DATE: November 8, 2023

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF E. CHRISTOPHER ABRUZZO, ESQ.

Q. What is your name and business address?

A. My name is E. Christopher Abruzzo, Esq., and my business address is 852 Wesley Drive, Mechanicsburg, PA 17011.

Q. By whom are you employed and in what capacity?

A. I am employed by Pennsylvania-American Water Company ("PAWC" or the "Company") as Senior Director of Business Development.

Q. What are your responsibilities as Senior Director of Business Development?

A. I develop and maintain necessary contacts to stay abreast of new business opportunities. I manage the acquisition from initial contact, responding to Requests for Qualifications, Requests for Proposals, Requests for Bids, preparation of the Application for submission to the Pennsylvania Public Utility Commission ("Commission") and manage the workflows required to close the acquisition. These responsibilities necessitate that I maintain a working knowledge of regulatory and technical developments, new technologies and current trends as they affect the water and wastewater utility industries, and that I be familiar with legislation, regulations and public policy affecting business opportunities.

Q. Please describe your professional education and experience.

A. I received a Bachelor of Science (B.S.) degree in Food Marketing from St. Joseph's University in May of 1988 and my Juris Doctor (J.D.) from the Widener University School of Law in 1992. I was employed as a criminal prosecutor by the Dauphin County District Attorney's Office and the Pennsylvania Office of Attorney General for approximately

20 years. In January 2011, I was appointed deputy chief of staff to Governor Tom Corbett. In that role, I served as the Governor's chief liaison to the Pennsylvania Public Utility Commission and the Pennsylvania Department of Environmental Protection. I held that role for two years before being appointed the acting Secretary of the Pennsylvania Department of Environmental Protection in April of 2013. I was nominated by Governor Corbett and then confirmed by the Senate of Pennsylvania in December of 2013 as Secretary of the Department of Environmental Protection. In 2015, I began my employment with PAWC as the Director of Water Quality and Environmental Compliance. In that capacity, I participated on the due diligence teams associated with numerous acquisitions. I held that role for five years before being promoted to the role of Senior Director of Business Development in September of 2020.

Q. Have you previously testified before the Commission?

A. Yes. I submitted testimony on behalf of PAWC's proposed acquisition of the wastewater collection and treatment system of the Township of Towamencin, Docket No. A-2023-3039900 *et al*. and in the Company's base rate cases at Docket Nos. R-2020-3019369 and R-2017-2595853.

Q. What is the purpose of your direct testimony?

A. I will discuss the water and wastewater system acquisitions that PAWC has included in this base rate case and provide support for the Company's request for acquisition adjustments pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water and sewer utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small nonviable water and wastewater systems).

ACQUISITIONS INCLUDED IN THIS BASE RATE CASE

Q. What acquisitions are being included for the first time in base rates in this base rate case?

A. PAWC has included the following acquisitions in this base rate case:

(1) Butler Area Sewer Authority (wastewater);

(2) Borough of Brentwood (wastewater);

(3) Sadsbury Township Municipal Authority (wastewater)

(4) Farmington Township (water and wastewater)

(5) Audubon Water Company (water).

At the time of filing this rate case, PAWC provided notice of this rate case to customers of those entities, even though closing on those acquisitions has not yet occurred. PAWC also completed the following water and wastewater acquisitions since it filed its last base rate case: Upper Pottsgrove Township (wastewater), York City Sewer Authority (wastewater), Foster Township (wastewater), and Creekside Homeowners Association (water). However, those acquisitions were reflected in the base rates established by the Commission-approved settlement of PAWC's 2022 base rate case.[1]

Q. Please provide a detailed description of these acquisitions.

A. **Butler Area Sewer Authority ("BASA"):** On August 14, 2023, PAWC filed a unanimous settlement of all issues with all active parties to this acquisition proceeding. Administrative Law Judge Marta Guhl issued a Recommended Decision on September 14th, 2023, recommending that the Commission deny the Joint Petition for Settlement and deny the

[1] *See Pa. Pub.Util.Comm'n. v. Pennsylvania-American Water Company*, Docket Nos. R-2022-3031672 and R-2022-3031673 (Joint Petition for Settlement of Rate Investigation approved by Order entered December 8, 2022), Appendix E (Amortizations).

Application. PAWC and certain other signatories to the Settlement filed Exceptions on September 21, 2023. Reply Exceptions were filed on September 26, 2023. The Commission is expected to enter a final order in this case at its November 9, 2023 public meeting. If the Commission approves the application, as modified by the settlement, the transaction is expected to close shortly after the Commission's order becomes final and unappealable.

As discussed below, PAWC has included this acquisition in the instant base rate case because this proceeding is PAWC's "next" base rate case after the expected closing on the acquisition. If the Commission approves the acquisition, its Order will establish the amount that PAWC is to include in its rate base in its "next" base rate case as a result of the acquisition. Additionally, it is prudent and fair for the Commission to integrate the BASA system into the larger PAWC system, and to address expenses associated with the operation and maintenance of the system, as soon as reasonably possible to avoid regulatory lag. If the Commission disapproves the acquisition, PAWC reserves the right to pursue all available legal remedies.

The BASA system is a regional wastewater service provider, providing wastewater service to the City of Butler, the Township of Butler, and portions of the Townships of Center, Summit, Connoquenessing, and Oakland, as well as the Borough of East Butler. As of June 30, 2023, the BASA system furnished wastewater service to approximately 14,755 customers. It has no bulk service agreements with any contributing municipalities.

The BASA system is a sanitary-only system; there are no combined sewers in the system. The system consists of 224 miles of interceptor sewers, eight miles of force mains, twenty-three pump stations, seven flow equalization tanks, and a wastewater treatment

plant ("WWTP") that has a design and permitted average daily flow capacity of 10.0 million gallons per day ("MGD") and a rated maximum flow capacity of 28.0 MGD. BASA also owns nearly 6,500 manholes.

Public benefits of the transaction include: promotion of the Commission's policy favoring regionalization and consolidation of water/wastewater systems and the General Assembly's policy goals when it enacted Section 1329; Commission regulation of the system, giving BASA's customers access to the Commission, the OCA, the OSBA and I&E; and enhanced customer assistance programs for all of PAWC's customers (including expanded eligibility for hardship grants and a $3,500,000 Company contribution, over five years, to its hardship grant program, which would not be recoverable in rates). PAWC will also make capital improvements to the system to address long-standing environmental issues.

In the settlement, the parties ask the Commission to approve the addition of $228,000,000 to PAWC's rate base, as a result of the acquisition. Including the BASA acquisition in the instant proceeding will significantly reduce regulatory lag, thereby mitigating one factor that hinders municipal acquisitions pursuant to Section 1329.

Borough of Brentwood ("Brentwood"): PAWC's application to acquire the Brentwood wastewater system was finally accepted for filing on September 14, 2023. Consequently, the Commission is required to enter a final decision in the proceeding by March 14, 2024, which is expected to be prior to the close of the record in this proceeding. If the acquisition is approved, the transaction is expected to close shortly thereafter.

As discussed below, PAWC has included this acquisition in the instant base rate case because this proceeding is PAWC's "next" base rate case after closing on the

acquisition. The Commission Order approving the acquisition will establish the amount that PAWC is to include in its rate base in its "next" base rate case as a result of the acquisition. Additionally, it is prudent and fair for the Commission to integrate the Brentwood system into the larger PAWC system, and to address expenses associated with the operation and maintenance of the system, as soon as reasonably possible to avoid regulatory lag.

The Brentwood system is a collection system that collects and ultimately conveys wastewater to the Allegheny County Sanitary Authority ("ALCOSAN") wastewater treatment facility. It serves customers located in the Borough of Brentwood. The Brentwood system is comprised of gravity sewers, manhole structures and service laterals. As of June 30, 2023, the Brentwood system furnished wastewater service to approximately 3,974 customers.

Public benefits of the transaction include: promotion of the Commission's policy favoring regionalization and consolidation of water/wastewater systems and the General Assembly's policy goals when it enacted Section 1329; Commission regulation of the system, giving Brentwood's customers access to the Commission, the OCA, the OSBA and I&E; and enhanced customer service for Brentwood's customers. In addition, PAWC will make capital improvements to the system to address long-standing environmental issues due to excessive inflow and infiltration.

The Commission's decision, which should be entered while the record is still open in this proceeding, will establish the amount that the Company is to include in rate base as a result of the acquisition. The application requests that the amount to be added to PAWC's rate base as a result of the acquisition be $19,364,443 (the purchase price of the system).

Including the Brentwood acquisition in the instant proceeding will significantly reduce regulatory lag, thereby mitigating one factor that hinders municipal acquisitions pursuant to Section 1329.

Sadsbury Township Municipal Authority ("STMA"): Currently pending before the Commission is PAWC's application to acquire the STMA wastewater collection and conveyance system pursuant to 66 Pa. C.S. § 1102. The STMA wastewater system serves approximately 226 residential and 26 commercial customers in Sadsbury Township, Lancaster County. Treatment service is provided by Christiana Borough Authority and the Township of Salisbury. The STMA has no employees and its governing board desires to exit the business of managing a wastewater system.

PAWC filed an application for Commission approval of the STMA acquisition on August 3, 2023 at Docket No. A-2023-3042058. STMA filed a Petition to Intervene, and the Office of Small Business Advocate ("OSBA") and the Office of Consumer Advocate ("OCA") filed protests. The matter is currently pending in the Office of Administrative Law Judge.

Public benefits of the transaction include:

- STMA's customers will receive service from a large, financially sound company with the employees and equipment to ensure that customers receive high quality wastewater service meeting federal and state requirements;
- PAWC's experience in operating wastewater systems will result in efficiencies;
- Other efficiencies will result from economies of scale, due to PAWC's greater purchasing power;
- PAWC offers customer assistance programs, whereas STMA does not; and
- PAWC's customers will benefit from an expanded customer base, allowing the Company to spread costs among a larger number of customers, which helps to stabilize or reduce per-customer costs over the long term.

The purchase price for the system is $990,000. PAWC has performed an analysis of the original cost and accumulated depreciation of the STMA system. After closing, PAWC will file with the Commission an original cost study to reflect the original cost and accumulated depreciation as of the closing date. The depreciated original cost of the assets included in this case is more than the purchase price, therefore, PAWC is proposing to amortize the difference between what was paid and the cost of the assets, thus lowering expenses for the Company's existing customers.

PAWC has included this acquisition in the instant base rate case because the transaction is expected to close no later than the end of the FPFTY. Additionally, it is prudent and fair for the Commission to integrate the STMA system into the larger PAWC system, and to address expenses associated with the operation and maintenance of the system, as soon as reasonably possible to avoid regulatory lag.

Farmington: PAWC filed the application to acquire Farmington Township's wastewater collection, conveyance and treatment system (Docket No. A-2023-3042587) and water distribution system (Docket No. A-2023-3042567) on August 28, 2023, pursuant to 66 Pa. C.S. § 1102. The OSBA filed a Notice of Intervention and OCA filed a Protest. The matter is currently pending in the Office of Administrative Law Judge.

The Farmington Township wastewater system serves approximately 448 customers in Farmington Township, Clarion County. The wastewater treatment plant has an average daily flow of 0.1 MGD. The system consists of the treatment plant, four pumping stations, approximately 340 grinder pumps and 14 miles of collection mains. The water distribution system serves approximately 464 customers in Farmington Township and consists of 16 miles of water mains, 70 water hydrants and one storage tank. Farmington Township

employs one operator who shares responsibility for both the wastewater system and the water distribution system. The township board desires to exit the business of managing both systems.

Public benefits of the acquisition include:

- Farmington Township's residents will receive service from a large, financially sound company with the employees and equipment to ensure that customers receive high quality wastewater and water services meeting federal and state requirements.
- The water distribution system will be folded into the Clarion water system which will create cost-savings.
- PAWC's experience in operating wastewater systems will result in proper adherence to environmental regulations; Farmington is currently operating the wastewater system with an expired NPDES permit.
- Farmington's wastewater plant is projected to be hydraulically overloaded within the next 5 years. PAWC has the necessary capital and expertise to reduce or eliminate the stormwater infiltration and inflow which reduces the potential for overloading.
- Farmington does not have the necessary personnel or financial resources to maintain the water distribution system or wastewater system. Currently, one full-time operator handles all of the maintenance and operations of both systems.
- Other efficiencies will result from economies of scale, due to PAWC's greater purchasing power.
- PAWC offers customer assistance programs, whereas Farmington Township does not.
- PAWC's customers will benefit from an expanded customer base, allowing the Company to spread costs among a larger number of customers, which helps to stabilize or reduce per-customer costs over the long term.
- Farmington will be able to use the proceeds of the sale to retire all debt associated with both systems, thus eliminating a significant burden from the township budget.

The total purchase price for both systems is $5,545,000. The allocation of the purchase price between the water and wastewater systems is shown in PAWC Exhibit No. 3-C. PAWC has filed an original cost study to determine the original cost and accumulated depreciation of the Farmington Township water and wastewater assets. The original cost study will be updated after closing to reflect the original cost and accumulated

depreciation as of the closing date. PAWC will pay slightly more than the depreciated original cost of the assets, therefore PAWC is requesting an acquisition adjustment on the water system pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water and sewer utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small nonviable water and wastewater systems).

PAWC has included this acquisition in the instant base rate case because the Company anticipates that the transaction will close no later than the end of the FPFTY. Additionally, it is prudent and fair for the Commission to integrate the Farmington systems into the larger PAWC systems, and to address expenses associated with the operation and maintenance of the system, as soon as reasonably possible to avoid regulatory lag.

Audubon Water Company ("AWC"): PAWC filed the application to acquire AWC on September 21, 2023, pursuant to 66 Pa. C.S. § 1102. The AWC system is located in Montgomery County and serves approximately 2,651 residential customers, 167 commercial customers, 90 private fire customers, 29 multi-family dwelling customers, 3 public customers, and 1 public fire customer primarily located within Lower Providence Township. The AWC system consists of two water systems that are not interconnected with each other. The main system supplies the town of Audubon and the second system supplies the Valley Forge Crossing Trailer Park. AWC's primary source of supply is from 15 groundwater wells located within its service area. There are a total of 12 active wells in the main AWC system. An additional three wells are located in the Valley Forge Crossing Trailer Park. The main AWC system consists of five pressure gradients and has six storage tanks, five booster pump stations, 160 fire hydrants and a distribution network

of approximately 40 miles of water mains. There are a total of 13 water treatment facilities associated with the ground water systems for the AWC system.

AWC has 12 full-time employees and one part-time employee. The proposed acquisition of AWC by PAWC will be accomplished by merger; therefore all current AWC employees will become PAWC employees at the time of close.

AWC and American Water Works Company, Inc. ("American Water") entered into a Merger Agreement, pursuant to which all issued and outstanding shares of the capital stock of AWC will be cancelled and converted to the right to receive American Water Common Stock equal to a pro rata portion of the merger consideration identified in the Merger Agreement. The issued and outstanding shares of AWC's capital stock will be surrendered to American Water in exchange for American Water Common Stock in accordance with the Merger Agreement.

Pursuant to the Merger Agreement, AWC will first merge with American Water's AWC Acquisition Company, LLC, with AWC as the surviving corporation; then AWC will merge with PAWC.

At closing, a number of shares of American Water Common Stock equal to the Contingent Escrowed Shares identified in the Merger Agreement (value of $2,000,000) will be held in escrow. The Merger Agreement provides that PAWC will seek distressed utility treatment under 66 Pa. C.S. § 1327(a) for the AWC system in its next rate case. If the Commission grants 1327(a) treatment and some or all of the difference between the depreciated original cost of the assets and the purchase price is approved for inclusion in rate base, American Water will release the Contingent Escrowed Shares to AWC in a corresponding percentage in an amount up to $2,000,000 upon entry of a final, non-

appealable Commission order. If the Commission does not grant the request for 1327(a) treatment, the purchase price for AWC will be $6,000,000 and the Contingent Escrowed Shares will be returned to American Water.

PAWC has included in this case the original cost and accumulated depreciation of the AWC system. As explained in the testimony of PAWC witness Ms. Gress, the Company proposes to amortize the difference between the depreciated original cost and the purchase price over a ten-year period.

Public benefits of the acquisition include:

- AWC's customers will receive service from a large, financially sound company with the employees and equipment to ensure that customers receive high quality water service meeting federal and state requirements.
- The water distribution system can eventually be interconnected to PAWC's Norristown and/or Royersford systems to eliminate the need to draw water from their insufficient and contaminated wells.
- PAWC's experience in operating water systems will result in proper adherence to environmental regulations.
- AWC will have to borrow tens of millions of dollars to remediate the PFAS contaminated wells it currently relies upon for source water.
- If the transaction does not occur, the capital investment needed in this system will significantly increase rates for AWC customers.
- Other efficiencies will result from economies of scale, due to PAWC's greater purchasing power.
- PAWC offers customer assistance programs, whereas AWC does not.
- PAWC's customers will benefit from an expanded customer base, allowing the Company to spread costs among a larger number of customers, which helps to stabilize or reduce per-customer costs over the long term.

PAWC has included this acquisition in the instant base rate case because the Company anticipates that the transaction will close no later than the end of the FPFTY. Additionally, it is prudent and fair for the Commission to integrate the AWC system into

the larger PAWC system, and to address expenses associated with the operation and maintenance of the system, as soon as reasonably possible to avoid regulatory lag.

Q. Please describe any settlement commitments for the BASA acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. At the outset, it should be noted that, in the settled Section 1329 BASA proceeding discussed above, PAWC, the statutory advocates, and the other parties to the proceeding agreed that PAWC could include $228,000,000 in rate base in this proceeding as a result of the Section 1329 acquisition. Customer notice was provided to the acquired customers and PAWC's legacy customers in the application proceeding. As a result, rate base issues related to the BASA acquisition should not be re-litigated in this proceeding.

On other issues resolved in the BASA proceeding (such as transaction and closing costs, accrual of Allowance for Funds Used During Construction ("AFUDC") for post-acquisition improvements not recovered through the Distribution System Improvement Charge ("DSIC") for book and ratemaking purposes, and deferred depreciation related to post-acquisition improvements not recovered through the DSIC for book and ratemaking purposes), PAWC, the statutory advocates and the other parties to the BASA proceeding only agreed that PAWC could include a claim for those expenses in this proceeding. On those issues, the parties reserved their rights to litigate the reasonableness of those claimed expenses. Nevertheless, I note that Section 1329 expressly permits the recovery of such expenses.

The instant base rate filing also includes a cost-of-service study that removes all costs and revenues associated with the operations of the BASA system, as well as a cost-

of-service study for the BASA system. The instant base rate case also reflects claims for rate recovery of the BASA transaction and closing costs delineated on PAWC Exhibit No. 3-C, as well as PAWC's outside legal fees associated with the BASA acquisition identified on PAWC Exhibit No. 3-C.

In the settlement, PAWC agreed that it would not propose an increase in BASA's base rates if the rates would become effective before the later of: (a) the first anniversary of closing or (b) January 1, 2025. PAWC also agreed that it would propose to move the system to 1.4x the current system rate or PAWC's proposed Rate Zone 1 system-average wastewater rates, whichever is lower, upon the later of (a) the first anniversary of Closing or (b) January 1, 2025. The instant base rate case complies with these provisions by proposing an increase for BASA system customers as discussed in PAWC Statement No. 4, the Direct Testimony of Stacey D. Gress, to take effect on the later of the first anniversary of Closing or January 1, 2025.

In addition, PAWC agreed that, in its first base rate case that includes the BASA system assets, if PAWC proposes a different effective date for new rates for BASA customers beyond the effective date of new rates for other customers, PAWC would calculate its proof of revenue as if the BASA customers were paying proposed rates without any delay to the effective date. PAWC has calculated its proof of revenues in compliance with this agreement.

Q. Will the Company pay any of Brentwood's legal or engineering fees incurred as part of the transaction?

A. Yes. PAWC will reimburse up to $70,000 as reimbursement for engineering and legal fees incurred related to the transaction.

Q. Is the Company seeking to recover the engineering and legal fees reimbursed to Brentwood?

A. Yes. Brentwood's engineering and legal fees are part of the transaction and closing costs of the acquisition and are appropriately included in rate base as a cost of organization of newly acquired service territory. Refer to PAWC Exhibit No. 3-C.

SECTION 1327

Q. What is your understanding of Section 1327?

A. I am advised by counsel that Section 1327 creates a rebuttable presumption that a purchase price in excess of the original cost less depreciation of an acquired system is reasonable and should be included in rate base if certain conditions are met. Those conditions are: (1) the property is used and useful in providing water or wastewater service; (2) the acquired system had 3,300 or fewer customer connections or was not viable; (3) the acquired system was not providing adequate, efficient, safe and reasonable service and facilities; (4) reasonable and prudent investments will be made to provide adequate, efficient, safe and reasonable service and facilities; (5) the acquired entity agrees to the acquisition and the negotiations were conducted at arm's length; (6) the actual purchase price is reasonable; (7) the acquiring public utility is not affiliated with the acquired entity; (8) the rates charged to the acquiring utility's preacquisition customers will not increase unreasonably because of the acquisition; and (9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over a reasonable period with corresponding reductions in the rate base.

Q. You testified earlier that the Company is requesting that the Commission grant Section 1327 treatment for the AWC system. Please explain why.

A. The system satisfies each of the nine criteria contained in Section 1327:

(1) all of the assets acquired by PAWC are used and useful in the public service;

(2) the AWC system has 2,941 customers as of June 30, 2023, which is fewer than 3,300 customer connections;

(3) the AWC system is struggling to provide adequate, efficient, safe and reasonable service and facilities because the owners of the system are of retirement age and they are no longer able to properly manage and operate the system. During the spring of 2023, AWC's system's wells were barely able to meet water demand. Additional customers are projected to connect in AWC's service area in the near future. With these additional customers, the system's sources of supply will not be sufficient to meet demand. In addition, two of the system's wells were tested and found to have elevated levels of PFAS. As AWC is limited in its sources of supply, AWC will be forced to construct PFAS treatment for these wells. The cost of constructing and operating these treatment units is significant, ranging in the tens of millions of dollars, which will cause a significant financial burden on the system's customers. AWC does not have the ability to spread these costs over a large customer base nor the technical expertise to properly operate these complex treatment units. Complicating matters further, the groundwater in the Audubon area is known or expected to have issues with PFAS. Once the new PFAS regulations take effect, AWC will be required to test all the wells in its system. These other wells will likely be impacted by PFAS and any wells not meeting PFAS limits will need additional treatment, adding to the financial burden placed on the system's customers. In general, issues with groundwater contamination in the area will limit AWC's ability to develop additional sources of supply to meet future demands in its service area;

(4) PAWC will make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities. These investments include:

- Improvements to provide enhanced safety and security;
- Remote monitoring and data collection systems;
- Distribution system improvements to address reliability, water quantity issues, and to reduce lost water in the system;
- Improvements to the disinfection systems;
- Additional interconnections between the AWC system and PAWC's Royersford and Norristown systems to enhance system reliability, provide adequate supply for periods of high demand, and to address future demands in AWC's certificated service area.

In addition, PAWC is uniquely suited to acquire the AWC system. PAWC already has an interconnection with AWC via a pipeline that travels through the system's service territory. The pipeline connects PAWC's Royersford and Norristown systems, allowing PAWC to supply the AWC system water from either or both of the PAWC systems. After acquisition, PAWC will be able to consolidate the sources of supply and halt using any problematic wells in the AWC system. PAWC has performed PFAS testing on the Royersford and Norristown sources of supply and has not found any impacts from PFAS. This acquisition will provide a cost effective solution to the contamination and demand issues facing the customers of AWC.

(5) AWC agreed to the acquisition and the negotiations were conducted at arm's length;

(6) the purchase price of $8,000,000 (with the Section 1327(a) contingency) is reasonable. A comparison of AWC's purchase price per customer ("PP/C") at a purchase price of $8,000,000 yields a favorable comparison to the average PP/C for PAWC's § 1102 transactions over the last five years. AWC's PP/C of $2,720 ($8,000,000/2,941 customers = $2,720) is almost 20% less than the average § 1102 PP/C during the last five years;

PAWC § 1102 TRANSACTIONS SINCE 2018

Date of Closing	System	Purchase Price	Customers	PP/C
7/24/2019	Turbotville Water	$635,000	330	$1,900
7/24/2019	Turbotville Wastewater	$365,000	318	$1,100
10/27/2022	Foster Township Water	$3,750,000	456	$8,200
6/21/2023	Creekside Water	$171,580	78	$2,200
Average				$3,350

(7) PAWC is not affiliated with AWC;

(8) the rates charged to PAWC's preacquisition customers will not increase unreasonably because of the acquisition. The proposed rate base for this system is $8 million, which represents less than 0.2% of PAWC's $4.7 billion rate base at the end of the FPFTY. The transaction will have a de minimus impact on rates.

(9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over ten years (a reasonable period) with corresponding reductions in the rate base.

Q. You also testified earlier that the Company is requesting that the Commission grant Section 1327 treatment for the Farmington water system. Please explain why.

A. Again, the water system satisfies each of the nine criteria contained in Section 1327:

(1) all of the assets acquired by PAWC are used and useful in the public service;

(2) the Farmington water system has 464 total customers, which is fewer than 3,300 customer connections;

(3) the Farmington water system is not providing adequate, efficient, safe and reasonable service and facilities. The Farmington water system has an extensive history of recurring violations of the PADEP Safe Drinking Water regulations. The system received 41 Safe Drinking Water violations between 2018 and 2023. As shown below, violations were received every year during this period and the system has shown no signs of improvement.

- 2018 4 violations
- 2019 10 violations
- 2020 7 violations
- 2021 10 violations
- 2022 5 violations
- 2023 5 violations

Violations include persistent failure to collect weekly water samples, including: disinfectant residual samples, disinfectant by-product contaminant samples, and lead and copper samples. The system has also repeatedly failed to collect follow-up disinfectant residual samples even after initial samples showed residual disinfectant concentrations below standards. By failing to collect samples, the Farmington system provided inadequate and unreliable service, exposing customers to the risk of ingesting improperly disinfected water. Proper water sampling is a basic health and safety function performed by water

providers. The failure to properly sample water and provide results to the PADEP is symptomatic of greater operational problems of a system.

The system has also repeatedly failed to issue public notification of its violations as required by PADEP Safe Drinking Water regulations and failed to issue its EPA mandated Consumer Confidence Report (CCR) on a timely basis. By failing to inform the public of critical drinking water alerts and information in a timely manner, the system provided inadequate and unreasonable service by not communicating public health safety concerns.

(4) PAWC will make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities. These investments include an estimated $1.04 million of capital improvements in the water system, such as:

- Security, safety and SCADA improvements at the interconnection/chemical feed facility and the water storage tank;
- Automatic flushing units to help maintain water quality at dead end mains;
- GIS mapping of system;
- Full meter replacement;
- Purchase new vehicle to replace old, unreliable vehicle;
- Leak logger purchase; and
- Recurring projects (new or relocated mains, capitalized main break repairs, new/replacement hydrants, new/replacement valves, new/replacement services, tools & equipment).

The following improvements will be made in the wastewater system:

- Blower-Effluent Sampling-Aeration Building Improvements (IP);

- Arc Flash, security, and general safety improvements at plant and all lift stations;
- Chemical feed (odor control) systems at Crown and Beer Barn lift stations;
- GIS mapping of system;
- Disinfection chemical feed system and plant process improvements for diffusers, piping, RAS pumps, decant pumps, etc.;
- SCADA installation at plant;
- Purchase new vehicle to replace old unreliable vehicle;
- System wide I/I study; and
- Recurring projects (replacement or relocated mains, capitalized main break repairs, new/replacement manholes, new/replacement services, plant process equipment, tools & equipment).

(5) Farmington agreed to the acquisition and the negotiations were conducted at arm's length;

(6) the allocated purchase price of $2,718,300 for the water system is reasonable. Farmington Township chose not to pursue a fair market value transaction, despite its ability to do so. The purchase price for the water system was based on the depreciated original cost ("DOC") of the assets of the system. The allocated purchase price of $2,718,300 is only 8% higher than the water system's DOC of $2,501,654. Farmington water's PP/C of $5,858 ($2,718,300/464 customers = $5,858) is 38% less than the average PP/C for PAWC's § 1329 transactions during the last five years:

PAWC § 1329 Transactions Since 2018

Date of Closing	System	Purchase Price	Customers	PP/C
11/14/2018	Steelton Water	21,750,000	2325	$9,354
5/28/2018	Exeter Wastewater	$93,500,000	9000	$10,388
9/30/2018	Kane Wastewater	$17,560,000	2006	$8,753
12/10/2019	Royersford Wastewater	$13,000,000	1596	$8,145
12/17/2019	Valley Water	$7,325,000	1459	$5,020
12/17/2019	Valley Wastewater	$13,950,000	1644	$8,485
4/28/2020	Upper Pottsgrove WW	$13,750,000	1428	$9,628
4/6/2021	York Wastewater	$235,000,000	158851	$14,825
Average				$9,324

(7) PAWC is not affiliated with Farmington;

(8) the rates charged to PAWC's preacquisition customers will not increase unreasonably because of the acquisition of the Farmington water system. The proposed rate base for this system is $2,718,300 million, which represents less than 0.1% of PAWC's $4.7 billion rate base at the end of the FPFTY. The transaction will have a de minimus impact on rates.

(9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over ten years (a reasonable period) with corresponding reductions in the rate base.

SECTION 1329

Q. Please explain your understanding of the Pennsylvania Legislature's intent in enacting Section 1329 of the Code.

A. The General Assembly supported and encouraged the sale of municipal water and wastewater systems at valuation levels higher than traditional original cost measures. Some communities desire to monetize their assets to address other public needs. Due to the age of many municipal systems, however, traditional original cost measures produced very low sales prices, discouraging many transactions. By enabling the sale of municipal assets to public utilities at higher valuations, the General Assembly intended to encourage these transactions. This result also promotes the regionalization and consolidation of water and wastewater systems. The Legislature also intended to improve the maintenance and replacement of public infrastructure, and to promote environmental stewardship by facilitating transfers to public utilities with extensive technical expertise and financial resources.

Q. Please explain the rate-making implications of a Section 1329 proceeding.

A. In a Section 1329 proceeding, the Commission establishes the amount that the acquiring public utility can put into rate base in its next base rate case as a result of the acquisition. In addition, the acquiring utility can include a claim for transaction and closing costs incurred because of the transaction in its next base rate case. The acquiring utility may also accrue AFUDC for post-acquisition improvements not recovered through the DSIC for book and ratemaking purposes and defer depreciation related to post acquisition improvements not recovered through the DSIC for book and ratemaking purposes. Finally,

the selling utility's cost of service is to be incorporated into the revenue requirement of the acquiring public utility during the acquiring company's next base rate case.

Q. What is your understanding of the term "next base rate case," as used in Section 1329?

A. Section 1329(d)(5) states "The selling utility's cost of service shall be incorporated into the revenue requirement of the acquiring public utility as part of the acquiring utility's next base rate case proceeding." My understanding from PAWC counsel is that the statute should be construed using the ordinary definition of "next," which is "in the time, place or order nearest or immediately succeeding." Webster's New Collegiate Dictionary 774 (1977). So, for example, if the BASA acquisition is approved by the Commission on November 9, 2023, and closes in December, 2023, the instant base rate case would be the "next" base rate case because PAWC's 2022 rate case was concluded on December 8, 2022. Therefore, this is the first base rate case in which PAWC should include BASA's assets.

Similarly, for the Brentwood acquisition, if the Commission approves this acquisition in March 2024, and closing occurs shortly thereafter, the "next" base rate case will be the instant rate proceeding – this proceeding is the rate proceeding immediately following the Commission's approval of the acquisition and the Company's closing on the acquisition. Therefore, this is the first base rate case in which PAWC should include Brentwood's assets.

Q. Based on your experience with the implementation of Section 1329 and PAWC's pending Section 1329 acquisitions, why is it important to avoid delay in including Commission-approved Section 1329 rate base additions in rate base?

A. There can be a considerable delay between the date a public utility closes on a Section 1329 acquisition (expending significant capital) and the date that the public utility is able to place the Commission-approved rate base addition for that transaction into rate base. The monetary impact is significant, considering the large investments that public utilities are not able to recover for years. This regulatory lag provides a disincentive for an acquiring utility to engage in Section 1329 acquisitions, which undermines the Legislative intent behind Section 1329. Section 1329 would be ineffective if willing sellers could not find willing buyers, due to the lengthy delay between closing on a transaction and the recovery of those costs. The intended public benefits of acquisitions of municipal water and wastewater systems – including the monetization of municipal assets, regionalization and consolidation of systems, and remediation of environmental problems – are being impeded.

Q. Does the Commission have the ability to address the problem of lag in rate recovery of Section 1329 acquisitions?

A. Yes. The Commission should interpret Section 1329 to permit recovery for Section 1329 acquisitions that close while a base rate case is pending. For example, with respect to the Brentwood acquisition (as discussed above), the Commission should consider the instant base rate proceeding to be the "next base rate case" under Section 1329(c)(1)(i) when rate base for the acquired system can be incorporated into the public utility's rate base. If the Commission does not construe Section 1329 in a way that reduces regulatory lag and does not permit public utilities to take the steps necessary to reduce regulatory lag, public utilities may become less willing to engage in acquisitions or they may file base rate cases more frequently. Neither result advances the public interest and the intent of the Legislature in implementing Section 1329 would be impeded.

CONCLUSION

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony as additional issues or facts arise during the course of this proceeding.

REBUTTAL TESTIMONY
OF
E. CHRISTOPHER ABRUZZO, ESQ.

WITH REGARD TO
PENNSYLVANIA-AMERICAN WATER COMPANY'S ACQUISITIONS

DOCKET NOS.
R-2023-3043189 (WATER)
R-2023-3043190 (WASTEWATER)

DATE: February 21, 2024

PENNSYLVANIA-AMERICAN WATER COMPANY
REBUTTAL TESTIMONY OF E. CHRISTOPHER ABRUZZO, ESQ.

INTRODUCTION

Q. Please state your name and business address for the record.

A. My name is E. Christopher Abruzzo, Esq., and my business address is 852 Wesley Drive, Mechanicsburg, PA 17055.

Q. Are you the same E. Christopher Abruzzo who provided direct testimony in this case?

A. Yes, I am.

Q. What is the purpose of your Rebuttal Testimony?

A. The purpose of my rebuttal testimony is two-fold. First, I will correct and update my Direct Testimony. Second, I will address issues raised by various parties in this case related to acquisitions and the bulk customers of PAWC's[1] York wastewater system.

CORRECTION TO DIRECT TESTIMONY

Q. Please describe the correction you would like to make in your Direct Testimony.

A. On page 9 of my Direct Testimony, I stated that Farmington Township is operating its wastewater system with an expired NPDES Permit. Farmington Township's expired NPDES Permit was renewed on April 27, 2023.

[1] Unless otherwise indicated, all acronyms and capitalized terms used herein have the same meanings as set forth in my Direct Testimony.

UPDATES TO DIRECT TESTIMONY

Q. Please describe the updates you would like to make in your Direct Testimony.

A. In my Direct Testimony, I discussed the acquisitions that PAWC included in this base rate case. I would like to update the status of those acquisition proceedings. Additional updates will be provided as this base rate case proceeds.

Butler Area Sewer Authority ("BASA"): On November 16, 2023, the Commission entered an Opinion and Order that approved PAWC's acquisition of the BASA wastewater system. On December 14, 2023, Center Township and Summit Township (collectively, the "Townships") each filed a Petition for Review with the Commonwealth Court of Pennsylvania ("Commonwealth Court"). PAWC filed an Application to Dismiss the Petitions for Review and for Expedited Consideration, arguing: (a) the only issue properly before the Commonwealth Court is whether the Commission properly found that the Townships waived their arguments by not raising them before the Administrative Law Judge, and (b) the Commission's decision finding that the Townships waived their arguments was clearly correct. Similarly, BASA, the City of Butler and the Township of Butler filed Motions to Quash Appeal for Lack of Issue Preservation.

In an Order issued on February 1, 2024 and modified on February 9, 2024, the Commonwealth Court expedited the case as follows: the Townships are to file their initial advance form brief by February 29; the Commission, PAWC and BASA are to file their advance form briefs within 14 days; and the Townships may file a reply advance form brief within five days. The Townships will then file the reproduced record within ten days, and definite form briefs must be filed within five days. The case will then be submitted to a

panel of judges on the next available list for expedited disposition on the briefs filed without oral argument, unless otherwise ordered. Considering the above schedule, counsel advises that the Commonwealth Court could issue a decision by the end of May, 2024.

If the Commonwealth Court affirms the Commission's decision (which counsel has advised me is likely because the Townships waived their rights to oppose the settlement that was approved by the Commission), PAWC intends to close shortly after the Commonwealth Court's order becomes final and unappealable. Typically, a transaction of this size can be closed within two weeks of final approvals, which would be before the Commission enters its order in this proceeding.

Borough of Brentwood ("Brentwood"): Administrative Law Judge Katrina L. Dunderdale issued a Recommended Decision on January 17, 2024, recommending that PAWC's acquisition of Brentwood's wastewater system be denied. Exceptions and Reply Exceptions have been filed. The Commission must make a decision by March 14, 2024. If the Commission approves the acquisition, PAWC intends to close shortly after the Commission's Order becomes final and unappealable, which would be before the Commission issues its decision in this proceeding.

If the Commission's decision is appealed to Commonwealth Court, a decision is expected in about 12 months. If the Commonwealth Court approves the Transaction, PAWC intends to close shortly after the Commonwealth Court's order becomes final and unappealable. Since a transaction of this size generally can be closed within two weeks of final approval, if the Commonwealth Court approves the Transaction, PAWC is likely to close on the Transaction before the end of the FPFTY.

Sadsbury Township Municipal Authority ("STMA"): During a telephonic status conference on January 16, 2024, the parties informed Administrative Law Judge Katrina L. Dunderdale that they had reached a unanimous settlement. As of the date of this writing, the settlement is expected to be submitted to the Administrative Law Judge during the week of February 19, 2024. If the Commission approves the acquisition, PAWC intends to close on the acquisition as soon as possible after the Commission's order becomes final and unappealable. Considering that the parties have reached a unanimous settlement, an appeal is extremely unlikely. Since a transaction of this size generally can be closed with two weeks of final approval, PAWC is likely to close on the Transaction before the end of the FPFTY.

Farmington Township ("Farmington"): As of the date of this writing, the parties to this case are exchanging informal discovery and attempting to negotiate a settlement. A status conference will be scheduled with Administrative Law Judge Katrina L. Dunderdale. If the parties believe that litigation will be necessary to resolve the case, they will propose a litigation schedule at that time. If the Commission approves the acquisition, PAWC intends to close on the acquisition as soon as possible after the Commission's order becomes final and unappealable, which is likely to be before the end of the FPFTY.

Audubon Water Company ("AWC"): A litigation schedule has been established by which Reply Briefs will be submitted to Administrative Law Judge Katrina L. Dunderdale on or before May 14, 2024. The Administrative Law Judge will then issue a Recommended Decision, which will be reviewed by the Commission. If the Commission approves the

acquisition, PAWC intends to close on the acquisition as soon as possible after the Commission's order becomes final and unappealable, which is likely to be before the end of the FPFTY.

As I stated in my direct testimony, PAWC has claimed an acquisition adjustment pursuant to 66 Pa. C.S. §1327 for the AWC system. On February 13, 2024, PAWC submitted direct testimony demonstrating that AWC is a small, non-viable system and, therefore, PAWC is entitled to full recovery of the acquisition premium under Section 1327. The Commission can take notice of testimony submitted in a case before the Commission. I am personally familiar with and can summarize that testimony because, as I said in my Direct Testimony, I was the Director of Water Quality and Environmental Compliance for PAWC from 2015 until 2020.

That testimony demonstrates that AWC is not providing adequate, efficient, safe and reasonable service. The System currently struggles to meet periods of high demand, despite AWC purchasing supplemental water supply from PAWC. During the spring of 2023, the System's wells were barely able to meet water demand. Additional customers are projected to connect to AWC's System in the near future. Audubon estimates a 50% increase in customers (to approximately 4,412) in the next decade. With these additional customers, the System's sources of supply will not be sufficient to meet demand.

AWC did at one point have sufficient capacity to serve existing plus future demand for water. However, AWC did not continue to invest in developing new sources and maintaining existing sources. Well VFCC No. 4 was a United States Environmental Protection Agency ("EPA") approved groundwater treatment well which was abandoned. Due to elevated levels of total dissolved solids and sulfates, AWC has not been able to

operate Wells AWC No, 3, No. 5, and No 13, and they are not considered available for future operation. Wells AWC 1, AWC 2, AWC 6, AWC 9, AWC 14 and AWC 15 all have diminished capacities. Pending regulations for Perfluoroalkyl and Polyflouroalkyl Substances ("PFAS") required limited testing in the past. However, VFCC No. 1, AWC No. 1 and AWC No. 2 have tested positive for PFAS and perfluorooctane acid ("PFOA"). VFCC No. 2 and VFCC No. 3 are within the same groundwater as VFCC No. 1, therefore, PAWC estimates they will also have the same levels of PFAS and PFOA. With the implementation of the PFAS regulations, AWC will be left in an untenable position of having an inadequate source of supply of water to meet customer needs.

PAWC's testimony shows that PAWC will make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities, as required by Section 1327(a). If the acquisition is approved, PAWC plans to invest approximately $21.5 million in capital improvements in the AWC system during the first five years of ownership. This amount will fund six additional interconnections (and upgrades on the two existing interconnections) to totally integrate the existing AWC system to PAWC. This will help address the system's issues with an adequate supply of water.

In addition to its issues with supply, AWC has a well-documented history of non-compliance with regulations promulgated under Pennsylvania's Safe Drinking Water Act ("SDWA"), 35 P.S. §§721.1-721.17. A recent web search for SDWA violations in the Pennsylvania Department of Environmental Protection's ("PADEP's") Drinking Water Reporting System produced results showing a total of 957 individual violations in AWC's main system (PWSID #1460055) from 2020 through January 23, 2024, as well as a total of 130 individual violations in the Valley Forge Crossing Trailer Park system (PWSID

#1460035) over the same time period.[2] This totals 1,087 violations over approximately four-years, or the equivalent of 270 violations per year.

The violations cover a broad range of issues that are focused mostly on monitoring and reporting activities, which are some of the most basic and most important functions of a public drinking water utility. The breakdown of violations by type are summarized below:

- Failure to monitor/report routine samples for nitrate/nitrite, radiological, inorganic compounds, synthetic organic compounds and volatile organic compounds (1,027);
- Failure to issue Tier 3 Public Notifications (44);
- Failure to monitor/report for disinfection/disinfection by-product contaminants (5);
- Failure to collect weekly disinfectant residual and/or failure to monitor sufficient number of monthly disinfectant residuals (5);
- Failure to properly collect or analyze Revised Total Coliform Rule routine samples (3);
- Failure to submit Consumer Confidence Report certification by the due date (2); and
- Failure to report Revised Total Coliform Rule sample results or notify PADEP on time (1).

PADEP's Water Supply Inspection Report dated February ("February Inspection Report") cited AWC for the following violations:

- Chronic failure to conduct routine monitoring requirements at Entry Point 101 in 2023. There is no quarterly Synthetic Organic Chemical ("SOC") monitoring data, quarterly Volatile Organic Chemical ("VOC") monitoring data, and no nitrate/nitrite data recorded for the first, second, and third quarters of 2023.
- Chronic failure to conduct routine monitoring requirements at Entry Point 104 in 2023. There is no SOC monitoring data for the first, second, and third quarters of 2023. There is also no annual nitrate and nitrite data for 2021 and 2022. There was also no annual VOC monitoring for the year 2022.

[2] The AWC system consists of two water systems that are not interconnected. The main system supplies the portion of Lower Providence Township known as Audubon, and the second system supplies the Valley Forge Crossing Trailer Park (also located in Lower Providence Township).

- Failure to conduct performance monitoring for Iron, Manganese, and VOCs at Entry Point 101.

- Failure to conduct performance monitoring for Iron and Manganese at Entry Point 102.

- Failure to conduct performance monitoring for Iron and Manganese at Entry Point 104.

- Failure to conduct performance monitoring for Iron and Manganese at Entry Point 111.

- Failure to conduct performance monitoring for Iron and Manganese at Entry Point 108.

In the February Inspection Report, PADEP instructed AWC to conduct make-up monitoring for the missed samples and issue appropriate public notifications to customers on the monitoring and reporting violations. In addition, the February Inspection Report discussed some recent results that exceeded contaminant levels, as described in detail below:

- On 12/13/2023 PADEP was notified of two chloride sample exceedances and one sulfate sample exceedance.
    - The maximum contaminant levels for chloride and sulfate are 250 mg/L.
    - A chloride result of 451 mg/L was detected at Entry Point 108 in a sample collected 12/13/2023.
    - A chloride result of 356 mg/L was detected at Entry Point 109 in a sample collected 12/13/2023.
    - A sulfate result of 448 mg/L was detected at Entry Point 111 in a sample collected 12/13/2023.
- As a result of these exceedances, AWC was instructed to begin quarterly monitoring for these parameters at these locations in order to determine compliance through a calculation of locational running annual average.

A similar inspection report was issued by PADEP for the Valley Forge Crossing Trailer Park System on January 31, 2024 ("January Inspection Report"). The January Inspection Report cites AWC for the following violations:

- Failure to conduct performance monitoring for Iron and Manganese at Entry Point 103.
- Failure to conduct performance monitoring for Iron and Manganese at Entry Point 102.
- Failure to conduct performance monitoring for Iron and Manganese at Entry Point 101.
- The water system does not have an Uninterrupted System Service Plan that contains all of the required elements.

PADEP has issued two Notice of Violation ("NOV") letters to bring enforcement actions against AWC for the above-described deficiencies.

The operational deficiencies highlighted by these violations are concerning and could lead to significant adverse impacts to the health and safety of the System's customers. The failure to conduct routine quarterly and annual entry point monitoring at two well stations means that there is no way for AWC to confirm the safety of the water supplied to customers by these sources during that time period. Regular routine monitoring is required for such sources to detect any increase in contaminants in the source water and allow the water utility to notify customers and take corrective actions to eliminate or mitigate the contaminants. If the utility fails to perform the required routine monitoring, it has no idea what the levels of contaminants are and cannot take actions to protect the customers.

The failure to do the performance monitoring at the eight (8) entry points with treatment means that there is no way for AWC to confirm that the treatment units were operating properly during this time period. In other words, the water utility has installed treatment

processes on these entry points to remove contaminants prior to delivering the treated water to customers, but by not monitoring the effectiveness of the treatment it has no idea on how effectively the contaminants were removed.

Finally, the high levels of chloride and sulfate that were cited by PADEP as exceeding the Secondary Maximum Contaminant Levels ("SMCLs") pose significant risks to the AWC customers. High sulfate levels in drinking water can cause a laxative effect, particularly with infants, and can lead to diarrhea and dehydration. High chloride levels in drinking water not only impart a salty taste but, more importantly, will increase the corrosivity of the water to customer's in-house plumbing and fixtures.

PAWC's testimony shows that PAWC will make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities, as required by Section 1327(a). PAWC has a dedicated Water Quality and Environmental Compliance department with professionals staffed to ensure that these basic and important functions are performed correctly. PAWC has never been cited by PADEP for chronic failures to monitor and report. PAWC will provide AWC with dedicated staffing and focused attention on water quality, environmental compliance and prompt customer notification. This will go a long way in addressing AWC's issues with monitoring and reporting, and thereby help ensure the health and safety of AWC's customers.

Finally, the testimony introduced in the AWC acquisition proceeding on February 13, 2024 demonstrates that the proposed purchase price of $8,000,000 (including Section 1327(a) contingency) is reasonable. A comparison of AWC's purchase price per customer ("PP/C") at a purchase price of $8,000,000 yields a favorable comparison to the average PP/C for PAWC's Commission-approved Section 1102 transactions over the last

six years. AWC's PP/C of $2,941 ($8,000,000/2,941 customers = $2,720) is almost 19% less than the average Section 1102 PP/C during the last six years.

PAWC § 1102 TRANSACTIONS SINCE 2018

Date of Closing	System	Purchase Price	Customers	PP/C
7/24/2019	Turbotville Water	$635,000	330	$1,900
7/24/2019	Turbotville Wastewater	$365,000	318	$1,100
10/27/2022	Foster Township Wastewater	$3,750,000	456	$8,200
6/21/2023	Creekside Water	$171,580	78	$2,200
Average				**$3,350**

The 1327(a) contingency was carefully negotiated between two unaffiliated parties at arm's length. PAWC strongly believes the Transaction is in the public interest at a purchase price of $8,000,000. Therefore, PAWC asks the Commission to approve recovery of the difference between the $8,000,000 and the depreciated original cost under Section 1327 of the Public Utility Code.

ACQUISITIONS

Q. Please describe OCA witness Smith's objections to including any of the five above-described acquisitions in the instant rate proceeding.

A. Mr. Smith believes that an acquisition should be included in a rate case only if two events occur prior to or at the close of the record: (a) the Commission issues a final, unappealable order approving the acquisition, and (b) there is no uncertainty about whether closing will occur for other reasons. OCA Statement No. 2 at 19. He believes there is "no reasonable

indication" that any of the acquisitions described above will satisfy these two conditions by the close of the record in this proceeding.

Q. Do you agree with Mr. Smith?

A. No. The relevant cut-off date should not be when the record closes. After the record closes, any party can petition to reopen the record to introduce additional evidence. 52 Pa. Code § 5.571(a). Instead, the test should be whether the acquisition is likely to close within the FPFTY.

To give the Commission certainty that closing will occur by the end of the FPFTY, it is not necessary for the Commission to approve an acquisition by the close of the record in the base rate case. Several months can pass between the date the record closes and the date the Commission issues its order in a base rate case. During that time period, the Commission could approve an acquisition (such as the STMA settlement), and the appeal period could expire without any appeals being filed. I see no reason why the Commission should ignore those events. The Commission can certainly take official notice of its own decisions and the fact that an appeal of that decision has or has not been filed.

Similarly, the Commission's order in a base rate case should be able to take official notice of judicial decisions issued after the record closes. For example, if the Commonwealth Court would issue a decision in April 2024 affirming the Commission's decision to approve the BASA acquisition, and no appeal is filed, the Commission should be able to consider those events when making its decision in these rate proceedings.

As I stated in my Direct Testimony, it is prudent and fair for the Commission to integrate these systems into the larger PAWC system, and to address expenses associated

with the operation and maintenance of the system as soon as reasonably possible to avoid regulatory lag. Including these systems in the instant proceeding will significantly reduce regulatory lag, thereby mitigating one factor that hinders acquisitions, particularly acquisitions of municipal systems pursuant to Section 1329. Excluding these systems in the instant proceeding would be one factor that the Company considers in determining when it will file another rate case.

I see no need for Mr. Smith's second criterion – the lack of any uncertainty that the acquisition will close. It is highly unusual for an acquisition that has been approved by the Commission or an appellate court, in a final unappealable order, to fail to close. I am not aware of any recent examples of this happening, and in discovery, neither OSBA witness Higgins, nor I&E witness Okum, nor OCA witness Smith could give any examples. In this case, PAWC has introduced evidence that it intends to close quickly on each acquisition after it is approved, and the applicable appeals period has run. Mr. Smith does not question this evidence. Under these circumstances, I do not see a need for evidence of a "lack of uncertainty" about whether the transaction will close.

Q. Did I&E introduce evidence concerning the five acquisitions described above?

A. Yes. I&E witnesses Okum, Cline and Kubas all opined that none of these acquisitions should be included in this rate case. Much of their testimony was very similar. To avoid redundancy, I will first address their similar arguments. I will then discuss some of the unique points made by each I&E witness.

Witnesses Okum, Cline and Kubas all argued that it is premature to include any of the acquisitions in rates. They noted that each of these acquisitions remains in litigation

before the Commission and none of these acquisitions have closed. Due to what they characterize as "uncertainty surrounding each of these acquisitions," I&E Statement No. 1 at 28, they object to the inclusion of these acquisitions in PAWC's base rates.

As discussed above, the test should be whether the acquisition closes within the FPFTY. At the time the record closes, it is premature to determine whether it is likely that an acquisition will close. As I discussed above, an acquisition could be approved, and the pertinent Commission or court order could become final and unappealable, after the record has closed but before the Commission enters its order in this proceeding. If so, the Commission should take notice of those facts when issuing its order in the base rate case.

Q. Did I&E witness Okum offer any additional arguments as to why the acquisitions should be disallowed?

A. With respect to the BASA and Brentwood acquisitions, Ms. Okum notes that Section 1329(d)(5) states: "The selling utility's cost of service shall be incorporated into the revenue requirement of the acquiring public utility as part of the acquiring utility's next base rate case proceeding." Ms. Okum argues that the "next" base rate case is the first base rate proceeding filed after closing on an acquisition. This view differs from PAWC's interpretation of the statute, which I explained in my Direct Testimony. This statutory construction issue will be addressed in briefs.

Similarly, with respect to the Farmington, Sadsbury and AWC acquisitions, Ms. Okum contends "an acquisition should be included in the first base rate case filed after an acquisition has closed." **PAWC Exhibit ECA-3R.** I disagree. As discussed above, I believe the test should be whether the acquisition is likely to close within the FPFTY. To

give the Commission certainty that the acquisition is likely to close within the FPFTY, it is sufficient that a final, unappealable order approving the acquisition be entered before the Commission enters its order in this base rate case, Ms. Okum's position would encourage utilities to file one rate case after another in order to minimize the regulatory lag in placing acquisitions into rates.

Q. Did I&E witness Cline offer any additional objections as to why the acquisitions should be disallowed?

A. Mr. Cline contends that ratepayers would be harmed if assets that are not used and useful are included in rates. I am not suggesting that assets which are not used and useful should be included in rates. To the contrary, I am arguing that assets that are used and useful in providing service to PAWC's customers by the end of the FPFTY are properly included in rates. Denying recovery of and on such assets is unconstitutional because it compels investors to provide safe, adequate and efficient utility service to customers without compensation.

Mr. Cline demands justification for PAWC's argument that it is prudent and fair to include these acquisitions in rates. He suggests that PAWC must demonstrate that it is in the public interest to include these acquisitions in rates. It is well established that assets that are used and useful before the end of the FPFTY are properly included in rates. No special "public interest" test is necessary or warranted. PAWC included these acquisitions in this rate case because it believes they are likely to be approved before the Commission enters its order in this case, and to close before the end of the FPFTY.

Contrary to Mr. Cline's assertions, PAWC is not asking the Commission to pre-judge the acquisition proceedings in this rate case. It is simply asking the Commission, in its final order, to take official notice of the status of these five acquisition proceedings. If it does, PAWC believes, the Commission will see that each acquisition is likely to close by the end of the FPFTY.

Q. Did I&E witness Kubas offer any additional objections as to why the acquisitions should be disallowed?

A. With respect to the BASA and Brentwood systems, Mr. Kubas recommends excluding these systems from rates as a way to save money for PAWC's water customers because the Company proposes to allocate some of the revenue shortfall from these wastewater systems to water customers. I am advised by counsel that excluding the BASA and/or Brentwood systems as a means of saving money for PAWC's existing water customers would violate PAWC's rights under the Pennsylvania and Federal Constitutions against taking private property without compensation, because it would force shareholders to commit investment capital to furnish safe and reliable service to the customers of the acquired wastewater systems while denying shareholders any compensation for the use of their funds. PAWC is aware of the need to keep utility service affordable, but disagrees with the argument that this objective justifies denying shareholders a reasonable return on their investment.

Mr. Kubas also contends that his proposal should be adopted as a way of keeping PAWC to its "promise" that the BASA and Brentwood acquisitions would have no immediate impact on PAWC's existing customers. Mr. Kubas mischaracterizes PAWC's testimony as a "promise" not to increase rates for existing customers. A fair reading of

PAWC's testimony is that the acquisitions would have no impact on PAWC's existing customers until the first base rate case in which the system's assets were included, when the Commission would set just and reasonable rates. This case is the first base rate case in which the systems' assets are included. PAWC has not broken a "promise" to its existing ratepayers.

In any event, Mr. Kubas is essentially asking this Commission for an equitable remedy – to enforce a "promise." I am advised by counsel that the Commission lacks equitable powers. Moreover, the requested remedy would not be equitable. The testimony referenced by Mr. Kubas was filed long before the base rate case was filed. There is no indication that the witnesses who made those statements knowingly misrepresented what would be in the rate case filing.

Q. Please describe OSBA witness Higgins' objections to including the five above-described acquisitions in the instant base rate proceeding.

A. Mr. Higgins does not propose any adjustments pertaining to the STMA or the Farmington acquisitions, so I assume he has no objection to PAWC's rate claim with regard to those acquisitions.

With respect to the acquisitions of BASA, Brentwood and AWC, Mr. Higgins states that, if any acquisition does not close, all of the costs of the non-closing acquisition should be removed from PAWC's revenue requirement. Unlike Mr. Smith, Mr. Higgins does not require that the Commission approve the acquisition by the close of the record.

If those acquisitions do close, however, Mr. Higgins proposes adjustments to PAWC's proposed rate treatment of each acquisition. My colleague, Ms. Gress, will address these proposed adjustments.

With respect to the AWC acquisition, Mr. Higgins notes that the AWC acquisition is still before the Commission. As discussed above, the relevant test is whether the acquisition is likely to close by the end of the FPFTY. The Commission should consider the status of the AWC case on the date the Commission's order is entered to determine whether it is likely that the acquisition will close by the end of the FPFTY.

BULK CUSTOMERS OF THE YORK WASTEWATER SYSTEM

Q. Please discuss Mr. Kubas' testimony regarding the bulk customers of the wastewater system that PAWC acquired from the York City Sewer Authority (the "York Bulk Customers").

A. PAWC proposed 9.9% increases over a two-year period, resulting in an annual increase of approximately 4.45% per year to the York Bulk Customers. In her Direct Testimony, PAWC Statement No. 12 at 19, PAWC witness Heppenstall testified that the revenues from the York Bulk customers cover the variable costs of bulk treatment service and provide a meaningful contribution to the total fixed costs incurred to furnish wastewater service to retail customers in the Company's WW SSS General Operations. PAWC witness Aiton, PAWC Statement No. 3 at 66-69, explained, among other things, that these modest increases were justified because customers have competitive alternatives to receiving service from PAWC and that the flow from the York Bulk Customers benefits the treatment process. I will discuss the evidence supporting Mr. Aiton's testimony below.

Beginning at page 47 of his Direct Testimony, Mr. Kubas contends that the proposed rates for the York Bulk Customers should increase by 50%. Mr. Kubas contends that PAWC's explanations for its modest proposed rate increases should be rejected as speculative because PAWC did not introduce any evidence to prove them.

Q. Do you agree with Mr. Kubas?

A. No. PAWC has twice before demonstrated that the York Bulk Customers have competitive alternatives and that the flow from the York Bulk Customers benefits the treatment process. First, PAWC demonstrated this when it acquired the York City Sewer Authority System, Docket Nos. A-2021-3024681 *et al.* ("York Acquisition Proceeding").

Second, in PAWC's 2022 rate case, Docket Nos. R-2022-3031672 *et al.*, I&E witness Ethan Cline proposed to increase the rates of the York Bulk Customers by 50% because of the lack of competitive alternatives.[3] He subsequently withdrew that proposal, I&E Statement No. 3-SR at 65, in response to the Rebuttal Testimony of PAWC witness Bernard Grundusky.

Mr. Grundusky's testimony (along with pertinent exhibits) is attached as **PAWC Exhibit ECA-1R_CONFIDENTIAL.** Mr. Grundusky is unavailable to testify in this proceeding because he has retired from PAWC. I&E participated in PAWC's 2022 rate proceeding and in the York Acquisition Proceeding, and, in both cases, I&E had a similar opportunity as it has in this case to develop the record by direct testimony and cross-examination.

[3] OSBA witness Brian Kalcic also argued that the rates for York Bulk Customers should increase due to the lack of evidence of competitive alternatives.

In his testimony, Mr. Grundusky explained and expanded upon the evidence that was introduced in the York Acquisition Proceeding regarding the competitive alternatives available to the York Bulk Customers. He testified that the York Bulk Customers formed the York Area Regional Sewer Authority ("YARSA") to compete for the York System and to explore alternative treatment options. Exhibits to his testimony include testimony from the York Bulk Customers, as well as supporting documents, demonstrating that the York Bulk Customers were planning for competitive alternatives to bulk treatment service from PAWC. He further explained that the York Bulk Customers formed a united block. As a result, the loss of one customer would likely have resulted in the loss of six bulk customers – comprising 54% of the allocated treatment flows. The loss of this large portion of flows would have made the system uneconomic in the absence of extraordinary rate increases.

> Additionally, the bulk flow from surrounding municipalities is essential to the proper functioning of the York treatment [plant]. I am advised by the PAWC Engineering Department and PAWC Operations Department that the bulk flow from the surrounding municipalities contains additional biological oxygen demand (BOD) materials that aid in the consumption and digestion of bacteria in the flow stream.

PAWC Exhibit ECA-1R at 20.

Mr. Kubas does not introduce any evidence to demonstrate that the York Bulk Customers lack competitive alternatives; he simply asserts that PAWC did not demonstrate that these customers in fact have competitive alternatives. This argument should be rejected based on the evidence provided in two previous cases.

At page 52 of his Direct Testimony, Mr. Kubas asserts that PAWC's other customers might be better off if the York Bulk Customers left the system because, after a bulk customer leaves, there would be less need for plant upgrades and/or expansions. I&E

witness Ethan Cline made the same argument in PAWC's 2022 rate case, which Mr. Grundusky rebutted as follows at page 21 (note omitted):

> Mr. Cline's statements ignore the realities of the York System at the time of negotiation of the Bulk Agreements and now (if the agreements are terminated because of a modification by the Commission). As stated above, the loss of one bulk customer by PAWC would likely result in the loss of six bulk customers – comprising 54% of the allocated treatment flows. This result would not be in anyone's long-term interests. Moreover, having the Bulk Customers leave the York System for wastewater treatment service elsewhere would be contrary to the Commission's policy favoring regionalization and consolidation.

Mr. Kubas contends that a customer's sophistication is irrelevant for establishing a rate and that it is irrelevant that the York Bulk Customers are located close together. Mr. Kubas should not have considered these points in isolation; these points are closely related to PAWC's argument that the York Bulk Customers have competitive alternatives to treatment service from PAWC. As Mr. Grundusky testified in 2022, at page 8, the York Bulk Customers:

> . . . are contiguous – which means that they could enter into (and have in some circumstances already entered into) intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment capacity. The intermunicipal agreements could provide for the reconciliation of flows, with treatment services being provided by surrounding municipalities. The Bulk customers are sophisticated, knowledgeable and experienced; therefore, they could have figured out how to get flows to alternative treatment providers.

Mr. Kubas further claims that PAWC's proposed rates should be compared to the customers' cost of using an alternative provider, so that the York Bulk Customers make the maximum contribution to fixed costs. This argument is similar to arguments offered by OSBA's witness in PAWC's 2022 rate proceeding. Mr. Grundusky, at page 18, explained that the Commission has rejected that argument in the past:

> I am advised by counsel that the Commission has long allowed discounts in other regulated industries where there is competition, a need for load retention, or a need for economic development. Specifically, the Commission has permitted discounting by natural gas distribution companies and steam distribution companies, if the standards identified by Mr. Kalcic have been satisfied. So long as the variable costs of providing service to the customer are covered and the customer makes a contribution to shared fixed costs, rate discounting is permitted in order to attract or maintain the customer. The theory is that it is better, and to the benefit of other customers, to have the customer making some contribution toward fixed costs than not to have the customer at all.[4]

Mr. Grundusky further testified at page 21:

> I have learned that "maximizing the revenue that could be received from each customer" is not always realistic or desirable. That was particularly true here, where the municipalities insisted on negotiating a standardized agreement that treated each of them the same. They acted as a block and were represented by the same counsel in negotiations. PAWC simply could not maximize the revenue from every individual customer when negotiating one form of contract and a standardized rate that applied to several bulk customers.

The arguments presented by Mr. Grundusky hold true today and I adopt them as my testimony in this proceeding. In addition, I attach as **PAWC Exhibit ECA-2R** copies of affidavits from the York Bulk Customers verifying that they continue to have competitive alternatives to receiving service from PAWC. For all of the above reasons, Mr. Kubas's proposed adjustment to the rates for the York Bulk Customers should be rejected.

[4] "Mr. Kalcic stated that a discount agreement is appropriate only where the bulk customer has a viable economic alternative throughout the term of the agreement to taking service from the system, the discount is the minimum necessary to maintain the customer, and the rate includes an escalation provision such as one based on a Consumer Price Index." **PAWC Exhibit ECA-1** at 18. The agreements between PAWC and the York Bulk Customers satisfied these standards: "[T]he Bulk Customers had competitive options for bulk service (noting that they negotiated as a block and demanded a uniform rate), the discount was the minimum necessary to maintain the Bulk Customers on the York System (as demonstrated by the extensive arm's length negotiations and PAWC's ability to negotiate a rate higher than some of the Bulk Customers were previously paying), and the Bulk Agreements provide for a CPI escalator (as well as a change in law rate increase provision)." *Id*. at 19.

CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony as new facts and issues arise during the course of this proceeding.

AFFIDAVIT IN SUPPORT OF BULK AGREEMENT WITH PENNSYLVANIA-AMERICAN WATER COMPANY

I, Marcy Krum-Tinsley, on behalf of Spring Garden Township (the "Township"), as the Manager/Secretary/Treasurer of the Township, do hereby solemnly affirm and declare the following:

I am making this Affidavit in support of the current Wastewater Treatment & Conveyance Agreement between the Township and Pennsylvania-American Water Company ("PAWC") dated May 16, 2022 (the "Bulk Agreement").

The Township, along with Manchester Township, West Manchester Township, North York Borough and York Township (the "Municipalities") are currently connected to the wastewater collection, transmission, treatment and disposal system previously owned and operated by the York City Sewer Authority and now owned and operated by PAWC (the "York System").

In 2020, the Municipalities joined together to form the York Area Regional Sewer Authority ("YARSA") for the purpose, among other things, to compete with PAWC for the purchase of the York System and explore alternative wastewater treatment options for their customers, including potential alternative wastewater treatment providers.

Prior to PAWC's acquisition of the York System, the Municipalities' alternatives always included entering into intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment plants based on their contiguous geographic locations. To that end, subject to design and permitting, the Municipalities' alternatives still include (among others):

- Treatment for Manchester Township's wastewater flow by the Dover Township wastewater treatment plant;
- Treatment for York Township's wastewater flow by the Springettsbury wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Dover Township wastewater treatment plant;
- Rerouting nearly 50% of Manchester Township's wastewater flow from the York System to Springettsbury by installing approximately 600 feet of gravity main;
- The construction of a treatment plant to service Bair Station in West Manchester Township and additional capacity to reverse flows from the York City wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Jackson Township wastewater treatment plant;
- Utilization of land in the possession of the Township to construct a wastewater treatment plant; and
- Construction of an interceptor pump station in York Township to redirect nearly 95% of York Township's flows from the York City wastewater treatment plant to the Springettsbury wastewater treatment plant.

As part of the acquisition of the York System by PAWC, the Municipalities, through YARSA, were able to negotiate extensively with PAWC in order to establish definitive rates, terms and conditions for treatment for their constituents, which currently represent approximately 54% of treatment flows through the York System.

The standard bulk agreements developed by the Municipalities and PAWC, including the Township's Bulk Agreement, contain a Most Favored Nations clause that essentially provides that no one of the bulk customers would receive a better deal from PAWC than another, and a breach of that covenant would allow the bulk customer to leave the York System and pursue competitive alternatives.

Further, as a result of its extensive arms-length negotiations with PAWC, the Township believes the Consumer Price Index escalator and Change of Law Surcharge, as defined in the Bulk Agreement, are fair, resulting in reasonable increases of rates over time, as agreed to in the Bulk Agreement. The Municipalities, including the Township, recognized that paying higher rates over time was worthwhile for a public utility provider with experience and a track record of good experience – something the Municipalities were not satisfied with from their previous provider. Further, the goal of negotiated rates is to prevent the unnecessary initiation of and investment of funds in alternative planning processes where the alternative is prospectively viable.

If the Pennsylvania Public Utility Commission (the "PUC") modifies the Bulk Agreement or PAWC indicates that it is no longer willing to abide by the terms and conditions of the Bulk Agreement, the Township is prepared to utilize its contractual rights under the Bulk Agreement, and the Township, together with the Municipalities, will explore the alternative treatment options summarized above, including, at a minimum, materially reducing the Municipalities' flow into the York System. One of the primary goals of negotiated contractual rates was to prevent the unnecessary initiation of and investment of funds by the Municipalities in alternative planning and design processes where alternatives are viable as summarized above. The modification of the Bulk Agreement by the PUC will provoke the Municipalities to initiate and invest funds to move as much wastewater flow as possible away from the York System.

I verify that the statements made in this affidavit are true and correct to the best of my personal knowledge or information and belief. I understand that false statements herein are made subject to the penalties of 18 Ca.C.S. relating to unsworn falsification to authorities.

Dated: February 16, 2024

AFFIDAVIT IN SUPPORT OF BULK AGREEMENT WITH PENNSYLVANIA-AMERICAN WATER COMPANY

I, Timothy James on behalf of Manchester Township (the "Township"), as the Manager/Secretary/Treasurer of the Township, do hereby solemnly affirm and declare the following:

I am making this Affidavit in support of the current Wastewater Treatment & Conveyance Agreement between the Township and Pennsylvania-American Water Company ("PAWC") dated May 16, 2022 (the "Bulk Agreement").

The Township, along with West Manchester Township, York Township, North York Borough and Spring Garden Township (the "Municipalities") are currently connected to the wastewater collection, transmission, treatment and disposal system previously owned and operated by the York City Sewer Authority and now owned and operated by PAWC (the "York System").

In 2020, the Municipalities joined together to form the York Area Regional Sewer Authority ("YARSA") for the purpose, among other things, to compete with PAWC for the purchase of the York System and explore alternative wastewater treatment options for their customers, including potential alternative wastewater treatment providers.

Prior to PAWC's acquisition of the York System, the Municipalities' alternatives always included entering into intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment plants based on their contiguous geographic locations. To that end, subject to design and permitting, the Municipalities' alternatives still include (among others):

- Treatment for the Township's wastewater flow by the Dover Township wastewater treatment plant;
- Treatment for York Township's wastewater flow by the Springettsbury wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Dover Township wastewater treatment plant;
- Rerouting nearly 50% of the Township's wastewater flow from the York System to Springettsbury by installing approximately 600 feet of gravity main;
- The construction of a treatment plant to service Bair Station in West Manchester Township and additional capacity to reverse flows from the York City wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Jackson Township wastewater treatment plant;
- Utilization of land in the possession of Spring Garden Township to construct a wastewater treatment plant; and
- Construction of an interceptor pump station in York Township to redirect nearly 95% of York Township's flows from the York City wastewater treatment plant to the Springettsbury wastewater treatment plant.

As part of the acquisition of the York System by PAWC, the Municipalities, through YARSA, were able to negotiate extensively with PAWC in order to establish definitive rates, terms and conditions for treatment for their constituents, which currently represent approximately 54% of treatment flows through the York System.

The standard bulk agreements developed by the Municipalities and PAWC, including the Township's Bulk Agreement, contain a Most Favored Nations clause that essentially provides that no one of the bulk customers would receive a better deal from PAWC than another, and a breach of that covenant would allow the bulk customer to leave the York System and pursue competitive alternatives.

Further, as a result of its extensive arms-length negotiations with PAWC, the Township believes the Consumer Price Index escalator and Change of Law Surcharge, as defined in the Bulk Agreement, are fair, resulting in reasonable increases of rates over time, as agreed to in the Bulk Agreement. The Municipalities, including the Township, recognized that paying higher rates over time was worthwhile for a public utility provider with experience and a track record of good experience – something the Municipalities were not satisfied with from their previous provider. Further, the goal of negotiated rates is to prevent the unnecessary initiation of and investment of funds in alternative planning processes where the alternative is prospectively viable.

If the Pennsylvania Public Utility Commission (the "PUC") modifies the Bulk Agreement or PAWC indicates that it is no longer willing to abide by the terms and conditions of the Bulk Agreement, the Township is prepared to utilize its contractual rights under the Bulk Agreement, and the Township, together with the Municipalities, will explore the alternative treatment options summarized above, including, at a minimum, materially reducing the Municipalities' flow into the York System. One of the primary goals of negotiated contractual rates was to prevent the unnecessary initiation of and investment of funds by the Municipalities in alternative planning and design processes where alternatives are viable as summarized above. The modification of the Bulk Agreement by the PUC will provoke the Municipalities to initiate and invest funds to move as much wastewater flow as possible away from the York System.

Dated: February 16, 2024

AFFIDAVIT IN SUPPORT OF BULK AGREEMENT WITH PENNSYLVANIA-AMERICAN WATER COMPANY

I, Kelly K. Kelch, on behalf of West Manchester Township (the "Township"), as the Manager of the Township, do hereby solemnly affirm and declare the following:

I am making this Affidavit in support of the current Wastewater Treatment & Conveyance Agreement between the Township and Pennsylvania-American Water Company ("PAWC") dated May 16, 2022 (the "Bulk Agreement").

The Township, along with Manchester Township, York Township, North York Borough and Spring Garden Township (the "Municipalities") are currently connected to the wastewater collection, transmission, treatment and disposal system previously owned and operated by the York City Sewer Authority and now owned and operated by PAWC (the "York System").

In 2020, the Municipalities joined together to form the York Area Regional Sewer Authority ("YARSA") for the purpose, among other things, to compete with PAWC for the purchase of the York System and explore alternative wastewater treatment options for their customers, including potential alternative wastewater treatment providers.

Prior to PAWC's acquisition of the York System, the Municipalities' alternatives always included entering into intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment plants based on their contiguous geographic locations. To that end, subject to design and permitting, the Municipalities' alternatives still include (among others):

- Treatment for Manchester Township's wastewater flow by the Dover Township wastewater treatment plant;
- Treatment for York Township's wastewater flow by the Springettsbury wastewater treatment plant;
- Treatment for the Township's wastewater by Dover Township wastewater treatment plant;
- Rerouting nearly 50% of Manchester Township's wastewater flow from the York System to Springettsbury by installing approximately 600 feet of gravity main;
- The construction of a treatment plant to service Bair Station in the Township and additional capacity to reverse flows from the York City wastewater treatment plant;
- Treatment for the Township's wastewater by Jackson Township wastewater treatment plant;
- Utilization of land in the possession of Spring Garden Township to construct a wastewater treatment plant; and
- Construction of an interceptor pump station in York Township to redirect nearly 95% of York Township's flows from the York City wastewater treatment plant to the Springettsbury wastewater treatment plant.

As part of the acquisition of the York System by PAWC, the Municipalities, through YARSA, were able to negotiate extensively with PAWC in order to establish definitive rates, terms and

conditions for treatment for their constituents, which currently represent approximately 54% of treatment flows through the York System.

The standard bulk agreements developed by the Municipalities and PAWC, including the Township's Bulk Agreement, contain a Most Favored Nations clause that essentially provides that no one of the bulk customers would receive a better deal from PAWC than another, and a breach of that covenant would allow the bulk customer to leave the York System and pursue competitive alternatives.

Further, as a result of its extensive arms-length negotiations with PAWC, the Township believes the Consumer Price Index escalator and Change of Law Surcharge, as defined in the Bulk Agreement, are fair, resulting in reasonable increases of rates over time, as agreed to in the Bulk Agreement. The Municipalities, including the Township, recognized that paying higher rates over time was worthwhile for a public utility provider with experience and a track record of good experience – something the Municipalities were not satisfied with from their previous provider. Further, the goal of negotiated rates is to prevent the unnecessary initiation of and investment of funds in alternative planning processes where the alternative is prospectively viable.

If the Pennsylvania Public Utility Commission (the "PUC") modifies the Bulk Agreement or PAWC indicates that it is no longer willing to abide by the terms and conditions of the Bulk Agreement, the Township is prepared to utilize its contractual rights under the Bulk Agreement, and the Township, together with the Municipalities, will explore the alternative treatment options summarized above, including, at a minimum, materially reducing the Municipalities' flow into the York System. One of the primary goals of negotiated contractual rates was to prevent the unnecessary initiation of and investment of funds by the Municipalities in alternative planning and design processes where alternatives are viable as summarized above. The modification of the Bulk Agreement by the PUC will provoke the Municipalities to initiate and invest funds to move as much wastewater flow as possible away from the York System.

I verify that the statements made in this affidavit are true and correct to the best of my personal knowledge or information and belief. I understand that false statements herein are made subject to the penalties of 18 Ca.C.S. relating to unsworn falsification to authorities.

AFFIDAVIT IN SUPPORT OF BULK AGREEMENT WITH PENNSYLVANIA-AMERICAN WATER COMPANY

I, Gary Milbrand, P.E. on behalf of York Township (the "Township"), as the Manager/Secretary of the Township, do hereby solemnly affirm and declare the following:

I am making this Affidavit in support of the current Wastewater Treatment & Conveyance Agreement between the Township and Pennsylvania-American Water Company ("PAWC") dated May 16, 2022 (the "Bulk Agreement").

The Township, along with Manchester Township, West Manchester Township, North York Borough and Spring Garden Township (the "Municipalities") are currently connected to the wastewater collection, transmission, treatment and disposal system previously owned and operated by the York City Sewer Authority and now owned and operated by PAWC (the "York System").

In 2020, the Municipalities joined together to form the York Area Regional Sewer Authority ("YARSA") for the purpose, among other things, to compete with PAWC for the purchase of the York System and explore alternative wastewater treatment options for their customers, including potential alternative wastewater treatment providers.

Prior to PAWC's acquisition of the York System, the Municipalities' alternatives always included entering into intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment plants based on their contiguous geographic locations. To that end, subject to design and permitting, the Municipalities' alternatives still include (among others):

- Treatment for Manchester Township's wastewater flow by the Dover Township wastewater treatment plant;
- Treatment for the Township's wastewater flow by the Springettsbury wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Dover Township wastewater treatment plant;
- Rerouting nearly 50% of Manchester Township's wastewater flow from the York System to Springettsbury by installing approximately 600 feet of gravity main;
- The construction of a treatment plant to service Bair Station in West Manchester Township and additional capacity to reverse flows from the York City wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Jackson Township wastewater treatment plant;
- Utilization of land in the possession of Spring Garden Township to construct a wastewater treatment plant; and
- Construction of an interceptor pump station in the Township to redirect nearly 95% of the Township's flows from the York City wastewater treatment plant to the Springettsbury wastewater treatment plant.

As part of the acquisition of the York System by PAWC, the Municipalities, through YARSA, were able to negotiate extensively with PAWC in order to establish definitive rates, terms and conditions for treatment for their constituents, which currently represent approximately 54% of treatment flows through the York System.

The standard bulk agreements developed by the Municipalities and PAWC, including the Township's Bulk Agreement, contain a Most Favored Nations clause that essentially provides that no one of the bulk customers would receive a better deal from PAWC than another, and a breach of that covenant would allow the bulk customer to leave the York System and pursue competitive alternatives.

Further, as a result of its extensive arms-length negotiations with PAWC, the Township believes the Consumer Price Index escalator and Change of Law Surcharge, as defined in the Bulk Agreement, are fair, resulting in reasonable increases of rates over time, as agreed to in the Bulk Agreement. The Municipalities, including the Township, recognized that paying higher rates over time was worthwhile for a public utility provider with experience and a track record of good experience – something the Municipalities were not satisfied with from their previous provider. Further, the goal of negotiated rates is to prevent the unnecessary initiation of and investment of funds in alternative planning processes where the alternative is prospectively viable.

If the Pennsylvania Public Utility Commission (the "PUC") modifies the Bulk Agreement or PAWC indicates that it is no longer willing to abide by the terms and conditions of the Bulk Agreement, the Township is prepared to utilize its contractual rights under the Bulk Agreement, and the Township, together with the Municipalities, will explore the alternative treatment options summarized above, including, at a minimum, materially reducing the Municipalities' flow into the York System. One of the primary goals of negotiated contractual rates was to prevent the unnecessary initiation of and investment of funds by the Municipalities in alternative planning and design processes where alternatives are viable as summarized above. The modification of the Bulk Agreement by the PUC will provoke the Municipalities to initiate and invest funds to move as much wastewater flow as possible away from the York System.

I verify that the statements made in this affidavit are true and correct to the best of my personal knowledge or information and belief. I understand that false statements herein are made subject to the penalties of 18 Ca.C.S. relating to unsworn falsification to authorities.

AFFIDAVIT IN SUPPORT OF BULK AGREEMENT WITH PENNSYLVANIA-AMERICAN WATER COMPANY

I, Dr. David W. Bolton, on behalf of North York Borough (the "Borough"), as the Borough Manager of the Borough, do hereby solemnly affirm and declare the following:

I am making this Affidavit in support of the current Wastewater Treatment & Conveyance Agreement between the Borough and Pennsylvania-American Water Company ("PAWC") dated May 16, 2022 (the "Bulk Agreement").

The Borough, along with Manchester Township, West Manchester Township, Spring Garden Township and York Township (the "Municipalities") are currently connected to the wastewater collection, transmission, treatment and disposal system previously owned and operated by the York City Sewer Authority and now owned and operated by PAWC (the "York System").

In 2020, the Municipalities joined together to form the York Area Regional Sewer Authority ("YARSA") for the purpose, among other things, to compete with PAWC for the purchase of the York System and explore alternative wastewater treatment options for their customers, including potential alternative wastewater treatment providers.

Prior to PAWC's acquisition of the York System, the Municipalities' alternatives always included entering into intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment plants based on their contiguous geographic locations. To that end, subject to design and permitting, the Municipalities' alternatives still include (among others):

- Treatment for Manchester Township's wastewater flow by the Dover Township wastewater treatment plant;
- Treatment for York Township's wastewater flow by the Springettsbury wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Dover Township wastewater treatment plant;
- Rerouting nearly 50% of Manchester Township's wastewater flow from the York System to Springettsbury by installing approximately 600 feet of gravity main;
- The construction of a treatment plant to service Bair Station in West Manchester Township and additional capacity to reverse flows from the York City wastewater treatment plant;
- Treatment for West Manchester Township's wastewater by Jackson Township wastewater treatment plant;
- Utilization of land in the possession of Spring Garden Township to construct a wastewater treatment plant; and
- Construction of an interceptor pump station in York Township to redirect nearly 95% of York Township's flows from the York City wastewater treatment plant to the Springettsbury wastewater treatment plant.

As part of the acquisition of the York System by PAWC, the Municipalities, through YARSA, were able to negotiate extensively with PAWC in order to establish definitive rates, terms and conditions for treatment for their constituents, which currently represent approximately 54% of treatment flows through the York System.

The standard bulk agreements developed by the Municipalities and PAWC, including the Borough's Bulk Agreement, contain a Most Favored Nations clause that essentially provides that no one of the bulk customers would receive a better deal from PAWC than another, and a breach of that covenant would allow the bulk customer to leave the York System and pursue competitive alternatives.

Further, as a result of its extensive arms-length negotiations with PAWC, the Borough believes the Consumer Price Index escalator and Change of Law Surcharge, as defined in the Bulk Agreement, are fair, resulting in reasonable increases of rates over time, as agreed to in the Bulk Agreement. The Municipalities, including the Borough, recognized that paying higher rates over time was worthwhile for a public utility provider with experience and a track record of good experience – something the Municipalities were not satisfied with from their previous provider. Further, the goal of negotiated rates is to prevent the unnecessary initiation of and investment of funds in alternative planning processes where the alternative is prospectively viable.

If the Pennsylvania Public Utility Commission (the "PUC") modifies the Bulk Agreement or PAWC indicates that it is no longer willing to abide by the terms and conditions of the Bulk Agreement, the Borough is prepared to utilize its contractual rights under the Bulk Agreement, and the Borough, together with the Municipalities, will explore the alternative treatment options summarized above, including, at a minimum, materially reducing the Municipalities' flow into the York System. One of the primary goals of negotiated contractual rates was to prevent the unnecessary initiation of and investment of funds by the Municipalities in alternative planning and design processes where alternatives are viable as summarized above. The modification of the Bulk Agreement by the PUC will provoke the Municipalities to initiate and invest funds to move as much wastewater flow as possible away from the York System.

I verify that the statements made in this affidavit are true and correct to the best of my personal knowledge or information and belief. I understand that false statements herein are made subject to the penalties of 18 Ca.C.S. relating to unsworn falsification to authorities.

Docket Nos. R-2023-3043189 and R-2023-3043190

Responses of the Bureau of Investigation and Enforcement to the Interrogatories of Pennsylvania-American Water Company – Set III
Witness: Vanessa Okum

PAWC-I&E-III-2 Reference I&E Statement No. 1, pp. 6-7, regarding the acquisitions of Audubon Water Company, the Sadsbury Township Municipal Authority wastewater system, and the Farmington Township's water and wastewater systems:

a. Would Ms. Okum agree that an acquisition should be included in rates if the Commission enters a final, unappealable order approving that acquisition before the Commission enters its order in the base rate case?

b. Is Ms. Okum aware of any proposed acquisitions that were approved in a final, unappealable Commission or Court Order, but did not close? If so, please identify those acquisitions.

Response:

a. No. An acquisition should only be included in a base rate case after it has been finalized. In other words, an acquisition should be included in the first base rate case filed after an acquisition has closed.

b. Ms. Okum does not know for certain whether there have been such acquisitions.

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF MELISSA CIULLO

Q. What is your name and business address?

A. My name is Melissa Ciullo. My business address is 1 Water Street, Camden New Jersey 08102.

Q. By whom are you employed, and in what capacity?

A. I am employed by American Water Works Service Company, Inc. as the Vice President of Tax. I am responsible for management and oversight of the tax function for American Water Works, Inc. ("AWWC"), and its consolidated subsidiaries, including Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. Please summarize your educational background and professional experience.

A. I graduated from Stockton College in 2001 with a Bachelor of Science Degree in Business and a concentration in Accounting. I have a Master of Business Administration Degree in Accounting and International Business from Rutgers University - Camden. I am a Certified Public Accountant in the State of New Jersey. I have 20 years of experience as a tax and accounting professional, including serving utilities with regulated operations in multiple states. For the 12 years before my employment with American Water, I held various positions with progressing responsibilities within the tax departments of utility holding companies Exelon Corporation and PEPCO Holdings Inc. Prior to these roles, I was employed by the international accounting firm KPMG.

Q. Have you previously testified before any regulatory agencies?

A. I previously provided testimony to the Pennsylvania Public Utility Commission, the Hawaii Public Utilities Commission, the Indiana Public Utility Commission, the Missouri Public Service Commission, and the West Virginia Public Service Commission.

Q. What is the purpose of your testimony?

A. My testimony addresses (1) the Company's computation of income tax expense in compliance with Act 40 of 2016 ("Act 40"), which added Section 1301.1 to the Pennsylvania Public Utility Code, (2) a change in Pennsylvania's corporate tax rate enacted in July 2022, and (3) the Corporate Alternative Minimum Tax ("CAMT") adopted as part of the Inflation Reduction Act ("IRA"), which was enacted in August 2022.

Computation of Income Taxes Consistent With Act 40

Q. What changes were made by Act 40?

A. Act 40 became law on June 12, 2016, and became effective on August 11, 2016. Section 1301.1(a) specifies how the Commission is to compute income tax expense for ratemaking purposes. In addition, Section 1301.1(b) states how any incremental internally generated funds produced by the application of Section 1301.1(a) should be used by an affected utility pending the December 31, 2025 "sunset" of Section 1301.1(b).

Q. What does Section 1301.1 direct the Commission to do in calculating income tax expenses for ratemaking purposes?

A. In summary, Section 1301.1(a) provides that current and deferred income taxes of a Pennsylvania utility are to be calculated for ratemaking purposes based only on the income, deductions, and credits of the utility itself. Therefore, the Commission may not calculate a utility's current and deferred income taxes for ratemaking purposes by taking into account

income, deductions (including taxable losses), or credits of the utility's parent or affiliated companies with which it joins in filing a consolidated Federal income tax return. This is generally referred to as a "stand-alone" computation of income tax expense because it reflects income tax expense of the utility "standing alone" and without regard to the taxable income, deductions, or credits of other companies in the same consolidated group.

Q. How does Section 1301.1(a) change prior Commission practice?

A. Section 1301.1(a) terminates the practice of making a "consolidated tax adjustment" ("CTA") when calculating a utility's Federal income taxes for ratemaking purposes in Pennsylvania. As directed by prior decisions of Pennsylvania appellate courts,[1] the Commission, until Act 40 became effective, was required to calculate CTAs employing the "Modified Effective Tax Rate Method," which the Commission described as follows:

> [U]nder the Modified Effective Tax Rate Method, which was approved under *Barasch II, supra*, the consolidated tax savings generated by the non-regulated companies of a corporate group are allocated to the regulated and non-regulated members of the group having positive taxable incomes.[2]

As calculated under the Modified Effective Tax Rate Method, a CTA captured a portion of the tax benefits of deductions – including taxable losses – of unregulated affiliates of public utilities and gave those benefits to the utilities' customers (as lower income tax expense than the utilities would have on a "stand-alone" basis), even though the utilities' customers did not pay the expenses that gave rise to those tax benefits. With the enactment of Act 40, Pennsylvania joined the vast majority of other jurisdictions, including the Federal Energy Regulatory Commission, that do not make CTAs for ratemaking purposes.

---

[1] *Barasch v. Pa. P.U.C.*, 493 A.2d 653 (Pa. 1985) ("*Barasch I*"); *Barasch v. Pa. Pub. Util. Comm'n*, 548 A.2d 1310 (Pa. Commw. Ct. 1988) ("*Barasch II*").

[2] *Pa. Pub. Util. Comm'n v. Philadelphia Suburban Water Co*., Docket No. R-00016750, *et al.*, 2002 Pa PUC LEXIS 55, *90-91 (July 18, 2002).

Q. What does Section 1301.1(b) provide?

A. Section 1301.1(b) states as follows:

> If a differential accrues to a public utility resulting from applying the ratemaking methods employed by the commission prior to the effective date of subsection (a) for ratemaking purposes, the differential shall be used as follows:
>
> (1) fifty percent to support reliability or infrastructure related to the rate-base eligible capital investment as determined by the commission; and
>
> (2) fifty percent for general corporate purposes.

As I previously noted, Section 1301.1(c)(1) provides that Section 1301.1(b) will no longer apply after December 31, 2025.

Q. Have you calculated the "differential" in income taxes referenced in Section 1301.1(b)?

A. Yes, the confidential response to Filing Requirement (FR) IV.14 sets forth the computation of a CTA using the Modified Effective Tax Rate Method and data for tax years 2017 through 2021, which are the most recent five years for which tax returns have been filed. The second page of the calculation shows the "differential" in an amount of approximately $2.3 million corresponding to the CTA calculated in the manner I described above. In addition, PAWC witness Ashley E. Everette (PAWC Statement No. 1) addresses the Company's investment of 50% of the differential in a manner that complies with Section 1301.1(b)(1).

Pennsylvania Corporate Tax Rate Change

Q. Please explain the Pennsylvania Corporate Tax Rate Change.

A. On July 8, 2022, House Bill ("H.B.") 1342 was signed into law in Pennsylvania, which incrementally reduces the Commonwealth's corporate net income tax ("CNIT") rate from

9.99% to 4.99% over a period of nine years. The rate change reduction became effective for tax years beginning in 2023, reducing the rate to 8.99%. The CNIT rate will continue to be reduced each year through 2031, when the CNIT rate will be set at 4.99%.

Q. Does the Company's proposed revenue requirement reflect the changes in the CNIT rate determined by H.B. 1342?

A. Yes. As shown in Exhibit No. 3-A, the Company's proposed revenue requirement is calculated using the 7.99% CNIT rate that will be in effect at the end of the FPFTY.

Q. Has the Company remeasured its Accumulated Deferred Income Tax ("ADIT") to account for the rate change?

A. Yes, the Company estimated a remeasurement of the ADIT in the 3rd Quarter of 2022. The ADIT balance will be remeasured annually to account for the reductions in the Company's CNIT rate through 2031.

Q. What is the reason for the annual remeasurement?

A. According to ASU 740, Accounting for Income Taxes, ADIT must be reported on the balance sheet at the rate at which they are expected to settle with the taxing authority. In the case of the declining state tax rate, it is difficult to estimate precisely at which rate the accumulated deferred taxes will settle. Therefore, each year, the Company will remeasure the deferred taxes based on available information at the time of remeasurement.

Q. How much did the Company's Pennsylvania ADIT change as a result of the CNIT rate change?

A. At the time of the remeasurement, the state ADIT was reduced by $159M, and a corresponding regulatory liability was created. These amounts will continue to change (increase or decrease) each year depending on the timing of the settlement of the deferred

income taxes. The excess accumulated ADIT ("EADIT") will not be finalized until the final CNIT rate is set at 4.99% in 2031.

Q. How do you propose to return the Pennsylvania EADIT to customers?

A. The Company proposes to calculate the EADIT for rate-making purposes after each CNIT rate change by multiplying the normalized gross temporary difference balance at the end of the year before the rate change by the incremental change in the tax rate (net of the federal effect of state taxes) for the next year. The resulting EADIT will be amortized over 20 years as an unprotected EADIT, consistent with the treatment of unprotected Federal EADIT. This calculation will be updated each year to reflect changes in the CNIT rate and layered into the EADIT balance which will be returned to customers. See below for an illustrated example.

Year	Tax Rate	Incremental Rate Change	Incremental Rate Change (Net of Federal)	Gross Temporary Difference Balance*	PA EADIT	Amortization - 20 years					
						Year 1	Year 2	Year 3	...Year 20	Year 21	Year 22
Year 0	9.99%			20,000,000							
Year 1	8.99%	1.00%	0.79%	21,000,000	165,900	8,295	8,295	8,295	8,295		
Year 2	8.49%	0.50%	0.40%	21,500,000	87,075		4,354	4,354	4,354	4,354	
Year 3	7.99%	0.50%	0.40%	24,000,000	94,800			4,740	4,740	4,740	4,740
Subtotal						8,295	12,649	17,389	17,389	9,094	4,740

* For Demonstration Purposes Only the GTD continues to increase at a rate quicker than GTD is reduced. The actual direction of movement will depend on each year's activity.

Additionally, as a result of the CNIT rate change, the regulatory asset related to the PA Flow-through tax depreciation will also be remeasured to the reduced tax rate.

Q. How much Pennsylvania EADIT is included in the rate case to be returned to customers?

A. The reductions in the CNIT rate from 9.99% in 2023 to 7.99% at the end of the fully projected future test year ending June 30, 2025 results in Pennsylvania EADIT in the amount of $28,363,055. As discussed earlier in my testimony, the Company proposes to

amortize this amount over 20 years resulting in an annual bill credit of $1,418,153 that will be returned to customers.

Corporate Alternative Minimum Tax

Q. How does the enactment of the IRA impact the Company?

A. The IRA implemented a new CAMT beginning in 2023 that imposes a 15% tax on adjusted financial statement income ("AFSI"), for which applicable corporations will be required to pay the greater of the 15% of adjusted financial statement income or their calculated regular federal tax liability. Based on the current interim Internal Revenue Service guidance and forecasted projections, AWWC and its subsidiaries, including PAWC, will be subject to CAMT beginning with tax year 2024.

Q. Is AWWC an applicable corporation? If so, how was that determined?

A. Beginning with tax year 2024, AWWC is expected to be considered an applicable corporation. AWWC meets the AFSI test, which states that if a corporation's average annual AFSI exceeds $1 billion over the preceding three-year period, then the corporation and its subsidiaries are applicable corporations.

Q. For CAMT purposes, how is AFSI determined?

A. The starting point to calculate AFSI is the net income or loss per the financial statements. The financial statement net income or loss is then adjusted for federal income taxes, book and tax depreciation, pension, and other post-employment benefits. As a result, for purposes of determining AFSI or loss, federal income taxes, accelerated tax depreciation, pension, and other post-employment benefits are exactly the same with respect to the regular federal income tax liability calculation.

Q. Why does AWWC's and PAWC's CAMT exceed the regular tax liability?

A. Under tax law, certain expenditures capitalized for financial statement purposes qualify for accelerated tax deductions, such as tax repairs. These accelerated tax deductions, which lower regular tax, are not included in the AFSI calculation for determining the CAMT liability. Therefore, the regular tax is below the CAMT tax liability.

Q. How is PAWC expected to account for the CAMT in its financial statements?

A. For income tax accounting purposes, a current income tax liability and current income tax expense will be recorded for the CAMT liability but will be equally offset by recording a deferred tax asset and a reduction to deferred income tax expense to reflect the CAMT credit carryforward. As a result, there is no net incremental income tax expense associated with the CAMT; however, a deferred tax asset is established for the minimum tax credit carryforward. Corporations are entitled to a tax credit equal to the amount by which the minimum tax liability exceeds the regular tax liability. This amount can be carried forward indefinitely and used in future years when the regular tax liability exceeds the CAMT liability.

Q. If PAWC is below the $1 billion threshold, why is PAWC subject to CAMT?

A. PAWC is a subsidiary of AWWC. Strictly for purposes of determining if AWWC exceeds the $1 billion threshold in average profits under the AFSI test, AWWC must include all of its subsidiaries, including PAWC, because AWWC is considered a "single employer group" under the applicable tax rules. As previously stated, the CAMT applies to "applicable corporations." If a "single employer group," in the aggregate, exceeds the $1 billion profits threshold, each corporation that is part of that "single employer group" is considered an "applicable corporation" and separately subject to CAMT. In addition, the

applicable tax rules further support recording CAMT at the operating companies. That is illustrated by the fact that if a subsidiary ceases to be a member of an affiliated group of corporations, the departing subsidiary is entitled to its CAMT credit carryforward and can utilize that credit in future tax years when its regular tax exceeds its CAMT liability.

Q. What are the rate-making impacts associated with CAMT?

A. Under the normalization method, for ratemaking purposes, accumulated deferred income taxes are a reduction to the rate base calculation to reflect the lower cost of capital attributable to accelerated tax benefits. However, the CAMT reduces the tax benefits associated with accelerated tax deductions. Therefore, a corresponding deferred tax asset is included as a rate base increase to reflect the appropriate cost of capital.

Conclusion

Q. Does that conclude your direct testimony at this time?

A. Yes, it does.

DIRECT TESTIMONY OF J. CAS SWIZ

Introduction

Q. What is your name and business address?

A. My name is J. Cas Swiz. My business address is 727 Craig Road, St. Louis, Missouri 63141.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("Service Company") as Senior Director, Enterprise-Wide Regulatory Strategy. Service Company is a wholly owned subsidiary of American Water Works Company, Inc. ("American Water") that provides services to Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. Please summarize your educational background and professional experience.

A. I am a 2001 graduate of the University of Evansville with a Bachelor of Science degree in Accounting, and a 2005 graduate of the University of Southern Indiana with a Master of Business Administration. From 2001 to 2003, I was employed by ExxonMobil Chemical as a Product and Inventory accountant. From 2003 through 2020, I was employed by Vectren Corporation, a CenterPoint Energy Company, in various accounting and regulatory roles. Most recently, I was Director, Regulatory and Rates with responsibility for leading and executing the regulatory strategy of CenterPoint Energy's Indiana and Ohio electric and gas jurisdictions. In November 2020, I was hired by the Service Company within Regulatory Services.

Q. What are your duties as Senior Director, Enterprise-Wide Regulatory Strategy?

A. My primary responsibilities consist of the review and preparation of regulatory filings, proceedings, and related activities for the regulated subsidiaries of American Water. This includes the preparation of written testimony, exhibits, and workpapers in support of regulatory proceedings. In addition, I also review regulatory developments and evaluate alternative strategies that may impact the operations of the American Water regulated utility entities.

Q. Have you previously submitted testimony before the Pennsylvania Public Utility Commission (the "Commission" or "PUC")?

A. Yes, I submitted testimony in the Company's most recent base rate proceeding at Docket Nos. R-2022-3031672 (water) and R-2022-3031673 (wastewater) (the "2022 Base Rate Case").

Q. Have you previously submitted testimony before other regulated jurisdictions?

A. Yes. I testified on behalf of Missouri-American Water Company in its most recent base rate case, Case No. WR-2022-0303. During my employment at Vectren, I submitted testimony before the Indiana Utility Regulatory Commission in various docketed proceedings supporting accounting and rate design requests, most recently in Cause Nos. 45378, 44429, and 44430. In addition, I submitted testimony on behalf of Vectren before the Public Utility Commission of Ohio in various docketed proceedings, most recently in Case Nos. 20-0099-GA-RDR, 20-0101-GA-RDR, and 18-0298-GA-AIR.

Q. What is the purpose of your testimony?

A. First, I will identify and describe PAWC's claim for uncollectible accounts expense as presented in the Company's principal accounting exhibits. Second, I will support the

Company's claim to recover the unamortized balance of the deferred amounts recorded to the regulatory asset account for incremental COVID-19 related financial impacts authorized by the Commission's September 15, 2021 Order at Docket No. P-2020-3022426 ("COVID-19 Deferral Accounting Order") and the PUC's December 8, 2022 Final Order approving the settlement of PAWC's 2022 base rate case ("2022 Rate Case Order"). I will also support the Company's request to defer and record pension, other post-employment benefits ("OPEB"), and production expenses. Finally, I will support the implementation of an Environmental Compliance Investment Charge ("ECIC") pursuant to the alternative ratemaking authority Act 58 of 2018 ("Act 58"), 66 Pa. C.S. § 1330, granted to the Commission to provide timely rate recognition of the Company's sustained investments between rate cases to comply with new and changed government-mandated environmental standards.

Uncollectible Accounts Expense

Q. Please describe the Company's proposed level of uncollectible accounts expense reflected in PAWC's revenue requirement for the fully projected future test year ("FPFTY") ending June 30, 2025.

A. PAWC calculated its claim for uncollectible accounts expense using a two-year historic average ratio of net write-offs as a percentage of sales revenues. As shown in Table 1 below, the uncollectible accounts rate (1.176%) was calculated by using the Company's actual write-off experience for the July 1, 2021 through June 30, 2023 period divided by PAWC's total billed revenues for the same two years.

Table 1

	7/2021-6/2022	7/2022-6/2023	Two-Year Average
Net Write-Off Activity	$ 10,174,929	$ 9,374,665	$ 9,774,797
Total Billed Revenues	$ 775,900,531	$ 886,675,101	$ 831,287,816
Average Write-Off Percentage	**1.311%**	**1.057%**	**1.176%**

Applying the two-year average rate of net write-offs to the FPFTY level of total Company revenues for water and wastewater operations results in an annual level of uncollectible expense reflected in new base rates established at the conclusion of this proceeding, as shown on Exhibit No. 3-A, Calculation of Uncollectible Accounts Expenses.

Q. Why is it reasonable and appropriate to calculate uncollectible expense in this proceeding using the two-year average percentage of net write-offs ended June 30, 2023?

A. Using the two-year average of net write-offs presented in Table 1, as opposed to the Company's historical approach of using a three-year average, eliminates the impacts of the COVID-19 emergency on customer collections activities. In response to the COVID-19 emergency, the Company implemented several measures to help customers deal with the financial impact of the pandemic, including ceasing service terminations for non-payment from March 12, 2020 through March 31, 2021. The Company resumed collections activities on April 1, 2021, at which point the customer account was evaluated for disconnection if payment had not been received within 90 days from the last billing period. Because of this timeline, overdue account balances dating back to March 2020 were not written off until summer 2021.

In addition, PAWC customers have received relief through the Low-Income Household Water Assistance Program ("LIHWAP") administered by the Pennsylvania Department of Human Services to assist with unpaid utility bills. Through June 30, 2023, PAWC customers have received over $7.8 million in funding, which has directly contributed to relieving outstanding arrearages and helping to reduce write-offs.

In sum, the Company used a two-year historic average for the July 2021 to June 2023 period to normalize the rate of uncollectible accounts to pre-pandemic levels and account for the application of LIHWAP funds to reduce unpaid balances. As shown on Table 2 below, PAWC experienced variances in monthly net write-offs in the twelve months ended June 30, 2021 and net write-offs have been trending back up toward pre-pandemic levels since mid-2021.

Table 2[1]

Net Write-Off's	2017	2018	2019	2020	2021	2022	2023
Jan	$ 716,536	$ 685,641	$ 912,390	$ 764,828	$ 349,586	$ 830,013	$ 827,805
Feb	$ 559,995	$ 692,680	$ 618,529	$ 346,622	$ 297,714	$ 747,877	$ 696,968
Mar	$ 662,432	$ 592,584	$ 499,215	$ 606,378	$ 484,338	$ 585,905	$ 642,204
Apr	$ 303,116	$ 332,690	$ 480,307	$ 404,114	$ 305,722	$ 483,219	$ 342,099
May	$ 597,020	$ 600,851	$ 568,274	$ 418,735	$ 424,310	$ 478,710	$ 668,436
Jun	$ 558,589	$ 913,277	$ 472,574	$ 549,243	$ 499,818	$ 778,586	$ 849,341
Jul	$ 591,294	$ 813,965	$ 558,600	$ 410,939	$ 596,656	$ 815,417	
Aug	$ 891,413	$ 910,428	$ 1,099,073	$ 200,884	$ 1,502,577	$ 1,230,674	
Sep	$ 630,558	$ 938,943	$ 822,732	$ 268,270	$ 1,405,223	$ 1,024,491	
Oct	$ 830,307	$ 870,953	$ 831,211	$ 189,356	$ 720,472	$ 663,419	
Nov	$ 638,288	$ 699,334	$ 684,167	$ 359,632	$ 942,686	$ 878,019	
Dec	$ 649,591	$ 720,657	$ 876,692	$ 386,722	$ 1,103,004	$ 735,792	
Annual	**$ 7,629,139**	**$ 8,772,003**	**$ 8,423,765**	**$ 4,905,724**	**$ 8,632,107**	**$ 9,252,122**	**$ 4,026,853**

Q. Have the outstanding arrearages for PAWC's customers stabilized from the significant increases incurred during the COVID-19 emergency?

[1] Table 2 presents net write-offs for 2017 through June 2023. The disconnection moratorium period is highlighted in green.

A. Yes. During the peak of the COVID-19 emergency, PAWC experienced significant increases to its outstanding arrearages, specifically with respect to balances that are more than 150 days overdue. This trend continued even after the expiration of the moratorium on disconnections. However, with LIHWAP funding and collection activities, the aging of PAWC's unpaid balances has returned to pre-COVID-19 levels.

Table 3

Receivables Balance as of June 30					
Aging Category	**2023**	**2022**	**2021**	**2020**	**2019**
Current	$ 46,404,037	$ 36,691,897	$ 34,369,435	$ 32,684,188	$ 37,087,580
31-150 Days	$ 19,890,869	$ 15,913,935	$ 21,197,606	$ 17,994,123	$ 15,855,887
>150 Days	$ 14,747,326	$ 20,551,028	$ 24,722,737	$ 14,067,730	$ 11,733,612
Total	**$ 81,042,232**	**$ 73,156,859**	**$ 80,289,777**	**$ 64,746,041**	**$ 64,677,079**

As shown in Table 3 above, accounts receivable aged over 150 days as of June 30, 2023 represent approximately 18% of the Company's total arrearages, which is in line with the percentage as of June 30, 2019. By comparison, as of June 30, 2021, accounts that were more than 150 days overdue represented over 30% of PAWC's total arrearages.

Q. Does the historic write-off data along with the current status of outstanding accounts receivable support the Company's recommendation to use the two-year average write-off percentage for the determination of the going level of uncollectible expense in this proceeding?

A. Yes, the Company's rate of uncollectible accounts over the past two years properly excludes the impacts of the COVID-19 emergency on customer collections and reflects a reasonable estimation of the going level of bad debt expense.

PAWC's COVID-19 Regulatory Asset

Q. Please summarize the COVID-19 Accounting Deferral Order and the ratemaking treatment authorized by the Commission for PAWC's COVID-19 regulatory asset in the 2022 Base Rate Case.

A. On May 13, 2020, the Commission issued a Secretarial Letter[2] that recognized the additional costs and other financial impacts that the COVID-19 emergency imposed on utilities as essential businesses, including the increased costs directly resulting from the service-termination moratorium established by the Emergency Order issued by PUC Chairman Gladys Brown Dutrieuille on March 13, 2020.[3] The May 2020 Secretarial Letter directed utilities to track incremental COVID-19 related expenses and any government assistance that would offset those expenses and permitted utilities to establish a regulatory asset for bad debt expense attributable to compliance with the Emergency Order.

On October 15, 2020, PAWC filed a Petition at Docket No. P-2020-3022426 requesting PUC approval to defer for accounting purposes specific expenses and revenue losses PAWC incurred in furnishing essential services during the COVID-19 emergency. In the COVID-19 Deferral Accounting Order (pp. 12-13, 30-32, 42, 49-50), the PUC authorized PAWC to record COVID-19 related direct costs and savings as a regulatory asset, along with incremental uncollectible expense and carrying charges on the deferred amounts. The Commission found that the Office of Consumer Advocate's proposal for an uncollectible expense deferral "baseline" clearly conflicted with the Commission's

[2] *COVID-19 Cost Tracking and Creation of Regulatory Asset*, Docket No. M-2020-3019775 (Secretarial Letter issued May 13, 2020) ("May 2020 Secretarial Letter").
[3] *Public Utility Service Termination Moratorium Proclamation of Disaster Emergency-COVID-19*, Docket No. M-2020-3019244 (Emergency Order ratified Mar. 26, 2020) ("Emergency Order").

prescribed approach for calculating deferrals in the May 2020 Secretarial Letter based on all uncollectible expense above the amount currently reflected in PAWC's approved base rates. The PUC also declined to establish a "hard cut-off date" after which no further COVID-19 related amounts could be deferred.

In the 2022 Base Rate Case, PAWC proposed to recover the deferred balance of its COVID-19 regulatory asset accumulated through July 31, 2022 (totaling $3,409,217), with an additional $517,127 of carrying costs calculated on the deferred amounts through January 1, 2023, amortized over three years. The Company also proposed to continue deferring incremental uncollectible expense from and after August 1, 2022 under the existing Commission authorization for possible recovery in PAWC's next base rate case. PAWC had already ceased recording COVID-19 related direct costs and savings in its COVID-19 regulatory asset on February 1, 2022. Under the settlement approved in the 2022 Rate Case Order ("Settlement"), the Company agreed to a December 31, 2022 end date for the deferral of incremental uncollectible expense and carrying costs recorded to the COVID-19 regulatory asset. In the Settlement, the parties also stipulated to (1) the total deferred balance as of July 31, 2022 included in rates ($3,409,217, Appendix H), (2) the total carrying costs calculated on the deferred amounts through January 1, 2023 ($517,127, Appendix H) and (3) the amortization period for the deferred balance (3 years, Appendix D).

Q. When did PAWC begin amortization of the deferred balance in the Company's COVID-19 regulatory asset agreed to in the Settlement?

A. The Company began amortizing the deferred balance of $3,926,344 over three years (i.e., $109,065 per month) on February 1, 2023. In accordance with 2022 Rate Case Order,

PAWC continued to defer incremental uncollectible expense above or below the amounts embedded in the Company's rates from August 1, 2022 through December 31, 2022. The Company did not realize any offsetting COVID-19 related direct savings during that same five-month period.

Q. What is the unamortized deferred balance in the Company's COVID-19 regulatory asset as of June 30, 2023?

A. As of June 30, 2023, PAWC has recorded a net credit balance of $(246,472). That balance reflects five-months of amortization of the net debit balance authorized in the 2022 Rate Case Order (totaling $545,325 through June 2023) and an aggregate credit of $(3,627,491) for uncollectible expense that was below the amount embedded in PAWC's base rates from August 1, 2022 through December 31, 2022, along with the corresponding adjustments to the carrying costs on the deferred net credit balance through January 1, 2023.

Q. Please describe the Company's claim for recovery of its COVID-19 regulatory asset in this proceeding.

A. PAWC projects that the unamortized deferred balance in its COVID-19 regulatory asset as of July 31, 2024, which aligns with the effective date of new base rates approved in this proceeding, will be a net credit of $(1,664,318). The Company proposes to include this projected deferred balance in base rates amortized over two years (24 months), starting on August 1, 2024.

Q. What is the annual level of amortization expense PAWC will include in its revenue requirement in this proceeding?

A. PAWC will include a credit of $(832,159) as annual amortization expense in its revenue requirement in this proceeding, or approximately $(69,347) per month.

Q. Why is the Company proposing to amortize the COVID-19 deferred balance over two years?

A. An amortization period of two years aligns with the typical time between PAWC's base rate cases. It also ensures this credit is appropriately returned to customers in a timely manner.

Q. Is the Company including any additional carrying costs on the deferred balance in its projections?

A. No. In accordance with the 2022 Rate Case Order, PAWC ceased recording carrying costs to its COVID-19 regulatory asset as of December 31, 2022. As noted previously in my testimony, the Company did adjust its claim for reductions to the carrying costs as a result of the credits recorded to the COVID-19 regulatory asset account from August 1, 2022 through December 31, 2022.

Proposed Regulatory and Accounting Treatment

Q. Please describe the Company's request to establish tracker and deferral accounts for pension, OPEB, and production expenses.

A. Historically, PAWC has experienced material variances between the levels of pension, OPEB, and production expenses forecasted for recovery in its base rates and the levels of those expenses it actually incurred. As I explain below, from year-to-year, actual expenses can be lower or higher than the amounts reflected in the Company's base rates. Therefore, the Company is asking for Commission permission to defer and record any amounts above or below the projected level of pension, OPEB, and production expenses into separate regulatory asset or liability accounts through the conclusion of the Company's next rate proceeding. In its next base rate case, the Company will address the ratemaking treatment

of the deferred amounts and any request to continue deferred accounting treatment for pension, OPEB, and production expenses beyond that next base rate proceeding.

Q. Is the Company proposing to recover carrying costs on deferred balances?

A. No. The Company is only proposing to defer any variance between the base level established in this case and the actual level incurred to an asset or liability account.

Q. What is the definition of a regulatory asset according to the National Association of Regulatory Utility Commissioners ("NARUC") Uniform System of Accounts ("USOA") for Class A Water Utilities?

A. "Regulatory Assets and Liabilities" are assets and liabilities that result from rate actions of regulatory agencies. They arise from specific revenues, expenses, gains or losses that would have been included in determination of net income in one period under the general requirements of the Uniform System of Accounts but for it being probable that: 1) such items will be included in a different period(s) for purposes of developing the rates the utility is authorized to charge for its utility services; or 2) in the case of regulatory liabilities, that refunds to customers, not provided for in other accounts, will be required. Regulatory assets and liabilities can also be created in reconciling differences between the requirements of generally accepted accounting principles ("GAAP"), regulatory practice and tax laws.

Q. What is the difference between a tracker mechanism and a rate adjustment clause established under Section 1307 of the Code?

A. Under the mechanism proposed by PAWC, the differences between the pension, OPEB, and production expenses included in the Company's rates and its actual pension, OPEB, and production expenses will be tracked and recorded in deferral accounts. The net balance

in the accounts would represent a deferral – either as a regulatory liability or regulatory asset – that would be credited to, or recovered from, customers in a subsequent base rate case by means of an appropriate amortization. In contrast, a rate adjustment mechanism established under Section 1307 of the Public Utility Code typically involves billing customers a charge calculated to recover a projected annual cost. Annually (or more frequently), the amount billed to customers is reconciled to the utility's actual cost and the difference is either recovered from or refunded to customers through the experience or "E" factor of the formula for the rate adjustment clause. In that way, customer rates are periodically adjusted to reflect changes in actual costs and the reconciliation of prior period over or under-collections.

Under a rate adjustment clause, customer rates are subject to change between base rate cases. Under the deferred accounting mechanism, the Company is proposing for pension, OPEB, and production expenses, variations between projected and actual expenses to be recorded and deferred, but customer rates will not reflect the net impact of those variations until new rates are authorized in a future base rate case.

Pension and OPEB Expense Tracker and Deferral Mechanism

Q. Why is it appropriate that the Company be permitted to record the amount of Pension and OPEB expenses, above or below the amount authorized in rates, to a regulatory asset or liability between base rate cases?

A. Pension and OPEB costs are difficult to predict. Projections of the Company's pension and OPEB costs are calculated by WTW (formerly known as Willis Towers Watson), a national actuarial firm. As discussed by Company witness Lori O'Malley, the pension costs of $22,218 and OPEB costs of $(5,955,515) claimed in PAWC's revenue requirement

for the fully projected future test year ending June 30, 2025 ("FPFTY") are based upon the actuary report provided by WTW for calendar year 2023, calculated in accordance with Accounting Standards Codification Topic 715 ("ASC 715")[4]. Although WTW uses sound, well-established actuarial methods, the pension and OPEB costs that it calculates are subject to material change from year-to-year, as well as within a year, based on a variety of factors that I discuss later in my testimony. As a consequence, pension and OPEB costs exhibit volatility because those costs are a function of variables that are subject to change over time and, therefore, are difficult to forecast.

Q. What are the principal factors that cause pension and OPEB costs to fluctuate from year to year?

A. Pension and OPEB costs calculated in accordance with GAAP[5] can fluctuate from year to year because of changes in economic or demographic variables used to determine those costs that are outside of the Company's control. Actuaries, including the Company's actuary, must make reasonable assumptions to supply the values for those variables, including interest rates, salary increases, inflation, and the performance of the investment markets. In addition, demographic assumptions related to the composition of the population that will receive retirement benefits, the behavior of members of that population (e.g., decisions about when to retire) and the life expectancy of the recipients of retirement benefits all impact the assumptions and variables of the calculation.

[4] The GAAP rules for calculating benefit costs in reporting the income and expense of a business are set forth in Financial Accounting Standards Board Accounting Standards Codification Topic 715, which was formerly Financial Accounting Standard 87.

[5] The GAAP rules for calculating retirement benefit costs in reporting the income and expense of a business are set forth in Financial Accounting Standard Board Accounting Standards Codification Topic 715 ("ASC 715"), which was formerly Financial Accounting Standard 87 ("FAS 87").

Among the primary economic factors that drive fluctuations in retirement costs are: (1) variations between the returns that are projected on the investments made to fund current and future retirement costs and returns actually achieved on those investments; and (2) variations between assumed discount rates and actual discount rates during the period for which costs are being projected. If investment returns and discount rates increase, retirement cost obligations measured at year end become smaller (compared to the prior year end). As a result, current year costs decrease as compared to the prior year. If investment returns and discount rates decrease, retirement cost obligations measured at year end become larger, and current year costs increase as compared to the prior period.

Although demographic assumptions have exhibited less year-to-year volatility than investment returns and discount rates, there have been demographic factors that produced material variations in retirement costs. For example, in 2014, the Society of Actuaries' Retirement Plans Experience Committee released a report that showed a population-wide increase in life expectancy, causing many actuarial experts to reassess their populations and reconsider previous assumptions. Longer life expectancy means that retirement benefits will be paid for a longer period of time in the future, and therefore the current costs to fund those future benefits increased.

The purpose of the Company's request for deferral accounting authorization is to protect both customers and the Company from the variations between forecasted and actual pension and OPEB costs that occur for the reasons I previously explained. This deferral mechanism is symmetrical. Neither customers nor the Company would be required to bear more than the Company's actual costs incurred for pension and OPEB expenses.

Q. Please generally describe how the proposed deferred accounting will work for Pension and OPEB expenses.

A. The Company will track the pension and OPEB expenses included for recovery in its Commission-approved base rates and will also track its actual costs incurred for pension and OPEB expenses. Each month, one-twelfth (1/12) of the amount authorized for recovery in base rates ("base level") will be compared to the Company's actual monthly expense. Actual costs incurred in accordance with ASC 715 guidelines above or below the base level will be credited or debited, as applicable, in separate pension and OPEB deferral accounts on the Company's books. The Company will continue to defer the net balance recorded in those accounts through the end of its next base rate case. In its next base rate case, the Company may seek rate recovery of the net credit or debit balances in the deferral accounts, which will represent either regulatory assets or regulatory liabilities as applicable, amortized to income over an appropriate period as either an increase or decrease, respectively, to pension and OPEB expense.

Q. Has the Company reviewed how the fluctuations in expense from year to year would have impacted the Company and its customers if tracker and deferral mechanisms for pension and OPEB expenses had been in place previously?

A. Yes. Table 4 and Table 5 below lay out by calendar year the authorized level of Pension and OPEB expense and the actual amount of expense recorded. In the variance column, a positive number indicates that the actual expense exceeded the authorized level, and a negative number indicates that the actual amount was lower than the authorized level. Significantly, over the eleven years (2012 through 2022) reflected in Table 4 and Table 5, customers would have realized net benefits (actual costs lower than the rate allowance) in

ten years for pension costs and nine years for OPEB costs. In total, over the eleven years reflected in my analysis, customers would have realized a net benefit of approximately $76 million for a pension deferral and $46 million for an OPEB deferral. In 2021 and 2022 alone, the Company would have recorded a regulatory liability of $(10,647,622) for pension expense and $(13,308,317) for OPEB expense, which would have been deferred and amortized through rates in a subsequent proceeding.

Table 4

	Pension Expense		
	Authorized Expense	Actual Expense	Variance
2012	$ 21,675,744	$ 14,062,463	$ (7,613,281)
2013	$ 21,675,744	$ (3,592,769)	$ (25,268,513)
2014	$ 10,036,329	$ 5,052,844	$ (4,983,485)
2015	$ 9,069,256	$ (1,472,998)	$ (10,542,254)
2016	$ 9,069,256	$ 3,370,585	$ (5,698,671)
2017	$ 9,069,256	$ 3,823,999	$ (5,245,257)
2018	$ 4,722,715	$ 3,330,125	$ (1,392,590)
2019	$ 4,389,352	$ 4,817,385	$ 428,034
2020	$ 4,389,352	$ (419,707)	$ (4,809,059)
2021	$ (36,471)	$ (4,824,802)	$ (4,788,331)
2022	$ (390,013)	$ (6,249,304)	$ (5,859,291)
2023	$ 688,289		

Table 5

	OPEB Expense		
	Authorized Expense	Actual Expense	Variance
2012	$ 4,516,334	$ 5,171,819	$ 655,485
2013	$ 4,516,334	$ 4,544,186	$ 27,852
2014	$ 4,768,889	$ 1,881,025	$ (2,887,864)

Deferred Accounting Treatment - Production Expense

Q. What is the scope of the "Production Expenses" for which the Company seeks deferral accounting authorization?

A. The Company defines Production Expenses as the costs incurred to provide water and wastewater services to our customers, including purchased water and wastewater treatment (NARUC Account 610 and NARUC Account 710), chemicals (NARUC Account 618 and NARUC Account 718), fuel and power (NARUC Accounts 615-616 and NARUC Accounts 715-716), and waste disposal (NARUC Account 711). As explained by Ms. O'Malley, the Company is requesting $59,989,147 in total Production Expense in its claimed revenue requirement for the FPFTY, broken out as $3,098,544 for Purchased Water and Wastewater Treatment, $21,276,332 for Fuel and Power, $27,485,022 for Chemicals, and $8,129,249 for Waste Disposal. *See* Exhibit 3-A, pp. 54-57, 118-120, 238-240.

Q. Why is PAWC requesting deferred accounting treatment for Production Expenses in this proceeding?

A. Production Expenses are not discretionary and are not driven solely by changes in overall production volumes. The Company's production expenses can materially increase or decrease based on the prices charged by suppliers from whom the Company purchases water, energy, wastewater treatment service, and waste disposal services needed to provide safe and reliable water and wastewater service to customers. As an example, the chemical market has been extremely volatile compared to historical levels, driven by many factors such as impacts from the COVID-19 emergency, global pressures driven by the conflict in Ukraine, inflationary growth in commodity prices, escalation in energy prices, and overall supply and demand pressure within a consolidating chemical market. As a result of the current volatility in the market for chemicals, many vendors have moved from annual contracts to quarterly or semi-annual contracts. While the Company takes rigorous steps to ensure that it obtains the best pricing possible when it purchases chemicals, the market forces that have caused sharp increases in contract pricing in 2022 and 2023 are outside of the control of the Company and many of its suppliers. The Company anticipates that it will continue to see chemical price volatility and uncertainty in 2024 and beyond. Likewise, energy market prices are higher than they have been in many years, and as a result, PAWC's electric generation suppliers have increased contract rates for power supply and are less willing to lock in prices for 12-month terms.

Market conditions impacting production expenses represent an extraordinary combination of circumstances that are expected to continue to produce significant price volatility over the next several years. While the Company actively manages its chemical

and energy use through a capital plan that emphasizes efficiency, it cannot avoid incurring these costs. The accounting deferral for production expenses would protect both the Company's customers and PAWC against this volatility. PAWC believes its production expenses are analogous to gas commodity or electric fuel and transmission costs that the Commission has approved for recovery through automatic adjustment clauses. The only difference here is that the Company seeks to defer increases or decreases to its Production Expenses between rate cases for recovery or refund in a future base rate case rather than implement an automatic rate change currently afforded to our gas and electric counterparts in the Commonwealth.

Q. Please generally describe how the proposed deferred accounting will work for Production Expenses.

A. The Company would maintain separate regulatory asset and liability accounts for each production expense category, including (1) Purchased Water and Wastewater Treatment, (2) Fuel & Power, (3) Chemicals, and (4) Waste Disposal. Beginning the first month after rates are in effect in this proceeding, the Company will record the difference between the expense authorized in this case and the actual expense. The amount approved within this base rate case for all of the Production Expense items will be "unitized" (cost per 1,000 gallons) by taking the total expenses divided by overall water and wastewater usage used to derive rates and charges in this proceeding. This rate will be multiplied by monthly usage to determine the authorized amount collected in the current month, which will be compared to the actual expense for the month. If the actual expense is lower than the authorized amount in rates, a regulatory liability will be set up to record the difference. If the actual expense is higher than the authorized amount in rates, a regulatory asset will be

recorded. At the time of its next rate case, the Company will present the net amount in these accounts for return to the customers (in the case of a net credit amount or regulatory liability) or for collection in rates (in the case of a net debit amount or regulatory asset) over a reasonable amortization period.

Q. Why is PAWC determining the authorized level of Production Expenses using a "unitized" rate?

A. As I noted earlier, Production Expenses are a function of both supplier prices and volumetric production. If sales increase in any period, the Company would expect increases in many of its Production Expenses. By unitizing the amount included in PAWC's base rates, any deviation in sales would be contemplated in the authorized level consistent with the actual expenses.

Q. Would deferred accounting treatment for Production Expenses remove incentives for the Company to reduce costs and improve its efficiency?

A. No. The Company is committed to providing safe and reliable water service to its customers at affordable rates. This request does not change that; it simply ensures that customers only pay for the production expenses incurred, nothing more and nothing less, while allowing the Company to collect the proper revenues to cover production expenses incurred to continue to provide safe and reliable service. This does not grant the Company a "free-pass" to mismanage Production Expenses. Any deferred amounts (and offsets to those amounts) will be subject to detailed ratemaking review to determine prudency and reasonableness when they are claimed by the Company in its next base rate case.

Q. Have fluctuations in Production Expenses from year to year become significant since volatility in market prices for chemicals, fuel and power began in 2022?

A. Yes. Table 6 below lays out by calendar year the authorized level of Production Expense and the actual amount of expense recorded. It is important to note that these figures do not represent unitized values, as we are proposing in this case. The Company did not have the ability to determine unitized values for historic authorized periods. As shown in Table 6, the variance (positive or negative) between the Company's actual Production Expenses and the amount reflected in base rates increased substantially in 2022 in the range of about $7 million to $9 million compared to the prior ten years.

Table 6

	Actual Expense						
	Purchased Water	Fuel and Power	Chemicals	Waste Disposal	Total Production Expense	Authorized Production Expense	Variance
2012	$ 2,802,239	$ 14,559,776	$ 8,780,671	$ 2,407,514	**$ 28,550,200**	**$ 27,933,614**	**$ 616,586**

2022	$ 3,275,530	$ 19,203,521	$ 16,777,449	$ 5,910,418	**$ 45,166,918**	**$ 35,631,512**	**$ 9,535,406**

Environmental Compliance Investment Charge

Q. Please generally describe the Company's proposal to implement a new ECIC.

A. PAWC seeks approval to establish an ECIC pursuant to Sections 1307 and 1330(b)(2) of the Public Utility Code. The ECIC is a rate adjustment clause designed to reflect and recover, between rate cases, the costs imposed on the Company to address and comply with continuously evolving government-mandated environmental standards that are beyond the Company's control and difficult to estimate at any single point in time. As Company witness Bruce W. Aiton explains in PAWC Statement No. 3, significant new or changed regulatory requirements under a variety of environmental laws create the need for large

future investments in the Company's assets and can impose substantial operations and maintenance ("O&M") expenses, often in a short time frame, due to expedited compliance deadlines required by law or regulation. Under PAWC's proposal, for inclusion in the ECIC, the costs must be consistent with the set of projects and activities set forth in an annual environmental compliance plan ("Environmental Plan") that is subject to Commission review and approval as I will discuss later in my testimony.

Q. Why is it appropriate to recover Environmental Plan costs through an alternative ratemaking mechanism under the authority granted to the Commission by Act 58?

A. The Company's proposed ECIC will provide a reasonable mechanism for adjusting the Company's rates between base rate cases to ensure full and timely rate recognition of PAWC's investments and measures undertaken to comply with new environmental regulatory mandates in a prudent and efficient manner as they emerge. PAWC has no control over the need for and timing of costs to comply with these new or changed regulatory requirements. The ECIC will also help avoid customer exposure to less frequent but more significant rate increases in a general base rate case by producing smaller, more gradual increases to customer bills driven by new regulations. In addition, permitting PAWC to recover ECIC-eligible capital costs and expenses through an automatic adjustment clause will reduce a major driver of the need for rate relief that would otherwise trigger a base rate case filing.

In sum, the ECIC helps ensure that PAWC receives adequate revenue to maintain safe, reliable, and compliant water and wastewater service that both meets government requirements and advances environmental policy objectives. It is my understanding through discussions with counsel that the Commission may consider the factors outlined

in its Policy Statement at 52 Pa. Code § 69.3302,[6] among any other relevant factors, when evaluating an alternative ratemaking mechanism. To assist the Commission in its review of the proposed ECIC, PAWC Exhibit JCS-1 addresses how each of those factors apply to the ECIC.

Q. Have other jurisdictions approved the use of adjustment clauses for recovery of environmental compliance costs?

A. Yes. As of July 2022, utility commissions in 30 states had approved various forms of environmental compliance riders or similar alternative ratemaking mechanisms.[7] Environmental compliance mechanisms are more prevalent for fully-integrated energy utilities, often for electric utilities with generating assets to comply with Environmental Protection Agency ("EPA") mandates under the Clean Air Act. Utilities in other states have also utilized these recovery mechanisms to address compliance costs as a result of asbestos removal and manufactured gas plant remediation expenditures. In addition, another American Water subsidiary, Indiana-American Water Company, has a System Enhancement Improvement charge that allows for the recovery of environmental compliance costs imposed on the utility by a federal or state agency.

[6] "[T]he proposed policy statement is intended only to give guidance to fixed utilities and interested stakeholders on what is to be considered when investigating alternative ratemaking methodologies in a Section 1308 rate proceeding. While intending to assist utilities and stakeholders, the policy statement does not establish a binding norm, nor does it establish a predicate for the adoption of an alternative rate mechanism by any fixed utility." *Implementation of Act 58 of 2018 Alternative Ratemaking for Utilities*, Docket No. M-2018-3003269 (Implementation Order entered Apr. 25, 2019).

[7] S&P Global Market Intelligence, *Regulatory Focus Topical Special Report – Adjustment Clauses: A state by state overview* (July 18, 2022).

Q. Is PAWC facing a similar regulatory paradigm to fully-integrated electric utilities that are authorized to recover environmental compliance costs through alternative rate mechanisms in other jurisdictions?

A. Yes. As further discussed in Mr. Aiton's Direct Testimony in PAWC Statement No. 3, the EPA issued proposed drinking water regulations for six per- and polyfluoroalkyl substances ("PFAS"), which will establish legally enforceable levels for each of these six PFAS that are known to occur in drinking water. In addition to proposing enforceable limits for these six PFAS, the EPA proposes requirements for the continued monitoring of PFAS, public notification of monitoring results if they exceed defined limits, and the treatment of drinking water to reduce PFAS to required limits. Once the PFAS Rule is finalized, which is expected to occur in the coming months, public water systems will be required to modify their facilities to comply with the Rule within three years. Similarly, the Pennsylvania Department of Environmental Protection has also adopted drinking water standards for PFAS that will require compliance monitoring and the adoption of additional or modified treatment systems, modification of sources, or a combination of actions.

PAWC's compliance with the federal and state PFAS Rules will require significant capital investment, currently estimated at over $1 billion of capital expenditures for all of American Water's thirteen (13) regulated jurisdictions, along with ongoing annual operating expenses estimated at approximately $50 million related to testing and treatment.[8] For PAWC, this estimated capital investment is substantial yet difficult to estimate pending the results of monitoring and completion of certain pilot treatment and

[8] American Water Works Company, Inc. SEC 10-Q, July 26, 2023 (page 33) https://www.sec.gov/ix.xhtml?doc=/Archives/edgar/data/1410636/000141063623000116/awk-20230630.htm

other studies. Company witness Bruce W. Aiton provides a more detailed explanation of the PAWC impacts in PAWC Statement No. 3.

Q. What projects will be eligible for ECIC recovery?

A. ECIC eligible projects will include capital costs and expenses incurred to comply with significant new or changed legal or regulatory requirements imposed or reasonably anticipated to be imposed under applicable Environmental Laws. Applicable Environmental Laws will include, but not be limited to, any statutes, regulations, orders, and other legal mandates relating to protection of the environment, public health and safety, or natural resources, such as the EPA's PFAS Rule.

Q. Will the Environmental Plan be approved by the Commission before the associated costs are eligible for recovery through the ECIC?

A. Yes. PAWC is proposing the following review and approval process for Environmental Plans, which affords due process to interested stakeholders and provides transparency regarding all ECIC eligible projects.

- PAWC will file a copy of its Environmental Plan, detailing the specific projects, estimates, timing, and justification for inclusion within the ECIC.
- The Commission will publish the Environmental Plan in the Pennsylvania Bulletin.
- Answers and/or Comments regarding the Environmental Plan will be due 20 days after Bulletin publication.
- If no Answers or Comments are filed and the Commission chooses not to institute an investigation, the Environmental Plan will be deemed effective 21 days after Bulletin publication.

- If a party files an Answer or Comments regarding the Environmental Plan within 20 days of Pennsylvania Bulletin publication or the Commission institutes an investigation regarding the Environmental Plan, the Commission shall rule on the Environmental Plan no later than 120 days of the date the Environmental Plan was filed at the Commission.
- If only Comments are filed, PAWC will file a revised Plan, Reply Comments, or both 20 days after the Comments are submitted.
- If Answers are filed, the Plan will be assigned to an Administrative Law Judge for a hearing to be held within 65 days of the Plan's filing date.
- Briefs are due 10 days after the hearing.
- PAWC will have 10 days after Briefs are filed to submit a revised Plan, Reply Brief, or both.
- The Administrative Law Judge will certify the Evidentiary Record.
- The Commission will rule on the Environmental Plan within 120 days of the Plan's filing date.

PAWC believes this review process is feasible for the Commission and stakeholders because it is nearly identical to the process followed by the Commission when reviewing electric distribution companies' energy efficiency and conservation plans.[9] In recognition of the urgency of ECIC eligible projects caused by mandatory regulatory compliance deadlines, an expedited review process for the Company's annual Environmental Plan is reasonable.

[9] *See, e.g., Petition of PPL Electric Utilities Corporation for Approval of its Act 129 Phase IV Energy Efficiency and Conservation Plan*, Docket No. M-2020-3020824 (Order entered Mar. 25, 2021), pp. 4-5; *Energy Efficiency and Conservation Program*, Docket No. M-2020-3015228 (Implementation Order entered Jun. 18, 2020), pp. 86-91.

Q. How will the ECIC revenue requirement be calculated?

A. The ECIC will capture the fixed costs of the Environmental Plan capital investments placed in-service after the end of the FPFTY in this case. The fixed costs will include the pre-tax return on the capital investment, the annual depreciation expense associated with the capital investments, incremental operating expenses within the Environmental Plan, and any associated deferrals associated with the capital investments. The fixed costs will be captured quarterly, with the ECIC effective one month after this date, as shown in the table below:

Environmental Plan Plant Additions As of	ECIC Rate Effective Date
March 31	May 1
June 30	August 1
September 30	November 1
December 31	February 1

Q. How will the pre-tax return applied to ECIC eligible projects be calculated?

A. The pre-tax return will be calculated using the state and federal income tax rates, the Company's actual capital structure, and actual costs rates for long-term debt and preferred stock as of the last day for the quarterly period (one-month prior to the ECIC Rate Effective date). The cost of equity will be the equity return rate approved in the Company's last fully litigated base rate proceeding for which a final order was entered, not more than two (2) years prior to the effective date of the ECIC. If more than two (2) years have elapsed between the entry of a such a final order and the effective date of the ECIC, then the equity return rate used in the calculation will be the authorized Distribution System Improvement Charge ("DSIC") Return for Water Utilities calculated by the Commission Staff in the

latest Quarterly Report on the Earnings of Jurisdictional Utilities released by the Commission.

Q. Please describe how the ECIC depreciation expense will be calculated.

A. The ECIC depreciation expense on the original cost of Environmental Plan projects will be calculated by applying the annual accrual rates employed in the Company's last base rate case for the plant accounts in which each retirement unit of Environmental Plan projects is recorded.

Q. Is PAWC requesting authorization to defer any ECIC-related costs until inclusion in the ECIC rider?

A. Yes. Until such point as the Environmental Plan investments and the associated fixed costs are included for recovery in the ECIC, PAWC requests authorization to defer depreciation expense and post-in-service carrying costs ("PISCC") from the period the investment is placed in-service until it is included in the ECIC rates for recovery. The depreciation expense deferred will be calculated consistent with the recoverable depreciation expense in the quarterly revenue requirement. The PISCC will be calculated using the Company's actual after-tax rate of return for the previous ECIC quarter, applied to the net plant value (gross plant less accumulated depreciation) of eligible Environmental Plan investments in-service.

Q. How will these ECIC deferrals be recovered?

A. PAWC will amortize the deferred balances over the remaining life of the investments, with only the annual amortization expense recovered within the ECIC. The Company will not seek a return on these deferred balances.

Q. Please describe the schedule for ECIC rider updates.

A. The ECIC will be updated quarterly, with supporting data for each quarterly update filed with the Commission and served upon the Commission's Bureau of Investigation and Enforcement, Commission's Bureau of Audits, the Office of Consumer Advocate and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

Q. How will the ECIC rider be assessed to customers?

A. The ECIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for service under the Company's otherwise applicable rates and charges, excluding amounts billed for public fire protection service, the State Tax Adjustment Surcharge ("STAS"), and the DSIC (collectively, "excluded amounts"). One-fourth of the annual fixed costs associated with the Environmental Plan projects will be divided by the Company's projected revenue for sales for water (including all applicable clauses and riders and less the excluded amounts) for the quarterly period during which the charge will be collected. The ECIC shall be applied equally to all customer classes.

Q. Will the ECIC be audited and reconciled?

A. Yes, the ECIC will be subject to audit at intervals determined by the Commission and to reconciliation annually for the twelve (12) months ending December 31 of each year. With respect to reconciliation, the revenue received under the ECIC for the reconciliation period will be compared to the Company's eligible costs for that period, with any difference between revenues and costs recouped from or credited to customers, as appropriate, in accordance with Section 1307(e) over a one-year period commencing on May 1 of each

year. The Company may elect to reconcile the ECIC quarterly, but only upon request and approval by the Commission.

Any over- or under-collection of revenues compared to ECIC eligible costs will be subject to interest, calculated at the residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. § 101, et seq.). Interest will be refunded to or collected from customers in the same manner and any over- or under-recovery collection.

Q. Will the ECIC reset with the implementation of future base rates?

A. Yes. The ECIC will be reset to zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had theretofore been recovered under the ECIC.

Q. Will the ECIC be subject to an earnings evaluation?

A. Yes. The ECIC may be reset to zero if, in any quarter, data filed with the Commission in the Company's then most recent Annual or Quarterly Earnings reports show that the Company will earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the ECIC.

Conclusion

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

BEFORE THE

PENNSYLVANIA-AMERICAN WATER COMPANY	:	

VERIFICATION

I, **J. Cas Swiz**, hereby state that the facts set forth in the pre-marked Statement No. 8 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Date: November 8, 2023

J. Cas Swiz

Pennsylvania-American Water Company
Response to Distribution Rates – Statement of Policy
Proposed Environmental Compliance Investment Charge (ECIC)

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa.C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

The ECIC recovers the costs associated with eligible environmental compliance costs from all customer classes via a percentage applied to the total amount billed. The ECIC is thus applied consistent with PAWC's base rates.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

This factor is not applicable to water and wastewater utilities.

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

See the response to item (1).

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

The proposed ECIC will be applied equally to all customer classes and will not affect interclass or intraclass cost shifting.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

The proposed ECIC will not impact efficiency programs or incentives.

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

See the response to item (5).

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

The proposed ECIC does not have any specific impacts on low-income customers that do not apply to residential customers (or other customers) generally. Without the ECIC, the same costs for environmental projects would be borne by the same ratepayers effective after the next base rate case. The ECIC will allow for rates to increase as certain environmental projects are undertaken, and thus those increases will be more gradual than if deferred between base rate cases.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

The proposed ECIC, updated quarterly and reconciled annually, will provide gradual changes to customer rates and bills as opposed to more significant increases typically experienced in base rate cases.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

The ECIC, like the Company's existing DSIC mechanism, will be reconciled annually whereby actual recoveries are compared to authorized/required recoveries, with any variances recovered from or credited to customers in subsequent ECIC charges. Specific to any weather variability in customer usage, this reconciliation ensures that no more or less than what the Company is required or authorized to recover is actually recovered in rates and charges to customers.

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

The Company's environmental compliance requirements are continuously evolving and is one of the drivers that increases the costs of water and wastewater service and the need for rate relief. As discussed in more detail in PAWC Statement Nos. 3 and 8, the need for and timing of measures to comply with new or changed government mandates under applicable environmental laws are outside of the Company's control. The Company's proposed ECIC will provide a reasonable mechanism for gradually adjusting the Company's rates between base rate cases to ensure full and timely rate recognition of PAWC's investments and related operating costs undertaken to comply with new environmental mandates in a prudent and efficient manner as they emerge. Permitting PAWC to recover ECIC-eligible capital costs and expenses through an automatic adjustment clause will reduce a major driver of the need for rate relief that would otherwise trigger a base rate case filing.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9)

(relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

The Company's proposed ECIC does not interact with other revenue sources. The proposed ECIC excludes assets that are currently eligible for recovery under the existing DSIC mechanism, and will function similar to the DSIC in design, applicability, and recovery. The proposed ECIC will be reset to zero at the implementation of new base rates in future proceedings.

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

The proposed ECIC incorporates consumer protections by:
(1) requiring that costs recoverable through the ECIC be consistent with the set of projects and activities set forth in an annual environmental compliance plan to be filed by the Company and approved by the Commission; and
(2) requiring the audit and reconciliation annually of the ECIC, to ensure that all costs included for recovery are eligible and appropriate, and that customers in total pay no more or less over the course of a year than the authorized level of costs associated with the Environmental Plan.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

The Company does not anticipate that there would be any issues related to customer confusion over the proposed ECIC. Infrastructure mechanisms like the ECIC exist today and are not new to the utility industry. The ECIC is separate and distinct from other existing mechanisms. An explanatory bill insert will be included with the first billing, and customers will be notified of changes in the ECIC by including appropriate information on the first bill they receive following any change.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

The proposed ECIC will support improvements in the ability of PAWC to continue providing safe, adequate, and reliable water quantity and quality, while complying with applicable drinking water and environmental regulations. The ECIC will support investment in PAWC's water and wastewater system to address emerging contaminants in a cost-effective manner.

PAWC STATEMENT NO. 8-R

REBUTTAL TESTIMONY
OF
J. CAS SWIZ

WITH REGARD TO

PENNSYLVANIA-AMERICAN WATER COMPANY'S

UNCOLLECTIBLE ACCOUNTS EXPENSE ADJUSTMENT; REQUEST FOR REGULATORY ACCOUNTING AUTHORIZATION TO DEFER DEVIATIONS IN PENSION, OTHER POST-EMPLOYMENT BENEFITS, AND PRODUCTION EXPENSES; AND REQUEST FOR ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE

R-2023-3043190 (WASTEWATER)

DATE: February 21, 2024

PENNSYLVANIA-AMERICAN WATER COMPANY

REBUTTAL TESTIMONY OF J. CAS SWIZ

Introduction

Q. What is your name and business address?

A. My name is J. Cas Swiz. My business address is 250 Cross Pointe Boulevard, Evansville, Indiana 47715.

Q. Have you submitted direct testimony in this proceeding?

A. Yes, I submitted direct testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company") Statement No. 8. My direct testimony contains a description of my background and qualifications.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to (1) respond to certain parts of the direct testimony of Office of Consumer Advocate ("OCA") witness Ralph C. Smith and Roger D. Colton concerning the Company's proposed level of uncollectible accounts expense, (2) respond to certain parts of the direct testimony of various witnesses[1] concerning the Company's request for deferred accounting treatment and regulatory asset authorization for pension, other post-employment benefits ("OPEB"), and production expenses, and (3) respond to certain parts of the direct testimony of various witnesses[2] concerning the Company's proposal to implement an Environmental Compliance Investment Charge

[1] OCA witness Smith; Pennsylvania Public Utility Commission ("Commission") Bureau of Investigation and Enforcement ("I&E") witness Vanessa Okum; Pennsylvania Office of Small Business Advocate ("OSBA") witness Kevin C. Higgins; and Pennsylvania-American Water Large User Group ("PAWLUG") witness Billie S. LaConte.

[2] OCA witnesses Christine Maloni Hoover, Jerome D. Mierzwa, and Colton; I&E witnesses Okum and Ethan H. Cline; OSBA witness Higgins; PAWLUG witness LaConte, and; the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") witness Harry S. Geller.

("ECIC") pursuant to the alternative ratemaking authority Section 1330 of the Pennsylvania Public Utility Code ("Code"), 66 Pa. C.S. § 1330, granted to the Commission.

Q. Have you prepared any exhibits to accompany your rebuttal testimony?

A. Yes. Exhibit JCS-1R presents an updated analysis of the authorized level of PAWC's pension and OPEB expense and the actual amount of expense recorded from 2012 through 2023.

PAWC's Uncollectible Accounts Expense

Q. Please describe your understanding of OCA witness Smith's adjustment to PAWC's proposed uncollectible accounts expense.

A. OCA witness Smith recommends that the Company use a three-year historic average ratio of net write-offs, based on the three years ended June 30, 2023, to determine the going level of uncollectible expense in this proceeding. Mr. Smith calculates this three-year average percentage as 1.164%, a 0.12% reduction from the Company's proposal of 1.176%.

Q. Do you agree with OCA witness Smith's adjustment?

A. No. While OCA witness Smith's adjustment would have a minimal impact on the Company's revenue requirement for the fully projected future test year ("FPFTY") ending June 30, 2025, the Company's approach of using a two-year percentage of net write offs ending June 30, 2023 eliminates the impacts of the COVID-19 pandemic from July 1, 2020 through June 20, 2021 on customer collections activities and PAWC revenues. As I explained in my direct testimony, outstanding arrearages for PAWC's customers have stabilized from the significant increases during the peak of the COVID-19 pandemic and the Company's net write-offs have been trending back up toward pre-pandemic levels since

mid-2021. As a result, the Company used a two-year historic average (July 2021 to June 2023) to normalize the rate of uncollectible accounts to pre-pandemic levels and account for the application of Low-Income Household Water Assistance Program funds to reduce unpaid balances.

Q. Is there an alternative view that could be considered?

A. Yes. If the Commission wishes to maintain historical practice and utilize a three-year average rate of net write offs to determine the annual level of uncollectible expense reflected in new base rates, the Company suggests removing the twelve-months ended June 30, 2021 when PAWC experienced significant variations in monthly net write-offs due to the impact of the COVID-19 pandemic. As shown in Table 1 below, using a three-year average for the twelve-months ended June 30, 2019, 2022, and 2023, produces an uncollectible accounts rate of 1.196%, which is 0.02% higher than the Company's proposal of 1.176%.

Table 1

	7/2018-6/2019	7/2021-6/2022	7/2022-6/2023	Three-Year Average
Net Write-Off Activity	$ 8,505,570	$ 10,174,929	$ 9,374,665	$ 9,351,721
Total Billed Revenues	$ 683,968,732	$ 775,900,531	$ 886,675,101	$ 782,181,454
Average Write-Off Percentage	**1.244%**	**1.311%**	**1.057%**	**1.196%**

Q. Did OCA witness Smith make other adjustments to PAWC's proposed uncollectible accounts expense?

A. Yes, consistent with the recommendation of OCA witness Colton, OCA witness Smith proposed an adjustment to reduce uncollectible expense related to the Company's Arrearage Management Plan ("AMP") credits by $2.162 million. PAWC witness Lori O'Malley will address this specific adjustment in her rebuttal testimony.

PAWC's Proposed Regulatory and Accounting Treatment

Q. Did any parties disagree with PAWC's request to establish tracker and deferral accounts for pension, OPEB, and production expenses?

A. Yes. Witnesses on behalf of I&E, the OCA, the OSBA and PAWLUG submitted testimony opposing the Company's proposal based on two primary concerns. First, according to I&E witness Okum and OSBA witness Higgins, deferred accounting treatment is not appropriate for pension, OPEB and production expenses because, in their view, those expenses are normal, expected, and recurring costs. Second, several witnesses assert that deferral accounting authorization could reduce or eliminate PAWC's incentive to control its pension, OPEB and production costs.

Q. Do you agree that pension, OPEB, and production expenses are not appropriate for deferred accounting treatment as several parties suggest?

A. No. The Commission regularly authorizes utilities to defer costs for accounting purposes arising from events that are unanticipated and outside the utility's control to provide the utility an opportunity to claim those costs for recovery in a future rate proceeding. As explained in my direct testimony, the pension and OPEB costs calculated by the Company's actuary are subject to material change based on economic and demographic factors that are outside of the Company's control and thus are within the scope of the Commission's exception to the prohibition against retroactive ratemaking. Similarly, the Company's production expenses can materially increase or decrease based on volatility in the prices charged by suppliers due to market conditions that are outside the control of PAWC and its suppliers. Deferred accounting authorization is a fair way to ensure neither customers nor the Company would be required to bear more than PAWC's actual costs

incurred for pension, OPEB and production expenses. Significantly, as discussed in my direct testimony (pp. 15-17) and revised in Exhibit JCS-1R, from 2012 through 2022 customers would have realized a net benefit of approximately $58 million for a pension deferral and $46 million for an OPEB deferral.

Q. Will deferred accounting authorization remove incentives for PAWC to control pension, OPEB and production costs?

A. No. All deferred net benefits or net liabilities will be subject to review in PAWC's next base rate case to ensure that pension, OPEB and production expenses were prudently incurred. The Company is strongly committed to managing the totality of its expenses, keeping in mind those items that it cannot directly control (pension, OPEB, production), to mitigate operating expenses becoming a driver of future rate increases.

Q. Do you agree that tracker and deferral mechanisms constitute single-issue ratemaking as witnesses for the OCA, OSBA and PAWLUG assert?

A. No. PAWC is requesting approval to defer pension, OPEB and production costs for accounting purposes and is not requesting recovery of these amounts at this time. As noted in my previous answer, the Company's pension, OPEB, and production expenses will still be subject to detailed ratemaking review in the Company's next base rate case. Moreover, natural gas utilities in Pennsylvania (and numerous other states) have the ability to recover the commodity cost of natural gas through automatic rate adjustment clauses. Although statutorily supported, the pass-through and reconcilable nature of these costs acknowledges that there is an inherent deviation in expense that is outside of the Company's primary control, yet required to provide service to customers, which fluctuates dramatically between periods. In addition, electric utilities in Pennsylvania and numerous other states

are afforded the opportunity to adjust rates for variations in purchased power, transmission services, and fuel costs to generate electricity. Although these automatic adjustment clauses are explicitly authorized in Pennsylvania by Section 1307 of the Code and no specific statute applies to PAWC's pension, OPEB, and production cost recovery, the same ratemaking principles that justify natural gas and electric utilities' Section 1307 mechanisms apply to PAWC's recovery of pension, OPEB, and production costs.

Q. I&E witness Okum recommends using a three-year historic average of actual pension and OPEB expenses to establish the going level of expense in the Company's revenue requirement for the FPFTY. Do you agree with this recommendation?

A. No. I&E witness Okum claims that her recommendation "will allow the expense to normalize over time and address PAWC's concern about over-recovery of pension expense without the need for a tracker." I respectfully disagree with this statement. The averaging approach will have no impact on the actual expense incurred, and specifically for pension and OPEB expenses, the use of historical information does not inform how future expenses will be recorded. In other words, past performance is not a guarantee of future performance. As I explained in my direct testimony, the Company's actuary, WTW, prepares a report annually in accordance with Accounting Standards Codification Topic 715 ("ASC 715") that defines the level of expense that will be recorded by PAWC each year. Economic and demographic variables change each year, which makes each annual actuary report unique and independent of what was previously expensed. Going back to rates effective in 2014, a rate allowance calculated using a three-year historic average as Ms. Okum proposes rather than actuarial forecasts would result in *larger* variances between

the annual amount of pension and OPEB expenses reflected in base rates and the actual amounts of those expenses the Company incurs.

Table 2[3]

Pension Expense	Authorized Expense	Actual Expense	Variance
2014	$ 9,069,256	$ 5,052,844	$ (4,016,412)

Additional Variance under Averaging Approach $ (6,772,451)

The material variances between actual expenses and authorized expense based on a three-year historic average presented in Tables 2 and 3 further demonstrate that there is a need

[3] Hypothetical Average amounts for each period calculated as (1) 2014 – average of 2010-2012 actuals, (2) 2018 - average of 2014-2016 actuals, (3) 2021 – average of 2017-2019 actuals (prorated for rates effective 1/28/2021), and (4) 2023 – average of 2019-2021 actuals (prorated for rates effective 1/28/2023).

[4] Hypothetical Average amounts for each period calculated as (1) 2014 – average of 2010-2012 actuals, (2) 2018 - average of 2014-2016 actuals, (3) 2021 – average of 2017-2019 actuals (prorated for rates effective 1/28/2021), and (4) 2023 – average of 2019-2021 actuals (prorated for rates effective 1/28/2023).

for a deferred accounting mechanism to protect against a substantial under- or over recovery by the Company and corresponding underpayment or overpayment by customers.

Q. Has WTW prepared an updated actuary report for 2024?

A. Yes, as of February 7, 2024, the level of expense that will be recorded by PAWC for calendar year 2024 will be $971,072 for pension expense, and a credit of $(5,951,954) for OPEB expense. Comparing these updated projections to the pension and OPEB allowances for the FPFTY recommended by I&E witness Okum based on a three-year historic average would result in an even larger variance between actual and authorized expense than shown in Tables 3 and 4. Ms. O'Malley discusses the Company's update to its pension and OPEB claims for the FPFTY based on the 2024 actuarial projections.

PAWC's Proposed Environmental Compliance Investment Charge

Q. Please provide a brief summary of the Company's ECIC proposal.

A. Section 1330 of the Code authorizes public utilities to propose, and the Commission to approve "alternative rate mechanisms." One of the alternative rate mechanisms specifically authorized by Section 1330(b)(2) is an automatic adjustment clause like the ECIC. The Company's environmental compliance requirements are continuously evolving and this is one of the drivers that increases the costs of water and wastewater service and the need for rate relief. As I explained in my direct testimony and in the direct testimony of PAWC witness Bruce W. Aiton in PAWC Statement No. 3, the need for and timing of measures to comply with new or changed government mandates under applicable environmental laws are outside of the Company's control. The Company's proposed ECIC will provide a reasonable mechanism for adjusting the Company's rates between base rate cases to support full and timely rate recognition of PAWC's costs to comply with new and

updated environmental regulatory mandates in a prudent and efficient manner as they emerge. The ECIC will also mitigate customer exposure to less frequent but more significant rate increases in a general base rate case by producing much smaller, gradual increases to customer bills. Costs that are recoverable through the ECIC must be consistent with the set of projects and activities set forth in an annual environmental compliance plan ("Environmental Plan") that will be subject to Commission review and approval.

Q. Have any witnesses opposed the Company's proposed ECIC?

A. Yes. While recognizing that compliance with environmental laws and regulations and addressing public health concerns regarding drinking water is important, witnesses on behalf of several parties in this case – I&E, OCA, OSBA, CAUSE-PA, and PAWLUG – recommend denial of the proposed ECIC. In the event the Commission approves the ECIC, a few parties recommend specific provisions or modifications for the ECIC. The arguments against the ECIC fall into the following general categories that I will address in greater detail below.

- Recovery of environmental compliance costs through an automatic rate adjustment mechanism would improperly shift the risk of recovery of those costs that are incurred as part of the Company's obligation to provide and maintain adequate, safe and reliable service to customers;
- The ECIC proposal is premature because PAWC does not have detailed forecasts of the costs that will be requested for recovery through the ECIC at this time to justify alternative ratemaking treatment;
- The proposed ECIC will unfairly impact low-income customers and create intra- and interclass subsidies; and

- The ECIC proposal does not satisfy the 14 factors set forth in the Commission's Policy Statement on alternative ratemaking.

Q. Many parties claim that compliance with environmental regulations is part of PAWC's "normal" responsibilities in providing service to its customers and therefore the ECIC unfairly shifts risks away from the Company to customers. How do you respond to those claims?

A. I agree that the provision of service that complies with environmental regulations to help ensure safe, clean drinking water is a requirement for PAWC. However, emerging regulations or re-interpretations of existing regulations often result in new environmental compliance obligations that disrupt PAWC's five-year plan of construction work and require the Company to undertake additional projects on an expedited basis to comply with those changes that increase the cost of water and wastewater service. For example, the rapidly changing set of drinking water standards and compliance monitoring mandates for per- and polyfluoroalkyl substances ("PFAS") will require additional or modified treatment systems, modification of sources, or a combination of actions on a very short time frame. The impending federal PFAS regulations will require American Water's utilities to spend over $1 billion within three years, which is an unprecedented magnitude of spending for the water and wastewater industry. As discussed by PAWC witness Aiton, for the Company, these new requirements will require investments in the range of $200 million before the end of 2027 based on preliminary estimates. The ECIC will provide the Company a reasonable opportunity to recover the capital costs and expenses incurred after June 30, 2025, to meet the challenges of removing PFAS from drinking water systems across the Commonwealth in an efficient and prudent manner.

Q. Will the ECIC mechanism lessen scrutiny of the Company's environmental compliance costs as several parties suggest?

A. No. If the Company's proposed ECIC is approved, the Commission and all parties will have the opportunity to proactively evaluate PAWC's proposed investments and measures to comply with new environmental mandates *before any costs are incurred*. Whether or not a party is inclined to review the Company's Environmental Plan and focus attention on the associated capital costs and expenses is at the discretion of each party, but the Company expects and welcomes a full and fair review of its Environmental Plan to ensure that the proposed set of projects are prudent and reasonable compliance solutions and any potential cost reductions experienced by the Company are reflected in the ECIC.

Q. OCA witness Mierzwa pointed to debt costs as an example of a PAWC cost that may decline and would not be taken into consideration outside of a general base rate case. Is that an accurate statement?

A. No. Specifically, any changes in PAWC's debt costs would be included in the ECIC. As noted in the ECIC Tariff, the determination of the pre-tax return "will be calculated using the state and federal income tax rates, *the Company's actual capital structure and actual cost rates for long-term debt preferred stock as of the last day for the three-month period ending one month prior to the effective date* of the ECIC and subsequent updates" (emphasis added).

Q. Is it too soon for the Commission to decide on an alternative ratemaking mechanism because PAWC has not presented detailed information about the projects and investments that would be included in an Environmental Plan to address the federal PFAS drinking water standard that is expected to be finalized later this year?

A. Absolutely not. The Public Utility Code requires utilities to propose alternative rate mechanisms as part of a base rate case, so it is entirely timely for the Company to propose the ECIC in this case in advance of the need to file its first Environmental Plan.[5] The Company believes it is prudent, appropriate, and consistent with accepted public utility practice to take proactive steps to address the challenge of PFAS and other emerging issues, without waiting for either regulatory deadlines or legal actions. The ECIC helps ensure that PAWC receives adequate revenue to maintain safe, reliable, and compliant water and wastewater service that both meets government requirements and advances environmental policy objectives.

Q. Is there any valid basis for the concerns expressed by OCA witness Mierzwa about potential for cross-subsidization?

A. No. Mr. Mierzwa raises concerns about interclass cost shifting because the ECIC will be assessed as a flat percentage increase across PAWC's customer base. However, Mr. Mierzwa cites no evidence supporting his assertions that the ECIC will necessarily result in subsidization among customers classes.

I further note that the ECIC is modeled upon the DSIC, with a similar formula and customer safeguards. The Commission-approved DSICs of PAWC and other utilities do not draw a distinction between customer classes in calculating their percentage of billed revenues charged to customers. All customers are charged the same percentage on the theory that the revenue requirement was fairly allocated between customers classes in setting rates in the prior base rate. I do not believe the Commission has found that the DSIC causes cross-subsidization or is discriminatory. The same can be said of the State

[5] 66 Pa.C.S.A. § 1330(b)(1).

Tax Adjustment Surcharge, which is applied uniformly on a percentage basis to all customer classes. The ECIC should not be treated differently.

Q. How do you respond to the generalized assertions that the ECIC will not promote rate stability and could result in customer confusion?

A. The ECIC will promote rate stability through gradual changes to customers rates and bills as opposed to more significant increases typically experienced in base rate cases. Rate adjustment mechanisms for infrastructure investments are not new to the utility industry. There is no reason to think that customers would be more confused about an ECIC surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill, including the DSIC. If the ECIC is approved, the Company will distribute an explanatory bill insert to all customers prior to the first bill that includes ECIC surcharges or credits.

Q. OCA witness Colton states that the ECIC is exempt from the Bill Discount Program "BDP" and that BDP participants would not receive a discount on environmental compliance costs. Do you agree with these statements?

A. No. As noted below, for BDP-eligible customers the discount will be applied in a manner that reduces the overall ECIC impact to these customers compared to non-BDP customers. Using purely hypothetical assumptions, a customer who is eligible for a 30% discount on their bill would receive this discount on all charges applied, as the discount would reduce the total bill *before* the proposed ECIC (and current DSIC) is applied. In this instance then, the customer has a lower starting point for application of the ECIC (and DSIC) than an otherwise equal customer would have absent the BDP.

Table 4

	BDP Customer	Non-BDP Customer
Total Customer Bill before DSIC, ECIC, and BDP	$ 100.00	$ 100.00
BDP - 30% Discount	$ (30.00)	$ -
Total Customer Bill after BDP [A]	**$ 70.00**	**$ 100.00**
DSIC - 2.5% of [A]	$ 1.75	$ 2.50
ECIC - 2.5% of [A]	$ 1.75	$ 2.50
Total Customer Bill	**$ 73.50**	**$ 105.00**
BDP - 30% Discount	**$ (31.50)**	

Q. Mr. Cline and Mr. Mierzwa assert that the Company's ECIC proposal does not satisfy the 14 factors of the Commission's alternative ratemaking policy statement. Do you agree?

A. No. The Policy Statement on alternative ratemaking mechanisms lists a number of factors that may be considered when evaluating an alternative ratemaking mechanism such as the ECIC, but it does not prescribe how or the extent to which each factor must be "satisfied."[6] The Company provided a detailed analysis of how the specific factors listed by the Commission apply to the Company's proposed ECIC to aid in the Commission's review and consideration of these factors as it pertains to the ECIC. *See* Exhibit JCS-1.

Q. If the Company were to receive relief through state or federal funding, or through litigation with those entities that have been deemed to have "caused" the environmental issues related to contaminants such as PFAS, would the ECIC address this?

[6] 52 Pa. Code § 69.3302 specifically states the "Commission ***may consider***, among other relevant factors" those listed in section (emphasis added). In addition, the Commission has specifically stated that "the proposed policy statement is intended ***only to give guidance to fixed utilities and interested stakeholders on what is to be considered when investigating alternative ratemaking methodologies*** in a Section 1308 rate proceeding. While intending to assist utilities and stakeholders, ***the policy statement does not establish a binding norm***, nor does it establish a predicate for the adoption of an alternative rate mechanism by any fixed utility." (emphasis added). *See* Docket No. M-2015-2518883, Final Policy Statement Order, p. 6-7 (July 18, 2019), *citing Implementation of Act 58 of 2018 Alternative Ratemaking for Utilities, Implementation Order at Docket No. M-2018-3003269, entered April 25, 2019.*

A. Yes, in a more immediate, direct method than via a base rate case. The Company will ensure that any proceeds received through litigation, or any government funding made available to PAWC, will be properly captured within the ECIC and credited to customers via the proposed revenue requirement. However, current expectations specific to PFAS compliance are that any proceeds or government funding will not sufficiently cover the expenditures required by PAWC to comply.

Q. OCA witness Mierzwa and PAWLUG witness LaConte recommend that the Commission impose an annual percentage cap on ECIC revenue if the Company's proposal is adopted. Do you agree with these recommendations?

A. No, I do not. The Company's existing DSIC does have applicable water and wastewater revenues caps, as referenced by OCA witness Mierzwa; however, the DSIC investments are ongoing and programmatic, with ratable plans. In contrast, the ECIC would have costs and investments that could be similar in magnitude, but greater in scope and potentially over a much shorter time period. As such, the application of rate caps for the ECIC presents challenges as each Environmental Plan could be different. An option that could be considered is a limitation on the Environmental Plan and ECIC recovery that requires a base rate proceeding to be filed within a certain time period. Absent this base rate proceeding, the ECIC would be set to zero.

Conclusion

Q. Does this conclude your rebuttal testimony at this time?

A. Yes, it does.

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF DEBORAH A. DEGILLIO

Q. What is your name and business address?

A. My name is Deborah A. Degillio. My business address is 1 Water Street, Camden NJ.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or "Service Company") as Vice President and Chief Customer Officer. I am providing testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. Please summarize your educational background and professional experience.

A. I received a Bachelor of Science degree in Finance and Math from the University of Wisconsin at LaCrosse in 1995 and a Master of Business Administration from the Stephen M. Ross School of Business, University of Michigan, with distinction, in 2012. I have been employed by AWWSC since April 2007. I have held various positions in the finance organization, including leading Financial Planning and Treasurer, as well as operational roles including President of New Jersey American Water Company. I became the Chief Customer Officer in March of 2019. Previous to my employment with AWWSC, I was employed by MCR Performance Solutions ("MCR") from 2000 through 2006. MCR is a management consulting company, working with utility clients. Prior to MCR, I worked with other management consulting companies and my focus was with utility clients. I have over twenty-five years of utility experience, mostly in the finance and customer service aspects.

Q. What are your current employment responsibilities?

A. My primary responsibility in my role as Vice President and Chief Customer Officer is to focus on further developing and advancing all aspects of the American Water Works Company, Inc. ("American Water") customer experience strategy. I lead the Company's efforts in building and maintaining programs that leverage technology and advance the overall customer experience in an effort to better understand and address customer concerns. I oversee the Customer Service Organization ("CSO"), which includes over 480 employees and almost 350 third-party, fully dedicated contractors who perform collections and support our inbound call handling team. My team supports all American Water regulated subsidiary utilities, including PAWC.

Q. What is the purpose of your direct testimony?

A. First, I will provide an overview of American Water's customer service function and functions we perform for PAWC customers. Next, I will explain how the CSO uses customer feedback to drive high levels of customer satisfaction. I will also discuss the CSO's efforts in recent years to improve the quality of PAWC's customer service and achieve the Company's customer service performance objectives. Finally, I will discuss the customer assistance programs offered by PAWC to help low-income and payment-troubled customers and enhancements to those programs the Company is proposing in this proceeding.

CUSTOMER SERVICE OVERVIEW

Q. Please describe the CSO and the functions it performs for PAWC customers.

A. The CSO is operated by AWWSC and supports the customer service needs of PAWC and the other American Water utility subsidiaries. The CSO responds to customer inquiries,

maintains customer information systems and the "myWater" customer self-service portal, provides billing and collections services and performs other customer service functions. The CSO's responsibilities include, but are not limited to, the following:

Customer Call Handling

- Establish and maintain customer/account records;
- Address customer inquiries concerning billing, credit and collections, service orders, and other matters;
- Field all inbound phone calls for initial customer queries and, if necessary, forward matters to appropriate parties for resolution;
- Create records of customer interactions in the Company's customer information system, SAP and in the myWater customer portal;
- Assist with payment options, taking payments and assistance programs (e.g., payment plans);
- Process move in and move out requests;
- Forward certain customer inquiries to field operations and water quality team members for resolution;
- Update customers who call to inquire about the status of service orders; and
- Provide assistance to customers with the myWater portal, such as password resets.

Billing

- Generate bills according to billing schedules and authorized tariffs;

- Resolve billing disputes and billing exceptions (out-of-range variances) not requiring field investigations;
- Issue service orders to resolve billing investigations requiring field investigations; and
- Implement and maintain controls to ensure all "active" accounts are billed according to authorized tariff frequencies.

Collections

- Monitor and/or generate and send for printing and distribution all collections-related notices;
- Manage services for customers who call to arrange payments to avoid shut-off notices for delinquent payments and that notify customers if service discontinuance is scheduled;
- Monitor and oversee the process to issue shut-off notices and schedule shut-off for non-payment;
- Maintain records for extended payment plans;
- Process bankruptcy claims; and
- Process refunds.

Operations Support and Field Resource Control Center

- Back-office support for billing exceptions, primarily associated with metering;
- Identify and investigate customer issues related to service orders for 1) zero consumption on active meters, 2) consumption on meters at premises with no active account holder, and 3) certain other meter readings;

- Coordinate and dispatch high priority work (e.g., emergencies, escalations and same-day appointments); and
- Coordinate service alerts.

Other Customer Service Functions

- Management of our customer insights program, including all surveys and customer feedback;
- Implementation of all tariff changes in SAP, including price and rate changes and associated testing of any changes to tariffs;
- Training and quality assurance for the CSO; and
- Support PAWC and its regulated utility affiliates with customer issues management, reporting and other information requests, as well as management of information required for effective handling of customer transactions and requests.

Q. Are there benefits to PAWC to having customer service provided by the comprehensive and centralized CSO?

A. Yes. The advantages include efficiency, consistency, and resiliency. By consolidating the customer service function of American Water's regulated utility operating companies, each operating company enjoys greater economies of scale than would be available to individual, stand-alone company customer service departments. Resources such as equipment, training, monitoring, and supervision can be sourced more efficiently on a consolidated basis, which mitigates the costs ultimately borne by customers. A centralized CSO also ensures consistency of customer service quality and training across jurisdictions

and that each operating company benefits from the lessons learned and best practices developed by the CSO. The use of a centralized, common CSO staff to provide service to multiple operating companies also means that additional staff are available should one company experience a spike in call volumes due to, for example, an increased number of main breaks due to local weather conditions. The geographic diversity of the locations of the customer care agents ("CCAs") that support the CSO creates resiliency, ensuring continued service in case of a severe weather event, work stoppage or other contingency in a single service territory.

Q. How does the CSO ensure that all CCAs comply with Pennsylvania consumer protection regulations and requirements?

A. With a limited exception for agents who work on weekends or overnights when the CSO handles only emergency calls, CCAs do not take calls from PAWC customers until they have completed the three-day Pennsylvania-specific training program. The CSO has a robust quality assurance ("QA") process that is executed by an internal team of professionals who are focusing on agents' adherence with Pennsylvania consumer protection rules and internal processes, as well as improvement opportunities for customer experience and employee training and coaching. We record all inbound calls to our toll-free numbers and utilize customer feedback to prioritize the calls we send to our QA team in an effort to focus on calls with the lowest customer satisfaction. We include coaching and training for our agents in weekly discussions, direct interactions with supervisors and group training tools, which include compliance with Pennsylvania regulations. In 2021, 17% of calls handled by CCAs were from PAWC customers, and in 2022 19% of calls handled by CCAs were from PAWC customers. As of September 30, 2023, over 47% of

CCAs (internal and agency) were certified in Pennsylvania regulations and available to handle those call volumes.

CUSTOMER INSIGHTS AND SATISFACTION DRIVERS

Q. Is customer satisfaction used as a key performance indicator of the CSO's customer service?

A. Yes. The CSO is focused on providing customers with convenient access to information and responsive, personal service to drive high satisfaction ratings. However, customer satisfaction is more than how fast we answer a call. The syndicated J.D. Power U.S. Water Utility Residential Customer Satisfaction Study ("J.D. Power Study") measures satisfaction among residential customers of over 90 water utilities across the United States. The 2023 J.D. Power Study based on 36,833 responses found that residential customer satisfaction is driven by the following six factors: quality and reliability (29%), price/value of service (20%), conservation (15%), billing and payment (14%), communications (15%), and customer service (6%). Only one of thirteen key customer satisfaction indicators identified in the 2023 JD Power Study – first contact resolution – related to call center performance. The other twelve major performance factors involved quality and value of service and conservation. In his direct testimony, Company witness Jim Runzer (PAWC Statement No. 2) discusses those areas outside of the CSO that drive customer satisfaction, for example, the Company's efforts to protect water supplies and improve the impact of operations on the environment, ongoing enhancements to deliver high quality water to PAWC customers, PAWC's conservation initiatives, and how we provide tips to customers to conserve.

The CSO employs a robust feedback process and tools to determine how well we meet – or exceed – customer expectations and to develop customer service performance objectives. PAWC and the CSO leverage multiple sources of customer feedback to monitor overall customer satisfaction and satisfaction with individual service experiences, including targeted surveys taken immediately after phone, field and customer portal interactions and a customer satisfaction survey of all PAWC customers conducted quarterly. This approach allows the Company and the CSO to stay abreast of changing customer expectations and align performance goals to meet those customer needs. For example, in 2022, the Company adopted a performance objective for first contact resolution based on customer feedback that a timely response to their inquiries improves satisfaction and reduces customer effort. CSO leadership regularly engages PAWC leadership regarding customer service performance objectives in an effort to drive higher customer satisfaction for PAWC customers by, among other things, sharing customer feedback data in real time through an online dashboard.

Q. How does the CSO rate with respect to customer satisfaction?

A. I believe the CSO rates quite well. In response to our phone-based and web-based transaction surveys conducted between January 1, 2023 and August 31, 2023, 70% of PAWC customers served by the CSO rated our CCAs' overall performance as excellent or very good, and 94% of PAWC customers rated overall service appointment experience as excellent or very good.

CUSTOMER SERVICE PERFORMANCE OBJECTIVES AND IMPROVEMENT INITIATIVES

Q. Has the CSO increased staffing to facilitate Company performance objectives in answering calls in a timely manner and avoiding a significant abandonment rate?

A. Yes. The CSO experienced an unusually high level of attrition among CCAs available to handle customer calls due to the COVID-19 emergency during the 2020-2022 period. Since the onset of the pandemic, the CSO has added CCAs across the American Water footprint to reduce wait times for customers. As of September 30, 2023, 355 CCAs were available to handle customer calls compared to staffing levels as low as 281 CCAs over 2020 and 2021. This increased complement of trained personnel has improved service levels with CCAs answering 67% of calls within 60 seconds year to date in 2023 (January through August) compared to 45% in 2022 overall. As shown in Table 1 below, the CSO's hiring and recruitment efforts over the past several years has reduced wait times and the call abandonment rate for customers that do not utilize the courtesy call-back feature in the CSO's interactive voice response ("IVR") system.

Table 1

Year	Annual Percentage of Calls Answered in 60 Seconds	First Contact Resolution	Average Speed of Answer (minutes)	Abandonment Rate
2020	67%	N/A	4:43	15%
2021	43%	N/A	10:19	24%
2022	45%	53%	7:50	21%
2023 (January through August)	67%	57%	2:37	9%

As shown in Table 1, the Company has made substantial progress in 2023 toward its performance objectives of answering 80% of calls within 60 seconds and achieving a call abandonment rate of 8%.

Q. Has the CSO implemented enhancements to the Company's myWater customer service portal to help PAWC customers to efficiently manage their accounts online?

A. Yes. Currently, nearly 50% of PAWC customers complete transactions with the Company online. The CSO and PAWC continue to expand options for customers to communicate with the Company and access information about their utility service through online self-service options. The myWater portal allows PAWC customers to effortlessly make payments, view water usage history, check balances and schedule appointments for some service items, 24 hours a day, 7 days a week. Through the portal, customers can also enroll in the Company's free paperless billing program and schedule automatic payments. The CSO continually refines the myWater portal to expand functionality and improve the customer experience. Since the myWater portal was launched in 2020, the CSO has implemented a variety of enhancements, including allowing automatic credit card payments, allowing customers to apply for a leak adjustment online, and improved navigation and scrolling.

Q. Please explain the CSO's efforts to increase paperless billing to increase customer engagement and, ultimately, satisfaction.

A. About 25% of PAWC customers are enrolled in paperless billing today. Increasing adoption of paperless billing is a key CSO initiative to improve customer satisfaction because it provides a convenient way for customers to access, pay and store their bills.

Using the Company's self-service portal to pay bills online reduces the time spent paying that bill, the clutter that comes with paper bills and a customer's carbon footprint. Paperless billing also reduces the Company's postage and paper costs by over $6.75 per bill per year. Postage rates increased twice in 2023 including a five percent increase in January 2023 and another five percent increase in July 2023. Postage rates are forecasted to increase twice a year going forward, so the operational cost savings from paperless billing will only continue to grow.

In 2023, PAWC encouraged customers to learn more about paperless billing and enroll in several communications, including a bill insert to all customers in August 2023, two customer emails in August and October 2023 with approximately 495,000 successful deliveries and three email campaigns where customers could establish a myWater account and enroll in paperless billing with one click. The Company's myWater users also receive a web pop-up every six months to remind them about the paperless billing option. PAWC employs many other tools to encourage customers to consider paperless billing including social media, website assets, on-bill and bill envelope messaging, and new welcome kits. The CSO also has scripting for CCAs to encourage, but not require, new customers to sign up for paperless billing.

Q. Ms. Degillio, what strategies has the CSO pursued in the last two years to maintain high levels of overall customer satisfaction?

A. As stated above, the CSO is always seeking ways to improve the experience of our customers and to perform our services more efficiently. I will highlight a few notable improvements made in the past 24 months based on customer feedback and evolving industry best practices. First, the CSO bolstered quality assurance for call handling.

Previously, we listened to at least ten calls per CCA per month that were randomly selected. The Company's call handling QA process includes reviewing any call where the customer rated the call as poor in the post-transaction survey. This not only allows us to provide better and more timely feedback to our CCAs and supervisors, but we are also able provide prompt and targeted training to ensure overall customer satisfaction with the CCA.

In addition to enhancements to the myWater portal, the CSO has streamlined customer interactions by updating website and IVR content and adding a virtual assistant to answer frequently asked questions and recurring concerns quickly so there is less need to talk to a CCA. The CSO also has pursued technological advancements in recent years to streamline administrative tasks and provide more time for our employees to focus on customer interactions. For example, in 2022, the CSO automated employee time and attendance. Prior to this upgrade, supervisors in both our billing and customer care teams had to engage in a time-consuming manual process to review when employees logged in for work and when breaks were taken to manage attendance.

Q. Are there any recent CSO improvements pertaining to PAWC's commercial and industrial ("C&I") customers that you would like to highlight?

A. Yes. Over the past 24 months, we have made improvements for our C&I customers and residential customers with more than one meter. One example is collective billing, which is where a customer can combine multiple meters into one bill. The same customer can access all of their accounts with a single sign-on to the myWater portal. We also held webcasts for major accounts in 2022 on conservation and diversity, equity, and inclusion. PAWC's major accounts program also now offers personalized service and a single point

of contact for the Company's largest C&I customers to provide value-based solutions and improve their overall customer experience.

COMMITMENT TO CUSTOMER ASSISTANCE

Q. How does PAWC provide assistance to customers who may need help paying their water or wastewater bills?

A. Affordability is critical to PAWC and American Water. Company witness Charles Rea describes how we assess the affordability of water and wastewater service in his direct testimony (PAWC Statement No. 10). PAWC has multiple ways to help customers in need, including low-income customer assistance programs, which I discuss below, budget billing and payment plans.

Q. Please describe the Company's existing low-income customer assistance programs.

A. Under the H2O Program, PAWC offers a range of financial assistance for qualifying water and wastewater customers. The H2O Bill Discount Program ("BDP") provides substantial bill reduction assistance for both water and wastewater customers with annual household incomes at or below 150% of the Federal Poverty Level ("FPL"). Additionally, BDP participants can receive water-saving device kits and educational programming through the H2O Program to help those customers conserve water and potentially lower their water and wastewater bills. BDP participation is "portable," meaning that an otherwise qualified customer will not be removed from the BDP if the customer changes their service address to another location within the Company's service territory.

The H2O Program also provides Hardship Grants for qualifying customers with annual household incomes at or below 200% of the FPL. A customer may receive a Hardship

Grant equal to the customer's total account balance at the time of grant issuance, up to the maximum annual grant amount of $500 for water service and $500 for wastewater service. H2O Hardship Grants are funded through an annual corporate donation (currently $625,000 for water and $125,000 for wastewater) as well as customer and employee donations.

Q. Does the Company perform outreach to customers regarding its low-income assistance programs?

A. Yes. PAWC utilizes a variety of tools and methods to inform its customers about the benefits provided by the H2O Program, including direct customer communication, participation in PUC consumer education events and local community events, and Dollar Energy Fund ("DEF") outreach.

Direct Customer Communications. PAWC combines broad-based communications to all residential PAWC customers with more targeted outreach activities to educate customers about assistance programs. The broader communications strategy includes bill inserts, email campaigns, the New Customer Booklet and social media (e.g., Facebook, Twitter, and YouTube). PAWC customers may also call our toll-free customer service line or visit PAWC's website for information on the benefits available under the H2O Program (with downloadable flyers available in both English and Spanish) and how to contact the Company to apply for the program. PAWC also employs targeted social media, direct mail and in-person outreach in zip codes with higher percentages of low-income customers overall (i.e., household income of 0-150% of FPL) as well as zip codes with higher percentages of customers with a household income of 0-50% of FPL. For example, the Company recently promoted its BDP and Hardship Grants via a direct mailing

to the 32 zip codes with the highest percentages of customers in the 0-150% of FPL range, representing approximately 55,000 customers. PAWC has also partnered with community service organizations such as the Chester County Food Bank and Phillipsburg YMCA to make customer assistance program fact sheets available to food pantry recipients.

PUC Events. The Commission's consumer education events are also an important part of the PAWC's outreach program. For many years, PAWC has been an active participant in the PUC Be Utility Wise ("BUW") consumer education event promoting consumer awareness, utility education, life management skills and financial literacy. The BUW events bring together hundreds of representatives from front-line community-based organizations ("CBOs") and other key stakeholders to engage, educate and help them better understand utility customer assistance programs available in their communities. The event focuses on ways to help low-income households maintain essential services by: (1) sharing tools and resources about customer assistance program and conservation; (2) reviewing information and guidelines about support programs; and (3) exchanging ideas on ways to improve service to at-risk households.

Local Community Events. PAWC also participates in many local events across the state, including utility fairs and senior fairs, to interact directly with customers. These events are held in neighborhood schools, churches, community centers, malls/shopping centers, and other community locations. For example, in the summer months of 2023, PAWC participated in several utility or customer assistance program fairs in the following areas, among others: Lackawanna County, Luzerne County, Coatesville, Port Vue, Duquesne City, Fayette County, Kane Borough, New Castle City, Clarion Borough, and Warren City. The Company has also focused on communicating low-income program

information in Spanish to several of its communities with higher concentrations of Spanish-speaking customers.

DEF Outreach. Finally, DEF provides public education about the Company's H2O Program through public service announcements, press releases, community speaking engagements, networking, and other methods deemed effective in alerting the public about the availability of the Company's low-income assistance programs and how the community can contribute to the Hardship Fund.

Q. Has the Company proposed an arrearage management program ("AMP") for qualifying low-income customers?

A. Yes. In PAWC's 2020 base rate proceeding, the Company agreed that it would present an AMP to the Commission for review and approval no later than six months after a final order in that proceeding. PAWC filed a petition to request approval of its AMP with the Commission on August 25, 2021 at Docket No. P-2021-3028195. The AMP proceeding is ongoing and a Further Amended Joint Petition for Full Settlement was filed on September 11, 2023 ("AMP Settlement"). Under the pending AMP Settlement, a customer is eligible to enroll in the AMP if : (1) they provide documentation establishing a household income is at or below 150% of the FPL, subject to the income-related provisions in the AMP Settlement; (2) they are enrolled or seeking enrollment in the BDP; and (3) they have at least a $150 arrearage balance (inclusive of water and/or wastewater charges), including arrearages that are at least 60 days past due. Customers participating in the AMP will receive $25 of arrearage forgiveness for each in-full payment of current charges plus the $5 co-pay made while the customer is in the program. Participants must recertify their income according to timelines detailed in the AMP Settlement in order to remain in the

program. If the AMP Settlement is approved, the Company will implement the AMP no later than twelve months after the Final Order in the AMP proceeding.

Q. Is the Company planning to make any enhancements to these low-income customer assistance programs?

A. Yes, the Company intends to make enhancements to the BDP, AMP and Hardship Fund to provide additional bill assistance to customers and also align program requirements. For the BDP, as explained in more detail by Mr. Rea in PAWC Statement No. 10, the Company is proposing to expand eligibility to customers with household income at or below 200% of the FPL. If approved by the Commission for the Company's BDP, the Company also intends to offer the AMP to qualifying BDP participants at or below the 200% of the FPL. In addition, the Company is actively working on implementing income verification requirements for the BDP that are consistent with the income verification provisions of the AMP Settlement. Having these requirements up and running will help facilitate the launch of the AMP after Commission consideration and approval of the AMP Settlement.

PAWC also plans to make enhancements to the Hardship Fund in accordance with a settlement that is pending before the Commission in the proceeding related to the Company's proposed acquisition of the Butler Area Sewer Authority's wastewater system assets (the "BASA Settlement").[1] Specifically, if the BASA Settlement is approved by the Commission, PAWC will expand eligibility to customers with household income at or below 250% of the FPL and contribute $3.5 million to the Hardship Fund ($700,000

[1] *See Application of Pennsylvania-American Water Company-Wastewater Section 1329 of the Pennsylvania Public Utility Code, 66 Pa. C.S.§ 1329, for the Acquisition of Butler Area Sewer Authority's Wastewater System Assets*, Docket No. A-2022-3037047 (Joint Petition for Settlement filed Aug. 14, 2023, pp. 26-27).

annually for 5 years) in addition to PAWC's annual $750,000 contribution. This increased funding level is also expected to provide eligible customers with access to Hardship Fund dollars year-round regardless of service status. In other words, if the BASA Settlement is approved, the Company would not likely need to limit Hardship Fund availability during certain months of the year to only customers at risk of service termination or who are already disconnected due to non-payment.

Q. What actions does the Company take with regard to Low-Income Household Water Assistance Program ("LIHWAP") grants?

A. The Company performs targeted customer outreach (e.g., direct mail, e-mail and social media) about the availability of LIHWAP grants and applies awarded grants to customer accounts. In the most recent round of LIHWAP funding, for which the application window closed on August 18, 2023, PAWC has applied over 2,400 grants to customer accounts, totaling approximately $1.11 million. In addition, PAWC is automatically enrolling LIHWAP recipients into its BDP to the extent the customer is not already enrolled.

Q. Have there been any other technology improvements implemented recently to improve customer assistance program delivery?

A. Yes. In 2023, PAWC implemented a customer assistance portal to improve service to our most vulnerable customers. The overall goal of this tool was to automate the processing of pledge information from third-party assistance providers, such as DEF, LIHWAP, non-profits, churches, community groups, etc. Before this tool was implemented, assistance providers needed to directly contact us with questions about customers and outstanding balances. If a pledge was approved, the assistance provider then transmitted the amount

and account information which was manually added to each account to reflect the pledges. This new portal automates both the provision of necessary information to the assistance provider and the loading of the pledge into SAP so that the pledge is reflected in the customer's account. Overall, this portal improves the efficiency of the pledge-related activities of the Company and the CSO and delivers more timely pledges to benefit our customers.

CONCLUSION

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF CHARLES REA

Q. What is your name and business address?

A. My name is Charles B. Rea. My business address is 3409 Research Parkway, Davenport, Iowa 52806.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or "Service Company") as Senior Director, Enterprise-Wide Regulatory Pricing & Affordability. I am providing testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. Please summarize your educational background and professional experience.

A. I received a Bachelor of Arts degree in Computer Science from the University of Illinois at Springfield in 1986 and a Master's degree in Statistics and Operations Research from Southern Illinois University at Edwardsville in 1990. I have been employed by AWWSC since January 2018. Prior to my employment with AWWSC, I was employed by MidAmerican Energy Company ("MidAmerican") from June 1990 through January 2018. I have over 30 years of utility experience covering a wide range of issues including electric system planning, sales and revenue forecasting, electric load research, marketing, rates, cost of service, and energy efficiency. Most recently, at MidAmerican, I was Director, Energy Efficiency and Regulatory Analytics. In that position I had responsibility for planning, evaluation, and operational management of MidAmerican's energy efficiency and demand response programs in Illinois, Iowa, and South Dakota, as well as direct responsibility for electric and natural gas sales and revenue forecasting, electric peak

demand forecasting, load research, retail pricing of electric and natural gas products, and electric and natural gas cost of service and rate design.

Q. What are your current employment responsibilities?

A. My primary responsibility in my role as Senior Director, Enterprise-Wide Regulatory Pricing & Affordability, is to serve as a subject-matter expert on rate design, revenue issues, and affordability issues. I am responsible for the development and preparation of rate design analyses, as well as presenting cost of service and rate design proposals to our internal and external stakeholders. In addition, I am the Company's subject-matter expert on forecasting and the statistical analysis of customer usage for rate case purposes and I am the Company's subject-matter expert on the analysis of the affordability of the Company's water and wastewater service to its customers.

Q. What is the purpose of your direct testimony?

A. I will sponsor the Company's proposed rate design for both water and wastewater service and will provide calculations and evidence necessary to support the Company's proposed rates. I will also present the Company's affordability analyses for water and wastewater service and PAWC's proposal to expand access to its Bill Discount Program ("BDP"). In addition, I further present the Company's analysis of residential, commercial, and public authorities' water consumption as it relates to the impact of the COVID-19 pandemic on water usage and long-term trends in water usage. I will, further, present the Company's determination of Test Year revenues at Present Rates and Proposed Rates. Finally, I will present the basis and rationale for the Company's proposed Revenue Decoupling Mechanism ("RDM").

Q. Please identify the exhibits you will be sponsoring in this proceeding.

A. I am sponsoring the following Company Exhibits attached to my testimony:

- Exhibit CBR-1 – Water Affordability Analysis
- Exhibit CBR-2 – Wastewater Affordability Analysis
- Exhibit CBR-3 – Proposed Water Rate Design
- Exhibit CBR-4 – Proposed Wastewater Rate Design
- Exhibit CBR-5 – Residential Usage Analysis
- Exhibit CBR-6 – Commercial Usage Analysis
- Exhibit CBR-7 – Municipal Usage Analysis
- Exhibit CBR-8 – RDM Cost Component Calculations
- Exhibit CBR-9 – RDM Projected Results
- Exhibit CBR-10 – RDM Analysis for Docket No. M-2015-2518883
- Exhibit CBR-11 – NARUC Resolution

I also am sponsoring Exhibit Nos. 10-A through 10-E, which set forth the proof of revenues from the application of present and proposed rates for each system.

Q. How is your Direct Testimony organized?

A. My Direct Testimony is organized into the following sections:

- Affordability
- Expansion of Low-Income Programs
- Rate Design
- Wastewater to Water Revenue Requirement Reallocation (Act 11)
- Analysis of PAWC Usage
- Revenue Calculations
- Revenue Decoupling Mechanism

AFFORDABILITY

Introduction

Q. Please describe the concept of affordability.

A. The concept of affordability for water and wastewater service is based on the idea that everyone should have access to drinking water and wastewater service that is (1) safe, meaning it complies with the U.S. Safe Drinking Water Act and regulations promulgated by the U.S. Environmental Protection Agency; (2) reliable, so that it is resilient in the face of floods, droughts, and other climate risks; and (3) affordable.

Q. Why is affordability of water and wastewater service an important issue to the Company?

A. The Company knows that its water and wastewater service is essential, and we know how important it is for that service to remain affordable. Maintaining affordability of service is an important objective for PAWC as discussed in the direct testimony of Ashley Everette in PAWC Statement No. 1 and Deborah Degillio in PAWC Statement No. 9.

Q. How does the Company assess the affordability of its water and wastewater service?

A. The Company assesses the affordability of its water and wastewater service by comparing annual bills for water and wastewater service to household income in the communities that we serve. Such an assessment requires at least two data points – the average monthly or annual bill for water service and some measure of household income for the customer population. For the broader residential customer base, commonly available household income measures are measures of income at different percentiles. Median Household Income ("MHI"), which is household income at a 50th percentile level (50% of households in a given population have incomes greater than the median and 50% of households have

incomes lower than the median), can be measured at a statewide or community level and can be paired with a data set that provides the number of customers served in each community to arrive at a weighted number that represents MHI for the Company's entire service territory.

At a more detailed level, individual household income is considered, and affordability can then be assessed, across a full range of households based on their various income levels and bills for water and/or wastewater service. A variety of household income data is readily and publicly available from the U.S. Census Bureau through the American Community Survey ("ACS") at the state, county, and community levels.

Q. What types of affordability analyses does the Company conduct?

A. The Company conducts two different types of affordability analysis for its water and wastewater service. The first analysis is an Enterprise-Level analysis of affordability, which considers affordability of service at a high level over a multi-year period. The second analysis is a Community-Level analysis of affordability, which takes a deep dive into the affordability of service at the individual customer level under current or proposed rates and current economic conditions.

Q. Has the Company provided an affordability analysis of its water and wastewater service for the proposed rates in this case?

A. Yes. The Company's affordability study for water service is provided in Exhibit CBR-1 and the affordability study for wastewater service is provided in Exhibit CBR-2. Each exhibit contains both the Enterprise-Level Analysis and a Community-Level Analysis for the applicable service.

Enterprise-Level Analysis

Q. Please describe the Company's Enterprise-Level Analysis of affordability of service.

A. The Enterprise-Level Analysis of affordability for water and wastewater service is a historical comparison of average monthly bills for PAWC residential customers to household income for the Company's residential customers. The metric used to describe affordability is the Bill-to-Income ("BTI") Ratio, which is defined as annual water bills divided by estimated annual household income. This view looks at average residential monthly bills for all customers over time compared to MHI for the Company's residential customer base.

Q. What is the purpose of this Enterprise-Level Analysis?

A. The purpose of the Enterprise-Level analysis is to provide a high-level historical perspective on how the affordability of service has been trending over time and how it is expected to continue to trend under proposed rates. Although the Company is proposing to increase customer rates in this proceeding, the important metric to consider is the impact that proposed rates and bills have on customer finances and how those impacts have trended over time and are expected to trend going forward. This metric must consider not only trends in rates and bills but trends in household income. The BTI Ratio proposed by the Company considers all of these factors. The Company's BTI Ratio as presented in the Company's affordability analyses is the appropriate metric to use when looking at the impact of the Company's rates for water and wastewater service on customers.

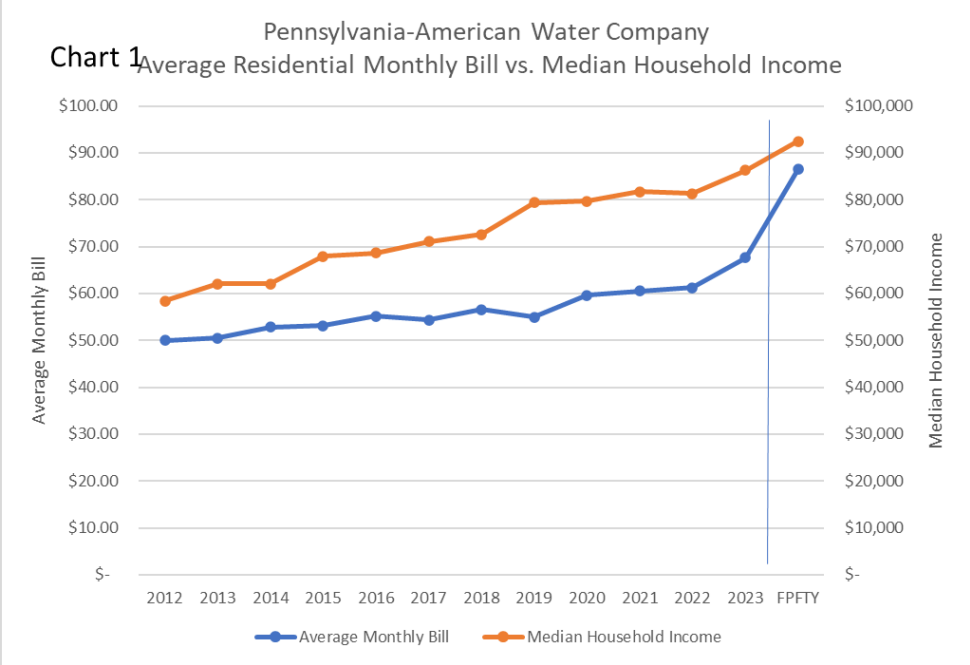
Q. How do you determine MHI for the customers in the Company's service territory?

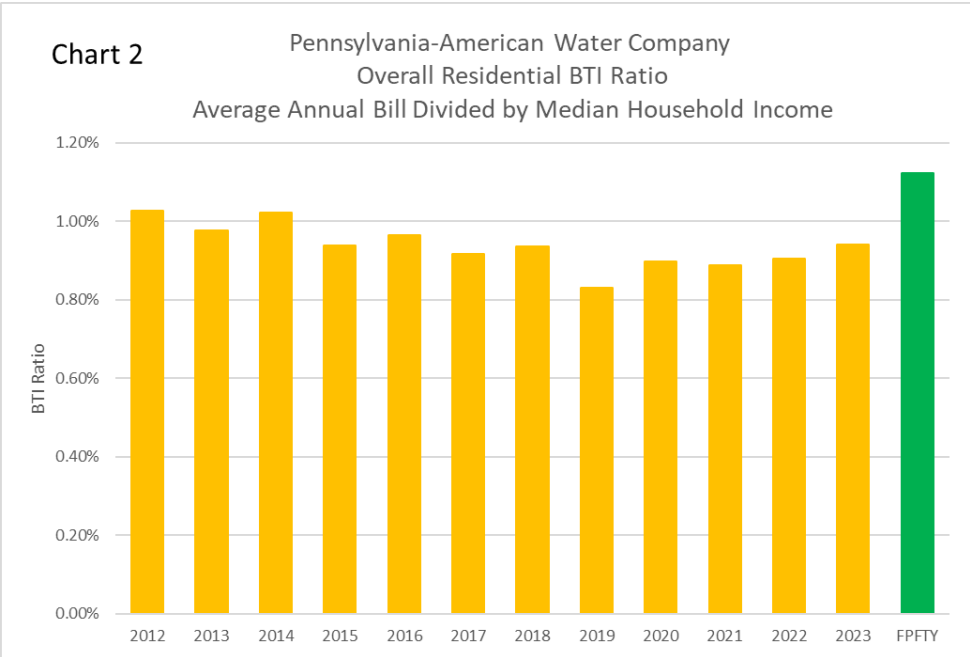
A. The MHI for the Company's service territory is a weighted average of the number of customers the Company serves in each community in the service territory and the median

household income in each of those communities for owner-occupied and single-unit, renter-occupied homes as reported by data in the ACS based on the most recent year's available data (2021 in this proceeding). The relationship between this service territory–specific figure and the MHI for the Commonwealth of Pennsylvania for 2021 (also provided at the community level through the ACS) is then applied to historical MHI data for the Commonwealth of Pennsylvania to arrive at historical MHI data for the PAWC service territory.

Q. What are the results of your Enterprise-Level analysis of affordability for water service?

A. The charts below compare historical average monthly water bills for water service to MHI for PAWC customers from 2012 through 2023 stated in absolute terms and stated in terms of the BTI Ratio, along with estimated average monthly bills under the Company's proposed rates in this case and the estimated MHI for PAWC water customers for the Fully Projected Future Test Year ending June 30, 2025 ("FPFTY"). The data shows that the BTI Ratios for water service for PAWC have held steady from 2012 through 2023 at levels between 0.8% and 1.0% of MHI. The BTI Ratio at the median income level is expected to be 1.12% under the Company's proposed water rates in this case.

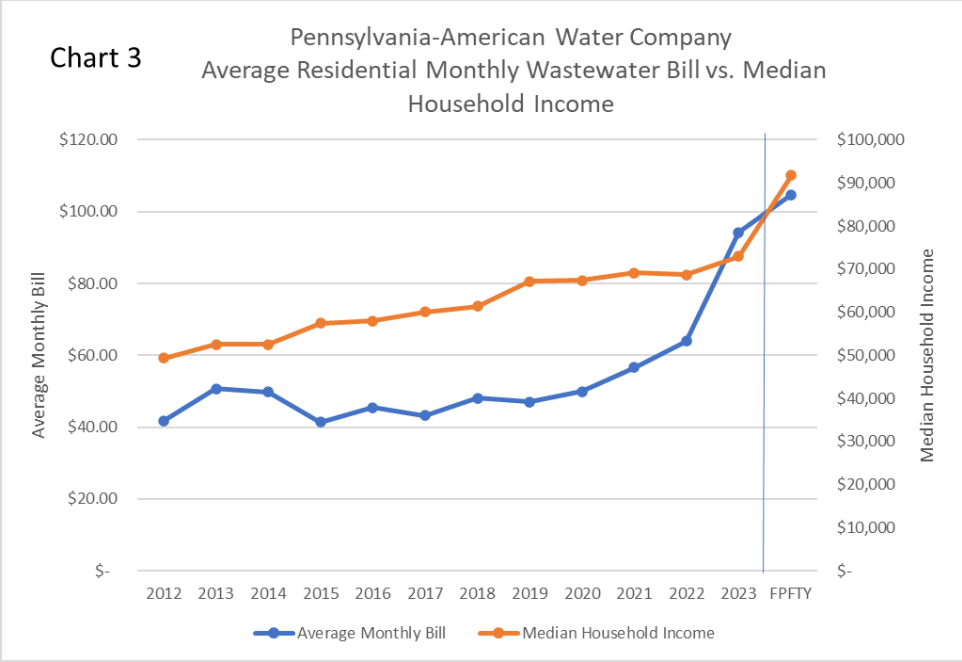


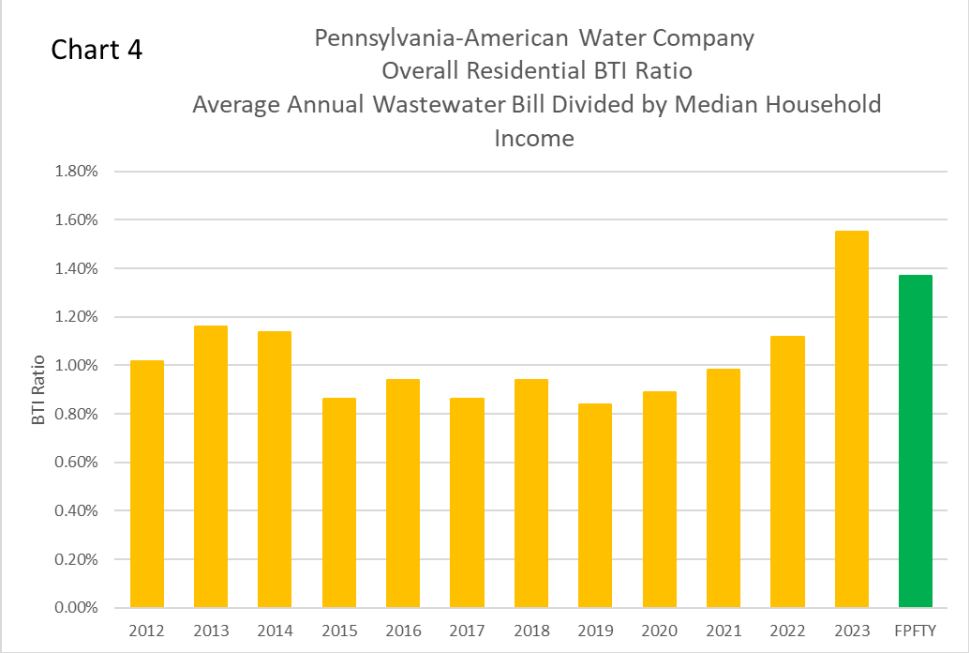


Q. What are the results of your Enterprise-Level analysis of affordability for wastewater service?

A. The charts below compare historical average monthly water bills for wastewater service to MHI for PAWC customers from 2012 through 2023 stated in absolute terms and stated in

terms of the BTI Ratio, along with estimated average monthly bills under the Company's proposed rates in this case and estimated MHI for PAWC customers for the FPFTY. The data shows that the BTI Ratios for wastewater service for PAWC customers have held steady from 2012 through 2022 at levels between 0.9% and 1.2% of MHI and rose to 1.55% in 2023. The BTI Ratio at the median income level is expected to be 1.37% under the Company's proposed wastewater rates in this case.





Q. Is there a generally accepted standard for the affordability of water and wastewater service expressed as a percentage of MHI?

A. There is no definitive standard for affordability as a percentage of MHI. Benchmarks for affordability expressed as a total bill's percentage of MHI is a policy decision. However, bills that are less than 2.0% or 2.5% of MHI for water and 4.0% to 4.5% of MHI for combined water/wastewater are considered "affordable" by some.[1]

Q. In your opinion can the assessment of affordability of service be reduced to basically a yes or no answer?

A. No, the affordability of water or wastewater service will never be that simple. One can generally measure average water bills against any given benchmark and come up with a yes or no answer, but affordability of service is a continuum, and that is what the

[1] Teodoro, Manuel P., "*Measuring Household Affordability for Water and Sewer Utilities*," Journal AWWA (2018), doi:10.5942/jawwa.2018.110.0002.

Company's Community-Level analysis, which I describe next in my Direct Testimony, shows. There will always be customers for whom water service is more affordable than for others depending on demographics and income levels. This is true across all of the communities that PAWC serves, including even the wealthiest communities that the Company serves.

Community-Level Analysis

Q. Please describe the Company's Community-Level Analysis of affordability of service.

A. The Community-Level Analysis takes a deeper dive into the affordability of water and wastewater service at a local level across different customer demographics and proposed rates for each community that the Company serves. For larger communities, the analysis is done at a zip-code level.

Q. What is the purpose of this Community-Level Analysis?

A. The purpose of the Community-Level Analysis is to identify, at an individual customer level, the percentages of household income that bills for water and wastewater service are expected to take up under the Company's proposed rates, and to identify demographic trends either by geographic location or by income level for customers where affordability of service may be an issue based on BTI Ratios measured at the individual customer level.

Q. How is this analysis different from the Enterprise-Level Analysis you previously presented?

A. The Enterprise-Level Analysis and the Community-Level Analysis are two different but complementary views of affordability. As previously stated, the purpose of the Enterprise-Level analysis is to provide a high-level historical perspective on how the affordability of service has been trending over time and how it is expected to continue to trend under

proposed rates. The Community-Level analysis takes a deep dive into the affordability of service at the individual customer level under current or proposed rates and current economic conditions.

Q. Is there academic research that supports the Company's approach to assessing affordability of service at this detailed level?

A. Yes. Cardoso and Wichman[2] outline a framework for assessing affordability of water service that uses the full distribution of household income at the local level rather than MHI or some other static representative level of income and uses varying levels of water usage at the individual household level instead of a static representative level of water usage. While my methodology differs from Cardoso and Wichman in certain areas, the goal remains the same, which is to analyze affordability at the individual customer level and identify customer groups where affordability of service may be an issue.

Q. What information is needed to conduct an analysis of the affordability of service at this detailed level?

A. The following information is used to assess affordability of service at the community and individual customer level:

- The number of customers served in each community.
- The distribution of owner-occupied households and renter-occupied households by income level in each community.

[2] Cardoso, Diego S. and Wichman, Casey J., "*Water Affordability in the United States*," Water Resources Research, vol. 58, issue 12 (2020).

- The percentage of occupied housing units that are owner-occupied households or renter-occupied households that are not in multi-dwelling buildings in each community.
- The average number of persons per household in each community for both owner-occupied and renter-occupied households.
- The distribution of the size of households (one-person, two-person, etc.) for households of different income levels.
- The standard definition of Basic Water Service.
- Current or proposed rate structures.

I will return to the Community-Level Analysis after I discuss the concept of Basic Water Service.

Q. Please describe the concept of Basic Water Service.

A. Basic Water Service is a water usage level that reflects the level of water consumption for basic human services (cooking, cleaning, sanitation, and general health requirements), which is then assumed to be constant from month-to-month and not subject to significant seasonality or weather conditions. This standard can be expressed in terms of gallons per resident per day. This service is different from discretionary seasonal water usage for filling swimming pools, lawn irrigation, etc. This definition of Basic Water Service can be used to customize a level of usage that accurately reflects water service for different sizes of households.

Q. How do you define Basic Water Service for the purposes of your customer-level affordability analysis?

A. For the purpose of the Company's affordability analyses, Basic Water Service is defined to be 40 gallons of water per household member per day. This figure is based on the review of relevant literature on the subject and a review of Company billing data for residential customers in months with minimum levels of discretionary water usage, all of which supports the definition of 40 gallons of water per household member per day.

Q. Why is this definition of Basic Water Service also suitable for wastewater analysis?

A. The definition of Basic Water Service at 40 gallons per household member per day is also suitable for wastewater analysis because wastewater billings, especially in light of the Company's proposal for winter averaging that I describe later in testimony, are based on the same type of service that Basic Water Service is meant to represent, namely water consumption for basic human services (e.g., cooking, cleaning, sanitation, and general health requirements). All of this service effectively is returned through the wastewater collection system and, therefore, the definition of Basic Water Service serves as an appropriate benchmark for analysis of affordability for wastewater service.

Q. Have you benchmarked this definition of Basic Water Service against actual Company residential billing data?

A. Yes. Based on the statistical modeling I described later in my Direct Testimony, current and projected levels of residential use per customer in non-seasonal months is approximately 3,000 gallons per month or less. These values are consistent with the definition of Basic Water Service at 40 gallons of water per household member per day.

Q. What information does your Community-Level Analysis provide?

A. The Company's Community-Level Analysis provides a complete set of demographic information for the Company's customer base in each community and a set of affordability

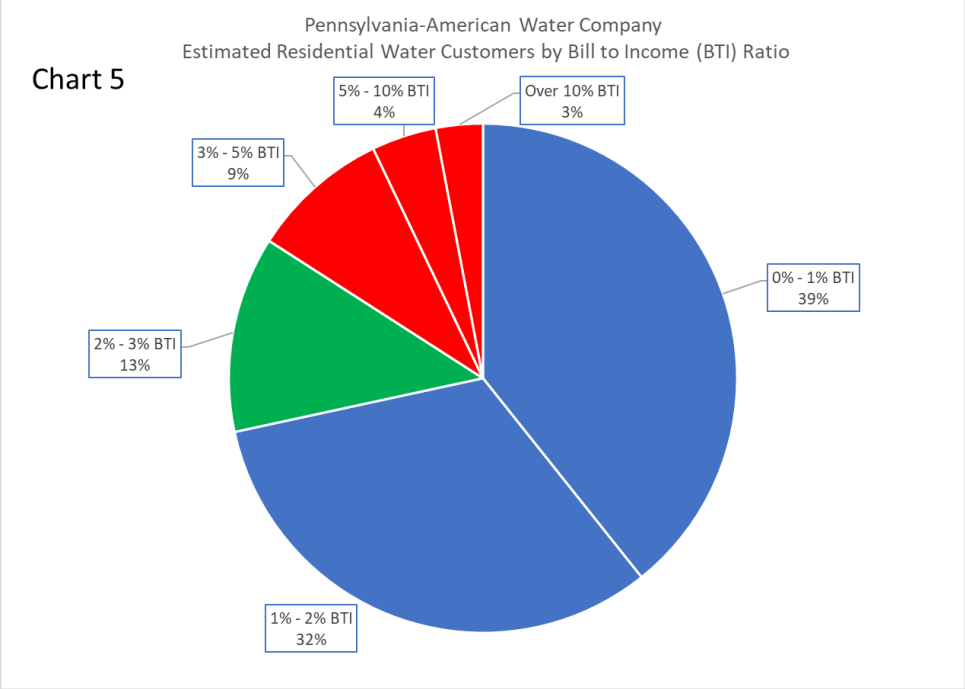
data for its service territory in total and for various cross sections of the Company's customers.

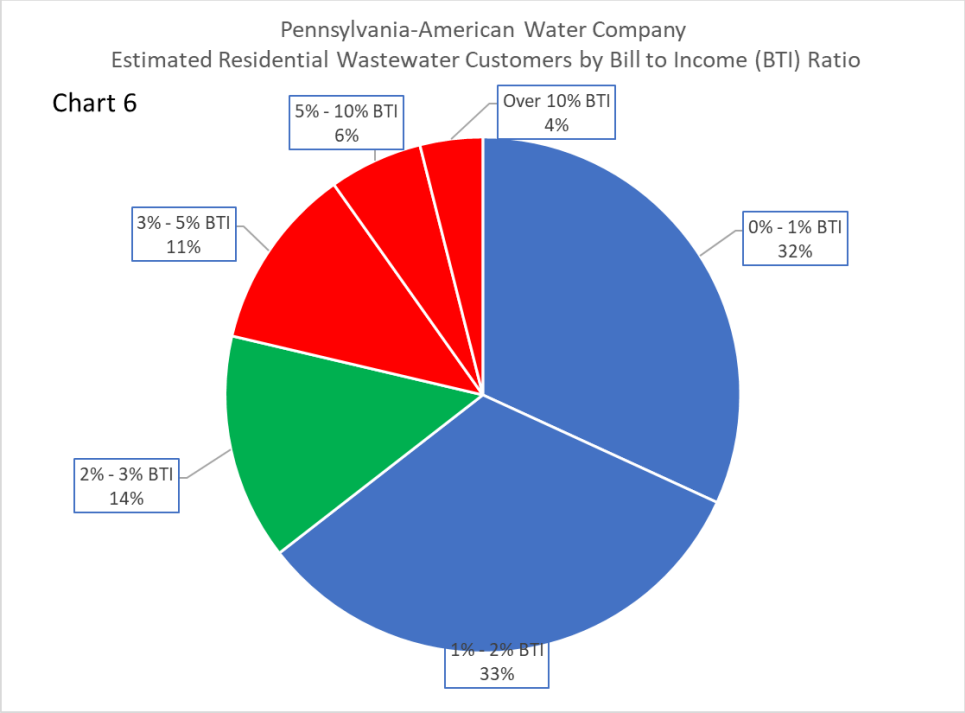
Q. What demographic information does your Community-Level Analysis provide?

A. The demographic information provided by this analysis is primarily economic in nature, although the analysis can be expanded to provide information on various identifiers such as race, languages spoken, etc. The primary demographic (economic) information provided by the analysis is the estimated number of customers at different levels of Federal Poverty Level ("FPL") and at different levels of household income. FPL is a measurement set by the U.S. Department of Health and Human Services of the minimum amount of annual income that is needed for individuals and families to pay for essentials, such as room and board, clothes, and transportation. The FPL takes into account the number of people in a household, their income, and the state in which they live. For Pennsylvania, the FPL guidelines for 2023 are set at $13,590 for a household size of one and $4,720 per year for each additional household member.

Q. What information does your Community-Level Analysis show?

A. Charts 5 and 6 below show, for both water and wastewater service, the relationship between residential customers' bills for Basic Water Service under the Company's proposed rates and level of household income.





These charts show that under the Company's proposed rate structure, the Affordability Index metric (discussed below) for the Company's service territory in total is 71% under proposed rates for water service and 65% under proposed rates for wastewater service,

meaning that 71% of our residential water customers and 65% of our residential wastewater customers can expect to see bills for Basic Water Service to be less than 2% of their household income. The Company estimates that there are approximately 176,900 residential water customers and 38,400 wastewater customers that will see bills for Basic Water Service above 2% of their household income, which is approximately 29% and 35% of the total customer population for water and wastewater service, respectively.

Q. Please describe the Affordability Index.

A. The Affordability Index ("AI") is a metric that reflects the percentage of a group of customers for whom Basic Water Service is expected to be less than a given percentage of annual household income. Consistent with my previous discussion in testimony regarding standards for affordability, the Company uses 2% of household income as the benchmark for this metric, which is at the conservative end of the range of affordability often cited. As an example, if, for a certain group of customers, it is estimated that 80% of those customers will have bills for Basic Water Service less than 2% of annual household income, the AI value for that group of customers is 80%.

The AI metric is designed to reflect the percentage of residential customers in a state, community, or demographic group for whom Basic Water Service is expected to cost 2% or less of annual household income. An AI value of 100% means that all customers within a selected group can expect Basic Water Service at less than 2% of household income. An AI value of 70% means that approximately 70% of customers within a selected group can expect Basic Water Service at less than 2% of household income, and 30% of customers in that group can expect Basic Water Service to cost more than 2% of household income. The AI value is calculated based on modeling of proposed rates and community-

level demographic information that I previously described in my testimony, which assesses affordability across the entire range of customer demographics in each community we serve.

Q. Why do you use 2% of household income as your benchmark for affordability of water or wastewater service?

A. The 2% benchmark is generally consistent with industry standards for affordability at the individual household level and is slightly lower than the 4.5% benchmark for combined water and wastewater service used by Cardoso and Wichman.[3]

Q. Is there a relationship between the data shown in Chart 5 and Chart 6 from the Community-Level Analysis and the data shown in Chart 2 and Chart 4 from the Enterprise-Level Analysis?

A. There is. The data in Chart 2 and Chart 4 shows BTI ratios at the MHI level, which is the 50th percentile household income, meaning that half of all customers have annual household incomes less than the 50th percentile level and half of all households have incomes greater than the 50th percentile level. For the 12-month period ending in June 2025, the BTI Ratio is anticipated to be 1.12% for water and 1.37% for wastewater. The data in Chart 5 and Chart 6 shows the distribution of BTI Ratios for the residential customer base in total, which inherently includes values for the MHI customer, which lies at the bottom of the pie chart (6 o'clock) at the point where half of the customers are to the left and half of the customers are to the right. The bottom point on the pie chart on Chart 5 covers approximately 25% of the 0%-1% BTI Ratio slice, and the bottom point on the pie chart on Chart 6 covers approximately 50% of the 0%-1% BTI Ratio slice. This data is

[3] Cardoso, Diego S. and Wichman, Casey J., *supra* note 2.

consistent with the BTI Ratios at the 50th percentile income level in Charts 2 and 4. Charts 5 and 6 show a range of BTI Ratios for the entire distribution of customers at a single point in time. Charts 2 and 4 show BTI Ratios for the 50th percentile household income level and also provide a historical perspective on how that value has trended over time and is expected to trend forward under the Company's proposed rates.

Q. Is affordability of service uniform across the Company's service territory?

A. No, it is not. While the Company's water and wastewater rates (and therefore bills) are the same for the vast majority of our customers, household income can vary significantly across the Company's service territory. PAWC has a very diverse service territory and serves customers in urban, suburban, and rural communities with household incomes that range from over $100,000 MHI to as low as $30,000 - $50,000 MHI. The Company's affordability analyses provided in Exhibits CBR-1 and CBR-2 provide information on the number of customers served in each community, the MHI for each community, and the BTI Ratios for Basic Water Service in each community.

Q. Do you have information on the Affordability Indices of service by income group?

A. Table 1 below shows AI values for the Company's residential customers by income level for water and wastewater service.

TABLE 1 Affordability Index by Income Level	Water Affordability Index	Wastewater Affordability Index
Above $150k	100%	100%
$100k - $150k	99%	98%
$75k - $100k	93%	87%
$50k - $75k	78%	73%
$35k - $50k	55%	49%
$25k - $35k	39%	34%
$20k - $25k	0%	14%
$15k - $20k	0%	5%
$10k - $15k	0%	1%
$5k - $10k	0%	0%
$0k - $5k	0%	0%

Q. Does your analysis consider customers who rent in multi-family buildings without individual meters?

A. No. The Company's Community-Level Analysis only considers customers that are assumed to be direct customers of the Company, meaning that they are directly responsible for payment of services to the Company. Direct customers are assumed to be owner-occupied households and single-family, renter-occupied households as reported by ACS data.

Q. Why does your Community-Level Analysis only concentrate on customers that are direct customers of the Company?

A. The Company's affordability analysis concentrates on customers that are direct customers of the Company for two reasons:

- The use of an MHI statistic, which best estimates household income for direct customers of the Company, is consistent with the calculation of the average bill, which is also based on direct customers.
- For indirect customers of the Company (e.g., renters in multi-family buildings), it is impossible to know definitively what these households pay in rent for water or wastewater service. Presumably, building owners that receive water and/or wastewater service from PAWC are recovering those costs through rents, but there is no way to know if owners are overcharging or undercharging renters or if they are also charging renters for building water or wastewater service that renters are themselves not actually using.

Q. Will the Company's proposed change in rates have an impact on people who use the Company's service but are not direct customers of the Company?

A. It is impossible to know what the impact of the Company's proposed rates will be on indirect customers of the Company. Rents may increase in part to recover increases in water service costs, but rents increase for many reasons, and the extent to which any increases can be attributable to the Company's proposed rates and the timing of such increases cannot be determined.

Q. How is all of this affordability information useful?

A. Assessing affordability information of water and wastewater service for the entire residential customer population can demonstrate whether customers, in general, are having or would have difficulty paying their water bills under the Company's current or proposed tariff structure. Assessing affordability information of water and wastewater service for lower-income customers can indicate the number of customers that may be having trouble

paying their utility bills, where the customers are in the Company's service territory, and the extent to which those bills may pose challenges for certain customers. This can, in turn, inform decision-makers about the size and scope of efforts that may be needed to help these vulnerable customers better afford water and wastewater service, both in terms of general rate design proposals that can reduce the cost of Basic Water Service for all customers, including lower-income customers, and customer assistance programs that may include customer grants, tariff discounts, levelized billing, and outreach programs.

Q. What conclusions do you draw based on the Company's affordability analyses?

A. There are three conclusions that can be drawn from Company's affordability study:

- The affordability of the Company's water and wastewater service from 2012 through the forecast test period indicates that the way the Company has invested in and managed its water and wastewater systems has indeed been for the long-term benefit of our customers.
- The Company's water and wastewater service has been, is, and is expected to continue to be affordable for the majority of its residential customers, including under the rates proposed in this case.
- There are, however, groups of customers for whom affordability of water and wastewater service may be challenging.

Q. How do the Company's affordability analyses and mitigation strategies enhance the value of the Company's water and wastewater service?

A. All stakeholders (regulators, customers, consumer advocates, community leaders, employees, shareholders, etc.) benefit from a financially sound utility providing safe, reliable, and affordable service to its customers. The Company's analyses provide

important insights into the affordability of its services and can help inform all stakeholders on strategies for improving affordability for customer groups that may be struggling financially.

LOW-INCOME PROGRAMS

Current Program

Q. Please describe the Company's current BPD for water and wastewater service.

A. The Company's current BDP offers three tiers of discounts for both water and wastewater service based on different levels of household income, stated as multiples of FPL. The Company's current discount program is as follows:

TABLE 2 Eligible Customers	Water Service Charge Discount	Water Service Volumetric Discount	Wastewater Total Bill Discount
0% - 50% FPL	80%	80%	80%
51% - 100% FPL	65%	50%	55%
101% - 150% FPL	40%	25%	30%

Q. When was the BDP approved?

A. While the Company's low-income discount programs are well established, the current program offering different discounts for three tiers of household income was approved by the Commission in the Company's last base rate case in Docket No. R-2022-3031672.

Q. How many customers are eligible for the BDP?

A. Based on the affordability analysis provided in this case, the number of eligible customers for the current program by income level is as follows:

TABLE 3

Eligible Customers	Water	Wastewater
0% - 50% FPL	21,906	4,743
51% - 100% FPL	35,081	7,877
101% - 150% FPL	51,176	10,859

Expansion Proposal

Q. Is the Company proposing to make changes to the BDP as a part of this proceeding?

A. Yes. The Company is proposing an expansion of the existing program to include additional customers whose bills for water or wastewater service are likely to exceed 2% of household income.

Q. Please describe how the BDP will be expanded .

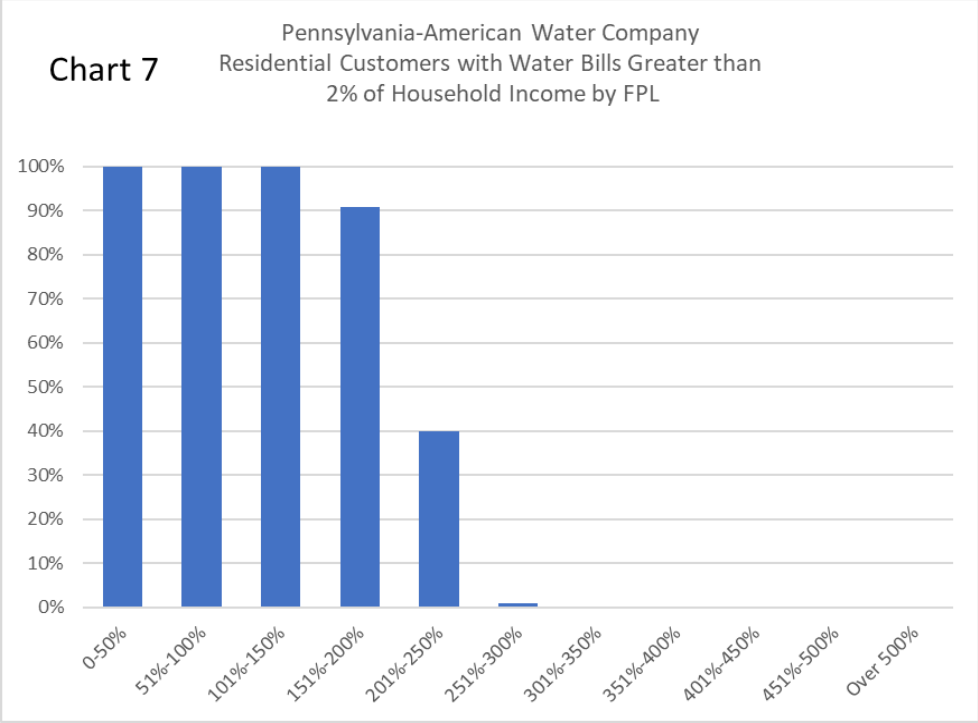
A. The Company is proposing in this case to add a fourth tier of eligibility to the current BDP and expand the program offerings to customers whose household incomes are between 151% and 200% of FPL. For water customers in this fourth tier of eligibility, the Company is proposing to offer discounts of 30% on the 5/8" meter charge and 15% on the volumetric rate. For wastewater customers in this fourth tier of eligibility, the Company is proposing to offer a discount of 20% on the total wastewater bill.

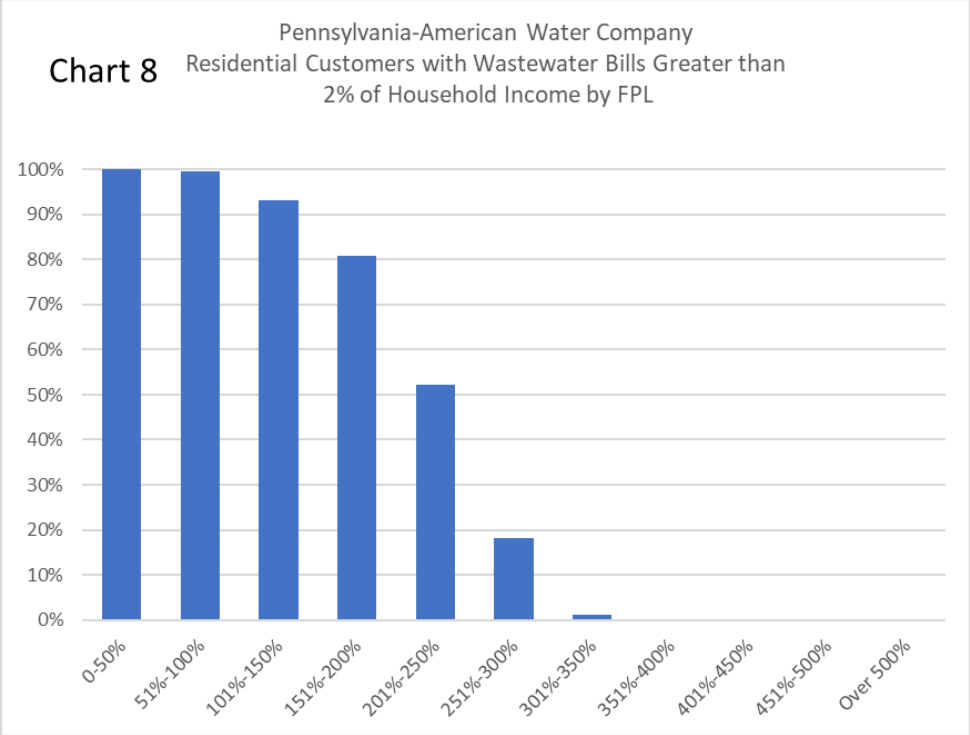
Q. Is the Company proposing any changes to the discounts offered to customers at or below 0-150% of FPL?

A. No. The Company is not proposing any changes to the programs for existing eligible customers. The proposed changes are only intended to expand eligibility to customers at the 151% to 200% FPL level.

Q. Why is the Company proposing to expand the BDP?

A. The Company is proposing to expand the low-income discount tariff to households with annual household income between 151% and 200% to address affordability issues under proposed rates in that demographic. The charts below show the percentage of customers at each interval of annual household income whose water or wastewater bills under the Company's proposed rates are expected to be more than 2% of household income prior to any discounts being offered.





These charts show that a majority of customers with household incomes between 151% and 200% of FPL will have bills for water and/or wastewater service at greater than 2% of household income. These customers are currently not eligible for the Company's low-income discount tariff. The Company's proposal to expand the current low-income discount tariff will increase affordability of service for these customers.

Q. If the BDP is expanded as the Company proposes, how many additional customers would become eligible for the BDP?

A. A substantial number of additional customers would be eligible for the BDP under the Company's proposal. Based on the Company's affordability analyses, the Company estimates that there are 51,252 residential water customers with household incomes between 151% and 200% of FPL, and 10,353 residential wastewater customers with household incomes between 151% and 200% of FPL.

Customer Impacts

Q. What will the impact be to newly participating customers in this program?

A. For newly participating customers with average monthly usage, the Company's proposed discounts in this fourth tier would equate to a bill savings of $16.23 for water (18% of the total bill) and approximately $20.00 per month for wastewater depending on the customer's specific rate and location.

Q. What participation rate is the Company assuming for the newly eligible 151%-200% FPL block?

A. For the purposes of ratemaking, the Company is assuming the same participation rate for the 151% to 200% FPL group that the Company observes in the 101% to 150% FPL group.

Q. Based on the total eligible population of customers and the expected participation rate, what level of additional discounts is the Company assuming in this proceeding?

A. The total associated level of annual discounts offered in this tier is expected to be approximately $3 million for water service and approximately $660,000 for wastewater service.

Q. How will this additional level of discount be recovered?

A. The additional costs associated with the BDP expansion will be recovered in the same manner as existing BDP costs – through residential customer base rates.

Q. What overall impact on affordability of service does the Company expect from the proposed expansion of these low-income discount tariffs?

A. The improvement in the affordability of service for participating customers in the 151% to 200% FPL group is expected to be significant. For water service, more than half of the

customers in the 151% to 200% FPL group whose bills were expected to be more than 2% of household income will now be below that threshold. For wastewater service, approximately one third of the customers in the 151% to 200% FPL group whose bills were expected to be more than 2% of household income will now be below that threshold.

RATE DESIGN

Introduction

Q. Do you sponsor exhibits that provide the Company's complete proposed rate design in this case?

A. Yes. Exhibits CBR-3 and CBR-4 provide the Company's proposed rate design for water and wastewater service in this case, which are based on the current rate design as modified by the proposals discussed below.

Q. Please discuss some of the important guiding principles associated with sound rate design.

A. There are a number of important principles that pricing analysts and policymakers consider when developing appropriate design mechanisms for retail water and wastewater service:

- **Cost Causation**: An important goal of rate design is to develop prices for water and wastewater service to retail customers that are intended to recover the Company's approved revenue requirement and that reflect the cost of providing service to retail customers. Cost of service results inform pricing decisions and guide how rates should be set such that each customer class contributes to the revenue requirement commensurate with their cost to serve. The principle of cost causation, which simply states that customers should pay for the costs that they are

deemed to cause the Company to incur, reflects the use of cost of service results in designing rates.

- **Revenue Stability**: Rates should be designed in a way that provides revenue stability to the utility and that can be reasonably expected to recover the utility's revenue requirement over the long run. Consistent recovery of the approved revenue requirement through well-designed rates helps the utility to prudently manage and invest in the water and wastewater systems, while poor rate design decisions can hamper the utility's ability to make investments, operate, and maintain the water and wastewater systems in a manner consistent with the long-term interest of its customers.
- **Efficiency of Use**: Rates should be designed to encourage the efficient use of water resources by customers. The volumetric charges for water service should appropriately reflect the variable cost of providing water service while also providing customers an appropriate incentive to conserve water and manage their bills. Rates should communicate to customers the full cost of providing water service.
- **Gradualism**: Changes in rate design should be made in a manner that avoids inappropriate levels of rate shock. Rate shock can come both from general increases in revenues that can affect all customers and from changes in rate designs that can cause large increases to specific groups of customers. Drastic changes in rates can cause customer confusion and dissatisfaction and have adverse effects on the utility's ability to provide quality customer service.

- **Avoidance of Discrimination**: Rates should not unduly discriminate between particular customer groups or provide different price signals to similarly situated customers taking similar services from the utility.
- **Simplicity and Feasibility**: Rate designs should be relatively simple, easy to understand, easy to communicate and manage, and should result in bills that are clear and understandable.
- **Affordability**: Development of rate designs that enhance the affordability of service to more vulnerable customers while still adhering to other more established principles of rate design is an important way that utility providers can enhance and maintain the value of service.

Q. How does the Company incorporate these guiding principles in its rate design?

A. Cost causation is the foundation of the Company's rate design. Revenue targets for customer classes, to be recovered through rate design, begin with the results of the Company's cost of service analysis, which allocates revenue requirements to customer class based on cost-causation principles. Cost causation, however, is not the be-all and end-all of rate design. All of the rate design principles I discuss are important; none more so than any other, and it is the consideration and balancing of these principles in total that constitutes the public policy aspect of ratemaking and leads to a determination of just and reasonable rates. Layered on top of cost causation are the other principles that I previously discussed (gradualism, revenue stability, avoidance of discrimination, affordability, for example), which ultimately result in a rate design that is fair to all customer groups and that is just and reasonable.

Water Rate Design

Q. Please describe the Company's current tariff structure for water service.

A. The Company currently offers water service in five different rate zones. These rate zones are as follows:

- Rate Zone 1 - General Statewide Rate
- Rate Zone 2 - Valley
- Rate Zone 3 - SLIBCO
- Rate Zone 4 - Turbotville
- Rate Zone 5 - Steelton

The largest of these rate zones by far is Rate Zone 1, with over 99% of the Company's total water revenue.

Q. Please describe the Company's current rate structures for these tariffs for residential and nonresidential customers in Rate Zone 1.

A. The Rate Zone 1 tariff offers service to all residential and non-residential customer classes through a monthly fixed charge that varies with the size of the meter (identified in PAWC's water tariff as a "service charge") and volumetric rates (identified in PAWC's water tariff as "consumption charges"). There are separate rate structures for each customer class.

- The residential water service charge for most customers is $17.50 per month for a 5/8", ¾", 1" and 1½" meter, and the service charge increases with the size of the meter beginning with 2" meters. A single volumetric rate of $1.6108 per hundred gallons applies to all residential customers.
- The commercial water service charge begins at $18.50 per month for a 5/8" meter, and the service charge increases with the size of the meter beginning with ¾"

meters. A two-block volumetric rate applies to commercial customers of $1.5613 per hundred gallons for the first 16,000 gallons per month and $1.1493 per hundred gallons for usage over 16,000 gallons per month.

- The municipal water service charges are the same as the commercial service charges, but the volumetric rates are different. A two-block volumetric rate applies to municipal customers of $1.6700 per hundred gallons for the first 16,000 gallons per month and $0.9140 per hundred gallons for usage over 16,000 gallons per month.
- The industrial water service charge begins at $28.00 per month for a 5/8" meter, and the service charge increases with the size of the meter beginning with ¾" meters. A three-block volumetric rate applies to industrial customers of $1.4200 per hundred gallons for the first 16,000 gallons per month, $1.0804 per hundred gallons for the next 584,000 gallons of usage per month, and $0.8499 per hundred gallons for usage over 600,000 gallons per month. In addition, the Company offers industrial curtailment rates that are identical to those described above, but with an additional rate step of $0.5110 per hundred gallons for all usage above 15,000,000 gallons per month and the requirement that the customer meet specified requirements to qualify for the rate, such as a minimum monthly purchase volume, a minimum load factor, and on-site water storage for industrial (non-fire protection) use during periods of curtailment.
- The Sales to Other Water Utilities service charge begins at $29.10 per month for a 5/8" meter, and the service charge increases with the size of the meter beginning with ¾" meters. The volumetric rates for Group A service is $0.7950 per hundred

gallons for all water service and the volumetric rate for Group B service is $1.1300 per hundred gallons for all water service.

Q. Does the Company have special rates for larger customers?

A. The Company offers a limited number of special rates designed to retain and attract the load of larger customers in Rate Zone 1 that have competitive alternatives to service from the Company. Currently, the Company has customers that are served on two of those rates: the Demand-Based Industrial Service rate and the Demand-Based Resale Service rate.

Q. Does the Company offer fire protection service?

A. Yes. The Company offers both public and private fire protection service. Public fire protection rates are based on a monthly hydrant fee that varies depending on where in the service territory the service is offered and the vintage of the rates. These rates are subject to the requirement that revenues from fire hydrants can be no more than 25% of the calculated cost of service for public fire service. Private fire service rates are also offered and are generally based on the size of the service line used in providing the service. Service is offered on both a metered and an unmetered service basis.

Q. Please describe the Company's current rate structures in the other pricing zones where water service is offered.

A. In zones other than Rate Zone 1, the Company's rate structures are as follows:

- Rate Zone 2 (Valley): Service in Rate Zone 2 is offered to all customers through a monthly service charge of $28.12 for all customers, and a volumetric charge that provides an allowance for the first 3,400 gallons of monthly usage at no additional

charge, and a volumetric rate of $0.8400 per hundred gallons for all water used above 3,400 gallons per month.[4]

- Rate Zone 3 (SLIBCO): Service in Rate Zone 3 is offered to all customers through service charges that increase with the size of the meter starting at $63.55 for a 5/8" and 2" meter and increasing to $309.90 for an 8" meter. Volumetric rates for all customers start at $1.8940 per hundred gallons for the first 20,000 gallons of usage per month and drop to $1.6780 per hundred gallons for the next 80,000 gallons of usage, and $1.3810 per hundred gallons for all usage above 100,000 gallons per month.
- Rate Zone 4 (Turbotville): Service in Rate Zone 4 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. Service charges are identical to Rate Zone 1. Volumetric rates are the same as Zone 1, except for the commercial rate, which is $1.0706 per hundred gallons for all commercial usage.
- Rate Zone 5 (Steelton): Service in Rate Zone 5 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. Volumetric rates are set at $1.6108 per hundred gallons for the first 20,000 gallons of usage per month and $1.2500 per hundred gallons for usage above 20,000 gallons per month. For all customers except for industrial customers, monthly service charges are identical to those for Rate Zone 1. For industrial customers, the

[4] The Company's currently approved tariff includes a step-in rate for Valley. The rates shown here will be effective November 19, 2023.

monthly service charges are $24.83 for 5/8" and ¾" meters and escalate for larger meter sizes above ¾".

Q. Is the Company proposing consolidation of rate zones for water service in this case?

A. Yes. The Company is proposing in this case to move Rate Zone 2 Valley, Rate Zone 3 SLIBCO, Rate Zone 4 Turbotville, and Rate Zone 5 Steelton rates to Rate Zone 1 rates. The Company is also proposing to move Farmington toward consolidation with Rate Zone 1. No changes are proposed for Audubon rates.

Q. Is the Company proposing to change the monthly service charges in this case?

A. Yes. Consistent with the cost-of-service analysis supported by Company witness Connie Heppenstall in PAWC Statement No. 12, the Company is proposing a 5/8" monthly meter service charge of $20.00 per month for residential, commercial, and municipal customers in Rate Zone 1 and in the other rate zones being combined with Rate Zone 1. The Company is proposing to increase meter charges for residential, commercial, and municipal customers for other meter sizes proportionally, except that residential meter charges for ¾", 1", and 1½" meters will all be set at $20.00. No increases are proposed to existing Rate Zone 1 industrial and Other Water Utility ("OWU") meter charges.

Q. Is the Company proposing to change the rate structure associated with its volumetric rates?

A. The only changes in the volumetric rate structure proposed in this case are changes in the steps for volumetric rates necessary to move the rate zones I previously mentioned (Steelton, Valley, and SLIBCO) to Rate Zone 1 rates. No other changes in volumetric rate structures are being proposed.

Q. Are there any other changes the Company is proposing to its water service rate design?

A. The only other change proposed to the Company's water service rate design is an expansion of the low-income discount tariff program, as described earlier in my testimony.

Q. Please describe how the Company is proposing to allocate its proposed revenue increase for water service to each customer class.

A. The Company is proposing in this case to set water service rates based on the cost of service studies sponsored by Ms. Heppenstall, with the exception of the increase to the OWU class, which is capped at 30%, and the remaining OWU allocated revenue requirements allocated to other customer classes based on relative levels of cost of service. In addition, the Company is proposing a reallocation of a portion of its wastewater revenue requirements to its water service customers consistent with Act 11 of 2012, which I describe later in my testimony.

Q. Do you have a schedule that shows the Company's current and proposed rate design for water service?

A. Yes. The Company's proposed rate design in this case for water service is provided in Exhibit CBR-3.

Wastewater Rate Design

Q. Please describe the Company's current tariff structure for wastewater service.

A. The Company provides wastewater service under a variety of different rate schedules and in a variety of different rate zones. The categories of rate zones under which the Company offers wastewater service are as follows:

- Sanitary Sewer Systems ("SSS"):
    - Rate Zone 1: PAWC Statewide
    - Rate Zone 2: New Cumberland
    - Rate Zone 5: Valley
    - Rate Zone 7: York
    - Rate Zone 8: Foster Township
    - Rate Zone 9: Royersford
- Combined Sewer Systems ("CSS"):
    - Rate Zone 3: Scranton
    - Rate Zone 4: Kane
    - Rate Zone 6: McKeesport

Q. Please describe the Company's current rate structures in its SSS rate zones.

A. Rate structures differ for the six rate zones in the SSS group as follows:

- Rate Zone 1 (Statewide Rate): Service in Rate Zone 1 is offered through a single monthly service charge and volumetric rate for all residential and nonresidential service. The monthly service charge is $14.30 for residential customers and $35.00 per month for nonresidential customers. The volumetric rate applies to all metered usage and is $2.8750 per hundred gallons for residential service and $2.1030 per hundred gallons for nonresidential service. Unmetered service is offered to residential customers at $106.00 per month.
- Rate Zone 2 (New Cumberland): Service charges in Rate Zone 2 are identical to service charges in Rate Zone 1, but the volumetric rates for service are slightly

lower. In Rate Zone 2, the volumetric rate is $2.4500 per hundred gallons for residential service and $1.9000 per hundred gallons for nonresidential service.

- Rate Zone 5 (Valley): Rates in Rate Zone 5 are identical to Rate Zone 1.
- Rate Zone 7 (York): Service in York is offered through a single monthly service charge for all customers of $18.00 per month, which includes an allowance of 2,000 gallons, plus a volumetric rate of $0.9370 per 100 gallons for usage over 2,000 gallons per month. The Company's currently approved tariff allows for a second step of rates to be effective May 27, 2025. These rates include a service charge of $18.00 per month for residential customers and $30.00 per month for nonresidential customers. The volumetric rate effective May 27, 2025, consists of a free allowance of 2,000 gallons per month and a volumetric charge for service above the allowance of $2.7375 per hundred gallons for residential customers and $1.6380 per month for nonresidential customers. In addition, bulk service will be offered through a volumetric rate of $0.3750 per hundred gallons for Rate A bulk customers and $0.261 per hundred gallons for Rate B bulk customers.
- Rate Zone 8 (Foster): Rates in Rate Zone 8 consist of a flat rate of $85.00 per equivalent dwelling unit ("EDU") per month until December 31, 2024. The Company's currently approved tariff includes a second step for Foster of a flat rate of $106.00 per EDU per month, which is identical to the flat rate in Rate Zone 1.
- Rate Zone 9 (Royersford): Service in Royersford is offered through a single monthly service charge for all customers of $48.00 per month and a volumetric rate consisting of an allowance for the first 3,000 gallons at no additional charge and a volumetric charge of $0.9400 per hundred gallons for service above the allowance.

In addition, an unmetered service option is available for $50.00 per month to residential customers and $67.00 to nonresidential customers.

Q. Please describe the Company's current rate structures in its CSS rate zones.

A. The rate structures differ for the three rate zones in the CSS group as follows:

- Rate Zone 3 (Scranton): Service in Rate Zone 3 is offered through a single monthly service charge and volumetric rate for all residential and nonresidential service. For residential customers, the monthly service charge is $19.50 and the volumetric rate is $2.3510 per hundred gallons, respectively, at proposed rates. For nonresidential customers, the monthly service charge is $35.00 and the volumetric rate is $1.7270 per hundred gallons. Unmetered service is offered to residential customers at $95.00 per month.
- Rate Zone 4 (Kane): Service in Rate Zone 4 is offered through a monthly service charge structure to all customers at $40.00 per month for customers with a 5/8" water meter and $100.00 per month for customers with water meters larger than 5/8" diameter. Volumetric rates are offered through a stepped rate at $2.10 per hundred gallons for the first 10,000 gallons of metered water usage per month and $1.80 per hundred gallons for all metered water usage above 10,000 gallons per month. Unmetered service is offered to residential customers at $110.00 per month.
- Rate Zone 6 (McKeesport): Service in Rate Zone 6 is offered through a monthly service charge of $14.30 per month for residential accounts and $35.00 per month for nonresidential accounts. A volumetric rate of $2.8750 per hundred gallons applies to residential usage and a volumetric rate of $2.1416 per hundred gallons applies to all non-residential usage. Additionally, there is a bulk service rate in

McKeesport that consists of a $86.00 per month service charge and a volumetric rate of $1.6680 per hundred gallons.

Q. Please describe the proposed rate structures in the other rate zones in this proceeding.

A. The rate structures for the remaining three rate zones not included in the CSS and SSS groups are as follows:

- Brentwood Acquisition: Upon closing, collection service in Brentwood will be offered through a single monthly service charge for all customers of $4.57 per month and a volumetric rate consisting of $0.8910 per hundred gallons of usage. The Company has proposed in the Brentwood acquisition proceeding that, consistent with Brentwood's current practice, PAWC will be the billing agent for charges for treatment from the Allegheny County Sanitary Authority ("ALCOSAN") and such charges will be directly flowed through to Brentwood customers.
- BASA Acquisition: Upon closing, service in the BASA territory will be offered on an unmetered basis only and will be based on EDUs. The EDU rate for the BASA territory will be $45.50 per EDU for most customers.

Q. Is the Company proposing to recover all of the revenue requirements for wastewater service from its wastewater customers?

A. No. The Company is proposing to reallocate a portion of the wastewater revenue requirement calculated in this case to its water service customers under the provisions of Act 11 of 2012 ("Act 11"). I will describe this reallocation and provide support for this reallocation in the next section of my testimony.

Q. Is the Company proposing consolidation of rate zones for wastewater service in this case?

A. Yes. Consistent with the Commission's goal of single-tariff pricing, the Company is proposing to move all CSS customers to a single tariff with a single set of rates, with the exception of the Scranton system, and is proposing to move New Cumberland and Valley to SSS Wastewater Rate Zone 1. The Company is also proposing to set fixed charges to be the same for all wastewater customers unless prohibited by prior agreement and move rates in the SSS group for the York and Royersford system closer to Zone 1 Rates.

Q. What is the Company's proposal for wastewater service rate design and tariff consolidation in this case?

A. The Company's proposal for wastewater service rate design and tariff consolidation in this case includes the following:

- The Company is proposing to set all residential service charges at $20 per month and all non-residential service charges at $50 per month, with the exception of (a) BASA where the residential service charge is proposed at $10 per month, (b) Brentwood where the residential service charge is proposed at $10 per month and the non-residential service charge is proposed at $20 per month, and Scranton.
- No changes are proposed for Scranton rates except for the roll-in of the Distribution System Improvement Charge ("DSIC") mechanism, which results in the same percentage increase to all rate components in Scranton.
- The Company is proposing to merge rates for Kane and McKeesport customers into a single rate design that results in residential bills at average usage levels of approximately $110 per customer, which is approximately $10 higher per customer

than SSS rates, which recognizes the differences in operating systems between CSS and SSS systems. Volumetric rates for non-residential customers for Kane and McKeesport are set at $1.90 per hundred gallons. Port Vue rates are proposed to be merged into McKeesport/Kane rates, but no increase is proposed for McKeesport bulk customers.

- SSS volumetric rates are increased to a level that brings residential bills for average levels of usage for Zone 1 customers to approximately $100 per month, with proportional increases to non-residential volumetric rates. No increases are proposed for large industrial contract customers.
- The Company is proposing to phase-out the allowance for the first 2,000 gallons in York rates by setting the volumetric rates for York at $0.75 per hundred gallons for the first 2,000 gallons for residential customers, and $0.40 per gallon for non-residential customers. Volumetric rates above 2,000 gallons are set equal to Zone 1 rates.
- Royersford volumetric rates are increased to a level that results in residential bills for average usage at approximately $65 per month, which is a $15 increase and is consistent with average bills and increases for York customers. Non-residential volumetric rates in Royersford are increased to $0.75 per hundred gallons.

Q. Is the company proposing any changes to its wastewater rate design in this case?

A. Yes. The Company is proposing to change the way that it determines the volumetric component of bills for residential customers from the method used today, where volumetric charges are based on total metered water usage for the month, to a methodology referred to as winter averaging.

Q. Please describe the concept of winter averaging.

A. Winter averaging is a method for determining volumetric components of wastewater bills that attempts to separate metered water usage that is likely to go through the wastewater system from water usage that is used for outdoor purposes in the summertime (e.g., watering lawns, filling pools, etc.). Under winter averaging, a customer's bill in the winter time is determined by actual metered water usage for the month, and in the summertime the customer's bill is determined by the lesser of actual metered water usage for the month or the average water consumption for that customer in the winter months.

For example, in the winter period, if a customer's metered water use is 4,000 gallons, the customer is billed for 4,000 gallons of water usage on their wastewater bill. In the summer period, if a customer's metered water use is 6,000 gallons and their average winter usage over the previous winter months was 5,000 gallons per month, the customer would only be billed for 5,000 gallons on their wastewater bill. If that customer's metered use was 3,000 gallons and their average winter usage over the previous winter months was 5,000 gallons per month, they would be billed for 3,000 gallons of usage on their wastewater bill.

Q. Is this a common way to design volumetric rates for wastewater service?

A. It is. There are numerous examples of wastewater utilities that bill customers in the summertime based on this winter averaging method. The Company's affiliates in Illinois and New Jersey used this method before determining wastewater bills in the summertime. Illinois-American Water Company, which has a significant wastewater customer base, bills all of its residential customers across the state using this winter averaging methodology. New Jersey-American Water Company, which also has a significant wastewater customer

base, uses this winter averaging methodology in select tariffs in the New Jersey-American Water Company service territory.

Q. How is the Company defining winter months under its winter averaging proposal?

A. The Company is defining the winter months for the winter averaging period to be January, February, and March. These three months are the months for which the baseline usage will be determined for the purposes of billing for the rest of the year.

Q. Is the winter average calculation the same for every customer?

A. No. The winter averaging calculation will be customized to each individual customer. The methodology will be the same for all customers, but the calculations will be done on an individual customer basis so that each individual customer will be billed based on their winter average usage, not the average winter monthly usage for residential customers in total.

Q. What happens in cases where the customer is new or otherwise doesn't have any winter billing history to base a winter average usage on?

A. In cases where the customer is new or there is no winter average billing data upon which to base a calculation, the Company will assume a standard usage level of 3,000 gallons per month for a comparison point for billed summer usage.

Q. Why is the Company proposing to move to a winter average rate design for residential wastewater service?

A. The Company is proposing to move to this winter averaging methodology to more closely align wastewater bills in the summertime with cost-causation rate design principles. Under the current rate structure, customers are charged for wastewater service in the summertime based on metered water usage that is not actually going through the wastewater system.

This winter averaging methodology remedies that inconsistency in the Company's wastewater rate design and better aligns customer usage with the amounts billed.

Q. What effect does this proposed move to winter averaging have on volumetric rates for wastewater service?

A. The effect of this winter average methodology on wastewater volumetric rates is that rates will be slightly higher than they otherwise would have been for the same revenue requirement. Volumetric billing determinants for wastewater service will be slightly lower than they otherwise would have been because usage that would have been included in the summertime, as water that was being used for outdoor purposes will now be excluded from the rate calculation.

Q. Do you have a schedule that shows the Company's current and proposed rate design for wastewater service?

A. Yes. The Company's proposed rate design in this case for water service is provided in Exhibit CBR-4.

Scale-Back Proposal

Q. In the event that the Commission approves a revenue requirement in this proceeding that is less than that proposed by the Company, either for water service or wastewater service or both, what is the Company's proposal for the scale back of its proposed water and wastewater rates?

A. In the event that the Commission approves a revenue requirement that is less than that proposed by the Company, the Company proposes to reduce the revenue requirements for water service and wastewater service, and the proposed amount of reallocation from wastewater to water under Act 11 to be proportional so that the same relative percentages

to the total of water service revenue requirement, wastewater service revenue requirement, and Act 11 reallocation amounts be maintained at proposed levels. The Company believes that the rate design proposed in this case is reasonable and that the levels of rates for water service and wastewater service relative to each other should be maintained as proposed in the event that a lower revenue requirement is approved by the Commission in this case.

REALLOCATION OF WASTEWATER REVENUE REQUIREMENT

Company Proposal

Q. What is the Company's proposal with respect to wastewater revenue requirement reallocation?

A. The Company is proposing to reallocate a portion of the total calculated wastewater revenue requirement shown in Exhibit 3-A to water service customers. This reallocation of wastewater revenue requirement to water customers is provided for in Act 11. Under Act 11, the Commission may, when approving base rates and after providing notice and an opportunity to be heard, authorize utilities to allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if in the public interest.

Q. What portion of the wastewater revenue requirement is the Company proposing to reallocate to water customers?

A. The total calculated revenue requirement for wastewater service is $263,574,897. The Company is proposing to recover $192,487,503 of that revenue requirement from wastewater customers under its proposed rates in this case. This is approximately 73% of the total. The remaining $71,087,394 is proposed to be a revenue requirement reduction for wastewater service customers that will be recovered from water service customers.

Q. Please provide a summary of the amounts of PAWC's proposed wastewater revenue requirement that it proposed to be reallocated to water customers, by customer class, pursuant to Act 11.

A. The reallocation of wastewater revenue requirements by water customer class is as follows:

TABLE 4
Wastewater Reallocation to Water Customers by Class

Water Customers by Class	Amount
Residential	$46,505,573
Commercial	$18,320,153
Municipal	$3,939,176
Industrial	$1,635,240
Private Fire	$341,990
Other Revenue	$345,262

Q. Please identify the amounts to be reallocated to water customers under Act 11 by wastewater rate zone category.

A. The reallocation of wastewater revenue requirement by wastewater pricing group is as follows

TABLE 5
Wastewater Reallocation by Wastewater System

Wastewater System	Amount
Group SSS	$31,962,411
Group CSS	$16,007,052
Brentwood	$1,565,232
BASA	$21,552,699

Rationale

Q. What is the guiding principle behind the Company's reallocation proposal?

A. The guiding principle behind the Company's reallocation proposal is to target residential bills for average wastewater usage of approximately $100 per month for customers in the

SSS Zone and $110 per month for customers in the CSS Zone, subject to the other constraints I have already noted. This reallocation also results in residential bills for average water usage of approximately $90 per month, which brings parity to residential bills for water service and wastewater service at average usage levels. This also results in a BTI Ratio for wastewater residential customers that is less than 2023 levels, which in turn helps to manage the affordability of wastewater service and bring a level of parity to the affordability of water and wastewater service.

Q. Why is the Company proposing a reallocation of wastewater revenue requirements to water customers under Act 11 in this case?

A. The Company is proposing a reallocation of wastewater revenue requirements to water customers under Act 11 for three reasons:

- Rate increases in several wastewater zones would be significant if the full revenue requirement proposed for those rate zones were to be implemented. Affordability of wastewater service in those communities would be significantly eroded without an allocation of a portion of those revenue requirements to water customers.
- In the BASA system, the parties in that acquisition proceeding have agreed to propose a 40% increase for BASA customers in the first case in which BASA is included, which leaves a significant gap between revenues at proposed rates and the revenue requirements to serve the BASA system proposed by the Company. After the proposed 40% increase as agreed to in the settlement, there is an approximate $21.5 million shortfall the Company proposes to recover from water customers through the Act 11 reallocation.

- Similar to the BASA system, the Company in the Brentwood acquisition proceeding is targeting an 11% bill increase (inclusive of ALCOSAN charges) for both residential and non-residential customers in the first base rate case in which Brentwood is included, which leaves a gap of approximately $1.6 million between revenues at proposed rates (inclusive of the 11% increase) and the revenue requirements to serve the Brentwood system proposed by the Company, which the Company proposes to recover from water customers through the Act 11 reallocation.
- In the Scranton system, the Company is not permitted to propose increases in rates that would result in annual revenues of $26,272,739, as explained in the direct testimony of Stacey D. Gress (PAWC Statement No. 4). This limitation means that the proposed revenue requirement increase of approximately $16 million for the CSS Group would otherwise have to be recovered from customers in Kane and McKeesport, which would result in significant increases for those customers.

Q. Is it in the public interest in this proceeding to reallocate a portion of the wastewater revenue requirement to water customers?

A. Yes, the proposed reallocation of wastewater revenue requirement to water service customers is appropriate and in the public interest from both a rate design and a policy perspective.

Q. Why is the Company's proposal in the public interest from a rate design perspective?

A. A primary rate design principle that supports the partial reallocation of wastewater cost of service to water customers is the principle of gradualism. The gradualism principle in rate design is based on the idea that changes in rates and rate design should be made in a way

that avoids rate shock. Rate shock can come both from general increases in revenues that can affect all customers, as well as from changes in rate designs that can cause large increases to specific groups of customers. Drastic changes in rates can cause customer confusion and dissatisfaction and have adverse effects on the utility's ability to provide quality customer service. The increases that would be applied to certain communities in the Company's wastewater territory, absent the Company's reallocation proposal, would certainly fall within this concept.

Another important rate design principle is the concept of affordability. As I mentioned previously, it is certainly in the public interest to have affordable water and wastewater service for as many customers as possible. Under the Company's proposed benchmark of 2% of household income at the individual household level, the Company's proposal seeks to maximize the total number of customers for whom water and wastewater service will fall below that threshold.

Q. What are the important policy considerations that support the Company's proposal?

A. From a policy perspective, it is important to note that PAWC is an integrated company that provides both water and wastewater services on a consolidated basis. The Company provides such services through the efforts of both PAWC employees and the resources of the Service Company. This consolidation of functions creates opportunities to capture economies of scale that ultimately will drive down costs to customers, which do not exist where water and wastewater operations are fragmented. It is in the long-term best interest of our customers and the Commonwealth of Pennsylvania to adopt policies that encourage the development of these cost-reducing or mitigating economies of scale. The temporary

reallocation of revenue requirement between water and wastewater systems is an important piece of that equation.

Capital expansion plans often drive the need for utility rate increases. As PAWC witness Bruce Aiton points out in PAWC Statement No. 3, a significant driver of this rate increase request is PAWC's ongoing infrastructure investment plans. In the short term, capital additions in different parts of the Company's water and wastewater systems will exhibit peaks and valleys. This can be especially true in newly acquired systems where upfront investment needs may be more significant than in other systems where the Company has been making more modest, annual investments over a longer period of time. Over time these investment plans will revert to an average long-term investment pattern, and the associated changes in rates will reflect that long-term investment pattern. The initial rate changes in newly acquired systems can be extreme, however, if all of the investments are required to be recovered exclusively from the customers of those systems upfront. A reallocation of a portion of the revenue requirement to a larger customer base can ease the burden on new system customers and further the goal of consolidation and prudent investment in these systems. The long-term benefits of consolidation are already experienced by existing customers, and this proposal allows those benefits to be extended to new customers as well.

Impacts to Customers

Q. What will be the impact of the Company's proposal to reallocate a portion of wastewater revenue requirement to water service customers on the Company's water service bills?

A. Based on the Company's cost of service and proposed customer class revenue allocation in this case, this reallocation results in an increase in residential water volumetric rates of $0.19 per hundred gallons, which would increase the monthly water bill of a Rate Zone 1 residential water customer with an average usage of 3,200 gallons per month by approximately $6.08 per month. In contrast, this reallocation results in lower wastewater residential bills for approximately the same usage level of anywhere from $10 to $90 per month depending on the rate and location of the customer.

QUANTITATIVE STATISTICAL ANALYSIS OF WATER CONSUMPTION

Introduction

Q. Are there revenue adjustments the Company is proposing in this case that require quantitative analysis of water consumption by PAWC's water customers?

A. Yes. I will explain the modeling used to develop the revenue forecasts for residential, commercial and municipal customers, and in the next section, I will discuss the development of the revenue projections for all customer classes (residential, commercial, industrial, municipal, and sales for resale). For residential, commercial, and municipal customers, the Company is proposing adjustments for the normalization of the actual billing determinants for the Historic Test Year ending June 30, 2023 ("HTY"), related to trends in declining use, weather normalization, and the impact of the COVID-19 public health emergency on water consumption for PAWC's water customers. These adjustments require the Company to analyze water consumption and determine (1) if there is a significant and pervasive rate of decline in water use per customer over time; (2) if there are significant relationships between water consumption and weather conditions in the Company's service territory, if weather was different from normal in the HTY period, and

assuming both of those conditions exist, if a weather normalization adjustment to usage is appropriate to reflect normal weather conditions for the Future Test Year ending June 20, 2024 ("FTY"), and the FPFTY; and (3) if the COVID-19 public health emergency has had a significant impact on water consumption for PAWC's customers, to determine if a COVID-19–related adjustment to usage is appropriate for the HTY and FPFTY.

Q. How do you determine the parameters and relationships necessary to analyze declining water use, weather impacts on water consumption, and the impact of COVID-19 on water consumption for PAWC's customers?

A. The parameters and relationships necessary to analyze declining use, weather, and COVID-19 on water consumption for PAWC's customers are estimated through the use of statistical linear regression modeling.

Review of Methodologies

Q. What is a statistical linear regression model?

A. Statistical linear regression modeling is a commonly used type of mathematical predictive analysis. The overall idea of regression modeling is to examine two things: (1) whether a set of independent explanatory variables do a good job of predicting an outcome (dependent) variable, and (2) which independent explanatory variables are significant predictors of the dependent variable, and in what way in particular do they help predict the results of the dependent variable.

There are three major uses for statistical linear regression analysis. These major uses are: (1) determining the predictive power of independent explanatory variables; (2) forecasting the effect that independent variables have on a dependent variable; and (3) trend forecasting. First, the regression analysis can be used to identify the strength of

the effect that independent explanatory variables have on a dependent variable. A typical question is: "What is the strength of the relationship between summer heat, precipitation, and water sales?" Second, the regression analysis can be used to forecast effects or impacts of changes. That is, the regression analysis helps us understand how much the dependent variable changes with a change in one or more of the independent variables. A typical question is: "What volume of water sales can the Company expect to lose for each inch of rainfall above normal in any given period?" Third, regression analysis can predict trends and future values. The regression analysis can be used to get point estimates of future values of the dependent variable based on assumed values for the independent variables. A typical question can be: "Given current trends in water sales, what can we expect water sales to be each month next year assuming normal weather?"

Q. What does a statistical regression model produce?

A. A statistical linear regression analysis is a way of mathematically validating which independent variables have a significant impact on the dependent variable – i.e., the main factor, or the factor you are trying to better understand or predict. A statistical linear regression model produces an equation that describes a historical relationship between a set of independent variables and a single dependent variable that can be used to forecast future values of the dependent variable based on assumed values of the independent variables. An example of such an equation is shown below:

UPCn = a0 + (a1 x RAINn) + (a2 x CDDn) + (a3 x HDDn) +
(a4 x COVIDn) + (a5 x TIMEn)

Where: UPCn = Use per customer in month n
RAINn = Rainfall in month n

		CDDn =	Cooling Degree Days ("CDD") in month n
		HDDn =	Heating Degree Days ("HDD") in month n
		COVIDn =	COVID-19 effect in month n (0% to 100%)
		TIMEn =	Year/Month for month n
	and:	a0 =	constant term
		a1 =	coefficient for RAIN
		a2 =	coefficient for CDD
		a3 =	coefficient for HDD
		a4 =	coefficient for COVID-19 impact per customer
		a5 =	coefficient for TIME (declining use value)

In this example, use per customer is the dependent variable (outcome) and all other variables are independent variables (predictors).

Q. Can statistical linear regression models be used to weather normalize historical water sales for different customer classes?

A. Yes. In the statistical model in the example above, the a1 coefficient for RAIN can be used to estimate the impact of rainfall on use per customer in any given historical period and estimate what the usage per customer would have been if rainfall had been different, especially when actual precipitation was higher or lower than normal. Below is a sample calculation of how weather normalization works with a statistical regression model that uses weather as a strong predictive independent variable that affects the use per customer dependent variable.

IMPACTn = a1 x (ACTUAL RAINn – NORMAL RAINn)

Where: IMPACTn = Weather impact due to abnormal rainfall in period n

ACTUAL RAINn = Actual Rainfall (in inches) in period n

NORMAL RAINn = Average Rainfall (in inches) in period n

If the value of the a1 coefficient for rainfall is -0.30 in this example, actual rainfall for the period is 6 inches and normal rainfall for the period is 4 inches, the weather impact for the period due to higher-than-normal rainfall is a negative 600 gallons per customer, meaning that the Company sold 600 fewer gallons per customer of water than it otherwise would have [-0.30 x (6 – 4) = -0.60]. If there are multiple weather variables in the statistical regression analysis, this calculation is completed separately for each variable and the sum of the calculations is rolled up into a single weather impact. This approach to weather normalization allows an analyst to independently assess the impact of each weather component, and also allows an analyst to state the weather impacts over time both in terms of consumption and in terms of revenues by multiplying the consumption impact by a volumetric price.

Q. Can statistical linear regression models be used to estimate the impacts of COVID-19 on water sales for different customer classes?

A. Yes. In the statistical model example above, the a4 coefficient for COVID-19 is the estimate of the impact of the COVID-19 public health emergency on monthly use per customer. The historical data set contains a variable for each month that indicates the assumed qualitative level impact from COVID-19 in that month. In all months prior to April 2020, that value was set at 0%. From April 2020 on, that value is set at 100% when maximum COVID-19 impacts are observed, or at a level less than 100% where we see

reduced COVID-19 impacts on usage. The coefficient for the COVID-19 impact variable estimates the average monthly use per customer based on the months that have been designated as COVID-19 months. This coefficient can then be used to (1) identify a normal level of usage that is not influenced by the impact of COVID-19, in a manner similar to a normalization calculation that adjusts for the influence on water usage associated with weather conditions that depart from normal, and (2) reflect estimates of future impacts of the COVID-19 public health emergency.

Q. Can these models be used to estimate trends in declining use per customer for different customer classes?

A. Yes. In the same statistical model example represented above, the a5 coefficient for TIME is the estimate of declining use per customer per month. This coefficient measures the rate of decline in use per customer over the historical data set independent of the effect of any other variable in the model. The historical data set contains a variable for each month that is a timestamp that starts at one for the first month in the dataset and increases by one for every month going forward. This acts as a trend variable for both historical periods in the dataset and future forecast periods. The coefficient for this trend variable is applied to future increasing values of the trend which results in decreasing forecasts of use per customer.

Q. How does one assess the accuracy of a statistical linear regression model?

A. A statistical linear regression model produces a set of statistics that can be used to judge the accuracy and fitness of the model. The most common statistics are (1) the "R-Squared" value, which is a statistical measure in a regression model that determines the proportion of variance in the dependent variable that can be explained by the independent variables,

and (2) values and standard deviations for the coefficients, which can be used to determine "t-statistics" and "p-values," which tell how accurately and precisely the different coefficients are being calculated and whether the associated independent variables are strong predictors of the dependent variable.

In the equation described above, the "R-Squared" value is a statistic that measures the percentage of variation from period to period in the dependent variable (water use per customer) that is explained by the mathematical relationship with the independent variables. The R-Squared can range from 0% (no explanatory ability) to 100% (perfect explanatory accuracy). In general, the higher the R-squared, the better the predictive value of the model.

The second major test involves comparisons of the values of each of the model coefficients and their associated standard errors. Because a statistical regression model estimates an explanatory relationship between a dependent variable and a set of independent variables, there will always be some degree of uncertainty around what that explanatory relationship actually is. As a result, each model coefficient has a level of uncertainty around it, and this level of uncertainty is represented by measuring how many standard errors each coefficient is away from zero, which the model also calculates.

Dividing the value of each coefficient by its standard error yields a t-statistic, which can be used to judge the predictive power of the independent variable that the coefficient represents. For example, in the case of the generic statistical model described above, if the value of the a1 coefficient for rainfall is -0.30 and the standard error for that coefficient is 0.05 (meaning that the real value of the coefficient could be anywhere between -0.35 and -0.25 with -0.30 being the most likely value), the value of the t-statistic is -6.0 (-0.30

divided by 0.05 = 6.0). Generally speaking, t-statistic values greater than 2.0 for positive coefficients or less than -2.0 for negative coefficients indicate an acceptable predictive relationship between that independent variable and the dependent variable of interest. The higher the t-statistic value, the greater the confidence we have in the coefficient as a predictor. Values between 2.0 and -2.0 indicate that the predictive power of that independent variable may not be very strong.

Q. Are there other more qualitative ways to determine whether a statistical linear regression model is accurate and produces reasonable results?

A. Yes. There are also several qualitative ways to determine whether a statistical regression model accurately describes the relationship that a chosen set of independent variables has with the dependent variable:

- **Does the model represent reality?** If it is generally known that water consumption is seasonal and is driven in the summertime by heat and precipitation, it is logical to assume that a statistical model that attempts to describe and predict seasonal water consumption would have explanatory variables related to summer heat and precipitation, and those explanatory variables would be shown to have a strong predictive value in the model. Models that attempt to accurately describe the drivers behind water consumption that do not contain statistically significant coefficients for independent variables that are logically known to drive water consumption are likely not strong predictive models.
- **Are the signs of the coefficients for major independent variables correct?** If water consumption increases in the summertime with increasing heat and decreases in the summertime with increasing precipitation, it is logical to expect that the

coefficients for the independent variables that represent summertime heat and summertime precipitation would be positive and negative, respectively.

- **Is the model based on a robust data set?** It is easy for a statistical model with many independent variables and relatively few observations of the dependent variable to accurately explain variation in the dependent variable, but that does not mean that the model has strong predictive power if the data set being analyzed is small in scope. A statistical model that attempts to describe water consumption and that has good predictive explanatory power over multiple years of monthly historical data is very useful and accurate in projecting future trends and in explaining how changes in strong predictive independent variables will affect levels of the dependent variable.
- **Do the impacts on the dependent variable that the model describes make logical sense?** It is possible, outside of a statistical linear regression model, to make ballpark estimates of other facts like the impact of COVID-19 on water consumption and long-term trends in declining use. This can be done with a simple linear plot of annual usage data by year. For example, if a linear plot of annual usage data suggests that there is a downward trend of approximately 1,000 gallons per customer per year, one would expect that a statistical model that is measuring that impact would yield a result that is similar. The same is true when looking at the potential impacts of COVID-19 on water consumption. If a visual examination of data suggests that water use per customer for a commercial class has decreased by 2,000 gallons per customer in 2020 due to the COVID-19 emergency, it is

logical to expect a statistical regression model that attempts to statistically measure that impact to yield estimates consistent with that expectation.

Pennsylvania Modeling and Results

Q. Please describe the statistical linear regression model you are using to analyze water consumption data for PAWC.

A. In this proceeding, we are using multiple regression statistical models to analyze use per customer for the residential and commercial classes that relate the dependent variable (i.e., water use per customer) to a collection of independent variables. The models use 120 months of monthly data beginning in July 2013 through June 2023. Each regression model uses independent variables that can be broken down into four categories to explain monthly use per customer. The four categories are:

- **Weather**: The weather variables used in the models are Cooling Degree Days ("CDDs"), Heating Degree Days ("HDD"), and precipitation. These weather variables are a weighted average of current month and lagged month weather readings taken by the National Oceanic and Atmospheric Administration at Pittsburgh Allegheny County Airport. This weighted average lagged approach is used to account for the differences between billing month sales and calendar month weather. Coefficients from these variables show the impact of weather on monthly use per customer over the 10-year period. Weather variables are modeled as monthly deviations from normal for each month in the data set (actual weather for the month less normal weather for the month for each individual weather variable). Normal weather is calculated for each month of the year based on the weather over the 10-year period that the historical data spans.

- **Time**: The time variable is a trending variable that notes the passage of time in the model and produces a coefficient that estimates the monthly decline in usage per customer over the 10-year model. The time variable captures the range of conservation efforts that have been implemented by customers over time, such as the installation of more water-efficient fixtures and appliances. Time on its own is of no consequence, but it is a powerful variable because it is the medium for capturing the conservation effect.

- **COVID-19 indicator**: The COVID-19 indicator variable is set at 0% for months prior to April 2020, 100% for the months of April 2020 through December 2020, and 40% for the months from January 2021 through June 2023. The effect of this variable in the model is to look specifically for increases or decreases in use per customer for the April 2020 through June 2023 timeframe that may have happened due to systemic changes in the amounts of water customers use as a result of the COVID-19 public health emergency.

- **Monthly indicators**: The monthly indicator variables in the model measure structural monthly and/or seasonal changes in use per customer that cannot be explained by any of the other variables in the model.

Q. What information do these models provide that is useful for developing pro forma adjustments to revenues that you are sponsoring in your testimony?

A. Each model produces a set of weather coefficients that can be used to weather-normalize historical sales for the HTY period, a coefficient that indicates the monthly trend in

declining use per customer for each class, and a coefficient that shows for each class the average use per customer impact associated with changes in usage due to COVID-19.

Q. You mentioned that you have developed models for customer usage relating to the residential, commercial, and municipal classes. Are you also modeling usage for the industrial and sales for resale customer classes?

A. No. The statistical modeling in this case is only for the residential, commercial, and municipal classes. Usage estimates for the industrial and sales for resale classes are developed using a simple multi-year average and are described later in the revenue section of my testimony.

Q. You previously discussed the various statistical tests used for accuracy and predictability. Please discuss the results of these tests for your models and why they are appropriate to use in this proceeding.

A. As shown in Exhibits CBR-5, CBR-6, and CBR-7, the Adjusted R-Squared statistics for the residential usage model is 85%, the Adjusted R-Squared statistic for the commercial usage model is 82%, and the Adjusted R-Squared statistic for the municipal model is 77%. This indicates that in all models, the explanatory variables (weather, COVID-19 impacts, declining use, etc.) strongly explain the variability in use per customer over time. The values of the coefficients, standard errors, and t-statistics for the major explanatory variables in the models are as follows:

TABLE 6

Residential Model Major Explanatory Variables	**Coefficient**	**Standard Error**	**t-Statistic**
Declining Use Trend	-0.0043	0.0004	-10.8213
Precipitation	-0.0333	0.0094	-3.5456
CDD	0.0009	0.0004	2.2482
HDD	0.0004	0.0001	3.0833
COVID-19 Impact	0.2962	0.0498	5.9428

TABLE 7

Commercial Model Major Explanatory Variables	**Coefficient**	**Standard Error**	**t-Statistic**
Declining Use Trend	-0.0180	0.0036	-5.0336
Precipitation	-0.1797	0.0825	-2.1788
CDD	0.0058	0.0037	1.5722
COVID-19 Impact	-2.4496	0.4521	-5.4178

TABLE 8

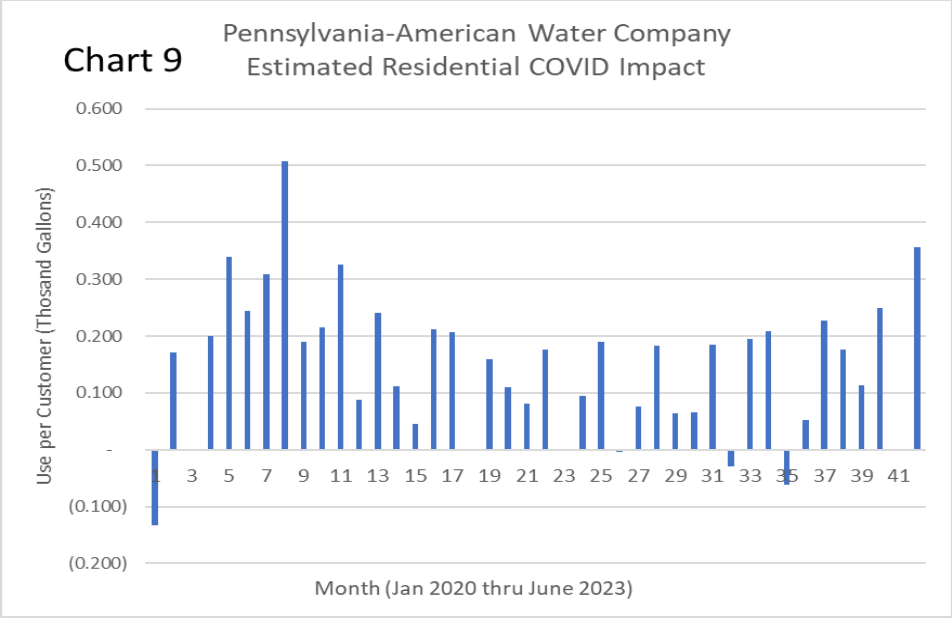
Municipal Model Major Explanatory Variables	Coefficient	Standard Error	t-Statistic
Declining Use Trend	-0.0055	0.0143	-0.3854
Precipitation	-0.8998	0.3143	-2.8626
CDD	0.0225	0.0136	1.6587
COVID-19 Impact	-18.0782	1.8153	-9.9590

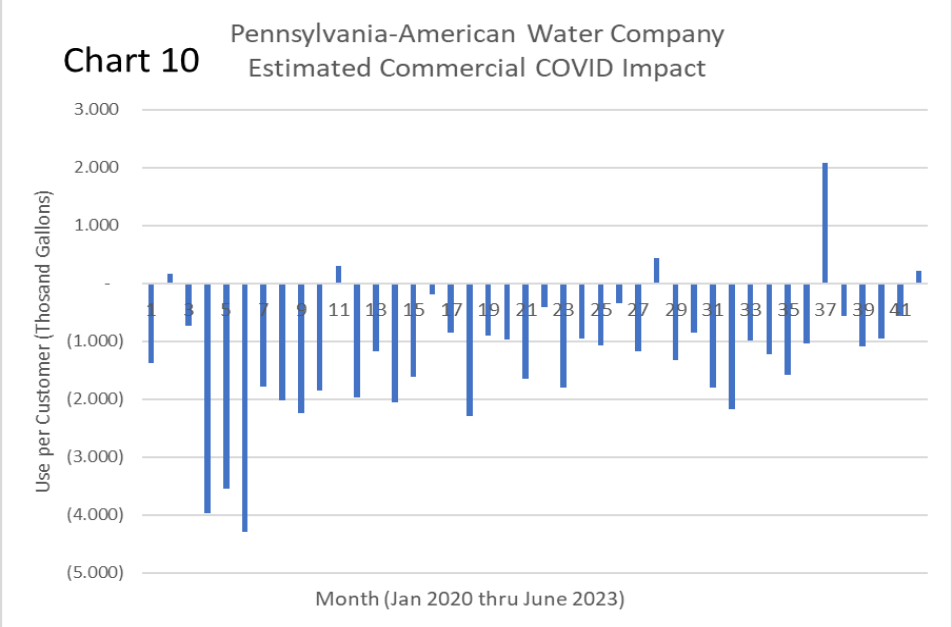
The statistics for the individual explanatory independent variables above show a high degree of explanatory power with all parameters having t-statistics all outside of the +/- 2.00 range apart from the CDD variable for the commercial class, which is marginally not statistically significant, and the trend variable for the municipal class, which is not statistically significant. The signs for the precipitation variables are negative as expected, meaning that more rainfall over a summer period results in less seasonal water usage from our residential customers. The signs for the CDD variable is positive, which indicates that the hotter the weather gets in the summer, the more water customers use, which is expected, and the COVID-19 impact variable indicates that residential usage went up as a result of

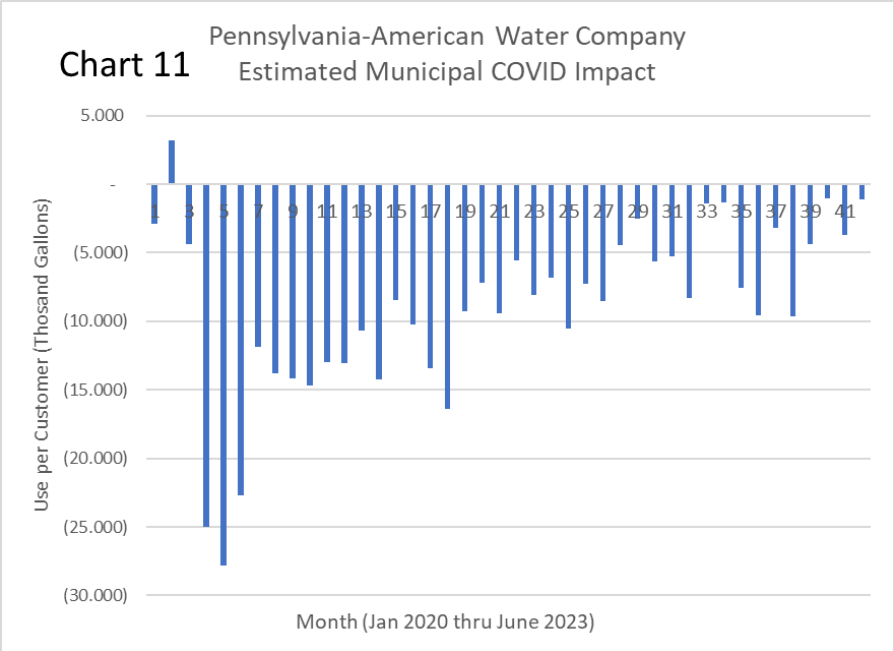
COVID-19 and commercial and municipal usage went down. The sign for the declining use variable for the residential and commercial classes are negative and are statistically significant, which means that there is a pervasive decline in use per customer for residential and commercial customers over the 10-year historical period.

Q. Please describe specifically how you are modeling the effect of the COVID-19 pandemic in your statistical analysis.

A. As stated previously, the COVID-19 indicator variable in each model is set at 0% for months prior to April 2020, 100% for the months of April 2020 through December 2020, and 40% for the months from January 2021 through June 2023. The effect of this variable in the model is to look specifically for increases or decreases in use per customer for April 2020 through June 2023, which may have happened due to systemic changes in the amounts of water customers used as a result of the COVID-19 public health emergency. The charts below show estimated impacts by month on use per customer by class associated with the COVID-19 pandemic as identified by the Company's modeling.







Q. Based on this information, what assumptions are you making going forward regarding the impacts on customer usage related to the COVID-19 pandemic?

A. The Company's forecast of use per customer includes no ongoing impacts related to the COVID-19 pandemic, meaning that forecasted impacts for each of the residential,

commercial, and municipal classes is forecasted to be zero, and usage is expected to revert back to the underlying trend seen before the pandemic.

Declining Usage Discussion

Q. Your regression models show a trend of declining use per customer. What is the amount of declining use your models have identified?

A. The annual amount of declining use identified for residential customers is approximately 610 gallons per year per customer. The annual amount of declining use identified for commercial customers is approximately 2,600 gallons per year per customer. The annual amount of declining use identified for municipal customers is approximately 800 gallons per year per customer.

Q . Why do you believe that declining use is a valid trend for residential and commercial customers that will continue?

A. Consumption patterns for the Company's customers are similar to those for other American Water operating companies, which have experienced a decline in consumption per customer averaging approximately -2.0% per year over the last 10 years. According to the 2010 Water Research Foundation report, "many water utilities across the United States and elsewhere are experiencing declining water sales among households." The report further states: "A pervasive decline in household consumption has been determined at the national and regional levels."[5]

[5] Coomes, Paul et al., *North America Residential Water Usage Trends Since 1992* – Project #4031, p. 1 (Water Research Foundation, 2010).

Q. What is causing the decline in customers' usage?

A. Several factors drive the decline in usage. These factors include the incremental introduction of low-flow fixtures and appliances, new regulations that lead to further reductions in fixture flow rates, conservation programs, and public initiatives that have led to greater consumer water conservation awareness.

Plumbing fixtures such as toilets, showerheads, and faucets available to consumers today are more water-efficient than those fixtures manufactured in the past. Similarly, appliances such as dishwashers and washing machines are also more water efficient. When a customer replaces an older toilet, washing machine, or dishwasher with a new unit, the new unit will almost certainly use less water than the one it replaced. Similarly, the construction of new homes results in the installation of water-efficient fixtures meeting new, more efficient, regulatory standards.

Q. How much water do the new fixtures and appliances save?

A. The Energy Policy Act of 1992 mandated the manufacture of water-efficient toilets, showerheads, and faucet fixtures. For example, a toilet manufactured after 1994 must use no more than 1.6 gallons per flush, compared to a pre-1994 toilet, which typically used from 3.5 to 7 gallons per flush. In fact, toilets using only 1.28 gallons per flush or less are becoming more prevalent in the marketplace. Replacing an old toilet with a new one, therefore, can save from 2 gallons to nearly 6 gallons per flush.

The Energy Independence & Security Act of 2007, which established stringent efficiency standards for dishwashers and washing machines, has further reduced indoor water consumption. Dishwashers manufactured after 2009 and washing machines manufactured after 2010 must use 54% and 30% less water, respectively. All other factors

being equal, a typical residential household in a new home constructed in 2015, with water-efficient toilets, washing machines, dishwashers, and other fixtures, uses approximately 35% less water for indoor purposes than a non-retrofitted home built prior to 1994.

Q. Are there other factors contributing to the continued decline in water consumption patterns?

A. Yes. Programs to raise customer awareness and interest in the benefits of conserving water and energy continue to increase. As awareness of water and energy efficiency increases, customers may decide to replace a fixture or appliance even before it has broken. Additionally, customers may further reduce consumption by changing their household water use habits in other various ways.

Q. Do you expect the trend of declining usage to continue in the future?

A. Yes. Water-efficient fixtures and other drivers such as conservation education and government-mandated standards will continue to drive further efficiency into residential and nonresidential usage per customer. In fact, the trend is well established and continues to affect water usage on the Company's system, as well as most water utilities across the United States. The rate of the continued trend is dependent on the pace of fixture replacement within the Company's footprint, as well as the broadening acceptance of a conservation ethic through customer and business awareness programs, government conservation policy, and similar behavior modification–related programs.

Technology is now available for newer, more water-efficient products that further improve on Energy Policy Act levels, and there has been a growing movement to codify these more stringent specifications. The introduction of progressive code modifications – such as the International Code Council's International Green Construction Code and the

International Association of Plumbing and Mechanical Officials Green Plumbing and Mechanical Code Supplement (2011) – support uniform implementation of increased water efficiency standards. An article in the June 2012 issue of the AWWA Journal titled "Insights into declining single-family residential water demands" recognizes this decline in water consumption: "[r]educed residential demand is a cornerstone of future urban water resource management. Great progress has been made in the last 15 years and the industry appears poised to realize further demand reductions in the future."[6] The trend of declining water consumption based on improved water efficiency has continued over time.

Conclusions

Q. Normalizing historical usage for weather and the COVID-19 emergency, what has the overall trend been for use per customer for the residential, commercial, and municipal classes?

A. The statistical analysis of usage for the residential, commercial, and municipal classes shows that once weather effects and the one-time effects of COVID-19 have been accounted for, there is a significant downward trend in usage for these customer classes. The charts below show use per customer for each class for the 10 years ending June 2023, adjusted for the weather impacts and COVID-19 impacts that I previously described in my testimony.

6 DeOreo, W. and Mayer, P., American Water Works Association Journal, vol. 104, issue 6 (June 2012), http://apps.awwa.org/WaterLibrary/showabstract.aspx?an=JAW_0076117.

Q. What conclusions do you draw from this chart and your supporting analysis?

A. The charts and the supporting analysis demonstrate that there has been a significant and pervasive decline in normalized use per customer for the residential, commercial and municipal customers in the PAWC service territory. The Company's modeling normalizes for weather and COVID-19 and shows that there has been a pervasive decline in usage for these classes over the past 10 years. The historical trends in adjusted monthly use per customer for the residential, commercial and municipal classes will continue through the relevant periods going forward.

REVENUE CALCULATIONS

General Calculations

Q. Please explain the development of pro forma revenues as set forth in Exhibit No. 3-A for Water Operations.

A. The process of developing the Company's revenue claim begins with revenues recorded on the Company's books of account at June 30, 2023, to which various adjustments were made. Exhibit No. 3-A shows a summary of the development of pro forma revenues for Water Operations under present and proposed rates for the HTY, FTY, and FPFTY periods.

Additionally, for each of the test years, Exhibit No. 3-A includes a schedule showing operating revenues by customer classification, as well as a schedule showing a summary of the various adjustments made to book operating revenues to arrive at pro forma operating revenues under present rates.

Q. Does Exhibit No. 3-A show a similar development of pro forma revenues for revenue requirements other than for water operations?

A. Yes. The revenue schedules described above are also provided for the five wastewater revenue requirements:

- SSS Systems
- CSS Systems
- Brentford Acquisition
- BASA Acquisition

Q. Please explain the various adjustments to the Company's book revenues that were made to develop pro forma sales and revenues under present and proposed rates for the Company's water and wastewater operations.

A. The following adjustments were made to per book revenues by class:

- Adjustment 2a: TCJA and EADIT Surcharge Adjustment
- Adjustment 2b: Unbilled Revenue Adjustment
- Adjustment 2c: DSIC Annualization Adjustment

- Adjustment 2d: AMP Deferred Revenue Adjustment
- Adjustment 2e: Annualization of Base Year Rate Changes
- Adjustment 2f: Private Fire Adjustment
- Adjustment 2g: Public Fire Adjustment
- Adjustment 2h: Changes in Customers
- Adjustment 2i: Usage Trend Adjustment
- Adjustment 2j: Annualization Adjustment for Valley Water
- Adjustment 2k: Annualization Adjustment for Valley Wastewater
- Adjustment 2l: Shale Gas Commercial Usage Adjustment
- Adjustment 2m: Acquisition Adjustment for Creekside Water
- Adjustment 2n: Annualization Adjustment for Foster Wastewater
- Adjustment 2o: Annualization Adjustment for York Wastewater
- Adjustment 2p: Annualization Adjustment for Upper Pottsgrove Wastewater
- Adjustment 2q: IPP Adjustment
- Adjustment 2r: Rental Income Adjustment
- Adjustment 2s: Intercompany Rental Adjustment
- Adjustment 2t: Usage Data Revenue Adjustment
- Adjustment 2u: Specific Customer Adjustments
- Adjustment 2v: Adjustment for Strattanville Borough
- Adjustment 2w: Annualization Adjustment for Findlay Township
- Adjustment 2x: Acquisition Adjustment for Audubon Water
- Adjustment 2y: Acquisition Adjustment for Farmington Water

- Adjustment 2z: Acquisition Adjustment for Farmington Wastewater
- Adjustment 2za: Acquisition Adjustment for Sadsbury Wastewater
- Adjustment 2zb: Acquisition Adjustment for BASA Wastewater
- Adjustment 2zc: Acquisition Adjustment for Brentwood Wastewater
- Adjustment 2zd: Late Payment Fees

Description of Adjustments

Q. Please describe the TCJA and EADIT Surcharge Adjustment in Schedule 2a.

A. The TCJA and EADIT Surcharge adjustment is made to eliminate booked revenues for the HTY period associated with the TCJA tax credit and EADIT surcharge revenues. The amount of the adjustments for water operations is $6,908,979. The amount of the adjustment for SSS wastewater operations is $48,442. The amount of the adjustment for CSS wastewater operations is $36,990.

Q. Please describe the Unbilled Revenue Adjustment in Schedule 2b.

A. The Unbilled Revenue adjustment is made to eliminate unbilled revenues that were accrued for the HTY period. The amount of the adjustment for water operations is -$9,429,136. The amount of the adjustment for SSS wastewater operations is -$2,746,186. The amount of the adjustment for CSS wastewater operations is -$1,981,963.

Q. Please describe the DSIC Annualization Adjustment in Schedule 2c.

A. The DSIC Annualization adjustment is made to eliminate the DSIC revenues per book for the HTY period, in order to reset the DSIC to zero. The FPFTY pro forma revenue adjustment is to annualize the DSIC revenues for the FPFTY period based on the Company's pro forma level rate of 2.30% for water and 1.08% for wastewater. The adjustments by year and by system are as follows.

TABLE 9 DSIC Adjustments	HTY	FPFTY
Water Operations	-$8,436,657	$17,839,208
SSS Wastewater Operations	-$322,710	$977,043
CSS Wastewater Operations	-$572,047	$833,002
Total	**-$9,331,414**	**$19,649,253**

Q. Please describe the AMP Deferred Revenue Adjustment in Schedule 2d.

A. The AMP Deferred Revenue adjustment is made to remove Arrearage Management Program ("AMP") revenue credits booked in residential revenue accounts for the HTY period. The amount of the adjustments for water operations is $721,875. The amount of the adjustment for CSS wastewater operations is $81,270 and for SSS wastewater operations is $106,230.

Q. Please describe the Base Year Rate Annualization Adjustment in Schedule 2e.

A. This revenue adjustment is made to revenues for the HTY period to reflect the annualization of new base rates for water and wastewater service that took effect on January 28, 2023. The adjustments by customer class and system are as follows:

TABLE 10 Class Adjustments	Water	SSS Wastewater	CSS Wastewater
Residential	$48,328,510	$9,235,949	$12,211,803
Commercial	$17,651,547	$2,343,500	$4,740,927
Industrial	$3,118,375	$399,757	$365,045
Municipal	$764,920	$200,475	$220,091
Sales for Resale	$21,538		
Unmetered Sales	$3,016		
Bulk		$473,272	$2,687,597
Total	**$69,887,906**	**$12,652,954**	**$20,225,463**

Q. Please describe Private Fire Adjustment in Schedule 2f.

A. This adjustment is being made to reflect the annualization of private fire revenues for the HTY, FTY, and FPFTY periods. This revenue adjustment is being made to reflect the annualization of new rates for private fire service that took effect in January of 2023 based upon the number of customers receiving such service as of June 30, 2023. The revenue adjustment for the FTY period includes additional growth in private fire services. The total adjustment is $290,447 for the HTY period and $152,747 for the FTY period.

Q. Please describe the Public Fire Adjustment in Schedule 2g.

A. This adjustment is being made to reflect the annualization of new rates that took effect in January of 2023 for public fire service based on the number of customers and hydrants as of June 30, 2023. The revenue adjustment for the FTY period is from the additional annualized revenues coming from Valley District. The revenue adjustments for the HTY period is $368,867 and the adjustment for the FTY period is $26,309.

Q. Please describe the Customer Change Adjustment in Schedule 2h.

A. This adjustment is being made to reflect expected increases in the number of residential and commercial customers for water and wastewater service exclusive of acquisitions. The historic revenue adjustment reflects the change in revenue associated with the average number of customers for the HTY period. The future and fully forecasted revenue adjustments reflect customer growth in the residential and commercial classes from the HTY period and is estimated based on a two-year historical growth pattern in these customer classes. The revenue adjustments themselves were calculated by applying the average annual consumption per residential and commercial customer to projected

increases in customers for the FTY and FPFTY periods. The total adjustments by class are as follows:

TABLE 11
Customer Growth Adjustment

Water Service	**HTY**	**FTY**	**FPFTY**
Residential	$1,099,437	$932,988	$1,865,976
Commercial	$1,554,148	$698,551	$1,397,102
Total	**$2,653,585**	**$1,631,539**	**$3,263,078**

TABLE 12
Customer Growth Adjustment

SSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential	$131,053	$109,906	$219,811
Commercial	$33,724	$30,352	$60,704
Total	**$164,777**	**$140,258**	**$280,515**

TABLE 13
Customer Growth Adjustment

CSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential	$63,868	$7,407	$14,813
Commercial	$103,860	$81,867	$163,736
Total	**$167,528**	**$89,274**	**$178,549**

Q. Please describe the Usage Trend Adjustment in Schedule 2i.

A. This adjustment is being made to reflect changes in usage for residential, commercial, and municipal customers that I have described previously in testimony. These changes incorporate weather normalization, COVID-19 normalization, and adjustments for trends in declining use that I have previously described. The adjustments apply to both water and wastewater operations. The revenue adjustments are made by multiplying usage adjustments by expected customer counts, breaking out the resulting total adjustments in usage for these classes by rate step, and applying rates to the resulting adjustments in order

to determine the revenue adjustments for the HTY, FTY, and FPFTY periods. The total adjustments by class are as follows:

TABLE 14
Usage Trend Adjustment

Water Service	**HTY**	**FTY**	**FPFTY**
Residential	-$13,769,762	-$7,716,775	-$6,236,951
Commercial	$2,147,538	-$1,646,203	-$1,156,531
Municipal	$1,520,971	-$651,058	-$66,790
Total	**-$10,101,253**	**-$10,014,037**	**-$7,460,272**

TABLE 15
Usage Trend Adjustment

SSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential		-$977,293	-$787,209
Municipal		-$232,359	-$162,064
Commercial		-$42,995	-$4,411
Total		**-$1,252,647**	**-$953,684**

TABLE 16
Usage Trend Adjustment

CSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential		-$799,671	-$644,138
Municipal		-$275,378	-$192,068
Commercial		-$32,847	-$3,370
Total		**-$1,107,896**	**-$839,576**

Q. Please describe the Annualization Adjustment for Valley Water in Schedule 2j.

A. This adjustment is to annualize the water revenues for the Valley Water operating district to reflect the changes in rates that will become effective for Valley Water on November 19, 2023. The total water adjustment for Valley Water for the FTY period is $413,150.

Q. Please describe the Annualization Adjustment for Valley Wastewater in Schedule 2k.

A. This adjustment is to annualize the wastewater revenues for the Valley Wastewater operating district to reflect the changes in rates that will become effective for Valley Wastewater on November 19, 2023. The total water adjustment for Valley Wastewater for the FTY period is $1,426,222.

Q. Please describe the Commercial Shale Gas Adjustment in Schedule 2l.

A. In 2009, the Company began selling water to gas drillers for use in their drilling and hydraulic fracturing operations. The annual usage for this type of operation can fluctuate significantly from year to year, and sales for the HTY period for this service were relatively low compared to previous years. This adjustment normalizes sales for this service assuming a three-year average of sales from the 12-month periods ended June 2021, June 2022, and June 2023. The total amount of the revenue adjustment for the FTY period is $251,438.

Q. Please describe the Acquisition Adjustment for Creekside Water in Schedule 2m.

A. On June 22, 2023, the Company closed on the acquisition of the water utility property of the Creekside Homeowner's Association and began providing direct service to that entity's customers. This adjustment annualizes the water revenues associated with this acquisition. The annualization is based on customer counts and meter counts by customer class as of June 2023. The total water adjustment includes a residential revenue adjustment and a private fire protection revenue adjustment. The revenue adjustments for the HTY period is $74,094. An additional 40 residential customers are expected to be added during the FPFTY period. The annualized revenue expected for the FPFTY period is $33,147.

Q. Please describe the Annualization Adjustment for Foster Wastewater in Schedule 2n.

A. In October 2022, the Company began providing wastewater service to Foster Township customers. The revenue adjustment for the HTY period annualizes revenues to reflect a full 12 months of billing. The revenue adjustment for the FTY period reflects the approved rates in Docket No. R-2022-3013673, which took effect in January of 2023. The revenue adjustment for the HTY period is $364,529. The revenue adjustment for the FTY period is $232,268.

Q. Please describe the Annualization Adjustment for York Wastewater in Schedule 2o.

A. In May 2022, the Company began providing wastewater service to the City of York. The revenue adjustment for the FTY period is to recognize the revenue associated with authorized rates that will take effect after the current rate freeze for York ends on May 27, 2025. The revenue adjustment for the FTY period is $10,507,182.

Q. Please describe the Annualization Adjustment for Upper Pottsgrove Wastewater in Schedule 2p.

A. In July 2022, the Company began providing wastewater service to Upper Pottsgrove. The revenue adjustment for the HTY period annualizes revenues to reflect a full 12 months of billing. The revenue adjustment for the FTY period is $172,272.

Q. Please describe the IPP Adjustment in Schedule 2q.

A. The IPP Surcharge wastewater revenue adjustment is made to account for the change in the Company's IPP surcharge and to reflect all IPP revenues in the Other WW Revenue account. The revenue adjustments by customer class for the HTY period are as follows.

TABLE 17 IPP Adjustments	SSS Wastewater	CSS Wastewater
Residential	$133	$747
Commercial	-$196,322	-$72,555
Industrial	-$337,932	-$119,925
Municipal	-$368	$0
Miscellaneous / Bulk	-$509,478	$0
Other WW Revenue	$1,776,143	$189,674
Total	**$732,176**	**-$2,060**

Q. Please describe the Rental Income Adjustment in Schedule 2r.

A. The Company receives money from cellular phone providers for the lease of space on top of its water towers for the placement of antennas. An adjustment is being made, which represents the difference between revenues that were recorded for the HTY period for cell tower rental income and revenues expected to be recorded as cell tower rental income for the FTY and FPFTY periods. These adjustments are -$71,977 and $7,148, respectively. Additionally, the Company receives money for the rights to land that it owns for tree harvesting. This revenue income is expected to end in 2023. This income adjustment related to timber rights income is -$325,393. The total combined adjustments for the FTY and FPFTY periods are -$397,369 and $7,148, respectively. These adjustments are made only to revenue for water operations.

Q. Please describe the Intercompany Rental Adjustment in Schedule 2s.

A. PAWC charges the AWWSC for Service Company employees that work in PAWC's Stafford Avenue and Mechanicsburg offices. An adjustment is being made, which represents the difference between revenues that were recorded for the HTY period and the revenue that is expected to be recorded as intercompany office rental income in 2024 and

2025 from this agreement. The reduction in revenue is expected to be $228,104. This adjustment is made only to revenue for water operations.

Q. Please describe the Usage Data Revenue Adjustment in Schedule 2t.

A. The Company supplies water usage data to certain municipalities so that these municipalities can bill their residents for sewer service. The Company made an adjustment to 2023 book revenues for the provision of usage data to eliminate revenues from localities no longer using the service. This adjustment for 2023 was to reduce usage data revenue by $4,439. The Company increases these fees annually based on changes in the Consumer Price Index ("CPI"). An adjustment is being made for 2024 and 2025 revenues to reflect a CPI change of 3.81% in those years, which is based on a historical average change in the CPI from June 2017 through June 2023. The adjustment amount for the FTY period is to increase usage data revenue by $16,325. The adjustment amount for the FPFTY period is to increase usage data revenue by $16,947. This adjustment is made only to revenue for water operations.

Q. Please describe the Customer Adjustments in Schedule 2u.

A. The adjustments to revenues in Schedule 2u are for specific and individual Industrial Standby and Resale Standby water customers to account for changes in rates and terms per specific contract agreements and to reflect a full 12 months of billing data of one of the resale contract customers. The total adjustments for the HTY, FTY, and FPFTY periods for water customers are $176,541, $205,121, and $269,192, respectively. The SSS wastewater adjustment for the HTY period is $33,245.

Q. Please describe the Adjustment for Strattanville Borough in Schedule 2v.

A. During the HTY period, the Strattanville Borough customer only received 11 bills. This adjustment is to account for the missing bill, which was billed and posted outside of the HTY period. The total revenue adjustment is $6,200.

Q. Please describe the Annualization Adjustment for Findlay Township in Schedule 2w.

A. Beginning in August 2023, the Company began Sales for Resale service to Findlay Township. The revenue adjustment for the FTY period is to annualize sales from Findlay Township. The adjustment for the FPFTY period is to annualize revenue from the expected rate change that will take place in August 2024 and to also consider the impact of the change in minimum take or pay requirements from a 366-day leap year to a normal 365-day year. The total adjustments for the HTY, FTY, and FPFTY periods are $535,275 and $19,113, respectively.

Q. Please describe the Acquisition Adjustment for Audubon Water in Schedule 2x.

A. In April 2024, the Company anticipates it will close on the acquisition of the water utility property of the Audubon Water System and begin providing service to these customers. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the closing of this acquisition. Since the Company will be serving Audubon premises directly, no revenue associated with Sales for Resale revenues will be expected from Audubon Water Company. The net adjustment for revenues for the FTY period is $2,965,024.

Q. Please describe the Acquisition Adjustment for Farmington Water in Schedule 2y.

A. In April 2024, the Company anticipates it will close on the acquisition of the water utility property of the Farmington Township Water System and will begin providing service to

these customers. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the closing of this acquisition. Since the Company will be serving Farmington Township premises directly, no revenue associated with Sales for Resale revenues will be expected from the Farmington Township Water Company. The net adjustment for revenues for the FTY period is $266,371.

Q. Please describe the Acquisition Adjustment for Farmington Wastewater in Schedule 2z.

A. In April 2024, the Company anticipates it will close on the acquisition of the wastewater utility property of the Farmington Township Wastewater System and begin providing service to these customers. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the closing of this acquisition. The adjustment for revenues for the FTY period is $322,926.

Q. Please describe the Acquisition Adjustment for Sadsbury Wastewater in Schedule 2za.

A. In April 2024, the Company anticipates it will close on the acquisition of the wastewater utility property of the Sadsbury Municipal Township Wastewater System and begin providing service to these customers. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the closing of this acquisition. The adjustment for revenues for the FTY period is $471,228.

Q. Please describe the Acquisition Adjustment for BASA Wastewater in Schedule 2zb.

A. In December 2023, the Company anticipates it will close on the acquisition of the wastewater utility property of the Butler Area Sewer Authority System and begin providing service to these customers. This adjustment is based on the Company's estimate of the

annualized revenues that will be produced following the closing of this acquisition and annualized DSIC revenues. The adjustment for revenues for the FTY period is $11,720,905. The adjustment for revenues for the FPFTY period is $125,861.

Q. Please describe the Acquisition Adjustment for Brentwood Wastewater in Schedule 2zc.

A. In April 2024, the Company anticipates it will close on the acquisition of the wastewater utility property of the Brentwood Wastewater System and begin providing service to these customers. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the closing of this acquisition. The adjustment for revenues for the FTY period is $1,824,191.

REVENUE DECOUPLING MECHANISM

Introduction

Q. Is the Company offering a proposal for a revenue decoupling mechanism in this case?

A. Yes. The Company is proposing an RDM for both water and wastewater service.

Q. What is the purpose of the RDM?

A. The RDM is an alternative rate design mechanism whose purpose is to more reliably recover the revenue requirement and associated fixed costs approved by the Commission in this case.

Q. Is recovery of fixed costs a concern for the Company?

A. Yes. Approximately 81% of the Company's water and wastewater service revenues will be collected under volumetric rates under the Company's proposed rate structure in this case, which means that revenues will vary up or down depending on how much water our customers use. At the same time, over 95% of the Company's costs are fixed costs, which

do not vary depending on how much water our customers use. If water sales are less than the levels used to set the Company's water service rates in this proceeding, the Company's revenues will be less than the authorized level in this proceeding and, as a result, the Company's ability to recover the costs that the Commission determines to be prudent will be diminished. Likewise, if revenues exceed the authorized level in this proceeding due to higher than anticipated water sales, the Company will recover more than the authorized level in this proceeding. Given the nature of the Company's fixed costs, the RDM will provide the Company with a better opportunity to recover the revenue requirement and fixed cost authorized in this case as the difference between those amounts and actual revenues will be charged or credited back to customers in the subsequent year.

Q. What are some of the factors that jeopardize the Company's ability to recover its fixed costs of providing service?

A. There are two primary factors that cause revenue volatility and the associated risk in recovering fixed costs from year to year – seasonal weather conditions and the ongoing trend of declining use for residential, commercial, and municipal customers.

Seasonal weather conditions can cause water sales to either increase or decrease from expected going-forward levels, which, in turn, causes revenues to increase or decrease from expected going-forward levels. Cold winters and hot, dry summers tend to increase water sales, and warmer winters and cooler, wetter summers tend to decrease water sales. Weather volatility in either direction causes volatility in revenues.

Continuing trends in declining use per customer in the residential, commercial, and municipal classes also cause volatility in revenues. I have previously testified to both the impact of weather conditions on annual water sales and on the continuing trends in

declining use and the associated impact of declining use on water sales. The Company expects that water consumption per customer will continue to decline over the next several years. Both of these conditions cause declines in revenues and both total consumption on a per customer basis and revenue on a per customer basis are expected to continue to decline well beyond the period of time for which rates are set in this case.

Q. Does the Company have any control over either seasonal weather conditions or the drivers that are causing declining usage?

A. No, it does not.

Q. Are there other factors that can cause the Company's revenue to deviate from expected levels?

A. Yes. The recent COVID-19 pandemic situation is a prime example of an external event that can cause the Company's revenues to vary from expected or approved levels. During the pandemic, the Company saw increased sales volumes for residential customers beyond expected levels due to the COVID-19 pandemic as more people were staying home from work and schools. Over the same period, the Company saw decreases in sales volumes from expected levels in the commercial and municipal classes. These changes in volumes, whether temporary or permanent, cause changes in revenues from expected or authorized levels and increase the Company's revenue volatility. Implementation of a well-structured RDM can stabilize customer bills over time and help avoid over-recovery or under-recovery of fixed costs because of revenue volatility resulting from uncontrollable circumstances.

Q. Does the Company have the ability to significantly change its cost structure in order to compensate for changes in revenues?

A. To some extent, the Company experiences a reduction in variable costs associated with the reduced cost of treating and pumping less water and wastewater. For the most part, however, the Company's ability to reduce its fixed costs during periods when water sales are lower is limited, and it is generally not in the long-term best interests of our customers for the Company to do so. One simple example of this is the number of Company employees. The Company can hardly hire and fire its well-trained workforce based on short-term trends in weather or economic conditions simply to keep expenses in line with revenues. Similarly, although some maintenance may be deferred when revenues are lower, such deferrals merely forestall necessary repairs and could degrade the quality of service provided to PAWC's customers, as well as increase the cost of service over time.

Q. How is a volatile and degrading long-term revenue stream not in the long-term best interests of the Company's customers?

A. The Company is committed to helping customers use water efficiently and providing quality water and wastewater service that is affordable. As I explain below, the Company's ability to reliably recover its revenue requirement and recover its fixed cost of providing service over the long term through rates is an important part of the Company's ability to continue to properly operate, maintain, and invest in its water and wastewater system at a reasonable cost. This ability to prudently manage the PAWC system at a reasonable cost is in the long-term best interests of our customers.

Description of Proposal

Q. Please describe the Company's proposed Revenue Decoupling Mechanism.

A. The Company's proposed RDM is an alternative rate design mechanism that couples traditional rate design with elements of Straight Fixed Variable ("SFV") Pricing. This

mechanism couples the benefits of traditional rate design that I have previously described in my Direct Testimony (including cost causation, affordability, gradualism, and efficiency of use) with the increased revenue stability available to the Company through an SFV rate design. This mechanism compares the revenues collected under the actual Commission-approved rates customers pay with the revenues that would have been collected through an SFV rate design on a forward-looking basis and accrues the differences, which are either credited to customers or collected from customers at a later time. The proposed RDM identifies three cost components as the basis for revenues that would be collected through the SFV rate design that form the basis of the revenue comparisons going forward. These three cost components are:

- **Volumetric Charge (VC):** A charge in dollars per hundred gallons that applies to all water volumes sold to customers.
- **Residential Fixed Charge (RC):** A flat dollar charge per month that applies to all residential customers.
- **Non-Residential Fixed Charge (NC):** A flat dollar amount that applies to all non-residential customers.

Q. What is SFV Pricing?

A. Generally, SFV pricing is a rate design that collects a utility's fixed costs through fixed charges and a utility's variable costs through volumetric charges. For utilities where nearly all of the revenue requirement is fixed cost, SFV pricing can result in monthly charges to customers that are relatively high and volumetric rates that are relatively low. SFV pricing aligns cost recovery with the nature of the costs being recovered, provides a stable and reliable revenue stream for the utility, and satisfies the revenue stability principle of rate

design. On the other hand, SFV pricing is arguably not consistent with generally accepted cost-causation principles at a customer class level because fixed costs between classes vary more than may be reflected in SFV rate components. On its own, SFV pricing also has the potential to reduce incentives to use utility service efficiently and can disadvantage lower-income customers from an affordability perspective if fixed charges are set too high.

Q. How is the Company proposing to determine the cost components of its proposed RDM?

A. The three different cost components are calculated based on the allocated revenue requirements to customer class, the level of production costs identified in the class cost of service studies sponsored by Ms. Heppenstall, and the total volumes of water and wastewater approved in this proceeding that form the basis of the billing determinants for water and wastewater service. The calculation for the different cost components is as follows:

- **Volumetric Charge (VC):** Total Production Costs allocated to eligible customers divided by total volumetric sales associated with eligible customers.
- **Residential Fixed Charge (RC):** Total revenue requirement allocated to residential customers for rate design purposes less the Volumetric Charge multiplied by total volumetric sales associated with residential customers divided by the total number of residential customers in the case.
- **Non-Residential Fixed Charge (NC):** Total revenue requirement allocated to eligible non-residential customers for rate design purposes less the Volumetric Charge multiplied by total volumetric sales associated with eligible non-residential

eligible customers divided by the total number of non-residential customers in the case.

Q. Do you have an exhibit that shows the calculation of these cost components?

A. Yes. Exhibit CBR-8 provides a calculation of the three RDM cost components based on the cost of service studies supported by Company witness Heppenstall.

TABLE 18
Water Service

RDM Cost Components	Amount	Description
Residential Fixed Charge	$83.18	$ per residential customer per month
Nonresidential Fixed Charge	$515.94	$ per nonresidential customer per month
Volumetric Charge	$0.1033	$ per hundred gallons sold

TABLE 19
Wastewater Service

RDM Cost Components	Amount	Description
Residential Fixed Charge	$87.87	$ per residential customer per month
Nonresidential Fixed Charge	$504.66	$ per nonresidential customer per month
Volumetric Charge	$0.1548	$ per hundred gallons sold

Q. Can you provide an example of how the RDM would work on a forward-looking basis?

A. The proposed RDM works by comparing actual revenues recovered from eligible customers in a given month or year to the revenues that would result from applying the RDM cost-components that I described above. If actual revenues are higher than would have been collected under the RDM formula, the difference is credited to customers in the following year. If actual revenues are lower than would have been collected under the RDM formula, the difference is collected from customers in the following year. As I have previously described, the RDM cost components are developed based on Commission-

approved customer counts, sales, production costs, and total revenue requirements. On a monthly basis, the RDM is calculated as follows:

RES Acc = RESREV – (VC * RESUSE) – (RC * RESCUST)

Where: RES Acc = amount of residential revenue to be accrued

RESREV = Total revenue in the month from residential customers, excluding revenues from adjustments

VC = Volumetric Charge

RESUSE = Number of 100-gallon units sold to residential customers

RC = Residential Fixed Charge

RESCUST = Average number of residential customers for the month

NON Acc = NONREV – (VC * NONUSE) – (NC * NRCUST)

Where: NON Acc = amount of non-residential revenue to be accrued

NONREV = Total revenue in the month from non-residential customers, excluding revenues from adjustments

VC = Volumetric Charge

NONUSE = Number of 100-gallon units sold to non-residential customers

NC = Non-Residential Fixed Charge

NRCUST = Average number of non-residential customers for the month

Q. Please describe how the Company proposes to implement the RDM.

A. The Company's proposed RDM will apply to both water and wastewater service, with separate tariffs and separate recovery/credit mechanisms for each service. The

recovery/credit mechanisms are proposed to be volumetric and apply separately for each customer class. Amounts accrued over the course of the year that will be credited to or collected from customers will be applied in the following year to forecasted sales volumes and a volumetric credit or surcharge, as applicable, will be calculated on a dollars per hundred gallons basis.

Q. Are the cost components of the RDM calculation themselves fixed or do they change over time depending on changes in revenue requirements?

A. The cost components of the RDM shown above in Tables 18 and 19 are fixed and will not change until a future rate case with a different set of revenue requirements and calculations for cost components.

Q. What customer classes are included in the Company's proposed RDM?

A. The RDM will apply to all customers in the residential, commercial, industrial, municipal, and sales for resale classes except for those customers taking service under contract rates.

Q. Please describe the specific accounting treatment to be used for the RDM.

A. Each month the Company will compare the actual metered revenues for the applicable customer classes to the calculated authorized revenues under the RDM cost component structure. If actual revenues fall short of the RDM calculation, the difference in revenue will be temporarily deferred to a regulatory asset account. If actual revenues are greater than the RDM calculation, the difference would be temporarily deferred to a regulatory liability account.

Q. Please describe the Company's proposed method for RDM reporting and reconciliation filings with the Commission

A. The Company proposes to make a filing with the Commission on or before January 31 of each year that includes the RDM calculation and support for any annual adjustments to be effective under the RDM tariff. The Commission Staff and other interested parties would have 60 days to review the Company's filing. If either a charge or a credit is in order, the reconciliation amount would be charged from April 1 through December 31 for that calendar year.

Q. How does the Company propose to treat customer growth through acquisitions in the RDM process?

A. Any acquisitions that are completed by the Company that are not already included in this proceeding will not be included in the proposed RDM until such time that they are included in rate base and revenue requirement calculations in a future rate proceeding. For any acquisitions that may occur that are not already included in this case, sales and revenues will be tracked separately and excluded from the calculations used to support charges or credits under the Company's proposed RDM.

Q. How does the Company's RDM design address the concerns you identified earlier regarding cost causation, efficiency, and possible effects on affordability?

A. The RDM, as a modified version of SFV pricing that preserves the traditional elements of rate design that I describe above, lessens the concerns regarding cost causation, efficiency, and affordability that are typically present when applying pure SFV pricing. The RDM cost components continue to reflect cost of service allocation as determined by Company witness Heppenstall, and as discussed below, customers will continue to be incentivized to

reduce usage and increase efficiency, and service will remain affordable with the added benefit of greater stability.

Q. Does the Company's proposed RDM address the same uncertainty regarding volatility production expense cost as the Company's production expense deferral mechanism described by Company witness J. Cas Swiz?

A. No. The RDM and the production expense deferral mechanism solve for different and distinct problems. As described by Mr. Swiz in PAWC Statement No. 8, there is significant volatility in the per unit cost of the Company's production expenses. The Company responsibly manages and mitigates the volatility of these expenses to the extent possible but, ultimately, the per unit costs of the Company's production expenses are subject to market forces beyond the Company's control. Separately, as I describe in my testimony, the Company's ability to fully recover the revenue requirement approved by the Commission will be diminished if water sales are less than the levels used to set the Company's water service rates in this proceeding. Conversely, the Company could potentially recover more than the revenue requirement approved by the Commission if water sales are greater than the levels used to set the Company's water services rates in this proceeding. The production expense deferral mechanism addresses the volatility associated in the per unit cost of production expenses. The RDM addresses the risk, to both the Company and customers, associated with volatility in water sales.

The Company's proposed RDM accounts for changes in the cost of production expenses (i.e., the Total Production Cost) resulting from changes in volumes sold, but does not account for changes in production cost resulting from higher or lower cost of materials on a per unit basis. Therefore, as volumes sold increase or decrease, the RDM will address

changes in Total Production Cost associated with unanticipated volatility in customer usage, but not volatility in the per unit cost of production expenses.

In contrast, the production expense deferral mechanism will consider changes in production cost on a per unit basis but not changes in volumes sold. As Mr. Swiz explains in his Direct Testimony, unitized production costs going forward will be compared to the production cost per unit approved by the Commission in this case and any differences in unitized production cost multiplied by volumes sold are recorded in the deferral accounts. If volumes sold change but the production cost on a per unit basis does not change, nothing will be recorded in the production expense deferral account described by Mr. Swiz. If production costs do change on a per unit basis, those changes will be accounted for in the production expense deferral accounting.

Comparisons to Revenue Stabilization Mechanisms

Q. Did the Company propose a decoupling mechanism in its last base rate case (Docket No. R-2022-3031672)?

A. Yes. The Company filed a proposal for a revenue stabilization mechanism ("RSM") that was not included in the settlement agreement between the parties that was approved by the Commission in that case. I sponsored the proposed RSM in that proceeding.

Q. Are there significant differences between the Company's proposed RDM in this case and the RSM?

A. There are two significant differences between the proposed RDM in this case and the RSM. These differences are listed below:

- The proposed RSM was primarily an accounting tool designed to align the Company's revenues going forward (i.e., beyond the conclusion of that proceeding)

with the level of authorized revenue ultimately approved by the Commission in that proceeding. The RDM is more of a rate design tool than an accounting tool, coupling traditional rate design principles with the revenue stability afforded through SFV pricing. The reliance on rate components in the Company's proposed RDM sets it apart from the RSM.

- The proposed RSM was based on a static revenue requirement to be approved in that case. Under the RSM, revenues would have been compared going forward to that approved static revenue requirement. The proposed RDM in this case is not based on a static revenue requirement. If volumes sold going forward fluctuate up or down, the revenue calculations under the RDM will go up or down accordingly, but only to the extent that changes in volumes sold cause changes in short-term variable costs. Similarly, if there is customer growth or a reduction in customers (exclusive of acquisitions), the revenue calculations under the RDM will increase or decrease accordingly based on the approved level of fixed cost per customer.

Customer Impacts

Q. Do you have an exhibit that shows expected future trends in total water usage and revenues by customer class?

A. Yes. Exhibit CBR-9 shows an analysis of future trends in water revenues at the Company's proposed rates if current trends in declining usage continue. This analysis shows that at proposed rates, water service revenues will be expected to decline by approximately $5.8 million per year assuming no changes in base rates given the current trends in declining usage and customer counts for the residential, commercial, municipal, and industrial classes.

Q. What variability do you expect to see in annual water revenues in the future?

A. An analysis of the historical data shows that in any given year water revenues at the Company's proposed rates in this proceeding can swing from the projected amount by as much as plus or minus approximately $11.1 million. A statistical analysis of the data shows that an 80% confidence upper and lower bound around projected annual water revenues is plus or minus $14.3 million. This means that 80% of the time revenues are expected to be within plus or minus $14.3 million of the forecast, but there is a 10% chance that revenues will be more than $14.3 million above the forecast and a 10% chance that revenues will be less than $14.3 million below the forecast.

Q. Based on this, what do you expect the impact to be of the Company's proposed RDM on customers?

A. If current trends in customer counts and usage continues, the Company expects there to be a gap for residential water service customers of approximately $6.5 million per year between revenues generated under proposed rates and revenues calculated through the RDM calculation and a gap of approximately $3.3 million per year for nonresidential customers. This translates to an expected recovery factor for residential customers of $0.0266 per hundred gallons, or approximately $1.06 per month for 4,000 gallons of usage, and an expected recovery factor of $0.0181 per hundred gallons for commercial customers.

Q. If a customer takes actions to use less water in an attempt to reduce their bill, will the RDM simply take those savings away from customers?

A. No. A customer who takes specific actions to reduce their water consumption will still enjoy the benefits of a lower bill even with implementation of the RDM. If a customer takes actions to reduce their water consumption by 5% per month (4,000 gallons to 3,800

gallons for example), the resulting bill savings for an average use customer without the RDM would be $4.16 per month, well above the amount that the Company estimates an average use customer bill would increase due to implementation of the RDM.

Public Interest

Q. Does Pennsylvania law allow for consideration of alternative ratemaking mechanisms like the RDM?

A. Yes. Section 1330 of the Public Utility Code allows the Commission to approve an application by PAWC to establish various forms of alternative ratemaking mechanisms. One such form of alternative ratemaking, as identified in section 1330(b)(i), is a decoupling mechanism. Section 1330(f) specifically defines a Decoupling Mechanism as follows: "In the case of water and wastewater, a rate mechanism that adjusts or reconciles authorized rates or revenues for differences between sales used to set rates and actual sales, which may include, but not be limited to, adjustments resulting from fluctuations in the number of customers served and other adjustments deemed appropriate by the commission."[7]

Q. Is the Company's proposed RDM consistent with Pennsylvania law?

A. Yes. The Company's proposed RDM is an alternative ratemaking mechanism under Section 1330(b)(i) and specifically considers and addresses differences between sales used to set rates and actual realized sales in the future, and also specifically considers and addresses fluctuations in the numbers of customers served.

Q. What public policy objectives did the Legislature identify when authorizing the Commission to approve the adoption of alternative ratemaking proposals such as the RDM?

[7] 66 Pa.C.S. § 1330(f).

A. The Legislature stated that "It is the policy of the Commonwealth that utility ratemaking should encourage and sustain investment through appropriate cost-recovery mechanisms to enhance the safety, security, reliability or availability of utility infrastructure and be consistent with the efficient consumption of utility service."[8]

Q. In Docket No. M-2015-2518883, the Commission developed a Policy Statement on alternative ratemaking mechanisms that lists a number of factors that may be considered when evaluating an alternative ratemaking mechanism such as an RDM. Do you have an exhibit that contains an analysis of how the specific factors laid out by the Commission at Docket No. M-2015-2518883 apply to the Company's proposed RDM?

A. Yes. To assist the Commission in its review of the RDM, Exhibit CBR-10 contains the Company's detailed analysis of how the specific factors laid out by the Commission at Docket No. M-2015-2518883 apply to the Company's proposed RDM.

Q. How does a properly structured RDM meet these policy objectives and benefit PAWC's customers?

A. It is in the long-term best interests of customers for the Company to be able to reliably recover its fixed costs on an ongoing basis. The authorized water and wastewater revenue requirements approved by the Commission in this case represent the amount of revenue the Commission determines that the Company needs to operate, maintain, and invest in its water and wastewater system in a prudent and efficient manner, the vast majority of which are fixed in the short term. The ability to reliably recover the Company's fixed cost of providing service to customers improves the Company's ability to plan, manage, maintain,

[8] *Id.* § 1330(a)(2).

and invest in the facilities to continue providing safe, reliable, and high-quality water and wastewater service at a reasonable cost to customers, and a properly structured RDM does just that.

Q. What percentage of the Company's proposed revenue requirement in this case represents fixed costs?

A. As I stated previously, over 95% of the Company's costs are fixed costs, which do not vary depending on how much water our customers use, while approximately 81% of the Company's water and wastewater service revenues will be collected under volumetric rates under the Company's proposed rate structure in this case, which means that revenues will vary up or down depending on how much water our customers use. This means that well over half of the Company's fixed costs will be recovered through volume-based revenues which subjects the Company to significant levels of risk related to recovery of fixed costs.

Q. Are there other benefits to customers from the approval of the RDM?

A. Yes. The RDM will reduce the throughput incentive – the Company's financial incentive to sell more water. Under the current rate structure (without an RDM), the more water customers use, the more water the Company sells, the more revenue the Company collects, and the better the Company's financial performance. Currently, from a public policy perspective, any actions taken by the Company or the government (local, state, or Federal) to encourage conservation, no matter how beneficial to society, creates a disconnect between the public policy goal of more efficient use of water resources and the Company's legitimate financial objectives.

This, in turn, allows for a much higher degree of freedom to consider alternative rate designs that can improve affordability and efficiency of use for customers. Freedom

to implement rate designs that can improve affordability and improve price signals to different types of customers can come in the form of lower monthly service charges and higher volumetric rates, which can help lower-income customers and provide a more significant volumetric incentive to use resources more economically. Rate designs that price Basic Water Service differently from seasonal usage can be implemented that can improve affordability across the board for lower-income customers and provide price signals that better reflect cost-causation principles for customers that use more water for seasonal discretionary purposes. Implementing these beneficial alternative rate designs normally could have significant short-term and longer-term impacts on usage and revenues that may be detrimental to the Company's legitimate financial objectives without an RDM mechanism, but the associated financial risk to both the Company and its customers is reduced under the Company's proposed RDM.

Q. Are there other policy concerns among public utility regulators that the RDM addresses?

A. Yes. The National Association of Regulatory Utility Commissioners ("NARUC") has been at the forefront of this issue. At its November 2013 annual meeting, NARUC adopted a resolution that supports consideration of alternative recovery mechanisms for water and wastewater utilities, attached hereto as Exhibit CBR-11. The NARUC resolution recognizes declining use per customer, a shift to non-revenue–producing infrastructure replacement, and that the traditional cost of service model is not well adapted to this new environment. It states, in part:

> WHEREAS, Traditional cost of service ratemaking, which has worked reasonably well in the past for water and wastewater utilities, no longer adequately addresses the challenges of today and tomorrow. Revenue, driven by declining use per customer, is flat to decreasing, while the nature

> of investment (rate base) has shifted largely from plant needed for serving new customers to non-revenue producing infrastructure replacement and compliance with new drinking water standards; and
>
> WHEREAS, The traditional cost of service model is not well adapted to a no/low growth, high investment utility environment and is unlikely to encourage the necessary future investment in infrastructure replacement; and
>
> WHEREAS, Compared to the water and wastewater industry, the electric and natural gas delivery industries have in place a larger number and a greater variety of alternative regulation policies, such as multiyear rate plans and rate stabilization programs, and those set forth in the 2005 Resolution; and
>
> WHEREAS, The U.S. water industry is the most capital intensive sector of regulated utilities and faces critical investment needs that are expected to total $335 billion to $1 trillion over the next quarter century, as noted in the American Society of Civil Engineers 2013 Report Card for America's Infrastructure… .

The NARUC resolution goes on to recommend the adoption of alternative recovery mechanisms, such as the RDM. It states that:

> Alternative regulatory mechanisms can enhance the efficiency and effectiveness of water and wastewater utility regulation by reducing regulatory costs, increasing rates for customers, when necessary, on a more gradual basis; and providing the predictability and regulatory certainty that supports the attraction of debt and equity capital at reasonable costs and maintains that access at all times.

Q. Are alternative regulatory mechanisms such as the RDM recognized in the regulatory community as an effective means of addressing these policy concerns?

A. Yes. Revenue decoupling mechanisms have been adopted in many states as a way to eliminate the throughput incentive, to support energy efficiency initiatives and investment, and to align actual revenue collection with authorized revenue. Clauses similar to the Company's proposal here have been successfully used for some time for water utilities in New York and California and have been more recently adopted for water utilities in

Connecticut, Nevada, Maine and Illinois. In addition, similar revenue stabilizing mechanisms have been approved for gas utilities in 23 states and an additional two states plus the District of Columbia have mechanisms pending, according to the December 2016 report from the American Gas Association entitled "Innovative Rates, Non-Volumetric Rates, and Tracking Mechanisms: Current List."[9] This report also states that Weather Normalization Adjustments are allowed in 22 states. A December 2017 report by the Institute for Electric Innovation lists 32 states and the District of Columbia that have an approved fixed cost recovery mechanism for electric utilities with an additional state pending approval.

Q. Please summarize why adoption of the RDM for the Company and its customers is appropriate.

A. Adoption of the Company's proposed RDM is in the long-term best interest of the Company and its customers. Rate designs that tie a utility's revenue recovery directly to sales volume have prompted concerns in modern utility regulation that because of seasonal variability and declining use per customer, volumetric rates that collect the majority of a Company's fixed cost do not give water utilities a reasonable opportunity to recover the fixed costs associated with providing service to customers. An alternative rate design mechanism that couples elements of SFV pricing with traditional rate designs brings the best of both worlds to both the Company and its customers. Implementing this alternative rate design solution: 1) makes the Company indifferent to selling less water, 2) promotes

[9] An earlier 2013 study by the Brattle Group entitled "Alternative Regulation and Ratemaking Approaches for Water Companies: Supporting the Capital Investment Needs of the 21st Century," prepared for the National Association of Water Companies, (September 30, 2013) found that 27 states for electricity, 30 states for natural gas delivery, and five states for water have these types of mechanisms.

water efficiency and conservation, 3) reduces the adverse impact of weather variability for both the utility and its customers, and 4) reasonably ensures that sufficient revenues for continued investments in the system are available. The result is a better alignment of all stakeholder interests, and the Company respectfully urges the Commission to authorize its proposed RDM.

CONCLUSION

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania-American Water Company
Response to Distribution Rates – Statement of Policy
Proposed Revenue Stabilization Mechanism

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa.C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

The RDM better aligns actual revenue collection with authorized revenues for all customer classes. The RDM specifically treats fixed and variable costs separately by customer class using rate design concepts associated with Straight-Fixed Variable ("SFV") pricing. The RDM is calculated and administered separately for residential and non-residential customer classes and treats fixed cost and variable cost separately so that fixed cost recovery is aligned with approved fixed costs (per customer) and variable cost recovery is aligned with approved variable costs (per hundred gallons of water). The recovery mechanism is on a volumetric basis.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

The Company's proposed RDM is not expected to impact the fixed utility's capacity utilization.

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

The Company's proposed RDM directly reflects changing consumption levels in variable cost recovery. As consumption levels increase, the Company's variable cost recovery increases, but only by the approved level of production cost per unit delivered or billed. The opposite is true whereas consumption levels decrease, the Company's variable cost recovery decreases, but only by the approved level of production cost per unit delivered or billed.

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

The proposed RDM would apply to both water and wastewater service with separate tariffs and separate recovery/credit mechanisms for residential and

nonresidential customers. The proposed RDM will not affect interclass or intraclass cost shifting between residential and non-residential customer classes.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

The proposed RDM reduces the throughput incentive, which gives the Company an incentive to collect more revenue when customers increase consumption. By connecting variable cost recovery directly to approved levels of production cost but not to fixed cost, the RDM removes this incentive from the Company and therefore eliminates any disincentives for the promotion of water efficiency efforts.

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

See response to item (5). The proposed mechanism encourages water efficiency by reducing the throughput incentive. In addition, if customers employ efficiency measures, those measures will far outweigh any surcharges that may result from the proposed RDM.

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

The proposed RDM does not have any specific impacts on low-income customers that do not apply to residential customers generally. Because the recovery mechanism is volumetric in nature, lower-use low-income customers will not be adversely impacted.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

The proposed RDM will, by definition, improve rate stability. In years where revenues are relatively low relative to SFV pricing and fixed costs are under recovered, rates would increase slightly in the next year to bring actual revenues back up. The opposite would be true in years where usage resulted in revenues that were higher than that implied by SFV pricing, which represents a scenario where fixed costs are over-recovered. In higher revenue years, the RDM will reduce rates which would offset higher revenues from the year before and "smooth out" revenues over the longer term.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

Weather will still have an impact on revenues but only to the extent that variable costs are impacted. Under the proposed RDM, volatility of utility revenue and

customer bills would be reduced over the long term. Increases in fixed cost recovery revenue due to abnormal weather variations (*e.g.*, drought conditions) would be returned to customers in the following year, and reductions in fixed cost recovery due to abnormal weather variations (*e.g.*, excessive rainfall) would be collected from customers in the following year.

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

To the extent that future rate cases are driven by lower-than-expected usage, the RDM likely would result in fewer rate cases, or at least rate cases seeking lower rate increases. However, the RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

The Company's proposed RDM does not interact with other revenue sources.

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

The RDM proposal includes consumer protections through the formal reconciliation process which includes audits and external stakeholder review. Tariff administration of the mechanism will contain consumer protections to make sure that the appropriate levels of revenue are being collected. Customers still can control their bill through controlling usage because the standard rate design still applies.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

The Company does not anticipate that there would be any issues related to customer confusion over the proposed RDM. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

The proposed RDM will support improvements in utility reliability by permitting the Company to more reliably recover fixed costs that can't be avoided by customers using less water, and will therefore enhance the Company's ability to prudently invest in and manage the business.

Resolution Endorsing Consideration of Alternative Regulation that Supports Capital Investment in the 21st Century for Water and Wastewater Utilities

WHEREAS, Through the *Resolution Supporting Consideration of Regulatory Policies Deemed as "Best Practices"* (2005), the National Association of Regulatory Utility Commissioners (NARUC) has previously recognized the important role of innovative regulatory policies and mechanisms in facilitating the efforts of water and wastewater utilities to address their significant infrastructure investment challenges; *and*

WHEREAS, Traditional cost of service ratemaking, which has worked reasonably well in the past for water and wastewater utilities, no longer adequately addresses the challenges of today and tomorrow. Revenue, driven by declining use per customer, is flat to decreasing, while the nature of investment (rate base) has shifted largely from plant needed for serving new customers to non-revenue producing infrastructure replacement and compliance with new drinking water standards; *and*

WHEREAS, The traditional cost of service model is not well adapted to a no/low growth, high investment utility environment and is unlikely to encourage the necessary future investment in infrastructure replacement; *and*

WHEREAS, Compared to the water and wastewater industry, the electric and natural gas delivery industries have in place a larger number and a greater variety of alternative regulation policies, such as multiyear rate plans and rate stabilization programs, and those set forth in the 2005 Resolution; *and*

WHEREAS, The U.S. water industry is the most capital intensive sector of regulated utilities and faces critical investment needs that are expected to total $335 billion to $1 trillion over the next quarter century, as noted in the *American Society of Civil Engineers 2013 Report Card for America's Infrastructure*; *and*

WHEREAS, Tap water is physically ingested and the quality of the service must be maintained to protect the health and economic well-being of communities across our Nation and comply with current and future regulations covering the control of a number of contaminants from nitrosamines to chromium, at a cost estimated at $42 billion by the EPA as part of their April 2013 Report to Congress; *and*

WHEREAS, Alternative regulatory mechanisms can enhance the efficiency and effectiveness of water and wastewater utility regulation by reducing regulatory costs, increasing rates for customers, when necessary, on a more gradual basis; and providing the predictability and regulatory certainty that supports the attraction of debt and equity capital at reasonable costs and maintains that access at all times; *now, therefore be it*

RESOLVED, That the National Association of Regulatory Utility Commissioners, convened at its 125th Annual Meeting in Orlando, Florida, supports consideration of alternative regulation plans and mechanisms along with and in addition to the policies and mechanisms outlined in the

Resolution Supporting Consideration of Regulatory Policies Deemed as "Best Practices" adopted by the NARUC Board of Directors on July 27, 2005; *and be it further*

RESOLVED, That the Committee on Water stands ready to assist economic regulators with implementation of alternative regulatory approaches that support water companies' capital investment needs of the 21st century.

_____

Sponsored by the Committee on Water
Recommended by the NARUC Board of Directors November 19, 2013
Adopted by the NARUC Committee of the Whole November 20, 2013.

PAWC STATEMENT NO. 10-R

REBUTTAL TESTIMONY
OF
CHARLES REA

WITH REGARD TO
PENNSYLVANIA-AMERICAN WATER COMPANY'S

RATE DESIGN PROPOSALS, AFFORDABILITY ANALYSES, LOW-INCOME DISCOUNT TARIFF MODIFICATION PROPOSAL, CUSTOMER USAGE AND DECLINING USE ANALYSES, REVENUE CALCULATIONS AND PROJECTIONS, AND REVENUE DECOUPLING MECHANISM PROPOSAL

DOCKET NOS.
R-2023-3043189 (WATER)
R-2023-3043190 (WASTEWATER)

DATE: February 21, 2024

PENNSYLVANIA-AMERICAN WATER COMPANY

REBUTTAL TESTIMONY OF CHARLES REA

I. INTRODUCTION

Q. What is your name and business address?

A. My name is Charles B. Rea. My business address is 3409 Research Parkway, Davenport, Iowa 52806.

Q. Are you the same Charles B. Rea that provided direct testimony in this case?

A. Yes, I am.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to address issues raised by various intervenors in this case related to water and wastewater rate design, Pennsylvania-American Water Company's ("Company" or "PAWC") affordability analysis for water and wastewater service, proposed changes to the Company's Bill Discount Program ("BDP"), revenue calculations in this case, and the Company's proposed Revenue Decoupling Mechanism ("RDM"). Specifically, I will be addressing the following witnesses:

- Office of Consumer Advocate ("OCA") Witnesses Christine Maloni Hoover (OCA Statement No. 1), Jerome D. Mierzwa (OCA Statement No. 4), and Roger Colton (OCA Statement No. 5).

- Bureau of Investigation and Enforcement ("I&E") Witnesses Joesph Kubas (I&E Statement No. 3) and Ethan H. Cline (I&E Statement No. 4).

- Pennsylvania-American Water Large Users Group ("PAWLUG") Witness Billie S. LaConte (PAWLUG Statement No. 1).

- Office of Small Business Advocate ("OSBA") Witness Kevin Higgins (OSBA Statement No. 1).

- The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Harry S. Geller, Esq. (CAUSE-PA Statement No. 1).

- Cleveland Cliffs Steel ("CCS") Witness Richard A. Baudino (CCS Statement No. 1).

- Commission on Economic Opportunity ("CEO") Witness Jennifer Warabak (CEO Statement No. 1).

- City of Scranton ("Scranton") Witness Teri Ooms (C.O.S. Statement No. 2).

I have not attempted to respond to every argument made by the I&E, OCA, OSBA, CCS, CAUSE-PA, PAWLUG, and CEO witnesses. The fact that I may not have responded to any particular argument or statement made by the I&E, OCA, OSBA, CCS, CAUSE-PA, PAWLUG, or CEO witnesses does not indicate my agreement with that argument or statement.

Q. Please identify the exhibits you will be sponsoring in this proceeding.

A. I am sponsoring the following PAWC Exhibits attached to my testimony:

- PAWC Exhibit CBR-10R – Rebuttal RDM Analysis for Docket No. M-2015-2518883

- PAWC Exhibit 10-E – WW BASA Operations Revised

- PAWC Schedule Rea 1

Q. How is your rebuttal testimony organized?

A. My rebuttal testimony is organized into the following sections:

- Affordability
- Bill Discount Program Changes
- Reallocation of Wastewater Revenue Requirement (Act 11)
- Rate Design
  - Scale Back of Rates
  - Water Rate Design
  - Wastewater Rate Design
- Revenue Calculations
- Revenue Decoupling Mechanism

II. AFFORDABILITY

Introduction

Q. Please provide an overview of the Company's affordability analyses that you provided in your direct testimony.

A. PAWC Statement No. 10 – Exhibits CBR-1 (Water Affordability Analysis) and CBR-2 (Wastewater Affordability Analysis) provided a very robust, detailed, and balanced analysis of the affordability of PAWC's water and wastewater service for our customers. These affordability analyses contained two components.

- The Enterprise-Level Analysis provided a long-term view of the overall affordability of the Company's water and wastewater service going back in time to 2012 and looking forward to proposed rates by comparing average residential bills by year for all residential customers to estimated median household income ("MHI") for the Company's customers, which is a high-level measure of household income for PAWC's customers.

- The Community-Level Analysis provided a deeper dive into the affordability of water and wastewater service at the Company's proposed rates in this case by community, and by income levels and household sizes within those communities, using a standard usage level of 40 gallons of water per household member per day.

Q. What do you mean when you refer to the Company's affordability analyses as balanced?

A. The Company's affordability analyses are balanced in the sense that they examine the affordability of water and wastewater service across the entire spectrum of the Company's residential customer population. While ultimately, the focus turns to lower income customers because that is where mitigation strategies for affordability are focused, and the Company's affordability analyses provide a detailed view of affordability for lower household income, it is important to understand the affordability of service across the entire customer spectrum. The Company's affordability analyses do both of these things.

Q. Which partes in this case address the Company's affordability analysis for water and wastewater service?

A. OCA Witness Colton and CAUSE-PA Witness Geller both address the Company's affordability analyses.

Q. How are you addressing these comments in your rebuttal testimony?

A. First, I will address the testimony of OCA Witness Colton in my rebuttal testimony and then I will address the testimony of CAUSE-PA Witness Geller.

Rebuttal of OCA Witness Colton

Q. What observations and criticisms does Mr. Colton raise regarding the Company's Enterprise-Level Analysis of affordability?

A. Mr. Colton raises a number of issues with the Company's Enterprise-Level Analysis:

- Mr. Colton takes issue with the Company's use of MHI in the enterprise level analysis. Mr. Colton, referring to an article that I cite to in my direct testimony (the "Teodoro" article) (*see* OCA Statement No. 5, p. 8), asserts that the Teodoro article's finding that use of MHI has been misapplied in the context of affordability, yielding results that "are inaccurate at best and misleading at worst," cannot be said to support my use of MHI. (OCA Statement No. 5, p. 9:3-20).
- Mr. Colton takes particular issue with our use of Median Household Income of Homeowners ("MHI-HO") in the Enterprise-Level Analysis stating that:
  - Home ownership is becoming increasingly limited to households with higher and higher incomes and it is not true that PAWC customers who are homeowners represent the income trend for PAWC customers as a whole (OCA Statement No. 5, p. 10:19:20).
  - MHI for homeowners is becoming less and less representative of the total population of households in a community (OCA Statement No. 5, p. 10:10-15)
  - The Company's assessment of water affordability entirely, or in large part, on the MHI-HO, has the impact of asserting that as owner-occupied housing in a community becomes increasingly less affordable, water service

becomes increasingly more affordable when measured by bills as a percentage of homeowner income. (OCA Statement No. 5, p. 11:8-13).

- Mr. Colton takes issue with my use of the "median household income in each of PAWC's communities for single-family owner-occupied and single-unit, renter-occupied homes as reported by data in the American Community Survey ("ACS")," stating that the data I cite to do not report median incomes of occupants of single-unit, renter-occupied homes. (OCA Statement No. 5, p. 12:3-13)
- Mr. Colton generally claims that use of MHI is inappropriate because MHI is growing at a faster rate than household income for lower-income customers, both in absolute dollar terms and as a percentage of income associated with the federal poverty level ("FPL"). (OCA Statement No. 5, p. 12:-14).
- Mr. Colton states that the Enterprise-Level Analysis compares non-comparable years and that instead of examining the impact of increasing rates given a uniform consumption from year to year, I apply the annual PAWC rates to a decreasing level of consumption. (OCA Statement No. 5, p. 16:5-9).
- Mr. Colton states that I made technical mistakes in my analysis, asserting that:
  - In nearly ten percent of the calculations where I weighted the homeowner and renter median incomes, I multiplied the percentage of renters by a renter median income even though the renter median income was not reported. As a result, the renter income in those instances was calculated as being $0. (OCA Statement No. 5, p. 17:4-8).
  - I excluded rental multi-family housing since residents of multi-family homes were not likely to have individual meters (and thus be direct

customers of PAWC) but did not exclude the corresponding owner-occupied multi-family housing unit. (OCA Statement No. 5, p. 17:9-12).

- Finally, he states that the reason I excluded multi-family housing does not withstand closer scrutiny. He asserts that while large apartment complexes are likely to be master-metered, structures with two to four housing units are more likely to be individually metered, and by excluding rental households with two to four housing units, I reduce the penetration of rental housing that should have been included in his weighting of renter and homeowner median incomes. He concludes, therefore, that my calculated MHI is systematically artificially high. (OCA Statement No. 5, p. 17:13-18:11).

Q. Why do you use MHI in your Enterprise-Wide Analysis?

A. The Enterprise-Level Analysis uses MHI for two reasons. The first is that MHI is a widely recognized, well understood, and readily available measure of household income in different communities and states. The second is that MHI is consistent in scope with the concept of average monthly bills, which is the second input in the analysis. Average monthly bills encompass all residential customers, not a subset. MHI also encompasses the entire residential customer base, not a subset. It is important in any analysis of affordability that there be consistency in assumptions between bills used in the analysis and household income metrics used in the analysis. This is something that many analyses of affordability of water and wastewater service do not consider. Use of MHI as a measure of total population income brings that consistency to the analysis when paired with average monthly bills.

Q. Why in your direct testimony do you cite publications that discuss 2% of MHI as a standard for affordability of service?

A. The 2% standard that was originally adopted by the U.S. Environmental Protection Agency and the Teodoro article that I cite to in my direct testimony (PAWC Statement No. 10, p. 10) is important because that figure still serves as a general standard of affordability for water and wastewater service. This standard is a commonly used standard for affordability at the individual household income level. (*See also*, PAWC Statement No. 10, p. 18).

Q. Do you agree that use of MHI involves a misapplication of the 2% standard and yields results that "are inaccurate at best and misleading at worst"?

A. I agree that use of the 2% standard at MHI as a single point estimate can be misleading because it may not be representative of affordability generally. That is why the point of the Enterprise-Level Analysis is not to indicate affordability of service at any point in time, but rather to provide a high-level historical perspective on how the affordability of service has been trending over time and how it is expected to continue to trend under proposed rates in this case.

Q. Do you believe that the Company's proposed rates in this case are generally affordable?

A. Yes. I believe that the Company's proposed rate design in this proceeding results in water and wastewater service that is affordable for our customers.

Q. Why do you believe that the Company's proposed rates in this proceeding are affordable?

A. The Company's proposed rates in this proceeding are affordable, not only because the BTI Ratio at MHI falls below the 2% level, but because the Company's proposed rate design in this case, which includes the Bill Discount Program ("BDP"), give virtually every residential customer the opportunity for Basic Water Service for both water and wastewater service at an affordable level (for example, less than 2% of household income for one form of service and 4% of household income for both).

Q. Please explain.

A. There are, and will always be, groups of customers for whom affordability of water and wastewater service may be challenging. The question of affordability is not one of whether that percentage of customers falls below a certain threshold level or whether the BTI ratio at MHI falls below a certain threshold level. The question of affordability instead depends on whether a robust sustainable tariff program, like the BDP, is in place to help customers with affordability issues, gives these customers the opportunity for Basic Water Service at a level deemed to be affordable (2% of household income or less, for example), and whose existence improves the overall affordability of service for all customers as measured by an index like the Affordability Index.

Typically, BDP programs are designed such that discounts offered to customers are built into base rates, and this is the case with PAWC. If rates approach a point where the level of discounts needed to provide lower income customers the opportunity for service at an affordable level are so great that other customers literally cannot afford to carry them

without their own bills becoming unaffordable, it can be said that rates are approaching a "tipping point" where overall affordability of service can no longer be improved through a program like the BDP. This tipping point can represent the threshold of affordability or unaffordability of rates. PAWC is not at that point. In fact, both Mr. Colton and Mr. Geller propose increases to discounts offered under the BDP knowing that the cost of those discounts is recovered from other customers without negatively impacting overall affordability of service. Because rates proposed by the Company in this proceeding are comfortably within the range where the BDP can significantly improve overall affordability of service, I conclude that the Company's overall rate design is in fact affordable.

Q. How do you use MHI for homeowners (MHI-HO) in your Enterprise-Level Analysis?

A. The MHI-HO metric is used in the Enterprise-Level Analysis as an input to the calculation of the multiplier that converts state-level MHI data from the U.S. Census Bureau Table H-8 to estimated MHI data for the Company's residential customer base. The fact of the matter is that the majority of PAWC's residential customers are homeowners. This metric is used in a weighted-average calculation by zip code along with the estimated percentage of PAWC's customers that are homeowners, the estimated percentage of PAWC's customers that rent, reported MHI for rental households, and number of customers by zip code that results in a multiplier that is applied to state-level MHI to yield an estimated MHI for the Company's customers. This estimated multiplier is 1.1256 for water service and 0.9515 for wastewater service, meaning that the Company estimates that MHI for the Company's residential water customers is 112.56% of the total statewide MHI for the

Commonwealth of Pennsylvania as reported by the U.S. Census Bureau, and the MHI for the Company's residential wastewater customers is 95.15% of the total statewide MHI. The differences in these two estimates reflect the differences in socio-economics and household demographics in the Company's water and wastewater service territory.

Q. How do you respond to the criticisms laid out by Mr. Colton regarding MHI-HO?

A. The criticisms that Mr. Colton makes against MHI-HO simply aren't relevant to the calculation I just described. Mr. Colton's criticism regarding incomes of homeowners versus renters over time would only be relevant if these conditions would result in systematic and significant changes in the calculated multipliers over time. Mr. Colton has not made this claim despite having access to the data necessary to investigate this, and in fact, estimates of these multipliers going back over time show that the estimated relationship between statewide MHI and estimated MHI for the Company's customers has held very steady over time.

Q. Do you believe that MHI-HO is reflective of the Company's residential customer population?

A. I do. The table below shows MHI statistics for homeowners and rental households from 2012 to 2022 as reported by the American Community Survey for zip codes that make up the vast majority of the Company's residential customers.

TABLE 1
Selected PAWC Household Statistics

	2012	2022	Increase
MHI – Owner Households	$71,504	$100,122	40%
MHI – Renter Households	$31,686	$46,553	47%

% of Owner Households	72.5%	71.8%	
% of Renter Households	27.5%	28.3%	

The data shows that while MHI has risen by 40% from 2012 to 2022 for homeowners, MHI for renter households has increased by 47% over the same time., which is a higher rate of increase. This result could be expected under Mr. Colton's theories if there was a large shift over time in lower income households being priced out of the housing market and forced to rent instead. However, the increase in the percentage of rental households over the same period is less than one percentage point, which is not a significant increase. This small increase cannot account, on its own, for the faster growth in incomes for rental households than for homeowners. This data indicates that there is not a large external factor related to home ownership that is driving increases in household income for homeowners. The data supports the conclusion that MHI-HO is a valid reflection of income for PAWC's residential customers.

Q. Mr. Colton claims that your use of MHI in each of PAWC's communities for single-family owner-occupied and single-unit, renter-occupied homes, as you have calculated it, is incorrect because the data you cite does not report median incomes of occupants of single-unit, renter-occupied homes. How do you respond?

A. It is true that the ACS does not report MHI for single-unit rented homes separately from other rental households, but there is no reason to believe that incomes in single-unit rented homes are less than for other rental households. If anything, the opposite is more likely to be true. It is generally the case that rental costs for single-family homes are greater than for apartments. If that is true, then it can be inferred that incomes for households that rent

single-family homes is likely higher than for households that rent apartments. This implies that my estimate of household income as it relates to rental households is actually a conservative estimate and understates the actual income levels for these customers.

Q. How do you respond to Mr. Colton's claim that the use of MHI is inappropriate because MHI is growing at a faster rate than household income for lower-income customers and as a percentage of income associated with FPL?

A. I agree that incomes for higher income households are growing at a faster pace than incomes for lower income households, but that does not indicate a weakness in the Company's Enterprise-Level Analysis as I have presented it in my testimony. It simply indicates that the trend in BTI Ratios over time would be slightly higher in an analysis that considers incomes at lower percentile levels.

Q. How do you respond to Mr. Colton's criticism that the Enterprise-Level Analysis compares non-comparable years and, that instead of examining the impact of increasing rates given a uniform consumption from year to year, you apply the annual PAWC rates to a decreasing level of consumption?

A. Any multi-year analysis of affordability must focus on bills, not just rates. This is true because a) customers pay bills, not rates, and b) bills incorporate both rates and usage levels. Usage levels have undeniably declined over the last several years, and declines in usage have a direct impact on rate levels (lower and lower usage results in higher and higher rates for the same revenue requirement). To focus on changes in rates over time without considering changes in usage that help drive those rate changes provides a highly

misleading view of affordability over time. Examining the impact of increasing water rates given a uniform level of consumption from year to year does not reflect reality and is misleading and incorrect. The appropriate analysis considers bills, not rates.

Q. Mr. Colton claims that you made a technical error because there are calculations where you weighted the homeowner and renter median incomes in cases where renter median income was not reported and, as a result, the renter incomes in those instances was calculated as being $0. How do you respond?

A. This claim is factually incorrect. The calculation of the multipliers I described above, which weights homeowner and renter median household incomes, does not include any communities where these incomes were not reported. This exclusion only drops 1.5% of residential customers from the water and wastewater affordability analysis.

Q. Mr. Colton claims that excluding multi-family housing does not "withstand closer scrutiny" because structures with two to four housing units are more likely to be individually metered and, by excluding rental households with two to four housing units, you reduce the penetration of rental housing that should have been included in you weighting of renter and homeowner median incomes, resulting in an artificially high MHI. How do you respond?

A. The Company's assumption in these analyses for who are direct customers of the Company are households that own their homes or households that are in single family rented units. While different assumptions on who are direct customers of the Company would lead to slightly different results in absolute values of BTI Ratios, they would not change the trend.

Q. Is this issue related to the technical error Mr. Colton claims you made by excluding rental multi-family housing, since residents of multi-family homes were not likely to have individual meters, but not owner-occupied multi-family housing units?

A. It is. But my exclusion of rental multi-family housing is not a technical error. This is a reflection of the Company's assumption of what type of households are direct customers of the Company.

Q. Does Mr. Colton provide what he claims to be an improved Enterprise-Level Analysis that allegedly fixes the problems he identifies in your Enterprise-Level Analysis?

A. Yes. Mr. Colton provides two sets of analyses that he states are more appropriate. The first set, which is provided in the tables at pp. 20-21 of OCA Statement No. 5, examines the BTI Ratios at the average income in the First Quintile and Second Quintile given a constant usage over the years. The second analysis, which is provided in Table 3 of OCA Statement No. 5 and is generally described at p. 22-23 of OCA Statement No. 5, determines what income would be needed in order to achieve a BTI Ratio of 2.0% each year and examine the number of zip codes within the PAWC service territory that have those incomes at the average Q1 and average Q2 income level (OCA Statement No. 5, p. 19).

Q. Have you reviewed these analyses?

A. I have.

Q. Do you have any comments on his first set of analyses depicted by the charts at p. 20 and p. 21?

A. Yes. These comparisons, according to Mr. Colton, are comparisons of rates over time assuming constant usage. As I stated previously, this is precisely the wrong way to do a multiyear evaluation of affordability because rates and usage levels are connected. Mr. Colton does not specify in his testimony what level of usage he assumes, how he determines rates historically, or what households his income estimates refer to or how those income estimates were developed, so it is not possible to know if there is any real consistency between his usage estimates or the levels of usage customers in his analysis would be expected to use, which is another important aspect of a robust affordability analysis.

Q. Do you have any comments on his second analysis as provided in his Table 3?

A. The data provided in his Table 3 calculates bills for a static average level of usage and estimates the level of income needed such that bills are 2% of household income, and then goes on to determine the number of zip codes where first quartile or second quartile income is less than that amount. There is no apparent consistency between usage levels in the analysis and the households that are being analyzed. As Mr. Colton points out in his testimony regarding the Company's winter averaging proposal for wastewater rates, lower income customers tend to have lower amounts of usage. That fact needs to be reflected in a proper analysis of the affordability of service for lower-income customers. That reality is reflected in the Company's Community-Level Analysis. It is not reflected in Mr. Colton's analysis.

Q. What observations and criticisms does Mr. Colton raise regarding the Company's Community-Level Analysis of affordability?

A. Mr. Colton raises a number of issues with the Company's Community-Level Analysis:

- Mr. Colton takes issue with the claim that the Company's Community-Level Analysis looks at affordability at the individual customer level and takes issue with my claim that the Community-Level Analysis looks at affordability across different customer demographics. He points out that the only demographics that were considered were household income and household size (OCA Statement No. 5, p. 26:9-21). These critiques are semantics.

- Mr. Colton states the Community-Level Analysis does not consider "affordability at the individual level" in any fashion and does not consider "different customer demographics." He asserts that, instead, the Community-Level Analysis only considers affordability, both at the community level and at the "individual customer level," using only one customer attribute, namely income. (OCA Statement No. 5, p. 27:1-11).

- Mr. Colton appears to take issue with my use of the concept of Basic Water Service.

  - Mr. Colton states that while Company Witness Everette asserts that the Company defines "basic water service" to be the "service that is necessary and reasonable to meet basic household needs for drinking, cooking, sanitation, and general health service that does not include seasonal discretionary water use", the Company's determination of Basic Water Service is not a ground-up calculation and that I made no effort to identify what water is needed for drinking, cooking, sanitation, and general health service, let alone to assess which of those uses are "necessary and reasonable to meet basic household needs." (OCA Statement No. 5, p. 27:12-28:7).

  - Mr. Colton criticizes the Company's definition of Basic Water Service at an individual customer level for not taking into account different aged individuals within the household. (OCA Statement No. 5, p. 28:8-17).

  - Mr. Colton criticizes our use of Basic Water Service and our assertion that affordability based on this definition is at an individual customer level because it does not account for differences in (1) the age of children in a household; (2) the age of adults in a household; (3) the number of children in a household; (4) the number of adults in a household; (5) the income of a household; (6) the size of a housing unit; (7) the owner/renter status of a household; and (8) the housing unit type occupied by a household.

  - Mr. Colton states that the Company concedes that the definition of Basic Water Service at 40 gallons per household member per day is not a measurement of PAWC consumption, but rather is merely an assumption that does not consider things like how many household members are at home at any given time or for how long, or whether that definition would

change during the summer months when school age children are not in school but are instead at home all day. (OCA Statement No. 5, p. 29-20:30-9).

- Mr. Colton states that the definition of Basic Water Service at 40 gallons per customer per day is not consistent with end-use water consumption studies and is not consistent with other research stating that the definition of water consumption per household member per day should be higher than 40 gallons. (OCA Statement No. 5, p. 30-10:32-3).

- Mr. Colton claims that the use of gallons per household member per day results in inconsistencies between the distribution of household size and the distribution of usage seen in bills (OCA Statement No. 5, p. 32:4-34:4).

- Finally, Mr. Colton states that my community affordability testimony considers affordability from only one dimension, the breadth of unaffordability. He states that the community affordability testimony identifies the percentage of residential customers with water bills greater than 2% of household income, as well as the percentage of residential customers with wastewater bills greater than 2% of income by FPL but does not identify by how much – the depth of unaffordability – water and wastewater bills exceed 2% at each Poverty Level. (OCA Statement No. 5, p. 35:1-36:3).

Q. How do you respond to Mr. Colton's criticism of your position that the Company's Community-Level Analysis looks at affordability at the individual customer level?

A. The Company's Community-Level Analysis cannot look at each individual customer in the Company's system to determine whether service is affordable for that particular customer. Attempting to do so would create significant customer data privacy concerns and would be enormously difficult, if not impossible, to complete. Mr. Colton's criticism is one of semantics, not actual substance. My description of the Community-Level Analysis as one

that is done at the individual customer level is simply meant to differentiate that analysis from the Enterprise-Level analysis which is a high-level analysis done at a system level.

Q. Can you comment on Mr. Colton's criticisms of the Company's use of and definition of Basic Water Service?

A. Again, Mr. Colton's criticism here is one of semantics, not substance. The description we have used for Basic Water Service is only a description and is meant to differentiate the type of service we are including in this analysis from seasonal water use, which is discretionary, and which should not be subject to an analysis of affordability. The myriad factors that Mr. Colton outlines in his testimony that might cause an individual customer's water consumption to fluctuate cannot be utilized for any meaningful analysis. While there can be differences of opinion of what the appropriate amount of water usage per household member per day should be in an affordability analysis, there should be no argument that Mr. Colton's usage per household member per day approach to estimating water consumption for the purposes of analyzing affordability is not only inappropriate, but nearly impossible to perform.

Q. How do you respond to Mr. Colton's criticism that the definition of Basic Water Service at 40 gallons per customer per day is not consistent with end-use water consumption studies and is not consistent with other research stating that the definition of water consumption per household member per day should be higher than 40 gallons?

A. As I explain in my direct testimony (PAWC Statement No. 10, p. 14), the Company's estimate of 40 gallons of water per household member is specifically calibrated to non-seasonal consumption patterns for PAWC's customers and is consistent with average non-seasonal use per customer for PAWC's residential population. Literature on the subject that argues for higher amounts are not calibrated to actual usage for PAWC customers and the end-use studies quoted by Mr. Colton are also not calibrated to actual usage for PAWC customers.

Q. How do you respond to Mr. Colton's claims that the use of gallons per household member per day results in inconsistencies between the distribution of household size and the distribution of usage seen in bills?

A. It may be that the relationship between household size and water consumption for PAWC's customers is not perfectly linear, but the level of detail needed to make a meaningful comparison utilizing water consumption versus household size is not reflected in Mr. Colton's analysis, is not easily or readily available, and should not deter from use of water consumption per household member per day as a standard for estimating consumption. It simply stands to reason that households with more people in them will use more water than households with less people in them, and national data on household size versus income shows that lower income households tend to have fewer people in them than higher income households. All of this points to an analytical methodology that estimates water usage for lower income customers based on household sizes for lower income customers.

Q. How do you respond to Mr. Colton's criticism that the Community-Level Analysis considers affordability from only one dimension (i.e., the breadth of unaffordability) but does not identify by how much (i.e., the depth of unaffordability) water and wastewater bills exceed 2% at each Poverty Level?

A. This assertion is simply false. PAWC Statement No. 10 Exhibit CBR-1 and CBR-2 provide enormous levels of detail on the affordability of water and wastewater service across all income groups and also provide data on BTI Ratio for customers at different levels of household income by increments of the FPL. While the Affordability Index is a simple summary metric that describes the estimated percentage of customers with bills less than 2% of annual household income, the data needed to fully analyze the depth and breadth of affordability is completely contained within the affordability analyses provided by the Company.

Q. Does Mr. Colton provide what he claims to be an improved Community-Level Analysis that allegedly fixes the problems he identifies in your Community-Level Analysis?

A. Yes. This analysis is provided in Table 7 of OCA Statement No. 5 and is generally described at p. 36-39 of OCA Statement No. 5.

Q. Have you reviewed this analysis?

A. I have.

Q. Do you have any comments on these analyses?

A. While I do not take issue with any of the data in his analysis at Table 7 of OCA Statement No. 5, I would point out that this analysis is simply a re-summarization of the affordability data already provided by the Company in PAWC Statement No. 10 Exhibit CBR-1 and CBR-2, summarized to highlight points of interest to Mr. Colton and to deemphasize areas that he finds less compelling. There is no new data or analysis here. It is simply a re-summarization of the robust affordability analysis already provided by the Company.

Rebuttal of CAUSE-PA Witness Geller

Q. Mr. Geller states that he disagrees strongly with your methodology and conclusions related to your affordability analyses you provided in your direct testimony. (CAUSE-PA Statement No. 1 p. 37:7-9). What reasons does he provide to support his opinions?

A. Mr. Geller gives the following reasons:

- Mr. Geller states that the affordability analyses rely heavily on the use of MHI which he asserts is not an appropriate standard for which to assess affordability because it masks the extreme levels of unaffordability experienced by the lowest income households. (CAUSE-PA Statement No. 1 p. 37:10-14).

- Mr. Geller expresses concern that the metrics applied in the Company's Affordability Index calculation conceal the true depth and breadth of need amongst PAWC's low-income customers. He states that while my analysis indicates that 0% of water customers and 20% wastewater customers with household income between $0-$25K meet PAWC's Affordability Index, it does not quantify the number of households facing acute unaffordability or the level of unaffordability experienced by each household, and that these non-quantified metrics are key to assessing both the depth and breadth of unaffordability. (CAUSE-PA Statement No. 1 p. 37:15-22).

- Mr. Geller also asserts that PAWC's definition of Basic Water Service is improperly restrictive and not reflective of actual usage rates amongst residential customers. He states that PAWC's definition of Basic Water Service does not account for variations in household size and, in turn, consumption, and does not

account for households with higher usage resulting from inefficiencies or leaks in their systems. (CAUSE-PA Statement No. 1, p. 39:4-13)

Q. How do you respond to Mr. Geller's claim that MHI is not an appropriate standard and that its use masks extreme levels of unaffordability for the lowest income customers?

A. As I stated previously, use of MHI in the Enterprise-Level Analysis is used not to indicate affordability of service at any point in time, but rather to provide a high-level historical perspective on how the affordability of service has been trending over time and how it is expected to continue to trend under proposed rates in this case. The Company's Community-Level Analysis, which does not rely on MHI, is used to address the depth and breadth of affordability issues for lower income customers.

Q. How do you respond to Mr. Geller's claim that the Company's Affordability Index does not assess both the depth and breadth of unaffordability?

A. The definition of the Affordability Index is meant to provide a simple and easy to understand metric that shows the percentage of customers for whom Basic Water Service is less than 2% of household income. It is not meant, on its own, to address an in-depth analysis of lower income affordability issues, although the breadth and depth of affordability issues are generally correlated with each other. As I stated earlier, PAWC Statement No. 10, Exhibit CBR-1 and CBR-2, provide enormous levels of detail on the affordability of water and wastewater service across all income groups and also provide data on BTI Ratio for customers at different levels of household income by increments of FPL.

Q. How do you respond to Mr. Geller's concerns around your definition of Basic Water Service?

A. The Company's definition of Basic Water Service is not restrictive, nor is it meant to be. Basic Water Service reflects usage levels among residential customers. As I stated earlier, the use of 40 gallons per household member per day is tied specifically to overall usage patterns by PAWC's customers. Mr. Geller's claim that PAWC's definition of Basic Water Service does not account for variations in household size is incorrect.

Q. Mr. Geller states that "Despite the assertion that their analysis is reliant on a metric that varies by household size, PAWC's analysis then goes on to apply a static usage threshold of 3,000 gallons/month or less. If PAWC's analysis were utilizing a 40 gallon/household member threshold for basic service as claimed, usage would be closer to 5,000 (4,960) gallons/month for a family of four". (CAUSE-PA Statement No. 1, p. 35:14-17). How do you respond to this assertion?

A. It is not clear what Mr. Gellar means when he says that PAWC's analysis goes on to apply a static usage threshold of 3,000 gallons/month or less, but even a cursory review of statement No. 10 Exhibits CBR-1 and CBR-2 demonstrates that his assertion is incorrect. The referenced exhibits clearly show different total usage levels are assumed for different household sizes, with usage for a four-person household set at 4,800 gallons per month (4 persons x 40 gallons per person x 30 days).

Q. Mr. Geller asserts that you conclude in your testimony that the numbers of customers that will receive bills that exceed broadly accepted affordability standards (what he

labels the affordability gap) is acceptable (CAUSE-PA Statement No. 1 p. 38:1-5). Was that your conclusion?

A. No. This assertion is false. Nowhere in my direct testimony did I say or otherwise imply that the number of customers whose bills are expected to be more than 2% of household income is an acceptable level of unaffordability.

Q. Mr. Geller states that you claim that PAWC's rates have remained consistently low over time, and that contrary to your position, PAWC's rate unaffordability has increased both in depth and breadth in recent years, causing significant hardship for low-income customers (CAUSE-PA Statement No. 1, p. 40:1-10). How do you respond?

A. This assertion is also false. Again, nowhere in my direct testimony do I say or imply that rates have remained consistently low, high, or any other general level over time. Despite the faults I identified in Mr. Colton's proposed Enterprise-Level Analysis, the general trend in that analysis shows that there is not a significant upward trend in BTI ratios at either the first or second quintile income level from 2012 through 2022. The assertion that PAWC's rate unaffordability has increased both in depth and breadth over time is simply not true.

Q. Does Mr. Geller provide his own analysis of affordability for water and wastewater service?

A. He does. This analysis is provided in CAUSE-PA Statement No. 1 Exhibit 1.

Q. Have you reviewed this analysis?

A. I have.

Q. Do you have any comments on Mr. Geller's analysis?

A. CAUSE-PA Exhibit 1 suffers from the same problem as Mr. Colton's analyses, namely that there is no connection between usage levels assumed in the analysis and the levels of usage lower-income customers are actually likely to have. Stated another way, CAUSE-PA Exhibit 1 simply lacks context. This analysis calculates bills for various scenarios of usage level and household income stated in terms of multiples of FPL but provides no context as to which of these scenarios are more or less likely to happen. For example, the analysis provides bill calculations for 5,000 gallons a month for a two-person household at varying levels of income but makes no statement about whether that level of usage for a two-person household is likely or not. Without information on the number of customers that might fall within these various scenarios, there is no way to judge from this analysis the scope or depth of the affordability issue. The Company's affordability analyses provide a much clearer view of the scope and depth of real-world affordability issues.

<u>Conclusions</u>

Q. Both Mr. Colton and Mr. Geller at times allege that the Company's analysis of affordability does not address both the breadth and the depth of affordability issues related to the Company's water and wastewater service. How do you respond to these arguments?

A. This is clearly not true. The affordability analyses provided by the Company assess the affordability of water and wastewater service across all levels of income in every

community the Company serves and reports BTI ratios at every combination of household income, household size, and multiple of FPL. The assertion that the Company's analysis does not address both the breadth and depth of these issues is simply false.

Q. Mr. Colton and Mr. Geller at times accuse the Company of whitewashing issues relating to affordability by claiming that the Company's service is affordable and ignoring the affordability challenges faced by lower-income customers. How do you respond to these assertions?

A. Again, this is simply not true. As I stated in my direct testimony, the purpose of these analyses is to inform decision-makers about the size and scope of efforts that may be needed to help these vulnerable customers better afford water and wastewater service, both in terms of general rate design proposals that can reduce the cost of Basic Water Service for all customers, including lower-income customers, and customer assistance programs such as the Bill Discount Program ("BDP"). This is exactly what the Company is doing with its proactive proposal to expand the BDP.

Q. Do you have any other observations around the testimonies of Mr. Colton and Mr. Geller on the subject of affordability?

A. Yes. Related to the point I just made, and despite the bevy of criticisms leveled against the Company's analyses, Mr. Geller and Mr. Colton both rely on the information provided by the Company's analyses to support their own positions in testimony and support their own proposed changes to the BDP, which I will discuss later. The fact that Mr. Geller and Mr. Colton quote and use information from the Company's affordability analyses serves as a

testament to the robustness and usefulness that the Company's affordability analyses provide.

III. PROPOSED BILL DISCOUNT PROGRAM CHANGES

Q. Please review the Company's proposal for expansion of the BDP.

A. The Company's current BDP is available to customers whose annual household incomes fall between 0% and 150% of FPL with different levels of discounts available to customers within the three tiers of the existing program (0%-50% FPL, 51%-100% FPL, and 101%-150% FPL). The Company's current BDP discount levels are shown in the table below:

TABLE 2 BDP Discount Levels	Water Service Charge Discount	Water Service Volumetric Discount	Wastewater Total Bill Discount
0% - 50% FPL	80%	80%	80%
51% - 100% FPL	65%	50%	55%
101% - 150% FPL	40%	25%	30%

The Company is proposing in this case to add a fourth tier of eligibility to the current BDP and expand the program offerings to customers whose household incomes are between 151% and 200% of FPL. For water customers in this fourth tier of eligibility, the Company is proposing to offer discounts of 30% on the 5/8" meter charge and 15% on the volumetric rate for water service and for wastewater customers in this fourth tier of eligibility, the Company is proposing to offer a discount of 20% on the total wastewater bill. (PAWC Statement No. 10, p. 24 6:12).

Q. Did the Company propose to change the discounts offered to customers in household income tiers already in the BDP?

A. No. The Company has not proposed changes to the existing discount schedule.

Q. Which partes in this case address the Company's proposed changes to the BDP?

A. OCA Wtiness Colton and CAUSE-PA Witness Geller both address the Company's proposed changes to the BDP.

Q. What is OCA Witness Colton's position on the proposed changes to the BDP?

A. Mr. Colton supports the proposed expansion of the BDP to include a fourth tier as defined by PAWC, but with modifications to the discount level and other modifications to discount levels for currently qualifying customers in the BDP, which he states will provide needed improvements in the affordability of service for current qualifying customers based on the Company's rate proposals in this case. I have outlined Mr. Geller's proposed discount levels for currently qualifying customers in the table below:[1]

TABLE 3 OCA Proposed BDP Discount Levels	**Water Service Charge Discount**	**Water Service Volumetric Discount**	**Wastewater Total Bill Discount**
0% - 50% FPL	90%	80%	85%
51% - 100% FPL	75%	65%	73%
101% - 150% FPL	60%	40%	55%
151% - 200% FPL	30%	20%	37%

[1] OCA Statement No. 5 p. 49:3-50:13 and OCA Statement No. 5 Table 10 at p 45.

Q. Does CAUSE-PA Witness Geller support the Company's proposed changes to the BDP?

A. In his words, "yes and no". Mr. Geller's support of the Company's expansion proposal appears to be conditioned on the Company being required to first make certain improvements in the affordability and accessibility of its BDP for currently qualifying customers, including transitioning to a percentage of income payment structure ("PIP") which the Company does not support. (*See* the rebuttal testimony of Tawana Dean, PAWC Statement No. 14-R). Mr. Geller proposes a new set of discount levels for currently qualifying customers in the BDP that he claims will provide needed enhancements in the affordability of the program. I have outlined Mr. Geller's proposed discount levels for currently qualifying customers in the table below:[2]

TABLE 4 CAUSE-PA Proposed BDP Discount Levels	**Water Service Charge Discount**	**Water Service Volumetric Discount**	**Wastewater Total Bill Discount**
0% - 50% FPL	90%	80%	85%
51% - 100% FPL	75%	65%	73%
101% - 150% FPL	60%	40%	55%

I would note that although Mr. Geller does not specify a proposal for discounts at the 151%-200% FPL tier, the discounts for the existing tiers proposed by Mr. Colton and Mr. Geller are identical.

Q. Do you agree with Mr. Colton's and Mr. Geller's proposed changes to the Company's BDP?

[2] CAUSE-PA Statement No. 1, p. 43:16-46:12.

A. While PAWC continues to support its BDP, as proposed by the Company, it does not oppose the modifications recommended by Mr. Colton or Mr. Geller. The proposed discounts to the BDP offered by Mr. Colton and Mr. Geller would provide greater levels of affordability for customers at the lowest end of the income scale. The Company defers to the Commission as to the level of discounts it deems appropriate in this proceeding.

IV. REALLOCATION OF WASTEWATER REVENUE REQUIREMENT

Q. Please review the Company's proposal for reallocating a portion of wastewater revenue requirements under Pennsylvania Act 11.

A. The Company is proposing in this case to reallocate approximately 27% of the filed revenue requirement for wastewater service to water service customers, which is approximately $71 million. The guiding principle behind the Company's reallocation proposal is to target residential bills for average wastewater usage of approximately $100 per month for customers in the SSS Zone and $110 per month for customers in the CSS Zone. This proposed reallocation also results in residential bills for average water usage of approximately $90 per month, which brings parity to residential bills for water service and wastewater service at average usage levels. This also results in a BTI Ratio for wastewater residential customers that is less than 2023 levels, which in turn helps to manage the affordability of wastewater service and bring a level of parity to the affordability of water and wastewater service. (PAWC Statement No. 10, p. 46:8-48:7).

Q. What intervenors in this proceeding address the Act 11 Reallocation of wastewater revenue requirement to water customers?

A. I&E Witness Kubas, OCA Witnesses Mierzwa and Hoover, PAWLUG Witness LaConte, OSBA Witness Higgins, and CCS Witness Baudino all address Act 11 reallocation of wastewater revenue requirement to water customers.

Q. What is I&E Witness Kubas' position on the Company's reallocation proposal?

A. Mr. Kubas argues that the Commission should reject PAWC's proposal to shift $71,087,394 of wastewater revenue requirement from to water customers because: (a) the primary consideration should have been to design wastewater rates to recover cost of providing wastewater service; (ii) the wastewater rates proposed by I&E result in average bills that are reasonable considering all factors, and (iii) the Company's affordability analysis is flawed because it ignores the wastewater rates paid to other entities by PAWC water customers and ignores the benefits that it claims accrue to customers of being acquired by PAWC. Mr. Kubas argues that the BASA and Brentwood Act 11 amounts should be removed completely due to the I&E position that these acquisitions should be removed from the case, which reduces the reallocation to $47,969,463, and that changes should be made in the SSS amount to reduce the reallocation amount to $321,682 and the CSS reallocation amount to $35,835 (I&E Statement No. 3 Exhibit 3, Schedule 1).

Q. What is OCA Witness Hoover's position on the Company's reallocation proposal?

A. Ms. Hoover argues that PAWC's request to shift 94% of the wastewater revenue deficiency ($71M) to water customers, which represents 27% of total wastewater cost of service, is a departure from traditional ratemaking. She recommends utilizing the Bonbright framework for choosing what shift of wastewater to water to be approved and that the

Commission must examine whether similarly situated customers are being treated similarly, which she claims is significant when most of PAWC's customers do not receive PAWC wastewater service (OCA Statement No. 1, pp. 35-39).

Q. What is OCA Witness Mierzwa's position on the Company's reallocation proposal?

A. Mr. Mierzwa argues that assigning 94% of the wastewater revenue requirement increase to water customers is not reasonable. Mr. Mierzwa notes that the Commission recently approved a reallocation proposal in an Aqua proceeding that assigned approximately 20% of the proposed wastewater revenue requirement to water customers. I would note that these two data points are not an apples to apples comparison as the 94% figure represents a percentage of the total increase and the 20% figure Mr. Mierzwa cites for Aqua is a percentage of the total revenue requirement, which is not the same thing. He states that it would be reasonable to shift up to 75% of OCA's calculated SSS revenue requirement increase (approximately $15.2M) and up to 50% of OCA's calculated CSS revenue increase (approximately $3.7M) to water customers (OCA Statement No. 4 pp. 22-28).

Q. What is PAWLUG Witness LaConte's position on the Company's reallocation proposal?

A. Ms. LaConte argues that the proposed wastewater reallocation is too large in light of the small number of PAWC water customers who also receive wastewater service from the Company and because it reflects acquisitions where PAWC has agreed to set insufficient rates. (PAWLUG Statement No. 1, pp. 23-27).

Q. Are there other positions taken by these witnesses that you wish to separately address?

A. Yes. Ms. LaConte and Mr. Baudino generally state in their testimonies that any approved Act 11 revenue requirement should be allocated among water customer classes based on the corresponding wastewater classes that give rise to the revenue shortfall. (PAWLUG Statement No. 1, pp. 23-27 and OSBA Statement No. 1, pp. 33-34). Mr. Baudino's position appears to go one step further, recommending that if the Commission approves a reallocation of wastewater revenue to water service customers, the total wastewater reallocation to the water service customer class should be based on each water service class's proportionate share of total water service cost responsibility, and that the classes to whom these amounts should be allocated are the Residential, Commercial, Industrial, Public, and Private Fire classes (CCS Statement No. 1, pp. 7-8).

Q. What is your position regarding the allocation of Act 11 amounts to water service customer class?

A. In practice, the customer classes around which wastewater rates are developed are not the same as the customer classes used to develop water rates, so there will never be a one to one match where you can cleanly identify Act 11 wastewater amounts by customer class and assign them to the same classes for water service. It is appropriate to match a class for class reallocation as much as possible but there will always be an element of an allocation to water service customers based on cost of service.

Q. How do you respond to the arguments that an Act 11 reallocation as large as the Company is proposing is too large in light of the small number of PAWC water customers who also receive wastewater service from the Company and the fact that most water customers take wastewater service from another supplier?

A. By virtue of its existence, Act 11 contemplates the possibility that most water customers whose rates may be affected by this statute may already take similar services from a different service provider, so the fact that most water customers take wastewater service from another supplier is not an issue. As I stated in my direct testimony, the Company's proposed reallocation results in an increase in residential water volumetric rates of $0.19 per hundred gallons, which would increase the monthly water bill of a Rate Zone 1 residential water customer with an average usage of 3,200 gallons per month by approximately $6.08 per month. In contrast, this reallocation results in lower wastewater residential bills for approximately the same usage level of anywhere from $10 to $90 per month depending on the rate and location of the customer. The Company's proposal seeks to maximize the total number of customers for whom water and wastewater service will fall within the Company's proposed benchmark of 2% of household income at the individual household level.

Q. How do you respond to the arguments that the Act 11 reallocation is unreasonable because it reflects acquisitions where PAWC has agreed to set insufficient rates?

A. Again, by virtue of its existence, Act 11 contemplates the possibility that acquired wastewater systems may not be able to implement sufficient rates necessary to support investment needed in those systems at levels that are affordable for their customers. The

purpose of Act 11 is to alleviate this concern and spread costs for needed improvements in these systems over a larger customer base. Initial rate changes in newly acquired systems are sufficient to carry needed investments if all of the investments are required to be recovered exclusively from the customers of those systems upfront. A reallocation of a portion of the revenue requirement to a larger customer base can ease the burden on new system customers and further the goal of consolidation and prudent investment in these systems. The long-term benefits of consolidation are already experienced by existing customers, and the Company's proposal allows those benefits to be extended to new customers as well. (*See* the rebuttal testimony of Company Witness Runzer, PAWC Statement No. 2-R).

Q. Does the Company continue to support its general approach to its Act 11 reallocation proposal?

A. Yes. The Company continues to support its methodology and reasoning for its proposed reallocation of a portion of wastewater revenue requirements to water customers under Act 11. While ultimate revenue requirements for water service and wastewater service may change from that originally proposed by the Company, the guiding principles for the Company's reallocation are sound and should be followed by the Commission.

V. RATE DESIGN

A. INTRODUCTION

Q. Did other intervenors comment on the Company's rate design in this case?

A. Yes. Comments on the Company's water and wastewater rate design were provided by I&E Witness Cline, OCA Witness Mierzwa, OSBA Witness Higgins, PAWLUG Witness LaConte, CEO Witness Warabak, CCS Witness Baudino, and CAUSE-PA Witness Geller.

Q. How will you be addressing these comments in your rebuttal testimony?

A. I will address comments specific to the Company's water rate design in the water rate design section of my testimony, and I will address comments specific to the Company's wastewater rate design in the wastewater rate design section of my testimony

B. <u>SCALE BACK OF RATES</u>

Q. What is the Company's position on the scale back of rates?

A. The Company's position for scale back of rates is that in the event that the Commission approves a revenue requirement that is less than that proposed by the Company, the Company proposes to reduce the revenue requirements for water service and wastewater service, and the proposed amount of reallocation from wastewater to water under Act 11 to be proportional so that the same relative percentages to the total of water service revenue requirement, wastewater service revenue requirement, and Act 11 reallocation amounts be maintained at proposed levels. The Company believes that the levels of rates for water service and wastewater service relative to each other should be maintained as proposed in the event that a lower revenue requirement is approved by the Commission in this case. (PAWC Statement 10, p. 16:16-17:5).

Q. Do parties in this case have proposals for the scale back of rates in the event that the Pennsylvania Public Utility Commission ("Commission") orders a revenue requirement increase less than what the Company is proposing in this case?

A. Yes. I&E Wtiness Cline, OCA Witness Mierzwa, OSBA Witness Higgins, and PAWLUG Witness LaConte all make proposals regarding the scale back of rates if the Commission orders a revenue requirement increase that is less than what the Company is proposing in this case.

Q. What is I&E Witness Cline's position on the scale back of rates?

A. Mr. Cline states that the first step that must be completed in any scale back is to determine the revenue requirement and scale back for wastewater operations. He asserts that must be set first in order to determine the amount of revenue requirement that must be allocated to water operations. (I&E Statement No. 4, p. 41:20-42:10). Mr. Cline recommends that any scale back to wastewater revenue requirement should be netted against the Act 11 allocation the Commission determines for wastewater operations. (I&E Statement No. 4, p. 42 12:15). For water service, Mr. Cline recommends that both usage rates and customer charges be decreased to produce a revenue level approved by the Commission in the event that a revenue requirement for water service is approved at levels below the Company's recommended amount, but that usage rates for the Rate Zone 2 residential and commercial and the Rate Zone 4 commercial rate classes not be scaled back as long as they remain lower than the usage rates in Rate Zone 1. (I&E Statement No. 4, p. 42:17-44:8).

Q. What is OCA Witness Mierzwa's position on the scale back of rates?

A. Mr. Mierzwa's comments on scale back appear to be confined to water service. Mr. Mierzwa recommends that in the event a lower than requested water revenue requirement increase is authorized by the Commission, that the direct cost of service indicated in his class cost of service study for each customer class which, would exclude the Act 11 allocation, be proportionately scaled back to reflect the actual water revenue increase authorized by the Commission in this proceeding. (OCA Statement No. 4, p. 30:3-15).

Q. What is OSBA Witness Higgins' position on the scale back of rates?

A. Mr. Higgins recommends that if the Commission approves a lower revenue requirement increase than proposed by PAWC, the decrease be applied principally to the water rates. He states that as long as the cost-based wastewater increase associated with the approved revenue requirement is greater than PAWC's proposed wastewater rates, the incremental revenue requirement reduction should not reduce PAWC's proposed wastewater rates, which means that a lower revenue requirement will reduce Act 11 revenues and PAWC's proposed water rates generally. For water service, he recommends scaling each water class's revenues in proportion to each class's share of the total proposed non-Act 11 revenues in his revenue allocation (Schedule KCH-9), which is calculated at PAWC's requested revenue requirement. (OSBA Statement No. 1, p. 36:15–37:10).

Q. What is PAWLUG Witness LaConte's position on the scale back of rates?

A. Ms. LaConte recommends that if the requested revenue requirement by the Company is reduced, the reduction should apply to the Act 11 wastewater allocation first. In addition, she recommends that any decrease that is allocated to industrial and municipal customers

apply to volumetric rates only, and that PAWLUG's proposed increases to the fixed monthly charges for these rate classes remain the same. (PAWLUG Statement No. 1, P. 29:10-30:2).

Q. Do you have any comments on the intervenor's positions on the scale-back of revenue requirements?

A. I do. To begin, I note that Mr. Cline is correct in stating that the first step in any scale back determination is to determine the revenue requirement for wastewater operations and a scale back for wastewater operations, because that must be set first in order to determine the amount of revenue requirement that must be allocated to water operations. Also, I do not object to his proposal that, in the event that a revenue requirement for water service is approved at levels below the Company's recommended amount, there is a reduction of both usage rates and fixed charges, but that usage rates for the Rate Zone 2 residential and commercial and the Rate Zone 4 commercial rate classes not be scaled back as long as they remain lower than the usage rates in Rate Zone 1. I would note that this recommendation is contrary to Ms. LaConte's recommendation that fixed charges not be reduced for industrial and municipal customers. I also do not object to recommendations that any reductions in water service revenue requirements be applied ratably across customer classes.

However, a running theme in all of the scale back proposals is that any reductions in revenue requirements for wastewater service be applied to the Act 11 reallocation amounts first, and the Company does not support that position. If revenue requirement reductions to wastewater customers are first applied to Act 11 amounts, that effectively

becomes a revenue requirement reduction to water service instead. Under these proposals, wastewater rates would only be reduced due to a reduction in wastewater revenue requirement in the event that reduction was greater than a proposed Act 11 reallocation amount. The Company does not support that position and believes that in the event that a reduction in wastewater revenue requirements is ordered by the Commission, reductions in wastewater rates should result from that decision.

Q. Does the Company continue to maintain its position on scale back as outlined in your direct testimony?

A. Yes. The Company's proposal for scale back is designed such that the same relative percentages to the total of water service revenue requirement, wastewater service revenue requirement, and Act 11 reallocation amounts be maintained at proposed levels and that the levels of rates for water service and wastewater service relative to each other should be maintained as proposed in the event that a lower revenue requirement is approved by the Commission in this case. This approach results in a just and reasonable outcome for all customer groups and should be approved by the Commission.

C. WATER RATE DESIGN

Introduction

Q. What intervenors in this proceeding address issues related to water service rate design?

A. I&E Witness Cline, OCA Witness Mierzwa, PAWLUG Witness LaConte, CEO Witness Warabak, OSBA Witness Higgins, and CCS Witness Baudino all address issues related to water service rate design in this case that I will be addressing in my rebuttal testimony.

Class Revenue Allocations

Q. Are there issues related to the allocation of revenue requirements by customer class that you will be addressing in your rebuttal testimony?

A. Yes. OSBA Witness Higgins and CCS Witness Baudino both offer alternative approaches to revenue allocations that I will address. I note that Company Witness Heppenstall generally addresses cost of service in her rebuttal testimony, and it is the Company's position that water service rates should generally be based on cost of service as modified by any Act 11 revenue reallocations to customer class and reallocations of revenue requirements from Public Fire and Other Water Utilities classes.

Q. What are Mr. Higgins and Mr. Baudino's proposals regarding allocation of revenue requirements that you would like to address?

A. Mr. Higgins offers an alternative revenue allocation for water operations that he claims improves alignment with costs that reflects a $5.3M lower increase for the Commercial class and a $5.3M higher increase for the Municipal class than PAWC's proposal (OSBA Statement No. 1, p. 35-37). Mr. Baudino also recommends an alternative approach to revenue allocation that results in a higher increase for the Municipal class and a lower increase for Residential, Commercial, Industrial, and Private Fire classes (CCS Statement No. 1, p. 12). In both of these proposals, the common theme is a higher increase to the

Municipal class than proposed by the Company and the lower increases to other customer classes to compensate.

Q. What is the Company's position regarding a higher increase for Municipal customers and a lower increase for other classes as proposed by Mr. Higgins and Mr. Baudino?

A. The Company is not opposed to higher increases for the Municipal class as proposed by Mr. Higgins and Mr. Baudino with offsetting decreases to other customer classes.

Meter Charges

Q. Please summarize the various parties' positions on monthly meter charges.

A. OCA Witness Mierzwa proposes no changes to the Company's existing monthly meter service charges, leaving the 5/8" meter charge at $17.50 per month. (OCA Statement No. 4, pp. 35-36). CEO Witness Warabak also opposes any increase to the fixed residential customer charge because he claims it will impact a customer's motive and ability to conserve (CEO Statement No. 1, pp. 5-6). Ms. LaConte recommends doubling the Company's proposed meter charges for industrial customers for 6" meter charges and above and decreasing volumetric rates for industrial customers accordingly (PAWLUG statement No. 1, pp. 28-29). She states that these changes will provide a more stable revenue stream to PAWC. Mr. Baudino recommends that the Company's proposal not to increase meter charges for industrial charges be rejected and that meter charges and volumetric charges for industrial customers should be increased by the same percentage amount. (CCS Statement No. 1, pp. 13-14).

I&E Witness Cline proposes a 5/8" meter charge of $19.50 per month and provides an alternative set of monthly meter charges based on that proposal. He does not oppose the Company's proposals for residential customers with meters larger than 1 ½ inch. He states that PAWC's proposals to increase commercial and municipal rate class customer charges are in a reasonable 7-8% increase range and does not recommend adjusting the proposed customer charges for industrial and Other Water Utilities. (I&E Statement No. 4 pp. 30-35).

Q. Does the Company continue to support its proposal for a $20 5/8" meter charge?

A. Yes. Mr. Cline correctly points out that the Company provided two customer cost analyses for the forecast test year in Company Witness Heppenstall's direct testimony (PAWC Ex. 12-A, Appendix A, Attachment RS1j). The results of the Company's first cost analysis reflect a fully allocated customer cost revenue requirement calculation that results in a unit cost and a 5/8" meter charge of $24.63 per month (PAWC Ex. 12-A, Appendix A, Attachments RS1j, p. 1). The second analysis considers an allocation of costs that is restricted to direct customer-related costs only and results in a 5/8" meter charge of $19.31 per month, both of which are higher than the Company's current charge of $17.50 per month (PAWC Ex. 12-A, Appendix A, Attachments RS1j, p. 2).

Both analyses are reasonable methodologies for considering the calculation of a monthly meter service charge, and the results from these analyses represent a window within which a cost-based meter charge can be determined. Choosing the lower amount of $19.31, which is based on costs that are only direct customer-related costs, is an extreme position to take; just as extreme as saying that volumetric rates should only consider costs

that change with the volumes of water sold. It is more appropriate to also consider the fully allocated revenue requirement associated with business functions that are customer related when determining the monthly meter charge. Therefore, the Company's proposal of $20 per month represents a compromise between these two endpoints and errs on the side of the more conservative $19.31 per month calculation.

Q. Do you agree with Ms. LaConte's proposal to artificially double the meter charges for industrial 6" meters and above?

A. I do not. The Company did not propose any changes to meter charges for industrial and Other Water Utilities classes, as these meter charges are already more than double the Company's proposed meter charges for residential and commercial charges for meter sizes of 4" and above. Ms. LaConte's proposal would have these meter charges be more than four times the proposed meter charges for residential and commercial charges with no apparent basis in cost. The differences in meter charges between commercial and industrial charges are already very substantial and there is no cost-basis for further increases.

Q. Do you agree with Mr. Baudino's proposal to increase meter charges for industrial charges for industrial customers at the same percentage as volumetric rates?

A. I do not. As I stated previously, the meter charges are already very substantial and there is no cost-basis for further increases to these charges.

<u>Volumetric Rates</u>

Q. What is I&E Witness Cline's position on volumetric rates for water service.

A. Mr. Cline argues that the Company's proposals to set usage rates in Rate Zone 3 (SLIBCO), residential and municipal usage rates in Rate Zone 4 (Turbotville), and usage rates in Rate Zone 5 (Steelton) to be equal to Rate Zone 1 are generally reasonable but notes that the volumetric rates will need to be increased slightly in light of I&E's reduced customer charge recommendation. Mr. Cline opposes setting Rate Zone 2 (Valley) equal to Rate Zone 1 as it would lead to what he claims are an unreasonable percentage increase and proposes a separate set of usage rates for Rate Zone 2 at I&E Statement No. 4 p. 38 which are approximately 77% of the Company's Rate Zone 1 proposed residential rate and approximately 81% of the Company's proposed Zone 1 commercial rate. He also opposes setting Rate Zone 4 commercial to Rate Zone 1 for similar reasons and recommends usage rates for commercial customers in Rate Zone 4 that are approximately 81% of the Company's proposed Zone 1 commercial rate. (I&E Statement No. 4, pp. 36-41).

Q. What is OCA Witness Mierzwa's position on volumetric rates for water service.

A. Citing gradualism, Mr. Mierzwa recommends that residential volumetric rates in Rate Zone 2 (Valley) usage rate be set at 70% of Rate Zone 1 rates established in this case, and that Rate Zone 1 usage charges should be designed to recover the approved revenue requirement that is not recovered through OCA's recommended customer charge. (OCA Statement No. 4, pp. 36-37)

Q. What is PAWLUG Witness LaConte's position on volumetric rates for water service?

A. As I previously stated Ms. LaConte recommends decreased volumetric rates from those proposed by the Company for industrial customers to match her proposed increases in

meter charges for industrial customers, claiming that these changes will provide a more stable revenue stream to PAWC and reduce the chance that the industrial class will pay more than its cost to serve if sales are higher than projected. (PAWLUG Statement No. 1, pp. 28-29).

Q. What is CCS Witness Baudino's position on volumetric rates for water service?

A. Mr. Baudino recommends that volumetric charges and meter charges for industrial customers should be increased by the same percentage amount. (CCS Statement No. 1, pp. 13-14).

Q. Do you accept Mr. Cline's and Mr. Mierzwa's recommendations for reducing proposed Rate Zone 2 (Valley) rates and Rate Zone 4 (Turbotville) commercial rates?

A. No. The Company believes that the increases for Rate Zone 2 (Valley) and the commercial increases for Rate Zone 4 (Turbotville) are not unreasonable given the relative level of rates currently in place. The Company continues to support full integration of Rate Zone 2 and Rate Zone 4 rates into the Company's single -tariff statewide rate.

Q. Do you accept Ms. LaConte's and Mr. Baudino's proposals regarding industrial volumetric rates?

A. No. I Continue to support the Company's proposal for leaving monthly meter charges for industrial customers unchanged. Volumetric rates for industrial customers should be designed to collect the total revenue allocated to that class less revenues from current industrial meter charges.

Q. In Company Witness Everette's testimony, she discusses an alternative proposal regarding the inclusion of revenue requirements for the Brentwood and BASA acquisitions, which would include a separate set of rates for "Step 1," "Step 2," and "Step 3." "Step 1" would be a set of rates excluding the revenue requirements for BASA and Brentwood, "Step 2" would include revenue requirements for BASA but nor for Brentwood, and "Step 3" would include the revenue requirements for both BASA and Brentwood (PAWC Statement No. 1-R, pp. 5-6). Have you reviewed Ms. Everette's rebuttal testimony regarding this alternative proposal?

A. Yes, I have.

Q. Are you submitting any alternative rate designs for Step 1, Step 2, and Step 3 at this time in your rebuttal testimony?

A. I am not submitting an alternative rate design at this time for Step 1 or Step 2. I note that the Company's filed rate design in this proceeding, based on its proposed revenue requirement, is effectively the Step 3 rate design because it includes both the revenue requirements for BASA and Brentwood and includes a reallocation of wastewater revenue requirements to water service under Act 11 that reflects the inclusion of rates for BASA and Brentwood.

Q. Does the proposal for a Step 1 and Step 2 revenue requirement affect proposed wastewater rates for BASA and Brentwood?

A. No. Because the Company's proposed wastewater rates for BASA and Brentwood are already based on the Company's proposed revenue requirement for those acquisitions, less

an amount of reallocation of revenue requirement to water service under Act 11, those rates would not change based on the exclusion of those revenue requirements from either Step 1 or Step 2. The only thing that would change regarding the Company's proposed wastewater rates is the effective date of the rates and the tariffs associated with those rates.

Q. Does the proposal for a Step 1 and Step 2 revenue requirement affect proposed water service rates?

A. Yes. The proposed water service rates are affected by the exclusion of revenue requirements for BASA and Brentwood because the total reallocation of wastewater revenue requirements to water service under Act 11 would change based on the exclusion of BASA and Brentwood. Under Step 1 rates, the Act 11 reallocation to water service would only be based on reallocated revenue requirements for the SSS and CSS wastewater pricing groups, so water service rates in total would be reduced from the Company's originally proposed levels. Under Step 2 rates, the reallocation of revenue requirements from the BASA system would be included but a reallocation of revenue requirements from the Brentwood system would not be included, so water service rates would increase from Step 1, but still would be at a reduced level from the Company's originally proposed rates. It would only be at Step 3 when the Act 11 reallocation from both the BASA and Brentwood systems would be in place would water service rates be equal to the Company's originally proposed water service rates.

D. WASTEWATER RATE DESIGN

Winter Averaging

Q. Please describe the Company's proposal for wastewater rate design as it relates to the concept of winter averaging.

A. The Company is proposing to change the way that it determines the volumetric component of bills for residential customers from the method used today, where volumetric charges are based on total metered water usage for the month, to a methodology referred to as winter averaging. Winter averaging is a method for determining volumetric components of wastewater bills that attempts to separate metered water usage that is likely to go through the wastewater system from water usage that is used for outdoor purposes in the summertime (e.g., watering lawns, filling pools, etc.). Under winter averaging, a customer's bill in the wintertime is determined by actual metered water usage for the month, and in the summertime, the customer's bill is determined by the lesser of actual metered water usage for the month or the average water consumption for that customer in the winter months. This calculation is done individually for each customer and is a common way that wastewater utilities bill customers for wastewater service. The practical effect of this approach is that customers who use water in the summertime that does not go through the wastewater system will no longer be billed for that usage on their sewer bills, and the volumetric rate for wastewater service will be slightly higher than it otherwise would have been because total billing determinants will be reduced. (PAWC Statement No. 10, p. 43:1-45:14).

Q. Did the Company propose winter averaging for all of its wastewater pricing zone?

A. The Company proposed Winer Averaging for all wastewater customers except for customers in the Scranton district. The Company did not propose winter averaging in the Scranton rate zone because the Company did not propose any changes in Scranton rates.

Q. If the Commission orders a change in rates for Scranton customers, does the Company propose to implement its winter averaging proposal for Scranton rates?

A. Yes. If the Commission orders a change in Scranton rates, the Company proposes that the winter averaging billing methodology would also apply to Scranton, and billing determinants for Scranton rates would change accordingly.

Q. Are there parties that address the Company's proposal for modifying wastewater rates and wastewater billing determinants to account for winter averaging?

A. Yes. I&E Witness Kubas, OCA Witnesses Mierzwa and Colton, and CAUSE-PA Witness Geller all address the Company's proposal regarding Winter Averaging.

Q. What is Mr. Kubas's position on the Company's winter averaging Proposal?

A. Mr. Kubas does not oppose the Company's winter averaging proposal but suggests two conditions. Mr. Kubas states that if the Commission approves the proposal, none of the revenue shortfall from this proposal should be recovered from other wastewater customers or water customers. Secondly, Mr. Kubas recommends that the Commission determine that the proposal is approved initially as a temporary program to permit the resulting revenue impacts to be evaluated in the first rate case following its implementation. (I&E Statement No. 3, p. 55-17:21).

Q. What is Mr. Mierzwa's position on the Company's winter averaging proposal?

A. Mr. Mierzwa opposes the Company's proposal, stating that the difference between winter usage and summer usage in the Company's service territory can be explained by a few extra showers and clothes washing loads per month in the summertime and that this would totally account for the historic difference between Residential winter and summer water usage. Therefore, he posits, it does not necessarily follow that PAWC's Residential customer outdoor water usage during the summer is sufficiently significant to justify adopting winter averaging and the resulting increase in volumetric rates and should be rejected. (OCA Statement No. 4, p.43:1-18).

Q. What is Mr. Colton's position on the Company's winter averaging proposal?

A. Mr. Colton opposes the Company's proposal for winter averaging, but states that should the winter averaging proposal be adopted, it should be made subject to the same low-income discounts that other PAWC volumetric charges are made subject to. In support of his position, Mr. Colton claims the following:

- Mr. Colton testifies that there is not a substantial variability in residential water bills (and thus in residential consumption) between the winter periods and the non-winter periods defined by the Company needed to support the Company's proposal. In support of this, Mr. Colton conducts an analysis of median usage levels by month that he asserts shows a relative lack of variability in bills between summer and non-summer months at the median level. (OCA Statement No. 5 p. 97:14 through p. 99).

- Mr. Colton claims that there are a significant number of residential customers that have usage in the summer but no usage in the winter whom he labels "snowbirds". Mr. Colton claims that usage for these customers in the summer is higher than in the winter, not because this usage is outdoor usage, but that because these customers aren't home during the winter and, therefore, it is incorrect to assume that their summer usage does not go through the wastewater system. (OCA Statement No. 5 p. 97 through p. 101:12)

- Mr. Colton states that the Company's assumption of using a standard usage level of 3,000 gallons per month for new customers with no winter usage history unfairly penalizes new customers as those customers, according to Mr. Colton, are likely to have usage levels lower than 3,000 gallons per month as shown on Table 28 of his direct testimony. (OCA Statement No. 5, p. 101:13-104:12)

- Mr. Colton states that lower-income customers are less likely to be residents of homes with substantial outdoor summer consumption. As a result, low-income customers will be less likely to have their summer wastewater bills capped at a lower level than those bills historically have been and these customers will be called upon to bear the burden of the foregone revenue from having non-water bills capped, with little opportunity to be a recipient of any of the reduced bills. (OCA Statement No. 5, p. 105:4-10).

- Mr. Colton states that customers who have non-winter usage capped at no more than their winter usage have substantial upward variability in their consumption and that customers who would not benefit from the winter averaging process have extremely low usage. He claims that by capping non-winter bills at no more than winter consumption, the Company is redistributing dollars from higher use customers to "chronically" lower use customers which are disproportionately likely to be low-income customers (OCA Statement No. 5 p. 106:9-109:2).

Q. What is Mr. Geller's position on the Company's winter averaging proposal?

A. Mr. Geller opposes the Company's proposal, asserting that the Company's proposal improperly shifts the revenue burden from higher income customers who reside in single-family homes and have the luxury of discretionary water use to customers with lower income, and those that live in smaller homes. He states that lower income customers who cannot afford to engage in higher discretionary water use in non-winter months, and customers residing in smaller homes, should not be penalized for lower water use in non-winter months compared to their higher income counterparts.(CAUSE-PA Statement No. 1, p. 13:18-14:7).

Q. How do you respond to Mr. Kubas' proposals that revenue differences should be recovered from other wastewater customers and that the Commission should approve

this change initially as a temporary program to permit the resulting revenue impacts to be evaluated in the first rate case following its implementation?

A. I agree that revenue differences related to implementation of winter averaging should be recovered from other wastewater customers, and this is in fact the case under the Company's proposal. However, it is not practical to approve this only as a temporary program and examine the results in a future rate case without effectively "shadow billing" (i.e., tracking what customers' bills would be absent utilization of winter averaging) these customers to see what bills would have been without winter averaging. This is because winter averaging involves both a change in rates and a change in billing determinants. The Company does not support a proposal that would require shadow billing of customers for an extended period or approval of this change in rate design as a temporary change.

Q. How do you respond to Mr. Mierzwa's assertion that residential customer outdoor water usage during the summer is not significant enough to justify adopting winter averaging?

A. Usage modeling that I discussed in my direct testimony shows that there are statistically significant levels of water consumption in the summertime that are specifically tied to changes in weather. It is not true that water usage during the summer is not significant enough to justify adopting winter averaging.

Q. How do you respond to the argument that the proposed winter averaging rate design unfairly benefits higher income customers and negatively impacts lower income customers?

A. I concede that the beneficiaries of the Company's winter averaging proposal are likely to be higher income customers because it is these customers that are more likely to have seasonal water usage in the summertime that would no longer be billed for wastewater service. However, cost causation principles clearly indicate that water used by customers that does not enter the wastewater system in the summertime should not be charged for wastewater service. The current system, therefore, has higher income customers subsidizing lower income customers through wastewater rate design. The Company's proposal is to introduce a stronger cost causation element into wastewater rate design and eliminate this subsidy.

Q. How do you respond to Mr. Colton's "snowbird" argument?

A. There will always be a group of customers whose usage patterns may provide advantages under certain rate structures and disadvantages under other rate structures. This is not a reason to leave rate structures in place that have elements that clearly run counter to cost causation principles.

Q. How do you respond to Mr. Colton's argument that the standard 3,000 gallon assumption for new customers with no winter usage history unfairly discriminates against customers that are more likely to be new customers?

A. The Company chose the standard amount of 3,000 gallons per month to be consistent with its definition of Basic Water Service at 40 gallons per household member per day for an average household size of 2.5 persons per household. If it is determined that the most

likely levels of usage for new customers is less than 3,000 gallons per month, the Company is open to proposing a lower standard threshold.

Q. Given these arguments, does the Company continue to support its winter averaging proposal?

A. Yes. Cost causation principles indicate that it is not appropriate to charge customers for wastewater usage in the summertime based on water that does not go through the sewer system. While there is potentially a minimal impact on lower income customers, this impact is dampened through discounts offered through the BDP. The Company continues to believe that the winter averaging methodology I proposed in my direct testimony is the most appropriate way to bill for wastewater services.

SSS Rates

Q. What is Mr. Kubas' position regarding SSS wastewater rates?

A. Mr. Kubas proposes an overall increase of approximately 34% to total SSS wastewater rates after application of Act 11 reallocations (I&E Statement No. 3 Schedule 4) which includes a 50% increase for York rates (Zone 5), a 65% increase for Royersford rates (Zone 9) and 30% - 40% increases in other rate zones. His rate design (I&E Statement No. 3 Schedule 3) features the following:

- $15.00 residential service charge (less than that proposed by the Company)
- $36.70 nonresidential service charge
- $132.00 unmetered service charge per month for residential customers
- $150.00 unmetered service charge per month for nonresidential customers

- $3.740 per hundred gallon residential volumetric charge for Rate Zones 1, 2 (New Cumberland), and 5 (Valley) and the second volumetric block for Rate Zone 7 (York)
- $3.150 per hundred gallon nonresidential volumetric charge for Rate Zones 1, 2 (New Cumberland), and 5 (Valley) and $2.800 for the second volumetric block for Rate Zone 7 (York)
- Volumetric charges for Rate Zone 9 (Royersford) at approximately 50% - 60% of I&E proposed volumetric rates for Rate Zone 1
- Partial elimination of the allowance block for York customers
- 50% increase for York bulk customers
- 45% increase for Flat rate (special) customers in Rate Zone 1
- 40% - 60% increases for Strattanville Borough and St. Lawrence Borough
- 50% increase in volumetric rates for Westwood Fire Company (Valley)
- 80% increase in volumetric rates for Rainbow Warehouse (Valley)

Q. What is Mr. Mierzwa's position regarding SSS wastewater rates?

A. Mr. Mierzwa proposes an overall increase of approximately 5.4% to total SSS wastewater rates after application of Act 11 reallocations (OCA Statement No. 4, p. 39). He disagrees with the Company's proposal to set residential monthly charges at $20.00 per month and proposes to keep these charges at $14.30 per month. He agrees with the Company's proposal to phase-out the allowance for York customers, but appears to be silent on other rate design proposals made by the Company, other than to argue that PAWC's volumetric rate proposals be proportionately adjusted to recover the cost of service approved by the

Commission for each current SSS and CSS customer class, and for SSS and CSS Residential customers, any revenue deficiency resulting from the adoption of his monthly Residential customer charge recommendations. (OCA Statement No. 4, p. 39 and pp. 46-48).

Q. How do you respond to Mr. Mierzwa's proposal for SSS rates?

A. I disagree with Mr. Mierzwa's proposal to leave the residential monthly charge at $14.30. The Company's proposed residential service charge is consistent with the Company's proposed 5/8" meter charge for water service and is generally consistent with the I&E proposal for 5/8" meter charges for water service. The Commission should adopt the Company's proposed $20 service charge for residential service.

Q. Does Mr. Kubas' proposed rate design for SSS customers generally follow your proposed rate design?

A. There are no significant differences in structure between Mr. Cline's proposed redesign for unmetered service customers and the Company's rate design for unmetered service customers, but there are a number of specific areas where I do not agree with Mr. Cline's proposed rate design.

Q. Do you agree with Mr. Kubas' overall levels of increases for SSS customers?

A. I do not agree with these levels of increases. These increases do not adequately balance the tradeoffs in affordability for SSS customers relative to the Company's water service customers and will result in levels of affordability as measured by the BTI Ratios for these

groups that are too high. The Company continues to recommend the rate design for SSS customers as originally proposed.

Q. Do you agree with Mr. Kubas' level of service charges for SSS customers?

A. No. The $15 residential service charge is not consistent with Mr. Cline's proposal for CSS customers or his proposal for 5/8" meter charges for water service customers. The Company continues to support its proposal for $20 residential monthly meter charges.

Q. Do you agree with Mr. Kubas' charges for unmetered service?

A. I do not, but I recognize that the charge for unmetered service is a function of the overall increase applied to SSS customers. The charge for unmetered service should be based roughly on the total bill for an average level of usage for a residential customer under volumetric rates that are approved in this case. This is how the Company's original proposal was developed.

Q. Do you agree with the 50% increase Mr. Kubas proposes for York bulk customers?

A. I do not. Company Witness Abruzzo addresses issues specific to York Bulk customers.

Q. Do you agree with the increases Mr. Kubas proposes for special flat rate customers, Strattanville Borough, St. Lawrence Borough, Westwood Fire Company, and Rainbow Warehouse?

A. No. The overall increase for these customers should be consistent with the overall increase approved by the Commission for the SSS group in total.

Q. Are there any aspects of Mr. Kubas' proposed rate design for SSS customers that you do support?

A. Yes. I agree with Mr. Kubas' proposal to begin elimination of the allowance block for York customers, and I agree with the general level of rates set for York customers compared to Zone 1 rates (apart from Bulk customers which is separately addressed by Company Witness Abruzzo), and the general level of rates set for Rate Zone 9 (Royersford) relative to Zone 1 rates.

CSS Group Rates

Q. What is Mr. Kubas' position regarding CSS wastewater rates?

A. Mr. Kubas proposes an overall increase of approximately 20% to total CSS wastewater rates after application of Act 11 reallocations (I&E Statement No. 3 Schedule 16) which includes a 27% increase for Scranton rates and 5% - 6% increases for Kane and McKeesport. His rate design (I&E Statement No. 3, Schedule 17) features the following:

- $20.00 residential service charge (same as proposed by the Company)
- $40.00 nonresidential service charge
- $2.900 per hundred gallon residential volumetric charge
- $2.580 per hundred gallon nonresidential volumetric charge
- $113.00 unmetered service charge per month
- Full consolidation of McKeesport and Kane rates
- No changes to McKeesport bulk rates

Q. What is Mr. Mierzwa's position regarding CSS wastewater rates?

A. Mr. Mierzwa proposes an overall increase of approximately 4.7% to total CSS wastewater rates after application of Act 11 reallocations (OCA Statement No. 4, p. 39). As with SSS rates, he disagrees with the Company's proposal to set residential monthly charges at $20.00 per month and proposes to keep these charges at $14.30 per month. Mr. Kubas appears to be silent on other specific rate design proposals made by the Company other than to argue that PAWC's volumetric rate proposals be proportionately adjusted to recover the cost of service approved by the Commission for each current SSS and CSS customer class, and for SSS and CSS Residential customers, any revenue deficiency resulting from the adoption of his monthly Residential customer charge recommendations. (OCA Statement No. 4, p. 39 and pp. 46-48).

Q. Do you have any commentary on Mr. Mierzwa's proposal for CSS rates?

A. As with his proposal for SSS Rates, I disagree with Mr. Mierzwa's proposal to leave the residential monthly charge at $14.30. The Company's proposed residential service charge is consistent with the Company's proposed 5/8" meter charge for water service and is generally consistent with the I&E proposal for 5/8" meter charges for water service and their proposal for residential service charges for CSS rates. The Commission should adopt the Company's proposed $20 service charge for residential service for CSS customers.

Q. Does Mr. Kubas' proposed rate design for CSS customers generally follow your proposed rate design?

A. Yes, they do, generally speaking.

Q. Do you agree with the increase Mr. Kubas proposed for Scranton rates?

A. I do not. Company Witness Gress addresses issues related to wastewater rates for the Scranton system.

Acquisitions

Q. What recommendations do Mr. Kubas and Mr. Mierzwa make regarding rates for the Company's proposed acquisitions?

A. Mr. Kubas and Mr. Mierzwa do not address rate design for the Company's proposed acquisitions in this proceeding as I&E and OCA advocate for removal of the proposed acquisitions from the case. Company Witness Abruzzo addresses the Company's proposal regarding acquisitions.

VI. REVENUE CALCULATIONS

Q. What issues related to revenue calculations are you addressing in your rebuttal testimony to in this proceeding?

A. I will be addressing issues related to concomitant adjustments related to acquisitions, and late payment revenues.

Q. What issues do intervenors raise related to concomitant adjustments for acquisitions?

A. OCA Witness Smith and I&E Witnesses Cline both argue for revenue adjustments to the Company's proposed revenues based on OCA and I&E opposition to inclusion of those acquisitions in the case. The revenue reductions are as follows (Smith pp. 49-52, Cline pp. 4-10):

TABLE 5
Acquisition Revenue Adjustments

Adjustments	Amount
AWC – Water	$2,965,024
Farmington - Water	$266,371
Farmington - Wastewater	$322,926
Sadsbury - Wastewater	$471,228

Q. What is your position regarding the revenue adjustments for acquisitions?

A. The Company opposes removal of revenue calculations for acquired service territories and opposes the removal of those acquisitions from the case. Company Witnesses Abruzzo and Everette address the Company's position regarding acquisitions in more detail.

Q. What issues do intervenors raise related to late-payment revenues?

A. I&E Witness Kubas proposes an increase in Other Operating Revenues for the SSS Wastewater Group and the CSS Wastewater Group of $154,448 and $78,775 respectively (Kubas pp. 53-55 and 70-72).

Q. What is your position regarding these proposed increases in late fee revenue?

A. I do not disagree with the method by which Mr. Kubas calculates additions to proposed late fee revenues, but I note that his exact amounts are based on his proposed rates for the SSS and CSS groups, which the Company does not support. Changes in late fee revenues should ultimately be based on changes in proposed rates as ordered by the Commission in this proceeding.

Q. Are there any other issues you wish to comment on related to revenues in your rebuttal testimony?

A. Yes. I am sponsoring PAWC Exhibit 10-E Wastewater BASA Operations_Revised that updates billing determinants for the purposes of setting rates for the BASA acquisition. These changes reflect updated billing determinants for BASA which are based on updated customer counts and usage data most recently provided by BASA after development of the Company's original proposed rate design for BASA.

In addition, in response to I&E RS-30, it was identified that PAWC Exhibit 10-B, page 87 incorrectly labeled the data as "Commercial", instead of "Industrial" and also incorrectly showed all bills under the present rates at $53.50. PAWC Schedule_Rea 1 includes a revised version of Exhibit 10-B page 87 to reflect label the data as "Industrial", as well as the proper bill impact amounts for the various levels of usage under present rates.

VII. REVENUE DECOUPLING MECHANISM

Q. Please describe the Company's proposal for an RDM in this proceeding.

A. The Company's proposed RDM is an alternative rate design mechanism that couples traditional rate design with elements of Straight Fixed Variable ("SFV") Pricing. This mechanism couples the benefits of traditional rate design that I have previously described in my direct testimony (including cost causation, affordability, gradualism, and efficiency of use) with the increased revenue stability available to the Company through an SFV rate design. This mechanism compares the revenues collected under the actual Commission-approved rates customers pay with the revenues that would have been collected through a SFV rate design on a forward-looking basis and accrues the differences, which are either

credited to customers or collected from customers at a later time. The proposed RDM identifies three cost components as the basis for revenues that would be collected through the SFV rate design that form the basis of the revenue comparisons going forward. These three cost components are:

- **Volumetric Charge (VC):** A charge in dollars per hundred gallons that applies to all water volumes sold to customers.
- **Residential Fixed Charge (RC):** A flat dollar charge per month that applies to all residential customers.
- **Non-Residential Fixed Charge (NC):** A flat dollar amount that applies to all non-residential customers.[3]

The RDM is an alternative rate design mechanism whose purpose is to more reliably recover the revenue requirement and associated fixed costs approved by the Commission in this case (PAWC Statement No. 10, p. 86:16-18).

Q. What intervenors address the Company's proposed RDM?

A. I&E Witness Cline, OCA Witnesses Colton, Mierzwa, and Hoover, OSBA Witness Higgins, PAWLUG Witness LaConte, CEO Witness Warabak, CAUSE-PA Witness Geller, and CCS Witness Baudino all address the Company's proposed RDM.

Q. What commentary does I&E Witness Cline have on the Company's proposed RDM?

A. Mr. Cline opposes the RDM because he argues that PAWC has not established a need for revenue stabilization, particularly when proposing a declining usage adjustment and using

[3] PAWC Statement No. 10, p. 89 line 10 through p. 90 line 16.

a FPFTY. He states that the RDM incorporates SFV pricing-based components in calculation of "goal" revenue, which he says has a negative impact on affordability and conservation. He claims that the RDM could result in rate instability and rate confusion, does not align with Section 1330 policy goals and would not reduce need for rate cases (I&E Statement No. 4, pp. 10-24).

Q. What issues does OCA Witness Mierzwa raise regarding the Company's proposed RDM?

A. Mr. Mierzwa opposes the Company's proposed RDM because he claims that the RDM does not satisfy the 14 factors of the Commission's alternative ratemaking policy statement (OCA Statement No. 4, pp. 54-56 and Schedule JDM-6), among other reasons. He claims that the RDM improperly shifts risk away from the Company to customers, provides a disincentive for customer conservation, and is likely to lead to customer confusion.

Q. What is OCA Witness Hoover's position on the Company's proposed RDM?

A. Ms. Hoover opposes the RDM because she argues that the Company has not shown how or why RDM could or would enhance safety, security, reliability or availability of utility infrastructure. She claims that Company Witness Everette's statements that the RDM will improve the Company's ability to provide service meeting the standards of Section 1501 are superficial because (i) Company has credibly shown in its initial filing that it is already meeting the standards of section 1501 regarding its service and facilities. She argues that where the Company is already meeting required standards of Section 1505 and is using the FPFTY, it is not clear how adding guaranteed rate recovery will enhance safety, security,

reliability, or availability of utility infrastructure and that by granting multiple incentives to address same behavior, potentially undermining the regulatory compact by mirroring detrimental effects of monopoly pricing. Additionally, she states that the RDM shifts risk of recovery under traditional ratemaking away from Company to customers by providing guaranteed revenue recovery for the utility, and without any benefit or enhancement of safety, security, reliability, or availability of utility infrastructure. She also states that the Company has not shown how or why the RDM proposal is "consistent with the efficient consumption of utility service[,]" asserting that if sales decrease, the RDM formula will adjust rates to charge customers to make-up for the reduced recovery due to decreased sales, which sends inaccurate price signals for efficient consumption of utility service (OCA Statement No. 1, pp. 44-48).

Q. What is OCA Witness Colton's position on the Company's proposed RDM?

A. Mr. Colton opposes the proposed RDM, asserting that it will disproportionately adversely affect low-income customers, and that actions customers take to reduce water consumption are disproportionally taken by higher income households which will result in low-income customers bearing the costs imposed by the RDM without benefitting from the corresponding savings (OCA Statement No. 5, p. 90).

Q. What is OSBA Witness Higgins' position on the Company's proposed RDM?

A. Mr. Higgins opposes the proposed RDM for a number of reasons. He states that the RDM shifts revenue risks related to changes in consumption for any reason, including economic and weather conditions, from shareholders to customers. He also states that the RDM

formula appears to have an error that would cause the calculation to have the opposite effect of PAWC's stated intent (e.g., if actual revenues exceed the SFV target, the RDM formula will produce a negative result or credit to customers) and PAWC did not clarify this issue in its response to Data Request OSBA 01-17. Mr. Higgins also recommends that if the RDM is adopted, non-residential classes should be excluded. (OSBA Statement No. 1, pp. 38-45).

Q. What is PAWLUG Witness LaConte's position on the Company's proposed RDM?

A. Ms. LaConte opposes the proposed RDM because she claims it would be moving PAWC's risk of recovering costs and meeting earnings targets to its customers. She further argues that the RDM will impact interclass cost shifting between various non-residential customer classes and erode the benefits of conservation. She claims that PAWC already has access to the Distribution System Improvement Charge ("DSIC"), the FPFTY and Act 11 reallocations. She states that if the RDM is approved by the Commission, she recommends an earnings test (for excess earnings) and an annual percentage cap on any increase that may result from changes in the surcharge (PAWLUG Statement No. 1, p. 10-15).

Q. What commentary does CEO Witness Warabak have on the Company's proposed RDM?

A. Mr. Warabak opposes the Company's proposed RDM because he claims it discourages conservation and would effectively guarantee PAWC's recovery of its authorized return (CEO Statement No. 1, p. 5).

Q. What commentary does CAUSE-PA Witness Geller have on the Company's proposed RDM?

A. Mr. Geller opposes the Company's RDM for several reasons. Mr. Geller claims that the proposed RDM disadvantages customers who practice conservation to reduce their monthly bill. He claims that the proposed RDM penalizes low-income customers for any conservation they achieve. Furthermore, he argues that the RDM has no consumer protections, is overly complex, and may not reduce the need for future rate increases. He recommends that the Commission reject the RDM in its entirety but if approved, recommends that PAWC exempt BDP participants from RDM charges. (CAUSE-PA Statement No. 1, p. 15-17).

Q. What is CCS Witness Baudino's position on the Company's proposed RDM?

A. Mr. Baudino opposes the Company's RDM because he claims that PAWC already uses the Distribution System Improvement Charge and the FPFTY to reduce regulatory lag and enhance PAWC's revenue stream between rate proceedings. He also claims the Industrial class should not be included in the RDM as there is no evidence that this class is affected by conservation measures, weather, or declining numbers of customers, and that the proposed RDM would therefore present significant problems with interclass allocations of lost revenues. (CCS Statement No. 1, p. 15-16).

Q. How do you respond to Mr. Baudino's argument that the industrial class should be excluded from the Company's proposed RDM?

A. The Company disagrees that industrial customers should be excluded from the proposed RDM. While it is true that industrial usage is less dependent on weather than other classes, the fact remains that there is volatility in industrial revenues. The fact that this volatility may come from different sources than volatility in revenues for residential and smaller commercial customers does not mean that risk associated with that volatility is any less important to mitigate. The purpose of the RDM is to mitigate risks associated with revenue volatility and industrial customers will benefit from this risk mitigation effort just like other customer classes.

Q. Mr. Cline and Mr. Mierzwa assert that the Company's RDM proposal does not satisfy the 14 factors of the Commission's alternative ratemaking policy statement. Do you agree?

A. No. The Policy Statement on alternative ratemaking mechanisms lists a number of factors that may be considered when evaluating an alternative ratemaking mechanism such as an RDM, but it does not prescribe how or the extent to which each factor must be "satisfied."[4] The Company did provide a detailed analysis of how the specific factors listed by the Commission apply the Company's proposed RDM to aid in the Commission's review and consideration of these factors as it pertains to the RDM. *See* Exhibit CBR-10R, which

[4] 52 Pa. Code § 69.3302 specifically states the "Commission ***may consider***, among other relevant factors" those listed in section (emphasis added). In addition, the Commission has specifically stated that "the proposed policy statement is intended ***only to give guidance to fixed utilities and interested stakeholders on what is to be considered when investigating alternative ratemaking methodologies*** in a Section 1308 rate proceeding. While intending to assist utilities and stakeholders, ***the policy statement does not establish a binding norm***, nor does it establish a predicate for the adoption of an alternative rate mechanism by any fixed utility." (emphasis added). *See* Docket No. M-2015-2518883, Final Policy Statement Order, p. 6-7 (July 18, 2019), *citing Implementation of Act 58 of 2018 Alternative Ratemaking for Utilities, Implementation Order at Docket No. M-2018-3003269 (*April 25, 2019).

respond Mr. Cline's and Mr. Mierzwa's arguments with respect to satisfaction of the 14 factors.

Q. Does the RDM formula have an error that would cause the calculation to have the opposite effect of PAWC's stated intent (e.g., if actual revenues exceed the straight-fixed variable ("SFV") target, the RDM formula will produce a negative result or credit to customers) as Mr. Higgins asserts?

A. No, there is no error. The Company's intent is revenue stability for both the Company and its customers. As I explain in my direct testimony, the Company is proposing a symmetrical mechanism that may result in a surcharge or credit depending on the actual revenues collected in any given year. This ensures that both the Company and its customers benefit from implementation of the RDM.

Q. Mr. Cline argues that, as acknowledged in the seventh edition of the American Water Works Association M1 Manual, there is a tradeoff between revenue stability from a high customer charge, and affordability and conservation from a low customer charge and higher usage rates. He states that SFV pricing strays too far from the concerns of affordability and conservation in the name of revenue stability for the Company (I&E Statement No. 4, p.4:6-11). How do you respond to this argument?

A. I don't disagree. Utilizing SFV pricing to establish rates places more of the revenue requirement into a fixed charge, which does make it more difficult for customers to mitigate their bills by adjusting their consumption. However, that is not what the Company is proposing to do in this proceeding. The Company is not proposing to establish rates based

on SFV pricing. PAWC is maintaining a balance between a limited fixed charge and volumetric charges. The concept of SFV pricing only becomes relevant to determine if the Company was able to collect the revenue requirement authorized in this proceeding as calculated through the RDM formula. If actual revenues are higher than would have been collected under the RDM formula, the difference is credited to customers in the following year. If actual revenues are lower than would have been collected under the RDM formula, the difference is collected from customers in the following year. As such, SFV pricing is being used only to reconcile actual revenues collected with those authorized in this proceeding. This allows for revenue stability without eliminating the customer's ability to benefit from conservation efforts.

Q. How do you respond to the general arguments that the RDM discourages conservation?

A. The proposed RDM does not discourage conservation. Regardless of what the volumetric rate happens to be, customers who use less water will have lower bills. As I stated in my direct testimony, a customer who takes specific actions to reduce their water consumption will still enjoy the benefits of a lower bill even with implementation of the RDM. If a customer takes actions to reduce their water consumption by 5% per month (4,000 gallons to 3,800 gallons for example), the resulting bill savings for an average use customer without the RDM would be $4.16 per month, well above the amount that the Company estimates an average use customer bill would increase due to implementation of the RDM.

Q. How do you respond to the general arguments that the RDM could result in rate instability and rate confusion?

A. The proposed RDM will, almost by definition, improve rate stability. In years where revenues are relatively low compared to the SVF calculation under the RDM, rates will increase slightly in the next year to bring revenues back up. The opposite will be true in years where usage results in revenues that were higher than the SVF calculation. In higher revenue years, the RDM will reduce rates (through one-time credits), which will offset higher revenues from the year before and "smooth out" revenues over the longer term. Regarding rate confusion, I do not believe that the Company's proposed RDM will cause rate confusion for customers. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill.

Q. How do you respond to the argument that the RDM improperly shifts revenue risk from the Company to customers?

A. It is false to claim that the RDM shifts revenue risk completely from one party to another. The RDM provides a mechanism that allows a sharing of revenue risk between the Company and its customers, allowing the Company to enjoy the benefits of revenue stability that a SVF rate design affords while affording customers all of the price signals provided through the rate design they currently take service under. There may be times when the RDM is a surcharge and there may be times when the RDM is a credit. Either way, there is "risk" in both directions that prices will be higher or lower than base rates

approved in this proceeding. Approving an RDM in this case does not shift risk in favor of the Company and to the detriment of its customers; it provides revenue and payment stability for both the Company and its customers.

Q. How do you respond to the argument that the RDM negatively impacts affordability and negatively impacts low-income customers?

A. Regarding affordability, I do not expect that any surcharges or credits that result from the Company's RDM will be of the magnitude that overall affordability of service will be significantly affected, and regarding low-income customers specifically, RDM credits or surcharges will be subject to discounts through the Company's BDP, which further dampens the effects on lower income customers.[5]

There is no evidence to suggest that the fundamental dynamics that are causing usage to decline over time for residential customers is more concentrated in higher income households than lower income households. The move toward more efficient appliances, showerheads, toilets, faucet aerators, etc. that use less water over time affects all customers, not just higher income customers, and the replacement of this appliance stock is more commonly due to replacement of equipment and appliances as these appliances fail than from conscious decisions by higher income customers to replace functioning appliances

[5] CAUSE-PA witness Mr. Geller recommends that PAWC exempt BDP participants from RDM charges but doesn't seem to recognize the RDM charge is already discounted for BDP participants. While the RDM does not specifically account for low-income participation, it will be applied after the BDP discount has been applied to the bill. In other words, a customer eligible for the BDP will have the discount applied to all base charges (Service Charge per Month and Consumption Charge) before the RDM would be applied. This will result in a reduced RDM charge (in dollars) compared to the RDM absent the BDP.

with more efficient appliances. This phenomenon affects all customers, not just higher income customers.

It is true that higher income customers tend to use more water for outdoor seasonal purposes and that water usage is dependent on weather which can fluctuate from year-to-year and cause variations in revenue as compared to lower-income customers. There is no evidence, however, to suggest that seasonal use of water is trending upward or downward over time as there is with non-seasonal usage. The end result is that changes in revenues over time come both from fluctuations in weather, which are more attributable to higher income customers, and pervasive declines in consumption, which are attributable to all residential customer groups.

Q. How do you respond to the claims that PAWC doesn't need an RDM because it has access to the DSIC, the FPFTY and other mechanisms that reduce regulatory lag?

A. While the DSIC mechanism helps the Company recover the costs of ongoing system improvements in a timely manner between rate cases, it does not address the well-documented and pervasive decline in consumption that affects revenues or the volatility in revenues that occurs from year to year. These factors affect the Company's ability to continue to prudently operate, manage, and invest in the rest of the business for the long-term benefit of its customers. The DSIC does not address these factors, which are what the Company's proposed RDM is intended to address.

Recognition of the FPFTY allows for the development of more realistic billing determinants for the purpose of setting rates going forward. The use of the forecast test period through which declining use adjustments can be extended further recognizes the

need for the Company to collect its revenue requirement beyond a static level of usage. However, the forecast test period only allows recognition of declining use through the end of the FPFTY. The RDM is necessary to address the pervasive declines in consumption that are expected to occur past the FPFTY and also help to address the fact that forecasts aren't perfect and that fluctuations from forecasted volumetric sales will naturally occur into the future.

Q. How do you respond to the argument that the RDM guarantees that the Company earns its authorized rate of return?

A. The issue of the relationship between ROE and the approval of an RDM is addressed by Company Witness Bulkley (PAWC Statement No. 13-R).

Q. Do you believe that the RDM is overly complex?

A. The RDM is not overly complex. The entire RDM mechanism was laid out in my direct testimony and there are very few moving parts. The only significant calculation in the RDM is a calculation of revenues that would result from SVF pricing based on the revenue requirement and cost components established in this case, which is a relatively simple calculation.

Q. Do you believe that the RDM will negatively impact cross-subsidization of cost between customer classes?

A. I do not. As I have previously testified, any expected level of credit or surcharge in the proposed RDM will be minor compared to the overall level of volumetric rates approved

in this proceeding. Only if volumetric rates in this proceeding are based precisely on cost of service can it be said that an RDM will result in cross subsidization relative to cost of service, and even then, the relative impacts will not be significant.

Q. Do you believe it is necessary to subject a proposed RDM to an earnings test and an annual cap?

A. I do not. The proposed RDM is designed to collect the revenues authorized in this proceeding. Therefore, any surcharge or credit will not deviate beyond the levels already considered and authorized by this Commission. Because the Company is not seeking to collect revenues beyond those authorized in this proceeding, an earning test is not necessary. Further, adding a cap to the amount collected or returned through the RDM undermines the revenue requirement authorized by this Commission to establish rates that are reflective of the Company's cost of service.

Q. Please recap why the Company's proposed RDM should be approved by the Commission.

A. Adoption of the Company's proposed RDM is in the long-term best interest of the Company and its customers. Rate designs that tie a utility's revenue recovery directly to sales volume have prompted concerns in modern utility regulation. Because of seasonal variability and declining use per customer, volumetric rates that collect the majority of a Company's fixed cost do not give water utilities a reasonable opportunity to recover the fixed costs associated with providing service to customers. An alternative rate design mechanism that couples elements of SFV pricing with traditional rate designs brings the

best of both worlds to both the Company and its customers. Implementing this alternative rate design solution: 1) makes the Company indifferent to selling less water, 2) promotes water efficiency and conservation, 3) reduces the adverse impact of weather variability for both the utility and its customers, and 4) reasonably ensures that sufficient revenues for continued investments in the system are available. The result is a better alignment of all stakeholder interests, and the Company respectfully urges the Commission to authorize its proposed RDM.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes, it does.

Pennsylvania-American Water Company
Response to Distribution Rates – Statement of Policy
Proposed Revenue Stabilization Mechanism
Summary of Positions

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa.C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

The RDM better aligns actual revenue collection with authorized revenues for all customer classes. The RDM specifically treats fixed and variable costs separately by customer class using rate design concepts associated with Straight-Fixed Variable ("SFV") pricing. The RDM is calculated and administered separately for residential and non-residential customer classes and treats fixed cost and variable cost separately so that fixed cost recovery is aligned with approved fixed costs (per customer) and variable cost recovery is aligned with approved variable costs (per hundred gallons of water). The recovery mechanism is on a volumetric basis.

Mierzwa: The RDM provides for the recovery of fixed costs on a volumetric basis; therefore, it does not align utility revenues with cost causation principles as to both fixed and variable costs.

Company Response: *As explained in the direct testimony of Charles Rea, PAWC Statement No. 10, the RDM cost components continue to reflect cost of service allocation as determined by the Company, which take into account cost causation principles. Further, although the costs are recovered on a volumetric basis, the surcharge or credit takes into account the Company's fixed costs as part of the RDM calculation.*

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

The Company's proposed RDM is not expected to impact the fixed utility's capacity utilization.

Mierzwa: The proposed RDM is unlikely to impact the fixed utility's capacity utilization.

Company Response: *N/A*

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

The Company's proposed RDM directly reflects changing consumption levels in variable cost recovery. As consumption levels increase, the Company's variable cost recovery increases, but only by the approved level of production cost per unit delivered or billed. The opposite is true whereas consumption levels decrease, the Company's variable cost recovery decreases, but only by the approved level of production cost per unit delivered or billed.

Mierzwa: The RDM adjustment or "true-up" mechanism creates the anomaly where customers see rate increases when they reduce consumption and rate decreases when they increase consumption.

Company Response: *It is not clear what Mr. Mierzwa's concern is with the alleged anomaly he cites. This is a symmetrical mechanism that considers and stabilizes the impacts of changing consumption levels for both customers and the Company.*

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

The proposed RDM would apply to both water and wastewater service with separate tariffs and separate recovery/credit mechanisms for residential and nonresidential customers. The proposed RDM will not affect interclass or intraclass cost shifting between residential and non-residential customer classes.

Mierzwa: OCA witness Roger Colton explains that, with respect to interclass cost shifting, the RDM could shift revenue within the residential class from customers who are financially able to invest in water conservation measures to low-income customers who are not financially able to make those same investments.

Company Response: *Please see the rebuttal testimony of Charles Rea, PAWC Statement No. 10-R, pp. 74-75.*

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

The proposed RDM reduces the throughput incentive, which gives the Company an incentive to collect more revenue when customers increase consumption. By connecting variable cost recovery directly to approved levels of production cost but not to fixed cost, the RDM removes this incentive from the Company and therefore eliminates any disincentives for the promotion of water efficiency efforts.

Mierzwa: The Company has not demonstrated that the lack of an RDM has been a major obstacle for the promotion of water conservation and efficiency. The Company has been able to implement methods to improve water efficiency without an RDM. Moreover, there has been a long-term trend of per-customer declining water consumption (i.e. improved water efficiency use) without an RDM.

Company Response: *While the Company has been able to improve water efficiency in the past, the bulk of these efficiencies have been achieved through supply-side practices (as discussed by Mr. Runzer and Mr. Aiton in their direct testimonies). To encourage additional demand-side strategies beyond those currently employed by the Company, it is critical to reduce the throughput incentive for the Company to sell more water.*

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

See response to item (5). The proposed mechanism encourages water efficiency by reducing the throughput incentive. In addition, if customers employ efficiency measures, those measures will far outweigh any surcharges that may result from the proposed RDM.

Mierzwa: The proposed RDM could provide a disincentive to ratepayers to undertake water conservation efforts because they would be required to pay for water they did not use. Revenue savings to individual customers that would ordinarily be achieved through usage reductions would be offset by surcharges to all customers under the RDM. Hence, if customers save money on their monthly water bill due to efficient consumption, customers will be forced to share their bill savings with the utility. Moreover, with the high and apparently never-ending rate increases that PAWC has implemented and will apparently continue to seek, customers are already incented to conserve water without a new RDM surcharge.

Cline: Q. WILL THE RDM ENCOURAGE WATER EFFICIENCY AND CONSERVATION FROM CUSTOMERS?

A. Not at all. From the perspective of a customer, the RDM will appear as a random surcharge or credit on their bill that is completely removed from their own usage. Specifically, by calculating the RDM based on a total class-wide (or multiple classes in the case of non-residential customers) basis, a single customer, particularly low-usage customers, will have zero ability to affect whether they are assessed an additional surcharge or a credit on their bill in the subsequent year. Therefore, it is the bill based on base charges that would encourage water efficiency and conservation. The only thing the RDM provides customers is the worry that the next year's RDM would erode the savings derived from conservation efforts.

Company Response: *Customers will continue to be encouraged to engage in water efficiency measures. Regardless of what the volumetric rate happens to be, customers who use less water will have lower bills. See the rebuttal testimony of Charles Rea, PAWC Statement No. 10-R, p. 72 for further discussion.*

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

The proposed RDM does not have any specific impacts on low-income customers that do not apply to residential customers generally. Because the recovery mechanism is volumetric in nature, lower-use low-income customers will not be adversely impacted.

Mierzwa: OCA witness Colton addresses how the RDM could affirmatively harm low- income customers that do not have the financial means to pursue investments in water conservation measures.

Cline: Q. COULD THE RDM NEGATIVELY IMPACT LOW-INCOME CUSTOMERS?

A. Yes. As I stated above, there are potentially many customers, who cannot themselves enact cost-saving water conservation measures, whose ability to pay may be compromised as their rates increase to address conservation efforts undertaken by more affluent customers or from more low-income customers enrolling in the BDP than was originally anticipated.

Company Response: *Mr. Mierzwa and Mr. Cline have provided no evidence that low-income customers will be harmed or negatively impacted by the RDM. RDM credits or surcharges will be subject to discounts through the Company's BDP because it is applied after the BDP discount is applied to the bill, which further dampens the effects on lower income customers. In other words, a customer eligible for the BDP will have the discount applied to all base charges (Service Charge per Month and Consumption Charge) before the RDM would be applied. This will result in a reduced RDM charge (in dollars) compared to the RDM absent the BDP.*

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

The proposed RDM will, by definition, improve rate stability. In years where revenues are relatively low relative to SFV pricing and fixed costs are under recovered, rates would increase slightly in the next year to bring actual revenues back up. The opposite would be true in years where usage resulted in revenues that were higher than that implied by SFV pricing, which represents a scenario where fixed costs are over-recovered. In higher revenue years, the RDM will

reduce rates which would offset higher revenues from the year before and "smooth out" revenues over the longer term.

Mierzwa: Under the current regulatory standard in Pennsylvania, base rate cost under and over recoveries are currently not tracked and are not eligible for recovery in future base rate proceedings. The proposed RDM would add another surcharge to customers' bills and would not reduce the frequency of PAWC base rate or DSIC rate filings. Thus, it does not appear that a new RDM surcharge would improve rate stability. In contrast, under traditional cost-of-service ratemaking, if a utility experiences sales reductions and under-recovery, it cannot simply achieve the same result as an RDM true-up by filing another base rate case with adjusted sales forecasts. When a utility files a general rate increase, all relevant information is reviewed to determine just and reasonable rates, not just sales forecasts. Traditional ratemaking produces rate stability.

Cline: Q. COULD THE RDM RESULT IN RATE INSTABILITY AND RATE CONFUSION FOR CUSTOMERS?

A. Yes. As I described above, the Company's proposal to determine the credit or surcharge based on a total class basis result in customers being completely unaware and unable to control or predict whether they will be receiving a surcharge or credit from the RDM for the following year. Additionally, the entire concept of the RDM introduces rate confusion for customers. Essentially, PAWC is telling customers that it will charge one set of rates from January through March, but that in April their rates will be adjusted based on the comparison of their revenues (but not just theirs, the revenue from all of the other customers as well) from the previous year to the revenues generated by some other rate that was not included or mentioned on their bill at all.

Company Response: *As discussed above, the RDM smooths out revenues over the long term, improving rate stability for both the Company and the customer. Further, all else being equal, it would be inefficient to file a rate case for the sole purpose reconciling variations in revenue. As discussed on page 99 of the direct testimony of Charles Rea, PAWC Statement No. 10, "[a]n analysis of the historical data shows that in any given year water revenues at the Company's proposed rates in this proceeding can swing from the projected amount by as much as plus or minus approximately $11.1 million." Alternative regulatory mechanisms such as the RDM have been recognized in the regulatory community as effective means to address policy concerns recognized by NARUC after a recognition that traditional cost of service ratemaking no longer adequately addresses current challenges. See the direct testimony of Charles Rea, PAWC Statement No. 10, pp. 103-105.*

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

Weather will still have an impact on revenues but only to the extent that variable costs are impacted. Under the proposed RDM, volatility of utility revenue and customer bills would be reduced over the long term. Increases in fixed cost

recovery revenue due to abnormal weather variations (*e.g.*, drought conditions) would be returned to customers in the following year, and reductions in fixed cost recovery due to abnormal weather variations (*e.g.*, excessive rainfall) would be collected from customers in the following year.

Mierzwa: The RDM adjustment or true-up mechanism creates the anomaly where customers see rate increases when they reduce consumption due to weather variations and rate decreases when they increase consumption due to weather variations.

Company Response: *Again, it is not clear what Mr. Mierzwa's concern is with the alleged anomaly he refers to. This is a symmetrical mechanism that stabilizes the impacts of weather for both customers and the Company.*

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

To the extent that future rate cases are driven by lower-than-expected usage, the RDM likely would result in fewer rate cases, or at least rate cases seeking lower rate increases. However, the RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

Mierzwa: The RDM will have no impact on the magnitude of base rate increases requested by the Company in the future. The RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

Company Response: *It is true that there may be various factors that contribute to rate case timing. As noted above, the RDM could result in fewer rate cases, or at least rate cases seeking lower rate increases, to the extent that future rate cases are driven by lower-than-expected usage. See also response to #8 above.*

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

The Company's proposed RDM does not interact with other revenue sources.

Mierzwa: The RDM will interact with the Company's DSIC because the DSIC is a percentage applied to the total bill and the RDM will impact a customer's total bill.

Company Response: *The RDM and DISC would each be applied to the total bill prior to the application of either surcharge.*

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

The RDM proposal includes consumer protections through the formal reconciliation process which includes audits and external stakeholder review. Tariff administration of the mechanism will contain consumer protections to make sure that the appropriate levels of revenue are being collected. Customers still can control their bill through controlling usage because the standard rate design still applies.

Mierzwa: The proposed RDM does not include appropriate consumer protections and should be rejected for the reasons discussed in my testimony and the testimony of OCA witness Colton.

Company Response: *In addition to the protections previously described, it is also important to specifically note that the RDM is a symmetrical mechanism that may result in a surcharge, or a credit to customers – an additional protection to ensure customers don't only get charged in the event of an under-collection but receive the benefits of an over-collection of revenues.*

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

The Company does not anticipate that there would be any issues related to customer confusion over the proposed RDM. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill.

Mierzwa: PAWC has not provided any evidence that the proposed RDM will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed ECIC, significant customer confusion is likely.

Cline: See response to #8 above.

Company Response: *The Company does not believe that the proposed RDM will cause rate confusion for customers. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an*

RDM surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

The proposed RDM will support improvements in utility reliability by permitting the Company to more reliably recover fixed costs that can't be avoided by customers using less water, and will therefore enhance the Company's ability to prudently invest in and manage the business.

Mierzwa: The proposed RDM does not provide a direct incentive to increase the safety and reliability of the PAWC system.

Company Response: *The RDM gives the Company a tool to reliably collect the revenues necessary to invest in the safety and reliability of the system more effectively through more consistent planning and deployment of the most efficient resources.*

PENNSYLVANIA-AMERICAN WATER COMPANY

SURREBUTTAL TESTIMONY OF CHARLES REA

I. INTRODUCTION

Q. What is your name and business address?

A. My name is Charles B. Rea. My business address is 3409 Research Parkway, Davenport, Iowa 52806.

Q. Are you the same Charles B. Rea that provided direct testimony and rebuttal testimony in this case?

A. Yes, I am.

Q. What is the purpose of your surrebuttal testimony?

A. The purpose of my surrebuttal testimony is to address an issue raised by Pennsylvania-American Water Large Users Group ("PAWLUG") Witness Billie S. LaConte (PAWLUG Statement No. 1R) related to Pennsylvania-American Water Company's ("Company" or "PAWC") proposed Revenue Stabilization Mechanism ("RDM").

Q. What position does Ms. LaConte take regarding the Company's proposed RDM do you wish to address?

A. Ms. LaConte argues that based on the direct testimony of Cleveland-Cliffs Steel witness Richard A. Baudino, that the Company's proposed RDM should exclude all Municipal class customers as well as Industrial class customers. Ms. LaConte states that because it is Mr. Baudino's position that there is no evidence in this case that the Industrial class is

affected by conservation measures, weather, or declining numbers of customers, the same exclusion should apply to Municipal class customers. She also points out that PAWC's demand study says that "Both the industrial and public [municipal] customer classes are characterized by the concentration of consumption among a small number of very large customers" and states this is another reason for excluding Municipal class customers from the Company's proposed RDM (PAWLUG Statement No. 1R p. 10).

Q. Do you agree with Ms. LaConte's proposal to exclude Municipal class customers from the Company's proposed RDM?

A. I do not. As noted on page 94 of my direct testimony, the RDM should apply to all customers in the Company's residential, commercial, industrial, municipal, and sales for resale classes except for customers taking service under contract rates. As with revenues from all customers, including other non-residential customers such as industrial customers, there is volatility in municipal revenues, some of which comes from changes in weather as Municipal class customers are weather sensitive customers (as shown in Table 8 of my direct testimony). Weather variation is among the sources of revenue risk that the proposed RDM is intended to mitigate. The fact that there are relatively few customers in this class is not relevant when considering that the proposed RDM applies to all non-residential customers not under contract rates. The same is true for all classes of non-residential customers. The purpose of the RDM is to mitigate risks associated with revenue volatility, and Municipal customers will benefit from this risk mitigation effort just like other customer classes.

Q. Does this conclude your surrebuttal testimony at this time?

A. Yes, it does.

RE: PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF JOHN J. SPANOS

Q. Please state your name and address.

A. My name is John J. Spanos. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania 17011.

Q. With what firm are you associated?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming").

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. What is your position in the firm?

A. I am President.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie Mellon University and a Master of Business Administration degree from York College of Pennsylvania.

Q. Are you a member of any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals. I am also a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Please outline your experience in the field of depreciation.

A. I have over 37 years of depreciation experience, which includes giving expert testimony in more than 430 cases before 46 regulatory commissions, including the Pennsylvania Public Utility Commission ("Commission"). My participation in the cases where I appeared as an expert witness has included conducting and analyzing depreciation studies for companies, government-owned utilities and other service providers in the electric, gas, water, wastewater and pipeline industries. In addition to the cases in which I submitted testimony, I have supervised over 800 other depreciation or valuation assignments. Please refer to Appendix A for additional information on my qualifications, work history, case experience, and my leadership in the Society of Depreciation Professionals.

Q. What is the purpose of your testimony?

A. I was asked by Pennsylvania-American Water Company ("PAWC" or the "Company") to prepare depreciation studies of the Company's water and wastewater plant in service as of June 30, 2023 and its water and wastewater plant projected to be in service as of June 30, 2024, and June 30, 2025. The

depreciation studies are presented for the total water operations and separately for the four wastewater operations, consisting of the following:

(1) Water Operations

(2) Wastewater Sanitary Sewer System ("SSS") General Operations

(3) Butler Area Sewer Authority ("BASA") Wastewater Operations

(4) Brentwood Wastewater Operations

(5) Wastewater Combined Sewer System ("CSS") Operations

Q. Have you prepared exhibits presenting the results of your studies?

A. Yes, I have prepared a total of thirteen exhibits, consisting of the following:

- **Exhibit Nos. 11-A, 11-D and 11-K** present the results of the depreciation studies for each water and wastewater operation as of June 30, 2023, except BASA Wastewater Operations and Brentwood Wastewater Operations because PAWC will acquire those systems during the future test year ending June 30, 2024, as explained by E. Christopher Abruzzo Esq. in PAWC Statement No.6.
- **Exhibit Nos. 11-B, 11-E, 11-G, 11-I and 11-L** present the results of the depreciation study for each water and wastewater operation as of June 30, 2024.
- **Exhibit Nos. 11-C, 11-F, 11-H, 11-J and 11-M** present the results of the depreciation study for each water and wastewater operation as of June 30, 2025.

In addition, I am responsible for the responses to Depreciation Data Filing Requirements FR VI.1, FR VI.2, FR VI.3, FR VI.4, FR VI.5 and FR VI.6 that are presented as Appendix B to my testimony.

Q. Please describe what is set forth in each of Exhibit Nos. 11-A through 11-M.

A. **Exhibit No. 11-A**, titled "2023 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2023," includes the results of the depreciation study related to the assets of the Water Operations as of June 30, 2023. The report also includes the detailed depreciation calculations.

Exhibit No. 11-B, titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2024," includes the results of the depreciation study related to the assets of Water Operations estimated as of June 30, 2024. The report also includes explanatory text, statistics related to the estimation of service life, and the detailed depreciation calculations.

Exhibit No. 11-C titled “2025 Depreciation Study – Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2025,” includes the results of the depreciation study related to the assets of Water Operations estimated as of June 30, 2025.

Exhibit Nos. 11-D through 11-M pertain to the Company’s wastewater operations and are organized in the same fashion described above for PAWC’s Water Operations except, as I noted before, there is no exhibit presenting the results of a depreciation study for the BASA Wastewater Operations and Brentwood Wastewater Operations as of June 30, 2023 because PAWC will acquire these systems during the future test year ending June 30, 2024.

Q. What was the purpose of your depreciation studies?

A. The purpose of the depreciation studies is to estimate the annual depreciation accruals related to water and wastewater plant in service for ratemaking purposes and, using Commission-approved procedures, to estimate the Company's book reserve as of June 30, 2023, June 30, 2024 and June 30, 2025.

Q. Is the Company's claim for annual depreciation in the current proceeding based on the same method of depreciation used in its most recent rate proceeding in Docket Nos. R-2022-3031672 and R-2022-3031673?

A. Yes, it is. For most plant accounts, the current claim for annual depreciation is based on the straight-line remaining life method of depreciation, which has been used for over thirty-seven years. For Accounts 340.00, 342.00, 343.00, 344.00, 346.00, 347.00 and 348.00 for water assets and Accounts 390, 392, 393.00, 394.00, 396.00, 397.00 and 398.00 for wastewater assets, the claim for annual depreciation is based on the straight- line remaining life method of amortization. That method employs amortization accounting to distribute the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account.

Q. What group procedure is being used in this proceeding for depreciable accounts?

A. The equal life group procedure is used in the current studies for all depreciable accounts and installation years of water and wastewater plant, which is the same procedure that has been used by the Company for many

years with the Commission's approval and, in fact, was used most recently in the Company's last base rate case (Docket Nos. R-2022-3031672 and R-2022-3031673).

Q. Is the Company's claim for accrued depreciation in the current proceeding made on the same basis that has been used for over thirty-eight years?

A. Yes. The current claim for accrued depreciation for water assets is the book reserve brought forward from the book reserves approved by the Commission at Dockets No. R-842621, R-842675 and R-842755. Similarly, for wastewater assets, accrued depreciation is brought forward from a starting point previously approved by the Commission in prior rate proceedings and at the time of each acquisition.

Q. How was the book reserve used in the calculation of annual depreciation?

A. The book reserve was allocated to vintages, by account, to determine original cost less accrued depreciation by vintage. The total annual accrual is the sum of the results of dividing the original costs less accrued depreciation by the vintage composite remaining lives.

Q. How was the book reserve as of June 30, 2024 and June 30, 2025 estimated?

A. The book reserve as of June 30, 2024 and June 30, 2025, by account, was projected by adding estimated accruals, salvage and the amortization of net salvage and subtracting estimated retirements and cost of removal from the book reserve as of June 30, 2023. Annual accruals were calculated based on average yearly or monthly plant balances. For most accounts, salvage

and cost of removal were estimated by: (1) expressing actual salvage and cost of removal as a percent of retirements, by account, for the most recent five-year period; and (2) applying those percentages to the projected retirements by account. The projected book reserve, by account, was allocated to vintages for the purpose of the annual accrual calculation based on calculated accrued depreciation as of June 30, 2024 and June 30, 2025.

Q. Has a service life study of the Company's water and wastewater utility property been performed?

A. Yes. Service life studies were most recently performed in 2022 (based on plant data through 2021) for the Company's water assets and 2020 (based on plant data through 2019) for its wastewater assets. The service life studies were the basis for the service lives and survivor curves I used to calculate annual accruals.

Q. Briefly outline the procedure used in performing the service life studies.

A. The service life studies consisted of assembling and compiling historical data from the records related to the water and wastewater plant of the Company and its predecessors; statistically analyzing such data to obtain historical trends of survivor characteristics; obtaining supplementary information from management and operating personnel concerning Company practices and plans as they relate to plant operations; and interpreting the above data to form judgments of service life characteristics.

Iowa-type survivor curves were used to describe the estimated survivor characteristics of the mass property groups. Individual service lives were used for major individual units of plant, such as reservoirs and buildings housing treatment plants, pump stations, offices and shops. The life span

concept was recognized by coordinating the lives of associated plant installed in subsequent years with the probable retirement date defined by the life estimated for the major unit.

Q. What statistical data were employed in the historical analyses performed for the purpose of estimating service life characteristics?

A. The data consisted of the entries made to record retirements and other transactions related to the water plant during the period 1960-2021 and the wastewater plant during the period 2000-2019. These entries were classified by depreciable group, type of transaction, the year in which the transaction took place, and the year in which the plant was installed. The types of transactions included in the data were plant additions, retirements, transfers, and balances.

Q. What was the source of these data?

A. The data were assembled from Company records related to its utility plant in service.

Q. Were the methods used in the service life study the same as those used in other depreciation studies for water and wastewater plant presented before the Commission?

A. Yes. The methods are the same ones that have been presented previously for the Company and for other water and wastewater companies before the Commission, which have been accepted by the Commission in its past orders for water and wastewater utilities, including PAWC.

Q. Are the factors considered in your estimates of service life presented in Exhibit Nos. 11-B, 11-E, 11-G, 11-I and 11-L?

A. Yes. A discussion of the factors considered in the estimation of service lives is presented in Part III of each of these exhibits.

Q. Please outline the contents of Exhibit Nos. 11-B, 11-E, 11-G, 11-I and 11-L, which include the results of your service life studies for water and wastewater plant.

A. Exhibit No. 11-B is presented in eight parts. Part I, Introduction, discusses the plan of the report and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life studies. Part III, Service Life Considerations, presents the factors and judgments utilized in the average service-life analysis. Part IV, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part V, Results of Study, presents a summary by depreciable group of annual depreciation accrual rates and amounts. Part VI, Service Life Statistics, presents the statistical analysis of service life estimates. Part VII, Detailed Depreciation Calculations, presents the detailed tabulations of annual depreciation. Finally, Part VIII, Experienced and Estimated Net Salvage, presents the cost of removal and gross salvage recorded for the period 2019-2023.

Table 1, pages V-5 and V-6, presents the book cost of Water Plant as of June 30, 2024, Customers' Advances for Construction, Contributions in Aid of Construction, and the resulting net original cost used in the depreciation study. Table 2, pages V-7 through V-9, presents the estimated survivor

curve, the net original cost as of June 30, 2024, and the book reserve and calculated annual depreciation for each account or subaccount of Water Plant. Table 3, pages V-10 through V-12, presents the bring-forward to June 30, 2024, of the book depreciation reserve as of June 30, 2023. Table 4, pages V-13 through V-15, sets forth the calculation of the annual accruals used in the bring-forward. Table 5, page V-16, presents the experienced and estimated net salvage during the five-year period, 2019 through 2023.

The section beginning on page VI-2 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VII-2 presents the depreciation calculations related to original cost. The tabulation on pages VII-3 through VII-6 presents the cumulative depreciated original cost by year installed. The tabulations on pages VII-8 through VII-137 present the calculation of annual depreciation by vintage by account for each depreciable group of water plant. The tabulation on pages VIII-2 through VIII-6 presents the retirements, salvage, and cost of removal by account for each year during the period 2019 through 2023.

Exhibit Nos. 11-E, 11-G, 11-I and 11-L are presented in the same fashion described above for all of the Company's wastewater plant by operating system.

Q. Please outline the contents of Exhibit Nos. 11-C, 11-F, 11-H, 11-J and 11-M.

A. Exhibit No. 11-C includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of June 30, 2025. The descriptions and explanations presented in Exhibit No. 11-B are also applicable to the depreciation calculations presented in Exhibit No. 11-C. The graphs and tables related to service lives presented in Exhibit No. 11-B also support the service life estimates used in Exhibit No. 11-C, inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of June 30, 2025, are organized and presented in the same manner as those as of June 30, 2024. Exhibit Nos. 11-F, 11-H, 11-J and 11-M present data and information for all of PAWC's wastewater plant, by operating system, in the same fashion described above.

Q. Please outline the contents of Exhibit Nos. 11-A, 11-D and 11-K.

A. Exhibit No. 11-A includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of June 30, 2023. The descriptions and explanations presented in Exhibit No. 11-B are also applicable to the depreciation calculations presented in Exhibit No. 11-A. The graphs and tables related to service lives presented in Exhibit No. 11-B also support the service life estimates used in Exhibit No. 11-A, inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of June 30, 2023 are organized and presented in the same manner as those as of June 30, 2024.

Exhibit Nos. 11-D and 11-K are presented in the same fashion as the Water Operations assets and use the same format for all wastewater plant by operating system, except the BASA Wastewater Operations and Brentwood Wastewater Operations (for the reasons previously explained).

Q. Please use an example to illustrate the manner in which the study is presented in Exhibit Nos. 11-A through 11-M.

A. I will use Account 331, Mains and Accessories, as my example, inasmuch as it is the largest depreciable group of water assets and represents 52 percent of the original cost of depreciable water utility plant as of June 30, 2024.

The retirement rate method was used to analyze the survivor characteristics of this group. The life table for the 1948-2021 experience band is presented on pages VI-112 through VI-116 of Exhibit No. 11-B. The life table, or original survivor curve, is plotted along with the estimated smooth survivor curve, the 90-R2, on page VI-111.

The calculation of the annual depreciation related to the original cost of water plant as of June 30, 2023 is presented on pages II-115 through II-118 of Exhibit No. 11-A. The calculation is based on the 90-R2 survivor curve, the attained age, and the allocated book reserve. The calculation as of June 30, 2024 is presented on pages VII-108 through VII-110 of Exhibit No. 11-B and is based in part on the bring-forward of the book reserve. The calculation as of June 30, 2025 is presented on pages II-109 through II-111 of Exhibit No. 11-C and is based in part on the bring-forward of the book reserve. The tabulations in Exhibit Nos. 11-A, 11-B and 11-C set forth the installation year, the original cost, calculated accrued depreciation, allocated

book reserve, future accruals, remaining life and annual accrual. The totals are brought forward to Table 2 on page I-7 in Exhibit No. 11-A, on page V-8 in Exhibit No. 11-B and on page I-7 in Exhibit No. 11-C. The same process was conducted for the plant of all the wastewater systems.

Q. Do the exhibits exclude the original cost of certain plant?

A. Yes. Certain items of plant, as well as amounts received from customers as advances or contributions, have been excluded from the original cost used in the study. The original cost and a description of the plant excluded are set forth on page I-5 of Exhibit No. 11-B. The net original cost used in the study is developed in Table 1 on pages I-3 and I-4 of Exhibit No. 11-A, on pages V-5 and V-6 of Exhibit No. 11-B and on pages I-3 and I-4 of Exhibit No. 11-C. The same description pertains to all the studies for the Company's wastewater operations.

Q. In what manner is net salvage incorporated in the depreciation calculations?

A. As stated on page IV-7 of Exhibit No. 11-B, no adjustment for net salvage was made to the calculated annual depreciation amounts. The total calculated annual depreciation set forth on page I-7 of Exhibit No. 11-A, on page V-9 of Exhibit No. 11-B and on page I-7 of Exhibit No. 11-C reflects an addition for the amortization of negative net salvage in accordance with the practice of the Commission. The amortization is based on: (1) experience during the period 2018 through 2022 for the calculation as of June 30, 2023; (2) experience during the period 2019 through June 30, 2023, plus estimates for the last six months of year 2023, for the calculation as of June 30, 2024;

and (3) experience during the period 2020 through June 30, 2023, plus estimates for the last six months of 2023 and year 2024, for the calculation as of June 30, 2025. The detail by plant account of regular retirements, salvage, and cost of removal for each year is presented on: (1) pages III-2 through III-6 of Exhibit No. 11-A; (2) pages VIII-2 through VIII-6 of Exhibit No. 11-B; and (3) pages III-2 through III-6 of Exhibit No, 11-C. The totals are brought forward to Table 3 on page I-8 of Exhibit No. 11-A, to Table 5 on page V-16 of Exhibit No. 11-B and to Table 5 on page I-14 of Exhibit No. 11-C, in which the amounts of the five-year amortizations are calculated. The same calculations are presented in all the studies for the Company's wastewater operations.

Q. Do any systems have additional calculations performed?

A. Yes. The BASA Wastewater Operations and Brentwood Wastewater Operations acquisitions will be recorded at the net value of the assets in 2024 determined by the Commission under Section 1329(c) of the Public Utility Code. Therefore, the service lives and survivor curves for each plant account based on the seller's original cost for the acquired property were used to calculate depreciation expense. From that analysis, I derived the accrual rates that were applied to the acquired plant at the approved ratemaking rate base, in order to determine the appropriate level of depreciation expense to include in the Company's revenue requirement.

Q. Does this complete your testimony?

A. Yes, it does.

Appendix A

JOHN SPANOS

DEPRECIATION EXPERIENCE

Q. Please state your name.

A. My name is John J. Spanos.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

Q. Do you belong to any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Please outline your experience in the field of depreciation.

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire; FirstEnergy Service Corporation; Northeast Ohio Natural Gas Corporation; Blue Granite Water Company; Spire Missouri, Inc.; Dominion Energy South Carolina, Inc.; South FirstEnergy Operating Companies; Dayton Power and Light Company; Liberty Utilities; East Kentucky Power Cooperative; Bangor Natural Gas; Hanover Borough Municipal Water Works; West Virginia American Water Company; Evergy Metro; Evergy Missouri West; Granite State Electric; Bluegrass Water; The Borough of Ambler; Newtown Artesian Water Company and Connecticut Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the

Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission ("FERC"); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

Q. Have you had any additional education relating to utility plant depreciation?

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.:

"Techniques of Life Analysis," "Techniques of Salvage and Depreciation Analysis," "Forecasting Life and Salvage," "Modeling and Life Analysis Using Simulation," and "Managing a Depreciation Study." I have also completed the "Introduction to Public Utility Accounting" program conducted by the American Gas Association.

Q. Does this conclude your qualification statement?

A. Yes.

LIST OF CASES IN WHICH JOHN J. SPANOS SUBMITTED TESTIMONY

	Year	Jurisdiction	Docket No.	Client Utility	Subject
01.	1998	PA PUC	R-00984375	City of Bethlehem – Bureau of Water	Original Cost and Depreciation

v.	:	**DOCKET NOS. R-2023-3043189 (WATER)** **R-2023-3043190 (WASTEWATER)**
PENNSYLVANIA-AMERICAN WATER COMPANY	:	

VERIFICATION

I, **John J. Spanos**, hereby state that the facts set forth in the pre-marked Statement No. 11 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Date: November 8, 2023

Appendix B

Pennsylvania-American Water Company
Data Requirements of the Pennsylvania Public Utility Commission
Depreciation Study

FR VI.1

Pennsylvania-American Water Company
VI. Depreciation

1. Provide a description of the depreciation methods used to calculate annual depreciation amounts and depreciation reserves, together with a discussion of the factors which were considered in arriving at estimates of service life and dispersion by account. Supply a comprehensive statement of any changes made in method of depreciation. Provide dates of all field inspections and facilities visited.

Answer:

The depreciation methods utilized in calculating annual and accrued depreciation are discussed in Exhibit No. 11-B in Part IV of the water depreciation study. The calculation of annual and accrued depreciation are discussed in Exhibit Nos. 11-E, 11-G, 11-I and 11-L in Part IV of the wastewater depreciation studies.

Field trips and facilities visited for Pennsylvania-American Water Company water and wastewater systems are presented in Part III. Service Life Considerations, in Exhibit Nos. 11-B, 11-E, 11-G, 11-I and 11-L of those that had recent visits.

FR VI.2

Pennsylvania-American Water Company
VI. Depreciation

2. Set forth, in exhibit form, charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized.

Answer:

Charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized is presented in Exhibit No. 11-B in Part VI. Service Life Statistics, of the water depreciation study. The original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized is presented in Exhibit Nos. 11-E, 11-G, 11-I and 11-L in Part VI. Service Life Statistics, for wastewater depreciation studies.

FR VI.3

Pennsylvania-American Water Company
VI. Depreciation

3. Provide the surviving original cost at historic test year-end by vintage by account and include applicable depreciation reserves and accruals. These calculations should be provided for plant in service as well as other categories of plant, including contributions in aid of construction and customers' advances for construction.

Answer:

The surviving original cost at the end of the historical year June 30, 2023 by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-A beginning on page II-8, in Exhibit No. 11-D beginning on page II-7, and in Exhibit No. 11-K beginning on page II-6.

The surviving original cost at test year end June 30, 2024, by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-B beginning on page VII-8, in Exhibit No. 11-E beginning on page VII-7, in Exhibit No. 11-G beginning on page VII-6, in Exhibit No. 11-I beginning on page VII-6, and in Exhibit No. 11-L beginning on page VII-6.

The surviving original cost at test year end June 30, 2025, by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-C beginning on page II-7, in Exhibit No. 11-F beginning on page II-7, in Exhibit No. 11-H beginning on page II-6, in Exhibit No. 11-J beginning on page II-6, and in Exhibit No. 11-M beginning on page II-6.

VI. Depreciation

4. Provide a comparison of the calculated depreciation reserve used for ratemaking purposes v. the book reserve by account at the end of the test year, if they differ.

Answer:

A comparison of the calculated depreciation reserve v. book reserve by account at June 30, 2023, at June 30, 2024, and at June 30, 2025, are attached as pages FR VI.4 (2) through (20) for all water and wastewater systems by account.

FR VI.5

Pennsylvania-American Water Company
VI. Depreciation

5. Supply a schedule by account and depreciable group showing the survivor curve and annual accrual rate estimated to be appropriate:

   a. For the purposes of this filing.

   b. For the purposes of the most recent rate increase filing prior to the current proceedings.

Answer:

a. Refer to Table 2 in Exhibit Nos. 11-A through 11-M.

b. Refer to pages FR VI.5 (2) to FR VI.5 (10) for survivor curves and annual accrual rates estimated to be appropriate in the most recent prior water rate filing, and pages FR VI.5 (11) to FR VI.5 (20) for survivor curves and annual accrual rates estimated to be appropriate in the most recent prior wastewater rate filing.

Depreciation Study

FR VI.6

Pennsylvania-American Water Company
VI. Depreciation

6. Provide an exhibit showing gross salvage, cost of removal, and net salvage for the five most recent calendar or fiscal years by account.

Answer:

The information is presented on pages III-2 through III-6 of Exhibit No. 11-A for the historic test year, on pages VIII-2 through VIII-6 of Exhibit No. 11-B for the future test year, and on pages III-2 through III-6 of Exhibit No. 11-C for the fully forecasted test year for water assets.

The information is presented in Part III. Experienced Net Salvage of Exhibit Nos. 11-D and 11-K for the historic test year, in Part VIII, Experienced and Estimated Net Salvage of Exhibit Nos. 11-E, 11-G, 11-I and 11-L of the future test year, and in Part III. Experienced and Estimated Net Salvage of Exhibit Nos. 11-F, 11-H, 11-J and 11-M of the fully forecasted test year for wastewater assets.

Attention Ms. Stacey Gress
Director, Rates and Regulatory

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to water plant as of June 30, 2023. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 through 3, beginning on page I-3 of the attached report.

A description of the methods and procedures upon which the study was based, as well as support for the service life estimates, is set forth in a companion report "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2024".

Respectfully submitted,

GANNETT FLEMING VALUATION

WATER OPERATIONS

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Table 1 presents the development of net original cost used in the study. The net original cost is the original cost of water plant less advances, contributions and property to be excluded pursuant to Commission audits. The results of the depreciation study are summarized in Table 2, which sets forth the book reserve and the calculated annual depreciation related to net original cost as of June 30, 2023, and the annual amortization of net negative salvage. Table 3 presents the calculation of the amortization of experienced net salvage, by account, based on the five-year period, 2018-2022.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-8. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage, and cost of removal are set forth by account for the years 2018 through 2022, on pages III-2 through III-6.
