Re: Pennsylvania-American Water Company – Water Operations Negative Surcharge for Deferred Tax Credit Section 1307(e) reconciliation for the period January 1, 2022 through January 27, 2023

Dear Secretary Chiavetta:

Attached please find the reconciliation filing for the 13-month period ending January 27, 2023, in conjunction with Pennsylvania-American Water Company's Negative Surcharge for Deferred Tax Credit for its water service territory. This surcharge, as approved at Docket No. R-2020-3019369, was applied to customers' bills during the period January 1, 2022 through January 27, 2023.

Consistent with page 40 of Tariff Water-PA P.U.C. No. 5 Supplement No. 27, the reconciliation amount of $719,248, plus interest, will be deferred to Pennsylvania-American Water Company's next base rate case.

If you have any questions, please contact me.

Sincerely,

Teresa K. Harrold

Re: 2021 Pennsylvania Public Utility Realty Tax
Notice of Determination

Dear Taxpayer:

Pursuant to the Public Utility Realty Tax Act, the Department of Revenue herein provides notice of the state taxable values of PURTA realty and the millage rate for tax year 2021. This notice is based on information provided by County Tax Assessor offices. Any discrepancies must be addressed with that agency and not with the Pennsylvania Department of Revenue. Please note, any net liabilities resulting from prior years' adjustments are due and payable along with the current year liability.

Payment of tax is required within 45 days of the mailing date of this notice. Previous payments, adjustments and credits should be taken into consideration. Payments and correspondence relevant to the PURTA tax or this notice should be mailed directly to the above address.

All payments of $1,000 or more must be made electronically or by certified or cashier's check remitted in person or by express mail courier. For information on electronic filing options, visit **www.etides.state.pa.us**.

If you do not agree with this Notice of Determination, you may file a Petition with the Board of Finance and Revenue pursuant to Section 1109-A of the Tax Reform Code of 1971. The petition must be postmarked by the U.S. Postal Service or received by the Board of Finance and Revenue within 30 days of the mailing date of this notice.

Important update: Beginning in 2023, utilities must file and pay electronically at mypath.pa.gov. More information about the transition to myPATH will be available soon and can be found at **www.revenue.pa.gov/mypathinformation**.

Tax Year	2021	2020	2019	2018	2017

PENNSYLVANIA AMERICAN WATER COMPANY
ASHLEY EVERETTE
852 WESLEY DRIVE
MECHANICSBURG PA 17055

Dear Ashley Everette,

The Commission submitted a request for pre-payment of Pennsylvania American Water Company's estimated Public Utility Commission assessment for fiscal year 2023-24. This pre-payment of $3,000,000.00 was an estimate based on the revenues shown on your Company's GAO-22 submission and the Commission's fiscal year 2023-24 approved budget. The following is a summary of the actual invoice amount less this pre-payment:

Description	Amount
PA Public Utility Commission 2023-24 Assessment	$3,021,645.00
Office of Consumer Advocate 2023-24 Assessment	$1,217,353.00
Office of Small Business Advocate 2023-24 Assessment	$212,031.00
Damage Prevention Committee 2023-24 Assessment	$503.00
Total Assessment for 2023-24	$4,451,532.00
Less: Prepayment of Estimated 2023-24 Assessment	($3,000,000.00)
Remaining Amount Due for 2023-24 Assessment	**$1,451,532.00**

For payment by check, please send to:
Pennsylvania Public Utility Commission
Bureau of Administration
Keystone Bldg. Room 303N
400 North Street
Harrisburg, PA 17120

For payment via ACH/wire transfer:
Bank: Wells Fargo Bank
ABA#: 121000248
Acct Name: Commonwealth of PA
Acct #: 2100019662887
OBI: 2023-24 PUC Assessment

The Commission would like to take this opportunity to express its gratitude for Pennsylvania American Water Company's continued cooperation in the pre-payment methodology.

If you have any questions concerning this pre-billing, please contact Amy Zuvich at (717) 783-6806.

Sincerely,

Robert C. Gramola

Robert C. Gramola

PENNSYLVANIA PUBLIC UTILITY COMMISSION
Harrisburg, PA 17120

NOTICE OF ASSESSMENT

EXPLANATION OF INVOICE FOR GENERAL ASSESSMENT
FOR FISCAL YEAR JULY 1, 2023 TO JUNE 30, 2024

In Section 510 of the Public Utility Code, 66 Pa. C.S. §510, the Pennsylvania General Assembly has authorized the Pennsylvania Public Utility Commission to assess all public utilities a percentage of their gross intrastate operating revenues for the preceding calendar year. Under Section 510, each public utility is required, on or before March 31 of each year to file with the Commission a statement of the utility's gross intrastate operating revenues for the preceding calendar year. After receiving the utilities' statements of gross intrastate operating revenues, the Commission sends general assessment invoices to all public utilities to advise each utility of the amount of assessment that utility owes based upon that utility's activity (gross intrastate operating revenues) in the preceding year. The enclosed assessment is for your proportionate share of the estimated expenses of the Public Utility Commission for the Commission's Fiscal Year July 1, 2023 to June 30, 2024.

YOU ARE REQUIRED TO PAY THIS INVOICE WITHIN THIRTY DAYS AFTER YOU RECEIVE IT. Objections to the assessment must be made in writing within 15 days and shall set out in detail the grounds upon which you regard the assessment to be excessive, erroneous, unlawful, or invalid. Objections may be filed only by the person, partnership, or corporation assessed. Filing an objection, however, does not eliminate your obligation to pay the assessment while your objection is being considered. **FAILURE TO PAY THE ASSESSMENT WHEN PAYMENT IS DUE WILL SUBJECT YOU TO PENALTIES.**

Be sure that your personal check or money order is written out in the same amount as your assessment invoice, and make your remittance payable to, "Commonwealth of PA". **DO NOT SEND CASH**. If you have reason to correspond with the Commission regarding your assessment invoice, please refer to your invoice number. A receipt for payment will not be issued. Please mail your payment with the return portion of your invoice in the enclosed self-addressed envelope. Please note that rounding of your assessment to the nearest dollar has occurred. Your assessment for the PUC, including the OCA, OSBA and the DPC where applicable, has been combined into one invoice; one payment for all applicable assessments is acceptable. **A TWENTY DOLLAR ($20.00) FEE WILL BE CHARGED FOR ALL DISHONORED OR BAD CHECKS REMITTED AS PAYMENT OF ASSESSMENTS.**

Your assessment has been computed by multiplying your gross intrastate operating revenues for the calendar year 2022 by the assessment factor for the public utility group of which you are a member. Your gross intrastate operating revenues for 2022 have been taken from the Assessment Reports Form GAO-22, AR-22-RR or AR-22-MC which you have filed with the Commission, or have been estimated by the Commission if you failed to file a timely report. Gross operating revenue reported to the Commission on the Assessment Reports may have been revised by the Commission to accurately reflect assessable revenue. The assessment factors for the various public utility groups are set forth in Schedule B enclosed herewith.

The approved estimate of expenditures of the Commission for the period July 1, 2023 to June 30, 2024 payable as a General Assessment by the public utilities which the Commission regulates has been determined as follows:

Approved budget for the Commission for the Fiscal Year July 1, 2023 through June 30, 2024:	$80,409,289
Deduct:	
Pipeline Operators Allocation per Act 127 of 2011	557,327
Various Fees Collected in FY 2022-23	249,139
UGWF Administration per Act 13 of 2012	552,500
Prior Year Cost Saving	13,400,000
UCR Collection for CY 2022	4,945,527
EGS/NGS Allocation per Act 155 of 2014	3,929,844
Total Deductions	$23,634,337
General Assessment Total Amount	$56,774,952

The way in which the total Public Utility Commission assessment of $56,774,952 has been allocated to the various groups of public utilities as shown on Schedules A and B enclosed herewith.

PENNSYLVANIA PUBLIC UTILITY COMMISSION
Harrisburg, PA 17120

OFFICE OF CONSUMER ADVOCATE
NOTICE OF ASSESSMENT

EXPLANATION OF INVOICE FOR GENERAL ASSESSMENT FOR PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE, OFFICE OF ATTORNEY GENERAL FOR FISCAL YEAR JULY 1, 2023 TO JUNE 30, 2024

The Pennsylvania Public Utility Commission is mandated under Act 15 of 1977, P.L. 19 as amended by Act 107 of 1978 and Act 25 of 1983, to levy upon the public utilities the Commission regulates a yearly assessment to fund the Pennsylvania Office of the Consumer Advocate (herein called Consumer Advocate), Office of the Attorney General. The Governor and the Appropriation Committees of the Pennsylvania House and Senate approved an estimated operating budget of $6,752,000 for the Consumer Advocate for the Fiscal Year July 1, 2023 to June 30, 2024.

The enclosed assessment invoice shows your proportionate share of the expenses of the Consumer Advocate for the Fiscal Year July 1, 2023 to June 30, 2024.

YOU ARE REQUIRED TO PAY THIS INVOICE WITHIN THIRTY DAYS AFTER YOU RECEIVE IT. Objections to the assessment must be made in writing within 15 days and shall set out in detail the grounds upon which you regard the assessment to be excessive, erroneous, unlawful, or invalid. Objections may be filed only by the person, partnership, or corporation assessed. **FAILURE TO PAY THE ASSESSMENT WHEN PAYMENT IS DUE WILL SUBJECT YOU TO PENALTIES.**

Be sure that your personal check or money order is written out in the same amount as your assessment invoice, and make your remittance payable to, “Commonwealth of PA”. **DO NOT SEND CASH**. If you have reason to correspond with the Office of Consumer Advocate regarding your assessment invoice, please refer to your invoice number. Please note that rounding of your assessment to the nearest dollar has occurred. Your assessment for the PUC, including the OCA, OSBA and the DPC where applicable, has been combined into one invoice; one payment for all applicable assessments is acceptable. **A TWENTY DOLLAR ($20.00) FEE WILL BE CHARGED FOR ALL DISHONORED OR BAD CHECKS REMITTED AS PAYMENT OF ASSESSMENTS.**

Your Consumer Advocate assessment has been computed by multiplying your gross intrastate operating revenues for the calendar year 2022 by the assessment factor for the public utility group of which you are a member. Your gross intrastate operating revenues for 2022 have been taken from the report on Form GAO-22 which you have filed with the Commission, or have been estimated by the Commission, if you failed to file a timely report. Gross operating revenue reported to the Commission on the Assessment Reports may have been revised by the Commission to accurately reflect assessable revenue. The assessment factors for the various public utility groups are set forth in Schedule B enclosed herewith.

Estimate of the expenditures of the Office of Consumer Advocate for the Fiscal Year July 1, 2023 through June 30, 2024:	$6,752,000
Deduct:	
Credit from previous fiscal year	$597,353
Total OCA Assessment:	$6,154,647

The way in which the total Consumer Advocate assessment of $6,154,647 has been allocated to the various groups of public utilities as shown on Schedules A and B enclosed herewith.

PENNSYLVANIA PUBLIC UTILITY COMMISSION
Harrisburg, PA 17120

PENNSYLVANIA ONE CALL LAW
PUBLIC UTILITY COMMISSION DAMAGE PREVENTION COMMITTEE
NOTICE OF ASSESSMENT

EXPLANATION OF INVOICE FOR GENERAL ASSESSMENT
FOR FISCAL YEAR JULY 1, 2023 TO JUNE 30, 2024

The Pennsylvania Public Utility Commission is mandated under Act 50 of 2017, to levy upon the applicable public utilities the Commission regulates a yearly assessment to fund the Pennsylvania Public Utility Commission's Damage Prevention Committee (herein called Damage Prevention Committee or DPC). The Governor and the Appropriation Committees of the Pennsylvania House and Senate approved an estimated operating budget of $1,486,711 for the Damage Prevention Committee for the Fiscal Year July 1, 2023 to June 30, 2024.

The enclosed assessment invoice shows your proportionate share of the expenses of the Damage Prevention Committee for the Fiscal Year July 1, 2023 to June 30, 2024.

YOU ARE REQUIRED TO PAY THIS INVOICE WITHIN THIRTY DAYS AFTER YOU RECEIVE IT. Objections to the assessment must be made in writing within 15 days and shall set out in detail the grounds upon which you regard the assessment to be excessive, erroneous, unlawful, or invalid. Objections may be filed only by the person, partnership, or corporation assessed. **FAILURE TO PAY THE ASSESSMENT WHEN PAYMENT IS DUE WILL SUBJECT YOU TO PENALTIES.**

Be sure that your personal check or money order is written out in the same amount as your assessment invoice, and make your remittance payable to, "Commonwealth of PA". **DO NOT SEND CASH.** Please note that rounding of your assessment to the nearest dollar has occurred. Your assessment for the PUC, including the OCA, OSBA and the DPC where applicable, has been combined into one invoice; one payment for all applicable assessments is acceptable. **A TWENTY DOLLAR ($20.00) FEE WILL BE CHARGED FOR ALL DISHONORED OR BAD CHECKS REMITTED AS PAYMENT OF ASSESSMENTS.**

Your Damage Prevention Committee assessment has been computed by following the formula prescribed in the Act. We subtract from the estimated budget to operate the DPC in fiscal year 2023-24 the amount that was received in DPC fines in FY 2022-23 and Federal Grant funds that were received toward the operation of the program. Eighty percent of the remaining balance shall be included within the amount assessed to applicable public utilities under 66 PA.C.S. Section 510 and twenty percent of the remaining costs shall be assessed to the PA One Call System, with the fee to be paid to the Commission.

Estimate of the expenditures of the Damage Prevention Committee for the Fiscal Year July 1, 2023 through June 30, 2024:	$1,486,711
Deduct:	
Amount billed to Federal Grants (One Call Grant):	$46,770
Amount of fines collected in FY 2022-23:	$1,314,770
Prior year cost savings:	$116,137
Total Assessment:	$9,034
Amount paid by PA One Call System (20%):	$1,807
Amount paid by public utilities (80%):	$7,227

The way in which the total Damage Prevention Committee assessment of $7,227 has been allocated to the various groups of public utilities as shown on Schedules A and B enclosed herewith.

REBUTTAL TESTIMONY OF ASHLEY E. EVERETTE

Introduction

Q. What is your name and address?

A. My name is Ashley E. Everette and my business address is 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

Q. Have you submitted direct testimony in this proceeding?

A. Yes, I submitted direct testimony as PAWC Statement No. 1. I also sponsored portions of PAWC Exhibits 3-A.

Q. What is the purpose of your rebuttal testimony?

A. Initially, I will update and revise the Company's claims as originally set forth in PAWC Exhibit No. 3-A. Thereafter, I will address the following points raised in the testimony of other parties' witnesses:

(1) I will respond to the direct testimony of witnesses for the Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"), who contend that the Commission should ignore the exceptional management performance exhibited by the Company in assessing the reasonable return on equity to be allowed in this case.

(2) I will respond to the testimony of witnesses for OCA regarding OCA's recommendations to impute revenues and eliminate incurred costs.

(3) I will respond to testimony of the OCA regarding the Company's rate base of Section 1329 acquisitions.

(4) I will respond to the testimony of witnesses for I&E, OCA, the Office of Small Business Advocate ("OSBA"), and the Pennsylvania-American Water Large Users Group

("PAWLUG") concerning the Company's proposal to employ the authority conferred by Act 11 of 2012 to recover a portion of the revenue requirement of its wastewater operations from its total customer base.

(5) I will address low-income customer assistance recommendations raised by the Coalition for Affordable Utility Service and Energy Efficiency ("CAUSE-PA") witness Harry S. Geller and Commission on Economic Opportunity ("CEO") witness Jennifer Warabak.

(6) I will address notice to customers of the rate increase in response to OCA witness Christine Hoover.

(7) I will respond to witnesses from I&E and OCA regarding cost of service studies and bulk agreements.

(8) I will respond to the testimony of OCA witness Barbara R. Alexander that any increase in this case should be contingent upon the Company acquiescing to her proposed customer service performance standards.

Updates and Revisions to the Company's Claims

Q. Has the Company prepared a revised statement of its revenue requirement in this proceeding?

A. Yes, it has. PAWC Exhibit 3-A Revised sets forth the Company's revised claims in this proceeding and incorporates revisions explained in the rebuttal testimony of the Company's witnesses, revisions to the Company's original claims as previously supplied in interrogatory responses, and the acceptance of certain adjustments proposed by other parties. Each page of Exhibit 3-A Revised that has been revised from the original Exhibit 3-A is noted by an "R" following the page number. In addition, a summary of the revisions is provided in Exhibit 3-A Revised, which sets forth: (1) a brief description of the revision;

(2) the page of Exhibit 3-A to which it relates; (3) a reference to where the revision has been identified or discussed in testimony; (4) the Company's original claimed amount; (5) the Company's revised claim; and (6) the net change between the original and revised claims. The net effect of these revisions is to change the Company's claimed increase in revenue requirement from $203.9 to $204.3 million.[1]

Q. In their direct testimony, I&E, OCA and OSBA recommend that the Butler Area Sewer Authority ("BASA") revenue requirement not be recovered in this case because the Commission's approval of the acquisition was appealed to Commonwealth Court of Pennsylvania. What is the current status of that appeal?

A. The Commonwealth Court has granted the Company's request for expedited consideration and consolidated the separate appeals filed by Center and Summit Townships. The Court will consider the Company's Applications to Dismiss and the Motions to Quash filed by BASA, the City of Butler and the Township of Butler (collectively, the "Butler Parties") along with the merits of the appeals. Both the Company's Applications and the Butler Parties' Motions argue that Center and Summit Townships waived their appellate rights and are estopped from pursuing appeals due to their adoption of resolutions that they would not oppose or contest the settlement and their failure to in fact timely oppose the settlement before the ALJ. On February 15, 2024, the Commission certified the record and Center and Summit briefs will be filed by March 1. Briefs by the Commission, the Company and the Butler Parties are due March 16 and reply briefs are due March 23. The appeals will be submitted to a panel of judges on the next available list for expedited disposition on the

[1] Although the Company has provided a revised claim that supports a revenue requirement increase of $204.3 million, it acknowledges that the Commission cannot approve a revenue requirement increase greater than the $203.9 million in the Company's initial filing that was noticed to customers.

briefs without oral argument. Therefore, the Company expects that a decision could be issued as early as May 2024, but certainly prior to a final order being issued in this proceeding.

Q. In their direct testimony, I&E, OCA and OSBA recommend that the Borough of Brentwood ("Brentwood") revenue requirement not be recovered in this case because the acquisition has not been approved by the Commission and/or is not certain to close by the end of the FPFTY. What is the current status of that acquisition?

A. As described in PAWC witness Mr. Abruzzo's rebuttal testimony, a final Commission order is expected to be entered on March 14, 2024 and PAWC intends to close shortly after a Commission Order approving the acquisition becomes final and unappealable, which would be before the Commission issues its decision in this proceeding, and if appealed and approved by the Commonwealth Court would be prior to the end of the FPFTY.

Q. What is the Company proposing regarding the BASA and Brentwood revenue requirements?

A. The Company maintains that the BASA and Brentwood acquisitions are likely to close prior to the end of the FPFTY and therefore should be reflected in this rate case on the effective date of new rates. Alternatively, if the Commission agrees with OCA, I&E and OSBA with respect to the certainty of closing the BASA and Brentwood acquisitions before the end of the FPFTY, rather than disallowing any recovery in this rate case which would factor into the timing of the Company's next rate case, the Company proposes that the Commission approve revenue requirements in this proceeding as follows: 1) a revenue requirement that excludes the BASA and Brentwood acquisitions; 2) a revenue requirement that excludes the Brentwood acquisition but includes the BASA acquisition; and 3) a

revenue requirement that includes the Brentwood and BASA acquisitions. This is possible because the Company filed a separate revenue requirement for the BASA and Brentwood systems, so the revenue requirements with and without the BASA and Brentwood systems are readily identifiable in the Company's filing. Additionally, the Company anticipates that the Commission's Order in this case would have separately identified the revenue requirements associated with BASA and Brentwood in any event.

Q. Please explain how the Company's alternative proposal would work.

A. I will refer to the revenue requirement that excludes the BASA and Brentwood acquisitions as "Step 1;" the revenue requirement in this proceeding that includes the BASA acquisition as "Step 2;" and the revenue requirement in this proceeding that includes both BASA and Brentwood as "Step 3". If the Commission agrees with OCA, I&E and OSBA with respect to the certainty of closing the BASA and Brentwood acquisitions, the Company is asking the Commission to approve rates for Step 1, Step 2 and Step 3. Step 1 rates would become effective on August 7, 2024, which is the end of the normal suspension period in this case. Step 2 rates would become effective on one day's notice, no earlier than August 7, 2024, and only after the Company has certified to the Commission that it has closed the BASA acquisition. If, for any reason, the BASA acquisition does not close, Step 2 rates would never become effective. Step 3 rates would become effective on one day's notice, again no earlier than August 7, 2024, and only after the Company has certified to the Commission that it has closed both the Brentwood and BASA acquisitions. If, for any reason, the Brentwood acquisition does not close, Step 3 rates would never become effective. A summary of the proposed revenue requirements is as follows:

	Step 1 Excludes BASA and Brentwood	**Step 2** Includes BASA Excludes Brentwood	**Step 3** Includes BASA and Brentwood
Proposed Incremental Rate Increase	$177,033,198	$25,322,947	$1,935,019
Proposed Cumulative Rate Increase	$177,033,198	$203,356,145	$204,291,164

Q. Borough of St. Lawrence witness Robert J. May testified in his supplemental direct testimony[2] that PAWC should disclose individual items that comprise the rate increase, specifically items related to the maintenance and upgrade to the wastewater treatment. How do you respond?

A. Regarding the individual components of the rate increase, the Company provided detailed calculations of its revenue requirements in its initial filing, Exhibit No. 3-A, which as I just indicated, the Company is now updating in rebuttal testimony. These studies provide a full calculation of each revenue requirement. Workpapers and documentation were provided in Exhibit Nos. 3-B and 3-C. The Company has provided additional information in its responses to more than 900 data requests in support of its revenue requirement calculations.

Management Performance Adjustment to Return on Equity

Q. Has the Company proposed that the Commission grant a rate of return on equity that reflects performance factors under Section 523 of the Public Utility Code and the Commission's Policy Statement at 52 Pa. Code § 69.711?

[2] I note that Borough of St. Lawrence witness May's "supplemental direct" testimony submitted on February 13, 2024 was untimely because the statement reiterates allegations set forth in the Borough of St. Lawrence formal complaint and was not limited to issues raised at the public input hearings as directed by the presiding Administrative Law Judges. The deadline for non-Company direct testimony was February 1, 2024.

A. Yes, it has. As I explained in my direct testimony, the Company is proposing that the Commission adopt a rate of return on equity at the upper end (10.95%) of Ms. Bulkley's range of reasonable equity returns (10%-11.25%) in recognition of PAWC's superior performance based on the factors delineated in Section 523 and 52 Pa. Code § 69.711. In addition, and for the same reason, the Company proposes that, if the Commission were to approve a rate of return on equity that is lower than the upper end of Ms. Bulkley's range, it should add 25 basis points to its market-determined rate of return. If the Commission's market-determined rate of return is less than 10.95% but greater than 10.70%, then the performance-based increment could be less than 25 basis points to achieve a final equity return rate of 10.95%.

Q. What areas of the Company's performance support its proposed equity return increment?

A. The Public Utility Code requires the Commission to consider the "efficiency, effectiveness, and adequacy of service" when establishing a utility's rates. My direct testimony explains the Company's exemplary management performance in several areas, including: (1) the Company's industry-leading programs to assist low-income and payment-troubled customers; (2) the Company's environmental record and commitment to water quality; (3) the Company's strong safety performance; (4) the Company's commitment to operational and water efficiency for the benefit of customers; (5) the Company's significant infrastructure investment; (6) the Company's community engagement and consumer education initiatives; (7) the Company's efforts to support the Commission's and the Pennsylvania Department of Environmental Protection's ("DEP") long-standing policy to eliminate the problems of small, troubled and nonviable water and wastewater systems by

acquiring those systems and making the improvements needed to assure safe and reliable service; and (8) the Company's efforts to extend service to meet the needs of customers without access to safe and reliable water service.

Q. Please discuss other parties' positions regarding the Company's proposal for performance factor recognition.

A. I&E and the OCA contend that PAWC's management effectiveness does not warrant recognition by the Commission through a performance enhancement to return on equity; I&E witness D.C. Patel and OCA witness Garrett contend that the Company should not be provided any management recognition for doing what they assert is simply required under the Public Utility Code. Mr. Patel also argues that the Company should not receive any management performance adjustment based on other alleged premiums and benefits that accrue to the Company's shareholders, including benefits associated with the Company's acquisitions of troubled water and wastewater systems. Mr. Patel further asserts no management performance adjustment is warranted because the Company's recent rate increases have "burdened" customers, the Company's low-income assistance programs are "largely funded" by residential customers, and the Company's most recent management audit indicated areas for improvement and possible additional customer savings that could be realized. For her part, OCA witness Hoover simply refers to the testimony of OCA witnesses Garrett, Alexander and Colton to object to the Company's proposed adjustment, and I will address the testimony of each of those witnesses.

Q. How do you respond to the contentions of OCA witness Garrett and I&E witness Patel that the Company should not be rewarded for performing duties that they believe are already required as a public utility?

A. At the outset, the attempt by Mr. Patel and Mr. Garret to characterize exemplary performance as something the law requires is contradicted by Section 523. I am advised by counsel that the legislature clearly envisioned that utilities can achieve levels of performance that exceed the base level of their legal requirements because otherwise there would be no point in enacting Section 523. In short, if Mr. Patel's and Mr. Garrett's position were adopted, it would be the same as writing Section 523 out of the Public Utility Code. Notably, the Company's actions described in my direct testimony are not merely examples of reasonable service, but instead demonstrate superior service because the Company went above and beyond the requirements of the Public Utility Code in many respects. In PAWC Statement No. 15-R, Company President Justin L. Ladner highlights the accomplishments of the Company in delivering superior performance that go well beyond what is required by the Public Utility Code.

In addition, over 50 witnesses who attended the Company's public input hearings testified to the excellent service provided by the Company. Below are highlights of the testimony of several of those witnesses which demonstrate the many ways the Company's performance substantially exceeds the statutory standards of reasonableness when serving customers, business partners, and its communities:

- The Vice President of the Board of Education for the Avella Area School District testified that the Company has committed to invest and install over ten miles of water mains extending public water service to portions throughout Washington County. This investment will provide the District, its students and administration, access to safe and clean drinking water as well as fire protection for the first time in history.

- A representative for the Dollar Energy Fund testified about its long-term partnership with the Company that began in 1991 when the Company voluntarily started the Help to Others (or H20) program. The representative commended the Company in that it not only has maintained, but has also grown the H20 program. The representative is supportive of the proposed rate change as the Company is proposing to expand eligibility under its Bill Discount Program.
- A representative of the Washington County Chamber of Commerce explained that the Company is a respected and professional partner in nearly every successful economic development project in the County and is committed to upgrading aging infrastructure. This representative reiterated the significance and gratitude the county of Washington has for PAWC's investment to extend the water main to serve the Avella Area School District. In addition, the Company contributes to the County through a variety of other programs including providing grants to firefighters, emergency responders, and local food banks.
- A representative of Pioneer Construction testified that in Pioneer Construction's capacity as a utility contractor, PAWC has been essential in growing their company and providing livelihoods to their employees and communities. Further, PAWC is committed to building and maintaining critical infrastructure showing the Company is striving to deliver safe and reliable water service to customers.
- A representative of Pennsbury School Board of Directors testified that PAWC took an active role and was "instrumental" in implementing the school's sustainability management plan. PAWC donated money to start the program and also donated 200 reusable water bottles to students who could not afford water bottles.

- A representative of Chester County Chamber of Business and Industry testified in support of the Company's proposed rate change, highlighting the need for upgrading the infrastructure which will benefit the health and safety of the public as well as the economic wellbeing of communities.
- The Executive Director of Fayette County Chamber of Commerce testified that they are proud that the Company "is not just a utility here, but they're a partner in the work that we do to continue to build and grow Fayette County." The Company is clearly dedicated to helping the communities they serve and that is evidenced by their participation and sponsorship of community events such as the County Consumer Resource Fairs as well as their investment in replacing aged water mains in Fayette County.
- A representative of Aclamo testified that PAWC has been a supporter of their organization over the past eight years, not only providing financial support but also working directly with families and children of the organization. PAWC has been available to work directly with people to help them access, read, and understand their bills.
- Bob Bielich: A representative of Disaster Restoration Services testified that in his capacity of working with PAWC providing emergency services for residential water damage, the Company provides great customer satisfaction often leaving the customer in a better place than before any water damage occurred.
- The Chief Financial Officer of EK Services, a certified women-owned utility contractor, testified that in their capacity of working with PAWC, the Company is a "good steward of the funds it requests and continues to optimally plan for and utilize these funds throughout the communities that they serve to enhance our everyday lives."

- A representative of the Yardely-Makefield Fire Company testified that their relationship with the Company and the Company's customer service is "outstanding." and that PAWC has been helpful and accommodating when the Company had to upgrade systems and mains, install new fire hydrants and update the fire codes.

This public input testimony establishes that PAWC's performance is not only reasonable, but superior in many different areas, including distribution system improvements, community engagement, its commitment to supplier diversity, and the financial and educational resources offered to its communities.

Q. Please respond to Mr. Patel's contention that the Commission should not recognize the Company's superior performance in the form of a higher rate of return since shareholders will already benefit from any savings in operations and maintenance costs that the Company achieves.

A. Mr. Patel's position is contrary to the terms of Section 523(a), which direct the Commission to consider "efficiency." Moreover, as Mr. Ladner explains, the Company has focused its attention on many areas where superior performance has not necessarily yielded a direct economic benefit to shareholders, but where superior performance will deliver direct benefits to customers, such as the Company's recognized excellence in addressing water quality and environmental issues, its success in streamlining field operations and reducing response times, and the Company's unwavering commitment to employee safety and employee training and development.

Q. What is your response to I&E's argument that because the Company's shareholders have benefited from higher returns on the ratemaking rate base associated with Section 1329 acquisitions, the Company's requested management performance adjustment should be denied?

A. I disagree. Section 1329 was added to the Public Utility Code to encourage the consolidation of the highly fragmented water and wastewater systems in the Commonwealth. For these systems, sale to an investor-owned public utility or entity with extensive technical expertise and financial resources can facilitate necessary infrastructure improvements and ensure the continued provision of safe, reliable service to customers at reasonable rates. Due to the age of many municipal systems, however, traditional depreciated original cost measures produce very low purchase prices, discouraging many transactions. Section 1329 establishes a voluntary fair market valuation process that mitigates the risk that a utility will not be able to fully recover its investment when water or wastewater assets are acquired from a municipality or authority. In a Section 1329 proceeding, the Commission establishes the amount that the acquiring public utility can put into rate base in its next base rate case as a result of the acquisition. The Company is simply recovering the ratemaking rate base amount approved by the Commission (which is never more than the Company's actual cost to acquire) and a return on its investment in the acquired systems when those systems are included in rate base.

Q. What is your response to I&E's and OCA's position that the Company's efforts to assist troubled water systems do not warrant an adjustment to the Company's rate of return?

A. I disagree. The Company has been providing support for troubled water and wastewater systems for many years. Since 1985, the Company has acquired approximately 110 small water and wastewater systems, several of which were deemed troubled, non-viable systems, including sixteen acquisitions of very small less-viable water and wastewater systems. As I explained in my direct testimony, PAWC has completed sixteen acquisitions of such systems in the last ten years, and the rebuttal testimony of Company witness Bruce W. Aiton (PAWC Statement No. 3-R) describes several recent water and wastewater acquisitions where PAWC addressed longstanding water quality and environmental compliance issues. In addition, PAWC recently began acting as receiver for the East Dunkard Water Authority ("EDWA") where the EDWA water treatment plant had simply ceased producing water and all customers were without even non-potable water for several days. It would be reasonable and consistent with the Commission's Policy Statement at 52 Pa. Code § 69.711 to recognize all of the Company's efforts and long-standing commitment to assist troubled systems by approving an upward adjustment to the Company's rate of return.

Q. Ms. Everette, do you agree with Mr. Patel's assertion that the Company's most recent Management Performance Audit is inconsistent with superior management performance?

A. No, I do not. As a threshold matter, I note that the Company filed its Implementation Plan with the Commission which details exactly how the Company will implement each of the audit recommendations. The Company entirely accepted 23 of the audit recommendations and partially accepted the remaining eight. With respect to the twelve functional areas reviewed by the Commission audit staff, none were marked for "Significant Improvement"

or "Major Improvement," and eight of the twelve functional areas reviewed were simply marked for "Minor Improvement Necessary." To provide just two examples of the minor improvements recommended: (i) in the area of Corporate Governance, the sole audit recommendation was to perform a market comparison for local board compensation to ensure PAWC board fees are at market rates, and the Company agreed to undertake such an analysis if it continues to have external board members; (ii) in the area of Human Resources and Diversity, the only recommendation was to document PAWC's policies and procedures or guidance for the application of remote work.[3] As reflected in the Implementation Plan, the Company is committed to implementing other Commission recommendations, including the recommendations that will achieve the potential annual savings of $3,130,000 relating to inventory stockpiles and unaccounted for water and the one-time savings of $4,000,000 associated with reducing inventory stockpiles (subject to availability of supplies and supplier shortages).

Q. Do you agree with Mr. Patel's argument that no management performance adjustment is warranted because PAWC's rate increases have "burdened" customers, its low-income assistance programs are "largely funded" by residential customers, and PAWC's customers will pay the costs of wastewater services used by other customers?

A. No, I do not. As Mr. Ladner explains, the Company faces monumental investment challenges to maintain its consistently strong record of delivering safe and reliable water and wastewater services, and the rate cases filed by the Company are necessary to make ongoing, significant capital investments. PAWC has also been expanding its customer

[3] See Pennsylvania-American Water Company Management and Operations Audit, Docket No. D-2022-3035217 (October 2023) ("Management Audit"), pp. 25 and 95.

assistance programs to help our most vulnerable customers, including its proposal in this proceeding to increase the Company's Bill Discount Program to residential customers whose household incomes are between 151% and 200% of Federal Poverty Level, and upon closing the BASA acquisition, additional voluntary shareholder contributions to the Company's Hardship Grant program over 5 years totaling $3,500,000 (which are not recovered in rates) on top of the current $750,000 annual shareholder contribution.

Mr. Patel's objection to any management performance adjustment due to the allocation of some of the costs of acquired wastewater systems to other customers is simply misplaced. Such an allocation is explicitly permitted if it is in the public interest, which the Commission has previously determined in other proceedings and which the Company has also demonstrated here.

Q. How do you respond to the issues raised by OCA witness Colton and Alexander?

A. OCA witnesses Colton and Alexander contend that the Company's proposed 25 basis point enhancement to its equity return rate is not warranted by alleging suboptimal performance exhibited by PAWC's long-term arrearages, justified complaint rate, percentage of justified payment arrangement requests, verified infractions, customer satisfaction, and call center performance. As I discussed below and further explained in the testimony of PAWC witnesses Dean and Degillio, their assertions and allegations should have no bearing on the Commission's decision to approve a management performance adjustment for the Company.

Arrearages. Reduced to its essence, Mr. Colton contends that PAWC's collection performance has not returned to pre-pandemic levels. While Mr. Colton quotes from the

2023 Management Audit's review of this issue, I believe it is worth reviewing the full statement of the Management Audit on this issue:

> Despite measures to address payment difficulties, especially among the most vulnerable customers, customer account balances aged more than 150 days increased significantly since early-2020, as illustrated by Exhibit XI-2. Although PAWC's effort are commendable, as of February 2023, the company's over 150-day customer receivables continue to reflect substantially higher balances than those experienced prior to the pandemic. ***This trend has been noted across Pennsylvania and is not unique to PAWC.*** However, while not caused by the company, its effects must be addressed by PAWC.[4]

While PAWC continues to work to reduce its arrearages to pre-pandemic levels, the Management Audit makes clear that this is not a PAWC-specific problem. Indeed, Mr. Colton's own chart showing his calculations of PAWC's arrearages (p. 113) shows that the Company has actually been quite successful at reducing arrearages from the levels reached during the pandemic. Contrary to Mr. Colton's approach, the proper conclusion is that PAWC's collection efforts are not "declining since 2018," but are in fact continuing to move towards pre-pandemic levels – results the Commission concluded were "commendable." In addition, the Company's new arrearage management program to further assist customers was just approved by the Commission on December 7, 2023 and the full roll out of the program will not be completed until the end of this year. As discussed by PAWC witness Dean, the Company is optimistic that its arrearage management program will offer an additional solution for customers to address their arrearages.

Justified Complaints and Requests for Payment Arrangements. Mr. Colton contends that the 25% of PAWC's complaints that were found to be justified (i.e., valid) does not reflect exemplary management. He also contends that the number of PAWC customers

[4] Management Audit, p. 83 (emphasis added).

seeking payment arrangements is high when compared to Aqua PA. As Mr. Colton concedes, however, the number of justified payment arrangements is far lower than Aqua (18% for PAWC compared to 28% for Aqua). As discussed in Company witness Dean's rebuttal testimony regarding the Company's justified complaint rates and requests for payment arrangements ("PAR"), several utilities, including another water utility, experienced increases in the number of PARs from 2021 to 2022, but the percentage of PAWC's increases were less than any other electric, gas and water/wastewater utility. PAWC also saw a 6% decline in non-PAR residential customer complaints from 2021 to 2022. An increase in the number of complaints filed and Commission payment arrangements requested after the COVID-19 pandemic is unsurprising. The Commission should disregard Mr. Colton's claim that the number of complaints and payment arrangement requests post-pandemic is evidence that a management performance adjustment is not warranted.

Verified Infractions. Mr. Colton further contends that PAWC's number of verified infractions reflects a "sharp decline" in recent years. As described further in PAWC witness Dean's rebuttal testimony, the Company takes proactive steps to determine the root cause of infractions to prevent future infractions. While the Company strives to provide exemplary service and, as discussed herein and throughout the testimony of other PAWC witnesses, frequently achieves its goal, infractions occasionally occur. These occasional lapses should not preclude the Commission from recognizing the Company's overall superior management performance.

Customer Satisfaction. Mr. Colton also asserts that PAWC has not compiled information that can actually be used to assess how PAWC might improve its customer satisfaction its

collection outcomes. As described further in PAWC witness Degillio's rebuttal testimony, Mr. Colton's concerns about the adequacy of PAWC's transaction surveys are unfounded.

H2O Program and Disconnections. Mr. Colton further argues that PAWC's H2O program does not "rank at the top" of water utility customer assistance programs, and its number of disconnections is higher than other Class A water companies. PAWC's shareholder contributions to its Hardship Grant program are significantly higher than other Pennsylvania water utilities. In addition, PAWC was the first water utility to launch customer assistance programs in the Commonwealth and continues to implement targeted changes to these programs to assist its low and moderate income customers, such as PAWC's arrearage management plan implementation and proposed income eligibility expansion for the bill discount program. With respect to its number of disconnections, the Company has an obligation to collect amounts billed to mitigate uncollectible expense. As further discussed in PAWC Witness Dean's rebuttal testimony, as part of PAWC's most recent management audit, the Commission's Bureau of Audits made only two-customer service findings related to PAWC, neither of which specifically related to uncollectibles or service disconnections. It is interesting that Mr. Colton both criticizes the Company's collection performance and the use of its primary and most effective method of collections. The Company's significant shareholder contributions to the Hardship Grant program, continued efforts to enhance its customer assistance programs, and prudent collection efforts are further evidence of exemplary management performance, rather than evidence against as Mr. Colton argues.

Call Center Performance. Ms. Alexander asserts that PAWC's call center performance does not support a management enhancement. However, as PAWC witness Degillio

explains, Ms. Alexander's criticism is derived solely from call center answering metrics and does not reflect the quality and value of service PAWC provides and the Company's improved call metrics, nor does she account for customer use of the Company's IVR system.

Q. **Do you continue to believe an upward adjustment to the Company's return on equity is reasonable to reflect the Company's superior management performance and efforts to assist troubled and nonviable systems?**

A. Yes. PAWC continues to actively work to enhance and improve its collections and CSO performance. For all the reasons discussed above and within my direct testimony, I believe the Company's exemplary management performance justifies approving a rate of return of 10.95% or an increase of 25 basis points if a lower rate of return on equity is approved by the Commission.

OCA Recommendations to Impute Revenues and Eliminate Incurred Costs

Q. What revenues does PAWC receive related to the "on-bill" billing of charges on behalf of American Water Resources ("AWR") for its non-utility products and services?

A. For the year ended June 30, 2023, PAWC received $659,624 of revenues. PAWC recorded these revenues above-the-line which provides a benefit to PAWC's customers by offsetting the Company's operating and maintenance expenses recovered through rates. As OCA witness Ralph D. Smith notes, the Company included $659,624 of miscellaneous revenue from AWR in the revenue requirement for the FPFTY in this case.

Q. Please summarize the recommendation of the OCA regarding the on-bill billing on behalf of AWR.

A. OCA recommends that PAWC "suspend" billing on behalf of AWR. OCA St. 6, page 41. Ms. Degilio discusses this recommendation and the Company's response in PAWC Statement No. 9-R. In response to discovery, Ms. Alexander clarified that billing PAWC customers on behalf of AWR should be halted for "additional (new)" enrollments pending her recommended Commission investigation.

Q. Given that the OCA recommends PAWC not be permitted to provide the on-bill billing service, did OCA also remove the revenues associated with this service?

A. No. Ms. Alexander states that she only wants to "benefit consumers, not harm them" (OCA St. 6, page 41) and therefore PAWC should be required to impute the revenues.

Q. Please respond to this recommendation.

A. If the OCA's recommendation is adopted by the Commission, the Company may not be permitted to bill for AWR during the FPFTY. The suggestion that PAWC not be permitted to provide a service, but the Commission should act as if PAWC will still receive revenues for that service, is unreasonable and inconsistent with proper ratemaking. If the Commission's Order in this proceeding determines that PAWC is not allowed to continue to bill for AWR, PAWC's rates should be set excluding any beneficial impact of the then-excluded billing arrangement with AWR.

Q. Please describe the OCA's proposed adjustment to third party call handling expense.

A. PAWC has claimed $3,082,255 for expenses associated with third-party call handling agencies in this case for the FPFTY. The OCA proposes to disallow 100% of this claimed expense based on Ms. Alexander's conclusion that the Company's third-party call handling agencies have "failed" to meet standards that Ms. Alexander finds reasonable. OCA St. 6, pages 25-26.

Q. How do you respond to this recommendation?

A. Ms. Degilio addresses Ms. Alexander's claims about PAWC's call center performance in PAWC St. No. 9-R.

As Ms. Alexander acknowledges, call handling operations are necessary to provide service to PAWC's customers. The cost of third party agents available to handle customer calls was and is incurred by the Company and is necessary to provide services to customers. If, hypothetically, the Company did not utilize third-party call handling agencies, the Company would incur additional Service Company cost to increase Customer Service Organization staffing to handle the call volumes (inbound and outbound) previously answered by third-party contractors. Therefore, the OCA's recommendation that an expense PAWC necessarily incurs to serve customers should be excluded for ratemaking purposes is inappropriate and should be rejected by the Commission.

Application Of 66 Pa. Code C.S. § 1329

Q. In her direct testimony, OCA witness Hoover discusses the Company's prior Section 1329 acquisitions. Please discuss this testimony.

A. Ms. Hoover discusses the Company's prior ten Section 1329 acquisitions, totaling approximately $576 million of rate base, characterizing these acquisitions as being "almost double the depreciated original cost of these assets" and that the revenues "do not recover the revenue requirement associated with the ratemaking rate base." OCA St. 1 at 33.

It is accurate that the revenues of acquired customers often do not cover the revenue requirement of the system upon acquisition. This is often in part due to the very low rates of the municipal system at the time of acquisition. For example, when the York system was

included in PAWC's 2022 rate case, an average customer in York had a monthly bill of $29.36, which was less than 40% of the Zone 1 wastewater rate at that time.[5]

Regarding the ratemaking rate base, while Ms. Hoover's testimony describes the Section 1329 rate base as it compares to original cost, the ratemaking rate base determination for each of these systems was part of a settlement agreement between the Company and parties, including the OCA. In other words, while the OCA criticizes in this case the ratemaking rate base of the Company's Section 1329 acquisitions, the OCA agreed to that ratemaking rate base in the context of the application proceeding.[6]

Application Of 66 Pa. Code C.S. § 1311(c)

Q. Do any parties take issue with PAWC's proposal to re-allocate a portion of the Company's wastewater revenue requirement across PAWC's 684,000 water customers as authorized by Section 1311(c) of the Public Utility Code?

A. Yes. Several non-Company witnesses recommend increasing rates for wastewater customers and reducing the amount of wastewater revenue requirement allocated to water customers. As discussed in more detail in PAWC Statement No. 10-R, PAWC proposed allocating approximately $71 million of its wastewater revenue requirement to water customers, while I&E, the OCA, OSBA and PAWLUG propose much lower Act 11 allocations.

Q. Do you believe the proposals to reduce the allocation of wastewater revenue requirement to water customers are "in the public interest"?

[5] Docket No. R-2022-3031673, Customer Notices.

[6] The OCA separately discusses the 10 closed acquisitions and the two pending acquisitions. Of the two pending acquisitions, the OCA agreed to the BASA ratemaking rate base in settlement while the Brentwood proceeding was not settled and is currently under Commission review.

A. No. They would result in a large increase in the rates of wastewater customers, which the Company believes may result in rate shock. For example, PAWC's original proposal would decrease rates for a Zone 1 residential wastewater customer from approximately $105 to approximately $100 per month for the average customer. Under I&E's recommended rate structure, the average monthly bill for PAWC's wastewater customers jumps to $132. The higher rate increases for PAWC's wastewater sanitary sewer operations proposed by other parties to reduce the portion of the revenue requirement recovered from water customers will exacerbate the adverse impacts on elderly customers and those with fixed incomes in those systems noted by Exeter Township witness Piho, as well as customers in Scranton as discussed by Scranton witness Cognetti.

Customer Assistance Programs

Q. Please discuss the recommendations of CAUSE-PA witness Geller and CEO witness Warabak regarding the Company's annual contribution to the H2O grant program.

A. The Company has a strong commitment to its Dollar Energy Hardship Fund and intends to maintain its current annual level of voluntary contributions ($750,000).[7] The level of that contribution was agreed to as part of the settlement of the Company's 2022 base rate case. Mr. Warabak recommends that the Company increase its annual contribution by $330,000 and distribute those funds based on the percentage of low-income customers within the service region or county. Similarly, Mr. Geller recommends increasing annual funding by $1,000,000.

[7] As discussed in my direct testimony, the Company will contribute an additional $700,000 annually for five years upon closing of the acquisition of the Butler Area Sewer Authority wastewater system.

It is my understanding that utility payments to the Dollar Energy Hardship Fund are voluntary shareholder contributions and, as such, the Commission has previously held that it cannot order a utility to increase its contributions.

Customer Notice

Q. Did the Company provide notice to its customers of the proposed rate increase?

A. Yes. The Company provided notice consistent with 52 Pa. Code § 53.45.

Q. Please summarize the OCA's testimony on this issue.

A. OCA witness Hoover discusses two "concerns" with the notice PAWC provided to customers upon filing this case: 1) That bill impacts are shown after the proposed Act 11 wastewater-to-water revenue requirement sharing; 2) That PAWC's notices are calculated based on a typical usage level and do not show bill impacts for customers at higher usage levels. Ms. Hoover discusses a third "concern" regarding notice to customers at the end of the case.

Q. Please discuss Ms. Hoover's concern regarding the impact of Act 11 on the customer notices.

A. As permitted by Section 1311 of the Public Utility Code, the Company has proposed to allocate a portion of the wastewater revenue requirement to its combined water and wastewater customer base. Notices to customers state that the Company is making this proposal. In her direct testimony, Ms. Hoover objects to the way the Company has calculated its notices and states "PAWC should have shown what it wants to charge for wastewater service before the shift."

First, I would note that notices sent to the Company's customers of the proposed rate increase must be consistent with the Company's proposed tariffs filed in the case. In

this case, the Company filed Supplement No. 45 to Tariff Water-PA P.U.C. No. 5 proposing a Zone 1 water service charge of $20.00 per month and a Zone 1 water usage charge of $2.1319 per 100 gallons and Supplement No. 47 to Tariff Wastewater PA P.U.C. No. 16 proposing a Zone 1 wastewater service charge of $20.00 per month and a Zone 1 usage charge of $2.5650 per 100 gallons. Both supplements carry an issue date of November 8, 2023 and an effective date of January 7, 2024. Notices sent to customers in this case reflected average monthly bills at those proposed rates.

Second, in every case the Company has filed since Act 11 of 2012, the Company has provided notice to customers of its proposed rates, inclusive of the impact of Act 11. There is not an alternative set of rates as Ms. Hoover suggests: the notices reflect the rates shown in the proposed tariff as described above. In my opinion, the testimony at the Public Input Hearings from wastewater customers concerned about rate increases confirms that customers understand that the final result may be different than what the Company is requesting.

Q. Please discuss Ms. Hoover's recommendation that the Company be required to show bill impacts for multiple usage levels on the customer notice.

A. Ms. Hoover describes that customers of different usage levels will have different bill impacts than the typical customer. Ms. Hoover appears to acknowledge that a "typical" usage level, as PAWC's current notices show, is what is required by the applicable regulation. PAWC is not unique in that customers have varying levels of usage, but the Commission has determined (evidenced by the regulations) that a typical usage level is sufficient notice. If the OCA believes that the notice required by regulation should be expanded, it should propose changes to the regulation in the proper forum, rather than

proposing a change in the context of a rate case that would apply only to PAWC and not all other utilities regulated by the Commission.[8]

Additionally, providing an arbitrary additional two levels of usage (5,000 and 10,000 gallons) for residential customers does not provide meaningful information to the Company's customers and may serve to confuse both residential and non-residential customers. Furthermore, customers also have the option, as indicated in the notice, to contact PAWC to determine how the proposed rate changes would impact their bill or to visit the Company's website to review the proposed rates in the tariff supplements filed, a fact which Ms. Hoover admits in her testimony. OCA St. 1, p. 60, footnote 30.

Q. Please discuss Ms. Hoover's recommendation that PAWC be required to provide additional notice to customers at the end of the rate case based on the Commission's final Order.

A. Ms. Hoover proposes an additional notice by bill insert at the end of the proceeding of the Commission's determination in the rate case. The OCA's recommendation appears to be about two issues: 1) the final Commission determination on the case and 2) showing the impact at multiple usage levels. I discuss the proposal regarding multiple usage levels above.

Regarding the first part of OCA's recommendation, the Company already provides information to customers that is substantially what the OCA appears to be requesting. When a rate change is implemented at the end of a rate case, the Company includes a bill message on customer bills informing customers that the Commission approved a rate increase and what the impact on the average residential customer is as well as other relevant

[8] In response to PAWC-OCA-III-4, the OCA clarified that it has only requested this additional notice in PAWC proceedings. PAWC Exhibit AEE-2R.

information the customer may want to know. For example, following the Company's last base rate case, the Company provided the following bill message on bills for customers in the Steelton water system:

> The PA Public Utility Commission recently approved a water rate increase for Pennsylvania American Water, effective Jan. 28, 2023. The average monthly residential water bill for Steelton customers increased by $30.48 (78.7%). The rate change included lowering the minimum charge and eliminating the usage allowance. This increase was part of a process to change Steelton's water rates over time to be more consistent with Pennsylvania American's existing base water rate structure.

In response to PAWC-OCA-III-3, Ms. Hoover clarified the OCA's proposal to include a direct mailing between when the Commission approves new rates and when customers receive their first bills containing new rates. PAWC Exhibit AEE-1R.

Q. Is the OCA's recommendation of a direct mailing feasible?

A. No. After the Company receives the Commission Order, it will need to calculate rates based on the revenue requirement, cost allocation and rate design approved by the Commission. Once calculated consistent with the Order, rates are typically effective on one day's notice. Because the Company has a large number of rate zones with different rates, the process of sending a customized direct mail notice to its nearly 800,000 customers (similar to what is done at the time of filing) takes several weeks. The Company is not able to send a direct mail notice between final determination of rates and when those rates are applied on customer bills. As described above, the Company already provides information to customers on the first bills sent after the rate increase in order to provide customers with information regarding the Commission's approval.

Additionally, I would note that notifying customers through direct mail costs over $300,000, which is a cost the OCA has not included in its calculation of the Company's revenue requirement.

Q. Please summarize the Company's response to the OCA's recommendation that the Company be required to provide additional notice at the end of the case.

A. The Company recommends that the Commission reject the OCA's proposal on this issue, both because it is inappropriate to impose additional notice requirements on one utility that is not required of other utilities, because it is unnecessary given the information the Company already provides to its customers, and because the recommendation to provide additional direct notice prior to billing at new rates is not feasible.

Cost of Service Studies and Bulk Customer Agreements

Q. Please discuss the OCA's recommendation regarding separate revenue requirements in PAWC's future rate cases.

A. OCA witness Jerome D. Mierzwa recommends that PAWC 1) prepare separate cost of service studies ("COSSs") for future Section 1329 acquisitions in the first base rate case that includes those systems and 2) "continue to prepare" separate cost of service studies for Section 1329 acquisitions that were included in this case.[9]

Q. Should the Commission decide as part of this proceeding whether to require the preparation of separate COSSs for all future Section 1329 acquisitions?

A. No. The current base rate case is not the appropriate place to determine whether or not PAWC should be required to provide separate COSSs for future acquisitions. There are

[9] Mr. Mierzwa further explains that under his proposal, "PAWC should continue to prepare separate CCOS studies either individually for each acquisition or as a group" and that "The group should not include Section 1329 acquisitions that are combined sewer systems." OCA St. 4, page 21.

circumstances where a separate COSS is inappropriate or unnecessary, and the Commission should have flexibility to only require a separate COSS when the situation merits it.

For example, when PAWC filed its application to acquire the Valley Township ("Valley") water and wastewater systems, PAWC explained that including these in PAWC's general wastewater revenue requirement was more reasonable than a separate COSS because Valley was a bulk customer of the Coatesville water and wastewater systems. Creating separate depreciation rates for the interconnected Valley system was unreasonable, so the Company requested that a separate COSS not be required.

The settlements of the Valley acquisition proceedings did not require separate COSSs for the Valley water and wastewater systems. It would be inappropriate to pre-judge situations like this one and institute a blanket requirement that applies to proceedings outside of the base rate case. The Company recommends that the Commission reject this recommendation and continue to evaluate the necessity of separate COSSs as part of future acquisition proceedings.

Q. Should the Commission require as part of this proceeding that PAWC prepare separate COSSs for all Section 1329 acquisitions, as recommended by the OCA?

A. No, this requirement is not reasonable. The Company recommends that the Commission continue its approach of moving toward single tariff pricing for all of its systems, including those acquired under Section 1329 of the Public Utility Code.[10] The service provided to customers of a system acquired under Section 1329 is indistinguishable from the service

[10] For the Company's wastewater operations, the Company is moving toward two sets of single tariff pricing: sanitary sewer systems and combined sewer systems.

provided to customers acquired either organically or through non-Section 1329 acquisitions.

The OCA, in recommending the Company "should continue to prepare separate CCOS studies" does not appear to acknowledge that the Company's first ten Section 1329 acquisitions, totaling approximately $576 million of rate base, have already been consolidated into the Company's main operating areas: Water Operations, Wastewater SSS Operations, and Wastewater CSS Operations. While the OCA says the Company should "continue" to separate the cost of service for these systems, these systems have already been integrated into the Company's general operations and rate case revenue requirements. I would also note that the Commission did not require as part of the 2020 base rate case or the 2022 base rate case that the Company continue to separate the requirements for its Section 1329 acquisitions. Instead, the Commission approved rates for these acquired systems that made significant progress toward single tariff pricing, and approved a settlement provision that allowed the Company to provide only one separate revenue requirement for its combined sewer systems. This approach should continue.

Q. I&E witness Kubas recommends that the proposed rates for the York Bulk Customers should increase by 50 percent. Please discuss these recommendations.

A. The Company strongly disagrees with this argument. As discussed in Company witness Abruzzo's rebuttal testimony, the Company negotiated the contracted rates to the bulk customers because it is in the best interest of <u>all</u> of PAWC's customers to have the bulk customers connected to the system and paying a portion of the fixed costs of operation. In his rebuttal testimony, Mr. Abruzzo discusses the bulk customers' competitive alternatives

and the Company's need to negotiate contracted rates for these customers in order to keep them connected to the system for the benefit of all customers.

As explained by PAWC witness Heppenstall in PAWC Statement No. 12 at 19, the revenues from the York Bulk customers cover the variable costs of bulk treatment service and provide a meaningful contribution to the total fixed costs incurred to furnish wastewater service to retail customers in the Company's WW SSS General Operations. As a result, all retail customers benefit from having the bulk customers connected to the York system. As such, it is appropriate that these customers are included in the proof of revenues at exactly the rate that they will be billed and in accordance with the negotiated agreements.

Q. Mr. Kubas claims that the bulk customers' competitive alternatives may have been higher priced than the negotiated rate, and this means that the rate may be set too low. Is this a reasonable approach?

A. No. Mr. Kubas has not shown that the rates the bulk customers would have paid under their competitive alternative would have been higher. The potential rate that the customers would have paid for service by a different provider is not an appropriate standard for evaluating the contracts. As noted in Mr. Abruzzo's rebuttal testimony, "'maximizing the revenue that could be received from each customer' is not always realistic or desirable." PAWC St. No. 6-R. The Company negotiated the contract rates in good faith in order to keep the bulk customers on the system for the good of all of its customers. It is important to understand that the Commission modifying the contract rates has the potential to lead to the customers leaving the system in favor of an alternative. It is uncontested that the bulk customers are contributing to the fixed costs of the York system. Therefore, if modifying the contract rates caused the customers to leave the system, this would be a detriment to

other PAWC wastewater customers. Therefore, these rates should be accepted by the Commission without modification.

Customer Service Performance Standards

Q. OCA witness Alexander proposes that the Commission impose several customer service performance standards on the Company as a condition of any rate increase. Does the Company agree with Ms. Alexander's proposal?

A. No. As a threshold issue, I note that Ms. Alexander does not clearly explain why she believes that the Commission has the authority to impose performance-based rates on the Company in this proceeding. Under Act 58, the General Assembly made clear that the Commission has authority to approve alternative rates and rate mechanisms following the application by a utility to establish such mechanisms.[11] While PAWC has proposed an RDM and ECIC in this proceeding, it has not made any proposal for performance-based rates. On advice of counsel, I do not believe that a utility's application for approval of one form of alternative rate mechanism identified in Act 58 permits the Commission to impose any or all other forms of alternative rate mechanisms. I also note that, to the extent the Commission has imposed customer service standards, those have been approved in the context of merger and acquisition proceedings – not base rate proceedings. As PAWC witness Deborah Degillio explains in PAWC Statement No. 9-R, the performance standards that Ms. Alexander advocates are based on a flawed analysis of PAWC's call center performance. The Commission should therefore reject Ms. Alexander's proposal for performance-based rate standards in this proceeding.

[11] 66 Pa. C.S. § 1330(b).

Conclusion

Q. Does that conclude your rebuttal testimony at this time?

A. Yes, but I reserve the right to supplement this testimony as additional facts arise during the proceeding.

Notes to Statement Of Income

Operating Revenues

Penalties

The following adjustment reflects the annualization of revenues associated with changes imposed during twelve months ending June 30, 2023 and projected to be imposed during twelve months ending June 30, 2024 and twelve months ending June 30, 2025. Additionally, annualized late payment charges are calculated based on revenues at the proposed rate level.

Calculation of Cash Working Capital Requirements

Charges for water service are billed in arrears on a monthly basis. The calculation set forth below reflects summarized operating revenues billed for the twelve months ended June 30, 2023 and as annualized under present rates for the twelve months ending June 30, 2024 and June 30, 2025.

The calculation further reflects the average lag in receipt of revenues less the lag in payment of operating expenses to determine cash working capital requirements.

Calculation of Cash Working Capital Requirements

The payment of interest on the Company's long term debt is made six months in arrears. Payment of interest on the Company's short term debt is made monthly in arrears. The payment of dividends on the Company's preferred stock is made quarterly in arrears. The average lag days of interest and dividend payments and the deduction of the average lag days for the receipt of revenue is calculated below to determine cash working capital requirements.

Deferred Income Tax

The following calculation is being made to reflect the federal tax difference between using accelerated and straight-line depreciation, the effects of the Tax Cuts and Jobs Act, taxable contributions and advances and normalizing the effect of the repairs and maintenance deduction for state and federal tax. This adjustment is carried as a rate base reduction.

Calculation of Cash Working Capital Requirements

Charges for wastewater service are billed in arrears on a monthly basis. The calculation set forth below reflects summarized operating revenues billed for the twelve months enc June 30, 2023 and as annualized under present rates for the twelve months ending June 30, 2024 and June 30, 2025.

The calculation further reflects the average lag in receipt of revenues less the lag in payment of operating expenses to determine cash working capital requirements.

Calculation of Cash Working Capital Requirements

The payment of interest on the Company's long term debt is made six months in arrears. Payment of interest on the Company's short term debt is made monthly in arrears. The payment of dividends on the Company's preferred stock is made quarterly in arrears. The average lag days of interest and dividend payments and the deduction of the average lag days for the receipt of revenue is calculated below to determine cash working capital requirements.

Notes to Statement Of Income

Operating Expenses

Group Insurance

The adjustment of the group insurance cost is based on the January 2024 premiums annualized for the future test year number of employees, less the annualized employee contribution, and adjusted for the portion not charged to operations. The fully projected future test year was developed by adjusting the annualized 2024 amount by a 3 year average of 3.03%.

LINE NO.	DESCRIPTION	PRESENT RATES 6/30/2024 AMOUNT	PRESENT RATES 6/30/2025 AMOUNT

Calculation of Cash Working Capital Requirements

Charges for wastewater service are billed in arrears on a monthly basis. The calculation set forth below reflects summarized operating revenues billed for the twelve months enc
June 30, 2023 and as annualized under present rates for the twelve months ending June 30, 2024 and June 30, 2025.

The calculation further reflects the average lag in receipt of revenues less the lag in payment of operating expenses to determine cash working capital requirements.

Calculation of Cash Working Capital Requirements

The payment of interest on the Company's long term debt is made six months in arrears. Payment of interest on the Company's short term debt is made monthly in arrears. The payment of dividends on the Company's preferred stock is made quarterly in arrears. The average lag days of interest and dividend payments and the deduction of the average lag days for the receipt of revenue is calculated below to determine cash working capital requirements.

Calculation of Cash Working Capital Requirements

Charges for wastewater service are billed in arrears on a monthly basis. The calculation set forth below reflects summarized operating revenues billed for the twelve months enc
June 30, 2023 and as annualized under present rates for the twelve months ending June 30, 2024 and June 30, 2025.

The calculation further reflects the average lag in receipt of revenues less the lag in payment of operating expenses to determine cash working capital requirements.

Calculation of Cash Working Capital Requirements

The payment of interest on the Company's long term debt is made six months in arrears. Payment of interest on the Company's short term debt is made monthly in arrears. The payment of dividends on the Company's preferred stock is made quarterly in arrears. The average lag days of interest and dividend payments and the deduction of the average lag days for the receipt of revenue is calculated below to determine cash working capital requirements.

Calculation of Cash Working Capital Requirements

Charges for wastewater service are billed in arrears on a monthly basis. The calculation set forth below reflects summarized operating revenues billed for the twelve months enc June 30, 2023 and as annualized under present rates for the twelve months ending June 30, 2024 and June 30, 2025.

The calculation further reflects the average lag in receipt of revenues less the lag in payment of operating expenses to determine cash working capital requirements.

Calculation of Cash Working Capital Requirements

The payment of interest on the Company's long term debt is made six months in arrears. Payment of interest on the Company's short term debt is made monthly in arrears. The payment of dividends on the Company's preferred stock is made quarterly in arrears. The average lag days of interest and dividend payments and the deduction of the average lag days for the receipt of revenue is calculated below to determine cash working capital requirements.

Operating Expenses

Group Insurance

The adjustment of the group insurance cost is based on the January 2024 premiums annualized for the future test year number of employees, less the annualized employee contribution, and adjusted for the portion not charged to operations. The fully projected future test year was developed by adjusting the annualized 2024 amount by a 3 year average of 3.03%.

LINE NO.	DESCRIPTION	PRESENT RATES 6/30/2024 AMOUNT	PRESENT RATES 6/30/2025 AMOUNT

Docket Nos. R-2023-3043189 (Water) and R-2023-3043190 (Wastewater)

OCA Responses to PAWC Interrogatories
Set III

PAWC-OCA-III-3. Refer to OCA Statement No. 1, page 62, lines 13-16, and page 63, lines 10-12. This testimony states that OCA proposes the additional notice be provided through a bill insert at the end of the rate proceeding and also that under OCA's proposal, customers would not have to wait until their first bill after the increase to find out the bill impact from the case. Please clarify how the OCA proposes that the Company provide a notice through a bill insert at the end of the rate proceeding but prior to the new rates appearing on customer bills.

Response:

With regard to timing, the OCA would support a direct mailing of the notice at the end of the case, just as PAWC used direct mailing for the notices at the time of its filing. The notice – however delivered – should include a link to the alternative ratemaking information posted on PAWC's website as required by regulation or Commission Order, and Section 1330(c)(1) and (2). Additionally, the website posting with the alternative ratemaking information could include information about the bill impact of the Commission's order at three usage levels.

The OCA's main concern about the notice at the end of the case is that, currently, the information customers might see at the end of the case is limited to press releases that use typical usage level and that information is not meaningful for most customers. Because of this, when customers receive the first bills containing the new rates, they have not received any information regarding the Commission's final order or any meaningful information about the bill impact of that order.

Dated: February 15, 2024

Pa. P.U.C. v. Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water) and R-2023-3043190 (Wastewater)

OCA Responses to PAWC Interrogatories
Set III

PAWC-OCA-III-4. To the OCA's knowledge, is any other Pennsylvania utility under Commission jurisdiction required to comply with the additional notice requirements proposed by Ms. Hoover in OCA Statement No. 1? If yes, provide a list of such utility(ies) and supporting information. If not, explain why PAWC should be subject to requirements that are beyond those required by regulation and beyond those required of every other Pennsylvania utility.

Response:

This is the first time that OCA has proposed this addition to a notice in a base rate case. The OCA has recommended this addition in two recent application proceedings. *Application of Pennsylvania-American Water Company, for approval of the acquisition of substantially all of the assets of the wastewater collection and treatment system owned by the Butler Area Sewer Authority*, Docket No. A-2022-3037047 (Order entered November 9, 2023) and *Application of Pennsylvania-American Water Company to Acquire the Brentwood Borough Wastewater Assets*, Docket No. A-2021-3024058. The OCA's proposed revision provides information that is readily available to PAWC and is minimal information for PAWC to add, yet provides useful information for its customers.

DATE: November 8, 2023

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF JIM RUNZER

Q. Please state your name and business address for the record.

A. Jim Runzer, 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

Q. By whom are you employed and in what capacity?

A. I am employed by Pennsylvania-American Water Company ("PAWC" or "Company") as the Vice President – Operations.

Q. What are your responsibilities as PAWC's Vice President - Operations?

A. I am responsible for all the Company's water and wastewater operations across the Commonwealth, managing a team of approximately 1,123 professionals, in 63 districts, serving 2.3 million Pennsylvanians.

Q. Please describe your professional education and experience.

A. I received a bachelor's degree in education in 1991 from Kean University and a Master of Business Administration in 2012 from the Keller Graduate School of Management. I also completed Advanced Water Treatment and Distribution certification from the Camden County Institute of Technology in 2004 and Advanced Wastewater Collection certification from the University of Sacramento in 2014.

I began my career at American Water Works Company, Inc. ("American Water") in 1994 as a bargaining unit employee for New Jersey American Water Company ("NJAWC"), working in both Production and Field Operations until being promoted to Operations Supervisor for NJAWC in Mount Holly, New Jersey in 2008. I was promoted to Field Operations Superintendent in Delran, New Jersey in 2011 and was then promoted

to Operations Manager for the Coastal South New Jersey system in 2014 where I was responsible for Field Operations, Production and Construction Operations. I was named Director of Operations for Iowa American Water Company in April 2018 and was later named Vice President of Operations for New York American Water Company in July of 2019. I held that position until taking on my current role as Vice President of Operations for the Company on June 28, 2021.

Q. What is the purpose of your direct testimony in this proceeding?

A. The purpose of my testimony is to describe PAWC's strong operational performance throughout the Commonwealth. First, I will describe the Company's water and wastewater operations and facilities throughout Pennsylvania. Second, I will explain PAWC's industry leading water quality improvement and source water monitoring efforts. Third, I will describe our strong safety record and Company commitment to safety for the benefit of both our customers and employees. Fourth, I will provide information regarding PAWC's operating and maintenance expenses. Fifth, I will describe several efficiencies within PAWC's Operations, such as the Company's usage of state-of-the-art technology in the field, including Geographic Information System ("GIS") platforms and advanced metering infrastructure ("AMI"). Finally, I will describe the Company's current and anticipated employee levels, employee compensation philosophy and commitment to employee development.

Operations and Facilities

Q. Please describe PAWC's Operations.

A. PAWC owns, operates, and maintains potable water production, treatment, storage, transmission and distribution systems, and wastewater collection, pumping, and/or

treatment systems, for furnishing water and wastewater services to approximately 780,000 residential, commercial, industrial, and governmental customers in communities located in 37 of the 67 counties across Pennsylvania.

The Company has recently established three geographically defined operating areas that collectively serve an estimated population of more than 2.4 million people. The three operating areas are western, northeast, and central/southeast. The western Pennsylvania operating area serves an estimated population of 1,100,000 people. Some of the larger communities served include Butler, New Castle, Ellwood, Indiana, Punxsutawney, Warren, Kane, portions of the City of Pittsburgh and its southern suburbs, McMurray, Uniontown, Brownsville, and Connellsville. Large customers include U.S. Steel, the Western Allegheny County Municipal Authority, AK Steel, Allegheny County Housing Authority, Koppel Steel, United Refining, Clarion University and Eastman Chemical Company. The Northeastern Pennsylvania operating area serves an estimated population of 740,000 people. Some of the larger communities served include Wilkes-Barre, Scranton, and Nazareth. Several of the large customers served in Northeastern Pennsylvania are Fairchild Semiconductor, Lion Brewery, SVC Manufacturing, UGI Utilities, and the State Correctional Institution – Dallas. The Central/Southeast operating area serves an estimated 560,000 people. Some of the larger communities include Camp Hill, Mechanicsburg, Hershey, Palmyra, Philipsburg, Milton, Norristown, Coatesville, Berwick, Milton, Yardley, and the suburbs of Reading. Several large customers include ConAgra Grocery Products Co., Furman Foods Inc., Penn State Hershey Medical Center, and Cleveland-Cliffs Plate LLC.

Q. Please describe the facilities and property that PAWC uses to provide water and wastewater services to customers.

A. PAWC's utility plant accounts include land and land rights, structures and improvements, wells, pumping equipment and associated facilities, purification plant and equipment, sludge disposal facilities, transmission and distribution mains, collection pipes, distribution storage facilities, service lines, meters, hydrants, and other facilities, including materials and supplies. All this plant and property is used to provide safe, adequate, efficient, and reliable water and wastewater services to PAWC's customers. A more detailed description of the source of supply, treatment, storage, and distribution facilities within each district is provided as Volume 2 of the Company's responses to the Pennsylvania Public Utility Commission's ("PUC") filing requirements, which is titled *Scope of Operations.*

Water Quality

Q. Please describe PAWC's overall commitment to water quality and environmental compliance.

A. Water quality is of paramount importance to the health and well-being of our customers. PAWC and its predecessor companies have provided water service to customers for approximately 120 years. We are acutely aware that water is the only utility service intended for customers to ingest, and that our customers rely on PAWC to provide them with safe and reliable water service. Beyond health and safety, we know that PAWC's customers are also interested in the aesthetic of the water we treat and deliver to them. We proactively look for ways to optimize treatment capabilities to continue to improve the overall quality of drinking water delivered to our customers and do so in a way that strives to create operational efficiencies that also benefit our customers.

Q. Has PAWC been recognized for its water quality achievements?

A. Yes. PAWC has received multiple awards and has been recognized for its dedication to and achievements in attaining exemplary water quality. PAWC is a participant in the Partnership for Safe Water treatment plant optimization program and has repeatedly been recognized for its optimization and water quality achievements. Nationwide, the Partnership for Safe Water treatment optimization program currently has 501 treatment plants from 266 utilities in the program. As of 2022, only 44 plants have received one of the program's highest honors, the Phase IV Presidents Award. To date, PAWC has received nine Phase IV Presidents Award recognitions. Moreover, each of these nine PAWC plants was also recognized as a 5-year Presidents Award winner. Only 18 systems nationally have achieved this level of recognition. Therefore, PAWC accounts for 50% of these highest-level award-winning treatment plants.

Since the Company's last base rate case filing, PAWC's Clarion Water Treatment Plant was presented with the Directors 15-year Longevity Award, and Shady Lane Water Treatment Plant was recognized with the Directors 10-year Longevity Award. PAWC has also made a commitment to optimization and water quality within our wastewater treatment plants. We are proud to share that PAWC now has 5 wastewater plants (Coatesville, Exeter, New Cumberland, McKeesport, and Pocono Country Place) currently participating in the Partnership for Clean Water Program.

Q. Please discuss some of PAWC's water quality initiatives.

A. PAWC is deeply committed to ensuring our customers receive water that meets all regulatory requirements, and we strive to provide water that exceeds those requirements.

To meet these goals, PAWC has developed strict internal metrics to support exemplary water service.

For example, PAWC requires that all sample collection, review of results, and reporting undergo dual validation internally prior to submittal to the reviewing regulatory agency. This serves to ensure both data accuracy and that the concerning results are addressed immediately. The Company also instituted a policy requiring the development of internal action plans to address testing results that show a contaminant level above 80% of the established primary maximum contaminant level. The plans will be site specific, and may include changes to treatment chemicals, distribution system improvements, or modifications or additions to treatment trains.

These efforts are supported by our internal monitoring results program, Sample 1 View ("Sample 1V"). Sample 1V provides a user-friendly dashboard for several critical water quality measurements that is reflective of real-time sample collection in the field and includes bacteriological sample information. This is a powerful tool that allows PAWC staff to ensure all required samples are collected and observe and react to trends in samples. It is GIS capable, so employees can more easily route themselves to the sampling locations. In addition, Sample 1V is capable of producing reports for submission to regulating authorities. Sample 1V is being used by all PAWC staff for the collection and reporting of compliance samples and has improved staffing efficiency significantly.

I would also like to highlight the Company's environmental near miss program. I will discuss the Company's near miss program in greater detail later in my testimony but included within that program is a specific focus on environmental and water quality issues. PAWC takes a proactive approach in identifying potential water quality issues and

implementing prompt improvements. The environmental near miss program identifies water quality or environmental vulnerabilities before they can create an adverse impact. In 2022, PAWC employees submitted 197 environmental near miss reports, which identified and avoided potential customer impacts in those 197 instances. In addition, because near miss reports, including environmental near misses, are shared statewide for educational purposes, the impact and positive benefits from such near miss reports is much broader than the specific near misses identified, as the reports often prompt proactive corrections for other customers in different areas of PAWC's system.

Q. Please discuss some of the Company's other water treatment effectiveness initiatives.

A. The Company has invested heavily in facility upgrades to meet regulatory requirements related to the Long Term 2 Enhanced Surface Water Treatment Rule. The Company continually evaluates new treatment chemicals for improved treatment effectiveness, safety, and cost efficiencies. As of October 1, 2023, the Company converted 21 treatment plants from the use of gaseous chlorine for disinfection to liquid sodium hypochlorite or ultra-violet ("UV") disinfection with three additional plant conversions scheduled for completion by the end of 2023. The elimination of chlorine gas reduces the risk of toxic exposure for our employees and the surrounding communities. The Company will continue to convert its remaining treatment plants that utilize gaseous chlorine to either liquid sodium hypochlorite or UV disinfection until all of its chlorine gas locations are eliminated. This conversion process is also now standard practice as new systems are acquired by PAWC.

The Company also employs a proactive approach to protect customers from lead exposure in the drinking water the Company supplies, consistent with federal and state regulatory standards established by the United States Environmental Protection Agency ("USEPA") and the Pennsylvania Department of Environmental Protection ("PADEP"), including the Lead and Copper Rule. Several of PAWC's systems are undergoing corrosion control studies to review the effectiveness of corrosion control treatment measures. The Company is also continuing to implement an industry-leading initiative to replace customer-owned lead service lines to address conditions that may increase the risk of exposure to lead at the customer's tap.

PAWC also changed coagulant options at several of its treatment plants to provide improved treatment at reduced costs. One recent example is our Rock Run treatment plant, which switched to Ferric Chloride-polymer blend in 2021 with approval from PADEP. PAWC also improved the chemical feed systems at our Stony Garden and Montrose facilities. We are also addressing potential contaminants of concern, such as the polyfluoroalkyl substances ("PFAS") contaminant. Our central laboratory is now certified to analyze PFAS samples, improving the Company's ability to test for these contaminants. Please see the Direct Testimony of Bruce Aiton (PAWC Statement No. 3) for more information regarding the Company's PFAS response.

Q. Has the Company made efforts to further improve operations at its wastewater facilities?

A. Yes. With the increasing number of wastewater facilities owned and operated by PAWC, the Company is making significant efforts to improve effluent quality discharged to receiving streams. Examples of improvements include the transition to ultra-violet

disinfection at numerous wastewater plants and efforts to reduce inflow and infiltration in our collection systems. The change to UV disinfection also reduces chemical usage and eliminates the potential for chlorinated water to reach waters of the Commonwealth. This modification has occurred in 10 systems owned by PAWC, including most recently the Turbotville and Franklin Township wastewater treatment plants. Additionally, significant effort to reduce inflow and infiltration has occurred in McKeesport, Dravosburg, Claysville and Duquesne. Finally, as new systems are acquired by PAWC, the Company acts to improve effluent quality and return systems to regulatory compliance. Since the last rate case, construction of the new Turbotville Wastewater Plant was completed, and the plant put into service. The investment into this new facility has significantly decreased the amount of end of pipe exceedances for this system.

Notably, to aid in improvements in wastewater quality, the Company also recently created a new specific area of focus within the Water Quality and Environmental Compliance Department that is dedicated to wastewater facility water quality and compliance. The Manager of Wastewater Compliance reports directly to the Director of Water Quality and Environmental Compliance. This organizational structure allows us to focus on developing and implementing new operating procedures, training, and optimization programs to continually improve our treated effluent. Some concrete examples of improvement in our wastewater treatment include improvements and standardization of our Industrial Pretreatment Program and the development of wastewater specific curricula to continually improve operator knowledge and plant optimization.

Q. Does the Company have any water quality-related settlement commitments it needs to respond to in this proceeding?

A. Yes. In the Company's last base rate case, the Company committed to filing its most recent cost of treatment study for its Coatesville wastewater treatment plant at the time of its next rate case filing. The Company's most recent Coatesville cost of treatment study is attached as PAWC Exhibit JR-1.

Source Water Protection

Q. Please describe how the Company is demonstrating its commitment to water quality through source water protection.

A. The Company has a dedicated source water protection program, which includes personnel who lead efforts to identify and mitigate potential threats to raw sources of supply. The program involves an integrated approach to planning, risk assessment, water quality monitoring, outreach and education. The Company has deployed and continues to evaluate and incorporate innovative technologies that support informed decision-making for changes in raw water quality and corresponding treatment, whether naturally occurring or related to a potential contamination incident.

Q. Please describe the Company's source water protection planning efforts.

A. The Company is committed to developing and implementing source water protection plans for each system with a surface water and/or groundwater source. Each plan consists of the following six elements: 1) local steering committee and public participation; 2) source water protection area delineation; 3) contaminant source inventory; 4) management methods and commitment; 5) contingency planning; and 6) protection of identified new source sites. This work is done in conjunction with the PADEP Source Water Protection

Technical Assistance Program ("SWPTAP"), and all PAWC systems have a source water protection plan, which includes Small System Plans, in place or under development in SWPTAP.

Source water protection is also a critical component of the Company's risk and resilience assessments ("RRAs") to comply with provisions of the federal Water Infrastructure Act of 2018. The Company has conducted all required RRAs and developed plans, strategies, and resources to improve the resiliency of PAWC's water systems.

Q. Please explain the Company's outreach and education efforts related to source water and environmental stewardship.

A. The Company conducts outreach and education to engage the community in protecting sources of drinking water. Activities include watershed service projects, school programs, plant tours, and community events. PAWC also engages the community through annual commitments, such as the Environmental Grant Program, Protect Our Watersheds Art contest, and the Stream of Learning Scholarship. In addition, PAWC staff represent the Company and industry on various professional committees at the local and national levels to share information and practices related to source water protection. These committees include PA AWWA Water Resources, National AWWA Source Water Protection, Local Emergency Planning committees, and several other coalitions and advisory groups.

Q. Please describe any other innovative approaches the Company is using to protect sources of drinking water.

A. The Company partnered with the Natural Resources Conservation Service ("NRCS") on one of sixteen source water protection pilot projects initiated in 2019 under the National Water Quality Initiative. PAWC worked with the State Conservation Office to identify the

Swatara Creek Watershed as a candidate for the program. Swatara Creek is a source of supply for the PAWC G.C. Smith Hershey Water Treatment Plant. The project, funded by the NRCS, is aimed at improving the watershed by reducing nutrient and sediment loading from agricultural runoff. This effort has leveraged and directed funding toward water quality improvements for the entire watershed that will ultimately benefit the whole community including PAWC customers. We continue to support this initiative by providing data and resources. We have also partnered with the 1 million trees campaign, upstream restoration project evaluations at two reservoir locations, and the SolarBee nutrient column study to remove phosphorus in the water column in one of our reservoirs.

Q. Please describe other ways the Company is demonstrating its commitment to source water quality.

A. The Company has enhanced its source water protection program by taking an integrated approach to monitoring its source water quality and evaluating risks. The integrated approach includes source water quality monitoring panels and a map-based information gathering tool called WaterSuite, both of which support the Company's ability to make more informed decisions regarding treatment and in responding to potential source water contamination events.

WaterSuite is a GIS map-based tool that collects information about potential sources of contamination from various sources and integrates that information into a database for a defined area of concern. The data sources may include publicly available regulatory databases, aerial imagery analyses, and local knowledge. The database is updated on a regular basis to include the latest available information and has search and reporting capabilities, which provides a significant advantage over standard static

contaminant assessments. This gives the Company a dynamic tool it can continue to use over time rather than a paper-based equivalent that captures only the circumstances present at a single point in time. The database also provides a larger set of data that is automatically updated on a periodic basis without requiring manual work by PAWC. As a result, PAWC can access more information more efficiently to address water quality concerns than in the past. WaterSuite is fully implemented for surface water and groundwater systems.

The Company also implemented the use of SolarBee mixers in five reservoirs to disrupt algal growth. To support the Company's efforts to combat algal growth, PAWC purchased a Cyanotoxin Automated Assay System for in-house rapid testing associated with harmful algal blooms. In addition, the Company continues to evaluate emerging technologies to help monitor and control algae growth in our reservoirs.

Q. Please describe PAWC's source water quality monitoring panels.

A. The Company has installed an online source water quality monitoring device at each of its surface water treatment plants as an effective tool for optimizing treatment decisions and aiding in the detection of potential source water contamination. All surface water treatment plants will have devices installed and in service by December 31, 2023. The sensors installed at each location were determined based on risk to the source water and monitor parameters in the source water that include turbidity, pH, oxygen reduction potential, temperature, conductivity, dissolved oxygen, dissolved organic carbon, oil, and total organic carbon. This equipment helps establish baseline water quality data for each parameter and alert water plant operators to certain changes in water characteristics. The Company uses this information to better understand the characteristics of its source water

and optimize chemical usage. In addition, a change in the baseline characteristics may indicate an issue that warrants additional investigation.

Q. Does the Company utilize any other sources to obtain source water quality information?

A. The Company also participates in watershed monitoring networks such as the Ohio River Valley Water Sanitation Commission Organics Detection System, Delaware River Valley Early Warning System, and the River Alert Information Network. These networks provide additional information about water quality in the watersheds that contribute water to sources of supply. The Company is also involved with developing the Southwest PA Water Network for the Upper Ohio River Basin and partners with the Susquehanna and Delaware River Basin Commissions.

Q. Please describe how the Company prepares for source contamination events.

A. The Company has developed source water contingency plans to outline the planned response to contamination of surface water sources of supply. These plans include system-specific options to consider in a contamination event along with a phased protocol response. This approach is consistent with National Incident Management System and USEPA guidance, and augments emergency response plans that cover a wide variety of potential emergency situations. The Company also developed Cyanotoxin Management Plans to aid in the identification and response to harmful algal blooms. PAWC employees receive training on the contingency plans through online learning and emergency response drills, which are coordinated by Operations and include on site mock drills, tabletop exercises and after-action reporting.

Q. How does the Company compare to the rest of Pennsylvania drinking water systems for Source Water Protection Plan development?

A. All PAWC systems are in the SWPTAP with approved PADEP Source Water Protection Plans and Small System Plans or have draft Source Water Protection Plans that are awaiting PADEP approval. The Company takes the extra initiative in creating, developing, and implementing Source Water Protection Plans for all their systems. This is a proactive approach that the Company is proud to demonstrate. The total number of systems and PAWC systems is reflected in the statistics below:

- (PADWIS) Community Water Systems in PA: 1,793 (Non-community/non-transient are not in this number)
- TOTAL number of project systems in SWPTAP: 301
- Number of PAWC project systems in SWPTAP: 45
- TOTAL number of Small System Projects: 223
- Number of PAWC small systems: 18

Commitment to Safety

Q. Please describe PAWC's overall commitment to safety.

A. The health and safety of our employees and customers, as well as protecting the quality of the water we deliver, are the top priorities for our Company and critical to our success. Our colleagues', contractors', and customers' safety are very important, and we focus on safety every day. PAWC's commitment is to ensure that every employee chooses safety, so they go home each day in the same or better condition than they came to work.

The Company is also committed to securing assets across our system and recognizes the importance of protecting our water sources, treatment plants, infrastructure, and data from malevolent acts, as demonstrated by our robust security and cyber security

programs. American Water has invested in several technology improvements to our security programs. Investments in a new modernized Video Management System software and expanded the use of video cameras across American Water facilities improve the physical security posture of the American Water locations. American Water has invested heavily in cyber security as well with a focus on Operational Technology ("OT") or SCADA security. These investments include replacement of all OT firewalls across the American Water environment and implementation of Tenable OT, an OT specific technology to help identify vulnerable OT assets across the organization.

Finally, the Company's emergency response program demonstrates the Company's recognition that rapid response and recovery from security incidents are critical to maintaining resilient water and wastewater systems.

Q. How is safety relevant to operational performance?

A. The Company considers safety to be a core value, as well as a strategy. Employee health and safety is the responsibility of every PAWC employee, and to that end, every employee strives for safety. We ask our employees to place safety first in everything they do. We have a strong commitment to our employees (and their families) to keep them, our customers, and the public safe. A safe workplace increases employee morale, increases our commitment to one another, and makes for a more engaged and productive workforce.

Q. Please describe PAWC's safety program and Operations' role in promoting safety and a safe working environment at PAWC.

A. The Company's safety program includes multiple activities and initiatives to maintain compliance, support employee engagement, and help ensure the safety of our workforce and our customers, as well as the public. Operations is responsible for administering the

health and safety program, which includes the delivery of all Occupational Safety and Health Administration ("OSHA") required training, training and qualification of employees, physical security, cyber security, business continuity planning, and event management. We are supported by functional departments within American Water Works Service Company, Inc., such as Health & Safety, Learning & Development, Security, and Human Resources, to deliver core operations services.

Q. How do you know the commitment to safety is effective?

A. We are building a strong safety culture at PAWC, which is illustrated by our year-over-year safety performance. The Company's OSHA recordable incident rate ("ORIR") improved from 2.62 in 2018 to 0.85 in 2022. In the first nine months of 2023, PAWC is having its best safety record in its operational history at 0.32. The Company has experienced 6 OSHA recordable injuries as of October 1, 2023 (as compared to 29 injuries in all of 2018). This reduction has resulted in record rates in two key safety performance metrics: an ORIR of 0.66 and Days Away Restricted or Transferred ("DART") rate of 0.32 as of October 1, 2023, demonstrating an 82% reduction in incidents. The ORIR targets that the Company sets for itself strive for a 20% reduction in injuries and incidents over the prior year.

Q. What other safety programs does PAWC use?

A. In addition to establishing ORIR targets, the Company's Near Miss Reporting Program involves employees identifying hazards that could have resulted in an injury or accident. For example, if a piece of equipment becomes worn outside of a regular maintenance cycle, an employee reports this as a "Near Miss" and we can then replace the worn part and avoid a potential injury from an equipment malfunction. Near Misses improve safety by

encouraging employees to look for hazards in the workplace, which improves the employees' awareness and helps make our workspaces safer. PAWC has continuously sought improved safety results, which correlates with the increase of Near Miss submittals that I describe later in my testimony. American Water's health and safety group collects these Near Misses from operating utilities across the American Water footprint each week and selects several to highlight in a safety video that is distributed across the business for use in safety tailgate discussions.

PAWC also uses the services of an occupational training and information company called Work Right ("WR"). WR supplies two (2) athletic trainers, one in eastern PA and the other in western PA, to provide training, health-related information, on-site first aid medical services and injury (home/work) consultation to our employees. WR has developed and implemented ergonomic programs to reduce and eliminate soft tissue injuries (strains and sprains) for our affected field operations and treatment plant employees. In 2022, PAWC had 5 injuries classified as "ergonomic" in nature, down from our 2018 total of 32 ergonomic related injuries. In 2023, PAWC has also utilized WR to provide First Aid/CPR/AED training for our employees and we now have 95% of our employees certified.

PAWC employees also participated in the American Water "Certified Safe Worker" program. This program is a self-directed program promoting safety and health awareness and participation, documenting work, and at-home safety activities. In 2022, 1,129 PAWC employees completed the program, achieving the highest number of Certified Safe Workers in our history and the highest total in all the American Water subsidiaries.

Q. How did PAWC perform in the Near Miss Reporting Program?

A. PAWC has achieved considerable progress since the program's inception in 2015, with increasing numbers of "Near Miss" reports. In 2022, PAWC employees reported 1,967 near misses from across the state, far surpassing our goal of 1,200. This is more than triple the number of Near Misses reported in 2019 and reflects the increased employee awareness and use of this program. Most Near Miss reports are corrected by an individual employee identifying the issue and resolving the issue or working with the appropriate people to obtain resources where necessary. PAWC has also experienced a 59% increase in Near Miss STOP Work situations from October 1, 2022, to October 1, 2023, a principal indicator of an advancing safety culture. All employees are encouraged to report unsafe behaviors or conditions, and we all have the authority as well as a responsibility to stop work until the safety issue can be resolved. We are a people-powered organization, and the voices of our employees are essential to our success. Employees must feel comfortable sharing their experiences and speaking up – that is how we will continue to improve and create a better organization. Another success is that 99% of all Near Misses reported in 2022 were corrected within 30 days of the report. In 2023, the Company's goal increased from 1,200 Near Misses submitted for 2022 to 4,892 near misses submitted for 2023. This breaks out to 1 Near Miss per quarter, per employee. As of October 1, 2023, PAWC has submitted 2,601 Near Misses. We believe that this increased emphasis on safety awareness will eventually enable PAWC to go a full year without a recordable injury.

Q. How has this benefited PAWC's customers?

A. A strong safety culture is a cornerstone for any high performing organization. A strong safety culture also improves employee morale, as employees understand a meaningful

commitment to them and to their families. In turn, PAWC's safety culture helps ensure that our employees are thoughtful in their work, which directly benefits our customers, as safety is a leading part of our high-performance culture. Lastly, when employees are healthy at work, they are available for work that benefits the customers.

Q. How does PAWC handle emergency response issues?

A. PAWC maintains emergency response manuals at each operating location. The manuals are updated each year and include emergency phone numbers for company personnel, PADEP, the PUC, emergency response services, vendors, suppliers, and critical customers. In 2022, PAWC conducted five functional water/wastewater treatment plant emergency response tabletop exercises. These events test each plant's ability to function during an emergency, which could include a power outage, chemical supply issues, cyber-attack, or other similar event. A significant benefit of these sessions is enhancing our cross-functional communications and also emphasizing the importance of including outside resources such as County Emergency Response teams and local fire departments. During these exercises a key element is the discussions held regarding the testing of our communications; both internally and externally. The exercises included participation from some of our external partners, including state, county and city regulators and first responders. By strengthening our relationships with these external partners, we can better understand their expectations and the support that they may provide during emergencies. Situational awareness is also a key takeaway from these exercises because we alert participants to some hazards they might face if responding to our facilities. Additionally, discussions are held to broaden PAWC's awareness to the American Water Enterprise Crisis Response Team ("ECRT")

which is available to provide support and guidance to the business during significant and severe incidents as they occur.

Future plans for 2023-24 include a tabletop exercise specific to Dam and Dam Safety (e.g., car into reservoir, significant storm, boils and seepage, and dam sinkhole) and tabletop exercises focused on physical security and cybersecurity.

Q. Please describe your Underground Damage Prevention Program as it relates to Act 50.

A. We have over 200 employees that perform underground locate requests in response to PA811 efforts. In 2022, the Company completed 183,343 One Call tickets. This year, as of September 1, 2023, the Company has completed 95,732 One Call tickets. Several PAWC employees perform underground locates as their primary job, and it is imperative to closely track and monitor performance to keep all parties aligned. We have an Underground Damage Prevention Committee that meets once per month to discuss performance trends, alleged violation reports, technical issues and training programs. The cross functional committee is made up of managers for each operating region, GIS team members, Legal and Business Performance who administer the program.

Q. What measures are in place to ensure compliance?

A. The Company's performance is very good with over 99.99% of tickets completed in 2022 and a steadily decreasing percentage of tickets that are responded to late of only 0.5% through October 1, 2023. There are various time frames within which different types of tickets must be completed. Emergency tickets are to be completed as soon as practical and routine tickets must be completed within 3 days. We track both completion of tickets and timeliness, i.e., completed within the applicable statutory time frame for response. Any

missed opportunity is discussed with local management, which has enabled the organization to continually improve.

Operating and Maintenance Expense

Q. What is PAWC's forecasted O&M expense for the fully projected future test year ("FPFTY") ending June 30, 2025?

A. PAWC's total O&M expense for the FPFTY is approximately $314 million, which is discussed in more detail in the Direct Testimony of Lori O'Malley (PAWC Statement No. 5).

Q. What factors contribute to increases in operating expenses?

A. As discussed in the Direct Testimony of Ashley Everette (PAWC Statement No. 1), the Company has managed to keep the rate of increases in O&M expense below that of inflation. However, several factors have caused an increase in the Company's O&M expenses. For example, PAWC has faced higher chemical prices due to volatility in the chemical supply market driven by both materials and transportation, which in turn results in chemical suppliers unwilling to commit to long-term agreements. Another example of an increase in O&M expenses is related to continued cost increases on treatment equipment and maintenance of our pumps, wells and pressure reducing valves. We have also seen increased costs due to municipal and state road opening permits and restoration costs. Increased assets and equipment related to acquisitions have also impacted expenses. We have also been impacted by the increased costs of fuel for our vehicles and generators. The Company has also experienced increased O&M expense from employee-related costs including wage increases, training, and development.

As PAWC has grown over time, many of the systems we acquired require significant work to address outstanding operational issues. In our efforts to provide excellent water and wastewater quality and service, particularly in newly acquired systems, we incur increased expenses related to maintenance of assets and operating the facilities. These efforts will marginally increase operating expenses to improve operational integrity and mitigate operational risk.

Management Efficiency - Operations

Q. Why does the Company focus on increasing and enhancing operational efficiency?

A. Increasing and enhancing operational efficiency reduces expenses and is a more environmentally friendly way of conducting business. When operations are managed efficiently, the Company can reduce capital and operating costs related to the provision of water and wastewater services, while also helping to protect and preserve our natural resources. Increasing and enhancing water efficiency saves customers money overall, protects the environment, supports integrated resource planning, and enhances the economy.

The Company's goal is to provide quality water and wastewater services as efficiently as possible, and by doing so, to increase the value of our services.

Q. Please describe PAWC's operational efficiency initiatives.

A. The Company's ongoing focus on operational efficiency covers a wide range of targeted measures to enhance efficiencies, including supply-side practices, such as increased pump efficiency, more accurate meter reading and leak detection, and main replacement and repair programs, as well as demand-side strategies, such as customer efficiency and public education programs to support water and energy efficiency. From an Operations

perspective, improving water and wastewater efficiency requires achieving a cost-effective mix of prudent investments and improved operations and maintenance management capabilities targeting safety, customer satisfaction, sustainability, and system efficiency. Customers, utilities, businesses, and the environment can all benefit from more efficient, higher quality service, reduced costs, and sustainable use of natural resources.

Q. Please describe PAWC's efforts to improve water and wastewater efficiency.

A. The Company strives to improve water and wastewater efficiency through operational excellence, the use of technology, system maintenance, and efforts to manage costs as efficiently as possible to provide a more cost-effective level of service for our customers over the long term. The Company also leverages the size and scale of American Water to improve transactional efficiencies through increased automation, the adoption of more effective business practices, and a continuous improvement mindset.

Q. How is PAWC using technology to improve employee effectiveness?

A. PAWC is using technology in a number of ways in order to enhance productivity and efficiency. For example, accurate GIS maps ensure that the Company's institutional infrastructure knowledge is readily available for use by employees. To that end, PAWC has loaded its facilities into GIS so that maps of its water and wastewater system assets are accessible on its internal network. The information available in GIS includes the location and a short description of the facilities, giving an electronic spatial view of the entire system. GIS also helps locate customers that might be affected by related service issues and allows us to communicate with our customers more effectively.

PAWC continues to enhance its GIS platform through integration with our Enterprise Asset Management system, our computer-aided design system, our work

management system ("MapCall") and our fixed asset records. This integration allows communication across the various platforms that makes data retrieval more efficient. The Company continues to build the GIS platform by adding new assets and retiring old assets to ensure our technicians have access to the most current information while working in the field. In 2022, the Company implemented a 'Digital As-built Workflow' that is focused on standardizing how, what and when GIS is updated as well as facilitating better integration between GIS and MapCall. This improved the lag time between when the asset was installed to when GIS and other systems are updated. The goal is to keep our GIS current, complete and accurate for our end users.

Q. How have PAWC and its customers benefitted from the GIS platform?

A. The location of water quality events, chlorine residuals, maintenance events, and pipe failures are all plotted on GIS map layers. The spatially presented information can be used to answer customer water quality inquiries, identify trends, and prioritize water main replacement projects. GIS also is a tool used to assist compliance with federal and state lead service line inventory and management. Known customer and Company service line material data has been loaded into the MapCall service records that is integrated to display on the GIS maps. This will provide employees and customers with a visual representation of known and suspected lead service lines within the service territory.

Q. How does PAWC's work management system improve employee effectiveness?

A. MapCall is a web-based application that enables employees and contractors to complete the lifecycle of work orders and assets in the field. Employees and contractors can view historical information, including work order history on an asset, standard operating practices associated with an asset, maintenance history, O&M manuals, and tap card images. MapCall provides

the flexibility to create work orders, configure workflows and report progress while in the field. For example, a supervisor can create a work order to flush a dozen hydrants in a particular area. Using MapCall, the field worker can report progress as flushing is performed, and both the supervisor and others in the field can visually see the progress made toward completing the identified work in real time through the MapCall interface. The same can be done to schedule and monitor other routine work, as well as emergency work, such as main break repairs. MapCall also allows those in the field to communicate water quality and other events more efficiently through preloaded notifications via email to both internal and external stakeholders, including regulators, allowing workers to quickly shift back to focusing on the task at hand and providing quality service to customers. Water main break locations are continually added to GIS and MapCall to help identify sections of pipe that have outlived their useful life. This information is used to prioritize water main replacements by strategically focusing on the pipe with the highest risk of failure.

Q. Are there other technology solutions that have been implemented to improve employee effectiveness?

A. Yes. In addition to GIS and MapCall, PAWC is implementing other technology solutions to enhance employee effectiveness. MyWater and Work1View ("W1V") are software applications that provide more comprehensive and easily accessible information to employees.

Q. Please describe how MyWater and W1V improve employee effectiveness.

A. MyWater has been implemented by the Company to better serve our customers. MyWater provides improved access to customer information (e.g., premise and service order history, meter details, billing and payment information) to field service representatives ("FSRs"), and

customer service representatives ("CSRs") who regularly interact with our customers. This means that FSRs can view the same information as CSRs. This allows our FSRs to review customer information that can help them address the customer's issue and provide customers information while speaking with them, rather than having to contact the Customer Service Center ("CSC") for information or requiring customers themselves to follow up with the CSC. FSRs can also update customer information and record notes on customer interactions on the spot, providing other employees that serve our customers timely access to the most up-to-date information. MyWater is also the customer facing website that allows customers to view much of the same information in the same format as both our FSRs and our CSRs are seeing to make for a more seamless discussion when interacting with the customer. Recent and planned enhancements have and will also improve our customers' self-service capabilities and the resiliency and usability of the website.

W1V provides employees with a single view for managing customer service order work in the field, customer information and meter information. W1V includes a real-time operations map to see work orders with optimized routing, as well as other types of nearby work and alerts. In addition, using W1V, FSRs can manage their own work based on the day's demands by adding or deferring undated work or by putting orders on hold in order to do emergency work needed at another location. Supervisors can also reroute work as appropriate. W1V along with MyWater allows for easy access to customer information during field visits. It has also been integrated with MapCall to provide FSRs one point of access for all information needs. Taken together, these types of improvements continue to support improved customer experience and satisfaction.

Q. Is the Company deploying advanced metering infrastructure technology?

A. Yes, advanced metering infrastructure ("AMI") technology is an integrated system of meters, communications networks, and data management systems. As of October 1, 2023, the Company has installed 138,000 AMI meters and smart endpoint systems. The AMI cellular-network systems utilize smart cellular endpoints installed on each meter to transmit the meter data via an existing third party cellular infrastructure to a central database system for analysis and reporting. The smart endpoint utilizes a cell-based network provided by major companies such as AT&T and Verizon to capture interim customer reads and eliminates the requirements of a fixed data collector network.

Q. Why is PAWC installing AMI technology?

A. The implementation of AMI increases billing accuracy and reduces the likelihood of estimated bills (e.g., due to weather events or other obstacles to accessing customer meters) by automatically providing timely, accurate reads through the network. In addition, AMI will reduce the need for manual re-reads and improve processes from meter reading through billing. AMI reduces the number of certain service orders over time by eliminating the need to drive by premises to collect reads and eliminating the need to roll a truck to complete certain high volume service orders such as "Move in-Move out orders." Reducing truck rolls provides additional environmental benefits related to reduced emissions and safety benefits to PAWC employees who avoid potential safety hazards associated with in-person meter reads. PAWC also can use AMI data to uncover irregularities that may signal a leak, meter tampering or water theft. With the planned implementation of a meter data management system, the Company will also be able to collect, organize and analyze information, to better enable smart water use choices, to enhance customer communication regarding customer

water consumption patterns, and to improve PAWC's ability to measure and address non-revenue water more efficiently.

Q. Please describe the Company's AMI deployment progress.

A. The Company is taking an approach that strategically selects areas for concentrated AMI efforts based on local needs and opportunities. As of August 2023, 31% of the Company's customers are equipped with AMI technology, with Scranton customers comprising the majority of our AMI customers. The Company also adopted cellular AMI technology, and all length of service meter and faulty meter replacements will be upgraded to AMI throughout the Company's service areas. We expect that 35-40% of the Company's customers will be equipped with AMI by the end of 2023.

Q. What are PAWC's other efforts to improve water efficiency?

A. In addition to utilizing its Distribution System Improvement Charge ("DSIC") mechanism to accelerate the replacement of aging infrastructure in the Company's service territory, we are enhancing our leak detection efforts throughout the state to reduce non-revenue water.

Q. What is non-revenue water)?

A. Non-revenue water ("NRW") is the difference between system delivery and water sales. Typically, NRW is measured as a volume, or a percentage of system delivery based on a 12-month rolling average. NRW is not just leakage, but also includes water for beneficial uses such as firefighting, flushing new water mains, flushing to maintain adequate chlorine levels, and annual hydrant flushing, as well as theft, and meter inaccuracies. To avoid any ambiguity, American Water, based in part on guidance from the American Water Works Association ("AWWA"), measures its reduction in water loss in terms of NRW rather than

Unaccounted for Water ("UFW").[1] In contrast to UFW, which can be defined in a variety of ways across the water industry, NRW is consistently calculated by subtracting the number of gallons of water sold from the number of gallons of water treated.

Q. Please describe the Company's program to reduce NRW.

A. As noted, reducing water loss is a complex issue with many contributing factors. To reduce actual water losses as effectively as possible, we strive to gather standard data from our operating centers so that we can efficiently and effectively communicate what is working, what is not working, and how we are progressing on mitigating NRW around the Commonwealth.

The Company rigorously applies water loss reduction practices in the normal course of business. These practices include regular monthly NRW meetings in both our east and west divisions that provide target NRW reductions and goals by independent NRW report cards of activities, routine maintenance, and pursuing and repairing leaks that are identified. In addition, the Company has several NRW control measures embedded in its on-going business practice, which consist principally of:

- Monitoring night flows within the different District Metering Areas ("DMA") across its systems (unexpected usage during off-peak periods can indicate leakage).
- Metering water usage within various parts of a water district as another indicator of possible leakage; the addition of DMAs working in conjunction with advanced metering infrastructure customer metering to assist in lost water identification within an operating district.

[1] The AWWA began to discourage the use of the term Unaccounted for Water in 2012 because its definition is inconsistent from organization to organization. There are several opportunities for inconsistency. For example, some organizations may deduct the number of gallons lost during a known main break, while others exclude gallons lost as a result of main breaks altogether.

- Using NRW-trained crew to find and report leaks daily, which are then promptly repaired.
- In conjunction with the state training lead, PAWC provides NRW and leak detection training for our new and current employees, including hands-on equipment training.
- Using NRW crews periodically in a "SWAT"-type approach to sweep larger areas of a particular system for leaks.
- Implementation of leak detection specialists to help locate leaks throughout PAWC's service territory when needed in the case of an emergency.
- Using the Company's MapCall work management system to capture all work done by our crews, including main break repairs so that patterns can be analyzed geographically (this will allow us to identify future main and service replacement projects).
- Usage of MapCall for more accurate monthly reporting and monitoring of all NRW use; and documenting all unaccounted-for water loss and authorized consumption in total gallons.
- Training meter readers and other field personnel to identify and report possible theft-of-service situations (such as evidence of occupancy or other activity in premises with no registered consumption) and raising public awareness and understanding of the operational and financial consequences of NRW.
- Asking local municipalities to develop theft-of-service ordinances and to enlist citizens and law enforcement to help address this problem.
- Annual and semi-annual testing and calibration of our production delivery meters per AWWA M36 manual standards.
- Metering all automatic blow-offs for water quality flushing and new water main installation flushing to help account for all authorized consumption water loss.

In addition to these operations activities, PAWC has an aggressive capital expenditure program to reduce the number of small diameter mains, which also helps to reduce water loss from the system. The Company's capital expenditures for main replacement and rehabilitation are described in more detail by Mr. Bruce Aiton (PAWC Statement No. 3).

Q. Please describe the leak detection technology used by the Company to control NRW.

A. Approximately 23,000 leak detection sensors have been installed in the Company's distribution system since 2016 and around 11,000 of those sensors have been installed since 2022. These active acoustic listening devices are cellular based and can transmit their findings to us daily for analysis. This transmittal eliminates the need to deploy resources to patrol the areas to collect the data, which allows for more timely analysis of the collected data. This technology also allows us to better identify those areas that need the most attention, resulting in more efficient deployment of repair crews. Since 2022, these leak detection sensors have helped pinpoint over 2,000 non-surfacing leaks that would have otherwise been unknown, allowing for quick repair by field operations staff. The Company plans to install an additional 3,000 acoustic cellular data loggers in 2024 across its service territory.

Our leak detection specialists use a variety of additional state-of-the-art equipment in the field as well, such as ground listening microphones, leak correlators, and line locating devices to locate and pinpoint leaks.

In 2023, an innovative technology was implemented in our regional Scranton Water system. The Company has partnered with a third-party vendor, Asterra, a satellite imagery company that takes photos of water facilities locating the dielectric properties of treated water in soil and marking points of interest overlayed on Company GIS mapping. This technology will be used with leak detection sensor technology to help us locate and repair leaks in remote locations of our operating areas in a more timely way, preventing substantial amounts of water loss and savings on production costs. PAWC plans to expand

the use of this technology to our Philipsburg regional water system in 2023-2024 to further evaluate the technology.

Q. How has the Company created additional efficiencies with respect to its fleet management?

A. With a fleet of over 1,100 vehicles and other rolling equipment, it is imperative that the Company has a program to manage its fleet. In 2023, American Water has restructured a centralized fleet management organization to support the Company in both fleet purchasing and maintenance. The organization is assisting PAWC with standardizing fleet equipment and generating savings by working directly with our senior operations managers and the end-users to optimize both initial cost and lifetime costs for every vehicle in the PAWC fleet. This process results in continuous improvement to better meet the needs of the end user. Our fleet management team is focused on reducing expenses, when possible, without negatively affecting our ability to serve our customers and safety.

As part of the capital planning process, we identify vehicles that are nearing the end of their depreciable life for replacement, targeting smaller replacement vehicles with better fuel consumption and lower initial and lifecycle costs. The mix of vehicle types varies year to year based on business need. Our capital program typically replaces over 120 vehicles per year. A summary of the Company's recent historical and planned vehicle replacements follows:

Year	Capital Spend	Vehicles Replaced
2021	$12.3M	146
2022	$11.5M	148

2023 (planned)	$10.5M	145
2024 (planned)	$10.8M	113

In addition, our third-party fleet management company, ARI Inc., provides us with data each month that allows us to look for trends around vehicle repair costs and fuel consumption.

We also have a policy of strategically sharing vehicles across districts to balance the needs of the business, especially when a vehicle is near the end of its depreciable life and in need of repair before its permanent replacement is available.

Q. Please describe the Company's energy efficiency initiatives and cost controls.

A. PAWC is using various strategies to improve energy efficiency and reduce energy costs that include five principal components: (1) competitive energy procurement; (2) upgrading energy efficiency of treatment and pumping facilities; (3) lighting upgrades; (4) energy-use monitoring and demand response; and (5) obtaining rebates made available under electric utility programs implementing Act 129 of 2008 ("Act 129").

Q. Please describe some of PAWC's energy cost mitigation strategies.

A. ***Competitive Energy Procurement.*** PAWC actively procures a diverse portfolio of electricity supplies across its operations. The Company uses competitive sourcing to procure electricity supplies for its operations in the West Penn Power, Duquesne Light, Met Ed, PECO, Penelec, Penn Power and PPL service territories. PAWC's supply contracts currently are based on "shaped" fixed pricing, which offers both competitive and stable pricing over time. The aggregate annual electricity supply covered by a mix of short-

and long-term fixed contracts accounts for over 95% of the Company's annual electricity consumption.

The remaining percentage of the Company's annual electricity consumption is from bundled sales service provided by the delivery utility. The Company will continue to employ all reasonable efforts to obtain competitive electric pricing for the benefit of customers.

Energy Efficiency Upgrades. The objectives of the Company's energy efficiency efforts are to reduce energy costs and greenhouse gas emissions that are associated with inefficient power consumption. The Company has performed "water-to-wire" efficiency testing (i.e., the efficiency of a pump and motor together) of its largest pumping facilities to identify opportunities to improve the efficiency of motors and pumps. The Company has systematically refurbished and/or replaced pumps at all of the top 20 energy consuming facilities. The Company continues to monitor these large stations to ensure that pumping efficiencies remain at acceptable levels and, in the event further upgrades are required to maintain or efficiently achieve greater efficiencies, PAWC will plan capital projects, as needed, to implement such upgrades.

Lighting Upgrades. The Company has upgraded the lighting and switches at more than 55 treatment plants, pumping stations and office buildings/operations centers. These projects consisted of replacing existing metal halide and T12 fluorescent fixtures with new, high-efficiency T8 fluorescent and/or LED fixtures, installing high-efficiency lamps, installing new high-efficiency outdoor LED lighting, and/or installing new switches with occupancy-sensor controls. The projects have payback periods of about two years and provide energy savings and improved lighting for workspaces well into the future. The

Company continues to look for opportunities during capital upgrade projects to replace inefficient equipment in order to gain efficiencies and realize savings.

Energy Use Monitoring and Demand Response. PAWC uses an American Water enterprise-wide application to monitor its energy accounts across the state. This monitoring tool provides "before and after" benchmarking capabilities to help the Company assess the success of various efficiency initiatives. The Company has also installed real-time electricity meters and dashboards at 19 of its largest pumping facilities. The dashboard provides our operators with real-time visibility of their electricity consumption and wire-to-water efficiency, and also provides our engineers with discrete energy efficiency data on these large units to monitor and plan for future efficiency upgrades.

PAWC was also an early adopter of smart-grid technology to help integrate the way we operate our treatment plants and pumps with electric grid system conditions. PAWC has installed equipment at three of its largest water pumping stations and one of its largest wastewater treatment plants that allows those facilities to vary electric usage (up or down) based on signals from the local grid operator. PAWC receives revenues from participation in demand response programs at these locations ranging from $25,000 to $75,000 annually that are used to offset electricity expense, but more importantly, we are taking proactive steps to help ensure the integrity of the electricity grid during peak demand emergencies.

Act 129 Rebates. PAWC has been working with its electric utilities since the inception of the programs for energy efficiency and conservation ("EE&C") that those utilities instituted to comply with Act 129. When electric utilities were developing their EE&C programs, the Company participated in stakeholder meetings with their service

providers to provide input from the water and wastewater industries. As the EE&C programs were introduced by the electric utilities, PAWC reviewed its capital projects for eligibility under the rebate programs and applied for, and received, several rebates. As of October 1, 2023, the Company has received over 40 rebates for more than $1,020,000.

Q. What are the benefits of PAWC's efforts to improve energy efficiency?

A. The benefits of PAWC's efforts to improve energy efficiency are three-fold. Improved energy efficiency (1) provides more efficient, higher quality service; (2) reduces operating costs through reduced energy consumption; and (3) reduces carbon and other emissions. Through the comprehensive energy efficiency programs outlined above, the Company has been able to minimalize increases to its fuel and power expenses.

Q. Please describe what the Company has done to control waste disposal expenses.

A. The Company has a long history of exploring and implementing cost-effective beneficial uses for its treatment residuals, rather than relying on costly landfill disposal. The Company has been able to implement beneficial use practices at 32 of the Company's 35 surface water treatment plants. On a dry weight basis, approximately 95% of the Company's water treatment residuals are beneficially used across the state, at a cost far lower than conventional disposal at a landfill. The Company recently implemented capital improvement projects at the Ellwood City and Norristown water treatment plants and the Clarion wastewater treatment plant to improve the residuals dewatering process. This process lowers the overall weight of the product to be transported and disposed of; and thus, the associated costs as well. A new volute press process at the Clarion wastewater treatment plant has improved the percentage solids reduction from an original range of 12%-18% to greater than 16%-22%, thus reducing the overall disposal costs. The new

centrifuge process in Ellwood City, completed in 2019, has resulted in a disposal cost saving of over 90%. A residuals improvement project is currently being completed at PAWC's largest water treatment plant, the Hays Mine Plant in Pittsburgh, which is expected to result in similar savings.

Q. Please describe what the Company has done to control purchased water expenses.

A. The Company has implemented changes in two districts to control purchased water expenses. We are currently maximizing all extra capacity from our Brownsville treatment plant by pumping it to Uniontown to reduce the purchased water load. We also increased our leak detection activities in Uniontown to minimize purchased water. The Company is continually investigating potential capital upgrades to be able to shift even more load to the lower-cost provider in the longer term.

Employee Levels and Compensation

Q. Please discuss how PAWC staffs its business operations.

A. As a public utility, PAWC is required to provide safe, reliable, and adequate water and wastewater services. PAWC's employees are responsible for assuring the production of high-quality drinking water, operating and maintaining the Company's production and treatment facilities and its distribution and collection systems, monitoring water quality, providing engineering services, and supporting the efficient management of all the Company's operations.

The Company continually strives to find more efficient and cost-effective ways to operate and maintain its business. As part of that effort, we strive to manage our cost structure as efficiently as possible, including employee costs. We recognize our duty to staff our business in a way consistent with providing safe, reliable and affordable utility

service. This requires a constant evaluation of the right mix of internal and contract labor, straight time versus overtime, training programs, and supplementing or, when prudent, replacing labor with technology. In this vein, we continue to evaluate costs and expenses going forward, always looking for the best solution for the unique and changing challenges we face. A substantial portion of PAWC's cost structure is associated with the Company's cost of labor, and as a position becomes vacant in our organization, we look to the value of that position. We review the overall need for that position and consider, among other things, whether it should be transferred to another area, modified, or even eliminated. Workforce optimization and improved business performance are the goals of these efforts. We continue to evaluate the new roles that will be created as new regulatory requirements are promulgated, and the appropriate positions that PAWC will need to optimize recent technology and most effectively serve our customers.

Q. What is PAWC's forecasted staffing level in this case?

A. We have identified 1,294 equivalent employees as the appropriate staffing level for the Company's water and wastewater operations in the FPFTY. The number of employees is based upon each department and each functional area's need to provide safe, adequate, efficient, and reliable service to the Company's customers. Service needs and related resource requirements are consistent with meeting regulatory requirements, tariff requirements, industry standards, service requests, customer needs, and providing adequate support to PAWC's business operations.

Q. Please describe PAWC's approach to employee compensation.

A. PAWC aims to offer compensation that allows it to attract and retain customer-committed, dedicated and highly qualified employees. The Company's overall compensation

philosophy is to provide employees with a total compensation package that is market based and competitive with those of comparable organizations with jobs of similar responsibility. As part of its compensation philosophy, the Company has chosen to make a portion of its compensation variable, driving continued performance across the enterprise. Specifically, PAWC targets its total direct compensation (base and variable compensation) for each role at the Company near the market median (50th percentile) for that role. By using a combination of fixed and variable compensation, the Company satisfies a dual objective of ensuring competitive market-based total compensation for all employees, while continuing to motivate employees to achieve goals that will improve performance and efficiency for the benefit of our customers.

Q. Please identify the various employee classifications at PAWC and briefly describe how each group is compensated.

A. There are three classifications of employees: collective bargaining unit ("CBU") hourly employees, non-collective bargaining unit ("non-CBU") hourly employees and exempt employees. Full-time hourly employees are compensated through base pay, overtime, performance compensation, and in some instances, shift premium and meal compensation pursuant to the terms of applicable collective bargaining agreements. Exempt employees are compensated through base pay and performance compensation.

Q. How is performance compensation provided to PAWC employees?

A. The performance compensation component of the Company's total direct compensation may be awarded under two performance plans – the Annual Performance Plan ("APP") and the Long-Term Performance Plan ("LTPP"). All full-time employees, including CBU employees, participate in the APP. Eligibility for the LTPP is limited to certain exempt

employees. Copies of the plans, which are marked as confidential and proprietary, are provided as Filing Requirement III.22 (Volume 6b) of the Company's responses to the PUC's filing requirements.

Q. Please describe the key performance objectives underlying the APP.

A. The APP is designed to recognize performance against key performance goals and targets that drive the Company's strategy. For 2023, the APP goals include safety goals related to reducing the ORIR and DART rates, customer goals related to customer satisfaction, environmental goals related to avoiding violations, people goals related to improving diverse representation in the workforce, and growth goals related to the Company's financial performance.

Q. Please describe the Company's LTPP.

A. American Water provides restricted stock units ("RSUs") and performance stock units ("PSUs") as long-term variable compensation under the LTPP. American Water's RSUs and PSUs are based on three-year vesting periods. RSUs are based on time-based vesting and PSUs are based on performance vesting conditions.[2]

Q. Do the Company's compensation plans benefit customers?

A. Yes. As I mentioned, the plans are designed to provide compensation for performance and to focus plan participants on delivering safe, reliable and affordable water and wastewater services. The design of the plans emphasizes customer service, environmental compliance,

[2] American Water uses a combination of compounded EPS growth and relative total shareholder return ("TSR") ranking over a three-year performance period as the basis for measuring performance for PSU awards. For the portion of American Water's PSUs that are contingent on relative TSR percentile performance, American Water compares performance to its peer group.

a safe work environment, and people, as well as certain financial goals. All of the APP and LTPP performance objectives – both operational and financial – focus employees' efforts in ways that ultimately benefit customers. The use of multiple measures further strengthens our ability to drive results across the enterprise. The operational components measure performance that can most directly influence customer satisfaction, health and safety, environmental performance, and workforce diversity. Customers benefit from the plan goals because operational performance is improved by controlling costs, capturing efficiencies, promoting effective safety and risk management practices, enhancing customer service, and doing so with a diverse workforce that reflects the communities we serve. Performance is determined by goals that benefit customers by creating a more productive and engaged workforce that is focused on customer satisfaction and achieving efficiency, environmental and safety goals. Further, well-grounded financial measures keep the organization focused on improved performance at all levels of the organization, particularly in increasing efficiency, decreasing waste, and boosting overall productivity. Finally, a financially healthy utility focused on efficiency and customer satisfaction can attract the capital investments necessary to provide safe and reliable service at favorable rates. Because utilities are capital intensive and must routinely and consistently access the capital markets, customers ultimately benefit when their utility has the financial health to do so at reasonable rates. Simply put, a financially healthy utility benefits customers because it enables the utility to meet its service obligations at reasonable financing costs.

Employee Development

Q. Describe the Company's commitment to employee development.

A. PAWC values the growth and development of its employees. In support of this, an annual training goal of 25 hours or more has been set for all employees. LEARN, American Water's learning management systems provides a one-stop shop for registering for instructor-led courses and participating in e-learning. In addition to the Company's focus on providing employees with relevant training geared towards their primary job responsibilities, there are opportunities for technical, professional, management and leadership development for career advancement opportunities. There are over 200+ eLearning courses around business, leadership, and professional development available in LEARN.

All employees have been assigned the following safety courses for 2023: Blood Born Pathogens and Fire Safety and Prevention, which are an annual requirement. In addition, An Employees Right to Know, Slips, Trips and Falls and Stop Work Authority are on a three-year training recurrence cycle. We consider these courses core to our training program and additional courses are assigned based on the employee's specific job tasks. PAWC has also developed an Operator Training Academy aimed at developing the skills of our treatment plant operators, which consists of both virtual and live sessions. While designed for operators, the program is offered to all employees that wish to develop their understanding of the Production and Treatment processes.

Q. Does this conclude your testimony?

A. Yes, it does.

2 High Strength Wastewater Surcharge Calculations – Fiscal Year 2018
3 High Strength Wastewater Surcharge Calculations – Fiscal Year 2019

1.0 INTRODUCTION

1.1 Background

Wastewater discharged from some non-residential (industrial, institutional, or commercial) dischargers can be much higher in strength than domestic wastewater and, as a result, requires additional treatment. These non-residential facilities can discharge wastewater containing high Biochemical Oxygen Demand (BOD_5), Total Suspended Solids (TSS), Total Phosphorus (TP), or Total Nitrogen (TN). Industrial, institutional, and commercial wastewaters can cost more to treat than residential wastewater because it can have a higher dissolved oxygen demand, create more solids for disposal, or require more chemicals for treatment. A High Strength Wastewater Surcharge Program provides a means to recover the additional treatment costs created by these discharges by charging a surcharge fee (in addition to the quarterly user rate) to dischargers of higher-than-normal strength wastewater. Surcharge rates provide an equitable means of distributing treatment costs among rate payers based on discharge characteristics. They are facility-specific and are calculated based on actual facility operating data. By establishing high strength surcharge rates, wastewater treatment plants (WWTPs) have the ability to distribute treatment costs on the basis of actual discharge strength above an established surcharge "baseline concentration.

Pennsylvania American Water Company (PAWC) has developed and implemented a High Strength Surcharge Program, as outlined it its Pennsylvania Wastewater Tariff. The surcharges for the Coatesville District are outlined under Section T, 1.2 and are summarized in *Table 1-1*. Because high strength surcharges are based on actual operating expenses and treatment efficiencies, these calculations must be updated periodically to better reflect the current operations of the WWTP. For these reasons, the PAWC has decided to update the calculations of their High Strength Surcharge Program for the Coatesville District to ensure the surcharge rates are appropriate and defendable. Additionally, PAWC wishes to establish nutrient surcharge rates for Total Nitrogen (TN) and Total Phosphorus (TP) in addition to Biochemical Oxygen Demand (BOD) and Total Suspended Solids (TSS).

Table 1-1. Current Surcharge Rate Schedule

	Cost/Lb.
BOD_5	$0.10
TSS	$0.06

The surcharge study calculations involve establishing a cost per pound for the pollutants of concern (BOD_5, TSS, TP, and TN) for each of the past three (3) years and then calculating a running 3-year average for each. The calculation tables are set up so that they can be updated periodically to allow the PAWC to establish current treatment costs for each pollutant.

1.2 Methodology

This Report sets forth the results of a High Strength Wastewater Surcharge Rate Study based on actual operations and maintenance expenses and actual influent loadings to the PAWC Coatesville WWTP for calendar years 2017, 2018, and 2019. This report contains explanations of the methods and procedures employed to calculate the High Strength Wastewater Surcharge Rate for the PAWC. Operations and maintenance costs were allocated among eleven (11) treatment processes (Influent Pumping Station, Preliminary Treatment, Bioreactors, Secondary Clarification, Chemical P Removal, Secondary Pumping Station, Tertiary Filtration, Disinfection, Solids Thickening, Aerobic Digestion, and Solids Dewatering). The treatment process O&M costs were allocated to the removal of BOD_5, TSS, TN, and TP. The annual removal (in pounds) of BOD_5, TSS, TN, and TP were calculated using laboratory data. A treatment cost per pound of pollutant removed was then calculated.

2.0 ALLOCATION PROCEDURES

The tables in the appendices of this report represent the step-by-step allocation procedures for the high strength wastewater surcharge calculations. Each appendix contains the calculations for an annual 12-month period, based on the PAWC's fiscal year from January 1 through December 31. The tables for Fiscal Year 2017 are contained in *Appendix 1*, Fiscal Year 2018 in *Appendix 2*, and Fiscal Year 2019 in *Appendix 3*.

2.1 Allocation of Operation and Maintenance Costs

The actual operation and maintenance costs related to the treatment of wastewater at the Coatesville WWTP are identified by account for each Fiscal Year. Each account was reviewed to determine the nature of the cost and to allocate those costs among the eleven (11) stages of the treatment process. This review formed the basis for the cost allocation presented in *Table 1* of the respective appendices.

The Electrical expenses were allocated based on the percent of annual kilowatt hours of equipment operated for each treatment process, as summarized in *Table 2* of the respective appendices.

2.2 Allocation of Cost Functions to Treatment Processes

As previously indicated, eleven (11) stages of treatment processes were included in this evaluation. In *Table 3* of the respective appendices, the costs to operate each treatment process are allocated among the pollutants of concern (Flow, BOD_5, TSS, TN, and TP) for each Fiscal Year.

2.3 Calculation of Removal Costs

The total annual costs associated with the removal of each pollutant for each Fiscal Year is summarized in *Table 4* of the respective appendices. These costs are based on the total operating costs of each treatment process as established in *Table 1* of the respective appendices. The total annual removal costs were divided by the total annual pounds removed of each pollutant in the respective year, as calculated in *Table 4* of the respective appendices, to establish a cost of removal per pound of pollutant.

The results of the High Strength Wastewater Surcharge Evaluation for each pollutant during each Fiscal Year are summarized in *Table 2-1*. A 3-year average has also been developed based on the annual treatment costs for each pollutant and this long-term average is utilized to normalize any anomalies in the annual average values. These 3-year averages should become the basis for the high strength wastewater surcharge rates.

Table 2-1. High Strength Surcharge Rate Summary

Pollutant	Fiscal Year			3-Year Average
	2017	2018	2019	
BOD_5	$0.39	$0.33	$0.33	$0.35
TSS	$0.18	$0.20	$0.20	$0.19
TN	$1.21	$1.03	$1.01	$1.08
TP	$2.82	$2.02	$2.11	$2.32

The National Association of Clean Water Agencies (NACWA) periodically surveys municipalities and authorities nationwide to track financial trends. As part of the NACWA's most recent survey in 2017, over 100 municipalities and authorities were surveyed. The 2017 NACWA National Survey of Municipal Wastewater Management and Financing Trends found the average BOD surcharge rate was $ 0.325 per lb. and the

average TSS surcharge rate was $0.287 per lb. PAWC Coatesville's calculated BOD rate, as presented in *Table 2-1*, appears to be lower than the national average compiled by the NACWA, although the calculated TSS rate is similar to the national average. Additionally, a survey of thirteen (13) wastewater authorities and agencies in central Pennsylvania revealed an average BOD and TSS surcharge rate of $0.384 and $0.381 per lb., respectively. Generally, it appears that the PAWC Coatesville surcharge rates are within the typical range.

Please note that these removal costs are applicable only to discharges into the sewer system that are treated at the Coatesville WWTP. Removal costs for other discharges from different sewer service systems or treated at different wastewater treatment plants cannot be extrapolated from these results.

3.0 APPLICABILITY

3.1 Domestic Strength Wastewater Concentrations

The high strength wastewater surcharge should only be applied to those sources of wastewaters with average discharge qualities that significantly exceed the typical domestic strength concentrations of the Coatesville WWTP's residential and non-regulated commercial (i.e. domestic) users. PAWC's current High Strength Surcharge Program, as outlined it its Pennsylvania Wastewater Tariff under Section T, 1.2, assumes domestic strength BOD and TSS concentrations of 300 mg/L each.

Establishing the "typical" domestic strength concentration for a particular wastewater collection system is accomplished by routine sampling of select locations throughout the system. Without collection system monitoring results, however, a conservative estimate of the typical domestic strength concentration must be utilized for high strength surcharge purposes.

Oftentimes, the average annual WWTP raw influent concentrations can be used for this purpose. These values include the non-residential components in addition to the residential components and, therefore, will typically exhibit higher concentrations than just the domestic wastewater component. This is especially true for the Coatesville WWTP, which includes a large beverage manufacturer in its service area that contributes a significant organic load. For high strength wastewater surcharging purposes, the historical WWTP raw influent concentrations, as presented in *Table 3-1*, can be utilized as the domestic strength concentrations.

Table 3-1. WWTP Raw Influent Characteristics

Pollutant	Year *			3-Year Average
	2017	2018	2019	
BOD_5	324	257	392	324
TSS	305	367	404	359
TN	41.0	29.1	42.1	37.4
TP	6.8	5.5	8.0	6.8

* As calculated in *Table 4* of the respective calculations in *Appendices 1* through *3*.

In addition to the residential, commercial, and non-regulated industrial discharges from the collection system, the PAWC Coatesville WWTP receives flows from several significant contributors. Raw influent to the WWTP, therefore, is comprised of four (4) main sources: Collection System (residential, commercial, and non-regulated industrial discharges); Victory Brewing Process Wastewater; Hauled Septage; and Rock Run Water Treatment Plant Residuals. As part of Gannett Fleming's August 2019 WWTP Process Evaluation, each of these components of the WWTP raw influent were estimated. The pollutant concentrations of the domestic strength wastewater (i.e. residential, commercial, and non-regulated industrial discharges) in the Coatesville service area is estimated as presented in *Table 3-2*.

Table 3-2. Estimated WWTP Raw Influent Characteristics

Pollutant	Average Annual Concentration*, mg/L
BOD_5	163
TSS	127
TN	32.2

* As estimated in Table 1 of the August 2019 GF WWTP Process Evaluation Report

For high strength wastewater surcharging purposes, the recommended pollutant concentrations in the domestic strength wastewater in the Coatesville service area are estimated as presented in *Table 3-3*. Actual domestic strength wastewater within the collection system is most likely lower than the values in *Table 3-3*, however, it is administratively easier to round up the concentrations for compliance monitoring purposes. Additionally, it is appropriate to maintain the BOD and TSS concentrations the same as historically utilized for continuity of the high strength surcharge program.

Table 3-3. Recommended Domestic Strength Wastewater Concentrations

Pollutant	Average Annual Concentration, mg/L
BOD_5	300
TSS	300
TN	40.0
TP	10.0

3.2 Applicability

Dischargers identified through wastewater sampling as contributing wastewater with strengths greater than domestic wastewater for any of the surcharge parameters (BOD, TSS, TN, or TP) shall pay a monthly or quarterly surcharge based on that customer's discharge strength and monthly metered wastewater volume. If metering is impractical, estimates of flow may be used. This surcharge will be in addition to the standard sewer use charge which is based on volume. The surcharge rate applies only to the extra strength (i.e. total concentration minus typical domestic concentration) for each parameter. Parameters with concentrations below typical domestic wastewater concentrations should be assessed the standard sewer use charge. No credit should be given for wastewater with one or more parameter concentrations below the maximum typical domestic concentrations.

A high strength wastewater surcharge should be applied to those sources of wastewater with average discharge qualities that significantly exceed the "Recommended Domestic Strength Wastewater Concentrations" as listed in *Table 3-3*. The high strength wastewater surcharge should be calculated using the 3-year average per pound removal cost as listed in *Table 2-1*. High Strength Wastewater Surcharges shall be calculated in dollars using the following formulas:

BOD	($0.20/lb) x (Total Flow, Mgal) x (8.34) x (BOD Concentration - 300 mg/L)
TSS	($0.29/lb) x (Total Flow, Mgal) x (8.34) x (TSS Concentration - 300 mg/L)
TN	($0.52/lb) x (Total Flow, Mgal) x (8.34) x (TN Concentration - 40.0 mg/L)
TP	($0.73/lb) x (Total Flow, Mgal) x (8.34) x (TP Concentration - 10.0 mg/L)

The total high strength surcharge rate is the sum of the surcharge rates for each parameter.

Notes:

[1] Operating costs from *Table 1*.

[2] The costs for BOD and TN removal in the secondary treatment process are based on the rate of oxygen demand assuming 1.5 lbs O_2 / lb BOD and 4.6 lbs O_2 / lb NH_3-N.

[3] The allocation of secondary clarification cost is distributed between BOD, TSS, NH3-N based on the estimated contribution of each to solids production. The costs for BOD and NH_3-N removal in the secondary clarifiers are based on the rate of oxygen demand while TSS contribution is estimated based on the primary clarifier influent TSS loading.

[4] Solids generated consist of influent solids, excess cell mass production as a direct result of the metabolism of BOD and TN, as well as chemical sludge from TP removal in the secondary treatment process. The allocation of solids handling cost is therefore distributed between BOD, TSS, TN, and TP based on the estimated contribution of each to solids production. Solids production is estimated based on the raw influent TSS loadings and the waste activated sludge loadings as outlined in*Table 4*.

Table 4
PAWC Coatesville Wastewater Treatment Plant
High Strength Wastewater Surcharge Rate Evaluation

Annual WWTP Operations Summary
January 1, 2017 through December 31, 2017

Pollutant of Concern	Raw Influent (1a)		Hauled Septage (1b)		Total Combined Process Loadings (1c)		Biological Assimulation (2)	Final Effluent (1)		Removal (3)	
	mg/L	lbs/day	mg/L	lbs/day	mg/L	lbs/day	lbs/day	mg/L	lbs/day	lbs/day	lbs/year
BOD	312	8,196	2,000	874	334	9,070	---	2	58	9,070	3,310,497
TSS	276	7,258	1,000	437	284	7,696	---	4	106	7,696	2,808,897
TN	38.4	1,008	100.0	44	38.7	1,051	651	2.9	75.3	325	118,613
TP	7.0	184	20.0	9	7.1	193	123	0.3	6.9	63	23,011

Notes:

(1) Raw Influent and Final Effluent average concentrations and loadings as reported for 2017

a. Raw Influent concentrations and loadings do not include hauled waste contributions.

b. Hauled septage average equivalent concentrations are based on literature value estimates. Loadings are estimated using annual average hauled waste volume in 1d.

c. Total Combined Process Loadings are the sum of the raw wastewater and the hauled septage loadings.

d. Annual average daily flows utilized to calculate the equivalent process loadings concentrations:

Raw Influent: 3.201 mgd

Hauled Waste: 0.052 mgd

(2) Biological assimulation is estimated based on the following assumptions:

Parameter	Unit	Input	Calculation
WAS	mgd	0.170	---
WAS TSS	mg/L	8,832	---
WAS	lbs/day	---	12,556
MLVSS/MLSS Ratio	%	0.85	---
Estimated WAS VSS	lbs/day	---	10,673
Pure Biomass/WAS VSS Ratio	%	0.50	---
Estimated Pure Biomass	lbs/day	---	5,336
Nitrogen Assimulated	%	12.2%	---
Nitrogen Assimulated	lbs/day	---	651
Phosphorus Assimulated	%	2.3%	---
Phosphorus Assimulated	lbs/day	---	123

(3) Removal assumes that all BOD and TSS is removed through the treatment process and the final effluent CBOD and TSS are mostly an artifact of cellular debris.

a. For TN and TP, the annual pounds removed is the raw influent loading minus the final effluent loading. Nutrient assimilation in the biological treatment process is considered part of the removal process.

Table 5
PAWC Coatesville Wastewater Treatment Plant
High Strength Wastewater Surcharge Rate Evaluation

Cost of Removal Summary
January 1, 2017 through December 31, 2017

Pollutant of Concern	Annual Cost of Removal (1)	Annual Pounds Removed (2)	Cost per Pound Removed (3)
BOD	$1,294,920	3,310,497	$0.39
TSS	$500,820	2,808,897	$0.18
TN	$143,920	118,613	$1.21
TP	$64,880	23,011	$2.82

Notes:

(1) Annual Cost of Removal from *Table 3*.

(2) Annual Pounds Removed based from *Table 4*.

(3) Cost of Removal = Yearly Cost of Pollutant Removed / Yearly Pounds of Pollutant Removed.

Notes:

[1] Operating costs from *Table 1*.

[2] The costs for BOD and TN removal in the secondary treatment process are based on the rate of oxygen demand assuming 1.5 lbs O_2 / lb BOD and 4.6 lbs O_2 / lb NH_3-N.

[3] The allocation of secondary clarification cost is distributed between BOD, TSS, NH3-N based on the estimated contribution of each to solids production. The costs for BOD and NH_3-N removal in the secondary clarifiers are based on the rate of oxygen demand while TSS contribution is estimated based on the primary clarifier influent TSS loading.

[4] Solids generated consist of influent solids, excess cell mass production as a direct result of the metabolism of BOD and TN, as well as chemical sludge from TP removal in the secondary treatment process. The allocation of solids handling cost is therefore distributed between BOD, TSS, TN, and TP based on the estimated contribution of each to solids production. Solids production is estimated based on the raw influent TSS loadings and the waste activated sludge loadings as outlined in *Table 4*.

BOD	244	8,635	2,000	954	264	9,589	---	2	75	9,589	3,499,983
TSS	341	12,083	1,000	477	346	12,560	---	4	139	12,560	4,584,501
TN	28.4	1,003	100.0	48	28.9	1,051	594	4.3	145.9	311	113,485
TP	5.3	187	20.0	10	5.4	197	112	0.2	0.0	85	30,900

Notes:

(1) Raw Influent and Final Effluent average concentrations and loadings as reported for 2018:

a. Raw Influent concentrations and loadings do not include hauled waste contributions.

b. Hauled septage average equivalent concentrations are based on literature value estimates. Loadings are estimated using annual average hauled waste volume in 1d.

c. Total Combined Process Loadings are the sum of the raw wastewater and the hauled septage loadings.

d. Annual average daily flows utilized to calculate the equivalent process loadings concentrations:

Raw Influent: 4.300 mgd
Hauled Waste: 0.057 mgd

(2) Biological assimilation is estimated based on the following assumptions:

Parameter	Unit	Input	Calculation
WAS	mgd	0.156	---
WAS TSS	mg/L	8,822	---
WAS	lbs/day	---	11,462
MLVSS/MLSS Ratio	%	0.85	---
Estimated WAS VSS	lbs/day	---	9,742
Pure Biomass/WAS VSS Ratio	%	0.50	---
Estimated Pure Biomass	lbs/day	---	4,871
Nitrogen Assimulated	%	12.2%	---
Nitrogen Assimulated	lbs/day	---	594
Phosphorus Assimulated	%	2.3%	---
Phosphorus Assimulated	lbs/day	---	112

(3) Removal assumes that all BOD and TSS is removed through the treatment process and the final effluent CBOD and TSS are mostly an artifact of cellular debris.

a. For TN and TP, the annual pounds removed is the raw influent loading minus the final effluent loading. Nutrient assimilation in the biological treatment process is considered part of the removal process.

Table 5
PAWC Coatesville Wastewater Treatment Plant
High Strength Wastewater Surcharge Rate Evaluation

Cost of Removal Summary
January 1, 2018 through December 31, 2018

Pollutant of Concern	Annual Cost of Removal (1)	Annual Pounds Removed (2)	Cost per Pound Removed (3)
BOD	$1,146,410	3,499,983	$0.33
TSS	$896,900	4,584,501	$0.20
TN	$116,480	113,485	$1.03
TP	$62,300	30,900	$2.02

Notes:

(1) Annual Cost of Removal from *Table 3*.

(2) Annual Pounds Removed based from *Table 4*.

(3) Cost of Removal = Yearly Cost of Pollutant Removed / Yearly Pounds of Pollutant Removed.

Notes:

(1) Operating costs from *Table 1*.

(2) The costs for BOD and TN removal in the secondary treatment process are based on the rate of oxygen demand assuming 1.5 lbs O_2 / lb BOD and 4.6 lbs O_2 / lb NH_3-N.

(3) The allocation of secondary clarification cost is distributed between BOD, TSS, NH3-N based on the estimated contribution of each to solids production. The costs for BOD and NH_3-N removal in the secondary clarifiers are based on the rate of oxygen demand while TSS contribution is estimated based on the primary clarifier influent TSS loading.

(4) Solids generated consist of influent solids, excess cell mass production as a direct result of the metabolism of BOD and TN, as well as chemical sludge from TP removal in the secondary treatment process. The allocation of solids handling cost is therefore distributed between BOD, TSS, TN, and TP based on the estimated contribution of each to solids production. Solids production is estimated based on the raw influent TSS loadings and the waste activated sludge loadings as outlined in*Table 4*.

Table 4
PAWC Coatesville Wastewater Treatment Plant
High Strength Wastewater Surcharge Rate Evaluation

Annual WWTP Operations Summary
January 1, 2019 through December 31, 2019

Pollutant of Concern	Raw Influent (1a)		Hauled Septage (1b)		Total Combined Process Loadings (1c)		Biological Assimulation (2)	Final Effluent (1)		Removal (3)	
	mg/L	lbs/day	mg/L	lbs/day	mg/L	lbs/day	lbs/day	mg/L	lbs/day	lbs/day	lbs/year
BOD	371	10,364	2,000	1,169	396	11,533	---	2	71	11,533	4,209,699
TSS	379	10,576	1,000	585	384	11,161	---	4	125	11,161	4,073,778
TN	41.8	1,168	100.0	58	42.2	1,227	700	4.6	138.7	388	141,577
TP	7.8	219	20.0	12	7.9	231	132	0.2	6.6	92	33,582

Notes:

(1) Raw Influent and Final Effluent average concentrations and loadings as reported for 2019

a. Raw Influent concentrations and loadings do not include hauled waste contributions.

b. Hauled septage average equivalent concentrations are based on literature value estimates. Loadings are estimated using annual average hauled waste volume in 1d.

c. Total Combined Process Loadings are the sum of the raw wastewater and the hauled septage loadings.

d. Annual average daily flows utilized to calculate the equivalent process loadings concentrations:

Raw Influent: 3.419 mgd
Hauled Waste: 0.070 mgd

(2) Biological assimulation is estimated based on the following assumptions:

Parameter	Unit	Input	Calculation
WAS	mgd	0.183	---
WAS TSS	mg/L	8,869	---
WAS	lbs/day	---	13,506
MLVSS/MLSS Ratio	%	0.85	---
Estimated WAS VSS	lbs/day	---	11,480
Pure Biomass/WAS VSS Ratio	%	0.50	---
Estimated Pure Biomass	lbs/day	---	5,740
Nitrogen Assimulated	%	12.2%	---
Nitrogen Assimulated	lbs/day	---	700
Phosphorus Assimulated	%	2.3%	---
Phosphorus Assimulated	lbs/day	---	132

(3) Removal assumes that all BOD and TSS is removed through the treatment process and the final effluent CBOD and TSS are mostly an artifact of cellular debris.

a. For TN and TP, the annual pounds removed is the raw influent loading minus the final effluent loading. Nutrient assimilation in the biological treatment process is considered part of the removal process.

Table 5
PAWC Coatesville Wastewater Treatment Plant
High Strength Wastewater Surcharge Rate Evaluation

Cost of Removal Summary
January 1, 2019 through December 31, 2019

Pollutant of Concern	Annual Cost of Removal (1)	Annual Pounds Removed (2)	Cost per Pound Removed (3)
BOD	$1,368,510	4,209,699	$0.33
TSS	$794,980	4,073,778	$0.20
TN	$142,810	141,577	$1.01
TP	$70,810	33,582	$2.11

Notes:

(1) Annual Cost of Removal from *Table 3*.

(2) Annual Pounds Removed based from *Table 4*.

(3) Cost of Removal = Yearly Cost of Pollutant Removed / Yearly Pounds of Pollutant Removed.

VI. Conclusion 54

PENNSYLVANIA-AMERICAN WATER COMPANY

REBUTTAL TESTIMONY OF JAMES RUNZER

I.

INTRODUCTION AND PURPOSE OF TESTIMONY

Q. Please state your name and address for the record.

A. James Runzer, 852 Wesley Drive, Mechanicsburg, PA 17055.

Q. By whom are you employed and in what capacity?

A. I am employed by Pennsylvania-American Water Company ("PAWC or "Company") as the Vice President – Operations.

Q. Have you submitted any other testimony in this proceeding?

A. Yes, I submitted PAWC Statement No. 2.

Q. What is the purpose of your rebuttal testimony in this proceeding?

A. My rebuttal testimony will address the following areas:

(1) I will respond to the direct testimony of Ralph C. Smith on behalf of the Office of Consumer Advocate ("OCA"), the direct testimony of Kevin Higgins on behalf of the Office of Small Business Advocate ("OSBA"), and the direct testimony of Billie S. LaConte on behalf of the Pennsylvania-American Water Large Users Group ("PAWLUG"), regarding proposed adjustments to the Company's Annual Performance Plan and Long-Term Performance Plan costs; (2) I will respond to the direct testimony of Barbara Alexander of the OCA and the direct testimony of Terry L. Fought of the OCA regarding their recommendations concerning customer notification and education on

pressure reducing valves; (3) I will respond to the service-related issues and water-quality issues raised in direct testimony of the Honorable Paige G. Cognetti, Mayor, City of Scranton, in the direct testimony of State Representative Kyle Donahue, in the direct testimony of Terry L. Fought of the OCA and in formal complaints filed in this proceeding; and (4) I will respond to the supplemental direct testimony of Terry L. Fought of the OCA and address issues raised at the public input hearings regarding service-related issues or water-quality issues.

II.

PERFORMANCE BASED COMPENSATION AND EMPLOYEE BENEFITS

Q. What is the Company's compensation philosophy?

A. As I explained in my direct testimony, PAWC aims to offer compensation that allows it to attract, motivate and retain customer-committed, dedicated and highly qualified employees needed to successfully run the business. The Company's overall compensation philosophy is to provide employees with a total compensation package that is market based and competitive with those of comparable organizations with jobs of similar responsibility.

Q. Is providing appropriate levels of compensation to employees critical to the Company's ability to continue to provide safe and adequate service?

A. Yes, it is. Competition among companies to attract and retain the best and highest performing employees is keen. In recruiting new employees or retaining existing employees, both the Company and American Water compete with general industry in surrounding regions and nationally. The Company's compensation program seeks to provide employees with a total compensation package on par with those offered by companies with which it competes for employees. While no evidence has been submitted

to challenge the reasonableness of our total compensation, some witnesses dispute how the Company provides part of this compensation, specifically disputing the portion that is awarded through performance pay tied to financial goals or metrics. I do not believe it is reasonable to split out a portion of a reasonable cost and disallow its recovery just because a party disagrees about how the cost is incurred.

Q. Why is it inappropriate to disallow recovery of a portion of reasonable market-based employee compensation simply because part of it is awarded through a performance pay component?

A. The Company should be entitled to recover those expenses reasonably necessary to provide service. Employee compensation is a reasonably necessary cost of providing utility service and the Company should recover those costs through rates just like any other operating costs provided the total expense is reasonable and prudently incurred. So, the Commission should rightly be concerned when total market-based employee compensation is too high, which may unreasonably increase rates, and when employee compensation is too low, which may impact service to customers. The Commission's focus should be on the reasonableness of the Company's overall level of total compensation, giving management the discretion to design a market competitive compensation package that is best structured to compensate employees properly and to motivate efficiency, safety, courtesy and other valuable employee traits. If the Company's overall compensation level is reasonable, regardless of whether it includes a combination of fixed and variable payments that the employees earn, then the Company's overall compensation expense is reasonable and prudently incurred and should be recoverable. It is inappropriate to

disallow a component of that cost simply because it doesn't comport with Mr. Higgins or Ms. LaConte's view of how employee compensation should be structured.

Q. Please summarize adjustments to the Company's Annual Performance Plan and Long-Term Performance Plan costs recommended by Mr. Kevin C. Higgins, Ms. Billie S. LaConte and Mr. Ralph Smith.

A. Mr. Higgins recommends that the Commission remove fifty percent (50%) of claimed Annual Performance Plan ("APP") expense based on the weight of the earnings per share ("EPS") goal in the APP calculation and disallow Long-Term Performance Plan ("LTPP") awards, which he contends should be funded entirely by shareholders, because (1) the performance stock unit ("PSU") component is directly tied to American Water financial performance and (2) the restricted stock unit ("RSU") component is based on continued employment with the Company rather than customer-related goals such as drinking water quality or customer satisfaction (Higgins Direct, pp. 10-13). Ms. LaConte recommends that the Commission disallow 100% of the proposed performance based compensation costs tied to meeting financial targets (approximately $2 million in the fully projected future test year) (LaConte Direct, p. 9). Mr. Smith recommends removal of the portion of stock-based compensation (LTPP) expense paid to American Water's "top executives" (Smith, p. 66) as well as removal of the Dividend Equivalents portion of "Other Compensation" paid to American Water executives (Smith, pp. 70-72).

Q. Do you agree with Mr. Higgins and Ms. LaConte's recommendations regarding the Company's APP and LTPP?

A. No. The focus should be on the reasonableness of the total compensation expense. No party contests that the Company's total market-based employee compensation, including

performance pay, is reasonable. Rather than dispute the reasonableness of the total compensation expense, Mr. Higgins and Ms. LaConte dispute the recoverability of the performance pay portion based on their assessment of who accrues benefits from the costs being incurred. Most costs incurred by a utility benefit both customers (due to the service enabled by the expense) and other parties (who may benefit in some way by providing the service). Notably, PAWC's performance-based compensation expense, including APP and LTPP, was recently reviewed and approved by the Commission in PAWC's 2020 base rate proceeding. The Commission found, among other things, that "the performance compensation program establishes that the employees' eligibility to receive the benefit is based on performance duties and metrics directly related to the provision of service; the fact that the program includes a financial metric does not disqualify it from allowance as an expense for inclusion in the rate base."[1]

Mr. Higgins and Ms. La Conte believe that performance compensation primarily benefits shareholders, but they conveniently ignore the numerous benefits that inure to customers, among them the ability to attract, motivate and retain skilled employees. The Company's compensation structure benefits several parties, including customers, employees and shareholders. Making the adjustment they recommend would not be in the long-term interest of our customers because it would remove the strong incentive APP and LTPP provide employees to proactively work towards efficiency. In my experience, the APP and LTPP metrics (including financial metrics) focus employees on managing the business more efficiently and benefit customers.

[1] PA PUC v. Pennsylvania-American Water Company, Docket Nos. R-2020-3019369 and R-2020-3019371 (Order entered Feb. 25, 2021), p. 53.

Q. How do the financial goals of the APP and the LTPP benefit customers?

A. The financial goals of the APP and LTPP are complementary to the operational goals and benefit customers in many ways. Achieving financial goals, such as targeted EPS, requires attention to operating efficiency. That is, unless the utility controls its operating costs, it likely will not achieve a targeted EPS. Financial goal-based performance pay thus ensures that employees at all levels of the organization, and not just the upper ranks, remain focused on increasing efficiency, decreasing waste, and boosting overall productivity. Incentivizing employees to control operating costs benefits customers, because doing so mitigates increases in costs ultimately collected in rates. Consequently, when financial performance is achieved through efficiency, as is the case for the Company, the interests of customers, employees, and investors are aligned.

Q. Does incentivizing employees to control and reduce operating costs provide other customer benefits?

A. Yes. Where PAWC can reduce operating expenses, it can increase investment in infrastructure without increasing rates, because every dollar of operating expenses saved can fund approximately $8 of investment. Therefore, customers also benefit from PAWC's enhanced ability to invest in the infrastructure to continue to meet its service obligations to customers.

Q. Is there other evidence of the tangible benefit to customers from PAWC's performance pay programs?

A. Yes. Again, it is important to consider the impact a utility's financial health has on its access to capital at reasonable rates. A financially healthy utility focused on efficiency can attract the capital investments necessary to continue to provide safe and reliable service

and to maintain the technological expertise necessary to operate the Company and comply with increasing water quality standards. In fact, PAWC's demonstrated ability to access lower cost debt and internal funds to finance water infrastructure investment has mitigated the financing costs that customers ultimately pay through rates (PAWC Statement No. 13. pp. 58-59; 73-74). The availability of those sources of capital at reasonable costs, however, depends on the utility's financial performance, including credit and bond ratings. So, it is important to focus utility employees on the financial health of the organization. Because utilities are capital intensive and must routinely and consistently access the capital markets, customers ultimately benefit when their utility has the financial health to do so at reasonable rates. Simply put, a financially healthy utility benefits customers because it enables the utility to meet its service obligations at reasonable financing costs.

Q. Ms. LaConte recommends that the Commission disallow 100% of the proposed performance-based compensation costs tied to meeting financial targets. Is the restricted stock unit ("RSU") component of the LTPP tied to any financial metric?

A. No, it is not. RSUs are not "linked to financial goals and targets," but vest in equal increments in the three years following the year in which the RSUs were granted, subject to continued employment through each vesting date. As will be discussed below, retaining well-trained, talented employees directly benefits PAWC customers.

Q. How do you respond to Mr. Higgins' assertion that the RSU component of the LTPP should be rejected because it is based on continued employment with the Company rather than customer-related goals such as drinking water quality or customer satisfaction (Higgins Direct, pp. 10-13)?

A. Mr. Higgins fails to recognize the benefit of having a compensation program that includes a time-based vesting component. Long-term performance pay programs, like the LTPP, are particularly intended to reduce attrition at the higher ranks of the organization. The LTPP, including the RSU component, helps retain talented employees – which, of course, directly benefits customers who have a vested interest in a well-trained, motivated, experienced, and stable workforce. As such, these types of performance pay programs are well-accepted in the industry. Importantly, the LTPP achieves its goals of reducing leadership attrition at a lower cost to customers than simply increasing leadership's base pay, because performance pay under the LTPP is stock-based. Because stock-based compensation vests on a phased basis in three installments over a prospective three-year period, employees must remain with the organization to realize the vesting of their awards.

In addition, maintaining a stable and experienced leadership team has benefits from an operational standpoint, allowing continuity of management of operational programs and personnel, which in turn promotes safe and reliable service and ongoing improvements in efficiency. A stable team also avoids the costs of employee turnover, which can result in lost investment in employee training and the incurrence of costs for employee replacement, such as recruiting, hiring, and new training costs.

Q. Mr. Smith does not recommend removing all stock-based compensation, but only that which is paid to American Water's "top executives." He further recommends removal of the Dividend Equivalents portion of "Other Compensation" paid to American Water executives. Do you agree with his recommendations?

A. I do not agree with Mr. Smith that some portion of the full, market-based compensation expenses for "top executives" should be excluded from the Company's revenue requirement.[2] The Company performs market-based analysis of the compensation of all of its employees, including "top executives", to ensure total compensation is reasonable and market-based. I have already discussed why it is necessary to provide full market-based compensation to our employees. Like all other employees, these "top executives" are necessary to enable the Company to manage the provision of safe and reliable water and wastewater service to customers. Maintaining leadership level employees benefits customers by retaining experienced, high quality employees that understand and support the Company effectively and efficiently. American Water executives also help promote enterprise-wide initiatives (adopted by PAWC) that help maintain a safe and inclusive work environment, promote environmental compliance and stewardship, and improve water and wastewater efficiency, many of which I discussed in my direct testimony. No party has presented evidence that the "top executives" or other employees could be attracted and retained at levels significantly below this total compensation expense. The question should be whether the total compensation is reasonable and market-based. The total compensation expense for the Company's employees, including "top executives", is reasonable and market-based and should be recovered through rates as a necessary expense of serving customers. For the "top executives", this analysis is detailed as part of American Water Works' 2023 Proxy Statement available at American-Water-Works-Company-Inc-2023-Proxy-Statement.pdf (q4cdn.com).

[2] Mr. Smith's definition of "top executives" includes those Service Company employees identified in response to OCA 17-001, which is appended to Mr. Smith's testimony in Confidential Exhibit LA-4. The definition includes the President, Chief Executive Officer, Chief Operating Officer, Chief Financial Officer, and General Counsel.

Instead of disputing the reasonableness of the total compensation level, Mr. Smith takes issue with the manner in which part of this total compensation is provided—specifically the stock-based compensation, including the dividend equivalents associated with it. The design of pieces of the total compensation should not matter in evaluating whether the total expense is necessary to attract and retain talent, but it is worth recognizing that significant benefits accrue to utility customers and utility investors from utilizing stock-based compensation as a portion of the total compensation. Both customers and utility investors benefit from awarding a portion of the total compensation as stock-based compensation because this structure incentives utility employees to manage the business in a healthy manner. A financially healthy business enables access to capital markets at a lower cost than businesses that are not financially healthy must incur, and in a capital-intensive business like the water and wastewater business, customers benefit from these lower costs. Mr. Smith's perspective that stock-based compensation only serves to align the interests of "top executives" with investors is too narrow and ignores the benefits customers reap from a utility that satisfies the reasonable expectations of investors.

III.

RESPONDING TO OCA TESTIMONY REGARDING PRESSURE REDUCING VALVES

Q. Did OCA Witness Alexander make any comments regarding notification and education to customers on pressure reducing valves ("PRVs")?

A. Yes, she did.

Q. Briefly describe Ms. Alexander's comments.

A. On page 43 of her testimony, Ms. Alexander stated that she "recommends that PAWC develop a customer education program concerning pressure reducing values, when they are appropriate, how they work, and what consumers should do to monitor their performance for safety and reliability of water service from PAWC. This program should include a consideration of customer-specific communications relating to complaints about water pressure, general customer information on PAWC's website, and potentially bill inserts. PAWC should develop this outreach and education program as a compliance filing in this proceeding after review and input from stakeholders" (Alexander Direct, p. 43).

Q. Do you agree with Ms. Alexander's recommendation?

A. No, I do not. Rule 4.7 of the Company's tariff outlines the requirement for customers to install and maintain a pressure reducing valve if the pressure at their service location exceeds 100 pounds per square inch ("psi"). PAWC's field service representatives already educate customers in the field regarding this tariff requirement, which only impacts a small percentage of customers. Because a targeted education occurs in the field already, there is no need to develop a comprehensive customer outreach and education plan for an issue that only impacts a limited number of customers.

Q. Did OCA Witness Fought make any comments regarding household operating pressures?

A. Yes. Mr. Fought requests that PAWC identify households with normal operating pressures that exceed 125 psi and inform those customers when to replace their PRVs.

Q. Do you agree with Mr. Fought's recommendation?

A. No. It is not within the Company's scope of operations to identify the pressure of every individual customer's home. The Company is responsible for identifying the pressure on the main up until the curb. Because service lines entering the home are customer-owned, customers should seek advice from a licensed plumber if they are concerned about the water pressure entering their home. In addition, a licensed plumber or PRV manufacturers would be in the better position to answer questions regarding a customer's PRV.

Q. Did Mr. Fought provide any additional testimony regarding PRVs?

A. Yes. Mr. Fought recommends that the Company should provide the pressure available at its water main to customers to allow them to make sure that their plumber is providing an acceptable PRV or expansion tank. He further notes that the Company should record this information as part of its Complaint Log related to pressure complaints to ensure the Company is able to review its responses to customers in these situations.

Q. Do you agree with Mr. Fought's recommendation regarding providing pressure available at its water main to the customer and recording it in the Complaint Log?

A. Yes, I do. The Company already records all pressure information and reports it to the Commission for pressure complaints. The Complaint Log currently contains the date the complaint was received, date report was sent to the Commission's Bureau of Consumer Services ("BCS"), customer account number, BCS case number, turnaround time, complaint type, customer name, analyst assigned to work the case, report type submitted to BCS, informal code (category), comments, customer address, Company region and district, the customer's written complaint, and the BCS decision and decision received date. When the Company takes a pressure reading, the Company will record the pressure available at the water main in a Complaint Log and provide that pressure reading to

customers, upon request. In addition, the Company investigates every pressure complaint and agrees to record the pressure on the main on its Complaint Log.

IV.

SERVICE-RELATED ISSUES AND WATER QUALITY ISSUES RAISED IN DIRECT TESTIMONY OF HON. PAIGE G. COGNETTI, MAYOR, CITY OF SCRANTON, STATE REPRESENTATIVE KYLE DONAHUE, AND FORMAL COMPLAINTS

Q. What are the categories of formal complaints that PAWC received as part of this rate proceeding?

A. The formal complaints PAWC received as part of this rate proceeding can be broken down into three (3) categories: (1) water quality complaints, (2) field service or water service complaints, and (3) rates-related complaints.

Q. For water quality-related formal complaints, what are some types of complaints that PAWC received, and how are they typically addressed?

A. For all water quality formal complaints, the Company follows standard operating procedures attached as PAWC Exhibit JR-1R ("Water Quality SOP"). Although the Company follows the processes detailed in its Water Quality SOP, each complaint is unique and the Company recognizes the need to address each complaint individually. Below are descriptions of the types of complaints typically received, why these types of complaints typically arise, and how the Company typically responds and resolves the issue for our customers.

• **Taste** – General taste complaints are typically related to system maintenance. We respond by first speaking with the customer and figuring out what may be causing their issue. We try to resolve the issue by customer education, flushing, and/or sample collection.

• **Rotten Egg Odor** – This type of complaint is typically related to internal plumbing issues. Our water quality team responds by phone call and resolves the issue by educating the customer on general interior drain line/trap maintenance.

• **Odor/Taste, Chlorine** – This type of complaint is typically related to water temperature changes and customers not understanding our treatment process. Our water quality team responds by phone call and resolves the issue by educating customers on the regulatory requirements around proper distribution system disinfection. If a customer expresses further concern, we will collect a sample at their property and test the chlorine residual.

• **Odor/Taste, Earthy/Musty** – This type of complaint is typically related to dead ends and parts of our system with low water usage. Spikes in complaints can increase during hot weather months where water temperatures are elevated, times of low rain fall and increased organics in our source water. These types of issues are usually resolved by flushing our system and turning over the water. If the complaints are directly tied to source water issues, some of our plants have the option to add powered activated carbon to minimize taste and odor compounds.

• **Slippery/Slimy** – These types of complaints are not typical and are usually a result of internal plumbing. We typically respond with a phone call to the customer. If we are unsure of what the cause is, we will collect a sample from the premise.

• **Particles/Sediments** – This type of complaint is typically related to main line work, flushing lines or leaks in the system. Typically, we respond by asking the customers to flush internally and we flush their street externally.

• **Hard Water** – This type of complaint is typically related to chalky white residue on faucets and showerheads, a buildup of soap scum in bathtubs or shower walls, calcium

deposits inside water using appliances, and spotty dishes. Water hardness is an aesthetic quality of water and is caused mostly by the minerals calcium and magnesium, which are naturally occurring in ground and surface water. The U.S. Environmental Protection Agency (EPA) has not set a maximum contaminant level (MCL) for hardness in water, primarily because the components that contribute to hardness are not toxic; that is, they do not cause harmful health effects.

• **Stained Laundry** – This type of complaint is typically related to flushing or main line repairs. Typically, we send out a code red notice to the customers ahead of such work and ask them to refrain from washing laundry during this time. Our response to this may vary dependent on the specific scenario. Any customers with alleged property damage are referred to our insurance claims department for further investigation of their claims.

• **Cloudy Water, Air/Milky/White –** Typically these types of complaints are tied to trapped air in lines after system maintenance. Cloudy water can also be caused by extreme water temperature changes. These complaints are resolved by asking the customer to flush internally. If the cloudy water is due to a change in water temperature, we educate the customer on why it is happening.

• **Iron, Moving Organisms, Colored Water** – These types of complaints are typically the result of internal plumbing issues. Iron complaints could be a result of old water age, but that is determined by speaking with the customer. These complaints are resolved by talking with the customer.

Q. For all field service-related formal complaints, how does PAWC typically respond to those concerns?

A. For all field service-related formal complaints where field investigations are required, a work order is created, then a field service representative will go out to the customer's premise and investigate the concern, which may entail checking for leaks and/or water-service issues. All of these interactions are recorded in the Company's system of record, Customer One View (C1V), and are subsequently linked to SAP in order to manage to resolution. Achieving a resolution may also result in the involvement of a different department within the Company if further action is needed. The notes from the field service representative are added to the customer's account and available to different departments that may be responsible for addressing the customer's issue.

Q. For all rates-related formal complaints, how does PAWC typically respond to those concerns?

A. For all rates-related formal complaints, the Commission is in the process of evaluating whether the overall rate increase and rate proposals are just and reasonable, which will address these complaints. While the concerns expressed in the rates-related complaints are outside the scope of my testimony, I am aware that some of the Company's rates proposals set forth in this case, such as winter averaging as discussed by PAWC Witness Mr. Rea, directly address the concerns of several formal complainants.

Q. Please respond to the specific customer complaints listed by Hon. Paige G. Cognetti in her Direct Testimony.

A. Ms. Cognetti alleged in her Direct Testimony that their "residents have also been experiencing 'dirty' water that has been discolored and/or chemical taste on a periodic basis." (City of Scranton, p. 6). PAWC is responsive to any complaints that are received within the City of Scranton and we are continuing to invest in the aging infrastructure

within this system. In PAWC Statement No 3-R, PAWC Witness Aiton describes in detail the investments that PAWC has made since acquiring the Scranton wastewater system from the Scranton Sewer Authority in 2016. In 2023, PAWC invested $45 million in infrastructure in the City of Scranton and anticipates investing $53 million in 2024.

Q. Please respond to the customer complaints listed by State Representative Kyle Donahue in his direct testimony regarding the quality of water.

A. Mr. Donahue alleged in his Direct Testimony that the residents of his district contact his offices with complaints regarding the quality of water and that "it is obvious that dirty water is a problem in my district." (Donahue, p. 6). PAWC is responsive to any complaints that are received within Mr. Donahue's service territory and we are continuing to invest in the aging infrastructure within this system. In 2023, PAWC invested $175 million total in the Wilkes-Barre/Scranton District. In 2024, PAWC anticipates the same level of investment.

Q. Please respond to the customer complaints listed by State Representative Kyle Donahue in his direct testimony regarding the protection plans on the service line of the customer.

A. Mr. Donahue alleged in his Direct Testimony that the residents of his district contact his offices with complaints regarding the protection plans that "are billed by PAWC but they sub-contract to repair service to a third party. The sub-contractors take days to respond to customer complaints." (Donahue, p. 6). The protection plan Mr. Donahue references are provided by American Water Resources ("AWR"), a separate company no longer affiliated with PAWC. Although charges for AWR's services appear as a separate line item on the bill for PAWC customers who voluntarily opt into the line protection service offered by

AWR, PAWC has no control over AWR's response time, quality of service, pricing, or any other aspect of AWR's business. PAWC Witness Degillio describes PAWC's relationship with AWR in more detail in PAWC St. No. 09-R.

Q. Please respond to Mr. Fought's request in his direct testimony for information addressing an event in February 2023 identified in PAWC's Complaint Log.

A. The Company provided the requested information in response to OCA 29-001. A copy of the Company's response to OCA 29-001 is attached as PAWC Exhibit JR-2R.

V.

RESPONSES TO SUPPLEMENTAL DIRECT TESTIMONY FROM OCA WITNESS FOUGHT BASED ON PUBLIC INPUT HEARINGS

Q. In responding to customer issues raised at the public input hearings, does the Company follow similar processes as those described in Section IV of your rebuttal testimony?

A. Yes. The Company follows the same resolution processes outlined previously.

A. Lissa Ludinich

Q. What service-related issues were raised by Lissa Ludinich at the public input hearing held on January 29, 2024 and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Ludinich raised concerns regarding metal plates from work performed on her street (28th Street in McKeesport).

Q. Has the Company taken any actions to address the concerns of Ms. Ludinich?

A. Yes. In response to concerns noted in Ms. Ludinich's testimony, PAWC staff spoke to Ms. Ludinich on January 30, 2024, about her concern of multiple metal road plates on her

street. The PAWC representative explained to Ms. Ludinich that the City of McKeesport put the plates down and that PAWC does not own or control the metal road plates. The PAWC representative also explained that our main sewer line in the street has been repaired by lining it and there are no issues with that pipe, and explained that the lateral lines coming from the homes to the main sewer line are the responsibility and ownership of the homeowner.

B. Julian Thomas

Q. What service-related issues were raised by Julian Thomas at the public input hearing held on January 29, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Thomas testified on behalf of himself, and a small online organization called "American-Water Concerned Citizens". Mr. Thomas raised concerns about customers' water being shut off without notice and sewage bills being automatically generated when a customer moves into Westmoreland water service territory.

Q. How does the Company respond to the concerns of Mr. Thomas?

A. In responses to Mr. Thomas's concerns that customers' water service is being shut off without notice, PAWC has agreements with the Municipal Authority of Westmoreland County ("Westmoreland") (filed at Docket No. U-2018-3003921) as well as the City of Duquesne ("Duquesne") (filed at Docket No. U-2020-3019190), that allow for the termination of water services for delinquent sewer customers of PAWC. Pursuant to the terms of these agreements, termination cannot occur without notice being provided to the customer. Additionally, PAWC follows all Commission regulations relating to termination of wastewater service. Regarding Mr. Thomas's concerns about how bills are generated for

new customers, the Company's tariff permits PAWC to use the water customers' information to start a contract for sewer. When the Company receives data from Westmoreland or Duquesne, pursuant to its usage data agreements with each entity, a new sewer contract is started, and corresponding wastewater bills are then generated for the new customer.

C. Christopher Paone

Q. What service-related issues were raised by Christopher Paone at the public input hearing held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Paone testified that there are concerns over Borough and Company cooperation as it relates to upgrading infrastructure, repair and maintenance of water mains, and the restoration of the roadways.

Q. Has the Company taken any actions to address the concerns of Mr. Paone?

A. Yes. A PAWC representative spoke with Mr. Paone on January 31, 2024, to discuss his concerns about a recently completed temporary restoration. PAWC is currently addressing the concerns of Mr. Paone. The PAWC representative also discussed setting up quarterly touch-base meetings to review upcoming projects scheduled in the Borough, and to address any concerns raised by the Borough and/or their constituents. The first meeting is scheduled for February 26, 2024.

D. Mary Tanealian

Q. What water quality related issues were raised by Mary Tanealian at the public input hearing held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Tanealian stated that (1) the water quality is poor; (2) she does not drink the water; (3) she does not make ice with the water; (4) she buys bottled water due to the taste of the water.

Q. Has the Company taken any actions to address the concerns of Ms. Tanealian?

A. Yes. In response to the concerns noted in Ms. Tanealian's testimony, PAWC staff spoke to Ms. Tanealian on February 1, 2024. Ms. Tanelian indicated that when she first moved into her home in 2021, she noticed that ice made with the tap water imparted an off taste to her drinks. Ms. Tanealian indicated that her family has not used tap water for ice since then, so she cannot speak to the taste at this point. She was thankful for the dialogue with a PAWC representative about her concerns.

E. <u>Stephen Nelson</u>

Q. What water quality related issues were raised by Mr. Nelson at the public input hearing held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Nelson indicated that (1) the water is not good to drink; (2) the water is not clear in their coffee pot; (3) there is so much chlorine in the water.

Q. Has the Company taken any actions to address the concerns of Mr. Nelson?

A. Yes. In response to the concerns noted in Mr. Nelson's testimony, PAWC staff spoke to Mr. Nelson on February 1, 2024, about the quality of water being provided. The PAWC representative explained that cloudy water complaints are tied to trapped air in lines after system maintenance and can also be caused by extreme water temperature changes. The PAWC representative also explained that taste and/or odor complaints of chlorine is typically related to water temperature changes and customers not understanding our

treatment process that it is required by the EPA and DEP for disinfection protection. The PAWC representative offered to collect a sample at their property and test the chlorine residual, but the customer declined.

F. James McDermott

Q. What water quality related issues were raised by James McDermott at the public input hearing held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. McDermott indicated that he uses bottled water to drink, make ice, and to make coffee and displayed the status of his whole house filter during the input hearing.

Q. Has the Company taken any actions to address the concerns of Mr. McDermott?

A. Yes. In response to the concerns noted in Mr. McDermott's testimony, PAWC staff spoke to Mr. McDermott on February 1, 2024, about the quality of water being provided to him. The PAWC representative and Mr. McDermott first started discussing his whole house filter. Mr. McDermott indicated that he has had the whole house filter for about 35 years, and that he replaces the filter about every 1.5 to 2 months, and that the filter will be brown when he replaces it. The PAWC representative explained that some potential causes of discolored water complaints are typically related to main line work, flushing lines or leaks in the system. Mr. McDermott also indicated during this discussion that he would sometimes see some color in the water that wouldn't last long and the PAWC representative explained that when customers see discolored water, we encourage customers to flush internally, and that the color is an aesthetic and is a part of our water treatment plant process in regards to meeting and exceeding regulatory standards in conjunction with our Partnership for Safe Water. The Partnership for Safe Water is the partnership of American

Water Works Association, the Association of Metropolitan Water Agencies, Association of State Drinking Water Administrators, the EPA, the National Association of Water Companies, and the Water Research Foundation which has the mission to improve the quality of water delivered to customers by optimizing water system operations. As explained in my direct testimony, PAWC participates in the Partnership for Safe Water treatment optimization program and accounts for 50% of the highest-level award-winning treatment plants in that program. (PAWC St. No. 2, at 5). Mr. McDermott also indicated that his family consumes bottled water and uses their Brita pitcher for their coffee water. The PAWC representative offered Mr. McDermott a Company representative who would come to his home and collect a sample. On February 5, 2024, a PAWC representative sampled Mr. McDermott's water, and results were within the limits. The PAWC representative provided an explanation to Mr. McDermott that because of the whole house filter that could not be bypassed for the sample, there could be potential impact on results. The PAWC representative contacted the customer and left a message with the results and his callback number.

G. <u>John Borer</u>

Q. What water quality related issues were raised by John Borer at the public input hearing held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Borer testified that in November 2023 he had a whole wash load of laundry ruined by water with rust and stains.

Q. Has the Company taken any action to address the concerns of Mr. Borer?

A. Yes. In response to the concerns noted in Mr. Borer's testimony, PAWC staff spoke to Mr. Borer on February 1, 2024, about his concerns with the quality of water being provided. The PAWC representative indicated to Mr. Borer that stained laundry complaints are typically related to flushing or main line repairs, but can also include fire hydrant usage. In regards to his request for laundry stain remover to be provided by PAWC, the Company representative explained that PAWC does not provide the detergent and explained the chemical referenced by the customer is aggressive and has hazardous components that could pose a customer risk if used improperly. A PAWC representative offered to sample Mr. Borer's water to address any of his concerns, but Mr. Borer declined.

H. <u>Theresa Fagerlyn</u>

Q. What water quality related issues were raised by Theresa Fagerlyn at the public input hearing held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Fagerlyn testified that she filled her pool with cloudy water and took a sample to a pool place that said the pH and chlorine were off. She further testified that a Company employee said the water looks fine but would not drink the water.

Q. Has the Company taken any action to address the concerns of Ms. Fagerlyn?

A. Yes. In response to Ms. Fagerlyn's testimony, PAWC staff spoke to Ms. Fagerlyn on February 1, 2024, about her concerns with the quality of water being provided. The PAWC representative discussed her experience with filling her pool during the summer in 2023 and finding the water cloudy, prompting her to take a sample to a pool store, and the results were high for alkalinity and pH. During that time, a PAWC representative went to her home and tested her water, and the results were normal. During the discussions on

February 1, 2024, Ms. Fagerlyn noted that she recalls that there was work being done in her area at the time that they filled their pool, and that she and her husband thought that the work may have caused the cloudiness. The PAWC representative confirmed with Ms. Fagerlyn that normally the water was fine and was fine at the time of their conversation. The PAWC representative offered to come back out to her premise and take an additional sample, but the customer agreed that if she experiences cloudiness or other issues in the future, she will call the customer service number with the issue, prior to going to the pool store, so PAWC can assess the circumstances at that time.

I. <u>David Bergerhoff</u>

Q. What water quality related issues were raised by David Bergerhoff at the public input hearings held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Bergerhoff testified that (1) the water is dirty and has been dirty for a long time and; (2) his stomachaches stopped when he quit drinking coffee made with Company water.

Q. Has the Company taken any action to address the concerns of Mr. Bergerhoff?

A. Yes. A PAWC representative contacted Mr. Bergerhoff to address his concerns. The PAWC representative explained the need to chlorinate the water provided to our customers, and that the Company routinely tests the water in the service area to assure the water is within drinking standards. The PAWC representative offered Mr. Bergerhoff to come out and sample his water, but he declined. Mr. Bergerhoff was satisfied with the interaction with the PAWC representative.

J. Janet Brier

Q. What water quality and or service issues were raised by Councilwoman Janet Brier at the public input hearings held on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Brier testified that: (1) when the water main burst on Grove Street in Dunmore on Thanksgiving Day, November 23, 2023, the water inundated houses on the 1200 block of Monroe Avenue, destroying basements and driveways; (2) a family of four with two toddlers was displaced for two months; (3) flooding had occurred several times previously in that exact location in 2021 and 2022; (4) on those occasions, the homeowner said that the representative from PAWC told them it would never be fixed because it was too expensive; (5) when PAWC finally put dye down the manhole behind the garage, the dye came right back up because it had no place to go; (6) the family still has not been made whole; (7) the back fence is still broken; (8) the finished basement is still without walls or flooring; (9) they have no washer or dryer or playroom; (10) the homeowner also questioned how much the value of his house has declined.

Q. Has the Company taken any action to address the concerns of Ms. Brier?

A. Yes. A PAWC representative was in contact with Councilwoman Brier on January 31, 2024, and she was provided with an update on each affected homeowner. Councilwoman Brier had concerns related to restoration in the yard of a constituent as a result of the sewer work. The PAWC representative assured her that the restoration would be completed, including fence installation, topsoil and seed, in the spring. Councilwoman Brier also expressed concerns about the timeline for her constituent's basement restoration after the water main break. The PAWC representative informed Ms. Brier that the Company was

waiting on an engineer from the insurance company before performing restoration on the basement. Councilwoman Brier was satisfied with the update and thanked us. The Company reminded Councilwoman Brier that we have a monthly meeting with Dunmore Borough which includes people from several departments of PAWC, the Borough Manager and Borough Engineer. Councilwomen Brier said that she may attend the next meeting, and the Company made sure that she had our contact information and advised her that she can reach out anytime.

K. <u>William King</u>

Q. What water quality and or service issues were raised by Councilman William King at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. King testified that he was notified (1) that on East Mountain, there was a water outage, pipes broke, and some people went anywhere from "10 to 48 hours" without water; (2) and then once the water was turned on, it took anywhere from four to five days of running brown water; (3) you couldn't drink the brown water; (4) every time he would go to Gary's on Meadow Avenue, people were buying jugs of water for a week; (5) you had to run the water to get rid of the discoloration and pay for that water usage..

Q. Has the Company taken any action to address the concerns of Mr. King?

A. Yes. A meeting was held on February 2, 2024, with members of PAWC and the Council President and Councilmen, including Mr. King. At this meeting, the PAWC representatives provided a list of upcoming main replacement and restoration projects.

L. <u>Jessica Rothschild</u>

Q. What water quality and/or service-related issues were raised by Councilwoman Jessica Rothchild at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought his in supplemental direct testimony?

A. Councilwoman Rothschild testified that she (1) "had numerous streets that I've had to bring up as concerns because they were Pennsylvania American Water projects, and the paving was not done properly"; (2) has had "dirty" water, including recently when a bath tub was being filled; (3) she sees complaints in the Hill section of Scranton about dirty water at least weekly; (4) after replacing water and sewage lines the entire length of Myrtle Street, the repaving does not appear to have been done properly, quickly develops potholes and is difficult to drive on; (5) when they contacted Pennsylvania American Water, they corrected one block of Myrtle Avenue, which does have a lot of traffic, but the rest of Myrtle Street is still in disrepair until they have better weather; (6) doesn't think that a project in Southside that went on for many years that had large bumps causing trouble driving over is still up to par.

Q. Has the Company taken any action to address the concerns of Councilwoman Rothschild?

A. Yes. Councilwoman Rothschild was invited to the meeting that the Company held with the Scranton City Council, but Mr. Frank Smurl, Council President, had indicated that Councilwoman Rothschild would not be able to attend due to other commitments. Mr. Smurl indicated he would advise Councilwoman Rothschild of the result of the meeting on February 2, 2024 and would direct her to follow-up with the Company as needed.

M. Paul Miller

Q. What water quality issues were raised by Paul Miller at the public input hearing on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Miller testified that the water on East Mountain has been "really dirty" and that his wife and daughter won't drink the water; they buy it in a bottle by the case.

Q. Has the Company taken any action to address the concerns of Mr. Miller.

A. Yes, a PAWC representative contacted Mr. Miller to discuss his concerns and offered to take a water sample. The customer indicated they may be interested in PAWC taking a water sample at a future date.

N. Fay Franus

Q. What service-related issues were raised by Ms. Franus at the public input hearing on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Franus testified that the Company (1) removed all the black top curbs and they never came back and put them back in; (2) now when it rains, the water just pours down their sidewalk and goes in their basements; (3) the Company refuses to come back and put the blacktop curbs in front of these homes; (4) she had to get her sidewalk done over because they did such a terrible job and she had to fight for months to get that.

Q. Has the Company taken any action to address the concerns of Ms. Franus?

A. Yes. A PAWC representative contacted Ms. Franus and discussed the City policy on curb restoration. The PAWC representative explained that the curbing had been restored to the

same condition it was in prior to the main replacement project and that the City would need to be contacted with questions about curb installation.

O. <u>Gerard Dombroski</u>

Q. What water quality related issues were raised by Gerard Dombroski at the public input hearing on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Dombroski testified that he lived on East Mountain and last month he experienced four days of "dirty" water. He further testified that, after some difficulty, he received a $20 credit for the four days of dirty water. Mr. Dombroski buys bottled water in 5-gallon jugs.

Q. Has the Company taken any action to address the concerns of Mr. Dombroski?

A. Yes. A PAWC representative contacted Mr. Dombroski on February 1, 2024, and discussed his concerns about water quality, and Mr. Dombroski indicated that the issues that are sporadic, can last a day or two, and occur roughly every other month that have been associated with main breaks or main work. Mr. Dombroski indicated that he does not like the taste and will not drink the water. Mr. Dombroski indicated that the taste is not like a "swimming pool" but he notices it and does not like it. The PAWC representative explained the need to chlorinate the water provided to our customers, and Mr. Dombroski acknowledged that he understands. The PAWC representative discussed the option of having his water tested. A sample was collected, and results were within water quality standards. During the discussion with the PAWC representative, Mr. Dombroski noted some sediment that builds up in his toilet and the Company representative indicated that it may be iron and/or manganese depending on the circumstances and collecting a sample of his water can investigate that further, as well.

P. <u>Sean McAndrew</u>

Q. What water quality and/or service-related issues were raised by Sean McAndrew during the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. McAndrew testified that multiple times throughout the summer, he had "dirty" water. Also, the Company was working on changing pipes every day for weeks at the bottom of his street.

Q. Was there any main line work, flushing, or leaks in the system at or near the home of Mr. McAndrew?

A. Yes. A main replacement project began in February 2023 on West Gibson St., and the final tie ins were completed in June 2023. West Gibson Street and North Garfield Avenue intersect and this main line replacement project would have caused the customer to experience discolored water periodically and would explain the claim of the Company changing pipes every day for weeks at the bottom of the customer's street.

Q. <u>Doris Koloski</u>

Q. What water quality and/or service-related issues were raised by Doris Koloski during the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Koloski testified that the Company is digging up the streets and she has been having a lot of dirt in the water. She has two filters. If she runs unfiltered water in the sink, on certain days, the water is cloudy or dirty or yellowing. If she runs filtered water, it's fine. Also, she has had (1) expensive plumbing bills when the Company's mains break and they were replacing pipes because her filters were clogged and/or broken; (2) an only three-year old

toilet that started making noise that the plumbers said that also was from the dirt, from the water; (3) on the 1700 block of Olive Street, last year the pipes were replaced, potholes paved, fixed and then within two weeks, the street was blocked off again to re-dig up the streets because the pipe was leaking again. And then maybe about five months later, they were digging it up again. Ms. Koloski testified a second time adding that the Company should provide a warning prior to doing something in your area.

Q. Has the Company taken any action to address the concerns of Ms. Koloski?

A. Yes. A PAWC representative contacted Ms. Koloski on February 1, 2024. Ms. Koloski advised the Company representative that her water is sporadically discolored and she associated the issue with main breaks, repairs, and other work. The PAWC representative offered to sample her water, but the customer reported her water was clear, and there is no immediate need for sampling at this time. A second PAWC representative attempted to contact Ms. Koloski on February 1, 2024 to discuss her service-related concerns, but the PAWC representative could only leave a voicemail, asking the customer to call back at her earliest convenience. PAWC does have General and Emergency alerts notifications that are sent via all methods of communication based on the customer's provided contact information. Emergency alerts are sent via all methods of communication based on the customer's provided contact information, regardless of notification preferences.

R. <u>Elaine Sporko</u>

Q. What water quality issues were raised by Elaine Sporko at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Sporko testified that there has been no compensation for getting brown and unusable water, being required to buy drinking water, and delaying clothes washing and showering that occurs every other week. The discolored water causes the whole house filter to be changed more often. Ms. Sporko testified a second time about discolored water damaging white fabric items such as clothing or towels.

Q. Has the Company taken any action to address the concerns of Ms. Sporko?

A. Yes. A PAWC representative reached out to Ms. Sporko regarding her water quality issues. Ms. Sporko's main issues were discolored water that she experienced this past fall and late summer. This type of complaint is typically related to main line work, flushing lines or leaks in the system, and can also be attributed to source water issues. Ms. Sporko's complaints can be associated with main breaks, as well as a source water seasonal turnover event at Lake Scranton Water Treatment Plant in the late fall, that caused system wide issues. The PAWC representative explained the alerts process, complaint handling, and options (customer service number, on-line access) for making water quality inquiries or complaints. PAWC offered Ms. Sporko testing of her water, but she declined, noting that it was presently clear. She will call the service number if she has problems in the future and was very appreciative of the dialogue.

S. <u>Frank Serafini</u>

Q. What water quality issues were raised by Frank Serafini at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Serafini testified that he has (1) installed a whole house filter system for cold water and still had to install carbon filters under every sink in his home and still gets "dirty" hot

water and (2) has had to put a backflow preventer on his home. Additionally, Mr. Serafini testified a second time adding the following to his testimony: (1) In 2017, he applied for a water hookup in a garage he built, and he still doesn't have water in that garage and (2) every couple of months he has to change the filter in his filter system.

Q. Has the Company taken any action to address the concerns of Mr. Serafini?

A. Yes. A PAWC representative contacted Mr. Serafini as it relates to his water quality complaints. Mr. Serafini indicated that he has a system in his home that gives him good water. It was offered to Mr. Serafini to have his water sampled, and he was noncommittal; he indicated that he had his water tested regularly, and it is now fine. As it relates to the backflow preventer, Mr. Serafini testified that he is required to have a backflow preventer on his private home that he pays $250 per year to have tested. Additionally, as it relates to the application for water hook up in his garage, the Company confirmed that Mr. Serafini did not apply for new service; this application was provided to Mr. Serafini on February 1, 2024. Once the application is received, the Company will process the application.

T. <u>Linda Bonczkiewicz</u>

Q. What water quality issues were raised by Linda Bonczkiewicz at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Bonczkiewicz testified that she wants to wash her dishes, clothes, body, and expects to be clean, not dirty, after using the water.

Q. Has the Company taken any action to address the concerns of Ms. Bonczkiewicz?

A. Yes. A PAWC representative contacted Ms. Bonczkiewicz to discuss her concerns. The PAWC representative offered to take a water sample, but Ms. Bonczkiewicz declined.

U. Eva Siarniak

Q. What service-related issues were raised by Eva Siarniak at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Siarniak testified that when service is interrupted or when customers are asked to flush their internal plumbing, there is no discount provided by the Company.

Q. How does the Company respond to Ms. Siarniak's stated concerns?

A. Ms. Siarniak referenced a water outage during her testimony that occurred when a large main broke in Dunmore at the intersection of Grove and Quincy Street on November 24, 2023. (Transcript, at 719). The Company sent out a CodeRed to over 22,000 in connection with this incident, and customers along Whitetail Drive lost water service due to the Newton Road pump station shutting down. Ms. Siarniak was one of the customers who received the CodeRed alert. The local team in Scranton provided updates and time tables to Ms. Siarniak when she contacted them for updates. The Company did provide water buffaloes, but due to the number of customers impacted, the Company located the water buffaloes at hospitals and nursing homes, and provided water to community centers.

V. Thomas Coyne

Q. What water quality or service-related issues were raised by Thomas Coyne at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Coyne testified that the water has a strong chlorine smell and he has experienced shut-offs, line breaks and notices to flush pipes.

Q. Has the Company taken any action to address the concerns of Mr. Coyne?

A. Yes. A PAWC representative contacted Mr. Coyne about the concerns he has with chorine odor in his water. Mr. Coyne noted it happens roughly once per week and will last for a portion of the day, and he feels it is related to main breaks. The PAWC representative noted that both high as well as low chlorine residuals can result in an odor and offered sampling to confirm the residual at his home. Mr. Coyne declined, stating he did not feel it was necessary, as he simply addresses it by placing water in a pitcher in the refrigerator, it dissipates and is fine. Mr. Coyne was also offered an opportunity to discuss any other questions or concerns he might have based on his testimony, but he declined.

W. <u>Joan Hodowanitz</u>

Q. What water quality or service-related issues were raised by Joan Hodowanitz at the public input hearings on January 30, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Hodowanitz testified that she is a renter and has to drink unpalatable water, buy bottled water, and use smelly water to shower and wash clothes. The witness also defined the smell as chlorine and testified that after flushing the toilet, the water still looks yellow; and the "dirty" water occurs for a couple of days two or three times per month.

Q. Has the Company taken any action to address the concerns of Ms. Hodowanitz?

A. Yes. PAWC's records show that Ms. Hodowanitz is not a customer, and as a result, PAWC does not have a phone number for her. PAWC sent a letter to Ms. Hodowanitz based on the address she provided at the public input hearing asking her to contact the Company. PAWC has not been contacted by Ms. Hodowanitz.

X. Amanda Johnsen

Q. What water quality issues were raised by Amanda Johnsen at the public input hearing on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Johnsen testified that her community has had issues with water quality, and in some areas of Exeter Township, the water is undrinkable, and people are supplementing undrinkable water with bottled water.

Q. Has the Company taken any action to address the concerns of Ms. Johnsen?

A. Yes. A PAWC representative spoke with Ms. Johnsen on February 2, 2024, and explained to Ms. Johnsen that hardness is the measurement of dissolved calcium and magnesium, and that is naturally occurring in ground and surface water. Ms. Johnsen was very understanding and pleased with the explanations regarding hardness. Ms. Johnsen stated that she would not mind if a PAWC representative came out to discuss water quality at a future township meeting, as it would be helpful for all customers.

Y. Kathleen Schwartz

Q. What water quality or service-related issues were raised by Kathleen Schwartz at the public input hearing on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Schwartz testified that (1) she buys drinking water (bottled) due to water quality concerns; (2) Exeter has extremely hard water and there is calcium and lime buildup on everything; (3) having a water softener is a must, but she had to turn hers off because the water is so hard that her softener cycles constantly, which counts towards wastewater. She

also testified that the water pressure is poor and cuts off in the middle of a laundry cycle for no reason. If the washer is running, it's not possible to take a shower or use the sink.

Q. Has the Company taken any action to address the concerns of Ms. Schwartz?

A. Yes. A PAWC representative contacted the customer on February 2, 2024, and she stated that hardness was her primary water quality concern. The PAWC representative explained to Ms. Schwartz that the water is naturally hard; therefore, additional treatment is not required. Additionally, another PAWC representative spoke with the customer regarding her pressure concerns. The pressure in the customer's service location is around 70 psi. Ms. Schwartz stated that the problem comes and goes sporadically, one week more than others. The PAWC representative explained that we have not had any main breaks or system issues recently and that the pressure concerns could be internal. The Company offered to schedule an appointment to help investigate; the customer declined.

Z. <u>Priscilla Gentry</u>

Q. What water quality issues were raised by Priscilla Gentry at the public input hearings on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Gentry testified that: (1) the water quality is hard and they have to buy bottled water for a baby to drink; (2) they have a water softener because in preparation to retire, they thought ahead and saved up to upgrade their water heater among other household appliances; and (3) they have to use the water softener to protect the washer, the dishwasher and their tankless hot water heater.

Q. Has the Company taken any action to address the concerns of Ms. Gentry?

A. Yes. A PAWC representative called and spoke with Ms. Gentry regarding her concern and explained hardness is the measurement of dissolved calcium and magnesium that is naturally occurring in ground and surface water. The Company scheduled an appointment with Ms. Gentry on February 6, 2024 to collect a sample for general water quality parameters. The sample that was collected from her home was analyzed for general water quality parameters. The results were normal and copy of report was mailed out to Ms. Gentry.

AA. <u>Ron Foy</u>

Q. What water quality and/or service-related issues were raised by Ron Foy at the public input hearings on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Foy testified that (1) the water pressure varies from hour to hour; (2) he should be able to not wash clothes and still get full water pressure out of his sink; (3) he does not know about the water quality because he spent $4,000 to install a water system because of the hard and unusable water.

Q. Has the Company taken action to address the concerns of Mr. Foy?

A. Yes. A PAWC representative contacted Mr. Foy about his water quality concerns. During that conversation, Mr. Foy indicated that he has no issues or concerns with his quality of water. Additionally, a PAWC representative contacted Mr. Foy regarding his pressure concerns. Mr. Foy has a service line that is approximately over 400 feet. The pressure concerns that he testified about could be volume loss not pressure; the line pressure at the

water main is over 100 psi. The Company representative offered assistance to help check if he has pressure reducing valve, but Mr. Foy declined.

BB. Alicia Shussett

Q. What water quality related issues were raised by Alicia Shussett at the public input hearings on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Shussett testified to the less appealing taste of her water, as well as the hardness of the water and its impact on her home, which prompted her to purchase a water softener system and drinking filtration system.

Q. Has the Company taken action to address the concerns of Ms. Shussett?

A. Yes. The Company has attempted to contact Ms. Shussett regarding her concerns but has not been successful in its attempts.

CC. Judith Kraines

Q. What water quality related issues were raised by Judith Kraines at the public input hearing on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Kraines testified that she does not have any problems with pressure or with water discoloration like others testified to; her water is "fine", except for hardness.

Q. Has the Company taken action to address the concerns of Ms. Kraines?

A. Yes. A PAWC representative contacted Ms. Kraines to discuss her concerns, but Ms. Kraines was unable to talk at length so the PAWC representative provided Ms. Kraines with contact information so that her concerns can be addressed at a time convenient for the customer.

DD. Fiona Reiter

Q. What water quality related issues were raised by Fiona Reiter at the public input hearings on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Reiter testified that the water was very hard before installing the water softener. Now they have a water softener and have extra water going through that.

Q. Has the Company taken any action to address the concerns of Ms. Reiter?

A Yes. A PAWC representative contacted Ms. Reiter on February 2, 2024. Ms. Reiter indicated that her main concern was hardness. The PAWC representative explained that hardness is the measurement of dissolved calcium and magnesium that is naturally occurring in ground and surface water and that the water in her service territory is naturally hard; therefore, additional treatment is not required. The EPA has not set a MCL for hardness in water, primarily because the components that contribute to hardness are not toxic; that is, they do not cause harmful health effects.

EE. Sheila Jones

Q: What water quality related issues were raised by Sheila Jones at the public input hearings on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Jones testified that many of her neighbors, as well as herself, experience periods of poor water quality which has led many of them to purchase expensive filtration systems or buy bottled water for safety concerns.

Q. Has the Company taken any action to address the concerns of Ms. Jones?

A. Yes. A PAWC representative spoke with Ms. Jones on February 2, 2024. Ms. Jones stated she sees discolored water from time to time throughout her house. She mentioned, and was aware, that the less she used the water, the more often she noticed the discolored water. She stated she read the material on the Company's website and was aware of the sequestration treatment we employ in the Blue Mountain Lakes water system. The PAWC representative discussed the sequestration treatment process and the effects that time and other factors (heat, chlorine, etc.) have on the treatment. The PAWC representative advised Ms. Jones of the flushing program we use twice a year in the system and the spot flushing we do to alleviate the discolored water, as those concerns appear. The PAWC representative also discussed why and how the discolored water can appear and how to minimize or remedy it. Ms. Jones was interested in having her cold water sampled; those sample results were provided to the customer.

FF. <u>Terence Reilly</u>

Q. What water quality related issues were raised by Terence Reilly at the public input hearings on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Reilly testified that he replaced the dishwasher and two faucets in the last couple of years just because of the quality of water.

Q. Has the Company taken any action to address the concerns of Mr. Reilly?

A. Yes. A PAWC representative spoke with Mr. Reilly on February 2, 2024. Mr. Reilly conveyed that hardness was his water quality concern. The PAWC representative explained that hardness is the measurement of dissolved calcium and magnesium that is naturally occurring in ground and surface water and that the water in his service territory is naturally

hard; therefore, additional treatment is not required The EPA has not set a MCL for hardness in water, primarily because the components that contribute to hardness are not toxic; that is, they do not cause harmful health effects..

GG. <u>Michelle Kircher</u>

Q. What water quality and/or service-related issues were raised by Michelle Kircher at the public input hearings on January 31, 2024, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Township Supervisor Kircher testified her big problem is the water quality and she gets white rings around her dishes and pans. She also testified that the water quality is terrible and uses plastic bottles for the dogs and herself because of the poor taste of the water. The customer also testified that the water tastes moldy and smells musty and the water pressure goes up and down.

Q. Has the Company taken any action to address the concerns of Township Supervisor Kircher?

A. Yes. A PAWC representative spoke with Township Supervisor Kircher on February 1, 2024 regarding her concerns. The PAWC representative reported on December 12, 2022, there was a service order related to low pressure at this customer's premises. A PAWC Field Service Representative found that the water softener in Township Supervisor Kircher's home caused the pressure issue, and after bypassing the softener, the customer's water pressure went back to normal. The PAWC representative indicated that the water pressure in Township Supervisor Kircher's area is normally 50 psi. A second PAWC representative contacted Township Supervisor Kircher to discuss her water quality concerns, which she clarified were focused on the taste and hardness of the water. The

PAWC representative explained the causes of these concerns and the customer appreciated the explanation.

HH. Jordan Henning

Q. What service-related issues were raised by Jordan Henning during the January 31, 2024, public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Henning testified about the alleged difficulties he had when the Company delayed replacing a faulty meter after he contacted the Company numerous times and the Company ended up billing the customer $1,800. After some difficulty, the customer got the Company to allegedly admit it was their mistake and drop the $1,800 bill.

Q. Has the Company taken any action to address the concerns of Mr. Henning?

A. Yes. A PAWC representative spoke with Mr. Henning on February 1, 2024, and Mr. Henning reported having had some issues with having his meter replaced. A PAWC representative reported that on March 7, 2022, a Field Service Representative had a check-meter work order due to a stopped meter. The Field Service Representative could not operate the curb stop due to the curb box needing to be realigned. On March 15, 2022, PAWC replaced the top section of the curb box to access the valve. Mr. Henning's meter was replaced on November 11, 2022. Following having a stopped meter, customers are back billed for their usage that they have not previously been billed for as permitted by regulation, but at times will be given a courtesy adjustment.

II. Patricia Finley

Q. What water quality related issues were raised by Patricia Finley during the January 31, 2024 public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Finley testified that the quality of water is an issue. She moved in 2013, and in 2015 installed a water softener because the water is hard.

Q. Has the Company taken any action to address the concerns of Ms. Finley?

A. Hardness is the measurement of dissolved calcium and magnesium, and that is naturally occurring in ground and surface water. The water in her service territory is naturally hard. The EPA has not set a MCL for hardness in water, primarily because the components that contribute to hardness are not toxic; that is, they do not cause harmful health effects. Multiple attempts to contact Ms. Finley, via telephone, with the number provided on her customer account have been unsuccessful, as the number is listed as no longer in service.

JJ. Eva Ross

Q. What water quality and/or service-related issues were raised by Eva Ross during the January 31, 2024 public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Ross testified that her water has a bad taste and hardness, which is not only unpleasant but also damaging to appliances requiring additional expenses for repairs, and the changing filters before their time. She stated she buys bottled water because she cannot drink the water out of the faucets. The witness also testified that the water has many minerals, has an odor and low pressure.

Q. Has the Company taken any action to address the concerns of Ms. Ross?

A. Hardness is the measurement of dissolved calcium and magnesium, and that is naturally occurring in ground and surface water. The water in her service territory is naturally hard. The EPA has not set a MCL for hardness in water, primarily because the components that contribute to hardness are not toxic; that is, they do not cause harmful health effects. General taste complaints are typically related to system maintenance. A PAWC representative has indicated that the Company has not received any complaints regarding pressure from Ms. Ross and that the pressure in her service area is around 95 psi. Multiple attempts to contact Ms. Ross, via telephone, with the number provided in her customer account have been unsuccessful, as the number is listed as no longer in service.

KK. <u>Gail Coleman</u>

Q. What service-related issues were raised by Gail Coleman during the January 31, 2024, public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Coleman, a wastewater customer, testified that she uses well water and the Company wanted to check her water meter (that doesn't exist) and billed her for water she didn't use because the Company was not allowed to check the water meter. With great difficulty, the customer succeeded in getting a resolution from PAWC.

Q. Has the Company taken any action to address the concern of Ms. Coleman?

A. Yes. A PAWC representative reported that Ms. Coleman had experienced nine consecutive estimates on her wastewater bill. When Ms. Coleman's meter was replaced, it was replaced with a new AMI transmitter, and actual reads were able to take place. Ms. Coleman was

subsequently back billed because her estimated reads were low, but she later received a courtesy adjustment in the amount of $494.

LL. <u>Carla Moran</u>

Q. What water quality and/or service-related issues were raised by Carla Moran during the February 5, 2024, public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Moran testified that she doesn't use the water for cooking or drinking, and there is a lot of dirt in the water. The customer also testified that she has been smelling chlorine for a year now.

Q. Has the Company taken any action to address the concern of Ms. Moran?

A. Yes. A PAWC representative contacted Ms. Moran and she indicated that her chief complaint was a chlorine taste in the water. A PAWC representative has made arrangements to sample Ms. Moran's water on February 21, 2024 and the results of the sample will be mailed directly to Ms. Moran. Ms. Moran also indicated that the "dirt" she referred to in her testimony was not dirt, but she has a Brita, and her filter becomes dirty after two months, not the normal three months. Ms. Moran also indicated that she was pleased that she did receive alerts from the Company when there are breaks in her service area, so she knows when not to do laundry.

MM. <u>Kendra Robinson</u>

Q. What water quality issues were raised by Kendra Robinson during the February 5, 2024, public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Robinson testified that there is no way she can drink the tap water because it tastes bad and has a strong chlorine odor. Also, she uses a well rated filter for any water that she consumes, even if it's to boil pasta. She claimed the hardness of the water damages her appliances. The witness also stated that the taste and smell is getting worse.

Q. Has the Company taken any action to address the concern of Ms. Robinson?

A. Yes. A PAWC representative spoke with Ms. Robinson, and she will call the Company to schedule a time for a sample to be collected at her convenience.

NN. <u>Kathleen Townsend</u>

Q. What water quality issues were raised by Kathleen Townsend during the February 5, 2024 public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Townsend testified that she had her water softener removed to try to save on the water usage. Ms. Townsend indicated the water is "so hard" and her faucets and washing machine have built up calcium buildup and she has to spend money on lotion because now she is really dry too. The witness said she hasn't drank the water for years, it tastes terrible, and even the ice cubes tastes terrible.

Q. Has the Company taken any action to address the concern of Ms. Townsend?

A. Yes. A PAWC representative spoke with Ms. Townsend and has scheduled to have a water sample collected on February 23, 2024.

OO. <u>Jodi Asay</u>

Q. What service-related concerns were raised by Jodi Asay during the February 6, 2024 public input hearing, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Asay testified that in her community (Saw Creek Estates), there are documented broken service lines causing high monthly water bills. Ms. Asay also testified that the Company raised pressure on existing customers to service additional customers on higher ground. The higher pressure caused a current event of flooded basement and broken water pipes. Repairs were at the homeowners' expense, and customers were billed for the unused and "wasted" water.

Q. Has the Company taken any action to address the concern of Ms. Asay?

A. Ms. Asay testified that the Company has engaged with her on her issues, and that her interactions with the Company have been positive. (Transcript, at 1511-1512). Ms. Asay has a formal complaint pending at Docket No. C-2023-3045163 regarding the issues that she raised in her public input hearing testimony. The specific issues raised by Ms. Asay will be addressed in her formal complaint proceeding, giving the parties to that proceeding the opportunity to fully develop the record and address Ms. Asay's concerns with more specificity and greater detail than is provided in the context of a rate case public input hearing.

Q. Can you please summarize Ms. Asay's testimony regarding PRVs?

A. Yes, Ms. Asay testified that the Company boosts pressure on the main for higher topography, but does not have a pressure reducing zone or pressure reducing device on the main. (Transcript, at 1486-1487). She further testified that if a PRV is installed in a home, the water bombards the service line and may lead to breaks. (Transcript, at 1489).

Q. Do you agree with Ms. Asay's testimony regarding PRVs?

A. No. I do not. The Company designs its distribution systems to stay within the 25 psi to 125 psi optimum window of system pressure, but there are circumstances that necessitate higher

pressures. For example, to serve high elevation areas and not add unnecessary booster pump stations that add capital and maintenance costs. If higher pressures are necessary in such circumstances, the Company takes steps designed to prevent the higher pressures from impacting existing customers.

PP. <u>Charles Wilson</u>

Q. What water quality issues were raised by Charles Wilson during the February 7, 2024, public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Wilson testified that water quality levels seem to only decline. He stated that his direct experience with the water quality has been an odor and mineral deposits in his toilet water tanks, which result in so much caking that at times the automatic fill and flush mechanism's operation is impeded. The witness also testified that this is the first time the mineral buildup in the toilet tanks impeded the operation of the flushing mechanism and the chlorine odor is quite new.

Q. Has the Company taken any action to address the concern of Mr. Wilson?

A. Yes. A PAWC representative called Mr. Wilson and made arrangements to come to his home to get a water sample on February 14, 2024. The results of his sampling were within normal limits, and a copy of the results were mailed to Mr. Wilson.

QQ. <u>Tacy Rutherford</u>

Q. What water quality issues were raised by Tacy Rutherford during the February 7, 2024, public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Rutherford testified that in early 2022 she requested the Company to investigate a sudden and intense increase in the chlorine odor and taste. The Company field representative took samples and determined Ms. Rutherford's chlorine levels were within the approved parameters and the intensity was likely due to colder temperatures. After no change in the spring, she had a water filtration system installed to remove the chlorine taste. The witness also testified that she filters just the water she drinks but chlorine smell persists from faucets and showers. The filter system cost $750 and every replacement filter costs $200.

Q. Has the Company taken any action to address the concern of Ms. Rutherford?

A. Yes. Ms. Rutherford previously called the Company with a water quality complaint on February 14, 2022, for a chlorine odor issue. A PAWC representative visited the customer on February 16, 2022, and checked the chlorine residual at the home and it was normal. The customer was satisfied after the interaction. Multiple attempts to contact Ms. Rutherford regarding re-sampling after the public input hearings have been unsuccessful.

RR. <u>Nereida Colon-Gonzalez</u>

Q. What water quality issues were raised by Nereida Colon-Gonzalez during the February 7, 2024, public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. The customer testified that she does not drink the water here because the taste is unpleasant. They are going on 14 years at their home and purchase bottled water for themselves and their pets. Ms. Colon-Gonzalez testified she has hard water which can impact her skin and

appliances. She testified that since they moved here, they had to replace four toilets, a water heater, and a dishwasher. They are on their second washing machine.

Q. Has the Company taken any action to address the concern of Ms. Colon-Gonzalez?

A. Multiple attempts to contact Ms. Colon-Gonzalez regarding re-sampling after the public input hearings have been unsuccessful.

SS. Phil Choff

Q. What service-related issues were raised by Phil Choff during the February 7, 2024 public input hearings and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Choff testified that he is part of the Jefferson Township Municipal Authority formal complaint requesting an extension of a water main in Washington County.

Q. Has the Company taken any action to address the concern of Mr. Choff.

A. The Company's response to the Jefferson Township Municipal Authority's request for extension of a water main is discussed in detail by PAWC Witness Mr. Aiton in PAWC Statement No. 3-R.

TT. Keith Sauer

Q. What service-related issues were raised by Keith Sauer during the February 7, 2024 public input hearings and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Mr. Sauer testified that his area experiences hard water, and that because he has not installed a water softener, his appliances are negatively impacted. He testified that those who have water softeners have excessive water consumption due to the regeneration cycle. He testified that he needed a meter replaced in 2018 due to mineral deposits locking up the

device and causing it not to read. Once the meter was replaced, PAWC back-billed him for his usage during the time the meter was not registering. Finally, Mr. Sauer testified his water has a strong chlorine smell and taste and he does not drink the tap water.

Q. Has the Company taken any action to address the concern of Mr. Sauer.

A. Mr. Sauer has a formal complaint in this rate case proceeding which raises concerns similar to those discussed by Mr. Sauer at the public input hearings. The Company filed an answer to Mr. Sauer's formal complaint on November 27, 2023.

UU. <u>JoAnna Stuck</u>

Q. What water quality issues were raised by JoAnna Stuck during the February 7, 2024 public input hearings, and highlighted by OCA Witness Fought in his supplemental direct testimony?

A. Ms. Stuck testified that within a few years, in their newly constructed home, they began noticing hard water, white residue on glasses, a dishwasher stopped working, their faucets were replaced, and they replaced refrigerators because of the waterline being clogged due to the hard water. They put in a water softener at that time. They have now replaced two water softeners.

Q. Has the Company taken any action to address the concerns of Ms. Stuck?

A. The Company has attempted to contact Ms. Stuck but has not been successful in its attempts.

Q. You note in your above testimony that some customers were unable to be reached, is the Company taking any further action to address these customers' concerns?

A. Yes, the Company is continuing its efforts to contact these customers by phone or by mail to discuss the issues raised at the public input hearings.

VI.

CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

Overview

Use this procedure to handle water quality notifications. This includes:

- Handling visual notifications.
- Handling non-visual notifications.
- Closing out notifications.

Background

This process starts when a customer contacts the call center with a complaint about water quality:

- The call center enters the complaint into SAP.
- SAP automatically emails a notification to all staff who handle water quality complaints.
- Staff handle the complaint based on the type of water quality issue and their job roles.

ℹ **Note:** After the customer call, the FRCC then determines whether or not they create a flush order in MapCall. MapCall assigns the order to a crew and a T&D technician is called to investigate and possibly open a hydrant to flush the main out. If the FSR notices that the problem doesn't clear up, or there may be a distribution-related issue, the FSR notifies a supervisor.

Water Quality Notifications		
Type	**Handled By**	**Comments**
Visual	BPAs	⚠ **Important:** A contact attempt for all visual notifications must be made within one business day, not including weekends. The customer can see indicators of possible water quality issues, such as: • Discolored water. • Cloudy water. • Stains on laundry. • BP handles credit requests; WQ handles the rest. ℹ **Note:** Business Performance associates (BPAs) handle only visual water quality notifications.
Non-Visual	WQ Staff	⚠ **Important:** All non-visual notifications must be completed within one business day, not including weekends. Any issue that is not visual to the customer, such as: • Bitter. • Boil Alert. • External Research Media Stories. • Illness or LSLR Flushing Inq Notifications has been issued: An expert will attempt to contact customer within 1 to 4 hours.

		• Iron. • Lead. • Moving Organisms. • Odor/Taste. • Particles. • Slippery/Slimy. • General Request Notification (ex's Annual-Detailed WQ Report, Basic WQ Summary table, FAQs) has been issued: An expert will attempt to contact customer in one business day. All non-credit-related issues: BP handles credits, WQ handles the rest. This can also include more general inquiries, including questions on: • PAWC water quality reports. • PAWC lead pipe replacement projects. ℹ **Note:** Supervisors handle non-visual water quality notifications.

Safety

PENNSYLVANIA AMERICAN WATER

Process

1. Handling Visual Notifications

⚠ **Important:** All visual notifications must be contacted within one business day.

The Business Performance Group (BPG) receives the notification, researches customer information, contacts the customer, and adds notes in the notification in MapCall. If a MapCall order is attached, then local operations is responsible for closing the work order before the BPG closes the notification.

Step	Action	Comment	See
1.	If needed, the FRCC automatically schedules a **flush order within 30 minutes.**	The FRCC receives the email first. They have their own procedure to determine whether a flush order is needed. They will not automatically schedule a flush order for a particle and stained laundry notification. If needed, the FRCC schedules the order within 30 minutes and respond to the complaint.	
2.	The BPG Team receives an **alert via email and also in MapCall**.	We break the state into east and west regions: see BPA Responsibility by Region.	
3.	The BPG Team performs the **following steps before calling** the customer back.		
4.	Search the **customer's area** for alerts.	Reviewing the area's alert history allows us to better understand the complaint.	
5.	Go to **H2Online IDA**.	http://h2o.amwater.net/home.aspx ℹ **Note:** IDA opens in Internet Explorer.	
6.	At the top of the page, in the Quick Links box, select **Alerts**.		
7.	In the Company box, select **Pennsylvania American Water**.		

PENNSYLVANIA AMERICAN WATER

8.	Select the following boxes in order for the customer's location: • **Division** • **District** • **Municipality.**	 The page shows the previous 30 day period. You can expand the date range if desired.	
9.	In the Active box, select **All**.	Selecting All provides a better historical view of incidents in the area. FRCC updates IDA when a complaint has been confirmed.	
10.	Click **Search**.		
11.	Review your **search results**.		
12.	From the notification, copy the customer's **premise number** into CRM.	Entering the premise number into CRM allows you to access the account notes for that premise.	
13.	Review the customer's **account notes**.	To check older notes, select Interaction Record > Interaction History > Search. Look for previous similar complaints. For example: • Is this an ongoing issue? • Does the customer submit unjustified or internal complaints?	

PENNSYLVANIA AMERICAN WATER

14.	Call the customer to make sure: • The issue has been **resolved**. • The customer has **no extended issues**.	We try to call back within the next business day. Extended issues means that either the issue persists after a flush or a new issue appears. ℹ **Note:** The FSR may be delayed in completing the investigative flush in the appropriate timeline. If you call the customer before the flush is completed: • Advise the customer that we will be out to flush (if we are flushing) the area for them or inform them if there is a main break in their area. • Give the customer your direct number in case they have extended issues.	
15.	Return to MapCall and enter **comments** into the notification.		
16.	If a MapCall order is attached to the complaint, then the FSR/supervisor must **close it out before BPG can close out the MapCall notification.**	The MapCall order is the initial FRCC flush order. Sometimes you must follow up with the supervisor to have the order closed.	

2. Non-Visual Notifications

⚠ **Important:** WQ supervisors are expected to make initial contact with the customer within one business day.

WQ handles the customer contact and review process.

Step	Action	Comment	See
1.	WQ supervisors, specialists, or their delegate make the **initial call**.	The same circumstances apply: • Check notes • Call customer • The WQ Team updates the notification in MapCall. ℹ **Note:** WQ supervisors or their delegates call the customers for non-visual notifications	
2.	Water Quality managers handle any **further escalations**.	For example, an escalation may occur when the customer is irate, and has not received a response from the assigned WQ supervisor or specialist. **Water Quality Managers** Central and Southeast: Scott Sharp Scranton/Wilkes-Barre and Northeast: Charles Motley West: Brandy Braun	

Troubleshooting

Scenario	Action	See
Notification not closed out properly. ⚠ **Important:** Customer Advocacy reviews notifications to make sure they are closed properly for PUC compliance.	Make sure that the notification is closed out in MapCall. There should be follow-up notes in MapCall, and everything should be resolved from the customer's end. • Be proactive. • Take detailed notes. • Note that the customer is satisfied. ℹ **Note:** If we have not spoken to the customer (only left a voicemail), we cannot note that the customer is satisfied. • Note if another department is following up on an issue (out of our hands).	
You feel the call center representative who took the call could benefit from mentoring.	For example, customers may advise that the representative did not listen to their concerns, was rude, etc. Take a screen shot of the initial notification email for reference. Email the screen shot to the call center supervisor, who will then follow-up as needed.	

Documentation/Recordkeeping

A BPA maintains records in CRM and in SharePoint, including the current **WQ Follow-Ups** spreadsheet.

Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 29

OCA 29-001

Responsible Witness: Jim Runzer, Vice President of Operations for PAWC

Question:

Reference the Pressure Complaint Log provided in response to OCA-7-005_Attachment 5 (confidential).

Please discuss the unexpected pressure surge that caused multiple main breaks and that likely caused damage to the pressure regulator at 507 Sycamore Street, New Eagle on or about February 16, 2023 (see row 1138 of Attachment 5). Include the cause of the pressure surge, the number of customers that experienced damages and estimated repair costs incurred by PAWC and PAWC customers related to the pressure surge.

Response:

On February 15, 2023, the Company experienced a brief power outage, which impacted the New Eagle gradient. When power returned, it caused a pressure spike (water hammer) in the gradient, which resulted in multiple main breaks and two pressure regulator issues in New Eagle. On February 16, a resident of 507 Sycamore Street reported that there was an increase in water pressure in his home. PAWC's field service representative responding to this work order discovered that the pressure reducing valve in the customer's home was faulty. Prior to this incident, there were no known issues.

The Company called Mitchell Plumbing on February 18, 2023, and the customer's pressure regulator was replaced on February 20, 2023, and was set at 70 psi.

In addition to the customer at 507 Sycamore Street, there was one additional customer who experienced the same issue and also had their pressure regulator replaced.

PAWC's cost to repair was approximately $1,100 per customer (total $2,200), at no cost to the customer.

As a result of this incident, there is a current project for replacement of the pressure reduction valves in this service territory with expected completion by June 30, 2024.

R-2023-3043190 (WASTEWATER)

DATE: NOVEMBER 8, 2023

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF BRUCE W. AITON

Q. What is your name and business address?

A. My name is Bruce W. Aiton and my business address is 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

Q. By whom are you employed and in what capacity?

A. I am employed by Pennsylvania-American Water Company ("PAWC" or the "Company") as Vice President of Engineering.

Q. Please describe your educational background and business experience.

A. I have a Bachelor of Science degree in Civil Engineering from California State University, Sacramento and have been in the engineering and construction field for approximately forty years. I am a licensed Civil Engineer in the State of California.

Q. Do you belong to any professional or industry associations?

A. Yes, I am a member of American Water Works Association and Water Environment Federation.

Q. What are your duties and responsibilities in your current position?

A. As Vice President of Engineering for PAWC, I am responsible for the administration of engineering services, including but not limited to the planning, design and construction of water and wastewater capital investment projects for PAWC's systems and facilities.

Q. What is the purpose of your testimony?

A. First, I will discuss the Company's capital investment planning process. As part of that discussion, I will explain how implementation of PAWC's proposed Environmental

Compliance Investment Charge ("ECIC") described by Company witness J. Cas Swiz in PAWC Statement No. 8 will address the challenges posed by new and changed environmental mandates between rate cases. Second, I will describe and support the additions to the Company's water and wastewater utility plant and equipment that will be placed in service during the future test year ("FTY") ending June 30, 2024 and the fully projected future test year ("FPFTY") ending June 30, 2025. Third, I will describe the risks associated with: maintaining safe and adequate water quantity and water quality and complying with applicable drinking water and environmental regulations associated with owning and operating facilities for supplying water services to the public; complying with environmental regulations applicable to owning and operating facilities for furnishing wastewater service to the public; and the challenges climate change could create for water and wastewater utilities. Ms. Bulkley, in PAWC Statement No. 13, discusses why investors' perceptions of such risks should be considered in establishing a reasonable rate of return on equity for the Company in this case. Finally, I will address the bulk treatment service that the Company provides in its York wastewater system.

The Company's Capital Investment Planning and Governance Process

Q. Please explain the Company's capital investment planning and governance process.

A. The Company uses a standardized Capital Program Management ("CPM") process to prioritize and manage its capital investments. PAWC conducts planning studies that assess necessary improvement projects and prioritize those projects. Further, each facility is evaluated using the Company's High Risk Asset Management ("HRAM") process to identify facilities or individual assets that may pose a high risk to the Company's system(s)

due to either their importance and/or a possibility of failure. All capital investment programs and projects are then prioritized within an overall strategic planning process, utilizing the HRAM process. In the HRAM process, facilities and critical assets are evaluated against risk and consequence of failure to formulate a five-year Strategic Capital Expenditure Plan ("SCEP"). Following more detailed design engineering, implementation plans are developed for those projects that are contained in the SCEP. The Company's annual capital construction plan is based upon projects and programs contained in the SCEP. On an annual basis, main replacement projects are prioritized on a state-wide basis. Numerous factors are considered when determining funding allocations for infrastructure investment, such as current and future service needs, assessments of the physical condition of existing plant, economic and risk factors, performance characteristics, regulatory compliance, and the potential to coordinate with municipalities and other utilities in joint improvement projects. The CPM governance process provides for formal approvals and consistent controls that optimize the effectiveness of asset investment and ensures that capital investment meets the Company's strategic goals.

Q. How does the Company's construction planning process impact its claim for plant additions?

A. The Company's claim for plant additions consists of the projects scheduled for completion during the FTY and the FPFTY. The overwhelming majority of the Company's claimed projects will be constructed and completed as planned. However, as the years progress, some projects may be substituted for others initially included in the budget due to unanticipated events requiring an immediate capital addition, such as plant or equipment

that has experienced failure and needs to be replaced or delay in permitting of a specific project. In general, the overall cost of plant construction will be consistent with the values filed. Often, where one project may lag for a variety of reasons, another may be completed early, thereby offsetting another project's delay such that the overall program remains consistent.

With timely recovery of its investment, the Company is better able to plan and deploy capital more efficiently over the long term. The Company employs a proactive approach to planning construction work and has accelerated investments in replacement of high risk or poor performing water and wastewater underground infrastructure before problems arise, such as leaks and main breaks, through its Commission-approved Distribution System Improvement Charge ("DSIC"). Planned infrastructure replacements are much less costly on a unit cost basis than the costs of addressing pipe breaks on an ad hoc basis that can result in service disruptions, property damage, health risks from potential drinking water contamination exposure during pipe breaks, related community opportunity costs related to community health and economic development, and the steep increase in future underground infrastructure investments resulting from prior deferrals of the replacements. PAWC's above ground assets, such as booster systems and storage tanks, are not DSIC-eligible property. Therefore, the Commission's approval of the Company's proposed FTY and FPFTY plant additions will support PAWC's ability to continue replacing pipes and above ground infrastructure on a planned and proactive basis with timely recovery of those investments.

Q. Why is PAWC proposing to implement a new ECIC in this case to recover certain environmental compliance costs through an automatic adjustment clause?

A. The Company spends a significant effort evaluating and planning a five-year set of needed construction improvements. However, emerging regulations or re-interpretations of existing regulations often result in new environmental compliance obligations that disrupt the five-year plan of construction work and require the Company to undertake additional projects on an expedited basis to comply with those changes. Because the timing of these projects and the need to comply with new environmental mandates are outside PAWC's control, the Company faces the undesirable situation of complying with these mandates and potentially having to delay other prudently planned and important projects to stay within the five-year plan's capital expense forecast. The Company's proposed ECIC would provide a reasonable rate adjustment mechanism to enable the thorough planning and execution of a five-year investment plan and support full and timely rate recognition of PAWC's costs to meet the continuously evolving requirements from the United States Environmental Protection Agency ("EPA"), Pennsylvania Department of Environmental Protection ("PADEP"), and other environmental agencies.

Q. Can you provide an example of such a situation with respect to drinking water systems?

A. One example of such a rapidly changing set of regulatory mandates involves the combination of federal and state regulations concerning per- and polyfluoroalkyl

substances ("PFAS"). On March 14, 2023,[1] the EPA issued proposed drinking water regulations for six PFAS, which will establish legally enforceable levels (Maximum Contaminant Levels, or "MCLs" and Maximum Contaminant Level Goals ("MCLGs")) for each of these six PFAS that are known to occur in drinking water. In addition to the MCLs and enforceable limits for these six PFAS, the EPA is proposing requirements for the continued monitoring of PFAS, public notification of monitoring results if they exceed defined limits, and the treatment of drinking water to reduce PFAS to required limits. The EPA is expected to finalize its PFAS Rule in January 2024 at which point public water systems will be required to modify their facilities to comply within three years.

In addition to these proposed federal regulatory requirements, Pennsylvania has promulgated state drinking water standards establishing strict MCLs and MCLGs for two PFAS chemicals, perfluorooctanoic acid ("PFOA") and perfluorooctanesulfonic acid ("PFOS"), with compliance monitoring mandates that go into effect January 1, 2024. Systems with monitored exceedances of these new standards must proceed expeditiously with corrective actions (in advance of any parallel federal mandates), which in most cases will require additional or modified treatment systems, modification of sources, or a combination of actions.

Together, these impending federal and state regulations in most cases will require additional or modified treatment systems, modification of sources, or a combination of actions. For the Company, these new requirements will require investments in the range

[1] US EPA Fact Sheet – *EPA's Proposal to Limit PFAS in Drinking Water* https://www.epa.gov/system/files/documents/2023-04/Fact%20Sheet_PFAS_NPWDR_Final_4.4.23.pdf.

of $200 million of work before the end of 2027, based on preliminary estimates; specific projects and investments will depend on the results of monitoring and pilot testing as envisioned by the regulations. While the Company believes that certain measures should be taken proactively in the FPFTY to comply with the EPA's impending MCLs for PFAS, the ECIC will provide the Company a reasonable opportunity to recover the capital costs and expenses incurred after June 30, 2025 to comply with the new federal standards.

Q. In the situation you just described, why can't the Company wait until the federal PFAS rules are finalized, and then prudently develop project plans to be incorporated into its five-year investment plan following standard utility procedures?

A. As I mentioned, the proposed federal PFAS drinking water standard rule provides a very short time frame for compliance, and the state rule contemplates an even faster track. Although the federal rule is not finalized, the Company cannot wait for final adoption of the federal regulations before commencing actions and investments. Achieving timely compliance with the proposed federal rule would require one year of pilot testing, nearly a year of design, between 6 to 12-months of permitting, and construction over a period of 1-2 years depending on the scope of treatment modifications necessary. And as noted previously, the state rules on two of the PFAS chemicals go into effect even before the federal rules. Thus, to achieve the combined mandates of these requirements, the Company must begin the work well ahead of the final federal rule.

At the same time, counsel has advised me that irrespective of the compliance timeframes set forth in such regulations, class action lawsuits have been brought in some states against utilities, seeking to impose liability on utilities under theories of product

liability, failure to warn, and negligence for the distribution of drinking water containing PFAS.[2] We are not commenting on the merits of such claims or the defenses which the utilities may assert. Suffice it to say that as a utility with a strong commitment to providing safe, reliable water to our customers, the Company believes it is prudent, appropriate, and consistent with accepted public utility practice to take proactive steps to address the challenge of PFAS and other emerging issues, without waiting for either regulatory deadlines or legal actions.

Q. Do you have an example of potential situations involving wastewater systems that might trigger consideration for use of the ECIC?

A. With respect to wastewater systems, PFAS again poses some impending challenges. The EPA has proposed and is expected soon to finalize rules designating certain PFAS chemicals as "hazardous substances" under the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"). The full effect of those regulations is at this point difficult to forecast with any clarity. Because PFAS chemicals are found in a range of wastewaters (and even stormwater) entering community wastewater systems, they may either pass through the treatment plant to discharge to a stream or become entrained in the residuals (sludges) that are produced by treatment processes. The designation of PFAS chemicals as hazardous substances is anticipated to impact the manner and method by which wastewater plants can dispose of sludges and other residuals, and may impose requirements for both additional residual management investment and significantly

[2] *Deborah Vincent, et al. v. Aquarion Water Company,* Connecticut Superior Court, J.D. Fairfield, Docket No. FBT-CV-23-6128205-S (Complaint filed October 16, 2023); *Frances Hoffnagle v. The Connecticut Water Company,* Connecticut Superior Court, J.D. Hartford, Docket No. HHD-CV-23-6175540-S (Compliant filed October 16, 2023).

increased operating costs associated with residuals disposition.

Description of Claimed Plant Additions

Q. Please describe the Company's claimed plant additions, as shown in Exhibit No. 3-C.

A. The Company has undertaken gross plant additions (including projects funded by customer advances and contributions) to be completed by June 30, 2024 (FTY), that are estimated to total $742,020,740. The Company has also undertaken, or will undertake, gross plant additions (including projects funded by customer advances and contributions) to be completed by June 30, 2025 (FPFTY), that are estimated to total $797,874,110. Thus, the total gross plant additions for the FTY and FPFTY are $1,539,894,850. When projected retirements of $253,536,706 are considered for the FTY and FPFTY, the combined net increase in plant additions for those two years is estimated to be $1,286,358,144.

Q. In general terms, could you explain why the Company is planning to spend over $1 billion on infrastructure investment through the fully projected future test year?

A. Pennsylvania's water and wastewater infrastructure requires significant upgrade and repair. In its 2021 Report Card for Pennsylvania's Infrastructure ("Report Card"), the American Society of Civil Engineers concluded that the Commonwealth's water and wastewater infrastructure received grades of D and D-, respectively.[3] With regard to drinking water, the Report Card provides the following Executive Summary:

> Most of Pennsylvania's public drinking water systems are struggling to fund projects to meet their replacement goals as well as new regulations. That's despite recent investment in main replacement and improvement in identifying vulnerability to failures for

[3] Report Card for Pennsylvania's Infrastructure, Pennsylvania State Council of the American Society of Civil Engineers (available at https://infrastructurereportcard.org/wp-content/uploads/2020/12/National_IRC_2021-report.pdf.

> prioritization of repairs. Over the next 10 years, Pennsylvania's public water systems are projected to have a $10.2 billion funding gap, a number only very slightly offset with recent federal actions to provide infrastructure funding. In addition, there remain substantial amounts of lead service lines posing risk to public health, particularly for underserved communities. Emerging contaminants such as perfluoroalkyl and polyfluoroalkyl substances (PFAS) pose growing public health threat. To conquer these issues, water utilities need to adopt full-cost pricing and find technologies that enable more efficient operation and emergency response.[4]

The Report Card's Executive Summary for Wastewater is as follows:

> Aging wastewater management systems discharge billions of gallons of raw sewage into Pennsylvania's surface water each year. The average age of most sewer systems is approaching 75 years with many pipes over 100 years old. 26% of the state is served by on-lot systems with nearly one-quarter failure rate. Two-thirds of the state's Sewage Facility Plans are over 20 years old. The Commonwealth has a funding gap of $8.4 billion over the next 10 years to repair existing systems, upgrade existing systems to meet regulatory requirements, control Combined Sewer Overflows (CSOs), address illicit Sanitary Sewer Overflows, and construct new or expand existing systems to meet increasing demand. Available funding over that time is estimated to be $900 million, only about one-tenth of the required annual investment.[5]

Dams fair a bit better with an overall grade of C. However, as pointed out in the Report Card there is still much work to be done:

> Dams in Pennsylvania manage flood risk, provide fish and wildlife habitats, recreational opportunities, and drinking water supply. Of the 1,498 dams in Pennsylvania, over half (54%) are classified as high-hazard, likely causing death and economic damage under failure. The average age of Pennsylvania dams is 76 years old, nearly 20 years older than the national average and well beyond the typical 50-year design life. The high average age of Pennsylvania dams makes incorporating resiliency and innovation into the

[4] *Id*., at p. 36.

[5] *Id.*, at p. 146.

> redesign cost-prohibitive, especially for the 61% of owners who are private citizens or organizations. Raising the grade on Pennsylvania dams requires increased funding, perhaps the establishment of a loan or grant program to financially assist owners with repairs, abandonment, and removal projects. Supporting modernization of current federal assistance programs through the passage of the 21st Century Dams Act would also serve to benefit Pennsylvanians.[6]

Many of the high hazard dams owned by the Company are well beyond 90-years and no longer fully comply with PADEP regulations**,** thus requiring significant investment in the dams to achieve compliance with newer regulations and to prevent failure to the dam and/or spillways.

The Company, while overall better than the grades for the Commonwealth, needs to increase investment in replacement and improvement of its older and high-risk water mains to avoid the potential health risks, environmental impacts and financial losses noted in the Report Card. Substantial investment in PAWC's wastewater systems is also required to properly address combined and sanitary sewer overflows, repair existing systems, upgrade systems to meet EPA and PADEP regulatory requirements and build new required facilities. The Company's planned infrastructure investment through the FPFTY and beyond is intended to continue to address these infrastructure concerns in the Commonwealth, as well as to meet several environmental and public health standards described later in my testimony.

Q. Can you provide an update on the actual plant in service through September 30, 2023?

[6] *Id.*, at p. 29.

A. The actual plant retirements and additions through September 30, 2023 are listed in Schedule BWA-1.

Q. What types of projects are included in the Company's total gross plant additions for its FTY and FPFTY?

A. The projects that comprise the Company's claim for plant additions are set forth by applicable property account and PAWC Project Number in the portion of PAWC Exhibit No. 3-C that I am sponsoring, along with the estimated completion date and associated retirement for each project. As shown in Exhibit No. 3-C, the Company's claimed plant additions vary from what may be characterized as small, routine projects, such as the installation of individual distribution mains to substantially larger projects, such as the Curtis Dam Rehabilitation. The Company's claims also include projects necessary to satisfy new regulations to ensure the removal of cryptosporidium as well as safety and reliability projects such as the installation of emergency power generation equipment and pipeline reinforcements; water storage tank projects; and improvements to acquired systems which I discuss below along with other large projects.

Q. Does Exhibit No. 3-C also reflect the Company's acquisitions in its FTY and FPFTY?

A. Yes. Exhibit No. 3-C reflects the asset cost, reserve, and depreciated cost by plant account and year for the acquired assets for the systems which the Company will acquire in the FTY and FPFTY, including Farmington Township and Audubon Water Company's water systems, as well as the wastewater systems to be acquired from Butler Area Sewer Authority, the Borough of Brentwood, Sadsbury Township Municipal Authority and Farmington Township. Additionally, as the Borough of Brentwood has not yet closed,

there are no specific projects associated with the interceptors at this time. However, subsequent to closing, the acquisition there may be work required on the interceptor pipes that while not owned by the Company are the responsibility of the Company and required as a component of adequate, reliable service. Therefore, those projects required will be treated as capital investment by the Company.

Q. Are there any particular projects that, because of their size or importance, you would like to discuss further?

A. Yes. While there are hundreds of individual plant additions detailed in Exhibit No. 3-C, the larger individual components of the Company's claim for plant additions are described below. Water system projects are presented first by year of anticipated completion, followed by wastewater system projects also by year of planned completion. In the following summary, I will indicate if a project is either a PADEP or EPA requirement.

FTY (July 2023-June 2024) Water Projects

1. 42" Edgebrook/Brook Street Waterline Replacement (I24-110070):

The Company plans to replace approximately 3,400 linear feet ("LF") of transmission main with 42-inch zinc coated HDSS ductile iron ("DI") pipe along Edgebrook Avenue and Minooka Street in the in the Company's Pittsburgh system in Allegheny County. The existing main has experienced frequent leaks leading to extensive surface damage. Replacement of the main will enhance system reliability and improve customer service. The estimated total cost of the project is approximately $7,990,178.

2. Snowden Road Main Replacement (I24-110071):

The project will replace approximately 3,300 LF of 24-inch high density polyethylene

("HDPE") pipe that has been pulled through 48-inch concrete lockjoint pipe with 24-inch zinc coated DI pipe along Snowden Road in South Park, Allegheny County, in the Company's Pittsburgh system. The 24-inch HDPE pipe was installed in 2002 and the exterior 48-inch concrete lockjoint pipe was installed in 1966. Replacement of the existing main, which has experienced several leaks, will provide better reliability and improved service to customers. The estimated total cost of the project is approximately $2,392,545.

3. Steelton Booster Pump Station ("BPS") Replacement(I24-140002):

The existing Kelker Street BPS serves 660 customers and experiences low pressure issues during periods of high flow demands, has low fire flow capability, and is not capable of providing sufficient flows for flushing the distribution system. The project involves replacing the existing BPS with a new prefabricated BPS with three domestic pumps and a high flow pump for satisfying system flushing and fire flow demands. The Company will construct a new utility building on an adjacent site, for storage and protection of equipment and materials, and to allow for Supervisory Control and Data Acquisition ("SCADA") monitoring and control of the system in the event that the water treatment plant ("WTP") is inaccessible. The total estimated project cost is $2,273,231.

4. Hershey-Steelton Regional WTP (I24-14XX03-02):

PAWC plans to acquire new property in the FTY prior to beginning the design and construction process for a future regional WTP to serve the Hershey and Steelton Districts. The existing Hershey WTP and Steelton WTP are approaching the end of their useful lives and it is not feasible to expand or replace either WTP on the existing site due to limited space and, in the case of the Hershey WTP, additional water allocation is not available

from the Swatara Creek. The Company will purchase property in advance of design and construction of the Hershey-Steelton WTP due to limited inventory adjacent to the Susquehanna River. The total estimated project cost is $1,500,000.

5. Steelton WTP Filter Improvements (I24-140003):

As a new acquisition, an assessment was done on the Steelton WTP. A number of deficiencies were identified that must be addressed to meet safety, reliability, and regulatory treatment requirements. These deficiencies will be addressed through improvements to optimize operation of the filters, including a dedicated backwash tank, air scour system, a filter to waste capability, and associated filter piping improvements. The existing gas chlorine system will also be replaced with a bulk sodium hypochlorite storage and feed system including a chemical unloading station with spill containment. The total estimated project cost is $4,946,094.

6. Donaldson Road Water Line Extension (I24-210035)

During the course of the Company's 2022 base rate case and, in particular, at the telephonic public input hearings held on July 19, 2022, six homeowners on Donaldson Road in Robinson Township, Washington County requested help to resolve ongoing water quality issues with the well water in the area that they attributed to strip mining operations. The affected area was identified by the Office of Consumer Advocate ("OCA") witness Terry L. Fought based on his review of the homeowners' request for service. PAWC analyzed the problem and determined that it would be feasible to construct extensions from its existing mains to the affected area. The Company also determined that the main extension could be constructed pursuant to Rule 27.1(F) of its water tariff, which authorizes

main extensions to be installed without customer contributions, subject to Commission approval, to address public health and safety concerns. Consequently, in Paragraph 57 of the Joint Petition for Settlement of Rate Investigation in its 2022 rate case ("2022 Rate Case Settlement"), the Company agreed to construct a water main extension to the six residences along Donaldson Road delineated by Mr. Fought. The Commission approved the 2022 Rate Case Settlement in its final order entered on December 8, 2022. The project will require the installation of 4,000 LF of new 8-inch and 1.5-inch water main along Donaldson Road and construction commenced in October 2023. The total estimated project cost is $1,362,000.

7. Ellwood - Jackson Township Gradient Improvements (I24-310020):

The project is to design and construct a 750,000-gallon elevated tank, 1,200 LF of 12-inch and 16-inch main, and a 1,500 gallons per minute ("GPM") BPS to create a new pressure gradient in Jackson Township, Butler County. This area of the Ellwood system has experienced high growth which is impacting pressure. The estimated cost of the project is $6,974,000.

8. New Castle WTP Improvements (I24-310018):

The project, which is required by the PADEP, will install ultraviolet light ("UV") disinfection to comply with the EPA's Long Term 2 Enhanced Surface Water Treatment Rule ("LT2") and the addition of a fifth filter to achieve reliable capacity with one filter out of service. The total estimated cost of the project is $11,500,000.

9. Punxsutawney South Main New Elevated Tank (I24-420008-02):

PAWC will install a second 0.50 million gallon ("MG") elevated storage tank within the

South Main gradient of the Punxsutawney system. The second tank will keep the system in pressure while the existing tank is out of service for maintenance and repainting. The overall estimated cost of the project is $4,500,000.

10. Warren 8,300 LF 12-inch Pipe Replacement On Pleasant Drive (I24-45XX03):

The project includes the replacement of approximately 8,300 LF pipe with 12-inch DI pipe along Pleasant Drive to add reliability and to increase flows and reinforce the south side of the Company's Warren system. The total estimated project cost is $2,490,000.

11. Norristown Lafayette Street Pipe Replacement (I24-510031):

The Lafayette Street distribution main services approximately 33,000 customers in the Norristown area in Montgomery County. This project involves the replacement of 2,800 LF of 4-inch and 6-inch cast iron ("CI") pipe with 12-inch DI pipe to improve redundancy and flow. The total estimated project cost is $1,800,000.

12. Lake Montrose Dam Rehabilitation (I24-540007)

The Lake Montrose Dam built in 1919 impounds 160-MG of water and provides a raw water source to the Company's 0.65 million gallon per day ("MGD") Montrose WTP. It is classified as a high hazard (Class C-1) dam under current PADEP dam safety regulations, which requires the structure to safely convey flood flows equal to the Probable Maximum Flood ("PMF") for the associated watershed. Although the dam was originally designed to satisfy the safety standards at the time of construction, the dam's spillway is now considered inadequate because it can pass only 17% of the PMF before water can overtop the dam. Overtopping could cause the structure to fail and result in the loss of life and extensive economic impacts. The project will create additional spillway capacity to ensure

safe and reliable operation and to meet current PADEP dam safety regulations. The estimated cost of the project is $4,866,026.

13. Montrose WTP Improvements (I24-540012)

The purpose of the project is to provide safe accommodations for deliveries, safe off-street parking for employees and visitors, and adequate storage space for tools and spare parts at the Montrose WTP. Due to the existing site constraints, deliveries to the plant are not able to be made in a safe manner and require plant operators to physically stop traffic along PennDOT Route 29 by entering the roadway and flagging oncoming traffic. The total estimated cost is $3,500,000.

14. Stoney Garden Intake Improvements (I24-560007)

The project is a PADEP requirement. Stoney Garden Dam has a severely deteriorated spillway, seepage issues, potential embankment stability issues and has a 100-year-old outlet works and piping. Rehabilitation of the dam includes replacing the deteriorated spillway, adding seepage drainage facilities, flattening downstream dam embankment for stability and upgrading outlet works, including replacing the 100-year-old CI pipe from the dam to the WTP. The total estimated cost is $8,376,706.

15. Pocono Well Improvements (I24-570011)

The existing well building requires significant improvements and has therefore reached the end of its useful life. This project includes constructing a new well house, adding a chlorine contact main, and demolishing the existing well house. The total estimated cost of the project is $1,500,000.

16. New Water Main in Exeter Township (I24-590003-02)

This project involves the installation of a new main in Exeter Township that will extend approximately 4,500 LF. The Company agreed to install the new water main as part of its acquisition of the Exeter water system to provide water service and fire protection to approximately 50 homes and businesses in parts of Exeter Township without existing service. The total estimated cost of the project is $1,550,000.

17. Glen Corrosion Control (I24-59XX02)

The purpose of this project is to install corrosion inhibitors at various entry points in the Glen water system. The corrosion inhibitor will aid in ensuring the customers are protected from potential metals dissolving into the water. The total estimated cost of the project is $1,100,000.

18. Lead Service Line Inventory (I24-610022)

To meet current EPA and PADEP Lead and Copper Rule ("LCR") requirements, PAWC will develop an inventory to identify the material of all service lines connected to the Company's water systems, including the customer-owned and Company-owned segments by October 2024. The purpose of the inventory is to determine the location of lead and galvanized services in PAWC's water systems, track progress toward full replacement of lead service lines ("LSLs") and inform communications with the public. This inventory will be publicly available on the Company's website so that customers can determine which of the four categories (lead, galvanized requiring replacement, non-lead and lead status unknown) is in the service line delivering their water. The project requires the physical examination of virtually all 680,000 services across Pennsylvania often through pothole excavation in order to develop the required inventory. The total estimated cost for the

project is $11,163,718.

19. West Shore Clearwell Roof (I24-610023)

The West Shore WTP serves the Mechanicsburg area in Cumberland County. The project includes replacement of the existing Clearwell roof, which has reached the end of its useful life. The total estimated cost of the project is $1,517,344.

20. Penn LCR Upgrades (I24-63XX08)

This project involves the installation of corrosion inhibitors at various entry points in the Penn water system to meet current LCR requirements. The total estimated cost of the project is $1,600,000.

21. Royersford System Loop (I24-640015)

The purpose of this project is to install a water main to connect the western ends of the Company's Royersford distribution system across Route 422. The total estimated cost of the project is $2,985,000.

22. Connect Phoenixville Gradient to Merlin Hills/Terry Lane Gradient (I24-640016)

The purpose of this project is to install main and pressure relief vaults ("PRV") with control panels to provide two interconnections into a lower pressure service area of the Royersford system currently served by interconnections with Phoenixville Borough. The total estimated cost of the project is $1,500,000.

23. Pine Ridge Well 5 - New Groundwater Supply (I24-680023)

The project will develop a new groundwater well source for the Pine Ridge water system in the Lehman-Pike District. The system is currently supplied by four wells and does not

have adequate capacity to meet average daily demands in the system if the largest well is out of service. The project will provide an additional groundwater source to augment existing supplies and enhance system reliability. The estimated cost of the project is $1,073,374.

24. Mid-Monroe Groundwater Development (I24-680024)

The purpose of this project is to develop a new groundwater source for the Mid-Monroe water system in the Lehman-Pike District. This system is supplied by four bedrock wells that experience recurring problems with reduced yield and decreasing effectiveness of redevelopment efforts. The current system does not have adequate capacity to meet maximum day demands and commercial customers are growing at accelerated rates. The project will provide an additional groundwater source to augment existing supplies, enhance system resiliency, and provide growth opportunities. The scope of the project includes hydrogeology field work, pump sizing and treatment design, well drilling, and existing treatment building and filter modifications. The total estimated cost of this project is $1,299,930.

25. Philipsburg WTP Filter Improvements (I24-720005)

The Phillipsburg WTP provides potable water to approximately 8000 customers in Centre County. The project will replace filter media installed more than 15 years ago and associated underdrain equipment that have reached the end of their useful life. The project was initiated by PADEP requirements after a filter inspection. Other improvements include

replacement of a section of deteriorated pipe and check-valves throughout the plant. The total estimated cost for this project is $1,330,147.

26. Dunmore No. 7 Dam Rehabilitation (I24-910005)

This project is a PADEP requirement. Dunmore Dam No. 7, built in 1877 impounds 107 MG of water and provides a raw water source to the Company's 33 MGD Scranton WTP. It is classified as a high hazard dam (Class B-1) under current PADEP dam safety regulations, which, as previously noted, require the structure to safely convey flood flows equal to the PMF for the associated watershed. Although the dam was originally designed to satisfy the safety standards at the time of construction, the dam's spillway is now considered inadequate because it can pass only 83% of the PMF before water can overtop the dam. Overtopping could cause the structure to fail and result in the loss of life and extensive economic impacts. The project will create additional spillway capacity to ensure safe and reliable operation and to meet current PADEP dam safety regulations. The estimated cost of the project is $17,075,370.

27. Griffin Dam Rehabilitation (I24-910068)

The project is a PADEP requirement. Griffin Dam, built in approximately 1887 and reconstructed in 1890's, impounds 400 MG of water and provides a raw water source to the Company's 5 MGD Chinchilla WTP. It is classified as a high hazard dam (Class B-1) under current PADEP dam safety regulations which, as previously noted, require the structure to safely convey flood flows equal to the PMF for the associated watershed. Although the dam was originally designed to satisfy the safety standards at the time of construction, the dam's spillway is now considered inadequate because it can pass only

28% of the PMF before water can overtop the dam. Overtopping could cause the structure to fail and result in the loss of life and extensive economic impacts. The project will create additional spillway capacity to ensure safe and reliable operation and to meet current PADEP dam safety regulations. The estimated cost of the project is $11,272,153.

28. Scranton Main Replacement West Parker to Viewmont Drive (I24-910090)

The purpose of this project is to replace 5,100 LF of parallel 16-inch and 6-inch diameter CI mains installed in the 1890s along N. Main Ave in the Scranton water system with a history of breaks and repairs. The existing 16-inch and 6-inch mains will be replaced and upgraded to 4,500 LF of 20-inch DI pipe and 800 LF of 24-inch DI water main. The total estimated cost is $3,700,000.

29. Watres WTP Solids Handling Improvements (I24-910078)

This project will improve the solids handling system at the Watres WTP. The existing solids handling facilities are undersized to handle plant upsets and the sand drying beds do not work well during winter months due to the cold climate, and also cause a safety concern for workers who must chisel out the solids in the winter months. The improvements include the installation of mechanical dewatering equipment that will be located inside of a building, providing a more efficient and safer approach during the colder months. The estimated cost of the project is $3,350,000.

30. Lake Scranton 3.5 MG Tank No. 3 (I24-910082)

The Scranton Area WTP utilizes two 2.5 MG storage tanks for chlorine contact time ("CT") and system storage. However, 5 MG of storage is not sufficient to meet the system's average daily demand of 20 MGD. A third 3.5 MG storage tank will be installed in parallel

with the existing tanks to improve the reliability of service to customers and maintain the required CT under all operating conditions. The total estimated project cost is $6,500,000.

31. Dunmore Dam No. 1 Outlet Works Rehabilitation (I24-910072)

Dunmore Dam No. 1 was built in 1877, impounds 66 MG of water, and provides a raw water source to the Company's 33 MGD Scranton WTP. It is classified as a high hazard dam (Class B-1) under current PADEP dam safety regulations, which require inspection of the dam's outlets works every 10 years. The project will modify the Dunmore Dam No. 1 outlet works in several respects to complete the required PADEP inspections, including installing new sluice gates, slip lining the outlet piping, and installing an access portal near the downstream toe of the dam. The estimated cost of the project is $3,226,399.

FTY (July 2023-June 2024) Wastewater Projects

32. Royersford Wastewater Treatment Plant ("WWTP") Disinfection Improvements (I24-17XX02)

The Royersford WWTP currently uses gaseous chlorine for disinfection, which is a toxic gas. For safety reasons and for more effective treatment during high wet weather flow, the plant will be converted to a UV light disinfection system. The existing chlorine and decolor system will be maintained as a backup disinfection process. The estimated cost of the project is $1,350,000.

33. Fairview South Beinhower Lift Station (I24-600007)

The Beinhower Lift Station is the primary lift station conveying wastewater flows to the Fairview South WWTP. The project will replace the existing lift station that has reached the end of its useful life with a new lift station with a greater pumping capacity to provide

reliable capacity when the largest pump is out of service. The total estimated cost for this project is $1,335,540.

34. Fairview WWTP Dewatering and Chemical Feed System Improvements (I24-600008)

Both the Fairview North and Fairview South WWTP use sodium aluminate in the treatment of wastewater to promote settling during the treatment process. This project will upgrade the existing storage and feed systems to meet PAWC's standards for safety and reliability, including chemical unloading containment. The project also includes replacement of the dewatering belt press at the Fairview South WWTP that has reached the end of its useful life. The total estimated cost for this project is $1,249,744.

35. Coatesville WWTP UV Replacement (I24-670013)

The project will replace obsolete UV units that pose safety and reliability concerns at the Coatesville WWTP. The estimated cost of the project is $1,600,000.

36. Saw Creek WWTP Equalization Tank Replacement (I24-690006)

The project will replace the existing heavily corroded steel flow equalization tank at the Saw Creek Estates WWTP. The existing tank will be replaced with a new, similar sized concrete tank and equipped with a replacement aeration system and pumps to convey wastewater to the sequence batch reactors. The estimated cost of the project is $2,367,202.

37. Scranton WWTP Building Improvements - Phase II (I24-920024-02)

The scope of this project is to construct and renovate office and operations space at the Scranton WWTP. Phase I involved the construction of office, garage, and operating facilities for the collections department of the wastewater system and was completed in

2023. Phase II of the project will construct laboratory and office space at the WWTP. The total estimated cost for this portion of the project is $10,000,000.

38. Outfall No. 6 - Gardner Avenue (I24-920038)

The Scranton combined sewer system ("CSS") is required to maintain compliance with the Long Term Control Plan ("LTCP") required by the EPA. One of the main components of the LTCP is the construction of upstream storage and follow management structures to alleviate the uncontrolled outflow of the combined wastewater into the Lackawanna River during wet weather conditions. This project includes the construction of a new offline 780,000-gallon storage system at Outfall #6 to reduce typical year CSO events from 38 to 7 and to reduce discharge to the Lackawanna River by 8.180 MG. In addition to the new storage facilities, the project includes the installation of a new inlet and maintenance/diversion structure, new valve and meter chamber including pinch valve and flow meter, piping, manholes, and a SCADA system at the existing outfall. The estimated cost of the project is $10,000,000.

39. Scranton CSO Outfall Access and Safety Improvements (I24-920042)

The Scranton CSS overflows to more than 80 different outfalls along the Lackawanna River and its tributaries. PAWC is required to clean and inspect the outfalls regularly. However, ten of the outfalls are unsafe or impossible to access. The project scope is to remove overgrowth, extend buried pipes, and install stairs or fall arrest systems on steep embankments at the ten outfall locations to make them safe to inspect and maintain. The total estimated cost of this project is $1,150,000.

40. York WWTP Outfall 001 Improvements (I24-940005)

This project is required by the EPA. The existing York WWTP has a stormwater system that collects and conveys stormwater from Train 2 to Outfall 001, where it is pumped to Codorus Creek. When the York WWTP influent flows reach 53 MGD, a portion of the Train 2 final effluent flow is diverted to the stormwater system for conveyance and disinfected utilizing the original Outfall 001 chlorine contact tank. This project includes installation of a new dechlorination system and upgraded controls for proper dosing to ensure the York WWTP can maintain compliance with the National Pollutant Discharge Elimination System ("NPDES") Permit requirements for disinfection and total residual chlorine discharged to the Codorus Creek. The total estimated cost for this project is $1,250,000.

41. York WWTP Boiler Replacement (I24-94XX03)

The scope of this project is to replace the existing boilers and underground hot water piping at the York WWTP that have reached the end of their useful life. The total estimated cost for this project is $1,000,000.

42. Scranton Outfall #027 (I24-920022)

The project is required by the EPA. Outfall #027 is a proposed off-line combined wastewater storage system being designed and constructed as part of Phase C of the Scranton LTCP. This project will provide a new 211,000 gallon off-line storage facility system to collect 90% of the combined wastewater storm surges, as opposed to discharging into the Lackawanna River, and then gradually pump the collected wastewater back into the CSS after the wet weather event has passed. The project will provide a new inlet

structure, three large diameter pipes installed horizontally acting as storage vessels, and a discharge pump station. The total estimated cost of the project is approximately $5,902,000.

FPFTY (July 2024-June 2025) Water Projects

43. Hays Mine Raw Pipeline (I24-110035)

The Hays Mine WTP is in the Company's Pittsburgh water system. The project will replace 9,500 LF of three parallel 24-inch CI mains with one 42-inch DI main and will replace 6,600 LF of 36-inch raw water main with 42-inch raw water main, which have suffered catastrophic breaks in the past, to maintain operations at the Hays Mine WTP. The estimated cost of the project is approximately $35,240,404.

44. Aldrich WTP Building Replacement (I24-110085)

The scope of this project is to construct a new building at the Aldrich WTP in the Pittsburgh water system. The new structure will replace an existing building that has reached the end of its useful life. The new building will house the SCADA and maintenance services groups and provide a safe and effective work area. The total estimated cost for this project is $1,750,000.

45. Hays Mine Ferric and Corrosion Inhibitor (C9) Tank Replacement (I24-11XX19)

The project involves the replacement of three ferric chloride bulk tanks, two ferric chloride day tanks, one corrosion inhibitor bulk tank, one (1) corrosion inhibitor day tank, and associated equipment that is nearing the end of its useful life at the Hays Mine WTP. One existing ferric chloride bulk tank also has an identified leak near the lower half of the base

of the tank and another is bulging at the bottom. The estimated total cost of the project is approximately $3,136,125.

46. Pittsburgh Water System, Madeline Street Main Replacement (I24-11XX08)

The purpose of this project is the replacement of approximately 3,000 LF of 24-inch water line and 1,800 LF of 6-inch water line in the Company's Pittsburgh system along Madeline Street from Agnew Street to Brownsville Road due to main breaks. This project will also increase the reliability of the system and improve customer service. The total estimated project cost is $3,500,000.

47. Aldrich WTP No. 1 Clarifier Rehabilitation (I24-110090)

The purpose of this project is to rehabilitate the circular 800,000-gallon No. 1 clarifier at the Aldrich WTP in the Company's Pittsburgh system. The Aldrich style clarifiers are steel tanks that corrode over time. The rehabilitation includes replacement of the drive mechanism, structural steel repairs of the sludge removal components, concrete tank repairs, replacement of two 8-inch incline grinder pumps and valves, and replacement of other isolation valves and appurtenances. The estimated total project cost is $1,200,000.

48. Aldrich WTP Chemical Pumps Upgrades (I24-110088)

This project involves the replacement of piping, valving, and metering pumps for several liquid chemical feed systems that have reached the end of their useful lives at the Aldrich WTP. The estimated total cost of the project is $1,030,000.

49. Carnegie Operations Center Parking Area Expansion (I24-11XX21)

The Carnegie Operations Center is the primary operations location in PAWC's Pittsburgh System. The existing parking lot is inadequate for full use of the training center or for

other visitors to the location. Therefore, PAWC will acquire a parcel in the FPFTY for the relocation and expansion of the Carnegie office operations storage yard and ultimately the parking lot. The total estimated project cost is $1,400,000.

50. Grant Street Booster Station (I24-210030-04)

The project will install a new BPS on Grant Street east of Verner Avenue in the Company's McMurray system in Washington County to supply high elevation customers and improve pressures. The estimated total project cost is $1,004,295.

51. Avella Road Water Line Extension (I24-210034)

In accordance with Paragraph 57 of the 2022 Rate Case Settlement, the Company will be extending service to the Avella School District in Washington County to address water quality issues regarding odor and distaste. The project consists of installing approximately 38,000 LF of new water main along Avella Road that will connect the Company's Mt. Pleasant gradient and the Church Street gradient. The main extension will serve the Avella School campus and has the potential for approximately 50 new service connections along the route in Independence Township, Cross Creek Township, and Mt. Pleasant Township. New fire hydrants and a pressure reducing valve ("PRV") station will be included in the project. The estimated cost of the project is approximately $13,100,000.

52. Old Steubenville Pike & Campbell Road Water Line Extension (I-210036)

In accordance with Paragraph 57 of the 2022 Rate Case Settlement, PAWC will be extending service to twenty-three new customers in Robinson Township, Washington County to address the concerns of homeowners and businesses in the area regarding polluted groundwater discussed by OCA witness, Mr. Fought. Similar to the Donaldson

Road Extension, PAWC analyzed the problem and determined that it would be feasible to construct extensions from its existing mains to the affected area. The Company also determined that the main extension could be constructed pursuant to Rule 27.1(F) of its water tariff, which authorizes main extensions to be installed without customer contributions, subject to Commission approval, to address public health and safety concerns. This project will require installation of approximately 15,000 LF of 6-inch and 8-inch new water main along Old Steubenville Pike and Campbell Road to service these residents. The project will also include a PRV station and fire hydrants. The estimated total cost of the project is $6,360,350.

53. Jack Clutter Dam Removal Project (I24-21XX07)

Jack Clutter Dam is a regulated, high hazard dam in Washington County. The existing dam does not meet current PADEP regulations for spillway capacity. The portion of the Company's system which drew water from Jack Clutter Dam can instead receive water from the McMurray District, and therefore the dam is no longer required and will be removed. The estimated total cost of the project is $1,200,000.

54. Replace Hannas Knob Booster Station (I24-210038)

The Hannas Knob BPS serves approximately 40 customers in the Company's McMurray district. The existing BPS was constructed in 1970's and has reached the end of its useful life. A new BPS, with a rated capacity of 75 gpm, will be installed adjacent to the existing pump station and the existing Hannas Knob BPS will be removed from service. The estimated total project cost is $1,600,000.

55. Connellsville – 12-inch Main Across Youghiogheny River (I24-230012)

The west portion of PAWC's Connellsville system is served by a single 12-inch main crossing the Youghiogheny River. The existing main was installed in the 1980s and raises service reliability concerns. The project will install approximately 1,350 LF of 12-inch main across the Youghiogheny River near US 119 by horizontal directional drilling to provide a second water feed to the west portion of the Connellsville system. The estimated total project cost is $2,321,880.

56. Brownsville to California Road 16-inch Main River Crossing (I24-250010)

Currently, approximately 9,200 customers in the Company's Brownsville system are served by one 16-inch main that was installed in 1986. If the existing feed failed, the area would not have a water supply. Accordingly, the project will install approximately 3,000 LF of 16-inch main crossing under the Monongahela River to provide a second water feed to West Brownsville Road and California Road in the Brownsville system. The total estimated cost of this project is $3,260,000.

57. Brownsville WTP Sedimentation Basin Upgrades (I24-250011)

Numerous improvements are needed to the sedimentation basins at the Brownsville WTP to improve safety and operational efficiency. The project will install automated sludge removal equipment, new mixers to replace the existing mixers that are beyond their useful life, and new sluice gates. PAWC will also cover the basins and perform electrical and control improvements. The estimated project cost is $2,680,000.

58. New Castle WTP Residual Improvements (I24-310026)

The New Castle WTP has a design capacity of 8.4 MGD and serves approximately 43,000

customers in Lawrence County. The Company will replace the current sludge press that no longer has maintenance parts available, and also install a new backwash holding tank and new filter backwash recycle pumps. A new building will be constructed to house two presses, polymer feed, electrical room, conveyance system for the finished solids and a new filtrate pump station. The project will also include improvements to the thickener building including electrical improvements, new lighting and heating, ventilation and air conditioning equipment, additional instrumentation, and better access to the thickener dome roof. The total estimated cost of the project is $7,500,000.

59. New Castle WTP Filter Rehabilitation (I24-310027)

The four existing filters at the New Castle WTP pose concerns because of the age and condition of the media. The Company regularly evaluates the condition and efficacy of filter media. The media requires replacement every 15-20 years. The filter work will consist of the removal and replacement of existing media, upgrades to valving and instrumentation, and installation of davit arm retrieval mounts. The total estimated cost of the project is $2,000,000.

60. Butler WTP Chemical Improvements (I24-330016)

The Butler WTP currently uses gas chlorine and gas ammonia for disinfection, which are both toxic gases. The project will convert to the use of liquid sodium hypochlorite and liquid ammonium sulfate, which is much safer for both the public and Company staff. The total estimated cost of the project is $3,900,000.

61. Indiana Pleasant Hills Gradient Improvements (I24-410010)

The Company is undertaking the project to improve reliable flow capacity and pressure at

the Pleasant Hills BPS. The pumps are being replaced at the existing Pleasant Hills BPS and a PRV station will be added within the Pleasant Hills gradient of the Company's Indiana system. The estimated cost of the project is $1,225,000.

62. Punxsutawney - Install New Storage at West End Reservoir (I24-420008-02)

The existing 100-year old storage tank at the West End Reservoir in the Company's Punxsutawney system is at the end of its useful life and a second tank is needed to maintain system pressure while the old tank is removed. The project consists of two parts. In the first part, the Company will construct a new ground storage tank at the West End Reservoir site adjacent to the existing tank. Part Two of the project will consist of demolishing the existing tank and constructing a second tank within the footprint of the existing tank. The estimated cost of this project is $2,414,394.

63. Punxsutawney Snyder Hill Rd./Rockland Extension (I24-42XX02)

This project will extend service to approximately 70 new customers along Snyder Hill Road in Punxsutawney Borough. The extension of water service into Snyder Hill Road will provide a safe, potable water supply to an area that has poor well quality and quantity issues, and improve public safety by providing adequate fire protection in the Rockland gradient. The project will require installation of approximately 11,000 LF of new 6-inch to 12-inch DI water main. In the 4th quarter of 2023, the Company will seek Commission approval for the service territory expansion. The estimated cost of this project is $2,800,000.

64. Clarion Main Across I-80 at Exit 62 to Feed Sligo (I24-43XX01)

This project will install approximately 3,000 LF of a new 12-inch water main across

Interstate 80 at Exit 62 to increase fire flows and reliability of service to customers in the Sligo area of the Company's Clarion system. The total estimated project cost is $1,500,000.

65. Clarion WTP - Chlorine Gas Elimination (I24-430007)

This project will replace the gaseous chorine system with a new bulk liquid sodium hypochlorite system at the Clarion WTP for safety reasons. The project will also include safety and operational improvements to the Clarion WTP. The estimated total project cost is $3,650,000.

66. Kittanning WTP Filter Improvements (I24-44XX06)

The Kittanning WTP provides water for the Company's distribution system serving 5,250 people. Over time, the filter media degrades and requires replacement. During replacement, the Company reviews and replaces as needed the underdrains and hardware. The project will rehabilitate the filters and replace the filter media at the Kittanning WTP. The estimated cost of the project is $1,500,000.

67. Second 16-inch Main to East Norriton Township (I24-510028-02)

The purpose of this project is to construct a new BPS at the existing East Norriton tank site and install approximately 3,000 LF of new 16-inch main, which will take water from the Dekalb pressure zone and transfer water and provide a secondary feed into the Church Road pressure zone for reliability. The estimated cost of the project is $2,000,000.

68. Norristown WTP New Blower and Backup (I24-51XX19)

PAWC will replace the Norristown WTP's aging blower system that experienced operational issues in past years with a new blower and backup system to improve reliability. The estimated cost of the project is $1,000,000.

69. Yardley System: Williams Lane Tank BPS and Chemical Feed (I24-520006)

The project will install pump station upgrades, such as moving the altitude valve inside and adding a redundancy pump, and will replace the 500,000-gallon Williams Lane Tank in the Yardley system with a new storage tank due to the age and condition of the existing 80-year old tank. The estimated cost of the project is $4,006,940.

70. Yardley College Avenue Wells PFAS Treatment (I24-520007)

The Company will proactively deploy treatment processes to remove PFAS at wells along College Avenue in the Company's Yardley system to comply with the new MCLs for six PFAS that are reasonably anticipated to be imposed by the EPA's proposed rule, which is expected to be finalized at the end of 2023. The estimated cost of the project is $6,000,000.

71. Susquehanna Operations Center (I24-540005)

PAWC will purchase land and build a new operations center for its Susquehanna System to replace the existing facility that has reached the end of its useful life and no longer meets the needs of the Company. The total estimated cost for this project is $3,550,000.

72. Pocono District: Pine Hill and Summit Point PFAS Treatment (I24-570012)

The Summit Point and the Pine Hill wells in the Pocono district serving customers in the Mount Pocono area have PFAS levels that exceed the MCLs under the EPA's proposed standards. The project will deploy treatment processes for PFAS removal at those wells to ensure compliance with those regulations that are expected to be finalized in the near future. Piping and pump modifications will be needed to connect the new treatment system to the distribution network. The estimated cost of the project is $4,000,000.

73. Glen Alsace District PFAS Treatment for Wells 8 and 9/9A (I24-590005)

Like the projects in the Yardley and Pocono districts described above, PAWC will proactively deploy treatment processes to remove PFAS at Wells 8 and 9/9A in the Company's Glen Alsace system to ensure compliance with MCLs under the proposed rule that the EPA anticipates finalizing by the end of 2023. The estimated cost of the project is $3,800,000.

74. Hershey District: Manada Creek Intake Project (I24-62xxxx_)

Siltation at the Manada Creek Intake Dam has reached a level that limits PAWC's ability to withdraw and pump water from Manada Creek to the Hershey WTP. The project will remove the sediment behind the dam to restore the capacity of the intake and provide an improved gate system that will allow for flushing sediment. The estimated cost of the project is $1,200,000.

75. Wyomissing System High Gradient Tank No. 2 (I24-630009-01)

PAWC will construct new concrete ground storage tanks on existing Company property with a combined capacity of 0.8 MG storage tank to address storage deficits in the Wyomissing high gradient. The estimated cost of the project is $2,000,000.

76. Wyomissing System High Gradient Tank No. 2 System Connection (I24-630009-02)

This project involves the replacement of 7,700 LF of main to connect the new Wyomissing High Gradient storage tank into the Wyomissing High Pressure zone. The estimated cost of this project is $2,750,000.

77. Penn System Wells 19 and 23 PFAS Treatment (I24-630010)

Like the projects in the Yardley, Pocono, and Glen Alsace districts described above, PAWC will proactively deploy treatment processes to remove PFAS at Wells 19 and 23 in the Company's Penn System to ensure compliance with MCLs under the proposed NPDWR. The estimated cost of the project is $3,800,000.

78. West Chester BPS Relocation (I24-650010)

The existing West Chester BPS was constructed over 40 years ago and is at the end of its useful life. The BPS is a below ground station in a roadway that impedes the ability to maintain and repair the pumping station. The project will relocate the West Chester BPS above ground and install an emergency generator to improve reliability and safety. The estimated cost of the project is $2,000,000.

79. Coatesville System: Rock Run Dam Improvements (I24-650020)

Rock Run Dam, built in the 1920's, impounds 235 MG of water and provides a raw water source to the Company's 7 MGD Rock Run WTP. The Company performs regular inspections of its dams across Pennsylvania and PAWC's recent inspection of Rock Run Dam identified several deficiencies in the dam structure. The project will implement various improvements to address those deficiencies, including valve replacement, access improvements, and intake system improvements. The estimated cost of the project is $1,624,212.

80. Coatesville System: Route 340 BPS Replacement (I24-650023)

To improve water quality and eliminate water age concerns, the Hill Road water tank is taken out of service during the summer. The project will replace the existing Route 340

BPS with a capacity of 0.29 MGD with a new 1.44 MG BPS to maintain system pressure when the Hill Road Water Tank is out of service. The estimated cost of the project is $2,000,000.

81. Coatesville System Main Replacement and/or Relining (I24-650024)

The existing 24-inch CI main that runs from Parkesburg, PA to Caln, PA adjacent to Amtrak railway in the Company's Coatesville system dates back to 1903 and has experienced multiple breaks recently. The project will slipline or replace approximately 7,500 LF of the existing aging and high-risk 24-inch CI main with HDPE or DI pipe depending on the condition of the existing pipe. The main will be placed further from the Amtrak right of way to ensure safe replacement and future pipe access. The estimated cost of the project is $7,600,000.

82. Coatesville System Raw Water Main Slip Lining (I24-65XX05)

The project will install 16-inch HDPE in approximately 750 LF of existing 16-inch raw water main that is in poor condition running from Chambers Lake to the Company's Rock Run WTP in the Coatesville system. The project is estimated to cost $2,000,000.

83. Rock Run WTP Wastewater Connection to Public Sewer (I24-650022)

The project will install a new main to connect Rock Run WTP to PAWC's Coatesville sanitary sewer system so that waste solids do not hinder WTP performance. The project is estimated to cost $2,000,000.

84. All Seasons Well Replacement (I24-680032)

The All Seasons water system in the Company's Lehman Pike district has only one well source to supply 51 customers. Additionally, the existing well has a problem with fine

sand in the source water that must be removed before treatment. The project will construct a new second well and will reconstruct the existing well to prevent sand from entering through it, so the existing well can serve as a reliable back-up source for the All-Seasons system. The estimated cost of the project is $1,000,000.

85. Pine Ridge System Well No. 3 PFAS Treatment (I24-680033)

The groundwater supply at Well No. 3 in the Company's Pine Ridge system contains PFOA and PFOS levels that require removal to meet current PADEP MCLs for those chemicals. The project will incorporate activated carbon into the treatment process to absorb excess PFOA, PFOS and other PFAS in the well water supply to provide safe, high-quality water to customers. The total estimated cost of this project is $1,700,000.

86. Philipsburg System Well No. 2 (I24-720002)

The Philipsburg District has a current supply deficit of 0.94 MGD during drought conditions, and a projected 2026 drought supply deficit of 0.89 MGD. This project is part of a multi-year project to develop an additional 1 MGD of groundwater source of supply to ensure a reliable service for customers in the Philipsburg district. The estimated cost for the project is $1,704,518.

87. Emigh Run BPS Improvements (I24-720003)

The existing Emigh Run BPS in the Philipsburg system serves a large area which includes twenty-one pressure gradients, and is currently supplied by a single 12-inch pipeline located in corrosive soils. The project will install approximately 10,500 LF of new 12-inch pipeline and two BPS in the Philipsburg system to create an alternate supply from the

Windy Hill gradient to the Spring Valley gradient and enhance reliability. The total estimated project cost is $4,537,070.

88. Philipsburg – Sandy Ridge BPS and Linwood BPS (I24-720007)

The project will install two new booster stations in the Philipsburg district. The existing Sandy Ridge BPS is an underground pump station that lacks capacity to serve existing fire hydrants, and it does not have an emergency generator needed to meet PADEP Uninterrupted System Service Plan requirements. Additionally, underground booster stations present safety hazards for workers. Given the small site footprint, an on-site replacement is not feasible. Therefore, PAWC will acquire new property and construct a new above-ground prefabricated BPS, along with a new emergency generator. The existing Linwood BPS is also an underground pump station that lacks fire capacity, does not have an emergency generator, and presents safety hazards for workers. A replacement pump station with a new emergency generator will be installed on existing property near the Phillipsburg WTP. The estimated cost of the project is $2,000,000.

89. Second Storage Tank at Philipsburg WTP (I24-720008)

PAWC will install a new distribution storage tank at the Philipsburg WTP because the existing distribution storage tank cannot be taken out of service for painting or other maintenance due to lack of adequate storage in the system. In addition, the project will install a new small clearwell or additional chlorine contact piping to ensure the Philipsburg WTP can meet minimum chlorine contact time requirements. Finally, a small pump station will also be added to provide potable water to the Philipsburg WTP since the plant's current

water supply does not meet chlorine contact time requirements. The estimated cost of the project is $4,200,000.

90. Berwick - Salem BPS Replacement (I24-730002)

The existing Salem BPS in the Berwick system is in poor condition, located within the 100-year floodplain, and located in an underground vault that requires confined space entry for servicing pumps. In addition, the Salem BPS only has one pump and does not have a fire pump. This project will replace the Salem BPS with a new BPS outside the flood plain to provide a reliable water supply for existing customers and improve fire flow. A 2,200 LF main extension is also required to connect the new BPS to the Berwick distribution system. The total estimated project cost is $1,629,956.

91. Curtis Dam Rehabilitation (I24-910008)

The Curtis Dam, built in 1886-1887, impounds 379 MG of water and provides a raw water source to the Company's 33 MGD Scranton WTP. It is classified as a high hazard dam (Class B-1) under current PADEP dam safety regulations, which as previously noted, require the structure to safely convey flood flows equal to the PMF for the associated watershed. Although the dam was originally designed to satisfy the safety standards at the time of construction, the dam's spillway is now considered inadequate because it can pass only 26% of the PMF before water can overtop the dam. Overtopping could cause the structure to fail and result in the loss of life and extensive economic impacts. The project will create additional spillway capacity to ensure safe and reliable operation and to meet current PADEP dam safety regulations. The estimated cost of the project is 16,491,001.

92. Maple Lake Outlet Works Rehabilitation (I24-910068)

The Maple Lake Dam, built in 1883, impounds 214 MG of water and provides a raw water source to the Company's 12 MGD Nesbitt WTP. It is classified as a high hazard dam (Class B-1) under current PADEP dam safety regulations, which require the outlet works to have upstream closure. The Maple Lakes Dam does not currently have upstream closure capabilities on the outlet works as required by PADEP. The Company will rehabilitate the dam structure to address the outlet works deficiency through several upgrades, including a new intake, new valves, a trash rack, an access catwalk to the new valves, outlet pipe slip lining and a downstream energy dissipation structure. The project is estimated to cost $5,541,000.

93. Marshwood Dam Outlet Works Rehabilitation (I24-910070)

The Marshwood Dam, built in 1927, impounds 59 MG of water and provides a raw water source to the Company's 33 MGD Scranton WTP. It is classified as a high hazard dam (Class C-1) under current PADEP dam safety regulations, which require the outlet works to have upstream closure. The Marshwood Dam does not currently have upstream closure capabilities on the outlet works as required by PADEP. The Company will rehabilitate the dam structure to address the outlet works deficiency through several upgrades, including a new intake, new valves, an access catwalk to the new valves, a trash rack, outlet pipe slip lining and a downstream energy dissipation structure. The estimated cost of the project is $4,988,000.

94. Old Boston Third Tank (I24-910087)

This project will add a third 1 MG finished water storage tank at the Old Boston tank site,

which is part of the Watres system in the Wilkes-Barre/Scranton district, to address growth and increased demands in the system. The tank installation project will also require inlet and outlet piping, valving, and SCADA work. The total estimated cost of the project is $4,000,000.

95. Wilkes Barre/Scranton: Sans Souci Parkway Main Interconnection (I24-910088)

Nanticoke City, located in the Company's Wilkes Barre/Scranton system, is currently served by a single 18-inch CI main crossing under the Susquehanna River. This project will install new 12-inch DI water main along Sans Souci Parkway from Hanover Township to Nanticoke City to supply approximately 15,000 customers. The second feed will reduce the impact to customers and fire protection during main break events. The total estimated cost of this project is $2,000,000.

96. Olwen Heights Storage Tank and Hydropneumatic Tank Replacement (I24-910089)

The project will replace the existing 100,000 gallon water storage tank at the Olwen Heights Well in the Wilkes Barre/Scranton system, along with the existing hydropneumatic tanks in the well houses, that have surpassed their useful life and are in degrading condition. The estimated total project cost is $1,250,000.

97. Homesite Well PFAS Treatment (I24-910093)

Like the projects in the Yardley, Pocono, Glen Alsace, and Penn districts described above, PAWC will proactively deploy treatment processes to remove PFAS at the Homesite Well

in the Company's Wilkes Barre/Scranton system to ensure compliance with MCLs under the EPA's proposed rule. The total estimated project cost is $2,000,000.

98. Rushbrook BPS Upgrades and Roadway Improvements (I24-910095)

The Rushbrook BPS in the Wilkes Barre/Scranton system is past its expected useful life and accessing the site is a safety concern. The project will upgrade the pumps at the Rushbrook BPS, install a standby generator and implement roadway improvements. The cost estimate for the project is $1,500,000.

99. Ceasetown WTP (I24-91XX03) and Huntsville WTP (I24-91XX08) Chlorine Safety

PAWC will convert the disinfection process at the Ceasetown WTP and the Huntsville WTP in the Wilkes Barre/Scranton system from the use of chlorine gas to bulk sodium hypochlorite. The project will eliminate safety hazards associated with the use of large chlorine gas cylinders. The total estimated cost of each project is $2,500,000 (or $5,000,000 total).

100. White Deer WTP Solids Handling (I24-710008)

The current clarifier and sludge drying beds at the White Deer WTP have design limitations that prevent their operation as hybrid lagoons and drying beds. Under worst case backwashing conditions, the current solids handling system does not have adequate wastewater storage to allow the plant to meet PADEP filter-to-waste regulations. Additionally, upgrades are required to meet more stringent residual chlorine limits in the new NPDES permit. Project improvements will include modification of the existing sludge drying beds and wastewater clarifier, addition of a new filter-to-waste holding tank,

installation of a dechlorination chemical feed system, a new recycle pump station, and associated yard piping. The total estimated cost for this project is $3,600,000.

101. Milton WTP Raw Water Intake Modification (I24-710018)

The existing intake at the Milton WTP encounters freezing issues during the winter when river levels are low. The wet well also receives a significant build of silt requiring annual cleaning. In addition, the existing travelling screen at the Milton WTP has reached the end of its useful life. The project will upgrade the existing intake to prevent icing or install of a new passive intake screen system. A mixer or bubbler system will be also installed in the wet well to minimize silt accumulation. The estimated project cost is $1,575,000.

FPFTY (July 2024-June 2025) Wastewater Projects

102. Duquesne Clarifier Rehabilitation - First Clarifier (I24-12XX09)

At the Duquesne WWTP, the existing clarifiers are over 40 years old and have never been maintained below the waterline. Additionally, maintenance parts have become difficult to find without significant cost. The Company has rehabilitated the majority of the Duquesne WWTP except for the clarifiers. This project will rehabilitate the first of the two clarifiers by replacing the clarifier mechanisms and upgrading electrical and controls. The total estimated project cost is $1,230,000.

103. Duquesne WWTP Chlorine Gas Conversion (I24-120023)

The Duquesne WWTP currently utilizes gaseous chlorine for disinfection, a toxic gas. In order to reduce regulatory compliance risk associated with meeting the plant's permitted low chlorine residual limit and for safety reasons, the project will convert the gas chlorine

disinfection system to a UV system and a liquid sodium hypochlorite back-up disinfection system. The total estimated cost of this project is $3,000,000.

104. Exeter: Lincoln Road Pump Station Upgrade (I24-13XX08)

PAWC will install new pumps, a wet well, and upgrade specific electrical equipment within the existing Lincoln Road pump station in the Exeter wastewater system that has deteriorated due to the corrosive environment. The total estimated cost of this project is $1,250,000.

105. Koppel WWTP – Sequence Batch Reactor ("SBR") Improvements (I24-350004)

PAWC will install a new SBR- Intermittent Cycle Extended Aeration System ("ICEAS") and process controls at the Koppel WWTP to address capacity and I&I levels. Structural inspection and repairs will be made to the concrete tankage. The estimated cost of the project is $1,750,000.

106. Sadsbury Pump Station Rehabilitation (I24-150001)

The Sadsbury pump station in the Company's Chester County, Sadsbury Township wastewater system is currently undersized and has experienced sanitary sewer overflows ("SSOs") in the past. The purpose of this project is to upgrade the Sadsbury pump station structurally and mechanically. The total estimated cost of this project is $2,000,000.

107. Kane Wastewater State Route 321 Lift Station ("LS") (I24-190006)

This project includes the construction of a new LS in the Kane wastewater system at a new site near the State Route 321 LS in order to eliminate capacity and access issues. Once the

new lift station is in service, the existing lift station will be removed from service and demolished. The estimated cost of the project is $1,500,000.

108. Kinzua WWTP Solids Handling (I24-190005)

This project will replace the aged belt filter press and solids conveyance system at the Kinzua Road WWTP in the Kane wastewater system, which will improve solids handling at the plant. The estimated total project cost is $1,050,000.

109. Clarion WWTP Outfall Sewer Replacement (I24-47XX03)

PAWC will replace approximately 2,500 LF of existing 12-inch and 18-inch outfall sewer pipe that is either undersized, damaged, or exposed within the Trout Run Stream before discharging into the Clarion River. This project will increase the reliability and capacity of the Clarion WWTP sewer effluent. The total estimated project cost is $1,600,000.

110. Fairview North Hydraulic Improvements (I24-60XX03)

The Company's Fairview North wastewater system has experienced growth, and its existing collection system is not capable of handling the projected additional flows. This project will enable the existing collection system to convey additional wastewater flows to the Fairview North WWTP for treatment by adding 2,800 LF of force main to the discharge of the Pin Oak LS. The cost of the project is offset by capacity charges/tapping fees related to the growth and development in the Fairview North area. The total estimated cost for this project is $1,800,000.

111. Timothy Lake Equalization Pump Station Replacement (I24-69XX03)

The existing Timothy Lake equalization pump station in the Lehman Pike wastewater system consists of two steel tanks that include pumps and an aeration system that require

frequent maintenance. Additionally, the steel tanks are corroded and present safety issues to Company staff. The project will replace the existing Timothy Lake equalization pump station with a new complete pump station. The total estimated cost of the project is $1,000,000.

112. Marcel Lakes WWTP Equalization Tank (I24-690008)

The purpose of this project is to remove the existing clarifier and replace it with separate influent and effluent equalization tanks. The equalization tanks are to enable dealing with flow variation. The total estimated cost of this project is $2,000,000.

113. Scranton WWTP Emergency Generator (I24-91XX07)

The Scranton WWTP has a dual electrical feed into the plant that are both powered by the same substation, and the plant does not otherwise have comprehensive emergency backup power. In the event of an extended power outage, the plant's main systems would not be able to operate. This project scope includes the installation of a new standby generator, switchgear, and metering work that will address the complexity of the site logistics and provide sufficient electrical power supply for continual plant operations in the event of a power outage. The estimated cost of the project is $3,000,000.

114. Scranton Outfall Nos. 19 and 20 Lackawanna/Linden Valving Reconfiguration (I24-920045)

Outfall Nos. 19 and 20 in the Scranton wastewater system consist of a large combined sewer overflow ("CSO") storage tank for the two outfall lines that the Company must regularly access for cleaning and maintenance. PAWC will install valves before the overflow storage facilities to allow for the isolation of each storage tank. The project will

improve safety and improve operation and maintenance of the CSO outfalls. The total estimated cost of this project is $1,100,000.

115. York Wastewater Prospect Street Interceptor (I24-94XX01)

The Prospect Street interceptor sewer line located within the York wastewater collection system conveys flows (primarily from Spring Garden Township) to the York interceptor sewer line for treatment at the York WWTP. The project will replace 1,300 LF of 12-inch interceptor sewer located between manhole MYC-83 and manhole MYC-2038 that is undersized with 18-inch interceptor sewer line. The total estimated cost for this project is $3,050,000.

116. York WWTP Dewatering, UV and Tertiary Treatment Improvements (I24-94XX05)

This project includes improvements at the York WWTP including dewatering, UV treatment and tertiary treatment. The dewatering centrifuges and UV disinfection units have reached the end of their useful life and need replacement. Additionally, in accordance with the EPA Consent Agreement Project 10, the capacity of the Tertiary Treatment Filters and the UV System will be increased to allow treatment of the entire wastewater flow and will eliminate diverted flows above 53 MGD. The total estimated cost for this project is $4,600,000.

117. Butler Area Sewer Authority ("BASA") Fischer–Brewster System Improvements (I24-XXXXXX)

The project is required by the BASA Corrective Action Plan imposed by the PADEP due to a history of SSOs within the collection system that the Company expects to acquire in

2024. The project includes the replacement of two lift stations (Fisher and Brewster) along with the construction of wet weather tanks at each station. A third station (Brewster Booster) will also be improved by installing larger capacity pumps to handle the higher flows from the other stations. The anticipated budget for this project is $7,000,000.

118. BASA Greenwood-Bryson-Benbrook System Improvements (I24-XXXXXX)

The project is required by the BASA Corrective Action Plan imposed by the PADEP due to a history of SSOs within the collection system that the Company expects to acquire in 2024. The project includes the replacement of two lift stations (Greenwood and Bryson) along with the construction of a wet weather tank at one of the Greenwood stations. A third station (Benbrook), located between the two other stations will be bypassed with a new force main from the Greenwood station and replaced with a small grinder pump station to serve the small collection system that currently flows to the Benbrook Station. The current estimate for this project is $3,500,000.

Q. Please explain in general terms the other types of improvements that the Company will make in its water and wastewater systems during the FTY.

A. The Company will replace or upgrade approximately 86,395 existing meters at various points throughout its water distribution system at an estimated cost of approximately $28.9 million, exclusive of meters associated with projects previously described. Meters are routinely replaced as they approach 20 years of age in the case of 5/8 inch meters and at various other ages for larger size meters. Meters are also replaced due to failures or malfunctions or to incorporate new meter technology.

The Company is also planning to replace approximately 2,930 Company-owned old water service lines and 415 wastewater laterals at an estimated cost of approximately $28.7 million, exclusive of services associated with projects previously described. In conjunction with its main replacement projects in the FTY, PAWC anticipates replacing customer-owned LSLs under the Company's LSL Replacement Plan ("Replacement Plan") approved by the Commission at Docket No. P-2017-2606100. Additionally, services are replaced for a variety of reasons, including leakage discovered through the Company's leak detection program and other actions to maintain the quality of water service. Pressure and water quality problems can result from old service lines made from obsolete materials, such as galvanized iron. When municipal paving projects are being planned, the Company reviews its records and determines if there are any obsolete services that should be replaced along the street. Service replacement costs are minimized by doing the service replacements before repaving occurs.

The Company also plans to replace approximately 130 miles of various diameter water mains and 23 miles of sewer mains at a total cost of approximately $269.7 million, exclusive of the larger pipeline investment projects previously described. This construction is being done for a variety of reasons including improving flow capabilities, preventing water quality degradation, systematically replacing aging distribution system infrastructure, enhancing system reliability and minimizing service disruptions to customers caused by main breaks. The Company anticipates additional developer projects in the FTY, which will be funded by developer advances.

Q. Please describe in general terms the types of improvements that the Company will make in its water and wastewater systems during the FPFTY.

A. The following routine improvement activities planned for the FPFTY will be conducted for the same reasons these projects are undertaken in the FTY. The Company will install approximately 5,200 new meters and replace or upgrade approximately 71,300 existing meters at various points throughout its distribution system at an estimated cost of approximately $27.0 million, exclusive of meters associated with projects previously described.

The Company is also planning to replace approximately 3,300 old water service lines and 380 wastewater laterals at an estimated cost of approximately $30.5 million, exclusive of services associated with projects previously described. In conjunction with its main replacement projects in the FTY, PAWC anticipates replacing 900 customer-owned LSLs under the Replacement Plan. The Company plans to replace approximately 88 miles of various diameter water pipes and approximately 15 miles of sewer main at a cost of approximately $181 million, exclusive of the larger pipeline investment projects previously described. The Company anticipates that additional developer projects will occur in the FTY, which will be funded by advances.

Risks Associated with Furnishing Public Water and Wastewater Service

Public Water Service

Q. Please provide an overview of the risks associated with furnishing safe and adequate water quantity and water quality and complying with drinking water and

environmental regulations that apply to PAWC's water supply facilities and operations.

A. Water supply utilities are subject to a complex array of regulations at the federal, state and river basin commission levels with respect to water quantity, water quality and other environmental aspects of their facilities and operations.

With respect to water sources and the quantity of water that can be withdrawn, PAWC's surface water and groundwater sources are subject to a combination of common law riparian rights and groundwater rights coupled with regulatory regimes administered by the PADEP, the Susquehanna River Basin Commission ("SRBC") and Delaware River Basin Commission ("DRBC"). These organizations administer the 1939 Water Rights Act,[7] which requires that public water supply agencies wishing to withdraw water from surface sources, or to acquire rights in surface sources, first obtain a permit. Water systems with sources developed prior to 1939 were accorded "orders of confirmation" confirming grandfathered withdrawals, but subsequent changes to those systems and/or increased withdrawals may trigger permitting requirements and possible loss of the "order of confirmation." Both SRBC and DRBC are empowered to review and approve projects having a substantial effect on basin water resources.[8] Pursuant to their project review authority, SRBC and DRBC review proposed surface and groundwater withdrawals that may have a "substantial effect" on basin waters (which are defined in both basins to include withdrawals of greater than 100,000 gallons per day from any source or combination of

[7] 32 P.S. §§ 631-641.

[8] DRBC Compact § 3.8; SRBC Compact § 3.10(2).

sources). Such project review is focused on determining consistency with Commission-adopted comprehensive plans and "the proper conservation, development, management or control of the water resources of the basin." In administering their permitting programs, the PADEP, SRBC and DRBC apply varying policies imposing limitations on withdrawals or requirements for conservation releases from reservoirs to protect stream flows.

Pennsylvania, overall, does not currently suffer serious constraints on its supply of usable water.[9] However, that assessment does not apply uniformly to all parts of the Commonwealth and can change with the climate. This past summer (June to September 2023), the entire Commonwealth experienced uncommonly dry weather. The drier weather, while not as severe as the Southwest part of the United States, still placed every county on a drought watch. The potential of having sources compromised and the inability to provide water is a significant concern. The legacy of coal mining, the effect of oil and gas drilling, run-off from high-intensity agricultural land use, and contamination from inadequate or malfunctioning on-lot septic systems create challenges to obtaining adequate supplies of water in various areas of Pennsylvania. Today, as in the past, these factors continue to drive requests by homeowners for PAWC to extend its facilities to serve areas that do not have a public water supply, as is further discussed in Ms. Everette's testimony (PAWC Statement No. 1). Under the Commission's regulations on water utilities' responsibility for main extensions, PAWC is required to make a significant investment to extend its facilities to serve bona fide applicants.

[9] As explained below, climate change is expected to affect the pattern of precipitation in ways that will challenge water suppliers by increasing the severity of both major storm events and intermittent periods of drought.

Additionally, as explained above, there are multiple levels of authorization and regulation that apply to a water system that wants to add a new source of supply or increase its withdrawals from existing sources. These factors add to the costs and lead-time for obtaining new, or increasing existing, water sources to meet new demands that may arise in portions of the Company's system. These are additional risk factors that can directly affect PAWC's ability to furnish safe, adequate and reliable service, and increase the costs PAWC incurs to provide that service.

Drinking water quality is addressed by a combination of federal regulation established under the Safe Drinking Water Act of 1973 coupled with state regulation under the Pennsylvania Safe Drinking Water Act. The federal act established the EPA as the federal regulatory authority on drinking water. Under that authority, the EPA has created standards for contaminant levels in drinking water and a series of mandatory treatment method standards, coupled with monitoring and reporting requirements, and public notification mandates in the event of contaminant level or treatment method non-compliance.[10] In turn, Pennsylvania has adopted the federal regulatory standards, plus some even more stringent rules, as codified in 25 Pa. Code Ch. 109, which are administered by the PADEP.

In recent years, there has been an increase in public concern over potential contaminants that laboratories can now identify at levels that, in the past, could not be detected. Certain experts suggest these contaminants might have health effects. The EPA and state drinking water regulators have responded by increasing their own research and,

[10] *See* 40 C.F.R. Parts 141-143.

in some cases, imposing or proposing more stringent regulatory standards, such as with respect to PFAS. As discussed in detail earlier in my testimony, the Company is operating between the current PADEP PFAS rules and the more stringent EPA standards anticipated to come out later this year. The Company is anticipating a rush on materials as the industry grapples with new EPA regulations. To mitigate potential supply shortages, the Company is proactively deploying treatment processes in its water systems to reduce the levels of the six PFAS covered by the proposed NPDWR to levels below the proposed EPA standards, even if the levels of these PFAS in the applicable PAWC system comply with the PADEP MCLs. The Company is proceeding cautiously based on the best available information and preparing to achieve treatment levels for such compounds that can reasonably be anticipated based on current research and actions contemplated by regulators, which the Company carefully studies and monitors. The continued evolution of drinking water regulations and best practices requires PAWC to operate dynamically and be prepared to respond to new contaminants of concern quickly, which can create certain business risks for PAWC. Current studies indicate that in order to remove PFAS from drinking water, PAWC may need to employ additional treatment technologies at existing water treatment facilities. A determination of what technologies to employ if PFAS compounds are present will require a review of the effectiveness of each technology and an analysis of the costs and operational feasibility for each location.

As the result of conditions that arose in Flint, Michigan and other jurisdictions across the country, increasing scrutiny is being placed at all levels concerning lead concentrations in water systems and adoption of more stringent requirements under the

EPA's 2021 Revised LCR. The lead issue arises not from constituents in source water, but rather from the leaching of lead from older pipes and joints into the water as it passes through the distribution lines and household service lines. While controlling of the corrosivity of the water can, in many cases, avoid excessive lead concentrations, the fact is that the plumbing in many older communities (such as those throughout much of PAWC's service territory) contain the type of copper and galvanized pipes with solder joints where lead contamination is an increased risk. Consequently, the Pennsylvania General Assembly determined in Act 120 that it is in the public interest for water utilities to replace customer-owned LSLs "concurrent[ly] with a scheduled utility main replacement project."[11] In addition, as recognized by the Commission, physical replacement of the entire LSL is emerging as a best practice in the water utility industry to improve public health protection from lead in drinking water.[12] To that end, in 2022, the Commission adopted final regulations implementing Act 120 that require all Pennsylvania water utilities to undertake LSL replacements as a matter of course to ensure total removal of LSLs in their water systems within 25 to 30 years (the "LSLR Regulations").[13] The LSLR Regulations became effective on July 23, 2022.[14]

[11] 66 Pa. C.S. § 1311(b)(2)(i). Section 1311(b)(2) was added to the Pennsylvania Public Utility Code by Act 120, which became law on October 24, 2018. Act 120 authorizes customer-owned LSL replacements that are not performed concurrently with main replacement projects if those replacements are done "under a commission-approved program."

[12] *See Petition of Pennsylvania-American Water Company for Approval of Tariff Changes and Accounting and Rate Treatment Related to Replacement of Lead Customer-Owned Service Pipes*, Docket No. P-2017-2606100 (Opinion and Order entered Jan. 4, 2019), pp. 6-7.

[13] *See* 52 Pa. Code §§ 65.51-65.62.

[14] 52 Pa. B. 30 (July 30, 2022).

The Company is at the forefront of the water industry in proactively eliminating the risks posed by the presence of LSLs. PAWC was the first water utility for whom the Commission approved a plan for replacing LSLs pursuant to Act 120. PAWC's efforts to eliminate a potential source of elevated lead levels at the customer's tap under its Replacement Plan require the dedication of management time and resources and the commitment of significant investment capital. The LSLR Regulations also require the Company to develop a comprehensive service line inventory that complies with the EPA's LCR and to modify and resubmit its Replacement Plan to the Commission by July 23, 2024.[15] These factors, in addition to the demands the Company already faces to rehabilitate, replace, and enhance aging infrastructure and meet evolving regulatory demands, add to risk factors that PAWC faces to assure that it meets its statutory obligation to furnish safe, adequate and reliable water service.

Finally, upstream releases of chemicals represent a significant risk and concern for the Company. One recent example of such an event was the train derailment which occurred early in 2023, just outside East Palestine, Ohio. The train derailment caused the release of toxic chemicals both into the air and into waterways. The Company received calls from our concerned customers. While the event did not impact PAWC's source water, the Company took multiple raw water samples to be certain our customers were protected and the water the Company was providing was safe. Similarly, a chemical release in a tributary of the Delaware River caused concern in the Southeast portion of Pennsylvania. While the releases did not impact PAWC's systems, these incidents illustrate that

[15] 52 Pa. Code §§ 65.56 and 65.61.

contamination is a significant risk faced by water suppliers and the importance of their ability to operate dynamically to prepare for and respond to future chemical releases by third parties.

Public Wastewater Service

Q. Provide an overview of the risks that environmental regulation poses for PAWC as the owner and operator of public wastewater systems.

A. Like the provision of public water supply service, the operation of wastewater collection and treatment systems entails a range of environmental regulatory risks. Each of the wastewater systems acquired by the Company over the past several years came with significant regulatory compliance challenges. For example, the York wastewater system acquired by the Company in 2022 is subject to a Consent Agreement with the EPA that requires system upgrades to address violations of untreated wastewater discharges that have occurred historically. The Company is required to ensure any high flow events receive treatment prior to discharge.

Wastewater operations are also regulated at both the federal and state levels pursuant to numerous statutes and voluminous regulations. At the federal level, wastewater systems are regulated pursuant to the Clean Water Act and numerous regulations adopted by the EPA under that law. At the state level, the Pennsylvania Clean Streams Law, Sewage Facilities Act, Solid Waste Management Act, Storage Tank and Spill Prevention Act and other laws administered by the PADEP, coupled with the regulations adopted under those statutes, set standards and requirements for virtually every aspect of wastewater system operations.

One risk associated with operating wastewater systems is that effluent limitations imposed on WWTP discharges are stringent and often become more stringent over time. The Clean Water Act requires wastewater systems to obtain and comply with NPDES permits, which, in Pennsylvania, are issued by PADEP. NPDES permits establish stringent effluent limits based upon the stricter of: (1) technology-based effluent limits; and (2) water quality-based effluent limits.

PAWC has faced significant regulatory compliance challenges with each of the wastewater systems the Company acquired over the past several years. Every five years, NPDES permits are up for renewal, and in any such renewal, more stringent limits may be triggered. One example is the Scranton WW, where the application for NPDES permit was applied for in June 2021 and has not been approved yet. Similarly, the Long-Term Control Plan for McKeesport was submitted to PADEP August 2022 with no finalization yet.

Another risk for PAWC is that several Pennsylvania streams, including those where PAWC is operating wastewater systems, are parts of watersheds that are classified as "impaired," meaning their instream quality does not meet state standards. Such impaired waters are subject to the development and imposition of Total Maximum Daily Loads ("TMDLs") for parameters that contribute to the instream conditions. A prime example is the Chesapeake Bay watershed, which includes the entire Susquehanna River Basin, where a TMDL has been established for sediments (total suspended solids) and nutrients (phosphorous and nitrogen). Where TMDLs are established by the EPA or the PADEP, stringent waste load allocations are made to point-source discharges (such as WWTPs), and allocations are also made to non-point sources, such as agriculture and urban runoff.

In the case of the Chesapeake Bay TMDL, for example, every WWTP in the Susquehanna Basin has been accorded an annual "cap load" for total nitrogen and total phosphorous – where any cap loading exceedance irrespective of the cause (such as increased flows and loadings from system customers or high stormwater flows entering the system) – can lead to stiff penalties and other enforcement actions.

Wastewater systems also face significant regulatory and environmental liability risks. Non-compliance with wastewater system effluent limits and other permit conditions can result in severe penalties. Regulatory violations open the operator to not only governmental agency enforcement actions, but also private lawsuits in which both injunctive relief and civil penalties can be imposed.

Another risk arises from PAWC's Scranton, McKeesport and Kane CSSs where both storm water and sanitary/industrial wastewaters flow in the same sewer lines. CSSs incur high flows during and after storms, which may exceed the system conveyance and/or treatment capacity, with excess untreated wastewater discharged to receiving streams through CSO outfalls. In many cases, separation of CSSs into separate sanitary and storm systems is logistically and economically infeasible. While the Company and the communities it serves did not and do not create the problems facing the treatment of wastewater, additional costs to address actions by previous dischargers and upstream polluters and cleanup water ways cannot be avoided.

EPA's CSO Control Policy,[16] which applies to publicly owned treatment works ("POTWs") (i.e., those systems owned or operated by state or local governmental agencies), seeks to reduce CSOs, while recognizing that CSOs cannot be entirely eliminated. However, the EPA recently issued an enforcement letter no longer allowing the Company to own a CSO system without fully eliminating any CSO discharge within five years. Although the federal Clean Water Act generally requires that all wastewater be treated with at least secondary treatment prior to discharge, the CSO Control Policy provides an exception for POTWs. Currently, the CSO Control Policy, by its terms, does not provide similar exceptions for privately-owned sewage systems. Some utilities (including PAWC) have obtained the EPA's agreement to continue to apply the CSO Control Policy's exception to systems that were formerly POTWs and were acquired by private entities. The EPA's recognition of such exceptions must be obtained by negotiation on a case-by-case basis and typically entails entering into court-approved consent decrees or agency consent orders that impose stringent capital improvement and operating obligations on the non-public owner of the wastewater system. In recent years, EPA has also not been as willing to agree to those exceptions, even where the Company has improved the level of discharge from the acquired system and the quality of the associated waterway.

Under the CSO Control Policy and applicable NPDES permits, operators of CSSs must develop and implement LTCPs, consisting of collection system and treatment plant

[16] 59 Fed. Reg. 18687 (April 19, 1994), available at: https://www.epa.gov/sites/production/files/2015-10/documents/owm0111.pdf.

improvement projects designed to reduce CSOs to no more than four events per year and/or capture and treatment of 85-90% of annual storm water flows. These LTCP requirements often involve very substantial multi-year capital expenditure programs.

CSS operators must adopt and implement a Nine Minimum Controls Plan,[17] consisting of a series of actions that address the management of storm water and constituents in storm water runoff, including regulation of storm water connections, regulation of land development/erosion and sedimentation activities, control of industrial and other dischargers, catch basin maintenance, and street sweeping, etc.

Moreover, even where systems being acquired do not involve combined sewers, high rates of I&I[18] during wet weather can surcharge the system and exceed the hydraulic or treatment capacity of the WWTP. System upgrades to reduce I&I may require major capital expenditures. Some I&I can be isolated and remedied, however the bulk of I&I comes in through small defaults and require relining or replacement of the entire pipeline with services reconnected to the main. The recently acquired York WW system has had historically high I&I. To overcome the I&I challenge will require both projects at the WWTP as well as significant upgrades to the collection system in order to get the I&I down to a level it does not over stress the WWTP.

[17] U.S. Environmental Protection Agency, Combined Sewer Overflows Guidance for Nine Minimum Controls, EPA 832-B-95-003 (May 1995), available at: https://www3.epa.gov/npdes/pubs/owm0030.pdf.

[18] I&I involves the infiltration of groundwater and stormwater into what is considered to be a sanitary only sewer line, such as through joints and other weaknesses in the pipelines.

Challenges Climate Change May Create

Q. Does climate change pose additional risks for water supply and wastewater system utilities such as PAWC?

A. Yes. Whatever the debate may be concerning the causes of climate change, water supply and wastewater utilities face the reality of changing climatic conditions and attendant stresses on water resources. "Climate models project that the Commonwealth will see an increase in average annual precipitation, extreme precipitation events, and drought, as both "very heavy" precipitation events and consecutive dry days increase." That means we can expect more droughts of varying degrees of severity and more frequent and intense high-flow events and floods – which impact water and wastewater utilities.

Water supply systems are fundamentally resource-dependent and, therefore, the effects of climate change pose a significant on-going risk and create challenges with regard to maintaining a reliable water supply during the full range of potential future conditions, including even what might be assumed to be "normal" periods. The safe yields of water supply sources have historically been evaluated based on historical climatic patterns, data from so called "droughts of record" or dry period frequency analysis. However, changing climatic conditions suggest that historical hydrologic data (which in many cases only reflect 50-100 years of rainfall and stream flow measurement collection – a quite short period in geologic or climatic time) may not accurately predict future conditions. Thus, the calculated safe yield of streams, reservoirs and groundwater wells are put in question as the effects of climate change are experienced across the northeastern United States. Thus, in response to climate change, water supply systems must address the risks posed to the reliability and resilience of their sources.

While droughts are the major challenge for water supply systems, heavy precipitation and high-flow events are the concern of wastewater systems. As mentioned previously, wastewater systems of all types are impacted by storm water – directly in the case of CSSs and indirectly (but nevertheless significantly) by I&I in "sanitary only" systems. The prediction of increased intensity of strong storms and high rainfall events in the northeastern United States portends challenges to wastewater systems which must, in turn, cope with and treat higher peak flows while avoiding exceedance of effluent limitations and reducing the potential for untreated overflows. An additional challenge related to high intensity rain events is higher levels and frequency of flooding. Flooding has the potential to impact both water and wastewater treatment facilities which are often located in proximity to water ways.

York System Bulk Treatment Service

Q. Do municipal and utility wastewater systems ("York Bulk Customers")[19] that have entered into Wastewater Treatment and Conveyance Agreements ("Bulk Agreements") to treat their wastewater flows at the York wastewater treatment plant WWTP have competitive alternatives to PAWC service?

A. Yes. The York Bulk Customers are in close geographic proximity – which means that they could enter into (and have in some circumstances already entered into) intermunicipal flow agreements to transmit wastewater flow between themselves and to other surrounding municipalities with existing treatment capacity, instead of sending their flows to the York

[19] The York Bulk Customers consist of The York Water Company, which is the owner of the former West York Borough collection system; Springettsbury Township; North York Borough; York Township; Manchester Township; West Manchester Township; and Spring Garden Township.

WWTP. The York Bulk Customers are sophisticated, knowledgeable, and experienced. Therefore, they could divert flows to alternative treatment providers or develop a new treatment system.

In the proceeding for approval of PAWC's acquisition of the York wastewater system at Docket Nos. A-2021-3024681 et al. ("Acquisition Proceeding"), the York Bulk Customers opposed the transaction and testified that were planning for a competitive alternative to bulk treatment service from PAWC. As witnesses for the York Bulk Customers explained in their testimony in the Acquisition Proceeding and discussed in detail by Company witness Bernard D. Grundusky in Statement No. 7-R submitted on August 19, 2022 in PAWC's 2022 rate case, unless PAWC entered into the Bulk Agreements on the terms and rates set forth in those contracts, each of the York Bulk Customers would leave the York system after PAWC's acquisition and pursue alternative treatment.

Q. Do you believe it is appropriate and in the public interest for PAWC to continue furnishing wastewater treatment and conveyance services to the York Bulk Customers under the terms and rates set forth in the Bulk Agreements?

A. Yes. The Bulk Agreements create broad public interest benefits, which could not have been achieved absent a settlement of the Acquisition Proceeding. In fact, that settlement includes provisions that the Commission would not be authorized to impose unilaterally. For example, by engaging in rigorous, good faith, arm's length negotiations with the York Bulk Customers over a six-month period, PAWC was able to secure specific commitments that it could not have procured otherwise, which include:

- The York Bulk Customers agreed that they will not divert flow to other providers during the 40-year term of the Bulk Agreements. By locking the York Bulk Customers into a 40-year term, which reasonably encompasses most of the service life of major treatment and conveyance facilities, PAWC is able to avoid the possibility that some portion of its investment in those facilities may become "stranded" by the departure of one or more York Bulk Customers.
- The York Bulk Customers have agreed to use commercially reasonable efforts to reduce I&I. This provision will enable PAWC to avoid potentially unforeseen increases in demand on its treatment facilities, which could adversely affect service and increase costs.
- The Bulk Agreements clearly define the services to be provided by PAWC to the York Bulk Customers by including more carefully delineated terms and parameters for service than could be set forth in a typical wastewater service tariff. The more precisely defined terms of service provide for better metering of service, improved billing, and better identification/tracking of inter-municipal flows. These improvements help to ensure that the York Bulk Customers bear the responsibility for the demands and associated costs they impose on the wastewater treatment and conveyance facilities they use.
- As part of the Bulk Agreements, the municipalities agreed to and have already enacted ordinances/resolutions that require Industrial Pretreatment

- Program ("IPP") customers within their municipal boundaries to comply with PAWC's IPP.

Q. What would be the practical consequences if the York bulk customers exercise their early termination rights under the bulk agreements and left the York wastewater system because of increases to the negotiated contract rate?

A. The York Bulk Customers represent approximately 54% of the allocated treatment flow at the Company's York WWTP. If the Bulk Customers left the system, the York WWTP would become uneconomic in the absence of rate increases to retail customers in PAWC's general sanitary sewer system operations. It would also result in a splintering of the current regional and consolidated wastewater collection and treatment system in the York area, which would be contrary to the Commission policy in favor of regionalization and consolidation. Additionally, the bulk flow from surrounding municipalities is essential to the proper functioning of the York WWTP. The bulk flow from the surrounding municipalities contains additional biological oxygen demand materials that aid in the consumption and digestion of bacteria in the flow stream. The Bulk Agreements also contain provisions that facilitate PAWC's ability to exchange capacity between the York Bulk Customers, which will help to reduce system peak treatment demand and, in that way, postpone or potentially avoid entirely, the investment in additional treatment capacity.

Q. Does this conclude your testimony?

A. Yes, it does.

PAWC STATEMENT NO. 3-R

REBUTTAL TESTIMONY
OF
BRUCE AITON

WITH REGARD TO
PENNSYLVANIA-AMERICAN WATER COMPANY'S POSITIONS REGARDING ACQUISITION INVESTMENT, AND LINE EXTENSION REQUESTS

DOCKET NOS.
R-2023-3043189 (WATER)
R-2023-3043190 (WASTEWATER)

DATE: FEBRUARY 21, 2024

PENNSYLVANIA-AMERICAN WATER COMPANY

REBUTTAL TESTIMONY OF BRUCE AITON

Q. What is your name and business address?

A. My name is Bruce Aiton, my business address is 852 Wesley Dr., Mechanicsburg, PA 18055.

Q. Have you submitted direct testimony in this proceeding?

A. Yes, I submitted direct testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company") as PAWC Statement No. 3.

Q. Have you updated Schedule BWA-1 presented in your direct testimony that lists the Company's actual plant retirements and additions for 2023?

A. Yes. Exhibit BWA-1R shows the Company's actual plant in service through December 31, 2023.

Q. What is the purpose of your Rebuttal Testimony?

A. The purpose of my rebuttal testimony is to respond to the direct testimony submitted by Terry L. Fought on behalf of the Office of Consumer Advocate ("OCA") related to proposed main extensions under PAWC Tariff Rule 27.1(F). I will also respond to the characterization of PAWC's investment in acquired systems by various customers at the public input hearings.

Q. Please identify the exhibits you will sponsoring in this proceeding.

A. I am sponsoring three exhibits: PAWC Exhibit BWA-1R, Exhibit BWA-2R, and Exhibit BWA-3R.

MAIN EXTENSIONS

Q. What does Tariff Rule 27.1(F) provide?

A. Tariff Rule 27.1(F) states as follows:

> Where substantial public need exists and the public health and safety may be compromised by the absence of a public water supply in a portion of the Company's authorized service territory, the Company, subject to the Commission's prior approval, may install main extensions and Special Utility Service facilities without the payment of the Customer Contribution that would otherwise be required under subparagraphs (A)(3) and (D)(2), respectively of Rule 27.1.

In relevant part, a customer connection is only eligible for Rule 27.1(F) treatment "where substantial public need exists and the public health and safety may be compromised by the absence of a public water supply" for a particular customer connection "in a portion of the Company's authorized service territory".

Q. Have any parties proposed that the Company evaluate the installation of water main extensions in accordance with the Tariff Rule 27.1(F)?

A. Yes. OCA witness Fought recommended the Company consider a main extension project pursuant to Tariff Rule 27.1(F) along Bethel Ridge Road, Shades of Death Road, Locust and Carter Lanes and Penobscot Road in Jefferson Township, Washington County, Pennsylvania. According to Mr. Fought, the proposed main extension is located about 2.5 miles away from an existing PAWC water main.

As noted by Mr. Fought and explained in my direct testimony, in accordance with the settlement of PAWC's last base rate case, the Company will be extending service to an Avella Area School District ("Avella") elementary school in Washington County to address water quality issues regarding odor and distaste. The Avella main extension also

has the potential for approximately 50 new service connections along the route in Independence Township, Cross Creek Township, and Mt. Pleasant Township. The proposed main extension route is located approximately 2.5 miles from the Avella main extension that is currently being constructed.

Q. Does the Company have a Main Extension Evaluation Process that is to be used in conjunction with this tariff provision?

A. Yes, it does. A copy of this process is attached hereto as PAWC Exhibit BWA-2R.

Q. Did the Company evaluate the main extension proposed by Mr. Fought consistent with that process?

A. The Company is in the process of evaluating the proposed main extension using this process.

Q. What are the expected costs associated with the main extension proposed by Mr. Fought?

A. The main extension along the route presented in OCA Exhibit TLF-4 that would extend an existing water line along Bethel Ridge Road to the West Virginia state border with spurs to serve Shades of Death Road, Locust and Carter Lanes and Penobscot Road would require construction of approximately 29,500 linear feet of new water main. The estimated costs of such a main extension are approximately $5.2 million.

Q. Is the project Mr. Fought discussed within the Company's service area?

A. Yes. Refer to Exhibit BWA-3R which depicts the service territory within Jefferson Township.

Q. Is there a substantial public need for the project, and would the absence of these projects compromise public health and safety?

A. Based on my understanding of the magnitude and locations of water issues currently being experienced by the residents along the proposed main extension route, the proposed project may, subject to further investigation, meet the requirements of Rule 27.1(F). The Company has been in conversations with the Jefferson Township Municipal Authority ("JTMA") regarding this main extension and will continue to work with the JTMA to determine if the extension is eligible under Rule 27.1(F).

Q. What specific actions does Mr. Fought request the Company take with respect to the proposed main extension?

A. Mr. Fought suggests that the Company:

(1) evaluate whether the above main extension is eligible for construction under the requirements of Tariff Rule 27.1(F);

(2) allow the OCA to survey the potential customers and submit pertinent information to PAWC prior to starting the evaluation;

(3) submit the conclusions of its evaluation to OCA and other parties within six months of receiving the survey data from the OCA; and

(4) submit an estimated construction cost and remaining contribution required for those main extensions that are determined not eligible under Tariff Rule 27.1(F).

Q. What is the Company's response?

A. The Company is continuing to evaluate whether the proposed main extension is eligible under Rule 27.1(F) of its tariff. The Company has been in continued discussions with the JTMA outside of these proceedings. Under the JTMA's proposal, approximately 39 potential customers would be served through the main extension. However, the Company has not yet determined whether Rule 27.1(F) is an appropriate mechanism to

fund this extension and is evaluating whether alternate grant funding should be pursued instead.

ACQUISITION INVESTMENT

Q. Did you attend the public input hearings held in this proceeding?

A. Yes, I attended each of the public input hearings held between January 29, 2024 and February 7, 2024.

Q. Do you wish to address any of the topics raised at the public input hearings?

A. Yes, I wish to address the testimony of several witnesses concerning PAWC's investments into the systems it has acquired.

Q. Please describe some recent wastewater acquisitions where PAWC successfully addressed long standing environmental compliance issues.

A. PAWC acquired the Clarion wastewater system in 2008 from the Clarion Area Authority ("CAA"). At the time the CAA system was in violation of the Pennsylvania Clean Streams Law and the Sewage Facilities Act. The sewage facilities were hydraulically overloaded, whereby the flow exceeded the hydraulic carrying capacity in portions of the system and caused sanitary sewer overflows ("SSOs") as defined by 25 Pa. Code § 94.1. SSOs are not authorized or permitted by the Pennsylvania Department of Environmental Protection ("PADEP"). Concurrent with the closing of this transaction, PAWC entered into a Consent Order and Agreement ("COA") with PADEP and proceeded to successfully implement projects to reduce illegal discharges to waters of the Commonwealth. The work included Act 537 planning, design and construction of new facilities, replacement of inadequate infrastructure, and modifications to long standing operational procedures. Specifically, PAWC upgraded the collection system by replacing approximately 10,000 lineal feet of 8"

to 36" interceptor sewers and replacing/upgrading the main lift station (Liberty Street) and equipping it with a new 1.3 MG equalization tank to capture excess storm flows. PAWC also made major hydraulic improvements to the wastewater treatment plant by increasing its design capacity from 1.75 to 4.0 MGD and installing a new 3.8 MG equalization tank. Construction began in July 2013 and was completed by the COA deadline of February 2015. The COA was lifted in January 2016. Under CAA ownership the system experienced approximately 30 SSOs per year and storm flows were routinely bypassed at the wastewater treatment plant with no treatment. Since the new facilities were placed online by PAWC, the SSOs have been reduced to an average of one per year, mainly caused by damaged or clogged/blocked sewer mains, and there have been no bypasses of untreated sewage at the wastewater treatment plant.

PAWC acquired the Scranton wastewater system in 2016 from the Scranton Sewer Authority ("SSA"). The SSA system had been out of compliance for many years prior to the acquisition. On September 29, 2009, the EPA filed a complaint against SSA seeking injunctive relief and civil penalties, and alleging, inter alia, that the SSA violated the Clean Water Act and certain terms and conditions of its National Pollution Discharge Elimination System ("NPDES") permit relating to the municipal wastewater treatment plant and collection system. In 2013, SSA entered into a Consent Order and Long Term Control Plan ("LTCP") with EPA mandating $140 million in upgrades to the system to achieve environmental compliance. Under the agreement, SSA historically faced financial penalties for a number of violations ranging from reporting failures and air quality violations to effluent exceedances and dry weather overflows. Over the years, SSA paid hundreds of thousands of dollars in fines. The LTCP is a 25-year program of nearly

60 combined sewer overflow ("CSO") improvement projects to control and significantly reduce the amount of untreated sewage discharged into the Lackawanna River and its tributaries. Prior to the acquisition, SSA often struggled with routine maintenance requirements outlined in the Consent Order. Lack of proper equipment, training, and a reactive response to improvements caused cleaning and inspection of catch basins and sewer lines to fall behind established goals. Concurrent with the closing of this transaction, PAWC entered into an Amended Consent Decree with EPA and PADEP that outlined the required compliance measures and timelines for system improvements to the Nine Minimum Controls, LTCP and General Compliance. Since 2016, PAWC has completed 30 of 72 CSO control upgrades required under the system's approved LTCP. The remainder will be addressed during the remaining 15 years of the 25-year LTCP. These improvements have reduced the total number of system-wide CSOs from a high of 1,293 in 2018 to 915 in 2022. On average per completed CSO outfall, the improvements have reduced the number of CSOs during a typical year from 25 to four and the total CSO discharge volume from 121 MG to 36 MG (a 70% reduction). These numbers will continue to improve each year as PAWC installs additional CSO control structures. PAWC has also done over 120 main replacement and/or repair projects in the collection system to remedy defects, regain lost capacity, reduce stormwater inflow and infiltration into the system, and eliminate potential sewer overflows into local waterways. At the treatment plant, PAWC increased the peak capacity from 39 MGD to 60 MGD in 2020, which has resulted in a reduction in non-compliance bypass events from a total of nearly 60 in 2019, to only six in 2021 and 2022 combined. In addition to the plant capacity increase, PAWC has also completed projects improving employee safety or operational efficiency, specifically

including new preliminary treatment to remove solids and protect downstream equipment; upgraded treatment units to remove ammonia and phosphorus and protect water quality, replacement of toxic chlorine gas disinfection process with safer UV disinfection system, and new solids press system for improved dewatering and lower solids disposal costs.

PAWC acquired the McKeesport wastewater system in 2017 from the Municipal Authority of the City of McKeesport ("MACM"). In a portion of the Borough of Dravosburg, the system had been illegally discharging sewage into an old underground mine shaft for years. As a condition of acquiring the system, PADEP required a remedy for the 44 residences illegally discharging their sewage into abandoned mines. PAWC invested $3 million to construct two new sewage systems. The project involved constructing two new sewage pump stations, installing approximately 4,800 feet of sewer main and 2,600 feet of sewer laterals to reroute the sewage to the treatment plant, fully sealing the mine, and rebuilding stormwater piping. In the nearby Port Vue Borough, PAWC identified a longstanding SSO issue caused by a landslide that damaged a sewer line along Romine Avenue. The Company invested approximately $1.6 million to install a new main and a lift station, which remedied the problem and prevented untreated water from entering the Monongahela River.

PAWC purchased the Exeter Township ("Exeter") wastewater system in 2019. At the time of the sale, the system was in disrepair and Exeter was under PADEP order to remedy a long list of deficiencies in its system and its operational procedures. To be specific, from January 2015 through March 2019, PADEP cited Exeter for the following violations:

- six (6) NPDES permit final effluent violations;

- twenty-six (26) discrete SSOs to the surface of the ground and to waters of the Commonwealth;
- one (1) unpermitted discharge of an estimated five (5) million gallons of raw sewage from manholes on the wastewater treatment plant's influent line to Heisters Creek, a tributary to the Schuylkill River and a water of the Commonwealth;
- five (5) unpermitted discharges of raw sewage from the wastewater treatment plant's treatment units to the surface of the ground and the plant's stormwater collection and conveyance system due to operational and maintenance issues;
- two (2) unpermitted discharges of sewage to the surface of the ground and to waters of the Commonwealth, due to power/equipment failure at sewage pumping stations;
- one (1) spill of hauled-in sewage sludge to the wastewater treatment plant's stormwater collection and conveyance system;
- one (1) incident where the wastewater treatment plant failed to disinfect effluent discharge flow to the Schuylkill River, a water of the Commonwealth, for an estimated 24 hours;
- one (1) incident where a contractor with prior Pennsylvania One Call approval excavated and struck a section of the 30-inch main raw influent interceptor to the wastewater treatment plant causing sewage to back up into the excavation; and

- evidence of hydraulic loading in the collection system that necessitated a Corrective Action Plan under the Chapter 94 Municipal Wasteload Management program.

Concurrent with the closing of the transaction, PAWC entered into a COA with PADEP on October 23, 2019 to resolve the deficiencies and bring the system back into compliance. Since acquiring the system, PAWC has been working diligently on the remedial actions identified in the COA and has met every deadline established by PADEP. Since closing of the transaction, PAWC has invested approximately $20 million in capital improvements to the collection system and wastewater treatment plant. Work has included major projects like remedying the issues identified by PADEP in the COA as well as projects that improve environmental compliance, improve system reliability, and expanding piping and pumping capacity to accommodate heavy rains and growth of the community.

Q. Please describe some recent water acquisitions where PAWC successfully addressed long-standing water quality, environmental compliance, system reliability and system safety issues.

A. PAWC acquired the public water system from the Borough of Turbotville in 2019. At the time the system was operating with a rudimentary Supervisory Control and Data Acquisition ("SCADA") system that only worked in local mode and relied on outdated dialer technology for after-hours alarming; old chemical feed pumps not meeting PADEP standards for National Science Foundation ("NSF") Standard 61 certification; outdated water quality analyzers with limited data storage; and a toxic chlorine gas disinfection system that posed a serious safety risk to workers and local community. In the four years following the acquisition, PAWC has made numerous improvements to help ensure that

the plant is producing high quality drinking water that is in compliance with all state and federal regulations. A significant improvement was the installation of a new state-of-the-art SCADA system that is capable of operating the plant and distribution system remotely by local operators as well as operators at the company's nearby Milton Water Treatment Plant; gathers and safely secures all water quality compliance data needed for reporting to PADEP; and has automatic shutdowns and alarms to protect the water quality delivered to customers in the event of a treatment upset. PAWC also replaced all water quality analyzers (chlorine and turbidity) used for compliance purposes with state-of-the-art units and connected them into the SCADA system. The old diaphragm-style non-NSF-61 certified chemical feed pumps were replaced with new reliable peristaltic pumps with valid NSF-61 certification. Finally, the plant's chlorine gas disinfection system, which utilized a gas that is toxic to human health and the environment, was replaced with a safe and reliable system that uses liquid sodium hypochlorite (bleach).

In 2019, PAWC also purchased the public water system of Steelton Borough. This system was suffering from a lack of investment and was facing numerous challenges at the time of sale, including an antiquated control system that was a view-only system and did not allow full operator control; outdated water quality analyzers that were no longer supported by the manufacturer; lack of any corrosion control process to protect against elevated lead and copper concentrations in the water consumed by customers; deteriorating distribution storage tanks; areas of low pressure and insufficient fire flow volumes in the distribution system; disinfection byproduct ("DBP") levels exceeding Maximum Contaminant Levels ("MCLs") under the Safe Drinking Water Act; insufficient filter backwash capability and lack of filter to waste facilities required by PADEP; and numerous

safety deficiencies. Over the last four years, PAWC has made numerous improvements to resolve these deficiencies and ensure that the plant is producing high quality drinking water that is in compliance with all state and federal regulations. The control system was replaced with a new state-of-the-art SCADA system that allows operators to fully control the process, collects and stores all water quality compliance data for reporting, and will alarm and automatically shut the plant down if a treatment upset is detected. The new SCADA system provides full compliance data reports that continuously monitors and records compliance data every 15 minutes. Prior to the new system, the operations staff had to manually calculate disinfection log removal during the highest flow period for the day. The new SCADA system continuously calculates disinfection log removal and provides alarms to let the staff know that they are approaching a regulatory limit. All water quality analyzers were replaced with state-of-the-art units. The new turbidimeters house a SD card that continuously records turbidity data and provides a backup of compliance data that was not possible with the old analyzers. Chlorine and pH analyzers were also updated to provide reliable and accurate log removal calculations and chlorine residual recording. A project to install corrosion control treatment using zinc orthophosphate to coat and protect the inside of the distribution system piping is underway and scheduled for completion in 2024. Both of the 2 MG distribution storage tanks have been completely rehabilitated and repainted. A new booster station was added to the distribution system to remedy the low pressure concerns and increase fire flow volumes. To reduce DBP levels, two new automatic blowoffs have been added to the distribution system to reduce water age. The new booster station will allow the tanks to have better turnover and will also help reduce DBP formation in the system. A project is underway to completely redo the filter

backwash and filter to waste processes. A new backwash tank will be added to provide higher backwash flows and will allow the plant to meet the required bed expansion during a backwash. Currently, the plant cannot achieve the required bed expansion. The filter will also be fitted with an air scour system, which will help make the filters cleaner during a backwash. New filter to waste facilities will allow the plant to comply with regulations and produce higher quality water for customers. Numerous safety upgrades have been completed to make sure the plant is safe for the workers and is compliant with Occupation Safety and Health Administration ("OSHA") regulations. Removable handrails were added to the loading dock. Toe guards were added to all handrailing on filters and clarifiers. Safety gates in the handrail system allow for safe ingress/egress into the filters. The gas chlorine feed room was completely renovated. The gas chlorine system was switched from a pressurized system to a vacuum system. A chlorine leak detection and audible alarm was added along with halogen valves to provide automatic shutdowns to the chlorine system, should a leak be detected. A project is now underway to completely replace the toxic chlorine gas disinfection system with a safe liquid sodium hypochlorite system, greatly improving the safety of the employees and local community.

In each of the water and wastewater systems referenced, the Company has made significant improvements to the systems. Thereby, improving the waters of the State and the environment for all Pennsylvanians.

CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

Pennsylvania American Water
Total Aggregate Gross Plant Additions

	Estimated 2023 Dec YTD Additions	Actual 2023 Dec YTD Additions
Water Operations	$524,246,981	$567,273,491

Main Extension Evaluation Process

Bona Fide Service Applicants-Tariff Rule 27

SCOPE

This main extension evaluation process applies to the provisions of Pennsylvania American Water Tariff Rule 27.

OBJECTIVE

The objective is to a develop program for the systematic evaluation of main extension requests within the Company's certificated service area, including the process for evaluating the existence of substantial public need based on documented health and safety problems.

EVALUATION PROCESS

A. General

Inquiries for new water service undergo an initial service area determination and preliminary capacity review to ascertain the water system's ability to meet the proposed customer's needs. Service requirements, including customer water demands and fire flow requirements, are obtained during the application process. For projects involving main extensions, a review of prior or pending service requests in the vicinity are reviewed to identify synergies which could result in a more cost-effective approach. Provisions under Section B below will apply for projects which have an identified substantial public need based on documented health and safety problems.

B. Tariff Rule 27.1 F

1. ***Supporting Health and Safety Documentation***
   - 1.1. Upon contact, the New Service Representative (NSR) or Customer Service Representative (CSR) will obtain a general description of the applicant's health and safety concern and request a copy of all supporting water quality testing and/or environmental documentation.
   - 1.2. NSR/CSR will contact the local Water Quality Manager and forward the following information as applicable:
     - 1.2.1. Applicant name/address/phone number
     - 1.2.2. Reason for water service request
     - 1.2.3. Description of health and safety concern (water quality and/or supply)
     - 1.2.4. Analytical documentation, including but not limited to available water quality test results, environmental data, and supply records

2. Health and Safety Assessment

2.1. Water Quality personnel will review all data provided by applicant against current public water supply health and aesthetic drinking water standards.

2.2. Water Quality personnel may also conduct a site investigation and initiate or request supplemental analysis to complete and/or confirm water quality data or supply related concerns as warranted.

3. Laboratory Test Reports and Environmental Data Documentation

3.1. Applicant's health and safety concern(s) should be supported by sound and appropriate analytical data certified by a state accredited laboratory.

3.2. Public health risk will be evaluated in accordance with current primary and secondary drinking water standards established under the regulatory compliance requirements of the Safe Drinking Water Act and all pertinent supply data.

4. Recommendation

The Water Quality Department will confer with Operations and Engineering on the evaluation results. If there is determination to extend the water main pursuant to Tariff Rule 27.1(F) subject to final PaPUC approval, the scope and timeline associated with the initiation and completion of the water main extension project shall be governed under a schedule approved by the Company.

5. Monitoring

The Water Quality & Environmental Compliance department will monitor and evaluate all public water service applications or requests involving potential health and safety situations and ensure terms of the process are maintained.

Water Quality functional leads will oversee and be responsible for applicant data review, initiation of supplemental analytical testing, and recommendations.

6. Reporting

NSR, CSR, and/or Operations personnel receiving a request for water service associated with a health and safety concern of a private water supply should contact the local Water Quality Manager and forward a copy of all available information.

C. Substantial Public Need

The Company will encourage the municipality within the project area to enact a mandatory tap-in ordinance for the area affected by the substantial public health and safety concerns.

D. Company Funding

The provisions of the Company's tariff regarding Main Extensions for Bona Fide Service Applicants will apply. Under Tariff Rule 27.1(F), when a substantial need exists and public health and safety may be compromised by the absence of a public water supply within the Company's customer service territory, the Company, subject to prior PUC approval, may install main extensions and special utility service facilities without the payment of the customer contribution or Contribution in Aid of Construction (CIAC), that would otherwise be required. If the public health and safety concerns have been caused by an entity, any monies that this entity is required to contribute shall be utilized to reduce the Company's investment.

Capital investment decisions are based on prioritization guidelines incorporated within the Company's Asset Investment Strategy and funding availability. Projects within the Company's customer service territory which address high risk health and safety issues for a significant number of customers receive the highest priority, whereas projects that address non-critical situations and/or smaller customer impacts, such as non-mandatory water quality goals, receive a lower prioritizing rating. It is recognized that each individual situation may result in a higher or lower priority for a specific project.

E. Financing

For larger scale projects, the Company may seek external funding, such as PennVest. If such funding is sought, the Company may request the PaPUC to issue an Order requiring the Company to extend service under the provisions of Tariff Rule 27.1 (F).

R-2023-3043190 (WASTEWATER)

DATE: November 8, 2023

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF STACEY D. GRESS

Q. What is your name and business address?

A. My name is Stacey D. Gress, and my business address is 1 Water Street, Camden, New Jersey 08102.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company (the "Service Company") as Director of Rates and Regulatory for Pennsylvania-American Water Company ("PAWC" or the "Company"). The Service Company is a wholly owned subsidiary of American Water Works Company, Inc. ("American Water") that provides services to PAWC and its affiliates.

Q. Please summarize your educational background and professional experience.

A. I received a Master of Business Administration Degree, with a specialization in Finance, from Drexel University in 2007. I also hold a Bachelor of Arts Degree in Economics from Rutgers University, as well as an Associate in Science Degree for Business Administration from Camden County College. In October 2017, I attended the Utility Rate School sponsored by the National Association of Regulatory Utility Commissioners.

Q. What are your duties as Director of Rates and Regulatory?

A. My duties as Director of Rates and Regulatory principally include preparing and presenting rate applications for PAWC. In addition, I am responsible for certain aspects of the financial, budgeting and regulatory functions of the Company.

Q. Have you previously submitted testimony before the Pennsylvania Public Utility Commission (the "Commission")?

A. Yes, I prepared and provided testimony in PAWC's last two base rate cases at Docket Nos. R-2022-3031672 and R-2020-3019369. In addition, I have testified before the West Virginia Public Service Commission on behalf of an American Water subsidiary, West Virginia-American Water.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to explain the portions of the Company's principal accounting exhibit, Exhibit No. 3-A, that I am sponsoring, which relate to the Company's claims for rate base, depreciation and amortization, taxes other than income, and acquisitions in rate base since its last base rate case. Additionally, my testimony supports the Company's claim for rate case and regulatory expense, as well as the allocation of common costs between water and wastewater operations. I will also describe changes that the Company is proposing to make to its water and wastewater tariffs in this case. Finally, I will discuss the Company's rate structure and rate design proposal.

The Development of the Combined Water and Wastewater Revenue Requirement

Q. Please explain how the Company developed its revenue requirement in this case.

A. The total Company revenue requirement was developed based on five separate revenue requirements, defined as follows:

- Water Operations,
- Wastewater Sanitary Sewer Systems ("SSS") General Operations,
- Butler Area Sewer Authority ("BASA") Wastewater ("WW") Operations,

- Brentwood WW Operations, and
- Wastewater Combined Sewer Systems ("CSS") Operations.

In this case, the Company is distributing a portion of the revenue requirements for its wastewater operations to the revenue requirements of its water operations as shown on Exhibit No. 3-A on the Revenue Requirement Summary. The allocation of a portion of wastewater revenue requirements to water revenue requirements by utilities that provide both forms of service was authorized by amendments to the Public Utility Code made by Act 11 of 2012. Those amendments provide the Commission with a reasonable means of moderating the rate impact of significant investments needed to improve the service, reliability and environmental compliance of acquired wastewater systems. The Commission approved the allocation of a portion of the Company's wastewater revenue requirements to water revenue requirements in the Company's last four base rate proceedings. In the Company's last base rate case, Docket No. R-2022-3031672, the Commission approved a settlement that allocated 33% of the Company's wastewater revenue requirement increase to the water revenue requirement in the rates that went into effect on January 28, 2023.

For the Company's five revenue requirements identified above, the Company has prepared five detailed revenue requirement studies that set forth the Company's claims for rate base, depreciation, operating and maintenance expenses, taxes and pro forma revenues for a historic test year ending June 30, 2023 ("HTY"), a projected future test year ending June 30, 2024 ("FTY"), and a fully projected future test year ending June 30, 2025 ("FPFTY"). In Exhibit No. 3-A, the historic test year data are generally identified by the title or heading "Present Rates at June 30, 2023" and the FTY and FPFTY are generally

identified by the title or heading "Present Rates at June 30, 2024," and "Present Rates at June 30, 2025," respectively.

Q. Why did the Company prepare separate revenue requirements?

A. The Company developed revenue requirements for its base water, wastewater sanitary sewer systems and wastewater combined sewer systems, and also developed individual revenue requirements for wastewater operations in BASA and Brentwood. The Joint Petition for Settlement (the "Settlement"), which was approved by the Commission in the Company's last base rate case, provides that the Company is not required to provide a separate study for each combined stormwater system. The Company has included one Wastewater CSS Operation study for Scranton, McKeesport and Kane wastewater systems, as permitted under the Settlement.[1]

Rate Base

Q. What are the Company's rate base claims in this proceeding?

A. The total Company rate base claim in this proceeding is shown below for each of the five revenue requirements:

Rate Base	**2025 Proposed**
Water Operations	$4,704,067,656
Wastewater SSS General Operations	$649,330,622
BASA WW Operations	$231,536,917
Brentwood WW Operations	$22,053,946
Wastewater CSS Operations	$489,184,280
Total:	**$6,096,173,421**

The calculations of these amounts are shown in Exhibit No. 3-A under the respective rate base sections for each revenue requirement.

[1] Joint Petition for Settlement of Rate Investigation ("Joint Petition") at ¶ 14, Docket No. R-2022-3031672.

Q. What are the elements of the Company's rate base claims?

A. PAWC's rate base claims consist of several elements. The first and largest element is the depreciated original cost of net plant in service. To this amount, three items have been added to each of the rate base claims: (1) materials and supplies; (2) cash working capital; and (3) accrued taxes net of prepaid taxes.

For Water Operations, items four and five described below were added:

(4) the unamortized balance of the Commission-approved[2] utility plant acquisition adjustments associated with the Company's acquisitions of the water assets of the former Pennsylvania Gas & Water Company ("PG&W"), Lake Spangenberg Water Company, the Fernwood Community Water System, and the Olwen Heights Water Service Company, Inc., as well as the unamortized balance of the Commission-approved acquisition transaction and closing costs for the Company's acquisitions of the water assets of the Steelton Borough Authority, Municipal Authority of the Borough of Turbotville, Valley Township, SLIBCO Utilities, and Creekside Homeowner's Association. In addition, the Company is seeking approval for recovery of the utility plant acquisition adjustments and transaction and closing costs associated with its planned acquisitions of the water systems from Farmington Township and Audubon Water Company, which are anticipated to be completed prior to the end of the FPFTY. As referenced in the testimony of Company witness Chris Abruzzo, the purchase price of $5,545,000 for the Farmington acquisition was allocated in the amounts of $2,718,300 for water and $2,826,700 for the wastewater

[2] References in this testimony to Commission authorized balances and amortizations of acquisition adjustments can be found at Docket No. R-2022-3031672, Joint Petition for Settlement of Rate Investigation, Appendix D, approved by Order entered December 8, 2022, unless specifically stated otherwise.

assets. For the Farmington water system, the depreciated original cost was calculated to be $2,502,811, resulting in a proposed utility plant acquisition adjustment ("UPAA") of $215,489. The estimated transaction and closing costs for Farmington are $54,825. For Audubon, the difference in the purchase price and depreciated original cost resulted in a proposed UPAA of $7,639,771. The estimated transaction and closing costs for Audubon are $117,954. The UPAA and acquisition transaction and closing costs are similar to those that I have discussed above and were previously approved by the Commission for other water system acquisitions. Please refer to the rate base sections of Exhibit Nos. 3-A and 3-C for more detail on these acquisition adjustments; and

(5) the unamortized balance of costs incurred by the Company relative to its position as receiver of the Winola Water Company, Docket No. P-2018-3006216.

For the Wastewater SSS General Operations rate base claim, a fourth item was added: the unamortized balance of the Commission-approved utility plant acquisition adjustments associated with the Company's acquisitions of the wastewater assets of the former Clean Treatment Sewage Company and Delaware Sewer Company, as well as the unamortized balance of the Commission-approved acquisition transaction and closing costs for the Company's acquisitions of the wastewater assets of the Borough of New Cumberland, Sadsbury Township, Exeter Township, Delaware Sewer Company, the Borough of Turbotville, Valley Township, Foster Township, the Borough of Royersford, Upper Pottsgrove Township, and the City of York. In addition, the Company is seeking approval for recovery of the estimated acquisition transaction and closing costs associated with the planned acquisitions of wastewater assets of Farmington Township ($56,895) and Sadsbury Township Municipal Authority ("STMA") (Lancaster County) ($91,470),

Docket Nos. A-2023-3042587 and A-2023-3042058, respectively. As discussed in the direct testimony of my colleague, Mr. Abruzzo (PAWC Statement No. 6), the planned acquisitions will be completed prior to the end of the FPFTY. These acquisition transaction and closing costs are similar to the acquisition transaction and closing costs approved by the Commission and previously discussed in my testimony.

For BASA WW Operations, a fourth item was added: the Company is seeking approval for recovery of $1,202,635, the estimated acquisition transaction and closing costs associated with the Company's planned acquisition of the wastewater assets of BASA, Docket No. A-2022-3037047, which will be completed prior to the end of the FPFTY. These acquisition transaction and closing costs are similar to the acquisition transaction and closing costs discussed previously.

For Brentwood WW Operations, a fourth item was added: the Company is seeking approval for recovery of $701,935, the estimated acquisition transaction and closing costs associated with the Company's planned acquisition of the wastewater assets of the Borough of Brentwood, Docket No. A-2021-3024058, which will be completed prior to the end of the FPFTY. These acquisition transaction and closing costs are similar to the acquisition transaction and closing costs discussed previously.

For the Wastewater CSS Operations rate base claim, a fourth item was added: the unamortized balance of the Commission-approved transaction and closing costs associated with the Company's acquisitions of the wastewater assets of the Sewer Authority of the City of Scranton, the Municipal Authority of the City of McKeesport, and the Borough of Kane Authority.

For the calculation of the Water Operations rate base claim, seven items have been deducted: (1) a net offset to cash working capital requirements to reflect the timing of the payment of interest and preferred dividends; (2) unamortized investment tax credits that were generated prior to 1971; (3) a thirteen-month average of extension deposits in suspense; (4) contributions-in-aid-of-construction ("CIAC") and customer advances for construction ("CAC") associated with the Company's acquisition of the water assets of the former Citizens Utilities Water Company of Pennsylvania ("Citizens"); (5) balance of the regulatory liability for the federal income tax savings associated with the 2017 Tax Cuts and Jobs Act ("TCJA") for January 1, 2018 through June 30, 2018 (the "Stub Period") and the unamortized balance of the Negative Deferred Tax Credit reconciliation from January 28, 2021 through January 27, 2023; (6) other deductions (as described below); and (7) accumulated deferred taxes.

For the calculation of the Wastewater SSS General Operations and Wastewater CSS Operations rate base claims, three items have been deducted: (1) a net offset to cash working capital requirements to reflect the timing of the payment of interest and preferred dividends; (2) the balance of the regulatory liability for federal income tax savings associated with the TCJA Stub Period relating to Wastewater SSS General and Scranton WW CSS Operations; and (3) accumulated deferred taxes.

For the calculation of the BASA and Brentwood WW Operations rate base claims, two items have been deducted: (1) a net offset to cash working capital requirements to reflect the timing of the payment of interest and preferred dividends; and (2) accumulated deferred taxes.

Q. Please explain how the depreciated original cost of net plant for the FPFTY was determined.

A. Net plant is the total utility plant in service less CIAC, CAC, and excluded property. Depreciated original cost is the original cost less accrued depreciation. The original cost of net utility plant as of the end of the FPFTY consists of the amount recorded in PAWC's plant accounts at June 30, 2023, plus projected additions, net of retirements, through June 30, 2024 and 2025, respectively, less CIAC and CAC. The original cost of plant in service at June 30, 2023, and the original cost of claimed additions and retirements, shown by detailed plant account, are set forth in Exhibit No. 3-A under the respective rate base sections for each revenue requirement study. Mr. Aiton discusses the more significant plant additions in his direct testimony (PAWC Statement No. 3).

I will address the pending water and wastewater acquisitions that the Company has submitted applications for since its last base rate case. The accrued depreciation at June 30, 2024 and 2025, respectively, related to net plant in service was determined by the Company's depreciation consultant, John J. Spanos (PAWC Statement No. 11), and is shown in Exhibit No. 3-A under the respective rate base sections for each revenue requirement study.

Q. Do the continuing property records, as maintained by the Company and augmented by depreciated original cost studies and fair market value appraisals for acquisitions, accurately reflect additions and retirements to plant in service?

A. Yes, they do. The Company's filing for the future fair market value acquisition of the BASA wastewater assets reflects the net value of the assets at the ratemaking rate base agreed to by the parties in the Joint Petition for Approval of Unanimous Settlement of All

Issues, filed with the Commission on August 14, 2023, Docket No. A-2022-3037047.[3] For the fair market value acquisition of the Brentwood wastewater system, the Company also reflects the net value of the ratemaking rate base reflected in the Company's acquisition application at Docket No. A-2021-3024058.[4] Preliminary depreciated original cost studies were completed and filed with the Commission for the planned acquisitions of Farmington Township Water and Wastewater assets (Docket Nos. A-2023-3042587 and A-2023-3042567). The original cost study will be updated after closing to reflect the original cost and accumulated depreciation as of the closing date. For the planned acquisition of STMA wastewater assets (Docket No. A-2023-3042058), the Company performed an analysis of the original cost and accumulated depreciation of this system, and after closing, will file with the Commission an original cost study to reflect the original cost and accumulated depreciation as of the closing date. For the planned acquisition of Audubon Water Company (Docket No. A-2023-3043194), the Company will not prepare an original cost study, as Audubon Water Company is a Commission-regulated utility, and it is assumed that the original cost and accumulated depreciation of Audubon Water Company's assets have been captured in Audubon Water Company's current rates.

Q. Are the data shown on the Company's continuing property records an accurate basis for developing the original cost of property?

A. Yes, they are.

[3] The Commission is expected to enter a final order in this case at its November 9, 2023 public meeting.
[4] The Commission is expected to enter a final order in this case at its March 14, 2024 public meeting.

Q. Do the Company's rate base claims include the cost of water and wastewater assets that are to be acquired during the pendency of this proceeding, but prior to the end of the FPFTY?

A. Yes, the Company's rate base claims include the cost of water assets to be acquired from Farmington Township and Audubon Water Company, and the wastewater assets to be acquired from BASA, the Borough of Brentwood, Farmington Township and STMA.

Q. Has the Company made any adjustments to its historic test year end CIAC and CAC balances?

A. Yes, adjustments have been made to the balances for Water Operations, Wastewater SSS General Operations, and Wastewater CSS Operations. The June 30, 2023 CIAC balance for Water Operations has been increased to reflect $2,436,273 of additional contributions projected to be received through the end of the FPFTY. In addition, the FTY reflects $2,147,017 of additional contributions associated with the planned acquisition of Farmington Water, and the FPFTY reflects $4,210,372 of additional contributions associated with the planned acquisition of Audubon Water. The CAC balance has been adjusted to reflect $3,789,774 and $8,464,954 of additional advances projected to be received through the FTY and FPFTY, respectively, and decreased for $3,732,642 and $6,535,508 of refunds anticipated to be paid during 2024 and 2025 with respect to customer advances received in prior years.

For the Wastewater SSS General Operations, the June 30, 2023 CIAC balance has been increased to reflect $752,142 of additional contributions projected to be received through the FPFTY. In addition, $925,000 and $1,970,206 of contributions associated with the

planned acquisitions of STMA and Farmington, respectively, have been included for the FTY.

For the Wastewater CSS Operations, the June 30, 2023 CIAC balance has been increased to reflect $132,667 of additional contributions projected to be received through the FPFTY. The Company does not anticipate any changes to the CAC balances for its Wastewater SSS General Operations or Wastewater CSS Operations. In addition, the Company does not anticipate any changes to the CIAC and CAC balances for its remaining operations. Therefore, no adjustments to the June 30, 2023 balances for those operations are required.

These calculations are shown in Exhibit No. 3-A under the respective rate base sections for the revenue requirements of Water Operations, Wastewater SSS General Operations, and Wastewater CSS Operations.

Q. Has the Company excluded from its rate base certain property recorded in its utility plant accounts?

A. Yes. The amount of $1,558,014 has been excluded from the Company's rate base claim for Water Operations as shown in Exhibit No. 3-A under the corresponding rate base section. For the most part, the excluded amount represents the original cost of utility plant in service for which the Company received relocation reimbursement payments from the Commonwealth of Pennsylvania. The remainder of the excluded amount consists of certain allowance for funds used during construction ("AFUDC") accruals that the Company agreed to remove from rate base pursuant to a stipulation approved in the Company's rate proceeding at Docket No. R-00932670.

Q. Please explain the addition to rate base for materials and supplies.

A. In accordance with procedures previously approved by the Commission, the Company's materials and supplies claims were determined by averaging the monthly balances of the materials and supplies account for the thirteen months ended June 30, 2023. The calculations of the materials and supplies claims are shown in Exhibit No. 3-A under the respective rate base sections for each revenue requirement study. The Company's materials and supplies claim for the BASA WW Operations and Brentwood WW Operations were derived as follows: (1) monthly balances of the materials and supplies accounts for PAWC's Wastewater SSS General Operations for the thirteen months ended June 30, 2023 were summed and the total divided by the number of customers in those wastewater districts to determine the average materials and supplies balance per customer; and (2) the average materials and supplies balance per customer was multiplied by the total number of customers served by the water and wastewater systems. The calculation of this adjustment is shown in Exhibit No. 3-A under the respective rate base sections for materials and supplies.

Q. Please explain the Company's claim for cash working capital.

A. The cash working capital requirement is calculated by multiplying the net lag days (revenue lag days less expense lag days) by the average operating expenses per day (total operating expenses / 365 days). All calculations have been made to two decimal places. In accordance with Commission policy, uncollectible accounts expense and amortizations were subtracted from total operating expenses before performing the calculation. The calculation of the gross cash working capital requirement is shown in Exhibit No. 3-A

under the respective rate base sections for cash working capital for each of the Company's revenue requirements.

Q. How were the revenue and expense lags determined?

A. Revenue and expense lags were determined by a lead-lag study. The revenue lag consists of three components: (1) the lag from the midpoint of the service period to the end of the service period, i.e., the meter-read date; (2) the time required for bill preparation and mailing; and (3) the lag in receipt of payment. The first component was calculated as follows: the sum of the number of service days relative to each customer bill in the last quarter of the HTY was calculated. That figure was divided by two to determine the interval from the midpoint to the end of the service period. The average of the service days for the period April through June 2023 was then computed, resulting in a service lag period of 15.30 days.

The second component is billing lag. The billing lag of two days used for this calculation was proposed by a witness for the Commission's Bureau of Investigation and Enforcement and agreed to by the Company in a prior base rate case at Docket No. R-2013-2355276.

The third component, the collection lag, requires a further calculation to determine the average length of time that revenues are outstanding before payment. This calculation was performed as follows: (1) daily accounts receivable balances for the twelve months ended June 30, 2023 were summed and the total divided by the number of days in the same period to determine the average accounts receivable balance per day; (2) the Company's total revenue for the twelve months ended June 30, 2023 was divided by the number of days in the same period to determine the average revenue billed per day; and (3) the average

accounts receivable balance per day was divided by the average revenue billed per day. The result of the division in (3), above, yields the number of days on average that billed revenue was outstanding prior to receipt of payment, which in the study was 32.52 days. This is a standard calculation used by other water utilities in Pennsylvania. Finally, 0.79 days of "Lockbox Collection Lag" was added to the revenue lag, which represents the time between the collection of customer remittances to a post office box and the deposit of those funds into the Company's bank account. The total revenue lag for this study, when the items above are combined, is 50.61 days.

The expense lag was based upon a comprehensive lag study. Using procedures approved by the Commission in prior proceedings and data obtained from the Company's centralized accounts payable system, samples of expense vouchers for each category of expense were analyzed to determine the lag between the receipt of goods or services and the applicable payment due date. A summary of the expense lags by category is shown in Exhibit No. 3-A under the corresponding rate base section. These lag calculations reflect an addition for "Check Float," which represents the average amount of time that it takes for a vendor to deposit a payment from the Company. For the Labor and Service Company calculations, an addition of 0.05 days was included, which has the same purpose as the "Check Float," but is instead calculated by taking a weighted average of direct deposit and check payments to employees. The detailed calculations of the revenue and expense lag days appear in the response to Question No. FR V. 8 of the Commission's Standard Filing Requirements.

Q. Please explain the addition to rate base for accrued and prepaid taxes.

A. This addition to rate base reflects the fact that, on balance, taxes are paid in advance. The lead/lag in payment of Pennsylvania corporate net income tax is based on payments

throughout the test year. The General Assessment tax lead was calculated based upon actual payment dates in 2022, for the tax period of July 1, 2022 through June 30, 2023 and a payment in 2023, for the tax period of July 1, 2023 through June 30, 2024. The lead/lag day calculations for the payment of taxes imposed by the Public Utility Realty Tax Act ("PURTA") and federal income tax were based upon statutory payment schedules. The lag for local property taxes was determined using the regular expense lag calculation, which was discussed above. Payments are made by check, and the average payment was a lead of (23.52) days, adjusted to (13.96) when Check Float was accounted for. The calculations of the lead/lag days for the aforementioned taxes are set forth in Exhibit No. 3-A in the respective rate base sections for each of the Company's revenue requirements. The net lead/lag days for each tax are then applied to the pro forma tax amounts, as shown in the applicable section of Exhibit No. 3-A, to calculate the overall working capital effect which, in this instance, is positive for all operations. Thus, the average net lead in payment of these taxes constitutes an addition to cash working capital requirements and, therefore, is reflected as a rate base addition.

Q. Please explain the addition to rate base for acquisition adjustments.

A. There are two types of acquisition adjustments claimed by the Company in this case. The first type represents utility plant acquisition adjustments. The second type represents acquisition transaction and closing costs. These are further broken down to the unamortized balance of adjustments that were approved in prior base rate cases and adjustments that the Company is seeking approval for in this case. The applicable rate base claims and docket numbers are shown on Exhibit No. 3-A under the rate base section entitled Acquisition Adjustments. Exhibit No. 3-C provides additional support, including

a copy of Appendix E of the Joint Petition for Settlement at Docket No. R-2022-3031672, for those acquisition adjustments approved in the Company's last base rate case. In this case, as discussed above, the Company is seeking approval of the estimated acquisition transaction and closing costs for the planned acquisitions of the Farmington Township water and wastewater systems, the Audubon Water Company water system, the STMA wastewater system, the Borough of Brentwood wastewater system and the BASA wastewater system.

Q. Please describe the adjustments made to the transaction cost balances approved in the last rate case for the Creekside Homeowner's Association water acquisition.

A. The total transaction and closing cost estimates at December 31, 2023 approved by the Commission were reconciled to the actual balance on the Company's books at the time of this filing. This resulted in an increase to the originally authorized balances by $11,512 for Creekside water. Supporting detail for this adjustment can be found in the Company's Exhibit No. 3-A and Exhibit No. 3-C pages for Water Operations.

Q. Please explain other rate base additions for water.

A. The fifth addition to Water Operations, shown in Exhibit No. 3-A in the corresponding rate base section, is the continued amortization of the Company's receivership costs related to Winola Water Company, as approved by the Commission in the Company's last base rate case at Docket No. R-2022-3031672.

Q. Please explain the items that were deducted from rate base for the Company's water and wastewater operations.

A. Three items were deducted from rate base for the Company's water and wastewater operations. The first deduction, which offsets cash working capital requirements, relates to the average net lag in payment of interest on long-term debt and dividends on preferred stock. The deduction was calculated using procedures previously approved by the Commission and is set forth in Exhibit No. 3-A in the corresponding rate base section for each of the Company's revenue requirements.

The second deduction is for the balance of the regulatory liability for the federal income tax savings associated with the TCJA for the Stub Period and the unamortized balance of the Negative Deferred Tax Credit reconciliation from January 28, 2021 through January 27, 2023. This deduction only relates to Water, Wastewater SSS and Wastewater CSS operations.

The third deduction is for accumulated deferred taxes as addressed by Company Witness Melissa Ciullo in her direct testimony, PAWC Statement No. 7.

Q. Please describe the adjustment to the Rate Base deduction for the Negative Deferred Tax Credit.

A. In accordance with PAWC Tariff Water-PA P.U.C. No. 5, page 40 (Negative Surcharge for Deferred Tax Credit), the Company filed, on April 30, 2023, a reconciliation of the difference between the total credits provided to customers for bills rendered from January 1, 2022 through January 27, 2023 in the amount of $11,440,000. The calculated difference of $719,248, plus applicable interest has been added to the unamortized balance approved at Docket No. R-2022-3031672 of $208,073, plus applicable interest, and is included as an addition to rate base offsetting the balance of the regulatory liability for

federal income tax savings associated with the TCJA Stub Period for Water Operations. The Company is seeking approval of this adjustment with an amortization period of two years.

Q. Were additional items deducted from rate base for the Company's water operations?

A. Yes. Four rate base deductions apply only to the Company's water operations. The first item is unamortized investment tax credits generated prior to 1971. These amounts are shown in Exhibit No. 3-A under the respective rate base sections. Investment tax credits accrued in 1971, and thereafter, are amortized to income and are not permitted to be deducted from rate base under the requirements of Section 46(f) of the Internal Revenue Code.

Another item deducted from rate base for water operations, shown in Exhibit No. 3-A under the respective rate base sections, is a thirteen-month average of extension deposits in suspense. The Company requires applicants for water service to advance a portion of the cost to construct main extensions needed to serve them under specified conditions, as more fully set forth in the Company's tariff. At the completion of the project, accounting entries are made to adjust the estimated costs of construction to the actual costs of construction. The difference is recorded in the extension deposit in suspense account until it is either refunded to the party that made the advance, or an additional amount owed is collected. In its final Order at Docket No. R-891208, the Commission agreed with the Office of Consumer Advocate ("OCA") that an average balance of such funds should be reflected in rate base, and the Company has made this adjustment, shown in Exhibit No. 3-A, to comply with that determination.

The third rate base offset for Water Operations comprises CIAC and CAC booked by Citizens prior to its acquisition by PAWC. The Joint Petition for Settlement at Docket No. R-2009-2097323 ("Citizens Joint Petition for Settlement"), as approved by the Commission for ratemaking purposes, provided as follows:

> (i) $14,147,208, or 40%, of the December 31, 2009, balance of the net customer advances for which Citizens retained the refund liability upon the Company's acquisition of Citizens' water utility assets will be deemed deducted from the Company's rate base; (ii) $8,895,830 (100%) of the December 31, 2009 balance of the net contributions in aid of construction the OCA proposed to attribute to PAWC from its acquisition of Citizens' water assets will be deducted from PAWC's rate base; (iii) in future base rate cases, the foregoing balances, adjusted to reflect accumulated amortization, will be deducted for ratemaking purposes until such balances are fully amortized; and (iv) the applicable depreciation rate for PAWC's transmission and distribution mains will be used to calculate the amortization of such balances for ratemaking purposes to offset the portion of depreciation expense on gross plant in service that is related to these advances and contributions.

The adjustments that were made to implement the terms of the Citizens Joint Petition for Settlement, set forth above, are detailed in Exhibit No. 3-A under the rate base section.

The final rate base deduction is for the Commission-approved amortization associated with an equipment discount.

Q. Do the adjustments explained above constitute all of the adjustments necessary to establish the Company's rate base?

A. Yes, they do.

Depreciation And Amortization Expense

Q. Have adjustments been made to the annual depreciation expense recorded on the Company's books at June 30, 2023?

A. Yes. Adjustments to booked amounts were made to a full annual amount of the depreciation accrual for the Company's plant in service as of June 30, 2023 and for plant to be added during 2024 and 2025. The annual accrual was determined largely on a Straight-Line Average Remaining Life basis. The adjustments to reflect the annual accrual for depreciation related to plant in service in 2023, 2024, and 2025 are shown in Exhibit No. 3-A under the respective rate base sections, and, as noted previously, are explained and sponsored by Mr. Spanos.

For Water Operations, a reduction to depreciation was made for CIAC and CAC associated with the Company's acquisition of the water assets from Citizens Joint Petition for Settlement at Docket No. R-2009-2097323.

Additionally, for each of the operational areas, a reduction to depreciation was made for the capitalized portion of depreciation on vehicles.

Q. Please explain the Company's claim for "Amortizations" that appears in Exhibit No. 3-A.

A. The amortization claims for each of the revenue requirements are described as follows and are reflected in Exhibit Nos. 3-A and 3-B under the respective operational sections:

For Water Operations, nine amortization claims are made:

(1) amortization of the UPAA amounts as previously approved by the Commission which include the Commission-approved utility plant acquisition adjustments associated

with the Company's acquisition of the water assets of the former PG&W, Lake Spangenberg Water Company, the Fernwood Community Water System, the Olwen Heights Water Service Company, Inc., Indian Rocks Property Owners Association, North Fayette County Municipal Authority, the Wildcat Park Corporation, the Municipal Authority of the Borough of Turbotville, and Creekside Homeowner's Association, plus the proposed UPAA adjustment for the planned Farmington Township and Audubon Water Company acquisitions. The Company is proposing to extend the amortization period for those amortizations which are currently due to end at December 31, 2025 in order to reflect a more appropriate ongoing annual level of expense in proposed rates. The detail of the amortizations can be found in Exhibit No. 3-A. Additionally, the Company has included the previously Commission approved amortizations of the transaction and closing costs associated with the acquisitions of the Borough of Turbotville, Steelton Borough Authority, Valley Township, SLIBCO Utilities, and Creekside Homeowner's Association, as well as the proposed amortization of the transaction and closing costs associated with the water system acquisitions of Farmington Township and Audubon Water Company as part of this claim;

(2) amortization of the previously Commission-approved equipment discount noted earlier in my testimony;

(3) amortization of SFAS 109 regulatory assets – AFUDC as previously approved by the Commission;

(4) amortization of receivership costs for Winola Water Company, Docket No. R-2022-3031672 as previously discussed in my testimony;

(5) amortization of the TCJA Stub Period and deferred taxes, as previously discussed in my testimony. The Company is proposing a new two-year amortization period for the TCJA Stub Period June 30, 2024 balance, which is currently due to end at December 31, 2025, in order to reflect a more appropriate ongoing annual level of expense in proposed rates. Additionally, as previously discussed in my testimony, the Company has included the two-year amortization of the reconciliation of the negative surcharge for deferred tax credits as required under the PAWC Tariff Water – PA P.U.C. No. 5, page 40. This reconciliation covers the period from January 28, 2021 through January 27, 2023;

(6) Commission-approved amortization of DEP Safe Drinking Water fees, reflecting an updated amortization period of two years on the balance as of June 30, 2024;

(7) post-in-service AFUDC for new plant additions made after the acquisition of Steelton Borough Authority. *See* 66 Pa.C.S. §1329(f), reflecting an updated amortization period of two years on the balance as of June 30, 2024;

(8) deferred depreciation associated with the Steelton acquisition (*see* 66 Pa.C.S. §1329(f)), as approved at Docket No. R-2020-3019369, reflecting an updated amortization period of two years on the balance as of June 30, 2024; and

(9) Commission-approved amortization of the deferred financial impacts authorized in the Commission's September 15, 2021 Order at Docket No. P-2020-3022426 associated with the COVID-19 emergency response. As part of the settlement of the Company's last rate case at Docket No. R-2022-3031672, the Company agreed it would cease the deferral of carrying costs and uncollectible expense as of December 31, 2022. The balance of the deferral at June 30, 2023 reflects a reduction to the deferred settlement balance in the amount of $3,627,490. The Company proposes to amortize the revised

balance of the $1,555,253 liability, as of June 30, 2024, over a period of two years. Company witness Cas Swiz further discusses the COVID-19 emergency response deferral in his testimony (PAWC Statement No. 8).

For Wastewater SSS General Operations, five amortization claims are made:

(1) Commission-approved utility plant acquisition adjustments associated with the Company's acquisition of the wastewater assets of the former Clean Treatment Sewage Company, Delaware Sewer Company, and the Borough of Turbotville, and Foster Township, plus the proposed Negative UPAA, that will be recorded as a regulatory liability, for STMA. For the former Clean Treatment Sewage Company, the Company is proposing a new two-year amortization period, which is currently due to end on December 31, 2025, in order to reflect a more appropriate ongoing annual level of expense in proposed rates. Additionally, the Company has included the previously approved amortizations of the transaction and closing costs associated with the acquisitions of the Borough of New Cumberland, the Borough of Turbotville, Sadsbury Township, Exeter Township, Delaware Sewer Company, Valley Township, Foster Township, the Borough of Royersford, Upper Pottsgrove Township, and City of York. In addition, the Company is proposing a 10-year amortization of the acquisition transaction and closing costs associated with the planned acquisition of the wastewater assets of Farmington Township and STMA;

(2) Commission-approved amortization of post-in-service AFUDC for new plant additions made after the acquisition for Exeter Township. The Company also proposes a new two-year amortization period, similar to what was proposed for the amortization of the Steelton Borough Authority post-in-service AFUDC;

(3) Commission-approved amortization of deferred depreciation associated with the acquisition Exeter Township. The Company also proposes a new two-year amortization period, similar to what was proposed for the amortization of the Steelton Borough Authority deferred depreciation;

(4) Commission-approved amortization of the deferred financial impacts authorized in the Commission's September 15, 2021 Order at Docket No. P-2020-3022426 associated with the COVID-19 emergency response, as described above; and

(5) amortization of the TCJA Stub Period and deferred taxes, as described above.

For BASA WW Operations, the only amortization claim being made is the acquisition transaction and closing costs associated with the Company's planned acquisition of the wastewater assets of the BASA, Docket No. A-2022-3037047. These costs are based on the estimates at the time of the application filing and will be updated with actual costs after closing.

For Brentwood WW Operations, the only amortization claim being made is the acquisition transaction and closing costs associated with the Company's planned acquisition of the wastewater assets of the Borough of Brentwood, Docket No. A-2021-3024058. These costs are based on the estimates at the time of the application filing and will be updated with actual costs after closing.

For Wastewater CSS Operations, four amortization claims are made:

(1) Commission-approved acquisition transaction and closing costs associated with the Company's acquisitions of the wastewater assets of Sewer Authority of the City of

Scranton, the Municipal Authority of the City of McKeesport, and the Borough of Kane Authority;

(2) deferred depreciation associated with the acquisition of the Municipal Authority of the City of McKeesport. The Company proposes a new two-year amortization period, similar to what was proposed for the amortization of the Steelton Borough Authority deferred depreciation; and

(3) Commission-approved amortization of the deferred financial impacts authorized in the Commission's September 15, 2021 Order at Docket No. P-2020-3022426 associated with the COVID-19 emergency response, as described above; and

(4) amortization of the TCJA Stub Period and deferred taxes, as described above.

Q. Please describe the adjustments made to the UPAA approved in the Company's last rate case for the Creekside Homeowner's Association water acquisition and Foster Township wastewater acquisition.

A. The UPAA based on the depreciated original cost ("DOC") studies filed with the Company's acquisition applications, and approved by the Commission, for the Creekside water and Foster wastewater systems were reconciled to the final DOC studies received at the time of closing for each acquisition. This resulted in an increase to the originally authorized Negative UPAA, recorded as a regulatory liability, by $205,184 for Creekside water and a decrease of $13,848 for Foster wastewater. Supporting detail for these adjustments can be found in the Company's Exhibit No. 3-A and Exhibit No. 3-C pages for Water Operations and Wastewater SSS Operations for Creekside and Foster, respectively.

Q. Please describe the proposed claim for the amortization of the balance of the deferred expense related to the Arrearage Management Plan ("AMP").

A. In the proceedings involving the Company's petition for approval of an arrearage management plan ("AMP"),[5] the Further Amended Joint Petition for Full Settlement filed with the Commission on September 11, 2023, states in Paragraph 46.c that "During the period that the AMP is considered a pilot program, the Company will record a regulatory asset or liability for amounts over or under the amount included in rates for recovery or refund in the next base rate case." The AMP has not yet been approved by the Commission; thus, no credits have been given related to the AMP. As a result of expenses claimed in the Company's last base rate case at Docket No. R-2022-3031672, a regulatory liability was recorded in the amount of $3,091,875 through June 30, 2024. The Company proposes to refund the annual amount of $1,545,937 through amortization expense over a period of two years.

Property Taxes and General Assessments

Q. Please explain the adjustments to claims for property taxes.

A. PURTA tax is imposed on certain real property dedicated to utility water service in Pennsylvania based upon the fair market value of such property, as determined by applying per-county common level ratios to the assessed values of the property. In Pennsylvania, property taxes imposed on real property not subject to PURTA are administered at the county level. In every county, the sum of local tax rates (school taxes, municipal taxes and county taxes) is applied to the assessed value of each property. However, each county has

[5] ***See*** Petition of Pennsylvania-American Water Company for Approval of an Arrearage Management Plan, Docket No. P-2021-3028195.

its own system for determining assessed value. The Company's claims for its Water Operations, Wastewater SSS General Operations, and Wastewater CSS Operations were calculated based on the ratio of actual 2022/2023 tax liability to tax base. This ratio was applied to the Company's pro forma claim for property tax eligible utility plant at June 30, 2024 and June 30, 2025. These calculations are detailed in Exhibit No. 3-A, Pennsylvania Property Tax under the section for Taxes, Other Than Income. The Company's claim for its BASA and Brentwood WW operations is included as part of the Acquisition O&M Adjustments in Exhibit No. 3-A, and are described by Company Witness Lori O'Malley (PAWC Statement No. 5).

Q. Please explain the adjustment for General Assessments.

A. The General Assessments are imposed on regulated utilities to provide funding for the Commission and Damage Prevention Committee, the Office of Consumer Advocate, and the Office of Small Business Advocate. The General Assessment rates are applied to a tax base consisting of revenue from water and wastewater service. To calculate pro forma General Assessments, the current assessment rates from the fiscal year July 1, 2023 to June 30, 2024 were applied to a tax base consisting of pro forma sales revenue under present and proposed rates as shown on Exhibit No. 3-A under the respective rate base sections. The Company will update these adjustments with the new General Assessment rates once they are available. Backup for the calculation of these adjustments is provided in the Company's Exhibit No. 3-A under the respective rate base sections.

<u>Rate Case and Regulatory Expense</u>

Q. Please explain the adjustment for regulatory and rate case expense.

A. These adjustments are being made to reflect and normalize the costs related to this rate case and to recover the annual amounts necessary to amortize other regulatory expenses that were incurred by the Company with the Commission's prior approval.

The costs for preparing and litigating this rate filing consist of the costs associated with the Company's consultants and outside legal counsel. Costs for customer communications, mailings, legal notices, administrative fees, and miscellaneous expenses associated with this application are also part of the regulatory expense adjustment. Some of these costs have already been incurred. The Company's claim reflects its total costs, both incurred to date and estimated to be incurred through the completion of this case. PAWC proposes that these costs be normalized over a two-year period, which reflects the average period of time in between the Company's last three base rate filings. Detail of the cost categories included in the projected rate case expense can be found in the Rate Case Expense section of Exhibit No. 3-B.

Q. Please identify the additional claims for regulatory expense the Company is making in this case.

A. The Company is claiming for recovery three other categories of regulatory expense. First, the Company is continuing the ten-year amortization of the costs it incurred for a Customer Class Demand Study performed in accordance with the terms of the Commission-approved settlement of PAWC's rate proceeding at Docket No. R-2011-2232243. The costs of that study were approved for recovery via a ten-year amortization, beginning in January 2018, as part of the Company's 2017 base rate case at Docket No. R-2017-2595853. Second, the Company is continuing the ten-year amortization of the costs incurred for the preparation, filing, litigation and resolution by settlement of the Company's petition at Docket

No. P-2017-2606100 for approval of a plan to replace customer-owned lead service pipes. Those costs were approved for recovery via a ten-year amortization, beginning in January 2021, as part of the Company's 2020 base rate case, Docket No. 2020-3019369. Third, the Company is updating the amortization period for the Commission-approved amortization of the costs associated with performing a stormwater fee feasibility study, which was conducted in order to assess potential recovery and rate methodology options for stormwater costs of combined sewer systems, as required under the approved settlement at Docket No. R-2020-3019369. The Company is proposing to amortize those costs over two years, in order to reflect a more appropriate ongoing annual level of expense in proposed rates.

Q. Has the Company allocated the pro forma rate case and regulatory expense?

A. Yes. The Company uses an allocation factor based on customer counts to apportion the projected rate case and regulatory expense to the individual water and wastewater operations for which separate revenue requirement studies have been provided in Exhibit No. 3-A. The allocation factor will be explained in more detail below. The Rate Case Expense section of Exhibit No. 3-B shows the costs allocated to each separate revenue requirement study from applying this allocation factor.

Allocation of Costs Between Water and Wastewater Operations

Q. Please describe the Company's approach to allocating costs between water and wastewater operations in this rate proceeding.

A. The Company is proposing to allocate costs between water and wastewater operations utilizing the same allocation methodology the Company used in its last base rate case at Docket No. R-2022-3031672.

Q. Please describe the cost categories that fall under the term "common costs".

A. The costs classified as "common costs" include Service Company expenses (including postage and customer accounting costs), insurance other than group, rate case expense and regulatory expense, and the costs associated with the PAWC Corporate Headquarters (Capital Campus) located in Mechanicsburg, Pennsylvania.

Q. What is the methodology used by the Company to allocate common costs between its water and wastewater operations?

A. The Company allocates the above categories based on four different factors, as shown in Schedule SDG-1.

Factor 1 – Customers (for Service Company and Customer Accounting). This factor was calculated based on the number of customers as of June 30, 2023. In allocating costs to PAWC, the Service Company identifies customers that receive both water and wastewater service from the Company. These accounts are not treated as two separate customers in the customer-count used to allocate Service Company costs. Instead, each dual service customer is assigned the value of 1.05 in the count of total Company customers and the value of 0.05 in the count of wastewater customers. PAWC used the same convention in allocating costs between water and wastewater operations. The dual service customers counted in the manner explained above plus wastewater-only customers are summed to arrive at the wastewater customer count used for the customer-based allocation.

Factor 2 – Customers (for Rate Case and Regulatory Expense). This calculation is based on the total number of customers for each water or wastewater system and allows for subsets of allocations based on water and wastewater SSS, water and wastewater SSS and

wastewater CSS customers. The breakdown of this level is necessary, as there are certain rate case expense components which only relate to specific customer types. For example, cost of service and rate design activities are completed for water and wastewater SSS customers, but separately for wastewater CSS customers. The application of this allocation factor is shown in the Rate Case Expense section of Exhibit No. 3-B.

Factor 3 – Customers (for PAWC's Corporate Headquarters (Capital Campus)). This allocation is based on each water or wastewater system's percentage of the Company's total customers as of June 30, 2023.

Factor 4 – Depreciated Cost of Utility Plant in Service (for Insurance Other Than Group). This factor is based on the depreciated original cost of total net utility plant in service as of June 30, 2023 for each water or wastewater system. The percentages of utility plant are applied to the pro forma Insurance Other Than Group expenses claimed by the Company to determine the portion of total expenses allocated to water and wastewater operations. The Company's expense for Insurance Other than Group consists of property, vehicle and general liability, which closely aligns with plant assets.

Proposed Water and Wastewater Tariffs

Q. Please discuss the proposed changes shown in the proposed Water Tariff.

A. The Company is proposing changes to its Water Tariff, which include the following:

1. In the Schedule of Rates, the Company's low-income discounts have been modified to add an additional tiered discount for 151%-200% of FPL, as discussed in the testimony of Charles Rea, (PAWC Statement No. 10). Additionally, the actual discount rate will be reflected in the tariff as opposed to the billed rate.

2. The Company proposes including a new Revenue Decoupling Mechanism ("RDM") as further discussed by Company witnesses Everette and Rea in PAWC Statement Nos. 1 and 10, respectively.
3. The Company proposes including a new Environmental Compliance Investment Charge ("ECIC"), as further discussed by Company witnesses Everette, Aiton, and Swiz in PAWC Statement Nos. 1, 3, and 8, respectively.
4. In Rule 3.2 – Application for Street Service Connection, the Company proposes additional language regarding the installation of additional or replacement connections to clarify that, following the installation of an initial street service connection, the customer will be responsible for the costs of installation of new service connections, including in instances where one property is converted into multiple premises.
5. In Rule 4.1 – Right to Reject, the Company proposes language to explicitly permit the Company to refuse to connect to service lines where (1) a customer-side service line is made of lead, (2) where a customer-side galvanized service line was or is downstream of a lead service line or a service line made of unknown material, or (3) if a customer either refuses or fails to respond to the Company's request to replace a customer-owned lead service pipe through the Company's Lead Service Pipe replacement plan.
6. In Rule 4.9 – Customer Responsibility for Service Pipe, the Company proposes a clarification that the Company may require documentation to establish the existence of repaired leaks.

7. In Rule 12.1 – Termination by Company, the Company proposes to specifically allow for termination pursuant to the terms of an agreement with a non-Company wastewater provider.
8. In Rule 27.1 – General Provisions under Main Extensions for Bona Fide Service Applicants, the Company proposes removing the description of residential service applicant(s) to clarify that a service applicant may be either residential or non-residential.

Q. Please discuss the proposed changes shown in the proposed Wastewater Tariff.

A. The Company is proposing changes to its Wastewater Tariff, which include the following:

1. In the Schedule of Rates, the Company is adding back into Rate Zone 1b-Metered a section identifying Special Rate Charges that apply to bulk wastewater contract customers in the York service territory. In the Company's 2022 rate case, the entirety of the Special Rate Charges section, which would govern in the absence of a valid contract for bulk wastewater customers, was removed because the customers did in fact have valid contracts. It was an oversight that the filing did not instead include a Special Rate Charges section permitting the Company to charge bulk wastewater customers in the York service territory the rates set forth in their respective contracts with the Company. This change corrects that section.
2. In the Schedule of Rates, the Company's low-income discounts have been modified to add an additional tiered discount for 151%-200% of FPL, as discussed in the testimony of Charles Rea, (PAWC Statement No. 10).

3. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to add "or water usage" on page 14 to correlate to the updated definition for Equivalent Dwelling Unit (or EDU) definition on page 22.
4. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to delete the references to special capacity charges applicable to McKeesport.
5. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to correct the Rate Zone 1 Sludge Discharge Fee to replace "Above 12%" with "Above 10%," consistent with the hauler agreement.
6. The Company proposes to include a new RDM as further discussed by Company witnesses Everette and Rea in PAWC Statement Nos. 1 and 10, respectively.
7. The Company proposes to include a new ECIC as further discussed by Company witnesses Everette, Aiton, and Swiz in PAWC Statement Nos. 1, 3, and 8, respectively.
8. In the Rules and Regulations, Section A – Definitions, the Company proposes modifications to the definitions of "Combined Sewer" (No. 12) and "Sanitary Sewer" (No. 73).
9. In the Rules and Regulations, Section A – Definitions, the Company proposes modifications to the calculation described in the definition of "Equivalent Dwelling Units" (or "EDU").
10. In the Rules and Regulations, Section C – Applications for Service, the Company proposes adding language to Section C.1 – Service Application Required.
11. In the Rules and Regulations, Section C – Applications for Service, the Company proposes a new Section C.7, which reflects a change to the tariff consistent with the

pro forma tariff submitted for approval as part of the Company's Application seeking approval of the acquisition of the Brentwood wastewater system at Docket No. A-2021-3024058.

12. In the Rules and Regulations, Section C – Applications for Service, the Company proposes new Sections C.8, C.9 and C.10, adding language regarding Meter Installation, Meter Space and Location, and Meter Removal.

13. In the Rules and Regulations, Section F – Billing and Collection, the Company adds a new Section F.9 Calculation of Winter Average Consumption, proposing to use a winter average consumption to be applied to volume of sewer use for specified meter reads, as discussed by Company Witness Mr. Rea, (PAWC Statement No. 10).

14. In the Rules and Regulations, Section M.E(2) – Main Extensions for Bona Fide Service Applicants, the Company proposes to remove the description of residential service applicant(s) to clarify that a service applicant may be either residential or non-residential.

15. In the Rules and Regulations, Section P – Grinder Pumps for Paint-Elk Wastewater, the Company proposes to add a section applying to Farmington Wastewater.

16. In the Rules and Regulations, Section T.2.1(b)(iii) – Prohibited Discharge Standards, the Company proposes to add clarifying language to describe exceptions to substances such as grease, which may cause obstruction to the flow in the sewer system.

17. In the Rules and Regulations, Section T – Wastewater Control and Industrial Pretreatment Regulations, the Company proposes to correct heading and subpart lettering and numbering on pages 62, 67, and 70.

18. In the Rules and Regulations, Sections T.2.13 – Grease Traps and T.3.7 – Additional Pretreatment Measures, the Company proposes to add language requiring that cleaning and maintenance records for the interceptor or traps must be made available upon Company request.

19. In the Rules and Regulations, Sections T.6.8 – Notice of Violation/Repeat Sampling and Reporting, the Company proposes to add clarifying language that was unintentionally omitted from the section.

20. In Rules and Regulations, Section T.6.13 – Certification Statements, the Company proposes to delete language that applies to Publicly Owned Treatment Works, but not to the Company.

21. In Rules and Regulations, Section T.7 – Fees and Charges, the Company proposes to add language clarifying that the general and specific fees charged in this section are billed on a quarterly basis.

22. In Rules and Regulations, Section T.7.2 – Specific Fees parts (a) and (b), the Company proposes to add defining language for measured pollutant concentrations as part of the industrial loading fee calculation, as well as excess loading fee.

23. In Rules and Regulations, Section U – Industrial Pretreatment Program – Pollutant Removal Costs, the Company proposes to update the BOD5 removal cost price per pound in the Coatesville district consistent with the settlement in the Company's prior base rate case.

24. In Rules and Regulations, Section X – Special Provisions Concerning Trunk Lines in the ALCOSAN Bulk Treatment Service Area, the Company proposes language consistent with the pro forma tariff submitted for approval as part of the Company's Application seeking approval of the acquisition of the Brentwood wastewater system at Docket No. A-2021-3024058.

Q. Has the Company provided a redlined version of the proposed tariffs?

A. Yes, the Company has provided a redlined version of its proposed tariffs showing all changes made relative to its current Water and Wastewater Tariffs, which include the changes to the rules described above, the Company's proposed rate changes, and the consolidation of rate zones, discussed in more detail in the testimony of Charles Rea (PAWC Statement No. 10).

Rate Structure and Rate Design Proposal

Q. Please discuss the Company's rate zones in effect following the last base rate case.

A. A large majority of the Company's customers are now being billed under the same set of rates for metered service. This consolidation represents the continued implementation of the Commission-approved concept of Single Tariff Pricing. Water Rate Zone 2 (Valley), Rate Zone 3 (SLIBCO), Rate Zone 4 (Turbotville), and Rate Zone 5 (Steelton) continue to have separate rate schedules.

Additionally, Wastewater Rate Zone 2 (New Cumberland), Rate Zone 3 (Scranton), Rate Zone 4 (Kane), Rate Zone 5 (Valley), Rate Zone 6 (McKeesport), Rate Zone 7 (York), Rate Zone 8 (Foster), and Rate Zone 9 (Royersford) continue to have separate rate schedules.

Q. Please summarize the rate zones that have been created since the last rate case.

A. Since the last case, no new rate zones have been created. The Company will, upon completion of the planned acquisitions I described previously in my testimony, add an additional two water rate zones for the Farmington and Audubon water acquisitions and an additional four wastewater rate zones for the BASA, STMA, Brentwood and Farmington wastewater system acquisitions.

Q. Has the Company created separate tariff groups for SSS and CSS customers?

A. In the settlement of the Company's last base rate case at Docket No. R-2022-3031672, PAWC committed to creating a separate tariff group for current and future CSS customers. The Company's proposed wastewater tariff reflects the use of Rate Zone 1 for the consolidation rates of SSS customers, using subparts such 1a, 1b, 1c, etc., for those SSS customers who are currently on separate rates, but moving towards consolidation in the future. Rate Zone 2 will be used for the consolidation rates of CSS customers, using subparts such as 2a, 2b, 2c, etc., for those CSS customers who are currently on separate rates, but moving towards consolidation in the future. In addition, the Company created a Rate Zone 3 for Brentwood, which is a collection only system, whose rates will be derived from the cost of service for collection services rather than treatment costs.

Q. Does the Company propose the consolidation of water and wastewater rates in this proceeding?

A. Yes. The Company proposes consolidation of certain water and wastewater rate zones and changes to the current water and wastewater rate structure. Please refer to the direct testimony of Company witness Charles Rea (PAWC Statement No. 10) for a detailed explanation of the Company's proposals.

Q. Did the Company employ any of the authority provided by amendments to the Public Utility Code made by Act 11 of 2012 in developing its rate design in this case?

A. Yes, in this case the Company is proposing to incorporate wastewater revenue requirements into its water revenue requirement. Combining water and wastewater revenue requirements and the resulting rate design are discussed in the direct testimony of Company witness Ashley Everette (PAWC Statement No. 1) and the direct testimony of Company witness Charles Rea (PAWC Statement No. 10).

Q. Please summarize the Company's commitments regarding rate increases for certain prior acquisitions.

A. The Scranton system, acquired by the Company in 2016, is subject to rate increase requirements or limitations. In the Scranton acquisition proceeding, the Commission approved the Amended Asset Purchase Agreement ("APA"), which provided that PAWC would not propose rate increases that would be equal to an amount greater than a 1.9% Compounded Annual Growth Rate ("CAGR") increase in annual revenues over a ten-year period relative to the starting amount of annual revenues. As part of the resolution of the Company's last base rate case, revenues from the Company's Scranton operations were increased by 63.55%. The pro forma revenues at present rates exceed the level of increase PAWC is permitted to propose under the CAGR provision during the ten years following closing of the acquisition. As such, and in compliance with the APA, the Company is not proposing an increase to the wastewater rates of the Scranton system. However, the Company does reflect the roll in of the Distribution System Improvement Charge ("DSIC") at present rate revenues, therefore changing the actual rate being charged to Scranton customers, while the average monthly bill will remain unchanged.

The York wastewater system was acquired by the Company in 2022. Section 6.04 of the York APA provides as follows:

> Buyer shall, subject to PaPUC approval in a future base rate proceeding, maintain base rates for System customers for a minimum period of three (3) years from the Closing Date.

The Foster Township wastewater system was also acquired by the Company in 2022. Section 4.1 of the Foster APA provides as follows:

> After Closing, Buyer will begin charging Seller's current rates (as of the date of this Agreement) as Buyer's base rates (but not other charges, including those discussed below) within Seller's service area (such service area being consistent with Schedule 1), which shall not be increased by the Buyer until after December 31, 2024.

Q. Please summarize the Company's commitments regarding rate increases for the pending acquisitions included in this filing and since the last rate case.

A. The Company expects to close on its acquisitions of the BASA wastewater assets in 2023 and the Brentwood wastewater assets in 2024.

In the BASA application proceedings, a unanimous Settlement was reached and filed with the Commission on August 14, 2023 ("BASA Settlement"). The BASA Settlement (p. 7) provided for the following regarding the proposed rate increase:

> PAWC will propose to move the System to 1.4x the current System rate or PAWC's proposed Rate Zone 1 system-average wastewater rates, whichever is lower, upon the later of (a) the first anniversary of Closing or (b) January 1, 2025.

For the Brentwood acquisition, Section 7.03 of the APA provides as follows:

> The Base Rate shall not be increased until after the second anniversary of the Closing Date.

Q. Please summarize how the Company has complied with the above-referenced BASA Settlement.

A. The Company proposes rates for the BASA system consistent with the revenue increases outlined in the Settlement. Please refer to the testimony of Charles Rea (PAWC Statement No. 10) for detail on the proposed increases.

Q. Please summarize the Company's proposal with respect to the systems for which the Company has agreed to not increase rates for a certain period of time.

A. For Foster, York, BASA, and Brentwood, the Company requests that the Commission permit the Company to implement the proposed changes to rates consistent with the Company's agreements with each of these systems. The Company's pro forma tariff supplement reflects this proposal by showing each system's current rates as continuing to be effective and proposed rates taking effect on the date indicated on the pro forma tariff supplement.

Conclusion

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

Wastewater CSS Operations	451,444,764	7.7%
Total Net Utility Plant in Service	5,870,640,186	100.00%

[1]5% is the percentage used per the Service Company methodology of qualifying a dual service customer. The Massachusetts Formula approach supports that dual service customers be counted as one customer plus 5% of another customer.
The Massachusetts Formula includes three factors: gross property, plant and equipment, direct labor expenses, and gross revenues

IV. TARIFF CHANGES AND RATE DESIGN……..9

PENNSYLVANIA-AMERICAN WATER COMPANY

REBUTTAL TESTIMONY OF STACEY D. GRESS

I. INTRODUCTION AND PURPOSE OF TESTIMONY

Q. What is your name and business address?

A. My name is Stacey D. Gress. My business address is 1 Water Street, Camden, NJ 08102.

Q. Have you submitted direct testimony in this proceeding?

A. Yes, I submitted direct testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company") Statement No. 4. My direct testimony contains a description of my background and qualifications.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to certain parts of the testimony of witnesses from the Office of Consumer Advocate ("OCA"), the Pennsylvania Public Utility Commission ("Commission") Bureau of Investigation and Enforcement ("I&E"), and the Office of Small Business Advocate ("OSBA").

Q. How is your testimony organized?

A. First, my rebuttal testimony discusses updates the Company proposes to rate base and then addresses other parties' proposed adjustments to rate base, particularly as it relates to acquisitions. As part of that discussion, I will respond to I&E witness Ethan H. Cline's recommended reporting requirements for fully projected future test year ("FPFTY") plant additions. Next, I respond to other parties' proposed concomitant adjustments to amortization and depreciation expense related to the proposed removal of acquisitions from rate base, as well as the Company's proposed revisions to rate case expense and depreciation expense. Finally, my rebuttal testimony addresses changes to the Company's

proposed water and wastewater tariffs and certain rate design recommendations made by other parties in this case.

Q. Have you prepared any exhibits to accompany your rebuttal testimony?

A. Yes. PAWC Exhibits SDG-1R to SDG-4R were prepared at my direction and under my supervision and are described in my rebuttal testimony.

II. RATE BASE

A. Accumulated Deferred Income Tax and Materials and Supplies

Q. Has the Company revised its claim for the accumulated deferred income taxes ("ADIT") associated with the Audubon Water Company ("AWC") acquisition?

A. Yes. In response to interrogatory OSBA 06-002, the Company recognized that the net book plant of $360,229 should have been utilized to calculate the ADIT instead of the original cost of $9.1 million. Please refer to Exhibit SDG-1R for details on the increase to the water operations deferred taxes of $1,852,196, which results in a $198,110 reduction to the revenue requirement for AWC.

Q. Has the Company revised its claim with respect to materials and supplies for Wastewater CSS Operations?

A. Yes. In reviewing its initial filing, the Company found that there was a discrepancy in the amount included in the revenue requirement model for materials and supplies under the Wastewater CSS revenue requirement. Volume 03- Exhibit 3-A page 217, line 13 reflected $176,374. However, the correct amount is $492,348, which appears on page 220. The Company has revised its revenue requirement model to include the proper amount of $492,348 in Exhibit 3-A Revised, page 217R.

B. Proposed Acquisitions

Q. Please describe the acquisitions that the Company is proposing in this rate case.

A. The Company has proposed the inclusion of two water system acquisitions, Farmington Township ("Farmington") and AWC, as well as four wastewater system acquisitions, Farmington, Sadsbury Township Municipal Authority ("STMA"), Butler Area Sewer Authority ("BASA"), and the Borough of Brentwood ("Brentwood"). Company witness Abruzzo discusses each of these acquisitions in more detail in PAWC Statement Nos. 6 and 6-R.

Q. Do I&E witnesses Cline, Kubas, and Okum, and OCA witness Smith object to including the six acquisitions listed above?

A. Yes. Collectively, these I&E and OCA witnesses recommend that the six acquisitions be excluded from this rate proceeding. Mr. Cline addresses Farmington water and AWC. Mr. Kubas addresses Brentwood, BASA, Farmington wastewater, and STMA. Ms. Okum and Mr. Smith address each acquisition.

Q. Do you agree with I&E and OCA's arguments regarding these acquisitions?

A. No. The disallowances proposed by witnesses Cline, Kubas, Okum, and Smith related to the Company's acquisitions should be rejected. Please refer to Mr. Abruzzo's rebuttal testimony for a further explanation of why the Commission should allow these acquisitions to be included in this proceeding.

Q. Does OSBA witness Higgins propose adjustments to PAWC's proposed rate treatment of the BASA and Brentwood acquisitions if they close and are approved to be included in the rate case?

A. Yes. If the BASA and Brentwood acquisitions do close, Mr. Higgins recommends:

- PAWC should not be permitted to allocate any costs of the BASA acquisition to water customers. Instead, "[t]he burden of funding the rate mitigation for BASA wastewater customers . . . most appropriately rests with PAWC shareholders until such time that BASA rates can be revisited consistent with the BASA settlement." OSBA Statement No. 1 pp. 22-23.

- "[T]he incremental Brentwood revenue requirement that exceeds the targeted increase to Brentwood customers should be absorbed by shareholders rather than shifted to water customers." OSBA Statement No. 1 p. 28.

I am advised by counsel that a similar proposal was rejected by the Commission in PAWC's 2020 base rate case, Docket No. R-2020-3019369. (*See* Opinion and Order entered on February 25, 2021 at 80-83). In that proceeding, the OCA recommended that the Commission require PAWC's shareholders (rather than PAWC's water customers) to pay approximately $16.7 million in revenue requirement relating to four wastewater systems that PAWC acquired pursuant to Section 1329, 66 Pa. C.S. § 1329. The Commission rejected that proposal. According to the Commission, that proposal would have violated PAWC's rights under the Pennsylvania and Federal Constitutions against taking private property without compensation, because it would force shareholders to commit investment capital to furnish safe and reliable service to the customers of the acquired wastewater systems while denying shareholders any compensation for the use of their funds. The Commission further found that, under Section 1329, once a selling utility's rate base is incorporated into the acquiring utility's rate base (i.e., the Company's rate base), that portion of the rate base is no different than any other portion of the Company's rate base and the Company is entitled to earn a reasonable rate of return on the new rate base consistent with standard ratemaking principles. Finally, the Commission stated:

> We also agree with the Company's argument that, in the circumstances, applying Section 1311(c) in conjunction with Section 1329 is in the public interest because otherwise larger, viable public utilities would be discouraged from acquiring

> municipal and wastewater systems and contravene the legislative intent and the Commission's policy of encouraging consolidation and regionalization.

Id. at 82 (note omitted). Mr. Higgins fails to acknowledge this decision, let alone explain why the Commission should reach a different result in this case. I believe the Commission should reach the same result in this case.

Q. Does OSBA witness Higgins recommend any disallowance of rate base or amortization expense with respect to the AWC acquisition?

A. Yes. In his Direct Testimony, Mr. Higgins recommended that the Commission not allow any recovery of amortization expense or rate base related to the AWC acquisition. Mr. Higgins noted that PAWC proposes to acquire the AWC system for $8 million, include the net book value of AWC's assets ($360,229) in rate base, and amortize the remaining $7,639,771 over ten years. Mr. Higgins states that he found the "disparity between the net book value of the Audubon assets and the proposed acquisition price to be of great concern for customers." OSBA Statement No. 1 at 29.

In response to PAWC-OSBA-II-2, Mr. Higgins further clarified his position. PAWC Exhibit SDG-2R. He stated that, if closing were to occur after the issuance of a final unappealable order approving the acquisition, he does not object to placing the net book value (*i.e.,* the original cost less depreciation) of AWC's assets into rate base. However, he continues to object to recovery of any acquisition cost in excess of the net book value of AWC's assets.

Q. Do you agree with Mr. Higgins' proposal?

A. No. There is no statutory basis for disallowing recovery of *any* acquisition costs in excess of the net book value of AWC's assets because there is allegedly too great of a difference between the purchase price and the system's original cost less depreciation. As described in

PAWC St. No. 6 and 6-R by Mr. Abruzzo, PAWC and AWC are unaffiliated entities that negotiated at arm's length, reaching an agreement for the acquisition of the AWC system that will provide numerous public benefits, at a reasonable purchase price that is comparable to (and lower than) the per customer purchase price of several recent acquisitions. Mr. Abruzzo's Direct and Rebuttal Testimony explain in detail that AWC is a small, non-viable public utility. PAWC has demonstrated that it satisfies all of the statutory criteria for a Section 1327 acquisition premium for the AWC system.

C. Concomitant Adjustments to Rate Base

Q. Please summarize I&E witness Okum's and OCA witness Smith's adjustments to cash working capital.

A. Ms. Okum and Mr. Smith recommend adjustments to cash working capital based on adjustments made to the Company's expense claims.

Q. Please summarize I&E witnesses Kubas' and Cline's, and OCA witness Smith's adjustments to acquisition transaction and closing costs.

A. Mr. Kubas, Mr. Cline, and Mr. Smith all recommend the removal of acquisition transaction and closing costs for all 6 acquisitions described in section B above, based on adjustments made to the Company's rate base claim.

Q. Please summarize OCA witness Smith's adjustments to interest synchronization.

A. Mr. Smith recommends an adjustment to synchronized interest in the income tax calculation based on the OCA's rate base and weighted cost of debt adjustments.

Q. Do you agree with I&E and OCA's concomitant adjustments to cash working capital?

A. Partially. While I do agree that an adjustment needs to be made to cash working capital for the changes to labor expense and rate case expense that the Company proposes, I do

not agree with the dollar amount calculated by I&E and OCA's witnesses, since the Company disagrees with most of the I&E and OCA adjustments to expenses. As such, the concomitant adjustments reflected in Exhibit 3-A, pages 31R, 101R, 148R, 181R, and 221R should be adopted instead of the proposed amounts from I&E and OCA.

Q. Do you agree with I&E and OCA's concomitant adjustments to acquisition transaction and closing costs and interest synchronization?

A. No. As explained in my testimony and the testimony of other PAWC witnesses, the Company disagrees with the I&E and OCA adjustments to rate base and the weighted cost of debt. As such, the proposed concomitant adjustments should be rejected and the Company's proposed amounts should be adopted.

D. Reporting Requirements

Q. What is the Company's position on Mr. Cline's proposed reporting requirements with respect to future plant additions?

A. The Company agrees that the parameters proposed by Mr. Cline to update the Summary of Detailed Plant Accounts in Exhibit 3-A no later than December 1, 2025 are reasonable and will provide the Commission with timely and appropriate information regarding projected investments in utility plant during the FPFTY.

III. EXPENSES, INCLUDING DEPRECIATION AND AMORTIZATION

A. Rate Case Expense

Q. Have you revised the Company's claim for rate case expense?

A. Yes. In the supplemental response to OCA 15-010 part b, the Company provided an update to the amount of rate case expense incurred during this proceeding through December 31,

2023. PAWC Exhibit SDG-3R includes an update to OCA 15-010_Supplemental part b which reflects the Company's actual rate case expense incurred through January 31, 2024 in the amount of $1.231 million, compared to an originally claimed total amount of $2.194 million. The Company is increasing its claim for rate case expense due to the need to incur additional expenses in respect to (i) the eight in-person public input hearings held in connection with this proceeding (including costs associated with necessary communications and employee travel-related expenses), and (ii) responding to the voluminous discovery requests (over 2,600 including subparts) and formal complaints (over 100 responses) received by the Company to date, and (iii) addressing all issues raised by the other parties' direct testimony. These changes result in an updated claim for rate case expense of $2,346,140, or a $76,259 increase to the normalized rate case expense amount.

B. Depreciation Expense

Q. Please describe the adjustment that the Company has made to depreciation expense for Water Operations?

A. In response to OCA interrogatory 24-003, the Company identified that Project Number I24-610022 PA Lead Service Line Inventory on page 9 of Exhibit 3-C was incorrectly classified under utility plant account 348 – Other Tangible Equipment. The Company has corrected the classification of this project to utility plant account 340.3 – Computer Software. The revision to the account for the $11,163,718 in the FPFTY results in an increase to depreciation expense of $1,660,367. Please refer to the rebuttal testimony and exhibits of John Spanos for more detail on the impact to the depreciation study. The revision to the depreciation expense also resulted in a change to accumulated depreciation,

increasing the balances by $1,258,893 for the FPFTY. Please refer to PAWC Exhibit 3-A Revised, pages 25R and 66R.

C. Concomitant Adjustments to Expenses

Q. Please summarize I&E witnesses Kubas and Cline, and OCA witness Smith's adjustments to amortization and depreciation expense.

A. As discussed above, I&E and OCA witnesses all propose to exclude from the rate case the acquisitions for wastewater assets of BASA, Brentwood, STMA, and Farmington, and the water systems of Farmington and AWC. Removing these acquisition investments from rate base results in concomitant adjustments to amortization expense as well as depreciation expense.

Q. Do you agree with I&E and OCA's concomitant adjustments to amortization and depreciation expense as it relates to acquisitions?

A. No, I do not. As stated earlier in my testimony and by other PAWC witnesses, the Company does not agree with the I&E and OCA adjustments to exclude these acquisitions from the rate case. As such, the concomitant adjustments should be rejected and the Company's proposed amounts should be adopted.

IV. TARIFF CHANGES AND RATE DESIGN

A. Tariff Changes

Q. Is the Company proposing any revisions to its proposed pro forma water and wastewater tariffs as part of its rebuttal testimony?

A. Yes, the following minor changes to PA P.U.C. Tariff Wastewater No. 16 are reflected in PAWC Exhibit SDG-4R:

1. Page 11.6, remove the language that references a service charge per EDU and replace with service charge "per meter".
2. Page 15, eliminates "Previous Amortization" and "Upcoming Amortization" from Section A of the RDM.
3. Page 31.1, adds language to Section F.9. to clarify that the winter averaging calculation is not applicable to bulk wastewater customers.

The following minor changes to PA P.U.C. Tariff Water No. 5 are reflected in PAWC Exhibit SDG-4R:

1. Page 40, eliminates "Previous Amortization" and "Upcoming Amortization" from Section A of the RDM.
2. Page 62, add in new Section 12.8, as described below.
3. Page 63, move Section 13.1 from prior page.

Q. Please describe OCA witness Barbara R. Alexander's opinion of PAWC's proposed addition to Tariff Rule 12.1(H) in PAWC's proposed water tariff.

A. PAWC's proposed addition to Tariff Rule 12.1(H) authorizes termination of service by the Company, "In accordance with the terms of any agreement with a non-Company wastewater provider for non-payment of wastewater service when due." Ms. Alexander recommends that PAWC's tariff proposal should be rejected due to it being misleading and confusing, and that the Company include a new Section (Ms. Alexander suggests Section 12.3) of the tariff that governs solely the process of PAWC's termination of water service performed pursuant to the Water Services Act and agreements in place between PAWC and the non-utility service provider due to the customer's non-payment of sewer charges owed to the customer's non-utility service provider.

Q. Does the Company agree with Ms. Alexander's proposal to modify Tariff Rule 12.1(H)?

A. As discussed by Company witness Tawana Dean, the Company's internal process for terminating service under the Water Services Act already addresses and mitigates the concerns raised by Ms. Alexander. As a result, the Company largely accepts Ms. Alexander's recommendation that Proposed Tariff Rule 12.1(H) should be withdrawn and replaced by a new Section (the Company will add a Section 12.8) to govern the process by which PAWC's termination of water service is performed pursuant to the Water Services Act and agreements in place between PAWC and a non-utility wastewater provider for non-payment of wastewater service when due. As a point of clarification, PAWC's Proposed Tariff Rule 12.1(H) proposes to allow for termination pursuant to the terms of an agreement with any non-Company wastewater provider (and not simply "municipalities, municipal authorities, cities, boroughs, or townships" as Ms. Alexander suggests). (OCA St. No. 6, at 26).

Ms. Alexander also recommends that, as part of Section 12.8, the tariff section should explain the PAWC-customer's right that once notice is issued by the non-Company wastewater service provider, PAWC cannot go forward with termination if a customer dispute is filed in accordance with the Water Services Act or if the customer produces a medical certification. The Company generally agrees with this recommendation. The Company also agrees that the new Section 12.8 should state the Company will post notice at the customer's premises at the time of shut-off. Ms. Alexander's recommendations reflect the actual practices by PAWC that are already in place and the Company accepts

memorializing these practices in its tariff. The requested revisions, including the removal of proposed Rule 12.1(H), are found in Exhibit SDG-4R.

B. Rate Design

Q. Please describe OCA witness Mierzwa's recommendation for imputed revenues for acquired systems with delayed effective dates.

A. Mr. Mierzwa recommends that if the Commission approves a delayed effective date for the rate zones of York, Foster, BASA and Brentwood, it should also adopt PAWC's rate design proposal and require the Company to impute revenues by calculating the proof of revenues based on the new rates that will become effective after the delay.

Q. Do you agree with Mr. Mierzwa's proposal?

A. Yes. The Company plans to impute any revenues prior to the delayed effective date in accordance with the proof of revenues.

Q. What is Mr. Kubas' position regarding Scranton CSS Wastewater rates?

A. Mr. Kubas proposes higher rates for Zone 3 than the Company proposed in its initial filing, as shown in I&E Exhibit No. 3, Sch. 19. In making his proposal, Mr. Kubas references the Order entered on October 19, 2016 at Docket No. A-2016-2537209 ("Scranton Order") in which the Commission approved PAWC's acquisition of the Scranton Sewer Authority ("SSA").

Q. How do you respond to this proposal?

A. The Company proposed Scranton CSS Wastewater rates consistent with the Scranton Order. Footnote 16 of the Scranton Order states, "The APA also limits the magnitude of increases that *PAWC may propose* for SSA's customers through a multi-year period, but does not restrict any other party's rate case position or bind the Commission in any way."

(Scranton Order, at 70. Emphasis in original). Any increase in rates for Scranton customers directed by the Commission should be just and reasonable and consistent with the concept of gradualism to avoid rate shock.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

Federal ADIT @ 06/30/2025	(75,648)	Deferred tax liability

PAWC-OSBA-II-2

Responsible Witness: Kevin C. Higgins

Question:

Reference OSBA Statement No. 1, pp. 29-30, regarding the acquisition of the Audubon Water Company: Please explain why Mr. Higgins believes that PAWC should not be permitted to place the net book value of Audubon's assets into rate base, if closing occurs after the issuance of a final unappealable order approving the acquisition?

Response:

Mr. Higgins interprets the "net book value of Audubon's assets" to mean the original cost less depreciation of Audubon's plant in service, net of contributions in aid of construction. Hypothetically, if closing were to occur after the issuance of a final unappealable order approving the acquisition, Mr. Higgins does not object to placing the net book value of Audubon's assets into rate base. Mr. Higgins' adjustment in this case is directed to the acquisition cost in *excess* of the net book value of Audubon's assets.

SCHEDULE OF RATES

RATE ZONE 1d – METERED AND UNMETERED (C)

APPLICABILITY

The rates as set forth below will apply in the service territory formerly served by the Butler Area Sewer Authority served under this tariff for service rendered on and after the Effective Date shown at the bottom of this page.

AVAILABILITY

The rates under this schedule are available to all customers classes.

METERED CHARGES (Based on Water Usage or Sewage Flows, determined at PAWC's discretion) (C)

All metered customers shall be subject to a minimum charge per meter.

	Effective [Acquisition Date]	Effective [Later of 1st anniversary of acquisition date or January 1, 2025]	(C)
A. Residential			
Service Charge per Month	N/A	$10.00	**(I)**
Usage Charge per 100 gallons	N/A	$2.0580	**(I)**
B. Non-Residential			
Service Charge per Month	N/A	$50.00	**(I)**
Usage Charge per 100 gallons	N/A	$1.3365	**(I)**
C. Special Rate for VA Hospital			
Service Charge per Month	$0.00	$50.00	**(I)**
Usage Charge per 100 gallons	$0.00	$1.3365	**(I)**

UNMETERED CHARGES

Until [Later of 1st Anniversary of Acquisition Date or January 1, 2025], this charge is a flat rate fee for customers previously billed a flat rate by the Butler Area Sewer Authority. Thereafter, this charge is a flat rate fee for customers not metered for water consumption. (C)

A. Residential			
Flat rate per month, per EDU:	$45.50	$70.00	**(I)**
B. Non-Residential			
Flat rate per month, per EDU:	$45.50	N/A	**(C)**
C. Special Rate for Multi-Family Dwelling Units - Flat Rate per month, per EDU:			
For the first 25 Units or any part thereof	$45.50	N/A	**(C)**
For the next 25 Units or any part thereof	$44.60	N/A	**(C)**
For the next 25 Units or any part thereof	$43.70	N/A	**(C)**
For the next 25 Units or any part thereof	$42.80	N/A	**(C)**
For the next 25 Units or any part thereof	$41.90	N/A	**(C)**
For the next 25 Units or any part thereof	$41.00	N/A	**(C)**
For all Units over 150 or any part thereof	$40.10	N/A	**(C)**

(I) means Increase and **(C)** means Change

[Miscellaneous Fees and Charges moved to prior page] **(C)**

REVENUE DECOUPLING MECHANISM ("RDM") (C)

Applicable to all residential and non-residential customers, exclusive of customers receiving service pursuant to a contract agreement.

Section A – Definitions

For purposes of the RDM only, the terms below are defined to mean:

Effective Period shall mean the period for which the adjustments in Section B are to be billed to customers and shall be the nine-month period April 1 through December 31 after the Filing Month.

Filing Month shall mean the month in which an adjustment is determined by the Company and submitted to the Commission, which shall be on or before January 31 each year.

Fiscal Year shall mean the 12-month period that ended as of the most recent December 31.

Non-Residential Customers shall mean all commercial, industrial, municipal, and Sales for Resale customers not taking service under special contract rates.

Section B - Determination of Adjustment

The Residential Adjustment is calculated as follows:

$$\frac{RESREV - (VC*RESUSE) - (RC*RESCUST)}{RESFC}$$

Where:

RESREV represents the actual dollar amount of revenues billed to residential customers for the identified service classifications, excluding revenues arising from adjustments under this tariff and any other tariff, which were billed for the applicable month.

RESUSE represents the number of 100-gallon units delivered to residential customers by the Company, including the number of 100-gallon units for the applicable month.

RESCUST represents the average number of residential customers for the applicable month.

VC represents the Volumetric Charge ($0.1548 per hundred gallons proposed)

RC represents the Residential Fixed Charge ($87.87 per month proposed)

RESFC represents the number of 100-gallon units expected to be delivered to residential customers by the Company, including the number of 100-gallon units for the applicable Effective Period.

PENNSYLVANIA-AMERICAN WATER COMPANY

RULES AND REGULATIONS

Section F - Billing and Collection (cont'd)

8. **Termination of Free Service Under Certain Contracts and Other Instruments:** Notwithstanding any contrary provision contained in any deed, grant, contract, franchise, permit, consent or other instrument (other than an instrument expressly set forth in and constituting a part of this tariff) made, executed or delivered between the Company or any predecessor in interest and a Customer of the Company or any predecessor in interest:

   (A) Every person who takes wastewater service shall pay for all wastewater service taken as provided in the applicable schedule of rates set forth herein and subject to the Rules and Regulations of the Company.

   (B) No credit, off-set or other allowance shall be allowed by the Company against any wastewater bill on account of the making, execution, or delivery of, or pursuant to any provisions of, any such instrument.

9. **Calculation of Winter Average Consumption**: **This formula is applicable to residential metered wastewater service customers, excluding bulk wastewater customers, served by the Company, unless exempted on the Schedule of Rates.** (C)

   Definitions:

   Winter Period is defined as the revenue periods of January, February, and March wherein the sewer customer's meter is read and/or estimated and billed by the Company.

   Winter Period Average Usage is defined as the sum of the usage per the actual and/or estimated water meter registration during the Winter Period divided by three.

   Seasonal Period is defined as the revenue periods of April, May, June, July, August, September, October, November, and December wherein the sewer customer's meter is read and/or estimated and billed by the Company.

   Formula Description:

   The volume of sewer use during the Seasonal Period months shall be considered to be equal to the lesser of the Winter Period Average Usage or actual water usage. In the Seasonal Period, the lesser of the Winter Period Average Usage or actual water usage will be billed at the volumetric tariff rates included on the Schedule of Rates for each applicable rate zone.

   For customers who have not been provided service for all three Winter Period months and thus have not established a Winter Period Average Usage, the lesser of actual Seasonal Period usage or 3,000 gallons per month will be used for the Seasonal Period billings until the customer receives bills for all three Winter Period months the following year. The lesser of actual usage or 3,000 gallons will be billed at the volumetric tariff rates included on the Schedule of Rates for each applicable rate zone.

   In the Winter Period, sewer customers will be billed for sewer service based on actual and/or estimated water meter registration and using the volumetric tariff rates included on the Schedule of Rates for each applicable rate zone.

PENNSYLVANIA-AMERICAN WATER COMPANY

REVENUE DECOUPLING MECHANISM ("RDM") (C)

Applicable to all residential customers and all Non-Residential customers, exclusive of customers receiving service pursuant to a contract agreement.

Section A – Definitions

For purposes of the RDM only, the terms below are defined to mean:

Effective Period shall mean the period for which the adjustments in Section B are to be billed to customers and shall be the nine-month period April 1 through December 31 after the Filing Month.

Filing Month shall mean the month in which an adjustment is determined by the Company and submitted to the Commission, which shall be on or before January 31 each year.

Fiscal Year shall mean the 12-month period that ended as of the most recent December 31.

Non-Residential Customers shall mean all commercial, industrial, municipal, and Sales for Resale customers not taking service under special contract rates. Excludes fire service customers.

Section B - Determination of Adjustment

The Residential Adjustment is calculated as follows:

$$\frac{RESREV - (VC*RESUSE) - (RC*RESCUST)}{RESFC}$$

Where:

RESREV represents the actual dollar amount of revenues billed to residential customers for the identified service classifications, excluding revenues arising from adjustments under this tariff and any other tariff, which were billed for the applicable month.

RESUSE represents the number of 100-gallon units delivered to residential customers by the Company, including the number of 100-gallon units for the applicable month.

RESCUST represents the average number of residential customers for the applicable month

VC represents the Volumetric Charge ($0.1033 per hundred gallons proposed)

RC represents the Residential Fixed Charge ($83.18 per month proposed)

RESFC represents the number of 100-gallon units expected to be delivered to residential customers by the Company, including the number of 100-gallon units for the applicable Effective Period.

RULES AND REGULATIONS

12. Termination and Discontinuance of Water Service (cont'd) **(C)**

12.8 Termination by Company For Non-Payment of Wastewater Service **(C)**

The Company may also terminate service in accordance with the terms of any agreement between the Company and a non-Company wastewater provider for non-payment of wastewater service when due upon prior notice by the non-Company wastewater provider.

Following the issuance of termination notice by the non-Company wastewater provider, the Company will not move forward with termination of water service upon notification to the Company by the non-Company wastewater provider that the customer (1) disputes the termination for non-payment or (2) if the customer produces a medical certification.

Upon termination, the Company will post the termination notice at the customer's premises.

Tariff Water-PA P.U.C. No. 5
Second Revised Page 63
Canceling First Revised Page 63

13. Abatements and Refunds [Moved from Prior Page] (C)

13.1 Meter Registration

The quantity of water recorded by the meter shall be accepted as correct by both the Customer and the Company except when the meter has been found to be registering inaccurately or has ceased to register. If a meter is found not to have registered for a period or not to have fully measured the entire flow due to meter interference, the Company shall compute the water used by taking the average of the water used for the nearest meter reading period immediately preceding and the meter reading period immediately following the date when the meter was found to be not registering or interfered with. This amount shall be the amount of water used by the Customer during the billing period in which the meter was found not to have registered. Exceptions may be made only if the facts clearly show that the stated method does not give the correct consumption for the period.

14. Service Continuity

14.1 Regularity of Supply

The Company may, at any time, shut off the water in the mains in case of accident, or for the purpose of making connections, alterations, repairs, changes or for other reasons, and may restrict the use of water to reserve a sufficient supply for public fire service or other emergencies whenever the public welfare may require it. The Company will, so far as circumstances permit, notify Customers to be affected by any interruptions in the water service.

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF LORI O'MALLEY

BACKGROUND

Q. What is your name and business address?

A. My name is Lori O'Malley. My business address is 1 Water Street, Camden, New Jersey 08102.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or the "Service Company") as Senior Manager Regulatory Services. The Service Company is a wholly owned subsidiary of American Water Works Company, Inc. ("American Water") that provides services to Pennsylvania-American Water Company ("PAWC", "Pennsylvania-American" or "Company") and its affiliates.

Q. What are your responsibilities as Senior Manager Regulatory Services?

A. My responsibilities include the review, preparation and presentation of regulatory filings and related activities for Pennsylvania-American and West Virginia-American Water Company. In addition, my responsibilities include the preparation of written testimony, exhibits and workpapers in support of rate applications and other regulatory filings, as well as responses to data requests related to filing requirements. In this role, I stay apprised of regulatory developments and policy initiatives that may impact regulated water utilities and support the analysis and coordination of process improvements of rates and regulatory processes and services.

Q. Please summarize your educational background.

A. I received a Bachelor of Science Degree in Business Administration with a specialization in Accounting from Rowan University in 1995. I have also attended the Utility Rate School sponsored by the National Association of Regulatory Utility Commissioners.

Q. Please outline your business experience.

A. I began my employment with the Service Company as an Accountant for the Regional Companies in July 1996. At the time, the Regional Companies included American Water affiliates located in the states of Iowa, Maryland, Michigan, Missouri, Ohio, Tennessee and Virginia. In October 1998, I was promoted to Senior Accountant and then Accounting Supervisor in March 1999. In May 2004, I accepted a position in the Regulatory Services group. From 2004 to today, I have held increasing levels of responsibility as an Intermediate Financial Analyst, Senior Financial Analyst, Principal Regulatory Analyst, and my current position as Senior Manager Regulatory Services.

PURPOSE OF TESTIMONY

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to support and explain the Company's claim for: (1) labor and labor-related expenses; (2) Service Company expenses; (3) production costs; (4) other operation and maintenance ("O&M") expenses; (5) miscellaneous expense adjustments; and (6) acquisition O&M expenses.

Q. What methodology did the Company use in calculating its pro forma expense levels in this case?

A. In this case, the Company is presenting supporting data for a historic test year ended June 30, 2023 ("HTY"), a future test year ending June 30, 2024 ("FTY"), and a fully

projected future test year ("FPFTY") ending June 30, 2025. The Company began with the expenses recorded on its books of account for the HTY and made various adjustments to reflect known and measurable changes that occurred during the HTY. For the FTY and FPFTY, the Company made specific adjustments to certain expenses or categories of expenses based on known and measurable changes (e.g., collective bargaining agreements), projected changes in expenses or, in some cases for expenses that are variable, relied upon historical averages to reflect a normalized level of expense. All adjustments are detailed in PAWC Exhibit Nos. 3-A and 3-B.

Q. Please provide a brief overview of the Company's O&M expense levels.

A. The Company is requesting $314,072,831 in O&M expense for the FPFTY. As Company witness Ashley Everette explains, the Company has managed to keep the rate of increases in O&M expense below that of inflation. This demonstrates that the Company has been successful in controlling its O&M costs per customer over the past decade or so and is continuing to do so. The requested increases in O&M expense over these periods support the Company's efforts to continue providing high quality water and wastewater service in the most cost-effective way to our customers in the long-term.

There are numerous factors that contribute to the increase in operating expenses, including those associated with production costs and employee related expenses discussed by Company witness Jim Runzer, as well as the addition of multiple acquired systems since the last base rate case, as addressed in the testimony of Company witness E. Christopher Abruzzo.

Q. Please explain how the adjustments you describe below apply to the revenue requirement studies set forth in PAWC Exhibit No. 3-A.

A. The adjustments I describe below apply to the expenses reflected in each of the five revenue requirement studies that are set forth in PAWC Exhibit No. 3-A. Because the adjustments apply to the expense claims set forth in each revenue requirement study, I will describe those adjustments generally and not address the specific adjustments reflected in each study.

LABOR AND LABOR RELATED EXPENSES

Q. Please describe PAWC's labor and labor-related expenses.

A. PAWC's labor and labor-related expenses are associated with employees who support PAWC exclusively and, therefore, are on the payroll of PAWC. As Mr. Runzer explains, PAWC's labor force is responsible for the production of high-quality drinking water, operating and maintaining the Company's production and treatment facilities and its distribution and collection systems, monitoring water quality, providing engineering services, and generally supporting the efficient management of all of the Company's operations.

There are three classifications of PAWC employees: collective bargaining unit ("CBU") hourly employees, non-collective bargaining unit ("non-CBU") hourly employees and exempt employees. CBU hourly employees receive base pay, overtime pay, and, in some cases, other compensation (such as shift premiums and meal allowances) and are also eligible for performance pay. Non-CBU hourly employees receive base pay and overtime pay and are eligible for performance pay. Exempt employees receive base pay and are

eligible for performance pay. Therefore, total wages or salaries for each classification of employees includes fixed pay (base pay) and some form(s) of variable pay (e.g. overtime, shift pay and performance pay) for eligible employees.

The labor and labor-related expenses that are discussed in my testimony include:

(1) Salaries and wages (including Annual and Long-Term Performance Pay)

(2) Group Insurance

(3) Other benefits, including:

a. 401k

b. Defined Contribution Plan ("DCP")

c. Pension and Other Post-Employment Benefits ("OPEBs") for certain eligible employees

d. Employee Stock Purchase Plan ("ESPP")

(4) Payroll Taxes

These costs are described further in my testimony below.

Q. Please describe the overall approach the Company has used to calculate labor and labor-related expenses.

A. PAWC's proposed labor and labor-related expenses are reflected in the labor and labor-related sections of Exhibit Nos. 3-A and 3-B. Pro forma labor and labor-related expenses were calculated on a position-by-position basis, based on the Company's HTY actual number of employees, consisting of 1,219 full-time positions and one part-time position. The labor expenses claimed for the FTY and the FPFTY reflect a full complement of employees for each of the Company operations, as set forth in the table below:

PAWC Operations Employee Levels	2023	2024	2025
Water Operations	1,046	1,076	1,076
Wastewater SSS General Operations	76	75.1	75.1
Butler Area Sewer Authority WW Operations	0	33.9	33.9
Brentwood WW Operations	0	1	1
Wastewater CSS Operations	98	99	99
Farmington Water	0	1	1
Farmington WW	0	1	1
Audubon Water	0	7	7
Total Company	1,220	1,294	1,294

The HTY labor hours were annualized and adjusted to a normalized level. These hours were then multiplied by the actual 2023 wage rates by employee position to determine an annualized level of expense. This amount was then adjusted using a historic three-year average (2021-2023) of base pay increases for non-CBU employees. To adjust the level of expense for CBU employees, the most recent collective bargaining agreements ("CBAs") that remain in effect were used to determine costs for each of the FTY and FPFTY. For those bargaining units for which CBAs expired, a historic three-year average (2021-2023) of contract wage increases was used to determine projected costs for the FTY and FPFTY. The Company's FPFTY annualizes the effects of the increases calculated using the methodologies described above. The details of these calculations, by employee position, are set forth in Exhibit No. 3-B.

Some labor and labor-related costs are capitalized and added to the costs of utility plant. Therefore, a capitalization percentage is applied to total labor and labor-related costs to calculate the portion of those costs that are recorded as capital costs. The Company has

calculated capitalization percentages based on the historic three-year average ratio (2021-2023) of direct labor dollars charged to capital to total direct labor costs. The capitalization percentages calculated in that manner are 39.55% for the Company's water operations and 22.14% for its wastewater operations. The complement of those percentages represents the portion of labor and labor-related costs recorded as an expense.

Salaries and Wages

Q. Please describe how the various components of pro forma salaries and wages are calculated.

A. Salary and wage expense has four components: (1) base pay; (2) overtime; (3) shift premium and meal compensation pursuant to the terms of applicable CBAs; and (4) annual and long-term performance compensation for eligible employees. Each component is discussed in further detail below.

Base Pay – Base pay was calculated for the FTY by applying a three-year average (2021-2023) of the historical percentage increases to the annualized HTY wage rates for non-CBU employees. The wage rate projected to be in effect for each month of the FTY is applied to the working hours for each month. Regular working hours total 2,088 for all full-time hourly employees and 2,080 for all full-time non-hourly employees. Wage rates for CBU employees were based on CBAs for each month of the FTY and FPFTY. If wage rates have not been established by CBAs that will be in effect the end of the FPFTY, the wage rates were adjusted using an annual increase percentage equal to the historical three-year average (2021-2023) of contracted increases. Non-CBU employees' wage rates were based on the rates that became effective on March 6, 2023. Those rates were adjusted

through the FPFTY based on a three-year average (2021-2023) of the historical percentage increases and were annualized as of the end of FPFTY.

Overtime – Overtime was calculated by starting with the total HTY overtime hours by position and multiplying those hours by the projected overtime wage rate for each employee position.

Shift Premium – CBU employees' CBAs provide wage premiums for employees working on uncommon shifts or when employees obtain certain licenses or complete certain training. The actual total HTY amounts of shift premiums, licensing and training premiums were determined on a per-employee basis and included in salary and wage expense for the FTY and FPFTY.

Meal Compensation – CBU employees' CBAs provide compensation for meals during extended shifts and, therefore, meal compensation is included in salaries and wage expense. A historical three-year average (2021-2023) of meal compensation was determined on a per-employee basis and included in salary and wage expense for the FTY and FPFTY.

Performance Pay – The last component of labor expense is the annual and long-term performance compensation for eligible employees. Performance pay was calculated on a position-by-position basis for eligible employees based on each position's target percent, or percentage of base salary that is provided if program goals are achieved, under both the Annual Performance Plan ("APP") and Long Term Performance Plan ("LTPP"). The target percentage was multiplied by each eligible employee's pro forma base salary in the FTY and FPFTY, to determine the cost of compensation under the APP and LTPP. In

PAWC Statement No. 2, Mr. Runzer describes the performance pay program in more detail.

Group Insurance

Q. Please describe the components of the Company's group insurance expense.

A. Group insurance includes several insurance coverages that PAWC provides its employees. These can be grouped into two primary categories: (1) basic life, short-term disability, long-term disability and accidental death and disability insurance ("AD&D"); and (2) medical, dental, prescription and vision insurance.

Q. How was the pro forma adjustment for group insurance expense calculated?

A. Costs were calculated for the pro forma adjustment as follows:

- Basic life, short- and long-term disability and AD&D. The starting point is the 2023 premium rates for each position under the applicable insurance plans for CBU and non-CBU positions.

- Medical, dental, and vision insurance. The Company's cost for this category of insurance is net of employee contributions. The total costs and employee contributions vary by plan type (e.g. family, employee, or employee plus spouse). Costs and contributions were calculated using the 2024 plan rates, on a position-by-position basis, taking into account actual employee plan selections.

Once the 2024 cost level was established, a historical three-year average of the change in Company costs for group insurance between 2021 and 2024 was applied to the annualized

amount for 2024 in order to adjust the insurance expense to the level appropriate for the FPFTY.

Q. What steps in general has American Water taken to manage the group insurance benefit costs?

A. Group insurance is obtained for employees of PAWC and its affiliates based on benefit plans administered by American Water. American Water has been proactive in seeking changes that improve how healthcare is delivered in order to control the costs of providing health insurance to its employees. These efforts have included offering high-deductible health plans and a telemedicine option, which lower the overall cost of health insurance programs. For example, instead of an office or urgent care visit, for which providers charge $100 or more, employees have the option to consult with a physician remotely, at a cost to the insurer of $59 per visit. American Water also became a founding member of the Health Transformation Alliance ("HTA") in 2016 to help achieve the goal of providing higher quality care at lower cost by identifying facilities and physicians that have better outcomes, using American Water's purchasing power to keep costs down, and helping every employee become a more engaged consumer. Additionally, by joining the HTA pharmacy coalition, the Company has mitigated cost increases through the pharmacy/prescription drug program, which includes specialty pricing and rebates.

Q. What is HTA and why is it better than the traditional approach to obtaining healthcare coverage for employees?

A. HTA is a cooperative comprising 50 major corporations that have come together to drive change in the healthcare system. In addition to American Water, its members include

American Express Company, JPMorgan Chase, IBM Corporation, Verizon and Marriott International Inc., and many more. Acting on its own, any single HTA member is unlikely to change the trends in healthcare that are driving up costs. By working together, however, HTA members can create more transparency to drive changes in the way healthcare is delivered, and those changes can result in lower prices for prescription medicine and medical services and produce better outcomes, which make health care more affordable. To that end, the HTA has developed value-driven solutions in the areas of data and analytics, pharmacy and medical services and consumer engagement specifically designed to improve patient care and economic value. Lastly, American Water will review current plan options, and when it is possible, add additional services to its plans to drive claims down and lower rates. Because the Company's health and welfare plans are self-funded, when claims are lower, everyone saves. For example, in 2022, American Water added the PrudentRx Copay program in partnership with CVS Caremark. This allows our active employees and retirees to get any specialty medications that are on our Exclusive Specialty Drug List for $0 out-of-pocket cost to the employee and discounts to American Water.

Other Benefits

Q. Please describe the components of other benefits the Company provides and how the costs of those benefits were calculated.

A. Other benefits PAWC provides include savings programs, such as 401k plans, DCP, pension benefits, OPEBs, and the Company's ESPP. The costs of these benefits were

calculated on a position-by-position basis. The calculations of the costs included in the Company's labor-related expense claims are described below.

401k – PAWC incurs 401k expense when it matches employee contributions to 401k retirement accounts. The matching amounts are determined by each employee's benefit group or hire date. For employees whose benefit group falls into an "original" category (including CBU employees hired before 2001 and non-CBU employees hired before 2006), the Company matches 50% of the first 5% of the employee's contribution (for a maximum of 2.5%). For the remaining employees, the Company matches 100% of the first 3%, and 50% of the next 2% of the employee's contributions (for a maximum of 4%). Pro forma 401k costs were calculated for each position based on FTY wages, current employee contribution levels, and the level of match for the benefit group.

DCP – DCP, or Defined Contribution Plan, is a retirement savings program for employees not eligible for the defined benefit pension program. Under the DCP, PAWC contributes an amount equal to 5.25% of an employee's base pay into a retirement account. The pro forma DCP expense was calculated by multiplying the FTY and FPFTY regular time pay of each eligible position by 5.25%.

Pension – Certain Company employees, upon retirement, are eligible for pension benefits under a defined benefit plan. Covered employees include non-CBU employees hired before January 1, 2006, and CBU employees hired before January 1, 2001. Consistent with PAWC's calculation of pension expense in its last base rate case, the Company calculated its pension expense claim in this case in accordance with Financial Account Standards Board Accounting Standards Codification Topic 715 or "ASC 715" (formerly Statement of

Financial Accounting Standards 87). The Company started with the report furnished by its actuary, Willis Towers Watson, that furnished pension costs for 2023 determined in accordance with ASC 715. From that report, the Company identified the service and non-service cost components of its pension costs. The service cost portion was reduced by the capitalization rate of 39.55% described above to determine the portion of total pension costs recorded as an expense.

In addition to the pro forma pension expense determined in the manner described above, the Company's claim reflects a credit for the annual amortization of a deferred pension asset that was created when the Company began using the accrual method of accounting, based on ASC 715, to calculate pension expense for ratemaking purposes in its 2020 base rate case. Prior to the 2020 case, the Company's pension expense claimed for ratemaking purposes had been based on its cash contributions to its pension plan. The amortization of the deferred pension asset is being continued at the level approved in R-2017-2595853. The ten-year amortization began with the effective date of the rates set in that case and, therefore, will expire in 2028.

OPEB – Certain PAWC employees are eligible for OPEBs upon their retirement depending on their employment start date. Only non-CBU employees hired before January 1, 2002, and CBU employees hired before January 1, 2006 are eligible for OPEBs. The investments made to fund OPEBs are divided into three Voluntary Employees Beneficiary Association Plans ("VEBAs"): Post-Retirement Medical Benefits/Bargaining Unit, Post-Retirement Medical Benefits/Non-Bargaining Unit, and Life Insurance

Benefits. In 2016 and 2018, American Water negotiated a cap on benefits in the Non-Bargaining Unit and Bargaining Unit VEBAs, respectively.

OPEB expense is based on the accrual cost recognized under ASC 715, as projected by Willis Towers Watson for 2023. The 39.55% capitalization rate was applied the service cost component that will be charged to capital.

In addition, for active bargaining unit employees covered under American Water's National Benefits Agreement who are not eligible for retiree medical benefits under the OPEB plan, the Company makes an annual contribution of $600 per employee to a separate VEBA plan that is administered by the Utility Workers Union of America. That plan is designed to reimburse eligible participants for certain health care expenses they incur in retirement. A pro forma adjustment to reflect these contributions on behalf of eligible employees of the Company's Water Operations, Wastewater Sanitary Sewer Systems ("SSS"), and Wastewater Combined Sewer System ("CSS") Operations has been made to the Company's OPEB expense claim in this case.

ESPP – ESPP expense is incurred to fund the 15% discount on purchases of American Water stock by employees who are enrolled in the ESPP. This expense was calculated based on the FTY and FPFTY salaries and wages for each employee who participates in the plan. The employees' forecasted base compensation is multiplied by the percentage of base compensation each employee has selected to devote to purchasing American Water stock. That amount was then multiplied by the 15% discount on stock purchases to determine the pro forma expense for the ESPP.

Q. Please describe the Company's payroll tax expense.

A. Payroll tax expense consists of the federal and state taxes the Company pays based on its employee's salaries and wages. The Federal Insurance Contributions Act imposes taxes on employers for Old Age Survivors and Disability Insurance ("OASDI," or more commonly "FICA") and Hospital Insurance (or more commonly "FICA Medicare"). The Company is also required to pay Federal Unemployment Tax ("FUTA") and State Unemployment Tax ("SUTA"). Pro forma payroll taxes were calculated on a position-by-position basis using current 2023 tax rates and pro forma wages for the FTY and FPFTY. The current 6.2% FICA tax rate will apply to wages of up to $160,200 in 2023. The wage ceiling for applying the FICA tax rate is estimated to increase to $168,543 for the FTY and $177,321 for the FPFTY, based on a three-year average (2021-2023) of historical actual increases in the wage ceiling for FICA tax. For the FTY and FPFTY, the Company applied the FICA Medicare tax rate of 1.45% to all wages, applied the SUTA tax rate of 2.18% to the first $10,000 of wages, and applied the FUTA tax rate to the first $7,000 in wages.

SERVICE COMPANY COSTS

Q. What kinds of services does PAWC obtain from the Service Company?

A. The services provided by the Service Company include customer service, water quality testing, environmental compliance, human resources, communications, information technology, finance, accounting, legal, engineering, supply chain, and risk management. As part of the broad range of services summarized above, the Service Company provides a variety of financial and accounting services for Pennsylvania-American that include payroll, human resources data management, utility plant accounting, cash management, general accounting and reporting, accounts payable, and tax accounting. As part of its

customer-service function, the Service Company handles customer calls, billing, and collection activities for PAWC and American Water's other public utility subsidiaries. The customer service function, which is discussed further by Company witness Deborah Degillio, also handles customer inquiries and correspondence and processes service order requests.

In addition, the Service Company provides Field Resource Coordination which is responsible for tracking and dispatching service orders for PAWC's field representatives and distribution crews. The Service Company also operates the Central Laboratory located in Belleville, Illinois, which employs chemists, laboratory technicians, analysts, and support employees to perform water quality testing and research. The Central Laboratory is certified by the United States Environmental Protection Agency, the Commonwealth of Pennsylvania Department of Environmental Protection ("PADEP") and the regulatory agencies of other states in which American Water's subsidiaries provide service. The Central Laboratory owns and uses state-of-the-art water testing equipment to test source water and finished water for all American Water's subsidiaries, including PAWC.

Q. How do Pennsylvania-American's customers benefit from obtaining the services you described from AWWSC?

A. The Service Company provides PAWC access to highly trained professionals who possess expertise in various specialized areas, whose background, experience and training are focused on water and wastewater utility operations and who work exclusively for American Water's subsidiaries. Furthermore, the size of AWWSC and the scope of its operations have enabled it to assemble a uniquely qualified group of professionals who, through

AWWSC, have a platform for sharing their extensive knowledge, expertise, and experience across the American Water system to the benefit of all of American Water's state-regulated utilities and their customers. The Company benefits from getting these services and tapping into the expertise of AWWSC's personnel at cost. The Company also benefits from the size and breadth of American Water, which affords the Company increased purchasing power that it could not obtain on its own, and provides access to discounts on equipment and supplies needed for utility operations, including, for example, pipe, fittings, and water treatment chemicals. In this way, Pennsylvania-American achieves costs savings that it could not obtain if it were a stand-alone water company.

Q. How does the Service Company charge PAWC for its services?

A. The Service Company provides its services to PAWC at cost and issues monthly invoices. Under the Service Company's billing system, costs can be billed as direct charges to a single company or as charges reflecting an allocation among several companies. If the Service Company can identify costs that relate exclusively to PAWC, 100% of those costs are charged directly to Pennsylvania-American. Costs the Service Company incurs in rendering services in common to a group of companies and not exclusive to Pennsylvania-American are charged to each service recipient in the relevant group based on an allocation.

Q. How are Service Company costs allocated to PAWC?

A. Service Company costs are charged to PAWC and its affiliates using Tier One or Tier Two allocation factors. The Tier One allocation factor represents the allocation of costs between regulated and non-regulated companies. The allocation factors are based on cost-causation drivers for a particular service and include operating revenues, net property, plant and

equipment and number of employees. The allocation is calculated using one or an applicable combination of these allocation factors. If a combination of allocation factors is used, each factor is equally weighted in the calculation. The Tier Two allocation factor is used to allocate regulated company costs to the regulated businesses that benefit from a service. Tier Two factors are primarily based on the number of customers served in the immediately preceding calendar year.

Q. What level of Service Company expense is Pennsylvania-American seeking in this case and how was it calculated?

A. The Company is seeking recovery of an expense of Service Company charges of $63.6 million for the FPFTY. The expense is divided into two categories consisting of labor and labor-related expenses and all other expenses. For the labor and labor-related portion, the expenses incurred for the HTY have been adjusted to annualize a base pay increase in March 2023 of 3.2% for non-CBU employees of the Service Company, and annual contract increases of 2.75% for CBU employees of the Service Company. For non-CBU employees, the HTY level of base pay was further adjusted to annualize base pay increases of 3.14% to calculate the base pay for the FTY and FPFTY. The FTY and FPFTY percentage was calculated using a historical three-year average (2021-2023). For CBU employees, the HTY level of base pay was further adjusted to annualize annual contract increases of 2.60% to calculate the base pay for the FTY and FPFTY. Additionally, adjustments were made to eliminate severance expense, to normalize pension and OPEB costs, adjust LTPP based on the latest compensation information, and to reflect the movement of employees between PAWC and the Service Company.

Q. Please explain the adjustment for employee movements between PAWC and AWWSC.

A. Two PAWC positions in Fleet Management and one in Business Development were transferred to the Service Company during the HTY. The difference is reflected as an addition to Service Company expense to annualize the salary and benefits for those employees to reflect a full year of compensation. The three transferred employees are not reflected in PAWC's HTY employee numbers.

Q. What other adjustments were made to Service Company expense?

A. Costs pertaining to lobbying, charitable contributions, penalties, and injuries and damages have been removed and, therefore, are not included in the pro forma expenses reflected in the Company's expense claim in this case. Additional adjustments were made for depreciation, interest associated with capital leases, postage, operating expenses for office space, removal of one-time sales tax refund, and removal of costs related to the Customer Service Centers in Alton, Illinois and Pensacola, Florida. Finally, an adjustment for changes in expense was applied to the FTY and FPFTY non-labor cost items excluding depreciation and capital lease interest. This adjustment was based on a three-year average (2021-2023) change in expense for the non-labor expense accounts.

PRODUCTION COSTS

Purchased Power Expense

Q. Please explain the methodology used to forecast purchased power expense.

A. Purchased power expense is incurred for treating, pumping and delivering water and collecting and treating wastewater. In order to forecast purchased power expense, HTY

expenses were adjusted to remove closed accounts and credit balances, to annualize electricity expense for active accounts, and to reflect known changes in the prices charged by the Company's electricity generation suppliers ("EGSs") and in the rates of the electric distribution companies ("EDCs") that furnish distribution service. Changes experienced during the HTY and projected to occur during the FTY and FPFTY were used to derive the expense levels for those years.

The Company has contracted with multiple EGSs to supply the Company's electric generation. The contract prices that were used to calculate electric expense for the FTY and FPFTY were from contracts that the Company successfully obtained through its competitive energy procurement process described by PAWC witness Jim Runzer in PAWC Statement No. 2. For the distribution and transmission portions of the Company's bills, the applicable EDC's distribution and transmission rates and applicable riders and surcharges/credits in effect as of June 30, 2023, were reflected to determine total purchase power expense. The purchased power adjustments are summarized in Exhibit No. 3-A, and supporting workpapers are provided in Exhibit No. 3-B.

Purchased Water Expense

Q. Please explain the methodology used to forecast purchased water expense.

A. Purchased water expense is composed of two components: contractual usage and diversion rights. The annualized usage levels from all contracted suppliers in the HTY were priced at the applicable supplier's rates effective in the FTY, and those rates were used to annualize purchased water expense for the FTY. For the FPFTY, contractual usage and diversion rights as of the FTY were increased by a three-year average (2021-

2023) change in expense. The purchased water adjustments are summarized in Exhibit No. 3-A and supporting workpapers are provided in Exhibit No. 3-B.

Chemical Expense

Q. Please explain the methodology used to forecast chemical expense.

A. PAWC uses various chemicals for water and wastewater treatment. In order to obtain the best available pricing, the Company participates in American Water's system-wide competitive bidding process and enters into unit-price contracts with the successful bidders for the chemicals needed at its water and wastewater treatment facilities throughout Pennsylvania. Chemical usage levels were adjusted in three respects. First, adjustments were made to eliminate the chemicals that are no longer being used as of June 2023 and to add chemicals the Company will begin using for the first time starting in or after July 2023. Then, usage levels were adjusted based on known and measurable changes that occurred in the HTY or changes that are projected to occur in the FTY and FPFTY.

Contract prices effective on July 1, 2023, were applied to the adjusted levels of chemical usage to project the FTY expense claim. Due to current volatility in the market for chemicals, many vendors have deviated from annual contracts and have moved to quarterly or semi-annual contracts. To determine chemical expense for the FTY and FPFTY, chemical costs were increased by a percentage for each chemical family each year based on input from our suppliers and indexes related to current volatility in the market. Over the last two years, the chemical market has seen unprecedented price increases, driven by many factors such as inflationary increases in commodity and transportation prices, volatile energy prices caused by, among other factors, the conflict in Ukraine, high labor costs, and overall supply pressure within a consolidating chemical market. If the Company enters

into new unit-price chemical contracts before the close of the record in this case, it will update its claims to reflect any material price changes. The adjustments for chemical expenses for all of the Company's water and wastewater systems are summarized in Exhibit No. 3-A, and supporting workpapers are included in Exhibit No. 3-B.

Change in Consumption

Q. Please explain the adjustment necessary to account for changes in customer water consumption.

A. PAWC Exhibit No. 3-A sets forth an adjustment to operating expenses to reflect changes in power and chemical costs due to changes in pro forma water consumption, including the decline in residential and commercial usage discussed in detail by Mr. Rea in PAWC Statement No. 10. The adjustment was calculated by computing the ratio of HTY power and chemical costs to actual HTY consumption. This ratio was then applied to the projected change in consumption between the HTY and FTY, and the FTY and FPFTY. The adjustment was applied to both existing water and wastewater operations. Supporting details are included in Exhibit No. 3-B.

Waste Disposal

Q. Please explain the methodology used to forecast waste disposal expense.

A. The Company's claims for waste disposal expenses are based on the HTY level of expense, increased by a three-year average (2021-2023) change in expense for the FTY and FPFTY. The waste disposal adjustments are summarized in Exhibit No. 3-A. Supporting workpapers are included in Exhibit No. 3-B.

OTHER OPERATION AND MAINTENANCE EXPENSES

Transportation Expense

Q. Please explain the methodology used to forecast transportation expense.

A. Transportation expense includes the fleet management cost per vehicle, costs for fuel, titling and registration fees, maintenance expense, and reimbursement for Company use of personal vehicles. The forecast of the fleet management expense is based on the number of vehicles claimed in FTY and FPFTY. The changes in the number of vehicles from the HTY level are reflected in the forecast of costs for fuel expense, titling and registration fees, and maintenance expense. Additionally, these costs, along with the reimbursement for personal use of Company vehicles, were adjusted by using a three-year average (2021-2023) CPI Transportation Services factor for the FTY and FPFTY (9.21%).[1] A portion of the transportation costs is capitalized and, therefore, excluded from O&M expense. The Company's adjustments to transportation expense are shown in Exhibit No. 3-A. Detailed supporting calculations are provided in Exhibit No. 3-B.

Insurance Other Than Group

Q. Please explain the methodology used to forecast insurance other than group insurance.

A. PAWC incurs costs related to several types of insurance, including Auto Liability, General Liability, Excess Liability and Workers' Compensation. The Company also has other policy coverages such as Directors and Officers Liability, Employment Practices and Cyber Crime policies. The FTY expense represents an increase from the HTY based upon

[1] http://data.bls.gov/timeseries/CUSR0000SAS4?data_tool=XGtable

a number of drivers. The HTY was adjusted using insurance premiums actually incurred, and projected to occur, during the twelve months ending June 30, 2024, adjusted by the five-year average of actual retroactive adjustments. The FTY expenses were then adjusted by applying a five-year average expense increase of 6.53% with exception of claims amounts which were held at 2023 levels to arrive at the FPFTY costs. Next, the new Workers' Compensation premium costs were multiplied by the capitalization rate to eliminate the portion of that cost not charged to operating expenses. The insurance other than group expense for FTY and FPFTY was allocated between water and wastewater operations based on allocation Factor 4 (Depreciated Utility Plant in Service). The development of the capitalization percentage is discussed above in the Labor and Labor Related section. The factors used to allocate common costs between water and wastewater operations are discussed in further detail by Company witnesses Gress (PAWC Statement No. 4). The Company's adjustments to insurance other than group expense are shown in Exhibit No. 3-A. Detailed supporting calculations are provided in Exhibit No. 3-B.

Rent Expense

Q. Please explain the Company's adjustment to rent expense.

A. The Company's specific adjustments to rent expense reflect changes projected to occur in the FTY and FPFTY in current lease agreements for water and combined sewer system operations. The Company's adjustment to rent expense is shown in Exhibit No. 3-A. Detailed supporting calculations are provided in Exhibit No. 3-B.

MISCELLANEOUS EXPENSES

Q. Please explain what is included in the Miscellaneous Expense Adjustment.

A. Exhibit No. 3-A sets forth items that are being adjusted or eliminated from the Company's O&M claim in this proceeding.

First, I will discuss deductions reflected in the Miscellaneous Expense Adjustment. The Company eliminated duplicative expense items such as pension and OPEB that have been included in the development of the Company's claim for the ongoing water expense levels (Exhibit No. 3-A Water Operations). Additionally, donations, lobbying expenses, and fines incurred during the HTY were removed. Costs associated with temporary employees were excluded from the Company's claim because the need for these employees will be significantly reduced by the full-time staffing levels reflected in the salary and wage claim in this case. This part of the adjustment assumes recognition in this proceeding of the requested staffing levels. The Company has reduced per-book severance costs, as well as injuries and damages, to reflect a normalized level that is based on a three-year average (2021-2023). An adjustment to the cost of credit card and e-check transaction fees has been calculated using the projected residential customers as of the FTY and FPFTY.

For Water Operations, the Company removed a one-time cost for legal fees, as well as trade show expenses. In addition, the Company removed the annual level of Industrial Pretreatment Program ("IPP") expenses that are currently being billed to the PAWC Oneida Valley Treatment Plant by the Butler Area Sewer Authority ("BASA"), since these will no longer be expensed once the BASA acquisition is completed. The Company has adjusted per book injuries and damages to reflect a normalized level that is based on a historic three-year average (2021-2023). Additionally, the Company has included an

adjustment in Exhibit No. 3-A to reflect the allocation of a portion of the cost of the Capital Campus in Mechanicsburg from Water Operations to Wastewater SSS General Operations, BASA Wastewater Operations, Brentwood Wastewater Operations, and Wastewater CSS Operations.

Second, the Miscellaneous Expense Adjustment also includes additions to the Company's O&M claim for water operations. The Company added costs associated with the revolving line of credit because the costs were reclassified from interest expense to operating costs.

An adjustment to General Facility Maintenance expense is shown in Exhibit No. 3-A to reflect the projected ongoing level of maintenance expense. For Wastewater SSS General Operations and Wastewater CSS Operations, the Company participates in the Nutrient Credit Trading program facilitated by PADEP. The program provides a cost-efficient way for National Pollutant Discharge Elimination System (NPDES) permittees in the Chesapeake Bay Watershed to meet their effluent cap load limits for nutrients. The need to purchase nutrient credits fluctuates from year to year, therefore the Company has adjusted the per book costs to reflect a normalized level that is based on a historic five-year average (2019-2023).

Finally, and as discussed by Ashley Everette in PAWC Statement No. 1, the Company has included costs related to the Arrearage Management Plan ("AMP") currently pending before the Pennsylvania Public Utility Commission and the H2O Bill Discount Program. The total cost of discounts and arrearage forgiveness is based on the average number of H2O Discount customers in the HTY with arrears multiplied by the annual credits, assuming 100% participation rate. The adjustment also includes monthly and start-

up costs provided by Dollar Energy who will facilitate the AMP and H2O Bill Discount Program.

ACQUISITION O&M EXPENSES

Q. Please explain what is included in the Acquisition O&M Adjustment.

A. The Company made adjustments to annualize the O&M expenses not fully recognized in the HTY for the Company's acquisitions, as follows:

Water Operations: the water assets of Farmington Township (anticipated acquisition in 2024) and Audubon (anticipated acquisition in 2024)

Wastewater SSS General Operations: the wastewater assets of Farmington Township (anticipated acquisition in 2024) and Sadsbury Township (anticipated acquisition in 2024)

BASA Wastewater Operations: the wastewater assets of Butler Area Sewer Authority (anticipated acquisition in 2023)

Brentwood Wastewater Operations: the wastewater assets of Brentwood Borough (anticipated acquisition in 2024)

Details supporting these adjustments are provided in Exhibit No. 3-B.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	**DOCKET NOS. R-2023-3043189 (WATER)** **R-2023-3043190 (WASTEWATER)**
PENNSYLVANIA-AMERICAN WATER COMPANY	:	

VERIFICATION

I, **Lori O'Malley**, hereby state that the facts set forth in the pre-marked Statement No. 5 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

OF

LORI O'MALLEY

WITH REGARD TO

PENNSYLVANIA-AMERICAN WATER COMPANY'S

LABOR AND LABOR-RELATED EXPENSES, SERVICE COMPANY EXPENSE, ACQUISITION O&M ADJUSTMENTS, AND OTHER OPERATION AND MAINTENANCE EXPENSES.

DOCKET NOS.
R-2023-3043189 (WATER)
R-2023-3043190 (WASTEWATER)

DATE: FEBRUARY 21, 2024

PENNSYLVANIA-AMERICAN WATER COMPANY

REBUTTAL TESTIMONY OF LORI O'MALLEY

Q. Please state your name and business address.

A. My name is Lori O'Malley, and my business address is 1 Water Street, Camden, New Jersey 08102.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or the "Service Company") as Senior Manager Regulatory Services. The Service Company is a wholly owned subsidiary of American Water Works Company, Inc. ("American Water") that provides services to Pennsylvania-American Water Company ("PAWC" or the "Company") and its affiliates.

Q. Have you submitted any other testimony in this proceeding?

A. Yes, I submitted PAWC Statement No. 5.

Q. What is the purpose of your rebuttal testimony in this proceeding?

A. I will respond to the direct testimonies of the Office of Consumer Advocate's ("OCA") witness Ralph C. Smith, Bureau of Investigation and Enforcement's ("I&E") witness Vanessa Okum, Office of Small Business Advocate ("OSBA") witness Kevin Higgins, and Pennsylvania-American Water Large Users Group ("PAWLUG") witness Billie LaConte concerning proposed adjustments to the Company's labor and labor related expenses, Service Company expenses, miscellaneous expenses, and acquisition operation and

maintenance ("O&M") adjustments. I also will explain revisions and updates that the Company has made to certain claims.

Q. Have you prepared any exhibits to accompany your rebuttal testimony?

A. Yes. PAWC Exhibits LNO-1R to LNO-6R were prepared by me or under my supervision and are described in my testimony below.

LABOR AND LABOR RELATED EXPENSES

Q. Have you revised the Company's claim for salaries, wages, and related benefits expense?

A. Yes. The Company implemented a merit increase effective January 8, 2024, to non-collective bargaining unit ("non-CBU") hourly employees and exempt employees. The adjustment impacts salaries and wages, performance pay, payroll taxes, 401k, Defined Contribution Plan ("DCP") and Employee Stock Purchase Plan ("ESPP") for Water Operations, Wastewater SSS General Operations and Wastewater CSS Operations. The adjustments, which also reflect the adjustment proposed by the OCA related to a vacancy rate, can be found in the PAWC Exhibit 3-A Revised pages 9R, 50R, 53R, 70R, 114R, 115R, 117R, 133R, 234R, 235R, 237R and 251R. A further breakdown by employee can be found in PAWC Exhibit LNO-1R.

Q. Please summarize Mr. Smith's proposed adjustments to salaries, wages and related benefits.

A. Mr. Smith proposed an adjustment to salaries, wages and related benefits for the Water Operations based on a 1.76% vacancy rate. Mr. Smith reduces the salaries and wages by

$1,045,353 and related payroll taxes by $79,970, and annual performance pay by $85,523 and related payroll tax by $6,543. Additionally, Mr. Smith proposes accompanying adjustments based on the vacancy rate for group insurance by $200,623 and 401K, DCP and ESPP by $72,817, resulting in a total proposed reduction to the Company's claim for salaries, wages, payroll taxes and related benefits by $1,490,829.

Q. Does the Company accept the adjustment proposed by Mr. Smith to the Company's salary and wage expense and related benefits and payroll taxes?

A. Yes. As noted above, this adjustment is reflected in PAWC Exhibit 3-A Revised. Since the Company updated salary and wage expense and related benefits and payroll taxes with the actual 2024 merit increase, the Company's claim was reduced by $1,499,283.

Q. Please describe Ms. Okum's adjustment to annual performance pay.

A. Ms. Okum calculated Water Operations annual performance pay for the fully projected future test year ("FPFTY") by using a percentage of base payroll. Ms. Okum divided the annual performance payout by the base payroll for 2021-2023, and then applied the three-year average percentage to the FPFTY base payroll. Ms. Okum states that the three-year historic average payout factor provides a more reliable and moderate base for the FPFTY allowance because it is based on historic data. Ms. Okum reduces performance pay by $672,285 and related payroll taxes by $52,237.

Q. Do you agree with Ms. Okum's proposed adjustments to performance pay?

A. No. The Company's projection of performance pay should be calculated on an employee level based on the employee's target percentage. If a historical average payout is used, it

should be based on the Company's employees' average actual performance compensation level rather than a percentage of total base payroll expense. For example, from 2020 through 2022, the Company's employees' average actual performance compensation level was one hundred and eight percent (108.5%) of the targeted amount. Consequently, using historical performance compensation levels to set future rates would result in an 8.5% increase to the Company's targeted levels for the FPFTY. The Company continues to believe that its performance pay claim, which is based on employee-specific targeted levels, is reasonable and appropriate.

Q What other adjustments do Mr. Higgins, Mr. Smith and Ms. LaConte recommend for the Company's performance pay costs?

A. Mr. Higgins recommends that the Commission exclude fifty percent (50%) of Annual Performance Plan ("APP") costs and one hundred percent (100%) of Long Term Performance Plan ("LTPP") costs for PAWC and Service Company employees. Including payroll taxes, Mr. Higgins' proposed adjustments would eliminate approximately $10.087 million from the Company's operating expense in this case. OCA witness Smith's proposed adjustments to the Company's LTPP compensation costs for certain Service Company employees would eliminate $1.753 million of PAWC's $4.1 million LTPP claim. PAWLUG witness LaConte recommends that the Commission exclude fifty percent (50%) of APP costs which would eliminate $2 million from the Company's claim. Company witness Runzer (PAWC Statement No. 2-R) explains why the Commission should reject these recommended adjustments to eliminate the Company's APP and LTPP expense.

Q. Please describe Mr. Higgins' proposed adjustments to Employee Stock Purchase Plan ("ESPP") expense?

A. Mr. Higgins recommends that the Commission exclude one hundred percent (100%) of ESPP costs, stating that the shareholders should fund the stock purchase discount provided by the ESPP because it increases payroll costs and "provides no tangible benefit for customers."

Q. Do you agree with Mr. Higgins' adjustments to ESPP expense?

A. No. The Company's ESPP is open to all active, full- or part-time employees of American Water and its subsidiaries, including PAWC, through payroll deductions, and it provides an opportunity to acquire shares of American Water common stock at a 15% discount. Employees who become stockholders of American Water have additional incentive to establish efficiencies. Those efficiencies benefit both the customers and the stockholders.

Q. Have you revised the Company's claim to Pension and OPEB expense?

A. Yes. The Company calculated its pension and OPEB expense claim in accordance with Financial Account Standards Board Accounting Standards Codification Topic 715 or "ASC 715". The expenses have been updated with the reports furnished by its actuary, Willis Towers Watson for 2024. The adjustments can be found in the PAWC Exhibit 3-A Revised pages 51R and 52R. Further support can be found in PAWC Exhibit LNO-2R.

Q. Please describe Ms. Okum's proposed adjustments to Pension and OPEB expense.

A. Ms. Okum recommends a three-year average of historic actuals for both pension and OPEB expense, reducing pension by $3,822,954 and OPEB by $2,343,426.

Q. Do you agree with Ms. Okum's adjustments to Pension and OPEB expense?

A. No. I do not agree with Ms. Okum's adjustments for the same reasons explained by Company witness Swiz (PAWC Statement No. 8-R).

SERVICE COMPANY COSTS

Q. Please describe Mr. Higgins and Mr. Smith's proposed adjustments to Service Company expense regarding performance pay.

A. As discussed above, Mr. Higgins proposes to eliminate 50% of cost recovery for annal performance pay and 100% for long-term performance pay (LTPP). Mr. Smith proposes to eliminate cost recovery for LTPP paid to certain AWWSC employees. As noted above, Company witness Runzer explains why the Commission should reject Mr. Higgins and Mr. Smith's recommended adjustments to eliminate the Company's performance pay expense.

Q. Have you revised the Company's claim for Service Company – Labor and Labor Related Expenses?

A. Yes. The Service Company implemented a merit increase effective January 8, 2024; therefore, the proposed adjustment was updated using the 2024 average increase. The Company also removed Supplemental Executive Retirement Plan ("SERP") costs which were erroneously included in the Company's claim. Finally, the Company made corrections to formula errors within the workpaper found during discovery (OSBA 04-008). The adjustments can be found in the PAWC Exhibit 3-A Revised pages 62R, 125R and 245R. Please refer to PAWC Exhibit LNO-3R for supporting adjustments.

OTHER O&M EXPENSES

Q. Have you adjusted the Company's claim for Miscellaneous Expense related to credit card and e-check transaction fees?

A. Yes. In preparing a response to a discovery request (I&E-RE-59), the Company identified an error in its claim for credit card and e-check transaction fees. The amounts included in the FTY and FPFTY were overstated for Water Operations. The adjustment reduces the Company's original claim for miscellaneous expense by $182,738. The adjustments can be found in PAWC Exhibit 3-A Revised page 64R. Please refer to PAWC Exhibit LNO-4R for supporting calculations.

Q. Have you adjusted the Company's claim for Miscellaneous Expense related to external board members?

A. Yes. As stated in response to a discovery request (OCA 22-003), PAWC eliminated its external board as of December 31, 2023. The adjustment to remove this $123,250 expense can be found in PAWC Exhibit 3-A Revised page 64R. Please refer to PAWC Exhibit LNO-5R for supporting calculations.

Q. Please describe Mr. Smith's Insurance Other Than Group ("IOTG") adjustment to the Company's O&M expense claim.

A. Mr. Smith reduced the Company's claim for IOTG by $306,312 by using the actual percentage change from the historical test year ended June 30, 2023 rather than the five-year average percentage change. Mr. Smith stated that annual percentage change for the 12-month ending periods of June 2019, June 2021 and June 2022 were abnormally high or low compared to the historical test year.

Q. Do you agree with Mr. Smith's recommendation?

A. No. It is common for averages to be used to normalize costs that fluctuate from year to year to forecast them for ratemaking purposes. The Company used a five-year historical average percentage change to smooth out the high and low years. Because the costs fluctuate from year-to-year, the use of the historical test year percentage change is not appropriate. The Company also used a five-year historical average percentage in the prior case (Docket Nos. R-2022-3031672 and R-2022-3031673), and Mr. Smith accepted the adjustment.

Q. Please describe Mr. Colton's adjustments to the Arrearage Management Plan ("AMP") uncollectible expense.

A. First, Mr. Colton calculated the cost of the discounts by adjusting the participation rate of the AMP program from 100% to 11% based on the number of full and timely payments from Bill Discount Program participants from November 2021 through October 2023. Mr. Colton further reduced the Company's expense for this item by a 17.9% write-off rate based on his claim that this expense was already included in uncollectible expense. In total, Mr. Colton reduced the Company's expense claim by $2.1 million.

Q. Do you agree with Mr. Colton's recommendations?

A. No. The Company's claim is consistent with the cost recovery permitted by the Further Amended Joint Petition for Full Settlement of the Arrearage Management Plan.[1] Under the terms of the settlement, the AMP is considered a pilot program for cost recovery purposes, and the Company will record a regulatory asset or liability for amounts over or

1 Commission Order entered December 7, 2023 at Docket No. P-2021-3028195.

under the amount included in rates for recovery or refund in the next base rate case. Thus, if the expense is lower than the Company has projected as assumed by Mr. Colton, the difference will be recorded to a regulatory liability and returned to customers in a future rate case. Mr. Colton's claim that the expense is already included in uncollectible expense is unsubstantiated as it cannot be determined at this time what impact, if any, the AMP will have on uncollectible expense. The AMP Settlement allows the cost of the AMP to be included in rates. The Company disagrees with speculative adjustments about potential offsets related to this program.

ACQUISITION O&M ADJUSTMENTS

Q. Has the Company revised its claim for acquisition O&M adjustments?

A. While preparing the response to discovery (OCA 15-009), the Company found that the Service Company expense amount for the Audubon Water acquisition for June 30, 2024 was incorrect. The adjustment reduces the Company's original claim for acquisition O&M expense by $10,494 for the FTY. The adjustment can be found in PAWC Exhibit 3-A Revised page 63R. Please refer to PAWC Exhibit LNO-6R for supporting calculations.

Q. Please describe Mr. Smith's and Ms. Okum's adjustments to O&M expenses associated with to-be acquired systems.

A. Both Mr. Smith and Ms. Okum eliminated expenses related to the following acquisitions: Butler Area Sewer Authority ("BASA"), Brentwood Wastewater, Audubon Water, Farmington Water, Farmington Wastewater and Sadsbury Wastewater. Company witness Abruzzo (PAWC Statement No. 6-R) explains why the Commission should reject these recommended adjustments to eliminate the Company's acquisition O&M expense.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes, it does.
