DER Monitoring Response

Location: Watson Sub, Susquehanna Region
Contact for Details: Preston Clark (DER Management)

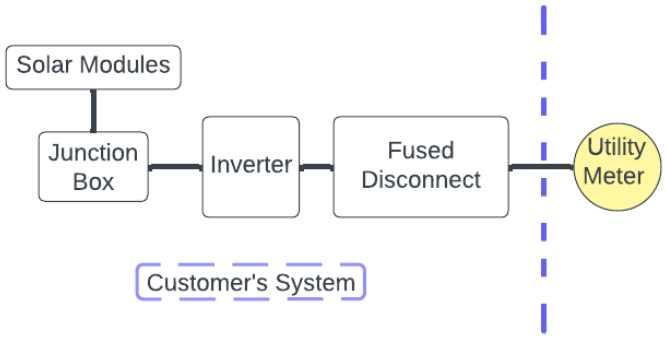
Document#: PPL-DER-WP-0040
Revision: 1
Date: 11/9/2023

Overview	
Trigger	DER communication lost
Use Case	DER Monitoring Response
DER information	5 kW solar
Cause of Violation	☐ DER interconnection ☐ Transmission voltage ☐ Cap bank failure ☐ Device mis operations ☐ High load V drop ☐ High penetration V rise ☒ **Other:** Blown Fuse
☒ **Active Management**	
	Benefits Gained: - Customer loss of generation was identified and resolved, enabling the customer's generation capabilities. **Customer Saving:** - Reduced lost system production and associated customer savings.

I. Problem Statement

PPL Operations identified a customer DER Management device using ADMS that was not communicating (starting 7/29/2023) and in response a service technician was sent to investigate. The service technician identified a blown fuse in the customer's fused AC disconnect between the inverter and the meter (as seen in Figure 1: Diagram of Customer System's Connection to Utility Meter, below), which blocked production of the inverter.

Figure 1: Diagram of Customer System's Connection to Utility Meter



II. Resolution

In response to the blown fuse, PPL contacted the installer to work with the customer, ensuring restoration of the customer's ability to generate power. Communication with the DER Management device and inverter production was restored 10/23/2023 following the installer's implementation of a new fuse.

III. Conclusion

The customer's loss of generation was identified because of PPL's DER Management program, enabling the customer's generation capabilities to be restored. Without DER management, the customer's loss of generation would have continued for an unknown duration, resulting in lost system production and any associated customer savings during the extended period of time. In the future, helping to keep customer generation online will mean more accurate day ahead forecasting, as well as maintaining and enhancing customer experience.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PPL Electric Utilities Corporation	:	
for Approval of its Second Distributed Energy	:	Docket No. P-2024-_____
Resources Management Plan	:	

DIRECT TESTIMONY OF REIGH A. WALLING

PPL Electric Statement No. 4

May 20, 2024

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Reigh A. Walling, and my business address is 438 Vischer Ferry Road, Clifton Park, NY 12065.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am the proprietor and sole professional of Walling Energy Systems Consulting, LLC, a consultancy focused on distributed and renewable electric energy systems.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I received Bachelor of Science (cum laude) and Master of Engineering Degrees in Electric Power Engineering from Rensselaer Polytechnic Institute in 1974 and 1979, respectively.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. For nearly 12 years, I have provided independent electric power system consulting services to electric utilities, Distributed Energy Resource ("DER") developers, DER equipment manufacturers, and research institutions. A majority of my work in this consultancy has involved DER and renewable energy systems, specifically with regard to standards, interconnection requirements, and system performance. I have been a major contributor to the development of the IEEE Std 1547 series of standards, including the original IEEE Std 1547-2003© version, the 2018 revision (IEEE Std 1547-2018©), and the current working group developing the next revision of this standard. I also was involved in developing the related IEEE 1547.1 standards, which are the companion

standards defining IEEE 1547 compliance verification and testing, for both the original IEEE Std 1547.1-2005© and current IEEE Std 1547.1-2020© versions of this standard. I was also a major contributor to the application guides to IEEE 1547, including the original development (IEEE Std 1547.2-2008©) and recent revision (IEEE Std 1547.2-2024©).

I have participated in numerous DER-related research projects for the Electric Power Research Institute ("EPRI"). One of these projects was specifically focused on the subject of "smart inverter" settings (parameters) and how these affect system performance and stability. For one of my clients, a major utility in the Northeast, I have developed DER interconnection technical requirements, including comprehensive screening criteria. Other consulting work I perform involves large-scale transmission-connected renewable resource interconnection (e.g., wind and solar farms), High-Voltage Direct Current ("HVDC") transmission systems, and the impacts of geomagnetic disturbances on electric power systems.

Prior to forming my consulting firm in 2012, I was employed for 32 years in the Energy Consulting unit of General Electric ("GE"), performing similar consulting work in a progression of titles and responsibilities, culminating in the position of Technical Director. One of my major assignments at GE was as the manager of the Distribution Systems Testing, Application, and Research ("DSTAR") organization, a consortium of over two dozen electric utilities supporting pragmatic distribution system research and development.

I was elected a Fellow of the Institution of Electrical and Electronic Engineers ("IEEE") in 2005, an honor limited to one-tenth of one percent of the IEEE membership

in any one year. In 2009, I was awarded the IEEE Excellence in Power Distribution Award. I have participated in many IEEE working groups, including leadership roles. Of particular relevance to this testimony is that I was the founding chair of the IEEE's Distributed Generation Integration working group.

Q. HAVE YOU PREVIOUSLY TESTIFIED AS A WITNESS BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. No.

Q. HAVE YOU TESTIFIED AS A WITNESS BEFORE OTHER REGULATORY COMMISSIONS?

A. Yes. I provided testimony in the following cases:

1. Before the Connecticut Siting Council, ca. 2004–2005, regarding technical aspects of underground transmission alternatives to a proposed extensive 345 kV transmission development (Middletown to Norwalk).
2. Before the Texas Public Utilities Commission, ca. 2008, regarding ancillary service requirements related to integration of large-scale wind development in the Electric Reliability Council of Texas ("ERCOT") power grid.

Both of these testimonies were submitted while I was employed at GE Energy Consulting, and I no longer have access to records that can indicate exact dates and dockets.

Q. HAVE YOU BEEN RETAINED BY PPL ELECTRIC TO TESTIFY ON BEHALF OF THE COMPANY IN SUPPORT OF THE ABOVE-CAPTIONED PETITION?

A. Yes.

Q. WOULD YOU PLEASE DESCRIBE THE SUBJECT MATTER OF YOUR TESTIMONY?

A. My testimony will address: (1) the development of IEEE 1547-2018, along with the standard's purpose and requirements; (2) the operational challenges created by DER on an electric distribution system; (3) the operational benefits of utility monitoring and management of DERs; and (4) the potential future consequences of integration of DERs without adequate utility visibility and management.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH YOUR TESTIMONY?

A. Yes, I am sponsoring the following exhibits:

- PPL Electric Exhibit RW-1 – a copy of my curriculum vitae.

I. THE COMMISSION SHOULD APPROVE PPL ELECTRIC'S SECOND DER MANAGEMENT PLAN

A. IEEE 1547-2018

Q. WHAT IS IEEE 1547-2018?

A. IEEE Std 1547-2018© is the current version of IEEE 1547, which is the "IEEE Standard for Interconnection and Interoperability of Distributed Energy Resources with Associated Electric Power Systems Interfaces". The intent of this standard is to establish uniform electric grid interconnection and data interoperability requirements for DER. While

IEEE standards are inherently voluntary, their adoption by regulatory and jurisdictional entities effectively makes such standards mandatory. This standard provides a widely-accepted technical basis for regulatory requirements that can be flexibly adjusted to regional differences. IEEE 1547 has been widely adopted in the United States, as well as many other countries. The federal Energy Policy Act of 2005 specifically references IEEE 1547, stating "Interconnection services shall be offered based upon the standards developed by the Institution of Electrical and Electronic Engineers: IEEE Standard 1547 for Interconnecting Distributed Resources with Electric Power Systems, as they may be amended from time to time." Energy Policy Act of 2005, Pub. L. No. 109-58, § 1254 (2005).

Q. WHEN WAS IEEE 1547 FIRST DEVELOPED?

A. The original version of IEEE 1547 was formally approved by the IEEE-Standards Association Standards Board in 2003. Work on this standard began in the 1998 timeframe; I became involved in 1999. Prior to this standard, DER interconnection requirements varied widely from utility to utility, and there was a great deal of contention between DER proponents and electric utilities. The wide variety of DER interconnection requirements was difficult for manufacturers of DER equipment to support and was confusing to the industry, resulting in great inefficiency and the creation of a major obstacle to DER implementation. The intent of the standard was to develop uniform requirements for which equipment can be designed and tested for compliance. While some individual utility technical requirements beyond IEEE 1547 persist, these requirements are generally supplemental to the IEEE 1547 requirements. The adoption

of this standard has been a major factor supporting the exponential growth of DER over the past two decades.

The original IEEE Std 1547-2003© was reaffirmed without change in 2008, in accordance with the IEEE Standards Association policy at the time, which required standards to be either rewritten, reaffirmed, or retired by five years after approval. The standard was amended in 2014 to implement very limited changes.

A later IEEE-SA policy change extended the maximum life of IEEE standards to 10 years, but no longer allowed simple reaffirmation. Instead, standards had to be either re-developed by a working group or retired by the 10-year point. As a result, a working group was convened in 2014 to rewrite IEEE 1547, culminating in the current IEEE 1547-2018. Presently, a new working group is developing the next revision of this standard. I am again heavily engaged in this effort. The changes from the 2003 to 2018 versions were dramatic. It is my opinion, as well as the stated goals of the working group leadership, that the changes from the current 2018 version to the next version will be primarily incremental.

Q. HOW HAVE CHANGES IN DER TECHNOLOGY, INCREASES IN DER PENETRATION, AND UTILITY DIGITIZATION DRIVEN REVISIONS THAT HAVE BEEN MADE TO IEEE 1547 SINCE ITS ORIGINAL DEVELOPMENT?

A. At the time of the development of IEEE 1547-2003, DER had a very limited presence in distribution systems. My observation of the attitudes of most electric utility participants in the standard working group was that they believed DERs would have only a detrimental impact to the distribution system, and in the event of any disturbance, DERs

should be immediately taken off the utility grid. The power generation capacity provided by DERs was seen as insignificant and there was little vision that DERs could provide a supportive role for the electric power system.

DERs at the turn of the millennium were primarily conventional rotating generators, powered by engines or turbines. Many participants in the original IEEE 1547 development working group openly stated to me a belief that inverter-based DERs, such as photovoltaics, would never amount to any significant level of system penetration.

Over the past two decades, subsequent to the development of the original IEEE 1547-2003, the growth of DERs has been exponential. This growth includes both relatively large megawatt-scale solar farms as well as behind-the-meter DERs located in both residential and commercial premises. The nature of the DERs has changed dramatically, with the majority of DERs now interfaced to the AC power grid using power electronic inverters, primarily using photovoltaic panels as the energy source. Recently, there has also been rapid growth of distributed battery energy storage.

The aggregate power capacity provided by DERs has now become a substantial component of the power grid's generation. Bulk power system reliability entities, such as the North American Electric Reliability Corporation ("NERC"), the Federal Energy Regulatory Commission's ("FERC") designated watchdog of grid reliability, has determined that DERs have considerable potential impact on system reliability. Under the requirements of IEEE 1547-2003, DERs were required to trip offline immediately for even modest voltage dips. Transmission system short-circuit faults can cause distribution voltage to be depressed over a large geographic area. Simultaneous tripping of DERs throughout the affected area can cause a significant loss of generation, adversely

affecting the necessary balance between generation and load demand, which could cause excessive power flows, instability, and even potential system collapse into blackout.

The growth of DER penetration also has substantial potential to disrupt distribution system voltage management. Voltage issues present the most common limitations of distribution system DER hosting capacity; *i.e.*, the ability of the distribution system to accommodate DER without exceeding the limitations of the distribution system equipment and the quality of service provided to other customers.

DERs, both inverter and synchronous generator types, have the inherent capability to inject or absorb reactive (kVAR) power as well as injecting active, or real (kW), power. It is well understood that DERs' reactive power can be used to mitigate some or all of the voltage impacts that the DERs' active power injection can create.

In addition to changes in DERs, there have been major technical advancements in the power grid with the advent of "smart grid" technology. Digitization of power system controls, including the implementation distribution management systems ("DMS"), advanced distribution management systems ("ADMS"), and various smart grid functionalities, such as system self-healing and optimized voltage management, exposed the need for DER to have data interoperability with such systems.

A minor amendment of IEEE 1547 was made in 2014, based on work that started in 2012, to allow, but not require, DERs to remain online through certain grid disturbances and to regulate voltage.

The changes in situation by the time that the work began in 2014 for complete re-development of IEEE 1547, resulting from massive DER capacity increase combined with technical advances, inspired a refocus in the revised IEEE 1547 for DERs to be a

more effective "team player" in the electric power grid. The need was realized for DERs to maintain continuity of operation during system disturbances to protect system reliability, participate in system voltage and frequency management, mitigate adverse DER impacts, and to communicate with electric power system controls. The major revisions of the standard in the 2018 version substantially addressed these needs.

Q. COULD YOU PLEASE EXPLAIN YOUR WORK ON AND EXPERIENCE WITH IEEE 1547?

A. As mentioned above, I first became involved with the working group developing the initial IEEE 1547 standard in 1999. Because of the very large size of the working group (351 members), a small 24-member "writing group" was formed to shape the inputs of the larger body into the exact language of the draft standard. I was selected to be part of this writing group. After the draft standard went to ballot (using the IEEE's accredited balloting process open to participation across the industry), I was also selected to serve on the ballot resolution committee, which addressed balloter comments and modified the standard draft as necessary to achieve the required industry consensus. This standard was approved with overwhelming consensus to become IEEE 1547-2003.

Following completion of IEEE 1547-2003, I became involved with development of related standards in the 1547 series, including the companion test and compliance verification standard (IEEE 1547.1-2005), and the application guide to IEEE 1547-2003 (IEEE 1547.2-2008). I also participated in the amendment of the base standard, which became IEEE Std 1547a-2014©.

When the complete redevelopment of IEEE 1547 began in 2014, I was involved in the working group in a leadership capacity (co-facilitator of a sub-group) with the sponsorship and support of the U.S. Department of Energy via the Sandia National Laboratory. I continued in that role throughout the development of what became IEEE 1547-2018, including participation in the ballot resolution committee that shaped the final document. Subsequent to completion of this standard, I was involved in the re-development of the test standard (IEEE 1547.1-2020), again with U.S. Department of Energy support, and the application guide (IEEE 1547.2-2024).

A redevelopment cycle of the base IEEE 1547 standard has already begun, and I have been actively participating in this working group starting in 2023 and continuing to the present.

Q. WHAT DOES IEEE 1547-2018 REQUIRE FOR DER, INCLUDING SMART INVERTERS?

A. The original IEEE 1547-2003 established very basic DER interconnection requirements which included:

- Prohibition of energization of an otherwise de-energized distribution circuit.
- Disconnection of the DER from the utility system for distribution system faults and other voltage and frequency deviations.
- Prohibition on causation of voltages on the distribution system outside of accepted bounds.
- Limitation of harmonic current distortion.

- Detection and cessation of energization of a disconnected distribution feeder (island detection).

The significantly revised IEEE 1547-2018 retained these basic requirements with some changes, but introduced many additional requirements including:

- Minimum reactive power injection and absorption capability. The intent of this requirement is that this reactive power capability can be deployed to help regulate the distribution system voltage, particularly to mitigate voltage impacts caused by the DER. The prohibition by the original IEEE 1547-2003 of DER regulation of voltage was interpreted by many that a DER should only operate at unity power factor (no reactive power). Consequently, many inverter-based DERs were previously not designed to have any reactive power capability.
- Capability to control the reactive power according to several different defined functions, including the "volt-var" function where reactive power is varied as a function of the measured local voltage. This requirement is effectively a voltage regulation function. The original IEEE 1547-2003 strictly prohibited DERs from performing any voltage regulation.
- Ability to ride through (*i.e.*, not trip offline) for voltage and frequency disturbances of specified severities for specified durations. These ride-through characteristics were coordinated with the expected severity and durations of bulk transmission faults and frequency disturbances, such that DER do not trip offline as a result of bulk transmission disturbances. Consequential tripping of DER for such disturbances poses the distinct possibility of substantially aggravating the

severity of large-scale system disturbances, thereby posing a threat to power grid security and reliability. IEEE 1547-2018 retains the requirement for DER to trip offline, similar to previous requirements in IEEE 1547-2003, but with adjustment of parameters to better coordinate with bulk system security needs.

- Limitations on the allowable power quality impact of DERs, specifically regarding lamp flicker (repetitive voltage variations) and rapid voltage change (isolated abrupt changes in voltage). Limitations on harmonic distortion in IEEE 1547-2018 are similar to the previous requirements with some adjustments of parameters.
- Automatic variation of active (real, or kW) power with grid frequency. This is the functionality of the speed governor of a rotating generator DER and is applied to all DERs, including inverter-based DERs. The intent of this requirement is to provide support to grid frequency regulation by increasing DER power output when the frequency of the grid drops below the 60 Hz nominal value, and decreasing power output when the frequency rises above nominal. With the growth of inverter-based generation, at both the distribution and transmission levels, and the concurrent retirement of conventional generating plants, the mechanical inertia of the power grid will decrease. As a result, grid frequency will tend to vary more quickly as a result of changes in the balance between load demand and generation. This new requirement of IEEE 1547-2018 ensures that DERs provide commensurate contribution to grid frequency regulation and helps avoid excessive frequency variations that can lead to grid collapse and blackout.

- Capability for interoperability and information exchange with external entities, typically the interconnected utility, using a unified information model and standard communication protocols. This interoperability includes real-time measurements of DER parameters, such as active and reactive power output, terminal voltage, ability for the external entity to disable and enable DER operation and set power output limits, and change DER parameters (e.g., voltage regulation setpoints), in real time. This requirement for interoperable capability applies to all DERs, regardless of whether the host utility or any other entity provides the communication medium to the DER point of connection at the time of original DER installation. The intent of this requirement is to allow DER operation to be properly coordinated with the operation and security of the distribution system and power system at large in the future, if not immediately, as the complexity of the DER-penetrated grid increases.

Other changes made in the 2018 version that are not specifically new capability requirements include:

- Interconnection and performance of microgrids when connected to the distribution system is defined.
- Large utility-scale DER facilities (e.g., solar farms connected to distribution systems) are distinguished from smaller behind-the-meter DER installations with regard to the point where requirements are applied.

- Test and conformance evaluation requirements are made dependent on where the standard requires the performance requirements to apply and whether the DER unit is a pre-tested device or a bespoke assemblage of components.

The above new requirements comprise substantial, if not revolutionary, changes to DER capabilities that have been deemed necessary to accommodate the rapid increase of DER penetration, coordinate with modern digitized power grids, and leverage the capabilities of advancing technology to provide necessary grid-supporting services.

Q. HOW DO PPL ELECTRIC'S FIRST AND SECOND DER MANAGEMENT PLANS BUILD UPON IEEE 1547-2018'S PURPOSE AND REQUIREMENTS?

A. The underlying vision put forth in IEEE 1547-2018 is that DERs provide grid support and minimize their own adverse power system impacts in coordination with utility distribution system controls. PPL Electric's First and Second DER Management Plans are prudent steps toward fulfillment of this vision by utilizing the advanced grid support features required of DERs under this standard, in a flexible manner and through integration with distribution system controls, to meet objectives of providing quality and reliable service to all electric consumers on the relevant circuits. Most significantly, the Plans integrate DERs into a cohesive and coordinated system management architecture by utilizing real-time management of DER grid-support function parameters and increasing visibility of DER operations using the data interoperability requirements of the standard. While the standard provides functions that can be applied with fixed parameters and thus perform autonomously, this is very sub-optimal in a modern

automated distribution system that can be topologically reconfigured to address loading and reliability constraints and requires significant performance compromises. A distribution circuit with substantial DERs connected will have a wide variety of operational situations over days and over seasons for which fixed DER parameters provide compromised performance. Also, modern distributions systems are designed to be self-healing by performing reconfiguration of the distribution system topology in response to faults and outages. DER management parameters that are appropriate for the normal system configuration can be counterproductive in an alternate system configuration. Dynamic adjustment of parameters, as will be made possible by the Second DER Management Plan, allows more complete implementation of the potential benefits afforded by the standard's DER functionality requirements.

B. OPERATIONAL CHALLENGES CREATED BY DERS

Q. IN YOUR EXPERIENCE, WHAT OPERATIONAL CHALLENGES DO DERS PRESENT ON ELECTRIC DISTRIBUTION SYSTEMS?

A. DERs pose numerous challenges to safe and reliable operation of electric distribution systems and to the electrical grid at large. These can be summarized as follows:

- The active (real, or kW) power injection by DERs create distribution system voltage changes that can result in voltage exceeding regulatory limits. Voltage profiles along distribution feeders can be substantially different from that which the distribution circuit and its voltage regulation devices have been designed.
- DER active and reactive power flow can interact with utility controls intended to regulate distribution system voltage, such as substation transformer on-load

tapchanger controls, series voltage regulator controls, and capacitor bank controls, in a way that detracts from the ability of these controls to effectively manage distribution system voltage magnitude. In certain scenarios, this can lead to excessively low voltage provided to some customers, as well as high voltage to other customers.

- Voltage increase caused by DERs can disrupt conservation voltage reduction schemes, leading to excess energy consumption by consumers.
- Variability in output of certain types of DERs, such as photovoltaics, can cause voltage variations that cause excessively-frequent operation of mechanical devices intended for voltage management (e.g., regulators and switched capacitor banks), thus increasing wear-and-tear of this equipment and leading to premature failure or increased maintenance requirements. Voltage variations can also be disturbing to other customers and decrease the allowable operating range for system voltage in order to accommodate variations.
- DER power injection can overload circuits and equipment, leading to failure or accelerated loss of life.
- Although DERs are required by IEEE 1547 to cease energization of disconnected distribution circuits (islanding), there is substantial uncertainty regarding the reliability of many DER island detection schemes when applied in practical circumstances. Continued energization of an "islanded" distribution feeder or system by DER can pose a significant risk to utility workers and to the public.
- DERs' current contribution to distribution system short-circuit faults can result in mis-coordination of protection and consequent decrease of distribution service

reliability. (This is a much more significant issue for conventional rotating generator DER than for inverter-based DER.)

- Opening of a circuit having more inverter-based DER output than the contemporaneous load demand can result in transient and temporary overvoltages that can reach magnitudes potentially damaging to other customers' equipment.
- DER performance during distribution system ground faults can result in excess temporary overvoltages on un-faulted feeder phases, with magnitude potentially damaging to utility and customer equipment.
- Aggregate DER output on a distribution system can result in damaging temporary overvoltages on transmission and sub-transmission systems during ground faults. These overvoltages are not detectable at the distribution level, sometimes requiring costly installation of protections at the high-voltage side of distribution substations.
- DER output inherently masks, or cancels, actual load demand. This can lead to faulty switching decisions when a distribution system is reconfigured following an outage.
- Load masking makes determination of minimum load conditions difficult. As a result, minimum load is often based on conservative assumptions when assessing DER hosting capacity, based on criteria that include involves the ratio of DER capacity to minimum load. Therefore, uncertainty in determining minimum load and the DER output at the time of minimum load can create unnecessary limitations of allowable DER hosting capacity.

- Load masking by DER confounds load forecasting, leading to inaccurate distribution system planning as well as planning and operations of the bulk power system.
- Uncontrolled turn-on of DER following an outage can disrupt system restoration.
- Transmission faults can potentially cause significant voltage dips over a wide geographic area. This can lead to simultaneous tripping of DER that results in an abrupt large increase of the net load served by the bulk power system, potentially disrupting system frequency, voltage, and angular stability.

Q. ARE THESE CHALLENGES LIMITED TO ELECTRIC DISTRIBUTION SYSTEMS WITH SUBSTANTIAL NUMBERS OF DERS INTERCONNECTED?

A. The impact of DER on a distribution feeder or system is directly related to the aggregate DER capacity. The number of DERs is not directly a factor; a single large DER can have equal or greater impact than an aggregation of smaller DER that totals to the same capacity. Also, concentration of DERs in a certain area can have significant local impact even if the DER penetration level is small on the overall feeder or system.

C. OPERATIONAL BENEFITS OF UTILITY MONITORING AND MANAGEMENT

Q. WHAT ARE THE OPERATIONAL BENEFITS OF UTILITY MONITORING AND MANAGEMENT OF DERS INTERCONNECTED ON THEIR ELECTRIC DISTRIBUTION SYSTEMS?

A. Of the 15 types of DER impacts I previously identified, 11 can potentially be completely eliminated or substantially mitigated by application of DER monitoring and management by the utility.

The most significant benefit is that the reactive power capability of DER can be used as a widely dispersed means of voltage management that can be applied to meet overall distribution system voltage objectives. Where a DER monitoring and management system is not available, it is necessary to use autonomous DER functions based solely on local measurements at the DER. It is not possible for a DER using only local voltage measurements to provide the support necessary to ensure that all customers on a distribution circuit are provided with voltage within established limits.

Depending on circuit loading conditions, it is usually necessary to hold voltage near the head (*i.e.*, substation end) of a distribution feeder to a higher than nominal magnitude such that customers at the remote end of the feeder have adequate voltage. Where autonomously functioning DER are used, practical considerations usually dictate that control settings are defined universally, without respect to location of DERs on a circuit. Typically, this involves a volt-var control setting that attempts to regulate voltage to the nominal value (e.g., 120 V). DERs located near the head of the feeder using such standardized settings will oppose the necessary elevated voltage level established by utility voltage regulation equipment, consuming excess reactive power, increasing system

losses, unnecessarily decreasing available DER active power (kW), and increasing system energy losses. Even if DER settings are customized to the location, there are substantial shortcomings in efficient voltage management. During lighter load periods, voltages can be held unnecessarily high increasing customer energy consumption. Also, in a self-healing distribution system, distribution circuits are reconfigured when outages occur and locations normally near a feeder head may be at the remote feeder end after reconfiguration. Fixed DER voltage management parameters cannot effectively respond to changing system conditions like load and topology variations.

Utility application of DER monitoring and control allows DER behavior to be coordinated with utility voltage controls and to be responsive to the circuit-wide voltage management objectives. Settings of DER reactive power controls can be readily adapted to changes in conditions, such as circuit loading and configuration.

DERs control voltage via reactive power, which inherently increases distribution circuit current flow, thereby consuming capacity and generating additional energy losses. In most cases, DERs on a circuit consume more reactive power than they generate, thus increasing utility requirements to install reactive power compensation equipment (e.g., shunt capacitors) to minimize reactive power interchange with the transmission system. Utility series voltage regulators provide boosts of feeder voltage using voltage transformation which does not generate significant increases in reactive power requirements or losses. Series voltage regulators, however, have limitations in their speed of response as well as cycling limitations. By contrast, DERs have the capability of much faster response and no loss of life or increased maintenance due to frequent reactive power variations. An optimal voltage management design might use series

voltage regulators and switched capacitor banks to manage longer term voltage levels and apply the dynamic flexibility of DERs to provide faster response until the utility regulation equipment responds. This type of coordinated voltage control strategy, using each component's inherent advantages, is not feasible using autonomous DER functions with fixed parameters. A DER management system allows coordinated voltage management that can provide better quality of service to all consumers on a distribution circuit with less wasteful energy consumption by users and decreased energy losses in the distribution system.

Additionally, continuous monitoring and archiving of DER output data avoids load masking. This leads to more reliable circuit reconfiguration to restore service following outages and to more accurate forecasting of both DER output and customer load demand. More accurate forecasts lead to better system planning and more reliable operation.

Further, utility management of DER operating status can be applied as a backup to DER island detection capabilities, increasing worker and public safety. Also, DERs can be pre-emptively shut off prior to an intentional disconnection of a circuit, avoiding the "load rejection overvoltage" issue that can be damaging to customer and utility equipment.

Utility worker safety is also increased if DERs' protective trip functions are made more sensitive during planned live-line work on a circuit. Such sensitive settings conflict with the voltage ride-through requirements of IEEE 1547-2018, but the standard also allows temporary implementation of sensitive settings on specific circuits for the time live-line work is to be performed. Temporary changes of fixed trip settings on DERs not

incorporated into a management system are infeasible due to the typically large number of individual DER units involved. DER management systems, such as PPL Electric's Second DER Management Plan, allow for the relatively easy implementation of temporary settings as necessary.

Q. ARE THESE OPERATIONAL BENEFITS LIMITED TO ELECTRIC DISTRIBUTION SYSTEMS WITH SUBSTANTIAL NUMBERS OF DERS INTERCONNECTED?

A. As previously stated, DER impacts are more closely related to the aggregate DER capacity than to the number of DERs. DER impacts increase with additional DER penetration into a system, and thus benefits of a DER monitoring and management system are greatest where the DER impacts are more pronounced.

However, growth of DER penetration has been exponentially increasing in many areas. Addressing the issues that DER create after penetration has already reached problematic levels creates delay in response that is not in the public interest. DERs already installed at that point will not have the communication and management infrastructure to incorporate them into a coherent and coordinated architecture to accomplish system goals. Incorporating monitoring and management only on incremental DER additions will be only marginally effective, as their benefits will be outweighed by the uncontrolled and unmonitored pre-existing DERs. Retrofitting capabilities can be extremely expensive and problematic to execute when the number of DERs being retrofitted is substantial. A number of years ago, a need was realized to

retrofit certain DER protective function settings across most of Europe, evolving into a project that cost more than a billion Euro and took years to implement.

It is my firm opinion that PPL Electric's Second DER Management Plan is a prudent step in favor of the public's interest to gain operational experience and evaluation of costs and benefits. At some point in the not-so-distant future, massive implementation of DER monitoring and management will become absolutely necessary to address DER impacts caused by DER penetration increases. PPL Electric's First DER Management Plan and Second DER Management Plan are critical to guiding future implementations of DER monitoring and management.

Q. WHAT ARE THE POTENTIAL CONSEQUENCES AND LIMITATIONS CREATED BY INTERCONNECTION OF SUBSTANTIAL NUMBERS OF DERS WITHOUT UTILITY VISIBILITY AND MANAGEMENT?

A. Failure to implement effective DER monitoring and management will either result in markedly decreased utility system efficiency, reliability, and quality of service or severely limited implementation of DER in conflict with public policy promoting DERs.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?

A. Yes, although I reserve the right to supplement my direct testimony.

PPL Electric Exhibit RW-1

RESUMÉ

REIGH A. WALLING

President and Owner
Walling Energy Systems Consulting, LLC

EDUCATION

B.S. Electric Power Engineering,
Rensselaer Polytechnic Institute, 1974

M. Eng. Electric Power Engineering,
Rensselaer Polytechnic Institute, 1979

SCOPE OF PRACTICE

Mr. Walling provides deep expertise in a wide range of electric power systems fields spanning transmission, distribution, and generation, for which he is well recognized across the industry. He provides the benefits of his broad experience and unique capabilities to identify and clarify the interactions between technologies, economic and business considerations, and the role of standards and regulations. His technical depth lies in a number of diverse technical areas and disciplines, including distributed generation interconnection issues and policies, renewable and inverter-based generation integration and interconnection, HVDC and FACTS transmission systems, geomagnetic disturbance impacts, renewable generation plant design, electromagnetic transients, insulation coordination, and power quality.

HONORS

Elected in 2004 as a Fellow of the Institution of Electrical and Electronic Engineers, an honor limited to one-tenth of one percent of the IEEE membership.

Recipient of the IEEE's Excellence in Distribution Award for 2009.

IEEE PES Prize Paper Award for 1995.

PROFESSIONAL EXPERIENCE

Walling Energy Systems Consulting, LLC (2012 – present)

As founder and principal of Walling Energy Systems Consulting, LLC, Mr. Walling offers his consulting expertise to the industry through a diverse range of engagements, including:

- Consultant to utilities, reliability entities, DER inverter manufacturers and renewable energy plant developers regarding inverter-based and distributed resource grid interconnection requirements.
- Technical research of DER interconnection issues and performance for the Electric Power Research Institute (EPRI), as well as a key contributor to development of analytical tools supporting DER evaluation.
- Leadership in the development of industry standards for the interconnection of inverter-based, renewable, and distributed energy resources.
- Development of detailed technical specifications for procurements of unconventional generation energy and capacity resources, including large-scale energy storage facilities.
- Owner's Engineer for the acquisition, testing and commissioning of major FACTS device installations. Prepared specifications, reviewed bid proposals, and provided technical oversight for pre-installation studies and commissioning activities.
- Research for EPRI on the power system impacts of geomagnetic disturbances and the impacts of geomagnetically-induced current (GIC) mitigation devices.
- Principal consultant for a major power equipment vendor's research and development project involving a novel HVDC transmission concept
- Technical expert supporting due diligence process for investor purchasing HVDC transmission assets.
- Principal technical contributor for a large-scale study of a utility's vulnerability to geomagnetic disturbances, including harmonic impacts.
- Provider of training courses to utilities and major manufacturers.

GE Energy Consulting (1981 – 2012)

At GE, Mr. Walling held a progression of roles, culminating in the position of director in GE's energy and power systems consulting business, serving a wide range of external and internal clients. In this role, he was responsible for defining client needs and guiding technical investigations, research projects, and client engineering support across a wide range of power system technical areas, focusing on transmission and distribution systems as well as renewable generation. His broad expertise in the areas of system interactions and equipment performance were applied to solving power system problems for GE Energy Consulting's clients and developing new applications for advanced apparatus and systems technology.

Mr. Walling has directed major studies related to the integration of variable (renewable) generation resources into bulk power systems, including a pioneering study of ancillary services required to support large-scale wind integration into the ERCOT market. He developed technical requirements for wind and solar plant interconnection for a major Independent System Operator. He was a lead author of the NERC Integration of Variable Generation Task Force report which recommends the wind and solar plant technical performance requirements that are needed to protect bulk grid stability and security.

At GE, Mr. Walling directed technical studies and provided consultation related to renewable generation plant design and grid interconnection. The focus of this work has been on collection system optimization, grounding, insulation coordination, protection, harmonics, and transient performance. He was a co-developer of GE Energy's unique wind plant voltage and reactive power control system.

Mr. Walling began his focused involvement in the technical and policy issues related to interconnection of distributed generation and the integration of distributed generation into the power grid while at GE, starting at the turn of the millennium.

From 1997 to 2002, Mr. Walling was the program manager for DSTAR (Distribution Systems Testing, Application, and Research), which was a consortium of utilities jointly funding distribution systems research. He has performed extensive investigations of distribution equipment application issues, leading many DSTAR research projects since 1991, and has directed development of significant software tools to aid distribution engineering.

Mr. Walling has over 30 years' experience in HVDC transmission systems, including both conventional thyristor-based HVDC and the more recent voltage-source converter HVDC systems. He served in the role of Utility's Engineer for several HVDC transmission system and FACTS projects. In this role, he was responsible for developing the specifications, reviewing system vendor designs and studies, and monitoring commissioning activities.

His earlier work in HVDC, when GE was an HVDC system vendor, was focused on system simulation, control design, and ac-HVDC system interactions. He directed GE's HVDC simulator facility and was responsible for the simulation studies supporting several HVDC projects. He authored several chapters of the EPRI HVDC Handbook.

Mr. Walling's early work at GE focused on transients and the interactions between equipment and the power system, with particular emphasis on interactions involving transformer saturation. His pioneering research, based on extensive full-scale testing, was responsible for reshaping the industry's understanding of distribution transformer ferroresonant overvoltages and the impact of these overvoltages on metal-oxide arresters.

Minnesota Power (1979 – 1981)

Mr. Walling was employed by Minnesota Power in the Operations and System Planning Departments where he performed transient stability, power flow, and electromagnetic transient studies to analyze system expansion plans, investigate failures, and coordinate system control and protection requirements.

U.S. Navy Civil Engineer Corps (1970 – 1974)

As a commissioned officer in the US Navy's Civil Engineer Corps, Mr. Walling was involved in the construction and maintenance of shore facilities. He was directly involved in the operation of Guam's island-wide power system, which supplied both military facilities and the civilian population of approximately 100,000. He also served as the facilities manager for a naval base.

LICENSURE

Mr. Walling is a registered Professional Engineer in the State of Minnesota.

AFFILIATIONS

Mr. Walling has been a very active member of the IEEE Power Engineering Society, having served in several leadership positions. These IEEE PES activities include:

- Working groups for the IEEE 1547 series of standards for distributed energy resource interconnection, including a leadership position in the development of IEEE 1547-2018. Active participant and contributor to the development of IEEE 2800, which establishes requirements for inverter-based resource interconnection to transmission systems, and he is currently involved in the development of the associated IEEE 2800.2 test and conformance verification standard.
- Founding chair of the IEEE PES Distributed Generation Integration working group.
- Chair of the IEEE task force responsible for developing IEEE Standard C62.92.6, which will define grounding issues related to current-regulated sources such as inverters.
- Member of the Surge Protective Devices Committee, High Voltage Subcommittee, chair for many years of the C62.22 working group, and member of the neutral grounding working group
- Co-chair of the Joint Working Group on Wind Plant Short Circuit Contribution and member of the Integration of Renewable Energy into the Transmission and Distribution Grids Subcommittee and the Wind Plant Collector Design Working Group.

Mr. Walling also serves on several industry activities outside of the IEEE, including:

- CIGRE Working Group B4-67, AC Filter Specifications for Voltage-Source Converter HVDC
- ANSI Standard C84.1 Working Group, (ANSI Standard 60 Hz Voltage Ratings)

PUBLICATIONS AND PATENTS

Mr. Walling has authored over 100 technical papers and articles presented at IEEE, CIGRE, and other conferences. He has been awarded 21 U.S. patents for power system inventions, primarily in the area of renewable and distributed generation systems.

PATENTS – REIGH A. WALLING

U.S. Patent Number	Title
5360998	Magnetic field minimization in power transmission
6327162	Static series voltage regulator
6924565	Continuous reactive power support for wind turbine generators
7016793	Method and apparatus for anti-islanding protection of distributed generations
7271571	Anti-islanding protection systems for synchronous machine based distributed generators
7202638	Anti-islanding protection systems for synchronous machine based distributed generators
7312537	Methods and apparatus for supplying and/or absorbing reactive power
7376491	Detection of islanding in power grids
7397143	Methods and apparatus for supplying and/or absorbing reactive power
7939970	Variable frequency wind plant
7990743	System and method for decreasing solar collector system losses
7994658	Windfarm collector system loss optimization
8041465	Voltage control at windfarms
8290634	Optimizing system loss for a system of multiple windfarms
8405247	Method and apparatus for control of fault-induced delayed voltage recovery (FIDVR) with photovoltaic and other inverter-based devices
8600573	System and method for managing cold load pickup using demand
8908343	System for electric distribution system protection and control and method of assembling the same
9178350	Electric distribution system protection
9252596	System and method for reactive power compensation in power networks
9389631	System and method for reactive power compensation
10135247	Methods and systems for integrated Volt/VAr control in electric network

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PPL Electric Utilities Corporation	:	
for Approval of its Second Distributed Energy	:	Docket No. P-2024-_____
Resources Management Plan	:	

DIRECT TESTIMONY OF JAY JOHNSON

PPL Electric Statement No. 5

May 20, 2024

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jay Johnson, and my business address is 1 Wells Rd, Scotts Valley, CA 95066.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am the Chief Technology Officer at DER Security Corp ("DERSec"), a startup company focused on Distributed Energy Resource ("DER") communications, power system operations, and security. I lead the DERSec engineering team, which is currently focused on two primary projects: (1) creating software to automate interconnection testing for DER equipment in accordance with Institute of Electrical and Electronics Engineers ("IEEE") 1547.1 and Underwriters Laboratories ("UL") 1741 SB; and (2) building network-based intrusion detection systems that perform deep packet inspection of IEEE 1547 protocols to defend DER systems from cyberattacks.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I received a B.S. in Mechanical Engineering from the University of Missouri-Rolla in 2006 and a M.S. in Mechanical Engineering from the Georgia Institute of Technology in 2009.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. Prior to working at DERSec, I was a Distinguished Member of Technical Staff at Sandia National Laboratories, where I worked for 13 years. In my time at Sandia, I led DOE research projects totaling $25 million in the areas of power system control, optimization,

interoperability, and cybersecurity. I authored more than 150 academic papers, received eight patents, and lead an international team to develop and automate interoperability and interconnection certification procedures. I also was a member of several working groups responsible for writing and refining the codes and standards developed by the SunSpec Alliance, UL, IEEE, International Electrotechnical Commission ("IEC"), National Fire Protection Association ("NFPA") 70: National Electrical Code ("NEC"), and others.

Q. HAVE YOU PREVIOUSLY TESTIFIED AS A WITNESS BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. No.

Q. HAVE YOU TESTIFIED AS A WITNESS BEFORE OTHER REGULATORY COMMISSIONS?

A. No.

Q. HAVE YOU BEEN RETAINED BY PPL ELECTRIC TO TESTIFY ON BEHALF OF THE COMPANY IN SUPPORT OF THE ABOVE-CAPTIONED PETITION?

A. Yes.

Q. WOULD YOU PLEASE DESCRIBE THE SUBJECT MATTER OF YOUR TESTIMONY?

A. My testimony will address the development of UL 1741 Supplement SB and how the Second DER Management Plan builds upon the standard's purpose and requirements for smart inverters.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH YOUR TESTIMONY?

A. Yes, I am sponsoring the following exhibits:

- PPL Electric Exhibit JJ-1 – a copy of my curriculum vitae.

I. UL 1741-SB'S DEVELOPMENT, PURPOSE, AND REQUIREMENTS

Q. WHAT IS UL 1741?

A. UL 1741 is the "Standard for Inverters, Converters, Controllers, and Interconnection System Equipment for Use with Distributed Energy Resources." It defines the certification testing requirements, procedures, and pass/fail criteria for DER equipment to be listed to different Source Requirements Documents ("SRDs").

Q. WHEN WAS UL 1741 FIRST DEVELOPED?

A. The first edition of UL 1741 was published in May 1999. Prior to November 2005, the title of UL 1741 was "Standard for Inverters, Converters, and Controllers for Use in Independent Power Systems."

Q. WHAT REVISIONS HAVE BEEN MADE TO UL 1741 SINCE ITS ORIGINAL DEVELOPMENT?

A. The Second Edition of UL 1741 was published in January 2010 and the most recent, Third Edition, was published on September 28, 2021. UL Standards & Engagement ("ULSE") encourages comments and proposals for revisions at any time to be submitted via the Collaborative Standards Development System ("CSDS"). Based on these proposals, changes were made to the Third Edition on October 19, 2022, and April 12, 2023.

Q. COULD YOU PLEASE EXPLAIN YOUR WORK ON AND EXPERIENCE WITH UL 1741 SB?

A. The requirements for UL 1741 Supplement SB, titled "Grid Support Utility-Interactive Inverters and Converters Based upon IEEE 1547-2018 and IEEE 1547.1-2020," directly references IEEE 1547-2018, "IEEE Standard for Interconnection and Interoperability of Distributed Energy Resources with Associated Electric Power Systems Interfaces," and the associated conformance standard, IEEE 1547.1-2020, "IEEE Standard Conformance Test Procedures for Equipment Interconnecting Distributed Energy Resources with Electric Power Systems and Associated Interfaces," as SRDs for UL 1741 SB certification testing.[1] Starting in 2018, I participated in the IEEE 1547 Communication Working Group, helped shape the communication and electrical testing procedures and

[1] UL 1741 SB Section 1.1.

criteria, and wrote several academic papers on early drafts of IEEE 1547.1 certification procedures to refine the test procedures before publication.[2,]

Since the publication of IEEE 1547, IEEE 1547.1, and UL 1741 SB, I worked on building automated certification software platforms to perform the tests defined in these standards.[3] At DERSec, I lead the software development team for a product called LabTest Pro that automates the IEEE 1547.1 and UL 1741 tests. This software is used by Nationally Recognized Testing Laboratories ("NRTLs") and DER vendors to accelerate conformance testing of DER equipment and systems.

Q. PLEASE PROVIDE DETAILS ON THE DEVELOPMENT AND PURPOSE OF UL 1741 SB.

A. The development and revision of UL 1741, like all UL safety standards, is performed in accordance with the American National Standards Institute ("ANSI") Essential Requirements,[4] approved in "ULSE ANSI Accredited Procedures."[5] UL 1741 was

Anandan, "Evaluation of Interoperable Distributed Energy Resources to IEEE 1547.1 Using SunSpec Modbus, IEEE 1815, and IEEE 2030.5," in IEEE Access, vol. 9, pp. 142129-142146, 2021, https://doi.org/10.1109/ACCESS.2021.3120304.

[4] ANSI, ANSI Essential Requirements, Jan 2024. Available at https://www.ansi.org/american-national-standards/ans-introduction/essential-requirements.

[5] ULSE ANSI Accredited Procedures - Approved by ANSI on March 15, 2023, available at https://ulse.org/data-insights/ulse-ansi-accredited-procedures.

updated after the publication of IEEE 1547.1-2020 to include Supplement SB using a consensus-based process within a Standards Technical Panel ("STP")[6] composed of a diverse set of technical experts representing different interests. Voting members of the STP came from a balanced collection of individuals representing the following interest groups: Producer, Testing and Standards Organizations, Supply Chain, AHJ/Regulator, Government, Consumer, General Interest, and Commercial/Industrial Users.

The purpose of UL 1741 is to clearly define the purpose, process, requirements, and criteria to certify inverters, converters, controllers, and Interconnection System Equipment ("ISE") to consensus-based safety, functional, and interconnection requirements from multiple SRDs. To this end, the purpose of UL 1741 SB is to provide a certification standard for the conformance test procedures in IEEE 1547.1-2020, so products can be listed to the requirements in IEEE 1547-2018. This creates an essential, traceable link between the widely adopted IEEE 1547-2018 interconnection standard and products that can be interconnected in that jurisdiction. Only products that have been listed to UL 1741 SB by an NRTL should be considered compliant with IEEE 1547-2018.

Q. WHAT DOES UL 1741 SB REQUIRE FOR SMART INVERTERS?

A. UL 1741 SB requires all listed DER equipment include grid support interactive electrical modes and a local communication interface. Depending on the categorization of the equipment, UL 1741 SB will require dozens of tests to validate compliance to the conformance standard. Example tests include validation of Voltage Trip and Voltage Ride-Through, Voltage Disturbances in Continuous Region, Frequency Trip and

[6] As of 2022, UL STPs are now called Technical Committees ("TCs").

Frequency Ride-Through, Voltage Phase-Angle Change Ride-Through, Enter Service, Limit Active Power, Constant Power Factor Mode, Voltage-Reactive Power Mode, Active Power-Reactive Power Mode, Constant Reactive Power Mode, Voltage-Active Power Mode, and Frequency-Droop Capability. Additionally, a standardized local communication interface is required which uses the SunSpec Modbus, IEEE 1815, or IEEE 2030.5 protocol. These interfaces are validated using four types of tests: Nameplate Data Test, Configuration Information Test, Monitoring Information Test, and Management Information Test. The three standardized communication protocols are further defined in the associated information models provided by the SunSpec Alliance and IEEE.

Q. HOW DOES PPL ELECTRIC'S DER MANAGEMENT PLAN BUILD UPON UL 1741 SB'S PURPOSE AND REQUIREMENTS?

A. PPL Electric started requiring UL 1741 SB listings for all newly installed DER equipment on January 1, 2023. After that time, PPL Electric could then rely on the equipment having standardized communication interfaces and incorporate their mandatory grid support interactive functionality defined in IEEE 1547-2018 into its First DER Management Plan. This provided PPL Electric the ability to remotely adjust voltage regulation modes, active power capabilities, and adjustable protection functions to minimize voltage violations, improve system restoration, better visualize power flows, and defer capital costs associated with system upgrades. Going forward, the Second DER Management Plan appears to be designed to capitalize on these capabilities made possible by IEEE 1547-2018 and UL 1741 SB.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?

A. Yes, although I reserve the right to supplement my direct testimony.

PPL Electric Exhibit JJ-1

EDUCATION

M.S. Mechanical Engineering, Georgia Institute of Technology — Dec 2009

- Modeling and Simulation Minor
- Thesis: Defect and thickness inspection system for cast thin films using machine vision and full-field transmission densitometry

B.S. Mechanical Engineering, University of Missouri-Rolla — Dec 2006

- Mechanical Design and Analysis Emphasis Area

EXPERIENCE

Chief Technology Officer, DER Security Corp, Scotts Valley, CA — *2023-current*

- **Chief architect and software engineer** for multiple product lines, including Distributed Energy Resource (DER) certification platforms, DER emulators, and IEEE 2030.5 network load testers.
- Pioneered commercial cyber-physical network-based intrusion detection system for distributed energy assets
- Deployed security solutions on cloud and field assets for multiple DER and EV charging communication protocols.
- Corporate lead for all R&D programs, including DOE CESER and DOE WETO projects.

Distinguished Member of Technical Staff, Sandia National Laboratories, Albuquerque NM

Grid Communications and Cybersecurity	*2023*
Renewable and Distributed Systems Integration	*2017-2023*
Photovoltaic and Distributed Systems Integration	*2013-2017*
Microsystems Integration	*2011-2013*
Advanced Microsystem Packaging	*2010-2011*

- **Principal Investigator** for more than $25M in DOE CESER, EERE SETO/VTO/WETO, OE, OTT, and IA **power system control, optimization, and cybersecurity research**
- Co-convener of the Sandia/SunSpec **DER Cybersecurity Workgroup 2017-current**; lead for the **Access Control** and **Patching** Subgroups
- Contributor to multiple **congressional reports** and DOE **cybersecurity roadmaps** for solar and wind technologies
- **Penetration testing** lead for multiple microgrid, EV charger, and distributed energy resource (DER) engagements
- Pioneered new **cyber-physical scoring metrics** and cost-benefit evaluations for OT cyber-hardening technologies
- Spearheaded **$5M DER management project** to provide voltage regulation and distribution protection through state estimation, optimization, and DER communications
- Coordinating Smart Grid International Research Facilities Network (SIRFN) **advanced inverter interoperability test protocol development** and inverter testing in Europe, Asia, Australia, and North America
- Programmed an automated System Validation Platform (SVP) for interoperability and interconnection certification testing and **oversaw the adoption of the system at 10 international research labs**
- **Managed** the expansion of a multimillion-dollar **DER interoperability and cybersecurity research platform** using Sandia fiber optic network (called **X-Net**) across internal research laboratories and external sites
- Managed **3-year $1. 5M Secure Virtual Power Plant** Laboratory Directed Research and Development (LDRD) project to provide **dispatchable ancillary services from distributed energy resources**
- **Led 5-year** multidisciplinary, international renewable energy research projects developing national and international **PV DC fault detection and mitigation standards**
- Managed U.S.-Japan **collaborative PV-smoothing control project** using multiple distributed energy resources, including a natural gas genset and energy storage system
- **Increased** Sandia heterojunction bipolar transistor (HBT) **wire bonding throughput 1500%** via machine vision-based automation
- Performed microelectronics packaging design and analysis for multiple $1M+ programs including the Micro Gas Analyzer, plastic ball grid arrays, ion switches, high-power high-voltage thyristors, artificial retina, and other devices

Graduate Research Assistant, Georgia Institute of Technology, Atlanta GA *2007-2009*

- Designed, constructed, and operated the electrical, mechanical, optical, and computer systems of an industrial-scale roll-feed **fuel cell membrane manufacturing system**
- Invented and implemented a **novel machine vision system** to identify/classify thin film defects and perform membrane thickness profilometry in real-time using a **custom MATLAB graphical user interface**
- Designed a full-field nondestructive evaluation (NDE) densitometry tool for verifying membrane thickness on a web system using specialized optics and analysis
- Implemented a **neural network** to classify defect types and **autonomously** determine casting parameter adjustments to improve the quality of the manufactured product
- Designed, wired, and programmed web tensioning control system and 26 kW heating sub-systems

Graduate Teaching Assistant, Introduction to Engineering Graphics and Visualization, Georgia Tech *Jan-Dec 2009*

- **Lectured**, tutored, and provided face-to-face assistance for **more than 100 students**—guiding their development in technical drafting, 2D (AutoCAD), and 3D CAD (Inventor) using ANSI Y14.5 standards and personal experience
- Worked with instructors to update course content and improve student performance

*Sustainability Fellow***,** Intelligent Systems Laboratory, **Palo Alto Research Center** (PARC), Palo Alto CA *Fall 2008*

- Created and patented a control algorithm for a **smart electrical grid** which provides high-quality **demand response** services by integrating duty cycling appliances
- Broadened renewable energy and sustainability research thrusts with multi-disciplinary clean tech research team
- Collaborated with PARC's **Green Team** to improve the company's sustainability practices through commuter rewards, recycling, and power reduction programs

Research Program Participant, **National Renewable Energy Laboratory** (NREL), Boulder CO *Summer 2008*

- Designed, constructed, and tested a stereo-videogrammetry system to detect wind turbine blade buckling during static and fatigue tests
- Developed MATLAB **spatial normalization algorithms** to convert dynamic point cloud data from global coordinates to a local reference frame to obtain localized deformation measurements
- Investigated **laser and optical nondestructive blade testing** techniques
- Created a **genetic algorithm** to optimize the location and mass of ballast weights for fixed and resonant fatigue tests of 6 to 70-meter wind turbine blades

Mechanical Systems Design Engineer, National Wind Technology Center (NWTC), NREL, Boulder CO *Spring 2007*

- **Designed and oversaw the manufacture** of a hydraulically-powered resonance mechanism for fatigue testing twist-coupled 10-meter wind turbine blades
- Performed **dynamic analysis** of multiple concepts modeled in SolidWorks to select the optimal design based on loads, cost, safety, and other design requirements
- Conceptualized and initiated designs of additional wind turbine blade testing mechanisms—submitted 4 innovation reports with 1 resulting patent
- **Directed the construction and assembly** of the Resonance Exciter and ballast weights
- Collaborated with technicians to instrument a blade for fatigue and modal tests

Science Undergraduate Laboratory Internship (SULI), Buildings and Thermal Systems, NREL, Golden CO *Summer 2006*

- Simulated performance of Thermosiphon **Solar Domestic Hot Water Systems** by programming new TRANSYS components in Fortran to account for reverse thermosiphoning behaviors at night
- Analyzed tank placement and other parameter variations on solar thermal system efficiency and freeze tolerance

Exchange Student to the University of South Australia (UniSA), Adelaide Australia *2005*

- Widened views of globalization and cultural diversity in a foreign society

PRINCIPAL INVESTIGATOR ROLES

1. $2.3M 3-year DOE WETO "Field Demonstration of Wind Hardening Technologies on Legacy Wind Sites," 2023-2026.
2. $100k 1-year DOE CESER "Report on Cybersecurity of Distribution Systems," 2022-2023.
3. $1.5M 3-year DOE WETO "WindWeasel: PLC Monitoring, Analysis, and Alerting System," 2022-2025.

4. $3.0M 5-year DOE VTO EVs@SCALE Consortium “Cybersecurity Pillar: Cybersecurity Pillar Unified National Lab Collaboration (Cyber PUNC)”, 2021-2026.
5. $1.05M 3-year DOE EERE SETO, “Securing Solar for the Grid (S2G)” project, 2021-2024.
6. $900k 3-year DOE CESER “EV Secure Architecture Laboratory Demonstrations (EV SALaD)” project, 2021-2023.
7. $100k 6-month “Staying ahead of the Bad Guys: Distributed Energy Cyber Ranges, Canaries, and Honeypots” Late-Start LDRD, 2021.
8. $1.0M ($500k DOE, $500k Cost Share) 2-year DOE Office of Technology Transitions (OTT) Technology Commercialization Fund (TCF), “Continuous Interoperability for Distributed Energy” project, 2020-2022.
9. $1.5M 3-year DOE EERE WETO, “Hardening Wind Energy Systems from Cyber Threats” project, 2018-2021.
10. $1.2M 3-year DOE EERE SETO, “PV Cybersecurity Standards Development” project, 2018-2021.
11. $3.0M 3-year DOE EERE VTO, “Securing Vehicle Charging Infrastructure” project, 2018-2020.
12. $1.15M 7-year DOE Office of International Affairs (IA), “International Smart Grids Testing and Validation Activities Under the Smart Grid International Research Facility Network (SIRFN)” project, 2013-2019, 2022-2023.
13. $5.0M ($2.5M DOE, $2.5 Cost Share) 2-year DOE EERE SETO Enabling Extreme Real-Time Grid Integration of Solar Energy (ENERGISE) project, “Voltage Regulation and Protection Assurance using DER Advanced Grid Functions,” 2017-2019.
14. $400k 2-year DOE EERE SETO, “Photovoltaic Cyber Security Research” project, 2016-2018.
15. $2.7M 3-year DOE EERE SETO SuNLaMP, “Secure, Scalable Control and Communications for Distributed PV” project, 2016-2018.
16. $1.56M 3-year “Secure Virtual Power Plant” SNL LDRD project 2014-2017.
17. $600k 3-year DOE OE, U.S.-Korea Joint Project, “Development of Test Best for DER Interoperability and Certification,” 2012-2015.

AWARDS AND HONORS

- Best Poster at the IEEE 50th Photovoltaic Specialist Conference (PVSC) for "Parametric Analysis of Photovoltaic Inverters Under Balanced and Unbalanced Voltage Phase Angle Jump Conditions."
- 2022 "Super Honorable Mention" in the SANS Holiday Hack Challenge (In top 50 of 16,000 competitors): https://www.sans.org/mlp/holiday-hack-challenge/winners-and-answers/
- 2022 SunSpec Alliance Open Standards Champion Award Winner in recognition of exceptional contributions to the open standards in the DER industry.
- 2022 R&D100 Award Winner in the Software/Services Category and Silver Award in the Market Disruptor – Products Category, Sandia National Laboratories, Proactive Intrusion Detection and Mitigation System (PIDMS), Team: Shamina Hossain-McKenzie, Adam Summers, Adrian Chavez, Nicholas Jacobs, C. Birk Jones, Brian Wright, Jay Johnson, James Obert.
- 2021 R&D 100 Award Winner, Software/Services Category, *Secure-Firmware Over-the-Air (S-FOTA) Update Protocol*. Team: Sung (Peter) Choi, Jay Johnson, Adrian Chavez, Tam Le, and Alan Sonntag.
- 2020 Featured in the Sandia National Laboratories "Tech Transfer Success Stories 2020" for Ensuring Cybersecurity in Solar Energy Systems.

- 2020 The ENERGISE project was part of National Grid's POWER Digitalization/Technology Adoption Award.
- 2019 Elevated to IEEE Senior Member.
- 2016 Albuquerque Section IEEE (Institute of Electrical and Electronics Engineers) Outstanding Young Engineer Award.
- 2015 SunSpec Alliance McCulloch-Pitts Award "for innovation, collaboration and general technical excellence in the area of Distributed Energy Resource control automation."
- 2012 and 2015 President's Volunteer Service Awards.
- 2014 IEEE PVSC Best Poster Award for *Evaluation Method for Arc Fault Detection Algorithms*.
- 2013 IEEE ECCE 3rd Prize Best Student Paper for *PV ground-fault detection using spread spectrum time domain reflectometry (SSTDR).*
- 2014/2015 Sandia National Laboratories' Public Good Innovator Award.
- 2014 Sandia National Laboratories' Up-and-Coming Innovator Award.
- 2013 Employee Recognition Award Nomination for the Packaging Enterprise HBT Integrated Circuit Production Team.
- 2008 Palo Alto Research Center (PARC) Sustainability Fellowship.
- Graduated University of Missouri-Rolla at top of the Dec 2006 School of Engineering class with perfect 4.0/4.0 GPA.

ACTIVITIES AND TECHNICAL ORGANIZATIONS

- Winter and Rock Technician, Albuquerque Mountain Rescue Council, 2011-present.
- Guest Editor for Energies Special Issue "Cybersecurity Solutions for Photovoltaic Systems, Wind Energy Sites, and Electric Vehicle Chargers."
- Industrial Advisory Board member for DOE SETO-funded "Optimal Reconfiguration and Resilient Control Framework for Real-Time Photovoltaic Dispatch to Manage Critical Infrastructure (ReDis-PV)" project.
- DOE CyberForce Competition Red Team Volunteer, 2019, 2020, 2021.
- Advisory Board for the NASEO and NARUC Cybersecurity Advisory Team for State Solar (CATSS) project, 2020-current.
- Completed 8-Part Center 8800 Energy & Earth Systems Leadership Workshop, Spring 2021.
- Completed multiple week-long SANS Institute and Offensive Security cybersecurity classes.
    - SANS ICS410: ICS/SCADA Security Essentials, April 2020.
    - SANS SEC560: Network Penetration Testing and Ethical Hacking, July 2020.
    - SANS ICS456: Essentials for NERC Critical Infrastructure Protection, May 2021.
    - SANS FOR508: Advanced Incident Response, Threat Hunting, and Digital Forensics, Feb 2022.
    - SANS SEC556: IoT Penetration Testing, May 2022.
    - SANS SEC588 Cloud Penetration Testing, Dec 2022.
    - Offensive Security PWK/PEN-200: Penetration Testing with Kali Linux
- Lead for the IEEE P1547.3 "Guide for Cybersecurity of Distributed Energy Resources Interconnected with Electric Power Systems" Justification Subgroup, 2020-2021.
- Balloter for IEEE 1547.3, IEEE 1547.9, IEEE 2800.
- U.S. Expert for ISO/TC 197/WG 24, Gaseous hydrogen – Fueling protocols for hydrogen-fueled vehicles, 2021.
- Co-convener for the SunSpec/Sandia DER Cybersecurity Workgroup, 2017-present.
    - Leader for the Access Control Subgroup, 2020.
    - Co-lead for the Patching Subgroup, 2021.
- Reviewer for the "European Research Infrastructure supporting Smart Grid Systems Technology Development, Validation and Roll Out" (ERIGrid) Transnational Access program, 2017-2019.
- Organized the *DOE VTO Cyber-Security of On-Road Transportation Meeting*, April 23-24, 2019, at Sandia National Laboratories for ~55 federal and national laboratory employees.
- Member of UL 1699B (Outline of Investigation for Photovoltaic (PV) DC Arc-Fault Circuit Protection) Standards Technical Panel, 2012-present.
- International Harmonization Committee (IHC) for UL/IEC 62109-2 "Standard for Power Converters for Use in Photovoltaic Power Systems - Part 2: Particular Requirements for Inverters," 2016-2020.
- Member of the CEC/CPUC Smart Inverter Working Group, 2014-2015, 2019-2020.
- UL 1741 Supplement A (*Standard for Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources*) task group member.
- Contributing member in IEEE 1547, "Standard for Interconnecting Distributed Resources with Electric Power Systems," Communication Working Group, 2018.
- Sandia National Laboratories representative for the SunSpec Alliance, 2013-present.
- Sandia representative for European Distributed Energy Resources Laboratories (DERlab), 2018-present.

- Sandia representative for the Smart Grid Interoperability Panel (SGIP) with active participation in the Distributed Renewables, Generation & Storage (DRGS) Domain Expert Working Group (DEWG) Conformance/Interoperability Tests and Certifications (Subgroup D), 2015-2016.
- International Smart Grid Action Network (ISGAN) Annex 5 “Smart Grid International Research Facility Network (SIRFN)” subgroup leader, 2015-2018.
- Guest editor for DERlab/SIRFN Special Issue on Pre-standardisation Activities in Grid Integration of DER, International Journal of Distributed Energy Resources and Smart Grids, 2015.
- Member of CIGRE D2.46 Working Group, “Cybersecurity: future threats and impact on Electric Power Utility organizations and operations,” 2018.
- Reviewer for IEEE PVSC, IEEE TPEL, IEEE JPV, and IEEE TSG.
- Pi Tau Sigma, Tau Beta Pi, Kappa Mu Epsilon.
- Sandia Ski and Snowboard Team, Webmaster 2012-2014, Treasurer 2014-2019, President 2019-2020.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PPL Electric Utilities Corporation for Approval of its Second Distributed Energy Resources Management Plan	: : :	Docket No. P-2024-_____

DIRECT TESTIMONY OF ELIZABETH COOK, Ph.D.

PPL Electric Statement No. 6

May 20, 2024

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dr. Elizabeth Cook, and my business address is 169 Irwin Avenue, Pittsburgh, PA 15202.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am self-employed as owner of EMC^2 Collective Power, LLC ("EMC^2") and employed by the Association of Edison Illumination Companies ("AEIC") as Vice President of Technical Strategy.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I received a B.S. degree in Electrical Engineering from the University of Pittsburgh in May 2004, an M.S. degree in Electrical Engineering from Kansas State University in May 2011, and Ph.D. in Electrical Engineering from the University of Pittsburgh in October 2020.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. As the Founder of EMC^2 Collective Power, I independently advise clients on the impacts and integration of new technologies in the electric industry and on the processes and leadership required to ensure the safe, reliable, and affordable electrical service when integrating those new technologies. Also, in my role as the Vice President of Technical Strategy at AEIC, I drive initiatives in electric energy innovation and operational excellence by working closely with technical committees and member companies and by directing projects at AEIC's Center for Operational Excellence. Previously, I was employed by Duquesne Light Company ("Duquesne Light") from 2016 to 2023. Prior to

that, I was hired at Mitsubishi Electric Power Products for 12 years when I graduated from the University of Pittsburgh in 2004.

During my 20-year career in the energy industry, I have held multiple positions and gained valuable experience in various industry functions. Below is the list of these positions:

- August 2008 – August 2015 – Senior System Studies Engineer at Mitsubishi Electric Power Products – I worked with Utility Planners to provide creative and cost-effective transmission solutions for future resource requirements. In addition, I maintained and improved transmission steady-state and dynamics data, reviewed and analyzed base cases, performed model validation studies, and performed power flow, transfer capability, voltage, and dynamic stability studies. I also developed several electromagnetic models using positive and zero sequence network impedances for various system connections. The model construction included benchmarking and verifying steady-state fault currents for transmission systems by comparing the Electromagnetic Transient Program ("EMTP").

- August 2015 – March 2016 – Power System Stability Studies Section Manager at Mitsubishi Electric Power Products – I was responsible for continually improving upon methods and procedures for processes, measurement, documentation, and workflow techniques. I mentored junior engineers and new hires to improve all team members' competency and efficiency. I also supported and educated internal stakeholders, including management, Compliance, Operations, and other departments, on the Bulk Electric System concerns and complexities. I maintained and reviewed North American Electric Reliability Corporation ("NERC") Compliance Planning Standards for project planning, participated in regional planning activities with external groups, such as PJM Interconnection LLC ("PJM"), The California Independent System Operator ("CAISO"), Southwest Power Pool ("SPP"), Electric Reliability Council of Texas ("ERCOT"), and Western Electricity Coordinating Council ("WECC") Committees, and provided technical training to utility members on power system studies and phenomena.

- March 2016 – November 2021 – Transmission & Distribution System Planning Senior Manager at Duquesne Light – I managed and led efforts in the transmission and distribution planning group. I reviewed and updated planning models for regulatory agencies and Duquesne Light, performed steady-state and dynamic contingency analyses for seasonal assessments, reviewed cut-in procedures, ran day-ahead studies for outage coordination, reviewed and conducted state estimator model updates, updated and reviewed procedures for all system planning models and relevant data requirements. I also led and developed Reliability Audit Standard Worksheets ("RSAWs"), procedures, and processes for NERC/PJM compliance obligations and led the development of scopes of work for future projects and construction estimates.

- December 2021 – December 2022 –General Manager of Advanced Grid Solutions at Duquesne Light; and January 2023 – December 2023 – Director of Grid Modernization and Advanced Grid Solutions at Duquesne Light. I was accountable for developing and executing the various programs and projects required to implement the capabilities and functions required for full-situational awareness. I also developed the teams and created the content (i.e., use cases, cost-benefit analyses, and business case development) for those programs and projects. I also led cross-functional teams, such as Operations, Customer, Regulatory, and Information Systems, to develop and support the work products. The plan and strategy were developed: (1) in collaboration with the U.S. Department of Energy's ("DOE") Office of Electricity and the various Electric Power Research Institute ("EPRI") Working Groups; and (2) through my engagement and efforts as a member of AEIC's Distributed Energy Resource Subcommittee (since 2017) and then Chair of that Subcommittee (since 2020).

Q. HAVE YOU PREVIOUSLY TESTIFIED AS A WITNESS BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. No.

Q. HAVE YOU BEEN RETAINED BY PPL ELECTRIC TO TESTIFY ON BEHALF OF THE COMPANY IN SUPPORT OF THE ABOVE-CAPTIONED PETITION?

A. Yes.

Q. WOULD YOU PLEASE DESCRIBE THE SUBJECT MATTER OF YOUR TESTIMONY?

A. My testimony will provide an overview of the status of solar development in Pennsylvania, electric utilities' experiences with distributed energy resources ("DERs") in Pennsylvania and other states, and electric utilities' pursuit of grid modernization. Collectively, my testimony will demonstrate that PPL Electric's Second DER Management Plan is needed to help facilitate the expansion of solar development in the Commonwealth and that PPL

Electric is well-positioned, compared to its peers, to continue monitoring and managing DERs on its distribution system.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH YOUR TESTIMONY?

A. Yes, I am sponsoring the following exhibits:

- PPL Electric Exhibit EC-1 – a copy of my curriculum vitae.

I. SOLAR DEVELOPMENT IN PENNSYLVANIA

Q. COULD YOU PLEASE PROVIDE US WITH AN OVERVIEW OF SOLAR DEVELOPMENT IN PENNSYLVANIA?

A. Although solar development in Pennsylvania has been slower than some other states, the Commonwealth has continued to see year-over-year growth. For example, as seen in the Commission's "Net Metering & Interconnection Report 2021-2023,"[1] the number of interconnection applications for Level 1 small generator facilities (*i.e.*, 10 kW or less) is increasing. In the Company's service territory specifically, the report states on pages 12 and 13 that there were 1,869, 2,876, and 4,698 interconnection applications in 2021, 2022, and 2023, respectively. This increasing trend can be seen across almost all of Pennsylvania's electric distribution companies ("EDCs"), but PPL Electric's number of interconnection applications over 2021 to 2023 has outpaced the other EDCs, as shown on pages 13 and 14 of that report.

[1] https://www.puc.pa.gov/media/2652/net-metering-interconnection-report-2021-2023_final.pdf.

Q. HOW DOES PENNSYLVANIA'S AMOUNT OF SOLAR DEVELOPMENT COMPARE TO OTHER STATES?

A. Although Pennsylvania currently ranks 30th in the U.S. for solar energy, the Commonwealth has tripled solar production since 2013. In fact, a recent PennEnvironment article noted that Pennsylvania ranked 15th in the nation for rooftop solar growth over the past decade.[2] Also, as I noted previously, the number of interconnection applications has increased significantly over the past three years, especially in PPL Electric's service territory.

Q. ARE YOU AWARE OF ANY FEDERAL OR STATE INITIATIVES TO EXPAND SOLAR DEVELOPMENT IN PENNSYLVANIA?

A. Yes. Several federal and state programs are focused on expanding solar development. For instance, the U.S. Environmental Protection Agency's ("EPA") Solar for All Program[3] and the DOE's recent investments in solar manufacturing and recycling[4] are federal initiatives designed to advance solar energy deployment and integration at the federal level. Specifically, the EPA's Solar for All Program delivers solar energy solutions to low-income and disadvantaged communities across states, such as Pennsylvania, providing financial assistance and project deployment services, including community outreach and workforce development. Additionally, the DOE has allocated $82 million to enhance solar

[2] https://environmentamerica.org/pennsylvania/center/media-center/rooftop-solar-is-slowly-on-the-rise-in-pa/#:~:text=Yet%20even%20with%20this%20growth,solar%20over%20the%20last%20decade.

[3] https://www.epa.gov/greenhouse-gas-reduction-fund/solar-all.

[4] https://www.energy.gov/articles/biden-harris-administration-announces-82-million-investment-increase-domestic-solar.

manufacturing and recycling, with added funding for new grid management tools to help integrate solar into the electricity grid more efficiently. Another critical federal support mechanism is the expanded federal Solar Investment Tax Credit ("ITC")[5] that was passed in August 2022 and provides a tax credit of 30% for the installation of a residential solar energy system.[6]

At the state level, the Pennsylvania Energy Development Authority ("PEDA") has received substantial federal funding to expand residential solar deployment, explicitly targeting low-income and disadvantaged communities.[7] This initiative emphasizes household savings, community ownership, and the creation of quality jobs. Another state-led initiative, Pennsylvania Department of Environmental Protection's ("DEP") Clean Energy Program Plan 2023-2025 for Pennsylvania, highlights and provides an enablement plan for solar energy.[8] It includes initiatives for supporting local governments with solar projects, facilitating solar energy siting, and expanding public knowledge and technical support for renewable energy development. This effort focuses on establishing best practices to enable broader solar adoption, which will provide a structured approach to solar energy integration throughout the Commonwealth.

[5] https://www.energy.gov/eere/solar/homeowners-guide-federal-tax-credit-solar-photovoltaics.

[6] The ITC will remain at 30% through 2032, after which it will decrease to 26% for solar energy systems installed in 2033 and to 22% for solar energy systems installed in 2034. The ITC will expire in 2035 unless reauthorized by Congress.

[7] https://www.epa.gov/newsreleases/biden-harris-administration-announces-pennsylvania-energy-development-authority#:~:text=PHILADELPHIA%20(April%2022%2C%202024),develop%20long%2Dlasting%20solar%20programs.

[8] https://www.depgreenport.state.pa.us/elibrary/GetDocument?docId=4852828&DocName=CLEAN%20ENERGY%20PROGRAM%20PLAN%202023-2025.PDF%20%3cspan%20style%3D%22color:green%3b%22%3e%3c/span%3e%20%3cspan%20style%3D%22color:blue%3b%22%3e%28NEW%29%3c/span%3e.

In addition, the Solar Energy Program ("SEP"), which is administered jointly by DEP and the Pennsylvania Department of Community and Economic Development ("DCED"), offers grants and loans to promote the use and generation of solar energy.[9] The program supports businesses, economic development organizations, and political subdivisions, like municipalities and counties, aiming to facilitate the installation of solar power systems across Pennsylvania. The Commonwealth also is providing a Business Energy Investment Tax Credit, which includes a grant of up to $9,500 and a 10% tax credit for businesses installing solar systems. Homeowners can benefit from the Pennsylvania Housing Finance Agency's Homeowners Energy Efficiency Loan Program, offering up to a $10,000 loan at a 1% interest rate for energy-efficient home improvements. Furthermore, owners can earn Solar Renewable Energy Credits for every 1,000 kWh produced, with each credit valued between $35 and $40.[10] (EcoGen America)

Q. HOW MIGHT THOSE INITIATIVES IMPACT THE LEVEL OF SOLAR INSTALLATIONS DEPLOYED IN PENNSYLVANIA?

A. These programs can significantly impact the level of solar installations in Pennsylvania by providing enhanced technical support, educational resources, and financial incentives. These efforts aim to facilitate the siting and development of solar projects, improve capabilities in managing and approving solar projects, and expand public awareness and acceptance of solar energy.

[9] https://dced.pa.gov/programs/solar-energy-program-sep/.

[10] https://ecogenamerica.com/pa-solar-incentives/.

Q. BASED ON YOUR REVIEW, IS PPL ELECTRIC'S FIRST DER MANAGEMENT PLAN INHIBITING SOLAR DEVELOPMENT IN THE COMPANY'S SERVICE TERRITORY?

A. No. PPL Electric continues to see significant growth in solar development in its service territory since the Company began implementing its First DER Management Plan on January 1, 2021. This can be seen in the following tables from the Commission's "Net Metering & Interconnection Report 2021-2023"[11]:

[11] "Net Metering & Interconnection Report 2021-2023," pp. 22-23, *available at* https://www.puc.pa.gov/media/2652/net-metering-interconnection-report-2021-2023_final.pdf.

II. UTILITIES' EXPERIENCES WITH DERS IN PENNSYLVANIA AND OTHER STATES

Q. COULD YOU PLEASE SUMMARIZE THE CHALLENGES OTHER ELECTRIC UTILITIES HAVE SEEN WITH THE DEPLOYMENT OF DERS ON THEIR ELECTRIC DISTRIBUTION SYSTEMS?

A. When electric utilities connect customer generation at the "edge," meaning where the utilities' systems interface with customer-owned generation systems and control assets, it is not the same as a customer load. The customer is no longer only taking electrons off the grid; they are putting electrons back onto the grid. As such, the voltage, volt-ampere

reactive ("VAR"), and watts change in a non-singular, non-linear direction. Once an electric utility starts to add on-site generation, there is now a dynamic edge that places demands on the distribution grid that it was not designed to accommodate. This point is critical because every distribution feeder is uniquely different from the next.

For instance, consider two feeders located in one service territory: one neighborhood. The first feeder is 13 miles long and has a voltage of 23 kV, feeding 100 typical-sized homes, and the second feeder is 5 miles long and has a voltage of 4 kV, feeding 20 typical homes. The longer, higher voltage feeder experiences more significant voltage drops over its length, necessitating advanced voltage regulation technologies to maintain stable power delivery across all homes. This could include implementing capacitor banks, voltage regulators, or load tap changers to compensate for the longer distance and higher load variability. On the other hand, the shorter, lower voltage feeder, while less susceptible to voltage drops due to its compact nature, might still face challenges if intermittent renewable energy sources, like solar, are integrated. These sources can lead to voltage stability issues and power quality concerns, particularly when the generation from these sources does not align with consumption patterns. The bi-directional nature of power flow with such energy sources requires modifications in circuit design to accommodate both traditional power delivery from the grid and power input from homes, which might include upgrading protection systems to handle the new dynamics of power flow.

Both feeders would, therefore, need the electric utility to design and upgrade infrastructure to effectively manage the added complexity of renewable energy sources, while ensuring the continued reliability and efficiency of power delivery to all connected

homes. This might involve a significant investment in technological upgrades and system redesign to ensure these feeders can handle the dynamic challenges of modern energy demands and generation methods.

In addition, the impact of customer-owned generation installed at the edge can be seen even in low numbers. Indeed, one solar system on one feeder could have a detrimental effect on the power quality of other customers' service, such as when a solar system is not performing effectively and negatively affects the feeder's voltage.

At the same time, however, DERs can be used to help support the distribution system, including voltage, by enabling two-way communication between the DERs and electric utilities. Such communication allows the electric utilities to create programs that can help support the overall grid. In pursuing these programs, it is critical to have accurate computer models and simulation software, such as a Distribution Management System ("DMS") and Power Flow Software (e.g., Synergi or CYME), that can effectively oversee the entire grid, including all systems connected to it. These tools provide the asset owners with visibility of each component. This level of insight is essential to ensuring that all feeders can handle a wide range of operational scenarios, maintaining stability and efficiency even during fluctuating conditions.

Q. DO YOU HAVE ANY SPECIFIC EXAMPLES?

A. Yes. In the EPRI report titled "Improving Visibility of DER and Load Through Advanced Real-Time and Short-Term Forecasting,"[12] there is a case study for Consolidated Edison

[12] https://www.epri.com/research/products/000000003002024360.

Company of New York, Inc. ("ConEd") demonstrating the overall impacts of a multitude of DER proliferation scenarios across four separate feeders. The case study shows the dynamic variability under which the feeders perform, demonstrates how the standard utility voltage regulation tools are used heavily, and provides insight on the importance of having the enhanced technology and increased visibility of DERs. As the report summarized on page 8-1, the case study's results "supported four main conclusions": (1) "[i]ncreased DER visibility can directly improve load forecasting performance for operations"; (2) "[s]olar forecasting has sufficient accuracy to provide DER visibility down to the customer-level"; (3) "[e]ven with the availability of forecasts, DER metering data can still be useful, especially for assessing and calibrating forecasts"; and (4) "[w]hile forecast accuracy reduces as the forecast horizon increases, the difference between updating forecasts once per day versus every hour is small enough that the choice of forecast schedule for operations does not need to be decided based solely on forecast accuracy."

Also, I have had the opportunity in my career to talk and review with a multitude of utilities work, such as Southern California Edison Company, Florida Power & Light Company, Arizona Public Service Company, Oklahoma Gas and Electric Company, and Duquesne Light, discussing the current processes and ability to gather the data build the models and run the analytics. Based on my experience, the work highlighted in this EPRI report's case study is not unique to ConEd. Therefore, this case study underscores the critical need for grid monitoring and data analytics advancements, as exemplified by ConEd's implementation of enhanced system models and voltage regulation strategies. By embracing such technologies, utilities can maintain management over grid operations,

enhance reliability and efficiency, and better prepare for a future with widespread deployments of DERs.

III. UTILITIES' PURSUIT OF GRID MODERNIZATION

Q. WHAT IS GRID MODERNIZATION?

A. Grid modernization is a term used in the electric industry to reference investments and practices that enable and unlock the existing grid's capabilities and that leverage DERs and other technologies to improve the grid's overall performance. If grid modernization is executed successfully, it can play a role in helping address the impact of increasing electrification demand, which requires investments in transmission infrastructure and bulk generation.

Grid modernization is a pivotal topic in the electric utility sector, representing the need for a transformative approach while embracing new technologies and capabilities that are now available to the energy sector. At the crux of all grid modernization plans is a utility with a defined "North Star" vision guiding the transformation, which requires full-situational awareness from the bulk generation to the grid edge.

The industry has broken down the pathway to grid modernization into five key function areas, which cover the fundamental capabilities that are required to fully realize grid modernization's potential. These areas are: (1) integrated planning; (2) system visibility; (3) real-time operation; (4) consumer and energy services; and (5) emerging grid architecture. Integrated planning focuses on improved planning processes, including forecasts and acknowledgment of the changing customer demand. System visibility involves technologies that provide situational awareness to grid operators. Real-time

operation highlights the need for technologies that act automatically on system data to maintain optimal operation. Consumer and energy services explore how consumers and third-party services engage with the grid for cost savings, resilience, or other benefits. Lastly, emerging grid architecture looks at future grid designs and business models required for managing increasing decentralization. All five of these function areas require data on the inverter-based resources' performance. Without this information, all of these capabilities are incomplete and not as effective.

Further, there are 11 technologies that can be used in grid modernization: (1) synchro phasors; (2) distributed energy resource management system ("DERMS"); (3) advanced metering infrastructure ("AMI"); (4) home energy management systems ("HEMS"); (5) interdependency planning; (6) networked microgrids; (7) volt-var optimization ("VVO") software; (8) integrated planning of transmission and distribution software; (9) automatic DER interconnection process software; (10) advanced distribution management system ("ADMS"); and (11) dynamic line rating technology. The majority of defined technologies require open integrated data streams and communication when integrated with the distribution grid.

Q. IS THE COMPANY'S FIRST DER MANAGEMENT PLAN AND SECOND DER MANAGEMENT PLAN CONSIDERED GRID MODERNIZATION?

A. Yes. It encompasses multiple building blocks of functionality and technology as stated above that are required to unlock the current grid's capabilities and effectively plan and operate the grid in the future.

Q. ARE YOU AWARE OF OTHER ELECTRIC UTILITIES PURSUING GRID MODERNIZATION?

A. Yes.

Q. COULD YOU PLEASE SUMMARIZE SOME OF THOSE ELECTRIC UTILITIES' GRID MODERNIZATION EFFORTS?

A. The following list is a summary of some utilities' grid modernization efforts, which were highlighted in the Grid Modernization Index 2020 report[13] and have all been a part of my engagement and networking at the AEIC DER Subcommittee meetings:

- Arizona Public Service Company ("APS"): APS adopted a system of systems approach for integrating DERMS, addressing DER integration and grid reliability and actively rolling out Fault Location, Isolation, and Service Restoration ("FLISR") and distribution automation techniques to enhance grid performance.

- Ohio Power Company d/b/a AEP Ohio ("AEP Ohio"): AEP Ohio launched an innovation process based on agile principles to encourage a culture of innovation within the company. This approach led to collaborations with startups to co-develop technologies for grid modernization, focusing on resilience and electrification.

- Florida Power & Light Company ("FPL"): FPL invested over $5 billion since 2006 to strengthen the grid, improve service reliability, and install over 5 million smart meters. They have effectively modernized their DMS with common SCADA shared with Energy Management System ("EMS"). Adoption of Advanced Network Applications (Volt-Var Control, FLISR). Improved their operator visualization and situational awareness tools. Integrated their DMS with their outage management systems. These investments have improved FPL's resilience and reduced outages during severe weather events.

[13] https://www.gridwise.org/resource-downloads/GWA_GMIInsightsintoaTransformation_2020_FINAL.pdf.

In addition, as detailed in Oklahoma Gas and Electric Company's ("OG&E") Grid Modernization Update to the Oklahoma Corporation Commission,[14] OG&E is in a third phase of the grid modernization plan around technology growth enhancing its DMS and ADMS activities that are being built upon under its Phase 1 Smart Grid, where OG&E rolled out the AMI, field communication systems, distribution management systems, integrated volt/var control, and automated switches.

Q. HAVE OTHER ELECTRIC UTILITIES IMPLEMENTED ANYTHING ON PAR WITH THE COMPANY'S FIRST DER MANAGEMENT PLAN OR SECOND DER MANAGEMENT PLAN?

A. No, not with respect to visibility and management of behind-the-meter DERs. Although utilities have implemented many components and requirements for inverter requirements, such as IEEE 1547-2018 and other industry driven initiatives (like communication protocol requirements), other utilities have not yet taken the next step of leveraging them to monitor and manage DERs across the distribution system.

Q. TO THE BEST OF YOUR KNOWLEDGE, WHY HAVE THEY NOT?

A. Grid modernization requires time and investment. PPL Electric has been proactive and executed a plan the Company determined was necessary over 10 years ago with a fully defined vision to get ahead of the impact of DERs and implement processes that will work for the benefit of all customers. To unlock the edge, a distribution utility must have a

[14] https://oklahoma.gov/content/dam/ok/en/occ/documents/pu/pud-reports-page/occgridmodernization presentation-111419.pdf.

geographical database of all distribution assets, a robust electrical connected model, an established planning and interconnection process, a fleet of intelligent devices, a communication network that can work with the intelligent devices, an available and active distribution management system, and communication and inverter standards that are defined and implemented. These activities all take time and resources and are necessary to support and manage the proliferation of DERs safely, reliability, and affordably. Being proactive and executing a vision is difficult, but PPL Electric is showing the way.

Q. FROM YOUR PERSPECTIVE, SHOULD THE COMMISSION APPROVE THE SECOND DER MANAGEMENT PLAN SO THAT THE COMPANY CAN CONTINUE TO MONITOR AND ACTIVELY MANAGE DERS ON ITS DISTRIBUTION SYSTEM?

A. Yes. PPL Electric's First and Second DER Management Plans are proactive steps to help facilitate and encourage the interconnection of DERs in a safe, reliable, and cost-effective way. As such, I believe the Commission should approve the Second DER Management Plan.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?

A. Yes, although I reserve the right to supplement my direct testimony.

PPL Electric Exhibit EC-1

Elizabeth M. Cook, Ph. D.

412-760-2186 | elizabeth@emc2cp.com | Pittsburgh, PA | LinkedIn

Highly educated, innovative and analytical professional with 20 years of industry experience working with utility companies. Proven ability to quickly learn, understand complex topics and deliver in fast-paced environments. Adept at creating business model transformations and/or partnership innovation methods to help customers in the clean energy transition. Passionate about educating and influencing stakeholders on key industry trends, EI&T services and portfolio outcomes. Experience with leading change, navigating ambiguity, managing senior/executive stakeholder communications, and organizing and leading purpose-built, cross-functional teams. Confident in capability to take highly technical information and break it down for all audience levels.

Core Competencies

- Grid Strategist
- Cross-functional Leadership
- Strategy Planning
- Data Cleansing & Analytics
- Staff Training & Development
- Process Improvement
- Energy Industry Trends
- Consumer Insights & Research
- Stakeholder Management
- Cost-effective Measures
- Budget Management
- Project Management

Professional Experience

2024 - Present • EMC^2 Collective Power • Pittsburgh, PA

Founder/CEO| 2024 – Present Specializing in Grid Integration, providing support and expertise in establishing connections with industrial, commercial, and academic communities to facilitate the integration of net-zero buildings and Microgrid systems into the power grid.

2024 - Present • Association of Edison Illuminating Companies (AEIC) • Pittsburgh, PA

Technical Strategy, Vice President| 2024 – Present

Driving initiatives and supporting operational excellence for the AEIC Electric Utility Membership working closely with technical committees, member companies, and directing projects at AEIC's Center for Operational Excellence

2016– 2023 • Duquesne Light Company • Pittsburgh, PA

Privately owned electric utility providing power to 600K customers in two counties in western PA.

Grid Modernization + Advanced Grid Solutions, Director | 2020 – 2023

Selected for role by CEO for vision and ability to speak the language to lead grid organization. Drive grid modernization plan with responsibility for seven workstreams focused on a $1.2B investment over five years.

Budget Responsibility: $5M Operating | $20M Capital | $1.2B Modernization

- Responsible for ensuring enterprise technology platform is integrated with the company's planning system, network architecture and physical assets.
- Manage and lead efforts within transmission and distribution power grid's operations and planning groups.
- Work with internal and external partnerships to collaborate with local, state, and federal planning entities, as well as universities and industry, to drive advanced grid solutions and plan for the future power grid.

System Planning, Senior Manager | 2016 – 2020

Identified, created and built the bridge between current and future desired power grid projects through an interactive change management process. Drove multiple process development groups simultaneously with projects ranging from two months to two years in length. Led transmission and distribution teams of nine and over saw budget of $15M in capital YoY.

- Stood up a strong distribution planning group with the ability to develop models, run studies and drive work products based on data insight and advanced analytics, raising the bar of company capabilities beyond what was thought possible.
- Set up comprehensive planning process to determine the most important focus areas and stood up a group to conduct project viability studies.

- Developed stack ranking criteria to prioritize projects across cross-functional groups to determine capital expense disbursements.

2004– 2016 • MITSUBISHI PRODUCTS, INC. • Pittsburgh, PA

Subsidiary of Melco (Japan) serving electric utility selling high voltage power equipment.

Power System Stability Studies Section Manager | 2015 – 2016

Responsible for a startup consulting group within the larger company. Stood up bidding processes and oversaw business processes including reviewing all contracts while leading a team of five engineers with a budget of $5M to procure 20-30 studies.

- Continually improved methods and procedures for processes, measurement, documenting and workflow technique enabling the group's growth in net income from $190K to $2M over 10 years.
- Mentored junior engineers and new hires to better improve the competency and efficiency of all team members and provided technical training to utility members of power system studies and phenomena.
- Supported and educated internal stakeholders including management, Compliance, Operations and other departments on the T&D Power Grid concerns and complexities.

"Elizabeth is a high capacity, strategic thinker who has driven many people, process and technology improvements in our planning function in her tenure. Her abilities and drive to excel are exceptional. Being a leader requires one to determine when others are working to their utmost ability and capability and accepting their performance as such even though it does not equal or even approach your ability and capacity."

Power System Studies Engineer | 2004 – 2015

Conducted five to ten concurrent studies while also interacting with 30 clients, conducting site reviews and providing technical training.

- Worked with Utility Planners to provide creative and cost-effective transmission solutions and ran studies to determine project feasibilities to create solutions to address problems for electric client companies.
- Maintained and improved transmission steady-state and dynamics data.
- Reviewed and analyzed base cases and performed model validation studies; Performed power flow, transfer capability, voltage and dynamic stability studies.
- Developed several electro-magnetic models using both positive and zero sequence network impedances for various system connections.
- Documented all study results in technical reports.

Educational Background

PH.D., ELECTRICAL ENGINEERING | University of Pittsburgh

MASTER OF SCIENCE, ELECTRICAL ENGINEERING | Kansas State University

BACHELOR OF SCIENCE, ELECTRICAL ENGINEERING | University of Pittsburgh

Publications, Involvement & Certifications

IEEE PES GM 2018 – Conference Paper
Distribution Model Creation using Circuit Maps for Applied PV Impact Studies

IEEE PES GM 2022 – Conference Paper

Podcast Host | *All Things DER and Grid Mod Podcast, Sponsored by AEIC*

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PPL Electric Utilities Corporation	:	
for Approval of its Second Distributed Energy	:	Docket No. P-2024-_____
Resources Management Plan	:	

DIRECT TESTIMONY OF LEE KREVAT

PPL Electric Statement No. 7

May 20, 2024

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Lee Krevat, and my business name and address is Krevat Energy Innovations LLC, 3530 NW 2nd Ave, Camas, WA 98607.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am self-employed as CEO of Krevat Energy Innovations LLC. Krevat Energy Innovations is dedicated to the worldwide challenge of keeping the earth's climate human-friendly by advising start-ups, utilities, regulators, legislatures, and environmentally focused companies and communities. My goal is to help bring ClimateTech[1] solutions successfully to market by strategizing, advocating for, and connecting stakeholders.

Bold leadership and committed teams across the globe share a mission to create and deploy transformational technology. Krevat Energy Innovations leverages strengths in strategy, innovation, communication, and deep stakeholder networks across the energy, IT, and transportation ecosystem to help achieve these goals.

I am currently on the board, advisory board, or an advisor to 10+ start-up ClimateTech companies, on the advisory committee of DistribuTECH International (the leading annual transmission and distribution event that addresses technologies used to move electricity from the power plant through the transmission and distribution systems to the meter and inside the home), a reviewer for start-up companies for Southern California Energy Innovation Network ("SCEIN"), CalSeed, and CalTestBed, mentor at Plug and Play Tech Center, and host of The Climate Champions podcast where I have interviewed over 150 climate champions.

[1] https://www.nasdaq.com/solutions/listings/resources/blogs/what-is-climate-tech.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I have a Bachelor of Science with University Honors from Carnegie Mellon University in Mathematics/Computer Science.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. I have almost four decades of experience in the energy and technology industries. While working at San Diego Gas & Electric Company ("SDG&E"), a subsidiary of Sempra Energy, I founded and served as director of smart grid and led SDG&E's smart grid and electric vehicle initiatives, advocating Grid Modernization and Electric Vehicle grid integration. I was twice named one of the top 100 movers and shakers influencing the smart grid market by GreenTech Media and twice recognized as a Top 12 Utility Mover and Shaker and Utility Champion by Intelligent Utility Magazine.

Prior to founding Krevat Energy Innovations, I was director for PXiSE Energy Solutions, advocating for a high-speed advanced grid control technology. Previously, I was director of new ventures for Sempra Renewables, responsible for leading the development of distributed energy solutions including solar, bio-methane, electric vehicle charging, energy blockchain, and microgrids. I successfully closed investments in Sempra's first distributed energy resources play, an exciting distributed solar company, Sol Systems, and as the sole US founding member in the Energy Web Foundation.

I champion for sustainability on a national level, serving on the Board of Directors or as an active member of the GridWise Alliance since 2011, where I led the development

of the GridWise Alliance Grid Modernization Index ("GMI")[2]. The GMI has been used since 2013 to evaluate the status of electric grid modernization in the United States, to identify and promote best practices, and to provide insights to state policymakers, regulators, and other stakeholders regarding the progress of their grid modernization.

Before joining the Sempra Energy family of companies, I led several software development teams at Tandem Computers and was a partner at TransPac Software, a startup in Silicon Valley.

Q. HAVE YOU PREVIOUSLY TESTIFIED AS A WITNESS BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. No.

Q. HAVE YOU TESTIFIED AS A WITNESS BEFORE OTHER REGULATORY COMMISSIONS?

A. Yes. Before the California Public Utilities Commission ("CPUC"), I have testified as follows:

1. Docket Number: A.10-12-005 - SDG&E 2012 GRC Filing: SDG&E-10 Smart Grid Policy – Lee S. Krevat.

2. Docket Number: A.14-02-006 - SDG&E's Energy Storage Procurement Application: Prepared Direct Testimony of Lee S. Krevat – filed February 28, 2014.

3. Docket Number: A.14-04-014 - SDG&E's Electric Vehicle Grid Integration Pilot Program: Chapter 1 – Prepared Direct Testimony of Lee Krevat – filed April 11, 2014.

[2] https://www.gridwise.org/resource-downloads/GWA_13_GridModernizationIndex-1_July_13.pdf.

Q. HAVE YOU BEEN RETAINED BY PPL ELECTRIC TO TESTIFY ON BEHALF OF THE COMPANY IN SUPPORT OF THE ABOVE-CAPTIONED PETITION?

A. Yes.

Q. WOULD YOU PLEASE DESCRIBE THE SUBJECT MATTER OF YOUR TESTIMONY?

A. My testimony will address: (1) how utility monitoring and management of Distributed Energy Resources ("DER") can help encourage and facilitate renewable energy development and combat climate change; and (2) the opportune timing of PPL Electric's First DER Management Plan and its Second DER Management Plan, which will help (a) get ahead of the issues that DERs without utility monitoring and management can cause on the distribution system, such as those seen in other states, where DERs without utility monitoring and management have caused problems on the distribution system that can only be remedied through costly system upgrades, and (b) leverage the opportunities presented by monitored and managed DERs, thereby providing additional benefits to customer-generators and non-customer-generators alike.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH YOUR TESTIMONY?

A. Yes, I am sponsoring the following exhibits:

- PPL Electric Exhibit LK-1 – A copy of my curriculum vitae.
- PPL Electric Exhibit LK-2 – Surface temperature against atmospheric CO2.
- PPL Electric Exhibit LK-3 – Billion-dollar disaster events over time.
- PPL Electric Exhibit LK-4 – Major sources of greenhouse emissions.

- PPL Electric Exhibit LK-5 – Emissions of selected energy supply technologies.
- PPL Electric Exhibit LK-6 – Residential vs. utility scale PV costs.
- PPL Electric Exhibit LK-7 – Distributed energy storage system market size.
- PPL Electric Exhibit LK-8 – Solar production over 365 days.
- PPL Electric Exhibit LK-9 – Solar hourly solar production over a year.
- PPL Electric Exhibit LK-10 – An hour of PV intermittency.
- PPL Electric Exhibit LK-11 – Four hours vs. ten minutes of PV intermittency

I. THE COMMISSION SHOULD APPROVE PPL ELECTRIC'S SECOND DER MANAGEMENT PLAN

A. PPL ELECTRIC'S SECOND DER MANAGEMENT PLAN WILL HELP FURTHER ENCOURAGE AND FACILITATE RENEWABLE ENERGY DEVELOPMENT AND COMBAT CLIMATE CHANGE

Q. WOULD YOU PLEASE DESCRIBE THE ROLE THAT RENEWABLE ENERGY DEVELOPMENT, PARTICULARLY DERS, CAN PLAY IN COMBATTING CLIMATE CHANGE?

A. From a scientific and data perspective, it is clear that climate change is caused by greenhouse gases ("GHGs"). (PPL Electric Exhibit LK-2.)[3] From an observational perspective, extreme weather events tied to the warming climate are also clear. (PPL Electric Exhibit LK-3.)[4] While the timing and impact of a changing climate is difficult to predict exactly, the world is already being impacted by a changing climate and the need to quickly reduce GHGs is evident.

[3] https://www.climate.gov/news-features/climate-qa/if-carbon-dioxide-hits-new-high-every-year-why-isn%E2%80%99t-every-year-hotter-last.

[4] https://www.forbes.com/sites/ianpalmer/2021/07/14/heat-waves-and-billion-dollar-extreme-weather-events--are-they-linked-to-greenhouse-gases-and-fossil-energies/?sh=1c1f3b68c1.

Given the difficulty the human race has with change and the politicizing of climate change, the most likely successes in GHG reduction will be the ones that impact people the least. For most people, the generation and science behind electric power is not well understood; if it can be generated with less carbon intensity, people will be impacted minimally. Also, electric power generation emits approximately 25% of total GHG and combined with the transportation sector, accounts for over 50%. (PPL Electric Exhibit LK-4.)[5] Given the imperative to reduce GHG, the carbon intensity of electric power generation and the availability of reasonably priced renewable energy make power production a low hanging fruit that also has the potential to make an impact in the transportation sector as the electric vehicle movement gains momentum.

While rooftop and utility solar photovoltaics ("PV") are not the least carbon intensive generation technologies – for example wind and nuclear can be less carbon intensive – they are significantly less carbon intensive than natural gas and coal (70+% reduction). (PPL Electric Exhibit LK-5.)[6] Furthermore, with regard to rooftop PV, utility PV, wind, nuclear, geothermal, biomethane, and other generation technologies, we do not know what technological breakthroughs may occur. For example, I am on the board of PI Energy, a start-up developing a low-cost, thin, and flexible solar energy technology manufactured in the US that could transform the solar market. It may or may not succeed. We need all arrows in the quiver and should reject the notion of one silver bullet.

There is a line of thinking that because the cost of utility PV is almost one third the cost of rooftop PV (PPL Electric Exhibit LK-6),[7] the utilities should focus only on cost and

[5] https://www.epa.gov/ghgemissions/sources-greenhouse-gas-emissions.
[6] https://www.ipcc.ch/site/assets/uploads/2018/02/ipcc_wg3_ar5_annex-iii.pdf.
[7] https://www.nrel.gov/solar/market-research-analysis/solar-installed-system-cost.html.

not support rooftop PV. I applaud PPL Electric for rejecting this argument. Rooftop solar provides numerous benefits beyond the kWh production. Rooftop solar can reduce peaks on transmission and distribution circuits, deferring capital investment. Over time, the peak will shift to evening hours since the sun will have set and rooftop solar will cease providing peak reduction benefit. However, customers are increasingly investing in solar and energy storage solutions. (PPL Electric Exhibit LK-7.)[8] This has the potential to significantly reduce the evening peak, further extending the benefits of solar.

Additional benefits of rooftop PV not directly tied to the cost of energy include local job growth, resiliency when combined with microgrid technology and storage, and inspiring a feeling of energy independence to those with a rooftop solar PV system; enabling customers to be prosumers (producers and consumers) of grid energy and nurturing their desire to mitigate climate change in other ways.

Q. DO YOU BELIEVE THAT ELECTRIC DISTRIBUTION COMPANIES ("EDCS"), SUCH AS PPL ELECTRIC, SHOULD HELP ENCOURAGE AND FACILITATE RENEWABLE ENERGY DEVELOPMENT?

A. Most EDCs benefit from being a monopoly, profit based on capital expenditures, and the reasonable opportunity to collect their operations and maintenance costs. In exchange, EDCs must provide safe, reliable, adequate, affordable, and reasonable service. While most other types of companies require more risk-taking to be profitable, they are not regulated to the same extent as utilities, do not have to serve all customers in a region, are free to pursue new markets and products with limited oversight, and as we have seen with

[8] https://www.precedenceresearch.com/distributed-energy-storage-system-market.

automobile companies' numerous recalls, for example, often risk making time-to-market, profit, and cost decisions at the expense of safety.

In addition, EDCs are in the best position to ensure those requirements are met. EDCs can evaluate safety across their system and propose technology to ensure the safety of the public and staff. EDCs also are in the best position to evaluate the least expensive options for balancing the benefits to all customers – those able to take advantage of solar and those that cannot – and the best position to monitor the distribution system to ensure safety, reliability, resilience, adequate resources, and optimization for all customers.

Q. IN YOUR VIEW, HAS THE COMPANY'S FIRST DER MANAGEMENT PLAN HELPED ENCOURAGE AND FACILITATE RENEWABLE ENERGY DEVELOPMENT AND COMBAT CLIMATE CHANGE?

A. Absolutely. With their First DER Management Plan, they are encouraging rooftop PV and that is encouragement for combating climate change. Rooftop solar is significantly less carbon intensive than natural gas and coal (see PPL Electric Exhibit LK-5) and enables customers to be prosumers of energy, inspiring a feeling of energy independence and likely to motivate them to take additional actions to help mitigate climate change.

PPL Electric's First DER Management Plan has done more than encourage DER development, it has coupled encouragement with efficiency, increasing DER potential by leveraging existing technology and building synergistic new solutions resulting in a smarter system instead of a more expensive, capital-intensive one. By deferring capital investments, generating and non-generating customers will see lower bill increases. By avoiding DER blamed bill increases, financial-driven pushbacks against solar are kept at bay.

These deferred capital improvement projects would take time to complete and also generate carbon emissions. And while customers wait for these projects to complete, they are not helping the planet by generating renewable energy. In addition, by deferring capital projects, customers wanting to invest in solar are able to act on that decision as soon as they are ready. Large financial decisions take a lot of research and time; if customers are forced to wait until a capital project is completed, it may discourage them from investing in solar. PPL Electric's First DER Management Plan ensures the grid is ready when customers are.

PPL Electric also encourages customers to invest in solar by eliminating the cost associated with wiring and upgrading their electric panels, reducing the cost and payback timeframe for customers of investing in solar.

The First DER Management Plan delivered all PPL Electric customers both emissions and cost savings. For example, in 2023, over 13,000 voltage violations that could have resulted in truck rolls[9] were avoided, saving over $7 million dollars and significantly reducing carbon emissions. These emissions would reduce some of the environmental benefits of solar and would have been a side-effect of unmonitored and unmanaged DERs.

[9] PPL Electric Utilities Corporation 2024 DER Management Report to the Pennsylvania Public Utility Commission, *Table 93 Total Cost to Respond to Voltage Violations that Were Avoided per Year*.

Q. HOW WILL THE COMPANY'S SECOND DER MANAGEMENT PLAN FURTHER HELP ENCOURAGE AND FACILITATE RENEWABLE ENERGY DEVELOPMENT AND COMBAT CLIMATE CHANGE?

A. Most importantly, the Second DER Management Plan makes the plan permanent. Tremendous benefits have been achieved for all customers through the First DER Management Plan and those benefits will continue to grow as more customers install DERs. While customers with DERs benefit the most, all customers benefit from less emissions and costs from truck rolls and deferred infrastructure construction, improved voltage and frequency power quality, and lower rates than they would otherwise be due to deferred capital upgrades. Future DER customers benefit by the system being able to support more DERs in a timely manner and lower installation costs – specifically, not needing to pay for an electric panel upgrade. And as previously discussed, more solar helps to combat climate change (see PPL Electric Exhibits LK-2, LK-4, and LK-5.)

And almost as important, in the Second DER Management Plan, the 3,000 DER system cap per year is removed. In 2023, the cap was exceeded in September, and in 2024, the Company projects that the cap will be exceeded in September. If the cap is not removed soon, more than half the DERs each year and soon after that, throughout the system, will not be monitored or manageable. The success of the Second DER Management Plan will be diminished; customers will have higher bills due to investment in capital projects that will be necessary to mitigate DER issues and suffer increased emissions and costs due to truck rolls responding to power quality issues. Installation cost for DER customers will increase because customers will need to wait for capital projects to complete before moving

forward with solar investments, and some may not be able to proceed due to system limitations because of a lack of system visibility and hosting capacity.

Lastly, the Second DER Management Plan introduces the capability to manage real power output. Grid planners must plan for the worst case. Regarding solar, many EDCs plan the system to be able to handle all the solar systems on a feeder at nameplate capacity and capital investments to improve the system are made accordingly. PPL Electric already leverages the technologies deployed as part of the First DER Management Plan to use actual generation data in planning. This has enabled an additional 29 MW of rooftop solar distribution grid availability as of March 21, 2024.[10] This number will continue to grow with active DER Management. In addition, PPL Electric's Second DER Management Plan would increase the potential MW even more significantly by managing real power output, enabling more people to invest in solar. When solar generation output is measured over the course of a year, there is only a small percentage of time solar systems are at maximum production (see PPL Electric Exhibits LK-8[11] and LK-9[12]). There are specific conditions that necessitate optimal output: an optimal operating temperature, strong solar irradiance, a lack of PV panel degradation, free of dirt and debris, number of hours of daylight, cloud cover, and other factors. With the agreement of a subset of incentivized solar customers, PPL Electric will be able to lower real power output for those few hours each year when the capacity of the feeder will not allow for concurrent maximum solar output matched against load. By reducing customers' upfront interconnection costs in exchange for the

[10] Ibid.

[11] http://www.curtronics.com/Solar/graphs/DailyProduction365Value.html.

[12] https://www.researchgate.net/figure/The-hourly-based-solar-irradiance-obtained-from-the-daily-solar-irradiance-dataset-8760_fig2_377702638.

ability to curtail a few hours each year, PPL Electric is further encouraging new solar installations. Even with curtailment, the overall amount of solar energy is increased because additional MWs of DERs can reliably connect to the system with confidence, reliability can be maintained, and capital investment by PPL Electric can be avoided. Since the increased DERs will be generating all but a small percentage of the time each year, climate change will be further mitigated the great majority of the time.

B. PPL ELECTRIC'S FIRST DER MANAGEMENT PLAN AND ITS SECOND DER MANAGEMENT PLAN ARE WELL-TIMED TO ADDRESS THE CHALLENGES AND OPPORTUNITIES PRESENTED BY DERS

Q. IN THE FIRST DER MANAGEMENT PLAN PROCEEDING AT DOCKET NO. P-2019-3010128, OTHER PARTIES QUESTIONED THE TIMING OF THE COMPANY'S FIRST DER MANAGEMENT PLAN AND ALLEGED THAT IT WAS PREMATURE. DO YOU AGREE WITH THAT POSITION?

A. No. Fifteen years ago, as Founder and Director of SDG&E's Smart Grid Team, I presented data to the leadership of SDG&E with forecasts for growth of solar PV. Some listened, but others did not believe the growth curve could be so steep. In addition, I presented data showing an example of the impact solar was already having on the system (see PPL Electric Exhibits LK-10[13] and LK-11[14]). Fortunately, SDG&E leadership understood the data and approved the development of a plan. Ultimately, the increase in solar in San Diego was greater than any of the projections forecasted.

[13] https://www.greentechmedia.com/articles/read/the-nuclear-failure-in-california-could-be-a-big-test-for-solar.

[14] https://www.electronicdesign.com/technologies/power/power-supply/power-electronics-systems/article/21196254/solar-power-impacts-power-electronics-in-the-smart-grid.

The data in PPL Electric's service territory demonstrates that the Company was prophetic in moving forward when it did. First, it takes longer to get proactive programs off the ground. Second, the increase in solar deployment in PPL Electric's service territory has been significant. Third, PPL Electric was able to increase the MW installed on feeders without increasing system cost. Lastly, PPL Electric achieved material cost and emissions savings for solar and non-solar customers. As I was quoted in the article "Solar Power Impacts Power Electronics in The Smart Grid," by John McDonald[15] over 10 years ago, which speaks to this specific issue as well as climate change, "The problem of the future is a problem of the present. There's an urgency around finding a solution."

Q. IS THE COMPANY'S SECOND DER MANAGEMENT PLAN WELL-TIMED TO ADDRESS THE CHALLENGES AND OPPORTUNITIES PRESENTED BY DERS ON ITS DISTRIBUTION SYSTEM?

A. Yes. Well, perhaps a little late. The current program is capped at 3,000 DER installations. In 2023, the cap was surpassed in September. In 2024, the Company projects that it will hit the cap in September. Thousands of DERs are currently not being monitored and managed. The program is already seeing benefits to customers with and without solar, lowering capital costs due to less investment in system upgrades, providing higher power quality, enabling cleaner generation, avoiding emissions, and providing the community the opportunity to invest in more DERs.

For comparison, SDG&E has approximately the same number of customers as PPL Electric but has about four times the number of DERs installed per month. They have been

[15] Ibid.

investing heavily in Smart Grid/Grid Modernization since 2010. In SDG&E's 2022-2024 General Rate Case, SDG&E proposed an average of $140 million dollars per year as part of their Grid Modernization Plan.[16] San Diego is PPL Electric's post card from 10-15 years in the future. One in every six households has solar.[17] While the entire $140 million is not all specifically for DER integration, most of the projects explain DER Integration and System Reliability as drivers.

SDG&E's Reliability and Operational Safety and Smart Grid Operation projects, at an average cost of over $3 million per year, provide a foundation for implementation of broader DER management capabilities, provide expanded visibility to DERs and advanced outage and reliability analytics, and provide an accurate baseline for planning and operating with DERs in the distribution system, refine advanced applications such as Volt/Var Optimization.[18]

The SDG&E Substation SCADA Expansion project's benefits, at an average cost of almost $2 million per year, include improved visibility as a telemetry point that can identify potential grid issues such as load imbalance, power factor, load factor, overloads, or voltage issues as well as enabling more DER integration through improved visibility and control of the distribution system.[19]

The SCADA (line) capacitor project, at a cost of almost a million dollars a year, is safety and reliability driven, but it is also expected to provide ancillary benefits to DER integration. SDG&E has been working on deploying and expanding substation power

[16] https://www.sdge.com/sites/default/files/regulatory/SDGE-12R%20Revised%20Direct%20Testimony%20-%20Elec%20Dist_OM-12-R_1431_1432.pdf, pages 91-140.
[17] Ibid.
[18] Ibid.
[19] Ibid.

quality ("PQ") monitoring systems and field PQ monitoring to improve the visibility of the control system, and bring valuable asset health data to engineers, eliminating the need to perform site visits to download such information. With additional visibility provided by the power quality meters, SDG&E has increased situational awareness on the distribution system, which allows SDG&E to better analyze system events on circuits in a high DER future. It is $2.3 million dollars per year.[20]

SDG&E-Owned Energy Storage Systems proposes to spend an average of $15 million dollars per year on additional circuits that have an abundance of DER penetration, driven by reliability and direct benefits to DER integration. The Distributed Energy Resource Management System ("DERMS") project, at $3 million dollars per year, is primarily driven by DER integration, having a critical role in SDG&E's ability to integrate DER while continuing to operate the system in a safe and reliable way.[21]

The Demand Response Management System ("DRMS") replacement system, with a proposed cost of over $9 million dollars over a two-year period, is designed to be able to grow and expand, allowing SDG&E to have the capacity to manage and signal smart devices. The new platform will also allow the SDG&E's DR team to provide a better customer experience as many more customer purchased smart devices and equipment will be integrated into DR. The DRMS project is primarily driven by DER integration.[22]

Meanwhile, PPL Electric's innovative First DER Management Plan has already made a significant impact including mitigating voltage violations resulting in approximately $13.7 million dollars of operational savings, which would have both

[20] Ibid.
[21] Ibid.
[22] Ibid.

impacted customer bills and increased emissions and costs from the over 23,000 truck rolls and over $1.6 million dollars of capital upgrade deferrals which not only keep electric bills reasonable, but also enable timely installation of DERs. These benefits would have been higher if the program was started sooner and the limit of 3,000 DERs was removed. The sooner the program can operate without a cap, the more customer benefits, DERs, and emissions avoidance can be achieved.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?

A. Yes, although I reserve the right to supplement my direct testimony.

PPL Electric Exhibit LK-1

Board of Directors | **Climate Change Mitigation** | **Advisory Board Member**

Accomplished and self-driven business professional with proven leadership in board membership, utility strategy, grid modernization, distributed energy resources, microgrids, renewable energy, leader mentorship, transportation electrification evangelizing, technology R&D, program management and implementation, software start-ups, architecture and design, organizational development and change management, and process improvement. Areas of expertise:

- Board Membership
- Business Development
- Microgrid Design
- Incubator Mentor
- Climate Champions Podcast
- Management Consulting
- Strategic Planning
- Grid Modernization
- Renewable Energy
- Keynotes, Panelist, Moderator
- Electric Vehicle Grid Integration
- Technology Startups

Experience

Krevat Energy Innovations LLC, Camas, WA **2018 - Present**
CEO
Advises clean technology start-ups, utilities, regulators, legislatures, and environmentally focused companies and communities to help bring climate technology solutions successfully to market by strategizing, advocating, and connecting stakeholders. Produces and hosts the Climate Champions podcast with over 150 episodes to date. Board member, advisory board member or advisor to over a dozen organizations.

Sempra Energy, San Diego, CA **1998 - 2018**
Director, PXiSE Energy Solutions, LLC, 2017 - 2018
Developed partnerships, venture capital opportunities, and microgrid clean energy projects to grow PXiSE into a self-sustaining entity. PXiSE DERMS Advanced Control Technology provides management and sub-second control for grid-connected microgrids, island microgrids, renewable energy farms, and high percentage renewable segments of the grid.

- Strategized PXiSE value statement, evangelized across the stakeholder community, and connected PXiSE with dozens of opportunities leading to the successful implementation of PXiSE's first 100% renewable, multi-inverter, blinkless microgrid, first utility segment project, first DERMS project, and first network of renewable microgrids project.

Director, New Ventures, Sempra Renewables, 2015 - 2017
Directed the company into new business areas. Focused on Distributed Energy Resources: solar, energy storage, load optimization, microgrids, and fuel cells.

- Developed strategic plan, educated leadership team, and acquired minority investment in Sol Systems, LLC., a distributed solar company based in Washington, DC.
- Directed and led the investment in the Energy Web Foundation's energy blockchain project, with Sempra a founding utility member on the advisory board.

Director, Non-Traditional Growth and Technology Services, 2014 - 2015
Monetized untapped internal and external opportunities for San Diego Gas & Electric. Identified opportunities in the energy sector by leveraging San Diego Gas & Electric's (SDG&E) reputation as a thought leader and innovator.

- Negotiated creative agreements that resulted in benefits to SDG&E customers, shareholders and our partners. Portfolio of potential opportunities included over thirty opportunities, including: Microgrid Controller, Substation Analytics, Quantum Cryptography, Grid Integrated Electric Vehicle Charging, and Centralized Rating Engine.

Director, Smart Grid and Clean Transportation, 2009 - 2014
After founding the Smart Grid Team, led enterprise-wide smart grid and clean transportation strategy, policy and project alignment. For all three years the honor was awarded (2009 - 2011), SDG&E was ranked "the most intelligent utility in the United States" by Intelligent Utility Magazine. Was personally ranked in numerous top energy industry "Mover and Shaker" lists by Intelligent Utility Magazine, GreenTech Media, and Fierce Energy.

Specific projects, of over fifty being implemented, within the SDG&E Smart Grid Ten Year Deployment Plan include:

- Smart Meter
- Substation Condition-based Maintenance
- Microgrid/Microgrid Controller
- Community Energy Storage
- Smart Transformer
- Advanced Distribution Management System
- Vehicle Grid Integrated Charging System
- Distributed Energy Resource Management

Keynote speaker, panel moderator, panelist and speaker at dozens of conferences and other events including:

- gridCONNEXT
- International Energy Conference (Beijing)
- California Public Utility Commission (CPUC)
- California Energy Commission (CEC)
- DistribuTECH International
- GridEdge Summit

Director, Program Delivery Team, 2007 - 2009
Managed Information Technology (IT) strategy, planning, and implementation efforts for transformational programs.

- Smart Grid/Smart Meter Advanced Metering Infrastructure (AMI) ($500M+)
- Operational Excellence (OpEx) 20/20 program ($500M+)

Director, Business Partnership and Strategic Planning, 2004 - 2007
Directed and led alignment between utility functions and IT ensuring optimized business performance. Partnered across the utilities to develop a common vision for Utility of the Future, including Smart Grid, Advanced Meter, and OpEx 20/20.

Director, Infrastructure Engineering and Operations, 2001 - 2003
Executed cybersecurity, data center infrastructure, middleware, desktop applications, and business resumption operations, engineering and projects. Led major infrastructure improvement initiative, i2, totaling over $20M per year.

Director, Process and Quality Improvement and Project Office, 1998 - 2000
Led the maturation of the IT organization. Leveraged Software Engineering Institute's Capability Maturity Model (SEI CMM), led major IT projects, and provided in-house project management consulting and mentoring for major initiatives.

Additional Relevant Experience

Head of Software Engineering Department, Tandem Computers / Compaq Computer Corporation, Cupertino, CA

Principal, Transpac Software, Inc., Palo Alto, CA

Education

Bachelor of Science (B.S.) Applied Math/Computer Science, with university honors
Carnegie Mellon University, Pittsburgh, PA

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PPL Electric Utilities Corporation	:	
for Approval of its Second Distributed Energy	:	Docket No. P-2024-_____
Resources Management Plan	:	

DIRECT TESTIMONY OF KAREN MIU, Ph.D.

PPL Electric Statement No. 8

May 20, 2024

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dr. Karen Miu, and my business address is Drexel University, 3141 Chestnut Street, Philadelphia, Pennsylvania 19104.[1]

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Professor of Electrical and Computer Engineering at Drexel University. In my position, I conduct extensive research in the areas on the planning and operation of electric distribution systems, including the impact of distributed energy resources ("DERs") on those distribution systems.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. My educational background is in the field of electrical engineering. My MS thesis and Ph.D. dissertation focused on electric power distribution systems. Degrees received include: B.S. in Electrical Engineering from Cornell University, Ithaca NY, 1992; M.S. in Electrical Engineering from Cornell University, Ithaca NY, 1995; and Ph.D. in Electrical Engineering from Cornell University, Ithaca NY, 1998.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. Since 1998, my professional experience has primarily been at Drexel University. I have also been a visiting professor at Northeastern University and the University of Hong Kong.

[1] I am testifying in my personal capacity, not in my capacity as a Professor of Drexel University. My views and opinions set forth in this testimony are my own and should not be taken as reflecting the position of Drexel University.

Q. HAVE YOU PREVIOUSLY TESTIFIED AS A WITNESS BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. Yes, I provided direct testimony in support of PPL Electric Utilities Corporation's ("PPL Electric" or the "Company") DER Management Plan at Docket No. P-2019-3010128.

Q. HAVE YOU BEEN RETAINED BY PPL ELECTRIC TO TESTIFY ON BEHALF OF THE COMPANY IN SUPPORT OF THE ABOVE-CAPTIONED PETITION?

A. Yes.

Q. WOULD YOU PLEASE DESCRIBE THE SUBJECT MATTER OF YOUR TESTIMONY?

A. My testimony will address the need for the Company to continue monitoring and managing DERs under its Second DER Management Plan, including: (1) the issues PPL Electric previously experienced on its distribution system from the deployment of DERs due to the Company's inability to monitor and manage those systems; and (2) the distribution system's more recent performance now that the Company does monitor and manage DERs on its system.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH YOUR TESTIMONY?

A. Yes, I am sponsoring the following exhibits:

- PPL Electric Exhibit KM-1 – a copy of my curriculum vitae.
- PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL) – a copy of a PowerPoint presentation prepared by Drexel University for PPL Electric, which summarizes

research performed on the impacts of DERs on certain PPL Electric distribution circuits."[2]

- PPL Electric Exhibit KM-3 (HIGHLY CONFIDENTIAL) – a written report on the results presented in PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL).
- PPL Electric Exhibit KM-4 (HIGHLY CONFIDENTIAL) – a copy of a PowerPoint presentation and corresponding report, which summarizes analyses performed on the impacts of DERs on certain PPL Electric distribution circuits.
- PPL Electric Exhibit KM-5 (HIGHLY CONFIDENTIAL) – a written report on the results presented in PPL Electric Exhibit KM-4 (HIGHLY CONFIDENTIAL).

I. PPL ELECTRIC MUST CONTINUE TO MONITOR AND MANAGE DERS TO ADDRESS THE IMPACT OF DERS ON ITS DISTRIBUTION SYSTEM

Q. WOULD YOU PLEASE DESCRIBE THE RESEARCH YOU HAVE PERFORMED CONCERNING THE IMPACT OF DERS ON DISTRIBUTION SYSTEMS?

A. My research related to DER impacts on distribution systems has addressed aspects of the modeling, analysis, planning and control of the impacted distribution system. Please see my curriculum vitae attached as PPL Electric Exhibit KM-1. My approach is based on fundamental electric circuit theory[3] and subsequent power system foundations.[4] Research studies were conducted using advanced mathematics and engineering principles to create

[2] PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL) is a PowerPoint presentation prepared by Drexel University for PPL Electric. This Presentation was not prepared by me in my personal capacity or in my capacity as an expert witness testifying on behalf of PPL Electric.

new, multi-phase models for capturing distributed energy generation flows and to integrate and implement them into large-scale distribution system models.[5] With multi-phase modeling, optimal planning and control problems were mathematically formulated for various problems with different types of DERs; these range from looking at snapshots in time to online problems which account for variations in the system.[6] Subsequently, corresponding computational solution algorithms were devised and implemented in software and tested on various, large-scale, utility distribution systems and data. Typically, the research studies then applied and tested the models, algorithms and software implementations onto real, electric distribution utility data; specifically, multi-phase, unbalanced electric power systems. Integrated hardware/software systems have also been developed to elucidate distribution system impacts.[7]

In particular, the net power flows and power loss within a power system changes with the amount of power injected by generators and with the amount of electric power load demanded by consumers. These flows and losses are not known a priori. A particular challenge is accounting for losses (slack) experienced by a power system in order to deliver electricity across a distance. Given power system and component models, repeatable computations can be used to calculate the flows. Furthermore, the concept of generator domains and generator commons has been introduced and has been applied to attribute portions of the power system to specific generators based on the computed flows for high voltage transmission systems.[8] The domains and commons can then be applied to distribute the slack across, for example, multiple distributed generators.[9] These concepts were adapted for unbalanced distribution systems.[10] Generator domains and commons are dependent upon the locations of DER within the power system itself and the individual amounts of generation.

Notably, in realistic, unbalanced distribution systems, multi-phase DERs have different domains per phase. In other words, it has been shown that even though a DER

may be operated in a certain manner, *e.g.*, balanced, at its own interconnection point, its impact on the system as a whole is driven by the nature of the interconnected system of loads and DER. Thus, both electrically and topologically, understanding DER impacts requires detailed system knowledge.

With respect to distribution system planning and distribution energy management techniques for systems with DERs, my research works have included demonstrating new DER model impacts on distribution application techniques[11] and cost analysis.[12] Switch placement and control problems for improved system reliability metrics via islanding distributed generators to form self-sustaining microgrids in the case of outages have been addressed.[13] Online control of distributed capacitors and distributed batteries to maintain feasibility of distribution systems under injection (net load and generation) variation forecasts have also been formulated and studied.[14] In addition, the challenge of selecting time windows and the frequency of distribution automation and control that consider

batteries were formulated and studied.[15] Also, the need for identifying control sequences that preserve feasible system operating conditions was addressed.[16]

Q. WHAT RESEARCH HAVE YOU PERFORMED SPECIFIC TO PPL ELECTRIC'S DISTRIBUTION SYSTEM, AND WHAT WERE YOUR FINDINGS?

A. As principal investigator of the Drexel University team for two Department of Energy projects led by PPL Electric, I performed detailed simulations of several actual PPL Electric distribution circuits. Resulting research on PPL Electric circuits included the studies with distributed energy storage mentioned above[17] as well as for the U.S. Department of Energy, ENERGISE: Keystone Solar Future Project, photovoltaic DER installations appearing in PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL).[18] Specifically, in PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL),[19] research studies focused on power flow and voltage impacts on PPL Electric circuits with and without existing photovoltaic DER installations. In addition, projected increases in

[18] My understanding is that the Company is treating this exhibit as HIGHLY CONFIDENTIAL because it specifically provides the names and identification numbers of the circuits that were studied. Although I provide data about these circuits in my testimony, I do not specifically reference or provide their names or locations.

[19] A written report on the results presented in PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL) is attached as PPL Electric Exhibit KM-3 (HIGHLY CONFIDENTIAL).

photovoltaic installations were considered in both systematic and random fashions, to mimic independent, consumer driven adoption of solar energy systems.

Nine power distribution systems' circuit data was provided. Circuit data included electrical bus and node connections, representing possible electrical interconnection points to the distribution system. Circuit data also included electrical and topological information on the branches interconnecting the buses and nodes, such as series impedance and the bus and node information at each side of the branch. In such a manner, a graphical representation of the power distribution circuit can be constructed. Please note Figure 1 from PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL).

Finally, corresponding to each bus and node, circuit data included both electric power demand, *e.g.*, load and time-of-load data, and corresponding photovoltaic installation data, *e.g.*, maximum capacity and net (DER and load) power injected. Then, power injections attributed to the photovoltaic installations at a node were estimated based on the National Oceanic and Atmospheric Association ("NOAA") temperature and solar irradiance data. These power values change over time and, for example, with the seasons. Table 1 from PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL) shows five loading levels under consideration where the base loading level was stated as the average loading level experienced by the circuit.

Six of the nine distribution circuits were studied with and without the existing photovoltaic DER installations. Simulation studies were performed at different, seasonal power loads/demand and, for simulations with photovoltaic DERs, power injections for corresponding dates and times. PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL) provides focused results on one of those six distribution circuits. Results on the other five

circuits were qualitatively similar, but quantitatively different as each circuit consists of its own topology, different loads/consumers and, thus, different DER installations.

Overall, the DERs numbered in the single digits on each circuit that was studied. The photovoltaic installations themselves had power capacities varying in size and were distributed within the power distribution circuit across different, unequal phases. For example, as seen in Table 3 of PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL), the five photovoltaic installations and their corresponding active power generation represented approximately 6.4% of the base load.[20]

In another circuit, the solar power capacity of the installations varied from 5.2 megawatts across three-phases to 3.6 kilowatt on a single phase (a 1,444 times variation between total power capacity, and assuming a balanced three-phase injection, a 481 times variation on a single phase) with similar magnitude variations seen in corresponding active generation. Since DER installations are dependent upon customer adoption, the size and location of installations can vary; thus, quantitatively, each distribution system is impacted differently by DERs, and detailed knowledge of that system is needed.

The impacts of DER on the distribution system with and without photovoltaic installations were studied across a range of consumer demands (the five load profiles referenced above) for electric power in order to capture the natural, behavioral variations in power demand the distribution system experience. With a focus on the one particular distribution circuit referenced above, system level impact metrics included minimum and

[20] Please note that the five installations existed on different phases. Also, the solar power capacity of the installations, in this case, varied greatly such that the resulting active (experienced) injection varied by more than an order of magnitude (>10 times) (here, approximately 15 times).

maximum voltages experienced at any node in the system and real power loss (a measure of energy efficiency) for the base (average) loading case, which are shown without photovoltaics in Table 4 and with the existing photovoltaics in Table 5 of PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL). It is noted that total system losses were reduced by 8% and that the minimum voltage level was improved with the corresponding photovoltaic injections. From Table 8, it is also seen that the electric distribution system experienced measurable imbalance across phases, with and without PV installations. When adding DERs purposefully to certain phases on this distribution circuit, the voltage imbalance improved slightly. This result demonstrates that DERs can help improve voltage imbalances if they are managed intelligently on the distribution system, such as through PPL Electric's DER Management Plan and Second DER Management Plan.

In addition to studying the impacts of PPL Electric circuits with and without existing photovoltaics, research simulations have been performed to accommodate increases in the number and the power capacity of projected, new photovoltaic installations. Since individual consumer adoption behavior is not truly predictable, various locations and sizes of projected photovoltaic installations were systematically studied and allowed for randomness in location and/or sizing. An example of an increase in photovoltaic DER installations from five to 12 and the corresponding values are shown in Table 6 of PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL). It is noted, the methodology adopted to add seven installations purposely tried to improve the system voltage balance across the three phases, as outlined to the left of Table 6. Within this construct, the locations on each individual phase of the system were randomly selected, and the capacity was also randomly selected within a range. The subsequent results show

quantitatively expected reduction in real power loss, continued improvement in voltage profile, and improvement in imbalance metrics, as seen in Tables 7 and 8 of PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL).

However, I would like to note that different placements and sizing of additional DERs can and did increase the levels of voltage imbalance from the existing system, *e.g.*, non-guided placements of DERs may place new photovoltaics all on one phase and worsen voltage imbalance. Therefore, although the one particular circuit profiled in Tables 7 and 8 did show improvement in voltage imbalance from existing DERs, such a result certainly is not the case for all distribution circuits.

Through all of this research, I have found that even the then-existing DER levels measurably impacted voltage power quality at various individual nodes throughout the distribution system itself. In particular, DER injections are non-uniform across electrical phases. Therefore, core assumptions on balanced behavior of injections made in bulk power transmission systems and their energy management systems cannot capture the physical reality of DER installations at the distribution level. Yet, especially as DER adoption is expected to increase, capturing this physical reality is fundamental to determining safe control actions, especially in the case of electric service restoration in emergency circumstances to the public and to distribution personnel. In addition, under normal operating conditions, voltage power quality with respect to voltage levels and voltage balance are critical to energy efficiency of the power distribution system and to equipment safety controls of both utility-owned and customer owned devices[21]

[21] See note 6, *supra*, Z. Minter, J. Hill, J. de Oliveira, S. Hughes, K. Miu, "A Study of Imbalance Levels Attributed to Photovoltaic Penetration in Distribution Systems."

Q. SINCE THE TIME YOU SUBMITTED DIRECT TESTIMONY IN THE DER MANAGEMENT PLAN PROCEEDING, HAVE YOU PERFORMED ANY ADDITIONAL ANALYSES BASED ON THE COMPANY'S ACTUAL DATA FOR THESE CIRCUITS?

A. Yes. In 2024, I performed detailed simulations with revised system conditions of the same PPL Electric circuit highlighted in the PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL). The additional simulation results are presented in PPL Electric Exhibit KM-4 (HIGHLY CONFIDENTIAL).[22] Customer demand for electric power, represented as loads, changes with time. In addition, customer adoption of DERs also changes with time. Thus, the actual increase in DER installations since 2019 were represented and the experienced load levels at 2023 summer peak, 2024 winter peak and 2023 minimum loading were utilized in the analyses.

Multi-phase distribution analysis was applied to the system at each operating load level without and with the actual DER installations. Power flow analysis provides the fundamental analytical tool to compute system states (voltages) and other subsequent parameter values. Power flow simulations without DERs highlight the impact of actual system load changes on the circuits. Power flow simulations with the actual DER impacts show the impacts of both load and DER changes. Subsequent performance metrics of minimum and maximum system voltage and real power loss were tracked at each operating condition.

[22] A written report on the results presented in PPL Electric Exhibit KM-4 (HIGHLY CONFIDENTIAL) is attached as PPL Electric Exhibit KM-5 (HIGHLY CONFIDENTIAL).

In addition to power flow analysis, two types of control analyses were investigated for the circuit with the actual DER installations and at the two peak load levels. First, multi-phase capacitor control was performed on the system. Second, DER power factor inverter control was performed on the system.

Q. WHAT DID YOU FIND WHEN CONDUCTING THESE MORE RECENT ANALYSES?

A. The additional simulations consistently demonstrate that DER impacts on a distribution system change with the type of DER installations, their locations, and the system operating conditions. For example, minimum loading occurred at night where zero solar irradiance is available. For the circuit under study, the DER installations were pre-dominantly photovoltaic; thus, they did not impact distribution system voltages. Yet, analyses performed at summer peak and winter peak loading consistently demonstrated that DERs increased the number of overvoltage violations on the distribution system as compared to the same system at the same loading without DER. Please see Table 3 of PPL Electric Exhibit KM-4 (HIGHLY CONFIDENTIAL). In addition, the total system real power loss increased for each peak loading condition.

DER installations occur per individual customer adoption. Customers interconnect to the distribution system at and across distinct phases of the circuit. Thus, DER installations impact different phases of the circuit differently.

To address the increase in overvoltage violations for systems with DERs, voltage magnitude control studies were performed. These control studies targeted the specific

phasing of the voltage violations and demonstrated the effectiveness of individual phase control for capacitor banks and for DER installations.

It is noted that while single-phase capacitor control has been advocated in research literature, three-phase capacitor control is more common in utility practices. The circuit under study does have two single-phase capacitors with on/off control. Capacitor control scenarios of these two single-phase capacitors were shown to eliminate overvoltage violations at both peak loading conditions. Please see Table 4 of PPL Electric Exhibit KM-4 (HIGHLY CONFIDENTIAL). However, turning off both single-phase capacitors resulted in undervoltages and higher real power losses compared to just one.

The circuit under study has 26 DER installations, with 25 single-phase (12 phase A, 5 phase B and 8 phase C) and 1 three-phase. Thus, most DER inverters in this circuit naturally provide individual phase control. The inclusion of the 26 DERs increased the number of overvoltage violations for each peak load level. For summer peak load, the number of locations/nodes experiencing overvoltage violations increased by 52 nodes (a 58% increase) all on phase A. Twelve (12) DERs were installed on phase A. Actively managing the power factor setpoint of the 12 phase A DER inverters consistently removed the overvoltage violations, up to 46 locations. Similar observations were made for the winter peak loading conditions. Thus, active DER inverter management was shown to mitigate a significant number of overvoltage violations.

Q. DO YOU BELIEVE THAT PPL ELECTRIC MUST CONTINUE TO TAKE ACTION THROUGH ITS SECOND DER MANAGEMENT PLAN TO ADDRESS THE IMPACT OF DERS ON ITS DISTRIBUTION SYSTEM?

A. Yes. Based on my experience, education, and research, I have determined that it is critically important for PPL Electric to continue taking steps to monitor and manage the deployment of DERs on its electric distribution system.

Modern DERs interconnect to distribution systems via power electronic inverters, which locally sense and control DER characteristics such as voltage levels and power characteristics. PPL Electric's distribution systems already include DER deployments. State of the art planning, operation, and maintenance efforts in distribution systems include active voltage management for energy efficiency and power quality preservation,[23] and coordination and management of distribution protection and switchgear to support electric service restoration efforts in times of faults. The lack of monitoring and management of DER deployments introduces uncertainty into these efforts and challenges the efficacy of existing control schemes that support an electric utility's duty to provide safe and reliable electric service. Furthermore, this uncertainty increases with the amount of DER installments.

The steady adoption of DERs has physically changed net electric power flows and, in particular, power flow directions. Historically, under normal operating conditions, individual customers (residential, commercial, industrial) interconnected directly to power distribution system nodes and solely consumed net energy. Power was drawn from bulk

[23] N. Segal, M. Kleinberg, H. Lehman, T. Figura, K. Miu, "Analytically driven capacitor control for voltage spread reduction," *Proc. of the IEEE Transmission &Distribution Conference,* Orlando, FL, May 7-10, 2012.

high voltage transmission system (three phase) substations, disaggregated by the distribution system, and delivered to individual customers (single and multi-phase) – in a one-way flow of power. Moreover, for several reasons primarily related to safety, the majority of distribution systems are operated in a physically, radial manner – *i.e.*, no electrical loops exist, and there is only one electrically active path for electricity to travel from the substation, through the distribution system, to the customer. This is especially the case in above-ground, power distribution systems that are open-air and accessible to the public.

With DERs installed, the one-way flow of power has physically and dynamically changed to a two-way power flow depending on power system conditions. In addition, the frequency and the magnitude of these changes will increase with increased DER adoption. Several examples of such changes in power flows can be seen in distribution systems and have been documented in California[24] and Hawaii[25] and, more locally, have been recognized by PJM Interconnection LLC, which is Pennsylvania's regional transmission operator.[26] With respect to PPL Electric, based upon my research findings on actual PPL Electric circuits, it has been shown that even with low levels of photovoltaic DER penetration, bi-directional power flows are experienced. In addition, low levels of DER penetration consistently result in quantifiable changes in operating characteristics, such as

[24] P. Denholm, M. O'Connell, G. Brinkman, and J. Jorgenson, "Overgeneration from Solar Energy in California: A Field Guide to the Duck Chart," National Renewable Energy Laboratory. Nov. 2015.

[25] A. Hoke, J. Giraldez, et.al., "Setting the Smart Solar Standard," IEEE Power & Energy Magazine, vol. 16, no. 6, pp. 18-29. Nov. 2018.

[26] "Distributed Energy Resources: Technical Considerations for the Bulk Power System." Staff Report, Federal Energy Regulatory Commission, Feb. 2018.

nodal voltage levels and phase imbalance levels within the system. (*See* PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL).) These changes in nodal voltage levels increased with additional DER installations as shown in PPL Electric Exhibit KM-4 (HIGHLY CONFIDENTIAL), where the circuit under study had a more than 5 times increase in the number of DER from the same circuit in 2019 shown in PPL Electric Exhibit KM-2 (HIGHLY CONFIDENTIAL).

Thus, PPL Electric must continue to monitor and manage DER deployments in order to preserve power quality, reliability, and safety. All power delivery systems (transmission and distribution) are operated with some reserve generation and varying levels of spare power flow capacity in order to factor in historical power injection fluctuations. However, as more DERs are deployed, it is the distribution system and its distribution energy management system that bear the brunt of non-aggregated, physically differentiated (single and multi-phase) DER power injections.

In the case of faults, distribution operators must be able to remotely sense the power injection level of individual DERs. Institute of Electrical and Electronics Engineers ("IEEE") interconnection standards for distributed sources currently require disconnection in the presence of an electrical fault in the system.[27] Lack of communication between DER inverters and system operators create uncertainty in whether a DER is actually disconnected from the grid in faulted, emergency conditions. Thus, while historical fault isolation in one-way flow direction systems should have de-energized a faulted, affected area, with no knowledge of DER inverter status, it is possible the affected areas are still

[27] IEEE 1547-2018 - IEEE Standard for Interconnection and Interoperability of Distributed Energy Resources with Associated Electric Power Systems Interfaces, historical base standard 1547-2003.

energized. This poses safety risks to PPL Electric's personnel and the public. Furthermore, distribution operators who are unable to monitor and manage the deployment of DERs on their systems cannot dispatch distribution personnel as rapidly to repair the faults.

Moving forward, it is imperative that PPL Electric continue to monitor and manage the incoming DERs before even more significant levels of DER inverters lacking communications with distribution system operators are deployed. PPL Electric must continue to proactively address the inevitable increase of DERs within the Company's distribution systems in order to maintain power quality and system reliability levels. The issues are technically and economically important because the sooner they can be addressed, the clearer the requirements for electric utility investments and customer investments in DER deployments will be.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?

A. Yes, although I reserve the right to supplement my direct testimony.

PATENT

United States Letters Patent No. 9,857,808 – C. Nwankpa, K. Miu Miller, J. Berardino, A. Steven, "Dynamic Load Modeling Of A Building's Energy Consumption For Demand Response Applicants." Jan. 2, 2018.

INVITED TALKS

6/6/2011 2011 Japan-America Frontiers of Engineering Symposium, Smart Grid Session, Integration of Smart Grid Enabling Technologies within Power Distribution Systems, Tsukuba, Japan.

7/21/2009 Emerging Power Distribution Systems, Electric Power Grid Technical Interchange Meeting, Lockheed Martin Corporation, Dallas, TX.

7/1/2009 Electric Power Distribution Systems: The First and Last Mile, Lockheed Martin Corporation – Corporate, Philadelphia, PA.

4/12/2007 Emerging Power Distribution Systems: Modeling, Analysis and Application Tools, University of Hong Kong, Hong Kong.

2/20/2007 Emerging Power Distribution Systems: Modeling, Analysis and Application Tools, Cornell University, Ithaca, NY.

2/2/2007 Modeling and Analysis of "Modern" Power Distribution Systems, Arizona State University, Tempe, AZ.

8/22/2006 2006 International Workshop on Sustainable Energy and Materials, Tokyo, Japan.

11/20/2003 – 11/22/2003 National Academy of Engineering, Japan-America Frontiers of Engineering Symposium, Irvine, CA.

11/6/2002 Office of Naval Research, AEPS Workshop, "3-Phase Converter Modeling for Unbalanced Radial Power Systems," Arlie, VA.

9/30/2002 Fuji Electric Corporate, "Modeling and Analysis of Emerging Distribution Systems," Tokyo, Japan.

4/16/2002 Villanova University, SWE Seminar – "Electrical Engineering - Graduate School and Academia," Villanova, PA.

3/1/2002 Iowa State University, Seminar – "Load Estimation for Unbalanced Distribution Systems," Ames, IA.

10/19/2000 IEEE Frontiers In Education 2000 – NSF CCLI Showcase "Hardware Design of a Reconfigurable Power Distribution Automation and Control Laboratory," Kansas City, MO.

5/1/2000 US Army War College, Center for Strategic Leadership – Information Warfare Issues, Carlisle, PA.

5/10/1999 US Army War College, Center for Strategic Leadership – Information Warfare Issues, Carlisle, PA.

3/4/1999 Drexel University, HKN Seminar - "Power Engineering – It's not just your local utility," Philadelphia, PA.

2/17/1999 US Army War College, Center for Strategic Leadership – Information Warfare Issues, Carlisle, PA.

2/24/1999 Department of Justice, FBI - NIPC Key Asset Program and Energy Sector Training, "Key Asset Protection – Electric Power Systems," Washington D.C.

2/25/1999 Department of Justice, FBI - NIPC Key Asset Program and Energy Sector Training, "SCADA Systems & Question/Answer," Washington D.C.

10/9/1998 Massachusetts Institute of Technology, LEES Seminar, Cambridge MA - "Some Analytical Results for Unbalanced Power Distribution Application Functions: Implications, Justification and Recommendations," Cambridge MA.

3/1998 Drexel University, ECE Seminar, "Recent Developments in Power Distribution System Analysis and Their Implication, Philadelphia, PA.

6/16/1997 Taipower Co, Seminar, "Service Restoration in Large-Scale, Radial Power Distribution Systems," Taipei, Taiwan.

5/30/1997 Zhe Jiang University, Electrical Engineering Department Seminar, "Service Restoration in Large-Scale, Radial Power Distribution Systems," Hangzhou, China.

GRANTS

Office of Naval Research (2022-2025)
PI – K. Miu, co-PI – J. de Oliveira
PEPDS: Energy Broadcast System: Multi-rate Analysis for Improved Situational Awareness (~$900K)

Office of Naval Research (2017-2022)
PI – K. Miu
Networked Multi-Converter Power System: Uncertainty Analysis: Formulation and Related Issues (~$700K)

US NAVY NEEC: NAVSEA (2017 – 2021)
PI – K. Miu, co-PI – J. de Oliveira
Networked Multi-Converter Power System: Instrumentation and Measurement (~$709K)

DOE/PPL ENERGISE (2017-2021)
PI – K. Miu, Co-PI – J. de Oliveira
Keystone Solar Future Project (~$403K)
Additional $50K, 2019

Office of Naval Research via Florida State University (2016-2018)
PI – K. Miu
Controls Framework for Shipboard Power Systems
SubAward ($70K)

National Science Foundation (2013-2018)
PI – K. Miu, co-PI – C. Nwankpa, J. de Oliveira, D. Niebur
TUES: Smart Power Distribution System Curriculum
Collaborative Proposal – Drexel (Lead), Cornell, TCNJ, UNCC, WSU
Total Sponsor Funding to Drexel: 259,114

Techno-Sciences Incorporated with US Navy (2012 – 2015)
PI – K. Miu, Co-PI – H. Kwatny
SBIR Stage 2 and Stage 2 Option: Load Leveling

Lockheed Martin (2010-2014)

PI – K. Miu, Co-PI – H. Kwatny, C. Nwankpa, J. DeOliviera
Understanding and Controlling Smart Power Delivery Systems
Total Sponsor Funding: $700,000, Total Project Funding: $700,000.

Techno-Sciences Incorporated with US Navy (2010 – 2010)
PI – K. Miu, Co-PI – H. Kwatny
Mixed Logic-Dynamics Controllers for Generation and Load Management in Smart Distribution Systems
Total Sponsor Funding: $15,001, Total Project Funding: $15,001.

PPL Electric Utilities with US Department of Energy (2010 – 2012)
PI – K. Miu
Smart Grid Investment Grant: Keystone Smart Distribution – (Enabling Technology Placement)
Total Sponsor Funding: $320,626, Total Project Funding: $369,730.

PECO Energy with US Department of Energy (2010 – 2012)
PI – C. Nwankpa, Co-PI – K. Miu (40%)
Smart Grid Investment Grant: Smart Future Greater Philadelphia
Total Sponsor Funding: $1,179,500, Total Project Funding: $1,773,972.

Office of Naval Research (2010-2013)
PI – C. Nwankpa, Co-PI – H. Kwatny, K. Miu (25%)
Control Limit Identification for Power Electronic Driven Power Systems
Total Sponsor Funding: $344,346, Total Project Funding: $442,604.

Office of Naval Research with University of South Carolina (2010-2013)
PI – C. Nwankpa, Co-PI – K. Miu (15%), N. Kandasamy, H. Sethu
Simulation Methods for Design of Networked Power Electronic and Information Systems
Total Sponsor Funding: $379,412, Total Project Funding: $490,878.

Viridity Energy (2009-2011)
PI – C. Nwankpa, Co-PI – K. Miu (30%)
Controllable Load Feasibility Study at Drexel University
Total Sponsor Funding: $95,084, Total Project Funding: $122,640.

National Science Foundation (2006-2009)
PI – C. Nwankpa, Co-PI – J. Johnson, P. Nagvajara, K. Miu
"Computation of Power System Dynamics Through Mixed-Signal VLSI Emulation"
Total Sponsor Funding: $220,000

Office of Naval Research (2004-2008)
PI – K. Miu, Co-PI – V. Ajjarapu, K. Butler-Purry, D. Niebur, C. Nwankpa, N. Schulz, A. Stankovic
MURI: Device Development for Remote, Non-Destructive Testing of Power Systems
Total Sponsor Funding: $2,854,157, Total Project Funding: $3,006,599.

Hydro One(2004-2005)
PI – K. Miu
Transmission Asset Planning Under Uncertainty
Total Sponsor Funding: $30,000, Total Project Funding: $30,000.

PJM (2004-2004)
PI – C. Nwankpa, Co-PI –P. Nagvajara, J. Johnson, K. Miu, D. Niebur
Parallel Computation Algorithms for State Estimation and Power Flow Calculations
Total Sponsor Funding: $40,000, Total Project Funding: $40,000.

Mary and Christian Lindback Foundation (2003-2004)
PI – K. Miu
Electric Service Restoration of Power Distribution Systems with Critical Loads
Total Sponsor Funding: $12,700, Total Project Funding: $25,400.

US Department of Energy (2003-2004)
PI – C. Nwankpa, Co-PI –P. Nagvajara, J. Johnson, K. Miu (10%), D. Niebur
Powergrid: A Computation Engine for Large-Scale Electric Networks
Total Sponsor Funding: $1,856,736, Drexel: $162,474, Total Project Funding: $2,019,210.

US Department of Energy (2002-2003)
PI – C. Nwankpa, Co-PI – K. Miu (10%), D. Niebur, P. Nagvajara, J. Johnson
Powergrid: A Computation Engine for Large-Scale Electric Networks
Total Sponsor Funding: $969,000, Total Project Funding: $1,064,024

Office of Naval Research (2001-2004)
ONR N00014-01-1-0760
PI – K. Miu
Young Investigator Program - Multi-Frequency Analysis of Large-Scale Systems
Total Sponsor Funding: $330,000, Total Project Funding: $441,000.

National Science Foundation (2000-2004)
NSF #9984692
PI – K. Miu
CAREER Electric Power Distribution Systems: Theory, Applications and Performance
Total Sponsor Funding: $200,000, Total Project Funding: $349,879.

REU Supplement (2002-2003)
Total Sponsor Funding: $12,000, Total Project Funding: $14,000.
REU Supplement (2003-2004)
Total Sponsor Funding: $12,000, Total Project Funding: $14,000.
Equipment Supplement (2003-2004)
Total Sponsor Funding: $10,000, Total Project Funding: $30,000.

F&H Applied Sciences, Inc. (2000-2002)
PI – K. Miu, Co-PI – C. Nwankpa

Application of IPSL Towards the Definition of a Simulation-Stimulation Interface
Total Sponsor Funding: $227,648, Total Project Funding: $227,648.

Office of Naval Research (2000-2001)
PI – K. Miu, Co-PI – C. Nwankpa
Definition of Hardware/Software Interface for Small-Scale Machinery R&D - Task 2
Total Sponsor Funding: $70,424, Total Project Funding: $70,424.

National Science Foundation (1999-2003)
NSF #995075
PI – K. Miu, Co-PI – C. Nwankpa, D. Niebur
Course, Curriculum, and Laboratory Improvement: Power Distribution Systems Curriculum
Total Sponsor Funding: $125,000, Total Project Funding: $323,712.

REU Supplement (2000-2001)
Total Sponsor Funding: $12,000, Total Project Funding: $14,000

TEACHING ACTIVITIES

Course Development
Developed a new graduate/senior level three-course sequence

— Power Distribution Systems I: Modeling and System Analysis

— Power Distribution Systems II: Distribution Automation and Control

— Power Distribution Systems III: Power and Service Quality

Co-developed a new senior level three-course sequence

— Energy & Control Systems I: Fundamentals of Power System Analysis

— Energy & Control Systems II: Fundamentals of Energy Control Systems

— Energy & Control Systems III: Advanced Control Systems

Laboratories Developed and In Progress
Reconfigurable Distribution Automation and Control Laboratory: Led Development of

— 36-bus, multi-phase 7.5KW multi-feeder power distribution system

— Embedded sensing and data acquisition instrumentation

— Embedded components required for automation and control functions

— Currently developing hardware/software educational laboratory modules.

Orthlip Systems and Control Laboratory: Co-developed the new Electrical and Computer Engineering Department's system and control laboratory (with Dr. P. Kalata)

Center for Electric Power Engineering (CEPE) research facilities: Co-designed the renovations (with Drs. C. Nwankpa and D. Niebur)

Matpower Software Laboratory and Course Project: Developed a software-based class project to supplement ECE-P412/502 Power Systems Analysis II

Senior Design Advisor (Select Examples)

2023-2024	ECE-33: Islanding in Power Distribution Systems for Power Outage Scenarios
2021-2022	ECE-12: Optimizing Power Distribution System Reliability with Inverter-Connected DER's
2017-2018	ECE-20: Power Restoration for Systems with Distributed Resources
2015-2016	ECE-18: The Effects of Distributed Energy Storage on a Power Distribution Grid
2013-2014	ECE-22: Integration and Analysis of Distributed Generation Resources in Micro-Grid Environments
2012-2013	ECE-20: Characterizing Disturbances in Smart Power Distribution Systems
2012-2013	ECE-28: Designing and Testing of an Energy Storage System
2012-2013	ECE-22: Analysis of Distributed Resources for Microgrids
2010-2011	ECE-11: Secure Distribution Energy Management System to Support Smart Grids
2010-2011	ECE-37: Small-Scale Wind Generation Systems for Residential Use
2005-2006	Project: Wavelet-based Fault Detection Algorithms
2005-2006	Project: Energy Management System for RDAC
2005-2006	Project: Adjustable Signal Conditioning. Boards for Power Measurements
2004-2005	Project: A Multi-purpose Inductive Device for Load and Fault Experiments – Awarded Top 6 Electrical and Computer Engineering Senior Design Project
2003-2004	Project: Optimal Placement of Distributed Generators – Awarded Top 5 Electrical and Computer Engineering Senior Design Project
2003-2004	Project: Optimal Polling of AMR for Load Estimation
2001-2002	Project: A Three-Phase Variable Frequency Inverter — Awarded Top 5 Electrical and Computer Engineering Senior Design Projects

1999-2000 Project: An Energy Management System for Electric Vehicles — Awarded Top 5 Electrical and Computer Engineering Senior Design Projects

1998-1999 Project: ARMED: Analysis and Restoration Model for Electric Distribution — Third Place in the Electrical and Computer Engineering Senior Design Competition and Honors at the College of Engineering Senior Design Competition, Drexel University (resulted in 1st place NAPS student paper prize)

Freshman Design Advisor

2005-2006 Project: Sizing Photovoltaic Systems

2004-2005 Project: Wireless Power Transfer (for handheld electronic devices)

2000-2001 Project: An Innovative Power Source Harnessing Wind and Wave Energy

1999-2000 Project: EnLIGHTenment of Drexel University - Redesigning Drexel's Outdoor Lighting System

1998-1999 Project: A Warm Night Sleeping When Camping - a Self-Heated Sleeping Bag

COURSES TAUGHT

Graduate

ECE-P641 Protective Relaying I

ECE-P612 Economic Operation of Power Systems

ECE-P601 Power Distribution Systems I: Modeling and System
ECE-P602 Power Distribution Systems II: Distribution Automation and Control
ECE-P603 Power Distribution Systems III: Power and Service Quality

ECE-P501 Power System Analysis I
ECE-P502 Power System Analysis II
ECE-P503 Power System Analysis III

ECEP803 Advanced Topics in Power Systems III – Numerical Analysis in Power Systems

Undergraduate

ECE-P421 Power Distribution Systems I: Modeling and System Analysis
ECE-P422 Power Distribution Systems II: Distribution Automation and Control
ECE-P423 Power Distribution Systems III: Power and Service Quality

ECE-S490 Energy and Control Systems I
ECE-S490 Energy and Control Systems II

ECE-P354	Energy Management Systems
ECE-P352	Motor Control Principles
ECE-P411	Power System Analysis I
ECE-P412	Power System Analysis II
ECE-P413	Power System Analysis III
ECE-L302	ECE Laboratory II (BJT, filters, power)
ECE-380	Fundamentals of Power and Energy
ECE-301	Circuits II (op-amps, RLC, power)
ECE-201	Circuits I (basic principles, analysis, RL)
TDEC221	Systems I
TDEC222	Systems II

Faculty and Course Evaluations

In general, a high percentage of students participated in evaluations for each class. Feedback has consistently ranged from good to excellent.

STUDENTS AND POST-DOCTORATES SUPERVISED

Ph.D. Advised and In Progress

Jie Wan	Nodal Load Estimation in Electric Power Distribution Systems (Sept. 2003)
Yiming Mao	Protection System Design in Power Distribution Systems with Distributed Resources (June 2005)
Xiaoguang Yang	Unbalanced Power Converter Modeling for AC/DC Power Distribution Systems (Dec. 2006)
Shiqiong Tong	Slack Bus Modeling for Distributed Generation and Its Impacts on Distribution System Analysis, Operation and Planning (Dec. 2006)
Valentina Cecchi	Temperature-Dependent Transmission Line Models for Electric Power Systems and Their Impacts on System Studies (Sept. 2010)
Michael Kleinberg	Online Optimization of Capacitor Switching in Electric Power Distribution Systems (June 2015)

Christian Schegan	Non-Destructive, Remote Testing of Physically Distributed Power Systems: Modeling, Analysis and Experimental Prototyping (Sept 2015)
Nicole Segal	Realizable Constraint Driven Capacitor Placement and Control Sequences for Voltage Spread Reduction in Distribution Systems (Sept 2015)
Sachi Jayasuriya	Modeling and Analysis of Information-Embedded Power Electronic Converter Systems (June 2017)
Nicholas Coleman	Online Analysis and Control of Electric Power Distribution Systems," (June 2018) (recognized as the 2018 Drexel University Outstanding Dissertation Award)
Mohammed Muthalib	An Electrical-Thermal Circuit Framework for Utilizing Buildings as Controllable Power System Loads (June 2018)
Jesse Hill	(expected 2021)
Tiffany Lakins	(expected 2021)
Shaun Cruz	(expected 2022)
Zachary Minter	(expected 2022)
Keith Zuckerman	(expected 2023)

M.S. Advised and In Progress

Razvan Stoicescu	Three-Phase Converter Model for Power Distribution Systems (June 2000)
Andrew Golder	Photovoltaic generator modeling for large scale distribution system studies (Dec. 2006)
Michael Kleinberg	(March 2007)
Valentina Cecchi	(March 2008)
Christian Schegan	(Aug. 2007)
Nicole Segal	(Aug. 2007)
Nicholas Coleman	(June 2013)
Uthara Reji	Load Frequency Control in Shipboard Power Systems: Design and Simulation (co-adv: H. Kwatny) (June 2015)
Edwin John	Experimental Testbed for Load Control on an AC/DC Microgrid (Sept. 2017)
Zachary Minter	Jan. 2019
Thomas Halpin	Nov. 2019

Undergraduate Research Assistants

Over 25 UG RA (typically employing 1-2 per academic year of service)

Graduate Student Committee Membership

Over 20	Ph.D. Committees
Over 20	M.S. Committees

Postdoctorate –Status

1. A. Deese (2009 – 2010) *Present Status:* Associate Professor, Department Head, The College of NJ – Trenton
2. J. Wan (2003) *Present Status:* GE-Alstom, Redmond, WA.

HONORS AND AWARDS

2007 IEEE Power Engineering Society, Power Engineering Education Committee – Best Paper Award [RJ16]

2007 IEEE Power Engineering Society Walter Fee Outstanding Young Electrical Engineer Award

2005 Eta Kappa Nu Outstanding Young Electrical and Computer Engineer Award

2005/2006 IEEE Drexel Best Electrical Engineering Teacher Award

2003 Drexel University, Department of Electrical and Computer Engineering – Research Award

2003 Eta Kappa Nu Outstanding Young Electrical Engineer – Honorable Mention

2001 Eta Kappa Nu Outstanding Young Electrical Engineer - Finalist

2001 Office of Naval Research Young Investigator Award

2001 IEEE Power Engineering Education Committee – Technical Committee Working Group Award

2001 IEEE Power Engineering Society – Outstanding Technical Report Award

2000 National Science Foundation CAREER Award

1999 North American Power Symposium Best Student Paper Contest - First Place (advisor/co-author)

1996 Liu Memorial Award - Cornell University

1996 North American Power Symposium Best Student Paper Contest - Third Place

SERVICE TO DREXEL UNIVERSITY

Member (academic committees, typically rotating every 3 years, unless noted)

ECE Promotion Committee – Member	(2019-2020)
ECE Tenure and Promotion Committee – Chair	(2017-2018)
ECE Promotion and Recognition Committee – Chair	(2014-2017)
ECE Tenure and Promotion Committee – member	(2009-2010)
ECE Senior Design Committee	(2002-2018)
ECE Graduate Affairs Committee	(2008-2011)
ECE Undergraduate Committee	(1999-rotated to 2018)
ECE ABET, Accrediation Committee	(2000-2002, 2005-2007, 2016-2018)
External Member of Tenure and Promotion Committees	(multiple)
College of Engineering (CoE) – Tenure and Promotion Committee	(2020-ongoing)
College of Engineering (CoE) – Tenure and Promotion Policy	(2015-2016)
College of Engineering (CoE) – Department Head Search Committees	(twice)
College of Engineering (CoE) – Dean's Advisory Committee	(2009-2010)
Drexel University – Provost's Tenure & Promotion Review Committee	(to begin 2020)
Drexel University – Director Review Committee	(once)
Drexel University – Awards Committee	(twice)
Drexel University – Multicultural Diversity Committee	(2002-2005)

Advisor

2004 – 2006	SWE – Drexel Student Chapter Technical Advisor
2002 – 2003	HKN – Drexel Chapter co-advisor
2000 – 2002	HKN - Drexel Chapter advisor

Participant

Drexel University Open Houses (recruitment events, lab tours, etc.)	2-4 times/year
College of Engineering - Summer Engineering Camps (9-12th graders)	multiple years
IEEE Info. Sessions: Academic Track Forums (Drexel community)	2 times/year
College of Engineering – Outreach Programs (7-11th graders)	3-4 times/year
Women in Engineering Outreach Events	once/year

Scholar's Day (prospective student interviews) 3 times

PROFESSIONAL ACTIVITIES

Editorial

Editor – IEEE Transactions on Power Systems 2007 - 2010

Associate Editor – IEEE Transactions on Circuits and Systems I: Regular Papers
Formerly: Fundamental Theory and Applications 1/2007 – 12/2009

Reviewer – IEEE Transactions on Power Systems, IEEE Transactions on Power Delivery, IEEE Power & Energy Society Letters, IEEE Proceedings, IEEE Transactions on Education, IEEE Transactions on Signal Processing, IEEE Circuits and Systems Society International Symposium on Circuits and Systems, ASEE Proceedings, PSCC Power System Computational Conference, North American Power Symposium

Member

Institute of Electrical and Electronic Engineers (IEEE), 1994-present

American Society of Engineering Education (ASEE), 1998-2015

Society of Women Engineers (SWE), 1996-2010

IEEE Power Engineering Society

— WiE Liason (PES) (2006 – 2008)

— AMPS – Formerly Power System Analysis, Computing and Economics (PSACE)
Distribution System Analysis Subcommittee (chair: 2006 – 2007, vice-chair 2001-2006)

— Power Engineering Education Committee
Power Engineering Career Promotion Subcommittee (chair 2001 - 2003, vice-chair 1999-2001)

— Transmission and Distribution Committee
Data Requirements for Distribution Systems Subcommittee

IEEE Circuit and Systems Society Committee:

— Power System and Power Electronics Technical Committee (past-chair, chair – 2005-2006, chair-elect - 2004-2005, secretary 2001- 2004)

Proposal Reviewer

National Science Foundation multiple times, different programs
International proposal foundations (Hong Kong)

Manuscript Reviewer

Participated in manuscript review for several international journals and conferences, these include:

IEEE Transactions on Power Systems

IEEE Transactions on Power Delivery

IEEE Transactions on Signal Processing

IEEE International Symposium on Circuits and Systems

Journal of Electric Power and Energy Systems

ASEE Proceedings

PSCC Power System Computational Conference

North American Power Symposium

Conference Organization

2017 ONR Control Group Workshop, Philadelphia PA 19104, August 2017.

2007 IEEE Power Engineering Society General Meeting, Tampa FL, PSACE Technical Chair Program Committee – Distribution System Analysis Sub-chair

2007 IEEE Circuits and Systems Society, International Symposium on Circuits and Systems, New Orleans, LA Technical Program Co-Chair for Power Systems & Power Electronics

2006 IEEE Circuits and Systems Society, International Symposium on Circuits and Systems, Kos, Greece, Technical Program Co-Chair for Power Systems & Power Electronics

2006 SWE Region E Conference, Philadelphia, PA, Drexel Faculty Host & Conference Organizer

2005 IEEE Power Engineering Society, Transmission and Distribution Conference, New Orleans LA/Dallas TX, PSACE Technical Chair Program Committee – Chair

Session Chairperson

7/2008	IEEE PES General Meeting, PES/WIE Reception, Chair
6/2007	IEEE Power Engineering Society, Panel Session, 2007 IEEE PES General Meeting, "Modeling and Analysis of AC/DC Distribution Systems" to occur.
11/1/2006	IEEE Power Engineering Society, Panel Session, 2006 IEEE Power Systems Conference and Exposition, "Current Topics in Distribution System Analysis II," Nov.1, 2006.

5/2006	IEEE Circuits and Systems Society, Poster Session, "Power Systems I," Kos, Greece.
6/2005	IEEE Power Engineering Society, Panel Session, 2005 IEEE General Meeting, "Advanced Models for Distribution System Analysis."
7/16/2003	IEEE Power Engineering Society, Panel Session: Future Power Engineering Professor, 2003 IEEE PES General Meeting, Toronto, CAN
10/15/2002	NAPS North American Power Symposium, Paper Session, Tempe, AZ
10/10/2002	IEEE Transmission and Distribution: Panel Session: Distribution Automation, Asia Pacific, Yokohama, Japan
10/2001	NAPS North American Power Symposium, Paper Session, College Station, TX
7/15/2001	IEEE Power Engineering Society, Panel Session: Challenges in Distribution System Analysis, 2001 IEEE PES Summer Meeting, Vancouver, CAN
6/25/2001	ASEE Annual Meeting, Energy Conversion and Conservation Division, Paper Session: Energy Programs and Software Tools, Albequerque NM
7/20/2000	IEEE Power Engineering Society Summer Meeting, Panel Session: Intelligent Systems Application in Distribution Systems, IEEE PES Summer Power Meeting, Seattle WA
1/2001	Organized a two-day ONR/F&H/NSWC/Drexel Training Workshop for VTB – Virtual Test Bed (20 people in attendance)
1/2001	Organized a two-day ONR/F&H/NSWC/Drexel Seminar on dynamic modeling of ship electrical systems (18 people in attendance)

Invited Panelist

Participated as an invited panelist in several symposiums, conferences and meetings, these include (see also CPS above, here no summary):

3/2014	2014 EAPA - Transmission and Distribution Meeting, "On Measurements' Role in Supporting Capacitor Control," Grantville, PA.
9/2012	2012 Energy Association of PA Meeting, "Practically Driven, Analytically Based Capacitor Control Methods," - Lancaster, PA,
5/2012	2012 IEEE T&D Panel Presentation, Orlando, FL

7/2011	2011 IEEE PES General Meeting Smart Grid Supersession: Analytics and Integration

PROFESSIONAL DEVELOPMENT ACTIVITIES

2/2010	Attendee – NSF Dissemination of Educational Innovations Workshop, Arlington, VA, Feb 18-19
6/2004	Attendee – NSF PAESMEM/Stanford Workshop, Mentoring for Academic Careers in Engineering, Palo Alto CA
7/2003	NSF Workshop – Power Electronics, Minneapolis, MN, July 10-12
11/2002	ONR AEPS Workshop, Arlie, VA, Nov. 5-7
6/17/2002	EC2000 ABET Evaluator Training Workshop, St. Louis MO
6/2000	Teaching Portfolio Workshop, Philadelphia PA, June 12-15
3/2000	Gateway-Succeed Coalition, Greensboro, NC, March 27-28

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PPL Electric Utilities Corporation	:	
for Approval of its Second Distributed Energy	:	Docket No. P-2024-_____
Resources Management Plan	:	

DIRECT TESTIMONY OF
KEVIN UNDERWOOD

PPL Electric Statement No. 9

May 20, 2024

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Kevin Underwood, and my business address is 645 Hamilton Street, Suite 300, Allentown, PA 18101.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I have been employed by PPL Services Corporation as a Principal Cybersecurity Architect since 2021.

Q. WHAT ARE YOUR DUTIES AS PRINCIPAL CYBERSECURITY ARCHITECT?

A. I am responsible for the cybersecurity architecture of energy and natural gas critical infrastructure.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I hold a Bachelor of Science degree in Computer Science and Engineering from The University of Toledo and a Master of Engineering degree in Computer Engineering from The University of Cincinnati. My certifications include Certified Information Systems Security Professional (CISSP #414567).

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. I have over 17 years' experience within the utility, energy, oil & gas, and government industry focused on information security protecting critical infrastructure. Prior to PPL Electric, I worked at Dragos, GE Power (GE Verona), Securicon, and as a civilian employee of The United States Air Force. Throughout my career, I have led multiple

cybersecurity penetration tests as a consultant, deployed and supported intelligence and threat-based network detection for critical infrastructure, and designed and architected secure vendor remote access to power generation plants.

Q. HAVE YOU PREVIOUSLY TESTIFIED AS A WITNESS BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. No.

Q. WOULD YOU PLEASE DESCRIBE THE SUBJECT MATTER OF YOUR TESTIMONY?

A. My testimony will address the cybersecurity architecture related to PPL Electric Utilities Corporation's ("PPL Electric" or the "Company") Second DER Management Plan.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH YOUR TESTIMONY?

A. No.

A. CYBERSECURITY PRACTICES AND PROTOCOLS

Q. WOULD YOU PLEASE EXPLAIN YOUR UNDERSTANDING OF THE COMPANY'S SECOND DER MANAGEMENT PLAN, WITH PARTICULAR FOCUS ON THE COMMUNICATIONS DEVICES INVOLVED?

A. Yes. My understanding is that under the Company's Second DER Management Plan, PPL Electric would require Distributed Energy Resources ("DERs") to be interconnected with the Company's distribution management system so that the Company can adjust the

operating parameters of the DER to better maintain grid stability. The communications will utilize either a Radio Frequency ("RF") Mesh or a cellular network radio.

Q. ARE YOU FAMILIAR WITH THE COMPANY'S RF MESH NETWORK THAT IS USED UNDER THE FIRST COMMUNICATION METHOD?

A. Yes. The RF Mesh environment consists of radios that transmit and receive on the 900 MHz Industrial, Scientific, and Medical ("ISM") bands. This RF Mesh system is a network that can be used to connect the Company's metering system to the DER. All network communication across the RF Mesh is encrypted. In July and September of 2019, Revolutionary Security's Operational Technology Security team performed security testing that encompassed the 900 MHz radios, the RF Mesh environment, the DER and smart inverter, and the cellular modems used as another communication medium between the Distribution Energy Resource Management System ("DERMS"), the DERMS software, and the DER. This security testing involved discovery workshops, vulnerability assessment, and penetration testing simulating different adversarial approaches. These approaches were based on the amount of knowledge and inside information (credentials, manuals, detailed system documentation) available to the testing team. The testing simulated an attack by an adversary with zero knowledge of the environment and an adversary with insider knowledge about the applications and infrastructure.

Q. WOULD YOU PLEASE EXPLAIN THE CYBERSECURITY PRACTICES AND PROTOCOLS THAT THE COMPANY HAS DEVELOPED TO HELP PROTECT AGAINST THE UNAUTHORIZED DISCLOSURE OF INFORMATION TRANSMITTED ON THE RF MESH NETWORK?

A. The RF Mesh connection between the DER Management device and the Company's metering head-end system is protected by Advanced Encryption Standard ("AES") encryption with unique strong credentials. Encryption keys are unique to each radio, which prevents interception or unauthorized disclosure of the information that is carried across the RF Mesh network. Access to the RF Mesh network is restricted by multiple access control devices that prevent unauthorized usage. The cybersecurity best practices of network segmentation,[1] defense-in-depth,[2] and least privilege[3] are reflected in the RF Mesh network design and interconnections.

Q. FROM YOUR PERSPECTIVE, DOES THE USE OF THE COMPANY'S RF MESH SYSTEM RAISE ANY CYBERSECURITY CONCERNS?

A. No. The protections built into the Company's RF Mesh network are explicitly designed to prevent unauthorized use and access. The RF Mesh network is monitored by technologies that will alert on attempts to bypass security protections. It is part of the Company's

[1] Network segmentation is the practice of separating systems with different function, capability, or security characteristics by restricting communication between different networks. *See* https://nvlpubs.nist.gov/nistpubs/Legacy/SP/nistspecialpublication800-39.pdf - Page 19.

[2] Defense-in-depth uses layers of differing security controls to increase the capability of stopping or reducing the impact of attackers. *See* https://csrc.nist.gov/glossary/term/defense_in_depth.

[3] Least privilege only grants the minimum amount of access necessary to perform a task, and not excessive or unnecessary permissions. *See* https://csrc.nist.gov/glossary/term/least-privilege.

policies and procedures to regularly scan and test that the security protections are operational and apply updates to maintain the cybersecurity posture.

Q. AS FOR THE SECOND OPTION USING A CELLULAR NETWORK, ARE YOU FAMILIAR WITH THE COMPANY'S CURRENT USE OF SUCH COMMUNICATION DEVICES ON ITS DISTRIBUTION SYSTEM?

A. Yes. The Company uses cellular modems that utilize a commercial network (Verizon or AT&T) with a private APN[4] to communicate from the DER to the Company's distribution management system. The communication protocol for the cellular network utilizes the IEEE 1547-2018 standard, which is a standard created by Institute of Electrical and Electronics Engineers ("IEEE") to enable utility management of the end user energy environment.

Q. WOULD YOU PLEASE EXPLAIN THE CYBERSECURITY PRACTICES AND PROTOCOLS THAT THE COMPANY HAS DEVELOPED TO HELP PROTECT AGAINST THE UNAUTHORIZED DISCLOSURE OF INFORMATION TRANSMITTED THROUGH CELLULAR DEVICES?

A. Like the RF Mesh network, the cybersecurity best practices of network segmentation, defense-in-depth, and least privilege are also reflected in the cellular modem implementation. Access to the cellular network is separated from other PPL Electric networks by using firewalls and other access control mechanisms that prevent use by

[4] Access Point Name (APN) is name of a gateway between a mobile device and another computer network.

unauthorized persons or applications. Distribution system information transmitted across the cellular network is protected by encryption and isolation provided by the cellular network and is used to prevent disclosure or modification of any information that crosses the network.

Q. FROM YOUR PERSPECTIVE, DOES THE USE OF CELLULAR DEVICES RAISE ANY CYBERSECURITY CONCERNS?

A. No, the use of cellular modems does not raise any cybersecurity concerns. Like the RF Mesh network, the protections built into the cellular modem and cellular network are explicitly designed to prevent unauthorized use and access. Access to the cellular network from the Company's network is monitored by technologies that will alert on attempts to bypass security protections. It is part of the Company's policies and procedures to regularly scan and test that the security protections are operational and apply updates to maintain the cybersecurity posture.

Q. UNDER EITHER THE RF MESH NETWORK OPTION OR THE CELLULAR NETWORK OPTION, CAN YOU EXPLAIN WHAT CUSTOMER DATA WILL BE TRANSMITTED FROM THE DERS TO PPL ELECTRIC?

A. Yes. Regardless of the communication option, customer data transmitted from the DER Management device includes a unique DER Management device ID, production data such as current, voltage, real and reactive power, smart inverter settings such as Constant Power Factor, Volt/VAR, and Remote On/Off.

Q. HOW WILL THE COMPANY PROTECT THAT CUSTOMER DATA AFTER IT HAS BEEN TRANSMITTED FROM THE DERS?

A. The Company considers the privacy of customers' information as a high priority. It has implemented systems that isolate and segregate customer information from environments that do not require that information. Additional authentication requirements and secured network transport is required to access systems that process and store customer information transmitted from the DERs. These systems are regularly scanned for cybersecurity vulnerabilities and configurations which may put the system integrity at risk. Issues discovered from these scans and tests are remediated commensurate with the criticality of the system. Information transmitted from DERs will be protected in the same manner from unauthorized use or disclosure. The protection mechanisms and regular scan and test requirements are aligned with the industry best practices for cybersecurity.

Q. DOES THE COMPANY CONTINUALLY ASSESS ITS SYSTEMS AND PRACTICES FOR POTENTIAL SECURITY GAPS AND ISSUES?

A. Yes. The Company regularly performs automated vulnerability assessments scans against their infrastructure that look for outdated system and application updates, misconfigurations of services, and the use of default or vendor provided credentials. The scans are part of a cybersecurity program that is equivalent or better than utility industry standards. The Company also utilizes third-party companies to perform independent testing of their systems to ensure that vulnerabilities are not overlooked and that their cybersecurity controls work as intended. The Company's cybersecurity program including vulnerability scans and third-party testing will continue after the Petition is approved.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY AT THIS TIME?

A. Yes, although I reserve the right to supplement my direct testimony.
