers, cable providers, fiber providers, fixed wireless hybrid providers, and satellite providers. Sixty-four percent of the winning bids in PA were for broadband meeting or exceeding 100 Mbps download speeds, while a number of the winning bids were for gigabit (1,000 Mbps) broadband speeds.

To be eligible to receive support from both Auction 903 and Auction 904, each of the winning bidders must be designated as an ETC in Pennsylvania. The following table shows the ETCs approved to operate in PA as of Dec. 30, 2022.

[29] See TracFone ETC Designation Order, CC Docket No. 96-45, Order, 23 FCC Rcd 6206 (released April 11, 2008).
[30] See 66 Pa. C.S. § 3019(f).

2022 PA Wireless and Non-Traditional ETCs

Utility	PUC Docket #	Date of ETC Designation
Airvoice Wireless d/b/a Feel Safe Wireless	P-2013-2379431	7/9/2014

Zito West d/b/a Zito Mifflin County	P-2021-3023622	9/15/2021

* The FCC approved Tracfone as an ETC for the purpose of providing Lifeline service prior to the PUC exercising its authority to designate ETCs.

** T-Mobile d/b/a InReach Wireless abandoned their ETC designation as of 12/31/2022.

National Lifeline Verifier

The National Verifier shifts the responsibility for determining Lifeline eligibility from ETCs to the program's administrator, the Universal Service Administrative Company (USAC). The National Verifier is a centralized system that confirms identity, and eligibility for Lifeline by accessing data in the National Lifeline Accountability Database (NLAD), federal and state databases. In Pennsylvania, USAC accesses the DHS Compass database to confirm consumer eligibility for Lifeline based on participation in SNAP, Medicaid or SSI.

On Dec. 4, 2018, the National Verifier launched in Pennsylvania. Initially, ETCs were not required to use the verifier; however, 23 Pennsylvania ETCs successfully used the verifier to obtain an eligibility decision during the first month. As of March 5, 2019, applicants must receive an approved eligibility decision from the National Verifier to enroll in Lifeline. To receive an eligibility decision, applicants have the option of applying

for Lifeline through the ETC of their choice, submitting the Universal Lifeline Application and Household Worksheet by mail or by applying through the consumer portal at checklifeline.org.

Chapter 30 Broadband

Act 183 of 2004 also addressed balancing the mandated deployment of broadband facilities while promoting the provision of Universal Service. In both the original Chapter 30 enacted in 1993 and its replacement in 2004, all ILECs were required to provide 100% broadband availability to their retail access lines by Dec. 31, 2015 . Act 183 granted ILECs reductions to their Commission-mandated productivity offsets in their already approved alternative ratemaking plans if they advanced their 100% broadband deployment target date to 2008 or 2013, except for Verizon Pennsylvania, LLC, which retained its 2015 target date but also received a reduction in its productivity offset.

In 2017, the Commission published the Pennsylvania Broadband Bill of Rights to help educate consumers of their right to broadband under Pennsylvania law. Specifically, Pennsylvania consumers have the right to service within 10 business days of the request for broadband service and the service must meet the following speed requirements:

- 1.544 megabits per second (Mbps) download
- 0.128 Mbps upload

The Pennsylvania Broadband Bill of Rights directed consumers to contact BCS if their local telecommunications company cannot provide broadband, or the service does not meet Pennsylvania requirements.

Many of the telecommunication complaints that BCS receives, also include issues with broadband speed and/or availability. The following table shows the total number of residential telecommunications informal complaints in 2019, 2020, 2021 and 2022 for each of the five major telecommunications utilities, compared to the number of complaints that included a dispute regarding broadband speed, access or availability. Overall, in 2022, 30% of the residential informal complaints for the major telecommunications utilities included a dispute regarding broadband speed, access, or availability, compared to 36% in 2019.

2019-22 Chapter 30 Broadband Complaints

Glossary of Terms

Automatic Customer Transfer (also known as Warm Transfer) – The process through which BCS is able to immediately and contemporaneously transfer a customer inquiry or service or billing complaint to a jurisdictional telecommunications public utility that has voluntarily elected to participate in such an arrangement.

Broadband – A communication channel using any technology and having a bandwidth equal to or greater than 1.544 Mbps in the downstream direction and equal to or greater than 0.128 Mbps in the upstream direction.

Change in Income – A decrease in household income of 20% or more if the customer's household income level exceeds 200% of the Federal poverty level or a decrease in household income of 10% or more if the customer's household income level is 200% or less of the Federal poverty level.

Competitive Local Exchange Carrier (CLEC) – A telecommunications provider that competes with other incumbent local exchange telecommunications providers to provide local telecommunications service.

Consumer Complaint Rate – The number of Consumer Complaints per 1,000 residential customers.

Consumer Complaints – Complaints to BCS involving billing, service, rates, and other issues not related to requests for payment terms.

Cramming – The submission or inclusion of unauthorized, misleading or deceptive charges for products or services on an end-user customer's local telecommunications bill.

Customer Assistance Programs (CAPs) – Payment assistance and debt forgiveness programs for low-income households. CAPs are intended to provide more affordable monthly bills based on a set energy burden standard. CAP billing credits may be applied to ongoing usage as long as the household remains current and timely in paying its monthly CAP payments. CAP charges may take the form of a discounted price on actual usage on either all or a portion of the usage,[31] a percentage of the monthly bill,[32] or a monthly amount that is calculated upon a percentage of the household income.[33] Percentage of income plans are correlated directly to the household's income and the utility's energy burden targets. CAP's debt forgiveness feature freezes a household's unpaid past debt upon entry into the program. As long as the household remains current and timely on their future CAP payments, the past debt is not collected and is forgiven in incremental amounts over time.

Customer Assistance and Referral Evaluation Services (CARES) – Social service and referral program for households encountering some form of extenuating circumstance or emergency that results in the household's inability to pay for utility service. Qualifying households may receive counseling and/or direct referrals to community resources that can aid the family in resolving the emergency.

CURE (Customer & Utility Resolution Effort) Complaint – A voluntary program designed to better manage workload, improve customer satisfaction, and reduce costs. The utility contacts the complainant and attempts to achieve a resolution. If mutual satisfaction is reached, the utility and complainant notify BCS the informal

[31] Also referred to as "rate discount bill."
[32] Also referred to as "percent of bill."
[33] Also referred to as a "percent of income payment" (PIP).

complaint can be closed without further investigation, and the utility isn't required to submit a full utility report.

Electric Distribution Company (EDC) – The owner of the power lines and equipment necessary to deliver purchased electricity to the customer.

Electric Generation Supplier (EGS) – A person or corporation, generator, broker, marketer, aggregator or other entity that sells electricity, using the transmission or distribution facilities of an EDC.

First Contact Resolution (FCR) Complaints – Formerly labeled as "Inquiries." FCRs are contacts to BCS that did not require follow-up investigation beyond the initial contact or call-back.

Hardship Funds – Programs that make cash grants available to qualifying households to assist in the payment of outstanding debt owed to the utility. They are paid directly to the utility and generally funded through contributions made by the public that are matched by the utility.

Incumbent Local Exchange Carrier (ILEC) – A telecommunications utility that was providing local telecommunications service in 1996 to customers in a specific geographic area designated by the FCC and held a certificate from the PUC.

Infraction – A misapplication or infringement of a Commission statute or regulation, particularly the standards and billing practices for residential utility service.

Infraction Rate – The number of informally verified infractions per 1,000 residential customers (includes infractions drawn from both Consumer Complaints and PARs).

Justified Consumer Complaint Rate – The number of justified Consumer Complaints per 1,000 residential customers.

Justified Payment Arrangement Request Rate – The number of justified PARs per 1,000 residential customers.

Local Exchange Carrier (LEC) – A public utility that provides basic telecommunications service. The term does not exclude the utility's provision of toll service in addition to basic service.

Low-Income Usage Reduction Program (LIURP) – An energy conservation and education program. Qualifying households receive an energy audit to assess household condition and energy usage; free installation of energy conservation and energy efficiency measures such as insulation, air sealing, and appliance installation if cost effective; and, free education on energy conservation and usage reduction.

Major Class A Water Utility – A non-municipal water utility with annual revenues of $1 million or more for three consecutive years.

Major Electric Distribution Company (EDC) – An EDC with more than 100,000 residential customers.

Major Natural Gas Distribution Company (NGDC) – An NGDC with more than 100,000 residential customers.

Major Local Telecommunications Utility – An ILEC that served over 50,000 residential customers. The major local telecommunications utilities provided voice telecommunications service to the vast majority of the telecommunications access service lines.

Natural Gas Distribution Company (NGDC) – A natural gas utility regulated by the PUC that owns the gas lines and equipment necessary to deliver natural gas to the customer.

Natural Gas Supplier (NGS) – An entity other than an NGDC that sells, or arranges to sell, natural gas to customers using the distribution lines of an NGDC.

Non-Major Electric Utility – An EDC with less than 100,000 residential customers or an EGS.

Non-Major Natural Gas Utility – An NGDC with less than 100,000 residential customers or an NGS.

Non-Major Telecommunications Utility – An incumbent local exchange carrier that served less than 50,000 residential customers, a CLEC, a long-distance company, an IXC, a reseller, or an ETC.

Non-Major Water Utility – A municipal water utility or a non-municipal water utility with revenues of either less than $1 million annually or greater than $1 million annually for no more than two consecutive years.

Payment Arrangement Request Rate – The number of PARs per 1,000 residential customers.

Payment Arrangement Requests (PARs) – Requests for payment arrangements principally include one of the following situations: suspension / termination of service is pending; service has been suspended/terminated and the complainant needs payment terms to have service restored; or, the complainant wants to retire an arrearage.

People-Delivered Utility Service – Scheduling delays, conduct of personnel, and damages.

Problem Categories – A breakdown of residential Consumer Complaints by specific problem categories such as billing, credit and deposits, service quality, rates, etc.

Response Time in Days – The time span in days from the date of BCS's first contact with the utility regarding a complaint to the date on which the utility provides BCS with its report regarding the complaint. Response time quantifies the speed of a utility's response to BCS Consumer Complaints and PARs.

Significant Change in Circumstances – Any of the following criteria when verified by the public utility and experienced by customers with household income less than 300% of the Federal poverty level: (1) The onset of a chronic or acute illness resulting in a significant loss in the customer's household income. (2) Catastrophic damage to the customer's residence resulting in a significant net cost to the customer's household. (3) Loss of the customer's residence. (4) Increase in the customer's number of dependents in the household.

Slamming – The unauthorized switching of a customer's service provider or supplier. In telecommunications, slamming refers to changing a customer's local exchange carrier or primary long-distance service provider without the customer's consent. In electric and gas, slamming refers to changing the customer's supply provider without customer authorization.

Termination Rate – For the electric and gas industries, termination rate is the number of service terminations divided by the number of residential customers. For the telecommunications industry, termination rate is the number of service terminations per 1,000 residential customers.

List of Acronyms

Acronym	Definition
ALCOSAN	Allegheny County Sanitary Authority
BCS	Bureau of Consumer Services
CAP	Customer Assistance Program
CARES	Customer Assistance and Referral Evaluation Services
CLEC	Competitive Local Exchange Carrier
COLR	Carrier of Last Resort
CRS	Collections Reporting System
CSIS	Consumer Services Information System
CTS	Compliance Tracking System
CURE	Customer & Utility Resolution Effort

Appendix D-1

Classification of Consumer Complaints
Electric, Gas and Water

Billing Disputes – Complaints about bills from the utility: high bills, inaccurate bills or balances, installation charges, customer charges, service charges, repair charges, late payment charges, frequency of bills, and the misapplication of payment on bills.

Competition – Complaints about issues that are directly related to competition: enrollment/eligibility, application and licensing, supplier selection, changing/switching suppliers (includes slamming), advertising and sales, billing, contracts, and credit and deposits. This category also includes any complaints about more general competition issues such as consumer education, pilot programs, and restructuring.

Credit and Deposits – Complaints about a utility's requirements to provide service: the applicant must pay another person's bill; the applicant must complete an application; the applicant must provide identification; or the applicant must pay a security deposit. This category also includes complaints about the amount of or the amortization of a deposit, the payment of interest on a deposit or the failure of a utility to return a deposit to the customer.

Damages – Complaints about a utility's lack of payment or lack of restored property related to damages to equipment, appliances or property due to service outages, utility construction or repair, and improperly delivered or transferred service.

Discontinuance/Transfer – Complaints related to the responsibility for or the amount of bills after discontinuance or transfer of service: the customer requested discontinuance of service and the utility failed to finalize the account as requested or transferred a balance to a new or existing account from the account of another person or location.

Metering – Billing complaints directly related to the reading of or the failure to read the customer's meter and the accuracy of the meter readings (utility reading, customer supplied reading or misreading).

Other Payment Issues – Complaints about the amount of budget bills or the transfer of a customer's debt to a collection agency.

Personnel Problems – Complaints about performance by utility personnel: a utility representative did not finish the job correctly; a meter reader entered a customer's home to read the meter without knocking; utility personnel will not perform a requested service; business office personnel treated the customer rudely; and, the utility mismanaged its operations. This category also includes any complaints about sales such as appliance sales by the utility, as well as complaints about a utility's CAP program or procedures.

Rates – General or specific complaints about a utility's rates: general or specific rates are too high; the utility's rates are being used to recover advertising costs; or the customer is being billed on the incorrect rate.

Scheduling Delays – Complaints about problems with a utility's scheduling: delays in scheduling or repairing service or relocating poles, failures to keep scheduled meetings or appointments and lack of accessibility to customers.

Service Extensions – Complaints about line extensions or installation of service: the responsibility for line extensions, the cost and payment for line extensions, inspection requirements, delay in installation, connection or disconnection of service, and denial of service extensions.

Service Interruptions – Complaints about service interruptions: the frequency of service interruptions, the duration of interruptions or the lack of prior notice regarding interruptions.

Service Quality – Complaints about a utility's product: the quality of the product is poor (water quality, voltage or pressure); the utility's equipment is unsatisfactory or unsafe; the utility fails to act on a complaint about safety; the utility plans to abandon service; the utility does not offer needed service; the utility wants to change location of equipment; or the utility providing service is not certified by the Commission (de facto).

Termination or PAR Procedures – Complaints about termination and/or payment arrangement procedures: the customer claims no termination notice was received; the utility failed to honor a medical certificate; or there was a delay in reconnection after the bill was paid.

All Other Problems – All other complaints that do not fit into the above categories, including, but not limited to, credit application procedures.

Appendix D-2

Classification of Consumer Complaints
Telecommunications

Annoyance Calls – Complaints about the utility's failure to resolve problems related to receiving unsolicited sales calls or harassing calls. This includes the utility's failure to change the phone number or initiate an investigation and problems with auto dialers and fax machines.

Billing Disputes – Complaints about bills from the utility: high bills, inaccurate bills or balances, installation charges, customer charges, service charges, repair charges, late payment charges, frequency of bills, and the misapplication of payment on bills.

Competition – Complaints about changing/switching service providers, slamming, cramming, competition-related billing problems, contracts, competition-related service problems, and all other problems associated with competition in the telecommunications marketplace.

Credit and Deposits – Complaints about a utility's requirements to provide service: applicant payment of another person's bill, completion of an application, provision of identification or payment of a security deposit. This category also includes complaints about the amount of or the amortization of a deposit, the payment of interest on a deposit or the failure of a utility to return a deposit to the customer.

Discontinuance/Transfer – Complaints related to responsibility for or the amount of bills after discontinuance or transfer of service; utility failure to finalize the account as requested; or the utility's transfer of a balance to a new or existing account from the account of another person or location.

Non-Recurring Charges – Complaints about one-time charges for installation of basic and/or non-basic services.

Service Delivery – Complaints about delays in service installations or disconnections of service and failures to keep scheduled appointments, lack of facilities to provide service, unauthorized transfer of service, unavailability of special services, and the rudeness of business office personnel.

Service Terminations – Complaints about suspension or termination procedures when there is no need for a payment arrangement.

Toll Services – Complaints about charges for local toll and/or long-distance toll services.

Unsatisfactory Service – Complaints about poor service quality, problems with the assignment of phone numbers, incorrect information in phone directories, lack of directories, equal access to toll network, and service interruptions and outages.

All Other Problems – All other complaints that do not fit into the above categories, including complaints about extended area of service (limited local calling area), rates (general or specific rates are too high or the customer is being billed on the incorrect rate), and sales of non-basic service (including the availability of certain services). Also included are complaints that were taken in by BCS but closed before they could be investigated because the complainant resolved the complaint with the utility or withdrew the complaint. In addition, some complaints are non-jurisdictional.

PREPARED REBUTTAL TESTIMONY OF
RUDOLPH HANECHAK
FINANCIAL ANALYSIS & BUDGET MANAGER
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: April 18, 2024
DATE ADMITTED: _____

Peoples Statement No. 10-R

PREPARED REBUTTAL TESTIMONY OF
RUDOLPH HANECHAK

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rudolph Hanechak. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies") as Financial Analysis and Budget Manager. PNG Companies provides various administrative functions for Peoples Natural Gas Company LLC ("Peoples" or the "Company") including Budgeting.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 10.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am presenting testimony in rebuttal of certain expense positions and recommendations of the Bureau of Investigation and Enforcement ("I&E") witness Christopher Keller and the Office of Consumer Advocate ("OCA") witness Dante Mugrace.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. DO ANY OF THE PARTIES MAKE AN ADJUSTMENT TO NON-INCOME TAXES?

A. Yes. Both I&E Witness Keller and OCA Witness Mugrace propose adjustments to payroll taxes as a result of a proposed change in labor expense to increase the vacancy credit. Mr. Mugrace also proposes a reduction to incentive compensation (STI) to remove financial related metrics.

Q. WHAT IS THE RESULT OF THEIR PROPOSED ADJUSTMENTS?

A. I&E Witness Keller's proposed adjustment would reduce payroll taxes by $216,212 and Witness Mugrace's proposed adjustment would reduce payroll taxes by $411,718.

Q. DO YOU AGREE WITH THE PROPOSED ADJUSTMENTS TO PAYROLL TAXES?

A. No. I do not agree with the adjustments to payroll taxes on the grounds that I do not agree with the proposed change to the vacancy credit or the incentive compensation adjustment. For additional rebuttal of the proposed adjustments to the vacancy credit and incentive compensation please refer to Peoples Statement No. 2-R the rebuttal testimony of Andrew Wachter.

Q. DO YOU AGREE WITH THEIR CALCULATION OF THE PROPOSED ADJUSTMENTS TO PAYROLL TAXES IF EITHER OF THEIR POSITIONS IS ACCEPTED?

A. Yes. If the additional vacancy credit and STI adjustments are accepted, then the calculations proposed are accurate.

Q. WHAT IS THE COMPANY'S PROPOSED CHANGE TO THEIR PAYROLL TAX EXPENSE ADJUSTMENTS?

A. I propose increasing the payroll taxes from I&E Witness Keller by $216,212 and Witness Mugrace's by $411,718 to reflect the original submission.

Q. DID MR. MUGRACE MAKE ANY ADDITIONAL RECOMMENDED CHANGES TO TAXES OTHER THAN INCOME?

A. Yes. Mr. Mugrace proposes a reduction to property taxes of $9,370 based on a reduction in Gas Plant In Service ("GPIS").

Q. PLEASE FURTHER EXPLAIN THE ADJUSTMENT TO PROPERTY TAX.

A. Overall, the recommended changes to GPIS should be rejected for the reasons discussed in both the rebuttal testimony of Paul Becker - Peoples Statement No. 5-R and Dawn Folks - Peoples Statement No. 11-R. Thus, the proposed changes to property tax should be rejected as well.

In addition, Mr. Mugrace calculates the property tax rate using the submitted property tax of $1,064,828 as a ratio of the submitted GPIS of $5,587,906,895 resulting in an incorrect ratio of .00032. Mr. Mugrace then applies this rate to the proposed GPIS reduction of ($29,282,008) resulting in the proposed reduction of $9,370. If this

methodology is accepted the correct ratio would have been .0001906. However, for the reason discussed below this should be rejected.

Q. ARE THEIR OTHER ERRORS WITH OCA'S ADJUSTMENT TO PROPERTY TAX?

A. Yes. First, the GPIS that Mr. Mugrace proposes to disallow is not subject to property tax in Pennsylvania. Second, I also disagree with the calculation itself. The correct ratio would have been .0001906 (1,064,828 / 5,587,906,895).

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REBUTTAL TESTIMONY OF DAWN M. FOLKS SENIOR FINANCE AND RATES ANALYST ON BEHALF OF PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: April 18, 2024
DATE ADMITTED: _____

Peoples Statement No. 11-R

PREPARED REBUTTAL TESTIMONY OF
DAWN M. FOLKS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dawn M. Folks. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as a Finance and Rates Analyst. I provide rates and regulatory services for Peoples Natural Gas Company LLC.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 11.

Q. HAVE YOU REVIEWED THE DIRECT TESTIMONY SUBMITTED BY OTHER PARTIES?

A. Yes. In particular, regarding this Rebuttal Testimony, I have reviewed the Direct Testimony submitted by Dante Mugrace and Roger Colton on behalf of the Office of Consumer Advocate ("OCA"), Ethan Cline on behalf of the Bureau of Investigation and Enforcement ("I&E") and Robert Knecht on behalf of the Office of Small Business Advocate ("OSBA").

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is fourfold: 1) address the OCA recommendation regarding reducing rate base by $27,819,503 for inflation adjustments, 2) respond to I&E request that PNG provides an update of its actual plant additions and retirements, 3) respond to OCA's recommended additions to Rule 3 in PNG Tariff Gas- PA PUC No. 48 and 4) address OBSA's statement on the Company's design day method with regards to the LGS class design day demand in particular.

Q. WHAT IS OCA WITNESS MUGRACE'S RECOMMENDATION WITH RESPECT TO THE COMPANY'S RATE BASE CLAIM?

A. Dante Mugrace is recommending a total adjustment of $27,819,503 related to the complete disallowance of the inflation adjustments that are included in the balances for each of Peoples' categories of plant.

Q. WHAT IS YOUR RESPONSE TO MUGRACE'S RECOMMENDATION TO ADJUST THE COMPANY'S RATE BASE CLAIM?

A. I do not agree with Mr. Mugrace's recommendation to remove inflation adjustments. Mr. Mugrace's recommendation to omit inflation in its entirety on future investments and expenses ignores real world reality. Refer to the Company witness Paul Becker, Peoples Natural Gas Statement No. 5-R, for further explanation on the Company's position regarding these adjustments.

Q. WHAT IS I&E WITNESS CLINE'S RECOMMENDATION WITH RESPECT TO THE COMPANY'S RATE BASE CLAIM?

A. Ethan Cline acknowledges the Company's claimed combined rate base for the FPFTY is $4,215,125,164 and the rate base for the FTY ending August 31, 2024 is $3,658,410,801 without issue and requests that actuals be provided for the FTY and FPFTY by March 1, 2026. Mr. Cline believes there is value in determining how closely Peoples' projected investments in future facilities compare with the actual investments that are made by the end of the FTY and FPFTY.

Q. WERE THERE ANY ADDITIONAL RECOMMENDATIONS REGARDING RATE BASE?

A. Yes. Both OCA and I&E recommend changes to the claim for Cash Working Capital in Rate Base. These adjustments should also be denied for the reasons set forth in Company witness Krista Snyder's Rebuttal Testimony, Peoples Natural Gas Statement No. 12-R.

Mr. Mugrace also had a recommendation for an adjustment related to an incident in Robinson. This adjustment should also be denied for the reasons set forth in Company witness Paul Becker's, Rebuttal Testimony Peoples Natural Gas Statement No. 5-R.

In addition, Mr. Mugrace had rate base adjustments related to deferred taxes in Act 40. These adjustments should also be denied for the reasons set forth in Company witness Christine Saball's Rebuttal Testimony, Peoples Natural Gas Statement No. 6-R.

Q. WHAT IS YOUR RECOMMENDATION WITH RESPECT TO I&E'S PROPOSAL TO PROVIDE UPDATES TO PEOPLES NATURAL PLANT ADDITIONS?

A. I can agree with Mr. Cline's recommendation to provide an update that includes actual plant additions and retirements, no later than March 1, 2026, for the twelve months ending August 31, 2024 and for the twelve months ending September 30, 2025.

Q. WERE THERE ANY TARIFF CHANGES PROPOSED THAT YOU WOULD LIKE TO DISCUSS?

A. Yes. Roger Colton proposed additions to the language the Company's proposed tariff, specifically regarding rules for deposit for residential customers. Colton suggests that additional language be added to Rule 3.C (Gas-PA PUC No. 48, Original Page 19), that mirrors the language of 52 Pa. Code § 56.32(e), "*Provide income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the public utility's Customer Assistance Program"* and Rule 3.D (Gas-PA PUC No. 48, Original Page 20) that mirrors the language of 52 Pa. Code § 56.41(B)(4), "*Notwithstanding subsection (D), the Company may not require a cash deposit from a customer who is, based upon household income, confirmed to be eligible for a customer assistance program. A customer is confirmed to be eligible for a customer assistance program by the public utility if the customer provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.*" Therefore, extending the exemption to customers eligible for the customer assistance program.

Q. WERE THERE ANY OTHER TARIFF CHANGES PROPOSED IN PEOPLES RULE 3 -RULES FOR DEPOSIT BY MR. COLTON?

A. Yes. Roger Colton also proposed additional tariff language added in (Rule 3.E (2), Gas-PA PUC No. 48, Original Page No. 19, "the Applicant is unable to establish creditworthiness to the satisfaction of the Company through the use of a generally accepted credit scoring methodology which employs standards for using the methodology that fall within the range of general industry practice." However, I do want to point out that the rule that Mr. Colton quotes in his testimony is actually Rule 3.B(2), Gas PA PUC No. 48, Original Page No. 19 not Rule 3.E(2), Gas PA PUC No. 48, Original Page No. 19. Mr. Colton believes that this provision, standing alone, carries with it an elevated risk of discrimination and suggests that the Company add the following language to this rule. *"provided that the methodology does not directly, or have the effect of, discriminating based on a protected class as set forth in the federal Equal Credit Opportunity Act."*

Q. DO YOU AGREE WITH THE CHANGES COLTON PROPOSED IN THE RETAIL TARIFF?

A. The Company accepts all three of Mr. Colton's recommended tariff language additions as outlined above. Exhibit DMF-1R includes the red-lined tariff language additions in Gas-PA PUC No. 48, Original Pages 19 and 20.

Q. ARE THERE ANY OTHER CHANGES TO THE PROPOSED RETAIL TARIFF THAT YOU WOULD LIKE TO MENTION?

A. Yes. In response to OSBA-I-12(J), Peoples explained their intention to propose the WNA mechanism on a bills rendered basis, not a service rendered basis. And as such, the Company will adjust its tariff to reflect the mechanism as bills rendered. Exhibit DMF-2R includes the red-lined tariff language change in Gas-PA PUC No. 48, Original Pages 79. Further explanation can be found in Company witness Carol Scanlon's, Rebuttal Testimony Peoples Statement No. 3-R.

Q. WHAT IS OSBA WITNESS KNECHT'S COMMENTS WITH RESPECT TO THE COMPANY'S DESIGN DAY DEMAND ALLOCATORS?

A. Mr. Knecht outlines in his testimony how the Company allocates the design day demands to the various rate classes based on historical normalized usage factors for base load and heat load. Mr. Knecht agrees with the Company's design day methodology. Mr. Knecht then comments that it appears that actual peak demands on recent peak days have substantially exceeded the "design" demands for the LGS class using the response provided in OSBA-I-34.

Q. WHAT IS YOUR RESPONSE TO KNECHT'S CONCLUSION?

A. First, it seems as if Mr. Knecht is assuming that the breakout of volumes by rate class presented in the Company's Exhibit 17 COS10 are true actuals. In the response to OBSA-I-34 the Company explained that actual send out volumes from gas supply were used to find the three peak days over the last three winters. There is no obvious way to recognize

those individual peak day data by rate class without daily metered data by class. The Company allocated these total volumes by customer class using the average forecasted volumes, which are for an average day situation not a peak day situation. Therefore, the LGS are a group of customers that are not generally heat sensitive, it is expected that the demand percentages for that class would be larger on an average day with respect to the total demand and smaller on a design day with respect to the total demand. The data by class is estimated not actuals and would be different if the company used a percentage spread using their design day model instead which would then decrease the LGS data presented in Exhibit 17 COS 10. See Exhibit DMF-3R for the data allocated by design day factors. As a result, I do not agree with Mr. Knecht's assumption that the Rate LGS demands on actual peak days exceeded the assumed design conditions and the Company's design day rate class allocation percentages originally provided in this case are the most accurate to use.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

RULES AND REGULATION

2. CHARACTER OF SERVICE

The Company offers firm service, unless otherwise provided in this tariff.

3. RULES FOR DEPOSIT

RESIDENTIAL CUSTOMERS

A. A deposit from a Customer shall conform to the requirements of all applicable Commission regulations and statutory requirements. Deposits required by the Company for services under this Tariff shall not be based on unpaid charges for gas supply services provided by an NGS.

B. The Company may also require a security deposit from an Applicant if any of the following conditions exist:

1) The Applicant was a residential distribution service Customer of the Company whose service was terminated for any of the following reasons:
   a. Nonpayment of an undisputed delinquent account.
   b. Failure to complete payment of a deposit, provide a guarantee, or establish credit.
   c. Failure to permit access to meters, service connections or other property of the Company for the purpose of replacement, maintenance, repair or meter reading.
   d. Unauthorized use of the utility service delivered on or about the affected dwelling.
   e. Failure to comply with the material terms of a settlement or payment agreement.
   f. Fraud or material misrepresentation of identity for the purpose of obtaining utility service.
   g. Tampering with meters, including, but not limited to, bypassing a meter or removal of an automatic meter reading device or other Company equipment.
   h. Violating Tariff provisions which endanger the safety of a person or the integrity of the Company's gas delivery system.

2) The Applicant is unable to establish creditworthiness to the satisfaction of the Company through the use of a generally accepted credit scoring methodology which employs standards for using the methodology that fall within the range of general industry practice, provided that the methodology does not directly, or have the effect of, discriminating based on a protected class as set forth in the federal Equal Credit Opportunity Act.

3) The Applicant has failed to comply with any material term or condition of a settlement or payment agreement.

C. If an Applicant is required to post a security deposit, the Applicant may, in the alternative:

1) Furnish a written guaranty from a third party, which can, to the Company's satisfaction, establish credit in Applicant's favor sufficient to assure payment to the Company upon demand of an amount equal to that which would otherwise be required in a security deposit.

2) Provide income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the public utility's Customer Assistance Program.

A written guaranty in a form acceptable to the Company must be received by the Company prior to commencement of utility service to any Applicant who elects the foregoing alternative to the posting of a security deposit.

3. RULES FOR DEPOSIT (continued)

D. The Company may require an existing or terminated Customer to post a security deposit in order to re-establish credit under any of the following circumstances, after giving the Customer due notice of its intention to require a security deposit in accordance with prevailing Commission regulations:

1) The existing Customer has been delinquent on any two (2) consecutive bills or three (3) or more bills within the preceding twelve (12) month period.

2) The existing Customer has failed to comply with a material term or condition of a settlement or payment agreement, as defined in applicable Commission regulations.

3) The Customer's utility service has been terminated and the Customer desires reconnection.

Notwithstanding subsection (D), the Company may not require a cash deposit from a customer who is, based upon household income, confirmed to be eligible for a customer assistance program. A customer is confirmed to be eligible for a customer assistance program by the public utility if the customer provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.

E. When the Company requires a security deposit from an Applicant or Customer, the due date for the payment of such security deposit will be in accordance with the applicable Commission regulations.

F. A security deposit may be required in an amount equal to twice the average estimated monthly bill of the Applicant. This estimate shall be based upon prior consumption for like service at the subject premises, wherever available. Should the character or degree of the Customer's usage materially change, or if it is established clearly that either will materially change in the immediate future, the amount of the deposit may be adjusted at the request of either the Company or the Customer.

G. All residential deposits shall bear interest at the simple annual interest rate determined by the Secretary of Revenue for interest on the underpayment of tax under section 806 of the act of April 9, 1929 (P.L. 343, No. 176), known as the Fiscal Code. Such interest will be credited to the Customer's account at the end of each year after the date of the deposit and if return of deposit results in a credit balance on the account, the credit may be returned to customer in the form of a refund check.

H. The Company shall refund or apply to a Customer's outstanding balance any security deposit held, plus accrued interest, under the following conditions:

1) Upon discontinuance or termination of service.

2) After a Customer has paid bills for utility service in full and on time for twelve (12) consecutive months.

3) At the option of the Company, a security deposit including accrued interest may be refunded in whole or in part at any time earlier than the time stated in this Rule.

4) After the Company has held the Customer deposit for a maximum of 24 months, if none of the above conditions are met.

RIDER
WEATHER NORMALIZATION ADJUSTMENT (WNA)

APPLICATION AND PURPOSE

A Weather Normalization Adjustment ("WNA") shall be applied to Residential, Commercial SGS, and Commercial MGS customers receiving service under Rate Schedules RS, CAP, SGS, and MGS for service rendered during the heating season of October 1st through May 31st.

WNA is a distribution charge adjustment and is considered a basic service charge.

Calculated WNA amounts shall be subject to Rider DSIC, Rider STAS, Rider Tax Repairs Surcredit, and Rider TCJA. No additional riders or surcharges will be applied to the calculated WNA.

CALCULATION

The WNA will be applied to bills ~~service~~ rendered October 1st through May 31st and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBM = BLMM+ [(NHDD/AHDD) x (AMUM-BLMM)]
WNAM = WNBM – AMUM
WNAM = WNAC x Distribution Charge

a) Weather Normalized Billing Mcfs ("WNBM") will be calculated as the Base Load Monthly Mcfs ("BLMM") added to the product of the [Normal Heating Degree Days ("NHDD") divided by the Actual Heating Degree Days ("AHDD")] and the [Actual Monthly Usage Mcfs ("AMUM") less the BLMM]. Weather Normalized Billing Mcfs (WNBM) will only be calculated if the AMUM exceeds the BLMM. WNA will not be applicable for the billing period if AMUM is less than the BLMM.

b) BLMM shall be established for each customer by averaging the actual daily consumption from the billing system, measured in Mcf, for service rendered July 1st thru August 31st of the most recent period.

c) AMUM shall be measured for each customer and billing cycle.

d) NHDD shall be based upon the heating degree days utilized to develop the revenue requirement in the Company's general rate case proceeding at Docket No. R-2023-3044549. NHDD shall be updated in future general rate case proceedings.

e) AHDD shall be the actual experienced heating degree days during the billing cycle days for the customer based upon experienced actual temperatures as reported by the National Oceanic and Atmospheric Administration (NOAA) for weather stations utilized by the Company for the area.

f) AMUM will be subtracted from the WNBM to compute the Weather Normalized Adjustment Mcfs ("WNAM").

PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REBUTTAL TESTIMONY OF KRISTA SNYDER FINANCIAL ANALYST ON BEHALF OF PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: April 18, 2024
DATE ADMITTED: _____

Peoples Statement No. 12-R

PREPARED REBUTTAL TESTIMONY OF
KRISTA SNYDER

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Krista Snyder and my business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as a Financial Rates Analyst. I provide rates and regulatory services for Peoples Natural Gas Company LLC, a direct subsidiary of PNG.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 12.

Q. HAVE YOU REVIEWED THE DIRECT TESTIMONY SUBMITTED BY OTHER PARTIES?

A. Yes. Regarding this Rebuttal Testimony, I have reviewed the Direct Testimony submitted by Christopher Keller on behalf of the Bureau of Investigation and Enforcement ("I&E") and the Direct Testimony submitted by Dante Mugrace on behalf of the Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. In direct testimony, I&E's witness Keller and OCA's witness Mugrace made statements and suggested modifications regarding Cash Working Capital ("CWC") claim that I previously provided. I will rebut certain of those positions and recommendations in this testimony. I am also sponsoring Exhibit KMS-R-1, a revised Cash Working Capital ("CWC") claim.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. Exhibit KMS-R1.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I have arranged my rebuttal testimony by subject matter. Where more than one witness has addressed the same subject matter with testimony that I wish to rebut, I address all of that testimony in the same section. I will address the following issues in the order listed: (1) Revisions to the CWC claim identified in testimony from I&E; and (2) response to OCA's proposed adjustments to the CWC claim.

Q. PLEASE EXPLAIN THE REVISIONS TO THE CASH WORKING CAPITAL CLAIM IDENTIFIED DURING DISCOVERY.

A. There were certain CWC claim adjustments identified in witness Keller's testimony relating to Payroll, Pension and Benefits, Taxes Other than Income and Other O&M Expenses. Also, a revised Exhibit 4, Schedule No. 1 was filed by the Company on March 12, 2024, which increases the claim for O&M expenses based on identified during

discovery. All these changes have been incorporated into **Peoples Exhibit No. KMS-R-1**. Please note that there are no other changes to my direct testimony.

Q. DO YOU AGREE WITH WITNESS KELLER'S CLAIM THAT THE CWC ALLOWANCE SHOULD BE $35,564,531?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend an allowance of $35,661,101 or an increase of $96,570 to I&E's proposed allowance.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the following: (1) to reflect the revisions made to the initial CWC claim, as noted above; and (2) to reflect the adjustments to CWC resulting from O&M expenses that have been accepted by the Company in response to adjustments from discovery.

Q. DO YOU AGREE WITH OCA WITNESS MUGRACE'S ADJUSTMENTS TO THE COMPANY'S CWC?

A. No. Mr. Mugrace has made different expense adjustments that impact the CWC claim. The Company does not accept these expense adjustments so the associated cash working capital adjustments should not be accepted.

Q. IF ALL MUGRACE ADJUSTMENTS ARE TO BE ACCPETED, IS HIS CASH WORKING CAPITAL CLAIM CORRECT?

A. No. While the $91.9 million adjustment for Interest Expense agree to the OCA adjustment, I do not agree with the total adjustment of $1.64 million to cash working capital. Because there was no mention of adjustments to short term debt in Mugrace's Direct Testimony, this should not be included, and the total adjustment should only include long term debt.

Q. HAVE YOU ADJUSTED THE LEAD-LAG STUDY TO AGREE WITH FPFTY LEVEL OF EXPENSES AT PROPOSED RATES?

A. Yes. I have included the revisions described above and expenses consistent with Peoples' rebuttal testimony. The final rebuttal CWC is $35,661,101 as shown on **Peoples Exhibit KMS-R-1**, which is attached hereto.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REBUTTAL TESTIMONY OF
JOHN J. SPANOS
ON BEHALF OF
PEOPLES NATURAL GAS COMPANY, LLC

DATE SERVED: April 18, 2024 Peoples Statement No. 14-R
DATE ADMITTED: _____

PREPARED REBUTTAL TESTIMONY OF
JOHN J. SPANOS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. John J. Spanos. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming) as President. I have been associated with the firm since June 1986.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 14.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of this testimony is to address and rebut the depreciation expense adjustments set forth by Office of Consumer Advocate ("OCA") witness Dante Mugrace. Mr. Mugrace's position includes adjustments to plant in service amounts, accumulated depreciation balances and depreciation expense for the fully projected future test year ("FPFTY").

Q. WHAT IS THE BASIS FOR OCA'S ADJUSTMENTS TO DEPRECIATION EXPENSE?

A. Mr. Mugrace's adjustments for depreciation expense are the result of his proposal to eliminate the application of inflation factors to some of the capital additions proposed in the rate case. This results in lower plant balances and a lower proposed depreciation expense as of the end of the fully projected future test year, September 30, 2025.

Q. HAS WITNESS MUGRACE RECOMMENDED ADJUSTMENTS TO THE PLANT IN SERVICE AS OF AUGUST 31, 2023, AUGUST 31, 2024 AND SEPTEMBER 30, 2025?

A. Yes. Mr. Mugrace proposes reducing the additions for each of the three test years, thus reducing the year-end plant balances used in the calculations of depreciation expense. These proposed changes, totaling $27,819,503, are summarized by function in Table 1 of Mr. Mugrace's testimony (page 9). Please note that the other proposed changes to rate base are discussed in Peoples Natural Gas Statement No. 5-R – the Rebuttal Testimony of Paul Becker, Peoples Natural Gas Statement No. 6-R – the Rebuttal Testimony of Christine Saball and Peoples Natural Gas Statement No. 11-R – the Rebuttal Testimony of Dawn Folks,

Q. HAS WITNESS MUGRACE RECOMMENDED ADJUSTMENTS TO THE ACCUMULATED DEPRECIATION BALANCE AS OF SEPTEMBER 30, 2025?

A. Yes. While witness Mugrace agrees with the method of development of the accumulated depreciation balances used in the Depreciation Studies, due to his proposed changes in plant, he also proposes an adjustment to the accumulated depreciation amount used in the FPFTY calculation. His proposed reduction of the accumulated depreciation is

approximately $727,743 and is summarized in schedule DM-6 of his testimony (part of Appendix B). He calculates this adjustment by multiplying his proposed changes in plant balance (i.e., the total of changes for all three test years) by the proposed composite depreciation rates from the Company's FPFTY calculations.

Q. WHAT ADJUSTMENT DOES WITNESS MUGRACE PROPOSE TO DEPRECIATION EXPENSE FOR THE FULLY PROJECTED FUTURE TEST YEAR?

A. To determine his proposed adjustment to depreciation expense, witness Mugrace uses the same process he used to determine his adjustment to accumulated depreciation. Thus, his adjustment amount of $727,743 is the same as the adjustment proposed for the accumulated depreciation. This is shown in schedule DM-35 of his testimony.

Q. IS THE CALCULATION OF DEPRECIATION RATES AND EXPENSE FOR FUTURE TEST YEARS AS WITNESS MUGRACE HAS PROPOSED, CORRECT?

A. No, it is not. First, the book reserve is brought forward based on many calculations to annualize the depreciation accruals, retirements, amortization of net salvage, cost of removal, gross salvage, acquisitions and adjustments. The annualized depreciation accruals are determined by calculating the average plant balance for the test year by the depreciation rates for each individual account. The amortization of net salvage is determined based on the incurred cost of removal and gross salvage for the five years prior. The projected retirements, cost of removal and gross salvage are determined on a yearly basis in order to properly establish an end of test yearbook reserve. This is critical in order

to properly annualize the book reserve in a consistent manner to the plant balance. This removes the over or under recovery concerns for new vintages within the year. Once the future test year (August 31, 2024) is determined, the same process must occur for the fully projected future test year (September 30, 2025). Consequently, each account's depreciation rate and expense needs to be calculated on the vintage plant balance and book reserve as of the same date.

Q. FURTHER EXPLAIN WHY WITNESS MUGRACE'S ADJUSTMENTS SHOULD NOT BE CONSIDERED REASONABLE.

A. As mentioned above, his calculations do not properly address the required details of making plant adjustments. When plant additions are adjusted, the specific amount that is changed by account is required in order to properly adjust the development of the book reserve and forecasted expense at the account level because each account is individually developed based on the remaining life calculation. Mr. Mugrace just takes a high level functional rate which not only is inaccurate for the future test year but then is magnified for the fully forecasted future test year. Depreciation requires account by account development of plant balances and book reserve development each year.

Q. CAN YOU SUMMARIZE THE ADJUSTMENTS MADE BY WITNESS MUGRACE?

A. Yes. Witness Mugrace proposes to reduce rate base and, as a result, to reduce depreciation reserve and depreciation expense for the fully projected future test year. His over-simplification of the development of future test year plant in service and accumulated

depreciation balances is inconsistent with the approved standard practices for developing future test year rate base as well as inappropriately develops accumulated depreciation components by mixing factors of different time periods to achieve his desired amounts. His inappropriate calculations should not be used in developing rate base for the fully projected future test year.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REBUTTAL TESTIMONY OF HEATHER DOYLE-CONLEY VICE PRESIDENT, CUSTOMER OPERATIONS ON BEHALF OF PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: 4-18-2024
DATE ADMITTED: _____

Peoples Statement No. 16-R

PREPARED REBUTTAL TESTIMONY OF
HEATHER DOYLE-CONLEY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Heather Doyle-Conley. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Vice President, Customer Operations. In this role, I lead customer operations for Peoples Natural Gas Company LLC[1] ("Peoples", "Peoples Natural Gas" or "the Company") and Aqua Water and Wastewater.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND YOUR ROLE WITH THE COMPANY.

A. I have been employed by the Company since February of 1990 and have held various positions of increasing responsibility in Customer Service. Currently, as Vice President of Customer Operations, I lead our Customer Operation teams at Aqua (water & wastewater) and Peoples across 10 states with Pennsylvania being our largest customer base. In this role I am responsible for approximately 300 employees across a number of departments including: Contact Centers, Billing, Credit, Collections and Cash Management teams.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

[1] Peoples Natural Gas Company LLC currently has two tariffed divisions under the PUC, "Peoples Natural Gas Division" and "Peoples Gas Division".

A. No.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN ANY REGULATORY PROCEEDING?

A. Yes, I submitted rebuttal testimony and rejoinder testimony in Peoples last base rate proceeding at Docket No. R-2018-3006818.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will respond to aspects of the direct testimony submitted by Ms. Barbara Alexander and Mr. Roger Colton on behalf of the Office of Consumer Advocate ("OCA") and Mr. Harry Geller on behalf of The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA").

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes, I am sponsoring Exhibits HDC-R1, HDC-R2, HDC-R3, HDC-R4 and HDC-R5.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I will address the various topics raised by parties in relation to my area of responsibility, denoting each subject by a heading. My testimony will address concerns raised by certain OCA and CAUSE-PA witnesses related to residential security deposits, collections, disconnections, disputes and CAP enrollment.

SECURITY DEPOSITS

Q. PLEASE DESCRIBE THE GENERAL CONCERNS RAISED BY CAUSE-PA WITNESS GELLER, AS YOU UNDERSTAND THEM, RELATED TO RESIDENTIAL SECURITY DEPOSIT.

A. The general concerns asserted by CAUSE-PA witness Geller involve the application of security deposits to low income consumers. On this issue, Mr. Geller states, "The Company has not clarified any process for screening for low income security deposits other than Customer Assistance Program ("CAP") enrollment and receipt of LIHEAP funds.[2]" I would first like to clarify that security deposits are not requested from customers who self-attest to being low income. The Company does not require a customer to complete the CAP enrollment process or to obtain a LIHEAP grant in order to confirm their low income status. With their verbal indication of low income status, security deposits are not requested or billed. If a security deposit exists on an account, perhaps from a prior time period in which the customer was not low income, that deposit would be credited to the account at the time of CAP enrollment.

I do understand the concerns raised by Mr. Geller regarding the settlement commitment from the prior base rate proceeding in which Peoples agreed to review accounts to identify any security deposits held on low income accounts in order for those deposits to be refunded. The review was to occur at least once every six months[3]. Even though Peoples does not request security deposits from low income consumers, based on their verbal indication of their low income status, I recognize that some consumers may

[2] Geller, Page 18, lines 8 and 9.
[3] Geller, Page 17, lines 13 through 16.

have been charged a security deposit at a time when their income was higher. I agree with Mr. Geller that those security deposits, when identified, should be removed from the associated accounts. This year, Peoples pulled and reviewed account data from 2019 to present to identify any security deposits held on low income accounts. Those deposits have been refunded. The Company will commit to implementing a periodic review process by which we ensure the identification and release of any security deposits that may be held by low income households.

Q. WITH RESPECT TO DEPOSITS, WHAT DID OCA WITNESS COLTON SUGGEST IN HIS TESTIMONY?

A. On pages 42-44 of his testimony, Mr. Colton proposed additions to the language the Company's proposed tariff, specifically regarding rules for deposit for residential customers.

Q. DOES THE COMPANY AGREE WITH OCA WITNESS COLTON'S RECOMMENDATIONS REGARDING SECURITY DEPOSITS?

A. Yes. The Company accepts Mr. Colton's recommendations and reflects the tariff language as illustrated by Exhibit DMR-1R, sponsored by Company witness Folks.

Q. WITH ELSE DOES WITNESS COLTON RECOMMEND WITH RESPECT TO DEPOSITS AND NOTICE?

A. Mr. Colton recommended that the Company provide a stand-alone written notice informing customers of their right to enroll in CAP.

Q DOES THE COMPANY AGREE WITH WITNESS COLTON'S NOTICE RECOMMENDATION?

A. No. A notice is not required since the Company already does not charge a deposit when customer reports low income and customers are educated about CAP upon reporting low income. For more background and information about procedures related to deposits, see the documentation attached hereto as Exhibits HDC-R1, HDC-R2 and HDC-R3.

COLLECTIONS

Q. LET'S BEGIN WITH OCA MR. COLTON'S DISCUSSION REGARDING THE BALANCES CARRIED BY CONSUMERS, AND IN PARTICULAR, CONFIRMED LOW INCOME CONSUMERS. WOULD YOU LIKE TO RESPOND TO HIS COMMENTS ON THIS TOPIC?

A. Yes. On page 16 of his testimony, Mr. Colton includes a table reflecting average arrears for residential and confirmed low income consumers. A copy of the table is shown here:

Table 5. Average Arrears: Residential vs. Confirmed Low-Income (2020 – 2022)
(BCS 2022 Report on Universal Service Programs and Collections Performance)

	Residential	Confirmed Low-Income	Ratio (Conf'd LI to Residential)
2020*	$449.90	$617.26	1.37
2021	$466.51	$718.87	1.54
2022	$394.22	$599.51	1.52

* Beginning in 2020, Peoples began reporting combined data for what, in prior years, had been separate reporting for Peoples and for Peoples (Equitable)

Mr. Colton raises a concern about the level of working capital required to support these levels of arrears. I would like to note that during 2020, an extended moratorium was in

place for all residential consumers due to the COVID-19 pandemic. When the moratorium ended at the end of March 2021, customers were offered an additional payment arrangement, regardless of the number of prior payment arrangements, under Pennsylvania Public Utility Commission ("PUC" or "Commission") requirements for pandemic assistance. Balances for residential consumers, both generally and confirmed low income, climbed during 2020 and 2021 while these special provisions were in place and began heading downwards again in 2022. This trend is likely to be seen across all Pennsylvania utilities and is not indicative of the Company under-performing in collections and therefore having a negative impact on working capital.

Mr. Colton also raises the concern that the level of debt carried through these three years is significantly higher for the confirmed low income population than the general residential population. As noted in the testimony of Mr. Geller and Mr. Colton, and responded to in the rebuttal testimony of Ms. Black on behalf of Peoples, the method by which Peoples reported its confirmed low income consumers excluded those who self-attested as low income. As a result, the residential figures shown above by Mr. Colton reflect a cross-section of income levels, including low income customers that did not participate in CAP nor receive a Low Income Home Energy Assistance Program ("LIHEAP") grant. Therefore, when considering the percentage of customers in arrears, the reported confirmed low income group has a much higher percentage of debt than the general population, which includes low income consumers that do not participate in CAP or LIHEAP.

I think it's important to recognize that LIHEAP is structured to provide the highest benefit to those with arrearages. While customers can receive a LIHEAP cash grant based

on income for the household, these grants are limited, typically around $200 or $300 annually. Customers receive higher grants through LIHEAP Crisis when their arrears reach a level that would put them at risk of service termination. Further, customers often enroll in CAP as a result of collections activities, therefore one can assume that CAP customers included in the reported confirmed low income category were payment troubled prior to enrolling in CAP, increasing the likelihood of ongoing arrears.

Q. CONTINUING ON THE TOPIC OF COLLECTIONS, MS. ALEXANDER MADE A RECOMMENDATION IN HER TESTIMONY ON PAGE 7 REGARDING THE HANDLING OF TENANTS IN SHARED PREMISES COLLECTIONS SITUATIONS, ALSO REFERENCING MEDICALS AND PFAs. PLEASE DESCRIBE HER RECOMMENDATION AND SHARE YOUR RESPONSE.

A. Ms. Alexander recommended the following provisions on this topic:[4]

- *Peoples' policies and disclosures should reflect that landlords may not retaliate against their tenants for 1) the tenant exercising their right to pay the utility bill to continue service under the landlord's name, and 2) to recover this payment by deducting the payment from their rental payment.*

- *Peoples should accept from tenants; medical certificates and protection from abuse orders, or court orders issued by a court 1 of competent jurisdiction in the Commonwealth, which provide clear evidence of domestic abuse.*

The above concerns are generally addressed in Peoples' Tenant Notice, Exhibit HDC-R5. The notice advises tenants of their right to pay current changes with the right to deduct from their rent. If the tenant wishes to deduct a payment made toward the utility service from their rent, the tenant would provide that communication to their landlord. Should the landlord call to confirm, our representatives would validate payment was made. Our

[4] Alexander Direct, Page 7.

Customer Service Representatives are trained not to share any personal information. Attached Exhibit HDC-R4, shows the high level of importance the Company places on customer privacy.

In regards to the moratorium recommendation, Peoples does not shut off residential heat customers during December through March, regardless of income. Medicals are offered to tenants as well.

Lastly, I disagree with Ms. Alexander's proposal regarding Protection from Abuse Orders ("PFAs"). PFAs protect the victim of domestic abuse from bills accrued by their abuser and provide other protections, such as an additional notice prior to termination. However, since we are discussing tenants' rights, and the tenant is not responsible for the utility bill, it would not be appropriate for the landlord to receive those protections. I address this in more depth below.

DISCONNECTIONS

Q. OCA'S MR. COLTON IS CONCERNED ABOUT THE DISCONNECTION RATE FOR LOW INCOME HOUSEHOLDS, INCLUDING THE LENGTH OF TIME BETWEEN DISCONNECTION AND RESTORATION OF SERVICE. PLEASE RESPOND TO HIS TESTIMONY ON THIS MATTER.

A. As Mr. Colton notes in his testimony, and I would agree, termination of service is a serious measure and it is an action of last resort. It is always our desire to work with customers with arrearages and assist them in identifying resources, such as LIHEAP, Dollar Energy Fund, CAP or payment arrangements. The steps in our collections process is automated and is based on level of arrearages. Customers receive multiple notifications, including a

written 10 day notice and personal contact attempts prior to termination in compliance with Chapter 56 regulations. If a customer has self-attested to low income status and is not enrolled in CAP, a standalone CAP notice is mailed prior to the termination notice, in order to encourage these customers to enroll in CAP to avoid termination. If no resolution regarding the arrearages has occurred, termination may take place.

Mr. Colton notes that reported confirmed low income consumers remain without service long than other consumers and measures reconnections in increments of 7 days[5]. It is important to note that often low income consumers rely on LIHEAP or the Dollar Energy Fund to restore service. These programs are typically not available during the summer when most terminations of service occur, thus leading to a higher period of time without service.

Q. MR. COLTON RAISES A CONCERN REGARDING TERMINATION OF A PARTICULAR DEMOGRAPHIC OF CUSTOMERS. WOULD YOU LIKE TO ADDRESS THIS?

A. Yes. Mr. Colton completed an analysis of race demographics by zip code across the Company's service territory and correlated that information with statistics on termination of service. He notes that he sees no indication of intentional discrimination[6] on the part of the Company, but concludes that termination for Black households is occurring more often. He recommends a root cause analysis of termination of service in 40 zip codes to identify the reason for the level of termination among Black households.

[5] Colton, Page 20, Chart
[6] Colton, Page 20, Lines 10-13.

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. I do not. As I mentioned earlier in my testimony, collections activities, including termination, are strictly arrears based. Mr. Colton noted he did not see any intention that the Company initiates termination of service in a discriminatory manner and Mr. Colton is indeed correct. The Company does not disconnect service based on demographics and does not discriminate.

DISPUTES

Q. MS. ALEXANDER PROVIDED A RECOMMENDATION REGARDING CUSTOMER DISPUTES. PLEASE DESCRIBE THIS RECOMMENDATION AND RESPOND.

A. Ms. Alexander recommends a professionally conducted root cause analysis of the Company's disputes and informal complaints. I do not agree with Ms. Alexander's recommendation in the manner described. Our team of senior customer service representatives, supervisors and managers are constantly and consistently working closely with our training department and IT resources to address issues that arise through the Company dispute process. We take customer satisfaction seriously and already track certain data points, review customer disputes and discuss any needed improvements. As Ms. Alexander notes in her testimony, we have zero percent of disputes not responded to within 30 days[7]. And I would note that our customer satisfaction results also reflect excellent service. As ranked amongst other PA utilities, Peoples is a leader in overall

[7] Alexander, Page 13, Line 21.

customer satisfaction with the highest scores in the last three years, 91% in 2023*, 89% in 2022 and 92% in 2021[8]. For more information on Ms. Alexander's recommendation, please see Statement No. 9-R from witness Rita Black.

CAP ENROLLMENT

Q. PLEASE DESCRIBE THE RECOMMENDATION MADE BY MR. COLTON REGARDING THE USE OF SPEECH ANALYTICS IN IDENTIFYING POTENTIAL CAP ENROLLEES.

A. Peoples agrees with the importance of identifying low-income customers as quickly as possible. The Company stresses the importance of obtaining up-to-date income information to all employees from the time of new-hire training through refresher training that occurs on a regular basis. Peoples Customer Service Representatives are trained and skilled in identifying low income customers and as normal course of business refer customer to CAP. People does not agree that speech analytics is needed to identify potential CAP enrollees. See the rebuttal testimony of Rita Black, pages 9-10 for more information about the many ways the Company works to identify potential CAP enrollees and encourage enrollment.

PFA'S AND MEDICAL CERTIFICATIONS

Q. WHAT DOES OCA WITNESS ALEXANDER RECOMMEND CONCERNING PFA'S AND MEDICAL CERTIFICATES?

[8] I note that 2023 data is still pending. *See* PUC Customer Service Performance Report. https://www.puc.pa.gov/filing-resources/reports/customer-service-performance-reports/

A. On page 25 of her testimony, Ms. Alexander states that Peoples should accept medical certificates and PFAs from tenants. While we do accept medical certificates, we do not accept PFAs. PFAs protect the victim of domestic abuse from bills accrued in the name of their abuser and provide additional notice, such as the 48 hour notice prior to termination. It is not appropriate to provide PFA protections to a landlord because their tenant has a PFA. Peoples already has a process for accepting medicals provided by tenants but does not agree to accept a PFA from a tenant. See Exhibit HDC – R5 regarding medical certificates.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Residential New Service

Revised: 8-30-2023

PEOPLES

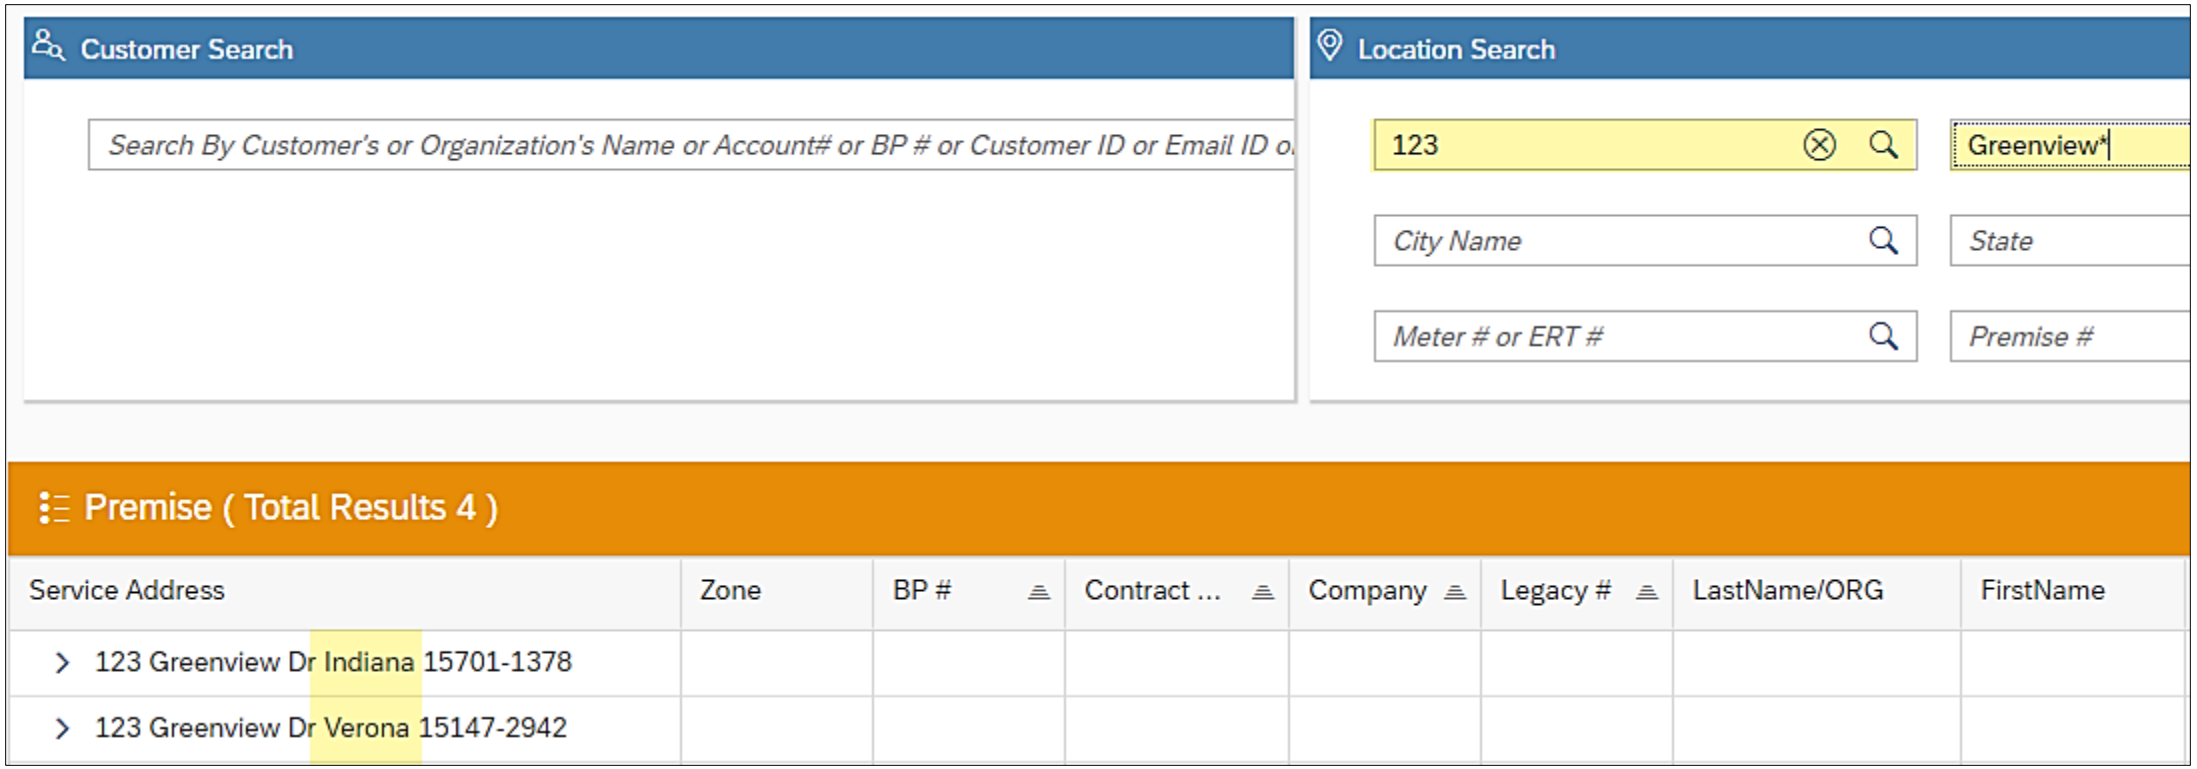
Learning Objectives

After you complete this module, you will be able to:

- List **required information** the caller must provide
- Verify a caller's **identity/credit worthiness**
- Discuss the importance of updating **Income & Occupancy** data
- Explain how a residential **security deposit** is calculated
- List acceptable **options in lieu of a deposit**
- Name different residential account options

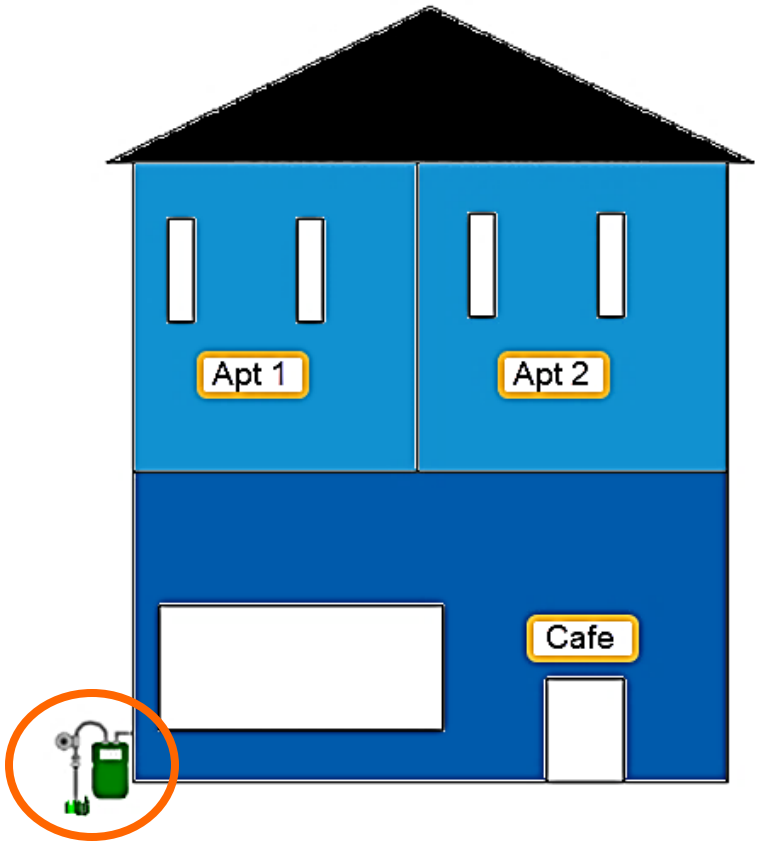
Obtain Service Address

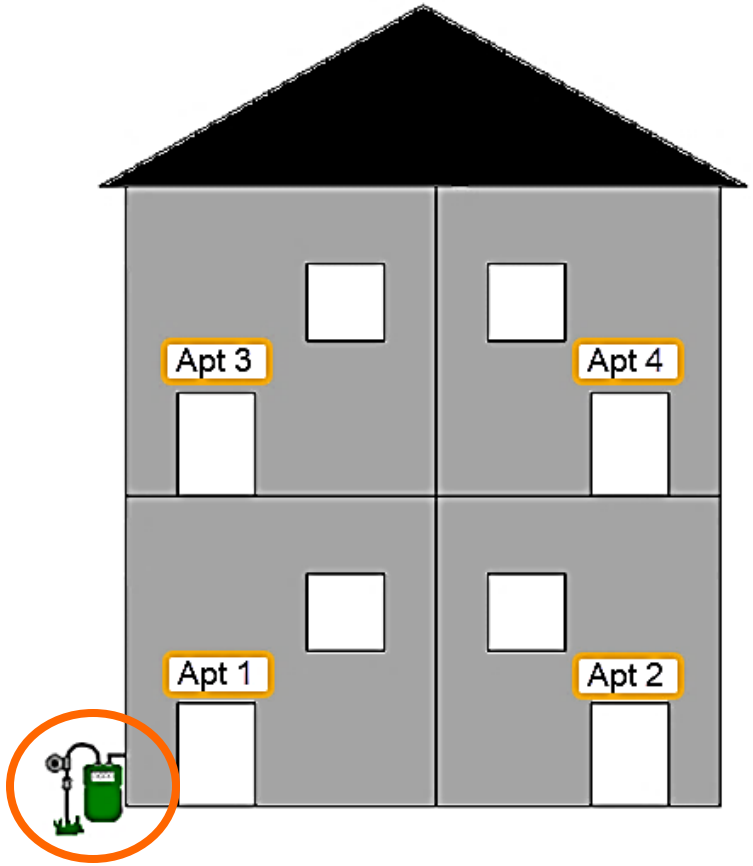
- Make sure we provide service at the address **BEFORE** obtaining other information from the caller
- Verify the **CORRECT** address with the customer

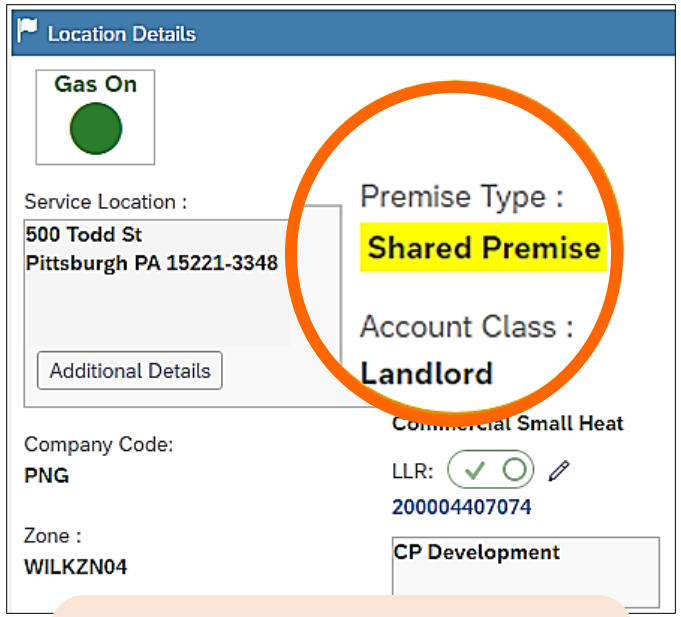


Shared Premise

When a **single gas meter** **supplies gas to multiple units**, service for a **Shared Premise** must be in the **property owner's name**







Never put gas service for a "**House Meter**" in a **tenant's** name

PEOPLES

Shared Premise Start Service = BACK OFFICE

- You cannot Start Service at a **Shared Premise** in EzServ
- Caller must provide **proof of ownership** (Bill of Sale or Deed required)

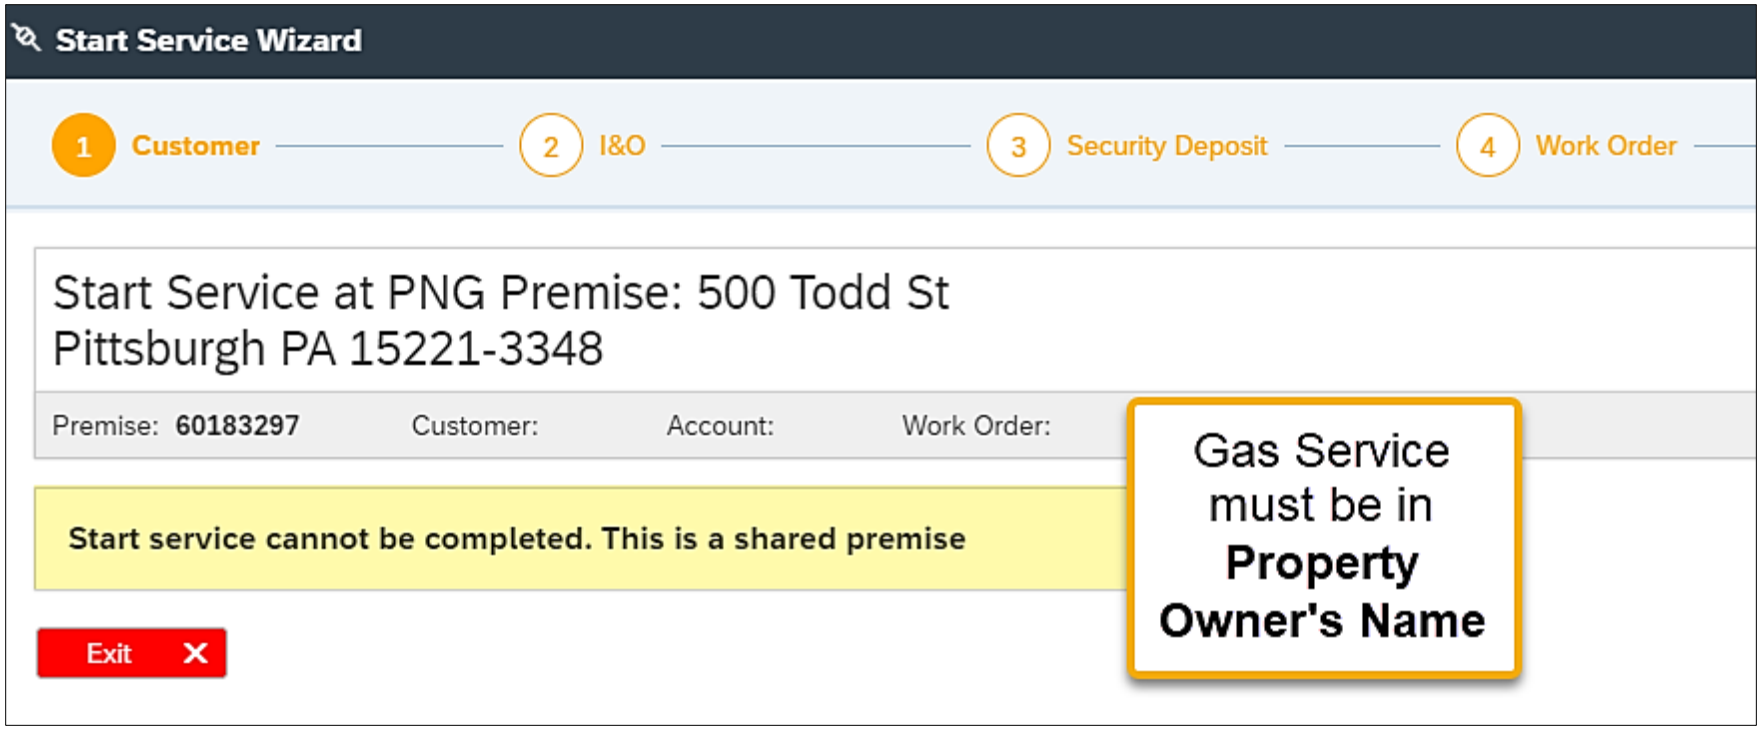


EXHIBIT HDC - R1

Name Switching?

If gas is **OFF** & balance ≥ **$500**, watch for **Name Game Clues**

- **Multiple Calls** for Termination, Reconnection, etc.
- Caller has **Same Last Name** as previous customer
- Caller's **Phone No.** is listed on account
- Caller's **Birth Date** appears in previous customer's Income & Occupancy data
- Caller **previously had service** (final bill past due)
- Caller associated with **Service Address** (via Credit Agency verification)
  - **If caller benefited from gas service**, *they are responsible for unpaid balance* per 66 Pa. C.S. § 1407 (D)

- Term Notice (p. 2) - If service is shut off, ANY adult occupant who has been living at the premise may have to pay all or portions of this bill to have service restored.

PEOPLES

Who can Start Service?

- Accounts must be set up by the **responsible party**
- Accounts are <u>not</u> to be set up by **3rd party callers**

Applicants

- Never had gas service with us
  OR
- Previously had service AND it is past the date on which the final bill should have been paid

Obtain Customer Information

- ❑ Service address with **Zip Code**
- ❑ First and Last Name
- ❑ Social Security Number
- ❑ Full mailing address
- ❑ Good phone number
- ❑ Phone Type (work, cell, etc.)
- ❑ Consent to text
- ❑ Email address

Verify Applicant's Identity

- We must positively identify and determine credit worthiness of **ALL** applicants
- To **verify ID** and credit risk, we run an online query via a **Credit Reporting Agency**
- **Credit risk** is determined using a generally accepted credit scoring method

✓ Pass **Next** *Create the Account and continue to IO*

! Fail **Exit** ✕ *Exit the Wizard and mail a Denial of Service letter*

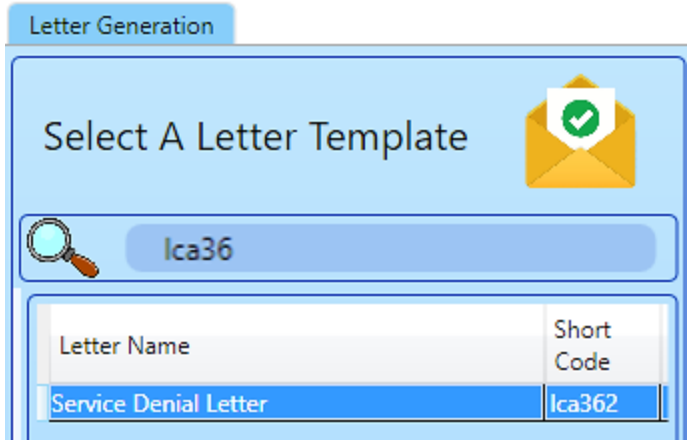
Credit Result:	**Pass**
Security Deposit Required:	**Yes**
Id Match Condition:	**C (Match)**
Vantage Score:	**468**

Positive ID/Credit Check

If ID Check…	Then Caller must…
Discrepancy occurs (No Match, deceased SSN, SSN matched another name, fraud alert, etc.) *or* caller **does not want to provide SSN** or driver's license number	Send copy of **valid Government-issued Photo ID**

Acceptable forms of Government-issued Photo ID:

- Driver's License
- Government Employee ID
- Military ID
- Passport
- Green Card

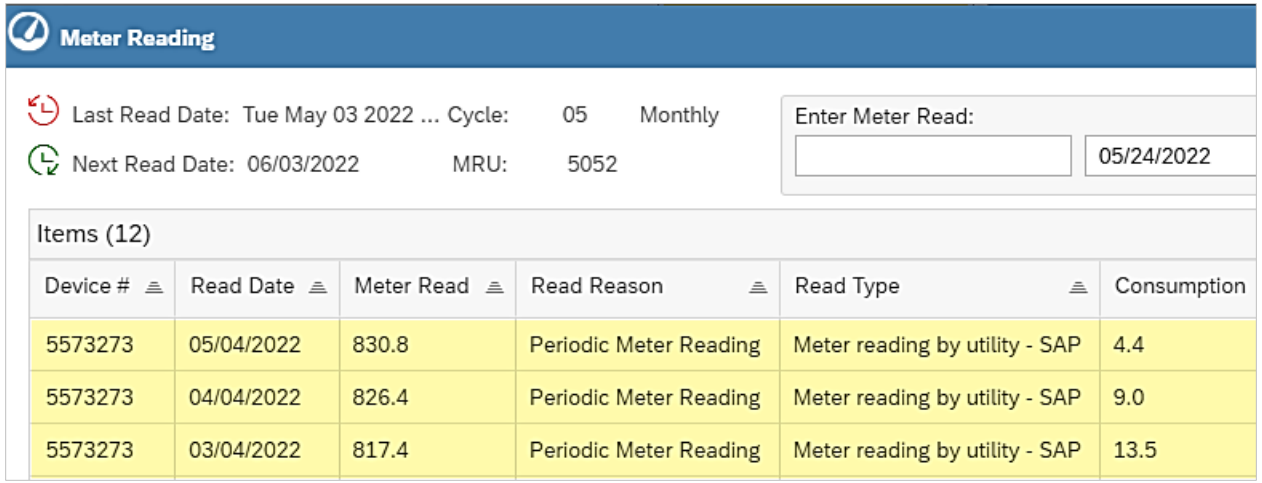


If **PA** must send ID required **Service Denial Letter (lca362)**

Contract Start Date – Soft Close Eligible

If the **PA** property is **eligible for a Soft Close** transfer, a **Move Out Notice** box appears

If the last 3 meter readings were **Actual** reads,
we can estimate gas usage for the customer's initial bill

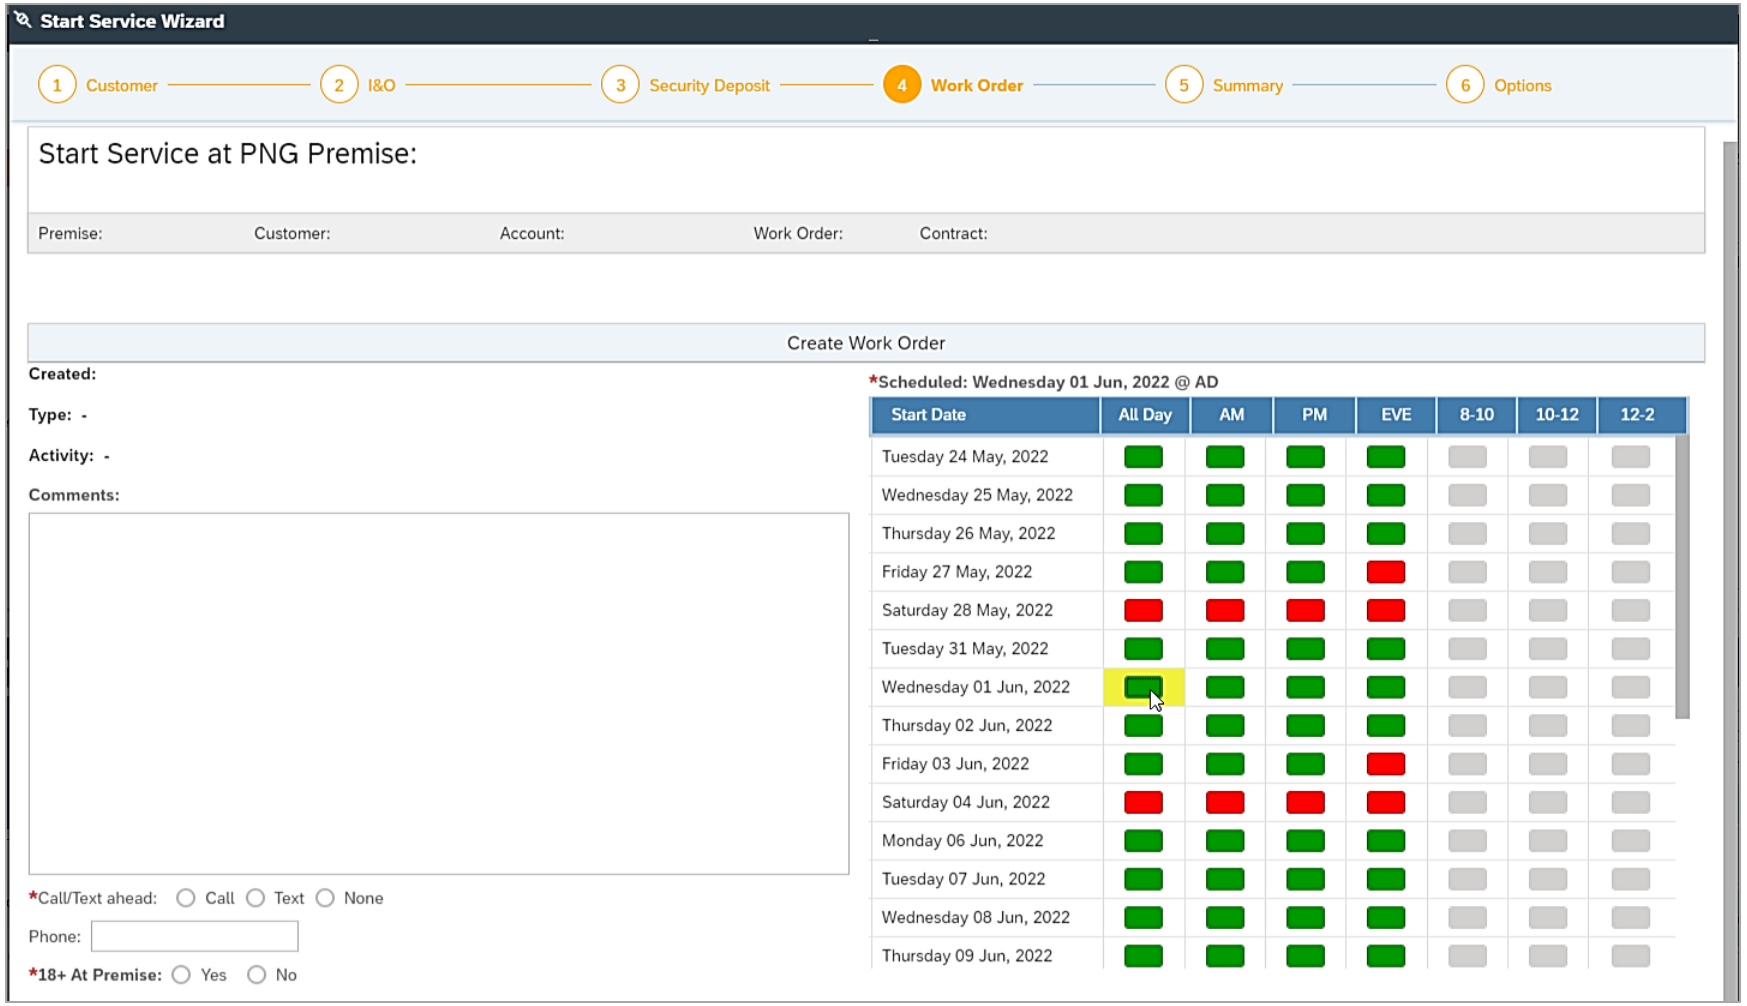


Device #	Read Date	Meter Read	Read Reason	Read Type	Consumption
5573273	05/04/2022	830.8	Periodic Meter Reading	Meter reading by utility - SAP	4.4
5573273	04/04/2022	826.4	Periodic Meter Reading	Meter reading by utility - SAP	9.0
5573273	03/04/2022	817.4	Periodic Meter Reading	Meter reading by utility - SAP	13.5

Contract Start Date – Soft Close Ineligible

If the property is **ineligible** for a **Soft Close** transfer, the **Create Work Order** screen appears

You must select a **Start Date**, indicate if a **Call Ahead** is needed, & if an **adult (18+)** will be at the Premise (**PREM**) to admit our service technician



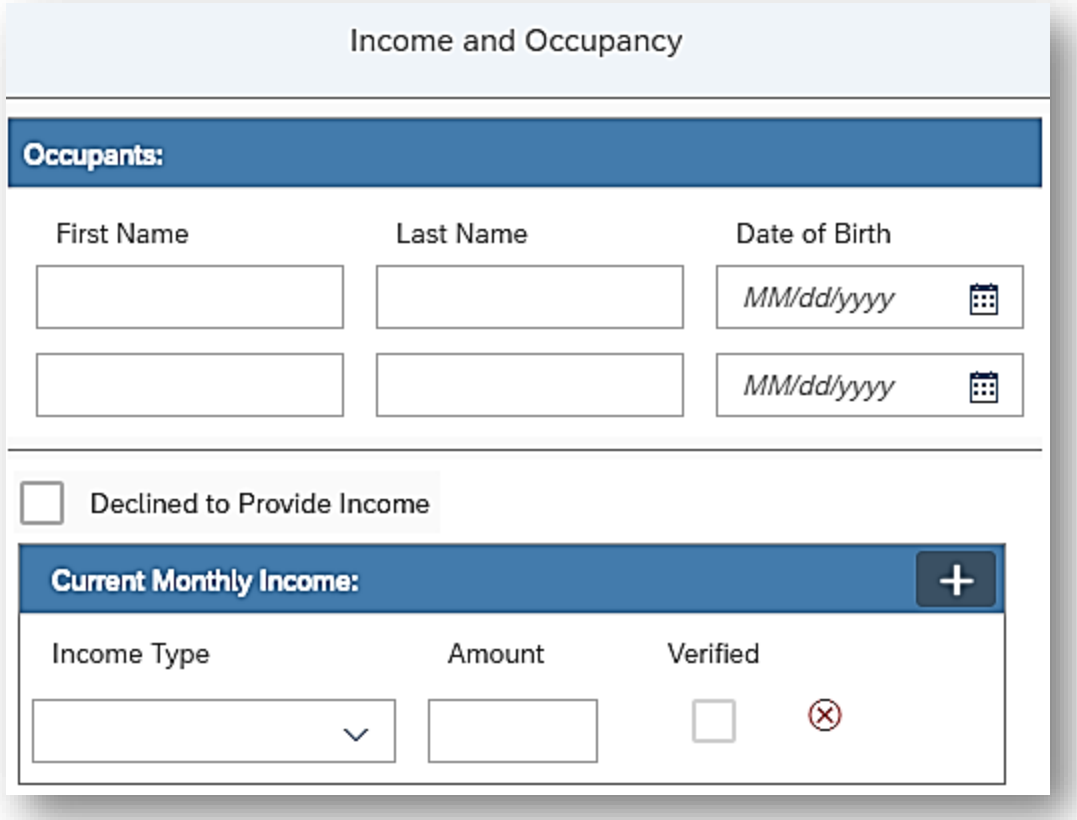
Income & Occupancy

Income

- "What is the household **gross monthly income** before deductions?"

Occupancy

- "**How many people** will be residing at the property?"
- "May I have your **birth date**?"
- "May I please have the names and birthdates for the other occupants?"



Security Deposit Information

- Company needs to secure account/receivables
- Deposit policies must be equitable and nondiscriminatory
- Must be **18 years old** or older; could be emancipated minor
- Based on the **credit risk of the individual** applicant/customer
- Not based on:
  - Economic character of the area
  - Credit history of property
  - Race, sex, national origins, marital status

Waive Security Deposit for…

Income **Level 1** household

Customer: Robert Jones **Heat:**

Income Level: 1 **LIHEAP Cash:**

Occupants: 1 **Special Household Members** (0)

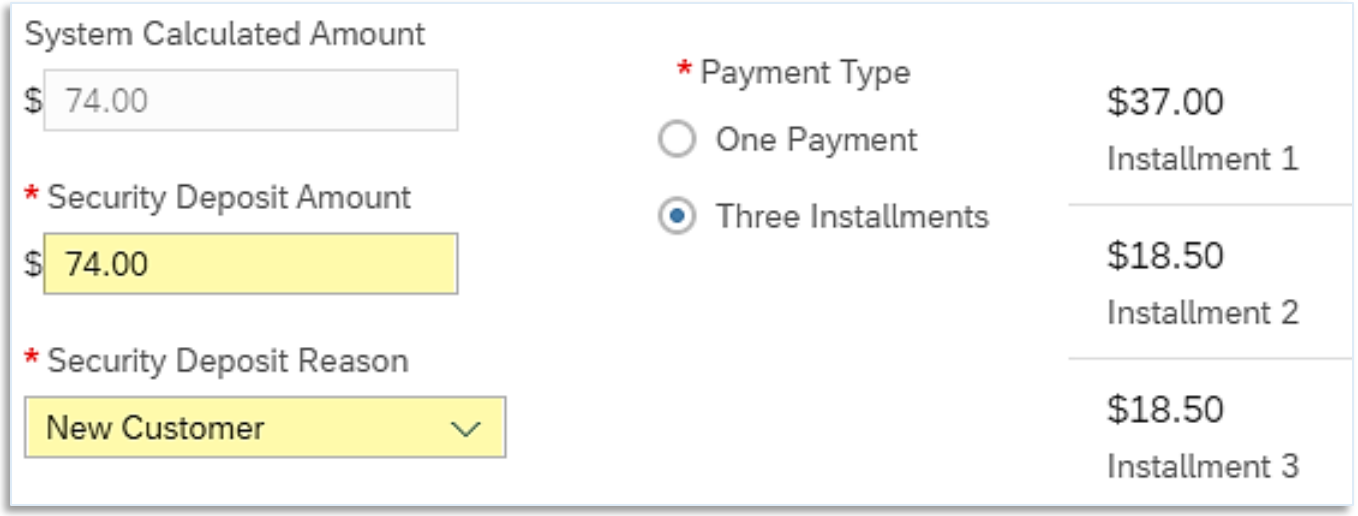
Robert	Jones	03/10/1982

Current Monthly Income: $1000.00

UNEMPLOYMENT	**1000.00**

Residential Security Deposits

- Applied to account after **12 months** of good payments OR after **24 months** regardless of payment history
- Interest applied at competitive rate
- Minimum deposit: **$20.00**
- Billable over 90 days in **3 installments**:
  - 50% first bill
  - 25% second bill
  - 25% third bill



- Must send **Deposit Required for New Applicant Letter (rje005)** to any applicant required to pay a Security Deposit

Residential Security Deposit Calculation

Security deposit is **1/6** of **estimated annual bill** based on **12 month average** premise gas usage

Budget x 2 = Residential Deposit

What Can we Accept in Lieu of a Deposit?

If applicant cannot afford to pay a deposit, they can provide a:

- **3rd party guarantor** (Not for commercial)
- **Surety bond** (Generally Commercial)
- **Letter of credit** (Residential and Commercial)

Call Summary

Recap these details with the caller:

- Start Service Date
- Premise Address
- Work Order/Soft Close
- Mailing Address effective on [Contract Start Date]
- Security Deposit details, if applicable

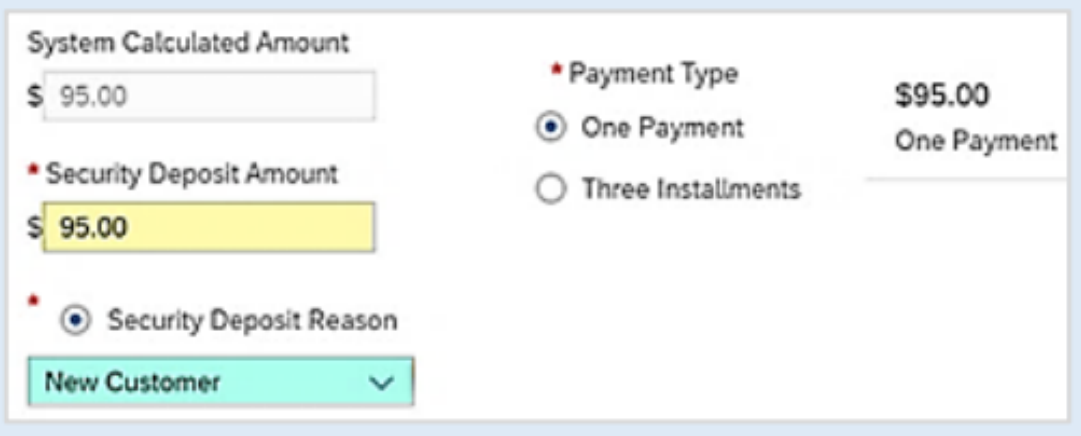
Residential Account Options

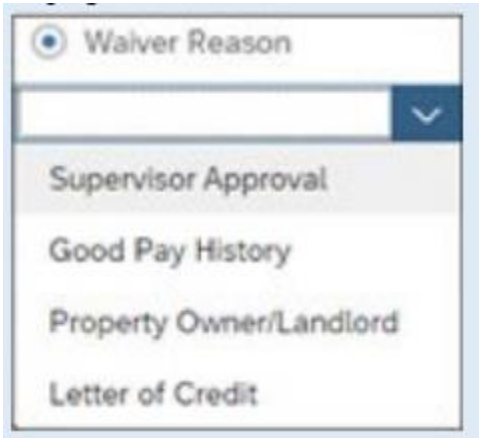
Review these options with the customer:

- Payment Options
- eAccount
  - Customer can register for our online portal.
  - Customer can manage their account online (i.e. register for e-billing, e-notification, etc.)
- Opt Out Choices
- Assistance Program Referrals (CAP, LIHEAP, etc.)
- Budget Billing: makes monthly gas bill more affordable
- Warranty Programs

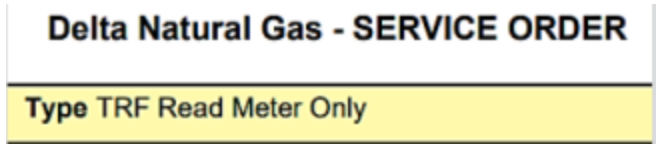
KY Delta Start Service

- Ask for **SSN**; may send Driver's License or show ID at TON
- **$95 Security Deposit** for **new Residential applicant;** due in **one payment**
- Waiver reason **– Supervisor Approval**, if **no deposit**





- No **Soft Close** transfer: **TRF – Read Meter Only**



PEOPLES

Knowledge Check

1. Name two pieces of information we need to obtain from the applicant/customer.
2. How do we **verify a caller's identity**?
3. Why do we update **income and occupancy** information?
4. How is a residential **security deposit** calculated?
5. What can we accept **in lieu of a deposit**?
6. Name two Residential **account options**.

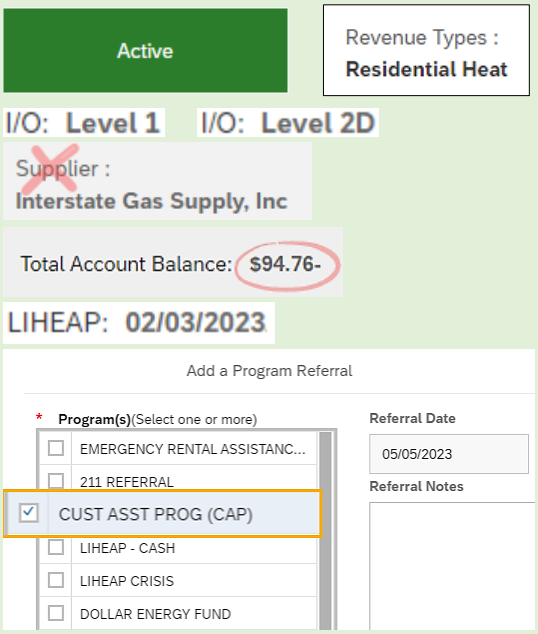
Customer Assistance Program (CAP) QRG

CAP is a payment plan for **PA Residential Heat** customers based on income, *rather than on gas usage*. CAP helps make natural gas more affordable for income-eligible households because customers pay a percentage of their income *or* the Budget amount, *whichever is less*.

Determine Eligibility

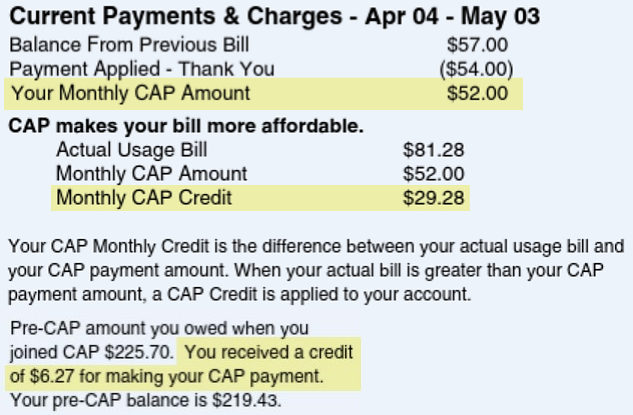
- **Active PA Residential Heat** account
- Household income at or below 150% of Federal Poverty Level (FPL) (I/O: **Level 1**) *or* 151 - 200% FPL (I/O: **Level 2D**) for E CAP
- Customer must **cancel Supplier** contract
- **Credit Balance** must be exhausted prior to CAP Enrollment
- Customer must provide **Proof of Income** (unless they're a recent **LIHEAP** recipient)
- **E CAP**: Apply for DEF Hardship grant before enrollment with outstanding balance of **$800+** when DEF grant is available or **$300** when DEF not available

Note: CAP is not available in **KY** or **WV**



CAP Benefits

- Affordable Budget (**Monthly CAP Amount**)
- **Monthly CAP Credit** (difference between Actual Usage and Monthly CAP Amount)
- **Arrearage Forgiveness**
  Credits given each month CAP Amount is paid to eliminate **Pre-CAP Balance** over 3 years
- No Security Deposit
- No Late Payment Charge (LPC)
- Referrals to other Universal Service Programs



CAP Customers Agree to:

- Pay Monthly CAP Amount on time
- Enroll in weatherization program, if eligible
- Apply for LIHEAP Cash, Crisis or DEF
- Report changes in income &/or household occupancy within 30 days
- Provide monthly meter reading access
- Periodically recertify depending on income type

CAP customers must periodically re-certify with DEF:

Income Type	CAP Recertification
$0 Income	**6 mos.**
Earned Income	**2 yrs.**
Fixed Income/LIHEAP	**3 yrs.**

DEF removes CAP if no income documentation is provided or if income exceeds CAP eligibility limit

CAP Budget Calculation

Tier	Federal Poverty Level	Income Level	Monthly CAP Amount ($25 minimum)
1	At or below 50% FPL	**1**	4% gross mo. income
2	51% - 100% FPL	**1**	5% gross mo. income
3	101% - 150% FPL	**1**	6% gross mo. income
4	151% - 200% FPL	**2D**	11% gross mo. income

Reconnection Checklist

Gas OFF - Quote Reconnection Amount

- ☐ **Update I/O** for **ALL customers,** including **CAP** participants
- ☐ If eligible for **Crisis Direct Referral,** add **Direct Referral to Crisis** **Dunning Hold** & add **Program Referral**
- ☐ Provide **$ Amt** required to **Reconnect Service**
- ☐ Display **Security Deposit**
  - If **Paid**, do **not** quote deposit
  - If **Requested**, quote a **new deposit for Income Level 2, 3 or 4 (No Deposit for Level 1 or 2D)**
- ☐ If eligible, refer to **Energy Assistance** (LIHEAP, DEF) & add **Program Referral**
- ☐ If **not** past **Final Bill Due Date**, offer Medical Certification
- ☐ If **Unauthorized Usage** noted, quote **Full Documented Amount**
- ☐ If necessary, instruct customer to **Call Back with Payment Confirmation No.** to schedule reconnection
- ☐ **PA Only:** After **Final Bill Due Date** send **Service Denied Letter (lca362)**
- ☐ **Note Account**: I/R: Quoted $100 (1/12 of $1,200) + $56 RCF for TCR; adv $175 SD to be billed; Sent Denial Ltr

RECONNECTION (TCR Scheduling)

- ☐ **Confirm** or **Update I/O**
- ☐ If gas was turned **"Off in Error"** or **"Medical Received"** appears on account
  - Note work order with reason for **Same Day** & Supervisor who approved
  - Change work order to TODAY's date
- ☐ If full debt OR reconnection amount **PAID,** note **confirmation #** & proceed with reconnection
- ☐ For routine **PA Reconnection, April - Nov**, no special circumstances; we have 3 calendar days for reconnect -- Work order defaults to next day
- ☐ **WV** schedule **SAME** day if PAID **before 4 pm** or on **Friday**
- ☐ **KY** schedule **SAME** day if PAID **before 2 pm**
- ☐ If account is **Final** and reconnection requested at:
  - SAME address, at same service address *Landing* page, click Start/Stop Service > **Reconnect Service**
  - DIFFERENT address, at new service address *Landing* page & click Start/Stop Service > **Start Service**
    - ☐ Create **Credit-Reconnection** Exception Case to Transfer Balance
    - ☐ If **Reconnection PAR** required, add details to **Credit-Reconnection** Exception Case
- ☐ Verify that the **Reconnection Order** dropped
  - Document **Work Order #** in Interaction Record (IR)

Customer Privacy QRG

You are not required to validate caller information for **Emergency Orders**

Caller Identification & Account Verification

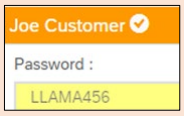
Before you provide ANY information,
ASK the caller to provide information to verify they are who they claim to be…

- May I have the **Service Address** with Zip Code?
- With **whom** am I speaking? (First & Last Name)
- **If the caller claims to be the customer**, **ASK**, "May I have the **last 4 digits** of your **SSN**?"

IMPORTANT: If an account has a **Password**, it must be provided & is acceptable in lieu of last 4 #s of SSN

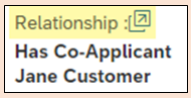
- **If the caller is not the customer**, **ASK**, "What is your relationship to (Customer Name)?"
- Please verify the **phone no.**, **type** & **email**

Password Protected



If an account has a password, provide information only to an authorized party

Co-Applicant



Treat Co-Applicant as the Ratepayer

If an account is not Password Protected & caller is not a Co-Applicant, provide **limited information**:

Ratepayer's Spouse Living at Residence

If the spouse verifies one of the following:

- Last 4 digits of ratepayer's SSN
- Account number
- Date and amount of last payment

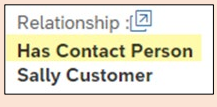
Then you may discuss:

Permitted Items	Spouse may also:
▪ **Amount Due**	❖ Make a payment
▪ **Due Date**	❖ Dispute a bill
▪ **Meter Read Date**	❖ Provide a meter reading
▪ **Usage Amount**	❖ Make a PAR

Note: Do not add a spouse as a co-applicant without the Ratepayer's permission

Family Member or Non-Related Party

Ratepayer MUST provide approval before we can discuss **Permitted Items**



PUC Urges Continued High Vigilance with Questionable Energy Marketing

If a caller asks for an **Account Number**, be careful. Callers might use dubious means to obtain information for unethical reasons.

Social Services Agency

Record agency name, caller's full name & call back phone number. You may provide only the following:

- Amount Due
- Due Date
- Meter Read Date
- Usage Amount
- Gas On or Off
- Termination Date
- Termination Amount
- Restore Service Amount
- Heating Source
- Residential Account
- 90-day Payment History
- CAP Amount
- CAP Recertification Date
- Recent Grants

Real Estate Agent

Provide **Average Annual Usage** Only
Document caller's full name & callback phone no.

Note: Provide ALL other information ONLY to Ratepayer or Co-Applicant.

Attorneys, Police, Courts, etc.

Do **not** provide any account data. Email **Legal@Peoples-gas.com** for requests such as warrants, subpoenas, interrogatories, etc. from:

- Police Officers
- City, State, Federal Agencies
- Regulatory Agencies
- Attorneys, Insurance Carriers
- Private Investigators
- Magistrate Offices, Judges or Courts

If you are not sure if you should send a request to Legal for review, please contact your Supervisor.

Media

Do **not** provide any account data
(See Quality Customer Service QRG **Media** or High Profile Calls section)

Elected or Regulatory Official

Do **not** provide any account data
(See Quality Customer Service QRG Media or **High Profile Calls** section)

EXHIBIT HDC-R5

DATE NOTICE IS RENDERED: _____

PEOPLES An Essential Utilities Company

30 DAY SHUT OFF NOTICE TO TENANTS

WARNING: THE PEOPLES GAS SERVICE TO _____ MAY BE SHUT OFF ON OR AFTER _____ BECAUSE THE PEOPLES GAS BILL HAS NOT BEEN PAID. TO STOP THE SHUT OFF OF YOUR UTILITY SERVICE YOU MUST DO ONE OF THE FOLLOWING:

1. You can join with the other tenants to pay the Peoples Gas bill for the last 30 days preceding this notice or you can pay the total bill yourself. Either way, you do not have to pay a deposit or get credit granted in your name. You will not have to pay your landlord's other debts or the debts of the prior tenants. The utility service will remain in the name of the landlord.
2. You may deduct your payment to Peoples Gas from your rent due now or from future rent. We will tell your landlord how much you paid for that utility service.

ADDITIONAL INFORMATION:

1. The bill which must be paid to continue service is $_____
2. Your landlord cannot punish you if you pay the utility bill. Your landlord cannot raise your rent, cannot evict you, and cannot take action against you in any other way for paying the utility bill and deducting it from your rent. You have the right to recover money damages from the landlord for any damages or injury they cause you for exercising your rights as a result of this notice.
3. You have the right to dispute the accuracy of this bill and have certain other rights. If you would like further information regarding these rights call our business office at **1-800-222-5101** Monday through Friday from 7:00 a.m. to 5:00 p.m.

DO YOU HAVE ANY QUESTIONS?

If you have questions about your utility service, please contact Peoples at **1-800-222-5101.** If, after you talk with us, you are not satisfied, you may contact the Pennsylvania Public Utility Commission at their toll free number, 1-800-692-7380, or write the Residential Termination Unit, Bureau of Consumer Services, Pennsylvania Public Utility Commission, P.O. Box 3265, Harrisburg, PA 17105-3265. YOU SHOULD CALL OR WRITE BEFORE THE SHUTOFF. TO AVOID SHUT OFF, YOUR LETTER TO MUST BE RECEIVED BEFORE THE SHUT OFF DATE.

You must make the payment directly to us by check or money order. **Call our business office at 1-800-222-5101 to discuss this notice.** We require you to provide us some form of current identification, such as a driver's license, photo identification, food stamp or medical assistance identification or any similar document from a local, city, state or federal government agency that contains your name and address. You will also need to provide proof that you are a tenant residing at the property, such as a lease or proof of an exchange of rent.

MEDICAL EMERGENCY NOTICE

Let us know if you or someone living at the residence is **SERIOUSLY ILL.** We will delay the shut off if a licensed physician, physician assistant or nurse practitioner states the shut off will harm the ill person. We will not shut off your gas service during this illness as long as you **provide a letter from your doctor, physician assistant, nurse practitioner certifying the illness.** The letter must include the following information:

- The name of the occupant who resides at the residence who is seriously ill.
- The expected duration of the illness.

- The name, office address and telephone number of the certifying physician, nurse practitioner or physician assistant.
- The signature of the certifying physician, nurse practitioner or physician assistant.

To talk to us, please call our business office at 1-800-222-5101 Monday through Friday from 7:00 a.m. – 5:00 p.m.

PREPARED SURREBUTTAL TESTIMONY OF
RITA F. BLACK
DIRECTOR, COMMUNITY ASSISTANCE PROGRAMS
ESSENTIAL UTILITIES

DATE SERVED: May 3, 2024 Peoples Statement No. 9-SR
DATE ADMITTED: _____

PREPARED SURREBUTTAL TESTIMONY OF
RITA F. BLACK

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rita F. Black and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Director of Community Assistance Programs. In this role, I lead assistance programs for Peoples Natural Gas Company LLC[1] ("Peoples", "Peoples Natural Gas" or "the Company"), Aqua Pennsylvania Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua PA"), as well as these companies' affiliated regulated utilities operating in other states.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 9 and my rebuttal testimony is set forth in Peoples Statement No. 9-R.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. I am responding to the rebuttal testimony of Mr. Christopher Keller on behalf of the Bureau of Investigation and Enforcement ("I&E").

[1] Peoples Natural Gas Company LLC currently has two tariffed divisions under the PUC, "Peoples Natural Gas Division" and "Peoples Gas Division".

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR SURREBUTTAL TESTIMONY?

A. Mr. Keller provided rebuttal testimony on two topics: Low Income Usage Reduction Program ("LIURP") and the Company's hardship fund. I will address LIURP first, followed by hardship fund.

Q. PLEASE SUMMARIZE MR. KELLER'S TESTIMONY WITH REGARDS TO LIURP.

A. Mr. Keller addresses the Direct Testimony of Mr. Harry Geller on behalf of The Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") and Ms. Jennifer Warabak on behalf of Pennsylvania Weatherization Providers Task Force ("PWPTF") in which both witnesses recommend increases to the Company's LIURP budget. Mr. Keller disagrees with the proposals by Mr. Geller and Ms. Warabak, both of which I addressed in my own Rebuttal Testimony, to increase the LIURP budget. He provides two main reasons for his disagreement. First, he points to the Company's inability to fully utilize its current LIURP budget over the past several years, leading to carryover dollars into subsequent years. Secondly, he notes the Commission recently approved

Peoples' Universal Service and Energy Conservation Plan ("USECP")[2] and that process considered program performance and provisions.[3]

Q. DO YOU AGREE WITH MR. KELLER?

A. I do. As noted in my Rebuttal Testimony, a realistic budget that can be fully utilized in a given year is the most appropriate use of ratepayer funds.[4] Further, I strongly agree with Mr. Keller that the USECP process is the appropriate venue for establishing and approving program budgets as that rigorous process is solely focused on universal service programs and addresses not only funding levels, but eligibility and needs assessments. The USECP process includes input from stakeholders, when combined with input from the Policy team of the Bureau of Consumer Services, results in a thorough review of the Company's programs. As noted in Mr. Keller's testimony, and reflected in responses to discovery in this proceeding, Peoples has been unable to fully expend its LIURP budget in the past several years on a combined basis. While Peoples Natural Gas Division was able to fully spend its budget in 2023, for example, Peoples Gas Division continues to have significant carryover.

Q. LET'S MOVE ON TO THE HARDSHIP FUND. PLEASE SUMMARIZE MR. KELLER'S TESTIMONY ON THIS TOPIC.

---

[2] Peoples Natural Gas Company LLC Universal Service and Energy Conservation Plan for 2019-2024, Docket No. M-2018-3003177 (Order entered on May 12, 2022).

[3] Keller, Page 4, Lines 7 through 13.

[4] Black, Statement 9-R, page 17, lines 13 through 15.

A. Mr. Keller briefly summarizes the proposals to increase the Company's hardship fund, as proposed in the testimony of Witnesses Geller and Warabak. He does not respond directly to the proposals to increase funding, but rather focuses his testimony on this topic to funding sources.

Q. PLEASE DESCRIBE THE FUNDING SOURCES FOR THE COMPANY'S HARDSHIP FUND.

A. The hardship fund receives funding from three sources: 1) shareholder donations; 2) customer donations; and 3) fundraising efforts of its administrator, Dollar Energy Fund ("DEF"). The hardship fund does not receive any funding from ratepayers through rates.

Q. IS THE COMPANY PROPOSING ANY CHANGE TO THE FUNDING SOURCES FOR THE HARDSHIP FUND?

A. No.

Q. WITNESS KELLER STATES HE IS 'NOT ARGUING AGAINST MR. GELLER'S RECOMMENDATION TO INCREASE FUNDING FOR HARDSHIP GRANTS'[5] AND MAKES SIMILAR COMMENTS REGARDING MS. WARABAK'S INCREASE PROPOSAL. WOULD YOU LIKE TO RESPOND TO THE PROPOSALS TO INCREASE FUNDING?

A. Yes. As noted in my Rebuttal testimony, I do not believe an increase is necessary. Hardship programs are funds of last resort. They were developed with the intention of

[5] Keller, Page 5, Lines 3 and 4.

providing a resource when customers fall behind on utility bills and have no other resources with which to pay their utility service. It is important to recall that unlike most utility Customer Assistance Programs ("CAP"), Peoples' CAP includes a Pilot CAP Expansion that allows customers with incomes up to 200% of Federal Poverty Level ("FPL"), the same eligibility threshold of the Company's hardship fund, to participate in CAP and benefit from Arrearage Forgiveness. Therefore, customers with arrears larger than the $500 maximum hardship grant can roll those arrears into CAP and become eligible for Arrearage Forgiveness benefits to extinguish that debt over time. It is my opinion that the Company's suite of universal service programs work together to support customers who face financial difficulty due to any number of factors, from external economic challenges, to changes in Peoples' rates. Therefore, I do not believe an increase to the hardship fund is necessary.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Andrew P. Wachter, and my business address is 375 North Shore Drive, Suite 600, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as Director, Finance and Regulation for PNG Companies LLC ("PNG"). I provide services to Peoples Natural Gas Company LLC ("Peoples" or the "Company") and its two divisions: the Peoples Natural Gas Division ("PNGD") and the Peoples Gas Company Division ("PGD"). As Director, Finance and Regulation, I oversee the Rates and Regulatory department and the Financial, Planning and Analysis department at Peoples and its affiliates.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 2, and my rebuttal testimony is set forth in Peoples Statement No. 2-R.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I am presenting testimony in response to certain expense positions and recommendations contained in the surrebuttal testimony submitted by David Evrard, Dante Mugrace, Barbara Alexander and Roger Colton on behalf of the Office of Consumer Advocate ("OCA"), by Christopher Keller and Ethan Cline on behalf of the Bureau of Investigation and Enforcement and Robert D. Knecht of the Office of Small Business Advocate ("OSBA").

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. I have arranged my rejoinder testimony by subject matter. Where more than one witness has addressed the same subject matter with testimony that I wish to rebut, I address all of that testimony in the same section. I will address the following issues in the order listed.

- Updates to Original Filing
- Gas Supply Expense
- 5-Year Average Annual Increases and Inflation Adjustments
- Labor/Vacancy Adjustments
- Incentive Compensation
- Corporate Insurance
- Employee Expenses

- Travel and Entertainment Expenses
- Company Memberships
- Advertising Expenses
- Materials and Supplies
- Rate Case Expense
- Pension Expense
- PBOP Expense
- Outside Services – Contracted
- Outside Services – IT
- Payment Processing Expenses
- Uncollectible Accounts Expense
- Non-Basic Service From Third Party Programs
- Gathering System Charges
- Synergy Savings
- Cost of Other Proposals
- Public Input Hearing Comments

II. RESPONSE TO OTHER PARTIES ADJUSTMENTS

A. UPDATES TO ORIGINAL FILING

Q. DID ANY PARTY FILE SURREBUTTAL ON YOUR UPDATES TO THE ORIGINAL FILING?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this matter.

Q. DID I&E WITNESS KELLER ACCEPT YOUR UPDATES TO THE ORIGINAL FILING?

A. Yes. The updates to the original filing were reflected in Mr. Keller's revised revenue requirement.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL REFLECT YOUR UPDATES TO THE ORIGINAL FILING?

A. No. Mr. Mugrace did not include my updates to the original filing in his revised revenue requirement because he does not believe that the Company should be allowed to recover specific expenses greater than those originally claimed. (OCA St. No. 2SR, p. 3). Based upon advice from counsel, the Company may make corrections to its claims to justify the revenue requirement it requested in the filing. Under Mr. Mugrace's proposal, the Company could only adjust expenses down but not up. This approach is one-sided and unreasonable. The adjustments were provided to the parties on March 13, 2024, and they should be considered as support for the filed revenue requirement and proposed increase in rates. He also made other assertions about such items, and they will be addressed by topic later in my Rejoinder Testimony.

B. <u>GAS SUPPLY EXPENSE</u>

Q. DID I&E WITNESS CLINE AGREE WITH YOUR REBUTTAL TESTIMONY REGARDING AN INADVERTENT ERROR HE MADE WITH REGARD TO GAS SUPPLY EXPENSE?

A. Yes. I&E Witness Cline agrees that if his proposed adjustment to change the Heating Degree Days ("HDDs") utilized to develop revenue at existing rates is accepted then an additional gas supply expense of $4,548,129 must be included in the case. This increases the proposed rate increase recommended by I&E to $88,073,129 from $83,525,000. I&E's total updated revenue requirement is $89,866,000. (I&E St. No. 1-SR, p. 3)

Please note that the Company continues to disagree with changing the HDDs utilized to develop revenue at existing rates which has been addressed by Company witness Scanlon.

C. 5-YEAR AVERAGE ANNUAL INCREASES AND INFLATION ADJUSTMENTS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S CORPORATE INSURANCE EXPENSE CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON YOUR USE OF 5-YEAR AVERAGE ANNUAL INCREASES?

A. No. Mr. Mugrace makes similar arguments to those made in his direct testimony. He introduces the concept that costs stabilized in 2022 (page 13) but the chart on page 15 of my Rebuttal testimony clearly shows otherwise. He also tries to reiterate his position that these are not known and measurable. I disagree for two reasons. First, these are based upon actual experience in these expense categories. Second, I have demonstrated that

inflation is ongoing and has consistently existed since before the 1960s which further validates the increases I proposed (see the chart on page 15 of my Rebuttal Testimony).

D. LABOR/VACANCY ADJUSTMENTS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S LABOR CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S SURREBUTTAL CHANGE YOUR POSITION ON THE YOUR CALCULATION OF THE VACANCY RATE?

A. It does not.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON THE YOUR CALCULATION OF THE VACANCY RATE?

A. It does not. First, Mr. Mugrace argues that the error he made by adding his 2.7% vacancy adjustment to our original vacancy credit of 8 employees should be rejected as I did not provide support for the calculation. Mr. Mugrace did not address the concept of the adjustment beyond that. The $247,205 adjustment was calculated by taking the total salary of the eight employees of $564,946 and netted out the capitalization to arrive at the adjustment of $247,205. Please note that the Company inadvertently excluded benefits which are typically around 30% of salary. The Company is not claiming the additional approximately $74,000 of benefits because this oversight was discovered while preparing Rejoinder Testimony. Mr. Mugrace did not remove our as filed vacancy adjustment of

eight employees prior to calculating his adjustment thus necessitating this adjustment. Failure to make this adjustment double counts the 8 vacancies.

Second, he makes further arguments on why adjustments to the original filing (see Section II. A. above) should be rejected as such information was available at the time of filing. Based upon advice from counsel I am not aware that this is the standard.

Third, Mr. Mugrace questions the difference between the $411,967 adjustment and the $538,590. The original adjustment for labor was $411,976 whereas the $538,590 represents the impact including merit and other benefits as provided in the revised Exhibit 4 (see **Exhibit No. APW-R-1** attached to my Rebuttal Testimony).

E. INCENTIVE COMPENSATION

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S INCENTIVE COMPENSATION CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON INCENTIVE COMPENSATION EXPENSE BASED UPON FINANCIAL METRICS?

A. It does not. Overall, Mr. Mugrace believes our compensation levels are appropriate. However, he continues to make arguments about the financial metrics and diversity metrics in the Company's incentive compensation plan.

Regarding financial metrics, my rebuttal testimony addresses the arguments he reiterates in his Surrebuttal testimony. However, he introduces a new concept on page 16

of his Surrebuttal testimony where he makes the statement that "It is not the responsibility of ratepayers to be required to recover the costs, as it is clearly the responsibility of the Company to share in the burden of absorbing these costs." I am not aware of any such requirement. Mr. Mugrace has not challenged the overall level of the Company's compensation. Incentive compensation is a necessary part of overall compensation in order to attract and retain employees, which directly benefits customers. Offering incentive compensation is a standard practice among utilities in Pennsylvania.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON INCENTIVE COMPENSATION EXPENSE BASED UPON DIVERSITY METRICS?

A. It does not. Our diversity goals were established to promote a workforce that matches the diversity of our customer base and to promote diversity in our procurement practices. By aligning our workforce to our customer base, it enables our employees to better respond to the needs of those communities. Further, procuring goods and services from diverse vendors at comparable costs helps promote a more economically vibrant and diverse community. The information I provided in **Exhibit No. APW-R-5** and **Exhibit No. APW-R-6**, provide sufficient support to refute Mr. Mugrace's claims.

Q. ARE THERE ANY CORRECTIONS/CLARIFICATIONS TO MR. MUGRACE'S SURREBUTTAL TESTIMONY ON INCENTIVE COMPENSATION NECESSARY?

A. Yes. On Line 3 of page 17 of Mr. Mugrace's Surrebuttal testimony he references an amount being a percent of total compensation. That is inaccurate. The percent he quotes is the percentage of total *incentive* compensation rather than total compensation. As such, the percent to total compensation would only be 3.4%.

F. CORPORATE INSURANCE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S CORPORATE INSURANCE EXPENSE CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S OR OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON CORPORATE INSURANCE EXPENSE?

A. They do not.

G. EMPLOYEE EXPENSES

Q. DID ANY PARTY FILE SURREBUTTAL ON THE EMPLOYEE EXPENSES CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON EMPLOYEE EXPENSES?

A. It does not.

H. TRAVEL AND ENTERTAINMENT EXPENSES

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S TRAVEL AND ENTERTAINMENT EXPENSE CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON TRAVEL AND ENTERTAINMENT EXPENSE?

A. It does not.

I. COMPANY MEMBERSHIPS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S CORPORATE MEMBERSHIPS EXPENSE CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON COMPANY MEMBERSHIP EXPENSE?

A. It does not. Regarding Mr. Mugrace's reference to the regulations at 66 Pa. C.S. Section 1316.1 none of the memberships cited are fraternal, social or sports clubs thus the regulations do not apply.

J. ADVERTISING EXPENSES

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S ADVERTISING EXPENSE CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S SURREBUTTAL CHANGE YOUR POSITION ON COMPANY ADVERTISING EXPENSE?

A. It does not. Mr. Keller introduces the concept that advertising at sporting events is not directly targeted towards our customers thus it should not be recoverable. I am not aware of that as a basis for exclusion. The advertising of key safety and customer messages through its relations with the sports teams create unparalleled exposure for these key messages beyond that which could be achieved through other forms of advertising. Further, the fact that some people who are not customers may also hear the message is irrelevant and has no impact on what is heard by our customers.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON COMPANY ADVERTISING EXPENSE?

A. It does not and is related to his "inflation" adjustments and is covered in Section III. C. above.

K. <u>MATERIALS AND SUPPLIES</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S MATERIALS AND SUPPLIES EXPENSE?

A. Yes, OCA witness Mugrace filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON MATERIALS AND SUPPLIES EXPENSE?

A. It does not.

L. <u>OTHER O&M</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OTHER O&M EXPENSE CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON OTHER O&M EXPENSE?

A. It does not and relates to Incentive Compensation which is addressed in Section II. E. above.

M. <u>RATE CASE EXPENSE</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S RATE CASE EXPENSE CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S OR OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON THE YOUR CLAIM FOR RATE CASE EXPENSES?

A. It does not. I have clearly demonstrated why the Company's rate case filing history should be normalized for unique circumstances that caused extended periods of time between previous rate case filings. These items are unlikely to occur in the next two years.

Q. MR. KELLER CLAIMS ON PAGE 26 OF HIS SURREBUTTAL TESTIMONY THAT THE EQUITABLE ACQUISITION BEING THE REASON FOR THE PERIOD BETWEEN THE 2012 AND 2018 RATE CASE FURTHER SUPPORTS HIS POSITION?

A. I disagree. The Equitable acquisition was a one-time event that is not going to happen in the near future. Thus, as show in **Exhibit No. APW-R-10**, attached to my Rebuttal Testimony clearly demonstrates that my originally proposed amortization is reasonable.

Q. DO YOU AGREE WITH MR. KELLER'S CLAIM REGARDING PRECEDENT APPLYING IN THIS CIRCUMSTANCE?

A. Mr. Keller has not made a clear argument that the facts and circumstances of the referenced cases apply here. The Peoples situation is unique in that the time between the last two base rate case filings were delayed due to unique circumstances that are not expected to occur in the near future. Mr. Keller has not demonstrated that those cases included unique circumstances such as those experienced by Peoples to use a historical approach.

I would argue that history must be normalized for the unique, significant circumstances that may impact the time between rate case proceedings thus appropriately normalizing the expense claim.

N. PENSION EXPENSE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S PENSION EXPENSE CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S SURREBUTTAL CHANGE YOUR CLAIM FOR PENSION EXPENSE?

A. It does not. However, to be clear, although I said that Mr. Keller's proposal is not unreasonable, the Company's original proposal for a 2-year average is most appropriate for developing revenue requirement in this proceeding.

Q. ARE THERE ANY CORRECTIONS YOU WOULD LIKE TO YOUR REBUTTAL TESTIMONY ON PENSION EXPENSE?

A. Yes. I inadvertently had a blank for the number of years in a sentence in my Rebuttal Testimony on page 49, lines 1-3. The full sentence should read:

> *Ratepayers have received the benefit of the Company contributing more to pensions than the accrual amount over the past* ***two***[1] *years.*

[1] Emphasis added.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON PENSION EXPENSE?

A. It does not. However, I note that Mr. Mugrace claims that pension funding has not changed since the acquisition is clearly wrong. The chart on lines 3 through 7 on page 28 of Mr. Mugrace's Surrebuttal Testimony shows contributions in excess of $5.3M in 2021 and 2022 (the first two full calendar years after the Essential acquisition on March 16, 2020), whereas the average contributions in 2018 through 2020 were less than $1.2M.

O. PBOP EXPENSE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S PBOP EXPENSE CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S SURREBUTTAL CHANGE YOUR POSITION ON PBOP EXPENSE?

A. It does not. My Direct and Rebuttal testimony clearly show that the Company will be filing more frequent base rate cases and that there were unique circumstances which cause the historical time between base rate cases. As such, the Company's proposed amortization for PBOP expense is appropriate.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON PBOP EXPENSE?

A. It does not. Mr. Mugrace just reiterated his position regarding the updates to the original filing as discussed above in Section II. A.

P. OUTSIDE SERVICES – CONTRACTED

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OUTSIDE SERVICES – CONTRACTED EXPENSE CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim. I&E Witness Keller withdrew his proposed adjustment of $810,857 to Outside Services – Contracted.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON OUTSIDE SERVICES – CONTRACTED EXPENSE?

A. It does not. However, I note that Mr. Mugrace accepted my annual costs for the Bridge Work, Pressure Tests, Additional Pig Runs, Additional Pipeline Maintenance/Corrosion and Additional Right of Way Maintenance totaling $2,592,893. His other arguments relate to his "inflation" adjustments which are addressed in Section II. C. above.

Q. OUTSIDE SERVICES – IT

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OUTSIDE SERVICES – IT EXPENSE CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal on this claim whereby he rescinded his adjustment of $1,117,500 related to annual costs related to various tax software maintenance, financial software maintenance, document storage, safety, Security

Information and Event Management (SEIM) and HR Information System for employee management.

R. OUTSIDE SERVICES – A&G

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OUTSIDE SERVICES – A&G EXPENSE CLAIM?

A. No.

S. PAYMENT PROCESSING EXPENSES

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S PAYMENT PROCESSING EXPENSE CLAIM?

A. Yes, OCA witness Mugrace filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS MUGRACE'S SURREBUTTAL CHANGE YOUR POSITION ON PAYMENT PROCESSING EXPENSE?

A. It does not.

T. UNCOLLECTIBLE ACCOUNTS EXPENSE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S UNCOLLECTIBLE ACCOUNTS EXPENSE CLAIM?

A. Yes, both I&E Witness Keller and OCA witness Mugrace filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S SURREBUTTAL CHANGE YOUR POSITION ON THE YOUR CLAIM FOR UNCOLLECTIBLE ACCOUNTS EXPENSES?

A. It does not.

Q. DID MR. KELLER APPROPRIATELY SUMMARIZE YOUR REBUTTAL TESTIMONY ON UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. It is not clear so I will reiterate my position word for word.

For the reasons noted in the Company' rebuttal testimony and now surrebuttal testimony, the I&E's *revenue* (emphasis added) adjustments are unreasonable and, in many circumstances, contrary to Commission precedent. Therefore, the I&E's adjustment to uncollectible accounts expense also should not be accepted.

I will note that Mr. Keller and I agree that ultimate recovery should be calculated based on the rate increase approved in this proceeding.

U. NON-BASIC SERVICE FROM THIRD PARTY PROGRAMS

Q. DID ANY PARTY FILE SURREBUTTAL ON YOUR NON-BASIS SERVICE FROM THIRD PARTY PROGRAMS TESTIMONY?

A. Yes, OCA witness Alexander filed Surrebuttal on this matter.

Q. DID OCA WITNESS ALEXANDER'S SURREBUTTAL CHANGE YOUR POSITION ON NON-BASIC SERVICE FROM THIRD PARTY PROGRAM?

A. It does not.

V. GATHERING SYSTEM CHARGES

Q. PLEASE DISCUSS OSBA WITNESS KNECHT'S SURREBUTTAL ON YOUR GATHERING SYSTEM COST REBUTTAL TESTIMONY.

A. Company witness Palombo at Peoples Statement No. 4-RJ and Company Witness Zarumba at Peoples Statement No. 15-RJ will address Mr. Knecht's Surrebuttal Testimony regarding the Gathering System Cost recovery. My Rebuttal Testimony at Peoples Statement No 2-R was specifically limited to addressing the cost o the gathering system base rate costs from customers via the Purchased Gas Costs Mechanism.

Q. DOES MR. KNECHT DISPUTE YOUR REBUTTAL TESTIMONY REGARDING THE RECOVERY OF GATHERING SYSTEM BASE RATES FROM CUSTOMERS VIA THE PURCHASED GAS COSTS MECHANISM?

A. He did not offer an assessment that base rate costs like return and depreciation on Company facilities cannot be recovered in a purchased gas cot proceeding. As mentioned above, Company witness Zarumba at Peoples Statement No. 15-RJ will fully address Mr. Knecht's Surrebuttal Testimony regarding the Gathering System Cost recovery.

W. SYNERGY SAVINGS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE SYNERGY SAVINGS?

A. Yes, OCA Witness Evrard filed Surrebuttal testimony.

Q. DOES MR. EVRARD'S REBUTTAL TESTIMONY CHANGE YOUR POSITION ON SYNERGY SAVINGS?

A. It does not.

X. COST OF OTHER PROPOSALS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S COST OF OTHER PARTIES' PROGRAM PROPOSALS IN THEIR REBUTTAL TESTIMONY?

A. Yes, both OCA Witness Alexander and OCA witness Colton filed Surrebuttal on this claim.

Q. PLEASE ADDRESS OCA WITNESS ALEXANDER'S SURREBUTTAL ON THE COST OF HER PROPOSALS?

A. First, Ms. Alexander misstates my position. As stated on page 61 of my Rebuttal Testimony, I recognized that the recommendations made by her "would potentially impact costs". I did not definitely say that they would. Rather, I proposed that certain accommodations be made for future recovery of incremental costs incurred as a result of recommendations made by the other parties in this proceeding.

Second, she claims that we have not properly evaluated whether current expenses could be better allocated to achieve her recommendations. I would argue that the burden is on her to support the cost/benefit of her recommendations and that it is not something that should be expected of the Company in this short timeframe.

Q. PLEASE ADDRESS OCA WITNESS COLTON'S SURREBUTTAL ON THE COST OF HIS PROPOSALS?

A. We appreciate the information provided by OCA Witness Colton. However, the Company's request that certain accommodations be made for future recovery of incremental costs incurred as a result of recommendations made by the other parties in this proceeding is reasonable considering the unknown ultimate impact of such recommendations as the Company has not had sufficient time during this proceeding to evaluate the true impact of Mr. Colton's recommendations.

Y. PUBLIC INPUT HEARING COMMENTS

Q. DID ANY **PARTY FILE SURREBUTTAL TESTIMONY REGARDING YOUR PUBLIC HEARING COMMENTS REBUTTAL TESTIMONY?**

A. No.

Z. EMPLOYEE BENEFITS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OTHER EMPLOYEE BENEFITS EXPENSE CLAIM?

A. Yes, I&E Witness Keller filed Surrebuttal on this claim.

Q. DID I&E WITNESS KELLER'S SURREBUTTAL CHANGE YOUR POSITION ON OTHER EMPLOYEE BENEFITS EXPENSE?

A. It does not. However, one point of clarity. Mr. Keller claims that I did not address his other employee benefits recommended adjustment. I agree that I did not separately call this out, but they are included within my Rebuttal Testimony arguments regarding Mr.

Keller's vacancy credit adjustment and why all aspects of that adjustment should be rejected.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Edward A. Palombo. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or "Company") as Vice President, Reliability.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 4, and my rebuttal testimony is set forth in Peoples Statement No. 4-R.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I will respond to the surrebuttal testimony of PIOGA witnesses Weaver and Jacobs concerning matters raised by Appalachian producers of conventional gas supplies, including rates charged by the Company for delivery of those gas supplies (the "gathering rate") and standards for receipt of that gas into the Companies facilities. I will also respond to matters raised in OSBA witness Knecht's surrebuttal testimony concerning the gathering rate and the Company's proposal to recover a portion the Allegheny Valley Connector ("AVC") costs from Peoples Gas Division customers.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes, I am sponsoring **Exhibit No. EP-RJ-1.**

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. I will addresses the issues by subject and address the surrebuttal comments by each witness on each topic in the same section of my rejoinder testimony.

Q. **PLEASE RESPOND TO PIOGA WITNESS WEAVER'S CONTENTION THAT THE COMPANY HAS NOT COMMITTED TO APPLY A UNIFORM STANDARD FOR THE AMOUNT OF WATER VAPOR IN GAS THAT MAY BE DELIVERED INTO THE COMPANY'S PIPELINES.**

A. Peoples is committed to apply a moisture curve standard uniformly across its entire system. The moisture curve is the amount of moisture in the gas that may be received based on the pressure of the gas at the receipt point. This standard is used because the amount of water vapor that can be retained in the gas increases as the pressure increases. It is important to make certain the water vapor does not liquify and result in corrosion of our pipelines and other facilities.

Q. PLEASE RESPOND TO MR WEAVER'S CONTINUING CONTENTION THAT APPALACHIAN PRODUCERS THAT DELIVER GAS INTO THE PEOPLES GAS DIVISION SYSTEM SHOULD NOT HAVE TO PAY THE GATHERING FEE

BECAUSE THE PIPELINES THE GAS IS DELIVERED INTO ARE NOT CURRENTLY CLASSIFIED AS GATHERING FACILITIES.

A. I will not repeat my prior testimony on this argument other than to say that the facilities are gathering Appalachian gas. More importantly, from my perspective, the gathering fee is designed to recognize that the Company's facilities provide the producers with a way to deliver gas to a market. It is appropriate, in the Company's view, that the producers that deliver into the Peoples Gas Division system pay some of the costs of the Company's facilities since they benefit from those facilities. I think this was recognized by the Commission in the Company's last base rate case when the Commission approved a settlement, joined by PIOGA, that approved the expansion of the Equitable Division gathering rate ("AGS") to the Peoples Natural Gas Division system. It is reasonable to now extend the gathering rate to Peoples Gas Division system which was subsequently combined with Peoples Natural Gas Division.

Q. IN YOUR PRIOR TESTIMONY YOU INDICATED THAT IT IS APPROPRIATE FOR PRODUCERS TO PAY SOME INCREASE IN THE GATHERING RATE TO CONTRIBUTE TO THE INCREASE IN RATES ULTIMATELY ALLOWED IN THIS CASE. PIOGA WITNESS WEAVER CONTENDS THAT THE COMPANY HAS NOT SHOWN THAT THE INCREASE IS CAUSED BY AN INCREASE IN GATHERING SYSTEM COSTS. PLEASE COMMENT.

A. On April 20, 2024, the Company provided data in an interrogatory response that shows that the gathering investment by the Company has increased by $6,422,559 since our last base rate proceeding. This response is provided as my **Exhibit No. EP-RJ-1** to this testimony.

These investments are to improve or replace gathering facilities, which benefit producers. I also note that the Company has not proposed that producers on the Peoples Natural Gas Division system will receive an increased gathering rate, we have proposed only that producers into the Peoples Gas Division system contribute to cost recovery.

Q. PIOGA WITNESS WEAVER ALSO STATES THAT THE COST OF FACILITIES ON THE PEOPLES GAS DIVISION SYSTEM HAVE NOT BEEN INCLUDED IN DEVELOPING THE GATHERING RATE. IS THIS A BASIS FOR NOT APPLYING THE GATHERING RATE TO PRODUCERS INTO THE PEOPLES GAS DIVISION SYSTEM?

A. No, not in my opinion. Adding the cost of the Peoples Gas Division facilities would just increase the costs to be recovered under the gathering rate. The Company already proposes that customers pay most gathering costs and producers pay only about a third of the costs. Also, I note that the Company seeks to combine all costs into one Company with one set of rates for all customers in this proceeding.

Q. OSBA KNECHT RECOMMENDS IN HIS SURREBUTTAL THAT PEOPLES DESIGN GATHERING CHARGES THAT WOULD BE BASED ON WHICH CUSTOMERS RECEIVE THE APPALACHIAN SUPPLIES IN IT NEXT CASE. IS THAT PRACTICAL?

A. As Mr. Knecht suggests, gas purchased by the Company for sales customers already includes the cost for gathering. However, it would be very difficult to track Appalachian gas that flows into marketer/NGS pools and determine what customers ultimately receive

that gas. In addition, it is very difficult to determine which customers ultimately burn local production gas as it varies based upon customer demand. For example, the volumes of local production can extend deeper downstream into the distribution systems and reach more customers when temperatures are warmer than colder temperatures. However, since customer demand can change hourly, daily, weekly, or monthly, it is difficult to determine the extent of customers. In any event, what might be done in a future rate case is not a basis for exempting producers on the Peoples Gas Division system from paying a gathering rate when rates in this case become effective.

Q. PIOGA WITNESS WEAVER REPEATS HIS CONTENTIONS IN HIS DIRECT TESTIMONY THAT PEOPLES HAS A DUTY TO ACCEPT APPALACHIAN GAS AND MANAGE ITS SYSTEMS TO MAXIMIZE THE USE OF SUCH GAS. PLEASE COMMENT.

A. I refer to my rebuttal testimony. Our first responsibility is to provide safe and reliable service to our customers. The Company must balance the cost of local production with many other factors to determine the optimal daily blend of supplies to service customers, such as (but not limited to) interstate contractual obligations, pipeline construction and maintenance activities, customer demand, and upstream supply interruptions. I do not think that restrictive rules to benefit Appalachian supplies provides any additional benefits to customers.

Q. PLEASE RESPOND TO PIOGA WITNESS JACOBS REQUEST TO PROVIDING ADVANCE COMMUNICATIONS TO CURE AND CHANGING ANNUAL INSPECTION REPORTS TO REQUESTS FOR REPORTS.

A. Peoples believes the current annual testing is consistent within the industry and meets the requirements in PA Code Chapter 59 for testing correctors and charts for accuracy. While PA Code Chapter 59 provides for longer testing intervals for various size meters, an annual test or calibration is required at least annually, and a record of the most recent verifications must be kept for each device. To move to a testing interval on an as-requested basis would create additional administrative work in coordinating the test with the integrators, and field technicians as opposed to the current annual test.

Q. PLEASE RESPOND TO OSBA WITNESS KNECHT'S COMMENT IN SURREBUTTAL THAT YOU DID NOT EXPLAIN HOW THE AVC INTERSTATE CAPACITY CAN BE USED TO SERVE CUSTOMERS ON THE PEOPLES GAS DIVISION SYSTEM.

A. As Ms. Scanlon explains in Peoples Statement No. 3, the Company proposes to spread the costs of AVC capacity, which is currently a gas capacity cost charged to only Peoples Natural Gas Division customers, to all customers. As Ms. Scanlon explains this will reduce Peoples Natural Gas Division's bills to customers and increase Peoples Gas Division's bills on a total bill basis and unify rates across the Company.

The Peoples Gas Division system has interconnects with the AVC system that physically deliver gas directly to Peoples Gas Division's pipelines and customers. In addition, Peoples Natural Gas Division has intercompany connections with Peoples Gas

Division that provide the ability to redeliver AVC supplies from Peoples Natural Gas Division to Peoples Gas Division. With a combined gas cost across the system, Peoples is able to use the upstream AVC capacity to supply gas to Peoples Gas customers through normal displacement opportunities.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: PIOGA-X-005

Witness: Palombo, Edward **Title:** Vice President Reliability

Question: Reference Peoples Statement No. 4-R (Palombo) at p.8, lines 3-6.

a. Please identify the portions of the (a) rate increase proposed in this proceeding and (b) rising costs that drive this proceeding that are attributable to producers.

b. Please identify where the portions identified in your response to 3.a. above are included in Peoples Exhibit RNZ-3.

Answer: Overall, the producers contribute to various increases in costs that drive the rate increase. The most explicit indication is the overall cost of the gathering system in this case of $32,982,446 (see Exhibit RNZ-3 attached to Peoples Statement No. 15 - the Direct Testimony of Ralph Zarumba) compared to the cost of the gathering system in the last case of $26,559,887.

PREPARED REJOINDER TESTIMONY OF
PAUL BECKER
VICE PRESIDENT, CONSTRUCTION & ENGINEERING
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: May 8, 2024 Peoples Statement No. 5-RJ
DATE ADMITTED: _____

PREPARED REJOINDER TESTIMONY OF
PAUL BECKER

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Paul Becker. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President, Construction and Engineering.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 5, and my rebuttal testimony is set forth in Peoples Statement No. 5-R.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I will respond to the Surrebuttal Testimony of OCA witness Mugrace.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. My rejoinder testimony responds to two of Mr. Mugrace's assertions: (1) inflation as it relates to the Company's capital expenditures and (2) the Company's recovery of its capital pipe replacement costs specific to Robinson Township, Pennsylvania.

Q. **ARE YOU SPONSORING ANY EXHIBITS?**

A. Yes. Exhibit PB-1-RJ.

INFLATION IN THE COMPANY'S CAPITAL WORK PLAN

Q. WHAT DOES MR. MUGRACE STATE ABOUT THE COMPANY'S INCLUSION OF INFLATION IN ITS CAPITAL PLAN PROJECTIONS?

A. In his surrebuttal testimony pages 4-5, Mr. Mugrace asserts that any allowance for inflation should not be included for ratemaking purposes and then suggests the Company remove the inflationary amounts from its capital plans because of the uncertainty in both the magnitude of inflation and the timing of Peoples' capital plans.

Q. HOW DO YOU RESPOND TO MR. MUGRACE'S ASSERTS ABOUT INFLATION AND THE COMPANY'S CAPITAL PLAN?

A. If, for argument's sake, inflation was zero or less than projected, Peoples would still invest the total budgeted capital amounts as outlined in the case and would simply complete more projects and replace more mileage. Peoples has an inventory of work and has shown its ability to consistently execute its capital pipeline replacement program (as evidenced by the Company's ability to meet or exceed its LTIIP mileage commitments). Moreover, from an operational perspective, investing and replacing as much old (at risk) pipe with every capital dollar available in the FPFTY in this case, will help improve the safety and reliability of its system, and will improve the environment through reduced emissions.

REPLACEMENT OF BARE STEEL IN THE ROBINSON EVENT

Q. WHAT DOES MR. MUGRACE ASSERT WITH RESPECT TO THE COMPANY'S INCLUSION OF CAPITAL COSTS FOR THE REPLACEMENT OF BARE STEEL PIPE IN ROBINSON?

A. Mr. Mugrace disallows the inclusion of $1.46M of capital invested in the replacement of the bare steel pipes in Robinson because he claims that the replacement would not have occurred in the periods at issue in this case. Mr. Mugrace goes on to state on pages 6-7 of his surrebuttal testimony, that the Company needs to "overcome the fact that, but-for the Robinson incident, the pipeline replacement costs would not be part of this case."

Q. **HOW DOES THE COMPANY RESPOND TO MR. MUGRACE'S ASSERTIONS?**

A. What Mr. Mugrace fails to understand is that even if the Bureau of Investigation and Enforcement's ("I&E") Gas Safety Division had not directed[1] the Company to accelerate the Robinson pipe replacement, Peoples would have invested the $1.46M of capital that it used for Robinson on other bare steel replacement pipe projects during the same time period/capital year. As such, whether it was the Robinson pipes specifically or other bare steel pipes up for replacement in the context of the Company's LTIIP, the Company consistently spends the capital plan amounts on its capital work plans and should be granted recovery of such investments. As mentioned above, the Company has an extensive inventory of work to be done. It is normal course of business for Peoples to adjust the schedule and the portfolio of projects throughout the year to manage the capital, the miles

[1] See Exhibit PB-1-RJ which is an e-mail exchange between the Company and I&E wherein I&E directed the Company to accelerate the replacement of the bare steel in Robinson.

of work, and the priorities of the work. Individual Projects are moved in and out of the schedule routinely and other bare steel pipeline replacement projects would have been executed if not for the request to accelerate the Robinson bare steel projects. Given that other work/projects would have been done with the $1.46M during the same period, there is no net impact.

Q. DO YOU HAVE ANY FURTHER RESPONSE TO MR. MUGRACE ON THIS TOPIC?

A. Yes. I note that not once did Mr. Mugrace question the prudency of the capital investment associated with the replacement of bare steel in Robinson. Mr. Mugrace did not challenge the prudency of this project as he cannot dispute that the replacement of bare steel pipe is necessary work for Peoples. The Company maintains that these costs should be included in rate base as they are prudent investments. The Robinson capital project was prudently incurred in order to maintain the safety and reliability of the Company's natural gas distribution system.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-XXVII-001

Witness: Becker, Paul **Title:** Vice President Construction &Engineering

Question: Reference Peoples Statement No. 5R, pp. 8-9, where witness Paul Becker testifies that “the PUC Gas Safety Division directed Peoples to accelerate the replacement” of bare steel pipe in Robinson for which OCA witness Mugrace recommended exclusion of the replacement cost. Provide any and all documentation demonstrating that the PUC Gas Safety Division directed Peoples to accelerate the replacement.

Answer: Please see attached.

Submit Date: 4/29/2024

Becker, Paul

From: Horensky, Robert <rhorensky@pa.gov>

To: Gregorini, Joseph
Cc: Palombo, Edward A; Thomas, Robert M; Kline, David; Matse, Matthew; Kanaskie, Richard
Subject: Peoples Gas Overpressure- NRC 1276429-Indiana County- Robinson, PA

[External email: Use caution with links and attachments]

Mr. Gregorini-

On April 29th, an overpressure incident occurred on Peoples Gas's distribution system in Robinson, PA in Indiana County. This was reported to the NRC at #1276429. Peoples Gas over-pressured the mains, services and customer piping while performing maintenance at a district regulator station. The system is a one way feed and supplied by a single regulator with a pressure relief and bypass. This event affected 227 homes and businesses.

Having reviewed the data provided to I&E Safety thus far for the Robinson overpressure incident, I&E Safety has the following safety related requirements of Peoples Gas. This email will be followed by a formal letter that will be sent via email:

1. Accelerate the replacement of the following gas assets:
    a. All bare steel piping affected by the overpressure .
    b. All metallic service lines that are not under Cathodic Protection and any leaking service.
    c. Any asset that has leaked as a result of the overpressure.
2. Repair and replace any customer owned service line that is leaking.
3. Provide I&E Safety with a timeframe of the scheduled replacement work.
4. Continue daily leak survey of all mains and services until all of the bare steel mains and services are replaced .
5. Perform a walking leak survey of all mains and services once weekly until all replacements are complete.
6. Provide Dave Kline and Matt Matse with daily leak survey results. The results should be tabulated and comprehensive.
7. Monitor any post incident appliance failures and develop a program to address.
8. Provide the public in Robinson with an update of the event and Peoples efforts to remediate. Notify this office of this awareness effort.
9. Access any and all structures immediately where piping, or appliances, downstream of the meter or curb valve was, or could have been, affected by overpressure on 4/29.
10. Consider immediate review of low pressure regulator station maintenance policy and procedures.
11. Consider immediate review of low pressure regulator station configurations.
12. Consider immediate review of Operator Qualification training for regulator technicians.
13. Consider immediate review of Quality Assurance/Quality Control for regulator station work involving low pressure systems.
14. Consider immediate review of Quality Assurance/Quality Control for regulator station work involving systems with one way feeds.
15. Continue to work with I&E Safety Engineers during the course of the investigation.

Sincerely,

Rob Horensky, Manager
Safety Division
Bureau of Investigation and Enforcement

PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REJOINDER TESTIMONY OF
CHRISTINE SABALL
VICE PRESIDENT, TAX
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: May 8, 2023 Peoples Statement No. 6-RJ
DATE ADMITTED: _____

PREPARED REJOINDER TESTIMONY OF
CHRISTINE SABALL

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christine Saball, and my business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as Vice President, Tax for Essential Utilities, Inc. ("Essential"), the parent company of Peoples Natural Gas Company LLC ("Peoples" or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 6, and my rebuttal testimony is set forth in Peoples Statement No. 6-R.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. The purpose of my Rejoinder Testimony is to address the Surrebuttal Testimony of OCA Witness, Mr. Mugrace, related to substantiation of the 50% portion of the CTA adjustment requirement for general corporate purposes. In addition, I will address the calculations of the Rate Base ADIT impacts that are a result of his adjustments to Operating income and to Gas Plant in Service/Accumulated Depreciation.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No, I am not.

Q. WHY DOES MR. MUGRACE BELIEVE THAT A CTA ADJUSTMENT SHOULD BE INCLUDED IN THE CASE?

A. In OCA Statement 2SR, pages 32-33, Mr. Mugrace states that while I specified how 50% of the differential was used for reliability or infrastructure related investments, the 50% of the differential to be used for general corporate purposes was not specified and is presumed to benefit the Company's shareholders or affiliates and should therefore be included as an adjustment. Mr. Mugrace also believes that ACT 40 requires the Company to provide evidence of actual application of its differential to reliability or infrastructure related investments and its general corporate purposes.

Q. WAS 50% OF THE DIFFERENTIAL USED FOR GENERAL CORPORATE PURPOSES IN ACCORDANCE WITH ACT 40?

A. Yes, it was. The O&M claim in this case in the amount of over $200M constitutes general corporate purposes that far exceed the $27,460 (per OCA Statement 2, Exhibit DM-3) differential, so the ACT 40 requirement is satisfied and the OCA's $27,460 adjustment for the differential should be rejected.

Q. DO YOU AGREE WITH MR. MUGRACE'S BELIEF THAT ACT 40 REQUIRES THE COMPANY TO PROVIDE EVIDENCE OF ACTUAL APPLICATION OF THE DIFFERENTIAL?

A. No, I do not. The Company has been advised by Counsel that OCA's interpretation of Act 40 of 2016, as requiring proof that the CTA amount has been used specifically to reduce ratepayer obligations, has been rejected by the Commission and affirmed by the Commonwealth Court.

Q. DID MR. MUGRACE MAKE ANY ADJUSTMENTS TO RATE BASE ADIT?

A. Yes, he did. In his direct testimony, Exhibit DM-6, Mr. Mugrace proposed an adjustment of $152,826 to the ADIT (decrease to rate base) related to adjustments to gas plant in service and accumulated depreciation. Then in his rebuttal testimony, he revised the ADIT adjustment to be $85,995 (increase to rate base) in Exhibit DM-SR-8, subsequent to the rebuttal testimony that I filed.

Q. DO YOU AGREE WITH MR. MUGRACE'S REVISED ADJUSTMENT TO ADIT?

A. No, I do not. As shown in my Exhibit CLS-2, as a result of being in a taxable loss for federal income tax purposes, any adjustment to ADIT results in an offsetting adjustment to the Federal NOL ADIT Asset for a zero-rate base impact. Mr. Mugrace did not calculate the impact on the Federal NOL ADIT Asset. The $85,995 ADIT adjustment increasing rate base should be removed.

Q. ARE THERE ANY OTHER ISSUES WITH THE TAX CALCULATIONS THAT YOU WOULD LIKE TO ADDRESS?

A. Yes, there is. In his direct testimony, Exhibit DM-6, Mr. Mugrace proposed various adjustments to operating income which resulted in an adjustment to total tax expense. In

my rebuttal testimony, I stated that any change to the deferred income tax in total income tax expense must be carried through to adjust accumulated deferred income taxes (Company Statement No. 6-R, page 4) and calculated a $16,485,401 ADIT adjustment to rate base in Exhibit CLS-3.

Q. DID MR. MUGRACE INCLUDE AN ADJUSTMENT TO ADIT ALONG WITH THE OPERATING INCOME ADJUSTMENTS HE PROPOSED?

A. No, he did not.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes, it does. Thank you.

PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REJOINDER TESTIMONY OF
LUKE RAVENSTAHL
VICE PRESIDENT OF SALES AND MARKETING
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: May 8, 2024 Peoples Statement No. 7-RJ
DATE ADMITTED: _____

PREPARED REJOINDER TESTIMONY OF
LUKE RAVENSTAHL

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Luke Ravenstahl. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President of Sales and Marketing.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 7, and my rebuttal testimony is set forth in Peoples Statement No.7-R.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. The purpose of my rejoinder testimony is to respond to other parties' surrebuttal testimonies concerning the use of electricity as a competitive alternative. I will specifically respond to the following witnesses:

- I&E Witness Cline – on electricity as a competitive alternative;
- OCA Witness Johnson – on electricity as a competitive alternative and price wars.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. WHAT DOES I&E WITNESS CLINE ASSERT IN HIS SURREBUTTAL TESTIMONY REGARDING ELECTRICITY AS A COMPETITIVE ALTERNATIVE?

A. I&E Witness Cline continues to recommend that the Commission reject the Company's proposal to include electric service as a viable competitive alternative due to there being "inequity in eligibility for discounted rates from electric service."

Q. DO YOU HAVE ANY FURTHER RESPONSE TO MR. CLINE'S ASSERTION? PLEASE EXPLAIN.

A. Yes. Mr. Cline states that allowing electricity to become a competitive alternative would result in "harm to smaller commercial customers who are unable to afford the investment necessary to switch from natural gas service to electric service." Mr. Cline's assertions only take existing customers into account. Mr. Cline does not address potential applicants or those who are not yet on the Company's system who may desire natural gas service. As an example, the Company's proposal to add electricity as a potential competitive alternative is intended to provide an avenue for an applicant assessing their energy needs to have the ability to choose from all available energy sources and compare them. Moreover, that potential customer should be able to choose between electric and natural gas if that applicant wants. The Company's tariff provision would allow that potential customer to look at all available options and choose what they want and need.

Q. DO YOU HAVE ANY FURTHER COMMENT ON USING ELECTRICITY AS A COMPETITIVE ALTERNATIVE?

A. To address Mr. Cline's concerns regarding inequitable eligibility, the Company would consider limiting the use of electricity as a competitive alternative and apply it only to new applicants or existing customers wishing to add new load. This would allow new applicants or, existing customers expanding their businesses or replacing existing equipment the ability to choose their energy source if indeed that potential user is evaluating the use or expansion of natural gas or electric, for example.

Q. WHAT DOES OCA WITNESS JOHNSON ASSERT IN HIS SURREBUTTAL TESTIMONY ABOUT THE COMPANY'S PROPOSAL TO ADD ELECTRICITY AS A COMPETITIVE ALTERNATIVE?

A. Mr. Johnson claims that since the Company's proposal to add electricity as a competitive alternative would not apply to residential customers, it "may be both inequitable and discriminatory." Mr. Johnson further asserts that the Company's request should be denied.

Q. HOW DO YOU RESPOND TO MR. JOHNSON'S ASSERTIONS ABOUT INEQUITY AND DISCRIMINATION?

A. The Company's proposal is not inequitable and is not discriminatory. Currently, the Company's Tariff Rule 20 is applied to commercial and industrial customers in practice. The Company is not actively seeking to entice customers to move away from existing utility services. With its proposal, the Company is actually seeking to provide equal and

non-discriminatory access to natural gas for new customers or existing customers looking to expand or replace equipment, both of whom who desire natural gas.

Q. DO YOU HAVE ANY FURTHER RESPONSE TO MR. JOHNSON'S ASSERTIONS ABOUT PRICE WARS?

A. The Company's proposal to add electricity as a competitive alternative is intended to promote energy choice for consumers. As noted above, the Company would be amenable to limiting the applicability of this provision to new customers coming onto its system or existing customers looking to add new load or a new natural gas use. Doing so would limit any "price wars" between existing users of natural gas and electric regarding existing load. The applicability of this provision, as an example, would allow a potential new user with new load the ability to choose from all available energy options for its business.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REJOINDER TESTIMONY OF
RITA F. BLACK
DIRECTOR, COMMUNITY ASSISTANCE PROGRAMS
ESSENTIAL UTILITIES

DATE SERVED:
DATE ADMITTED: _____

Peoples Statement No. 9-RJ

PREPARED REJOINDER TESTIMONY OF
RITA F. BLACK

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rita F. Black and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Director of Community Assistance Programs. In this role, I lead assistance programs for Peoples Natural Gas Company LLC[1] ("Peoples", "Peoples Natural Gas" or "the Company"), Aqua Pennsylvania Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua PA"), as well as these companies' affiliated regulated utilities operating in other states.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT, REBUTTAL, AND SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 9, my rebuttal testimony is set forth in Peoples Statement No. 9-R, and my surrebuttal testimony is set forth in Peoples Statement No. 9-SR.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

[1] Peoples Natural Gas Company LLC currently has two tariffed divisions under the PUC, "Peoples Natural Gas Division" and "Peoples Gas Division".

A. I will provide clarification regarding the Company's reporting of confirmed low income ("CLI") customer counts. I will also respond to surrebuttal testimony of Harry Geller on behalf of the Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA").

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. I will first address the confirmed low income count issue that was raised by Mr. Geller and Roger Colton on behalf of the Office of Consumer Advocate ("OCA"). I will then address surrebuttal testimony by Mr. Geller regarding the use of hardship fund dollars.

Q. LET'S BEGIN WITH THE CONFIRMED LOW INCOME COUNT ISSUE. DO YOU HAVE NEW INFORMATION TO SHARE WITH PARTIES REGARDING THIS ISSUE?

A. Yes I do. Preparations for the Universal Service Report are completed by an analyst employed by the Company, using data derived from the Company's customer information system. I met with the analyst to review our 2023 Universal Service Report submission methods. We are currently in the data verification stage of annual reporting with members of the Bureau of Consumer Services ("BCS"). Annually, utilities submit their required reports by April 1. BCS staff review the submissions and reach out to the utilities if they identify any discrepancies or inconsistencies. They also often ask the utility to validate

their submissions before publication. In the case of 2023 data, we are to provide our final verifications and submit any changes by May 14, 2024.

As the analyst and I reviewed the reported information, we identified that the definition of reported CLI that I had been using throughout my testimony was only partially accurate. While we used the limited definition of receipt of Low Income Home Energy Assistance Program ("LIHEAP") and/or Customer Assistance Program ("CAP") participation as proxy for CLI in some particular report responses, the use was extremely limited.

Q. PLEASE CONTINUE.

A. The limited definition was used for the counting of termination notices and reconnections reported. However, the more inclusive definition, including those who provided verbal indication of their low income status, was used in response to all of the other questions. This is important as the main focus of the report is to show both the residential body as a whole and CLI as a sub-set across a number of categories including arrears and payment arrangements.

Q. WITH THIS CLARITY AROUND THE USE OF THE LIMITED DEFINITION, DOES THE COMPANY PLAN TO CORRECT ITS FILED 2023 UNIVERSAL SERVICE COLLECTIONS REPORT?

A. Yes. The analyst is currently working to revise the responses to 2023, on or before the May 14, 2024 deadline, to replace the current counts of termination and reconnection with a full count of customers who have indicated low income status. Further, we identified

that while the majority of the report uses the low income indicator as CLI, we likely missed customers who have received a LIHEAP grant, but have not had contact with the Company to provide verbal indication of their low income status. Therefore, we will ensure those customers are also included in the CLI reporting. The final revised report will be provided not only to BCS, but to parties of this case as an update to CAUSE-PA Set IV Question 5.

Q. ON PAGES 10 AND 11 OF HIS TESTIMONY, MR. GELLER RESPONDS TO YOUR REBUTTAL TESTIMONY REGARDING USING A HARDSHIP GRANT TO PAY DOWN AN ARREARAGE PRIOR TO ENROLLMENT IN CAP. WOULD YOU LIKE TO RESPOND TO HIS TESTIMONY ON THIS TOPIC?

A. Yes. Mr. Geller states, "Peoples should be ordered to apply Hardship Fund grants directly to a CAP or E-CAP[2] applicant or participant's asked-to-pay amount, following full enrollment in the program."[3] He likens this treatment of the rules surrounding LIHEAP payment application for CAP participants. I would first like to clarify that there are two types of LIHEAP payments. The first is LIHEAP cash, which is an income eligible grant based on household composition and income. This grant is not related to arrears and it is intended to support the ongoing payment of utility bills by LIHEAP eligible consumers. For this reason, the LIHEAP cash grant is applied to the CAP ask-to-pay amount only. The second type of LIHEAP grant is the LIHEAP Crisis grant. The Crisis grant is only provided to households with arrears that are facing termination of service or attempting to restore service. LIHEAP Crisis must be posted to the arrears and cannot be used to pay any current

[2] "E-CAP" is a commonly used abbreviation referring to the Company's Pilot CAP Expansion for customers with incomes between 151 and 200% of Federal Poverty Level.

[3] Geller, Page 11, Lines 1 through 3.

portion of a customer's bill. Hardship funds are similar to LIHEAP Crisis in that they are intended to be a fund of last resort to assist customers with arrears. As such, hardship funds should be posted to the arrears that were evaluated when determining eligibility for the grant. This treatment is not only consistent with the handling of LIHEAP payments, it protects non-CAP ratepayers from higher costs related to deferred balances that were intended to be paid by the hardship fund.

Q. MR. GELLER ALSO RAISES A CONCERN THAT PEOPLES LIMITS HARDSHIP FUND GRANTS TO NEW CAP AND E-CAP ENROLLEES. IS THIS ACCURATE?

A. No. Customers that are actively participating in CAP and E-CAP and fall into arrears are eligible to apply for and receive hardship fund grants to pay those arrears.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REJOINDER TESTIMONY OF DAWN M. FOLKS SENIOR FINANCE AND RATES ANALYST ON BEHALF OF PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: May 8, 2024
DATE ADMITTED:

Peoples Statement No. 11-RJ

PREPARED REJOINDER TESTIMONY OF
DAWN M. FOLKS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dawn M. Folks. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as a Finance and Rates Analyst. I provide rates and regulatory services for Peoples Natural Gas Company LLC ("Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 11, and my rebuttal testimony is set forth in Peoples Statement No. 11-R.

Q. HAVE YOU REVIEWED THE DIRECT AND REBUTTAL TESTIMONY SUBMITTED BY OTHER PARTIES?

A. Yes. I have reviewed the Surrebuttal Testimony submitted by Robert Knecht on behalf of the Office of Small Business Advocate ("OSBA").

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. The purpose of my Rejoinder Testimony is in response to Mr. Knecht's Surrebuttal Testimony, specifically on Design Day Demand Allocator.

Q. DID MR. KNECHT RESPOND TO YOUR REBUTTAL TESTIMONY?

A. Yes. I explained in my rebuttal testimony that the peak day data originally supplied in Exhibit 17 COS 10, was derived from actual send out data and then spread by rate class using percentage allocation from an average day. It was assumed by Mr. Knecht that the Company supplied actual data since the Company does have some daily metered LGS customers. While it is true that the Company does have a few LGS customer that are daily metered, we do not have the data available for the entire rate class. Therefore, while the total send out is in fact accurate and reliable, the spread by rate classes is estimated because there is no obvious way to recognize data by rate class without daily metered data by class. Therefore, I pointed out the inaccuracy of using this specific LGS data spread in Mr. Knecht's calculations because it was using an average day spread. In rebuttal, I supplied Exhibit DMF-3R, which gave Mr. Knecht the new data spread that used design day allocation factors instead of average day allocation factors which was more appropriate to use in the ACOSS. Mr. Knecht accepted my rebuttal testimony and modified his surrebuttal ACOSS to use the Rate LGS design Day demand values developed by the Company.

In responding to my testimony, Mr. Knecht states that I claimed the Company's filing was "inaccurate and unreliable." (OSBA St. No. 1S, p. 8.) I disagree with this characterization for the reasons that I explain above.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

DATE SERVED: May 8, 2024
DATE ADMITTED: _____

Peoples Statement No. 14-RJ

PREPARED REJOINDER TESTIMONY OF
JOHN J. SPANOS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. John J. Spanos. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming) as President. I have been associated with the firm since June 1986.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 14, and my rebuttal testimony is set forth in Peoples Statement No. 14-R.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I will address the surrebuttal testimony of Office of Consumer Advocate("OCA") Witness Dante Mugrace related to the proper manner at which to update the accumulated depreciation and depreciation expense. Although, I do not agree with the plant adjustments witness Mugrace has made that is not what I will address. My testimony will address his discussion related to use of a composite functional rate for his reduction in depreciation expense and accumulated depreciation.

Q. IS THE ACCUMULATED DEPRECIATION AND DEPRECIATION EXPENSE DEVELOPED BASED ON AN ACCOUNT LEVEL?

A. Yes. There is a detailed depreciation calculation that is affected by the plant additions and retirements by account which leads to the development of the annual expense and accumulated depreciation (book reserve) that is utilized in the remaining life calculation for each account. Therefore, additions to some accounts affect the book reserve differently than other accounts. For example, reducing the plant additions for a long lived account has a smaller impact on the accumulated depreciation than would reducing the plant additions for a short lived account. Consequently, if the accumulated depreciation has not been adjusted consistent with the change in plant balances then the impact of depreciation expense will not be accurate.

Q. DO CHANGES TO THE PLANT AND ACCUMULATED DEPRECIATION FOR THE FUTURE TEST YEAR AFFECT THE FULLY FORECASTED TEST YEAR?

A. Yes. The rates from the future test year are utilized to develop the accumulated depreciation for the fully forecasted test year so the improper development by using the composite functional rate gets magnified when incorporating the development in the new year. Consequently, witness Mugrace's opinion that composite functional rates for depreciation being okay because it is utilized in other areas is not appropriate and creates inaccurate results.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REJOINDER TESTIMONY OF
HEATHER DOYLE-CONLEY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Heather Doyle-Conley. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Vice President, Customer Operations. In this role, I lead customer operations for Peoples Natural Gas Company LLC[1] ("Peoples", "Peoples Natural Gas" or "the Company") and Aqua Water and Wastewater.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes, my rebuttal testimony is set forth in Peoples Statement No. 16-R. I did not submit direct testimony in this proceeding.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I will respond to particular aspects of the surrebuttal testimony of witnesses Barbara Alexander and Roger Colton, on behalf of the Office of Consumer Advocate ("OCA") and Harry Geller, on behalf of the Coalition For Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA").

[1] Peoples Natural Gas Company LLC currently has two tariffed divisions under the PUC, "Peoples Natural Gas Division" and "Peoples Gas Division".

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. I will first respond to Ms. Alexander, followed by Mr. Colton and Mr. Geller.

Q. IN HER SURREBUTTAL TESTIMONY, MS. ALEXANDER STATES, "SECOND, IF PEOPLES IS WILLING TO PROVIDE MEDICAL EMERGENCY RIGHTS TO A TENANT, THERE IS NO BASIS FOR REFUSING TO PROVIDE THE PFA RIGHTS."[2] WOULD YOU LIKE TO RESPOND?

A. Yes. Medical certificates and the protections available to utility consumers with active protection from abuse orders are functionally different. A medical certificate is submitted by a medical provider when an occupant of a residence has a serious medical condition or a condition that requires continuation of service to treat the condition. If a tenant has such a medical condition and a valid medical certification is provided, it is wholly appropriate for Peoples to honor such a certificate. The Statement of purpose and policy for PFAs, as found in §56.251, states "…These subchapters establish and enforce uniform, fair and equitable residential public utility service standards governing eligibility criteria, credit and deposit practices, and account billing, termination and customer complaint procedures." A tenant does not have an obligation to pay the utility bill in the name of the landlord, therefore the protections provided by a PFA are not necessary.

[2] Alexander, Page 13, lines 5 and 6

Q. MOVING ON TO MR. COLTON'S TESTIMONY, ON PAGE 10 OF HIS SURREBUTTAL TESTIMONY HE AGAIN RAISES A CONCERN REGARDING "THE RACIALLY DISPARATE IMPACT OF PEOPLES NONPAYMENT SERVICE DISCONNECTIONS."[3] WOULD YOU LIKE TO RESPOND?

A. Yes. I believe it is helpful to describe the collections process in more detail than previously provided in my rebuttal testimony. The collections process is automated. It first identifies accounts with arrears that have reached a threshold for potential disconnection of service. Any account that exceeds the threshold would first receive a notice of disconnection that provides not only the amount of arrears, but also offers information to the customer about contacting the Company to discuss payment arrangements, provide a medical certificate and to contact the Pennsylvania Public Utility Commission. The notice also includes information on available cash assistance, such as the Company's hardship fund and the Low Income Home Energy Program ("LIHEAP"). If customers do not respond to the notice, the account moves into the next step which is personal contact. Personal contact attempts can be made via telephone or field visit, depending on the availability of a working phone number for the household. If the account arrears have not yet been addressed, the account will finally move to the creation of a service order for field service teams to disconnect the gas service. This is a color-blind process that does not consider any demographical information about the customer or the area in which the customer resides.

Q. ON PAGE 11, LINE 17 OF HIS TESTIMONY, HE STATES "PEOPLES EXPLICITLY ACKNOWLEDGES THAT CONDUCT COULD BE

[3] Colton, Page 10, Lines 14 and 15.

DISCRIMINATORY, EVEN IF THERE IS A LACK OF ANY INTENTIONAL DISCRIMINATION AND THAT SUCH DISCRIMINATION WOULD BE INAPPROPRIATE." DO YOU AGREE WITH HIS CHARACTERIZATION?

A. No, I do not. In that section of his testimony, Mr. Colton appears to connect our agreement to change tariff language that describes the Company's security deposit evaluation process to indicate that the Company 'explicitly acknowledges' that its conduct could be discriminatory. Adding the additional tariff language was an effort to make the implicit non-discrimination of the Company's current process more explicit.

Q. MR. COLTON ALSO ADDRESSES THE USE OF VERINT LINGUISTICS ANALYTICS SOFTWARE FOR THE PURPOSES OF IDENTIFYING POTENTIAL CAP ELIGIBLE CUSTOMERS. HE STATES, "THE SOFTWARE I RECOMMEND THAT PEOPLES USE IS NOT NEW, BUT IS *EXISTING* SOFTWARE USED BY THE COMPANY."[4] WOULD YOU LIKE TO RESPOND TO THIS STATEMENT?

A. Yes. Mr. Colton implies that the Company can easily 'turn on' this functionality and begin using it to identify potential low income customers. While the suggested functionality may be available in Verint, it would take considerable dedicated time, effort and expense to begin using the software for this purpose. It is important to note that the Company already uses a dedicated phone queue for customers that are calling to inquire about universal service programs. All outreach materials, including information on the Company's website pertaining to programs, refers customers to call 1-800-400-WARM (9276). This phone

[4] Colton, Page 13, lines 3 and 4.

line is received in our main call center on an independent queue that identifies to the answering agent that the caller is seeking assistance or may be income eligible for, low income programs.

Q. WITNESS GELLER STATES, "PEOPLES SHOULD COMMIT TO THE IMMEDIATE RELEASE OF ALL IMPROPERLY HELD SECURITY DEPOSITS, AND THE IMPLEMENTATION OF A POLICY THAT WILL ENSURE FULL COMPLIANCE WITH THE TERMS OF THE 2018 RATE CASE SETTLEMENT."[5] PLEASE RESPOND.

A. First, I would like to assure Mr. Geller that all security deposits were reviewed and any security deposits identified on low income accounts were immediately released. The process to review deposits on a regular basis, in compliance with the 2018 rate case settlement, has been implemented. Further, employee training to reinforce the policy to ensure future security deposits are not requested from low income customers and applicants has been implemented.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

II. RATE IMPACT ON LOW INCOME HOUSEHOLDS 4

III. LOW INCOME CUSTOMER SERVICE ISSUES 17

IV. RATE DESIGN 36

V. CONCLUSION 40

CAUSE-PA STATEMENT 1
PREPARED DIRECT TESTIMONY OF HARRY S. GELLER

I. INTRODUCTION

Q: Please state your name, occupation, and business address.

A: My name is Harry S. Geller. I am an attorney. I retired as Executive Director of the Pennsylvania Utility Law Project (PULP), but have maintained an office at 118 Locust St., Harrisburg, PA 17101, for the purpose of providing consulting services and assistance to low income individuals and the organizations which represent them in utility and energy matters.

Q: Briefly outline your education and professional background.

A: I received my B.A. degree from Harpur College, State University of New York at Binghamton in 1966, and a J.D. degree from Washington College of Law, American University in 1969. Upon graduation from law school, I worked at several organizations dedicated to serving low income households. Beginning 1988, I served as the Executive Director of PULP, a statewide legal aid project dedicated to protecting the rights of low income utility customers. At PULP, I represented low income individuals to resolve issues impacting their ability to maintain energy and utility services to their homes and supported organizations advocating for improved utility access and affordability. I also consulted and co-counseled on a wide variety of individual utility consumer cases, and participated in multiple task forces, work groups and advisory panels, including serving as chair of the Department of Human Services' LIHEAP Advisory Committee and the Pennsylvania Public Utility Commission's Consumer Advisory Committee. I frequently trained communities, legal aid staff, and advocacy groups across Pennsylvania on a range of utility and energy matters affecting Pennsylvania's low income population. I retired from PULP on June 30, 2015. Since that time, I have continued to provide consulting services for PULP and its clients,

as well as other organizations serving the low income community. In sum, I have over 50 years' experience working on behalf of households in poverty, including the past 30 years focusing specifically on utility and energy issues affecting low income consumers. My resume is attached as Appendix A.

Q: Please describe the focus of your work over the past fifty years, including relevant work experience on issues of low income families' ability to afford essential services such as utilities?

A: Through the entirety of my career, I have represented low income individuals and organizations serving low income populations in a wide variety of legal matters, including family law, public benefits, unemployment compensation, utility shut-offs, debtor/creditor, and housing-related disputes. Over the past 30 years, my focus has been to ensure that low income households can connect to, afford, and maintain utility and energy services.

In all these legal matters, I worked almost exclusively on behalf of individuals and households that subsist on incomes at or below 150% of the Federal Poverty Level (FPL). Through this work, I have had a close view of the daily lives of countless of our poorest citizens. I have spent thousands of hours assisting clients, combing through their budgets to see whether it is even possible to make ends meet. Over the years, I have consistently seen the near total absence of the ability of low income families to afford the most basic monthly necessities with the incomes they have, even assuming heroic self-control and conscientious budgeting and spending. Every month, my clients faced the stark reality of having to choose which bills they can forgo with the least drastic consequences.

Q: Have you testified in any proceedings before the Pennsylvania PUC?

A: Yes. I have presented testimony in many proceedings before the PUC. I have included a complete list in my resume, which I have attached as Appendix A.

Q. For whom are you testifying in this proceeding?

A. I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your testimony?

A: CAUSE-PA intervened in this proceeding to ensure that the proposed rate increase, rate design, and tariff changes will not adversely affect the ability of low income customers of Peoples Natural Gas Company, LLC (Peoples or the Company) to connect to, maintain, and afford natural gas service, which is essential for heating, cooking, and hot water – all critical components to a safe and healthy home.

In furtherance of these stated intentions for intervention, the purpose of my testimony is to assess Peoples' existing and proposed rates, tariff, rules, procedures, and programs to determine whether they are just, reasonable, and appropriately designed to ensure that low income Pennsylvanians within Peoples' service territory are able to equitably access and maintain safe and affordable utility services.

Q: How is your testimony organized?

A: My testimony is divided into five sections. After my section I introduction, in section II, I discuss the financial impact that Peoples' proposed residential rate increase will have on its low income ratepayers. In section III, I discuss customer service issues affecting low income customers, and the need for critical improvements to customer service policies and protocols to ensure equitable access to service for vulnerable populations in Peoples' service territory. In

section IV, I will discuss Peoples' proposed rate design including its proposed substantial increase to the residential fixed customer charge and its proposed Weather Normalization Adjustment charge (WNA). Finally, in section V, I will summarize the recommendations and proposals which I provided throughout my direct testimony.

II. RATE IMPACT ON LOW INCOME HOUSEHOLDS

Q: Please summarize Peoples' requested rate increase as it applies to residential customers.

A: Peoples' proposed rate increase is estimated at approximately $156.0 million and seeks to consolidate the tariffs of Peoples Natural Gas Division (PNG) and Peoples Gas Division (PG). If the Commission was to approve Peoples' full request, the total bill for PGND residential customer using 80 Mcf per year would increase from $73.16 to $88.79 per month or by 21.4% and the total bill for a PG residential customer using 80 Mcf per year would increase from $84.00 to $90.35 per month or by 7.6%.[1]

The dollar increase for individual customers depends on each customer's level of usage. However, a substantial portion of the impact of Peoples' proposed rate increase for residential customers comes from a large increase to the fixed monthly service charge. Peoples proposes to increase its residential customer charge from $14.50 in PNG Division and $15.75 in PG Division to $21.50 across both divisions, meaning a $7.00 (48%) per month increase for PNG Division customers and $5.75 (36.5%) for PG division customers.[2]

[1] Rate Filing Cover Letter
[2] Ex. DF-2.

Q: What level of income qualifies a household as a "low income"?

A: With some exceptions, most utility assistance programs require households to have income that is not greater than 150% of the federal poverty level (FPL) to qualify. The FPL is a measure of poverty based exclusively on income and household size, but not the composition of the household (i.e., whether the household consists of adults or children) or geography. As a baseline, in 2024, a family of four at 150% FPL has a gross annual income of just $46,800.[3] This is insufficient income to support a family of this size and is substantially less than a household this size needs to meet their basic expenses in Pennsylvania.[4]

The Commission's definition of "low income customer" is correlated to the nationwide FPL and thus does not capture all customers residing in Peoples' service territory whose income is inadequate to afford basic needs. To assess actual levels of economic hardship across a given region, poverty experts often use the Self Sufficiency Standard - a benchmark developed to determine how much income a household needs to afford life's most basic necessities (food, rent, clothing, medicine/medical care, childcare, utilities, transportation, and taxes) without assistance.[5] Unlike the federal poverty level, which does not change based on geographic location or family composition, the Self Sufficiency Standard measures the income necessary to meet a family's basic needs based on average costs at the county level. In 2021, the average Self Sufficiency Standard for a family of four (two adults and two school-aged children) living in the counties served by Peoples' (both PG and PNG divisions) was $61,533. This requires an income of $14,733 per year

[3] U.S. Dept. of Health and Human Services, 2024 U.S. Federal Poverty Guidelines, available at https://aspe.hhs.gov/topics/poverty-economic-mobility/poverty-guidelines
[4] Self Sufficiency Standard, http://www.selfsufficiencystandard.org/Pennsylvania.
[5] Id.

more than a four-person household with income at 150% FPL makes in a given year, leaving these families with a budget deficit of approximately $1,227.75 per month.[6]

Most of Peoples' low income customers do not have income that is anywhere close to the Self Sufficiency standard – or the Commission's low income threshold at 150% FPL. The average annual income for Peoples' currently identified confirmed low income customers is $19,576 - and is just $19,145 for Peoples' customers currently enrolled in its Customer Assistance Program (CAP).[7]

Q: How does Peoples assess how many low income customers are in its service territory?

A: Like other large regulated public utilities in Pennsylvania, Peoples tracks its low income customer population two ways: "*estimated low income customers*" and "*confirmed low income customers*." However, Peoples also maintains a different, internal definition of confirmed low income customers that is narrower than, and somewhat conflicting with, the Commission's definition of the same term.[8] As I will further explain later in discussing the identification and enrollment of low income customers in universal service programs,[9] the operation of Peoples' internal definition of low income customers adds additional confusion to the ability to accurately measure the number of low income customers in Peoples' service territory.

Section 62.2 of the Commission's regulations defines the term "confirmed low-income residential customer account" as:

> Accounts where the NGDC has obtained information that would reasonably place the customer in a low-income designation. This information may include receipt of LIHEAP funds (Low-Income Home Energy Assistance Program), self-certification by the customer, income source or information obtained in § 56.97(b) (relating to procedures upon rate-payer or occupant contact prior to termination).[10]

[6] See id. (2021 Pennsylvania Data Set).
[7] CAUSE-PA II-8.
[8] See 52 Pa. Code §62.2.
[9] See infra pp. 6-10, 16-23.
[10] 2022 Universal Service Report at 3, 7.

The Commission's annual Universal Service and Collections Performance Report (herein Universal Service Report) further clarifies that "confirmed low income customers" are those for whom the utility has "obtained information that would reasonably place them within this FPIG level" and the data is reported as "an average of the 12 months of month-end data" reported by the utility.[11] According to the Commission's 2022 Universal Service Report (the most recent report available), Peoples reported to the Commission that it had 108,055 confirmed low income customers in 2022, representing 18% of its residential customer class.[12]

Aside from its reporting to the Commission, Peoples maintains a much more restrictive internal definition of confirmed low income customers, counting only those that are actively enrolled in CAP or who have received a Low Income Home Energy Assistance Program (LIHEAP) grant in the past 24 months.[13] According to this internal definition, Peoples only classified 52,973 customers as low income – based on the average count on the last day of each month of 2022.[14] This accounts for *less than half* of the customers the Company reported to the Commission as "confirmed low income" during this same period.[15] Peoples used this restrictive definition to respond to discovery questions, which I believe results in a significant undercount of Peoples' low income customers.[16]

This inconsistency and undercounting detrimentally impacts the ability of customers to access certain protections, such as the exemption of low income customers from the collection of security deposits, which is based on customers status as confirmed low income customers.[17] It also

[11] Id. at 7.
[12] Id.
[13] CAUSE-PA II-3.
[14] CAUSE-PA II-4.
[15] 2022 Universal Service Report at 7.
[16] CAUSE-PA IV-6.
[17] 52 Pa Code § 56.32(e).

makes it more difficult to analyze Peoples' universal service program performance relative to its universal service reporting data and the reporting data of other NGDCs.

Notably, Peoples' definition of confirmed low income customer is even more restrictive than the definition used by Philadelphia Gas Works (PGW), which the Commission deemed as a flawed interpretation of the Commission's regulation. In a recent decision, the Commission found that PGW's process for identifying low income customers was flawed, stating: "PGW's reading of the confirmed low income designation appears to limit the pool of Confirmed Low-Income Customers by only counting customers enrolled in CRP, receiving LIHEAP, and on low-income payment agreements."[18] The Commission pointed to section 62.2 of the regulations, explaining that the term is broadly defined and that the enumeration of examples provided therein "does not imply the exclusion of others if the information is obtained by the Company and would reasonably place the customer in a low income designation."[19]

I recommend that Peoples adopt a consistent, broader definition of confirmed low income customers consistent with the Commission's regulation 62.2, including any information provided by the customer that reasonably places the customer in a low income designation. Such information should include, at a minimum, collection of customer information through the income and CAP screening process that I recommend later in my discussion about CAP enrollment,[20] as well as:

- Enrollment or participation in a universal service or energy conservation program (CAP, LIURP, Hardship Fund, or CARES.
- Receipt of a cash or crisis LIHEAP grant.
- Receipt of a other emergency utility assistance.

[18] Pa. PUC v. PGW, R-2023-3037933, Final Order at 221 (Entered Nov. 9, 2023).
[19] Id.
[20] See infra p. 28.

- Indication by the customer of inability to pay current bill and/or requests for income based payment arrangements.
- Contact immediately prior to termination.
- CARES contacts and other referrals to low income programs.
- Self-certification by the customer.
- Income information received based on request for a medical certificate.

For the purposes of evaluating the actual number of low income customers in Peoples' service territory, the "estimated low income customer" count, developed by the Commission's Bureau of Consumer Services (BCS) and reported by Peoples to BCS, presents a more accurate and reliable picture of Peoples' low income consumers. To develop its estimated low income customer count, Peoples uses a Household Poverty file provided by BCS, based on census data, to estimate its low income customer count.[21] Peoples multiplies the percentage of residents in each county with income at or below 150% FPL by the company's total count of residential customers to estimate the likely number of low income customers in its service territory.[22] As of January 31, 2024, Peoples reported 135,425 estimated low income customers in PNG division (23% of residential customers) and 13,048 in PG division (22% of residential customers).[23] In total, as of January 31, 2024, Peoples had 148,473 estimated low income customers across both divisions.

Both the estimated and confirmed low income customer counts that Peoples reports to BCS reflect the fact that a substantial percentage (between 18-23%) of Peoples customers have income at or below 150%. However, Peoples' estimated low income customer count, as reported to BCS, is a more appropriate measure of the number of low income customers in its service territory for

[21] See CAUSE-PA II-12.
[22] Id.
[23] Id.; see also CAUSE-PA II-7 (595,138 residential customers PNG division customers and 59,728 residential PG division customers as of Jan. 31, 2024).

evaluating its universal service enrollment and measuring the need for low income universal service assistance in its service territory.[24]

Consistent with the Commission's recent decision in the PGW case, I recommend that Peoples be required to apply its estimated low income customer count, using the methodology developed by BCS, to assess the impact of rates on its low income customers, to evaluate the adequacy and effectiveness of its universal service programs to serve the needs of its low income customer base, and to make adjustments to its outreach and educational efforts to improve its reach for low income consumers.[25] These estimated numbers should form the basis of the budget projections within the Company's USECP.

Q: How would Peoples' proposed rate increase impact low income households?

A: Peoples' proposed rate increase will worsen existing energy insecurity, placing many low income families at risk of deep and lasting consequences to their health, safety, and wellbeing and negatively impacting the communities in which they live and work. As I explained earlier, low income families lack sufficient income to afford basic necessities without assistance.

To contextualize the impact of the proposed increase on low income households, it is helpful to look at the relative energy burden (the percentage of income a household pays for energy costs) of low income households. To be affordable, a household's total housing costs – *including*

[24] See 52 Pa. Code § 62.5 ("(xiii) The total number of low-income households. NGDCs may estimate this number using census data or other information the NGDC finds appropriate.").

[25] See Pa. PUC v. PGW, R-2023-3037933, Final Order at 221-222 (Ent'd Nov. 9, 2023):

> Next, we also agree with the ALJs' conclusion that the BCS census-based estimated low-income count, which is collected and published by the federal government and readily accessible to PGW, falls within the scope of information that would reasonably place the customer in a low-income designation under Section 62.2. Additionally, we **find this data to be a more accurate tool for assessing the number of eligible customers and the effectiveness of PGW's universal service program participation and outreach than PGW's current methodology**.

utility costs - should account for no more than 30% of the household's total income.[26] But across Pennsylvania, households with income at or below 150% FPL spend as much as 29% of their income on *energy costs alone*.[27] In comparison, BCS estimates that the energy burden of Pennsylvania's residential customers as a whole (excluding those enrolled in a Customer Assistance Program (CAP)) is roughly 4%.[28]

Energy insecurity resulting from high energy burdens impacts roughly 1 in 4 Pennsylvania households. According to the United States Census Bureau's Household Pulse Survey, roughly 25% of Pennsylvania households were unable to afford their home energy bills in 2023, compared to 23% nationwide.[29]

High energy burdens, and resulting energy insecurity, can have a profound impact on families – causing many to forego food, medicine, and other basic necessities in order to maintain energy services to their home. According to the Energy Information Administration (EIA) Residential Energy Consumption Survey (RECS) released in 2022, 27.2% of United States residents reported experiencing energy insecurity; 19.9% reported reducing or forgoing food or medicine to pay for energy costs; and 10% reported leaving their homes at unhealthy temperatures because they could not afford to pay for energy.[30] Importantly, energy insecurity is more

[30] United States Energy Information Administration, 2020 Residential Energy Consumptions Survey, Table HC11.1 Household energy insecurity, 2020 available at: https://www.eia.gov/consumption/residential/data/2020/hc/pdf/HC%2011.1.pdf .

pronounced for low income Black families. EIA's RECS data revealed that 52% of Black and African American households experience energy insecurity, compared to 23.2% of white households – and nearly 40.2% of Black and African American households report foregoing food or medicine to pay energy costs, compared to 16.8% of white households.[31] These disparities are driven in large part by inequities in housing quality and, in turn, home efficiency.

There is no reason to believe that low income households within People's service territory fare any better than the state and national averages. Given the high rate of payment trouble and service termination affecting its low income customers, discussed below, I am deeply concerned that disparities in energy insecurity across class and race divisions will be exacerbated by Peoples' proposal to substantially increase rates. It is imperative that all necessary measures be taken to mitigate the affordability challenges facing Peoples' low income customers, especially in light of its current rate proposal.

Q: Is there evidence that low income customers cannot afford Peoples' service at current rates?

A: Yes. There are strong indicators that Peoples' gas service is already unaffordable for low income households. A vastly disproportionate percentage of Peoples' payment troubled residential customers are low income.[32] In response to discovery, Peoples reported that, as of January 2024, it had 25,057 payment troubled residential customers across both divisions, of which 10,467 (42%) were confirmed low income customers. [33] These 10,467 payment troubled customers accounted

[31] Id.
[32] CAUSE-PA II-16, II-17 ("Peoples identifies a missed payment on a payment arrangement as 'payment troubled.'").
[33] CAUSE-PA II-16 (For PNG division, 9,779 out of 23,082 payment troubled residential customers were confirmed low income. For PG division, 688 out of 1,975 payment troubled customers were confirmed low income.); see also CAUSE-PA II-17 (Peoples identities a missed payment on a payment arrangement as "payment troubled.").

for **20%** of Peoples' 51,433 confirmed low income customers that month.[34] This high rate of payment trouble among confirmed low income customers stands in stark contrast to the 4**%** of Peoples' residential customers who were payment troubled during that same month.[35]

This large discrepancy in the rate of payment trouble among Peoples' low income customers demonstrates that its' low income consumers already struggle to pay for gas service and will likely experience increased payment trouble if the proposed rate increase is approved without taking necessary measures to mitigate the impact of the increase on low income households.

Q: Would the proposed rate increase worsen the threat of termination for low income customers?

A: Yes. Peoples' low income customers already have a markedly higher rate of termination compared to residential customers as a whole. Using Peoples' 2023 numbers, despite comprising only 7.9% of residential customers, [36] confirmed low income customers accounted for 17.4% of residential terminations.[37] Table 1 shows the termination rates among Peoples residential customer categories:

[34] See CAUSE-PA II-4 (46,894 confirmed low income in PNG and 4,539 confirmed low income in PG as of Jan. 2024).
[35] See CAUSE-PA II-16 (Jan. 2024 payment troubled residential customers: 23,082 for PNG and 1,975 for PG.) See also CAUSE-PA II-7 (595,138 PNG residential customers and 59,728 PG residential customers as of Jan. 2024).
[36] OCA IX-2.
[37] CAUSE-PA II-13

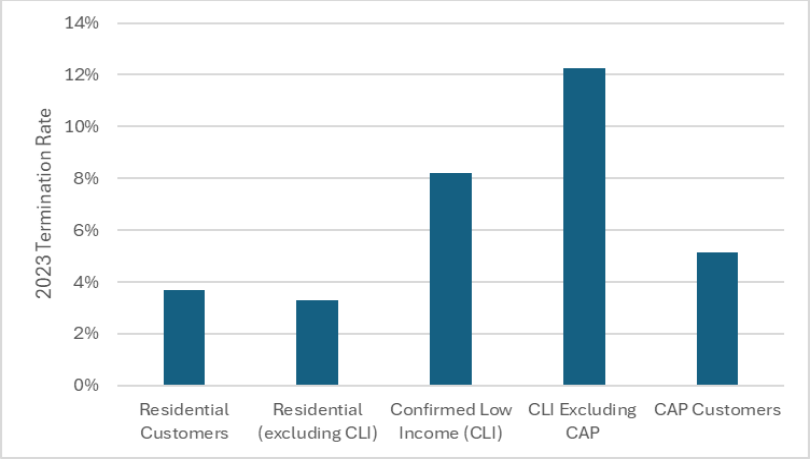
Table 1 – 2023 Peoples Residential Termination Rates

	Residential Customers	Residential (excluding CLI)	Confirmed Low Income (CLI)	CLI Excluding CAP	CAP Customers
Customers[38]	653,651	602,653	50,998	21,873	29,125
Terminations[39]	23,959	19,780	4,179	2,679	1,500
Termination Rate	4%	3%	8%	12%	5%

In 2023, Peoples' confirmed low income termination rate was approximately 8% and, for confirmed low income customer who were not enrolled in CAP, the termination rate was 12%.[40] Thus, termination rates for low income customers, especially those not enrolled in CAP, were far higher than termination rates for residential customers who were not confirmed low income.[41]

The following chart more clearly demonstrates the large disparity in termination rates among Peoples residential customer groups.

Chart 1 – Peoples 2023 Residential Termination Rates



[38] As of Dec. 31, 2023. See CAUSE-PA II-4, II-5, II-7.
[39] CAUSE-PA II-13.
[40] CAUSE-PA II-4, II-13(50,998 confirmed low income customers across both divisions as of Dec. 2023. 4,179 confirmed low income terminations); CAUSE-PA II-7 (CLI non-CAP customers: 19,632 PNG, 2,241 PG (Total 21,873)); CAUSE-PA II-13 (CLI non-CAP terminations: 2,313 PNG 366 PG (2,679 Total)).
[41] CAUSE-PA II-7, II-13 (653,651 residential customers across both divisions as of Dec. 2023. 23,959 residential terminations).

The disparity in involuntary termination rates for Peoples' low income customers underscores the need to improve rate affordability by further strengthening the availability of assistance for low income consumers through its universal service programs to help mitigate the impact of any potential rate increase.

Q: How does the involuntary termination of gas service impact a household?

A: Involuntary termination of gas service can have a deep and lasting impact on the health and wellbeing of the entire household and the surrounding community. When service is terminated, households are exposed to unsafe temperatures, which can create or exacerbate health conditions, and disrupts family unity.[42] Young children in households experiencing energy insecurity are also more likely to face housing and food insecurity.[43] Children in families facing energy insecurity have greater odds of poor health and developmental problems.[44] The lack of water heating can also prevent proper sanitation and hygiene,[45] And, when a family cannot use their stove to prepare meals at home, it adds significant costs to purchase prepared food. Following involuntary termination, renters often face eviction and/or termination of public housing assistance. Involuntary termination is also a common catalyst to homelessness, as inability to reconnect to service at a new address can form the basis for denial of public or private housing.[46]

Involuntary terminations are also dangerous to the physical safety of the household and their surrounding community. When a family is unable to use a primary heating system, they often resort to dangerous, high usage / high cost heating methods – such as electric space-heaters, electric stoves, and/or portable generators – which increases the risk of carbon monoxide poisoning and house fires.[47] Heating equipment is a leading cause of fires in U.S. homes.[48] Space heaters are most often responsible for home heating equipment fires, accounting for more than two in five fires, as well as the vast majority of the deaths and injuries in home fires caused by heating equipment.[49]

As of February 2023, Peoples reported that at least 60 of its gas heating homes across both divisions were *known* to be without a central heating source in the winter months, and at least 19 households were *known* to be using a potentially unsafe alternative heating source.[50] This is dangerous to the life and health of the individual family and the surrounding community, and is driven primarily by the inability of that family to afford the cost of service. Increasing the cost of service and the affordability gap, without concurrently providing strong mitigation will exacerbate the health and safety consequences to Pennsylvania's most economically vulnerable households, which are disproportionately single parents with young children, people of color, seniors, and people with a disability.[51]

Peoples must take steps to protect its most vulnerable customers from the harsh consequences of its proposed rate increase. I will make several recommendations later in my testimony that will enable Peoples to better protect these vulnerable customers.

III. LOW INCOME CUSTOMER SERVICE ISSUES

a. Low Income Security Deposit Prohibition

Q: You previously indicated that Peoples' methods for tracking confirmed low income customers detrimentally impacts the ability of customers to access certain protections, such as the exemption of low income customers from the collection of security deposits. Why?

A: Section 56.32(e) of the Commission's regulations prohibits utilities from collecting security deposits from customers who are confirmed to be income eligible for its customer assistance programs.

According to the settlement in Peoples' last rate case, Peoples agreed:

> Peoples Natural agrees to automatically review its residential accounts at least once every six months to ensure it is not holding deposits for customers who are confirmed low income. If it discovers that deposits are being held, Peoples Natural will refund those deposits to customers within 30 days.[52]

Peoples indicated in response to discovery that it does not have a process to automatically return security deposits to confirmed low income customers other than those who enroll in CAP.[53] I understand from counsel that the legal issues related to Peoples noncompliance with this settlement term will be addressed in briefing, but it has been nearly five years since Peoples agreed to implement this process and they have apparently failed to comply. Based on Peoples' multiple inconsistent definitions of confirmed low income customer, it is difficult to determine whether

[52] Pa. PUC v. Peoples, R-2018-3006818, Joint Petition for Approval of Settlement Stipulation at ¶ 56 (Submitted Jul. 9, 2019).
[53] CAUSE-PA I-8.

Peoples is actually complying with the regulation and its settlement obligations regarding which customers are granted the security deposit exemption. For example, in response to CAUSE-PA's first set of interrogatories, Peoples indicated that it only returns security deposits "as a condition of participating in CAP" or "customer notification of a LIHEAP grant."[54] However, when asked later whether the Company was holding security deposits from any customer who meets the reporting definition of CLI that Peoples uses for reporting universal service data to the Commission, the Company responded that "The Company is not holding any deposits for customers meeting this definition."[55] The Company has not clarified any process for screening for low income security deposits other than enrollment in CAP and receipt of LIHEAP funds.

I note here that the Commission has issued explicit guidance on this issue and was clear that a low income household does not need to enroll in CAP or another universal service program for the prohibition on security deposits to apply.[56] In its Attachment A to its Ch. 56 Rulemaking Order, the Commission clarified that the prohibition on collecting security deposits from low income customers is "referring to eligibility based upon the customer's household income – *not on other miscellaneous eligibility criteria that can vary by utility*."[57] The Commission also stated:

> Regarding the concerns expressed about this same section by LICRG that it is eligibility and not actual enrollment into CAP that determines the customer's exemption from deposit requirements, we agree and point out that ***this section specifies "eligible," not "enrolled" or "participating."*** We think this language is sufficient direction that the customer only has to be "eligible" and not actually enrolled in CAP to be exempt from a deposit request.[58]

[54] CAUSE-PA I-8.
[55] CAUSE-PA IV-7.
[56] 52 Pa. Code § 56.32(e).
[57] Rulemaking to Amend the Provisions of 52 Pa. Code, Chapter 56 to Comply with the Amended Provisions of 66 Pa. C.S. Ch. 14, L-2015-2508421, Final Rulemaking Order, Attach. One at 48 (Feb. 28, 2019).
[58] Id. (emphasis added).

The Commission also requires both verbal notice of the exemption to be provided to applicants and customers *at the time the security deposit is assessed*, as well as instructions for how the applicant or customer can verify income.[59]

The imposition of a security deposit can pose a huge barrier to low income customers who already struggle to connect to and maintain service. As I explained above in addressing Peoples confirmed low income customer count, there are many more ways that a customer can confirm they are income eligible aside from actual CAP and LIHEAP enrollment. While I believe all eligible households should be encouraged to enroll in CAP and participate in LIHEAP, these are neither prerequisites nor the only circumstances which trigger the statutory and regulatory prohibition. Further, as Peoples offers its Extended Customer Assistance Program (E-CAP) to customers between 151-200% FPL, any customers indicating they have income in this range should be considered "income eligible for a customer assistance program" and should also be exempt from security deposit requirements.[60]

I recommend that Peoples apply the security deposit exemption in all circumstances where a customer has indicted low income status. The Commission should require Peoples to develop an automated process to immediately refund all security deposits held for customers which meet the definition of "confirmed low income customer" under section 62.2, consistent with the discussion of this term, above. Peoples should be further ordered to inform all consumers of the prohibition at the time a security deposit is assessed and provide information about how Peoples gathers income information to prevent imposition of a deposit and what customers can do to access the exemption if it is not automatically applied. Peoples should be required to explain the low income security deposit prohibition and request income information through the course of any

[59] Id.; see also 52 Pa. Code §§ 56.36, 56.286.
[60] 52 Pa. Code § 56.32(e).

communication (written or verbal) regarding a security deposit. This proactive approach would help ensure that Peoples is not unlawfully assessing and collecting security deposits from economically vulnerable households.

b. Customer Assistance Program (CAP)

Q: Please briefly describe Peoples Customer Assistance Program (CAP).

A: Peoples Customer Assistance Program provides a discounted bill and arrearage forgiveness to low income customers at or below 150% FPL. Peoples also offers an "Extended CAP" or "E-CAP" program for customers between 151-200% FPL. Peoples' CAP rates are calculated on a monthly basis to determine the lesser of the participant's average monthly bill or percentage of income.[61] CAP accounts are subject to a minimum bill of $25.[62] Peoples' CAP percentage of income payments (PIP) are tiered based on household income as follows:

- 0 to 50% FPL - 4%
- 51 to 100% FPL - 5%
- 101 to 150% FPL - 6%
- 151 to 200% FPL - 11%[63]

Q: How will the proposed rate increase affect CAP customer bills?

A: CAP customers who receive the average CAP rate bill will pay the full rate increase, up to their respective percentage of income rate.[64] In those cases, Peoples will switch those customers into the percentage of income rate through their monthly CAP rate review.[65] For customers currently paying the percentage of income payment amount, an increase to the average bill amount as a result of a change in rates would not impact their payment, but will increase and accelerate

[61] Peoples St. 9 at 3-4.
[62] Id.
[63] Id. at 4.
[64] CAUSE-PA II-1.
[65] Id.

the CAP shortfall (the difference between the customer's calculated usage bill and their CAP rate).[66] Peoples indicated in response to discovery that it does not actively track how many customers are enrolled in each CAP rate, so it is not possible to quantify the number of households currently receiving the average CAP rate that will be directly impacted by the rate increase or the financial impact these households will experience.[67] Nevertheless, while the availability of the percentage of income rate will help mitigate the impact for some CAP participants, CAP participants on the average bill CAP rate will pay higher rates and, in turn, the cost of the program will increase.

Q: Do you have concerns about the number of Peoples customers that are enrolled in Peoples' CAP?

A: Yes. Peoples' CAP can help mitigate unaffordability of rates and reduce payment trouble and terminations among vulnerable customers. Strengthening the availability of CAP and other assistance for low income consumers would help low income customers to better afford service and help mitigate the impact of any potential rate increase. However, Peoples' CAP is reaching only a small percentage of *confirmed* low income customers and an even smaller percentage of its *estimated* low income customers.

Peoples' CAP enrollment has declined by approximately 13% across both divisions since 2019.[68] As shown in Chart 1, PNG CAP enrollment increased during the pandemic before significantly declining from a high of 35,171 in June 2021, to its current low of 26,842 as of January 2024, which is substantially lower even than pre-pandemic levels.[69]

[66] Peoples USECP at 13.
[67] CAUSE-PA II-2.
[68] CAUSE-PA II-5 (29091 CAP customers across both divisions as of Jan. 2024; 33377 CAP customers across both divisions as of Oct. 2019).
[69] Id.

Chart 1 - PNG CAP Enrollment[70]

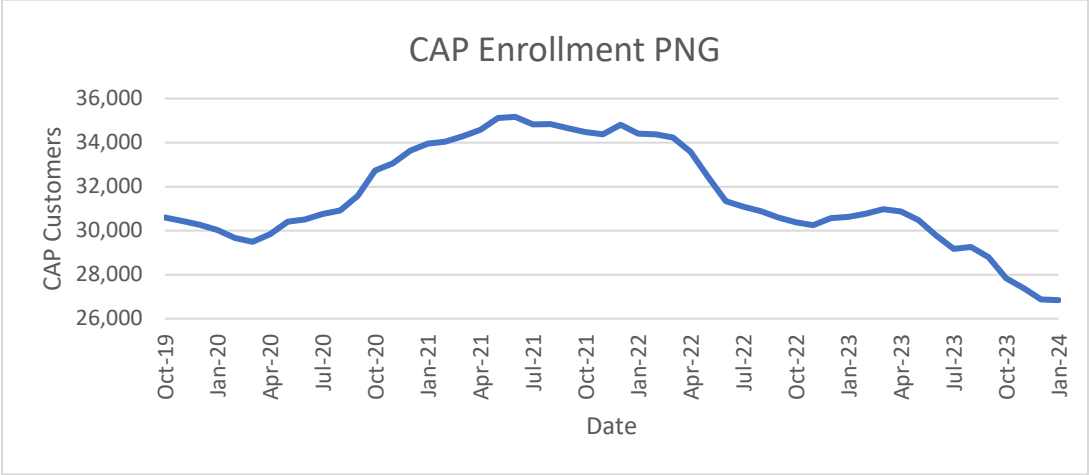

Chart 2 shows that PG division has followed a similar pattern, with CAP enrollment reaching a high of 3,012 in June 2021 and dropping to its current low below 2,250 in December 2023 and January 2024.[71]

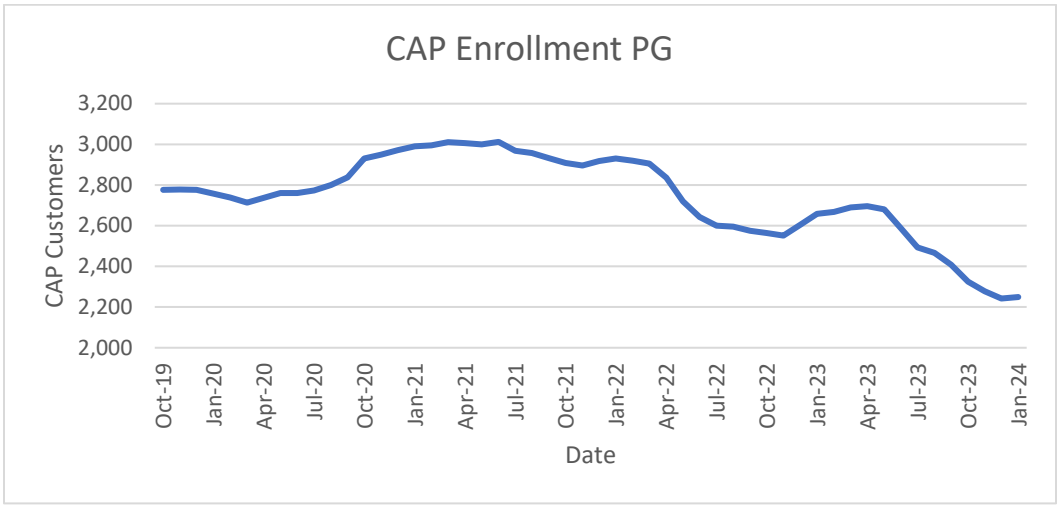
Chart 2 – PG CAP Enrollment[72]

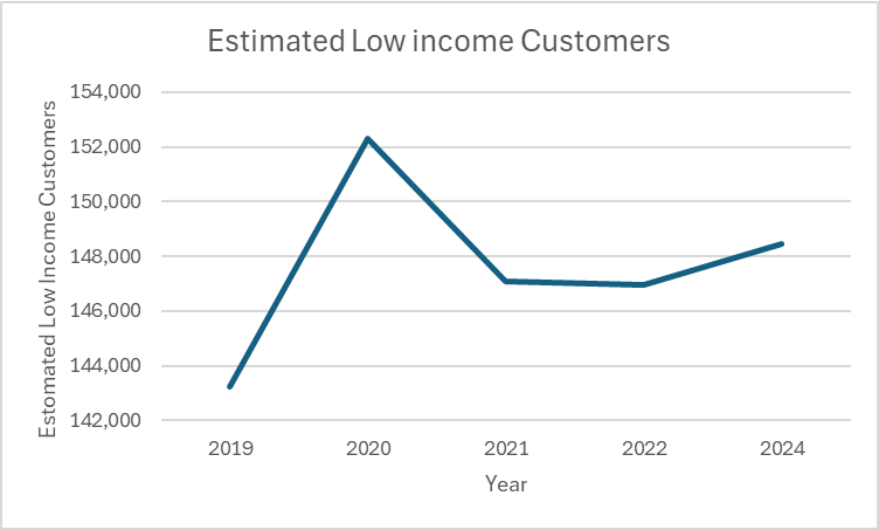


This steep decline in enrollment is especially concerning, considering that the number of estimated low income customers in Peoples' service territory has actually increased by

[70] Id.
[71] Id.
[72] Id.

approximately 4% since 2019.[73] Chart 3 shows that, while the spike of estimated low income customers due to the pandemic has come down from its high of 152,309 in 2020, Peoples' estimated low income count remains substantially higher than its pre-pandemic level.

Chart 3 – Peoples' Estimated Low Income Customers[74]



While some of the recent decline can be attributed to the reinstitution of CAP recertification requirements after the pandemic,[75] this does not explain why Peoples CAP enrollment is below pre-pandemic levels despite an increase in its low income population over that same period. The 29,091 customers enrolled in CAP as of January 2024 only account for 20% of Peoples' 148,473 estimated low income customers. ***Peoples must take immediate steps to increase outreach and enrollment of the remaining 80% of its estimated low income population that is not enrolled currently in CAP***. It is critical that Peoples address the disparate rates of payment trouble and terminations among low income customers, which will grow more pronounced if its substantial rate increase proposal is approved.

[73] See CAUSE-PA II-12 (148,473 as of Jan. 1, 2024 for PNG and PG combined); see also 2019 Universal Service Report at 7 (143,228 estimated low income customers for Peoples and Peoples Equitable combined).
[74] CAUSE-PA II-12 (148,473 as of Jan. 1, 2024); 2022 Universal Service Report at 10 (estimated low income customers 2020-2022); 2019 Universal Service Report at 7.
[75] See CAUSE-PA IV-3.

Q: Has Peoples proposed changes to its universal service programs as part of this rate case?

A: Yes. Peoples is proposing to remove the section 'Payments Toward Arrearage' from its tariff to reflect the change approved in the Company's most recent USECP to eliminate the $5 copay towards pre-program arrearages.[76] I strongly support this change, as it is in line with the Company's recent changes to its Universal Service and Energy Conservation Plan and the Commission's Final CAP Policy Statement Order. Elimination of the $5 CAP copayment will help CAP customers afford service by more closely aligning their bills with the customers' ability to pay. This will help CAP customers afford their monthly bill, which will help reduce low income terminations and, in turn, uncollectible expenses for the Company.

Peoples is also proposing to remove language from the tariff, which states 'Customers will automatically be enrolled in CAP if: a. the customer has defaulted on a payment arrangement, and b. the customer has received a LIHEAP payment within the past two years.[77] This provision refers to automatic enrollment, which the Company does not currently perform.[78]

Q: Do you agree with Peoples' proposal to eliminate its tariff provision that requires LIHEAP auto-enrollment?[79]

A: No. Considering the steep decline in Peoples' CAP enrollment, the *substantial* number of LIHEAP recipients who are not enrolled in CAP, and the struggles facing low income customers throughout its service territory, Peoples should be focusing on ways to simplify and improve CAP enrollment, not eliminating pathways to enrollment. This concern is especially true for low income customers who have already had their income vetted through the Department of Human Services'

[76] Peoples St. 9 at 6.
[77] Id. at 7.
[78] Id.
[79] See Peoples St. 9 at 7; Ex. RFB-2.

(DHS) income screening process for participation in LIHEAP. Peoples has clarified that customers receiving a LIHEAP grant are able to enroll in the program without providing income documentation, but that such enrollment is voluntary and initiated by the customer.[80] However, based on Peoples low and declining enrollment numbers, this alternative process has not proven effective enrolling LIHEAP recipients into CAP.

As of January 2024, Peoples reported 51,433 "confirmed low income customers" across both divisions, but only 29,091 were enrolled in CAP.[81] Thus, 22,342 (43%) of confirmed low income customers received LIHEAP funds but were not enrolled in CAP as required by its own tariff and Commission rules.[82] This means that these customers received LIHEAP grants and were certified to have income at or below 150% FPL, yet were not able to access the discounted bill and arrearage management benefits provided through Peoples' CAP.

Although the Company is currently unable to determine when this provision was added to the tariff and under what circumstances, Peoples' LIHEAP auto-enrollment provision dates back at least to Peoples' April 3, 2000 Tariff[83] and has remained in full force and effect since.[84] Peoples has not explained why it has not been following the rules in its own tariff for so many years. Peoples is required to follow the rules and procedures set forth in its Commission approved tariff. I understand from CAUSE-PA's counsel that the legal issues regarding Peoples' duty to follow the provisions of its tariff and provide the most advantageous rate to customers will be addressed through briefing.

[80] Peoples St. 9 at 7.
[81] CAUSE-PA II-4, II-5.
[82] CAUSE-PA II-7.
[83] CAUSE-PA IV-8.
[84] See 66 Pa.C.S. § 103.

While LIHEAP is a critically important program and provides life-sustaining assistance to those in need, it is not sufficient to remediate the affordability challenges facing Peoples' low income customers. In Pennsylvania, LIHEAP cash grants are intended to provide only supplemental assistance in the winter heating season, and is not enough to mitigate the financial harm of a rate increase. Furthermore, many customers designate their LIHEAP grant to their electric provider as a secondary or supplemental heating source. To date in the 2023-2024 LIHEAP season, the average LIHEAP Cash grant for low income gas customers is $364.[85] Peoples proposed rates would increase the annual bill for a typical PNG division customer (the vast majority of Peoples customers) by $187.56. Thus, the proposed rate increase alone would absorb more than half (51.5%) of the average LIHEAP cash grant for these customers. [86] After paying for the proposed increase, very little of the grant will be left to address existing affordability challenges.

Now is not the time for Peoples to close the door on LIHEAP auto-enrollment, especially in light of the Company's continued decline in CAP enrollment, the substantial number of Peoples customers who received a LIHEAP grant but were not enrolled in CAP, and Peoples' substantial proposed rate increase. Notably, the Commission recently approved a LIHEAP auto-enrollment program in UGI's electric division rate case.[87] According to the settlement in that case, once DHS begins sharing LIHEAP participant income data with utilities, UGI Electric will implement required modifications to its IT system and processes to use that data to automatically enroll non-

[85] See Appendix C, PA DHS, Energy Assistance Summary (EASUM), September 9, 2023 through March 14, 2024.
[86] See Rate Filing Cover Letter (The total bill for PGND residential customer using 80 Mcf per year would increase from $73.16 to $88.79 per month.).
[87] See Pa. PUC v. UGI Utilities, Inc. Electric Division, R-2022-3037368, Joint Petition for Approval of Settlement of All Issues at ¶ 60(c) (Submitted July 14, 2023).

shopping LIHEAP recipients into CAP, and to recertify income and eligibility for current CAP participants.[88]

For the reasons stated, the removal of the LIHEAP auto-enrollment provisions in Peoples' tariff is unwarranted, ill-considered, and ill-timed. However, I do recommend that Peoples amend the language in its tariff to further simplify auto-enrollment. Peoples' tariff currently states: "Customers will automatically be enrolled in CAP if: (a) the customer has defaulted on a payment arrangement, and (b) the customer has received a LIHEAP payment within the past two years."[89] Defaulting on a payment arrangement is not now and should not become a prerequisite to accessing simplified CAP enrollment. I recommend that, instead of removing the LIHEAP auto-enrollment process, Peoples keep its current tariff language but amend the language by removing the required payment arrangement default, which will make the process more effective at addressing the unmet need in Peoples' territory. I further recommend that Peoples be required to file a Petition to amend its USECP to permit auto-enrollment and auto-recertification, and to work with its USAG to develop the details of the program - including customer communications. Within 90 days of the final order in this case, Peoples should file a petition that includes amended budget projections, identifies a proposed process for auto-enrollment, and proposes any amendments to its USECP which are necessary to facilitate auto-enrollment.

All households automatically enrolled in CAP through this process should be marked as confirmed low income customers and eligible for reconnection waiver, security deposit exemption, and winter shutoff protections.

[88] Id.
[89] Tariff at 2nd rev. p. 37.

Taking this approach will help implement LIHEAP auto-enrollment in a useful and meaningful way to improve rate affordability, as opposed to the Company's proposal to simply remove it from the tariff, which would be counterproductive to the improvement of Peoples' CAP enrollment.

Q: Do you have other suggestions about how Peoples can improve CAP enrollment?

A: Yes. To more accurately identify and better serve its low income customer base, I recommend that Peoples screen all new and moving customers for income level at the time their service is established. For existing customers, Peoples should routinely screen for income on any non-emergency calls, and/or should inquire whether there has been any update to their income information already noted in their account. Upon establishing an online account, and once annually thereafter, customers should be given the opportunity to voluntarily self-disclose any changes to their income information. All customers identified as low income through this process should be referred for enrollment in Peoples' universal service programs. Consumers should be able to opt out of disclosing their income if they so choose but should first be informed that they may be eligible for lower rates or energy efficiency measures.

Improving the identification of low income customers, and better matching them to critical rate assistance and usage reduction services at the earliest opportunity is essential to improving Peoples' ability to provide just and reasonable rates and services to low income households – especially in light of Peoples' request to substantially increase residential rates through this proceeding. It would also help improve the ability of Peoples, the Commission, and stakeholders to assess Peoples customer service metrics – including its credit, collections, termination, reconnection, complaint, and universal service data – to determine whether and to what extent its rates, policies, and programs are just and reasonable in appropriately serving the needs of its low income customers.

c. Low Income Usage Reduction Program

Q: Please briefly describe Peoples' Low Income Usage Reduction Program (LIURP).

A: LIURP provides free weatherization and energy efficiency measures to low income, high usage households, including but not limited to a heating system clean and tune, energy audit, and air sealing and insulation.[90] The program is available to customers at or below 150% FPL and special needs customers with incomes between 151 and 200% FPL. PNG and PG divisions currently use different LIURP minimum usage thresholds of 140 Mcf and 120 Mcf respectively.[91] However, as both divisions are brought together under a single tariff, Peoples seeks to apply the lower 120 Mcf LIURP minimum usage threshold currently utilized by PG division to PNG as well. In 2023, the average usage for low income Peoples customers ranged between 78.5-107 Mcf of gas for the year.

Peoples' proposed 120 Mcf minimum usage threshold would require customers use between 12%-53% above average to qualify for LIURP. I recommend the Commission approve this proposal to adopt the 120 Mcf minimum usage threshold as it will make the program more accessible, which as I will explain further, is important to help the affordability challenges facing low income households.

Q: How can LIURP help low income customers address affordability challenges?

A: Peoples' LIURP is a critical universal service program designed to improve energy efficiency, bill affordability, reduce arrearages, and termination rates over the long term, and work in tandem with CAP to help reduce uncontrollably high usage attributable to home energy inefficiencies that low income households cannot afford to address on their own.[92] Peoples has

[90] Peoples St. 9 at 5; Peoples USECP at 20.
[91] Peoples St. 9 at 5.
[92] 52 Pa. Code § 58.1.

achieved high energy savings from LIURP, averaging about *20 percent* of the customers' pre-treatment natural gas usage.[93] Throughout Pennsylvania, gas heating customers who receive LIURP services achieve 14.5% energy reduction with average annual bill savings of $220 per year.[94] Bill reductions through comprehensive energy efficiency and conservation efforts improve affordability and help to ensure that low income customers remain connected to service at more affordable rates. It is especially important to improve the availability of LIURP to high usage families to mitigate the disproportionately high burden if Peoples' proposed rate increase is approved.

Q: Is Peoples LIURP adequately funded to mitigate the impact of the proposed rate increase?

A: No. Peoples' LIURP program could help mitigate the impact of its proposed rate increase on low income high-use households by installing a range of efficiency and weatherization measures to reduce unnecessarily high usage in low income households that cannot otherwise afford to adopt efficiency measures. But Peoples' LIURP is not adequately funded to meet the currently identified need of its low income customer base – let alone serve to offset the increased energy burdens resulting from its rate proposal in this proceeding.

Peoples' confirmed low income customers consistently have average usage that is *22-23% higher* average annual usage than residential customers who are not confirmed low income.[95] Table 2 shows the difference in average annual usage between these two subsets of customers.

[93] 2019-2024 USECP, Attach. A at 19.
[94] 2022 Universal Service Report at 57.
[95] CAUSE-PA II-14.

TABLE 2: Average Annual Customer Usage (Mcf)[96]

	2019	2020	2021	2022	2023
Confirmed Low Income	106.4	98.3	103.8	106.6	96
Residential excluding low income	87.3	80.7	84.7	86.7	78.5
Difference	22%	22%	23%	23%	22%

This disparity in usage is likely the result of disparities in access to efficient housing and heating equipment.[97] Considering that Peoples' LIURP can provide approximately 20 percent reduction of low income customers' pre-treatment natural gas usage, the program can and does help address this disparity in usage rates.[98]

In 2023, Peoples reported the lowest LIURP budget projected spending per residential customer of any NGDC. Table 3 shows 2023 projected LIURP spending per customer among all PA NGDCs.

Table 3: LIURP Spending Per Customer[99]

Utility	2022 Residential Customers	2023 Projected LIURP Spending	2023 Projected Monthly Spending Per Customer
NFG	196,741	$3,388,596	$1.43
PGW	487,336	$8,105,134	$1.39
Columbia	409,611	$5,893,673	$1.20
UGI Utilities – Gas	618,589	$3,964,350	$0.53
PECO-Gas	500,154	$3,150,000	$0.52
Peoples	**594,250**	**$3,466,437**	**$0.49**
Total / Industry Avg.	2,806,681	$27,968,190	$0.83

[96] CAUSE-PA II-14.
[97] Diana Hernández, Energy Insecurity And Health: America's Hidden Hardship, Health Affairs Health Policy Brief, (June 2023) ("The physical manifestations of energy insecurity include dated, malfunctioning, or nonexistent heating and cooling equipment; poor insulation; drafts; and reliance on older, less efficient lighting systems and domestic appliances such as refrigerators, stoves, and hot water heaters.").
[98] Ex. RFB-1, Attachment A at 19.
[99] 2022 Universal Service Report at 7, 54.

As this table demonstrates, Peoples had the lowest LIURP budget per capita in 2023 and well below the industry average. For example, Peoples budget is roughly on par with NFG's budget – yet NFG has roughly 400,000 (67%) fewer residential customers than Peoples.

Further, a substantial portion of Peoples' 2023 budget consisted of unspent rollover funds accumulated through the pandemic, when it was difficult to perform work inside homes. Table 4 shows Peoples LIURP budget, spending, and jobs completed as reported to the Universal Service Advisory Group (USAG) at its January 2024 meeting.

Table 4: USAG January 2024 LIURP Presentation[100]

	Peoples Natural	**Peoples Gas**	**Total**
2023 Spend	$3,469,514	$301,075	$3,770,589
2023 Completed Jobs	290	27	317
2024 Budget (including rollover)	$2,753,076	$511,410	$3,264,486
Current Annual Approved Budget	$2,750,000	$280,000	$3,030,000

As this table shows, Peoples spent $3,770,589 across both divisions in 2023. However, despite the demonstrated need for services, and the fact that Peoples has the lowest spending per capita among NGDCs in 2023, the lack of additional rollover funds means that the Company's LIURP budget will actually *decrease* by 13% to $3,264,486 for 2024.

As of 2020, Peoples estimated that it had approximately 12,832 customers eligible for LIURP services for its PNG division.[101] Since then, it has served approximately 2,000

[100] See Peoples' January 2024 USAG presentation, Attached hereto as Appendix D.
[101] 2019-2024 USECP, Attach. G. Notably, it is unclear how Peoples' estimated this figure, given the substantial deviation from the 23,923 LIURP-eligible customers identified in the needs assessment for its previous USECP; see Peoples 2015-2017 USECP, Attachment A, p. 2.

households.[102] However, the Company is proposing to lower the LIURP minimum usage threshold for PNG division, which will expand the potential number of eligible households. Even at its 2023 completion rate of 317 LIURP jobs per year, Peoples will not be able to serve an adequate number of households to address the identified needs within a reasonable amount of time, let alone at a 13% lower budget.

I strongly recommend that the Company increase its LIURP budget to address current and anticipated need for comprehensive usage reduction services. First, Peoples should increase their annual LIURP budget equal to the actual 2023 spend for each division (e.g., $3,469,514 for Peoples Natural Gas and $301,075 for Peoples Gas, in addition to the rollover from the prior year). In addition, to the extent the Commission approves any increase in residential rates, Peoples should further increase its annual LIURP budget for each division by a percentage equal to the approved residential rate increase. These adjustments to the LIURP budget would help to address current unmet need as well as increased need following any increase in rate.

d. Hardship Fund

Q: Please briefly describe Peoples' Hardship Fund.

A: Peoples' Hardship Fund is administered by Dollar Energy Fund and provides grants of up to $500 and is available for customers with income at or below 200% FPL.[103] Peoples' Expert Witness Rita Black also states that all customers receiving a hardship fund grant are then enrolled into Peoples' CAP.[104]

[102] Id. at 22.
[103] People's St. 9 at 4.
[104] Id.

Q: Is Peoples' Hardship Fund appropriately funded to address low income household arrearages?

A: No. As I have noted, I am concerned that Peoples' method of counting its confirmed low income customers is incorrect and results in an inadequate identification of at-need customers within its service territory, as well as a disproportionately high level of arrears and terminations among its low income customers. As of January 2024, despite making up just 7.9% of residential customers, confirmed low income customers (according to Peoples' narrow internal definition, which includes only customers who are enrolled in CAP and/or received a LIHEAP grant),[105] account for 25.7% of total dollars in debt.[106] Further, of the 53,931 residential customers in an active payment arrangement, 58% of those are confirmed low income customers. [107] Those confirmed low income customers carry 43.9% of the actual debt in dollars held by residential customers in an active payment arrangement.[108] As of January 2024, Peoples reported that the 6,283 of its confirmed low income customers, *excluding CAP enrollees*, are carrying arrearages.[109] The average debt of these customers is $492.24.[110]

As explained above, People's low income customers also face terminations at disproportionate levels compared to residential customers as a whole, evidencing a substantial unmet need for emergency assistance to maintain gas services to their home. If Peoples' proposed rate increase is approved, the need for hardship fund assistance will grow. As noted, Peoples' proposed rate increase, alone, accounts for over 50% of the average LIHEAP grant. This is true,

[105] CAUSE-PA II-3.
[106] CAUSE-PA II-20(1),(3).
[107] CAUSE-PA II-18(1),(3).
[108] Id.
[109] CAUSE-PA II-18(1), (4); CAUSE-PA II-19(1), (4).
[110] OCA IX-9(b).

also, of Peoples' Hardship Fund grants. It is imperative that the Commission take steps to expand Peoples' Hardship Fund to improve the availability of emergency grant assistance to those in need of emergency grant assistance to maintain gas service to their home.

Q: Do you have any recommendations regarding Peoples' Hardship Fund?

A: Yes. I recommend that Peoples increase its maximum grant amount and annual hardship fund budget, and that Peoples take additional steps to refocus the hardship fund program to reduce disproportionately high low income termination rates and more appropriately target its hardship grants to help customers most in need of assistance. This is particularly critical in light of Peoples' proposal to substantially increase rates.

First, I recommend that Peoples increase its maximum grant amount to $600. Raising the limit for the hardship fund will help further the explicit statutory purpose of universal service programs to assist low income customers to maintain gas service to their home – providing a greater level of relief to experiencing a hardship to prevent termination of service. Increasing the Hardship Fund grant amounts will also help ensure adequate relief is available following any increase in rates as a result of the present proceeding. The goal of the Hardship Fund – as with all universal service programming – is to assist low income families to maintain service to their home. Thus, I recommend that Peoples raise the maximum grant level to adequately address the level of arrears accrued by its low income customers and provide the emergency funds necessary to prevent terminations in light of increasing rates.

In addition to increasing the maximum grant amount, I also recommend that Peoples increase funding available for grant assistance. As explained above, low income customers already struggle to afford service and are at a greater risk of service termination compared to residential customers as a whole. Any increase to the cost of essential utility service, such as People's

currently proposed rate increase, will worsen these struggles and lead to an increased threat of involuntary termination – while at the same time eroding both the adequacy and effectiveness of Peoples' current maximum grant levels *and* available funding. I therefore recommend, in addition to increasing the grant amount, that the Commission require Peoples to increase funding for its Hardship Fund to address unaffordability felt by low income customers at both present and proposed rates.

At a minimum, I recommend that Peoples be required to increase its hardship fund budget by a percentage equal to any residential rate increase approved in this proceeding. This increased level of grant funding will help the program budget better keep pace with the cost of residential service and ensure that the policies, protections, and services which are currently in place to avoid termination are appropriately modified so that they are not as significantly reduced as a result of any approved rate increase.

IV. RATE DESIGN

a. Residential Fixed Customer Charge

Q: Please briefly describe Peoples' residential fixed customer charge proposal.

A: In its filing, Peoples seeks to consolidate the tariffs of PNG Division and PG Division and increase the fixed monthly residential customer charge from $14.50 in PNG Division and $15.75 in PG Division to $21.50 across both divisions.[111] This would be a 48% percent increase to the residential customer charge for PNG division customers and 37% for PG division customers.

[111] Ex. DF-2.

Q: How would Peoples' proposed increase to the fixed customer charge impact low income households?

A: This level of increase to the fixed charge will undermine the ability for consumers to control costs through energy efficiency and conservation. While most low income customers participating in a CAP are shielded – at least in part - from the full brunt of the rate increase, thousands of low income customers are not enrolled in CAP, and will experience a substantial hardship as a result of Peoples' proposed rate increase. As discussed, due to disparities in housing and heating system efficiency, low income households often have greater potential to reduce energy and gain cost benefits through comprehensive efficiency and conservation measures. Low income customers already struggle profoundly to pay for gas service and rely on the ability to offset high bills through conservation and usage reduction. Regardless of the level of household usage, any increase to the fixed charge erodes the ability of consumers to effectively deploy efficiency and conservation measures to achieve bill savings.

Q: Would Peoples' proposed increase to the fixed charge impact the effectiveness of its Low Income Usage Reduction Program (LIURP)?

A: Yes. Peoples' proposal to dramatically increase its fixed charge will undermine the regulatory goals for LIURP. The Commission's LIURP regulations explicitly provide that LIURP is intended to help low income customers to reduce their bills and, in turn, to "decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[112] Increasing

[112] 52 Pa. Code § 58.1 ("The programs are intended to assist low-income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs.").

the fixed customer charge at the level proposed by Peoples limits the ability of the LIURP program to help program participants who are not enrolled in CAP (or who are enrolled in CAP and pay the average bill rate) to achieve meaningful bill savings.

LIURP is effective at achieving these goals. In 2020, the most recent year where industry-wide data is available, LIURP saved an annual of $220 per year, or $18.30 per month, corresponding to an estimated percentage of 14.5%.[113] The ability to save money through energy efficiency is tied directly to a bill structure that bases costs on throughput. But as more residential customer costs are shifted to the fixed charge, the achievable bill savings – and the corresponding impact on bill payment behavior – will erode.

Q: Do you have any recommendations regarding Peoples' residential customer charge proposal?

A: Yes. Based on my analysis above regarding the effect of fixed charge increases on low income customers' ability to achieve bill savings through energy efficiency measures, I recommend that Peoples' fixed monthly customer charges remain static for both divisions.

b. Weather Normalization Adjustment Charge (WNA)

Q: Please briefly describe Peoples' proposed Weather Normalization Adjustment.

A: Peoples' proposed Weather Normalization Adjustment (WNA) is a bill adjustment applied to certain customer classes (including residential customers) from October 1 through May 31 that attempts to break the link between the revenue collected through the volumetric rate and the effects of variations in temperature.[114] Peoples claims that the WNA would provide "symmetric

[113] 2022 Universal Service Report at 57 (Estimated annual bill reductions are based on the average of the public utility results from each category of LIURP jobs completed in the program year, evaluated in following year, and reported in the year after that.)
[114] Peoples St. 3 at 16-17.

protection" to customers and the Company by protecting the utility from reduced revenue due to warmer weather - while also protecting customers from higher bills due to colder than normal weather.[115] However, in practice, the other WNAs implemented in Pennsylvania service territories have nearly always resulted in higher charges for residential consumers and shifted all risk of changing weather from utilities onto consumers.[116] Utility distribution rates are based on expected throughput during normal weather. When temperatures are warmer than normal, which they have been for the last several years, WNAs result in a higher bill for residential customers.

Q: Do you support Peoples' proposed adoption of a WNA in this proceeding?

A: No. Peoples' proposed WNA would prevent residential customers from realizing bill savings that result from warming weather trends and would shift all weather-related risk from the utility to the consumer. Low income customers struggle to afford service and need to retain every ability to realize bill savings due to reduced usage, even reduced usage due to changing weather.

As I explained earlier, the vast majority of low income customers in Peoples' service territory are not enrolled in CAP and are therefore not only already paying an unaffordable full tariff rate but will now have to pay extra, even if they use less gas for heat and would lose the opportunity to recognize bill savings resulting from reduced usage during warmer winters.

Residential customers will receive no practical benefit from implementation of the WNA. Any risk of increased bills due to colder than normal winters will likely be outweighed by the increasing frequency of warmer winters. Further, the risk of varying bills due to colder than normal winters can be mitigated by enrollment in CAP or budget billing. While Peoples touts that the WNA will produce more predictable bills, a more predictable but less affordable bill will not

[115] Peoples St. 15 at 55-56.

[116] See Pa. PUC v. Columbia Gas of Pa., Inc., R-2020-3018835, Columbia St. 3 at 17-18 (Submitted Apr. 24, 2020); see also Pa. PUC v. Philadelphia Gas Works, R-2017-2586783, PGW Annual WNA Reporting (filed Dec. 31, 2019; June 9, 2021; Jan. 6, 2022).

benefit low income customers who already struggle to afford service. Thus, I recommend that the Commission reject Peoples' proposed WNA.

V. CONCLUSION

Q: Please summarize your recommendations.

A: I have made several recommendations throughout my testimony, each with the goal of improving the services provided to low income households and ensuring that Peoples' low income customers can reasonably afford service in the face of the proposed rate increase. Indeed, rates are not just and reasonable if they are unaffordable for a substantial segment of Peoples' customer base. Specifically, I recommend that the Commission order Peoples to:

- Revise its internal definition of confirmed low income customers to include any information provided by the customer that reasonably places the customer in a low income designation, consistent with the Commission's regulations at section 62.2.
- Fully adhere to the statutory security deposit prohibition for all confirmed low income customers, as defined by section 62.2.
- Immediately refund any currently held security deposits to any customer classified as confirmed low income under section 62.2, and on a monthly basis thereafter.
- Use the estimated low income customer count, calculated pursuant to the BCS methodology, to analyze and assess universal service program needs and budget.
- Amend its existing LIHEAP auto-enrollment language in its tariff to eliminate the requirement that a customer breach a payment agreement.
- File a Petition within 90 days of a final order in this case seeking authorization to amend its USECP to permit auto-enrollment, as explained in my testimony.
- Screen all new and moving customers for income level at the time their service is established and routinely thereafter during non-emergency calls or contacts, and refer potentially eligible customers to enroll in appropriate universal service programs.
- Approve Peoples' proposal to adopt the 120 Mcf LIURP minimum usage threshold.
- Increase Peoples' annual LIURP budget to match 2023 spending levels. Additionally, if any rate increase is approved in this proceeding, increase the LIURP budget further by an amount proportionally equal to the percentage of any approved increase in residential rates.
- Increase the maximum hardship fund grant to $600.

- Increase funding for the Hardship Fund, at a minimum, by the percentage of any approved residential rate increase.
- Reject Peoples' proposal to increase the residential customer charge.
- Reject Peoples' inequitable and unjust WNA proposal.

Q: Does that conclude your direct testimony?

A: Yes.

THE COALITION FOR AFFORDABLE UTILITY SERVICE AND ENERGY EFFICIENCY IN PENNSYLVANIA

APPENDIX A

RESUME OF HARRY S. GELLER

RESUME OF HARRY S. GELLER

EDUCATIONAL BACKGROUND:

Harpur College, State University of New York at Binghamton, B.A. 1966
Washington College of Law, American University, J.D. 1969
New York University Law School, courses in Urban Affairs and Poverty Law, as part of Volunteers in Service to America (VISTA) Program 1969-1971

EMPLOYMENT:

1988 – 2015 Executive Director, Pennsylvania Utility Law Project (PULP), a project of the civil non-profit Pennsylvania Legal Aid Network. PULP is dedicated to providing technical support, information sharing, and representation to low-income individuals and organizations, assisting and advocating for the low income in utility and energy matters. Responsibilities include project oversight, case consultation, co-counseling, and participation on task forces, work groups and advisory panels, community education and training in utility and energy matters affecting the low income.

While at PULP, served in the following capacities:

- Chairman, Low-Income Home Energy Assistance Program (LIHEAP) Advisory Committee to the Secretary, Pennsylvania Department of Human Services
- Member, Pennsylvania Public Utility Commission, Consumer Advisory Council Coordinator, Pennsylvania Legal Services Utility/Energy Work Groups
- Member, Weatherization Policy Advisory Committee to the Department of Community and Economic Development
- Member, PECO Universal Service Advisory Committee and LIURP Subcommittee

1974-1987 Staff Attorney, Managing Attorney and ultimately, Executive Director of Legal Services, Incorporated (LSI), a civil legal services program serving Adams, Cumberland, Franklin and Fulton Counties. Through a restructuring with other legal services programs, LSI became part of what is now known as MidPenn Legal Services and Franklin County Legal Services.

1971-1972 Staff Attorney, New York City Legal Aid Society, Criminal Court and Supreme Court Branches, New York County.

1969-1971 Volunteer in Service to America (VISTA) assigned to the New York University Law School Project on Urban Affairs and Poverty Law.

Office of Consumer Advocate (OCA) to Peoples Natural Gas Co. LLC (Peoples)

- OCA IX-9.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-I-008

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: Please describe the steps Peoples use to investigate whether they are holding security deposit of confirmed low income customers, and the procedures related to how the security deposit is returned to a confirmed low income customer. Please also provide a copy of any policies, procedures, or other documents which describe Peoples existing policies related to collection and return of security deposits from low income customers.

Answer: Customer who are enrolled in CAP will have security deposits removed as a condition of participating in the program. Peoples does not have a process to automatically return security deposits upon receipt of a LIHEAP grant, however the company does return the deposit upon customer notification of LIHEAP grant.

Submit Date: 2/20/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-001

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Please identify the bill impacts of the proposed rate increase on customers enrolled in Peoples' Customer Assistance Program by payment plan type. If you are unable to identify the bill impact, or assert that there will be no impact, please explain.

Answer: Customers participating in CAP pay the lower of their percentage of income payment amount, or the calculated average bill amount, whichever is lower. CAP customers are exempt from the universal service rider. On a monthly basis, during the billing process, CAP accounts are reviewed to ensure they are on the most affordable payment option available to the household. If a change is necessary, the bill will denote a payment change will be occurring the following month. To the extent that approved rates from this proceeding increase a CAP customer's average bill amount, and that average bill is currently lower than their ask to pay, the customer's payment would change to either the new average bill amount, or the percentage of income payment, whichever is lower. For customers currently paying the percentage of income payment amount, an increase to the average bill amount as a result of a change in rates would not impact their payment.

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-002

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: From 2019 to present, disaggregated by division, month, and year, please identify the number of CAP customers whose bills were calculated based on:

a. Average monthly bill;

b. Percentage of income (disaggregated by income tier);

c. Minimum bill; or

d. Other (please specify).

Please provide this data in a live excel spreadsheet.

Answer: This data is not readily available. However, the Company is further evaluating if it can be compiled. An updated response will be provided if the information becomes available.

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-003

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: Please identify all categories or identifiers that Peoples includes when calculating its "confirmed low income customer" count.

Answer: Peoples counts all CAP participants, as income documentation or the zero income form are submitted to confirm low income status. In addition to CAP participation, Peoples also considers receipt of LIHEAP cash or crisis grants within the past 24 months as indicative of confirmed low income.

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-004

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: For 2019 to present, disaggregated by division, month, and year, how many Peoples customers were/are categorized as a confirmed low income customer? Please provide this data in a live excel spreadsheet.

Answer: Please see attached Excel file.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-008

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: What is the average annual income of:

1. Peoples' current identified confirmed low income customers?

2. Peoples' customers currently enrolled in CAP?

Answer: 1. $19,576

2. $19,145

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-012

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: As of the most current date, how many estimated low income customers reside in Peoples' service territory, disaggregated by division? Please explain how Peoples arrived at its estimated figures and include citation and/or copies of any and all workpapers used to perform this estimation.

Answer: The Company uses the most recent Household Poverty file provided by BCS to estimate it's low income customer count. This file is attached in the response. The percentages of each county (< 150%) are multiplied by the companies total count of residential customers.

As of January 31st, 2024:

Peoples Natural Gas Company: 135,425

Peoples Gas Company: 13,048

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-013

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: From 2019 to present, disaggregated by division, month, and year, how many customers were terminated for nonpayment each month, for the following customer segments:

1. All residential customers;
2. Residential customers, excluding confirmed low income customers;
3. Confirmed low income customers;
4. Confirmed low income customers, excluding CAP customers;
5. CAP customers.

Please provide this data in a live excel spreadsheet.

Answer: Please see attached Excel file.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-016

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: From 2019 to present, please provide the number of payment troubled customers, disaggregated by division, month, year, and the following customer segments:

1. All residential customers;
2. Residential customers, excluding confirmed low income customers;
3. Confirmed low income customers;
4. Confirmed low income customers, excluding CAP customers;
5. CAP customers.

Please provide this data in a live excel spreadsheet.

Answer: Please see attached Excel file.

Submit Date: 2/26/2024

CAUSE-II-16

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-017

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: Please explain how Peoples defines the term “payment troubled.”

Answer: Peoples identities a missed payment on a payment arrangement as "payment troubled".

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-018

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: From 2019 to present, disaggregated by division, month, and year, please provide the number of customers with an active payment arrangement and total debt associated with these accounts for each of the following customer segments:

1. All residential customers;
2. Residential customers, excluding confirmed low income customers;
3. Confirmed low income customers;
4. Confirmed low income customers, excluding CAP customers;
5. CAP customers.

Please provide this data in a live excel spreadsheet.

Answer: Please see the attached Excel file.

Submit Date: 2/26/2024

CAUSE-PA-II-18

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-019

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: From 2019 to present, disaggregated by division, month, and year, please provide the number of customers in debt without an active payment arrangement and the total debt associated with these accounts for each of the following customer segments:

1. All residential customers;
2. Residential customers, excluding confirmed low income customers;
3. Confirmed low income customers;
4. Confirmed low income customers, excluding CAP customers;
5. CAP customers.

Please provide this data in a live excel spreadsheet.

Answer: Please see attached Excel file.

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-II-020

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: From 2019 to present, disaggregated by division, month, and year, please provide the total dollars in debt and the average arrearage level for each of the following Peoples customer segments:

1. All residential customers;
2. Residential customers, excluding confirmed low income customers;
3. Confirmed low income customers;
4. Confirmed low income customers, excluding CAP customers;
5. CAP customers.

Please provide this data in a live excel spreadsheet.

Answer: Please see attached Excel file.

Submit Date: 2/26/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-IV-003

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: In reference to CAUSE-II-005, from May 2021 to January 2024, please explain why the amount of Peoples Natural Gas Company CAP accounts decreased to the best of your knowledge. Please provide copies of any studies or reports conducted to evaluate the cause of the decline in CAP enrollment.

Answer: During the pandemic (2020 and 2021), there were two significant changes to the Company's CAP participation procedures as a result of Commission guidance and the Company's desire to support low income households in need of CAP participation. First, if a customer wished to enroll in CAP and income documentation was not readily available, the account could be enrolled using verbal attestation. Second, if a participating CAP account reached the recertification date and the customer failed to complete the recertification process, the account was not dismissed from CAP.

Further, for most of 2020, an extended moratorium was in place to prevent utility terminations. Once the moratorium was lifted in 2021, all customers were offered an opportunity for an additional payment arrangement (sometimes referred to as a Covid PAR), regardless of prior payment arrangement history. CAP enrollment is closely impacted by collections activities as customers may not seek to enroll in CAP until they are faced with possible loss of utility service. During the extended moratoriums and the ability to establish additional payment arrangements, without the application process and documentation required to participate in CAP, many customers choose the payment arrangement option rather than CAP. These reasons led to overall low CAP applications.

CAP enrollment levels began to drop off further when dismissal for failure to recertify was reinstituted in January of 2022. During 2022 and 2023, we saw an increase in dismissals from customers who failed to provide current income documents to validate their continued eligibility and those that enrolled without income documentation, due the pandemic, were required to provide it for the first time. Further, as wages increased, we have received anecdotal feedback that customers who previously qualified no longer met the income threshold, or assumed they no longer met it, thereby causing them to not respond to recertification efforts.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-IV-006

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: Please reference Peoples' response to CAUSE-PA II-3. Does Peoples definition of "confirmed low income customer" in this interrogatory differ from the definition of the same term that Peoples utilizes for purposes of reporting data to the Commission for inclusion in the Universal Service report? If yes:

1. Please explain the difference between the two definitions.

2. Please explain the specific situations where each definition is used.

3. Please indicate for each interrogatory in CAUSE-PA Sets I and II, which "confirmed low income customer" definition was used for the response.

Answer: Yes.

1. The definition of 'confirmed low income' used throughout the responses to CAUSE sets I and II identified 'confirmed low income' as an account that was active in CAP and/or had received LIHEAP in the prior 24 months. In those cases, income documentation had been received by either the Company or the state for purposes of enrolling the customer in CAP or LIHEAP, thereby confirming low income status.

For the Universal Service collections reporting data, in which all residential accounts are shown in one column and the second column is 'confirmed low income', any customer within the Company's billing system denoted as having income at or below 150% of the federal poverty level is counted as 'confirmed low income' for that report.

2. Refer to the response to 1.

3. Refer to the response to 1.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-IV-007

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: How many security deposits currently being held for customers who meet reporting definition of CLI that Peoples uses for reporting universal service data to the Commission?

Answer: The Company is not holding any deposits for customers meeting this definition.

Submit Date: 3/18/2024

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: CAUSE-IV-008

Witness: Black, Rita **Title:** Community Assistance Programs Director

Question: Please refer to Peoples Statement at 6-7, referencing the removal of condition number 7 (LIHEAP autoenrollment). Please explain the origination of the LIHEAP autoenrollment provision including when and why it was added to the tariff. Please also provide copies of any settlement documents or other related document referencing the inclusion of LIHEAP autoenrollment in the tariff.

Answer: The earliest tariff referencing this provision that could be located is dated 4/3/2000 and is attached. Due to the advanced age of the provision, the Company is unable to determine exactly when this provision was added to the tariff and under what circumstances. It is not the practice of the Company to auto-enroll customers into CAP and it is not provided as an enrollment mechanism in the currently approved Universal Service and Energy Conservation Plan.

The Company notes that customers can be enrolled in CAP, using receipt of LIHEAP as proof of eligibility and eliminating the necessity of providing income documentation, if the customer desires enrollment and provides their verbal household information and permission to enroll.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OCA-IX-009

Witness: Doyle-Conley, Heather **Title:** Vice President Customer Operations

Question: In Excel format, for each month for the most recent 36 months available, please provide the mean natural gas arrears (in dollars) for:

a) Residential customers as a whole;

b) Confirmed low-income customers (without CAP participants);

c) Confirmed low-income customers (with CAP participants);

d) CAP participants.

Answer: Please see attached Excel file.

THE COALITION FOR AFFORDABLE UTILITY SERVICE AND ENERGY EFFICIENCY IN PENNSYLVANIA

APPENDIX D

PEOPLES UNIVERSAL SERVICE ADVISORY GROUP PRESENTATION

January 24, 2024

PEOPLES USAG

JANUARY 24, 2024

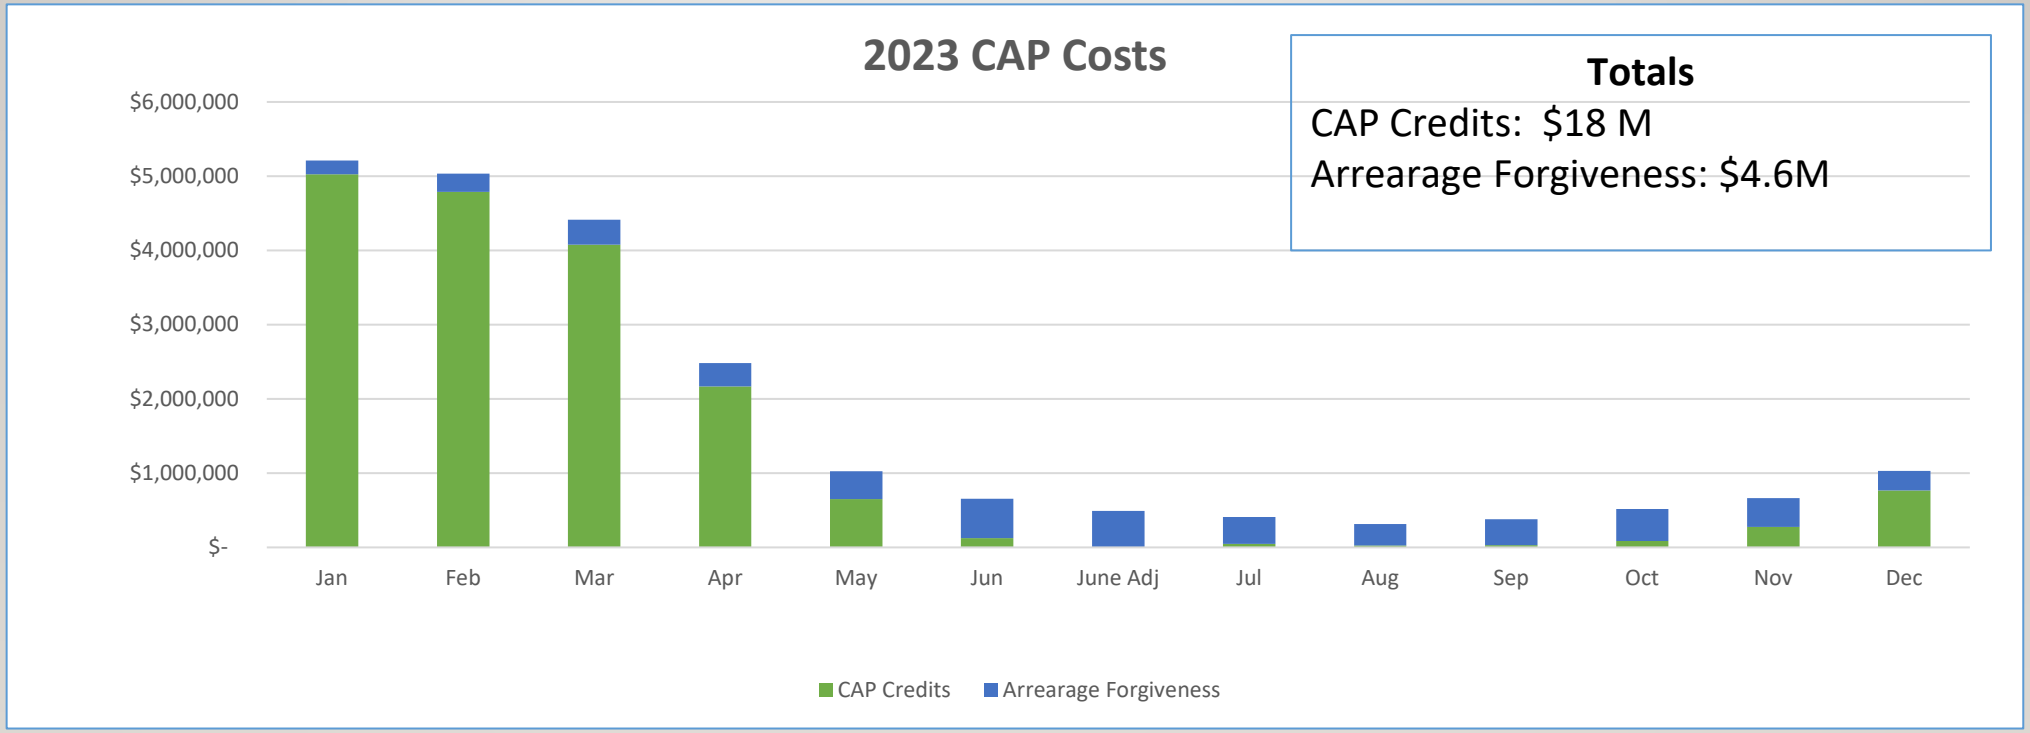
AGENDA

- Program Statistics
- Base Rate Case Filed
- CAP Enrollment
- 2024 Advisory Group Planning

CURRENT CAP PARTICIPATION

	October USAG	December
Peoples Division	30,126	28,159
Peoples Gas LLC	2,542	2,338
Total	**32,668**	**30,497**

CAP BENEFITS COST TRACKING



2022 costs were $21.9 million

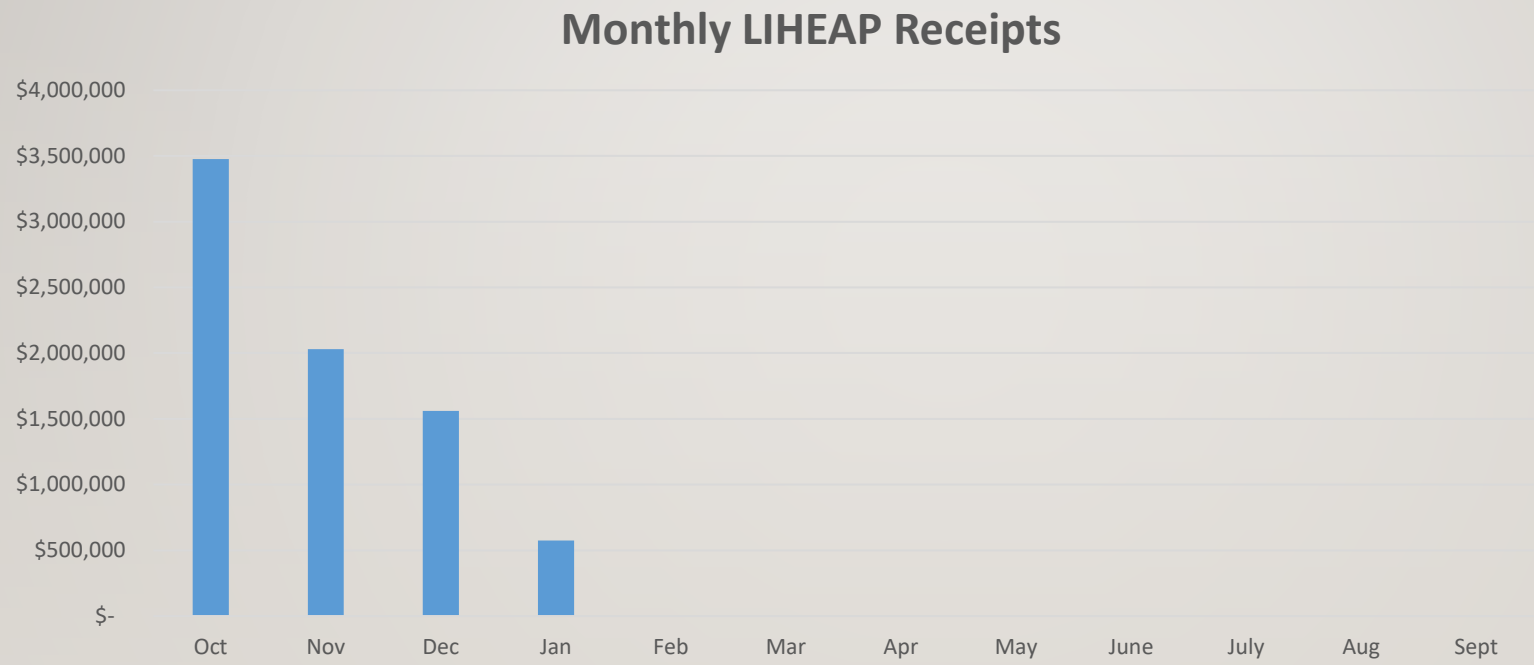
DOLLAR ENERGY FUND

Dollar Energy	Grant program opened 10/1/23
Grants provided through 1/19/24 Funds currently available	$174,090 to 410 households $781,579 current balance*

*Benefit of Dollar Energy Fund winter fundraising efforts will be added to the Fund.

Reminder: Peoples Natural Gas and Peoples Gas were combined into one Fund last year.

LIHEAP UPDATE



$19.5 million rec'd in 2022/2023 year.

$7.6 million program year-to-date receipts

LIHEAP Cash minimum $300/ LIHEAP Crisis maximum $1,000

Program scheduled to close April 5th.

LIURP UPDATE

	Peoples Natural Gas	Peoples Gas
2023 Spend	$3,469,514	$301,075
Completed Jobs	290	27
Former Peoples Division	176	
Former Equitable Division	*114*	
2024 Budget	*$2,753,076*	$511,410

**Please note: Figures above are preliminary as year-end closing processes are still underway.*

The former Equitable Gas has been fully integrated into Peoples Natural Gas and all jobs and dollars are reported to the PUC under Peoples Natural Gas.

BASE RATE CASE FILING

- Peoples filed a request with the PA Public Utility Commission in late December.
- The filing brings Peoples Natural Gas and Peoples Gas together in one tariff and one rider for the recovery of Universal Service program costs.
- Generally programs at both companies have the same eligibility requirements, with the exception of LIURP
  - Peoples Natural Gas requires 140 MCF annually for participation
  - Peoples Gas requires 120 MCF annually for participation
  - We proposed the combined LIURP program should use the lower threshold (120 MCF)

CAP PARTICIPATION

January 2023 USAG Meeting

Current CAP Participation

	October USAG	Current
Peoples Division	30,161	30,111
Peoples Gas LLC	2,539	2,548
Total	32,700	32,659

Today

CURRENT CAP PARTICIPATION

	October USAG	December
Peoples Division	30,126	28,159
Peoples Gas LLC	2,542	2,338
Total	**32,668**	**30,497**

Enrollment levels have been flat all year and are now dipping lower

LOW CAP PARTICIPATION

- During the pandemic, dismissal for failure to recertify was paused.
- Customers could enroll with verbal income if income documentation was not easily attainable during the pandemic.
- Gas rates in 2023 decreased, lowering residential bills
- Participation in LIHEAP is generally flat as well, despite outreach efforts
- Other natural gas utilities are also reporting flat and/or lower than desired participation

2024 FOCUS AREAS

- Increased efforts at Dollar Energy Fund to ensure all grant recipients are also enrolled in CAP.
- Direct calls underway to LIHEAP recipients not on CAP to gain verbal income and permission to enroll in CAP.
- Enroll Emergency Repair Program participants in CAP if they are not yet participating (with customer permission).
- Working with Dollar Energy Fund on IVR improvements to improve experience & keep customers engaged.

Other utility best practices we should consider?

DISCUSSION: WHAT KEEPS ELIGIBLE CUSTOMERS FROM ENROLLING/REMAINING IN CAP?

- Awareness?
- Difficulty in applying?
- Confusion with LIHEAP?
- Problems with outreach messaging?
- What else?

	:	
Peoples Natural Gas Company LLC.	:	

SURREBUTTAL TESTIMONY OF HARRY GELLER

ON BEHALF OF

THE COALITION FOR AFFORDABLE UTILITY SERVICES AND ENERGY EFFICIENCY IN PENNSYLVANIA ("CAUSE-PA")

May 3, 2024

PREPARED SURREBUTTAL TESTIMONY OF HARRY S. GELLER

Q: Please state your name, occupation, and business address.

A: My name is Harry S. Geller, Esq. I retired as Executive Director of the Pennsylvania Utility Law Project (PULP), but have maintained an office at 118 Locust St., Harrisburg, PA 17101, for the purpose of providing consulting services and assistance to low income individuals and the organizations which represent them in utility and energy matters.

Q: Did you previously submit testimony in this proceeding?

A: Yes. I submitted direct testimony on behalf of the Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA) pre-marked as CAUSE-PA Statement 1. In my direct testimony, I examined the potential impact of the proposed rate increase on Peoples' low income customers and made recommendations about how to mitigate that potential impact through better identification and enrollment of low income customers into Peoples' Customer Assistance Program (CAP), improvements to its Hardship Fund and its Low Income Usage Reduction Program (LIURP), modifications to its customer service policies, and improved equity in its proposed rate design.[1]

Q: What is the purpose of your Surrebuttal Testimony?

A: My surrebuttal testimony responds to the Rebuttal Testimony of Peoples Natural Gas Company, LLC (Peoples) witnesses Rita Black[2] and Heather Doyle-Conley,[3] and Bureau of Investigation and Enforcement (I&E) witness Christopher Keller.[4] My silence with respect to any

[1] See CAUSE-PA St.1.
[2] Peoples St. 9-R.
[3] Peoples St. 16-R.
[4] I&E St. 1-R.

other issues raised in the rebuttal testimony of these witnesses or any other witness in this proceeding should not be taken as an endorsement of or agreement with their positions. Rather, I stand by my analysis contained in my direct testimony, and nothing stated in rebuttal has changed or revised my positions as stated therein.

Q: How is your testimony organized?

A: I will begin by responding to the Company's rebuttal testimony regarding Peoples' tracking of its confirmed low income customers and related issues regarding its security deposit collection and retention policies. I will then address Peoples' and I&E's rebuttal regarding my recommendations to improve Peoples' Universal Service and Energy Conservation programming to address increased need for assistance as a result of Peoples' proposed rate increase. Finally, I will address Ms. Doyle-Conley's response to concerns raised in OCA witness Barbara Alexanders' direct testimony[5] regarding the application of medical certificate and domestic violence protections for tenants.

a. Security Deposits and Confirmed Low Income Designation

Q: Please briefly describe Peoples' rebuttal to your direct testimony regarding Peoples' confirmed low income designations.

A: In my direct testimony, I explained that Peoples seems to maintain separate definitions of "confirmed low income customers" that do not align with the Commission's definition in section 62.2 of the regulations.[6] I expressed my concern that the more restrictive definition of confirmed low income is resulting in an undercounting of confirmed low income customers, which detrimentally impacts the analysis necessary for evaluating low income programming and customers' access to consumer protections.

[5] OCA St. 5.
[6] 52 Pa. Code 62.2.

In rebuttal, Ms. Black clarifies that the Company uses low income census data provided by the Commission's Bureau of Consumer Services (BCS) to determine its estimated low income customer count and to complete its universal service program needs assessments.[7] She also indicates that the Company agrees to modify its definition for "confirmed low income" for its 2024 reports, consistent with Commission's definition of the term.[8]

I appreciate that the Company utilizes the estimated low income count in its needs assessment and has agreed to amend the data included in its universal service and collections reports to comply with the regulatory definition of confirmed low income customers. However, it is unclear whether Peoples' agreement to comply with the regulatory definition is limited to 2024 – or if Peoples intends to change its policy on a forward going basis.

Peoples should not maintain separate definitions for quantifying or categorizing confirmed low income customers, for any purpose. To the extent that Peoples finds it necessary to separately track the number of customers who specifically receive LIHEAP funds and/or enroll in CAP, the Company should develop a separate distinct term for those customers. The term "confirmed low income" has a specific definition under the Commission's regulations and maintaining and utilizing an alternative term leads to undue confusion. I recommend that the Commission specifically require Peoples to utilize the Commission's definition in all future reporting.

Further, I continue to question why the confirmed low income customer counts provided in discovery were even lower than those reported by Peoples to BCS for the Universal Service Report. As I explained in my direct testimony, Peoples' witness Heather Doyle-Conely's indicated in response to discovery that the Company only classified approximately 53,000 customers as low income in 2022, which is less than half of the 108,055 customers the Company reported to the

[7] Peoples St. 9-R at 6.
[8] *Id*. at 5; 52 Pa. Code § 62.2.

Commission as "confirmed low income."[9] This discrepancy was not addressed or resolved by Peoples' witnesses through rebuttal.

Q: Please briefly describe Peoples' rebuttal to your direct testimony regarding Peoples' security deposit policies.

A: In my direct testimony, I explained that, according to Peoples' discovery responses, the Company requires CAP enrollment and/or receipt of Low Income Home Energy Assistance Program (LIHEAP) funds for Peoples to reverse an assessed security deposit or return a previously collected security deposit. I pointed out that Peoples had agreed in a prior settlement to "automatically review its residential accounts every six months" and refund security deposits collected from confirmed low income customers within 30 days of this review.[10] I recommended that Peoples adopt a consistent definition of confirmed low income reflecting the regulatory definition, and return security deposits to all customers who fall within that definition, consistent with the terms of this prior settlement agreement. In turn, I recommended that the Commission require Peoples to explain the low income security deposit prohibition and request income information at the time a security deposit is initially assessed to ensure that low income consumers are informed of and able to easily access this critical statutory protection.[11]

In rebuttal, Ms. Black clarifies that the Company accepts verbal attestation of income for security deposit exemption.[12] She explains that, "At the start of service, the Company asks for income information in order to determine if a security deposit and connection fee should be waived and as an opportunity to refer income eligible customers into universal service programs."[13]

[9] CAUSE-PA St. 1 at 7.
[10] *Id*. at 17.
[11] *Id*. at 19.
[12] Peoples St. 9-R at 5.
[13] *Id*. at 4.

Ms. Doyle-Conley also indicates that "With their verbal indication of low income status, security deposits are not requested or billed."[14] She indicates that the Company will commit to implementing a periodic review process by which the Company will "ensure the identification and release of any security deposits that may be held by low income households." [15]

While I appreciate this future commitment, I remain troubled that this process for releasing deposits was not implemented in compliance with the terms of settlement in Peoples' 2018 rate case, and in accordance with statutory and regulatory requirements.[16] It is insufficient for Peoples to commit to releasing improperly held security deposits in the future, presumably sometime after the conclusion of this proceeding. Low income customers – those with income at or below 150% of the federal poverty level – are severely income constrained, and struggle to make ends meet. Assessing and then holding a security deposit for any length of time can exacerbate financial insecurity – depriving low income consumers of several hundred dollars that are desperately needed to cover basic life necessities.

Peoples should commit to the *immediate* release of all improperly held security deposits, and the implementation of a policy that will ensure full compliance with the terms of the 2018 rate case settlement. This includes an "*automatic*" semiannual (6 month) review and release of any and all collected security deposits held for confirmed low income customers, utilizing the Commission's definition of that term.

To help ensure compliance now, and in the future, I recommend that the Commission require Peoples to develop an implementation plan, which it should share with stakeholders at the earliest possible Universal Service Advisory Group (USAG) meeting following the issuance of a

[14] Peoples St. 16-R at 3.
[15] *Id.* at 4.
[16] 66 Pa. C.S. § 1404(a.1); 56 Pa. Code §§ 56.32(e), 56.53(f).

final order in this proceeding. Peoples should further be ordered to clarify that security deposits will be applied to a customer's "asked to pay" amount – or, *at the election of the customer*, returned by check. If a security deposit is credited to a customer upon their enrollment in CAP, it should be applied toward the customers' monthly asked to pay amount, and not the balances deferred through the CAP program.

Finally, I continue to recommend that Peoples inform all consumers of the prohibition on security deposits for customers who are income eligible for Peoples customer assistance program and provide information about how a consumer can request this exemption if it is not automatically applied or if they later experience a reduction in income, consistent with my prior testimony.[17]

b. Low Income Programs

Q: Please briefly describe other parties' rebuttal to your direct testimony regarding Peoples' low income programs.

A: In my direct testimony, I voiced concern about Peoples declining CAP enrollment numbers and the adequacy of its program budgets, especially in light of Peoples large, proposed rate increase, which will disproportionately impact low income customers. I made several recommendations to improve Peoples' low income programs to serve the increased need for assistance following any approved rate increase. This included a recommendation that Peoples retain its existing LIHEAP auto-enrollment language in its tariff but eliminate the requirement that a customer breach a payment agreement to be auto-enrolled in the program. To fully effectuate this long-standing tariff language, I suggested that Peoples file a Petition to amend its USECP to integrate auto-enrollment utilizing granular LIHEAP recipient data, which the Department of Human Services (DHS) is poised to begin sharing with utilities in Fall 2024.

[17] CAUSE-PA St. 1 at 19-20.

In addition to addressing auto-enrollment, I recommended a process for increased screening of customers for income level and program eligibility. In turn, I recommended that Peoples increase its LIURP and Hardship fund budgets and the maximum hardship fund grant amount to help offset the stark financial impact of any approved rate increase in this case.

In response to my recommendations, Peoples witness, Ms. Black, indicates that she shares my concerns about Peoples' declining CAP enrollment and argues that Peoples has already implemented some of the screening processes that I recommended. She indicates that she is looking ahead to the benefit of LIHEAP data sharing. However, she argues that initiating a petition to provide auto-enrollment is premature. She argues that since the Company's CAP extends to 200% FPL, which is the same as the income requirements for the hardship fund, the programs can already absorb the impact of the increase and an increased hardship fund budget is not necessary.[18] She also disagrees with my recommendation that the maximum grant amount be increased because hardship funds are typically applied to back balances before they are enrolled into arrearage forgiveness through CAP.[19] Regarding my recommendation for an increased LIURP budget, Ms. Black asserts that, before the Company increases its LIURP budget, it needs to first complete the number of projected annual LIURP jobs so that it can fully spend the LIURP budget in the year it is intended, eliminating carryover.[20]

I&E witness Christopher Keller also opposes my recommendations to increase funding for Peoples' LIURP and hardship fund.[21] He argues that Peoples has not exhausted its LIURP budget for several years and questions the correlation between LIURP funding and Peoples' proposed rate increase. He asserts that increased rates will not affect income qualifications or job costs and

[18] Peoples St. 9-R at 14-15.
[19] *Id*. at 15-16.
[20] *Id*. at 18.
[21] I&E St. 1-R at 3-4.

argues that it is inappropriate to increase the LIURP budget in this proceeding without consideration and evaluation of all universal service program performance indicators – subject to the opportunity for comments of all stakeholders and interested parties.[22]

Q: How do you respond to Ms. Black's assertion that filing a petition for LIHEAP autoenrollment is premature?

A: As I explained in my direct testimony, considering the steep decline in Peoples' CAP enrollment and the substantial number of LIHEAP recipients who are not enrolled in CAP, Peoples should be focusing on ways to simplify and improve CAP enrollment.[23] One of the best, most effective ways to do this is to ***proactively*** prepare for the introduction of DHS LIHEAP data sharing so that it can implement enrollment procedures as soon as the data becomes available. I note that the Commission's process for ruling on such petitions takes substantial time – with review times spanning multiple years. Peoples' last USECP was originally filed in 2018 but was not approved until 2022. Peoples' next USECP will be for program years 2029 through 2033 and is not due to be filed with the Commission until April 1, 2028.[24] This leaves open the distinct possibility that Peoples will not seek to utilize LIHEAP data to improve and streamline universal service enrollment until 2029.

As I noted in my direct testimony, the Commission recently approved a LIHEAP auto-enrollment program in UGI's electric division rate case to help offset the impact of the approved rate increase on low income customers.[25] Similarly, the Commission approved a LIHEAP auto-recertification program in the recent FirstEnergy Pennsylvania (FE PA) merger proceeding to help

[22] *Id*.
[23] CAUSE-Pa St. 1 at 24.
[24] The Commission's USECP filing schedule is published on its website here: https://www.puc.pa.gov/electricity/universal-service/ .
[25] CAUSE-PA St. 1 at 26.

ensure the merger would result in an affirmative public benefit.[26] Once DHS begins sharing LIHEAP participant income data with utilities, UGI and FE PA will be ready to implement required modifications to its IT system and processes to streamline CAP enrollment and/or to recertify income and eligibility.[27] Like UGI and FE PA, Peoples needs to act now to develop policies for effective utilization of LIHEAP data when the data becomes available.

Given Peoples' documented struggle to improve its CAP enrollment to serve identified need, and given the substantial number of LIHEAP recipients who are not enrolled in CAP it is vital that Peoples be ***proactive*** and act promptly in petitioning the Commission for approval to streamline CAP enrollment and recertification through LIHEAP data sharing when it becomes available. For consumers struggling to pay gas bills without the benefit of CAP enrollment, any delay will needlessly exacerbate their financial difficulties.

Q: How do you respond to Ms. Black's rebuttal testimony regarding the hardship fund?

A: In her rebuttal, Ms. Black asserts that Peoples' universal service programs "appropriately manage customers who face financial difficulty."[28] She points to the fact that Peoples Extended CAP (E-CAP) is available to households with income up to 200% FPL, and notes that customers who are income eligible for the hardship fund are now eligible for CAP or E-CAP. Of particular concern, Ms. Black explains that if a CAP or E-CAP customer receives a hardship fund grant, it is applied to the CAP enrollee's underlying balance (*which is eligible for deferment and forgiveness over time through the program*) – not the enrollee's asked to pay amount.[29] She asserts that the

[26] *Joint Application of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, West Penn Power Company, Keystone Appalachian Transmission Company, Mid-Atlantic Interstate Transmission, LLC, and FirstEnergy Pennsylvania Electric Company for All of the Necessary Authority, Approvals, and Certificates of Public Convenience*, Docket Nos. A-2023-3038771, -792, -793, -794, A--795, -807, -808, Joint Petition for Approval of Settlement of All Issues, at ¶ 47 (Final Order approving settlement entered Dec. 7, 2023).
[27] *Id.*
[28] Peoples St. 9 at 14-15.
[29] *Id*. at 16.

availability of hardship funds for CAP and E-CAP customers obviates the need for any further improvements to the availability of hardship fund assistance in light of Peoples' proposed rate increase.

First, I note that while universal programs are intended to be complementary, one cannot be a substitute for another. The availability of one program does not obviate the need for another. CAP and Hardship Fund serve different needs and types of energy insecurity: Hardship Fund provides financial assistance for households facing a current and acute utility debt, while CAP provides longer-term rate affordability and debt management. In practice, there are many households that may be unable to have their balances deferred through CAP due to prior program enrollment, or who may be income qualified but otherwise ineligible for or unable to enroll in CAP or E-CAP. These households may need the hardship fund as an option of last resort to stay connected.

Second, I am concerned about Peoples' policy of applying Hardship Fund grants to pay down a balance that will otherwise be deferred and eligible for forgiveness through CAP. This policy results in no additional benefit to the grantee. Hardship Fund grants are intended to provide direct financial support for households with current acute financial needs – not to be applied to past debts that are frozen and will ultimately be forgiven, or to offset the cost of CAP by reducing debts that will be frozen and forgiven over time through participation in CAP. I note that Ms. Black argues that increasing the maximum Hardship Fund from $500 to $600 "will only accelerate the depletion of the hardship fund without providing additional support to maintain utility service as CAP is already providing that important safety net."[30] I share Ms. Black's concern, which is equally applicable to the $500 maximum grants that Peoples is currently using to apply to balances

[30] *Id*. at 16.

which are already eligible for deferment through CAP or E-CAP. Peoples should be ordered to apply Hardship Fund grants directly to a CAP or E-CAP applicant or participant's asked-to-pay amount, following full enrollment in the program. This would not only be the appropriate policy but would be in accord with the purpose and letter of DHS' parallel policy of requiring that LIHEAP grants be applied to the "asked to pay" amount and not to arrears which are frozen and eligible for forgiveness over time.[31]

Finally, based on Ms. Black's description of Peoples' Hardship Fund policy with respect to CAP and E-CAP participants, I am concerned that Peoples appears to limit Hardship Fund grants to new CAP and E-CAP enrollees. Both CAP / E-CAP applicants *and* CAP / E-CAP participants should be eligible for emergency hardship fund assistance to help resolve an acute financial hardship. This is particularly true, given CAP participants are not eligible for a payment arrangement if they fall behind on their CAP bills. CAP provides critical bill assistance, but it does not eliminate the fragile financial reality of low income households. A car repair bill, dental visit, or any other unanticipated financial burden can cause tremendous repercussions that quickly compound the fragile financial circumstances of low income families – even those enrolled in CAP. Thus, I recommend that Peoples be required to allow CAP and E-CAP participants (along with new enrollees) to access assistance through the Hardship Fund.

Q: How do you respond to Ms. Black and Mr. Keller's rebuttal testimony regarding Peoples' LIURP budget?

A: Both Ms. Black and Mr. Keller argue that it is not appropriate to increase the LIURP budget because Peoples has been unable to spend its current LIURP over the past several years.[32]

[31] *Pa. Low Income Home Energy Assistance Program: Fiscal Year 2024 Final State Plan*, at § 601.45 (application of benefits) https://www.dhs.pa.gov/Services/Assistance/Documents/Heating%20Assistance_LIHEAP/FY2024-LIHEAP-Final-State-Plan.pdf .

[32] Peoples St. 9-R at 17-18; I&E St. 1-R at 3-4.

However, as I explained in my direct testimony, in 2023, Peoples spent $3,770,589 to complete 317 LIURP jobs, which is approximately $740,000 more than its current 2024 budget. While this additional $740,000 in funds came from rollover from the pandemic related shutdowns, the 2023 spending demonstrates that Peoples is already in a position and has the capacity to not only spend its full LIURP budget in the year it is intended, but to substantially exceed that production. In fact, if Peoples were to maintain its 2023 level of LIURP production it will have fully spent its allocated 2024 budget plus the remaining $234,486 of rollover, leaving it with a budget deficit of over $500,000. This will mean that if Peoples does not increase its budget as I have recommended, it will have to reduce the number of LIURP jobs it completes annually despite the increasing need and demonstrated capacity for providing this level of services.

There is no evidence that Peoples' rollover budget in recent years was a result of a lack of need in Peoples service territory. To the contrary, Peoples inability to fully expend its budget was a result of the cessation of LIURP production during the pandemic and the struggle to ramp back up production after the shut-down.[33] If Peoples now begins to reduce the number of LIURP jobs produced annually due to budgetary constraints it is not only failing to address the current need, but may struggle to maintain workforce and ramp back up again in the future. It is also important to keep in mind that the cost of labor and materials has substantially increased in the past several years. Thus, I continue to strongly recommend that Peoples maintain a LIURP budget that will allow it to continue to complete at least 317 LIURP jobs per year, consistent with its demonstrated 2023 program performance capabilities.

Regarding Ms. Black's and Mr. Keller's assertion that LIURP budgets should only be adjusted through a USECP proceeding due to evaluation of program performance indicators and

[33] CAUSE-PA St. 1 at 32.

provision of comments by all stakeholders and interested parties, as explained above, Peoples' next USECP is not due to be filed until April 2028 – with a target effective date of 2029-2033. This is far too long to wait for Peoples to implement meaningful, currently needed improvements to its universal service programming and to offset the financial impact of any approved rate increase resulting from this case.

Further, this case has provided the parties with the additional benefit of the ability to conduct formal discovery and evaluations of Peoples' program data that were and are presently not possible in the less formal USECP proceeding, which was/is limited to comments and reply comments. Addressing these current and important low income customer needs now, in this rate case proceeding, in no way negates the ability of Peoples to propose, the Commission to review, and others to comment on the appropriate LIURP to be budgeted and implemented for 2029-2033.The LIURP budget established through the USECP did not take into account the substantial increase in rates proposed by Peoples in this case. While Mr. Keller argues that the proposed rate increase will not impact the income qualifications or cost of materials for the LIURP program, it will increase the cost of volumetric rates, which will disproportionately impact low income high usage households. As I explained in my direct testimony, Peoples' confirmed low income customers consistently have average usage that is *22-23% higher* average annual usage than Peoples' population of residential customers -- excluding those with confirmed low income -- due to disparities in access to efficient housing and heating equipment.[34] The proposed rate increase will result in disproportionately higher bills for these high use low income customers, further compounding the fact that they already struggle to afford their current rates. This disproportionate impact on low income, high usage families is likely to result in increased payment trouble and

[34] *Id*. at 30-31.

termination – as well as a corresponding increase in the need for LIURP to help bring down the cost of utility bills. Peoples' LIURP can provide approximately 20 percent reduction of low income customers' pre-treatment natural gas usage. Indeed, the program can and does help address disparities in usage, in turn lessening the disproportionate impact of any approved rate increase on low income high usage customers.[35] However, as I also explained in my direct testimony, Peoples' LIURP is not adequately funded to meet the currently identified need of its low income customers – let alone to offset the increased energy burdens resulting from its current rate proposal.[36]

As the regulation regarding the purpose of LIURP states: "The programs are intended to assist low income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[37] Thus, it is wholly appropriate to increase the LIURP budget to account for the increased rates resulting from any increase approved by the Commission in this case.

c. Domestic Violence Protections

Q: Is there other rebuttal testimony you would like to address?

A: Yes. In direct testimony, OCA witness Barbara Alexander recommended that Peoples allow tenants in master metered buildings to access domestic violence protections by submitting a Protection from Abuse Order (PFA) or other court order evidencing domestic violence.[38] Peoples witness Doyle-Conley disagreed, noting concern the protections could be used to benefit landlord ratepayers.[39] However, I believe Ms. Doyle-Conley's concerns about the protections benefiting

[35] *Id*.
[36] *Id*. at 30.
[37] Peoples St. 9-R at 17 (quoting 20 Pa. Code §58.1).
[38] OCA St. 5 at 7.
[39] Peoples St. 16-R at 11-12.

landlords are misplaced and miss the point. While I understand from CAUSE-PA's counsel that the legal aspects of this issue will be discussed through briefing, it is important to note that the provision of special protections to domestic violence victims and survivors is not optional. These protections are required by statute and regulation due in large part to their vital protection for the safety of vulnerable customers whose abusers often use the victims' housing and utility insecurity as a tool to manipulate them back into the abusive situation. The special protections in the Code are designed to prevent this by helping the PFA recipient, or victim of violence covered by another court order, achieve economic independence from their abuser without the threat of utility termination hanging over their head.

All Pennsylvania consumers with a PFA/other court order are entitled to the protections guaranteed in statute and regulation, and this includes circumstances where the victim/survivor is a tenant. Chief among the protections afforded to a victim/survivor with a PFA or other applicable court order is the protection from liability for debts accrued by any third party.[40]

Ms. Alexander's recommendation to protect non-customer tenants with a PFA or court order who are victims of violence is akin to the current Commission policy of protecting non-customer tenants with a medical certificate. In each case, public policy and statute addresses a specific protection for specific vulnerable, at-risk individuals. Thus, it is important that **both** sets of protections be provided to tenants in master metered buildings.

Q: Does this conclude your surrebuttal testimony?

A: Yes.

[40] 66 Pa. C.S. § 1417; 52 Pa. Code § 56.285. (Domestic violence protections are not limited to protecting a victim/survivor from bills accrued by their abuser – the protections prevent the transfer of debt from any third party to a victim/survivor. Where the bill is in a landlord's name, the protections would apply to the tenant submitting the PFA/court order, not the account holder.).

Introduction

Q. Please state your name and business address.

A. My name is David Evrard and my business address is 555 Walnut Street, 5th Floor, Harrisburg, PA.

Q. By whom are you employed and in what capacity?

A. I am employed by the Office of Consumer Advocate (OCA) as an Assistant Consumer Advocate.

Q. What is the purpose of your testimony in this case?

A. I have been asked to provide an overview of this case from the OCA's perspective, including discussion of the OCA's view on certain regulatory policy positions. In addition, I will introduce and synthesize the OCA's other witnesses who address the specific rate requests filed by the Company and will provide overall recommendations.

Q. Have you previously provided testimony before the Pennsylvania Public Utility Commission?

A. No, I have not.

Q. What are your qualifications to provide this testimony in this case?

A. I have served as an Assistant Consumer Advocate for nineteen years, engaged primarily in cases involving electric and natural gas utilities and related matters. For more than ten years, I represented the OCA in the Gas Cost Rate proceedings of Peoples Natural Gas, People Gas and Peoples Gas' forerunner, T.W. Philips Gas and Oil Co. Prior to my time at the OCA, I served as a legal assistant and attorney for the Pennsylvania Electric Association (PEA), one of the predecessor organizations that combined to form what is now the Energy Association of Pennsylvania (EAP). At EAP, I served as Vice President

and Secretary. My combined service with PEA and EAP totaled more than twenty-four years. Thus, I have worked for more than 40 years in the field of legal and regulatory matters involving utilities, primarily energy companies. I received my undergraduate degree in Economics from Rider College (now University) in Lawrenceville, NJ and Master of Business Administration and Juris Doctor degrees from the University of South Carolina.

Q. Have you prepared Exhibits to accompany your testimony?

A. Yes, I am offering Exhibit DE-1, which is attached to my testimony. This exhibit outlines the factors under Section 1330 of the Public Utility Code concerning Peoples Natural Gas Company LLC's (Peoples)[1] proposed Weather Normalization Adjustment. I am also offering Exhibit DE-2 which is a summary of the public input testimony offered by consumers during the course of the six public input hearings held in this case from March 5 through March 7, 2024.

Q. Do you have any other preliminary matters to address?

A. Yes, there are occasions where I may refer to decisions by regulatory agencies, courts, statutes and regulations. This should not be considered a legal opinion as I am not acting as an OCA attorney in this proceeding. Any reference or citation would be related to supporting my opinion about the public policy that I discuss below.

[1] For purposes of clarity and consistency, in the course of my testimony, I refer to Peoples Natural Gas Company LLC as "Peoples" and I refer to Peoples' two operating divisions as follows: Peoples Natural Gas Division (PNGD) and Peoples Gas Division (PGD).

Summary

Q. Please summarize your conclusions and recommendations.

A. Overall, my conclusion is that Peoples has not supported the need for many of its claims and proposals in this case. Peoples' lack of support extends to its requested annual revenue increase of approximately $156 million, its Weather Normalization Adjustment (WNA) proposal, and its proposed return on equity of 11.75%. My overarching recommendation is that the Commission should adopt, in totality, the adjustments and recommendations of all OCA witnesses in this case, each of whom I will discuss below. Consistent with the OCA's other witnesses, I recommend the following: that Peoples receive an increase in annual operating revenue of no more than $10,786,713 (which is $145,239,409 lower than Peoples' request), that Peoples' WNA proposal be rejected, and that Peoples' capital structure, overall rate of return, including its allowed return on equity, be set at the levels recommended by OCA witness Rothschild. I will present an overview of OCA's testimony below.

Overview of the Case

Q. Please provide your general understanding of Peoples' proposed revenue increase in this case.

A. Peoples seeks an annual revenue increase of $156 million for its distribution service. If approved as filed, the increase would provide the PNGD with an annual revenue increase of increase of $148,558,437, or approximately 21.8%, and the PGD with an annual revenue increase of $7,466,250 million, or approximately 7.8%. For residential customers currently served under the PNGD Tariff, this would amount to a 21.4% increase over current rates. For residential customers served under the PGD Tariff, this would be a 7.6% increase over

current rates. Peoples proposes to merge the rates of the PNGD and PGD customers as part of this case, and the combined total increase for both PNGD and PGD customers, approximately $156 million, is an increase of 18.7% on a total annual revenue basis.

Q. What else is Peoples proposing in this case?

A. Among other things, the Company proposes to increase the residential customer charges of PNGD and PGD customers from $14.50 and $15.75, respectively, to $21.50 Peoples also proposes Tariff revisions in its filing including the following: (1) implementation of a Weather Normalization Adjustment (WNA); and (2) adjusting its Tax Repairs Surcredit, Tax Cuts and Jobs Act Surcharge, and Allegheny Valley Capacity Charge; and (3) revising Rule 20 of its tariff competitive customer designation to certain customers on the basis of their claimed access to electricity as a competitive alternative. In addition, Peoples has proposed a 25-basis point adder to its estimate of an 11.50% cost of equity, due to the Company's purported exceptional management performance.

Introduction of OCA Witnesses

Q. Please briefly introduce the OCA's witnesses for this case:

A. Along with my testimony, the OCA offers five additional witnesses whose testimony supports its overall position and slate of recommendations in this case. I will introduce each witness and give a brief overview of their respective testimonies below. While my testimony summarizes the OCA's positions on Peoples' various proposals, it is intended to provide the broad regulatory policy considerations that underlie those positions. For the details of particular positions, I will defer to each individual witness's testimony and their specific expertise.

In OCA Statement 2, Dante Mugrace recognizes the revenue impact of the overall OCA position, which is comprised of his recommended adjustments to Peoples' claims as well as the revenue implications of all the OCA witnesses' testimony. Mr. Murgrace also addresses Peoples tax proposals, and he presents an analysis of the proposed Weather Normalization Adjustment (WNA) that demonstrates that the proposal is flawed, unprecedented in comparison to other jurisdictional utilities that Peoples cites, and should be rejected. Importantly, Mr. Mugrace also quantifies the detrimental impact that ratepayers would face if Peoples' request for a management performance premium, which is a .25% adder to its proposed equity cost rate of 11.5%, were approved. Mr. Mugrace shows that, all else being equal, at the Company's requested ratemaking rate base, the elimination of the 25 basis point adder alone would reduce the Company's proposed revenue requirement increase by more than $7.46 million (OCA Statement 2 at 4-5).

In OCA Statement 3, Aaron Rothschild analyzes Peoples' rate of return claims. He addresses the appropriate capital structure for ratemaking, the Company's return on equity, and its overall cost of capital. Mr. Rothschild recommends rejecting Peoples' claimed capital structure of 54.67% common equity and 47.2% debt. Instead, Mr. Rothschild supports a capital structure consisting of 50% equity and 50% debt, which is consistent with the similarly-situated companies in his proxy group. Mr. Rothschild recommends a return on equity of 8.02%, which is within his recommended range of 7.67%-8.37% and an overall rate of return of 6.20% at his 50/50 capital structure. However, if the Commission accepts Peoples' proposed capital structure, Mr. Rothschild recommends that the authorized return on equity be reduced to 7.84%

In OCA Statement 4, Clarence Johnson reviews and analyzes the cost of service (COS) studies and rate design proposals included in Peoples' filings and makes recommendations to reflect the appropriate assignment of costs. Mr. Johnson also explains why Peoples' proposal to significantly raise the customer charges of PNGD and PGD customers from $14.50 and $15.75, respectively, to $21.50 is unsupported and should be denied. Additionally, Mr. Johnson analyzes Peoples' WNA proposal and explains how the impact of the WNA will not only fail to benefit ratepayers, but that a review of data provided in this case demonstrates that the net impact is likely to be detrimental to customers by causing confusion, disincentivizing conservation, and producing higher bills. Finally, Mr. Johnson will also explain the multiple reasons why Peoples' proposals to extend the competitive customer designation to certain customers on the basis of their claimed access to electricity as a competitive alternative is flawed and should not be accepted.

In OCA Statement 5, Barbara Alexander addresses Peoples' customer service performance, as well as its consumer protection policies and programs, and she makes recommendations to address issues related to those matters. Ms. Alexander also recommends improvements to Peoples' training programs to ensure compliance with the Commission's regulations regarding service termination, and implementation of policies necessary to recognize and disclose tenants' right to remain with gas service under certain conditions related to shared service premises. Ms. Alexander also recommends rejection of Peoples' WNA proposal and explains that customers who desire bill stability to mitigate bill volatility can and should be encouraged to enroll in budget billing. Additionally, Ms. Alexander opposes Peoples' practice of offering an on-bill warranty

program on the basis that it is misleading and poses an unnecessary risk of confusion and additional costs for Peoples' consumers. Ms. Alexander also makes recommendations for Peoples to improve customer education about shopping for a natural gas supplier to ensure that customers have tools to make informed decisions. This is important in this case because data demonstrates that higher rates paid as a result of retail shopping have impacted collections and uncollectible accounts. Finally, Ms. Alexander opposes Peoples' request for a management premium adder and she identifies areas where customers' access to important information is limited, such as through the notification of this rate increase and in the limited "business hours" available for customers to speak with a live customer service representative.

In OCA Statement 6, Roger Colton addresses issues that include overall affordability, impact of the unaffordability of Peoples' bills on collections, the appropriate Peoples response to unaffordable bills for low-income customers, the adverse impact of the proposed increase and WNA proposal on customers, and the reasonableness of proposed changes in the Peoples tariff.. Mr. Colton recommends multiple changes in Peoples' customer service programs, practices, and related matters to help all Peoples' customers have reasonable access to affordable utility service.

Summary of Peoples

Q. Please describe Peoples.

A. Peoples is the surviving entity resulting from the merger of Peoples Natural Gas Company LLC with Peoples Gas Company LLC, which was approved by the Commission in August 2022.[2] Under the terms of the merger, the two entities were to maintain separate

[2] Joint Application of Peoples Natural Gas Company LLC and Peoples Gas Company LLC for All of the Authority and Necessary Certificates of Public Convenience to Merge Peoples Natural Gas Company LLC and Peoples Gas

distribution base rates until a future rate case[3], which happens to be the instant proceeding in which unification of the two entities' base rates is proposed.

Q. Did Peoples' customers have the opportunity to comment on the Company's proposed increases?

A. Yes, six Public Input Hearings were held in this case. Specifically, in-person public input hearings were held daily at 1 p.m. and 6 p.m. on Tuesday, March 5 and Wednesday March 6 in Monroeville, PA and Butler, PA, respectively. Additionally telephonic hearings were held at 1 p.m. and 6 p.m. on March 7. In addition, there have been six Formal Complaints filed with the Commission by individual consumers as well twenty-four Informal Complaints filed by Peoples' customers.

Q. Did you have the opportunity to review the transcripts of the public input hearings in this case?

A. Yes.

Q. Please summarize the public input hearing testimony in this case.

A. Testimony at the Public Input Hearings was of two types – testimony from individual Peoples customers who expressed opposition to the rate increase; and testimony from individuals representing various organizations who either work with Peoples or have been assisted by Peoples in some way and who testified favorably to their relationship with the Company and either supported the rate increase or offered no opinion on the merits of the

Company LLC, Docket No. A-2021-3029831 et al, Order (August 25, 2022), noting that the Order adopted the Initial Decision recommending approval of an underlying settlement.

[3] Joint Application of Peoples Natural Gas Company LLC and Peoples Gas Company LLC for All of the Authority and Necessary Certificates of Public Convenience to Merge Peoples Natural Gas Company LLC and Peoples Gas Company LLC, Docket No. A-2021-3029831 et al, Initial Decision, p. 8, ¶33 (July 6, 2022).

increase. There were a few areas of testimony from consumers,[4] which are summarized in Exhibit DE-2, that were particularly concerning.

Multiple customers found the rate case notice provided by Peoples to be ineffective. Specifically, several customers were not certain whether the Company's proposed WNA was included in the projected rate increase of 21% for PNGD customers and 7% for PGD customers. Those customers were troubled to learn that any rate increase resulting from the WNA was not included in the noticed rate impact. Another customer stated that the notices were not representative of a potential bill increase, where her bill was higher than the noticed amount at a lower-than-noticed usage.

Two customers requested that the Company not be permitted to implement its WNA. *See* Exhibit DE-2. The first customer to testify has had difficulty receiving an accurate DSIC calculation on his monthly bills, and is concerned that, if the WNA is implemented, its much more complicated calculation will be inaccurate and cost customers more money. He testified that he believes the WNA is contrary Section 1330 of the Public Utility Code because it charges customers for infrastructure they do not use. Similarly, the second customer testified that the WNA is unfair because it charges customers for gas they do not use.

Two customers also indicated that they had quality of service concerns with the Company's practices. One customer stated that he had a meter installed in front of a window, which is a violation of the Commission's regulations and poses a safety concern. The other customer testified that he had been waiting for the Company to test his meter for

[4] Exhibit DE-2 excludes testimony provided by witness who testified about Peoples' role as a good corporate citizen, as most had no position on the rate increase, and/or the organization the witness represented relied, at least in part, on financial and other support from Peoples.

four weeks, had repeated issues receiving service from the Company's field technicians because they did not keep their appointments, and that the Company's call center hours made it difficult to get help.

Peoples' Acquisition by Aqua

Q. When did Peoples become a subsidiary of Essential?

A. In 2020, the Commission approved the acquisition of Peoples Natural Gas LLC by Aqua America Inc., which later changed its name to Essential Utilities, Inc. More specifically, the Commission approved a joint settlement between the OCA, Peoples, Aqua, and several other parties agreeing to the acquisition under defined parameters that were, from the OCA's perspective, intended to protect ratepayers from being harmed by the acquisition.[5]

Q. Why does Peoples acquisition by Aqua matter in this case?

A. The acquisition matters because of certain commitments made in the course of settling the case. I refer to the Commission's Order approving the Joint Petition for Non-Unanimous Settlement, where the Commission acknowledged that the Joint Applicants (Aqua and Peoples) expressed a commitment "throughout the entire proceeding" to pass along any future cost savings or rate benefits resulting from operational efficiencies in future rate proceedings[6]. The Commission further noted that the ALJ identified this commitment in her Recommended Decision and the Joint Applicants did not file exceptions to it.

Q. Why are you pointing this out?

A. I point this out because it is not clear whether the cost savings and operational efficiencies anticipated in the Aqua-Peoples acquisition are captured or reflected in the revenue

[5] Joint Application of Aqua America et al. to Approve a Change in Control of Peoples Natural Gas Company LLC et al, Docket Nos. A-2018-3006061, Opinion and Order, January 16, 2020 ("Acquisition Order").
[6] Acquisition Order at 177, footnote 37.

requirement proposed for this case. What is clear is that despite the promises and commitments made in that case, Peoples is now requesting that consumers pay $156 million more each year driven primarily by its choice of capital structure and an excessive allowed return on equity of 11.75% without showing marked synergies or improvements resulting from the acquisition. Ensuring that customers are not left holding the proverbial bag on the acquisition costs and impacts is essential to both the Consumer Advocate, who is empowered to represent the interests of consumers before the Commission,[7] and to the Commission, which is required to give "due consideration to the interests of consumers"[8] when setting rates. It is also important to recognize that the Commission has broad authority to consider consumer interests in all areas of ratemaking, given its administrative power and authority to regulate public utilities in Pennsylvania.[9]

Assuming for the sake of argument that acquisition-related cost savings and efficiencies are embedded in the requested revenue requirement, one wonders whether those savings could not be outstripped by a single ratemaking component such as an excessive return on equity proposal, or by the accumulation of other unjustified rate proposals detailed by the OCA witnesses in this case. It is the nature of traditional ratemaking that teasing out the plusses and minuses of particular item of expense is difficult at best. I simply bring the acquisition case commitments to the Commission's attention as a reminder of what was anticipated when the acquisition was approved.

As mentioned, Peoples and Aqua are now part of Essential Utilities. While customers were told that there would be affirmative public benefits as a result of the

[7] 71 P.S. §§ 309-1, et seq.
[8] 71 P.S. §309-5(2).
[9] 66 Pa. C.S. §501

acquisition, in its first base rate case under its new ownership, Peoples is asking customers to pay an 11.75% return on equity, inclusive of a .25% management performance adder. While Mr. Rothschild will discuss Peoples' excessive rate of return request in his testimony in greater detail, asking Peoples' customers to support an 11.75% return on equity post-acquisition is unreasonable.

Q. In this case, has Peoples quantified any acquisition-related cost-savings or synergies that offset the revenue requirement Peoples may have required on a standalone basis?

A. Not as far as I can tell. Despite this proceeding being an ideal opportunity for Peoples to demonstrate all of the value that the acquisition presented to Peoples' customers, Peoples has instead elected to use this opportunity to request a revenue requirement increase that is excessive. As mentioned above, based on the instant filing, the OCA remains skeptical that the benefits touted by Peoples and Aqua in the acquisition proceeding are actually benefitting Peoples' customers nearly four years after the settlement.

While Peoples' claims that it is a "valuable corporate citizen" which "should lead the decision makers to authorize a 0.25 addition to the determination of the return on common equity",[10] those claims conflate corporate goodwill with ratemaking. This is best exemplified in that by proposing to charge higher rates to customers in the form of a management adder, Peoples seeks indirectly to have customers pay for the Company's corporate citizenship activity. I note that the Public Utility Code prohibits Peoples from recovering charges for fraternal, social or sports clubs or organizations through rates.[11] Here, however, through its management adder, Peoples does indirectly what the Code prohibits it from doing directly because it uses its donations and "good corporate citizen"

[10] Peoples Statement No. 1, pp. 25-26.
[11] 66 Pa. C.S. § 1316.1.

claims as part of the basis to impose higher rates by way of the management adder. Peoples' responsibility is to provide safe and adequate service at reasonable rates, not to spend money on corporate goals and charge ratepayers for these costs through a management adder.

Q. What impact does the .25% addition have on Peoples' revenue requirement?

A.. Exclusion of the management effectiveness bonus would reduce the Company's revenue requirement by $7,461,843.

Purpose of the Ratemaking Process

Q. Why did Peoples file for a general rate increase?

A. According to Company witness Mr. Huwar, Peoples filed this case in fulfillment of a commitment made as part of the settlement of the Company's Tax Repair Election Petition in 2021.[12] In that settlement, Peoples committed to file a base rate case by no later than December 31, 2023. Peoples' previous base rate proceedings were in 2019 for PNGD and in 2013 for PGD.[13] Mr. Huwar claims that the primary driver for this case is the Company's ongoing infrastructure modernization program which requires significant capital investment to replace aging infrastructure.[14]

[12] Peoples Statement No. 1, p. 3.
[13] Id.
[14] Id. at 26.

Q. How were PNGD and PGD customers notified of the requested rate increase?

A. Peoples mailed a combined notice of the proposed rate increase to all of its customers in both divisions – Peoples Natural Gas division and Peoples Gas Division. OCA witness Alexander included a copy of the notices as an exhibit to her testimony as Exhibit BA-6. As shown on Exhibit BA-6, Peoples sent the same public notice of this rate case to all its customers without separating the notices to its two divisions even though the bill impacts differ between those two divisions. Peoples' notice directed customers to call the Company if they were uncertain about which division provided their service, thereby placing the burden on the customer to take additional steps to determine how much more money they may have to pay for service. The burden was exacerbated because, as Ms. Alexander describes in her testimony, Peoples' live customer service hours are limited to traditional business hours, making customers' access to information about the rate increase even more difficult to obtain for those who may not be able to call during the limited hours.

Q. Was the combined notice sufficient?

A. No, it did not inform all Peoples' customers of the impact of the proposed increase on their rates. After laying out the effects of the proposed increase for customers of each division, customers who were uncertain of which division they were served by, or which customer class they were in, were instructed to call the Company for this information. This was an extra step customers should not have been asked to take. Requiring customers to call the Company in order to understand the impact of the proposed rate increase on their rates is not adequate or efficient notice. Separate notices tailored to the customers of each division would have properly informed the customers of the rate impact. It could have also eliminated any confusion on the part of customers potentially confused by the similarity in

names between Peoples Natural and Peoples Gas. In this case, the importance of clearly designating the customers' operating division as part of an effective notice is underscored by the significance of the differences in the magnitude of the projected increase. I note that the total bill for a PNGD residential customer using 80 Mcf per year was projected to increase from $73.16 to $88.79 per month or by 21.4%., but the total bill for a Peoples Gas Division residential customer using 80 Mcf per year was only projected to increase from $84.00 to $90.35 per month or by 7.6%. As the significantly higher increase for PNGD customers reveals, the operating division distinction will matter greatly to customers, but Peoples determined to leave it to customers to figure it out on their own.

Q. Why does an effective notice matter?

A. The customer notice is the means by which customers first become aware of an impending rate hike, which may well impact their budget, their access to service, and how they choose to respond to the prospective increase. Importantly, it serves as the gateway for further action on their part, whether that means filing a formal complaint, complaining informally, testifying at a Public Input Hearing, or if they so choose, doing nothing. As such, clarity is essential to customer understanding of how their rates will be affected. Avoiding any potential confusion should be an important goal when designing a customer notice.

Q. Do you have recommendations to improve the notice?

A. While the difficulty with the notice that I identified may not be a problem in the future as Peoples proposes to unify the tariffs for the PNGD and PGD divisions and these entities have already legally merged, I encourage Peoples to develop notices that do not place unfair burdens on the customer. Another way Peoples could do this is by considering whether usage of 80Mcf per year is a fair metric to rely upon in notices, as I note that the

summary included in Exhibit DE-2 identifies a customer who testified that the 80Mcf metric was understated.

Traditional vs. Alternative Ratemaking

Q. In general terms, can you describe the difference between traditional cost-of-service regulation and regulation that utilizes so-called alternative ratemaking mechanisms?

A. Yes, since the earliest days of public utility regulation, regulators have applied a common set of regulatory principles and practices to the task of setting utility rates. This traditional type of regulation is referred to as "cost-of-service regulation" because regulators set a utility's rates so that it has a reasonable opportunity to recover the "prudent" and "used and useful" costs the utility incurs in providing service to its customers, plus a reasonable rate of return on its invested capital (its profit). Under this type of regulation, once the utility regulator sets a utility's rates, those rates remain in effect until the utility requests, and the regulator approves, a change. In the absence of any form of stay-out obligation, rate changes can be requested at any time.

In more recent times, utilities, various interest groups, commissions and even state legislatures have put forward alternatives to traditional ratemaking. There are many variants of this type of alternative regulation, but the common theme is that rates are set differently from the traditional approach. Among these variants are things such as performance-based rates which allows a utility to earn a larger return if it meets certain performance goals or increases efficiency. Other times a utility is permitted to automatically change certain aspects of its rates without a full-scale review of all of its costs as would occur in a typical cost-of-service review. Sometimes alternative regulation can "guarantee" a utility a certain amount of revenue.

Q: Please describe traditional cost-of-service ratemaking in Pennsylvania.

A: Traditional cost-of-service ratemaking in Pennsylvania involves a set of well-established methodologies, norms, and standards for analyzing and determining a utility's cost of providing service and setting just and reasonable rates. Fundamentally, under cost-of service ratemaking, a utility's rates are based on costs either experienced or projected in a test year, including the utility's prudent and necessary expenses, used and useful plant investment, reasonable debt financing costs, and no more than a reasonable profit sufficient to keep a private company in the public utility business. Private companies that enter into the public utility business should be fully aware of the governmental interest and indeed the legal requirement for the utility's provision and maintenance of adequate, efficient, safe, and reasonable utility service and facilities as are necessary or proper for the accommodation, convenience, and safety of consumers and the public. This means that these companies are subject to significant oversight to restrain the exercise of their monopoly power to ensure that they do not charge rates for service that are excessive. The regulatory power of the Commission, exercised through traditional cost-of-service ratemaking serves as a check on any such excess.

Q: Does traditional cost-of-service ratemaking benefit consumers and public utility companies?

A: Yes. Traditional cost-of-service ratemaking should benefit both consumers and public utility companies.

Q: Please explain.

A. Public utilities typically have no competition for the service they provide in their certificated service territories. They are natural monopolies. Traditional cost-of-service

ratemaking serves as a substitute for the beneficial effects of competition by setting rates on a prospective basis. Because the utility can recover its authorized costs (or authorized revenue requirement) on a prospective basis, the utility is given the opportunity to recover its authorized profit, but such recovery *is not* guaranteed – just as recovery of costs and profits are not guaranteed in a competitive marketplace. To fully recover the authorized costs and return on equity, once rates are set, the utility must go forward and operate efficiently and control its costs and pace of growth, if any. All of this must be done while providing and maintaining adequate, efficient, safe, and reasonable service and facilities.

Q: What is the most beneficial aspect of traditional cost-of-service ratemaking for consumers?

A: The most beneficial aspect of traditional cost-of-service ratemaking is the lack of guaranteed recovery for the utility while the utility remains obligated to provide and maintain adequate, efficient, safe, and reasonable service and facilities. This means that the public utility company faces the risk of under recovery due to normal business risks and management underperformance if it fails to control costs or if it asks for rates to be set based on inaccurate sales projections. Under traditional ratemaking, the utility – not its guaranteed consumer base – bears the risk of recovery until it files for another base rate increase and reflects the increased costs or decreased sales in new prospective rates granted by the Commission after a record is developed in that case.

Q: Why is it beneficial for consumers that the risk of recovery be placed with the public utility company?

A: Placing the risk of recovery of authorized costs (or authorized revenue requirement) on

the public utility company creates an incentive for the utility's management to manage its normal business risks and perform its service duties efficiently – just as competition would place similar pressure on performance in a competitive marketplace where firms compete for consumers and sales. The utility also faces normal business risks that affect cost recovery in between rate cases, such as weather, recessions, changing technologies, and other sources of sales fluctuations. Indeed, the utility management is faced with having to operate efficiently, control costs, and achieve growth at a sustainable pace. While the utility is and should be given the opportunity to earn its authorized return on equity to remain financially stable based on efficient management performance, the lack of guaranteed recovery protects consumers from having to overpay for a utility management's underperformance. In addition, it should be noted that a utility is presumably compensated for the degree of risk it carries through the rate of return on equity it earns as investors price the level of risk into the returns they require. The utility's customers, by contrast, receive no compensation for bearing risks that may be shifted to them.

Peoples' Transfer of Risk to Customers

Alternative Ratemaking Mechanisms

Q. Can public utilities recover costs which are not based in the cost of service?

A. Yes. The Commission and Public Utility Code permit public utilities to earn revenue outside of cost-of-service-based ratemaking through different types of "alternative ratemaking." This is authorized by Section 1330 of the Public Utility Code.

Q. What are some examples of alternative ratemaking?

A. As I noted earlier, there are many different forms of alternative ratemaking. Section 1330 of the Public Utility Code mentions a number of them including revenue decoupling mechanisms, multiyear rate plans, formula rates and performance-based rates. Others would include cost trackers, infrastructure surcharges like the existing DSIC charges, and straight fixed – variable rates under which a utility recovers its fixed costs through a fixed monthly charge and its variable rates through volumetric charges.

Q. Has Peoples already availed itself of other alternative ratemaking mechanisms in existing rates?

A. Yes. Before the Commission considers any other proposals made in this case, it is important to note that Peoples has already significantly benefitted from other alternative ratemaking proposals that shift the risk of meeting its revenue target to customers. These include Peoples use of a fully-projected future test, by which Peoples enjoys the benefit of designing rates now for what it anticipates costs and investor expectations to be through September 30, 2025.[15] Additionally, Peoples has implemented a distribution system improvement charge, which enables it to recover the costs for the repair and replacement of eligible property outside the confines of a rate case, thereby further eliminating regulatory lag and decoupling those costs from rates.

Q. Is Peoples seeking to implement an additional alternative ratemaking mechanism in this case?

A. Yes, Peoples' is proposing a WNA, which is a form of revenue decoupling.

[15] Peoples Statement No. 2, p. 12.

Q. What is a revenue decoupling mechanism?

A. A revenue-decoupling mechanism allows a utility to adjust its rates between rate cases when sales deviate from some baseline level. A good example would be the periodic adjustment of rates for a gap between actual sales and the projected test-year sales upon which base rates were set. If a utility's actual sales per customer over a specific period fall below the level embedded in existing rates, the utility could increase its rates to compensate for the revenue shortfall. If actual sales exceeded the test-year sales projections, the utility would provide a credit to its customers. The objective of such a mechanism is to helps stabilize a utility's revenues and earnings, making it more indifferent to the level of actual sales and thus removing any financial harm from customer energy efficiency efforts.

Q. What effect do alternative ratemaking mechanisms have on the risk of recovery?

A. While it may not be the case with all forms of alternative ratemaking, revenue decoupling, or at least partial revenue decoupling, as is being proposed in this case via the WNA, definitely has the effect of shifting the risk of recovery of certain costs from the utility to its customers.

Q. What guidance does the General Assembly offer regarding the use of alternative ratemaking mechanisms?

A. Code Section 1330 provides the declaration of policy from the General Assembly where it declares that "it is the Commonwealth's policy that utility ratemaking should encourage and sustain investment through appropriate cost-recovery mechanisms to enhance the safety, security, reliability or availability of utility infrastructure and be consistent with the efficient consumption of utility service." 66 Pa. C.S. § 1330(a)(2).

Proposed Weather Normalization Adjustment

Q. What is a weather normalization adjustment (WNA)?

A A WNA adjusts customers' distribution charges by comparing actual versus normal weather conditions for a month, typically during cold weather months. In this case the Company proposes that its WNA would be in effect from October through May. The actual versus normal weather comparison is based on Heating Degree Days (HDDs). If normal HDDs exceed the actual number of HDDs, indicating a warmer than normal month, customers will receive an additional charge on their bill to achieve the level of revenue that would have been received under "normal" weather conditions. Conversely, if normal HDDs are below the actual HDDs, indicating a colder than normal month, customers will receive a credit on their bill, again to achieve the level of revenue that would have been received under "normal" weather conditions.

Q. What is the purpose of a WNA?

A. The primary purpose of the WNA is to stabilize a utility's revenues during periods when weather variations can result in fluctuations to its revenues.

Q. Is a WNA a revenue decoupling mechanism?

A. Though a form of revenue decoupling mechanism, a WNA accounts for just one of the factors – weather -- that can cause a utility's revenue to fluctuate. I note that Peoples witness Paul Moul also classified the WNA as a decoupling mechanism[16].

Q. Do other natural gas utilities in Pennsylvania use WNAs?

Yes, WNAs are in place for National Fuel Gas (NFG), UGI Gas, Columbia Gas, and the Philadelphia Gas Works. However, it is important note, as OCA witness Mugrace explains

[16] Peoples Statement No. 13, pp. 9-10.

in more detail, the WNAs in place for these utilities differ significantly from what Peoples is proposing here. While I defer to witness Mugrace, I note that, among other things, Peoples has not proposed any of the guardrails that the other utilities have implemented in an attempt to protect consumers.

Q. How does Peoples propose to implement the WNA?

A. The WNA is a charge that Peoples proposes to assess only on the following classes of customers: residential including CAP, commercial SGS, and commercial MGS customers. Peoples explains that by implementing the WNA, it will adjust the customer delivery charges based upon "normal historic weather patterns." According to Peoples, if the weather a customer experiences is colder than normal weather, through a WNA mechanism, that customer would receive a credit on the bill. If the weather a customer experiences is warmer than normal, that customer would receive an additional charge on the bill. (Peoples Statement No. 1 page 14). Peoples claims that consistent with the revenue forecasting methodology, these customer classes are predominantly weather sensitive**.** Peoples proposes to assess the WNA to the identified customer classes for service rendered during the heating season months, specifically October 1, through May 31 (Peoples Statement No. 3, p. 17).

Q. How have the OCA's other witnesses addressed the WNA issue?

A. In OCA Statement 2, witness Dante Mugrace will provide information about the calculation of the WNA, and, from an accounting standpoint, he will provide additional analysis and facts that support rejection of the WNA, including why Peoples cannot credibly rely upon other utilities' approved WNA mechanisms to support its distinguishable proposal here. Additionally, in OCA Statement 3, witness Aaron Rothschild explains that there is no

established nexus between Peoples' WNA proposal and Peoples' alleged financial risk. In OCA Statement 4, witness Clarence Johnson opposes the WNA in the context of rate design and provides information that reveals why Peoples' customers may be harmed by the WNA in the form of bill confusion, decreased conservation incentives, and higher bills. In Statement 5, OCA witness Barbara Alexander examines the WNA from a customer-service perspective, and her testimony demonstrates that customers will not be able to access basic information about the WNA charge on their bills, which will prevent them from verifying their bill and add to its complexity. Finally, in OCA Statement 6, witness Roger Colton refutes Peoples' claims that low-income customers will not be impacted by the WNA as he presents data and analysis to illustrate the detrimental impact of the WNA to all customers, not just low-income customers.

Q. How does Peoples determine what weather is "normal"?

A. The testimonies of Peoples witnesses Scanlon and Zarumba explain in detail how the Company arrived at what it considers to be normal weather, which it determined to be 5,341 HDDs annually. Generally, Peoples' process involved the averaging of two methods of estimating normal HDDs -- a 20-year averaging of HDDs together with the average resulting from a 65-year statistical regression model of HDDs.

Q. Do other utilities in Pennsylvania use the same method to determine "normal" weather?

A. Not to my knowledge. I am informed by counsel that none of the four utilities with WNAs have used a 65-year statistical regression model in their calculation of the WNA.

Q. Aside from the calculation method, are there other differences between the WNA proposed by Peoples and the ones used by other public utilities in Pennsylvania?

A. Yes, each of the other Pennsylvania gas utilities with WNAs employ what is referred to as a "deadband," typically 3%. Through the deadband, if actual HDDs differ from normal HDDs by less than 3%, no WNA adjustment is applied. As indicated by Peoples witness Zarumba, the Company is not proposing a deadband for its WNA mechanism.

Q. Have there been any recent issues with WNAs in Pennsylvania?

A. Yes. In May 2022, the operation of PGW's WNA mechanism produced substantial increases in the bills of some of its customers. The weather in Philadelphia that month was unusually warm and gas consumption was low. High bills were not experienced by all customers, rather it affected customers in particular billing cycles. The impacts of those adjustments were so substantial that PGW eventually refunded the excessive WNA charges for the month of May. The fact that the impact on PGW's customers could be affected by something as random as their billing cycle assignment, even though all experienced the same weather, is concerning.

Q. Why does PGW's WNA experience matter in this case?

A. PGW's experience demonstrates that WNA mechanisms can result in harm to customers by subjecting them to higher bills that result from weather anomalies. Customers are much less likely to be able to absorb these costs, even in the short term, than a utility company like Peoples. The inequity of passing the risk on to customers is highlighted even more so with Peoples' WNA proposal, because as OCA witnesses Mugrace and Johnson explain, Peoples does not propose any protective customer measures, such as a deadband.

The Commission's Distribution Rate Considerations Weigh Heavily Against the WNA

Q. What does the Commission consider when determining if an alternative distribution ratemaking mechanism is just and reasonable?

The Commission considers, among other things, the 14 distribution rate considerations:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

52 Pa. Code §69.3302.

Q. What is the purpose of the Commission's policy statement for evaluating distribution rate considerations in the context of alternative ratemaking proposals?

A. The Commission's policy statement at 52 Pa. Code §69.3302 expands alternative ratemaking policy objectives to include reducing disincentives for promoting §1330 objectives. Additionally, the policy statement recognizes the goals of providing incentives to improve system economic efficiency and avoiding unnecessary future capital investments, while (1) ensuring adequate utility revenue to maintain the safe, secure and reliable operation of its system and (2) reflecting sound cost of service principles and a rate structure that is just and reasonable and considers customer impacts.[17] The above distribution rate consideration factors were adopted by the Commission in the *Fixed Utility Distribution Rates Policy Statement*, at Docket No. M-2015-2518883, on July 11, 2019, in an implementation proceeding resulting from the enactment of Section 1330 of the Public Utility Code, the portion of the Code relating to alternative ratemaking for utilities. Should the Company fail to carry its burden of proof that the proposed WNA is just and reasonable, as informed by the above factors, then the Commission should not approve the WNA.

[17] **§69.3301. Purpose and scope.** Federal and State policy initiatives promote the efficient use of electricity, natural gas and water through technologies and information, including distributed energy resources. The purpose of this policy statement is to invite the proposal, within a utility's base rate proceeding, of fixed utility distribution ratemaking mechanisms and rate designs that further promote these Federal and State policy objectives, the objectives of 66 Pa. C.S. § 1330 (relating to alternative ratemaking for utilities), and may include reducing disincentives for promoting these objectives, providing incentives to improve system economic efficiency, and avoiding unnecessary future capital investments while ensuring that fixed utilities receive adequate revenue to maintain the safe, secure and reliable operation of their distribution systems. At the same time, an alternative rate design methodology should reflect the sound application of cost of service principles, establish a rate structure that is just and reasonable, and consider customer impacts.

Q. In Statement No. 3, Peoples' witness Scanlon evaluated the WNA under the Commission's policy statement factors and determined that the factors weighed in favor of approving the WNA. Do you agree?

A. I do not. I too reviewed the WNA in the context of each of the fourteen policy statement factors, and my analysis demonstrates that the factors weigh heavily against the WNA. For ease of reference, I included my analysis as DE Exhibit 1, and it reviews each of the factors in a manner that is responsive to Ms. Scanlon's claims. I incorporate my analysis here, and in totality, it demonstrates that Peoples' WNA is not a just and reasonable rate**.**

Q. Do you recommend that the proposed WNA for Peoples be adopted?

A. No, I do not. Aside from the points I have raised here and the application of the alternative ratemaking factors that weigh heavily against the WNA, the testimony of OCA witnesses Mugrace, Johnson, Alexander, and Colton further demonstrates that the WNA should not be approved.

Conclusion

Q. What is your overall recommendation?

A. Overall, I recommend that the Commission adopt, in totality, the adjustments and recommendations of all OCA witnesses in this case. While I will not summarize each recommendation, consistent with the points made at the outset of my testimony, my recommendations include the following: that Peoples receive an increase in annual operating revenue of no more than $10,786,713 (which is $145,239,409 lower than Peoples' request), that Peoples' WNA proposal be rejected, and that Peoples' capital structure, overall rate of return, including its allowed return on equity, be set at the levels recommended by OCA witness Rothschild

Q. Does this conclude your direct testimony?

A. Yes it does.

Peoples Natural Gas LLC
Response to Distribution Rates – Statement of Policy
Proposed Weather Normalization Adjustment

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa. C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

Peoples

Peoples' proposed WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while lessening the variance between actual and projected distribution revenues due to weather. Peoples recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance ("O&M") expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary due to changes in temperature. Thus, a WNA mechanism will better align distribution revenues with cost causation principles; appropriately accounting for variation in usage due to weather.

OCA

Peoples' WNA represents a clear misalignment between revenue and cost causation because it bills customers based upon hypothetical usage, and not upon actual cost-based usage. To the extent that a WNA only smooths the Company's revenues by reducing variance between monthly bills which results from less-than-predicted usage, it remains an extra step between costs incurred due to actual usage and the customer paying for those costs through rates. In other words, the WNA is, if perfectly revenue neutral, a continuation of the status quo with regard to aligning revenues with

cost causation. However, no other natural gas distribution company in Pennsylvania has indicated a perfectly revenue neutral WNA, meaning Peoples' proposed WNA likely dissociates revenues from cost causation.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

Peoples

Peoples' WNA proposal does not impact capacity utilization.

OCA

Peoples' proposed WNA is unrelated to capacity utilization since the determining metric for the charge is weather and not utilization..

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

Peoples

Customer specific usage factors corresponding to the customer's individual demand are continually updated by the Company and reflect the level of demand associated with said customer's expected consumption levels.

OCA

While Ms. Scanlon claims that the use of customer-specific base load factors reflect a customer's individual demand, and, therefore, are associated with the customer's expected consumption levels, her claim fails to address the heart of this factor's concern. (Peoples St. 3 at 20:18-21.) Specifically, the Peoples' WNA – even with a customer-specific base load factor – reflects an anticipation that the customer's actual demand will be at a lower level than their anticipated consumption, or else the Company would not have requested a WNA be implemented. As stated above, there is no reason to believe that Peoples' WNA will be revenue neutral. If Peoples' WNA is generating revenue, then it inherently does not reflect the level of demand associated with the customer's anticipated consumption levels, because the WNA only generates revenue if the demand is less than anticipated.

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

Peoples

Because Peoples Natural Gas's proposed WNA mechanism applies to rates which are based upon the specific revenue allocation and rate design ultimately approved by the Commission, the WNA mechanism will reduce the potential for interclass or intraclass cost shifting related to usage variances brought on by weather from the same weather assumptions incorporated into establishing the Company's rates.

OCA

Peoples' WNA is only being charged to those that Peoples' has identified as "heat-sensitive customers", which includes residential and small- and medium-sized commercial customers. (Peoples St. 3 at 17:7-8.) As a result, any revenue generated from the WNA reduces the deficits the Company experiences as a result of other customer classes, including recipients of competitive flex rates, or other rates offered by Peoples which may be below the cost-of-service, or require no cost-of-service basis. The result is not a limitation of cost shifting, but an exacerbation of it , which may be limited only by a cold winter.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

Peoples

Peoples' proposed WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Further Peoples will continue to promote the use of energy efficiency measures to its customers.

OCA

The proposed WNA disincentivizes energy efficiency programs because it imposes a disconnect between cost-savings for customers to participate in energy efficiency programming. The disincentive exists in that by relying upon temperature variances to impose a WNA regardless of reduced usage that may otherwise result from participation in an energy efficiency program, Peoples insert an artificial variable that would mitigate at least some cost-savings contingent on the weather..

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

Peoples

Peoples' customers will continue to be incentivized to use and employ energy efficiency measures and distributed energy resources because a reduction in the customer's ultimate usage will still reduce their overall bill.

OCA

Peoples' proposed WNA only considers the impact of weather on a customer's usage. If a customer reduces usage for reasons not related to the weather, such as pursuing cost savings, replacing a furnace, switching to electric appliances, or using less gas, Peoples' WNA is incapable of considering increased efficiency when calculating the hypothetical, weather-dependent usage. Customers are disincentivized from improving efficiency because they will be paying for gas they do not use – charged at the distribution rate – under Peoples' WNA. While the Company claims that efficiency will still result in a lower overall bill, decreases to a customer's bill will not be as impactful as if the WNA were not in place, limiting customers' incentives to use less gas. (Peoples St. 3 at 21:1-2.)

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

Peoples

As proposed, under Peoples WNA mechanism, customers enrolled in CAP will see lower bill variability for distribution costs during colder than normal billing cycles. Relatedly, customers who are currently enrolled to pay their bills based off of a percentage of their household income will see little to no affect to their bills under the WNA mechanism.

OCA

Peoples' WNA will impact low-income customers and does not support consumer assistance programs (CAP). All residential customers will be assessed a WNA, including CAP customers. (Peoples St. 3 at 17:7-8.) OCA witness Colton further addresses the detrimental impact in OCA Statement 6. As Mr. Colton explain in more depth,, CAP customers will not directly pay the WNA charge; instead, they will continue to pay monthly bills in accordance with their CAP bill. As a result, the amount of WNA revenue which the Company is unable to collect from CAP customers will be collected from non-CAP customers, as a quasi-universal service rider.

(Peoples St. 3 at 18:5-19:4.) The WNA proposal has an obvious negative impact on the Company's ability to provide affordable service to low-income customers because it will increase the burden upon low-income customers who have not been enrolled in assistance programming by adding more expense to their bills.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

Peoples

As proposed, Peoples' WNA mechanism would provide customers with more stable bills on an annual basis and, during the cold weather heating months, the WNA will directly reduce bill volatility through the WNA adjustment should weather be abnormally warm or cold.

OCA

As proposed, Peoples' WNA decreases customer rate stability because it obscures price signals for customers by dissociating their monthly bill from their actual usage. As a result, a customer is less likely to be able to predict what their bill should be at the end of the month based off of usage, such as what temperature they set their thermostat to, than under Peoples' current billing practices. As indicated by Peoples customer Nick Hoffman during a March 5 public input hearing held in this case, being subject to a WNA charge would make bills difficult to budget. Transcript at 57-58.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

Peoples

Peoples' proposed WNA adjusts a customer's bill due to variations from normal weather and will be in effect during the heating season months (October through May). Further it only applies to certain of the Company's customer classes (Residential including CAP, Commercial SGS, and Commercial MGS) and it does not guarantee that Peoples will recover 100% of its authorized distribution revenues, however, does reduce the amount of weather-related variation in customer bills and the Company's utility distribution revenue.

OCA

Weather will significantly impact Peoples' revenue under the proposed WNA. Warmer weather results in greater revenues while colder weather results in lesser revenues. However, as weather

continues to warm over time, it becomes more and more likely that Peoples' revenues will increase, instead of being revenue neutral, virtually eliminating any weather-related risk for Peoples and transferring that risk to customers..

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

Peoples

The WNA will not impact the Company's rate case frequency or have an effect on regulatory lag.

OCA

As Peoples admits, the Company's proposed WNA does not benefit customers in the form of reducing its rate case frequency or have an effect on regulatory lag, if approved.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

Peoples

Peoples' proposed WNA only applies to distribution related charges recovering the base distribution revenue requirement from customers subject to the WNA during October through May of each year. WNA amounts will be subject to STAS, DSIC, TRS, and TCJA riders.

OCA

Peoples' WNA revenues will interact with the STAS, DSIC, TRS, and TCJA riders, likely increasing the charges customers will pay in surcharges in addition to the WNA charges on their bill.

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

Peoples

Peoples' proposed WNA mechanism will adjust bills to reflect the revenues that would be recovered under normal weather. Peoples

will not recover additional distribution revenues due to colder weather that result in relatively higher usage by customers subject to the WNA.

OCA

Peoples has proposed no consumer protections for its WNA. Other Pennsylvania NGDCs which have implemented WNAs have adopted consumer protection measures, including the implementation of a deadband, and exclusion of May from the months in effect. Peoples has proposed no such protections.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

Peoples

Peoples' WNA is not new within the NGDC landscape. Several other NGDCs in Pennsylvania have implemented WNA mechanisms. Peoples' proposed WNA is similar to that of those other Pennsylvania NGDCs and, further, Peoples will develop and employ consumer education and customer service training should the WNA mechanism be approved, as well as provide notice of the WNA to its customers pursuant to the Commission's alternative ratemaking notice requirements.

OCA

At the Public Input Hearings in this case, multiple witnesses testified that they did not understand the WNA and did not understand how the WNA may impact their monthly bills if the Company's rate increase were approved. The Company's notice stated: "This filing also includes a request for the approval of a Weather Normalization Adjustment (WNA) as an alternative rate mechanism in accordance with 66 Pa. C.S. § 1330. The WNA would adjust certain customers' bills to reflect normalized weather conditions." (OCA-I-002.) This notice is not in plain language and does not adequately explain the WNA or how dramatically it could impact customers' bills, let alone how the Company will calculate the WNA charge on a customer's bills each month. Further, the Company is not proposing to include their WNA as a separate line item on a customer's bill, as discussed in greater detail inOCA Statement 5 by witness Barbara Alexander, which would preclude customers from understanding the actual impact the WNA will have on their monthly bills. Not only is the WNA a difficult to understand mechanism for most consumers, but Peoples' proposed WNA is particularly difficult to understand due to how it is calculated, and the Company has done itself no favors

by providing inadequate information to consumers regarding the WNA.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

Peoples

Peoples' cost-of-service is inclusive of investments and costs to continue to enhance the safety and reliability of Peoples' system. Indeed, the WNA will stabilize the recovery of these costs, thereby assisting the Company to continue to pursue improvements to its system.

OCA

Peoples has not presented any evidence that implementing the WNA will support improvements in utility reliability. Peoples relies upon claims that that the WNA will stabilize revenues and thereby assist in the ability to pursue improvements, but it fails to tie WNA-based revenue to reliability commitments or infrastructure improvement metrics. , On the contrary, the WNA will provide additional revenues which are not cost-based and are not dedicated to infrastructure upgrades; instead, it is possible or likely that the proceeds of the WNA will bolster the Company's return on equity and go into the pockets of shareholders.

SMMARY OF PUBLIC INPUT HEARING TESTIMONY

March 5, 2024, at 1 p.m., in Monroeville, PA:

1. Nick Hoffman, a customer from Indiana, PA, noticed that the DSIC charge on his monthly bill has been inaccurate for the past three months. As such, he expressed concern regarding Peoples' ability to accurately calculate a weather normalization adjustment (WNA), which is much more complicated than the DSIC charge calculation. Further, he was not sure whether any rate increase resulting from WNA was included in the noticed rate impact of 21.4%, as Peoples claimed the WNA was revenue neutral. Mr. Hoffman expressed doubt that the WNA would be revenue neutral because temperatures continue to rise, meaning that the WNA would increase bills each month. He also indicated concern that Peoples' WNA would have similar results to UGI's, which saw significant increases to customer bills recently, resulting in a cap. Mr. Hoffman believes that it is easier to deny the WNA at the outset than to try and reform it after customers suffer. He testified that enduring changes in weather is an inherent part of the natural gas distribution business, and now Peoples wants to get rid of risk associated with warming weather. Mr. Hoffman cited to 66 Pa.C.S. Section 1330(a)(1), stating that it is not in the public interest to approve the WNA because the WNA charges increase as Peoples' infrastructure is used less, despite the statute's statement that costs for utility infrastructure are recovered consistent with the use of that infrastructure. He concluded by remarking that the WNA does not appear to be essential to the revenue or profit of Peoples or its parent company. Tr. 47-61; Exh. NH-1.
2. Benjamin John Chiszar, a customer from Pittsburgh, testified that he is opposed to the requested rate increase. Ms. Chiszar expressed frustration with the requested rate increase, namely because Peoples' request was made during a time of significant financial strain for many customers in the Company's service territory. He stated that Peoples should pay for the maintenance and repair of the service lines and other infrastructure it owns out of its profits and not rates. Mr. Chiszar was concerned that the hearing was poorly attended because there was not enough notice provided and because many customers believe that the rate increase will be approved regardless of public input. Tr. 83-90.

March 5, 2024, at 6 p.m., in Monroeville, PA:

3. Richard Culbertson, a customer from Pittsburgh, testified that he believes Peoples does not maintain adequate books and records and should be audited, including its claims for expenses and rate base, and the results of the audit should be publicly available. Mr. Culbertson is unsure whether customer-owned service lines replaced by the Company are included in rate base or considered donations, when the Company can refuse to service customer-owned lines. He also testified that Peoples installed a gas meter in front of a window on his property, which is not permitted under the Commission's regulations. Tr. 123-151; Exh. RC-1.

March 6, 2024, at 1 p.m., in Butler, PA:

4. James Iman, a customer from Butler, testified that the rate increase comes at a time when Peoples' customers are already struggling financially. Mr. Iman is concerned that, give the current financial conditions, customers will be forced to choose between essential services, such as food, medication, and rent, in order to afford Peoples' requested increase. He also noted that income levels which qualify for customer assistance do not reflect current financial realities. Tr. 179-180.

5. Joseph Byrnes, a customer from Wexford, testified that, as a retired person living on Social Security benefits, the annual increase in Social Security benefits is not sufficient to cover the increased cost of gas under Peoples' proposal. Before retirement, Mr. Byrnes stated, he did not receive an 18% increase to his salary at any one point, and does not understand why Peoples should receive one in this case. Instead, Mr. Byrnes urged Peoples to reduce its costs and minimize any required increase. Tr. 182.

March 6, 2024, at 6 p.m., in Butler, PA:

6. Lou Ann Byrnes, a customer from Wexford, testified regarding her concerns about the weather normalization adjustment (WNA). Specifically, she said that the WNA is unfair to customers who are penalized for using less gas, and that she believes rate increases associated with the WNA are included in the Company's noticed increase of 21.4%. Ms. Byrnes also indicated that Peoples' determination of 80 Mcf as a metric for the estimated bill increase was much lower that her average usage level. As a school counselor, before retiring, Ms. Byrnes saw a number of students whose families were unable to afford to heat their homes and had to choose between household essentials every day. She is concerned that, under the Company's requested increase, the number of families who are forced to choose between eating and heating their homes will increase. Ms. Byrnes emphasized that the Commission's mission statement is to protect the public interest and balance the needs of consumers at reasonable rates, and, as such, she believes the Commission should deny or limit any rate increase. Tr. 214-222.

7. Mark Krenitsky, a customer from Meridian, complained of a number of service issues from dealing with Peoples. Specifically, Mr. Krenitsky has no gas service in one of his rental properties because Peoples took the meter at the property and has not returned it yet. He has had difficulty getting field technicians from Peoples to his property or responsive answers from call center staff when trying to get working gas service, including the inability to reach anyone after 5:00 p.m. Tr. 223-229.

8. John Kramer, a customer from Butler, operates several rental properties. He pays for gas service for some of them, and the tenant pays for gas service in others. Mr. Kramer testified that additional costs would be detrimental to him and his tenants. He gave an example of a tenant who had to move out because he could no longer afford to rent the property; while Mr. Kramer and the tenant were able to try and recover back-payments on rent, the tenant was unable to get assistance for a significant arrearage balance with Peoples, despite being on a payment program. While Mr. Kramer said that he would try and postpone passing on

any costs for increased gas bills to his tenants, he testified that, eventually, the rate increase by Peoples will result in higher rent for the customers whose gas service he pays for. Tr. 230-235.

I. STATEMENT OF QUALIFICATIONS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dante Mugrace. My business address is 22 Brooks Avenue, Gaithersburg, MD 20877.

Q. WHAT IS YOUR PRESENT OCCUPATION?

A. I am a Senior Consultant with the Economic and Management Consulting Firm of PCMG and Associates, LLC. (PCMG). In my capacity as a Senior Consultant, I am responsible for evaluating and examining rate and rate related proceedings before various governmental entities, preparing expert testimony recommending revenue requirement, as well as, offering opinions on economic policy and policy issues and methodologies used to set a value on a utility's rate base and cost of service components of revenue requirement.

Q. PLEASE SUMMARIZE YOUR PROFESSIONAL EXPERIENCE.

A. PCMG is an association of experts in utility regulation and policy, economics, accounting and finance. PCMG's members have over 75 years collective experience providing assistance to counsel and expert testimony regarding the regulation of electric, gas, water and wastewater utilities that operate under local, state and federal jurisdictions. PCMG focuses on areas regarding revenue requirement, cost of service, rate design, cost of capital and rate of return. Prior to my association with PCMG, I was employed as a Senior Consultant with the consulting firm of Snavely King Majoros and Associates (SKM) from 2013 to 2015, in the same capacity as PCMG. Prior to SKM I was employed by the New Jersey Board of Public Utilities (NJBPU) from 1983 to my retirement in 2011. During my tenure at the NJBPU, I held various Accounting, Rate Analyst, Supervisory and Management Positions. My last position was Bureau Chief of Rates in the Agency's Water Division (Bureau Chief of Rates). I held this position for nearly 10 years. My resume is attached as Appendix A.

Q. WHAT EXPERIENCE DO YOU HAVE IN THE AREA OF UTILITY RATE SETTING PROCEEDINGS AND OTHER UTILITY MATTERS?

A. In my capacity as Bureau Chief of Rates at NJBPU, I was responsible for overseeing the rate process regarding administrative, financial, and managerial functions of the Rates

Bureau. My primary duties were to ensure that the jurisdictional utilities had sufficient revenues to cover their operating expenses, the ability to earn a reasonable rate of return on plant investments, and to ensure that the provision of safe, adequate and proper service at reasonable rates was met. During my time at the NJBPU, I was involved in hundreds of rate and rate related proceedings. In my capacity as a Senior Consultant previously with SKM and now with PCMG, I have been and am currently involved in rate and rate related proceedings before the Commissions in the Commonwealths of Massachusetts and Pennsylvania, and the States of Maine, Maryland, New Jersey, New York, North Dakota, and Ohio. I was involved in the Generic Proceedings to Establish Parameters for the Next Generation Performance Based Rate Plans before the Alberta Utilities Commission. I was involved in transmission formula rate plans before the Federal Energy Regulatory Commission (FERC) regarding the PECO Energy Company on behalf of the Pennsylvania OCA and the Rockland Electric Company on behalf of the NJ Division of Rate Counsel.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I hold a Master of Business Administration (MBA) degree with a concentration in Strategic Management from Pace University-Lubin School of Business in New York, New York. I hold a Master of Public Administration (MPA) degree from Kean University in Union, New Jersey. I hold a Bachelor of Science (BS) degree in Accounting from Saint Peter's University in Jersey City, New Jersey.

II. PURPOSE OF TESTIMONY

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am testifying on behalf of the Pennsylvania Office of the Consumer Advocate (OCA).

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to calculate and to make a recommendation regarding the Peoples Natural Gas Company, LLC (Peoples or Company) base rate case proceeding. My recommendations include the setting of the Company's Rate Base Valuation, and Pro Forma Operating Income at Present Rates for the Fully Projected Future Test Year Period

Ending September 30, 2025. On December 29, 2023, Peoples filed a base rate case with the Pennsylvania Public Utility Commission (PAPUC or Commission) requesting an overall increase in rates for its gas distribution service of $156.00 million or 18.725% above current rates. The filing is predicated on the combined operations of Peoples Natural Gas Division (PNGD) and Peoples Gas Division (PGD) Companies. PNGD and PGD are legally merged but remain as two divisions before the Commission. Both PNGD and PGD have separate base rates and accounting books and records. Peoples has requested all of the necessary approvals from the Commission to fully merge its two divisions (PNGD and PGD).[1] My recommendations incorporate the components of Peoples as one single entity (combined basis). Included in my recommended position on Rate Base Valuation and Operating Income, I am also incorporating the recommendations of OCA witness Mr. Aaron Rothschild with respect to the overall rate of return, any adjustments to OCA witness Mr. Clarence Johnson on certain rate design issues, and any adjustments to OCA witness Mr. Colton on Universal Service adjustments.

III. REVENUE REQUIREMENT ISSUES

A. SUMMARY

Q. WHAT REVENUE DEFICIENCIES OR ADJUSTMENTS ARE YOU RECOMMENDING?

A. Based upon the use of Peoples' proposed fully projected future test year ending September 30, 2025, I have the following recommendations:

- My recommended Rate Base balance is $4,207,419,461, which is $7,705,703 lower than the Peoples's proposed Rate Base balance of $4,215,125,164.
- My overall Rate of Return based upon OCA witness Mr. Rothschild's recommendation is 6.20%, which includes a Common Equity component of 8.02%.

[1] The Commission has approved the Joint Application for merger of the Peoples Gas Division and the Peoples Natural Gas Division on August 25, 2022 in Docket Nos. A-2021-3029831 and A-2021-3029833. The Commission has also approved the Peoples Gas Division and Peoples Natural Gas Division Purchased Gas Cost Rates in the 2022 1307 (f) Proceeding in Docket Nos. R-2023-3037928, et. al.

- My recommended Operating Revenue at Present Rates is computed at $833,215,510, which is the same at Peoples' Present Rate Revenue of $833,215,508.[2]
- My recommended Operation and Maintenance Expenses are $203,741,414, which is $23,269,392 lower than Peoples' proposed Operation and Maintenance Expenses of $227,010,806.
- My recommended Income Taxes are ($91,344,434), which is ($32,049,042) lower than Peoples's proposed Income Taxes of ($59,295,392).
- Overall, based on each of these pieces, I recommend a revenue requirement increase of $7,701,077 which is $148,325,045 lower than Peoples's proposed revenue requirement increase of $156,026,122.

B. RATE OF RETURN

Q. WHAT HAS PEOPLES PROPOSED WITH RESPECT TO ITS OVERALL RATE OF RETURN?

A. Peoples**'** witness Mr. Paul Moul has proposed an overall Rate of Return of 8.40% including a Return on Equity of 11.75%.

Q. WHAT HAS OCA WITNESS MR. AARON ROTHSCHILD PROPOSED WITH RESPECT TO HIS RECOMMENDED OVERALL RATE OF RETURN?

A. Mr. Rothschild has recommended an overall Rate of Return of 6.20% with a Return on Equity of 8.02%

Q. WHAT EFFECT DOES MR. ROTHSCHILD'S REMOVAL OF MR. MOUL'S MANAGEMENT PERFORMANCE PREMIUM OF 0.25% HAVE ON THE COMPANY'S REVENUE REQUIREMENT?

A. The effect of removing the 0.25% Management Performance Premium from the Company's Cost of Equity would be a reduction from Peoples' filed 11.75% Equity Cost Rate less 0.25% equals 11.50%. Incorporating this into the overall rate of return would be

[2] Any differences between Peoples's Operating Revenues at Present Rates in its filing and my Exhibits are due to rounding.

an 8.267% instead of Peoples's 8.40%. The revenue requirement impact would be a reduction of about $7,461,843[3].

Q. DID PEOPLES PROVIDE ANY UPDATED DOCUMENTS SUBSEQUENT TO THE FILING OF ITS RATE CASE?

A. Yes. While Peoples filed its rate case on December 29, 2023, on February 16, 2024, Peoples provided updates related to errors and omissions from the original filing. These updates relate to its Exhibits to Post-Retirement Benefits Other than Pension, (Exhibit No. 4 Schedule 1, page 11), Schedule of Expenses (Exhibit No. 4 Schedule No. 22) and its Current Gas Storage (Exhibit No. 1 Schedule 6). Peoples stated that the revisions to Exhibit No. 4 Schedule No. 22 do not impact the revenue requirement. With respect to Exhibit No. 4 Schedule No. 1 page 11, Peoples indicated through the discovery process that it will file under separate cover all changes to the revenue requirement. (OCA Set 15-5).

Q. WHAT DID PEOPLES PROVIDE WITH RESPECT ITS UPDATED DOCUMENTS?

A. Peoples provided revisions to its filing on March 13, 2024. Peoples noted that the revisions increase the revenue requirement by $996,345. Peoples noted that it intends to make this update in its rebuttal testimony, along with other adjustments, if any, that Peoples may agree to resulting from other parties' direct testimony.

Q. DO YOU HAVE ANY UPDATES WITH RESPECT TO THE COMPANY'S UPDATED DOCUMENTS TO CERTAIN O&M EXPENSES?

A. I note that Peoples' revisions does not provide a full picture of its revenue requirement in its revised exhibits in that it has not updated any other components that affect its increased $996,345 revenue requirement such as rate base components, and the flow through of other components (taxes, uncollectible accounts, late payment charges and cash working

[3] (Rate Base of $4.215 billion times the rate of return of 8.267% equals $348.464 million or a reduction from Peoples' proposed income requirement $354.265 million or $5.800 million multiplied by the gross revenue factor of 1.28640527 equals $7.462million).

capital). I am still reviewing Peoples' revised exhibits and will await Peoples' rebuttal testimony before I recommended any further adjustments. I also note that Peoples cannot claim a higher revenue requirement amount than what customers have been noticed for. Given this, I am not making any further adjustments to my revenue requirement recommendation at this point.

C. RATE BASE (Measures of Value)[4]

1. Utility Plant in Service (GPIS)

Q. WHAT HAS PEOPLES PROPOSED REGARDING ITS GAS PLANT IN SERVICE?

A. Peoples has proposed a GPIS balance in the combined amount of $5,587,906,895[5] for the fully projected future test year ending September 30, 2025. (Peoples' Exhibit No. 8, Schedule No. 2). Included in that balance are plant additions that Peoples expects to place in service during the future test year period ending September 30, 2024, in the amount of $494,633,645, and an additional $592,024,502 for the Fully Projected Future Test period ending September 30, 2025, a total addition to plant of $1,086,658,147. (Peoples' Exhibit No. 8, Schedule No. 2). Peoples' Fully Projected Future Test Period (FPFTY) and its Measure of Value is in accordance with Act 11 of 2012.

Q. WHAT ARE THE REQUIREMENTS OF THE USE OF A FPFTY PERIOD?

A. With the enactment of Act 11 of 2012, Peoples is allowed to use a fully projected future test year to establish base rates. The FPFTY is defined as the 12-month period that begins with the first month that the new rates will be placed in service, after application of the full suspension period permitted under Section 1308(d). (Peoples Statement No. 11 page 4).

Q. DID PEOPLES COMPLY WITH THESE REQUIREMENTS?

A. Yes.

[4] I am accepting Peoples balances related to Customer Advances and Customer Deposits.
[5] Differences between the Company's balance and my balance are due to rounding.

Q. BECAUSE IT IS BASED UPON A FULLY PROJECTED TEST PERIOD, DOES PEOPLES' FPFTY RELY UPON PROJECTIONS OF WHAT COSTS AND EXPENSES WILL BE IN THE FUTURE?

A. Yes. Because Peoples' filing is built upon a FPFTY, many of its claims are built upon assumptions of what expenses and revenue will be in the future, for a test year that ends on September 30, 2025. In that sense, Peoples relies upon inflation adjustments and CPI indices projections simply to support its revenue requirement for 2025. As the combined testimony of OCA witnesses will explain, Peoples' budget projections have not always materialized, and in many respects have been significantly over projected through the adjustments of inflation factors and CPI indices.

Q. WHAT HAS PEOPLES INCLUDED IN THE DEVELOPMENT OF ITS GPIS?

A. Peoples' witness Mr. Huwar stated that Peoples has included costs related to its Long-Term Infrastructure Improvement Plan (LTIIP). Mr. Huwar stated that the most recently approved LTIIP in January of 2021 targeted replacement of 871 miles of at-risk pipe for a total cost of $1.512 billion related to mains and services. (Peoples Statement No. 1 page 12). Peoples' second combined distribution LTIIP maintained its commitment to replace all at-risk pipelines over a twenty-year period. Peoples has stated that as of October 2023, about 485 miles or 56% of the projected 871 total miles in the Company's current LTIIP have been replaced at a cost of $918 million or 63% of the estimated program costs for mains and services of $1.5 billion. (Peoples Statement No. 5 page 4). Peoples' witness Mr. Becker stated that the LTIIP includes three other programs related to pipeline work programs. They are (1) the Gathering Pipeline Replacement Program (GP); (2) the Goodwin Tombaugh Program (GT); and (3) the Mainline Extension Program (MLX). A breakdown of these costs is shown in response to OCA Set 8-023. Peoples has prepared an exhibit showing the total plant additions from the Peoples' 2023 and 2024 capital budgets and the amount of Construction Work in Program (CWIP) as of August 31, 2023, that will close to plant in 2023 or early 2024. (Peoples Exhibit No. DF-1). (Peoples Statement No. 11 page 5).

Q. WHAT CHANGES DO YOU HAVE WITH RESPECT TO PEOPLES' PROPOSED LEVEL OF GPIS FOR ITS FULLY PROJECTED FUTURE TEST YEAR PERIOD ENDING SEPTEMBER 30, 2025?

A. In response to OCA-7-2, Peoples stated that it included inflation related adjustments to compute its projected capital expenditures in the FTY and the FPFTY periods. Peoples utilized an inflation factor for its LTIIP capital expenditures of 2.31% in 2024 and 2.40% in 2025. Peoples utilized an inflation factor for its General Plant (GP) of 4.00% in 2024 and 3.50% in 2025. Peoples utilized an inflation factor for its Mainline Extension Program (MLX) of 3.50% in 2025. In response to OCA Set 7-8, Peoples stated that its LTIIP capital expenditures are accounted for in the following accounts: 367.0, 369.0, 376.1, 376.2, 380.00, 381.0 and 381.1. I am recommending removing these inflation related adjustments from Peoples FTY and FPFTY capital expenditures.

Q. WHY ARE YOU RECOMMENDING REMOVAL OF THESE INFLATION COSTS IN THE DEVELOPMENT OF PEOPLES' REVENUE REQUIREMENT?
