PREPARED DIRECT TESTIMONY OF
MICHAEL HUWAR, PRESIDENT
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023
DATE ADMITTED: _____

Peoples Statement No. 1

PREPARED DIRECT TESTIMONY
OF MICHAEL HUWAR

Introduction

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Michael Huwar. My business address is Peoples Natural Gas Company LLC, 375 North Shore Drive, Suite 600, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples Natural Gas," "Peoples," or the "Company") as President. I am also the President of Peoples Natural Gas' direct parent, PNG Companies LLC ("PNG"). On January 1, 2023, Peoples Natural Gas was merged with People Gas Company LLC and two divisions were formed.

Q. PLEASE DESCRIBE YOUR EDUCATION AND PROFESSIONAL EXPERIENCE.

A. I hold an undergraduate degree from the University of Pittsburgh, and completed a leadership development program at the University of Pennsylvania's Wharton School. Currently, I am the corporate officer responsible for Peoples Natural Gas and its various departments including but not limited to Operations, Construction, Pipeline Safety and Compliance, Damage Prevention, Sales, Customer Service and Community Relations. Prior to my time at Peoples, I held various positions with Columbia Gas of Pennsylvania, Inc. and its parent company, NiSource Inc. from 1986 through 2021, including President and Chief Operating Officer of Columbia Gas of Pennsylvania, Inc. While at Columbia/NiSource I also served as Vice President and General Operations Manager for Columbia Gas of Virginia, Inc., Vice President of Sales, Vice President of Products and

Services, and Director of Large Customer Relations. From 2015 through 2017, I served as Vice President of Marketing for Columbia Midstream, a subsidiary of Columbia Pipeline Group and TransCanada/TC Energy.

Q. WHAT ARE YOUR CURRENT JOB RESPONSIBILITIES WITH PEOPLES?

A. As President, I have the overall responsibility of leading the business and establishing the strategic plan for Peoples Natural Gas. My principle role is setting and executing on Peoples' strategic goals, which prioritize the operation and maintenance of a safe and reliable natural gas distribution system from which we serve our customers and communities.

Safety and reliability are the top priorities at Peoples and as such, I oversee the modernization of Peoples' infrastructure to maintain the overall safety and integrity of our natural gas delivery system. From that system, we meet the natural gas distribution needs of our customers in 18 counties in Southwest Pennsylvania. While we improve our infrastructure, Peoples is committed to providing top tier customer service. I also serve as Peoples' chief spokesperson and representative on important energy issues being debated and deliberated on both the federal and state levels.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY REGULATORY PROCEEDING?

A. Yes. Most recently, I submitted testimony in Peoples Gas Company LLC and Peoples Natural Gas Company LLC's Joint Application for Merger at Docket Nos. A-2021-3029831 and A-2021-3029833, which was approved by the Pennsylvania Public Utility

Commission ("Commission") on August 25, 2022. While at Columbia, I submitted testimony in support of Columbia Gas of Pennsylvania, Inc.'s base rate proceedings before the Commission at Docket Nos. R-2018-2647577 and R-2020-3018835.

Q. WHY DID THE COMPANY FILE THIS RATE CASE?

A. Peoples committed to file a base rate proceeding by no later than December 31, 2023 as part of a Joint Settlement in the Company's Tax Repair Election Petition in Docket No. P-2020-3021191 before the Commission in 2021. Prior to this filing, Peoples Natural Gas Division filed its last base rate proceeding in 2019 and Peoples Gas Division filed its last base rate proceeding in 2013[1]. By the time proposed new rates would become effective in this filing, it will have been nearly five years since the Company's last rate increase.

Q. WHAT IS THE PRIMARY DRIVER FOR THIS FILING?

A. The primary drivers for this case are the Company's ongoing infrastructure modernization programs which are supported by significant ongoing capital investments. These capital investments involve the replacement of aging infrastructure that will enhance the overall safety, reliability and integrity of the Company's natural gas distribution system. Therefore, the Company is requesting a base rate increase to recover the revenue requirement associated with the capital invested through the test year and continued investment in modernizing its infrastructure through the fully projected future test year.

[1] For more information regarding the two Divisions and Merger information for Peoples Natural Gas Company LLC's Peoples Natural Gas Division and Peoples Gas Division, see the Testimony of Andrew Wachter, pages 3-4.

Approval of the Company's request is necessary for Peoples to continue to provide safe and reliable natural gas service at a reasonable price to its customers while providing the Company with a reasonable opportunity to recover its costs and earn a fair rate of return on its capital investments in this proceeding. The Company is seeing overall increases in its costs to do business, including rising interest rates and post-pandemic pressures related to labor and availability of materials. As such, approval of the Company's request herein will demonstrate to its investors that the Commission continues to support the Company's need for natural gas infrastructure modernization and investment, as well as the need for reasonable and predictable earnings to continue to operate its business.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS CASE?

A. First, I will introduce Peoples' witnesses in this case, as well as the subject matters presented by each witness. Next, I will discuss the various priorities in this filing, including but not limited to the unification of the retail tariffs of the two divisions of Peoples (Peoples Gas Division and Peoples Natural Gas Division) into one combined retail tariff under Peoples Natural Gas Company LLC. I will also highlight some of the Company's operational performance and safety results, including the progress the Company has made with its infrastructure modernization program. In addition, I will discuss Peoples' customer service metrics and how the Company has been improving its customer experience. Additionally, I will briefly summarize some of the Company's requests in this proceeding, including a weather normalization adjustment mechanism and a new rate proposal to attract large industrial customers to the Company's distribution system.

Lastly, I will conclude my testimony with a discussion regarding the Company's focus on delivering safe and reliable natural gas distribution service, the benefits of that service, and the overall community impact resulting from that service.

Q. PLEASE LIST THE FILING REQUIREMENTS THAT YOU ARE SPONSORING AS A WITNESS.

A. I am sponsoring Exhibit 13, Sch. 10 and Exhibit 15, Sch. 1.

Witnesses

Q. PLEASE PROCEED WITH THE INTRODUCTION OF PEOPLES' WITNESSES.

A. Peoples' witnesses and the subject matters of their testimonies are as follows:

Andrew P. Wachter, Director, Finance and Regulation, will discuss the overall rate case organization and the merger of the Divisions. In addition, he will support the Company's proposed revenue requirement and identify and explain Peoples' operating and maintenance expenses for the Historic Test Year, Future Test Year, and the Fully Projected Future Test Year ("FPFTY"). Moreover, Mr. Wachter will discuss the Company's WNA proposal, the Company's proposals related to Rider TCJA and the Company's Tax Repairs proposal. (Peoples Statement No. 2);

Carol Scanlon, Manager of Rates and Regulation, will discuss the Company's calculation of historical and projected revenues, including customer counts and volume projections, the determination of rates for competitive accounts and the Company's proposal for a Weather Normalization Mechanism. Additionally, Ms. Scanlon will describe the Company's AVC rate blending proposal and the combination of the PNG and PG universal service riders. (Peoples Statement No. 3)

Ed Palombo, Vice President of Reliability, will describe the Company's gas supply plan, the Company's gathering approach, and the Company's safety performance. (Peoples Statement No. 4)

Paul Becker, Vice President of Construction and Engineering, will discuss the Company's capital pipeline work programs. (Peoples Statement No. 5)

Christine Saball, Vice President of Taxation will sponsor and support the Company's tax calculations for ratemaking purposes and the tax-related information provided by Peoples in response to the Commission's rate filing regulations. More specifically, Ms. Saball will explain the Company's Net Operating Loss carryforward, the Consolidated Tax Adjustment, how the Company is reflecting the effects of Tax Repairs in this proceeding, the impact of the Gas Safe Harbor rules issued in 2023 and how the reduction to the Corporate Net Income tax rate impacts the Company's revenue requirement in this matter. (Peoples Statement No. 6)

Luke Ravenstahl, Vice President Sales and Marketing, will sponsor and support the Company's negotiated contracts with competitive customers, Microgrid and Combined Heat and Power facilities, and outline the Company's requests to expand the use and availability of natural gas. (Peoples Statement No. 7)

Joyce Mitole, Controller, will sponsor the accounting filing requirements and explain how the accounting records of Peoples are maintained under industry standards. (Peoples Statement No. 8)

Rita Black, Director of Customer Service Programs, will sponsor and explain the Company's universal service programs and the implementation of said programs. (Peoples Statement No. 9)

Rudolph Hanechak, Financial Analysis and Budget Manager, will sponsor and support the Company's taxes other than income calculations. (Peoples Statement No. 10)

Dawn Folks, Senior Rates Analyst, will present the calculation of the Company's rate base. In addition, Ms. Folks will discuss the Company's tariff changes and the proposal to consolidate the Company's two tariff divisions (Peoples Gas Division and Peoples Natural Gas Division) into one retail tariff under Peoples Natural Gas Company LLC. (Peoples Statement No. 11)

Krista Snyder, Rates Analyst, will present the calculation of the Company's cash working capital requirements. (Peoples Statement No. 12)

Paul Moul, Managing Consultant, P. Moul & Associates, will present an independent assessment of the fair rate of return that Peoples should be authorized to earn on its investment in providing gas delivery service to customers. (Peoples Statement No. 13)

John Spanos, President, Gannett Fleming, Inc., will sponsor a depreciation study that determined Peoples' annual depreciation accrual rates. (Peoples Statement No. 14)

Ralph Zarumba, Black & Veatch Management Consulting, LLC, will sponsor the cost of service allocation studies prepared by his firm and he will explain how Peoples' rates were designed to produce the revenue requirement described in Peoples' witness Andrew Wachter's testimony. Mr. Zarumba will also discuss the Company's WNA proposal and its request to a new rate for industrial customers. (Peoples Statement No. 15)

Unification of Tariffs

Q. PLEASE DESCRIBE THE COMPANY'S CURRENT STRUCTURE AND WHAT HAS OCCURRED SINCE ITS LAST BASE RATE PROCEEDING.

A. Over the last few years, the Company has made great strides to merge its two Pennsylvania gas utilities, Peoples Gas Company LLC and Peoples Natural Gas Company LLC, into one entity, Peoples Natural Gas Company LLC. Today, the entities are legally merged, but remain as two divisions before the Commission– Peoples Gas Division and Peoples Natural Gas Division – with two separate tariffs on file. Moreover, the two divisions have separate base rates and accounting books and records.

Q. WHAT STEPS HAS THE COMPANY TAKEN TO UNIFY THE PEOPLES GAS AND PEOPLES NATURAL GAS DIVISIONS' OPERATIONS?

A. The Company has taken a variety of steps to unify the operations of its divisions. In particular, the organizational structures of the two divisions have been restructured to avoid duplicative positions, the unions have been merged, and the vehicles, tools, and equipment have been standardized across the divisions. In addition, the Company has re-aligned the locations of offices across the combined service territory to better serve the customers and avoid duplicative offices. The Company has gone to great efforts to create a single operation that provides the most valuable services to its customers in the most efficient means possible.

Additionally, the Company, in this proceeding, is requesting all of the necessary regulatory approvals from the Commission to fully merge its two divisions.

Q. HAS THE COMMISSION APPROVED THE JOINT APPLICATION FOR MERGER OF THE PEOPLES GAS DIVISION AND PEOPLES NATURAL GAS DIVISION INTO ONE ENTITY?

A. Yes, the Commission approved the Joint Application for merger of the Peoples Gas Division and Peoples Natural Gas Division on August 25, 2022 in Docket Nos. A-2021-3029831 and A-2021-3029833.

Q. HAS THE COMMISSION APPROVED THE CONSOLIDATION OF THE PEOPLES GAS DIVISION AND PEOPLES NATURAL GAS DIVISION PURCHASED GAS COST RATES?

A. Yes, the Commission approved the consolidation of the Peoples Gas Division and Peoples Natural Gas Division Purchased Gas Cost Rates in the 2022 1307(f) proceeding at Docket Nos. R-2023-3037928, *et al.*

Q. WHAT IS PEOPLES PROPOSING IN THIS PROCEEDING WITH RESPECT TO THE PEOPLES GAS AND PEOPLES NATURAL GAS DIVISIONS' BASE RATES, TARIFFS AND ACCOUNTING?

A. The Company is requesting consolidation of the base rates and accounting of the Peoples Gas and Peoples Natural Gas Divisions together into one unified company and the elimination of any requirement to maintain separate divisions. In addition, the Company is proposing one new retail tariff, Peoples Natural Gas Tariff Gas No. 48 to serve all retail customers. Peoples Natural Gas' Tariff Gas- PA PUC No. 47 and Peoples Gas Tariff– PA PUC No. 8 would be canceled and superseded by this new retail tariff, Peoples Natural Gas

Tariff Gas No. 48. The Peoples Natural Gas Division's Supplier Tariff S-3 will be canceled and superseded by a new PA PUC Tariff No. S-4 and will cover supplier issues for both the Peoples Natural Gas and Peoples Gas Divisions. Dawn Folks' testimony (Peoples Statement No. 11) discusses this in more detail. At a high level, the merging of the tariffs will involve the merging of certain rates and fees that may be effective for one division but not yet another. For example, in this proceeding, the Company proposes to apply its gathering fees across both divisions. Further, the Company proposes to spread the capacity gas costs incurred by the Company on Equitran's Allegheny Valley Connector system across both divisions, as well.

Q. WHAT ARE THE BENEFITS OF COMBINING THE PEOPLES AND PEOPLES NATURAL GAS DIVISIONS' RATES AND TARIFFS?

A. As described above, the Company has made efforts to combine the operations procedures of the two divisions, as well as the purchased gas cost rates. The final step to complete the acquisition will be in combining the tariffs and rates of the Peoples Gas and Peoples Natural Gas Divisions. By combining the rates and tariffs, the Company will ensure that standards, procedures and customer charges are uniform across its service territory. This will present the Company to customers as one company and avoid customer confusion concerning rates and services. Duplicative regulatory filings for the Peoples Gas and Peoples Natural Gas Divisions will be eliminated. In addition, the new rates will reflect more accurate costs to customers of the unified company, instead of separate rates for each division. Additionally, the merger affords the Company with operational flexibility related to the procurement of natural gas. As previously described the Company operates and holds itself out as a single

business to the people and businesses it serves. This will simplify that even further for customers' benefit.

Case Priorities

Q. WHAT ARE PEOPLES' TOP PRIORITIES?

A. At Peoples, our mission is to sustain life and improve economic prosperity by safely and reliably delivering natural gas to our customers and communities. The Company delivers on this mission while striving to achieve the operational excellence necessary to provide safe and reliable natural gas delivery service to its customers. We are fully engaged in the Southwestern Pennsylvania community. I am personally actively engaged in the Southwestern Pennsylvania community through various organizations and events. In 2022, I was the Chair of the Heart Association Walk in downtown Pittsburgh's North Shore and in 2023, I was Chair of the Leukemia and Lymphoma Association's Light The Night Walk in North Shore. Additionally, I am an active board member for the Marcellus Shale Coalition and the Allegheny Conference on Economic Development. I am also Co-Chair of Pittsburgh Works Together – a Pittsburgh based business and labor coalition. Many of our executives and employees are likewise highly involved in the community and such participation is strongly encouraged by Peoples. We work hard to support our customers, our employees and to help the communities we serve grow and prosper. We achieve our mission with a focus on safety. We strive to keep our customers, the communities we serve and our employees safe every day. In order to keep our system safe, the Company is investing and will continue to invest in upgrading and modernizing the infrastructure from which we serve our customers.

Additionally, since we are geographically located on top of the second largest known natural gas reserve on the planet, the Company prioritizes and supports the utilization of the available and affordable energy supply we have right here in Southwestern Pennsylvania. We work with producers and customers as well as economic leaders to optimize the incredible asset of natural gas for the benefit of this Commonwealth and Southwestern Pennsylvania. Helping customers understand the environmental and economic benefits of natural gas is a key part of our mission.

At the same time that we are delivering safe and reliable natural gas service, we are also working to reduce our methane emissions and our overall impact on the environment with our leak reduction and pipeline replacement work and other projects. We continue to partner with leaders at the local and state levels to drive both economic development in this region but also environmentally conscious initiatives to help us all reach our emissions reduction goals.

Infrastructure Investment

Q. PLEASE EXPLAIN THE COMPANY'S INFRASTRUCTURE INVESTMENTS.

A. The Peoples Companies, and their predecessor companies, have had Long Term Infrastructure Improvement Plans ("LTIIPs") in place since 2013. The most-recently approved version is a Combined Distribution LTIIP that encompasses infrastructure modernization for both the Peoples Natural Gas and Peoples Gas Divisions. The current approved Combined Distribution LTIIP approved in January of 2021 targeted the replacement of 871 miles of at-risk pipe for a total cost of approximately $1.512 billion related to mains and services.

Q. ON WHAT DOES THE COMBINED DISTRIBUTION LTIIP FOCUS?

A. Peoples' Second Combined Distribution LTIIP maintains its commitment to replace all at-risk pipelines over an approximately 20-year period. The current LTIIP focuses primarily on removing bare steel and cast/wrought iron from the Company's system. Typically, the highest risk pipes are mainly located in urban areas, which have the highest concentration of customers being served. These pipe replacement projects are much more costly per mile than the rural pipe replacement projects due to the significant paving and restoration work associated with the urban projects. In addition, and of growing importance to all of us, our LTIIP focuses on the mitigation and elimination of methane impacts on the quality of air. The Company is committed to reducing its overall emissions by 60% from its 2019 baseline, by 2034. The LTIIP work is one of the major ways the Company will meet its emissions reduction goals.

Q. WILL THE COMPANY CONTINUE TO INVEST IN THE MODERNIZATION OF ITS INFRASTRUCTURE AND WHY?

A. Yes, Peoples is committed to continue its investment in infrastructure modernization for many years to come. Through its capital pipeline work, the Company will systematically replace older and more vulnerable sections of its pipeline made of leak-prone materials in order to reduce its overall scope 1 greenhouse gas emissions. Moreover, the Company's infrastructure modernization programs allow the Company to maintain the reliability and integrity of its natural gas system for the safety of its customers and the environment.

Witness Paul Becker further details the Company's work and spend on pipeline modernization.

Weather Normalization Adjustment

Q. PLEASE BRIEFLY EXPLAIN THE COMPANY'S WNA PROPOSAL.

A. In this proceeding, the Company is requesting a Weather Normalization Adjustment ("WNA") mechanism. With this mechanism, the Company will adjust the customer delivery charges based on normal historic weather patterns. For example, if the weather a customer experiences is colder than normal weather, through a WNA mechanism, that customer would receive a credit on their bill. Alternatively, if the weather a customer experiences is warmer than normal, then that customer would receive an additional charge on their bill. A WNA mechanism provides customers with more predictable winter bills and in turn stabilizes Company revenues for that same period of time. For more information about the Company's WNA proposal and the mechanics of the mechanism, please see the testimonies of Ralph Zarumba and Carol Scanlon.

Q. WHAT ARE THE BENEFITS OF A WNA MECHANISM?

A. A WNA mechanism has benefits for both the customer and the Company. The Company is able to bring in steady, predictable revenue while in turn, the customer is afforded stable distribution charges during typically high usage winter months. A WNA mechanism reduces some of the volatility associated with weather on a customer's bill.

Q. DOES ANYONE ELSE USE A WNA MECHANISM?

A. Yes. There are four other Pennsylvania gas utilities with WNA mechanisms – PGW, Columbia, National Fuel and UGI. Additionally, there are WNA mechanisms approved or proposed in 40 states in the United States. For more information about our proposed WNA mechanism please see the testimonies of Carol Scanlon and Ralph Zarumba.

Q. WHY SHOULD THE COMMISSION APPROVE THE COMPANY'S WNA MECHANISM?

A. The Commission should approve the Company's WNA mechanism as it benefits both the customer and the Company to reflect normal weather for distribution charges on a monthly billed basis. Additionally, as the Company is engaged in modernizing its infrastructure, it is important to keep utility revenues as stable as possible in order to attract the capital necessary to fund its modernization programs.

Customer Service

Q. PLEASE EXPLAIN THE COMPANY'S GOALS WITH RESPECT TO CUSTOMER SERVICE.

A. One of our primary goals has been to focus on and continually improve our customer service, and I am happy to be able to testify that we have been successful in this area. Peoples has objective targets for measuring customer service including certain call center metric targets and metrics related to customer complaints and the Company's response to such complaints. Overall, the Company as a whole has embraced the principle that people who care about what they are doing will provide a more efficient and higher quality of service to customers. Our employees are proud to work for the Company and they

recognize the importance of their services to the region where they live. They see themselves as neighbors helping to make their neighbors' lives better, which is a long-term core value for our Company in the communities we serve.

Q. WHAT HAS BEEN PEOPLES' PERFORMANCE REGARDING CUSTOMER SERVICE?

A. Since Peoples Natural Gas Company LLC's last base rate proceeding in 2019, Peoples has made great strides to improve customer service goals and our success is reflected in the Annual Customer Service Performance Report[2] published by the Commission. Some of the highlights from the 2022 report are as follows:

- **Highest Service Level at 85%. (**Goal was 82%.)
- **Lowest Abandon Rate at 3%.** (Regulatory goal was 2%. The average for all gas companies combined was just under 9% for reference.)
- **2nd Highest IVR Score at 78%** (Average for all companies was 78%)
- **Highest Rep Satisfaction at 94%** (Average for all companies was 92%)
- **Highest Rep Courtesy at 97%** (Average for all companies was 95%)
- **2nd Highest Rep Knowledge at 93%** (Average for all companies was 92%)
- **Highest Overall Satisfaction at 91%** (Average for all companies was 88%)

Q. CAN YOU PROVIDE EXAMPLES OF PEOPLES PROVIDING QUALITY CUSTOMER SERVICE?

A. Yes, as demonstrated in the PUC's Annual Utility Consumer Report and Evaluation for 2022[3] Peoples provided excellent service. The report provides information on each utility's performance in handling complaints. The three main areas covered in the report are: Consumer Complaints, Payment Arrangement Requests ("PAR") and Compliance with

[2] https://www.puc.pa.gov/media/2566/2022-customer-service-performance-report-final-092623.pdf

[3] https://www.puc.pa.gov/media/2606/2022-ucare-final-version.pdf

Commission regulations. As shown in the table below, Peoples' Consumer Complaint Rate for both divisions was lower than the Pennsylvania NGDC average.

	Consumer Complaint Rate	Justified Consumer Complaint Rate	Percent of Justified Consumer Complaints
Peoples	0.58	0.02	3.8%
NGDC Average	0.86	0.12	13.7%

Further, Peoples responds promptly to consumer complaints received by the PUC as demonstrated by the following table:

2019-22 Average Response Time to BCS
Residential Consumer Complaints
Major Natural Gas Distribution Companies

Utility	Number of Days			
	2019	2020	2021	2022
Columbia	6.9	9.6	10.3	8.2
NFG	12.9	11.2	13.6	16.9
Peoples+	3.6	3.4	4.8	4.6
Peoples-Equitable+	3.8	n/a	n/a	n/a
PGW	14.8	10.5	21.2	19.8
UGI Gas++	11.3	8.8	7.6	10.7
UGI North++	11.9	n/a	n/a	n/a
Average	**11.2**	**8.4**	**13.0**	**14.2**

+ Due to the Peoples Natural Gas merger, effective Jan. 1, 2020, the Peoples data includes Peoples-Equitable.
++ Due to the UGI Gas merger, effective Jan. 1, 2020, the UGI Gas data includes UGI Central and UGI North.

Peoples also treats customers fairly with respect to payment arrangement requests (PAR), having the lowest justified PAR rate of its NGDC Peers. The following table shows that Peoples' PAR Rate, Justified PAR Rate and Percent of Justified PARs are significantly less than the average NGDC rates:

2022 Residential Payment Arrangement Request (PAR) Rates,
Justified PAR Rates, and Percent of Justified PARs
Major Natural Gas Distribution Companies

Utility	PAR Rate	Justified PAR Rate	Percent of Justified PARs
Columbia	1.35	0.04	3.1%
NFG	1.79	0.07	3.7%
Peoples	1.71	0.03*	1.5%*
PGW	8.21	1.43*	17.5%*
UGI Gas	5.49	0.14*	2.5%*
Average	**3.71**	**0.34**	**8.9%**

* Based on a probability sample of complaints

Finally, Peoples' infraction rates remain very low in the Commonwealth and the Company is tied with Columbia Gas of Pennsylvania for the lowest rate in 2022 as shown below:

Commission Infraction Rates*
Major Natural Gas Distribution Companies

Utility	2019	2020	2021	2022
Columbia	0.00	0.00	0.03	0.02
NFG	0.07	0.06	0.16	0.10
Peoples+	0.01	0.01	0.06	0.02
Peoples-Equitable+	0.03	n/a	n/a	n/a
PGW	0.18	0.28	0.47	0.83
UGI Gas++	0.14	0.04	0.13	0.18
UGI North++	0.25	n/a	n/a	n/a

* The infraction rate is the number of informally verified infractions per 1,000 residential customers. Dividing per 1,000 customers normalizes the data for comparison purposes. The infraction rate is not a percentage.
+ Due to the Peoples Natural Gas merger, effective Jan. 1, 2020, the Peoples data includes Peoples-Equitable.
++ Due to the UGI Gas merger, effective Jan. 1, 2020, the UGI Gas data includes UGI Central and UGI North.

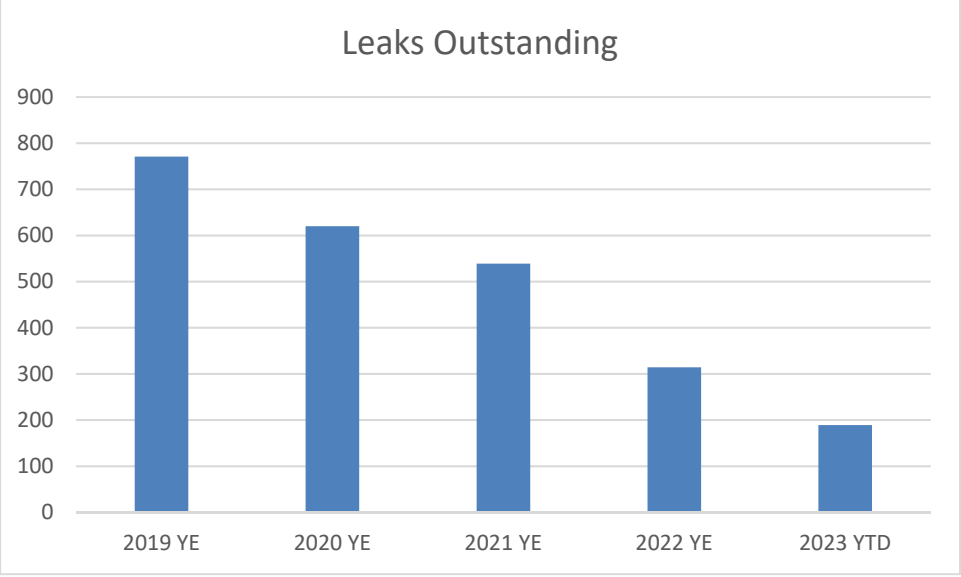
Operations and Safety Performance

Q. PLEASE EXPLAIN THE COMPANY'S GOALS WITH RESPECT TO OPERATIONS AND SAFETY?

A. As previously mentioned, safety is the Company's top priority. As such, the safe operation of our system is what our Company focuses on every day. Some of the ways the Company measures its operational safety performance include outstanding leaks, emergency response and pipeline safety compliance. As demonstrated below, the Company is working hard to achieve its operations and safety performance.

Q. CAN YOU PROVIDE EXAMPLES OF PEOPLES' OPERATIONAL AND SAFETY PERFORMANCE?

A. Yes. As demonstrated by the following table, the Peoples team has worked hard and continues to work hard to reduce the outstanding leaks on its system. Since 2019, the Company has reduced its outstanding leaks (Grade 1 and 2) from more than 700 in 2019 to less than 200 as of November, 2023.



Regarding Emergency Response times, the Company has successfully reduced its results with respect to "average minutes to respond" and also met its goals for "% response within 60 minutes." The following table demonstrates 2020-2022 results for both categories:

AVERAGE RESPONSE TIME TO POTENTIAL GAS EMERGENCIES

	2022	2021	2020
Average minutes to respond	24.2	24.3	25.0
% Response within 60 minutes	98.6	98.7	98.3

Lastly, the Company has achieved success with respect to gas safety compliance. In 2023, the Commission has conducted 160 audits of field operations and associated records, finding no violations, fines or citations. In 2023, the Pipeline Safety Division of the Commission's Bureau of Investigation and Enforcement did issue three letters of potential Non-Compliance (NC letters) to the Company that recommended minor revisions to procedures and policies to enhance the pipeline safety performance. The Company is working with the Pipeline Safety Division to incorporate its suggestions into the Company's standard operating procedures. The following table demonstrates the number of NC letters and reportable incidents the Company had since 2019:

	2019 YE	2020 YE	2021 YE	2022 YE	2023 YTD
NC Letters	3	5	9	3	2
Reportable Incidents	2	2	2	3	1

For more information on the Company's operations and safety programs, please see the testimony of Company witness Edward Palombo.

Economic Development

Q. EARLIER YOU TESTIFIED THAT PEOPLES WILL REMAIN FOCUSED ON DRIVING ECONOMIC DEVELOPMENT AND JOB CREATION IN WESTERN PENNSYLVANIA. WHY IS THIS IMPORTANT TO PEOPLES?

A. Peoples serves more than 700,000 customers and over two million people in Southwestern Pennsylvania. Each customer represents at least one individual, but most represent more than that – perhaps a family or a business with employees. Peoples will only continue to be successful if its service to customers remains safe and reliable. I believe that Peoples can help make this happen with our focus on modernizing infrastructure. To complete our modernization work, we need people. Our work is creating jobs at Peoples with businesses that help us serve our customers and run our Company. Further, Peoples is committed to not only creating jobs but helping to sustain the jobs and retain the key talent employed in those positions.

Despite the challenges the Company faced during the COVID-19 pandemic with regard to recruiting and retaining talent, the Company managed to mitigate turnover and create additional jobs through its pipeline capital work programs. Our LTIIP alone has created significant employment opportunities beyond any project in the Company's long history. For example, in 2023, the Company's LTIIP program required 70 different pipeline crews to complete its work. Our work creates jobs for both internal positions as well as positions outside the company for people employed by contractors engaged to help execute the Company's program. The vast majority of these jobs are good paying union positions including positions in the building trades in the region.

In the same way that Peoples supports job creation in its service territory, Peoples continues to support and encourage local production of natural gas in whatever ways we can. Our commitment to bring our customers gas supply from locally drilled gas wells has driven more jobs for local drilling companies and related activities. We consider the local producers on our system as partners in making sure this region and our Commonwealth realize the full economic benefits of having this incredible abundance of gas supply right beneath our feet.

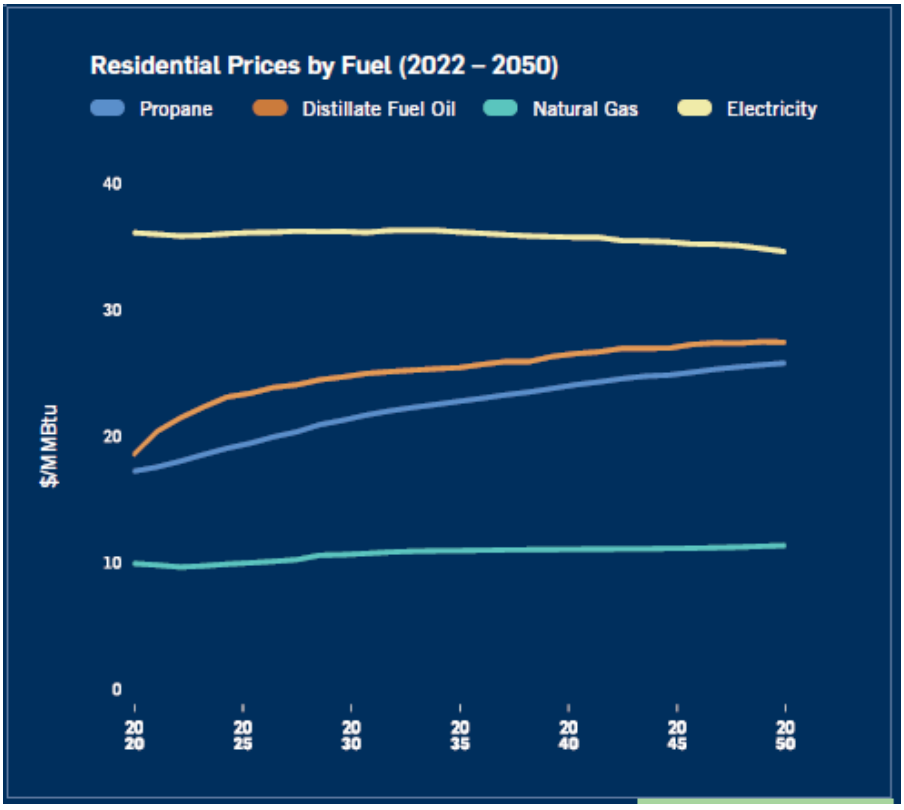
Affordability

Q. HOW DO CUSTOMERS BENEFIT FROM BEING LOCATED WITHIN PEOPLES' SERVICE TERRITORY?

A. Peoples' customers benefit from the fact that the Company is uniquely and strategically positioned within the Marcellus Shale region which affords both the Company with an opportunity to purchase and customers with an opportunity to avail themselves of an affordable natural resource – natural gas. The combination of this region's abundant natural gas resources, competitive marketplace and well-developed infrastructure collectively contributes to the comparatively lower natural gas prices in the western Pennsylvania region compared to other parts of the country. For example, natural gas purchased within the Peoples footprint has traditionally traded (over the past several years) at a negative basis differential of approximately $1.00 per Mcf as compared to the benchmark Henry Hub price used as a standard pricing reference in many regions of the country. That cost differential allows Peoples to purchase gas for our customers at a lower

price which provides them with an affordable energy solution. Further, lower gas costs have helped to maintain affordable rates for our customers at the same time that we have been increasing modernization efforts to provide a safer and more reliable system for our customers.

We continue to educate our customers and the businesses we serve on seeing the economic value in using natural gas for their energy needs. Natural gas is more affordable than other home energy sources. For example, according to the American Gas Association ("AGA")[4], for residential customers, natural gas will cost *significantly* less than other fuels for many years to come (emphasis added). The table below demonstrates that natural gas will be a cost-effective choice for consumers through 2050:



[4] https://playbook.aga.org/share/residential-prices

Moreover, in August of 2023, the Department of Energy published analysis which shows the affordability of natural gas – with natural gas being two to three times more affordable than other energy sources for the same amount of energy delivered[5].

As such, Peoples is committed to boosting economic development in this region by job creation, job retention and by way of providing a cost-effective, geographically available essential resource – natural gas – to Southwestern Pennsylvania consumers.

Community

Q. PLEASE EXPLAIN THE PEOPLES COMPANIES' COMMITMENT TO THE COMMUNITIES THEY SERVE.

A. Community involvement is not only one of the Peoples Companies' stated core values, it is how we have become recognized in the communities we serve as a true community leader. In a time when governmental support is becoming more challenging at both the federal and state levels, the need for social services in our region continues to grow. The Peoples Companies make financial commitments to organizations that serve our service territory communities - both large organizations and small. Some examples of organizations we support are the Greater Pittsburgh Food Bank, United Way, Leukemia/Lymphoma Society, Dollar Energy Fund, March of Dimes, Salvation Army and Greater Pittsburgh Literacy Council.

One of the key values our employees have embraced is the need to support the communities we serve. I am proud to say that we have a very active Volunteer Activities Committee and many of our employees volunteer on the boards of community

[5] https://www.govinfo.gov/content/pkg/FR-2023-08-28/pdf/2023-18532.pdf

organizations. A large number of Peoples' corporate donations are made to organizations in which our employees are actively involved or actively support.

This includes giving time and money to help those in need. We offer ongoing volunteer events such as collecting and packing food in partnership with local food banks, restoring and protecting urban forests with Tree Pittsburgh, mentoring youths through Big Brothers Big Sisters and providing winter outwear for children with the Salvation Army's Project Bundle Up. This is helping our customers to see us differently, as something other than a company who sends them a bill every month for their utility services, and at the same time building a pride in the employee ranks that we have not seen before.

Management Effectiveness

Q. DO YOU BELIEVE THAT PEOPLES' ACTIVITIES THAT YOU HAVE DISCUSSED IN THIS TESTIMONY SHOULD HAVE ANY IMPACT ON THE RESULT OF THIS RATE CASE?

A. Yes, I do. We all know that in deciding these cases, the presiding Administrative Law Judge and then the Commission consider many conflicting positions and, with respect to the authorized return on common equity, often end up with a range of returns recommended by various experts from which an authorized return is selected. Peoples' success in many of the areas I have discussed in this testimony - improving its customer service and accelerating pipeline replacements, bringing jobs to its service territory, and demonstrating that Peoples is a valuable corporate citizen – should lead the decision makers to authorize a 0.25% addition to the determination of the return on common equity proposed by Mr.

Moul to bring it to the high end of the range of returns being considered. Peoples has become a critically valuable business to the region and to the state. Its impact has made a positive difference in the lives of people and the prosperity of its customers in many ways. We believe our importance will continue to grow into the future.

Q. TO WHAT DO YOU ATTRIBUTE THE SUCCESS THAT PEOPLES HAS ACHIEVED?

A. To attain these results, Peoples' employees have shown great skill, innovation and dedication, but they would not be able to do their jobs as successfully as they have if Peoples does not have access to capital to improve Peoples' facilities and service. I am confident that I can continue to lead and motivate Peoples' employees to improve Peoples. A results-based return on capital will encourage continued financial support for that improvement.

Our investors have the ability and the interest to fund the necessary additional equity needed to modernize our critical natural gas infrastructure. The outcome of this rate case will send a clear message to our investors and, just as importantly, to the investment community in general on how this Commonwealth views critical infrastructure investment and service to customers. It is critically important at this time to provide a positive message to that important stakeholder group that Pennsylvania is a good place to invest.

Conclusion

Q. WILL PEOPLES' PRIORITIES CHANGE IN THE FUTURE?

A. Yes and no. Peoples will not change its core values of Safety, Reliability, Integrity, Respect and Operational Excellence. Peoples will continue to prioritize employee and public safety, customer service, community involvement, economic development, and conducting its business in the correct way. These priorities will remain unchanged. How we provide our services may change regularly with advances in technology, innovation as well as changes in our customer expectations and their needs. Within this framework, our primary focus will continue to be on providing safe and reliable service while maintaining high quality customer service and making improvements to our infrastructure through pipeline replacement and modernization.

Q. WHY IS A RATE INCREASE NECESSARY FOR PEOPLES AT THIS TIME?

A. Peoples filed this base rate proceeding to satisfy a settlement commitment as part of a settlement in its tax repairs election proceeding. Specifically, Peoples was required to file this base rate proceeding by the end of 2023. Additionally, this was also filed as Peoples' continuing investment in its infrastructure is driving the need for an increase in base rates. Peoples is experiencing higher costs resulting from increases in both its plant in service and expenses related to the operating and maintenance of its system. Without a base rate increase, Peoples' revenues will no longer be adequate to cover its costs to provide service and to offer an opportunity to earn a fair rate of return on Peoples' investment.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does. I reserve the right to submit supplemental testimony as additional issues arise during the course of this proceeding. Thank you.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2023-3044549
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
ANDREW P. WACHTER
DIRECTOR OF FINANCE AND REGULATION
PNG COMPANIES LLC

DATE SERVED: December 29, 2023
DATE ADMITTED: _____

Peoples Statement No. 2

PREPARED DIRECT TESTIMONY OF
ANDREW P. WACHTER

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Andrew P. Wachter, and my business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as Director, Finance and Regulation for PNG Companies LLC ("PNG"). I provide services to Peoples Natural Gas Company LLC ("Peoples" or the "Company") and its two divisions: the Peoples Natural Gas Division ("PNGD") and the Peoples Gas Company Division ("PGD"). As Director, Finance and Regulation, I oversee the Rates and Regulatory department and the Financial, Planning and Analysis department at Peoples and its affiliates.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.

A. I graduated from Duquesne University in 2000 with a Bachelor of Science Degree in Accounting. I also obtained a Masters in Business Administration from Duquesne University in 2001. After graduation, I was employed as an Auditor with Deloitte and Touche LLP. In September 2004, I joined T. W. Phillips Gas and Oil Co., the predecessor to Peoples Gas Company LLC ("Peoples Gas") as the Assistant Controller and was ultimately promoted to the Vice President of Finance and Rates. In June 2012, I assumed the position of Manager, Rates and Regulatory as the result of a post-acquisition reorganization. After that I held multiple roles until I was named Director, Finance in

February 2016. In 2018, I assumed regulatory responsibilities in addition to my financial responsibilities and my title was changed to Director, Finance and Regulation. I am a Certified Public Accountant, having obtained my certificate in Pennsylvania in 2004.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION (THE "COMMISSION")?

A. Yes. I have submitted Testimony in various base rate cases, purchased gas cost cases and other proceedings on behalf of Peoples and Peoples Gas Division and its predecessor companies. I have also testified for Peoples Gas WV LLC before the West Virginia Public Service Commission.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to explain the overall rate case organization and identify Peoples' overall revenue requirement for non-gas costs. I will also discuss the following items:

- The recent merger of the Peoples Gas Company into the Peoples Natural Gas Company;
- Identify and explain Peoples' operating and maintenance expenses for the test years relevant to this proceeding and, where helpful, the individual components of those expenses;
- The Company's proposal for a Weather Normalization Mechanism;
- The Company's proposals related to the Rider TCJA – TCJA Temporary Surcharge on PGD; and
- The Company's proposals related to Tax Repairs;

There are three relevant test years: the historic test year ("HTY"), which covers the period September 1, 2022 through August 31, 2023, the future test year ("FTY") which covers the period September 1, 2023 through August 31, 2024, and the fully projected future test year ("FPFTY") which covers the period October 1, 2024 through September 30, 2025.

MERGER

Q. PLEASE EXPLAIN THE MERGER WHICH RECENTLY OCCURRED.

A. Effective January 1, 2023, Peoples Gas Company LLC ("Peoples Gas") was merged with and into Peoples Natural Gas, with Peoples Natural Gas being the surviving entity and Peoples Gas becoming an operating division of Peoples Natural Gas (the "Merger"). The Merger was approved by an Order of the Commission entered on August 25, 2022 at Docket Nos. A-2021-3029831 and A-2021-3029833.

Because Peoples Gas was merged into Peoples Natural Gas with Peoples Natural Gas being the surviving entity, Peoples Natural Gas retained all of the service rights and certificates of public convenience of Peoples Gas and ownership interests in Peoples Gas's property. PNG Companies previously owned Peoples Gas as a wholly owned separate subsidiary and continues to be the sole direct owner of all membership interests in Peoples Natural Gas following the Merger.

At the effective time of the Merger, Peoples Natural Gas assumed all the debt that Peoples Gas has outstanding with PNG Companies (the "Debt Assumption"). The terms and conditions of the debt assumed by Peoples Natural Gas did not change. The principal amount of the total debt outstanding at Peoples Natural and Peoples Gas was unchanged by the Proposed Merger.

Q. WHAT WAS THE EFFECT OF THE PROPOSED MERGER ON BASE RATES?

A. With the exception of changes described herein, the base tariff rates of Peoples Natural Gas and of Peoples Gas in effect at the time the Proposed Merger remained in effect following the Merger. Following the Merger, the base rates of Peoples Natural Gas and Peoples Gas were maintained separately with separate accounting for each Division. The only changes to rates made in conjunction with the Merger and the Application were to merge each of the Purchased Gas Cost ("PGC") rates and the Merchant Function ("MFC") and Gas Procurement ("GPC") charges of Peoples Natural Gas and Peoples Gas, effective October 1, 2022. Upon closing, the existing tariff of Peoples Gas was adopted as the tariff of the Peoples Gas Division of Peoples Natural Gas. As part of this proceeding we are recommending a complete merger of the rates of Peoples Natural Gas and the Peoples Gas Divisions and the creation of a unified tariff. Please refer to Statement No. 15 - the Direct Testimony of Ralph Zarumba for further discussion on the merger of rates and Statement No. 11 – the Direct Testimony of Dawn Folks for further discussion on the tariff unification.

Q. WHAT WAS THE EFFECT OF THE PROPOSED MERGER ON GAS COST RATES?

A. In the Merger, the Commission approved the merger of the PGC rates of Peoples Natural Gas and Peoples Gas so that, effective October 1, 2022, Peoples Natural Gas and Peoples Gas, with the exception of Peoples Natural's Allegheny Valley Connector ("AVC") capacity charge. As a result, all customers of Peoples are charged the same PGC rate components, balancing charges and retainage rates to their respective customers, other than

the AVC charge. Effective October 1, 2022, gas supplies under gas purchase agreements were purchased for the combined use and benefit of customers of the Peoples Natural Gas Divisions, as were pipeline services under interstate pipeline service agreements. In short, for both 1307(f) ratemaking and gas supply acquisition purposes, the two Divisions were treated as one. Beginning in April of 2023 Peoples Natural Gas and Peoples Gas began making a single annual 1307(f) filing, that included the gas procurement plans and purchased gas costs for the combined Peoples Natural Gas and Peoples Gas Divisions. As part of this proceeding we are recommending that the AVC capacity charge be applied to customers of both the Peoples Natural Gas and the Peoples Gas Divisions. Please refer to Statement No. 3 - the Direct Testimony of Carol Scanlon for further discussion on AVC.

RATE CASE ORGANIZATION

Q. HOW HAS PEOPLES ORGANIZED THIS RATE CASE?

A. Consistent with the last Peoples Natural Gas Company case, we have organized the filing by topics, instead of the previous numerical method. The below table summarizes how the information is structured in this case by exhibit. Within each exhibit, there are schedules and attachments to further organize the information. While the filing requirements are still listed in each response, the Company's witnesses will be referring to the filing requirements by their corresponding exhibit and schedule numbers. Where applicable, information is provided for the HTY, FTY and FPFTY in one response.

Exhibit 1	Balance Sheet
Exhibit 2	Income Statement
Exhibit 3	Revenues
Exhibit 4	O&M Expenses
Exhibit 5	Depreciation Study

Exhibit 6	Taxes other than Income Taxes
Exhibit 7	Income Taxes
Exhibit 8	Rate Base
Exhibit 9	Depreciation
Exhibit 10	Sales
Exhibit 11	Cost of Service
Exhibit 12	Gas Planning
Exhibit 13	General
Exhibit 14	Tariffs
Exhibit 15	System
Exhibit 16	Capitalization
Exhibit 17	COS Standard Data Requests
Exhibit 18	ROR Standard Data Requests
Exhibit 19	RR Standard Data Requests
Exhibit 20	Testimony

An index of all information provided can be found in Exhibit 13, Schedule 1.

Q. HOW IS THE INFORMATION FOR THE PEOPLES NATURAL GAS AND PEOPLES GAS DIVISIONS PRESENTED IN THIS CASE?

A. Where applicable, Peoples has provided information for each requirement on both a divisional and combined basis. To avoid duplicative responses for certain filing requirements, the Company has provided a combined answer for both divisions on questions where the answer would be identical for each Division.

Please note that the Divisions themselves are referred to in various ways. For example, the Peoples Natural Division may be referred to as Peoples Natural, PNG or PNGD and the Peoples Gas Division may be referred to as Peoples Gas, PG, or PGD.

OVERALL REVENUE REQUIREMENT

Q. WHAT IS THE ADDITIONAL PROPOSED NON-GAS COST RECOVERY IN THIS PROCEEDING?

A. Approximately $156 million of additional revenues are required in order for Peoples to recover its non-gas costs. This is the additional non-gas cost revenue requirement above our current non-gas revenues.

Q. WHAT DO YOU MEAN BY THE TERM NON-GAS COST REVENUE REQUIREMENT?

A. Peoples' non-gas costs are the costs incurred to provide public utility service, other than the cost of natural gas that is normally recovered in the Commission's 1307(f) proceedings.

Q. HOW WAS THAT AMOUNT DETERMINED?

A. The Company's non-gas revenue requirement is the sum of the individual cost components introduced and supported by the other witnesses in this proceeding and me. These individual components include: (1) operation and maintenance expenses, which I explain below; (2) depreciation and amortization expense and negative salvage expense to which witness John Spanos has testified (**Peoples Statement No. 14**); (3) taxes other than income taxes supported by witness Rudolph Hanechak (**Peoples Statement No. 10**); (4) a return allowance which is the product of an overall rate of return of 11.75%, to which witness Paul R. Moul has testified (**Peoples Statement No. 13**), rate base supported by witness Dawn Folks (**Peoples Statement No. 11**); and (5) federal and state income taxes to which witness Christine Saball has testified (**Peoples Statement No. 6**).

Q. CAN YOU SUMMARIZE THE REVENUE REQUIREMENT?

A. Yes. Below is a table which summarizes the major components of our non-gas revenue requirement necessary to recover our FPFTY expenses and a fair return on plant investment at the end of the FPFTY as compared to our revenue at present rates.

Revenue Requirement		
Equity Return	$	270,179,758
Interest Expense		84,085,080
Depreciation		134,219,598
Expenses and TOTI		242,363,973
Gas Costs		317,688,615
Income Taxes		(59,295,392)
Revenue Requirement	$	989,241,631
Revenue at Current Rates		833,215,508
Requested Rate Increase	$	156,026,122

Q. WHAT EXHIBIT PROVIDES THE REVENUE REQUIREMENT?

A. Exhibit 2, Schedule 4 (53.53.III.A.17) provides the income statement for both divisions and combined for each period in the case (HTY, FTY and FPFTY) at present and proposed rates (pages 2-4). Further, page 5 of this exhibit provides a calculation of proforma interest expense, page 6 provides rate of return on rate base including the derivation of the gross revenue conversion factors and page 7 provides the derivation of the adjustments to proposed rates necessary to derive projected rates for the combined Company. This results an overall increase in revenues of $156,026,122.

O&M EXPENSE

Q. ARE YOU SPONSORING ANY EXHIBITS AS PART OF YOUR TESTIMONY?

A. Yes, I am sponsoring the main O&M claim schedule, **Peoples Exhibit 4, Schedule 1** ("Ex. 4, Sch. 1"), along with the filing requirements and standard data requests identified in Appendix A to this testimony.

Q. WHAT ARE PEOPLES' TOTAL FPFTY OPERATING AND MAINTENANCE EXPENSES AT PROPOSED RATES?

A. Operating and Maintenance expenses at proposed rates for the FPFTY is $227,010,806 on a combined basis[1], as shown in the income statement presented at **Exhibit 2, Schedule 4** (filing requirement 53.53 III.A.17). This includes $223,598,704 of expense at present rates which is presented **Ex. 4, Sch. 1** and $3,412,102 of additional uncollectible expense as derived at **Exhibit 2, Schedule 4**.

Q. PLEASE DESCRIBE THE PROCESS BY WHICH YOU DETERMINED THE FPFTY OPERATING AND MAINTENANCE EXPENSES.

A. I started with the "per books" operating and maintenance expenses of $192,351,147 for the HTY as shown on **Ex. 4, Sch. 1 Page 2**, and I made HTY, FTY and FPFTY adjustments to determine the "normal" level of operating and maintenance expenses of $203,964,225 for the HTY, of $207,039,623 for the FTY and of $223,598,704 for the FPFTY. These adjustments were made after reviewing Peoples' actual expenses and obtaining additional information from department heads.

Q. WHAT IS THE HTY ADJUSTMENT FOR LABOR ON PAGE 5 OF EX. 4, SCH. 1?

[1] The combined results of Peoples Natural Gas – Peoples Natural Gas Division and Peoples Gas Division will be referred to throughout this testimony as the Company is proposing to combine these rates in this proceeding.

A. The HTY Labor adjustment is $7,422,979. This was determined by starting with the Full Time Equivalents ("FTEs") complement on board at August 31, 2023 and annualizing the labor costs associated with those FTEs at our current wage rates (Lines 1-3) net of capitalization (Line 4) to derive an adjustment to the HTY (Line 5).

Q. DO THE NORMALIZED LABOR COSTS REFLECT THE IMPACTS OF THE SERVICE AGREEMENT BETWEEN PEOPLES AND PNG AND OTHER SUCH AGREEMENTS?

A. Yes, the normalized labor costs reflect the impacts of the Service Agreement between Peoples and PNG as well as the Second Amended Operational Service Agreement by and among Peoples and various affiliates both approved by the Commission in 2018. Under these agreements administrative employees are hired at PNG and perform work for PNG's various affiliates. In addition, operational employees in Pennsylvania are hired at Peoples Natural and perform work for other affiliates (primarily Peoples Gas Division). The impacts of these agreements can be seen primarily in the Labor and Benefits expenses.

Q. IN LIGHT OF THE SERVICE AGREEMENT BETWEEN PEOPLES AND PNG AS WELL AS THE SECOND AMENDED OPERATIONAL SERVICE AGREEMENT DISCUSSED ABOVE HOW ARE YOU GOING TO ADDRESS NUMBER OF EMPLOYEES?

A. Pursuant to these agreements, employees are hired at PNG or Peoples and perform work for affiliates as well as for the Company. Thus, I will provide the actual number of employees expected to be hired across the companies as well as the FTE anticipated to be

charged to Peoples. To be clear, the costs claimed in this proceeding include only costs expected to be incurred by Peoples and do not include any costs for its affiliates.

Q. WHAT ARE THE FTY ADJUSTMENTS FOR LABOR ON PAGE 5 OF EX. 4, SCH. 1?

A. The adjustments for the FTY (Lines 7-13) were derived by starting with the annualized HTY labor of $62,604,088 on a combined basis and making three types of adjustments. First, we added anticipated merit increases for the FTY period (Columns 4-6) based upon recent history. Second, we added in expected union job progression and anticipated normal salaried promotion increases (Columns 7-9). Third, we adjusted for routine/normal vacancies as of the end of the HTY as well as added the salaries related to incremental FTE additions expected in the FTY.

Q. PLEASE EXPLAIN YOUR TREATMENT OF ROUTINE OR NORMAL POSITION VACANCIES.

A. Routine and/or normal position vacancies which occur as a result of terminations or retirements were assumed to be filled by employees with equivalent pay or by temporary employees while the positions are being filled. The associated amounts are included in FTY Adjustments (Columns 10-12). These amounts are net of a vacancy credit.

Q. PLEASE EXPLAIN THE VACANCY CREDIT ADJUSTMENTS INCLUDED IN THE FTY and FPFTY.

A. Although the Company is seeking to fill all positions that are currently open, a certain level of vacancies is expected during the FTY the FPFTY. The Company estimates that 29 FTEs

and 8 FTEs will be vacant on average during the FTY and FPFTY, respectively. The Company has experienced higher average vacancies since COVID but expects to be at pre-COVID average vacancy levels by September 30, 2025, the end of the FPFTY.

Q. WHAT ARE THE FPFTY ADJUSTMENTS FOR LABOR ON PAGE 5 OF EX. 4, SCH. 1?

A. The adjustments for the FPFTY (Lines 14-19) were derived by starting with the annualized FTY labor of $64,552,792 on a combined basis and making three types of adjustments. First, we added anticipated merit increases for the FPFTY period (Columns 4-6) based upon recent history. Second, we added in expected union job progression and anticipated normal salaried promotion increases (Columns 7-9). Third, we adjusted for the filled vacant positions expected in the FPFTY and added the salaries related to these positions.

Q. CAN YOU EXPLAIN THE EMPLOYEES ADDED BEYOND FILLING EXISTING VACANCIES IN THE FTY AND FPFTY?

A. The Company did not add any such positions.

Q. WHAT IS THE TOTAL FTE COMPLEMENT INCLUDED IN YOUR FPFTY LABOR EXPENSES?

A. The Company's projected FTE complement is based on the organization proposed by the department heads. This level increases the FTE equivalent staffing level for Peoples to 1,465, our FPFTY FTE count in this proceeding.

Q. EXPLAIN THE O&M LABOR PERCENTAGE UTILIZED ON THE LABOR SCHEDULES.

A. We developed the O&M labor percentage based upon payroll information during the period from September 1, 2022 through August 31, 2023 and an evaluation of the new labor added and the type of work they will perform.

Q. IS THE ALLOCATION OF LABOR COSTS BETWEEN THE PEOPLES NATURAL GAS AND PEOPLES GAS DIVISIONS CONSISTENT WITH THE PREVIOUSLY MENTIONED AGREEMENTS?

A. Yes. The labor costs in this case reflect the impacts of the Service Agreement between Peoples and PNG as well as the Second Amended Operational Service Agreement by and among Peoples and various affiliates.

Q. WHAT IS THE BASIS FOR THE SHORT-TERM INCENTIVE PROGRAM ("STI") AND INCENTIVE COMPENSATION CLAIM ON PAGE 6 OF EX. 4, SCH. 1?

A. First the Company normalized and annualized the per books incentive compensation to the amounts based upon the complement of FTEs on board as of the end of the HTY (Lines 1-5). Then the Company made an adjustment to the FTY (Line 11) and the FPFTY (Line 17) to reflect the incentive compensation based upon the FTEs and their associated compensation projected in the FTY and the FPFTY. Lines 7 and 13 include the incentive compensation related to FTEs projected to be added in the FTY and FPFTY, respectively.

Q. WHY IS IT IMPORTANT FOR PEOPLES TO RECOVER THE EXPENSE RELATED TO INCENTIVE COMPENSATION?

A. To retain talent, Peoples must offer benefits comparable to other companies. Offering Incentive Compensation is one way for Peoples to retain talent by offering market-based incentives to Company employees. The Company has undertaken research to ensure that it offers market-based compensation and incentive programs. Eliminating or reducing these programs would have a significant impact on the Company's ability to attract and retain competent employees.

Q. WHAT IS THE BASIS OF THE FPFTY PENSION CLAIM ON PAGE 10 OF EX. 4, SCH. 1?

A. Peoples' FPFTY pension expense is based on the FTEs' pension costs determined on a contribution basis. The Company used a two-year average of contributions made in 2022 and 2023 to derive the claim amount. Peoples intends to make contributions consistent with recent contributions.

Q. WHAT IS THE BASIS FOR YOUR FTY EXPENSE FOR POST RETIREMENT BENEFITS OTHER THAN PENSIONS ("PBOPS") ON PAGE 11 OF EX. 4, SCH. 1?

A. Peoples has been accounting for PBOPs on the same basis that these costs are recovered in rates. That is, on an accrual basis consistent with FAS 106 and the prior Commission order at both the Peoples Natural Division and the Peoples Gas Division. Peoples has complied with that order and deposited the amounts into dedicated trust accounts in response to the Commission's Opinion and Order at Docket No R-00943111. Line 2 reflects the recovery

of a prior period net undercollection of PBOP costs as compared to the amounts set in the above referenced proceedings amortized over two years. The HTY adjusted expense is reflected on Line 3 of this schedule.

Under our existing benefits programs, the total FPFTY PBOP expense is $2,414,041 (Line 9) which includes the projections provided by the Company's actuary as well as the previously discussed amortization amount.

Q. ARE YOU PROPOSING ANY CHANGES TO THE RECOVERY OF THESE COSTS IN THIS PROCEEDING?

A. No. Consistent with prior cases, the Company is proposing to track actual PBOP costs and amortize the cumulative difference between actual and projected costs in the Company's next base rate proceeding. The amount to be tracked is $779,921 as calculated on Line 10 on page 11 of **Ex. 4, Sch. 1**. The tracking will exclude the amortization of prior period amounts. This treatment is consistent with the past ratemaking treatment of these costs by both divisions. The Company anticipates that differences between the rate allowance and actual accruals be tracked and amortized over a period to be determined in the Company's next base rate proceeding.

Q. WHAT APPROACH DID YOU USE TO DETERMINE PEOPLES' BENEFITS EXPENSES ON PAGE 12 OF EX. 4, SCH. 1?

A. Overall, these benefits include Medical, Dental, Vision, Life Insurance, Long Term Disability Insurance, 401(k) plans and other such programs. The FPFTY benefits expenses reflect the HTY benefits expenses adjusted to include the costs of the benefits for vacant positions filled and annualized for changes in costs relative to the anticipated results from

future open seasons. Medical and other benefits were increased based upon information provided by our third-party benefits consultants. 401(k) benefits were increased consistent with merit increases utilized to develop the labor claim. The combined benefits expense claim for the FPFTY is $20,985,623.

Q. PLEASE DESCRIBE THE ADJUSTMENTS MADE TO OUTSIDE SERVICES-CONTRACTED ON PAGE 13 OF EX. 4, SCH. 1?

A. I adjusted the HTY costs to remove non-recurring charges in the HTY, if applicable, and then adjusted for future increases in determining the FTY and FPFTY expense. Below is a summary of the adjustments included in the FTY and FPFTY:

	PNG	PG	DESCRIPTION
BRIDGE WORK	$675,000	$75,000	Required atmospheric remediation for exposed pipe on bridges. This work is required for compliance and integrity of the bridge lines. The work will include inspection of the lines on the bridges and subsequent remediation. Remediation will include replacing hangers and pipe supports, wrapping and/or painting the pipe, and general maintenance.
PRESSURE TESTS	810,000	90,000	These are part of the prescriptive pipeline integrity management program. Pressure testing of sections is required on three lines.
ADDITIONAL PIG RUN COSTS	450,000	50,000	Internal line inspection "ILI" of Transmission Pipelines as mandated by Federal Code; PHMSA, Subpart O of 49 CFR part 192, which prescribes requirements for managing pipeline integrity in HCAs and requires that operators perform pipeline assessments.
ADDITIONAL PIPELINE MAINTENANCE/CORROSION	285,371	31,708	Ground Bed and Rectifier needs due to age and condition. These units typically have a 25-30 year working lifespan. We typically have 320 at any given time, due to differing decades of installation, depleting, etc. They get replaced and updated to maintain the requirements of CFR 192.465 (A) (B) 1 & 2.

	PNG	PG	DESCRIPTION
ADDITIONAL RIGHT OF WAY MAINT.	110,206	15,608	Process of cutting or trimming vegetation within the right of way of gas lines. The ROW must be clear for the overall operation and maintenance of our gas lines to allow for any ongoing maintenance/inspection activities
TOTAL	$2,330,577	$262,316	

Further, I increased both the FTY and FPFTY by 3.75% which represents the recent 5-year annualized increase in these costs.

Q. PLEASE DESCRIBE THE ADJUSTMENTS MADE TO OUTSIDE SERVICES-IT ON PAGE 14 OF EX. 4, SCH. 1?

A. I added an adjustment for $1,117,550 in the FTY and $67,600 in the FPFTY for a total of $1,185,150 for various maintenance contracts on new software systems. Further, I increased both the FTY and FPFTY by 2.39% which represents the recent 5-year annualized increase in these costs.

Q. PLEASE DESCRIBE THE ADJUSTMENTS MADE TO OUTSIDE SERVICES-A&G ON PAGE 15 OF EX. 4, SCH. 1?

A. I adjusted the HTY costs to remove non-recurring charges, if applicable, in the HTY and then increased it by 7.0% which represents the recent 5-year annualized increase in these costs in determining the FTY and FPFTY expense (Lines 3 and 7).

Q. HOW DID YOU DETERMINE THE COSTS OF RENT FOR THE FTY AND FPFTY ON PAGE 16 OF EX. 4, SCH. 1?

A. Our General Office Rent for the FTY and FPFTY are based on the terms and conditions of the lease for our main office and call center operations in downtown Pittsburgh as well as our Etna and Grove City field office facilities. The adjustment on Line 2 represents the annualization of rent expense according to the terms of the leases compared to the HTY expense amount.

Q. HOW WERE PEOPLES' INSURANCE COSTS DETERMINED ON PAGE 17 OF EX. 4, SCH. 1?

A. I have adjusted the HTY Corporate Insurance Premium by annualizing the most recent premium invoices. Furthermore, I increased the cost thereafter by 13.1% which represents the average total premium increase experienced from the 2023 invoice as compared to the 2022 premiums and the premium increase experienced from the 2022 invoice as compared to the 2021 premiums. The Company further affirmed the reasonableness of this increase with our third-party insurance brokers. They shared with us the following feedback about upcoming rates:

Industry data for forecasts beyond this horizon is scarce, as market dynamics can shift dramatically. This is illustrated in various lines of coverage:

- *Excess Liability:*
  - *Historically stable, with occasional modest increases.*
  - *However, from 2018 to 2020, the market experienced a seismic shift due to nuclear verdicts, resulting in carriers reducing their capacity. They transitioned from providing $25 million layers to $10 million or $15 million while maintaining similar pricing to the prior $25 million, causing significant cost increases for policyholders.*

- *D&O:*
  - *Leading up to the COVID-19 pandemic, the public D&O market witnessed a surge in securities litigation and claim payouts. This trend was further amplified by the increasing number of SPACs, contributing to higher premiums.*
  - *Similar to the Excess Liability market, D&O coverage experienced a substantial decrease in available capacity, with $25 million chunks becoming scarce.*

- *Cyber:*
  - *The cyber insurance market underwent a radical transformation due to the rising incidence of ransomware attacks and inadequate protection by businesses. This led to triple-digit rate increases, reduced capacity, and, in extreme cases, some insureds being left without coverage.*
  - *While the rate increases were not as dramatic, the cyber market evolved due to the heightened requirements set by insurance companies. Businesses invested significant time and resources in enhancing their cybersecurity, resulting in a notable decline in claims activity and a stabilization of this previously volatile market.*

- *Property:*
  - *Currently, the property insurance market is facing a challenging phase, often referred to as a "hard market." The industry collectively hopes for this to be a cyclical pattern but currently sees no end to issues, particularly those related to weather, which are driving claims.*

The examples provided emphasize how rapidly insurance markets can change. Predicting market conditions 3-5 years ahead remains a challenging task, as evidenced by the persistence of nuclear verdicts and extreme weather-related claims. The volatility in the insurance market is likely to continue as long as these trends persist.

Q. WHAT IS THE BASIS FOR THE INJURIES AND DAMAGES EXPENSE ON PAGE 18 OF EX. 4, SCH. 1?

A. I have reviewed the history of Peoples' Injuries and Damages expenses and have included an average of the past three years' expenses. Further, I increased it by a Consumer Price Index inflation rate to adjust the FTY and FPFTY.

Q. DISCUSS THE TRAVEL EXPENSES ON PAGE 19 OF EX. 4, SCH. 1?

A. I adjusted the HTY costs to remove non-recurring charges, if applicable, in the HTY and then increased it by 4.40% which represents the recent 5-year annualized increase in these costs in determining the FTY and FPFTY expense (Lines 5 and 9).

Q. WERE COMPANY MEMBERSHIPS ADJUSTED ON PAGE 20 OF EX. 4, SCH. 1?

A. Yes. The O&M Expense related to Company Memberships has been adjusted for expected increases.

Q. WERE LICENSES AND PERMITS ADJUSTED ON PAGE 21 OF EX. 4, SCH. 1?

A. I adjusted the HTY costs to remove non-recurring charges, if applicable, in the HTY and then increased it by 3.62% which represents the recent 5-year annualized increase in these costs in determining the FTY and FPFTY expense (Lines 5 and 9).

Q. PLEASE EXPLAIN THE ADJUSTMENTS TO UTILITIES AND FUEL USED IN COMPANY OPERATIONS ON PAGE 22 OF EX. 4, SCH. 1?

A. Since the expense of gas used in company operations is recovered through the 1307(f) proceeding, it has been removed from the O&M expense in this proceeding on Line 2 of this schedule. The remaining level of costs in this category represent other utility costs, like electric, that are not recovered through the 1307(f) proceeding. The remaining costs in this category were increased for the FTY and FPFTY based upon recent increases in this category.

Q. WHAT ARE PEOPLES' FPFTY ADVERTISING EXPENSES ON PAGE 23 OF EX. 4, SCH. 1?

A. Peoples advertising expenses total $1,423,934 for the FPFTY. This amount was adjusted to only include expenses which satisfy at least one of the criteria set forth in Section 1316(a) of the Public Utility Code.

Q. PLEASE DESCRIBE THE ADJUSTMENTS MADE TO FLEET MAINTENANCE AND FUEL AS WELL AS MATERIALS & SUPPLIES ON PAGES 24, AND 23, RESPECTIVELY OF EX. 4, SCH. 1?

A. I adjusted these categories for expected increases based upon historical experience in determining the FTY and FPFTY expense.

Q. WERE MATERIALS AND SUPPLIES ADJUSTED ON PAGE 25 OF EX. 4, SCH. 1?

A. I adjusted the HTY costs to remove non-recurring charges, if applicable, in the HTY and then increased it by 2.94% which represents the recent 5-year annualized increase in these costs in determining the FTY and FPFTY expense (Lines 3 and 6). Additional incremental adjustments were added for the expected increase in average cost per fault, higher number of faults expected and the higher cost of anodes.

Q. PLEASE DESCRIBE THE ADJUSTMENTS MADE TO OTHER O&M EXPENSE ON PAGE 24 OF EX. 4, SCH. 1?

A. I added an adjustment on Line 3 to remove the cost of operating the building at 225 N. Main Street in Butler, Pennsylvania. The Company received approval to sell this building at Docket No. A-2022-3034038 and the sale was consummated on October 26, 2023. As such, it was appropriate to remove the HTY costs from the claim in this proceeding.

Further, I added an adjustment on Line 10 for the services provided to us from Essential Utilities via PNG Companies, the parent company of PNG and PG. This represents the normalized costs of such items. Essential provides various administrative services to both

divisions such as Human Resources, Information Technology, Finance, Accounting and many other such services.

Q. PLEASE DESCRIBE PEOPLES' ADJUSTMENT FOR DEBT ISSUANCE COSTS ON PAGE 27 OF EX. 4, SCH. 12?

A. PNG Companies recently refinanced the revolving credit facility for debt borrowed for less than one-year which is used to help finance capital expenditures and to fund working capital, particularly in the summer months when revenues are low. The claim in this case represents Peoples' share of such debt issuance costs. I have included one year's worth of that amortization amounting to $404,371 in our O&M expenses as shown on this page.

Q. PLEASE DESCRIBE THE COMPANY'S CLAIM FOR THIRD PARTY PAYMENT PROCESSING FEES IN THE COST OF SERVICE.

A. Currently, both Peoples Natural Gas Division and Peoples Gas Division customers can make payment through various channels such as mail, web and automated telephone ("IVR"). The costs associated with third party payment processing for certain web, IVR and walk-in payments including credit card payments at the Peoples Natural Gas Division are borne by customers via base rates. However, for the Peoples Gas Division such payments are currently borne by the individual customers making such payments.

The Company is proposing to pay all costs associated with customer payments directly to its service providers and recover such costs from all customers via base rates rather than a customer-paid transaction cost. If approved, all customers of both divisions will be able to select the payment channel of their choice without consideration of additional convenience or transaction fees subject to certain limitations.

Q. PLEASE DESCRIBE HOW CUSTOMERS BENEFIT FROM THIS PROPOSAL.

A. Overall, this will improve the Customer Experience at the Peoples Gas Division and align it with the Peoples Natural Gas Division and thus improve customer satisfaction. Customers have frequently voiced dissatisfaction with having to pay transaction fees for making payments. Additional benefits include:

- Elimination of the convenience fee to customers for electronic payment through our third-party processor for credit card, debit card and ACH transactions;
- Elimination of transaction fees for bill payment at authorized walk-in locations;
- Encourage customer use of authorized agents, thus avoiding delays in processing payments made through unauthorized agents;
- Increased customer satisfaction by allowing customers to pay via the channel of their choice – free of charge; and,
- Encourages payment, especially from those who have limited means.

Q. DO MANY NON-UTILITY INDUSTRIES CHARGE CUSTOMERS PER TRANSACTION FOR PROCESSING PAYMENTS?

A. No. It is my observation that very few industries outside of utilities and government charge a per transaction fee for payment processing.

Q. PLEASE DESCRIBE THE ADJUSTMENTS TO PAYMENT PROCESSING FEES MADE ON PAGE 28 OF EX. 4, SCH. 1.

A. There were three types of adjustments made to this schedule. The first adjustment of $124,419 was made on Line 2 to reflect the cost of extending such payments to the Peoples

Gas Division customers as discussed above. The support of this amount is shown on Lines 12 through 20 on this same schedule and is self-explanatory. The second adjustment was to reflect the cost of additional adoption of this payment channel based upon the percentage increase for the twelve-months ended (TME) August 31, 2023 as compared to the TME August 31, 2022 (7.82%). Both the FTY was adjusted on Lines 5 and 9. The third adjustment was made on Line 10 and reflects a 10% increase in costs the Company expects to incur on such costs upon the expiration of the existing contract in February of 2025.

Q. PLEASE SUMMARIZE YOUR PAYMENT PROCESSING FEE PROPOSAL.

A. The Company proposes to waive all transaction fees associated with the payment of residential customers' bills and include these costs in the cost of service for the Peoples Gas Division customers in order to align with the Peoples Natural Gas Division customers.

Q. IF APPROVED, WHEN WOULD THE PROPOSAL GO INTO EFFECT?

A. Since the proposal would require IT changes for both Peoples and the third-party payment processing company, Peoples will endeavor to implement these changes as soon as possible after approval.

Q. PLEASE EXPLAIN ANY CLAIM FOR LOBBYING EXPENSE IN THIS PROCEEDING.

A. Peoples is not making a claim for expenses related to lobbying in this case.

Q. PLEASE EXPLAIN THE CALCULATION OF RATE CASE EXPENSES ON PAGE 29 OF EX. 4, SCH. 1.

A. I have used the projected costs for outside services of $2,062,000 related to this proceeding and normalized them over two years.

Q. WHY DID YOU SELECT TWO YEARS FOR THE NORMALIZATION OF THESE COSTS?

A. Peoples filed rate cases in 2010, 2012 and 2019. The reason seven years elapsed between the 2012 case and the 2019 case was a result of the stay out period committed to in the Company acquisition of the Equitable Gas Company. Further, the main reason for the time that has elapsed between the 2019 case and this case was the result of the Company receiving Accounting and Regulatory approval regarding its treatment of the tax repair election in Docket No. P-2020-3021191. Specifically, the Company changed its tax accounting method to define its unit of property under the IRS's tangible property regulations, which allowed the Company to prospectively deduct, as an operating expense on its income tax returns, the costs of certain asset improvements that otherwise would be capitalized and depreciated for tax purposes. See the testimony of Christine Saball for further discussion. Peoples projects two years to be the approximate length of time between the filing of this proceeding and the filing of Peoples' next base rate proceeding given the Company's LTIIP commitments for infrastructure replacement. For example, the Company is projected to have capital expenditures of over $1 billion for the combined FTY and FPFTY and expects this to continue beyond the FPFTY.

Q. HOW DID YOU DEVELOP PEOPLES' EXPENSES FOR WRITE-OFF OF UNCOLLECTIBLE ACCOUNTS ON PAGE 30 OF EX. 4, SCH. 2?

A. The uncollectible write-off amount is based on the relationship between write-offs and revenues. I have used a normalized three-year average of write-offs as the basis for my adjustment. However, I note that based upon the analysis discussed below the normalized residential write-off rate I used of 2.2% is consistently close to one to seven years average depicted in the chart below. This schedule depicts the development of each customer class' uncollectible expense by using a percentage of write-offs to revenues for each test year. These averages were applied to both pro-forma revenue at present rate levels and proposed revenue levels to determine normal uncollectible write-off amounts.

Q. PLEASE DESCRIBE THE NORMALIZATION ADJUSTMENT TO WRITE-OFFS THAT YOU CALCULATED FOR RESIDENTIAL UNCOLLECTIBLE ACCOUNTS EXPENSE.

A. I made two main normalization adjustments to the three-year average of write-offs. First, I added $5,000,000 to the 2020 write-offs as the Company provided a credit to customers in this amount as a result of the settlement of the proceeding at Docket No. P-2020-3021191. Specifically, the credit was "The credit would equate to a maximum of 70% of the past due balance on an eligible customer's bill since March 2020."[2] It is reasonable to conclude that write-offs were avoided as a result of this customer credit.

Second, I normalized the LIHEAP grants for the period utilizing an average of the annual grants received in 2017, 2018, 2019 and 2022. During 2021 and 2022 the Company's customers received abnormally high grants due to increased Federal funding resulting from the COVID pandemic. The impact on bad debt was calculated by taking

[2] Paragraph 17g of on page 6 the ALJ's Recommending Decision at Docket No. P-2020-3021191.

75% of normalized Crisis grants (grants given to low income customers who are also at risk for termination) and 25% of the normalized LIHEAP Cash grants (given to low income customers without risk of termination).

The result of this normalization is depicted in the chart shown below:

Original RS Writeoffs	7-Year	6-Year	5-Year	4-Year	3-Year	2-Year	1-Year
Cumulative Revenue	$ 3,937,650,863	$ 3,395,047,246	$ 2,795,006,481	$ 2,213,252,745	$ 1,705,289,721	$ 1,151,256,907	$ 408,201,175
Cumulative Adj. Writeoffs	$ 76,992,581	$ 65,506,137	$ 52,202,020	$ 36,978,889	$ 32,500,999	$ 23,345,054	$ 13,405,732
Unadjusted Averages	1.96%	1.93%	1.87%	1.67%	1.91%	2.03%	3.28%
Adjusted Write-Offs							
Annual Writeoffs	$ 11,486,444	$ 13,304,116	$ 15,223,131	$ 4,477,891	$ 9,155,944	$ 9,939,323	$ 13,405,732
$5M Repair Tax Credit				5,000,000			
LIHEAP Grants Normalized	(65,826)	111,766	(29,296)	(426,293)	2,170,163	2,430,063	409,649
Adjusted Writeoffs	$ 11,420,619	$ 13,415,882	$ 15,193,835	$ 9,051,598	$ 11,326,107	$ 12,369,385	$ 13,815,381
					used in Rate Case		
Revised Writeoffs	7-Years	6-Years	5-Years	4-Years	3-Years	2-Years	1-Years
Cumulative Revenue	$ 3,937,650,863	$ 3,395,047,246	$ 2,795,006,481	$ 2,213,252,745	$ 1,705,289,721	$ 1,151,256,907	$ 408,201,175
Cumulative Adj. Writeoffs	$ 86,592,807	$ 75,172,188	$ 61,756,306	$ 46,562,471	$ 37,510,873	$ 26,184,766	$ 13,815,381
Adjusted Averages	2.20%	2.21%	2.21%	2.10%	2.20%	2.27%	3.38%
Difference	0.24%	0.28%	0.34%	0.43%	0.29%	0.25%	0.10%

Q. WAS A NORMALIZATION ADJUSTMENT NECESSARY FOR COMMERCIAL AND INDUSTRIAL WRITE-OFF RATIOS.

A. No. The normalization adjustments mentioned above are unnecessary for the Commercial and Customer calculations as the adjustments were unique items only impacting residential customers.

Q. HOW WAS THE UNIVERSAL SERVICE PROGRAM ("USP") RIDER ADJUSTMENT DETERMINED ON PAGE 31 OF EX. 4, SCH. 1?

A. In order to normalize USP O&M both the O&M and revenue associated with these programs were removed from the claim. This adjustment has no impact on base rates. The Company is not proposing any other changes to the costs of these programs within this case. See the Testimony of Rita Black for further discussion of these programs.

Q. HOW WAS THE INTEREST EXPENSE ON CUSTOMER DEPOSITS DERIVED ON PAGE 32 OF EX. 4, SCH. 1?

A. Peoples used a twelve-month average of customer deposits which represents the customer deposit amount utilized as a deduction to rate base. This average was then multiplied by the current interest rate of 7%, per Chapter 14 of the Public Utility code, to determine the interest on customer deposits at current rates. No adjustment is needed for the FTY or the FPFTY as the Company has not projected a change to the balance of customer deposits.

PEOPLES GAS DIVISION RIDER TCJA – TCJA TEMPORARY SURCHARGE ("TCJA RIDER")

Q. WHAT IS THE PURPOSE AND BACKGROUND OF THE TCJA RIDER?

A. The purpose of this rider is to refund all impacts of the TCJA on PGD from the effective date of TCJA on January 1, 2018 through the present. The Opinion and Order issued on June 16, 2022 at Docket No. P-2022-3031235 provides the background:

> *On March 15, 2018, the Commission issued a Temporary Rates Order at Docket No. M-2018-2641242, directing Peoples Gas and other public utilities to file their current base rates and riders as temporary rates, pursuant to Section 1310(d) of the Pennsylvania Public Utility Code (Code).*
>
> *The Commission issued an Order on May 17, 2018, at Docket No. R-2018-3000502 (Peoples Gas Compliance Order), which indicated that a negative surcharge of 2.6676%[3] be applied to customer bills. The Peoples*

[3] Peoples Gas determined that this calculation did not fully reflect the tax reductions intended by the Commission and did not correctly calculate the negative surcharge. In accordance with the procedure set forth in the Peoples Gas Compliance Order, Peoples Gas then filed on June 4, 2018, a Petition for Reconsideration to allow Commission staff to review and address the newly discovered computation errors. The Petition for Reconsideration stated a corrected negative surcharge of -6.6820%, which was approved by the Commission by Reconsideration Order entered on June 14, 2018. The Petition for Reconsideration did not request modification and the

Gas Compliance Order provided that the TCJA temporary surcharge will be effective July 1, 2018 on a prospective basis. However, the Commission also recognized that the tax savings from TCJA commenced on January 1, 2018. In lieu of addressing this portion of the tax savings in the May 17, 2018 Order, the Commission directed Peoples Gas to establish a "deferred regulatory liability" account to record on its books the tax savings associated with the TCJA for the January 1, 2018, through June 30, 2018, time period (the "Stub Period"). The Peoples Gas Compliance Order also directed that: the account shall accrue interest at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41. P.S. §§ 101, et seq.); the rate treatment of this amount plus accrued interest shall be addressed in Peoples Gas' next base rate case; in that future proceeding, Peoples Gas and parties can address the appropriate negative surcharge, amortization or other disposition of this deferred regulatory liability, including any legal issues; and if Peoples Gas did not file, within three (3) years of May 17, 2018 (i.e., by May 17, 2021), a Section 1308(d), 66 Pa. C.S. § 1308(d), general base rate case, the Company was directed to file a petition proposing how to distribute the funds in the deferred regulatory liability account related to the Stub Period.

On May 17, 2021, Peoples Gas filed a Petition to Establish a Mechanism to Distribute the Tax Savings Associated with Tax Cuts and Jobs Act of 2017 for the Period between January 1, 2018, and June 30, 2018 (TCJA Petition) at Docket No. P-2021-302598. On November 18, 2021, the Commission approved Peoples Gas's TCJA Petition. However, the Commission determined that Peoples Gas did not include tax savings associated with the Company's EADIT for the Stub Period, and that the Commission had approved the distribution of TCJA-related tax savings for the period prior to July 1, 2018, which included the flowback of EADIT, for other utilities. The Commission also stated that the "Commission's intent to flow back taxes to customers on a current basis is clear…. Thus, it is clear that the Commission intended for all tax savings to be flowed back to customers on a timely basis." As such, the Commission required Peoples Gas to file a Petition within 60 days of the TCJA Order to distribute the tax savings associated with its EADIT[4].

Reconsideration Order did not modify any of the procedures approved in the Peoples Gas Compliance Order related to the establishment of the deferred regulatory liability account and the distribution of funds in that account.

[4] The company sought and was granted a 45-day extension, making the Petition due on or before March 3, 2022.

As a result of the June 16, 2022 Order at Docket No. P-2022-3031235, the Company filed a petition on March 3, 2022. This petition was approved and a compliance filing was made on June 21, 2022.

Q. ARE THERE ANY FURTHER ADJUSTMENTS NECESSARY?

A. The TCJA Rider calculations have addressed and will address the impact of the TCJA through the effective date of rates in this proceeding. The only matter left is to roll the impact of TCJA into base rates.

Q. HOW TO PROPOSE TO ROLL THE TCJA IMPACT INTO BASE RATES?

A. I recommend the following:

- The prospective impact of the TCJA for PGD be reflected in the development of rates in the case. This is being handled as such in the development of the income tax claim in Exhibit No. 7;
- Upon the effective date of rates in this proceeding, the TCJA Rider will continue to only apply to the former customers of PGD and the rate will be changed to only reflect the over/under collection recovery and remove the prospective impact of the TCJA as this will be rolled into base rates. The rate will be to recover any over or under collection amount over a twelve-month period. The Company reserved the right to adjust the rate through this twelve-month period in order to minimize the amount of over or under collection at the end of the period; and
- Further, any over or under collection amounts remaining at the end of the period shall be flowed through to Customers in the Company's next 1307(f) gas cost proceeding.

Q. DOES THE PEOPLES NATURAL GAS DIVISION HAVE A SIMILAR RIDER?

A. It previously did but the rate no longer applies as all matters related to the TCJA were resolved in the prior base rate case at Docket No. R-2018-3006818.

Q. HOW HAS RIDER TCJA BEEN REFLECTED IN EXHIBIT 3, WHICH DETAILS THE CALCULATION OF REVENUES AT PRESENT AND PROPOSED RATES?

A. Rider TCJA, as billed, is reflected in the historical test period revenues. Since the proposed revenues have been designed to recover income tax expense at the 21% federal income tax rate, revenue derived from Rider TCJA is eliminated when calculating revenue at proposed rates except for the portion related to the over/under collection of prior TCJA Rider credits.

Q. DOES THIS PROPOSAL REQUIRE ANY TARIFF CHANGES.

A. Yes. The Company's proposed treatment would result in revision to the previously approved Tax Repair Surcharge Rider included in both the PNGD and PGD tariffs to account for the aforementioned adjustments. Refer to Exhibit No. 14 for a red-line of such tariff changes.

TAX REPAIR SURCREDIT

Q. PLEASE EXPLAIN THE TAX REPAIR SURCREDIT CURRENTLY IN PLACE AT PNG?

A. Pursuant to Docket No. P-2020-3021191, effective August 1, 2021, a surcredit was put into effect on the Peoples Natural Gas Division. The purpose of this surcredit is to refund, over a five-year period, the entire tax benefit of a catch-up tax deduction resulting from the Company's defining its unit of property under the Internal Revenue Service's ("IRS") Treasury Regulations 1.263(a)-3 and 1.162-4. This catch-up deduction or "look back"

represents the difference between federal and state income tax depreciation claimed versus the repair deductions that would have been claimed for the tax years ended December 31, 2012 through March 15, 2020.

Q. DOES THE PEOPLES GAS DIVISION CURRENTLY HAVE SUCH A RIDER?

A. No. Although this tax methodology was approved in the Merger, the resolution of the Catch Up deduction was deferred to this base rate case proceeding.

Q. WHAT HAS CHANGED SINCE THE SURCREDIT WAS PUT INTO EFFECT?

A. In addition to PG's adoption of the deduction effective January 1, 2023, the Pennsylvania and Corporate Net Income ("CNI") tax rate changes, the IRS issued Natural Gas industry Safe Harbor rules for this deduction and the Company is applying this Unit of Property methodology to mandatory relocations.

Q. PLEASE FURTHER EXPLAIN PG ADOPTION OF TAX REPAIRS.

A. As a result of the Merger, PG adopted the tax methodologies of PNG including its definition of a Unit of Property for income tax purposes. However, the treatment of the Catch-Up deduction by PG was deferred to this proceeding. This was described in the Merger and specifically the ALJs decision had the following paragraph:

> *35. No refund of the anticipated catch-up benefits associated with Peoples Gas' adoption of Peoples Natural Gas' tax methodologies will be made in this proceeding. The Company will defer any retroactive ("catch up") benefits and will address such retrospective catch-up tax benefits achieved between the implementation of the tax change and the next base rate proceeding in the next base rate case proceeding. Regarding the prospective impact, Peoples Natural Gas (which will include the Peoples Gas assets) will account for the prospective impact utilizing flow-through accounting*

consistent with the recent Peoples Natural Gas repairs tax settlement at Docket No. P- 2020-3021191.

The impact of PG's adoption of the unit of property is to begin refunding to customers the Catch-Up benefit associated with PG's adoption.

Q. PLEASE FURTHER EXPLAIN THE PENNSYLVANIA CNI TAX RATE CHANGES.

A. In 2021, Pennsylvania House Bill 1342 was passed reducing the PA CNI rates beginning on January 1, 2023. This bill reduced such rates in subsequent years as follows:

- January 1, 1995, through December 31, 2022; 9.99%;
- January 1, 2023, through December 31, 2023; 8.99%
- January 1, 2024, through December 31, 2024; 8.49%
- January 1, 2025, through December 31, 2025; 7.99%
- January 1, 2026, through December 31, 2026; 7.49%
- January 1, 2027, through December 31, 2027; 6.99%
- January 1, 2028, through December 31, 2028; 6.49%
- January 1, 2029, through December 31, 2029; 5.99%
- January 1, 2030, through December 31, 2030; 5.49%
- January 1, 2031, and each year thereafter; 4.99%

The lower PA CNI tax rate results in a reduced tax benefit of the catch-up deduction thus the amount refunded by PNG since August 2021 has been overstated. The original order related to PNG's adoption addressed this. The ALJ's recommendation decision at paragraph 17(e) provided for the following:

> *(e) <u>Subsequent Changes to Benefit of Catch-Up Deduction.</u>*
> *To the extent that the benefit of the Company's catch-up deduction is affected by: (i) any subsequent disallowance by a future IRS audit;(ii) any changes in tax rate; or (iii) any change in rules or guidance that require a method change and, therefore, a change of benefit, permission is granted to defer those impacts for future refund or recovery for customers.*

The impact of this is that the Company needs to be made whole for the over-refund of the benefit via the surcredit resulting from the reduced Pennsylvania CNI tax rate.

Q. PLEASE FURTHER EXPLAIN THE SAFE HARBOR RULES.

A. The gas industry many years ago sought specific IRS guidance in the form of an industry issue resolution request. This was similar to the IRS guidance the electric industry sought and received around 2010. In 2023, the IRS finally issued gas industry specific guidance regarding the tangible property regulations that defined the unit of property for transmission and distribution property. Tax filers that previously had a method change filed for the tangible property regulations are provided with a "safe harbor" to quantify the impacts of the new regulations to its previous method without penalty. The end result is the Company having to quantify the difference in methods in the 481(a) adjustment and on a going forward basis, applying this guidance to future tax repair deductions.

Q. PLEASE FURTHER EXPLAIN MANDATORY RELOCATIONS.

A. Mandatory relocations are a type of project that the Company has determined is eligible for treatment as a tax repair deduction. This determination was a change in tax accounting method, hence a separate 481(a) catch up deduction was calculated in this instance.

Q. ARE THERE ANY OTHER CONSIDERATIONS THAT SHOULD BE FACTORED INTO THIS?

A. The Company has contracted a consulting firm with expertise in the very prescriptive methods required by the IRS to perform the examination of its records and determine the impacts of this guidance on a retroactive and going forward basis. That work is ongoing as

of the date of filing this case. Pursuant to IRS regulations, the Company has until it files its 2023 tax return (in October 2024), to quantify the impacts of the new IRS guidance. The Company will net the costs associated with implementing this change in method with the benefits to be given to customers.

Q. WHAT ARE YOU PROPOSING IN THIS PROCEEDING?

A. Regarding the current and ongoing benefit, the Company has reflected in its claim for income tax expense the expected repairs deduction to be realized by applying the new IRS regulations, what I refer to as the "current repair deduction".

As far as the catch-up adjustment impacts, given the fact that the examination and analysis of the Company records going back to 2012 is ongoing and the Company was required to file this case by December 2023 pursuant to Docket No. P-2020-3021191, the Company is proposing that the impacts of the following adjustments be recognized in a revised Tax Repair Surcharge Rider to be filed 90 days following the effective date of new rates in this proceeding, the adjustments listed as follows:

1.) Adjustment to reflect the reduced tax benefits as a result of the reduction in the State CNI rate;

2.) Adjustment to reflect the impacts of the new IRS regulations "Natural Gas Safe Harbor" – IRS Rev. Proc. 2023-15 to the "Catch-Up" adjustment amounts quantified in Docket No. P-2020-3021191;

3.) Adjustment to include the 481(a) adjustment for PG;

4.) Adjustment to include the 481(a) adjustment for Mandatory Relocations; and

5.) Extend the amortization period from 5 years to 10 years including the amortized portion of the previous sur-credit authorized in Docket No. P-2020-3021191, including the aforementioned adjustments.

Q. DOES THIS PROPOSAL REQUIRE ANY TARIFF CHANGES.

A. Yes. The Company's proposed treatment would result in a revision to the previously approved Tax Repair Surcharge Rider, including to account for the aforementioned adjustments. The Tax Repair surcharge will apply to all customers of the combined company. Refer to Exhibit No. 14 for a red-line of such tariff changes.

Q. IS THERE ANYTHING ELSE YOU WOULD LIKE TO ADDRESS REGARDING REPAIRS?

A. Yes. I would like to discuss the "Collar" proposal related to repairs.

Q. HAS THE COLLAR BEEN ADDRESSED IN ANY OTHER PROCEEDING?

A. Yes. In Docket No. P-2020-3021191, the Company was instructed to propose a collar for current repairs deductions similar to the one that was approved for our affiliate companies Aqua Pennsylvania, Inc. & Aqua Pennsylvania Wastewater, Inc., in Docket Nos. R-2018-3003558/3003561 & R-2021-3027385/3027386.

Q. WHAT ARE YOU PROPOSING AS THE COLLAR?

A. The Company's proposal is substantially similar to that of our affiliates. We are proposing in this case that the level of tax repair benefits claimed in the calculation of income tax expense (see Exhibit 7) have a collar applied on the higher and lower end in the amount of

$10 million before the requirement to defer those impacts for future base rate case treatment is implemented. The effective date of this should be the first day of the first calendar year after the effective date of new rates in this proceeding which is January 1, 2025. Said another way, as an example, if the final tax repair benefit in this proceeding was set at $300 million, the requirement to defer the financial impacts of the actual deduction would not be triggered unless the tax benefit realized on the tax return were greater than $310 million or less than $290 million. The differences between our proposal in this case, to that of our affiliate is 1.) the size of the collar and 2.) FIN 48 – Uncertain tax position is not applicable to gas as we have not recorded an uncertain tax position and we have industry specific guidance now.

Q. DOES THIS COMPLETE YOUR TESTIMONY?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2023-3044549
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
CAROL A. SCANLON,
MANAGER, RATES
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023 Peoples Statement No. 3
DATE ADMITTED: _____

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Carol A. Scanlon. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as Rates Manager. Effective January 1, 2023 the Peoples Natural Gas Company LLC and Peoples Gas Company LLC were merged. As such, Peoples Natural Gas Company LLC ("Company") currently includes – Peoples Natural Gas Division ("PNGD" or "Peoples Natural Gas Division") and Peoples Gas Division ("PGD" or "Peoples Gas Division"). When referring to both divisions herein, they may be referred to as the Peoples Divisions, Peoples Natural Gas, the Company or Peoples. In my position as Rates Manager, I provide rates and regulatory services for both PNGD and PGD.

Q. PLEASE DESCRIBE BRIEFLY YOUR EDUCATIONAL BACKGROUND AND WORK EXPERIENCE.

A. I graduated from the University of Pittsburgh in 1994 with a Bachelor of Science Degree in Business Administration with a concentration in Finance, and from Robert Morris University in 2001 with a Master's Degree in Business Administration. My career began with the former Equitable Gas Company ("EGC") in 2004, where I was employed in various positions of increasing responsibility. I started with EGC as a Senior Financial Analyst supporting the

Collections and Compliance areas of the business. In March 2006, I transitioned to the role of Supervisor of Collections and Analysis. I was in that role until August of 2007, when I was promoted to the Manager of Account Maintenance, during which time I directed the activities of the Audit and Back Office departments. In May 2009, I was promoted to Manager of Commercial and Residential Analysis. In June 2010, I was promoted to the Manager of Rates. I continued in that role until December 17, 2013, at which time EGC was acquired by PNG Companies and merged into Peoples Natural Gas. At that time, I transitioned to Peoples Natural Gas as a Rate Consultant. In August 2017, I was promoted to Manager of Transportation and Revenue. In this role, I managed revenue reporting and the team responsible for all interactions with the Natural Gas Suppliers ("NGSs"). In 2018, I transferred to PNG Companies. In April of the same year, I moved back to the Regulatory team as the Rates Manager.

Q. WHAT ARE YOUR RESPONSIBILITIES FOR PURPOSES OF THIS PROCEEDING?

A. I will provide an overview of the historical test year revenues presented in this case. I will explain the forecasting methods used to develop customer count and usage data for the future and fully projected future test years. I will describe how those forecasted counts and volumes were priced to determine total revenues. I will explain the use of competitive pricing in the Company's business model and the inclusion of negotiated rates in the pricing of the revenue claim. I will also describe adjustments made to normalize and annualize the revenues presented.

In addition, I will explain implementation aspects of the proposed weather normalization adjustment mechanism, describe the AVC rate blending proposal, and support the strategy to combine the universal service riders.

Q. PLEASE LIST THE EXHIBITS AND FILING REQUIREMENTS THAT YOU ARE SPONSORING AS A WITNESS.

A. Please refer to Appendix A to this testimony for a complete list of the filing requirements for which I am the responsible witness.

REVENUES (EXHIBIT NO. 3)

Q. PLEASE BRIEFLY DESCRIBE THE TEST YEAR REVENUES AS PRESENTED IN PEOPLES' FILING.

A. The schedules set forth in my testimony are presented separately for PNGD and PGD, but the exhibits follow the same numbering for each entity. Refer to the schedule "Volume and Revenue Summary at Current Rates," Exhibit 3, Schedule 15, Attachment C, page 1. Column 1 reflects the per books revenue for the year prior to the historic test year and column 2 reflects the per books revenue for the Historic Test Year ("HTY") of August 31, 2023 by FERC account. Columns 3-9 display the amounts of per books revenue related to gas cost, universal service rider, Gas Procurement Charge ("GPC"), Merchant Function Charge ("MFC"), Supplier Choice Rider ("SCR"), DSIC, Tax Repairs Surcredit rider ("TRS") for PNGD, and the Tax Cuts and Jobs Act rider ("TCJA" for PGD). The calculation of the gas cost

revenue for the HTY provided in Exhibit 3, Schedule 15, Attachment M and the calculation of the rider revenues for the HTY is provided in Exhibit 3, Schedule 15, Attachment N. Column 10 displays the unbilled and cycle 22 adjustment amount, which is presented in Exhibit 3, Schedule 15, Attachment K. This amount is being excluded because it is not pertinent to calculate the annualized revenues. Column 11 presents a weather adjustment to normalize the revenues for weather. The weather adjustment calculation is shown in Exhibit 3, Schedule 15, Attachment H, page 1. Column 12 reflects an adjustment to price the test year bills and volumes to the most current base rates. Column 13 is the annualized delivery service and customer charge revenue at current rates as calculated in Exhibit 3, Schedule 15, Attachment D, pages 1-6.

Refer next to Exhibit 3, Schedule 15, Attachment C, page 2. This schedule summarizes the annualized total revenue at present rates as shown in Exhibit 3, Schedule 15, Attachment D, pages 1-6. The present rates used in the schedule are those in effect as of October 1, 2023, with the exception of the Gas Cost Adjustment ("GCA") rate component. The GCA rate component is excluded because Peoples accelerated the refund of the over collections of gas cost commodity costs experienced during the 2022/2023 winter by decreasing the GCA charge to customers for the period of October 1, 2023 through December 31, 2023. This was approved by the Commission in Peoples 2023 -1307(f) annual gas cost proceeding at Docket No. R-2023-3037928. As a result, the GCA rate in effect from October 1, 2023 through December 31, 2023 is a credit of ($3.7904) per Mcf. Since the amount is not typical, Peoples excluded GCA from the gas cost rate displayed in the Exhibit

3 schedules so that gas cost rate is not skewed by it and remains in line with the actual cost of gas. The annualized universal service rider revenues in column (3) of Exhibit 3, Schedule 15, Attachment C, page 2, are reduced by the Customer Assistance Program ("CAP") Credit amount shown in Exhibit 3, Schedule 15, Attachment D, page 1, line no. 29.

Q. PLEASE EXPLAIN THE DEVELOPMENT OF YOUR ADJUSTMENT TO NORMALIZE REVENUES FOR THE EFFECTS OF THE HISTORICAL TEST YEAR WEATHER.

A. Exhibit 3, Schedule 15, Attachment H, page 1 summarizes the adjustment made to normalize the historical test year revenues for the effects of weather. This adjustment was calculated by determining the use per customer ("UPC") for each class of customer and multiplying the historical customer counts by this amount. I will discuss the calculation of UPC by class further in my testimony. Peoples is using 5,341 heating degree days ("HDDs") to forecast normal weather. This is derived by averaging a 20-year average with a 65-year regression for the periods ending December 31, 2022 as obtained from the National Oceanographic Atmospheric Association ("NOAA"). At Statement No. 15, Ralph Zarumba supports the use of a regression model, and specifically the use of a 65-year regression model for this case. The Company believes the 65-year regression model provides a reasonable basis for weather normalization. However, Peoples is proposing to use the average of the 65-year regression model result with the average of the 20-year average due to the concept of gradualism. The 65-year regression model produces a result of 5,240

HDDs. In Peoples Natural Gas Division's last base rate case in 2018, the HDDs employed in the forecasting model were 5,416. Although the methodology proposed by Ralph Zarumba is reasonable, in order to transition from the prior methodology to this new methodology we are utilizing an average of the 20-year average and the new methodology. which results in the use of 5,341 HDDs. The HTY billed throughput is deducted from the normalized volume to calculate the adjustment amount in Mcf. The Mcf adjustment amount is multiplied by the current delivery rate to determine the dollar amount of the adjustment.

Q. PLEASE FURTHER DESCRIBE THE DEVELOPMENT OF THE UPC PER CUSTOMER CLASS.

A. A UPC factor was developed for each class of customer to both normalize the historical test year and forecast the future test year ("FTY") and fully projected future test year ("FPFTY") volumes. Different methods were used to determine the UPC for each class of customer. Residential and commercial SGS and MGS customers traditionally are heat sensitive and require a model that includes a weather variable. By comparison, commercial LGS and all industrial customers are not predominantly impacted by weather, so using historical usage patterns for this class of customer is more indicative of future usage.

Q. LET'S START WITH HEAT SENSITIVE CUSTOMER CLASSES. PLEASE ELABORATE ON THE MODEL USED TO DEVELOP THE RESIDENTIAL AND COMMERCIAL SGS AND MGS UPC.

A. The Company employed a forecasting model that uses historical actual data to calculate a non-heat sensitive base load factor and a seasonal, heating degree day factor. This is the method that was used to calculate the UPC for all residential customers and small and medium commercial customers. Each of the calculated UPCs was then reduced by 0.50% to account for customer conservation measures. Small commercial customers are defined as commercial customers using between 0 – 999 Mcf annually. Medium commercial customers are defined as commercial customers using between 1,000 – 24,999 Mcf annually.

Q. HOW IS THE NON-HEAT SENSITIVE BASE LOAD DEVELOPED FOR THE RESIDENTIAL AND SMALL AND MEDIUM SIZE COMMERCIAL CUSTOMERS?

A. The non-heat sensitive base load is developed by reviewing actual volumes for the months of July and August, both of which have a low number of heating degree days, to establish a non-heat sensitive base load. This base load volume is divided by the number of customers and number of days in the month to arrive at a daily customer base load figure.

Q. HOW IS THE HEATING DEGREE DAY FACTOR DEVELOPED?

A. The first step is to remove the non-heat sensitive usage as identified above. This isolates the usage impacted by weather. Next, we identify the actual HDDs related to the historical data we are using. Finally, we take total heat load, divided by the total heating degree days for the period, then divided by the number of customers, to arrive

at a heating degree day factor.

Q. HOW WAS THE UPC FOR LARGE COMMERCIAL CUSTOMERS DEVELOPED?

A. Large commercial customers, defined as commercial customers using 25,000 Mcf or greater annually, often have usage patterns that behave more similarly to industrial customers than to heat sensitive customers. As a result, development of the large commercial customer's UPC is included in the next section with industrial customers.

Q. HOW WAS THE FORECAST FOR LARGE COMMERCIAL CUSTOMERS AND ALL INDUSTRIAL CUSTOMERS DEVELOPED?

A. The large commercial and all of the industrial volume projections were prepared using the actual, HTY history of volumes. The Company believes this is the best indicator of future usage trends for this group of customers. We then utilized the input of our sales representatives to incorporate significant known changes in usage patterns.

Q. PLEASE EXPLAIN HOW THE NUMBER OF BILLS ARE ANNUALIZED.

A. Refer to Exhibit 3, Schedule 15, Attachment F, pages 1-2. The net change in customers for growth and attrition, as presented in column (2), is determined by the net overall change in average number of customers over the last five years. The Company compared the average number of customers for the twelve months ending 8/31/2023 to the average number of customers for the twelve months ending

8/31/2018. The change in the average number of customers is then divided by the number of years between the two time frames to arrive at an annual change in customers number. The details of this analysis are presented in Exhibit 3, Schedule 15, Attachment H, page 2.

Depicted in column 3 of Exhibit 3, Schedule 15, Attachment F, pages 1-2 is the change of customers between classes. The purpose of this column is to align the customers with the correct rate category, as compared to the HTY data. For example, customers may switch back and forth between sales and transportation service. Also, as a result of the annual consumption review process, customers may move to another annual usage tier within the same category.

Q. PLEASE EXPLAIN HOW THE NUMBER OF BILLS ARE FORECASTED FOR THE FTY AND FPFTY.

A. The average annual change in number of customers, as determined to annualize the bills and described above, is forecasted for the FTY and FPFTY as shown in Exhibit 3, Schedule 15, Attachment F, pages 3-6.

Q. PLEASE DESCRIBE EXHIBIT 3, SCHEDULE 15, ATTACHMENT G.

A. Exhibit 3, Schedule 15, Attachment G summarizes the adjustments to weather normalize volumes and to annualize and forecast customer counts for each of the pertinent time frames; HTY, FTY, FPFTY. The adjustments to annualize volumes for net customer growth and attrition and customer reclasses used in Attachment G are summarized in Exhibit 3, Schedule 15, Attachment I.

Q. PLEASE DESCRIBE EXHIBIT 3, SCHEDULE 15, ATTACHMENT D.

A. Exhibit 3, Schedule 15, Attachment D incorporates the summary information provided in Exhibit 3, Schedule 15, Attachments F & G in the first two columns of each page. These volumes and customer counts are then priced out at current rates to calculate the revenue at current rates shown in column 4. This exercise is repeated for each of the pertinent time frames; Adjusted HTY (pages 1-6), FTY (pages 7-12), FPFTY (pages 13-18).

Q. YOU HAVE DESCRIBED THE PROCESS FOR PREPARING THE CUSTOMER COUNTS AND USAGE FORECASTED FOR EACH CLASS. PLEASE EXPLAIN HOW THESE COUNTS AND VOLUMES WERE PRICED IN EXHIBIT 3, SCHEDULE 15, ATTACHMENT D.

A. The retail sales customers are priced at current tariff rates effective October 1, 2023 (excluding the atypical GCA discussed earlier). The transportation service is priced in two parts: customers subject to full tariff rates are priced at the current tariff rates effective October 1, 2023, and competitive customers that have negotiated rates are priced individually at their negotiated delivery rate. The negotiated delivery rate line item displayed in Exhibit 3, Schedule 15, Attachment D is the weighted average negotiated delivery rate for the group of competitive customers specific to each rate class.

Q. YOU MENTION NEGOTIATED DELIVERY RATES FOR COMPETITIVE CUSTOMERS. WHAT MAKES A CUSTOMER "COMPETITIVE"?

A. The Company's service territory is a productive market for competition in several ways, including competition among Natural Gas Distribution Companies (NGDC), the ability for customers to bypass the system, and for customers to choose between natural gas and alternate fuels. Some of our commercial customers and most industrial customers have more than one service option available to them. These customers support important operational needs of the Company's system and also offset the cost of service for other customers. In order to ensure we maintain these accounts, it is necessary to flex our maximum delivery rates to remain competitive. Competitive customers are further discussed by Luke Ravenstahl at Statement No. 7.

Q. PLEASE DESCRIBE EXHIBIT 3, SCHEDULE 15, ATTACHMENT C, PAGES 3 - 6.

A. Exhibit 3, Schedule 15, Attachment C, pages 3-6 are comparable to the schedules presented in the same attachment on pages 1 and 2 and discussed on page 3, lines 7-23, and page 4, lines 1-11 in my testimony. Attachment C, page 3 starts with the pro forma revenue for the future test year as presented in Exhibit 3, Schedule 15, Attachment D, pages 7-12, and walks through the future test year gas costs and rider revenues to arrive at the annualized base revenue for the future test year at current rates. Attachment C, page 4 summarizes the annualized total revenue at present rates as shown in Exhibit 3, Schedule 15, Attachment D, pages 7-12. Annualized universal service rider revenues (column (3) of Attachment C) are reduced by annualized CAP expenses and net to zero. As a result, in Exhibit 3,

Schedule 15, Attachment C, universal service rider revenues are excluded from the schedule for the FTY and FPFTY periods, as also presented in Exhibit 3, Schedule 15, Attachment D, pages 7-18.

Q. PLEASE EXPLAIN THE PROPOSED REVENUES.

A. Exhibit 3, Schedule 15, Attachment O shows the allocation of proposed annual revenues by rate schedule based upon the class revenue requirements presented by witness Ralph Zarumba at Statement No. 15. Next, refer to Exhibit 3, Schedule 15, Attachment E. Exhibit 3, Schedule 15, Attachment E is similar to Exhibit 3, Schedule 15, Attachment D in that it incorporates the summary information provided in Exhibit 3, Schedule 15, Attachments F & G in the first two columns of each page. However, the volumes and customer counts are then priced out at proposed rates to calculate the revenue at proposed rates shown in column 4. This exercise is repeated for each of the pertinent time frames; Adjusted HTY (pages 1-6), FTY (pages 7-12), FPFTY (pages 13-18). Schedules that summarize the comparison of current rates to proposed rates for each of the relevant time periods are shown in Exhibit 3, Schedule 15, Attachment A.

OTHER OPERATING REVENUES

Q. PLEASE DESCRIBE, BY CATEGORY, THE OTHER OPERATING REVENUES INCLUDED IN THE HISTORIC, FUTURE, AND FULLY PROJECTED FUTURE TEST YEARS.

A. As displayed in Exhibit 3, Schedule 15, Attachment A, Line Nos. 19-27, seven accounts are presented as Other Operating Revenues. Account 487 is Forfeited Discounts which represents late payment charges applied to delinquent customer accounts. Account 483 presents sales for resale. This account contains the sales side of gas to third party suppliers. Account 488 is Miscellaneous Service Revenues which includes revenues from connection fees and service fees. Revenues from Transportation of Gas through Gathering Facilities is shown in Account 489.1 for Peoples Natural Gas Division. Account 493 provides revenue from rental of gas property. Account 495 includes several different items such as pooling and billing fees, off-system sales revenue, and other non-distribution revenues. Account 496 is Provision for Rate Refunds. This account is relative to the Tax Cuts and Jobs Act of 2018.

Q. LET'S BEGIN WITH THE FIRST ACCOUNT 483 - SALES FOR RESALE. DID YOU MAKE ANY ADJUSTMENTS TO THIS ACCOUNT?

A. As shown in Exhibit 3, Schedule 15, Attachment C, page 1 sales for resale are removed from the booked revenue as a normalization adjustment. Refer to Exhibit 3, Schedule 15, Attachment J . As mentioned, the entries in this account are for the sales side of gas to third party suppliers, but these sales are offset by the expense to suppliers, netting to zero. As a result, there is nothing forecasted for this account in any of the future periods.

Q. NEXT, ACCOUNT 487 - FORFEITED DISCOUNTS. DID YOU MAKE

ANY ADJUSTMENTS TO THIS ACCOUNT?

A. Yes. The forfeited discounts are projected as a percentage of gross revenues. Refer to Exhibit 3, Schedule 15, Attachment L, page 1. This schedule shows the actual forfeited discounts as a percentage of gross revenues for the HTY is 0.69%. The gross revenues projected for each of the pertinent time frames are then multiplied by 0.69% to forecast the forfeited discounts amount for each period.

Q. DID YOU MAKE ANY ADJUSTMENTS TO ACCOUNT 488 – MISCELLANEOUS SERVICE REVENUES?

A. No. The historic revenues for these fees were used to forecast the future test year and fully projected future test year revenues.

Q. DID YOU MAKE ANY ADJUSTMENTS TO ACCOUNT 489.1 RELATED TO REVENUES FROM THE TRANSPORTATION OF GAS THROUGH GATHERING FACILITIES?

A. Yes. The Company has experienced declining revenues due to declining production during recent years. As a result, Peoples reflected a decline in the forecasted revenues based upon 18 months of historical production data ending May 31, 2023.

Q. DID YOU MAKE ANY ADJUSTMENTS TO ACCOUNT 493 – REVENUE FROM RENTAL OF GAS PROPERTY?

A. No. The historic revenues for these fees were used to forecast the future test year and fully projected future test year revenues.

Q. DID YOU MAKE ANY ADJUSTMENTS TO ACCOUNT 495 – OTHER GAS REVENUES?

A. No. The historic revenues for these fees were used to forecast the future test year and fully projected future test year revenues.

Q. FINALLY, DID YOU MAKE ANY ADJUSTMENTS TO ACCOUNT 496 – PROVISION FOR RATE REFUNDS.

A. No.

WEATHER NORMALIZATION ADJUSTMENT ("WNA")

Q. IS THE COMPANY PROPOSING ANY NEW RATE MECHANISMS?

A. Yes. Peoples is proposing a weather normalization adjustment ("WNA") mechanism in this proceeding.

Q. PLEASE DESCRIBE WHAT A WNA MECHANISM IS.

A. In general, a WNA mechanism adjusts customers' bills to better reflect normalized weather conditions. If weather is colder than normal, customers receive a credit from the utility on their bill which offsets, to some degree, the higher distribution charges based on usage. If weather is warmer than normal, customers receive an additional charge from the utility on their bill which is offset, to some degree, by lower distribution charges based on usage.

Q. WHY IS PEOPLES PROPOSING A WNA MECHANISM?

A. Ralph Zarumba discusses the rationale and support for instituting a WNA mechanism at Statement No. 15. However, I will examine aspects of implementation of the WNA mechanism for Peoples.

Q. DESCRIBE THE WNA CALCULATION.

A. Exhibit CAS-1 presents the formulas and proposed calculation for the WNA mechanism. Additionally, the appropriate tariff pages to implement the proposed WNA mechanism are presented in Dawn Folk's testimony at Statement No. 11. Turning to Exhibit CAS-1, a WNA factor is developed by dividing the normal number of HDD's by the number of actual HDDs. Peoples is proposing that the normal number of HDDs used in the WNA calculation will be based upon the HDDs utilized to develop the revenue requirement in this proceeding (discussed above), and thus would remain the same until a future base rate case proceeding. The next step in the WNA calculation is to determine the baseload amount and heat sensitive amount of the customer's actual monthly consumption. The baseload amount is determined by averaging the actual daily consumption for July and August. Next, the customer's actual consumption for the month is reduced by the baseload amount. The result is the heat sensitive consumption for the month. The heat sensitive consumption is then multiplied by the WNA factor developed above and added to the baseload amount to calculate a weather normalized consumption amount. The difference between the weather normalized consumption amount and

the customer's actual total monthly consumption is the weather normalized adjusted Mcf amount. This amount is multiplied by the distribution rate charge to arrive at the weather normalized adjustment dollar amount that will be included on the customer bill.

Q. WHICH CUSTOMERS WILL WNA APPLY TO?

A. The Company is proposing that WNA apply to residential including CAP, commercial SGS and commercial MGS customers. Consistent with the revenue forecasting methodology, these customer classes are predominantly weather sensitive**.**

Q. WHICH MONTHS WILL WNA APPLY?

A. The Company is proposing that WNA is applicable on a service rendered basis during the heating season months, specifically October 1st through May 31st.

Q. HOW WILL WNA BE REFLECTED ON THE CUSTOMER'S BILL?

A. Peoples will calculate the WNA on an individual customer basis using the actual HDDs and expected HDDs pertaining to the days in the specific customer's billing cycle. The WNA adjustment amount for that billing cycle will roll up with the distribution charge component on the customer's bill and will be included in the total charges displayed as the delivery line item on the bill. Since the WNA mechanism effectively normalizes the distribution revenues recovered from the customer, this will aid the customer in seeing charges on their bill that are more

aligned with the weather most recently experienced. I would also note that WNA amounts will be subject to STAS, DSIC, TRS, and TCJA riders.

Q. HOW WILL WNA IMPACT CAP CUSTOMERS?

A. The WNA program will not impact the amount a CAP customer is expected to pay but rather only impact the "full tariff" charges that costs of the program will be calculated on. Peoples CAP program is a percentage of income program, where CAP customers pay the lower of a percentage of their income or their budget amount. WNA will not change the payment amount requested of CAP customers. WNA will be calculated on a CAP customer's bill, the same as it would for a non-CAP residential customer. However, if the amount of the CAP customer's actual usage bill at "full tariff" rates is greater than the CAP customer's asked to pay amount, the difference is called a CAP Credit. CAP credits are recovered through the Company's Universal Service Program rider that is applicable to Residential non-CAP customers. In this circumstance, the WNA dollars charged to customers enrolled in CAP can be part of the CAP Credit amount that is recovered through the Universal Service rider.

Q. HOW WILL WNA IMPACT BUDGET BILLING CUSTOMERS?

A. The WNA program will not impact the monthly amount a budget customer is expected to pay, meaning the WNA adjustment will not be added to or reduced from the otherwise applicable monthly budget amount. The WNA will be factored into the customer's annual budget reconciliation, which occurs on or near the

annual anniversary date of when the customer enrolled in budget billing. This results in matching the WNA charge with the benefit of a lower gas bill resulting from warmer than normal weather or matches the WNA credit with the higher gas bill resulting from colder than normal weather.

Q. WILL WNA REQUIRE ADDITIONAL FILINGS?

A. Peoples will file weather normalization information with the Commission annually on or before September 1st for the 12-month period ending June of that same year. The filing will contain the following information on the WNA mechanism:

- monthly WNA billed revenue; and
- monthly actual and normal HDD data.

Q. HOW DOES PEOPLES NATURAL GAS'S PROPOSED WNA ALIGN WITH THE STATEMENTS OF POLICY AS OUTLINED BY THE COMMISSION IN THE ALTERNATIVE RATEMAKING AT DOCKET NO. M-2015-2518883?

A. The Company's evaluation of each consideration from the aforementioned Statement of Policy is listed below along with the relevant effect the WNA has on the same.

1. ***Please explain how the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.***

Peoples' proposed WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while lessening the variance between actual and projected distribution revenues due to weather. Peoples recovers a significant portion of fixed costs through volumetric

rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance ("O&M") expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary due to changes in temperature. Thus, a WNA mechanism will better align distribution revenues with cost causation principles; appropriately accounting for variation in usage due to weather.

2. ***Please explain how the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.***

Peoples' WNA proposal does not impact capacity utilization.

3. ***Please explain whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.***

Customer specific usage factors corresponding to the customer's individual demand are continually updated by the Company and reflect the level of demand associated with said customer's expected consumption levels.

4. ***How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.***

Because Peoples Natural Gas's proposed WNA mechanism applies to rates which are based upon the specific revenue allocation and rate design ultimately approved by the Commission, the WNA mechanism will reduce the potential for interclass or intraclass cost shifting related to usage variances brought on by weather from the same weather assumptions incorporated into establishing the Company's rates.

5. ***Please explain how the WNA limits or eliminates disincentives for the promotion of efficiency programs.***

Peoples' proposed WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Further Peoples will continue to promote the use of energy efficiency measures to its customers.

6. ***Please explain how the WNA impacts customer incentives to employ efficiency measures and distributed energy resources.***

Peoples' customers will continue to be incentivized to use and employ energy efficiency measures and distributed energy resources

because a reduction in the customer's ultimate usage will still reduce their overall bill.

7. ***Please explain how the WNA impacts low-income customers and supports consumer assistance programs.***

As proposed, under Peoples WNA mechanism, customers enrolled in CAP will see lower bill variability for distribution costs during colder than normal billing cycles. Relatedly, customers who are currently enrolled to pay their bills based off of a percentage of their household income will see little to no affect to their bills under the WNA mechanism.

8. ***Please explain how the WNA impacts customer rate stability principles.***

As proposed, Peoples' WNA mechanism would provide customers with more stable bills on an annual basis and, during the cold weather heating months, the WNA will directly reduce bill volatility through the WNA adjustment should weather be abnormally warm or cold.

9. ***Please explain how the weather impacts utility revenue under the WNA.***

Peoples' proposed WNA adjusts a customer's bill due to variations from normal weather and will be in effect during the heating season months (October through May). Further it only applies to certain of the Company's customer classes (Residential including CAP, Commercial SGS, and Commercial MGS) and it does not guarantee that Peoples will recover 100% of its authorized distribution revenues, however, does reduce the amount of weather-related variation in customer bills and the Company's utility distribution revenue.

10. ***Please explain how the WNA impacts the frequency of rate case filings and affects regulatory lag.***

The WNA will not impact the Company's rate case frequency or have an effect on regulatory lag.

11. ***Please explain if the WNA interacts with other revenue sources, such as Section 1307 automatic adjustment surcharges 66. Pa. C.S § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa. C.S. § 2804 (relating to standards for restructuring of electric industry) or system improvement charges66 Pa. C.S. § 1353 (relating to distribution system improvement charge).***

Peoples' proposed WNA only applies to distribution related charges recovering the base distribution revenue requirement from customers subject to the WNA during October through May of each year. WNA amounts will be subject to STAS, DSIC, TRS, and TCJA riders.

12. ***Please explain whether the WNA includes appropriate consumer protections.***

Peoples' proposed WNA mechanism will adjust bills to reflect the revenues that would be recovered under normal weather. Peoples will not recover additional distribution revenues due to colder weather that result in relatively higher usage by customers subject to the WNA.

13. ***Please explain whether the WNA is understandable to customers.***

Peoples' WNA is not new within the NGDC landscape. Several other NGDCs in Pennsylvania have implemented WNA mechanisms. Peoples' proposed WNA is similar to that of those other Pennsylvania NGDCs and, further, Peoples will develop and employ consumer education and customer service training should the WNA mechanism be approved, as well as provide notice of the WNA to its customers pursuant to the Commission's alternative ratemaking notice requirements.

14. ***Please explain how the WNA will support improvements in utility reliability.***

Peoples' cost-of-service is inclusive of investments and costs to continue to enhance the safety and reliability of Peoples' system. Indeed, the WNA will stabilize the recovery of these costs, thereby assisting the Company to continue to pursue improvements to its system.

ALLEGHENY VALLEY CONNECTOR ("AVC") CAPACITY

Q. PLEASE DESCRIBE AVC CAPACITY, INCLUDING HOW AVC COSTS ARE CALCULATED AND RECOVERED.

A. The AVC facilities consist of transmission and storage facilities that are used to provide service to customers. The AVC facilities were historically owned by the

Peoples Natural Gas Division and AVC costs were recovered in base rates from both sales and transportation customers in accordance with the cost allocation approved in Peoples then most recent base rate case. The AVC facilities were transferred to EQT Corporation ("EQT") as part of Peoples acquisition of the Equitable Gas as distribution system in December 2013. When that happened, the AVC costs were removed from base rates and included in purchased gas costs as a stand-alone capacity charge. In other words, the AVC costs were not rolled into Peoples traditional capacity charges for recovery. To date, AVC costs are recovered via a separate surcharge applicable to all Peoples Natural Gas customers. Additionally, AVC capacity is not included in the Price to Compare ("PTC") because it is charged to all of Peoples Natural Gas' customers and therefore shopping customers would not shed this cost if choosing to purchase commodity through a third-party supplier.

Q. ARE YOU PROPOSING TO BLEND THE AVC RATES IN THIS PROCEEDING?

A. Yes. Although capacity is a gas cost and typically reviewed in the context of a 1307(f) proceeding, Peoples is proposing the blending of the AVC rate in this rate case proceeding because it is applicable to all customer classes. Peoples proposal is to charge the stand alone AVC capacity charge to all Peoples Natural Gas Division and Peoples Gas Division customers. As indicated in the application to merge Peoples Natural Gas Company LLC and Peoples Gas Company LLC at Docket Nos. A-2021-3029831 and A-2021-3029833 filed on December 21, 2021,

how and whether the AVC surcharge should be applied to former Peoples Gas customers presents complex issues that should be addressed in a base rate proceeding.

Q. WHY IS PEOPLES PROPOSING AVC CHARGES FOR PEOPLES GAS DIVISION CUSTOMERS?

A. The Company combined gas costs for Peoples Natural Gas Division and Peoples Gas Division effective October 1, 2022. Since that time, with the exception of AVC, both divisions have the same PGC rate components, balancing charges and retainage rates. In this proceeding, Peoples is proposing the combining of base rates and tariffs as the next step in the process of merging these separate divisions into one company. The blending of the AVC rate is necessary to bring the divisions together on the same footing.

Additionally, since the combining of the gas costs, Peoples Gas Division customers receive the benefit of the AVC capacity. Specifically, Peoples is able to "move" the capacity, including AVC, across both legacy systems. This is of particular note when considering Peoples' transportation program. Third-party suppliers are able to bring gas to Peoples system at any of the interconnection points, no matter where the end use customer is receiving the gas. In this fashion, the capacity can be used in the same way by either of the divisions and is not contingent on which of the legacy distribution systems the customer is served from.

Q. HAVE YOU PREPARED AN ANALYSIS OF THIS PROPOSAL?

A. Yes. Refer to Exhibit CAS-2. Peoples is not proposing any changes to the AVC capacity dollars to be recovered in this proceeding. Peoples is also not proposing any change to the allocation of the costs to the customer classes as defined in the current Peoples Natural Gas Company LLC - Peoples Natural Gas Division tariff and shown below.

Rate Class	Allocation
Residential	66.25%
SGS	11.94%
MGS	12.99%
LGS	8.82%

Peoples is only proposing recovery from all Peoples Natural Gas Division and Peoples Gas Division customers. Exhibit CAS-2 displays the AVC revenues included in the gas cost rate displayed in Exhibit No. 3, Schedule 15, Attachment D for the HTY on the left-hand side of the exhibit. The revenues are based upon the AVC rate as of October 1, 2023. On the right-hand side of the exhibit, Peoples utilized the same existing AVC revenue at current rates, but presents the recovery of the revenue from both Peoples Natural Gas Division and Peoples Gas Division customers. As evidenced in the combined totals at the bottom of the page, the Company's AVC proposal is revenue neutral.

Q. IS THE PROPOSED BLENDED AVC RATE WHAT WILL GO INTO EFFECT AT THE CONCLUSION OF THIS CASE?

A. Generally, yes, but not exactly. In the 2024-1307(f) gas cost proceeding, Peoples will propose the same calculation methodology for AVC, but with updated projections of the AVC capacity costs, revisions to the forecasted volumes for both

Divisions, and including any adjustments, if necessary, to account for volumes from negotiated rate customers that are not subject to the AVC capacity charge for competitive reasons.

Q. DOES CHARGING AVC CAPACITY COSTS TO PGD CUSTOMERS HELP MITIGATE RATE DIFFERENCES BETWEEN THE TWO DIVISIONS?

A. Yes. PGD rates are currently higher than PNGD rates. Allocating some of the AVC costs to PGD customers will reduce the overall rate increase for PNGD customers.

COMBINING OF UNIVERSAL SERVICE RIDERS

Q. ARE YOU PROPOSING TO COMBINE UNIVERSAL SERVICE PROGRAM RIDERS IN THIS PROCEEDING?

A. Yes. In conjunction with combining the tariffs and rates for Peoples Natural Gas Division and Peoples Gas Division, the Company is also proposing to combine Rider Universal Service for Peoples Natural Gas Division with Rider USP – Universal Service Program for Peoples Gas Division into one collective Universal Service rider.

Q. PLEASE DESCRIBE WHAT COMBINING THE UNIVERSAL SERVICE RIDERS ENTAILS.

A. The first step is to align the presentation of the riders for ratemaking purposes.

Exhibit CAS-3 displays the rate calculation for Peoples Gas Division in Peoples Natural Gas Division filing format. As a validation point, the rate effective July 1, 2023 as calculated in the legacy Peoples Gas Division format equals the rate calculated in Exhibit CAS-3 using the Peoples Natural Gas Division template. As a validation point, the July 1st Universal Service filings are also included in Exhibit CAS-3, starting on page 6 of 14. Upon approval of combining the riders in this proceeding, Peoples will add the expense components together for PNG & PG shown in Line Nos. 1 through 9 on page 1 of Exhibit CAS-3, and then divide this by the sum of the projected residential non-CAP throughput on Line No. 10, to arrive at a combined C-factor rate. The same calculation methodology will then be applied to the reconciliation adjustment dollars shown in Line No. 12 to arrive at the E-factor rate. The C-factor rate component and the E-factor rate component will be summed to determine the total combined Universal Service rider rate to go into effect for both divisions.

Q. REFERRING TO EXHIBIT CAS-3, WOULD THE COMBINED UNIVERSAL SERVICE RIDER RATE GOING INTO EFFECT UPON APPROVAL OF RATES IN THIS PROCEEDING BE $0.1475 PER MCF?

A. No. Exhibit CAS-3 is presented to illustrate the approach the Company is proposing to combine the universal service rider rates upon approval in this proceeding. The rate of $0.1475 is calculated using the universal service filings effective July 1, 2023. However, there are subsequent universal service filings submitted to the Commission on a quarterly basis. Most recently, October 1, 2023 and an upcoming

filing January 1, 2024. Peoples' proposal to combine the universal service riders will be consistent with the approach shown in Exhibit CAS-3, but will reflect figures based upon the most recent universal service filing filed with the Commission at the commencement of new rates in this proceeding. From that point forward, the Company is proposing to calculate the combined universal service rider using the current Peoples Natural Gas Division calculation methodology, for both PNG and PG.

Q. YOU MENTION USING THE CURRENT PEOPLES NATURAL GAS DIVISION CALCULATION METHODOLOGY FOR THE UNIVERSAL SERVICE RIDER GOING FORWARD. WILL THAT INVOLVE CHANGES FOR THE PEOPLES GAS DIVISION?

A. Yes. This will involve a few changes for the current Peoples Division calculation methodology. First, is the timing and methodology of the bad debt offset calculation. Presently, Peoples Gas Division determines the bad debt offset amount on an annual basis. Using this Peoples Natural Gas Division methodology, this will change to quarterly. Secondly, Peoples Gas Division's bad debt offset calculation uses the average number of customers during the period of October – September to subtract from the CAP Participation threshold amount of 1,500 participants. This would change to using the actual number of customers to subtract from the CAP Participation threshold amount. Next, Peoples Gas Division currently projects customer payments and billed revenue by each tier level of the CAP program. This would change to being projected in the aggregate. Lastly, consistent with the

existing Peoples Natural Gas Division universal service rider, interest will not be applicable.

Q. PLEASE DESCRIBE HOW THE BAD DEBT OFFSET AND CAP PARTICIPATION LEVELS WILL BE COMBINED.

A. The Company proposes to reflect a bad debt offset amount of 4.70% in the first universal service update filing (after the initial compliance filing described above) upon approval in this case. This percentage is determined by dividing the gross write-offs in dollars for confirmed low-income customers by the annual residential revenues for confirmed low-income customers as reported in the Commission's Universal Service Programs and Collections Performance 2022 Report. The calculation is presented in Exhibit CAS-4.

In relation to the CAP participation level, Peoples proposes the threshold amount to trigger the bad debt offset is CAP enrollment in excess of 33,800 customers. This figure is derived by adding the current threshold amount of 32,300 customer on Peoples Natural Gas Division and 1,500 on Peoples Gas Division.

Q. ARE THERE ANY OTHER ASPECTS OF COMBINING THE UNIVERSAL SERVICE RIDERS THAT YOU WOULD LIKE TO ADDRESS?

A. Yes. The current timing of the reconciliation period and roll in of the reconciliation amount into the rate is not the same for Peoples Natural Gas Division and Peoples Gas Division. As inferred by the proposed tariff changes, the Company plans to incorporate the timing set forth for the existing Peoples Gas Division, which means

the annual reconciliation period will be October - September of a given year. The annual 1307(e) reconciliation statement will then be filed by October 31st of the same year as the period end and the reconciliation adjustment will be included in the rate calculation effective January 1st of the following year. To align the two divisions upon approval of this filing, the Company proposes that the Peoples Natural Gas Division annual reconciliation filing of January – December 2023 will be filed by January 31, 2024 and included in the rate calculation effective April 1, 2024. The next annual filing reconciliation statement, that will be filed by October 31, 2024, will include both divisions. For Peoples Natural Gas Division, it will include the months of January 2024 – September 2024 and for Peoples Gas Division, it will include October 2023 – September 2024. The combined reconciliation adjustment amount will be included in the rate calculation effective January 1, 2025.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as other issues arise during the course of this proceeding. Thank you.

WNA Calculation

WNA Formulas	
Weather Normalization Adjustment (WNA)	WNAM X Distribution Usage Charge
WNAM = Weather Normalized Adjustment MCF	WNBM-AMUM
WNBM = Weather Normalized Billing MCF	BLMM+ [(NHDDA/AHDDA)x(AMUM-BLMM)]
BLMM = Base Load Monthly MCF	Actual average daily consumption for July and August
NHDD = Normal Heating Degree Days	Per revenue requirement

Gray highlighted cells designate input fields.

	WNA Calculation			
1	Normal Heating Degree Days		914	NHDD
2	Actual Heating Degree Days		956	AHDD
3	WNA Factor (Line 1 / Line 2)		0.956	NHDD/AHDD
4	Total Monthly MCF Consumption		13.5	AMUM
5	Base Load MCF Consumption		2.2	BLMM
6	Heat Sensitive MCF Consumption (Line 4 - Line 5)		11.3	
7	Weather Normalized Billing MCF (Line 5 + (Line 3 x Line 6))		13.0	WNBM
8	Weather Normalized Adjusted MCF (Line 7 - Line 4)		(0.50)	WNAM
9	Distribution Charge 1/	$	3.9608	
10	**Weather Normalization Adjustment (Line 8 x Line 9)**	**$**	**(1.98)**	WNA

1/ Represents Peoples Natural Gas Division residential delivery rate as of Oct 1, 2023

2/ WNA is a delivery charge adjustment

3/ Calculated WNA amounts are subject to STAS, DSIC, and TRS

PREPARED REBUTTAL TESTIMONY OF CAROL A. SCANLON, MANAGER, RATES PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED:
DATE ADMITTED: April 18, 2024

Peoples Statement No. 3-R

PREPARED REBUTTAL TESTIMONY OF
CAROL A. SCANLON

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Carol A. Scanlon. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as Rates Manager. Effective January 1, 2023 the Peoples Natural Gas Company LLC and Peoples Gas Company LLC were merged. As such, Peoples Natural Gas Company LLC ("Company") currently includes – Peoples Natural Gas Division ("PNGD" or "Peoples Natural Gas Division") and Peoples Gas Division ("PGD" or "Peoples Gas Division"). When referring to both divisions herein, they may be referred to as the Peoples Divisions, or the Company. In my position as Rates Manager, I provide rates and regulatory services for both PNGD and PGD.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 3.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will respond to the testimony set forth by the Commission's Bureau of Investigation and Enforcement's ("I&E") witness Ethan H. Cline, the Office of Consumer Advocate's

("OCA") witnesses David T. Evrard, Dante Mugrace, Clarence Johnson, Barbara Alexander, and Roger Colton, as well as the Office of Small Business Advocate's ("OSBA") witness Robert D. Knecht, and the Coalition of Affordable Utility Service and Energy Efficiency in Pennsylvania's ("CAUSE-PA") witness Harry Geller. Many of these identified witnesses' testimony have overlapping subject matters. Where possible, I will address issues in kind and by subject matter, rather than by specific witness.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes, I am sponsoring Exhibits CAS-1R, CAS-2R and CAS-3R.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I address each issue in kind in the following order: (1) other parties direct testimony related to the Company's proposal to implement a weather normalization adjustment ("WNA") mechanism, as identified by various witnesses for various parties (Section I, *supra);* (2) other parties direct testimony related to derivation of annual heating degree days ("HDD"s) used to forecast normal weather identified by I&E witness Cline in I&E Statement No. 3 and the conservation adjustment factor identified by witness Knecht in OSBA Statement No. 1(Section II, *supra*); (3) other parties direct testimony related to the alleged notice issues identified by OCA witnesses Evrard in OCA Statement No. 1 and Alexander in OCA Statement No. 5 (Section III, *supra*); (4) other parties direct testimony related to the bad debt offset for universal service rider as identified by OCA witness Mr. Colton in OCA Statement No. 6 (Section IV, *supra*); and (5) other parties direct testimony related to the

AVC capacity charge combining as identified witness Knecht in OSBA Statement No. 1 (Section V, *supra*).

I. WEATHER NORMALIZATION ADJUSTMENT

Q. PLEASE BRIEFLY EXPLAIN THE COMPANY'S WNA PROPOSAL.

A. The Company's WNA proposal requests a mechanism that adjusts customers' bills to better reflect normalized weather conditions. If weather is colder than normal, customers receive a credit from the utility on their bill which offsets, to some degree, the higher distribution charges based on usage. If weather is warmer than normal, customers receive an additional charge from the utility on their bill which is offset, to some degree, by lower distribution charges based on usage.

More specifically, Peoples' proposal is for a WNA mechanism that would apply to residential (including Customer Assistance Program ("CAP")) customers, commercial SGS and commercial MGS customers that are predominantly weather sensitive, meaning that fluctuations in heating degree days is the predominant variable that impacts the customer's usage. The WNA will be calculated on an individual customer basis using the actual HDDs and expected HDDs pertaining to the days in the specific customer's billing cycle. The Company's proposal does not include a deadband and would be applicable during the heating season months, specifically October through May.

Q. IS PEOPLES PROPOSAL BASED UPON SERVICE RENDERED OR BILLS RENDERED?

A. Peoples intended to propose the WNA mechanism on a bills rendered basis, not a service rendered basis, from May 1st through October 31st. I note this because the proposed WNA tariff inadvertently references a service rendered basis. As stated in response to OSBA-I-12(j) the Company specified it would adjust its tariff to reflect the mechanism as bill rendered in rebuttal testimony. The revised tariff language is presented in Peoples Exhibit No. DMF-2R.

Q. DID OTHER PARTIES SUBMIT DIRECT TESTIMONY REGARDING THE WNA?

A. Yes. I&E, OCA, OSBA, and CAUSE-PA all addressed the Company's WNA proposal through their Direct Testimony.

Q. PLEASE SUMMARIZE OTHER PARTIES' TESTIMONY WITH RESPECT TO THE WNA.

A. Various parties submitted direct testimony related to the WNA. I&E witness Mr. Cline states that the WNA mechanism as proposed by the Company should be revised to include a 3% deadband but otherwise be approved. OCA witness David T. Evrard recommends that the WNA be denied and points to other utilities' WNA programs and how they differ from Peoples' proposal. Mr. Evrard also argues that alternative ratemaking mechanisms, like the WNA, can guarantee revenue for a utility and traditional ratemaking methods render certain benefits. OCA witness Mugrace also recommends that the WNA be denied as, according to Mr. Mugrace, implementation of the WNA will impose more volatility to customers' bills, doesn't closely relate to cost causation principles, and the WNA will be

difficult to understand from customers' perspective. Similarly, OCA witness Johnson recommends that the WNA be denied, as he claims that the WNA would result in more charges than credits, that the WNA may constitute single issue ratemaking, that the WNA is difficult for customers to understand, and that implementation of the WNA would disincentivize energy efficiency measures. OCA witness Colton also recommends that the WNA be denied and that the Company's budget billing program is sufficient.

OSBA witness Robert D. Knecht recommends that, if the WNA is approved by the Commission, certain "protections" should be adopted for the program.

CAUSE-PA witness Geller recommends that the WNA be denied and argues that the WNA would prevent residential customers from realizing bill savings "that result from warming weather trends and would shift all weather-related risk from the utility to the consumer."

A. Application and Efficacy of a Deadband

Q. PLEASE EXPLAIN WHAT A "DEADBAND" IS WITH RESPECT TO THE WNA.

A. In relation to a WNA mechanism, a deadband is a threshold upon which until met, the WNA mechanism would not apply. Said another way, it sets a boundary such that slight fluctuations in actual HDDs compared to normal HDDs are not adjusted for.

Q. DO OTHER PARTIES RECOMMEND THE IMPLEMENTATION OF A DEADBAND IN ORDER FOR THE COMMISSION TO APPROVE THE WNA?

A. Yes. I&E witness Mr. Cline recommends that Peoples' WNA be approved on the condition that a 3% deadband is included. He indicates that his recommendation maintains

consistency with the Commission's previous ruling and with existing WNAs of Columbia, NFG, and UGI. OSBA witness Knecht, by way of discovery, notes the following about the deadband: "In my testimony, I did not recommend a deadband as a necessary condition for approval of the Company's WNA proposal." He then goes on to say that he would not object to a reasonable deadband. Refer to Exhibit CAS-1R for OSBA's response to OCA's data request.

Q. DO YOU AGREE WITH I&E WITNESS MR. CLINE THAT THE WNA MECHANISM SHOULD ONLY BE APPROVED WITH A THREE PERCENT DEADBAND?

A. No, I do not.

Q. WHY NOT?

A. As also discussed in the direct testimony of Ralph Zarumba at Peoples Statement No. 15, page 57, deadbands reduce the effectiveness of the weather normalization mechanism and therefore reduce their values to both the Company and customers. The goal of the WNA mechanism is to adjust bills to better reflect normalized weather conditions. Implementation of a deadband conflicts with this normalization and leaves a portion of weather-related revenues unaddressed. In this way, the deadband negates the purpose of the WNA mechanism.

On page 14 of his direct testimony, witness Mr. Cline, points to the 2021 Columbia Gas Order as support for the appropriateness of a deadband.

> In the 2021 Columbia Order, the Commission determined that "without an extraordinary set of circumstances, there is no need for Columbia to

> reconcile day-to-day temperature variations that are part of normal business." (Docket No. R-13 2020-3018835, Order entered February 19, 2021, pp. 264-265)

However, Peoples WNA proposal is not to reconcile day-to-day temperature changes, but rather to compare a customer's full billing cycle of actual HDDs to the comparable full cycle of normal HDDs. Therefore, any day-to-day weather fluctuations will be flushed out since the comparison will be done on a full billing cycle of data, which on average, is approximately 30 days.

Finally, as will be discussed later in my rebuttal testimony, another concern raised by OCA witness Johnson is that the WNA is difficult for customers to understand. Johnson's concern is presented in response to Peoples proposed calculation that does not contain a deadband. Including a deadband will certainly add complexity to the calculation that will elevate concerns on this front.

Q. HOW DO YOU THINK THE COMMISSION SHOULD EVALUATE I&E'S ARGUMENTS RELATED TO A DEADBAND?

A. Peoples believes that application of the WNA without a deadband is the most consistent and correct application of the mechanism, as the purpose of the WNA is to remedy variations in weather for both the customer and the company. Additionally, it is the most straightforward application of the mechanism which will be important for ease of customer understanding. Consider a case when the variation in weather is 3.1% versus 3.0%. In this scenario, the WNA mechanism would be applied to a 0.1% change in weather. The Company believes this could create more complexity and confusion for customers.

The Commission should approve the Company's WNA proposal without a deadband. Both the Company and even OSBA in discovery, agree that a deadband is NOT a necessary condition for approving the WNA mechanism.

B. Complexity and Customer Understanding

Q. WHAT STATEMENTS DO THE OCA WITNESSES MAKE REGARDING COMPLEXITY OF THE WNA MECHANISM?

A. OCA witness Mr. Mugrace claims the WNA calculation proposed by Peoples is a complex model that will make it difficult for customers to understand what exactly is included in their bill. He further points to Peoples proposal to include the WNA component with the delivery charge line item on a customer's bill as a reason customers will find it difficult to understand what's in their bill.

OCA witness Mr. Johnson cites the testimony of Peoples customer Nick Hoffman from a public input hearing on March 5, 2024, in Monroeville, PA. Mr. Hoffman stated that the calculation of the WNA is complex and that customers would have a hard time verifying the accuracy of the charge or credit. Witness Mr. Johnson also references an occasion two years ago when some PGW customers received high charges in the month of May when customers ordinarily reduced their heating use. He points to this as a reason that shoulder months are a particular cause for concern since at times a shoulder month can be more similar to summer than winter and that the complexity of the formula could lead to customer confusion or complaint.

OCA witness Ms. Alexander supplements the other OCA witnesses' position on the WNA mechanism. Similar to OCA witness Mr. Johnson, Ms. Alexander addresses Mr.

Hoffman's testimony at the public input hearing, pointing out that he testified in opposition of the WNA because he does not view it as being neutral," stating, "It seems doubtful that WNA would be revenue neutral because a warmer month does not guarantee a colder month is inevitable."[1] Ms. Alexander also echoes Mr. Mugrace's concern about the WNA rate adjustment not being listed out separately on the customer's bill but rather being included in the customer's "delivery charge" line item.

Q. PLEASE RESPOND TO THE OCA'S CONCERNS REGARDING COMPLEXITY OF THE PROGRAM.

A. Peoples acknowledges there are multiple steps and variables in the WNA calculation. However, that should not be viewed as a reason for rejecting the WNA mechanism. In Pennsylvania, four other Natural Gas Distribution Companies (NGDCs) have Commission approved weather normalization mechanisms in place. They are Columbia Gas of PA, National Fuel Gas, PGW, and UGI. Peoples' proposed WNA is similar to that of those other Pennsylvania NGDCs. This supports the notion that while the WNA calculation contains multiple steps, customers are able to understand the nature of the mechanism. Peoples' proposal is to include the WNA adjustment with the distribution charge component on a customer's bill. Peoples is experienced with handling this function. Currently, the universal service rider ("USR") rate component is included with the distribution charge rate component and displayed on the customer's bill as the "delivery" line item for presentation purposes. The reason for handling the WNA mechanism the same way is to aid the customer in seeing charges on their bill that are more aligned with normal

[1] Public Input Transcript, March 5, 2024, page 49.

weather, in essence, a more stable delivery charge amount. However, this does not mean that Peoples is not anticipating customer education and awareness of the WNA mechanism. If approved, Peoples plans to include information and FAQs in a bill insert and on the Company's website explaining the WNA. The Company will also ensure training for customer service center representatives to be able to walk a customer through what the WNA is and how the WNA is calculated.

Q. DID YOU ATTEND THE PUBLIC INPUT HEARING ON MARCH 5, 2024 IN MONROEVILLE PA?

A. No, I did not.

Q. HAVE YOU REVIEWED THE TRANSCRIPT FROM THE PUBLIC INPUT HEARING ON MARCH 5, 2024 IN MONROEVILLE PA SPECIFIC TO MR. HOFFMAN'S TESTIMONY?

A. Yes, I have.

Q. HOW DO YOU RESPOND TO THE CONCERNS RAISED BY OCA PURSUANT TO MR. HOFFMAN'S TESTIMONY?

A. While I completely understand and appreciate Mr. Hoffmann's concerns that are mentioned by OCA witnesses Mr. Mugrace and Ms. Alexander, I believe the Company is taking the necessary steps towards alleviating those concerns. Specifically, in relation to the complexity of the mechanism and being able to understand it, I mentioned that, if approved, Peoples will be providing customer communication and education through bill inserts and the Company's website. In addition, customer service center representatives

will be trained to assist customers with WNA questions. I reiterate that multiple NGDCs in PA have this mechanism currently in place and that is not new within the NGDC landscape. In relation to Mr. Hoffman's belief that the mechanism in not neutral, I respectfully point out that he is focused only on the impact of weather that is warmer than normal versus a more comprehensive view of the mechanism. The other side of the coin is that Peoples will not recover additional distribution revenues due to colder weather that results in relatively higher usage by customers subject to the WNA. The Company anticipates that over a length of time the total weather related cumulative impact is expected to be zero or near zero.

Q. IS THERE ANYTHING ELSE IN REGARD TO MR. HOFFMAN'S TESTIMONY AT THE PUBLIC INPUT HEARING THAT YOU WOULD LIKE TO POINT OUT?

A. Yes. Mr. Hoffman testified that "Peoples has made errors on my bill. The simple DSIC charge surcharge of 5.00 percent on my bill has been wrong for the last three months. It's easy to compute 5.00 percent of the customer charge plus delivery charge, but Peoples has been charging me about 5.17 percent."[2]

Q. DID YOU REVIEW MR. HOFFMAN'S BILLS?

A. Yes. After the public input hearing, I was made aware of his claim about the incorrect DSIC amount being billed to him. As a result, and in conjunction with Peoples Billing and

[2] Public Input Transcript, March 5, 2024, page 51.

Compliance departments, I reviewed each of Mr. Hoffman's bills from July 2023 through February 2024.

Q. WERE ANY OF THE BILLS YOU REVIEWED FOUND TO BE INCORRECT?

A. No. The DSIC surcharge was properly applied to each bill. I had a follow up phone conversation with Mr. Hoffman to walk through each bill and explain how the DSIC amount was calculated for each of the bills.

Q. ARE YOU FAMILIAR WITH THE RECENT PGW PETITION FOR EMERGENCY ORDER AT DOCKET NO. R-2022-3034229?

A. Yes, I am.

Q. PLEASE SUMAMRIZE YOUR UNDERSTANDING OF THIS CASE.

A. My understanding of the case is that Philadelphia Gas Works ("PGW") experienced an anomaly in the application of the WNA to May 2022 usage, which produced unusually large and unanticipated charges to customers in the majority of billing cycles with May usage. PGW did not believe their customers should be subject to the unusually large charges and requested approval to reverse the WNA charges that were applied to the May usage billings while they conducted an internal investigation into the WNA formula, inputs and current information about weather trends as they affect May. I am not aware of any public information about PGW's WNA mechanism producing inaccurate results, but just that there were unanticipated charges for May usage.

Q. WILL PEOPLES' WNA RESULT IN THE SAME SITUATION AS PGW'S MAY 2022?

A. In my opinion, the chances are extremely low that this would happen. I have a general understanding of PGW's situation based upon the public record available at Docket No. R-2022-3034229, however, I do not have an in depth knowledge of the issue nor do I have customer specific information as to what happened. PGW's petition states that their WNA was originally authorized by the Commission in 2002 and has worked more or less as anticipated over the past twenty years. I am not aware of the triggering event(s) that caused this specific condition. Further, after reviewing the docket, I found no information to show that PGW's WNA formula was misapplied or inaccurately calculated.

What I can say, and what does support our position is the seven years' worth of data we have reviewed and analyzed. That data shows that a situation like PGW's May 2022 is extremely rare. I point to the rebuttal testimony of witness Ralph Zarumba at Statement No.15-R for a detailed discussion of the analysis and results. What Mr. Zarumba's rebuttal testimony will show, and what we have found is that PGW and Peoples cannot be compared as apples to apples. PGW and Peoples have different weather, different HDDs, different delivery rates, etc. In the extremely rare circumstance that an unusual WNA situation occurs, Peoples will address it reasonably as the Company has adequate protections in place to ensure that the WNA formula will be applied fairly and accurately.

C. <u>Low Income Issues</u>

Q. DOES THE WNA PREVENT RESIDENTIAL CUSTOMERS FROM REALIZING BILL SAVINGS OFTEN ASSOCIATED WITH WARMER-THAN-NORMAL WEATHER?

A. No. The WNA mechanism pertains to distribution charges, which generally reflect the cost of delivering natural gas to the customer's premises. In warmer than normal weather, customers can still realize savings on the commodity portion of their bill. The commodity charge reflects the actual cost of the natural gas a customer consumes. In warmer than normal weather, it is expected less gas would be consumed, thereby the customer would still receive benefit of a lower gas bill (compared to normal weather) during a warmer than normal billing month.

Q. WILL THE WNA INCREASE VOLATILITY IN RESIDENTIAL CUSTOMERS' BILLS?

A. No, quite the contrary. The WNA mechanism seeks to stabilize the amount of distribution revenues billed due to weather impacts. The concept of increased volatility relies on parties focused on only the warmer than normal scenario. Peoples respectfully calls attention to the other side of the coin. Peoples will not recover additional distribution revenues due to colder weather that results in relatively higher usage by customers subject to the WNA. Additionally, the Company offers a budget billing program that can be used in conjunction with the WNA mechanism to further reduce bill volatility, as examined later in this testimony. However, I note that this option alone is insufficient as will be discussed later in my testimony.

Q. MR. GELLER OF CAUSE-PA ARGUES THAT THE WNA WILL DISINCENTIVIZE ENERGY EFFICIENCY MEASURES. DO YOU AGREE?

A. No, I do not. As discussed above, the WNA mechanism pertains to the distribution charges, which roughly make up about half of the total bill amount. The other half is for commodity, which reflects the actual cost of the natural gas a customer consumes. Customers can still recognize savings. WNA mechanism adjusts for weather impacts, whether that weather be warmer or colder than normal. The mechanism is applied to the usage factors present on individual accounts. These factors are specific to usage patterns of the customer account and are updated annually. When customers conserve, these usage factors will adjust accordingly over time. Therefore, customer efforts to reduce bills through using less gas will continue to have a positive effect, regardless of the adjustment for weather normalization.

Q. CAUSE-PA WITNESS GELLER ARGUES THAT THE WNA MAY MAKE CUSTOMERS' BILLS LESS AFFORDABLE FOR LOW INCOME CUSTOMERS. DO YOU AGREE?

A. No. First, I would like to note that Mr. Geller's testimony concentrates only on the impact of weather that is warmer than normal versus a more comprehensive view of the mechanism. I reiterate the point that the other side of the coin is that Peoples will not recover additional distribution revenues due to colder weather that results in relatively higher usage by customers subject to the WNA. This insulates customers from higher bills in colder than normal conditions. With that said, for low income customers enrolled in CAP, the WNA mechanism will not impact the amount a CAP customer is expected to pay

but rather only impact the "full tariff" charges that costs of the program will be calculated on. Peoples CAP program is a percentage of income program, where CAP customers pay the lower of a percentage of their income or their budget amount. WNA will not change the payment amount requested of CAP customers.

Q. CAUSE-PA WITNESS GELLER STATES THAT THE VAST MAJORITY OF LOW INCOME CUSTOMERS IN PEOPLES' SERVICE TERRITORY ARE NOT ENROLLED IN CAP. HOW DO YOU ADDRESS THAT?

A. Peoples flagship program to support affordability is CAP. Peoples CAP program is open to anyone that is income eligible, meaning any customer at or below 150% of Federal Poverty Level ("FPL"). A customer does not need to be in arrears or on a payment arrangement to be eligible for the CAP program. Further, in Peoples direct testimony at Statement No. 9 and in rebuttal Statement No. 9-R, witness Rita Black, discusses Peoples' outreach and intake efforts for CAP and the Low Income Home Energy Assistance Program ("LIHEAP"). Income eligible low income customers that are payment troubled should enroll in the CAP program to maintain affordability. Additionally, low income customers with arrears and income between 151 and 200% FPL can participate in Peoples pilot CAP expansion, providing protection against bill volatility for those who are payment troubled and are ineligible for LIHEAP

Q. ACCORDING TO OCA WITNESS COLTON, THE WNA WILL DISPROPORTIONATELY ADVERSELY AFFECT LOW-INCOME CUSTOMERS. PLEASE RESPOND.

A. OCA witness Mr. Colton is primarily concerned with low income customers that are not enrolled in CAP. As examined above, the first point is that Mr. Colton is only assessing warmer than normal weather impacts versus a more comprehensive view of the mechanism. I restate the point that the other side of the coin is that Peoples will not recover additional distribution revenues due to colder weather that results in relatively higher usage by customers subject to the WNA. In relation to low income customers not enrolled in CAP, the first goal is to enroll income eligible customers in CAP. Again, at Statement No. 9 and in Statement No. 9-R, Peoples witness Rita Black, discusses Peoples' outreach and intake efforts for CAP and LIHEAP. Next, for customers that are not eligible or choose not to enroll in CAP, the budget billing program will remain available and can be utilized to even out the seasonal highs and lows for more affordability. Additionally, low income customers with arrears and income between 151 and 200% FPL can participate in Peoples pilot CAP expansion, providing protection against bill volatility for those who are payment troubled and are ineligible for LIHEAP

Q. IS THE COMPANY PROPOSING TO CONTINUE ITS BUDGET BILLING PROGRAM IN ADDITION TO THE WNA MECHANISM?

A. Yes, and the WNA program will not impact the monthly amount a budget customer is expected to pay, meaning the WNA adjustment will not be added to or reduced from the otherwise applicable monthly budget amount. The WNA will be factored into the customer's periodic budget reconciliation, which occurs on or near the annual anniversary date of when the customer enrolled in budget billing.

Q. WOULD BUDGET BILLING PROTECT LOW-INCOME CUSTOMERS FROM BILL VOLATILITY BETTER THAN THE WNA?

A. As mentioned above, the budget billing program will remain available and can be utilized in conjunction with the WNA mechanism to even out the seasonal highs and lows for more affordability. This (budget billing) will be an option for low income customers. However, while both budget billing and WNA attempt to levelize bill amounts month to month, they are not interchangeable as Mr. Colton recommends. Meaning, the purpose of each mechanism is different. Both mechanisms can be used together and are complementary, but exchanging one for the other, for example, use budget billing instead of WNA, does not produce the same result. The WNA mechanism seeks to stabilize the amount of distribution revenue billed due to weather impacts. Budget billing spreads a customer's annual bill amount equally over a twelve month period. Once billed, the budget billing programs balances the monthly bill amounts to keep the payment amount the same in order to even out the high and low bills over a period of time. Once the WNA mechanism is approved, a customer on budget billing would likely see lower levels of change during the budget review and/ budget reconciliation processes, as the differences between actual and normal weather will be adjusted. This, in turn, increases bill stability for customers rather than making the bills more volatile.

D. Responses to Weather-Related Issues

Q. HOW DO OCA WITNESS JOHNSON AND CAUSE-PA WITNESS GELLER CHARCTERIZE THE IMPACTS OF THE WNA MECHANISM?

A. Both witnesses, Mr, Johnson and Mr. Geller, reference concerns about warmer than normal weather. Mr. Johnson states the implication of Mr. Zarumba's statement that "it is generally agreed that weather is becoming milder (i.e. warmer) over time" and that the "average number of HDDs for each year are decreasing"[3] is that customers are likely to see more WNA charges than credits. Mr. Geller asserts that when temperatures are warmer than normal, which they have been for the last several years, WNAs result in higher bills for residential customers.

Q. ARE WARMER-THAN-NORMAL WINTERS MORE COMMON THAN COLDER-THAN-NORMAL WINTERS?

A. Yes and no. I say yes in relation to Mr. Zarumba's statement about weather becoming generally milder over time. This notion is reflected in Peoples HDDs proposal for normal weather used in the revenue forecast for this case. In Peoples 2018 base rate case, the Company proposed 5,416 HDDs to forecast normal weather. In this case, Peoples is proposing 5,341 HDDs to forecast normal weather. The proposal to use less HDDs to forecast normal weather is consistent with Mr. Zarumba's statement about weather becoming generally milder over time. Without a weather normalization adjustment, weather sensitive revenues will fluctuate, higher or lower, depending on the difference in HDDs as compared to 5,341. With a weather normalization adjustment in place, the Company's weather sensitive revenues would be consistent with the revenue projections based upon 5,341 HDDs annually, which, as shown, accounts for the concept that weather is becoming milder.

[3] Peoples Statement No 15, page 53.

I say no in response to this question in the context that weather can be unpredictable. As OCA witness Mr. Mugrace stated in his testimony, "Weather cannot be predicted accurately and with certainty."[4] As support that the WNA mechanism can provide symmetric protection to *customers* (emphasis added) and the Company for revenue variations in usage associated with non-normal weather, refer to the below table[5]. The table presents a summary of the impact of the proposed WNA on a typical residential customer for the years 2019 through 2022. The following assumptions were made in preparing this analysis.

1. Billing periods are aligned with the calendar month.
2. Only the current base delivery and current base customer charges were applied.
3. Monthly NHDD are the same as that used in the rate case except for February in leap years which are adjusted slightly for the different number of days.
4. Average monthly consumption is based on the PNGD & PGD combined entity.
5. The delivery and customer charge rates used represent PNGD residential delivery rates as of Oct 1, 2023.
6. Assumes no deadband.

Annual Base Bill	2019	2020	2021	2022		Total
Initial Base Delivery Charges	$354.82	$330.55	$331.15	$357.01		$1,373.53
WNA Adj. Base Delivery Charges	$346.50	$341.24	$337.88	$340.77		$1,366.40
Incr/ (Decr) to Base Delivery	($8.32)	$10.69	$6.73	($16.24)		($7.13)
% Change in Delivery Charges	-2.3%	3.2%	2.0%	-4.5%		-0.52%
Customer Charge	$174.00	$174.00	$174.00	$174.00		$696
Total Base Charges	$528.82	$504.55	$505.15	$531.01		$2,069.53
WNA Adjusted Base Charges	$520.50	$515.24	$511.88	$514.77		$2,062.40
$ Inc / (Decr) in Base Charges	-1.6%	2.1%	1.3%	-3.1%		-0.34%

[4] OCA Statement No. 2, page 23.

[5] Excerpt from Peoples response to CAUSE-PA-I-16.

As shown, the WNA impact over four recent years of weather varied between colder than normal results and warmer than normal results. In fact, over this four year period, the cumulative impact was a net savings for the customer based on the assumptions above.

Q. SHOULD THE COMMISSION WEIGH OTHER CONSIDERATIONS WHEN EVALUATING THE TRADE-OFFS FOR CUSTOMERS BETWEEN COLDER-THAN-NORMAL AND WARMER-THAN-NORMAL WINTERS?

A. Yes. A common theme throughout the other parties direct testimonies is that they are testifying in opposition of the WNA mechanism based upon reliance that only warmer than normal weather will be present. Many of the arguments against the WNA mechanism only weigh the warmer than normal scenario. I recap throughout this testimony that Peoples will not recover additional distribution revenues due to colder weather that results in relatively higher usage by customers subject to the WNA. The WNA mechanism provides symmetric protection to *customers* (emphasis added) and the Company for revenue variations in usage associated with non-normal weather, as evidenced in the table above for a typical customer between the years of 2019 – 2022. Peoples anticipates that over a length of time the total weather related cumulative impact is expected to be zero or near zero.

E. Derivation of Daily Heating Degree Days

Q. DOES ANY PARTY TAKE ISSUE WITH HOW THE COMPANY DERIVES ITS NORMAL DAILY HDDs?

A. Yes. OSBA witness Mr. Knecht raise concern about Peoples approach to allocating the 5,341 annual HDDs to the daily level of HDDs that are necessary for deriving the billing period normal HDDs for each individual customer for purposes of billing the weather normalization adjustment.

Q. WHAT ARE MR. KNECHT'S CONCERNS WITH THE DERIVATION OF DAILY HDDs?

A. As presented in Peoples response to OSBA-I-12(a), which is included in Exhibit IEc-3 attached to Mr. Knecht's direct testimony, the Company used use an average of the past 10 years of data to define normal daily HDDs that are necessary for deriving the billing period normal HDDs for each individual customer. Their concern is that the average annual HDDs for the ten year period used appears to have been 5,389 HDDs, modestly higher (colder) than the 5,341 normal value used for load forecasting. They believe that if actual HDDs in FPFTY 2025 exactly meets the 5,341 HDD normal value used for load forecasting, the Company will be permitted to increase its charges for heating load by about 0.9 percent.

Q. DOES MR. KNECHT MAKE ANY RECOMMENDATIONS AS TO THE COMPANY'S METHOD FOR DERIVING ITS NORMAL DAILY HEATING DEGREE DAYS?

A. Yes. He recommends that the Company clarify its proposed method for deriving normal HDDs for individual billing periods to ensure that they are consistent with the annual normal HDDs used for load forecasting.

Q. PLEASE RESPOND TO MR. KNECHT'S RECOMMENDATION.

A. I am not able to tie back to the average annual HDDs of 5,389 for the ten year period that Mr. Knecht references. However, to clarify the derivation of the normal daily HDDs that Peoples intends to use for the WNA calculation, refer to Exhibit CAS-2R. Exhibit CAS-2R contains an extract from the excel document provided by Peoples in response to OSBA-I-12(a). Peoples used the ten year period of HDDs to ascertain a reasonable allocation of monthly HDDs to daily HDDs. As shown in Exhibit CAS-2R, the total number of daily HDDs ties back to the annual HDD figure of 5,341 proposed in this proceeding. The only exception to this is during a leap year. In a leap year, there is an extra day, so the total annual HDDs increase to 5,368 to account for the additional day. For comparative purposes, the leap year table of normal HDDs that Peoples intends to use in a leap year is on page 2 of Exhibit CAS-2R.

F. Response to OCA's Policy Concerns with WNA Mechanisms

Q. BEYOND THE UNSUPPORTED ASSERTIONS RELATED TO THE WNA'S IMPACT ON LOW-INCOME CUSTOMERS, DOES THE OCA RAISE OTHER POLICY CONCERNS WITH THE WNA?

A. Yes. OCA witness Mr. Johnson raises concern that the WNA mechanism is analogous to a take or pay provision and that implementation of the WNA may constitute single issues ratemaking. Additionally, OCA witness Mr. Evrard reviewed the WNA proposal in the context of each of the fourteen policy statement factors, and believes the result is that the factors weigh heavily against the WNA.

Q. WHY DOES OCA WITNESS JOHNSON BELIEVE THAT THE WNA MECHANISM RESULTS IN A TAKE-OR-PAY BILLING FEATURE?

A. OCA witness Mr. Johnson, believes from the customer's perspective, the WNA produces a charge without a concomitant increase in delivered gas. He goes on to say, the WNA is normalizing the billing units rather than imposing a charge or credit for providing an increase or decrease in service.[6]

Q. DOES THE AMOUNT OF DISTRIBUTION SERVICE PROVIDED TO PEOPLES' CUSTOMERS CHANGE DEPENDENT ON WEATHER?

A. No, it does not. Distribution costs are largely fixed in nature and do not fluctuate based on customer usage. Despite the fixed nature of costs recovered through the distribution charge, the rates for recovery are primarily set on a volumetric basis, with the exception of the customer charge. Consider a simple example of this construct. The cost to prepare and send a bill to a customer is an example of a distribution cost. Whether a customer uses 1 Mcf or 1,000 Mcf, the cost to prepare and mail the bill is the same. The customer does not receive more or less bills dependent on their usage. Most distribution costs are characterized in this this nature.

Q. IN YOUR DIRECT TESTIMONY, YOU ADDRESSS EACH OF THE 14 CONSIDERATIONS OUTLINED IN THE COMMISSION'S STATEMENT OF POLICY ON ALTERNATIVE RATEMAKING. DOES OCA WITNESS EVRARD ADDRESS THOSE CONSIDERATIONS?

[6] OCA Statement No. 4, pages 43-44.

A. Yes, he does.

Q. PLEASE EXPLAIN WHERE YOUR ANALYSIS DIFFERS FROM THAT OF MR. EVRARD.

A. **Consideration 1** – Mr. Evrard indicates that WNA represents a clear misalignment between revenue and cost causation. In my opinion, they are not misaligned because the purpose of the WNA is to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding. During the course of this proceeding the cost causation, through the cost of service model, is determined. The WNA mechanism does not alter that.

Consideration 2 – Peoples and Mr. Evrard are in alignment.

Consideration 3 – Mr. Evrard contends that the heart of this matter is that even with a customer-specific base load factor, the WNA mechanism reflects an anticipation that the customer's actual demand will be at a lower level than their anticipated consumption. Throughout this testimony, I direct attention to the other side of the coin, that Peoples will not recover additional distribution revenues due to colder weather that results in relatively higher usage by customers subject to the WNA. This side of the coin is not considered in Mr. Evrard's response to Consideration 3.

Consideration 4- Mr. Evrard surmises that revenue generated from the WNA mechanism will serve to reduce deficits the Company experiences as a result of other customer classes, including recipients of competitive flex rates, or other rates
offered by Peoples which may be below the cost-of-service as how the WNA mechanism limits or eliminates eliminate interclass and intraclass cost shifting. The Company disagrees. The rates established in this proceeding are based upon specific revenue allocations and rate design, ultimately approved by the Commission. The WNA mechanism only adjusts for weather related variances back to the baseline normal weather used in this proceeding to set the rates originally.

Consideration 5- Mr. Evrard maintains that the WNA mechanism disincentivizes energy efficiency programs because it because it imposes a disconnect between cost-savings and conserving energy. The Company does not agree. In warmer than normal weather, when the WNA would traditionally be a charge, customers can still realize savings on the commodity portion of their bill. The WNA only applies to the distribution portion of the customer's bill. Cost savings from reduced commodity charges can still drive energy efficiency.

Consideration 6- Mr. Evrard contends that if a customer reduces usage for reasons other than weather, such as costs savings or a new furnace, they will be disincentivized from improving efficiency because they will be paying for gas they do not use. This notion is misguided. First, with a WNA mechanism, the customer is not paying for gas that they do not use. The WNA mechanism is designed to recover distribution costs that are largely

fixed in nature and do not fluctuate based on customer usage. Further, the WNA mechanism would only adjust the customer's bill back to the baseline (normal weather) per this proceeding. Secondly, akin to Consideration 5, if the customer reduced usage for reasons other than weather, such as costs savings or a new furnace, they would realize the cost savings from the commodity portion of the customer's bill.

Consideration 7 –In relation to how the WNA mechanism impacts low-income customers and supports consumer assistance programs, Mr. Evrard focuses his attention only on low income customers that are not enrolled in CAP. Peoples avers that first, the CAP is Peoples flagship program for low income customers and the WNA mechanism will not impact the amount a CAP customer is expected to pay. . Peoples has outreach and intake efforts in place to enroll income eligible low income customers into CAP that are not already. Low income customers also have the option to enroll in budget billing to spread the seasonal bills into a more stable and constant monthly payment amount. Further, low income customers with arrears and income between 151 and 200% FPL can participate in Peoples pilot CAP expansion, providing protection against bill volatility for those who are payment troubled and are ineligible for LIHEAP.

Consideration 8 – As to how the WNA mechanism impacts customer rate stability principles, Mr. Evrard claims Peoples' WNA decreases customer rate stability because it obscures price signals for customers by dissociating their monthly bill from their actual usage as to how the WNA mechanism impacts customer rate stability principles. Peoples standpoint is that it is quite the contrary. The purpose of the WNA mechanism is to stabilize

revenues consistent with normal weather conditions, in essence taking the "guess work" out of the equation.

Consideration 9- Mr. Evrard solely focuses on warmer than normal weather with regard to how weather impacts utility revenue under the ratemaking mechanism and rate design. In colder than normal weather conditions, when the customer is most vulnerable, they will receive the benefit of the WNA mechanism insulating them from higher distribution charges when the commodity charges will also be higher due to increased consumption.

Consideration 10- Peoples and Mr. Evrard are in agreement.

Consideration 11 – Peoples and Mr. Evrard primarily agree on how the ratemaking mechanism and rate design interact with other revenue sources. Mr. Evrard comments that the interaction with the other riders mentioned will likely increase the charges on the bill. Peoples notes that some of the riders that WNA will interact with are surcredits.

Consideration 12- Mr. Evrard points out that Peoples did not propose a deadband or exclude May from the WNA mechanism, and as such, have no consumer protections for its WNA mechanism. Peoples specifies the WNA mechanism itself is a customer protection as it shields customers from especially high bills in colder than normal weather conditions.

Consideration 13 – Mr. Evrard indicates that multiple customers at the public hearing testified that they did not understand the WNA mechanism as a reason it is not

understandable to consumers. He further points to the Company's notice and avers that inadequate information was provided to customers. Finally, he mentions that Peoples is not proposing to include the WNA as a separate line item on a customer's bill. Peoples contends that communication and customer education plans include providing information and FAQs in a bill insert and on the Company's website explaining the WNA. Moreover, the Company will ensure training for customer service center representatives to be able to walk a customer through what the WNA is and how the WNA is calculated. The customers at public hearing that testified they did not understand the WNA mechanism have not yet been privy to any educational materials by the Company, but if approved, they will be forthcoming. Refer to page 31, Section III of this testimony for further detail on the Company's position on the customer notices.

Consideration 14 – Mr. Evrard alleges the WNA will provide additional revenues which are not cost-based and are not dedicated to infrastructure upgrades as a reason that the WNA mechanism does not support improvements in utility reliability. Again, Peoples points to the fact that Mr. Evrard is purely focused on warmer than normal weather. Peoples reaffirms that the Company's cost-of-service is inclusive of investments and costs to continue to enhance the safety and reliability of Peoples' system. Indeed, the WNA will stabilize the recovery of these costs, thereby assisting the Company to continue to pursue improvements.

Q. WHAT IS YOUR UNDERSTANDING OF SINGLE ISSUE RATEMAKING?

A. Simply put, it is when a single cost or revenue is reviewed by a regulator in isolation, without considering other changes in costs and /or revenues.

Q. PLEASE ADDRESS OCA WITNESS JOHNSON'S POSITION THAT IMPLEMENTATION OF THE WNA MAY CONSTITUTE SINGLE ISSUE RATEMAKING.

A. The appropriate level of revenue and customer bills is set in a rate case. The WNA mechanism adjusts actual revenues and customer bills to account for the differences between normal weather and actual weather in order to better align what was set in the rate case versus what occurs in future years. Peoples' projected revenues in this proceeding are determined using normalized weather of 5,341 HDDs. Without a weather normalization adjustment, weather sensitive revenues will fluctuate, higher or lower, depending on the difference in HDDs as compared to 5,341. With a weather normalization adjustment in place, the Company's weather sensitive revenues would be consistent with the revenue projections based upon 5,341 HDDs annually. In conclusion, I do not agree the WNA adjustment constitutes single-issue ratemaking because is not creating a new level of revenues allowed, but rather adjusts the revenues so that the revenues that *have been* allowed can be realized.

Q. IS IT YOUR UNDERSTANDING THAT OTHER NGDCS IN PENNSYLVANIA HAVE IMPLEMENTED WNA MECHANISMS?

A. Yes, it is my understanding that Columbia Gas of PA, National Fuel Gas, PGW, and UGI have Commission approved WNA mechanisms in place.

Q. DID YOU REVIEW THE WNA CALCUATION OF THE OTHER NGDCS IN PENNSYLVANIA?

A. Yes, I have. Specifically, we focused on the formulae and calculations for NFG, UGI and Columbia as those mechanisms were most recently approved.

Q. IS THE COMPANY'S WNA MODEL CALCULATION SIMILAR TO THE WNA MECHANISMS APPROVED AND IMPLEMENTED BY OTHER NGDCs?

A. I would say it is similar to those NGDCs upon which we focused our review. However, I do note that the Company's proposed mechanism does not use a deadband, uses different weather patterns and may apply to different months.

II. DERIVATION OF HEATING DEGREE DAYS AND CONSERVATION ADJUSTMENT FACTOR

A. Heating Degree Days

Q. DOES ANY PARTY TAKE ISSUE WITH HOW THE COMPANY DERIVES ITS NORMAL ANNUAL HDDs?

A. Yes. I&E witness Mr. Cline presents an issue with the Company's methodology for developing normal HDDs used to forecast normal weather.

Q. WHAT ARE MR. CLINE'S CONCERNS WITH THE DERIVIATION OF ANNUAL HDDs?

A. Peoples proposed using 5,341 HDDs to forecast normal weather. This is derived by averaging a 20-year average with a 65-year regression for the periods ending December

31, 2022. Mr. Cline says what while he does not necessarily disagree with the concept of using a regression analysis to normalize HDDs, he does disagree with the Company's proposal to use 65-years of historic data to determine normalized HDDs. He states the reason for this is because Peoples witness Mr. Zarumba provided no support for why he selected 65 years of data for his analysis. He goes on to say that he also does not identify why he considers weather from as early as 1958 to be representative of weather patterns occurring today. He asserts that the Company selected this methodology in order to justify a specific normalized HDD result.

Q. WHAT DOES MR. CLINE'S RECOMMEND?

A. He recommends Peoples use 5,443 HDD to forecast normal weather. This value is equivalent to the 20 year average of HDD.

Q. HOW DO YOU RESPOND TO MR. CLINE?

A. Mr. Zarumba addresses Mr. Cline's concerns about the use of the 65-year regression approach in his rebuttal testimony at Peoples Statement No. 15-R. I further note that in Mr. Cline's proposed revenue adjustment related to this topic, he utilized gross revenue including gas cost revenue. Refer to the rebuttal testimony of witness Andrew Wachter at Peoples Statement No. 2-R for additional discussion of this matter including an error made by Mr. Cline in his proposed adjustment.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS ABOUT THE DERIVATION OF ANNUAL HDDs?

A. Yes. In OSBA Statement No. 1, witness Knecht also considers the Company's proposal to use 5,341 HDDs to forecast normal weather. He discusses how he evaluated and confirmed the Company's statistical trend analysis. In conclusion, he states that his analysis suggests that applying the Company's proposal, namely using an average of the 20-year method and the trend method, appears to be slightly better than relying only on the trend approach. As a result, OSBA takes no exception to the Company's proposed method for deriving normal annual HDDs.[7]

B. Conservation Adjustment Factor

Q. DOES ANY PARTY TAKE ISSUE WITH THE BILLING DETERMINANTS THE COMPANY IS USING?

A. Yes. OSBA witness Knecht raises concern with the Company's 0.5 percent conservation factor adjustment applied to the load forecast.

Q. WHAT IS MR. KNECHT'S CONCERN WITH THE CONSERVATION FACTOR ADJUSTMENT?

A. Mr. Knecht conducted his own statistical analysis using a model for each rate class reflecting actual "HDDs" in the month and a trend variable, to evaluate the reasonableness of the Company's assumptions that weather-normalized use per customer is declining for all rate classes except Rate LGS. He concluded that the statistical analysis does not show a statistically significant trend effect, either for a total class load analysis or a per-customer analysis.

[7] OSBA Statement No. 1, pages 50-51.

Q. WHAT DOES HE RECOMMEND?

A. He recommends that the Company's conservation adjustment factor be rejected, and that use per customer for the temperature sensitive classes be based solely on historical average use per customer.

Q. HOW DO YOU RESPOND TO THIS RECOMMEDATION?

A. Peoples believes the conservation factor is appropriate to account for the continual shift towards more energy efficient appliances. Refer to Exhibit CAS-3R for a recent online article by Time. The article discusses forthcoming changes to regulations for household appliances anticipated to take effect in 2027. The article also corroborates the current shift towards more energy efficient appliances, stating "Despite this, substantially more energy efficient models are available today."

III. NOTICE ISSUES

Q. PLEASE DESCRIBE THE NOTICE PROVIDED BY THE COMPANY TO ITS CUSTOMERS WITH RESPECT TO THIS PROCEEDING.

A. Peoples provided notice to its customers through bill inserts that are included with the bill for each individual customer. Peoples also placed notice in newspapers that cover the Company's service territory. Lastly, information is presented on the Company's website about the rate case filing, the public input hearings, the statement of reasons for the filing, along with several other rate case topics in the form of FAQs to assist customers.

Q. DID THE COMPANY'S NOTICE PRACTICES IN THIS PROCEEDING COMPLY WITH THE COMMISSION'S REQUIREMENTS?

A. Yes.

Q. DID ANY PARTY TO THIS PROCEEDING RAISE ISSUES RELATED TO THE NOTICE PROVIDED BY THE TO ITS CUSTOMERS?

A. Yes. OCA witness Mr. Evrard discusses concerns with Peoples notice. These concerns are then echoed by OCA witness Ms. Alexander.

Q. WHAT WERE THE ISSUES THE OCA WITNESSES MR. EVRARD AND MS. ALEXANDER RAISE WITH RESPECT TO NOTICE?

A. The main concern is that Peoples sent the same public notice of the rate case to all its customers without separating the notices into a PNGD and PGD division notice, particularly because the bill impacts differ between these two divisions. To be clear, I note that the bill insert clearly provided the proposed increase and the effect on a residential customer's bill by division assuming usage of 80 mcf/annually. Nevertheless, the OCA witness suggests that customers could not easily identify which division serves them and would have to take additional steps to find out. They further claim the burden was exacerbated because Peoples' live customer service hours are limited to traditional business hours, making customers' access to information about the rate increase even more difficult to obtain.

Q. WHAT DO OCA WITNESSES MR. EVRARD AND MS. ALEXANDER RECOMMEND WITH RESPECT TO THE COMPANY'S NOTICE PRACTICES?

A. Mr. Evrard said he encourages Peoples to develop notices that do not place unfair burdens on the customer. He added that one way Peoples could do this is by considering whether usage of 80 Mcf per year is a fair metric to use in the notice, as one customer testified it was too low. Ms. Alexander recommended that Peoples conduct an evaluation of the potential for extending the customer service center hours to accommodate customers who are employed during normal business hours.

Q. PLEASE RESPOND TO THE RECOMMENDATIONS BY MR. EVRARD AND MS. ALEXANDER.

A. As Mr. Evrard recognized in his testimony, the issue of the consolidated notice will likely not be a problem in the future because Peoples' proposal in this case is to unify the tariffs and rates for the PNGD and PGD divisions and these entities have already been legally merged. Since the consolidated notice will likely not be a future problem, Peoples will re-evaluate the Mcf usage for the next notice requirement, but points out that it has been a long standing practice to provide notice based upon an "average" customer's usage, which is what the Company did in this case. This approach is consistent with the Commission's requirements around customer notices.

I further note that by providing a combined bill insert and notice the Company presented the higher divisional impact on rates and thus erred on the side of caution.

Q. DID PEOPLES NOTICE CUSTOMERS ABOUT THE PROPOSED WNA MECHANISM?

A. Yes. Both the newspaper notice and the bill insert included communication that the filing contained a request for the approval of a Weather Normalization Adjustment (WNA) as an alternative rate mechanism in accordance with 66 Pa. C.S. § 1330. Adding that, "The WNA would adjust certain customers' bills to reflect normalized weather conditions."

Q. DOES THE WNA MECHANISM IMPACT THE PROJECTED RATE INCREASE OF 21% FOR PNGD AND 7% FOR PGD?

A. No.

Q. WHY NOT?

A. The purpose of a WNA mechanism is to adjust customers' bills to better reflect normalized weather conditions. The proposed rates in this proceeding assume normal weather conditions (i.e. 5,341 HDDs). As future real-time weather conditions vary from these normal conditions proposed in the case, the WNA mechanism would adjust the customer's bill back to the baseline (normal weather). Using normal weather proposed in the case, the corresponding increases are 21% for PNGD and 7% for PGD. The WNA mechanism would only adjust the distribution portion of the bills back to that normal level.

IV. BAD DEBT OFFSET FOR UNIVERSAL SERVICE RIDER

Q. PLEASE EXPLAIN THE POSITION OF MR. COLTON PERTAINING TO THE BAD DEBT OFFSET FOR THE UNIVERSAL SERVICE RIDER.

A. Mr. Colton accepts the Company's combined universal service cost recovery proposal, with the exception of one component. He does not agree with the 33,800 base CAP participation level over which the Company will apply the proposed bad debt offset. He recommends a combined participation level of 30,800 based upon the combined projected CAP participation for the year starting October 2024, as presented in Peoples Exhibit No. 3, Schedule 15 Attachment E, rounded to the nearest 100.

Q. HOW DO YOU RESPOND TO MR. COLTON'S RECOMMENDATION FOR THE BASE CAP PARTICIPATION LEVEL OVER WHICH THE COMPANY WILL APPLY THE PROPOSED BAD DEBT OFFSET?

A. The Company accepts Mr. Colton's recommendation of a combined base participation rate of 30,800. Peoples reaffirms that pending the approval of the tariffs and rates in this proceeding, the Company will no longer track the PNGD and PGD separately, so the universal service recovery mechanism will only recognize a combined base participation

V. AVC CAPACITY

Q. PLEASE EXPLAIN THE POSITION OF MR. KNECHT PERTAINING TO THE COMPANY'S PROPOSAL TO COMBINE THE AVC CAPACITY CHARGE.

A. Mr. Knecht starts out by indicating that he needs to develop a better understanding of the history of AVC and this issue for consideration. However, based on his existing understanding, he identifies three main areas of concern. They are (1) the allocation of costs has not been updated since about 2013, (2) the recovery of costs from both sales and

transportation customers does not appear to reflect the relative use of the AVC system, and (3) the appropriateness of applying AVC costs to all transportation customers.

Q. WHAT IS MR. KNECHT'S RECOMMENDATION?

A. He recommends the Commission defer any approval of the AVC capacity charge approach proposed by the Company to the PGC proceeding.

Q. HOW DO YOU RESPOND?

A. Peoples believes the methodology of applying AVC capacity to both PNGD and PGD should be approved in the context of this proceeding, however, the Company is amenable to working through the specific rate calculation to determine the final AVC rate applicable to each customer class in the context of its existing PGC proceeding at Docket No. R-2024-3045945.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Peoples Natural Gas Company LLC 2023 Base Rate Case
Docket No. R- 2023-3044549

OSBA Responses to OCA Set I

OCA-OSBA-I-5

5. Please clarify whether Mr. Knecht recommends a deadband as a condition for approving the WNA proposal.

Response:

In my testimony, I did not recommend a deadband as a necessary condition for approval of the Company's WNA proposal. However, I would not object to the adoption of a reasonable deadband. My concerns with WNA mechanisms, however, are more related to inaccurate and unreasonably large bill adjustments due either to low actual heating degree day billing periods, or due to the default assumption that the difference between actual usage and average prior summer usage is necessarily and entirely due to space heating.

CLIMATE ENERGY

The U.S. Government Is Requiring Washers, Refrigerators and Freezers to be More Efficient. Here's What It Means for You

5 MINUTE READ

Getty Images

BY **ANISHA KOHLI**

FEBRUARY 11, 2023 1:02 PM EST

Under the Biden administration, the Department of Energy (DOE) proposed a series of stricter energy standards on Friday that they said would update regulations for household appliances, and slash greenhouse gas emissions while saving Americans around $3.5 billion annually on utility bills.

It's been more than a decade since the DOE has updated the regulations for refrigerators, washing machines, and other such appliances. Despite this, substantially more energy efficient models are available today. The proposed changes, which would go farther than current levels of energy efficiency, would ideally go into effect in 2027 and the department is hopeful that they'll save consumers $60 billion over a 30-year period.

"With today's proposals, we're building on a decades-long effort with our industry partners to ensure tomorrow's appliances work more efficiently and save Americans money," U.S. Secretary of Energy Jennifer Granholm said.

The news comes after both the US Consumer Product Safety Commission and the DOE said they were considering how best to regulate gas stoves due to health, climate, and energy efficiency concerns.

Previous DOE regulations have kept up with energy efficiency technology, while allowing manufacturers flexibility to keep improving products. Today, a standard new refrigerator uses 75% less energy than one from 1973. The DOE has raised its efficiency standard for refrigerators three times in the past 40 years. The department said that the proposed rules, "will continue this trajectory of innovation and savings."

Here's what to know:

When will this impact people?

The new energy standards wouldn't take into effect until 2027, or perhaps later, but the DOE is optimistic about both the environmental conservation and consumer cost reduction potential.

The department has estimated that over the next 30 years the proposed changes would reduce carbon emissions by 233 million metric tons—equivalent to a year's worth of emissions from 29 million homes. The proposal builds on Biden's clean-energy agenda to combat climate change. Despite conservative opposition against Biden's increased regulation of household appliances, energy experts say that such standards are long overdue.

Read more: *What the Potential Ban on Gas Stoves Means If You Have One*

What's the climate impact of household energy appliances?

Residential energy use accounts for about 20% of greenhouse gas emissions in the U.S., according to a 2020 study published in *PNAS*. The same study suggested that retrofitting energy systems would be a key part of meeting carbon emissions reduction goals. Products covered by the DOE's regulations—like washers, dryers, refrigerators, and dishwashers— currently account for 5% of annual residential energy use.

Household appliances that use the least electricity and fewest kilowatts per hour like ovens, space heaters, and even refrigerators are the most efficient, according to All Energy Solar. Central air and heat can also be highly efficient, especially when buying products with high seasonal energy-efficiency ratio (SEER) ratings. Refrigerators that have the freezer on top and that opt out of water and ice dispensers are also typically more energy efficient. Induction stoves can be up to 10% more efficient than conventional electric stoves and three times more efficient than gas stoves.

Read more: *The Best Stove for Your Health and the Environment*

Under the DOE's proposed changes, households that use new, up-to-code refrigerators and washing machines would save $425 on electric and water bills

over the the appliances' lifespan.The proposal is contingent on consumers buying new appliances or already having energy-efficient ones, rather than keeping old inefficient products for a long time.

Although energy efficient appliances can cost more up front, experts have long boasted that the major savings in utility costs and carbon emissions pay for themselves after a short period of initial investment.

How do the DOE's standards compare with Energy Star?

Energy Star is a program run jointly by the Environmental Protection Agency and the DOE that certifies buildings and products which meet strong energy efficiency standards. The Energy Star logo pops up on all sorts of consumer products, from refrigerators, to washing machines and light bulbs.

Energy Star is a completely voluntary program that provides consumers with guidance on which products are the most energy efficient. The new rules proposed by the DOE, on the other hand, are regulations that would require strict standards for all household appliances. The Energy Department hasn't given much information on what exactly those requirements would look like yet. The department is responsible for implementing minimum energy conservation standards on more than 60 categories of appliances and equipment.

What about appliance incentives under the Inflation Reduction Act?

The Inflation Reduction Act includes provisions to provide tax credits and rebates for certain energy efficient home improvements, such as heat pumps and solar panels, with the aim of making it more affordable for people to invest in clean, domestically-sourced renewable energy. Despite being a federally-

funded program, it's up to states to implement the climate-friendly appliance incentives, which are anticipated to be up and running later this year.

So far, there's little information available about what product specifications will grant incentives, but households could receive as much as $14,000 in rebates, according to some estimates. Like Energy Star, the Inflation Reduction Act's incentives are voluntary and rely on consumers to take initiative.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
	:	
v.	:	**Docket No. R-2023-3044549**
	:	
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED SURREBUTTAL TESTIMONY OF
CAROL A. SCANLON,
MANAGER, RATES
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED:
DATE ADMITTED: May 3, 2024

Peoples Statement No. 3-SR

PREPARED SURREBUTTAL TESTIMONY OF
CAROL A. SCANLON

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Carol A. Scanlon. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as Rates Manager. Effective January 1, 2023 the Peoples Natural Gas Company LLC and Peoples Gas Company LLC were merged. As such, Peoples Natural Gas Company LLC ("Company") currently includes – Peoples Natural Gas Division ("PNGD" or "Peoples Natural Gas Division") and Peoples Gas Division ("PGD" or "Peoples Gas Division"). When referring to both divisions herein, they may be referred to as the Peoples Divisions, Peoples Natural Gas, the Company or Peoples. In my position as Rates Manager, I provide rates and regulatory services for both PNGD and PGD.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 3 and my rebuttal testimony is set forth in Peoples Statement No. 3-R.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. I will respond to the rebuttal testimony set forth by the Office of Consumer Advocate ("OCA") witness Clarence Johnson related to the weather normalization adjustment ("WNA").

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No, I am not.

Q. HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF MR. JOHNSON?

A. Yes, I have.

Q. **PLEASE SUMMARIZE MR. JOHNSON'S REBUTTAL TESTIMONY RELATED TO WNA.**

A. Mr. Johnson evaluates the positions of two intervening parties in this case that accept the WNA mechanism, but with some modifications from the Company's proposal: the Office of Small Business Advocate ("OSBA") witness Robert D. Knecht and the Commission's Bureau of Investigation and Enforcement ("I&E") witness Ethan H. Cline. Mr. Johnson continues to reject the WNA mechanism and points out why he does not agree with the positions of Mr. Knecht and Mr. Cline. Mr. Johnson further goes on to summarize the five reasons he concludes as why the WNA mechanism should be denied.

Q. WHAT ARE MR. KNECHT'S AND MR. CLINE'S POSITION WITH REGARD TO WNA?

A. Mr. Knecht recommends that, if the WNA is approved by the Commission, certain "protections" should be adopted for the program. Specifically, one such protection that Mr. Knecht recommends is that WNA not apply when actual HDDs for a billing period are below 100 HDDs. Mr. Cline recommends that Peoples' WNA be approved on the condition that a 3% deadband is included. However, it should also be noted that in relation to the Company's proposal of annual HDDs for forecasting normal weather, Mr. Cline is proposing a 20 year average of HDDs, or a total of 5,443 HDDs be used to forecast normal weather. This will, in turn, affect the WNA calculation if adopted. As noted in rebuttal, the Company opposes this recommendation from Mr. Cline.

Q. WHAT DOES MR. JOHNSON CONCLUDE ABOUT MR. KNECHT'S AND MR. CLINE'S CONCERNS RELATED TO WNA?

A. Mr. Johnson indicates that the concerns raised by Mr. Knecht and Mr. Cline are further support for denial of the proposed WNA mechanism.

Q. DO YOU AGREE?

A. No. In my rebuttal testimony at Statement No. 3-R, I address the overall concerns raised by Mr. Knecht and Mr. Cline. However, it is worth noting here, Mr. Knecht and Mr. Cline suggested some modifications to the Company's proposed WNA mechanism, but even they did not view the matters raised as ones that warrant denial of the mechanism. Rather, they both accept the mechanism, itself (with certain caveats, as aforementioned).

Q. MR. JOHNSON SUGGESTS THAT MR. KNECHT'S PROPOSAL TO NOT APPLY THE WNA IN MONTHS WITH LESS THAN 100 HDDS IS INSUFFICIENT TO CORRECT ISSUES WITH POTENTIAL LARGE BILL ADJUSTMENTS IN MONTHS WITH LOW HDDS. OCA ST. NO. 4-R, P. 26. DO YOU AGREE?

A. I disagree with Mr. Johnson. I believe Mr. Knecht's approach could remedy potential issues, however, as discussed in the surrebuttal testimony of Ralph Zarumba at Statement No. 15-SR, I also believe that Mr. Knecht's approach introduces practical challenges which makes implementation of the proposal problematic. As a result, Peoples continues to examine different options for mitigating potential large bill adjustments in months with low actual HDDs as compared to anticipated HDDs.

Q. DO YOU AGREE WITH MR. KNECHT AND MR. CLINE THAT CUSTOMER PROTECTIONS ARE NECESSARY?

A. Yes. The Company recognizes this as an important issue and is continuing to evaluate additional customer protections to put in place. As Peoples explores the options available, I note that the Company would be open to customer protections, including changing the effective dates of the WNA mechanism from October 1st through May 31st to October 1st through April 30th.

Q. IS THERE ANYTHING ELSE THE COMMISSION SHOULD CONSIDER RELATED TO CUSTOMER PROTECTIONS?

A. Yes. As referenced in the prior testimonies in this case, PGW previously filed a petition to suspend their application of the WNA for May 2022 due to unusually large charges on customer bills. In that proceeding, the Commission found it appropriate and acceptable to remove May from the WNA mechanism as a suitable customer protection.[1] Although, as discussed in my rebuttal testimony at Statement No. 3-R, Peoples and PGW have different weather, different HDDs, different delivery rates, and are not an apples to apples comparison. Nonetheless, Peoples' analysis as completed by witness Zarumba and provided in his Rebuttal testimony at Statement No. 15-R, has shown that most outliers occur in the month of May, and I believe this approach to be a fitting safeguard for customers.

Q. WHAT ARE THE FIVE MAIN REASONS MR. JOHNSON CONCLUDES AS TO WHY THE WNA MECHANISM SHOULD BE DENIED?

A. Mr. Johnson concludes the five main reasons for rejecting the WNA mechanism are (1) the Company has failed to demonstrate that extraordinary circumstances justify departure from important principles of traditional regulatory practice; (2) single issue rate making unreasonably allows the Company to reflect changes in a single component of rates without recognizing potential off-setting changes in other components; (3) The WNA is likely to produce more increases in gas bills than credits, given the long term warming trends; (4) The WNA may be perceived by customers as a disincentive to energy conservation; and (5) the tariff will likely cause customer confusion regarding billing changes resulting from the weather adjustments.

[1] Opinion and Order entered September 21, 2023 at Docket No. R-2022-3034229.

Q. HOW DO YOU RESPOND TO THE FIRST REASON THAT THE COMPANY HAS FAILED TO DEMONSTRATE EXTRAORDINARY CIRCUMSTANCES THAT WARRANT A WNA MECHANISM?

A. Peoples witness Ralph Zarumba addresses this aspect in his surrebuttal testimony at Statement No. 15-SR.

Q. HOW DO YOU RESPOND TO THE SECOND REASON RELATED TO SINGLE ISSUE RATEMAKING?

A. The appropriate level of revenue and customer rates is set in a rate case. The WNA mechanism adjusts actual revenues and customer bills to account for the differences between normal weather and actual weather in order to better align what was set in the rate case versus what occurs in future years. Peoples' projected revenues in this proceeding are determined using normalized weather of 5,341 HDDs. Without a weather normalization adjustment, weather sensitive revenues will fluctuate, higher or lower, depending on the difference in HDDs as compared to 5,341. With a weather normalization adjustment in place, the Company's weather sensitive revenues would be consistent with the revenue projections based upon 5,341 HDDs annually. In conclusion, I do not agree the WNA adjustment constitutes single-issue ratemaking because it is not creating a new level of revenues allowed, but rather adjusts the revenues so that the revenues that *have been* allowed can be realized (emphasis added).

Q. HOW DO YOU RESPOND TO THE THIRD REASON THAT WNA IS LIKELY TO PRODUCE MORE INCREASES IN BILLS THAN CREDITS?

A. As support that the WNA mechanism can provide symmetric protection to *customers* (emphasis added) and the Company for revenue variations in usage associated with non-normal weather, refer to the below table[2]. The table presents a summary of the impact of the proposed WNA on a typical residential customer for the years 2019 through 2022. The following assumptions were made in preparing this analysis.

1. Billing periods are aligned with the calendar month.
2. Only the current base delivery and current base customer charges were applied.
3. Monthly NHDDs are the same as that used in the rate case except for February in leap years which are adjusted slightly for the different number of days.
4. Average monthly consumption is based on the PNGD & PGD combined entity.
5. The delivery and customer charge rates used represent PNGD residential delivery rates as of Oct 1, 2023.
6. Assumes no deadband.

Annual Base Bill	2019	2020	2021	2022		Total
Initial Base Delivery Charges	$354.82	$330.55	$331.15	$357.01		$1,373.53
WNA Adj. Base Delivery Charges	$346.50	$341.24	$337.88	$340.77		$1,366.40
Incr/ (Decr) to Base Delivery	($8.32)	$10.69	$6.73	($16.24)		($7.13)
% Change in Delivery Charges	-2.3%	3.2%	2.0%	-4.5%		-0.52%
Customer Charge	$174.00	$174.00	$174.00	$174.00		$696
Total Base Charges	$528.82	$504.55	$505.15	$531.01		$2,069.53
WNA Adjusted Base Charges	$520.50	$515.24	$511.88	$514.77		$2,062.40
$ Inc / (Decr) in Base Charges	-1.6%	2.1%	1.3%	-3.1%		-0.34%

As shown, the WNA impact over four recent years of weather varied between colder than normal results and warmer than normal results. In fact, over this four year

[2] Excerpt from Peoples response to CAUSE-PA-I-16.

period, the cumulative impact was a net savings for the customer based on the assumptions above.

Q. HOW DO YOU RESPOND TO THE FOURTH REASON THAT WNA MAY BE PERCEIVED AS A DISINCENTIVE TO ENERGY CONSERVATION?

A. The WNA mechanism pertains to distribution charges, which generally reflect the cost of delivering natural gas to the customer's premises. In warmer than normal weather, customers can still realize savings on the commodity portion of their bill. The commodity charge reflects the actual cost of the natural gas a customer consumes. In warmer than normal weather, it is expected less gas would be consumed, thereby the customer would still receive benefit of a lower gas bill (compared to normal weather) during a warmer than normal billing month.

Q. FINALLY, HOW DO YOU RESPOND TO MR. JOHNSON'S FIFTH REASON THAT THE WNA TARIFF WILL CAUSE CUSTOMER CONFUSION REGARDING BILLINGS CHANGES RESULTING FROM THE WEATHER ADJUSTMENT?

A. Peoples intends to provide communication and customer education materials that include providing information and FAQs in a bill insert and on the Company's website explaining the WNA. Moreover, the Company will ensure training for customer service center representatives to be able to walk a customer through what the WNA is and how the WNA is calculated.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REJOINDER TESTIMONY OF CAROL A. SCANLON, MANAGER, RATES PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: May 8, 2024
DATE ADMITTED: May __ 2024

Peoples Statement No. 3-RJ

PREPARED REJOINDER TESTIMONY OF
CAROL A. SCANLON

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Carol A. Scanlon. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as Rates Manager. Effective January 1, 2023 the Peoples Natural Gas Company LLC and Peoples Gas Company LLC were merged. As such, Peoples Natural Gas Company LLC ("Company") currently includes – Peoples Natural Gas Division ("PNGD" or "Peoples Natural Gas Division") and Peoples Gas Division ("PGD" or "Peoples Gas Division"). When referring to both divisions herein, they may be referred to as the Peoples Divisions, or the Company. In my position as Rates Manager, I provide rates and regulatory services for both PNGD and PGD.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT, REBUTTAL, AND SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 3, my rebuttal testimony is set forth in Peoples Statement No. 3-R, and my surrebuttal testimony is set forth in Peoples Statement No. 3-SR.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I will respond to the surrebuttal testimony set forth by the Commission's Bureau of Investigation and Enforcement's ("I&E") witness Ethan H. Cline, the Office of Consumer Advocate's ("OCA") witnesses David T. Evrard, Dante Mugrace, Clarence Johnson, Barbara Alexander, and Roger Colton, as well as the Office of Small Business Advocate's ("OSBA") witness Robert D. Knecht. Many of these identified witnesses' testimony have overlapping subject matters. Where possible, I will address issues in kind and by subject matter, rather than by specific witness.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. I am sponsoring Exhibit CAS-1-RJ and CAS-2-RJ.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. I address each issue in kind in the following order: (1) other parties surrebuttal testimony related to the Company's proposal to implement a weather normalization adjustment ("WNA") mechanism, as identified by various witnesses for various parties (Section I, supra); and (2) other parties surrebuttal testimony related to the AVC capacity charge combining as identified by witness Knecht in OSBA Statement No. 1S. (Section II, supra).

I. WEATHER NORMALIZATION ADJUSTMENT

Q. DID OTHER PARTIES SUBMIT SURREBUTTAL TESTIMONY REGARDING THE WNA MECHANISM?

A. Yes. I&E witness Mr. Cline states that the WNA mechanism can be approved as long as a 3% deadband is included. OSBA witness Knecht continues to recommend that, if the WNA

is approved, certain "protections" should be adopted for the program. OCA witnesses Evrard, Mugrace, Johnson, Alexander, and Colton continue to reject the WNA mechanism for various reasons. Of particular note, concerns about the complexity of the WNA mechanisn making it difficult for customers to understand and that the WNA mechanism can discourage energy efficiency are discussed in OCA's surrebuttal testimony.

Q. HOW DO YOU RESPOND TO THE CUSTOMER PROTECTIONS RECOMMENDATIONS FOR WNA?

A. The Company recognizes customer protections as an important issue related to the WNA mechanism. As such, Peoples agrees to display the WNA amount as a separate and distinct line item on the customer's bill. Peoples will also institute the recommended deadband of 3%. Lastly, as also mentioned in my surrebuttal testimony, the Company would be open to changing the effective dates of the WNA mechanism from October 1st through May 31st to October 1st through April 30th as an additional customer protection.

Q. PLEASE COMMENT ON THE COMPLEXITY OF WNA LEADING TO CUSTOMER CONFUSION.

A. As discussed in my rebuttal testimony, the Company will make customers aware of the WNA and educate them about the mechanism. If approved, Peoples plans to include information and FAQs in a bill insert and on the Company's website explaining the WNA. The Company will also ensure training for customer service center representatives to be able to walk a customer through what the WNA is and how the WNA is calculated. However, I would like to further expound on this topic. Exhibit CAS-1-RJ presents bill

samples that are published on the Commission's website as fact sheets to help customers understand their natural gas bill by breaking down the various charges. Exhibit CAS-1-RJ includes the bill sample fact sheets for two of the PA Natural Gas Distribution Companies (NGDCs) that have the WNA mechanism. As evidenced, the WNA mechanism can be shown in simple terms that customers are able to understand.

II. AVC CAPACITY

Q. DID OTHER PARTIES SUBMIT SURREBUTTAL TESTIMONY REGARDING AVC CAPACITY?

A. Yes. OSBA witness Knecht reiterates his concerns related to AVC capacity and indicates that I generally agreed with his recommendation in my rebuttal testimony that this issue be deferred to the Company's current Section 1307(f) Purchased Gas Cost ("PGC") case. He now further recommends that the Commission direct Peoples to undertake an evaluation of the cost recovery method for the AVC costs to address the three main issues he cites and that the Company file its results in the 2025 Section 1307(f) proceeding.

Q. HOW DO YOU RESPOND?

A. First, I would like to start by clarifying that I did not agree entirely with the approach initially recommended by Mr. Knecht. I stated that the methodology of applying AVC capacity to both PNGD and PGD should be approved in the context of *this proceeding* (emphasis added), however, the Company is amenable to working through the specific rate calculation to determine the final AVC rate applicable to each customer class in the context of its existing PGC proceeding at Docket No. R-2024-3045945. Attached to this testimony

as Exhibit CAS-2-RJ is the Company's response to OSBA-I-13 that addressed certain facets of AVC capacity. I note that no party submitted direct testimony related to the final AVC rate calculation in the context of this year's PGC proceeding at Docket No. R-2024-3045945. To reiterate, Peoples proposal in this proceeding is to apply AVC capacity to both Peoples divisions and the proposal seeks approval of the specific rate calculation as well. In his rejoinder testimony at Peoples Statement No. 4-RJ, Ed Palombo explains how AVC capacity is used to serve both Peoples divisions. Additionally, no parties to this proceeding challenged the application of AVC capacity to both divisions and the application of the AVC capacity to both Peoples divisions results in all customers having the same PGC rates by rate class. I further note that the Company would be willing to discuss the AVC rate in its current PGC proceeding at the referenced docket and parties are able to make recommendations regarding the AVC rate calculation in subsequent PGC proceedings.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Distribution System Improvement Charge (DSIC)	
Weather Normalization Adjustment	

Delivery

Total Current Utility Charges

- Your distribution charges have been adjusted to reduce the impact of warmer than normal weather.
- Your bill includes $0.41 in state taxes, not including sales tax.
- Effective January 1, 2021 the DSIC rate has increaded from 4.25% to 5.00%.

Columbia Gas of Pennsylvania Price to Compare per therm $0.20259
The Price to Compare is the price to use when comparing Columbia's gas cost to gas supply prices offered by other natural gas suppliers in the CHOICE program. This price may change in January, April, July and October each year.

Gas Supply Charge - This is the commodity price, the charges for natural gas supply, which is converted to therms*.

Gas Cost Adjustment - The amount billed or credited each month to account for differences between projected and actual gas supply costs.

Customer Charge - A fixed, monthly charge that helps Columbia Gas provide safe, reliable service. This charge includes the cost of maintaining the meter and preparing bills. You must pay the Customer Charge even if you do not use any gas.

Distribution Charge - The charges for the delivery of natural gas from Columbia Gas to your home.

Pass-through Charges - The charges that the company must pay to third-parties for the ability to deliver natural gas to its' system and universal service charges, as applicable.

Distribution System Improvement Charge - This is a monthly charge to recover a portion of Columbia Gas' distribution system infrastructure costs.

Weather Normalization Adjustment - A method of adjusting customers' bills to reflect normal, rather than actual, weather conditions during the months of November through May. As a result, customers are less impacted by large monthly swings in their gas bills which can occur during the heating season as a result of increased usage during colder weather. *This adjustment will only appear if the temperature is more than 3% colder or warmer than normal during the billing period.*

***Therm (thm) -** A unit of heat equal to 100,000 British thermal units (BTU)*

SHOPPING INFORMATION BOX

When shopping for Natural Gas with a Natural Gas Supplier, please provide the following:

PGW Account:	
Service Point ID:	
Rate Class:	General Service Residential
Rate Schedule:	GSR

If you are already shopping know your contract expiration date.

Commodity Charge - This is the charge for natural gas supply, which is sold in Ccf (100 Cubic Feet).

Customer Charge - A fixed, monthly charge that helps PGW provide safe, reliable service. This charge includes the cost of maintaining the meter and preparing bills. You must pay the Customer Charge even if you do not use any gas.

Distribution Charge - The charges for the delivery of natural gas from PGW to your home.

Distribution System Improvement Charge - The charge for the increased replacement of infrastructure (e.g. pipes) which is calculated by applying the same percentage to both the customer charge and the distribution charge.

Weather Normalization Adjustment – An adjustment approved by the PUC as a way to help PGW stabilize its income and operate more efficiently within its budget during the heating season.

Gas Cost Adjustment - The amount billed or credited each month to account for differences between projected and actual gas supply costs.

Interrogatory Response

Case Name: 2023 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2023-3044549

Question Number: OSBA-I-013

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference Peoples Statement No. 3, AVC Capacity:

a. Please describe fully the facilities associated with the AVC Capacity, the geographic regions served by that capacity, and the customers downstream from that capacity.

b. Please explain why AVC Capacity costs are considered to be a PGC cost, when they are charged to all ratepayers.

c. Please indicate where costs associated with AVC Capacity are functionalized, classified and allocated in the Company's proposed allocated cost of service study.

d. Please provide a calculation of the revenue requirement for the AVC Capacity for the FPFTY.

e. For the most recent 12-month period, please provide volumes shipped on the AVC Capacity into the Company's service territory, split between sales and transportation customers, and segregated by rate class if available.

f. Please provide the basis for the AVC Capacity allocators shown on page 25 and provide supporting calculations. Please explain why the allocation factors remain appropriate.

Answer: a. AVC capacity is able to provide supply to all regions of PNG and PG through multiple delivery points and company interconnects, with the exception of the Grove City area which does not have a physical delivery point from AVC.

b. Refer to the attachment for an excerpt from the direct testimony of Joseph A. Gregorini at Joint Applicants Statement No. 4 from Peoples acquisition of Equitable Gas proceeding at Docket No. Docket Nos. A-2013-2353647, A-2013-2353649, A-2013-2353651.

c. These costs are embedded in gas supply expenses.

Functionalization: Please refer to excel row 195 in the "Functions" tab in OCA Attachment 5-1a (COS Model)

Classification: Please refer to excel row 191 in the "Classification" tab in OCA Attachment 5-1a

(COS Model)

Allocation: Please refer to excel row 190 in the “GS_Com” tab in OCA Attachment 5-1a (COS Model)

d. AVC Capacity is not included in base rates, so there is not a revenue requirement calculation per se for the FPFTY. Attached is the summary page of the AVC rate calculation for rates effective October 1, 2023. In Peoples 2024-1307(f) proceeding, a revised calculation reflecting the Oct 2024 – Sep 2025 projected AVC costs to be recovered will be presented, but all of the information in not yet available to include as part of this response.

e. See attached OSBA 1-13e.pdf

f. Refer to the attachment for Exhibit JAG-1 and page 1 of Exhibit JAG-2 from the proceeding for Peoples acquisition of Equitable Gas at Docket Nos. A-2013-2353647, A-2013-2353649, A-2013-2353651. As shown in the referenced exhibits, the allocation factors were derived from the revenue requirement based on when the assets were removed from Peoples base rates.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Joint Application of Peoples Natural Gas Company LLC, Peoples TWP LLC, and Equitable Gas Company, LLC for All of the Authority and the Necessary Certificates of Public Convenience (1) to Transfer All of the Issued and Outstanding Limited Liability Company Membership Interest of Equitable Gas Company, LLC to PNG Companies LLC, (2) to Merge Equitable Gas Company, LLC with Peoples Natural Gas Company LLC, (3) to Transfer Certain Storage and Transmission Assets of Peoples Natural Gas Company LLC to EQT Corporation, (4) to Transfer Certain Assets between Equitable Gas Company, LLC and EQT Corporation, (5) for Approval of Certain Ownership Changes Associated with the Transaction, (6) for Approval of Certain Associated Gas Capacity and Supply Agreements, and (7) for Approval Certain Changes in the Tariffs of Peoples Natural Gas Company LLC, Peoples TWP LLC, and Equitable Gas Company, LLC.	:	Docket Nos. A-2013-2353647 A-2013-2353649 A-2013-2353651

DIRECT TESTIMONY OF
JOSEPH A. GREGORINI

Joint Applicants Statement No. 4

rate base updates for annual depreciation and modernization and compliance capital; an adjustment to O&M for inflation; actual taxes other than income; actual depreciation at 1.9%; and a pre-tax return of 12.5%. The recovery by Equitrans of the return and depreciation on improvements will be updated annually as opposed to the more frequent quarterly adjustments under the DSIC mechanism.

It is important to note that the Peoples Asset Transportation and Storage Agreement prohibits the inclusion of any expansion capital costs in the cost of service formula and requires Equitrans to provide project specific cost data that demonstrates that any modernization and compliance capital to be included in the rate were incurred solely in support of the transportation and storage services to be provided to Peoples.

Q. How does Peoples propose to recover the capacity costs for the transportation and storage services on the AVC system?

A. Peoples is proposing to establish a rate mechanism in its Retail Tariff to recover the capacity costs associated with the AVC from all sales and transportation customers. The costs are currently recovered from all Peoples customers in base rates. The facilities are needed to serve all customers and will continue to be needed post-closing of the Proposed Transaction. Peoples' proposed rate recovery mechanism has been included in Rider B of Peoples' Retail Tariff. Rider B currently provides for the recovery of 1307(f) purchased gas-cost related expenses, and includes the rate calculation methodology and charges for recovery of upstream pipeline capacity charges, natural gas supply commodity charges and over/under gas cost recoveries. Peoples is proposing to add a new and separate charge to

Rider B for the recovery of the transportation and storage capacity costs for use of the AVC. I have been advised by counsel that it is appropriate to recover these upstream pipeline capacity costs through Rider B and as a component of the 1307(f) mechanism because they are pipeline capacity charges that fit the definition of a natural gas cost as defined in Section 1307(f) of the Public Utility Code[1]

Q. Please describe the changes you are proposing to Peoples' Rider B.

A. Attached to my testimony, as Joint Applicants Exhibit JAG-3, are pro-forma tariff pages showing the proposed revisions to Peoples' Retail Gas Tariff to reflect the various aspects of the Proposed Transaction. I will describe those changes later in my testimony. Tariff pages 62 through 63B show the proposed revisions to Rider B.

The new charges and computational formula for the recovery of transportation and storage capacity costs for use of the AVC by Peoples are shown on Pro Forma Page 62 of Rider B. These new charges are referred to as the "AVC Capacity Charge". The gas cost charges currently set forth in Rider B are subject to a quarterly rate adjustment process that modifies the gas cost charges on January 1, April 1, July 1, and October 1 of each year. Consistent with this process, Peoples is proposing to adjust the AVC Capacity Charges on the same quarterly basis. The proposed initial AVC Capacity Charges that will become effective

[1] As used in the Public Utility Code, the terms "natural gas costs" and "gas costs" include the direct costs paid by a natural gas distribution company for the purchase and the delivery of natural gas to its system in order to supply its customers. Such costs may include costs paid under agreements to purchase natural gas from sellers; costs paid for transporting natural gas to its system; costs paid for natural gas storage service from others, including the costs of injecting and withdrawing natural gas from storage; all charges, fees, taxes and rates paid in connection with such purchases, pipeline gathering, storage and transportation; and costs paid for employing futures, options and other risk management tools. "Natural gas" and "gas" include natural gas, liquified natural gas, synthetic natural gas and any natural gas substitutes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2023-3044549
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
EDWARD A. PALOMBO,
VICE PRESIDENT, RELIABILITY
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023
DATE ADMITTED: _____

Peoples Statement No. 4

PREPARED DIRECT TESTIMONY OF
EDWARD A. PALOMBO

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Edward A. Palombo. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or "Company") as Vice President, Reliability.

Q. PLEASE STATE BRIEFLY YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.

A. I graduated from The Pennsylvania State University in August 1983 with a Bachelor of Science Degree in Petroleum and Natural Gas Engineering. After graduation, I was hired as a Project Engineer for Washington Gas Light Corporation. I progressed to leadership roles in the Distribution, Planning, and Design department, until January 1987 when I left to join Peoples Natural Gas, and have been employed since. During this time, I've held several leadership positions in the Operations departments, with responsibilities in PA, WV, OH, and KY. Currently I am Vice President, Reliability and am responsible for directing the activities for Gas Supply & Transportation Services, Local Production Acquisition, Gas Control, System Planning, Pipeline Safety & Compliance, Employee Safety, Technical Training, and GIS.

Q. PLEASE LIST THE FILING REQUIREMENTS THAT YOU ARE SPONSORING AS WITNESS.

A. Please refer to Appendix A for a complete list of the filing requirements for which I am the responsible witness.

Q. WHAT ARE YOUR RESPONSIBILITIES FOR PURPOSES OF THIS PROCEEDING?

A. My responsibilities which I will describe in separate sections of my testimony are:

1. Safety Programs
2. Peak Day and Annual Gas Supply Plan
3. Local Production - Gathering and Cost Recovery

SAFETY PROGRAMS

Q. PLEASE DESCRIBE SOME OF THE COMMITMENTS PEOPLES HAS MADE TO THE SAFE OPERATION OF ITS PIPELINE SYSTEM.

A. Peoples is strongly committed to safety, and has established a comprehensive safety program that strives to protect employees, its customers, the public, and property. All levels of management and employees are responsible and accountable for safety, and expected to continuously work together to foster and promote a healthy safety culture. This culture is integral to making safety a priority by incorporating the following into all Company activities: Management commitment at all levels of the organization; Employee engagement and accountability; Recognizing, controlling, and eliminating work place

hazards and unsafe behaviors; and Safety training and education. No employee will be required to perform a task or job that they consider unsafe. Peoples complies with all applicable safety and health requirements, and maintains occupational safety and health standards that equal or exceed best practices.

The Company demonstrates its commitment to safety by including a Safety component in its employee incentive compensation goals. In addition, all Operations Department employees also have a pipeline compliance component included in their performance expectations and incentive compensation goals.

Additionally, the Company engages our Compliance Process Managers, Safety Department, and the entire Operations leadership team on a regular basis by conducting weekly safety conference calls where injuries, accidents, operating guidelines (Job Procedures and Standard Operating Procedures or "SOPs"), line hit damages, and near miss safety incidents are reviewed and discussed. Further, we have implemented procedures for ongoing safety observations of work activities by supervisors and rapid dissemination of injury details to the all field leadership and union personnel. We also work closely with our union to solve all safety-related issues and to communicate and advance safety initiatives throughout the organization. A component of this is management's and employees' commitment to operational and safety training at our Training Center where employees obtain hands-on experience through controlled simulations of emergency events and other real-life situations that enhance their safety awareness and hone their emergency response capability. We have also perfected our compliance work tracking system. This system schedules our prescribed, routine maintenance, compliance check work and provides for information system tracking of our planning and progress.

Q. PLEASE DESCRIBE THE COMPANY'S EMPLOYEE SAFETY PROGRAM.

A. Peoples' Employee Safety Program is multi-dimensional and includes numerous activities focused on accident prevention and compliance with applicable safety regulations. Safety is supported through active participation by operations leadership, a strong union management partnership, and engagement with industry organizations.

The three cornerstones of Peoples' Employee Safety Program are:

- Training and Education - where technical skills, emergency response, and specialized safety training is provided to employees, contractors, and external partners.
- Awareness and Communication – where weekly and monthly safety meetings, pre-job briefings, safety alerts, and intranet website resources are used to inform and refresh safety messaging.
- Investigations, Observations, and Safety Analysis – where safety incidents and risks are thoroughly investigated, discussed, trended, and mitigated.

In recognition of the success of the Company's safety program and performance for 2022, the Energy Association of Pennsylvania awarded Peoples the 2023 Safety Achievement Award, the 2023 Safety Improvement Award, the 2023 Safety Sustainability Award, and the 2023 Motor Vehicle Fleet Safety Achievement Award.

Q. EARLIER YOU MENTIONED THE COMPANY'S TRAINING PROGRAM, COULD YOU DESCRIBE IT IN MORE DETAIL?

A. Peoples operates an in-house training facility in McKeesport, PA that provides multi-week introductory training for new hires, training for employees entering new job classifications, initial and refresher operator qualification ("OQ") training on covered tasks performed by each field classification for both employees and contractors, and supplemental training for field personnel. By providing training internally, as opposed to using a 3rd party vendor, Peoples is able to ensure training captures Company-specific processes and procedures, and this allows us to provide direct oversight of rigorous testing methods.

In addition to providing training to employees and contractors, the training team also conducts community outreach sessions for audiences beyond those affiliated with Peoples. These sessions include:

- First Responder Training: Emergency training for local volunteer fire departments
- Natural Gas Construction Heat Installation Training
- Natural gas utility and pipeline field skills training: This program is to prepare a new potential workforce for a career in the gas and pipeline industry.

Q. ARE THERE OTHER NOTEWORTHY SAFETY RELATED INITIATIVES THAT YOU WOULD LIKE TO DISCUSS?

A. Yes. Peoples has a well-established Corporate Safety Committee known as the CARE (Combined Accident Reduction Effort) Committee. This committee is comprised of senior leaders from Operations, Safety, and Bargaining Unit personnel whose sole purpose is to provide a cooperative forum for discussions on all safety-related issues and concerns. The main goal is to promote and support a strong safety culture, and to assure a safe and healthy work environment for all employees. Operations management meets monthly with the

Salaried and Bargaining Unit CARE Coordinators to discuss safety matters that arise locally at their respective operating locations. The CARE Steering Committee meets quarterly to review and discuss more systemic issues that arise from the local shop discussions, and also Company-wide safety issues to evaluate and implement potential overall corrective actions.

Q. PLEASE PROVIDE AN UPDATE ON THE COMPANY'S SAFETY MANAGEMENT SYSTEM INITIATIVE.

A. Peoples continues to expand and build upon the Pipeline Safety Management System ("PSMS") first initiated in 2018. Safety Management Systems have proven to be successful in many industries (aviation, nuclear, petrochemical to name a few), and are being widely adopted and implemented within the natural gas industry. As a result of the Merrimac, MA incident, many organizations, such as the American Gas Association (AGA), the US Pipeline and Hazardous Materials Safety Administration (PHMSA), as well as state regulators, have strongly recommended gas operators implement a safety management program related to pipeline operations. In 2020, Peoples completed a gap analysis on the API recommended practices to help develop the framework of the PSMS program. A Program Manager was hired in 2020 to lead the implementation of the overall program, communicate the elements of the program with all operations employees, and develop the staff and resources for the program. Two QA/QC Specialists were hired in 2021 to conduct field audits of employees and contractors to ensure adherence to appropriate SOPs and Job Procedures when completing tasks and jobs. Three external consulting QA/QC Specialists were added in 2022 to bring the team to the current staffing of six.

The PSMS team has been currently focused on three primary functional areas of the operations: plastic fusions on pipeline replacement projects; working in and around live gaseous environments, and preventing/mitigating damages to meters and facilities. The PSMS team collects and compiles information from the field audits, analyzes the results for trends, and makes recommendations to the PSMS Steering Committee for revisions or additions to SOPs, Job Procedures, Training materials, etc. that may enhance pipeline safety and reliability.

Q. PLEASE DESCRIBE WHAT THE COMPANY HAS DONE AND PLANS TO DO GOING FORWARD TO MANAGE THE RISKS ASSOCIATED WITH LEAKAGE.

A. Peoples has an extensive leak management and repair program with SOP's that are designed to ensure safe and reliable delivery of natural gas to our customers. Peoples has implemented enhanced operating procedures regarding leak mitigation to further ensure safety across its system, that also helps reduce emissions and improve the environment. These enhancements include adoption of: 1) the Gas Piping Technology Committee ("GPTC") Leak Classification and Action Criteria for Grade 1, 2, and 3 leaks; 2) newer operating procedures designed to identify and replace shorter sections of leak prone pipelines instead of repairing those sections; 3) procedures on the handling of Grade 1 leaks (potentially most hazardous leaks) which require that Grade 1 leaks only be vented as a last resort, Peoples' Operations Management personnel being directly involved and consulted in Grade 1 leak situations, and vented Grade 1 leaks being monitored on a daily basis during frost/frozen ground conditions; and 4) a Leak Detection and Reduction ("LDAR") program that focuses on accelerated leak surveys on certain systems; reducing leaks on gathering

pipes, and utilizing newer technologies for identifying potential leaks. Another effective leak mitigation measure is the accelerated replacement of older higher-risk bare steel pipelines under our Long Term Infrastructure Improvement Plan ("LTIIP"), that is described in more detail in the testimony of Paul Becker, VP Engineering & Construction. As a result of these enhanced leak management efforts, Peoples has experienced a 60% reduction from 2019 to 2022 in outstanding unrepaired leaks at year end.

PEAK DAY AND ANNUAL GAS SUPPLY PLAN

Q. AS THE WITNESS SUPPORTING THE ANNUAL AND PEAK REQUIREMENTS AND SUPPLY VOLUME PROJECTIONS USED IN THIS FILING, PLEASE GENERALLY DESCRIBE HOW PEOPLES FORMULATES ITS ANNUAL GAS SUPPLY PLAN.

A. Each year, Peoples Natural Gas projects its total system requirements and available sources of supply. On the requirements side of the analysis, Peoples develops throughput projections by various requirements categories including usage by class of customer. The Company then adds monthly projections for company use and lost and unaccounted for gas to arrive at total projected system requirements on a monthly basis.

Certain operational considerations play a role in the requirements analysis. For example, there are portions of Peoples Natural Gas' service territory that are not physically interconnected with the main portion of Peoples' facilities, particularly in the Grove City area. Similarly, there are portions of Peoples Gas' service territory that require support from specific interstate pipeline delivery points at times of high demand, most notably the

Punxsutawney area. As a result, Peoples ~~a~~analyzes alternative options in those areas to maintain adequate supplies to maintain reliable service.

On the supply side of the analysis, Peoples pursues a least-cost reliable-service strategy through a combination of local and interstate assets and supplies. Local assets include an on-system storage facility and the gathering system, which allows Peoples to enhance the delivery of gas supplies produced locally in western Pennsylvania. The Company's interstate assets are comprised of a portfolio of transportation and storage services with six interstate pipelines that provides Peoples with access to a variety of supply source locations. Using this gas supply portfolio, Peoples uses an economic dispatch approach that also takes into account reliability, operational requirements, and contractual obligations. Under that approach, Peoples reviews the cost of its various sources of supply and plans to use those that are least costly. The Company starts by base loading local supplies; that is, using local gas first. From there the Company then turns to the existing pipeline supply assets and existing gas supply agreements. These include the firm transportation and storage service agreements with interstate pipelines and the long-term firm gas supply commodity agreement with EQT Energy.

Q. HOW DOES PEOPLES TYPICALLY DETERMINE ITS CUSTOMERS' REQUIREMENTS AND ASSOCIATED GAS SUPPLIES ON A DESIGN PEAK DAY?

A. Peoples uses a forecasting model that employs a number of variables including but not limited to temperature, and historical consumption levels. The values accorded the temperature and wind speed variables are minus 9 degrees Fahrenheit and 15.8 miles per

hour respectively. The values assigned to consumption levels and the other variables change over time. Using send-out data for the four years ended May 2022 the Company calculated total system peak day design requirements of 1,468.8 MMcf per day.

Q. WILL THE COMPANY SUPPLY THE ENTIRETY OF THE 1,468.8 MMCF FOR ITS CUSTOMERS?

A. No. Peoples Natural Gas will supply 1,170.6 MMcf of the Company's customers' design day requirements of 1,468.8 MMcf. The supply of 1,170.6 MMcf per day includes the following components:

- Projected local gas volumes of 13.8 MMcf. This volume is based on a projection of the amount of local gas under contract to Peoples Natural Gas and available on a design day;
- The on-system storage design day supply of 55.3 MMcf reflects the expected volume of supplies available from the Company's on-system storage fields; and
- Interstate delivered gas of 1101.5 MMcf projected to be received from Equitrans, EGTS, Tennessee Gas Pipeline Company, LLC ("Tennessee"), TETCO, TCO and NFG.

Q. WHY DOESN'T PEOPLES NATURAL GAS HAVE TO BE PREPARED TO SUPPLY ALL OF ITS CUSTOMERS' DESIGN DAY REQUIREMENTS?

A. Many of Peoples Natural Gas's customers, generally also its largest customers, that purchase their supplies from NGSs – customers whom the Company refers to as Non-Priority 1 or NP-1 – are responsible for acquiring their own design day assets at a level sufficient to deliver their average daily usage during that month. The Company expects those customers to deliver to the system 298.4 MMcf on a design day during the 1307(f)-2023 projected period.

Q. HOW DO THE DESIGN DAY REQUIREMENTS OF PEOPLES NATURAL GAS'S SMALLER CUSTOMERS WHO PURCHASE THEIR SUPPLIES FROM NGSs FIT INTO PEOPLES NATURAL GAS'S SUPPLY PORTFOLIO?

A. When a substantial alternative supply market for those smaller Priority 1 ("P-1"), or essential human needs, customers first began to develop on Peoples Natural Gas's system in 1997, Peoples Natural Gas addressed the design day requirements of those customers under a program of mandatory capacity assignment. Peoples Natural Gas's tariff requires that the P-1 customers acquire their design day capacity requirements from Peoples Natural Gas by means of mandatory assignment of capacity and that the P-1 customers must pay the costs of that assigned capacity through the capacity charge. The P-1 NGSs are expected to utilize the assigned capacity to deliver to the system sufficient supplies to meet the projected total usage for their P-1 customers on a design day during the 1307(f)-2023 projected period.

Q. IN ADDITION TO ITS CUSTOMERS' DESIGN DAY CAPACITY AND SUPPLY REQUIREMENTS, WHAT OTHER CUSTOMER REQUIREMENTS MUST PEOPLES NATURAL GAS'S GAS SUPPLY PORTFOLIO SATISFY?

A. Peoples Natural Gas must also satisfy the day-to-day supply requirements of Peoples Natural Gas's customers who purchase supplies from Peoples Natural Gas, the day-to-day balancing requirements of NP-1 transportation customers, and the requirements for gas that either will be used in Peoples Natural Gas's operations (i.e., company-use gas) or that will be "lost or unaccounted for" because of various reasons.

Q. DOES PEOPLES NATURAL GAS USE ITS ANNUAL CONSUMPTION PROJECTIONS FOR THOSE CUSTOMERS WHO LIKELY WILL BUY THEIR SUPPLIES FROM NGSs FOR ANY PURPOSE IN THIS PROCEEDING?

A. Yes. Although those customers' capacity requirements are measured strictly by the demands that they will place on Peoples Natural Gas's system on a design peak day, Peoples Natural Gas recovers the costs of meeting those requirements through each Mcf that Peoples Natural Gas delivers to those customers throughout the year. In the case of P-1 customers, Peoples Natural Gas recovers the costs through a capacity charge per Mcf consumed. In the case of NP-1 customers, the recovery is through a balancing charge per Mcf consumed.

Q. HOW DO THE DESIGN DAY SUPPLY ASSETS COMPARE TO THE PROJECTED DESIGN DAY REQUIREMENTS?

A. As shown on **Peoples Natural Gas Exhibit No. 1**, the Company is projecting that its design day supply assets will be within 0.2 MMcf of its design day requirements.

Q. PLEASE DESCRIBE HOW LOCAL GAS PURCHASES FROM CONVENTIONAL WELLS ARE USED TO SATISFY SYSTEM GAS SUPPLY NEEDS.

A. Peoples and natural gas suppliers operating on our system use natural gas produced from local shallow wells as a base load supply to meet customer's usage requirements. However, since 2012, local gas produced and delivered from conventional wells into the Company's system has declined year-over-year. In 2017, Peoples received supplies from conventional wells totaling approximately 39.0 BCF. In 2022, a total of approximately 29.5 Bcf of conventional production was delivered into the Peoples' systems. Over this

six-year period, this represents a total decline of 9.5 Bcf, or 24%. A reversal of this ongoing decline is not expected. The conventional production volume level for the 11 months ended November 30, 2023 is 25.9 Bcf.

Q. DOES PEOPLES HAVE A POLICY REGARDING ADDITIONAL MARCELLUS SHALE WELL PRODUCTION?

A. Peoples' current role in the development of Marcellus Shale has been to provide producers of unconventional gas with similar access to both on-system and off-system markets as provided to conventional producers. Peoples has been able to accept Marcellus Shale production into its systems on a case by case basis, using the same analysis for Marcellus Shale production tap requests that it uses for conventional production tap requests. The analysis includes (i) the location and quantity of gas supply, (ii) the unused pipeline capacity at the proposed injection point, (iii) the anticipated gas quality and the investment required to resolve gas quality issues, and (iv) the impact of the production on existing base load supplies from local and interstate alternatives.

Peoples' market fundamentally benefits from having access to additional direct feed local Marcellus Shale production. It provides a replacement supply for declining conventional production volumes. Also, local gas supplies, including gas produced into the Peoples' system from both conventional and Marcellus wells, represent a lower cost supply than interstate delivered gas. Peoples plans to remain involved in finding opportunities to utilize Marcellus Shale gas produced in Peoples' service territory, and that activity will continue to benefit Peoples' market.

LOCAL PRODUCTION - GATHERING AND COST RECOVERY

Q. PLEASE DESCRIBE GENERALLY THE TRADITIONAL GATHERING PIPELINE SYSTEM.

A. Both the Peoples Natural Gas Division ("PNGD") and Peoples Gas Division ("PGD") have distribution systems that serve customers in and near the natural gas production regions of Pennsylvania. In fact, it was natural gas from the western Pennsylvania gas fields that originally served the customers of both Divisions.

Gathering systems are pipeline facilities that have the primary purpose of moving conventionally produced gas from production fields to transmission and distribution facilities for delivery to end use customers. In contrast, distribution pipelines generally are a system of mains and service lines that primarily function to deliver natural gas to individual homes and businesses. However, in some instances, customers and small distribution systems are connected directly to gathering systems in rural areas where it is not economic to extend pipelines from the major distribution centers because of the low density of potential customers.

In addition to gathering pipelines, gathering systems also typically include compression facilities and equipment to monitor and treat the gas. Gathering compressors are used to increase the flow of local production by raising the gathering pipeline pressure to the pressure of the pipeline that the gathering pipeline feeds into, typically a transmission pipeline or higher pressure gathering or distribution pipeline. Gas monitoring and treatment is another part of a gathering system. Peoples requires producers to remove water and other contaminants from the gas delivered to the gathering system. In some cases, the gas is further

treated by Peoples at compressor stations where dehydration facilities are installed to remove water prior to delivering gas to transmission or distribution systems.

There are also situations where Peoples receives locally produced gas directly into its distribution and transmission systems. This production can be from both conventional and unconventional sources. Although PGD does not have a Gathering System per its Books and Records, it does have systems that serve a similar purpose to the PNGD Gathering system.

Q. DO GAS PRODUCERS BENEFIT FROM GATHERING SYSTEMS?

A. Yes. Producers benefit from gathering lines because, in most cases, it is their only means to get their gas production to a market. The gas produced into the gathering systems originates from conventional wells. Generally, gathering systems cannot be used to receive and deliver higher pressure gas produced from unconventional sources such as Marcellus Shale.

Q. DO CUSTOMERS BENEFIT FROM LOCAL PRODUCTION AND GATHERING SYSTEMS?

A. Yes. Customers receive a notable cost savings benefit from local production delivered into the Peoples' systems. Production directly feeding utility pipelines avoids costly interstate pipeline charges, which include fixed reservation charges for interstate pipeline reservation space, usage charges to cover variable interstate pipeline costs and retainage to cover gas loss and gas used in interstate pipeline operations.

Q. HAS THE COMPANY PREPARED A COMPARISON OF THE COST PER MCF OF DELIVERING GAS THROUGH INTERSTATE PIPELINES TO THE COST OF DELIVERING GAS THROUGH THE COMPANY'S GATHERING SYSTEM?

A. Yes. Peoples Natural Gas Exhibit No. EAP-1 provides this comparison for the projected twelve months ended September 30, 2025 (Fully Projected Future Test Year - "FPFTY"). It shows that gas produced into and delivered through the gathering systems is notably less costly than gas procured on and delivered from Peoples' interstate pipeline suppliers. The total average cost of gas delivered via the gathering system for the FPFTY is estimated at $3.08 per Mcf. The total average cost of gas delivered via the interstate systems for the FPFTY is estimated at $3.48 per Mcf. This results in an estimated cost savings of $0.40 per Mcf for the local gas purchased by Peoples' for our on-system customers alone. Customers that purchase local gas supplies from third party marketers can reasonably be expected to receive a similar cost per Mcf savings benefit. As noted in Peoples Natural Gas Exhibit No. EAP-1, this analysis reflects the various costs incurred by Peoples' ratepayers for the FPFTY which include: the projected average commodity cost of gas delivered to the Peoples' system; Peoples' costs to own and operate the gathering systems (including gathering UFG); and interstate pipeline costs for capacity, retainage, and delivery. Mr. Zarumba calculated and presented testimony in support of the projected non-gas costs incurred by Peoples to own and operate the PNG gathering system.

Q. DOES INTERSTATE PIPELINE GAS AND LOCAL GAS SERVE THE SAME PURPOSES?

A. While both supply sources provide the gas supply needed by the customer, pipeline gas is much more flexible in that it is provided to the Company at significantly higher pressure which is required in peak periods of usage and for injection into storage. The amount of pipeline gas entering the Company's system can also more easily be adjusted up or down to meet the daily gas consumption swings due to weather. In addition, pipeline gas generally meets higher quality standards relating to containing impurities and water and creates fewer operational problems.

Q. HOW SHOULD THE BASE RATE COSTS OF THE GATHERING SYSTEM BE RECOVERED?

A. Gathering system costs are incurred to provide a market for supplies produced by local wells and to provide cost effective gas supplies to customers. In my opinion, it is appropriate for both producers and customers to share in paying these costs.

Q. WHAT FACTORS SHOULD BE CONSIDERED IN ALLOCATING THESE COSTS BETWEEN CUSTOMERS AND LOCAL SUPPLIERS?

A. As I have noted previously, customers benefit from obtaining local gas at a cost lower than interstate pipeline gas. The gathering system lowers the amount of interstate pipeline capacity that is required to serve customers and lowers pipeline demand costs recovered from all sales and transportation customers. In addition, customers served directly from the gathering system receive their service from gathering pipelines and not distribution pipelines. Finally, some of Peoples' distribution areas are served only by local gas from the gathering systems.

Producers derive substantial benefit from the gathering facilities as it is their source to a market. In addition, Peoples operates its gathering and distribution systems to facilitate the introduction of lower pressure gas from conventional wells into its system.

While it is difficult to specifically quantify these benefits between producers and customers, it is clear that both producers and customers benefit from the gathering systems.

Q. ARE THERE ANY UNIQUE OPERATIONAL ISSUES AND/OR COSTS ASSOCIATED WITH GATHERING SYSTEMS?

A. Gathering systems present operational challenges uncommon to distribution. Since the facilities typically are in rural areas, and consist of many measurement delivery points, potential leaks are not as readily detectable. This can contribute to potential higher lost and unaccounted for gas than on distribution systems, as well as higher methane emissions. Peoples has attempted to mitigate this by operating and maintaining gathering assets under the same guidelines as distribution assets. While not required by federal codes, Peoples conducts leak surveys on the gathering pipelines at intervals similar to distribution pipelines, and schedules gathering line leak repairs accordingly.

A pending issue related to gathering facilities has surfaced under the requirements within the 2022 Inflation Reduction Act (IRA) waste methane fees. Natural gas distribution assets are exempt from the methane fees, however gathering pipelines may be subject to the fees under the "Gathering and Boosting" industry segment. The IRA details the implementation of a waste methane fee based upon the ratio between the emissions and gas sales as represented by a methane intensity. If the calculated methane intensity exceeds the threshold established in the IRA, a waste methane fee is applied to the emissions above the

threshold. The method to calculate the methane intensity has not been finalized and is still in the proposed rule-making process, and the associated proposed methane fee schedule (in $/Metric Ton Methane) is $900 for 2024, $1,200 for 2025, and $1,500 for 2026. Peoples continues to evaluate and analyze the potential impact of the waste methane fee, and estimates the annual costs to be $1.1-1.8 million, depending on the final methodology for calculating the fee. These incremental fees are included in the total cost of service for gathering and claimed within Taxes Other than Income in Exhibit No. 6

Q. HOW DOES PEOPLES PROPOSE TO RECOVER THE COSTS OF THE GATHERING SYSTEMS?

A. There is a practical limit to how much of the gathering system costs can be recovered from producers. The projected average market price that producers will receive for their gas purchased by Peoples for system supply is $2.22/Dth for the projected twelve months ended September 30, 2025 (FPFTY). These prices are low by historical standards and it is likely that this has contributed to the reduction of production from conventional wells since 2012.

PNGD currently charges amounts to producers for gathering system costs through its existing Rate Schedule AGS and PGD does not currently charge any gathering fee to producers. The Company proposes to institute a uniform gathering service rate for all conventional gas production produced into both divisions. The proposal is set forth in the tariff rate schedule – Appalachian Gathering Service -- that is provided in Exhibit No. 14.

Q. PLEASE EXPLAIN THESE EXISTING GATHERING PROGRAMS AND THE ASSESSMENT OF CHARGES TO PRODUCERS.

A. The current structure for assessing gathering related charges on the Peoples Natural Gas and Peoples Gas differ.

At the Peoples Natural Gas Division a gathering tariff service and fee structure was approved by the Commission and put in place during the Peoples Natural Gas Division 2019 Rate Case. That service, which currently exists today, is provided under Rate AGS – Appalachian Gathering Service. Under Rate AGS any conventional natural gas producers desiring to produce gas into and transport gas on the distribution or gathering systems are subject to a gathering rate and a gas retainage charge. It is not a voluntary program. All producers transporting conventional local production onto the Company's system are subject to gathering rates ($0.26 for conventional production) and a retainage charge of 2.3%. Gathering rates and retainage charges for unconventional production such as that from horizontally drilled Marcellus and Utica shale gas are determined through negotiation. For the HTY 12-month period ending August 31, 2023, Peoples Natural Gas recovered just under $7 million in gathering rate revenues.

The Peoples Gas Division currently has Rate GS – Gathering Service tariff service. Under Rate GS, producers are not charged a gathering fee for utilizing Peoples Gas' system. However, they are charged a retainage fee of 3.4% that was established during a prior 1307(f) case.

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSAL TO INSTITUTE A UNIFORM GATHERING RATE FOR CONVENTIONAL GAS PRODUCTION ACROSS THE DIVISIONS.

A. Before I describe the mechanics of the gathering pricing proposal I would like to point out that our gathering rate proposal is designed to bring together the existing and differing programs of Peoples Natural Gas and Peoples Gas and set a producer paid gathering fee structure that attempts to establish a reasonable and ongoing producer revenue contribution (to offset the customers' share of gathering costs) that also does not create an economic disincentive for conventional gas producers to continue to produce low cost gas supplies into the Peoples' systems. All conventional gas producers will be required to pay the same uniform gathering fee for any gas produced into and transported on the distribution or gathering systems. All unconventional gas producers, including but not limited to, horizontally drilled Marcellus and Utica shale gas and landfill gas, shall be negotiated and agreed to with the producer. As set forth and described in the proposed, combined tariff at Exhibit No. 14, a gathering rate will continue to be assessed to any party desiring to transport gas through the gathering system, as well as deliver locally produced gas directly into the Company's distribution or transmission systems on PNGD. The Company also proposes to apply this gathering rate on PGD.

Lastly, I'd like to point out that this proposal addresses the recovery of gathering related non-gas costs and does not address the assessment of gas retainage charges to producers. Peoples plans to continue to assess the gas retainage rates currently charged to producers but plans to make a proposal to have a uniform retainage rate across the two divisions in its next 1307(f) purchased gas cost proceeding to be filed on April 1, 2024.

Q. WHY IS IT APPROPRIATE FOR THE GATHERING FEE TO APPLY TO THE PEOPLES GAS DIVISION?

A. While the PG system does not have gathering pipelines as defined by federal DOT code or by the FERC Chart of Accounts gathering definition, it does have facilities that move local production to the Company's distribution system. The pipelines and associated facilities (meters, compressors, regulators) receive gas directly from local production. The gas is then transported to high pressure and/or distribution pipelines for delivery to end user customers. Although these facilities are non-jurisdictional, PG operates and maintains them under the same procedures as distribution facilities from a pipeline safety viewpoint.

Q. WHAT IS THE GATHERING RATE STRUCTURE APPLICABLE TO GAS DELIVERED INTO THE GATHERING SYSTEMS OR CONVENTIONAL GAS PRODUCED AND DELIVERED INTO THE DISTRIBUTION OR TRANSMISSION SYSTEMS?

A. The Company is proposing to utilize the current PNGD gathering rate of of $0.26/Mcf for all conventional production across both PNGD and PGD.

Q. HOW MUCH REVENUE DOES THE COMPANY PROJECT TO RECOVER IN THE FULLY PROJECTED FUTURE TEST YEAR?

A. The annual volume projection of conventional production on PNGD and PGD that will be subject to the gathering fee for the FPFTY is 30.1 Bcf. This volume projection was based on recent actual production levels adjusted to reflect current production decline trends. The

resulting revenues to be paid for by conventional well producers for the FPFTY is projected to be $7.8 million.

Q. YOU MENTIONED EARLIER IN YOUR TESTIMONY THAT PEOPLES ALSO RECEIVES UNCONVENTIONAL SUPPLIES INTO ITS SYSTEMS. ARE THERE GATHERING FEES ASSESSED TO PRODUCERS BY PEOPLES FOR UNCONVENTIONAL SUPPLIES AND IF SO WHAT ARE THE EXPECTED ANNUAL REVENUES?

A. Yes. As set forth in the existing tariff rate schedule – Appalachian Gathering Service (Peoples Natural Gas Exhibit No. 14), Peoples charges a rate for gathering natural gas produced from unconventional sources that is determined through negotiation. It's important that this rate be negotiable because Peoples needs to compete with midstream and interstate pipelines to acquire this gas supply. Marcellus producers generally have multiple options to get their gas to market. Based on the negotiated rate currently charged to existing unconventional producers and the associated expected annual volumes produced from unconventional sources for the FPFTY, Peoples projects to generate $1.55 million in annual gathering fees from unconventional gas producers for the FPFTY period.

Q. BASED UPON THE COMPANY'S FPFTY PROJECTION OF RECOVERIES UNDER THE GATHERING CHARGES TO CONVENTIONAL AND UNCONVENTIONAL PRODUCERS HOW MUCH OF THE GATHERING COSTS WILL BE RECOVERED?

A. The Company projects that it will recover $9.4 million, a $2.4M or 34% increase over the existing revenue of $7.0M at present rates.

Q. HOW DOES THE COMPANY PROPOSE TO RECOVER THE REMAINDER OF THE GATHERING COSTS THAT ARE NOT PROJECTED TO BE RECOVERED FROM PRODUCERS?

A. We have directed Mr. Zarumba to allocate the remaining costs to the various customer classes. He uses a volumetric allocation factor to assign gathering plant and associated expenses to customer classes based on the percentage of annual gas volumes in each class supplied by Pennsylvania gas producers. This is consistent with the methodology used in the Company's last base rate proceeding.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as other issues arise during the course of this proceeding. Thank you.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2023-3044549
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
PAUL BECKER
VICE PRESIDENT, CONSTRUCTION & ENGINEERING
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023
DATE ADMITTED: _____

Peoples Statement No. 5

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Paul Becker. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President, Construction and Engineering.

Q. PLEASE STATE BRIEFLY YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.

A. I have worked in the gas energy industry for almost four decades and now work as Vice President, Construction & Engineering at Peoples, a position I have held since 2017. I am responsible for the design and construction of natural gas facilities, specifically relating to transmission, storage, gathering and distribution. I received my Bachelor of Science in engineering from the University of Pittsburgh and a Master of Business Administration from Duquesne University. I am a registered professional engineer in Pennsylvania and a member of the American Society of Civil Engineers, the Energy Association of Pennsylvania, and the American Gas Association.

Q. WHAT ARE YOUR RESPONSBILITIES FOR PURPOSES OF THIS PROCEEDING?

A. I will describe the Company's four major pipeline capital programs which make up the majority of the Company's overall capital budget. Moreover, I will provide an update as

to the progress the Company has made with respect to its pipeline capital programs and why the Company should continue to invest these programs.

PIPELINE CAPITAL WORK PLAN

Q. PLEASE GENERALLY DESCRIBE WHAT THE COMPANY MEANS BY PIPELINE CAPITAL WORK.

A. The Company is engaged in various programs to modernize its infrastructure (pipelines and related facilities) to maintain the safety and integrity of its natural gas distribution system. As part of its modernization efforts, the Company performs the replacement, improvement and retirement of its pipelines (and related facilities) on a daily basis. The Company's most significant modernization program in terms of cost and mileage is its Long-Term Infrastructure Improvement Plan (LTIIP). For example, the Company anticipates that since its last base rate case (PNG case) through the end of the Fully Projected Future Test Year presented in this filing, it will spend nearly $2 Billion to replace more than 1,000 miles of its aging infrastructure. In addition to its LTIIP, the Company has three other pipeline programs.

Q. **PLEASE GENERALLY DESCRIBE THE COMPANY'S FOUR MAJOR CAPITAL PIPELINE WORK PROGRAMS.**

A. The four programs include the Company's Long-Term Infrastructure Improvement Plan ("LTIIP"), the Gathering Pipeline Replacement Program ("GP"), the Goodwin Tombaugh Program ("GT") and the Mainline Extension Program or MLX.

(1) The Company's LTIIP is a multiyear program targeting primarily the replacement of distribution and transmission bare steel and cast/wrought iron pipelines. The Company's current five-year LTIIP was approved by the Commission on January 14, 2021 and is in effect through 2025[1]. The five-year program targets replacement of a total of 871 miles of pipeline. The as-filed anticipated total costs of the current LTIIP program for the years 2021-2025 are approximately $1.6 Billion.

(2) The GP Replacement Program is an annual program primarily targeting the replacement and/or abandonment of bare steel gathering pipelines. The GP program targets approximately 25 miles of gathering pipeline for abandonment or replacement at an estimated cost of $5-$7M annually.

(3) The GT Program is a program specifically targeting the replacement and conversion of an aging legacy gathering system. The replacement of the GT system was a settlement requirement stemming from the 2020 acquisition of Peoples by Essential Utilities, Inc.[2] The settlement requires the Company to replace over 300 miles of the GT pipeline over a seven-year time frame for an estimated total cost of $120 Million. Under the acquisition settlement, as the GT plant is completed and placed in service, the plant is transferred to Peoples Natural Gas, regulated under the Commission's jurisdiction and classified as distribution pipeline and operated for safety purposes following all provisions

[1] Docket Nos. P-2020-3021942 and P-2020-3022053
[2] Docket Nos. A-2018-3006061, A-2018-3006062 and A-2018-3006063

under 49 C.F.R. § 192 for distribution pipeline. See Settlement §A[3]. Consistent with the Settlement, as PNG has replaced GT plant, the new plant has been transferred to PNG and included in distribution plant.

(4) The Mainline Extension Program ("MLX") is an annual program encompassing the construction of mainlines, meters, and services associated with new customers coming onto the Company's system. Typically, the MLX program adds about 30-40 miles of distribution pipeline (and associated meters and services) for an estimated cost of $20-30M, annually.

Q. **PLEASE SUMMARIZE THE COMPANY'S PIPELINE CAPITAL WORK ACCOMPLISHMENTS/INVESTMENTS.**

A. LTIIP – As of October 2023, approximately 485 miles or 56% of the projected 871 total miles in the Company's current LTIIP have been replaced at a cost of $918M or 63% of the estimated program costs for mains and services of $1.5 Billion. The following table provides a summary of the Company's current LTIIP results from 2021 through October 2023:

[3] *Id.*

Current LTIIP 2021-2025								
Mains and Services Only		as of Oct 2023						
LTIIP		Miles				Dollars, Millions		
LTIIP Program year	Year	Plan miles	actual miles	actual PTD miles	% actual to plan each year	Planned costs	actual costs	% actual to plan each year
1	2021	159	165	165	103%	$242	$247	102%
2	2022	159	163	327	102%	$239	$326	137%
3	2023	181	158	485	87%	$328	$344	105%
4	2024	186				$329		
5	2025	186				$329		
Total		871		485	56%	$1,467	$918	63%

GP –From 2019 through October of 2023, the Company has replaced or abandoned more than 200 miles of its bare steel gathering pipeline for a total cost of approximately $25 Million. The following table summarizes the Company's GP Program results from 2019 through October 2023:

as of Oct 2023					
GP	Miles			Dollars, Millions	
Year	pipe replaced	pipe abandoned	total	capital	cumulative capital
2019	17.5	15.2	32.7	$ 7.4	$ 7.4
2020	12.1	39.0	51.1	$ 4.2	$ 11.6
2021	11.9	56.0	67.9	$ 3.6	$ 15.2
2022	11.2	36.3	47.5	$ 5.3	$ 20.5
2023	8.6	16.0	24.6	$ 4.7	$ 25.2
total	61.3	162.5	223.8	$ 25.2	

GT - As of October, 2023, the Company has replaced or abandoned 151 miles or 49% of the targeted GT pipe in the Company's system for a cost of $37.7 M or 31% of the original $120M estimate. The Company is meeting its mileage commitment and carrying out the

terms of the referenced settlement. Please see the table below for the Company's progress on its GT Program since 2020:

as of Oct 2023					
GT		Miles		Dollars, Millions	
program year	year	PTD	% complete	PTD	% complete
1	2020	26.2	8%	$2.8	2%
2	2021	69.2	22%	$13.0	11%
3	2022	103.0	33%	$26.4	22%
4	2023	150.8	49%	$37.7	31%

To date there have been no adverse impacts to existing GT customers (switched 223 customers to the new pipe). Throughout the process, the Company has been evaluating ways to achieve efficiencies and minimize costs. The Company's design team identified 93 miles (30%) of pipeline that can be abandoned (to date 73 of those miles have been abandoned). Also, the design team identified 84 miles (27%) that can be moved from rights of way to along the road, thereby minimizing environmental impacts and positioning the new distribution pipe to serve future loads.

MLX - Since 2020, the Company has installed approximately 131 miles of mainline pipe for a total cost of approximately $97 Million. Such mainline extensions vary from a short section for a single customer to miles long segments to and in subdivisions serving tens or hundreds of customers. The Company's Tariff Rule 4 addresses the Company's extension of its facilities and is consistent with the Commission's regulations. The Company adheres to these tariff provisions when analyzing potential mainline extension projects. The following table summarizes the Company's progress on its MLX program since 2020:

as of Oct 2023				
MLX	Miles		Dollars, Millions	
Year	pipe installed	cumulative total	capital	cumulative capital
2020	35.0	35.0	$ 21.6	$ 21.6
2021	24.0	59.0	$ 20.7	$ 42.3
2022	42.0	101.0	$ 28.4	$ 70.7
2023	30.1	131.1	$ 26.8	$ 97.5
total	131.1		$ 97.5	

Q. **HAS THE COVID-19 PANDEMIC IMPACTED THE COMPANY'S CAPITAL WORK PLANS?**

A. In general, the Company is enduring a tighter labor market and higher inflation costs which have increased the Company's average cost per mile for its capital programs significantly more than historical levels. From 2016-2019 the average cost per mile for the Company's LTIIP grew at an average annual compound growth rate of approximately 4% per year. From 2020-2022 the average cost per mile grew at an average annual compound growth rate of approximately 17% per year.

	2014	2015	2016	2017	2018	2019	2020	2021	2022
yearly cost per mile, $M/M	$0.82	$1.06	$1.02	$1.16	$1.22	$1.24	$1.45	$1.50	$2.01

These macroeconomic forces (labor market, inflation, etc.) have directly translated into increased investment costs for the Company to meet its LTIIP commitments. Currently, the LTIIP remains on track from a mileage point of view and the Company continues to evaluate and consider the need to file a petition for a major modification of the current LTIIP as the Company is currently exceeding the 20% or more variation in cost. The following table shows that the program is currently exceeding the 20% cost threshold which will require a petition for the major modification of the Company's LTIIP.

•Filed LTIIP Commitment		Miles	•LTIIP Actual/Forecast:		Miles	Variance	
2021	$ 258.1	159	2021	$ 262.0	167	1.51%	
2022	$ 256.2	159	2022	$ 340.4	159	32.86%	
2023	$ 346.6	181	2023	$ 417.7	181	20.52%	
2024	$ 347.3	186	2024	$ 451.9	186	30.12%	
2025	$ 347.5	186	2025	$ 468.5	186	34.82%	
	$ 1,555.7	871		$ 1,940.5	879	24.73%	Cumulative

Q. WHAT ARE THE PROJECTED FTY AND FPFTY AMOUNTS FOR THE COMPANY'S PIPELINE CAPITAL WORK PROGRAMS IN THIS FILING?

A. The Peoples' estimated Pipeline Capital Work Plan (including LTIIP, GP, GT and MLX) spend for the FTY and FPFTY is $484.1 million and $581.4 million, respectively. Peoples estimates that it will spend over $900 million in LTIIP spending alone over the FTY and FPFTY.

Q. **WHY SHOULD THE COMPANY BE ALLOWED TO CONTINUE ITS CAPITAL WORK AS EXPLAINED IN THIS TESTIMONY?**

A. Through its capital work programs, the Company is able to modernize its infrastructure from which it ultimately serves homes and businesses in its service territory. By replacing its aging infrastructure and installing state of the art infrastructure, the Company is able to ensure the safe and reliable delivery of natural gas service to its customers. Moreover, upgrading older pipelines helps to protect the environment by reducing methane emissions associated with leak prone, older pipelines. The Company should be able to continue its capital program spending at the estimated levels identified in its FTY and FPFTY to meet its infrastructure investment commitments and for the continued safe and reliable

distribution of natural gas. For more information on the benefits of our capital programs, please see the testimony of Company witness, Michael Huwar.

Q. DOES THIS COMPLETE YOUR TESTIMONY?

A. Yes, it does.

BEFORE THE

PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2023-3044549
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
CHRISTINE SABALL
VICE PRESIDENT, TAX
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023

Peoples Natural Gas Statement No. 6

DATE ADMITTED: _____

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christine Saball, and my business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. BY WHOM AND IN WHAT CAPACITY ARE YOU EMPLOYED?

A. I am employed as Vice President, Tax for Essential Utilities, Inc. ("Essential"), the parent company of Peoples Natural Gas Company LLC ("Peoples" or the "Company").

Q. PLEASE DESCRIBE YOUR PROFESSIONAL AND EDUCATIONAL BACKGROUND.

A. I graduated from Boston University's Questrom School of Business in 1999 with a Bachelor of Science degree in Business Administration, with a concentration in Accounting. I am a Certified Public Accountant ("CPA") in the Commonwealth of Pennsylvania. I have held various positions in public accounting at regional firms in New England and obtained my CPA license in 2003. I began my career in the utility industry in October 2003, when I joined National Grid as a Senior Tax Analyst. At National Grid, I had the opportunity to support the ratemaking process by reviewing the utility's accrual for income tax liability, calculating its year end provision to actual federal and state liability calculations, and analyzing the flow through and normalized deferred tax accounts. Prior to joining Essential in May 2019, I was employed by Connecticut Water Company ("Connecticut Water") for ten years. I started as a Tax Manager in the Finance Department and held that position for five years, and then was promoted to the position of Tax Director and held that position for five years. During my employment with Connecticut Water, my

responsibilities included preparing tax schedules for regulatory filings and related activities for Connecticut Water and its affiliate Maine Water Company. In addition, I prepared workpapers and exhibits, and provided testimony in support of regulatory filings.

Q. WHAT ARE YOUR DUTIES AS VICE PRESIDENT OF TAXES?

A. My primary responsibilities include oversight of the Company's income tax functions with responsibility for tax aspects of acquisitions, planning, risk management, financial reporting and compliance. I oversee and manage accounting for income taxes under ASC 740 and ASC 980, and federal and state tax compliance filings for all subsidiaries. I assist in regulatory filings including base rate cases for the regulated businesses. In addition, I perform tax research, and provide budget information and guidance on tax matters.

Q. HAVE YOU BEEN A WITNESS IN MATTERS PREVIOUSLY BEFORE THE COMMISSION?

A. Yes, I was a witness for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. in their consolidated base rate proceeding before the Pennsylvania Public Utility Commission ("PUC" or "Commission") at Docket Nos. R-2021-3027385 and R-2021-3027386. I have also served as a witness before the West Virginia Public Service Commission for Peoples Gas WV, LLC in Case No. 19-1229-G-P.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. First, I will explain the calculation of the Company's federal and state income tax expense claims in this case and the tax balances included in rate base Second, I will explain the Company's need for a mechanism related to the realization of its Pennsylvania State Net Operating Loss carryforward. Third, I will address the Consolidated Tax Adjustment. Fourth, I will describe how the Company is reflecting the effects of its tax treatment of repairs pursuant to the terms of the Joint Petition for Settlement and Approval of Tax Repairs Sur-credit, which was approved by the Commission in Docket No. P-2020-3021191, including how the Company proposes to reflect the effects of its tax treatment of repairs under Revenue Procedure 2023-15 (the "Gas Safe Harbor"), which was recently issued by the Internal Revenue Service ("IRS") on April 14, 2023. Fifth, I will describe how the reduction in the Pennsylvania Corporate Net Income ("CNI") tax rate affects the development of the Company's revenue requirement in this case.

Q. ARE YOU SPONSORING ANY EXHIBITS AS PART OF YOUR TESTIMONY?

A. Yes, I am sponsoring **Exhibit 7** (Income Taxes) along with the filing requirements and standard data requests identified in Appendix A to this testimony as well the accumulated deferred tax components of Rate Base included in Exhibit 8.

Q. WERE YOU INVOLVED IN THE PREPARATION OF THE TAX-RELATED INFORMATION SUBMITTED IN THIS PROCEEDING?

A. Yes. I participated in the preparation and review of the information along with members of the Company's tax department.

Q. WHAT SCHEDULE SETS FORTH THE COMPANY'S CALCULATION OF ITS INCOME TAX EXPENSE?

A. **Exhibit 7** includes all filing requirements related to income taxes. Specifically, **Exhibit 7, Schedule 8** sets forth the calculation of income tax expense.

Q. PLEASE EXPLAIN HOW THESE SCHEDULES WERE PREPARED IN LIGHT OF THE SEPARATE DIVISIONS.

A. All the tax schedules were prepared individually for the Peoples Natural Gas ("PNG division") and Peoples Gas Divisions ("PG division"), as well as on a combined basis.

THE COMPANY'S CALCULATION OF FEDERAL AND STATE INCOME TAX

Q. PLEASE EXPLAIN THE BASIS FOR THE FEDERAL AND STATE INCOME TAX COMPUTATIONS SET FORTH IN EXHIBIT 7, SCHEDULE 8.

A. Schedule 8 of Exhibits No. 7 contain four income tax expense computations: one for the historic test year at base rates then in effect (which are the same as current base rates), one for the future test year at current base rates, one for the FPFTY at current base rates and one for the FPFTY at the rates proposed by the Company. All four of the computations employ the same methodology but, since it is the level of income tax expense applicable to the FPFTY at proposed rates that is of greatest relevance in this case, I will describe that computation (columns G and I). First, the schedule shows the computation of current state and federal income tax expense – that is, the income tax that would be paid with respect to operations during the year assuming the projected levels of income and expense are achieved. The second part is the computation of deferred federal and state tax expense. The

two components, when combined, equal the Company's total income tax expense to be recovered in proposed base rates.

Q. PLEASE DESCRIBE THE CALCULATION OF CURRENT INCOME TAX EXPENSE.

A. I will describe the calculation of income tax expense for the combined entities fully forecasted test year at proposed rates, noting that each of the other tax expense calculations operates in essentially the same fashion. The purpose of this calculation is to derive income tax expense attributable to the Company's regulated gas operations. The calculation starts on line 1 with Operating Income before Taxes and Interest ("OIBTI"). The calculation of current income tax expense begins with pre-tax income (operating income before income taxes and before interest expense). OIBTI, derived from **Exhibit 2, Schedule 4**, reflects the items of income and expense for the provision of natural gas service. There are adjustments made to OIBIT that are the same for both federal and state income tax purposes. These are interest expense, meals and entertainment, tax repairs, Sec 263A capitalized interest, contributions in aid of construction, cost of removal, UNICAP 263A inventory and book depreciation.

Interest expense (line 2) is not reflected in pre-tax income but is deductible for both federal and state income tax purposes. Consequently, an adjustment must be made. The interest deduction, calculated at **Exhibit 2, Schedule 4**, is the product of multiplying Peoples weighted overall cost of debt by its regulated rate base for the same period. This calculation "synchronizes" the tax deduction with the rate base supported by the underlying debt and is consistent with the approach used in previous rate proceedings. Meals & entertainment

expense (line 4) is a permanent difference addback. Under federal tax law, most of the Company's meals and entertainment expenditures that are expensed for book purposes are not deductible for tax purposes. Thus, an adjustment is necessary to increase taxable income.

The tax repair deduction (line 7) is the deduction that the Company projects it will claim during the test year for both federal and state income tax purposes. Tax repairs book depreciation (line 8) is comprised of the book depreciation reversal on the 481(a) deduction taken in 2020 for the repair method change, as well as the book depreciation reversal on the current and on-going deductions taken since the tax accounting method change. The nature of the tax repair deduction is described later in my testimony.

Other property differences flow through (line 9) is comprised of an addback for the reversal of like kind exchange benefits that are now reversing through book depreciation over the life of the property.

Sec 263A interest (line 12) is an addback for the differences in the methodology for capitalizing construction period interest under the IRS rules.

Contributions in aid of construction (line 13) is an addback for customer payments towards the construction of facilities that are not income for book purposes but are taxable to the Company. Assets depreciated for book purposes have a cost basis net of CIAC, whereas for tax purposes, the basis is not reduced for CIAC. In subsequent years, this basis difference yields a tax depreciation deduction which is greater than the deduction for book purposes.

Cost of removal (line 14) is a deduction for tax purposes when incurred. Under Pennsylvania regulatory accounting principles, these costs are amortized over the five-year period subsequent to the year in which the cost is incurred.

Property basis differences, other (line 15) is an adjustment for the differences in book and tax depreciation on equipment and vehicles required to be capitalized when assets are self-constructed.

UNICAP 263A inventory (line 16) is a deduction for the differences in overhead costs capitalized to inventory for tax purposes under the IRS rules. These differences reverse as gas is withdrawn from storage.

Book depreciation is added back to both the federal and state computation (line 11) and tax depreciation is then deducted for both state and federal income tax purposes (line 11).

Q. WHAT DEPRECIABLE LIVES AND DEPRECIATION METHODS DOES THE COMPANY USE FOR FEDERAL INCOME TAX PURPOSES?

A. The Company uses the following depreciable lives and depreciation methods for tax purposes:

Utility Property Vintages		
1969 and prior	50 years (1)	Straight-Line
1970	50 years (1)	Double Declining Balance Switching to Straight-Line
1971 to 1980	40 years (2)	Double Declining Balance Switching to Straight-Line
1981 to 1986	15 years	Accelerated Cost Recovery System (ACRS)

1987 to June, 1996 20 years Modified Accelerated Cost Recovery System (MACRS)

June, 1996 and subsequent 25 years Straight-Line

Tax Exempt Financed Property 50 years Straight-Line

Buildings

1970 and prior 45 years (1) Straight-Line

1971 to 1980 45 years (2) Straight-Line

1981 to 1984 (portion) 15 years ACRS

1984 (portion) to 1985 18 years ACRS

1986 19 years ACRS

1987 and subsequent 31 1/2 years Straight-Line

Office Equipment

1970 and prior 10 years (1) Straight-Line

1971 to 1980 8 years (2) Double Declining Balance

1981 to 1986 5 years ACRS

1987 and subsequent 7 years MACRS

Qualified Technological Equipment

1987 and subsequent 5 years MACRS

(1) Guideline Lives

(2) Lives under Asset Depreciation Range (ADR)

Q. WHY DO THE FEDERAL AND STATE TAX DEPRECIATION AMOUNTS DIFFER FROM ONE ANOTHER?

A. Under Pennsylvania law, the method of depreciation for state income tax does not always conform to the method utilized for federal income tax. The difference between the two methods results in an adjustment to derive state taxable income. This is reflected in the PA depreciation adjustment (line 20).

Q. IS THERE ANOTHER ADJUSTMENT NECESSARY TO DERIVE STATE TAXABLE INCOME?

A. Yes. In past years, the Peoples Natural Gas and Peoples Gas Division's regulated operations have produced tax net operating losses ("NOLs") for Pennsylvania income tax purposes. As of September 30, 2025, the Company projects that it will have a state net operating loss carryforward ("NOLC") of over $2 billion. Under Pennsylvania law, this NOLC can offset state taxable income, subject to both taxable income and time limitations. Pennsylvania law limits the NOLC offset to a percentage of the state taxable income produced. This limit was 35% in 2018 and 2019 and increased to 40% in 2020 and thereafter. There is no utilization of these NOLCs reflected in the FPFTY due to the level of tax deductions. The state NOLC is increasing into the FPFTY.

Q. ARE THERE ANY OTHER ADJUSTMENTS?

A. Just one. Since state income taxes are deductible for federal purposes, once the current state income tax liability is computed (column I, lines 24 & 25) by multiplying state taxable income (column I, line 23) by the state income tax rate, that amount is deducted to derive federal taxable income. Federal taxable income is then multiplied by the21% federal income tax rate.

Q. WHAT IS THE TOTAL CURRENT INCOME TAX PROVISION?

A. Total current federal income tax expense for the FPFTY at proposed rates is projected to be $0 for both current federal and state income tax expense in the FPFTY. As previously stated, the level of current and projected tax deductions results in net operating losses for both federal and state taxable income. When a company is in a net operating loss there are no current taxes payable.

Q. PLEASE EXPLAIN THE DEFERRED INCOME TAX COMPONENT OF THE COMPANY'S TOTAL INCOME TAX EXPENSE.

A. Pennsylvania regulatory policy is, generally, to charge customers a level of tax expense equal to the taxes the utility expects to pay currently. This is referred to as "flow through" tax accounting. However, there are exceptions to this policy – particularly as it relates to the Federal tax benefits of accelerated depreciation (which is subject to the tax normalization rules). Further, in the Company's case, because of the settlement of the Petition for Accounting and Regulatory Approvals and Approval of Related Tariff Sur-credits Associated with Tax Repair Election Docket No. P-2020-3021191 (the "TRS") for the Peoples Natural Gas division, there is also an exception for the Section 481(a) adjustment relating to the tax repairs change in accounting method, which I discuss later in this testimony. As to the Section 481(a) adjustment (the so-called "catch-up" adjustment), the Company agreed to amortize the tax effect of that deduction in the manner set forth in the settlement of the TRS, as I explain later in my testimony. As to accelerated depreciation related to property subject to the normalization requirement, the Company records deferred

taxes. The provision of deferred income taxes is the accounting and ratemaking mechanism that implements the normalization requirement the Internal Revenue Code imposes as a condition for using the liberalized depreciation methodologies allowed for income tax purposes. The normalization requirement does not permit the tax benefit of tax depreciation in excess of book depreciation to be flowed through to customers as a tax deduction in the year(s) those deductions occur. Instead, the tax effects of those amounts are recorded as deferred taxes. These taxes are deferred, not eliminated; the taxes that are deferred will be paid to the government later in the life of the depreciable asset when the relationship between book and tax depreciation reverses. To recognize the fact that deferred taxes are a source of capital to the Company that does not have an attendant capital cost, accumulated deferred income taxes are deducted from rate base for ratemaking purposes. The Company's deferred tax expense in this case also includes the flow-through of excess accumulated deferred income taxes ("ADIT"), as described later in my testimony.

Q. PLEASE EXPLAIN THE PROVISION OF DEFERRED INCOME TAX EXPENSE FOR ACCELERATED DEPRECIATION.

A. As I introduced earlier, deferred income tax expense arises from the normalization requirement imposed by the Internal Revenue Code and reflects the difference between tax depreciation and book depreciation for post-1969 utility property. Tax depreciation is calculated by multiplying the tax basis of assets by the applicable depreciation rates used for income tax purposes. The applicable depreciation rates are a function of the depreciable lives and depreciation methods that I previously described for each relevant vintage of the Company's property. Because depreciable lives and methods differ based on the year plant

was placed in service, the difference between tax and book depreciation and the associated tax effect differs depending on the vintage year of the property involved. For assets acquired prior to 1970, there are no deferred taxes because this property was not subject to a normalization requirement. In total, the difference between tax depreciation and book depreciation (Exhibit No. 7, Schedule 8, Attachment 2, line 3) when multiplied by the 21% federal income tax rate is $7,140,430 for the HTY.

Q. DOES THE COMPANY RECORD DEFERRED STATE INCOME TAX EXPENSE RELATED TO ITS USE OF ACCELERATED DEPRECIATION?

A. No, on property related differences it does not. The federal tax normalization rules only apply to the federal income tax. The only deferred state income taxes recorded are for the temporary differences related to UNICAP 263A Inventory and Line Pack Gas. These differences are treated as normalized for state income taxes and the related state deferred taxes are included in rate base because the underlying assets giving rise to the temporary differences are included in rate base.

Q. PLEASE EXPLAIN THE EFFECT OF PROVIDING THE FINANCIAL STATEMENT TAX BENEFIT OF THE CATCH-UP ADJUSTMENT TO CUSTOMERS, ON THE COMPANY'S DEFERRED INCOME TAX EXPENSE.

A. The tax benefit derived from the catch-up adjustment calculated when the Company changed its accounting method for its PNG division, is providing a rate reduction to customers through a sur-credit on customer bills. The sur-credit is being provided over a five-year period which is in accordance with the terms of the TRS for the PNG division.

Due to the differences in depreciation methods under Pennsylvania state law, as discussed earlier in my testimony, the Company had a higher tax basis for state purposes to which the Section 481(a) calculation was applied. The state 481(a) adjustment included in the sur-credit calculation is $407.2M, while the Federal deduction is $390.9M. The total benefit that will be provided to customers over the five-year period was calculated based on the respective basis and rate, which is the Pennsylvania basis at the Pennsylvania rate net of Federal benefit or 7.89%; and the Federal basis at the Federal rate of 21%. As the sur-credit is provided, the Regulatory Liability that accounts for the benefit to be returned, amortizes to and reduces the Company's deferred income tax expense. This reduction is $22,847,694 as reflected in column A, on line 39 of Exhibit 7, Schedule 8, for the HTY. The level of a is amortization included in the FPFTY is $20,947,437. Please refer to the Direct Testimony of Witness Andrew Wachter for further discussion of returning the tax benefit to customers of the Section 481(a) amortization in rates. I will discuss the tax implications later in my testimony.

Q. PLEASE EXPLAIN THE IMPACT OF THE EXCESS ADIT ON THE COMPANY'S DEFERRED INCOME TAX EXPENSE.

A. The Company's deferred tax expense is reduced by the flow-back to customers of a portion of the excess ADIT resulting from the reduction in federal tax rate from 35% to 21% resulting from the Tax Cuts and Jobs Act of 2017 ("TCJA") tax rate reduction. As proposed and accepted in the Company's prior rate filing, Docket No. R-2018-3006818, the flow-back of ADIT resulting from accelerated depreciation ("protected ADIT") is computed

using the Average Rate Assumption Method ("ARAM") and is $1,757,485, as shown in column A, on line 37, of Schedule 8 of Exhibit No. 7 for the HTY.

Q. HOW ARE NOLCS REFLECTED IN DERIVING TAX EXPENSE?

A. The federal NOLC is estimated to increase to over $1.1 billion by the FPFTY. Similar to the state NOLC this is due to the increasing level of tax deductions greater than book income. The creation and utilization of federal NOLs does not impact the overall federal income tax expense because deferral of the benefits of the federal NOL are recorded to deferred income tax expense. State NOLCs utilized offset 40% of the current year taxable income. The creation and utilization of the state NOLs either decrease the overall state income tax expense (in the event of state NOLC utilization) or increase the overall state income tax expense (in the event of state NOLC creation) because the tax consequences of the creation and utilization of the state NOLC are not reflected in deferred income tax expense. This flow through tax accounting is consistent with Pennsylvania regulatory policy and the Company's treatment of not recording deferred state income tax expense on property related differences.

Q. WHAT IS THE COMPANY'S TOTAL PROJECTED DEFERRED INCOME TAX EXPENSE?

A. The total amount of these various components constitutes the Company's anticipated federal deferred tax expense of ($59,276,678) for the FPFTY at proposed rates as set forth on Schedule 8 of Exhibit Nos. 7. The corresponding state amount is ($18,714).

Q. WHAT IS THE COMPANY'S TOTAL PROJECTED INCOME TAX EXPENSE?

A. The Company projects total federal income tax expense of ($59,276,678)~~,~~ and state income tax expense of ($18,714). The reason for the large negative total federal income tax expense (benefit) is that the federal tax benefit of the tax repairs deduction is being flowed through to customers in this case. I will explain the consequences of this treatment later in my testimony.

THE COMPANY'S CALCULATION OF TAX BALANCES IN RATE BASE

Q. HOW IS THE ADIT SET FORTH IN THE COMPANY'S RATE BASE CALCULATION DERIVED?

A. The ADIT for the rate base calculation, as shown on Schedule 8, Attachment 2 of Exhibit 8, is calculated by including the normalized deferred taxes and the unamortized excess ADIT related to the 35% to 21% tax rate reduction resulting from the tax law changes made in 2017 under the TCJA at the end of the FPFTY. This amount is $47,366,959 for the combined divisions (Schedule 8, Attachment 2 of Exhibit 7 lines 31-38 and lines 47-48).

Q. WHY IS THE ADIT REFLECTED AS AN INCREASE TO RATE BASE IN THIS CASE?

A. Typically, ADIT in rate base is a large deferred tax liability due to the property related book vs tax differences that are normalized for federal income taxes resulting in a decrease to rate base, however, as a result of using different depreciable lives and methods to depreciate property for tax purposes as well as taking tax repairs deductions, the Company has experienced net taxable losses and projects net taxable losses in the FTY and FPFTY.

The result is that the Company booked and will continue to book deferred federal income taxes in those years for which the Company has not received any cash for the losses. The Company cannot reflect an increase in deferred taxes for tax depreciation deductions that have not been realized. To do so would violate the principles of the Normalization requirements under the Internal Revenue Code. Past IRS rulings addressing this issue have made it clear that companies cannot reduce rate base for benefits that have not been realized. Therefore, included as an increase to rate base is a deferred tax asset in the amount of $246,494,052 (line 38) which represents the remaining balance of un-utilized federal net operating loss. As a consequence of the flow through treatment of the tax repairs deduction, the federal deferred tax liability for the amount owed to the IRS for the future reversal of the tax repairs deduction through book depreciation expense is adjusted out of rate base (line 44) since customers are receiving the tax benefit through cost of service. Had the tax benefit of the tax repairs deduction not been flowed through in cost of service, the deferred tax liability would be included in rate base resulting in a significant reduction to rate base. This results in a net increase to rate base for ADIT as shown on lines 59 and 60 of Schedule 8, Attachment 2 of Exhibit 7. I discuss the inclusion of state deferred taxes later in my testimony.

Q. HOW ARE EXCESS DEFERRED TAXES REFLECTED IN RATE BASE?

A. The property related ADIT on lines 31-35 are at the 21% statutory rate, then the excess ADIT resulting from the TCJA rate reduction is recorded in the regulatory liability for excess ADIT (line 61) in the amount of ($90,495,350) and included as a reduction to rate base. This balance represents the remaining amount, after tax gross-up, due to customers

for the collection of taxes from customers at higher federal rates for book vs tax differences that will reverse at the current 21% rate in the future. The regulatory liability balance includes the gross-up for taxes, therefore, also included in rate base are the associated deferred tax assets that represent the tax gross-up of the regulatory liability on lines 39 and 51.

Q. ARE THERE ANY OTHER ADJUSTMENTS TO ADIT INCLUDED IN RATE BASE?

A. Yes, there is. On Exhibit 7, Schedule 8, Attachment 5, the Company has calculated a projected test period normalization adjustment. Whenever there are estimated changes in the deferred taxes that occur in a future rate period, the Normalization requirements of the Internal Revenue Code require that the deferred taxes be reflected on a pro rata basis as provided under Reg. Section 1.167(I)-1(h)(6)(ii). A future test period is defined as that portion of the test period after the effective date of the rate order. Under the pro rata basis, the change in the deferred taxes is determined by multiplying the change by a fraction of the number of days remaining in the period at the time such change is to be accrued over the total number of days in the future period. Applying this calculation results in an increase to deferred taxes (decrease to rate base) of $18,247,276 as shown on Exhibit 7, Schedule 8, Attachment 5, line 20.

Also, on Exhibit 7, Schedule 8, Attachment 2, the Company has included the deferred tax asset for the PA rate change (line 55) in the amount of $65,863,679 with offsets in the federal impact of the PA rate change and Regulatory Liability PA rate change (lines 43 & 65).

Q. WHY IS THERE A DEFERRED TAX ASSET FOR THE STATE NOLC REFLECTED IN RATE BASE IN THIS CASE?

A. On line 50 there is a deferred tax asset for the State NOLC generated based on the level of regulated operations and tax deductions through the FPFTY. This does not include the historical tax repairs (481(a) tax repairs and tax repairs deductions prior to the HTY). The State NOL ADIT is shown as an increase to rate base, however the Regulatory Liability-State NOLC flow through (line 64) and the tax gross-ups on the Regulatory Liability-State NOLC flow through (lines 41 and 53) have also been included and when all combined net to zero because the State NOLC creation did not result in any deferred tax expense being reflected in rates through cost of service. The zero rate base increase for the State NOLC ADIT is a consequence of the zero current state tax expense in cost of service due to the flow through of the State NOLC generated.

There is another deferred tax asset for the State NOLC on line 49. This amount represents the State NOLC generated by the 481(a) tax repairs deduction and is thus referred to as State NOL Historical Tax Repairs. It is included in rate base because the Regulatory Liability for the 481(a) Tax Repairs has been included as a reduction to rate base on line 66. Since the Regulatory Liability is grossed-up for taxes, the deferred taxes representing the tax gross-up (lines 42 and 54) have also been included in rate base. Even though the Company has not been able to monetize the State NOLC created by the 481(a) tax repairs deduction, Peoples Natural Gas division has been providing the tax benefits to customers through the TRS at the tax rate before phase down of 9.99%. The state tax rate phase down and the carryforward limitations on the State NOLC present a risk that the Company is

likely to provide tax benefits to customers that more likely than not will never be monetized through future state income tax deductions. This results in the need for protections that the Company can recover amounts over refunded to customers if the calculation of income tax expense in this rate case is approved and a valuation allowance on the State NOLC is required, as I will discuss in the next section of my testimony.

STATE NOLC AND VALUATION ALLOWANCE

Q. WHAT IS A VALUATION ALLOWANCE?

A. Under ASC 740, companies must value deferred tax assets, including net operating loss carryforwards, at the amount to be realized. A valuation allowance is a reserve that is used to offset the amount of a deferred tax asset, such as the deferred tax asset on a net operating loss, that could not be monetized due to insufficient taxable income or other limitations. The amount of the allowance is based on that portion of the tax asset for which it is more likely than not that a tax benefit will not be realized by the reporting entity.

Q. HOW IS A VALUATION ALLOWANCE DETERMINED?

A. The Company projects its taxable income for future periods. The projections include estimates of capital spending, revenues, depreciation expense, operating expenses and other items impacting income before taxes and taxable income. The Company then estimates the amount of net operating loss carryforward that will be utilized, if any, in each future period. Based on this analysis, the Company projects that the state NOLC may not be fully utilized by the end of the state's 20-year NOL carryforward limitation. In the case of Pennsylvania, this is largely affected by the 40% taxable income limitation on the

utilization of the PA NOLC each year as well as the carryforward period limitation.

Q. IN THE EVENT THE STATE NOLC CANNOT BE FULLY UTILIZED WHAT IMPACTS DOES THAT HAVE?

A. As discussed earlier in my testimony, the Company has been refunding to customers the tax benefit of the deduction for the tax repairs catch up adjustment through the TRS even though the Company has not yet been able to monetize the tax benefits (i.e. the Company has not been paying state income taxes nor has it been able to reduce the amount of cash it has to pay for state taxes). A substantial portion of the state NOLC was generated by the catch-up adjustment being refunded to customers by means of the TRS. The result could be that the Company has refunded to customers more than it will eventually recognize in actual state tax benefits.

Q. HOW DOES THE COMPANY PROPOSE TO RECOVER THE AMOUNTS REFUNDED TO CUSTOMERS THAT ARE NOT REALIZED DUE TO THE STATE NOLC LIMITATIONS?

A. In the event the Company has returned to customers state tax benefits that it cannot monetize, the Company is requesting approval of protections that the Company will be able to recover these amounts from customers. The Company is proposing the following: To the extent that the benefit of the Company's state NOLC is affected by: (i) any disallowance due to the 40% taxable income and the 20 year carryforward limitation; (ii) any subsequent disallowance by a future IRS audit; (iii) any changes in tax rate; or (iv) any change in rules or guidance that require a change to the originating amount of the NOL, the Company is

requesting permission to defer those impacts for future recovery from customers.

THE IMPACT OF THE CONSOLIDATED TAX ADJUSTMENT ("CTA")

Q. HAS THE COMPANY CALCULATED A CONSOLIDATED TAX ADJUSTMENT ("CTA")?

A. Yes, but not for the purpose of flowing through as a ratemaking deduction to federal income tax expense. In 2016, Act 40 was passed which eliminated the consolidated tax savings adjustment. With the passage of Act 40, a utility's tax expense for regulatory purposes is calculated on a stand-alone basis and is not subsidized by its affiliates. Act 40 has been codified as Section 1301.1 of the Public Utility Code. Section 1301.1 (a) clearly and unambiguously states:

> *"If an expense or investment is not allowed to be included in a public utility's rates, the related income tax deductions and credits, including tax losses of the public utility's parent or affiliated companies, shall not be included in the computation of income tax expense to reduce rates. The deferred income taxes used to determine the rate base of a public utility for ratemaking purposes shall be based solely on the tax deductions and credits received by the public utility and shall not include any deductions or credits generated by the expenses or investments of a public utility's parent or any affiliated entity."*

Section 1301.1(b) requires a public utility seeking to change rates to demonstrate that it uses at least 50 percent of what would have been a consolidated tax expense adjustment under the law prior to Act 40 for reliability or infrastructure related capital investment and

the other 50 percent may be used for general corporate purposes. Included at **Exhibit 7, Schedule 3** is the calculation of such an adjustment using the modified effective tax rate methodology traditionally used by the Commission prior to the enactment of Act 40. **Exhibit 7, Schedule 3** calculated the former consolidated tax adjustment to be $0 for both divisions combined. For the fully projected future test year, pipe replacement spending under the Long-Term Infrastructure Improvement Program ("LTIIP") program will be $508 million. Section 1301.1(b) requires that $36.7 million (50% of $73 million consolidated tax adjustment) to be spent on infrastructure replacement. For the fully projected future test year, the Company will spend fourteen times the amount required under Section 1301.1(b) on infrastructure related capital investment. Since the company has and will spend far more than the 50% (369.7 million) of the former CTA on replacement of its plant under the LTIIP, the remaining 50% is available for any permissible corporate purpose. Therefore, Peoples has satisfied the Section 1301.1(b) requirements.

THE COMPANY'S TREATMENT OF PAST AND FUTURE REPAIRS DEDUCTIONS FOR RATEMAKING PURPOSES IN THIS CASE

Q. PLEASE BEGIN BY EXPLAINING WHAT QUALIFIES AS A REPAIR FOR TAX PURPOSES.

A. Work performed on an asset to keep it in its normal working condition which does not materially extend its life, increase its value or change its use generally qualifies as a repair for tax purposes.

Q. WHAT IS THE USUAL TAX TREATMENT OF REPAIR COSTS?

A. Expenditures for incidental repairs are deductible as incurred for tax purposes.

Q. WHAT IS A UNIT OF PROPERTY?

A. The unit of property is the asset to which the "repair" test is applied. The concept is, therefore, critical for distinguishing between repairs (which are currently deductible) and capital costs (which are depreciated). A simple illustration will make this clear. Take the changing of a truck's spark plugs. If each spark plug is defined as a separate unit of property, then the changing of 6 spark plugs represents the retirement of 6 units of property and the installation of 6 new units of property. Because the removal of a unit of property does not, by definition, keep that unit in its normal operating condition, the installation of a new unit of property is a capital cost and not a repair. Consequently, the installation of each spark plug would be a capital addition that would be depreciated over the tax life of the asset. By contrast, if the truck was defined as the unit of property, then the changing of spark plugs would not constitute the installation of new units of property. Because a tune-up (of which the spark plug replacements are a part) keeps the truck in its normal operating condition, it would meet the definition of a repair and, as such, be fully deductible when the repair occurs. Thus, the same work can produce radically different tax results depending on the definition of a unit of property.

Q. WHAT DOES THIS EXAMPLE ILLUSTRATE ABOUT UNITS OF PROPERTY?

A. It demonstrates the fundamental characteristic that the larger the unit of property, the more likely it is that projects associated with that asset will qualify as deductible repairs.

Q. ARE THERE SPECIFIC RULES THAT GOVERN HOW TAXPAYERS MUST DEFINE THEIR UNITS OF PROPERTY?

A. The current Treasury Regulations provide several helpful definitions and examples. However, with respect to network assets such as gas and oil pipelines, electric lines, railroad track and water and wastewater systems, the regulations are singularly unhelpful. In this regard, they state:

> (B) Unit of property for network assets. In the case of network assets, the unit of property is determined by the taxpayer's particular facts and circumstances except as otherwise provided in published guidance in the federal register or in the Internal Revenue Bulletin (see §601.601(d)(2)(ii)(b) of this chapter). For these purposes, the functional interdependence standard provided in paragraph (e)(3)(i) of this section is not determinative.

Treasury Regulations §1.263-3(e)(3)(iii)(B).

Q. HAS THE IRS ISSUED ANY PUBLISHED GUIDANCE WITH RESPECT TO NETWORK ASSETS?

A. Yes, it has for certain types of network assets in the past – and just recently this year the Gas Safe Harbor rules under Rev. Proc. 2023-15 for Gas Transmission and Distribution were published on April 14, 2023.

Q. IN THE PAST WHAT UNITS OF PROPERTY DID THE COMPANY USE FOR DETERMINING WHETHER A PARTICULAR COST WAS A REPAIR OR A CAPITAL EXPENDITURE?

A. Prior to 2020, the Company and the now-merged Peoples Gas Company used the same units of property for tax purposes that they used for book purposes. That is, the Company followed its books in determining what expenditures were and were not repairs for tax purposes.

Q. WHAT CAUSED THE COMPANY TO CHANGE ITS UNITS OF PROPERTY FOR TAX PURPOSES?

A. In 2006, the Internal Revenue Service ("IRS") issued proposed regulations in which, for the first time, it addressed the determination of a unit of property in a systematic way. In 2008, it withdrew these proposed regulations and issued a revised version. While these revised proposed regulations provided principles and helpful examples for many types of assets, with respect to network assets they said nothing. The preamble to these proposed regulations contained the following statement:

> The IRS and Treasury Department generally think that the unit of property rules for network assets should be addressed on an industry by industry basis in internal revenue bulletin guidance. Industries are invited to submit requests for guidance under the industry issue resolution (IIR) program after these regulations are finalized.

This invitation indicated that the final determination of units of property for network assets had to be negotiated for each industry group interested in pursuing a common definition for that industry.

Q. WAS THERE A TAX RULE THAT CREATES A PARTICULAR PROBLEM FOR LINEAR UNITS OF PROPERTY?

A. Yes, there was. One historical tax rule has been that the replacement of a material portion of a linear unit of property is a capital expenditure — not a repair. When a taxpayer uses large units of property, this requires that one must be able to draw a line that divides a material replacement from a non-material replacement. The dividing line is a percentage of the unit of property. Unfortunately, prior to 2023, there was no specific percentage that the IRS has identified as being acceptable. It could have been 5% or 10% or 20% or some other percentage. Thus, even were the units of property certain, the identification of repairs remained uncertain.

Q. PLEASE DESCRIBE THE COMPANY'S CHANGE IN ITS TREATMENT OF REPAIRS.

A. Subsequent to the Company's last base rate case, on March 31, 2020, effective for the tax year ended December 31, 2020, but prior to the issuance of the Gas Safe Harbor rules, Peoples Natural Gas made an election to define its units of property under the Internal Revenue Service's ("IRS") tangible property regulations, which allows the Company to prospectively deduct, as an operating expense on its income tax returns, the costs of certain asset improvements that otherwise would be capitalized and depreciated for income tax purposes (the "tax repair election"). As a result of making the tax repair election, the Company also is required to calculate a one-time "catch-up deduction" that involves a restatement of the Company's tax books and records to conform to what they would have looked like if the new method had always been used. The effect of the catch-up deduction

was an additional tax deduction of approximately $425million, which was claimed as a deduction on the Peoples Natural Gas division's 2020 Federal and State income tax returns (the estimated deduction was $380.7 million when the tariff sur-credit was filed for) and the Peoples Gas division's 2021 Federal and State income tax returns. The Company is currently in a Net Operating Loss ("NOL") position, which prevents it from currently receiving the cash benefit of the catch-up deduction.

Q. HOW WAS THE CHANGE IN ACCOUNTING METHOD RECORDED ON THE COMPANY'S FEDERAL INCOME TAX RETURNS?

A. The change had two components and thus the treatment in rates has been different for each of the divisions. First, all costs incurred in 2020 for PNG and 2021 for PG that qualified as repairs under the Company's new accounting method (that is, its use of defined units of property) were deducted. This enhanced deduction will continue each year into the future. The second component is referred to as a "Section 481(a)" adjustment or catch-up adjustment. It is a "one time" deduction. When a taxpayer changes a tax accounting method, its tax books and records are essentially restated to conform to what they would have looked like had the taxpayer always used its new method. The Company restated the tax basis of its assets as if it had always deducted those projects that would have been repairs had its new unit of property definition been in use for the 481(a) years. 15 years is the furthest back the Company could go to determine the 481(a) catch-up adjustment since the tax life of gas distribution assets is 15 years. The 481(a) period selected was from 2012 to 3/15/2020 for the Peoples Natural Gas division with the deduction being taken on the 2020 return and 2013 to 2020 for the Peoples Gas division with the deduction being taken

on the 2021 return. For each of those years they needed to go back and determine in each year what projects it capitalized that would have qualified as repairs under its new unit of property definition. However, since the costs of those projects had, in fact, been capitalized and depreciated for tax purposes, the cumulative incremental repair amount must be reduced by the tax depreciation already claimed to arrive at a net amount by which the tax basis of the distribution assets will be reduced. Because reducing the tax basis will deprive the utility of ever claiming a deduction for the costs reflected in this basis reduction, the tax rules allow the company to claim the entire amount as a deduction in the year in which the change is made. The Section 481(a) adjustment is, in reality, a "catch-up" adjustment.

Q. HOW DOES ALL OF THIS BACKGROUND RELATE TO THE TREATMENT OF REPAIRS IN THIS CASE?

A. I will first explain the treatment of repairs for the Peoples Natural Gas division, and later explain the treatment of repairs for the Peoples Gas Division. For Peoples Natural Gas the treatment of the 481(a) adjustment, the ongoing current and going-forward benefits were all handled in the TRS proceeding. The TRS proceeding (Docket No. P-2020-3021191) was resolved by a settlement. During the pendency of the case, the Company had an accounting method change on file with the IRS's National Office but the calculation of the 481(a) adjustment was not finalized at the time. Although the actual amount with respect to the Peoples Natural Gas division, which is now known at $390.9 million was not fixed at the time the settlement was reached, the parties decided to lay out the terms and conditions for any eventual change in the settlement agreement. The Joint Petition for Settlement, which was approved by the Commission, stated, in pertinent part:

(a) Treatment Of the Catch-Up Deduction. Peoples Natural Gas's proposed treatment of the approximately $380.7 Million catch-up deduction associated with its tax repairs election is modified as follows. The actual amount of the catch-up deduction will be based upon the amount reported on the 2020 tax return as filed:

(i) One hundred percent (100%) of the benefit from the approximately $380.7 Million catch-up deduction will be used to provide a sur-credit to customers. The sur-credit is designed to provide a rate reduction of approximately $27.845 Million per year over five years, beginning within 90 days after an Order is issued in this proceeding.

(ii) The Rider Tax Repair Sur-credit ("Rider TRS") will be credited to customers' bills by application to both customer charges and base rate delivery charges, and flexible rate customers will not be eligible for the sur-credit, as set forth in attached Appendix A.

(b) Treatment Of the Current and Going-Forward Benefits. The effects of the current and going forward tax deduction of Peoples Natural Gas's tax repairs election will continue to flow-through the Company's financials until the effective date of rates established in the Company's next base rate case filing.

(c) Revenue Requirement in Next Base Rate Proceeding. Peoples Natural Gas will reflect the ongoing repair benefit in the Company's calculation of income tax expense (i.e., reduced effective income tax rate) in its revenue requirement in its next base rate proceeding.

(d) Rate Case Filing. Peoples Natural Gas affirmatively commits that it will file a base rate proceeding no later than December 31, 2023. As part of that filing, Peoples

Natural Gas will propose a tracker mechanism to account for variances between the estimated net tax repair benefit incorporated into the Company's revenue requirement and the actual net tax repair benefit realized on the Company's tax returns on a going-forward basis from the effective date of new base rates, similar to the tracker mechanism adopted in the settlement of the Aqua Pennsylvania, Inc. base rate case at Docket No. R-2018-3003558. A copy of that settlement term is attached as Appendix B hereto for illustrative purposes. The proposed tracker mechanism will require the Company to return or recoup the tax benefits associated with these variances to or from customers in an expeditious manner. This filing commitment is not intended to affect the rights of other parties to this Settlement to oppose any proposals presented by the Company or to offer alternative proposals in that rate case.

I Subsequent Changes to Benefit of Catch-Up Deduction. To the extent that the benefit of the Company's catch-up deduction is affected by: (i) any subsequent disallowance by a future IRS audit; (ii) any changes in tax rate; or (iii) any change in rules or guidance that require a method change and, therefore, a change of benefit, permission is granted to defer those impacts for future refund or recovery for customers.

Q. PLEASE DESCRIBE HOW THE COMPANY TREATED THE TAX CONSEQUENCES OF THE ACCOUNTING METHOD CHANGE SINCE THE ORDER WAS ENTERED APPROVING THE SETTLEMENT.

A. In accordance with the terms of the settlement with respect to the Section 481(a) adjustment for the Peoples Natural Gas division, the Company commenced flow-through accounting beginning in calendar year 2020. In August of 2021, the Company placed sur-credits on customer bills to begin providing the tax benefit of the 481(a) adjustment claimed on the Company's 2020 tax return. The calculation of the sur-credit was based on the $390.9million.

Q. IS THIS TREATMENT CONSISTENT WITH THE DICTATES OF THE ORDER?

A. Yes, it is.

Q. PLEASE EXPLAIN THE TREATMENT OF REPAIRS FOR THE PEOPLES GAS DIVISION.

A. The former Peoples Gas Company did not make the tax repair election at the same time as the Peoples Natural Gas Company. Peoples Natural Gas filed an election with its 2021 tax return to adopt a repair methodology consistent with that of the Peoples Natural Gas Division. The Section 481(a) adjustment with respect to the Peoples Gas division assets is $34 million.

The treatment of the 481(a) adjustment, the ongoing current and going-forward benefits for the Peoples Gas division were established in the Joint Petition for Settlement of the merger of Peoples Gas into Peoples Natural Gas, as approved by the Commission Order entered August 25, 2022, at Docket Nos. A-2021-3029831 and A-2021-3029833. As relevant to this proceeding that settlement provided:

> No refund of the anticipated catch-up benefits associated with Peoples Gas' adoption of Peoples Natural Gas' tax methodologies will be made in this proceeding. The Company will defer any retroactive ("catch up") benefits and will address such retrospective catch-up tax benefits achieved between the implementation of the tax change and the next base rate proceeding in the next base rate case proceeding. Regarding the prospective impact, Peoples Natural Gas (which will include the Peoples Gas assets) will account for the prospective impact utilizing flow-through accounting consistent with the recent Peoples Natural Gas repairs tax settlement at Docket No. P-2020-3021191.

Consistent with that settlement, the Company has deferred the catch-up benefits for the Peoples Gas division for treatment in this case and has implemented flow-through accounting subsequent to adoption of the repairs method.

Q. DOES THE COMPANY PROPOSE TO DISCONTINUE THE TRS AND INCLUDE THE REFUND OF THE CATCH-UP ADJUSTMENT IN THE CURRENT CASE?

A. The proposed treatment of the catch-up adjustment is discussed by Witness Andrew Wachter in his Direct Testimony. Pursuant to the terms of the TRS Order, the current and going forward repair benefit is included in the Company's calculation of income tax expense (i.e., reduced effective income tax rate) in its revenue requirement in this base rate proceeding. The repair benefit included in this case is calculated based on the new Gas Safe Harbor rules.

Q. PLEASE EXPLAIN THE NEW GAS SAFE HARBOR RULES.

A. The gas safe harbor, Revenue Procedure 2023-15, is the culmination of years of negotiations between the IRS and the gas industry under the Industry Issue Resolution (IRR). The revenue procedure provides a safe harbor method of accounting that taxpayers may use to determine whether certain expenditures to maintain, repair, replace, or improve natural gas transmission and distribution property must be capitalized as improvements under §263(a) of the Internal Revenue Code (Code) or as the costs of property produced by the taxpayer for use in its trade or business under §263A, or are allowable as deductions under §162. The revenue procedure also provides procedures for taxpayers to obtain automatic consent to change their method of accounting to the safe harbor method of accounting permitted by this revenue procedure. Under the safe harbor method, the unit of property for linear transmission property is 10%. Linear distribution property has no defined unit of property, and the safe harbor allows for projects under 4 miles to be deducted as a repair. The safe harbor method defines units of property and major components of non-linear transmission and distribution property.

Q. WILL THE COMPANY CALCULATE A REVISION TO THE CATCH-UP ADJUSTMENT PRESENTED IN THE TRS SETTLEMENTAS A RESULT OF THE RECENTLY ISSUED GAS SAFE HARBOR RULES?

A. Yes. The Company plans to calculate the differences between the tax repair deduction under the previous methodology compared to what the deduction would have been under the current gas safe harbor rules. Pursuant to subsection (e) of the TRS settlement, quoted previously, this change in IRS guidance which affects the catch-up adjustment will be provided to customers.

Q. HAS THE COMPANY INCLUDED AN ESTIMATE OF THE TAX IMPACTS OF THE REVISION TO THE CATCH-UP IN THE CURRENT CASE?

A. No, it has not. The Company will be calculating a revision to the catch-up adjustment based on the Safe Harbor rules for gas. The revised adjustment will be finalized in 2024 and included in the Company's 2023 tax return to be filed in October of 2024. For the proposed rate treatment of the revised catch-up adjustment resulting from the Safe Harbor rules for gas, please see the Direct Testimony of Witness Andrew Wachter.

Q. ARE THERE ANY OTHER ITEMS RELATED TO TAX REPAIRS THAT THE COMPANY WOULD LIKE TO DISCUSS?

A. Yes, there is. On October 10, 2023 the Company filed for a change in method of accounting to treat costs incurred for "mandatory relocations" as a currently deductible expense This change is limited to expenditures for the relocation of portion of mains and services pipelines for both public and private purposes, that were previously capitalized for both book and tax purposes.

Q. PLEASE EXPLAIN WHAT A MANDATORY RELOCATION IS.

A. Per the IRS rules, mandatory relocations consist of public and private relocations of pipeline that are mandated by the federal government, state government, county officials, townships, municipal road owners, turnpike commissions, developers, companies, corporations or individuals. Mandatory relocations typically occur when gas pipelines are

required to be relocated due to conflicts with other utility lines or construction of highways, roadways, buildings and other development.

Q. PLEASE EXPLAIN THE IMPACT OF THIS CHANGE.

A. Previously the Company capitalized the expenditures for mandatory relocations for book and tax purposes. The tax rules permit an automatic change in accounting for mandatory relocations that are not required to be capitalized as improvements but can instead be eligible for a tax repairs deduction if the tax repairs requirements are met. The result is projects previously not eligible for tax repairs qualified and the Company became eligible for additional repairs deduction that it had not taken previously.

Q. HOW WAS THE CHANGE IN ACCOUNTING FOR REPAIRS ON MANDATORY RELOCATIONS RECORDED ON THE COMPANY'S 2022 TAX RETURN?

A. Similar to the repairs, deduction discussed previously, the change also had two components. First, all costs incurred in 2022 that qualified as repairs under the Company's new accounting method (that is, mandatory relocations eligible for repairs) were deducted. This enhanced deduction will continue each year into the future. The enhanced deduction is included as additional repairs deductions in this case. The second component is another "Section 481(a)" adjustment or catch-up adjustment the description for which is discussed previously. The amount of the "one time" or catch-up adjustment results in a $36,461,137 deduction after the Company restated the tax basis of its assets as if it had always deducted those projects that would have been repairs had the repairs eligible mandatory relocations been in use for all prior years.

Q. PLEASE DESCRIBE HOW THE COMPANY TREATED THE TAX CONSEQUENCES OF THE ACCOUNTING METHOD CHANGE FOR REPAIRS ON MANDATORY RELOCATIONS IN THIS CASE?

A. Due to the NOLC's the Company is not currently able to monetize the tax benefits of the catch-up deduction for mandatory relocations. Please see the Direct Testimony of Witness Andrew Wachter for the proposed treatment of the catch-up deduction related to mandatory relocations.

STATE TAX RATE CHANGE

Q. WHAT CHANGES IN PENNSYLVANIA TAX LAW HAVE BEEN ENACTED SINCE THE FILING OF THE LAST RATE CASE?

A. House Bill 1342 was signed into law in Pennsylvania on July 8, 2022. The bill makes significant changes to the Commonwealth's corporate net income tax laws:

- Corporate net income tax rate reduction from 9.99 to 4.99 percent over a period of years;
- Sales factor changes;
- Codification of economic nexus standards.

Q. WHEN IS THE RATE REDUCTION EFFECTIVE?

A. House Bill 1342 reduces that rate incrementally to 4.99%. These rate reductions are scheduled to occur automatically and are not contingent on state tax revenues meeting or

exceeding specific thresholds. The rate is first reduced to 8.99% for the 2023 tax year. The rate is further reduced as follows:

8.49% for tax year 2024

7.99% for tax year 2025

7.49% for tax year 2026

6.99% for tax year 2027

6.49% for tax year 2028

5.99% for tax year 2029

5.49% for tax year 2030

4.99% for tax years beginning January 1, 2031, and thereafter

Q. HOW HAS THE RATE REDUCTION BEEN REFLECTED IN THE INCOME TAX CALCULATIONS IN THIS CASE?

A. By the FPFTY the rate is 7.99%. Since the FPFTY consists of 3 months of 2024 and 9 months of 2025, the Company has used a blended rate to calculated state income tax expense for the FPFTY.

Q. HOW WILL FUTURE CHANGES TO THE STATE INCOME TAX RATE BE REFLECTED?

A. Future changes to the state income tax rate will be managed through the State Tax Adjustment Surcharge, or in future base rate proceedings. Because rates in this case reflect a blended tax rate, the Company's STAS effective with the effective date of rates will be set to 0% for the state income tax rate. As I have previously explained, due

principally to ongoing repair deductions, the Company is claiming $0 state income tax expense in this case. Further, due to substantial state NOLs and expected continued high levels of repair deductions, the Company does not anticipate paying any state income taxes into the foreseeable future. For these reasons, the Company will not be reflecting reductions to the CNI tax rate through the STAS during the period that base rates established in this case remain effective. Future base rate cases will reflect the applicable CNI rate in effect at the time, applied to the pro forma taxable income in those cases.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2023-3044549
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
LUKE RAVENSTAHL
VICE PRESIDENT OF SALES AND MARKETING
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023

DATE ADMITTED: _____

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Luke Ravenstahl. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President of Sales and Marketing.

Q. PLEASE STATE BRIEFELY YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.

A. I graduated from Washington & Jefferson College in 2003 with a Bachelor of Business Administration in 2003. I served for 10 years as an elected official in the City of Pittsburgh, serving 7 ½ of those years as the City's mayor. I started with Peoples in a consulting role before becoming a full-time employee in 2015. During that time, I helped launch the Company's Go With Gas expansion program. In my capacity of Vice President of Sales and Marketing at Peoples, I oversee traditional sales work. Recently, my role has expanded, and I am also responsible for our Process Operations group which includes Damage Prevention, Corrosion and Leak Survey.

Q. PLEASE LIST THE FILING REQUIREMENTS THAT YOU ARE SPONSORING AS A WITNESS.

A. I am sponsoring Exhibit 19, RR13.

Q. WHAT ARE YOUR RESPONSIBILITIES FOR PURPOSES OF THIS PROCEEDING?

A. My responsibilities which I will describe in separate sections of my testimony are:

1) Competitive customers (including actual contracts and rate discounts)
2) MICROGRID/CHP (assets and contracts)
3) Extension of facilities (150-foot rule) expansion to PG
4) Expansion of Natural Gas & New Rate Request

COMPETITIVE CUSTOMERS

Q. WHAT MAKES A CUSTOMER COMPETITIVE?

A. The Company's service territory is an active market for competition both among natural gas distribution companies (NGDC) and between natural gas and alternate energy sources, including private well gas, landfill gas, interstate pipeline companies, and alternative fuels such as electricity or propane. Some of our commercial customers, and most industrial customers, have more than one energy service option available to them. These competitive customers support the operational needs of the Company's system and also offset the cost of service for other non-competitive customers as for example, they generate additional revenue that offsets the rates of non-competitive customers. In order to ensure we maintain these accounts, it is necessary to flex our maximum delivery rates to remain competitive.

Q. DESCRIBE THE COMPANY'S COMPETITIVE ALTERNATIVE ANALYSIS.

A. As contracts are newly negotiated or renewed, the Company performs its normal assessment, which includes verification of the competitive alternative and a fixed cost analysis. Every

competitive rate that the Company establishes is directly and exclusively tied to the cost of the customer's alternative service. The Company continually seeks to maximize the revenues it can receive through negotiations with current or potential customers. Doing so is in the non-discounted customers' best interest because it provides additional revenues that would be lost if the discounted customers left the system. It is also in the best interest of the Company to maximize revenues from discounted customers to mitigate potential revenue loss. Peoples must properly balance the competing demands of rate maximization against revenue retention.

Moreover, Peoples has a legal duty to its customers to maintain just and reasonable rates. One way of doing so is to maintain a reasonable customer load. If discounted customers were to reduce or eliminate production at facilities on Peoples' system or to switch to alternative sources of fuel, this would have a substantial negative impact on the Company's non-discounted customer rates. This is because the incremental cost to serve these customers is less than the discounted revenue generated as natural gas customers of Peoples. That is, although the discounted customers do not pay full tariffed rates, they still generate millions of dollars in annual revenue for Peoples and contribute to the Company's fixed costs. However, if those competitive customers leave the Company's system, the Company's non-discounted customer rates could be increased to offset the lost revenue in future base rate cases. Also, customers may look to reduce their other expenses and investments in an effort to maintain their current profit levels, such as by laying off existing employees, not hiring prospective employees, or reducing their production and operations. All of these would have negative effects on jobs and the local economy. Furthermore, we strongly believe that public policy should favor the use of flexed rates that encourage

increased economic development due to the availability and affordability of shale gas, thus utilizing more of this abundant resource in Pennsylvania to benefit the Commonwealth's economy.

Q. WHAT DID THE COMPANY AGREE TO WITH RESPECT TO COMPETITIVE CUSTOMERS IN ITS LAST BASE RATE PROCEEDING?

A. In the Company's last base rate case at Docket No. R-2018-3006818, the Company agreed to the following with respect to its competitive rate discounts:

> Customer number, effective date of the agreement, the reason(s) for offering a negotiated delivery agreement, supporting work papers relied upon to substantiate the negotiated agreement, and an analysis which evaluates the contribution to overall fixed costs provided by each customer.
>
> In implementing this provision in circumstances where a bypass of the Company's facilities is the customer's competitive option, the Company will work with the customer in future negotiations to develop an analysis of the likely construction cost of the bypass facilities and apply that estimate in determining, through negotiations, the discounted rate offered to the customer. This information will be included as a part of the confidential materials presented in the Company's initial filing in future base rate proceedings. The Company will also provide a confidential annual report to the Statutory Advocates listing all customers that currently are receiving a discounted rate due to any of the reasons contained herein. The confidential report will provide information regarding whether the customer is being offered the discounted rate due to gas-on-gas competition, potential bypass, economic reasons or alternative fuel reasons. The Company should include in its analysis the annual log information. In future base rate proceedings, the confidential materials presented as part of the Company's filing will include sworn affidavits from all discount customers as to the facts and reasons for the discounts as set forth in the Company supplied materials.

To the extent any new agreements have been added since the Company's base rate case at Docket No. R-2018-3006818, the Company is complying with the settlement provisions regardless of the reason for the discount. For any new agreement or renewed agreement

executed since the last case, the Company performed a new verification and analysis to justify the competitive alternative and negotiated rate.

Notably, several discounted delivery rate customers had their competitive options and their associated retainage discounts reviewed and approved or were unopposed in prior 1307(f) settlements. Access to the Company's CONFIDENTIAL competitive customer information is included with the initial materials presented for this base rate case filing and will be made available upon execution of a Protective Agreement.

Q. SHOULD ELECTRICITY BE CONSIDERED A COMPETITIVE ALTERNATIVE?

Yes. Electricity should be deemed a competitive alternative as it can be used to displace natural gas for heating, cooking, clothes drying, and other uses. The Company evaluates each existing and potential competitive customer on a case-by-case basis and completes a detailed assessment prior to deeming a customer as competitively situated. Like other alternate fuel sources, such as coal, steam, or propane, electricity is a competitive option and customers certainly treat it as such. Therefore, the Company has revised its tariff to allow for electricity to be considered a competitive alternative subject to the same cost of service justification analysis and assessment as other competitive alternatives. See the Company's proposed Tariff – GAS – PA PUC No. 48, Rule 20. Service Agreement and Flexible Rates.

Q. PLEASE EXPLAIN THE STATUS OF THE COMPANY'S CURRENTLY EFFECTIVE NEGOTIATED CONTRACTS AS COMPARED TO THE COMPANY'S LAST RATE CASE.

A. In the Company's last base rate proceeding (for Peoples Natural Gas Division), there were 42 negotiated contracts in effect for Peoples Natural Gas Division. As a result of that rate case and as contract expirations come up, the Company evaluated all of its negotiated contracts and has successfully negotiated some customers to full tariffed rates. As of October 2023, there are 17 negotiated contracts on the Company's system (for both Divisions of the Company). All of the current customers with negotiated rates have a viable competitive alternative and justified cost of service analysis.

Q. HAS THE COMPANY ENTERED INTO ANY NEW FLEX AGREEMENTS SINCE ITS LAST RATE PROCEEDING?

A. Yes, the Company will have one new flex agreement. The Company has entered into a discounted delivery agreement with a new customer and that agreement is expected to become effective in the first quarter of 2024.

Q. PLEASE DISCUSS WHY THE COMPANY ENTERED INTO THIS NEW AGREEMENT?

A. This new agreement is justified as there is a competitive alternative (interstate pipeline) in close proximity to the new customer. If not for the discounted rate, the customer would connect to an alternative transportation service via direct bypass with an interstate pipeline. The Company performed an assessment for this competitive situation, which included a

verification of the competitive alternative and a fixed cost analysis. The established competitive rate for this new customer is directly and exclusively tied to the cost of the customer's alternative service.

SALE OF MICROGRID/CHP ASSETS

Q. PLEASE DISCUSS THE PENDING SALE OF CERTAIN NON-JURISDICTIONAL MICROGRID/CHP ASSETS IN THE COMPANY'S SERVICE TERRITORY.

A. As of October 2023, the Company entered into an agreement to sell certain non-jurisdictional, district energy and microgrid notes receivable in Pittsburgh, Pennsylvania. As a result of these non-jurisdictional projects, the Company was able to add three new jurisdictional customers, including a customer with a negotiated delivery rate agreement and also two customers paying full tariffed rates. These projects were completed with shareholder not customer funds but resulted in a direct benefit to customers resulting from the customer additions.

COMBINED HEAT AND POWER ("CHP")

Q. PLEASE EXPLAIN THE COMPANY'S POSITION WITH RESPECT TO CHP.

A. The Company believes that natural gas should have a major role in the development of CHP technology for its customers. The Company is committed to helping its customers explore the benefits of installing CHP systems to power their businesses. The Company's position is in line with the spirit and purpose of the Commission's Policy Statement on CHP development[1]. Customers using CHP systems can benefit by improved operational

[1] See Docket No. M-2016-2530484.

efficiency, increased flexibility and reliability by shifting away from grid reliance and reduced methane emissions.

Q. IS THE COMPANY PROPOSING ANYTHING IN THIS PROCEEDING WITH RESPECT TO CHP?

A. The Company is proposing some revisions to its tariff section on flex rates, Section 20. The Company's intention is to relax the tariff language such that a discount could be provided to certain applicants/customers who wish to install new technologies such as CHP. The Company feels that this tariff revision will allow owners and operators to invest in new CHP technologies which would ultimately expand the use of natural gas in the Company's service territory. The Company's proposed, combined tariff in this proceeding, is sponsored by Company witness Dawn Folks.

EXTENSION OF FACILITIES

Q. DOES THE COMPANY CURRENTLY OFFER ANY FOOTAGE ALLOWANCE FOR CUSTOMERS TO CONNECT TO PEOPLES SYSTEM?

A. Yes, Peoples Natural Gas currently offers customers a 150-feet main line allowance. This provision is not currently included in the Peoples Gas Division tariff.

Q. WHAT IS PEOPLES' MAIN EXTENSION TARIFF CHANGE PROPOSAL?

A. The Company is proposing to extend the 150-feet main line allowance for residential extensions to the customers of Peoples Gas. As with Peoples Natural Gas, for each applicant that requests a main line extension, Peoples Gas would install the first 150-feet of main line

without charge to the customer in normal situations. At the discretion of the Company, certain projects which contain abnormal underground conditions, such as crossing a stream or state highway, or visible ledge or rock that will affect excavation or excessive permitting fees would not be eligible for the 150-foot allotment. As more applicants join in a single project to extend gas facilities the greater the length of main the Company will install without charge to the applicants. For example, on a single project with four customers electing to receive natural gas, the Company will install up to 150-feet of main line per customer, or 600 feet, without requiring a contribution in aid of construction ("CIAC") from the customers. For extension projects greater than 150-feet per customer, the Company will run an economic model solely on the line extension segment in excess of the 150-foot allotment per customer to determine if the customer(s) will be required to pay a CIAC. For example, if one customer requested a 150-foot line extension, the Company would conduct analysis on the cost to extend facilities 150-feet to the customer. If a CIAC was necessary, the applicant(s) would be required to pay this up front.

EXPANSION OF NATURAL GAS AND NEW RATES

Q. PLEASE EXPLAIN THE NEW RATE FOR COMMERCIAL AND INDUSTRIAL CUSTOMERS THE COMPANY IS PROPOSING IN THIS PROCEEDING.

A. The Company is proposing to incorporate a mainline service rate ("Rate MLS") into its tariff. This rate would be available to existing or new large commercial and industrial customers in the Company's service territory. In order to qualify for Rate MLS, a customer must meet certain requirements: (1) have consumption greater than 500,000 mcf on an

annual basis AND (2) be located within 1,000 feet of a Peoples' Transmission mainline pipe OR be located within 1,000 feet of an interstate pipeline.

Q. WHY IS THE COMPANY PROPOSING AN MLS RATE?

A. Peoples is proposing this rate as it will allow qualifying customers who meet certain requirements to avail themselves of a just and reasonable delivery rate directly tied to the appropriate cost of service for the Company to serve that customer. Said in other words, this would be a tariffed rate that is justified due to the customer's load and proximity to the Company's system. The proposed rate is available on pages 61-62 of the Tariff as sponsored by Witness Dawn Folks.

Q. DOES THIS COMPLETE YOUR TESTIMONY?

A. Yes, it does.

v.	:	Docket No. R-2023-3044549
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
JOYCE MITOLE
CONTROLLER
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023 Peoples Statement No. 8
DATE ADMITTED: _____

PREPARED DIRECT TESTIMONY OF
JOYCE MITOLE

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Joyce Mitole. My business address is 375 North Shore Drive, Suite 400, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies") as Controller. PNG Companies provides various administrative functions for Peoples Natural Gas Company LLC ("Peoples" or the "Company") including Accounting.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.

A. I received a Bachelor of Science Degree in Accounting from University of Malawi in 1993 and a Master of Business Administration from Carnegie Mellon University in 1997. I am a Certified Public Accountant in the Commonwealth of Pennsylvania.

From 1997 to 2020, I worked in different accounting roles at Alcoa and its successor companies after two consecutive company splits (Arconic and Howmet Aerospace). In 2021, I joined Peoples as the Controller where my responsibilities include accounting and financial reporting for Peoples in addition to Fixed Asset accounting.

Q. WHAT ARE YOUR RESPONSIBILITIES AS CONTROLLER OF PEOPLES?

A. I am responsible for the overall development and execution of the Company's policies, strategies, and practices in the areas of General and Fixed Asset Accounting.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. I will identify the filing requirements that I am sponsoring. Also, I will discuss how the accounting records of Peoples are maintained and what industry standards are followed. Additionally, I will discuss the Company's settlement commitment in the merger of Peoples Natural Gas Division and Peoples Gas Company Division and how the accounting information is reported by division in this proceeding based upon the settlement agreement.

Q. WHAT FILING REQUIREMENTS ARE YOU SPONSORING?

A. A list of the filing requirements that I am sponsoring is attached to my testimony as Appendix A.

Q. PLEASE DISCUSS HOW PEOPLES MAINTAINS ITS ACCOUNTING RECORDS AND WHAT INDUSTRY STANDARDS IT FOLLOWS IN DOING SO.

A. Peoples' accounting records are maintained using both a "Natural" chart of accounts and a "FERC" chart of accounts. Transactional data is recorded, maintained and reported in accordance with Generally Accepted Accounting Principles ("GAAP"). Several authoritative sources are utilized including standards and interpretations issued by the Financial Accounting Standards Board ("FASB") and FASB's Accounting Standards

Codification ("ASC"), and the Code of Federal Regulations ("CFR"). Additionally, Pennsylvania Public Utility Commission ("Commission") and Federal Energy Regulatory Commission ("FERC") directives and standards are reviewed to assure compliance with applicable reporting requirements.

Further, Peoples' financial statements are included in the annual report and audit of its parent company PNG Companies. The report is based on audits conducted in accordance with auditing standards generally accepted in the United States of America.

Q. PLEASE DISCUSS THE SETTLEMENT COMMITMENT FROM THE AGREEMENT TO MERGE PEOPLES NATURAL GAS COMPANY LLC AND PEOPLES GAS COMPANY LLC DOCKETED AT NOS. A-2021-3029831, AND A-2021-3029833.

A. As specified in Settlement Paragraph 33, the Company agreed to maintain pre-merger accounting records for Peoples Natural Gas Division and Peoples Gas Division and to maintain separate accounting by division post-merger, at least until a plan of consolidation of base rates is established for the two divisions and otherwise in accordance with applicable record retention legal requirements.

In Settlement Paragraph 34, the Company was directed to utilize the same allocation factors of the existing affiliated interest agreements between Peoples Natural Gas Division and Peoples Gas Division to allocate costs between the Peoples Gas

Division and Peoples Natural Gas Division. Services provided by PNG Companies or other affiliated interests were agreed to be provided pursuant to existing Commission-approved affiliate interest agreements.

Q. HAS THE COMPANY ADHERED TO THIS SETTLEMENT PROVISION?

A. Yes, Peoples has maintained separate and sufficient accounting records for both Divisions and for operations in West Virginia and Kentucky. Cost allocations between the Peoples Natural Gas Division and Peoples Gas Division and affiliates have followed the standards and methodologies approved at Docket No. G-2022-3036720, and allocation factors have been updated each year based on the approved methodology.

Q. HOW IS THE ACCOUNTING INFORMATION PRESENTED IN THIS CASE?

A. In the filing requirements, Peoples has provided separate information by division and/or combined, where applicable.

Q. HOW ARE OPERATING COSTS ALLOCATED BETWEEN DIVISIONS IN THIS CASE?

A. Costs are allocated based upon the affiliated interest agreements that are provided in SDR-RR-51, Attachments 1 and 2, which have been filed and approved by the Commission.

Q. WHAT IS PEOPLES PROPOSING IN THIS PROCEEDING WITH RESPECT TO THE PEOPLES NATURAL GAS DIVISION AND PEOPLES GAS DIVISION ACCOUNTING?

A. The Company is proposing to consolidate the accounting of the Peoples Natural Gas Division and Peoples Gas Division together into one unified company with consolidated accounting records.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding.

PREPARED DIRECT TESTIMONY OF
KRISTA SNYDER
FINANCIAL ANALYST
ON BEHALF OF
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: December 29, 2023
DATE ADMITTED: _____

Peoples Statement No. 12

PREPARED DIRECT TESTIMONY OF
KRISTA SNYDER

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Krista Snyder and my business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as a Financial Rates Analyst. I provide rates and regulatory services for Peoples Natural Gas Company LLC, a direct subsidiary of PNG.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND WORK EXPERIENCE.

A. I received my Master of Business Administration from Point Park University in 2019, and a Bachelor of Science in Business Administration in Finance from West Virginia University in 2014. After receiving my Bachelor's degree, I was employed at The Bank of New York Mellon as a Regulatory and Reporting Lead Analyst. In October 2022, I accepted my current position as a Financial Rates Analyst in the Rates and Regulatory Affairs Department.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY REGULATORY PROCEEDING?

A. I have not.

Q. ARE YOU SPONSORING ANY FILING REQUIREMENTS OR OTHER EXHIBITS?

A. Yes, I am. Attached to this Direct Testimony as Appendix A is a complete list of the exhibits for which I am the responsible witness.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. I am responsible for developing the value of Cash Working Capital. I have also prepared **Peoples Exhibit No. KMS-1**, which includes the lead-lag study in support of the Company's cash working capital requirement pursuant to Section 53.53 III. A.15 of the Commission's standard filing requirements.

Q. HAS THE COMPANY PERFORMED A STUDY TO DETERMINE THE LEVEL OF CASH WORKING CAPITAL THE COMPANY REQUIRES TO FINANCE ITS DAY-TO-DAY OPERATIONS?

A. Yes, the Company performed a lead-lag study by analyzing the Company's cash transactions and invoices for the twelve months ended August 31, 2023.

Q. PLEASE DEFINE WHAT YOU MEAN BY THE PHRASE "CASH WORKING CAPITAL".

A. Cash working capital is the amount of funds required to finance the day-to-day operations of the Company.

Q. HOW SHOULD THE RESULTS OF THE CASH WORKING CAPITAL ANALYSIS BE TREATED FOR RATEMAKING PURPOSES?

A. The cash working capital requirements should be included as part of the Company's rate base for ratemaking purposes.

Q. DID YOU PREPARE A SEPARATE STUDY FOR THE PEOPLES NATURAL GAS DIVISION AND THE PEOPLES GAS DIVISION?

A. No. The study to develop the lead/lag day was performed on a combined basis as the Company finances its day-to-day operations on a combined basis. Therefore, it would be inappropriate to segment the study. However, the results were applied to the divisional operations to show the cash working capital claim by division.

Q. WHAT IS A LEAD-LAG STUDY?

A. A lead-lag study is an analysis of the differences between the revenue "lags" and the expense "leads" of a utility. The revenue lag reflects the time between the date customers receive service and the date that customers' payments are available to the utility. This revenue lag is offset by an expense lead time during which the utility receives goods and services, but pays for them at a later date. The leads and lags are both measured in days. The dollar-weighted lead and lag days are then divided by 365 to determine a daily cash working capital factor ("CWC factor") for each specified expense category in the study. These CWC factors are then multiplied by the applicable annual test year cash expenses to determine the amount of cash working capital required for operations. The resulting amount of cash working capital is then included as part of the utility's rate base.

Q. WHAT ARE THE VARIOUS LEADS AND LAGS THAT SHOULD BE CONSIDERED IN A CASH WORKING CAPITAL ANALYSIS?

A. Two broad categories of leads and lags should be considered: 1) lag times associated with the collection of revenues owed to the utility; and 2) lead times associated with the payments for goods and services received by the utility.

Q. WHAT WAS THE SOURCE OF INFORMATION YOU EMPLOYED TO DETERMINE THE LEADS AND LAGS IN YOUR CASH WORKING CAPITAL ANALYSIS?

A. Data from the Company's Accounts Payable, Accounts Receivable ("A/R"), Payroll, and Tax accounts were utilized. The information derived from these sources, together with analyses of specific invoices, led to the determination of the appropriate number of lead-lag days for the Company.

Q. WHAT IS A REVENUE LAG AND HOW IS IT DETERMINED?

A. The revenue lag measures the number of days from the date service was rendered by the Company until the date payment was received from customers and such funds were available to the Company. In this study, the revenue lag was divided into three distinct components: 1) service lag; 2) billing lag; and 3) collections lag. Considered together, these three components of retail revenue lag totaled a weighted average of 59.44 lag days. An explanation of each component of the base revenue lag follows.

Q. WHAT IS MEANT BY SERVICE LAG?

A. The service lag refers to the period of time from when service is rendered to the time the customer's meter is read. Using the mid-point methodology, the average service lag associated with meter reading was 15.21 days (365 days in the year divided by 12 months divided by 2). Twelve months was appropriate to use for purposes of determining the service lag because the Company bills its customers monthly.

Q. WHAT IS THE MID-POINT METHODOLOGY?

A. For purposes of determining the service lead or lag, the Company's methodology presumes that the service was provided (or received) evenly over a given period (i.e., a month). Adding the one-half month to the derivation of the lead or lag is referred to as the mid-point methodology.

Q. WHAT IS MEANT BY BILLING LAG?

A. Billing lag refers to the average number of days from the date on which the meter was read until the date a customer is billed. Based upon the percentage weighted distribution of the mailing of the bills, the Company determined the billing lag to be 1.0 day.

Q. WHAT IS MEANT BY COLLECTIONS LAG?

A. The collections lag refers to the average amount of time from the date when the Company mailed a bill to the date that the Company received payment from its customers. As shown on page 4 of Exhibit KMS-1, the Company calculated collections lag using the days in accounts receivable methodology. First, average monthly accounts receivable is calculated by adding the end of month accounts receivable balances for each month in the preceding

12 months to the historic test year and dividing the total by 12. Then, A/R Turnover is calculated by taking the trailing twelve months sales divided by the average accounts receivable balance. Finally, we calculate the collection days lag by taking 365 divided by the A/R Turnover previously calculated. Based on this approach, the average collection lag at the Company was determined to be 43.23 days.

Q. PLEASE SUMMARIZE THE CALCULATION OF REVENUE LAG DAYS.

A. The calculation of the overall revenue lag, by lag component is summarized in the following table:

Revenue Lag Component	Lag Days
Service Lag	15.21
Billing Lag	1.0
Collections Lag	43.23
Total Lag Days	59.44

Q. WHAT EXPENSE-RELATED LEADS WERE CONSIDERED IN THE LEAD LAG ANALYSIS?

A. Lead times associated with the following expense categories were considered in the study: a) Gas Purchase Costs; b) Payroll; c) Pensions and Benefits, d) Other Operations and Maintenance Expenses, e) Taxes other than Income Taxes; f) Federal Income taxes; g) State Income Taxes; h) Interest on Long-term Debt; and i) Interest on Short-term Debt.

Q. WHAT TYPES OF LEADS WERE ASSOCIATED WITH THE COMPANY'S PURCHASES OF NATURAL GAS?

A. Pipeline companies typically send out invoices around the 10th of the month following the service month with payments due 10 days later. Payments to suppliers were made electronically. The Company also purchases gas from local producers. The Company reads the meters at the end of each month and cuts a check to the producer on the last day of the following month. As shown on pages 5 through 11 of Exhibit KMS-1; the Company used payment data for the twelve months ended August 31, 2023, and determined that the expense lead time associated with payments for natural gas and pipeline services, including 15.21 days of service lead time, was 35.49 days.

Q. PROVIDE AN EXPLANATION OF THE LEAD ASSOCIATED WITH THE COMPANY'S PAYROLL EXPENSES.

A. The Company's payroll records were analyzed to measure the number of lead days between the Company's receipt of services from its employees and the payment for those services. As shown on page 12 through 14 of Exhibit KMS-1, payroll lead days were calculated by: a) calculating the unweighted (or nominal) lead time by pay day and pay-cycle including a mid-point of the pay period as indicative of a service lead time and weighting the resulting lead days by the amounts paid out by the Company to cover its payroll obligations. The Company's pay-roll cycles are bi-weekly; resulting in a total average payroll expense lag of 15.55 days.

Q. WHAT TYPE OF LEADS ASSOCIATED WITH THE COMPANY'S EMPLOYEE BENEFIT PROGRAMS WERE CONSIDERED IN THE ANALYSIS?

A. As shown on page 15 of Exhibit KMS-1, the estimated lead times associated with the following major categories of the Company's employee benefit programs were considered: a) pensions; and b) employee benefits including group life, group health, and other employee programs. The medical benefits calculation is for lead time of premium payments is based off of an estimated monthly premium amount. These premiums will be paid in full before the next month of coverage begins. All of these benefits and programs taken together, had a dollar-weighted lead time of 30.63 days.

Q. DID THE COMPANY MAKE CONTRIBUTIONS TO THE DEFINED BENEFIT PENSION FUND ("DB") DURING THE HISTORIC TEST YEAR?

A. Yes. The Company made quarterly contributions to the pension fund for its unionized employees. The contributions were typically made around the 15th day of the month following the end of a quarter. The costs are accrued monthly which helps to appropriately align the costs to the appropriate service period for both the pension and post-retirement benefits.

Q. HOW WAS THE EXPENSE LEAD TIME ASSOCIATED WITH THE COMPANY'S OTHER BENEFIT PROGRAMS DETERMINED?

A. The Company is billed monthly by each of its benefit providers. The bill may consist of service costs and/or administrative fees. The invoices are typically paid within one week

following the receipt of the invoice. Funds for 401K accounts are sent the day following pay day.

Q. WHAT ARE OTHER OPERATIONS AND MAINTENANCE EXPENSES AND WHAT LEAD TIMES WERE ASSOCIATED WITH SUCH EXPENSES?

A. The Company engages in transactions with other vendors (not associated with pensions, benefits, payroll, natural gas and pipeline services, or taxes) for a variety of purposes including facility maintenance, maintenance of system reliability, and customer service. As shown on pages 16 through 21 of Exhibit KMS-1, a random sample of invoices from providers of such services were analyzed in order to estimate a lead time associated with payment for services related to other operations and maintenance activities. The analysis indicates that on average, invoices were paid by the Company 42.40 days after receipt.

Q. WHAT ARE THE GENERAL TAXES CONSIDERED IN THE ANALYSIS OF EXPENSE LEADS?

A. As shown on page 22 through 24 of Exhibit KMS-1, the following general taxes and similar assessments were considered in the study: a) property taxes; b) State & Federal Alternative Fuel Taxes; c) U.S. DOT Fees; d) Federal Heavy Highway Taxes; e) PUC assessments; f) WV Gas Stored Tax; g) PURTA; and h) Sales and use taxes. Payroll-related taxes were not considered in the analysis because the funds associated with those taxes are forwarded to our payroll processor, at the same time as the payroll funds. The payroll processor is then responsible for remitting the funds to the appropriate taxing bodies. When dollar-weighted using twelve months ended August 31, 2023 actual payments, the weighted expense lead

time for all categories of these general taxes was determined to be 51.86 days. This weighted lead time was then used in computing the cash working capital requirement associated with taxes other than income taxes

Q. HOW DID YOUR STUDY ADDRESS INCOME TAXES?

A. As shown on page 25 of Exhibit KMS-1, for Federal and State income taxes, the statutory payment schedules relative to each tax were utilized to arrive at 37.00 and 54.78 lag days, respectively.

Q. PROVIDE A DESCRIPTION OF HOW LEAD TIMES ASSOCIATED WITH THE COMPANY'S INTEREST EXPENSE ON LONG-TERM AND SHORT –TERM DEBT WERE ADDRESSED BY THE STUDY.

A. As shown on page 26 of Exhibit KMS-1, interest expense on long term debt was assigned expense lag days based on the semi-annual payments of the Company's installment promissory notes to arrive at an average of 67.26 days. Short term debt is not applicable to this study as the Company is not making contributions.

Q. HAVE YOU PREPARED AN EXHIBIT THAT SUMMARIZES THE RESULTS OF YOUR ANALYSIS OF THE COMPANY'S CASH WORKING CAPITAL REQUIREMENTS?

A. Yes. The results of the cash working capital study are presented in Peoples Exhibit No. KMS-1, pages 1 to 3. As shown on page 1, the total cash working capital claim is

$36,256,917. This amount is included in rate base in Peoples Exhibit No. 2. Peoples Exhibit No KMS-1 is attached following my testimony.

Q. DOES THIS COMPLETE YOUR PREPARED DIRECT TESTIMONY?

A. Yes, it does. I reserve the right to submit additional testimony as issues arise during the course of the proceeding. Thank you.

Calculation of Revenue Lag Time

Line No.	Description	(A) Reference or Factor	(B) Accounts Receivable Balance End of Month	(C) Total Monthly Sales	(D) A/R Turnover	(E) Days Lag
					(C) / (B)	365 / (D)
1	Annual Number of Days					365
2	August, 2022		$ 59,670			
3	September		$ 55,669	$ 34,249		
4	October		$ 62,479	$ 69,507		
5	November		$ 76,407	$ 101,366		
6	December		$ 124,460	$ 161,132		
7	January		$ 148,218	$ 131,758		
8	February		$ 162,211	$ 111,818		
9	March		$ 163,405	$ 113,310		
10	April		$ 135,879	$ 46,953		
11	May		$ 105,002	$ 36,479		
12	June		$ 83,129	$ 24,294		
13	July		$ 70,614	$ 22,503		
14	August, 2023		$ 62,113	$ 25,855		
15	Total	Sum Ln3 to Ln14	$ 1,249,587			
16	Average A/R Balance		$ 104,132	$ 879,224		
17	Factor				8.44	43.23
18	Collection Days Lag					43.23
19	Billing Lag					1.00
20	Service Lag			365 / 12 * 0.5		15.21
21	Total Revenue Lag Days	Sum Ln17 to Ln19				**59.44**

Calculation of Purchased Gas Costs

Weighted Expense Lead Time: **35.49** **days**

DIRECT TESTIMONY OF PAUL R. MOUL

INTRODUCTION AND SUMMARY OF RECOMMENDATIONS

Q. Please state your name, occupation and business address.

A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road, Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P. Moul & Associates, an independent financial and regulatory consulting firm. My educational background, business experience and qualifications are provided in Appendix A, which follows my direct testimony.

Q. What is the purpose of your direct testimony?

A. My testimony presents evidence, analysis and a recommendation concerning the appropriate cost of equity and overall rate of return that the Pennsylvania Public Utility Commission ("PPUC" or the "Commission") should recognize in determining the revenues that Peoples Natural Gas Company LLC ("Peoples" or the "Company") should realize as a result of this proceeding. My analysis and recommendation are supported by the detailed financial data contained in Exhibit PRM-1, which is a multi-page document divided into fourteen (14) schedules.

Q. Based upon your analysis, what is your conclusion concerning the appropriate rate of return for the Company in this case?

A. My conclusion is that the Company's cost of common equity is 11.75%. The 11.75% cost of equity includes recognition of the exemplary performance of the Company's management, as a provider of high quality customer service and as a leader in the replacement of cast iron mains and the rehabilitation of its infrastructure. That is to say, the cost of equity that I am proposing is comprised

of an 11.50% market-determined rate plus 0.25% for management performance. My cost of equity determination should be viewed in the context of increased capital costs revealed by the highest interest rates that have been seen in the past fifteen (15) years. Moreover, supportive regulation is essential, especially at a time of increased infrastructure improvements now underway by the Company. As shown on page 1 of Schedule 1, I have presented the weighted average cost of capital for the Company, which is calculated with the September 30, 2025 Fully Projected Future Test Year ("FPFTY"). The Company's proposed rate of return is shown below:

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Debt	45.33%	4.37%	1.98%
Common Equity	54.67%	11.75%	6.42%
Total	100.00%		8.40%

The resulting overall cost of capital, which is the product of weighting the individual capital costs by the proportion of each respective type of capital, should establish a compensatory level of return for the use of capital and, if achieved, will provide the Company with the ability to attract capital on reasonable terms.

Q. What background information have you considered in reaching a conclusion concerning the Company's cost of capital?

A. The Company provides natural gas service to over 700,000 customers in Pittsburgh and surrounding counties in western Pennsylvania. The Company

consists of its legacy operations and those of T. W. Phillips Gas and Oil Company and Equitable Gas Company. For the Historic Test Year ("HTY"), gas throughput (both sales and transportation) for Peoples was comprised of approximately 45% to residential, 27% to commercial, 28% to industrial customers. The Company's top ten customers represent approximately 15 million MCF, or approximately 13% of total throughput, but less than 1% of revenue. Further, the Company provides discounted service to commercial and industrial accounts that have access to competitive sources of supply. The Company obtains its natural gas supply from both local Pennsylvania producers and purchases that are delivered by interstate pipelines. The Company supplements flowing natural gas with gas withdrawn from underground storage. Peoples is a wholly-owned subsidiary of PNG Companies, LLC, which is ultimately owned by Essential Utilities, Inc., a New York Stock Exchange listed company. Essential also owns water and wastewater utilities and is categorized as a water utility holding company by The Value Line Investment Survey.

Q. How have you determined the cost of common equity in this case?

A. The cost of common equity is established using capital market and financial data relied upon by investors to assess the relative risk, and hence the cost of equity, for a gas distribution utility, such as the Company. In this regard, I have considered four (4) well-recognized models. These methods include: the Discounted Cash Flow ("DCF") model, the Risk Premium ("RP") analysis, the Capital Asset Pricing Model ("CAPM"), and the Comparable Earnings ("CE") approach. The results of a variety of approaches indicate that the Company's rate

of return on common equity is 11.75%, including recognition of exemplary management performance.

Q. In your opinion, what factors should the Commission consider when determining the Company's cost of capital in this proceeding?

A. The Commission's rate of return allowance must be set to cover the Company's interest and dividend payments, provide a reasonable level of earnings retention, produce an adequate level of internally generated funds to meet capital requirements, be commensurate with the risk to which the Company's capital is exposed, assure confidence in the financial integrity of the Company, support reasonable credit quality, and allow the Company to raise capital on reasonable terms. The return that I propose fulfills these established standards of a fair rate of return set forth by the landmark Bluefield and Hope cases.[1] That is to say, my proposed rate of return is commensurate with returns available on investments having corresponding risks.

Q. How have you measured the cost of equity in this case?

A. The models that I used to measure the cost of common equity for the Company were applied with market and financial data developed from a group of eight (8) gas companies. The companies are identified on page 2 of Schedule 3. I will refer to these companies as the "Gas Group" throughout my testimony. In the Quarterly Earnings Report approved by the Commission on July 13, 2023, the Gas Distribution Company group included all eight companies that are part of my Gas Group.

[1] Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia, 262 U.S. 679 (1923) and F.P.C. v. Hope Natural Gas Co., 320 U.S. 591 (1944).

Q. Please explain the selection process used to assemble the Gas Group?

A. I began with all of the gas utilities contained in The Value Line Investment Survey, which consists of nine companies. Value Line is an investment advisory service that is a widely used source in public utility rate cases. Through the application of my screening process, I eliminated one company. UGI Corp. was removed due to its diversified businesses consisting of six reportable segments, including propane, two international LPG segments, natural gas utility, energy services, and electric generation. The elimination was attributed to operational differences and diversification. The remaining eight companies are identified in page 2 of Schedule 3.

Q. How have you performed your cost of equity analysis with the market data for the Gas Group?

A. I have applied the models/methods for estimating the cost of equity using the average data for the Gas Group. I have not measured separately the cost of equity for the individual companies within the Gas Group, because the determination of the cost of equity for an individual company can be problematic. The use of group average data will reduce the effect of potentially anomalous results for an individual company if a company-by-company approach were utilized.

Q. What noteworthy factors have influenced your cost of equity analysis?

A. My cost of equity analysis reflects the impact of high levels of inflation, which have not been seen for four decades. Indeed, the rate of inflation spiked upward to 9.1% in June 2022, and as of October 2023, it was 3.2%. High levels of inflation, i.e., those above the Federal Open Market Committee ("FOMC") policy

goal of 2%, have an impact on the level of economic activity, the cost of capital – particularly the interest cost of debt, and the need for more cautious financial practices, such as a prudent level of borrowing. While short-term interest rates were at historically low levels during much of the Pandemic, longer term interest rates began to rise in February 2021 and have continued at high levels throughout 2022 and 2023. Indeed, accommodative policy by the FOMC has ended and higher interest rates have occurred and will prevail in the future. The FOMC uses its open market operations to control the Fed Funds rate as a means of implementing its dual mandate of healthy employment and price stability. This was shown by the Fed Funds rate, which has increased 525 basis points since the beginning of 2022 through eleven (11) increases in 20 months. The FOMC paused its rate increase cycle and held rates steady at its meeting on June 14, 2023. Thereafter another rate increase occurred on July 26, 2023. The FOMC has paused again at its meeting on September 20 and November 1. The chairman of the FOMC indicated that additional rate increases could be forthcoming, but at a slowing pace, until its policy goal is achieved according to comments at his press conference on November 1, 2023.

Q. Please summarize your cost of equity analysis.

A. My cost of equity determination was derived from the results of the methods/models identified above. In general, the use of more than one method provides a superior foundation to arrive at the cost of equity. At any point in time, a single method can provide an incomplete measure of the cost of equity. The specific application of these methods/models will be described later in my

testimony. The following table provides a summary of the indicated costs of equity using each of these approaches.

	Gas Group
DCF	11.88%
Risk Premium	11.50%
CAPM	15.42%
Comparable Earnings	12.70%

The range of equity cost rates is 11.50% to 15.42%. By focusing on the lower part of the range, the Company's cost of equity is at least 11.50%. As I will discuss later, Peoples has more risk than the Gas Group and Subgroup attributed to its smaller size and other factors. To the 11.50% minimum cost of equity, twenty-five (25) basis points has been added in recognition of the exemplary performance of the Company's management. The exemplary performance of the Company's management is described in the direct testimony of Mr. Michael Huwar. Mr. Huwar describes the many initiatives that the Company has undertaken, which have produced high quality service at reasonable prices. The combined 11.75% (11.50% + 0.25%) rate of return on common equity is reasonable and cost based because it is within the range of returns (i.e., 11.50% to 15.42%) and recognizes the Company's greater risk as compared to the Barometer group. My recommended rate of return on common equity of 11.75% is likewise conservative because it makes no provision for the prospect that the rate of return may not be achieved due to unforeseen events, such as unexpected spikes in the

cost of purchased products and other expenses. To obtain new capital and retain existing capital, the rate of return on common equity must be high enough to satisfy investors' requirements. From these measures, I recommend a cost of equity of 11.75%, which includes recognition of the exemplary performance of the Company's management.

NATURAL GAS RISK FACTORS

Q. What factors currently affect the business risk of natural gas utilities?

A. Gas utilities face risks arising from competition, economic regulation, the business cycle, and customer usage patterns. Their business profile is influenced by market-oriented pricing for the commodity distributed to customers and open access for the transportation of natural gas for customers.

Natural gas utilities have focused increased attention on safety and reliability issues, energy conservation and efficiency, and the reduction of greenhouse gas emissions. In order to address these issues and to comply with new and pending pipeline safety regulations, natural gas companies are now allocating more of their resources to addressing aging infrastructure.

Finally, the existence of local gas production in the Company's service territory and potential access to interstate pipelines provide a bypass threat to the Company, especially with production from the Marcellus Shale formation. Overall, the Company's risk of competition is considerably higher than that faced by many LDCs, including the members of the Gas Group that I used to measure the Company's cost of equity.

Q. Are there other features of the Company's business that should be considered when assessing the Company's risk?

A. Yes. Most of the Company's residential and commercial customers use natural gas for space heating purposes. This indicates that a large proportion of the Company's residential and commercial customers present a low load factor profile and their energy demands are significantly influenced by temperature conditions, over which the Company has absolutely no control. I should note that for the Gas Group, rate stabilization mechanisms (e.g., weather normalization adjustments, decoupling, infrastructure trackers/riders) provide a common characteristic of most of these companies. In the LDC industry, rate stabilization mechanisms are frequently expected by investors for gas distribution utilities.

Q. Is Peoples proposing to adjust its rates to deal with this issue?

A. Yes. The Company is proposing an increase in its monthly customer charge to more closely align it with its fixed costs. If the Commission does not adopt the Company's proposal, then the Company will continue to have higher risk that would mandate a higher required return in the future. Failing to approve the Company's proposal would miss the opportunity to mitigate one of the high-risk traits of Peoples.

Q. Is the Company also proposing a revenue decoupling feature in its tariff in this case?

A. Yes. Most of the Company's residential customers use natural gas for space heating purposes. Indeed, 81% of residential throughput is to customers with natural gas space heating. This indicates that the energy requirements of a large

proportion of the Company's residential customers are significantly influenced by temperature conditions over which the Company has absolutely no control. If weather patterns in the future do not align with rate case test period data, a weather normalization adjustment ("WNA") feature enables a company to adjust its revenue collections to account for those variations. My cost of equity analysis takes into account the Company's proposed WNA mechanism proposal.

Q. Please explain.

A. My analysis reflects the impact of the WNA on investor expectations through the use of market-determined models. All of the companies in my Gas Group have some form of WNA mechanism that is intended to accomplish the same result as the Company's proposal in this case. As a group, the market prices of these companies' common equity reflect the expectations of investors that the companies' revenues are stabilized to some extent by a WNA. Therefore, my analysis reflects the impacts of decoupling on investor expectations through the use of market-determined models.

As such, the market prices of these companies' common stocks reflect the expectations of investors related to a regulatory mechanism that adjusts revenues for conservation, abnormal weather, and other items. The trend in the industry is to stabilize the recovery of fixed costs, which are unaffected by usage. Indeed, there has been a proliferation of these mechanisms in the LDC business. Because the Gas Group that I use to measure the cost of equity has the risk attributes related to the revenue decoupling mechanism "baked in" to their stock prices, the

absence of the benefit of the WNA would increase the cost of equity as determined by the models that are applied with the Gas Group data.

Q. How does the Company's throughput to large volume users or those with competitive alternatives affect its risk profile?

A. The Company's risk profile is influenced by natural gas delivered to its large industrial and commercial customers and those customers with competitive alternatives. Generally speaking, there are four primary threats to throughput to the Company's largest volume users. First, the Company can and has experienced attrition in this large customer group. Second, the Company's largest customers, which have traditionally used transportation service, have the ability to bypass the Company's system to other gas supply sources such as interstate pipelines, other local distribution companies, and/or nonregulated pipeline contractors providing access to local supplies. Third, in addition to the bypass threat, a material portion of the large customer throughput can be exposed to fuel switching to coal, oil, propane, or other energy sources depending on the cost of natural gas as compared to the cost of these fuels. Finally, in its effort to retain load, the Company is vulnerable to the impacts of business cycles, competition within its customers' industries, and other external factors that can result in shifts of production to customer facilities that are not served by the Company. All of these risks put fixed cost recovery for this class of customers at risk.

Q. Are you aware that a DSIC is available to natural gas utilities in Pennsylvania, and does the DSIC affect the Company's cost of capital?

A. I am aware that the Company has utilized the DSIC in the past. The cost of capital for Peoples, however, is not affected by the DSIC. I say this because most of the proxy group companies (i.e., six of eight companies) whose data has been used to develop the cost of equity for Peoples in this proceeding have a DSIC or similar infrastructure rehabilitation mechanisms. Indeed, Atmos Energy, New Jersey Resources, Northwest Natural Gas, South Jersey Industries, Southwest Gas, and Spire make use of a DSIC or similar infrastructure rehabilitation mechanisms. Hence, whatever the benefit of a DSIC, or other regulatory mechanisms, that impact is already reflected in the market evidence of the cost of equity for the proxy group.

Q. Please indicate how the Company's construction program affects its risk profile.

A. The Company is faced with the requirement to undertake investments to maintain and upgrade existing facilities in its service territory. To maintain safe and reliable service to existing customers, the Company must invest to upgrade its infrastructure. The rehabilitation of the Company's infrastructure represents capital expenditures that do not increase the Company's customer base. Although the Company (including TNP) has made significant strides in reducing its percentage of cast iron and unprotected steel pipe, these facilities still represent 2,889.5 miles (or approximately 22%) of its distribution mains as of year-end 2022. The Company also has 44,832 (or approximately 6%) of its services constructed of unprotected steel. In addition, the Company's gathering lines are

represented by 1,094 miles (or approximate 73%) of unprotected steel pipe. For the future, the Company expects its net capital expenditures to be:

Year	Capital Expenditures ($ 000)
2024	$ 581,600
2025	$ 591,700
2026	$ 572,500
2027	$ 610,700
2028	$ 677,600
Total	$ 3,034,100

The incremental capital expenditures for the next five years of $3,034.1 million represents approximately 108% ($3,034.100 ÷ $2,804.280) of the Company's net utility plant at December 31, 2022. These levels of capital expenditures and ongoing expenditures illustrate the significant capital requirements that the Company must fund going forward.

Q. How should the Commission respond to the issues facing the natural gas utilities and in particular Peoples?

A. The Commission should recognize and take into account the need to replace infrastructure and the competitive environment in the natural gas business in determining the cost of capital for the Company and provide a reasonable opportunity for the Company to actually achieve its cost of capital. A fair rate of return also represents a key to a financial profile that will provide the Company with the ability to raise the significant amount of capital necessary to meet its capital needs on reasonable terms.

FUNDAMENTAL RISK ANALYSIS

Q. Is it necessary to conduct a fundamental risk analysis to provide a framework for a determination of a utility's cost of equity?

A. Yes, it is. It is necessary to establish a company's relative risk position within its industry through a fundamental analysis of various quantitative and qualitative factors that bear upon investors' assessment of overall risk. The qualitative factors that bear upon Company risk have already been discussed previously. The quantitative risk analysis follows. The items that influence investors' evaluation of risk and their required returns were described above. For this purpose, I compared the Company to the S&P Public Utilities, an industry-wide proxy consisting of various regulated businesses, and to the Gas Group.

Q. What are the components of the S&P Public Utilities?

A. The S&P Public Utilities is a widely recognized index that is comprised of electric power and natural gas companies. These companies are identified on page 3 of Schedule 4.

Q. What companies comprise the gas group?

A. My Gas Group consists of the following companies: Atmos Energy Corp., Chesapeake Utilities Corporation, New Jersey Resources Corp., NiSource, Inc., Northwest Natural Holding Co., ONE Gas, Inc., Southwest Gas Holdings, and Spire, Inc.

Q. Is knowledge of a utility's bond rating an important factor in assessing its risk and cost of capital?

A. Yes. Knowledge of a company's credit quality rating is important because the cost of each type of capital is directly related to the associated risk of the firm. So, while a company's credit quality risk is shown directly by the rating and yield on its bonds, these relative risk assessments also bear upon the cost of equity. This is because a firm's cost of equity is represented by its borrowing cost, plus compensation to recognize the higher risk of an equity investment compared to debt.

Q. How do the credit quality ratings compare for the Company, the Gas Group, and the S&P Public Utilities?

A. The Company obtains its external capital from PNG Companies, and as such it has no rating on its debt. Presently, the credit quality ratings for PNG Companies are Baa1 from Moody's Investors Service ("Moody's") and A from Standard & Poor's Corporation ("S&P"). These ratings represent the Long Term ("LT") issuer rating by Moody's and the corporate credit rating ("CCR") designation by S&P, which focuses upon the credit quality of the issuer of the debt rather than upon the debt obligation itself.

For the Gas Group, the average LT issuer rating is A3 by Moody's and the average CCR is A- by S&P, as displayed on page 2 of Schedule 3. For the S&P Public Utilities, the average credit quality rating is A3 by Moody's and BBB+ by S&P, as displayed on page 3 of Schedule 4. Many of the financial indicators that I will subsequently discuss are considered during the rating process.

Q. How do the financial data compare for the Company, the Gas Group, and the S&P Public Utilities?

A. The broad categories of financial data that I will discuss are shown on Schedules 2, 3, and 4. The data cover the five-year period 2018-2022. The important categories of relative risk may be summarized as follows:

Size. In terms of capitalization, the Company is smaller than the average size of the Gas Group, and smaller still than the average size of the S&P Public Utilities. Indeed, the Company is approximately one-third the average size of the Gas Group. All other things being equal, a smaller company is riskier than a larger company because a given change in revenue and expense has a proportionately greater impact on a small firm. As I will demonstrate later, the size of a firm can impact its cost of equity.

Market Ratios. Market-based financial ratios, such as earnings/price ratios and dividend yields, provide a partial measure of the investor-required cost of equity. If all other factors are equal, investors will require a higher rate of return for companies that exhibit greater risk, in order to compensate for that risk. That is to say, a firm that investors perceive to have higher risks will experience a lower price per share in relation to expected earnings.[2]

There are no market ratios available for the Company because its stock is owned by PNG Companies, whose stock is also not traded. The five-year average price-earnings multiple were equivalent for the Gas Group and the S&P Public Utilities. The five-year average dividend yield was lower for the Gas Group as

[2]For example, two otherwise similarly situated firms each reporting $1.00 in earnings per share would have different market prices at varying levels of risk (i.e., the firm with a higher level of risk will have a lower share value, while the firm with a lower risk profile will have a higher share value).

compared to the S&P Public Utilities. The five-year average market-to-book ratio was somewhat lower for the Gas Group as compared to the S&P Public Utilities.

Common Equity Ratio. The level of financial risk is measured by the proportion of long-term debt and other senior capital that is contained in a company's capitalization. Financial risk is also analyzed by comparing common equity ratios (the complement of the ratio of debt and other senior capital). That is to say, a firm with a high common equity ratio has lower financial risk, while a firm with a low common equity ratio has higher financial risk. The five-year average common equity ratios, based on permanent capital, were 58.8% for Peoples, 49.0% for the Gas Group, and 40.5% for the S&P Public Utilities. The historic common equity ratio for Peoples was higher than the Gas Group, thereby indicating lower financial risk.

Return on Book Equity. Greater variability (i.e., uncertainty) of a firm's earned returns signifies relatively greater levels of risk, as shown by the coefficient of variation (standard deviation ÷ mean) of the rate of return on book common equity. The higher the coefficients of variation, the greater degree of variability. For the five-year period, the coefficients of variation were 0.045 (2.3% ÷ 11.5%) for the Company, 0.113 (1.1% ÷ 9.7%) for the Gas Group, and 0.040 (0.4% ÷ 10.0%) for the S&P Public Utilities. The variability of the Company's rates of return was much higher than the Gas Group and the S&P Public Utilities, thereby signifying higher risk for the Company.

Operating Ratios. I have also compared operating ratios (the percentage of revenues consumed by operating expense, depreciation, and taxes other than

income).[3] The five-year average operating ratios were 77.3% for the Company, 82.7% for the Gas Group, and 81.0% for the S&P Public Utilities. The Company's average operating ratio was somewhat lower than the Gas Group, thereby indicating lower risk.

Coverage. The level of fixed charge coverage (i.e., the multiple by which available earnings cover fixed charges, such as interest expense) provides an indication of the earnings protection for creditors. Higher levels of coverage, and hence earnings protection for fixed charges, are usually associated with superior grades of creditworthiness. Excluding Allowance for Funds Used During Construction ("AFUDC"), the five-year average pre-tax interest coverage was 4.63 times for the Company, 4.33 times for the Gas Group, and 2.94 times for the S&P Public Utilities. The average interest coverages were highest for Peoples, followed by the Gas Group and the S&P Public Utilities. As compared to the Gas Group, the Company has slightly higher credit risk.

Quality of Earnings. Measures of earnings quality usually are revealed by the percentage of AFUDC related to income available for common equity, the effective income tax rate, and other cost deferrals. These measures of earnings quality usually influence a firm's internally generated funds because poor quality of earnings would not generate high levels of cash flow. Quality of earnings has not been a significant concern for the Company, the Gas Group and the S&P Public Utilities.

[3]The complement of the operating ratio is the operating margin which provides a measure of profitability. The higher the operating ratio, the lower the operating margin.

Internally Generated Funds. Internally generated funds ("IGF") provide an important source of new investment capital for a utility and represent a key measure of credit strength. Historically, the five-year average percentage of IGF to capital expenditures was 37.4% for the Company, 56.3% for the Gas Group and 62.3% for the S&P Public Utilities. The Company's average IGF to construction percentage has been extremely variable historically.

Betas. The financial data that I have been discussing relate primarily to company-specific risks. Market risk for firms with publicly-traded stock is measured by beta coefficients. Beta coefficients attempt to identify systematic risk, i.e., the risk associated with changes in the overall market for common equities.[4] Value Line publishes such a statistical measure of a stock's relative historical volatility to the rest of the market. A comparison of market risk is shown by the Value Line beta of 0.86 as the average for the Gas Group (see page 2 of Schedule 3) and 0.90 as the average for the S&P Public Utilities (see page 3 of Schedule 4).

Q. Please summarize your risk evaluation.

A. The risk of Peoples is greater than that of the Gas Group. Peoples has higher credit risk, which is shown by the Company's small size. Further, based on the Company's business risk characteristics, especially with regard to the threat of bypass from the interstate pipelines, the availability of other sources of gas, its

[4]Beta is a relative measure of the historical sensitivity of the stock's price to overall fluctuations in the New York Stock Exchange Composite Index. The ''Beta coefficient'' is derived from a regression analysis of the relationship between weekly percentage changes in the price of a stock and weekly percentage changes in the NYSE Index over a period of five years. The betas are adjusted for their long-term tendency to converge toward 1.00. A common stock that has a beta less than 1.0 is considered to have less systematic risk than the market as a whole and would be expected to rise and fall more slowly than the rest of the market. A stock with a beta above 1.0 would have more systematic risk.

higher percentage of throughput to its top ten customers, and its infrastructure needs, the Company's overall risk is above that of the Gas Group that is used as a basis to measure the Company's cost of equity.

CAPITAL STRUCTURE RATIOS

Q. Please explain the selection of capital structure ratios for Peoples.

A. In this case, the capital structure ratios of Peoples have been proposed to calculate the rate of return. I will show that the Company's capital structure ratios proposed in this case are reasonable. Furthermore, consistency requires that the embedded cost rate of the Company's senior securities also be employed.

Q. Does Schedule 5 provide the Company's capitalization and capital structure ratios?

A. Yes. Schedule 5 presents the Company's capitalization and related capital structure ratios. The August 31, 2023 capitalization corresponds with the end of the HTY in this case. The August 31, 2024 capital structure is estimated at the end of the future test year ("FTY"), and the September 30, 2025 capital structure is estimated at the end of the FPFTY. The September 30, 2025 forecast capital structure reflects the issuance of $814 million ($547.4 million in the FTY and $266.6 million in the FPFTY of new long-term debt in five series, maturities of $370.071 million of long-term debt and Intercompany Demand Note, equity contributions of $107.409 million and the build-up of retained earnings.

Q. How do the capital structure ratios compare for Peoples and the Gas Group?

A. I have verified the reasonableness of the Company's common equity ratio by considering the historical comparison to the Gas Group. For the historical comparison, the Gas Group had a 45.7% common equity ratio at year-end 2022. The range of ratios was 34.7% to 58.2%. Over the past five years, the range of common equity ratios was 35.2% to 57.8% for the Gas Group. Based on the Value Line forecasts, the range is 32.5% to 60.0%. For the Company, its FPFTY common equity ratio is 54.67%, thereby indicating that the Company's common equity ratio is reasonable because it is within the range of the Gas Group.

Q. Have you included short-term debt in the capital structure for Peoples?

A. No. In reaching this conclusion, I have analyzed the 12-month average balances of short-term debt for the HTY and compared those amounts to the Company's construction work in progress ("CWIP"). I have done this because the Company follows the FERC formula to calculate its AFUDC rate. That formula assigns short-term debt first to CWIP, with any excess balance of CWIP receiving the Company's overall rate of return. In order to avoid double-counting the amount of short-term debt that finances CWIP, those amounts must be removed from the average short-term debt amounts for rate case purposes. For the HTY, the CWIP balances of $144.1 million exceeds the average amount of 24.3 million short-term debt. Therefore, the short-term debt is not considered in the capital structure.

Q. What capital structure ratios do you recommend be adopted for rate of return purposes in this proceeding?

A. Since ratesetting is prospective, the rate of return should, at a minimum, reflect known or reasonably foreseeable changes which will occur during the course of

the FPFTY. As a result, I will adopt the Company's FPFTY capital structure ratios of 45.33%% long-term debt and 54.67% common equity at September 30, 2025. These capital structure ratios are the best approximation of the mix of capital the Company will employ to finance its rate base during the period new rates are in effect.

COSTS OF SENIOR CAPITAL

Q. What cost rate have you assigned to the debt portion of Peoples' capital structure?

A. The determination of the long-term debt cost rate is essentially an arithmetic exercise. This is due to the fact that the Company has contracted for the use of this capital for a specific period of time at a specified cost rate. As shown on page 1 of Schedule 6, I have computed the actual embedded cost rate of debt at August 31, 2023. And on page 3 of Schedule 6, the embedded cost of debt is shown at September 30, 2025. By September 30, 2025, the embedded long-term debt cost rate is estimated to be 4.37%. The FPFTY embedded cost of long-term debt reflects a 7.00% stated interest rate on the proposed issue of $378 million in the FTY and FPFTY. There was a previous issue of $193.584 million of long-term debt in 2023 that carried a stated rate of 2.40%, established when interest rates were low, followed by 5.30% on a $242.416 million issue, after rates moved up as I previously explained. In the FPFTY, the rate is estimated to be 7.00%. The details leading to the development of the individual effective cost rates for each series of long-term debt, using the cost rate to maturity technique, are shown on

page 4 of Schedule 6. The cost rate, or yield to maturity ("ytm"), is the rate of discount that equates the present value of all future interest and principal payments with the net proceeds of the bond.

Q. What overall debt cost rate have you determined for rate of return purposes?

A. As shown on page 3 of Schedule 6, the combined cost of long- and short-term debt is 4.37% for the FPFTY. The 4.37% debt cost rate is related to the amount of total debt shown on Schedule 5 which provides the basis for the 45.33% debt ratio.

COST OF EQUITY – GENERAL APPROACH

Q. Please describe how you determined the cost of equity for the Company.

A. Although my fundamental financial analysis provides the required framework to establish the risk relationships among Peoples, the Gas Group, and the S&P Public Utilities, the cost of equity must be measured by standard financial models that I identified above. Differences in risk traits, such as size, business diversification, geographical diversity, regulatory policy, financial leverage, and bond ratings must be considered when analyzing the cost of equity.

It is also important to reiterate that no one method or model of the cost of equity can be applied in an isolated manner. Rather, informed judgment must be used to take into consideration the relative risk traits of the firm. It is for this reason that I have used more than one method to measure the Company's cost of equity. As I describe below, each of the methods used to measure the cost of equity contains certain incomplete and/or overly restrictive assumptions and constraints

that are not optimal. Therefore, I favor considering the results from a variety of methods. In this regard, I applied each of the methods with data taken from the Gas Group and arrived at a cost of equity of 11.75% for the Company, which includes an increment for exemplary management performance.

DISCOUNTED CASH FLOW

Q. Please describe the DCF model.

A. The DCF model seeks to explain the value of an asset as the present value of future expected cash flows discounted at the appropriate risk-adjusted rate of return. In its simplest form, the DCF-determined return on common stock consists of a current cash (dividend) yield and future price appreciation (growth) of the investment. The dividend discount equation is the familiar DCF valuation model, which assumes that future dividends are systematically related to one another by a constant growth rate. The DCF formula is derived from the standard valuation model: $P = D/(k-g)$, where P = price, D = dividend, k = the cost of equity, and g = growth in cash flows. By rearranging the terms, we obtain the familiar DCF equation: $k= D/P + g$. All of the terms in the DCF equation represent investors' assessment of expected future cash flows that they will receive in relation to the value that they set for a share of stock (P). The DCF equation is sometimes referred to as the "Gordon" model.[5] My DCF results are provided on Schedule 1, page 2, for the Gas Group. The DCF return is 11.88% with the leverage adjustment and 10.47% without the leverage

[5] Although the popular application of the DCF model is often attributed to the work of Myron J. Gordon in the mid-1950s, J.B. Williams exposited the DCF model in its present form nearly two decades earlier.

adjustment for the Gas Group. The leverage adjustment is discussed more fully below.

Among the limitations of the model, there is a certain element of circularity in the DCF method when applied in rate cases. This is because investors' expectations for the future depend upon regulatory decisions. In turn, when regulators depend upon the DCF model to set the cost of equity, they rely upon investor expectations that include an assessment of how regulators will decide rate cases. Due to this circularity, the DCF model may not fully reflect the true risk of a utility. Other limitations of the DCF include the constant P-E multiple assertion that does not conform with actual stock market performance. And, indeed, the FERC has moved to using multiple methods for measuring the cost of equity due to the limitations of the DCF.

Q. What is the dividend yield component of a DCF analysis?

A. The dividend yield reveals the portion of investors' cash flow that is generated by the return provided by the dividends an investor receives. It is measured by the dividends per share relative to the price per share. The DCF methodology requires the use of an expected dividend yield to establish the investor-required cost of equity. For the twelve months ended September 2023, the monthly dividend yields are shown on Schedule 7. The month-end prices were adjusted to reflect the buildup of the dividend in the price that has occurred since the last ex-dividend date (i.e., the date by which a shareholder must own the shares to be entitled to the dividend payment – usually about two to three weeks prior to the actual payment).

For the twelve months ended September 2023, the average dividend yield was 3.43% for the Gas Group based upon a calculation using annualized dividend payments and adjusted month-end stock prices. The dividend yields for the more recent six-month and three-month periods were 3.59% and 3.70%, respectively. For applying the DCF model, I have used the six-month average dividend yield of 3.59% for the Gas Group. The use of this dividend yield will reflect current capital costs while avoiding spot yields. For the purpose of a DCF calculation, the average dividend yield must be adjusted to reflect the prospective nature of the dividend payments, i.e., the higher expected dividends for the future. Recall that the DCF is an expectational model that must reflect investors' anticipated cash flows. I have adjusted the six-month average dividend yield in three different but generally accepted manners and used the average of the three adjusted values as calculated in the lower panel of data presented on Schedule 7.[6] This adjustment adds thirteen basis points to the six-month average historical yield, thus producing the 3.72% adjusted dividend yield for the Gas Group.

Q. What factors influence investors' growth expectations?

A. As noted previously, investors are interested principally in the dividend yield and future growth of their investment (i.e., the price per share of the stock). Future

[6] These adjustments are the 1/2 growth approach, the discrete approach, and the quarterly approach. Under the 1/2 approach, the procedure to adjust the average dividend yield for the expectation of a dividend increase during the initial investment period will be at a rate of one-half the growth component, which assumes that half of the dividend payments will be at the expected higher rate during the initial investment period. Under the discrete approach, the "*g*" in the DCF model reflects the discrete growth in the quarterly dividend, which is required for the periodic form of the DCF to properly recognize that dividends are expected to grow on a discrete basis. The quarterly approach takes into account that investors have the opportunity to reinvest quarterly dividend receipts. Recognizing the compounding of the periodic quarterly dividend payments (D_0) results in this third DCF formulation. This DCF equation provides no further recognition of growth in the quarterly dividend. A compounding of the quarterly dividend yield recognizes the necessity for an adjusted dividend yield.

growth in earnings per share is the DCF model's primary focus because, under the model's assumption that the P-E multiple remains constant, the price per share of stock will grow at the same rate as earnings per share. A growth rate analysis considers a variety of variables to reach a consensus of prospective growth, including historical data and widely available analysts' forecasts of earnings, dividends, book value, and cash flow (all stated on a per-share basis). A fundamental growth rate analysis is frequently based upon internal growth ("b x r"), where "r" is the expected rate of return on common equity and "b" is the retention rate (a fraction representing the proportion of earnings not paid out as dividends). To be complete, the internal growth rate should be modified to account for sales of new common stock (external growth), which is represented by the formula s x v, where "s" is the number of new common shares that the firm expects to issue and "v" is the value that accrues to existing shareholders from selling stock at a price above book value. Fundamental growth, which combines internal and external growth, encompasses the factors that cause book value per share to grow over time.

Growth also can be expressed in multiple stages. This expression of growth consists of an initial "growth" stage during which a firm enjoys rapidly expanding markets, high profit margins, and abnormally high growth in earnings per share. Thereafter, a firm enters a "transition" stage during which fewer technological advances and increased product saturation begin to reduce the growth rate and profit margins come under pressure. During the "transition" stage, investment opportunities begin to mature, capital requirements decline, and a firm begins to pay out a larger percentage of earnings to shareholders. Finally, the mature or

"steady-state" stage is reached when a firm's earnings growth, payout ratio, and return on equity stabilize at levels where they remain for the life of a firm. The three stages of growth assume a step-down of high initial growth to lower sustainable growth. Even if these three stages of growth can be envisioned for a firm, the third "steady-state" growth stage, which is assumed to remain fixed in perpetuity, represents an unrealistic expectation because the three stages of growth can be repeated. That is to say, the stages can be repeated where growth for a firm ramps up and ramps down in cycles over time. For these reasons, there is no need to analyze growth rates individually for each cycle, but rather to rely upon analysts' growth forecasts that are used by investors when pricing common stocks.

Q. What factor should be considered in the determination of an appropriate growth rate?

A. The growth rate used in a DCF calculation should measure investor expectations. Investors consider both company-specific variables and overall market sentiment (i.e., level of inflation rates, interest rates, economic conditions, etc.) when balancing their capital gains expectations with their dividend yield requirements. Investors are not influenced solely by a single set of company-specific variables weighted in a formulaic manner. Therefore, all relevant growth rate indicators should be evaluated using a variety of techniques when formulating a judgment of investor-expected growth.

Q. What data for the Gas Group have you considered in your growth rate analysis?

A. I considered the growth in the financial variables shown on Schedules 8 and 9, which reflect historical (Schedule 8) and projected (Schedule 9) rates of growth in earnings per share, dividends per share, book value per share, and cash flow per share for the Gas Group. While analysts will review all measures of growth, as I have done, earnings per share growth directly influences the expectations of investors for the future performance of utility stocks. Forecasts of earnings growth are required because the DCF model is forward-looking, and, with the constant P-E multiple and constant payout ratio that the DCF model assumes, all other measures of growth will mirror earnings growth. The historical growth rates, which were also reviewed to gain a perspective on the industry, were obtained from the Value Line publication that provides this data. While historical data cannot be ignored, they are much less significant when applying the DCF model than projections of future growth. Investors cannot purchase the past earnings of a utility. To the contrary they are only entitled to future earnings, which are the focus of growth projections. Furthermore, if significant weight is assigned to historical performance, the historical data are double-counted because they are already factored into analysts' forecasts of earnings growth.

Q. Is a five-year investment horizon associated with the analysts' forecasts consistent with the traditional DCF model?

A. Yes, it is. Although the constant form of the DCF model assumes an infinite stream of cash flows, investors do not expect to hold an investment indefinitely. Rather

than viewing the DCF in the context of an endless stream of growing dividends (e.g., a century of cash flows), the growth in the share value (i.e., capital appreciation, or capital gains yield) is most relevant to investors' total return expectations. Hence, the sale price of a stock can be viewed as a liquidating dividend that can be discounted along with the annual dividend receipts during the investment-holding period to arrive at the investors' expected return. The growth in the price per share will equal the growth in earnings per share if, as the DCF model assumes, there is no change in the P-E multiple. As such, my company-specific growth analysis, which focuses principally upon five-year forecasts of earnings per share growth, conforms with the type of analysis that influences investors' expectations of their actual total return. Moreover, academic research also focuses on five-year growth rates specifically because market outcomes occurring over that investment horizon are what influence stock prices. Indeed, if investors required forecasts beyond five years in order to properly value common stocks, then it would be reasonable to expect that some investment advisory service would begin publishing that information for individual stocks in order to meet the demands of the marketplace. The absence of such a publication suggests that there is no market for this information because investors do not require forecasts for an infinite series of future data points in order to make informed decisions to purchase and sell stocks.

Q. What are the analysts' forecasts of future growth that you considered?

A. Schedule 9 provides projected earnings per share growth rates taken from analysts' five-year forecasts compiled by IBES/First Call, Zacks, and Value Line. These are

all reliable authorities of projected growth that investors use to make buy, sell, and hold decisions. The IBES/First Call and Zacks estimates are obtained from the Internet and are widely available to investors. The growth rates reported by IBES/First Call and Zacks are consensus forecasts taken from a survey of analysts that make growth projections for these companies. Notably, First Call's earnings forecasts are frequently quoted in the financial press. The Value Line forecasts also are widely available to investors and can be obtained by subscription or free of charge at most public and collegiate libraries. The IBES/First Call and Zacks forecasts are limited to earnings per share growth, while Value Line makes projections of other financial variables. The Value Line forecasts of dividends per share, book value per share, and cash flow per share for the Gas Group are also included on Schedule 9.

Q. What are the projected growth rates published by the sources you discussed?

A. Schedule 9 shows the prospective five-year earnings per share growth rates projected for the Gas Group by IBES/First Call (5.57%), Zacks (5.46%), and Value Line (7.31%).

Q. Are certain growth rate forecasts entitled to greater weight in developing a growth rate for use in the DCF model?

A. Yes. While a variety of factors should be examined to reach a reasonable conclusion on the DCF growth rate, growth in earnings per share should receive the greatest emphasis. Growth in earnings per share is the primary determinant of investors' expectations of the total returns they will obtain from stocks because the capital gains yield (i.e., price appreciation) will track earnings growth if the P-E

multiple remains constant, as the DCF model assumes. Moreover, earnings per share (derived from net income) are the source of dividend payments and are the primary driver of retention growth and its surrogate, i.e., book value per share growth. As such, under these circumstances, greater emphasis must be placed upon projected earnings per share growth. In fact, Professor Gordon, the foremost proponent of the use of the DCF model in setting utility rates, concluded that the best measure of growth for use in the DCF model is a forecast of earnings per-share growth.[7] Consistent with Professor Gordon's findings, projections of earnings per share growth, such as those published by IBES/First Call, Zacks, and Value Line, provide the best indication of investor expectations.

Q. What growth rate do you use in your DCF model?

A. The forecasts shown on Schedule 9 for the Gas Group exhibit a range of average earnings per share growth rates from 5.46% to 7.31%. DCF growth rates should not be established by mathematical formulation, and I have not done so. In my opinion, a growth rate of 6.75% is a reasonable estimate of investor-expected growth for the Gas Group. This value is within the array of analysts' forecasts of five-year earnings per share growth rates. The reasonableness of this growth rate is also supported by the expected continuation of gas utility infrastructure spending. Based upon the dividend yield and growth rate that I have recommended the DCF cost rate would be 10.47%

[7] Gordon, Gordon & Gould, "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management (Spring 1989).

Q. Are the dividend yield and growth components of the DCF adequate to accurately depict the rate of return on common equity when it is used to calculate a utility's weighted average overall cost of capital?

A. The components of the DCF model are adequate for that purpose only if the capital structure ratios are measured by the market value of debt and equity. In the case of the Gas Group, average capital structure ratios are 37.19% long-term debt, 1.38% preferred stock, and 61.43% common equity, as shown on Schedule 10. If book values are used to compute the capital structure ratios, then a leverage adjustment is required.

Q. What is a leverage adjustment?

A. If a firm's capitalization, as measured by its stock price, diverges from its capitalization, measured at book value, the potential exists for a financial risk difference. Such a risk difference arises because a market-valued capitalization contains more equity and less debt than a book-value capitalization and, therefore, has less risk than the book-value capitalization. A leverage adjustment properly accounts for the risk differential between market-value and book-value capital structures.

Q. Why is a leverage adjustment necessary?

A. In order to make the DCF results relevant to the capitalization measured at book value (as is done for rate setting purposes), the market-derived cost rate must be adjusted to account for this difference in financial risk. The only perspective that is important to investors is the return that they can realize on the market value of their investment. As I have measured the DCF, the simple yield (D/P) plus growth (g)

provides a return applicable strictly to the price (P) that an investor is willing to pay for a share of stock. The need for the leverage adjustment arises when the results of the DCF model (k) are to be applied to a capital structure that is different from the capital structure indicated by the market price (P). From the market perspective, the financial risk of the Gas Group is accurately measured by the capital structure ratios calculated from the market-valued capitalization of a firm. If the ratemaking process utilized the market capitalization ratios, then no additional analysis or adjustment would be required, and the simple yield (D/P) plus growth (g) components of the DCF would satisfy the financial risk associated with the market value of the equity capitalization. Because the ratemaking process uses ratios calculated from a firm's book value capitalization, further analysis is required to synchronize the financial risk of the book capitalization with the required return on the book value of the firm's equity. This adjustment is developed through precise mathematical calculations, using well-recognized analytical procedures that are widely accepted in the financial literature. To arrive at that return, the rate of return on common equity is the unleveraged cost of capital (or equity return at 100% equity) plus one or more terms reflecting the increase in financial risk resulting from the use of leverage in the capital structure. The calculations presented in the lower panel of data shown on Schedule 10, under the heading "M&M,"[8] provide a return of 8.81% when applicable to a capital structure with 100% common equity.

[8] Franco Modigliani and Merton H. Miller, "The Cost of Capital, Corporation Finance, and the Theory of Investments," American Economic Review, June 1958, at 261-97. Franco Modigliani and Merton H. Miller, "Taxes and the Cost of Capital: A Correction," American Economic Review, June 1963, at 433-43.

Q. Are there specific factors that influence market-to-book ratios that determine whether the leverage adjustment should be made?

A. No. The leverage adjustment is not intended, nor was it designed, to address the reasons that stock prices vary from book value. Hence, any observations concerning market prices relative to book value are not on point. The leverage adjustment deals with the issue of financial risk and does not transform the DCF result to a book value return through a market-to-book adjustment. Again, the leverage adjustment that I propose is based on the fundamental financial precept that the cost of equity is equal to the rate of return for an unleveraged firm (i.e., where the overall rate of return equates to the cost of equity with a capital structure that contains 100% equity) plus the additional return required for introducing debt and/or preferred stock leverage into the capital structure.

Further, as noted previously, the relatively high market prices of utility stocks cannot be attributed solely to the notion that these companies are expected to earn a return on the book value of equity that differs from their cost of equity determined from stock market prices. Stock prices above book value are common for utility stocks, and indeed the stock prices of non-regulated companies exceed book values by even greater margins. It is difficult to accept that the vast majority of all firms operating in our economy are generating returns far in excess of their cost of capital. Certainly, in our free-market economy, competition should contain such "excesses" if they actually exist.

Finally, the leverage adjustment adds stability to the final DCF cost rate. That is to say, as the market capitalization increases relative to its book value, the

leverage adjustment increases while the simple yield (D/P) plus growth (g) result declines. The reverse is also true: when the market capitalization declines, the leverage adjustment also declines as the simple yield (D/P) plus growth (g) result increases.

Q. Is the leverage adjustment that you propose designed to transform the market return into one that is designed to produce a particular market-to-book ratio?

A. No, it is not. What I label a "leverage adjustment" is merely a convenient way of showing the amount that must be added to (or subtracted from) the result of the simple DCF model (i.e., D/P + g) when the DCF return applies to a capital structure used for ratemaking that is computed with book-value weighting rather than market-value weighting. Although I specify a separate factor, which I call the leverage adjustment, there is no need to do so other than to identify this factor. If I were to express my return solely in the context of the book value weighting that we use to calculate the weighted average cost of capital and ignore the familiar D/P + g expression entirely, then a separate element in the DCF cost of equity determination would not be needed to reflect the differential in financial leverage between a market-value and book-value capitalization. As shown in the bottom panel of data on Schedule 10, the equity return applicable to the book value common equity ratio is equal to 8.81%, which is the return for the Gas Group appropriate for a capital structure with no debt (i.e., a 100% equity ratio) plus 2.96% to compensate investors for the risk of 52.11% debt ratio and 0.11% for a 1.63% preferred stock ratio. These are the book-value ratios that differ markedly from the market-value based ratios I discussed previously. Under this approach, the parts add up to

11.88% (8.81% + 2.96% + 0.11%), and there is no need to even address the cost of equity in terms of D/P + g. To express this same return in the context of the familiar DCF model, I added the 3.72% dividend yield, the 6.75% growth rate, and 1.41% for the leverage adjustment in order to arrive at the same 11.88% return computed directly with the "M&M formula. I know of no means to mathematically solve for the 1.41% leverage adjustment by expressing it in the terms of any particular relationship of market price to book value. The 1.41% adjustment is merely a convenient way to compare the 11.88% return computed using the Modigliani & Miller formulas to the 10.47% return generated by the DCF model (i.e., D_1/P_0 + g, or the traditional form of the DCF shown on Schedule 7) based on a market-value capital structure. A 10.47% return assigned to anything other than the market value of equity cannot equate to a reasonable return on book value that has higher financial risk. My point is that when we use a market-determined cost of equity developed from the DCF model, it reflects a level of financial risk that is different (in this case, lower) from the capital structure stated at book value. This process has nothing to do with targeting any particular market-to-book ratio.

Q. Please provide the DCF return based upon your preceding discussion of dividend yield, growth, and leverage.

A. As explained previously, I have utilized a six-month average dividend yield (D_1/P_0) adjusted in a forward-looking manner for my DCF calculation. This dividend yield is used in conjunction with the growth rate (g) previously developed. The DCF also includes the leverage modification (Lev.) required when the book value equity ratio is used in determining the weighted average cost of capital in the ratemaking

process rather than the market value equity ratio related to the price of stock. The resulting DCF cost rate is 11.88%, computed as follows:

	D_1/P_0	+	g	+	$lev.$	=	k
Gas Griyo	3.72%	+	6.75%	+	1.41%	=	11.88%

The DCF result shown above represents the simplified (i.e., Gordon) form of the model that contains a constant-growth assumption. I should reiterate, however, that the DCF-indicated cost rate provides an explanation of the rate of return on common stock market prices without regard to the prospect of a change in the P-E multiple. An assumption that there will be no change in the P-E multiple is not supported by the realities of the equity market because P-E multiples do not remain constant. This is one of the constraints of this model that makes it important to consider the results of other models when determining a company's cost of equity.

RISK PREMIUM ANALYSIS

Q. Please describe your use of the Risk Premium approach to determine the cost of equity.

A. With the Risk Premium approach, the cost of equity capital is determined by corporate bond yields plus a premium to account for the fact that common equity is exposed to greater investment risk than debt capital. The result of my Risk Premium study is shown on Schedule 1, page 2. That result is 11.50%.

Q. What long-term public utility debt cost rate did you use in your Risk Premium analysis?

A. In my opinion, and as I will explain in more detail further in my testimony, a 5.00% yield represents a reasonable estimate of the prospective yield on long-term, public utility bonds.

Q. What historical data are shown by the Moody's data?

A. I have analyzed the historical yields on the Moody's index of long-term public utility debt as shown on Schedule 11, page 1. For the twelve months ended September 2023 the average monthly yield on Moody's index public utility bonds was 5.47%. For the six- and three-month periods ended September 2023, the yields were 5.48% and 5.66%, respectively. During the twelve months ended September 2023, the range of the yields on public utility bonds were 5.13% to 5.88% dependent on credit rating. Page 2 of Schedule 11 shows the long-run spread in yields between A-rated public utility bonds and long-term Treasury bonds. As shown on page 3 of Schedule 11, the yields on A-rated public utility bonds have exceeded those on Treasury bonds by 1.55% on a twelve-month average basis, 1.46% on a six-month average basis, and 1.42% on a three-month average basis. With these data, 1.25% represents a reasonable, albeit conservative, spread for the yield on A-rated public utility bonds over Treasury bonds.

Q. What forecasts of interest rates have you considered in your analysis?

A. I have determined the prospective yield on A-rated public utility debt by using the Blue Chip Financial Forecasts ("Blue Chip") along with the spread in the yields that I describe below. Blue Chip is a reliable authority and contains consensus forecasts

of a variety of interest rates compiled from a panel of banking, brokerage, and investment advisory services. In early 1999, Blue Chip stopped publishing forecasts of yields on A-rated public utility bonds because the Federal Reserve deleted these yields from its Statistical Release H.15. To independently project a forecast of the yields on A-rated public utility bonds, I have combined the forecast yields on long-term Treasury bonds published on October 1, 2023 and a yield spread of 1.25%, derived from historical data.

Q. How have you used these data to project the yield on A-rated public utility bonds for the purpose of your Risk Premium analyses?

A. Shown below is my calculation of the prospective yield on A-rated public utility bonds using the building blocks discussed above, i.e., the Blue Chip forecast of Treasury bond yields and the public utility bond yield spread. For comparative purposes, I also have shown the Blue Chip forecasts of Aaa-rated and Baa-rated corporate bonds. These forecasts are:

		Blue Chip Financial Forecasts				
		Corporate		30-Year	A-rated Public Utility	
Year	Quarter	Aaa-rated	Baa-rated	Treasury	Spread	Yield
2023	Fourth	5.2%	6.2%	4.4%	1.25%	5.65%
2024	First	5.2%	6.1%	4.3%	1.25%	5.55%
2024	Second	5.0%	6.0%	4.2%	1.25%	5.45%
2024	Third	5.0%	6.0%	4.2%	1.25%	5.45%
2024	Fourth	4.9%	6.0%	4.1%	1.25%	5.35%
2025	First	4.9%	5.9%	4.0%	1.25%	5.25%

Q. Are there additional forecasts of interest rates that extend beyond those shown above?

A. Yes. Twice yearly, Blue Chip provides long-term forecasts of interest rates. In its June 1, 2023 publication Blue Chip published longer-term forecasts of interest rates,

which were reported to be:

	Blue Chip Financial Forecasts		
	Corporate		30-Year
Averages	Aaa-rated	Baa-rated	Treasury
2024-2028	4.8%	5.7%	3.8%
2029-2033	5.0%	5.9%	3.9%

The longer-term forecasts by Blue Chip suggest that interest rates will move up from the levels revealed by the near-term forecasts. A 5.00% yield on A-rated public utility bonds represents a reasonably conservative benchmark for measuring the cost of equity in this case. All the data I used to formulate my conclusion as to a prospective yield on A-rated public utility debt are available to investors, who regularly rely upon such data to make investment decisions.

Q. What equity risk premium have you determined for public utilities?

A. To develop an appropriate equity risk premium, I analyzed the results from 2022 SBBI Yearbook, Stocks, Bonds, Bills and Inflation. My investigation reveals that the equity risk premium varies according to the level of interest rates. That is to say, the equity risk premium increases as interest rates decline, and it declines as interest rates increase. This inverse relationship is revealed by the summary data presented below and shown on Schedule 12, page 1.

Common Equity Risk Premiums	
Low Interest Rates	7.13%
Average Across All Interest Rates	5.96%
High Interest Rates	4.76%

Based on my analysis of the historical data, the equity risk premium was 7.13% when the marginal cost of long-term government bonds was low (i.e., 2.83%, which was the average yield during periods of low rates). Conversely, when the yield on long-term government bonds was high (i.e., 7.03% on average during periods of high interest rates), the spread narrowed to 4.76%. Over the entire spectrum of interest rates, the equity risk premium was 5.96% when the average government bond yield was 4.93%. From these data, I have utilized a 6.50% equity risk premium. The equity risk premium of 6.50% is between the premiums associated with low interest rates (i.e., 7.13%) and average for the entire historical period interest rates (i.e., 5.96%).

Q. What common equity cost rate did you determine based on your Risk Premium analysis?

A. The cost of equity (i.e., "k") is represented by the sum of the prospective yield for long-term public utility debt (i.e., "i") and the equity risk premium (i.e., "RP"). The Risk Premium approach provides a cost of equity of:

	i	+	RP	=	k
Gas Group	5.00%	+	6.50%	=	11.50%

CAPITAL ASSET PRICING MODEL

Q. How is the CAPM used to measure the cost of equity?

A. The CAPM uses the yield on a risk-free interest-bearing obligation plus a rate of return premium that is proportional to the systematic risk of an investment. As shown on page 2 of Schedule 1, the result of the CAPM is 15.42% for the Gas

Group with the leverage adjustment. Without the leverage adjustment, the CAPM result is 13.09% (15.42% - (0.24 x 9.68%)) through use of the Value Line beta excluding the leverage adjustment (i.e., 1.10 - 0.86 = 0.24). To compute the cost of equity with the CAPM, three components are necessary: a risk-free rate of return ("Rf"), the beta measure of systematic risk ("β"), and the market risk premium ("Rm-Rf") derived from the total return on the market of equities reduced by the risk-free rate of return. The CAPM specifically accounts for differences in systematic risk (i.e., market risk as measured by the beta) between an individual firm or group of firms and the entire market of equities.

Q. What betas have you considered in the CAPM?

A. For my CAPM analysis, I initially considered the Value Line betas. As shown on page 2 of Schedule 3, the average beta is 0.86 for the Gas Group.

Q. Did you use the Value Line betas in the CAPM determined cost of equity?

A. I used the Value Line betas as a foundation for the leverage adjusted betas that I used in the CAPM. The Value Line betas are measured over a five-year period. The betas must be reflective of the financial risk associated with the ratemaking capital structure that is measured at book value. Therefore, Value Line betas cannot be used directly in the CAPM, unless the cost rate developed using those betas is applied to a capital structure measured with market values. Since we used book values in this case, the Value Line betas must be adjusted for the higher financial risk associated with the book value capital structure. To develop a CAPM cost rate applicable to a book-value capital structure, the Value Line (market value) betas

have been unleveraged and re-leveraged for the book value common equity ratios using the Hamada formula,[9] as follows:

$$\beta l = \beta u \, [1 + (1 - t) \, D/E + P/E]$$

ßl = the leveraged beta, ßu = the unleveraged beta, t = income tax rate, D = debt ratio, P = preferred stock ratio, and E = common equity ratio. The betas published by Value Line have been calculated with the market price of stock and are related to the market value capitalization. By using the formula shown above and the capital structure ratios measured at market value, the beta would become 0.57 for the Gas Group if it employed no leverage and was 100% equity financed. Those calculations are shown on Schedule 10 under the section labeled "Hamada," who is credited with developing those formulas. With the unleveraged beta as a base, I calculated the leveraged beta of 1.10 for the book value capital structure of the Gas Group.

Q. What risk-free rate have you used in the CAPM?

A. As shown on page 1 of Schedule 13, I provided the historical yields on Treasury notes and bonds. For the twelve months ended September 2023, the average yield on 30-year Treasury bonds was 3.92%. For the six- and three-months ended September 2023, the yields on 30-year Treasury bonds were 4.02% and 4.24%, respectively. During the twelve months ended September 2023, the range of the yields on 30-year Treasury bonds was 3.66% to 4.47%.

[9] Robert S. Hamada, "The Effects of the Firm's Capital Structure on the Systematic Risk of Common Stocks;" The Journal of Finance, Vol. 27, No. 2; Papers and Proceedings of the Thirtieth Annual Meeting of the American Finance Association, New Orleans, Louisiana, Dec. 27-29, 1971. (May 1972), pp. 435-52.

The low yields that existed prior to 2022 can be traced to extraordinary events associated with the Pandemic that jolted the capital markets. Since then, much higher rates have been in place. Higher inflation was a contributing factor that prompted the FOMC to raise the Fed Funds rate that I described previously.

Due to high inflation rates above the policy goal of the FOMC, accommodative policy was ended by the FOMC in the first quarter of 2022. Tighter monetary policy exists today and has caused higher interest rates that have already occurred. After the FOMC ended its bond-buying program (i.e., quantitative easing) in March 2022, it is in the process of running off its $9 trillion asset portfolio, which will keep interest rates at elevated levels.

High interest rates clearly point to high capital costs prospectively, as indicated by recent bond yield changes. The yield on 10-year Treasury bonds moved above the 3% level on May 2, 2022, the first time since late 2018. By September 2023, the yield on 30-year Treasury bonds moved to 4.47%, or an increase of 2.80% (or 168%) since December 2020.

As shown on page 2 of Schedule 13, forecasts published by Blue Chip on October 1, 2023 indicate that the yields on long-term Treasury bonds are expected to be in the range of 4.0% to 4.4% during the next six quarters. This means that elevated interest rates will continue near current levels into 2024. The longer-term forecasts show that the yields on 30-year Treasury bonds will average 3.8% from 2024 through 2028 and 3.9% from 2029 to 2033. For the reasons explained previously, forecasts of interest rates should be emphasized at this time in selecting

the risk-free rate of return in CAPM. Hence, I have used a conservative 3.75% risk-free rate of return for CAPM purposes, which considers the Blue Chip forecasts.

Q. What market premium have you used in the CAPM?

A. As shown in the lower panel of data presented on Schedule 13, page 2, the market premium is derived from historical data and the forecast returns. For the historically based market premium, I have used the arithmetic mean obtained from the data presented on Schedule 12, page 1. On that schedule, the market return was 12.21% (12.40% + 12.02% = 24.42% ÷ 2) as the midpoint of the "low" and "average" interest rate environments. During those periods, the yield on long-term government bonds was 3.87% (2.83% + 4.91% = 7.74% ÷ 2). The resulting market premium is 8.34% (12.21% - 3.87%) based on historical data, as shown on Schedule 13, page 2. As also shown on Schedule 13, page 2, I calculated the forecast returns, which show a 14.77% total market return based on the Value Line forecasts. With these data, I calculated a market premium of 11.02% (14.77% - 3.75%) using the forecast data by Value Line. The resulting market premium applicable to the CAPM derived from these sources equals 9.68% (11.02% + 8.34% = 19.36% ÷ 2).

Q. Are there adjustments to the CAPM that are necessary to fully reflect the rate of return on common equity?

A. Yes. The technical literature supports an adjustment relating to the size of the company or portfolio for which the calculation is performed. As the size of a firm decreases, its risk and required return increases. Moreover, in his discussion of the cost of capital, Professor Eugene F. Brigham has indicated that smaller firms have

higher capital costs than otherwise similar larger firms. Also, the Fama/French study (see "The Cross-Section of Expected Stock Returns"; The Journal of Finance, June 1992) established that the size of a firm helps explain stock returns. In an October 15, 1995 article in Public Utility Fortnightly, entitled "Equity and the Small-Stock Effect," it was demonstrated that the CAPM could significantly understate the cost of equity according to a company's size. Indeed, it was demonstrated in the SBBI Yearbook that the returns for stocks in lower deciles (i.e., smaller stocks) had returns in excess of those shown by the simple CAPM. To recognize this fact, I used the mid-cap adjustment of 1.02%, as revealed on page 3 of Schedule 13, for the CAPM calculation. The adjustment here is related to the size of the Gas Group.

Q. What does your CAPM analysis show?

A. Using the 3.75% risk-free rate of return, the leverage adjusted beta of 1.10 for the Gas Group, the 9.68% market premium, and the 1.02% size adjustment, the following result is indicated.

	Rf	+	***ß***	***x (Rm-Rf)***	+	***size***	=	***k***
Gas Group	3.75%	+	1.10	x (9.68%)	+	1.02%	=	15.42%

Excluding the leverage adjusted beta and eliminating the size adjustment, the CAPM result would be 12.07% = (3.75% + .86 (9.68%))

COMPARABLE EARNINGS APPROACH

Q. What is the Comparable Earnings approach?

A. The Comparable Earnings approach estimates a fair return on equity by comparing

returns realized by non-regulated companies to returns that a public utility with similar risk characteristics would need to realize in order to compete for capital. Because regulation is a substitute for competitively determined prices, the returns realized by non-regulated firms with comparable risks to a public utility provide useful insight into investor expectations for public utility returns. The firms selected for the Comparable Earnings approach should be companies whose prices are not subject to cost-based price ceilings (i.e., non-regulated firms) so that circularity is avoided.

There are two avenues available to implement the Comparable Earnings approach. One method involves the selection of another industry (or industries) with comparable risks to the public utility in question, and the results for all companies within that industry serve as a benchmark. The second approach requires the selection of parameters that represent similar risk traits for the public utility and the comparable risk companies. Using this approach, the business lines of the comparable companies become unimportant. The latter approach is preferable with the further qualification that the comparable risk companies exclude regulated firms in order to avoid the circular reasoning implicit in the use of the achieved earnings/book ratios of other regulated firms. The United States Supreme Court has held that:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and

> economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. Bluefield Water Works v. Public Service Commission, 262 U.S. 668 (1923).

It is important to identify the returns earned by firms that compete for capital with a public utility. This can be accomplished by analyzing the returns of non-regulated firms that are subject to the competitive forces of the marketplace.

Q. Did you compare the results of your DCF and CAPM analyses to the results indicated by a Comparable Earnings approach?

A. Yes. I selected companies from The Value Line Investment Survey for Windows that have six categories of comparability designed to reflect the risk of the Gas Group. These screening criteria were based upon the range as defined by the rankings of the companies in the Gas Group. The items considered were Timeliness Rank, Safety Rank, Financial Strength, Price Stability, Value Line betas, and Technical Rank. The definition for these parameters is provided on Schedule 14, page 3. The identities of the companies comprising the Comparable Earnings group and their associated rankings within the ranges are identified on Schedule 14, page 1.

I relied upon Value Line data because it provides a comprehensive basis for evaluating the risks of the comparable firms. As to the returns calculated by Value Line for these companies, there is some downward bias in the figures shown on Schedule 14, page 2, because Value Line computes the returns on year-end rather than average book value. If average book values had been employed, the rates of return would have been slightly higher. Nevertheless, these are the returns considered by investors when taking positions in these stocks. Because many of the

comparability factors, as well as the published returns, are used by investors in selecting stocks, and the fact that investors rely on the Value Line service to gauge returns, it is an appropriate database for measuring comparable return opportunities.

Q. What data did you consider in your Comparable Earnings analysis?

A. I used both historical realized returns and forecasted returns for non-utility companies. As noted previously, I have not used returns for utility companies in order to avoid the circularity that arises from using regulatory-influenced returns to determine a regulated return. It is appropriate to consider a relatively long measurement period in the Comparable Earnings approach in order to cover conditions over an entire business cycle. A ten-year period (five historical years and five projected years) is sufficient to cover an average business cycle. Unlike the DCF and CAPM, the results of the Comparable Earnings method can be applied directly to the book value capitalization. In other words, the Comparable Earnings approach does not contain the potential misspecification contained in market models when the market capitalization and book value capitalization diverge significantly. A point of demarcation was chosen to eliminate the results of highly profitable enterprises, which the Bluefield case stated were not the type of returns that a utility was entitled to earn. For this purpose, I used 20% as the point where those returns could be viewed as highly profitable and should be excluded from the Comparable Earnings approach. The average historical rate of return on book common equity was 12.1% using only the returns that were less than 20%, as shown on Schedule 14, page 2. The average forecasted rate of return as published by Value Line is 13.3% also using values less than 20%, as provided on Schedule

14, page 2. Using the average of these data, my Comparable Earnings result is 12.70%, as shown on Schedule 1, page 2.

CONCLUSION ON COST OF EQUITY

Q. What is your conclusion regarding the Company's cost of common equity?

A. Based upon the application of a variety of methods and models described previously, it is my opinion that a reasonable rate of return on common equity is 11.75% for Peoples, which includes twenty-five basis points or 0.25% for recognition of the Company's strong management performance. My cost of equity recommendation is within the range of results and should be considered in the context of the Company's higher risk characteristics relative to the barometer group companies. It is essential that the Commission employ a variety of techniques to measure the Company's cost of equity because of the limitations/infirmities that are inherent in each method. In summary, the Company should be provided an opportunity to realize a 11.75% rate of return on common equity so that it can compete in the capital markets, attain reasonable credit quality, sustain its cash flow in the context of its capital expenditures, and receive recognition of the significant accomplishments that management has achieved.

Q. Does this complete your direct testimony?

A. Yes. However, I reserve the right to supplement my testimony, if necessary, and to respond to witnesses presented by other parties.

APPENDIX A TO DIRECT TESTIMONY OF PAUL R. MOUL

EDUCATIONAL BACKGROUND, BUSINESS EXPERIENCE AND QUALIFICATIONS

I was awarded a degree of Bachelor of Science in Business Administration by Drexel University in 1971. While at Drexel, I participated in the Cooperative Education Program which included employment, for one year, with American Water Works Service Company, Inc., as an internal auditor, where I was involved in the audits of several operating water companies of the American Water Works System and participated in the preparation of annual reports to regulatory agencies and assisted in other general accounting matters.

Upon graduation from Drexel University, I was employed by American Water Works Service Company, Inc., in the Eastern Regional Treasury Department where my duties included preparation of rate case exhibits for submission to regulatory agencies, as well as responsibility for various treasury functions of the thirteen New England operating subsidiaries.

In 1973, I joined the Municipal Financial Services Department of Betz Environmental Engineers, a consulting engineering firm, where I specialized in financial studies for municipal water and wastewater systems.

In 1974, I joined Associated Utility Services, Inc., now known as AUS Consultants. I held various positions with the Utility Services Group of AUS Consultants, concluding my employment there as a Senior Vice President.

In 1994, I formed P. Moul & Associates, an independent financial and regulatory consulting firm. In my capacity as Managing Consultant and for the past forty-one years, I have continuously studied the rate of return requirements for cost of service-regulated firms. In this regard, I have supervised the preparation of rate of return studies, which were employed, in connection with my testimony and in the past for other individuals. I have

presented direct testimony on the subject of fair rate of return, evaluated rate of return testimony of other witnesses, and presented rebuttal testimony.

My studies and prepared direct testimony have been presented before thirty-seven (37) federal, state and municipal regulatory commissions, consisting of: the Federal Energy Regulatory Commission; state public utility commissions in Alabama, Alaska, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Virginia, West Virginia, Wisconsin, and the Philadelphia Gas Commission, and the Texas Commission on Environmental Quality. My testimony has been offered in over 300 rate cases involving electric power, natural gas distribution and transmission, resource recovery, solid waste collection and disposal, telephone, wastewater, and water service utility companies. While my testimony has involved principally fair rate of return and financial matters, I have also testified on capital allocations, capital recovery, cash working capital, income taxes, factoring of accounts receivable, and take-or-pay expense recovery. My testimony has been offered on behalf of municipal and investor-owned public utilities and for the staff of a regulatory commission. I have also testified at an Executive Session of the State of New Jersey Commission of Investigation concerning the BPU regulation of solid waste collection and disposal.

I was a co-author of a verified statement submitted to the Interstate Commerce Commission concerning the 1983 Railroad Cost of Capital (Ex Parte No. 452). I was also co-author of comments submitted to the Federal Energy Regulatory Commission regarding the Generic Determination of Rate of Return on Common Equity for Public Utilities in

1985, 1986 and 1987 (Docket Nos. RM85-19-000, RM86-12-000, RM87-35-000 and RM88-25-000). Further, I have been the consultant to the New York Chapter of the National Association of Water Companies, which represented the water utility group in the Proceeding on Motion of the Commission to Consider Financial Regulatory Policies for New York Utilities (Case 91-M-0509). I have also submitted comments to the Federal Energy Regulatory Commission in its Notice of Proposed Rulemaking (Docket No. RM99-2-000) concerning Regional Transmission Organizations and on behalf of the Edison Electric Institute in its intervention in the case of Southern California Edison Company (Docket No. ER97-2355-000). Also, I was a member of the panel of participants at the Technical Conference in Docket No. PL07-2 on the Composition of Proxy Groups for Determining Gas and Oil Pipeline Return on Equity.

In late 1978, I arranged for the private placement of bonds on behalf of an investor-owned public utility. I have assisted in the preparation of a report to the Delaware Public Service Commission relative to the operations of the Lincoln and Ellendale Electric Company. I was also engaged by the Delaware P.S.C. to review and report on the proposed financing and disposition of certain assets of Sussex Shores Water Company (P.S.C. Docket Nos. 24-79 and 47-79). I was a co-author of a Report on Proposed Mandatory Solid Waste Collection Ordinance prepared for the Board of County Commissioners of Collier County, Florida.

I have been a consultant to the Bucks County Water and Sewer Authority concerning rates and charges for wholesale contract service with the City of Philadelphia. My municipal consulting experience also included an assignment for Baltimore County, Maryland, regarding the City/County Water Agreement for Metropolitan District customers

(Circuit Court for Baltimore County in Case 34/153/87-CSP-2636).

Gas Group
Capitalization and Financial Statistics
2018-2022, Inclusive

Notes:

(1) All capitalization and financial statistics for the group are the arithmetic average of the achieved results for each individual company in the group.
(2) Excluding Accumulated Other Comprehensive Income ("OCI") from the equity account.
(3) Total operating expenses, maintenance, depreciation and taxes other than income taxes as a percent of operating revenues.
(4) Coverage calculations represent the number of times available earnings, both including and excluding AFUDC (allowance for funds used during construction) as reported in its entirety, cover fixed charges.
(5) Internal cash generation/gross construction is the percentage of gross construction expenditures provided by internally-generated funds from operations after payment of all cash dividends divided by gross construction expenditures.
(6) Gross Cash Flow (sum of net income, depreciation, amortization, net deferred income taxes and investment tax credits, less total AFUDC) plus interest charges, divided by interest charges.
(7) Gross Cash Flow plus interest charges divided by interest charges.
(8) Common dividend coverage is the relationship of internally-generated funds from operations after payment of preferred stock dividends to common dividends paid.

Basis of Selection:
The Gas Group includes companies that are contained in The Value Line Investment Survey within the industry group "Natural Gas Utility," they are not currently the target of a publicly-announced merger or acquisition (i.e., South Jersey Industries), and after eliminating UGI Corp. due to its highly diversified businesses.

10-Smallest	1.39	20.27%	15.25%	9.66%	5.59%

Betas are estimated from monthly returns in excess of the 30-day U.S. Treasury bill total return, January 1926–December 2016. Historical riskless rate measured by the 91-year arithmetic mean income return component of 20-year government bonds (5.02%). Calculated in the context of the CAPM by multiplying the equity risk premium by beta. The equity risk premium is estimated by the arithmetic mean total return of the S&P 500 (11.95%) minus the arithmetic mean income return component of 20-year government bonds (5.02%) from 1926–2016. Comparable Earnings Approach
Screening Parameters

Timeliness Rank

The rank for a stock's probable relative market performance in the year ahead. Stocks ranked 1 (Highest) or 2 (Above Average) are likely to outpace the year-ahead market. Those ranked 4 (Below Average) or 5 (Lowest) are not expected to outperform most stocks over the next 12 months. Stocks ranked 3 (Average) will probably advance or decline with the market in the year ahead. Investors should try to limit purchases to stocks ranked 1 (Highest) or 2 (Above Average) for Timeliness.

Safety Rank

A measure of potential risk associated with individual common stocks rather than large diversified portfolios (for which Beta is good risk measure). Safety is based on the stability of price, which includes sensitivity to the market (see Beta) as well as the stock's inherent volatility, adjusted for trend and other factors including company size, the penetration of its markets, product market volatility, the degree of financial leverage, the earnings quality, and the overall condition of the balance sheet. Safety Ranks range from 1 (Highest) to 5 (Lowest). Conservative investors should try to limit purchases to equities ranked 1 (Highest) or 2 (Above Average) for Safety.

Financial Strength

The financial strength of each of the more than 1,600 companies in the VS II data base is rated relative to all the others. The ratings range from A++ to C in nine steps. (For screening purposes, think of an A rating as "greater than" a B). Companies that have the best relative financial strength are given an A++ rating, indicating ability to weather hard times better than the vast majority of other companies. Those who don't quite merit the top rating are given an A+ grade, and so on. A rating as low as C++ is considered satisfactory. A rating of C+ is well below average, and C is reserved for companies with very serious financial problems. The ratings are based upon a computer analysis of a number of key variables that determine (a) financial leverage, (b) business risk, and (c) company size, plus the judgment of Value Line's analysts and senior editors regarding factors that cannot be quantified across-the-board for companies. The primary variables that are indexed and studied include equity coverage of debt, equity coverage of intangibles, "quick ratio", accounting methods, variability of return, fixed charge coverage, stock price stability, and company size.

Price Stability Index

An index based upon a ranking of the weekly percent changes in the price of the stock over the last five years. The lower the standard deviation of the changes, the more stable the stock. Stocks ranking in the top 5% (lowest standard deviations) carry a Price Stability Index of 100; the next 5%, 95; and so on down to 5. One standard deviation is the range around the average weekly percent change in the price that encompasses about two thirds of all the weekly percent change figures over the last five years. When the range is wide, the standard deviation is high and the stock's Price Stability Index is low.

Beta

A measure of the sensitivity of the stock's price to overall fluctuations in the New York Stock Exchange Composite Average. A Beta of 1.50 indicates that a stock tends to rise (or fall) 50% more than the New York Stock Exchange Composite Average. Use Beta to measure the stock market risk inherent in any diversified portfolio of, say, 15 or more companies. Otherwise, use the Safety Rank, which measures total risk inherent in an equity, including that portion attributable to market fluctuations. Beta is derived from a least squares regression analysis between weekly percent changes in the price of a stock and weekly percent changes in the NYSE Average over a period of five years. In the case of shorter price histories, a smaller time period is used, but two years is the minimum. The Betas are periodically adjusted for their long-term tendency to regress toward 1.00.

Technical Rank

A prediction of relative price movement, primarily over the next three to six months. It is a function of price action relative to all stocks followed by Value Line. Stocks ranked 1 (Highest) or 2 (Above Average) are likely to outpace the market. Those ranked 4 (Below Average) or 5 (Lowest) are not expected to outperform most stocks over the next six months. Stocks ranked 3 (Average) will probably advance or decline with the market. Investors should use the Technical and Timeliness Ranks as complements to one another.

P. MOUL & ASSOCIATES
ON BEHALF OF
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED:
DATE ADMITTED:

Peoples Statement No. 13-R

PREPARED REBUTTAL TESTIMONY OF
P. MOUL

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road, Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P. Moul & Associates, an independent financial and regulatory consulting firm.

Q. DID YOU PREVIOUSLY SUBMIT TESTIMONY IN THIS PROCEEDING ON BEHALF OF PEOPLES NATURAL GAS COMPANY, LLC, INC. ("PEOPLES" OR THE "COMPANY")?

A. Yes. I submitted my direct testimony, Peoples Statement No. 13, on December 29, 2023.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony responds to the direct testimony submitted by Anthony Spadaccio, a witness appearing on behalf of the Commission's Bureau of Investigation and Enforcement ("I&E"), and Aaron L. Rothschild, a witness appearing on behalf of the Office of the Consumer Advocate ("OCA"). If I fail to address each and every issue in the testimonies of each of these witnesses, it does not imply agreement with those issues.

Q. WHAT RATE OF RETURN ISSUES HAVE BEEN DISPUTED IN THIS CASE?

A. The Company's capital structure has been challenged by Mr. Rothschild. Mr. Spadaccio has accepted the Company's proposed capital structure. Each of the opposing witnesses

have accepted the Company's proposed cost of debt in this case. The cost of equity has been disputed by both Messrs. Rothschild and Spadaccio. The equity returns proposed by the I&E and OCA witnesses are entirely too low to reflect the risks of Peoples and the prospective cost of equity.

There are three key factors that bear on the rate of return issue in this case. Aside from technical issues that I will discuss later in my rebuttal testimony, the Commission should take into consideration the following:

1) A rate of return that will be reflective of the current capital cost rates, which is today higher than any time since the financial crisis of 2007-08.

2) A rate of return that will reflect and be supportive of the Company's financial and risk profile.

3) The management effectiveness displayed by Peoples.

As I explain below, the opposing party recommendations fail to adequately consider these points and thereby understate the required cost of common equity in this proceeding.

Q. PLEASE SUMMARIZE THE KEY POINTS OF YOUR COST OF EQUITY REBUTTAL TESTIMONY.

A. My key points are:

- Comparable Companies - Mr. Spadaccio has made one deletion to the members of my Gas Group and Mr. Rothschild has made three deletions to the Gas Group that I proposed in this case. I disagree with those eliminations to my Gas Group because my group fairly reflects the risks for the typical natural gas distribution utility.

- Discounted Cash Flow (DCF) - A variety of DCF results are too close to the cost of debt to provide a reliable measure of the cost of equity. As such, alternative measures should be considered as has been Commission practice in other recent proceedings.
- DCF Leverage Adjustment - The I&E and OCA witnesses have not refuted the accuracy of the Company's leverage adjustments to the DCF and beta component of the CAPM.
- Capital Asset Pricing Model - A reasonable application of the CAPM mandates using prospective yields on 30-year Treasury bonds, leverage adjusted betas, and size adjustment.
- Risk Premium Analysis - The Risk Premium approach has previously been considered by the Commission and the results presented by the Company substantiate the Company's proposed return in this case.
- Comparable Earnings Approach - This approach verifies the Company's proposed return in this case.

Management effectiveness of Peoples warrants an equity return above the midpoint of the indicated returns shown by the standard models of the cost of equity.

Q. WHAT ARE THE KEY ASPECTS OF THE RATE OF RETURN ISSUE THAT THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION") SHOULD CONSIDER WHEN DECIDING THIS ISSUE IN THIS CASE?

A. The issues involve the Company's cost of equity and the capital structure. OCA's witness, Mr. Rothschild, has opposed the actual capital structure and instead proposed a

hypothetical capital structure, which is not warranted based upon the Commission's policy on this matter. Mr. Rothschild's use of a hypothetical capital structure, rather than the Company's projected actual capital structure for the FPFTY, is factually wrong and contrary to long-standing Commission practice and precedent. I will detail the Commission recent findings on capital structure below.

My key points on the cost of equity are:

- The recommended equity returns proposed by Messrs. Spadaccio and Rothschild fail to adequately reflect higher interest rates that have transpired since the end of the Pandemic. Today, the return should be higher for reasons I will explain below. Instead, Messrs. Spadaccio and Rothschild are erroneously moving in the other direction. Some of the flawed analysis by opposing witnesses can be traced to the failure by Mr. Spadaccio to give any weight to CAPM and Mr. Rothschild's defective CAPM analysis. These omissions by the opposing witnesses rest with their failure to follow the Commission's lead established in the Aqua and Columbia Water rate case decisions.
- The Commission has recognized that additional methods should be considered when establishing the cost of equity. This is especially important because of monetary policy by the FOMC and relatively high inflation points to a higher cost of equity than formerly. Moreover, the DCF model is slow to respond to changes in bond yields, mandating use of alternative methods, such as CAPM and Risk Premium. Both the I&E and OCA witnesses have inadequately addressed this issue.

- Discounted Cash Flow ("DCF") – many of DCF results by the opposing parties are clearly too low to provide a reliable measure of the cost of equity. This can be traced to the formulaic approach taken by Mr. Spadaccio in applying this model (see pages 26-22 of I&E Statement No. 2). It is troublesome that Mr. Spadaccio only devotes about two pages out of 68 pages of his direct testimony to substantiate his recommended cost of equity. Regarding Mr. Rothschild, he fails to adequately reflect investor expectations of growth. He errs when he gives insufficient weight to analysts' growth rate forecasts of earnings per share that are consistently used by Mr. Spadaccio, me, and the Commission.
- The DCF proposal by Mr. Rothschild provides an inappropriate measure of investor expected returns. Analysts' projections of future growth are the only reasonable evidence of the DCF growth rate and the retention growth rate that he used is entirely inappropriate and has never been adopted in Pennsylvania.
- A multistage DCF model, as proposed by Mr. Rothschild is unnecessary for this case. The only thing that the multistage DCF model does, when properly applied, is to show that his sustainable growth DCF result is too low.
- DCF Leverage Adjustment – Mr. Spadaccio has not refuted the accuracy of my leverage adjustments to the DCF and beta component of the Capital Asset Pricing Model ("CAPM"). Mr. Rothschild draws erroneous conclusions concerning my leverage adjustment.
- CAPM – A reasonable application of the CAPM mandates using 30-year Treasury bond yields, leverage adjusted betas, and size adjustment. With these

elements the CAPM indicates an equity cost rate that is 11.96% following the approach used by Mr. Spadaccio. Indeed, Mr. Spadaccio has proposed an 10.91% CAPM result in this case, even without these considerations. Significantly, he fails to reflect his CAPM result in his cost of equity recommendation. Without the results of the CAPM, Mr. Spadaccio fails to adequately incorporate the current level of high interest rates. And, Mr. Spadaccio fails to incorporate CAPM results that the Commission used in its recent Aqua and Columbia Water rate case decisions.

Q. HOW SHOULD THE RATE OF RETURN SET BY THE COMMISSION SUPPORT THE COMPANY'S FINANCIAL PROFILE?

A. The Commission should set the Company's return on equity at a level that will attract investment in the Company to ensure the Company's financial ability to render safe and reliable service. Applying this principle, the Commission should reject the proposals by Messrs. Spadaccio and Rothschild to lower the Company's return on common equity to 9.96% and 8.02%, respectively. These proposed equity returns would be viewed by investors as unsupportive of the Company's financial condition. The I&E and OCA witnesses provide no explanation why 9.96% or 8.02% would be reasonable. Indeed, in my memory, the Commission has not set a return on equity on an original cost rate base that was less than 9% for an investor-owned utility in the past 40-years. This makes Mr. Rothschild's proposal clearly an outlier and should be rejected. Indeed, the Commission approved 10.24% in the last PECO gas rate case in 2021, and the Aqua Pennsylvania rate case where 10.00% was approved in 2022. Columbia Water received a 9.75% equity return

without any recognition of management performance. There have been dramatic increases in inflation, prompting the Federal Open Market Committee ("FOMC") to increase the federal funds ("Fed Funds") rate to combat inflation. While the March 2024 rate of inflation was 3.5%, a meaningful decline from the peak of 9.1% that occurred in June 2022, it is still above the policy goal of 2% set by the FOMC. Indeed, to combat inflation, the Fed Funds rate has been increased by the FOMC eleven times, amounting to a 5.25% increase. This has been the fastest rate of increase in 40 years. This fact has not been adequately incorporated into the cost of equity proposals of Messrs. Rothschild and Spadaccio. Indeed, with the upward move in interest rates, an equity return above 10% is clearly warranted today. Rather, based on the factors listed below, and for technical reasons set forth later in my rebuttal testimony, the Commission should adopt a substantially higher equity return today for Peoples.

Q. ARE THERE ADDITIONAL ISSUES THAT THE COMMISSION SHOULD CONSIDER WHEN SETTING THE COMPANY'S RETURN?

A. Yes. The investment community would be very concerned if the Commission were to adopt the position of the OCA in this case. If it were to do so, investors would view Pennsylvania regulation as less supportive of the Company at a time of high levels of capital investment and increasing capital cost rates. Over the next five years, Peoples expects capital expenditures to be approximately $3 billion, which represents 108% of the Company's existing Utility Plant In Service. Indeed, Mr. Spadaccio acknowledges (see page 39 of I&E Statement No. 2) that future capex for Peoples will increase by this level, but does not adequately reflect this in his proposed return on equity. If the Commission

were to adopt the returns proposed by the OCA, Pennsylvania's regulatory support would certainly be placed into question by the investment community, particularly in the context of higher capital costs. Although cost allocations, rate design issues, and regulatory policies relative to the cost of service are important considerations, the return on equity used by the Commission to set rates, embodies in a single numerical value a clear signal of regulatory support (or lack thereof) for the financial strength of the utilities that it regulates. In a single figure, the return on equity utilized to set rates provides a common and widely understood benchmark that can be compared from one company to another and is the basis by which returns on all financial assets (stocks – both utility and non-regulated, bonds, money market instruments, and so forth) can be measured. So, while varying degrees of sophistication are required to interpret the meaning of specific Commission policies on technical matters, the return on equity figure is universally understood and communicates to investors the types of returns that they can reasonably expect from an investment in utilities operating in Pennsylvania.

Q. SHOULD THE COMMISSION CONSIDER THE CURRENT HIGH LEVEL OF CAPITAL COSTS WHEN DECIDING THE RETURN ON EQUITY IN THIS CASE?

A. Yes. The Commission should recognize that accommodative policy by the FOMC has ended and higher interest rates have occurred and will prevail in the future. High inflation also has been a driving factor. As noted previously, the rate of inflation spiked upward to 9.1% in June 2022, and as of March 2024, it stood at 3.5%. High levels of inflation have an impact on the level of economic activity, the cost of capital – particularly the interest

cost of debt – and the need for more cautious financial practices, such as a prudent level of borrowing. Today's inflation is substantially higher than the target rate of 2%, which is the FOMC policy goal. Contributing to "sky high" inflation is pandemic-related supply side issues, strong consumer demand, and tight labor markets. Supply disruptions have also significantly impacted the consumer sector of the economy, which developed during the pandemic. While short-term interest rates were at historically low levels during much of the pandemic, interest rates began to rise and have continued at high levels throughout 2023 and 2024.

Q. IS THERE ADDITIONAL EVIDENCE THAT SUGGESTS THAT THE COST OF CAPITAL WILL CONTINUE AT HIGH LEVELS?

A. Yes. To gain a consensus view of future interest rates, I tabulated the forecasts of yields on 10-year Treasury notes published by a variety of well recognized and investor-influencing sources. I chose the 10-year Treasury note because it is available on a consistent basis for each source. The comparisons are:

	2024	2025	2026	2027	2028
Blue Chip	4.10%	3.90%	3.90%	3.90%	3.90%
CBO	4.60%	4.60%	3.90%	3.80%	3.80%

The Blue Chip (December 2023) and CBO (February 2024) reflect the general consensus is that interest rates will remain at elevated levels in the future. The high levels of interest rates represent one key factor that adds to the risk of common equity. The Commission should take into account the forecast of interest rates when it sets the cost of equity for Peoples.

Q. HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?

A. I will cover the issues of (i) capital structure, (ii) the composition of the proxy (i.e., barometer) group, (iii) the weight to be given to the DCF method, (iv) the DCF growth rate, (v) the leverage adjustment to the DCF and CAPM methods, (vi) the CAPM method, (vii) the Risk Premium analysis, (viii) Comparable Earnings, and (ix) management performance as part of the return on equity consideration.

CAPITAL STRUCTURE RATIOS

Q. ARE THERE DIFFERENCES IN THE PROPOSED CAPITAL STRUCTURES UTILIZED BY THE RATE OF RETURN WITNESSES IN THIS CASE?

A. Yes. Mr. Rothschild has erroneously proposed a lower hypothetical common equity ratio in Peoples' capital structure. Mr. Spadaccio has accepted the Company's proposed capital structure, because it falls within the range of capital structures of the proxy group.

Q. HOW DOES THE COMPANY'S CAPITAL STRUCTURE PROPOSAL DIFFER FROM THAT ADVOCATED BY MR. ROTHSCHILD?

A. Mr. Rothschild's proposal is based on the average common equity from his proxy group. In reaching his conclusion on capital structure ratios, Mr. Rothschild says his 50% common equity ratio represent the "high side" of the mean and median common equity ratios of his Gas Proxy Group. He also observes that the common equity ratio of Essential Utilities (the parent company of Peoples) has an impact on his capital structure proposal.

Q. IS THERE ANY BASIS TO DEVIATE FROM THE COMPANY'S ACTUAL CAPITAL STRUCTURE TO SET THE RATE OF RETURN IN THIS CASE?

A. No. The Company's actual capital structure ratios are entirely reasonable and acceptable. That alone is sufficient to support the use of the Company's actual capital structure in this case. Mr. Rothschild might have been led to a different conclusion if he had considered the most recently approved common equity ratio by this Commission rather than rely on the actions of other commissions. Indeed, in its Order Entered on October 25, 2018 in Docket No. R-2017-2640058, the Commission adopted a 54.02% common equity ratio. This is the most relevant benchmark common equity ratio for comparative purposes in this case. Indeed, the Company's proposed common equity ratio of 54.67% is entirely reasonable based a prior Commission decision which have approved equity ratios that are within the range employed by the barometer group. Moreover, the reasonableness of the Company's actual capital structure containing a common equity ratio of 54.67% is revealed by the data provided by Mr. Spadaccio. His data shows that the Company's common equity ratio is within the range employed by his barometer groups and, therefore, supports the level of common equity proposed by the Company. Those comparisons show that his Barometer Group has a range of common equity ratios from 34.62% to 60.01% according to Mr. Spadaccio. This comparison supports the actual 54.67% common equity ratio for Peoples. Here, the Company's actual common equity ratio falls within that range. Hence, the Company's actual common equity ratio conforms with Commission policy that states that the actual, not hypothetical, common equity ratio will be employed when it falls within the Barometer Group's range.

PROXY GROUP

Q. ARE THERE DIFFERENCES IN THE PROXY GROUPS UTILIZED BY THE RATE OF RETURN WITNESSES IN THIS CASE?

A. Yes. Mr. Spadaccio includes only seven companies from my Gas Group in his barometer group. He drops Southwest Gas Holdings. Mr. Rothschild accepts only five of the companies in my Gas Group and drops Chesapeake, New Jersey Resources, and Southwest Gas.

Q. MR. SPADACCIO USED THE PERCENTAGE OF REVENUES DEVOTED TO UTILITY OPERATIONS AS A CRITERION FOR SCREENING COMPANIES TO ASSEMBLE HIS BAROMETER GROUP. IS THIS A CORRECT CRITERION?

A. No. For utilities, the percentage of regulated revenues cannot be used as the criteria to select members of the Barometer Group. This is because the margins on other business segments within Barometer Group companies are generally dissimilar to the utility business. Energy trading is a case in point, which would make revenue comparisons incompatible because of the large revenues and small margins associated with that business. That is to say, energy trading generates large amount of revenues, but little profits because the margins on such trades are very small.

Q. HOW DO THE PERCENTAGES OF UTILITY INCOME AND ASSETS COMPARE TO THE COMPANIES CONTAINED IN YOUR GAS GROUP?

A. Those results are shown below:

		Percent Regulated Operations		
		Revenues	Income	Assets
ATO	Atmos Energy Corp	96%	67%	97%
CPK	Chesapeake Utilities Corp.	62%	81%	77%
NJR	New Jersey Resources Corp.	39%	58%	64%
NI	NiSource, Inc.	100%	101%	93%
NWN	Northwest Natural Gas	95%	92%	93%
OGS	One Gas, Inc.	100%	100%	100%
SWX	Southwest Gas Corp.	39%	99%	67%
SR	Spire, Inc.	88%	83%	80%
	Average	77%	85%	84%

As shown above, the percentage of utility assets is above 64% for all members of my Gas Group. As such, these data show that no elimination to my Gas Group is appropriate in this case.

Q. HAS THE COMMISSION USED YOUR GAS GROUP?

A. Yes. The Commission has recently used my Gas Group in its Quarterly Earnings Report (Docket Number U-2023-3044811) for the year ended September 30, 2023, which was adopted at the Public Meeting on January 18, 2024.

COST OF EQUITY

Q. THE DCF MODEL HAS BEEN USED BY MR. SPADACCIO, MR. ROTHSCHILD AND YOU AS ONE METHOD TO MEASURE THE COST OF EQUITY. WHAT IS YOUR POSITION CONCERNING THE USEFULNESS OF THE DCF METHOD?

A. While the results of a DCF analysis should certainly be given weight, the use of more than one method provides a superior foundation for the cost of equity determination. Since all

cost of equity methods contain certain unrealistic and overly restrictive assumptions, the use of more than one method will capture the multiplicity of factors that motivate investors to commit capital to an enterprise (i.e., current income, capital appreciation, preservation of capital, level of risk bearing). I am aware that the Commission usually expresses its cost of equity determination in the context of the DCF model. But the Commission also considers other methods as well. In its order entered on December 28, 2012, in Docket No. R-2012-2290597, the Commission stated:

> Sole reliance on one methodology without checking the validity of the results of that methodology with other cost of equity analyses does not always lend itself to responsible ratemaking. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived equity return calculation.[1]

Similarly, in the Aqua Pennsylvania decision, the Commission observed:

> In the 2012 PPL Order, the Commission considered PPL's CAPM and RP methods, tempered by informed judgment, instead of DCF-only results. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. Historically, we have relied primarily upon the DCF methodology in arriving at ROE determinations and have utilized the results of the CAPM as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination.[2]

[1] Pennsylvania Public Utility Commission v. PPL Electric Utilities, R-2012-2290597, meeting held December 5, 2012, at 80.

[2] Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc., R-2021-3027385, order entered May 16, 2022, at 154-55.

Again, the Commission recognized the need for additional methods in its decision for Columbia Water.

> In *Aqua 2022*, the Commission determined the ROE by using informed judgement based on I&E's DCF and CAPM methodologies. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. We historically have primarily relied upon the DCF methodology in arriving at ROE determinations and utilized the results of the CAPM, as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our ROE determination.[3]

The Commission has acknowledged the usefulness of other methods, such as CAPM, as a means of establishing a range of reasonable returns. Indeed, it is clear that the Commission has been guided by the results of other models and other factors aside from DCF when setting the DSIC return. The Commission's selection of the rate of return on equity for use in the DSIC is usually set well above the cost of equity indicated by the DCF model alone.

Indeed, the influence of other methods must have an impact on the Commission's attitude toward the DCF model because the Commission's selection of the rate of return on equity for use in the DSIC is usually set well above the cost of equity indicated by the DCF model alone. For example, in the Quarterly Earnings Report at Docket No. M-2023-3044811, the Commission set the DSIC return at 10.15% for the Gas Companies, while the DCF returns were 10.06% using current stock prices and 9.74% using 52-week average stock prices. It is clear that the Commission has been guided by the results of other models and other factors aside from DCF when setting the DSIC return.

[3] Pennsylvania Public Utility Commission v. Columbia Water Company, R-2023-3040258, order entered January 18, 2024, at 108.

Q. WHAT HAS MR. SPADACCIO DONE WITH THE RESULTS OF MODELS OTHER THAN DCF?

A. Nothing. In this case, Mr. Spadaccio essentially ignores the results of the CAPM, calling his CAPM results a basis for comparison purposes only (see page 33 of I&E Statement No. 2). Unlike Mr. Spadaccio, Mr. Rothschild acknowledges (see page 10 of OCA Statement No. 2) that the CAPM serves as a check on the DCF because it considers how inflation and interest rates are impacting the cost of equity. The use of multiple methods provides a more comprehensive and reliable basis to establish a reasonable equity return for Peoples. In his testimony, Mr. Spadaccio shows that the average DCF result is too low by reference to his CAPM results. In this situation, the Commission should consider moving to within the top half of the range of DCF returns submitted in this case due to this understatement. This process would preserve use of DCF, but also accommodate the tendency of the DCF model to understate the required return in this market. Mr. Spadaccio's DCF return range is from 8.49% for Chesapeake to 12.34% for NiSource. Since Mr. Spadaccio's CAPM result is 10.91%, then it stands to reason that the top half of the range of DCF results should be emphasized in this case, because the average DCF by itself is too low. Hence if DCF is to be used exclusively, as argued by Mr. Spadaccio, then the proper DCF return should be 11.15% which is within the top half of the range, i.e., 9.96% + 12.34% = 22.30% ÷ 2, and is without regard to management performance.

Indeed, the CAPM and RP methods reflect directly the changes in interest rates and are an important indicator of higher equity cost rates. Although he claims (see page 33 of I&E Statement No. 2) that DCF sufficiently considers economic factors, including inflation, there is no input in the DCF that Mr. Spadaccio can point to that substantiates his

position. We know that CAPM and RP reflects directly changes in interest rates and those models are more responsive in this regard than DCF.

Q. HAS THE NATIONAL ASSOCIATION OF REGULATORY UTILITY COMMISSIONERS ("NARUC") TAKEN A POSITION ON THE USE OF MULTIPLE METHODS TO MEASURE THE COST OF EQUITY?

A. Yes. The NARUC has published a paper entitled "Cost of Capital and Capital Markets Primer for Utility Regulators." In it, the NARUC said:

> The goal of all cost of equity models is to capture the realities of the capital marketplace and each model does so from a different perspective. Because these financial models are simplifications of the real world, the ROE results are estimates rather than exact discernments of ultimate truth. Ideally, the model results will corroborate each other but may not in practice. Different estimates resulting from different models can usefully frame, bracket, or define a range or zone of estimates.
>
> Investors, investment bankers, and corporate financial professionals use multiple models when evaluating the cost of equity. Likewise, it is desirable for regulators to also use multiple models when evaluating the cost of equity.

DCF APPLICATION BY I&E

Q. WHAT FORM OF THE DCF MODEL HAS BEEN EMPLOYED IN THIS CASE?

A. The constant growth form of the DCF model has been used by Mr. Spadaccio, Mr. Rothschild, and me.

Q. ARE THERE LIMITATIONS TO THE APPLICATION OF THE DCF THAT INDICATES THAT IT SHOULD NOT BE USED ALONE TO ESTABLISH THE EQUITY RETURN, WHICH MR. SPADACCIO SEEMS TO SUPPORT

ESPECIALLY IN TIMES OF RISING OR FALLING INTEREST RATES?

A. My point is that all models have their strengths and weaknesses, and it is important to rely on more than one model in determining the cost of common equity. There are many assumptions associated with the specification of the DCF. These are:

- The form of the model. A choice must be made whether to employ the continuous or discrete form of the model.
- Whether a finite or infinite form of the model realistically represents investor's horizon.
- Whether compounding of the quarterly dividend should be employed.
- The timing of the dividend payments regarding the interval from the ex-dividend date and the stock measurement date needs to be addressed.
- A choice is necessary relative to a representative price that would reasonably represent the rate effective period, e.g., 12-month average, 6-month average, 13-week average, spot, etc.
- Assumptions concerning the structure of returns which under the DCF assumes that the price-earnings multiple, dividend payout ratio, and earned return will be constant.
- Whether single or multiple growth rates better reflect investor expectations.
- Choices concerning the use of historical or forecast growth rates.
- From a historical perspective, whether 10-years, 5-years, or some other historical period is representative of investor expectations.

- Choice among variables to measure growth, e.g., earnings per share, dividends per share, book value per share, cash flow per share, retention growth, price growth, etc.
- Choice of investor influencing growth rates that are available from I/B/E/S First Call, Zacks, and Value Line.
- Whether the growth rate if measured by the formula "b x r" should be modified for external growth, i.e., "sv."
- The potential misspecification of the rate of return applicable to book value when taken directly from DCF if the market price diverges from book value.

Many of the assumptions, especially the constant price-earnings multiple, constant payout rate, and constant earned return, are particularly unrealistic.

Q. DO THE DCF RESULTS PROPOSED BY MR. SPADACCIO PROVIDE A REASONABLE REPRESENTATION OF THE COST OF EQUITY?

A. Not in my opinion. I&E Witness Spadaccio concludes that the DCF cost of equity is 9.96%, while the CAPM cost rate is 10.91% (I&E Statement No. 2, pages 28 and 32). As noted above, the Commission has stated that it would consider other methods when the other methods showed that the DCF method understated the cost of equity. It should be noted that I&E's DCF result in this case is also too low for two reasons. First, there have been significant increases in interest rates and inflation since the Pandemic, indicating a higher cost of equity today. Second, I&E's own CAPM result of 10.91% illustrates its DCF result is too low.

Focusing on the DCF approach, the principal purpose of assembling a barometer group is to avoid relying on data for a single company that may not be representative and to thereby smooth out any abnormalities. That said, when some of the DCF results for companies in the I&E barometer group are unreasonable on their face, the reliability of the method being used, or the witness' application of that method, must be questioned. As indicated below, the DCF results shown below fall into this category:

Company	Average: 52 wk & Spot Yield	+	Growth	=	Total
Chesapeake Utilities Corp.	2.49%	+	6.00%	=	8.49%
ONE Gas, Inc.	4.18%	+	4.67%	=	8.85%

It is a fundamental tenet of finance that the cost of equity must be higher than the cost of debt by a meaningful margin to compensate for the higher risk associated with a common equity investment. As noted above, the DCF return for these companies fail to provide a sufficient spread over the yield of on A-rated public utility bonds, which currently stands at 5.55%. Hence, any DCF return below 9% is clearly unreasonable and should be rejected.

Q. PLEASE SUMMARIZE THE DCF GROWTH RATE ANALYSIS PERFORMED BY MR. SPADACCIO.

A. As shown on page 27 of I&E Statement No. 2, Mr. Spadaccio proposes a growth rate based on his review of analysts' projected earnings growth rates. His growth rate (i.e., 5.91%) is below the 6.75% growth rate that I determined. Referring to Mr. Spadaccio's growth rates, the 4.33% growth rate for Northwest Natural and 4.67% for ONE Gas appear to be outliers.

The range of growth rates for other companies is 5.49% (i.e., Spire) to 8.00% (i.e., NiSource).

Q. What DCF return is indicated from the data presented by Mr. Spadaccio after removing the unduly low results for Chesapeake and ONE Gas?

A. Those results are revealed below:

Company	Average: 52 wk & Spot Yield	+	Growth	=	Total
Atmos Energy Corp.	3.08%	+	7.27%	=	10.35%
NiSource Inc.	4.34%	+	8.00%	=	12.34%
New Jersey Resources Corp.	4.01%	+	5.67%	=	9.68%
Northwest Natural Gas Co.	5.01%	+	4.33%	=	9.34%
Spire Inc.	5.21%	+	5.49%	=	10.70%
Average					**10.48%**

DCF APPLICATION BY OCA

Q. PLEASE SUMMARIZE MR. ROTHSCHILD'S DCF METHODOLOGY.

A. In his DCF analyses, Mr. Rothschild uses dividend yields for the average yearly period and spot prices as of February 29, 2024 (see Exhibit ALR-5, page 1). He arrives at a dividend yield of 4.03% and 4.35% for each calculation. He employs the Retention Growth Rate as his first DCF approach. As part of his retention growth analysis, Mr. Rothschild relies upon book value returns for his proxy group (see Source [C] on page 1 of Exhibit ALR-3).

Q. ARE THERE OTHER ASPECTS OF MR. ROTHSCHILD'S TESTIMONY WHERE HE IS INCONSISTENT IN HIS APPROACH?

A. Yes. Specific instances include:

- Mr. Rothschild states that his recommended ROE is "market-based" and "forward-looking" (page 5 of OCA Statement 3), yet he criticizes forecasts as unreliable (page 89).
- He claims that he uses primarily current, forward-looking market data (e.g., stock prices, bond yields, stock option prices) and then criticizes me for relying on historical data (betas in my CAPM are based on past 5 years of data) and non-market data. Yet, he used historical data himself, which conflicts with his own criticism of historical data. Indeed, Mr. Rothschild used book value data extensively in his analysis. First, he calculates a return on book value as part of his Retention Growth Rate (see page 56 of OCA Statement No. 3). Second, he also employs book value per share growth rates in his non-constant DCF (see page 58 of OCA Statement No. 3).
- Despite his preference for forward-looking data, he claims that using analyst's forecasts would be speculative. He also states that his market-based cost of equity recommendation is not based on future stock prices because he cannot "predict the future" and "capital markets are unpredictable" (page 18 of OCA Statement No. 3).
- His retention method relies on historic data in part, yet he previously criticized my use of historic data.
- He states that he uses an analytical approach focused on market data while my testimony is too focused on non-market data. Yet he uses book value data in his analysis, e.g. growth rate and book value per share. Also, he uses historical data for risk free rate of return for CAPM.

- Although he criticizes analyst forecasts as speculative and unreliable (p. 19), he admits to using them. Specifically, he admits to relying on Value Line and Zacks analyst forecasts in his DCF analysis despite his own criticisms of the data.

Q. AT PAGE 13 OF OCA STATEMENT NO. 3, MR. ROTHSCHILD ASSERTS THAT HE USES AN ANALYTICAL APPROACH FOCUSED PRIMARILY OF MARKET DATA. HE FURTHER ALLEGES THAT YOUR ANALYSIS IS TOO FOCUSED ON NON-MARKET DATA. IS THIS AN ACCURATE DESCRIPTION OF THE EVIDENCE IN THIS CASE?

A. No. Both Mr. Rothschild and I have considered both historical and forecast data for this case. And, we both have used book value data and market data in our analysis. For example, the dividend yield component of the DCF and the risk-free rate of return component of the CAPM are recent averages of historical data. No other approach here is possible. Forecasts have been employed by both of us for the growth component of the DCF and the market risk premium of the CAPM. I have looked at book value measures of historical data, just like Mr. Rothschild as revealed on page 58 of OCA Statement No. 3. His extensive use of history strongly indicates that Mr. Rothschild's analysis is in no way superior to my analysis.

Q. AT PAGE 90 OF OCA STATEMENT NO. 3, MR. ROTHSCHILD CLAIMS THAT IT IS DANGEROUS TO USE ANALYSTS' EPS GROWTH FORECASTS WITHOUT ADDITIONAL INTERPRETATION. DO YOU AGREE?

A. No. As noted above, to properly reflect investor expectations within the limitations of the DCF model, earnings per share growth, which is the basis for the capital gains yield and the source of dividend payments, must be given greatest weight. The reason that earnings per share growth is the primary determinant of investor expectations rests with the fact that the capital gains yield (i.e., price appreciation) will track earnings growth with a constant price earnings multiple (a key assumption of the DCF model). It is also important to recognize that analysts' forecasts significantly influence investor growth expectations and include review of historic growth rates. The theory of the model rests on the assumption that there will be a constant price-earnings multiple, and therefore the price of stock will increase at the same rate as earnings growth – that is, EPS growth is the metric that drives the DCF analysis. Moreover, with the constant payout ratio assumption of the DCF, dividend growth will equal earnings growth in the long-term. Finally, with a consistent market-to-book ratio assumption of the DCF, book value per share will equal the other variables of growth, i.e., earnings per share and dividends per share. It is therefore not surprising that Professor Myron Gordon[4] found that EPS forecast are the best measure of growth in the DCF. I cited to his work on this matter above.

Q. IN HIS DIRECT TESTIMONY, MR. ROTHSCHILD RELIES HEAVILY ON RETENTION GROWTH IN HIS CONSTANT GROWTH DCF ANALYSIS. PLEASE DISCUSS THE LIMITATIONS OF THIS APPROACH.

A. Retention growth, along with external financing growth, is another means of describing

[4]The Company has previously adjusted its interest rates on long-term debt in its rebuttal testimony to reflect changing market conditions. In its 2021 Electric Base Rate Case proceeding at Docket No. R-2021-3023618. Peoples Electric lowered its interest rate, which had the effect of reducing its overall rate of return in that proceeding. Peoples Electric St. No. 5-R, p. 9.

book value per share growth. Other factors also contribute to earnings growth that is not accounted for by the retention growth formula, such as sales of new common stock that Mr. Rothschild has included in his DCF growth rate analysis, reacquisition of common stock previously issued, changes in financial leverage, acquisition of new business opportunities, profitable liquidation of assets, and repositioning of existing assets. In my view, book value per share growth, or its surrogate retention growth, does not represent the proper financial variable to be considered when selecting the DCF growth component. This shows how the return expected of 8.60% translates into a much lower DCF result for his Comparison Group (see page 1 of Exhibit ALR-3).

	Year Ending 2/29/2024	As of 2/29/2024
Return on Equity (Line 2c)	8.60%	8.60%
Dividend Yield on Book Value (Line 2b)	-6.30%	-6.18%
Dividend Yield on Market Value (Lines 2 & 6)	4.11%	4.43%
Result	6.41%	6.85%
New financing growth (Line 4)	1.65%	1.24%
Average DCF return	8.06%	8.09%

As shown above, the retention approach advocated by Mr. Rothschild is clearly inconsistent with the traditional form of the DCF model used by the Commission. It should be noted that the Commission has not previously adopted a retention growth approach in the DCF analysis. A key component of retention growth is the analyst's assumed return

on book common equity. Mr. Rothschild does not and cannot explain why an investor expected return of 8.60% should be reduced to 8.06% or 8.09% in this case, particularly since rates are set on book value (net original cost). If the NiSource book value return were updated for the most recent Value Line report, the group average return would increase to 9.30%.

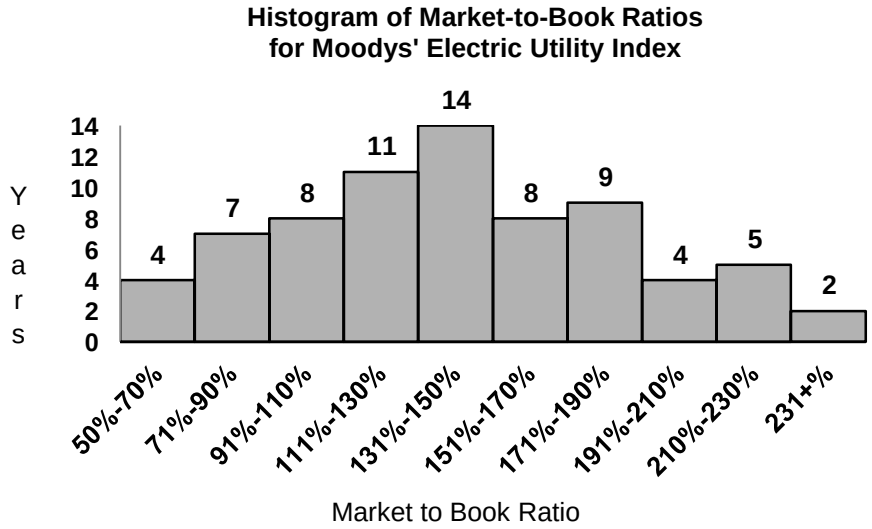
Q. WHAT DCF RESULTS WOULD BE OBTAINED BY RELYING ON FORECASTS OF EARNINGS PER SHARE GROWTH STATED BY MR. ROTHSCHILD THAT IS TYPICALLY CONSIDERED BY THE COMMISSION?

A. Mr. Rothschild himself relied on forecast by analysts published by Value Line and Zacks (see page 56 of OCA Statement No. 3), but fails to use these forecasts directly. This violates the process used by investors that I will discuss below, which results in a mis-specified cost of equity determination by Mr. Rothschild. Mr. Rothschild declined to use directly the earnings per share forecast growth rate of 5.76% by Zacks (see page 3 of Exhibit ALR-5). Had he done so, the resulting DCF return would be 9.91% ((4.03% (1 + 0.5 (0.0576%) + 5.76%) to 10.24% ((4.35% (1 + 0.5 (5.76%)) + 5.76%) with the Zacks growth rate. This provides a far more reasonable DCF result than the DCF returns advocated by Mr. Rothschild (see OCA Statement No. 3 at page 11). As I describe in my pre-filed direct testimony (Statement No. 13), forecast earnings growth is the only valid measure of growth for DCF purposes.

Q. ONE OF THE FEATURES OF MR. ROTHSCHILD'S DIRECT TESTIMONY IS HIS CONTENTION THAT WHEN STOCK PRICES ARE CONSIDERABLY

HIGHER THAN THEIR BOOK VALUE THEN THE RETURN THAT INVESTORS EXPECT TO RECEIVE ON THEIR MARKET PRICES IS LESS THAN WHATEVER IS ANTICIPATED ON BOOK VALUE (APPENDIX A OF OCA STATEMENT NO. 3). PLEASE RESPOND.

A. Mr. Rothschild makes this assertion in Appendix A of his direct testimony. That is to say, when a company has a market-to-book ratio above 1, it is over earning, in Mr. Rothschild's view. But such a claim is unwarranted given the evidence of the history of market-to-book ratios I provide below. The Commission has stated that it does not believe that its rate case decisions can ensure any particular market-to-book ratios (*PUC vs. The York Water Co.*, 62 Pa.PUC 459, Order Entered November 25, 1986). Moreover, if this assertion were correct then it leads to the inevitable conclusion that if investors expected to earn their required return, then stock prices would revert to their book value. However, the market for stocks shows that Mr. Rothschild's assertion is baseless. In the long history of market-to-book ratios for electric utilities since 1945, M/B ratios equal to 1.0 are unusual and ratios of greater than 1.0 are quite common. That data is shown below.



These data show that it is unusual for market prices to gravitate to book value. Indeed, in only about 11% of the years studied did electric utility stock prices approximate book value. In 74% of the years, gas utilities stock prices exceeded book value and sometimes by a substantial amount. The average market-to-book ratio over the past 72 years is 143%.

Q. MR. ROTHSCHILD ALSO USES WHAT HE IDENTIFIES AS "CONSTANT GROWTH – OPTION-IMPLIED GROWTH" MODEL OF THE DCF. WHAT VALUE DO THE RESULTS OF THE MODEL PROVIDE?

A. Very little to none. Mr. Rothschild provides virtually no explanation for this model and only divulges the result on page 2 of Exhibit ALR-3. These are the only two values provided, i.e., 9.42% and 9.43%, that reveal that his retention growth DCF returns are unreasonable.

Q. MR. ROTHSCHILD ALSO SUBMITS A THIRD ALTERNATIVE DCF CALCULATION TO MEASURE THE COST OF EQUITY. IS THIS DATA USEFUL IN THIS CASE?

A. When properly applied it shows that his constant-growth DCF model results are unrealistic. As shown on Rebuttal Exhibit PRM-2, the non-constant DCF results are 15.00% and 12.79%, which demonstrates the unreasonable results of Mr. Rothschild's constant growth DCF model. As opposed to Mr. Rothschilds use of book value per share growth as a key input in his non-constant the DCF, I have corrected his calculation by using EPS and Price-Earnings multiple forecasts by Value Line. These inputs are essential to understanding investors future return expectations, because stock prices are a function of future earnings

per share and expected Price-Earnings multiples. The non-constant DCF results are shown on Rebuttal Exhibit PRM-2.

LEVERAGE ADJUSTMENT

Q. AT PAGES 47-54 OF I&E STATEMENT NO. 2, MR. SPADACCIO RESPONDS TO YOUR LEVERAGE ADJUSTMENT AND ARGUES THAT IT SHOULD BE REJECTED. DO YOU AGREE?

A. No. Mr. Spadaccio states that he opposes the leverage adjustment. In his discussion of my leverage adjustment, Mr. Spadaccio mentions market-to-book ratios ("M/B") (see page 48 of I&E Statement No. 2). I need to be clear that my leverage adjustment is not designed to produce any particular M/B ratio.

Q. PLEASE RESPOND TO MR. SPADACCIO'S CRITICISM OF YOUR LEVERAGE ADJUSTMENT.

A. Mr. Spadaccio offers three reasons for not making a leverage adjustment. First, Mr. Spadaccio notes that the credit rating agencies assess financial risk in terms of a company's booked debt obligations in their analysis of the creditworthiness of a company (see I&E Statement No. 2 page 49). I agree. But this has nothing to do with my leverage adjustment. The credit rating agencies do not measure the market required cost of equity for a company. The credit rating agencies are only concerned with the interests of lenders. They are judging risk associated with a company's ability to make timely payments of principal and interest. Hence, they are not concerned with the cost of equity or how it is applied in the rate-setting context. While Mr. Spadaccio's observation is correct, it has no relevance to

my leverage adjustment.

Q. SECOND, MR. SPADACCIO ALSO QUESTIONS YOUR LEVERAGE ADJUSTMENT BY REFERENCE TO PRIOR COMMISSION ORDERS. PLEASE COMMENT.

A. Mr. Spadaccio points to several decisions where the Commission declined to make a leverage adjustment (see I&E Statement No. 2 pages 50-52). The fact that the Commission declined to use the leverage adjustment in the Aqua Pennsylvania case cited by Mr. Spadaccio does not invalidate its use. Notably, the Commission did not repudiate the leverage adjustment in the Aqua case, but instead arrived at an 11.00% return on equity for Aqua by including a separate return increment for management performance. Just like an increment for management performance is not recognized in all rate cases, so too the Commission seems to be taking a similar approach to the leverage adjustment. As to the City of Lancaster decision, the situation there was quite different than the leverage adjustment that I propose in this case. Lancaster proposed a leverage adjustment to the cost of equity measured with the Hamada formula and applied it to the DCF result, the Risk Premium result, and the CAPM. While the Hamada formula plays a role in the CAPM, it is not applicable to the DCF or the Risk Premium measures of the cost of equity. Hence, this distinguishes the City of Lancaster approach to the leverage adjustment from mine in this case. As to the Peoples Utilities – Electric Division case, there the Commission granted a management performance increment rather than a leverage adjustment when arriving at a 9.85% equity return. And for Columbia, the Company accepted the I&E's recommendation of the allowed return, which was 9.86%, in a case litigated at the height

of the COVID-19 Pandemic. Thus, Columbia chose not to argue the leverage adjustment in Exceptions to the Commission. However, based upon the current inputs to the DCF that indicated a low result, the Commission should now consider using the leverage adjustment, just as it did previously when the DCF was suggesting unusual results. In the PECO - electric rate case, the Commission arrived at a 10.24% return without the leverage adjustment, because that return was already deemed to be on the higher side and no additional adjustment was warranted. Finally, the Commission set the equity return at 10.00% for Aqua Pennsylvania recently without a leverage adjustment, but with an adjustment for management performance.

Q. THIRD, MR. SPADACCIO ARGUES THAT INFORMATION PROVIDED INVESTORS IS BOOK VALUES ACCORDING TO VALUE LINE. IS THIS CORRECT?

A. No. Mr. Spadaccio contends that information presented to investors (see page 53 of I&E Statement No. 3), such as that included in the Value Line reports, argues against my leverage adjustment because investors base their investment decisions on book value. However, the Value Line reports clearly show the market capitalization of each company in his barometer group. This means that investors are well aware of the market capitalization of the electric utility stocks that Mr. Spadaccio relies upon for his analysis of the cost of equity. More importantly, I fundamentally disagree that investors base their decisions on book values. To the contrary, it is the future cash flows that investors expect to realize that determines the price they are willing to pay for a share of common equity. Stated differently, investors are concerned with the return that will be earned on the dollars

they invest (i.e., their market price) and not some accounting value of little relevance to them. The financial risk associated with the book value capital structure is different from the market value of the capitalization. I clearly demonstrate this point on Schedule 10 of Peoples Exhibit B. Hence, the observation of Mr. Spadaccio is misplaced because I have clearly shown the difference in financial risk and that risk difference must be taken into account when arriving at an equity return that is applicable to the weighted average cost of capital using book value weights.

Q MR. ROTHSCHILD CRITICIZED THE LEVERAGE ADJUSTMENT THAT YOU PROPOSE TO ACCOUNT FOR THE DIVERGENCE OF MARKET CAPITALIZATION AND BOOK VALUE CAPITALIZATION. PLEASE COMMENT.

A. Mr. Rothschild claims that the market value capital structure and the book value capital structure are two completely different ways of measuring the same thing. But it must be recognized that, in order to make the DCF results relevant in the rate-setting context, the market-derived cost rate cannot be used without modification. The importance of the leverage modification to the DCF results was fully supported in my direct testimony, wherein it was shown that the market value of the equity in the Gas Group's capitalization was much higher than its book value. The market value common equity ratio was 61.43% compared to a book value common equity ratio 46.26%. The leverage adjustment is necessary to make the market-derived DCF results applicable in the rate-setting context. Because the market-based cost rate is determined based on less financial risk than that reflected in the ratemaking capital structure, and because increased financial risk justifies

a higher return on equity, it is necessary to account for the higher financial risk that arises from the lower common equity ratio measured by book value capitalization.

Q. DO YOU AGREE WITH MR. ROTHSCHILD'S CONTENTION THAT THE MARKET VALUE CAPITAL STRUCTURE AND THE BOOK VALUE CAPITAL STRUCTURE ARE TWO COMPLETELY DIFFERENT WAYS OF MEASURING THE SAME THING?

A. No. As Professors Modigliani and Miller proved 50 years ago (as discussed on page 34 of my direct testimony), the amount of leverage, or proportion of debt, in a firm's capital structure is directly related to the firm's financial risk and cost of equity. Mr. Rothschild's analogy to the measurement of weight on two scales (see page 92 of OCA Statement No. 3) is no analogy at all. Unlike weight, there is only one scale for measuring financial risk and that is the proportion of leverage in a firm's capital structure. A firm's financial risk changes when the quantities of debt and equity capital, on which the proportion is based, are changed. For the Gas Group, the average market value of their debt is $3.537 million and the book value of their debt is $4,023 million. Both of these measures are stated as dollar values; there has been no change in the units of measurement. Likewise, for their equity. The average market value of the Gas Group's common equity is $5.595 million and the corresponding book value is $3,437 million. Again, both are stated in dollars and there has been no change in the units of measurement. A measurement of financial risk that is based on a market-value capitalization cannot be applied directly to book-value capitalization if there is a material difference attributed to a change in financial risk between the two. Unlike weight, where the relationship between the scales of measurement

is fixed (*i.e.*, one-pound equals 0.45359 kilograms), the financial risk associated with a market-value capitalization can be higher or lower than the financial risk associated with a book-value capitalization, depending on the quantities, stated in dollars, of debt and equity measured and their relative proportion to the total capitalization. Financial risk is measured as a percent of fixed-cost (*i.e.*, senior) capital. That is to say, the quantities that are used to measure financial risk account for the different quantities of debt and equity that result from market and book valuations of capital.

According to Mr. Rothschild's analogy (see page 92 of OCA Statement No. 3), one loses weight by merely changing the calibration of the scale from pounds to kilograms. Mr. Rothschild's position that a cost of equity derived from market-value capitalizations may be applied to a book-value capitalization is just like saying one kilogram is the same as one pound. This is, of course, incorrect, just as it is indisputable that there is more financial risk associated with a 45.26% common equity ratio than there is with a 61.43% common equity ratio. The risk-adjusted return associated with a higher market-value capitalization is different than and generally lower than its risk-adjusted return associated with a book-value capitalization. Indeed, Mr. Rothschild's own studies support this proposition. Using his adjustment noted in Source [F] shown on Exhibit ALR-1, the adjustment would be 0.61% (61.43% - 46.26% = 15.17% x 0.04%). Although less than my leverage adjustment of 1.41%, it does establish the propriety of the adjustment. Therefore, in order to apply a measurement of a return measured based on a firm's market-value capitalization to a book-value capitalization, the return measurement must be adjusted before it is applied to the firm's capitalization measured based on book value. All

returns derived from the market models of the cost of equity are related to the price of stock established by investors and not based on book values.

COST OF COMMON EQUITY - CAPITAL ASSET PRICING MODEL

Q. AT PAGE 19 OF I&E STATEMENT NO. 2, MR. SPADACCIO TRIES TO EXPLAIN THAT THE CAPM IS LESS RESPONSIVE THAN DCF TO CHANGES IN THE CAPITAL MARKETS, BECAUSE THE CAPM USES HISTORICAL BETAS AND MEASURES THE RETURN ON EQUITY INDIRECTLY. DO THESE OBSERVATIONS DEFEAT THE USEFULNESS OF THE RESULTS OF THE CAPM?

A. Absolutely not. The CAPM is just as responsive to changes in capital costs as is the DCF. Indeed, the CAPM is more responsive to the current level and trend in interest rates because the risk-free rate of return reflects those factors directly. The market risk premium is also forward-looking, as it is based on a DCF type calculation for the market total return, as proposed by Mr. Spadaccio. And while the beta calculation is based on historical data, Value Line adjusts its historical betas for the tendency of betas to move toward 1.00 on a forward-looking basis. The bottom line is the CAPM is just as responsive to changes in capital costs as any other method.

Q. MR. SPADACCIO PRESENTS A REVENUE REQUIREMENTS CALCULATION SHOWING THE DIFFERENCE ASSOCIATED WITH USING THE DCF AND CAPM RESULTS (SEE PAGE 35 OF I&E STATEMENT NO. 2.) WHAT DOES THIS COMPARISON REVEAL?

A. This comparison is not relevant to this case. If any insight can be made with these inputs, it would be between the midpoint of the range, i.e., 10.44% (10.91% + 9.96% = 20.87% ÷ 2) and the lower end of the range, i.e., 9.96%. That gap is 48 basis points. That produces a $14.081 million difference in revenue requirements, not the $28.162 million Mr. Spadaccio reports.

Q. DO YOU HAVE CONCERNS REGARDING MR. SPADACCIO'S AND MR. ROTHSCHILD'S APPLICATIONS OF THE CAPM?

A. Yes. Mr. Spadaccio's CAPM analysis understates the cost of equity for a number of reasons: (i) his use of the yield on 10-year Treasury notes, (ii) his failure to use leveraged adjusted betas, and (iii) his failure to make a size adjustment. Mr. Rothschild uses a beta that is not leverage adjusted, an unrealistic market risk premium, and ignores the size adjustment. He therefore proposes a totally unrealistic CAPM result of 7.50% to 8.22%. This compares with my CAPM of 15.42%, Mr. Spadaccio's CAPM of 10.91%, and the Quarterly Earnings Report's CAPM of 10.87%. Excluding the leverage and size adjustments, my CAPM result would be 12.07% (13.09% - 1.02%). With regard to Mr. Spadaccio's CAPM analysis, which produces a 10.91% cost rate, it can be argued that he has understated the risk-free rate. On Schedule 9 of I&E Exhibit No. 2, he uses a projected 10-year treasury note yield from Blue Chip on February 1, 2024 and December 1, 2023, producing a 3.88% risk-free rate.

Q. HOW DOES THE USE OF THE YIELD ON 10-YEAR TREASURY NOTES COMPARE WITH YIELDS ON LONGER-TERM TREASURY BONDS?

A. The Blue Chip report shows this comparison. For the fourth quarter of 2023, the gap was 0.14% (4.58% - 4.44%) between the yields on 30-year and 10-year Treasury obligations. For the period 2025-2029, that gap is projected to increase to 0.20% (4.1% - 3.9%) according to the December 1, 2023 Blue Chip. This shows a systematic understatement of Mr. Spadaccio's CAPM returns. Shorter-term rates, such as 10-year notes, respond more to the policy initiatives of monetary officials, while long-term rates, such as 30-year bonds, are more a reflection of investor sentiment of their required returns. For this reason, long-term rates, such as those revealed by 30-year Treasury bonds, should be used to measure the risk-free rate of return.

Q. HOW HAS MR. SPADACCIO UNDERSTATED THE RISK-FREE RATE OF RETURN?

A. The support for his risk-free rate of return is shown on his Schedule 9 of I&E Exhibit No. 2. There, he incorrectly gives the same weight to the yield on 10-year Treasury notes for the second quarter of 2024 as he does for the entire five-year period from 2025 through 2029. This approach leads to an understated risk-free rate of return. Even if 10-year rates are used, it is necessary to correct the weights assigned to the forecast data presented by Mr. Spadaccio. The resulting risk-free rate of return is 3.94% using the yield on 10-year Treasury Notes and 4.16% using the yield on 30-year Treasury Bonds.

Year	10-Year Treasury Yield	30-Year Treasury Yield
2024	4.10%	4.30%
2025	3.90%	4.10%
2026	3.90%	4.10%
2027	3.90%	4.10%
2028	3.90%	4.20%
Average	3.94%	4.16%

Q. HOW SHOULD THESE RESULTS BE USED IN THE CAPM?

A. The risk-free rate of return should be calculated with the data that I present above. The size adjustment of 1.02% must also be incorporated into the CAPM. I have corrected Mr. Spadaccio's CAPM as indicated below using those inputs and the forecast yield on 30-year Treasury bond shown above:

	Rf	+	*β*	(	*Rm*	-	*Rf*	) +	*size*	=	*K*
Gas Group	4.16%	+	0.86	(	12.05%	-	4.16%	) +	1.02%	=	11.97%

Q. MR. SPADACCIO QUESTIONS THE NEED TO ADJUST THE CAPM RESULTS FOR SIZE DIFFERENCES. PLEASE COMMENT.

A. As a preliminary matter, it is noteworthy that CAPM provides compensation solely for systematic risk, and that the size of the Electric Group must be considered separately. Just as investors have choices concerning large cap, midcap, and small cap equity investments offered by many mutual funds and ETFs, size is clearly on important investment criteria for investors. It is well recognized that the return for small cap investments outperform large cap investments. Indeed, the Ibbotson Yearbook shows that small cap stocks have

outperformed large cap stocks by four percentage points (4.00%) over the past ninety-seven (97) years. As I indicated with the data presented on Schedules 2, 3 and 4 of Exhibit PRM-1, the gas utilities are small as they are just 19% of the size of the electric and gas utilities that comprise the S&P Public Utilities. Indeed, recent Federal Energy Regulatory Commission ("FERC") orders specifically prescribe an adjustment to the CAPM due to the size of an enterprise.[5] Mr. Spadaccio's arguments revolve around the purported distinction between regulated utilities and unregulated industrial companies (see pages 57-60 of I&E Statement No. 2). However, the Wong article that he relies upon was authored nearly thirty (30) years ago, and employed data going back into the 1960s. Enormous changes have occurred in the industry since the 1960s that have fundamentally changed the utility business. The Wong article also noted that betas for the non-regulated companies were larger than the betas of the utilities. This, however, is not a revelation, because utilities continue to have lower betas than many other companies. This fact does not invalidate the additional risk associated with small size.

The Wong article further concludes that size cannot be explained in terms of beta. Again, this should not be a surprise. Beta is not the tool that should be employed to make that determination. Indeed, beta is a measure of systematic risk and it does not provide the means to identify the return necessary to compensate for the additional risk of small size. In contrast, the famous Fama/French study (see "The Cross-Section of Expected Stock Returns," The Journal of Finance, June 1992) identified size as a separate factor that helps explain returns.

[5] *See, e.g.*, Association of Businesses Advocating Tariff Equity, 171 FERC ¶61,154 (May 21, 2020).

Q. HOW DOES SIZE AFFECT THE FINANCIAL PERFORMANCE OF A SMALL COMPANY?

A. Examples of the financial consequences of external factors that can influence the financial performance of a small company include loss of a large customer and the effect of unexpected changes in expense.

Q. MR. ROTHSCHILD USES A VARIETY OF APPROACHES TO APPLY THE CAPM. IS THERE ANYTHING UNUSUAL IN HIS APPROACH?

A. Yes. Aside from his consideration of yields on 3-month Treasury bills which are rarely considered in rate cases such as these, he uses a non-standard approach for the selection of his betas and an unusual approach for his market risk premium. He makes CAPM calculations that produce results in the range of 7.50% to 8.09% with spot data and 7.62% to 8.18% with average data. By any reasonable standard, such low returns are simply not credible. All of Mr. Rothschild's CAPM results are below his DCF returns. In contrast, Mr. Spadaccio and I have provided CAPM results that exceed the DCF. Mr. Rothschild does not use betas that are available to investors, but instead uses a "phantom" beta that invalidates his CAPM. Mr. Rothschild calculates "option implied betas" that have not and could not have any influence on the types of returns investors could expect using the CAPM, such as the Value Line betas do. Rather than use betas that are available to or used by investors, Mr. Rothschild has manufactured his own betas. It is well known that investors use the Value Line data. He says he follows the Value Line approach for calculating betas, but he ignores the actual Value Line betas. This makes no sense. There is no evidence that the betas calculated by Mr. Rothschild have any bearing on investor

expected returns, and in setting rates of return that is what is relevant. Even if Mr. Rothschild was correct that his calculations are valid, investors simply could not have relied on them. The Value Line data is relied upon by investors. As such, the Value Line betas should be used directly in the cost of capital computation. To augment the Value Line betas with other information that investors do not use is not appropriate, regardless of the theoretical underpinnings of the modifications.

I know of no other witness in public utility rate cases that use "Historical Blended" betas or "Forward" betas like Mr. Rothschild. Mr. Rothschild has not shown, nor could he, that investors use his betas. If they are not used by investors, they have no relevance in establishing a market-based cost of equity. Mr. Rothschild should have used standard Value Line betas that are used by the Commission, the FERC, Mr. Spadaccio, and almost all other rate of return witnesses, including me. His cumulative probably "Option-Implied Growth Rate" for the S&P 500 is also highly unusual and not supported in other rate cases. To show how unusual Mr. Rothschild's approach is here, just consider the overall market risk of 12.05% that Mr. Spadaccio developed and the 8.30% market return that Mr. Rothschild proposes. With Mr. Rothschild's unconventional approach, it is not surprising that he develops CAPM returns that are not credible when his range is from 7.50% to 8.22%. Those returns are clearly outside the range of reasonableness when Mr. Spadaccio develops a CAPM of 10.91% and I obtained 12.07% (13.09% - 1.02%) without the size adjustment or the leveraged betas (see page 43 of Statement No. 13).

Q. AT PAGES 97-98 OF OCA Statement 3, MR. ROTHSCHILD ALSO CHALLENGES THE ADJUSTMENT THAT YOU MADE TO THE RESULTS OF THE CAPM FOR

THE SIZE OF THE ELECTRIC GROUP. PLEASE RESPOND.

A. A size adjustment is necessary because the financial impact of changes in specific dollar amounts of revenues and costs have a magnified influence on a small company because there are fewer dollars over which those revenues or costs can be spread. The SBBI/Morningstar Yearbook clearly demonstrates that the simple CAPM does not reflect the return that is associated with small size. As Ibbotson has stated:

> The security market line is based on the pure CAPM without adjusting for the size premium. Based on the risk (or beta) of a security, the expected return should fluctuate along the security market line. However, the expected returns for the smaller deciles of the NYSE/AMEX/NASDAQ lie above the line, indicating that these deciles have had returns in excess of those appropriate for their systematic risk.

COST OF COMMON EQUITY - RISK PREMIUM ANALYSIS

Q. DO YOU BELIEVE THE RISK PREMIUM METHOD PROVIDES SIGNIFICANT EVIDENCE OF THE COST OF EQUITY?

A. Yes. In my opinion, the Risk Premium results should be given serious consideration. The Risk Premium method is straight-forward, understandable and has intuitive appeal because it is based on a company's own borrowing rate. The utility's borrowing rate provides the foundation for its cost of equity, which must be higher than the cost of debt in recognition of the higher risk of equity (see Statement No. 13 pages 41-42). So, while Mr. Spadaccio and Mr. Rothschild decline to use the Risk Premium approach to measure the Company's cost of equity, it is an approach that provides a direct and complete reflection of a utility's risk and return because it considers additional factors not reflected in the beta measure of systematic risk. It is particularly useful when investors expect changes in the cost of debt prospectively, which is currently the expectation of investors, as I have explained above

and in Statement No. 13, page 41. Indeed, the Risk Premium approach provides for direct reflection of prospective interest rates in the model and therefore should be given weight in determining the equity cost rate in this case.

Q. WHAT DOES MR. SPADACCIO SAY ABOUT YOUR RISK PREMIUM ANALYSIS?

A. Mr. Spadaccio makes the unfounded assertion that the Risk Premium and CAPM methods should only be used as a comparison to the results of the DCF method because they do not carry over from the investment decision-making process to the utility rate setting process (see pages 20-21 of OCA Statement 3). In fact, it is precisely because investors consider the results of other methods that they too should be used in addition to the DCF in the development of the cost of equity in this proceeding. Mr. Spadaccio's assertion that the Risk Premium method does not measure the current cost of equity as directly as the DCF is similarly without foundation. As I explained in my direct testimony and earlier in this rebuttal testimony, we are facing the prospect of increasing interest rates for the future. I incorporated the trend toward higher interest rates when I developed my Risk Premium cost of equity of 11.50% although, as noted above, actual interest rates on A-rated public utility bonds have already exceeded the projection I used for my Risk Premium cost of equity. Hence, my Risk Premium cost rate is fully responsive to changing market fundamentals and the credit quality of the Electric Group.

Q. MR. ROTHSCHILD CLAIMS (SEE PAGES 94-96 OF OCA STATEMENT NO. 3) THAT YOUR RISK PREMIUM APPROACH IS FLAWED. PLEASE RESPOND.

A. Mr. Rothschild claims that Kroll supply-side equity risk premium is much lower than the risk premium that I established using historical data. His claim is unsupported because it was not shown to be related to the level of interest rates, i.e., it expands when interest rates decline and contracts as interest rates increase, and it is not based on actual measurable returns that are revealed by historical data.

COST OF COMMON EQUITY - COMPARABLE EARNINGS APPROACH

Q. PLEASE RESPOND TO THE CRITICISM OF THE COMPARABLE EARNINGS APPROACH.

A. The underlying premise of the Comparable Earnings method is that regulation should emulate results obtained by firms operating in competitive markets and that a utility must be given an opportunity cost of capital equal to that which could be earned if one invested in firms of comparable risk. For non-regulated firms, the cost of capital concept is used to determine whether the expected marginal returns on new projects will be greater than the cost of capital, i.e., the cost of capital provides the hurdle rate at which new projects can be justified, and therefore undertaken. Further, given the 10-year time frame (i.e., five years historical and five years projected) considered by my study, it is unlikely that the earned returns of non-regulated firms would diverge significantly from their cost of capital.

The Comparable Earnings approach satisfies the comparability standard established in the Hope case. In addition, the financial community has expressed the view that the regulatory process must consider the returns that are being achieved in the non-regulated sector to ensure that regulated companies can compete effectively in the capital markets. Moreover, in a 1994 study that addressed the ROE issue, John Olson (then with Merrill

Lynch) established that equity returns from non-regulated companies provide better assessment of investor requirements than those available for regulated utilities.[6]

MANAGEMENT PERFORMANCE

Q. BOTH MR. SPADACCIO AND MR. ROTHSCHILD OPPOSE ANY RECOGNITION FOR MANAGEMENT PERFORMANCE IN THE DETERMINATION OF THE RETURN ON EQUITY. MR. SPADACCIO AND MR. ROTHSCHILD ASSERT THAT PEOPLES HAS ONLY DONE WHAT IT IS REQUIRED TO BY LAW. HOW DO YOU RESPOND?

A. As I stated in my direct testimony, I believe Peoples has performed in an exemplary manner, as explained by Peoples Witness Wachter, and that performance should be recognized in this case. Mr. Spadaccio simply disagrees, without addressing any of the items highlighted by Mr. Wachter as examples of Peoples's excellent performance. Mr. Rothschild's position regarding management performance is that the models of the cost of equity already incorporate management effectiveness. In each case, neither Messrs. Spadaccio nor Rothschild have shown that Peoples is not entitled to some form of management performance recognition by the Commission. Mr. Wachter's direct and rebuttal testimony establish that the Company's management performance warrants recognition by the Commission.

SUMMARY

[6] "Natural Gas: The Case for ROE Reform," John E. Olson First Vice President, Merrill Lynch & Co., October 11, 1994.

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A. It is my opinion that the equity allowances proposed by Mr. Spadaccio and Mr. Rothschild seriously understate the cost of common equity for Peoples. This is particularly true for Mr. Rothschild's proposal. In an environment of high interest rates and Company-specific risk factors, an opportunity to earn a cost of equity of 11.75% is reasonable for Peoples.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED SURREBUTTAL TESTIMONY OF
PAUL R. MOUL, MANAGING CONSULTANT
P. MOUL & ASSOCIATES
ON BEHALF OF
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: May 3, 2024 **Peoples Statement No. 13-SR**
DATE ADMITTED:

REJOINDER TESTIMONY OF PAUL R. MOUL

Q. PLEASE STATE YOUR NAME, OCCUPATION AND BUSINESS ADDRESS.

A. My name is Paul R. Moul and I am Managing Consultant at the firm P. Moul & Associates. My business address is 251 Hopkins Road, Haddonfield, NJ 08033-3062.

Q. MR. MOUL, HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony (Peoples Statement No. 13) was submitted with the Company's case-in-chief on December 29, 2023 and my rebuttal testimony (Peoples Statement No. 13 No. 5-R) was submitted on April 18, 2024.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. Peoples has requested that I respond to the rebuttal testimony presented by Mr. Aaron L. Rothschild a witness appearing on behalf of the Office of Consumer Advocate ("OCA"). If I fail to address each and every issue in the rebuttal testimony of Mr. Rothschild, it does not imply agreement with those issues.

Q. BASED ON YOUR REVIEW OF THE REBUTTAL TESTIMONY OF MR. ROTHSCHILD, DO YOU PROPOSE ANY CHANGE IN YOUR RECOMMENDED RETURN FOR PEOPLES IN THIS PROCEEDING?

A. No. There was nothing contained in the rebuttal testimony of Mr. Rothschild that changes my position that Peoples is entitled to an 11.75% rate of return on common equity ("ROE") and that the Company's actual capital structure of 45.23% debt and 54.67% common equity should be used in this proceeding.

Q. WHAT ISSUES WERE CONTAINED IN THE SURREBUTTAL TESTIMONY OF OCA WITNESS ROTHSCHILD?

A. Mr. Rothschild has addressed the following issues: (i) he says that the ROE proposed by Mr. Spadaccio is too high and (ii) that the Company's actual capital structure accepted by Mr. Spadaccio is inappropriate.

Q. WHAT IS THE BASIS FOR MR. ROTHSCHILD'S ASSERTIONS?

A. He essentially repeats many of his positions that he set forth in his direct testimony. where he finds that his analysis results in a lower ROE and a capital structure that is more highly leveraged than the Company's actual capital structure supported by Mr. Spadaccio. Accordingly, as a result, he faults Mr. Spadaccio's recommendation.

Q. CAN YOU SHOW HOW THE REBUTTAL TESTIMONY OF MR. ROTHSCHILD DOES NOT UNDERMINE THE ANALYSIS OF MR. SPADACCIO?

A. I have already shown in my rebuttal testimony that Mr. Spadaccio's ROE analysis is flawed and produces an ROE that is too low. To support his position Mr. Rothschild asserts, at page 5, that Mr. Spadaccio failed to consider expenses, as well as income, as it impacts the DCF returns considered by investors. He says the DCF can only be accurate if it considers money taken out by dividends during the holding period. He is way off base with his contention. The DCF represents investor expected positive cash flows that accrue to them during their holding period. Those cash flows consist

of dividend receipts and the sale price of stock at the end of the holding period. I have shown in my rebuttal how that works in the non-constant growth form of the DCF that revealed investor expected returns of 12.79% to 15.00%. First, in an article published in The Wall Street Journal on April 26, 2010, it was reported that 64% of companies had beaten analysts' forecasts since the start of 1999. More importantly, however, investors rely heavily on analysts' forecasts in determining the price they are willing to pay for a particular stock. This was confirmed by the research by Myron Gordon, the "father" of the DCF model in rate cases. I have specifically noted that Myron Godon established that analysts' forecasts of earnings growth is the best growth rate measures in the DCF, and retention growth was not the preferred approach. Second, there is no requirement in the DCF model that the growth rate must include a retention rate factor/percentage. Accordingly, Mr. Rothschilds contention that the growth rate must be reduced by dividends is flawed. Neither Mr. Spadaccio or I have made this improper adjustment, which is one of the primary flaws made in Mr. Rothschild's analysis and results in his erroneous DCF result.

Q. AT PAGES 8 AND 9 OF MR. ROTHSCHILD'S REBUTTAL, HE COMPLAINS ABOUT THE MARKET RISK PREMIUM USED BY MR. SPADACCIO THAT HE SAID WAS TOO HIGH. IS THIS COMPLAINT JUSTIFIED?

A. No. First Mr. Rothschild claims that I used the "geometric supply-side equity risk premium of 4.39%" in my analysis. I did no such thing. Rather, Mr. Spadaccio's market-risk premium analysis aligns with the analysis that I conducted, and is within the mainstream, unlike Mr. Rothschild's analysis.

Q. MR. ROTHSCHILD ALSO COMPLAINS ABOUT PEOPLES' CAPITAL STRUCTURE THAT MR. SPADACCIO ACCEPTS. ARE HIS ARGUMENTS PERSUASIVE AND SUPPORTED BY COMMISSION PRACTICE?

A. No. Mr. Spadaccio and I have followed Commission policy on capital structure. Mr. Rothschild has not followed the Commission policy by advocating a hypothetical capital structure even though the projected Company capital structure is within the range of capital structures used by the barometer group companies. His position must be rejected.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

REJOINDER TESTIMONY OF PAUL R. MOUL

Q. PLEASE STATE YOUR NAME, OCCUPATION AND BUSINESS ADDRESS.

A. My name is Paul R. Moul and I am Managing Consultant at the firm P. Moul & Associates. My business address is 251 Hopkins Road, Haddonfield, NJ 08033-3062.

Q. MR. MOUL, HAVE YOU PREVIOUSLY SUBMITTED DIRECT, REBUTTAL AND SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony Peoples Statement No. 13 was submitted with the Company's case-in-chief on December 29, 2023, my rebuttal testimony (Peoples Statement No. 13R) was submitted on April 18, 2024, and my surrebuttal testimony (Peoples Statement No. 13 SR) was submitted on May 3, 2024.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. Peoples has requested that I respond to the surrebuttal testimony presented by Mr. Anthony Spadaccio, a witness appearing on behalf of the Bureau of Investigation and Enforcement ("I&E"), Mr. Aaron L. Rothschild, a witness appearing on behalf of the Office of Consumer Advocate ("OCA"), and Mr. David Evrard another witness appearing on behalf of the OCA. If I fail to address each and every issue in the surrebuttal testimony of Mr. Rothschild, Mr. Spadaccio, and Mr. Evrard it does not imply agreement with those issues.

Q. BASED ON YOUR REVIEW OF THE SURREBUTTAL TESTIMONY OF THESE WITNESSES, DO YOU PROPOSE ANY CHANGE IN YOUR RECOMMENDED RETURN FOR PEOPLES IN THIS PROCEEDING?

A. No. There was nothing contained in the surrebuttal testimony of these witnesses that

changes my position that Peoples is entitled to an 11.75% rate of return on common equity. The proposals of Messrs. Spadaccio and Rothschild of 9.96% and 8.02%, respectively, are entirely too low by reference to returns set by the Commission in recent rate cases, the DSIC proceedings, and the current level of interest rates.

Q. DOES MR. EVRARD'S SURREBUTTAL TESTIMONY THAT ATTEMPTS TO LINK THE COMPANY'S ACQUISITION BY ESSENTIAL UTILITIES AND THE RETURN COMPONENT FOR MANAGEMENT PERFORMANCE IN THIS CASE HAVE MERIT?

A. No. The public utility code authorizes the Commission to consider management performance in deciding the rate of return in rate cases. Performance should be considered with the acquisition of the Company by Essential Utilities or if the acquisition had never occurred. In this case, the Commission can decide the merits of the Company's management independent of the acquisition that occurred, which was well before the test years in this proceeding.

Q. ON PAGES 9 THROUGH 11 OF HIS SURREBUTTAL TESTIMONY, MR. SPADACCIO ASSERTS THAT THE PERCENTAGE OF UTILITY ASSETS IS NOT THE APPROPRIATE CRITERION TO ASSEMBLE A BAROMETER GROUP. DOES MR. SPADACCIO ADEQUATELY SUPPORT HIS POSITION?

A. No. Mr. Spadaccio says that the value of a utility's assets depends on its age. While this is true, it has nothing to do with the validity of using assets to identify whether a particular company is predominately a utility. The basic ratesetting formula accounts for the level of depreciated assets in the determination of the rate base. Therefore, highly depreciated assets for a utility means that rate base is low and therefore

earnings are low. There is a direct relationship between assets and earnings for a public utility. Therefore, there is no reason to ignore the percentage of assets in the screening process for the barometer group.

Q. MR. SPADACCIO CLAIMS THE DSIC RETURN PROVIDES A BENCHMARK TO SIGNIFY "OVEREARNING" BY A UTILITY. WHAT ROLE DO YOU SEE FOR THE DSIC RETURN IN THIS CASE?

A. Mr. Spadaccio argues that the DSIC rate is merely a benchmark (*see* page 15 of I&E Statement No. 2-SR) to identify "overearning." Mr. Spadaccio is confusing achieved returns to be eligible for the DSIC and the opportunity rate of return established in a rate case for revenues to be collected in the future. The actual collection of revenues from the DSIC can only occur if earnings historically were below the DSIC rate. And it is illogical that once DSIC assets enter the rate base, the utility should be penalized with a lower return. Such a result would occur if Mr. Spadaccio's recommended 9.96% equity return was accepted because it is below the Commission's 10.15% DSIC rate (*see Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2023*, Docket No. M-2023-3044811 [January 18,2024]). So, although the Commission has stated that the DSIC return is not company specific and is determined on a quarterly basis (*see Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc*., Dkt. No. R-2021-3027385 (Order entered May 16, 2022), page 178), it does provide an overall benchmark to gauge the reasonableness of the proposed return that a Company should be given an opportunity to earn in the future. I also would note that the Staff Quarterly Report was established long before the DSIC was enacted in 2012. Moreover, the DSIC rate comes into play only if the

utility has not had a recent rate case determination of cost of equity. In other words, it is a default rate when there has been no rate case and is obviously not intended to establish a cap on rate case cost of equity findings.

Q. IS THERE EVIDENCE FROM ANY RATE CASE DECISIONS THAT THE COMMISSION USUALLY SETS THE RATE OF RETURN ON COMMON EQUITY HIGHER THAN THE DSIC RETURN PUBLISHED IN THE QUARTERLY REPORT?

A. Yes. Four rate case decisions substantiate this position. In the PPL Electric Utilities rate case at Docket No. R-2012-2290597,[1] the Commission set the return on equity at 10.40% when the DSIC return was 10.20% for electric utilities. In the UGI Electric rate case at Docket No. R-2017-2640058,[2] the Commission set the rate of return on common equity at 9.85% when the DSIC return was 9.65% for electric utilities. In the PECO gas rate case at Docket No. R-2020-3018929,[3] the equity return was set at 10.24% when the DSIC rate was 10.20%. The same is true in the Aqua Pennsylvania rate case at Docket No. R-2021-3027385,[4] where the Commission set the return on equity at 10.00% when the water DSIC return was 9.80% (*see* page 15 of I&E Statement No. 3-SR). So, this evidence supports a higher return in base rate cases than the prevailing DSIC return, contrary to Mr. Spadaccio's opinion expressed on pages 14 through 16 of his surrebuttal testimony (I&E Statement No. 3-SR).

Q. AT PAGES 12-14 OF HIS SURREBUTTAL TESTIMONY (I&E STATEMENT NO. 2-

[1] *Pennsylvania Public Utility Commission v. PPL Electric Utilities*, Dkt. No. R-2012-2290597 (Order entered Dec. 28, 2012).
[2] *Pennsylvania Public Utility Commission v. UGI Utilities, Inc. – Electric Division*, Dkt. No. R-2017-2640058 (Order entered Oct. 25, 2018)(UGI Electric 2018 Rate Case).
[3] *Pennsylvania Public Utility Commission v. PECO Energy Company – Gas Division*, Dkt. No. R-2020-3018929 (Order entered June 22, 2021).
[4] *Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc.*, Dkt. No. R-2021-3027385 (Order entered May 16, 2022)(Aqua Order).

SR), MR. SPADACCIO DISCUSSES THE RELATIVE WEIGHT THAT SHOULD BE ASSIGNED TO THE DCF. PLEASE RESPOND.

A. His discussion as to the weight that should be given to models other than DCF is somewhat difficult to follow. As near as I can tell, he proposes that the Capital Asset Pricing Model ("CAPM") should only be used as a comparison to DCF, but not as additional input. It seems to me that ignoring the CAPM results in exclusive use of the DCF, meaning that there would be no need to calculate a CAPM return in the first place. But his CAPM return of 10.91% clearly shows that the DCF return needs validation. His position of exclusive reliance on DCF is contrary to the Commission's recent Aqua and Columbia Water Orders that established a range of equity returns using DCF and CAPM. While Mr. Spadaccio seems troubled by alternative models, including CAPM, there is no basis to ignore the results of these models when the DCF is producing unreasonably low results. While I have considerable concerns about Mr. Spadaccio's application of his models, as noted in my rebuttal and rejoinder testimony, the simple average of the DCF and CAPM proposed by him provides a 10.44% (9.96% + 10.91% = 20.87% ÷ 2) return on equity.

Q. ON PAGE 17 OF HIS SURREBUTTAL TESTIMONY, MR. SPADACCIO STATES THAT HIS RECOMMENDED DCF RETURN OF 9.96% PROVIDES AN ADEQUATE SPREAD OVER THE YEILED ON A-RATED PUBLIC UTILITY BONDS. IS THIS THE POINT OF YOUR REBUTTAL ON THIS ISSUE?

A. No. My point was that his average DCF return is downwardly biased by the result of two companies with returns that are too close to the cost of debt. That is to say, his DCF return would be 10.48% with those companies removed. He does not effectively respond to this point.

Q. AT PAGE 24 OF HIS SURREBUTTAL TESTIMONY, MR. SPADACCIO ACKNOWLEDGES THAT INVESTORS PURCHASE STOCKS AT THEIR MARKET VALUE AND NOT BOOK VALUE. WHAT ARE THE IMPLICATIONS OF THIS FACT?

A. This statement supports the underlying principle of the leverage adjustment. Mr. Spadaccio acknowledges that "Clearly an investor takes financial risk into consideration when determining a required return." (See page 25 of I&E Statement No. 2-SR.) This statement clearly supports my leverage adjustment, notwithstanding his statement he wants to ignore the capital structure effects on financial risk. Mr. Spadaccio cites to the Value Line reports where those amounts are related to the market value of equity and excludes debt. However, the Yahoo! Finance reports show that the "Enterprise Value" of a utility includes both its debt capital, as well the market value of equity. This supports the fact that investors are well aware of the market value of a utility's total capitalization, including both debt and equity.

Q. MR. SPADACCIO CLAIMS ON PAGE 26 OF HIS SURREBUTTAL (I&E STATEMENT NO. 2-SR) THAT HIS USE OF SPOT STOCK PRICES PROVIDES THE MOST UP-TO-DATE INFORMATION THAT ACCOUNTS FOR RECENT INFLATION DATA. DOES THIS REMEDY THE SITUATION WHERE THE DCF RESULTS LAG EXPECTED INFLATION AND INTEREST RATES?

A. No. While spot prices provide an indication of current dividend yields, those yields reflect mainly the assessment of current analysts' growth forecasts. Those growth rate forecasts relate to company-specific fundamentals that existed when those forecasts were made in the past. We do not know if current interest rates and

inflation expectations today are embedded in analysts' forecasts made in the past. So spot prices in the DCF would reflect today's interest rate and inflation expectation only by chance.

Q. ON PAGE 28 OF HIS SURREBUTTAL TESTIMONY, MR. SPADACCIO CLAIMS THAT LESS WEIGHT SHOULD BE GIVEN TO MORE DISTANT FORECASTS BECAUSE THEY ARE LESS RELIABLE. PLEASE RESPOND.

A. I find his observations to conflict with his use of five-year projections of earnings growth in his DCF analysis. If reliance upon five-year projections, whatever their reliability, is okay for DCF purposes, then there is no reason to discount any of the projections of Treasury yields when looking for the appropriate risk-free rate of return in the CAPM.

Q. MR. SPADACCIO SEEMS TO IMPLY THAT THE EVIDENCE YOU USED TO SUPPORT THE SIZE ADJUSTMENT IN THE CAPM IS NOT SPECIFIC TO UTILITY STOCKS. IS THIS CORRECT?

A. No. Mr. Spadaccio states on page 32 that the Fama/French study is not specific to utility stocks. But what Mr. Spadaccio has not acknowledged is that utility stock performance was used in the Fama/French study that makes the size adjustment relevant to utilities, and appropriate to consider in this case. Furthermore, the article by Annie Wong was deficient because it attempted to correlate betas with size. As Fama/French subsequently established, beta is not the correct measure to identify returns associated with the relative size of a company, either utility or non-regulated. Beta measures systematic risk, and the size of a company is an unsystematic risk.

Q. AT PAGES 37-40 OF HIS SURREBUTTAL (I&E STATEMENT NO. 2-SR), MR. SPADACCIO OPPOSES ANY RECOGNITION OF THE COMPANY'S MANAGEMENT PERFORMANCE. PLEASE RESPOND.

A. Mr. Spadaccio asserts that a utility should not be rewarded for implementing programs funded by ratepayers or for meeting their obligations under 66 Pa C.S. §1501. The Commission has a long history of recognizing management performance (either positively or negatively) in rate case decisions. If the Commission were to abandon its constructive ratesetting approaches, such as recognition of management performance, then the assessment by investors of the Commission's pattern of regulation would surely suffer.

Q. ON PAGES 38-39 OF HIS SURREBUTTAL TESTIMONY (I&E STATEMENT NO. 2-SR), MR. SPADACCIO CLAIMS THAT MANAGEMENT PERFORMANCE NEED NOT BE CONSIDERED AS AN ISSUE IN THIS CASE. IS THAT CORRECT?

A. No. The Commission has a long history of recognizing management performance (either positively or negatively) in rate case decisions. If the Commission were to abandon its constructive ratesetting approaches that include recognition of management performance, or to reduce the return to levels suggested by Mr. Spadaccio, then the Company's ranking would surely suffer. Mr. Spadaccio asserts that recognition of management performance is "nonsensical" in that higher equity returns should not occur for management initiatives that are funded by ratepayers under 66 Pa C.S.A. §1501. Mr. Spadaccio does acknowledge that the legislature authorized this approach and that the Commission has followed it.

Q. WHAT ISSUES WERE CONTAINED IN THE SURREBUTTAL TESTIMONY OF

OCA WITNESS ROTHSCHILD?

A. Mr. Rothchild has addressed the following issues: the discounted cash flow model, market-to-book ratios, analyst's growth projections, betas, and capital structure.

Q. IN HIS SURREBUTTAL TESTIMONY (*SEE* PAGES 37-38 OF OCA STATEMENT NO. 3-SR), MR. ROTHSCHILD OPINES THAT THE COMPANY'S PROPOSED CAPITAL STRUCTURE IS UNREASONABLE AND UNFAIRLY PREJUDICES RATEPAYERS. DO YOU AGREE?

A. No. Mr. Rothchild adopts a hypothetical capital structure for Peoples in place of its actual capital structure. His proposal provides a generic capital structure that would apply to any and all LDCs. But he is entirely wrong on this matter. Moreover, as explained in my rebuttal testimony (see pages 12-13 of Peoples Statement No. 13-R), his approach drives down his equity return on Peoples actual equity to 7.72% (6.20% - 1.98% = 4.22% ÷ 54.67%) from 8.02%. The Commission's policy on capital structure, which adopts the projected equity ratio if it is the range employed by the barometer group companies, places a limit on the common equity ratio that triggers the imposition of a hypothetical capital structure. Further, it is incorrect for Mr. Rothschild to argue on page 37 of his surrebuttal testimony (OCA Statement No. 3-SR) that his hypothetical capital structure complies with Commission policy. I have explained at length in my rebuttal testimony why this is not correct. Therefore, there is no need to repeat my justification here. He also fails to acknowledge my alternative analysis of public utility capital structures. As revealed on page 21 of Peoples Statement No. 9, the range of common equity ratios is 34.7% to 58.2% for 2022 and 32.5% to 60.0% based on Value Line forecasts. The common equity ratio

for Peoples in this case is 54.67%, which clearly falls within these ranges. Hence, the Company's proposal is reasonable and should be accepted.

Q. MR. ROTHSCHILD ATTEMPTS TO RESPOND (*SEE* PAGES 5-8 OF OCA STATEMENT NO. 3-SR) TO YOUR OBSERVATION CONCERNING THE MANY INCONSISTENCIES IN HIS DIRECT TESTIMONY. HAS HE SUCCESSFULLY DONE SO?

A. For the most part, no. Many of his responses in his surrebuttal testimony attempt to distinguish investor expectations from expert forecasts and the necessary use of historical data due to the limitations of capital market data. But what Mr. Rothschild has failed to explain is how his testimony addresses these factors in any way that is superior to my use of these data. That is to say, expert forecasts are the only hard data that we can use to gain insight into investor expectations, and historical data provides the foundation upon which expectations are formed. As is often repeated, past performance provides no guarantee of future returns. But what it does is to provide a basis for judgments on how the future will diverge from the past given changing fundamentals that impact the capital markets. And that is how I used historical data in my testimony.

Q. BEGINNING ON PAGE 10 OF HIS SURREBUTTAL TESTIMONY, MR. ROTHSCHILD ATTEMPTS TO DIMINISH THE USEFULNESS OF ANALYSTS' PROJECTED GROWTH RATES IN THE DCF. PLEASE RESPOND.

A. Mr. Rothschild sets forth two arguments. He claims at page 13 that analysts' projected growth rates are overly optimistic and that the retention rate must be considered in the DCF. First, in an article published in The Wall Street Journal on

April 26, 2010, it was reported that 64% of companies had beaten analysts' forecasts since the start of 1999. More importantly, however, investors rely heavily on analysts' forecasts in determining the price they are willing to pay for a particular stock. Consequently, if the forecasted earnings growth rates were to be discounted, a downward adjustment would also have to be made to the stock prices that reflect those forecasts. This, in turn, would generate higher dividend yields in the DCF analysis. I have specifically noted that Myron Gordon established that analysts' forecasts of earnings growth is the best growth rate measures in the DCF, and retention growth was not the preferred approach. Second, there is no requirement in the DCF model that the growth rate must include a retention rate factor/percentage. Mr. Rothschild's paycheck analogy is way off the mark. The paycheck in his example (see page 14) is represented by the dividend receipts component that establishes the dividend yield in the DCF equation. This is distinct from the expected growth in future paychecks that an individual might expect. Hopefully, an individual will realize a growing paycheck in the future attributed to (i) inflation and (ii) the relationship between the employer and employee. Hence, paycheck growth occurs mostly from these two factors and has nothing to do with the amount an individual retains in his/her bank account.

Q. IN HIS SURREBUTTAL TESTIMONY (*SEE* PAGE 14 OF OCA STATEMENT NO. 3-SR), MR. ROTHSCHILD CLAIMS TO HAVE USED A "HOLISTIC ANALYSIS" WHEN EMPLOYING ANALYSTS' FIVE-YEAR GROWTH RATE FORECASTS. HAS HIS "HOLISTIC ANALYSIS" IMPROVED UPON USE OF ANALYSTS' FORECASTS DIRECTLY?

A. No. My understanding of holism is that the whole is worth more than merely the sum of the parts. Mr. Rothschild used many parts in his analysis, i.e., earnings per share, dividends per share, book value per share, dividend payout ratios, earnings book ratios, market to book ratios, and analysts' forecasts. In his use of these data sets, Mr. Rothschild has missed some key components in pursuit of a truly holistic outcome. We know this because the sum of all the parts used by Mr. Rothschild produces a result that fails the holistic analysts because it is less than the analysts' forecasts used directly.

Q. REGARDING THE ISSUE OF MARKET-TO-BOOK RATIOS, MR. ROTHSCHILD CLAIMS ON PAGES 15-17 OF HIS SURREBUTTAL TESTIMONY (OCA STATEMENT NO. 3-SR) THAT WHEN INVESTORS PAY MORE THAN BOOK VALUE, THEY REQUIRE A LOWER RETURN THAN WHAT THEY EXPECT A UTILITY WILL EARN. IS THIS CORRECT?

A. No. Since utility stock prices are today, and have been generally throughout history, considerably higher than book value, Mr. Rothschild's apparent desire is to reduce those prices to book value is unjustified. Of course, no rational investor would take a position in a utility stock with the expectation that the price would decline, thereby losing capital. So while utility stock prices exceed book value, the stock prices of many non-utilities exceed their book values by even larger amounts. Hence, stock prices above book value for utilities provide no basis for reducing market determined returns because they must compete in the capital markets with these other companies. Nevertheless, Mr. Rothschild does exactly that in his analysis.

Q. AT PAGE 27 OF OCA STATEMENT NO. 3-SR, MR. ROTHSCHILD COMPLAINS

ABOUT THE HISTORICAL NATURE OF THE VALUE LINE BETAS. ARE HIS COMPLAINTS VALID?

A. No. What Mr. Rothschild fails to acknowledge is that Value Line adjusts its betas in recognition of the regression bias associated with use of historical data. What Value Line has done is to recognize that the betas of low beta stocks must be adjusted upward, and high beta stocks must be adjusted downward. These adjustments recognize that high and low beta stocks will revert to the mean beta of 1.0 moving from historical performance to expectations. So Value Line has already acknowledged Mr. Rothschild's observation and adjusted for it.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes.

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Peoples Natural Gas Company LLC

Docket No. R-2023-3044549

Volume 10

Direct Testimony and Exhibits of John P. Spanos
Statement No. 14

Peoples Natural Gas Company, LLC	)	

DIRECT TESTIMONY OF

JOHN J. SPANOS

ON BEHALF OF

PEOPLES NATURAL GAS COMPANY, LLC

December 29, 2023

Q. Please state your name and address.

A. John J. Spanos. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania.

Q. With what firm are you associated and in what capacity?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming) as President.

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College of Pennsylvania.

Q. Are you a member of any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals. I am also a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Will you outline your experience in the field of depreciation?

A. I have over 37 years of depreciation experience which includes giving expert testimony in more than 440 cases before 46 regulatory commissions, including the Pennsylvania Public Utility Commission ("Commission"). My participation in the cases where I appeared as an expert witness has included conducting and analyzing depreciation studies for companies, government-owned utilities and other service providers in the electric, gas,

water, wastewater and pipeline industries. In addition to the cases in which I submitted testimony, I have supervised over 800 other depreciation or valuation assignments. Please refer to Appendix A for additional information on my qualifications, work history, case experience, and my leadership in the Society of Depreciation Professionals.

Q. What is the purpose of your testimony?

A. My testimony is in support of the depreciation studies conducted under my direction and supervision for the gas plant of the Peoples Natural Gas Division of Peoples Natural Gas Company LLC ("PNG" or "PNG Division"); Peoples Gas Division of Peoples Natural Gas Company LLC ("PGC" or "PG Division") and the combined gas of both the Peoples Natural Gas Division and Peoples Gas Division ("Companies").

Q. Have you prepared exhibits presenting the results of your studies?

A. Yes, I have prepared a total of nine exhibits, consisting of the following: Exhibit Nos. 5A, 5B and 5C present the results of the depreciation studies for the combined gas operations as of August 31, 2023, August 31, 2024 and September 30, 2025. The three depreciation studies for the PNG Division as of August 31, 2023, August 31, 2024 and September 30, 2025 are presented in Appendix B of Statement No. 14. The three depreciation studies for the PG Division are presented in Appendix C of Statement No. 14.

In addition, I am responsible for the responses to Depreciation Data Filing Requirements FR VI.1, FR VI.2, FR VI.3, FR VI.4, FR VI.5 and FR VI.6 that are presented as Exhibit No. 9.

Q. Please describe what is set forth in each of Exhibit Nos. 5 and 14.

A. Exhibit No. 5A, titled "2023 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2023," includes the results of the depreciation study related to the assets of the combined companies as of August 31, 2023. The report also includes the detailed depreciation calculations. Exhibit No. 5B, titled

"2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2024," includes the results of the depreciation study related to the assets of combined companies estimated as of August 31, 2024. The report also includes explanatory text, statistics related to the estimation of service life, and the detailed depreciation calculations. Exhibit No. 5C titled "2025 Depreciation Study – Calculated Annual Depreciation Accruals Related to Gas Plant as of September 30, 2025," includes the results of the depreciation study related to the assets of combined companies estimated as of September 30, 2025.

Statement No. 14, Appendix B and C pertain to the PNG Division and PG Division gas operations and are organized in the same fashion described above for combined companies.

Q. What were the purposes of your depreciation studies?

A. The purposes of the depreciation studies were to estimate the annual depreciation accruals related to gas plant in service for ratemaking purposes and, using Commission-approved procedures, to estimate the Company's book reserve as of August 31, 2023, August 31, 2024 and September 30, 2025.

Q. Is the Company's claim for annual depreciation in the current proceeding based on the same methods of depreciation as were used in its most recent Annual Depreciation Reports filed in June and August 2023?

A. Yes, it is. For most plant accounts, the current claim for annual depreciation is based on the straight line remaining life method of depreciation, which has been used for over thirty years. For Accounts 391.01, 391.02, 391.03, 393, 394, 394.01, 397.02, 397.03, 397.10, 397.20 and 398, the claim is based on the straight line remaining life method of amortization. The accounts have a large number of units, but small asset values representing slightly more than 1 percent of the depreciable plant. The assets represent

items located in office buildings, service centers, garages and warehouses. Given the difficulty in maintaining accounting records for these numerous assets and high cost for periodic inventories, retirements are recorded when a vintage is fully amortized, rather than as the units are removed from service. All units are retired when the age of the vintage reaches the amortization period. The annual amortization is based on amortization accounting which distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account.

Q. What group procedure is being used in this proceeding for depreciable accounts?

A. The average service life procedure is used in the current proceeding for plant installed prior to 1983 and the equal life group procedure for 1983 and subsequent vintages for the individual PNG Division study and the combined Companies. The average service life procedure is used for plant installed prior to 1976 and the equal life group procedure for 1976 and subsequent vintages for the individual PG Division study. These calculations have been used in the same manner for each Company's most recent annual depreciation reports.

Q. Is the Company's claim for accrued depreciation in the current proceeding made on the same basis as has been used for over thirty years?

A. Yes. The current claim for accrued depreciation is the book reserve brought forward from the book reserve approved by the Commission in the last proceeding for each division.

Q. How was the book reserve used in the calculation of annual depreciation?

A. The book reserve by account was allocated to vintages to determine original cost less accrued depreciation by vintage. The total annual accrual is the sum of the results of dividing the original costs less accrued depreciation by the vintage composite remaining lives.

Q. How was the book reserve as of August 31, 2024, estimated?

A. The book reserve as of August 31, 2024, by account, was projected by adding estimated accruals, salvage and the amortization of net salvage, and subtracting estimated retirements and cost of removal from the book reserve as of August 31, 2023. Annual accruals were estimated using the annual accruals calculated as of August 31, 2023. For most accounts, gross salvage and cost of removal were estimated by (1) expressing actual gross salvage and cost of removal as a percent of retirements by account, for the most recent five-year period, and (2) applying those percents to the projected retirements by account.

For the purpose of calculating the annual accruals, the projected book reserve by account was allocated to vintages based on calculated accrued depreciation as of August 31, 2024.

Q. Was the book reserve as of September 30, 2025, estimated using the same methodology?

A. Yes.

Q. Has a service life study of the Company's gas utility property been performed?

A. Yes. A service life study of the combined two divisions was performed as of December 2022 as well as an individual service life study for the PNG Division. The most recent service life study for the PG Division was as of December 2019. The service life studies were the basis for the service lives I used to calculate annual accruals . The service life study of the combined companies was used for Exhibit No. 5 and the individual company service life studies were used for Appendix B and C.

Q. Briefly outline the procedure used in performing the service life study.

A. The service life study consisted of assembling and compiling historical data from the records related to the gas utility plant of the Company; statistically analyzing such data to obtain historical trends of survivor characteristics; obtaining supplementary information from management and operating personnel concerning Company practices and plans as

they relate to plant operations; and interpreting the above data to form judgments of service life characteristics. Iowa type survivor curves were used to describe the estimated survivor characteristics of the mass property groups. Individual service lives were used for major individual units of plant, such as distribution buildings housing offices and shops. The life span concept was recognized by coordinating the lives of associated plant installed in subsequent years with the probable retirement date defined by the life estimated for the major unit.

Q. What statistical data were employed in the historical analyses performed for the purpose of estimating service life characteristics?

A. The data consisted of the entries made to record retirements and other transactions related to the gas plant during the period 1939-2022. The year 1939 is the first year continuing property records were maintained.

These entries were classified by depreciable group, type of transaction, the year in which the transaction took place, and the year in which the plant was installed. Types of transactions included in the data were plant additions, retirements, transfers, and balances. In the presentation of service life statistics, only the significant exposure points that were utilized in determining survivor curves were plotted. This process is utilized to show my judgment in service life determinations.

Q. What was the source of these data?

A. They were assembled from Company records related to its gas plant in service.

Q. Were the methods used in the service life studies the same as those used in other depreciation studies for gas utility plant presented before this Commission?

A. Yes. The methods are the same ones that have been presented previously for Peoples Natural Gas Company and Peoples Gas Company and for other gas companies before the Pennsylvania Public Utility Commission and that have been accepted by the Commission

in its past orders concerning gas utilities.

Q. What approach did you use to estimate the lives of significant structures such as office buildings and service centers?

A. I used the life span technique to estimate the lives of significant structures. In this technique, the survivor characteristics of the structures are described by the use of interim survivor curves and estimated probable retirement dates. The interim survivor curve describes the rate of retirement related to the replacement of elements of the structure such as plumbing, heating, doors, windows, roofs, etc. that occur during the life of the facility.The probable retirement date provides the rate of final retirement for each year of installation for the structure by truncating the interim survivor curve for each installation year at its attained age at the date of probable retirement. The use of interim survivor curves truncated at the date of probable retirement provides a consistent method for estimating the lives of the several years of installation inasmuch as concurrent retirement of all years of installation will occur when the structure is retired.

Q. Has your firm used this approach in other proceedings before this Commission?

A. Yes, we have used the life span technique on many occasions before the Pennsylvania Public Utility Commission.

Q. What are the bases for the probable retirement years that you have estimated for each 1 structure?

A. The bases for the estimates of probable retirement years are life spans for each structure that are based on judgment and incorporate consideration of the age, use, size, nature of construction, management outlook and typical life spans experienced and used by other gas utilities for similar structures. Most of the life spans result in probable retirement dates that are many years in the future. As a result, the retirement of these structures is not yet subject to specific management plans. Such plans would be premature. At the

appropriate time, studies of the economics of rehabilitation and continued use or retirement of the structure will be analyzed and the results incorporated in the estimation of the structure's life span.

Q. Are the factors considered in your estimates of service life presented in Exhibit Nos. 5B-B, Appendix B and Appendix C?

A. Yes. A discussion of the factors considered in the estimation of service lives is presented in Part III of each of these exhibits.

Q. Please outline the contents of Exhibit Nos. 5B, Appendix B and Appendix C.

A. Exhibit Nos. 5B, Appendix B (Future Test Year) and Appendix C (Future Test Year) are each presented in eight parts. Part I, Introduction, sets forth the scope and basis of the study. Part II, Estimation of Survivor Curves, includes a description of the Iowa Curves and the formulation of the retirement rate method. Part III, Service Life Considerations, and Part IV, Calculation of Annual and Accrued Depreciation, include a description of the judgment utilized for life parameters and the explanation of depreciation procedures. Part V, Results of Study, presents a description of the results and summaries of the depreciation calculations. Part VI, Service Life Statistics, presents the graphs and tables which relate to the service life study. Part VII, Detailed Depreciation Calculations, sets forth the detailed depreciation calculations by account. Part VIII, Experienced and Estimated Net Salvage, presents the cost of removal and gross salvage by account for the years 2019 through 2023. For Exhibit No. 5B, Table 1, pages V-4 through V-6 presents the estimated survivor curve, the original cost as of August 31, 2024, and the book reserve and calculated annual depreciation for each account or subaccount of Gas Plant. Table 2, pages V-7 and V-8 presents the bringforward to August 31, 2024, of the book depreciation reserve as of August 31, 2023. Table 3 on pages V-9 and V-10 sets forth the calculation of the annual accruals used in the bringforward. Table 4, page V-11, presents the experienced

and estimated net salvage during the five-year period, 2019 through 2023. The section beginning on page VI-1 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VII-1 presents the depreciation calculations related to original cost. The tabulation on pages VII-3 through VII- 6 presents the cumulative depreciated original cost by year installed. The tabulations on pages VII-8 through VII-130 present the calculation of annual depreciation by vintage by account for each depreciable group of utility plant. The tabulation on pages VIII-2 through VIII-6 presents the retirements, salvage, and cost of removal by account for each year during the period 2019 through 2023.

Exhibit Nos. Appendix B (Future Test Year) and Appendix C (Future Test Year) are presented in the same fashion described above for the Company's gas plant for the PNG and PG Divisions.

Q. Please outline the contents of Exhibit Nos. 5C, Appendix B (Fully Forecasted Test Year) and Appendix C (Fully Forecasted Test Year).

A. Exhibit Nos. 5C includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of September 30, 2025. The descriptions and explanations presented in Exhibit No. 5B are also applicable to the depreciation calculations presented in Exhibit No. 5C. The graphs and tables related to service life presented in Exhibit No. 5B, also support the service life estimates used in Exhibit No. 15C inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of September 30, 2025, are organized and presented in the same manner as those as of August 31, 2024. Exhibit Nos. Appendix B(Fully Forecasted Test Year) and Appendix C(Fully Forecasted Test Year) present data and information for the PNG and PG Divisions in the same fashion described above.

Q. Please outline the contents of Exhibit Nos. 5A, Appendix B(Historic Test Year) and

Appendix C(Historic Test Year).

A. Exhibit No. 5A includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of August 31, 2023. The descriptions and explanations presented in Exhibit No. 5B are also applicable to the depreciation calculations presented in Exhibit No. 5A. The graphs and tables related to service life presented in Exhibit No. 5B also support the service life estimates used in Exhibit No. 5A, inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of August 31, 2023, are organized and presented in the same manner as those as of August 31, 2024. Exhibit Nos. Appendix B(Historic Test Year) and Appendix C(Historic Test Year) are presented in the same fashion for the PNG and PG Divisions.

Q. Please use an example to illustrate the manner in which the studies are as presented in Exhibit Nos. 5A, Appendix B and Appendix C.

A. I will use the combined companies Account 380, Services, as my example, inasmuch as it is one of the largest depreciable groups and represents 18 percent of the original cost of depreciable gas plant as of August 31, 2024. The retirement rate method was used to analyze the survivor characteristics of this group. The life table for the 1939-2022 experience band is presented on pages VI-167 through VI-170 of Exhibit No. 5B. The life table, or original survivor curve, is plotted along with the estimated smooth survivor curve, the 55-R2, on page VI-166. The calculations of the annual depreciation related to the original cost as of August 31, 2023, of gas plant are presented on pages II-101 through II-103 of Exhibit No. 5A. The calculation is based on the 55-R2 survivor curve, the attained age, and the allocated book reserve. The calculations as of August 31, 2024, are presented on pages VII-122 through VII-125 of Exhibit No. 5B and are based in part on the bringforward of the book reserve. Also, the calculations as of September 30, 2025 are

presented on pages II-98 and II-99 of Exhibit No. 5C and are based in part on the bringforward of the book reserve. The tabulations in Exhibit Nos. 5A, 5B and 5C set forth the installation year, the original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual. The totals are brought forward to Table 1 on page I-4 in Exhibit No. 5A, page V-5 in Exhibit No. 5B, and on page I-4 in Exhibit No. 5C.

Q. In what manner is net salvage incorporated in the depreciation calculations?

A. As stated on page IV-9 of Exhibit No. 5B no adjustment for net salvage was made to the calculated annual depreciation amounts. The total calculated annual depreciation set forth on page I-5 of Exhibit No. 5A, page V-6 of Exhibit No. 5B, and on page I-5 of Exhibit No. 5C should include an addition for the amortization of negative net salvage in accordance with the practice of this Commission. The amortization is based on experience during the period 2018 through 2022 for the calculation as of August 31, 2023, and on experience during the period 2019 through August 31, 2023, plus estimates for the last four months of 2023 for the calculation as of August 31, 2024. The amortization for the September 30, 2025 calculation is based on experience during the period 2020 through August 31, 2023, plus estimates for the period September 2023 through December 2024. The amounts of the five-year amortizations are calculated in Table 2 on page I-6 of Exhibit No. 5A, in Table 4 on page V-11 of Exhibit No. 5B, and in Table 4 on page I-10 of Exhibit No. 5C.

Q. Does this complete your testimony at this time?

A. Yes, it does.

APPENDIX A

JOHN SPANOS

DEPRECIATION EXPERIENCE

Q. Please state your name.

A. My name is John J. Spanos.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

Q. Do you belong to any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Please outline your experience in the field of depreciation.

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire; FirstEnergy Service Corporation; Northeast Ohio Natural Gas Corporation; Blue Granite Water Company; Spire Missouri, Inc.; Dominion Energy South Carolina, Inc.; South FirstEnergy Operating Companies; Dayton Power and Light Company; Liberty Utilities; East Kentucky Power Cooperative; Bangor Natural Gas; Hanover Borough Municipal Water Works; West Virginia American Water Company; Evergy Metro; Evergy Missouri West; Granite State Electric; Bluegrass Water; The Borough of Ambler; Newtown Artesian Water Company and Connecticut Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the

Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission ("FERC"); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

Q. Have you had any additional education relating to utility plant depreciation?

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.:

"Techniques of Life Analysis," "Techniques of Salvage and Depreciation Analysis," "Forecasting Life and Salvage," "Modeling and Life Analysis Using Simulation," and "Managing a Depreciation Study." I have also completed the "Introduction to Public Utility Accounting" program conducted by the American Gas Association.

Q. Does this conclude your qualification statement?

A. Yes.

LIST OF CASES IN WHICH JOHN J. SPANOS SUBMITTED TESTIMONY

	Year	Jurisdiction	Docket No.	Client Utility	Subject
01.	1998	PA PUC	R-00984375	City of Bethlehem – Bureau of Water	Original Cost and Depreciation

Peoples Natural Gas Company, LLC
375 North Shore Drive, Suite 600
Pittsburgh, PA 15212-5322

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant as of August 31, 2023. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 and 2, beginning on page I-3 of the attached report.

A description of the methods and procedures upon which the study was based is set forth in a companion report, "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2024".

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

JOHN J. SPANOS

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

The results of the depreciation study are summarized in Table 1, which sets forth the calculated annual depreciation related to Gas Plant in Service as of August 31, 2023. Table 2 presents the experienced gross salvage and cost of removal associated with regular retirements during the five-year period, 2018-2022 and the annual amortization of net salvage.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2018 through 2022, beginning on beginning on III-2 through III-6.

Pittsburgh, PA 15212-5322

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant in service. The results of our study as of August 31, 2024 are presented in the attached report. The results of our study as of August 31, 2023 are presented in our report titled "2023 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2023". The same methods, procedures and estimates are used in both studies.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates as of August 31, 2024.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study conducted for Peoples Natural Gas Company LLC to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of gas plant as of August 31, 2024 for the Peoples Natural Gas division.

The depreciation accrual rates and amounts presented herein are based on estimated survivor curves and on methods and procedures set forth in previous orders approved by the Pennsylvania Public Utility Commission. The estimated survivor curves presented herein were based on the results of a service life study incorporating statistical analyses of data through 2022.

BASIS OF STUDY

Depreciation and Amortization

Depreciation, as defined in the Uniform System of Accounts, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

The calculation of annual and accrued depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. These subjects are discussed in the sections which follow.

For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, the average service life (ASL) procedure for plant installed prior to 1983 and the equal life group (ELG) procedure for property installed subsequent to 1982. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of gas property. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

Survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. Iowa type curves were used to depict the estimated survivor curves. For life span groups, the estimate of life characteristics is consistent because the calculated

lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Service Life Estimates

The method of estimating service life consisted of compiling the service life history of the plant accounts, subaccounts or depreciable groups, reducing this history to trends through the use of acceptable actuarial techniques, and forecasting the trend of survivors for each depreciable group on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend yielded a complete pattern of life characteristics from which the average service life was derived.

The Company's service life estimates used in the depreciation calculation incorporated historical data compiled through 2022 from the property records of the Company. Such data included plant additions, retirements, transfers and other activity. Generally, retirement data for the years 1939 through 2022 were used in the actuarial life table computations which were the primary statistical support of the service life estimates.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through field trips conducted during the course of the service life study. Discussions with operating and management personnel also provided information regarding plans for the future which was incorporated in the interpretation and extrapolation of the statistical analyses.

AMORTIZATION OF NET SALVAGE

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of net salvage over a five-year period.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

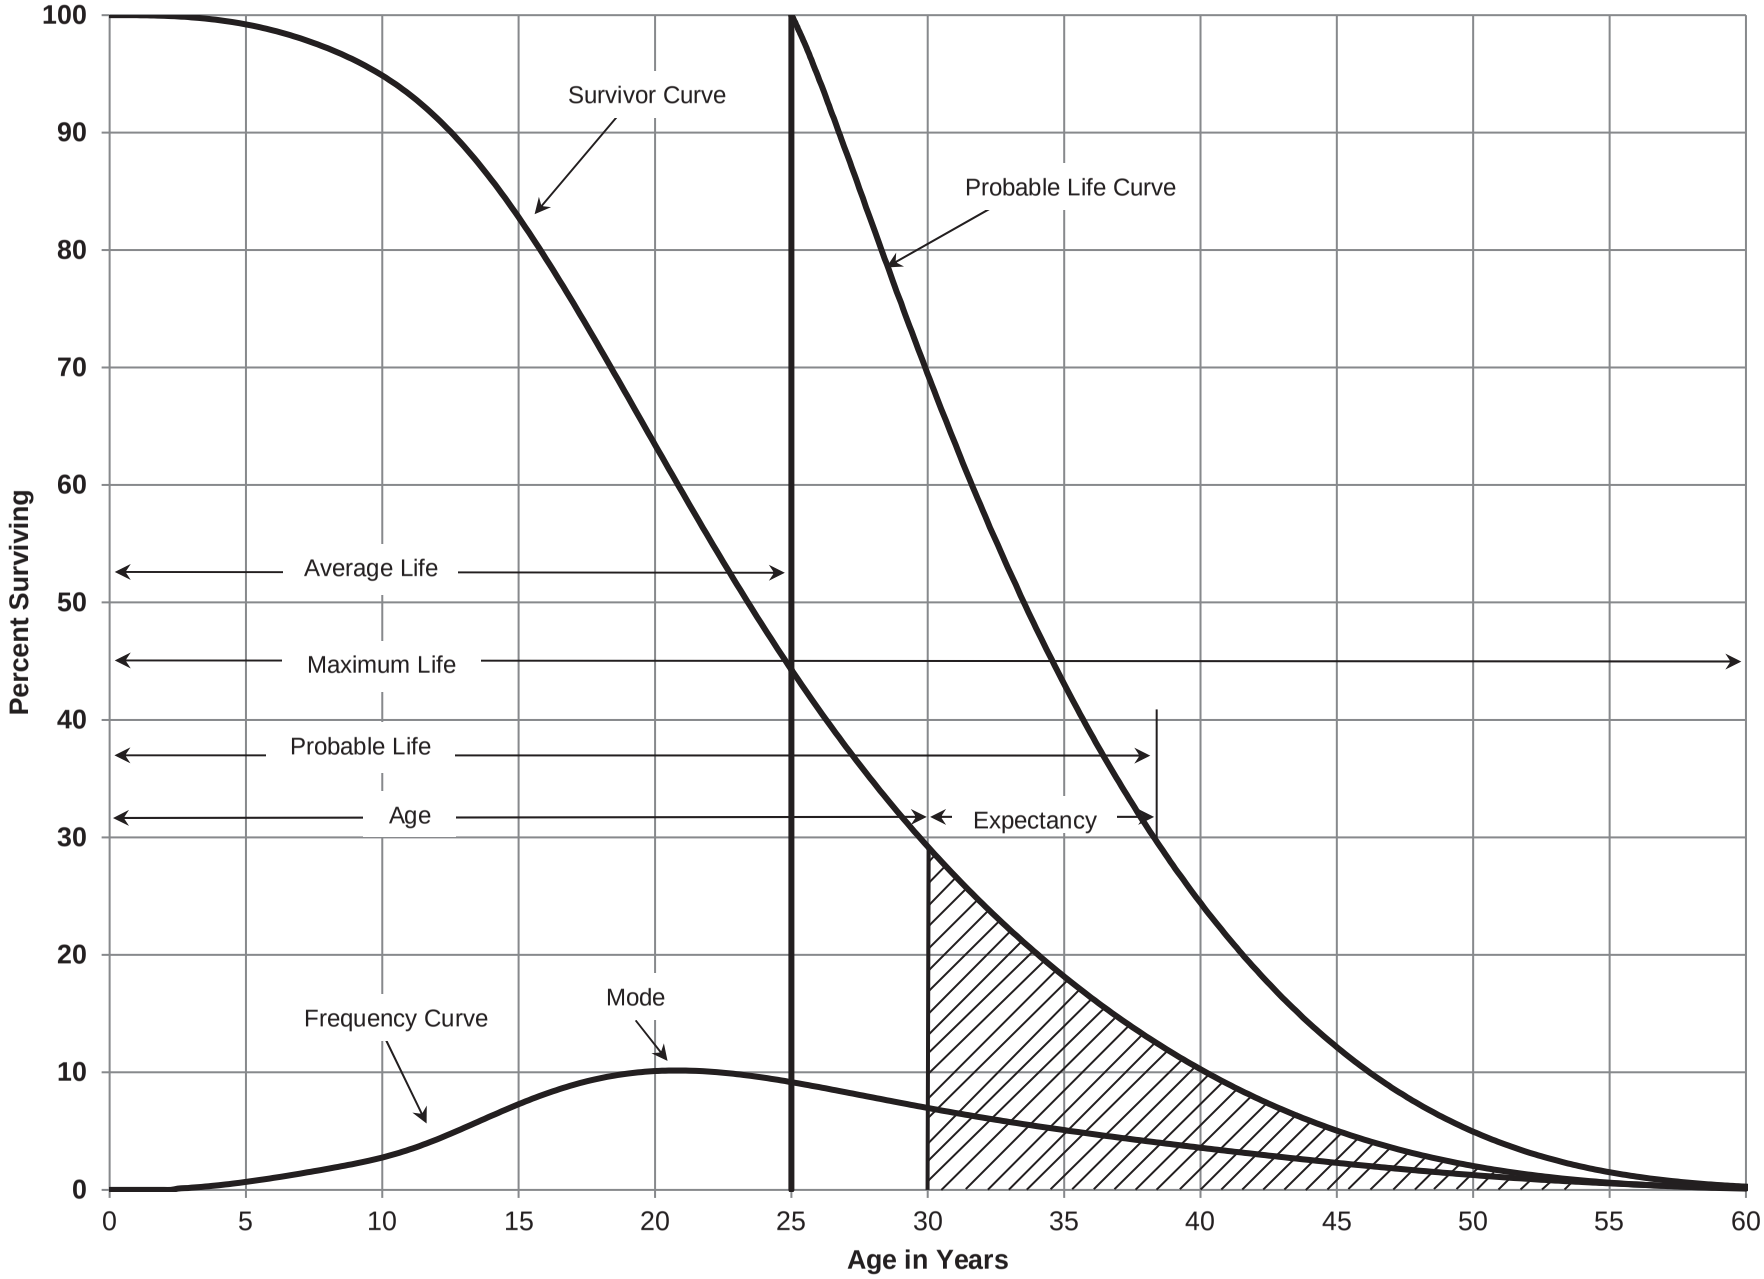

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

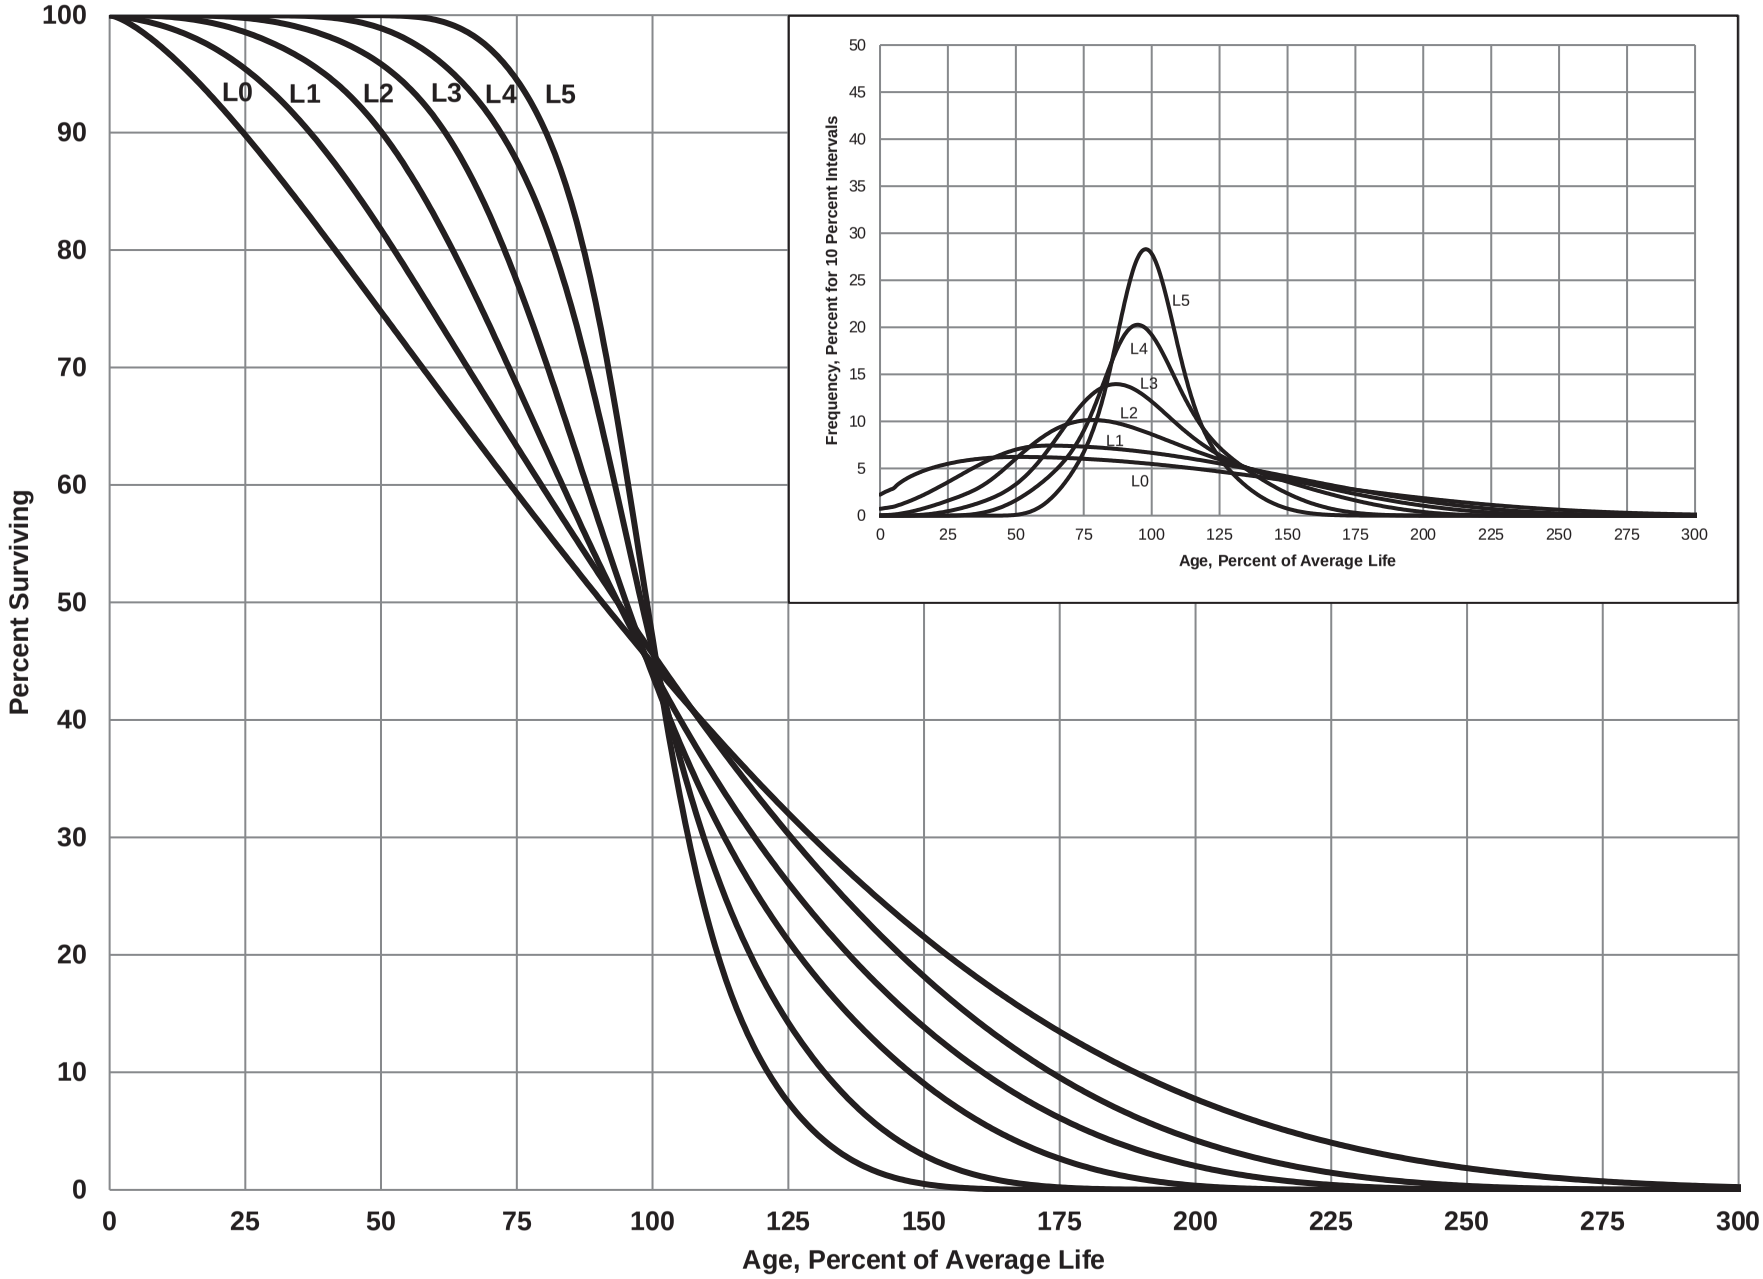

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

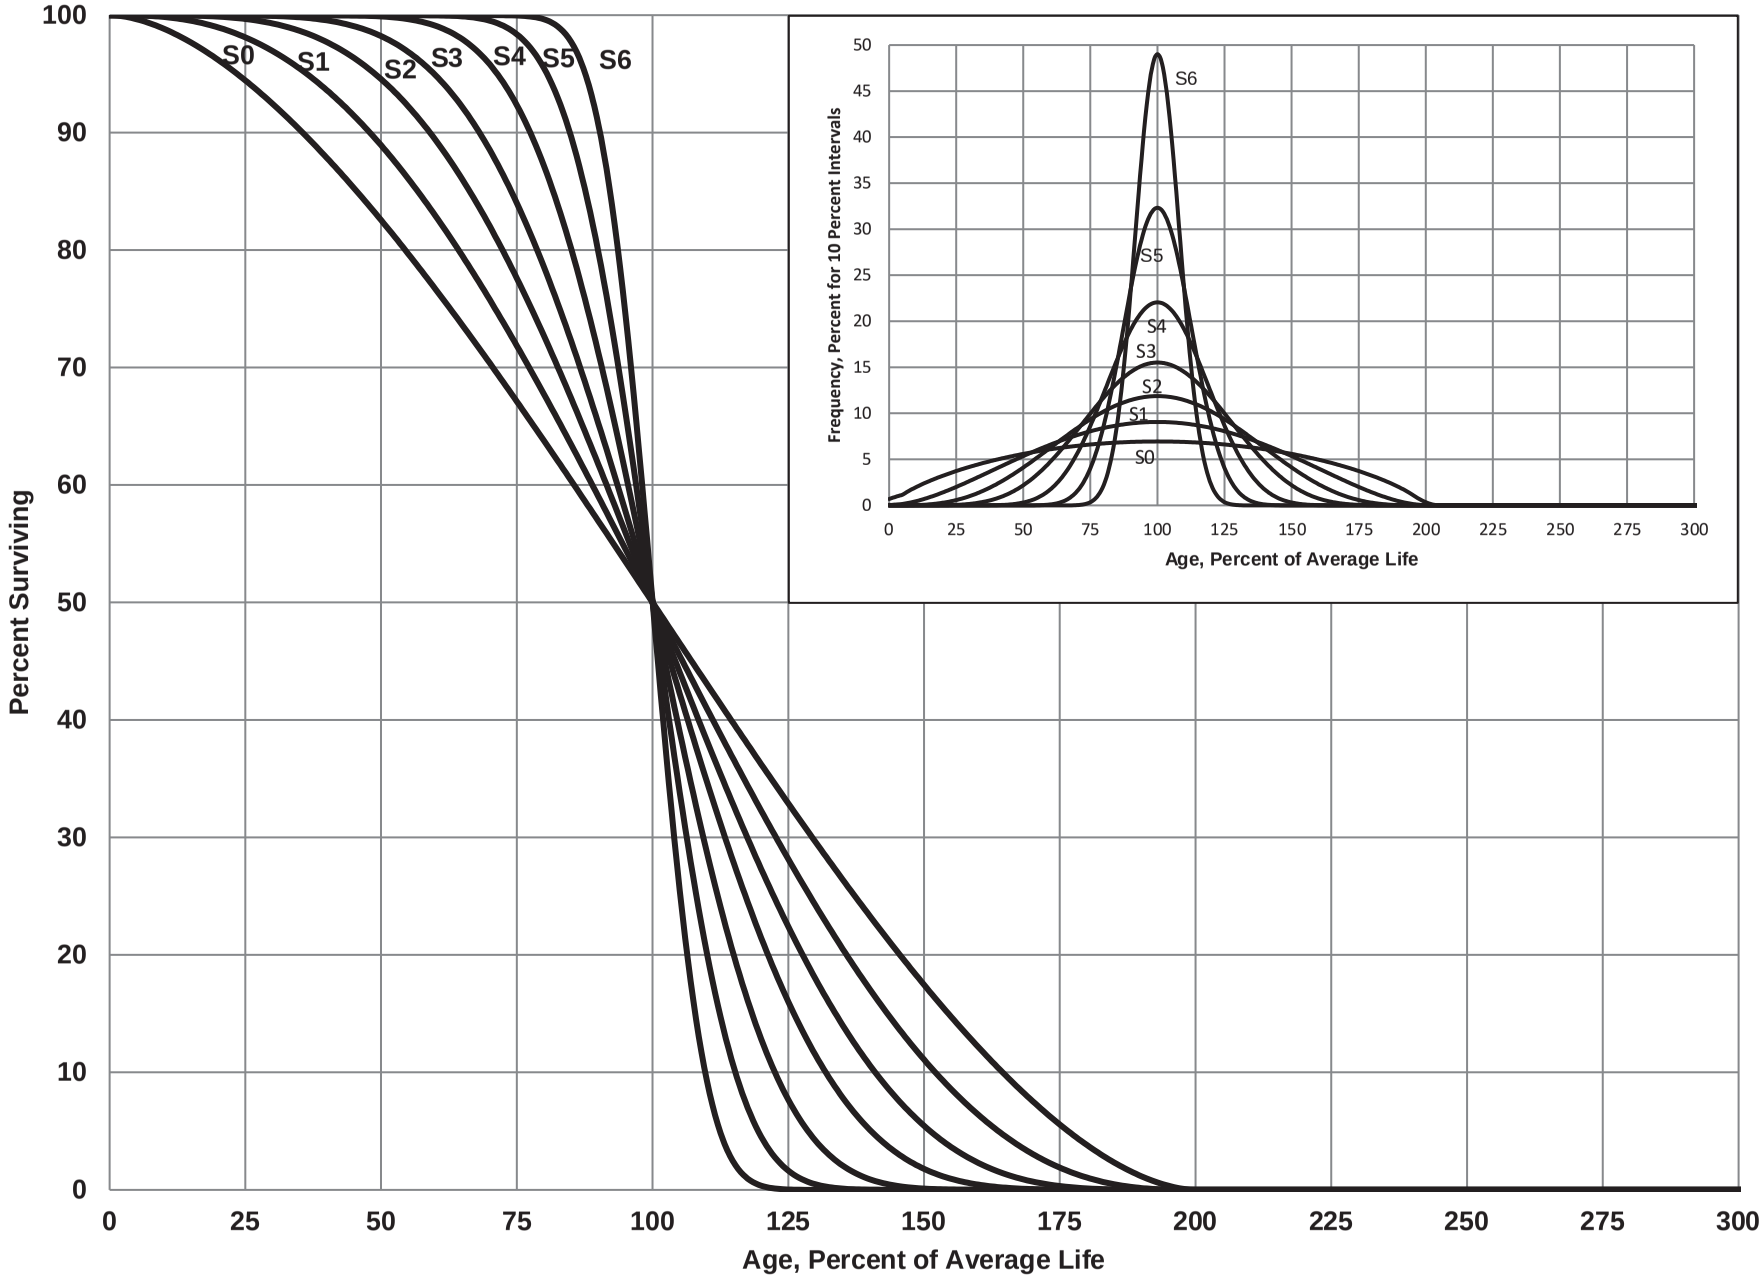

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

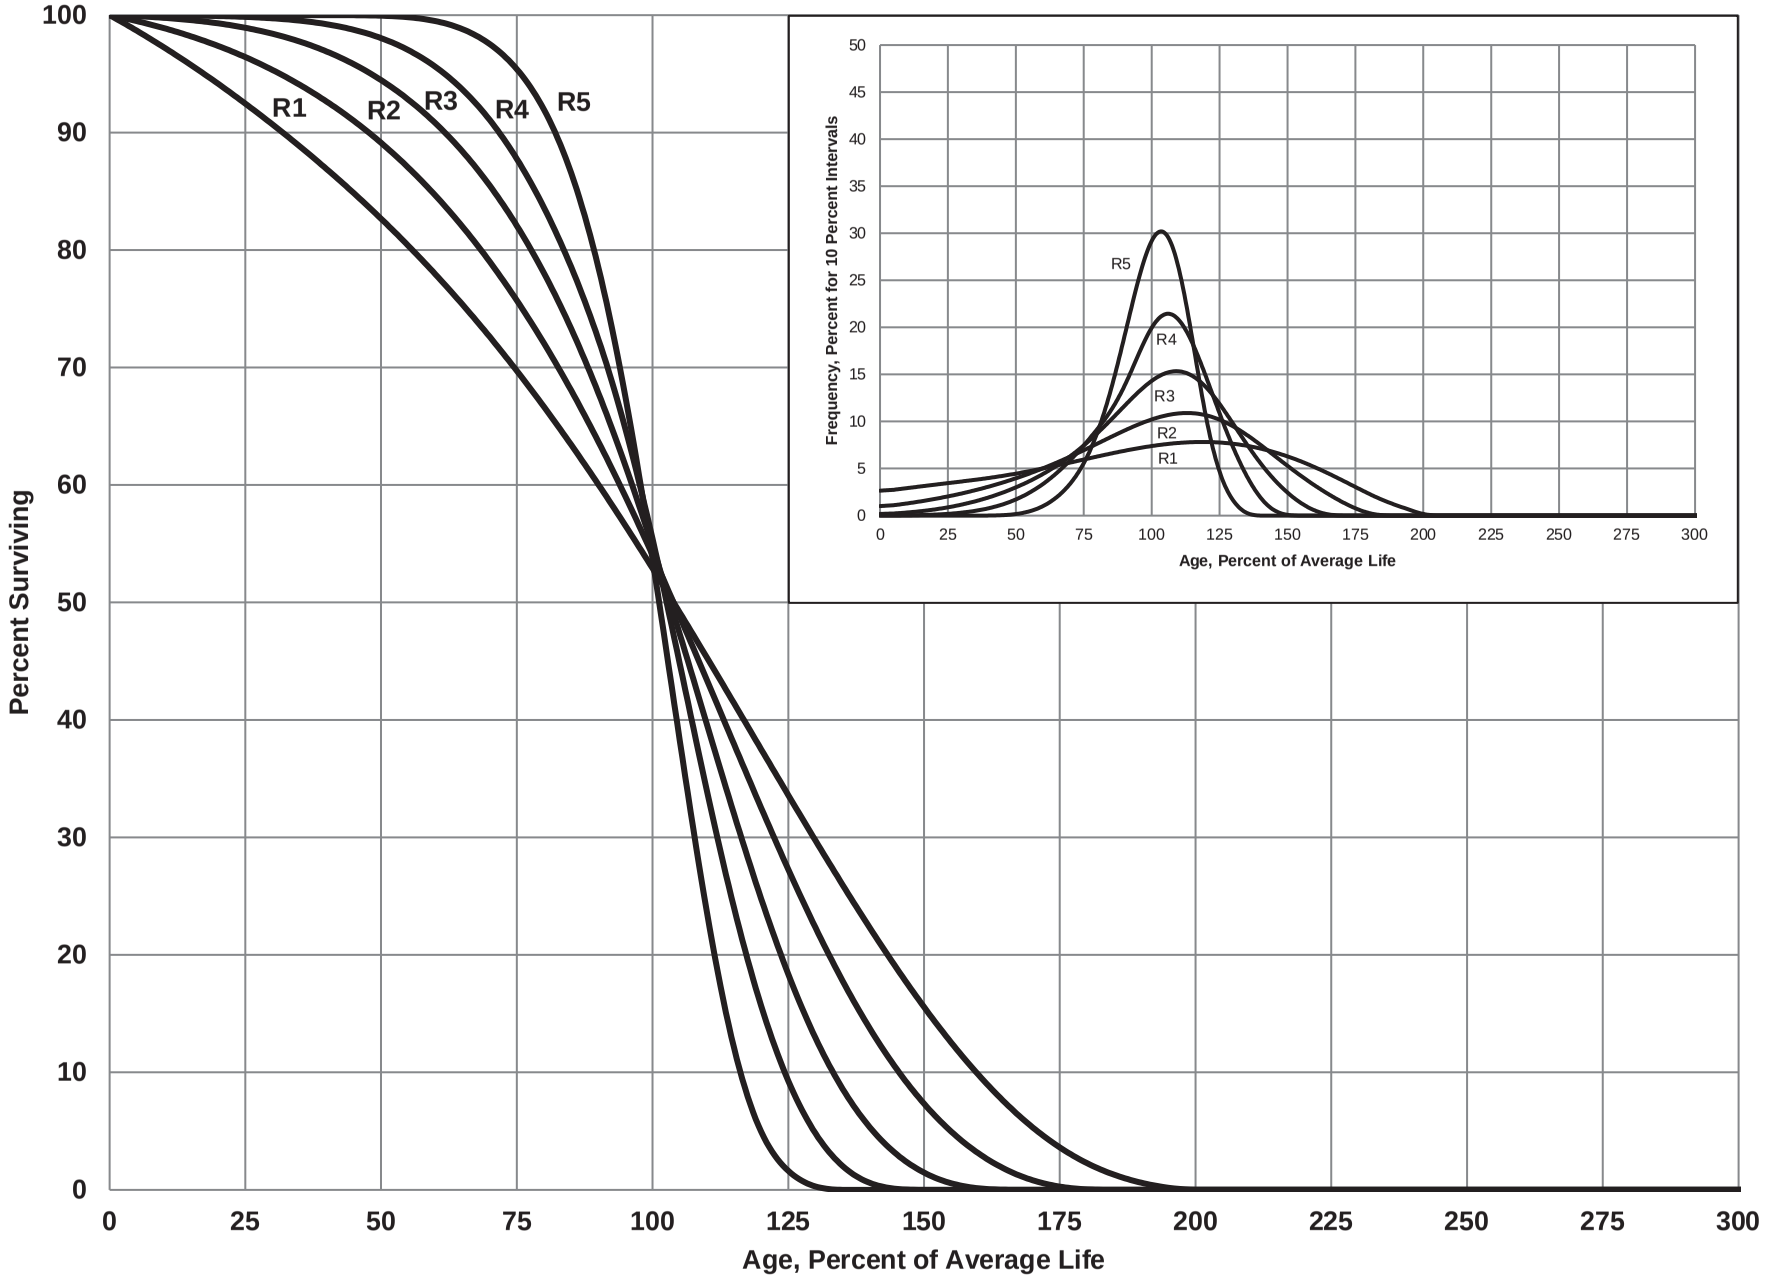

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

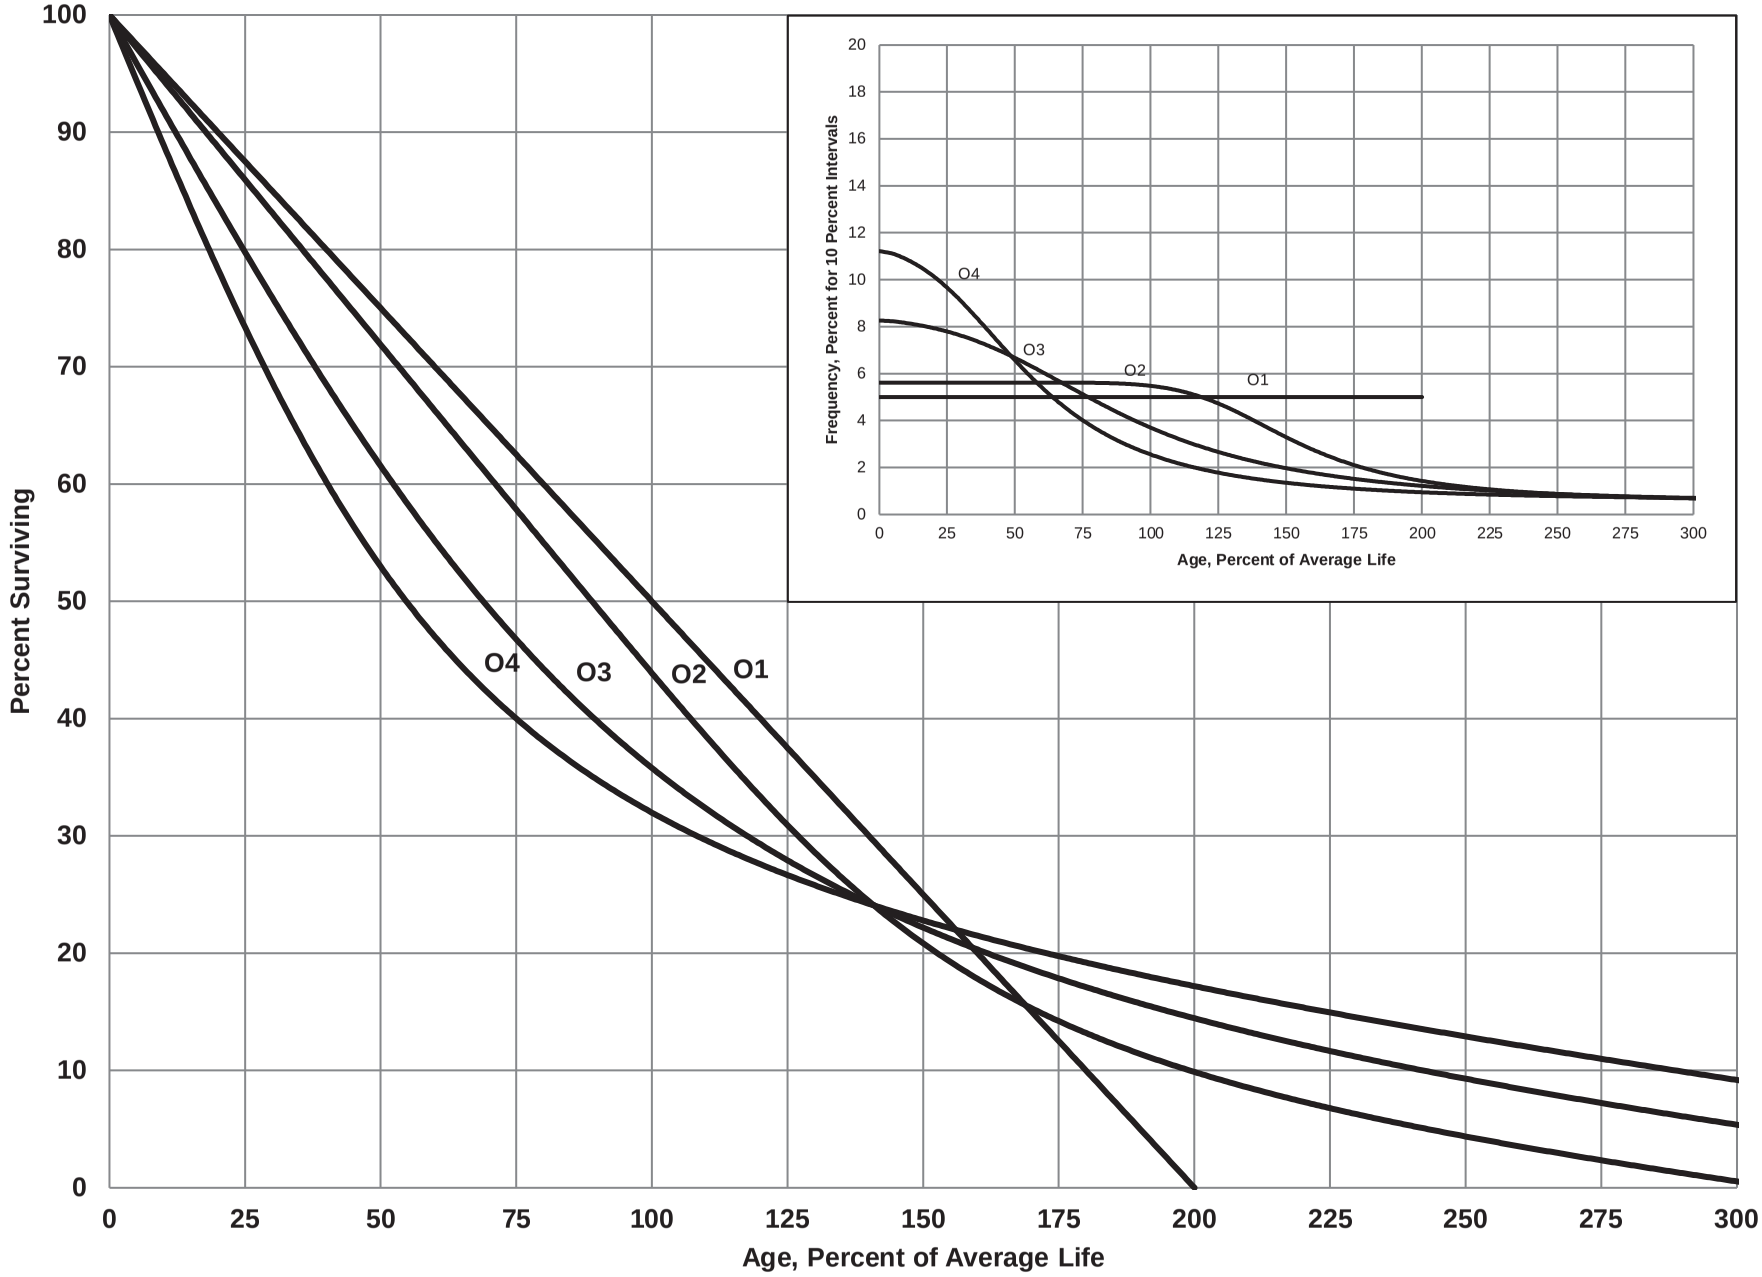

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2013-2022 for which there were placements during the years 2008-2022. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2008 were retired in 2013. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2013 retirements of 2008 installations and ending with the 2022 retirements of the 2017 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.

[a] Transfer Affecting Exposures at Beginning of Year

[b] Transfer Affecting Exposures at End of Year

[c] Sale with Continued Use

Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2013 through 2022 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2018 are calculated in the following manner:

Exposures at age 0	= amount of addition	= $750,000
Exposures at age ½	= $750,000 - $ 8,000	= $742,000
Exposures at age 1½	= $742,000 - $18,000	= $724,000
Exposures at age 2½	= $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½	= $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2013-2022
SUMMARIZED BY AGE INTERVAL

Experience Band 2013-2022 Placement Band 2008-2022

Year Placed	Exposures, Thousands of Dollars Annual Survivors at the Beginning of the Year 2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Total at Beginning of Age Interval	Age Interval

2020								960[a]	949	926	5,719	1½-2½
2021									1,080[a]	1,069	6,579	½-1½
2022										1,220[a]	7,490	0-½
Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2013-2022, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2013-2022 Placement Band 2008-2022

					35.66
Total	44,780	1,606			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips have been conducted periodically. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during these field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

During the extensive period of years our firm has been conducting depreciation studies for the Company, the field trips have resulted in the review of operations of all the Company's divisions numerous times. The following is a list of the locations visited during the past and recent trips.

August 9, 2023

Kinter Compression Station
Pratt Drive Meter Set and Regulator Station
Ricey Alley Regulator Station

Valley Compressor Station
Baum Compressor Station
Truittsburg Compressor Station

Judgment

The survivor curve estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during the field trips and other conversations with management; and the survivor curve estimates from previous studies of this company and other gas companies.

For many of the mass plant accounts and subaccounts for which survivor curves were estimated, the statistical analyses resulted in good to excellent indications of the survivor patterns experienced. Generally, the information external to the statistics led to little or no significant departure from the indicated survivor curves for the following accounts:

Account No.	Account Name
325.04	Rights-of-Way
327.00	Field Compressor Station Structures
328.00	Field Measuring and Regulating Station Structures
330.00	Producing Gas Wells - Well Construction
331.00	Producing Gas Wells - Well Equipment
332.00	Field Lines
333.00	Field Compressor Station Equipment
334.00	Field Measuring and Regulating Station Equipment
337.00	Other Equipment
351.00	Structures and Improvements
352.02	Wells - Equipment

353.01	Lines
354.01	Compressor Station Equipment
366.02	Structures and Improvements - Measuring and Regulating
366.03	Structures and Improvements - Other
367.00	Mains
369.00	Measuring and Regulating Station Equipment
371.00	Other Equipment
375.01	Structures and Improvements - Measuring and Regulating - Other - Minor
375.02	Structures and Improvements - Measuring and Regulating - Other - Major
376.00	Mains
378.00	Measuring and Regulating Station Equipment - General
380.00	Services
381.00	Meters
382.00	Meter Installations
385.00	Industrial Measuring and Regulating Station Equipment
387.00	Other Equipment
392.01	Transportation Equipment - Automobiles
392.02	Transportation Equipment - Trucks
392.03	Transportation Equipment - Trailers
396.00	Power Operated Equipment

Account 376.01, Mains – Low Pressure, is used to illustrate the manner in which the study was conducted for the groups in the preceding list. Account 376.01 represents 27 percent of the total depreciable plant. Aged plant accounting data have been compiled for the years 1938 through 2022. These data have been coded in the course of the Company's normal record keeping according to account or property group, type of transaction, year in which the transaction took place, and year in which the gas plant was placed in service. The retirements, and other plant transactions, and plant additions were analyzed by the retirement rate method.

The survivor curve estimate for the periods 1938 through 2022 was selected to analyze the rates of retirements of low pressure distribution mains. The current indication is that an Iowa 73-S0.5 survivor curve is being experienced, based on the statistical analysis for the overall period, 1939-2022. Discussions with operating and managing personnel as well as field observations related to reasons for retirement indicated that little change over the last few years or in the next few years are

expected. Thus, a slight change to a shorter average service life and survivor curve from the last study.

For large structures in Account 375, a life span was estimated for each major structure. Each life span was estimated on the basis of type of construction, use, age, condition, and management's plans within the foreseeable future. An interim survivor curve was estimated for the major structures, based primarily upon the statistical analysis of the interim retirements that have been experienced by the Company's large buildings. The estimates for land, leaseholds, and rights-of-way represented by Accounts 350.11, 350.21, 352.11, 352.12, 365.02, 374.02, and 389.02 were based on a review of the ages and magnitude of experienced retirements and a consideration of the survivor curves of the physical plant with which the rights are associated. Generally, the rates of retirement have been small during the early portion of the life cycles and are of use only in defining the foreportion of the estimated survivor curves. The maximum lives of the estimated curves generally coincide with the maximum lives of the survivor curves determined for the associated physical plant.

The survivor curve for Account 351 was based on statistical analyses and a knowledge of the type of structures in the account. The structures generally are small to medium size metal buildings of the nature expected to experience average service lives approximating 40 to 60 years. The stub survivor curves for the 1951-2022 experience band for Account 351 is reasonably well fit by an R2 Iowa type curve with a 60-year average service life which provides for significant retirements during ages 35 through 65.

The survivor curve estimate for Account 355, Measuring and Regulating Station Equipment, is based on statistical analyses and the nature of the equipment in the account. The range of service lives used by others for this account is 40 to 55 years. The estimates for the Company's measuring and

regulating equipment used in other functions range from 20 to 50 years with low mode survivor curves. The 60-R2.5 is a reasonable interpretation of the available experience, however, longer than the upper end of the range of lives expected for this equipment. The survivor curve estimates for the remaining accounts were based on judgment incorporating the statistical analyses, the nature of the equipment and the typical range of lives used in the industry.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of August 31, 2024, the estimated book depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the average service life procedure and for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$\text{Composite Remaining Life} = \frac{\left(\frac{\text{Book Cost}}{\text{Life}} \times \text{Remaining Life}\right)}{\frac{\text{Book Cost}}{\text{Life}}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$\text{Composite Remaining LIfe} = \frac{\sum \text{Whole Life Future Accruals}}{\sum \text{Whole Life Annual Accruals}}$$

or

$$\text{Composite Remaining Life} = \frac{\sum \text{Book Cost} - \text{Calc. Reserve}}{\sum \text{Whole Life Annual Accrual}}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through

future accruals. However, the calculation is based at the equal life group level rather than the vintage group level and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 6-L2.5 Survivor curve and a August 31, 2024 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., August 31, 2024 in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 6-L2.5 survivor curve and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

TOTAL			100.00000						

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval, the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than the first year (2024), the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For example, the figure 19.41179464092 for 2023 equals one-half of 0.93708654670 plus all of the succeeding figures in column 5. Only two-thirds of the annual accrual for the vintage's current age interval group is included in the summation because the equal life group for that interval expires at the midpoint of the current year.

The summation of annual accruals (column 7) for installations during 2024 is calculated on the basis of an in-service date at the midpoint of twelve months, i.e., six months prior to August 31. Inasmuch as the overall calculation is centered on August 31, 2024, the accrual for 2024 installations (during the twelve months) represents only one-half of one year, one-third of the year prior to August 31 plus two thirds year following August 31. For this reason, the first figure in column 7, for vintage 2024, equals the group annual accrual for 2024 plus one-half of the group annual accruals for each of the subsequent years.

The average percent surviving, derived from the Iowa 6-L2.5 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group as of August 31, 2024.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will

render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable gas plant in service. The accounts and their amortization periods are as follows:

Account		Amortization Period, Years
391.00,	Office Furniture and Equipment	
	Furniture	20
	Computers	5
	Equipment	15
394.00,	Tools, Shop and Garage Equipment	25
394.01,	Dual Fuel Stations	15
397.00,	Communication Equipment	
	Radio	10
	Telephone	15
	Microwave	18
398.00,	Miscellaneous Equipment	15

For the purpose of calculating annual amortization amounts as of August 31, 2024, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced salvage is incorporated in the results of the study, as it was reported on the Company's books and records for the period January 1, 2019 through August 31, 2023. The data for the last four months of 2023 are based on estimated experience. Results of the calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing salvage, no adjustments for salvage were made to the annual accruals and accrued depreciation calculated for each individual account. There were no exclusions from the 2019 through 2023 net salvage accrual.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-11 summarize the results of the depreciation study as of August 31, 2024. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of August 31, 2024, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book reserve to August 31, 2024.. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended August 31, 2024. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2019 through 2023.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and gross salvage and cost of removal for the years 2019-2023 are presented in three sections.

The section beginning on page VI-2 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for gas plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-2. The tabulations of experienced and estimated net salvage by year by account for the five-year period, 2019-2023, are presented in the section beginning on page VIII-2.

In the first section, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in the second section and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 on page V-11.

Pittsburgh, PA 15212-5322

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant as of September 30, 2025. The results of our study as of August 31, 2024 are presented in our report titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2024". The same methods, procedures and estimates are used in both studies.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates as of September 30, 2025.

Respectfully submitted,

GANNETT FLEMING VALUATION

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages I-3 through I-10 summarize the results of the depreciation study as of September 30, 2025. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of September 30, 2025, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book reserve to September 30, 2025. Table 3 sets forth the calculations of the depreciation accruals for the thirteen months ended September 30, 2025. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2020 through 2024.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2020 through 2024, beginning on pages III-2 through III-5.

Peoples Natural Gas Company, LLC
375 North Shore Drive, Suite 600
Pittsburgh, PA 15212-5322

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant as of August 31, 2023. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 and 2, beginning on page I-3 of the attached report.

A description of the methods and procedures upon which the study was based is set forth in a companion report, "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2024".

Respectfully submitted,

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

The results of the depreciation study are summarized in Table 1, which sets forth the calculated annual depreciation related to Gas Plant in Service as of August 31, 2023. Table 2 presents the experienced gross salvage and cost of removal associated with regular retirements during the five-year period, 2018-2022 and the annual amortization of net salvage.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on II-6. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2018 through 2022, beginning on beginning on page III-2.

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant in service. The results of our study as of August 31, 2024 are presented in the attached report. The results of our study as of August 31, 2023 are presented in our report titled "2023 Depreciation Study- Calculated Annual Depreciation Accruals Related to Gas Plant as of August 31, 2023". The same methods, procedures and estimates are used in both studies.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates as of August 31, 2024.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study conducted for Peoples Natural Gas Company LLC to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of gas plant as of August 31, 2024 for the Peoples Gas division.

The depreciation accrual rates and amounts presented herein are based on estimated survivor curves and on methods and procedures set forth in previous orders approved by the Pennsylvania Public Utility Commission. The estimated survivor curves presented herein were based on the results of a service life study incorporating statistical analyses of data through 2019.

BASIS OF STUDY

Depreciation and Amortization

Depreciation, as defined in the Uniform System of Accounts, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

The calculation of annual and accrued depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. These subjects are discussed in the sections which follow.

For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, the average service life (ASL) procedure for plant installed prior to 1976 and the equal life group (ELG) procedure for property installed subsequent to 1975. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of gas property. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

Survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. Iowa type curves were used to depict the estimated survivor curves. For life span groups, the estimate of life characteristics is consistent because the

calculated lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Service Life Estimates

The method of estimating service life consisted of compiling the service life history of the plant accounts, subaccounts or depreciable groups, reducing this history to trends through the use of acceptable actuarial techniques, and forecasting the trend of survivors for each depreciable group on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend yielded a complete pattern of life characteristics from which the average service life was derived.

The Company's service life estimates used in the depreciation calculation incorporated historical data compiled through 2019 from the property records of the Company. Such data included plant additions, retirements, transfers and other activity. Generally, retirement data for the years 1946 through 2019 were used in the actuarial life table computations which were the primary statistical support of the service life estimates.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through field trips conducted during the course of the service life study. Discussions with operating and management personnel also provided information regarding plans for the future which was incorporated in the interpretation and extrapolation of the statistical analyses.

AMORTIZATION OF NET SALVAGE

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of net salvage over a five-year period.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

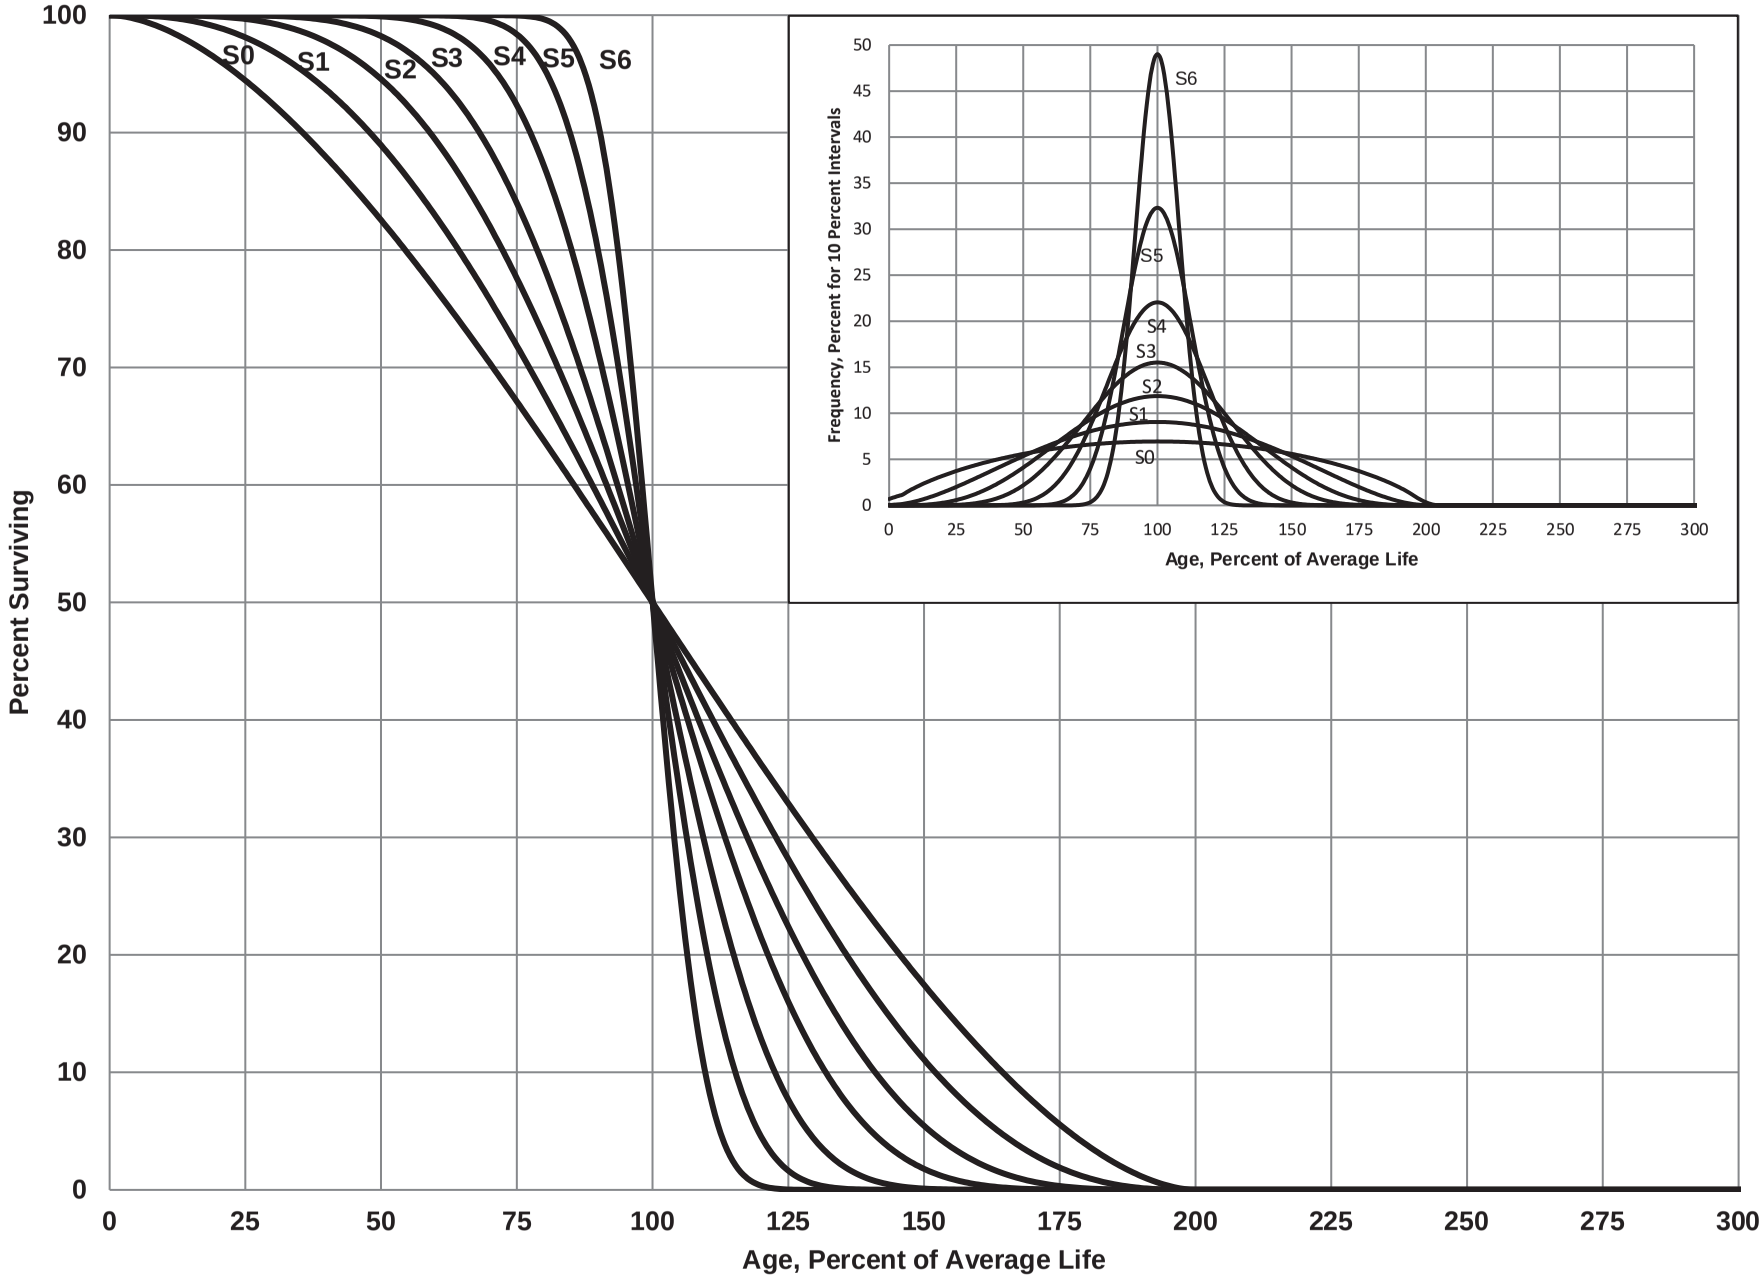

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

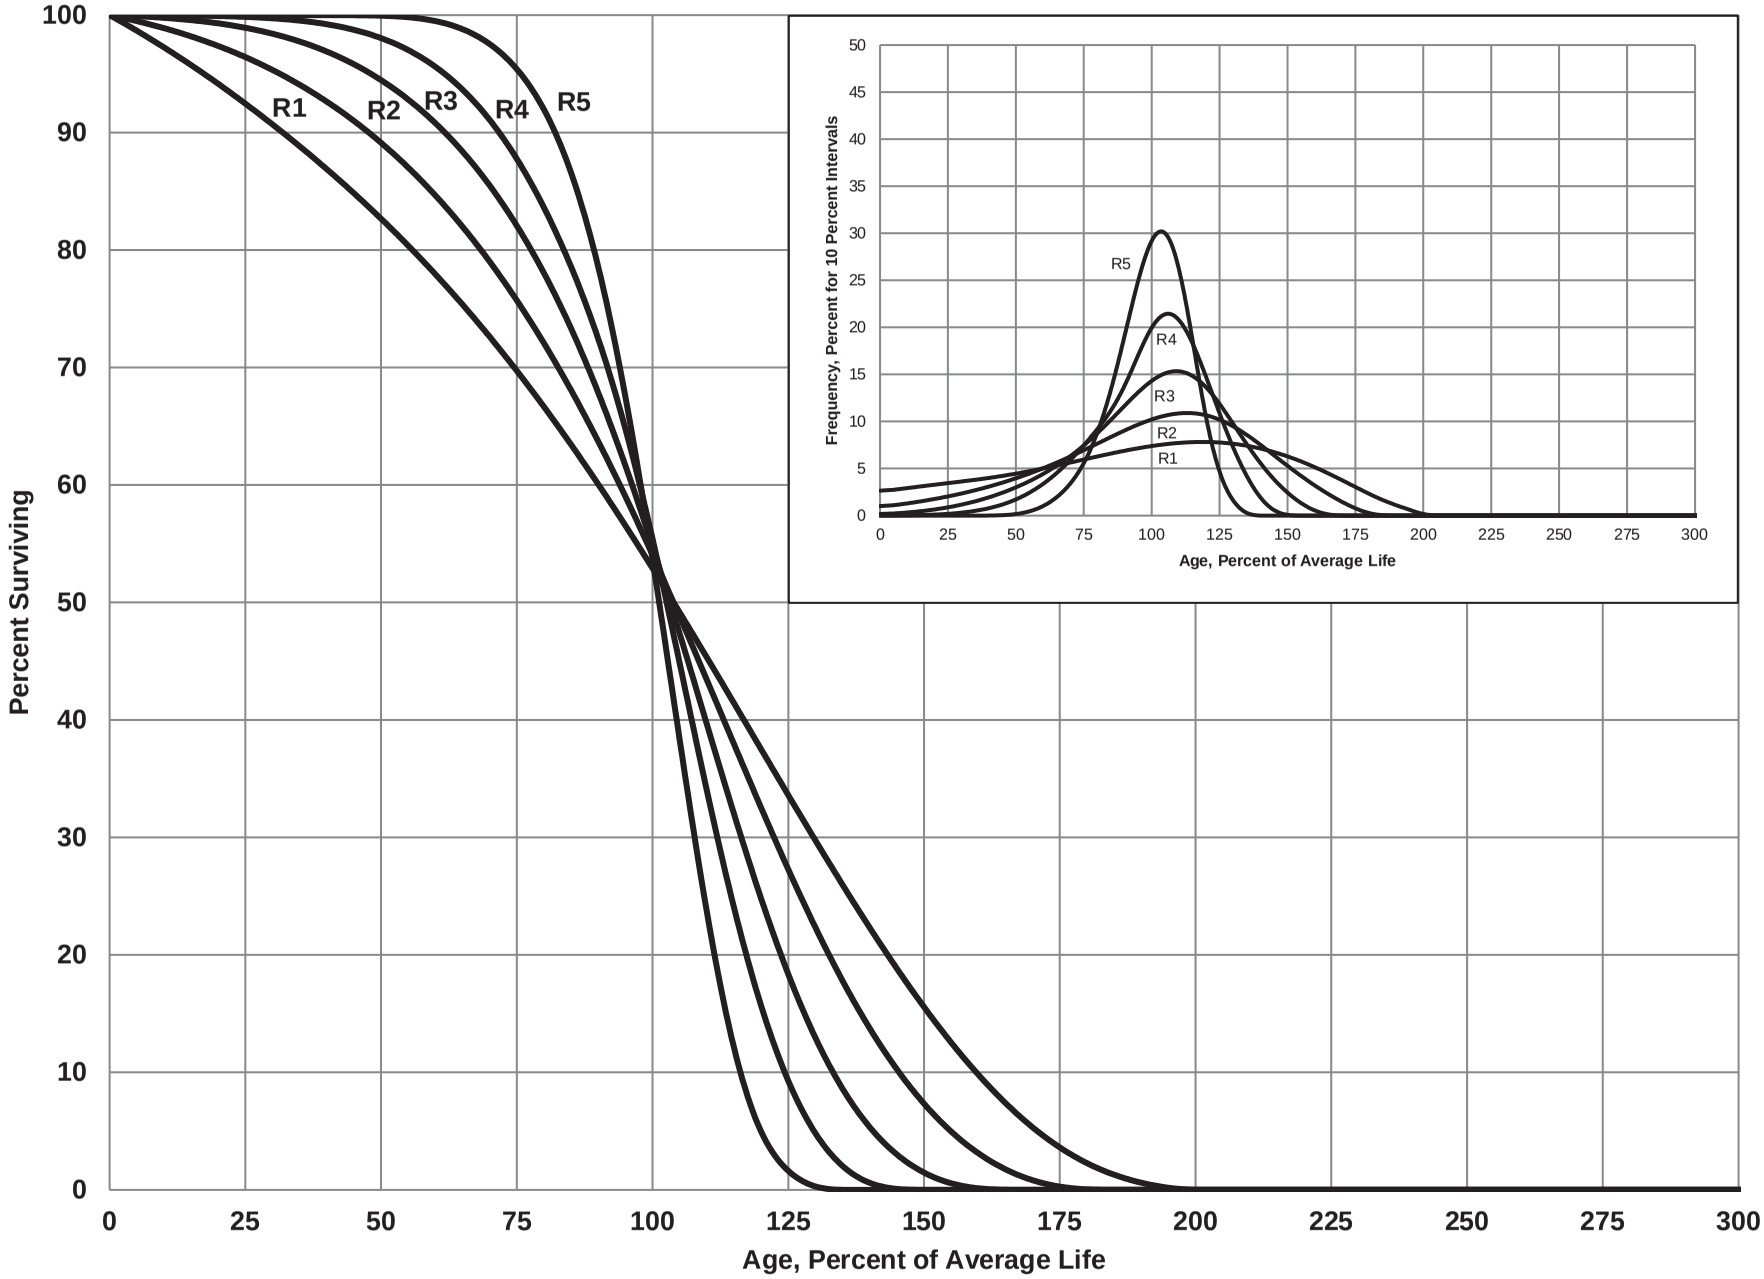

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

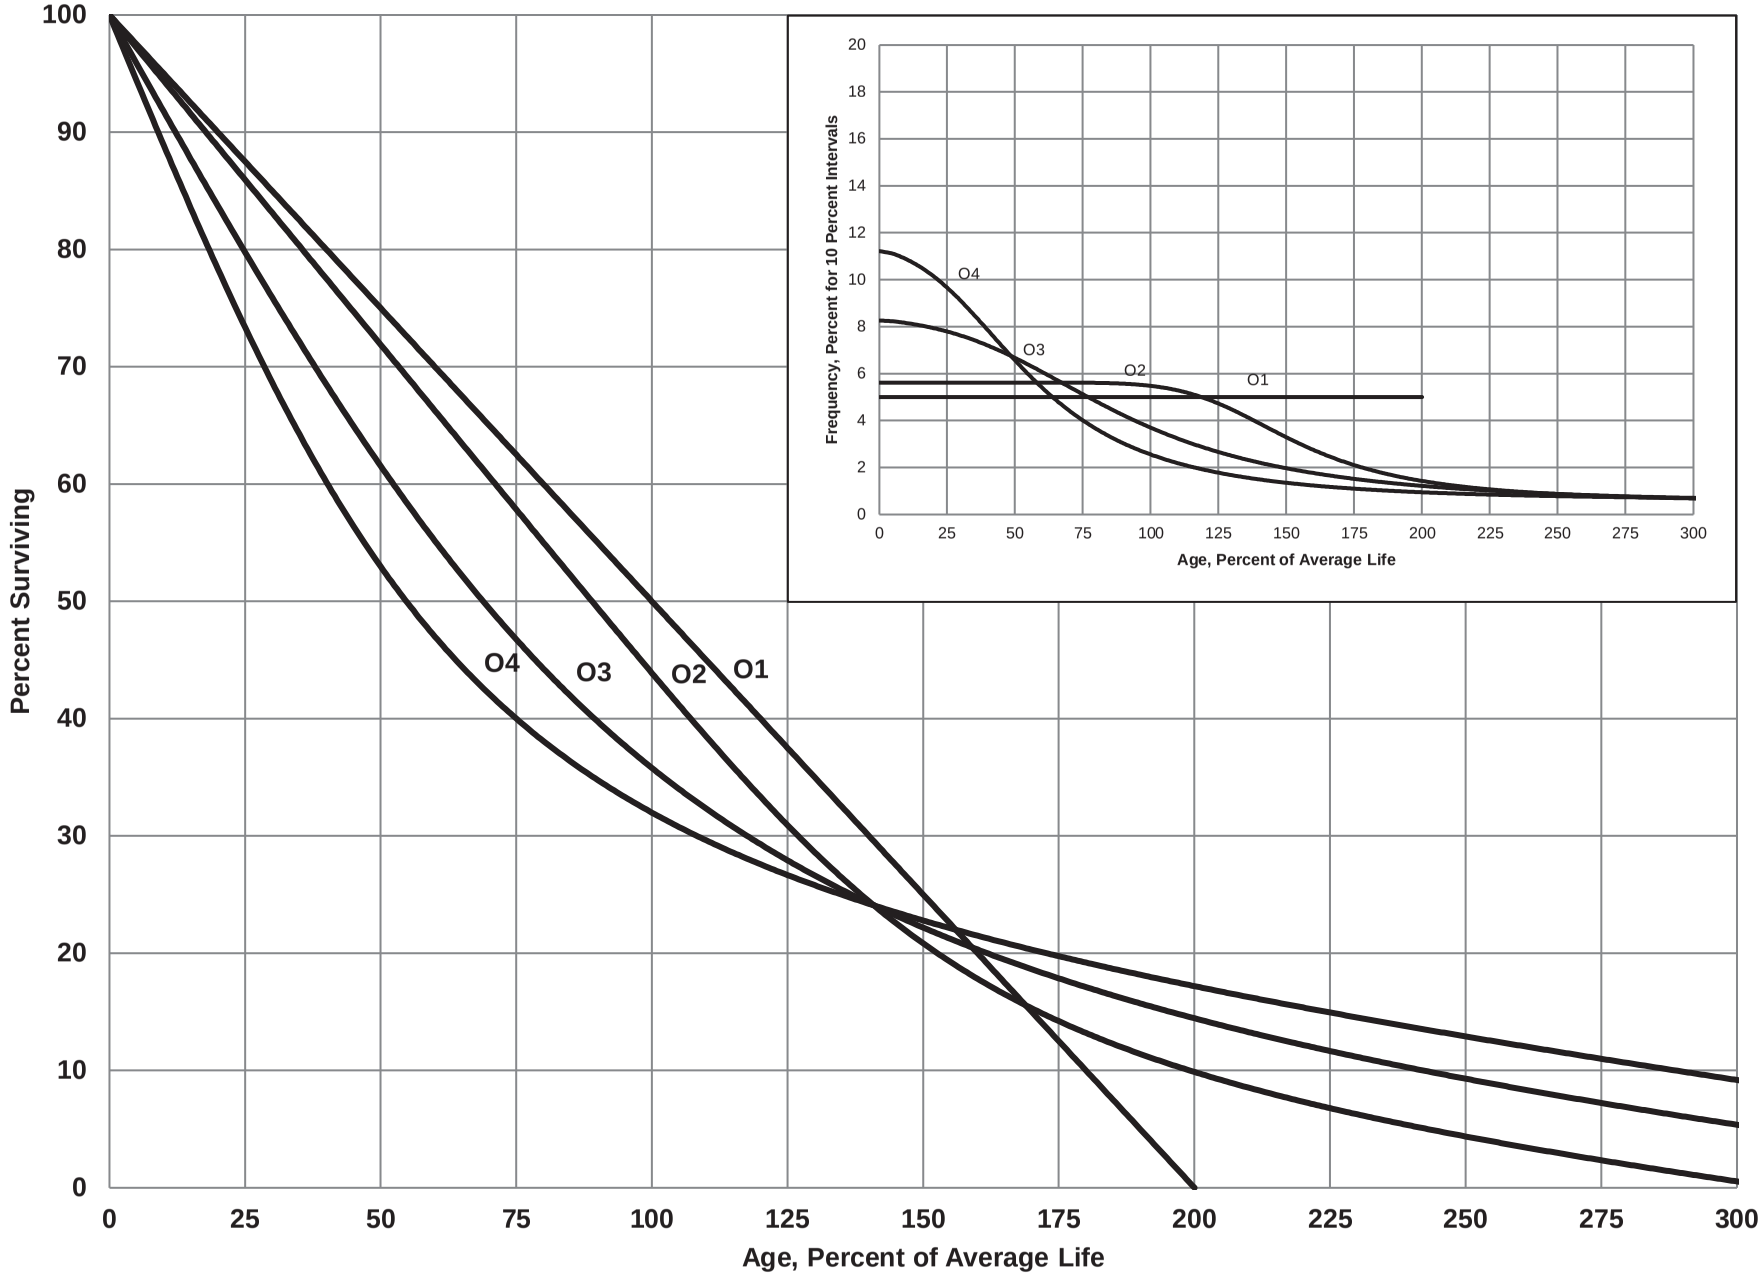

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2013-2022 for which there were placements during the years 2008-2022. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2008 were retired in 2013. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2013 retirements of 2008 installations and ending with the 2022 retirements of the 2017 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

$$10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.$$

SCHEDULE 1. RETIREMENTS FOR EACH YEAR 2013-2022
SUMMARIZED BY AGE INTERVAL

Experience Band 2013-2022 Placement Band 2008-2022

Year Placed	Retirements, Thousands of Dollars During Year										Total During Age Interval	Age Interval
	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
2008	10	11	12	13	14	16	23	24	25	26	26	13½-14½
2009	11	12	13	15	16	18	20	21	22	19	44	12½-13½
