RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

i. Provide a calculation of the Company's base cost of water per unit of consumption.

RESPONSE

The calculation of the average flow cost per hundred gallons is as follows:

Total Flow Cost	$59,529,129
Pro Forma Usage (Hundred Gallons) (Includes Estimated Unmetered)	46,078,695
Flow Cost per Hundred Gallons	$1.2919

PENNSYLVANIA AMERICAN WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTORS 1 and 2. ALLOCATION OF COSTS ASSOCIATED WITH AVERAGE DAILY FLOWS.

Factors are based on the pro forma test year average daily consumption for each customer classification.

Classification	Total Average Daily Customer Flow 100 gallons (a)	I&I Average Day 100 gallons (b)	Total Sanitary Average Flow	Allocation Factor 1	Average Day CSO 100 gallons	Total Average Day Wastewater Flow	Allocation Factor 2
(1)	(2)	(3)	(4)=(2)+(3)	(5)	(6)	(7)=(4)+(6)	(8)
Residential	38,324	21,530	59,854	0.5190		59,854	0.2353
Non-Residential	24,610	12,057	36,667	0.3179		36,667	0.1441
Industrial	3,060	1,935	4,995	0.0433		4,995	0.0196
Bulk	11,391	2,421	13,812	0.1198		13,812	0.0543
Stormwater CSO	-	-	-	-	139,047	139,047	0.5466
Total	77,385	37,943	115,328	1.0000	139,047	254,375	1.0000

(a) Customer water usage from bill analysis, adjusted to reflect 88% returned to sewer system. See below.
(b) Allocation based on Factor 1A for Residential, Non-Residential and Industrial.

Classification	Annual Usage 100 gallons	Average Day 100 gallons	Percent to Sewer System	Adjusted Average Day 100 gallons
(1)	(2)	(3)=(2)/365	(6)	(7)
Residential	15,895,672	43,550	88.0%	38,324
Non-Residential	10,207,424	27,966	88.0%	24,610
Industrial	1,269,373	3,478	88.0%	3,060
Bulk	4,724,512	12,944	88.0%	11,391
Total	32,096,981	87,937		77,385

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER COMBINED SEWER SYSTEM OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1A. ALLOCATION OF INFILTRATION AND INFLOW BY CUSTOMER CLASS.

Factors are based on a 1/3-2/3 weighting of flow and number of customers, as follows:

Customer Classification	Total Average Daily Flow 100 gallons	Average Daily Flow		Service Equivalents (Factor 5)			Allocation Factor 1A
		Factor	Weight	Number	Factor 5	Weight	
(1)	(2)	(3)	(4)=(3) x 0.3333	(5)	(6)	(7)=(6) x 0.6667	(8)=(4)+(7)
Residential	38,324	0.4952	0.1651	31,124	0.6035	0.4024	0.5674
Non-Residential	24,610	0.3180	0.1060	16,380	0.3176	0.2118	0.3178
Industrial	3,060	0.0395	0.0132	2,925	0.0567	0.0378	0.0510
Bulk	11,391	0.1472	0.0491	1,141	0.0221	0.0147	0.0638
Total	77,385	1.0000	0.3333	51,570	1.0000	0.6667	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER COMBINED SEWER SYSTEM OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTORS 3 and 4. ALLOCATION OF CAPITAL COSTS ASSOCIATED WITH PEAK DAILY FLOW.

Factors are based on the peak daily flow for each customer classification.

Classification	Total Average Daily Customer Flow 100 gallons (a)	I&I Peak Day 100 gallons (b)	Total Sanitary Peak Flow	Allocation Factor 3	Peak Day CSO 100 gallons	Total Peak Day Wastewater Flow	Allocation Factor 4
(1)	(2)	(3)	(4)=(2)+(3)	(5)	(6)	(7)=(4)+(6)	(8)
Residential	38,324	222,785	261,109	0.5556		261,109	0.2194
Non-Residential	24,610	124,757	149,367	0.3178		149,367	0.1255
Industrial	3,060	20,021	23,081	0.0491		23,081	0.0194
Bulk	11,391	25,052	36,443	0.0775		36,443	0.0306
Stormwater CSO	-	-	-	-	720,000	720,000	0.6050
Total	77,385	392,615	470,000	1.0000	720,000	1,190,000	1.0000

(a) See Factor 1.
(b) Allocated based on Factor 1A

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER COMBINED SEWER SYSTEM OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH CUSTOMER FACILITIES.

Factors are based on the estimated relative cost of customer facilities, as follows:

Customer Classification	Number of Customers	Service Equiv. Ratio	Service Equivalents	Allocation Factor
(1)	(2)	(3)	(2)X(3)=(4)	(5)
Residential	31,124	1.0	31,124	0.6035
Non-Residential	6,552	2.5	16,380	0.3176
Industrial	117	25.0	2,925	0.0567
Bulk	563	*	1,141 *	0.0221
Stormwater CSO	-	-	-	-
Total	38,356		51,570	1.0000

* Based on 514 aggregated residential customers and 49 Bulk customers at 25.0 service equivalent ratio.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

Customer Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Residential	31,124	0.8115
Non-Residential	6,552	0.1708
Industrial	117	0.0031
Bulk	563	0.0147
Stormwater CSO	-	-
Total	38,356	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER COMBINED SEWER SYSTEM OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 7. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of direct labor expense.

Customer Classification	Direct Labor Expense	Allocation Factor
(1)	(2)	(3)
Residential	$ 1,640,640	0.2437
Non-Residential	947,331	0.1407
Industrial	125,473	0.0186
Bulk	348,059	0.0517
Stormwater CSO	3,671,452	0.5453
Total	$ 6,732,956	1.0000

FACTOR 8. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, MISCELLANEOUS INTANGIBLE PLANT AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciation other than those items being allocated, as follows:

Customer Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Residential	$ 169,478,961	0.3037
Non-Residential	96,029,295	0.1721
Industrial	14,793,737	0.0265
Bulk	23,194,565	0.0416
Stormwater CSO	254,479,640	0.4561
Total	$ 557,976,198	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER COMBINED SEWER SYSTEM OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 9. ALLOCATION OF INCOME TAXES AND INCOME AVAILABLE FOR RETURN.

Factors are based on the allocation of the original cost measure of value rate base as shown on the following pages and summarized below.

Customer Classification	Original Cost Measure of Value	Allocation Factor
(1)	(2)	(3)
Residential	$ 148,614,323	0.3038
Non-Residential	84,190,398	0.1721
Industrial	12,964,909	0.0265
Bulk	20,353,116	0.0416
Stormwater CSO	223,061,535	0.4560
Total	$ 489,184,281	1.0000

FACTOR 10 and 10A. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS, OTHER WATER REVENUES.

The factors are based on the allocation of the total cost of service, excluding those items being allocated.

Customer Classification	Total Cost of Service	Allocation Factor 10	Total Cost of Service with Stormwater Reallocated	Allocation Factor 10A
(1)	(2)	(3)	(4)	(5)
Residential	$ 29,570,875	0.3155	$ 52,876,847	0.5641
Non-Residential	16,348,485	0.1744	29,396,208	0.3136
Industrial	2,403,121	0.0256	4,497,238	0.0480
Bulk	4,355,487	0.0465	6,972,683	0.0744
Stormwater CSO	41,041,425	0.4379	-	-
Total	$ 93,719,394	1.0000	$ 93,742,976	1.0000

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 11. ALLOCATION OF ADMINISTRATIVE AND GENERAL EXPENSES

Factors are based on the allocation of all other operation and maintenance expenses excluding purchased water, power, chemicals and waste disposal.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 2,939,228	0.3124
Non-Residential	1,367,012	0.1453
Industrial	159,353	0.0169
Bulk	448,935	0.0477
Stormwater CSO	4,494,014	0.4777
Total	$ 9,408,543	1.0000

FACTOR 12. ALLOCATION OF CASH WORKING CAPITAL

Factors are based on the allocation of operation and maintenance expenses including purchased water, power, chemicals and waste disposal.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 7,228,536	0.3343
Commercial	3,730,083	0.1725
Industrial	465,170	0.0215
Bulk	1,297,177	0.0600
Stormwater CSO	8,903,134	0.4117
Total	$ 21,624,101	1.0000

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS ASSOCIATED WITH WASTEWATER TREATMENT

Factors are based on the pro forma test year average daily consumption for each customer classification with adjustments. The detail regarding calculation of adjusted flows can be found on the following page.

Classification	Total Adjusted Average Daily Customer Flow 100 gallons (a)	I&I Gallons Per Day 100 gallons (b)	Total I&I And Average Flow	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(7)
Residential	3,592	5,032	8,625	0.7918
Non-Residential	1,123	1,144	2,268	0.2082
Total	4,716	6,177	10,892	1.0000

(a) Customer Flow.
(b) Allocation based on Factor 1A for Residential, Non-Residential and Large Industrial.

FACTOR 1A. ALLOCATION OF INFILTRATION AND INFLOW BY CUSTOMER CLASS.

Factors are based on a 1/3-2/3 weighting of flow and number of customers, as follows:

Customer Classification	Total Adjusted Average Daily Flow 100 gallons	Average Daily Flow		Number of Service Equivalents	Number of Customers		Allocation Factor
		Factor	Weight		Factor	Weight	
(1)	(2)	(3)	(4)=(3) x 0.3333	(5)	(6)	(7)=(6) x 0.6667	(8)=(4)+(7)
Residential	3,592	0.7618	0.2539	44,340	0.8412	0.5608	0.8147
Non-Residential	1,123	0.2382	0.0794	8,370	0.1588	0.1059	0.1853
Total	4,716	1.0000	0.3333	52,710	1.0000	0.6667	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BRENTWOOD OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH THE COLLECTION SYSTEM

Factors are based on peak daily flow for each customer classification.

Customer Classification	Ave. Flow Consumption, 100 gpd	Peak I&I Flow 100 gallons (a)	Total Peak I&I And Average	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(5)
Residential	3,592	11,526	15,119	0.8015
Non-Residential	1,123	2,621	3,744	0.1985
Total	4,716	14,147	18,863	1.0000

(a) Allocation based on Factor 1A.

FACTOR 3. ALLOCATION OF CAPITAL COSTS ASSOCIATED WITH PROJECTED AVERAGE DAILY FLOW INCLUDING INFILTRATION AND INFLOW

Factors are based on the projected average daily consumption for each customer classification.

Classification	Total Average Daily Flow 100 gallons	Direct I&I Gallons Per Day 100 gallons (a)	Total Direct I&I And Average	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(7)
Residential	3,592	5,032	8,625	0.7918
Non-Residential	1,123	1,144	2,268	0.2082
Total	4,716	6,177	10,892	1.0000

(a) Allocation based on Factor 1A.

FACTOR 3A. NOT USED IN THIS ALLOCATION

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BRENTWOOD OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH CUSTOMER FACILITIES.

Factors are based on the estimated relative cost of customer facilities, as follows:

Customer Classification	Number of Customers	Service Equiv. Ratio (a)	Service Equivalents	Allocation Factor
(1)	(2)	(3)	(2)X(3)=(4)	(5)
Residential	44,340	1.0	44,340	0.8412
Non-Residential	3,348	2.5	8,370	0.1588
Total	47,688		52,710	1.0000

(a) Based on ratio by class for Coatesville service area.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

Customer Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Residential	44,340	0.9298
Non-Residential	3,348	0.0702
Total	47,688	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BRENTWOOD OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 6. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of direct labor expense.

Customer Classification	Direct Labor Expense	Allocation Factor
(1)	(2)	(3)
Residential	$ 60,873	0.7918
Non-Residential	16,004	0.2082
Total	$ 76,876	1.0000

FACTOR 7. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, MISCELLANEOUS INTANGIBLE PLANT AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciation other than those items being allocated, as follows:

Customer Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Residential	$ 17,739,721	0.7951
Non-Residential	4,572,039	0.2049
Total	$ 22,311,759	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BRENTWOOD OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 8. ALLOCATION OF INCOME TAXES AND INCOME AVAILABLE FOR RETURN.

Factors are based on the allocation of the original cost measure of value rate base as shown on the following pages and summarized below.

Customer Classification	Original Cost Measure of Value	Allocation Factor
(1)	(2)	(3)
Residential	$ 17,536,432	0.7952
Non-Residential	4,517,514	0.2048
Total	$ 22,053,946	1.0000

FACTOR 9. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS AND OTHER WATER REVENUES.

The factors are based on the allocation of the total cost of service, excluding those items being allocated.

Customer Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Residential	$ 2,914,581	0.8042
Non-Residential	709,584	0.1958
Total	$ 3,624,165	1.0000

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS ASSOCIATED WITH WASTEWATER TREATMENT

Factors are based on the pro forma test year average daily consumption for each customer classification with adjustments. The detail regarding calculation of adjusted flows can be found on the following page.

Classification	Total Adjusted Average Daily Customer Flow 100 gallons (a)	I&I Gallons Per Day 100 gallons (b)	Total I&I And Average Flow	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(7)
Residential	14,112	34,875	48,987	0.7785
Non-Residential	7,295	6,643	13,937	0.2215
Total	21,407	41,518	62,924	1.0000

(a) Customer Flow.
(b) Allocation based on Factor 1A for Residential, Non-Residential and Large Industrial.

FACTOR 1A. ALLOCATION OF INFILTRATION AND INFLOW BY CUSTOMER CLASS.

Factors are based on a 1/3-2/3 weighting of flow and number of customers, as follows:

Customer Classification	Total Adjusted Average Daily Flow 100 gallons	Average Daily Flow		Number of Service Equivalents	Number of Customers		Allocation Factor
		Factor	Weight		Factor	Weight	
(1)	(2)	(3)	(4)=(3) x 0.3333	(5)	(6)	(7)=(6) x 0.6667	(8)=(4)+(7)
Residential	14,112	0.6592	0.2197	171,216	0.9304	0.6203	0.8400
Non-Residential	7,295	0.3408	0.1136	12,816	0.0696	0.0464	0.1600
Total	21,407	1.0000	0.3333	184,032	1.0000	0.6667	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BUTLER AREA OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH THE COLLECTION SYSTEM

Factors are based on peak daily flow for each customer classification.

Customer Classification	Ave. Flow Consumption, 100 gpd	Peak I&I Flow 100 gallons (a)	Total Peak I&I And Average	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(5)
Residential	14,112	79,097	93,209	0.8065
Non-Residential	7,295	15,067	22,361	0.1935
Total	21,407	94,163	115,570	1.0000

(a) Allocation based on Factor 1A.

FACTOR 3. ALLOCATION OF CAPITAL COSTS ASSOCIATED WITH PROJECTED AVERAGE DAILY FLOW INCLUDING INFILTRATION AND INFLOW

Factors are based on the projected average daily consumption for each customer classification.

Classification	Total Average Daily Flow 100 gallons	I&I Gallons Per Day 100 gallons (a)	Total Direct I&I And Average	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(7)
Residential	14,112	34,875	48,987	0.7785
Non-Residential	7,295	6,643	13,937	0.2215
Total	21,407	41,518	62,924	1.0000

(a) Allocation based on Factor 1A.

FACTOR 3A. NOT USED IN THIS ALLOCATION

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BUTLER AREA OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH CUSTOMER FACILITIES.

Factors are based on the estimated relative cost of customer facilities, as follows:

Customer Classification	Number of Customers	Service Equiv. Ratio (a)	Service Equivalents	Allocation Factor
(1)	(2)	(3)	(2)X(3)=(4)	(5)
Residential	171,072	1.0	171,072	0.9303
Non-Residential	12,816	1.0	12,816	0.0697
Total	183,888		183,888	1.0000

(a) Based on ratio by class for Coatesville service area.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

Customer Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Residential	171,072	0.9303
Non-Residential	12,816	0.0697
Total	183,888	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BUTLER AREA OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 6. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of direct labor expense.

Customer Classification	Direct Labor Expense	Allocation Factor
(1)	(2)	(3)
Residential	$ 1,874,225	0.7785
Non-Residential	533,246	0.2215
Total	$ 2,407,470	1.0000

FACTOR 7. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, MISCELLANEOUS INTANGIBLE PLANT AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciation other than those items being allocated, as follows:

Customer Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Residential	$ 185,670,939	0.7935
Non-Residential	48,323,487	0.2065
Total	$ 233,994,426	1.0000

PENNSYLVANIA AMERICAN WATER COMPANY
WASTEWATER SEWER SANITARY SYSTEM BUTLER AREA OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 8. ALLOCATION OF INCOME TAXES AND INCOME AVAILABLE FOR RETURN.

Factors are based on the allocation of the original cost measure of value rate base as shown on the following pages and summarized below.

Customer Classification	Original Cost Measure of Value	Allocation Factor
(1)	(2)	(3)
Residential	$ 183,730,629	0.7935
Non-Residential	47,806,288	0.2065
Total	$ 231,536,917	1.0000

FACTOR 9. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS AND OTHER WATER REVENUES.

The factors are based on the allocation of the total cost of service, excluding those items being allocated.

Customer Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Residential	$ 29,585,086	0.7961
Non-Residential	7,579,123	0.2039
Total	$ 37,164,209	1.0000

PAWC STATEMENT NO. 12-R

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

REBUTTAL TESTIMONY OF CONSTANCE E. HEPPENSTALL

ON BEHALF OF PENNSYLVANIA-AMERICAN WATER COMPANY

CONCERNING

COST OF SERVICE ALLOCATION

DOCKET NOS.
R-2023-3043189 (WATER)
R-2023-3043190 (WASTEWATER)

DATE: February 21, 2024

REBUTTAL TESTIMONY OF
CONSTANCE E. HEPPENSTALL

Q. Please state your name and address.

A. My name is Constance E. Heppenstall. My business address is 1010 Adams Avenue, Audubon, PA 19403.

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Have you previously submitted testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company") in this proceeding before the Pennsylvania Public Utility Commission ("Commission")?

A. Yes. My direct testimony is set forth in PAWC Statement No. 12. I sponsored Exhibits Nos. 12-A through 12-F.

Q. What is the purpose of your rebuttal testimony in this proceeding?

A. I will address the direct testimonies and exhibits of the Pennsylvania Public Utility Commission ("Commission") Bureau of Investigation and Enforcement ("I&E") witnesses Ethan H. Cline and Joseph Kubas, Office of Consumer Advocate ("OCA") witness Jerome D. Mierzwa, Office of Small Business Advocate ("OSBA") witness Kevin C. Higgins, Commission on Economic Opportunity ("CEO") witness Jennifer Warabak, Cleveland-Cliffs Steel witness Richard A. Baudino, and PAWLUG witness Billie S. LaConte concerning cost of service allocation issues.

Q. Do you have any revisions to your exhibits accompanying your direct testimony?

A. Yes, I do. The Company's revised water and wastewater cost-of-service studies ("COSS") in Exhibits 12-A Revised through 12-E Revised incorporate several

revisions summarized below and the acceptance of OSBA witness Higgins' recommendation regarding the treatment of certain low-income program costs discussed later in my rebuttal testimony. The results of these changes are summarized in Exhibit CEH-1R.

Water COSS Revisions

During the discovery process, the Company determined that the calculation of maximum day and maximum hour demands for Factors 2, 3 and 4 in the Water COSS inadvertently omitted the adjustment for interruptible customer usage that was described in my direct testimony. I have corrected this error in the extra capacity factor allocations in Exhibit 12-A Revised.

In addition, the allocation factors for meters and services for the Public class used in the Water COSS were overstated due to an error in linking to PAWC Exhibit 10-A. This error was corrected in Exhibit 12-A Revised and reduces the Public class meter and services allocator from 3.7% to 2.7%. This revision addresses the concern expressed by Cleveland-Cliffs Steel witness Richard A. Baudino regarding the large increase in cost allocation to the Public class as compared to the Water COSS presented in the Company's last base rate case.

Finally, the Company corrected the amounts of wastewater revenue requirement that were re-allocated to the rate classes in the Water COSS in column 3 of Schedule A of Exhibit 12-A to tie to the data presented in PAWC Exhibit 3-A, Schedule A.

Wastewater COSS Corrections

During the discovery process, the Company determined that the values used to calculate peak infiltration and inflow (I&I) in Factor 2 for the Wastewater

Sanitary Sewer System ("SSS") Operations and Brentwood Operations presented Exhibits 12-B and 12-D, respectively, were misstated. Specifically, the value for "Total Adjusted Average Daily Flow" in Column 2 of Factor 1 used to calculate peak I&E flow in Exhibit 12-B should have excluded the average flow of bulk contract customers. In Exhibit 12-D, the calculation of Factors 1 and 2 should have excluded the average flow consumption in column 2. These amounts were corrected in Exhibit 12-B Revised and 12-D Revised, respectively.

Q. Have you prepared any exhibits to accompany your rebuttal testimony?

A. Yes. PAWC Exhibits 12-A Revised, 12-B Revised, 12-C Revised, 12-D Revised and 12-E Revised are described in my rebuttal testimony. I have also prepared Exhibits CEH-R1, CEH-R2 and CEH-R3.

Cost of Service Study for Water Operations

Q. Ms. Heppenstall, do any parties propose revisions to PAWC's Water COSS presented in Exhibit 12-A?

A. Yes. OCA witness Mierzwa agrees with PAWC's use of the base-extra capacity method for allocating costs to customer classifications. However, Mr. Mierzwa contends that the system-wide demand factors used in the Company's Water COSS to functionalize costs between facilities used to meet average day demand and, respectively, maximum day and maximum hour demand, are not appropriate, purportedly because they are out of date. Mr. Mierzwa also contends that interruptible industrial usage should be included in the extra capacity allocations because those customers have not been regularly interrupted during periods of peak demand. Based on those criticisms, Mr. Mierzwa developed a revised COSS employing different extra capacity factors. The effect of using those revised extra

capacity factors is to shift costs from the class with higher maximum day and maximum hour demand (the residential class) to other classes with lower demand ratios, principally the industrial class.

PAWLUG witness LaConte expresses concern that the demand study statistics used in the Water COSS, which include the maximum day and maximum hour demand factors for each customer class, are outdated and do not account for changes in consumption patterns. She also recommends that the Company use the actual maximum hour demand ratio (6) from the results of PAWC's demand study that was conducted over the period 2013-2015 (the "Demand Study"). Ms. LaConte's alternative COSS using the revised ratio increases the costs of service allocated to the residential class by $7.6 million and decreases the increase to other classes by between 0.7% and 6%.

OSBA witness Higgins disagrees with the way I allocated Arrearage Management Plan ("AMP") credit costs and administrative costs associated with PAWC's customer assistance programs. Mr. Higgins proposes to directly assign those costs to the residential class because PAWC's AMP and other customer assistance programs are designed to benefit residential customers.

Q. Please respond to Mr. Mierzwa's criticisms of the extra capacity demand ratios used in the Company's Water COSS.

A. The ratios of average demand to extra capacity (maximum day and maximum hour) demands for classes of general service (i.e., other than fire protection) are weighted by ratios derived from system wide maximum day and maximum hour demand factors.

The use of the system wide maximum day factor of 1.4 to derive the weighting factors for average demand and maximum day extra demand is shown on Exhibit No. 12-A, Schedule E, page 5. The use of the average day to maximum day extra capacity demand ratio to weight the individual class demand ratios is shown on page 4 of the same schedule.

As I explained in my direct testimony, the system wide maximum day demand factor reflects the maximum daily send-out of the Company since 1987. (PAWC was established in its current form in 1987 by the merger of American Water Works Company Inc.'s three Pennsylvania water utility subsidiaries.) Specifically, the Company's actual maximum day send out was 1.4 times average day send out in each of the years 1988, 1995, 1996, 1999 and 2003. Mr. Mierzwa rejects the use of these experienced system wide maximum day factors and, instead, recommends truncating the data set to include data for only the last twelve years. On that basis he proposes using a maximum day factor of 1.2, which was experienced in 2012 and is the highest maximum day factor within that limited twelve-year window.

Q. What is the error in Mr. Mierzwa's approach to developing a system wide maximum day factor?

A. Mr. Mierzwa ignores the fact that a water system must be designed to meet the highest peak demand that potentially could be experienced – not just the highest peak demand that was experienced within a recent historical period. As described in my direct testimony, peak demands can vary based on contingencies that do not recur on a regular or predictable basis. The facilities needed to produce and distribute water have a long lead-time to design and construct and have a

correspondingly long service life. Given those inherent characteristics of water utility facilities, responsible waterworks practice necessitates building a system that can meet peak demands whenever they may occur because the system cannot be expanded (or contracted) to meet only those demands that appear within a limited historical study period, such as the twelve year look-back that Mr. Mierzwa has arbitrarily selected. Since its formation, PAWC has actually experienced a system wide maximum day factor of 1.4 several times.

Additionally, as PAWC Exhibit CEH-R2 shows, the water usage on the maximum day of 2022 in several areas within the Company's overall water operations was more than 1.4 times the average usage for that year. Given PAWC's obligation to furnish safe and reliable service, the Company must be prepared to meet customers' peak demands whenever they occur and, therefore, it is not reasonable to ignore the maximum day ratios that the Company has actually experienced by imposing an arbitrary limit on the data set that is examined to determine the system wide maximum day ratio.

Q. Does the American Water Works Association ("AWWA") M1 Manual, Seventh Edition, address system wide maximum day demand factors for use in the base extra capacity method?

A. As stated in my direct testimony, the AWWA M1 Manual does not directly prescribe a specific system wide maximum day factor. However, in my direct testimony I describe the concept of a diversity ratio. Specifically, the diversity ratio is the non-coincident peaking factor divided by the system peaking factor. In Appendix A, the Manual recommends that a reasonable diversity ratio should be between 1.1 and 1.4. This is significant because if the system wide maximum day demand factor of 1.2

proposed by Mr. Mierzwa were used to calculate the diversity factor for PAWC, it would yield a diversity factor well outside the range of reasonableness identified by the AWWA Manual. In contrast, the 1.4 system wide maximum day demand factor I employed in the Water COSS produces a diversity factor that is reasonable based on the range recommended in the AWWA manual.

Q. Please explain the calculation of a diversity ratio using the Company's system wide maximum day factor and the factor proposed by Mr. Mierzwa.

A. As described in my direct testimony, the Company's non-coincident peaking factor (the dividend, which is divided by the system wide maximum day factor to derive the diversity factor) is calculated based on the non-coincident maximum day volumes found on Schedule E in Exhibit 12-A. The total average daily consumption (in 100 gallons) shown in this schedule totals 1,169,719. The maximum day extra capacity (in 100 gallons) totals 1,126,999. The factors (column 3) that produce this amount were obtained from a demand study completed by the Company from January 2013 through October 2015. If these volumes of average day and maximum day extra capacity are added together, the sum equals the non-coincident maximum day volume (in 100 gallons) of 2,296,718. The ratio of the non-coincident peak volume (in 100 gallons) of 2,296,718 to average day volume (in 100 gallons) of 1,169.719 equals 1.96. This non-coincident ratio is then divided by the system wide peaking factor (coincident peaking factor) to develop the diversity ratio. The Company's system wide peaking factor of 1.4 produces a diversity factor of 1.41 (1.96/1.40), which is reasonable based on the recommended range of diversity ratios set forth in the AWWA Manual. In contrast, Mr. Mierzwa's peaking factor of 1.20 produces a diversity factor of 1.64 (1.97/1.20), which is outside the bounds set for

reasonable diversity ratios in the AWWA M1 Manual. In short, calculating the diversity ratios using the system wide maximum day factors of PAWC and Mr. Mierzwa, respectively, fully supports the reasonableness of the system wide maximum day factor I used in the COSS and, conversely, underscores the unreasonableness of the system wide maximum day factor that Mr. Mierzwa proposes.

Q. Please address Mr. Mierzwa's proposal to use a maximum hour demand factor of 1.5 in lieu of the 2.1 factor you employed in the Water COSS.

A. Mr. Mierzwa recommends rejecting the system wide maximum hour factor of 2.1 that I used in the COSS. That factor was calculated by PAWC based on a detailed analysis of its actual maximum hour send out. Mr. Mierzwa has not identified any errors or inaccuracies in the PAWC-specific analysis. And rather than addressing the merits of that analysis, which has been accepted in a number of prior cases, Mr. Mierzwa rejects its results simply because, in his estimation, the analysis was conducted too long ago. However, Mr. Mierzwa did not conduct his own analysis of maximum hour send out. Instead, he proposes a maximum hour ratio derived from demand data for The York Water Company, which was an estimate for that system and not based on a demand study. Mr. Mierzwa's proposal should be rejected.

Q. Please respond to PAWLUG witness LaConte's criticism of the maximum hour demand ratio for the Residential class used in the Water COSS.

A. Ms. LaConte points to the fact that the Company used a maximum hour demand ratio of 5 when the Demand Study shows a ratio of 6. In reviewing the results of the Demand Study, the demand ratio of 6 occurred in 2015 when the hourly data for North Strabane, a larger monitoring area, was not available. In addition, the peak

usage for Shire Oaks was on February 22, 2015, rather than a summer day. It is an anomaly to have a residential peak on a winter day. *See* Exhibit CEH-R3 for the relevant pages of the Demand Study. As a result, the Company chose to use a max hour demand ratio of 5 rather than 6.

Q. Ms. LaConte recommends that a customer class demand study be conducted prior to the Company's next base rate case. Do you agree?

A. No. If the residential class is using a greater share of the overall sale of water, this will be reflected in the cost of service study as usage factors are based on annual pro forma billed usage. In addition, a demand study is a substantial undertaking and would require significant Company and outside consultant resources. As none of the other intervenors in the case are recommending this course of action, Ms. LaConte's proposal would require the Company to incur unnecessary expense. However, if the Commission directs PAWC to pursue a demand study, the first step would be to do a study of the feasibility of conducting such a demand study. The feasibility study would determine the overall scope of the demand study, the methods for selecting the customers to be monitored, the location of the selected areas, the equipment to be used, and the overall cost of the study. The feasibility study would take approximately 90-120 days to complete. At that time, the feasibility study could be presented to the parties for their input and approval of the overall scope and cost before any full-scale demand study would be undertaken.

Q. Should the Commission require PAWC perform analysis of its system wide maximum hour extra capacity demands prior to the Company's next rate case as Mr. Mierzwa contends?

A. No. As I explained previously**,** Mr. Mierzwa has not even alleged, let alone provided any basis to contend, that the results of the Company's 1988 study of actual maximum hour send-outs from water storage tanks are inaccurate. Moreover, the detailed study proposed by Mr. Mierzwa is a large, multi-year undertaking. In performing such analysis, the Company faces challenges in accurately measuring maximum hour demand in districts with multiple groundwater sources due to a number of factors, such as missing SCADA connections, tank filling, and metering issues.

Q. Mr. Mierzwa rejects the Company's long standing procedure of excluding Industrial curtailment usage from the extra capacity factor allocations. Please respond.

A. Mr. Mierzwa cites the fact that the curtailment customers have not had their service regularly interrupted in the past three years and therefore their usage should not be excluded from the extra capacity factor allocation. I disagree. These customers need to be prepared for a curtailment in water service even if their usage is not curtailed in a three-year period. In addition, the water system was built so that in the event of a water shortage, these customers could be curtailed, regardless of whether they have been curtailed over the past three years. Finally, this adjustment to the cost of service for Industrial curtailment customers has been reflected in the Company's cost of service studies since at least the Company's 2007 rate case at Docket No. R-00072229 and has long been accepted by the Commission and other parties.

Q. Mr. Higgins' recommends direct assignment of $2.8 million of AMP costs and customer assistance-related administrative costs to the residential class in the Company's Water COSS. Have you accepted this proposal?

A. Yes. This adjustment is reflected in the revised Water COSS results that are summarized in Exhibit CEH-R1.

Q. Do you agree with OCA witness Mierzwa's recommendation that the Company include Rider Demand Industrial Sales ("DIS") and Rider Demand Resale Sales ("DRS") customers as separate customer classes in the Water COSS presented in PAWC's next base rate proceeding?

A. No. Riders DIS and DRS authorize the Company to negotiate contracts at rates, with specified minimum and maximum levels, designed to retain or attract industrial and resale load for which the customer or applicant for service has a viable competitive alternative to service from the Company which the customer intends to select to the detriment of the Company and its other customers. In approving Riders DIS and DRS, the Commission found that those riders create benefits for all of the Company's water customers by preserving or attracting incremental sales that, because of competitive forces, could not otherwise be made. Accordingly, the revenues derived from Rider DIS and DRS customers are appropriately reflected as a deduction to all classes' cost of service.

Cost of Service Studies for Wastewater Operations

Q. Did you make any changes to the Company's wastewater cost of service studies to reflect acceptance of OSBA witness Higgins recommendation regarding allocation of AMP costs and customer assistance program administrative costs?

A. Yes, Exhibits 12-B Revised, 12-C Revised, 12-D Revised and 12-E were revised to reflect the changes in the allocation of AMP costs and customer assistance program administrative costs in the Company's four wastewater COSSs as recommended by OSBA witness Higgins.

Q. I&E witness Kubas recommends that the Company continue to provide separate COSSs for the Company's Water Operations, the Wastewater SSS Operations, and Waster CSS Operations. Do you agree?

A. Yes. The Company's Water Operations, Wastewater SSS Operations and Wastewater CSS Operations each have unique cost of service elements that require the operations to remain separate.

Q. Mr. Kubas and Mr. Mierzwa also recommend that the Company provide separate COSSs for the BASA and Brentwood systems again in the next rate case. How do you respond.

A. I disagree for the reasons discussed in the rebuttal testimony of Company witness Ashley E. Everette (PAWC Statement No. 1-R).

Q. Mr. Kubas also recommends that the Company continue to separate the Bulk User/VA class and the Bulk Contract classes from the other classes in the SSS Operations Cost of Service Study. Do you agree?

A. Yes, as these classes of customers are unique, I agree that the Company should continue to separate these classes in the next base rate case.

Q. On page 23 of his direct testimony, Mr. Mierzwa infers that $41 million for stormwater costs are being assigned to water customers. Is this correct?

A. No. Exhibit 12-E shows the allocation of costs to customer classes for the CSS Operations. He is correct that $41 million of these costs are related to stormwater. However, these costs are reallocated to the CSS customer classes as shown on page 7 of Exhibit 12-E. No stormwater costs are reallocated to water customers in this case.

Water Customer Charges

Q. Do any parties take issue with the Company's proposed customer charges?

A. Yes. I&E witness Cline recommends a 5/8-inch residential customer charge of $19.50 rather than the Company's proposed customer charge of $20.00. Mr. Cline's proposed customer charges are based solely on the Company's direct cost analysis presented in Appendix A to Exhibit 12-A. As a result of recommending a lower customer charge, Mr. Cline recommends raising the volumetric rates to make up for the reduced revenue.

OCA witness Mierzwa recommends keeping existing customer charges at the current rate level ($17.50) for residential customer with a 5/8-inch, 3/4-inch, 1-inch or 1 ½-inch meter, based on his analysis of direct customer costs.

Q. Do you agree with Mr. Cline's recommendation?

A. No, for two reasons. First, the corrected cost of service study shows customer costs for a 5/8-inch meter to be $20.26, which is higher than the Company's request. In addition, the direct cost analysis only applies to 5/8-inch meter customers. The Company is proposing a $20.00 residential customer charge for 5/8-inch, 3/4-inch, and 1-inch meters. As shown in Table 1 below, the weighted average residential customer charge for those meter sizes supported by my direct cost analysis is $21.61, assuming the 3/4-inch and 1-inch customers were charged a meter charge commensurate with the 5/8-inch dollar equivalent and based on a $20.26 customer charge for a 5/8-inch and higher charges for the 3/4-inch and 1-inch.

Meter Size	5/8" Dollar Equivalent	Customer Charge	Number of Residential Meters	Hypothetical Revenue By Meter Size
(1)	(2)	(3)	(4)	(5)=(3)X(4)
5/8	1.0	20.26	675,824	$ 13,692,203
3/4	1.5	30.82	1,036	$ 31,927
1	2.0	60.19	23,467	$ 1,412,459
Total			700,328	$ 15,136,589
Weighted Average Customer Charge (Total of Column 5 divided by Total of Column 4)				$ 21.61

Q. Do you agree with Mr. Mierzwa's direct cost analysis?

A. No. Mr. Mierzwa improperly omits office building and furniture expenses that I included in my direct cost analysis in Exhibit 12-A. These facilities are essential for billing and collections personnel to perform their jobs. Consequently, these categories of costs are directly related to customer cost functions. In addition, Mr. Mierzwa's direct cost analysis reflects the OCA's recommended pre-tax return of 8.71%, which is unreasonable for the reasons explained by Company witness Ann E. Bulkley in PAWC Statement 13-R. Accordingly, the OCA's direct cost analysis should not be used to determine the proposed level of customer charges in this case.

Q. Is the Company's proposed residential 5/8-inch meter customer charge of $20.00 supported by the Company's fully allocated customer cost analysis?

A. Yes, even though Mr. Mierzwa and CEO witness Warabak both recommend no increase to the customer charge. Not only is the Company's proposed customer charge supported by Exhibit 12-A Revised, but the Company also considered the fully allocated customer cost analysis that includes an allocable share of the

administrative and general costs in the customer cost components. Under the fully allocated analysis described in the AWWA M1 Manual, the administrative and general costs are allocated to both customer charges and consumption charges in proportion to the other directly assigned costs, excluding variable costs such as power, chemical, and waste disposal costs.

Q. What do you recommend regarding customer charges?

A. I continue to support the Company's original proposed 5/8-inch customer charge. The Company's revised direct customer cost analysis supports the $20.00 customer charge and a weighted residential customer charge of $21.60 per month for 5/8-inch, 3/4-inch, and 1-inch meters.

Conclusion

Q. Does this complete your rebuttal testimony at this time?

A. Yes, it does.

PENNSYLVANIA AMERICAN WATER COMPANY - WATER OPERATIONS

COMPARISON OF PRO FORMA COST OF SERVICE STUDIES AS FILED AND REBUTTAL
FOR THE TWELVE MONTHS ENDED JUNE 30, 2025

	Pro Forma Cost of Service, As Filed as of June 30, 2025				Revised Rebuttal Cost of Service, as of June 30, 2025

X. CONCLUSION AND RECOMMENDATIONS 65

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name, affiliation and business address.

A. My name is Ann E. Bulkley. I am a Principal at The Brattle Group ("Brattle"). My business address is One Beacon Street, Suite 2600, Boston, Massachusetts 02108.

Q. On whose behalf are you submitting this testimony?

A. I am submitting this testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company"), a wholly-owned subsidiary of American Water Works Company Inc. ("AWK").

Q. Please describe your education and experience.

A. I hold a Bachelor's degree in Economics and Finance from Simmons College and a Master's degree in Economics from Boston University, with over 25 years of experience consulting to the regulated utility industry. I have advised numerous energy and utility clients on a wide range of financial and economic issues with primary concentrations in valuation and utility rate matters. Many of these assignments have included the determination of the cost of capital for valuation and ratemaking purposes. My resume and a summary of testimony that I have filed in other proceedings are presented in more detail in Appendix A.

II. PURPOSE AND OVERVIEW OF DIRECT TESTIMONY

Q. Please describe the purpose of your Direct Testimony.

A. The purpose of my Direct Testimony is to present evidence and provide a recommendation regarding the appropriate return on equity ("ROE") for the Company and to provide an assessment of the reasonableness of PAWC's proposed capital structure for ratemaking purposes.

Q. Are you sponsoring any exhibits in support of your direct testimony?

A. Yes. My analysis and recommendations are supported by the data presented in Exhibit No. 13-A Schedule 1 through Schedule 14, which were prepared by me or under my direction.

Q. Please provide a brief overview of the analyses that led to your ROE recommendation.

A. As discussed in more detail below, it is important to consider the results of several analytical approaches in determining a reasonable recommendation for the Company's ROE. To develop my ROE recommendation, I first developed a proxy group of utility companies. I did not limit the proxy group to water utilities, but included a broader group of utilities that face risk similar to PAWC because a proxy group composed only of water utilities would result in a small group of companies for which data is limited. To that proxy group, I applied the Constant Growth Form of the Discounted Cash Flow ("DCF") model, the Capital Asset Pricing Model ("CAPM"), and the Empirical Capital Asset Pricing Model ("ECAPM"). My recommendation also takes into consideration the following factors:

1. PAWC's capital expenditure program relative to the proxy group companies;
2. Flotation costs associated with AWK's recent equity issuance;

3. the risks related to environmental and water quality regulation;

4. the regulatory risk of PAWC relative to the proxy group; and

5. PAWC's proposed capital structure as compared to the capital structures of the proxy group companies.[1]

While I did not make specific adjustments to my recommended ROE for these factors, I did consider them in the aggregate when determining where my recommended ROE falls within the range of the analytical results.

Q. How is the remainder of your Direct Testimony organized?

A. The remainder of my direct testimony is organized as follows:

- Section III provides a summary of my analyses and conclusions.
- Section IV reviews the regulatory guidelines pertinent to the development of the cost of capital.
- Section V discusses current and projected capital market conditions and the effect of those conditions on PAWC's cost of equity.
- Section VI explains my selection of the proxy group for PAWC.
- Section VII describes my analyses and the analytical basis for my recommendation of the appropriate ROE for PAWC.
- Section VIII provides a discussion of specific regulatory, business, and financial risks that have a direct bearing on the ROE to be authorized for PAWC in this case.
- Section IX provides an assessment of the reasonableness of PAWC's proposed capital structure relative to the proxy group.
- Section X presents my conclusions and recommendations.

[1] The selection and purpose of developing a group of comparable companies will be discussed in detail in Section VI of my Direct Testimony.

III. SUMMARY OF ANALYSIS AND CONCLUSIONS

Q. Please summarize the key factors considered in your analyses and upon which you base your recommended ROE.

A. The key factors that I considered in my cost of equity analyses and recommended ROE for the Company in this proceeding are:

- The United States Supreme Court's *Hope* and *Bluefield* decisions[2] established the standards for determining a fair and reasonable authorized ROE for public utilities, including consistency of the allowed return with the returns of other businesses having similar risk, adequacy of the return to provide access to capital and support credit quality, and the requirement that the result lead to just and reasonable rates.
- The effect of current and prospective capital market conditions on the cost of equity estimation models and on investors' return requirements.
- The results of several analytical approaches that provide estimates of the Company's cost of equity. Because the Company's authorized ROE should be a forward-looking estimate over the period during which the rates will be in effect, these analyses rely on forward-looking inputs and assumptions (*e.g.*, projected analyst growth rates in the DCF model, forecasted risk-free rate and market risk premium in the CAPM analysis).
- Although the companies in my proxy group are generally comparable to PAWC, each company is unique, and no two companies have the exact same business and financial risk profiles. Accordingly, I considered the Company's regulatory, business, and financial risks relative to the proxy group of comparable companies in determining where the Company's ROE should fall within the reasonable range of analytical results to appropriately account for any residual differences in risk.

Q. Please explain how you considered those factors.

A. I relied on the range of results produced by the Constant Growth DCF model, the CAPM and ECAPM analysis. As shown in Figure 1, these COE estimation models produce a wide

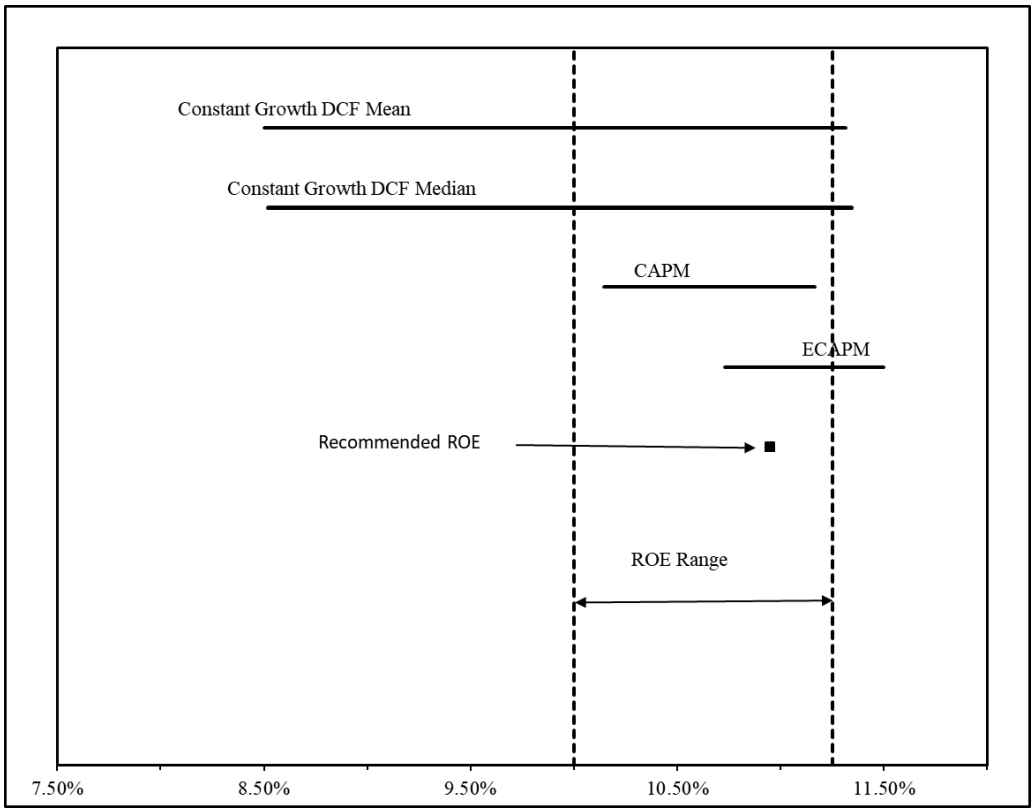
[2] Federal Power Commission v. Hope Natural Gas Co., 320 U.S. 591 (1944) ("Hope"); Bluefield Waterworks & Improvement Co., v. Public Service Commission of West Virginia, 262 U.S. 679 (1923) ("Bluefield").

range of results. My conclusion as to the appropriate ROE for PAWC within that range of results is based on Company's business and financial risk relative to the proxy group and my assessment of market conditions. As noted above, although the companies in my proxy group are generally comparable to PAWC, each company is unique. Accordingly, I considered the Company's business, financial and regulatory risk in aggregate relative to that of the proxy group companies when determining where the Company's ROE should fall within the reasonable range of analytical results to appropriately account for any residual differences in risk.

Q. What are the results of the models that you have used to estimate the cost of equity for PAWC?

A. Figure 1 (and Exhibit No. 13-A, Schedule 1) summarizes the range of results produced by the Constant Growth DCF, CAPM, and ECAPM analyses.

Figure 1: Summary of Cost of Equity Analytical Results[3]



As shown in Figure 1 (and Exhibit No. 13-A, Schedule 1), the range of results produced by the models used to estimate the COE is wide. For example, the low end of the DCF results are below any ROE that has been authorized by a regulatory commission for a water utility whereas the range set by the higher end of the DCF model overlap the results of the other risk premium-based methodologies. While it is common to consider multiple models to estimate the cost of equity, it is particularly important when the range of results varies

[3] DCF results exclude the result for Middlesex Water Company because the low and mean results are lower than the current yield on the Moody's Baa rated utility bond index, which is illogical and the high end DCF result does not provide a reasonable equity risk premium over the current yield on the Moody's Baa rated utility bond index of 6.48 percent on a 30-day average basis ending October 31, 2023.

considerably across methodologies. My ROE recommendation also considers PAWC's company-specific risk factors and current and prospective capital market conditions.

Q. Are prospective capital market conditions expected to affect the results of the cost of equity for PAWC during the period in which the rates established in this proceeding will be in effect?

A. Yes. Capital market conditions are expected to affect the results of the cost of equity estimation models. Specifically:

- Inflation is expected to persist over the near-term, which increases the retail revenue requirement due to increases in operating costs. Inflation increases the risk that the revenue requirement that is set in a rate proceeding will not recover the operating costs of the business going forward, which increases the operating risk of the utility during the period in which rates will be in effect.
- Long-term interest rates have increased substantially in the past year in response to inflation.
- Equity analysts have noted the increased risk for the utility sector as a result of rising interest rates and expect the sector to underperform over the near-term.
- Since utility dividend yields are now less attractive than the risk-free rates of government bonds, and interest rates are expected to remain elevated, it is likely that utility share prices will decline.
- A decline in utility stock prices will increase the dividend yields and thus, all else equal, the cost of equity estimates produced by the DCF model.
- Consequently, the results of the DCF model using current utility share prices may understate the cost of equity during the period that the Company's rates will be in effect.
- Furthermore, expected market conditions warrant consideration of forward-looking cost of equity estimation models such as the CAPM and ECAPM, which rely on interest rates as a direct input into the models and thus may better reflect the market expected during the period that the Company's rates will be in effect.

- Rating agencies have cited increased risk in the utility sector due to increased interest rates, inflation and elevated capital expenditures.

It is appropriate to consider all of these factors when estimating a reasonable range of the investor-required cost of equity and the recommended ROE for PAWC.

Q. What is your conclusion regarding the appropriate authorized ROE for PAWC in this proceeding?

A. Considering the analytical results presented in Figure 1, current and prospective capital market conditions, as well as the level of regulatory, business, and financial risk faced by PAWC's water and wastewater operations in Pennsylvania relative to the proxy group, I believe a range from 10.00 percent to 11.25 percent is reasonable. Taking into consideration the results of the analytical models, current market conditions, the Company's relative risk, and superior management performance, an ROE in the higher end of that range of 10.95 percent is reasonable and appropriate.

Q. Is PAWC's requested capital structure reasonable and appropriate?

A. Yes. Comparing the Company's proposed equity ratio of 55.00 percent to the equity ratios of the operating companies owned by the proxy group companies demonstrates that the Company's requested equity ratio is well within the range of equity ratios for the proxy group. Further, the Company's proposed equity ratio is reasonable considering credit rating agencies' continued concern with the negative effect on the cash flows and credit metrics associated with increasing interest rates, inflation and capital expenditures.

IV. REGULATORY GUIDELINES

Q. Please describe the guiding principles to be used in establishing the cost of capital for a regulated utility.

A. The U.S. Supreme Court's precedent-setting *Hope* and *Bluefield* cases established the standards for determining the fairness and reasonableness of a utility's authorized ROE. Among the standards established by the Court in those cases are: (1) consistency with other businesses having similar or comparable risks; (2) adequacy of the return to support credit quality and access to capital; and (3) the principle that the specific means of arriving at a fair return does not need to be determined, only that the end result leads to just and reasonable rates.[4]

Q. Is fixing a proper rate of return just about protecting the utility's interests?

A. No. As the Court noted in *Bluefield,* a proper rate of return not only assures "confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit [but also] enable[s the utility] to raise the money necessary for the proper discharge of its public duties."[5] As the Court went on to explain in *Hope*, "[t]the rate-making process … involves balancing of the investor and consumer interests."[6]

---

4 *Bluefield*, 262 U.S. at 692-93; *Hope*, 320 U.S. at 603.
5 *Bluefield*, 262 U.S. at 693.
6 *Hope*, 320 U.S. at 603.

Q. Has the Pennsylvania Public Utility Commission ("Commission") provided similar guidance in establishing the appropriate return on common equity?

A. Yes. The Commission follows the precedents of the Hope and Bluefield cases and acknowledges that utility investors are entitled to a fair and reasonable return. This position was set forth by the Commission as follows:

> In determining a fair rate of return, the Commission must adhere to the constitutional standards established by the United States Supreme Court in the seminal cases *Bluefield Water Works and Improvement Co. v. Public Service Comm'n of West Virginia*, 262 U.S. 679, 692-93 (1923) (*Bluefield*) and *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944) (*Hope Natural Gas*). In *Bluefield*, the Supreme Court stated:
>
> > A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A rate of return may be too high or too low by changes affecting opportunities for investment, the money market and business conditions generally.

Twenty years later in *Hope Natural Gas*, the Supreme Court reiterated:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. By that standard the return to equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the

financial integrity of the enterprise, so as to maintain its credit and to attract capital.[7]

Q. Why is it important for a utility to be allowed the opportunity to earn a return that is adequate to attract capital at reasonable terms?

A. A return that is adequate to attract capital at reasonable terms enables PAWC to continue to provide safe, reliable water and wastewater service efficiently while maintaining its financial integrity. That return should be commensurate with returns expected elsewhere in the market for investments of equivalent risk. If it is not, debt and equity investors will seek alternative investment opportunities for which the expected return reflects the perceived risks, thereby inhibiting PAWC's ability to attract capital at reasonable cost. When the Company is afforded a reasonable opportunity to earn its market-based cost of capital, a fair and reasonable balance will be achieved between customers' and shareholders' interests.

Q. Is a utility's ability to attract capital also affected by the ROEs authorized for other utilities?

A. Yes. Utilities compete directly for capital with other investments of similar risk, which include other water, natural gas, and electric utilities. Therefore, the ROE authorized for a utility sends an important signal to investors regarding whether there is regulatory support for financial integrity, dividends, growth, and fair compensation for business and financial risk. The cost of capital represents an opportunity cost to investors. If higher returns are available elsewhere for other investments of comparable risk over the same time period,

[7] Pennsylvania Public Utility Commission, Opinion and Order, PECO Energy Company – Gas Division, Docket No. R-2020-3018929, June 17, 2021 at 8.

investors have an incentive to direct their capital to those alternative investments. Thus, an authorized ROE significantly below authorized ROEs for other water, natural gas, and electric utilities can inhibit the utility's ability to attract capital for investment.

Q. Is the regulatory framework and the authorized ROE and equity ratio important to the financial community?

A. Yes. The regulatory framework is one of the most important factors in debt and equity investors' assessments of risk. Specifically regarding debt investors, credit rating agencies consider the authorized ROE and equity ratio for regulated utilities to be very important for two reasons: (1) they help determine the cash flows and credit metrics of the regulated utility; and (2) they provide an indication of the degree of regulatory support for credit quality in the jurisdiction. To the extent that the authorized returns in a jurisdiction are lower than the returns that have been authorized more broadly, credit rating agencies will consider this in the overall risk assessment of the regulatory jurisdiction in which the company operates. Not only do credit ratings affect the overall cost of borrowing, they also act as a signal to equity investors about the risk of investing in the equity of a company.

Q. What is the standard for setting the ROE in any jurisdiction?

A. The stand-alone ratemaking principle is the foundation of jurisdictional ratemaking. This principle requires that the rates that are charged in any operating jurisdiction be for the costs incurred in that jurisdiction. The stand-alone ratemaking principle ensures that customers in each jurisdiction only pay for the costs of the service provided in that jurisdiction, which is not influenced by the business operations in other operating companies. In order to maintain this principle, the cost of equity analysis is performed for

an individual operating company as a stand-alone entity. As such, I have evaluated the investor-required return for PAWC's water and wastewater operations in Pennsylvania.

Q. What are your conclusions regarding regulatory guidelines?

A. The ratemaking process is premised on the principle that, in order for investors and companies to commit the capital needed to provide safe and reliable utility services, a utility must have a reasonable opportunity to recover the return of, and the market-required return on, its invested capital. Accordingly, the Commission's order in this proceeding should establish rates that provide the Company with a reasonable opportunity to earn a ROE that is: (1) adequate to attract capital at reasonable terms; (2) sufficient to ensure its financial integrity; and (3) commensurate with returns on investments in enterprises with similar risk. It is important for the ROE authorized in this proceeding to take into consideration current and projected capital market conditions, as well as investors' expectations and requirements for both risks and returns. Because utility operations are capital-intensive, regulatory decisions should enable the utility to attract capital at reasonable terms under a variety of economic and financial market conditions. Providing the opportunity to earn a market-based cost of capital supports the financial integrity of the Company, which is in the interest of both customers and shareholders.

V. CAPITAL MARKET CONDITIONS

Q. Why is it important to analyze capital market conditions?

A. The models used to estimate the cost of equity rely on market data that are specific either to the proxy group, in the case of the DCF model, or to the expectations of market risk, in

the case of the CAPM. The results of the cost of equity estimation models can be affected by prevailing market conditions at the time the analysis is performed. While the ROE established in a rate proceeding is intended to be forward-looking, the analyst uses both current and projected market data, specifically stock prices, dividends, growth rates, and interest rates, in the cost of equity estimation models to estimate the investor-required return for the subject company.

Regulatory commissions and analysts recognize that current market conditions affect the results of the cost of equity estimation models. As a result, it is important to consider the effect of the market conditions on these models when determining an appropriate range for the ROE and the recommended ROE for ratemaking purposes for a future period. If investors do not expect current market conditions to be sustained in the future, it is possible that the cost of equity estimation models will not provide an accurate estimate of investors' required return during that rate period. Therefore, it is very important to consider projected market data to estimate the return for that forward-looking period.

Q. What factors are affecting the cost of equity for regulated utilities in the current and prospective capital markets?

A. The cost of equity for regulated utility companies is being affected by several factors in the current and prospective capital markets, including: (1) changes in monetary policy; (2) relatively high inflation; and (3) increased interest rates that also are expected to remain relatively high over the next few years. These factors affect the assumptions used in the cost of equity estimation models.

Q. What effect do current and prospective market conditions have on the cost of equity for the Company?

A. As is discussed in more detail in the remainder of this section, the combination of inflation persistently higher than the Federal Reserve's target level and the Federal Reserve's changes in monetary policy contribute to an expectation of increased market risk and an increase in the cost of the investor-required return. It is important that these factors be considered in setting a forward-looking ROE. Inflation has recently been at some of the highest levels seen in approximately 40 years, and while inflation has declined from these recent peaks, it remains relatively high. Interest rates, which have increased significantly, are expected to continue to remain relatively high in direct response to the Federal Reserve's use of monetary policy to combat inflation. There is a strong historical inverse correlation between interest rates (i.e., yields on long-term government bonds) and the share prices of utility stocks (i.e., as utility share prices decline, utility dividend yields increase). Since the yields on long-term government bonds currently exceed the dividend yields of utilities, and historically long-term government bond yields have been lower than the dividend yields of utilities, it is reasonable to expect that utility investors' cost of equity is increasing. Because the cost of equity in this proceeding is being estimated for the future period that the Company's rates will be in effect, and because the cost of equity is expected to increase over the near term for utilities, cost of equity estimates based in whole or in part on historical or current market conditions, as opposed to projected market conditions, will likely understate the cost of equity during the future period that the Company's rates will be in effect.

A. Inflationary Expectations in Current and Projected Capital Market Conditions

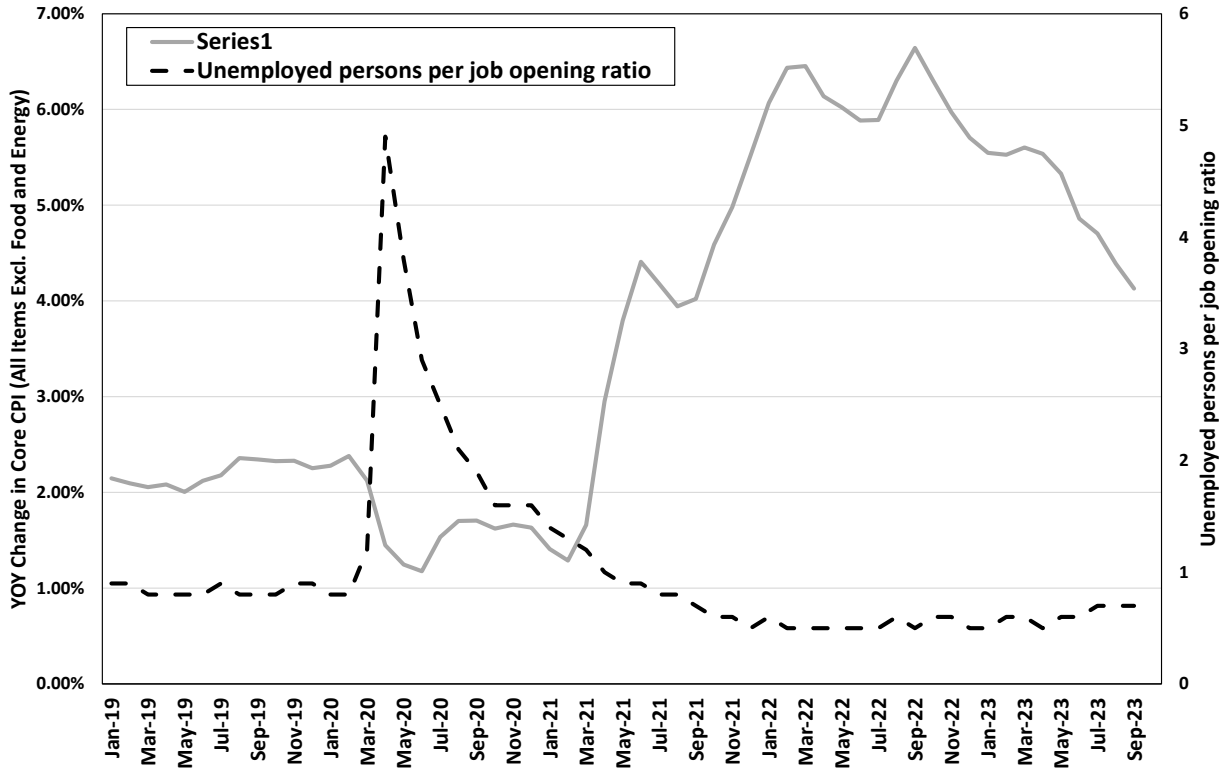
Q. Has inflation increased significantly in recent years?

A. Yes. As shown in Figure 2, core inflation increased steadily beginning in early 2021, rising from 1.41 percent in January 2021 to a high of 6.64 percent in September 2022, which was the largest 12-month increase since 1982.[8] Since that time, while core inflation has declined in response to the Federal Reserve's monetary policy, core inflation continues to remain significantly above the Federal Reserve's target level of 2.0 percent.

Finally, Figure 2 also considers the ratio of unemployed persons per job opening, which is currently 0.7 and has been consistently below 1.0 since mid- 2021 despite the Federal Reserve's accelerated policy normalization. This metric indicates sustained strength in the labor market. Given the Federal Reserve's dual mandate of maximum employment and price stability, the continued increased levels of core inflation coupled with the strength in the labor market has resulted in the Federal Reserve's sustained focus on the priority of reducing inflation.

[8] Figure 2, presents the year-over-year ("YOY") change in core inflation as measured by the Consumer Price Index ("CPI") excluding food and energy prices as published by the Bureau of Labor Statistics. I considered core inflation because it is the preferred inflation indicator of the Federal Reserve for determining the direction of monetary policy. Core inflation is preferred by the Federal Reserve since it removes the effect of food and energy prices, which can be highly volatile.

Figure 2: Core Inflation and Unemployed Persons-to-Job Openings, January 2019 to October 2023[9]



Q. What are the expectations for inflation over the near term?

A. Despite the declines from 40-year highs, the Federal Reserve has indicated that it expects inflation will remain above its target level over at least the next year and that monetary policy will remain restrictive in order to reduce inflation. For example, Federal Reserve Chair Powell observed at the Federal Open Market Committee (FOMC) meeting in September 2023 that while inflation is down from its recent highs, it remains significantly above the Federal Reserve's long-term target:

[9] Bureau of Labor Statistics.

> Inflation remains well above our longer-run goal of 2 percent. Based on the Consumer Price Index and other data, we estimate that total PCE [personal consumption expenditures] prices rose 3.4 percent over the 12 months ending in August; and that, excluding the volatile food and energy categories, core PCE prices rose 3.9 percent. Inflation has moderated somewhat since the middle of last year, and longer-term inflation expectations appear to remain well anchored, as reflected in a broad range of surveys of households, businesses, and forecasters, as well as measures from financial markets. Nevertheless, the process of getting inflation sustainably down to 2 percent has a long way to go. The median projection in the SEP for total PCE inflation is 3.3 percent this year, falls to 2.5 percent next year, and reaches 2 percent in 2026.[10]

After the September 2023 and the November 2023 meetings Chair Powell kept open the possibility of additional rate increases, considering even December this year, or thereafter if it is appropriate to do so. He also stated that interest rates would likely remain positive for some time:

> First of all, interest rates – real interest rates are, are positive now. They're meaningfully positive, and that's a good thing. We need policy to be restrictive so that we can get inflation down to target. Okay. And we need - we're going to need that to remain to be the case for some time. So I think, you know – remember that the – of course, the SEP [Summary of Economic Projections] is not a plan that is negotiated or discussed, really, as a plan. It's accumulation, really, and what you see are the medians. It's accumulation of individual forecasts from 19 people, and then what you're seeing are the medians. So I wouldn't want to, you know, bestow upon it the idea that, that it's really a plan. But what it reflects, though, is that economic activity's been stronger than we expected – stronger than I think everyone expected. And, so what you're – what you're seeing is, this is what people believe, as of now, will be appropriate to achieve what we're looking to achieve, which is progress toward our – toward our inflation goal, as you see in the SEP.[11]

> The fact is the committee is not thinking about rate cuts right now at all. We're not talking about rate cuts. We're still very focused on the first question, which is 'have we achieved a stance of monetary policy that's

[10] Federal Reserve, Transcript of Chair Powell's Press Conference, September 20, 2023, p 2.
[11] *Id.*, Transcript of Chair Powell Press Conference, September 20, 2023 at 6.

sufficiently restrictive to bring inflation down to 2% over time, sustainably?' That is the question we're focusing on.[12]

B. The Use of Monetary Policy to Address Inflation

Q. What policy actions has the Federal Reserve enacted to respond to increased inflation?

A. The dramatic increase in inflation has prompted the Federal Reserve to pursue an aggressive normalization of monetary policy, removing the accommodative policy programs used to mitigate the economic effects of COVID-19. Since the March 2022 FOMC meeting, the Federal Reserve increased the target federal funds rate through a series of increases from a range of 0.00 – 0.25 percent to a range of 5.25 percent to 5.50 percent.[13] Further, as noted above, while the Federal Reserve acknowledges that inflation has declined from its peak, it still is well above the Federal Reserve's target of 2 percent. Therefore, the Federal Reserve anticipates the continued need to maintain the federal funds rate at a restrictive level in order to achieve its goal of 2 percent inflation over the long run.

C. The Effect of Inflation and Monetary Policy on Interest Rates and the Investor-Required Return

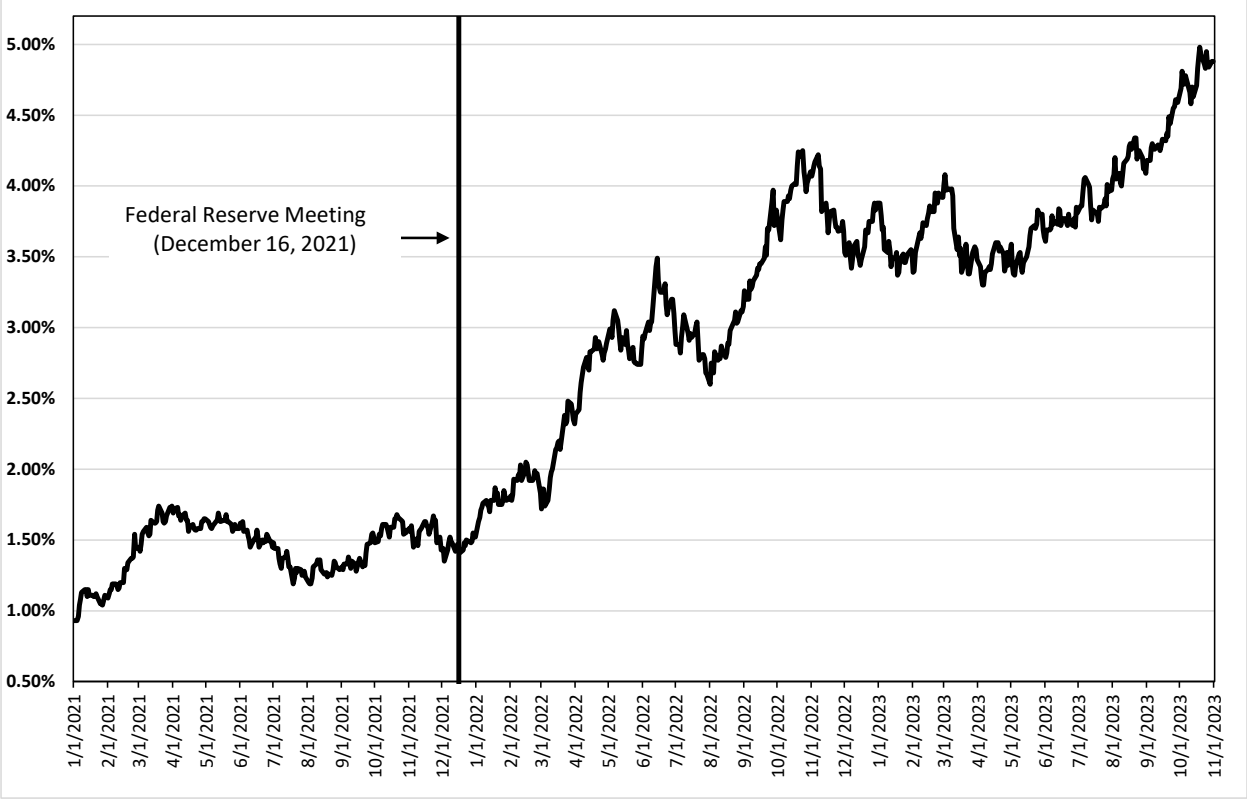
[12] CNBC "Full recap: Fed leaves rates unchanged, Powell discusses December decision", November 1, 2023.

[13] Federal Reserve, Press Releases, March 16, 2022, May 4, 2022, June 15, 2022, September 22, 2022, November 2, 2022, February 1, 2023, March 22, 2023, May 3, 2023, July 26, 2023, September 20, 2023, November 1, 2023. Federal Reserve Board - Press Releases

Q. Have the yields on long-term government bonds increased in response to inflation and the Federal Reserve's normalization of monetary policy?

A. Yes. As the Federal Reserve has substantially increased the federal funds rate in response to increased levels of inflation that have persisted for longer than originally projected, longer term interest rates have also increased. As shown in Figure 3, since the Federal Reserve's December 2021 meeting, the yield on 10-year Treasury bond has more than doubled, increasing from 1.47 percent on December 15, 2021 to 4.88 percent at the end of October 2023.

Figure 3: 10-Year Treasury Bond Yield, January 2021 through October 2023[14]



[14] S&P Capital IQ Pro.

Q. What have equity analysts said about long-term government bond yields?

A. Leading equity analysts have noted that they expect the yields on long-term government bonds to remain elevated. According to the most recent *Blue Chip Financial Forecasts* report, the consensus estimate of the average yield on the 10-year Treasury Bond is approximately 3.80 percent through the first quarter of 2025.[15] It is reasonable to expect that if government bond yields remain elevated, the cost of equity will be increasing above the levels experienced in the 2020 and 2021 lower interest rate environment.

Q. How have interest rates and inflation changed since the Company's last rate case?

A. As shown in Figure 4, at the time that the Commission approved the Company's settlement in its last rate proceeding, interest rates (as measured by the 30-year Treasury bond yield) were 3.91 percent and inflation was 5.70 percent. Since the Company's last rate proceeding, long-term interest rates have increased approximately 93 basis points as the Federal Reserve has increased the federal funds rate to combat inflation. While inflation has moderated since the Company's last case, it remains above the Federal Reserve's target.

Figure 4: Change in Market Conditions Since the Company's Last Rate Case[16]

Docket	Date	Federal Funds Rate	30-Day Avg of 30-Year Treasury Bond Yield	Core Inflation Rate

D. Expected Performance of Utility Stocks and the Investor-Required Return on Utility Investments

Q. Are utility share prices correlated to changes in the yields on long-term government bonds?

A. Yes. Interest rates and utility share prices are inversely correlated, which means that increases in interest rates result in declines in the share prices of utilities and vice versa. For example, Goldman Sachs and Deutsche Bank examined the sensitivity of share prices of different industries to changes in interest rates over the past five years. Both Goldman Sachs and Deutsche Bank found that utilities had one of the strongest negative relationships with bond yields (*i.e.*, increases in bond yields resulted in the decline of utility share prices).[17]

Q. How do equity analysts expect the utilities sector to perform in an increasing interest rate environment?

A. Equity analysts project that utilities will underperform the broader market given high inflation and the recent increases in interest rates. Fidelity classifies the utility sector as underweight,[18] and Bank of America recently noted that it is "not so constructive on

[17] Lee, Justina. "Wall Street Is Rethinking the Treasury Threat to Big Tech Stocks." Bloomberg.com, 11 Mar. 2021, www.bloomberg.com/news/articles/2021-03-11/wall-street-is-rethinking-the-treasury-threat-to-big-tech-stocks.

[18] Fidelity. "Third Quarter 2023 Investment Research Update." July 24, 2023.

[u]tilities" given that the dividend yields for utilities are below the yields available on both long- and short-term government bonds.[19]

E. Conclusion

Q. What are your conclusions regarding the effect of current market conditions on the cost of equity for the Company?

A. Investors expect long-term interest rates to remain relatively high in response to continued elevated levels of inflation and the Federal Reserve's normalization of monetary policy. Because the share prices of utilities are inversely correlated to interest rates, and government bond yields have increased significantly since the lows of 2020, the share prices of utilities are likely to continue to decline, which is the reason a number of equity analysts have classified the sector as either underperform or underweight. The expected underperformance of utilities means that DCF models using recent historical data likely underestimate investors' required return over the period that rates will be in effect. Therefore, this expected change in market conditions supports consideration of the higher end of the range of cost of equity results produced by the DCF models. Moreover, prospective market conditions warrant consideration of, and placing more weight on, forward-looking cost of equity estimation models such as the CAPM and ECAPM, which better reflect expected market conditions.

[19] Dumoulin-Smith, "US Electric Utilities & IPPs: As the leaves fall, preparing for Autumn utility outlook. Macro still has potholes," September 6, 2023.

VI. PROXY GROUP SELECTION

Q. Why have you used a group of proxy companies to estimate the cost of equity for PAWC?

A. In this proceeding, I am estimating the cost of equity for PAWC, which is a rate regulated subsidiary of AWK. Because the ROE is a market-based concept, and given the fact that PAWC's operations do not make up the entirety of a publicly-traded entity, it is necessary to establish a group of companies that is both publicly-traded and comparable to the Company in certain fundamental business and financial respects to serve as its "proxy" for purposes of the ROE estimation process. The proxy companies used in my analyses all possess a set of operating and financial risk characteristics that are substantially comparable to PAWC, and, therefore, provide a reasonable basis for deriving the appropriate ROE.

Q. Please provide a brief profile of PAWC.

A. PAWC, a wholly-owned subsidiary of AWK, provides water distribution service to approximately 679,000 customers and wastewater services to approximately 97,000 customers in Pennsylvania.[20] The Company can access debt markets through American Water Capital Corp. ("AWCC") or independently. The current credit ratings for AWCC

[20] American Water Works Company, Inc., 2022 SEC Form 10-K, at 4.

and AWK are as follows: (1) S&P - A (Outlook: Stable)[21]; and (2) Moody's - Baa1 (Outlook: Stable).[22]

Q. How did you select the companies in your proxy group?

A. I began with the group of U.S. utilities that Value Line classifies as "Water Utilities" and "Natural Gas Distribution Companies". That combined group includes 16 domestic U.S. utilities. I simultaneously applied the following screening criteria to select companies that:

- pay consistent quarterly cash dividends because companies that do not cannot be analyzed using the Constant Growth DCF model;
- have investment grade long-term issuer ratings from S&P and/or Moody's;
- are covered by at least two utility industry analysts;
- have positive long-term earnings growth forecasts from at least two utility industry equity analysts;
- derive more than 70.00 percent of their total operating income from regulated operations; and
- were not parties to a merger or transformative transaction during the analytical periods relied on.

Q. Did you consider any additional companies for inclusion in your proxy group?

A. Yes. I also considered the group of 36 companies that Value Line classifies as "Electric Utilities". In determining which electric utilities would qualify for inclusion in my proxy group, I started by relying on the criteria used to screen the water and natural gas utilities.

[21] S&P Global Ratings, American Water Works Co. Inc., June 26, 2023.

[22] Moody's Investors Service, accessed June 30, 2023. Moody's last rating change for American Water Works Company, Inc was as of April 1, 2019. (https://www.moodys.com/research/Moodys-downgrades-American-Water-and-American-Water-Capital-Corp-to--PR_397640)

I then applied two additional screening criteria to only include electric utilities that would be considered risk comparable to PAWC:

- have owned generation comprising less than 10 percent of the Company's MWh sales to ultimate customers to ensure that the electric utilities included did not own a substantial amount of generation and therefore had operations that were primarily transmission and distribution; and
- own water operations.

Q. Did you include AWK in your proxy group?

A. No. Consistent with my general practice of excluding the subject company, or its parent holding company, from the proxy group, I have excluded AWK from my proxy group for PAWC.

Q. What is the composition of your proxy group?

A. The screening criteria discussed above resulted in a proxy group consisting of the companies in Figure 5 (see also Exhibit No. 13-A, Schedule 2).

Figure 5: Proxy Group

Company	Ticker
American States Water Company	AWR
Atmos Energy Corporation	ATO
California Water Service Group	CWT
Essential Utilities, Inc.	WTRG
Eversource Energy	ES
Middlesex Water Company	MSEX
NiSource Inc.	NI
Northwest Natural Gas Company	NWN
ONE Gas, Inc.	OGS
SJW Group	SJW
Spire, Inc.	SR

Q. Why did you include electric utilities and natural gas distribution companies in the proxy group?

A. Value Line currently classifies only seven companies as water utilities. Therefore, the universe of water utilities is already small before a set of screening criteria are applied. Additionally, there has been a recent trend towards consolidation in the utility industry, which reduces the number of available proxy companies. Because there are a small number of companies that are available for inclusion in the proxy group, I also considered electric utilities and natural gas distribution companies that meet the screening criteria.

Q. Are electric utilities and natural gas distribution companies reasonably comparable to water utilities to be included in a proxy group used to estimate the cost of equity for a water utility?

A. Yes, I believe that it is reasonable to rely on a combined proxy group. As noted above, due to consolidation in the water utility industry, there is only a small group of water companies that can be included in the proxy group. In addition, the screening criteria relied on for my proxy group require that a company derive more than 70 percent of their operating income from regulated operations. Therefore, the electric utilities and natural gas distribution companies included in my proxy group generate a large portion of their operating income from regulated operations similar to PAWC and the water utilities that will be included in the proxy group. As a result, I believe that it is appropriate to include electric utilities and natural gas distribution companies in my proxy group.

VII. COST OF EQUITY ESTIMATION

Q. Please briefly discuss the ROE in the context of the regulated rate of return.

A. The ROE is the cost of common equity capital in the utility's capital structure for ratemaking purposes. The overall rate of return for a regulated utility is the weighted average cost of capital, in which the cost rates of the individual sources of capital are weighted by their respective book values. While the costs of debt and preferred stock can be directly observed, the cost of equity is market-based and, therefore, must be estimated based on observable market data.

Q. How is the required cost of equity determined?

A. The required cost of equity is estimated by using analytical techniques that rely on market-based data to quantify investor expectations regarding equity returns, adjusted for certain incremental costs and risks. Informed judgment is then applied to determine where the given company's cost of equity falls within the range of results produced by multiple analytical techniques. The key consideration in determining the cost of equity is to ensure that the methodologies employed reasonably reflect investors' views of the financial markets in general, as well as the subject company (in the context of the proxy group), in particular.

Q. What methods did you use to estimate PAWC's cost of equity?

A. I considered the results of the Constant Growth DCF model, the CAPM, and the ECAPM. As discussed in more detail below, a reasonable ROE estimate considers alternative

methodologies, observable market data, and the reasonableness of their individual and collective results.

A. Importance of Multiple Analytical Approaches

Q. Is it important to use more than one analytical approach?

A. Yes. Because the cost of equity is not directly observable, it must be estimated based on both quantitative and qualitative information. When faced with the task of estimating the cost of equity, analysts and investors are inclined to gather and evaluate as much relevant data as reasonably can be analyzed. Several models have been developed to estimate the cost of equity, and I use multiple approaches to estimate the cost of equity. As a practical matter, however, all of the models available for estimating the cost of equity are subject to limiting assumptions or other methodological constraints. Consequently, many well-regarded finance texts recommend using multiple approaches when estimating the cost of equity. For example, Copeland, Koller, and Murrin[23] suggest using the CAPM and Arbitrage Pricing Theory model, while Brigham and Gapenski[24] recommend the CAPM, DCF, and Bond Yield Plus Risk Premium approaches.

[23] Tom Copeland, Tim Koller and Jack Murrin, Valuation: Measuring and Managing the Value of Companies, 3rd Ed. (New York: McKinsey & Company, Inc., 2000), at 214.

[24] Eugene Brigham, Louis Gapenski, Financial Management: Theory and Practice, 7th Ed. (Orlando: Dryden Press, 1994), at 341.

Q. Do current market conditions support the reliance on more than one analytical approach?

A. Yes. As I discussed above, interest rates have increased substantially over the past year and are expected to remain elevated from the lows seen during the COVID-19 pandemic. The benefit of using multiple models is that each model relies on different assumptions, certain of which may better reflect current and projected market conditions at different times. As discussed previously, the CAPM, and the ECAPM analyses offer some balance through the use of projected interest rates since the effect of changes in interest rates, particularly the recent increase in interest rates, may not be captured as well in the DCF model at this time. Therefore, it is important to use multiple analytical approaches to ensure that the cost of equity results reflect market conditions that are expected during the period that the Company's rates will be in effect.

Q. Has the Commission made similar findings regarding the reliance on multiple models?

A. Yes, it has. In a 2012 decision for PPL Electric Utilities, while noting that the Commission has traditionally relied primarily on the DCF method to estimate the cost of equity for regulated utilities, the Commission recognized that market conditions were causing the DCF model to produce results that were much lower than other models such as the CAPM and Risk Premium. The Commission's Order explained:

> Sole reliance on one methodology without checking the validity of the results of that methodology with other cost of equity analyses does not always lend itself to responsible ratemaking. We conclude that

methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived equity return calculation.[25]

The Commission ultimately concluded:

> As such, where evidence based on the CAPM and RP methods suggest that the DCF-only results may understate the utility's current cost of equity capital, we will give consideration to those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination.[26]

Q. Are you aware of any regulatory commissions that have recognized the importance of considering the results of multiple models?

A. Yes, several regulatory commissions consider the results of multiple COE estimation methodologies such as the DCF, CAPM, and ECAPM in determining the authorized ROE, including the Minnesota Public Utilities Commission ("Minnesota PUC")[27], the Michigan Public Service Commission ("Michigan PSC")[28], the Iowa Utilities Board ("IUB")[29], the Washington Utilities and Transportation Commission ("Washington UTC")[30] and the New Jersey Board of Public Utilities ("NJBPU")[31]. For example, the Washington UTC has repeatedly emphasized that it "places value on each of the methodologies used to calculate the cost of equity and does not find it appropriate to select a single method as being the

most accurate or instructive."[32] The Washington UTC has also explained that "[f]inancial circumstances are constantly shifting and changing, and we welcome a robust and diverse record of evidence based on a variety of analytics and cost of capital methodologies."[33]

Additionally, in its recent order for DTE Gas Company ("DTE Gas") in Case No. U-18999, the Michigan PSC considered the results of each of the models presented by the ROE witnesses, which included the DCF, CAPM, and ECAPM in the determination of the authorized ROE.[34] The Commission also considered authorized ROEs in other states, increased volatility in capital markets and the company-specific business risks of DTE Gas.

B. Constant Growth DCF Model

Q. Please describe the DCF approach.

A. The DCF approach is based on the theory that a stock's current price represents the present value of all expected future cash flows. In its most general form, the DCF model is expressed as follows:

$$P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + \cdots + \frac{D_\infty}{(1+k)^\infty} \qquad [1]$$

Where P_0 represents the current stock price, D1…D∞ are all expected future dividends, and k is the discount rate, or required ROE. Equation [1] is a standard present value calculation that can be simplified and rearranged into the following form:

---

[32] Wash. Utils. & Transp. Comm'n v. PacifiCorp, Docket UE-130043, Order 05, n. 89 (Dec. 4, 2013).
[33] Wash. Utils. & Transp. Comm'n v. PacifiCorp, Docket UE-100749, Order 06, ¶ 91 (March 25, 2011).
[34] Michigan Public Service Commission Order, DTE Gas Company, Case No. U-18999, September 13, 2018, at 45-47.

$$k = \frac{D_0(1+g)}{P_0} + g \qquad [2]$$

Equation [2] is often referred to as the Constant Growth DCF model in which the first term is the expected dividend yield and the second term is the expected long-term growth rate.

Q. What assumptions are required for the Constant Growth DCF model?

A. The Constant Growth DCF model requires the following four assumptions: (1) a constant growth rate for earnings and dividends; (2) a stable dividend payout ratio; (3) a constant price-to-earnings ratio; and (4) a discount rate greater than the expected growth rate. To the extent that any of these assumptions are not objectively valid, considered judgment and/or specific adjustments should be applied to the results.

Q. What market data do you use to calculate the dividend yield in your Constant Growth DCF model?

A. The dividend yield in my Constant Growth DCF model is based on the proxy group companies' current annualized dividend and average closing stock prices over the 30-, 90-, and 180-trading days ended October 31, 2023.

Q. Why do you use 30-, 90-, and 180-day averaging periods?

A. I use an average of recent trading days to calculate the term P_0 in the DCF model to reflect current market data while also ensuring that the result of the model is not skewed by anomalous events that may affect stock prices on any given trading day.

Q. Did you make any adjustments to the dividend yield to account for periodic growth in dividends?

A. Yes, I did. Because utility companies tend to increase their quarterly dividends at different times throughout the year, it is reasonable to assume that dividend increases will be evenly distributed over calendar quarters. Given that assumption, it is reasonable to apply one-half of the expected annual dividend growth rate for purposes of calculating the expected dividend yield component of the DCF model. This adjustment ensures that the expected first-year dividend yield is, on average, representative of the coming twelve-month period, and does not overstate the aggregated dividends to be paid during that time.

Q. Why is it important to select appropriate measures of long-term growth in applying the DCF model?

A. In its Constant Growth form, the DCF model (*i.e.*, Equation [2]) assumes a single growth estimate in perpetuity. To reduce the long-term growth rate to a single measure, one must assume that the payout ratio remains constant and that earnings per share, dividends per share and book value per share all grow at the same constant rate. Over the long run, however, dividend growth can only be sustained by earnings growth. Therefore, it is important to consider a variety of sources in arriving at a singular long-term earnings growth rate for the Constant Growth DCF model.

Q. Which sources of long-term earnings growth rates did you use?

A. My Constant Growth DCF model incorporates three sources of long-term earnings growth rates: (1) Zacks Investment Research; (2) Thompson as reported by Yahoo! Finance; and (3) *Value Line Investment Survey* ("*Value Line*").

Q. Why are EPS growth rates the appropriate growth rates to be relied on in the DCF model?

A. Earnings are the fundamental driver of a company's ability to pay dividends; therefore, projected EPS growth is the appropriate measure of a company's long-term growth. In contrast, changes in a company's dividend payments are based on management decisions related to cash management and other factors. For example, a company may decide to retain earnings rather than pay out a portion of those earnings to shareholders through dividends. Therefore, dividend growth rates are less likely than earnings growth rates to reflect accurately investor perceptions of a company's growth prospects.

Q. How did you calculate the range of results for the Constant Growth DCF Model?

A. I calculated a low end result for my DCF model using the minimum growth rate of the three sources (*i.e.*, the lowest of the Zacks, Yahoo Finance, and *Value Line* projected earnings growth rates) for each of the proxy group companies. I used a similar approach to calculate a high end result, using the maximum growth rate of the three sources for each proxy group company. The mean results were calculated using the average growth rate from all three sources for each proxy group company.

Q. What were the results of your DCF analyses?

A. Figure 6 summarizes the results of my DCF analyses. As shown in Figure 6, the mean and median DCF results using the average growth rates range from 9.28 percent to 10.00 percent, and the mean and median results using the maximum growth rates range from 10.63 percent to 11.34 percent. While I also summarize the DCF results using the minimum growth rates, given the expected underperformance of utility stocks going

forward and thus the likelihood that the DCF model is understating the cost of equity, I do not believe it is appropriate to consider these understated DCF results at this time. It is important to note that there have been no relevant regulatory decisions where a commission has determined that the appropriate ROE for a water utility should be set in the range resulting from the use of the minimum growth rates in the DCF model.

Figure 6: Summary of Constant Growth DCF Results

	Mean Low	Mean	Mean High
Constant Growth DCF[35]			
Mean Results:			
30-Day Average	8.90%	10.00%	11.31%
90-Day Average	8.66%	9.77%	11.08%
180-Day Average	8.50%	9.60%	10.91%
Average	8.69%	9.79%	11.10%
Median Results:			
30-Day Average	8.91%	9.98%	11.34%
90-Day Average	8.65%	9.54%	10.90%
180-Day Average	8.52%	9.28%	10.63%
Average	8.69%	9.60%	10.96%

Q. Has the Commission acknowledged that the DCF model might understate the cost of equity given the current capital market conditions of high inflation and elevated interest rates?

A. Yes. For example, in its May 2022 decision establishing the cost of equity for Aqua Pennsylvania, Inc., the Pennsylvania Public Utility Commission concluded that the current

[35] DCF results exclude the result for Middlesex Water Company because the low and mean results are lower than the current yield on the Moody's Baa rated utility bond index, which is illogical and the high end DCF result does not provide a reasonable equity risk premium over the current yield on the Moody's Baa rated utility bond index of 6.48 percent on a 30-day average basis ending October 31, 2023.

.

capital market conditions of high inflation and increased interest rates has resulted in the DCF model understating the utility cost of equity, and that weight should be placed on risk premium models, such as the CAPM, in the determination of the ROE.

> To help control rising inflation, the Federal Open Market Committee has signaled that it is ending its policies designed to maintain low interest rates. Aqua Exc. at 9. Because the DCF model does not directly account for interest rates, consequently, it is slow to respond to interest rate changes. However, I&E's CAPM model uses forecasted yields on ten-year Treasury bonds, and accordingly, its methodology captures forward looking changes in interest rates.
>
> Therefore, our methodology for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies. As noted above, the Commission recognizes the importance of informed judgment and information provided by other ROE models. In the 2012 PPL Order, the Commission considered PPL's CAPM and RP methods, tempered by informed judgment, instead of DCF-only results. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. Historically, we have relied primarily upon the DCF methodology in arriving at ROE determinations and have utilized the results of the CAPM as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination. In light of the above, we shall determine an appropriate ROE for Aqua using informed judgement based on I&E's DCF and CAPM methodologies.[36]
>
> …..
>
> We have previously determined, above, that we shall utilize I&E's DCF and CAPM methodologies. I&E's DCF and CAPM produce a range of reasonableness for the ROE in this proceeding from 8.90% [DCF] to 9.89% [CAPM]. Based upon our informed judgment, which includes consideration of a variety of factors, including increasing inflation leading to increases in interest rates and capital costs since the rate filing, we

[36] Pennsylvania Public Utility Commission, Docket Nos. R-2021-3027385 and R-2021-3027386, Opinion and Order, May 12, 2022, pp. 154–155.

determine that a base ROE of 9.75% is reasonable and appropriate for Aqua.[37]

Also, in a recent decision, the Massachusetts Department of Public Utilities recognized that long-term interest rates had increased and found greater certainty in that proceeding (as compared with prior decisions) that the DCF results understate the Company's cost of equity. As such, the Department considered this finding in establishing the range of reasonable results from within the analytical results presented.[38]

Q. What are your conclusions about the results of the DCF models?

A. As discussed previously, one primary assumption of the DCF models is a constant price-to-earnings ratio. That assumption is heavily influenced by the market price of utility stocks. Because utility stocks are expected to underperform the broader market over the near-term as interest rates remain elevated and yields on long-term government bonds exceed utility dividend yields, it is important to consider the results of the DCF models with caution. Therefore, although I have given weight to the results of the Constant Growth DCF model, my recommendation also gives weight to the results of other cost of equity estimation models that take into greater consideration current and expected market conditions.

[37] *Id.*, pp. 177–178.
[38] D.P.U. 22-22 at 386.

C. CAPM Analysis

Q. Please briefly describe the CAPM.

A. The CAPM is a risk premium approach that estimates the cost of equity for a given security as a function of a risk-free return plus a risk premium to compensate investors for the non-diversifiable or "systematic" risk of that security. Systematic risk is the risk inherent in the entire market or market segment—which cannot be diversified away using a portfolio of assets. Unsystematic risk is the risk of a specific company that can, theoretically, be mitigated through portfolio diversification.

The CAPM is defined by four components, each of which must theoretically be a forward-looking estimate:

$$K_e = r_f + \beta(r_m - r_f) \qquad [3]$$

Where:

Ke = the required market ROE;

β = beta coefficient of an individual security;

rf = the risk-free rate of return; and

r_m = the required return on the market.

In this specification, the term (r_m – r_f) represents the market risk premium. According to the theory underlying the CAPM, because unsystematic risk can be diversified away,

investors should only be concerned with systematic or non-diversifiable risk. Non-diversifiable risk is measured by beta, which is defined as:

$$\beta = \frac{Covariance(r_e, r_m)}{Variance(r_m)} \quad [4]$$

The variance of the market return (*i.e.*, Variance (r_m)) is a measure of the uncertainty of the general market, and the Covariance between the return on a specific security and the general market (*i.e.*, Covariance (r_e, r_m)) reflects the extent to which the return on that security will respond to a given change in the general market return. Thus, beta represents the risk of the security relative to the general market.

Q. What risk-free rate did you use in your CAPM analysis?

A. I relied on three sources for my estimate of the risk-free rate: (1) the current 30-day average yield on 30-year U.S. Treasury bonds, which is 4.84 percent;[39] (2) the average projected 30-year U.S. Treasury bond yield for the fourth quarter of 2023 through the fourth quarter of 2024, which is 4.44 percent;[40] and (3) the average projected 30-year U.S. Treasury bond yield for 2025 through 2029, which is 3.80 percent.[41]

Q. What Beta coefficients did you use in your CAPM analyses?

A. As shown in Exhibit No. 13-A, Schedule 5, I used the average Beta coefficients for the proxy group companies as reported by Bloomberg and *Value Line*. The beta coefficients reported by Bloomberg are calculated using ten years of weekly returns relative to the S&P

[39] Bloomberg Professional as of October 31, 2023.
[40] Blue Chip Financial Forecasts, Vol. 42, No. 11, November 1, 2023, at 2.
[41] Blue Chip Financial Forecasts, Vol. 42, No. 6, June 1, 2023, at 14.

500 Index. Value Line's calculation of the beta coefficients is based on five years of weekly returns relative to the New York Stock Exchange Composite Index ("NYSE"). Additionally, as shown on Exhibit No. 13-A, Schedule 5 and Exhibit No. 13-A, Schedule 6, I also considered an additional CAPM analysis that relies on the long-term average utility beta coefficient for the companies in my proxy group, which is calculated as an average of the *Value Line* beta coefficients for the companies in my proxy group from 2013 through 2022.

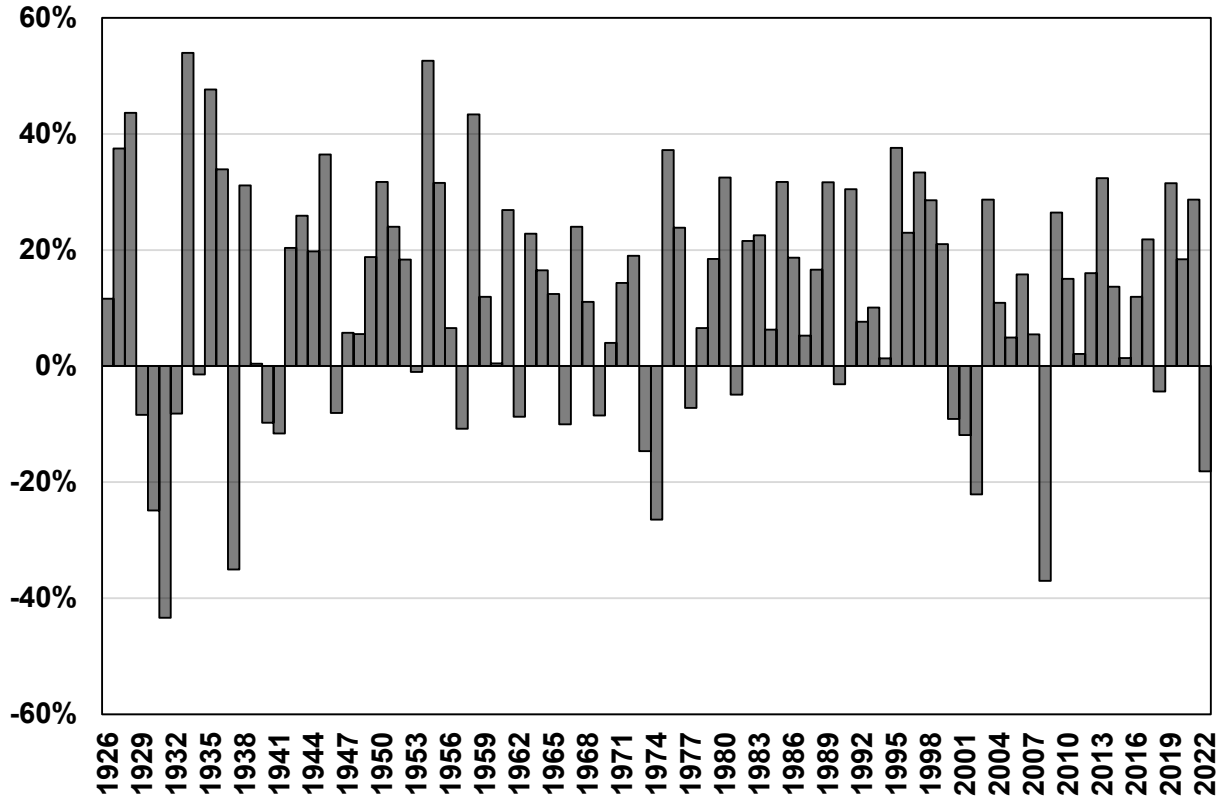
Q. How did you estimate the Market Risk Premium in the CAPM?

A. I estimated the market risk premium as the difference between the implied expected equity market return and the risk-free rate. As shown in Exhibit No. 13-A, Schedule 7, the expected market return is calculated using the Constant Growth DCF model discussed earlier in my testimony for the companies in the S&P 500 Index. Based on an estimated market capitalization-weighted dividend yield of 1.88 percent and a weighted long-term earnings growth rate of 10.51 percent, the estimated required market return for the S&P 500 Index as of October 31, 2023 is 12.49 percent. Based on the three risk-free rates considered, the implied market risk premia ranges from 7.64 percent to 8.69 percent.

Q. How does the current expected market return compare to observed historical market returns?

A. As shown in Figure 7, given the range of annual equity returns that have been observed over the past century, a current expected market return of 12.49 percent is not unreasonable. As shown, in 50 out of the past 97 years (or roughly 52 percent of observations), the realized equity market return was at least 12.49 percent or greater.

Figure 7: Realized U.S. Equity Market Returns (1926-2022)[42]



Q. Did you consider another form of the CAPM in your analysis?

A. Yes. I have also considered the results of an ECAPM in estimating the cost of equity for PAWC.[43] The ECAPM calculates the product of the adjusted beta coefficient and the market risk premium and applies a weight of 75.00 percent to that result. The model then applies a 25.00 percent weight to the market risk premium without any effect from the beta coefficient. The results of the two calculations are summed, along with the risk-free rate, to produce the ECAPM result, as noted in Equation [5] below:

$$k_e = r_f + 0.75\beta(r_m - r_f) + 0.25(r_m - r_f) \qquad [5]$$

[42] Depicts total annual returns on large company stocks, as reported in the 2023 Kroll SBBI Yearbook.
[43] See, e.g., Roger A. Morin, New Regulatory Finance, Public Utilities Reports, Inc., 2006, at 189.

Where:

k_e = the required market ROE

β = Adjusted Beta coefficient of an individual security

r_f = the risk-free rate of return

r_m = the required return on the market as a whole

In essence, the empirical form of the CAPM addresses the tendency of the "traditional" CAPM to underestimate the cost of equity for companies with low beta coefficients such as regulated utilities. In that regard, the ECAPM is not redundant to the use of adjusted betas in the traditional CAPM; rather, it recognizes the results of academic research indicating that the risk-return relationship is different (in essence, flatter) than estimated by the CAPM, and that the CAPM underestimates the "alpha," or the constant return term.[44]

As with the CAPM, my application of the ECAPM uses the forward-looking market risk premium estimates, the three yields on 30-year Treasury securities noted earlier as the risk-free rate, and the current Bloomberg and *Value Line* and long-term *Value Line* beta coefficients.

[44] *Id.*, at 191.

Q. What are the results of your CAPM analyses?

A. As shown in Figure 8 (*see* also Exhibit No. 13-A, Schedule 5), my traditional CAPM analyses produce a range of returns from 10.15 percent to 11.17 percent. The ECAPM analysis results range from 10.73 percent to 11.50 percent.

Figure 8: CAPM Results

	Current 30-day Average 30-Year Treasury Bond Yield	Near-Term Projected 30-Year Treasury Yield	Longer-Term Projected 30-Year Treasury Yield
CAPM:			
Current Value Line Beta	11.17%	11.10%	10.99%
Current Bloomberg Beta	10.66%	10.56%	10.41%
Long-term Avg. Beta	10.43%	10.32%	10.15%
ECAPM:			
Current Value Line Beta	11.50%	11.44%	11.36%
Current Bloomberg Beta	11.12%	11.04%	10.93%
Long-term Avg. Beta	10.94%	10.86%	10.73%

VIII. BUSINESS RISKS AND MANAGEMENT PERFORMANCE

Q. Taken alone, do the results from the cost of equity estimation models for the proxy group provide an appropriate estimate of the cost of equity for the Company?

A. No. These results provide only a range for the appropriate estimate of the Company's cost of equity. There are several additional factors that must be taken into consideration when determining where the Company's cost of equity falls within the range of results. These factors, which are discussed below, should be considered with respect to their overall effect on the Company's risk profile.

A. Flotation Costs

Q. What are flotation costs?

A. Flotation costs are the costs associated with the sale of new issues of common stock. These costs include out-of-pocket expenditures for preparation, filing, underwriting, and other issuance costs.

Q. Why is it important to consider flotation costs in the allowed ROE?

A. A regulated utility must have the opportunity to earn an ROE that is both competitive and compensatory to attract and retain new investors. To the extent that a company is denied the opportunity to recover prudently incurred flotation costs, actual returns will fall short of expected (or required) returns, thereby diluting equity share value.

Q. Are flotation costs part of the utility's invested costs or part of the utility's expenses?

A. Flotation costs are part of the invested costs of the utility, which are properly reflected on the balance sheet under "paid in capital." They are not current expenses, and, therefore, are not reflected on the income statement. Rather, like investments in rate base or the issuance costs of long-term debt, flotation costs are incurred over time. As a result, the great majority of a utility's flotation cost is incurred prior to the test year but remains part of the cost structure that exists during the test year and beyond, and as such, should be recognized for ratemaking purposes. Therefore, it is irrelevant whether an issuance occurs during the test year or is planned for the test year because failure to allow recovery of past flotation costs may deny PAWC the opportunity to earn its required rate of return in the future.

Q. Please provide an example of why a flotation cost adjustment is necessary to compensate investors for the capital they have invested?

A. As shown in Exhibit No. 13-A, Schedule 4, in AWK's most recent stock issuance, the offering price was $135.5 per share of common stock. After paying flotation costs associated with the equity issuance, which include fees paid to underwriters and attorneys, among others, AWK's net proceeds are only $133.41 per share invested. AWK invests that $133.41 per share in plant used to serve its customers, which becomes part of rate base. Absent a flotation cost adjustment, the investor will thereafter earn a return on only the $133.41 per share invested in rate base, even though the contribution was $135.50. Making a small flotation cost adjustment gives the investor a reasonable opportunity to earn the authorized return, rather than the lower return that results when the authorized return is applied to an amount less than what the investor contributed.

Q. Is the need to consider flotation costs eliminated because PAWC is a wholly-owned subsidiary of AWK?

A. No. Although PAWC is a wholly-owned subsidiary of AWK, it is appropriate to consider flotation costs because wholly-owned subsidiaries receive equity capital from their parent and provide returns on the capital that roll up to the parent, which is designated to attract and raise capital based upon the returns of those subsidiaries. To deny recovery of issuance costs associated with the capital that is invested in the subsidiaries ultimately penalizes the investors that fund the utility operations and could inhibit the utility's ability to obtain new equity capital at a reasonable cost. This is important for PAWC because, as I will discuss

in more detail below, the Company is planning significant capital expenditures in the near term.

Q. Is the need to consider flotation costs recognized by the academic and financial communities?

A. Yes. The need to reimburse shareholders for the lost returns associated with equity issuance costs is recognized by the academic and financial communities in the same spirit that investors are reimbursed for the costs of issuing debt. This treatment is consistent with the philosophy of a fair rate of return. According to Dr. Shannon Pratt:

> Flotation costs occur when new issues of stock or debt are sold to the public. The firm usually incurs several kinds of flotation or transaction costs, which reduce the actual proceeds received by the firm. Some of these are direct out-of-pocket outlays, such as fees paid to underwriters, legal expenses, and prospectus preparation costs. Because of this reduction in proceeds, the firm's required returns on these proceeds equate to a higher return to compensate for the additional costs. Flotation costs can be accounted for either by amortizing the cost, thus reducing the cash flow to discount, or by incorporating the cost into the cost of capital. Because flotation costs are not typically applied to operating cash flow, one must incorporate them into the cost of capital.[45]

Q. How did you calculate the flotation costs for PAWC?

A. My flotation cost calculation is based on the costs incurred by AWK in its most recent equity offering as of March 3, 2023. That flotation cost percentage is then applied to the DCF analysis to estimate impact on ROE. As shown in Exhibit No. 13-A, Schedule 4, based on the flotation costs incurred in the most recent AWK issuance, the impact on the

[45] Shannon P. Pratt, Cost of Capital Estimation and Applications, Second Edition, at 220-221.

proxy group's cost of equity amounts to 6 basis points (i.e., 0.6 percent) based on the median and 6 basis points (i.e., 0.6 percent) based on the mean.

Q. Do your final results include an adjustment for flotation cost recovery?

A. No. While the final ROE results do not incorporate an explicit adjustment for flotation costs, the estimated effect of flotation cost on ROE is considered in identifying a recommended ROE within the range of ROE estimates from the various models.

B. Risks Associated with Capital Expenditure Program

Q. How is PAWC's risk profile affected by its substantial capital expenditure program?

A. PAWC projects that the Company will make over $1 billion in capital investments for the period through June 30, 2025, including significant investment to replace aging infrastructure to meet the needs of its customers and to comply with various regulations and recent acquisitions of water utility systems.[46] These investments are summarized in PAWC Statement No. 03 in the testimony of Mr. Aiton.

From a credit perspective, the additional pressure on cash flows associated with high levels of capital expenditures exerts corresponding pressure on credit metrics and, therefore, credit ratings. An S&P report explains:

> [T]here is little doubt that the U.S. electric industry needs to make record capital expenditures to comply with the proposed carbon pollution rules over the next several years, while maintaining safety standards and grid stability. We believe the higher capital spending and subsequent rise in debt levels could strain these companies' financial measures, resulting in an almost consistent negative discretionary cash flow throughout this higher

[46] Data provided by PAWC.

> construction period. To meet the higher capital spending requirements, companies will require ongoing and steady access to the capital markets, necessitating that the industry maintains its high credit quality. We expect that utilities will continue to effectively manage their regulatory risk by using various creative means to recover their costs and to finance their necessary higher spending.[47]

Although this S&P report refers to electric utilities, the same applies to water utilities. In an August 2016 report, S&P explained the importance of regulatory support for large capital projects:

> When applicable, a jurisdiction's willingness to support large capital projects with cash during construction is an important aspect of our analysis. This is especially true when the project represents a major addition to rate base and entails long lead times and technological risks that make it susceptible to construction delays. Broad support for all capital spending is the most credit-sustaining. Support for only specific types of capital spending, such as specific environmental projects or system integrity plans, is less so, but still favorable for creditors. Allowance of a cash return on construction work-in-progress or similar ratemaking methods historically were extraordinary measures for use in unusual circumstances, but when construction costs are rising, cash flow support could be crucial to maintain credit quality through the spending program. Even more favorable are those jurisdictions that present an opportunity for a higher return on capital projects as an incentive to investors.[48]

Q. Does PAWC have a capital tracking mechanism to recover some of the costs associated with its capital expenditures plan between rate cases?

A. Yes. PAWC has a Water and Wastewater Distribution System Improvement Charge ("DSIC") which allows PAWC to recover the costs associated with replacing and repairing aging water and wastewater infrastructure. In addition, the Company is proposing an Environmental Compliance Investment Charge recovery mechanism, which will allow for

---

[47] S&P, Ratings Direct, "U.S. Regulated Electric Utilities' Annual Capital Spending is Poised to Eclipse $100 Billion," July 2014.

[48] S&P Global Ratings, "Assessing U.S. Investor-Owned Utility Regulatory Environments," August 10, 2016, at 7.

the recovery of the fixed costs associated with certain non-revenue producing, non DSIC eligible projects between rate cases that are related to environmental requirements. The presence of these clauses is certainly a positive aspect of Pennsylvania regulation but they have become quite commonplace in utility regulation. In fact, each of the proxy group companies has infrastructure and capital recovery mechanisms that address significant capital expenditure requirements. As shown in Exhibit AEB-10, the companies in the proxy group have infrastructure replacement recovery mechanisms in approximately 78.57 percent of their operating jurisdictions. Consequently, the presence of the DSIC, and the Company's proposed Environmental Compliance Investment Charge recovery mechanism, while positive regulatory mechanisms, do not reduce the Company's risk vis-à-vis that of the proxy group.

Q. Why is it important that PAWC's capital tracking mechanisms recover these costs?

A. Over the next few years, PAWC is proposing to invest $3.28 billion in infrastructure improvements. On an annual basis, PAWC's capital investment program is greater than its allowance for depreciation which results in negative Free Cash Flow. Therefore, the Company will need to seek financing for its capital investments beyond any internally generated cash flow. Similar to the credit rating agencies, discussed previously, investors consider the stability and supportiveness of the regulatory environment in the assessment of overall risk of investment. The use of tracking mechanisms for the recovery of capital

investments has become a key component of the strategy to address regulatory lag that results from significant investments in supportive regulatory jurisdictions.[49]

Q. Has Pennsylvania been viewed as a supportive regulatory jurisdiction?

A. Yes. S&P conducts a ranking of regulatory jurisdictions, using a scale of 9 steps ranging from a low of Below Average to Above Average, with each ranking having three notches ("3" being the low end of the ranking and "1" being the high end of the ranking). These rankings are assigned from an investor perspective and are intended to indicate the relative regulatory risk associated with the ownership of securities issued by the utilities in the jurisdiction. The evaluation is intended to assess the level and quality of earnings realized by the state utilities as a result of regulatory, legislative and court actions. Pennsylvania has been ranked Above Average 2 since 2019. S&P indicates that this ranking is based on a constructive regulatory climate, relying on forward test years, year -end rate base and reduction in regulatory lag.

Q. What is your conclusion regarding the regulatory environment in Pennsylvania as it relates to PAWC's capital investment plan?

A. The Company's capital plan demonstrates a need to access external capital for financing. Therefore, it is important that the constructive regulatory environment that has been established by the Commission be maintained to ensure that the Company continues to be able to secure capital on favorable terms.

[49] S&P Global Market Intelligence, RRA Regulatory Focus: Adjustment Mechanisms, July 22, 2022, pp. 6-15.

C. Rate Decoupling Mechanism

Q. Are you aware that the Company is proposing to implement a Rate Decoupling Mechanism ("RDM")?

A. Yes. As discussed in PAWC Statement No. 10, the Direct Testimony of Company witness Mr. Charles Rea, the Company's current rate design recovers approximately 81 percent of water and wastewater service revenues under volumetric rates whereas approximately 95 percent of the Company's costs are fixed costs, which do not vary with usage. Further, Mr. Rea's analysis demonstrates that there are two primary factors that cause revenue volatility, seasonal weather conditions and continuing trends in declining use per customer in the residential, commercial and municipal customer classes. As Mr. Rea notes, seasonal weather conditions can cause water sales to increase or decrease from expected going-forward levels, which creates volatility in revenues. Further, if water usage going forward is less than the levels set in this rate proceeding, the Company's revenues will be less than what is authorized as a result of this case, making it difficult to earn the authorized ROE.

Q. Does the implementation of an RDM affect your recommended ROE?

A. No. The recommended ROE in this proceeding has been estimated using market data for a proxy group of companies. In order to determine the appropriate ROE from within the range of results, it is necessary to consider PAWC's overall risks as compared with the operating companies of the proxy group companies. That evaluation demonstrates whether or not the Company has greater or less risk and informs the decision regarding the estimated investor-required return on equity. Therefore, it is necessary to review the proposed

mechanism as compared with proxy group to determine if the Company's overall risk is greater or less than the proxy group companies.

Q. Have you conducted an analysis of the proxy group companies and whether or not they have implemented recovery mechanisms?

A. Yes. I have reviewed each of the operating companies of the proxy group to determine whether or not they have implemented a mechanism similar to the RDM proposed by PAWC. As shown on Exhibit No. 13-A, Schedule 9, approximately 59 percent of the proxy group companies have implemented some form of revenue decoupling mechanism.

Q. What are your conclusions regarding the Company's proposed RDM?

A. Since a significant amount of the operating companies of the proxy group companies have implemented some form of RDM, the Company's proposed RDM makes PAWC more like the proxy group. Therefore, comparing PAWC to the proxy group, the Company would be more comparable to the proxy group with the RDM. If the RDM were not authorized, PAWC would have greater risk than the proxy group.

D. Risks Associated with Environmental and Water Quality Regulation

Q. Please provide an overview of the risks associated with water quantity, water quality and other environmental regulations applicable to PAWC's water supply facilities and operations.

A. Water supply utilities are subject to a complex array of regulations at the federal, state and river basin commission levels with respect to water quantity, water quality and other environmental aspects of their facilities and operations.

In addition to the requirement to make significant investments to extend facilities to accommodate applicants for service, there are multiple levels of authorization and regulation that apply to a public water system that wants to add a new source of supply or increase its withdrawals from existing sources. These factors add to the costs and lead-time for obtaining new, or increasing existing, water sources to meet new demands that may arise in portions of the Company's system. These are additional risk factors that can directly affect PAWC's ability to continue to furnish safe, adequate and reliable service, and increase the costs PAWC incurs to provide that service.

As discussed in the direct testimony of Company witness Mr. Jim Runzer, there are significant regulations that require the monitoring and treatment of water supplies to ensure the safety of and reliability of drinking water service. Further, there is increased research and awareness of contaminants on an ongoing basis that, once identified, require investment to meet more stringent regulatory standards related to new contaminants.

While the Company intends to comply with all state and federal regulatory standards for safe and reliable drinking water service, the upstream releases of chemicals that are then found in the Company's water supplies and must be remediated present an ongoing business risk.

Q. Provide an overview of the risks associated with environmental regulation with respect to PAWC's wastewater system operations.

A. As is the case with regard to drinking water system operations, the operation of wastewater collection and treatment systems face a range of environmental regulatory risks.

Wastewater operations are also regulated at both the federal and state levels pursuant to numerous statutes and regulations. At the federal level, wastewater systems are regulated pursuant to the Clean Water Act and numerous regulations adopted by the Environmental Protection Agency ("EPA") under that law. At the state level, the Pennsylvania Clean Streams Law, Sewage Facilities Act, Solid Waste Management Act, Storage Tank and Spill Prevention Act and other laws administered by the DEP, coupled with the regulations adopted under those statutes, set standards and requirements for virtually every aspect of wastewater system operations. Similar to water regulation meeting regulatory compliance requirements, including evolving permitting requirements, and more stringent limits can be challenging and can result in significant increases in operating costs. Furthermore, wastewater systems face significant regulatory and environmental liability risks enforceable by governmental agencies through penalties and through citizen lawsuits.

Finally, combined sewer systems present additional risks, particularly during storms when water flows can exceed the treatment system capacity and result in excess untreated water discharging through combined sewer outfalls. These systems can present increased risk, as they often cannot be separated, and the EPA seeks to reduce the number of these systems that operate.

Q. What is your conclusion with respect to the effect of the risk associated with environmental regulations and water quality regulations on PAWC's cost of equity?

A. PAWC has significant risk and uncertainty associated with environmental and water quality regulations, and the recovery of costs to comply with those regulations. It is clear that the financial community recognizes the additional risks to credit quality associated

with the capital investment required to meet environmental and water quality regulations. As discussed in Section VI of my testimony, in order to establish a proxy group of sufficient size, the group is composed of water utilities, electric utilities and natural gas utilities, which all face significant and increasing environmental requirements. The environmental risk factors faced by PAWC, and the magnitude of the capital program that the Company has planned to maintain compliance, support an ROE above the proxy group mean and median.

E. Management Performance and Recognition

Q. Please summarize the Public Utility Code as it pertains to consideration of performance factors in the utility's revenue requirement.

A. Section 523 of the Pennsylvania Public Utility Code states that the Commission shall consider "the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates under this title". Additionally, the Commission's Policy Statement on Small Nonviable Water and Wastewater Systems at 52 Pa. Code § 69.711 states that the Commission will consider acquisition incentives including "rate of return premiums", "acquisition adjustments", "deferral of acquisition improvement costs" and "plant improvement surcharges" to encourage the acquisition of troubled water and wastewater systems by viable utilities.

Q. What are the specific performance factors that are to be considered by the Commission?

A. Sections 523 (a) and (b) address the factors considered in evaluating the performance of water and wastewater utilities. These provisions include 1) the efficiency, effectiveness and adequacy of service, 2) management effectiveness and operating efficiency, 3) action or inaction to encourage cost-effective conservation by customers of water, and 4) other relevant evidence that relates to efficiency, effectiveness and adequacy of service.

Q. How has PAWC demonstrated excellence in these categories?

A. The testimony of Company witness Ashley Everette discusses several areas where PAWC has demonstrated exemplary management performance. Among these areas, the performance highlighted by Ms. Everette includes:

- The Company's H2O program ranks at the top of the Pennsylvania water utility customer assistance programs for the types of benefits provided under the program. Further, the Company is expanding this program to add a fourth tier of eligibility to its bill discount program to customers whose household incomes are between 151% and 200% of FPL as well as to offer arrearage forgiveness for certain qualifying customers.
- PAWC's treatment plants are nationally recognized for optimization and performance above the regulatory standards.
- The Company is committed to continuing improvement in water quality and monitoring for pollutants where there is no obligation to monitor.
- PAWC's demonstrated commitment to operational and water efficiency for the benefit of customers.
- The Company has acted as a receiver for and acquired troubled water and wastewater systems for over 25 years, acquiring sixteen companies in the last 10 years.

Q. How have you considered the management performance of PAWC in your recommendation?

A. Yes. As discussed above, a reasonable range of ROE estimates for PAWC is from 10 percent to 11.25 percent. I recommend an ROE of 10.95 percent for PAWC, which is at the high end of the reasonable range. This recommendation considers the effects of current market conditions as well as the Company's excellent management performance.

IX. CAPITAL STRUCTURE

Q. Please explain how the water services capital structure was calculated for PAWC.

A. Because there is specific debt that has been identified for wastewater services, the capital structures for water and wastewater services were calculated separately. The capital structure for the total company was calculated first, including all debt issuances and all sources of capital. As shown in Exhibit No. 13-A, Schedule 11, the total company projected permanent capital structure includes 44.70 percent long-term debt, 0.00 percent preferred stock and 55.30 percent common equity for the fully projected future test year ending June 30, 2025. The total company capital structure includes three issuances that can be specifically assigned to the wastewater services: Pennvest Clarion; Pennvest Scranton; and $47 million of a PEDFA tax-exempt debt issuance for Coatsville. These issuances are shown on Exhibit No. 13-A, Schedule 14. The capital structure for water service was calculated by removing the wastewater specific debt instruments from the total long-term debt of the company and recalculating the ratios of the remaining capital stock. As shown in Exhibit No. 13-A, Schedule 12 the permanent ratemaking capital structure for the water service after removing the wastewater specific debt issuances from the total company

capital structure is 44.01 percent long-term debt, 0.00 percent preferred stock and 55.99 percent common equity for the fully projected future test year ending June 30, 2025.

Q. How was the wastewater services capital structure calculated?

A. The wastewater specific capital structure was calculated by applying the total company debt ratio to the wastewater rate base, excluding the specific wastewater debt issuances. Preferred stock is also calculated by applying the total company percentage of preferred stock to the rate base less the wastewater specific debt issuances. The equity component of the capital structure is the rate base less long-term debt, wastewater specific debt issuances and preferred stock. As shown in Exhibit No. 13-A, Schedule 13, the wastewater specific capital structure includes 42.73 percent long-term debt, wastewater specific financing of 4.40 percent, for a total long-term debt of 47.13 percent, 0.00 percent preferred stock and 52.87 percent common equity for fully projected future test year ending June 30, 2025.

Figure 13: Ratemaking Capital Structures for the Fully Projected Future Test Year ending June 30, 2025

Total Company[50]	
Common Equity	55.30%
Preferred Stock	0.00%
Long-Term Debt	44.70%
Water Services[51]	
Common Equity	55.99%
Preferred Stock	0.00%
Long-Term Debt	44.01%
Wastewater Services[52]	
Common Equity	52.87%
Preferred Stock	0.00%
Long-Term Debt	42.73%
WW Specific Debt	4.40%

Q. Why does the ratemaking capital structure exclude short-term debt?

A. The ratemaking capital structure is intended to reflect the permanent financing of rate base assets. PAWC has relied on short-term debt as temporary financing; to finance Construction Work in Progress (CWIP), and the acquisitions of other water systems. As those assets are brought into rate base, the Company secures permanent financing including equity and long-term debt.

Q. Did you conduct any analysis to determine if the requested equity ratio was reasonable?

A. Yes, I did. I reviewed the Company's proposed capital structure and the capital structures of the utility operating subsidiaries of the proxy companies.

---

50 *See* Exhibit 13-A, Schedule 11.

51 *Ibid.*, at Schedule 12.

52 *Ibid.*, at Schedule 13.

Q. Why is it appropriate to consider the equity ratio for the proxy companies?

A. The determination of the ROE is based on the expected return for a proxy group of companies that are comparable in risk to PAWC. The equity ratio is a measure of the financial risk of the company, and the authorized ROE is the return to compensate investors for that risk. If the Commission is going to rely on the ROE estimates for the proxy companies to establish the authorized ROE for PAWC, it is important that the financial risk of PAWC be similar to the financial risk of the proxy group. This is accomplished when the equity ratio of the subject company (in this case PAWC) is within the range established by the proxy group.

Q. How did you conduct your analysis of the proxy group capital structures?

A. Specifically, I calculated the mean proportions of common equity, long-term debt and short-term debt over the past three years for each of companies in the proxy group at the operating subsidiary level. Exhibit No. 13-A, Schedule 10 summarizes the actual capital structures of the operating subsidiaries. As shown, the average equity ratios for the operating subsidiaries of the proxy group range from 49.41 percent to 59.88 percent, with a mean of 55.88 percent. PAWC's proposed equity ratio of 55.30 percent is well within the equity ratio range established by the utility operating subsidiaries of the proxy group.

Q. Are there other factors to be considered in setting the Company's capital structure?

A. Yes, there are other factors that should be considered in setting the Companies' capital structures, namely the challenges that the credit rating agencies have highlighted as placing pressure on the outlook for utilities in 2023.

For example, Moody's recently revised its 2023 outlook for the regulated gas and electric utilities sector to "negative" based on ongoing challenges of inflation, increasing interest rates and higher natural gas prices. Moody's noted that these challenges increase the pressure on customer affordability, and thus face heightened public scrutiny and the ability of utilities to promptly recover their costs. Moody's concluded that regulated utilities' financial metrics are already under pressure with little cushion, and that sustained capital spending is likely as utilities continue progress towards emissions reductions and net-zero goals. Moody's noted that the outlook could return to stable if regulatory support remains intact, natural gas prices are at a level where utilities are able to recover their fuel and purchased power costs without delay beyond 12 months, overall inflation moderates, interest rates stabilize and/or utilities' aggregate funds from operations-to-debt ratio remains between 14% and 15%.[53]

Fitch Ratings ("Fitch") also highlights similar factors identified by Moody's as challenging utilities' outlook for 2023, stating that the sector faces mounting cost pressures due to "elevated commodity prices, inflationary headwinds and rising interest costs," and that some offset in managing these headwinds include "higher authorized ROEs and the use of tools such as securitization of under-recovered fuel balances."[54]

Likewise, S&P also continues to maintain a negative outlook for the utility industry, noting that downgrades have outpaced upgrades for the third consecutive year in 2022 with a

[53] Moody's Investors Service, Outlook. "2023 outlook negative due to higher natural gas prices, inflation and rising interest rates." November 10, 2022; Moody's Investors Service. Outlook, Sector In-Depth. "Inflation, high natural gas prices complicate prospects for supportive rate increases." November 11, 2022.

[54] Fitch Ratings. "North American Utilities, Power & Gas Outlook 2023." December 7, 2022, at 1-2.

median investor-owned utility credit rating of "BBB+".[55] Further, S&P expects the industry to have negative discretionary cash flow as a result of significant capital spending and consistent dividends.[56] Therefore, the utility industry will need ongoing access to capital markets to fund the capital expenditures. However, S&P notes that inflation, rising interest rates and decreasing equity prices may "hamper" consistent access to capital markets and result in additional pressure on cash flows.[57] Moreover, S&P indicates that if inflation risks persist over the near-term and customer bills increase, regulatory credit support could decrease resulting in weaker financial metrics for the industry:

> Over the past decade the industry's financial measures have weakened from a combination of rising capital spending, regulatory lag, and lower authorized return on equity (ROE). The industry's return on capital was about 6% a decade ago and today is closer to 4%. More recently, we have seen instances where not only is the authorized ROE lowered but also the equity ratio is lowered. These results have weakened the industry's financial measures, pressuring credit quality. Under our base case of moderating inflationary risks during 2023, we expect the industry's credit measures to generally remain flat. However, if inflationary risks persist, it may further pressure the customer bill, potentially decreasing the level of regulatory credit support, weakening the industry's financial performance.[58]

The credit ratings agencies' continued concerns over the negative effects of inflation and increased capital expenditures underscore the importance of maintaining adequate cash flow metrics for the industry as a whole, and PAWC in particular in the context of this proceeding.

[56] *Id.*

[57] *Id.*

[58] *Id.*

Q. What is your conclusion with regard to PAWC's proposed capital structure?

A. Considering the actual capital structures of the proxy group operating companies, I believe that PAWC's proposed common equity ratio of 55.30 percent is reasonable. The proposed equity ratio is well within the range and slightly below the mean established by the capital structures of the utility operating subsidiaries of the proxy companies.

X. CONCLUSION AND RECOMMENDATIONS

Q. What is your conclusion regarding a fair ROE for PAWC?

A. Figure 9 summarizes the results of my cost of equity analyses. Based on the various quantitative analyses summarized in Figure 1 above and the qualitative analyses presented in my Direct Testimony, a reasonable range of ROE results for PAWC is from 10.00 percent to 11.25 percent. Within that range, I believe that an ROE of 10.95 percent is reasonable and appropriate. A return at the high end of the range of results would recognize the Company's superior performance and service quality, as discussed in the testimony of Ms. Ashley Everette at PAWC Statement No. 1. In addition, the recommended ROE takes into consideration the current conditions in capital markets including the high interest rates, and elevated inflationary pressures, both of which increase the cost of capital as well as the need to recover flotation costs and the relative business and financial risk of PAWC as compared to the proxy group. This ROE would enable the company to attract capital at reasonable terms under a variety of economic and financial market conditions, while continuing to provide safe, reliable and affordable water service to customers in Pennsylvania.

Q. What is your conclusion regarding PAWC's proposed capital structure?

A. My conclusion is that PAWC's proposed rate-making capital structure consisting of 55.30 percent common equity, 44.70 percent long-term debt is reasonable as compared to the proxy group companies and should be used for setting rates in this case.

[59] DCF results exclude the result for Middlesex Water Company because the low and mean results are lower than the current yield on the Moody's Baa rated utility bond index, which is illogical and the high end DCF result does not provide a reasonable equity risk premium over the current yield on the Moody's Baa rated utility bond index of 6.48 percent on a 30-day average basis ending October 31, 2023.

Q. Does this conclude you direct testimony?

A. Yes, it does.

FLOTATION COST ADJUSTMENT

			[1]	[2]	[3]	[4]	[5]	[6]	[7]	[8]	[9]	
Company	Ticker	Date [i]	Shares Issued (000)	Offering Price	Under-writing Discount [ii]	Offering Expense ($000)	Net Proceeds Per Share	Total Flotation Costs ($000)	Gross Equity Issue Before Costs ($000)	Net Proceeds ($000)	Flotation Cost Percentage	
American Water Works Company	AWK	2/28/2023	12,650	135.50	2.033	700	133.41	26,411	1,714,075	1,687,664	1.54%	[iii]

[i] Offering Completion Date
[ii] Underwriting discount is calculated as the market price minus the offering price when not explicitly given in the prospectus.
[iii] American Water Works Company: AWK Prospectus 424B7 02.28.2023

The flotation cost adjustment is derived by dividing the dividend yield by 1 − F (where F = flotation costs expressed in percentage terms), or by 0.9846, and adding that result to the constant growth rate to determine the cost of equity. Using the formulas shown previously in my testimony, the Constant Growth DCF calculation is modified as follows to accommodate an adjustment for flotation costs:

$$k = \frac{D \times (1 + 0.5g)}{P \times (1 - F)} + g$$

Notes to Debt Schedule

(1) Re-issuance 12/21/12 from Parent at a coupon rate of 4.30% for 30 years
(2) New unsecured borrowing at a coupon rate of 4.30% for 30 years
(3) Issuances costs included make whole premium of $10M
(4) Issuances costs included make whole premium of $7.2M
(5) Refinanced June 2019 at a lower rate for the remaining term of the bond
(6) Refinanced Dec 2019 at a lower rate for the remaining term of the bond
(7) Farmington Twp., Interest rate 1.387% for first 70 months and 2.774% (07/2009) for remainder
(8) Sandy Ridge, Interest rate 1.000% for first 60 months and 1.156% (07/2010) for remainder
(9) Sligo/Shippenville, Interest rate 1.385% for first 86 months and 2.763% (06/2013) for remainder
(10) Ellwood/Butler Interconnect, Interest rate 1.387% for first 74 months and 2.774% (08/2009) for remainder
(11) Mahoning & Union Twp, Interest rate 1.305% for first 82 months and 2.432% (10/2009) for remainder
(12) Hanover & Collier 1.274% first 2009 - 2014 and 2.547% starting Oct 2014
(13) Mount Pleasant Water System Extension 1.559% first 2011 - 2016 and 2.69% starting March 2016
(14) Rock Run WTP 2.414% first 2011 - 2016 and 3.117% starting Dec 2017
(15) Silver Spring Clearwell 2.376% first 2012 - 2016 and 3.098% starting Jan 2017
(16) Wallaceton Municipal Authority 1.00% for 30 years starting March 2012
(17) Pittsburgh Meter Improvements 1.799% first 2012 - 2017 and 2.81% starting April 2017
(18) Pittsburgh Meter Improvement Project Phase II 1.559% first 60 months and 2.69% starting May 2016
(19) Southwest PA Pipeline Exts Phase II - Interest 1.591% first 5 years - 2.196% starting April 2018
(20) Clarion WW Act 537 Implementation Project - Interest rate is 1.0% for the life of the loan
(21) Paint Twp #1 - Interest rate is 1% for the remaining life of the Bond
(22) Paint Twp #2 - Interest rate is 1% for the remaining life of the Bond
(23) Fairview Water Main Extension - Interest rate is 1.356% for the first 5 years, 1.985% June 2022 for remaining 5 years
(24) Debt assumed as part of Scranton Sewer acquisition
(25) Washington County Main Extension Project - Interest rate is 1.439% until Oct 2021 - 2.027% for the remaining term
(26) Unsecured borrowing at a coupon rate of 2.80% for 10 years
(27) Unsecured borrowing at a coupon rate of 3.45% for 30 years
(28) Issuance costs include make whole premium of $1.2M
(29) New unsecured borrowing at a coupon rate of 3.25% for 30 years
(30) New projected unsecured borrowing at a coupon rate of 4.45% for 10 years
(31) New unsecured borrowing at a coupon rate of 4.20% for 26 years
(32) New unsecured borrowing at a coupon rate of 5.05% for 15 years
(33) New unsecured borrowing at a coupon rate of 5.06% for 15 years
(34) New unsecured borrowing at a coupon rate of 4.20% for 15 years
(35) New unsecured borrowing at a coupon rate of 5.06% for 15 years
(36) New unsecured borrowing at a coupon rate of 4.75% for 15 years
(37) New unsecured borrowing at a coupon rate of 5.14% for 17 years

Notes to Debt Schedule

(1) Re-issuance 12/21/12 from Parent at a coupon rate of 4.30% for 30 years
(2) New unsecured borrowing at a coupon rate of 4.30% for 30 years
(3) Issuances costs included make whole premium of $10M
(4) Issuances costs included make whole premium of $7.2M
(5) Refinanced June 2019 at a lower rate for the remaining term of the bond
(6) Refinanced Dec 2019 at a lower rate for the remaining term of the bond
(7) Farmington Twp., Interest rate 1.387% for first 70 months and 2.774% (07/2009) for remainder
(8) Sandy Ridge, Interest rate 1.000% for first 60 months and 1.156% (07/2010) for remainder
(9) Sligo/Shippenville, Interest rate 1.385% for first 86 months and 2.763% (06/2013) for remainder
(10) Ellwood/Butler Interconnect, Interest rate 1.387% for first 74 months and 2.774% (08/2009) for remainder
(11) Mahoning & Union Twp, Interest rate 1.305% for first 82 months and 2.432% (10/2009) for remainder
(12) Hanover & Collier 1.274% first 2009 - 2014 and 2.547% starting Oct 2014
(13) Mount Pleasant Water System Extension 1.559% first 2011 - 2016 and 2.69% starting March 2016
(14) Rock Run WTP 2.414% first 2011 - 2016 and 3.117% starting Dec 2017
(15) Silver Spring Clearwell 2.376% first 2012 - 2016 and 3.098% starting Jan 2017
(16) Wallaceton Municipal Authority 1.00% for 30 years starting March 2012
(17) Pittsburgh Meter Improvements 1.799% first 2012 - 2017 and 2.81% starting April 2017
(18) Pittsburgh Meter Improvement Project Phase II 1.559% first 60 months and 2.69% starting May 2016
(19) Southwest PA Pipeline Exts Phase II - Interest 1.591% first 5 years - 2.196% starting April 2018
(20) Clarion WW Act 537 Implementation Project - Interest rate is 1.0% for the life of the loan
(21) Paint Twp #1 - Interest rate is 1% for the remaining life of the Bond
(22) Paint Twp #2 - Interest rate is 1% for the remaining life of the Bond
(23) Fairview Water Main Extension - Interest rate is 1.356% for the first 5 years, 1.985% June 2022 for remaining 5 years
(24) Debt assumed as part of Scranton Sewer acquisition
(25) Washington County Main Extension Project - Interest rate is 1.439% until Oct 2021 - 2.027% for the remaining term
(26) Unsecured borrowing at a coupon rate of 2.80% for 10 years
(27) Unsecured borrowing at a coupon rate of 3.45% for 30 years
(28) Issuance costs include make whole premium of $1.2M
(29) New unsecured borrowing at a coupon rate of 3.25% for 30 years
(30) New projected unsecured borrowing at a coupon rate of 4.45% for 10 years
(31) New unsecured borrowing at a coupon rate of 4.20% for 26 years
(32) New unsecured borrowing at a coupon rate of 5.05% for 15 years
(33) New unsecured borrowing at a coupon rate of 5.06% for 15 years
(34) New unsecured borrowing at a coupon rate of 4.20% for 15 years
(35) New unsecured borrowing at a coupon rate of 5.06% for 15 years
(36) New unsecured borrowing at a coupon rate of 4.75% for 15 years
(37) New unsecured borrowing at a coupon rate of 5.14% for 17 years
(38) New unsecured borrowing at a coupon rate of 3.625% for 3 years
(39) New unsecured borrowing at a coupon rate of 5.247% for 10 years
(40) New unsecured borrowing at a coupon rate of 5.646% for 30 years

I. INTRODUCTION

Q. Are you the same Ann E. Bulkley who previously submitted direct testimony in this proceeding?

A. Yes. I previously submitted direct testimony in this proceeding,[1] and am submitting this rebuttal testimony before the Pennsylvania Public Utility Commission ("Commission") on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company"), a wholly-owned subsidiary of American Water Works Company, Inc. ("AWK").

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to the issues raised in the direct testimonies of Mr. D.C. Patel on behalf of the Bureau of Investigation and Enforcement ("I&E"),[2] Mr. David Garrett on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"),[3] Mr. Kevin C. Higgins on behalf of the Pennsylvania Office of Small Business Advocate[4] and Ms. Billie S. LaConte on

[1] Pennsylvania Public Utility Commission, Docket Nos. R-2023-3043189 and R-2023-3043190, Direct Testimony of Ann E. Bulkley, November 8, 2023 ("Bulkley Direct Testimony").

[2] Pennsylvania Public Utility Commission, Docket Nos. R-2023-3043189 and R-2023-3043190, Direct Testimony of D. C. Patel, February 1, 2024 ("Patel Direct Testimony").

[3] Pennsylvania Public Utility Commission, Docket Nos. R-2023-3043189 and R-2023-3043190, Direct Testimony of David J. Garrett, February 1, 2024 ("Garrett Direct Testimony").

[4] Pennsylvania Public Utility Commission, Docket Nos. R-2023-3043189 and R-2023-3043190, Direct Testimony of Kevin C. Higgins, February 1, 2024 ("Higgins Direct Testimony").

behalf of the Pennsylvania-American Water Large Users Group[5] as they relate to the just and reasonable ROE and the appropriate capital structure for PAWC.

I have not attempted to respond to every position offered by these witnesses, and the fact that I may not have responded to any particular position or statement made does not indicate my agreement with that position or statement.

Q. Have you prepared any exhibits to support your analysis and recommendations?

A. Yes. My recommendations are supported by the data presented in Exhibit No. 13-R, Schedules 1 through 14, which have been prepared by me or under my direction.

Q. Have you updated the cost of equity analyses you presented in your direct testimony to reflect current market conditions?

A. Yes. As discussed in more detail herein, I have updated my cost of equity analyses based on market data through January 31, 2024. These results provide additional support for my ROE recommendation of 10.95 percent. I continue to base my recommendation not only on the results of multiple cost of equity models, but also other factors, including capital market conditions, the relative business and financial risk of PAWC as compared to the proxy group, and the Company's management performance.

[5] Pennsylvania Public Utility Commission, Docket Nos. R-2023-3043189 and R-2023-3043190, Direct Testimony and Exhibits of Billie S. LaConte, February 1, 2024 ("LaConte Direct Testimony").

Q. How is the remainder of your rebuttal testimony organized?

A. The remainder of my rebuttal testimony is organized as follows:

- Section II provides a summary and overview of my Rebuttal Testimony and the important factors to be considered in establishing the ROE for PAWC.
- Section III provides the update to my cost of equity analyses based on market data as of January 31, 2024.
- Section IV discusses the changes in capital market conditions since my direct testimony, their effect on the cost of equity, and the comparable return.
- Section V provides my response to Mr. Patel's cost of equity and capital structure analyses and recommendations.
- Section VI provides my response to Mr. Garrett's cost of equity and capital structure analyses and recommendations.
- Section VII provides my response to the positions of Mr. Patel, Mr. Garrett, Ms. LaConte, and Mr. Higgins regarding the Company's business and regulatory risks, including the Company's proposed revenue decoupling mechanism ("RDM") and Environmental Compliance Infrastructure Charge ("ECIC").
- Section VIII provides my response to the positions of Mr. Patel and Mr. Garrett regarding consideration of the Company's management performance in establishing the authorized ROE in this proceeding.

II. SUMMARY AND OVERVIEW

Q. What analyses do Mr. Patel and Mr. Garrett conduct, and what ROEs and capital structures are each recommending for the Company in this proceeding?

A. Figure 1 summarizes the results of the cost of equity analyses presented by Mr. Patel and Mr. Garrett in this proceeding and their final recommendations. Specifically, Mr. Patel's ROE recommendation of 8.45 percent is based solely on

the result of a single DCF analysis.[6] Mr. Garrett states that his ROE recommendation of 9.10 percent represents the average of his CAPM result of 8.7 percent and his DCF result of 9.4 percent.[7] Mr. Garrett also states that his ROE recommendation is contingent on his proposed capital structure being approved by the Commission, which is 51 percent equity and 49 percent debt, but if the Company's proposed capital structure is approved, he recommends an ROE of 8.70 percent. Mr. Higgins utilizes a "proxy" ROE of the Commission's most recently approved ROE for the Distribution System Improvement Charge ("DSIC") of 9.65 percent, and, acknowledges that this is not based on any cost of equity analysis he performed and is not intended to supplant the Commission's consideration of the traditional cost of equity analyses.[8]

Figure 1: Recommended ROE and Capital Structure

	Witness Patel (I&E)	**Witness Garrett (OCA)**
Constant Growth DCF	8.45%	6.3% - 9.4%
CAPM	10.44%	8.70%
Recommended ROE	8.45%	9.10%
Recommended Equity Ratio	Water: 55.99% Wastewater: 52.87%	51%
Recommended ROE – at Company's Proposed Capital Structure	8.45%	8.70%

6 Patel Direct Testimony, at 31.

7 Garrett Direct Testimony, at 50.

8 Higgins Direct Testimony, at 17.

Ms. LaConte contends that the Company's proposed ROE is excessive but she did not conduct any cost analysis for a proxy group relative to the Company for the current time period. Instead, Ms. LaConte references some recently authorized ROEs in the US, the most recently authorized ROE by the Commission of 10.0 percent for Aqua Pennsylvania Inc. and Aqua Pennsylvania Wastewater, Inc. in 2022, and the proxy ROE used in Pennsylvania for utilities' quarterly Distribution System Improvement Charges ("DSIC"), and contends that the Commission should approve an ROE "at the lower end of the Commission's deemed range of reasonableness."[9]

Q. What factors should be considered in evaluating the results of ROE models and establishing the authorized ROE?

A. The primary factors that should be considered are: (1) the importance of investors' actual return requirements and the critical role of judgment in selecting the appropriate ROE; (2) the importance of providing a return that is comparable to returns on alternative investments with commensurate risk; (3) the need for a return that supports a utility's ability to attract needed capital at reasonable terms; (4) the

[9] *Id.*, at 5. As the Commission has previously noted, "Further, we note the DSIC ROE is unlike a ROE set in a base rate proceeding. The DSIC ROE is determined by the Commission on a quarterly basis and is set per industry. As such, it is not company specific." (*Pa. PUC v. Aqua Pennsylvania, Inc*., Docket Nos. R-2021-3027385 & R-2021-3027386, at 177 (Order entered May 16, 2022) ("*Aqua*")).

effect of current and expected capital market conditions; and (5) achieving a reasonable balance between the interests of investors and customers.

Q. What are your key conclusions and recommendations regarding the appropriate ROE and capital structure for PAWC?

A. Nothing in the testimony of the witnesses that I address herein has caused me to change my recommendations Based on my review of their direct testimonies, my key conclusions regarding a reasonable ROE and capital structure for the Company in this proceeding are as follows:

ROE

- Updating the cost of equity estimation models that I relied upon in my direct testimony to reflect the most current data demonstrates that an ROE range of 10.00 percent to 11.25 percent remains reasonable. Considering these updated results, current and prospective capital market conditions, PAWC's specific business risks, and the company's management performance, I continue to recommend an ROE of 10.95 percent for PAWC in this proceeding.
- Mr. Patel's recommended ROE of 8.45 percent is unreasonable given that it is:
    - below any return that has been authorized for a water utility in the United States since at least 2010 as covered by Regulatory Research Associates;
    - inconsistent with the fact that the cost of equity has increased significantly in response to the increase in interest rates since 2022; and
    - inconsistent with recent ROE authorizations by the Commission for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. ("Aqua") and Columbia Water Company ("Columbia Water") of

10.00 percent (inclusive of a 25 basis point adder for management effectiveness) and 9.75 percent, respectively. [10]

- Mr. Patel's CAPM result is approximately 200 basis points higher than his DCF result, yet he exclusively relies on his DCF result, which is also inconsistent with the *Aqua* and *Columbia Water* decisions.
- Current and prospective market conditions are similar to the conditions identified by the Commission in *Aqua* and *Columbia Water*.
    - Interest rates and capital costs have increased and remain elevated, and inflation remains above the Federal Reserve's target level.
    - Current market conditions suggest that interest rates will likely remain higher than was anticipated in December 2023 given the recent macroeconomic data demonstrating strength in the overall economy and the labor market, both of which have exceeded expectations.
    - Mr. Patel's view of market conditions, particularly an alleged "commitment" by the Federal Reserve to reduce interest rates, incorrectly summarizes the Federal Reserve's position regarding future interest rate policy and is also inconsistent with recent macroeconomic data.
    - Mr. Garrett fails to consider the effect of current market conditions on the traditional cost of equity estimation models and the current cost of equity.
- Reasonable adjustments to Mr. Patel's cost of equity analyses indicates a significantly higher result:
    - A conservative 50/50 weighting of the DCF and CAPM analyses and reasonable adjustments to those analyses, while retaining his small water utility proxy group, results in an ROE estimate for PAWC of 10.02 percent.
    - The same 50/50 weighting of the DCF and CAPM analyses and reasonable adjustments to those analyses, but reasonably relying on a larger proxy group of distribution utilities comparable to the Company results in an ROE estimate of 10.53 percent.
- Mr. Garrett's ROE recommendation of 9.1 percent (assuming his recommended capital structure) or 8.7 percent (assuming the Company's proposed capital structure) are both also directionally inconsistent with

[10] *Aqua*, at 177; *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, at 108 (Order Entered January 18, 2024) ("*Columbia Water*").

current and prospective market conditions and fail to consider the specific factors that the Commission considered in *Columbia Water* just one month ago – higher inflation, elevated interest rates, and higher equity costs.

- Making no modifications to Mr. Garrett's DCF result (i.e., 9.4 percent), and only one change to Mr. Garrett's CAPM assumptions by relying on Mr. Patel's market risk premium,(i.e., resulting in a cost of equity of 10.60 percent), averaging each model result as Mr. Garret has done to establish his recommendation, would result in an ROE calculation of 10.00 percent.

Business and Regulatory Risks

- None of the witnesses in this proceeding have presented reasonable evidence to support their conclusions that the authorized ROE for the Company should be reduced if the Commission approves the proposed RDM or ECIC.
- The appropriate comparison when considering how business risks affect the ROE for PAWC is a comparison to the proxy group companies – not simply suggesting that approval of the proposed RDM or ECIC would reduce risk for the Company alone.
- Numerous regulatory commissions have rejected a reduction in the authorized ROE as a result of the approval of revenue decoupling mechanisms if such mechanisms were prevalent among the proxy companies being used to estimate the ROE.

Management Performance

- Consideration of the Company's management performance in determining where within the range of results that the Company's ROE should fall is reasonable and consistent with the Commission's policy and prior precedent.
- Neither Mr. Patel nor Mr. Garrett have provided any basis for deviating from the Commission's policy and prior precedent.

Capital Structure

- Mr. Patel supports the Company's proposed capital structures.
- The Company's proposed capital structures are reasonable based on a comparison with the actual capital structures of the utility operating companies owned by the proxy group companies.
- There are multiple problems with Mr. Garrett's capital structure analysis.

- First, he inappropriately compares the Company's proposed capital structure to that of the holding companies of the proxy group, which includes corporate level debt that is not a part of the regulated capital structure of the operating subsidiaries, instead of the operating utilities of the holding companies.
- Second, even though Mr. Garrett inappropriately compares the Company's proposed capital structure to the holding companies in the proxy group, he incorrectly does so to my proxy group and not his own.
- Lastly, Mr. Garrett incorrectly applies the Hamada equation to my proxy group, which causes him to incorrectly conclude that his CAPM result should be lower if the Commission approves the Company's proposed capital structure.

III. UPDATED COST OF EQUITY RESULTS

Q. Have you updated your cost of equity analyses?

A. Yes. I have updated the results of the cost of equity analyses based on market data through January 31, 2024, using the same analyses as in my direct testimony. Figure 2 summarizes the results of my updated cost of equity analyses. The results of the constant growth DCF analyses are slightly higher and the CAPM and ECAPM results are slightly lower than as in my direct testimony,[11] and these updated results are generally consistent with the results presented in my direct testimony. Considering the updated cost of equity model results, the current and projected market conditions discussed later herein, the relative risks of the Company as discussed in my direct testimony, and the Company's excellent management performance as discussed in the direct testimony of PAWC witness

[11] Bulkley Direct Testimony, at 66.

Ms. Ashley Everette, the ROE range of 10.00 percent to 11.25 percent that I established in my direct testimony, and my recommended ROE of 10.95 percent, are reasonable for setting rates in this proceeding.

Figure 2: Summary of Updated Cost of Equity Results[12]

	Minimum Growth Rate	Average Growth Rate	Maximum Growth Rate
Constant Growth DCF			
Mean Results:			
30-Day Average	8.97%	10.07%	11.36%

Long-term Avg. *Value Line* Beta	10.65%	10.64%	10.64%

[12] *See* Petitioner's Exhibit 13-R, Schedules 1-5. Excludes results for Middlesex Water Company in the DCF analyses since the results do not reflect any equity risk premium.

Q. Have you updated any other analyses that were presented in your direct testimony?

A. Yes. I have updated Exhibit No. 13-A, Schedule 13 from my direct testimony to reflect a change in the wastewater LTD financing rate. This rate changed from 2.62 percent to 2.67 percent as of June 30, 2025. This updated schedule is provided as Exhibit 13-R, Schedule 14.

IV. CAPITAL MARKET CONDITIONS

Q. Has the Commission previously considered capital market conditions in establishing the ROE for a utility?

A. Yes. In *Aqua*, the Commission concluded that I&E's DCF result was likely understating the cost of equity given increased inflation and expected increases in interest rates and capital costs and, therefore, placed weight on the results of the CAPM to set the range of reasonableness and authorized ROE.[13] Most recently, in *Columbia Water*, the Commission also utilized both the DCF and CAPM results to establish the authorized ROE, stating that it considered increasing inflation, interest rates, and capital costs in its determination.[14] As discussed further in this section of my rebuttal testimony, given that current market conditions are still characterized by high interest rates and capital costs, it is important that the Commission continue

[13] *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, p. 177 (Order entered May 16, 2022).

[14] *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, at 108 (Order Entered January 18, 2024).

to place weight on the results of the CAPM when determining the authorized ROE for PAWC.

Q. What is Mr. Patel's assessment of current market conditions?

A. Mr. Patel's summary of market conditions appears to rely exclusively on the Federal Reserve's Summary of Economic Projections ("SEP") published on December 13, 2023. Mr. Patel suggests that the "Federal Reserve indicated that it would lower the Fed-funds rate to 4.60% by the end of 2024."[15] In addition, Mr. Patel states that in light of the Federal Reserves "commitment" to an interest rate reduction, he does not believe it is important to consider the underperformance of the utilities sector in the DCF model.[16]

Q. Has Mr. Patel correctly summarized the Federal Reserve's position on interest rates?

A. No. The Federal Reserve has indicated that it expects inflation will remain elevated above its target level until 2026 and that the extent to which it maintains the restrictive monetary policy will depend on market indicators going forward. For example, Federal Reserve Chair Powell at the Federal Open Market Committee ("FOMC") meeting on December 13, 2023 observed that while inflation is off of

[15] Patel Direct Testimony, at 40.

[16] *Id*., at 41.

its recent highs, it remains too high and noted that further policy firming is possible based on the data:

> Today, we decided to leave our policy interest rate unchanged and to continue to reduce our securities holdings. Given how far we have come, along with the uncertainties and risks that we face, the Committee is proceeding carefully. We will make decisions about the extent of any additional policy firming and how long policy will remain restrictive based on the totality of the incoming data, the evolving outlook, and the balance of risks.[17]

Chair Powell reiterated that the FOMC was committed to bringing inflation down to the 2.0 percent target level, and that while the easing of inflation has been good news, it is currently projected to take until 2026 to reach the Federal Reserve's target of 2.0 percent:

> Inflation has eased over the past year but remains above our longer-run goal of 2 percent. Based on the Consumer Price Index and other data, we estimate that total PCE [Personal Consumption Expenditures] prices rose 2.6 percent over the 12 months ending in November; and that, excluding the volatile food and energy categories, core PCE prices rose 3.1 percent. The lower inflation readings over the past several months are welcome, but we will need to see further evidence to build confidence that inflation is moving down sustainably toward our goal. Longer-term inflation expectations appear to remain well anchored, as reflected in a broad range of surveys of households, businesses, and forecasters, as well as measures from financial markets. As is evident from the SEP [Summary of Economic Projections], we anticipate that the process of getting inflation all the way to 2 percent will take some time. The

[17] Federal Reserve, Transcript of Chair Powell's Press Conference, December 13, 2023, at 1.

> median projection in the SEP is 2.8 percent this year, falls to 2.4 percent next year, and reaches 2 percent in 2026.[18]

Chair Powell also noted that the FOMC members project a gradual decline in the federal funds rates over time, but remain cautious and leave open the possibility of further monetary policy tightening as required:

> While we believe that our policy rate is likely at or near its peak for this tightening cycle, the economy has surprised forecasters in many ways since the pandemic, and ongoing progress toward our 2 percent inflation objective is not assured. We are prepared to tighten policy further if appropriate. We are committed to achieving a stance of monetary policy that is sufficiently restrictive to bring inflation sustainably down to 2 percent over time, and to keeping policy restrictive until we are confident that inflation is on a path to that objective.
>
> In our SEP, FOMC participants wrote down their individual assessments of an appropriate path for the federal funds rate based on what each participant judges to be the most likely scenario going forward. While participants do not view it as likely to be appropriate to raise interest rates further, neither do they want to take the possibility off the table. If the economy evolves as projected, the median participant projects that the appropriate level of the federal funds rate will be 4.6 percent at the end of 2024, 3.6 percent at the end of 2025, and 2.9 percent at the end of 2026, still above the median longer-term rate. These projections are not a Committee decision or plan; if the economy does not evolve as projected, the path for policy will adjust as appropriate to foster our maximum employment and price stability goals.[19]

On January 31, 2024, the FOMC concluded their meeting with a unanimous decision to leave the federal funds rate unchanged. In his speech following that

[18] *Id*., at 2-3; clarification added.

[19] *Id*., at 3-4.

meeting, Chair Powell indicated that inflation was still too high and added that a March cut is "not the most likely" or "base case" scenario.[20] Therefore, it is clear that the timing and nature of any interest rate cuts are speculative at this time.

Q. Have there been economic indicators published since the FOMC published the SEP on December 13, 2023 that indicate strength in the US economy?

A. Yes. Since December 13, 2023, the following data has been released demonstrating the unexpected strength in the U.S. economy:

- GDP increased in the fourth quarter of 2023 by 3.3 percent, which exceeded the expectation of 2.0 percent. This followed an increase of 4.9 percent in the third quarter of the year.
- U.S. employers added 353,000 jobs in January, far exceeding forecasts. Further, revised 2023 data indicated that 2023 was stronger than previously reported.
- The unemployment rate remained at 3.7 percent, and has been below 4.0 percent for 24 months.
- Average hourly earnings increased 0.6 percent in January 2024, up 4.5 percent year-over-year.

Q. What has been the market's expectation about interest rate cuts since the recent economic data you referenced has been reported?

A. The market has recognized the strength in the economy and the labor market and has tempered its expectations that the FOMC will decrease interest rates in the first quarter of this year. The CME Group, which publishes a "FedWatch" probability

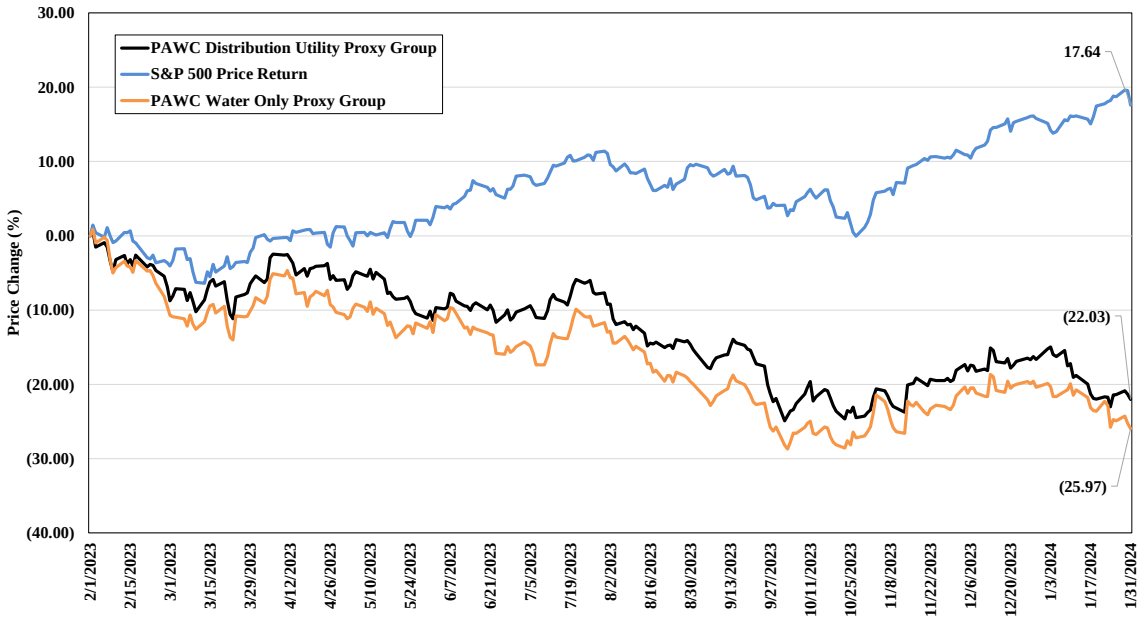
[20] Federal Reserve, Transcript of Chair Powell's Press Conference, January 31, 2024, at 16.

chart of FOMC activity, is currently reporting less than a 20 percent probability that the FOMC will reduce rates in March.[21]

Q. Mr. Patel disagrees that the share prices of utilities are likely to continue to decline due to higher interest rates.[22] What is your response?

A. I disagree with Mr. Patel. As shown in Figure 3, the companies in Mr. Patel's water utility proxy group and the companies in my distribution utility proxy group have both significantly underperformed the broader market over the past year as interest rates have increased.

Figure 3: Share Price Performance of Water Utility Proxy Group and Distribution Utility Proxy Group Performance v. S&P 500



[21] https://www.cmegroup.com/markets/interest-rates/cme-fedwatch-tool.htm; accessed February 8, 2023.

[22] Patel Direct Testimony, at 40.

Q. What are your conclusions about the effect of current market conditions on the investor-required ROE?

A. Current market conditions suggest that interest rates will likely remain higher than was anticipated in December 2023 given the recent macroeconomic data demonstrates strength in the overall economy and the labor market, both of which have exceeded expectations. These factors suggest that the cost of equity for utilities will also remain high. Therefore, consistent with the *Aqua* and *Columbia* decisions, the Commission should again determine the authorized ROE for PAWC using both the DCF and CAPM to ensure the return that the authorized ROE is reflective of market conditions expected during the time period rates will be in effect.

V. RESPONSE TO MR. PATEL'S COST OF EQUITY ANALYSES

Q. What is Mr. Patel's ROE recommendation in this proceeding?

A. As noted previously, Mr. Patel recommends an ROE for PAWC of 8.45 percent based on the mean result of his single constant growth DCF analysis. Mr. Patel's CAPM analysis, which is based on forward-looking assumptions for the risk-free rate and market risk premium, produces a mean result of 10.44 percent; however, he gives no weight to his CAPM result. Mr. Patel indicates that the results of his

CAPM are used as a comparison to the DCF results, but "not for recommendation purposes."[23]

Mr. Patel does not consider any company-specific risk factors or PAWC's superior management performance in setting his recommended ROE. Rather, he contends that PAWC faces the same risk from capital expenditures and water quality and environmental regulations as other proxy group companies, and that PAWC's proposed ROE adder for management performance should be disallowed because: (1) PAWC is already rewarded through higher net income if the Company is able to operate more efficiently; (2) the Company is already fairly compensated for its acquisitions of nonviable water and wastewater systems; and (3) the financial impact to ratepayers of the proposed 25 basis point adjustment.[24]

Q. Is Mr. Patel's ROE recommendation consistent with the Commission's recent *Aqua* and *Columbia Water* decisions in which it has considered the results of multiple cost of equity models?

A. No. Mr. Patel acknowledges – but disregards – the Commission's decisions in the recent Aqua and Columbia Water rate proceedings. In both of those cases, I&E's CAPM result was higher than its DCF result, and I&E recommended an ROE based solely on the DCF result, yet the Commission recognized the need to consider the

[23] *Id*., at 35.

[24] *Id*., at 69-82.

range of results set by multiple cost of equity models, and in fact set the ROE above the mean of the range in both cases.[25] As discussed, the current and projected market conditions are consistent with the circumstances in those proceedings with elevated interest rates, inflation higher than the Federal Reserve's target, and large capital expenditure requirements. Therefore, consistent with the Commission's recent decisions, Mr. Patel should have relied on both his DCF and CAPM result for purposes of his recommended ROE, and by failing to do so, has understated the cost of equity for PAWC.

A. Proxy Group Composition

Q. What is the composition of Mr. Patel's proxy group for purposes of his cost of equity analyses?

A. Mr. Patel's proxy group is comprised of five water utilities selected from the *Value Line* Water Utility industry, of which four are also in my proxy group.

Q. Do you agree with Mr. Patel including AWK in the proxy group?

A. No. As I discussed in my direct testimony, it is not appropriate to include AWK in the proxy group used to determine the authorized ROE for PAWC because of the circular logic that would occur.[26] For example, in the current proceeding, we are

[25] *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, at 147, 178 (Order entered May 16, 2022); *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, at 108 (Order entered January 18, 2024).

[26] Bulkley Direct Testimony, at 26.

determining the ROE for PAWC, which, in turn, contributes to the ROE of its parent company, AWK. If AWK is included in the proxy group, AWK is being used to determine its own ROE. Therefore, to avoid the circular logic, AWK should be excluded from the proxy group.

Q. Do you agree with Mr. Patel's exclusion of Essential Utilities ("Essential") from the proxy group?

A. No. It appears that Mr. Patel's decision to exclude Essential from the proxy group is based on his revenue screening criterion, specifically that 50 percent of a company's revenue should be from water operations. However, operating income, not revenue, more appropriately reflects the risk profile of the operations. This is particularly the case for Essential. As shown in Figure 4, as well as in Exhibit 13-R, Schedule 6, Essential has historically derived more than 50 percent of its revenue and operating income from water utility operations. However in 2022, the company experienced natural gas costs that were $237.6 million higher than in 2021 as a result of unusually high gas prices. This increase in the utility's gas costs affected the percentage of water versus natural gas operations on a revenue basis, but did not affect operating income since natural gas costs are recovered as a pass through directly to customers. Therefore, while the 2022 data on a revenue basis might suggest that Essential should be excluded from the proxy group, it is clear that this

company meets Mr. Patel's screening criteria on an operating income basis and should be included.

Further, when the revenue is adjusted to remove the unusually high gas costs, it is clear that, even on a revenue basis, Essential would meet Mr. Patel's screening criteria. Therefore, it is appropriate to include Essential in the proxy group for PAWC.

Figure 4: Essential Utilities' Revenue and Operating Income, 2020-2022[27]

		Total	Regulated Water	Natural Gas
Revenue (%)	2022	100.00%	48.64%	51.36%
	2021	100.00%	53.27%	46.73%
	2020	100.00%	64.95%	35.05%
	Average	100.00%	55.62%	44.38%
Operating Income (%)	2022	100.00%	67.87%	32.13%
	2021	100.00%	68.35%	31.65%
	2020	100.00%	87.54%	12.46%
	Average	100.00%	74.59%	25.41%
Revenue adjusted for higher gas costs [1]	2022	$ 1,988,715.00	$ 1,082,972.00	$ 905,743.00
Revenue % adjusted for higher gas costs			54.46%	45.54%

Q. Mr. Patel disagrees with your decision to include gas distribution companies and electric companies in the proxy group for PAWC.[28] What is your response?

A. As discussed in my direct testimony, due to consolidation in the water industry, there is only a small group of water utilities that can be included in the proxy group. The smaller the size of the proxy group, the greater the chance the proxy group average can be affected by the results of one company. As I discuss in more detail later herein, due to the small size of Mr. Patel's proxy group, the mean DCF result is particularly affected by the low results of just one company, Middlesex Water Company ("Middlesex Water"). As also discussed in my direct testimony, similar

[27] Essential Utilities 2022 SEC Form 10-K, p. 52 reporting that Operating Revenues in 2022 were higher by $237,619,000 as a result of higher gas costs.

[28] Patel Direct Testimony, at 12.

to the water utilities, the electric and natural gas utilities included in my proxy group generate a substantial portion of their operating income from regulated utility distribution operations.[29] Therefore, there are significant similarities between the business and operating risks of the water, electric, and natural gas distribution utilities included in my proxy group.

Q. Have other regulatory commissions relied on proxy groups that include natural gas and electric distribution utilities?

A. Yes. Several regulatory commissions such as the Massachusetts Department of Public Utilities, the Florida Public Service Commission, and the Illinois Commerce Commission have considered the results of a proxy group that includes natural gas companies when determining the authorized ROE for water and wastewater utilities.[30]

[29] Bulkley Direct Testimony, at 27.

[30] Massachusetts Department of Public Utilities, Docket No. 17-90, Petition of Aquarion Water Company of Massachusetts, Inc., pursuant to G.L. c. 164, § 94, and G.L. c. 165, § 2, for Approval of a General Rate Increase as set forth in M.D.P.U. No. 3., October 31, 2018, p. 286-287. *See also*, Docket No. 20180006-WS, In re. Water and wastewater industry annual reestablishment of authorized range of return on common equity for water and wastewater utilities pursuant to Section 367.081(4)(f),F.S., Order No. PSC-2018-0327-PAA-WS, at 7. *See also*, Illinois Commerce Commission, Illinois-American Water Company Proposed Rate increases for Water and Sewer Service (tariffs filed February 10, 2022), Docket No. 22-0210, Order, December 15, 2022, at 102.

Q. Have the stock prices of water utilities and electric and natural gas distribution companies responded to market conditions in a similar manner?

A. Yes. As shown previously in Figure 3, both my distribution utility proxy group and Mr. Patel's water utility proxy group have significantly underperformed the market since January 2023. As shown therein, the change in total return for these two proxy groups have tracked very closely over the past year as interest rates have increased, demonstrating that the return on the water, electric and natural gas utility distribution companies are inversely correlated to interest rates, providing further support for the proxy group I rely on for my analyses.

Q. Do you have any other observations regarding the inclusion of electric and natural gas utilities in your proxy group?

A. Yes. While consolidation has occurred among water utilities, there have been acquisitions in recent years that have involved the merger of a water utility with a natural gas utility or an electric utility. One of the reasons cited for the purpose of Northwest Natural Gas Company's ("NW Natural") acquisition of Salmon Valley Water Company and Falls Water Company was the similarity in operating characteristics and risk profiles of natural gas and water utilities. In an interview regarding the transaction, the CEO of NW Natural noted:

> While these transactions and the companies' continuing operations are not expected to have a material impact on NW Natural's financial results, we view these acquisitions as the first step in a broader strategy. The water utility sector has a risk profile and

> business model that is similar to our core gas utility. There are also substantial investment opportunities over the long term, as water infrastructure needs to be replaced and upgraded to serve growing communities with safe, clean drinking water.[31]

Similarly, Aqua America completed the acquisition of PNG Companies, LLC, a natural gas utility operating in Pennsylvania, West Virginia and Kentucky, forming Essential. In discussing the acquisition, Essential's CEO noted that "both gas and water utilities are underground utilities, and that the systems share a common burden of being old and in need of replacement."[32]

These statements from the utilities themselves underscore the similar operating characteristics and risk profiles of these utility distribution industries, which have been a catalyst for consolidation.

Q. What is your conclusion with regard to the proxy group for PAWC?

A. I continue to support the use of the screening criteria outlined in my direct testimony to develop the proxy group for PAWC, which includes Essential, as well as electric and natural gas distribution utilities. For the reasons discussed, my screening criteria results in a proxy group that more appropriately balances the goal of establishing a sufficiently large proxy group, while maintaining a proxy group that is generally comparable to the risk profile and operating characteristics of

[31] Northwest Natural Gas Company Press Release, "NW Natural Expands into Regulated Water Utility Sector with Acquisitions in Oregon and Idaho," December 21, 2017.

[32] Margaret J. Krauss, "Aqua America Will Buy Peoples Gas For $4.3 Billion," 90.5 WESA (NPR), January 16, 2020, www.wesa.fm/post/aqua-america-will-buy-peoples-gas-43-billion.

PAWC. Relying on a smaller proxy group, as Mr. Patel has done, increased the relative weight of the results for each proxy company and undermines the benefit of relying on a proxy group. In the case of Mr. Patel's analysis, this results in placing a 20 percent weight on an ROE estimate for Middlesex Water that is at or below the current yield on utility bond indexes, and therefore assumes a zero or negative equity risk premium.[33] The inclusion of a ROE estimate that does not recognize the equity risk premium is unreasonable, and placing such significant weight on that estimate, through the use of a small proxy group results in a downward bias in his cost of equity estimate.

B. Constant Growth DCF Analysis

Q. What is the difference between your application of the constant growth DCF model and Mr. Patel's specification of this model?

A. Mr. Patel's application of the constant growth DCF model is generally similar to the way in which I have performed my DCF analysis. Mr. Patel has relied on spot stock prices, projected dividends for 2024, and analysts' earnings per share ("EPS") growth rates. The primary difference between our respective specifications of the DCF model is the range that I establish using the low and high growth rate assumptions and the level of reliance on the results of the DCF model. Mr. Patel

[33] As of January 31, 2024, the yields on the Moody's A and Baa rated utility bond indexes were in the range of 5.42 percent to 6.10 percent using 30, 90, and 180 day averages.

has placed sole reliance on the result from a single scenario of the DCF model without considering the reasonableness of the assumptions used in the model and the reasonableness of the individual company-specific results. While Mr. Patel suggests that the CAPM should be used for comparison purposes, he then gives the CAPM results no consideration simply because that the model produces results that are 199 basis points higher than the result of I&E's DCF model. It is not reasonable for Mr. Patel determine that the CAPM cannot be used simply by reference to the result of one other model. At best, it is reasonable to note the differences, but the simple fact that there is a difference between the numbers does not provide a basis for which estimate better reflects the cost of equity; indeed, as Mr. Patel acknowledges, the difference between the I&E DCF and CAPM results in *Columbia Water* was greater than here (325 basis points compared to 199 basis points), and the Commission relied on the CAPM in determining the ROE for *Columbia Water*. Furthermore, Mr. Patel does not consider how his recommendation compares with recently authorized ROEs established by this Commission or the range of returns set by other regulatory jurisdictions. In contrast, I have considered whether the assumptions used in the DCF model are

sustainable and whether the model results for each company meet the *Hope* and *Bluefield* standards for a reasonable return.[34]

1. Reasonableness of Mr. Patel's Constant Growth DCF Analysis

Q. Are the cost of equity estimates produced by Mr. Patel's constant growth DCF model reasonable compared to the returns available to investors in companies with similar risk?

A. No. Since January 2019, there have been no comparable ROEs authorized for either a water or natural gas utility that were equal to or less than 8.45 percent. Further, in January 2024, as Mr. Patel was preparing testimony for this proceeding, the Commission issued its decision in the Columbia Water proceeding, authorizing an ROE of 9.75 percent. In 2022, the Commission also authorized an ROE for Aqua of 10.00 percent, which included a 25 basis point adjustment for management performance. Mr. Patel summarizes these decisions, but simply disregards them (noting that, with respect to *Columbia Water*, he "respectfully disagree[]s" with the Commission's decision). .[35] The *Hope* and *Bluefield* decisions require the authorized return to be just and reasonable, as well as comparable to other returns

[34] Federal Power Commission v. Hope Natural Gas Co., 320 U.S. 591 (1944) ("Hope"); Bluefield Waterworks & Improvement Co., v. Public Service Commission of West Virginia, 262 U.S. 679 (1923) ("Bluefield").

[35] Patel Direct Testimony, at 27.

available to investors in companies with similar risk. Mr. Patel's constant growth DCF results clearly violate this standard.

2. Application of the DCF Model to the Proxy Group

Q. Have you reviewed the ROE results for each of the companies in Mr. Patel's proxy group?

A. Yes. As shown in I&E Exhibit No. 2, Schedule 6, the result for Middlesex Water is 5.77 percent, which is only slightly greater than the 30-day average yield on the Moody's A-rated utility bonds of 5.56 percent, and is *less than* the 30-day average yield on the Moody's Baa-rated utility bonds of 5.81 percent.[36] Therefore, Middlesex Water's DCF result does not compensate investors for the added risk of an equity investment relative to a debt investment, and thus should be excluded in Mr. Patel's DCF model results. As I noted earlier, Mr. Patel has selected a proxy group of only 5 companies, including the parent company of PAWC, and therefore, the effect of Middlesex Water's unreasonably low DCF result is greater because of his reliance on only 5 proxy group companies as opposed to the larger proxy group of 11 proxy group companies that I selected to conduct my analysis.

[36] Yields are as of January 2, 2023, which appears to be the spot stock price for each of the proxy group companies used in Mr. Patel's DCF analysis as reflected in I&E Exhibit No. 2, Schedule 4.

Q. Is it appropriate to rely on the spot stock price in developing an ROE estimate?

A. No. While I agree with Mr. Patel that the cost of equity that is being set in this proceeding is forward-looking, the use of the price on a single day can be biased significantly by the volatility that exists in the market on any given day. Therefore, it is more appropriate to consider an average stock price such as is reflected in my DCF analysis as well as the DCF analysis conducted by Mr. Garrett.[37]

Q. Have you updated Mr. Patel's constant growth DCF to reflect the issues with his analysis that you have identified?

A. Yes. I have modified Mr. Patel's constant growth DCF analysis to:

- appropriately include Essential in the proxy group;
- rely on a 30-day average stock price in the calculation of the dividend yield;
- calculate the range of DCF results based on the full range of growth rate assumptions reported by Yahoo! Finance, *Zacks*, and *Value Line*; and,
- consider the results of the DCF model in the context of the yield on comparable utility bonds, recognizing that an equity risk premium is reasonable and appropriate, and eliminating results that do not provide an equity risk premium.

As shown in Exhibit No. 13-R, Schedule 7, based on these updates, Mr. Patel's mean constant growth DCF result would increase by 80 basis points from 8.45 percent to 9.21 percent. Further, considering the range of results, and in particular the higher end of the range, the DCF results demonstrate a cost of equity as high as

[37] Garrett Direct Testimony, Exhibit DJG-3.

10.58 percent. Further, considering the results of a distribution utility proxy group instead of Mr. Patel's very small water only proxy group, the mean DCF result would increase to 9.82 percent.

Q. Mr. Patel's primary concern with your DCF analysis is that you eliminated the low-end of your DCF results.[38] What is your response?

A. First, it is important to recognize that Mr. Patel's analysis does not consider the results of a low growth rate scenario. Instead, he relies exclusively on the mean growth rates for the proxy group. Therefore, his criticism that I dismissed low growth rate results lacks merit because he did not find a low growth rate scenario sufficiently useful for comparison purposes to even develop in his own analyses.

Second, Mr. Patel's characterization of my analysis is incorrect. The range of results presented in my DCF analysis include a low end, which relies on the lowest growth rates assumed for each of the proxy companies, and a high end, which relies on the highest growth rates assumed for each of the proxy group companies, as well as the mean result, which is generally consistent to the one scenario that was prepared by Mr. Patel. Therefore, I considered a much broader range of results than were considered by Mr. Patel in his analyses.

[38] Patel Direct Testimony, at 44-45.

Q. Is there any market evidence that demonstrates that the low end of your range of DCF results does not reflect the investor-required ROE?

A. Yes. The market response to recent authorized ROEs that were below the investor-required return resulting in credit rating downgrades and significant declines in the stock prices of the parent companies demonstrate that the low end of the range of DCF results is not reflective of the investor required ROE. There are numerous examples in which utilities have experienced a negative market response related to the financial effects of a rate decision, including credit rating downgrades and material stock price declines. For example, ALLETE, Inc.,[39] CenterPoint Energy Houston Electric,[40] and Pinnacle West Capital Corporation ("PNW")[41] each received credit rating downgrades following rate case decisions in the past few years for reasons that included below average authorized ROEs. The most recent example is the decision by the Illinois Commerce Commission ("ICC") in mid-December 2023 that rejected the multiyear grid plan proposals of Ameren Illinois Co. ("Ameren IL") and Commonwealth Edison Co. ("ComEd") and authorized lower-than-expected ROEs for both of these electric transmission and distribution

[40] FitchRatings, "Fitch Downgrades CenterPoint Energy Houston Electric to BBB+; Affirms CNP; Outlooks Negative," February 19, 2020.

[41] S&P Capital IQ Pro; FitchRatings, "Fitch Downgrades Pinnacle West Capital & Arizona Public Service to 'BBB+'; Outlooks Remain Negative," October 12, 2021; and Moody's Investors Service, "Rating Actions: Moody's downgrades Pinnacle West to Baa1 and Arizona Public Service to A3; outlook negative," November 17, 2021.

utilities. Specifically, the ICC authorized an ROE for Ameren IL of 8.72 percent and 8.905 percent for ComEd, which was a significant reduction from the Administrative Law Judge's recommendations of 9.24 percent and 9.28 percent, respectively.[42]

Q. How did the market respond to the ICC's decisions for these utilities?

A. While the S&P 500 was increasing, the share prices of the parent companies of both Ameren IL and ComEd (*i.e.*, Ameren Corp. and Exelon Corp., respectively) each dropped more than 7 percent on December 14, 2023 after the ICC's decision, and declined again by more than 4.4 percent and 6.4 percent the following day, respectively.[43] In addition, the reactions of equity analysts were universally negative, and questioned whether the parents of both Ameren IL and ComEd will shift their capital spending out of the jurisdiction as a result of the uncertainty associated with the multi-year grid plan and low authorized ROEs. For example:

- Barclays characterized the ICC's ROE authorizations as "draconian" and "one of the lowest awarded in recent memory, especially in an elevated interest rate and cost of capital environment."[44] Barclays also stated it found it hard to believe utilities "can deploy capital under the same magnitude on the updated grid plans to be filed, especially under the current proposed ROE framework."

43 Yahoo! Finance.

44 Barclays, "AEE/EXC: Coal Stocking-Stuffer in Illinois," December 14, 2023.

- In its assessment of the impact on Exelon, the parent of ComEd, UBS stated that "[t]he actions taken by the ICC today call into question, in our view, the regulatory backdrop in which EXC operates."[45]

- Wells Fargo stated that it was not mincing words, and that the ICC's orders were "onerous" and that:

> We now view IL as one of the worst regulatory jurisdictions in the U.S. (nipping at CT's heels). We think the totality of the recent orders suggest that the regulatory balancing act between customers and investors is currently heavily skewed toward customers. As a result, we wonder if AEE & EXC will allocate capital away from IL. Keep in mind, IL represents ~25% of both AEE's & EXC's total rate base."[46]

- In its evaluation of Ameren IL, BofA Securities characterized the ICC's decision as "punitive" and stated that it was a surprise based on numerous conversations with investors that believed the ICC may authorize an ROE above the ALJ's recommendation, not substantially lower, and that the downside surprise was one of the biggest in recent memory for their regulated utility coverage.[47] While BofA Securities acknowledged that Ameren IL represents less than 20 percent of Ameren Corp.'s consolidated rate base, it will nonetheless need offsets or capital expenditures elsewhere in order to hit its earnings growth rate targets.[48]

- After the decisions, Guggenheim questioned, "Is Illinois Becoming the Next Connecticut?" Guggenheim noted that investors questioned whether Illinois was "slowly becoming a CT-esque jurisdiction," and that equity and debt holders are going to be wary of Illinois as a jurisdiction going forward and that the ICC is "simply sending a negative message to investors."[49]

[46] Wells Fargo, "The ICC Delivers a Lump of Coal for AEE & EXC," December 14, 2023.

[47] BofA Securities, Ameren Corporation, "Illinois delivers downside surprise," December 15, 2023.

[48] *Id*.

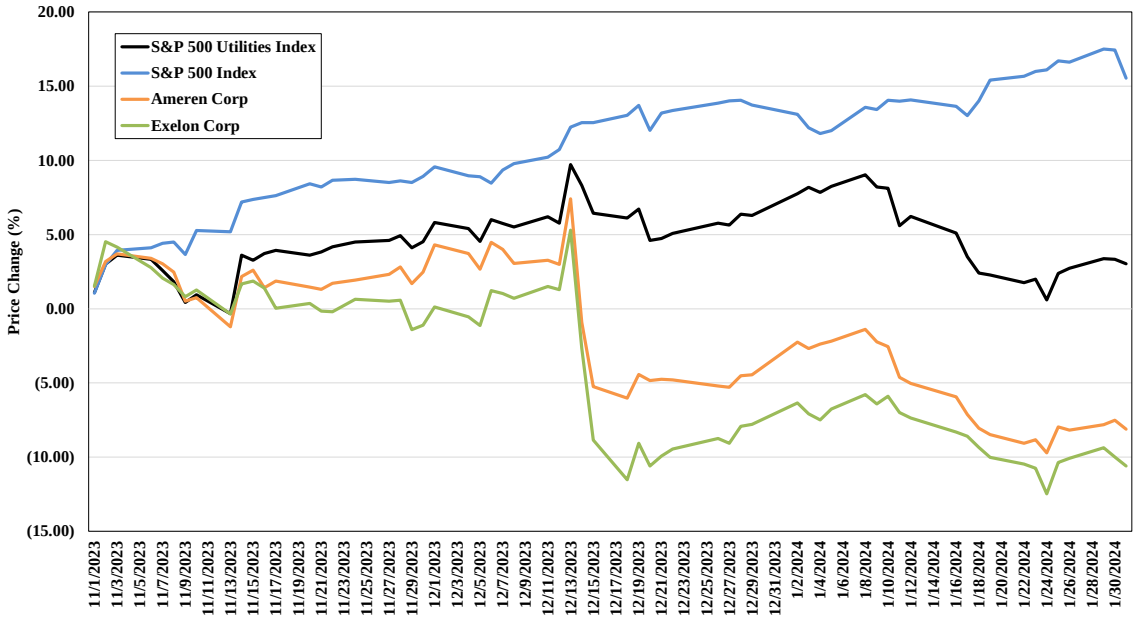
[49] Guggenheim, "IL: Is Illinois Becoming the Next Connecticut? To Be Determined, but Taking a Neutral Stance on the State," December 15, 2023.

Further, after the ICC's decisions, Regulatory Research Associates ("RRA") lowered its rating of the Illinois regulatory jurisdiction from Average/2 to Average/3 due to the "concerning pattern of restrictive" rate actions in the state.

Q. Do the stock prices of AEE and EXC continue to be affected by these rate case outcomes?

A. Yes. As shown in Figure 5, the share prices for AEE and EXC continue to be affected by these decisions. As of the decision date, both AEE and EXC experienced a significant decline in share prices and continue to trade at approximately 10.88 percent and 14.54 percent below prices as of November 2023. In contrast, the S&P 500 Utilities index is trading generally flat with November 2023.

Figure 5: AEE and EXC Stock Price Performance Following ICC Rate Decisions



Q. Do you agree with the adjustments that Mr. Patel makes to your DCF analysis?

A. No. Mr. Patel reduces the size of the proxy group and the range of results considered because he: (1) inappropriately concludes that the electric and natural gas utilities included in my proxy are not comparable to PAWC; and, (2) appears to conclude that the range of projected analysts' EPS growth rates should not be used to develop a range of DCF results, but rather only the average growth rates. Therefore, Mr. Patel uses a narrow review of the mean and median results of a small water utility proxy group to underestimate the cost of equity. Mr. Patel's adjustments to my DCF analysis results in an ROE of 8.21 percent, which is below

any comparable authorized ROE for either a water or natural gas utility of which I am aware. In addition, it is 154 basis points below the return that was authorized by the Commission only a few weeks ago in *Columbia Water*, which did not consider management performance. Therefore, while Mr. Patel "respectfully disagree[s]" with the Commission's decision in that proceeding, it is clear that, based on the response of investors in the recent Illinois decision discussed previously, investors would disagree with Mr. Patel that his DCF analysis as well as his "adjustment" to my analysis reflect the investor-required return. It would be reasonable to expect a similar market response as occurred in Illinois in this proceeding if Mr. Patel's ROE recommendation were implemented.

3. Weighting of the DCF Results in the Final Recommendation

Q. Do you agree with Mr. Patel's sole reliance on the DCF model?

A. No, and as previously discussed, neither has the Commission in *Aqua* or *Columbia*. Mr. Patel contends that prior Commission opinions in substantially different market conditions suggest that sole reliance on the results of the DCF model reflect Commission precedent, but dismisses the most recent two decisions by the Commission simply because disagrees with them. Regardless of his lack of agreement, the Commission was clear in both *Aqua* and *Columbia Water* that it was not accepting I&E's position to rely exclusively on the DCF result to the exclusion of the CAPM model results. In *Aqua*, the Commission noted that inflation was

currently high and that the Federal Reserve was ending its accommodative monetary policy to keep interest rates low in response to inflation. Further, the Commission noted that the DCF model is slow to respond to changes in interest rates while the CAPM can be calculated using forecasted interest rates and thus captures "forward-looking" changes in interest rates.[50] As a result, the Commission concluded that it would determine Aqua's authorized ROE based on both the DCF and CAPM models as opposed to relying solely on the DCF model as proposed by Mr. Patel. This was consistent with the Commission's long-standing openness to consideration of other ROE models when appropriate:

> As such, where evidence based on *other* methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination. In light of the above, we shall determine an appropriate ROE for Aqua using informed judgement based on I&E's DCF and CAPM methodologies.[51]

The Commission relied on the range of results of 8.90 percent to 9.89 percent produced by I&E's DCF and CAPM models, and ultimate authorized an ROE of

[50] *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, at 154 (Order entered May 16, 2022).

[51] *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, p. 155 (Order entered May 16, 2022).

9.75 percent at the high end of the range considering increased inflation leading to increases in interest rates and capital costs since Aqua filed its rate case.[52]

Likewise in *Columbia Water*, the Commission affirmed its view that the DCF and the CAPM should be relied upon to set the range, agreeing with the Administrative Law Judge that the CAPM is more responsive to changes in interest rates. Further, the Commission recognized that where evidence based on other methodologies suggests that the DCF results may understate the utility's ROE, the Commission will consider those methods, to some degree in determining the appropriate range of reasonableness. As such, the Commission established its range based on the DCF and CAPM results and used its judgement as to where within that range to set the ROE, which was 9.75 percent.[53]

Q. Please summarize your conclusions on Mr. Patel's DCF analysis and his reliance on those results in establishing his ROE recommendation.

A. Mr. Patel relies on a proxy group that is limited in size, excludes a comparable water utility based on an incomplete review of historical operating revenue, and includes PAWC's parent company, which is circular. The small size of the proxy

[52] *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, p. 178 (Order entered May 16, 2022). The Commission authorized an ROE for Aqua of 10.00 percent which was based on a 9.75 percent ROE considering the DCF and CAPM results plus a 0.25 percent adder for management performance.

[53] *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, at 107-108 (Order Entered January 18, 2024).

group increases the weight placed on each individual result. This is an important point to consider, particularly because he includes an estimate of the cost of equity for Middlesex Water that is below the cost of debt in the average used to develop his ROE recommendation. As discussed previously, it is unreasonable to consider a return that is below the cost of debt as a return to equity investors, based on the increased risk associated with equity ownership. This issue is further magnified in a proxy group of five companies, such as is relied upon by Mr. Patel. As discussed in my response to Mr. Patel, I believe that a larger proxy group that is composed of distribution utilities that are of similar overall risk as water utilities addresses concerns about sample size. Further, I believe that Essential Utilities, which was excluded from Mr. Patel's proxy group should be included in the group.

In addition to my concerns regarding the proxy group, I disagree with Mr. Patel's view that the DCF model is superior to other ROE estimation models and his claims that that it has a stronger capability to estimate returns in the current market are unsubstantiated. The capital market conditions discussed in my rebuttal testimony demonstrate that interest rates are currently elevated and will remain elevated for some period of time, which has an effect on the prices used in the DCF model. This provides further support for the Commission's concern in *Aqua* that the DCF model may presently be understating the cost of equity.

Q. Please summarize the adjustments you made to Mr. Patel's DCF analysis.

A. As shown in Figure 6 below, I made the following four adjustments to Mr. Patel's DCF analysis.

- Include Essential in the proxy group given that the company meets Mr. Patel's screening criteria when revenues are properly adjusted to exclude the effect of high natural gas prices that have no effect on the Company's operating income.
- Utilize the 30-day average stock price in the DCF analysis rather than a spot stock price, which is consistent with the methodology that both Mr. Garrett and I rely upon.
- Exclude the DCF result for MSEX, since the result is below the yield on the utility bond index and therefore does not provide an equity risk premium, which exclusion is also supported by the market response to authorized ROEs in Illinois that were more than 350 basis points higher than the DCF result for MSEX.
- Consider the results of a distribution utility proxy group.

As shown in Figure 6, reasonable changes to Mr. Patel's DCF analysis results in a cost of equity estimate of 9.82 percent.

Figure 6: Summary of Adjustments to Mr. Patel's DCF analysis

	DCF
As Filed Result	8.45%
DCF Adjustments (Adj'mts Additive)	
Include Essential in Proxy Group	8.62%
Exclude MSEX Results (No Equity Risk Prem)	9.19%
Use 30-Day Avg Stock Price (Not Spot Price)	9.21%
Use Distribution Utility Proxy Group	9.82%

C. CAPM Analysis

Q. Please summarize Mr. Patel's CAPM analysis.

A. Mr. Patel's CAPM analysis is based on the following assumptions: (1) a projected risk-free rate on the 10-year Treasury bond of 4.00 percent; (2) *Value Line* beta coefficients for his proxy group companies; and (3) a market risk premium that is based on the average of (i) an estimate of the total return for the companies in the *Value Line* universe and the S&P 500 Index less the risk-free rate, and (ii) the historical average return on the S&P 500. Mr. Patel's CAPM analysis produces a return estimate of 10.44 percent, which is 199 basis points higher than the results of his constant growth DCF analysis of 8.45 percent, which, as noted, he solely relies on for his ROE recommendation.

Q. What are the specific areas that you disagree with in Mr. Patel's CAPM analysis?

A. My primary areas of disagreement with Mr. Patel's CAPM are; 1) excluding Essential Utilities from the proxy group; 2) relying on the projected yield on the 10-year Treasury bond as the risk-free rate; and 3) relying on a single *Value Line* report for the calculation of the market risk premium. In addition, I believe that a broader distribution utility proxy group is more appropriate to estimate the cost of equity than the smaller proxy group relied upon in his CAPM analysis.

Q. Why do you disagree with the use of the 10-year Treasury bond as the risk-free rate?

A. While I recognize the Commission's previous decision to use the 10-year Treasury bond as the risk-free rate in the CAPM analysis, in determining the security most relevant to the application of the CAPM, it is important to select the term (or maturity) that best matches the life of the underlying investment. As noted by *Morningstar*:

> The horizon of the chosen Treasury security should match the horizon of whatever is being valued… If an investor plans to hold stock in a company for only five years, the yield on a five-year Treasury note would not be appropriate since the company will continue to exist beyond those five years.[54]

Because utility companies represent long-duration investments, the 30-year Treasury bond yield, not the 10-year Treasury bond yield, is the appropriate measure of the risk-free rate for the purpose of the CAPM.[55] In addition, based on principles of prudent financial management, the term of the debt financing should match the useful life of the assets being financed. Utility plant assets generally have useful lives between 25 and 40 years, meaning that, under prudent financial management, those assets should be financed with bonds of longer duration than 10 years. The average useful life of PAWC's net utility plant for water distribution operations is approximately

---

[54] *Morningstar, Inc.*, 2010 Ibbotson Stocks, Bonds, Bills and Inflation, Valuation Yearbook, at 44.

[55] Bulkley Direct Testimony, at 50.

34.74 years,[56] which suggests that it would be reasonable to assume that the duration of debt instruments would be at least 30 years, further supporting the use of the 30-year Treasury bond yield as the risk-free rate in the CAPM analysis.

Q. How would the use of the 30-year Treasury bond yield change the results of Mr. Patel's CAPM analysis?

A. As shown in Exhibit No. 13-R, Schedule 8, relying on the 30-year Treasury bond yield rather than the 10-year Treasury bond yield increases the risk-free rate to 4.20 percent. As shown in Exhibit No. 13-R, Schedule 9, and as summarized in Figure 8 below, updating Mr. Patel's CAPM analysis for the 30-year Treasury bond yield and including Essential Utilities increases his CAPM result by 30 basis points to 10.74 percent, which is approximately 230 basis points higher than his ROE recommendation of 8.45 percent based solely on the results of his constant growth DCF analysis. In addition, if the distribution utility proxy group is used, then the CAPM result increases to 10.87 percent.

Q. Do you agree with Mr. Patel's calculation of the market return using the *Value Line* reports?

A. No, I do not. Mr. Patel relies on a *Value Line* report for a single week – January 5 2024 – in the development of his projected market return. As shown in Exhibit No.

[56] Pennsylvania-American Water Company 2022 Annual Report filed with Pennsylvania Public Utility Commission. Calculation based on 2022 net utility plant in service of $4,935,007,207 divided by 2022 depreciation expense of $142,049,228 = 34.74 years.

13-R, Schedule 7 and Figure 7 below, the *Value Line* Appreciation Potential was somewhat variable over the last few months, with January 2024 being the low point. Further, I&E relied on a similar analysis in the Columbia Water proceeding, where the June 2023 *Value Line* Appreciation Potential was higher still, resulting in a projected average yearly return of 14.77 percent. Therefore, based on this data, it appears that Mr. Patel has relied on a low point in the data set that is not reasonable and does not reflect projected market conditions.

Figure 7: Summary of Projected Market Return based on *Value Line* Projected Dividend Yield and Market Appreciation Potential

VL Report Date	Dividend Yield	Appreciation Potential	Growth Rate	DCF Result
6/30/2023	2.30%	60%	12.47%	14.77%
7/1/2023	2.30%	65%	13.34%	15.64%
7/7/2023	2.30%	65%	13.34%	15.64%
7/14/2023	2.20%	55%	11.58%	13.78%
7/21/2023	2.20%	60%	12.47%	14.67%
7/28/2023	2.20%	55%	11.58%	13.78%
8/4/2023	2.10%	55%	11.58%	13.68%

11/10/2023	2.50%	75%	15.02%	17.52%
11/17/2023	2.40%	65%	13.34%	15.74%
11/6/2023	2.40%	75%	15.02%	17.42%
11/24/2023	2.40%	65%	13.34%	15.74%
12/1/2023	2.30%	60%	12.47%	14.77%
12/8/2023	2.30%	60%	12.47%	14.77%
12/15/2023	2.20%	55%	11.58%	13.78%
12/22/2023	2.20%	50%	10.67%	12.87%
12/29/2023	2.20%	45%	9.73%	11.93%
1/5/2024	2.20%	45%	9.73%	11.93%
1/12/2024	2.20%	45%	9.73%	11.93%
1/19/2024	2.20%	45%	9.73%	11.93%
1/26/2024	2.20%	45%	9.73%	11.93%
2/2/2024	2.20%	45%	9.73%	11.93%
2/9/2024	2.20%	50%	10.67%	12.87%
2/16/2024	2.20%	50%	10.67%	12.87%
Average Dec 1, 2023-Feb. 16, 2024			10.58%	12.79%

As shown in Exhibit No. 13-R, Schedule 9, relying on the average market return calculated using the *Value Line* appreciation potential and dividend yield on 1,700 companies since December 1, 2023 and the historical average return on the market,

results in a market return of 12.48 percent. While this is considerably lower than the 13.39 percent that I&E calculated as a 5 year forward projection in July 2023, it is more consistent with the recent market return estimates from this source. Therefore, it is reasonable and appropriate to update Mr. Patel's CAPM to rely on this average market return.

Q. What adjustments have you made to Mr. Patel's DCF analysis?

A. As shown in Figure 8 below, I made the following four adjustments to Mr. Patel's DCF analysis.

- Include Essential in the proxy group given that the company meets Mr. Patel's screening criteria when revenues are properly adjusted to exclude the effect of high natural gas prices that have no effect on the Company's operating income.
- Utilize the projected 30-year Treasury bond yield as the estimate of the risk-free rate in the CAPM rather than the 10-year Treasury bond yield.
- Rely on an average of the *Value Line* projected market return
- Consider the results of a distribution utility proxy group.

As shown in Figure 8, reasonable changes to Mr. Patel's CAPM analysis results in a cost of equity estimate of 11.24 percent.

Figure 8: Summary of Adjustments to Mr. Patel's CAPM Analysis

	CAPM
As Filed Result	10.44%
CAPM Adjustments (Adj'mts Additive)	
Include Essential Utilities	10.71%
Use Projected 30- year Treasury Bond	10.74%
Update Market Return calculation	11.10%
Use Distribution Utility Proxy Group	11.24%

Q. Does Mr. Patel acknowledge the significant disparity between the results of his DCF and CAPM analyses?

A. Yes. While Mr. Patel cites to the difference between his model results (the CAPM result being 199 basis points higher than the result of his DCF analysis) as a reason the Commission should not place weight on the CAPM result in authorizing the ROE for PAWC, he has provided no evidence to suggest that the results of one of these models is more appropriate than the other. It is not reasonable for Mr. Patel to determine that the CAPM cannot be used simply because it is higher. In order to identify an outlying data point, it is necessary to have a broader sample with which to compare the results of the models. Reduced to its essence, his support for placing no weight on the CAPM result is that 1) he "respectfully disagree[s]" with the Commission's *Aqua* and *Columbia Water* decisions, 2) he believes the CAPM result can be disregarded because it is 199 basis points above his DCF result and 3) the difference between the DCF and CAPM results in the *Aqua* decision was more "modest' at 99 basis points ignores the fact that the 325 basis point difference in

the I&E CAPM and DCF results in *Columbia Water* did not preclude the Commission's reliance on the CAPM in that decision.[57] As discussed previously, many of the same concerns the Commission had in *Aqua* and *Columbia Water* regarding capital market conditions remain relevant in the consideration of the model results in the current case for PAWC. Therefore, Mr. Patel's proposal to reject the CAPM on the basis of prior decisions in different market conditions, while dismissing recent decisions in current market conditions is unreasonable and should be rejected. The Commission should continue to place weight on the CAPM analysis in setting the authorized ROE for PAWC in this proceeding.

D. Mr. Patel Adjusted Cost of Equity Results

Q. Do the results of Mr. Patel's cost of equity analyses materially change if the issues that you have identified are changed?

A. Yes. When the issues with Mr. Patel's cost of equity analyses that I have discussed are reasonably adjusted, the results of his DCF and CAPM analyses increase materially. Specifically, these reasonable adjustments are noted below and the results of Mr. Patel's adjusted cost of equity analyses are summarized in Figure 9:

[57] I note that in *Columbia Water* I&E calculated a CAPM result of 11.09 percent.

Figure 9: Average of Mr. Patel's Adjusted DCF and CAPM Results

Adjusted DCF	9.82%
Adjusted CAPM	11.24%
Average	**10.53%**

Q. How would Mr. Patel's ROE recommendation change considering the adjustments just discussed and the Commission's methodology for determining the ROE in *Aqua* and *Columbia Water*?

A. As shown in Figure 9, simply placing equal weight on the adjusted results of Mr. Patel's DCF and CAPM analysis, which is less weight on the CAPM than it appears the Commission relied upon in both *Aqua* and *Columbia Water*, would result in a base ROE of 9.96 percent using a water utility proxy group and 10.34 percent using a distribution utility proxy group, without consideration of the management performance adjustment. Including the 25 basis point adjustment for the Company's excellent management performance, as discussed in the direct and rebuttal testimonies of Company witness Ashley Everette, would result in an ROE of 10.21 percent using the water utility proxy group and 10.59 percent using the distribution utility proxy group.

VI. RESPONSE MR. GARRETT

Q. Please summarize Mr. Garrett's cost of equity analyses and recommendations.

A. Mr. Garrett conducts two forms of the DCF model and CAPM. Specifically, Mr. Garrett conducts a constant growth DCF model using analyst-projected dividend

growth rates and another using sustainable growth rates. In addition, he conducts two CAPM scenarios; one assuming the proxy group debt ratio for the Company, and another CAPM assuming the Company's proposed debt ratio to which he applies the Hamada adjustment. Mr. Garrett recommends an ROE for the Company in this proceeding of 9.10 percent, which he states is an average of his DCF result (*i.e.*, 9.40 percent) and his CAPM model result (*i.e.*, 8.70 percent). However, Mr. Garrett states that if the Commission accepts the Company's proposed capital structure and/or adopts either of its proposed RDM or ECIC, then he recommends an ROE of 8.70 percent. In addition, Mr. Garrett recommends that the Commission reject the Company's proposal for a performance-based adder to its ROE of up to a 25 basis points for managerial performance, stating that such adder is unsupported and excessive. Lastly, Mr. Garrett recommends that the Commission impute a capital structure consisting of 51 percent long-term debt and 49 percent equity.[58]

Q. Do you agree with Mr. Garrett's proposals?

A. No. In particular, I disagree with various aspects of his model specifications including the proxy group used in his analyses, certain of the growth rates used in his DCF analysis, and the market risk premium relied upon in his CAPM. I also disagree with Mr. Garrett's proposed capital structure and the application of the Hamada Adjustment to his CAPM analysis using the Company's proposed capital

[58] Garrett Direct Testimony, at 3-4.

structure. Finally, I disagree with his conclusions regarding adjustments to the ROE for the authorization of the Company's proposed RDM and ECIC, and his recommendation to disregard the Company's management performance and the proposed adjustment to the ROE for that performance.

A. Proxy Group

Q. What are the differences between Mr. Garrett's proxy group and the proxy group you rely on in your analyses?

A. Mr. Garrett utilizes the same water utilities that I have used in my proxy group, but states that he does not believe it is necessary to include non-water utilities in the proxy group. While Mr. Garrett bases his ROE recommendation on the results of his cost of equity analyses based a water utility proxy group he presents the results of his cost of equity models using (1) the water utilities; (2) the non-water utilities; and (3) the combined water and non-water utilities (i.e., my proxy group).[59]

Q. Do you agree with the proxy group that Mr. Garrett has relied on for his ROE recommendation?

A. No. For the same reasons as I previously discussed with respect to Mr. Patel's testimony, a larger proxy group that includes comparable distribution utilities is the

[59] Garrett Direct Testimony, at 11.

most appropriate proxy group for purposes of establishing the ROE in this proceeding.

B. Constant Growth DCF Model

Q. While Mr. Garrett conducts two constant growth DCF analyses, does he rely on the results of both of these analyses?

A. No. As noted, Mr. Garrett conducts a constant growth DCF analysis using analysts' projected dividend per share ("DPS") growth rates and another using sustainable growth rates. However, Mr. Garrett states that, given the unique growth opportunities for water utilities, he gives "more consideration" to the results of his DCF analysis using projected DPS growth rates. While Mr. Garrett states that he gives "more consideration" to the DCF analysis relying on projected DPS growth rates, he actually relies solely on the result of this analysis.

Q. Is it reasonable that Mr. Garrett dismisses the results of his DCF analyses using sustainable growth rates?

A. Yes. The results of Mr. Garrett's DCF using sustainable growth rates for his water utility proxy group is just 6.30 percent, which is well below any authorized ROE for any water, electric, or natural gas utility in over 40 years, and as noted previously, is only marginally above the existing utility bond yields. Thus, I agree with Mr. Garrett that it is appropriate to disregard the results of these DCF analyses.

Q. What is Mr. Garrett's position regarding your constant growth DCF analysis?

A. Mr. Garrett claims that the growth rates in my DCF model are inconsistent with the long-term U.S. GDP growth rate, but also suggests that my growth rates are also short-term growth rates and thus inconsistent with a long-term projection.[60]

Q. Are the analysts' projected EPS growth rates in your constant growth DCF analysis unreasonable?

A. No. First, it is important to recognize that Mr. Garrett and I both rely on the constant growth form of the DCF model. While Mr. Garrett develops this model using sustainable growth rates, he dismisses the result of that model. Therefore, the only DCF model that he relies upon is his DCF using projected DPS growth rates. Comparing the growth rates that Mr. Garrett uses in his model to the projected EPS growth rates I relied on in my analyses demonstrates that my growth rate assumption is lower than the growth rate assumption Mr. Garrett relies on in his analysis. Therefore, there is no basis to either of Mr. Garrett's claims that the projected analyst EPS growth rates used in my DCF analysis are unreasonable. Further, his comparison to any estimate of GDP growth is moot, given that the growth rates he relies on would violate his GDP growth rate test. As shown on Exhibit DJG-6, the average growth rate for Mr. Garrett's water utility proxy group

[60] Garrett Direct Testimony, at 30.

is 6.90 percent.[61] As shown on Exhibit 13-A, Schedule 3, the average growth rate in my DCF analyses was 6.07 percent; *lower* than Mr. Garrett's projected growth rates. Likewise, the average growth rate in my updated cost of equity analyses is 6.19 percent, which is still materially *lower* than the projected growth rates on which Mr. Garrett relies.

Second, while Mr. Garrett criticizes my growth rates as being short-term and inappropriate for use in the DCF model as long-term growth rates, the growth rates that he relies upon project growth over a similar period. Specifically, his projected DPS growth rates, which are sourced from *Value Line* project growth over the period 2020-2022 to 2026-2028. Therefore, Mr. Garrett and I have relied on projected growth rates over similar time periods which makes his concern regarding the use of short-term growth rates in my analyses equally applicable to the growth rates used in his own specification of the DCF model.

C. CAPM Analysis

Q. Please summarize Mr. Garrett's CAPM analysis.

A. Mr. Garrett presents a CAPM analysis based on (1) a risk-free rate of 4.42 percent, which is the 30-day average yield on 30-year Treasury bonds through December 20, 2023; (2) the current betas for each of the proxy group companies as published

[61] While Mr. Garrett does not present the average of his "Analyst Growth" rates from column [2] of Exhibit DJG-6, the average of his water proxy group (*i.e.*, the average of 8.5 percent, 6.5 percent, 8.0 percent, 6.5 percent, and 5.0 percent) is 6.90 percent.

by *Value Line*; and (3) a market risk premium of 5.30 percent based on an average of a IESE Business School survey of experts reflecting an average equity risk premium of 5.70 percent, a *Kroll* equity risk premium estimate of 5.50 percent, an average of several equity risk premium estimates produced by Dr. Damodaran of 4.50 percent, and Mr. Garrett's own calculation of an implied equity risk premium of 5.30 percent.[62] As shown in Exhibit DJG-11, these inputs produce a CAPM result for his water utility proxy group of 8.70 percent.

In addition, Mr. Garrett also calculates another version of the CAPM using the same inputs as just discussed, except that he adjusts the average proxy group beta using the Hamada formula to account for what he contends is a lower level of leverage in the Company's proposed capital structure, and thus a lower level of risk, as compared to the proxy group. In applying the Hamada formula, the average beta of the proxy group is unlevered and then re-levered to account for the differences in leverage in the Company's proposed capital structure as compared to the proxy group. After the application of the Hamada adjustment, Mr. Garrett's CAPM result is 8.20 percent.

Q. Is the market risk premium used in Mr. Garrett's CAPM reasonable?

A. No. Mr. Garrett's equity risk premium in his CAPM analysis is inconsistent with the well-established inverse relationship between interest rates and the market risk

[62] Garrett Direct Testimony, at 50-51.

premium. This relationship is such that as interest rates increase, the market risk premium decreases, or if interest rates decline, the market risk premium increases. As shown on Exhibit DJG-11, Mr. Garrett relies on an average market risk premium of 5.30 percent; however, the long-term historical arithmetic average income-only return on long-term government bonds as published by *Kroll* is 4.85 percent and the corresponding long-term historical arithmetic average market risk premium over that same time period is 7.17 percent. Therefore, since the current 30-year Treasury bond yield is below its long-term average, currently at 4.19 percent on a 30-day average basis, the inverse relationship between interest rates and the market risk premium implies that the market risk premium should be *above* the long-term historical average market risk premium of 7.17 percent –not 187 basis points lower than the historical average, such as Mr. Garrett has assumed. Therefore, Mr. Garrett's assumed market risk premium is understated.

Q. Do you agree with Mr. Garrett's use of the IESE Business school survey as an estimate of the market risk premium?

A. No. Mr. Garrett relies on an average equity risk premium from the IESE Business School survey; however, the author of that survey specifically states that the average of the distribution of the required equity risk premium from the survey cannot be interpreted as the required equity premium of the market nor of a

representative investor.[63] Therefore, Mr. Garrett's use of this survey data is in direct conflict with the author's conclusions about the analysis.

Q. How does Mr. Garrett estimate his own implied equity risk premium?

A. As shown on Exhibit DJG-9, Mr. Garrett uses a form of the DCF analysis to solve for an implied equity risk premium. Specifically, given that the current value of the S&P 500 Index is known, Mr. Garrett solves for the discount rate (*i.e.*, the implied market return on the S&P 500 Index) that is required to produce the present value of a future stream of dividends (based on a historical dividend yield, historical buyback yield, and historical earnings growth rate) that is equivalent to the current value of the S&P 500 Index. For purposes of this analysis, Mr. Garrett relies on a multi-stage DCF analysis in that he uses historical EPS growth for the first five years of the future stream of dividends and stock buybacks, and then his risk-free rate for calculating the terminal value of that same future stream. After solving for the implied market return, Mr. Garrett then subtracts his risk-free rate to estimate the implied market risk premium.

[63] Pablo Fernandez, Diego Garcia de la Garza, and Javier Fernandez Acin, "Survey: Market Risk Premium and Risk-Free Rate used for 80 countries in 2023," IESE Business School, April 3, 2023, at 10.

Q. Is Mr. Garrett's approach for estimating his implied market return and implied equity risk premium reasonable and consistent with his constant growth DCF analysis?

A. No. There are multiple reasons why the approach that Mr. Garrett has used to estimate his implied market return, and thus implied market risk premium, are unreasonable.

First, the approach that Mr. Garrett has utilized to estimate an implied market return is inconsistent with the approach that he uses for estimating the cost of equity using the DCF model. Specifically, Mr. Garrett conducts a constant growth DCF for purposes of estimating the cost of equity using the DCF analysis, yet applies a multi-stage DCF of the S&P 500 for his calculation of an implied market return. In addition, unlike Mr. Garrett, both Mr. Patel and I have both relied on a constant growth DCF analysis of the S&P 500 for purposes of calculating the market return in the CAPM. The market return that Mr. Patel relies on is 12.02 percent, while the market return in my updated CAPM analyses is 12.22 percent, both of which are materially higher than Mr. Garrett's understated market return of 9.80 percent.

Second, Mr. Garrett relies on *projected* DPS growth for purposes of estimating the cost of equity in his constant growth DCF model, yet he relies on *historical* EPS growth rates for purposes of estimating his implied market return.

Third, Mr. Garrett condemns his own assumption of using historical growth rates by acknowledging that "past growth is not always a good indicator of future growth."[64]

Lastly, Mr. Garrett has provided no evidence that his assumed risk-free rate (*i.e.*, the current 30-day average yield on the 30-year Treasury bond) is an appropriate estimate of long-term growth in his estimation of an implied market return, particularly given the significant changes in interest rates that have occurred over the past two years.

Q. Would the results of Mr. Garrett's CAPM change materially if he had relied on a market return consistent with what Mr. Patel has utilized in this proceeding?

A. Yes. Exhibit No. 13-R, Schedule 10 presents a comparison of the results of Mr. Garrett's CAPM analysis as reflected in his testimony versus if he had used the market return supported by Mr. Patel. As shown, Mr. Garrett's CAPM result increases from 8.68 percent to 10.60 percent for his water utility proxy group, and from 8.84 percent to 10.84 percent using my proxy distribution utility proxy group.

Even if no modification is made to Mr. Garrett's DCF result (*i.e.*, 9.4 percent), and Mr. Patel's market risk premium is used in Mr. Garrett's CAPM (i.e., resulting in

[64] Garrett Direct Testimony, at 24.

a cost of equity 10.60 percent), based on Mr. Garrett's methodology of taking the average of each model result for purposes of his ROE recommendation means that his ROE recommendation would be 10.00 percent.

Q. Do you agree with Mr. Garrett's position that your estimation of the market risk premium in the CAPM is too high? [65]

A. No. As noted above, Mr. Patel and I both rely on a forward-looking market return. As discussed in my response to Mr. Patel, *Value Line*, which is the source of his projected market return, estimates a return on the market overall of 12.29 percent based on an average of the Value Line estimates from December 1, 2023 through February 16, 2024. Further, I&E projected a market return of 14.77 percent using Value Line data in the Columbia Water case. The calculation of the market risk premium is based on the return on the broader stock market, as measured by S&P 500 Index, less the return on a risk-free instrument (which in my case and as also used by Mr. Garrett, is the yield on the 30-year Treasury bond). The S&P 500 Index is composed of the largest top performing companies. It is reasonable to assume that the projected growth of the S&P 500 Index could be sustainable in the long run. Over time, the specific companies that are included in the S&P 500 Index will vary; however, because the index is composed of the largest top performing companies, it is reasonable to assume the index will always contain individual

[65] Garrett Direct Testimony, at 44-45.

companies with projected earnings growth rates that will be considered high. Therefore, investor expectations of growth and return overall for the index as a whole may not change materially over time because of the selection process involved of including the largest top performing companies in the index.

Q. Has the Commission supported the use of a forward-looking market return in the CAPM analysis such as you have relied on in estimating the cost of equity?

A. Yes. For example, in Docket No. R-2021-3027385, the Commission relied on I&E's DCF and CAPM results to establish the authorized ROE,[66] and I&E's CAPM reflected a forward-looking market return based on a constant growth DCF of the *Value Line* universe of stocks and of the S&P 500 (yielding a market return of 12.14%).[67]

Q. Have other regulatory commissions also supported the use of a forward-looking market return in the CAPM analysis?

A. Yes. The Federal Energy Regulatory Commission ("FERC") continues to support the use of the constant growth DCF model to calculate the market return for the CAPM:

> We also continue to find that the CAPM should use a one-step DCF for its risk premium. This is because the rationale for using a two-step DCF methodology for a specific group of utilities does not

[66] Pennsylvania Public Utility Commission, Aqua Pennsylvania, Inc., Opinion and Order, Public Meeting held May 12, 2022, at 178.

[67] Pennsylvania Public Utility Commission, Aqua Pennsylvania, Inc., Opinion and Order, Public Meeting held May 12, 2022, at 147.

> apply when conducting a DCF study of the dividend-paying companies in the S&P 500, as the Commission found in Opinion Nos. 531-B and 569. A long-term component is unnecessary because of the regular updates to the S&P 500, which allows it to continue to grow at a short-term growth rate and because S&P 500 companies include stocks that are both new and mature, the latter of which have a moderating effect on the short-term growth rates.[68]

In addition, the Maine Public Utilities Commission ("Maine PUC") has also relied on the constant growth DCF model to estimate the market return. Specifically, the Staff of the Maine PUC conducted a constant growth DCF of the dividend-paying companies in the S&P 500,[69] and the Maine PUC relied on the Staff's CAPM to determine the authorized ROE and did not dispute the use of the constant growth DCF model to calculate the market return.[70]

Q. Have the courts addressed Mr. Garrett's assertion that your forward-looking market return is inflated?

A. Yes. In its review of FERC Opinion No. 569-B, the U.S. State Court of Appeals for the District of Columbia addressed the concern regarding the use of projected EPS growth rates in a constant growth DCF model to estimate the market return. In the Court's decision, it acknowledged that the FERC has relied on the use of projected EPS growth rates in the calculation of the market return on the S&P 500

[68] *Ass'n. of Businesses Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, 171 FERC ¶ 61,154 (2020), at ¶ 85.

because the S&P 500 is regularly updated to include companies with high market capitalization and it includes companies at all stages of growth, including lower and higher growth potential. The Court determined that FERC's rationale for using projected EPS growth rates was sufficient and did not accept the challenge to this assumption.[71]

D. ECAPM

Q. What is Mr. Garrett's position regarding your ECAPM analysis?

A. Mr. Garrett contends that the use of an adjusted beta along with the adjustments in the ECAPM are effectively duplicative and thus produces overstated results.[72] In addition, Mr. Garrett also contends that the *Value Line* adjustment to betas overstates betas for firms with a beta less than 1.0, and as he indicated regarding my CAPM, he states that my ECAPM also suffers from an overstated market return, and thus market risk premium.[73]

Q. Do you agree with Mr. Garrett that it is inappropriate to use adjusted betas in the ECAPM?

A. No. The purpose of adjusting beta in the CAPM is to account for the tendency of beta to trend back over time to the market beta of 1.00. The betas published by

[71] United States Court of Appeals, District of Columbia Circuit, Opinion, Docket No. 16-1325, August 9, 2022, at 19.

[72] Garrett Direct Testimony, at 46-47.

[73] Garrett Direct Testimony, at 57-58.

Value Line include this adjustment, which was first proposed by Marshall E. Blume in 1975.[74] The use of adjusted betas in the CAPM is important because if beta trends towards 1.00, as Blume noted, then the adjusted beta will be more reflective of the beta that can be expected over the near-term. This is equally important in the specification of the CAPM in this case since we are estimating the cost of equity for the Company over the near-term.

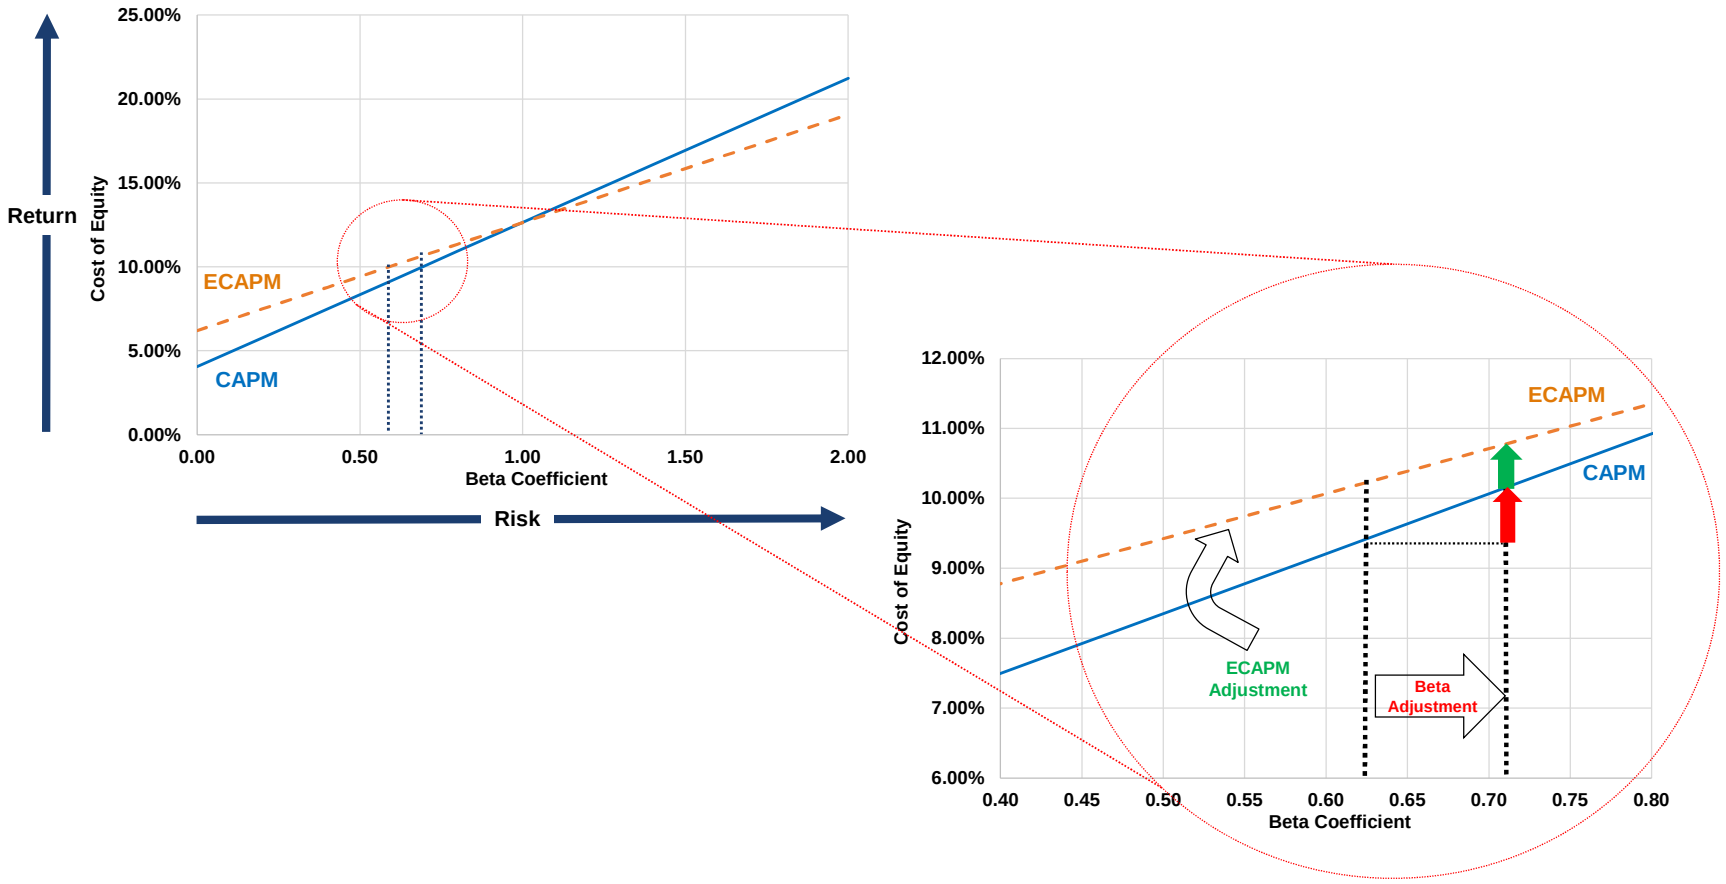
The ECAPM does not account for the tendency of beta to trend toward 1.00. The purpose of the ECAPM is to account for the fact that the risk-return relationship is flatter than what is estimated by the CAPM, ***even when using adjusted betas***. While beta is not observable and must be estimated, the theory behind the ECAPM is that even if the true value of a stock's beta were observable, the CAPM would understate the results for stocks with betas less than 1.00 and overstate the results for stocks with betas greater than 1.00. Therefore, contrary to the assertions of Mr. Walters and Mr. Garrett, the purpose of each adjustment is different and thus applying both adjustments in the ECAPM is not duplicative.

[74] Blume, Marshall E. "Betas And Their Regression Tendencies." *The Journal of Finance*, Vol. 30, No. 3, 1975, pp. 785–795.

Q. Can you demonstrate that using adjusted betas in the CAPM and relying on the ECAPM are two distinct adjustments to the CAPM?

A. Yes. Figure 10 demonstrates the point that adjusting betas and adjusting the slope of the risk/return relationship through the ECAPM are two distinct adjustments and are not duplicative as alleged by Mr. Garrett. As shown in Figure 10, when beta is adjusted to recognize that betas revert to the market mean of 1.0 over time and used in the CAPM, the resulting adjustment is shown by the red arrow in the lower right-hand corner. Separately, when the ECAPM is employed to recognize that the risk/return relationship is flatter than predicted by the CAPM, the resulting adjustment is shown by the green arrow in the lower right-hand corner. To the extent that a company with a beta greater than 1.0 were being evaluated, the same process of two separate adjustments would apply, albeit in the opposite direction from what is shown in Figure 10 and would result in a decrease in the cost of equity otherwise predicted by the CAPM.

Figure 10: Risk/Return Relationship between CAPM and ECAPM



Q. Are you aware of any other academic studies that have used adjusted betas to estimate the ECAPM?

A. Yes. For example, Chrétien and Coggins (2011) studied the CAPM and its ability to estimate the risk premium for the utility industry in particular subgroups of utilities for a data set that included market data through the end of 2006.[75] Chrétien and Coggins considered the CAPM, the Fama-French three-factor model and a model similar to the ECAPM. The study shows that the ECAPM significantly outperformed the traditional CAPM at predicting the observed risk premium for the various utility subgroups.

Additionally, Mr. Garett's concern with the ECAPM analysis is addressed directly by Dr. Roger Morin in Modern Regulatory Finance as follows:

> Because of this adjustment, some critics of the ECAPM argue that the use of Value Line adjusted betas in the traditional CAPM amounts to using an ECAPM. This is incorrect. The use of adjusted betas in a CAPM analysis is not equivalent to the ECAPM. Betas are adjusted because of the regression tendency of betas to converge towards 1.0 over time. We have seen that numerous empirical studies have determined that the SML [Security Market Line] described by the CAPM formula at any given moment in time is not as steeply sloped as the predicted SML. The slope of the SML should not be confused with Beta. On the point, Eugene F. Brigham, finance professor and the author of many financial textbooks states:
>
> The Slope of the SML (5% in Figure 6-16) reflects the degree of risk aversion in the economy. The greater the average investor's aversion to risk, then (a) the steeper the slope of the line, (b) the greater the risk premium for all stocks, and (c) the higher required rate of return on all stocks. Students sometimes confuse beta with the slope of the SML. This is a mistake.
>
> The use of an adjusted beta by Value Line is correcting for a different problem than the ECAPM. The adjusted beta captures the fact that betas regress towards one over time. The ECAPM corrects for the fact that the

[75] Stéphane Chrétien, and Frank Coggins, "Cost Of Equity For Energy Utilities: Beyond The CAPM," *Energy Studies Review*, Vol. 18, No. 2, 2011.

CAPM under-predicts observed returns when beta is less than one and over-predicts observed returns when beta is greater than one.[76]

Q. Are you aware of state regulatory commissions that have accepted the use of the ECAPM?

A. Yes. There are various regulatory commissions that have supported the use of the ECAPM in establishing an authorized ROE, and have done so when adjusted betas are used in the ECAPM analysis. For example, the New York Public Service Commission ("NYPSC"), the Montana Public Service Commission ("Montana PSC"), and North Carolina Utilities Commission ("NCUC") have accepted the ECAPM analysis with the use of adjusted beta coefficients in establishing the authorized ROE for regulated utilities. Specifically, the NYPSC gives equal weight to the CAPM and ECAPM (which it refers to as the "Zero Beta" CAPM) results,[77] the Montana PSC has expressed preference for the ECAPM analysis,[78] and the NCUC has recently found that both the adjustment to beta in the CAPM and the adjustment in the ECAPM were needed because they correct for different things.[79]

Q. Do you agree with Mr. Garrett's contention that the adjustment made by *Value Line* to its betas overstates betas for firms with a beta less than 1.0?

A. No. There is no basis to Mr. Garrett's contention that the adjusted betas published by *Value Line* are overstated. Both *Value Line* and *Bloomberg* publish betas adjusted using the

[76] Dr. Roger A. Morin, *Modern Regulatory Finance*, Public Utilities Report, Inc. (2021), at 223-224 (emphasis added).

Blume adjustment, have been doing so for many years, and investors clearly rely on both *Value Line* and *Bloomberg* for financial data in making investment decisions.

E. Flotation Costs

Q. What is Mr. Garrett's position regarding your consideration of flotation costs?[80]

A. While Mr. Garrett acknowledges that I have considered flotation costs in my overall risk assessment, but have not made a specific adjustment to the ROE for such costs, he claims that there are two reasons from a technical standpoint that flotation costs should be disallowed: flotation costs are not actual out-of-pocket costs and the market already accounts for such costs.[81] In addition, Mr. Garrett also states that it would be inappropriate from a practical standpoint to adjust the authorized ROE upward for flotation costs given that the Company's requested ROE is well above the market cost of equity.[82]

Q. Do you agree with Mr. Garrett's rationale from a technical perspective for disallowing flotation costs?

A. No. I addressed both of Mr. Garrett's alleged technical reasons for disallowing flotation costs in my direct testimony. First, while Mr. Garrett claims that if the Company actually had flotation costs then those costs should be included in the Company's expense schedules. However, as stated in my direct testimony, flotation costs are part of the invested costs of the utility, which are properly reflected on the balance sheet under "paid in capital" and are not current expenses, and, therefore, are not reflected on the income

---

[80] Mr. Patel also briefly notes that he believes it is inappropriate to consider the potential impact of flotation costs in the authorized ROE (Patel Direct Testimony, at 68-69).

[81] Garrett Direct Testimony, at 32-33.

[82] *Id*., at 33.

statement. The great majority of a utility's flotation costs are incurred prior to the test year but remain part of the cost structure that exists during the test year, and failure to allow recovery of past flotation costs constrains the opportunity to earn the required rate of return in the future. In addition, simply because the Company does not issue its own equity does not mean that the recovery of flotation costs is inappropriate. Again, as stated in my direct testimony, denying recovery of issuance costs associated with the capital that is invested in the subsidiaries ultimately penalizes the investors that fund the utility operations and could inhibit the utility's ability to obtain new equity capital at a reasonable cost.

Second, Mr. Garrett's claim that investors already account for flotation costs is counter to the need recognized by the academic and financial communities that shareholders need to be reimbursed for the lost returns associated with equity issuance costs in the same spirit that investors are reimbursed for the costs of issuing debt.

Lastly, Mr. Garrett's "practical" reason for not allowing the recovery of flotation costs incorrectly assumes that the Company's proposed ROE exceeds the market cost of equity, but that conclusion is based on his cost of equity analyses, which, as discussed, are not supportable.

F. Capital Structure

Q. What is Mr. Garrett's position regarding the Company's proposed capital structure?

A. Mr. Garrett states that the Company's proposed capital structure of 55 percent equity and 45 percent debt represents an excessive equity ratio, and that the Company's equity ratio should be 51 percent, which is consistent with the average equity ratio of the proxy group companies. In addition, Mr. Garrett applies a Hamada formula to his CAPM results to

assess the difference in the cost of equity of a capital structure with a greater proportion of equity relative to the proxy group. Based on this analysis, Mr. Garrett recommends that if the Commission adopts the Company's proposed capital structure, which has a greater proportion of equity and thus lower risk relative to the proxy group, the cost of equity using the CAPM should be 8.5 percent instead of 8.8 percent.

Q. Is Mr. Garrett's position regarding the Company's proposed capital structure reasonable?

A. No. I disagree with Mr. Garrett's analysis for four primary reasons. First, Mr. Garrett's proposed capital structure does not reflect how the Company capitalizes its business. Second, he inappropriately compares the Company's proposed capital structure to that of the holding companies of the proxy group instead of the operating utilities of the holding companies. Third, even though Mr. Garrett inappropriately compares the Company's proposed capital structure to the holding companies in the proxy group, he incorrectly does so to my proxy group and not his own. Lastly, Mr. Garrett incorrectly applies the Hamada equation to my proxy group, which results in Mr. Garrett incorrectly concluding that his CAPM result should be lower if the Commission approves the Company's proposed capital structure.

Q. Does the Company's proposed capital structure reflect its actual capital structure?

A. Yes. It is my understanding that the Company's proposed capital structure recognizes the composition of the financing that the Company is currently using to fund the significant investments PAWC must make to continue to meet its obligations to provide reliable water and wastewater service while meeting ever more stringent environmental laws and

regulations. Moreover, it is my understanding that the projected capital structures as of June 30, 2024 and June 30, 2025 are the Company's expected capital structures that will result from incremental investment over this time period.

Q. Why is Mr. Garrett's capital structure comparison to the proxy group inappropriate?

A. As shown on Exhibit DJG-13, Mr. Garrett considers the common equity ratio for the proxy group companies at the holding company level, not the utility operating subsidiaries, which includes corporate-level debt that is not part of the regulated or financial capital structure of the operating utilities. Simply because the parent companies in the proxy group are used to estimate the Company's cost of equity does not mean that the *holding company* capital structures are the relevant comparators for establishing the Company's authorized capital structure. There is no question that the utility operating subsidiaries of those holding companies are *more* comparable to PAWC in terms of risk. Holding companies have multiple regulated utility subsidiaries, including in multiple jurisdictions, as well as unregulated operations or other business activities, which differs from the Company's purely regulated utility operations in a single jurisdiction. Therefore, the appropriate comparison for the Company's proposed capital structure is a comparison to the capital structures of the utility operating subsidiaries of the proxy group companies, which, as shown in my direct testimony, PAWC's proposed equity ratio of 55.20 percent is well within the range of equity ratios for the utility operating subsidiaries of the proxy group companies, and is in fact below the average.[83]

[83] Direct Testimony of Ann E. Bulkley, at 62-63.

Q. Is the average debt ratio of Mr. Garrett's water utility proxy group 49 percent such as he suggests?

A. No. As shown on Exhibit DJG-13, the 49 percent debt ratio is an average of all of the holding companies in my proxy – not just the water utilities such as Mr. Garrett has relied for purposes of his cost of equity analyses. As shown on Exhibit 13-R, Schedule 11, the actual average debt ratio for Mr. Garrett's proxy group at the holding company level is 47.30 percent, meaning an equity ratio of 52.70 percent.

Q. What is the purpose of the Hamada equation?

A. The Hamada equation allows an analyst to first "unlever" beta to remove the effect of the debt ratio of a company and then "relever" beta at different debt ratios to examine the effect of changes in the debt ratio on the cost of equity produced by the CAPM. The Hamada equation is as follows:[84]

$$\beta_l = \beta_u [1 + (1 - T) \frac{D}{E}$$

Where:

β_l = Levered beta of a company

β_u = Unlevered beta of a company

T = Corporate income tax rate

D = Market value of debt

E = Market value of equity

[84] *See*, Villadsen, Vilbert, Harris and Kolbe, *Risk and Return for Regulated Utilities*, 2017, at 146-154; Brealey, Myers, and Allen, *Principles of Corporate Finance*, 13th Ed., 2020, at 452-462; and Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, 3rd ed., John Wiley & Sons, Inc., 2012.

Q. Do you agree with Mr. Garrett's application of the Hamada formula?

A. No. In his analysis, Mr. Garrett is unlevering the proxy group beta to remove the effect of the debt ratios of the proxy group on the average beta and then relevering beta to reflect the Company's proposed capital structure to determine its effect on the cost of equity. However, in applying the Hamada formula, Mr. Garrett incorrectly relies on the book value of debt and equity for each of the proxy group companies at the holding company level as published by *Value Line*, instead of the market value of debt and equity as required in applying the Hamada equation. As a result, this has a substantial effect on the debt-to-equity ratio used to unlever and relever beta given the market value of debt and equity in this instance deviates significantly from the book value.

Q. Have you estimated the equity ratio and debt ratio for the proxy group based on the market value of debt and equity to illustrate the problem with Mr. Garrett's analysis?

A. Yes. In applying the Hamada equation, Mr. Garrett relies on an average debt ratio of 49 percent and equity ratio of 51 percent, which is the book value of debt and equity for each of the companies in my proxy group. Mr. Garrett contends that, since the Company's proposed debt ratio of 44.8 percent is lower than the proxy group average debt ratio of 49 percent, the Company has less risk and that applying the Hamada equation results in a downward adjustment to his CAPM result from 8.8 percent to 8.5 percent to reflect the decreased financial risk of the Company's proposed capital structure. However, as shown in Exhibit 13-R, Schedule 12, if Mr. Garrett had instead correctly relied on the *market value* of debt and equity of each company in my proxy group for his analysis, he would have estimated a proxy group average debt ratio of 34.3 percent, not 49.1 percent. Since the

debt ratio for the proxy group when correctly based on market value as required in the Hamada formula is *lower* than the Company's proposed debt ratio, the Hamada formula, when specified and applied correctly, implies that Mr. Garrett's CAPM result of 8.80 percent should *increase* – not decrease – to reflect the increased financial risk associated with the Company's proposed debt ratio relative to the proxy group. As shown in Exhibit 13-R, Schedule 13, Mr. Garrett's CAPM estimate is actually *understated* by approximately 120 basis points based on his water utility proxy group, and 100 basis points based on my distribution utility proxy group. Given that the capital structures of the proxy group companies at the holding company level should not be used to evaluate the reasonableness of the Company's proposed capital structure, and Mr. Garrett's Hamada adjustment is nonetheless incorrect, the Commission should disregard the results of Mr. Garrett's CAPM scenario in which he applies the Hamada equation.

VII. BUSINESS AND REGULATORY RISK

Q. What is Mr. Patel's position regarding how the Company's general business and regulatory risk should affect the Company's authorized ROE in this proceeding?

A. Mr. Patel contends that PAWC's business and operating risks are not unique to PAWC, and the fact that the utilities in Pennsylvania have mechanisms such as the DSIC, the Fully Projected Forecast Test Year, and the ability to file rates cases as needed, reduce risk.[85]

Q. Do you agree with Mr. Patel's assessment?

A. No. It is not reasonable or appropriate to consider the regulatory mechanisms of the utilities in Pennsylvania generally, or the regulatory mechanisms applicable to the Company

[85] Patel Direct Testimony, at 55-60.

specifically, on a stand-alone basis without reference to the other comparable utilities as Mr. Patel seemingly suggests. Rather, the risk that is relevant for purposes of establishing the authorized ROE in this proceeding is the *relative* risk of the Company as compared to the proxy group. Mr. Patel appears to acknowledge that a comparative analysis is appropriate relative the proxy group given that he states that only 22 percent of the water utilities have some form of revenue decoupling or revenue stabilization.

Q. Mr. Patel characterizes your regulatory risk analysis regarding the RDM as "extremely misleading" given that only 22 percent of the water utilities have some form of revenue decoupling or revenue stabilization? Do you agree?

A. No. As discussed previously, I disagree with Mr. Patel's very small water only proxy group, and as presented in Exhibit 13-A, Schedule 9 of my direct testimony, nearly 60 percent of the distribution utilities in my proxy have some form of revenue stabilization. There is clearly no attempt to be misleading given that all of the information on which Mr. Patel relies on for his characterization of my assessment is from my Exhibit 13-A, Schedule 9. The issue is simply that there is no meaningful difference between distribution utilities with respect to whether they benefit from revenue decoupling or revenue stabilization, and looking at only the water utilities in my view is not reasonable.

Q. What has Mr. Garrett stated regarding the Company's proposed ECIC and RDM?

A. Mr. Garrett claims that these proposals improperly shift the risk of operating the utility from investors to ratepayers, and that if the Commission were to adopt these proposals, the Company's risk would greatly decrease. Mr. Garrett states that it is the OCA's primary recommendation that the ECIC and RDM be rejected by the Commission; however, if the

Commission approves these proposals, then he recommends that the Commission authorize an ROE of 8.70 percent, which is the low end of his cost of equity range.[86]

Q. Has Mr. Garrett provided any basis for using the low end of his cost of equity range for purposes of setting the ROE in this proceeding if the ECIC and RDM are approved by the Commission?

A. No. Mr. Garrett provides no analysis of the risk of the Company relative to other comparable utilities if the ECIC and RDM are approved. As discussed in my direct testimony, the proper analysis is to compare the risk of the Company relative to the proxy group, and Mr. Garrett has conducted no such analysis. In contrast, in Exhibit No. 13-A, Schedule 9 of my direct testimony, I reviewed the utility operating subsidiaries of the proxy group companies and showed that the majority of the proxy group companies have implemented some form of RDM. As I stated in my direct testimony, capital and operating cost recovery mechanisms are commonplace within the utility industry. Therefore, the approval of the proposed RDM in this proceeding does not by itself reduce the risk of the Company relative to the proxy group if approved by the Commission. Rather, if the Commission approves the Company's proposed ECIC and RDM, my testimony demonstrates that it would make the Company consistent with the proxy group companies, not less risky as incorrectly suggested by Mr. Garrett.

[86] Garrett Direct Testimony, at 19.

Q. Is Mr. Garrett recommending a specific reduction to the Company's authorized ROE if the ECIC and RDM are approved?

A. It is unclear whether Mr. Garrett is recommending a specific reduction to the Company's authorized ROE if the ECIC or RDM are approved. In his discussion of the ECIC and RDM, Mr. Garrett mentions that the Public Utilities Regulatory Authority ("PURA") of Connecticut found that there should be a 10 basis point reduction in Aquarion Water's authorized ROE associated with its revenue adjustment mechanism. Mr. Garrett states that if the Commission adopts the ECIC or RDM, then "there should be a corresponding reduction to the allowed ROE." While it appears that Mr. Garrett is using this as support for stating that the Commission should authorize at the low end of the range of results of his cost of equity models as opposed to the average, it is unclear whether he is also recommending a further, specific basis point reduction to the authorized ROE as well. Regardless of this lack of clarity, as discussed, there is no basis for the adoption of an ROE at either the low end of his range of results or a specific basis point reduction given that Mr. Garrett fails to evaluate the relative risk of the Company as compared to the proxy group if either the RDM or ECIC are approved by the Commission.

Q. What do Ms. LaConte, Mr. Higgins and Ms. Hoover state regarding the Company's proposed RDM and ECIC mechanisms?

A. Ms. LaConte, Mr. Higgins, and Ms. Hoover oppose approval of both of these mechanisms.[87] Specifically, they contend that the RDM shifts the risk of cost recovery from PAWC to its customers, with Ms. LaConte suggesting that it "provides PAWC with

[87] LaConte Direct Testimony, at 13-14; Higgins Direct Testimony, at 38-39; Hoover Direct Testimony, at 46-50.

the guarantee of cost recovery and a significant advantage of achieving its earnings targets for shareholders,"[88] and Mr. Higgins suggesting that shareholders are already compensated for accepting revenue risk as part of its authorized ROE. Regarding the ECIC, Ms. LaConte and Mr. Higgins state that the ECIC is another example of single issue ratemaking, with Ms. LaConte noting that none of the water utilities in Pennsylvania, nor any of the water utilities in the my proxy group, have environmental cost recovery mechanisms.[89] Ms. LaConte states that if the Commission approves the RDM and ECIC, a downward adjustment to the Company's proposed ROE should be applied to reflect the reduced risk.[90] Ms. LaConte also states that, at a minimum, considering the extraordinary timing of the proposed rate increase, and that the proposed RDM, ECIC, and deferral mechanisms reduce risk, warrants approval of an ROE at the lower end of the Commission's deemed range of reasonableness.[91]

Q. Do Ms. LaConte, Mr. Higgins, or Ms. Hoover provide any evidence that suggests that your regulatory risk analysis of the Company relative to the proxy group is insufficient or that it does not demonstrate that PAWC's risk is comparable to the proxy group?

A. No. None of these witnesses have provided any additional analysis of the cost recovery mechanisms implemented by the proxy group companies relied on by the ROE witnesses in this proceeding.

---

88 LaConte Direct Testimony, at 13-14.

89 LaConte Direct Testimony, at 16; Higgins Direct Testimony, at 46.

90 LaConte Direct Testimony, at 6.

91 *Id*., at 7.

Q. Does the Company's proposed RDM and ECIC reduce the risk of PAWC as compared to the proxy group?

A. No. As discussed in my direct testimony, based on a review of the operating subsidiaries of the proxy group companies as shown in Schedule-6 of Exhibit No. 13-A, 59 percent of the group had implemented some form of revenue stabilization mechanism and therefore the Company would be more comparable to the group if the proposed RDM and ECIC were approved.

Q. Are you aware of regulatory commissions that have concluded that rate mechanisms to provide more stable revenue do not reduce the risk of the company as compared to the proxy group?

A. Yes. I am aware that the Public Service Commission of Wyoming ("WY PSC"), the Public Service Commission of Maryland ("MD PSC") and the Minnesota Public Utilities Commission ("MN PUC") have each rejected a proposed reduction to a utility's authorized ROE due to a revenue stabilization or revenue decoupling mechanism. For example, in Docket No. 30010-94-GR-08 for Quester Gas Company, the WY PSC noted the following:

> Regarding the OCA's suggestion about reducing ROE by 25 basis points if the Commission adopted the CET, the Commission agrees the CET [Conservation Enabling Tariff] may reduce its risk, but the OCA did not provided a logical basis on which to derive or apply the 25 basis point reduction in this docket. **This suggested reduction in ROE is not appropriate because eight of the ten utilities in the proxy group Questar used in its DCF analysis have some sort of decoupling mechanism. If the decoupled utilities are part of the proxy group, the risk reduction is already accounted for when the proxy group financial parameters are used to determine a ROE for the Company**. The Commission agrees with Questar that financial analysts now tend to treat revenue stabilization

> measures as a norm, rather than an exception which requires adjustments. (Tr. Vol. II, p. 257.)[92]

Similarly, in Docket No. G-008/GR-08-1075 for CenterPoint Energy, the MN PUC rejected a proposal by the Office of the Attorney General to reduce CenterPoint Energy's ROE by 27 basis points if a revenue decoupling mechanism was approved due in part:

> Further, the Company argued persuasively that the comparison group used to determine that 8.09 percent was reasonable was composed of companies most of whom had significant revenue stabilization arrangements in place (including decoupling and including decoupling that adjusted for weather) so that adopting the limited decoupling plan for CenterPoint simply made CenterPoint more like the comparison group. In these circumstances, lowering the cost of equity in response to CenterPoint's limited decoupling would overemphasize the risk reduction resulting from the limited decoupling approved in this Order.[93]

Finally, in Case No. 9299 for Baltimore Gas and Electric Company, the MD PSC did not reduce the ROE for Baltimore Gas and Electric Company's natural gas operations due to its decoupling mechanism because revenue decoupling mechanisms were prevalent among natural gas distribution companies.[94]

VIII. MANAGEMENT PERFORMANCE

Q. What is Mr. Patel's position regarding the Company's management performance and how it should be considered relative to the Company's authorized ROE in this proceeding?

A. In addition to contending that the performance of the Company's management does not justify an ROE adder,[95] which is addressed by PAWC witness Ashley Everette's rebuttal testimony, Mr. Patel also states that the Company is able to recover all of its costs associated with acquisition of troubled water and wastewater systems, as well as has the opportunity to earn a return on the fair value of the rate base of such acquisitions, which Mr. Patel states "adequately compensates for the investment risk of the acquiring company."[96]

Q. Has Mr. Patel provided any evidence to support his notion that the Company is already adequately compensated for its investment risk as a result of acquiring troubled water and wastewater utilities?

A. No, Mr. Patel has not provided any evidence as to the adequacy of the compensation for such investment risk. Regardless, Mr. Patel's position that management performance should not be compensated is counter to the Commission's Policy Statement on Small Nonviable Water and Wastewater Systems, which specifies that the Commission will consider rate of return incentives to encourage the acquisition of troubled water and wastewater systems. In fact, as noted by Patel, the Commission recently approved a 25 basis point adder for management performance in *Aqua* based primarily on the utility's

[95] Patel Direct Testimony, at 71-74.

[96] *Id*., at 78.

willingness to provide emergency aide to water and wastewater systems that required substantial investment.[97] Mr. Patel also recognizes that simply because the Commission will consider a potential ROE adder for management performance, it does not mean such an adder will be granted. However, as discussed by PAWC witness Ms. Everette, and Company President Justin L. Ladner, the Company has delivered superior performance that goes well beyond the requirements of the Public Utility Code.

Q. What is Mr. Garrett's position regarding your consideration of the Company's management performance on the ROE to be authorized by the Commission in this proceeding?

A. Mr. Garrett contends that the ROE should not consider management performance, as the risk of imprudent management is related to firm-specific risk that is not rewarded by the market because investors can eliminate such risks through portfolio diversification.[98]

Q. Is it appropriate to consider management performance as one factor in determining where within the range of cost of equity results an authorized ROE should fall?

A. Yes. As Mr. Garrett's own cost of equity analyses demonstrate, there is a range of results that occur when using multiple analytical approaches to estimating the cost of equity. As such, the analyst needs to determine where best within that range of results that the authorized ROE should fall, and considering management performance is one factor that reasonably should be considered when setting the authorized ROE.

[97] Patel Direct Testimony, at 25.

[98] Garrett Direct Testimony, at 48.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

Re: Pennsylvania Public Utility Commission v. Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 and R-2023-3043190

Dear Secretary Chiavetta:

Attached please find in the above-captioned proceedings, the **Errata to PAWC Statement No. 13-R – Rebuttal Testimony of Ann E. Bulkley**, which was served on February 21, 2024 (the "Errata").

As evidenced by the Certificate of Service, copies of the Errata are being served upon Deputy Chief Administrative Law Judge Christopher P. Pell, Administrative Law Judge John Coogan, and all parties of record.

If you have any questions, please contact me directly at 215.963.5384.

Very truly yours,

Kenneth M. Kulak

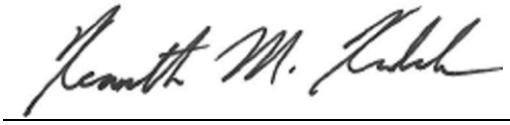
ERRATA

On February 21, 2024, Pennsylvania-American Water Company ("PAWC" or the "Company") submitted its Rebuttal Testimony and Exhibits in the above-referenced matters, including the Rebuttal Testimony of Ann E. Bulkley (PAWC Statement No. 13-R). Upon review of the as-served document, PAWC discovered an error on Schedule 3 (pages 2 through 9) of Exhibit No. 13-R. The columns titled "Company" and "Ticker"

incorrectly refer to #REF!". Accordingly, PAWC submits the following errata with a revised Schedule 3 (included as Attachment A).

Respectfully submitted,



Elizabeth Rose Triscari (PA I.D. No. 306921)

REBUTTAL TESTIMONY
OF
JUSTIN L. LADNER

WITH REGARD TO
RESPONDING TO OPPOSING PARTY WITNESSES' TESTIMONY REGARDING THE COMPANY'S NEED FOR RATE RELIEF, MANAGEMENT EFFECTIVENESS, ACCQUISTIONS AND DEPLOYMENT OF PUBLIC FUNDING

DOCKET NOS.
R-2023-3043189 (WATER)
R-2023-3043190 (WASTEWATER)

FEBRUARY 21, 2024

PENNSYLVANIA-AMERICAN WATER COMPANY

REBUTTAL TESTIMONY OF JUSTIN L. LADNER

Introduction

Q. Please state your name and address?

A. My name is Justin L. Ladner and my business address is 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

Q. By whom are you employed and in what capacity?

A. I am the President of Pennsylvania-American Water Company, Inc. ("Pennsylvania-American", "PAWC" or the "Company").

Q. What are your responsibilities in this position?

A. As President of PAWC, I am responsible for all aspects of its business, including financial, operations, production, distribution, customer service, engineering and capital investment planning, employee relations, environmental, and regulatory affairs. I lead a team of dedicated professionals who are devoted to providing safe and reliable service to approximately 780,000 residential, commercial and industrial water and wastewater service customers in 37 counties in Commonwealth of Pennsylvania. PAWC has three operating areas, western, northeast, and central/southeast, which collectively serve an estimated population of about 2.4 million people. My goals are to ensure that all activities of the Company are carried out in compliance with all local, state and federal laws and regulations, adhere to standards of good business practice, and enhance the quality of service provided to our customers.

Q. Please describe your educational background and business experience.

A. I joined American Water in 2018 as director of National Regulatory Affairs. In this role I was responsible for developing and implementing strategies, practices, and processes related to national regulatory affairs. In 2020, I joined Illinois American Water, serving in the role of president until 2022, when I joined PAWC. Before joining American Water, I served in multiple roles at Southern Company, including attorney for Southern Nuclear and governmental affairs and policy manager, project manager for the Integration Management Office, and assistant to the executive vice president of Nuclear Development at George Power. Prior to joining Southern Company, I was an associate attorney for Huie, Fernambucq & Stewart in Birmingham, Alabama. I also worked for U.S. Steel as a metallurgical engineer.

I received my law degree, cum laude, from the University of Alabama School of Law, as well as a master's and a bachelor's degree in Metallurgical and Materials Engineering with honors from the University of Alabama.

Q. Have you previously submitted direct testimony in this proceeding?

A. No, I have not.

Q. What is the purpose of your rebuttal testimony?

A. I will address the direct testimonies submitted by: Office of Consumer Advocate ("OCA") witness Christine Maloni Hoover relating to her assessment of the Company's rate case filing and position that the Company's request for a 25 basis point management efficiency adder is not supported by substantial evidence; OCA witness Ralph C. Smith and the Pennsylvania Public Utility Commission ("Commission") Bureau of Investigation and Enforcement ("I&E") witnesses Vanessa Okum, Ethan H. Cline and Joseph Kubas

recommended disallowance of certain acquisitions from the Company's proposed rate base; and State Representative Kyle T. Donahue and the City of Scranton witness Paige G. Cognetti regarding the Company's use of PENNVEST funding.

Response to OCA Witness Hoover Regarding Assessment of the Rate Case Filing

Q. OCA witness Hoover describes the purpose of her testimony as providing an overview of the Company's rate case proposals from the consumers' perspective, which includes discussion of how the Company's proposals, when taken together, result in large bill increases and harms customers.[1] Do you agree with Ms. Hoover's assessment?

A. No, I do not agree. As explained in the Company's initial filing, the most significant driver for the Company seeking additional rate relief at this time is the substantial capital investments PAWC is and will continue to make in its water and wastewater systems through to the end of the Fully Projected Future Test Year ("FPFTY") ending June 30, 2025, which are projected to exceed $1 billion. The Company's rate case filing provided extensive data in support of its requested rate increase, including the detailed description of 118 discrete capital projects[2] anticipated to be in service by the end of the FPFTY, with costs ranging from $1 million to $17 million per project. In addition to these large infrastructure improvement projects, the Company will perform routine replacement of mains, meters, company-owned service lines, customer-owned lead service lines, and wastewater laterals. As explained by Company witness Bruce W. Aiton, the Company needs to make significant investment in both its water and wastewater facilities to meet environmental and public health standards, address aging infrastructure and maintain and

[1] OCA Statement 1, p. 1.
[2] See PAWC Statement No. 3, pp. 13-51.

enhance the reliability and resiliency of its systems.[3] No party challenged the need for these projects.

Despite the significant level of investment that the Company plans to make through the end of the FPFTY, PAWC water service will remain quite reasonable for our customers. The average residential water customer taking service under Zone 1 will pay approximately 2 cents per gallon under proposed rates, which equates to about $2.90 per day for all their water needs for drinking, cooking, cleaning and sanitation. Contrary to Ms. Hoover's claim that the Company's proposed rates will result in large bill increases and harm customers, the Company's rate case proposals, if adopted, will result in customers benefitting from the Company's extensive capital investments while still paying reasonable rates.

Q. OCA Witness Hoover states that, "it is in the decision-making process by the utility in planning for their rate case and making choices about what to pursue … that the consideration of the consumers' interests often fall away."[4] Did PAWC consider the impact of increased rates on customers?

A. Of course. The Company recognizes that a rate increase can have an impact on our customers, but we also recognize that our customers rely on the Company to provide them with safe and reliable water and wastewater service which requires the Company to make ongoing, significant capital investments. We strive to find the right balance between the investments that are essential to providing safe and reliable service with the costs that will ultimately be paid by customers, and we work to deploy our capital as cost effectively as possible. As Mr. Aiton explains, our systematic, proactive approach to planning capital

[3] See PAWC Statement No. 3, pp. 9-53.
[4] OCA Statement 1, p. 26.

projects allows the Company to deploy capital more cost effectively than simply reacting to pipe breaks or equipment failures.[5]

Our water and wastewater services are critical for our customers, and we know how important it is for customer bills for those services to not only be reasonable, but remain affordable.[6] The Company was the first Pennsylvania water utility to implement customer assistance programs and is one of the first utilities to prepare and present an affordability analysis of the kind presented by Charles B. Rea in this proceeding. In light of our analysis, the Company has proposed to further expand its Bill Discount Program ("BDP"), as discussed further below.

Q. Regarding affordability, please respond to Ms. Hoover's contention that her concern about rising utility costs are magnified because this case represents the Company's third case in four years.[7]

A. It is true that this is the Company's third rate case since 2020. But utility costs are rising despite our success in mitigating rate increases for customers by operating efficiently and controlling operating and maintenance ("O&M") expenses year-after-year as discussed in Company witness Ashley Everette's direct testimony.[8] With the monumental investment challenges we face, keeping our costs as low as practicable is paramount. The combination of our proactive investment, efficient O&M, and continued affordability of our service demonstrates that the Company's management of the business and investment in the business delivers high-value service to customers at affordable rates, which is in the long-term best interest of our customers.

[5] See PAWC Statement No. 3, p. 4.
[6] See, PAWC Statement No. 10-R, pp. 8-10, 27.
[7] OCA Statement 1, p. 19.
[8] See, PAWC Statement No. 1, pp. 8-9.

In addition to delivering our services in the most efficient, cost-effective ways to benefit all of our customers, PAWC also offers several targeted customer assistance programs to help our most vulnerable customers. In this case, PAWC proposes to expand the Company's BDP to residential customers whose household incomes are between 151% and 200% of Federal Poverty Level, which will further contribute to the affordability of our rates. In addition, as discussed in Company witness Rea's rebuttal testimony,[9] the Company is not opposed to the proposals of OCA witness Roger D. Colton and CAUSE-PA witness Harry S. Geller that would increase the BDP's existing discount levels to provide greater levels of affordability for qualifying customers.

Response to Ms. Hoover's Position on the Company's Requested Management Efficiency Adder

Q. Ms. Hoover recommends that the Company's request for a 25 basis point management efficiency adder be rejected on the basis that it is not supported by substantial evidence.[10] Please respond.

A. It appears that in making this recommendation, Ms. Hoover is relying on the conclusions drawn by OCA witnesses Barbara R. Alexander, Colton and David J. Garrett. Company witnesses Everette, Deborah Degillio, Tawana Dean and Ann Bulkley respond to Mr. Garret's, Mr. Colton's and Ms. Alexander's testimonies directly in their rebuttal testimonies, but I want to underscore the extensive evidence supporting the Company's request. As demonstrated below, it is simply incorrect to state that the Company has not supported its request for a management efficiency adder with substantial evidence.

[9] PAWC Statement No. 10-R, pp. 29-31.
[10] OCA Statement 1, p. 52-53, 64.

PAWC has Industry-Leading Customer Assistance Programs

As testified to by Ms. Everette[11] and Ms. Degillio,[12] the Company has several programs to assist low income and payment troubled customers and makes significant efforts to educate customers about the availability of assistance programs (both Company-sponsored and non-Company sponsored). These programs include the BDP, which the Company has proposed to expand, the Help to Others ("H2O") program, which is funded primarily with shareholder dollars (currently $750,000/year and, upon closing of the BASA acquisition, increasing by $700,000 annually for the next five years), and the Arrearage Management Program ("AMP"), which is a new program to provide customers participating in the BDP who have an arrearage balance of at least $150 with $25 of arrearage forgiveness for each in-full payment of current charges plus a $5 co-payment. I will note that, unlike the electric and gas utilities that are required to offer customer assistance programs, PAWC voluntarily developed and is initiating these programs to assist our customers, and we were the first water company to do so in Pennsylvania.

Regarding the Company's customer outreach efforts to educate customers on the availability of customer assistance programs, I note that the number of H2O grants provided to customers increased between 2022 and 2023, from 1,441 grants in 2022, to 3,443 grants between January and November 2023. These increasing amounts demonstrate that the Company's efforts have been successful. In addition to the Company's H2O grant program, the Company also applied over 15,400 grants to customer accounts, amounting to approximately $8.6 million, through the Low Income Household Water Assistance Program ("LIHWAP"). PAWC also has been involved in advocating for continuation of

[11] PAWC Statement No. 1, pp. 34-36.
[12] PAWC Statement No. 6, pp. 13-19.

the LIHWAP program, which Ms. Everette discusses in direct testimony.[13] Ms. Everette also described the Company's community engagement and customer education initiatives.

PAWC's has a Distinguished Environmental Record and Strong Commitment to Water Quality, Safety, Efficiency and Infrastructure Improvements

Company witness Runzer[14] discussed several of the Company's initiatives representative of its superior performance, including (1) the Company's distinguished environmental record, (2) optimization of water treatment plant performance and water quality, and the recognition PAWC has received for both, (3) excellent safety record and the Company's commitments to employee safety and development, and (4) use of technology to enhance employee effectiveness and improve billing accuracy. Below I highlight a few of these initiatives as justification for the Company's request for a management efficiency adder:

- The Company participates in the Partnership for Safe Water Treatment Plant Optimization program. Of the 501 participating treatment plants, only 44 plants have received the high honor of the Phase IV Presidents Award – nine (9) PAWC treatment plants have received these awards, and each of these plants were also recognized as a 5-year Presidents Award winner, which has only been awarded to 18 systems nationally. Additionally, in 2023, PAWC's Clarion Water Treatment Plant was presented with the Directors 15-year longevity Award and it's Shady Lane Water Treatment Plant was recognized with the Directors 10-year Longevity Award.[15]

[13] PAWC Statement No. 1, pp. 35-36.
[14] PAWC Statement No. 2.
[15] PAWC Statement No. 2, p. 5.

- The development of the environmental near miss program, which in 2022, identified and avoided 197 potential customer impacts[16] and in 2023 identified and avoided 218 potential customer impacts.
- Since the submission of direct testimony in this proceeding, the Company has converted three (3) additional treatments plants from the use of gaseous chlorine for disinfection to liquid sodium hypochlorite or ultra-violet disinfection, bringing the total of treatment plants converted to 24. Making these conversions reduce the risk of toxic exposure to our employees and the surrounding communities. This conversion practice is now standard practice as new systems are acquired by the Company, and it intends to convert its remaining treatment plants that utilize gaseous chlorine to either liquid sodium hypochlorite or UV disinfection until all of its chlorine gas locations are eliminated.[17]
- The Company has taken a proactive approach to protect customers from lead exposure in the Company's drinking water, which include conducting corrosion control studies to review the effectiveness of corrosion control treatment measures and implementing an initiative to replace customer-owned lead service lines.[18]
- The Company has installed an online source water quality monitoring device at each of its surface water treatment plants as a tool for optimizing treatment decisions and aiding in the detection of potential source water contamination. This device helps establish baseline water quality data and alert water plant operators to certain changes in water characteristics. The Company uses this information to better understand the characteristics of its source water and optimize chemical usage.[19]

[16] PAWC Statement No. 2, pp. 6-7.
[17] PAWC Statement No. 2, p. 7.
[18] PAWC Statement No. 2, p. 8.
[19] PAWC Statement No. 2, pp. 13-14.

- The Company has created a strong safety culture, as demonstrated by the OSHA recordable incident rate ("ORIR") improving from 2.62 in 2018 to 0.50 in 2023, which represents PAWC's best safety record in its operational history.[20]
- The Company's Near Miss Reporting Program, which was implemented in 2015, provides a convenient platform for employees to identify hazards that could have resulted in injury or accident and for the Company to share these incidents with other employees to raise awareness. In 2022, PAWC employees reported 1,967 near misses from across the state, far surpassing our goal of 1,200. This is more than triple the number of Near Misses reported in 2019 and reflects the increased employee awareness and use of this program.[21]
- PAWC employees are encouraged to participate in a Certified Safe Worker program, which is a self-directed program promoting safety and health awareness and participation, documenting work, and at-home safety activities. In 2022, 1,129 PAWC employees completed the program, achieving the highest number of Certified Safe Workers in our history and the highest total in all the American Water subsidiaries.[22]

Ms. Everette and Mr. Aiton described the Company's plans to continue making significant investment in its infrastructure. In the past 17 years, PAWC has invested more than $5 billion in its infrastructure. In addition, the Company has delivered a variety of public benefits through acquisitions. In that regard, I want to underscore just a few examples of recent water and wastewater acquisitions where PAWC has addressed longstanding water quality and environmental compliance issues for the benefit of our customers.

[20] PAWC Statement No. 2, p. 17 (updated with PAWC's 2023 ORIR).
[21] PAWC Statement No. 2, p. 17-19.
[22] PAWC Statement no. 2, p. 18.

- Investing in numerous improvements in the Steelton and Turbotville water systems to help ensure that the plants produce high quality drinking water, including deployment of state-of-the-art SCADA systems and water quality analyzers, replacing filters, and transitioning away from the use of toxic gases in the treatment process.
- Reducing the number of sewage overflows per year from 30 to 1 in the wastewater system acquired from the Clarion Area Authority.
- Committing to a 25-year program, ordered by the Pennsylvania Department of Environmental Protection ("PADEP") prior to the Company's acquisition of the Scranton combined sewer system, to control and significantly reduce the amount of untreated sewage discharged into the Lackawanna River and its tributaries.
- Developing a solution after taking over the McKeesport wastewater system to address sewage that had been illegally discharged into an old underground mine shaft for years.
- Remedial actions to address nearly 50 violations cited by the PADEP for the Exeter Township wastewater system at the time of the acquisition.

Mr. Aiton provides more detail about the investments the Company has made to address the service, safety and environmental challenges of acquired systems in PAWC Statement No. 3-R.

PAWC is an Industry Leader in Acquiring Small and Troubled Systems

Ms. Everette[23] outlines the Company's history of assisting troubled water and wastewater system resolve significant challenges – including the four small water and

[23] PAWC Statement No. 1, pp. 42-45.

wastewater acquisitions pending before the Commission and contemplated as part of this rate case (Sadsbury Township Municipal Authority wastewater system, Farmington Township water system, Farmington Township wastewater system, and Audubon Water Company), and several other small non- or less- viable systems that PAWC has executed agreements to acquire. In addition, PAWC recently began acting as receiver for the East Dunkard Water Authority ("EDWA") where the EDWA water treatment plant had simply ceased producing water and all customers were without even non-potable water for several days. The Company worked collaboratively with the Commission, the PADEP, and EDWA to achieve a creative and novel solution for the customers of EDWA. It is my understanding that this is the first time an investor-owned utility under the Commission's jurisdiction has been appointed receiver of a municipal authority. This is but one example of PAWC's demonstrated commitment to providing solutions to troubled systems.

PAWC's Extensive Efforts to Extend Service to Meet the Needs of Customers without Access to Safe and Reliable Water Service

As discussed by Ms. Everette, the Company routinely extends service to customers who are in need of water and/or wastewater service. Recent examples discussed by Ms. Everette include:

- A $21 million water main extension project that will bring high-quality, reliable drinking water and fire service to the Avella School District and portions of surrounding communities in Washington County.
- In 2021, the Office of Attorney General requested PAWC to assist in helping find a drinking water solution for a community of approximately 21 Dimock properties that have not had access to safe well water due to unsafe levels of methane and other

contaminants for approximately 15 years. The Company responded to this request by developing a plan for the most effective public drinking water system for Dimock residents. Since then, the Company has filed an application with the Commission to extend its service territory for a public groundwater project in Dimock, Pennsylvania. PAWC projects that the new drinking water system in Dimock will be in service by the end of 2026.

The above examples, and the many others provided in the Company's initial filing, justify awarding the Company with its requested 25 basis points for exemplary management performance.

Q. Besides the Company's testimony, is there other testimonial support that highlights the Company's performance?

A. Yes, there is. During the public input hearings held in this proceeding there were a number of individuals who testified regarding how the Company has benefited customers, the communities we serve, and even the labor force. I summarize some of this testimony below:

- The President of Butler County Chamber of Commerce testified that the Company is an outstanding partner that they have had the privilege of working with on a variety of different projects including environmental remediation, greenspace preservation, trail connectivity, and community beautification. He stated that the Company is always willing to provide employees to volunteer and be engaged in the communities where PAWC serves.
- A customer from Pittsburgh testified stating that the Company's water quality is "by far better than any other city" that they and their family have lived in across the country.
- A representative of North Branch Land Trust testified that PAWC has partnered with them on projects to conserve land and protect watersheds to improve water quality. In addition,

employees of the Company have volunteered their time to help plant seedlings as part of the Forest Echo Bird Sanctuary.

- The Director of Economic Development for Scranton Lackawanna Industrial Building Company ("SLIBCO") testified regarding the historic relationship shared between SLIBCO and PAWC that has created "remarkable results" facilitating the creation of 50,000 jobs in Lackawanna County and attracting over $2 billion in community investments.
- The Deputy Director of the Schuylkill River Watershed testified that the Company has been a valued partner for the past several years supporting projects to improve water quality throughout the watershed both within their service territory and assisting the Schuylkill River Watershed in selecting other work projects along the river corridor.
- A representative of Brandywine Red Clay Alliance testified that the Company is a strong supporter of watershed protection and conservation and providing clean water, the Company has helped fund clean-up events, tree planting, water education, land preservation, and community outreach.
- The Executive Director of the Watershed of South Pittsburgh testified that PAWC has been a valued partner of the Watershed for eight years, supporting much of the work they've done throughout the region to protecting and improving water quality.
- The Executive Director Big West Food Bank testified that PAWC is a wonderful partner and supporter, coming out to their facilities and offices on numerous occasions to provide educational material as well as information about PAWC customer assistance programs.
- A resident of New Cumberland testified that as a former member of the Borough Council during the time PAWC acquired the Borough's wastewater system, PAWC was a great

partner, not only in the acquisition but also with capital improvements needed in the Borough of Cumberland.

- A State Representative for Clarion County and part of Armstrong County testified stating the access to clean water and the service PAWC has provided to Clarion County is a valuable asset and critical to the economic growth and development of the area. In addition, the Company has been committed to being a good neighbor in the community, participating in community activities, community boards, and communicating with elected officials.
- A State Representative for Washington County and Greene County testified that after the breakdown of the East Dunkard Water Authority's system that recently occurred, he is pleased that the PADEP enlisted the Company to receive and take control of the failing system and restore safe and clean water for his constituents.
- The President of Local IBEW 654 testified stating the Company's commitment to invest into water and wastewater infrastructure serves as both a job opportunity for local workers but also provides a significant public health benefit for Chester County residents.
- The President of Hydrotech Environmental, a small minority owned business that transports wastewater for commercial and municipal customers, testified that in her capacity of working with PAWC, the Company has taken pride and exhibited a very positive attitude in their working relationship. PAWC's award of the hauling bid to Hydrotech Environmental has allowed the business to hire an additional employee and continue to grow their business.

Response to OCA Witness Smith & I&E Witnesses Regarding Disallowance of Acquisitions

Q. OCA witness Mr. Smith and I&E witnesses Okum, Cline and Kubas recommend that the Commission disallow certain acquisitions from the Company's proposed rate base because the acquisitions are not likely to be approved by the close of the record in this case. Please respond.

A. As Company witness Christopher Abruzzo explains in rebuttal testimony,[24] acquisitions that are likely to close before the end of the FPFTY should be included in the Company's rate base for purposes of developing the revenue requirement and setting rates in this proceeding. To use the close of the record, which will occur on or about March 8, 2024, and is over 15 months before the end of the FPFTY, effectively denies the Company the ability to earn its appropriate and authorized return on actual investment that was known, measurable, and prudent by the end of the FPFTY. Thus, OCA's and I&E's position, if adopted, would result in punitive regulatory lag for the Company.

Response to the testimony of State Representative Kyle T. Donahue and City of Scranton Witness Paige G. Cognetti Regarding PAWC's use of PENNVEST and Like Programs

Q. State Representative Donahue and City of Scranton witness Cognetti both state in direct testimony that the Company has not taken advantage of programs like PENNVEST. Please respond.

A. This is not accurate. PAWC currently has PENNVEST loans and is pursuing additional PENNVEST funding. It is my understanding that in 2024, PAWC is participating in multiple PENNVEST requests.

[24] PAWC Statement No. 6-R.

Conclusion

Q. Do you have any final remarks regarding the direct testimony submitted by other parties in this case?

A. I do. This rate case is driven largely by the investments the Company has and will continue to make to continue to provide safe and reliable water and wastewater services to our customers. I did not see a single party express concern about the prudency of the Company's investments in this regard. The Company is quite simply asking for appropriate and timely returns of and on its investments; for appropriate and timely cost recovery of its ongoing expenses; and for constructive regulatory measures that allow PAWC to compete for capital so that it can continue to make proactive investments so crucial not only to the Company, but also to the Commonwealth as a whole. The Company simply wants to continue its successes and trends of wise investment and prudent operational expenditure. While I have provided a broad overview of the Company's filing in my rebuttal testimony responding to just a few issues raised by other parties to this proceeding, other Company witnesses provide detailed testimony in support of the Company's request that goes beyond the few critical and overarching points I have chosen to highlight for the Commission.

Q. Does this conclude your Rebuttal Testimony?

A. Yes, it does.

V. THE USE OF FAIR MARKET VALUE 24

REBUTTAL TESTIMONY
OF
PAUL J. HIBBARD

I. INTRODUCTION

1. Q. Would you please state your name, business address, and occupation?

A. My name is Paul Hibbard. I am a Principal at Analysis Group (AG), an economic, finance and strategy consulting firm headquartered in Boston, Massachusetts, where I work on energy and environmental economic and policy consulting. My business address is 111 Huntington Avenue, 14th Floor, Boston, Massachusetts 02199.

2. Q. Please describe your background and experience.

A. I have been with AG for approximately twenty years, since 2003. First, from 2003 to April 2007, and most recently, from August 2010 to the present. In between, from April 2007 to June 2010, I served as Chairman of the Massachusetts Department of Public Utilities ("MA DPU") where I participated in deciding rate cases for electric, natural gas, and water utilities. While Chairman, I also served as a member of the Massachusetts Energy Facilities Siting Board, the New England Governors' Conference Power Planning Committee, and the NARUC Electricity Committee and Procurement Work Group. I also served as State Manager for the New England States Committee on Electricity and as Treasurer to the Executive Committee of the 41-state Eastern Interconnect States' Planning Council.

I have previously worked in energy and environmental consulting with Lexecon, Inc. from 2000 to 2003. Prior to working with Lexecon, I worked in state energy and environmental agencies for almost ten years. From 1998 to 2000, I worked for the Massachusetts Department of Environmental Protection on the development and administration of air quality regulations, State Implementation Plans and emission control programs for the electric industry with a focus on criteria pollutants and carbon dioxide ("CO_2"), as well as various policy issues related to controlling pollutants from electric power generators within the Commonwealth of Massachusetts. From 1991 to 1998, I worked in the Electric Power Division of the DPU on cases related to the setting of company rates, restructuring of the electric industry in Massachusetts, quantification of environmental externalities, integrated resource planning, energy efficiency, utility compliance with state and federal emission control requirements, regional electricity market structure development, and coordination with other states on electricity and gas policy issues through the staff subcommittee of the New England Conference of Public Utility Commissioners.

I hold an M.S. in Energy and Resources from the University of California, Berkeley, and a B.S. in Physics from the University of Massachusetts at Amherst. My curriculum vitae is provided in Appendix A, which follows my rebuttal testimony.

3. Q. Have you previously testified before the Pennsylvania Public Utilities Commission ("PUC," or "Commission")?

A. Yes. In November of 2011, I presented comments to the Commission in an En Banc Hearing related to auctions for retail service in the electric sector on behalf of Direct Energy. In January of 2021, I provided Rebuttal Testimony to the PUC on behalf of PECO Energy Company related to ratemaking principles.

II. SUMMARY

4. Q. What is the purpose of your testimony?

A. In this testimony I respond to certain aspects of the testimony of the Pennsylvania Office of Consumer Advocate ("OCA") witness Christine Maloni Hoover. First, I discuss Ms. Hoover's framing of what she refers to as the "regulatory compact," and the principles and precedent related to the practice of reviewing and setting utility rates. Next, I review Ms. Hoover's discussion of alternative ratemaking in this context. Finally, I review Ms. Hoover's discussion related to the application of the fair market value approach in incorporating the cost of municipal water system acquisitions in the rates of Pennsylvania-American Water Company ("PAWC" or "Company").

5. Q. Please provide a summary of your views.

A. There are long-standing principles and precedent applied by the Commission in setting rates. The Commission identifies these in describing the legal framework for its decision in every rate case. They are neither ambiguous nor subject to reinterpretation. In short, the utility is allowed to recover its used and useful and prudently-incurred costs and investments, and earn a fair return on the capital it

commits to discharge its public service obligations. The *Hope*[1] and *Bluefield*[2] decisions of the United States Supreme Court established the fundamental obligation in ratemaking to allow a utility the opportunity to recover its costs and earn a fair return on equity (one attendant to the risks experienced by similarly situated companies) and an overall return on investment that allows the utility to maintain financial integrity and maintain credit. In establishing rates, the Commission exercises its judgement to achieve the correct balance of utility and consumer interests and determine just and reasonable rates based on a utility's filing and record evidence. The Commission has the latitude to consider policy objectives and has the obligation to adhere to Pennsylvania statutes that address certain specific elements allowed or required in the setting of utility rates.

Ms. Hoover narrowly defines "regulatory compact" and "traditional ratemaking" to create a distorted view of the ratemaking process and confuse the Commission's administration of its jurisdictional obligations by inducing the Commission to disregard application of long-standing and time-tested precedent and principles of ratemaking. The phrase "regulatory compact" is simply a shorthand simplification used to illustrate elements of the framework for utility regulation. Ms. Hoover's incomplete description of a "regulatory compact" ignores critical aspects of the regulatory structure and purports to grant the Commission broad authority under her construction to disregard application of long-standing and unambiguous ratemaking principles and precedent, and its

[1] F.P.C. v. Hope Natural Gas Co., 320 U.S. 591 (1944) ("Hope").

[2] Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia, 262 U.S. 679 (1923) ("Bluefield").

evidence-based evaluation of specific elements included in the Company's proposal.

The use of "regulatory compact" in this proceeding by Ms. Hoover and the OCA reflects an unnecessary and exclusively consumer-focused viewpoint on Commission responsibilities that starts with the erroneous presumption that the whole ratemaking process in Pennsylvania and/or the Commission's exercise of its jurisdictional responsibilities are structurally biased in favor of regulated utilities. The OCA's application of this viewpoint leads to recommendations that are inconsistent with the appropriate application of ratemaking principles and precedent.

Similarly, Ms. Hoover uses the concept of "traditional ratemaking" to imply that the Company's filing somehow deviates from what is appropriately presented by the utility and considered by the Commission in a rate case, and systematically changes the balance of risk. In fact, the Company has filed a traditional rate case with all of the required elements, including a cost of service study, revenue requirement allocation, proposed weighted average cost of capital, rate design, and additional proposals that include assistance to low-income customers. And the Company's proposals for "alternative ratemaking" – authorized under Pennsylvania law and by the policy statements of this Commission[3] – include specific measures designed to achieve legislated public policy objectives around

[3] *See* 66 Pa.C.S. § 1330 (authorizing alternative rates and ratemaking mechanisms); 52 Pa. Code § 69.3301 (inviting alternative ratemaking proposals by utilities).

efficiency, environmental compliance, and consolidation of municipal services that provide a vital public service to achieve efficiency and reliability.

The Company has also included in the filing its prior and pending acquisitions, which reflect the consolidation of municipal services that provide a vital public service to achieve efficiency and reliability. Ms. Hoover discusses the fair market valuation of these acquisitions as "alternative ratemaking." The Company is not requesting alternative ratemaking for these acquisitions, but rather has included systems at the ratemaking rate base as provided for under Pennsylvania law and as approved by the Commission. My testimony will respond to Ms. Hoover's arguments on fair market value as part of her "alternative ratemaking," but to be clear, I do not agree that inclusion of an acquisition at the rate base approved by the Commission constitutes alternative ratemaking.

In my view, Ms. Hoover's testimony regarding the "regulatory compact" and "traditional ratemaking" are nothing more than an effort to misconstrue traditional ratemaking principles to try to fashion authority otherwise lacking for the specific changes the OCA proposes to the Company's proposed revenue requirement. Her testimony does not add any probative value to the decisions the Commission must make in this traditional rate case.

Finally, Ms. Hoover claims that by using a fair market value approach with respect to acquisition of municipal water companies rather than the original cost approach, the rate base associated with such acquisitions is inflated, and creates a large revenue deficiency for the customers acquired through these acquisitions.

I disagree with Ms. Hoover's and OCA's position. PAWC's use of fair market value in calculating its rate base for acquisitions is fully supported by existing laws and regulations in Pennsylvania, which were intentionally designed this way by the legislature and regulators to encourage regionalization and acquisitions of smaller, often nonviable, water and wastewater utilities by larger utilities better able to maintain acceptable service quality and meet customer needs. As I understand it, for acquisitions approved by the PUC under Section 1329,[4] the law specifies that the lower of the negotiated purchase price or fair market value of the acquired utility is to be included in the acquiring public utility's rate base. For acquisitions where Section 1329 is not applicable or utilized, Section 1327 allows PAWC to request an adjustment to its rate base if its acquisition costs or purchase price is greater than the depreciated original cost of the acquired systems. Thus, whether Commission-approved acquisition purchase prices exceed depreciated original cost should have no impact on whether they are included in PAWC's rate base, and any associated wastewater revenue deficiency can be properly allocated to both water and wastewater companies in accordance with Section 1331.

6. Q. Are you providing a legal opinion in this proceeding?

A. No, I am not and I am not a lawyer. My discussion of regulatory precedent and practice is focused on regulatory policy based on my experience as a former

[4] 66 Pa. C.S. § 1329. All references to Sections in my testimony refer to Sections of the Pennsylvania Public Utility Code unless otherwise noted.

Commissioner and staff person at the Massachusetts' Department of Public Utilities, and on my work as a consultant in regulatory matters.

III. THE "REGULATORY COMPACT"

7. Q. Are you familiar with the principles behind the setting of regulated utility rates by public utility commissions?

A. Yes, through my work as both a staff person and as Chairman of the Massachusetts Department of Public Utilities, and in private practice. The principles and precedent underlying public utility commission rate case decisions across the United States are a well-understood framework that guides this Commission's review of record evidence to set utility rates in a way that ensures efficient, safe, and reliable utility service at reasonable cost to consumers.

8. Q. Please provide a summary of your understanding of these principles.

A. Public utilities are generally obligated through law and regulation to reliably meet the needs of all customers within their service territory. The utilities in turn are allowed to collect the costs of serving customers through commission-approved cost of service rates, including operating expenses and a return of and on prudently-incurred capital investment. Rates are set in order to allow the utility an opportunity to earn a fair return on the value of the property which it employs for the convenience of the public, with the rate of return designed to approximate the return being earned at the same time in businesses that face similar risks and uncertainties. This level of return on investment is designed to assure confidence in the financial soundness of the utility and to be sufficient to enable the utility to

maintain credit and attract the capital needed to reliably meet customer needs over time.[5]

In addition, in rate cases, regulators set rates in a way that is consistent with any applicable state laws, regulations, and policies, and ensure that their decisions adhere to regulatory and judicial precedent. Specifically, rates should be designed to allow the recovery of prudently-incurred costs while promoting efficient consumption decisions by consumers, encouraging efficiency in the management and operation of the utility, and allocating costs fairly. When a utility's operational practices and/or the prudence of its investment decisions are questioned, commissions evaluate claims based on record evidence.[6] The structure of regulated utility rate setting encourages utility managers to make reasonable operational and investment decisions on behalf of their customers, in order to provide reliable service at a reasonable cost and in a manner consistent with the ratemaking and policy directives of the state.[7] The foundational principles for the purpose and process of setting rates for regulated utilities are not new law or policy; they have been actively used and vetted through regulatory

[5] *See*, e.g., James C. Bonbright, Albert L. Danielsen, and David R. Kamerschen, *Principles of Public Utility Rates*, Public Utility Reports, Inc., March 1998 (Second Edition) (hereafter "Bonbright"), at 315-316; and Dr. Karl McDermott, *Cost of Service Regulation in the Investor-Owned Electric Utility Industry*, Edison Electric Institute, June 2012 (hereafter "McDermott") at 5-7.

[6] The job of a public utility commission is not to substitute its judgement for that of the utility; utilities are presumed to act in good faith and make efficient operational and prudent investment decisions absent evidence to the contrary. *See*, *e.g.*, McDermott at 9, 13.

[7] *See, e.g.*, McDermott at 7.

and legal decisions consistent with principles set in place beginning almost a century ago.[8]

9. Q. Based on your review, do you have a view as to an appropriate approach for assessing the operational and investment decisions of the utility?

A. Yes. First and foremost, evaluating the Company's actions and investments must not be taken lightly. The practice of setting rates evolved from a necessary but difficult balancing of companies' obligations to shareholders and ratepayers; it is part of the fabric of public utility ratemaking that seeks to maintain the financial integrity of regulated utilities while providing appropriate incentives for efficiency in management, operations, and customer consumption. One cannot be cavalier in a review of the costs associated with the utility's management and discharge of its public service obligations; rate case reviews need to be based on careful review of record evidence in the context of regulatory and judicial precedent, with an eye toward sustaining a functioning and efficient service provider.

10. Q. Have you reviewed Ms. Hoover's discussion of what she calls the "regulatory compact?"

A. Yes.

11. Q. Please summarize how Ms. Hoover represents the "regulatory compact."

[8] The *Bluefield* decision, one of the landmark Supreme Court decisions on ratemaking, was issued by the United States Supreme Court just over 100 years ago, in 1923.

A. It is not entirely clear to me exactly what the purpose is of Ms. Hoover's "regulatory compact" discussion. It appears that Ms. Hoover provides her views on the "regulatory compact" to suggest that the Commission intentionally and aggressively err in every discrete decision related to the Company's filing in favor of consumers. Ms. Hoover tees up the "regulatory compact" and "traditional ratemaking" discussions as support for the OCA's various recommendations to reject recovery of legitimate, prudent, and necessary company expenses and investments.

Ms. Hoover's summary of the "regulatory compact" describes a quid-pro-quo whereby the utility receives an exclusive franchise in exchange for the obligation to provide service.[9] Ms. Hoover goes on to suggest that the Commission "enforces" the regulatory compact through a system of incentives and deterrents designed to protect consumers against the effects of monopoly power.[10] Ms. Hoover's discussion of the regulatory compact focuses on obligations of the utility to provide service at reasonable rates subject to state policing powers, with little or no reference to the obligation to allow the utility to recover the legitimate costs of meeting its public service obligation.

12. Q. In your view, does Ms. Hoover's discussion of the regulatory compact provide any guidance or probative value in this case?

[9] *Pennsylvania Office of Consumer Advocate*, Direct Testimony of Christine Maloni Hoover, OCA Statement 1, Docket Nos. R-2023-3043189 et al., February 1, 2024 ("Hoover Testimony"), p. 20.

[10] Hoover Testimony, pp. 22-23.

No, it does not. The phrase "regulatory compact" has been used in various ways by utility industry participants and practitioners to characterize the nature of public utility regulation and the relationship between a state and its jurisdictional utilities. While there is no explicit compact, contract or agreement between the state and its jurisdictional utilities, in statute, state codes, or Commission orders, it is a shorthand simplification often used to try to illustrate certain elements of the framework for utility regulation, a simplification that in practice is described in different ways by different industry stakeholders and practitioners. There is no explicit or indicative utility-consumer balance implied uniquely by the metaphor of a "regulatory compact" that would enable the Commission to disregard reasonable and prudent costs incurred by a utility in favor of protecting customers.

No description of a "regulatory compact" can take the place of long-standing principles and precedent applied by the Commission in setting rates. The Commission identifies these principles in describing the legal framework for its decision in every rate case. They are neither ambiguous nor subject to reinterpretation. In short, the utility is allowed to recover its used and useful and prudently-incurred costs and investments, and must be given the opportunity to earn a reasonable return on the capital it commits to discharge its public service obligations. *Hope* and *Bluefield* clearly establish the fundamental obligation to allow a utility an opportunity to recover its costs and earn a fair return on equity (one attendant to the risks experienced by similarly situated companies), and an overall return on investment that allows the utility to maintain financial integrity

and maintain credit. Consistent with these obligations, the Commission exercises its judgement to achieve the correct balance of utility and consumer interests, and determine just and reasonable rates based on the company's filing and record evidence.

The presentation of Ms. Hoover's view of what the "regulatory compact" might be in this proceeding only provides a manufactured premise for Ms. Hoover and the OCA to argue for their disallowance recommendations, a premise that starts with the erroneous presumption that the whole ratemaking process in Pennsylvania and/or the Commission's exercise of its jurisdictional responsibilities are structurally biased in favor of regulated utilities. In the end, the OCA's application of this viewpoint leads to recommendations that are inconsistent with the appropriate application of ratemaking principles and precedent.

13. Q. Ms. Hoover discusses the principles of "just and reasonable" and "zone of reasonableness" as an element of the "regulatory compact." How do "just and reasonable" and "zone of reasonableness" enter into commission rate case deliberations?

A. In practice, the setting of rates is not formulaic; there are often variabilities and uncertainties in the data and forecasts that underlie utility and intervenor perspectives on forward-looking costs, billing determinants, and company rates. A commission must weigh record evidence against appropriate standards to determine—within those ranges of uncertainty—where rates should be set. In this

context, various principles such as "just and reasonable" and "zone of reasonableness" have evolved to guide commission deliberations and have been used in commission and court decisions. These principles have been interpreted through decades of precedent as standards to apply in the evaluation of record evidence and the ultimate setting of rates. Importantly, just and reasonable is bounded; it is not meant to be used by commissions to render decisions that are not tethered to the purpose of allowing utilities to recover the costs they incur to provide reliable service.[11]

14. Q. Ms. Hoover suggests that there may be circumstances where the Commission can set rates that are outside a zone of reasonableness to "…fairly balance the interests of all parties." Do you agree?

A. No. Ms. Hoover would have the Commission believe that they should focus primarily or exclusively on consumer interests when determining whether rates are just and reasonable, and that this provides the Commission an unbounded latitude to set rates outside a zone of reasonableness, even if the outcome does not reflect the true costs for the utility to discharge its public service obligation and attract the capital needed to safely and reliably meet customer demands on a going-forward basis. Yet "just and reasonable" is not a one-sided standard to be interpreted to define a range of rate outcomes acceptable only to the consumer.

[11] A "zone of reasonableness" is intended to represent both the consumer and investor interest, for example the landmark *Hope* case adopted "just and reasonable rates as a balance of the investor and the consumer interests." This balance was "gradually refined into the concept of a 'zone of reasonableness.'" Further, *Duquesne Light Co. v. Barasch*, 488 U.S. 299 (1989) describes the "lower limit of the zone of reasonableness, that is, where just and reasonable is bounded by a constitutional prohibition against confiscation." Steve Isser, *Just and Reasonable: The Cornerstone of Energy Regulation*, June 30, 2015 (hereafter "Isser"), at 31, 38.

This one-sided perspective ignores or understates the fundamental balance established between requiring a utility to safely and reliably meet the needs of current and future customers in exchange for the ability to recover the costs of doing so, including a return on prudently-invested capital sufficient to attract investors.[12]

15. Q. You have observed that utilities should be compensated for providing reliable services. In this case the OCA has recommended a dramatic reduction in PAWC's proposed revenue requirement increase. Are there potential negative impacts if the Commission were to accept OCA's proposed reductions, from a public policy perspective?

A. Yes. PAWC's proposed revenue requirement increase is driven in large part by necessary investments in water and wastewater system infrastructure – investments needed for the Company to continue to provide safe and reliable delivery of *vital* water and wastewater services to customers in their service territory. In fact, no one in this case has challenged these investments as not used and useful for reliable water and wastewater services, and no one has alleged that the Company's investments or management of construction projects has been imprudent. Yet if the Commission accepts OCA's recommendations, the Company would not be able to recover the cost of prudent investments needed to discharge its public service obligation. This would threaten the financial viability

[12] *See*, *e.g.*, Filipink's analysis of the Supreme Court cases Bluefield Waterworks and Hope Natural Gas: "These decisions said that a return should be reasonably sufficient so that investors had confidence in the financial soundness of the utility and should be adequate to raise necessary financing," including "capital costs of the business." Eric Filipink, *Serving the Public Interest - Traditional vs. Expansive Utility Regulation*, December 30, 2009, at 12-13.

of the company and make it difficult to raise capital to fund water and wastewater service projects.

There are numerous reasons for ensuring the financial integrity of water utilities like PAWC, and sufficiently funding system investment and operations. PAWC serves a critical function, providing an essential service needed to support the health and welfare of residents in its service territory, and supporting the operation of businesses vital to the local economy. It has no choice. As a regulated utility it must provide safe and reliable service to customers in its service territory.

It should not be necessary to highlight the importance of safe, reliable water and wastewater services; they are unquestionably necessary for life, and for the health, safety, and comfort of the Commonwealth's residents. In turn, providing a stable and secure revenue environment for water companies supports local economic activity both through projects funded through utility investments and support of local business activity, and it can help lower the costs incurred by utilities in attracting capital to fund such investments.

If the Commission accepts the dramatic revenue requirement reduction proposal of the OCA (and other intervenors), it risks destabilizing the financial conditions for efficient operation of the Company's system, increasing the long-run cost of providing reliable service, depressing local investment in the economy, and increasing the risks of less safe and reliable water and wastewater system operations.

IV. ALTERNATIVE RATEMAKING

16. Q. Have you reviewed Ms. Hoover's discussions with respect to alternative ratemaking?

A. Yes.

17. Q. Please summarize Ms. Hoover's position.

A. Ms. Hoover claims that because alternative ratemaking mechanisms tend to shift risks to customers, they require more scrutiny.[13] In addition, she argues that the two new alternative ratemaking mechanisms that PAWC is proposing in this case—the Revenue Decoupling Mechanism and an Environmental Compliance Investment Charge—represent additional incentives encouraging the same behavior as previously authorized alternative ratemaking mechanisms—namely, "(1) the Distribution System Improvement Charge (DSIC); (2) the Fully Projected Future Test Year (FPFTY); (3) the addition of Section 1329 that permits fair market valuation for municipal acquisitions; and (4) the addition of Section 1311(c) that permits the Commission to approve the shift of wastewater revenue deficiencies to water customers if it is in the 'public interest.'"[14] She claims that approving multiple incentives for the same behavior can cause it to be "unclear which incentive is having the desired effect on a utility's performance"[15] and

[13] Hoover Testimony, p. 30.

[14] Hoover Testimony, p. 29.

[15] Hoover Testimony, p. 41.

"serves to transfer risk disproportionately from the shareholders to the consumers and to transfer wealth unjustly from consumers to the shareholders.[16]

18. Q. Do you agree with Ms. Hoover?

A. No, I do not. I do not agree that there is a limit on the number of incentives that should be applied to encourage particular behaviors by utilities, particularly when those particular behaviors are consonant with the public interest and/or have been provided for in state law. Indeed, Section 1330 allows for a broad array of alternative ratemaking mechanisms and demonstrates that the Pennsylvania legislature did not set limits on the number of alternative ratemaking mechanisms that could be applied as it explicitly allowed the Commission to approve "rates based on a combination of more than one" mechanism.[17] Moreover, I do not agree that the new alternative ratemaking mechanisms proposed by PAWC duplicate incentives already in place. The new mechanisms proposed by PAWC are designed to achieve different goals than existing mechanisms.

19. Q. Please describe the existing alternative ratemaking mechanisms in more detail.

A. A Distribution System Improvement Charge ("DSIC") is a surcharge on customers' bills that is revised quarterly and allows recovery of costs to replace aging infrastructure between rate cases.[18] It thus "provides utilities with an

[16] *Id.*

[17] 66 Pa. C.S. §1330(b)(1).

[18] 66 Pa.C.S. §§ 1353, 1357.

additional rate mechanism to recover the capitalized costs related to repair, improvement and replacement [of] utility infrastructure. A DSIC can reduce regulatory lag, improve access to capital at lower rates, and accelerate infrastructure improvement and replacement."[19]

A Fully Projected Future Test Year ("FPFTY") was implemented by the Pennsylvania legislature to "reduce regulatory lag due to the use of rate case inputs that are outdated by the time new base rates become effective and, further, to provide more ratemaking flexibility for the timely recovery of prudently incurred infrastructure costs."[20] The FPFTY mechanism allows forecasted costs to be used that more accurately capture expected conditions during the period for which the rates will be effective and allows investments that will become used and useful after the date the rates become effective to be included in the utility's revenue requirement.[21] Reducing regulatory lag can reduce capital costs and facilitate infrastructure investments, particularly when costs are rising faster than usage.

Section 1329 permits fair market valuation for municipal acquisitions. As discussed in more detail in the next section, this statute was passed in order to allow larger utilities, with greater resources, to acquire smaller municipal utilities, many of which have heavily depreciated assets and are in need of upgrades to

[19] Final Implementation Order, *Implementation of Act 11 of 2012*, Docket No. M-2012-2293611 (August 2, 2012) ("2012 Implementation Order re Act 11"), p. 57.

[20] 2012 Implementation Order re Act 11, p. 4.

[21] 2012 Implementation Order re Act 11, p. 5.

maintain safe and reliable service.[22] Absent this rule, such acquisitions may have created financial hardship for such municipalities and delayed necessary improvements to the systems. This rule also mitigated the risk to the utility of not being able to recover the full cost of these acquisitions—thus encouraging larger utilities to acquire such systems.[23]

Section 1311(c) permits the Commission to approve the shift of wastewater revenue deficiencies to water customers if it is in the "public interest."[24] "The benefits of this provision are that the costs of necessary upgrades to wastewater systems to maintain safe and reliable service, which can be substantial on a stand-alone basis, can be spread among the common customer base of the water and wastewater utilities."[25] This can prevent rate shock for wastewater customers from needed infrastructure upgrades and thus facilitates the implementation of such upgrades.

20. Q. What behaviors were the existing alternative ratemaking mechanisms designed to incentivize?

A. The four alternative ratemaking mechanisms in use by PAWC are designed to encourage and accelerate needed infrastructure upgrades to maintain safe and reliable service and to reduce the costs of these upgrades to consumers. While

[22] Final Implementation Order, *Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 (October 27, 2016) ("2016 Implementation Order re Section 1329"), p. 2.

[23] 2016 Implementation Order re Section 1329, pp. 2-3.

[24] Hoover Testimony, p. 29.

[25] 2012 Implementation Order re Act 11, p. 8.

these mechanisms are all focused on reliable service, they each operate to relieve a different constraint. The first two mechanisms work by relieving timing constraints on when certain investments and other costs can be included in rates, thus reducing long-term capital costs through the more efficient deployment of proactive capital; the third relieves constraints on mutually beneficial acquisitions for both the small municipalities whose systems are being acquired and the buyer utilities; and the fourth ensures that potential rate shock does not further delay critical infrastructure upgrades. Implementing these mechanisms in combination thus ensures that no one of these constraints can hold up infrastructure investments needed to support safe, reliable service over the long-term.

21. Q. What behaviors are the alternative ratemaking mechanisms PAWC has proposed in this proceeding designed to incentivize?

A. PAWC has proposed two mechanisms: revenue decoupling and an Environmental Compliance Investment Charge.[26] Revenue decoupling is a mechanism that removes utilities' disincentive to promote efficient usage. The more successful a utility is at encouraging customers to use less water, the lower the revenue the utility collects and the more likely it is that the utility will not receive sufficient revenue to cover its costs. By allowing the utility to recover its fixed costs with more certainty, revenue decoupling removes financial barriers to utility-provided

[26] *Pennsylvania-American Water Company*, Testimony of Ashley E. Everette, PAWC Statement No. 1, Pa. P.U.C. Docket Nos. R-2023-3043189 et al., November 8, 2023 ("Everette Testimony"), pp. 23-27.

efficiency programs, which ultimately reduces operating expenses, capital expenditure needs, and costs to consumers.

The Environmental Compliance Investment Charge is a rate adjustment clause designed to reflect and recover, between rate cases, the capital costs and expenses imposed on the Company to address and comply with new or changed federal and state environmental mandates.[27] Such an adjustment clause provides appropriate incentives for the company to rapidly respond to changing mandates, reducing the costs of doing so and ensuring that changes needed to improve the safety and/or quality of water service are implemented expeditiously.

22. Q. How do the proposed ratemaking mechanisms differ from the existing mechanisms?

A. Where the existing mechanisms focus on accelerating necessary system upgrades at reasonable rates to consumers, the two proposed in this proceeding are designed to encourage efficiency and incentivize rapid response to changing environmental mandates, respectively. Thus, they are not duplicative of existing mechanisms, and Ms. Hoover's concern that their implementation could result in a lack of clarity regarding any individual mechanism's effectiveness is unfounded.

[27] Everette Testimony, p. 26.

23. Q. Do you agree with Ms. Hoover that allowing multiple alternative ratemaking mechanisms renders the ratemaking process "non-traditional," or somehow compromises the rate regulation of public utilities?

A. No, and I do not agree with Ms. Hoover's narrow view of what constitutes "traditional ratemaking." In its decision-based review of PAWC's proposed rate change, the Commission is engaged in a traditional ratemaking exercise, and to suggest otherwise because the proposal includes certain alternative mechanisms is an effort to make a mountain out of a molehill. Utility inclusion and public utility commission approval of various mechanisms in rate cases to achieve public policy goals and/or meet statutory objectives is nothing new. Nor does it render the Commission unable to consider the impact of individual rate case components on the balance of risk between consumers and the Company.

In this case, PAWC has filed all the elements of a "traditional rate case," such as a cost of service study, revenue requirement allocation, proposed components of the cost of capital, rate design, mechanisms to assist low-income customers, and proposals for other utility offerings. It is true that the Company's proposals *also* include specific measures and mechanisms designed to achieve legislated public policy objectives around efficiency, environmental compliance, and consolidation of municipal services. But there is nothing new or "non-traditional" about these rate case elements, and they are similar to features that have been required or adopted in rate cases across many states and utilities. In my view, the OCA's treatise on "regulatory construct" and "traditional ratemaking" are forced and exaggerated constructs simply to set the stage for the very real-world and

significant reductions it proposes to the Company's revenue requirement, and do not add any probative value to the decisions the Commission must make in this traditional rate case.

V. THE USE OF FAIR MARKET VALUE

24. Q. Have you reviewed Ms. Hoover's discussion related to the Company's use of Fair Market Value in incorporating in rates the cost of recent municipal water company acquisitions?

A. Yes.

25. Q. Please summarize Ms, Hoover's position.

A. Ms. Hoover states that PAWC has completed 10 acquisitions where the ratemaking rate base was calculated using fair market value along with two others that are in progress.[28] She claims that by using a fair market value approach rather than the traditional original cost approach, the rate base associated with these acquisitions is "inflated"[29] and creates a large revenue deficiency for the customers acquired through these acquisitions.[30] This revenue deficiency occurs because the revenue PAWC proposes to collect from the acquired customers is less than the cost of service based on the fair market value of the acquired assets.[31] Consequently, she claims that the "rates for the acquired customers are

[28] Hoover Testimony, pp. 33-34

[29] Hoover Testimony, p. 9.

[30] *Id.*

[31] *Id.*

disconnected from the actual cost to serve them,"[32] and argues that PAWC's proposed reallocation is not consistent with principles of fairness and efficiency.[33]

26. Q. Do you agree with Ms. Hoover?

A. No. PAWC's use of fair market value in calculating its rate base for acquisitions is fully supported by existing laws and regulations in Pennsylvania, which were intentionally designed this way by the legislature and regulators to encourage regionalization and acquisitions of smaller, often nonviable, water and wastewater utilities by larger utilities better able to maintain acceptable service quality.

The Pennsylvania legislature passed Section 1329 to encourage the acquisition of municipal water and wastewater systems by larger public utilities and entities, recognizing that such acquisitions "can facilitate necessary infrastructure improvements and ensure the continued provision of safe, reliable service to customers at reasonable rates."[34] Prior to the enactment of Section 1329, the method of valuing utility property as "the original construction cost less accumulated depreciation" could lead to municipalities with heavily depreciated assets being viewed as "less advantageous" acquisitions.[35] In response, the Pennsylvania legislature enacted Section 1329 which allowed for the fair market valuation of water and wastewater systems to be acquired.[36] Additionally, this

[32] Hoover Testimony, p. 34.

[33] Hoover Testimony, pp. 37-38.

[34] *Id.*

[35] *Id.*

[36] *Id.*

rule mitigated the risk that the acquiring utility may not be able to recover the full cost of such acquisitions.[37]

The Pennsylvania legislature also enacted Section 1327, which further encouraged the acquisition and regionalization of small water and wastewater utilities. Previous law prohibited the recognition of the fair market value of acquired utilities in the ratemaking process, which resulted in an "economic disincentive for larger, more capable and viable water utilities to acquire and merge with smaller, nonviable water systems."[38] Under Section 1327, the legislature allowed acquiring utilities to request adjustments to its rate base when "the actual purchase price or acquisition costs are greater than the depreciated original cost of the assets of the acquired system."[39] And Section 1311 permits a utility to propose to allocate a portion of wastewater systems' higher revenue requirements to water customers when such allocation is in the public interest.

I understand from the testimony of PAWC witness Ashley Everette that the OCA entered into settlement agreements that requested Commission approval of eleven of the Company's twelve Section 1329 acquisitions and PAWC has closed on ten of those eleven transactions. Ms. Hoover's contention that the "fair market value rate base exacerbates the revenue deficiencies"[40] is irrelevant, and the associated valuations have nothing to do with "fairness" and "efficiency." The need to

[37] 2016 Implementation Order re Section 1329, p. 3.

[38] Proposed Policy Statement on Acquisitions of Water and Wastewater Systems, Docket Nos. M-00051926 et. al. (December 5, 2005) ("2005 Proposed Policy Statement on Acquisitions of Water and Wastewater Systems"), p. 2.

[39] *Id.*

[40] Hoover testimony, p. 39.

allocate a portion of the wastewater revenue requirement under Section 1311 is simply a rate design question for the Commission to decide, which Mr. Rea addresses in his testimony.

27. Q. Does this conclude your rebuttal testimony?

A. Yes.

Mr. Hibbard is an expert on economics, strategy, regulation, and policy in the electric and natural gas industries. He has a comprehensive background merging business development, technical analysis, resource planning and development modeling, economics, and public policy in the energy and environmental fields. Mr. Hibbard has provided technical and strategic advice to government, industry, business, public interest groups, and trade organizations on energy market structure, electric and natural gas infrastructure planning and siting, utility resource solicitation and procurement, emission allocation and environmental policy, renewable resource program design and administration, transmission pricing, climate change policy, utility ratemaking practices, and the transfer of US federal and state emission control programs to other countries.

Prior to joining Analysis Group, Mr. Hibbard was chairman of the Massachusetts Department of Public Utilities. During his tenure, he carried out a forward-looking ratemaking and policy agenda to advance energy efficiency and renewable resources, coordinate regional efforts in the development of energy resources and associated infrastructure, and promote the administration of fair and efficient transmission pricing models in regional and national contexts. He also has provided testimony on resource planning, competitive electricity markets, and transmission pricing in hearings before committees of the Massachusetts legislature and the US House of Representatives, the Federal Energy Regulatory Commission (FERC), and state and regional planning councils.

SELECTED PUBLIC-SECTOR EXPERIENCE (MASSACHUSETTS)

- ***Chairman, Department of Public Utilities***
  - Chaired the state's public utilities commission during a period of aggressive change in state policies affecting the electricity and natural gas industries, including initial implementation of several new state energy laws and initiatives restructuring the setting of utility rates, promoting the expansion of energy efficiency and demand response, facilitating the retail and wholesale market integration of renewable and low-carbon resources, and revising state policy on the siting of major generation and transmission infrastructure.
  - Oversaw the issuance of initial regulations and policy related to revenue decoupling, net metering, long-term contracting for renewables, and power system emergency planning and outage restoration.
  - Led Massachusetts's work with regulators across the Northeast to pursue large-scale renewable resource development through coordinated procurement strategies to develop coordinated positions related to national transmission development proposals and establish a regional presence on transmission-related provisions in federal legislation.
  - As chairman, served as the administrative and policy head of an agency of nearly 150 employees, and was responsible for agency management and growth, budgeting, legislative matters, press inquiries, and policy agenda-setting.
  - Oversaw the completion of all dockets jurisdictional to the department, including rate cases and associated tariff matters, forecast and supply planning for electric and natural gas industries, and state oversight of natural gas pipeline safety and public transit authorities.
  - Responsible for all interaction with the governor's office, legislature, and Executive Office of Energy and Environmental Affairs, as well as representing the state in regional deliberations related to electric and natural gas utility policy, electricity market design and oversight, and regional power system reliability issues.

- ***Member, Energy Facilities Siting Board***
  Sitting member of the state board responsible for reviewing all proposals for major generation and transmission infrastructure projects within the state, as well as state intervention in federal review of natural gas pipeline infrastructure. Review involved technical, environmental, and economic evaluation of jurisdictional power plants, transmission lines, and other energy infrastructure, as well as ruling on proposals for exemption from state and local zoning ordinances.
- ***Manager, NESCOE***
  State representative of the regional group chartered to develop New England regional policy positions on electricity market and transmission planning issues. Responsibilities included consideration of group development issues, input into regional determinations of the Installed Capacity Requirement, consideration of regional approaches to transmission planning and the consideration of non-transmission alternatives, and coordinated development of a regional RFP/RFI for the solicitation of renewable power under long-term contracts for the New England states.
- ***Treasurer, Executive Committee, Eastern Interconnection States' Planning Council***
  Elected treasurer of the steering committee for the state council formed under a US Department of Energy (DOE) grant to coordinate with power system operators on developing long-range plans for a transmission system spanning 41 states in the eastern US. Coordinated New England states' approach to policy issues stemming from council efforts.
- ***Representative, NEGC Power Planning Committee***
  Represented the governor's office in all discussions related to regional energy/environmental issues, including transmission cost allocation, regional energy policy coordination, and development of mechanisms for and approaches to procurement of renewable power through long-term contracts with sources in New England and eastern Canada. Engaged in collaborative discussions with counterparts representing the Eastern Canadian Premiers.

SELECTED CONSULTING EXPERIENCE

Government, Foundations, Commissions, and Cooperatives

- ***For the Natural Resources Defense Council (NRDC)*** – Coauthored a public report on the Clean Electricity Payment Program's (CEPP) positive impact on the US economy if adopted (2021).
- ***For Advanced Energy Economy (AEE)*** – Coauthored a public report on the potential economic impacts of applying stimulus funds to electrification of the US transportation sector using estimated spending levels from President Biden's American Jobs Plan (2021).
- ***For AEE*** – Coauthored a public report on the potential economic impacts of applying stimulus funds to develop advanced energy technologies, products, and services in the US using estimated spending levels from President Biden's American Jobs Plan (2021).
- ***For the Coalition for Green Capital*** – Coauthored a white paper examining the potential of the federally authorized Clean Energy and Sustainability Accelerator that could address economic and climate crises (2021).
- ***For AEE*** – Coauthored a series of public reports on the economic impacts in select states of potential stimulus spending on clean and advanced energy resources (2020).
- ***For a municipal association*** – Drafted a white paper related to the fuel mix and emission characteristics of the portfolio of generating assets and power contracts used by municipal electric light companies in Massachusetts (2020).
- ***For the Wellesley Municipal Light Plant (WMLP)*** – Coauthored two white papers on the greenhouse gas (GHG) impacts of the WMLP power portfolio, and considerations for the WMLP associated with achieving continued reductions in carbon emissions over the ensuing decades (2020).

- ***For the Georgetown Climate Center*** – Conducted a bill impact analysis related to Virginia's proposed implementation of a carbon cap-and-trade program (2018).
- ***For Energy New England*** – Provided strategic assistance on energy market and public policy issues in New England (2017).
- ***For the Environmental Defense Fund*** – Coauthored a white paper related to historical power system emission trends (2015).
- ***For the Massachusetts Attorney General*** – Coauthored a report evaluating electric and natural gas infrastructure in New England from the perspectives of reliability, cost, and GHG emissions (2015).
- ***For AEE*** – Coauthored a report on the status of the electric industry in the State of Ohio, and developed recommendations on state energy policy in consideration of the state's market and technological circumstances at the time.
- ***For the Energy Foundation and industry groups*** – Coauthored multiple white papers on the reliability, cost, and market efficiency impacts of the US Environmental Protection Agency's (EPA's) proposed regulations to control emissions of carbon dioxide from existing electric generating facilities. Presented results in numerous conference, stakeholder, and regulatory settings.
- ***For a foundation*** – Led a study of the economic impacts of a state clean energy policy (2013–2014).
- ***For the Massachusetts Department of Energy Resources –*** Provided testimony on the ratepayer and social benefits of reducing methane leaks from a local natural gas distribution company's system (2013).
- ***For AEE*** – Facilitated a regional symposium for the New England Conference of Public Utility Commissioners and staff related to advanced energy technology development and commercialization, and the legal and regulatory structures needed to facilitate integration of emerging technologies (2013).
- ***For the Regional Greenhouse Gas Initiative (RGGI)*** – Conducted a bill impact analysis related to changes to retail customer electric bills in New England, New York, and RGGI Pennsylvania, New Jersey, and Maryland Interconnection (PJM) states associated with various changes considered by RGGI to program cap level and use of allowance revenues (2012).
- ***For AEE*** – Participated in a project advising AEE with respect to its national program to support public utility commission consideration of policies and regulations related to the development and integration of advanced energy technologies (2012–2013).
- ***For the Merck Family Fund*** – Developed an interactive tool to compare the impacts of energy, economic, environmental, legislative, and regulatory policies and programs across the US (2012).
- ***For AEE*** – Coauthored a report on the perspectives of CEOs at advanced energy companies doing business in California on California's energy policies. Conducted over 30 interviews with energy business leaders to get perspectives and recommendations for policy changes (2012).
- ***For the Barr Foundation*** – Coauthored a report on the benefits and costs associated with reducing natural gas leaks on natural gas distribution systems through implementation of targeted infrastructure replacement ratemaking mechanisms in Massachusetts, Rhode Island, and Ohio. Developed a cost-benefit model to quantify the impacts of such programs (2012–2013).
- ***For the American Clean Skies Foundation*** – Developed a dispatch price and emissions model to forecast power system outcomes in the PJM Interconnection, Midwest Independent System Operator, and Southwest Power Pool regions (2012).
- ***For a national environmental organization*** – Conducted a comprehensive national review of energy efficiency monitoring and verification programs in order to support development of a protocol that

could be used to allow energy efficiency to be used as a compliance tool in national carbon emission control regimes (2012–2013).

- ***For the Merck Family Fund –*** Co-led a project to carry out an analysis of the economic impacts of the Northeast states' use of revenues collected from the auctioning of carbon allowances associated with RGGI (2011).
- ***For AEE –*** Developed background on electric industry structure, regional planning and market structures and operations, and state energy policy organization and initiatives. Assisted with the development of a web-based information platform (2011).
- ***For the American Clean Skies Foundation –*** Authored a paper on the redesign of wholesale electricity market structures to efficiently integrate a higher level of variable resources (2012). Coauthored a white paper examining electric reliability and air emission issues associated with the potential retirement of the Potomac River Generating Station in Alexandria, Virginia (2011).
- ***For the Public Service Commission of Colorado –*** Coauthored a white paper on the design of incentives for the photovoltaic (PV) solar energy market (2011).
- ***For a national environmental organization*** – Conducted an economic analysis of key US cities that were or had been in nonattainment under the National Ambient Air Quality Standards, to explore relationships between air quality control requirements and the local economy (2011).
- ***For a national environmental organization*** – Completed a comprehensive report on the full scope of energy efficiency and demand response programs administered by New York electric utilities and the New York Independent System Operator (NYISO). Assessed the potential for additional innovative programs to improve energy efficiency and demand response in New York City (2010).
- ***For the North Carolina Attorney General –*** Managed a project in support of expert testimony on the economic and financial feasibility of requiring the installation of controls to reduce emissions of sulfur dioxide, nitrogen oxides, and mercury from coal-fired power plants owned by the Tennessee Valley Authority (TVA). The project was in the context of a public nuisance lawsuit brought by the North Carolina Attorney General against TVA (2006).
- ***For the National Commission on Energy Policy –*** Authored white papers on (1) the implications for US energy infrastructure of the damage to Gulf Coast energy facilities from Hurricanes Katrina and Rita (2006); (2) the practical and economic implications of various mechanisms for the allocation of carbon dioxide emission allowances to the electric sector under potential federal carbon control regimes (2005); and (3) national energy infrastructure needs for the electricity, natural gas, and petroleum industries, and for addressing the long-term impacts of energy production and use associated with spent nuclear fuel and carbon dioxide (2004).
- ***For the Massachusetts Health and Educational Facilities Authority (MHEFA) PowerOptions Program*** – Managed several projects providing regulatory, economic, and strategic advice to PowerOptions to assist in their selection and pricing of retail electricity products from competitive electricity suppliers. Over a three-year period, projects included analyses of forward prices and wholesale markets for capacity and reserves; analysis of contract price options, terms, and conditions; and analysis of congestion pricing implications for retail supply (2002–2004).
- ***For the Energy Foundation*** – Coauthored a report (with Dr. Susan Tierney) documenting best practices in energy facility siting regulations in the US, and analyzing in particular the impact of California's energy facility siting process on that state's electricity crisis (2002). Supported a foundation-based program to provide international assistance to China's efforts to privatize and restructure its electric industry, and to develop regulations to control air emissions from power plants in that country (2000–2003).
- ***For the Massachusetts Technology Collaborative (MTC) –*** Managed projects in support of the MTC's renewable and premium power programs, including the (1) creation of a standard financial

pro-forma for wind and landfill gas technologies in New England under various assumptions related to capital and operating costs, financing, discount rates, and the impact of state and federal policies to support renewable development; (2) development of an economic model to determine the financial impact on potential wind and combined heat and power facilities of proposed changes to utility standby service tariffs; and (3) research, strategic, and regulatory support of MTC's efforts to advance distributed generation in Massachusetts to promote renewable resources and improve power reliability for commercial and industrial customers (2000–2002).

ENERGY INDUSTRY STAKEHOLDERS

- ***For PECO Energy*** – Provided testimony on traditional ratemaking principles as applied to PECO's cost of providing gas delivery service (2021).
- ***For the Hingham Municipal Lighting Plant (HMLP)*** – Conducted an internal evaluation of the impact of decarbonization of residential and commercial energy use in the town, and its effect on HMLP's investments and operations (2020).
- ***For a natural gas interstate pipeline company*** – Coauthored a white paper and presention showing options to decarbonize the company's operations. The study included an analysis of its GHG footprint, identification of options and pathways to reduce net GHG emissions from operations to zero over time, and the development of recommendations for senior management (2020).
- ***For Oracle Corporation*** – Conducted an analysis of and report on the GHG emission reduction impacts of various types of energy efficiency programs and measures, with a focus on the comparison of structural and behavioral energy efficiency programs (2020).
- ***For NYISO*** – Conducted a study of the parameters used as the basis to set the NYISO's installed capacity demand curves for the four capability years beginning with the summer 2021 capability period (2020).
- ***For NYISO*** – Conducted an internal study of the potential reliability impacts on the electric grid due to changes in system mix and operations associated with a changing climate, and with state programs to address climate change (2020).
- ***For NYISO*** – Conducted a study of the potential risks to New York power system operations associated with an increased reliance on natural gas for power generation (2020).
- ***For Commonwealth Edison*** – Provided testimony on issues associated with a request for a certificate of public convenience and necessity by NextEra related to the proposed acquisition of the transmission assets of Rochelle Municipal Utilities (2020).
- ***For Repsol Energy North America*** – Provided strategic assistance related to the potential impacts of electric system market rules and public policy on the potential marketability of liquefied natural gas (LNG) in New England (2020).
- ***For Liberty Utilities*** – Provided testimony on the need for and economic and environmental impacts of the proposed Granite Bridge pipeline and LNG project in the State of New Hampshire (2020).
- ***For NYISO*** – Coauthored a white paper for NYISO on the potential impacts of a proposed carbon pricing mechanism in New York on power prices; energy policy; and economic, environmental, and public health impacts in New York (2020).
- ***For NTE Energy*** – Provided testimony before the Connecticut Siting Council on the need for and potential benefits associated with a proposed new natural gas-fired power plant in the State of Connecticut (2020).
- ***AltaGas*** – Provided testimony before the Maryland and District of Columbia public utility commissions on the potential environmental impacts of a proposed merger between AltaGas and Washington Gas (2017–2018).

- ***For Calpine Corporation*** – Coauthored a white paper on the design of a proposed carbon trading mechanism in Massachusetts (2017).
- ***For Vermont Gas*** – Provided testimony on the prudence of Vermont Gas' decisions and investments with respect to the Addison natural gas project (2017).
- ***For the Vermont Electric Power Company (VELCO)*** – Coauthored a white paper on VELCO's capital structure associated with its transmission assets and operations (2016).
- ***For the Merck Family Fund*** – Coauthored a white paper on economic principles associated with the trading of emission allowances associated with RGGI (2016).
- ***For a consortium of solar companies*** – Developed a white paper on the appropriate evaluation and treatment of behind-the-meter solar PV generation from the perspective of net metering policies in Massachusetts (2015).
- ***For a group of owners of electric generating facilities*** – Developed a comprehensive quantitative and qualitative critique of a utility proposal to invest in electricity storage capability in the State of Texas. Drafted a report for circulation to legislative, regulatory, and market interests stating the results of the critique and analysis (2015).
- ***For an energy resource developer*** – Conducted a financial and ratepayer analysis of the benefits of a project to develop a power plant and natural gas pipeline in the State of Maine. Submitted testimony to the Maine Public Utilities Commission describing the results (2014–2015).
- ***For an energy storage company*** – Developed an optimization analysis to evaluate the security, reliability, economic, and environmental benefits and costs of multiple battery storage installations across the Hawaiian Islands in different industry settings (renewable generator, island utility, military base, hotel/resort). Drafted a report presenting the results, considering the state's unique energy price and fuel security context (2014–2015).
- ***For NYISO*** – Developed a model to compare cost, resource, and emission outcomes of alternative designs for a capacity market in the State of New York. Coauthored a report presenting the results of the analysis and a comprehensive review of the benefits and drawbacks of moving from a spot to a forward capacity market (FCM) structure. Presented results to NYISO senior management and several meetings of New York electricity market participants and stakeholders (2014–2015).
- ***For multiple regional transmission organizations (RTOs)*** – Provided strategic support at the board-of-director and senior-management levels for considering the changing structures of retail regulation and wholesale market incentives within their regions (2014–2015).
- ***For Calpine Corporation –*** Provided testimony on the costs and benefits of different proposals for generation capacity in Florida (2014).
- ***For an RTO*** – Conducted an internal analysis of the financial risk associated with the RTO's position in administering the trading of power system transmission rights (2014).
- ***For a regional transmission operator*** – Conducted a top-to-bottom review of the content and design of the RTO's Rate Schedule 1 tariff for the collection of operational costs from market participants. Presented results of the analysis to the RTO's board of directors and senior management (2014).
- ***For a retail electricity supplier*** – Provided analytic and strategic support with respect to the supplier's participation in a state regulatory proceeding related to changing the nature of and rate structure for electric distribution service (2014).
- ***For Ambri Inc. –*** Led a study of the economic feasibility of using battery storage in conjunction with wind and solar for a micro-grid application (2013–2014).
- ***For Calpine Corporation –*** Provided testimony on the costs and benefits of different proposals for generation capacity in Minnesota (2013).

- ***For the New England Independent System Operator (ISO-NE) –*** Assisted on several projects related to addressing the codependence of electric and natural gas systems in New England through a mix of short- and long-term market rule changes and administrative actions. Assistance included review of market structures to improve unit performance, particularly under stressed natural gas system conditions; quantification of the costs of potential natural gas and electric system infrastructure, and contractual responses to market rules and administrative actions (e.g., dual-fuel capability, new pipeline investment, LNG purchasing, and firm natural gas transportation agreements); and assistance with a series of discussions between ISO-NE and regional electricity and natural gas market participants. Also quantified the potential benefits of improved performance associated with reduced system interruptions (2012–2013).
- ***For the ISO-NE*** – Developed an economic supply/demand model of the FCM to estimate the cost impact of integrating a new long-term performance incentive design element into the FCM auctions and pricing structure (2012–2013).
- ***For Calpine Corporation*** – Filed a report with the EPA on the impact of emergency generation demand response programs on the costs and emissions associated with power system dispatch in the PJM electricity market (2012).
- ***For the ISO-NE*** – Organized and helped lead a strategic planning initiative to address unit retirement, fuel mix, operational performance, and wind resource integration issues. Oversaw comprehensive generating unit performance analysis and electric-gas system risk review. Conducted a thorough internal risk assessment and key-challenge solution development. Facilitated meetings and developed organizational and concept documents to explore outcomes and assist in deliberations with states and regional industry stakeholders, and participated in external meetings to gain input and feedback (2010–2012).
- ***For an RTO*** – Conducted a top-to-bottom review of its external market monitoring function and a comprehensive best-practices survey of all internal and external market monitoring functions at US RTOs and independent system operators (ISOs) (2012).
- ***For a wind power development company*** – Conducted a regional review of wind power development projects and an assessment of potentially valuable projects for acquisition based on power system location and siting viability (2012).
- ***For an energy services company –*** Oversaw and conducted an analysis of business, legal, and regulatory conditions related to a legal dispute over the legitimacy of a contract for energy and water management services. Coauthored a report to be used in the development of legal strategy and legal proceedings (2012).
- ***For an international power company*** – Conducted a review of a regional utility's compliance with the FERC requirements for transmission open access, and developed strategies for the filing of complaints of anticompetitive conduct before the FERC (2011–2012).
- ***For an RTO*** – Comprehensively reviewed and suggested changes to the design of regional market structures; oversaw data review and analysis related to key market design features and asset performance (2011).
- ***For Direct Energy*** – Assisted with the development of strategies to increase retail choice in Pennsylvania, including the design of an opt-in descending-clock auction to increase migration from default service to competitive supply. Prepared comments and analysis on utility contract structures. Provided testimony before the Pennsylvania Public Utilities Commission (2011).
- ***For Algonquin Gas*** – Submitted affidavits and testified in bankruptcy court on the impact on power plant value of changes in market rules related to the FCM in New England. Also provided testimony on the impact on power system reliability of the availability of firm transportation contracts for natural gas supplied to power plants in New England (2010).

- ***For an RTO*** – Conducted a best-practices and performance metrics analysis to benchmark the ISO's performance against industry peers with respect to responsiveness to consumers, stakeholders, and policymakers. Drafted a report with comprehensive benchmarking and performance metric recommendations; participated in stakeholder discussions (2010).
- ***For a power generators trade association*** – Developed and facilitated an all-day group discussion concerning key economic, environmental, legal, and policy challenges to the economic viability of existing and new power generation capacity in regional wholesale electricity markets (2010).
- ***For a coalition of electric companies*** – Coauthored the report "Ensuring a Clean, Modern Electric Generating Fleet while Maintaining Electric System Reliability," which reviewed the impact on power plant operations of proposed EPA rules to reduce emissions of sulfur dioxide, nitrogen oxides, mercury, and other hazardous air pollutants. Presented findings to numerous regional and national industry and regulatory groups (2010).
- ***For an industry coalition*** – Conducted a study and coauthored a white paper (with Dr. Susan Tierney) for the New England Energy Alliance on New England energy infrastructure needs and policy issues (e.g., facility siting policies, RGGI/climate change) influencing the future addition of energy infrastructure in the region (2006).
- ***For an interstate pipeline company and offshore LNG developer*** – Authored a report related to recent developments in the supply and demand for natural gas in New England, and surveyed the development, regulatory, and commercial status of proposed LNG projects across the US (2006); coauthored a report (with Susan Tierney) providing an overview of Northeastern natural gas markets and conditions, and an assessment of natural gas supply and demand conditions (2005).
- ***For independent system operators*** – Managed several projects and coauthored reports or analyses for the Northeast region's ISOs/RTOs related to ISO/RTO annual strategic plans; market monitoring and mitigation best practices; and the links between wholesale electricity markets and local distribution company retail prices (2002–2006).
- ***For electric utilities*** – Managed or participated in numerous engagements with wires-only as well as vertically integrated electric utilities within New England and across the country related to rate case strategy and regulatory support; strategic planning; power supply resource planning and procurement (including the role of independent monitor of utility procurements); price and environmental analyses related to the siting of new high-voltage transmission lines; and evaluation of the allocation of SO_2 and NO_x emission allowances under the EPA Clean Air Interstate Rule (CAIR) program (2001–2006).
- ***For a developer of a land-based LNG facility –*** Assisted in the preparation of confidential reports on US natural gas supply/demand conditions, market pricing indices, US LNG facilities' status, Northeast interstate and intrastate pipeline infrastructure conditions and prospects, and LNG supply contract prices, terms, and conditions (2006).
- ***For retail energy providers*** – Managed projects and authored or coauthored confidential reports on the experience with retail competition in the US, a benefit/cost analysis of wholesale electricity competition, and comparative analyses of retail electricity prices for utility and competitive retail suppliers in select states (2004–2006).
- ***For merchant generating companies/coalitions*** – Managed production cost dispatching analyses for strategic planning related to the construction of new generating capacity in New England; assisted in the development of regulatory proposals for new wholesale market organizations and policies in New England (2001–2002).
- ***For a major interstate pipeline owner/operator –*** Modeled the electrical load characteristics of pipeline operations and utility rate structures to quantify the extent to which the company was being overcharged for electricity services. Supported company intervention in public utility commission proceedings and with analytical support in settlement negotiations (2002).

- ***For a renewable power developer association*** – Provided testimony on the potential negative effects – and remedial policy options – related to the impact of locational marginal pricing on the development and operation of renewable generating resources in New England (2001).

OTHER PROFESSIONAL ACTIVITIES

AEE
Advisory Board (2011)

SELECTED REPORTS, TESTIMONY, PUBLICATIONS, AND PRESENTATIONS

Testimony of Paul J. Hibbard before the Rhode Island Public Utilities Commission, Docket No. 22-20-NG on behalf of The Narragansett Electric Company, d/b/a Rhode Island Energy (September 1, 2022)

Answering Testimony of Paul J. Hibbard before FERC, Docket No. ER20-2441-002 on behalf of McKenzie Electric Cooperative, Inc. (July 15, 2022)

Testimony of Paul J. Hibbard before the US District Court, Southern District of Florida, Ft. Lauderdale Division on behalf of Simon Property Group et al., Case No. 0:20-cv-60981-AMC (June 6, 2022)

Methane Reduction Technology Electricity and Abatement Costs: The Cost to Power Zero-Emission Pneumatic Controllers and Pumps in Grid-Connected and Remote Locations, with Scott Ario and Elisa Gan (May 6, 2022)

Affidavit of Paul Hibbard and Charles Wu before FERC, Docket No. ER22-772-000 on behalf of NYISO (January 5, 2022)

Modifications to the BSM Construct in the NYISO Capacity Market: Analysis of Potential Capacity Market Competitiveness and Reliability Outcomes, with Charles Wu (December 2021)

Economic Impact of a Clean Electricity Payment Program, with Pavel Darling and Luke Daniels (September 2021)

"Why Hydrogen?," presentation during the EBC Energy Resources Webinar: Future of Green Hydrogen – Earthshot Effort to Meet the Needs of Climate Change (September 30, 2021)

"Decarbonization and The Power System," presentation during the Northeast Public Power Association RodE&O Conference and Expo, Engineering Track (September 22, 2021)

"Net Zero Carbon: What Is It and What Should It Be?," presentation during the LDC Gas Forum (September 14, 2021)

"Net Zero Carbon: What Is It and What Should It Be?," presentation during the NEPPA Annual Conference, General Session (August 23–24, 2021)

"Motivating Customers to Decarbonize with an Eye Toward Equity," presentation during the 2021 NARUC Summer Policy Summit (July 18, 2021)

Economic Impact of Stimulus Investment in Advanced Energy for America, with Pavel Darling (June 2021)

Economic Impact of Stimulus Investment in Transportation Electrification, with Pavel Darling (June 2021)

"A Step Through the Looking Glass – Outlook for Natural Gas in the Northeast," Webinar for the Northeast Gas Association (NGA) Regional Market Trends Forum, What are the Market Pathways and Their Various Implications (April 29, 2021)

Accelerating Job Growth and an Equitable Low-Carbon Energy Transition: The Role of the Clean Energy Accelerator, with Susan F. Tierney (January 2021)

"Carbon Pricing: This Is the Way," presentation on a plenary panel to the New England Restructuring Roundtable (December 11, 2020)

"Approaches to Meeting Decarbonization Mandates: Important Decisions with Cost, Equity, and Reliability Implications," presentation during the EUCI Decarbonization Summit on state decarbonization opportunities (December 9, 2020)

"Approaches to Meeting Decarbonization Mandates: Important Decisions with Cost, Equity, and Reliability Implications," presentation during the New England Energy Summit on state decarbonization opportunities (November 23, 2020)

Affidavit of Paul J. Hibbard before FERC, Docket No. ER21-502-000 on behalf of NYISO (November 30, 2020)

Economic Impact of Stimulus Investment in Advanced Energy (series of 10 state-specific reports), with Pavel G. Darling (September–October 2020)

Climate Change Impact and Resilience Study – Phase II: An Assessment of Climate Change Impacts on Power System Reliability in New York State, with Charles Wu, Hannah Krovetz, Tyler Farrell, and Jessica Landry (September 2020)

Presented virtually at the Annual NECA Conference on how New England can transition away from fossil fuels, as well as the costs, reliability, and societal implications of moving toward low-carbon alternatives (September 30, 2020)

Independent Consultant Study to Establish New York ICAP Demand Curve Parameters for the 2021/2022 through 2024/2025 Capability Years – Final Report, with Todd Schatzki, Charles Wu, Christopher Llop, Matthew Lind, Kiernan McInerney, and Stephanie Villarreal (September 9, 2020)

Utility energy efficiency program performance from a climate change perspective: A comparison of structural and behavioral programs, with Jonathan Baker, Mona Birjandi-Feriz, and Hannah Krovetz (August 2020)

"Energy Efficiency for Climate, Not Ratepayers," presentation on a plenary panel to the American Council for an Energy-Efficient Economy (ACEEE) Summer Study Session (August 19, 2020)

For the New England Power Generators Association (NEPGA), coauthored a report assessing the potential use of carbon pricing in New England; the analysis applied tested industry models to identify effective and efficient economy-wide pricing of carbon dioxide (CO_2) emissions consistent with New England states' GHG emission reduction targets (June 23, 2020)

Carbon Pricing for New England: Context, Key Factors, and Impacts, with Joseph Cavicchi (June 2020)

"Decarbonization and Wholesale Markets in New England – Looking Ahead: Achieving 80% GHG Reduction by 2050," presentation on a plenary panel to the Association of Energy Engineers Conference, "ISO-NE in 2050: Getting to an advanced energy future in New England," Boston, MA (March 18, 2020)

"Decarbonization and Natural Gas in the Northeast," panel moderator and presenter at the EUCI conference on Natural Gas Decarbonization, Denver, CO (January 22–23, 2020)

Fuel and Energy Security in New York State: An Assessment of Winter Operational Risks for a Power System in Transition, with Charles Wu (November 2019)

Clean Energy in New York State: The Role and Economic Impacts of a Carbon Price in NYISO's Wholesale Electricity Markets, with Susan F. Tierney (October 2019)

"Natural Gas in Power Generation: Role Going Forward," 7th Annual Maine Natural Gas Conference to discuss power generation in the New England region. Falmouth, ME (October 3, 2019)

Direct Testimony of Paul J. Hibbard before the New Hampshire Public Utilities Commission on the need for and economic and environmental impacts of proposed Liberty Utilities Granite Bridge pipeline and LNG project, Docket No. DG 17-152 (June 28, 2019)

Rebuttal Testimony on Reopening of Paul J. Hibbard before the Illinois Commerce Commission on Behalf of Commonwealth Edison, Docket No. 18-0843 (May 31, 2019)

Pre-filed Testimony of Paul J. Hibbard before the Connecticut Siting Council on behalf of NTE Connecticut LLC, Docket No. 470 (January 18, 2019)

Vehicle Fuel-Economy and Air Pollution Standards: A Literature Review of the Rebound Effect, with Susan F. Tierney, Benjamin Dalzell, Grace Howland, Jonathan Baker, Tom Beckford, Sarah Centanni, Asie Makarova, and Scott Ario (June 28, 2018)

"An Expanding Carbon Cap-and-trade Regime? A Decade of Experience with RGGI Charts a Path Forward," with Susan F. Tierney and Pavel G. Darling, *The Electricity Journal* (June 2018)

Testimony of Paul J. Hibbard before the District of Columbia on behalf of AltaGas, Case No. 1142 (May 25, 2018)

The Economic Impacts of the Regional Greenhouse Gas Initiative on Nine Northeast and Mid-Atlantic States, review of RGGI's third three-year compliance period (2015–2017), with Susan F. Tierney, Pavel G. Darling, and Sarah Cullinan (April 2018)

Post-Settlement Testimony of Paul J. Hibbard before the Maryland Public Service Commission on behalf of AltaGas, Case No. 9449 (January 5, 2018)

Rebuttal Testimony of Paul J. Hibbard before the Public Service Commission of the District of Columbia on behalf of AltaGas, Formal Case No. 1142 (October 27, 2017)

Capacity Resource Performance in NYISO Markets: An Assessment of Wholesale Market Options, with Todd Schatski and Sarah Bolthrunis (November 2017)

RGGI and Emissions Allowance Trading: Options for Voluntary Cooperation Among RGGI and Non-RGGI States, with Ellery Berk (July 2017)

"Analytical Issues in Linking," presentation on Virginia and the Regional Greenhouse Gas Initiative, Virginia Commonwealth University, Richmond, VA (July 12, 2017)

Electricity Markets, Reliability and the Evolving U.S. Power System, with Susan Tierney and Katherine Franklin (June 2017)

"Storage and Microgrids – New Applications," panel presentation during the Electricity Advisory Committee's Energy Storage Session (June 8, 2017)

Supplemental Affidavit of Paul J. Hibbard before FERC, Docket No. ER17-386-000 on behalf of NYISO (December 18, 2016)

Affidavit of Paul J. Hibbard before FERC, Docket No. ER17-386-000 on behalf of NYISO (November 18, 2016)

Evaluation of Vermont Transco, LLC Capital Structure, with Craig Aubuchon and Mike Cliff (October 2016)

Rebuttal Testimony of Paul J. Hibbard before the State of Vermont Public Service Board on behalf of Vermont Gas Systems Inc., Docket Nos. 8698 and 8710 (September 26, 2016)

RGGI and CO_2 Emissions Trading Under the Clean Power Plan: Options for Trading Among Generating Units in RGGI and Other States, Susan Tierney and Ellery Berk (July 12, 2016)

Affidavit of Paul J. Hibbard before the FERC, Docket No. ER16-1751-000 on behalf of the NYISO (May 20, 2016)

Declaration of Paul J. Hibbard and Andrea M. Okie in the US Court of Appeals for the District of Columbia Circuit, Case No. 15-1363 (and consolidated cases) on behalf of multiple parties (December 8, 2015)

Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas, report for the Massachusetts Office of the Attorney General, with Craig Aubuchon (November 2015)

Testimony of Paul J. Hibbard before the Senate Committee on Global Warming and Climate Change, *Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas* (November 24, 2015)

The Economic Impacts of the Regional Greenhouse Gas Initiative on Nine Northeast and Mid-Altantic States, review of RGGI's Second Three-Year Compliance Period (2012–2014), with Andrea Okie, Susan Tierney, and Pavel Darling (July 14, 2015)

Electric System Reliability and EPA's Clean Power Plan: The Case of MISO, report for the Energy Foundation, with Susan Tierney and Craig Aubuchon (June 8, 2015)

Net Metering in the Commonwealth of Massachusetts: A Framework for Evaluation (May 2015)

NYISO Capacity Market: Evaluation of Options, report for the NYISO, with Todd Schatzki, Craig Aubuchon, and Charles Wu (May 2015)

Ohio's Electricity Future: Assessment of Context and Options, report for Advanced Energy Economy, with Andrea Okie (April 2015)

Electric System Reliability and EPA's Clean Power Plan: The Case of PJM, report for the Energy Foundation, with Susan Tierney and Craig Aubuchon (March 16, 2015)

Electric System Reliability and EPA's Clean Power Plan: Tools and Practices, report for the Energy Foundation, with Susan Tierney and Craig Aubuchon (February 2015)

Tools States Can Utilize for Managing Compliance Costs and the Distribution of Economic Benefits to Consumers Under EPA's Clean Power Plan, Electricity Forum, with Andrea Okie and Susan Tierney (February 2015)

The Economic Potential of Energy Efficiency, report for the Environmental Defense Fund, with Katherine Franklin and Andrea Okie (December 2014)

Assessment of EPA's Clean Power Plan: Evaluation of Energy Efficiency Program Ramp Rates and Savings Levels, report for the Environmental Defense Fund and National Resources Defense Council, with Andrea Okie and Katherine Franklin (December 2014)

"EPA's Proposed Clean Power Plan and States' Planning for Implementation," presentation to the Power-Gen International Annual Conference (December 2014)

"Storage/Renewables Valuation: A Case Study Hitting Multiple Perspectives," presentation to the Caribbean Renewable Energy Forum 2014 (October 2014)

"Electric Industry Transformation: A New World, or a Step Through the Looking Glass?" presentation to the New England Independent System Operator Quarterly Meeting (September 2014)

"Consumers, Markets, and Infrastructure: New England at a Crossroads," presentation to the New England Consumer Liaison Group (September 2014)

"Columbia River Treaty Hydropower: Perspectives on Power Benefits," presentation to the LSI Conference on the Columbia River Treaty (September 2014)

Direct Testimony of Paul J. Hibbard on Behalf of Calpine Construction Finance Company, L.P., before the Florida Public Service Commission, Docket No. 140110-E1 (July 2014)

"States in Control: EPA's Clean Power Plan and State Implementation," presentation at the National Association of Regulatory Utility Commissioners Summer Meetings (July 2014)

"EPA's Clean Power Plan: States' Tools for Reducing Costs and Increasing Benefits to Consumers," with Andrea Okie and Susan Tierney, *The Electricity Journal* (July 2014)

Direct Testimony of Paul J. Hibbard on behalf of Calpine Construction Finance Company, L.P., before the Florida Public Service Commission, Docket No. 140110-E1 (July 14, 2014)

"Project Vigilance: Value of Ambri Batteries at Joint Base Cape Cod," presentation to the Raab Restructuring Roundtable, Boston MA (June 2014)

Further Explanation on Rate Calculations, with Todd Schatzki, memo to the New England Independent System Operator Markets Committee on setting the compensation rate for the ISO Winter Program (May 28, 2014)

"Markets, Infrastructure, and Policy: New England at a Crossroads," presentation to the US/Canada Cross-Border Power Summit (April 2014)

THE COST OF CAPITAL –

A PRACTITIONER'S GUIDE

BY

DAVID C. PARCELL

PREPARED FOR THE SOCIETY OF UTILITY AND REGULATORY FINANCIAL ANALYSTS (SURFA)

2020 EDITION

Author's Note: This manual has been prepared as an educational reference on cost of capital concepts. Its purpose is to describe a broad array of cost of capital models and techniques. No cost of equity model or other concept is recommended or emphasized, nor is any procedure for employing any model recommended. Furthermore, no opinions or preferences are expressed by either the author or the Society of Utility and Regulatory Financial Analysts.

and regulators should recognize that no model can be refined to the extent that the cost of common equity for any firm can be reduced to a simple formulistic exercise and be exactly measured. Investor expectations differ and it is apparent that all investors do not rely upon the same information and models in making investment decisions. Consequently, so single model and model variant can be demonstrated to capture all investor expectations.

Furthermore, no single model is so inherently precise that it can be relied on solely to the exclusion of other theoretically sound models. Each model requires the exercise of judgment as to the reasonableness of the underlying assumptions of the methodology and on the reasonableness of the proxies used to validate the theory. Each model has its own way of examining investor behavior, its own premises, and its own set of simplifications of reality. Each method proceeds from different fundamental premises, most of which cannot be validated empirically. Investors clearly do not subscribe to any singular method, nor does the stock price reflect the application of any one single method by investors. Therefore, it is essential that estimates of investors' required rate of return produced by one method be compared with those produced by other methods, and that all cost of equity estimates be required to pass fundamental tests of reasonableness and economic logic. "The concept of a fair rate of return, therefore, represents a range or a zone of reasonableness" (Phillips, 1988, 357-358).

Two texts have evaluated the various cost of equity models (Kolbe, Read and Hall, 1986; Thompson, 1991). These texts, while informative to the process of evaluating alternative methods, do not establish a single model as superior to the others. In addition, the texts do not evaluate the alternative methodologies available for implementing each model. Nevertheless, they do provide informative insights to the interested reader.

Classification of Models

There are numerous ways that the various cost of equity models can be classified. One way is to classify models according to their underlying financial theory. The capital asset pricing model (CAPM) is based upon portfolio theory; the comparable earnings method is based upon the economic concept of opportunity cost; the discounted cash flow (DCF) model is based on the

Models and Court Decisions

It is worth noting that the regulatory concept of a fair rate of return, as used in current utility regulation, was articulated long before the development of modern approaches (such as CAPM and DCF) for estimating market returns. In addition, the Court decisions cited in Chapter 3 preceded each of these methods. Nevertheless, it is proper to apply these approaches to the traditional regulatory framework since the concepts remain compatible with the Court decisions, which endorsed no specific method of estimating the cost of equity (Bonbright, Danielsen and Kamerschen, 1988, 315). In addition, the Court decisions subsequent to the Hope case have generally endorsed the previous standards of a fair rate of return and neither endorsed nor rejected any specific methodologies.

How do the various approaches relate to the guidelines of the Court cases cited in Chapter 3? Three standards for measuring equity costs rates have evolved from these guidelines:

1. comparable earnings;
2. capital attraction; and,
3. risk and return.

The comparable earnings approach relies on the earnings of similar risk utility and/or industrial companies as a comparable proxy for a utility's fair return on equity. The capital attraction standard uses market valuation approaches such as the discounted cash flow model to measure required returns in the form of cash flows to the investor. The risk-return version of the capital attraction standard, traditionally a risk premium model and more currently the capital asset pricing model, formally defines market return requirements in light of specific investment risk.

Models Preferred By Commissions

What models do the various regulatory agencies consider? Table 1 summarizes the most recent (1995) NARUC survey on rate of return methods. As this indicates, most commissions use multiple methods and several appear to be widely used.

TABLE 1
COST OF COMMON EQUITY MODELS
FAVORED BY FEDERAL AND STATE
REGULATORY AGENCIES

MODEL	NUMBER OF COMMISSIONS FAVORING METHOD
Discounted Cash Flow	44
Comparable Earnings	21
Risk Premium	12
Capital Asset Pricing Model	11
Earnings/Price Ratio	5
No One Method – All are considered	27

Importance of Stock Prices

Most of the cost of equity models described in this manual depend, to some degree, on common stock prices. Stock prices are directly utilized in the DCF model and are indirectly used in the CAPM (through use of stock price betas), comparable earnings (if market-to-book ratios are considered), and risk premium (if total market returns are used). In fact, it is the dependence on stock prices which gives rise to the term "market tests" often used in describing cost of equity models. Given the importance of stock prices, it is useful to describe the principles underlying the significance and interpretation of stock prices.

The market price of a firm's stock represents the collective judgment of all stock market participants as to the value of the firm at a particular point in time. The stock price takes into consideration the participants' interpretation of all relevant factors, such as past, present and future earnings, the risk of these earnings, dividend policy and other factors. Thus, the market

Use of this formula requires use of a computer. The value for K (cost of equity) is determined in an iterative fashion by substituting values of K into equation (8.21) until the result for P_0 equates to the actual stock price.

A more practical multi-stage DCF combines a short-term growth rate with a long-term growth rate by weighting the two (or three) growth rates. An example of this is the two-stage DCF model used by the Federal Energy Regulatory Commission to set the cost of equity for inter-state natural gas pipelines.

$$(8.22)\quad K = \frac{D_0}{P_0}(1 + 0.5g) + 0.67(g_s) + 0.33(g_l)$$

where:
- K = cost of equity
- D_0/P_0 = average dividend yield over past six months
- g = average growth rate
- g_s = short-term growth rate (EPS forecasts)
- g_l = long-term growth rate (gross domestic product forecasts)

An alternative non-constant DCF model is implemented using a computer model which projects annual (or quarterly) dividends many years into the future. The summed present value of these dividends is then calculated and compared to the current stock price, in an iterative framework, until the present value of future dividends equals the current stock price. The resulting discount rate which produces equality is the DCF estimate.

Strengths and Weaknesses

The DCF model is characterized by strengths and weaknesses, as are the other cost of equity models. This concluding section lists the most frequently cited strengths and weaknesses.

Strengths

The DCF model is noted for the following strengths:

1. It has "intuitive appeal" since it is based upon the common notion that receipt of dividends plus expected appreciation is the total return requirement determined by the market;

2. It is the most company-specific method, since a company's own stock price and growth rates are directly employed. Even when company-specific information is not available or appropriate, the use of "comparable company" or "proxy" company data has the effect of giving market requirements on a company-specific risk basis;

3. The model is formalistic and data required to make the calculation are readily available;

4. It has the most wide-spread regulatory acceptance; and,

5. It recognizes the time value of money and is forward-looking.

Weaknesses

The DCF method is cited as having the following weaknesses:

1. Some of the underlying assumptions of the model are at odds with investor and capital market behavior. There is generally no empirical evidence that these assumptions are valid;

2. Growth rates are subjective. There is no way to prove that the presumed growth in value reflected in the price of stock used to developed the dividend yield is the product of any one or any combination of growth indicators;

3. One underpinning of the model is the Efficient Market Hypothesis. There is no universal acceptance of this hypothesis in either the long-run or short-run;

4. It is sometimes difficult to match the yield and growth components in a consistent framework; and,

5. Analysts' forecasts are generally short-term in nature, whereas the DCF model is log-term in nature.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Vanessa Okum. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. IN WHAT CAPACITY ARE YOU EMPLOYED?

A. I am employed as a Fixed Utility Financial Analyst in the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E).

Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. Appendix A, which is attached to my testimony, describes my educational background and professional experience.

Q. DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of the ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of Pennsylvania-American Water Company (PAWC or Company) and make recommended adjustments to PAWC's proposed operating and maintenance (O&M) expense claims for the fully projected future test year (FPFTY) ending June 30, 2025. I will also address several alternative ratemaking mechanisms proposed by the Company.

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1 contains schedules relating to my direct testimony.

Q. WHAT ARE THE TEST YEARS USED BY PAWC IN THIS PROCEEDING?

A. PAWC uses the year ended June 30, 2023 as the historic test year (HTY), the year ending June 30, 2024 as the future test year (FTY), and the year ending June 30, 2025 as the FPFTY in this proceeding.[1]

Q. WHAT IS PAWC'S REQUESTED REVENUE INCREASE?

A. PAWC is requesting a total annual revenue increase of $203,945,911 (or 20.2%) based upon the FPFTY pro forma revenue requirement,[2] which reflects a total rate

[1] PAWC Statement No. 5, pp. 2-3.
[2] PAWC Exhibit No. 3-A, p. A.

base claim for the combined water and wastewater operations. The revenue increase includes two pending acquisitions: Butler Area Sewer Authority (BASA) and the Borough of Brentwood (Brentwood) wastewater collection system, and is broken down by operation as follows:[3]

	Present Rate Revenue	**Net Revenue Increase after Act 11 WW Allocation**	**% Increase in Revenue**
Water Operations	$824,117,186	$199,237,084	24.2%
Wastewater SSS Ops.	$95,470,867	($169,261)	-0.2%
BASA WW Ops.	$11,847,402	$4,735,609	40.0%
Brentwood WW Ops.	$1,824,191	$369,405	20.3%
Wastewater CSS Ops.	$78,636,216	($226,926)	-0.3%
Total Company	**$1,011,895,862**	**$203,945,911**	**20.2%**

The requested Water Operations revenue increase of $199,237,084 includes $71,087,394 (35.68% of the Water Operations increase) allocated from the various Wastewater Operations per the Act 11 provision.

[3] PAWC Exhibit No. 3-A, p. A.

PAWC ACQUISITIONS

Q. PAWC HAS INCLUDED A SEPARATE REVENUE REQUIREMENT FOR TWO PENDING ACQUISITIONS: BASA AND BRENTWOOD. PLEASE SUMMARIZE THE HISTORY OF THESE ACQUISITION PROCEEDINGS.

A. The petition to acquire BASA was filed with the Commission on February 14, 2023 at Docket No. A-2022-3037047. A joint settlement was filed on August 14, 2023, with the support of PAWC, BASA, I&E, the Office of Consumer Advocate (OCA), and the Office of Small Business Advocate (OSBA); conversely, the administrative law judge assigned to the case recommended denial of the settlement. PAWC and BASA filed an exception to this decision, asking the Commission to approve the settlement, and on November 9, 2023, the Commission voted to approve the settlement. However, Center and Summit Townships, each having residents that are BASA members, have filed a joint appeal against the sale[4] and the case remains unresolved as of the writing of this direct testimony.

The petition to acquire Brentwood was filed with the Commission on March 31, 2023, at Docket No. A-2021-3024058. The petition was highly contested by the public, as well as by I&E and OCA. As of the writing of this direct testimony, the petition has not been approved or denied by the Commission.

[4] https://butlerradio.com/summit-and-center-townships-file-appeal-of-puc-basa-decision/, accessed January 22, 2024.

Q. WHAT IS THE COMPANY'S BASIS FOR INCLUDING THESE PENDING ACQUISITIONS IN THIS RATE FILING?

A. PAWC witness E. Christopher Abruzzo, Esq. cites Section 1329(d)(5) of the Public Utility Code which states, "The selling utility's cost of service shall be incorporated into the revenue requirement of the acquiring public utility as part of the acquiring utility's next base rate case proceeding." He continues that it is his understanding from PAWC counsel that the statute points to the instant proceeding as the "next" base rate case, assuming that BASA closes in December 2023 and Brentwood closes shortly after the end of its acquisition proceeding in March 2024.[5]

Q. DO YOU AGREE THAT THESE ACQUISITIONS SHOULD BE INCLUDED IN THIS BASE RATE PROCEEDING?

A. No. I&E is recommending that inclusion of these pending acquisitions in this base rate proceeding be disallowed; therefore, I have excluded them from my analysis and subsequent adjustments.

Q. PLEASE EXPLAIN YOUR RECOMMENDATION TO EXCLUDE BASA AND BRENTWOOD IN THE INSTANT PROCEEDING.

A. I disagree with the Company's interpretation that the instant proceeding is the next

[5] PAWC Statement No. 6, p. 24.

base rate case in which to include these acquisitions; however, any legal arguments will be addressed by I&E counsel in the Main and Reply Briefs. As neither facility has yet been acquired, I assert that the "next" base rate case proceeding would be the base rate proceeding immediately following the closing on the acquisition of the respective facility. Since closing has not occurred for either utility, as the Brentwood acquisition proceeding is undecided and the BASA decision has been appealed to Commonwealth Court, which has stayed any closing, I conclude that including BASA and Brentwood in the instant proceeding is inappropriate and should be disallowed.

Q. ARE THERE OTHER ACQUISITIONS CLAIMED IN THE INSTANT FILING?

A. Yes. PAWC has included O&M expenses for costs associated with the following planned acquisitions: Audubon Water, Farmington Water, Farmington Wastewater, and Sadsbury Wastewater. [6] The costs are allocated between Water Operations and Wastewater SSS Operations and are included in the respective revenue requirements.[7]

[6] PAWC Exhibit No. 3-B, pp. 303-308.
[7] PAWC Exhibit No. 3-A, pp. 48 and 113.

Q. DO YOU AGREE THAT EXPENSE CLAIMS ATTRIBUTABLE TO THESE ACQUISITIONS SHOULD BE ALLOWED IN THE INSTANT PROCEEDING?

A. No. As these acquisitions have not been completed or even approved by the Commission,[8] it is inappropriate for the Commission to allow these costs as claimed in the instant proceeding. A discussion of these expenses and supporting calculations are forthcoming in my testimony below.

I&E OPERATING AND MAINTENANCE EXPENSE ADJUSTMENTS

Q. PLEASE SUMMARIZE YOUR ADJUSTMENTS.

A. The following tables summarize my recommended adjustments:

Water Operations:

	Company Claim	Recommended Allowance	I&E Adjustment
O&M Expenses:			
Performance Pay	$4,868,107	$4,195,822	($672,285)
Payroll Taxes	$4,999,459	$4,947,222	($52,237)
Pension	$22,218	($3,800,736)	($3,822,954)
OPEBs	($5,817,327)	($8,160,753)	($2,343,426)
Acquisition O&M	$1,675,709	$0	($1,675,709)
Miscellaneous Expense Adjustment	$1,728,285	$1,545,547	($182,738)
Total O&M Expense Adjustments			**($8,749,349)**
Rate Base:			
Cash Working Capital	$23,164,070	$22,082,926	($1,081,144)
Total Rate Base Adjustments			**($1,081,144)**

[8] I&E Exhibit No. 1, Schedule 1. Reference Part K of each data request.

Wastewater SSS Operations:

	Company Claim	Recommended Allowance	I&E Adjustment
O&M Expenses:			
Acquisition O&M	$504,709	$0	($504,709)
Total O&M Expense Adjustments			**($504,709)**
Rate Base:			
Cash Working Capital	$2,230,011	$2,199,053	($30,958)
Total Rate Base Adjustments			**($30,958)**

OVERALL I&E RECOMMENDED POSITION

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT FOR WATER OPERATIONS?

A. I&E's total recommended revenue requirement for Water Operations is $848,325,560. This recommended revenue requirement represents an increase of $27,439,769 to the I&E-adjusted present rate revenues of $820,885,791. This total recommended allowance incorporates my adjustments made in this testimony to O&M expenses and cash working capital, as well as the recommended adjustments made in the testimony of I&E witnesses D.C. Patel,[9] Ethan Cline,[10] and Joseph Kubas.[11] A calculation of the I&E recommended revenue requirement is shown in Table I(a) below:

[9] I&E Statement No. 2.
[10] I&E Statement No. 3.
[11] I&E Statement No. 4.

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT FOR WASTEWATER SSS OPERATIONS?

A. I&E's total recommended revenue requirement for Wastewater SSS Operations is $114,539,947. This recommended revenue requirement represents an increase of $19,863,234 to the I&E-adjusted present rate revenues of $94,676,713. This total recommended allowance incorporates my adjustments made in this testimony to O&M expenses and cash working capital, as well as the recommended adjustments made in the testimony of I&E witnesses D.C. Patel, Ethan Cline, and Joseph Kubas. A calculation of the I&E recommended revenue requirement is

shown in Table I(b) below:

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT FOR WASTEWATER CSS OPERATIONS?

A. I&E's total recommended revenue requirement for Wastewater CSS Operations is $85,369,303. This recommended revenue requirement represents an increase of $6,733,087 to the Company's claimed present rate revenues of $78,636,216. This total recommended allowance incorporates my adjustments made in this testimony to O&M expenses and cash working capital, as well as the recommended adjustments made in the testimony of I&E witness D.C. Patel. A calculation of the

I&E recommended revenue requirement is shown in Table I(c) below:

PAWC - Wastewater CSS Operations		TABLE I(c)

Q. SUMMARIZE I&E'S COMBINED RECOMMENDED REVENUE REQUIREMENT.

A. I&E's total recommended revenue requirement for all PAWC operations combined is $1,048,234,810 as shown in Table II below. This recommended revenue requirement represents an increase of $54,036,090 to the I&E-recommended total present rate revenues of $994,198,720 for Water Operations, Wastewater SSS Operations, and Wastewater CSS Operations. This total recommended allowance incorporates my adjustments made in this testimony to O&M expenses and cash

working capital, as well as the recommended adjustments made in the testimony of I&E witnesses D.C. Patel, Ethan Cline, and Joseph Kubas. To be clear, this overall recommendation reflects I&E's disallowance for claims related to BASA and Brentwood as discussed above.

Q. WHAT IS I&E'S PROPOSED ACT 11 REVENUE ALLOCATION AS SUPPORTED BY I&E WITNESS JOSEPH KUBAS IN I&E STATEMENT NO. 4?

A. As further discussed in his testimony,[12] I&E witness Joseph Kubas does not recommend the application of an Act 11 allocation in the instant proceeding as shown the table below:

TABLE II
PAWC - Docket Nos. R-2023-3043189 and R-2023-3043190
I&E Recommended - Combined Water and Wastewater Revenue Requirement Summary

		Total Company	Water Operations	WW SSS Genera Ops	CSS WW Ops

[12] I&E Statement No. 4.

PERFORMANCE PAY

Q. WHAT IS PERFORMANCE PAY?

A. Performance pay is a component of labor expense defined by PAWC witness Lori O'Malley as annual and long-term performance compensation for eligible employees. This is made up of two components: the Annual Performance Plan (APP) and the Long-Term Performance Plan (LTPP).[13]

Q. WHAT IS THE COMPANY'S CLAIM FOR PERFORMANCE PAY EXPENSE?

A. The Company is claiming FPFTY O&M performance pay expense broken down as follows:[14]

	FPFTY Claim	O&M Allocation Factor	FPFTY O&M Claim
Water Operations	$8,053,114	60.45%	$4,868,107
Wastewater SSS Operations	$377,659	77.86%	$294,054
Wastewater CSS Operations	$324,254	77.86%	$252,464
Total	**$8,755,027**		**$5,414,617**

The O&M allocation factor is calculated as one minus the capitalization rate.[15]

[13] PAWC Statement No. 5, p. 8.
[14] PAWC Exhibit No. 3-B, p. 47.
[15] PAWC Exhibit No. 3-B, p. 2.

Q. WHAT IS THE BASIS FOR THE COMPANY'S PERFORMANCE PAY EXPENSE CLAIM?

A. The Company's projected performance pay was calculated on a position-by-position basis for eligible employees based on each position's target percent, or percentage of base salary that is provided if an employee achieves their performance target, under both the APP and LTPP. The target percent was multiplied by each eligible employee's pro forma base salary in the FTY and FPFTY to determine the cost of compensation under the APP and LTPP.[16] Total annual performance compensation was further separated into expensed and capitalized portions by application of the specified capitalization rates as shown in the table above.

Q. DO YOU AGREE WITH THE COMPANY'S PERFORMANCE PAY CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND FOR PERFORMANCE PAY?

A. I recommend an allowance of $4,195,822 for Water Operations performance pay expense, or a reduction of $672,285 ($4,868,107 - $4,195,822) to the Company's Water Operations claim.

[16] PAWC Statement No. 5, p. 8.

Q. HOW DID YOU CALCULATE YOUR RECOMMENDED ALLOWANCE FOR WATER OPERATIONS' PERFORMANCE PAY?

A. The following table shows the calculation of my recommended Water Operations FPFTY allowance and adjustment for performance pay:

1. FPFTY Base Payroll[17]	$88,103,860
2. Performance Pay Factor – I&E Recommended	7.88%
3. Performance Pay Allowance (1 x 0.0788)	$6,940,979
4. O&M Allowance (3 x 0.6045)	$4,195,822
5. FPFTY O&M – Company Claim ($8,053,114 x 0.6045)	$4,868,107
6. I&E Recommended O&M Adjustment (4 – 5)	($672,285)

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on a three-year average performance payout factor of 7.88% of the base payroll expense for Water Operations. This calculation uses historic data provided in response to I&E-RE-21-D[18] as summarized in the table below:

	2021	**2022**	**2023**
Base Payroll	$70,693,112	$75,709,119	$78,576,599
Performance Pay	$5,031,188	$5,532,881	$7,236,524
% of Base Payroll	7.12%	7.31%	9.21%

[17] I&E Exhibit No. 1, Schedule 2.
[18] I&E Exhibit No. 1, Schedule 2.

The Company has claimed a target level payout factor of 9.14% for Water Operations ($8,053,114 / $88,103,860) in the FPFTY,[19] which is contingent upon achieving targeted financial performance goals.

The achievement of these financial goals is speculative and not guaranteed as performance against goals is calculated at three separate levels: **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}** Therefore, my recommended three-year historic average payout factor of 7.88% provides a more reliable and moderate base for the FPFTY allowance because it is based on historic data, rather than the significantly higher and speculative projected payout factor of 9.14%. It should be noted that I am not addressing or recommending any adjustments to the performance pay claims for Wastewater SSS Operations or Wastewater CSS Operations as the payout factors for these business units are reasonable when compared to historic actual data.

[19] I&E Exhibit No. 1, Schedule 2.
[20] I&E Exhibit No. 1, Schedule 3. Note: I have only included the specifically referenced page from this document to avoid unnecessary bulk in my Exhibit.

PAYROLL TAX EXPENSE

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR PAYROLL TAX EXPENSE?

A. The Company's claim for payroll tax expense includes its share of federal and state payroll taxes, such as Social Security, Medicare, and federal and state unemployment taxes, and is based on employee compensation.

Q. WHAT IS THE COMPANY'S CLAIM FOR PAYROLL TAX EXPENSE?

A. The Company's payroll tax expense claim is broken down as follows:[21]

	FPFTY Claim	O&M Allocation Factor	FPFTY O&M Claim
Water Operations	$8,270,403	60.45%	$4,999,459
Wastewater SSS Operations	$496,169	77.86%	$386,317
Wastewater CSS Operations	$687,308	77.86%	$535,138
	$9,453,880		$5,920,914

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND FOR PAYROLL TAX EXPENSE?

A. I recommend an allowance of $4,947,222 for Water Operations payroll tax

[21] PAWC Exhibit No. 3-B, p. 74.

expense, or a reduction of $52,237 ($4,999,459 - $4,947,222) to the Company's FPFTY Water Operations claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on an effective payroll tax rate of 7.77%, as shown in the table below, and represents the Company's share of the payroll taxes as applied to my recommended performance pay adjustment [($672,285) x 7.77% = ($52,237)] explained above.

Water Ops FPFTY Compensation Claim[22]	$106,487,061
Water Ops FPFTY Payroll Tax Claim	$8,270,403
Effective Payroll Tax Rate	7.77%

It should be noted that I am not addressing or recommending any adjustments to the payroll tax expense claims for Wastewater SSS Operations or Wastewater CSS Operations since I am not recommending performance pay adjustments to these operational units.

[22] PAWC Exhibit No. 3-B, p. 3.

PENSION AND OTHER POST-EMPLOYMENT BENEFITS (OPEB) TRACKER

Q. WHAT IS THE PROPOSED PENSION AND OPEB TRACKER?

A. The Company is requesting Commission authorization to defer and record any amounts above or below the projected level of pension and OPEB expenses into separate regulatory accounts.[23] PAWC witness J. Cas Swiz states that these costs are difficult to predict and that the associated claims in this case are based off projections calculated by WTW, formerly Willis Towers Watson, a national actuarial firm. Mr. Swiz explains that despite the sound and well-established actuarial methods used in the reports from WTW, pension and OPEB costs exhibit volatility due to several variables and are difficult to forecast. He uses this argument to support establishment of regulatory assets which would track the difference between the Commission-approved pension and OPEB expenses included in base rates and the actual expense incurred.[24]

Q. EXPLAIN HOW THE COMPANY PROPOSES THE PENSION AND OPEB TRACKER WOULD WORK.

A. The Company would track actual pension and OPEB expenses along with Commission-approved amounts included for recovery in base rates. Each month, actual expenses would be compared to the monthly amount authorized for recovery in base rates (annual amount divided by twelve). Actual costs above or

[23] PAWC Statement No. 8, p. 10.
[24] PAWC Statement No. 8, pp. 12-15.

below the authorized amount would be credited or debited to the applicable pension or OPEB deferral account. The Company would continue to defer the net balance in those accounts until the end of its next base rate case, where it would seek rate recovery via amortization of the regulatory asset or liability.[25] It should be noted here that this methodology assumes that PAWC claims are approved by the Commission in the event of any black box settlements.

Q. DO YOU AGREE THAT PENSION AND OPEB EXPENSES SHOULD BE GRANTED REGULATORY ASSET TREATMENT?

A. No. I recommend that the Commission disallow the proposed pension and OPEB expense tracker in its entirety.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. While I do not dispute that the Commission has previously authorized utilities to track certain expenses via a regulatory asset, the Company's pension and OPEB expenses do not meet the requirements to be treated as a regulatory asset. Specifically, the Commission has previously ruled that deferred accounting treatment may be granted if the expense is: (1) extraordinary; (2) unanticipated; (3) non-recurring; and (4) substantial.[26]

---

[25] PAWC Statement No. 8, p. 15.

[26] *Petition of Columbia Gas of Pa., Inc. for Authority to Defer for Accounting and Financial Purposes Certain Start Up Expenses Assoc. with the Redesign of Upgrade of Financial Processes and Info. Systems*, Docket No. P-2012-2319920 (Order Entered December 5, 2012).

Q. HOW DO PENSION AND OPEB EXPENSES FAIL TO MEET THE COMMISSION'S CRITERIA?

A. While I agree that these costs have sometimes been substantial in the past, the costs are not extraordinary because pension and OPEB costs are routine expenses incurred by PAWC as well as many other water and wastewater utilities. Secondly, the costs are not unanticipated because they are a part of contractual agreements with past employees. Finally, the expenses cannot be categorized as non-recurring while also being forecasted on an annual basis. As the Company's pension and OPEB expenses may have only met one of four criteria to be considered for regulatory asset treatment, it is not appropriate for the Commission to grant approval for the Company to defer these costs.

Pension and OPEB expenses are normal, expected, recurring costs for which the Company cannot expect a virtually guaranteed dollar-for-dollar recovery. Pensions and OPEB costs do not meet the requirements for deferral treatment, and I recommend that the Commission deny the Company's request.

PENSION EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR PENSION EXPENSES?

A. The Company is claiming pension expense of $22,218 for Water Operations in the FPFTY but is not claiming any pension expense for Wastewater SSS Operations or

Wastewater CSS Operations.[27]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. PAWC witness Lori O'Malley states that the Company started with a report furnished by its actuary, Willis Towers Watson, which reflects pension costs for 2023 in accordance with ASC 715. The Company then reduced the amount by the capitalized portion to determine the portion of total pension costs to be recorded as an expense. In addition, the Company's claim reflects a credit for the amortization of a deferred pension asset created during the Company's switch to the accrual accounting method. This deferred asset was approved in a previous rate case at Docket No. R-2017-2595853.[28]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR PENSION EXPENSE?

A. I recommend a negative allowance of ($3,800,736) for pension expense, or a reduction of $3,822,954 [$22,218 - ($3,800,736)] to the Company's FPFTY claim for Water Operations.

[27] PAWC Exhibit No. 3-A, p. 52.
[28] PAWC Statement No. 5, pp. 12-13.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. I based my recommendation on a three-year average of historic actuals for pension expense,[29] as shown below. If the Company continues this approach in future base rate proceedings it will allow the expense to normalize over time and address PAWC's concern about over-recovery of pension expense without the need for a tracker.

	2021	2022	2023	Average
Pension - ASC 715 Accrual	($710,325)	($3,603,106)	($1,213,524)	($1,842,318)
Add Deferred Liability				($1,958,418)
Total Pension				**($3,800,736)**

Pension:	FPFTY
PAWC Claim	$22,218
I&E Allowance	($3,800,736)
Adjustment	($3,822,954)

OPEB EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR OPEB EXPENSE?

A. The Company is claiming OPEB expense of ($5,817,327) for Water Operations, $9,810 for Wastewater SSS Operations, and $32,234 for Wastewater CSS Operations in the FPFTY.[30]

[29] I&E Exhibit No. 1, Schedule 4.
[30] PAWC Exhibit No. 3-A, pp. 51, 116, and 236.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. PAWC witness Lori O'Malley states that OPEB expense is based on the accrual cost recognized under ASC 715 as projected by Willis Towers Watson for 2023. In addition, the Company makes an annual contribution of $600 per union employee for those who are not eligible for retiree medical benefits under the OPEB plan. The Company then reduced the total amount by the capitalized portion to determine the portion of total OPEB costs to be recorded as an expense.[31] It should be noted that claims for Wastewater SSS Operations and Wastewater CSS Operations are made up entirely of these $600 contributions.[32]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR OPEB EXPENSES?

A. I recommend a negative allowance of ($8,160,753) for OPEB expenses, or a reduction of $2,343,426 [($8,160,753) - ($5,817,327)] to the Company's as-filed FPFTY claim. I am not addressing or recommending any adjustments to the OPEB claims for Wastewater SSS Operations or Wastewater CSS Operations since these claims are made up entirely of the aforementioned $600 contributions per

[31] PAWC Statement No. 5, p. 14.
[32] PAWC Exhibit No. 3-A, pp. 116 and 236.

union employee for those who are not eligible for retiree medical benefits under the OPEB plan.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. I based my recommendation on a three-year average of historic actuals for OPEB expense,[33] as shown below. If the Company continues this approach in future base rate proceedings it will allow the expense to normalize over time and address PAWC's concern about over-recovery of OPEB expense without the need for a tracker.

	2021	2022	2023	Average
Total OPEBs	($8,281,292)	($8,877,869)	($7,323,097)	**($8,160,753)**

OPEBs:	FPFTY
PAWC Claim	($5,817,327)
I&E Allowance	($8,160,753)
Adjustment	($2,343,426)

ACQUISITION O&M

Q. WHAT IS INCLUDED IN THE COMPANY'S ACQUISITION O&M CLAIM?

A. As part of the acquisition O&M claim, the Company has included various O&M expenses for the following potential acquisitions: Farmington Water, Audubon

[33] I&E Exhibit No. 1, Schedule 5.

Water, Farmington Wastewater, Sadsbury Wastewater, BASA Wastewater, and Brentwood Wastewater.[34]

Q. WHAT IS THE COMPANY'S ACQUISITION O&M CLAIM?

A. The Company has allocated these O&M expenses among Water Operations[35] and Wastewater SSS Operations[36] as follows:

Acquisition O&M Expense:	**FPFTY**
Water Operations	$1,675,709
Wastewater SSS Operations	$504,709
Total PAWC Expense	**$2,180,418**

I have calculated the above total amounts using PAWC's adjustment data provided in the Company's Exhibit 3-A as cited with the table. Assuming zero as the starting point since no costs were incurred in the historic test year regarding these acquisitions, I have added the FTY and FPFTY adjustments to reach the FPFTY total claim.

Acquisition O&M Adjustment:	FTY	FPFTY	Total
Water Operations	$1,657,302	$18,407	$1,675,709
Wastewater SSS Operations	$499,513	$5,196	$504,709

[34] PAWC Exhibit No. 3-B, pp. 303-308.
[35] PAWC Exhibit No. 3-A, p. 48.
[36] PAWC Exhibit No. 3-A, p. 113.

It should be noted that no amounts were allocated to Wastewater CSS Operations by the Company, and the amounts allocated to BASA and Brentwood are not addressed here because I have already removed them from the revenue requirement as addressed earlier in my testimony.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. According to PAWC witness Lori O'Malley, the Company has made adjustments to annualize the O&M expenses not fully recognized in the HTY for the Company's pending acquisitions.[37] The Company has not provided any supporting documentation to validate these claims.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR ACQUISITION O&M EXPENSE?

A. No.

Q. WHAT DO YOU RECOMMEND FOR ACQUISITION O&M EXPENSES?

A. I recommend disallowance of PAWC's entire claim of $1,675,709 for Water Operations and $504,709 for Wastewater SSS Operations.

[37] PAWC Statement No. 5, p. 27.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. As mentioned earlier in my testimony, it is inappropriate for the Company to claim expenses for utilities that have not yet been acquired. With the exception of BASA , the Commission has not yet made a ruling on any of these acquisitions; however, the BASA decision is currently under appeal and the outcome is, therefore, unknown. Due to the uncertainty surrounding each of these acquisitions, I recommend disallowance of the entire claim.

MISCELLANEOUS EXPENSE ADJUSTMENT

Q. WHAT IS THE COMPANY'S CLAIM FOR MISCELLANEOUS EXPENSE ADJUSTMENT - CREDIT CARD AND E-CHECK TRANSACTION FEES?

A. Per PAWC Exhibit 3-B, the FPFTY claim for credit card and e-check transaction fees is $1,766,752 and is allocated among operations as follows:[38]

Credit Card and Echeck Fees:	FPFTY
Water Operations	$1,545,547
Wastewater SSS Operations	$126,067
Wastewater CSS Operations	$95,138
Total	$1,766,752

[38] PAWC Exhibit No. 3-B, p. 326.

However, per PAWC Exhibit 3-A, which is used to calculate the revenue requirement for each operation, the respective adjustments for Water Operations result in a claim of $1,728,285 for the FPFTY.[39]

Base Year (HTY) Water Ops Actual	$1,665,018
2024 Adjustment from Exhibit 3-A	$57,480
2025 Adjustment from Exhibit 3-A	$5,787
FPFTY Claim	$1,728,285

Q. DID THE COMPANY PROVIDE ADDITIONAL INFORMATION REGARDING ITS CLAIM?

A. Yes. After the initial filing, the Company provided updated information in response to I&E-RE-59-D explaining the amounts for credit card and e-check fees on page 64 of Exhibit 3-A are incorrect and the amounts in Exhibit 3-B are correct.[40]

Q. HAS THE COMPANY INDICATED IT WILL UPDATE ITS CLAIM?

A. Yes. PAWC confirmed that it will update its claim for credit card and e-check transaction fees in rebuttal testimony as explained above.

[39] PAWC Exhibit No. 3-A, p. 64.
[40] I&E Exhibit No. 1, Schedule 6.

Q. DO YOU ACCEPT THE COMPANY'S REVISED FPFTY CLAIM?

A. Yes. I accept the Company's revised claim of $1,545,547 for Water Operations, or a reduction of $182,738 ($1,728,285- $1,545,547) to the as-filed claim.

PRODUCTION EXPENSE TRACKER

Q. WHAT IS THE PROPOSED PRODUCTION EXPENSE TRACKER?

A. The Company is requesting Commission authorization to defer and record any amounts above or below the projected level of production expenses into separate regulatory accounts.[41] The Company defines production expenses as the costs incurred to provide water and wastewater services to its customers, including purchased water and wastewater treatment, chemicals, fuel and power, and waste disposal.[42] PAWC witness J. Cas Swiz argues that these expenses can materially increase or decrease based on the prices charged by suppliers, and are needed to provide safe and reliable water and wastewater service to customers. Mr. Swiz asserts that market conditions impacting production expenses represent an extraordinary combination of circumstances that are expected to continue to produce significant price volatility over the next several years. He uses this argument to support establishing regulatory assets to track the difference between the individual Commission-approved production expenses included in base rates and the actual expense incurred.[43]

[41] PAWC Statement No. 8, p. 10.
[42] PAWC Statement No. 8, p. 17.
[43] PAWC Statement No. 8, pp. 18-20.

Q. EXPLAIN HOW THE COMPANY PROPOSES THE PRODUCTION EXPENSE TRACKER WOULD WORK.

A. The Company would maintain separate regulatory accounts for purchased water and wastewater treatment, chemicals, fuel and power, and waste disposal. Beginning the first month after rates from the instant proceeding take effect, the Company would record the difference between actual costs and Commission-approved amounts included for recovery in rate base (which assumes PAWC claimed amounts are approved in the event of a black box settlement). The total amount authorized in the instant proceeding for all production expense items would be unitized (cost per 1,000 gallons) by taking the total expenses divided by overall water and wastewater usage used to derive rates and charges in this proceeding. This rate would be multiplied by monthly usage to determine the authorized amount collected in the current month, which would be compared to actual monthly expense. The difference would be recorded in the appropriate regulatory accounts and would accumulate until the next rate case when it is presented for collection via amortization.[44]

Q. DO YOU AGREE THAT PRODUCTION EXPENSES SHOULD BE GRANTED REGULATORY ASSET TREATMENT?

A. No. I recommend the Commission disallow the production expense tracker in its

[44] PAWC Statement No. 8, pp. 19-20.

entirety.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. While I do not dispute that the Commission has previously authorized utilities to track certain expenses via a regulatory asset, the Company's production expenses do not meet the requirements to be treated as a regulatory asset. Specifically, the Commission has previously ruled that deferred accounting treatment may be granted if the expense is: (1) extraordinary; (2) unanticipated; (3) non-recurring; and (4) substantial.[45]

Q. HOW DO PRODUCTION EXPENSES FAIL TO MEET THE COMMISSION'S CRITERIA?

A. First, while I agree that production costs are substantial for PAWC, the costs are not extraordinary because production costs are normal expenses incurred by PAWC and virtually all other water and wastewater utilities. Second, the costs are not unanticipated because they are an integral part of providing safe and reliable service to customers. Finally, the expenses cannot be categorized as non-recurring while also being forecasted on an annual basis. As the Company's production expenses may have only met one of four criteria to be considered for regulatory

[45] *Petition of Columbia Gas of Pa., Inc. for Authority to Defer for Accounting and Financial Purposes Certain Start Up Expenses Assoc. with the Redesign of Upgrade of Financial Processes and Info. Systems*, Docket No. P-2012-2319920 (Order Entered December 5, 2012).

asset treatment, it is not appropriate for the Commission to approve deferral of these routine expenses.

Production expenses are normal, expected, recurring costs of which the Company cannot expect to have a virtually guaranteed dollar-for-dollar recovery. Volatility among these expenses is an issue affecting all water and wastewater utilities, and the Company is not unique in its circumstances. There is no reasonable justification for the argument that PAWC should be allowed to establish regulatory assets for production expenses, and therefore, I recommend the Commission deny the Company's request.

Q. WHAT IS THE COMPANY'S CLAIM FOR PRODUCTION EXPENSES?

A. The Company is claiming total FPFTY production expenses of $59,989,147, which can be broken down as $3,098,544 for purchased water and wastewater treatment, $21,276,332 for fuel and power, $27,485,022 for chemicals, and $8,129,249 for waste disposal.[46]

Q. DO YOU ACCEPT THE COMPANY'S CLAIMS REGARDING PRODUCTION EXPENSES?

A. Yes. I am not making any adjustments to production expenses in the instant proceeding. However, I disagree with the proposed tracker.

[46] PAWC Statement No. 8, p. 17.

ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE

Q. PLEASE SUMMARIZE PAWC'S PROPOSED ENVIRONMENTAL COMPLIANCE CHARGE.

A. The Company is requesting approval of an Environmental Compliance Investment Charge (ECIC) as part of the instant proceeding. The ECIC is designed to recover capital costs and expenses imposed on the Company due to new or changed federal and state environmental mandates. The rate adjustment mechanism would allow for recovery of these expenses between rate cases. Applicable costs would be consistent with the set of projects and activities set forth in an annual environmental compliance plan to be filed by the Company and approved by the Commission.[47]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. PAWC witness J. Cas Swiz claims that because the Company has no control over the need for and timing of costs to comply with regulatory requirements, the ECIC should be approved to ensure full and timely rate recognition of the Company's environmental compliance investments. He states that the ECIC would result in smaller, more gradual increases in rates, rather than infrequent, significant increases caused by general base rate proceedings, thereby benefiting ratepayers. Mr. Swiz concludes by pointing to PAWC Exhibit JCS-1, which addresses factors

[47] PAWC Statement No. 1, p. 26.

that the Commission has previously found relevant when evaluating an alternative ratemaking mechanism.[48]

Q. DO YOU AGREE WITH PAWC'S PROPOSAL TO IMPLEMENT THE ECIC?

A. No. The proposed ECIC is problematic for several reasons. First, the proposed environmental compliance plan would be filed outside the parameters of a base rate case, disrupting the ability of the Commission to review the data in the context of the total impact to ratepayers and with respect to other expenses that may be increasing or decreasing between rate cases, which constitutes single-issue ratemaking.

Second, I disagree with Mr. Swiz's assertion that the ECIC will not impact efficiency incentives.[49] The fact that changing regulations require the Company to make investments or increase spending in certain areas does not mean the Company has no choice in the matter. There may be more than one option for compliance or other ways to save money, but the Company would not be incentivized to explore these if it were virtually guaranteed recovery of all environmental compliance projects approved through the plan.

Third, it is difficult to adequately evaluate the impact of such a charge when the Company has not provided any measurable data associated with the charge.

[48] PAWC Statement No. 8, pp. 22-23.
[49] PAWC Statement No. 8, Exhibit JCS-1, p. 1.

As noted in the Company's response to OCA 10-014,[50] the Company has not projected any data related to the ECIC. The Company argues in response to I&E-RE-46-D[51] that it disagrees with my classification of these expenses as "unknown" as it plans to submit an environmental plan to the Commission before implementing the charge. The Company states further that it is not seeking to recover expenses in the instant proceeding, but rather to establish the mechanism and methodology. However, I maintain that as the Company has not provided any forecasted data, the costs are in fact entirely unknown at this time, and it is difficult to evaluate the mechanism and methodology without better understanding the impact to ratepayers.

Finally, although I understand that environmental issues will be ongoing as environmental science continues to evolve, the implementation of such a charge indefinitely seems unnecessary. Environmental compliance has been and will continue to be a normal part of a utility's expenditures. It is important to realize that water and wastewater utilities nationwide face these same emerging contaminant issues, and implementing a rider recovery mechanism for one company before any universal Commission action could occur and before any potential government funding has been established is simply premature. While I generally agree that the utility should be able to recover costs associated with

[50] I&E Exhibit No. 1, Schedule 7.
[51] I&E Exhibit No. 1, Schedule 8.

environmental compliance, I do not agree that this open-ended surcharge is the proper way to do so.

Q. DO YOU HAVE ANY OTHER CONCERNS ABOUT THE PROPOSAL OF SUCH A SURCHARGE MECHANISM?

A. Anytime companies receive approval for such surcharge mechanisms, it increases the workload of the Commission's Bureau of Audits (Audits). Additionally, periodic review of reports made and presented to Audits does not constitute a proper analysis of these expenses in comparison to related changes (increases or decreases) in other expenses, as mentioned above, that should all be conducted in a base rate proceeding.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE PROPOSED ECIC?

A. I recommend the Commission deny the establishment of the ECIC as an alternative rate-making mechanism.

CASH WORKING CAPITAL

Q. WHAT IS A CASH WORKING CAPITAL (CWC) ALLOWANCE FOR RATEMAKING PURPOSES?

A. CWC includes the amount of funds necessary to operate a utility during the interim period between the rendition of service, including the payment of related

expenses, and the receipt of revenue in payment for services rendered by the utility.

Q. HOW DOES THE COMPANY CALCULATE ITS CWC CLAIM?

A. The Company calculates its CWC claim by using a lead/lag study. Briefly, the CWC requirement is calculated by multiplying the net leg days (revenue lag days less expense lag days) by the average operating expense per day (total operating expenses ÷ 365 days). A lead/lag study measures the differences in time between: (1) the time services are rendered until payment of those services is received; and (2) the time between the point when a utility has incurred an expense and the actual payment of the expense. Stating this in a different way, the lead/lag study measures how many days exist on average between the midpoint of the service period and the date the payment is made.

Q. DO YOU AGREE WITH THE COMPANY'S USE OF A LEAD/LAG METHOD?

A. Yes. I agree with the Company's use of this method.

Q. WHAT IS THE COMPANY'S CLAIM FOR CWC?

A. The following table shows PAWC's CWC claim broken down by business

operation:[52]

	FPFTY Claim
Water Operations	$23,164,070
Wastewater SSS Ops.	$2,230,011
Wastewater CSS Ops.	$1,879,977
Total	**$27,274,058**

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend an adjustment to the Company's FPFTY claim broken down by business operation as shown in the table below:

	FPFTY Claim	I&E Allowance	Adjustment
Water Operations	$23,164,070	$22,082,926	($1,081,144)
Wastewater SSS Operations	$2,230,011	$2,199,053	($30,958)
Wastewater CSS Operations	$1,879,977	$1,879,977	$0
Total	**$27,274,058**	**$26,161,956**	**($1,112,102)**

Note that no changes have been made to Wastewater CSS Operations CWC since I did not make any O&M adjustments to this operating unit.

[52] PAWC Exhibit No. 3-A, pp. 31, 101, and 221.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATIONS?

A. All O&M adjustments that are cash-based expense claims are included when determining each operating unit's overall CWC requirement. My CWC recommendations are based on my recommended adjustments to O&M expenses as discussed in this direct testimony.

I subtracted all of my recommended O&M expense adjustments from the tables above in the I&E Operating and Maintenance Expense Adjustments section that correspond to the Company's CWC calculation. I did this using the Company's electronic workpapers for each operation. I&E-modified CWC schedules reflect my changes for each operation's CWC allowance calculation.[53]

Q. ARE YOUR ABOVE-RECOMMENDED CWC ALLOWANCES FINAL RECOMMENDATIONS?

A. No. All adjustments to the Company's claims for revenues, expenses, taxes, and rate base must be continually brought together for each operating unit in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims.

[53] I&E Exhibit No. 1, Schedule 9.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Question:

Acquisition of Sadsbury Township Municipal Authority (wastewater)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of the Sudbury Township Municipal Authority wastewater utility system by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by the Sadsbury system (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a. Please refer to Volume 03, Exhibit No. 3-A, page 97.
b. The rate base claims in this case do not include any post-acquisition capital investment for the Sadsbury Township Municipal Authority ("STMA") Wastewater acquisition in this case.
c-d. STMA costs are included in the Wastewater SSS General Operations totals in Volume 03, Exhibit No. 3-A, pages 109-112 and page 76, lines 6-19. For specific incremental expenses related to STMA, please refer to Volume 04, Exhibit No. 3-B, page 306.
e. The revenue adjustment for the STMA acquisition is included in Wastewater SSS General Operations in Volume 03, Exhibit No. 3-A, page 79, line 19 and page 94.
f. Please refer to parts c-d.
g. The STMA acquisition is anticipated to close in Q3 2024.
h. Please refer to part b.
i-j. Please refer to Volume 06 - Filing Requirements I-V, page 54.
k. The Company filed an application of acquisition for STMA on August 3, 2023. An order approving or denying this acquisition has not yet been issued by the Commission.
l. Please see the response to part k. The Company therefore does not have any accounting entries related to the closing of this acquisition at this time.
m. Please refer to Volume 03, Exhibit No. 3-A, pages 96-108 and Volume 05, Exhibit No. 3-C, pages 80-81 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n-o. Please refer to OCA 12-008_Attachment 1 for the requested cost incurred through October 2023 YTD.
p. There are no affiliated service company charges to PAWC to date related to this acquisition.
q. Please refer to OCA 12-008_Attachment 2.
r-t. PAWC does not expect to acquire any workforce positions from this acquisition.

u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the STMA wastewater system.

Question:

Acquisition of Farmington Township (water and wastewater)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of the Farmington Township water and wastewater utility system by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by the Farmington systems (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a. Please refer to Volume 03, Exhibit No. 3-A, page 26 for acquired plant for Farmington Water and Volume 03, Exhibit No. 3-A, page 97 for acquired plant for Farmington Wastewater.
b. The rate base claims in this case do not include any post-acquisition capital investment for the Farmington Water and Wastewater acquisition in this case.
c-d. Farmington Water costs are included in the Water Operations totals in Volume 03, Exhibit No. 3-A, pages 44-47 and page 1, lines 6-19. For specific incremental expenses related to Farmington Water, please refer to Volume 04, Exhibit No. 3-B, page 303.
Farmington Wastewater costs are included in the Wastewater SSS General Operations totals in Volume 03, Exhibit No. 3-A, page 109-112 and page 76, lines 6-19. For specific incremental expenses related to Farmington Wastewater, please refer to Volume 04, Exhibit No. 3-B, page 305.
e. The revenue adjustment for Farmington Water is included in Water Operations in Volume 03, Exhibit No. 3-A, page 4, line 15 and page 23.
The revenue adjustment for Farmington Wastewater is included in the Wastewater SSS General Operations in Volume 03, Exhibit No. 3-A, page 79, line 18 and page 93.
f. Please refer to parts c-d.
g. The acquisition of Farmington Water and Wastewater assets is anticipated to close in Q2 2024.
h. Please refer to part b.
i-j. Please refer to Volume 06 - Filing Requirements I-V, page 52 for Farmington Water customer counts and utility sales and page 53 for Farmington Wastewater customer counts and utility sales.
k. The Company filed an application for acquisition of Farmington Township Water and Wastewater assets on August 28, 2023. An order approving or denying this acquisition has not yet been issued by the Commission.
l. Please see the response to part k. The Company therefore does not have any accounting entries related to the closing of this acquisition at this time.

m. Please refer to Volume 03, Exhibit No. 3-A, page 25-43 and Volume 05, Exhibit No. 3-C, pages 74-75 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for the acquisition of the Farmington Water system. Please refer to Volume 03, Exhibit No. 3-A, pages 96-108 and Volume 05, Exhibit No. 3-C, pages 74 and 76 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for the acquisition the Farmington Wastewater assets.

n-o. Please refer to OCA 12-010_Attachment 1 for the requested cost incurred through October 2023 YTD.

p. There are no affiliated service company charges to PAWC to date related to this acquisition.

q. Please refer to OCA 12-010_Attachment 2.

r-t. Please refer to OCA 12-010_Attachment 3.

u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the Farmington water and wastewater system acquisition.

Question:

Acquisition of Audubon Water Company (water)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of Audubon Water Company by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by the Audubon system (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a. Please refer to Volume 03, Exhibit No. 3-A, page 26.
b. The rate base claims in this case do not include any post-acquisition capital investment for the Audubon Water acquisition in this case.
c-d. Audubon Water costs are included in the total PAWC Water Operations in Volume 03, Exhibit No. 3-A, page 44-47 and on page 1, lines 6-19. For specific incremental expenses related to Audubon, please refer to Volume 04, Exhibit No. 3-B, page 304.
e. The revenue adjustment for the Audubon Water acquisition is included in Water Operations in Volume 03, Exhibit No. 3-A, page 4, line 14 and page 22.
f. Please refer to parts c-d.
g. The acquisition of the Audubon Water Company system is anticipated to close in Q4 2024.
h. Please refer to part b.
i-j. Please refer to Volume 06 - Filing Requirements I-V, pages 50-51 for Audubon customer counts and utility sales.
k. The Company filed an application for acquisition of the Audubon Water Company on September 21, 2023. An order approving or denying this acquisition has not yet been issued by the Commission.
l. Please see the response to part k. The Company therefore does not have any accounting entries related to the closing of this acquisition at this time.
m. Please refer to Volume 03, Exhibit No. 3-A, page 25-43 and Volume 05, Exhibit No. 3-C, pages 77-78 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. Please refer to OCA 12-012_Attachment 1 for the requested costs incurred through October 2023 YTD.

o-p. There are no consulting expenses or affiliated service company charges to PAWC to date related to this acquisition.

q. PAWC has not received any legal or consulting expense invoice to over $5,000 to date related to this acquisition.

r-t. Please refer to OCA 12-012_Attachment 2.

u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the Audubon water system acquisition.

R-2023-3043190 (Wastewater)
Bureau of Investigation and Enforcement

I&E RE-059-D

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

Reference PAWC Exhibit 3-A, p. 64 and PAWC Exhibit 3-B p. 326 concerning credit card and Echeck transactions for Water Operations, reconcile the $57,480 in the FTY and $5,787 in the FPFTY shown in Exhibit 3-A with the ($124,416) in the FTY and $4,945 in the FPFTY shown in Exhibit 3-B.

Response:

For Water Operations, the ($124,416) and $4,945 amounts shown on PAWC Exhibit 3-B p.326 are the correct allocated adjustment amounts of credit card and E-check transactions. The adjustment amounts of $57,480 and $5,787 shown on PAWC Exhibit 3-A, p. 64 are incorrect. They represent the total company adjustments rather than Water Operations. The adjustment amounts for Water Operations will be updated through the rebuttal phase of the proceeding. The allocated adjustment amounts are shown below.

	Base Yr	2024 Adjustment	12 Mos Jun 2024	2025 Adjustment	12 Mos Jun 2025
Water Operations	$1,665,018	(124,416)	$1,540,602	$4,945	$1,545,547
Wastewater SSS General Operations	$52,049	73,615	$125,664	$403	$126,067
Brentwood WW	$0	8,834	$8,834	$28	$8,863
BASA WW	$0	32,994	$32,994	$106	$33,099
Wastewater CSS Operations	$28,381	66,453	$94,834	$304	$95,138
Total	$1,745,448	$57,480	$1,802,928	$5,787	$1,808,715

Office of Consumer Advocate Set 10

OCA 10-014

Responsible Witness: Cas Swiz, Senior Director of Rates and Regulatory

Question:

Based on PAWC's current projections for expenses incurred and capital investment placed in service on and after July 1, 2025 through June 30, 2027, please provide a schedule showing:

a. The projected water ECIC rates for the eight quarters beginning November 1, 2025, assuming that new base rates do not go into effect and the charge is not reset due to overearning. Please provide all documentation and calculations supporting the Company's response.
b. The projected quarterly water ECIC revenues for the eight quarters beginning November 1, 2025 shown in dollars and as a percentage of projected total water revenues for the same quarters. Please provide supporting calculations in native format with all formula intact.
c. The projected wastewater ECIC rates for the eight quarters beginning November 1, 2025, assuming that new base rates do not go into effect and the charge is not reset due to overearning. Please provide all documentation and calculations supporting the Company's response.
d. The projected quarterly wastewater ECIC revenues for the eight quarters beginning November 1, 2025 shown in dollars and as a percentage of projected total wastewater revenues for the same quarters. Please provide supporting calculations in native format with all formula intact.

Response:

a.-d. PAWC does not have a projection for the requested information. As noted within PAWC Statement No. 8, page 25, lines 10-22 through page 26, lines 1-21, the ECIC requires that the Environmental Plan (as defined in the proposed ECIC Tariff) be approved by the Commission before inclusion in the ECIC. At such time as the Company submits for approval before the Commission an Environmental Plan eligible for ECIC recovery, the requested amounts will be projected.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Bureau of Investigation and Enforcement

I&E RE-046-D

Responsible Witness: Cas Swiz, Senior Director of Rates and Regulatory

Question:

Reference PAWC Exhibit JCS-1, Question 8, concerning the proposed Environmental Compliance Investment Charge, explain how large expenditures flowing through customer bills with minimal delay will add to any rate stability principals, given that PAWC is indicating unknown amounts of rate base and O&M-related expenditures.

Response:

The Company disagrees with the claim that it is indicating "unknown amounts of rate base and O&M-related expenditures." As noted within the ECIC tariff, the Company will submit an Environmental Plan to the Commission that will detail the specific projects, estimates, timing, and justification. The Company is not proposing to include any investments or O&M expenditures in the ECIC as part of this rate case, but rather to establish the mechanism and methodology.

The proposed ECIC will provide gradual changes to customer rates and bills. If ECIC-eligible investment costs are first included in customers' rates through a base rate case, the increase in customers' bills upon approval of the base rate case will be larger than if ECIC-eligible investment costs have been gradually incorporated into rates through the ECIC tariff in the period before the rate case. Moreover, the required investments necessary to comply with Environmental Laws (as defined in the ECIC tariff) would become significant drivers of both the timing and magnitude of future rate cases absent the approval of the ECIC.

Notes to Rate Base Elements

Calculation of Cash Working Capital Requirements

Charges for water service are billed in arrears on a monthly basis. The calculation set forth below reflects summarized operating revenues billed for the twelve months ended June 30, 2023 and as annualized under present rates for the twelve months ending June 30, 2024 and June 30, 2025.

The calculation further reflects the average lag in receipt of revenues less the lag in payment of operating expenses to determine cash working capital requirements.

INTRODUCTION **1**

RESPONSE TO CAUSE-PA WITNESS HARRY GELLER **2**

RESPONSE TO OCA WITNESS ROGER COLTON **4**

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Vanessa Okum. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. IN WHAT CAPACITY ARE YOU EMPLOYED?

A. I am employed as a Fixed Utility Financial Analyst in the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E).

Q. ARE YOU THE SAME VANESSA OKUM WHO SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted I&E Statement No. 1 Proprietary and I&E Exhibit No. 1 Proprietary.

Q. DOES YOUR REBUTTAL TESTIMONY INCLUDE AN ACCOMPANYING EXHIBIT?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to the direct testimony of the following witnesses from the Coalition for Affordable Utility Services and Energy

Efficiency in Pennsylvania (CAUSE-PA) and the Office of Consumer Advocate (OCA):

- Harry S. Geller, Esq. – CAUSE-PA Statement No. 1 regarding Pennsylvania-American Water Company's (PAWC or the Company) Hardship Fund and the development of a comprehensive conservation and line repair/replace program for low-income customers.
- Roger Colton – OCA Statement No. 5 CONFIDENTIAL regarding the development of a "universal service plan."

RESPONSE TO CAUSE-PA WITNESS HARRY GELLER

Q. WHAT RECOMMENDATIONS DOES MR. GELLER PRESENT REGARDING THE COMPANY'S HARDSHIP FUND?

A. First, Mr. Geller recommends the Company increase annual hardship funding by $1 million over the existing funding levels, with unspent funds being rolled over and added to the budget for the following year. Second, he recommends eliminating any upfront or "good faith" payment requirements to be eligible for participation in the Hardship Fund, with immediate communication of this fact through all customer-facing information sources. Third, he recommends an increase in the maximum amount of annual hardship funding per customer from

$500 to $600 for water and wastewater accounts.[1]

Mr. Geller also notes in his testimony that the Company's low-income assistance programs, including the Hardship Fund, are woefully undersubscribed and that an effort should be made through education, outreach, and screening to increase participation in these programs.[2]

Q. DO YOU HAVE ANY CONCERNS ABOUT MR. GELLER'S RECOMMENDATIONS REGARDING THE HARDSHIP FUND?

A. Yes. Although I do not argue against Mr. Geller's recommendation to increase funding for hardship grants, he does not explicitly state how his proposed $1 million increase is to be funded. As the current program for hardship grants is entirely funded by shareholders and not recovered from ratepayers,[3] I believe this should continue and recommend that any increase to funding of hardship grants continue to be funded entirely by shareholders and not recovered from ratepayers.

Q. PLEASE SUMMARIZE MR. GELLER'S RECOMMENDATIONS REGARDING CONSERVATION AND LINE REPAIR/REPLACE ASSISTANCE FOR LOW INCOME CUSTOMERS.

A. Mr. Geller recommends the Company develop and implement a comprehensive conservation and line repair/replacement program to be available to all customers

[1] CAUSE-PA Statement No. 1, pp. 52-53.
[2] CAUSE-PA Statement No. 1, pp. 53-59.
[3] PAWC Statement No. 1, pp. 12-13.

at or below 200% of the federal poverty level. He further stipulates that the Company should be required to work with its customer assistance advisory group to develop this program no later than six months after the final order in this proceeding.

Q. DO YOU HAVE ANY CONCERNS ABOUT MR. GELLER'S RECOMMENDATIONS REGARDING THIS PROGRAM?

A. Yes. Mr. Geller does not explicitly state how this program should be funded, nor does he present any type of budget or cap for this proposal.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that, if explored and ultimately developed, this program should be funded entirely by shareholders and not recovered from ratepayers. As the program focuses on water conservation efforts inside customers' homes and assistance in repairing or replacing service lines on customers' property, it would be inappropriate to add this expense to the rates of customers not participating in the program given the Company's ever-increasing utility bills.

<u>RESPONSE TO OCA WITNESS ROGER COLTON</u>

Q. PLEASE SUMMARIZE MR. COLTON'S RECOMMENDATION FOR A WRITTEN UNIVERSAL SERVICE PLAN.

A. Mr. Colton recommends a "universal service plan" that includes not only a

description of each low-income program component offered by PAWC, but also identifies: (1) the objectives of each component; (2) the metrics by which each component will be measured; (3) the manner in which the components interact with each other; (4) the evaluation process of program metrics including proposed remedies if metrics are not met; (5) qualifications for each component; (6) proposed means of outreach and intake; (7) current and projected participation levels; and (8) expected annual budgets. He explains that this plan should be filed with the Commission's Bureau of Consumer Services (BCS) and should be subject to review and comment by BCS and other stakeholders who choose to be involved.[4]

Mr. Colton also points out that, beyond any formal requirement for a written universal service plan to be filed with the Commission, the Company does not even have an internal document or process that addresses the issues identified above.

Q. DO YOU HAVE ANY CONCERNS WITH MR. COLTON'S RECOMMENDATION?

A. Yes. Currently, Commission regulations requiring utilities to develop such plans apply only to electric and natural gas utilities.[5] If the Commission chooses to require water and wastewater utilities to file such plans with BCS on a periodic

[4] OCA Statement No. 5, p. 67.
[5] 52 Pa. Code § 69.261.

basis, it should issue guidance statewide rather than impose a singular requirement for PAWC. Furthermore, PAWC's low-income benefits flow through base rates, and even if the Commission were to approve OCA's recommendation to have periodic reports filed with BCS and reviewed/discussed by interested parties, there would be no avenue in that forum to make any changes to base rate items.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is D. C. Patel, and my business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. WHAT IS YOUR EDUCATION AND PROFESSIONAL EXPERIENCE?

A. My educational and professional experience is set forth in Appendix A, which is attached.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for representing the public interest in rate and other proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the utility company, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to address the rate of return, including capital structure, cost of long-term debt, the cost of equity, and the overall fair rate of return for the water and wastewater operations of Pennsylvania-American Water Company (PAWC or Company) for the fully projected future test year (FPFTY) ending June 30, 2025.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 2 contains schedules that support my direct testimony.

BACKGROUND

Q. WHAT IS THE GENERAL DEFINITION OF RATE OF RETURN IN THE CONTEXT OF A RATE CASE?

A. Rate of return is one of the components of the revenue requirement formula. Rate of return is the amount of revenue an investment generates in the form of net income and is usually expressed as a percentage of the amount of capital invested over a given period of time.

Q. WHAT IS THE REVENUE REQUIREMENT FORMULA?

A. The revenue requirement formula used in base rate cases is as follows:

$$RR = E + D + T + (RB \times ROR)$$

Where:

RR = Revenue Requirement

E = Operating Expenses

D = Depreciation Expense

T = Taxes

RB = Rate Base

ROR = Overall Rate of Return

In the above formula, the rate of return is expressed as a percentage. The calculation of that percentage is independent of the determination of the appropriate rate base value for ratemaking purposes. As such, the appropriate total dollar return is dependent upon the proper computation of the rate of return and the proper valuation of the Company's rate base.

Q. WHAT CONSTITUTES A FAIR AND REASONABLE OVERALL RATE OF RETURN?

A. A fair and reasonable overall rate of return is one that will allow the utility an opportunity to recover those costs prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect.

The *Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679, 692-93 (1923), and the *Federal Power Commission et al v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944) cases set forth the principles that are generally accepted by regulators throughout the

country as the appropriate criteria for measuring a fair rate of return:

1. A utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.
2. A utility is entitled to a return level reasonably sufficient to assure financial soundness.
3. A utility is entitled to a return sufficient to maintain and support its credit and raise necessary capital.
4. A fair return can change (increase or decrease) along with economic conditions and capital markets.

Q. EXPLAIN HOW THE OVERALL RATE OF RETURN IS TRADITIONALLY CALCULATED IN BASE RATE PROCEEDINGS.

A. In base rate proceedings, the overall rate of return is traditionally calculated using the weighted average cost of capital method. To calculate the weighted average cost of capital, a company's capital structure must first be determined by comparing the percentage of each capitalization component, which has a financed rate base, to total capital. Next, the effective cost rate of each capital structure component must be determined. The historical component of the cost rate of debt can be computed accurately, and any future debt issuances are based on estimates. The cost rate of common equity is not fixed and is more difficult to measure. Because of this difficulty, a proxy group is used as discussed later in this

testimony. Then, each capital structure component percentage is multiplied by its corresponding effective cost rate to determine the weighted capital component cost rate. The table in the *"I&E Position"* section below demonstrates the interaction of each capital structure component and its corresponding effective cost rate. Finally, the sum of the weighted cost rates produces the overall rate of return. This overall rate of return is multiplied by the rate base to determine the return portion of a company's revenue requirement.

COMPANY'S RATE OF RETURN CLAIM

Q. WHO IS THE COMPANY'S RATE OF RETURN WITNESS IN THIS PROCEEDING?

A. Ann E. Bulkley, Principal of the Brattle Group, is the primary witness addressing the rate of return (PAWC Statement No. 13). Throughout her direct testimony, Ms. Bulkley provides her analysis for the claimed capital structure, long-term debt, preferred stock, and cost of common equity for PAWC Water and Wastewater Operations.

Q. PLEASE SUMMARIZE MS. BULKLEY'S RECOMMENDATIONS FOR THE COMPANY'S RATE OF RETURN CLAIM.

A. Ms. Bulkley recommends the following rates of return for the Company based on the FPFTY ending June 30, 2025 (PAWC Exhibit No. 13-A, Schedule 12 and 13):

PENNSYLVANIA-AMERICAN WATER COMPANY **Summary of Cost of Capital** Pennsylvania-American Water Company - Water Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	44.01%	4.76%	2.09%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	55.99%	10.95%	6.13%
Total	**100.00%**		**8.22%**

PENNSYLVANIA-AMERICAN WATER COMPANY **Summary of Cost of Capital** Pennsylvania-American Water Company - Wastewater Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	42.73%	4.76%	2.03%
Wastewater Specific Debt	4.40%	2.62%	0.12%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	52.87%	10.95%	5.79%
Total	**100.00%**		**7.94%**

I&E POSITION

Q. PLEASE SUMMARIZE YOUR RATE OF RETURN RECOMMENDATIONS FOR THE COMPANY.

A. I recommend the following rates of return for the Company (I&E Exhibit No. 2, Schedule 1):

I&E Summary of Cost of Capital Pennsylvania-American Water Company - Water Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	44.01%	4.76%	2.09%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	55.99%	8.45%	4.73%
Total	**100.00%**		**6.82%**

I&E Summary of Cost of Capital Pennsylvania-American Water Company - Wastewater Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	42.73%	4.76%	2.03%
Wastewater Specific Debt	4.40%	2.62%	0.12%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	52.87%	8.45%	4.47%
Total	**100.00%**		**6.62%**

PROXY GROUP

Q. WHAT IS A PROXY GROUP AS USED IN BASE RATE CASES?

A. A proxy group is a set of companies that have similar traits as compared to the subject utility. This group of companies acts as a benchmark for determining the subject utility's rate of return in a base rate case.

Q. WHAT ARE THE REASONS FOR USING A PROXY GROUP?

A. A proxy group's cost of equity is used as a benchmark to satisfy the long-

established guideline of utility regulation that seeks to provide the subject utility with the opportunity to earn a return similar to that of enterprises with corresponding risks and uncertainties.

A proxy group is typically utilized since the use of data exclusively from one company may be less reliable. The lower reliability occurs because the data for one company may be subject to events that can cause short-term anomalies in the marketplace. The rate of return on common equity for a single company could become distorted in these circumstances and would therefore not be representative of similarly situated companies. Therefore, a proxy group has the effect of smoothing out potential anomalies associated with a single company.

Q. DID YOU REQUIRE THAT THE COMPANIES IN YOUR PROXY GROUP EXCLUSIVELY PROVIDE WATER OR WASTEWATER SERVICE?

A. No. Few, if any, publicly held 'wastewater-only' companies exist because most water companies have diversified their businesses to include wastewater operations. Accordingly, this type of criterion produces an insufficient sample of companies for my proxy group, adversely affecting the calculation of a fair rate of return for the subject utility. Further, Value Line does not offer a standalone wastewater utilities industry category as an option. Therefore, my proxy group began with a search of the regulated water utility companies.

Q. WHAT CRITERIA DID YOU USE IN SELECTING YOUR WATER UTILITY PROXY GROUP?

A. The criteria for my proxy group was designed to select companies that are representative of PAWC. I applied the following criteria to Value Line's "Water Utility" company group:

1. Fifty percent or more of the company's revenues must be generated from the regulated water utility industry.
2. The company's stock must be publicly traded.
3. Investment information for the company must be available from more than one source, which includes Value Line.
4. The company must not be currently involved in an announced merger or the target of an acquisition.
5. The company must have four consecutive years of historic earnings data.

Q. WHAT CRITERIA DID MS. BULKLEY USE IN SELECTING THE COMPANIES THAT FORMULATE HER COMBINED UTILITY PROXY GROUP (GAS, ELECTRIC, AND WATER)?

A. Ms. Bulkley implemented the following criteria to both Value Line's "Water Utility" and "Natural Gas Distribution Utility" companies to formulate her proxy group (PAWC Statement No. 13, p. 25, lines 4-16):

1. Pay consistent quarterly cash dividends because companies that do

not cannot be analyzed using the Constant Growth DCF model.

2. Have investment grade long-term issuer ratings from S&P and/or Moody's.

3. Are covered by at least two utility industry analysts.

4. Have positive long-term earnings growth forecasts from at least two utility industry equity analysts.

5. Derive more than 70% of their total operating income from regulated operations.

6. Were not parties to a merger or transformative transaction during the analytical periods relied on.

Further, Ms. Bulkley considered the thirty-six companies contained in Value Line's three "Electric Utility" groups. She applied the criteria listed above, as well as the following two additional criteria (PAWC Statement No. 13, p. 25, lines 19-21 and p. 26 lines 1-7):

1. Have owned electric generation comprising less than 10% of the Company's MWh sales to ultimate customers to ensure that the electric utilities included did not own a substantial amount of generation, and therefore, had operations that were primarily transmission and distribution.

2. Own water operations.

Q. WHAT PROXY GROUP DID YOU USE IN YOUR ANALYSIS?

A. I included the following five companies in my proxy group:

Company	Stock Ticker
American Water Works Company, Inc.	AWK
American States Water Company	AWR
California Water Service Group	CWT
Middlesex Water Company	MSEX
SJW Group	SJW

Q. WHAT PROXY GROUP DID MS. BULKLEY USE IN HER ANALYSIS?

A. Ms. Bulkley's combined proxy group consists of the following eleven companies (PAWC Statement No. 13, p. 26, ln. 15):

Company	Stock Ticker
American States Water Company	AWR
Atmos Energy Corporation	ATO
California Water Service Group	CWT
Essential Utilities, Inc.	WTRG
Eversource Energy	ES
Middlesex Water Company	MSEX
NiSource, Inc.	NI
Northwest Natural Gas Company	NWN
ONE Gas, Inc.	OGS
SJW Group	SJW
Spire, Inc.	SR

Q. DO YOU AGREE WITH MS. BULKLEY'S COMBINED PROXY GROUP?

A. No. While Ms. Bulkley's proxy group includes four of the five water utility companies of my proxy group, I have included one company that she does not include. Specifically, Ms. Bulkley excludes PAWC's parent company, American Water Works Company (AWK). Additionally, I have not considered all the natural gas and electric utility companies, which she includes in her combined proxy group for the determination of a return on equity (ROE).

Q. WHY DOES MS. BULKLEY EXCLUDE AMERICAN WATER WORKS COMPANY FROM HER PROXY GROUP?

A. Ms. Bulkley excludes PAWC's parent company, AWK, simply because she claims it is her general practice to exclude the subject company or its parent holding company from her proxy group (PAWC Statement No. 13, p. 26, lines 9-11).

Q. DO YOU BELIEVE IT IS NECESSARY TO EXCLUDE AMERICAN WATER WORKS COMPANY AS A COMPARABLE COMPANY IN THIS PROCEEDING?

A. No. While I cannot opine on Ms. Bulkley's "general practice," I also do not see any valid reason or basis for the exclusion of AWK. In my view, inclusion of AWK's vast operations across many states and numerous divisions eliminates the potential for circularity as opposed to if only PAWC itself was included in the proxy group.

Q. WHAT IS THE BASIS OF MS. BULKLEY'S INCLUSION OF GAS AND ELECTRIC COMPANIES IN HER PROXY GROUP?

A. First, Ms. Bulkley states that there are a small number of water companies available for inclusion in the proxy group, and therefore, she has considered electric utilities and natural gas distribution companies that meet her screening criteria (PAWC Statement No. 13, p. 27, lines 6-8). Second, she asserts that the electric utilities and natural gas distribution companies included in her proxy group generate a large portion (more than 70%) of their operating income from regulated operations (gas or electric) similar to PAWC (water and wastewater operations) and the water utilities that are included in her proxy group (PAWC Statement No. 19, p. 27, lines 16-19). Lastly, she believes that all the proxy companies used in her analyses possess a set of operating and financial risk characteristics that are substantially comparable to PAWC, and therefore, provide a reasonable basis for deriving the appropriate ROE (PAWC Statement No. 13, p. 24, lines 9-12).

Q. PLEASE EXPLAIN WHY YOU DID NOT INCLUDE THE NATURAL GAS AND ELECTRIC DISTRIBUTION COMPANIES IN YOUR PROXY GROUP THAT MS. BULKLEY INCLUDED.

A. Companies within the water industry are similarly situated utilities and have a much better representation of the financial and operational risks faced by PAWC. The five companies used in my water utility proxy group are a fair and appropriate

representation of regulated water industry. Ideally, it is better to have more companies in a proxy group, however, using more companies (engaged in gas or electric operations) that are dissimilar to the subject company will provide less accurate or distorted information than using fewer, more similarly situated companies as a proxy.

Additionally, the water industry has less risk as it has a more captive customer base for water and wastewater services. For example, unlike the natural gas and electric distribution industries where customers can shop for generation or limit or eliminate the need for the service entirely, there are generally no alternatives for water customers. Gas and electric companies also bear the risk of a certain degree of competition between each other and the potential for alternative energy sources that water utilities are immune from. Further, gas, electric, and water utilities face different degrees of operational, safety, and weather-related risks and uncertainties in addition to substantially different environmental regulations. Lastly, Ms. Bulkley's belief that the regulated gas and electric utilities used in her analyses all possess a set of operating and financial risk characteristics that are substantially comparable to PAWC is incorrect and unsupported.

CAPITAL STRUCTURE

Q. WHAT IS A CAPITAL STRUCTURE?

A. A capital structure represents how a firm has financed its rate base with different

sources of funds. The primary sources of funding are long-term debt and common equity. A capital structure may also include preferred stock and/or short-term debt.

Q. WHAT ARE THE COMPANY'S CLAIMED CAPITAL STRUCTURES?

A. The Company's claimed capital structures for Water and Wastewater Operations for the FPFTY are summarized in the tables below (PAWC Statement No. 13, p. 61, ln. 2).

PAWC - Water Operations	
Type of Capital	**Capitalization Ratio**
Long-Term Debt	44.01%
Preferred Stock	0.00%
Common Equity	55.99%
Total	**100.00%**

PAWC - Wastewater Operations	
Type of Capital	**Capitalization Ratio**
Long-Term Debt	42.73%
WW Specific Debt	4.40%
Preferred Stock	0.00%
Common Equity	52.87%
Total	**100.00%**

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIMED CAPITAL STRUCTURES?

A. Ms. Bulkley explains that because specific debt has been identified for Wastewater Operations only, capital structures for Water and Wastewater Operations were calculated separately (PAWC Statement No. 13, p. 59, lines 9-10). She claims to have examined the actual capital structures of her proxy group operating companies and believes that PAWC's proposed common equity ratios for Water and Wastewater Operations are reasonable. She states that the proposed equity ratio of 55.30% for the total Company is well within the range (49.41% - 59.88%) and slightly below the mean (55.88%) established by the capital structures of the utility operating subsidiaries of her proxy group companies (PAWC Statement No. 13, p. 61, lines 14-17).

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S CAPITAL STRUCTURE?

A. I recommend using the Company's claimed capital structures as presented in the tables above.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. I recommend using the Company's claimed capital structures for both Water and Wastewater Operations as they fall within the range of my proxy group's most recently available capital structures. The most recent five-year average range of

my proxy group individual company capital structure ratios are from 42.44% to 58.43% long-term debt and 41.57% to 57.18% common equity, with an overall five-year average of 49.16% long-term debt and 50.76% common equity (I&E Exhibit No. 2, Schedule 2).

COST OF LONG-TERM DEBT

Q. WHAT IS THE COMPANY'S FPFTY CLAIMED COST RATE OF LONG-TERM DEBT?

A. Ms. Bulkley recommends a 4.76% weighted cost rate of long-term debt for both Water and Wastewater Operations. Additionally, she recommends a 2.62% weighted cost rate for wastewater specific long-term debt (PAWC Exhibit No. 13-A, Schedule 12 and 13).

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S LONG-TERM DEBT COST RATES?

A. I recommend using the Company's claimed 4.76% cost of long-term debt for Water and Wastewater Operations, as well as the 2.62% cost rate of long-term debt for wastewater specific debt issuances.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION TO USE THE COMPANY'S CLAIMED COST RATES OF LONG-TERM DEBT?

A. The Company's FPFTY claimed cost rates of long-term debt are based on the

projected actual cost rates and they are representative of the water industry. The 4.76% long-term debt cost falls within my proxy group's 2022 implied long-term debt cost range of 3.19% to 5.67%, with an average implied long-term debt cost of 4.30% (I&E Exhibit No. 2, Schedule 3), while the 2.62% wastewater specific long-term debt cost falls below that same range. There is an upward trend in the Company's long-term debt cost rate in 2022 due to new long term bond issuances with higher coupon rates from 4.20% to 5.14% under the then interest rates. Additionally, the Company has planned for new long-term bond issues in 2024 and 2025 (PAWC Exhibit No. 13-A, Schedule 14, p. 6). The Mergent Bond Record shows an average yield of 5.54% (November 2022 through November 2023) for A-rated public utility bond (I&E Exhibit No. 2, Schedule 3). Therefore, I recommend applying the Company's claimed cost rates of long-term debt for water and wastewater operations.

COST OF COMMON EQUITY

COMMON METHODS

Q. WHAT METHODS ARE COMMONLY PRESENTED BY UTILITIES IN DETERMINING THE COST OF COMMON EQUITY?

A. Four methods commonly presented to estimate the cost of common equity are the Discounted Cash Flow (DCF), the Capital Asset Pricing Model (CAPM), the Risk Premium (RP) Method, and the Comparable Earnings (CE) Method.

Q. WHAT IS THE THEORETICAL BASIS FOR THE DCF METHOD?

A. The DCF method is the "dividend discount model" of financial theory, which maintains that the value (price) of any security or commodity is the discounted present value of all future cash flows. The DCF method assumes that investors evaluate stocks in the traditional economic framework, which maintains that the value of a financial asset is determined by its earning power, or its ability to generate future cash flows. The DCF method is also considered as a forward-looking model to estimate the cost of common equity.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CAPM?

A. The CAPM describes the relationship of a stock's investment risk and its market rate of return. It identifies the rate of return investors expect so that it is comparable with returns of other stocks of similar risk. This method hypothesizes that the investor-required return on a company's stock is equal to the return on a "risk free" asset plus an equity premium reflecting the company's investment risk. In the CAPM, two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta. The CAPM allows investors to receive a return only for bearing systematic risk. Unsystematic risk is assumed to be diversified away, and therefore, does not earn a return.

Q. WHAT IS THE THEORETICAL BASIS FOR THE RP METHOD?

A. The theoretical basis for the RP method is a simplified version of the CAPM. The RP method's theory is that common stock is riskier than debt, thus, investors require a higher expected return on stocks than bonds. In the RP approach, the cost of equity is made up of the cost of debt and a risk premium. While the CAPM uses the market risk premium, it also directly measures the systematic risk of a company or proxy group through the use of beta. The RP method does not measure the specific risk of a company.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CE METHOD?

A. The CE method utilizes the concept of opportunity cost. This means that investors will likely dedicate their capital to the investment offering the highest return with similar risk to alternative investments. Unlike the DCF, CAPM, and the RP methods, the CE method is not market-based and relies upon historic accounting data. The most problematic issue with the CE method is determining what constitutes comparable companies.

<u>I&E RECOMMENDED METHOD TO EMPLOY</u>

Q. WHAT METHOD DO YOU RECOMMEND TO DETERMINE AN APPROPRIATE COST OF COMMON EQUITY FOR THE COMPANY?

A. I recommend using the DCF method as the primary method to determine the cost of common equity. Additionally, I provide a CAPM analysis to be used as a

comparison, not as a check, to the DCF results. It has the most wide-spread regulatory acceptance, and the Commission has historically relied mostly upon the DCF results in base rate proceedings, but also as recently as 2017, 2018, 2020, and 2021.[1]

Q. PLEASE EXPLAIN WHY YOU CHOSE TO EMPLOY THE DCF TO DETERMINE YOUR RECOMMENDED RETURN ON EQUITY.

A. I recommend using the DCF for a variety of reasons. The DCF is appealing to investors since it is based upon the concept that the receipt of dividends in addition to expected appreciation is the total return requirement determined by the market.[2] The use of a growth rate and expected dividend yield are also strengths of the DCF, as this recognizes the time value of money and is forward-looking. The use of the utilities' own, or in this case the proxy group's, stock prices and growth rates directly in the calculation also causes the DCF to be industry and company specific. Finally, current financial, inflationary, and economic trends are most certainly reflected in a stock's price, which is used in determining the dividend

yield, and forecasted earnings growth rates by stock market analysts. Therefore, the DCF contains the most up-to-date projected information of any model and is the superior method for determining the rate of return for the current economic market because it measures the cost of equity directly.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE CAPM AS A COMPARISON TO THE DCF IN YOUR ANALYSIS.

A. I have included a CAPM analysis only as a comparison, and not as a basis, for my recommendation because both the CAPM and the DCF include inputs that allow the results to be specific to the utility industry. However, the CAPM is based on the performance of U.S. Treasury bonds and the performance of the market as measured through the S&P 500 and is company-specific only through the use of beta. Beta reflects a stock's volatility relative to the overall market, thereby incorporating an industry-specific aspect to the CAPM, but only as a measure of how reactive the industry is compared to the market as a whole. Although changes in the utility industry are more likely to be accurately reflected in the DCF, which uses the companies' actual prices, dividends, and growth rates, I have included the results of my CAPM analysis because changes in the market, whether as a whole or specific to the utility industry, affect the outcome of each method in different ways. Although I have provided the results of my CAPM analysis as a comparison, and not as a check, it does have several disadvantages and should not be given comparable weight to the DCF result.

Q. EXPLAIN THE DISADVANTAGES OF THE CAPM.

A. The CAPM, and the RP method by virtue of its similarities to the CAPM, give results that indicate to an investor what the equity cost rate should be if current economic and regulatory conditions are the same as those present during the historical period in which the risk premiums were determined. This is because beta, which is the only company-specific variable in the CAPM model, measures the *historical* volatility of a stock compared to the *historical* overall market return. Reliance on historical values is especially problematic now given the recent impact of the COVID-19 pandemic on economic conditions. Although the CAPM and RP results can be useful to investors in making rational buy and sell decisions within their portfolios, the DCF method is the superior method for determining the rate of return for the current economic market and measuring the cost of equity directly. The CAPM and the RP methods are less reliable indicators because they measure the cost of equity indirectly and risk premiums vary depending on the debt and equity being compared. The use of historic risk premiums contains the implicit assumption that future risk premiums will mirror historic premiums. In addition, the period of time chosen to measure the risk premium is subjective. Also, regulators can never be certain that economic and regulatory conditions underlying the historical period during which the risk premiums were calculated are the same today or will be the same in the future.

Q. IS THERE ANY ACADEMIC EVIDENCE THAT QUESTIONS THE CREDIBILITY OF THE CAPM MODEL?

A. Yes. An article, "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory," that appeared in the *New York Times* on February 18, 1992, summarized a CAPM study conducted by professors Eugene F. Fama and Kenneth R. French.[3] Their study examined the importance of beta, CAPM's risk factor, in explaining returns on common stock. In CAPM theory a stock with a higher beta should have a higher expected return. However, they found that the model did not do well in predicting actual returns and suggested the use of more elaborate multi-factor models.

A more recent article, "The Capital Asset Pricing Model: Theory and Evidence," which appeared in the *Journal of Economic Perspectives,* states that "the attraction of the CAPM is that it offers powerful and intuitively pleasing predictions about how to measure risk and the relation between expected return and risk. Unfortunately, the empirical record of the model is poor - poor enough to invalidate the way it is used in applications."[4] As a result, I conclude that the CAPM's relevance to the investment decision making process does not carry over into the regulatory rate setting process.

[4] Fama, Eugene F. and French, Kenneth R., "The Capital Asset Pricing Model: Theory and Evidence." *Journal of Economic Perspectives* (2004): Volume 18, Number 3, pp. 25-46.

Q. PLEASE EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE RP METHOD FROM YOUR ANALYSIS.

A. The RP method is excluded because it is a simplified version of the CAPM and is subject to the same faults explained above. Most importantly, unlike the CAPM, the RP method does not recognize the company-specific risk through beta.

Q. EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE CE METHOD IN YOUR ANALYSIS.

A. The CE method is excluded because the choice of which companies are comparable is highly subjective, and it is debatable whether historic accounting values are representative of the future. Moreover, its historical usage in this regulatory forum has been minimal.

Q. ARE THERE ANY RECENT COMMISSION ORDERS THAT DEVIATE FROM THE USE OF THE DCF AS THE PRIMARY METHOD IN DETERMINING A COMPANY'S RETURN ON EQUITY?

A. Yes. The Commission indicated in the 2021 Aqua Pennsylvania, Inc. (Aqua) base rate case order that its method "for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies"[5] and that "I&E's DCF and CAPM produce a range of reasonableness for the ROE…"[6] , which deviates from prior

[5] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154 (Order entered May 16, 2022).

[6] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 178 (Order entered May 16, 2022).

Commission practice of primarily relying on the DCF. Most recently, the Commission's Columbia Water Company (Columbia Water) base rate case order relied on the results of I&E's DCF and CAPM analyses for determining Columbia Water's ROE.[7]

Q. SHOULD THE COMMISSION'S USE OF THE CAPM AS A CEILING FOR A "RANGE OF REASONABLENESS" APPLY IN THIS PROCEEDING?

A. No. In a report issued by Regulatory Research Associates, a group within S&P Global Market Intelligence,[8] Aqua's ROE of 10.00% was stated as being above the national average for water utility base rate cases and above the Distribution System Improvement Charge (DSIC) rate authorized by the Commission of 9.80%[9] for water and wastewater utilities for the year ended December 31, 2021. This DSIC rate for water and wastewater utilities has since dropped 5 basis points to 9.75% for the year ended March 31, 2023[10] and further dropped 10 basis points to 9.65% for the year ended June 30, 2023[11] and remained at the same level 9.65%

CIQ Pro: RRA Regulatory Focus: Commission authorizes management performance bonus for Aqua Pennsylvania (spglobal.com) (Accessed December 14, 2023).

9 PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended December 31, 2021, approved at Public Meeting on June 16, 2022, at Docket No. M-2022-3032405.

10 PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended March 31, 2023, approved at Public Meeting on July 13, 2023 at Docket No. M-2023-3041106.

11 PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended June 30, 2023, approved at Public Meeting on October 19, 2023 at Docket No. M-2023-3042679.

for the year ended September 30, 2023[12] The above referenced S&P report, which directly reviews Aqua's ROE of 10.00% on the very date the Commission entered its order in Aqua's rate case demonstrated that the ROE awarded to Aqua was higher than average. Specifically, the S&P report determined that the average ROE for water utility base rate cases that have been completed during the first four months of 2022 was 9.63% and for the twelve months ended April 30, 2022 was 9.53%, each of which were well below the 10.00% ROE authorized by the Commission for Aqua. This demonstrates the unreasonable skewing of results associated with using the CAPM as a ceiling for determining a utility's ROE.

In the Columbia Water order, the Commission noted that I&E's DCF and CAPM produced a range of reasonableness for the ROE from 7.84% to 11.09% and approved an ROE of 9.75% as reasonable and appropriate for that company, which is based upon consideration of a variety of factors such as increasing inflation leading to increases in interest rates and capital costs.[13] I respectfully disagree with the Commission's basis (current inflation and interest rates) for determining Columbia Water's ROE of 9.75%. I have presented and discussed in the Capital Market Conditions section, the forecasted lower-level inflation rates, and the Federal Reserve's intention to cut interest rates in 2024, which would have

[12] PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2023, approved at Public Meeting on January 18, 2024 at Docket No. M-2023-3044811.

[13] *Pa. PUC v. Columbia Water Company,* Docket Nos. R-2023-3040258, pp.108-109 (Order entered January 18, 2024).

the effect of reducing potential inflation and interest rate risks in the capital costs during 2024-2025, when PAWC's rates will be in effect.

Additionally, as explained above, the CAPM should not be used as a primary method, and it should only be used as a comparison and not as a check of the DCF. Also, as demonstrated below, the use of the CAPM in this proceeding would result in a significant burden to ratepayers due to large water companies like PAWC increasing rate base significantly over time due to recent fair market value acquisitions. Therefore, I disagree with giving the CAPM similar weight to the DCF method.

SUMMARY OF THE COMPANY'S RESULTS

Q. WHAT ARE THE RESULTS OF THE COMPANY'S COST OF EQUITY ANALYSES?

A. Ms. Bulkley employed the Constant Growth DCF, CAPM, and Empirical Capital Asset Pricing Model (ECAPM) methods in analyzing the Company's cost of equity (PAWC Statement No. 13, p. 4, lines 26-27). Ms. Bulkley opines that a reasonable range for PAWC's cost of equity is 10.00% to 11.25% relative to her combined utility proxy group. Ultimately, she claims an ROE at the higher end of that range of 10.95% is reasonable and appropriate as it recognizes the Company's management performance and risk factors (PAWC Statement No. 13, p. 8, lines 9-13).

I&E RECOMMENDATION

Q. WHAT IS YOUR RECOMMENDED COST OF COMMON EQUITY FOR PAWC?

A. Based upon my analysis, I recommend a cost of common equity of 8.45% for both Water and Wastewater Operations (I&E Exhibit No. 2, Schedule 1).

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the use of the DCF method. As explained below, I used my CAPM result only to present to the Commission a comparison to my DCF results. My DCF analysis uses a spot dividend yield, a 52-week dividend yield, and earnings growth forecasts.

DISCOUNTED CASH FLOW

Q. PLEASE EXPLAIN YOUR DCF ANALYSIS.

A. My analysis employs the constant growth DCF model as portrayed in the following formula:

$$K = D_1/P_0 + g$$

Where:

K	=	Cost of equity
D_1	=	Dividend expected during the year
P_0	=	Current price of the stock
g	=	Expected growth rate

When a forecast of D_1 is not available, D_0 (the current dividend) must be adjusted by one half of the expected growth rate to account for changes in the dividend paid in period one. As forecasts for each company in my proxy group were available from Value Line, no dividends were adjusted for the purpose of my analysis.

Q. PLEASE EXPLAIN HOW YOU DEVELOPED THE DIVIDEND YIELDS USED IN YOUR DCF ANALYSIS.

A. A representative dividend yield must be calculated over a time frame that avoids the problems of both short-term anomalies and stale data series. For my DCF analysis, the dividend yield calculation places equal emphasis on the most recent spot and the 52-week average dividend yields. The following table summarizes my dividend yield computations for the proxy group (I&E Exhibit No. 2, Schedule 4):

Proxy Group - Average Dividend Yields	
(a) Spot Dividend Yield	2.24%
(b) 52-week Average Dividend Yield	2.06%
(c) Average ((a +b) ÷ 2)	2.15%

Q. WHAT INFORMATION DID YOU RELY UPON TO DETERMINE YOUR EXPECTED GROWTH RATE?

A. I have used five-year projected growth rate estimates from Yahoo! Finance, Zacks, and Value Line.

Q. WHAT WERE THE RESULTS OF YOUR FORECASTED EARNINGS GROWTH RATES?

A. The expected average growth rates for my proxy group ranged from 3.85% to 8.65% with an overall average of 6.30% (I&E Exhibit No. 2, Schedule 5).

Q. WHAT IS THE RESULT OF YOUR DCF ANALYSIS BASED ON YOUR RECOMMENDED DIVIDEND YIELD AND GROWTH RATE?

A. The results of my DCF analysis are calculated as follows, which is based on the source data published in the first week of January 2024 (I&E Exhibit No. 2, Schedule 6):

K	**=**	**D_1/P_0**	**+**	**g**
8.45%	=	2.15%	+	6.30%

CAPITAL ASSET PRICING MODEL

Q. PLEASE EXPLAIN YOUR CAPM ANALYSIS.

A. My analysis employs the traditional CAPM as portrayed in the following formula:

$$K = R_f + \beta(R_m - R_f)$$

Where:

K = Cost of equity

R_f = Risk-free rate of return

R_m = Expected rate of return on the overall stock market

β = Beta measures the systematic risk of an asset

Q. WHAT IS BETA AS EMPLOYED IN YOUR CAPM ANALYSIS?

A. Beta is a measure of the systematic risk of a stock in relation to the rest of the stock market. A stock's beta is estimated by calculating the linear regression of a stock's return against the return on the overall stock market. The beta of a stock with a price pattern identical to that of the overall stock market will equal one. A stock with a price movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Conversely, a stock with a price movement that is less than the overall stock market will have a beta of less than one and would be described as having less investment risk than the overall stock market.

Q. HOW DID YOU DETERMINE YOUR BETA FOR YOUR CAPM ANALYSIS?

A. In estimating an equity cost rate for my proxy group, I used the average of the betas for the companies as provided in the Value Line Investment Survey. The average beta for my proxy group is 0.80 (I&E Exhibit No. 2, Schedule 7).

Q. WHAT RISK-FREE RATE OF RETURN HAVE YOU USED FOR YOUR FORECASTED CAPM ANALYSIS?

A. I have chosen to use the risk-free rate of return (R_f) from the projected yield on 10-

year Treasury Notes. The yield on the short-term T-Bill is a more theoretically correct parameter to represent a risk-free rate of return, however, it can be extremely volatile. The volatility of short-term T-Bills is directly influenced by Federal Reserve policy. At the other extreme, the 30-year Treasury Bond exhibits more stability but is not risk-free. Long-term Treasury Bonds have substantial maturity risk associated with market risk and the risk of unexpected inflation. Long-term treasuries normally offer higher yields to compensate investors for these risks. As a result, I chose to use the yield on the 10-year Treasury Note because it mitigates the shortcomings of the other two alternatives. Additionally, the Commission has recently agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[14]

The forecasted yield on the 10-year Treasury Note, as seen in Blue Chip Financial Forecasts, is expected to range between 4.20% and 3.90% from the first quarter of 2024 through the fourth quarter of 2024, and it is forecasted to be 3.90% from 2025-2029. For my forecasted CAPM analysis, I used 4.00%, the average of all the yield forecasts I observed (I&E Exhibit No. 2, Schedule 8).

[14] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99; *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 154 (Order entered May 16, 2022).

Q. HOW DID YOU DETERMINE THE RETURN ON THE OVERALL STOCK MARKET EMPLOYED IN YOUR FORECASTED CAPM ANALYSIS?

A. To arrive at a representative expected return on the overall stock market, I observed Value Line's 1700 stocks and the S&P 500. Value Line expects its universe of 1700 stocks to have an average yearly return of 11.93% over the next three to five years based on a forecasted dividend yield of 2.20% and a yearly index appreciation of 45%. The S&P 500 index has an average yearly return of 12.16% over the past 98 years (1926-2023). I have averaged these two figures, which results in an estimated or expected market return of 12.05% ((11.93% + 12.16%) ÷ 2) (I&E Exhibit No. 2, Schedule 9, pp. 1-3).

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS?

A. The result of my analysis is based on the source data published in December 2023 and the first week of January 2024, which is as follows (I&E Exhibit No. 2, Schedule 10):

K	=	R_f	+	$\beta(R_m - R_f)$
10.44%	=	4.00%	+	0.80 (12.05% - 4.00%)

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR CAPM ANALYSIS?

A. Yes. As discussed earlier in my testimony, my recommended cost of equity is based upon my DCF analysis. For the multiple reasons I explained above, I only present a CAPM analysis to the Commission as a comparison and not for recommendation purposes. It must also be recognized that CAPM inputs are highly subjective, and other than beta, they are not company or industry specific.

Q. IS IT NECESSARY TO APPLY THE CAPM WITH SIMILAR WEIGHT TO THE DCF WHEN DETERMINING A SPECIFIC RETURN ON EQUITY DUE TO RECENT INFLATIONARY TRENDS?

A. No. My use of the DCF as a primary method in determining an appropriate ROE already sufficiently takes recent inflationary trends into consideration. As mentioned above, the DCF includes a spot stock price in the dividend yield calculation and analysts who generate forecasted earnings growth should take inflation into consideration as well, so it contains the most up-to-date projected information of any model. In other words, the inputs of the DCF capture all known economic factors, including inflation.

Q. DID YOU QUANTIFY THE NUMBER OF BASIS POINTS BETWEEN YOUR DCF AND CAPM RESULTS TO ILLUSTRATE THE FINANCIAL IMPACT BETWEEN USING EACH MODEL?

A. Yes. The difference between my DCF and CAPM analysis is 199 basis points (CAPM result of 10.44% - DCF result of 8.45% = 1.99% difference). As demonstrated below, relying on the results of the CAPM is unnecessary and places undue hardship on PAWC's ratepayers.

Q. BASED ON THE COMPANY'S CLAIMED FPFTY RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 199 BASIS POINTS TO THE COST OF EQUITY BASED ON THE DIFFERENCE IN RESULTS BETWEEN YOUR CAPM ANALYSIS (10.44%) AND YOUR DCF ANALYSIS (8.45%)?

A. The example below illustrates the impact of 199 additional basis points on the Company's cost of equity if the results of my CAPM analysis, rather than my DCF results were applied to the Company's FPFTY total claimed rate base and combined capital structure:

PAWC's Claimed Equity Percentage of Capital Structure*	55.30%
Difference in Return on Equity between I&E's CAPM and DCF Analysis (10.44% – 8.45% = 1.99%)	1.99%
Claimed Rate Base**	$6,096,173,421
Impact Prior to Gross Up (0.5530 x 0.0199 x $6,096,173,421)	$67,086,560
Gross Revenue Conversion Factor***	1.4011
Total Impact to Ratepayers ($67,086,560 x 1.4011)	**$93,994,979**

*PAWC Exhibit 13-A, Schedule 11, p. 1 (Total Company).
** PAWC Statement No. 4, p. 4 (Total Company).
*** I&E Exhibit No. 2, Schedule 11, p. 2.

In this example, an addition of 199 basis points to the cost of equity would require ratepayers to fund an additional $93,994,979 annually to cover the increase of the inflated rate of return along with the associated impact resulting from increases to income taxes, uncollectibles, and assessments.

Q. DOES THE FINANCIAL IMPACT OF FUNDING AN ADDITIONAL $93,994,979 ANNUALLY DEMONSTRATE THAT IT IS INAPPROPRIATE TO USE THE CAPM TO ESTABLISH A "ZONE OF REASONABLENESS" IN THIS PROCEEDING?

A. Yes. In my opinion it is inappropriate to use the CAPM as the top end of a range for this case as was done by the Commission in the recent Aqua and Columbia Water rate cases for determining an ROE. Contrary to the 199-basis point spread in this proceeding, as illustrated above, the spread between the DCF and the CAPM in

the Aqua case was more modest at 99-basis points.[15] In the Columbia Water case, the spread between the CAPM and DCF results has significantly increased to 325-basis points (11.09% - 7.84%). In this case, with two times the basis-point impact of the Aqua rate case, the burden would be far more onerous for PAWC's ratepayers due its significantly larger rate base, which would be unwarranted and inappropriate. In my opinion, and as demonstrated by my analysis, any amount granted above the DCF (8.45% based on my recommendation) is not justified and places an inappropriate burden on ratepayers.

CRITIQUE OF MS. BULKLEY'S PROPOSED COST OF EQUITY

Q. DO YOU AGREE WITH MS. BULKLEY'S PROPOSED COST OF EQUITY?

A. No. I disagree with Ms. Bulkley's proposed cost of equity analysis for several reasons. First, I take issue with certain aspects of her discussion on capital market conditions, her application of the DCF, her application of the CAPM, and her use of Empirical Capital Asset Pricing Method (ECAPM). Additionally, I disagree with the claimed risks from the Company's capital expenditure program and adherence to environmental and water quality regulations. Finally, I disagree with Ms. Bulkley's recommendation to include a minimum 25-basis point adjustment

[15] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 178 (Order entered May 16, 2022).

to the cost of equity for recognition of management performance if the Commission determines anything less than her cost of equity recommendation.

CAPITAL MARKET CONDITIONS

Q. WHAT IS MS. BULKLEY'S POSITION REGARDING CURRENT CAPITAL MARKET CONDITIONS?

A. Ms. Bulkley claims that the cost of equity for regulated utilities is being affected in the current and prospective capital markets by several factors. The factors she discusses are changes in monetary policy, relatively high inflation, and the increased interest rates that she expects to remain high over the next few years (PAWC Statement No. 13, pp. 13-23).

Q. SUMMARIZE MS. BULKLEY'S COMMENTS REGARDING THE IMPACT OF CURRENT MARKET CONDITIONS ON COST OF EQUITY MODELS.

A. Ms. Bulkley opines that ROE estimates will understate the ROE during the period the Company's rates will be in effect because the share prices of utilities are likely to continue to decline or underperform due to higher interest rates and government bond yields, and the DCF models using the recent historical data are likely to underestimate investors' required return. Therefore, she opines, this expected change in market conditions supports consideration of the higher end of the range of cost of equity results produced by the DCF model. Moreover, she asserts that

the prospective market conditions warrant consideration of and placing more weight on cost of equity estimation models such as the CAPM and ECAPM, which may better reflect expected market conditions (PAWC Statement No. 13, p. 23, lines 8-18).

Q. PLEASE COMMENT ON MS. BULKLEY'S CONCERNS REGARDING CURRENT MARKET CONDITIONS.

A. First, I cannot dispute the current economic conditions with respect to increased interest rates and government bond yields, however, it is important to note that all companies, including regulated utilities, are impacted by high interest rates. Second, I disagree with Ms. Bulkley's speculative statement that share prices of utilities are likely to continue to decline due to higher interest rates in the future. Most recently at the Federal Open Market Committee meeting held on December 13, 2023, the Federal Reserve indicated that it would lower the Fed-fund rate to 4.60% by the end of 2024 equivalent to a three quarter-point reduction from the current level. Federal Reserve Chairman Powell indicated that inflation is well on its way to the targeted 2% level, and they would not wait for the 2% inflation target to cut the interest rate (I&E Exhibit No. 2, Schedule 12, pp. 1-6). Per the most recent monthly Blue Chip Financial Forecasts,[16] the 2024 inflation

[16] Blue Chip Financial Forecasts Vol. 43, No. 1, December 28, 2023.

rates by two measures are forecasted to be slightly over 2% as shown in the table below:

	Q4 2023	Q1 2024	Q2 2024	Q3 2024	Q4 2024	Q1 2025	Q2 2025
Consumer Price Index	2.9%	2.4%	2.4%	2.4%	2.3%	2.2%	2.2%
PCE Price Index	2.6%	2.2%	2.2%	2.2%	2.2%	2.1%	2.0%

In light of the Federal Reserve's commitment to an interest rate reduction and forecasted gradual reduction in inflationary pressure to the Federal Reserve target level of 2.0%, Ms. Bulkley's speculative opinion about *future* underperformance of utility share prices of utilities due to higher interest rates and inflationary pressure are not supported. Lastly, it is important to note that unlike unregulated companies, public utilities may file rate cases to address unforeseen or increased expenses and/or revenue shortfalls due to changes in market conditions. It is important to note that despite the increased inflation level and high interest costs, AWK has accessed the capital market and successfully completed a stock issue of 12.65 million shares at an offering price of $135.50 amounting to a total of $1.71 billion on February 28, 2023 (PAWC Exhibit No. 13-A, Schedule 4). This signifies the confidence of investors in AWK's financial soundness and integrity.

Q. DO YOU AGREE WITH MS. BULKLEY'S CONCERNS THAT THE DCF MODEL IS LIKELY TO UNDERSTATE THE COST OF EQUITY?

A. No. As a general rule, it is always necessary to consider current and projected market conditions when estimating the cost of common equity using the models discussed throughout this testimony. Again, as mentioned above, the DCF is a forward-looking cost of equity estimation model, which includes a spot stock price in the dividend yield calculation and analysts who generate forecasted earnings growth expectations consider current as well as future market conditions that will be impacted by related economic factors. Therefore, the inputs of the DCF capture all known economic factors, including current and projected inflation and interest rates, which ultimately produces the most up-to-date projected or forward-looking information for the DCF model.

Q. DO YOU AGREE WITH MS. BULKLEY'S DESIRE TO PLACE MORE WEIGHT ON THE CAPM AND ECAPM MODELS TO REFLECT PROSPECTIVE MARKET CONDITIONS IN DETERMINING THE ESTIMATED COST OF EQUITY?

A. No. The CAPM and ECAPM models rely on the current beta of a utility's stock price, which influences the cost of equity estimation. Beta is a measure of a stock's volatility in relation to the overall market such as the S&P 500 Index (which has a beta of 1.0), on the basis of historic stock price movement and individual stocks that are ranked according to how much they deviate from the

overall market. Beta is influenced by systematic risks such as economic, financial, and political risk factors, and the beta does not give enough information about the fundamentals of a company and is of limited value when making stock selections. Beta is probably a better indicator of short-term (less than a year) rather than long-term risk. Another troubling factor is that past price movement is a poor predictor of the future. Betas are merely rear-view mirrors, reflecting very little of what lies ahead. For traders looking to buy and sell stocks within short time periods, beta is a reasonable risk metric. However, for investors with long-term horizons, it is less useful.

Considering the limitation of the beta measure discussed above, the CAPM and ECAPM models do not generate or provide a forward-looking cost of equity estimation for the future periods when customer rates will be in effect. Therefore, it is inappropriate to give more weight to the CAPM and ECAPM results in the determination of a forward-looking, fair, and reasonable common equity cost rate.

DCF ANALYSIS

Q. PLEASE SUMMARIZE MS. BULKLEY'S DCF ANALYSIS.

A. Ms. Bulkley calculates mean and median results for 30-day, 90-day, and 180-day average constant growth DCF models with mean low, mean, and mean high results (PAWC Statement No. 13, p. 36, ln. 6). She relies on the mean and median DCF results using the average growth rate range from 9.28% to 10.00%, and the mean and median DCF results using the maximum growth rate range from 10.63% to

11.34% (PAWC Statement No. 13, p. 35, lines 18-21). She claims that her mean high and median high results are a more appropriate measure than using minimum or low growth rates of the cost of equity since the DCF model is likely understating the cost of equity due to expected underperformance of utility stocks going forward (PAWC Statement No. 13, p. 35, lines 21-22 and p. 36, lines 1-2). She concludes that her DCF results range is 8.69% - 11.10% (PAWC Statement No. 13, p. 66, ln. 1).

Q. SUMMARIZE THE ISSUES YOU HAVE WITH MS. BULKLEY'S DCF ANALYSIS.

A. Aside from including gas and electric utilities in her analysis for reasons previously discussed in the *"Proxy Group"* section, the primary issue I have with Ms. Bulkley's DCF analysis is her elimination of the low-end results and considering mean and high-end DCF results mainly to support her speculative claim of expected underperformance of utility stocks over the near term caused by elevated interest rates and yields on long-term government bonds, which exceed the dividend yield (PAWC Statement No. 13, p. 38, lines 11-14).

Q. DOES MS. BULKLEY SELECTIVELY ELIMINATE HER LOW-END DCF RESULTS FROM HER PROXY GROUP?

A. Yes. Ms. Bulkley dismisses the low-end results of her DCF analysis; however, she does not take issue with results that are significantly higher than the average

calculated ROE. For example, she excludes the lowest results of Middlesex Water Company: (a) 30-day, 90-day, and 180-day mean low DCF results of 4.63%, 4.41%, and 4.37% respectively; (b) 30-day, 90-day, and 180-day mean DCF results of 5.79%, 5.57%, and 5.53% respectively; and (c) 30-day, 90-day, and 180-day mean high DCF results of 6.96%, 6.73%, and 6.69% respectively from her proxy group DCF results analysis (PAWC Exhibit No. 13-A, Schedule 3, pp. 1-3). However, she includes the top-end results of NiSource Inc.'s (a natural gas distribution company): (a) 30-day, 90-day, and 180-day mean low DCF results of 10.81%, 10.64%, and 10.58% respectively; (b) 30-day, 90-day, and 180-day mean DCF results of 11.87%, 11.69%, and 11.64% respectively; and (c) 30-day, 90-day, and 180-day mean high DCF results of 13.67%, 13.49%, and 13.44% respectively in her proxy group individual company DCF result analysis (PAWC Exhibit No. 13-A, Schedule 3, pp. 1-3).

In my view, Ms. Bulkley undermines the purpose of using a proxy group by excluding low-end results of a water utility and including high-end results of a *dissimilar company* in her ROE analysis. Again, the purpose of a proxy group is to employ a group of similarly situated companies, in this case, water utilities, to smooth out any anomalous data points in an ROE analysis. Further, by only removing the results on the low end of her analysis and by retaining the higher end results, her DCF analysis serves to inflate the true results and provides a skewed ROE.

Q. WHAT IS YOUR CONCLUSION REGARDING MS. BULKLEY'S DCF ANALYSIS?

A. Ms. Bulkley and I have slightly different applications of our DCF analyses. Notably, although I believe it is appropriate to consider AWK (parent company) in the ROE analysis for this proceeding, I honored Ms. Buckley's decision to ignore the parent company in her proxy group analysis. I have recalculated and summarized Ms. Bulkley's DCF analysis (PAWC Exhibit No. 13-A, Schedule 3) by simply removing the gas and electric distribution utilities and including the entire range of results in her average. The overall average result of my recalculation yields the DCF result of 8.21% for water utilities after removing the gas and electric distribution utilities, which is now comparable, yet lower than my recommended DCF result of 8.45%. The following table is an I&E Modified version of PAWC Exhibit No. 13-A, Schedule 3 shown below:

I&E MODIFIED PAWC Exhibit No. 13-A, Schedule 3

CAPM ANALYSIS

Q. PLEASE SUMMARIZE MS. BULKLEY'S CAPM ANALYSIS.

A. Ms. Bulkley performs several variations of analyses for her CAPM (PAWC Exhibit No. 13-A, Schedule 5). She provides one analysis using betas from Value Line reports (August 25, 2023 and October 6, 2023), another analysis employing Bloomberg betas (October 31, 2023), and a third analysis using long-term average betas from Value Line (2013 through 2022). Within those sets, she provides subsets using three risk-free rates including the current 30-day average yield on 30-year U.S. Treasury Bonds, the near term projected 30-year U.S. Treasury Bond yield for Q1-2024 through Q1-2025, and the long term projected 30-year U.S. Treasury Bond yield for 2025-2029. She calculates the expected return on the S&P 500 Index for each company in the entire S&P 500 Index using the data published by Bloomberg Professional (October 31, 2023). Finally, Ms. Bulkley includes an ECAPM analysis paired with each result of her standard CAPM analysis for the proxy group companies (PAWC Statement No. 13, pp. 39-43 and PAWC Exhibit 13-A, Schedule 5-7).

Q. SUMMARIZE THE ISSUES YOU HAVE WITH MS. BULKLEY'S CAPM ANALYSIS.

A. Aside from the improper inclusion of gas and electric utilities in her analysis, which I disputed above, the primary issues I have with Ms. Bulkley's CAPM

analysis are the use of 30-year U.S. Treasury Bond yields for the risk-free rate and the inclusion of the ECAPM.

Q. DISCUSS YOUR DISAGREEMENT WITH MS. BULKLEY'S RISK-FREE RATE.

A. As stated earlier, long-term Treasury Bonds have substantial maturity risk associated with the market risk and the risk of unexpected inflation and normally offer higher yields to compensate investors for these risks. Using the 10-year Treasury Note is more appropriate to balance the short-term volatility risk and the long-term inflation risk.

The Commission has recently recognized the 10-year Treasury Note as the superior measure for the risk-free rate by stating the following:[17]

> We agree with I&E and the ALJs that using the yield on the 10-year Treasury Note provides a better measure of the risk-free rate of return than using the yield on the 30-year Treasury Bond, as recommended by UGI. In our view, using the 10-year Treasury Note balances the shortcomings of the short-term T-Bill and the 30-year Treasury Bond. Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with the market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation.

[17] *Pa. PUC v. UGI Utilities, Inc. – Electric Division*; Docket No. R-2017-2640058 (Order entered October 25, 2018), p. 99.

Additionally, the Commission recognized:[18]

> I&E's CAPM model uses forecasted yields on ten-year Treasury bonds, and accordingly, its methodology captures forward-looking changes in interest rates.

Q. WHAT IS THE ECAPM?

A. The ECAPM is a modified version of the CAPM which attempts to address the belief that the actual risk versus return correlation is flatter than what is predicted by the CAPM. The implication is that the CAPM underestimates returns with lower levels of risk and over-estimates the returns associated with higher levels of risk. ECAPM entails assigning 25% weight to the market beta (1.0) and 75% weight to the individual company or proxy group beta.[19]

Q. EXPLAIN YOUR DISAGREEMENT WITH MS. BULKLEY'S USE OF THE ECAPM.

A. The use of the ECAPM in estimating the cost of capital does not increase the validity of the result, but instead it injects another measure of subjectivity to the CAPM in an attempt to make the Security Market Line more accurate. The ECAPM reduces the purpose of the beta, which is the only company-specific variable in the CAPM model. This additional layer of subjectivity provides an

[18] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154 (Order entered May 16, 2022).

[19] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2010 Edition, p. 104.

even stronger basis to rely on the DCF, as I have done, as the primary method to calculate a utility's cost of equity.

Q. WHAT IS YOUR CONCLUSION REGARDING MS. BULKLEY'S CAPM ANALYSIS?

A. In the table below, I have recalculated and summarized Ms. Bulkley's CAPM analysis (PAWC Exhibit No. 13-A, Schedule 5) by removing the gas and electric utilities in her proxy group, using my recommended 10-Year Treasury Note (risk-free rate of 4.00%) rather than 30-Year Treasury Bond as the risk-free rate (4.84%), and eliminating the ECAPM analysis. This recalculation maintains Ms. Bulkley's forecasted market return, as well as separate analyses for the Value Line betas, Bloomberg betas, and Value Line long-term average betas from 2013 through 2022. The overall average result of this recalculation below yields a 9.81% CAPM result, which is lower than my CAPM result of 10.44%. The following table shows the I&E Modified version of PAWC Exhibit No. 13-A, Schedule 5:

I&E MODIFIED - PAWC Exhibit 13-A, Schedule 5

BUSINESS RISKS

Q. SUMMARIZE MS. BULKLEY'S CLAIMS REGARDING THE COMPANY'S BUSINESS RISKS.

A. Ms. Bulkley explains that PAWC will spend approximately $1.00 billion on capital investments for the period through June 30, 2025 (FTY and FPFTY), which includes significant investment to replace aging infrastructure and to comply with various regulations and recent acquisitions of utility systems (PAWC Statement No. 13, p. 49, lines 9-12). She claims in general that the additional pressure on cash flows associated with high levels of capital expenditures exerts corresponding pressure on credit metrics and credit ratings (PAWC Statement No. 13, p. 49, lines 14-16). She also briefly mentions that the water and wastewater Distribution System Improvement Charge (DSIC), allows PAWC to recover the costs associated with replacing and repairing aging water and wastewater infrastructure. The Company is proposing an Environmental Compliance Investment Charge recovery mechanism, which would allow for the recovery of the fixed costs associated with certain non-revenue producing, non DSIC-eligible projects between rate cases that are related to environmental requirements (PAWC Statement No. 13, p. 50, lines 26-28 and p. 51 lines 1-2).

Additionally, Ms. Bulkley supports PAWC's proposed Rate Decoupling Mechanism (RDM) discussed by Company witness Charles B. Rea to insulate the Company from revenue volatility caused by seasonal weather conditions and continuing trends in declining use per customer in the residential, commercial, and

municipal customer classes to support her recommended ROE range (PAWC Statement No. 13, p. 53, lines 7-10). She claims that if the RDM is not authorized, PAWC will have greater risks than the proxy group (PAWC Statement No. 13, p. 54, lines 13-14).

Lastly, Ms. Bulkley discusses stock issue flotation costs, the costs associated with the sale of new issues of common stock of the parent company, which include out-of-pocket expenditures for preparation, filing, underwriting, and other issuance costs. She calculates the impact on the proxy group's cost of equity of six basis points (i.e., 0.6 percent) based on the mean and median values and states that her final ROE results do not incorporate an explicit adjustment for flotation costs (PAWC Statement No. 13, pp. 46-49).

Q. DO YOU AGREE WITH MS. BULKLEY'S CONCERNS REGARDING THE COMPANY'S HIGH LEVEL OF CAPITAL EXPENDITURES OVER THE NEXT FEW YEARS?

A. Not entirely. While I do agree that the Company makes substantial capital investments and as usual will continue its capital expenditure program in coming years, it is not unique to PAWC. It is common knowledge that the entire water industry must cope with aging infrastructure, which positions all water companies in her proxy group in a similar situation. Additionally, Ms. Bulkley acknowledges that each of the industries in her proxy group face similar risks associated with

cost recovery related capital investment/expenditures (I&E Exhibit No. 2, Schedule 13, p. 1).

Q. DO YOU AGREE WITH MS. BULKLEY'S CONCERN REGARDING THE COMPANY'S CREDIT RATING RISK DUE TO CAPITAL EXPENDITURES OR THE INEVESTMENT PLAN?

A. No. The Commission does encourage efficiency and savings in costs where possible to reduce ratepayer expenses and allows the opportunity for utilities to recover the full true cost of doing business. Pennsylvania utilizes various mechanisms to assist utilities in recovering costs and earn fair returns. The first, which Ms. Bulkley herself discusses, is the DSIC. In addition to the DSIC, jurisdictional utilities, including PAWC, can take advantage of an FPFTY for ratemaking, which allows utilities to recover forecasted expenses and capital expenditures and to anticipate future anomalous events. Accordingly, PAWC has been taking advantage of the FPFTY for ratemaking by filing base rate cases at regular interval as shown in the table below:

Base Rate Case Docket No.	Filing Date
R-2023-3043189 and 3043190	November 8, 2023
R-2022-3031672 and 3031673	April 29, 2022
R-2020-3019369 and 3019371	April 29, 2020
R-2017-2595853	April 28, 2017

Furthermore, utilities have the option to file petitions and rate cases with the Commission should unforeseen or extraordinary circumstances occur. In short, the DSIC mechanism and base rate case filings are risk-reduction mechanisms available to PAWC that mitigate pressure on cash flows and alleviate concerns about potential credit risks.

Lastly, it is important to note that PAWC and its parent company, AWK have consistently maintained their credit ratings between 2018 and 2022 as shown in table below (PAWC Filing, Volume 7, FR VII.17):

2018-2022	PAWC	AWW
Moody's Investors	A3 (Stable Outlook)	Baa1 (Stable Outlook)
S&P Global	A (Stable Outlook)	A (Stable Outlook)

Ms. Bulkley's concerns regarding pressure on credit metrics and potential credit rating risk due to the capital expenditure plan are speculative and unsupported because historically PAWC has been consistently making capital expenditures to improve its infrastructure summarized in the table below (I&E Exhibit No. 2, Schedule 13, pp. 2-5):

	Water Ops.	Wastewater SSS Ops.	Wastewater CSS Ops.	Total
2018	$406.36 Mn.	$13.36 Mn.	$13.51 Mn.	$433.23 Mn.
2019	$283.47 Mn.	$21.63 Mn.	$45.87 Mn.	$350.97 Mn.
2020	$313.79 Mn.	$18.65 Mn.	$54.57 Mn.	$387.01 Mn.
2021	$340.40 Mn.	$19.03 Mn.	$34.21 Mn.	$393.64 Mn.
2022	$406.80 Mn.	$39.00 Mn.	$39.46 Mn.	$485.26 Mn.

Considering the historic capital expenditure level, the proposed capital expenditures of approximately $1.00 billion for the two-year period through June 30, 2025 (the FTY and FPFTY) is not an extraordinary increase in the CapEx plan that would create pressure on financials and credit metrics. This does not support or justify PAWC's claim for a higher cost of equity.

Q. PLEASE CONTINUE.

A. Despite the historically consistent increase in capital investment as shown in the above table, PAWC has depicted a consistent financial result or increase in operating revenues, operating income, net income, and rate base as reported in its PUC Annual Reports, which is summarized in the table below (I&E Exhibit No. 2, Schedule 13, pp. 6-7):

Water Operations:

	Operating Revenue	Operating Income	Net Income
2018	$627.98 Mn.	$240.19 Mn.	$164.71 Mn.
2019	$626.14 Mn.	$231.68 Mn.	$159.99 Mn.
2020	$662.03 Mn.	$246.82 Mn.	$168.09 Mn.
2021	$686.62 Mn.	$278.70 Mn.	$197.29 Mn.
2022	$711.79 Mn.	$281.10 Mn.	$195.37 Mn.

Wastewater Operations:

	Operating Revenue	Operating Income	Net Income
2018	$61.23 Mn.	$24.32 Mn.	$24.82 Mn.
2019	$62.98 Mn.	$25.43 Mn.	$27.11 Mn.
2020	$71.03 Mn.	$28.18 Mn.	$29.31 Mn.
2021	$82.95 Mn.	$31.44 Mn.	$31.55 Mn.
2022	$106.61 Mn.	$40.54 Mn.	$41.14 Mn.

Total Company - Rate Base:

2018	2019	2020	2021	2022
$3,389 Mn.	$3,722 Mn.	$3,952 Mn.	$4,210 Mn.	$4,726 Mn.

Additionally, the parent company, AWK has consistently increased yearly dividend payments to its shareholders as shown in the table below,[20] which

[20] American Water - Stock Information - Dividend History (amwater.com) (accessed on January 10, 2023).

acknowledges steady and sustainable growth in the historic financial condition or strength of the parent company and the group as a whole:

Year	Dividend paid per stock	Year	Dividend paid per stock
2014	$1.21	2019	$1.96
2015	$1.33	2020	$2.15
2016	$1.47	2021	$2.36
2017	$1.62	2022	$2.57
2018	$1.78	2023	$2.78

AWK has a yearly target of 7% to 9% growth rate in the long-term EPS and dividend payment.[21]

Q. PLEASE DISCUSS MS. BULKLEY'S COMMENTS CONCERNING THE COMPANY'S DSIC.

A. Ms. Bulkley acknowledges the benefits of the DSIC to the Company when it comes to recovering the costs of repairing and replacing aging water and wastewater infrastructure (PAWC Statement No. 13, p. 50, lines 26-28). However, she opines that since each of the companies in her proxy group have infrastructure and capital recovery mechanisms, the presence of a DSIC and the Company's proposed Environmental Compliance Investment Charge recovery

[21] Q3 2023 Earnings & 2024 Outlook Call Presentation (q4cdn.com) p. 6 (accessed on January 10, 2023).

mechanism may not reduce PAWC's risk vis-à-vis that of the proxy group (PAWC Statement No. 13, p. 51, lines 8-11).

Q. WHAT IS YOUR RESPONSE TO MS. BULKLEY'S COMMENTS REGARDING THE COMPANY'S DSIC?

A. While the comparative risk to Ms. Bulkley's proxy group companies (water, gas, and electric) with different jurisdictions that have implemented the infrastructure and capital recovery mechanism may not change, the fact that the mechanisms, such as DSIC, FPFTY ratemaking, and the ability to file rate cases as needed are accessible to Pennsylvania's regulated utilities to reduce risk. Additionally, these mechanisms were designed to reduce regulatory lag and assist in timely cost recovery, not to replace rate case proceedings. Further, Ms. Bulkley notes that S&P ranked "Pennsylvania Above Average 2 since 2019 using a scale of 9 steps ranging from a low of Below Average to Above Average, which indicates that this ranking is based on a constructive regulatory climate, relying on forward test years, year-end rate base and reduction in regulatory lag" (PAWC Statement No. 13, p. 52, lines 10-13).

Q. SUMMARIZE THE COMPANY'S PROPOSAL REGARDING THE PROPOSED RDM.

A. Company witness Charles B. Rea (PAWC Statement No. 10, pp. 86-106) is the primary witness who discusses PAWC's RDM proposal as an alternative rate

design mechanism, while Ms. Bulkley provides an analysis of the implications on the Company's risk profile of accepting or denying the RDM proposal. As Mr. Rea claims in much greater detail, the ultimate purpose of the RDM is to more reliably recover the revenue requirement and associated fixed costs approved by the Commission in this case to stabilize revenue volatility and the associated risk in recovering fixed costs from year to year as revenues vary due to seasonal weather conditions and the ongoing trend of declining water usage by residential, commercial, and municipal customers (PAWC Statement No. 10, p. 86, lines 16-18 and p. 87, lines 13-15).

Q. DISCUSS MS. BULKLEY'S RISK CLAIMS REGARDING THE COMPANY'S PROPOSED RDM.

A. Ms. Bulkley argues that if water usage going forward is less than the levels set in this rate proceeding, the Company's revenues will be less than what is authorized as a result of this case, making it difficult to earn the authorized ROE (PAWC Statement No. 13, p. 53, lines 12-14). Ms. Bulkley provides an analysis in which she determines that 59 percent of the companies in her proxy group have implemented some form of a revenue decoupling mechanism (PAWC Exhibit No. 13-A, Schedule 9). She concludes that PAWC would be more comparable to the proxy group with the RDM (PAWC Statement No. 13, p. 54, lines 12-13). She states that the implementation of an RDM would not affect her recommended

ROE range considering the overall risk of PAWC and the proxy group companies (PAWC Statement No. 13, pp. 53 lines 15- 16).

Q. WHAT ARE YOUR COMMENTS REGARDING THE PROPOSED RDM AND ITS POTENTIAL IMPACT ON THE COMPANY'S RISK PROFILE?

A. I agree with the simple concept that a guaranteed revenue recovery mechanism reduces a company's overall business risk profile and protects it from financial loss caused due to revenue loss. However, as discussed above, PAWC already has access to and is currently taking advantage of risk reducing mechanisms such as the DSIC, the use of a FPFTY in base rate filings, and petitions to request deferral of extraordinary costs incurred, such as COVID-19 related deferrals for example, in order to cover the entire cost of doing business and reduce any regulatory lag.

Q. DOES MS. BULKLEY'S ANALYSIS HEAVILY RELY UPON THE INCLUSION OF GAS AND ELECTRIC UTILITIES TO SUPPORT THE CLAIM THAT 59% OF HER PROXY GROUP COMPANIES HAVE A REVENUE DECOUPLING MECHANISM?

A. Yes. Ms. Bulkley's analysis is extremely misleading as it included gas and electric utilities, which as discussed above, are dissimilar to water companies and should not be included in the proxy group. In the table below, I recreate Ms. Bulkley's Schedule 9 analysis and change it only by removing the gas and electric

utilities she identifies under "Utility Type," which results in the inclusion of only the companies she identifies as water utilities.

I&E MODIFIED PAWC EXHIBIT 13-A, SCHEDULE 9

COMPARISON OF PAWC AND PROXY GROUP COMPANIES
CAPITAL COST RECOVERY MECHANISMS

Company	State	Utility Type	Infrastructure Cost Recovery Mechanism	Future Test year	Revenue Stabilization or Decoupling
American States Water Co.					
	California	Water	Yes	Fully Forecast	Full
California Water Service Group					
	California	Water	Yes	Fully Forecast	Full
	Hawaii	Water	No	Fully Forecast	No
	New Mexico	Water	No	Historical	No
	Washington	Water	Yes	Historical	No
Essential Utilities, Inc.					
	Pennsylvania	Water	Yes	Fully Forecast	No
	Ohio	Water	Yes	Partially Forecast	No
	Illinois	Water	Yes	Fully Forecast	Full
	Texas	Water	Yes	Historical	No
	New Jersey	Water	Yes	Partially Forecast	No
	North Carolina	Water	Yes	Historical	No
	Indiana	Water	Yes	Fully Forecast	No
	Virginia	Water	Yes	Historical	No

			No 4	Fully FC 10	Partial 0
				Partially FC 3	FRP 0
					SFV 0
					No 18
			Yes 82.60%	**Forecast 56.52%**	**Full 21.74%**
PAWC	**Pennsylvania**	**Water**	**Yes**	**Fully Forecast**	**Proposing**

This analysis illustrates that less than 22% of Ms. Bulkley's proxy group have implemented some type of revenue decoupling mechanism. Ms. Bulkley's claim of 59% of utilities (comprised of gas, electric, and water) does not support PAWC's proposed RDM when compared with the analysis of the more comparable water utilities in the proxy group as shown in the above table.

Q. IN YOUR OPINION, DOES PAWC'S CURRENT ACCESS TO A WIDE VARIETY OF REGULATORY RISK-REDUCING MEASURES WEIGH AGAINST ITS ALLEGED NEED FOR AN RDM AND ITS REQUESTED ROE?

A. Yes. PAWC already has use of a DSIC, an FPFTY for ratemaking, the discretionary ability to file rate cases, and the ability to file petitions for deferral of extraordinary costs. In my view, to permit it to add both a declining water usage adjustment as well as an additional revenue decoupling mechanism such as the proposed RDM as Mr. Rea recommends (PAWC Statement No. 10, p. 105 lines 12-20 and p. 106, lines 1-5), all while requesting an extremely high ROE, would be unreasonable and harmful to ratepayers and conservation efforts. To add additional mechanisms for risk reduction while requesting an ROE above that which any comparable utility has received as cited previously herein is simply rapacious. Investors expect higher risk investments to yield higher returns, while the inverse is also true, that lower risk investments typically require lower returns, and regulated utilities are inherently lower risk investments. However, in this proceeding, the Company is effectively

seeking to eliminate virtually all business risks all while claiming an excessively high ROE.

Q. WHAT IS I&E'S RECOMMENDATION REGARDING THE COMPANY'S RDM PROPOSAL?

A. I&E witness Ethan Cline (I&E Statement No. 4) addresses the proposed RDM in detail and presents I&E's recommendation that the Commission deny the Company's RDM proposal.

Q. DISCUSS MS. BULKLEY'S CLAIMED RISKS ASSOCIATED WITH ENVIRONMENTAL AND WATER QUALITY REGULATION.

A. Ms. Bulkley explains that water utilities are subject to a complex array of regulations at the federal, state, and river basin commission levels with respect to water quantity, water quality, and other environmental aspects of their facilities and operations (PAWC Statement No. 13, p. 54, lines 19-21). She defers to Company witness Jim Runzer (PAWC Statement No. 3) who provides a detailed discussion of the environmental and regulatory risks facing water and wastewater utilities.

Q. SUMMARIZE MR. RUNZER'S TESTIMONY REGARDING THE ENVIRONMENTAL AND REGULATORY RISKS FACING WATER AND WASTEWATER UTILITIES.

A. Mr. Runzer discusses PAWC's operational performance by implementing various operating measures and initiatives for water quality improvement and source water monitoring efforts, commitment to safety, state-of-the-art technology, advanced metering infrastructure, etc. to provide safe and reliable services to its customers (PAWC Statement No. 3, p. 3, lines 8-17). All these business operation-related measures and initiatives enable the Company to remain in compliance with the federal, state, and local environmental and regulatory requirements.

Q. DO YOU AGREE WITH MS BULKLEY'S CLAIM REGARDING RISKS ASSOCIATED WITH ENVIRONMENTAL AND WATER QUALITY REGULATIONS AND THE PLANNED CAPITAL INVESTMENT PROGRAM?

A. No. I accept that PAWC may be subject to environmental risks and challenges, however, as discussed by Mr. Runzer, PAWC is effectively managing these challenges by implementing various operating measures and initiatives. I disagree that those challenges are unique to PAWC as necessary to support a risk adjustment. All water utilities providing water and/or wastewater services are required and expected to comply with all applicable statutory (federal, state, and local) rules and regulations including environmental and water quality-related

regulations for doing a business within the framework of the law. The arguments made by Ms. Bulkley concerning environmental and water quality regulations have an impact not only on PAWC, but they are industry-wide realities. Since all regulated water and wastewater utility companies must deal with these regulations, no one water company in Ms. Bulkley's proxy group is riskier than another in this respect. Ms. Bulkley herself acknowledges that all the water utilities in her proxy group are required to comply with the environmental and water quality regulations at the federal level and also required to comply with the state and local regulations (I&E Exhibit No. 2, Schedule 13, p. 8). Further, operating costs associated with providing safe and reliable water and wastewater services in compliance with regulations are recoverable, eliminating a vast majority of the risks and concerns regarding this issue.

Q. IS THERE A CAUSE FOR CONCERN REGARDING THE IMPACT OF RISK ASSOCIATED WITH ENVIRONMENTAL AND WATER QUALITY REGULATIONS ON PAWC'S COST OF EQUITY AND CREDIT QUALITY?

A. No. Ms. Bulkley points out that the significant environmental risk factors faced by PAWC and the magnitude of the capital program that the Company has planned to maintain compliance, support an ROE above the proxy group mean and median (PAWC Statement No. 13, p. 57, lines 4-7). As discussed above, environmental risk factors faced by PAWC are industry-wide realities and they are

normal business risk factors managed by all water utilities in the proxy group. Therefore, Ms. Bulkley's claim to support her proxy group mean and median ROE highlighting environmental risk factors is not logical or appropriate.

Additionally, these risk factors did not impact the Company's current credit ratings of "A3" with a stable outlook from Moody's Investors Service and "A" with a stable outlook from S&P Global as discussed above. These credit ratings are considered investment grade with low credit risk. In the most recent Moody's credit opinion of January 25, 2023, Moody's summarizes PAWC's business risks as follow (PAWC filing, FR VII, Attachment 1 Confidential, pdf p. 539): **[BEGIN PROPRIETARY]**

> PAWC credit profile benefits from its low business risk as a regulated water utility, strong cost recovery features provided by legislation, supportive regulatory decisions from the Pennsylvania Public Utilities Commission (PUC) and equity and liquidity support from its large, diversified parent company, American Water Works, Inc. (Baa1 stable). These strengths have supported PAWC's record of consistent cash flow generation and strong financial metrics including an FFO to net debt ratio of about 20%. We expect the utility to sustain stable credit metrics over the next several years.**[END PROPRIETARY]**

Q. DO YOU AGREE WITH MS. BULKLEY'S DISCUSSION REGARDING THE POTENTIAL IMPACT OF SHARE ISSUE FLOTATION COSTS ON THE ROE?

A. No. Generally, the flotation costs of the parent company are accounted for and recovered as O&M expenses or amortized over a certain period on the books of

the issuer company. It is inappropriate to present the potential impact of this cost for seeking support to the claimed ROE in this proceeding.

MANAGEMENT PERFORMANCE

Q. WHAT IS MS. BULKLEY'S CLAIM REGARDING ADDITIONAL POINTS TO PAWC'S ROE FOR MANAGEMENT PERFORMANCE?

A. Ms. Bulkley refers to Sections 523(a) and (b) that lists efficiency, effectiveness, and adequacy of service factors as well as the management effectiveness and operating efficiency that the Commission shall consider in evaluating the performance of water and wastewater utilities. She also refers to 52 Pa. Code § 69.711, which outlines the Commission's acquisition incentives, including rate of return premiums, acquisition adjustments, deferral of acquisition improvement costs and plant improvement surcharges to encourage the acquisition of troubled water and wastewater systems by viable utilities (PAWC Statement No. 13, p. 57, lines 11-18). She largely refers to PAWC witness Ashley Everette's testimony (PAWC Statement No. 1) to support the Company's management performance claims. Ultimately, Ms. Bulkley suggests that a reasonable range of ROE estimates for PAWC is from 10.00% to 11.25% and specifically recommends an ROE of 10.95%, which she acknowledges is at the high end of the reasonable range to account for the Company's claimed excellent management performance (PAWC Statement No. 13, p. 59, lines 3-6).

Ms. Everette supports Ms. Bulkley's recommended ROE of 10.95% - at the upper end of her ROE estimated range (10.00% - 11.25%) in recognition of claimed superior management performance (PAWC Statement No. 1, p. 33. lines 9-12). Further, she opines that if the Commission were to approve a rate of ROE that is lower than the upper end of Ms. Bulkley's recommended range, it should add (for a management performance reward) no less than 25 basis points to its market-determined rate of return (PAWC Statement No. 1, p. 33. lines 12-15).

Q. WHAT EVIDENCE DOES THE COMPANY PRESENT TO SUPPORT ITS 25 BASIS POINT ADJUSTMENT TO ITS ROE FOR MANAGEMENT PERFORMANCE?

A. Like Ms. Bulkley, Ms. Everette also refers to 52 Pa. Code § 69.711 as well as 66 Pa C.S.A. § 523, which dictates the Commission "shall consider" "the efficiency, effectiveness, and adequacy of service of each utility when determining just and reasonable rates" to support additional basis points for exemplary management performance. Ms. Everette identifies eight specific factors that she claims demonstrates the Company's "exemplary management performance." These factors include the Company's dedication to assisting its low-income and payment-troubled customers, environmental efforts and a commitment to water quality, strong safety performance, the Company's commitment to operational and water efficiency, significant infrastructure investment, community engagement and consumer education initiatives, efforts to eliminate problems of small,

troubled, and nonviable water and wastewater systems through acquisitions, and efforts to extend water service to untapped service areas (PAWC Statement No. 1, p. 33, lines 18-22 and p. 34, lines 1-6).

Q. DO YOU AGREE WITH THE COMPANY'S CLAIMS REGARDING AN ROE ADJUSTMENT FOR MANAGEMENT PERFORMANCE?

A. No. First, many of the topics presented by the Company witnesses fall within the categories of reliability, customer service obligation, and safety that are required of every public utility company under 66 Pa C.S.A. §1501. The Company passes capital expenditures (investments) for infrastructure improvements onto ratepayers via base rates and utilizes a DSIC mechanism for capital expenditure recovery. Further, if the Company's operational efficiency results in controlling operating and maintenance costs, those savings should flow through to ratepayers and/or investors. These savings would likely be offset by the addition of basis points for management performance as ratepayers would have to fund the additional costs. This defeats the purpose of any cost cutting measures to benefit ratepayers. The Company has burdened ratepayers with three substantial rate increases starting on January 1, 2018, caused by three consecutive base rate cases filed on April 28, 2017, April 29, 2020, and April 29, 2022, and now, this fourth-rate case filed on November 8, 2023 within 18 months of the 2022 base rate case, in addition to the DSIC and other surcharges. Regarding the Company's bill payment assistance programs or initiatives for the low-income and payment-troubled customers, it is

important to note that the cost of such programs are largely funded by residential customers and government funded programs. For example, in this case the Company claimed a $2,864,700 expense to fund its recent Arrearage Management Plan to provide qualifying low-income customers with $25 of arrearage forgiveness per month (PAWC Statement No. 1, p. 16, lines 1 and 16-17).

Q. DO YOU HAVE ANY OTHER POINTS TO SUPPORT YOUR RECOMMENDED DISALLOWANCE OF THE PROPOSED ROE ADJUSTMENT FOR A MANAGEMENT PERFORMANCE AWARD?

A. Yes. Further to my discussion above, I refer to the Company's most recent Management and Operations Audit Report, prepared by the Commission's Bureau of Audits, issued in October 2023, which illustrates the following summary of findings (Exhibit I-1, page 4 of the report):[22]

[22] Management and Operations Audit of Pennsylvania-American Water Company, prepared by The Pennsylvania Public Utility Commission, Bureau of Audits at Docket No. D-2022-3035217, October 2023.

Functional Area	Meets Expected Performance Level	Minor Improvement Necessary	Moderate Improvement Necessary	Significant Improvement Necessary	Major Improvement Necessary
Executive Management and Organizational Structure		X			
Corporate Governance		X			
Cost Allocations and Affiliated Interests			X		
Financial Management		X			
Water Operations			X		
Wastewater Operations		X			
Emergency Preparedness			X		
Purchasing and Materials Management		X			
Customer Service			X		
Information Technology		X			
Fleet Management		X			
Human Resources and Diversity		X			

It is important to note that not a single functional area out of the twelve functional areas meets the expected level of performance. All twelve areas require some level of improvement. The audit report contains identifiable, potential quantifiable cost savings of approximately $3.13 million in annual savings and $4.00 million in one-time savings (summarized on Exhibit I-2, page 5 of the report) from effective implementation of the recommendations. Notably, the audit report

recommendations identified operational and service improvements for customers as listed below:

- Reducing unaccounted-for-water (UFW) below the Commission's 20% threshold and reporting UFW correctly.
- Reducing line hits to the Company's underground facilities.
- Improving physical security for control rooms and SCADA control systems.
- Improving customer service performance to pre-pandemic levels at a minimum.
- Continuing outreach efforts to payment troubled customers and leveraging low-income resources to help reduce the level of outstanding customer balances.

PAWC's implementation plan[23] accepts twenty-three of the recommendations and partially agrees with the remaining eight recommendations detailed in the audit report.

With the level of improvement that PAWC requires, and other topics discussed above, I do not believe that PAWC's claim for an exemplary management performance award of 25 basis points in ROE is justified or warranted in the interest of ratepayers.

[23] PAWC Implementation Plan in response to the 2022-23 Focused Management and Operations Audit Report filed with the Commission at Docket No. D-2022-3035217.

Q. ARE YOU AWARE OF ANY COMPANIES IN PENNSYLVANIA THAT HAVE RECEIVED ADDITIONAL BASIS POINTS IN RECOGNITION OF MANAGEMENT PERFORMANCE IN THE LAST FIFTEEN YEARS?

A. Yes. Most recently in one base rate case, the Commission awarded Aqua an addition of 25 basis points for its management performance efforts.[24] However, it is important to recognize that this addition was based specifically on the record created in the Aqua case for it rescuing troubled water and wastewater systems at the Commission's request. The Commission stated: [25]

> We specifically recognize Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement. Aqua has often provided this emergency aid on short notice and at the request of the Commission or other parties to protect the public from egregious health and safety threats and to protect the Commonwealth's drinking water resources from catastrophic damage.

Q. DOES THE COMMISSION'S PAST ISSUANCE OF ADDITIONAL EQUITY POINTS RECOGNIZING MANAGEMENT PERFORMANCE MEAN THAT PAWC SHOULD ALSO RECEIVE AN ADJUSTED RETURN ON EQUITY?

A. No. The issuance of equity points to recognize management performance should be done on a case-by-case basis and based on the unique facts of each case.

---

[24] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 168-173 (Order entered May 16, 2022).

[25] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 169 (Order entered May 16, 2022).

Notably, in the recommended decision for the Aqua case, Administrative Law Judge Mary D. Long pointed out that while Aqua had in fact acquired troubled water systems, it had also acquired non-troubled water and wastewater systems with the expectation that existing customers help pay the costs to serve the newly acquired customers.[26]

In fact, in this very proceeding, PAWC is proposing to allocate approximately $71 million of wastewater service costs including for the acquired wastewater systems, which is approximately 7% of the FPFTY total proposed water revenue of $1,023,354,270 to its current water operation customers (PAWC Statement No. 1, p. 19, lines 20-21 and p. 20, lines 1 and 9, and PAWC filing Exhibit No. 3-A, p. A, Combined Water and Wastewater Revenue Requirement-Summary). The Company is causing unwarranted financial harm to current customers by forcing them to subsidize services they do not and likely will not ever use. I&E witness Kubas (I&E Statement No. 3) discusses these subsidies and their impact on rates in greater detail.

Additionally, it must be made clear that companies are made whole for their acquisitions and receiverships of small nonviable water and wastewater systems. For example, in the orders of two acquisition cases under 66 Pa. C. S. § 529, the Company references, Delaware Sewer Company and Indian Springs Water Company (PAWC Statement No. 1, p. 42, lines 26-27 and p. 43, lines 3-5),

[26] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, Recommended Decision, pp. 79-80 (February 18, 2022).

where the Commission confirmed that PAWC was able to recover all costs associated with these acquisitions. In the Delaware Sewer Company order, the Commission recognized that PAWC would be made whole:[27]

> That Pennsylvania-American Water Company–Wastewater Operations is permitted to establish a regulatory asset for any ineligible property in order to claim appropriate ratemaking and revenue recovery within a future base rate proceeding.

Additionally, in the Indian Springs Water Company order, the Commission recognized that PAWC would recoup full reimbursement:[28]

> That if Pennsylvania-American Water Company does not receive full reimbursement for all costs of receivership from The Indian Springs Water Company for any reason, including but not limited to this Settlement not being approved by the Commission or the Sale not closing, Pennsylvania-American Water Company may claim any unreimbursed costs in a subsequent base rate case. All Parties to the Settlement reserve their respective rights to challenge a claim for recovery of such costs.

Q. ASIDE FROM BEING ABLE TO RECOVER COSTS OF ACQUIRING TROUBLED SYSTEMS, IS PAWC ALSO REWARDED ON TOP OF JUST COST RECOUPMENT?

A. Yes. Not only is PAWC able to recover all its acquisition costs, but it also earns a return on the associated amounts put into the rate base for both troubled and non-troubled acquired systems. In fact, the benefit of the return PAWC earns on 66 Pa. C.S. § 1329 (Section 1329) acquisitions is significantly compounded when

[27] *Pa. PUC v. Delaware Sewer Company* Docket No. I-2016-2526085, p. 26 (Order entered March 26, 2020).
[28] *Pa. PUC v. Indian Springs Water Company,* Docket No. M-2019-3011972, p. 51 (Order entered October 7, 2021).

considering the continually increasing rate base is determined on a fair market value basis, which is significantly higher than the book value of the acquired system assets as of the date of acquisition. A rate base amount determined at fair market value rather than on book value (net of depreciation) of the acquired system assets adequately compensates for the investment risk of the acquiring company. This enhancement in return due to Section 1329 acquisitions also benefits the Company's shareholders in the end. Lastly, besides the benefit of earning a return on the inflated rate base value of the acquired system, PAWC is expanding its service area (adding to its customer count) and forever revenue stream, strengthening its market monopoly and benefits from combined (water and wastewater) business synergy in the certificated service areas, which results in an improvement or enhancement in the financial performance and balance sheet.

Q. FOR PURPOSES OF ILLUSTRATION, CAN YOU QUANTIFY THE RATE OF RETURN THAT PAWC IS ESTIMATED TO EARN AS A RESULT OF THE LATEST SECTION 1329 TRANSACTIONS INCLUDED IN THIS RATE CASE?

A. Yes. The chart below illustrates the dollar return assuming the Company's claimed rate of return were applied to the ratemaking rate base for the wastewater systems of Butler Area Sewer Authority and The Borough of Brentwood yet to be closed under Section 1329:

PENNSYLVANIA-AMERICAN WATER COMPANY	
Wastewater Systems Ratemaking Rate Base ($231,536,917 + $22,053,946)*	$253,590,863
FPFTY Claimed Overall Rate of Return for Wastewater Systems**	7.94%
Total Return on Wastewater under Acquisitions ($253,590,863 x 7.94%)	$20,135,115
Gross Revenue Conversion Factor***	1.4011
Total Impact to Ratepayers ($20,135,115 x 1.4011)	**$28,211,310**

* PAWC Exhibit No. 3A, pp. 145 and 178.
** PAWC Exhibit No. 13-A, Schedule 13.
*** I&E Exhibit No. 2, Schedule 11.

The above chart illustrates that if the Company's claimed rate of return for the above two wastewater systems were achieved, PAWC would earn a $20,135,115 return on these Section 1329 acquisitions. The Company may be well-intentioned for the acquisitions, but it cannot be ignored that it is earning a meaningful return on its acquisitions that is to be paid by all PAWC customers. PAWC binds ratepayers to fund all the acquisitions, so compelling ratepayers to reward them yet again, in the name of management performance, is inappropriate, unjust, and unreasonable.

Q. BASED ON THE COMPANY'S CLAIMED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 25 BASIS POINTS FOR THE CONSIDERATION OF MANAGEMENT PERFORMANCE TO THE COST OF EQUITY?

A. The example below illustrates the impact of 25 additional basis points to the

Company's cost of equity for the consideration of management performance if applied to the Company's total as-filed rate base and combined capital structure:

PENNSYLVANIA-AMERICAN WATER COMPANY	
FPFTY Claimed Equity Percentage of Capital Structure*	55.30%
Additional Basis Points to Calculated Cost of Equity	25
FPFTY Claimed Rate Base**	$6,096,173,421
Impact Prior to Gross Up (0.5530 x 0.0025 x $6,096,173,421)	$8,427,960
Gross Revenue Conversion Factor***	1.4011
Total Impact to Ratepayers ($8,427,960 x 1.4011)	**$11,808,415**

* PAWC Exhibit No. 13-A, Schedule 11 (Total Company).
** PAWC Exhibit No. 3-A, Summary of Rate Base, pp. 25, 96, 145, 178, and 217 and PAWC Statement No. 4, p. 4 (Total Company).
*** I&E Exhibit No. 2, Schedule 11, p. 2.

In this example, an addition of 25 basis points to the cost of equity in consideration of management performance would force ratepayers to fund an unwarranted additional amount of $11,808,415 annually to cover the increase of the inflated rate of return along with the associated impact resulting from increases to income taxes, uncollectibles, and assessments.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE CONSIDERATION OF 25 ADDITIONAL BASIS POINTS FOR PAWC'S MANAGEMENT PERFORMANCE?

A. I am aware that under 66 Pa C.S.A. §523 the Commission has authority to *consider* a utility's performance, however, it is not mandatory that the Commission grant additional basis points to the ROE. Ultimately, for any

company, true management effectiveness is earning a higher return through efficient use of resources and cost-cutting measures. The greater net income resulting from growth, cost savings, and true efficiency in management and operations is available to be passed onto shareholders. I do not believe that PAWC should be granted additional basis points for doing what it is required to do under 66 Pa C.S.A. §1501 in order to provide adequate, efficient, safe, and reliable service.

Yet, even putting aside cost savings and efficiency benefits for argument's sake, as I explained above, ratepayers are already paying PAWC a return for all closed water and wastewater system acquisitions under Section 1329. As I demonstrated above, regarding the acquisitions of nonviable water and wastewater systems, the Company is not only made whole, but it makes a fair profit from these acquisitions. On top of this, PAWC has also made the management decision to bind ratepayers to fund Section 1329 acquisitions as part of this rate case. I am certainly not opposed to the Company making a fair return, but it is disingenuous to imply that the Company is making acquisitions consistently since the implementation of Act 12 of 2016 (Section 1329) out of goodwill, when in reality, it is simply forcing existing customers to fund them to increase its rate base and earn a larger return. The Company is already fairly compensated for these acquisitions so additional basis points to the cost of equity are unreasonable and unnecessary. Per American Water Work's investor presentation on November 2,

2023, PAWC has entered into twelve acquisition agreements as of September 2023,[29] which would impact customers' rates in the future.

For the reasons previously discussed and the financial impact on ratepayers as illustrated above, I recommend that any addition of basis points to the cost of equity for management performance be disallowed.

OVERALL RATE OF RETURN RECOMMENDATION

Q. WHAT IS THE COMPANY'S PROPOSED COST OF EQUITY AND OVERALL RATES OF RETURN?

A. The Company recommends a cost of equity of 10.95% for both water and wastewater service and overall rates of return of 8.22% and 7.94% respectively.

Q. WHAT IS I&E'S RECOMMENDED COST OF EQUITY AND OVERALL RATES OF RETURN?

A. I&E Exhibit No. 2, Schedule 1, shows the calculation of an appropriate cost of equity for PAWC to be 8.45% for both water and wastewater services and overall rates of return of 6.82% and 6.62% respectively.

[29] Q3 2023 Earnings & 2024 Outlook Call Presentation (q4cdn.com) p. 15 (accessed on January 10, 2023).

FINAL COMMENTS

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S PROPOSED RETURN ON EQUITY?

A. Yes. First, when asked, Ms. Bulkley indicated that she is not aware of any Commission-authorized ROEs of 10.95% or higher for water utilities throughout the United States in the last two years despite the high interest rate environment since March 2022 (I&E Exhibit No. 2, Schedule 14).

Additionally, the Company's requested 10.95% return on common equity is 130 basis points (1.30%) higher than the Commission's latest approved DSIC incentive ROE of 9.65% (Q3 2023 Quarterly Earnings Summary Report)[30] for water utility companies. The DSIC rate is designed to encourage its use and to incentivize accelerated pipeline replacement and infrastructure upgrades to bring the existing aging infrastructure closer to meeting safety and reliability requirements in between base rate filings. Additionally, it is my understanding that the DSIC rate establishes a benchmark above which a utility company is considered "overearning." As such, the DSIC rate does not serve as a proper measurement of a subject utility's cost of equity in a rate case proceeding. To suggest the cost of equity must be at or above the DSIC rate in this base rate proceeding is inappropriate and not in the public interest.

[30] *PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2023,* approved at Public Meeting on January 18, 2024, at Docket No. M-2023-3044811.

Finally, considering the impact PAWC's claimed high-end record ROE of 10.95% would have on rates, I believe it is important not to overburden ratepayers. As illustrated in the various charts above, any additional basis points beyond the I&E recommended ROE of 8.45% based on a DCF (market-determined) result are unnecessary and will put an enormous burden on ratepayers.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

D. C. Patel
Professional and Educational Background

EXPERIENCE:

- Pennsylvania Public Utility Commission, Harrisburg, Pennsylvania
  June 2015 to present
  Fixed Utility Financial Analyst, Bureau of Investigation and Enforcement
- Pennsylvania Insurance Department, Harrisburg, Pennsylvania
  March 2013 - June 2015
  Insurance Company Financial Analyst, Bureau of Company Licensing & Financial Analysis

Bureau of Investigation & Enforcement Set 1

I&E RR-020-D

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Identify and provide the calculation for the gross revenue conversion factor separately for water, wastewater, and total Company for the HTY, FTY, and FPFTY to account for the need to gross-up revenue for taxes, uncollectibles, assessments, etc.

Response:

The Company does not employ a gross revenue conversion factor in the calculation of its revenue requirement. Please see I&E-RR-020-D_Attachment which illustrates a gross revenue conversion factor based on the gross-up revenue components of the revenue requirement for the FPFTY.

ECONOMY | CENTRAL BANKING

Fed Begins Pivot Toward Lowering Rates as Inflation Declines

Officials don't rule out further hikes while penciling in three rate cuts in 2024

By Nick Timiraos Follow

Updated Dec. 13, 2023 6:32 pm ET

WASHINGTON—Slowing inflation prompted Federal Reserve Chair Jerome Powell to pivot away from raising interest rates and toward considering when to cut them, igniting a rally on Wall Street.

The Fed held its benchmark federal-funds rate steady at a 22-year high on Wednesday and offered every reason to think that its most recent increase this past July probably marked the end of the most aggressive cycle of hikes in four decades.

At a press conference, Powell focused instead on the risk of causing unnecessary harm to the economy by leaving rates too high as inflation falls. "We're aware of the risk that we would hang on too long," he said. "We're very focused on not making that mistake."

All three major stock indexes climbed, with the Dow industrials up 512 points or 1.4% to 37090, a record close. Yields on the 10-year Treasury note declined 0.173 percentage point to 4.032%, the lowest level since August.

Officially, the Fed's policy statement indicated policy makers left the door open to raising rates again. "It is far too early to declare victory, and there are certainly risks," Powell said.

But Powell's comments made the carefully crafted policy communiqué feel stale less than an hour after it was released by suggesting officials had turned their attention to rate cuts. "There's a general expectation that this will be a topic for us, looking ahead. That's really what happened in today's meeting," he said.

Powell's remarks, along with new projections showing Fed officials anticipated three rate cuts next year, marked a notable U-turn. For more than a year, he had warned that they would raise rates as much as needed to lower inflation even if that triggered a recession.

The comment about rate cuts was surprising because just two weeks ago during an appearance at Spelman College in Atlanta, Powell said it was too soon to speculate about when lower rates might be appropriate.

The Federal Reserve, led by Chair Jerome Powell, has held its benchmark rate steady at three consecutive meetings. PHOTO: BRENDAN SMIALOWSKI/AGENCE FRANCE-PRESSE/GETTY IMAGES

"Powell played Santa Claus early," said Diane Swonk, chief economist at KPMG. "It was a 180-degree shift, right there."

Powell indicated officials were turning their attention to rate cuts because inflation has declined much faster than they expected. In their latest projections, they expected core prices, which exclude volatile food and energy items, to rise 3.2% this quarter from a year ago, down from their September projection of 3.7%. They see core inflation of 2.4% at the end of next year, down from their September expectation of 2.6%.

Government data released Wednesday morning suggest that core prices registered a very mild rise in November as measured by the

Fed's preferred inflation gauge, which will be released by the Commerce Department later this month. Wall Street forecasters said that could put core inflation on track to reach or even dip below 2% on a six-month annualized basis, and it could drop the 12-month rate to 3.1%. The Fed targets 2% annual inflation.

"I welcome the progress," Powell said. "We just need to see more."

Powell said it was too soon to say whether the last stretch of inflation reduction would prove harder than the ground covered so far. "We kind of assume that it will get harder from here, but so far, it hasn't," he said.

With Wednesday's decision, the Fed has held its fed-funds rate steady at three consecutive policy meetings in a range between 5.25% and 5.5%.

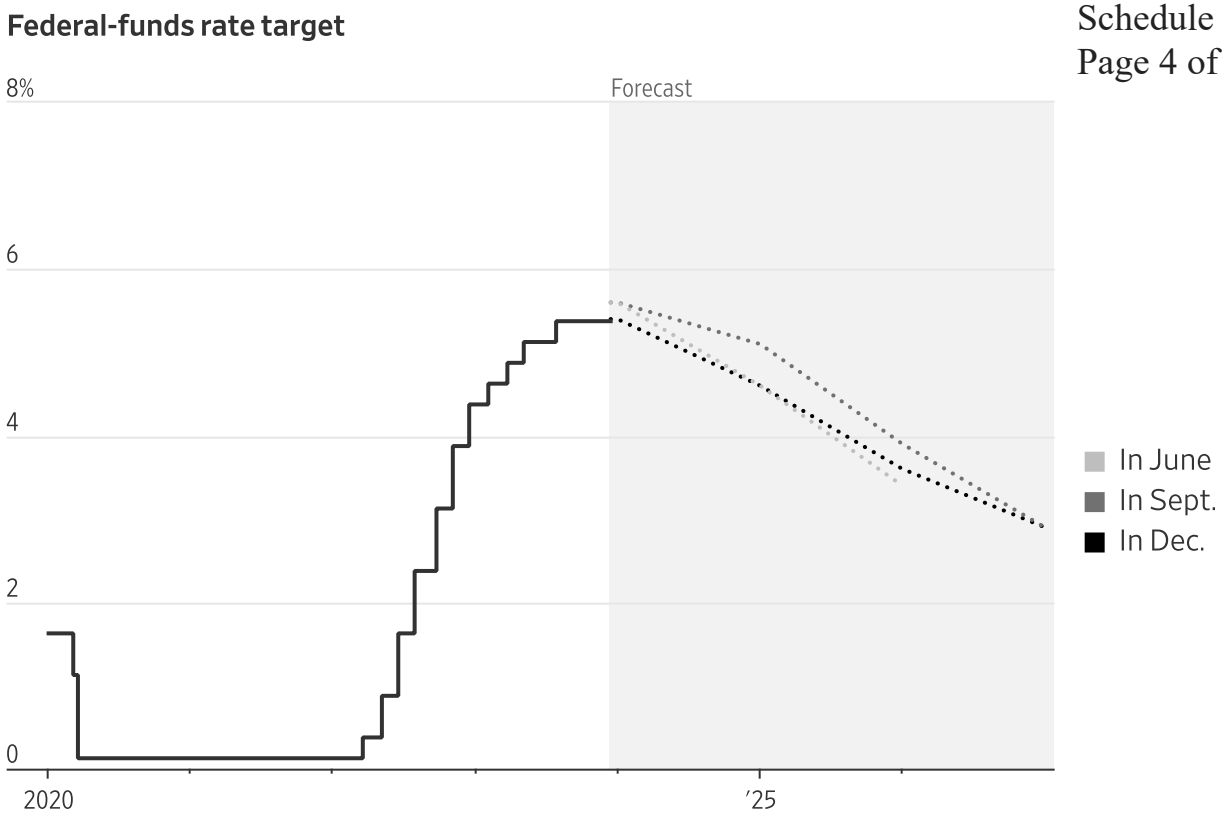
In September, officials had projected one more hike this year followed by two cuts next year, taking the fed-funds rate to around 5.1%. On Wednesday, officials projected they would lower it to around 4.6% by the end of 2024, the equivalent of three quarter-point reductions from the current level.

Investors in interest-rate futures markets dialed up bets that the Fed would begin cutting rates in March, placing a roughly 80% probability of lower rates, according to CME Group.

The U.S. economic outlook has brightened in recent months because inflation and wage growth are slowing. That would give the Fed more room to lower rates rapidly if the economy weakens more than officials expect, and it could open the door to cuts even if the expansion doesn't stall.

One year ago, many economists anticipated that Fed officials would have to raise rates to levels that would create enough slack—such as unemployed workers and idled factories—to significantly slow inflation. But healed supply chains and an influx of workers into the labor force are curbing wage and price increases without causing broad economic weakness.

“This has worked out beautifully. Things are going very well from their perspective,” said William Dudley, a former president of the New York Fed.

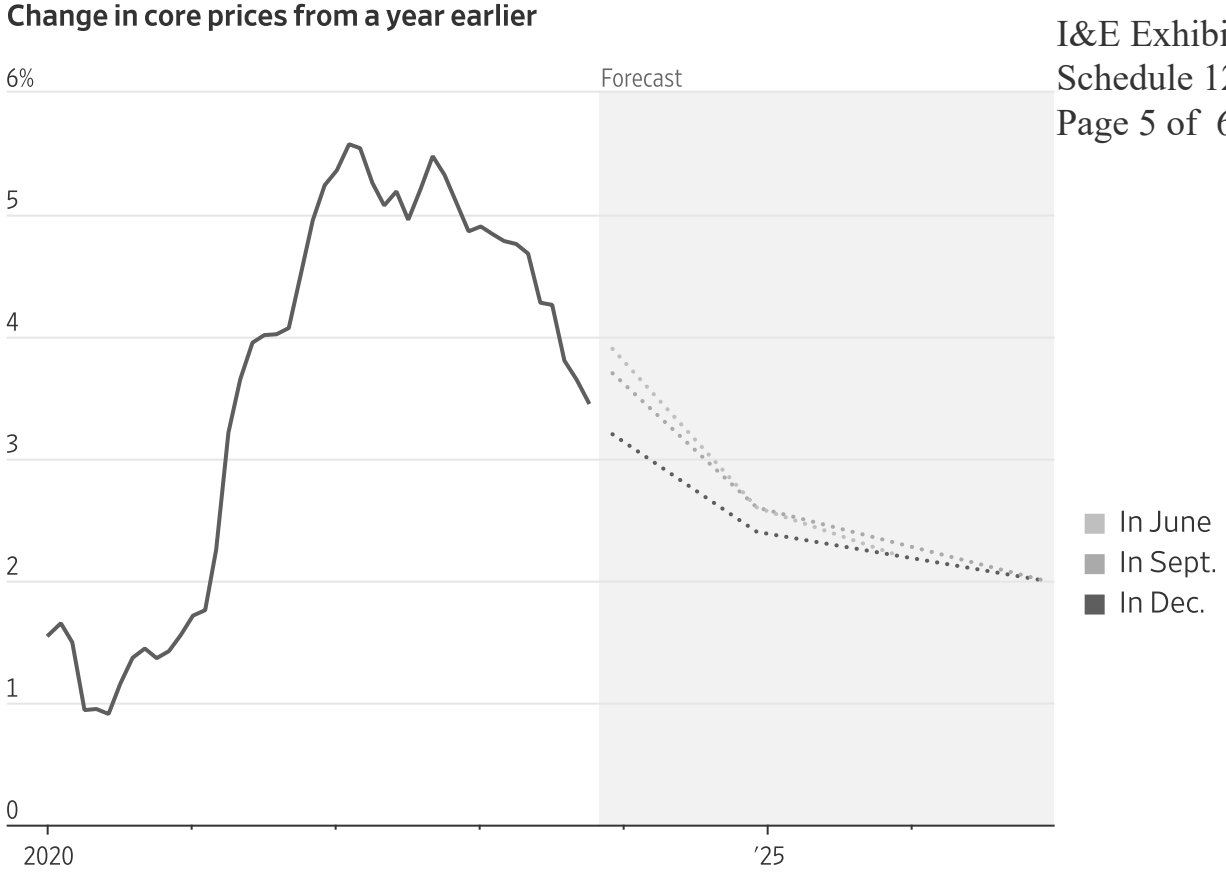


Notes: Midpoint of range; forecasts are the median value projected at the end of each year
Source: Federal Reserve

The labor market has been cooling but remains solid. The unemployment rate ticked down to 3.7% last month from 3.9% in October, and private-sector employers have added an average of 130,000 jobs a month over the past six months, down from 228,000 during the six months before that.

Powell repeated his view that officials could lower rates next year simply because inflation is well on its way to their 2% target. Holding rates steady as inflation falls would lead inflation-adjusted or “real” rates to rise, which the Fed doesn’t want. Officials could lower nominal rates simply to prevent real interest rates from turning too tight.

“You wouldn’t wait to get to 2% [inflation] to cut rates,” Powell said. “It would be too late. You’d want to be reducing” the amount of “restriction on the economy well before you get to 2%.”



Notes: Seasonally adjusted personal consumption expenditure prices excluding food and energy costs; forecasts are the median value projected at the end of each year
Source: Commerce Department (actual), Federal Reserve (forecast)

Still, officials don't want a premature declaration of victory over inflation to cause market rallies that might make it harder to sustain the slower economic growth they believe necessary to conquer inflation.

Before cutting rates, "you'd want to be highly confident that you were going to be able to pull off" maintaining inflation around 2%, said Dudley. "Things are going to be very tricky this coming year. This is going to be more art than science."

Swonk said Powell's comments on Wednesday suggested officials were comfortable with some easing in financial conditions now after a bond-market selloff this fall had pushed up a range of borrowing costs for auto loans, mortgages and business debt.

"They clearly don't want to look like they are the enemy of growth with inflation coming down," she said. "Financial conditions easing are going to stimulate the economy enough to slow down the deceleration of inflation, and I think the Fed is comfortable with that."

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Bureau of Investigation & Enforcement Set 1

I&E RR-001-D

Responsible Witness: Ann E. Bulkley, Principal, The Brattle Group

Question:

Reference PAWC Statement No. 13, p. 27, lines 12-20. State whether Ms. Bulkley believes that water and wastewater utilities face similar operating and financial risks including bypass via competition and alternative energy sources such as propane, solar, wind, and the creation of micro-grids as do electric and gas utilities. If so, please explain.

Response:

As discussed on page 27 of Ms. Bulkley's direct testimony, as a result of the consolidation in the water utility industry, a small number of water companies were available to use in the proxy group that met certain screening criteria to be risk-comparable to PAWC. In applying these screening criteria, Ms. Bulkley has developed a proxy group of companies, the operations of which are largely regulated utility operations that are investment grade and meet the criteria necessary to develop the traditional ROE estimation methodologies.

Ms. Bulkley recognizes no two companies have identical risk profiles and does not attempt to address each specific risk factor faced by each of the regulated companies in the proxy group. It may be easier for some customers to install a solar panel or procure alternative electric energy supply than to establish alternative water or wastewater service, but a possible lower bypass risk for one type of utility service may be outweighed by a more substantial risk factor common to water and wastewater utilities. Further, as discussed in Ms. Bulkley's direct testimony, it is recognized that each of the industries is facing similar risks related to inflation, higher interest rates and regulatory lag and cost recovery related to capital investment, each of which has been noted by the credit rating agencies for utilities generally.

Ms. Bulkley recognizes that there are trade-offs in establishing a sample that is of sufficient size to produce a meaningful range of estimated returns to be relied upon in setting the ROE for PAWC and believes that her proxy group is reasonably risk-comparable to PAWC to achieve that objective.

OCA 03-010

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Please provide the Company's annual figures for the following items over the past 10 years and the source of such information:

a. Total load
b. Total customers
c. Total revenue
d. Operating income
e. Net income
f. Rate base

Response:

a. Not Applicable. There is no "load" for a Water or Wastewater system.

b-f. Please refer to OCA 03-010_Attachment.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Bureau of Investigation & Enforcement Set 1

I&E RR-006-D

Responsible Witness: Ann E. Bulkley, Principal, The Brattle Group

Question:

Reference PAWC Statement No. 13, p. 26, line 15 concerning the proxy group. State whether Ms. Bulkley believes the water utilities contained in her proxy group face similar environmental and water quality regulation risks as compared to PAWC. If not, please explain.

Response:

Ms. Bulkley recognizes that the water utility industry faces environmental and water quality regulatory risk. However, while all of the water utilities in the proxy group are required to comply with the environmental and water quality regulations at the federal level, water utilities are also required to comply with state and local regulations that can vary by state and locality. Therefore, environmental and water quality regulatory risk will vary among the water utilities in the proxy group and PAWC.

R-2023-3043190 (Wastewater)
Bureau of Investigation & Enforcement Set 1

I&E RR-013-D

Responsible Witness: Ann E. Bulkley, Principal, The Brattle Group

Question:

Reference PAWC Statement No. 13, p. 74, lines 17-18:

A. State whether Ms. Bulkley is aware of any water utilities throughout the United States that have been granted a Commission authorized 10.95% or higher cost of common equity in the past two years.
B. If the answer to I&E-RR-14-D, Part A is yes, identify which company/companies have been authorized such cost of common equity, in what jurisdiction, and docket numbers associated with each instance.

Response:

A. Historically authorized ROEs are not a reasonable indicator of the forward-looking cost of equity. Authorized ROEs are established based on market data known and expected during a rate proceeding. As discussed in Ms. Bulkley's direct testimony, market conditions during this rate proceeding differ from the conditions over the past two years. For example, inflation is at the highest level that it has been since the 1980s. Interest rates have been increasing rapidly. Since March of 2022, the Federal Reserve has increased the Federal Funds from 0.25% to 0.50% to 5.25% to 5.50%. This is a significant change in market conditions over the referenced time period. Therefore, while Ms. Bulkley is not aware of any authorized ROEs of 10.95 percent for water utilities in the last two years, it is also the case that the conditions that were present over the entire historical period referenced have not been consistent with the market conditions that were considered in setting the recommended ROE in this proceeding.
B. Please see the response to I&E-RR-013-D, part A.

Rebuttal Testimony

of

D. C. Patel

Bureau of Investigation & Enforcement

Concerning:

Rate of Return

TABLE OF CONTENTS

INTRODUCTION OF WITNESS 1

RETURN ON EQUITY 2

INTRODUCTION OF WITNESS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is D. C. Patel, and my business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME D. C. PATEL WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2 AND THE SCHEDULES IN I&E EXHIBIT NO. 2?

A. Yes.

Q. DOES YOUR REBUTTAL TESTIMONY INCLUDE AN ACCOMPANYING EXHIBIT?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to address the direct testimony of the

Office of Small Business Advocate (OSBA) witness Kevin Higgins concerning his recommended return on equity (ROE) of 9.65% applied in the revenue requirement computation for Pennsylvania-American Water Company (PAWC). This recommended ROE contributed a reduction of $61,540,957 to the overall recommended revenue requirement (OSBA Statement No. 1, p. 8).

RETURN ON EQUITY

Q. WHAT IS PAWC'S CLAIMED ROE?

A. PAWC has claimed an ROE of 10.95% (PAWC Exhibit No. 13-A, Schedules 12 and 13) in the calculation of a claimed total revenue increase of $203,945,911 for its water and wastewater operations.

Q. SUMMARIZE MR. HIGGINS'S DIRECT TESTIMONY CONCERNING HIS RECOMMENDED ROE.

A. First, Mr. Higgins states that his recommended proxy ROE of 9.65% is based on the ROE authorized for PAWC's Distribution System Improvement Charge (DSIC) in the Bureau of Technical Utility Services' most recent Report on the Quarterly Earnings of Jurisdictional Utilities[1] (OSBA Statement No. 1, p. 8). Second, he states that the use of this proxy ROE is not intended to displace the Commission's consideration of traditional cost of capital analyses presented by the Company and other parties in this proceeding such as the Office of Consumer

[1] Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2023, Attachment D, p. 15, at Docket No. M-2023-3044811 approved at the Commission's Public Meeting Held January 18, 2024.

Advocate (OCA) (OSBA Statement No. 1, p. 17). Lastly, he states that based on his experience in other proceedings, he would not be surprised if other parties present credible analyses indicating that PAWC's ROE should be set lower than 9.65% (OSBA Statement No. 1, pp. 17-18).

Q. WHAT ARE THE ROE RECOMMENDATIONS MADE BY I&E AND OCA?

A. I recommend an ROE of 8.45% based on the analysis of financial modeling applying the Discounted Cash Flow (DCF) and Capital Asset Pricing Method (CAPM) results (I&E Statement No. 2, p. 29). Similarly, the OCA recommends an ROE of 9.1% based on its analysis of the DCF and CAPM results. Alternatively, OCA recommends 8.7% ROE if the Commission accepts the Company's claimed capital structure and/or proposed alternative ratemaking proposals (OCA Statement No. 3, p. 3).

Q. WHAT IS THE BASIS OF MR. HIGGINS'S RECOMMENDED ROE OF 9.65%?

A. Mr. Higgins avers that OSBA's overall revenue requirement recommendation without an ROE adjustment could be mistaken for implicit endorsement of PAWC's proposed ROE of 10.95%. Therefore, the use of the proxy ROE as a placeholder helps to avoid that misrepresentation. Moreover, the cost of capital has implications for the recommended adjustments in PAWC's acquisitions of other utilities, which would provide a more realistic measurement of their impact

(OSBA Statement No. 1, p. 18).

Q. DO YOU AGREE WITH MR. HIGGINS'S USE OF THE DSIC ROE OF 9.65% IN THIS BASE RATE PROCEEDING?

A. No.

Q. DID MR. HIGGINS CONDUCT ANY ANALYSIS BEFORE APPLYING THE DSIC ROE OF 9.65%?

A. No. Mr. Higgins confirms that he did not conduct any analysis for the ROE, but simply utilized the 9.65% ROE authorized for PAWC's DSIC in the Bureau of Technical Utility Services' most recent Report on the Quarterly Earnings of Jurisdictional Utilities as a proxy in his revenue requirement calculation (OSBA Statement No. 1, p. 17).

Q. WHAT IS THE BASIS FOR YOUR DISAGREEMENT WITH MR. HIGGINS'S USE OF THE DSIC ROE OF 9.65% IN THE COMPUTATION OF HIS RECOMMENDED REVENUE REQUIREMENT FOR PAWC?

A. The DSIC rate is specifically designed to encourage its use and to incentivize accelerated pipeline replacement and infrastructure upgrades to bring the existing aging infrastructure closer to meeting the safety and reliability requirements in between base rate filings. The DSIC rate is not intended to substitute the ROE established in a base rate proceeding after conducting a detailed ROE analysis. Additionally, the DSIC rate establishes a benchmark above which a utility

company is considered "overearning." As such, the DSIC rate does not serve as a proper measurement of a subject utility's cost of equity in a rate case proceeding. To suggest the cost of equity must be at the DSIC rate absent a detailed analysis in a base rate proceeding is inappropriate and not in the public interest.

Q. SHOULD THE COMMISSION CONSIDER THE AUTHORIZED DSIC RATE ESTABLISHED IN THE QUARTERLY EARNINGS SUMMARY REPORTS AS AN APPROPRIATE MEASURE TO DETERMINE THE COST OF EQUITY IN THIS PROCEEDING?

A. No. Mr. Higgins's application of the DSIC ROE rate in this proceeding is used as more of a placeholder for a properly analyzed and determined ROE. As discussed above, the DSIC rate should not serve as a proper measurement of a subject utility's cost of equity in a base rate proceeding since the DSIC rate is subject to change at a quarterly intervals. In fact, 66 Pa. C.S. § 1358(b)(3) states,

> The distribution system improvement charge shall be reset at zero if, in any quarter, data filed with the commission in the utility's most recent annual or quarterly earnings report show that the utility will earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the distribution system improvement charge.

Finally, the DSIC mechanism serves to lower a utility's risk because it reduces the lag time in the recovery of a company's capital outlays. The DSIC spending requires preapproval of eligible plant via a Long-Term Infrastructure Improvement Plan so there is little question as to the prudence of those expenditures.

Q. ARE THERE ANY POTENTIAL PROBLEMS WITH AWARDING AN ROE THAT IS EQUAL TO OR HIGHER THAN THE DSIC RATE?

A. Yes. First, if a company ultimately achieves a return that is above the DSIC rate, it eliminates the possibility for the utility to utilize the DSIC mechanism until its earnings fall below the DSIC rate. Further, if a company believes it will receive a return higher than the DSIC rate in a litigated base rate proceeding, it will remove the incentive to use the DSIC mechanism between rate filings and may encourage the more frequent filing of base rate cases.

Therefore, in my opinion, the DSIC rate should generally be viewed as an incentive rate that is higher than a return on equity percentage granted in a base rate proceeding.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

INTRODUCTION OF WITNESS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is D. C. Patel. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME D. C. PATEL WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2, I&E EXHIBIT NO. 2, AND REBUTTAL TESTIMONY CONTAINED IN I&E STATEMENT NO. 2-R?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address statements made by: (1) Pennsylvania-American Water Company (PAWC or Company) witnesses Ann E. Bulkley (PAWC Statement No. 13-R), Ashley E. Everette (PAWC Statement No. 1-R), and Justin L. Ladner (PAWC Statement No. 15-R) regarding rate of

return topics including the proxy group, capital structure, cost of common equity, management performance adder, and the overall fair rate of return, as applied to PAWC's rate base; and (2) the Office of Consumer Advocate (OCA) witness David J. Garrett (OCA Statement No. 3-R) regarding PAWC's equity and debt ratios applied in my recommended capital structure.

I will not reiterate the extensive arguments and evidence that I provided in my direct testimony and exhibit (I&E Statement No. 2 and I&E Exhibit No. 2). Absence of my comment on or response to any particular statements or topics addressed in the rebuttal testimony of PAWC and OCA concerning the return on equity and capitalization ratio does not signify my acceptance or support to the Company's or OCA's positions in this proceeding.

Q. WHAT WAS YOUR OVERALL RECOMMENDATION IN DIRECT TESTIMONY?

A. I recommended the following rates of return for the Company's Water and Wastewater Operations (I&E Statement No. 2, pp. 6-7):

I&E Summary of Cost of Capital Pennsylvania-American Water Company - Water Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	44.01%	4.76%	2.09%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	55.99%	8.45%	4.73%
Total	**100.00%**		**6.82%**

I&E Summary of Cost of Capital Pennsylvania-American Water Company - Wastewater Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	42.73%	4.76%	2.03%
Wastewater Specific Debt	4.40%	2.62%	0.12%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	52.87%	8.45%	4.47%
Total	**100.00%**		**6.62%**

SUMMARY OF MS. BULKLEY'S RESPONSE IN REBUTTAL TESTIMONY

Q. SUMMARIZE MS. BULKLEY'S RESPONSE TO YOUR RECOMMENDATIONS MADE IN DIRECT TESTIMONY.

A. First, Ms. Bulkley provides an updated cost of equity analysis based on market data of January 2024 (PAWC Exhibit No. 13-R, Schedules 1-14) that she claims supports her return on equity (ROE) recommendation of 10.95% made in her direct testimony (PAWC Statement No. 13-R, p. 2). Second, she challenges my

discussion regarding: (1) capital market conditions; (2) exclusion of Essential Utilities and natural gas and electric distribution companies and inclusion of Middlesex Water in my proxy group; (3) application of the Discounted Cash Flow (DCF) and Capital Asset Pricing Model (CAPM) in the cost of capital analysis; and (4) PAWC's business and financial risks. She also emphasizes the Commission's orders in the Aqua Pennsylvania and Columbia Water base rate proceedings that considered DCF and CAPM results in determining the appropriate ROE. Third, she presents my DCF and CAPM analysis results after making changes in the data to produce a higher ROE to support her claimed ROE of 10.95%. Fourth, Ms. Bulkley echoes the concerns made by Ms. Everette regarding my recommendation to reject additional basis points to the cost of equity for exemplary management performance. Finally, Ms. Bulkley suggests that my ROE recommendation should not be adopted by the Commission as she argues it does not meet the *Hope* and *Bluefield* standards for a fair rate of return.

COMPANY'S UPDATED POSITION

Q. SUMMARIZE MS. BULKLEY'S UPDATED ANALYSIS AND OVERALL RATE OF RETURN FOR THE COMPANY.

A. Ms. Bulkley provides an updated ROE analyses employing the same methodologies as presented in her direct testimony. In her updated analysis, she uses market data through January 31, 2024 (PAWC Exhibit 13-R, Schedules 1-6) in place of her original October 2023 market data that was used in her analysis

presented in direct testimony and the accompanying exhibit (PAWC Statement No. 13 and PAWC Exhibit 13-A, Schedules 1-14). Ultimately, she does not change her cost of equity recommendation or capital structure. She simply argues that her updated analyses support her original ROE claim of 10.95%. However, she does increase the fully projected future test year (FPFTY) wastewater specific long-term debt cost rate from 2.62% to 2.67%. (PAWC Statement No. 13-R, p. 11 and PAWC Exhibit 13-R, Schedule 14).

Q. WHAT IS THE COMPANY'S RATE OF RETURN CLAIM?

A. The Company's overall rate of return claim for water and wastewater is as follows (PAWC Exhibit 13-A, Schedule 12 and PAWC Exhibit 13-R, Schedule 14):

PENNSYLVANIA-AMERICAN WATER COMPANY
Summary of Cost of Capital
Pennsylvania-American Water Company - Water Operations

Type of Capital	Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	44.01%	4.76%	2.09%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	55.99%	10.95%	6.13%
Total	**100.00%**		**8.22%**

PENNSYLVANIA-AMERICAN WATER COMPANY **Summary of Cost of Capital** Pennsylvania-American Water Company - Wastewater Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	42.73%	4.76%	2.03%
Wastewater Specific Debt	4.40%	2.67%	0.12%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	52.87%	10.95%	5.79%
Total	**100.00%**		**7.94%**

CAPITAL MARKET CONDITIONS

Q. PLEASE SUMMARIZE MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING CURRENT CAPITAL MARKET CONDITIONS.

A. First, Ms. Bulkley states that in the Aqua Pennsylvania base rate proceeding, the Commission concluded that I&E's DCF result was likely understating the cost of equity given increased inflation and *expected increases* in interest rates and capital costs and, therefore, placed weight on the CAPM results to set the range of reasonableness and accordingly authorize the ROE. Likewise, in the Columbia Water base rate proceeding, the Commission utilized both the DCF and CAPM results to establish the authorized ROE, stating that it considered increasing inflation, interest rates, and capital costs in its determination. Second, she reiterates that the current market conditions are still characterized by high interest rates and capital costs, therefore, she asserts, it is important that the Commission continue to place weight on the results of the CAPM in determining the authorized

ROE for PAWC (PAWC Statement No. 13-R, pp. 11-12). Third, she references Federal Reserve Chair Powell's statement that it is currently projected to take until 2026 to reach the Federal Reserve's target inflation rate of 2.00%, and therefore, a March 2024 rate cut would most likely not happen (PAWC Statement No. 13-R, pp. 13-15). Fourth, she continues to assert that the share prices of utilities are likely to continue to decline or underperform due to the higher interest rates (PAWC Statement No. 13-R, p. 16). Lastly, she opines that the current market conditions suggest that interest rates will likely remain higher than was anticipated in December 2023 due to recent macro-economic data (PAWC Statement No. 13-R, p. 17).

Q. WHAT IS YOUR RESPONSE TO MS. BULKLEY'S CLAIMS?

A. First, I partly disagree with Ms. Bulkley's statement that the Commission concluded I&E's DCF result was likely understating the cost of equity given the increased inflation and expected increases in interest rates and capital costs. The Commission order in the Aqua Pennsylvania base rate proceeding states,[1]

> Based upon our informed judgment, which includes consideration of *a variety of factors* ("emphasis added") including increasing inflation leading to increases in interest rates and capital costs since the rate filing, we determine that a base ROE of 9.75% is reasonable and appropriate for Aqua. When combined with our upward adjustment of 25 basis points to the Company's ROE for management effectiveness, this will

[1] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 178 (Order entered May 16, 2022).

> produce a final authorized ROE for Aqua of 10.00% (*i.e.*, 9.75% + 0.25% = 10.00%).

It is important to note that the Commission relied on *various other factors* besides inflation leading to increases in interest rates and capital costs for determining a range of reasonableness for the ROE based on I&E's DCF and CAPM results. Similarly, in the Columbia Water rate case order, the Commission states,[2]

> Based upon our informed judgment, which includes consideration of *a variety of factors* ("emphasis added") such as increasing inflation leading to increases in interest rates and capital costs, we determine that an ROE of 9.75% is reasonable and appropriate for Columbia.

Also, in this Columbia Water proceeding, the Commission relied on *various other factors* besides inflation leading to increases in interest rates and capital costs for determining a range of reasonableness for the ROE based on I&E's DCF and CAPM results. In both these cases, the Commission concluded its decision to rely on the DCF and CAPM results in determining a reasonable ROE was based on various factors, evidence, and informed judgment specific to each case.

Second, I agree the current market conditions are still characterized by high interest rates and capital costs, however, it is speculative to assume that the current high inflation and interest rates scenario will continue in the longer term. It is also important to note that the Company's new rates will be effective during the FPFTY ending June 25, 2025, and will continue thereafter when the capital market conditions would be different.

---

[2] *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, p. 108 (Order Entered January 18, 2024).

Third, as discussed at length in my direct testimony, Federal Reserve Chairman Powell indicated that inflation is well on its way to the targeted 2% level, and *they would not wait for the 2%* inflation target to cut the interest rate (I&E Statement No. 2, pp. 40-43 and I&E Exhibit No. 2, Schedule 12, pp. 1-6). Per the most recent monthly Blue Chip Financial Forecasts (February 2024),[3] the 2024 inflation rates by two measures are forecasted to be slightly over 2% as shown in the table below:

	Q4 2023	**Q1 2024**	**Q2 2024**	**Q3 2024**	**Q4 2024**	**Q1 2025**	**Q2 2025**
Consumer Price Index	2.8%	2.5%	2.4%	2.4%	2.3%	2.2%	2.2%
PCE Price Index	1.7%	2.2%	2.3%	2.2%	2.2%	2.1%	2.1%

Considering the above, it is still likely that the Federal Reserve will consider a series of interest rate cuts in 2024 and 2025.

Fourth, Ms. Bulkley's assertion that the share prices of utilities are likely to continue to decline or underperform due to the higher interest rates is speculative and unsupported.

Lastly, in light of the above discussion, Ms. Bulkley's statement that the current market conditions suggest that interest rates will likely remain higher than was anticipated in December 2023 is speculative and unsupported.

[3] Blue Chip Financial Forecasts Vol. 43, No. 2, February 1, 2024.

Q. DOES MS. BULKLEY'S POSITION REGARDING CAPITAL MARKET CONDITIONS IGNORE FACTS THAT DIFFERENTIATE PAWC FROM COMPANIES THAT ARE NOT REGULATED UTILTIES?

A. Yes. Notably, unlike companies in unregulated industries, public utilities, such as PAWC, are in a unique position to recover their entire cost of doing business by filing rate cases as required and PAWC has filed four base rate cases since 2017 including this case (I&E Statement No. 2, p. 55). This includes addressing revenue shortfalls due to increased expenses and costs resulting from unforeseen circumstances, including rising interest rates and inflation and the consequent increase in the capital costs. Finally, PAWC will be shielded from any volatile market conditions in ways that unregulated entities are not regarding recent inflation and rising interest rates. I&E is not disputing the FPFTY claimed long-term debt cost rates and the updated increase in the cost of wastewater specific long-term debt as presented above.

Q. WHAT IS YOUR CONCLUSION ABOUT THE EFFECT OF CURRENT MARKET CONDITIONS IN DETERMINING PAWC'S ROE?

A. I disagree with Ms. Bulkley's recommendation that the Commission should determine the authorized ROE for PAWC using both the DCF and CAPM results to ensure that the authorized ROE is reflective of current market conditions for rates to be effective in the future periods. In fact, an ROE that is based on the DCF result is a forward-looking cost of equity model, which considers *projections*

for the dividend payments and earnings per share growth rates. The independent stock market analysts consider all market conditions, including the current and future state of interest rates, inflation, and stock market (price) volatility when making their projections for dividend payments and growth rates. Therefore, there is no reason to suggest that the CAPM result should be given weight with the DCF result in determining the ROE for PAWC. Additionally, as discussed above, the Commission's reliance on DCF and CAPM results in determining the ROE for the Aqua Pennsylvania and Columbia Water rate cases was based on the utility-specific factors and evidence-based determination or informed judgment. Therefore, I believe the Commission's decisions in these two cases should not be considered as precedent for PAWC and other rate cases in the future. The ROE should be determined based on the merits of each case with due consideration of various factors including the impact of higher rates on ratepayers.

I have discussed at length the reasons for applying the DCF as a primary method and using the CAPM result for comparison purposes. Additionally, I have previously highlighted the disadvantages of the CAPM as a reason why not to use it as a primary method in determining PAWC's ROE (I&E Statement No. 1, pp. 21-28).

PROXY GROUP

Q. SUMMARIZE MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR PROXY GROUP.

A. First, Ms. Bulkley disagrees with my inclusion of PAWC's parent company, American Water Works Company, as she claims including it would lead to circular logic (PAWC Statement No. 13-R, pp. 19-20). Second, she disagrees with my exclusion of Essential Utilities from the proxy group, which is based on my revenue screening criterion of 50% of a company's revenue should be from water operations. She states that operating income more appropriately reflects the risk profile of the operations and not the revenue, and further states that in 2022 gas revenue was more than 50% of the total revenue due to increased natural gas costs. Therefore, while the water revenue fell below 50% of the total revenue, the net income still favored water operations, which would then result in Essential's inclusion in her proxy group. She notes that in 2020 and 2021, before gas prices increased so substantially, water operations revenue was more than 50% of the total revenue (PAWC Statement No. 13-R, pp. 20-22). Third, she disagrees with my exclusion of gas and electric distribution companies in my proxy group due to there being so few water utilities as a result of consolidation in the water industry. She opines that there are significant similarities between the business and operating risks of the water, electric, and natural gas distribution utilities included in her proxy group. Additionally, she states that three other state public utility commissions have considered the results of a proxy group that includes natural gas

companies when determining the authorized ROE for water and wastewater utilities. She concludes that her proxy group comprised of gas, electric, and water utilities appropriately balances the goal of establishing a sufficiently large proxy group, while maintaining a proxy group that is generally comparable to the risk profile and operating characteristics of PAWC (PAWC Statement No. 13-R, pp. 22-25). Lastly, she opines that the smaller the size of the proxy group, the greater the chance the proxy group average can be affected by the results of one company. In particular, she asserts, I&E's mean DCF result is affected by the low results of just one company, Middlesex Water Company (PAWC Statement No. 13-R, p. 26).

Q. WHAT IS YOUR RESPONSE TO MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR INCLUSION OF AMERICAN WATER WORKS COMPANY AND EXCLUSION OF ESSENTIAL UTILITIES IN/FROM YOUR PROXY GROUP?

A. I disagree with Ms. Bulkley's averment that inclusion of the parent company, American Water Works would create circular logic for determining PAWC's ROE. As discussed in my direct testimony, I reiterate that the inclusion of American Water Work's vast operations across many states and numerous divisions and its required compliance to an equal number of state regulatory bodies eliminates the potential for any circularity effect as opposed to if only PAWC itself was included in the proxy group (I&E Statement No. 2, p. 12).

Regarding the exclusion of Essential Utilities (natural gas distribution and water utility), I relied on I&E's consistently followed proxy group selection criterion requiring that fifty percent or more of the company's revenues be generated from the regulated water utility industry. Based on S&P Global's FY 2022 business segment analysis of Essential Utilities (the most recent information available at the time of my analysis), regulated water revenue was 47.33% of total revenue, which supports my exclusion of this company from my proxy group. Additionally, I disagree with Ms. Bulkley's assertion that an operating income criterion is more appropriate as it reflects the risk profile of operations and not the revenue criterion. The generation of revenue is the first step that drives the net income (net profit) and cash flow. A company's realization of net income depends on various factors such as management efficiency, operational and financial efficiency in the best use of utility assets with available resources, O&M cost containment measures, capital expenditure programs, etc. Therefore, I believe a utility's revenue composition is a more appropriate measure than net income for establishing a proxy group because this measure represents the percentage of cash flow a company receives from each business segment. While the financial community is more likely to rely on measures of income rather than measures of revenue when making credit assessments and investment decisions, the purpose of a proxy group is to compile a set of companies that have similar risks to the subject utility. If less than 50% of revenues come from the regulated water

business sector, the company is not comparable to the subject utility as it does not provide a similar level of regulated water business.

Additionally, in the most recent Columbia Water rate case, the Commission concludes,[4]

> In Columbia Gas 2021, we stated the following regarding the proxy group at issue in that proceeding: First, as I&E and the ALJ pointed out, a company's revenues represent the percentage of cash flow the company receives from each business line related to providing a good or service. Therefore, if less than fifty percent of revenues come from the regulated gas sector, the company is not comparable to the subject utility as it does not provide a similar level of regulated business.
>
> As further noted by I&E, while two companies or segments can have the same level of revenue, their net operating income may vary greatly, depending on their performance and decisions. The purpose of a proxy group is to compile a set of companies that have similar risks to the subject utility. As such, we are of the same opinion, as in our decisions in *Columbia Gas 2021* and *PECO 2021*, that if less than 50% of a utility's revenues come from the regulated business sector, the company is not comparable to the subject utility as it does not provide a similar level of regulated business.
>
> Based on the specific record developed in the instant case, we find that the percentage of revenues generated from regulated utility operations, in this instance regulated water utility operations, is the appropriate criterion to include when setting Columbia's proxy group. Therefore, we concur with I&E that Essential Utilities should be excluded from the proxy group that we will use in setting the authorized ROE and the resulting overall rate of return for Columbia in this proceeding.

[4] *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, pp.75, 76, and 77 (Order Entered January 18, 2024).

Q. WHAT IS YOUR RESPONSE TO MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR EXCLUSION OF NATURAL GAS AND ELECTRIC DISTRIBUTION COMPANIES IN YOUR PROXY GROUP?

A. I generally agree with Ms. Bulkley that it is advantageous to have a greater number of companies in a proxy group; however, I reject the notion that skewing the analysis by including companies that are demonstrably dissimilar, simply in favor of having a larger group, produces a valid analysis. Instead, I believe it is more appropriate to include fewer companies that are more similar to the subject company, because it will produce a more valid result. Specifically, as explained in my direct testimony, water companies face different degrees operational, safety, and weather-related risks and uncertainties in addition to substantially different environmental regulations than natural gas and electric distribution companies. Water companies also have a more captive customer base than do natural gas companies as customers cannot eliminate the need for water whereas gas is not a necessity and can be replaced with other fuel sources. Additionally, water companies remain vertically integrated wherein the company generates and distributes the commodity, so there is no opportunity for customers to shop competitively for the commodity as there is with gas and electric shopping. These differences, among others, make electric and gas utilities dissimilar enough from water companies to properly be excluded from a water proxy group (I&E Statement No. 2, pp. 13-14). Lastly, Ms. Bulkley's belief that the regulated gas

and electric utilities used in her analyses all possess a set of risk profile, and operating and financial risk characteristics that are substantially comparable to PAWC is incorrect and unsupported. Therefore, including natural gas and electric distribution companies in the proxy group for PAWC, a water and wastewater utility, dilutes the integrity of the analysis.

Q. DO YOU AGREE WITH MS. BULKLEY'S RECALCULATION OF YOUR DCF RESULTS BASED ON THE REMOVAL OF MIDDLESEX WATER DUE TO WHAT SHE DEEMS TO BE AN UNREASONABLY LOW DCF RESULT SKEWING THE MEAN DCF RESULT OF THE PROXY GROUP?

A. No. As discussed above, it is important to use a proxy group having all water utilities, which possess a similar set of operating and financial risk characteristics that are substantially comparable to PAWC rather than Ms. Bulkley's inclusion of dissimilar gas and electric utilities to make a larger proxy group. I disagree with Ms. Bulkley's contention that the smaller the size of the proxy group, the greater the chance the proxy group average can be affected by the results of one company with low end financial numbers, specifically in this instance the Middlesex Water DCF result. Regarding Ms. Bulkley's characterization of Middlesex Water's low-end numbers, it should be noted that its spot dividend yield is 2.77% less than the next low end dividend yield of California Water Service Group and its 52-week dividend yield is 15.12% less than the next low end dividend yield of California

Water Service Group. Regarding the growth rate of Middlesex Water Company, Yahoo finance projects 2.70% while Value Line projects 5.00%, so these projections influenced Middlesex Water's DCF results (I&E Exhibit No. 2, Schedules 4-5). It is important to note that each company has a different jurisdictional operating and management set up. Therefore, I believe Middlesex Water's DCF result is not an outlier or abnormal and should not be ignored in the calculation of the proxy group mean results unless the projections would result in a negative DCF result for Middlesex Water (I&E Exhibit No. 2, Schedule 6). The principal purpose of assembling a proxy group is to avoid relying on data for a single company that is not representative and thereby to smooth out any abnormalities.

Ms. Bulkley's decision to remove Middlesex Water only serves to inflate the DCF result and defeats the purpose of using a proxy group. Ironically, Ms. Bulkley employs Middlesex Water in her own CAPM analysis.

Q. DO YOU HAVE ANY CHANGES TO YOUR PROXY GROUP IN RESPONSE TO MS. BULKLEY'S REBUTTAL TESTIMONY?

A. No. I continue to support the proxy group I used in my rate of return analysis as shown in my direct testimony (I&E Statement No. 2, p. 11).

COST OF COMMON EQUITY

DISCOUNTED CASH FLOW

Q. SUMMARIZE MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. First, Ms. Bulkley notes that my application of the DCF model is generally similar to hers. However, she identifies differences and raises concerns with my DCF results. Ms. Bulkley relies on low and high growth rate assumptions and the level of reliance on the range of the DCF results rather than my use of the proxy group average DCF result for my cost of equity recommendation (PAWC Statement No. 13-R, pp. 26-27). Second, she raises issue with my recommended ROE, which "ignores" the Commission's recent decisions concerning the ROE determination in the Aqua Pennsylvania and Columbia Water base rate proceedings (PAWC Statement No. 13-R, p. 27). Lastly, she takes issue with my CAPM result, that is used for comparison purposes, and produces a result that is 199 basis points higher than my DCF results (PAWC Statement No. 13-R, p. 27).

Q. PLEASE RESPOND TO MS. BULKLEY'S CONCERNS ABOUT YOUR EXCLUSIVE RELIANCE ON THE DCF.

A. Although my recommendation was based on the results of my DCF analysis, I also employed the CAPM as a comparison. For reasons discussed in my direct testimony, the DCF method is the most reliable method (I&E Statement No. 2, pp. 20-25). My DCF mean results capture high and low-end growth rates as well as

the individual company specific DCF result. Although no one method can capture every factor that influences an investor, including the results of methods less reliable than the DCF does not make the end result more reliable or more accurate. It is important to note that the DCF is appealing to investors since it is based upon the concept that the receipt of dividends in addition to expected appreciation is the total return requirement determined by the market.[5] In direct testimony, I cited several cases that illustrate the methodology I employed is consistent with the methodology historically used by the Commission in base rate proceedings as recently as 2017, 2018, 2020, and 2021 (I&E Statement No. 2, pp. 21-22).

Additionally, as indicated in my direct testimony (I&E Statement No. 2, pp. 25-26), the Commission indicated in the 2022 Aqua Pennsylvania rate case order that its method "for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies"[6] and that "I&E's DCF and CAPM produce a range of reasonableness for the ROE…"[7]. Similarly, most recently, the Commission's Columbia Water rate case order relied on the results of I&E's DCF and CAPM analyses for determining Columbia Water's ROE.[8] Thus, it is inappropriate to characterize my direct testimony as having ignored the Commission's recent decisions concerning the ROE determination deviating from prior Commission

practice. In my direct testimony I explain more fully why the CAPM should not be used as a primary method and continue to express those concerns in this proceeding as to why it should only be used as a comparison to, not a check of, the DCF. Thus, I continue to disagree with a method that provides the CAPM comparable weight to the DCF method (I&E Statement No. 2, pp. 22-24).

I disagree with Ms. Bulkley's assertion that because my CAPM model produces results that are 199-basis points higher than my DCF results, I ignored the CAPM results in the ROE recommendation. In fact, I highlighted the revenue increase impact of $93,994,979 on ratepayers due to 199-basis point higher CAPM result (10.44%) in comparison to my recommended DCF result (8.45%) for consideration by the Commission in determining the final ROE (I&E Statement No. 2, pp. 36-38).

Q. SUMMARIZE MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING THE REASONABLENESS OF YOUR DCF ANALYSIS.

A. Ms. Bulkley claims that my recommended ROE is not comparable to ROEs authorized for either a water or natural gas utility since January 2019. She then refers to the Commission's authorized ROEs of 10.00% and 9.75% in the Aqua Pennsylvania and Columbia Water base rate proceedings respectively and states that I did not consider these ROEs to test the reasonableness of my recommended ROE in light of the Hope and Bluefield decisions that require the authorized return

to be just and reasonable as available to investors in companies with similar risk (PAWC Statement No. 13-R, pp. 28-29).

Q. PLEASE RESPOND TO MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING THE REASONABLENESS OF YOUR DCF ANALYSIS.

A. I have discussed earlier in this testimony and in my direct testimony (I&E Statement No. 2, pp. 26-28) the various factors including the company specific factors considered by the Commission in determining the ROEs of 10.00% and 9.75% in Aqua Pennsylvania and Columbia Water base rate proceedings. In my opinion, each rate case should be evaluated independently based on the company specific details, proxy group data analysis, and most importantly the impact of the revenue increase on ratepayers. Accordingly, in my opinion my cost of equity analysis produces a just and reasonable DCF result for the Company and ratepayers. Regarding the Hope and Bluefield decisions that require the authorized return to be just and reasonable, I am responding separately in the Fair Rate of Return section.

Q. SUMMARIZE MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR APPLICATION OF THE DCF MODEL TO YOUR PROXY GROUP.

A. First, Mr. Bulkley states that my DCF result of 5.77% for Middlesex Water is unreasonably low, which is slightly greater than the 30-day average yield on

Moody's A-rated utility bonds of 5.56% and, according to her, does not compensate investors for the added risk of an equity investment. Therefore, she recommends this result should be excluded from my DCF analysis (PAWC Statement No. 13-R, p. 29).

Second, she comments that it is inappropriate to rely on the spot stock price in developing an ROE estimate and suggests considering the 30-day, 90-day, and 180-day average stock prices as reflected in her DCF analysis (PAWC Statement No. 13-R, p. 30).

Third, she presents a modified DCF result with her own selective data choice to include Essential Utilities from the proxy group, exclude Middlesex Water from the proxy group, use a 30-day average stock price in the calculation of the dividend yield, and use a range of growth rate assumptions (PAWC Statement No. 13-R, p. 30). Ms. Bulkley's modified mean DCF result is 9.21% in contrast to my mean DCF result of 8.45%. Considering the high-end growth rate, her DCF result produces a cost of equity at 10.58% and considering the large proxy group, including gas and electric utilities with water utilities, she produces a mean DCF result of 9.82% (PAWC Statement No. 13-R, pp. 30-31 and PAWC Exhibit No. 13-R, Schedule 7, p. 2).

Q. WHAT IS YOUR RESPONSE TO MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR APPLICATION OF THE DCF MODEL TO THE PROXY GROUP.

A. First, I disagree with Ms. Bulkley's recommendation to remove Middlesex Water and include Essential Utilities in my proxy group analysis, which I have adequately discussed in the Proxy Group section above. The DCF result for every single company in my proxy group is higher than PAWC's cost of debt which again satisfies the notion that equity investors require a higher return than do bondholders. Additionally, to address Ms. Bulkley's specific concern that the Middlesex DCF is too low, I would point out the purpose of using a proxy group is to smooth out any perceived anomalous results. In my view, any attempt to eliminate or disregard low end Middlesex Water results, or one side of a range of results, is inconsistent with the purpose of a proxy group and only serves to subjectively influence the results of an otherwise unbiased analysis.

Second, I disagree with Ms. Bulkley's assertion that it is inappropriate to rely on the spot stock price in developing an ROE estimate and her suggestion to consider the 30-day, 90-day, and 180-day average stock prices in my DCF analysis. My DCF analysis considers the spot price, the 52-week high and 52-week low price in the calculation of the average spot dividend yield and average 52-week dividend yield as shown in the table below (I&E Exhibit No. 2, Schedule 4). This calculation reflects the average current dividend yield based on the current stock price and historic average of the 52-week dividend yield of proxy

group companies, which satisfies Ms. Bulkley's concern about the DCF analysis using a 30-day, 90-day, and 180-day average stock prices scenario.

Dividend Yields of the Proxy Group

Company	American Water Works Company, Inc.	American States Water Company	California Water Service Group	Middlesex Water Company	SJW Group
Symbol	*AWK*	*AWR*	*CWT*	*MSEX*	*SJW*
Div	3.00	1.80	1.12	1.32	1.60

Source:	Barrons	January 3, 2024
	Value Line	January 5, 2024

Third, I disagree with Ms. Bulkley's modified DCF mean results of: (1) 9.21 after excluding Middlesex Water and including Essential Utilities in my proxy group; (2) 10.58% after excluding Middlesex Water and including Essential Utilities in my proxy group and applying a maximum growth rate range; and (3) 9.82% after excluding Middlesex Water and including Essential Utilities and gas and electric utilities in my proxy group for the reasons discussed above. It appears that Ms. Bulkley presents these results with variations to my proxy group data just to prove her DCF analysis is correct and undermine my DCF analysis results with the ultimate objective to justify her updated DCF mean result range of 8.96% - 11.34% (excluding Middlesex Water's DCF results) and PAWC's claimed high end ROE of 10.95% (PAWC statement No. 13-R, p. 10).

Q. DID MS. BULKLEY SUMMARIZE INSTITUTIONS' AND BANKS' COMMENTS IN RESPONSE TO OTHER STATE COMMISSIONS' AUTHORIZED LOW-END RANGE OF ROE?

A. Yes. She discusses comments or observation notes including credit rating notes made by various institutions and banks for other state commissions' authorized low-end range of ROEs for gas and electric utilities. She highlights certain utilities that have experienced a negative market response related to the financial effects of a rate decision, including credit rating downgrades and material stock price declines (PAWC Statement No. 13-R, pp. 32-35).

Q. DO YOU AGREE WITH MS. BULKLEY'S SUMMARY OF THE INSTITUTIONS' AND BANKS' COMMENTS IN RESPONSE TO OTHER STATE COMMISSIONS' AUTHORIZED LOW-END ROE?

A. No. It is inappropriate to suggest or infer that if the Commission authorize a low-end ROE, PAWC or its parent company's credit rating would be downgraded, or its credit worthiness would be impacted because besides the financial performance, there are several other factors considered in overall assessment of any company such as business operations, management profile, business risks assessment, business expansion plan, capital expenditure programs, etc.

CAPITAL ASSET PRICING MODEL

Q. SUMMARIZE MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR CAPM ANALYSIS.

A. Other than my lack of reliance on the CAPM model to determine an appropriate cost of equity recommendation as discussed above, Ms. Bulkley's major concerns with my CAPM analysis are: (1) exclusion of Essential Utilities and excluding gas and electric utilities from the proxy group; (2) reliance on the projected yield on the 10-year Treasury bond as the risk-free rate rather than 30-year Treasury Bond yields she uses; and (3) reliance on a single date Value Line report for the calculation of the market risk premium (PAWC Statement No. 13-R, p. 42).

Q. EXPLAIN MS. BULKLEY'S CRITICISM REGARDING YOUR USE OF THE YIELD ON THE 10-YEAR TREASURY NOTE TO DETERMINE YOUR RISK-FREE RATE.

A. First, Ms. Bulkley acknowledges the Commission's decision to use the 10-year Treasury Note, as opposed to the 30-year Treasury Bond yield, as the risk-free rate in the CAPM model (PAWC Statement No. 13-R, p. 43). However, she suggests that it is important to select the term that most closely matches the useful life of the assets financed. Then, she provides a recalculation of my risk-free rate using the 30-year Treasury Bond yield and including Essential Utilities in my proxy group that produces her CAPM result of 10.74% an increase of 30-basis points to my CAPM result of 10.44% (PAWC Statement No. 13-R, p. 44).

Q. DO YOU AGREE WITH MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING YOUR RISK-FREE RATE?

A. No. First, while rate base assets are long-lived, utility company debt may have the opportunity to be refinanced at any point to capture favorable interest rates, which would reduce the financial risk associated with the corresponding assets. Second, I believe it is more appropriate to utilize a risk-free rate that will be in effect during the investment period being considered, which, in this case, is the FPFTY or possibly the normalization period between base rate cases. Although short-term Treasury Bills may align closer with the investment timeframe, they are very volatile. Finally, as Ms. Bulkley has acknowledged the Commission's previous decisions (PAWC Statement No. 13-R, p. 43), it is important to reiterate that the Commission has recently agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[9]

Q. DO YOU AGREE WITH MS. BULKLEY'S SUGGESTED RECALCULATION OF YOUR RISK-FREE RATE AND CAPM RESULTS?

A. No. As previously discussed, it is more appropriate to employ the 10-year Treasury Note and weight the quarters and years as shown in my exhibit (I&E Exhibit No. 2, Schedule 8) because my calculation provides a more accurate

[9] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99; *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154 (Order entered May 16, 2022).

estimation of the risk-free rate for the FPFTY. The time periods I employ place more weight on the FPFTY yet also consider forecasts of the mid-term (2025-2029) that may better match the rate case filing frequency. It is also important to keep in mind that the further out one forecasts, the less reliable the information becomes.

Q. HAS MS. BULKLEY PRESENTED MODIFIED CAPM RESULTS USING DIFFERENT RISK-FREE RATES AND AN UPDATED MARKET RETURN TO JUSTFY HER ORIGINAL CAPM RESULTS?

A. Yes. She presents four modified CAPM scenarios with variation as shown in the table below (PAWC Exhibit No. 13-R, Schedule 9) to justify her CAPM analysis results presented in her direct testimony and reject my CAPM analysis result of 10.44%:

CAPM Adjustments	Adjusted CAPM Results
(1) CAPM with 10-year Treasury yield and Essential Utilities in I&E Proxy Group	10.71%
(2) CAPM with 30-year Treasury Bond yield and Essential Utilities in I&E Proxy Group	10.74%
(3) CAPM with 30-year Treasury Bond yield and Essential Utilities and updated market return	11.10%
(4) CAPM with 30-year Treasury Bond yield and Proxy Group with gas and electric utilities	11.24%

Q. DO YOU AGREE WITH MS. BULKLEY'S MODIFIED CAPM RESULTS SCENARIO?

A. No. First, as discussed above in the Proxy Group section, I disagree with the inclusion of Essential Utilities and gas and electric utilities in the proxy group for CAPM analysis and the resultant beta coefficient of 0.83 applied in the analysis at line nos. 1-3 and the beta coefficient of 0.85 applied in the analysis at line no. 4 in the above table. Second, as discussed above and in my direct testimony (I&E Statement No. 2, pp. 32-33 and pp. 49-50), I disagree with using the 30-year Treasury Bond yield as a risk-free rate in the CAPM analysis. Third, I disagree with Ms. Bulkley's total market return calculation method and its application of 12.48% in her analysis at line nos. 3-4 shown in the above table. Again, it is important to note that Ms. Bulkley excluded Middlesex Water's results in her DCF analysis, however, she included Middlesex Water in her proxy group for CAPM analysis. Lastly. I disagree with Ms. Bulkley's modified CAPM analysis results of 11.24% (line no. 4 in the table above) as reasonable and appropriate.

<u>BUSINESS RISK</u>

Q. DID MS. BULKLEY RESPOND YOUR BUSINESS RISK ASSESSMENT FOR PAWC?

A. No. Ms. Bulkley did not specifically respond to my discussion regarding the capital expenditure plan, credit rating risk, PAWC's historic financial performance, American Water Work's (parent company) consistently increased

dividend payments and future yearly target of 7% to 9% growth rate in the long-term EPS and dividend payment (I&E Statement No. 2, pp. 54-60).

Q. DID MS. BULKLEY RESPOND TO YOUR POSITION REGARDING THE PROPOSED REVENUE DECOUPLING MECHANISM (RDM) AND RISKS ASSOCIATED WITH ENVIRONMENTAL AND WATER QUALITY REGULATIONS?

A. Yes, in part. Ms. Bulkley reiterates that nearly 60% of the distribution utilities (gas, electric, and water) in her proxy group have some form of RDM. She claims that there is no meaningful difference between distribution utilities with respect to whether they benefit from revenue decoupling or revenue stabilization, and looking at only the water utilities in her view is not reasonable (PAWC Statement No. 13-R, pp. 76-77).

It appears Ms. Bulkley did not specifically respond to my discussion in response to her claimed risks associated with environmental and water regulations (I&E Statement No. 2, pp. 66-68).

Q. WHAT IS YOUR RESPONSE TO MS. BULKLEY'S POSITION WITH REGARD TO THE PROPOSED RDM?

A. I disagree with Ms. Bulkley's response. As discussed in my direct testimony, Ms. Bulkley's analysis is extremely misleading as her proxy group includes gas and electric utilities with water utilities of which 59% of the utilities have an RDM.

Based on my analysis, after removing gas and electric utilities from her proxy group, less than 22% of water utilities in other state jurisdictions have implemented some type RDM (I&E Statement No. 2, pp. 62-64). Ms. Bulkley did not respond to my assertion that the proposed RDM is a guaranteed revenue recovery mechanism, which reduces the Company's overall business risk profile and protects it from financial loss due to revenue shortfall or losses. PAWC already has access to and is currently taking advantage of risk reducing mechanisms such as the DSIC and the use of a FPFTY in base rate filings (I&E Statement No. 2, p. 64).

I&E witness Ethan Cline (I&E Statement Nos. 4 and 4-SR) presents further discussion on this topic as well as I&E's recommendation that the Commission deny the Company's RDM proposal.

MANAGEMENT PERFORMANCE

Q. SUMMARIZE THE COMPANY'S REBUTTAL TESTIMONY REGARDING YOUR DISCUSSION CONCERNING MANAGEMENT PERFORMANCE.

A. First, Ms. Bulkley disagrees with my recommended rejection of an additional 25-basis points to the cost of equity for management performance if a lower return on equity is approved by the Commission, and she points to Ms. Everette's discussion on this topic (PAWC Statement No. 1-R). She states that I have not provided any evidence as to the adequacy of compensation for investment risk to recover costs

associated with acquiring troubled water and wastewater systems and the opportunity to earn a return on the fair value of the rate base of such acquisitions. Then, she states that PAWC witnesses Ms. Everette and Mr. Ladner discuss the Company's superior performance that purportedly goes well beyond the requirements of the Public Utility Code (PAWC Statement No. 13-R, pp. 83-84).

Q. WHAT IS YOUR RESPONSE TO MS. BULKLEY'S REBUTTAL TESTIMONY REGARDING MANAGEMENT PERFORMANCE?

A. As discussed in my direct testimony, the benefit of the return PAWC earns on system acquisitions per 66 Pa. C.S. § 1329 (Section 1329) is significantly compounded when considering that the continually increasing rate base is determined on a fair market value (FMV) basis, which is significantly higher than the book value (net of depreciation) of the acquired system assets as of the date of acquisition. A rate base amount determined at FMV rather than the book value of the acquired system assets adequately compensates for the investment risk of the acquiring company. Additionally, PAWC is expanding its service area (adding to its customer count) and forever revenue stream, strengthening its market monopoly and benefits from combined (water and wastewater) business synergy in the certificated service areas (I&E Statement No. 1, pp. 77-78). Ms. Bulkley did not reject my assertion that the Company is earning a return on the inflated rate base amount due to the FMV-determined rate base addition of the acquired system assets, however, she requires evidence as to the adequacy of the compensation for

investment risk. I provided an example of PAWC's potential return on Section 1329 ratemaking rate base at FMV for the wastewater systems of the Butler Area Sewer Authority and the Borough of Brentwood, which are yet to close (I&E Statement No. 2, pp. 78-79).

Q. SUMMARIZE MS. EVERETTE'S REBUTTAL TESTIMONY REGARDING YOUR DISCUSSION OF THE COMPANY'S MANAGEMENT PERFORMANCE.

A. As in her direct testimony (PAWC Statement No. 1, pp. 33-34), Ms. Everette itemizes the accomplishments and achievements in which she argues PAWC demonstrates "superior" management performance established by 52 Pa. Code § 69.711 and 66 Pa C.S.A. § 523 (Section 523) (PAWC Statement No. 1-R, pp. 7-8). She claims that my position contradicts Section 523 that envisions utilities can achieve levels of performance that exceed the base level of the requirements and that the Company has demonstrated superior service beyond the requirements of the Public Utility Code (PAWC Statement No. 1-R, p. 9). She points to the rebuttal testimony of Mr. Ladner who highlights the accomplishments of the Company in delivering superior performance (PAWC Statement No. 15-R). She then produces a list of witnesses who attended the Company's public input hearings and testified for the excellent services provided by the Company (PAWC Statement No. 1-R, pp. 9-12). She disagrees with my assertion that the Company's shareholders have benefited from higher returns on the FMV-

determined ratemaking rate base associated with Section 1329 acquisitions although the depreciated assets value (book value) of the acquired assets are significantly below the FMV, because Section 1329 permits the FMV-determined acquired assets' addition to rate base (PAWC Statement No. 1-R, p. 13). She claims the Company's efforts and long-standing commitment to assist troubled systems justifies an upward adjustment to the rate of return consistent with 52 Pa. Code § 69.71 (PAWC Statement No. 1-R, p. 14). She disagrees with my assertion that the Company's most recent Management Performance Audit is inconsistent with superior management performance (PAWC Statement No. 1-R, pp. 14-15). Lastly, she disagrees with my argument that no management performance adjustment is warranted because PAWC's rate increases have burdened its customers, despite its low-income assistance programs (largely funded by residential customers), and PAWC's customers paying the costs of acquired wastewater services (PAWC Statement No. 1-R, pp. 15-16).

Q. WHAT IS YOUR RESPONSE TO MS. EVERETTE'S REBUTTAL TESTIMONY REGARDING MANAGEMENT PERFORMANCE?

A. As discussed in greater detail in my direct testimony (I&E Statement No. 1, pp. 71-82), I maintain my position that PAWC or any utility company, should not be entitled to additional rewards for implementing programs funded by ratepayers or for meeting their obligations under 66 Pa C.S.A. §1501 (Section 1501).

I am aware that under Section 523 the Commission shall consider a utility's performance, however, it is not mandatory that the Commission grant additional basis points to the ROE. Although I am not offering a legal position and I will defer to counsel to address the legal aspect of it in briefing, I am advised by counsel that the Commission's consideration is not limited to the listing of claims made by PAWC but that it should also consider other factors including evidence of PAWC's efficiency, effectiveness, and adequacy of service. Ultimately, for any company, true management effectiveness is earning a higher return through efficient use of resources and cost-cutting measures. The greater net income resulting from growth, cost savings, and true efficiency in management and operations is available to be passed onto shareholders. I do not believe that PAWC should be granted additional basis points for doing what it is required to do under Section 1501 to provide adequate, efficient, safe, and reliable service (I&E Statement No. 2, pp. 80-81).

As explained above, ratepayers are already paying PAWC a return on the FMV-determined rate base associated with Section 1329 water and wastewater acquisitions. Beyond that, in this proceeding PAWC is proposing to allocate approximately $71 million of wastewater costs to current water customers, causing an unwarranted financial burden in subsidizing wastewater service of others to facilitate PAWC's continued acquisition of water and wastewater systems.

Q. MS. EVERETTE SUMMARIZES MULTIPLE PUBLIC INPUT HEARING WITNESSES TO SUPPORT HER POSITION, THAT PAWC'S SERVICE JUSTIFIES FINANCIAL RECOGNITION. HOW DO YOU RESPOND?

A. Based on my review of the list of public input hearings witnesses' summary as produced by Ms. Everette, she conveniently omits individual customers complaints and concerns regarding water quality, rate increase impacts, bill payment plans, service-related issues, etc. raised at the public input hearings. Ms. Everette's list of witnesses who supports PAWC's efforts are: (1) speaking as representative on behalf of organizations or institutions; (2) possibly not themselves customers of PAWC and, therefore, would not be subject to a rate increase; (3) might have been asked by PAWC to speak at the hearings; and (4) may be directly or indirectly benefitting from association with PAWC and hope to remain associated in the future. I will defer to counsel to address this more specifically in briefing.

Q. PLEASE CONTINUE.

A. Ms. Everette purposefully ignores several customer and public official complaints and concerns raised at the public input hearings about the quality of water services, billing issues, payment issues, service lines repairs, billing, and marketing of the American Water Resources service protection plan, etc.

All these concerns and complaints are echoed and summarized in the supplemental direct testimonies of the OCA witnesses, Christine M. Hoover (OCA

Statement No. 1 - Supp), Barbara Alexander (OCA Statement Nos. 6 - Supp), and Terry Fought (OCA Statement Nos. 7 - Supp) served on February 13, 2024.

Section 523(b)(1) requires the Commission to review management effectiveness and operating efficiency as measured by an audit pursuant to 66 Pa.16 C.S. § 516 (Section 516) as one of the management performance factors. As discussed in my direct testimony, PAWC's most recent Management and Operations Audit Report pursuant to Section 516 prepared by the Commission's Bureau of Audits, issued in October 2023, identified, and recommended a need for improvements in twelve functional areas relating to the operations and service improvements for customers. PAWC's implementation plan[10] accepts twenty-three of the recommendations and partially agrees with the remaining eight recommendations detailed in the audit report (I&E Statement No. 2, pp. 72-74).

Q. SUMMARIZE MR. LADNER'S REBUTTAL TESTIMONY REGARDING THE COMPANY'S PURPORTED SUPERIOR PERFORMANCE.

A. Mr. Ladner summarizes the Company's distinguished environmental record, optimization of water treatment plant performance and water quality, excellent safety record, use of technology, the acquisition of small and troubled systems, and various other initiatives and approaches to provide safe and reliable service to its customers (PAWC Statement No. 15-R, pp. 8-12). Like Ms. Everette, Mr.

[10] PAWC Implementation Plan in response to the 2022-23 Focused Management and Operations Audit Report filed with the Commission at Docket No. D-2022-3035217.

Ladner also presents a summary of witnesses who support the Company's efforts (PAWC Statement No. 15-R, pp. 8-12).

Q. WHAT IS YOUR RESPONSE TO MR. LADNER'S REBUTTAL TESTIMONY REGARDING THE COMPANY'S PURPORTED SUPERIOR PERFORMANCE?

A. As discussed above, the Company's actions and initiatives to excel in its operating performance is not a novel effort, but I believe it is a normal business requirement to provide adequate, efficient, safe, and reliable services to customers as required under Section 1501. In fact, with PAWC's efficient operating performance, all stakeholders of the Company, including its shareholders, benefit because management effectiveness leads to a higher return through efficient use of resources and cost-cutting measures.

Considering the above discussion, I do not believe that PAWC should be granted additional basis points for doing what it is required to do under Section 1501 to provide adequate, efficient, safe, and reliable service. Therefore, I continue to recommend that the addition of 25-basis point to the cost of equity for the claimed superior or exemplary performance be disallowed.

Q. WHAT IS MS. BULKLEY'S CONCLUSION WITH HER ADJUSTMENTS TO YOUR DCF AND CAPM RESULTS?

A. Ms. Bulkley states that with her adjustments to my cost of equity analyses, she

produces the following results (PAWC Statement No. 13-R, pp. 49-50):

Cost of Equity Model	Bulkley's Adjusted Results
Adjusted DCF	9.82%
Adjusted CAPM	11.24%
Average	10.53%

Q. DO YOU AGREE WITH MS. BULKLEY'S ADJUSTED ROE RESULTS?

A. No. As discussed at length above, I disagree with Ms. Bulkley's adjusted DCF and CAPM results as well as her calculated average of adjusted results to suggest that the Commission should consider an average of the DCF and CAPM results in determining an appropriate ROE for PAWC.

FAIR RATE OF RETURN

Q. HAS MS. BULKLEY STATED THAT YOUR COST OF EQUITY RECOMMENDATION DOES NOT ALLOW FOR A FAIR RATE OF RETURN?

A. Yes. Ms. Bulkley suggests that my cost of equity recommendation does not meet the standards determined by the *Hope* and *Bluefield* cases when determining a fair rate of return. Specifically, she argues that my recommended cost of equity is not consistent with the comparable return standard (PAWC Statement No. 13-R, pp. 28-29).

Q. PLEASE RESPOND TO MS. BULKLEY'S ALLEGATION THAT YOUR COST OF EQUITY RECOMMENDATION DOES NOT ALLOW PAWC TO RECEIVE A FAIR RATE OF RETURN.

A. The main reason a proxy group is used is to satisfy the very standard that seeks to provide the subject utility with the opportunity to earn a return similar to that of companies with corresponding risks and uncertainties. The criteria I used in developing my proxy group were specifically designed to identify a group of comparable water utilities that serves as a benchmark in determining a fair cost of equity and overall rate of return.

Additionally, it is important to recognize another standard determined by the *Hope* and *Bluefield* cases when determining a fair rate of return that dictates a fair return can change (increase or decrease) along with economic conditions and capital markets. Forecasted growth rates and stock prices used to calculate the dividend yield component of the DCF model reflect how analysts and investors perceive current and future market conditions. Therefore, while my recommended ROE may not be as high as Ms. Bulkley would like, I believe it is in fact a fair return when considering current market conditions and expectations through the FPFTY.

SUMMARY OF OCA WITNESS GARRETT'S RESPONSE IN REBUTTAL TESTIMONY

Q. SUMMARIZE MR. GARRETT'S RESPONSE CONCERNING YOUR RECOMMENDED CAPITAL STRUCTURE.

A. Mr. Garrett disagrees with my recommended capital structure because it would result in an unreasonably high authorized rate of return and would be unfair to ratepayers. He opines that cost of capital analysts almost always rely on proxy group averages (or medians) for their financial modeling (e.g., average stock price, average dividend yield, average beta, etc.) rather than the range of a proxy group's capital structure. He suggests that it would be fairer and objective to use an average rather than a range in this analysis (OCA Statement No. 3-R, p. 3).

He then recommends that the Commission reject the Company's proposed capital structure for the results of the ROE models to be accurate, and he asserts that any discrepancy between the utility's capital structure and the proxy group's capital structure must be reconciled either through a capital structure adjustment for ratemaking purposes or a lower authorized ROE (OCA Statement No. 3-R, p. 4).

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S REBUTTAL TESTIMONY REGARDING YOUR RECOMMENDED CAPITAL STRUCTURE?

A. Generally, with few exceptions such as municipalities and smaller investor-owned

utilities with largely contributed capital, the actual and FPFTY capital structure of a company and the parent company should be reviewed and applied in the cost of equity analyses to truly reflect the utility's financing structure (capitalization ratio) that will be used to finance the utility's rate base. Based on this fundamental procedure and comparing the Company's actual capital structure with the proxy group's capital structure range, the Company's claimed capital structure is reasonable in this case. It is difficult to assess the reasonableness of a company's capitalization ratio because there are pros and cons of higher debt or higher equity in the capitalization ratio. For example, a higher debt ratio may result in higher financial risk and borrowing costs which negatively impacts ratepayers. The reverse would be true for companies with a higher equity ratio. Additionally, my recommended ROE of 8.45% appropriately addresses Mr. Garrette's concern about applying the Company's higher equity ratio as recommended in my direct testimony.

OVERALL RATE OF RETURN

Q. HAS YOUR OVERALL RATE OF RETURN RECOMMENDATION CHANGED FROM YOUR DIRECT TESTIMONY?

A. No. While my cost of equity and capital structure recommendations remain the same, the cost of wastewater specific long-term debt has been updated to reflect the Company's revision, but due to this minor change in the debt cost rate, the weighted cost of wastewater specific debt did not change in the analysis.

Q. WHAT IS YOUR OVERALL RATE OF RETURN RECOMMENDATION FOR THE COMPANY?

A. The following are my rate of return recommendations for the Company:

I&E Summary of Cost of Capital Pennsylvania-American Water Company - Water Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	44.01%	4.76%	2.09%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	55.99%	8.45%	4.73%
Total	**100.00%**		**6.82%**

I&E Summary of Cost of Capital Pennsylvania-American Water Company - Wastewater Operations			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	42.73%	4.76%	2.03%
Wastewater Specific Debt	4.40%	2.67%	0.12%
Preferred Stock	0.00%	0.00%	0.00%
Common Equity	52.87%	8.45%	4.47%
Total	**100.00%**		**6.62%**

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Joseph Kubas. My business address is 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as an Annuitant. I was previously employed as the Fixed Utility Valuation Engineer Supervisor.

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. My education and professional background are set forth in Appendix A, which is attached.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to evaluate Pennsylvania – American Water Company's (PAWC or Company) request for an annual increase in operating

revenue of approximately $203,946,000. My testimony regarding PAWC's request will focus on the exclusion of four wastewater systems, the rate structure contained in the remaining two wastewater systems, Cost of Service Studies, and the scaleback of rates.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 3 contains schedules relating to my direct testimony.

INTRODUCTION

Q. PLEASE DESCRIBE THE FILING.

A. On November 8, 2023, PAWC filed a combined water and wastewater base rate case based on a fully projected future test year (FPFTY) ending June 30, 2025. The total increase of approximately $203,946,000 is comprised of an increase in water revenue of approximately $199,237,000, and an increase in wastewater revenue of approximately $4,709,000 (PAWC Volume 3, Sch. 3-A).

Q. HOW MANY DIFFERENT WASTEWATER ZONES DOES PAWC HAVE AND DO THE RATES VARY BY ZONE?

A. PAWC currently has eleven different wastewater rate zones with various rates, with eight in the Sanitary Sewer System (SSS) Group, which only includes sanitary systems, and three zones in the Combined Sewer System (CSS) Group, which include systems that treat both sanitary and storm water flows (PAWC Volume 9,

Ex. 10-B and 10-C). PAWC also included in this filing the Butler Area Sewer Authority (BASA), the Borough of Brentwood (Brentwood), Farmington Township Wastewater (Farmington), and the Sadsbury Township Wastewater (Sadsbury) systems that the Company does not currently own but are pending purchase. Presently, the average bill for a residential customer varies between $49.24 per month in the York WW system to $106.70 in the Kane WW system (PAWC Volume 9, Ex 10-B, p. 70 and Ex. 10-C, p. 30).

BRENTWOOD WASTEWATER

Q. PLEASE DESCRIBE THE BRENTWOOD WASTEWATER SYSTEM.

A. The Brentwood system is a municipal owned wastewater collection only system in Allegheny County. PAWC filed an application with the Commission to purchase this system on April 3, 2023, at Docket A-2021-3024058.

Q. DID YOU PARTICIPATE IN THE APPLICATION PROCEEDING FOR THE PURCHASE OF THE BRENTWOOD WASTEWATER SYSTEM?

A. Yes. I provided direct and surrebuttal testimony recommending that the Application to acquire the system be denied for many reasons including the lack of affirmative public benefit and the improper inclusion of plant used by "non-customers" in the rate base (I&E St. No. 1 and St. No. 1-SR at Docket A-2021-3024058).

Q. WHAT IS THE CURRENT STATUS OF THE BRENTWOOD APPLICATION?

A. Administrative Law Judge (ALJ) Katrina T. Dunderdale recommended that the Application be denied in a Recommended Decision (RD) dated January 17, 2024. The RD is currently pending before the Commission. As part of this base rate case filing, the Company reflected a revenue shortfall of $1,565,232, as a result of the Brentwood acquisition that will be paid by water customers (PAWC Volume 3, Exhibit 3-A).

Q. WHAT DO YOU RECOMMEND CONCERNING THE INCLUSION OF THE RATE BASE, EXPENSES, TAXES, AND REVENUE FROM THE BRENTWOOD SYSTEM IN THIS CASE?

A. I recommend that the rate base, expenses, taxes, revenue, and corresponding revenue shortfall from the Brentwood system be excluded from this case.

Q. WHY DO YOU RECOMMEND THIS SYSTEM BE EXCLUDED FROM THIS BASE RATE CASE?

A. First, PAWC does not currently own the Brentwood system and as no decision has been issued by the Commission regarding this acquisition, it is uncertain whether the acquisition will proceed or whether the closing would even occur within the FPFTY. Therefore it is premature to allow the inclusion of the rate base, expenses, taxes, and revenue from Brentwood in this base rate case. Second, excluding the Brentwood

system in this case saves water customers $1,565,232, because the revenue shortfall as a result of purchasing the Brentwood system will be eliminated. Finally, in the Application proceeding, the Company alleged there would be no "immediate" harm to other PAWC customers as a result of this acquisition (PAWC St. No. 3. p. 10 at A-2021-3024058). Since this base rate case was filed before PAWC will be able to close on the acquisition of the Brentwood system, I believe this case falls into the "immediate" time frame PAWC was referring to. Therefore, I recommend the Commission hold the Company to this promise and exclude the Brentwood rate base, expenses, taxes, revenue and revenue shortfall from this case resulting in no harm to PAWC water customers.

BASA WASTEWATER

Q. PLEASE DESCRIBE THE BASA WASTEWATER SYSTEM.

A. The BASA system is a municipal owned wastewater collection and treatment system in Butler County. PAWC filed an application with the Commission to purchase this system on March 9, 2023, at Docket A-2022-3037047.

Q. WHAT IS THE CURRENT STATUS OF THE BASA APPLICATION?

A. The Commission approved the Application by an Order entered November 16, 2023. As part of this filing, the Company reflected a revenue shortfall of $21,552,699 for BASA that will be paid by water customers (PAWC Volume 3, Exhibit 3-A). However, I have been advised by counsel that this Commission order has been

appealed by Center and Summit Townships, and it is currently pending before the Commonwealth Court.

Q. WHAT DO YOU RECOMMEND CONCERNING THE INCLUSION OF THE RATE BASE, EXPENSES, TAXES AND REVENUE FROM THE BASA SYSTEM IN THIS CASE?

A. I recommend that the rate base, expenses, taxes, and revenue from the BASA system be excluded from this case.

Q. WHY DO YOU RECOMMEND THIS SYSTEM BE EXCLUDED FROM THIS BASE RATE CASE?

A. First, PAWC does not currently own the BASA system, and any closing will be dependent upon the outcome of the Commonwealth Court appeal, which could easily extend any potential closing beyond the FPFTY in this case. Therefore it is premature to allow the inclusion of the rate base, expenses, taxes, and revenue from BASA in this base rate case. Second, excluding the BASA system in this case saves water customers $21,552,699, because the revenue shortfall as a result of purchasing the BASA system will be eliminated. Finally, in the Application, the Company claimed there would be no "immediate" harm to other PAWC customers (PAWC St. No. 3. p. 11 at A-2022-3037047). Since this case was filed before PAWC will acquire the system, I believe this case falls also into the "immediate" time frame PAWC was referring to. Therefore, I recommend the Commission hold the

Company to this promise and exclude the BASA rate base, expenses, taxes, revenue, and revenue shortfall from this case, resulting in no harm to PAWC water customers.

FARMINGTON WASTEWATER

Q. PLEASE DESCRIBE THE FARMINGTON TOWNSHIP WASTEWATER SYSTEM.

A. The Farmington system is a municipal owned wastewater collection and treatment system in Clarion County. PAWC filed an application with the Commission to purchase this system on August 28, 2023 at Docket A-2023-3042567.

Q. WHAT IS THE CURRENT STATUS OF THE FARMINGTON APPLICATION?

A. The Commission has yet to approve this Application.

Q. WHAT DO YOU RECOMMEND CONCERNING THE INCLUSION OF THE RATE BASE, EXPENSES, TAXES AND REVENUE FROM THE FARMINGTON SYSTEM IN THIS CASE?

A. As this application has not been approved and a closing date is unknown, I recommend that the rate base, expenses, taxes, and revenue from the Farmington system be excluded from this case, since the system is not currently owned by PAWC.

SADSBURY WASTEWATER

Q. PLEASE DESCRIBE THE SADSBURY TOWNSHIP WASTEWATER SYSTEM.

A. The Sadsbury system is a municipal owned wastewater collection and treatment system in Lancaster County. PAWC filed an application with the Commission to purchase this system on March 9, 2023, at Docket A-2023-3042058.

Q. WHAT IS THE CURRENT STATUS OF THE SADSBURY APPLICATION?

A. The Commission has yet to approve this Application.

Q. WHAT DO YOU RECOMMEND CONCERNING THE INCLUSION OF THE RATE BASE, EXPENSES, TAXES AND REVENUE FROM THE SADSBURY SYSTEM IN THIS CASE?

A. As this application has not been approved and a closing date is unknown, I recommend that the rate base, expenses, taxes, and revenue from the Sadsbury system be excluded from this case, since the system is not currently owned by PAWC.

WASTEWATER PRESENT RATE REVENUE

Q. PLEASE SUMMARIZE THE WASTEWATER PRESENT RATE REVENUE THAT YOU RECOMMEND BE EXCLUDED FROM THE FILING.

A. For the reasons stated above, I recommend that $11,847,402 of present rate revenue

from BASA and $1,824,191 of present rate revenue from Brentwood shown on PAWC Volume 3, Sch. 3-A be excluded from this case. I also recommend that $322,926 of present rate revenue from Farmington and $471,228 of present rate revenue from Sadsbury shown on PAWC Volume 9, Exhibit 10-B, p. 1 be excluded from this case.

WASTEWATER PROPOSED RATE SUMMARY

Q. WHAT DID PAWC STATE CONCERNING PROPOSED WASTEWATER RATES?

A. PAWC made several claims and statements concerning wastewater rates. First, the Company states that "cost causation" is an important goal in establishing proposed rates. The Company goes on to state that "cost causation" is the "foundation" of its proposed wastewater rates (PAWC Volume 9, St. No. 10, pp. 28-30).

Q. DID THE COMPANY PROPOSE WASTEWATER RATES TO RECOVER THE HIGHER COST OF PROVIDING WASTEWATER SERVICE?

A. No. Contrary to this testimony, the Company did not propose wastewater rates to better recover the cost of providing wastewater service. The Company proposed various wastewater rate decreases, kept some rates the same, and proposed increases in some other cases. The increased rates did move the lower rates closer to the corresponding rates in Zone 1. A review of the Company's proposed rates indicates that the Company's primary goal was to ignore the cost of providing wastewater

service and limit the average bill of residential wastewater customers to make them comparable to the average bill of a water customer (PAWC Volume 9, St. No. 10, pp. 47-48).

Q. WHAT IS ACT 11 of 2012?

A. On February 14, 2012, Governor Corbett signed into law Act 11 of 2012 (Act 11), which amends Chapters 3, 13, and 33 of the Pennsylvania Public Utility Code. Act 11 amends Chapters 3 and 13 to allow jurisdictional utilities to make rate case claims based on an FPFTY, to allow wastewater utilities to allocate a portion of their revenue requirement to the combined wastewater and water utility customer base, and to allow water and wastewater utilities, electric distribution companies, and natural gas distribution companies or a city natural gas distribution operation to petition for a distribution system improvement charge (Docket No. M-2012-2293611, Final Implementation Order entered August 2, 2012).

Q. DOES ACT 11 SPECIFY HOW RATES SHOULD BE DETERMINED OR WHAT PORTION OF A COMPANY'S WASTEWATER REVENUE REQUIREMENT SHOULD BE ALLOCATED TO ITS COMBINED WATER AND WASTEWATER CUSTOMERS?

A. No. Act 11 does not specify how the Commission should determine rates or dictate the amount of revenue that should be allocated or shifted, leaving the Commission wide latitude in applying this provision of Act 11. However, it is important to

remember that Section 1311(c) states that it must be in the public interest for the utility to allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base.

Q. IS PAWC PROPOSING TO SHIFT SOME OF THE WASTEWATER REVENUE REQUIREMENT FROM WASTEWATER CUSTOMERS TO WATER CUSTOMERS IN THIS FILING?

A. Yes. In its filing, the Company proposes that its wastewater operations receive a $71,087,394 subsidy from its water operations (PAWC Volume 3, Ex. 3-A, p. 1).

Q. WHY IS PAWC PROPOSING TO SHIFT SOME OF THE WASTEWATER REVENUE REQUIREMENT FROM WASTEWATER CUSTOMERS TO WATER CUSTOMERS IN THIS FILING?

A. The Company believes it is important to limit the overall increase to wastewater customers. After increasing, and decreasing various wastewater rates, the Company's goal was to have an average wastewater bill of approximately $100 per month in the SSS Operations and approximately $110 per month in the CSS Operations which is in parity with the average water customer bill of $90 per month. This proposal results in a wastewater revenue shortfall of $71,087,394 being shifted to water customers (PAWC Volume 3, Sch. Act 11, p. 1).

Q. SHOULD THE COMMISSION ACCEPT PAWC'S PROPOSAL TO SHIFT $71,087,394 OF THE WASTEWATER REVENUE REQUIREMENT FROM WASTEWATER CUSTOMERS TO WATER CUSTOMERS IN THIS FILING?

A. No, for several reasons. First, as described below, the primary consideration should have been to design wastewater rates to recover the cost of providing wastewater service, a goal the Company described, but ignored. Second, I believe that the wastewater rates that I propose result in average bills that are reasonable considering all the factors. Third, the Company's affordability analysis is flawed because it ignores the wastewater rates paid to other entities by PAWC water customers. Finally, the Company's affordability analysis ignores the benefits that it claims accrue to customers of being acquired by PAWC.

Q. HOW MUCH IS THE ACT 11 SUBSIDY REDUCED IF THE BASA AND BRENTWOOD SYSTEMS ARE NOT INCLUDED?

A. The $71,087,394 subsidy is reduced to $47,969,463 ($71,087,394 – $21,552,699 - $1,565,232).

Q. HOW DO YOU RECOMMEND REDUCTION OF THE REMAINING $47,969,493 SUBSIDY?

A. As described below, I recommend various changes to the wastewater rates to reduce the remaining $47,969,463 subsidy needed to operate the wastewater systems.

Q. WHAT DID THE COMPANY PROVIDE TO SUPPORT ITS WASTEWATER RATES?

A. The Company provided what it calls an "Affordability Analysis" as described in PAWC Volume 9, St. 10. In summary, the Company believes that its rate structure proposal makes all rates more "affordable," by increasing the bill of an average water customer by approximately $6.08 per month so that wastewater rates can be between $10 and $90 per month lower (PAWC Volume 9, St. No. 10, p. 52).

Q. WHAT DO YOU RECOMMEND CONCERNING THE COMPANY'S AFFORDABILITY ANALYSIS?

A. I recommend that the Commission not rely on the Company's affordability analysis to justify limiting PAWC's wastewater rates for three reasons. First, I do not believe that making the average bills of water and wastewater customers "comparable" should be the primary goal as there is a substantial difference in operating costs between water and wastewater systems, and the Company itself notes that cost causation should be a primary factor in rate setting. I am not aware of any rate making criteria that would imply that water customers and wastewater customers should have comparable rates. Second, as described above, the analysis ignores the fact that water customer who do not receive wastewater service from PAWC will incur their own wastewater costs that may or may not be comparable to their PAWC water rates while they subsidize PAWC wastewater customers to provide them with comparable rates. This is definitely a cost to PAWC water customers that should not

be ignored. Third, the analysis ignores the benefits the Company claims that could or have accrued to customers in acquired systems. As an example, the analysis ignores the potential local tax reductions PAWC claimed a customer may receive after the wastewater system was acquired by PAWC. Therefore, the affordability analysis is flawed and should not be used to establish wastewater rates.

WASTEWATER RATE STRUCTURE AND REVENUE SUMMARY

Q. DID YOU COMPILE A SUMMARY THAT SHOWS THE REVENUE IMPACT OF I&E'S RATE STRUCTURE RECOMMENDATIONS?

A. Yes. A summary of the I&E wastewater revenue recommendations described below is provided on I&E Ex. No. 3, Sch. 1. On this exhibit, column B shows the total PAWC operations, column C shows PAWC water operations, column D shows total Wastewater Operations, and columns E through H show the various Wastewater Operations. Line 1 shows the present rate revenue from each operation, line 2 shows the additional revenue requirement the Company claimed, line 3 shows the Act 11 allocation, line 4 shows the proposed revenue requested by the Company reallocated by I&E, line 5 shows the increase, and line 6 shows the percentage increase.

Based upon my proposed wastewater rates, the total subsidy needed to operate the SSS Operations wastewater systems is $357,517 (I&E Ex. No. 3, Sch. 1, columns C and D, line 3).

SSS OPERATIONS – ZONES 1, 2, 5, 7, 8, AND 9

Q. DID THE COMPANY PROVIDE A COST OF SERVICE STUDY (COSS) TO DETERMINE THE COSTS OF PROVIDING WASTEWATER SERVICE FOR THE SSS OPERATIONS?

A. Yes. The Company provided one COSS for the SSS Operations - Zones 1, 2, 5, 7, 8, and 9 (PAWC Volume 17, Ex. 12-B). This COSS included a customer cost analysis that claims the SSS Operations wastewater customer cost is comprised of $13.87 per month of direct customer costs, and $29.63 per month of Inflow and Infiltration (I&I) costs for a total cost of $43.50 for a Residential customer (PAWC Volume 17, Ex. 12-B, Sch. RS1 j. Responses p. 2).

Q. WHAT CHANGE IN REVENUE DID THE COMPANY PROPOSE IN THE SSS OPERATIONS?

A. The Company proposed that present rate revenue be decreased from $95,470,866 to $95,301,613 which is a decrease of $169,253 or 0.2% (PAWC Volume 9 Ex. 10-B, p. 1). To achieve this reduction, the Company proposed to increase some customer charges, usage rates and flat rates, and decrease other customer charges, usage rates and flat rates (PAWC Volume 9 Ex. 10-B, pp. 3-32).

Q. DO THE PROPOSED REVENUES FROM THE SSS OPERATIONS RECOVER THE ENTIRE COST OF PROVIDING WASTEWATER SERVICE TO THE SSS OPERATIONS?

A. No. The revenue shortfall for SSS Operations is $31,962,411 (PAWC Volume 3, Exhibit 3-A).

Q. WHAT PERCENTAGE OF TOTAL PAWC CUSTOMERS ARE WASTEWATER CUSTOMERS?

A. Based upon the number of customers in each system, wastewater customers comprise only approximately 12.6% of all PAWC customers (I&E Ex. No. 3, Sch. 2).

Q. IS THIS LARGE SUBSIDY REASONABLE?

A. No. I believe each type of utility service should recover as much of the cost of providing that service as possible. Since most PAWC water customers are not wastewater customers, it is unreasonable to require water customers to subsidize wastewater customers to the extent PAWC has requested. Therefore, as described below, I recommend that rates increase for SSS and CSS Operations to significantly reduce the remaining $47,969,463 subsidy.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN THE SSS OPERATIONS.

A. My goal was to reduce the $31,962,411 subsidy the Company claims is needed in the SSS Operations. The proposed rates that I recommend are shown on I&E Ex No. 3, Sch 3, pp. 1-2 column D. My proposed revenue by class and zone as well as the increases by class are amounts shown on I&E Ex. No. 3, Sch. 4. The total increase in the SSS system that I recommend is $32,265,198 (I&E Ex No. 3, Sch. 4, p. 1, column G, line 23). This recommendation results in a remaining subsidy in the SSS Operations of $321,682 (I&E Ex No. 3, Sch 1, column E, line 3).

Q. WHAT LIMITATIONS DID YOU FOLLOW TO ALMOST ELIMINATE THE SUBSIDY NEEDED TO OPERATE THE SSS OPERATIONS?

A. I recommend monthly customer charges and usage rates that will limit the highest increase in an average bill to less than 70%, except in one case. As described below, the highest average percent increase in a bill a residential customer will experience is the 69.2% increase I propose in Zone 7 - York. The 70% maximum increase to an average bill also applies to non-residential customers, with one exception.

Q. WHAT OTHER CRITERIA DID YOU USE TO PROPOSE RATES?

A. I utilized the Company's COSS to develop the various wastewater rates that moves the relative rate of return of each class towards 1.0. During the course of discovery,

the Company revised its SSS Operations COSS. I provide the revised results under present and proposed rates as I&E Ex. No. 3, Sch. 5, p. 1 and 2 respectively.

Q. WHAT ARE RATE OF RETURN AND RELATIVE RATE OF RETURN?

A. The rate of return is the Commission authorized return on rate base that is determined in a base rate proceeding; this is the return the Company and shareholders earn on the rate base investment. A relative rate of return indicates how the rate of return of each customer class compares to the system average rate of return. In general, a relative rate of return that provides revenue equal to its cost to serve would have a relative rate of return equal to 1.0. If a class of service has a relative rate of return below 1.0, the revenue received from that class does not cover the cost of providing service to that class. If a class of service has a relative rate of return above 1.0, the revenue received from that class exceeds the cost of providing service to that class.

SSS OPERATIONS - RESIDENTIAL

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR RESIDENTIAL CUSTOMERS IN THE SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 6, showing present and proposed rates and revenue for Residential SSS Operation customers.

Q. HOW DID YOU DETERMINE THE RESIDENTIAL CUSTOMER CHARGE OF $15.00 PER MONTH?

A. With a present customer charge of $14.30 per month, my proposed $15.00 per month customer charge equates to an increase of $0.70 per month or 4.9% (I&E Ex. No. 3, Sch. 3, p. 1, line 1). The $15.00 per month customer charge will recover more than the direct customer cost of $13.87 per month plus a small portion of the I&I costs identified by the Company, both described above. Furthermore, I believe this 4.9% increase will provide sufficient revenue, while limiting the increase to low-usage residential customers.

Q. WHY DO YOU NOT RECOMMEND MORE OF THE I&I COSTS BE RECOVERED IN THE RESIDENTIAL CUSTOMER CHARGE OF $15.00 PER MONTH?

A. I recognize that I&I costs are a large portion of the cost of operating wastewater systems. However, I&I costs relate to flow, which does not vary with the number of customers, a typical criterion for determining if a cost should be recovered in the customer charge. Therefore, I recommend that only a small part of I&I costs be recovered in the customer charge to generate revenue, but I believe it is improper to recover more than a small amount of the cost of I&I in the customer charge.

Q. HOW DID YOU DETERMINE THE SSS OPERATIONS RESIDENTIAL USAGE RATES?

A. In order to reduce the $31,962,411 subsidy described above in the SSS Operations I increased the residential usage rate to $3.74 per hundred gallons in Zones 1, 2, and 5 (I&E Ex. No. 3, Sch. 2, p. 1, column D, line 4). The lower residential usage rates for Zones 7 and 9 were limited by the maximum average bill increase of 70.0% described above and are shown on I&E Ex. No. 3, Sch. 3, p. 2, column D, lines 2-3 and 14-15.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE SSS OPERATIONS SUBSIDY?

A. These residential customer charges and usage rates reduce the subsidy needed to operate the SSS Operations by $19,612,917 (I&E Ex. No. 3, Sch. 4, p. 1, column B, line 27).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVELS FOR THE SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 7, showing the present and proposed bills at various usage levels. The average bill is shown in bold with an asterisk for each zone in the SSS Operations.

Q. WHAT INCREASE WILL THE AVERAGE ZONE 1 AND ZONE 5 RESIDENTIAL CUSTOMERS RECEIVE UNDER YOUR CUSTOMER CHARGE AND USAGE RATE PROPOSAL?

A. The bill for an average Residential customer in Zones 1 and 5 will increase from $105.18 per month to $131.76 per month, which is an increase of $26.58 per month or 25.3% (I&E Ex. No. 3, Sch. 7, p. 1 and p. 3, line 7).

Q. WHAT INCREASE WILL THE AVERAGE CUSTOMERS RECEIVE IN THE OTHER RATE ZONES?

A. The bill for an average Residential customer in Zone 2 will increase from $91.77 per month to $131.76 per month, which is an increase of $39.99 per month or 43.6% (I&E Ex. No. 3, Sch. 7, p. 2, line 7). The bill for an average Residential customer in Zone 7 will increase from $49.24 per month to $83.32 per month, which is an increase of $34.08 per month or 69.2% (I&E Ex. No. 3, Sch. 7, p. 4, line 7). The bill for an average Residential customer in Zone 9 will increase from $49.68 per month to $83.68 per month, which is an increase of $34.00 per month or 68.4% (I&E Ex. No. 3, Sch. 7, p. 6, line 7). The bill for a flat rate Residential customer in Zone 8 will increase from $107.14 per month to $132.00 per month, which is an increase of $24.86 per month or 23.2% (I&E Ex. No. 3, Sch. 7, p. 5, line 7).

Q. HOW DID YOU DETERMINE THE MONTHLY FLAT RATE FOR THE CUSTOMERS IN ZONE 8, AND FOR CUSTOMERS WHERE THERE IS NO WATER USAGE DATA AVAILABLE?

A. The $132.00 per month Residential flat rate that I propose in these zones and in other zones if a customer has no water usage available is based upon the average bill of a Zone 1 customer that uses 3,122 gallons per month as a result of my rate structure proposal, rounded to the nearest dollar (I&E Ex. No. 3, Sch. 7, p. 1, line 7).

Q. HOW DID YOU DETERMINE THE MONTHLY FLAT RATE FOR THE CUSTOMERS IN ZONE 9?

A. The present flat rate in Zone 9 is $50.00 per month. Increasing this flat rate to $75.00 per month equates to an increase of $25.00 per month or 50%. This increase of $25.00 per month will move the Zone 9 flat rate towards the Zone 1 flat rate that I recommend in a more gradual manner (I&E Ex. No. 3, Sch. 3, p. 2, line 13).

Q. WHY IS IT REASONABLE FOR THE AVERAGE CUSTOMER'S BILL IN ZONE 2 TO INCREASE MORE THAN THE AVERAGE BILL OF A CUSTOMER IN ZONE 1?

A. The present usage rate for Zone 1 customers is $2.875 per hundred gallons, and the usage rate for Zone 2 customers is $2.450 per hundred gallons (I&E Ex No. 3, Sch.

3, p. 1, lines 4 and 22). In order to consolidate these rate rates, Zone 2 customers will need to experience a slightly larger increase than the average Zone 1 customer to equalize the usage rates.

Q. WHY IS IT REASONABLE FOR THE AVERAGE CUSTOMER'S BILL IN ZONES 7 AND 9 TO INCREASE MORE THAT THE AVERAGE INCREASE FOR ZONE 1 CUSTOMERS?

A. There are two reasons that the increases for these systems are greater. First, the average Residential bill for customers in these zones is below $50.00 per month, well below the present average bill of $105.18 in Zone 1 (I&E Ex. No. 3, Sch. 7, pp. 1, 4, and 6). Therefore, a greater percentage increase in the average bill is necessary to begin to consolidate rates, so that all SSS Operations Residential customers eventually pay the same rates. Second, Zones 7 and 9 were acquired under Section 1329, which among other things, provided benefits to the municipalities that sold their systems to PAWC including such things as debt relief, the municipality's financial outlook, and other improvements and investments to municipal properties in addition to PAWC's claimed improved service to their customers. Therefore, since the municipalities and presumably the customers benefited from being acquired by PAWC through Section 1329 it is reasonable to assign a greater than average increase in rates to customers acquired under Section 1329.

Q. HOW DID THE CITY OF YORK BELIEVE THE SALE WOULD BENEFIT THE CITY OF YORK AND ITS RESIDENTS?

A. City Manager Micheal Helfich testified in the Application Docket at A-2021-3024681, City St. No. 1, p. 6 that:

> Sales proceeds realized by the Authority will be applied to repay or defease sewer debt and the remaining proceeds will be transferred to the City upon Closing of the Transaction and dissolution of the Authority. These remaining proceeds would be available to address critical public service needs in the community, including additional municipal bond debt, municipal pension obligations, social programs, infrastructural improvements, and other key initiatives.

Q. HOW DID THE BOROUGH OF ROYERSFORD BELIEVE THE SALE WOULD BENEFIT THE BOROUGH OF ROYERSFORD AND ITS RESIDENTS?

A. City Manager Micheal A Leonard testified in the Application Docket at A-2020-3014248, St. No. 1, p. 10 that:

> The sale will (1) improve the Borough's financial condition and outlook, (2) enable the Borough to reallocate its administration time to focus on other key initiatives of the Borough, and (3) provide for economies of scale given that PA American Water already provides water service to Borough residents.

Q. DID YOU MAKE A SIMILAR RECOMMENDATION IN THE RECENT AQUA BASE RATE CASE CONCERNING THE ACT 11 SUBSIDY AND THE RATES PAID BY SECTION 1329 CUSTOMERS?

A. Yes. In the recent Aqua base rate case at Docket R-2021-3027385, I recommended a

larger percentage increase in wastewater rates and the corresponding average bills of most customers to reduce the Act 11 subsidy. I recommended an even larger percentage increase in the rates and corresponding average bills for customers in the systems acquired under Section 1329 (I&E Ex, No. 3, Sch. 8).

Q. DID THE ALJ AND COMMISSION ACCEPT YOUR RECOMMENDATIONS CONCERNING THE ACT 11 SUBSIDY AND RATES PAID BY SECTION 1329 CUSTOMERS?

A. Yes. The Commission agreed with the ALJ that the Act 11 subsidy should be reduced and that rates for customers acquired under Section 1329 should increase more than the rates for other customers because of the benefits received by these customers (Aqua Docket R-2021-3027385, Order entered May 16, 2022, p. 224 – 230).

Q. WHAT IS THE RELATIVE RATE OF RETURN FOR THE RESIDENTIAL CLASS IN THE SSS OPERATIONS AS A RESULT OF YOUR PROPOSED RATE RECOMMENDATIONS?

A. The relative rate of return for the Residential class in the SSS Operations is 1.19 (I&E Ex. No. 3, Sch. 5, p. 3, Column D).

Q. ABOVE YOU DESCRIBED HOW THE RELATIVE RATE OF RETURN SHOULD BE 1.00, EXPLAIN WHY THIS RELATIVE RATE OF RETURN IS ABOVE ONE.

A. It is above 1.00 because even after increasing the Bulk Contract rates, the relative rate of return for the Bulk Contracts is well below 1.00 (I&E Ex. No. 3, Sch. 5, p. 3, line 13, columns D and H). In other words, the Residential and Non-Residential classes must contribute more revenue than the cost of providing service to compensate PAWC for the Bulk service customers paying rates substantially below their full cost of service.

SSS OPERATIONS – COMMERCIAL

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR COMMERCIAL CUSTOMERS IN THE SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 9, showing present and proposed rates and revenue for Commercial SSS Operations customers.

Q. HOW DID YOU DETERMINE THE COMMERCIAL CUSTOMER CHARGE OF $36.70 PER MONTH FOR GENERAL COMMERCIAL CUSTOMERS?

A. With a present customer charge of $35.00 per month, my proposed $36.70 per month customer charge equates to an increase of $1.70 per month or 4.9% (I&E Ex. No. 3,

Sch. 3, p. 1, line 2). The 4.9% increase is the same increase I proposed in the Residential class. I believe this 4.9% increase will provide sufficient revenue, while limiting the increase to low-usage commercial customers.

Q. HOW DID YOU DETERMINE THE USAGE RATE IN THE SSS OPERATIONS FOR GENERAL COMMERCIAL CUSTOMERS?

A. In order to reduce the $31,962,411 subsidy described above in the SSS Operations, I increased the general Commercial usage rate to $3.150 per hundred gallons in Zones 1, 2, and 5 (I&E Ex. No. 3, Sch. 3, p. 1, column D, line 5). The lower special Commercial usage rates for Zone 1, 5, which I will discuss below, and the general usage rates for Zones 7 and 9 that were limited by the average bill increase are shown on I&E Ex. No. 3, Sch. 3, pp. 2, column D, lines 5-6 and 18-19.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE SSS OPERATIONS SUBSIDY?

A. These commercial customer charges and usage rates reduce the subsidy needed to operate the SSS Operations by $7,545,735 (I&E Ex. No. 3, Sch. 4, p. 1, column C, line 27).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVELS FOR THE SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 10, showing the present and proposed bills at various usage levels. The average bill for each Zone is shown in bold with an asterisk for each zone in the SSS Operations.

Q. WHAT INCREASE WILL THE AVERAGE ZONE 1 AND ZONE 5 COMMERCIAL CUSTOMERS RECEIVE UNDER YOUR CUSTOMER CHARGE AND USAGE RATE PROPOSAL?

A. The bill for an average Commercial customer in Zones 1 and 5 will increase from $505.03 per month to $732.66 per month, which is an increase of $227.63 per month or 45.1% (I&E Ex. No. 3, Sch. 10, p. 1 and p. 3, line 19).

Q. WHAT INCREASE WILL THE AVERAGE CUSTOMERS RECEIVE IN THE OTHER RATE ZONES?

A. The bill for an average Commercial customer in Zone 2 will increase from $459.70 per month to $732.66 per month, which is an increase of $261.96 per month or 59.4% (I&E Ex. No. 3, Sch. 10, p. 2, line 19). The bill for an average Commercial customer in Zone 7 will increase from $363.02 per month to $611.35 per month, which is an increase of $248.33 per month or 68.4% (I&E Ex. No. 3, Sch. 10, p. 4, line 19). The bill for a flat rate Commercial customer in Zone 8 will increase from

$107.14 per month to $150.00 per month, which is an increase of $42.86 per month or 40.0% (I&E Ex. No. 3, Sch. 10, p. 5, line 19). The bill for an average Commercial customer in Zone 9 will increase from $229.94 per month to $385.79 per month, which is an increase of $155.84 per month or 67.8% (I&E Ex. No. 3, Sch. 10, p. 6, line 19).

Q. HOW DID YOU DETERMINE THE MONTHLY FLAT RATE FOR THE CUSTOMERS IN ZONES 1, 5, 8 AND FOR CUSTOMERS WHERE THERE IS NO WATER USAGE DATA AVAILABLE?

A. As described above, the Residential flat rate of $132.00 per month is based upon the average usage of a Residential customer. Following this concept, the flat rate for a Commercial customer should be based upon the average bill of a Commercial customer. However, that would require a very large increase. Therefore, I recommend a Commercial flat rate of $150.00 per month to begin to move the Commercial flat rate towards the average $732.66 per month bill of Zone 1 Commercial customers (I&E Ex. No. 3, Sch. 10, p. 1, line 19).

Q. WHAT IS THE PRESENT COMMERCIAL FLAT CHARGE IN ZONE 9 AND WHAT FLAT CHARGE DO YOU RECOMMEND?

A. The present flat rate in Zone 9 is $67.00 per month. Therefore, my recommendation of $113.00 per month in rate Zone 9 equates to an increase of

$46.00 per month or 68.7% (I&E Ex. No. 3, Sch. 3, p. 2, line 17). I limited the increase to $46.00 per month to keep the increase reasonable and under 70%.

Q. ARE THERE SPECIAL COMMERCIAL RATES IN THE SSS OPERATIONS?

A. Yes. In the SSS Operations, the Company maintains a separate usage charge for Upper Pottsgrove, and separate monthly charges and usage rates for Cleveland Cliffs and Rainbow Washhouse (PAWC Volume 9, Ex, 10-B, p. 12 and 14).

Q. WHAT DID THE COMPANY PROPOSE FOR THESE SPECIAL COMMERCIAL RATES IN THE SSS OPERATIONS?

A. For Upper Pottsgrove, the Company proposed the monthly charge be decreased, and the usage rate be increased. The total bill will decrease by 2.4% (I&E Ex. No. 3. Sch. 9, p. 7, lines 1-3). For Cleveland Cliffs, the Company proposed no increase in the monthly charge and a small increase in the usage rate. The total bill will increase by 0.3% (I&E Ex. No. 3. Sch. 9, p. 7, lines 4-6). For the Rainbow Washhouse, the Company proposed small increases in both the customer charge and usage rate. The Company also proposed the usage rate be applied to all usage, thus eliminating the usage allowance. The total bill will increase 5.9% (I&E Ex. No. 3. Sch. 9, p. 7, lines 8-11).

Q. IS IT REASONABLE TO DECREASE OR LIMIT THE INCREASES FOR THESE SPECIAL RATE COMMERCIAL CUSTOMERS IN THE SSS OPERATIONS?

A. No. Given the overall increase in cost to operate all PAWC systems, it is reasonable to believe that the cost to serve these customers has also increased since the last case or will increase before the end of the FPFTY. With all the increase in regulatory costs, more stringent environmental compliance issues, need for plant additions, and overall higher costs and risk described by the Company, it is disingenuous of the Company and unfair to other customers to propose a decrease for one customer and minimal increases for the remaining two customers. Second, PAWC acquiring the York and Royersford systems resulted in a revenue shortfall. This revenue shortfall should be recovered from all customers including special rate customers. Therefore, I believe it's also reasonable that these special rate customers should contribute to this revenue shortfall that currently exists as a result of the York and Royersford acquisitions. Also as described below, there is a revenue shortfall as a result of not charging York Bulk customers the fully imbedded cost of providing service to them to which these customers should also contribute (I&E Ex. No. 3, Sch. 5, column H).

Q. WHAT RATES DO YOU RECOMMEND FOR THESE SPECIAL COMMERCIAL CUSTOMERS IN THE SSS OPERATIONS?

A. For Upper Pottsgrove, I recommend a customer charge of $37.60 per month, and a usage rate of $2.350 per hundred gallons (I&E Ex. No. 3. Sch. 3, p. 1, lines 8-9). For

Cleveland Cliffs, I recommend a customer charge of $456.50 per month and a usage rate of $2.350 per hundred gallons (I&E Ex. No. 3. Sch. 3, p. 1, lines 10-11). For the Rainbow Washhouse, I recommend a monthly customer charge of $75.00 and a usage rate of $0.380 per hundred gallons for all usage (I&E Ex. No. 3. Sch. 3, p. 1, lines 35-38).

Q. DO YOUR RATES PRODUCE REASONABLE INCREASES FOR THESE SPECIAL RATE COMMERCIAL CUSTOMERS?

A. Yes. For Upper Pottsgrove the increase in revenue is 29.2% (I&E Ex. No. 3. Sch. 9, p. 7, line 14). For Cleveland Cliffs, the total bill will increase by 22.3% (I&E Ex. No. 3. Sch. 9, p. 7, line 17). These percentage increases are below the 45.1% increase than I propose for the average Commercial customer in Zone 1 but will move the usage rate towards the usage rate I propose for the Commercial class in the SSS Operations (I&E Ex. No. 3, Sch. 4, p. 1, column C, line 24). For the Rainbow Washhouse, the total bill will increase 67.1% (I&E Ex. No. 3. Sch. 9, p. 7, lines 18-20). The larger percentage increase is reasonable because of the low present usage rate of $0.210 per hundred gallons. This larger percentage increase is justified to move the usage rate towards the proposed Commercial usage rate of $3.150 per hundred gallons that I recommend in the SSS Operations (I&E Ex. No. 3. Sch. 3, p. 1, line 5).

Q. WHY DO YOU RECOMMEND LARGER PERCENTAGE INCREASES FOR COMMERCIAL CUSTOMERS THAN THE RESIDENTIAL CUSTOMERS IN SOME ZONES?

A. Under present rates, the relative rate of return for the Residential class is 1.35 and 1.00 for the Non-Residential classes including the Commercial class, indicating that a higher percentage increase is justified for the Commercial class (I&E Ex. No. 3, Sch. 5, p. 1, line 12, columns C and D). Under my proposed rates, the relative rate of return for the Residential class is 1.19 and 1.18 for the Non-Residential class, which includes the Commercial class (I&E Ex. No. 3, Sch. 5, p. 3, line 13, columns D and E).

SSS OPERATIONS – INDUSTRIAL

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR INDUSTRIAL CUSTOMERS IN THE SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 11, showing present and proposed rates and revenue for Industrial SSS Operations customers. It should be noted that I included the customer charge revenue for the one Zone 7 Industrial customer that the Company failed to include (I&E Ex. No. 3, Sch. 11, p. 2, line 1).

Q. HOW DID YOU DETERMINE THE INDUSTRIAL CUSTOMER CHARGE OF $36.70 PER MONTH AND USAGE RATE OF $3.150 PER HUNDRED GALLONS FOR GENERAL INDUSTRIAL CUSTOMERS?

A. These rates are the same rates I propose for the Commercial class described above. Since the Company combined the Commercial, Small Industrial, and Municipal customers in the "Non-Residential" class in the COSS, it is reasonable to recommend the same rates for these general Non-Residential customers.

Q. HOW DID YOU DETERMINE THE USAGE RATES IN ZONES 7 AND 9, AND THE FLAT RATE FOR INDUSTRIAL CUSTOMERS?

A. These are the same rates that I proposed for the Commercial class described above.

Q. ARE THERE ALSO SPECIAL USAGE RATES FOR SOME INDUSTRIAL CUSTOMERS?

A. Yes. There are special Industrial usage rates for Zone 1, which I will discuss below. The special rates that I recommend are shown on I&E Ex. No. 3, Sch. 3, p. 1, column D.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE SSS OPERATIONS SUBSIDY?

A. These Industrial customer charges and usage rates reduce the subsidy needed to

operate the SSS Operations by $1,256,978 (I&E Ex. No. 3, Sch. 4, p. 1, column D, line 27).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVELS FOR SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 12, showing the present and proposed bills at various usage levels. The average bill is shown in bold with an asterisk for each zone in the SSS system.

Q. WHAT INCREASE WILL THE AVERAGE ZONE 1 INDUSTRIAL CUSTOMERS RECEIVE UNDER YOUR CUSTOMER CHARGE AND USAGE RATE PROPOSAL?

A. The bill for an average Industrial customer in Zone 1 will increase from $14,614.64 per month to $21,644.03 per month, which is an increase of $7,027.39 per month or 48.1% (I&E Ex. No. 3, Sch. 12, p. 1, line 23).

Q. WHAT INCREASE WILL THE AVERAGE CUSTOMERS RECEIVE IN THE OTHER RATE ZONES?

A. The bill for an average Industrial customer in Zone 7 will increase from $875.92 per month to $1,458.17 per month, which is an increase of $582.25 per month or 66.5% (I&E Ex. No. 3, Sch. 12, p. 2, line 13). The bill for a flat rate Industrial customer in

Zone 8 will increase from $107.14 per month to $150.00 per month, which is an increase of $42.86 per month or 40.0% (I&E Ex. No. 3, Sch. 12, p. 3, line 23). The bill for an average Industrial customer in Zone 9 will increase from $116.06 per month to $196.42 per month, which is an increase of $80.36 per month or 69.2% (I&E Ex. No. 3, Sch. 12, p. 4, line 7).

Q. ARE THERE SPECIAL INDUSTRIAL RATES IN THE SSS OPERATIONS?

A. Yes. In the SSS Operations, the Company charges the same separate customer charge and usage rate for Cleveland Cliffs and Victory Brewing. The Company also charges various flat rates for Knouse Foods, Penn State Special Metals, PSC Metals, and Ipsco Koppel Tubulars (PAWC Volume 9, Ex, 10-B, p. 20).

Q. WHAT DID THE COMPANY PROPOSE FOR THESE SPECIAL INDUSTRIAL RATES IN THE SSS OPERATIONS?

A. For Cleveland Cliffs and Victory Brewing, the Company proposed no increase in the $415.00 per month customer charge and proposed to increase the present usage rate of $1.400 per hundred gallons to $1.480 per hundred gallons, which equates to an increase of $0.08 per hundred gallons or 4.6%. The Company proposed no increase for Knouse Foods, Penn State Special Metals, PSC Metals, and Ipsco Koppel Tubulars (PAWC Volume 9, Ex, 10-B, p. 20).

Q. IS IT REASONABLE TO PROPOSE NO INCREASE OR LIMIT THE INCREASE FOR THESE SPECIAL INDUSTRIAL RATE CUSTOMERS IN THE SSS OPERATIONS?

A. No. For the reasons described above applicable to special rate Commercial customers.

Q. WHAT RATES DO YOU RECOMMEND FOR THESE SPECIAL COMMERCIAL RATES IN THE SSS OPERATIONS?

A. For Cleveland Cliffs and Victory Brewing, I recommend a customer charge of $456.50 per month, and a usage rate of $2.350 per hundred gallons (I&E Ex. No. 3. Sch. 3, p. 1, lines 10-11). For Knouse Foods, I recommend a flat rate of $12,093 per month. For Penn State Special Metals, I recommend a flat rate of $4,161.50 per month. For PCS metals, I recommend a flat rate of $1,609.50 per month. For Ipsco Koppel Tubulars, I recommend a flat rate of $24,998.00 per month (I&E Ex. No. 3. Sch. 3, p. 1, lines 13-16).

Q. DO YOUR RATES RESULT IN A REASONABLE INCREASES FOR THESE SPECIAL RATE INDUSTRIAL CUSTOMERS?

A. Yes. For Cleveland Cliffs and Victory Brewing, I recommend the customer charge increase 10.0% and the usage rate increase by 67.9% (I&E Ex. No 3, Sch. 3, p. 1, lines 10-11). These percentage increases are below the 70% maximum increase that I describe above, and the usage rate will be the same as the usage rate these

customers pay as Commercial customers (I&E Ex. No. 3. Sch. 11, p. 2, lines 4 and 7). For Knouse Foods, Penn State Special Metals, PCS metals, and Ipsco Koppel Tubulars, I recommend an increase of 45.0% (I&E Ex. No. 3. Sch. 3, p. 1, lines 13-16). These 45.0% increases are comparable, but less than the 48.1% increase the average Industrial Zone 1 customer will receive under my rate structure proposal.

Q. WHY DO YOU RECOMMEND LARGER PERCENTAGE INCREASES FOR SOME INDUSTRIAL CUSTOMERS AND LARGE INDUSTRIAL CUSTOMERS THAN THE RESIDENTIAL CUSTOMERS IN SOME ZONES?

A. Under present rates, the relative rate of return for the Residential class is 1.35. The relative rate of return for the Non-Residential class which includes the Industrial class is 1.00, justifying a larger percentage increase for the Industrial class (I&E Ex. No. 3, Sch. 5, p. 1, line 13, Columns C and D). Also, the relative rate of return of the Large Industrial class is 0.79 indicating that a higher percentage increase is justified for the Large Industrial customers (I&E Ex. No. 3, Sch. 5, p. 1, Column E). Under my proposed rates, the relative rate of return for the Non-Residential class is 1.18, and the relative rate of return for the Large Industrial class is 1.16 (I&E Ex. No. 3, Sch. 5, p. 3, line 13, Columns E and F).

SSS OPERATIONS – MUNICIPAL

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR MUNICIPAL CUSTOMERS IN THE SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 13, showing present and proposed rates and revenue for Municipal SSS Operations customers.

Q. HOW DID YOU DETERMINE THE MUNICIPAL CUSTOMER CHARGE OF $36.70 PER MONTH AND A USAGE RATE OF $3.150 PER HUNDRED GALLONS FOR GENERAL MUNICIPAL CUSTOMERS?

A. These are the same rates that I proposed for the Commercial class described above.

Q. HOW DID YOU DETERMINE THE USAGE RATES IN ZONES 7, 9, AND THE FLAT RATE FOR ZONE 1 MUNICIPAL CUSTOMERS?

A. These are the same rates that I proposed for the Commercial class described above.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE SSS OPERATIONS SUBSIDY?

A. These Municipal customer charges and usage rates reduce the subsidy needed to operate the SSS Operations by $687,364 (I&E Ex. No. 3, Sch. 4, p. 1, column E, line 27).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVEL FOR SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 14, showing the present and proposed bills at various usage levels. The average bill is shown in bold with an asterisk for each zone in the SSS system.

Q. WHAT INCREASE WILL THE AVERAGE ZONE 1 AND ZONE 5 MUNICIPAL CUSTOMERS RECEIVE UNDER YOUR PROPOSED CUSTOMER CHARGE AND USAGE RATE?

A. The bill for an average Municipal customer in Zone 1 and Zone 5 will increase from $1,009.25 per month to $1,479.84 per month, which is an increase of $470.59 per month or 46.4% (I&E Ex. No. 3, Sch. 14, p. 1, line 16).

Q. WHAT INCREASE WILL THE AVERAGE CUSTOMERS RECEIVE IN THE OTHER RATE ZONES?

A. The bill for an average Municipal customer in Zone 2 will increase from $220.94 per month to $341.05 per month, which is an increase of $120.11 per month or 54.4% (I&E Ex. No. 3, Sch. 14, p. 2, line 9). The bill for an average Municipal customer in Zone 7 will increase from $573.85 per month to $967.90 per month, which is an increase of $394.05 per month or 68.7% (I&E Ex. No. 3, Sch. 14, p. 3, line 13). The bill for an average Municipal customer in Zone 9 will increase from $328.59 per

month to $549.82 per month, which is an increase of $221.24 per month or 67.3% (I&E Ex. 3, Sch. 14, p. 4, line 13).

Q. WHAT IS THE PRESENT MUNICIPAL FLAT CHARGE IN ZONE 8 AND WHAT FLAT CHARGE DO YOU RECOMMEND?

A. The present flat rate in Zone 8 is $15.00 per month. Therefore, my recommendation of $40.00 per month in rate Zone 8 equates to an increase of $25.00 per month or 166.7% (I&E Ex. No. 3, Sch. 3, p. 2, line 11). I believe an increase of 166.7% is justified because of the low $15.00 per month present flat rate and the need to eventually increase this monthly charge to the $150.00 per month applicable in other divisions.

Q. ARE THERE SPECIAL MUNICIPAL RATES IN THE SSS OPERATIONS?

A. Yes. In the SSS Operations, the Company charges Strattanville Borough a flat rate of $6,200.00 per month (PAWC Volume 9, Ex, 10-B, p. 25).

Q. WHAT DID THE COMPANY PROPOSE FOR THIS SPECIAL RATE CUSTOMER IN THE SSS OPERATIONS?

A. For Strattanville Borough the Company proposed the present rate of $6,200.00 per month be increased to $6,572.00 per month which is an increase of $372.00 per month or 4.9%.

Q. IS IT REASONABLE TO LIMIT THE INCREASE TO THIS SPECIAL MUNICIPAL CUSTOMER IN THE SSS OPERATIONS TO 4.9%?

A. No. For the same reasons given above in the Commercial class.

Q. WHAT MONTHLY CHARGE DO YOU RECOMMEND FOR STRATTANVILLE BOROUGH IN THE SSS OPERATIONS?

A. For Strattanville Borough, I recommend a flat rate of $8,680.00 per month. This $8,680.000 equates to an increase of $2,480.00 per month or 40.0% (I&E Ex. No. 3. Sch. 3, p. 1, line 18).

Q. DOES YOUR RECOMMENDATION RESULT IN A REASONABLE INCREASE FOR THIS SPECIAL RATE MUNICIPAL CUSTOMER?

A. Yes. The 40% increase is comparable, but below the 46.6% increase the average Municipal customer will experience.

Q. WHY DO YOU RECOMMEND LARGER PERCENTAGE INCREASES FOR MUNICIPAL CUSTOMERS THAN THE RESIDENTIAL CUSTOMERS IN SOME ZONES?

A. For the same reasons described above in the Commercial and Industrial classes.

SSS OPERATIONS – BULK

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR BULK CUSTOMERS IN THE SSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 15, showing present and proposed rates and revenue for Bulk SSS Operations customers.

Q. HOW DID YOU DETERMINE THE BULK CUSTOMER CHARGE OF $50.00 PER MONTH AND A USAGE RATE OF $3.15 PER HUNDRED GALLONS FOR GENERAL BULK CUSTOMERS?

A. The $50.00 per month customer charge is the same customer charge proposed by the Company and $3.15 per hundred-gallon usage rates are the same rates I propose for the other general Non-Residential customers. The remaining rates are special rates which I will describe below.

Q. HOW DID YOU DETERMINE THE FLAT RATE OF $113.00 PER MONTH FOR BULK CUSTOMERS WHERE USAGE DATA IS NOT AVAILABLE?

A. The $113.00 per month flat rate in Zone 9 is the same flat rate I recommend for the Zone 9 Commercial class described above.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE SSS OPERATIONS SUBSIDY?

A. These Bulk customer charges and usage rates reduce the subsidy needed to operate the SSS Operations by $3,177,009 (I&E Ex. No. 3, Sch. 4, p. 1, column F, line 27).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVEL FOR SSS OPERATIONS?

A. No. However, the increases I propose for each zone are all below the 70% maximum increase I described above. The total increase in Bulk revenue is 37.2%, the lowest of all the SSS Operation classes (I&E Ex. No. 3, Sch. 6, 9, 11, 13 and 15, p. 1).

Q. ARE THERE SPECIAL MUNICIPAL RATES IN THE SSS OPERATIONS?

A. Yes. In the SSS Operations, the Company charges Caln, West Brandywine, the VA Medical Center (VA), St Lawrence Borough (St. Lawrence) in Zone 1, and various Bulk contracts in Zone 7 are charged special municipal rates (PAWC Volume 9, Ex, 10-B, p. 31).

Q. WHAT DID THE COMPANY PROPOSE FOR CALN, WEST BRANDYWINE, THE VA, AND ST. LAWRENCE SPECIAL RATE CUSTOMERS IN THE SSS OPERATIONS ZONE 1?

A. For Caln, West Brandywine, and the VA, the Company proposed the customer charge increase from $415.00 to $430.00 per month which is an increase of $15.00 per month or 2.5%, and the usage rate increase from $1.450 per hundred gallons to $1.490 per hundred gallons which is an increase of $0.04 per hundred gallons or 2.5%. For St. Lawrence, the Company does not charge a customer charge but did propose to increase the present usage rate of $0.400 per hundred gallons to $0.412 per hundred gallons which is an increase of $0.012 per hundred gallons or 1.9% (PAWC Volume 9, Ex. 10-B, p 31).

Q. IS IT REASONABLE TO LIMIT INCREASES TO THESE SPECIAL BULK CUSTOMERS IN THE SSS OPERATIONS TO BETWEEN 1.9% AND 2.5%?

A. No. The Company's proposal contradicts its testimony that proposed rates are based upon cost. The Company only proposed an increase of $56,942 for the Bulk class (Volume 9 Ex. 12-B, Sch. A). After this minimal increase under proposed rates, the relative rate of return for the VA/Bulk class is 0.87, indicating that the revenue received from this class is less than the cost of providing service to this class (I&E Ex. No. 3, Sch. 5, p. 2, column F).

Q. WHAT MONTHLY CHARGE AND USAGE RATE DO YOU RECOMMEND FOR CALN, WEST BRANDYWINE AND THE VA?

A. I recommend a monthly charge of $456.50. This equates to an increase of $41.50 per month or 10.0% (I&E Ex No. 3, Sch. 3, line 19). I also recommend a usage rate of $1.680 per hundred gallons. This equates to an increase of $0.230 per hundred gallons or 15.9% (I&E Ex. No. 3. Sch. 3, p. 1, line 20).

Q. WHAT MONTHLY CHARGE AND USAGE RATE DO YOU RECOMMEND FOR ST. LAWRENCE?

A. I recommend that the Company begin to charge St. Lawrence a monthly charge of $456.50. This recommendation is based upon the general tariff provision that requires all customers to pay a monthly customer charge, and to generate revenue in a class that is not recovering its cost. I also recommend the present usage rate of $0.400 per hundred gallons be increased to $0.630 per hundred gallons. This equates to an increase of $0.230 per hundred gallons or 57.5% (I&E Ex. No. 3. Sch. 3, p. 1, lines 19 and 21).

Q. DO YOUR RECOMMENDATIONS RESULT IN REASONABLE INCREASES FOR THESE SPECIAL RATE BULK CUSTOMERS?

A. Yes. The 14.6% increase in the Caln, West Brandywine and VA usage revenue and the 55.8% increase in the St. Lawrence usage revenue are both below the 70.0% maximum increase that I describe above (I&E Ex. No. 3, Sch. 15, p. 2, lines 3-8).

Q. WHAT MUNICIPALITIES COMPRISE THE BULK CUSTOMERS IN ZONE 7?

A. The York Bulk Customers consist of The York Water Company, which is the owner of the former West York Borough collection system, Springettsbury Township, North York Borough, York Township, Manchester Township, West Manchester Township, and Spring Garden Township (PAWC Volume 8, St. 3, p. 66).

Q. WHAT DID THE COMPANY PROPOSE FOR THE YORK BULK CUSTOMERS IN THE SSS OPERATIONS ZONE 7?

A. For York Bulk Customers in Zone 7, the Company proposed to charge two different usage rates. For the first rate, the Company proposed the present usage rate be increased from $0.3750 per hundred gallons to $0.4123 per hundred gallons, which is an increase $0.0373 per hundred gallons or 9.9%. For the second usage rate, the Company proposed the present usage rate of $0.249 per hundred gallons increase to $0.2737 per hundred gallons which equates to an increase of $0.0247 per hundred or 9.9%. These 9.9% increases are over the two-year period 2023-2025 which results in an annual increase of approximately 4.45% per year (PAWC Volume 9, Exh. 10-B, p. 31).

Q. WHY DID THE COMPANY LIMIT THE INCREASE IN THESE RATES TO 4.5% PER YEAR?

A. First, the Company claims that these customers have "competitive alternatives" and since the proposed rates are greater than the incremental cost of providing service to these customers, these customers are not being subsidized (PAWC Volume 8, St. 12, pp. 18-19). Another witness describes how these Bulk Customers are "sophisticated," are in close geographic proximity, and they could enter into intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment capacity, instead of sending their flows to the York plant owned by PAWC (PAWC Volume 8, St. No. 3, pp. 66-67). The Company claims that the flow from these Bulk customer provide benefits to the treatment process, that if these customers left the system, it would conflict with the Commission goal of regionalization, and retail customers would experience rate increases, (PAWC Volume 8, St. No. 3, pp. 66-69).

Q. DID THE COMPANY PROVIDE ANY ANALYSIS THAT SHOWS THE COMPETITIVE ALTERNATIVE THESE CUSTOMERS ALLEGEDLY HAVE?

A. No. Therefore, these statements are speculation and should be rejected. While this is enough to support my recommendation and increase these usage rates, I will

address some of the Company's other bogus arguments concerning the York Bulk customers and rates.

Q. DID THE COMPANY INCLUDE A COMPLETE COST OF SERVICE SUMMARY IN THE FILING?

A. No. Volume 17, Exhibit 12-B which details the SSS COSS does not include the details of the Bulk User Contract class on either Sch. B, or C. However, the excel version does include this column on each schedule. As described above, the Company also made corrections to these schedules in discovery. Therefore, I provided a complete corrected version of PAWC Volume 17, Ex. No. 12-B, Sch. A and B as I&E Ex. No. 3, Sch. 5, pp. 1-2, respectively. I also included an additional line which shows the subsidy each class is providing and receiving (I&E Ex. No. 3, Sch. 5, pp. 1-2, line 13).

Q. WHAT DOES I&E EXHIBIT NO. 3, SCHEDULE 5, PAGE 2 SHOW?

A. This schedule shows that under present rates, the Bulk Users are receiving a subsidy from the other customers of $9,879,620 even after contributing $7,702,598 of revenue, putting the low level of revenue from these bulk customers into perspective (I&E Ex. No. 3, Sch. 5, p. 2, column G).

Q. DID THE COMPANY SUPPORT THE RATES THAT IT PROPOSED FOR THESE BULK CUSTOMERS?

A. No. Therefore, the minimal increase the Company proposes for these customers should be rejected, in favor of the 50% increases I show on I&E Ex. No. 3, Sch. 3. p. 2, lines 7-8.

Q. IS THE COMPANY'S CLAIM CONCERNING INCREMENTAL COST TO SERVICE BULK CUSTOMER'S THE CORRECT COMPARISON?

A. No. First this argument assumes that these customers have a viable alternative, which the Company has not provided. Second, if these customers did have a viable alternative, the Company's proposed rates may be well below the cost these customers would incur if they did select the viable alternative, thus not maximizing the revenue from these customers. The valid comparison would be to compare the customer's cost of utilizing a viable alternative to the competitive rate so that the customer makes the maximum contribution to fixed costs.

Q. PLEASE ELABORATE ON WHY THE CUSTOMER'S COST OF UTILIZING A VIABLE ALTERNATIVE IS THE PROPER ANALYSIS?

A. This analysis will show the customer is making the maximum contribution to PAWC's fixed costs. For example, if a competitive analysis shows that a customer can utilize an alternative, but the cost of this alternative is $0.800 per hundred gallons, the $0.4123 per hundred gallons the Company is proposing is woefully

inadequate and indicates the customer could pay up to $0.7900 per hundred gallons to PAWC and not leave the system. However, since the Company failed to describe the competitive alternative, the Company has failed to show the cost each customer would incur to utilize the alleged competitive alternative. Therefore, the higher rates that I propose should be approved.

Q. DOES YOUR RECOMMENDATIONS RESULT IN A REASONABLE INCREASES FOR THISE ZONE 7 BULK CUSTOMERS?

A. Yes. The $0.5625 per hundred gallon and $0.3735 per hundred-gallon usage rates that I recommend are much less than the $1.680 per hundred-gallon usage rate I recommend for Caln, West Brandywine and the VA. They are significantly less than the $3.740 per hundred-gallon rate that I recommend for the Zone 1 Residential customers indicating that even after the 50% increase I propose for these customers, the Zone 7 Bulk usage rates that I propose will be much less than other usage rates.

Q. PLEASE ADDRESS THE COMPANY'S OTHER ARGUMENTS FOR PROPOSING SUCH A SMALL INCREASE FOR THE YORK BULK CUSTOMERS IN ZONE 7.

A. A customer's "sophistication" should not be used to establish or justify a rate. This implies that the Commission and a utility should take advantage of less sophisticated customers by requiring them to pay higher rates. First, the Company failed to describe how the Commission is to determine if a customer is

"sophisticated" or not. Second, rates should be based upon cost. The "closeness" argument is also not valid because it fails to provide any details of how close the customers are or how it could be an advantage. There may be substantial logistical problems to combining and/or changing flows. Just because two or more systems are "close" or "could" enter into flow agreements doesn't necessarily mean they can or even will, or if a lower rate is justified. Even if it did, the rate to which two or more close systems should receive simply because they are close has not been quantified. The Company claims that the flow from these Bulk customers provides benefits to the treatment process is also speculation and does not take into account the benefits of flow from non-bulk customers which also could provide a benefit to the system. Finally, in the near future, existing customers may be better off if these bulk customers did leave the system, because after a bulk customer leaves, there would be much less need for plant upgrades and/or expansions. Costly plant upgrades and/or expansions to serve bulk customers would likely be paid for by other non-bulk customers, increasing the subsidy to the bulk customers.

Q. IS YOUR RECOMMENDATION TO INCREASE THE YORK BULK RATES SUPPORTED BY THE COMPANY'S COSS?

A. Yes. The higher percentage increases that I propose for the York Bulk customers compared to the small increase proposed by the Company are justified by the Company's COSS. Even after the larger than average increase that I propose, the

revenue received from York Bulk customers is still less than the cost of providing service to Bulk customers (I&E Ex. No. 3, Sch. 5, p. 3, column H).

Q. HOW MUCH OF A SUBSIDY WILL THE YORK BULK CUSTOMERS RECEIVE AFTER YOUR RECOMMENDATION?

A. The York Bulk customers will receive a subsidy of $7,999,227 (I&E Ex. No. 3, Sch. 5, p. 3, line 14, column H). While a significant subsidy will continue to exist, I recommend it be reduced in future cases.

SSS OPERATIONS OTHER OPERATING REVENUE

Q. WHAT TYPES OF OTHER OPERATING REVENUE DOES PAWC COLLECT?

A. PAWC includes Industrial Pretreatment revenue, late payment fees, and Miscellaneous revenue in Other Operating revenue (PAWC Volume 9, Ex. 10-B, p. 33).

Q. HOW MUCH OTHER OPERATING REVENUE DOES PAWC PROJECT IT WILL COLLECT IN THE SSS OPERATIONS?

A. The Company is projecting it will collect $3,241,057 of Other Operating Revenue in the SSS Operations (PAWC Volume 9, Ex. 10-B, p. 33).

Q. DOES THIS INCLUDE AN INCREASE IN LATE PAYMENT REVENUE?

A. Yes. Going from present to proposed rate, the Company projected late payment revenue will increase $8,332 ($472,013 - $463,681) (PAWC Volume 9, Ex. 10-B, p. 33).

Q. WHAT LEVEL OF OTHER OPERATING REVENUE IN THE SSS OPERATIONS DO YOU RECOMMEND?

A. I recommend that Other Operating Revenue be increased from $3,241,057 to $3,395,504 which is an increase of $154,448 (I&E Ex. No. 3, Sch. 4, p. 2, columns E-G). This $154,448 is all additional late payment revenue.

Q. HOW DID YOU DETERMINE THE $154,448 INCREASE IN LATE PAYMENT REVENUE?

A. I multiplied the present rate late payment revenue of $463,681 times the percentage increase in tariff rates of approximately 35.1% to arrive at the $162,780 ($463,681 X 35.106%). Then subtracting the $8,332 increase the Company reflected to arrive at the $154,448 ($162,780 - $8,332) increase in late payment revenue projected by I&E (I&E Ex. No. 3, Sch. 4, p. 2, line 3).

Q. WHY DO YOU BELIEVE THAT LATE PAYMENT REVENUE WILL INCREASE UNDER PROPOSED RATES?

A. Late Payment Revenue is received from a customer when that customer does not pay

their bill on time. Since it is based upon a percentage of a customer's bill, it is reasonable to believe that an increase in base rates will cause Late Payment Revenue to increase by the same percentage.

WASTEWATER WINTER USAGE

Q. DID THE COMPANY PROPOSE TO ADJUST WATER USAGE TO DETERMINE THE BILLS FOR WASTEWATER CUSTOMERS?

A. Yes. The Company is proposing to change the way that it determines the volumetric component of bills for residential customers. Currently, wastewater usage is based upon actual water usage. In the proposal, the wastewater usage volume of a Residential customer will be adjusted downward to account for water purchased, but not entering the wastewater system. The Company refers to this plan as winter averaging (PAWC Volume 8, St. 10, p. 42-45).

Q. DO YOU OPPOSE THE PAWC WINTER AVERAGE BILLING PROPOSAL?

A. No. However, if the Commission approves the proposal, I have two conditions. First, that none of the revenue shortfall from this proposal be recovered from other wastewater customers or water customers. Second, that the Commission determine that the proposal is approved initially as a temporary program to permit the resulting revenue impacts to be evaluated in the first rate case following its implementation.

Q. WHY DO YOU RECOMMEND THAT NONE OF THE REVENUE SHORTFALL BE RECOVERED FROM OTHER WASTEWATER OR WATER CUSTOMERS?

A. The proposal is designed to help only Residential wastewater customers. Therefore, only Residential wastewater customers should be required to fund this program and 100% of the revenue shortfall should be recovered in the Residential wastewater rates.

Q. WHY DO YOU RECOMMEND THAT THE PROGRAM BE CONSIDERED A TEMPORARY PROGRAM?

A. This is a new proposal that reduces revenue, and it should not be approved in perpetuity. Therefore, the program and its underlying concepts should be studied, and the results reported in the Company's next base rate case. This will enable the Commission and interested parties to determine if the program should be changed, continued as proposed, or ended.

<u>CSS OPERATIONS SUMMARY</u>

Q. WHAT CHANGE IN REVENUE DID THE COMPANY PROPOSE IN THE CSS OPERATIONS?

A. The Company proposed that present rate revenue be decreased from $78,636,222 to $78,409,294, which is a decrease of $226,926 or 0.30% (PAWC Volume 9, Ex. 10-C, p. 1). To achieve this reduction, the Company proposed to increase and

decrease various customer charges, usage rates, and flat rates (PAWC Volume 9, Ex. 10-C, pp. 3-38).

CSS OPERATIONS – ZONES 3, 4, and 6

Q. DID THE COMPANY PROVIDE A COSS TO DETERMINE THE COSTS OF PROVIDING WASTEWATER SERVICE FOR THE CSS OPERATIONS?

A. Yes. The Company provided one COSS for the CSS Operations - Zones 3, 4, and 6 (PAWC Volume 17, Ex. 12-C). This COSS did not include a customer cost analysis.

Q. DO THE PROPOSED REVENUES FROM THE CSS OPERATIONS RECOVER THE ENTIRE COST OF PROVIDING WASTEWATER SERVICE TO THE CSS OPERATIONS?

A. No. The revenue shortfall for CSS Operations is $16,007,052 (PAWC Volume 3, Exhibit 3-A, p. 1).

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN THE CSS OPERATIONS.

A. My goal was to reduce the $16,007,052 subsidy the Company claims is needed to fund the CSS Operations. The proposed rates that I recommend are shown on I&E Ex. No. 3, Sch 17, p. 1, column D. My proposed revenue by class and zone as well as the increases by class are shown on I&E Ex. No. 3, Sch. 16. The total

increase in the CSS system that I recommend is $15,744,287 (I&E Ex. No. 3, Sch 16, column G, line 14). This recommendation results in the CSS Operations needing a subsidy of $35,835 (I&E Ex. No. 3, Sch 1, column H, line 3).

Q. WHAT IS THE HIGHEST AVERAGE BILL INCREASE UNDER YOUR RATE STRUCTURE PROPOSAL?

A. The highest average bill increase under my rate structure proposal is 47.7% for an average Industrial customer in Zone 3 (I&E Ex. No. 3, Sch. 24, p. 1, line 23).

Q. WHY IS THIS 47.7% MAXIMUM AVERAGE BILL LOWER THAN THE 70% MAXIMUM BILL YOU PROPOSE IN THE SSS OPERATIONS?

A. There are two related reasons. First, there are no systems recently acquired under Section 1329 in the CSS Operations, which as described above, generally justifies a higher percentage increase to customers in systems acquired under Section 1329. The Section 1329 customers generally have lower rates and should be subject to higher percentage increases. Second, the cost of providing service to the CSS Operations can be recovered with smaller percentage increases to the average bills in the CSS Operations compared to the SSS Operations.

Q. WHAT OTHER CRITERIA DID YOU USE TO PROPOSE RATES?

A. I utilized the Company's CSS COSS to propose the various rate increases by class

that moves the relative rate of return of each class towards 1.0 (I&E Ex. No. 3, Sch. 18, line 13).

CSS OPERATIONS – RESIDENTIAL

Q. WHAT ARE THE PRESENT RESIDENTIAL CUSTOMER CHARGES AND THE COMPANY PROPOSED RESIDENTIAL CUSTOMER CHARGES?

A. The Company proposed the Zone 3 Residential customer charge increase from $19.50 per month to $19.71 per month, which equates to an increase of $0.21 per month or 1.1%. The Company proposed the Zone 4 Residential customer charge decrease from $40.00 per month to $20.00 per month, which equates to a decrease of $20.00 per month or 50%. The Company also proposed that the Zone 6 Residential customer charge increase from $14.30 per month to $20.00 per month, which equates to an increase of $5.70 per month or 39.9%. Finally, there is one Zone 4 Residential customer that pays $100.00 per month where the Company proposed this monthly charge be reduced to $20.00 per month (PAWC Volume 9, Sch. 10-C, pp. 3-5).

Q. DID THE COMPANY DISCUSS WHY IT LIMITED THE INCREASE IN RATES IN ZONE 3?

A. Yes. The Company states that it acquired the Scranton – Zone 3 system in 2016 and in accordance with its agreement with the seller, it is limited to proposing an increase of 1.9% per year (Volume 8, PAWC St. No. 4, p. 40).

Q. SHOULD THE COMMISSION BE BOUND BY THIS AGREEMENT WHEN ESTABLISHING RATES IN ZONE 3?

A. No. Therefore, I recommend the higher rates for Zone 3 be approved for two reasons. First, this rate commitment is only a proposal, and the Commission is not bound by any rate promises made in asset purchase agreements, as stated in the Order approving the acquisition of the Scranton system (Joint Application of PAWC and the City of Scranton, at Docket R-2016-2537209, Order entered Oct. 19, 2016. p. 70). Second, the cost to operate the CSS Operations, which includes the Scranton system, is more than the revenue received from the CSS Operations justifying a rate increase for CSS Operations customers.

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR RESIDENTIAL CUSTOMERS IN THE CSS OPERATIONS THAT YOU RECOMMEND?

A. Yes. I prepared I&E Ex. No. 3, Sch. 19, showing present and proposed rates and revenue for Residential CSS Operation customers.

Q. IS THE PROPOSED RESIDENTIAL CUSTOMER CHARGE OF $20.00 PER MONTH IN ZONE 4 AND 6 REASONABLE?

A. Yes. While I don't normally recommend a reduction in a customer charge, or an increase of almost 40%, consolidating these Residential customer charges to $20.00 per month in the CSS Operations in this case is reasonable.

Q. IS THE PROPOSED RESIDENTIAL CUSTOMER CHARGE OF $19.71 PER MONTH IN ZONE 3 REASONABLE?

A. No. I recommend that all Residential customer charges be the same $20.00 per month in the CSS Operations. This $20.00 per month Residential customer charge in Zone 3 equates to an increase of $0.50 per month or 2.6% (I&E Ex. No. 3, Sch. 17, line 1). This recommendation will consolidate the Residential customer charge in Zones 3, 4, and 6.

Q. HOW DID YOU DETERMINE THE RESIDENTIAL USAGE RATE OF $2.900 PER HUNDRED GALLONS FOR ALL ZONES?

A. I increased the present Residential usage rate to $2.900 per hundred gallons to significantly reduce the subsidy needed to operate the CSS Operations and move the relative rate of return for the Residential class from 1.11 under present rates (PAWC Volume 17, Ex. 12-C, Sch. B, column 3) to 0.99 under proposed rates (I&E Ex. No. 3, Sch. 18, column D line 13). As described above, a relative rate of return of 1.00 indicates that the revenue received from that class is equal to the cost of providing service to that class.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE CSS OPERATIONS SUBSIDY?

A. These residential customer charges and usage rates reduce the subsidy needed to

operate the CSS Operations by $6,196,302 (I&E Ex. No. 3, Sch. 16, column B, line 18).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVELS FOR THE CSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 20, showing the present and proposed bills at various usage levels. The average bill is shown in bold with an asterisk for each zone in the CSS Operations.

Q. HOW DID YOU DETERMINE THE MONTHLY FLAT RATE FOR THE RESIDENTIAL CUSTOMERS IN ZONES 3 AND 4?

A. The $113.00 per month flat rate that I propose in these zones if a customer has no water usage available is based upon the bill of an average Zone 3 customer that uses 3,201 gallons per month, rounded to the nearest dollar (I&E Ex. No. 3, Sch. 20, p. 1, line 7).

<u>CSS OPERATIONS – COMMERCIAL</u>

Q. WHAT ARE THE PRESENT COMMERCIAL CUSTOMER CHARGES AND THE COMPANY PROPOSED COMMERCIAL CUSTOMER CHARGES?

A. The Company proposed the Zone 3 Commercial customer charge increase from

$35.00 per month to $35.38 per month, which equates to an increase of $0.38 per month or 1.1%. The Company proposed the Zone 4 Commercial customer charge increase from $40.00 per month to $50.00 per month, which equates to an increase of $10.00 per month or 25.0%. The Company also proposed that the Zone 6 – McKeesport Commercial customer charge increase from $35.50 per month to $50.00 per month, which equates to an increase of $15.00 per month or 42.9%. Finally, the Company proposed that the Zone 6 – Port Vue Commercial customer charge increase from $14.30 to $50.00 per month, which equates to an increase of $35.70 per month or 249.7% (PAWC Volume 9, Sch. 10-C, pp. 6-9).

Q. ARE THE PROPOSED COMMERCIAL CUSTOMER CHARGES OF $35.38 PER MONTH IN ZONE 3, AND $50.00 PER MONTH IN ZONES 4 AND 6 REASONABLE?

A. No. There is no reason to have two separate Commercial customer charges in the CSS Operations and proposing a $50.00 per month Commercial customer charge in Zones 4 and 6 is not reasonable.

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR COMMERCIAL CUSTOMERS IN THE CSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 21, showing present and proposed rates and revenue for Commercial CSS Operations customers.

Q. WHAT COMMERCIAL CUSTOMER CHARGE AND USAGE RATE DO YOU RECOMMEND FOR COMMERCIAL CUSTOMERS IN THE CSS OPERATIONS?

A. I recommend a Commercial customer charge of $40.00 per month and a usage rate of $2.580 per hundred gallons in all zones (I&E Ex. No. 3, Sch. 17, column D, lines 4-5). The $40.00 per month Commercial customer charge in Zone 3 equates to an increase of $5.00 per month or a 14.3% (I&E Ex. No. 3, Sch. 17, line 4). In Zone 4, the present rate of $40.00 per month will remain $40.00 per month, and the special rate of $100.00 per month will decrease to $40.00 per month (I&E Ex. No. 3, Sch. 17, line 12-13). The $40.00 per month Commercial customer charge in Zone 6 – McKeesport equates to an increase of $5.00 per month or 14.3% (I&E Ex. No. 3, Sch. 17, line 18). Finally, the $40.00 per month Commercial customer charge in Zone 6 – Port Vue equates to an increase of $25.70 per month or a 179.7% (I&E Ex. No. 3, Sch. 17, line 20).

Q. IS THE LARGE INCREASE IN THE PORT VUE COMMERCIAL CUSTOMER CHARGE REASONABLE?

A. Yes, for two reasons. First, the present Zone 6 - Port Vue customer charge of $14.30 per month is relatively low, thus justifying a larger than normal percentage increase. Second, I recommend a reduction in the Zone 6 – Port Vue usage rate from $2.875 per hundred gallons to $2.580 per hundred gallons which will offset the large increase in the customer charge (I&E Ex. No. 3, Sch 22. p. 4).

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE CSS OPERATIONS SUBSIDY?

A. These commercial customer charges and usage rates reduce the subsidy needed to operate the CSS Operations by $7,894,461 (I&E Ex. No. 3, Sch. 16, column C, line 18).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVELS FOR THE CSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 22, showing the present and proposed bills at various usage levels. The average bill for each Zone is shown in bold with an asterisk for each zone in the CSS Operations.

Q. WHY DO YOU RECOMMEND LARGER PERCENTAGE INCREASES FOR AVERAGE COMMERCIAL CUSTOMERS THAN RESIDENTIAL CUSTOMERS IN SOME ZONES?

A. Under present rates, the relative rate of return for the Residential class is 1.11 and 0.73 for the Non-Residential classes including the Commercial class, indicating that a higher percentage increase is justified for the Commercial class (PAWC Volume 17, Ex. 12-C, Sch. B). Under my proposed rates, the relative rate of return for the Non-Residential class is 0.99 which includes the Commercial class (I&E Ex. No. 3, Sch. 18, line 13, columns D and E).

CSS OPERATIONS – INDUSTRIAL

Q. WHAT ARE THE PRESENT INDUSTRIAL CUSTOMER CHARGES AND USAGE RATES AND WHAT ARE THE COMPANY'S PROPOSED CUSTOMER CHARGES AND USAGE RATES?

A. The present and Company proposed Industrial customer charges and usage rates are shown on PAWC Volume 9, Ex. 10-C, p. 11-13.

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR INDUSTRIAL CUSTOMERS IN THE CSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 23, showing present and proposed rates and revenue for Industrial CSS Operations customers that I recommend.

Q. HOW DID YOU DETERMINE THE INDUSTRIAL CUSTOMER CHARGES AND USAGE RATES?

A. They are the same as the Commercial class. Since the Company combined the Commercial, and Municipal customers in the "Non-Residential" class in the COSS, it is reasonable to recommend the same rates for these general Non-Residential customers.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE CSS OPERATIONS SUBSIDY?

A. These Industrial customer charges and usage rates reduce the subsidy needed to operate the CSS Operations by $1,063,058 (I&E Ex. No. 3, Sch. 16, column D, line 18).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVEL FOR CSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 24, showing the present and proposed bills at various usage levels. The average bill is shown in bold with an asterisk for each zone in the CSS system.

Q. WHY DO YOU RECOMMEND LARGER PERCENTAGE INCREASES FOR AVERAGE INDUSTRIAL CUSTOMERS THAN THE RESIDENTIAL CUSTOMERS IN SOME ZONES?

A. Under present rates, the relative rate of return for the Residential class is 1.11 and 0.24 for the Industrial class, indicating that a higher percentage increase is justified for the Industrial class (PAWC Volume 17, Ex. 12-C, Sch. B). Under my proposed rates, the relative rate of return for the Industrial class moves to 0.57 (I&E Ex. No. 3, Sch. 18, line 13, columns D and F).

CSS OPERATIONS - MUNICIPAL

Q. WHAT ARE THE PRESENT MUNICIPAL CUSTOMER CHARGES AND USAGE RATES AND WHAT ARE THE COMPANY'S PROPOSED CUSTOMER CHARGES AND USAGE RATES?

A. The present and Company proposed Municipal customer charges and usage rates are shown on PAWC Volume 9, Ex. 10-C, p. 14-17.

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR MUNICIPAL CUSTOMERS IN THE CSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 25, showing present and proposed rates and revenue for Municipal CSS Operations customers.

Q. HOW DID YOU DETERMINE THE MUNICIPAL CUSTOMER CHARGES AND USAGE RATES?

A. They are the same as the Commercial class for the reason stated above in the Commercial class.

Q. HOW MUCH DO YOUR CUSTOMER CHARGE AND USAGE RATE RECOMMENDATIONS REDUCE THE CSS OPERATIONS SUBSIDY?

A. These Municipal customer charges and usage rates reduce the subsidy needed to

operate the CSS Operations by $366,673 (I&E Ex. No. 3, Sch. 16, column E, line 18).

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVEL FOR CSS OPERATIONS?

A. No. The Company did not provide the average bill comparisons for Municipal customers. However, the Municipal customers pay the same rates as the Commercial customers pay. Therefore, the increases at the various usage levels will be the same as shown on I&E Ex. No. 3, Sch. 22.

<u>CSS OPERATIONS – BULK</u>

Q. WHAT ARE THE PRESENT BULK CUSTOMER CHARGES AND USAGE RATES AND WHAT ARE THE COMPANY'S PROPOSED CUSTOMER CHARGES AND USAGE RATES?

A. The present and Company proposed Bulk customer charges and usage rates are shown on PAWC Volume 9, Ex. 10-C, p. 18-21.

Q. DID YOU PREPARE A SCHEDULE SHOWING PRESENT AND YOUR PROPOSED RATES AND REVENUE FOR BULK CUSTOMERS IN THE CSS OPERATIONS?

A. Yes. I prepared I&E Ex. No. 3, Sch. 26, showing present and proposed rates and

revenue for Bulk CSS Operations customers.

Q. DID YOU ALSO PREPARE BILL COMPARISON SCHEDULES SHOWING THE PRESENT AND PROPOSED BILLS AT VARIOUS USAGE LEVEL FOR CSS OPERATIONS?

A. No. However, the increases I propose for each zone are all below the 45% maximum increase I described above. The total increase in Bulk revenue is 3.5%, the lowest of all the CSS Operation classes (I&E Ex. No. 3, Sch. 19, 21, 23 and 25, p. 1).

Q. WHY DID YOU NOT PROPOSE A LARGER INCREASE IN BULK USAGE RATES FOR CSS OPERATIONS CUSTOMERS?

A. Under present rates, the relative rate of return for the Bulk class is 1.9 (PAWC Volume 17, Ex. 12-C, Sch. B). The relative rate of return for the Bulk customers under my proposed rates is lowered to 1.44, well above 1.00, indicating that no further increase in Bulk rates is justified (I&E Ex. No. 3, Sch. 18, Column G, line 13).

CSS OPERATIONS OTHER OPERATING REVENUE

Q. WHAT TYPES OF OTHER OPERATING REVENUE DOES PAWC COLLECT?

A. PAWC includes Industrial Pretreatment revenue, late payment fees, and

Miscellaneous revenue in Other Operating revenue (PAWC Volume 9, Ex. 10-C, p. 22).

Q. HOW MUCH OTHER OPERATING REVENUE DOES PAWC PROJECT IT WILL COLLECT IN THE CSS OPERATIONS?

A. The Company is projecting that it will collect $673,366 of Other Operating Revenue in the CSS Operations (PAWC Volume 9, Ex. 10-C, p. 22).

Q. WHAT LEVEL OF LATE PAYMENT REVENUE IS THE COMPANY PROJECTING UNDER PRESENT AND PROPOSED RATES?

A. Going from present to proposed rates, the Company projected late payment revenue will decrease $4, ($391,919 - $391,915) (PAWC Volume 9, Ex. 10-B, p. 33).

Q. WHAT LEVEL OF OTHER OPERATING REVENUE IN THE CSS OPERATIONS DO YOU RECOMMEND?

A. I recommend that Other Operating Revenue be increased from $673,367 to $752,121 which is an increase of $78,755 (I&E Ex. No. 3, Sch. 27, column F). The $78,755 is entirely Late Payment Revenue.

Q. HOW DID YOU DETERMINE THE $78,755 INCREASE IN LATE PAYMENT REVENUE?

A. I multiplied the present rate late payment revenue of $391,919 times the percentage

increase in tariff rates of approximately 20% to arrive at $78,751 ($391,919 X 20.0936%). Then adding $4 the Company subtracted to arrive at the $78,755 ($78,751 + $4) increase in late payment revenue projected by I&E (I&E Ex. No. 3, Sch. 27, line 3).

CSS OPERATIONS SUMMARY

Q. WHAT TOTAL REVENUE DO YOU RECOMMEND FOR THE CSS OPERATIONS?

A. I recommend that CSS Operations revenue increase from $78,636,222 to $94,380,509 which is an increase of $15,744,287 or 20.2% (I&E Ex. No. 3, Sch. 16, column G, lines 6, 13-15).

COST OF SERVICE STUDIES

Q. DID PAWC ADDRESS THE FILING OF SEPARATE COST OF SERVICE STUDIES IN FUTURE BASE RATE CASES?

A. No. The Company did not address the continuation of separate COSS' in the next case.

Q. WHAT DO YOU RECOMMEND THE COMPANY PROVIDE IN THE NEXT BASE RATE CASE?

A. I recommend the Company continue to provide separate COSS's for the Water Operations, the SSS Operations, and the CSS Operations. I also recommend that the

Company provide separate COSS' for the BASA and Brentwood systems in the next case if these systems are acquired.

Q. WHAT SPECIFIC RECOMMENDATION DO YOU MAKE FOR THE SSS OPERATIONS COSS?

A. I recommend the Company continue to separate the Bulk User/VA class and the Bulk Contract classes from the other classes. The flow from the Bulk Users/VA and Bulk Contracts amount to 3% and 29% respectively of the flow in the SSS wastewater Operations (PAWC Volume 17, Exhibit 12-B, Sch. E, p. 1). As described above, the public and the Commission should be aware of the revenue received, the cost to provide service and the subsidy being provided to the Bulk Users/VA and Bulk Contracts separately. There is value in knowing the cost of providing service and the revenue received from customers that account for 32% (3% + 29%) of the flow in the SSS Operations.

Q. DO YOU ALSO RECOMMEND THE COMPANY PROVIDE A SEPARATE COSS FOR BASA IN THE NEXT BASE RATE CASE?

A. Yes, for two reasons. First, I&E believes the BASA COSS is not currently relevant given the I&E recommendation to exclude the BASA system revenue and expenses in this case making the BASA COSS premature. The review in the next base rate case after which PAWC closes on BASA will then include plant in service, allocation factors, and expenses that have not been reviewed or addressed by I&E in

this case. Second, the present rate revenue from BASA shown in this case is so far below the cost of providing service to BASA customers, the public and the Commission should be aware of the subsidy being provided to BASA in the next base rate case after PAWC officially closes on BASA.

Q. WHY DO YOU ALSO RECOMMEND THE COMPANY PROVIDE A SEPARATE COSS FOR THE BRENTWOOD SYSTEM IN ALL FUTURE BASE RATE CASES?

A. In the event that PAWC does acquire the Brentwood system, I recommend PAWC provide a separate COSS for Brentwood in all future cases for two reasons. First, as described by the Company in the Brentwood Application at A-2021-3024058, some of the flow carried by the Brentwood plant is from "non-customers." Since only plant "used and useful" to serve customers can be recovered from customers, plant in service to serve "non-customers" should be identified and excluded from rate base. Second, Brentwood customers will also pay a separate treatment fee. With no treatment costs in base rates, I believe it could be reasonable to establish a lower rate for Brentwood customers than other SSS customers that have treatment costs recovered in their usage rates.

Q. IS THERE ALSO A SPECIFIC REASON FOR A SEPARATE BRENTWOOD COSS IN THE NEXT PROCEEDING?

A. Yes. The two primary inputs for cost allocation are the number of customers, and

flow. Almost all allocations in a COSS are based on one of these inputs. The Company's response to I&E-RS-31 indicates that the Company has no idea how much flow is coming into the system from "non-customers" and how much flow is going out of the system from a combination of "non-customers" and Brentwood customers. This lack of data indicates that the Brentwood COSS filed in this case is totally speculative and not based on any known and measurable data (I&E Ex. No. 3 Sch. 29).

SCALE BACK OF RATES

Q. WHAT DO YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE?

A. If the Commission grants less than the full increase for the SSS Operations, I recommend the following steps to reduce revenue and rates for SSS Operations customers. First, any subsidy from Water customers should be eliminated. That way, water customers will not subsidize any of the SSS Operations.

The scale back should start with the Zone 1, 2, and 5 Residential usage rate, reducing it to achieve the desired level of increase together with a reduction in the Non-Residential usage rate proportional to the percentage increase that I proposed for each rate under the full increase. For example, if the general Residential usage rate is scaled back 50%, the Residential usage rate would increase 15.05% (30.1% X 50%). The increase in the general Non-Residential usage rate should be approximately 24.9% (49.8% X 50%) (I&E Ex. No. 3, Sch 3, p. 1, lines 4-5). This

will keep the total increase in the Residential class and No-Residential class relatively proportional. The Special Commercial rate of $2.350 per hundred gallons for Cleveland Cliffs and Victory Brewing should be similarly scaled back based upon the 67.9% increase shown on I&E Ex. No. 3, Sch. 3, p. 1, line 11. The Special Commercial flat monthly charges shown on I&E Ex. No. 3, Sch. 3, p. 1, lines 13-16 and line 18 should also be similarly scaled back. The Non-Residential flat rate of $150.00 per month should not be scaled back since it is below the average bill of a Non-Residential customer. The special customer charge of $465.50 per month should not be scaled back because the increase is only 10.0% (I&E Ex. No. 3, Sch. 3, p. 1, line 19). The usage rates for Caln, West Brandywine, the VA, and St. Lawrence should not be scaled back because the rates that I propose are below the corresponding usage rate in Zone 1 (I&E Ex. No. 3, Sch. 3, p. 1, lines 20-21). The customer charge and usage rate paid by Rainbow Washhouse where the usage rate that I propose is below the present Commercial usage rate, should not be scaled back (I&E Ex. No. 3, Sch. 3, lines 35-38).

Q. WHAT SPECIFIC SCALE BACK DO YOU RECOMMEND FOR ZONES 7, 8, AND 9?

A. In Zones 7 and 9, the general usage rates should not be scaled back since they are below the Zone 1 usage rate. The Zone 8 Residential and Commercial flat charge can be made the same as the corresponding Zone 1 flat charge. However, the Butler Township flat rate of $40.00 per month and the Zone 9 flat rate of $75.00 should not

be scaled back because they are below the $132.00 per month flat rate I propose in Zone 1. The Bulk rates for the York Bulk customers and the Bulk rates in Royersford should not be scaled back since the revenue received from these classes is so far below the cost to provide service to these classes (I&E Ex. No. 3, Sch. 3, p. 2, line 1-21).

Q. WHAT SPECIFIC SCALE BACK DIRECTION DO YOU RECOMMEND FOR THE CSS OPERATIONS?

A. I recommend that the customer charges not be scaled back. In Zone 4, the charge decreased, thus no further decrease is appropriate. There should be a corresponding decrease in the Residential flat rate of $113.00 per month that I recommend match the eventual average bill of a Residential usage customer. The scale back should start with the Zone 3, 4, and 6 Residential usage rate, reducing it to achieve the desired level of increase together with a reduction in the Non-Residential usage rate proportional to the percentage increase that I proposed for each rate under the full increase. For example, if the general Residential usage rate is scaled back 50% which would result in the general Residential usage rate increasing 11.7% (23.4% X 50%). The increase in the general Non-Residential usage rate should be approximately 24.7% (49.4% X 50%) (I&E Ex. No. 3, Sch 17, p. 1, lines 2 and 5). This will keep the total increase in the Residential class and No-Residential class relatively proportional. Finally, the Bulk rates in Zone 6 should not be scaled back since they are not being increased (I&E Ex. No. 3, Sch 17, p. 1, lines 22-24).

RATE BASE

Q. WHAT IS RATE BASE?

A. Rate base is the depreciated original cost of a utility's investment in plant a utility has in place to serve customers plus other additions and deductions that the Commission determines to be necessary in order to keep the utility operating and providing safe and reliable service to its customers.

Q. HOW IS THE DEPRECIATED ORIGINAL COST PLANT IN SERVICE AT THE END OF THE TEST YEAR DETERMINED?

A. The depreciated original cost is determined by subtracting the book reserve, which is the accumulation of all prior annual depreciation expense, and other items such as retirements and salvage value from the original cost of the plant in service at the end of the fully projected future test year.

Q. WHAT OTHER ADDITIONS AND DEDUCTIONS TO THE DEPRECIATED ORIGINAL COST OF UTILITY PLANT ARE ALLOWED?

A. Some of the additions to the depreciated original cost of a company's investment in utility include acquisition adjustments, materials and supplies, prepayments, and cash working capital. Some of the deductions include deferred income taxes and customer deposits. Some additions are applicable to a specific utility or utility type.

Q. WHAT RATE BASE CLAIMED BY THE COMPANY DO YOU WISH TO ADDRESS?

A. I will address the Company's claimed SSS Operations rate base of $649,330,622 for the FPFTY ending June 30, 2025 (PAWC Volume 3, p. 96).

Q. WHAT SPECIFIC AREAS OF THE SYSTEM THAT COMPRISE THIS $649,330,622 SSS OPERATIONS RATE BASE WILL YOU ADDRESS?

A. I will address the net plant and the acquisition adjustment, and amortization expenses associated with the not yet acquired Sadsbury and the Farmington systems.

Q. HOW MUCH OF THE $649,330,622 SSS OPERATIONS RATE BASE IS THE RESULT OF THE FARMINGTON AND SADSBURY SYSTEMS?

A. According to information in the filing, the Company is reflecting $1,935,612 of net plant as a result of the Sadsbury acquisition and $932,272 of net plant as a result of the Farmington acquisition. The determination of this net plant and the references used to arrive at these net plant amounts are shown on I&E Ex. No. 3, Schedule 28 lines 1-5 and 11-15.

Q. WHAT DO YOU RECOMMEND CONCERNING THE FARMINGTON AND SADSBURY RATE BASE?

A. I recommend that $1,935,612 of rate base associated with the Sadsbury system and

$923,272 of rate base Farmington system be removed from the SSS Operations rate base.

Q. WHY DO YOU RECOMMEND THAT THESE AMOUNTS BE REMOVED FROM THE SSS OPERATIONS RATE BASE?

A. As described above, these systems are not yet owned by PAWC, therefore PAWC should not be able to include the rate base from these systems in the SSS Operations rate base.

ANNUARL DEPRECIATION EXPENSE

Q. WHAT IS ANNUAL DEPRECIATION EXPENSE?

A. Annual depreciation expense is an operating expense. It represents the loss of service value of plant over the life of the plant.

Q. WHAT ANNUAL DEPRECIATION EXPENSE IS PAWC CLAIMING IN THE SSS OPERATIONS?

A. PAWC is claiming $27,482,112 of annual depreciation expense for the FPFTY ending June 30, 2025 (PAWC Volume 3, p. 76, line 3).

Q. WHAT ADJUSTMENT TO THE SSS OPERATIONS ANNUAL DEPRECIATION EXPENSE DO YOU RECOMMEND?

A. I recommend that $24,342 of annual depreciation expense associated with the

Sadsbury system and $11,611 associated with the Farmington system be removed from the SSS Operations annual depreciation expense. The determination of the $24,342 and the references to arrive at this amount are shown on I&E Ex. No. 3, Schedule 28 lines 6-8. Since the filing did not contain a breakdown of annual depreciation expense for the Farmington System, I applied the same approximately 1.26% composite depreciation rate applicable in the Sadsbury system to the Farmington system net plant to arrive at the $11,611 ($923,272 X 0.012576) of Farmington annual depreciation expense (I&E Ex. No. 3, Schedule 28 line 16).

Q. WHY DO YOU RECOMMEND THAT $24,342 AND $11,611 BE REMOVED FROM THE SSS OPERATIONS ANNUAL DEPRECIATION EXPENSE?

A. As described above, these systems are not yet owned by PAWC, therefore PAWC should not be able to include the annual depreciation expense on the plant from these systems in the SSS Operations annual depreciation expense claim.

<u>AMORTIZATION EXPENSE</u>

Q. WHAT IS ANNUAL AMORTIZATION EXPENSE?

A. Annual amortization expense is an operating expense. It represents the recovery or refund of regulatory assets and liabilities over an agreed upon period of time. Regulatory assets and liabilities may or may not be included in a company's rate base.

Q. IF THE COMMISSION AGREES WITH YOUR RECOMMENDATION TO REMOVE THE SADSBURY AND FARMINGTON SYSTEMS, SHOULD THERE BE A CORRESPONDING ADJUSTMENT TO AMORTIZATION EXPENSE OF TRANSACTION COSTS?

A. Yes. If the Commission agrees with my recommendation to exclude the Sadsbury and Farmington system, there should be a corresponding $9,147 reduction of amortization expense claimed for the Sadsbury system and $5,699 claimed for the Farmington System (PAWC Volume 3, SSS Operations, page 130). As described above, these systems are not yet owned by PAWC. Therefore, it is premature to allow PAWC to recover these corresponding transaction expense in this case.

Q. DID THE COMPANY ALSO CLAIM A NEGATIVE PLANT ACQUISITION ADJUSTMENT IN THE TOTAL AMORTIZATION EXPENSE RELATED TO THE SADSBURY SYSTEM?

A. Yes. For the Sadsbury system, the Company is projecting that the purchase price will be $945,612 less than the net book value of the Sadsbury plant. This $945,612 is shown on PAWC Volume 4, Ex. 3-B, p. 344. Because it is a negative Acquisition Adjustment, the Company is required to amortize the adjustment as a credit back to customers over 10 years. While there is no rate base adjustment, the Company is claiming a negative $94,561 ($945,612 /10) Acquisition Adjustment expense be credited back to customers over 10 years (PAWC Volume 3, Ex. 3-A, p. 130).

Q. IF THE COMMISSION AGREES WITH YOUR RECOMMENDATION TO REMOVE THE RATE MAKING COMPONENTS RELATED TO THE SADSBURY SYSTEM, SHOULD THIS $94,561 CREDIT ALSO BE REMOVED?

A. Yes. If the Commission agrees with my recommendation to remove the plant, revenue, expenses, taxes, and amortizations related to the Sadsbury system, I recommend the Commission reverse the negative $94,561 Annual Amortization expense credit related to the Sadsbury system shown on PAWC Volume 3, Ex. 3-A, p. 130. Since the system has not yet been acquired, the Company should not be required to credit this $94,561 Annual Amortization expense back to customers.

ACQUISITION ADJUSTMENT – RATE BASE AND ACCRUED

Q. WHAT IS AN ACQUISITION ADJUSTMENT?

A. An Acquisition adjustment occurs when a utility purchases another system for more or less than the book value. It can also include transaction costs incurred by PAWC to acquire the system. The acquisition adjustment is typically claimed in rate base and amortized over a reasonable period of time.

Q. IS PAWC CLAIMING ACQUISITION ADJUSTMENTS IN THE FULLY PROJECTED FUTURE TEST YEAR RATE BASE?

A. Yes. PAWC is claiming $3,749,235 of Acquisition Adjustment in the FPFTY (PAWC Volume 3, Ex. 3-A, p. 96, line 16 and p. 106).

Q. WHAT ADJUSTMENTS TO THE SSS OPERATIONS ACQUISITION ADJUSTMENT DO YOU RECOMMEND?

A. I recommend that $83,085 of Transaction Costs related to the Sadsbury system and $51,761 of Transaction Costs related to the Farmington system included in the Acquisition Adjustments be removed from the total Acquisition Adjustment claimed in rate base. These amounts and the references to these amounts are shown on I&E Ex. No. 3, Schedule 28 lines 9 and 17).

Q. WHY DO YOU RECOMMEND THAT THESE AMOUNTS BE REMOVED FROM THE SSS OPERATIONS ACQUISITION ADJUSTMENT CLAIMED IN RATE BASE?

A. As described above, these systems are not yet owned by PAWC, therefore PAWC should not be able to include the corresponding Transaction Costs incurred to acquire these systems as part of the total Acquisition Adjustment in rate base from these systems in the SSS Operations.

Q. IF THE COMMISSION AGREES WITH YOUR RECOMMENDATION TO REMOVE THESE TRANSACTION COSTS, SHOULD THERE BE A CORRESPONDING ADJUSTMENT TO ACCRUED AMORTIZATION EXPENSE?

A. Yes. If the Commission agrees with my recommendation that $83,085 of Transaction Costs related to the Sadsbury system and $51,761 of Transaction Costs

related to the Farmington system be removed from the total Acquisition Adjustment claimed in rate base, there should be a corresponding reduction of $8,358 of Annual Amortization related to the Sadsbury system and a reduction of $5,224 of Annual Amortization related to the Farmington system (I&E Ex. No. 3, Sch. 28, lines 10 and 18).

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS CONCERNING THE FARMINGTON TOWNSHIP AND SADSBURY SYSTEMS?

A. For the reasons stated above, I recommend that the Commission remove the revenue requirement for the Farmington and Sadsbury systems from the present proceeding including all costs, revenues, taxes, and amortizations. The table below shows the net plant in service, acquisition adjustment accrued and annual, depreciation expense, and revenues as shown on I&E Ex. No. 3, Sch. 28.

	Farmington Township	Sadsbury
Net Plant- Rate Base	$923,272	$1,935,612
Transaction Costs - Rate Base	$51,761	$83,085
/Transaction Costs – Accrued Amortization	-$5,224	-$8,385
Acquisition Adjustment – Annual Expense		-$94,561
Transaction Costs Amortization Expense	$5,699	$9,147
Depreciation Expense	$11,611	$24,342
Present Rate Revenue	$322,926	$471,228

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS CONCERNING THE BASA AND BRENTWATER SYSTEMS?

A. For the reasons stated above, I recommend the Commission disallow the present and proposed rate revenue, rate base, expenses, amortizations, and taxes related to the Brentwood and BASA systems. These are shown on PAWC Volume 3, p. 139, 145, 172 and 178 as summarized on the following table.

	Present Rate BASA	Proposed Rate BASA
Rate Base	$231,624,479	$231,536,917
Revenue	$11,847,402	$38,135,710
Expenses and Income Taxes	$12,225,420	$19,751,679
Income Deductions	$4,979,926	$4,978,043
	Present Rate Brentwood	Proposed Rate Brentwood
Rate Base	$22,060,403	$22,053,946
Revenue	$1,824,191	$3,758,828
Expenses and Income Taxes	$1,453,865	$2,007,745
Income Deductions	$474,298	$474,160

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

JOSEPH KUBAS

PENNSYLVANIA PUBLIC UTILITY COMMISSION
COMMONWEALTH KEYSTONE BUILDING
400 NORTH STREET
HARRISBURG, PA 17120

Education: Bachelor of Science in Civil Engineering Technology, 1985, University of Pittsburgh at Johnstown, Johnstown, PA.

Continuing Education: Legal Principles and Practices of Surveying at the University of Maryland. Economics, Accounting, 33 Credit hours of accounting at the Howard County Community College and the University of Pittsburgh at Johnstown. Managing Multiple Priorities at the Pennsylvania State University. Various PA-PUC and Utility Company Seminars.

Professional: Engineer In Training, 1985,

Exams: Uniform Certified Public Accounting Exam, 1993.

Rate School: Cost of Service - Rate Structure & Rate Design instructor at Commission's Rate School - September 2010, 2012, 2014, 2016 and 2022.

Title: **RATE CASE REVIEW SPECIALIST - ANNUITANT**

July 2023 – Present
Pennsylvania Public Utility Commission
Bureau of Investigation and Enforcement

Duties: Provide consultation and assist the Bureau of I&E in the areas of Engineering, Revenue and Rate Structure for all fixed utility types. This includes measure of value claims, rate structure and rates, revenue annualizations, depreciation claims, fuel purchasing practices and economic analyses. The types of dockets reviewed by the Bureau of I&E included applications, formal complaints, investigations, applications, petitions and rate investigations. The review includes analyzing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue schedules, depreciation studies, water quality test results and formal complaints.

Title: **FIXED UTILITY VALUATION ENGINEER SUPERVISOR**

December 2011 – June 2023
Pennsylvania Public Utility Commission
Bureau of Investigation and Enforcement

Duties: Duties included the areas of Engineering, Revenue and Rate Structure for all fixed utility types. During the course of formal and informal investigations personnel under my direction were responsible for reviewing and presenting recommendations regarding tariff rate schedules, tariff rules and regulations, measures of value claims, revenue annualizations, depreciation claims, fuel purchasing practices and economic analyses. The types of dockets reviewed by the Bureau of I&E included: applications, formal complaints, investigations, petitions and rate investigations. The Engineering Section was also responsible for reviewing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue, depreciation studies, water quality test results and formal complaints. Duties also included reviewing default service petitions by electric distribution companies and Act 129 Filings by the seven major electric Utilities, including energy efficiency and conservation plans and Smart Meter Plans.

Title: **RATE CASE REVIEW SPECIALIST**

December 2009 - December 2011
Pennsylvania Public Utility Commission
Bureau of Investigation and Enforcement and Office of Trial Staff

Duties: These duties included the determination of the reasonableness of claims and proposals in the areas of plant in service, rate base, depreciation expense, cost of service, quality of service, revenues, acquisitions, purchase gas expense, rate structure, and tariff proposal submitted by Water, Sewer, Telephone, Gas and Steam Heat utilities to justify utility service rates, or alternative forms of regulation. Research, analyze, and review rate case filings, tariff filings, acquisitions and investigations. Participate in on-site inspections of utility properties to determine the used and usefulness of the plant-in service and make recommendations. Prepare interrogatories in the areas of rate base, depreciation expense, purchase gas expense, amortizations, rate structure, revenue and quality of service in order to obtain additional information regarding a utility's filing. Analyze present revenue, proposed revenue, rate structure and tariff issues. Recommend adjustments to rate base, depreciation expense, revenue, rate structure and other issues concerning fixed utilities. Prepare testimony and exhibits for the purpose of establishing the I&E position in formal and informal proceedings before the

Commission. Provide assistance and input to I&E employees concerning engineering and rate structure issues including input for briefs and exceptions. Participate in Commission consultative report proceedings and collaboratives undertaken by the Commission.

Title: **FIXED UTILITY VALUATION ENGINEER III**

December 1999 - December 2009
Pennsylvania Public Utility Commission
Office of Trial Staff

Duties: These duties included the determination of the reasonableness of claims and proposals in the areas of plant in service, rate base, depreciation expense, cost of service, quality of service, revenues, acquisitions, purchase gas expense, rate structure, and tariff proposal submitted by Water, Sewer, Telephone, Gas and Steam Heat utilities to justify utility service rates, or alternative forms of regulation. Research, analyze, and review rate case filings, tariff filings, acquisitions and investigations. Participate in on-site inspections of utility properties to determine the used and usefulness of the plant-in service and make recommendations. Prepare interrogatories in the areas of rate base, depreciation expense, purchase gas expense, amortizations, rate structure, revenue and quality of service in order to obtain additional information regarding a utility's filing. Analyze present revenue, proposed revenue, rate structure and tariff issues. Recommend adjustments to rate base, depreciation expense, revenue, rate structure and other issues concerning fixed utilities. Prepare testimony and exhibits for the purpose of establishing the OTS position in formal and informal proceedings before the Commission. Provide assistance and input to OTS employees concerning engineering and rate structure issues including input for briefs and exceptions. Participate in Commission consultative report proceedings and collaboratives undertaken by the Commission.

Title: **FIXED UTILITY VALUATION ENGINEER II**

April 1996 - December 1999
Pennsylvania Public Utility Commission
Office of Trial Staff and Bureau of Fixed Utility Services

Duties: Perform the duties of a Fixed Utility Valuation Engineer II in the Office of Trail Staff (OTS) and Bureau of Fixed Utility Services.

Title: **FIXED UTILITY VALUATION ENGINEER TRAINEE, I & II**

May 1993 - March 1996
Pennsylvania Public Utility Commission
Office of Trial Staff
Telecommunications and Water Division

Duties: Perform the duties of a Fixed Utility Valuation Engineer II in the Rate Structure/Engineering Section of the Telecommunications and Water Division of the Office of Trial Staff (OTS).

Title: **CIVIL ENGINEER**

May 1985 - January 1991
Clark Finefrock & Sackett Inc.
7135 Minstrel Way
Columbia, MD 21045

Duties: Engineering, Surveying, Computer, and Field Inspection work related to land development projects in Maryland.

I&E Statement No. 5
Witness: Joseph Kubas

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

AQUA PENNSYLVANIA, INC

Docket No. R-2021-3027385 (Water)

Docket No. R -2021-3027386 (Wastewater)

Direct Testimony

of

Joseph Kubas

Bureau of Investigation and Enforcement

Concerning:
Overall Act 11 Revenue, Wastewater
Present Rate Revenue, Late Payment Revenue
Proposed Revenue, Tariff Zones
Rate Structure, Revenue Shortfall
Cost of Service Studies Scaleback of Rates

month to $65.82 per month, which is an increase of $20.31 per month or 44.6% (I&E Ex. No. 5, Sch. 5, p. 2, line 5).

Q. HOW DID YOU DETERMINE THESE RATES?

A. In order to reduce the $13.452 million subsidy described above, the Zone 6 rates should be increased more than proposed by the Company. The rates I recommend were established so that the average Zone 6 customer receives an increase of slightly below 45% in this case. The 45% is reasonable given the low present bill for an average customer, the revenue it will generate, and the percentage increase relative to other proposed rates and average bills in this proceeding. I recommended the same $56.20 per month charge for all other Zone 6 customer charges. The flat rate of $67.00 per month that I recommended is approximately equal to the $66.60 per month bill applicable to a Zone 6 customer that uses 4,000 gallons per month (I&E Ex. No. 5, Sch. 5, p. 2, line 6).

ZONES 7-11 SUMMARY

Q. DO ZONES 7-11 INCLUDE THE SYSTEMS RECENTLY ACQUIRED UNDER ACT 129?

A. Yes. The Limerick system became Zone 7, the East Bradford system became Zone 8, the Cheltenham system became Zone 9, the East Norriton System became Zone 10, and the New Garden System became Zone 11.

Q. WHAT DOES ACT 129 ALLOW?

A. Act 129, at 66 Pa. C.S §1329, enables the investor-owned utility to establish the ratemaking rate base of the acquired property in the same proceeding that it seeks to acquire the property based upon a fair market valuation of the system.

Q. DID THE COMPANY PROVIDE COST OF SERVICE STUDIES (COSS) TO DETERMINE THE COST OF PROVIDING WASTEWATER SERVICE TO EACH SYSTEM?

A. Yes. The Company provided separate COSS' for Zones 7-11 (Aqua Volume 5, Ex. 5-B, Part I).

Q. DO PROPOSED REVENUE FROM ZONES 7-11 RECOVER THE COST OF PROVIDING SERVICE TO ZONES 7-11?

A. No. The revenue shortfall under Company proposed rates for Zones 7-11 is $7,387,428 ($2,977,700 + $457,861 + $515,804 + $1,749,281 + $1,686,782) (Aqua Volume 2, Sch. Act 11). The Company is requesting that this revenue shortfall be subsidized by Aqua water customers.

Q. IS THIS LARGE SUBSIDY REASONABLE?

A. No. Since most Aqua water customers are not wastewater customers, it is unreasonable to require water customers to subsidize wastewater customers. I believe each type of utility service should recover as much of the cost of providing

that service as possible. Therefore, as described below, I recommend adjustments to rates in Zone 7 - Zone 11 to reduce the subsidy, simplify the rate structure, and limit the increase to Zone 7 flat rate customers and certain Zone 11 usage blocks. Overall, my recommendations reduce the $7,387,428 by $2,539,680 to $4,847,748 (I&E Ex No. 5, Sch. 1, p. 1, line 16).

Q. SHOULD THE COMMISSION BE CONCERNED IF THE RATES AND AVERAGE BILL FOR THESE CUSTOMERS INCREASE GREATER THAN THE SYSTEM AVERAGE INCREASE?

A. No. In each acquisition, the municipalities benefited by selling the system and therefore the customers benefited by the sale. As stated in the various acquisitions, examples of these benefits to the municipality and/or customers include gaining the expertise of wastewater professionals, economies of scale, environmental impacts, spreading the cost of improvements over a larger customer base, access to low-income programs, paying off municipal debt, lowering taxes, exiting the ever-increasing difficult utility business, and improving public facilities such as parks, and libraries.

Q. SHOULD THE BENEFITS TO THE MUNICIPALITIES BALANCE THE HIGHER PERCENTAGE INCREASES TO SOME OF THESE SYSTEMS?

A. Yes. These benefits balance the larger than average increase customers will experience to recover the cost to Aqua and its other customers of acquiring the

systems. Acquiring these systems should not harm existing customers; therefore, the larger than average increase in rates will limit the harm to other Aqua customers by reducing the subsidy paid by other Aqua customers.

Q. WHAT OVERALL MISCONCEPTION DID YOU OBSERVE IN MOST OF THESE ACQUISITIONS?

A. In most cases, the municipal governments believed that the cost to acquire, operate, and upgrade their system would be borne by other Company customers through the large customer base/economies of scale arguments presented by the Company, thus keeping their residents' rates low. There are two flaws in this belief. First, they fail to consider that Aqua needs to recover the excess costs of operating the acquired system as is evidenced in the separate COSS' provided for the acquired systems. Second, the municipalities fail to recognize that the Company has acquired and will continue to acquire other systems and that any revenue shortfall for operating cost coverage will be spread across the Company's existing customers, which their residents have now become, so regular rate increases will be a certainty for those former municipal customers. Those acquired customers are now part of a large investor-owned utility that must ensure return for shareholders and coverage in rates for tax liabilities that did not apply to the municipality, and it would be untenable for existing Aqua customers to endlessly bear the burden of the revenue shortfalls that are typical of these acquired systems.

Q. WHY DIDN'T YOU ELIMINATE THE SUBSIDY NEEDED TO OPERATE ZONES 7 THROUGH 11.

A. Eliminating the entire subsidy would have resulted in very large increases to the monthly customer charges, usage rates, unmetered rates, and average bills for both residential and Commercial customers. Instead, I limited the increase in the monthly customer charges and usage rates that will limit the increase to the average Residential usage customer to generally less than 100%.

ZONE 7 – LIMERICK

Q. WHEN DID AQUA ACQUIRE THE LIMERICK SYSTEM?

A. Aqua acquired the Limerick system on July 26, 2018, at Docket A-2017-2605434.

Q. WHAT PRESENT RATES DO CUSTOMERS IN ZONE 7 CURRENTLY PAY?

A. The present Zone 7 rates are shown on I&E Ex. No. 5, Sch. 6, p. 1, column B, lines 1-7 (Aqua Volume 5, Ex. 5-B, Part II, Sch. LMK-3, p. 1, column 4).

Q. IS THE COMPANY PROPOSING TO INCREASE THE PRESENT CUSTOMER CHARGE, UNMETERED RATE, AND USAGE RATES IN ZONE 7?

A. Yes. The proposed Zone 7 rates are shown on I&E Ex. No. 5, Sch. 6, p. 1, column D, lines 1-7 (Aqua Volume 5, Ex. 5-B, Part II, Sch. LMK-3, p. 1, column 6).

Q. WHAT INCREASE WILL THE AVERAGE RESIDENTIAL CUSTOMER IN ZONE 7 EXPERIENCE UNDER YOUR PROPOSAL?

A. The bill for an average Residential customer in Zone 7 will increase from $37.69 per month to $71.32 per month, which is an increase of $33.63 per month or 89.2% (I&E Ex. No. 5, Sch. 6, p. 2, line 5).

Q. HOW DID YOU DETERMINE THESE RATES?

A. In order to reduce the $13.452 million subsidy described above, the Zone 7 rates should be increased. The rates I recommend were established so that the average Zone 7 customer receives an increase of slightly below 90% in this case. The 90% is reasonable given the revenue it will generate, the subsidy to Zone 7, the percentage increase relative to other proposed rates, the elimination of the current allowance, the average bills in this proceeding, and the benefits to Limerick customers from the acquisition by Aqua. I applied the same percentage increase to the other Zone 7 customer charges. The present unmetered rate is $28.33 per month and establishing an unmetered rate of $60.00 per month would be an increase of $31.67 per month or 111.8% ($31.67 / $28.33) over the present unmetered rate of $28.33 per month (I&E Ex. No. 5, Sch. 6, p. 1, line 6).

Bureau of Investigation & Enforcement

I&E RS-031-D

Responsible Witness: Connie Heppenstall, Senior Project Manager, Gannett Fleming

Question:

Reference PAWC Volume 17, Exhibit 12-D, page 7 showing the flow volumes per customer class in the Brentwood WW System.

A. How did the Company determine the average 395,200 gallons of residential and 112,300 gallons of flow non-residential flows given the response to I&E-RB-6 indicates that the flow from Brentwood customers alone is unknown.
B. Provide the back-up data used to determine these flows.
C. Did the Company include the flow from upstream municipalities in the 395,200 gallons of residential flow and 112,300 gallons of non-residential flow volumes? If yes, provide the volumes of upstream flow the Company attributed to these municipalities by class?
D. If the Company did not include the flow from upstream municipalities, explain why not.

Response:

A. The flow listed for the average residential flow in Exhibit 12-D, page 7 is actually 359,200, not 395,200 as stated in the question. The average flow per customer class is equal to the annualized winter metered water usage for each customer class as found in Exhibit 10-D divided by 365. This value is not based on actual measured sewage flows.
B. Please refer to Volume 9, Exhibit 10-D.
C. No, the Company did not include the flow from upstream municipalities in the 359,200 gallons of residential flow and 112,300 gallons of non-residential flow volumes.
D. The flow from upstream municipalities is not included because there are no data available on the quantity of sewage entering the Brentwood system from upstream municipalities.

Bureau of Investigation and Enforcement

Concerning:
Overall Act 11 Revenue, Wastewater
Rate Structure, Revenue Shortfall

TABLE OF CONTENTS

INTRODUCTION **1**

ACT 22 – OVERALL REVENUE **2**

CSS OPERATIONS – RESIDENTIAL CUSTOMER CHARGE **4**

SUMMARY **6**

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Joseph Kubas, and my business address is 400 North Street, Harrisburg, PA 17120.

Q. ARE YOU THE SAME JOSEPH KUBAS THAT SUBMITTED DIRECT TESTIMONY TO THE PARTIES ON FEBRUARY 1, 2024?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to address the direct testimony submitted on behalf of the Office of Consumer Advocate (OCA) by Jerome D. Mierzwa (OCA St. No. 4. My testimony will address the OCA's recommendation concerning the Act 11 allocation and the CSS customer charges.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. No.

INTRODUCTION

Q. PLEASE DESCRIBE THE FILING.

A. On November 8, 2023, PAWC filed a combined water and wastewater base rate case based on a fully projected future test year (FPFTY) ending June 30, 2025. The total increase of approximately $203,946,000 is comprised of an increase in water revenue

of approximately $199,237,000, and an increase in wastewater revenue of approximately $4,709,000 (PAWC Volume 3, Sch. 3-A).

ACT 22 – OVERALL REVENUE

Q. IS PAWC PROPOSING TO SHIFT SOME OF THE WASTEWATER REVENUE REQUIREMENT FROM WASTEWATER CUSTOMERS TO WATER CUSTOMERS IN THIS FILING?

A. Yes. In its filing, the Company proposes that its wastewater operations receive a $71,087,394 subsidy from its water operations (PAWC Volume 3, Ex. 3-A, p. 1).

Q. DID YOU ADDRESS THIS $71,087,394 SUBSIDY FROM WATER OPERATIONS?

A. Yes. I recommended that the $71,087,394 be reduced to $357,517 (I&E St. No. 3 and I&E Ex. No. 3, Sch. 1).

Q. DID THE OCA ALSO ADDRESS THIS $71,087,394 SUBSIDY FROM WATER OPERATIONS?

A. Yes. The OCA also believed that the $71,087,394 was excessive and recommended that the $71,087,394 be reduced to $18,899,766 through various rate making reductions and the exclusion of the large Butler Area Sewer Authority (BASA) and Borough of Brentwood (Brentwood) revenue shortfalls (OCA St. No. 4, pp. 38-40 and Table 5).

Q. WHAT REASON DID THE OCA GIVE FOR RECOMMENDING A SUBSIDY OF $18,899,766 FROM WATER OPERATIONS?

A. The OCA proposed to limit the increase in the Scranton area to 4.7% in this case consistent with the 4.7% increase it applied to the other CSS systems of McKeesport and Kane (OCA St. No. 4, pp. 39-40).

Q. DID THE OCA PROVIDE ANY REASON OR JUSTIFICATION FOR BELIEVING THAT INCREASES BETWEEN 21.0% AND 25.9% SHOWN ON OCA TABLE 5 BEFORE ANY ACT 11 SUBSIDY IS UNREASONABLE?

A. No. The OCA did not explain why its "Pre-Act 11" percentage increases of between 21.0% and 25.9% shown on OCA St. No. 4, Table 5 are excessive. I believe that considering the OCA total increase, this range is reasonable, given that the Company proposed the average Zone 1 Residential water customer bill increase 24.9% (PAWC Volume 9, Ex. 10-A, p. 76.

Q. DO YOU AGREE WITH THE OCA THAT IT IS REASONABLE TO RECOVER $18,899,766 OF WASTEWATER COSTS FROM WATER CUSTOMERS?

A. No, for the reasons described in my direct testimony. Overall, I believe the OCA was not aggressive enough in significantly reducing the wastewater subsidy to the extent described in my direct testimony. Therefore, I recommend that the OCA proposal to approve a wastewater subsidy of $18,899,766 be rejected.

CSS OPERATIONS – RESIDENTIAL CUSTOMER CHARGE

Q. WHAT ARE THE PRESENT RESIDENTIAL CUSTOMER CHARGES AND THE COMPANY PROPOSED RESIDENTIAL CUSTOMER CHARGES FOR CSS OPERATIONS?

A. The Company proposed the Zone 3 Residential customer charge increase from $19.50 per month to $19.71 per month, which equates to an increase of $0.21 per month or 1.1%. The Company proposed the Zone 4 Residential customer charge decrease from $40.00 per month to $20.00 per month, which equates to a decrease of $20.00 per month or 50%. The Company also proposed that the Zone 6 Residential customer charge increase from $14.30 per month to $20.00 per month, which equates to an increase of $5.70 per month or 39.9%. Finally, there is one Zone 4 Residential customer that pays $100.00 per month where the Company proposed this monthly charge be reduced to $20.00 per month (PAWC Volume 9, Sch. 10-C, pp. 3-5).

Q. WHAT RESIDENTIAL CUSTOMER CHARGE DID YOU RECOMMEND IN THE CSS OPERATIONS?

A. I recommended a Residential customer charge of $20.00 per month in the CSS Operations. This recommendation consolidated the Residential customer charge in Zones 3, 4, and 6 (I&E St. No. 3, p. 61).

Q. DID THE OCA ALSO ADDRESS THE PROPOSED RESIDENTIAL CUSTOMER CHARGE IN THE CSS OPERATIONS?

A. Yes. In the CSS Operations, the OCA recommended that the present Zone 3 customer charge be reduced from $19.50 per month to $14.30 per month, that the Zone 4 customer charge be reduced from $40.00 per month to $14.30 per month and the Zone 6 customer charge of $14.30 remain at $14.30 per month (OCA St. No. 4, p. 46-47).

Q. DO YOU AGREE WITH THE $14.30 PER MONTH CUSTOMER CHARGE FOR THE CSS RESIDENTIAL CUSTOMERS PROPOSED BY OCA?

A. No for several reasons. First, 72% ($33.228 million / $46.175 million) of present rate CSS Operations revenues are generated by Zone 3 (PAWC Volume 9, Ex. 10-C, p. 2). Therefore, granting a $5.20 per month reduction in the Zone 3 Residential customer charge will have a large impact on total CSS Operations revenue. Since Zone 3 Residential customers are used to paying $19.50 per month, my recommendation to increase the monthly charge to $20.00 is reasonable and will generate needed revenue. Second, for Zone 4, Residential customers currently paying $40.00 per month would experience a decrease of $25.70 ($40.00 -$14.30) per month under the OCA proposal, which I believe is too large of a decrease and will also reduce CSS Operations revenue more than my proposal. Third, for Zone 6, I believe these customers can absorb the larger increase in the customer charge that I propose because under present rates, Zone 6 customers pay the highest Residential

usage rates in the CSS Operations (I&E Ex. No. 3, Sch. 17, column B, line 17). The higher customer charge together with the small increase in the Zone 6 usage rate will cause the bill for an average Residential customer to increase only 5.1% under my rate structure proposal (I&E Ex. No. 3, Sch. 20, p. 3, line 7).

SUMMARY

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN REBUTTAL TESTIMONY?

A. For the reasons stated above and in my direct testimony, I recommend that the Commission reject the OCA proposal to allow $18,889,766 of Act 11 subsidy and instead approve the $357,517 subsidy that I recommend (I&E Ex. No. 3, Sch. 1). I also recommend the proposed CSS Residential customer charge be $20.00 per month, rather than the $14.30 per month proposed by the OCA.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Joseph Kubas. My business address is 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as an Annuitant. I was previously employed as the Fixed Utility Valuation Engineer Supervisor.

Q. ARE YOU THE SAME JOSEPH KUBAS THAT SUBMITTED DIRECT TESTIMONY ON FEBRUARY 1, 2024 AND REBUTTAL TESTIMONY ON FEBRUARY 21, 2024?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address the rebuttal testimony submitted on behalf of Pennsylvania American Water Company (PAWC) by Ashley E. Everette (PAWC St. No. 1-R), Stacey D, Gess (PAWC St. No. 4-R), E. Christopher Abruzzo (PAWC St. No. 6-R), Charles. B. Rea (PAWC St. No. 10-R), John J. Spanos (PAWC St. No. 11-R), and Constance C. Heppenstall (PAWC St. No. 12-R). I will also address the rebuttal testimony of the Office of Consumer Advocate by Jerome D. Mierzwa (OCA St. No. 4-R).

INTRODUCTION

Q. PLEASE DESCRIBE THE FILING.

A. On November 8, 2023, PAWC filed a combined water and wastewater base rate case based on a fully projected future test year (FPFTY) ending June 30, 2025. The total increase of approximately $203,946,000 is comprised of an increase in water revenue of approximately $199,237,000, and an increase in wastewater revenue of approximately $4,709,000 (PAWC Volume 3, Sch. 3-A).

Q. DID PAWC MAKE REVISIONS TO THE ORIGINAL INCREASE?

A. Yes, PAWC revised its original increase upwards to approximately $204,291,000 (PAWC Ex. 3-A- Revised). This small increase did not change the Act 11 subsidy but did result in changes to the proposed level of water and wastewater revenue. For example, the proposed increase after the Act 11 allocation for the Sanitary Sewer System (SSS) was changed from $95,301,606 on PAWC Ex. 3-A to $95,363,564, and for the Combined Sewer System (CSS) it was changed from $78,409,290 to $78,464,092. The Company also made several revisions to some of the ratemaking components related to the Farmington and Sadsbury systems that I will describe below (PAWC Volume 3, Ex. 3-A, and PAWC St. 1-R).

Q. DID PAWC PROVIDE REVISED PROPOSED RATES TO ACCOUNT FOR THIS CHANGE?

A. No.

Q. IS IT NECESSARY FOR YOU TO REVISE YOUR PROPOSED WASTEWATER RATES TO ACCOUNT FOR THIS ADDITIONAL REVENUE?

A. No. I believe the scale-back described in my direct testimony can be used as described without impact due to these small changes.

Q. WHAT WILL YOUR SURREBUTTAL TESTIMONY FOCUS ON?

A. My surrebuttal testimony regarding PAWC's request will focus on the rebuttal testimony of the witness listed above addressing the exclusion of four wastewater systems, the rate structure contained in the remaining two wastewater systems, Cost of Service Studies (COSS), winter rates, and the scaleback of rates.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. No.

<u>WASTEWATER ZONES</u>

Q. HOW MANY DIFFERENT WASTEWATER ZONES DOES PAWC HAVE AND DO THE RATES VARY BY ZONE?

A. PAWC currently has eleven different wastewater rate zones with various rates, with eight in the Sanitary Sewer System (SSS) Group, which only includes sanitary systems, and three zones in the Combined Sewer System (CSS) Group, which include systems that treat both sanitary and storm water flows (PAWC Volume 9,

Ex. 10-B and 10-C). PAWC also included in this filing the Butler Area Sewer Authority (BASA), Borough of Brentwood (Brentwood), Farmington Township Wastewater (Farmington), and Sadsbury Township Wastewater (Sadsbury) systems that the Company does not currently own but are pending purchase.

BRENTWOOD WASTEWATER

Q. PLEASE DESCRIBE THE BRENTWOOD WASTEWATER SYSTEM.

A. The Brentwood system is a municipal owned wastewater collection only system in Allegheny County. PAWC filed an application with the Commission to purchase this system on April 3, 2023, at Docket A-2021-3024058.

Q. WHAT IS THE CURRENT STATUS OF THE BRENTWOOD APPLICATION?

A. The Commission denied the Application at the February 22, 2024 Public Meeting. As part of this base rate case filing, the Company reflected a revenue shortfall of $1,565,232, as a result of the Brentwood acquisition that will be paid by water customers (PAWC Volume 3, Exhibit 3-A).

Q. WHAT DID YOU RECOMMEND CONCERNING THE INCLUSION OF THE REVENUE, RATE BASE, EXPENSES, AMORTIZATIONS AND TAXES RELATED TO THE BRENTWOOD SYSTEM IN THIS CASE?

A. I recommended that the revenue, rate base, expenses, and taxes, and corresponding

revenue shortfall from the Brentwood system be excluded from this case (I&E St. No. 3, p. 4).

Q. WHY DID YOU RECOMMEND THIS SYSTEM BE EXCLUDED FROM THIS BASE RATE CASE IN YOUR DIRECT TESTIMONY?

A. I identified the following issues for my recommendation that Brentwood be excluded from this base rate case. First, PAWC does not currently own the Brentwood system. At the time I submitted direct testimony, the Commission had yet to decide the Application. Second, excluding the Brentwood system in this case eliminates the revenue shortfall of $1,565,232, as a result of the purchase of the Brentwood system and ensures that water customers will not be responsible for this shortfall while PAWC does not yet own the system. Finally, in the Application proceeding, the Company alleged there would be no "immediate" harm to other PAWC customers as a result of this acquisition (PAWC St. No. 3. p. 10 at A-2021-3024058). Since this base rate case was filed before PAWC will be able to close on the acquisition of the Brentwood system, I believed this case falls into the "immediate" time frame PAWC was referring to. Therefore, I recommended that the Commission hold the Company to this promise and exclude the Brentwood rate base, expenses, taxes, revenue, and revenue shortfall from this case resulting in no harm to PAWC water customers (I&E St. No. 3, pp. 4-5).

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION CONCERNING THE BRENTWOOD WASTEWATER SYSTEM?

A. Yes. The Company disagreed with my recommendation to exclude the Brentwood wastewater system for several reasons. First, the Company believes that it will eventually purchase the Brentwood wastewater system shortly after the Commission issues a final Commission Order. However, if the Application is appealed to Commonwealth Court, the Company believes the system would still be acquired before the end of the FPFTY (PAWC St. No. 1-R, p. 4). Second, the Company believes that excluding the systems to reduce the bills of water customers as I suggest violates its rights under State and Federal law. Third, the Company believes that I misinterpreted the promise made in the Application docket that there would be no "immediate" impact on other ratepayers and this "promise" really meant "no immediate harm unless we file a base rate case before the system is acquired." Finally, the Company believes that any promise made in the past was not made with any foreknowledge of this impending case, and the equitable remedy I recommended is not an enforcement action available to the Commission (PAWC St. No. 6-R, p. 16-17).

Q. HAS THE STATUS OF THE BRENTWOOD ACQUISITION CHANGED?

A. Yes. As described above, the Commission denied the Company's Application to acquire the Brentwood wastewater system at Public Meeting on February 22, 2024.

Q. DOES THIS OUTCOME CHANGE THE LIKELIHOOD THAT THIS TRANSACTION WILL CLOSE WITHIN THE FPFTY?

A. Yes, the Company's belief that it will quickly purchase the Brentwood wastewater system is more speculative than it was before the Commission denied the Application. There is even greater question now as to whether this acquisition will close within the FPFTY, if at all.

Q. PLEASE ADDRESS THE SECOND REASON CONCERNING ALLEGED VIOLATIONS OF PAWC'S RIGHTS.

A. As explained above, excluding the Brentwood system in this case "saves" water customers $1,565,232, because the revenue shortfall as a result of purchasing the Brentwood system will be eliminated. This argument that removing this system violates its rights under State and Federal law makes no sense because the Company currently does not own the system. While the legal arguments concerning this claim will be addressed in the I&E brief, the Company does not own this system and cannot, therefore, include it in rates.

Q. PLEASE ADDRESS THE THIRD REASON CONCERNING ALLEGED PROMISES PAWC MADE IN THE APPLICATION.

A. I disagree with the Company that I misinterpreted the promise made in the Application docket. It was clear in the Application that the Company assured the Commission that there would be no "immediate" impact to other ratepayers as a

result of the acquisition. In this instance, PAWC is attempting to impact ratepayers before it even officially owns the system. If impacting ratepayers before the acquisition even closes is not immediate, it is unclear what would be classified as such.

Q. PLEASE ADDRESS THE FINAL REASON CONCERNING PAWC'S CLAIMS THAT ANY PROMISE MADE IN THE APPLICATION IS OUTDATED AND EQUITABLE REMEDIES ARE BEYOND THE COMMISSION'S ENFORCEMENT AUTHORITY.

A. This argument will be addressed in the I&E Brief. However, this argument leaves the parties and Commission to question the validity of statements made by PAWC in this case and in the future.

Q. DID THE COMPANY PROVIDE ANY VALID REASON FOR INCLUDING THE REVENUE, RATE BASE, EXPENSES, TAXES, AND REVENUE SHORTFALL FOR THE BRENTWOOD SYSTEM?

A. No. Therefore, I continue to recommend that the revenue, rate base, taxes, expenses, and revenue shortfall associated with the Brentwood wastewater system be excluded from this case.

BASA WASTEWATER

Q. PLEASE DESCRIBE THE BASA WASTEWATER SYSTEM.

A. The BASA system is a municipal owned wastewater collection and treatment system in Butler County. PAWC filed an application with the Commission to purchase this system on March 9, 2023, at Docket A-2022-3037047.

Q. WHAT IS THE CURRENT STATUS OF THE BASA APPLICATION?

A. The Commission approved the Application by an Order entered November 16, 2023. As part of this filing, the Company reflected a revenue shortfall of $21,552,699 for BASA that will be paid by water customers (PAWC Volume 3, Exhibit 3-A). However, I have been advised by counsel that this Commission order has been appealed by Center and Summit Townships, and it is currently pending before the Commonwealth Court.

Q. WHAT DID YOU RECOMMEND CONCERNING THE INCLUSION OF THE REVENUE, RATE BASE, EXPENSES, AND TAXES RELATED TO THE BASA SYSTEM IN THIS CASE?

A. I recommended that the revenue, rate base, expenses, taxes, and corresponding revenue shortfall from the BASA system be excluded from this case (I&E St. No. 3, p. 6).

Q. WHY DID YOU RECOMMEND THIS SYSTEM BE EXCLUDED FROM THIS BASE RATE CASE?

A. First, PAWC does not currently own the BASA system, and any closing will be dependent upon the outcome of the Commonwealth Court appeal, which could easily extend any potential closing beyond the FPFTY in this case. Therefore, it is premature to allow the inclusion of the rate base, expenses, taxes, and revenue from BASA in this base rate case. Second, excluding the BASA system in this case eliminates the claimed revenue shortfall of $21,552,699 for the BASA system. Finally, in the Application, the Company claimed there would be no "immediate" harm to other PAWC customers (PAWC St. No. 3. p. 11 at A-2022-3037047). Since this case was filed before PAWC will acquire the system, I believe this case falls also into the "immediate" time frame PAWC was referring to. Therefore, I recommended that the Commission hold the Company to this promise and exclude the BASA rate base, expenses, taxes, revenue, and revenue shortfall from this case, resulting in no harm to PAWC water customers (I&E St. No. 3, p. 6-7).

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION CONCERNING THE BASA WASTEWATER SYSTEM?

A. Yes. The Company disagreed with my recommendation to exclude the BASA wastewater system for the same reason reasons it disagreed with my recommendation concerning the Brentwood system (PAWC St. No. 1, page 3-4 and St. No. 6-R, p. 16-17).

Q. DID YOU ADDRESS THESE SAME CLAIM IN THE BRENTWOOD SECTION ABOVE?

A. Yes. Similar to the Brentwood system, the Company did not provide any valid reason for including the BASA wastewater system in this filing. Therefore, I continue to recommend that the revenue, rate base, expenses, taxes, and revenue shortfall related to the BASA wastewater system should be excluded from this filing.

<u>BASA AND BRENTWOOD ANNUAL DEPRECIATION EXPENSE</u>

Q. IS THERE ANOTHER ISSUE WITH BASA AND BRENTWOOD THE COMMISSION SHOULD BE AWARE OF?

A. Yes. The OCA has raised an issue concerning service lives for some of the BASA and Brentwood plant accounts and corresponding annual depreciation expense. The OCA has preliminarily determined that recent shortening of service lives has increased the annual depreciation expense for BASA by $877,000 and has increased the annual depreciation expense for Brentwood by $48,000 (OCA St. No. 2, p. 41).

Q. DID PAWC ADDRESS THE OCA TESTIMONY CONCERNING SERVICE LIVES AND ANNUAL DEPRECIATION EXPENSE FOR BASA AND BRENTWOOD?

A. Yes. The Company states that based upon new analyses, the shorter service lives are justified (PAWC St. No. 11-R, pp. 10-11).

Q. DO YOU HAVE ANY COMMENTS ON THIS ISSUE?

A. Yes. I do agree that the Company can adjust service lives going forward. However, in this situation, the Company has yet to purchase these systems. When the Company filed these Applications, the prior service lives were used to estimate the net plant, a component of the purchase price and Fair Market Value and eventually the customer notices. In this case, increasing depreciation expense before the systems are acquired is unfair to customers. Therefore, if the Company does acquire these systems, I recommend separate plant account summaries for each of these systems so that the parties and the Commission can review the depreciation expense and proposed changes in more detail.

FARMINGTON WASTEWATER

Q. PLEASE DESCRIBE THE FARMINGTON TOWNSHIP WASTEWATER SYSTEM.

A. The Farmington system is a municipal owned wastewater collection and treatment system in Clarion County. PAWC filed an application with the Commission to purchase this system on August 28, 2023, at Docket A-2023-3042567.

Q. WHAT IS THE CURRENT STATUS OF THE FARMINGTON APPLICATION?

A. The Commission has yet to approve this Application.

Q. WHAT DID YOU RECOMMEND CONCERNING THE INCLUSION OF THE REVENUE, RATE BASE, EXPENSES, AMORTIZATIONS, AND TAXES RELATED TO THE FARMINGTON SYSTEM IN THIS CASE?

A. As this application has not been approved and a closing date is unknown, I recommended that $322,926 of present rate revenue and various rate base, expenses, amortizations, and taxes related to the Farmington wastewater system be excluded from this case, since the system is not currently owned by PAWC (I&E St. No. 3, pp. 7-9, 78-86, and Ex. No. 3, Sch. 28, lines 11-18).

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATIONS CONCERNING THE FARMINGTON WASTEWATER SYSTEM?

A. Yes. The Company disagreed with my recommendations concerning the Farmington wastewater system because it believes that it will eventually purchase the Farmington wastewater system, and that it is improper to exclude the rate making components in this case (PAWC St. No. 4, pp. 3g-9, St. No. 6-R, pp. 4-15, St. No. 10-R, pp. 62-63).

Q. DID THE COMPANY PROVIDE ANY VALID REASON FOR INCLUDING THE FARMINGTON WASTEWATER SYSTEM?

A. No. Therefore, the Commission should exclude the revenue, and corresponding rate making claims described in my direct testimony for the reason described in my direct testimony (I&E St. No. 3, p. 7).

SADSBURY WASTEWATER

Q. PLEASE DESCRIBE THE SADSBURY TOWNSHIP WASTEWATER SYSTEM.

A. The Sadsbury system is a municipal owned wastewater collection and treatment system in Lancaster County. PAWC filed an application with the Commission to purchase this system on March 9, 2023, at Docket A-2023-3042058.

Q. WHAT IS THE CURRENT STATUS OF THE SADSBURY APPLICATION?

A. The Commission has yet to approve this Application.

Q. WHAT DID YOU RECOMMEND CONCERNING THE INCLUSION OF THE REVENUE, RATE BASE, EXPENSES, AMORTIZATIONS AND TAXES RELATED TO THE SADSBURY SYSTEM IN THIS CASE?

A. As this application has not been approved and a closing date is unknown, I recommended that the $471,228 in present rate revenue and various rate base, expenses, amortizations, and taxes related to the Sadsbury system be excluded from this case, since the system is not currently owned by PAWC (I&E St. No. 3, p. 8-9, 78-86, and Ex. No. 3, Sch. 28, lines 1-10).

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION CONCERNING THE SADSBURY WASTEWATER SYSTEM?

A. Yes. The Company disagreed with my recommendations concerning the Sadsbury

wastewater system because the Company believes that it will eventually purchase the Sadsbury wastewater system, and that it is improper to exclude the revenue shortfall in this case (PAWC St. No. 4, pp. 3-9, St. No. 6-R, pp. 4-15, St. No. 10-R, pp. 62-63).

Q. DID THE COMPANY PROVIDE ANY VALID REASON FOR INCLUDING THE SADSBURY WASTEWATER SYSTEM?

A. No. Therefore, the Commission should exclude the revenue, and corresponding rate making claims described in my direct testimony, for the reason described in my direct testimony.

ACQUISITION SUMMARY

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS CONCERNING THE FARMINGTON TOWNSHIP AND SADSBURY SYSTEMS?

A. For the reason stated above and in my direct testimony, I recommend that the Commission remove the revenue requirement for the Farmington and Sadsbury systems from the present proceeding including all costs, revenues, taxes, and amortizations. The table below shows the net plant in service, acquisition adjustment accrued and annual, depreciation expense, and revenues as shown on I&E Ex. No. 3, Sch. 28.

	Farmington Township	Sadsbury
Net Plant- Rate Base	$923,272	$1,935,612
Transaction Costs - Rate Base	$51,761	$83,085
Transaction Costs – Accrued Amortization	-$5,224	-$8,385
Acquisition Adjustment – Annual Expense		-$94,561
Transaction Costs Amortization Expense	$5,699	$9,147
Depreciation Expense	$11,611	$24,342
Present Rate Revenue	$322,926	$471,228

Q. DID THE COMPANY REVISE THE REVENUE, EXPENSE AND RATE BASE CLAIMS IN THE BASA AND BRENTWOOD SYSTEMS?

A. Yes. The Company made small changes to the revenue, expenses, and rate base for BASA and Brentwood wastewater systems that I reflect below.

Q. PLEASE SUMMARIZE YOUR REVISED RECOMMENDATIONS CONCERNING THE BASA AND BRENTWOOD SYSTEMS?

A. For the reason stated above and in my direct testimony, I recommend the Commission disallow the present and proposed rate revenue, rate base, expenses, amortizations, and taxes related to the Brentwood and BASA systems. These revised amounts are shown on PAWC St. No. 1-R, Ex. 3-A, revised, p. 139R, 145R, 172R and 178R.

	Present Rate BASA	Proposed Rate BASA
Rate Base	$231,621,374	$231,537,003
Revenue	$12,814,193	$38,135,140
Expenses and Income Taxes	$12,503,224	$19,753,102
Income Deductions	$4,979,860	$4,978,045
	Present Rate Brentwood	Proposed Rate Brentwood
Rate Base	$22,053,946	$22,053,946
Revenue	$1,824,191	$3,759,210
Expenses and Income Taxes	$1,454,133	$2,008,125
Income Deductions	$474,300	$474,161

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S INCLUSION OF NOT YET ACQUIRED SYSTEM ASSETS IN BASE RATE PROCEEDINGS?

A. Yes. With the application of Act 12 and the routine cost-sharing that occurs for system water customers, to include systems that are not yet acquired with associated speculative subsidy needs not based on any actual known operating costs is inappropriate and unfair to existing customers as the additional costs applied to their rates may not come to fruition or be accurate in the scope established in the proceeding. For these reasons, I recommend that the Company not be permitted to include systems not yet acquired in base rate proceedings now or in the future.

WASTEWATER PRESENT RATE REVENUE

Q. PLEASE SUMMARIZE THE WASTEWATER PRESENT RATE REVENUE THAT YOU RECOMMEND BE EXCLUDED FROM THE FILING.

A. For the reasons stated above, I recommended that $11,847,402 of present rate revenue from BASA and $1,824,191 of present rate revenue from Brentwood shown on PAWC Volume 3, Sch. 3-A be excluded from this case. I also recommend that $322,926 of present rate revenue from Farmington and $471,228 of present rate revenue from Sadsbury shown on PAWC Volume 9, Exhibit 10-B, p. 1 be excluded from this case (I&E St. No. 3, pp. 8-9).

Q. DO YOU WISH TO REVISE YOUR RECOMMENDATION CONCERNING PRESENT RATE REVENUE?

A. Yes. As described above, present rate revenue for the BASA system has been updated by the Company to $12,814,193. Overall, the Company did not provide any valid reason for including these wastewater systems and corresponding present rate revenue of these systems in this filing, so any associated present rate revenues should be removed.

WASTEWATER PROPOSED RATE SUMMARY

Q. WHAT DID PAWC STATE CONCERNING PROPOSED WASTEWATER RATES?

A. PAWC made several claims and statements concerning wastewater rates. First, the

Company states that "cost causation" is an important goal in establishing proposed rates. The Company goes on to state that "cost causation" is the "foundation" of its proposed wastewater rates (PAWC Volume 9, St. No. 10, pp. 28-30).

Q. DID YOU ADDRESS THE CONTRADICTIONS IN THE COMPANY'S TESTIMONY VERSUS ITS PROPOSED WASTEWATER RATES?

A. Yes. In my direct testimony I described how the Company failed to propose wastewater rates to better recover the cost of providing wastewater service. The Company proposed various wastewater rate decreases, kept some rates the same, and proposed increases in some other cases. The increased rates did move the lower rates closer to the corresponding rates in Zone 1. A review of the Company's proposed rates indicates that the Company's primary goal was to ignore the cost of providing wastewater service and limit the average bill of residential wastewater customers to make them comparable to the average bill of a water customer (I&E St. No. 3, p. 12).

Q. IS PAWC CONTINUING TO PROPOSE TO SHIFT SOME OF THE WASTEWATER REVENUE REQUIREMENT FROM WASTEWATER CUSTOMERS TO WATER CUSTOMERS IN THIS FILING?

A. Yes. In rebuttal testimony the Company continues to propose that its wastewater operations receive a $71,087,394 subsidy from its water operations (PAWC Volume 3, Ex. 3-A, p. 1 in Rebuttal).

Q. WHAT DID YOU RECOMMEND CONCERNING PAWC'S PROPOSAL TO SHIFT $71,087,394 OF THE WASTEWATER REVENUE REQUIREMENT FROM WASTEWATER CUSTOMERS TO WATER CUSTOMERS IN THIS FILING?

A. I recommended that it be denied for several reasons. First, as described below, the primary consideration should have been to design wastewater rates to recover the cost of providing wastewater service, a goal the Company described, but ignored. Second, I believe that the wastewater rates that I propose result in average bills that are reasonable considering all the factors. Third, the Company's affordability analysis is flawed because it ignores the wastewater rates paid to other entities by PAWC water customers. Finally, the Company's affordability analysis ignores the benefits that it claims accrue to customers after being acquired by PAWC (I&E St. No. 3, p. 12).

Q. HOW MUCH IS THE ACT 11 SUBSIDY REDUCED IF THE BASA AND BRENTWOOD SYSTEMS ARE NOT INCLUDED?

A. The $71,087,394 subsidy is reduced to $47,969,463 ($71,087,394 – $21,552,699 - $1,565,232 (I&E St. No. 3, p. 12).

Q. HOW DID YOU RECOMMEND REDUCTION OF THE REMAINING $47,969,493 SUBSIDY?

A. As described in my direct testimony and below, I recommended various changes to

the wastewater rates to reduce the remaining $47,969,463 subsidy needed to operate the wastewater systems (I&E St. No. 3, p. 12).

WASTEWATER RATE STRUCTURE AND REVENUE SUMMARY

Q. DID YOU COMPILE A SUMMARY THAT SHOWS THE REVENUE IMPACT OF I&E'S RATE STRUCTURE RECOMMENDATIONS?

A. Yes. A summary of the I&E wastewater revenue recommendations described below was provided in I&E Ex. No. 3, Sch. 1.

Q. DID YOU PROVIDE THE PARTIES IN THIS CASE A REVISED SUMMARY THAT SHOWS THE REVENUE IMPACT OF I&E'S RATE STRUCTURE RECOMMENDATIONS?

A. Yes. Subsequent to the submission of my direct testimony, I became aware of an error in the increase that I reflected for the Water Operations. Therefore, I submitted I&E Ex. No. 3, Sch. 1 – Corrected 2/12/24. On this revised exhibit, column B shows the total PAWC operations, column C shows PAWC water operations, column D shows total Wastewater Operations, and columns E through H show the various Wastewater Operations. Line 1 shows the present rate revenue from each operation, line 2 shows the additional revenue requirement the Company claimed, line 3 shows the Act 11 allocation, line 4 shows the proposed revenue requested by the Company reallocated by I&E, line 5 shows the increase, and line 6 shows the percentage increase.

Based upon my proposed wastewater rates, the total subsidy needed to operate all the wastewater systems is $357,517 (I&E Ex. No. 3, Sch. 1, columns C and D, line 3- Corrected 2-12-24).

SSS OPERATIONS INTRODUCTION

Q. WHAT CHANGE IN REVENUE DID THE COMPANY PROPOSE IN THE CSS OPERATIONS?

A. The Company proposed that present rate revenue be decreased from $95,470,866 to $95,301,613, which is a decrease of $169,523 or 0.18% (PAWC Volume 9, Ex. 10-B, p. 1). To achieve this reduction, the Company proposed to increase and decrease various customer charges, usage rates, and flat rates (PAWC Volume 9, Ex. 10-B, pp. 3-32).

SSS OPERATIONS – ZONES 1, 2, 5, 7, 8, AND 9

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN THE SSS OPERATIONS.

A. My goal was to reduce the $31,962,411 subsidy the Company claims is needed in the SSS Operations. I achieved this goal by generally proposing higher usage rates than the Company proposed. The proposed rates that I recommend are shown on I&E Ex No. 3, Sch 3, pp. 1-2 column D. My proposed revenue by class and zone as well as the increases by class are shown on I&E Ex. No. 3, Sch. 4. The total increase in the SSS system that I recommend is $32,265,198 (I&E Ex

No. 3, Sch. 4, p. 1, column G, line 23). This recommendation results in a remaining subsidy in the SSS Operations of $321,682 (I&E Ex No. 3, Sch 1, column E, line 3).

Q. DID THE COMPANY PROVIDE A REVISED COSS FOR THE SSS OPERATIONS?

A. Yes (PAWC St. 12-R, p. 11).

Q. ARE THE CHANGES IN THE SSS OPERATIONS COSS MATERIAL ENOUGH FOR YOU TO CHANGE YOUR SSS OPERATIONS REVENUE RECOMMENDATION?

A. No. Comparing the results in the revised SSS Operations COSS with the SSS Operations COSS that I utilized to propose rates show only minimal changes. Therefore, I did not revise my SSS Operations Exhibits.

Q. DID THE COMPANY ADDRESS YOUR PROPOSED REVENUE AND CORRESPONDING ACT 11 REVENUE REDUCTION IN THE SSS OPERATIONS?

A. Yes. The Company disagrees with my recommendation to increase revenue in the SSS Operations and reduce the Act 11 subsidy to $321,682. The Company believes that the increases I proposed will result in rates that are too high relative to the average bill of water customers and may result in "rate shock" for

wastewater customers (PAWC St. No. 1, p. 23-24, and St. No. 10-R, pp. 58-59).

Q. PLEASE ADDRESS THE COMPANY'S CLAIM THAT REDUCING THE ACT 11 WASTEWATER SUBSIDY RESULTS IN BILLS THAT ARE TOO HIGH AND COULD RESULT IN "RATE SHOCK."

A. The Company failed to provide any new arguments on this issue. I provided unrebutted testimony concerning how the Company's affordability analysis fails to consider the wastewater costs that water customers who are not PAWC wastewater customers experience and fails to consider the benefits that accrue to recently acquired customers (I&E St. No. 3, pp. 12-14 and pp. 23-26).

Q. CAN YOU DESCRIBE HOW YOUR WASTEWATER RATE STRUCTURE PROPOSALS ARE REASONABLE AND DO NOT CONSTITUTE "RATE SHOCK?"

A. Yes. The Company proposed that the average Zone 1 Residential water customer bill increase 24.9% (PAWC Volume 9, Ex. 10-A, p. 76). In comparison, I propose the bill of an average Zone 1 Residential SSS Operations Wastewater customer increase 25.3% (I&E Ex. No. 3, Sch. 7, p. 1, line 7). Therefore, comparing these two percentage increases shows that my proposed wastewater increase is in line with PAWC's proposed Zone 1 Residential water increase. Therefore, there is no support for the Company's contention that reducing the Act 11 subsidy in the SSS Operations to $321,682 could result in "rate shock."

Q. WHAT CUSTOMER CHARGES DID YOU RECOMMEND IN THE SSS OPERATIONS?

A. I recommended a monthly customer charge of $15.00 per month for SSS Residential customers, $36.70 per month for Non-Residential customers, and $50.00 per month for Bulk customers for the reasons stated in my direct testimony (I&E St. No. 3, p. 19, 26-27, 43 and Ex. No. 3, Sch. 3).

Q. DID THE COMPANY ADDRESS ANY OF THESE SSS OPERATIONS CUSTOMER CHARGES?

A. Yes. The Company states that the $15.00 per month customer charge is inconsistent with the $20.00 per month customer charge recommended by I&E witness Cline in the CSS Operations (PAWC St. No. 10-R, p. 59). The Company did not address the general Non-Residential or Bulk rate customer charges above; therefore, they should be approved.

Q. PLEASE ADDRESS THE COMPANY'S CONCERN REGARDING THE $15.00 PER MONTH SSS OPERATIONS RESIDENTIAL CUSTOMER CHARGE?

A. First, Mr. Cline did not address CSS Operations; therefore, the Company cited the incorrect witness on this issue. If the Company meant to say that SSS and CSS monthly charges should be the same, there is no reason they must be the same. The present Residential customer charges in the SSS Operations are much

different than the Residential customer charge in the CSS Operations (I&E Ex. No. 3, Sch. 3 and 17). Finally, since the present customer charges are much different, and the revenue requirement is different, there is no reason the SSS Operations and CSS Operations should have the same Residential customer charge.

Q. HOW DID YOU DETERMINE THE MONTHLY FLAT RATE FOR THE CUSTOMERS IN ZONE 8 AND FOR CUSTOMERS WHERE THERE IS NO WATER USAGE DATA AVAILABLE?

A. In my direct testimony, my recommendation of a $132.00 per month Residential flat rate in Zone 8 and other zones if a customer has no water usage data available was based upon the average bill of a Zone 1 customer that uses 3,122 gallons per month, rounded to the nearest dollar (I&E St. No. 3, p. 22, and Ex. No. 3, Sch. 7, p. 1, line 7).

Q. DID THE COMPANY ADDRESS THE GENERAL FLAT SERVICE CHARGE THAT YOU RECOMMEND?

A. Yes. The Company disagreed with my recommendation but did agree that the methodology was consistent with what they proposed (PAWC St. No. 10, p. 59).

Q. PLEASE ADDRESS THE COMPANY'S CONCERN REGARDING FLAT RATE RESIDENTIAL SERVICE?

A. I believe the Company's concern is with the final rate, not the methodology for determining the final rate. To clarify this issue, I will recommend that the Residential flat rate be adjusted downward based upon the final average Residential Zone 1 bill established when rates are scaled back. I believe this will satisfy the Company's concern regarding the Residential flat rate.

Q. WHAT DID YOU PROPOSE FOR CERTAIN SPECIFIC BULK, MUNICIPAL, AND COMMERCIAL CUSTOMERS IN DIRECT TESTIMONY?

A. In my direct testimony, I recommended that the flat rate for Strattanville Borough be increased 40.0%, and for St. Lawerence Borough, I recommended an increase of 57.5% (I&E Ex. No. 3, Sch. 3, p. 1, lines 18 and 21). For the Westwood Fire Company, I recommended they begin to pay a customer charge of $36.70 per month and increase the usage rate 49.8%, and for the Rainbow Warehouse, I recommended the usage rate increase 81.1% (I&E Ex. No. 3, Sch. 3, p. 1, lines 32-38).

Q. DID THE COMPANY ADDRESS THESE SPECIFIC COMMERCIAL, MUNICIPAL, AND BULK CUSTOMERS?

A. Yes. The Company disagreed with my proposal to increase the rates for

Strattanville Borough, St. Lawerence Borough, Westwood Fire Company, and Rainbow Warehouse, only stating that the increase applicable to these customers should be consistent with the overall increase in the SSS Operations (PAWC St. No. 10, p. 59).

Q. DO YOU AGREE WITH THE COMPANY'S RECOMMENDATION THAT THE INCREASE FOR THESE CUSTOMERS BE CONSISTENT WITH THE OVERALL INCREASE IN THE SSS OPERATIONS?

A. No. Specific rates should be established based on various factors, not whether they are consistent with the increase in the SSS Operations. For example, as described in my direct testimony, Strattanville Borough, which is in the Municipal class, and St. Lawerence Borough, which is the Bulk class, both of which are part of the "Non-Residential" class has a lower relative rate of return than the Residential class, justifying a larger percentage increase for the customers in the Municipal and Bulk classes (I&E St. No. 3, p. 41-42 and 45-46). Furthermore, the 40% increase I propose for Strattanville Borough is below the 52.5% increase I propose for the Municipal class (I&E Ex. No. 3, Sch. 4, p. 1, column E, line 24). For St. Lawerence Borough, the minimal $0.230 per hundred gallon increase I propose results in a usage rate of only $0.630 per hundred gallons (I&E Ex. No. 3, Sch. 3, p. 1, line 21). Given the general Bulk usage rate of $3.150 per hundred gallons that I propose, the $0.630 per hundred-gallon usage rate is only 20 % of what other Bulk customers are paying. Therefore, the $0.630 per hundred-gallon

rate is reasonable. For the Westwood Fire Company, I recommended that they begin to pay a customer charge of $36.70 per month and a usage rate of $3.150 per hundred gallons, the same as other general Commercial customers. Finally, for the Rainbow Washhouse, the minimal $0.170 per hundred gallon increase I propose results in a usage rate of only $0.380 per hundred gallons (I&E Ex. No. 3, Sch. 3, p. 1, line 38). Given the general Commercial usage rate of $3.150 per hundred gallons that I propose, the $0.380 per hundred-gallon usage rate is only 12.1 % of what the usage rate other Commercial customers are paying. Therefore, the 81.1% increase in the Rainbow Washhouse usage rate that I proposed is reasonable (I&E Ex. No. 3, Sch. 3, p. 1, lines 32-38).

Q. DID THE COMPANY ADDRESS ALL OF YOUR RATE RECOMMENDATIONS, ANY OF YOUR COSS RATIONALE, OR THE BENEFITS TO 1329 CUSTOMERS AFTER BEING ACQUIRED BY PAWC?

A. No. Therefore, this unrebutted testimony should be accepted by the Commission to approve the SSS Operation rates that I propose.

<u>SSS OPERATIONS – BULK</u>

Q. WHAT DID THE COMPANY PROPOSE FOR THE YORK BULK CUSTOMERS IN THE SSS OPERATIONS ZONE 7?

A. For York Bulk Customers in Zone 7, the Company proposed to charge two different usage rates. For the first rate, the Company proposed the present usage rate be

increased from $0.3750 per hundred gallons to $0.4123 per hundred gallons, which is an increase $0.0373 per hundred gallons or 9.9%. For the second usage rate, the Company proposed the present usage rate of $0.249 per hundred gallons increase to $0.2737 per hundred gallons which equates to an increase of $0.0247 per hundred or 9.9%. These 9.9% increases are over the two-year period 2023-2025, which results in an annual increase of approximately 4.45% per year (PAWC Volume 9, Exh. 10-B, p. 31).

Q. WHAT DID YOU RECOMMEND CONCERNING THESE YORK BULK CUSTOMERS?

A. I recommended that the minimal increase the Company proposes for these customers should be rejected, in favor of the 50% increases I show on I&E Ex. No. 3, Sch. 3. p. 2, lines 7-8 (I&E St. No. 3, p. 50).

Q. WHY DID YOU REJECT THE MINIMAL INCREASE FOR THESE CUSTOMERS AS PROPOSED BY THE COMPANY?

A. First the Company failed to support its argument that these customers have a viable alternative. Second, the alleged "sophistication" of these customers is not relevant. Just because the systems are close, doesn't mean they can easily be interconnected to each other or another treatment plant. Third, if these customers did have a viable alternative, the Company's proposed rates may be well below the cost these customers would incur if they did select the viable alternative, thus not maximizing

the revenue from these customers. The valid comparison would be to compare the customer's cost of utilizing a viable alternative to the competitive rate so that the customer makes the maximum contribution to fixed costs. Finally, in the near future, existing customers may be better off if these bulk customers did leave the system, because after a bulk customer leaves, there would be much less need for plant upgrades and/or expansions. Costly plant upgrades and/or expansions to serve bulk customers would likely be paid for by other non-bulk customers, increasing the subsidy to the bulk customers.

Q. DID THE COMPANY ADDRESS YOUR DIRECT TESTIMONY REGARDING THE COMPETITIVE ALTERNATIVES THESE CUSTOMERS ALLEGEDLY HAVE?

A. Yes. First, the Company believes that it twice before demonstrated that the York Bulk Customers have competitive alternatives, once in the Application docket at Docket No. A-2021-3024681 *et al.* and again in the most recent base rate case at Docket No. R-2022-3031672 *et al*. To support this notion, the Company provided documents from the Bulk customers. Second, the Company also states that I&E participated in the PAWC's 2022 rate case and in the York Acquisition Proceeding, and, in both cases, I&E had the opportunity to develop the record by direct testimony and cross examination and failed to provide evidence that these Bulk customers lack a competitive alternative. Third, the Company also states that in PAWC's 2022 rate case, I&E withdrew a similar proposal; therefore, it cannot

raise the same issue in this case. Third, the Company believes that since these bulk customers formed an alliance and called it the York Area Regional Sewer Authority (YARSA), these customers must have a competitive alternative. Fourth, the Company speculates that the loss of one customer will likely lead to the loss of all customers. Finally, the Company believes that maximizing the revenue from contract customers is not always realistic or desirable (PAWC St. No. 6-R, pp. 19-22).

Q. PLEASE ADDRESS THE FIRST CLAIM CONCERNING THE COMPETITIVE ALTERNATIVES THESE CUSTOMERS ALLEGEDLY HAVE.

A. The Company's belief that this issue was fully reviewed in the Application docket and /or the last rate case is mistaken. In the Application docket, rates are not established, therefore, no consideration is given to future tariff or contract rates. In the last base rate case, it was determined to accept the Company's representations because the cost to serve these customers versus the revenue received was unknown. However, the acceptance at that time does not mean I&E can never review this evidence or raise any issue related to Bulk contracts in future cases. Furthermore, this is the first base rate case where the Company provided the actual cost of providing service to these Bulk customers. While the cost to serve these customers does not determine if these customers have a competitive alternative, it can put the issue into perspective. In the last case, it was not known if the subsidy was a few

thousand dollars or several million dollars. Under the Company's proposed Bulk rates, the subsidy is approximately $9.88 million (I&E Ex. No. 3, Sch. 5, p. 2, column G, line 13. Under my proposed Bulk rates, the subsidy is approximately $8.00 million (I&E Ex. No. 3, Sch. 5, p. 3, column H, line 14).

Q. WHAT DOCUMENTATION DID THE COMPANY PROVIDE FROM THE BULK CUSTOMERS?

A. The Company provided separate affidavits from each of the Bulk customers claiming that they each (or as a group) have the potential to find an alternative. They each state "We will explore the alternative treatment options" (PAWC St. 6-R, Ex. ECA-2R).

Q. PLEASE ADDRESS THESE DOCUMENTS FROM THE BULK CUSTOMERS?

A. First, the vague statement that they would explore alternative treatment options in no way implies that an exploration would or could yield a competitive outcome. I would simply state that any customer could have an alternative, which is all these statements convey. These customers and, therefore, the Company failed to provide any cost comparison to justify granting the rate proposed by the Company. Second, exploring alternative options does not constitute a valid competitive alternative. There should be actual alternatives that are supported by cost data. The Customer's

affidavits fail to provide the total fixed or variable cost of the alternative to do determine if the alternative is viable and competitive.

Q. PLEASE ADDRESS THE COMPANY'S CLAIM THAT I&E HAD AMPLE OPPORTUNITY TO DEVELOP A RECORD IN THE PAST CASE AND FAILED TO PROVIDE EVIDENCE IN THIS CASE THAT THESE CUSTOMERS LACK COMPETITIVE ALTERNATIVES?

A. I am advised by counsel that I&E does not have the burden of proof in rate cases. However, the Company's claim that I&E can somehow prove a negative makes no sense. What I&E did determine in this case is that the Company's claim that these customers have a competitive alternative has not been shown.

Q. PLEASE ADDRESS THE COMPANY'S CLAIM THAT SINCE THESE CUSTOMERS FORMED YARSA, THESE CUSTOMERS MUST HAVE A COMPETITIVE ALTERNATIVE?

A. While the Company may believe this, simply forming an alliance in no way demonstrates that there is an actual competitive alternative that has been evaluated or established. Without evidence of the alternatives' costs to the alliance, the Company cannot establish any factual basis for its negotiated bulk rates.

Q. PLEASE ADDRESS THE COMPANY'S CLAIM THAT MAXIMIZING REVENUE FROM COMPETITIVE CUSTOMERS IS NOT ALWAYS REALISTIC OR FEASIBLE.

A. The Company failed to provide an example where maximizing revenue from a customer with a competitive alternative is neither feasible nor desirable. I can understand the Company's position since it can recover all the revenue shortfall from tariff rate customers, regardless of the revenue received from these Bulk customers. The Company doesn't make any additional profit if these customers pay higher rates. However, the Commission should consider the plight of tariff rate customers that pay higher rates as a result of these Bulk customers not contributing the maximum amount towards fixed costs. In conclusion, a requirement that companies have substantive evidence of competitive alternative costs from bulk customers in order to set fair rates that maximizes the contribution to fixed costs and minimizes the subsidy required of other tariff customers would be a reasonable requirement to be imposed. With this type of data, a company could reasonably ensure that it had met its burden of proof in setting fair and reasonable bulk rates.

Q. DID THE COMPANY ADDRESS YOUR DIRECT TESTIMONY COMPARING THE ZONE 7 BULK CUSTOMERS TO OTHER SSS OPERATIONS CUSTOMER RATES (I&E ST. NO. 3, P. 51)?

A. No. The Company failed to respond to my direct testimony that the $0.5625 per hundred gallon and $0.3735 per hundred-gallon usage rates that I recommend are

much less than the $1.680 per hundred-gallon usage rate I recommend for Caln, West Brandywine, and the VA. My proposed rates are significantly less than the $3.740 per hundred-gallon rate that I recommend for the Zone 1 Residential customers indicating that even after the 50% increase I propose, the Zone 7 Bulk usage rates remain much less than other usage rates.

Q. DID THE COMPANY ADDRESS YOUR DIRECT TESTIMONY CONCERNING THE YORK BULK CUSTOMERS IN THE COMPANY'S COSS AND LARGE SUBSIDY THESE BULK CUSTOMERS WILL RECEIVE (I&E ST. NO. 3, PP. 51-53)?

A. No. The Company failed to provide a response to the argument that the higher percentage increases that I propose for the York Bulk customers compared to the small increase proposed by the Company are justified by the Company's COSS. After my 50% increase, the York Bulk customers will receive a subsidy of $7,999,227 (I&E Ex. No. 3, Sch. 5, p. 3, line 14, column H). While a significant subsidy will continue to exist, I recommend it be reduced in future cases.

SSS OPERATIONS SUMMARY

Q. WHAT TOTAL REVENUE DO YOU RECOMMEND FOR THE CSS OPERATIONS?

A. The Company provided no testimony that would alter my opinion regarding the rates that I recommend in the SSS Operations, including the rates paid by York Bulk

customers. Therefore, I recommend that SSS Operations revenue increase from $94,677,137 to $126,942,335, which is an increase of $32,265,198 or 35.3% (I&E Ex. No. 3, Sch. 4, column G, lines 11, 22-27).

WASTEWATER WINTER USAGE

Q. DID THE COMPANY PROPOSE TO ADJUST WATER USAGE TO DETERMINE THE BILLS FOR WASTEWATER CUSTOMERS?

A. Yes. The Company is proposing to change the way that it determines the volumetric component of bills for residential customers. Currently, wastewater usage is based upon actual water usage. In the proposal, the wastewater usage volume of a Residential customer will be adjusted downward to account for water purchased, but not entering the wastewater system. The Company refers to this plan as winter averaging (PAWC Volume 8, St. 10, p. 42-45).

Q. DID YOU OPPOSE THE PAWC WINTER AVERAGE BILLING PROPOSAL?

A. No. However, I recommended that if the Commission approves the proposal, two conditions apply. First, that none of the revenue shortfall from this proposal be recovered from other wastewater customers or water customers. Second, that the Commission determine that the proposal is approved initially as a temporary program to permit the resulting revenue impacts to be evaluated in the first rate case following its implementation (I&E St No. 3, p 55).

Q. WHY DID YOU RECOMMEND THAT THE PROGRAM BE CONSIDERED A TEMPORARY PROGRAM?

A. This is a new proposal that reduces revenue, and it should not be approved in perpetuity. Therefore, the program and its underlying concepts should be studied, and the results reported in the Company's next base rate case. This will enable the Commission and interested parties to determine if the program should be changed, continued as proposed, or ended (I&E St. No. 3, p. 56).

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION?

A. Yes. The Company believes that my second condition is not acceptable because it doesn't want this to be a temporary program and doesn't want to track any of the results (PAWC St. 10-R, p. 54).

Q. SINCE THE COMPANY CANNOT ACCEPT YOUR CONDITION, WHAT DO YOU RECOMMEND?

A. I recommend that the winter average program be denied because the Company is unwilling to accept this as a temporary program or determine and report the success or failure of the winter average program. Furthermore, I believe the Commission should accept the rationale provided by the Office of Consumer Advocate (OCA) and CAUSE-PA to reject the winter average program based on harm to lower income customers who likely do not have the opportunity or income necessary to engage in discretionary outdoor water usage that does not enter the wastewater

systems (OCA St. No. 4, pp. 40-44 and CAUSE-PA St. No. 1, pp, 12-14).

CSS OPERATIONS INTRUDUCTION

Q. WHAT CHANGE IN REVENUE DID THE COMPANY PROPOSE IN THE CSS OPERATIONS?

A. The Company proposed that present rate revenue be decreased from $78,636,222 to $78,409,294, which is a decrease of $226,926 or 0.30% (PAWC Volume 9, Ex. 10-C, p. 1). To achieve this reduction, the Company proposed to increase and decrease various customer charges, usage rates, and flat rates (PAWC Volume 9, Ex. 10-C, pp. 3-38).

CSS OPERATIONS – ZONES 3, 4, AND 6

Q. DID THE COMPANY PROVIDE A COSS TO DETERMINE THE COSTS OF PROVIDING WASTEWATER SERVICE FOR THE CSS OPERATIONS?

A. Yes. The Company provided one COSS for the CSS Operations - Zones 3, 4, and 6 (PAWC Volume 17, Ex. 12-C). This COSS did not include a customer cost analysis.

Q. DID THE COMPANY PROVIDE A REVISED COSS FOR THE CSS OPERATIONS?

A. Yes (PAWC St. 12-R, p. 11).

Q. ARE THE CHANGES IN THE CSS OPERATIONS COSS MATERIAL ENOUGH FOR YOU TO CHANGE YOUR CSS OPERATIONS REVENUE RECOMMENDATION?

A. No. Comparing the results in the revised CSS Operations COSS with the CSS Operations COSS that I utilized to propose rates show only minimal changes. Therefore, I did not revise my CSS Operations Exhibits.

Q. DO THE PROPOSED REVENUES FROM THE CSS OPERATIONS RECOVER THE ENTIRE COST OF PROVIDING WASTEWATER SERVICE TO THE CSS OPERATIONS?

A. No. The revenue shortfall for CSS Operations is $16,007,052 (PAWC Volume 3, Exhibit 3-A, p. 1 - Revised).

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN THE CSS OPERATIONS.

A. My goal was to reduce the $16,007,052 subsidy the Company claims is needed to fund the CSS Operations. The proposed rates that I recommended are shown on I&E Ex. No. 3, Sch 17, p. 1, column D. My proposed revenue by class and zone as well as the increases by class are shown on I&E Ex. No. 3, Sch. 16. The total increase in the CSS system that I recommended was $15,744,287 (I&E Ex. No. 3, Sch 16, column G, line 14). This recommendation results in the CSS Operations needing a subsidy of $35,835 (I&E Ex. No. 3, Sch 1, column H, line 3).

Q. DID THE COMPANY ADDRESS YOUR RATE RECOMMENDATIONS IN THE CSS OPERATIONS?

A. The Company generally agreed with my rate proposals in the CSS Operations (PAWC St. No. 4-R, p. 16). The only specific Company rebuttal testimony focused on the Zone 3 rates where the Company states that it believes that Zone 3 rates should be just and reasonable, consistent with the concept of gradualism, and avoid rate shock (PAWC St. No. 4-R, pp. 12-13).

Q. WHAT DID YOU PREPARE TO ADDRESS THE COMPANY'S CONCERN REGARDING GRADUALISM AND RATE SHOCK?

A. In my direct testimony I describe the increases the Zone 3 customers would experience and compiled bill comparisons for the Residential, Commercial, and Industrial classes presented as I&E Ex. No. 3, Sch. 20, p. 1, Sch. 22. p. 1, and Sch. 24, p. 1, respectively.

Q. DO YOU BELIEVE YOUR PROPOSED RATES FOR ZONE 3 VIOLATE THE CONCEPT OF GRADUALISM OR WILL RESULT IN RATE SHOCK?

A. No. For the Residential class, I proposed an increase of 17.8% (I&E Ex. No. 3, Sch. 20, p. 1, line 7). This 17.8% increase is reasonable and less than the 24.9% increase the Company proposed for Zone 1 water customers described above. While the average Commercial and Industrial customers will experience a larger increase, the increases are smaller than the Company proposed for the average water Commercial

customers in Zones 2 and 4 (PAWC Volume 9, Ex. 10-A, pp 83 and 85). Finally, if the Commission grants less than the full increase in the CSS Operations, the average bills in the CSS Operations will decrease.

CSS OPERATIONS SUMMARY

Q. WHAT TOTAL REVENUE DO YOU RECOMMEND FOR THE CSS OPERATIONS?

A. The Company did not provide any testimony that would cause me to alter the rates I proposed in the CSS Operations. Therefore, I recommend that CSS Operations revenue increase from $78,636,222 to $94,380,509 which is an increase of $15,744,287 or 20.2% (I&E Ex. No. 3, Sch. 16, column G, lines 6, 13-15).

OCA REBUTTAL TESTIMONY

Q. DID THE OCA ADDRESS YOUR DIRECT TESTIMONY?

A. Yes. The OCA disagrees with my SSS Operations Residential customer charge of $15.00 per month and disagrees with my recommendation to essentially eliminate the Act 11 subsidy (OCA St. No. 4-R, p. 6-7).

Q. WHAT REASON DOES THE OCA PROVIDE FOR DISAGREEING WITH YOUR $15.00 PER MONTH RESIDENTIAL CUSTOMER CHARGE?

A. The OCA states that none of the cost of Inflow and Infiltration (I&I) should be recovered in the customer charge and thus believes it's important to keep the Zone 1

Residential customer charge at $14.30 per month (OCA St. No. 4-R, pp. 6- 7).

Q. DO YOU CONTINUE TO BELIEVE THE RESIDENTIAL CUSTOMER CHARGE SHOULD BE $15.00 PER MONTH IN THE SSS OPERATIONS?

A. Yes. While the overall difference of $0.70 per month is minimal, I continue to recommend an SSS Operations Residential customer charge of $15.00 per month. Furthermore, under this proposal, the decrease to the present Zone 7 usage rate of from $18.00 per month to $15.00 per month will be slightly less under my proposal and generate more revenue in Zone 7 than reducing the Zone 7 customer charge to $14.30 per month.

Q. WHAT REASON DOES THE OCA PROVIDE FOR DISAGREEING WITH PROPOSAL TO VIRTUALLY ELIMINATE THE ACT 11 SUBSIDY?

A. The OCA believes there are not enough wastewater customers over which to spread the cost of the wastewater operations (OCA St. No. 4-R, pp. 7-8).

Q. DO YOU AGREE WITH THE OCA THAT THE FEWER WASTEWATER CUSTOMERS JUSTIFIES A LARGE SUBSIDY?

A. No. As described in my direct testimony, my SSS and CSS Operations proposed rates result in reasonable increases for these customers. As described above, some of the average bill increases that result from my rates are comparable or less than the percentage increases the Company has proposed in the water operations.

COST OF SERVICE STUDIES

Q. WHAT DID YOU RECOMMEND THE COMPANY PROVIDE IN THE NEXT BASE RATE CASE?

A. I recommended that the Company continue to provide separate COSS's for the Water Operations, the CSS Operations, and the SSS Operations including separating the Bulk and Bulk contract customers into separate classes. I also recommend that the Company provide separate COSS' for the BASA and Brentwood systems in the next case if these systems are acquired (I&E St. No. 3, pp. 72-73).

Q. DID THE COMPANY AGREE WITH YOUR RECOMMENDATION CONCERNING THE SSS AND CSS OPERATIONS IN THE NEXT BASE RATE CASE?

A. Yes. The Company agreed to provide separate COSS for the SSS Operations and the CSS Operations (PAWC St. No. 12-R, p. 12).

Q. WHY DID YOU RECOMMEND THE COMPANY PROVIDE A SEPARATE COSS FOR BASA IN THE NEXT BASE RATE CASE?

A. There are two reasons. First, I&E believes the BASA COSS is not currently relevant given the I&E recommendation to exclude the BASA system revenue and expenses in this case making the BASA COSS premature in addition to being speculative as the Company does not own the system and can not accurately project its actual operating costs. The review in the next base rate case after which PAWC closes on

BASA will then include plant in service, allocation factors, and expenses that have not been reviewed or addressed by I&E in this case. Second, the present rate revenue from BASA shown in this case is so far below the cost of providing service to BASA customers, the public and the Commission should be aware of the subsidy being provided to BASA in the next base rate case after PAWC purchases BASA.

Q. WHY DID YOU ALSO RECOMMEND THE COMPANY PROVIDE A SEPARATE COSS FOR THE BRENTWOOD SYSTEM IN ALL FUTURE BASE RATE CASES?

A. In the event that PAWC does acquire the Brentwood system, I recommend PAWC provide a separate COSS for Brentwood in all future cases for two reasons. First, as described by the Company in the Brentwood Application at A-2021-3024058, some of the flow carried by the Brentwood plant is from "non-customers." Since only plant "used and useful" to serve customers can be recovered from customers, plant in service to serve "non-customers" should be identified and excluded from rate base. Second, Brentwood customers will also pay a separate treatment fee. With no treatment costs in base rates, I believe it could be reasonable to establish a lower rate for Brentwood customers than other SSS customers that have treatment costs recovered in their usage rates (I&E St. No. 3, pp. 74-75).

Q. DID YOU PROVIDE ADDITIONAL SPECIFIC REASONS FOR A SEPARATE BRENTWOOD COSS IN THE NEXT PROCEEDING?

A. Yes. The two primary inputs for cost allocation are the number of customers, and flow. Almost all allocations in a COSS are based on one of these inputs. The Company's response to I&E-RS-31 indicates that the Company has no idea how much flow is coming into the system from "non-customers" and how much flow is going out of the system from a combination of "non-customers" and Brentwood customers. This lack of data indicates that the Brentwood COSS filed in this case is totally speculative and not based on any known and measurable data (I&E Ex. No. 3 Sch. 29 and I&E St. No. 3, pp. 74-75).

Q. DID THE COMPANY ADRESS YOUR RECOMMENDATION CONCERNING THE BASA COSS IN THE NEXT BASE RATE CASE AND THE BRENTWOOD COSS IN ALL FUTURE CASES?

A. The Company disagreed with these recommendations (PAWC St. No. 12-R, p. 12). The Company states that once a COSS for a 1329 system is submitted, future separate COSS are unnecessary and the Company is unwilling to provide any of them again (PAWC St. No. 1-R, pp. 29-31).

Q. DID THE COMPANY ADRESS THE UNIQUE CIRCUMSTANCES CONCERNING THE BASA SYSTEM IN THE NEXT CASE, OR THE ISSUES IN THE BRENTWOOD SYSTEM APPLICABLE IN ALL FUTURE CASES?

A. No. The Company did not address the claim that since they do not own the BASA system, a separate COSS should be provided after they own the BASA system. Furthermore, the Company failed to address the unique circumstances of the Brentwood system. Therefore, since the Company failed to address my specific concerns, my recommendation that the Company provide a separate COSS for BASA in the next case and a separate COSS for the Brentwood system in all future base rate cases should be approved.

SCALE BACK OF RATES

Q. WHAT DID YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE?

A. If the Commission grants less than the full increase for the SSS Operations and the CSS Operations, I described a detailed scale back proposal that continued the progress of consolidating rates in the various wastewater zones (I&E St. No. 3, pp. 75-76). Additionally, I clarified above how the Residential flat rate should be scaled back.

Q. DID THE COMPANY ADDRESS YOUR SCALE BACK RECOMMENDATION?

A. No. The Company did not address any specific scale back recommendation that I proposed and only addressed how total revenue should be scaled back. In summary the Company is proposing that the Act 11 allocation should be maintained on a proportional basis to the amount of the scale back the Commission grants (PAWC St. No. 1-R, p. 37).

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. No. The Company did not describe any specific rates and failed to show how rates in the various zones should be consolidated. Since the Company did not address my specific scale back that accomplished this goal, the methodology that I propose should be approved to continue to consolidate rates. I&E continues to believe that the Act 11 subsidy should be reduced first (I&E St. No. 4, pp. 42-44).

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission in the Bureau of Investigation and Enforcement ("I&E") as a Fixed Utility Valuation Engineer.

Q. WHAT IS YOUR EDUCATIONAL AND EMPLOYMENT EXPERIENCE?

A. An outline of my education and employment experience is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for representing the public interest in rate and other proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the utility company, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my testimony is to evaluate Pennsylvania American Water's

("PAWC" or "Company") request for an annual increase in operating revenue of approximately $203.9 million in the Fully Projected Future Test Year ("FPFTY") ending June 30, 2025. My testimony will address issues related to the proposed revenue, cost allocation, and rate design of the water and wastewater operations of the Company.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 4 contains schedules relating to my testimony.

Q. PLEASE DESCRIBE PAWC's FILING.

A. On November 8, 2023, PAWC filed a combined water and wastewater base rate case. Using the FPFTY ending June 30, 2025, PAWC's filing requested a net increase of $203,945,911, which is comprised of an increase in water revenue of $199,237,084 and decreases of $169,261 for the wastewater SSS General Operations and $226,926 for the Combined Sewer System ("CSS") Wastewater Operations, and increases of $4,735,609 for the Butler Area Sewer Authority ("BASA") Wastewater Operations and $369,405 for the Brentwood Wastewater Operations (PAWC Ex. 3-A, Combined Water and Wastewater Revenue Requirement-Summary).

FPFTY REPORTING REQUIREMENTS

Q. WHAT DO YOU RECOMMEND REGARDING PLANT ADDITIONS THAT PAWC PROJECTS TO BE IN SERVICE DURING THE FPFTY?

A. Consistent with agreements in previous PAWC base rate cases, I recommend that the Company provide the Commission's Bureau of Investigation and Enforcement and Office of Consumer Advocate ("OCA") with updates to PAWC Ex. 3-A, pp. 26, 97, 146, 179, and 218 no later than December 1, 2025, under this docket number. PAWC's updates should include actual plant additions and retirements for the twelve months ending June 30, 2024 and for the twelve months ending June 30, 2025.

Q. WHY DO YOU RECOMMEND THAT PAWC PROVIDE THESE UPDATES?

A. As explained on PAWC Statement No. 3, p. 4, the Company is estimating that it will add approximately $742,020,7140 of plant additions in the Future Test Year ("FTY") ending June 30, 2024 and approximately $797,874,110 of plant additions in the FPFTY. There is value in determining how closely PAWC's projected investments in future facility comport with the actual investments that are made by the end of the FTY and the FPFTY. Determining the correlation between PAWC's projected and actual plant additions and retirements will help verify the validity of PAWC's projections.

Q. HAS PAWC PROVIDED THE RECOMMENDED UPDATES IN THE PAST?

A. Yes. The Company previously agreed to provide these updates to its capital projections in previous base rate cases, most recently in its last base rate case at Docket Nos. R-2022-3031672 and R-2022-3031673.

ACQUISITIONS - WATER

Q. WHAT WATER ACQUISITIONS ARE INCLUDED IN THE COMPANY'S FILING?

A. PAWC has proposed to include in the present proceeding the Farmington Township water distribution system ("Farmington Township") and Audubon Water Company ("AWC") acquisitions (PAWC St. No. 6, p. 3).

Q. HAS EITHER THE FARMINGTON TOWNSHIP OR AWC ACQUSITION CLOSED?

A. No. As described on pages 8 and 10 of PAWC Statement No. 6, the Farmington Township application was filed on August 28, 2023, and the AWC application was filed on September 21, 2023. As far as I am aware, neither of these applications have been approved by the Commission, and the Company only anticipates these acquisitions closing by the end of the FPFTY.

Q. WHAT JUSTIFICATION DOES THE COMPANY PROVIDE FOR ITS PROPOSAL TO INCLUDE THE FARMINGTON TOWNSHIP AND AWC SYSTEMS IN THE PRESENT BASE RATE CASE?

A. On pages 10 and 12-13 of PAWC Statement No. 6, PAWC witness Abruzzo provided the same justification to include both acquisitions in the present base rate case. Specifically, Mr. Abruzzo stated that the Company anticipates each transaction will close no later than the end of the FPFTY, that including the systems into the larger PAWC systems is prudent and fair, and to address expenses associated with the operation and maintenances of these systems as soon as reasonably possible to avoid regulatory lag.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO INCLUDE THE FARMINGTON TOWNSHIP AND AWC SYSTEMS IN THE PRESENT BASE RATE CASE?

A. No, I do not agree with the Company's proposal to include the Farmington Township and AWC systems in the present base rate case. Specifically, including any not as yet acquired system in a base rate case based on the mere speculation that the acquisition will close no later than the end of the FPFTY, is not in the public interest. Utilities are entitled to earn a fair return on the value of their rate base, and it is unfair to require utility customers to pay for this return when PAWC does not currently own the assets and cannot guarantee it will own the assets by the end of the FPFTY. Assets the Company does not own cannot be considered

used and useful in public service. Additionally, the Company provided insufficient support for its proposal to include the Farmington and AWC systems in the present base rate case. Lastly, there is no guarantee that the Commission will approve either acquisition.

Q. WHY IS INCLUDING THESE SYSTEMS IN A BASE RATE CASE BEFORE ACQUISITION CLOSING NOT IN THE PUBLIC INTEREST?

A. Simply put, PAWC does not yet own these systems and will not own them until the Commission issues an order and PAWC is able to close on the sales. Treating potential acquisitions as a fait accompli regardless of the status of the actual acquisition to begin recovering costs as early as possible is not in the public interest and is harmful to ratepayers. Sometimes during the investigation of an acquisition, issues are revealed that must be resolved in the next base rate case. However, should those types of issues arise in the Farmington or AWC acquisitions, the issues would not be able to be resolved until the next base rate case after the instant case. In that situation, ratepayers would have already been paying for a return of and a return on the Farmington and AWC assets and expenses that could be proved to be inaccurate for the entire period between the implementation of rates in this case and the implementation of rates in the next subsequent case. It is unreasonable to ask this of ratepayers for acquisitions where the acquisition dockets are still active and no closing dates have been established.

In the case of Farmington Township and AWC, the present base rate case was filed so early in the acquisition process that it is highly unlikely that any parties have been able to determine issues that would need to be addressed at all. Prematurely including the acquisitions in a base rate case severely limits the effectiveness of any public input hearings and removes the main opportunity for customers to make their voices heard regarding the potential sale of their water or wastewater utility. No incentive exists for a customer to speak up regarding an acquisition if the Commission has already allowed it to be included in a base rate case before it ever even issued an order approving PAWC's ownership. This stands directly opposed to the public interest. The public interest requires that ratepayers pay a return of and on assets that are used and useful in the public service. If PAWC does not yet own the assets, they are not used and useful in the public service to PAWC ratepayers.

Finally, the Company included the Farmington Township and AWC systems in the current filing each with a claim for the amortization of utility plant acquisition adjustments ("UPAA") based upon the purchase price and depreciated original cost of each system as explain by PAWC witness Gress on page 6 of PAWC Statement No. 4. It is possible that through the acquisition proceeding and investigation, errors could be identified that would affect the amortization claim in this proceeding. These potential changes would not be reflected in this case, because it is possible, if not likely, that this base rate case concludes with a Commission Order before an Order is issued for either of the Farmington

Township or AWC acquisition cases. Thus, the Company would be recovering amounts associated with these acquisition adjustments in rates that may be deemed inaccurate until the next base rate case and its rates effective date, which is not in the public interest.

Q. WHAT SUPPORT DID THE COMPANY PROVIDE FOR ITS CLAIM THAT INCLUDING THE SYSTEMS IN THE CURRENT BASE RATE CASE IS PRUDENT AND FAIR?

A. On pages 8-13 of PAWC Statement No. 6, the Company listed the claimed benefits for each acquisition and a description of each system.

Q. DO YOU AGREE THAT THE LISTED CLAIMED BENEFITS FOR EACH ACQUISITION PROVIDES SUFFICIENT SUPPORT TO INCLUDE THE ACQUISITIONS IN THE PRESENT BASE RATE CASE?

A. No. The lists of claimed benefits provided by the Company would more properly be considered as part of an acquisition case and not a base rate case. These lists of perceived benefits do not provide any support for why the Commission should consider including those systems in the present base rate case prior to issuing Orders approving the applications.

Q. ARE YOU PROVIDING TESTIMONY ON WHETHER OR NOT IT IS IN THE PUBLIC INTEREST FOR PAWC TO ACQUIRE THE FARMINGTON TOWNSHIP AND AWC SYSTEMS?

A. Not at all. Whether or not PAWC's proposed acquisition of these systems is in the public interest is not something to be decided in a base rate case. The claims made by the Company regarding the Farmington Township and AWC systems as well as whether the acquisitions themselves are in the public interest is something more appropriately decided through the application dockets where proper investigations can take place.

Q. DID THE COMPANY IDENTIFY THE INDIVIDUAL REVENUE REQUIREMENTS OF THE FARMINGTON TOWNSHIP AND AWC SYSTEMS?

A. No. In its responses to OCA-21-9 and OCA-21-12, attached as I&E Exhibit No. 3, Schedules 1 and 2, respectively, the Company stated that it has not performed a revenue requirement calculation that includes only the AWC or Farmington Township systems.

Q. WHAT DO YOU RECOMMEND REGARDING THE FARMINGTON TOWNSHIP AND AWC SYSTEMS?

A. For the reasons described above, I recommend that the Commission remove the revenue requirement for the Farmington Township and AWC systems from the

present proceeding including all costs, revenues, taxes, and amortizations. The table below shows the net plant in service, acquisition adjustments and amortizations, transaction costs and amortizations, depreciation expense, and revenues, as shown on PAWC Ex. 3-C, pp. 72-77 that should be removed.

	Farmington Township	AWC
Net Plant	$2,502,811	$360,229
Acquisition Adjustment	$215,489	$7,639,771
Acquisition Adjustment Amortization Expense	$21,549	$763,977
Transaction Costs	$54,825	$117,954
Transaction Costs Amortization Expense	$5,483	$11,795
Depreciation Expense	$607,272	$310,188
Revenue	$266,371	$2,965,024

REVENUE DECOUPLING MECHANISM

Q. WHAT IS THE REVENUE DECOUPLING MECHANISM PROPOSED BY PAWC?

A. According to PAWC, the proposed Revenue Decoupling Mechanism ("RDM") is an alternative rate design mechanism whose purpose is to more reliably recover the revenue requirement and associated fixed costs approved by the Commission in this case. In other words, the Company is proposing to stabilize its revenue level received from customers by charging or crediting the difference between the revenue requirement and fixed cost authorized in this case and actual revenues to customers in the subsequent year. (PAWC Statement No. 10, pp. 86-87).

Q. WHAT CUSTOMERS ARE AFFECTED BY THIS PROPOSAL?

A. The Company is proposing to apply an RDM to its water and wastewater service, with separate tariffs and separate recovery mechanisms for each service for all customers in the residential, commercial, industrial, municipal, and sales for resale classes except those customers taking service under contract rates (PAWC St. No. 10, p. 86). I also note that PAWC is proposing to exempt any future acquisition customers from the RDM surcharge provided they are customers of a system that is not included in this case and to delay any assessment of the charge until a future rate proceeding (PAWC St. No. 10, p. 88).

Q. HOW DOES THE COMPANY PROPOSE TO ENACT THE RDM?

A. The Company proposes to compare actual revenues recovered from eligible water and wastewater customers in a given month or year to the revenues that would result from applying the RDM cost-components. If the actual revenues are short of the revenue requirement, the Company intends to charge the reconciliation amount as a volumetric rate from April 1 through December 31 for that calendar year. If the actual revenue is larger than the revenue requirement, the credit would be issued as a volumetric credit during the same period. (PAWC St. No. 10, pp. 92-94).

Q. HOW WILL THE COMPANY DETERMINE THE "GOAL" LEVEL OF REVENUE TO WHICH THE ACTUAL REVENUE IS COMPARED?

A. The Company generated a set of rate components (residential fixed charge, nonresidential fixed charge, and volumetric charge) based on its cost of service study ("COSS") and the concept of Straight Fixed Variable ("SFV") pricing. The rate components proposed are shown on Tables 18 and 19 on PAWC Statement No. 10, p. 92 and copied below.

TABLE 18 **Water Service** **RDM Cost Components**	**Amount**	**Description**
Residential Fixed Charge	$83.18	$ per residential customer per month
Nonresidential Fixed Charge	$515.94	$ per nonresidential customer per month
Volumetric Charge	$0.1033	$ per hundred gallons sold

TABLE 19 **Wastewater Service** **RDM Cost Components**	**Amount**	**Description**
Residential Fixed Charge	$87.87	$ per residential customer per month
Nonresidential Fixed Charge	$504.66	$ per nonresidential customer per month
Volumetric Charge	$0.1548	$ per hundred gallons sold

The residential fixed charges are applied to all residential customers regardless of meter size or enrollment in the Bill Discount Program ("BDP"), and the nonresidential fixed charges are applied to all commercial, industrial, municipal, and sales for resale customers regardless of meter size or rate structure, though the RDM does not apply contract customers. (PAWC St. No. 10, p. 94).

Q. WHAT IS SFV PRICING?

A. SFV pricing, as described by Mr. Rea on page 90 of PAWC Statement No. 10, is a rate design that collects a utility's fixed costs through fixed charges and a utility's variable costs through volumetric charges. Mr. Rea also claimed on page 86 of PAWC Statement No. 10 that over 95% of the Company's costs are fixed costs. Therefore, under SFV pricing, the Company would collect 95% of its revenues through fixed costs rather than volumetric costs.

Q. DID MR. REA DESCRIBE THE NEGATIVE ASPECTS OF SFV PRICING?

A. Yes. Mr. Rea described the negative aspects of SFV pricing on pages 90-91 of PAWC Statement No. 10, "SFV is arguably not consistent with generally accepted cost-causation principles at a customer class level because fixed costs between classes vary more than may be reflected in SFV rate components. On its own, SFV pricing also has the potential to reduce incentives to use utility service efficiently and can disadvantage lower-income customers from an affordability perspective if fixed charges are set too high."

Q. DID THE COMPANY EXPLAIN WHY THE COMMISSION SHOULD ALLOW RATE COMPONENTS WITH THESE NEGATIVE ASPECTS BE USED TO DETERMINE THE GOAL REVENUES FROM THE RDM?

A. The only support that the Company provides for including the SFV pricing-based

rate components in the calculation of the goal revenue is that it provides additional revenue stability for the Company. Revenue stability for the Company, in my opinion, is not sufficient support to base monthly or annual goal revenues on rate components that are not consistent with cost-causation principles, has the potential to reduce incentives to use utility service efficiently, and can disadvantage lower-income customers from an affordability perspective. As acknowledged in the seventh edition of the American Water Works Association M1 Manual, there is a tradeoff between revenue stability from a high customer charge, and affordability and conservation from a low customer charge and higher usage rates.[1] SFV pricing strays too far from the concerns of affordability and conservation in the name of revenue stability for the Company.

Q. WHAT SUPPORT DID THE COMPANY PROVIDE FOR ITS RDM PROPOSAL?

A. The Company described its concern regarding seasonal weather conditions and the ongoing trend of declining use for residential, commercial, and municipal customers as primary factors that cause revenue volatility from year to year (PAWC St. No. 10, p. 78). PAWC also cited to section 1330 of the Public Utility Code ("Code") which allows the Commission to approve various forms of alternative ratemaking mechanisms proposed by utilities (PAWC St No. 10, p. 81).

[1] AWWA Manual of Water Supply Practices M1 Principles of Water Rates, Fees, Charges, Seventh Edition. pp. 154-155.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED IMPLEMENTATION OF THE RDM?

A. No. As I discuss in greater detail below, I do not agree that the Company has established a need for revenue stabilization, especially when it is also simultaneously proposing a declining usage adjustment in this case. Additionally, the proposed RDM may cause harm to PAWC's customers by completely separating their usage patterns from the surcharge/credit program. Also, this type of mechanism will devalue conservation efforts undertaken by customers that can afford efficiency measures and harm customers who cannot afford these measures by assessing an additional charge to all customers. Furthermore, the proposal does not achieve the policy goals supported based on the Commission's policy statement associated with Section 1330 of the Code, or the Code itself. Finally, it is likely to cause rate confusion with yet another surcharge on PAWC's customer bills.

Q. HAS THE COMPANY DEMONSTRATED A NEED FOR SUCH REVENUE STABILIZATION?

A. No. The purpose of revenue stabilization is to remove the inherent risk of not recovering the full amount of revenue requirement allowed by the Commission due to changes in usage. However, through Act 11 and the FPFTY, the Company is permitted to build into its revenue requirement an adjustment for revenue lost due to a decline in usage that is projected to occur after rates go into effect.

Between the frequent base rate cases filed by the Company, only one and a half years since the last previous filing, the FPFTY, and the DSIC, the Company has demonstrated no need for further revenue stabilization measures.

Q. IS PAWC ALREADY PROPOSING AN ADJUSTMENT IN THIS CASE TO ADDRESS DECLINING USAGE?

A. Yes. PAWC is proposing adjustments for the normalization of the actual billing determinants for the 12-month period ended June 30, 2025. PAWC alleges that the need for the adjustment is related to trends in declining use, weather normalization, and the impact of the COVID-public health emergency on water consumption for PAWC's water customers (PAWC St. No. 10, pp. 52-72).

Q. ARE YOU CONTESTING PAWC'S DECLINING USAGE ADJUSTMENT AS PART OF YOUR TESTIMONY?

A. No. I am not contesting PAWC's adjustment for declining usage in this case. In conjunction with the Company's rate case filing frequency, I do not believe it is necessary to add an additional revenue stabilization measure as the Company has already adjusted for anticipated declining usage in the FPFTY.

Q. IS THERE ANY BASIS TO BELIEVE THAT PAWC'S IMPLEMENTATION OF THE RDM WOULD RESULT IN IT FILING FEWER BASE RATE CASES?

A. No. The Company's response to question (10) on PAWC Exhibit No. CBR-10 stated, "if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases." Additionally, the Company's response to I&E-RS-38-D indicated that the main drivers of the Company's most recent four base rate cases are its substantial investment in infrastructure and to allow the Company the opportunity to earn a reasonable rate of return on that investment (I&E Ex. No. 4, Sch. 3). These two statements combined with the fact that the Company has provided no indication that the rate of its capital improvement projects will decrease going forward indicate that there is no basis to believe that PAWC's proposed implementation of the RDM would result in filing fewer base rate cases.

Q. IS THE RDM NECESSARY TO ENSURE THAT PAWC IS VIABLE?

A. No. As discussed by I&E witness Patel in I&E Statement No. 2, the Company has no history of an inability to attract capital. This is particularly true when considering that PAWC was able to generate approximately $262 million to acquire new water and wastewater systems since the last base rate case despite an overall continuing decline in usage (I&E Ex. No. 4, Sch. 4).

Q. CAN THE PROPOSED RDM CAUSE HARM?

A. Yes. For the RDM to be approved, it should have some benefit to customers; however, in this case, it not only would not provide any benefit, but it may harm customers by causing them to overpay and negating any cost incentive to conserve water. Customers who undertake conservation efforts will see their savings eroded and their investment payback time increased as the Company is permitted to increase rates in response to usage declines.

Further, customers who lack the financial means to undertake conservation efforts will be penalized by the RDM, which increases rates to address usage reductions. PAWC has specifically stated in its response to OCA 6-59 that the RDM does not account for low-income participation (I&E Ex. No. 4, Sch. 5). Therefore, there are potentially many customers whose ability to pay may be compromised as their rates increase to address conservation efforts undertaken by those more able to afford such measures, or from more low-income customers enrolling in the BDP than was originally anticipated (I&E Ex. No. 4, Sch. 6). Finally, as described above, there is no expectation it will lead to fewer base rate cases. The facts show that customers would be harmed by the proposal and all benefits will flow only to the Company; therefore, there is no demonstrated need for the RDM.

Q. WHAT DOES SECTION 1330 OF THE CODE ALLOW?

A. As explained on page 81 of PAWC Statement No. 10, "section 1330 of the Public

Utility Code allows the Commission to approve an application by PAWC to establish various forms of alternative ratemaking mechanisms." An RDM is one such mechanism.

Q. DID THE GENERAL ASSEMBLY IDENTIFY ANY POLICY GOALS THAT UTILITIES SHOULD ACHIEVE WHEN IMPLEMENTING ALTERNATIVE RATEMAKING MECHANISMS?

A. Yes. Although I am not offering a legal opinion, the plain language of Section 1330 includes a "declaration of policy" that reads, in part, as follows:

> Innovations in utility operations and information technologies are creating new opportunities for all customers, and it is in the public interest for the commission to approve just and reasonable rates and rate mechanisms to facilitate customer access to these new opportunities while ensuring that utility infrastructure costs are reasonably allocated to and recovered from customers and market participants consistent with the use of the infrastructure.[2]

Q. DOES PAWC'S RDM ALIGN WITH THE GOAL OF ENSURING THAT ITS INFRASTRUCTURE COSTS ARE REASONABLY RECOVERED FROM CUSTOMERS CONSISTENT WITH USE OF INFRASTRUCTURE?

A. No. The Company has stated that "[a]ny acquisitions that are completed by the Company that are not already included in this proceeding will not be included in

[2] 66 Pa. C.S. §1330(a)(1).

the proposed RDM until such time that they are included in rate base and revenue requirement calculations in a future rate proceeding." (PAWC St. No. 10, p. 95). Approving the RDM in this case would only subject existing customers to paying the surcharge while any customers of the systems that PAWC chooses to acquire between rate cases will be exempt from paying the RDM even if the system serving them requires PAWC to make significant infrastructure improvements prior to the next base rate case.

Q. DID THE COMMISSION RELEASE A POLICY STATEMENT REGARDING PA CODE SECTION 1330?

A. Yes. The Statements of Policy as outlined by the Commission in the alternative rate making Docket No. M-2015-2518883 includes a list of fourteen questions for utilities to answer when they propose alternative ratemaking mechanisms, including revenue decoupling. In my opinion, it is important that as many of these questions as are applicable to each proposal are answered so that the Commission may determine if the alternative ratemaking proposal will result in just and reasonable rates.

Q. DID PAWC PROVIDE A RESPONSE TO EACH OF THE QUESTIONS SET FORTH IN THE STATEMENTS OF POLICY?

A. Yes. In PACW Exhibit CBR-10, Mr. Rea provided the Company's responses to

each of the 14 questions set forth in the statements of policy regarding alternative ratemaking described above.

Q. DO YOU DISAGREE WITH THE COMPANY'S RESPONSES TO ANY OF THE QUESTIONS?

A. Yes. I disagree with the Company's response to the following questions:

(6) how the ratemaking and rate design impact customer incentives to employ efficiency measures and distributed energy resources;

(7) how the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs;

(8) how the ratemaking mechanism and rate design impact customer rate stability principles; and

(13) whether the alternative ratemaking mechanism and rate design are understandable to consumers.

Q. HOW DID THE COMPANY RESPOND TO THE QUESTION REGARDING THE IMPACT TO CUSTOMER INCENTIVES TO EMPLOY EFFICIENCY MEASURES AND DISTRIBUTED ENERGY RESOURCES?

A. Mr. Rea claimed that the proposed mechanism encourages water efficiency by reducing the throughput incentive and that customer-employed efficiency

measures would far outweigh any surcharges that may result from the proposed RDM (PAWC Ex. CBR-10, p. 2).

Q. WILL THE RDM ENCOURAGE WATER EFFICIENCY AND CONSERVATION FROM CUSTOMERS?

A. Not at all. From the perspective of a customer, the RDM will appear as a random surcharge or credit on their bill that is completely removed from their own usage. Specifically, by calculating the RDM based on a total class-wide (or multiple classes in the case of non-residential customers) basis, a single customer, particularly low-usage customers, will have zero ability to affect whether they are assessed an additional surcharge or a credit on their bill in the subsequent year. Therefore, it is the bill based on base charges that would encourage water efficiency and conservation. The only thing the RDM provides customers is the worry that the next year's RDM would erode the savings derived from conservation efforts.

Q. HOW DID THE COMPANY RESPOND TO THE QUESTION REGARDING THE IMPACT TO LOW-INCOME CUSTOMERS AND SUPPORT FOR CONSUMER ASSISTANCE PROGRAMS?

A. Mr. Rea claimed that the RDM does not have any specific impacts on low-income customers that do not apply to residential customers generally (PAWC Ex. CBR-10, p. 2).

Q. COULD THE RDM NEGATIVELY IMPACT LOW-INCOME CUSTOMERS?

A. Yes. As I stated above, there are potentially many customers, who cannot themselves enact cost-saving water conservation measures, whose ability to pay may be compromised as their rates increase to address conservation efforts undertaken by more affluent customers or from more low-income customers enrolling in the BDP than was originally anticipated.

Q. HOW DID THE COMPANY RESPOND TO THE QUESTION REGARDING THE IMPACT TO RATE STABILITY PRINCIPLES?

A. Mr. Rea claimed that the proposed RDM will, by definition, improve rate stability (PAWC EX. CBR-10, p. 2).

Q. HOW DID THE COMPANY RESPOND TO THE QUESTION REGARDING WHETHER THE ALTERNATIVE RATEMAKING MECHANISM AND RATE DESIGN ARE UNDERSTANDABLE TO CUSTOMERS.

A. Mr. Rea stated that the Company does not anticipate that there would be any issues related to customer confusion over the proposed RDM because revenue reconciliation riders are not new to the utility industry (PAWC Ex. CBR-10, p. 3).

Q. COULD THE RDM RESULT IN RATE INSTABILITY AND RATE CONFUSION FOR CUSTOMERS?

A. Yes. As I described above, the Company's proposal to determine the credit or surcharge based on a total class basis results in customers being completely unaware and unable to control or predict whether they will be receiving a surcharge or credit from the RDM for the following year. Additionally, the entire concept of the RDM introduces rate confusion for customers. Essentially, PAWC is telling customers that it will charge one set of rates from January through March, but that in April their rates will be adjusted based on the comparison of their revenues (but not just theirs, the revenue from all of the other customers as well) from the previous year to the revenues generated by some other rate that was not included or mentioned on their bill at all.

Q. WHAT DO YOU RECOMMEND REGARDING THE PROPOSED RDM?

A. For the reasons I described above, I have determined that the RDM will result in rates that are not just and reasonable and, therefore, I recommend the proposed RDM be denied.

<u>ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE</u>

Q. WHAT IS THE ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE PROPOSED BY PAWC?

A. Per PAWC witness Swiz, the Environmental Compliance Investment Charge

("ECIC") "is a rate adjustment clause designed to reflect and recover, between rate cases, the costs imposed on the Company to address and comply with continuously evolving government-mandated environmental standards that are beyond the Company's control and difficult to estimate at any single point in time." (PAWC St. No. 8, p. 21).

Q. WHY IS THE COMPANY PROPOSING THE ECIC?

A. PAWC witness Aiton described the problems imposed by the rapidly changing set of regulatory mandates from a combination of federal and state regulations concerning per- and polyfluoroalkyl substances ("PFAS") which the Company claims will require an investment in the range of $200 million of work before the end of 2027. Mr. Aiton claims that the ECIC will provide the Company a reasonable opportunity to recover capital costs and expenses incurred after June 30, 2025 to comply with the new federal standards (PAWC St. No. 3, pp. 5-7).

Q. DID THE COMPANY PROPOSE A REVIEW AND APPROVAL PROCESS FOR THE ECIC?

A. Yes. PAWC witness Swiz proposed a review and approval process on pages 25-26 of PAWC Statement No. 8 that includes the filing of an Environmental Plan detailing specific projects, estimates, timing, and justification for inclusion within the ECIC, and the process for reviewing the Environmental Plan.

Q. HOW DOES THE COMPANY PLAN TO ASSESS THE ECIC TO CUSTOMERS?

A. Mr. Swiz indicated on page 29 of PAWC Statement No. 8 that the ECIC will be a percentage carried to two decimal places applied to the total amount billed to each customer excluding the State Tax Adjustment Surcharge ("STAS") and the Distribution System Improvement Charge ("DSIC"). Mr. Swiz further proposed that the ECIC would be subject to audit and reconciliation at intervals determined by the Commission.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED ECIC?

A. No. The ECIC proposed by the Company should be denied because the proposal is premature and filed in the wrong venue.

Q. WHY DO YOU BELIEVE THAT THE PROPOSAL IS PREMATURE?

A. I believe the proposal is premature because the Company, as stated on pages 26 and 27 of PAWC Statement No. 8 and in its response to Office of Consumer Advocate ("OCA") discovery OCA-15-1 (I&E Ex. No. 3, Sch. 7), is unable to provide any projection of the actual level of capital additions that will be included in the ECIC because it has the Environmental Plan must be approved by the Commission before inclusion in the ECIC. It is my understanding that the Company has also not filed an Environmental Plan and has projected no other information beyond a speculative cost "in the range of $200 million by the end of

2027." While I do not deny that impending environmental regulations involving PFAS and other issues detailed by the Company will cause a need for significant future capital investment, I do question the need for recovery between base rate cases. Specifically, had the Company delayed filing the present base rate case by two years so that the FPFTY encompassed all of 2027 rather than half of 2025, the Company would have been able to accurately include the environmental capital investments in rate base. As a side note, the water and wastewater acquisitions addressed above and in I&E Statement No. 3 by I&E witness Kubas would likely have all closed and would then properly be included in the filing. Additionally, the Company has not lost the ability to file for emergency rate relief if it becomes necessary in between base rate cases.

Q. WHY IS THE PRESENT BASE RATE CASE NOT THE CORRECT FORUM FOR THE INTRODUCTION OF THE ECIC?

A. The structure of the ECIC appears to be extremely similar to that of the DSIC in that the Environmental Plan is similar to the Long-Term Infrastructure Improvement Plan ("LTIIP"), which is required for a utility to institute a DSIC, there are quarterly reviews and annual reconciliations, and it is assessed to customers in the form of a percentage of their overall bill (less other certain Riders such as STAS). However, it is my understanding that in order for a utility to start utilizing a DSIC it must first get approval in a separate petition with an LTIIP

prepared. The Company has not provided any reason why the ECIC should be treated differently.

Additionally, the issue of environmental rules changes to deal with PFAS and other issues is an industry-wide concern. At this juncture, final regulations have not been formulated, and the Commission has not had the opportunity to react to this situation on a utility-wide basis such as was done with Covid cost impacts, which further supports my opinion that the Company request in this proceeding is premature. Additionally, this is not a concern that is limited to Pennsylvania utilities, and like lead, there may be federal or state programs and funding that have yet to be established to address this problem on a nationwide or state basis.

RATE DESIGN

WATER OPERATIONS

Q. BRIEFLY DESCRIBE THE COMPANY'S RATE DESIGN PROPOSALS IN THE VARIOUS WATER OPERATIONS' RATE ZONES.

A. The Company's filing includes primarily six different rate zones. Most of PAWC's customers are included in Rate Zone 1 – PAWC ("Rate Zone 1") and pay the Rate Zone 1 rates. Customers in the remaining rate zones pay present rates that are different from Rate Zone 1 present rates. The remaining rate zones are as follows: Rate Zone 2 – Valley, Rate Zone 3 – SLIBCO, Rate Zone 4 – Turbotville, Rate Zone 5 – Steelton, Rate Zone X – Audubon, and Rate Zone X - Farmington. It should be

noted that, per my recommendation above, the Audubon and Farmington rate zones should be removed in this case and, therefore, I will not be addressing proposed rate changes for those customers.

Q. WHAT RATE DESIGN ADJUSTMENTS ARE THE COMPANY PROPOSING?

A. The Company is proposing to consolidate the monthly metered rates for all classes of customers in Rate Zone 2 – Valley, Rate Zone 3 – SLIBCO, Rate Zone 4 – Turbotville, and Rate Zone 5 - Steelton into Rate Zone 1 in the FPFTY (PAWC St. No. 10, p. 35).

Q. ARE THE COMPANY'S RATE DESIGN PROPOSALS TO MERGE THE USAGE RATES IN RATE ZONES 2, 3, 4, AND 5 INTO RATE ZONE 1 OVER THE FPFTY REASONABLE?

A. In general, yes. The rates proposed by the Company that merge the various rate zones described above into Rate Zone 1, are reasonable, except for the proposal to merge Rate Zone 2 – Valley usage rates into Rate Zone 1. I will discuss the Rate Zone 2 – Valley usage rates further below.

<u>WATER OPERATIONS - CUSTOMER COST ANALYSIS</u>

Q. WHAT IS A CUSTOMER COST ANALYSIS AND HOW IS IT USED?

A. A customer cost analysis is a part of a COSS that is used to determine the

appropriate fixed customer charges for the various classes and meter sizes. It includes customer costs only.

Q. WHY IS IT NECESSARY TO PERFORM A CUSTOMER COST ANALYSIS?

A. A fixed customer charge represents the revenue that the Company is guaranteed to receive each month, regardless of the level of usage. As I described above, the seventh edition of the American Water Works Association M1 Manual acknowledged that there is a tradeoff between revenue stability from a high customer charge, and affordability and conservation from a low customer charge and higher usage rates.

<u>WATER OPERATIONS – CUSTOMER COSTS</u>

Q. DID THE COMPANY PREPARE A CUSTOMER COST ANALYSIS TO SUPPORT INCREASING THE CUSTOMER CHARGES?

A. Yes. The Company provided two customer cost analyses for the FPFTY in PAWC Exhibit 12-A, Appendix A, Attachment RS1j. The results of the first cost analysis, shown on page 1 of 3, includes all costs being allocated to the customer cost function and results in a unit cost of $24.63 per month in the FPFTY.

Additionally, PAWC provided a second customer cost analysis that relies on the allocation of costs more directly applicable to customers. The result of the

more direct customer cost analysis is $19.31 per month per customer in the FPFTY (PAWC Ex. 12-A, Appendix A, Attachments RS1j, p. 2 of 3).

Q. WHICH CUSTOMER COST ANALYSIS DO YOU RECOMMEND BE USED TO DETERMINE THE CUSTOMER CHARGES FOR WATER OPERATIONS CUSTOMERS?

A. I recommend that the second customer cost analysis, that is the result of more direct customer costs, be used to determine the customer charges for Water Operations customers.

Q. WHY DO YOU RECOMMEND THE SECOND CUSTOMER COST ANALYSIS BE USED?

A. I recommend the second customer cost analysis for several reasons. Costs that are recovered from customers are continuously increasing, even between rate cases, with surcharges such the DSIC. Therefore, I believe it is appropriate to limit the increase in the customer charges and to consider the affordability of rates through a lower customer charge and higher usage rate. Additionally, the Commission has traditionally relied on customer cost analyses based on direct cost allocations to determine customer charges. For these reasons, I recommend the Commission continue to reject the "fully allocated" customer cost analysis provided by Ms. Heppenstall and base the customer charges instead on the direct cost customer cost

analysis provided by the Company on PAWC Exhibit 12-A, Appendix A, Attachments RS1j, p. 2 of 3.

WATER CUSTOMER CHARGES

Q. IS PAWC PROPOSING TO INCREASE MOST RESIDENTIAL, COMMERCIAL AND MUNICIPAL CUSTOMER CHARGES?

A. Yes. For Rate Zone 1, the Company is proposing to increase the residential 5/8-, ¾-, 1-, and 1 ½-inch customer charges from $17.50 to $20.00 in the FPFTY. The increases for all Water Operations rate zones and meter sizes are shown on PAWC Exhibit No. 10-A.

As shown on PAWC Exhibit CBR-3, PAWC is also proposing to increase the customer charges of the larger meter sizes and commercial, municipal, and industrial by approximately 7%-8%, except for Zone 2 – Valley Industrial customers, Zone 3 – SLIBCO customers, and Zone 5 – Steelton Industrial customers, which have a wide arrange of varying customer charge increases.

Q. WHAT IS THE BASIS FOR THE COMPANY'S PROPOSED $20.00 PER MONTH CUSTOMER CHARGE FOR A 5/8-INCH RESIDENTIAL CUSTOMER?

A. The basis for the $20.00 per month per month 5/8-inch customer charge is the Company's overly inclusive customer cost analysis that claims the Company

incurs a cost of $24.63 per month to provide service to a 5/8-inch Residential customer as described above.

Q. WHAT 5/8-INCH RESIDENTIAL CUSTOMER CHARGE DO YOU RECOMMEND?

A. I recommend a $19.50 per month 5/8-inch Residential customer charge in the FPFTY.

Q. WHY DO YOU RECOMMEND THAT THE PRESENT RESIDENTIAL CUSTOMER CHARGE IN RATE ZONE 1 INCREASE TO $19.50 PER MONTH IN THE FPFTY INSTEAD OF TO THE LEVEL PROPOSED BY PAWC?

A. My recommended customer charge is based on the direct cost customer cost analysis, as described above, which shows that the cost to provide service to a 5/8-inch residential customer is $19.31 per month in the FPFTY. Therefore, my recommended $19.50 per month customer charge approximates the monthly customer cost per customer, rounded to the nearest half dollar. There is no cost basis for increasing the residential customer charges to $20.00 per month as requested by the Company. My recommended $19.50 customer charge for Rate Zone 1 and all rate zones that are proposed to match Rate Zone 1 in the FPFTY is an increase of $2.00 per month over the Company's present rate 5/8-inch customer charge for Rate Zones 1 of $17.50 per month.

Q. WHAT CUSTOMER CHARGES DO YOU RECOMMEND FOR RESIDENTIAL CUSTOMERS IN RATE ZONES 1, 2, 3, AND 4 WITH METERS LARGER THAN 1-1/2-INCH?

A. I do not oppose the Company's proposed increase for residential customers with meters larger than 1-1/2-inch in all Rate Zones in the FPFTY. I recommend the customer charges for all meter sizes in all of the remaining rate zones be set equal to the customer charges in Rate Zone 1. My recommended residential customer charges by meter size are as follows:

Rate Zone 1, 2, 4, and 5 Residential Customer Charges			
Meter Size	Present Rate	I&E Proposed Rate	Revenue Percent Increase
5/8 – inch	$17.50	$19.50	11.4%
3/4-inch	$17.50	$19.50	11.4%
1-inch	$17.50	$19.50	11.4%
1 1/2-inch	$17.50	$19.50	11.4%
2-inch	$121.80	$132.00	8.4%
3-inch	$227.20	$246.00	8.3%
4-inch	$285.10	$308.00	8.0%
6-inch	$426.80	$461.00	8.0%
8-inch	$826.30	$893.00	8.1%

Q. WHY DO YOU NOT OPPOSE THE COMPANY'S PROPOSED INCREASE FOR RESIDENTIAL CUSTOMERS WITH METER SIZES 2-INCHES AND OVER?

A. The Company's proposed increase for residential customers with meter sizes 2-

inches and over are all consistently increased by approximately 8%, which is a reasonable increase.

Q. ARE YOU RECOMMENDING ANY ADJUSTMENTS TO THE PROPOSED CUSTOMER CHARGES FOR THE COMMERCIAL AND MUNICIPAL RATE CLASSES?

A. No. The Company's proposal for the commercial and municipal rate class customer charges is to increase those rates by approximately 7%-8% over present rates as shown on PAWC Exhibit CBR-3. As I stated above, a 7%-8% increase for a customer charge is reasonable.

Q. ARE YOU RECOMMENDING AN ADJUSTMENT TO THE PROPOSED CUSTOMER CHARGE RATE STRUCTURES FOR THE INDUSTRIAL AND OTHER WATER UTILITIES MONTHLY – GROUPS A AND B RATE ZONE 1 CUSTOMER CLASSES?

A. No. I am not recommending any adjustments to the customer charges each for the Rate Zone 1 Industrial class and the Other Water Utilities Monthly – Groups A and B. Despite these classes in general having larger percentage increases in their customer charges, the percent increase in the bill for the average industrial customers shown on PAWC Exhibit 10-A, pp. 89-91, is reasonable.

USAGE RATES

RATE ZONE 1

Q. WILL THE COMPANY'S PROPOSED USAGE RATES FOR THE RESIDENTIAL, COMMERCIAL, AND MUNICIPAL CLASSES FOR RATE ZONE 1 NEED TO BE INCREASED UNDER YOUR CUSTOMER CHARGE RECOMMENDATION AT THE COMPANY'S FULLY REQUESTED INCREASE?

A. Yes. As a result of the revenue produced by the customer charge being decreased based on my recommended customer charges compared to the Company's proposed customer charges, under the fully requested revenue increase, the proposed usage rates for the Rate Zone 1 residential class would need to increase slightly. As would the usage rates for any Rate Zones that are being proposed to merge with Rate Zone 1 rates, as I described above.

Q. DID YOU DETERMINE THE RESULTING INCREASE TO THE PROPOSED USAGE CHARGE?

A. No. Based on I&E's recommendation regarding the Act 11 subsidy, as well as the adjustments made by I&E witnesses Patel and Okum, it is more likely that the usage rate will be subject to a scale back rather than an increase. Therefore, I did not calculate what the increase would be at the fully proposed increase. I will discuss my usage rate recommendations for each Rate Zone below.

RATE ZONE 2 – USAGE RATE

Q. IS THE COMPANY PROPOSING THAT RATE ZONE 2 USAGE RATES BE SET EQUAL TO RATE ZONE 1?

A. Yes. As shown on PAWC Exhibit 10-A, pp. 4 and 11, the Company is proposing to set Rate Zone 2 residential and commercial usage rates equal to Rate Zone 1.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO SET RATE ZONE 2 RESIDENTIAL AND COMMERCIAL USAGE RATES EQUAL TO RATE ZONE 1?

A. No. The Company's proposal to set Rate Zone 2 residential and commercial usage rates equal to Rate Zone 1 would result in the bill for an average Rate Zone 2 residential customer to increase by 63.64%, and the average bill for a commercial customer would increase by 64.37% (PAWC Ex. 10-A, pp. 77, 83). For residential customers in Rate Zone 2, the proposed percent increase is at least double that of the average residential customers in the other rate zones. For Rate Zone 2 commercial customers, the disparity between the percent increases for the other rate zones, apart from Rate Zone 4, is even greater than that of the residential customers.

Q. WHAT USAGE CHARGES DO YOU RECOMMEND FOR RATE ZONE 2 CUSTOMERS?

A. The table below shows the usage rates that I recommend for the Rate Zone 2

residential and commercial customers.

Rate Zone 2 Residential and Commercial Usage Rates			
Usage Level	Present Rate per hundred gal.	I&E Proposed Rate per hundred gal.	Revenue Percent Increase
Residential			
First 3,400 gal.	$1.1000	$1.6000	45.5%
Over 3,400 gal.	$1.1000	$1.6000	45.5%
Commercial			
First 16,000 gal.	$1.1000	$1.6500	55%
Over 16,000 gal.	$1.1000	$1.2540	14%

Q. HOW DID YOU DETERMINED YOUR RECOMMENDED USAGE RATES AT THE FULLY REQUESTED REVENUE INCREASE?

A. I selected a $1.6 per hundred-gallon usage rate for residential customers because it generated a reasonable percent increase on the total bill of a rate zone 5 residential customer as shown on I&E Exhibit No. 4, Schedule 8. I performed a similar analysis for the Rate Zone 2 commercial customers, but I kept the second block usage rate at approximately 76% of the first block, which is the same ratio as the Company's proposed rates. As shown on I&E Exhibit No. 4, Schedule 9, the resulting overall percentage increase for commercial customers is reasonable.

<u>RATE ZONE 3 – USAGE RATE</u>

Q. IS THE COMPANY PROPOSING THAT RATE ZONE 3 USAGE RATES BE SET EQUAL TO RATE ZONE 1?

A. Yes. As shown on PAWC Exhibit 10-A, pp. 12 and 25, the Company is proposing

to set Rate Zone 3 commercial and municipal usage rates equal to Rate Zone 1.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO SET RATE ZONE 3 COMMERCIAL AND MUNICIPAL USAGE RATES EQUAL TO RATE ZONE 1?

A. Yes. The Company's proposal to set Rate Zone 3 commercial and municipal usage rates equal to Rate Zone 1 is reasonable.

<u>RATE ZONE 4 – USAGE RATE</u>

Q. IS THE COMPANY PROPOSING THAT RATE ZONE 4 USAGE RATES BE SET EQUAL TO RATE ZONE 1?

A. Yes. As shown on PAWC Exhibit 10-A, pp. 5, 13, and 26, the Company is proposing to set Rate Zone 4 residential, commercial, and municipal usage rates equal to Rate Zone 1.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO SET RATE ZONE 4 RESIDENTIAL AND COMMERCIAL USAGE RATES EQUAL TO RATE ZONE 1?

A. Partially. I believe the Company's proposal to set the Rate Zone 4 residential and municipal rates equal to Rate Zone 1 is reasonable. However, the Company's proposal to set Rate Zone 4 commercial usage rates equal to Rate Zone 1 would result in the bill for an average Rate Zone 4 commercial customer to increase by

68.56% (PAWC Ex. 10-A, pp. 77, 83). This increase is unnecessarily large when compared to the increase proposed for Rate Zone 1 commercial customers.

Q. WHAT USAGE CHARGES DO YOU RECOMMEND FOR RATE ZONE 4 COMMERCIAL CUSTOMERS?

A. The table below shows the usage rates that I recommend for the Rate Zone 4 commercial customers.

Rate Zone 4 Residential and Commercial Usage Rates			
Usage Level	Present Rate per hundred gal.	I&E Proposed Rate per hundred gal.	Revenue Percent Increase
Commercial			
First 16,000 gal.	$1.1000	$1.6500	55%
Over 16,000 gal.	$1.1000	$1.2540	14%

Q. HOW DID YOU DETERMINED YOUR RECOMMENDED USAGE RATES AT THE FULLY REQUESTED REVENUE INCREASE?

A. I set the Rate Zone 4 commercial usage rates equal to those of Rate Zone 2 so that Rate Zone 2 and Rate Zone 4 can be merged after this base rate case and likely merged with Rate Zone 1 after the next base rate case. As shown on I&E Exhibit No. 4, Schedule 10, the resulting overall percentage increase for commercial customers is reasonable.

RATE ZONE 5 – USAGE RATE

Q. IS THE COMPANY PROPOSING THAT RATE ZONE 5 USAGE RATES BE SET EQUAL TO RATE ZONE 1?

A. Yes. As shown on PAWC Exhibit 10-A, pp. 6, 14, 20, and 27, the Company is proposing to set Rate Zone 5 residential, commercial, industrial, and municipal usage rates equal to Rate Zone 1.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO SET RATE ZONE 5 RESIDENTIAL, COMMERCIAL, AND MUNICIPAL USAGE RATES EQUAL TO RATE ZONE 1?

A. Yes. The Company's proposal to set Rate Zone 5 residential, commercial, municipal and industrial usage rates equal to Rate Zone 1 is reasonable.

SCALE BACK OF RATES

Q. WHAT IS A SCALE BACK OF RATES?

A. If the Commission grants an increase less than the amount the Company requested, the Company's proposed rates would be reduced, or scaled back, to produce the revenue requirement allowed by the Commission.

Q. WHAT IS THE FIRST STEP THAT MUST BE COMPLETED IN ANY SCALE BACK OF RATES?

A. The first step that must be completed in any scale back is to determine the revenue

requirements and scale backs of the wastewater operations.

Q. WHY MUST THE WASTEWATER OPERATIONS REVENUE REQUIREMENT AND SCALE BACK BE DETERMINED PRIOR TO THE APPLICATION OF A SCALE BACK TO WATER OPERATION RATES?

A. The wastewater operations revenue requirement must be set first because that will determine the amount of revenue requirement that must be allocated to Water Operations. Once the wastewater to water allocation is determined, then the full Water Operations revenue requirement will be known, and those rates can be scaled back.

Q. WHAT DO YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE FOR ANY OF THE WW OPERATIONS?

A. I recommend that any scale back be netted against the subsidy the Commission determines for the wastewater operations.

<u>WATER OPERATIONS RATE SCALE BACK</u>

Q. WHAT OVERALL PERCENTAGE INCREASES HAS THE COMPANY PROPOSED FOR EACH WATER CUSTOMER CLASS?

A. As shown on PAWC Exhibit No. 12-A, Schedule A, the Company is proposing the following increases for each class in the FPFTY:

- Residential 24.4%,

- Commercial 25.6%,
- Industrial 28.1%,
- Municipal 16.2%,
- Resale –A 3.6%,
- Resale – B 36.8%,
- Private Fire 18.9%,
- Public Fire 24.5%.

Q. WHAT DO YOU RECOMMEND IF THE COMMISSION GRANTS AN INCREASE THAT IS LESS THAN THE FULLY REQUESTED INCREASE FOR WATER OPERATIONS?

A. If the Commission grants an increase less than the fully requested increase, I recommend that the usage rates and customer charges be decreased to produce the revenue level the Commission approves.

Q. WHY DO YOU RECOMMEND THAT THE CUSTOMER CHARGES BE INCLUDED IN ANY SCALE BACK?

A. Because the $19.50 per month customer charge I recommend is based upon the direct customer cost, any reduction in any of the ratemaking inputs by the Commission would reduce the inputs used in the customer cost analysis that was used to determine the $19.50 per month customer charge. The Commission recently reaffirmed its commitment to including the customer charge in the scale back on

pages 166-167 in the Order for Philadelphia Gas Works in its recent base rate case at Docket No. R-2023-3037933, Order entered November 9, 2023.

Q. WHAT GUIDELINE SHOULD THE COMPANY FOLLOW IN ADJUSTING THE USAGE RATES DESCRIBED ABOVE?

A. I recommend that the usage rates for the Rate Zone 2 residential and commercial and the Rate Zone 4 commercial rate classes not be scaled back as long as they remain lower than the usage rates in Rate Zone 1.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

ETHAN H. CLINE

PROFESSIONAL EXPERIENCE AND EDUCATION

EXPERIENCE:

03/2009 - Present
Bureau of Investigation and Enforcement, Pennsylvania Public Utility Commission - Harrisburg, Pennsylvania

Fixed Utility Valuation Engineer – Assists in the performance of studies and analyses of the engineering-related areas including valuation, depreciation, cost of service, quality and reliability of service as they apply to fixed utilities. Assists in reviewing, comparing and performing analyses in specific areas of valuation engineering and rate structure including valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design.

06/2008 – 09/2008
Akens Engineering, Inc. - Shiremanstown, Pennsylvania

Civil Engineer – Responsible, primarily, for assisting engineers and surveyors in the planning and design of residential development projects.

10/2007 – 05/2008
J. Michael Brill and Associates - Mechanicsburg, Pennsylvania

Design Technician – Responsible, primarily, for assisting engineers in the permit application process for commercial development projects.

01/2006 – 10/2007
CABE Associates, Inc. - Dover, Delaware

Civil Engineer – Responsible, primarily, for assisting engineers in performing technical reviews of the sewer and sanitary sewer systems of Sussex County, Delaware residential development projects.

EDUCATION:

Pennsylvania State University, State College, Pennsylvania
Bachelor of Science; Major in Civil Engineering, 2005

- Attended NARUC Rate School, Clearwater, FL
- Attended Society of Depreciation Professionals Annual Conference and Training

TESTIMONY SUBMITTED:

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission in the Bureau of Investigation and Enforcement ("I&E") as a Fixed Utility Valuation Engineer.

Q. ARE YOU THE SAME ETHAN H. CLINE THAT SUBMITTED I&E STATEMENT NO. 4 AND I&E EXHIBIT NO. 4 ON FEBRUARY 1, 2024?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony submitted by witnesses on behalf of Pennsylvania-American Water Company ("PAWC" or "Company"): Stacey D. Gress (PAWC St. No. 4-R), E. Christopher Abruzzo (PAWC St. No. 6-R), J. Cas Swiz (PAWC St. No. 7-R), and Constance E. Heppenstall (PAWC St. No. 12-R). I will also address the rebuttal testimony submitted on behalf of the Office of Small Business Advocate ("OSBA") by witness Brian Kalcic (OSBA St. No. 1-R), and the rebuttal testimony submitted on

behalf of the Office of Consumer Advocate ("OCA") by witness Jerome Mierzwa (OCA St. No. 4R).

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No.

FPFTY REPORTING REQUIREMENTS

Q. WHAT DID YOU RECOMMEND REGARDING PLANT ADDITIONS THAT PAWC PROJECTS TO BE IN SERVICE DURING THE FPFTY?

A. I recommended that the Company provide I&E and OCA with updates to PAWC Ex. 3-A, pp. 26, 97, 146, 179, and 218 no later than December 1, 2025, under this docket number. PAWC's updates should include actual plant additions and retirements for the twelve months ending June 30, 2024 and for the twelve months ending June 30, 2025 (I&E St. No. 3, p. 3).

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. PAWC witness Gress indicated on page 7 of PAWC Statement No. 4-R that the Company agrees with my reporting requirement recommendation and indicates that PAWC will provide the updates as I recommended.

ACQUISITIONS - WATER

Q. WHAT WATER ACQUISITIONS ARE INCLUDED IN THE COMPANY'S FILING?

A. PAWC has proposed to include in the present proceeding the Farmington Township water distribution system ("Farmington Township") and Audubon Water Company ("AWC") acquisitions (PAWC St. No. 6, p. 3).

Q. HAS EITHER THE FARMINGTON TOWNSHIP OR AWC ACQUSITION CLOSED?

A. No. As described on pages 8 and 10 of PAWC Statement No. 6, the Farmington Township application was filed on August 28, 2023, and the AWC application was filed on September 21, 2023. As far as I am aware, neither of these applications have been approved by the Commission, and the Company continues to only anticipate these acquisitions closing and making it through any potential appeals by the end of the FPFTY.

Q. WHAT DID YOU RECOMMEND REGARDING THE FARMINGTON TOWNSHIP AND AWC SYSTEMS?

A. I recommended that the Commission remove the revenue requirement for the Farmington Township and AWC systems from the present proceeding including all costs, revenues, taxes, and amortizations (I&E St. No. 4, pp. 9-10).

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. PAWC witnesses Gress, Abruzzo, and Ladner each provided testimony indicating that the Company disagreed with my recommendation. I will mainly address the testimony of Mr. Abruzzo since witnesses Gress and Ladner indicated their agreement with Mr. Abruzzo's testimony.

Q. WHAT REASONS DID MR. ABRUZZO PROVIDE FOR DISAGREEING WITH YOUR RECOMMENDATION TO REMOVE THE FARMINGTON TOWNSHIP AND AWC SYSTEMS FROM THE PRESENT FILING?

A. Mr. Abruzzo first provided updates to the ongoing proceedings regarding the Farmington Township and AWC systems. Specifically, Mr. Abruzzo indicated that the parties involved in the Farmington case are exchanging informal discovery as they attempt to hold settlement discussions, but a litigation schedule has yet to be set. Regarding the AWC case, Mr. Abruzzo explained that a litigation schedule has been set with Reply Briefs set to be submitted to the Administrative Law Judge by May 14, 2024. Mr. Abruzzo indicated that PAWC would close on each system "likely" before the end of the FPFTY in this case (PAWC St. No. 6-R, pp. 4-5).

Mr. Abruzzo then provided three main reasons why the Company disagrees with I&E's recommendation to not include the Farmington and AWC systems in the current proceeding. First, he believes that the "test" for whether or not an acquisition should be included in a base rate case should be whether the

acquisition closes within the FPFTY and claims that the Company is asking the Commission, in its final order, to take official notice of the status of the acquisition proceedings and that the Commission would then see that each acquisition is likely to close by the end of the FPFTY. Second, Mr. Abruzzo compares the inclusion of the Farmington Township and AWC systems to "assets that are used and useful before the end of the FPFTY." Third, Mr. Abruzzo claims that no special "public interest" test is necessary or warranted. (PAWC St. No. 6-R, pp. 13-16).

Q. WHY DOES MR. ABRUZZO SUGGEST THAT THE TEST FOR WHETHER OR NOT AN ACQUSITION SHOULD BE INCLUDED IN A BASE RATE CASE BE WHETHER OR NOT THE ACQUISITION CLOSES WITHIN THE FPFTY?

A. It is Mr. Abruzzo's opinion that the Commission should take official notice of its own decisions and that an appeal of that decision has or has not been filed as well as judicial decisions after the record in a base rate case closes. Mr. Abruzzo claimed that this is so the Company can integrate acquisitions into the larger PAWC systems "as soon as reasonably possible to avoid regulatory lag." (PAWC St. No. 6-R, pp. 12-13).

Q. IS THE COMPANY'S POSITION REASONABLE?

A. No. The Company's preference would be for the Commission to take official

notice of its orders approving the acquisitions so that it can avoid regulatory lag. However, as I described on p. 7 of I&E Statement No. 4, "[i]t is possible that through the acquisition proceeding and investigation, errors could be identified that would affect the amortization claim in this proceeding. These potential changes would not be reflected in this case, because it is possible, if not likely, that this base rate case concludes before a Commission Order is for either of the Farmington Township or AWC acquisition cases." Mr. Abruzzo did not address this potentially harmful result as the focus of his testimony was solely on the Company's ability to recover its investment as fast as possible. Therefore, contrary to the Company's position, the "test" for whether an acquisition can reasonably be included in a base rate case is if the regulatory process has played out and all issues have been resolved. The goal of reducing regulatory lag cannot come at the expense of the actual regulatory process.

Q. HOW DOES MR. ABRUZZO COMPARE THE FARMINGTON TOWNSHIP AND AWC ACQUISITIONS TO OTHER ASSETS THAT ARE INCLUDED IN THE FPFTY?

A. Mr. Abruzzo stated that he is arguing that assets that are used and useful in providing service to PAWC's by the end of the FPFTY are properly included in rates and that denying the recovery of such assets is unconstitutional. He further stated that "[i]t is well established that assets that are used and useful before the end of the FPFTY are properly included in rates." (PAWC St. No. 6-R, p. 15).

Q. DO YOU AGREE THAT ASSETS THAT ARE USED AND USEFUL BEFORE THE END OF THE FPFTY ARE PROPERLY INCLUDED IN RATES?

A. Yes. However, capital projects relate to systems that PAWC already undoubtedly owns. These capital projects that are set to be included in rate base in the FPFTY will have projected in-service dates that are before the end of the FPFTY. Additionally, parties are able to look at a Company's history of completing projects on time to determine if the projected in-service dates are reasonable and determine if adjustments to the Company's projections are necessary. In the case of the Farmington Township and AWC acquisitions, the Company, even through rebuttal testimony, has not identified any set closing date other than a nebulous "likely before the end of the FPFTY." Therefore, I&E is recommending that the acquisitions not be included in the current proceeding due to the inability predict whether the acquisitions will actually be "in-service" before the end of the FPFTY. Furthermore, unlike plant additions to existing systems, all of the projected costs and revenues for these not yet acquired systems are based on speculation and are not reflective of PAWC's own costs to own and operate the system, so projected revenue shortfalls that are recovered from other water customers could be inaccurate resulting in improper rates being established for existing customers. In addition, PAWC itself determines when it files a base rate case. If it was necessary for these systems to be included in rate base, PAWC could have simply waited until it actually owned these systems to file its case.

Q. DOES YOUR RECOMMENDATION DENY THE COMPANY ITS RIGHT TO COLLECT A RETURN ON AND OF ITS INVESTMENT?

A. No. My recommendation is not to permanently deny the recovery of the Company's investment in the Farmington Township and AWC systems. The Company will have the ability to properly include these investments in a subsequent base rate case after the acquisitions close.

Q. DO YOU AGREE WITH MR. ABRUZZO THAT YOUR RECOMMENDATION IS REQUIRING A "SPECIAL PUBLIC INTEREST TEST?"

A. No. There is nothing special about ensuring a proposal or claim by the Company is in the public interest. Every claim made by the Company in its filing must be determined to be in the public interest. This is the very basis for how rates are determined to be just and reasonable. Simply because issues such as necessary capital improvement projects, the Company paying its employees, or paying its taxes, are obviously in the public interest that does not mean that they are not also subject to this "test." Being in the public interest is the bare minimum standard for a proposal being approved by the Commission. What is extraordinary is Mr. Abruzzo's claim that the Company's proposal to include the Farmington Township and AWC systems in the present base rate case prior to the completion of a full Commission review of the acquisitions does not need to be in the public interest.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. As I discussed above, the Company has not provided any evidence that would support a change in my recommendation. Therefore, I continue to recommend the Commission deny the inclusion of the Farmington Township and AWC systems in this proceeding.

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S INCLUSION OF NOT YET ACQUIRED SYSTEM ASSETS IN BASE RATE PROCEEDINGS?

A. Yes. With the application of Act 12 and the routine cost-sharing that occurs for system water customers, to include systems that are not yet acquired with associated speculative subsidy needs not based on any actual known operating costs is inappropriate and unfair to existing customers as the additional costs applied to their rates may not come to fruition or be accurate in the scope established in the proceeding. For these reasons, I recommend that the Company not be permitted to include systems not yet acquired in base rate proceedings now or in the future.

REVENUE DECOUPLING MECHANISM

Q. WHAT IS THE REVENUE DECOUPLING MECHANISM PROPOSED BY PAWC?

A. According to PAWC, the proposed Revenue Decoupling Mechanism ("RDM") is

an alternative rate design mechanism whose purpose is to more reliably recover the revenue requirement and associated fixed costs approved by the Commission in this case. In other words, the Company is proposing to stabilize its revenue level received from customers by charging or crediting the difference between the revenue requirement and fixed cost authorized in this case and actual revenues to customers in the subsequent year (PAWC Statement No. 10, pp. 86-87).

Q. DID YOU AGREE WITH THE COMPANY'S PROPOSED IMPLEMENTATION OF THE RDM?

A. No. As I discussed in greater detail on pages 16-23 of I&E Statement No. 3, I did not agree that the Company has established a need for revenue stabilization, especially when it is also simultaneously proposing a declining usage adjustment in this case. Additionally, the proposed RDM may cause harm to PAWC's customers by completely separating their usage patterns from the surcharge/credit program. Also, this type of mechanism will devalue conservation efforts undertaken by customers that can afford efficiency measures and harm customers who cannot afford these measures by assessing an additional charge to all customers. Furthermore, the proposal does not achieve the policy goals supported based on the Commission's policy statement associated with Section 1330 of the Code, or the Code itself. Finally, it is likely to cause rate confusion with yet another surcharge on PAWC's customer bills.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION REGARDING THE PROPOSED RDM?

A. Yes. Witness Rea provided testimony opposing my recommendation that the Commission deny the proposed RDM.

Q. WHY DID THE COMPANY DISAGREE WITH YOUR RECOMMENDATION THAT THE COMMISSION DENY THE PROPOSED RDM?

A. Witness Rea responded to the issues of the problems regarding straight fixed variable ("SFV") pricing, the effect of the RDM on customers' conservation efforts, the RDMs effect on rate stability and rate confusion, the existing mechanisms such as the Distribution System Improvement Charge ("DSIC") and FPFTY that protect against regulatory lag and the Commission's Policy Statement on alternative ratemaking mechanism at Docket No. M-2015-2518883 (PAWC St. No. 10-R, pp. 64-78).

Q. HOW DID MR. REA RESPOND TO YOUR CONCERNS REGARDING SFV PRICING?

A. Mr. Rea did not disagree that utilizing SFV pricing to establish rates makes it more difficult for customers to mitigate their bills by adjusting their consumption. Mr. Rea then attempted to distinguish the Company's RDM proposal from straight SFV pricing by restating that SFV is being used only to reconcile actual revenues

collected with those authorized in this proceeding. (PAWC St. No. 10-R, pp. 71-72).

Q. DO YOU AGREE THAT THE COMPANY'S RDM PROPOSAL IS REASONABLE BECAUSE IT ONLY USES SFV PRICING TO SET THE GOAL RATES FOR EACH RATE CLASS?

A. No. The Company's proposal to use a rate methodology that would otherwise be unacceptable to judge actual revenues generated by rates that have been determined by the Commission to be just and reasonable makes no sense. At the conclusion of the base rate case, the Commission sets the rates that it determines to be just and reasonable which includes providing the Company the opportunity to recover its rate of return. The Company has not established a need to hedge against the Commission's decision.

Q. DOES YOUR DIRECT TESTIMONY DESCRIBE HOW THE RDM COULD POTENTIALLY HARM CUSTOMERS FROM A CONSERVATION STANDPOINT?

A. Yes. I indicated that by calculating the RDM based on a total class-wide (or multiple classes in the case of non-residential customers) basis, a single customer, particularly low-usage customers, will have zero ability to affect whether they are assessed an additional surcharge or a credit on their bill in the subsequent year. Therefore, it is the bill based on base charges that would encourage water

efficiency and conservation. The only thing the RDM provides customers is the worry that the next year's RDM would erode the savings derived from conservation efforts. (I&E St. No. 3, p. 22).

Q. HOW DID THE COMPANY RESPOND TO YOUR CONCERNS?

A. Witness Rea stated regardless of what the volumetric rate happens to be, customers who use less water will have lower bills. He then provided an example of a customer taking actions to reduce their water consumption by 5% per month, who would save $4.16 per month without the RDM, and claimed that this is well above the amount the Company estimates an average customer bill would increase due to implementation of the RDM (PAWC St. No. 10-R, p. 72).

Q. DOES MR. REA'S CALCULATION PROVE YOUR CONCERN THAT THE RDM WOULD ERODE CUSTOMER SAVINGS FROM CONSERVATION?

A. Yes. Mr. Rea's statement that the $4.16 per month saved without the RDM is well above the amount that the customer bill would increase due to the RDM just shows that the RDM would erode the savings and not completely remove them. This savings erosion would be larger for customers who conserve less than 5% per month. This savings erosion for customers who choose to conserve water could have a chilling effect on conservation efforts for customers.

Q. HOW DID MR. REA RESPOND TO YOUR CONCERNS REGARDING RATE STABILITY AND RATE CONFUSION?

A. Mr. Rea claimed that the RDM will improve stability. He then described how, under the RDM, rates will change every based on the previous year's usage patterns of the entire rate class. Mr. Rea addressed rate confusion by pointing out that revenue reconciliation riders are not new to the utility industry, and he claimed that there is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element (PAWC St. No. 10-R, p. 73).

Q. DO YOU AGREE WITH MR. REA'S POSITION REGARDING RATE STABILITY AND RATE CONFUSION?

A. No. First, Mr. Rea did not identify how yearly changes in rates that customers cannot anticipate promote rate stability. It seems contradictory to state that the RDM promotes rate stability and then to say that the rate can change every year in either direction based on the previous year's usage patterns. Second, while Mr. Rea is correct that utility customers have experienced revenue reconciliation riders in the past, I disagree that continuing to add additional riders and surcharges to a customer's bill will not lead to further rate confusion. This is particularly true in the case of the RDM which customers will be unable to anticipate whether they will be receiving a credit or an additional surcharge on a year-to-year basis.

Q. HOW DID THE COMPANY RESPOND TO THE REDUCTION OF REGULATORY RISK THROUGH EXISTING MECHANISMS SUCH AS THE DSIC AND FPFTY?

A. Mr. Rea claims that the DSIC and FPFTY do not address the usage decline between cases which affects the Company's ability prudently operate, manage, and invest in the rest of the business for the long-term benefit of its customers (PAWC St. No. 10-R, pp. 75-76).

Q. HAS THE COMPANY ESTABLISHED THAT REVENUE DECLINE HAS AFFECTED ITS ABILITY TO ATTRACT CAPITAL, PLAN, AND INVEST IN ITS SYSTEM TO DATE?

A. Not at all. As I described on page 17 of I&E Statement No. 4, since its last base rate case one and a half years prior to the current base rate case, PAWC was able to generate approximately $262 million in capital to acquire new water and wastewater systems despite an overall continuing decline in usage. This ability to generate capital to acquire new water and wastewater systems shows that the RDM is not necessary.

Q. HOW DID THE COMPANY ADDRESS THE COMMISSION'S POLICY STATEMENT ON ALTERNATIVE RATEMAKING MECHANISMS AT DOCKET NO. M-2015-2518883?

A. Mr. Rea asserts that the Policy Statement lists several factors that may be

considered but does not prescribe how or the extent to which each factor must be "satisfied." (PAWC St. No. 10-R, p. 70). Specifically, Mr. Rea provided responses to the issues brought up on pages 21-24 of I&E Statement No. 4 as well as those discussed by OCA witness Mierzwa (PAWC Ex. CBR-10R).

Q. PLEASE ADDRESS THE COMPANY'S TESTIMONY REGARDING THE FACTORS INTRODUCED IN THE POLICY STATEMENT AT DOCKET NO. M-2015-2518883.

A. First, Mr. Rea addressed the effects of the RDM on water conservation and rate stability. I addressed the fact that the RDM does not promote water conservation or rate stability above. Second, Mr. Rea claimed that I have provided no evidence that low-income customers will be harmed or negatively impacted by the RDM and that RDM credits and surcharges will be subject to discounts through the Company's Bill Discount Program ("BDP"). Third, Mr. Rea addressed the issue of customer confusion over rates. (PAWC Ex. CBR-10R).

Q. IS MR. REA CORRECT THAT YOU DID NOT PROVIDE ANY EVIDENCE THAT LOW-INCOME CUSTOMERS WILL BE HARMED OR NEGATIVELY IMPACTED BY THE RDM?

A. Yes. I have no definitive proof that the low-income customers will be harmed or negatively impacted by the RDM because the RDM has not been enacted. Therefore, there is no actual data regarding the impact on low-income customers.

However, on page 22 of I&E Statement No. 4, a single low-income customer will have zero ability to influence whether they are assessed an additional surcharge or a credit on their bill in a subsequent year because the RDM is based on a total class-wide basis. This uncontrollable extra charge, even if it is passed through the BDP as Mr. Rea indicated, could negatively impact low-income customers who have difficulty affording their unadjusted bills.

Q. HOW DID MR. REA RESPOND TO CONCERNS REGARDING RATE CONFUSION?

A. As discussed above, Mr. Rea's position is that revenue reconciliation riders are not new to the utility industry and that there is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element (PAWC Ex. CBR-10R, p. 7).

Q. DO YOU AGREE WITH MR. REA'S POSITION ON RATE CONFUSION?

A. No. Unlike the other rate design elements that appear on the customer bills, the customer is completely unaware of how the RDM is generated and whether they will be receiving a surcharge or credit on a year-to-year basis. This would only serve to increase customer confusion.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. For the reasons stated above, I continue to recommend that the RDM be

denied.

ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE

Q. WHAT IS THE ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE PROPOSED BY PAWC?

A. Per PAWC witness Swiz, the Environmental Compliance Investment Charge ("ECIC") "is a rate adjustment clause designed to reflect and recover, between rate cases, the costs imposed on the Company to address and comply with continuously evolving government-mandated environmental standards that are beyond the Company's control and difficult to estimate at any single point in time." (PAWC St. No. 8, p. 21).

Q. DID YOU AGREE WITH THE COMPANY'S PROPOSED ECIC?

A. No. I recommended the ECIC proposed by the Company should be denied because the proposal is premature and filed in the wrong venue (I&E St. No. 4, p. 26).

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. PAWC witness Swiz disagreed with my recommendation because he claims the Public Utility Code "requires utilities to propose alternative rate mechanisms as part of a base rate case, so it is entirely timely for the Company to propose the

ECIC in this case in advance of the need to file its first Environmental Plan." (PAWC St. No. 8-R, p. 12).

Q. PLEASE RESPOND TO MR. SWIZ CLAIMS REGARDING YOUR RECOMMENDATIONS RELATED TO THE ECIC.

A. While Mr. Swiz is correct regarding the Public Utility Code requiring alternate ratemaking mechanisms to be proposed in base rate cases, that is not in conflict with my recommendation that the ECIC would follow the same process as the Distribution System Improvement Charge ("DSIC"). The Commission has the authority to deny the proposal in this case and instead have it follow the same process as the DSIC if the Commission deems that such a recovery mechanism is relevant. In fact, on page 12 of PAWC Statement No. 8-R, Mr. Swiz notes that the ECIC is modeled on the DSIC. Therefore, it is reasonable for the ECIC to follow the example of the DSIC and require a utility to first get approval in a separate petition with its Environmental Plan prepared as I suggested on page 27 of I&E Statement No. 4.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. I still believe that a single company proposing such a plan before regulations are finalized and before the Commission or Legislature has had any opportunity to evaluate this issue on an industry-wide basis is premature. Further, the Company's own claim that the ECIC is modeled after the DSIC would support

that it be filed and evaluated in a similar petition venue. For these reasons, I continue to recommend that the Commission deny the ECIC.

RATE DESIGN

WATER OPERATIONS

Q. BRIEFLY DESCRIBE THE COMPANY'S RATE DESIGN PROPOSALS IN THE VARIOUS WATER OPERATIONS' RATE ZONES.

A. The Company's filing includes primarily six different rate zones. Most of PAWC's customers are included in Rate Zone 1 – PAWC ("Rate Zone 1") and pay the Rate Zone 1 rates. Customers in the remaining rate zones pay present rates that are different from Rate Zone 1 present rates. The remaining rate zones are as follows: Rate Zone 2 – Valley, Rate Zone 3 – SLIBCO, Rate Zone 4 – Turbotville, Rate Zone 5 – Steelton, Rate Zone X – Audubon, and Rate Zone X - Farmington. It should be noted that, per my recommendation above, the Audubon and Farmington rate zones should be removed in this case, and, therefore, I will not be addressing proposed rate changes for those customers.

Q. WHAT RATE DESIGN ADJUSTMENTS ARE THE COMPANY PROPOSING?

A. The Company is proposing to consolidate the monthly metered rates for all classes of customers in Rate Zone 2 – Valley, Rate Zone 3 – SLIBCO, Rate Zone 4 –

Turbotville, and Rate Zone 5 - Steelton into Rate Zone 1 in the FPFTY (PAWC St. No. 10, p. 35).

Q. ARE THE COMPANY'S RATE DESIGN PROPOSALS TO MERGE THE USAGE RATES IN RATE ZONES 2, 3, 4, AND 5 INTO RATE ZONE 1 OVER THE FPFTY REASONABLE?

A. In general, yes. The rates proposed by the Company that merge the various rate zones described above into Rate Zone 1, are reasonable, except for the proposal to merge Rate Zone 2 – Valley usage rates into Rate Zone 1. I will discuss the Rate Zone 2 – Valley usage rates further below.

WATER OPERATIONS – CUSTOMER COSTS

Q. DID THE COMPANY PREPARE A CUSTOMER COST ANALYSIS TO SUPPORT INCREASING THE CUSTOMER CHARGES?

A. Yes. The Company provided two customer cost analyses for the FPFTY in PAWC Exhibit 12-A, Appendix A, Attachment RS1j. The results of the first cost analysis, shown on page 1 of 3, include all costs being allocated to the customer cost function and results in a cost of $24.63 per month in the FPFTY.

Additionally, PAWC provided a second customer cost analysis that relies on the allocation of costs more directly applicable to customers. The result of the more direct customer cost analysis is $19.31 per month per customer in the FPFTY (PAWC Ex. 12-A, Appendix A, Attachments RS1j, p. 2 of 3).

Q. DID THE COMPANY UPDATE BOTH OF ITS CUSTOMER COST ANALYSES?

A. Yes. PAWC witness Heppenstall described, on page 2 of PAWC Statement No. 12-R, several corrections to its cost of service study that affected the customer cost analyses that were performed. The result of the corrections is that the Company's fully allocated customer cost analysis increased to $25.57 and the direct customer cost analysis increased to $20.26 (PAWC Ex. 12-A REVISED, Appendix A, Attachments RS1j, pp. 1 - 2 of 3),

Q. WHICH CUSTOMER COST ANALYSIS DID YOU RECOMMEND BE USED TO DETERMINE THE CUSTOMER CHARGES FOR WATER OPERATIONS CUSTOMERS?

A. I recommended that the second customer cost analysis that is the result of more direct customer costs be used to determine the customer charges for Water Operations customers (I&E St. No. 4, p. 31).

Q. DID THE COMPANY AGREE WITH YOUR RECOMMENDATION?

A. No. Mr. Rea claimed that both customer cost analyses are reasonable methodologies for considering the calculation of a monthly meter service charge and represent a window to determine a customer charge. He further claimed that choosing a customer charge based only on the direct customer-related customer cost analysis is an extreme position to take (PAWC St. No. 10-R, p. 44). Ms.

Heppenstall stated that the direct cost analysis applies to 5/8-inch meter customers and the Company is grouping 5/8-inch, 3/4-inch, and 1-inch meter customer charges together and that the weighted average residential customer charge for those meter sizes is $21.61 per month (PAWC St. No. 12-R, p. 13).

Q. DO YOU AGREE THAT BASING THE RESIDENTIAL CUSTOMER CHARGE ON THE CUSTOMER COST ANALYSIS THAT IS BASED ONLY ON DIRECT CUSTOMERS COSTS IS "EXTREME?"

A. No. Traditionally, the Commission has determined customer charges based upon the direct-cost customer cost analysis. Further, the Commission reaffirmed its preference for this customer cost analysis in the UGI Electric base rate case at Docket R-2017-2640058, p. 182, Order entered October 25, 2018 ("2018 UGI Electric Order"). Therefore, Mr. Rea's proposed consideration of the "fully allocated" customer cost analysis should be disregarded.

Q. DO YOU AGREE WITH MS. HEPPENSTALL THAT THE 5/8-INCH CUSTOMER CHARGE SHOULD BE INCREASED TO ACCOMMODATE A MERGE WITH LARGER SIZED METER CUSTOMER CHARGES?

A. No. Traditionally, 3/4-inch and larger meters are assigned individual customer charges which can often be increased based on the percent increase of the 5/8-inch meter customer charge. The consolidation of the 5/8-inch, 3/4-inch, and 1-inch meter customer charge to solve the concerns of a limited number of customers that

may have sprinkler systems, and thus require a larger meter was the Company's prerogative, and the 5/8-inch meter customer charges should not be increased beyond the results of the 5/8-inch customer cost analysis since the vast majority of customers only have a 5/8-inch meter.

WATER CUSTOMER CHARGES

Q. WHAT 5/8-INCH RESIDENTIAL CUSTOMER CHARGE DID YOU RECOMMEND?

A. I recommended a $19.50 per month 5/8-inch Residential customer charge in the FPFTY (I&E St. No. 3, p. 33).

Q. WHAT WAS THE BASIS FOR RESIDENTIAL CUSTOMER CHARGE RECOMMENDATION?

A. The basis for my recommendation was the Company's original direct customer cost of $19.31 per month (I&E St. No. 3, p. 33).

Q. DID OCA WITNESS MIERZWA AGREE WITH YOUR CUSTOMER CHARGE RECOMMENDATION?

A. No. OCA witness Mierzwa disagreed with my customer charge recommendation for two reasons. First, Mr. Mierzwa contends that the Company's customer cost analysis is flawed because it includes costs that are not direct customer costs and do not change with the addition or subtraction of a customer, using office building

and furniture expenses as an example. Second, Mr. Mierzwa claims that a reduction in the Company's revenue requirement increase would reduce the customer charge and provided the example of the OCA's recommended pre-tax rate of return reducing the customer cost analysis result to $17.77. (OCA St. No. 4-R, pp. 1-2).

Q. DO YOU AGREE WITH MR. MIERZWA REGARDING WHAT IS PROPERLY INCLUDED IN A DIRECT CUSTOMER COST ANALYSIS?

A. No. Prior to 2018, I&E's long-standing position agreed with the OCA that only costs that would change with the addition or subtraction of a customer should properly be included in a direct customer cost analysis. However, the Commission, in the 2018 UGI Electric Order clearly rejected that approach and identified what is properly included in a direct customer cost analysis. Both the Company's recommendation to consider a fully-allocated customer cost analysis and OCA's recommendation to consider only those costs that would change with the addition or subtraction of a single customer are inconsistent with that order and should be rejected.

Q. DO YOU AGREE WITH MR. MIERZWA THAT A REDUCTION IN THE COMPANY'S REVENUE REQUIREMENT WOULD RESULT IN A REDUCTION IN THE CUSTOMER COST ANALYSIS?

A. Yes. As I discussed on pages 43-44 of I&E Statement No. 4 and below, I agree

that a reduction in the Company's revenue requirement would result in a reduction in the customer cost analysis, which is why I recommended the customer charge be included in any scale back of rates.

Q. DO YOU WANT TO CHANGE YOUR RECOMMENDATION REGARDING THE RESIDENTIAL CUSTOMER CHARGE?

A. Yes. As described above, the Company provided in rebuttal testimony an updated direct customer cost analysis that results in $20.26 per 5/8" residential customer. Therefore, the Company's proposed $20.00 per month residential customer charge is supported by the direct customer cost analysis and, as such, I withdraw my recommendation to lower the 5/8" residential customer charge to $19.50 at the Company's fully requested increase.

USAGE RATES

RATE ZONE 1

Q. DID YOU DETERMINE THE RESULTING INCREASE TO THE PROPOSED USAGE CHARGE?

A. No. Based on I&E's recommendation regarding the Act 11 subsidy, as well as the adjustments made by I&E witnesses Patel and Okum, it is more likely that the usage rate will be subject to a scale back rather than an increase. Therefore, I did not calculate what the increase would be at the fully proposed increase. I will

discuss my usage rate recommendations for each Rate Zone below (I&E St. No. 4, p. 36).

Q. DID THE COMPANY REFERENCE A CALCULATED INCREASE IN USAGE RATES AS A RESULT OF YOUR CUSTOMER CHARGE ADJUSTMENT?

A. Yes. However, first, those calculations were intended as an example and not as a recommendation. Second, as I discussed above, I am withdrawing my recommended adjustment to the Company's proposed customer charge, therefore, the resulting adjustments to the usage rates no longer apply.

<u>RATE ZONES 2 AND 4 – USAGE RATE</u>

Q. DID YOU AGREE WITH THE COMPANY'S PROPOSAL TO SET RATE ZONE 2 RESIDENTIAL AND COMMERCIAL AND RATE ZONE 4 USAGE RATES EQUAL TO RATE ZONE 1?

A. No. The Company's proposal to set Rate Zone 2 residential and commercial usage rates equal to Rate Zone 1 would result in the bill for an average Rate Zone 2 residential customer to increase by 63.64%, and the average bill for a commercial customer would increase by 64.37%. For residential customers in Rate Zone 2, the proposed percent increase is at least double that of the average residential customers in the other rate zones. For Rate Zone 2 commercial customers, the disparity between the percent increases for the other rate zones, apart from Rate

Zone 4, is even greater than that of the residential customers. (I&E St. No. 4, p. 38).

The Company's proposal to set Rate Zone 4 commercial usage rates equal to Rate Zone 1 would result in the bill for an average Rate Zone 4 commercial customer to increase by 68.56%. This increase is unnecessarily large when compared to the increase proposed for Rate Zone 1 commercial customers. (I&E St. No. 4, p. 40).

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATIONS?

A. Yes. Mr. Rea stated that the Company believes that the increases for Rate Zone 2 and the commercial increases for Rate Zone 4 are not unreasonable given the relative level of rates currently in place and continues to support full integration of Rate Zone 4 into the Company's single-tariff statewide rate (PAWC St. No. 10-R, p. 47).

Q. DID THE OCA ADDRESS YOUR USAGE RATE RECOMMENDATIONS?

A. Yes. Mr. Mierzwa shared my concerns regarding the Company's proposed increases for Rate Zones 2 and 4, however, he disagreed with my usage rate recommendation because they were calculated based on the Company's cost of service study, which he opposes (OCA St. No. 4-R, pp. 3-4).

Q. PLEASE RESPOND TO MR. MIERZWA'S TESTIMONY REGARDING YOUR USAGE RATE RECOMMENDATIONS.

A. I am not taking a position regarding Mr. Mierzwa's proposed adjustments to the Company's cost of service study. However, I do agree that rates should be set based upon the cost of service study ultimately approved by the Commission.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDAITON?

A. No. Despite the Company's belief, imposing such large increases on Rate Zone 2 and commercial Rate Zone 4 customers is unnecessary at this time. I continue to recommend a more moderate increase to the usage rates for these customers as described in my direct testimony.

<u>SCALE BACK OF RATES</u>

Q. WHAT DID YOU RECOMMEND REGARDING A SCALE BACK OF RATES?

A. I recommended that the first step that must be completed in any scale back is to determine the revenue requirements and scale backs of the wastewater operations. I then recommended that any scale back be netted against the subsidy the Commission determines for the WW Operations (I&E St. No. 4, pp. 41-42).

Q. DID THE COMPANY RESPOND TO YOUR SCALE BACK RECOMMENDATION?

A. Yes. Mr. Rea stated that the "Company does not support the position that any scale back in rates be applied to the Act 11 allocation amount first. Instead, Mr. Rea stated that the Company's proposal for scale back is designed such that the same relative percentages to the total of water service revenue requirement, wastewater service revenue requirement, and Act 11 reallocation amounts be maintained at proposed levels and that the levels of rates for water service and wastewater service relative to each other should be maintained as proposed in the event that a lower revenue requirement is approved by the Commission in this case." (PAWC St. No. 10R, pp. 40-41).

Q. DO YOU AGREE WITH THE COMPANY'S RECOMMENDATION?

A. No. Since I&E witness Kubas has proposed adjustments to PAWC's wastewater rates and Act 11 allocation amount, as described in I&E Statements No. 3 and 3-SR, I&E does not agree with the relative percentages to the total of water service revenue requirement, wastewater service revenue requirement, and Act 11 reallocation amounts at proposed levels. Additionally, eliminating the allocation amounts first sets both divisions at their own base revenue requirement which then allows for any further reduction in revenue requirement to be scaled back proportionally based on the approved cost of service study.

WATER OPERATIONS RATE SCALE BACK

Q. DID YOU RECOMMEND THAT THE CUSTOMER CHARGES YOU RECOMMEND BE INCLUDED IN ANY SCALE BACK?

A. Yes. The customer charges that I recommended should be scaled back proportional to the increase granted by the Commission and not adjusted independently as they are in alignment with my recommended customer cost analysis and any reduction in costs will cause a reduction in the customer cost analysis (I&E St. No. 4, p. 43).

Q. WHAT GUIDELINE DID YOU RECOMMEND THE COMPANY SHOULD FOLLOW IN ADJUSTING THE USAGE RATES DESCRIBED ABOVE?

A. I recommended that the usage rates for the Rate Zone 2 residential and commercial and the Rate Zone 4 commercial rate classes not be scaled back as long as they remain lower than the usage rates in Rate Zone 1 (I&E St. No. 4, p. 44).

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION REGARDING THE SCALE BACK OF CUSTOMER CHARGE, USAGE RATES, AND YOUR GUIDELINES REGARDING THE USAGE RATES FOR RATE ZONES 2 AND 4?

A. Yes. Mr. Rea stated that the "Company does not object to my proposal that, in the event that a revenue requirement for water service is approved a levels below the Company's recommended amount, there is a reduction of both usage rates and fixed charges, but that the usage rates for the Rate Zone 2 residential and commercial and

the Rate Zone 4 commercial rate classes not be scaled back as long as they remain lower than the usage rates in Rate Zone 1." (PAWC St. No. 10R, pp. 40).

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Introduction

Q. Please state your name and business address.

A. My name is Christine Maloni Hoover. My business address is 555 Walnut Street, 5th Floor, Harrisburg, PA 17101.

Q. By whom are you employed and in what capacity?

A. I am employed by the Office of Consumer Advocate (OCA) as the Deputy Consumer Advocate.

Q. What is the purpose of your testimony in this case?

A. I have been asked to provide an overview of this case from the consumers' perspective, including a discussion of how Pennsylvania-American Water Company's (PAWC or Company) proposals that, when taken together, result in large bill increases and other harms to its customers. I will also introduce and synthesize the OCA's other witnesses who address the rate requests filed by the Company and provide an overall recommendation.

Q. Have you provided testimony before the Pennsylvania Public Utility Commission?

A. No. My appearances before the Commission have been as an attorney on behalf of the Office of Consumer Advocate.

Q. What are your qualifications to provide this testimony in this case?

A. I have been employed by the OCA since 1987 in increasingly responsible roles as an attorney, then a senior attorney, and now as the Deputy Consumer Advocate. I also served as the Interim Acting Consumer Advocate for slightly more than 6 months from June 2021 through mid-December 2021. I have concentrated my legal career on cases and

public policy issues that have been before the Public Utility Commission (PUC or Commission). I also have been involved in public policy issues at the state and federal level, concentrating on water and wastewater issues. During my career at OCA, I have had increasing responsibilities and have had a role in setting the OCA's policy positions on a wide range of utility issues. In addition, during my career at OCA I have been responsible for supervising the technical staff and the support staff of the office, and responsible for the operations of the office.

During my career, I developed expertise relating to the regulation of public utilities. I have presented many times relating to regulatory issues and have prepared testimony for the legislature. I have participated as a faculty member in educational programs for the Institute of Public Utilities at Michigan State University and presented before the American Water Works Association (AWWA), the Society of Utility and Regulatory Financial Analysts, the National Conference of Regulatory Attorneys, and the Pennsylvania Bar Institute. My complete curriculum vitae is provided as Appendix A.

Q. Do you have any experience that is particularly relevant to the issues in this case?

A. Yes, I do. During my career at OCA, I developed specific expertise in the regulation of water and wastewater issues. In addition to my case work on water and wastewater utilities, including appellate work, I have been involved in several activities that are not tied to specific legal proceedings. I am the OCA's representative on the Department of Environmental Protection's Technical Assistance Center. I have participated on behalf of the National Association of State Utility Consumer Advocates (NASUCA) in negotiations for rulemakings on Stage 2 Disinfection By Products, Total Coliform Rule, and the National Drinking Water Advisory Committee's Small Systems Implementation

Working Group. I was a member and chair of American Water Works Association (AWWA)'s Public Interest Advisory Forum for many years. I also served as a consumer representative on the Water Research Foundation's Public Council. I am a member of, and past chair of, NASUCA's Water Committee.

Q. Have you prepared Exhibits to accompany your testimony?

A. Yes, I have Exhibits CMH-1 through CMH-5 attached to my testimony.

Q. Do you have any other preliminary matters to address?

A. Yes, there are occasions where I may refer to decisions by regulatory agencies, courts, statutes and regulations. This should not be considered a legal opinion as I am not acting as an OCA attorney in this proceeding. Any reference or citation would be related to supporting my opinion about the public policy that I discuss below.

Summary

Q. Please summarize your conclusions and recommendations.

A. I summarize my conclusions and recommendations as follows:

- PAWC should receive no more than $43,733,007 (4.3%) of additional annual revenues on a total company basis. It has not supported its requested $203,945,910 (20.2%) of additional annual revenues;
- PAWC's proposed rate increase is overstated in part due to its high cost of equity in an equity rich capital structure and its unsupported request for a 25 basis point addition to return on equity;

- PAWC's overstated rate of return is applied to a rate base that includes six acquisitions, five of which do not have a Commission order and one that has been appealed to Commonwealth Court;
- PAWC already uses at least four different alternative ratemaking provisions of the Public Utility Code, namely the Fully Projected Future Test Year, the shift of wastewater revenue deficiency to water customers, the use of fair market value for municipal acquisitions, and the Distribution System Improvement Charge that shift risk to its customers and provide higher returns to its investors. 66 Pa. C.S. §§ 315(e), 1311(c), 1329, 1350-1360. The impact of all four of these provisions is to move the rate setting away from cost of service.
- PAWC is requesting approval of two additional alternative ratemaking mechanisms in this proceeding:
    - The Revenue Decoupling Mechanism (RDM) will shift risk from its investors to its customers and will send improper price signals to its customers.
    - The Environmental Compliance Investment Charge (ECIC) would permit quarterly rate increases between rate cases to collect capital expenditures, and operations and maintenance expenses to provide service that complies with environmental regulations.

  Both alternative ratemaking mechanisms fail to meet the requirements under Section 1330 of the Public Utility Code, violate sound ratemaking principles, and pose a risk to the consumers of unknown rate increases outside of the rate case process.
- PAWC proposes to shift 94% of the wastewater revenue deficiency , or $71 million, to its water customers. This represents 27% of the total wastewater cost of service.
- PAWC's ten acquisitions with ratemaking rate base valued under Section 1329 have added a cumulative annual revenue deficiency of $44,645,164, calculated before any

capital expenditures were added. It proposes the addition of two proposed acquisitions with ratemaking rate base valued using Section 1329 that would add revenue deficiencies of $28,222,944 to this case.

- PAWC's winter averaging proposal for wastewater customer should be rejected because PAWC has not justified it and it disproportionately harms low-income customers;
- PAWC's proposes a small expansion to its bill discount program, however, it continues to propose recovery only from residential customers.
- PAWC's customer service has not shown improvement, including the lack of specific monthly and annual call center performance standards, improvement of its analysis of customer complaints, reform of Pennsylvania-specific training, along with evaluation of its third party contractors, additional customer education, and reforms in its implementation of termination of water service to its customers on behalf of non-Company sewer service providers.
- PAWC's pressure and pressure surveys need to be improved as does its customer complaint log.
- PAWC likely has water customers in all the 36 counties it serves who are struggling to pay utility bills because of the large burden of their current utility bills; in 18 of those 36 counties, the median household income is between the federal poverty income guidelines but below the ALICE (Asset Limited, Income Constrained, Employed) household survival budget for a family of four. Similarly, for the 18 counties in which PAWC provides wastewater service, there are six counties where the median household income is below the ALICE household survival budget.

- PAWC's third rate case in four years seeks to increase rates that many customers are struggling to pay. PAWC filed this case 8 months after its last rate increase went into effect which means that rates will have increased every year between 2021-2024.
- The Commission can choose to adopt the OCA's recommendations that reflect the consumers' interests and still ensure that PAWC has sufficient ability to attract capital and the opportunity to earn a fair rate of return. The Commission's adoptions of the OCA's recommendations in this case would comport with the regulatory compact.

Overview of this Case

Q. Please provide your general understanding of PAWC's proposed revenue increase in this case.

A. PAWC has proposed to increase its revenues in August 2024 by $203.9 million (20.2%).[1] The proposed increase would take effect approximately eighteen months after its most recent rate increase of approximately $138 million.

PAWC provided rate case notices to its customers, but these notices very likely significantly underestimate the impact that many consumers will experience because the notices use only what PAWC considered a "typical" residential customer usage level of 3,201 gallons of water per month. Increases for a residential bill based on 3,201 gallons of water per month, by zone, are reflected below and range from 20.1% to 63.6%.[2]

[1] PAWC Vol. 1, Statement of Reasons, p. 1.
[2] Rate Zone 3 – SLIBCO would see a 10% decrease under PAWC's proposal. There are no residential customers in Rate Zone 3, so I have excluded that from the range of increases.

Water Bills for Residential Customers Based on 3,201 gallons per month usage					
Current Rate Zone	Service Area	Present Rate	Proposed Rate	$ Increase	% Increase
1	All except as designated	$70.65	$88.24	$17.59	24.9%
2	Valley Township	$53.92	$88.24	$34.32	63.6%
3	SLIBCO*	$488.47	$439.77	-$48.70	-10.0%
4	Turbotville Borough	$70.65	$88.24	$17.59	24.9%
5	Borough of Steelton and portions of Swatara Township	$70.65	$88.24	$17.59	24.9%
n/a	Lower Providence Township (formerly Audubon Water Company)	$44.39	$53.32	$8.93	20.1%
n/a	Farmington Township	$67.50	$88.24	$20.74	30.7%
*There are only commercial customers in the SLIBCO service area currently, but the rate schedule applies to residential customers should they come into existence.					

The impact on individual customers varies by their water usage. By using 3,201 gallons per month, PAWC's notice has underestimated the impact of the proposed rate increase for many customers.

PAWC proposes that $199.2 million of the total increase of $203.7 would be collected from water operations and $4.7 million from wastewater operations. This is even though the increased wastewater cost of service is equal to $75.8 million per year. Thus, PAWC's proposal reflects a shift of approximately 94% of the wastewater revenue increase to its water customers and 27% of the total wastewater revenue requirement. OCA St. 4, Table 2. PAWC currently has more than nine times as many water customers as wastewater customers. Further, there are several PAWC wastewater systems whose customers do not purchase their water from PAWC.

Instead of accurately reflecting a cost of service based increase of $75.8 million that are contained in its schedules, PAWC's notices to its wastewater customers reflect what the resulting rates would be if PAWC's proposed shift of approximately 94% of the

wastewater deficiency is adopted by the Commission. In my view, this presents an inaccurate and unrealistic picture for wastewater customers as it is not very likely that the PUC will shift such a large percentage.

The impact on wastewater customers also reflects PAWC's proposed shift and the winter averaging proposal and other agreements it has entered into with acquired systems is shown below.

Wastewater
Bills for Residential Customers
Based on 3,122 gallons per month usage

Current Rate Zone	Service Area	Present Rate	Proposed Rate	$ Increase	% Increase
1	All except as designated	$105.18	$100.08	-$5.10	-4.8%
2	New Cumberland Borough	$91.77	$100.08	$8.31	9.1%
3	City of Scranton and Borough of Dunmore	$95.78	$95.78	$0.00	0%
4	Kane Borough	$106.70	$109.76	$3.06	2.9%
5	Valley Township	$105.18	$100.08	-$5.10	-4.8%
6	City of McKeesport	$105.18	$109.76	$4.58	4.4%
7	York County (portions)* (formerly York City Sewer Authority)	$28.82	$63.78	$34.96	121.3%
8	Foster Township**	$85.92	$100.00	$14.08	16.4%
9	Royersford Borough	$49.68	$64.18	$14.50	29.2%
n/a	Farmington Township	$53.50	$62.15	$8.65	16.2%
n/a	Butler Area Sewer Authority (BASA)***	$45.99	$74.25	$28.26	61.4%

*Company is requesting that the current York wastewater rates not increase until May 27, 2025, consistent with PAWC's agreement to freeze rates until then.

**Company is requesting that the current Foster wastewater rates not increase until January 1, 2025, consistent with the PAWC's agreement to freeze rates until then.

***Company is requesting that the current BASA wastewater rates not increase until one year from the acquisition closing or January 1, 2025, whichever is later, consistent with PAWC's agreement with BASA.

In addition to seeking an inflated rate base based on acquisitions that are not yet final, as outlined below, PAWC seeks a 10.95% return on equity which results in overall rates of return of 8.22% for water operations and 7.94% for wastewater operations using capital structures that are equity rich and inconsistent with both an appropriate proxy group and its parent company's capital structure.

PAWC has proposed two alternative ratemaking mechanisms that shift the risk of not meeting PAWC's authorized revenue target from the company to its customers. Specifically, they seek a Revenue Decoupling Mechanism (RDM) that would guarantee that PAWC meets its revenue targets by allowing the Company to adjust rates between bae rate cases without Commission review or approval and an Environmental Compliance Investment Charge (ECIC). The ECIC would recover the capital costs and expenses incurred to address and comply with new or changed federal or state environmental mandates for projects that are not eligible for recovery under the existing Distribution System Improvement Charge (DSIC).

PAWC proposes a new wastewater rate design where a wastewater customer's monthly bill during the summer months will be based on the customer's average winter consumption rather than the customer's actual water consumption during the summer months. The Company states that the purpose of this proposed change is to accommodate customers that have a high seasonal outdoor water usage where such water usage does not get collected in the wastewater system, e.g., filling a swimming pool or watering a lawn.

PAWC is proposing deferred accounting treatment for several expenses, including pension and OPEB expenses, and production costs that change between rate cases.

The only enhancement to customer service proposed by PAWC is a small, proposed expansion to its bill discount programs that it proposes to collect those costs only from residential customers.

Finally, PAWC has also included six acquisitions to its already large ratebase. Five of those acquisitions are pending before the Commission but have no final order and one application has a final order but was appealed by two parties to Commonwealth Court. Despite not receiving Commission approval, PAWC has included the rate base, O&M, and return costs in its requested revenue requirement. In addition, some of the cost of service related to these proposed acquisitions is proposed to be shifted to water customers pursuant to PAWC's Section 1311(c) shift. As outlined more fully by OCA witness Ralph Smith, PAWC has not met its burden of proof regarding the six acquisitions: one that is on appeal and has not closed and the five that do not yet have a final order (and it cannot be presumed that the final order will approve the proposed acquisition).

Q. Is the OCA opposing these proposals?

A. Yes. As I describe below, the OCA has six witnesses addressing each of these proposals along with the Company's claims for rate base, cash working capital, operations and maintenance expense claims, rate of return, cost of service and rate design, bill discount programs, customer service, management performance, and PAWC's water and wastewater operations. PAWC's proposals represent what it and its investors want: limited risk, but with a return on equity that does not reflect that limited risk. PAWC's proposals shift risk to its customers by requiring the customers to pay rates that ensure that:

- PAWC collects the revenue authorized in this proceeding by raising customers rates even if usage by its customers is lower through its RDM;
- PAWC recovers capital and O&M **between** rate cases for nearly everything that is not already included in its fully projected future test year and not included in the DSIC through its ECIC;
- PAWC is awarded high returns on equity despite the lack of support, the large portion of PAWC's rate base that is based on fair market value, and the ratemaking proposals that will reduce its risk.

In addition to the new alternative ratemaking claims made in this case, there are existing alternative ratemaking provisions built into PAWC's existing and proposed revenue requirements, such as the DSIC, the fully projected future test year ending June 30, 2025, Section 1329, and Section 1311(c). 66 Pa. C.S. §§ 315, 1311(c), 1329, 1350-1360. PAWC's proposed alternative ratemaking claims would be layered on top of those existing mechanisms.

Setting a revenue requirement that is based on layer upon layer of alternative ratemaking that reduces risk to the utility and its investors, without recognition that all these proposals burden ratepayers and undermine the regulatory compact is neither reasonable nor necessary.

Q. Are there others opposed to the Company's proposed increases?

A. In addition to the formal parties represented by counsel, there have been approximately 149 different formal complainants who filed complaints at the Commission.[3] Also, as of January 16, 2024, the OCA has reviewed approximately 535 informal complaints sent to the Commission. The formal and informal complaints raise general complaints about the rate increase, question the size of the rate increase, affordability of bills, and the taste, odor and hardness of water in certain areas.

Q. Does the public have an opportunity to comment on the rate proposals?

A. Yes. There will be twelve public input hearings held between January 29 and February 7, 2024.

Q. **Are you addressing testimony from the public input hearings?**

A. Not at this time. Six public input hearings were held the week that the other parties' direct testimony is due and six will be held the week after. OCA will address the public input testimony in Supplemental Direct Testimony that will be served on February 13, 2024.

Financial Demographic Information For PAWC's Service Territory

Q. What information do you have that will assist the Commission in understanding the impact of the proposed rate increases on PAWC's customers?

A. I will provide information about the financial demographics for the counties in which PAWC provides service and the bill burden for the counties served by PAWC and show how PAWC's proposed bills compare to their customers' bills for electric and natural gas service, to reflect the full burden customers face for their fixed utilities.

[3] The Commission has docketed 286 formal complaints because some complaints are docketed at both the water and wastewater dockets.

Q. In this information in addition to that provided by other OCA witnesses?

A. Yes. OCA witness Roger Colton (OCA Statement 5) provides testimony regarding the impacts of PAWC's proposal on low income customers. This information is critical as the adverse impact of PAWC's proposals on low-income customers cannot be emphasized enough as Mr. Colton explains in his testimony. However, low income customers are not the only ones struggling and the impact of PAWC's proposals on customers who are not at or below the federal poverty income thresholds but may be struggling to cover their bills, rent, and other costs should be considered as well.

PAWC serves water customers in portions of 36 counties across the Commonwealth. Using United States Census data, of those 36 counties, Fayette County has the lowest median household income ($55,579) and the highest percentage of persons in poverty (17.2%). Exhibit CMH-1.

PAWC provides wastewater service in portions of 18 counties across the Commonwealth. Of those 18 counties, McKean County has the lowest median household income ($57,861) and the highest percentage of persons in poverty (15.4%). Exhibit CMH-2.

Q. What other information is useful in looking at the impact on customers in Fayette County who are above the FPL income levels but may struggle to pay their household bills, including utilities?

A. There is county-level and statewide data provided by United for ALICE[4] through the ALICE (Asset Limited, Income Constrained, Employed) Report for Pennsylvania. In the 2023 report, using data from 2021, in Pennsylvania, a family of four would need an annual income of $65,796 to cover the essentials needed to live and work, pay rent, and pay utilities.[5] Exhibit CMH-3 (Excerpts). ALICE estimates utility bills for Pennsylvania of $292 per month for a family of four. *Id.*

Using the ALICE household survival budget of $65,796 for a family of four in Pennsylvania and reviewing the median household income of the 36 counties where PAWC provides water service, there are eighteen counties where the median household income for the county would be below the ALICE household survival budget for a family of four. Those counties are highlighted in yellow on Exhibit CMH-1.

Looking at the ALICE data specifically for Fayette County, which has the lowest median income and the highest poverty level for the 36 counties served by PAWC Water shows there are 55,986 households in Fayette County. The 2021 ALICE data shows that Fayette County had 32% of its households (approximately 17,886 households) that would be at or below the household survival budget or "ALICE households".[6]

[4] An overview of United for Alice is available at https://www.unitedforalice.org/overview. While Mr. Colton in his testimony also uses the Self-Sufficiency Standard these two measures are substantially similar.

[5] https://www.unitedforalice.org/state-reports-mobile

[6] https://www.unitedforalice.org/county-reports/pennsylvania

Q. What about the 17 other counties served by PAWC that are above the FPL but below the ALICE survival budget?

A. Those counties have similar data for ALICE households ranging from 25% of households in Lackawanna County to 37% in Wayne County. Exhibit CMH-1, Col. G.

Q. Is similar data available for PAWC's wastewater service territory and the level of poverty in those areas?

A. Yes, as I described above. Using the annual income level of $65,796 (ALICE household survival budget for a family of four in Pennsylvania) and reviewing the median household income of the 18 counties where PAWC provides wastewater service, shows a total of six counties where the median household income for the county would be below the ALICE household survival budget. Those counties are highlighted in yellow on Exhibit CMH-2.

Looking at the ALICE data for McKean County, which has the lowest median income and the highest poverty level for the 18 counties served by PAWC Wastewater there are 40,652 households in McKean County. In the 2021 data, ALICE shows that McKean County had 31% of its households (approximately 12,602 households) that would be at or below the annual income level ALICE households.[7]

[7] https://www.unitedforalice.org/county-reports/pennsylvania

Q. What about the 5 other counties served by PAWC Wastewater that are above the FPL but below the ALICE survival budget?

A. Those counties have similar data for ALICE households ranging from 25% in Lackawanna County to 34% in Northumberland County. Exhibit CMH-2, Col. G.

Q. What information does ALICE have about utilities as part of a household's budget?

On a statewide level, the ALICE Household Survival Budget assumes a family of four in Pennsylvania will spend $292 dollars per month on utilities (as of 2021, the most recent data available). An example of what that might mean for a PAWC customer in one of the counties where the median household income is below the ALICE household survival budget is helpful to understand what customers are facing now, *before any rate increases go into effect*. The table below shows the cumulative utility burden for a PAWC Rate Zone 1 water and wastewater customer using 3,201 gallons of water per month, including electric and natural gas service. I used McKean, and Luzerne Counties[8] as examples to show what that customer currently pays and would pay using PAWC's proposed rates, for their utilities. The usage used in the current PAWC rate case notices would likely understate the bills for a 4-person household.

[8] PAWC provides water and wastewater service in these counties. These examples provides information about two counties in separate geographic areas with different electric and natural gas utilities.

Utility providers-McKean County	Current Bill	Proposed Bill
PAWC Water Rate Zone 1[9]	$70.65	$88.24
PAWC Wastewater Rate Zone 1	$105.18	$100.08
Pennsylvania Electric Co.[10]	$138.86	$138.86
National Fuel Gas Distribution Corp.	$108.36	$108.36
Columbia Gas of PA	$148.96	$148.96
Total Monthly Utilities for a customer of National Fuel Gas Distribution Corp.	$423.05	$435.54
Total Monthly Utilities for a customer of Columbia Gas of PA	$463.65	$476.14

Utility providers-Luzerne County	Current Bill	Proposed Bill
PAWC Water Rate Zone 1	$70.65	$88.24
PAWC Wastewater Rate Zone 1	$105.18	$100.08
UGI Electric Company	$190.43	$190.43
UGI Gas Company	$124.49	$124.49
PPL	$199.85	$199.85
Total Monthly Utilities for a customer of UGI Electric	$490.75	$503.24
Total Monthly Utilities for a customer of PPL	$500.17	$512.66

Q. What does this information show?

A. For many customers, whether an ALICE household or not, the **current** utility bills at a "typical" level far exceed the amount estimated by ALICE for the cost of utilities for a household of four in Pennsylvania and is even higher using the proposed water and wastewater bills, even if PAWC's reduced Zone 1 wastewater rates are adopted. It is likely that many of PAWC's water and wastewater customers are struggling to meet their

[9] The current rates are based on the rate case notices that PAWC provided to its customers. PAWC Vol. 1.
[10] The rates for the electric and natural gas companies are from the Commission's Rate Comparison Report dated April 15, 2023 at page 6. https://www.puc.pa.gov/media/2364/23_rate-comparison-report_final.pdf.

household bills, including their current water and wastewater bills yet do not qualify for PAWC's bill discount programs that Mr. Colton addresses in his testimony.

Q. Why are you raising these concerns in this case?

A. This case represents PAWC's third case in four years. It has received base rate increases in February 2021, February 2022, and January 2023. Looking at the rate cases filed since 2020, base rates for PAWC customers have increased each year since 2021 and PAWC proposes to increase the rates again in 2024. The three rate increases over the last four years are not insignificant as can be seen below.

In the five rate cases prior to 2021, PAWC increased rates in November 2007, November 2009, November 2011, December 2013, and December 2017. As shown in the chart below, over the longer period, 2007-2023, the revenue requirement increases were substantial. Importantly, the impact on customers' bills often is well more than the percentage increase in revenues.

PAWC Rate Increase History

Year	Effective date	Docket Number	Increase Requested	Increase Allowed	Bill Increase				Noticed Usage
					Water		Wastewater		
2007	Nov. 2007	R-00072229	$ 59,236,366	$ 36,000,000	9.3%				4,500
2009	Nov. 2009	R-2009-2097323	$ 58,062,930	$ 30,750,000	7.35%				4,200
2011	Nov. 2011	R-2011-2232243	$ 70,676,379	$ 36,000,000	6.30%				4,150
2013	Dec. 2013	R-2013-2355276	$ 58,600,000	$ 26,000,000	5.58%		Clarion 36.9%	Others 0%-(36%)	3,960
2017	Jan. 2018	R-2017-2595853	$107,900,000	$ 61,850,000	9.38%		13.90%		3,630
2020	Jan. 2021 Jan. 2022	R-2020-3019369 R-2020-3019371	$138,600,000	$ 70,500,000	7.00%	1.40%	12.50%	15.40%	3,201
2022	Jan. 2023	R-2022-3031672 R-2022-3031673	$173,200,000	$138,000,002	14.50%		39.10%		3,212

Q. Considering these concerns about the financial demographics of some of those living in PAWC's service territory and may be customers of PAWC, and the multiple increases in bills over the last 16 years, what is your concern about PAWC's proposals in these rate cases?

A. Coming on the heels of the rate increases from 2021-2024, the concerns about rising utility costs are magnified. In this case, PAWC has added a multitude of alternative ratemaking requests on top of what it already has. I will discuss each of these briefly below while OCA's other witnesses address these requests in detail. It is my opinion that PAWC's requests inappropriately shifts risk to ratepayers and deviates from the regulatory compact that should govern monopolistic necessities such as water and wastewater service. I urge the Commission to fully consider the interests of these customers and all customers of PAWC in reaching its determinations on PAWC's multitude of requests, including a 25 basis point management adder, the overstated rate of return on equity, the overall return, the inclusion of acquisitions that have not even made it through the Commission process and closed, the alternative ratemaking claims including RMD and ECIC, cost of service, rate design, and the proposed Section 1311shift that all impact the bills that the customers pay. Keeping the rates as low as reasonably possible while ensuring that the service is consistent with the obligations under Section 1501 should be the outcome of this case.

Purpose of this and all Rate Cases

Q. What is your understanding of the purpose of this proceeding?

A. As I understand it, the purpose of this case is to determine the "just and reasonable" rates for PAWC under Chapter 13, and other provisions, of the Public Utility Code. In this

section of my testimony, I will address the regulatory compact and related legal and policy concepts. This foundation is necessary because when put into proper context it is evident that PAWC's specific claims and proposals as filed, would produce unjust and unreasonable rates and, when taken together, would result in larger bills than necessary to maintain service obligations and would substantially harm PAWC's customers.

The Regulatory Compact

Q: What is the purpose of this section of your testimony?

A: The purpose of this section of my testimony is to explain the regulatory compact and the economics and legal principles that underlie and support it.

Q: What is the regulatory compact?

A: The regulatory compact is a public policy concept that fundamentally recognizes that public utility companies such as PAWC are natural monopolists, and that in return for the public utility company being granted an exclusive franchise to operate in a specific service territory without rival, the public utility company in turn has the duty to provide service to all customers under certain governmental direction and oversight as to rates and service quality, subject to due process constraints.

Q: Is the regulatory compact unique to the Commonwealth of Pennsylvania?

A: No. As a public policy concept, the regulatory compact is not unique to the Commonwealth of Pennsylvania. It is the public policy concept that underlies the state regulatory frameworks which exist across the country governing the rights and responsibilities of public utility companies.

Q: Please explain the state's authority to regulate public utilities.

A: Foundationally, the state's authority to regulate public utilities stems from the state's police powers, which is a term that refers to the broad governmental regulatory power to enact laws to regulate behaviors to protect and improve the health, safety, and general welfare of the state's citizenry.

Q: Can you explain the Pennsylvania statutory framework?

A: The Pennsylvania General Assembly has sought to protect consumers from the effects of natural monopoly power by enacting the Public Utility Code and granting the Commission comprehensive authority to oversee and regulate a public utility's service, rates, certificates of public convenience (service territory, entry into the public utility business, abandonment of utility service), and dealings with affiliated interests.

Q. How does the regulatory compact work in the Pennsylvania statutory framework?

A. The regulatory compact in Pennsylvania, as set forth in the Public Utility Code, permits the Commission to grant a public utility company the legal privilege to exclusively serve in a defined service area, and in turn, the public utility is obligated within that area to provide consumers adequate, efficient, safe, and reasonable utility service and to maintain adequate, efficient, safe, and reasonable utility facilities at rates that are just and reasonable and not unreasonably discriminatory.

Q: What statutory authority and discretion does the Commission have to enforce the regulatory compact?

A: To enforce a certificated public utility company's statutory responsibility, the General Assembly has given the Commission the statutory authority and discretion to use a combination of incentives and deterrents.

Q: What do you mean by deterrents?

A: A deterrent is a tool that the Commission can use to force a public utility company's compliance with statutory and regulatory obligations. In theory, the effectiveness of any deterrent cannot be measured by the frequency with which it is used by the Commission. Rather, the severity of the punishment and likelihood, or degree of certainty, of getting caught for non-compliance can have a deterrent effect.

Q: Can you provide examples of deterrents?

A: Yes. For example, the Commission has the authority to reject a rate increase request in whole or in part due to inadequate quality or quantity of service. 66 Pa. C.S. § 526. The Commission is required to consider the "efficiency, effectiveness and quality of service of each utility when determining just and reasonable rates." 66 Pa. C.S. § 523. It also has the authority to require a utility to prove that its existing rates are just and reasonable and to fix just and reasonable rates upon its own investigation or upon complaint and order refunds (66 Pa C.S. §§ 1309(a), 315(a), 1312). These examples are merely illustrative, not exhaustive.

Q: What do you mean by incentives?

A: Incentive regulation is a tool that the Commission can use to motivate a public utility company's compliance with its statutory and regulatory obligations. In terms of incentive

regulation, the Public Utility Code gives the Commission the power and discretion to, after notice and hearing, approve any of the following:

- Deferred regulatory accounting treatment to recover certain costs;
- use of Future Test Year or Fully Projected Future Test Year for setting rates to reduce regulatory lag between plant investment and recovery; (§ 315(e))
- inclusion in rate base amounts paid in excess of original cost less depreciation in acquisition of troubled water or wastewater systems; (§ 1327)
- use of a rate base value that exceeds original cost less depreciation for ratemaking purposes in acquisitions of municipal water or wastewater systems; (§1329)
- alternative ratemaking; (§ 1330)
- adjustment to the return on equity in recognition of a public utility's "efficiency, effectiveness and adequacy of service." (§ 523).

Traditional Cost-of-Service Ratemaking and the Regulatory Compact in Pennsylvania

Q: Does traditional cost-of-service ratemaking support the regulatory compact in Pennsylvania?

A: Yes. Traditional cost-of-service ratemaking is a longstanding support to the regulatory compact in Pennsylvania. Cost-of-service ratemaking involves a set of well-established methodologies, norms, and standards for analyzing and determining a utility's cost of providing service and setting just and reasonable rates. Foundationally, under cost-of-service ratemaking, a utility's rates are based on costs either experienced or projected in a test year, including the utility's prudent and necessary expenses, used and useful plant investment, reasonable debt financing costs, and no more than a reasonable profit sufficient to keep a private company in the public utility business. A private company that wishes to be in the public utility business and wishes to earn a return on equity should be fully knowledgeable of the governmental interest in the utility's provision and maintenance of adequate, efficient, safe, and reasonable utility service and facilities as are necessary or proper for the accommodation, convenience, and safety of consumers and the public. This means that these companies are subject to significant oversight to

restrain the power of their monopoly to ensure that they do not charge rates for services that are excessive. The regulatory power of the Commission is a check on this excess and cost-of-service ratemaking supports the regulatory compact.

Q: Does traditional cost-of-service ratemaking benefit consumers and public utility companies?

A: Yes. Traditional cost-of-service ratemaking should benefit both consumers and public utility companies.

Q: Please explain.

A: As I explained above, there is no competition in the public utility industry since the industry is a natural monopoly. Traditional cost-of-service ratemaking serves as a substitute for the beneficial effects of competition by setting rates on a prospective basis. Because the utility can recover its authorized costs (or authorized revenue requirement) on a prospective basis, the utility is given the opportunity to recover its authorized profit, but such recovery *is not* guaranteed – just as recovery of costs and profits are not guaranteed in a competitive marketplace. To fully recover the authorized costs and return on equity, once rates are set, the utility must go forward and operate efficiently and control its costs and pace of growth, if any. All of this must be done while providing and maintaining adequate, efficient, safe, and reasonable service and facilities.

Q: What is the most beneficial aspect of traditional cost-of-service ratemaking for consumers?

A: The most beneficial aspect of traditional cost-of-service ratemaking is the lack of guaranteed recovery for the utility while the utility remains obligated to provide and maintain adequate, efficient, safe, and reasonable service and facilities. This means that

the public utility company faces the risk of under recovery due to normal business risks and management underperformance if it fails to control costs or if it asks for rates to be set based on inaccurate sales projections. Under traditional ratemaking, the utility – not its guaranteed consumer base – bears the risk of recovery until it files for another base rate increase and reflect the increased costs or decreased sales in new prospective rates granted by the Commission after a record is developed by parties to that case.

Q: Why is it beneficial for consumers that the risk of recovery be placed with the public utility company?

A: Placing the risk of recovery of authorized costs (or authorized revenue requirement) on the public utility company creates an incentive for the utility's management to manage its normal business risks and perform its service duties efficiently – just as competition would place similar pressure on performance in a competitive marketplace when firms compete for consumers and sales. The utility also faces normal business risks impacting recovery in between rate cases, such as weather, recessions, changing technologies, and other sources of sales fluctuations. Indeed, the utility management is faced with having to operate efficiently, control costs, and achieve growth at a sustainable pace. While the utility is and should be given the opportunity to earn its authorized return on equity to remain financially stable based on efficient management performance, the lack of guaranteed recovery protects consumers from having to overpay for a utility management's underperformance.

Q. Given this background information, what concerns do you have about how PAWC seeks to have rate set in this case?

A. PAWC seeks to move even farther away from this paradigm in several significant ways building on years of the entire utility industry seeking to shift risk from where it belongs – on the utility – to where it does not – on consumers. I want to emphasize that almost all the parties presenting testimony will quote the same seminal cases about rate setting, but it is in the decision-making process by the utility in planning for their rate case and making choices about what to pursue and by the Commission in its regulatory oversight that the consideration of the consumers' interests often falls away.

As a rule, a public utility, with facilities and assets dedicated to public service, is entitled to **no more than** a reasonable opportunity to earn a fair rate of return on its investment. The United States Supreme Court established the standard by which to evaluate what is a fair rate of return in *Bluefield Waterworks & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923) (*Bluefield*):

> The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to raise the money necessary for the proper discharge of public duties.

Bluefield at 693.

Twenty-one years later, the United States Supreme Court reviewed the issue of fair rate of return in *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591 (1944) (*Hope*). In *Hope*, the Court held that a fair rate of return "should be commensurate with returns on investments in other enterprises having corresponding risks" while being sufficient "to assure confidence in the financial integrity of the enterprise, so as to

maintain its credit and attract capital." *Hope* at 603. This attraction of capital quote is used frequently to support rate of return requests. The Court also noted, however, that:

> The rate-making process under the Act, i.e., the fixing of 'just and reasonable' rates, involves a **balancing of the investor and consumer interests** and does not insure that the business shall produce revenues.

Id. (emphasis added). The Supreme Court added that **consumers are obliged to rely upon regulatory commissions to protect them from excessive rates and charges.** *See Permian Basin Area Rate Cases*, 390 U.S. 747, 794-95 (1968) (*Permian Basin*) (citing *Atlantic Refining Co. v. Public Serv. Comm'n,* 360 U.S. 378, 388 (1981)).

Protecting consumers from excessive rates and charges is part of the setting of just and reasonable rates. The legal arguments often focus on the investors and utility's interests. The ability of the utility to attract capital is but one part of the rate setting process, not the only criterion. Consumers' interests are often overlooked in both the nuts and bolts and the big picture of rate setting. If the test of the overall rates is confined to the utility's interests, then it is not a reasonable process. Moreover, in Pennsylvania, the statute that created the OCA also created obligations on the Commission to consider the consumer interests. Specifically, it requires that:

> Section 905-A. Duties of the Commission. -- In dealing with any proposed action which may substantially affect the interest of consumers, including but not limited to a proposed change of rates and the adoption of rules, regulations, guidelines, orders, standards or final policy decisions, the commission shall:
>
> . . .
>
> (2) Consistent with its other statutory responsibilities, take such action with due consideration to the interest of consumers.

71 Pa. Stat. Ann. §309-5.

Thus, the fact that consumer interest must be considered in the assessment of whether rates are just and reasonable is a well-founded concept in both the regulatory compact as established in case law and in Pennsylvania statutory authority. Often, in setting just and reasonable rates, regulators, parties, and the courts refer to a zone of reasonableness. *Permian Basin*, 390 U.S. at 797. Within that zone of reasonableness, the interests of consumers and investors should overlap. There may be circumstances where the rates are outside of a normal range of reasonableness, but the regulators must still fairly balance the interests of all parties.[11] Thus, as outlined above, while the focus of the rate case is usually on the investors' needs, missing from the focus is defining the consumers' needs. While the need to attract capital is important, it is not paramount and in no way is it superior to the needs of consumers.

In this case, the OCA seeks to present a clear focus on the needs of consumers to safe and reliable drinking water and wastewater at just and reasonable rates that they can afford. The OCA's witnesses' testimony contains the customary adjustments to the components of PAWC's rate filings as well as analysis of a reasonable rate of return, rate design, and customer service. The OCA is focused on providing evidence of the consumers' needs too. In plain language, PAWC's rates are already too high for many consumers. The case presented by PAWC in so many ways adds insult to injury because it is driven by multiple layers of excessive and overreaching claims such as, by way of example, the request by the Company to include in rate base acquisitions that have not yet occurred. On top of those and other aspirational ratemaking claims, the Company is

[11]For example, *in Market Street Railway Co. v. Railroad Commission*, 324 U.S. 548, 566 (1945) the Court refused to overturn a rate reduction for a failing street railway company noting that *Hope* recognized that "regulation does not assure that the regulated business make a profit.

asking for approval now of future unknown rate increases due to the alternative ratemaking proposals for revenue decoupling and capital surcharge recovery. None of this is in the public interest and all of it deviates significantly from the regulatory compact as outlined above.

Incentive Regulation, Alternative Ratemaking, and the Regulatory Compact in Pennsylvania

Q. You referenced traditional ratemaking. Is that what is in place in Pennsylvania?

A. Not in the strictest sense. There have been modifications to the Public Utility Code that have introduced alternative ratemaking. I will discuss four major changes that were made to the Public Utility Code, between 2012 and 2016 that established several alternative ratemaking provisions. These modifications preceded Act 58 of 2018 which added Section 1330, Alternative Ratemaking to the Public Utility Code, which I discuss after this section.[12]

Q: What are the four major changes that you are discussing here?

A: The four major changes are: (1) the Distribution System Improvement Charge (DSIC); (2) the Fully Projected Future Test Year (FPFTY); (3) the addition of Section 1329 that permits fair market valuation for municipal acquisitions; and (4) the addition of Section 1311(c) that permits the Commission to approve the shift of wastewater revenue deficiencies to water customers if it is in the "public interest". Each of these individually is a departure from traditional ratemaking and when layered together as PAWC has done,

[12] In the *Implementation of Act 58 of 2018 Alternative Ratemaking for Utilities*, Implementation Order at Docket No. M-2018-3003269, entered April 25, 2019 (*Act 58 Implementation Order*), the Commission found that "utilities have always had the ability to propose, and the Commission has had the ability to approve, alternative rates or rate mechanisms….". Order at 33 (footnote omitted).

they significantly shift the risk of uncertainties from the public utility to captive consumers who have no choice but to purchase water and wastewater from PAWC due to its monopoly status. As such, they require far more exacting scrutiny from the Commission in a rate case than under principles of traditional ratemaking.

Distribution System Improvement Charge (DSIC)

Q. Briefly explain the DSIC and how it is different from traditional ratemaking?

In Act 11 of 2012, the legislature added new DSIC provisions that permitted a DSIC for electric, natural gas, and wastewater utilities and replaced the existing DSIC provisions for water utilities. 66 Pa. C.S. §§ 1350-1360. A DSIC had been in place for water utilities via a Commission Order followed by an amendment to the Public Utility Code (66 Pa. C.S. § 1307(g)).[13] Traditional ratemaking rate cases used a test year period that provided a snapshot of the components that make up the revenue requirement formula including utility plant in service, depreciation, revenues, operation and maintenance expenses, cost rates of debt and equity, taxes, and there was no provision for the recovery of capital in between rate cases. The DSIC when first implemented for water utilities and again when expanded for electric, natural gas, and wastewater utilities provided for capital recovery in between rate cases and on a quarterly basis to reduce lag was seen as an exception to the traditional ratemaking The DSIC permitted capital recovery and return in between rate cases for eligible capital.

Q: Why is it your opinion that the DSIC was an exception to traditional ratemaking?

[13] Initially, by order entered on August 26, 1996, the Commission approved a Petition filed by PAWC seeking to establish a Distribution System Improvement Charge under Section 1307(a), at Docket No. P-00961931.

A: Because when I look at the provisions of the Public Utility Code governing DSIC and LTIIP, at 66 Pa. C.S. §§ 1350-1360, these provisions provide a good illustration of alternative ratemaking that carry out the policy objective of to *enhance the safety, security, reliability, or availability of utility infrastructure*.

The DSIC is an alternative ratemaking mechanism because it transfers the risk of recovery of the utility's capital costs and depreciation expense, subject to a cap, related to the utility's investment in underground mains, lines, and the like. By enabling the utility to recover these costs through a surcharge on customers' bills that is updated quarterly and in between base rate cases, the utility need not wait nor carry these costs until it can reflect these capital costs in new rates granted by the Commission in the next base rate case. Thus, the DSIC accelerates the utility's cost recovery of new plant investment in underground mains and lines and related appurtenances. This may make sense when it is tied to the accelerated replacement of aging infrastructure that otherwise would have taken longer under traditional ratemaking. If properly implemented and overseen by the Commission, a DSIC can provide public benefit because of its nexus to safety, security and reliability. That is, it is not designed to be growth for growth's sake between rate cases.

Fully Projected Future Test Year (FPFTY)

Q. Why do you characterize the FPFTY as a departure from traditional ratemaking?

A. The use of a fully projected future test year was added to the Public Utility Code in Act 11 of 2012 by amending Section 315. 66 Pa. C.S. § 315. Prior to the 2012 amendment,

utilities filing a base rate case could use a historic test year or a future test year.[14] The fully projected future test year that is defined as the 12-month period beginning with the first month that the new rates will be placed in effect after the application of the full suspension period under Section 1308(d). 66 Pa. C.S. § 315(e). The rates that go into effect are based on the utility plant that is projected to be in service at the end of the FPFTY, along with projected expenses at the end of the FPFTY. All the revenue requirement components are determined using the end date of the FPFTY. In its Implementation Order, the Commission recognized import of this change, stating, "Under this approach, the risks associated with regulatory lag will be substantially reduced because the new rates will be consistent with the test year used to establish those rates for at least the first year.at using the FPFTY."[15] Thus, the ability to use the FPFTY is another break from traditional ratemaking and is alternative ratemaking.

Section 1329

Q. Why do you characterize the addition of Section 1329 as a departure from traditional ratemaking?

A. In Pennsylvania, rate base has been calculated using original cost less depreciation since the mid-1980s. Section 1329 provides an option for a water and wastewater utility to add, after approval by the Commission under Section 1103, an acquisition of a municipal

[14] An historic test year is complete, and all data is known when the utility files its rate case. If a future test year used it is based on estimates for the 12 months following the end of the historic test year. It is partially historic and partially projected when the rate case is filed. 52 Pa. Code § 53.56(a). If the utility uses a future test year, the regulations require quarterly updates during the rate proceeding. 52. Pa. Code § 53.56(b).

[15] *Implementation of Act 11 of 2012*, Docket No. M-2012-2293611, Order at 5 (Aug. 2, 2012) (*Act 11 of 2012 Implementation Order*). *See* Costello, Ken, *Future Test Year: Evidence from State Utility Commissions*, National Regulatory Review Institute, NRRI Report 13-10 (October 2013) at 8, n. 24, https://pubs.naruc.org/pub/FA86C105-05F5-9766-BC78-29829AC50361, last viewed January 3, 2024.

water or wastewater provider at "fair market value" rather than depreciated original cost. 66 Pa. C.S. § 1329.

Q. What transactions has PAWC completed using Section 1329 as the valuation method?

A. PAWC has completed 10 acquisitions[16] where the ratemaking rate base for the acquired assets has been calculated using fair market value. The additional ratemaking rate base, as determined under Section 1329, was approximately $575,885,000. Exhibit CMH-4, Col K, line 12. The ratemaking base was almost double the depreciated original cost of these assets.[17] Exhibit CMH-4, Col. K, line 12/line 10.

The revenues of the acquired customers do not recover the revenue requirement associated with the ratemaking rate base. Exhibit CMH-5. As a result, in PAWC's 2017, 2020, and 2022 rate cases there was a revenue deficiency for the customers acquired under Section 1329 valuation. *Id.* Then, when the cost to serve the acquired customers was calculated using the FPFTY, including PAWC's return and taxes, capital expenditures, and O&M, the acquired customers' revenues did not cover that additional cost of service.

The same is true in this case. The annual revenue deficiency calculated by PAWC for the BASA wastewater operations is $26,288,308, and for Brentwood Wastewater is $1,934,636. PAWC Exh. 3-A, p. A. Although I point to BASA and Brentwood revenue deficiencies as an example of the ratemaking impact of the Section 1329 valuations, as

[16] The 10 acquisitions reflect those where PAWC has closed on the transaction and has already included the acquired ratemaking ratebase in a rate case.
[17] The depreciated original cost of the acquired assets was $279,334,005 as calculated pursuant to Section 1329(d)(5) which does not require the subtraction of contributed capital. That is also a change from traditional rate base calculation. The ratemaking rate base exceeded the depreciated original cost by $311,000,995. Exhibit CMH-4

discussed by OCA witness Mr. Smith, the OCA's recommendation is that the costs for these two proposed acquisitions along with four other proposed acquisitions be removed from the calculated revenue requirements.

Q. What impact does that have in the rate cases?

A. It has several impacts but one of the issues in this case is a revenue requirement shortfall from both the ratemaking rate base and from the increased cost of service for each of the acquisitions as of the end of the FPFTY. The revenue deficiency if placed on the acquired customers may mean very large increases. PAWC's proposal is to shift almost all the wastewater revenue deficiency to water customers pursuant to Section 1311(c), as discussed below and in Mr. Mierzwa's testimony. What Section 1311(c) shift, if any, is in the public interest is one of the issues that must be addressed in each case and Mr. Mierzwa presents OCA's recommendation. However, it is critical to understand that the use of fair market value to set the ratemaking rate base of the qualifying acquisitions under Section 1329 has, in almost all PAWC's acquisitions, resulted in a large revenue deficiency as of closing. That deficiency grows in the rate cases when the cost of service for each acquired system using the FPFTY is calculated. To the extent that the acquired customers do not see part or all that revenue requirement deficiency in the rates that they are paying, those rates become more disconnected from the actual cost to serve them. The revenue deficiency that exists at closing and grows in the rate cases impacts existing water customers in that they are being asked to bear all or part of the revenue deficiency in their rates, as discussed below and in Mr. Mierzwa's testimony.

The interplay between the fair market valuation when it is multiples of depreciated original cost and Section 1311(c) is an example of how it is important to

view the layering of the alternative regulatory provisions included in PAWC's rate proceedings.

Section 1311 (c)

Q. Why do you characterize the amendments to Section 1311(c) as a departure from traditional ratemaking?

A. Section 1311(c) was amended in Act 11 of 2012. The amendment exempted certain water and wastewater utilities from the existing requirement to segregate utility property and a definition was added as subsection (e). This exemption permits the combination of water and wastewater revenue requirement while other utilities that provide more than one type of service continue to follow the requirement to segregate the property used to provide two different utility services.

The relevant portions of Section 1311 read as follows:

§ 1311 Valuation of and return on the property of a public utility.

* * *

(c) Segregation of property. When any public utility furnishes more than one of the different types of utility service, the commission shall segregate the property used and useful in furnishing each type of such service, and shall not consider the property of such public utility as a unit in determining the value of the rate base of such public utility for the purpose of fixing base rates. A utility that provides water and wastewater service shall be exempt from this subsection upon petition of a utility to combine water and wastewater revenue requirements. The commission, when setting base rates, after notice and an opportunity to be heard, may allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if in the public interest.

* * *

(e) Definition. As used in this section, the term "utility that provides both water and wastewater service" shall include separate companies that

> individually provide water and wastewater service so long as the companies are wholly owned by a common parent company.

66 Pa. C.S. § 1311 (effective April 16, 2012). The statutory language does not contain any guidelines, nor has the Commission promulgated regulations.[18] The determination of what is in the public interest in Section 1311(c) is within the Commission's discretion. The concept of taking wastewater revenue requirement based on the wastewater cost of service and placing additional revenue requirement onto water customers, who are already paying rates that collect the water cost of service was a break from traditional ratemaking.

There are principles of ratemaking that should be used to guide the Commission's determination of whether and in what amount a shift of wastewater revenue requirement to water customers should occur based on the record in each case.[19] In defining the public interest, the affected public certainly includes PAWC's wastewater customers and its water customers. The public interest also could include policies regarding the acquisition of small, nonviable wastewater systems. For example, when acquiring a small, troubled wastewater system that would need a complete rebuild of its system, it may be that the customers of that system could not bear the costs of the rehabilitation and replacement of the system. In that instance, the costs could be spread among the other wastewater systems as part of rate consolidation of wastewater systems. Or, under

[18] In the *Act 11 of 2012 Implementation Order* the Commission clarifies two points regarding notice and the definition contained in 1311(e).

[19] The first case that was filed using Section 1311(c) was PAWC's 2013 base rate case at Docket No. R-2013-2355276. *Pa. PUC v. Pennsylvania-American Water Co.,* Docket No. R-2013-2355276 (Order entered Dec. 19, 2013).

Section 1311(c), the utility could ask that a portion of the small wastewater systems higher revenue requirement be allocated to water customers.

Q. Does the Commission have a range of options when looking at requests for Section 1311(c) shifts from wastewater to water?

A. Yes. I see the Commission as having a range of options under 1311(c). The question is whether the options are consistent with established regulatory principles. For example, the Commission could choose to not approve any shift. It also could approve a shift of the entire wastewater revenue requirement. In that instance it is hard to support that as being consistent with established regulatory principles. Although this range of possibilities under Section 1311(c) exists, it has not been addressed in regulations since the enactment of Section 1311(c).

Q. What framework do you recommend that the Commission use to choose what shift, if any, should be approved?

A. Professor James Bonbright provides a useful framework for setting and evaluating utility rates:

- Practicality, including simplicity, understandability, ability to implement, and public acceptability;
- Clarity in its interpretation;
- Effectiveness in yielding the total revenue requirement;
- Revenue stability from year to year;
- Continuity of rates, including the concept of gradualism;
- Fairness in relation to the cost of serving different types of customers;[20]

[20] The "fairness" of a utility rate generally means that the rate bears a reasonable relationship to the utility's cost of serving the customer without exceeding the value of service to the customer. See, e.g., James C. Bonbright, *Principles of Public Utility Rates* (New York, NY, 1961) (hereafter "Bonbright"), pp. 82-92.

- Avoidance of undue discrimination among similarly situated customers; and
- Encouragement of efficient consumption practices.[21]

According to Bonbright, the most important criteria are adequacy of collection of the revenue requirement, fairness to all customer classes, and efficiency to encourage economically efficient consumption and discouragement of waste.[22] He notes that these criteria are primary "not only because of their widespread acceptance but also because most of the more detailed criteria are ancillary" to these three principles.[23]

Q. How does this framework apply in this proceeding?

A. The OCA has focused on the principles of efficiency and fairness. Mr. Mierzwa discusses these issues in OCA Statement 4. I would note that the review of PAWC's proposal must include an examination of whether similarly situated customers are being treated similarly. This is significant when most of PAWC's water customers do not receive wastewater service from PAWC. PAWC has more than nine times as many water customers as wastewater customers. OCA St. 4 at 26. Those water customers are paying their own wastewater bills to other entities, or they have on-lot septic systems that they must install and cover maintenance costs. They also have been paying a portion of the wastewater deficiency for PAWC's wastewater customers since 2013. Mr. Mierzwa addresses the cost-of-service details in OCA Statement 4.

[21] Bonbright, p. 291-92.

[22] Bonbright, p. 292.

[23] *Id.*

Proper price signals are sent through rates meaning that rates are set to reflect the cost of providing the service. Mr. Mierzwa addresses these issues in his testimony (OCA Statement 4).

Q. What do you conclude regarding PAWC's proposal to shift $71 million of wastewater revenue requirement to its water customers?

A. PAWC's proposal fails to meet the fundamental principles of fairness and efficiency in setting rates for water and wastewater customers. The impact of more than $585 million of fair market value rate base exacerbates the revenue deficiencies on wastewater revenue requirement and is one of the causes for a large shift. However, shifting 94% of the wastewater revenue deficiency is not reasonable.

Q. You have reviewed numerous changes to the Public Utility Code through Act 11 of 2012 and Act 12 of 2016. What do you conclude about these changes as applied to PAWC's proposals in this proceeding?

A. Each of the changes represented a change to traditional ratemaking and represent alternative ratemaking provisions that PAWC has used since the passage of these changes including in leading up to this case (DSIC, FPFTY, 1311(c), and 1329 acquisitions) and in this case (discretionary selection of the FPFTY, proposed 1311(c) shift, and seeking to include not yet completed acquisitions in rate base). The OCA does not agree with many of PAWC's proposals in this proceeding as set forth above and, in the testimony, provided by the OCA witnesses. However, as explained below, PAWC proposes additional alternative ratemaking mechanisms that will further reduce its risk, shift unknown rate increases onto its customers, and unreasonably increase the rates and bills for its customers.

It is important to note that PAWC could have chosen any of these or none of them, but the fact that they chose to employ them all in coordination with each other and its selection of the FPFTY and 1311(c) shift present an unreasonable choice by PAWC that seeks to insulate shareholders and PAWC management from the difficult job of efficient management and seeks to place nearly all the risk on PAWC's captive customers. This should be looked at with a great deal of skepticism by the Commission when reaching a determination about the justness, reasonableness, and lawfulness of PAWC's proposals.

PAWC's Alternative Ratemaking Proposals Pursuant To Section 1330 of the Public Utility Code

Q. Does the passage of Section 1330 and the related orders provide any constraints on the use of alternative ratemaking?

A. Yes. Section 1330[24] provides the declaration of policy from the General Assembly where it declared that "utility ratemaking should encourage and sustain investment through appropriate cost-recovery mechanisms to enhance the safety, security, reliability or availability of utility infrastructure and be consistent with the efficient consumption of utility service." 66 Pa. C.S. § 1330(a)(2).

Q: When is incentive regulation appropriate under the regulatory compact?

A: In my opinion, under the regulatory compact, incentive regulation is appropriate when the regulator seeks to generate certain behavior by the public utility company that benefits

[24]The Commission adopted the *Act 58 Implementation Order* in 2019. In the *Act 58 Implementation Order*, the Commission recognized that the policy statement proceeding was intended to give guidance to the utilities and stakeholders on what is to be considered in a Section 1308 proceeding and that it did not "establish a binding norm, nor does it establish a predicate" for the adoption of an alternative rate mechanism. *Act 58 Implementation Order* at 3-4. The Commission entered an order adopting a final policy statement, at 52 Pa. Code § 69.3301-3302, on alternative ratemaking that was the result of a proceeding that began prior to the passage of Act 58. *Fixed Utility Distribution Rates Policy Statement*, Docket No. M-2015-2518883 entered July 18, 2019.

consumers or the public at large. The General Assembly in its wisdom gave the Commission discretion on which incentive regulation to approve and when, and the temporary or permanent nature of such incentives. However, I recommend that the Commission approach incentive regulation with caution especially when faced with a request by a utility that seeks to receive multiple incentives for the same reason or to generate the same behavior.

Q: Why do you recommend that the Commission approach incentive regulation with caution?

A: Incentive regulation is not meant to be a smorgasbord where you pick a little bit of everything. If more than one incentive regulation is granted to generate the same behavior, it can quickly become unclear which incentive is having the desired effect on a utility's performance. In my opinion, offering multiple incentives to generate the same behavior by the public utility company carries the risk of undermining the regulatory compact.

Q: Why is this your opinion?

A: Because offering more than one incentive regulation to generate the same behavior by the public utility company serves to transfer risk disproportionately from the shareholders to the consumers and to transfer wealth unjustly from consumers to the shareholders. This is the same effect as monopoly pricing. And as I discussed above, it is the effect of monopoly pricing that the regulatory compact is intended to remedy.

Q: Is alternative ratemaking under Section 1330 of the Code a type of incentive regulation?

A: Yes. Alternative regulation is a type of incentive regulation, and as its name suggests, it is an alternative to traditional cost-of-service ratemaking.

Q: What is alternative ratemaking?

A: As a concept, alternative ratemaking encompasses different forms of rate mechanisms that essentially shift the risk of recovery from the public utility company to the consumer.

Q: If alternative ratemaking shifts the risk of recovery from the public utility company to consumers, is it an appropriate part of the regulatory compact in Pennsylvania?

A: Alternative ratemaking is an appropriate part of the regulatory compact in Pennsylvania where it is used pursuant to the policy objectives laid out in Section 1330(b)(2) of the Public Utility Code. In my opinion, alternative ratemaking should be a "package deal" with symmetrical protections required for both utility and consumers, so that there is clear overall societal benefit reducing the utility's risk of recovery. Importantly, Section 1330(b)(2) states that "it is the policy of the Commonwealth" that the appropriate cost-recovery mechanisms be allowed "to *enhance* the safety, security, reliability or availability of utility infrastructure." In my opinion, the General Assembly's use of the word "enhance" is very important in relation to the regulatory compact.

Q: Please explain.

A: To "enhance" means to increase or further improve; meaning, alternative ratemaking can be used where it will increase or further improve the safety, security, reliability, or availability of utility infrastructure. As I explained above, under the regulatory compact in Pennsylvania, as a baseline, a public utility company is expected and obligated to

provide and maintain adequate, efficient, safe, and reasonable service and facilities. If a public utility company is meeting this baseline standard satisfactorily under traditional cost-of-service ratemaking and with the use of a FPFTY, then it leaves the question of how and why alternative ratemaking will *enhance* the *safety, security, reliability or availability of utility infrastructure*.

Q. What does the Commission's Policy Statement address for use in a Section 1308(d) proceeding, like this proceeding?

A. It provides a statement of purpose and scope that states that the alternative ratemaking proposals promote the efficient use of the relevant utility service, through technologies and information and that may include:

> reducing disincentives for promoting these objectives, providing incentives to improve system economic efficiency, and avoiding unnecessary future capital investments while ensuring that fixed utilities receive adequate revenue to maintain the safe, secure and reliable operation of their distribution systems. At the same time, an alternative rate design methodology should reflect the sound application of cost of service principles, establish a rate structure that is just and reasonable, and consider customer impacts.

52 Pa. Code § 69.3301. In 52 Pa. Code § 69.3302, the Policy Statement provides considerations that the Commission may consider in determining alternative ratemaking mechanisms as well as a directive that the utility "shall explain how these factors impact the distribution rates for each customer class."

Q. How do these considerations impact your review of PAWC's proposed alternative ratemaking mechanisms?

A. As I discuss each proposal below, I will overlay the relevant considerations onto PAWC's proposals.

Response to Company's testimony on Alternative Ratemaking: RDM and ECIC

Q: Does PAWC seek the Commission's approval of proposed alternative ratemaking mechanisms?

A: Yes. PAWC seeks the Commission's approval of two proposed alternative ratemaking mechanisms. Specifically, PAWC seeks approval of its RDM and ECIC proposals.

Q: Which witnesses discuss these proposals and who are you responding to?

A: As for the Company's RDM proposal, Company Witnesses Everette and Rea discuss the RDM proposal. I will respond to PAWC Witness Everette while Mr. Mierzwa will respond to PAWC Witness Rea. In OCA Statement 5, Mr. Colton addresses the disproportionate adverse impact of the PAWC's RDM proposal on low-income customers.

As for the Company's ECIC proposal, Witnesses Everette and Swiz discuss these proposals. I will respond to Witness Everette while OCA witness Jerry Mierzwa will be responding to Witness Swiz.

Revenue Decoupling Mechanism (RDM)

Q: Can you please describe your understanding of the Company's RDM proposal?

A: In terms of how the RDM will work, my understanding is that the Company's RDM proposal is a revenue decoupling proposal that is designed to provide PAWC with guaranteed recovery of its authorized revenue requirement and fixed costs. I understand that the RDM will compare the difference between actual revenue collected from eligible customers under approved rates in this case against cost components calculated to recover fixed costs of providing service. If actual revenues are higher than would have been collected under RDM formula, the difference will be credited to customers in the

subsequent year. If actual revenues are lower than would have been collected under the RDM formula, the difference will be collected from customers in the subsequent year.

Q: Can you please describe your understanding of why the Company has proposed the RDM?

A: In terms of why the Company proposed the RDM, my understanding is that the Company believes that its proposal meets the Section 1330(b)(2) policy objectives for two reasons. First, according to Witness Everette, she submits that current method of recovery relies heavily on sales volumes and customer usage through volumetric or variable rates but the Company's need to recover its authorized fixed costs and revenue requirement does not vary with sales volumes or customer usage. Witness Everette testified that the Company's ability to reliably recover its authorized revenue requirement will improve the Company's ability to plan, manage, maintain, and invest in the facilities necessary to continue providing safe, reliable, and high-quality water and wastewater service at a reasonable cost to customers.

Second, according to Witness Everette, the volumetric rates create a "throughput incentive" for the public utility company to sell more water, which competes with the interest of customer end-use efficiency and conservation. Witness Everette testified,

therefore, that the Company's RDM proposal is consistent with the efficient consumption of utility service.

Q: Do you agree with Witness Everette that the Company's RDM proposal meets the Section 1330(a)(2) policy objectives?

A: No. I do not agree with Witness Everette that the Company's RDM proposal meets the Section 1330(a)(2) policy objectives.

Q: Please explain why.

A: As for the first policy objective of Section 1330(a)(2), the Company has not shown how or why the RDM proposal could or would "*enhance* the safety, security, reliability or availability of utility infrastructure." In my opinion, Witness Everette's statements that the RDM will improve the Company's ability to provide service that meets the standards of Section 1501 are superficial for several reasons.

First, the Company has credibly shown in its initial filing in this case that the Company is already meeting the standards of Section 1501 regarding its service and facilities. I refer also to the OCA testimony of Witness Terry Fought, who gives his opinion that the Company is performing more than satisfactorily from an engineering standpoint.

Second, where the public utility company is already meeting the required standards of Section 1501 service and facilities pursuant to the traditional cost-of-service ratemaking and the use of the FPFTY, it is not clear how adding guaranteed rate recovery will have the impact of enhancing the safety, security, reliability, or availability of utility infrastructure. Rather, the downside of granting multiple incentives to address the same

behavior is potentially undermining the regulatory compact by mirroring the detrimental effects of monopoly pricing.

As I discussed above, one of the most beneficial aspects of traditional cost-of-service ratemaking under the regulatory compact is that the public utility company bears the risk of recovery in the face of all normal business risk in between rate cases, such as weather, recessions, changing technologies, and other sources of sales fluctuations from impacting revenues. However, the Company's RDM proposal shifts the risk of recovery away from the Company and places it wholly onto consumers. In this sense, the RDM proposal would guarantee revenue recovery for the utility where no guarantee has ever been provided. That guarantee wholly shifts the risk onto consumers without consumers gaining any obvious benefit of enhancement to the safety, security, reliability, or availability of utility infrastructure.

Q: What about the second policy objective of 1330(a)(2) – to be consistent with the efficient consumption of utility service?

A: As for the second policy objective of Section 1330(a)(2), the Company has not shown how or why the RDM proposal is "consistent with the efficient consumption of utility service." The whole point of the RDM is to eliminate PAWC's risk of recovery due to variable sales. It does this through rate true-ups resulting from over- or under-recovery of revenues. The true-ups result in after-the-fact surcharges or credits that misalign consumption decisions with actual utility costs. Thus, if sales decrease, the RDM formula will adjust rates to charge customers to make-up for the reduced recovery due to decreased sales. In my opinion, guaranteed revenue recovery for the utility means

inaccurate price signals for efficient consumption of utility service because it misaligns the incremental or variable component of rates from actual incremental costs.

Q: Under traditional cost-of-service ratemaking, if a utility experiences sales reduction and under-recovery, can it achieve the same result as an RDM true-up by just filing another base rate case with adjusted sales forecasts?

A: No. Under traditional cost-of-service ratemaking, if a utility experiences sales reductions and under-recovery, it cannot simply achieve the same result as an RDM true-up by filing another base rate case with adjusted sales forecasts. When a utility files a general rate increase, all relevant information is reviewed to determine just and reasonable rates, not just sales forecasts.

Q. Did PAWC address the considerations contained in 52 Pa. Code § 69.3302?

A. Ms. Everette did not address the factors listed in 52 Pa. Code § 69.3302. In response to PAWC witness Rea's testimony, Mr. Mierzwa addresses the factors in OCA Statement 4.

Q: In your opinion, should PAWC be allowed to implement the RDM?

A: No, consistent with the above and as outlined more fully by Mr. Mierzwa and Mr. Colton, PAWC should not be permitted to implement the RDM.

Environmental Compliance Investment Charge (ECIC)

Q: Can you please describe the Company's ECIC proposal?

A: In terms of how the ECIC will work, my understanding is that the Company's ECIC is a rate adjustment clause designed to reflect and recover, between rate cases, the capital costs and expenses imposed on the Company to address and comply with new or changed federal and state environmental mandates. Costs that are recoverable through the ECIC

must be consistent with the set of projects and activities set forth in an annual environmental compliance plan to be filed by the Company and approved by the Commission.

Q: Can you please describe your understanding of why the Company has proposed the ECIC?

A: Witness Everette stated that the Company's environmental compliance requirements are continuously evolving and one of the drivers that increases the costs of water and wastewater service and the need for rate relief. Witness Everette asserts that the need for and timing of measures to comply with new or changed government mandates under applicable environmental laws are outside of the Company's control. Witness Everette says that the Company's proposed ECIC will provide a mechanism for adjusting the Company's rates between base rate cases to support full and timely rate recognition of PAWC's costs to comply with new and updated environmental regulatory mandates in a prudent and efficient manner as they emerge.

Q: Do you agree with Witness Everette that the ECIC proposal meets the 1330(a)(2) policy objectives?

A: No. While the Company has sought to model the ECIC proposal on the DSIC/Long Term Infrastructure Investment Plan (LTIIP) model with a plan/surcharge, the similarities are superficial. Unlike DSIC/LTIIP which achieves acceleration of replacement of aging underground infrastructure, the Company's proposed ECIC is simply aimed to shift the risk of recovery for sizeable and wide-ranging capital investments from the Company to customers based on the Company's normal business risk of complying with environmental laws. However, the Company's compliance with environmental laws is

part and parcel of the Company satisfying the mandatory requirements of providing and maintaining adequate, safe, and reasonable service and facilities under Section 1501. PAWC has already shown that it can do this without any further incentive or inducement. In my opinion, the Company has not shown how the ECIC will enhance the safety, security, reliability, or availability of utility infrastructure.

Q: What kind of capital investments does the Company want to recover under the ECIC?

A: The Company wants to recover through the ECIC sizeable and wide-ranging capital investments in water production, treatment, and storage infrastructure and wastewater treatment infrastructure. For example, new dams, dam rehabilitations, new treatment plants would be included in the ECIC surcharge.

Q: What would happen if these types of costs were recovered through the ECIC?

A: Recovering these types of capital costs would greatly reduce the transparency of the ratemaking process for these types of costs. While the Company seeks to address the transparency problem by proposing that the Company file an annual environmental compliance plan that is approved by the Commission, the Commission does not have expertise to determine whether the investments are prudent or necessary to comply with environmental laws. The Company has this expertise, and it has the responsibility for this type of decision-making. And such decision-making should be subject to the

Commission's full investigation and review with the benefit of the evidence as developed by party litigants in base rate cases.

Q. Did PAWC address the considerations contained in 52 Pa. Code § 69.3302?

A. Ms. Everette did not address the factors in 52 Pa. Code § 69.3302. OCA witness Mierzwa addresses the factors in his testimony.

Q. **Do you think the ECIC is reasonable and consistent with setting just and reasonable rates**?

A. No. The ECIC is a broad, unrestricted surcharge to recover capital and O&M in between rate cases. This is a surcharge that could be a large component of a customers' bill for usage because of the broadness of this proposed surcharge. Even with limits this surcharge is unnecessary and unreasonable. These large items of capital expenditures and the associated O&M should be reviewed as part of a base rate case when they become used and useful.[25]

Q: Should PAWC be permitted to implement the ECIC?

A: No. Consistent with the above and the testimony of Mr. Mierzwa, PAWC should not be allowed to implement the ECIC.

[25] Mr. Mierzwa notes that PAWC's proposal to recover a large range of capital expenditures and O&M by a surcharge that would be filed on a quarterly basis and would need to be reviewed within ten days of each filing would strain the limited resources of the advocates and I would add, presumably the Commission too.

Response to Company's testimony on Section 523 and 52 Pa. Code § 69.711 regarding a 25 Basis Points Addition To the Return On Equity

Q. PAWC Witness Everette recommends "no less than 25 basis points" be added to the return on equity if the Commission were to approve a return on equity that is lower than 10.95% which is the upper end of PAWC's range of return on equity. Do you agree?

A. No. OCA witness Smith determined that the 25 basis points request by PAWC is equal to $11.8 million of additional revenue requirement. PAWC wants its customers to pay more than5% of the requested increase for PAWC's claimed superior management performance. That request should be denied.

The Commission is required to look at the efficiency, effectiveness and adequacy of service of each utility, in addition to all other relevant evidence, when determining just and reasonable rates. 66 Pa. C.S. § 523(a). Any adjustments to specific components of the utility's claimed cost of service must be made based on specific findings in the record. *Id.* PAWC is obligated to provide service that complies with Section 1501 of the Public Utility Code. 66 Pa. C.S. § 1501. Section 1501 requires:

> **§ 1501. Character of service and facilities.**
>
> Every public utility shall furnish and maintain adequate, efficient, safe, and reasonable service and facilities, and shall make all such repairs, changes, alterations, substitutions, extensions, and improvements in or to such service and facilities as shall be necessary or proper for the accommodation, convenience, and safety of its patrons, employees, and the public. Such service also shall be reasonably continuous and without unreasonable interruptions or delay. Such service and facilities shall be in

> conformity with the regulations and orders of the commission.

66 Pa. C.S. § 1501. PAWC's obligation to meet the requirements of Section 1501 do not require additional basis points be added to its return on equity claim, as OCA witness Garrett discusses in OCA Statement 3. In OCA Statement 5, Mr. Colton provided specific evidence that PAWC's customer service, credit and collection management performance does not warrant any additional basis points on equity. Mr. Colton also examined PAWC's performance regarding residential complaints, payment arrangement requests, and verified infractions. Ms. Alexander reviews the Company's customer service performance and concludes that PAWC's failure to properly manage and oversee the call center performance refutes its claim of superior management performance. OCA witnesses Garrett, Colton, and Alexander each address reasons why PAWC's 25 basis point addition to return on equity should be denied and the resulting $11.8 million of additional revenue requirement should be denied.

Introduction of OCA's Other Witnesses

Q. Who are the OCA's other expert witnesses?

A. Ralph Smith (OCA Statement 2) supports the OCA's traditional revenue requirements recommendations. Mr. Smith also discusses the reasons why PAWC cannot meet its burden of proving the reasonableness of its FPFTY projections. Mr. Smith removes the 5 pending applications and 1 application that has not closed from the calculation of the revenue requirement because those proposed acquisitions are either pending before the Commission and there is no certainty that the proposed acquisitions will be approved and close before the close of the record in this proceeding.

Mr. Smith's Exhibit LA-1 provides a summary of the OCA's revenue requirement recommendations that result in his recommendation that PAWC should receive no more than $43,733,007 (4.3%) of additional annual revenues on a total (water and wastewater) company basis.

In developing his recommendations, Mr. Smith incorporates the rate of return analysis presented by David Garrett (OCA Statement 3). Mr. Garrett addresses the appropriate capital structure for ratemaking, the return on equity, and the impact of PAWC's claims for alternative ratemaking as well as its request for additional basis points for management performance. Mr. Garrett also recommends an adjustment to the proposed capital structures due to the substantial deviation from its parent and its proxy group. However, if the Commission accepts the Company's capital structure or the Company's alternative ratemaking proposals, Mr. Garrett recommends a return on equity of 8.7%. Mr. Garrett's adjustments reduce PAWC's overstated return on equity and adjust PAWC's equity-rich capital structure. Mr. Smith provided the individual revenue requirement impact of each of Mr. Garrett's recommendations as well. OCA St. 2, Exhibit LA-6.

Jerome Mierzwa (OCA Statement No. 4) provides adjustments to the Company's cost of service, recommendations regarding PAWC's proposed rate designs, including PAWC's winter averaging proposal, and recommendations regarding PAWC's alternative ratemaking claims. Mr. Mierzwa also addresses the Company's proposed shift of nearly 94% of the wastewater revenue requirement increase to water customers pursuant to Section 1311(c) of the Public Utility Code.

Roger Colton (OCA Statement No. 5) addresses the impact of the Company's current rates and their requested increase on low-income customers. He recommends changes in the Company's bill discount programs, the collection of those costs from all customer classes, and related matters to help all PAWC customers afford essential utility service. Mr. Colton also demonstrates that PAWC's winter averaging proposal will disproportionately harm low-income customers. He also addresses the company's performance in key areas that impact customers.

Barbara Alexander (OCA Statement No. 6) provides an analysis and recommendations regarding customer-service issues, including certain provisions of the Company's tariffs and management performance, including the lack of specific monthly and annual call center performance standards, improvement of its analysis of customer complaints, reform of Pennsylvania-specific training, along with evaluation of its third party contractors, additional customer education, and reforms in its implementation of termination of water service to its customers on behalf of non-Company sewer service providers.

Finally, Terry Fought (OCA Statement 7), a consulting engineer, makes several recommendations about the pressures and pressure surveys in the water operations and customer complaints in PAWC's customer complaint log.

Information in Customer Notices

Q. Do you have any other concerns about PAWC's filing?

A. Yes. I am concerned about PAWC's rate case notices to its customers. There are three issues that impact the accuracy of the bill impacts and the notice that I discuss below:

1) The impact of PAWC's proposed revenue deficiency shift (under Section 1311(c)) on the proposed bill impact;

2) the residential customer usage level used by PAWC, and
3) notice of the final order's disposition of PAWC's proposed alternative ratemaking mechanisms under Section 1330.

Impact of Section 1311(c)

Q. You mentioned that the notices provided by PAWC reflect its proposal to shift $71 million or 94% of the wastewater revenue requirement to water customers. What is your concern?

A. While Mr. Mierzwa discusses the OCA's recommendation about what shift, if any, is in the public interest under Section 1311(c), I will discuss PAWC's rate case notices that reflect the rate impacts **after** its proposed shift.[26]

The notices PAWC provided to its wastewater customers reflect only 6% of the calculated cost of service revenue deficiency presumably because PAWC is proposing to shift 94% of the revenue deficiency to its water customers. It is highly probable that PAWC's proposed shift of nearly all its calculated wastewater cost of service increases will not be granted by the Commission. That means that the wastewater customers from the inception of this case, have been misled by PAWC about the likely rate increase that they will experience, and they are not seeing an accurate estimate of the proposed rate filing on their bills.

[26] I discuss Section 1311(c) in the alternative ratemaking section of my testimony, *supra*.

Q. What should PAWC use in the wastewater notices to estimate the impact of its filings on wastewater customers?

A. The notices should use the revenue requirement deficiencies that PAWC calculated for each of its wastewater costs of service. That is, PAWC should have shown what it wants to charge for wastewater service *before* the shift. PAWC provides cost of service studies for four wastewater service areas and one for water.[27] PAWC provides testimony and exhibits from multiple witnesses to support the data and results of the cost of service studies for the four wastewater divisions. The additional revenues needed to provide service to those customers, as calculated in the cost of service studies, should be used to reflect the proposed rate increases for each rate zone within that division. If that were done in the notices to customers, the wastewater customers would get a realistic picture of what rate increases they would be facing if their rates were set on the cost to serve them. PAWC's notices already state that it is requesting approval of a "combined revenue requirement for the company's water and wastewater operations as authorized by legislation enacted in 2012." PAWC Vol.1, pp. 16-37 of the PDF.

Q. What about PAWC's other proposals that might impact the customers' bills?

A. PAWC provided language in all its notices regarding the Section 1311(c) shift, and other alternative ratemaking claims, stating:

> The filing requests approval of a combined revenue requirement for the company's water and wastewater operations as authorized by legislation enacted in 2012. The filing also requests approval of the following alternative rate mechanisms in accordance with 66 Pa. C.S. § 1330: a Revenue Decoupling Mechanism and an Environmental Compliance Investment Charge.

[27] Wastewater SSS, Wastewater CSS, BASA WW, and Brentwood WW.

PAWC Vol.1, pp. 16-37 of the PDF. In the wastewater notices[28], PAWC added the following before these sentences to include its winter averaging proposal:

> Pennsylvania American Water's filing requests a change to base residential bills for wastewater collection from April-December on an average of usage during the prior January-March to better reflect seasonal outdoor usage.

PAWC Vol. 1, pp. 17-24, 26, 29-33, 35-36. Nowhere in any of the wastewater notices does PAWC disclose that the **proposed rates** shown in the notices are calculated **after** PAWC's proposed shift of 96% of the wastewater revenue requirement.

Q. What should have been provided to wastewater customers to provide an accurate level of proposed rates that could result from PAWC's filing?

A. The notice should have based the proposed rates on the calculated cost of service, not on the "post" shift rate levels. PAWC already has language in the notice that it is requesting approval to use Section 1311(c), among other requests.

Q. What changes would be necessary for the notices to water customers?

A. I recommend the same change as I recommend for the wastewater notices. PAWC should be required to calculate the proposed bill using the water only revenue deficiency. The notice language following the bill impact could be modified to state that PAWC's request for approval of a shift from wastewater to water could increase the final level of rates and the bills for water customers.

[28] The only wastewater notice that did not have this sentence was Rate Zone 8 which would not have a rate increase until 2025, according to PAWC's proposal. PAWC Vol 1., p. 34 of the PDF.

Residential Customer Usage Level

Q. Turning to another concern about the rate case notices, what usage level does PAWC use in its rate case notice to customers?

A. In its rate case notice for each water rate zone, PAWC uses 3,201 gallons per month usage for a residential customer to calculate the impact of its proposed rate increases. PAWC Filing, Vol. 1, pp. 16-37 of PDF. The rate impact is calculated based on a "typical water bill" for residential customers of 3,201 gallons per month. *Id.* PAWC derives the "typical" level of usage by averaging the usage of all residential customers in all its service areas.

Q. What about the rate case notices for its wastewater rate zones?

A. In its rate case notice for each wastewater zone and for notices to customers who receive water and wastewater service from PAWC, it used a "typical wastewater bill" for residential customers of 3,122 gallons a month.[29] PAWC Filing, Vol. 1, pp. 29-37 of PDF PAWC derives the "typical" wastewater usage by averaging the usage of all residential customers in all its service areas.

Q. Why is this a concern?

A. PAWC has residential customers who have usage levels ranging above the "typical" usage level, yet its notice does not show what the bill impact of its proposed rate increase will be. For example, a customer using 5,000 gallons per month (perhaps a small family) would see a different bill impact. A customer using 10,000 gallons per month (perhaps a larger family) would see a different impact. There is no information in the rate case notice

[29] PAWC's notice for Wastewater Zone 3 (Scranton) uses 3,201 gallons per month.

that would permit a customer with different usage levels to calculate the impact on their bill.[30]

Q. Can you provide an example of what that would look like?

A. Yes. The chart below is an example of what could be used in the rate case notice to provide the bill impacts for additional usage levels.

Gallons per month	Current Bill	Proposed Bill
3,201	$70.65	$88.24
5,000	$100.29	$126.60
10,000	$182.69	$233.19

PAWC Exh. 10-A, p. 76. This chart should be used for each rate case notice that PAWC sends to its customers.[31]

Q. Why did you choose 5,000 and 10,000 gallons per month for additional usage levels?

A. I used those amounts as an estimate that falls at or near the middle of a range of usage for 2 and 4-person households and a range of daily usage of 5-100 gallons per day (gpd). This range is based on information contained in Penn State Extension: Estimating Water Needs.[32] Although this paper is based on designing water systems, using 50 gallons per day per person (gppd) as the minimum and 100 gppd for a 30 day month would equal 3,000-6,000 gallons per month for a 2-person household and 6,000-12,000 gallons per day for a 4-person household. By choosing a level close to the middle of each range, I

[30] The notice directs the customers who want "[t]o find out more about how the request might affect your water bill" to contact PAWC's customer service or to review the rates in the proposed tariff supplements on PAWC's website under Customer Service & Billing menu, and then select Your Water and Wastewater Rates. That page provides a link to the proposed tariff supplements that were filed on November 7 as well as the current customer charge and consumption charges for a customer to calculate their current bill. https://www.amwater.com/paaw/customer-service-billing/your-water-and-wastewater-rates

[31] For any existing flat rate zones, this recommendation would not apply if PAWC proposes to continue the flat rate.

[32] https://extension.psu.edu/water-system-planning-estimating-water-needs

think it is a reasonable approach to show the impact of the proposed rate increases on customers at different usage levels.

Q. Is your recommendation the same for the wastewater notices?

A. Yes. The chart below, using Wastewater Rate Zone 2[33] is an example of what could be used in the wastewater only notices to provide bill impacts for additional usage levels.

Gallons per month	Current Bill	Proposed Bill
3,201	$91.77	100.08
5,000	$138.28	$148.25
10,000	$262.10	$276.50

PAWC Exh. 10-B, p. 68.

Q. PAWC is required to use the Commission's rate case notice form at 52 Pa. Code § 53.45. Does your recommendation conflict with that requirement?

A. No. This recommendation would require information in addition to what the Commission's rate case notice requires. It is relevant information that will help residential customers better understand the impact on their bills. A good example of additional relevant information is shown in PAWC's notice to Wastewater Rate Zone 7 customers, where it used a chart to provide additional information regarding its request that rates in Rate Zone 7 not increase until May 27, 2025. PAWC Rate Filing, Vol. 1, p. 33 of the PDF. In its chart, PAWC provided the average usage per month for residential bills reflecting an average of 3,122 gallons per month, the current bill, current rates approved to go into effect in 2025 plus the proposed rates effective 5/27/25. I provided a screenshot below of PAWC's chart.

[33] Some wastewater rate zones reflect decreases at proposed rates, while others, like Rate Zone 2, show increases at proposed rates. *See* PAWC Exh. 10-B, pp. 29-37 of PDF. In addition, the increases vary depending on the current rates.

If the entire rate request is approved as filed, the estimated impact on a typical wastewater bill is outlined in this chart:

Customer Class	Average Usage/ Month	Current Monthly Wastewater Bill	Current Rates Approved to go into effect in 2025	Proposed Rates Effective 5/27/2025
Residential	3,122 gallons	$28.82	$49.24	$63.78
Commercial	22,094 gallons	$208.51	$363.02	$459.88
Industrial	685,947 gallons	$6,496.74	$11,357.16	$13,718.94

PAWC Rate Filing, Vol. 1, p. 33 of PDF. My recommendation is no different than what PAWC has already done in its notice to Rate Zone 7 other than my recommendation would apply in each rate zone notice.

Notice of the impact of the Final Order in the case

Q. What is your recommendation for customer notice at the end of the case?

A. At the end of the rate proceeding, upon entry of the final order and the filing of the compliance tariffs and schedules, the Commission and PAWC will likely issue press releases that provide the overall revenue increase granted by the Commission and include an overall percentage increase. The press releases will likely include the impact on the "typical" residential, commercial, and industrial customers, like what is found in the rate case notices at the beginning of the case.

My recommendation is that a notice be provided via bill insert at the end of the rate proceeding that shows the final revenue requirement approved by the Commission and includes the impact on customers' bills at multiple usage levels as I described above. This should be implemented at the end of this case.

Q. Why do you recommend a notice at the end of the case?

A. The notice would provide the customers with the Commission's decision on the rate filing and the rate adjustments and the resulting bill impact. PAWC's request for alternative ratemaking already requires it to issue a notice at the end of the proceeding to

provide its customers with a plain language summary of the Commission's decision and the approved alternative rate or rate mechanism to comply with 66 Pa. C.S. § 1330(c)(1) and (2).[34]

As I discussed in this testimony, the rate case notices PAWC provided do not accurately relay the impact of its proposals on its customers' bills. At the end of the proceeding, I recommend that PAWC's notice required for the alternative ratemaking determination include the Commission's overall determination and the impact on ;customers at different usage levels (5,000 and 10,000 per month). The additional information about the bill impacts resulting from the Commission's final order will reflect the final revenue requirement and rate design. Customers will not have to wait until they receive their first bill after the rate case ends to find out what the bill impact is from the rate case. The basic information that is included in press releases is not sufficient to inform customers of the impact on their bills.

Q. Can you summarize your recommendations regarding notices?

A. Yes. Customer notices should provide relevant information about the impact on their bill if PAWC's cost of service revenue deficiencies are used to set rates. There is already language about PAWC's proposals that, if adopted, may impact customers' rates. I also recommend that a chart, using three usage levels, be included in the rate case notices for water and wastewater in PAWC's next base rate filing. My final recommendation about notices is that a notice be sent at the end of the proceeding that shows customers what the final order's impact on their bills. This notice can include the two other recommendations

[34] *Act 58 Implementation Order* at 26-27.

as well as the information regarding any Section 1311(c) shift, and any other proposals that are adopted in the final order.

Conclusion

Q. What is your overall recommendation?

A. PAWC's proposals unreasonably increase its customers' rates through a layering of claims including excessive rate of return, overstated rate base, operation and maintenance expenses, and taxes. Their claim should be rejected, and they should be granted an increase of no more than that which was presented by OCA witness Smith.

PAWC's proposal to shift almost all the wastewater revenue deficiency to water customers should be rejected. Its rate design proposals, including its alternative rate design proposals, are not reasonable and unreasonably increase the bills that its customers will have to pay.

PAWC's proposal for a 25 basis point management adder to its cost of equity claim is responsible for $11.8 of its revenue requirement claim and is not supported by its customer service or substantial evidence. PAWC's capital structure and return on equity are major drivers of its proposed increase. OCA's adjustments to both should be adopted to reflect the consumers' interests in not paying an excessive return.

PAWC's alternative ratemaking proposals for a revenue decoupling mechanism and an Environmental Compliance Investment Charge should be rejected as unsupported under Section 1330 and unreasonable because both involve unknown increases to customers' bills. The OCA's recommendations as set forth in its witnesses' testimony address these issues and others and should be adopted by the Commission.

Q. Does this complete your direct testimony?

A. Yes, at this time except I reserve the right to serve supplemental direct testimony by February 13 based on the information learned at the Public Input Hearings.

APPENDIX A

Christine Maloni Hoover
Pennsylvania Office of Consumer Advocate
555 Walnut Street, 5th Floor
Harrisburg, PA 17101-1923
717-783-5048

Deputy Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg PA. March 2023-present. Oversee and coordinate the legal work of the office, including the work of the Senior Assistant Consumer Advocates, to make recommendations to the Consumer Advocate regarding legal and policy matters; represent the office and the Consumer Advocate at hearings, events, meetings, boards, councils; and serve as a primary resource to the Consumer Advocate, along with the Director of Operations, regarding office policies, administration, budget, assessments, personnel, and other duties as necessary.

Previous Positions

- Interim Acting Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg PA. June 2021-December 2021. As Interim Acting Consumer Advocate, I represented the interest of consumers as a party to proceedings before the Public Utility Commission, state and federal courts, and agencies working with Senior Assistant Consumer Advocates and OCA staff; provided testimony at the General Assembly.

- Senior Assistant Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg PA. 1999-May 2021, December 2021-March 2023. Work on all aspects of utility law and regulation, acting as one of the directors of the office's policies and litigation strategies. Responsible for water and wastewater cases. Responsible for coordinating and supervising administrative staff, IT, support staff, consumer outreach, education, and call center staff.

- Assistant Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg, PA. 1987-1999. Increasing levels of responsibility, including the water coordinator for Pa. OCA's work on water and wastewater cases, including small companies, from 1990-1994. In 1994 became the small utilities project coordinator.

Current Professional Activities

- Admitted to practice law before the Supreme Court of Pennsylvania, and the United States District Court for the Middle District of Pennsylvania.

- Representative for Pennsylvania OCA, Technical Assistance Center Board, Pennsylvania Department of Environmental Protection, Harrisburg, PA.

- Member, Planning Committee for Pennsylvania Bar Institute's Public Utility Law Conference, Mechanicsburg, PA

- Member, Pennsylvania Public Utility Commission's Small Water Task Force, Harrisburg, PA

- Member, Water Committee, National Association of State Utility Consumer Advocates (NASUCA), Washington, DC

- Presenter or faculty member in educational programs for the Institute for Public Utilities at Michigan State University, the Society of Utility and Regulatory Financial Analysts, the National Conference of Regulatory Attorneys, the Pennsylvania Bar Institute American Water Works Association, National Association of Water Companies, NASUCA, NARUC, PA Department of Environmental Protection conferences and training sessions.

Previous Professional Activities

- Faculty member and presenter, NARUC Eastern Rate School and Western Rate School
- Member, Federal Advisory Committee on Total Coliform Rule/Distribution System Advisory, U.S. Environmental Protection Agency, Washington, DC.
- Member, Federal Advisory Committee on Stage 2 Disinfectants and Disinfection By-Products in Drinking Water, U.S. Environmental Protection Agency, Washington, DC.
- Member, on behalf of Pennsylvania OCA, NDWAC Small Systems Implementation Working Group, Washington, DC

Education

- J.D. American University's Washington College of Law, Washington, DC. 1987.
- B.A. in Political Science and Public Policy, University of Pennsylvania, Philadelphia, PA. 1984.

SUPPLEMENTAL DIRECT TESTIMONY

OF

CHRISTINE MALONI HOOVER

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

Date Served: February 13, 2024

Q. Please state your name, address and occupation.

A. My name is Christine Maloni Hoover. My business address is 555 Walnut Street, 5th Floor, Harrisburg, PA 17101. I am employed by the Office of Consumer Advocate (OCA) as the Deputy Consumer Advocate. I appear in this case as a witness on behalf of the OCA.

Q. What is the purpose of this testimony?

A. I am submitting Supplemental Direct Testimony with regard to testimony by PAWC's customers submitted at the public hearings on PAWC's proposed rate increase that was not already addressed in the OCA's Direct Testimony. Specifically, I will supplement my Direct Testimony on consumers' request for the PUC to reject PAWC's proposed rate increase and consumer testimony regarding their experience with quality issues (quality of service and customer service). However, I am not addressing all testimony or concerns raised at the Public Input Hearings, recognizing that the sworn consumer testimony was transcribed and is part of the evidentiary record.

Q. Please describe consumer testimony that requested the Commission to reject PAWC's proposed rate increase.

A. An overwhelming number of consumers and public officials requested that the Commission outright reject or deny PAWC's proposed rate increase. See, for example, Transcript at pages 182, 183-184, 408, 513, 520-521, 530, 536, 542, 610, 616, 869, 872, 915, 964, 1008, 1046, 1066, 1100, 1013, 1657, 1789, 1823, 1848, 1860, 1875. I believe this testimony supports the OCA's recommendations in this proceeding, including a substantial reduction to the Company's requested revenue requirement increase and rejection of new surcharges and proposed alternative rate mechanisms.

Q. Please describe your concern regarding consumer testimony that raised quality of service and customer service issues.

A. It is concerning how many consumers testified about quality of service issues relating to the look, taste, and smell of the water delivered by PAWC. Mr. Fought's Supplemental Direct Testimony summarizes many of the concerns raised by consumers, including dirty or discolored water and bad taste and odor. (OCA Statement 7 Supp.). Other consumers raised concerns about customer service including inconsistent billing cycles and PAWC's billing for protection plan services, as addressed in Ms. Alexander's Supplemental Direct Testimony (OCA Statement 6 Supp.). Although Mr. Fought and Ms. Alexander set forth a number of consumer concerns in their Supplemental Direct Testimony, it is important for PAWC to fully address all of the concerns raised in the consumers' sworn testimony at the Public Input Hearings. The OCA will consider the evidence from the Public Input Hearings and PAWC's rebuttal in making any recommendations regarding whether PAWC is meeting its obligations under Section 1501 of the Public Utility Code (66 Pa. C.S. § 1501), and regarding the application of Sections 523 and 526 of the Public Utility Code (66 Pa. C.S. §§ 523, 526) in its final recommendations to the ALJs and to the Commission.

Q. Does this conclude your supplemental direct testimony?

A. Yes.

REBUTTAL TESTIMONY

OF

CHRISTINE MALONI HOOVER

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

Date Served: February 21, 2024

Q. Please state your name, address and occupation.

A. My name is Christine Maloni Hoover. My business address is 555 Walnut Street, 5th Floor, Harrisburg, PA 17101. I am employed by the Office of Consumer Advocate (OCA) as the Deputy Consumer Advocate. I appear in this case as a witness on behalf of the OCA.

Q. Have you previously submitted testimony in this case?

A. Yes. I prepared Direct Testimony and Supplemental Direct Testimony.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my Rebuttal Testimony is to respond to certain aspects of the Direct testimony of the Honorable Paige G. Cognetti, Mayor of the City of Scranton (Scranton St. 1) and the Direct Testimony of Representative Kyle Donahue (Donahue St. 1). Other OCA witnesses submitting rebuttal testimony are Mr. Garrett (OCA St. 3R), Mr. Mierzwa (OCA St. 4R), and Mr. Colton (OCA St. 5R).

Scranton St. 1 and Donahue St. 1

Q. Please briefly describe your understanding of PAWC's proposed Section 1311(c) shift in this case.

A. PAWC calculated an additional wastewater revenue requirement of $76 million. PAWC proposes to shift $71 million of that increased revenue requirement to water customers. The Company's wastewater divisions include the Sanitary Sewer Systems (SSS) division and the Combined Sewer System (CSS) division. The CSS division includes the City of Scranton, McKeesport, and Kane. PAWC's $71 million shift proposal includes a shift of $16,007,052 of the additional revenue requirement for the CSS division.[1] That proposed

[1] Prior to this rate filing, there were separate cost of service studies for the City of Scranton, McKeesport, and Kane.

shift of $16,007,052 is greater than the Company's claimed revenue requirement increase of $15,780,126 for the CSS division by $226,926 ($16,007,052 - $15,780,126 = $226,926). It is a 101% revenue shift. This means that the Company's proposed shift to water customers *exceeds* the Company's claimed revenue requirement increase for the CSS division.

Q. What is your understanding of Mayor Cognetti's testimony and Representative Donahue's testimony regarding the Act 11 shift?

A. I want to acknowledge that I understand that both Mayor Cognetti and Representative Donahue do not want to see any increase for Scranton customers. The OCA shares the goal that any increase for PAWC should be as low as possible. Where we diverge is that if any increase is granted by the Commission, then it is the OCA's position that all customers should share in the cost of that increase. Mayor Cognetti and Representative Donahue use as their starting point PAWC's ***proposal*** to have its water customers pay 94% of PAWC's calculated *wastewater* revenue requirement increase, with no proposed revenue increase paid by consumers in the CSS division. Mayor Cognetti and Representative Donahue state that the OCA's position is to shift water revenue requirement to wastewater customers. Scranton St. 1 at 3-4; Donahue St. 1 at 3-4. This is not the OCA's position.

The OCA does not propose to shift water revenue requirement to wastewater customers. Instead, the OCA has proposed (1) a significantly less overall revenue requirement increase for both water and wastewater customers, and (2) to shift less of the wastewater revenue requirement to water customers.

Q. How does the OCA's recommendation impact PAWC customers in the City of Scranton?

A. First, the OCA recommends a lower overall revenue requirement increase to the CSS division ($7.3 million or 9.3%), compared to PAWC's proposed revenue increase ($15.8 million or 20.1%). *See* OCA St. 2, Exh. LA-1. This benefits all of PAWC's customers, including those in Scranton.[2] Second, the OCA recommends a shift of half of the OCA-reduced CSS revenue requirement to water customers, which would result in a 4.7% revenue increase remaining for the customers in the CSS division. *Id.*; OCA St. 4, Table 5 . Even under the OCA's proposal, the customers in the CSS division would not be paying the full costs for their wastewater service. The customers in the CSS division would be paying only 50% of the increase needed to cover their full cost of service.

Any shift of wastewater revenue requirement under Act 11 impacts all water customers, not just water customers in the City of Scranton. Even under the OCA's proposal, water customers, most of whom are not wastewater customers, would see an additional revenue requirement increase of $18.9 million, or 2.2% (which doubles the increase for water customers under OCA's recommended revenue requirement increase for the Water division) related solely to the shift of costs that the SSS and CSS wastewater customers are not covering for their wastewater service. *See* OCA St. 2, Exh. LA-1.

[2] In her testimony (p. 5), Mayor Cognetti refers to a statement regarding the City's financial standing that she attributes to OCA. In response to OCA Set 1, Q. 1 to Scranton, Mayor Cognetti's attachment does not contain any such statement from OCA. See attached Exhibit CMH-6.

Q. Mayor Cognetti discusses the Asset Purchase Agreement (APA) for PAWC's 2016 purchase of the Scranton Sewer Authority and the Compound Annual Growth Rate (CAGR) provision that would limit rate increases. Please address that testimony.

A. Mayor Cognetti included the APA as an exhibit to her direct testimony (Exhibit 1) and discusses the CAGR provision in the APA. Scranton St. 1 at 5. Even though the CAGR is in the APA, the Commission's statutory rate setting authority is not voided or otherwise limited in any way by this agreement. *Joint Application of Pennsylvania-American Water Co. and the Sewer Authority of the City of Scranton*, Docket No. A-2016-2537209, slip op. at 70 (Order entered October 19, 2016.)

Furthermore, although PAWC promised the Scranton Sewer Authority in the APA to limit the future rate increases it proposes in accordance with the CAGR provision of the APA, since then PAWC has never proposed in any rate case that its shareholders absorb any cost difference between its calculated revenue requirement for the Scranton combined sewer system and the promised rate limit.[3] Rather, since acquiring the Scranton Sewer Authority system in 2016, PAWC has only ever proposed in its rate cases to shift the cost difference to its water customers under Act 11.

Q. **Does this conclude your rebuttal testimony**?

A. Yes. To the extent I have not addressed an issue or proposal raised by the other parties in this proceeding, it should not be construed that I agree with the same.

[3] In his testimony discussing the impact of PAWC's rate increases on his constituents, Representative Donahue states, "PAWC has a monopoly on water and sewer in my district it's time the 30-billion-dollar company invest some of their profits into the infrastructure work and stop burdening the ratepayers." Donahue St. 1 at 5. Similarly, in response to OCA Set 1-2.c to Scranton, Ms. Cognetti stated her position that "the Water Company is able to afford the cost difference without placing the burden on ratepayers." In making this response, she referred to her response to OCA Set 1-2.b., where she stated "it is believed and therefore averred that the Water Company is able to afford the changes that it needs to make without placing the burden on water *or* wastewater customers at this time, including and especially those within the City of Scranton." *See* Exhibit CMH-6.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission v. Pennsylvania-American Water Company	Docket Nos. R-2023-3043189 (Water) R-2023-3043190 (Wastewater)

THE CITY OF SCRANTON'S RESPONSES TO INTERROGATORIES OF THE OFFICE OF CONSUMER ADVOCATE TO THE CITY OF SCRANTON SET I

AND NOW COMES the Intervenor, THE CITY OF SCRANTON, by and through its counsel, The City of Scranton Law Department, and hereby responds to the Office of the Consumer Advocate's First Set of Interrogatories, in accordance with 52 Pa. Code § 5.342, as follows:

1. In the Direct Testimony of the Honorable Paige G. Cognetti, Mayor of the City of Scranton, Scranton St. 1, at p. 5, lines 137-139, Ms. Cognetti states that the OCA stated that "since the City is doing better financially, the terms of the APA are negotiable to permit the relief that they are seeking." Scranton St. 1 at 5.

    a. Please cite to a written document where the OCA has made this statement.

    ANSWER: Please see a copy of an e-mail chain attached hereto as Exhibit A in response to the same. Answering Intervenor respectfully requests the opportunity to supplement this response and the responses contained herein and ahead of the hearings scheduled for this coming March.

    b. If the above-referenced statement is based on oral discussions between the City of Scranton and the OCA, please describe the date, time, location of such discussion, and provide the name of the individuals from the City of Scranton and the OCA who participated in that discussion.

    ANSWER: Denied at this time. By way of further answer, a reasonable inquiry concerning this request has been made, and the information known or readily obtainable to Answering Intervenor is insufficient to enable the Answering Intervenor to adequately respond to this request. Answering Intervenor respectfully requests the opportunity to supplement this response and the responses contained herein and ahead of the hearings scheduled for this coming March.

2. Ms. Cognetti references and discusses that certain Asset Purchase Agreement between PAWC and the City of Scranton dated March 29, 2016 ("APA") pursuant to which PAWC acquired the assets of the City of Scranton's combined sewer stormwater system

("Scranton System"). In her testimony, Ms. Cognetti discusses Section 7.07(d) of the APA where PAWC agreed to propose a rate increase in annual revenues associated with the provision of wastewater service to the customers of the Scranton System over a ten-year period no higher than 1.9% Compound Annual Growth Rate ("annual 1.9% CAGR rate increase limit" or "rate limits").

b. Where there is a cost difference, does Ms. Cognetti believe that it is fair or reasonable that PAWC should collect some or all of that cost difference from PAWC's water customers, including water customers located in the Scranton service area?

ANSWER: Denied as stated. Due to the Water Company's rate increases over the last few years and pending purchase of another wastewater system, it is believed and therefore averred that the Water Company is able to afford the changes that it needs to make without placing the burden on water *or* wastewater customers at this time, including and especially those within the City of Scranton.

c. Where there is a cost difference, does Ms. Cognetti believe that it is fair or reasonable that PAWC's shareholders should absorb some or all of that cost difference?

ANSWER: Admitted in part, denied in part. Mayor Cognetti's position is that the Water Company is able to afford the cost difference without placing the burden on ratepayers. As to how the Company can afford the same, Mayor Cognetti would need more financial information to answer the same. Please see answer b, above, for more information.

Subject: RE: Scranton Sewer Sale & Rate Changes

Hi Andrew.

The letter does not need to be filed prior to the Commission's next meeting. It would be helpful to have it filed prior to the prehearing, if that is possible. The prehearing could be as soon as the week of December 18.

- Regarding SLIBCO, all documents filed with the PUC related to the acquisition are available here: https://www.puc.pa.gov/docket/A-2020-3023369 The acquisition closed in fall 2021. PAWC adopted the

then-existing SLIBCO rates (first attachment). In PAWC's 2022 base rate case, they kept rates pretty similar. In the 2023 rate case, PAWC proposes to move SLIBCO into Rate Zone 1. This chart summarizes PAWC's proposed rate changes:

Zone 3 - SLIBCO

All Charges		Present Rate		Proposed Rate		I Inc
5/8 - Meter	$	63.55	$	20.00	$	(4
3/4 - Meter	$	63.55	$	30.00	$	(3
1 - Meter	$	63.55	$	50.00	$	(1
1 1/2 - Meter	$	63.55	$	82.00	$	1
2 - Meter	$	63.55	$	132.00	$	6
3 - Meter	$	63.55	$	246.00	$	18
4 - Meter	$	136.30	$	308.00	$	17
6 - Meter	$	136.30	$	461.00	$	32
8 - Meter	$	309.30	$	893.00	$	58
Current Volumetric Rates						
First 20,000 Gallons	$	1.8940			$	(1.8
Next 80,000 Gallons	$	1.6780			$	(1.(
Over 100,000 Gallons	$	1.3810			$	(1.3
Commercial - First 16,000 gallons			$	2.0346	$	2.(

- Regarding complaints, this page on the PUC's website contains information about filing informal and formal complaints: https://www.puc.pa.gov/complaints/

- Regarding the limitations on rate increases in Scranton's asset purchase agreement. There were two, related provisions – one to adjust the purchase price if revenues from the Scranton wastewater system exceed a 1.9% CAGR at the end of year 10. That proposed variance adjustment was withdrawn by Scranton and PAWC. The second provision was that rate increases would be limited to avoid producing revenues in excess of 1.9% CAGR at the end of year 10 following closing. For years 11-13, PAWC would propose to move the system in equal increments towards zone 1 rates. In the current rate case, PAWC states that in the 2022 rate case, revenues for Scranton increased by 63.55%, which exceeds the CAGR so PAWC is proposing no rate increase in the current rate case. (See fourth attachment to this email.) But that proposed level of rates will not cover PAWC's cost to serve customers in the CSS rate zone (that Scranton is part of) so PAWC is going to take the $16M revenue deficiency and add it to the rate increase for water customers.

Please let us know if you have questions or we can provide any additional information. - Erin

Thank you all again so much for your time! Very, very helpful.

Quick question -- if the City sends a letter to the Commission requesting public input hearings, would that need to be before the PUC's next mtg (on Dec 7)? I'm wondering if we have time to get such a letter co-signed by our city council via a formal resolution.

Also, if you'd prefer I only bug one or two of us, just let me know.

Thanks,
Andrew

Dear Mr. Cutillo,

Thank you for reaching out to me. We certainly are able to discuss the current rate filings and the interplay of the 1.9% CAGR from the APA between PAWC and the City of Scranton for the sale of the wastewater assets. Erin Gannon and Melanie El Atieh are the senior attorneys working on the rate case filing. Their email addresses are egannon@paoca.org and melatieh@paoca.org. I don't know if they will be able to talk to you tomorrow, so if you can provide us with some dates next week, they will be able to set up a time to talk.

Subject: Scranton Sewer Sale & Rate Changes

Good afternoon Atty Hoover,

I'm writing on behalf of the City of Scranton to discuss the recent proposed water rate increases for our residents. Residents have been *quite* vocal in their opposition and have been looking to our administration for advocacy.

In particular, we have been reviewing the 2016 sewer system sale agreement to make sure that all provisions of that agreement with respect to rate increases are being followed.

I noticed your name and Atty Erin Gannon's name on the OCA brief and thought you might be most familiar with the situation (and any implications for rate changes). I confess I haven't read all 1500 pages yet, but we have identified at least one potentially relevant provision—regarding a 1.9% CAGR on wastewater rates.

Would you (or Erin or another colleague) be willing to chat briefly sometime this week? Happy to schedule a time or happy to play phone tag – 570-878-8918 is my cell.

Thanks so much,
Andrew

Introduction

Q. Please state your name, address and occupation.

A. My name is Christine Maloni Hoover. My business address is 555 Walnut Street, 5th Floor, Harrisburg, PA 17101. I am employed by the Office of Consumer Advocate (OCA) as the Deputy Consumer Advocate. I appear in this case as a witness on behalf of the OCA.

Q. Have you previously submitted testimony in this case?

A. Yes. I prepared Direct Testimony, Supplemental Direct Testimony, and Rebuttal Testimony.

Q. What is the purpose of your surrebuttal testimony?

A. The purpose of my Surrebuttal Testimony is to provide an overview of the OCA's surrebuttal testimony and to respond to certain aspects of the Rebuttal testimony of PAWC witnesses Everette (PAWC St. No. 1-R), Swiz (PAWC St. No. 8-R), Rea (PAWC St. No. 10-R), Bulkley (PAWC St. No. 13-R), Ladner (PAWC St. No. 15-R) and Hibbard (PAWC St. No. 16-R). Other OCA witnesses submitting surrebuttal testimony are Mr. Smith (OCA St. 2SR), Mr. Garrett (OCA St. 3SR), Mr. Mierzwa (OCA St. 4SR), Mr. Colton (OCA St. 5SR), Ms. Alexander (OCA St. 6SR), and Mr. Fought (OCA St. 7SR).

Q. Please provide an overview of the OCA's surrebuttal testimony.

A. The OCA's overall position has not changed as a result of PAWC's rebuttal testimony. PAWC's proposed $203.9 million revenue increase[1] and related proposals will have a substantial adverse impact on its customers. The OCA's surrebuttal addresses PAWC's

[1] In rebuttal, PAWC's revised claim supports a revenue requirement of $204.3 million according to PAWC witness Everette. PAWC St. No. 1-R, p. 3. She acknowledges that the Commission cannot approve a revenue requirement increase greater than the $203.9 million in the Company's original filing that was noticed to customers. *Id.*

arguments, but I want to highlight a few points. PAWC's rebuttal testimony incorrectly characterizes the statutory requirements of the Public Utility Code that require the review of service quality and management performance in a base rate proceeding, as will be discussed in more detail in OCA's brief. The OCA continues to oppose the management adder as discussed by Ms. Alexander, Mr. Colton, and Mr. Garrett. PAWC's rebuttal testimony also overlooks the impact of its alternative ratemaking proposals on its customers and blurs the concept of the Fully Projected Future Test Year (FPFTY) that it used to justify its revenue requirement by proposing the Environmental Compliance Investment Charge (ECIC). The ECIC is a new charge that could include all capital expenditures and it would recover quarterly increases for capital, return, and operation and maintenance expenses, rather than adhering to the test year used in rate base/rate of return ratemaking. PAWC's rebuttal testimony in support of its Revenue Decoupling Mechanism (RDM) ignores the significant Public Input Hearing testimony of consumers who testified to the water efficiency and conservation measures they are taking to reduce their monthly water bills, and how they cannot reduce their consumption any further to save money. PAWC's proposed alternative ratemaking mechanisms fail to meet the requirements of Section 1330 of the Public Utility Code. PAWC also unreasonably relies on its proposed enhancements low-income programs to justify its proposed increases.

As I stated in my direct testimony, in addition to the protection that consumers rely on from the Commission under the Public Utility Code, in Pennsylvania the OCA's authorizing statute creates obligations on the Commission to consider consumer interests in rate determinations. OCA St. 1 at 27; 71 Pa. Stat. Ann. § 309-5.

The overview of OCA's surrebuttal testimony is:

- Mr. Smith (OCA St. 2SR) addresses PAWC's rebuttal testimony regarding his exclusion of six proposed acquisitions and the related adjustments to revenue requirement, the problems with PAWC's alternative proposal for the acquisitions, stock-based compensation expense for executives, call center expense, arrearage management plan credits to uncollectibles expense, pension and OPEB expense tracker and production cost tracker, and other components of the revenue requirement. Mr. Smith did not revise his schedules calculating the OCA's revenue requirement deficiency of $43.7 million.[2]

- Mr. Garrett (OCA St. 3SR) addresses PAWC's rebuttal regarding cost of capital and rate of return issues as well as the Company's claim for a 25 basis point management adder to its return on equity.

- Mr. Mierzwa (OCA St. 4SR) responds to PAWC rebuttal that contains revisions to the water and wastewater class cost of service studies, as well as rebuttal testimony about customer charge recommendations, the methodology and size of the Act 11/Section 1311(c) shift, scaleback, winter averaging, the RDM, the ECIC, and the impact on multiple parts of the cost of service and customer confusion. Mr. Mierzwa also responds to rebuttal testimony of other parties' witnesses on issues related to cost of service, Section 1311(c) (Act 11) shift, and tariff riders.

- Mr. Colton (OCA St. 5SR) responds to PAWC rebuttal regarding affordability of PAWC rates at the enterprise level, addresses affordability at the community level, explains that the PAWC rates are unaffordable for low income customers even after receiving PAWC's proposed bill discount, and highlights PAWC's failure to enroll the vast majority of its low-income customers in its bill discount program. Mr. Colton also addresses the rebuttal testimony regarding his conclusions about the impact of PAWC's winter averaging proposal, the RDM, and the ECIC on low-income customers, and PAWC's management adder. Mr. Colton refutes PAWC's assertions about the superiority of its low-income programs.

- Ms. Alexander (OCA St. 6SR) responds to PAWC rebuttal to her recommendations for improving service quality and customer service performance and the impact that the current level of service has on the Company's request, including its request for a management performance adder, the below average performance of the Service Company's call centers and lack of oversight of the third party call center contractors, the program and proposed tariff to terminate service related to third party sewer service providers, PAWC's billing arrangements with American Water Resources, the lack of customer education on high water pressure and pressure reducing valve, and the volatility of the number of days in customer billing cycles.

[2] The calculated revenue deficiency for water operations is $16.1 million and $27.6 million for wastewater operations. OCA St. 1, Exh. LA-1, Sch. A.

- Mr. Fought (OCA St. 7SR) responds to PAWC rebuttal to his recommendations for notifying and educating customers about pressure reducing valves, information provided when customers have normal operating pressure at 100 psi and above, the complaints and Public Input Hearing testimony about water quality, and the Main Extension complaint by the Jefferson Township Municipal Authority.

Q. Please provide an overview of your surrebuttal testimony.

A. In my direct testimony, I concluded that PAWC's proposed revenue requirement and related proposals layering special ratemaking claims and alternative ratemaking mechanisms: (1) do not adequately address service quality, customer service, and affordability of service for low-income customers, (2) unreasonably burdens consumers; and (3) undermine the regulatory compact. OCA St. 1 at 3-11. The OCA's direct testimony and recommendations addressed all of these issues in detail.

PAWC's rebuttal position has not materially changed from its direct testimony and for the most part repeated generalized statements that do not address the actual facts in this case. My conclusion about PAWC's proposals, and the impact those have on its customers, has not changed, and as noted above, the OCA's recommendations have not changed in surrebuttal in any material way.

My surrebuttal testimony addresses PAWC rebuttal testimony that disagrees with my conclusions that PAWC's proposals in this case reduce it and its investors' risks at the expense of its customers, while its requested rate of return does not reflect that shift. I also address rebuttal testimony that responds to arguments that I did not make.

Q. If some point raised in PAWC's rebuttal is not specifically addressed in your surrebuttal testimony, should it be presumed that you agree with the Company?

A. No.

Response to Specific PAWC Witnesses

PAWC witness Hibbard, PAWC St. No. 16-R

Regulatory Compact

Q. Do you have a preliminary comment regarding Mr. Hibbard's testimony on the regulatory compact?

A. Yes. The regulatory compact is a guiding policy and generally accepted by stakeholders in the Pennsylvania regulatory community. Yet, at pages 4-7 of his testimony, Mr. Hibbard makes sweeping statements about my testimony on the regulatory compact, including that I narrowly define the regulatory compact and traditional ratemaking. I disagree with Mr. Hibbard's characterization of my testimony and OCA's position. His testimony is filled with straw man fallacies that are not tied directly to my testimony. For example, he states that I and the OCA reflect an "exclusively consumer-focused viewpoint on Commission responsibilities". PAWC St. No. 16-R at 5. This statement is incorrect. Throughout my testimony, I refer to regulation's benefits to both consumers and utilities (p. 24), the fair rate of return standard in seminal cases (p. 26), the components in setting just and reasonable rates include investors and consumers (p. 27). I explained that the OCA's focus is on providing evidence of consumers' needs while recognizing the requirements of the utility. OCA St. 1 at 28.

Mr. Hibbard also states that I use traditional ratemaking "to imply that the Company's filing somehow deviates from what is appropriately presented by the utility and considered by the Commission in a rate case, and systematically changes the balance of risk." PAWC St. No. 16-R at 5. My testimony does not imply that the Company's filing "deviates" from what is appropriately presented. Rather, my testimony

recommends denial of what is presented because the proposals shift more risk to consumers, are inconsistent with Section 1330 of the Public Utility Code, and otherwise inconsistent with the setting of just and reasonable rates. The facts of the case and the choices made by PAWC in this case are what require the Commission to restrain PAWC's request as monopolistic excesses.

I provide these two examples of Mr. Hibbard's rebuttal because there are many such statements in Mr. Hibbard's testimony that take my testimony (usually not cited by Mr. Hibbard) and refute straw man arguments that he creates.

Q. What is your recommendation on these rate filings?

A. This proceeding clearly presents an opportunity for the Commission to exercise constraint in deciding PAWC's proposals, including PAWC's alternative ratemaking proposals. The OCA's recommendations provide an opportunity for recovery of a reasonable return while protecting customers from unreasonable bill impacts, along with an expansion of the bill discount program and other recommendations that will protect customers from unreasonable rates and service.

Q. At pages 10-11, when Mr. Hibbard states that he will begin to address your specific statements, he states that you have "little or no reference" to the utility's recovery of legitimate costs of meeting its public service obligation (p. 11, lines 16-17). Is he correct?

A. No. I referenced the utility's recovery of legitimate costs numerous times in my testimony. OCA St. 1 at 19, 22-23, 27, 28.

Q. At page 11, line 18, Mr. Hibbard opines that your testimony does not provide any guidance or have probative value in this case. What is your response?

A. This is Mr. Hibbard's opinion, and it is baseless as he has no authority in this proceeding to make such a declaration as he is neither sitting as an Administrative Law Judge nor as a Commissioner. The ALJs and the Commissioners will determine the probative value of all of the testimony in this case, including mine as well as Mr. Hibbard's.

Mr. Hibbard refutes supposed statements that are not in my testimony, essentially creating straw man arguments. For example, he states that there is no utility-consumer balance under the regulatory compact that would enable the Commission to disregard reasonable and prudent costs in favor of protecting customers. (PAWC St. No. 16-R, at 12). This is a truism and irrelevant as I did not testify that reasonable and prudent costs should be disregarded.

Q. Mr. Hibbard accuses you and the OCA of erroneously presuming that the ratemaking process is structurally biased in favor of regulated utilities. PAWC St. No. 16-R at 13. What is your response?

A. Mr. Hibbard appears to believe that hyperbole is a substitute for fact. I stated that traditional cost of service ratemaking should benefit both consumers and public utilities. OCA St. 1 at 24. One of the most beneficial aspects of cost of service ratemaking is the lack of guaranteed recovery for the utility while the utility is obligated to provide adequate, efficient, safe, and reasonable service and facilities. *Id.* As the basis for setting rates moves away from the traditional ratemaking process to alternative mechanisms that guarantee certain cost recovery or otherwise reduces or removes risk for the utility, the

impact on consumers becomes greater and the process tilts towards the utility and its investors.

Q. Mr. Hibbard states that you would have the Commission believe that they should focus primarily or exclusively on consumer interests and that the zone of reasonableness that you discuss would be one-sided. Is that accurate?

A. No. Once again, as discussed above, Mr. Hibbard reaches conclusions that are not reasonable or supported by what is in my testimony.

Q. Mr. Hibbard claims that OCA's dramatic reduction in PAWC's proposed increases would have potential negative impacts and repeats the company's statement that the increase is driven in large part by necessary investments. PAWC St. No. 16-R at 15. Is that accurate?

A. No. The OCA's recommendations result in reasonable revenue requirements that would permit an opportunity for PAWC to recover its reasonable and prudent expenses and earn a reasonable return on its prudent capital investments that are likely to be used and useful in the FPFTY. The OCA did not make any adjustments to the proposed $1.5 billion of gross plant additions through the end of the FPFTY to its existing water and wastewater systems that PAWC witnesses emphasize in rebuttal testimony. Mr. Hibbard even acknowledges that no party challenged the proposed capital expenditures.[3]

The OCA's proposed adjustments to PAWC's claimed rate base, rate of return, expenses, Act 11 allocation, class cost of service allocation, and rate design are consistent with ratemaking principles and precedent. Mr. Hibbard's claims that the OCA's

[3] As explained by Mr. Smith, the OCA's recommended revenue requirement reflects the removal of the rate base for the six acquisitions that have not closed, and Future Test Year (FTY) and FPFTY capital expenditures for the BASA and Brentwood proposed acquisitions. See OCA St. 2SR at 21-27.

recommendation of an increase of $43.7 million in additional annual water and wastewater revenues would cause potential negative impacts are unsupported and should be rejected.

Alternative Ratemaking

Q. Mr. Hibbard thinks there should be no limit on the number of incentives under Section 1330 (PAWC St. No. 16-R at 17-20). What is your response?

A. I did not state that there should be a numerical limit. I discussed the multiple alternative ratemaking mechanisms that PAWC already uses and the two that it proposes in this case to emphasize that these incentive mechanisms cannot be viewed in isolation. Rather, each incentive mechanism has an impact on customers' bills. The proposed RDM and ECIC would be in addition to the cumulative impact of existing mechanisms and also layered over a ratemaking rate base set at the end of the FPFTY. Other OCA witnesses have addressed the problems with the RDM and the ECIC in direct and surrebuttal testimony including that the RDM and ECIC do not meet the legislative policies stated in Section 1330. There is no reasonable basis to approve the RDM and the ECIC, especially given that they would be above and beyond that which is determined to be just and reasonable in this case.

The Commission has the authority to approve alternative ratemaking provisions under Section 1330 of the Public Utility Code, 66 Pa. C.S. § 1330, but the Company's proposal of alternative ratemaking mechanisms is neither entitled to a presumption of being just and reasonable nor is it automatically approved. The determination of whether a proposed alternative ratemaking mechanism should be approved must be addressed in a rate case, based on the facts as presented by the utility subject to the challenge of others

and the scrutiny of the PUC as a regulator whose job it is to restrain a utility's monopolistic tendencies. In this case, PAWC's RDM and ECIC should be rejected, for the reasons discussed in detail in my direct testimony, as well as the testimony of Mr. Mierzwa, Mr. Colton, and Ms. Alexander.

Q. Mr. Hibbard discusses Section 1311(c) on page 20 and states that the wastewater costs are "spread among the common customer base of the water and wastewater utilities." Is that accurate?

A. No. The large majority of PAWC water customers are not PAWC wastewater customers. Nor has the Commission required that the wastewater and water customer base be the same. Given these facts, PAWC's proposals to shift 94% of its wastewater revenue requirement to water customers and to recover no increase from existing wastewater customers are not reasonable, as addressed in the testimony of Mr. Mierzwa.

Q. Mr. Hibbard states that the RDM and the ECIC are different alternative ratemaking mechanisms than what PAWC currently has. PAWC St. No. 16-R, p. 21-22. Do you agree?

A. The RDM may be different than existing mechanisms because it shifts the risk of revenue fluctuations, but I would note that PAWC already reflects a declining consumption adjustment in the future test year and FPFTY and the OCA reflected a declining per customer water usage in the projection of 2025 water sales. OCA St. 4SR at 22-23, Sch. JDM-6SR, p. 3. The ECIC is set up like a much broader mechanism to the Distribution System Improvement Charge (DSIC) mechanism with none of the safeguards. The OCA's testimony, including surrebuttal testimony from Mr. Mierzwa and Mr. Colton, provides a full discussion of why the RDM and the ECIC should be rejected.

Q. Mr. Hibbard characterizes your position on traditional ratemaking as narrow and that the use of alternative ratemaking renders the ratemaking process non-traditional. (PAWC St. No. 16-R at 22-23). Do you agree?

A. No. I disagree that I have a "narrow view" of traditional ratemaking or that the use of some alternative ratemaking provisions in the Public Utility Code makes the entire rate regulation system "non-traditional." I described the current ratemaking in Pennsylvania as not traditional ratemaking "in the strictest sense" because of certain existing statutory provisions. OCA St. 1 at 29. Traditional ratemaking for water and wastewater utilities in Pennsylvania has been rate base/rate of return for a very long time. Since the 1980s, that has included the use of depreciated original cost to calculate the rate base. In my direct testimony, I described four alternative ratemaking provisions that were added to the Public Utility Code between 2012 and 2016 and are used by PAWC and reflected in its rates. OCA St. 1 at 4, 29-40. Those four statutory provisions are outside of traditional ratemaking because each creates an exception to traditional ratemaking. The DSIC permits a return on and of capital costs between rate cases, which moves that recovery outside of the test year used in a rate case and increases rates between rate cases. It also permits capital cost recovery through a surcharge. The FPFTY permits a full year projection to be included in rates as of day one and thus permits property that is not (but projected to be) used and useful as of the time rates are set to be reflected in rates. The use of fair market valuation as defined in Section 1329 and in the type of acquisition covered by Section 1329 is an exception to the use of depreciated original cost to set rates. Section 1311(c) permits the shift of wastewater revenue requirement to water

customers and is the exception added to a section that prohibits utilities that provide two types of service from combining the revenue requirements.

These statutory provisions created exceptions to traditional ratemaking concepts of test years, valuation, and recovery of separate utility service revenue requirements.

Fair Market Value

Q. Mr. Hibbard opines on Section 1327 and fair market valuation under Section 1329 (PAWC St. 16-R at 24-27). What is your response?

A. Once again, Mr. Hibbard creates a straw man argument about Section 1329 valuations. The OCA did not propose any adjustments to the ratemaking rate base that was approved in the ten acquisitions that are already closed and reflected in PAWC's rate base in its filing. Notably, Mr. Hibbard did not provide any evidence to refute the revenue requirement shortfall that is created and that is shifted to water customers under PAWC's proposed Section 1311(c) shift. Regarding the six proposed acquisitions that have not closed or met the other criteria set forth by Mr. Smith, the OCA removed the rate base additions and ratemaking claims for BASA and Brentwood, per Mr. Smith's surrebuttal testimony at pages 23-29.

At page 26, line 18, Mr. Hibbard characterizes the revenue requirement deficiencies created by the FMV acquisitions as "irrelevant". This statement is incorrect. I provided the annual revenue requirement shortfall that existed at closing on the ten FMV acquisitions that are reflected in PAWC's rate filing. OCA St. 1, Exhibit CMH-5. Those revenue deficiencies grow in each rate case due to increased O&M and capital expenditures projected in the rate case. The revenue deficiency for just five of those

acquisitions, and at the OCA's smaller revenue requirement, is more than $10 million.[4] At PAWC's calculated revenue requirement, the shortfall would be greater. I would not characterize that shortfall as irrelevant.

Regarding Section 1327, Mr. Hibbard characterizes it as permitting fair market value that was prohibited by previous law. PAWC St. 16-R at 26, lines 5-6. That is not correct. Section 1327 permits positive acquisition premiums to be included in water or wastewater rate base if the statutory criteria set forth in Section 1327(a) is met (*i.e.*, for the purchase of *distressed small* water or wastewater utilities). 66 Pa. C.S. § 1327. The acquisition premium is based on the difference between the purchase price and the depreciated original cost.[5] The inclusion of acquisition premiums, consistent with Section 1327, is available only for water and wastewater utilities under Section 1327 and created an exception to the traditional ratemaking rule that only depreciated original cost is included in rate base and is not available to gas and electric utilities for acquisitions.

[4]Exhibit CMH-5 shows ten closed FMV acquisitions and the related revenue requirement shortfall. Eight of the ten are wastewater acquisitions. In the current rate filing, only five of the eight wastewater FMV acquisitions can be identified in the revenue requirement calculations, the others have been rolled into Zone 1. See e.g., OCA St. 4SR, Table 5 (Valley, York, Royersford all in the SSS division, and Kane and McKeesport in the CSS division).

[5] Note that the depreciated original cost as used in Section 1327 includes the traditional deduction of contributions in aid of construction and customer advances from the original costs because those funds are not investor-supplied funds.

PAWC witness Ladner, PAWC St. No. 15-R

Assessment of Rate Filing

Q. Mr. Ladner talks about the capital expenditures, rehabilitation of aging infrastructure that the Company undertakes, and states that no party challenged the need for the projects. He concludes that the impact on customers will be reasonable while customers benefit from extensive capital investments. (PAWC St. No. 15-R at 3-4). Please address his statements.

A. It is correct that the OCA did not challenge the Company's proposed capital expenditures through the end of the FPFTY to its existing water and wastewater systems, as I stated above. However, the OCA submitted substantial testimony regarding other claims and proposals by PAWC that do not benefit the customers. The OCA presented adjustments to the claimed cost of capital and capital structure, the claimed rate base of property that is targeted for acquisition but is not reasonably certain to be used and useful in the FPFTY, certain operation and maintenance expenses, including bonuses and incentive compensation, the proposed rate designs that front load a customer's bill with a high customer charge, the proposed shift of wastewater revenue requirement to water customers, the proposed bill discount program and the arrearage management program, the impact on customers who are not eligible for those programs but who may be struggling to pay their current bills, the service received by customers at their taps, and the customers who interact with the Call Center or report service issues to the Company. The OCA also recommends rejection of the Company's proposed RDM and ECIC, and multiple deferral/tracker accounts.

In addition to the OCA's adjustments, the overwhelming majority of the more than two hundred customers who testified at the public input hearings said that they were concerned about the size of their monthly bills.

Q. In direct testimony, you stated that the consideration of the consumers' interests often fall away in the utility's planning and choices for the rate case. Mr. Ladner disagrees with your statement. (PAWC St. No. 15-R, pp. 4-5). What is your response?

A. Mr. Ladner states that PAWC considered the impact of increased rates on its customers and that PAWC sought to find the right balance between investments and the costs paid by customers. PAWC St. No. 15-R, p. 4. However, the OCA's testimony and the testimony of the overwhelming majority of customers who testified at the public input hearing make it clear that the result of PAWC's choices is that the balance is tilted towards investors. There are many choices that PAWC made in this case that do not strike a reasonable balance as I described above and as discussed in the OCA's testimony. The OCA's litigation position provides a more balanced approach that results in less onerous bill impacts while permitting a reasonable opportunity for investors to earn a reasonable return on prudent and reasonably certain capital investments. The OCA's position also recognizes that there is work to be done on specific service quality and customer service issues.

Q. Mr. Ladner also disagreed with your concern about the frequency of the PAWC's rate increases with this representing the third case in four years. (PAWC St. No. 15-R, pp. 5-6). What is your response?

A. Mr. Ladner's position is that utility costs are rising and that PAWC has controlled O&M costs. For sake of argument, even if I accepted that, PAWC has not controlled the revenue requirement impact of its fair market value acquisitions, nor has it refrained from asking for alternative ratemaking that will benefit its investors at the cost of the impact on its customers' bills. The expansion of PAWC's bill discount program, as Mr. Ladner references, including PAWC's non-opposition to recommendations from Mr. Colton and CAUSE-PA witness Geller (PAWC St. No. 15-R, p. 6) should help more customers who qualify and are actually enrolled in the program (see OCA St. 5SR). However, the expansion of a bill discount program does not offset the overall increase in a rate case. When facing the frequency of rate filings, it takes a toll on low-income and other customers who do not qualify for those programs. Those low-income programs do not justify the frequency of PAWC's rate filings that takes a toll on all customers' bills, as many customers testified at the public input hearings.

Q. Mr. Ladner responds to OCA's position that PAWC's 25 basis point management adder be rejected because it was not supported by substantial evidence. PAWC St. No. 15-R, pp. 6-13. What is your response?

A. The OCA maintains its position that PAWC has not supported it management adder and that the evidence in this case establishes that the adder should be rejected. Mr. Ladner notes that I relied on the conclusions drawn by Ms. Alexander, Mr. Colton, and Mr. Garrett. Similarly he points to rebuttal testimony by PAWC witnesses Everette, Degillio,

Dean and Bulkley. His testimony "underscores the extensive evidence supporting the Company's request" and states that it is incorrect that the Company has not supported its request. PAWC St. No. 15-R, p. 6. I am providing an overview of the categories listed by Mr. Ladner and the response of OCA to that evidence.

Customer Assistance Programs:

Mr. Colton has provided testimony refuting the evidence related to the Company's position that it has industry-leading customer assistance programs. See Mr. Colton's testimony. OCA St. 5, 5SR.

Service Quality:

The OCA has addressed the Company's premise that it should receive an additional 25 basis points for doing what it is required to do under Section 1501. Moreover, as discussed below, and will be discussed in the OCA's brief, there are customers who have service quality concerns that need to be addressed by the Company.

Acquiring Small and Troubled Systems:

The Company's premise that PAWC's acquisitions of small or troubled systems justifies an additional 25 basis points is not supported because its acquisitions are part of its growth strategy. When the Company acts as a receiver it is made whole for its costs as receiver. See e.g., In re: The Indian Springs Water Company, Docket No. M-2019-3011972 Aug. 8, 2019 Order at App. A. When it acquires troubled systems, it often requests a positive acquisition premium for the amount it paid over depreciated original cost. It is not reasonable for the Company to receive both the acquisition premium and a 25 basis point management adder for the same acquisition.

Extending Service to Customers:

The Company's extension of service to customers who do not have access to safe and reliable service is part of its obligations under Section 1501 of the Public Utility Code.

Q. Mr. Ladner also points to testimony at the PIH to support PAWC's proposed 25 basis point management adder. PAWC St. No. 15-R, pp. 13-15. What is your response?

A. Mr. Ladner's list of public input hearing testimony is a very small subset of the testimony over the twelve hearings. Most of the testimony he highlights is not from actual customers, but rather representatives of entities that have business relationships with PAWC. Given these entities' motivation to maintain a good business relationship with PAWC, it is not surprising that those entities will have positive things to say about the Company as a good business or community partner, even if the representatives would not testify as to specific rate increase. However, there were hundreds of PAWC customers who testified in opposition to the proposed rate increases, and many others expressed opposition to the Company's proposed management adder and the RDM.

Acquisitions

Q. Mr. Ladner references Mr. Abruzzo's rebuttal to OCA and I&E adjustments to remove acquisitions from PAWC's revenue requirement claims because the acquisitions are not likely to be approved by the close of the record (PAWC St. No. 15-R, p. 16). Please respond.

A. Mr. Ladner's position, incorporating Mr. Abruzzo's rebuttal, is refuted by Mr. Smith in his surrebuttal testimony. PAWC's arguments are inconsistent with the fundamental concepts of ratemaking as Mr. Smith explains. The uncertainties associated with the six acquisitions that PAWC includes in this case are fully set out by Mr. Smith in OCA St. 2SR. The simple fact of the matter is that merely because PAWC hopes that these acquisitions will be approved within the FPFTY is indicative of nothing more than its

desire to include them now rather than later so that it can begin earning a return on and of its investment. There is no reasonable basis in fact or law to allow PAWC to include in rate base those acquisitions that are challenged by the OCA in this case and the challenged acquisitions should be disallowed for the reasons discussed by OCA's other witnesses.

PAWC witness Everette PAWC St. No. 1-R

Section 1329

Q. Ms. Everette comments on your testimony regarding the revenue requirement shortfall resulting from the ratemaking rate base in the company's Section 1329 acquisitions at pages 22-23 of her rebuttal testimony. Please address her testimony.

A. Ms. Everette acknowledges that, "It is accurate that the revenues of acquired customers often do not cover the revenue requirement of the system upon acquisition." PAWC St. 1-R at 22. As explained in my direct testimony, PAWC has not had a 1329 acquisition where the acquired customers' revenues cover the revenue requirement upon ownership by PAWC given the high ratemaking rate base valuations. Although Ms. Everette offers a possible explanation (rate differentials), she does not acknowledge that the higher revenue requirement associated with the ratemaking rate base values under PAWC's ownership reflects a higher cost of ownership in addition to a rate base that is multiples higher than depreciated original cost.

Ms. Everette provides the example of York City acquisition where the average customer had a monthly bill of $29.36 which was "40% of the Zone 1 wastewater rate at that time." PAWC St. 1-R at 22-23. This supports my concern about the initial revenue shortfall and the ongoing impact of that initial shortfall that then grows in each rate case.

In this case, York City is Wastewater Rate Zone 7 and part of the SSS division. PAWC has proposed no increase to Rate Zone 7 until May 27, 2025 because of its commitment in its Asset Purchase Agreement with York City. PAWC Filing, Vol. 1, Notice to Rate Zone 7. The calculated revenue requirement for Rate Zone 7 shows an increase of $6.66 million (24.6%) and under OCA's Act 11 reduction, an increase of $1.66 million (6.2%). OCA St. 4, Table 5. PAWC's notice, for former York City customers, shows that on May 27, 2025, at PAWC's proposed revenue requirement, the average customer bill would be $63.78 per month. PAWC Filing, Vol. 1, Notice to Rate Zone 7. The rate hike for York City customer bills from $29.36 to $63.78 is a concrete example of how the revenue shortfall created in the Section 1329 case grows in the first rate case and subsequent rate cases. That shortfall is part of what is shifted in the Act 11 shift.

Q. Ms. Everette also states that OCA agreed to the ratemaking rate bases reflected in the 1329 cases. Please respond.

A. Ms. Everette's testimony rebuts a non-issue. The OCA has not challenged the ratemaking rate base for any of PAWC's completed 1329 acquisitions reflected in this case because the ratemaking rate bases were already determined in the application dockets pursuant to PAWC's choice to use Section 1329's fair market valuation. As I said in direct, the revenue requirement shortfall at the time of closing is part of what drives the Section 1311(c) shift in the future rate cases because the wastewater revenue requirement to serve those acquired customers is not covered by the acquired customers. As I discussed above, in the future rate case(s), the revenue requirement shortfall grows because there may be additional capital expenditures for those systems, as well as PAWC's proposed increases in O&M, return, etc.

Customer Notice

Q. Ms. Everette disagrees with your testimony regarding the notices that PAWC provides. PAWC St. No. 1-R, pp. at 25-29. Is she correct?

A. Ms. Everette claims that the notices must reflect PAWC's proposed tariffs that reflect the proposed 94% shift of the wastewater revenue requirement increase. She points to what the company did in prior cases but in prior cases PAWC was not proposing to shift 94% of the wastewater revenue increase. This case points out that this is not a reasonable approach. That is why I recommend that the notices provide an accurate bill impact for wastewater customers. There is no reason that PAWC could not also indicate that it is proposing to keep wastewater bills at current levels as part of its filing.

Q. Ms. Everette responds to your recommendation that PAWC should provide multiple usage levels in the notice by stating that OCA should propose changes to the Commission's regulation. Do you agree?

A. No. PAWC should not be afraid to accurately disclose the rate impact of its proposed rate increase at different, realistic usage levels. PAWC currently benefits from the obscurity that is provided by merely showing what a typical customer's bill would be. PAWC could choose to show usage at multiple levels but has made the choice not to do so. There is no need to change the notice regulation to have the customer notice show multiple usage levels. As I explained in my direct testimony, PAWC already makes changes to the notice regarding small, explanatory charts, and it did not seek a change to the PUC's regulations to do so. See OCA St. 1 at 61-62.

Q. Ms. Everette also states that the customer can visit PAWC's website. (PAWC St. No. 1-R, p. 27). Do you agree?

A. I agree that a customer can visit PAWC's website, but as I pointed out in my direct testimony, there is no rate calculation provided there, let alone bill impact calculations at different usage levels. Rather, the website provides PAWC's proposed tariffs, which the customer would then have to review to find the right rate zone and then calculate their bill at the proposed rate. Even if the customer did that, to my earlier point, that would not reflect a true picture of what the customer's increase might be but would reflect only PAWC's proposal.

Q. Ms. Everette disagrees with your recommendation about notice being provided at the end of the case. (PAWC St. No. 1-R, pp. 27-29). What is your response?

A. As I said in direct, the notice at the end of the case would provide the bill impact resulting from the Commission's decision on the rate filing, including revenue requirement and rate design decisions. PAWC's request for alternative ratemaking already requires it to issue a notice at the end of the proceeding to provide its customers with a plain language summary of the Commission's decision and the approved alternative rate or rate mechanism to comply with 66 Pa. C.S. § 1330(c)(1) and (2).[6]

Regarding Ms. Everette's testimony about the feasibility of a notice at the end of the case, I acknowledge that the timing is very tight. With regard to timing, the OCA would support a direct mailing of the notice at the end of the case, just as PAWC used direct mailing for the notices at the time of its filing. The notice –however delivered –

[6] *Act 58 Implementation Order* at 26-27.

should include a link to the alternative ratemaking information posted on PAWC's website as required by regulation or Commission Order, and Section 1330(c)(1) and (2).

Additionally, the website posting with the alternative ratemaking information could include information about the bill impact of the Commission's order at three usage levels.

The OCA's main concern about the notice at the end of the case is that, currently, the information customers might see at the end of the case is limited to press releases that use typical usage level and that information is not meaningful for most customers. Because of this, when customers receive the first bills containing the new rates, they have not received any information regarding the Commission's final order or any meaningful information about the bill impact of that order.

Q. Ms. Everette claims that the Company already adds a bill message at the end of the base rate case. (PAWC St. No. 1-R, p. 27-28). Is that sufficient to address your recommendations?

A. No. Ms. Everette provides as an example the bill message provided to the customers of the Steelton system after the last rate case. This message has similar flaws as the press release that I mentioned in my testimony. The only difference is that it is customized for a customer in the former Steelton water system. The bill message only provides the amount of the monthly bill increase of $30.48 (78%). The message does not even provide what usage level was used to calculate that monthly increase that resulted from the rate case or tie it back to what was proposed. It does not address customers at different usage levels. This illustrates my point – if I were a customer receiving that notice, I would not know how that impacts my bill at my usage levels because of the lack of information.

PAWC witness Rea, PAWC St. No. 10-R

Act 11

Q. Mr. Rea identifies your use of Bonbright principles for reviewing PAWC's proposal to shift 94% of the wastewater revenue requirement to water customers (p. 32). Does he address that testimony or those principles?

A. No.

Q. Mr. Rea claims that Act 11 "contemplates" that acquired wastewater systems may not be able to implement sufficient rates to support needed investment. P. 35-36. What is your response?

A. His statement focuses solely on capital improvements and disregards the shortfall that is created solely by the ratemaking rate base determined in the fair market valuation under Section 1329.

Q. At page 40-41, Mr. Rea claims that if revenue requirement reductions or scale back is first applied to PAWC's proposed Act 11 shift, then that is a revenue requirement reduction to water service. Please respond.

A. I disagree. PAWC calculated a wastewater revenue requirement and then proposed to shift 94% of that calculated wastewater revenue requirement to water customers. The imposition of $71 million on water customers has nothing to do with water service. So, the reduction of the shift to something less than PAWC's proposed $71 million is a reduction to the wastewater revenue requirement that would be shifted. This obfuscation that Mr. Rea is creating is exactly the reason why PAWC's notices to its wastewater customers should have reflected the calculated revenue requirement for the wastewater rate divisions to begin with. If it had properly notified those customers of the bill impact

of the calculated revenue requirement, then any changes made by the final Commission order would be in a reasonable context.

RDM

Q. At page 73-74, Mr. Rea states that the RDM dos does not shift revenue risk "completely" but rather "allows a <u>sharing</u> of revenue risk between the Company and its customers allowing the Company to enjoy the benefits of revenue stability…." (Emphasis in original). Do you agree?

A. No. Once a revenue requirement is determined using a test year or snapshot of capital, O&M, and cost of capital, rates are designed to permit a reasonable opportunity for PAWC to collect its revenue requirement. Customers pay bills that reflect those rates whether the company is able to earn more than its revenue requirement or less. If the Company determines that it is not earning its revenue requirement, then it can file a new rate case. Note that the use of an FPFTY provides a full year of projected costs and capital expenditures to determine the revenue requirement even though not one dollar has been spent as of the day that rates go into effect. Mr. Rea appears to acknowledge that the use of the FPFTY provides for some advantages for the Company (p. 75-76), yet claims that it only allows recognition of declining usage through the end of the FPFTY. As I stated, the end of the FPFTY is one year *after* the new rates go into effect, so rates are set with the use of lower consumption *as of the end* of the FPFTY. Moreover, PAWC filed its current case *during* its FPFTY from its last rate case, so the gap between the end of the FPFTY and new rates is very small.[7]

[7] The FPFTY for PAWC's 2022 rate case ended December 31, 2023. Rates in this case will go into effect on August 7, 2024.

PAWC's RDM would guarantee that PAWC recovers the exact revenue requirement that is set while its customers' bills will vary to ensure that recovery. It is not clear what risk PAWC's investors are bearing if the RDM is approved. Mr. Rea's statement that the RDM provides "payment stability" for PAWC's customers (p. 74) is not supported because the design of the RDM uses adjustments to customers' bills to maintain the Company's revenue levels.

An overwhelming majority of consumers testified at the public input hearings that they are taking reasonable, and in some cases drastic, steps to reduce their water consumption to save on their water bills, and that they would lose the incentive to conserve if they had to return or share back those savings with the Company under the RDM proposal, and that they do not believe they can reduce their consumption any further to be able to save under the RDM proposal (which as explained in Jerry Mierzwa's direct testimony would be what is required for a customer to be able to achieve a credit under the RDM mechanism).

PAWC witness Swiz St. No. 8-R

ECIC

Q. Mr. Swiz, at pages 9-13, addresses his justification for the ECIC. Do you agree?

A. The pace of new or changing regulations is not as quick as he portrays, and preapproval of projects is not what is done in Pennsylvania. Rather, traditionally the utility invests in capital, and if found to be just and reasonable, used and useful, and a prudent level of expenditures, then the utility recovers those capital expenditures in rates. The review outside of a full base rate case is not a "full and fair review" in my opinion. Mr. Swiz states that, "The ECIC helps ensure PAWC receives adequate revenue to maintain safe,

reliable, and compliant water and wastewater service…." PAWC St. No. 8-R, p. 12. That process is what is done in rate cases where all components of costs to serve can be reviewed. Also, I note that this case was filed within FPFTY from last case.

At page 12, Mr. Swiz states that the ECIC is modeled on the DSIC with "similar formula and customer safeguards". The ECIC does not have similar customer safeguards. For example, the DSIC has a statutory cap on the percentage of the bill that the DSIC can reflect. The DSIC is limited to distribution improvements and capital recovery for those improvements. The ECIC does not have a limitation on the type of property that can be recovered; it includes capital ***and*** O&M costs.

Mr. Swiz continues to claim that the ECIC will promote rate stability through gradual changes to customers rates and bills (p. 13). I disagree with the premise that guaranteed gradual rate increases on customer bills promote rate stability. From my reading of the transcripts of the sworn consumer testimony at the public input hearings held in this proceeding, an overwhelming number of consumers and public officials requested that the Commission outright reject or deny PAWC's proposed rate increase. Another large number of customers' testimony expressed concern over the frequency of PAWC's rate increase and cumulative effect of back-to-back rate increases.

There is no upper limit on the amount that can be charged through the ECIC. The ECIC would mean that rates would be guaranteed to increase as a result of rate filings and then every quarter in between rate filings, without any cap on the ECIC charges. These issues are addressed more fully by Mr. Garrett (OCA St. 3), Mr. Mierzwa (OCA St. 4, 4SR), and Mr. Colton (OCA St. 5, 5SR).

PAWC witness Bulkley PAWC St. No. 13-R

Q. Ms. Bulkley refers to your opposition to the RDM and the ECIC (PAWC St. No. 13-R, p. 79-81) and states that you did not provide any evidence regarding the proxy group.

A. That is correct, I did not conduct an analysis of the proxy group. Mr. Garrett addressed the proxy groups and the shift of risk from investors to ratepayers the RDM and ECIC present. OCA St. 3 at 10-11, 19-20.

Notably, Ms. Bulkley states, at page 81 of her rebuttal, that 59% of the proxy group operating subsidiaries have revenue stabilization mechanisms. That means that 41% do not. Moreover, although she refers only to her analysis of revenue stabilization mechanisms, she includes the ECIC as part of the revenue stabilization without any specific information. Ms. Bulkley also does not acknowledge that the water proxy group companies with operating subsidiaries in Pennsylvania (Essential Utilities and Middlesex Water) do not have revenue stabilization mechanisms or an ECIC.

Q. Does this conclude your surrebuttal testimony?

A. Yes.

I. INTRODUCTION

Q. Please state your name, position and business address.

A. Ralph C. Smith. I am a Senior Regulatory Consultant at Larkin & Associates, PLLC, 15728 Farmington Road, Livonia, Michigan 48154.

Q. Please describe Larkin & Associates.

A. Larkin & Associates is a Certified Public Accounting and Regulatory Consulting firm. The firm performs independent regulatory consulting primarily for public service/utility commission staffs and consumer interest groups (public counsels, public advocates, consumer counsels, attorneys general, etc.). Larkin & Associates has extensive experience in the utility regulatory field as expert witnesses in over 400 regulatory proceedings including numerous telephone, water and sewer, gas, and electric matters.

Q. Please summarize your educational background.

A. I received a Bachelor of Science degree in Business Administration (Accounting Major) with distinction from the University of Michigan - Dearborn, in April 1979. I passed all parts of the C.P.A. examination in my first sitting in 1979, received my CPA license in 1981, and received a certified financial planning certificate in 1983. I also have a Master of Science in Taxation from Walsh College, 1981, and a law degree (J.D.) cum laude from Wayne State University, 1986. In addition, I have attended a variety of continuing education courses in conjunction with maintaining my accountancy license. I am a licensed Certified Public Accountant and attorney in

the State of Michigan. I am also a Certified Financial Planner™ professional and a Certified Rate of Return Analyst ("CRRA"). Since 1981, I have been a member of the Michigan Association of Certified Public Accountants. I am also a member of the Michigan Bar Association. I have been a member of the Society of Utility and Regulatory Financial Analysts ("SURFA"). I have also been a member of the American Bar Association ("ABA"), and the ABA sections on Public Utility Law and Taxation.

Q. Please summarize your professional experience.

A. Subsequent to graduation from the University of Michigan, and after a short period of installing a computerized accounting system for a Southfield, Michigan realty management firm, I accepted a position as an auditor with the predecessor CPA firm to Larkin & Associates in July 1979. Before becoming involved in utility regulation, where the majority of my time for the past 44 years has been spent, I performed audit, accounting, and tax work for a wide variety of businesses that were clients of the firm.

During my service in the regulatory section of our firm, I have been involved in rate cases and other regulatory matters concerning numerous electric, gas, telephone, water, and sewer utility companies. My present work consists primarily of analyzing rate case and regulatory filings of public utility companies before various regulatory commissions and where appropriate, preparing testimony and schedules relating to the issues for presentation before these regulatory agencies.

I have performed work in the field of utility regulation on behalf of industry, state attorneys general, consumer groups, municipalities, and public service commission staffs concerning regulatory matters before regulatory agencies in Alabama, Alaska, Arizona, Arkansas, Barbados California, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Kansas, Kentucky, Louisiana, Massachusetts, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, Montana, New Jersey, New Mexico, New York, Nevada, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, Puerto Rico, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, Washington D.C., West Virginia, and Canada as well as the Federal Energy Regulatory Commission and various state and federal courts of law. My prior testimonies have included evaluations of numerous utility rate case filings and revenue requirement determinations.

Q. Have you prepared an attachment summarizing your educational background and regulatory experience?

A. Yes. Attachment RCS-1 provides details concerning my experience and qualifications.

Q. Have you previously testified before the Pennsylvania Public Utility Commission?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("PUC" or "Commission") previously on a number of occasions.

Q. On whose behalf are you appearing?

A. Larkin & Associates, PLLC, was retained by the Pennsylvania Office of Consumer Advocate ("OCA") to review the rate request of Pennsylvania American Water Company ("PAWC" or "Company"). Accordingly, I am appearing on behalf of the OCA.

Q. How will your testimony be organized?

A. I will present an Overall Financial Summary that addresses the revenue increases requested by PAWC for one water utility operations ("Water Operations") revenue requirement and for four wastewater utility operations ("Wastewater Operations") revenue requirements. I then address each of the utility revenue requirements that are the subject of the Company's revenue requirement filings in this proceeding. I then present an explanation of the organization and content of my exhibits for each system, which are attached to my testimony. That discussion is then followed by sections on Rate Base and Net Operating Income adjustments, where I explain each adjustment for each respective system.

Q. How many revenue requirement calculations has PAWC presented in the current case?

A. For the fully projected future test year ("FPFTY") of June 30, 2025, PAWC has presented one Water Operations and four Wastewater Operations revenue requirement calculations where the Company applies a rate of return to rate base and compares the required operating income with its adjusted operating income and uses

the difference to derive a revenue deficiency or sufficiency. The Company's four separate Wastewater Operations revenue requirements in this proceeding reflect a wastewater sanitary sewer system ("Wastewater SSS General Operations") general group and a combined sewer system ("CSS Wastewater Operations") group. PAWC is also presenting separate revenue requirements for the wastewater systems that the Company expects to acquire from the Butler Area Sewer Authority ("BASA Wastewater Operations") and the Borough of Brentwood ("Brentwood Wastewater Operations"), pursuant to the pending acquisition applications.

Q. What base rate revenue increases has PAWC calculated in the current case?

A. As shown in the Company's Exhibit 3-A, page A, the Company is proposing to increase its base rate revenues by $203.9 million on a total Company basis, or approximately 20.2 percent, when factoring in the Company's proposed Act 11 or Section 1311(c)[1] shift to recover portions of the Wastewater Operations revenue requirement from the Water Operations.

For its Water Operations, PAWC has calculated a base rate revenue increase of approximately $199.2 million, or 24.2 percent, after factoring in the proposed Section 1311(c) shift.

For its Wastewater Operations, PAWC has calculated the following base rate revenue increases/(decreases), after factoring in the proposed Section 1311(c) shift:

(1) ($169,261), or -0.2 percent for its Wastewater SSS General Operations;

(2) $4.7 million, or 40.0 percent for its BASA Wastewater Operations;

[1] 66 Pa.C.S. § 1311(c).

(3) $369,404, or 20.3 percent for its Brentwood Wastewater Operations; and

(4) ($226,926) or -0.3 percent for its CSS Wastewater Operations.

Q. Has PAWC proposed that some of its calculated rate increases for Wastewater Operations be borne by water utility customers under Section 1311(c) of the Public Utility Code?

A. Yes. As shown in the table below, the Company is proposing to determine its revenue requirement on a combined water and wastewater basis and to allocate approximately $71.1 million of its Wastewater Operations' cost of service (total for all four Wastewater Operations) to Water Operations:

	FPFTY Ending
Company Proposal - Allocation of Calculated Wastewater Increases to Water Customers	**6/30/2025**
Wastewater SSS General Operations	$32.0 million
Butler Wastewater Operations	$21.6 million
Brentwood Wastewater Operations	$1.6 million
CSS Wastewater Operations	$16.0 million
Total	**$71.1 million**
Source: Exhibit 3-A, page A from PAWC filing	

Q. What is the Company's basis for allocating approximately $71.1 million of its calculated Wastewater Operations' revenue requirement to Water Operations?

A. PAWC asks the Commission to exercise its discretion to approve the subsidy of wastewater revenue increases by water utility customers pursuant to Section 1311(c) of the Public Utility Code. The Company's request is discussed on pages 19 through 22 of the Direct Testimony of Company Witness Everette. On page 20 of her

testimony, Ms. Everette states that the allocation of the $71.1 million of wastewater cost of service to water operations increases the revenue requirement to be recovered from water customers by approximately 7 percent. In addition, Ms. Everette states that the allocation would increase the monthly water bill of a residential water customer by approximately $6.08 per month at proposed rates. OCA witness Jerome Mierzwa addresses the Company's proposed shift under Section 1311(c) in his direct testimony.

Q. What is Mr. Mierzwa's recommendation with regard to shifting the Wastewater revenue deficiencies to Water Operations pursuant to Act 11?

A. As discussed in his Direct Testimony, Mr. Mierzwa recommends that 75 percent of OCA's recommended revenue deficiency for Wastewater SSS General Operations be allocated to Water Operations. In addition, Mr. Mierzwa recommends that 50 percent of OCA's recommended revenue deficiency for CSS Wastewater Operations be allocated to Water Operations.

As shown on Exhibit LA-1, Schedule A, page 1, Mr. Mierzwa's recommendations shift approximately $15.2 million of the revenue deficiency for Wastewater SSS General Operations and approximately $3.7 million of the revenue deficiency for CSS Wastewater Operations to Water Operations.

Q. For which PAWC utilities are you addressing PAWC's revenue requirements?

A. I am addressing the revenue requirements requested by PAWC for its Water Operations, and the four separate revenue requirements requested by PAWC for its

Wastewater Operations, including (1) Wastewater SSS General Operations, (2) BASA Wastewater Operations, (3) Brentwood Wastewater Operations, and (4) CSS Wastewater Operations.

Exhibits Filed with Testimony

Q. Have you prepared any attachments to be filed with your testimony?

A. Yes. Exhibits LA-1 through LA-4 were prepared and/or referenced by me or under my supervision and are attached to my testimony.

Q. What is shown on Exhibit LA-1?

A. Exhibit LA-1 shows the OCA's revenue requirement summary schedules for PAWC's one Water Operations and four Wastewater Operations for the FPFTY ending June 30, 2025.

Q. What is shown on Exhibit LA-2?

A. Exhibit LA-2 shows schedules related to my recommended adjustments to rate base and net operating income for the FPFTY ending June 30, 2025.

Q. What is shown on Exhibit LA-3?

A. Exhibit LA-3 presents selected non-confidential documents that are referenced in my testimony and Exhibits LA-1 and LA-2.

Q. What is shown on Exhibit LA-4?

A. Exhibit LA-4 presents selected confidential documents that are referenced in my testimony and Exhibits LA-1 and LA-2.

Q. What is shown on Exhibit LA-5?

A. Exhibit LA-5 contains materials showing the survivor curves for wastewater utility plant accounts prepared by Gannett Fleming that were used in PAWC's acquisition proceedings under §1329 for BASA and Brentwood.

Q. What is shown on Exhibit LA-6?

A. Exhibit LA-6 contains certain rate of return and revenue requirement impact calculations that OCA requested be performed.

II. OVERALL FINANCIAL SUMMARY

Water and Wastewater Utility Operations

Q. What does Exhibit LA-1, Schedule A, page 1 show?

A. Exhibit LA-1 shows the development of the adjusted revenue requirements for PAWC's Water Operations and four Wastewater Operations for the FPFTY ending June 30, 2025.

Schedule A, page 1 presents the revenue requirement calculations reflecting all of the adjustments I am recommending for PAWC's Water and Wastewater Operations, including the complete removal of the separate revenue requirement amounts related to the proposed BASA and Brentwood Wastewater acquisitions. My recommendations for the Water Operations and Wastewater SSS General Operations also reflect the complete removal of costs related to the remaining proposed acquisitions, including Audubon Water Company ("Audubon Water"), Farmington Township water ("Farmington Water"), Farmington Township

wastewater ("Farmington Wastewater"), and Sadsbury Township Municipal Authority wastewater system ("Sadsbury Wastewater").

As shown on Schedule A, page 1, line 7, the results of my recommendations do not support PAWC's proposed overall increase of approximately $203.9 million in the FPFTY. Instead, my analysis – after removing the proposed acquisitions, applying my other recommended adjustments, and using the cost of capital recommended by OCA Witness Garrett – shows an overall revenue deficiency of $43.7 million in the FPFTY, inclusive of a base rate revenue deficiency of $16.1 million for PAWC's Water Operations and $27.6 million for PAWC's Wastewater SSS General Operations and the CSS Wastewater Operations.

Q. What is shown on Exhibit LA-1, Schedule A, page 2?

A. Schedule A, page 2 shows PAWC's proposed Summary of Revenue Requirement for Water Operations and for each Wastewater Operations from PAWC Exhibit 3-A, page A. As shown on Schedule A, page 2, column A, line 7, PAWC's filing shows an overall revenue deficiency of approximately $203.9 million based on a FPFTY ending June 30, 2025.

Q. What is shown on Exhibit LA-1, Schedule A, page 3?

A. Schedule A, page 3 shows the differences between the OCA's adjusted amounts (Schedule A, page 1) and PAWC's calculated amounts (Schedule A, page 2).

Q. What is shown on Exhibit LA-1, Schedule A, page 4?

A. Schedule A, page 4, shows a reconciliation of PAWC's calculated base rate revenue deficiency amount of approximately $128.1 million for the FPFTY Water Operations with the revenue deficiency amount of approximately $16.1 million for Water operations that I have calculated on Schedule A, page 1.

Q. What is shown on Exhibit LA-1, Schedule A, page 5?

A. Schedule A, page 5, shows a reconciliation of PAWC's calculated base rate revenue deficiency amount of approximately $75.8 million for overall Wastewater Operations with the alternate revenue deficiency amount of approximately $27.6 million for overall Wastewater Operations that I have calculated on Schedule A, page 1, which reflects the removal of the BASA and Brentwood Wastewater Operations revenue requirements.

Q. What is the revenue requirement impact of incorporating the cost of capital and ROE recommendations of OCA Witness Garrett?

A. As shown on Exhibit LA-1, Schedule A, page 4, column C, line 1, the impact of Mr. Garrett's cost of capital and ROE recommendations reduces PAWC's requested revenue requirement by approximately $82.4 million for Water Operations.

As shown on Exhibit LA-1, Schedule A, page 5, column C, line 1, the impact of Mr. Garrett's cost of capital and ROE recommendations reduces PAWC's requested revenue deficiency by approximately $22.4 million for Wastewater Operations.

The total expected reduction to PAWC's requested revenue requirement is approximately $104.8 million for Water and Wastewater operations combined.

Q. Did OCA request that you perform additional calculations with regard to PAWC's capital structure and ROE?

A. Yes. OCA requested that I perform additional calculations with regard to PAWC's requested capital structure and ROE. Specifically, OCA requested the following calculations:

- To calculate the revenue requirement impact of 25 basis points ROE change using PAWC's rate base and capital structure.
- To calculate the revenue requirement impact of comparing the difference between PAWC's proposed capital structure and OCA's recommended capital structure using PAWC's rate base.
- To calculate the revenue requirement impact of comparing the difference between PAWC's proposed ROE of 10.95 percent and OCA's recommended ROE of 9.1 percent using PAWC's rate base.
- To calculate the revenue requirement impact of comparing the difference between PAWC's proposed capital structure and ROE and OCA's recommended capital structure and ROE using PAWC's rate base.

Q. What is the revenue requirement impact of adopting the Company's performance-based increment award to ROE of up to 25 basis points?

A. As shown on Exhibit LA-6, page 1 the impact of a 25-basis points ROE change, at PAWC's claimed rate base and proposed capital structure, is approximately $9.2 million for Water Operations and approximately $2.6 million for Wastewater Operations, for a total impact of $11.8 million.

Q. What is the revenue requirement impact of adopting the OCA's recommended capital structure over PAWC's proposed capital structure?

A. As shown on Exhibit LA-6, page 2, column D, line 14, the revenue requirement impact of adopting the OCA's recommended capital structure over PAWC's proposed capital structure, at PAWC's claimed rate base and at PAWC's proposed ROE of 10.95 percent, is a reduction of approximately $24.7 million for Water Operations, and as shown on Exhibit LA-6, page 3, column D, line 21, is a reduction of approximately $5.9 million for Wastewater Operations.

The combined impact is a reduction of approximately $30.6 million to PAWC's requested revenue requirement for its Water and Wastewater Operations.

Q. What is the revenue requirement impact of adopting the OCA's recommended 9.1 percent ROE over PAWC's proposed ROE of 10.95 percent?

A. As shown on Exhibit LA-6, page 4, column D, line 12, the revenue requirement impact of adopting the OCA's recommended 9.1 percent ROE over PAWC's proposed 10.95 percent ROE is a total reduction on a combined basis of

approximately $87 million; inclusive of a reduction of approximately $67.9 million for Water Operations, and as shown on Exhibit LA-6, page 5, column D, line 14, is a reduction of approximately $19.1 million for Wastewater Operations.

Q. What is the revenue requirement impact of adopting PAWC's proposed cost of capital structure and ROE and OCA's recommended cost of capital and ROE?

A. As shown on Exhibit LA-6, page 6, column D, line 14, the impact of OCA's versus PAWC's proposed cost of capital using PAWC's rate base, reduces PAWC's proposed revenue deficiency by approximately $86.7 million for Water Operations. This amount includes a reduction of approximately $82.4 million for the rate of return difference (column D, line 12) and a reduction of approximately $4.3 million related to interest synchronization (column D, line 13).[2]

As shown on Exhibit LA-6, page 7, column D, line 21, the impact reduces PAWC's proposed revenue deficiency by approximately $23.5 million for Wastewater Operations. This amount includes a reduction of approximately $22.4 million for the rate of return difference (column D, line 14) and a reduction of approximately $1.1 million related to interest synchronization (column D, line 20).[3]

[2] The revenue requirement impact amount for interest synchronization on Exhibit LA-6, page 6, line 13 is different than what is shown on Exhibit LA-1, Schedule A, page 4, column C, line 16. This is due to the amount on Exhibit LA-6 being calculated with PAWC's claimed rate base for Water Operations whereas the amount shown on Exhibit LA-1 was calculated using OCA's recommended rate base for Water Operations.

[3] The revenue requirement impact amount for interest synchronization on Exhibit LA-6, page 7, line 20 is different than what is shown on Exhibit LA-1, Schedule A, page 5, column C, line 12. This is due to the amount on Exhibit LA-6 being calculated with PAWC's claimed rate base for Wastewater Operations whereas the amount shown on Exhibit LA-1 was calculated using OCA's recommended rate base for Wastewater Operations.

The combined impact is a reduction of approximately $110.2 million to PAWC's requested revenue requirement for its Water and Wastewater Operations.

Q. What is shown on Exhibit LA-1, Schedules A-1.B through A-1.F?

A. Schedules A-1.B through A-1.F of Exhibit LA-1 present the derivation of my recommended gross revenue conversion factor ("GRCF") for each of the PAWC water and wastewater revenue requirements for the FPFTY ending June 30, 2025.

Q. What is a GRCF?

A. The GRCF is used to derive the amount of revenue increase (or decrease) that is needed based upon a deficiency (or excess) in the utility's ongoing level net operating income. Any increase or decrease in net income granted in this proceeding will cause PAWC to incur additional taxes and uncollectible expenses. The GRCF "grosses up" the net operating income deficiency (or sufficiency) for these items in order to derive a revenue requirement impact. Using the same data shown on PAWC Exhibit 3-A for each PAWC water and wastewater revenue requirements, I calculated the GRCFs shown in Exhibit LA-1, Schedules A-1.B through A-1.F.

Q. How does the GRCF recommended by you compare with the GRCF in PAWC's water and wastewater utility filings?

A. Exhibit LA-1, Schedule A-1.B, column A, reproduces the GRCF of 1.401114 that I used to convert PAWC's net operating income deficiency into a revenue deficiency amount on Schedule A, page 3 for Water Operations. Exhibit LA-1, Schedule A-

1.B, column C, shows the GRCF of 1.400941 that is used in my calculation of PAWC's adjusted water utility revenue deficiency. The difference in the GRCF is attributable to the Uncollectibles factor. The Company's GRCF for the water utility reflects an Uncollectibles factor of 1.17600 percent, as shown on Schedule A-1.B, column C, line 2. In contrast, I have used an Uncollectibles factor of 1.163386 percent, as shown on Schedule A-1.B, column E, line 2. The Uncollectibles factor is calculated on Exhibit LA-2, Schedule C-9.

Exhibit LA-1, Schedules A-1.C through A-1.F reproduce the GRCF of 1.401143 that I used to convert PAWC's net operating income deficiency into a revenue deficiency amount on Schedule A, page 3 for Wastewater Operations. The Company's GRCF for wastewater operations reflects a similar Uncollectibles factor of 1.17600 percent, as shown on Schedules A-1.C through A-1.F, column C, line 2. In contrast, I have used the aforementioned Uncollectibles factor of 1.163386 percent, as shown on Schedules A-1.C through A-1.F, column E, line 2.

Q. What is shown on Exhibit LA-1, Schedule B (pages 1-5)?

A. Schedule B (pages 1-5) presents my recommended adjusted rate base for each PAWC water and wastewater revenue requirement for the June 30, 2025 FPFTY. Schedules B.1.B through B.1.F summarize my recommended adjustments rate base for each PAWC water and wastewater revenue requirement for the June 30, 2025 FPFTY.

Q. What is shown on Exhibit LA-1, Schedule C (pages 1-5)?

A. Schedule C (pages 1-5) presents my recommended adjusted net operating income for each PAWC water and wastewater revenue requirement for the June 30, 2025 FPFTY. Schedules C.1.B through C.1.F summarize my recommended adjustments to revenue and expenses for each PAWC Water Operations and Wastewater Operations revenue requirement for the June 30, 2025 FPFTY. Schedules C.1.B through C.1.F also present the impact on income tax expense resulting from my recommended adjustments for each PAWC water and wastewater revenue requirement for the June 30, 2025 FPFTY.

Q. What is shown on Exhibit LA-1, Schedule D?

A. Schedule D (pages 1-2) presents OCA's recommended capital structure cost rates and overall rate of return based on the recommendations of OCA witness Garrett. Schedule D, page 1, shows the capital structure and cost rates for PAWC's Water Operations. Schedule D, page 2, shows the capital structure and cost rates for PAWC's Wastewater Operations. The capital structure for PAWC's Wastewater Operations includes Pennvest Financing.

Q. What does Exhibit LA-2 show overall?

A. Overall, Exhibit LA-2 presents my recommended adjustments to rate base, revenue, and operating expenses for the FPFTY ending June 30, 2025. Adjustments to rate base are shown on Schedules B-1 through B-5 of Exhibit LA-2. Adjustments

affecting net operating income are shown on Schedules C-1 through C-22 of Exhibit LA-2.

III. FULLY PROJECTED FUTURE TEST YEAR – JUNE 30, 2025

Q. What time period has PAWC used as the basis for determining its revenue requirements in this proceeding?

A. PAWC used the 12 months ending June 30, 2025, as the rate year for determining its revenue requirements in this proceeding. The June 30, 2025 fiscal year projections are a FPFTY, which means all claims are fully projected rather than experienced. The use of a FPFTY is permitted pursuant to Section 315(e) of the Public Utility Code.

IV. ACQUISITIONS INCLUDED IN PAWC'S BASE RATE CASE

Q. Has the Company proposed including certain pending acquisitions in the current base rate case?

A. Yes. As discussed in the Direct Testimony Company witness Abruzzo, the Company has included the following proposed acquisitions in this rate case:

1. Audubon Water,
2. Farmington Water,
3. Farmington Wastewater,
4. Sadsbury Wastewater,
5. BASA Wastewater, and
6. Brentwood Wastewater.

The Company has included rate base claims for those systems in its revenue requirements based on its prediction that the utility plant will be acquired and used

and useful by the end of the FPFTY. The Company has also included certain improvements for the BASA and Brentwood Wastewater systems in rate base in the FPFTY. Finally, the Company has included expense claims related to Audubon Water, Farmington Water, Farmington Wastewater, Sadsbury Water, BASA Wastewater, and Brentwood Wastewater in the FPFTY. I discuss each of the proposed acquisitions further below in my testimony.

Q. In your opinion, what criteria should be used to determine whether a proposed acquisition should be included in the FPFTY in this case?

A. In my opinion, the criteria that should be used to determine whether a proposed acquisition is reasonably likely to occur by the end of the FPFTY and thus can be included in the FPFTY for ratemaking purposes are the following two criteria **prior to or at the close of the record in the base rate case**:

1. there is a Commission **final** order approving the acquisition (*i.e.*, the appeal period has run, and no appeals filed) in the acquisition proceeding docket; **AND**
2. there is a lack of uncertainty as to whether the utility will close the acquisition for reasons other than Commission approval (*i.e.*, it appears reasonably certain that the utility will close the acquisition because there is no other apparent regulatory, legal, or business risk that would prevent the transaction from closing).

Q. Why do you select these criteria for inclusion of an acquisition in the FPFTY for ratemaking purposes?

A. The PUC is obligated to approve only just and reasonable rates. PAWC's aspiration that these systems be included is based on its belief the PUC will approve its pending applications and that no other party will take legal steps to protect its interests to challenge those cases. In my view, that is not a reasonable belief. If customers rates are set that reflect a proposed to-be-acquired utility system in its revenue requirement that is later not authorized under law and therefore not eligible to be included in the utility's revenue requirement for ratemaking purposes, those rates would be unjust and unreasonable. Ensuring that there is a high degree of certainty as to the utility acquisitions that are included in the FPFTY will avoid the aggravation and public confusion of the Commission having to later enter an order to adjust the utility's rates to remove the unauthorized transaction from the utility's revenue requirement and to issue refunds to customers for previously amounts collected under unjust and unreasonable rates. The two criteria I offer in my testimony for evaluating the certainty level of a utility acquisition are objective and reasonable and clear. Additionally, PAWC controls the timing of its rate filings. It could have waited for more certainty on each of these acquisitions it is wanted to include them in rates and, of course, the fact that they are not included in rates set in this proceeding does not negate that they can be included in rates in any future filing when they are more certain.

Q. Based on the above criteria, should any of the proposed acquisitions be included in the FPFTY in this case?

A. No. I outline the specifics for each proposed acquisition in more detail below, but in my opinion, none of the proposed acquisitions addressed in PAWC's Witness Abruzzo's testimony should be included in the FPFTY for ratemaking purposes because based on my review of those acquisitions, none of the acquisitions will have met the two criteria set forth above by the close of the record in this proceeding. It is simply too premature to tell what will happen. There is no reasonable indication that by the close of the record in this proceeding any of the transactions will receive a Commission final order where the appeal period has run or, in the case of BASA that the appeal will be resolved before the close of the record. In my opinion, it would be unreasonable to rely on a party's prediction that the Commission will approve a utility acquisition in a separate application proceeding or will do so by a date certain. It would be unreasonable because reliance on such premature predictions would improperly signal to the general public, to the system seller, and to the management and shareholders of public utility companies that the Commission is expected in the future to adjudicate the utility acquisition in favor of the utility (*i.e.*, effectively "pre-judging" the outcome of the acquisition application in a base rate proceeding). A party or a member of the public having access to that type of "inside ball" as to future Commission decision-making is inappropriate; accordingly, it would be unreasonable to include a utility acquisition for ratemaking purposes based on a party's premature prediction of Commission future decision-making to occur after the close of the record in this base rate case.

Q. What if the current information that you have about the status of any of the proposed transactions changes during the course of this case and before the close of the record in this proceeding?

A. It is possible that the information about any of the proposed transactions could change and that one or more of the proposed transactions could meet the criteria I have outlined above before the close of the record in this proceeding. To the extent the uncertainties about any of the proposed transactions are sufficiently resolved before the close of the record in this proceeding, *i.e.*, the Commission's Order becomes final (appeal period has run and no appeal filed) and there are no other outstanding risk items that would prevent the closing, then I reserve the right to change my recommended revenue requirement to include the proposed transactions that are more reasonably certain to occur in the FPFTY along with my recommended adjustments relating to the claims for that transaction. Thus, out of an abundance of caution, in the event that there is a change in status to either the Brentwood or BASA transactions, I present my recommended adjustments to the revenue requirements for the BASA Wastewater Operations and Brentwood Wastewater Operations. To be clear, my current recommendation is that these proposed acquisitions should not be included ratemaking rate base or the calculation of revenue requirement, but the adjustments are presented only in the alternative so that if they become more reasonably likely that the necessary information is available to calculate an adjusted revenue requirement.

Q. Why do you address your recommended adjustments to the revenue requirement for BASA Wastewater and Brentwood Wastewater but not the remaining proposed transactions?

A. I present my alternative recommendations for the BASA Wastewater and Brentwood Wastewater revenue requirements because the Company in its direct case presented separate revenue requirements for these systems. For the remaining proposed acquisitions, the ratemaking elements are embedded in the revenue requirements for Water Operations and Wastewater SSS General Operations. Specifically, Audubon Water and Farmington Water are included in the revenue requirement for the general Water Operations, while Farmington Wastewater and Sadsbury Wastewater are embedded in the revenue requirement for Wastewater SSS General Operations.

Audubon Water

Q. Please describe the proposed Audubon Water acquisition.

A. As discussed on pages 10-13 of Mr. Abruzzo's testimony, pursuant to 66 Pa. C.S. § 1102, the Company filed its application to acquire Audubon Water on September 21, 2023 in Docket No. A-2023-3043194. The first prehearing was held on January 16, 2024, where a litigation schedules was set with briefs due in May 2024. Tr. 60-62. As shown on Exhibit 3-C, page 77, the proposed Audubon Water acquisition has a purchase price of $8 million and an anticipated closing date occurring in the fourth quarter of 2024. On page 11 of his testimony, Mr. Abruzzo states that Audubon Water and American Water Works Company, Inc., the parent company of PAWC ("Parent Company") entered into a merger agreement pursuant to the proposed acquisition whereby the issued and outstanding shares of Audubon Water's capital

stock will be surrendered to the Parent Company's common stock per the merger agreement.

Q. Did PAWC include any post-acquisition costs in the rate base related to the Audubon Water acquisition?

A. No. In its response to OCA 12-012, the Company stated that its rate base claims in this proceeding do not include any post-acquisition capital investment for the Audubon Water acquisition.

Q. Based on the above criteria for including acquisitions in the FPFTY for ratemaking purposes, should the proposed Audubon Water acquisition be included in the FPFTY in this case?

A. No. Based on the above criteria, the proposed Audubon Water acquisition should not be included in the FPFTY in this case. At this time, there is no Commission Order approving the Audubon Water acquisition, and there is no indication based on my review of that proceeding that there will be a Commission final order (meaning, the appeal period has run) by the close of the record in this proceeding. Even if an assumption is made – prior even to the development of the evidentiary record in that separate proceeding – that the Commission will ultimately approve the acquisition, as discussed above, such approval could be subject to appeal. If an appeal is filed, then the acquisition is too uncertain such that the appellate court could potentially reverse the Commission's approval of the acquisition.

Q. Is PAWC seeking treatment under 66 Pa. C.S. § 1327(a) with regard to the proposed acquisition of Audubon Water?

A. Yes. Mr. Abruzzo states that the merger agreement provides that the Company will seek distressed utility treatment under 66 Pa. C.S. § 1327(a) for Audubon Water in its next rate case. Specifically, on pages 11 (lines 19-23) and 12 (lines 1-3) of his testimony, Mr. Abruzzo states:

> If the Commission grants 1327(a) treatment and some or all of the difference between the depreciated original cost of the assets and purchase price is approved for inclusion in rate base, American Water will release the Contingent Escrowed Shares to AWC in a corresponding percentage in an amount up to $2,000,000 upon entry of a final, non-appealable Commission order. If the Commission does not grant the request for 1327(a) treatment, the purchase price for AWC will be $6,000,000 and the Contingent Escrowed Shares will be returned to American Water.

Q. Is PAWC claiming that the Audubon Water system meets all nine criteria of 66 Pa. C.S. § 1327(a)?

A. Yes. PAWC is claiming that the Audubon Water system meets all nine criteria of 66 Pa. C.S. § 1327(a). Specifically, on pages 15-18 of his testimony, Mr. Abruzzo discusses each of the nine criteria in the context of the proposed Audubon Water acquisition.

Q. Does the proposed Audubon Water acquisition satisfy all nine criteria of 66 Pa. C.S. § 1327(a)?

A. It is premature to reach this conclusion when there is a separate, ongoing application proceeding where the evidentiary record is being developed and no findings of fact have been adopted.

Q. What is your recommendation regarding PAWC's potential acquisition of Audubon Water for ratemaking purposes?

A. Based on the foregoing, I recommend that the costs associated with the proposed Audubon Water acquisition be removed from the FPFTY as reflected in Exhibit LA-1, Schedule A, page 1. As discussed in a later section of my testimony, I have removed the costs associated with the Audubon Water acquisition from the FPFTY, including the amounts included in rate base (Schedule B-1), operating expense (Schedule C-1) and depreciation expense (Schedule C-5).

Farmington Water and Wastewater

Q. Please describe the proposed Farmington Water and Wastewater acquisitions.

A. As discussed on page 8 of Mr. Abruzzo's testimony, pursuant to 66 Pa. C.S. § 1102, the Company filed its application to acquire Farmington Township's water distribution system in Docket No. A-2023-3042567, and its wastewater collection, conveyance and treatment system in Docket No. A-2023-3042587. Mr. Abruzzo also states that OCA filed a protest and the OSBA filed a Notice of Intervention and that this matter is currently pending before the Office of the Administrative Law Judge with a pre-hearing scheduled for January 24, 2024. As shown on Exhibit 3-C,

page 74, the purchase price for Farmington Water is $2.718 million and the purchase price for Farmington Wastewater is $2.827 million for an overall purchase price of $5.545 million for both systems and an anticipated closing date occurring in the second quarter of 2024.

Q. Did PAWC include any post-acquisition costs in the rate base related to the Farmington Water and Wastewater acquisitions?

A. No. In its response to OCA 12-010, the Company stated that its rate base claims in this proceeding do not include any post-acquisition capital investment for the Farmington Water and Wastewater acquisitions.

Q. Based on the two previously discussed criteria regarding whether a proposed acquisition should be included in the FPFTY, should the proposed Farmington Water and Wastewater acquisitions be included in the FPFTY in this case?

A. No. Based on the two previously discussed criteria, the proposed Farmington Water and Wastewater acquisitions should not be included in the FPFTY in this case. At this early phase of the application proceeding, there is no predicting with reasonable certainty that the Commission will approve the Farmington Water and Wastewater transactions or by when the Commission will enter an order. Even if an assumption is made – prior even to the development of the evidentiary record in that separate proceeding – that the Commission will ultimately approve the acquisition, such approval could be subject to appeal. If an appeal is filed, then the acquisition is too

uncertain such that the appellate court could potentially reverse the Commission's approval of the acquisition.

Q. Is PAWC seeking treatment under 66 Pa. C.S. § 1327(a) with regard to the proposed acquisition of Farmington Water?

A. Yes. On page 10 of his testimony, Mr. Abruzzo states that the Company will pay slightly more than the depreciated original cost of the Farmington Water assets and that it is requesting an acquisition adjustment on the water system pursuant to 66 Pa. C.S. § 1327 and 52 Pa. Code § 69.711.

Q. Is PAWC claiming that it the Farmington Water system meets all nine criteria of 66 Pa. C.S. § 1327(a)?

A. Yes. PAWC is claiming that the Farmington Water system meets all nine criteria of 66 Pa. C.S. § 1327(a). Specifically, on pages 18-22 of his testimony, Mr. Abruzzo discusses each of the nine criteria in the context of the proposed Farmington Water acquisition.

Q. Does the proposed Farmington Water acquisition satisfy all nine criteria of 66 Pa. C.S. § 1327(a)?

A. It is premature to reach this conclusion when there is a separate, ongoing application proceeding where the evidentiary record is being developed and no findings of fact have been adopted.

Q. What is your recommendation regarding PAWC's potential acquisition of Farmington Water and Wastewater for ratemaking purposes?

A. Based on the foregoing, I recommend that the costs associated with the proposed Farmington Water and Wastewater acquisitions be removed from the FPFTY as reflected in Exhibit LA-1, Schedule A, page 1. As discussed in a later section of my testimony, I have removed the costs associated with the Farmington Water and Wastewater acquisitions from the FPFTY for the Water Operations and Wastewater SSS General Operations, respectively, including the amounts included in rate base (Schedule B-2 for water and Schedule B-3 for wastewater), operating expense (Schedule C-2 for water and Schedule C-3 for wastewater) and depreciation expense (Schedule C-6 for water and Schedule C-7 for wastewater).

Sadsbury Wastewater

Q. Please describe the proposed Sadsbury Wastewater acquisition.

A. As discussed on page 7 of Mr. Abruzzo's testimony, pursuant to 66 Pa. C.S. § 1102, the Company filed its application to acquire the Sadsbury Township Municipal Authority wastewater collection and conveyance system on August 3, 2023, in Docket No. A-2023-3042058. Mr. Abruzzo also states that Sadsbury Wastewater filed a Petition to Intervene and both OCA and the OSBA filed protests, which are currently pending before the Office of the Administrative Law Judge. As shown on Exhibit 3-C, page 80, the purchase price for the Sadsbury Wastewater system is $990,000 and an anticipated closing date occurring in the third quarter of 2024.

On page 8 of his testimony, Mr. Abruzzo states that the depreciated original cost of the Sadsbury Wastewater assets is more than the purchase price, thus the

Company is proposing to amortize the difference between the purchase price and the cost of Sadsbury Wastewater assets.

Q. Did PAWC include any post-acquisition costs in the rate base related to the Sadsbury Township Municipal Authority Wastewater acquisition?

A. No. In its response to OCA 12-008, the Company stated that its rate base claims in this proceeding do not include any post-acquisition capital investment for the Sadsbury Township Municipal Authority acquisition.

Q. Based on the two previously discussed criteria regarding whether a proposed acquisition should be included in the FPFTY, should the proposed Sadsbury Wastewater acquisition be included in the FPFTY in this case?

A. No. Based on the two previously discussed criteria, the proposed Sadsbury Wastewater acquisition should not be included in the FPFTY in this case. At this time, it is not known with reasonable certainty that the Commission will or will not approve the acquisition.

Q. What is your recommendation regarding PAWC's potential acquisition of the Sadsbury Wastewater system for ratemaking purposes?

A. Based on the foregoing, I recommend that the costs associated with the proposed Sadsbury Wastewater acquisition be removed from the FPFTY as reflected in Exhibit LA-1, Schedule A, page 1. As discussed in a later section of my testimony, I have removed the costs associated with the Sadsbury Wastewater acquisition from

the FPFTY, including the amounts included in rate base (Schedule B-4), operating expense (Schedule C-4) and depreciation expense (Schedule C-8).

BASA Wastewater

Q. Please describe the proposed BASA Wastewater acquisition.

A. The BASA system is a regional wastewater service provider that provides wastewater service to the City of Butler, Township of Butler, portions of Center, Summit, Connoquenessing, and Oakland Townships and the Borough of East Butler. According to Exhibit 3-C, PAWC filed its application for the BASA Wastewater system on February 14, 2023, in Docket No. A-2022-3037047.

As discussed on page 3 of Mr. Abruzzo's testimony, on August 14, 2023, the Company filed a unanimous settlement of all issues with all active parties in the BASA acquisition proceeding. On page 5 of his testimony, Mr. Abruzzo states that as part of the settlement, the parties requested that the Commission approve the addition of $228 million to PAWC's rate base pursuant to the BASA acquisition.

In its Order dated November 16, 2023, the Commission approved the Settlement.

Q. Were there appeals filed by certain parties in response to the Commission's Order approving the Joint Petition for Approval of Unanimous Settlement of All Issues?

A. Yes. On December 29, 2023, both Center Township, Butler County (1459 C.D. 2023) and Summit Township, Butler County (1460 C.D. 2023), filed appeals that are pending before the Pennsylvania Commonwealth Court.

Q. What is the status of the BASA acquisition as a result of those appeals?

A. The BASA Wastewater acquisition has not closed as of the date of the filing of my Direct Testimony, and it is unclear whether they will close while the appeals are pending. On page 20 of both Center Township's and Summit Township's applications, it states:

> PAWC and the BASA Parties are reluctant to close on the transaction while the Townships' Petitions for Review are pending before this Court.

Q. Did PAWC include any post-acquisition costs in the rate base related to the BASA Wastewater acquisition?

A. Yes. In its response to OCA 12-014, the Company referred to Exhibit 3-A, page 146 from PAWC's filing, which includes a column titled "Additions" with amounts totaling $15.4 million. In its response to OCA 21-008, the Company stated that the amounts shown in the "Additions" column reflect the post-acquisition costs related to the BASA Wastewater acquisition.

Q. Based on the two previously discussed criteria regarding whether a proposed acquisition should be included in the FPFTY, should the proposed BASA Wastewater acquisition be included in the FPFTY in this case?

A. No. Based on the two previously discussed criteria, the proposed BASA Wastewater acquisition should not be included in the FPFTY in this case. While there is a Commission order approving PAWC's acquisition of the BASA wastewater system, appeals of that decision have been filed with the Commonwealth Court. In my

opinion, there is no predicting with any degree of reasonable certainty how or when the Commonwealth Court will act. It is possible that the acquisition proceeding could be remanded and the ratemaking rate base or other aspects of the transaction that impact revenue requirement or recovery could change.[4] Thus, at this time, there is too much uncertainty with respect to that transaction and therefore it should not be included in the FPFTY for ratemaking purposes.

Q. What is your primary recommendation regarding PAWC's potential acquisition of the BASA wastewater system for ratemaking purposes?

A. Based on the foregoing, I recommend that the costs associated with the proposed BASA Wastewater acquisition be removed from the FPFTY. Since PAWC is presenting a separate revenue requirement for the BASA Wastewater Operations, as shown on Exhibit LA-1, Schedule A, page 2, I have reflected the removal of the entire BASA revenue requirement from the Company's overall filing in Exhibit LA-1, Schedule A, page 1.[5]

[4] I point to the example of the East Whiteland Township wastewater system acquisition by Aqua Pennsylvania Wastewater, Inc. at Docket No. A-2021-3026132. There, subsequent to the Commission entering an order approving Aqua's acquisition of the East Whiteland system, the OCA filed a timely appeal of the Commission's decision. However, prior to the thirty-day appeal period having run, Aqua moved quickly and closed the transaction and acquired the East Whiteland system. Subsequently, in response to the OCA's appeal, the Commonwealth Court entered an order reversing the Commission's decision. Aqua and the Commission have appealed the Commonwealth Court's decision to the state Supreme Court. I am advised by OCA counsel that, absent a stay, Aqua and the Commission are obligated to comply with the Commonwealth Court's order.

[5] There are no separate rate base or net operating income schedules in Exhibit LA-2 to reflect the removal of the BASA wastewater acquisition from the FPFTY.

Q. What is your alternative recommendation as to the BASA Wastewater system?

A. As stated above, to the extent the uncertainties about the proposed BASA transaction are sufficiently resolved before the close of the record in this proceeding, *i.e*., the Commission's Order becomes final and there are no other outstanding risk items that would prevent the closing, then I will change my recommended revenue requirement to include the BASA Wastewater Operations with my recommended adjustments. For BASA Wastewater operations, specifically, I would recommend that the rate of return recommended by OCA witness Garrett be applied to the ratemaking rate base value and I further recommend adjustments to the claimed depreciation expense.

<u>Brentwood Wastewater</u>

Q. Please describe the proposed Borough of Brentwood Wastewater acquisition.

A. As shown on page 86 of Exhibit 3-C, the Company filed its application to acquire the Borough of Brentwood ("Brentwood") wastewater system at a purchase price of $19.4 million on March 31, 2023 in Docket No. A-2021-3024058. As discussed on page 5 of Mr. Abruzzo's testimony, the Company's application to acquire Brentwood was accepted for filing on September 14, 2023. In addition, Mr. Abruzzo states that the Commission is required under Section 1329(d)(2) to enter a final decision by March 14, 2024. Upon approval, Mr. Abruzzo states that the Brentwood acquisition would close shortly thereafter.

Q. Did PAWC include any post-acquisition costs in the rate base related to the Brentwood Wastewater acquisition?

A. Yes. In its response to OCA 12-006, the Company referred to Exhibit 3-A, page 179 from PAWC's filing, which includes a column titled "Additions" with amounts totaling $3.5 million. In its response to OCA 21-003, the Company stated that the amounts shown in the "Additions" column reflect the post-acquisition costs related to the Brentwood Wastewater acquisition.

Q. Based on the two previously discussed criteria regarding whether a proposed acquisition should be included in the FPFTY, should the proposed Brentwood wastewater acquisition be included in the FPFTY in this case?

A. No. Based on the two previously discussed criteria, the proposed Brentwood wastewater acquisition should not be included in the FPFTY for ratemaking purposes in this case. Even if the Commission were to enter a final order by March 14, 2024, the evidentiary record in this proceeding closes on or around March 8, 2024, which is the last scheduled day of evidentiary hearings in this case.[6] Hence,

[6] Regarding the six-month period under Section 1329(d)(2), I am advised by OCA counsel that while the Commission may within its discretion act within the six-month period, it may also exercise its discretion to act outside of the six-month period as well. I point to the example of Aqua's application to acquire the DELCORA's wastewater system assets at Docket No. A-2019-3015173, in which the Commission did not enter a final order to approve or deny Aqua's application but instead remanded Aqua's application for further proceedings and for the issuance of a Recommended Decision on remand based on new developments in the case after the close of the evidentiary record in that case. This example demonstrates that even Section 1329 proceedings with truncated litigation schedules can be unpredictable as to the substance and timing of a Commission decision after the close of the record in a base rate proceeding.

by the close of the record in this proceeding, there is expected to be no Commission Order adjudicating the Brentwood acquisition.

Furthermore, I understand from counsel for OCA that the OCA has contested the transaction and PAWC has vigorously defended the transaction. This means that even if an order is entered in March, the appeal period must run, and there is no predicting with any reasonable degree of certainty whether a party (including possibly PAWC) will appeal the Commission decision once it is entered. This uncertainty is increased because, in a Recommended Decision issued January 17, 2024, the Administrative Law Judge recommended the Commission should deny the Brentwood acquisition. It makes no sense to presume – as PAWC seeks to do by including this in rate base – that the PUC will reverse this decision on March 14th. It seems as or more likely that the PUC will deny any exceptions filed by PAWC and Brentwood, and since we will not know this until on or after March 14, 2024, after the record is closed, it makes no sense to include this proposed acquisition in this case.

Moreover, PAWC is seeking approval of a ratemaking rate base for Brentwood Wastewater in the application proceedings. It is possible that, in the course of possible scenarios, the Commission could approve a different ratemaking rate base or impose conditions or modifications to the filed-for transaction that impact treatment of the assets for ratemaking purposes. For all of these reasons, there is too much uncertainty with respect to the Brentwood transaction and it would be unreasonable to rely on predictions of PAWC as to what the Commission will do and

whether an appeal will be taken, all of which would occur after the close of the record in this proceeding.

Q. What is your primary recommendation regarding PAWC's potential acquisition of the Brentwood wastewater system for ratemaking purposes?

A. Based on the two criteria previously discussed, I recommend that the costs associated with the proposed Brentwood Wastewater acquisition be removed from the FPFTY. Since PAWC is presenting a separate revenue requirement for the Brentwood wastewater system, as shown on Exhibit LA-1, Schedule A, page 2, I have reflected the removal of the entire Brentwood revenue requirement from the Company's overall filing in Exhibit LA-1, Schedule A, page 1.[7]

Q. What is your alternative recommendation as to the Brentwood Wastewater system?

A. As stated above, to the extent the uncertainties about the proposed Brentwood Wastewater transaction are sufficiently resolved before the close of the record in this proceeding, *i.e.*, the Commission's Order becomes final and there are no other outstanding risk items that would prevent the closing, then I will change my recommended revenue requirement to include the Brentwood Wastewater Operations with my recommended adjustments. For Brentwood Wastewater operations, specifically, I would recommend that the rate of return recommended by

[7] There are no separate rate base or net operating income schedules in Exhibit LA-2 to reflect the removal of the Brentwood wastewater acquisition from the FPFTY.

OCA witness Garrett be applied to the ratemaking rate base value and I further recommend adjustments to the claimed depreciation expense.

Concerns Regarding BASA and Brentwood Wastewater Plant Account Useful Lives and the Impact on Depreciation Expense

Q. What is your alternative recommendation for depreciation expense for BASA and Brentwood Wastewater?

A. As discussed in above, I am recommending that the acquisitions related to BASA Wastewater and Brentwood Wastewater be excluded from the FPFTY in the current proceeding. However, to the extent the information changes by the close of the record to meet the criteria I have outlined above to include these acquisitions in the FPFT for ratemaking purposes, I recommend adjustments to PAWC's claimed depreciation expense for these acquisitions.

Q. What is shown in Exhibit LA-5?

A. Exhibit LA-5 contains materials showing the survivor curves for wastewater utility plant accounts prepared by Gannett Fleming that were used in PAWC's acquisition proceedings under §1329 for BASA and Brentwood.

Pages 2-3 show information from Appendix A-5.2 in the BASA §1329 case, A-2022-3037047, containing the Gannett Fleming recommended survivor curves for BASA. Pages 4-5 show information from Appendix A-5.2 in the Brentwood §1329 case, A-2021-3024058, containing the Gannett Fleming recommended survivor curves for Brentwood.

Pages 6 through 10 contain PAWC's responses to OCA 26-027, 26-028, 26-029 and 26-030, which show comparable survivor curve information.

PAWC's response to OCA 26-027 confirms that the listed survivor curves for each plant account listed there "are the confirmed life estimates used in Docket No. A-2022-30378047" which was the BASA §1329 acquisition case.

PAWC's response to OCA 26-028 confirms that the listed survivor curves for BASA are the ones being proposed on behalf of PAWC in the current rate case for purposes of computing depreciation in the FTY and FPFTY.

PAWC's response to OCA 26-029 confirms that the listed survivor curves for each plant account listed there "are the confirmed life estimates used in Docket No. A-2021-3024058" which was the Brentwood §1329 acquisition case.

PAWC's response to OCA 26-030 confirms that the listed survivor curves for Brentwood are the ones being proposed on behalf of PAWC in the current rate case for purposes of computing depreciation in the FTY and FPFTY.

Q. In comparing the information from the BASA and Brentwood Wastewater acquisition cases and PAWC's recommended survivor curves in the current rate case, what did you notice?

A. I noticed some instances in which PAWC has drastically shortened the utility plant useful lives for purposes of depreciation expense in the current rate case. For BASA Wastewater, PAWC has drastically shortened its proposed utility plant life for the following accounts in the current rate case, by as much as 8 to 20 years, as compared

with the corresponding recommendation in the BASA's Section1329 acquisition case. The table below shows the differences between the two proceedings:

BASA Wastewater Operations

Account No.	Description	Rate Case Survivior Curve	§1329 Survivor Curve	Shortening of Useful Life from §1329 Case to Rate Case
		(A)	(B)	(C)
354.30	STRUCTURES AND IMPROVEMENTS - SPP	55-S0	65-S0	10
354.40	STRUCTURES AND IMPROVEMENTS - TDP	55-S0	70-S0	15
361.20	MANHOLES	50-S2.5	60-S2.5	10
363.00	SERVICES	47-R3	55-R3	8
364.00	FLOW MEASURING DEVICES	15-L2.5	30-L2.5	15
371.00	PUMPING EQUIPMENT	30-S0.5	40-S0.5	10
380.00	TREATMENT EQUIPMENT	35-S1.5	45-S1.5	10
382.00	OUTFALL SEWER LINES	50-R3	70-R3	20

Notes and Source:
Col. (A): PAWC Filing, Exhibit 11-H, Table 2
Col. (B): Useful Lives per PAWC-BASA Section 1329, Docket No. A-2022-3037047, Gannett Fleming Exhibit 7, page 3

Similarly, for Brentwood Wastewater, PAWC has drastically shortened its proposed utility plant life for the account 363.00, services, by 13 years, and for account 361.2, manholes, by 15 years, in the current rate case, compared with the corresponding recommendation in the §1329 acquisition case:

Brentwood Wastewater Operations

Account No.	Description	Rate Case Survivior Curve	§1329 Survivor Curve	Shortening of Useful Life from §1329 Case to Rate Case
		(A)	(B)	(C)
361.20	MANHOLES	50-S2.5	65-S2.5	15
363.00	SERVICES	47-R3	60-R3	13

Notes and Source:
Col. (A): PAWC Filing, Exhibit 11-J, Table 2
Col. (B): Useful Lives per PAWC-Brentwood Section 1329, Docket No. A-2021-3024058, Gannett Fleming Exhibit 7, page 3

Q. How does the estimated useful life generally affect depreciation expense for a regulated utility like PAWC?

A. Generally, the shorter the useful life, the higher the depreciation expense. Under remaining life depreciation, the estimated useful life is the denominator. So having a significantly lower estimated useful life in the denominator, other things being equal, can significantly increase the resulting depreciation rate and depreciation expense.

Q. Should depreciation lives which are 8 to 20 years shorter be allowed for PAWC's rate case depreciation expense for BASA and Brentwood in the current rate case?

A. No. As noted above, PAWC has been dramatically inconsistent in the depreciation lives that were used for a number of important utility plant accounts between the BASA and Brentwood Wastewater acquisition proceedings and the corresponding lives that PAWC is using for depreciation expense for those not-yet acquired systems in the current rate case. PAWC's use of significantly shortened useful lives for those accounts has contributed to PAWC's requested amounts for depreciation expense in the current rate case.

Q. Have you made an adjustment to reduce depreciation expense for the above-noted wastewater utility plant accounts for BASA and Brentwood?

A. Based on a preliminary estimate, PAWC's proposed depreciation expense for BASA Wastewater should be reduced by as much as $877,000 to remove the impact of useful life shortening from the Section 1329 acquisition proceeding to the rate case.

PAWC's proposed depreciation expense for Brentwood Wastewater should be reduced by as much as $48,000. I have not yet completed or reflected adjustments for those depreciation expenses due to the way the BASA and Brentwood Wastewater Operations total cost of service amounts are being reflected in the OCA's revenue requirement recommendations. At this time, PAWC's entire proposed cost of service for BASA and Brentwood Wastewater Operations are being removed from the revenue requirement for the reasons presented in my testimony. Consequently, there is not a need at this stage to adjust the BASA and Brentwood Wastewater Operations depreciation expense proposed by PAWC. If either of those acquisitions meet the criteria for inclusion in PAWC's revenue requirement, at a subsequent point in this proceeding, the cost of serving the acquired BASA and Brentwood customers may need to be reflected. At that point, the amount of depreciation expense that PAWC has proposed for those not-yet acquired wastewater utility systems will need to be adjusted.

V. RATE BASE

Q. At this time are you recommending any adjustments to rate base?

A. Yes. As shown on Exhibit LA-1, Schedule B (pages 1-5), column B, I am recommending a number of adjustments to the Company's adjusted rate base for PAWC's Water and Wastewater Operations.

Q. Please summarize your adjustments to PAWC's Water Operations rate base.

A. As shown in PAWC's Exhibit 3-A, page 25, the Company proposes a FPFTY rate base of approximately $4.704 billion for its Water Operations. As shown on Exhibit LA-1, Schedule B, page 1, I recommend FPFTY rate base of approximately $4.692 billion for PAWC's Water Operations, which is about $11.9 million lower than the Company's proposal.

Q. Please summarize your adjustments to PAWC's Wastewater Operations rate base.

A. As shown in PAWC's Exhibit 3-A, pages 96, 145, 178 and 217 and summarized in the table below, the Company proposes an overall FPFTY rate base of approximately $1.392 billion for its combined or total Wastewater Operations.

PAWC Rate Base for Wastewater Operations	Proposed Rate Base 6/30/2025 ($000's)
Wastewater SSS General Operations	$ 649,331
BASA Wastewater Operations	$ 231,537
Brentwood Wastewater Operations	$ 22,054
CSS Wastewater Operations	$ 489,184
Total	$ 1,392,106
Source: Exhibit 3-A (pages 96, 145, 178 and 217) from PAWC's filing	

As summarized in the table below, I recommend an overall FPFTY rate base of approximately $1.133 billion for PAWC's total Wastewater Operations after removing BASA and Brentwood, which is about $258.7 million lower than the Company's proposal.

OCA Recommended Rate Base for Wastewater Operations	Rate Base 6/30/2025 ($000's)
Wastewater SSS General Operations	$ 644,283
BASA Wastewater Operations	$ -
Brentwood Wastewater Operations	$ -
CSS Wastewater Operations	$ 489,085
Total	$ 1,133,368

Q. Would you please discuss each of your recommended adjustments to rate base.

A. Yes, each of my recommended adjustments to rate base is discussed below.

Schedule B-1, Acquisition – Audubon Water

Q. Please explain your adjustment on Schedule B-1?

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to the Audubon Water be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company Witness Abruzzo, the Company anticipates that the Audubon Water acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, using the information PAWC provided in its responses to OCA 21-007 and OCA 21-009, I am removing the amounts from rate base that the Company included in the FPFTY for the Audubon Water acquisition.

As shown on Exhibit LA-2, Schedule B-1, this adjustment reduces rate base by $7.407 million for PAWC's Water Operations.

Schedule B-2, Acquisition – Farmington Water

Q. Please explain your adjustment on Schedule B-2?

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Farmington Water be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company

anticipates that the Farmington Water acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, using the information PAWC provided in its responses to OCA 21-005 and OCA 21-012, I am removing the amounts from rate base that the Company included in the FPFTY for the Farmington Water acquisition.

As shown on Exhibit LA-2, Schedule B-2, this adjustment reduces rate base by $2.773 million for PAWC's Water Operations.

Schedule B-3, Acquisition – Farmington Wastewater

Q. Please explain your adjustment on Schedule B-3?

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Farmington Wastewater be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Farmington Wastewater acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, using the information PAWC provided in its responses to OCA 21-006 and OCA 21-011, I am removing the amounts from rate base that the Company included in the FPFTY for the Farmington Wastewater acquisition.

As shown on Exhibit LA-2, Schedule B-3, this adjustment reduces rate base by $2.878 million for PAWC's Wastewater SSS General Operations.

Schedule B-4, Acquisition – Sadsbury Wastewater

Q. Please explain your adjustment on Schedule B-4.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Sadsbury Wastewater be excluded from the FPFTY in the current

proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Sadsbury Wastewater acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, using the information PAWC provided in its responses to OCA 21-004 and OCA 21-010, I am removing the amounts from rate base that the Company included in the FPFTY for the Sadsbury Wastewater acquisition.

As shown on Exhibit LA-2, Schedule B-4, this adjustment reduces rate base by $2.019 million for PAWC's Wastewater SSS General Operations.

Schedule B-5, Cash Working Capital

Q. What is Cash Working Capital?

A. Cash working capital is the cash needed by the Company to cover its day-to-day operations. If the Company's cash expenditures, on an aggregate basis, precede the cash recovery of expenses, investors must provide cash working capital. In that situation a positive cash working capital requirement exists. On the other hand, if revenues are typically received prior to when cash expenditures are made, on average, then ratepayers provide the cash working capital to the utility, and the negative cash working capital allowance is reflected as a reduction to rate base. In this case, the cash working capital requirement is a reduction to rate base as ratepayers are supplying these funds.

Q. What has PAWC proposed for cash working capital in the current rate case?

A. In the current rate case, PAWC proposed the following positive cash working capital amounts:

- Water Operations - approximately $23.2 million for Operating and Management Expenses and negative $8.35 million for Interest and Dividend Expenses.
- Wastewater SSS General Operations - $2.2 million for Operating and Management Expenses and negative $1.19 million for Interest and Dividend Expenses.
- BASA Wastewater Operations - $373,592 for Operating and Management Expenses and negative $422,915 for Interest and Dividend Expenses.
- Brentwood Wastewater Operations - $43,531 for Operating and Management Expenses and negative $40,313 for Interest and Dividend Expenses.
- CSS Wastewater Operations - $1.9 million for Operating and Management Expenses and negative $893,553 for Interest and Dividend Expenses.

The Company's proposed CWC amounts are shown on PAWC Exhibit 3-A.

Q. Have you prepared schedules showing OCA's recommended CWC allowances for each of these PAWC utility operations?

A. Yes. I have recalculated the CWC requirements on Schedules B-5.B, B-5.C and B-5.D in Exhibit LA-2 for Water Operations, Wastewater SSS General Operations, and CSS Wastewater Operations, respectively.[8] The adjustments to CWC incorporate the impacts of adjustments to expenses that I have recommended as well as the different capital structure proposed by OCA Witness Garrett.

As shown on Exhibit LA-2, Schedule B-5.B, my adjusted CWC requirements are approximately $22.34 million for Operating and Management Expenses and negative $9.29 million for Interest and Dividend Expenses for Water Operations. My total adjusted CWC requirement is $1.761 million lower than PAWC's proposed CWC allowance for Water Operations.

[8] Since the BASA and Brentwood revenue requirements have been removed in their entirety, no separate adjustments to BASA and Brentwood cash working capital requirements were made.

As shown on Exhibit LA-2, Schedule B-5.C, adjusted CWC is approximately $2.18 million for Operating and Management Expenses and negative $1.29 million for Interest and Dividend Expenses for Wastewater SSS General Operations. My total adjusted CWC requirement is $150,794 lower than PAWC's proposed CWC for its Wastewater SSS General Operations.

As shown on Exhibit LA-2, Schedule B-5.D, adjusted CWC is approximately $1.86 million for Operating and Management Expenses and negative $976,474 for Interest and Dividend Expenses for CSS Wastewater Operations. My total adjusted CWC Requirement is $98,811 lower than PAWC's proposed CWC for its CSS Wastewater Operations.

VI. OPERATING INCOME

Q. What does PAWC show for its water and wastewater utility operating income?

A. On PAWC's Exhibit 3-A, line 21, in the "Present Rates 6/30/25 Amount" column, for each of the Water Operations and Wastewater Operations revenue requirements included in its filing, the Company shows the adjusted utility operating income amounts as summarized in the following table:

PAWC Operating Income	Present Rates 6/30/2025 ($000's)
Water Operations	$ 295,212
Wastewater SSS General Operations	$ 28,866
BASA Wastewater Operations	$ (378)
Brentwood Wastewater Operations	$ 370
CSS Wastewater Operations	$ 27,579
Total	$ 351,649
Source: Exhibit 3-A from PAWC filing	

As shown in the table above, the Company's filing reflects operating income totaling $351.649 million in 2025.

Q. Have you summarized PAWC's calculation of net operating income for each utility revenue requirement on one of your schedules in Exhibit LA-1?

A. Yes. I have summarized PAWC's proposed net operating income for Water and Wastewater Operations on Exhibit LA-1, Schedule C (pages 1-5).

Q. Are you recommending any adjustments that impact net operating income?

A. Yes. As shown on Exhibit LA-1, Schedule C (pages 1-5), column B, I am recommending a number of adjustments to the Company's adjusted operating income for PAWC's Water and Wastewater Operations.

Q. On which Schedules do you present your recommended adjustments to net operating income?

A. My recommended adjustments to net operating income for the Company's Water and Wastewater Operations are presented below and on Schedules C-1 through C-22 of Exhibit LA-2. Each of those adjustments is discussed below.

Schedule C-1, Acquisition O&M Expense – Audubon Water

Q. Please explain your adjustment on Schedule C-1.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to the Audubon Water be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the

Company anticipates that the Audubon acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, I am removing the amounts of operating revenue and expenses that the Company included in the FPFTY for the Audubon Water acquisition.

As shown on Exhibit LA-2, Schedule C-1, this adjustment reduces operating revenue by $2.965 million, operating expenses and taxes other than income by $1.586 million and amortization expense by $763,977 for PAWC's Water Operations.

Schedule C-2, Acquisition O&M Expense – Farmington Water

Q. Please explain your adjustment on Schedule C-2.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Farmington Water be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Farmington Water acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, I am removing the amounts of operating revenue and expenses that the Company included in the FPFTY for the Farmington Water acquisition.

As shown on Exhibit LA-2, Schedule C-2, this adjustment reduces operating revenue by $266,371, operating expenses and taxes other than income by $152,385 and amortization expense by $21,549 for PAWC's Water Operations.

Schedule C-3, Acquisition O&M Expense – Farmington Wastewater

Q. Please explain your adjustment on Schedule C-3.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Farmington Wastewater be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Farmington Wastewater acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, I am removing the amounts of operating revenue and expenses that the Company included in the FPFTY for the Farmington Wastewater acquisition.

As shown on Exhibit LA-2, Schedule C-3, this adjustment reduces operating revenue by $322,926, operating expenses and taxes other than income by $264,176 and amortization expense by $5,699 for PAWC's Wastewater SSS General Operations.

Schedule C-4, Acquisition O&M Expense – Sadsbury Wastewater

Q. Please explain your adjustment on Schedule C-4.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Sadsbury Wastewater be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Sadsbury Wastewater acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, I am removing the amounts of operating revenue and expenses that the Company included in the FPFTY for the Sadsbury Wastewater acquisition.

As shown on Exhibit LA-2, Schedule C-4, this adjustment reduces operating revenue by $471,228, operating expenses and taxes other than income by $249,288 and amortization expense by $85,414 for PAWC's Wastewater SSS General Operations.

Schedule C-5, Depreciation Expense – Audubon Water

Q. Please explain your adjustment on Schedule C-5.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Audubon be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Audubon acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, I am removing the amounts of depreciation expense that the Company included in the FPFTY for the Audubon acquisition.

As shown on Exhibit LA-2, Schedule C-5, this adjustment reduces depreciation expense by $269,599 for PAWC's Water Operations.

Schedule C-6, Depreciation Expense – Farmington Water

Q. Please explain your adjustment on Schedule C-6.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Farmington Water be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Audubon acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, I am

removing the amounts of depreciation expense that the Company included in the FPFTY for the Farmington Water acquisition.

As shown on Exhibit LA-2, Schedule C-6, this adjustment reduces depreciation expense by $101,751 for PAWC's Water Operations.

Schedule C-7, Depreciation Expense – Farmington Wastewater

Q. Please explain your adjustment on Schedule C-7.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Farmington Wastewater be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Audubon acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my testimony, I am removing the amounts of depreciation expense that the Company included in the FPFTY for the Farmington Wastewater acquisition.

As shown on Exhibit LA-2, Schedule C-7, this adjustment reduces depreciation expense by $137,987 for PAWC's Wastewater SSS General Operations.

Schedule C-8, Depreciation Expense – Sadsbury Wastewater

Q. Please explain your adjustment on Schedule C-8.

A. As discussed in Section IV of my testimony, I am recommending that the acquisition related to Sadsbury Wastewater be excluded from the FPFTY in the current proceeding. As discussed in the Direct Testimony of Company witness Abruzzo, the Company anticipates that the Sadsbury Wastewater acquisition transaction will close by the end of the FPFTY. Based upon the criteria discussed in Section IV of my

testimony, I am removing the amounts of depreciation expense that the Company included in the FPFTY for the Sadsbury Wastewater acquisition.

As shown on Exhibit LA-2, Schedule C-8, this adjustment reduces depreciation expense by $51,847 for PAWC's Wastewater SSS General Operations.

Schedule C-9, Uncollectibles Expense

Q. How did PAWC determine its requested amounts of Uncollectibles Expense?

A. As discussed in the Direct Testimony of Company witness Swiz, PAWC used an average of net write-offs to revenues for the two one-year periods July 1, 2021 through June 30, 2022 and July 1, 2022 through June 30, 2023. Specifically, PAWC calculated an uncollectibles rate of 1.176 percent as summarized in the table below:

Description	7/1/2021 - 6/30/2022	7/1/2022 - 6/30/2023	Two-Year Average
Net Write-Off Activity	$ 10,174,929	$ 9,374,665	$ 9,774,797
Total Billed Revenues	$ 775,900,531	$ 886,675,101	$ 831,287,816
Average Write-Off Percentage	1.311%	1.057%	1.176%
Source: Table 1 on page 4 of Swiz Direct Testimony			

Q. Please explain your adjustment for Uncollectibles Expense.

A. As shown on Exhibit LA-2, Schedule C-9, I recommended using a three-year average based on the 12 months ended June 30, 2020, June 30, 2022 and June 30, 2023, which calculates to an uncollectibles write-off percentage of 1.164 percent. For the Water Operations, this reduces PAWC's proposed Uncollectibles Expense by $100,054. For PAWC's Wastewater Operations, this adjustment reduces PAWC's proposed Uncollectibles Expense by $11,591 for Wastewater SSS General

Operations, $1,438 for BASA Wastewater Operations, $221 for Brentwood Wastewater Operations, and $9,547 for CSS Wastewater Operations.

Q. Why should three-years be used for normalizing Uncollectibles Expense in this case instead of two years?

A. As noted on page 4 Mr. Swiz's testimony, three years has historically been used by PAWC for calculating pro forma Uncollectibles Expense, but Mr. Swiz states that using a two-year average eliminates the impacts of Covid-19 pandemic on customer collections. With regard to the impacts that Covid-19 had on customer collections, the period July 1, 2020 through June 30, 2021 appears to be the period impacted the most by the Covid-19 pandemic as shown in the following table:

Description	July 1, 2019 to June 30, 2020	July 1, 2020 to June 30, 2021	July 1, 2021 to June 30, 2022	July 1, 2022 to June 30, 2023
Write Offs	$ 9,514,528	$ 4,776,043	$10,736,970	$10,146,054
Bad Debt Recovery	$ 1,552,132	$ 598,751	562,041	771,389
Net Write Offs	$ 7,962,396	$ 4,177,292	10,174,929	9,374,665
Billed Revenues	$ 701,283,203	$ 762,652,071	$775,900,531	$886,675,101
Write-Off Percentage	1.135%	0.548%	1.311%	1.057%
Source: Exhibit 3-B and the response to OCA 09-030				

As shown in the above table, for the 12-months ended June 30, 2021, the uncollectibles annual write-off percentage calculates to 0.548 percent whereas for the 12-month period ended June 30, 2020, the annual write-off percentage of 1.135 percent is consistent with the write-off percentages shown for the 12-months ended June 30, 2022 and June 30, 2023. Consequently, averaging the annual write-off information using the 12 months ended June 30, 2020, June 30, 2022 and June 30,

2023, which is the HTY in this case, appears to be reasonable in the context of the current PAWC rate case.

Schedule C-10, Vacancies - Salary and Wages and Payroll Taxes

Q. Please explain your adjustment related to vacancies for Salaries and Wages Expense.

A. As shown on Exhibit LA-2, Schedule C-10, this adjustment reduces PAWC's proposed 2025 salaries and wages expense for Water Operations by $1.045 million to remove the cost associated with vacant positions. Payroll tax expense is reduced by $79,970.

Q. How many positions is PAWC proposing to add to its work force to derive its going-level payroll expense amount for its water operations?

A. The Company's workpapers for its proposed salaries and wages reflect a projected FPFTY work force of 1,076 positions for its Water Operations, consisting of 299 non-collective bargaining unit salaried positions, 547 non-collective bargaining unit hourly positions, and 230 collective bargaining unit hourly positions. That is an increase of 30 positions above the June 30, 2023 level of 1,046 positions.

Q. Are the 30 new positions for the Company's Water Operations in the FPFTY associated with PAWC's proposed acquisitions?

A. No. PAWC is proposing to add 43 additional positions pursuant to the pending acquisitions of Audubon Water, Farmington Township Water and Wastewater, BASA Wastewater and Brentwood Wastewater. As previously discussed, I am

recommending that all of the Company's proposed acquisitions be excluded from the FPFTY. Consequently, the FPFTY payroll expense associated with those 43 positions has been removed from FPFTY cost of service, for a total adjustment of $2.984 million.[9] A summary of the acquisition-related payroll expense and references to where it appears in my Schedules is shown in the table below:

Description	Amount	Comments
Audubon Water	$ 387,283	Removed on Sch. C-1
Farmington Water	$ 47,751	Removed on Sch. C-2
Farmington Wastewater	$ 65,425	Removed on Sch. C-3
Sadsbury Township Municipal Authority	$ -	No Labor for Sadsbury
BASA	$ 2,407,470	Removed on Sch. A, page 1
Brentwood	$ 76,876	Removed on Sch. A, page 1
Total	$ 2,984,805	
PAWC Source: Exhibit 3-B, pages 303-308		

Q. Have all of the 30 new positions that PAWC projects to add to its work force for Water Operations been filled?

A. No. According to PAWC's response to OCA 18-013, which reflects information through December 29, 2023 (i.e., the date of the response), PAWC anticipates that three of the 30 proposed positions for water operations will not be filled until June 30, 2024.

[9] Exhibit LA-2, Schedule C-4 relates to the removal of O&M expenses associated with the acquisition of the Sadsbury Township Municipal Authority, which did not include any amounts for labor costs.

Q. Has the Company identified other positions that became vacant subsequent to the HTY ended June 30, 2023?

A. Yes. In its response to OCA 09-070(e) and (f), which is dated December 6, 2023, the Company identified 49 positions with gross annual payroll expense totaling $3.369 million that became vacant subsequent to the HTY ended June 30, 2023.

Q. Have any of those positions been refilled since the date of the response to OCA 09-070?

A. Yes. In its response to OCA 26-001, the Company stated that 27 of the 49 positions have been refilled as of the date of that response (*i.e.*, January 16, 2024).

Q. Did the Company identify any additional positions that became vacant since the 49 positions listed in the response to OCA 09-070?

A. Yes. In its response to OCA 26-001, Attachment 2, the Company identified eight additional positions that became vacant after November 27, 2023.[10]

Q. Is it common for a utility the size of PAWC to have some level of work force vacancies at any given point in time?

A. Yes. At any given point in time, a utility the size of PAWC with a work force of more than 1,000 positions could have vacancies. Thus, for rate setting purposes, using a full utility-proposed work force complement with no provision for unfilled

[10] As shown on the OCA 09-070 Attachment (page 3), of the 49 positions that became vacant subsequent to June 30, 2023, the most recent termination date was November 27, 2023.

positions, *i.e.*, without a provision for a normal vacancy rate, would tend to overstate the actual amount of labor costs.

Q. Please explain your adjustment for salaries and wages.

A. As shown on Exhibit LA-2, Schedule C-10, using the information from the response to OCA 18-013 for the unfilled positions as of December 29, 2023, I calculated a vacancy rate of 1.76 percent, which I applied to the Company's proposed salaries and wages for the FPFTY ending June 30, 2025 for Water Operations. As shown on Schedule C-10, to remove costs for unfilled positions and reflect this vacancy rate, PAWC's requested salaries and wages for Water Operations are reduced by $1.045 million, and payroll tax expense is reduced by $79,970. There is no adjustment to this expense for Wastewater Operations.

Schedule C-11, Annualized Performance Plan Expense

Q. Please explain your adjustment to performance plan expense.

A. This adjustment is related to my recommendation to apply a vacancy adjustment to projected 2025 salaries and wages. I reduced the Company's proposed 2025 annualized performance plan expense by the percentage of my recommended vacancy adjustment for non-collective bargaining salaried, non-collective bargaining hourly and collective bargaining unit employees for Water Operations that was discussed above pursuant to my adjustment to salaries and wages on Exhibit LA-2, Schedule C-10.

Q. Please explain how this adjustment impacted PAWC's water operations.

A. As shown on Exhibit LA-2, Schedule C-11, my adjustment reduces annualized performance plan expense by $85,523 and related payroll tax expense by $6,543 for Water Operations. There is no adjustment to this expense for Wastewater Operations.

Schedule C-12, Group Insurance Expense

Q. Please explain your adjustment to group insurance expense.

A. This adjustment is related to my recommendation to apply a vacancy adjustment to 2025 work force levels. As stated on page 9 of Ms. O'Malley's Direct Testimony (Statement No. 5), employee group insurance expense is grouped into two primary categories, including (1) basic life, short-term disability, long-term disability and accidental death and disability insurance ("AD&D"), and (2) medical, dental, prescription and vision insurance.

I reduced the Company's proposed 2025 FPFTY group insurance expense to reflect my recommended vacancy factor on Exhibit LA-2, Schedule C-10. I then applied the Company's capitalization rate percentages to my adjustment to derive the amount of group insurance expense charged to operating expenses. The impact of vacancies on the 2025 work force levels results in lower group insurance expense due to some positions not being filled at any given point in time. This adjustment reduces projected 2025 group insurance expense by $200,623 for Water Operations. There is no adjustment for this expense for PAWC's Wastewater Operations.

Schedule C-13, 401K, Defined Contribution Plan and Employee Stock Purchase Plan

Q. Please explain your adjustment to 401K, Defined Contribution Plan and Employee Stock Purchase Plan expense.

A. This adjustment is also related to applying a vacancy rate for projected 2025 workforce. On Exhibit LA-2, Schedule C-13, I reduced the Company's proposed 2025 401K, Defined Contribution Plan ("DCP") and Employee Stock Purchase Plan ("ESPP") expense by applying the vacancy rate adjustment. I then applied the Company's water capitalization rate percentage to derive the amount of adjustment to 401K, DCP, and ESPP expense charged to operating expenses. As shown on Exhibit LA-2, Schedule C-13, my adjustment reduces projected 2025 expense by $72,817 for Water Operations. There is no adjustment for this expense for PAWC's Wastewater Operations.

Schedule C-14, Interest Synchronization

Q. Please explain your interest synchronization adjustment.

A. The interest synchronization adjustment applies the weighted cost of debt to the adjusted rate base in deriving the interest deduction applicable to the calculation of test year income tax expense. Utilities and utility regulators routinely accept the interest synchronization adjustment as appropriate and necessary for ratemaking purposes. The interest synchronization method is widely used by other utilities and utility regulatory commissions because it appropriately coordinates the elements of the ratemaking formula and is fair to all parties.

The calculations of the interest synchronization adjustments for PAWC's Water and Wastewater Operations are shown on pages 2 through 6 (and summarized on page 1) of Schedule C-14 on Exhibit LA-2.

Schedule C-15, PAWC External Board Members Expense

Q. Please explain your adjustment on Schedule C-15.

A. This adjustment relates to Recommendation IV-1 pursuant to the Management and Operations Audit that was issued in October 2023 in Docket No. 2022-3035217. Specifically, Recommendation IV-1 stated:

> Perform a market comparison for local board compensation to ensure PAWC Board fees are at market rates.

As it relates to Recommendation IV-1, in its Implementation Plan, the Company stated that it is in the process of evaluating whether it should continue to maintain external Board members, and if so, PAWC will re-evaluate whether its external Board compensation fees are at market rates. In its response to OCA 22-003, the Company stated that it eliminated its external Board as of December 31, 2023, but that the FPFTY includes annual expense related to external Board members in the amount of $123,250. The Company stated that it will remove this amount during the rebuttal phase of this proceeding. As a result, I have removed the $123,250 from PAWC's Water Operations.

As shown on Exhibit LA-2, Schedule C-15, this adjustment reduces pre-tax operating income by $123,250 for Water Operations.

Schedule C-16, Insurance Other Than Group

Q. How did PAWC calculate Insurance Other Than Group for the FPFTY?

A. As discussed on page 24 of the Direct Testimony of Company witness O'Malley, the HTY amount of Insurance Other Than Group was adjusted using insurance premiums that were actually incurred and projected to be incurred during the 12 months ending June 30, 2024 and then adjusted by a five-year average of actual retroactive adjustments. The Company then adjusted the FTY and FPFTY Insurance Other Than Group expense by applying an increase of 6.53 percent, which is based on a five-year average.[11] The Company also applied a capitalization rate to eliminate the portion of worker's compensation expense that is not charged to operating expenses. Finally, PAWC allocated the FPFTY Insurance Other Than Group between Water and Wastewater Operations based on Depreciated Utility Plant in Service.[12]

Q. Do you agree with PAWC's methodology for calculating Insurance Other Than Group for the FPFTY?

A. Generally, yes. However, I disagree with the Company's use of the five-year average of 6.53 percent to calculate Insurance Other Than Group for the FPFTY.

[11] Ms. O'Malley states on page 24 of her testimony that insurance claim amounts were held at HTY levels to arrive at FPFTY costs.

[12] For Wastewater Operations, PAWC allocated Insurance Other Than Group to Wastewater SSS General Operations and CSS Wastewater Operations only.

The Company's calculation of the 6.53 percent is replicated in the table below:

Per Books	12 Months Ending June 2018	12 Months Ending June 2019	12 Months Ending June 2020	12 Months Ending June 2021	12 Months Ending June 2022	12 Months Ending June 2023
55110000 Insurance Vehicle	$225,420	$207,332	$225,377	$249,451	$265,232	$278,559
55710000 Insurance General Liabilty	9,122,239	9,755,759	9,620,594	11,375,771	11,038,467	11,469,880
55711000 Insurance Casualty Reserve	(2,017,551)	(25,216)	(901,767)	(2,221,572)	(2,369,245)	183,485
55720000 Insurance Workers Compensation	2,359,754	2,514,031	2,827,264	2,375,609	1,831,039	1,545,189
55720100 Insurance WC Capitalized Credits	(840,218)	(762,997)	(1,126,401)	(1,010,742)	(724,233)	(599,816)
55730000 Insurance Other	81,462	68,282	92,858	156,984	125,215	85,815
55740000 Insurance Property	1,173,794	1,321,643	2,072,272	2,905,236	3,245,712	3,716,320
Total: Insurance other than group	$10,104,899	$13,078,835	$12,810,198	$13,830,737	$13,412,187	$16,679,432
Total Without Reserve & Retro Adjustment	$12,122,451	$13,104,051	$13,711,965	$16,052,309	$15,781,432	$16,495,948
Annual % Change		8.10%	4.64%	17.07%	-1.69%	4.53%
					5-Year Average	**6.53%**
Source: Exhibit 3-B, page 269 from PAWC's filing						

As shown in the above table, the annual percentage change for the 12-month ending periods of June 30, 2019, June 30, 2021, and June 30, 2022, were abnormally high or low as compared to the 12-month ending periods June 30, 2020, and the HTY ended June 30, 2023. As a result, I recommend that the HTY percentage change of 4.53 percent be used to calculate Insurance Other Than Group for the FPFTY.

Q. Please explain your adjustment.

A. As shown on Exhibit LA-2, Schedule C-16, page 1, this adjustment reduces pre-tax operating income by $247,905 for Water Operations, $34,694 for Wastewater SSS General Operations and $23,713 for CSS Wastewater Operations.

<u>Schedule C-17, Depreciation Expense – Water Operations</u>

Q. Has PAWC proposed drastic shortening of depreciable lives for certain water utility plant accounts in the current case?

A. Yes. As shown on Exhibit LA-2, Schedule C-17, for account 304.15, Other Water Source Structures, in PAWC's last rate case, Docket No. R-2022-3031673, a useful

life of 60 years was used for depreciation rate purposes. In the current case, PAWC proposes to shorten that useful life by 10 years, cutting it to 50 years. For account 331.00, Mains and Accessories, in PAWC's last rate case, a useful life of 110 years was used. In the current case, PAWC proposes to shorten that useful life by 20 years, cutting it to 90 years. For account 335.00, Fire Hydrants, in PAWC's last rate case, a useful life of 75 years was used. In the current case, PAWC proposes to shorten that useful life by 15 years, cutting it to 60 years. PAWC filed its current rate case less than one year after the Commission's final decision in PAWC's last water utility rate case. PAWC has not justified shortening the expected useful lives of its water utility plant in service by 10, 15 or 20 years in comparison to the depreciable lives for these three accounts that were used, and were approved by the Commission with rates effective in January 2023. Considering that relatively short time interval between PAWC's last base rate case and its current one, drastic shortening in water utility plant depreciable lives for these three water utility plant accounts by 10, 15 and 20 years, is not justified, and should not be accepted. Using drastically shortened depreciation lives for those accounts in PAWC's current rate case is unreasonable and would overstate Water Operations' depreciation expense.

Q. What adjustment are you recommending?

A. As shown on Exhibit LA-2, Schedule C-17, I recommend that the drastically shortened depreciable lives for those three accounts proposed by PAWC in the current rate case be rejected. I recommend using the depreciable lives and depreciation rates for those three accounts that were approved by the Commission on

December 8, 2022, in PAWC's last water utility rate case, at Docket No. R-2022-3031673. This reduces PAWC's proposed Water Operations' depreciation expense for the FPFTY by $15.479 million.

Schedule C-18, Stock-Based Compensation - American Water Works Executives

Q. Please explain your adjustment to stock-based compensation expense charged to PAWC from American Water Works, Inc. ("AWW" or "Parent Company").

A. PAWC's total claim for stock-based compensation is $4.934 million, as shown in the response to OCA 09-011. As shown on Exhibit LA-2, Schedule C-18, I have removed the portion of stock-based compensation projected to be paid to AWW's top executives and charged to PAWC for the 2025 FPFTY.[13] The stock-based compensation for those executives includes (1) performance stock units ("PSU"), and (2) restricted stock units ("RSU"). This adjustment reduces PAWC's operating expenses by $1.722 million to remove the stock-based compensation expense paid to AWW's top executives and charged from AWW to PAWC.

Q. Did the Company provide a copy of AWW's Long Term Performance Plan?

A. Yes. In its response to FR III.22, the Company provided a confidential copy of AWW's 2023 Long Term Performance Plan ("LTPP").

Q. What is the purpose of the AWW 2023 LTPP?

A. The Company's 2023 LTPP states at page 1: [redacted]

[13] The Company provided this information in its response to OCA 17-001.

Q. Please discuss the reasons for your recommendation to remove a portion of the expense for stock-based compensation to AWW executives that was charged to PAWC.

A. Ratepayers should not be required to pay for a portion of the expense for stock-based compensation paid to AWW's top executives, especially when such compensation is based on the performance of the Parent Company's stock price, or has the primary purpose of benefitting the Parent Company's stockholders and aligning the interests of participants with those of such stockholders. Recovering that portion of stock-based compensation expense in PAWC's revenue requirement is not reasonable nor does it promote reliable and effective public utility service.

Q. Why should the Commission adopt your recommendation to remove expense for stock-based compensation for AWW top executives when stock-based compensation was an allowed expense in Aqua Pennsylvania's rate case in Docket No. R-2018-3003558?

A. The Commission's Order in Docket No. R-2018-3003558 at pages 100-101 in the Aqua Pennsylvania rate case stated that:

> We find that Aqua has provided evidence linking the stock-based incentive compensation program with benefits to customers and improved operational efficiency.
>
> …
>
> Mr. Packer stated that "[m]any of the employee objectives focus on cost containment, quality service, productivity enhancements and compliance initiatives to ensure reasonable cost and high-quality service to our customers." Aqua St. 1-R at 17-18. Mr. Packer provided that "[s]tock compensation is an equally important form of compensation at risk, promotes retention, and emphasizes an investment interest in the business at the employee level that promotes efforts to provide safe, adequate, and reliable utility service." Aqua St. 1-R at 19.
>
> We agree with the ALJ that the stock-based compensation benefits ratepayers. We find that the stock-based compensation is linked to performance objectives that benefit consumers, including controlling costs and compliance initiatives. Accordingly, the OCA Exception No. 5 is denied.

The adjustment being recommended here is for recent AWW executives and focuses on the portion of their incentive compensation – the stock-based compensation – that directly relates to aligning the interests of those top executives with **shareholder** interests. As such, the AWW shareholders, not PAWC's ratepayers, should be responsible for bearing the cost of the stock-based compensation that the shareholders directly benefit from. Again, I am recommending removing $1.722

million of PAWC's total $4.934 million claim, the portion that is related to shareholder profit and earnings growth.

Q. How did you allocate your recommended adjustment for stock-based compensation to AWW top executives to the Company's water and wastewater operations?

A. As shown on Exhibit LA-2, Schedule C-18, I allocated my recommended adjustments for stock-based compensation to AWW executives to PAWC's Water and Wastewater Operations by using the allocation factors shown in the table below, which are reflected on Exhibit 3-B, page 301 from the Company's filing:

Description	Allocation Factors
Water Operations	95.40%
Wastewater SSS General Operations	3.00%
Wastewater CSS Operations	1.60%
Total	100.00%
Source: Exhibit 3-B, page 301	

Q. What expense adjustments does this produce for each PAWC utility group?

A. Based on the allocation factors shown in the above table, my adjustment reduces pre-tax operating expenses by (1) $1.643 million for Water Operations, (2) $51,658 for Wastewater SSS General Operations, and (3) $27,551 for Wastewater CSS Operations.

Consistent with PAWC's salaries and wages adjustment, there is no allocation to BASA or Brentwood wastewater operations.

Schedule C-19 American Water Works Executives – Dividend Equivalents

Q. Please explain your adjustment to expense for AWW executive perquisites that is charged to PAWC from AWW.

A. As shown on Exhibit LA-2, Schedule C-19, I have removed the portion of Other Compensation that relates to Dividend Equivalents projected to be paid to AWW's top executives and charged to PAWC for the 2025 FPFTY.[14] This adjustment reduces PAWC's FPFTY operating expenses by $31,371 for the AWW's top executives Other Compensation expense for Dividend Equivalents that is projected to be charged to PAWC from AWW in the FPFTY.

Q. Does AWW's 2023 Proxy Statement discuss the Dividend Equivalents component of the Other Compensation and Perquisites that is paid to the top AWW executives?

A. Yes. On page 53 of AWW's 2023 Proxy Statement under the section titled "Executive Compensation", it states the following with regard to Dividend Equivalents:

> Dividend equivalents are paid in cash with respect to PSUs and RSUs at such time, if ever, as the PSUs or RSUs are converted to common stock. Amounts in this column reflect PSU and RSU dividend equivalents that were paid out in 2022.

[14] The Company provided this information in its confidential response to OCA 17-002.

Q. Please discuss the reasons for removing the Dividend Equivalents portion of all Other Compensation paid to AWW executives that was charged to PAWC.

A. Charging the Dividend Equivalents portion of all Other Compensation received by AWW's top executives to PAWC's revenue requirement is not reasonable nor does it promote reliable and effective public utility service. This additional executive perquisite relates to stock-based compensation and is beyond the normal compensation paid to employees and it is not reasonable to charge such parent company executive perquisite costs to ratepayers.

Q. How did you allocate your recommended adjustment to remove the portion of all other compensation paid to AWW top executives to the Company's water and wastewater operations?

A. As shown on Exhibit LA-2, Schedule C-19, I allocated my recommended adjustments for a portion of all other compensation paid to AWW executives to the Company's Water and Wastewater Operations by using the allocation factors shown in the table in the preceding section, which are reflected on Exhibit 3-B, page 301 from the Company's filing.

Q. What adjustments to expense does this produce for each PAWC utility group?

A. Based on the allocation factors shown in the table in the preceding section, my adjustment reduces pre-tax operating expenses by (1) $29,928 for Water Operations, (2) $941 for Wastewater SSS General Operations, and (3) $502 for CSS Wastewater Operations.

Consistent with PAWC's salaries and wages adjustment, there is no allocation of this expense to BASA and Brentwood Wastewater Operations.

Schedule C-20, American Water Works Service Company SERP Expense

Q. Please explain your adjustment on Schedule C-20.

A. This adjustment corrects an error in PAWC's filing. Specifically, in its response to OCA 09-012, the Company stated that it does not offer a Supplemental Executive Retirement Plan ("SERP") as part of its benefits package. However, in its response to OCA 09-039, which included information regarding American Water Works Service Company ("Service Company") costs allocated to PAWC, Attachment 4 (*i.e.*, Service Company trial balance/income statement) includes the line item shown in the table below:

Description	Account Number	Company Code	6/30/2023 Amount
Pension Expense - SERP	50630000	1033	$ 152,769
Source: OCA 09-039, Attachment 4			

Pursuant to OCA's request that PAWC reconcile this apparent discrepancy, in its response to OCA 15-013, the Company stated:

> The Company does not offer SERP as a benefits plan but does offer ERP (Executive Retirement Plan). Upon further research, the amount listed under Account No. 50630000 in the HTY was recorded to the Service Company in error and should have been booked to the parent company which would not have any amounts passed down to PAWC. Therefore, the amounts will be removed from Service Company for the FTY and FPFTY in the rebuttal phase of this proceeding.

Pursuant to the Company's response in the above passage, I have removed the Service Company SERP expense from the FPFTY. As shown on Exhibit LA-2, Schedule C-20, this adjustment reduces pre-tax operating expense by $145,742 for

Water Operations, $4,583 for Wastewater SSS General Operations and $2,444 for CSS Wastewater Operations.

Q. How did you allocate this adjustment to remove Service Company SERP expense from the Company's water and wastewater operations?

A. As shown on Exhibit LA-2, Schedule C-20, I allocated the removal of the Service Company SERP expense to the Company's Water and Wastewater operations by using the allocation factors that are reflected on Exhibit 3-B, page 301 from the Company's filing.

Schedule C-21, Call Center Expense

Q. Please explain the adjustment related to Call Center Expense on Schedule C-21.

A. As shown on Exhibit LA-2, Schedule C-21, this adjustment removes the FPFTY expense proposed by PAWC for account 634.8 of $2,475,869 for Transworld and $606,386 for InterLogix identified in the response to OCA 26-022(3) based on the recommendation of OCA witness Barbara Alexander (OCA Statement 6) to eliminate expenses for the third party call centers that have routinely failed to meet reasonable call performance standards.

Schedule C-22, Arrearage Management Plan ("AMP") – Uncollectibles Expense

Q. Please explain the adjustment to uncollectibles expense related to Arrearage Management Program ("AMP") arrears shown on Schedule C-22.

A. This adjustment reduces overall FPFTY uncollectibles expense by $2.162 million in account 670.7 related to the Company's proposed AMP. With this adjustment, account 670.7 should reflect the amount of $214,728 for the AMP-related

uncollectibles expense, rather than $2,377,200 as proposed by PAWC. This adjustment is based on the recommendation of OCA witness Roger C. Colton (OCA Statement 5), in which Mr. Colton recommended that PAWC's addition of dollars to uncollectibles to reflect AMP credits should be reduced by the percentage of Bill Discount Program (BDP) dollars already historically included in uncollectibles. The allocation of Mr. Colton's recommended amount of $214,728 among PAWC's Water and Wastewater Operations is summarized in the table below:

Description	Amount
Water Operations	$ 183,485
Wastewater SSS General Operations	$ 14,967
BASA Wastewater Operations	$ 3,930
Brentwood Wastewater Operations	$ 1,052
CSS Wastewater Operations	$ 11,295
Total	$ 214,728
Source: Exhibit LA-2, Schedule C-22	

Q. Please summarize your adjustment.

A. As shown on Exhibit LA-2, Schedule C-22, this adjustment reduces pre-tax operating expense by $1.848 million for Water Operations, $150,724 for Wastewater SSS General Operations, $39,573 for BASA Wastewater Operations, $10,596 for Brentwood Wastewater Operations, and $113,746 for CSS Wastewater Operations.

VII. NEW SURCHARGES AND SINGLE-ISSUE TRACKERS

Q. Has PAWC proposed additional surcharges and trackers in the current case?

A. Yes. PAWC has proposed the following additional "ratemaking proposals" in the current case:

- Pension/OPEB cost tracker and deferral mechanism

- Production Cost Tracker

Q. Will you address each of those PAWC proposals?

A. Yes. Each of those PAWC proposals involves single-issue, piecemeal ratemaking that would shift risks onto ratepayers of fluctuating cost and revenues between rate cases that are currently borne by the Company's investors. As discussed below, I recommend that each of these PAWC "ratemaking proposals" be rejected.

Q. Has PAWC proposed implementing other surcharges and/or trackers?

A. Yes. I am not addressing PAWC's proposed implementation of a revenue decoupling mechanism ("RDM") or an Environmental Compliance Investment Charge ("ECIC") in the current case; rather, OCA witness Jerry Mierzwa will address PAWC's proposals for an RDM and ECIC.

Pension and OPEB Expense Tracker and Deferral Mechanism

Q. Please discuss the Company's proposed Pension and OPEB Tracker.

A. As described in the testimony of Company witness Swiz at pages 12-17, the Company has experienced fluctuations in its defined benefit pension plan and OPEB expense. PAWC is proposing a tracking mechanism to defer for accounting purposes and for future ratemaking treatment any variances between a "base level" for such expenses established in the current rate case and actual expenses. Annual amortization expense for deferred balances under this Company-proposed tracking mechanism would be addressed in the Company's next rate case.

Q. What is your recommendation concerning the Company's proposed Pension and OPEB Tracker?

A. The Pension and OPEB Tracker, while not proposed as a rate recovery mechanism in this proceeding, is likely to be proposed as such in its next base rate case. Company witness Swiz, in his Direct Testimony (p. 10-11) states, "In its next base rate case, the Company will address the ratemaking treatment of the deferred amounts." Isolating and tracking the Pension and OPEB expenses for eventual recovery via a special rate recovery mechanism, runs counter to a fundamental principle of ratemaking – that a utility should be afforded the opportunity to recover its costs of providing service but not guaranteed such recovery. This is particularly so for PAWC in this case given that the Company is utilizing a FPFTY that anticipates the Company's future costs of providing service. These costs include a provision for projected, future Pension and OPEB expenses. In addition, where there is certainty of recovery of expenses, any incentive to manage or reduce those expenses is diminished.

Further, by singling out these expenses for tracking and eventual recovery, PAWC is engaging in a form of single-issue, piecemeal ratemaking. Although a utility's "cost of service" is made up of dozens of individual cost components, which can and will vary from expected values, single-issue ratemaking ignores the fact that as a single cost component changes in one direction, other components may change in the opposite direction. Single-issue ratemaking denies customers the benefit of these offsetting cost reductions. It shifts the risk of fluctuations in two specific expense items, Pension and OPEBs, away from investors where the risk is currently borne, and

put that risk onto customers. I recommend that the proposed Pension and OPEB tracker be rejected.

Production Cost Tracker

Q. What has PAWC requested for a Production Cost Tracker?

A. PAWC witness Swiz addresses this PAWC proposal at pages 17-21 of his Direct Testimony. At page 17, he defines Production Expenses as "the costs incurred to provide water and wastewater services to our customers, including purchased water and wastewater treatment (NARUC Account 610 and NARUC Account 710), chemicals (NARUC Account 618 and NARUC Account 718), fuel and power (NARUC Accounts 615-616 and NARUC Accounts 715-716), and waste disposal (NARUC Account 711)." PAWC proposes that it would maintain separate regulatory asset and liability accounts for the production expense categories, including (1) Purchased Water and Wastewater Treatment, (2) Fuel & Power, (3) Chemicals, and (4) Waste Disposal PAWC proposes deferring any variance between the level for Production Costs established in the current case and the actual expenses incurred. Mr. Swiz states at page 20 that: "At the time of its next rate case, the Company will present the net amount in these accounts for return to the customers (in case of a net credit amount or regulatory liability) or for collection in rates (in the case of a net debit amount or regulatory asset) over a reasonable amortization period."

Q. What is your recommendation concerning the Company's proposed Production Cost Tracker?

A. The Company's proposed Production Cost Tracker, while not presented as a rate recovery mechanism in this proceeding, will almost surely, as explained by Mr. Swiz, be proposed as such in the Company's next base rate case. As explained in response to the Pension and OPEB tracker, establishing a Production Cost Tracker is contrary to the well-established principle of ratemaking that a utility should be allowed the opportunity to recover its costs of providing service but not guaranteed such recovery. The Production Cost Tracker is a form of single-issue, piecemeal ratemaking. This is especially so for PAWC in this case because the Company is utilizing a FPFTY that anticipates the Company's future costs of providing service. These costs include a provision for projected, future purchased water, wastewater treatment, chemicals, fuel and energy, and waste disposal costs. In addition, as I noted above, where there is certainty of recovery of various expenses, the incentive to control or minimize those expenses is reduced.

Further, by singling out Production expenses for tracking and eventual recovery, PAWC is engaging in a form of single-issue, piecemeal ratemaking. Although a utility's "cost of service" is made up of dozens of individual cost components, which can and will vary from expected values, single-issue ratemaking ignores the fact that as a single cost component changes in one direction, other components may change in the opposite direction. Single-issue ratemaking denies customers the benefit of these offsetting cost reductions. It shifts the risk of

fluctuations in the various Production Expense categories away from investors where the risk is currently borne and puts that risk onto customers.

For all of these reasons, I recommend that the proposed Production Cost Tracker be rejected.

VIII. MISCELLANEOUS REVENUE AND EXPENSES RELATED TO AMERICAN WATER RESOURCES

Q. OCA witness Barbara Alexander (OCA Statement 6) has identified concerns related to American Water Resources ("AWR"). How much revenue did PAWC include in the FPFTY related to AWR?

A. PAWC's responses to OCA 26-005, OCA 26-015 and OCA 26-016 indicate that PAWC included $659,624 of miscellaneous revenue from AWR (aka Oncourse Home Solutions) in account 471 in the FTY and FPFTY.

Q. How has PAWC treated the AWR revenue in its Application?

A. PAWC's response to OCA 26-016 states that PAWC records those amounts "above the line" for ratemaking purposes, such that the net amounts "offset PAWC's operating expenses recovered through rates."

Q. Does PAWC also have expenses related to that revenue?

A. Yes. PAWC's CONFIDENTIAL response to OCA 26-016 states that:

[redacted]

[redacted]

[redacted] incurred in providing such services.

[redacted]

Q. How has that revenue, and the related expenses, been treated in the OCA's adjusted revenue requirement for PAWC?

A. Those revenues, and the related expenses, have not been removed based on Ms. Alexander's recommendation that: "In the context of this rate case, the reliance on the revenues produced by this program is questionable but any defect associated in revenues by eliminating these revenues should be borne by shareholders and not PAWC's ratepayers." OCA St. 6 at 41.

IX. MANAGEMENT OPERATIONS AUDIT REPORT

Q. Has the PUC recently conducted a management operations audit for PAWC?

A. Yes. The PUC recently conducted a management operations audit for PAWC in Docket No. D-2022-3035217. The PUC Bureau of Audits submitted its Management and Operations Audit Report in October 2023. In addition, PAWC filed an Implementation Plan in response to the management and operations audit.

Q. Has the report been released to the public?

A. Yes. In a public meeting held on December 21, 2023, the PUC Vice Chair filed a Motion whereby the Management and Operations Audit Report and PAWC's Implementation Plan were made public.

Q. Did the Management and Operations Audit Report result in recommendations?

A. Yes. The audit staff analyzed 12 functional areas of the Company and proposed 31 recommendations. In PAWC's Implementation Plan, of the 31 recommendations, the Company accepted 23 in their entirety and partially accepted eight of the 31 recommendations.

Q. Was PAWC aware of the recommendations in the Management and Operations Audit Report when the Company prepared its application in the current rate case?

A. In its response to OCA 22-001, the Company stated that it became aware of the recommendations in the Management and Operations Audit Report during the preparation of its application in the current rate case. In terms of if and how the Company reflected the recommendations in its rate case application, the response to OCA 22-001 stated in part:

> Many of the recommendations PAWC accepted have no direct correlation to the rate case or the proposed revenue requirement. The management audit is a separate proceeding and PAWC will implement recommendations as outlined in the Implementation Plan.

As discussed above pursuant to the adjustment shown Schedule C-5, in its response to OCA 22-003, the Company stated that is has eliminated its external board and will reflect the removal of the related expenses during the rebuttal phase of this proceeding.

Q. The Management and Operations Audit Report at page 4 states that the Audit Report contains identifiable potential quantifiable cost savings of approximately $3.13 million in annual savings and $4 million of one-time savings that could be realized upon implementation of the recommendations. Has PAWC reflected such costs savings in the FPFTY?

A. No. In its response to OCA 22-008, the Company stated:

> The "potential quantifiable cost savings" estimated by the Bureau of Audits are composed of savings to inventory costs and production costs. These amounts were not specifically incorporated into the FTY or FPFTY. In the Implementation Plan, the Company noted that it continues to evaluate its inventory turnover and reduce stockpiled materials as supplier shortages and materials availability improves. Regarding unaccounted for water, the Company noted in the Implementation Plan that it continues to strive to reduce its UFW below the 20% threshold. PAWC's UFW reduction efforts include, but are not limited to, documenting UFW within the Company's Work Management Program; offering a robust UFW training program on unmetered and unbilled water loss; and repairing leaks sensed by fixed based logger systems.
>
> Please note that one-time items are not included in the revenue requirement and therefore one-time savings would not be appropriately reflected in the revenue requirement.

Q. Does this conclude your direct testimony?

A. Yes, it does. I reserve the right to supplement this testimony either in writing or orally if additional relevant information is received.

Attachment RCS-1
QUALIFICATIONS OF RALPH C. SMITH

Accomplishments

Mr. Smith's professional credentials include being a Certified Financial Planner™ professional, a Certified Rate of Return Analyst, a licensed Certified Public Accountant and attorney. He functions as project manager on consulting projects involving utility regulation, regulatory policy and ratemaking and utility management. His involvement in public utility regulation has included project management and in-depth analyses of numerous issues involving telephone, electric, gas, and water and sewer utilities.

Mr. Smith has performed work in the field of utility regulation on behalf of industry, public service commission staffs, state attorney generals, municipalities, and consumer groups concerning regulatory matters before regulatory agencies in Alabama, Alaska, Arizona, Arkansas, Barbados, California, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, New Jersey, New Mexico, New York, Nevada, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, Puerto Rico, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, Washington DC, West Virginia, Canada, Federal Energy Regulatory Commission and various state and federal courts of law. He has presented expert testimony in regulatory hearings on behalf of utility commission staffs and intervenors on several occasions.

Project manager in Larkin & Associates' review, on behalf of the Georgia Commission Staff, of the budget and planning activities of Georgia Power Company; supervised 13 professionals; coordinated over 200 interviews with Company budget center managers and executives; organized and edited voluminous audit report; presented testimony before the Commission. Functional areas covered included fossil plant O&M, headquarters and district operations, internal audit, legal, affiliated transactions, and responsibility reporting. All of our findings and recommendations were accepted by the Commission.

Key team member in the firm's management audit of the Anchorage Water and Wastewater Utility on behalf of the Alaska Commission Staff, which assessed the effectiveness of the Utility's operations in several areas; responsible for in-depth investigation and report writing in areas involving information systems, finance and accounting, affiliated relationships and transactions, and use of outside contractors. Testified before the Alaska Commission concerning certain areas of the audit report. AWWU concurred with each of Mr. Smith's 40 plus recommendations for improvement.

Co-consultant in the analysis of the issues surrounding gas transportation performed for the law firm of Cravath, Swaine & Moore in conjunction with the case of Reynolds Metals Co. vs. the Columbia Gas System, Inc.; drafted in-depth report concerning the regulatory treatment at both state and federal levels of issues such as flexible pricing and mandatory gas transportation.

Lead consultant and expert witness in the analysis of the rate increase request of the City of Austin - Electric Utility on behalf of the residential consumers. Among the numerous ratemaking issues addressed were the economies of the Utility's employment of outside services; provided both written and oral testimony outlining recommendations and their bases. Most of Mr. Smith's recommendations were adopted by the City Council and Utility in a settlement.

Key team member performing an analysis of the rate stabilization plan submitted by the Southern Bell Telephone & Telegraph Company to the Florida PSC; performed comprehensive analysis of the Company's projections and budgets which were used as the basis for establishing rates.

Lead consultant in analyzing Southwestern Bell Telephone separations in Missouri; sponsored the complex technical analysis and calculations upon which the firm's testimony in that case was based. He has also assisted in analyzing changes in depreciation methodology for setting telephone rates.

Lead consultant in the review of gas cost recovery reconciliation applications of Michigan Gas Utilities Company, Michigan Consolidated Gas Company, and Consumers Power Company. Drafted recommendations regarding the appropriate rate of interest to be applied to any over or under collections and the proper procedures and allocation methodology to be used to distribute any refunds to customer classes.

Lead consultant in the review of Consumers Power Company's gas cost recovery refund plan. Addressed appropriate interest rate and compounding procedures and proper allocation methodology.

Project manager in the review of the request by Central Maine Power Company for an increase in rates. The major area addressed was the propriety of the Company's ratemaking attrition adjustment in relation to its corporate budgets and projections.

Project manager in an engagement designed to address the impacts of the Tax Reform Act of 1986 on gas distribution utility operations of the Northern States Power Company. Analyzed the reduction in the corporate tax rate, uncollectibles reserve, ACRS, unbilled revenues, customer advances, CIAC, and timing of TRA-related impacts associated with the Company's tax liability.

Project manager and expert witness in the determination of the impacts of the Tax Reform Act of 1986 on the operations of Connecticut Natural Gas Company on behalf of the Connecticut Department of Public Utility Control - Prosecutorial Division, Connecticut Attorney General, and Connecticut Department of Consumer Counsel.

Lead Consultant for The Minnesota Department of Public Service ("DPS") to review the Minnesota Incentive Plan ("Incentive Plan") proposal presented by Northwestern Bell Telephone Company ("NWB") doing business as U S West Communications ("USWC"). Objective was to express an opinion as to whether current rates addressed by the plan were appropriate from a Minnesota intrastate revenue requirements and accounting perspective, and to assist in developing recommended modifications to NWB's proposed Plan.

Performed a variety of analytical and review tasks related to our work effort on this project. Obtained and reviewed data and performed other procedures as necessary (1) to obtain an understanding of the Company's Incentive Plan filing package as it relates to rate base, operating income, revenue requirements, and plan operation, and (2) to formulate an opinion concerning the reasonableness of current rates and of amounts included within the Company's Incentive Plan filing. These procedures included requesting and reviewing extensive discovery, visiting the Company's offices to review data, issuing follow-up information requests in many instances, telephone and on-site discussions with Company representatives, and frequent discussions with counsel and DPS Staff assigned to the project.

Lead Consultant in the regulatory analysis of Jersey Central Power & Light Company for the Department of the Public Advocate, Division of Rate Counsel. Tasks performed included on-site review and audit of Company, identification and analysis of specific issues, preparation of data requests, testimony, and cross examination questions. Testified in Hearings.

Assisted the NARUC Committee on Management Analysis with drafting the Consultant Standards for Management Audits.

Presented training seminars covering public utility accounting, tax reform, ratemaking, affiliated transaction auditing, rate case management, and regulatory policy in Maine, Georgia, Kentucky, and Pennsylvania. Seminars were presented to commission staffs and consumer interest groups.

Previous Positions

With Larkin, Chapski and Co., the predecessor firm to Larkin & Associates, was involved primarily in utility regulatory consulting, and also in tax planning and tax research for businesses and individuals, tax return preparation and review, and independent audit, review and preparation of financial statements.

Installed computerized accounting system for a realty management firm.

Education

Bachelor of Science in Administration in Accounting, with distinction, University of Michigan, Dearborn, 1979.

Master of Science in Taxation, Walsh College, Michigan, 1981. Master's thesis dealt with investment tax credit and property tax on various assets.

Juris Doctor, cum laude, Wayne State University Law School, Detroit, Michigan, 1986. Recipient of American Jurisprudence Award for academic excellence.

Continuing education required to maintain CPA license and CFP® certificate.

Passed all parts of CPA examination in first sitting, 1979. Received CPA certificate in 1981 and Certified Financial Planning certificate in 1983. Admitted to Michigan and Federal bars in 1986.

Michigan Bar Association.

American Bar Association, sections on public utility law and taxation.
