(Attachment not included)	No	3	32 - 34

OCA 12-014	As related to the BASA acquisition: Amounts of rate base for acquired plant and new utility plant relating to or caused by Brentwood system reflected its HTY, FTY, and FPFTY; Amounts of operating expenses and other taxes expenses in its HTY, FTY, and FPFTY; Amounts of revenues related to the acquisition reflected in its HTY, FTY, and FPFTY; Amounts of any other costs related to the acquisition reflected in its HTY, FTY and FPFTY; Date that PAWC assumed the acquisition would be closed; Listings of all projected plant additions that PAWC assumed that would occur after PAWC's assumed closing date; Number of customers reflected for the acquisition; Quantities of utility sales reflected for the acquisition; Copy of Commission Order approving or denying the aquisition; Complete copy of all accounting entries related to the closing; Supporting workpapers and calculations for the related rate base amounts; Itemization of all legal expenses, consulting expenses, and affiliated service company charges; Copy of each legal and consulting expense invoice to PAWC over $5,000; Number of workforce positions PAWC expects to acquire; Amounts of salary and wages for each position PAWC expects to acquire; Amounts of employee benefits for each workforce position PAWC expects to acquire; Explanation and supporting calculations concerning how the acquisition affected and projected to affect, PAWC's allocation of costs between PAWC's water and wastewater operation; Explanation and supporting calculations concerning how the acquisition affected, and is projected to affect, the allocation and charging of costs to PAWC from AWWSC; Additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY, and FPFTY utility revenue requirements. (Attachments not included)	No	3	35 - 37
OCA 15-013	PAWC offers an Executive Retirement Plan ERP instead of a SERP; The amount listed under Account No. 50630000 in the HTY should have been booked to the parent company instead of the Service Company.	No	1	38
OCA 18-013	Reconciliation of the three positions that PAWC is actively recruiting; Reconciliation of the three positions that PAWC anticipates filing by June 30, 2024; The 43 positions related to acquisitions are reflected in Exhibit 3-B of PAWC's filing.	No	2	39 - 40
OCA 21-003	Brentwood wastewater acquisition: As it relates to the amounts for acquired plant in service and new utility plant in service (post-acquisition), breakout of FPFTY plant in service amount of $22.695 million between the purchase price in the related Section 1329 proceeding and the post-acquisition costs included in PAWC's filing in the current rate case proceeding; As it relates to the amounts reflected in HTY, FTY, and FPFTY operating and tax expenses, explanation of why does Company Exhibit 3-B, page 308 not reflect the FPFTY amounts for Bad Debt expense of $63,404, Miscellaneous expense of $8,863, Transportation expense of $3,551, and Amortization of Rate Case expense of $5,370; Referring to OCA 12-06(e), the amount included in FPFTY operating revenue at current rates reflects the Present Rate revenue at the FTY and FPFTY; Pursuant to the amounts included in plant in service, the related depreciation and amortization expense included in the FTY and FPFTY; Pursuant to the amounts included in plant in service, the related ADIT included in rate base for the FTY and FPFTY; The Brentwood wastewater system was not acquired during the HTY.	No	2	41 - 42
OCA 21-004	Sadsbury Township Municpal Authority ("STMA") acquisition: All requested amounts in OCA 12-08 and OCA 12-09 are embedded in the overall Wastewater SS General Operations amounts; Reconciliation of plant in service discrepancy; Amounts in rate base in Wastewater SSS General Operations that relate specifically to the STMA acquisition for the HTY, FTY, and FPFTY; The amounts shown on Exhibit 3-B, page 306 reflect the entirety of the amounts in operating and tax expenses; The amount included in FPFTY operating revenue totals $471,228; Related depreciation expense and ADIT for Water Operations in total; Amortization expense related to STMA transaction costs claimed in the FTY and FPFTY; Amount of property tax expense projected in the FPFTY.	No	3	43 - 45
OCA 21-005	Farmington Township (water system) acquisition: All requested amounts in OCA 12-10 and OCA 12-11 are embedded in the overall Water Operations amounts; Reconciliation of plant in service discrepancy; Amounts in rate base in PAWC's Water Operations that relate specifically to the Farmington Township water system acquisition for the HTY, FTY, and FPFTY; The amounts shown on Exhibit 3-B, page 303 reflect the entirety of the amounts in operating and tax expenses; The amount included in FPFTY operating revenue totals $266,371; Related depreciation expense, property tax expense, and ADIT for Water Operations in total; Related Amortization expense included in the FTY and FPFTY pursuant to the amounts included in plant in service.	No	3	46 - 48
OCA 21-006	Farmington Township (wastewater system) acquisition: All requested amounts in OCA 12-10 and OCA 12-11 are embedded in the overall Wastewater SSS General Operations amounts; Reconciliation of plant in service discrepancy; Amounts in rate base in PAWC's Wastewater SSS General Operations that relate specifically to the Farmington Township wastewater system acquisition for the HTY, FTY, and FPFTY; The amounts shown on Exhibit 3-B, page 305 reflect the entirety of the amounts in operating and tax expenses; The amount included in FPFTY operating revenue totals $322,926; Related depreciation expense, property tax expense, and ADIT for Wastewater SSS General Operations; Related amortization expense included in the FTY and FPFTY pursuant to the amounts included in plant in service.	No	3	49 - 51
OCA 21-007	Audubon Water Company acquisition: All requested amounts in OCA 12-12 and OCA 12-13 are embedded in the overall Water Operations amounts; Reconciliation of plant in service discrepancy; Amounts in rate base in PAWC's Water Operations that relate specifically to the Audubon Water Company acquisition for the FTY and FPFTY; The amounts shown on Exhibit 3-B, page 304 reflect the entirety of the amounts in operating and tax expenses; The amount included in FPFTY operating revenue totals $2,965,024; Related depreciation expense and ADIT for Water Operations in total; Amortization expense related to Audubon transaction costs and UPAA claimed in the FPFTY; Amount of property tax expense projected in the FPFTY.	No	3	52 - 54
OCA 21-009	Amount of revenue requirement in the FPFTY that PAWC is requesting related to the Audubon Water Company acquisition.	No	1	55
OCA 21-010	Amount of revenue requirement in the FPFTY that PAWC is requesting related to the STMA acquisition.	No	1	56
OCA 21-011	Amount of revenue requirement in the FPFTY that PAWC is requesting related to the Farmington Township wastewater system acquisition.	No	1	57
OCA 21-012	Amount of revenue requirement in the FPFTY that PAWC is requesting related to the Farmington Township water system acquisition.	No	1	58
OCA 22-001	PAWC became aware of the Management and Operations Audit report in Docket No. D-2022-3035217 during the preparation of the current rate case; PAWC claims that many of the MOA recommendations that PAWC reflected have no direct correlation to the current rate case or the proposed revenue requirement.	No	1	59
OCA 22-003	Annual expense reflected in account 675.8 in the HTY, FTY, and FPFTY; PAWC has eliminated its external board as of December 31, 2023; Cost of American Water Works board member allocated to PAWC.	No	2	60 - 61
OCA 22-008	Amount of identifiable and quantifiable cost savings contained in the MOA that PAWC reflected in the FTY and FPFTY.	No	1	62
OCA 26-001	Reconciliation of each of the 49 positions from OCA 09-070 Attachment to the Volume 4, 4c Compensation Adjustment Excel file; For each of the 49 terminated/vacant positions, the number of positions filled to date and for each such position, the annual payroll amount in the FPFTY and the date which each position was filled; Identification of any additional positions that became vacant after November 27, 2023 and for each such position, the related annual payroll amounts in the FPFTY.	No	5	63 - 67
OCA 26-005	Amounts budgeted/forecasted by PAWC's books related to Oncourse Home Solutions for the FTY and FPFTY.	No	1	68
OCA 26-015	Amounts of (1) revenue and (2) expenses PAWC recorded related to warranty services for the HTY, calendar year 2022, and calendar year 2023.	No	1	69
OCA 26-022	For each third party call center contractor: Amounts recorded in PAWC's books by month in 2022 and 2023; Amounts recorded in PAWC's books by month in the HTY; Amounts budgeted/forecasted by PAWC for the FTY and FPFTY.	No	2	70 - 71
OCA 26-027	Neither Gannett Fleming nor PAWC proposed depreciation rates in the BASA acquisition proceeding, Docket No. A-2022-3037047. The Gannett Fleming Exhibit 7 from that proceeding reflects the survivor curves for each account.	No	1	72
OCA 26-028	BASA depreciation rates that are being proposed in the current PAWC rate case based on the Gannett Fleming depreciation rate study for each period HTY, FTY, and FPFTY.	No	2	73 - 74
OCA 26-029	Neither Gannett Fleming nor PAWC proposed depreciation rates in the Brentwood acquisition proceeding, Docket No. A-2021-3024058. The Gannett Fleming Exhibit 7 from that proceeding reflects the survivor curves for each account.	No	1	75
OCA 26-030	BASA depreciation rates that are being proposed in the current PAWC rate case based on the Gannett Fleming depreciation rate study for each period FTY, and FPFTY.	No	1	76

Question:

Stock-Based Compensation.

a. Please list, by amount and account, all stock-based compensation expense charged to PAWC during the HTY, including but not limited to executive stock options, performance share awards, accruals made pursuant to Accounting Standard Codification (ASC) 718 and any other stock-based compensation awards that resulted in cost being charged to PAWC during the HTY.
b. Provide a description of each distinct stock-based compensation program that resulted in charges to PAWC during the HTY.
c. Please break out the stock-based compensation included in the HTY by (1) type of plan (e.g., stock options, performance shares, etc.), (2) stock-based compensation direct charged to PAWC, and (3) each type of stock-based compensation that was allocated to PAWC from the affiliated Service Company.
d. Please explain fully and in detail the amount of stock-based compensation that the Company has included in cost of service for the FPFTY ending June 30, 2025.
e. Provide a description of each stock-based compensation program that PAWC has requested be reflected in cost of service for the FPFTY ending June 30, 2025.
f. Please break out the stock-based compensation included in the FPFTY ending June 30, 2025 cost of service by (1) type of plan (e.g., stock options, performance shares, etc.), (2) stock-based compensation direct charged to PAWC, and (3) stock-based compensation that was allocated to PAWC from the affiliated Service Company.

Response:

a. Please refer to the table below for the breakdown of stock-based compensation expense charged to PAWC during the HTY ended June 30, 2023:

Description	GL Account	Expense Amount
Restricted Stock Units	50171800	$71,980
Performance Stock Units	50171800	250,479
Total - GL 50171800		**$322,459**

b. Please refer to Confidential Volume 6b – FR III.22 for a description of the 2022 & 2023 Long Term Performance Plan, which is a stock-based compensation program.

c. Please refer to the table below for the stock-based compensation included in the HTY ended June 30, 2023, as well as pro forma expenses for the 12 months ended June 30, 2024 and June 30, 2025. Please note that the amounts projected in the FTY and FPFTY are not available by type of stock-based compensation (i.e., restricted stock units and performance stock units) so an allocation was performed based on actual data from the HTY to break out these costs.

	GL Account Name	GL Account	12 Months Ended 6/30/2023	12 Months Ended 6/30/2024	12 Months Ended 6/30/2025
PAWC	Restricted Stock Units	50171800	$71,980	$180,590	$186,357
PAWC	Performance Stock Units	50171800	250,479	628,427	648,491
	Total - PAWC		**$322,459**	**$809,017**	**$834,848**
AWWSC to PAWC	Restricted Stock Units	50171800	$759,261	$831,673	$915,119
AWWSC to PAWC	Performance Stock Units	50171800	2,642,110	2,894,092	3,184,471
	Total - AWWSC to PAWC		**$3,401,371**	**$3,725,765**	**$4,099,590**
	Grand Total		**$3,723,830**	**$4,534,782**	**$4,934,438**

d. Please refer to the response provided in part c. Employees in salary grade 50 and above are eligible for Long Term Performance Plan awards. The pro forma expenses for 2024 & 2025 were calculated by taking annualized base salary for each year for eligible employees and multiplying it by the target award percentage by salary level.

e. Please refer to Confidential Volume 6b – FR III.22 for the 2022 and 2023 Long Term Performance Plan documents.

f. Please refer to the response provided in part c.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 9

OCA 09-012

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

Supplemental Executive Retirement Plan (SERP).

a. Please provide the level of SERP expense, by account, included in the Company's cost of service for the HTY. Include with your response all charges to PAWC from the affiliated Service Company for SERP.
b. Please provide the level of SERP expense, by account, included in the Company's proposed cost of service for the FPFTY ending June 30, 2025.
c. Provide the two most recent actuarial reports for SERP.
d. Identify and provide all actuarial studies, reports and estimates used for SERP for the HTY, as well as for calendar years 2022, 2023 and the FPFTY ending June 30, 2025.

Response:

The Company does not offer SERP as a benefits plan; therefore, there is no information to report.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 9

OCA 09-030

Responsible Witness: Cas Swiz, Senior Director of Rates and Regulatory

Question:

Uncollectibles Expense. Please provide the following monthly data related to uncollectible accounts for the HTY, for the previous three years, monthly since the end of the HTY, and projected for the FPFTY ending June 30, 2025:

a. Bad debt expense;
b. Bad debt write-offs;
c. Collections of written-off accounts; and
d. Billed revenues

Response:

Please refer to OCA 09-030_Attachment for the requested data related to uncollectible accounts. For the HTY ended June 30, 2023, and previous three years, please refer to page 1 of the attachment. For the monthly data since the end of the HTY, please refer to page 2 of the attachment. Please note that October 2023 is the last month of actual data available at the time of this response. The Company does not project uncollectible expense at the level of detail requested in items a, b, and c. The Company projected total uncollectible expense to be reflected in rates as a percentage of forecasted revenue, as explained in the direct testimony of Company witness Swiz (PAWC Statement No. 8, pages 3-5), using a two-year historic average for the July 1, 2021 through June 30, 2023 period to normalize the rate of uncollectible accounts to pre-pandemic levels and account for the application of Low-Income Household Water Assistance Program ("LIHWAP") funds to reduce unpaid balances.

Office of Consumer Advocate Set 9

OCA 09-039

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

American Water Works Service Company (AWWSC).

a. During each of the following periods were any costs actually charged, or are any projected to be charged, to PAWC from AWWSC? If so, identify all AWWSC costs charged to PAWC by account for each period: (1) the 12 months ended December 31, 2021, (2) the HTY (3) calendar 2022, (4) calendar 2023, (5) the 12 months ending June 30, 2024 and (6) the FPFTY ending June 30, 2025.
b. Is there any written agreement between PAWC and AWWSC? If so, identify and provide it.
c. Does AWWSC have a balance sheet, income statement, statement of cash flows, general ledger, trial balance, budgets or forecasts for any of the following periods: (1) the 12 months ended December 31, 2021, (2) the HTY (3) calendar 2022, (4) calendar 2023, (5) the 12 months ending June 30, 2024 and (6) the FPFTY ending June 30, 2025.
d. If the answer to part c is "yes", identify which of those items that AWWSC has and provide a complete copy of each.

Response:

a. Please see OCA 09-039_Attachment 1 for the breakdown of AWWSC costs charged to PAWC by account for the periods requested. Please note that we did not forecast charges for the calendar year 2023 and included YTD actual charges through October 2023 in their place.

b. Yes, please see OCA 09-039_Attachment 2.

c. Yes, AWWSC has balance sheets, income statements and general ledgers available for the periods Dec 2021, Dec 2022, June 2023. There are no financial statements available for the forecast periods. Also, AWWSC budgets on a calendar year basis and no budgets are available covering the 12-month periods ending June 2024 and June 2025.

d. Please see OCA 09-039_Attachment 3 for the balance sheets; OCA 09-039_Attachment 4 for the income statements; OCA 09-039_Attachment 5 for the general ledger for the periods noted in part c above.

R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 9

OCA 09-070

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

Payroll.

a. Identify PAWC's work force levels by type as of each of the following dates, in total, and by salaried, non-union hourly and union employees respectively: (1) December 31, 2021, (2) 6/30/2022 (3) 12/31/2022, (4) June 30, 2023, (5) 12/31/2023, (6) June 30, 2024 and (7) June 30, 2025.
b. Identify the annualized payroll associated with PAWC's actual work force level in total, and by salaried, non-union hourly and union employees respectively, as of each of the following dates: (1) December 31, 2021, (2) 6/30/2022 (3) 12/31/2022, (4) June 30, 2023, (5) 12/31/2023, (6) June 30, 2024 and (7) June 30, 2025.
c. Identify all positions that PAWC has filled from June 30, 2023 through November 30, 2023.
d. Identify the annual payroll for the positions that PAWC has filled during the period June 30, 2023 through November 30, 2023.
e. Identify all positions that have become vacant from June 30, 2023 through November 30, 2023.
f. Identify the annual payroll for the positions that have become vacant from June 30, 2023 through November 30, 2023.
g. What work force level has PAWC reflected for the 12 month period ending June 30, 2025?
h. How many of the FTE's that PAWC reflected for the 12 month period ending June 30, 2025 are currently filled positions as of the date of PAWC's response to this request?
i. What is the annual payroll expense that PAWC is requesting for the 12 month period ending June 30, 2025
j. How many of the FTE's that PAWC reflected for the 12 month period ending June 30, 2025 represent positions that are not currently filled positions?
k. What amount of payroll expense for the 12 month period ending June 30, 2025 is PAWC is requesting for the currently unfilled positions (that are identified in the response to part j)?

Response:

a-b. Please refer to OCA 09-070_Attachment for work force levels by type as well as the gross annualized payroll as of the dates requested. Please note that information as of 10/31/2023 has been provided for (5) above as data as of 12/31/2023 is not available.

c-d. Please refer to OCA 09-070_Attachment for the positions that PAWC has filled from June 30, 2023 through the date of this response.

e-f. Please refer to OCA 09-070_Attachment for the positions that have become vacant from June 30, 2023 through the date of this response.

g. Please refer to the response provided in part a which includes the work force level for the 12-month period ending June 30, 2025.

h. Please refer to the response provided in parts c & d above.

i. The annual payroll expense for the 12-month period ended June 30, 2025 that PAWC is requesting for the 1,294 FTE's is $78,940,092. This total is made up of $75,955,287 that is part of the Company's compensation adjustment and the remaining $2,984,805 is related to BASA WW Operations, Brentwood WW Operations, Farmington Water, Farmington Wastewater, and Audubon Water, which are included in the Company's Acquisition O&M expense adjustment.

j-k. As of the date of this response, there are 49 positions that are currently not filled. Of the 49 positions, there are 3 for which the Company is actively recruiting and 3 that the Company will be posting and anticipates filling the vacant positions before June 30, 2024. The remaining 43 positions are related to positions that will be added to staff upon time of closing of acquired systems (BASA WW, Brentwood WW, Farmington Water & WW, and Audubon Water).

Please refer to the table below for the annual payroll expense that PAWC is requesting for the currently unfilled positions for the 12-month period ended June 30, 2025:

	Count	6/30/2025 Payroll Expense
Positions Actively Being Recruited	3	$239,032

Office of Consumer Advocate Set 12

OCA 12-006

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of Borough of Brentwood (wastewater)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of the Borough of Brentwood wastewater utility system by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by Brentwood system (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a-b. Please refer to Volume 03, Exhibit No. 3-A, page 179.
c. Please refer to Volume 03, Exhibit No. 3-A, page 187-190, as well as Volume 04, Exhibit No. 3-B, page 308.
d. Please refer to Volume 03, Exhibit No. 3-A, page 172, lines 6-19.
e. Please refer to Volume 03, Exhibit No. 3-A, page 173-174.
f. Please refer to parts c-d.
g. The Brentwood Wastewater acquisition is anticipated to close Q1 of 2024.
h. Please refer to Volume 05, Exhibit No. 3-C, pages 50 and 52.
i-j. Please refer to Volume 06 - Filing Requirements I-V, page 78 for customer counts and utility sales.
k. The acquisition of Brentwood Borough wastewater assets is currently pending before the Commission, with an order anticipated to be issued by March 2024.
l. Please see the response to part k. The Company therefore does not have any accounting entries related to the closing of this acquisition at this time.
m. Please refer to Volume 03, Exhibit No. 3-A, page 178-186, and Volume 5, Exhibit No. 3-C, pages 69 and 86-89 for all supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n-p. Please refer to OCA 12-006_Attachment 1 for the requested costs incurred through October 2023 YTD.
q. Please refer to OCA 12-006_Attachment 2.
r-t. Please refer to OCA 12-006_Attachment 3.
u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the

allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the Brentwood wastewater system.

Office of Consumer Advocate Set 12

OCA 12-008

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of Sadsbury Township Municipal Authority (wastewater)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of the Sudbury Township Municipal Authority wastewater utility system by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by the Sadsbury system (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a. Please refer to Volume 03, Exhibit No. 3-A, page 97.
b. The rate base claims in this case do not include any post-acquisition capital investment for the Sadsbury Township Municipal Authority ("STMA") Wastewater acquisition in this case.
c-d. STMA costs are included in the Wastewater SSS General Operations totals in Volume 03, Exhibit No. 3-A, pages 109-112 and page 76, lines 6-19. For specific incremental expenses related to STMA, please refer to Volume 04, Exhibit No. 3-B, page 306.
e. The revenue adjustment for the STMA acquisition is included in Wastewater SSS General Operations in Volume 03, Exhibit No. 3-A, page 79, line 19 and page 94.
f. Please refer to parts c-d.
g. The STMA acquisition is anticipated to close in Q3 2024.
h. Please refer to part b.
i-j. Please refer to Volume 06 - Filing Requirements I-V, page 54.
k. The Company filed an application of acquisition for STMA on August 3, 2023. An order approving or denying this acquisition has not yet been issued by the Commission.
l. Please see the response to part k. The Company therefore does not have any accounting entries related to the closing of this acquisition at this time.
m. Please refer to Volume 03, Exhibit No. 3-A, pages 96-108 and Volume 05, Exhibit No. 3-C, pages 80-81 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n-o. Please refer to OCA 12-008_Attachment 1 for the requested cost incurred through October 2023 YTD.
p. There are no affiliated service company charges to PAWC to date related to this acquisition.
q. Please refer to OCA 12-008_Attachment 2.
r-t. PAWC does not expect to acquire any workforce positions from this acquisition.

u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the STMA wastewater system.

Question:

Acquisition of Farmington Township (water and wastewater)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of the Farmington Township water and wastewater utility system by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by the Farmington systems (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a. Please refer to Volume 03, Exhibit No. 3-A, page 26 for acquired plant for Farmington Water and Volume 03, Exhibit No. 3-A, page 97 for acquired plant for Farmington Wastewater.
b. The rate base claims in this case do not include any post-acquisition capital investment for the Farmington Water and Wastewater acquisition in this case.
c-d. Farmington Water costs are included in the Water Operations totals in Volume 03, Exhibit No. 3-A, pages 44-47 and page 1, lines 6-19. For specific incremental expenses related to Farmington Water, please refer to Volume 04, Exhibit No. 3-B, page 303.
Farmington Wastewater costs are included in the Wastewater SSS General Operations totals in Volume 03, Exhibit No. 3-A, page 109-112 and page 76, lines 6-19. For specific incremental expenses related to Farmington Wastewater, please refer to Volume 04, Exhibit No. 3-B, page 305.
e. The revenue adjustment for Farmington Water is included in Water Operations in Volume 03, Exhibit No. 3-A, page 4, line 15 and page 23.
The revenue adjustment for Farmington Wastewater is included in the Wastewater SSS General Operations in Volume 03, Exhibit No. 3-A, page 79, line 18 and page 93.
f. Please refer to parts c-d.
g. The acquisition of Farmington Water and Wastewater assets is anticipated to close in Q2 2024.
h. Please refer to part b.
i-j. Please refer to Volume 06 - Filing Requirements I-V, page 52 for Farmington Water customer counts and utility sales and page 53 for Farmington Wastewater customer counts and utility sales.
k. The Company filed an application for acquisition of Farmington Township Water and Wastewater assets on August 28, 2023. An order approving or denying this acquisition has not yet been issued by the Commission.
l. Please see the response to part k. The Company therefore does not have any accounting entries related to the closing of this acquisition at this time.

m. Please refer to Volume 03, Exhibit No. 3-A, page 25-43 and Volume 05, Exhibit No. 3-C, pages 74-75 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for the acquisition of the Farmington Water system. Please refer to Volume 03, Exhibit No. 3-A, pages 96-108 and Volume 05, Exhibit No. 3-C, pages 74 and 76 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for the acquisition the Farmington Wastewater assets.

n-o. Please refer to OCA 12-010_Attachment 1 for the requested cost incurred through October 2023 YTD.

p. There are no affiliated service company charges to PAWC to date related to this acquisition.

q. Please refer to OCA 12-010_Attachment 2.

r-t. Please refer to OCA 12-010_Attachment 3.

u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the Farmington water and wastewater system acquisition.

Question:

Acquisition of Audubon Water Company (water)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of Audubon Water Company by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by the Audubon system (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a. Please refer to Volume 03, Exhibit No. 3-A, page 26.
b. The rate base claims in this case do not include any post-acquisition capital investment for the Audubon Water acquisition in this case.
c-d. Audubon Water costs are included in the total PAWC Water Operations in Volume 03, Exhibit No. 3-A, page 44-47 and on page 1, lines 6-19. For specific incremental expenses related to Audubon, please refer to Volume 04, Exhibit No. 3-B, page 304.
e. The revenue adjustment for the Audubon Water acquisition is included in Water Operations in Volume 03, Exhibit No. 3-A, page 4, line 14 and page 22.
f. Please refer to parts c-d.
g. The acquisition of the Audubon Water Company system is anticipated to close in Q4 2024.
h. Please refer to part b.
i-j. Please refer to Volume 06 - Filing Requirements I-V, pages 50-51 for Audubon customer counts and utility sales.
k. The Company filed an application for acquisition of the Audubon Water Company on September 21, 2023. An order approving or denying this acquisition has not yet been issued by the Commission.
l. Please see the response to part k. The Company therefore does not have any accounting entries related to the closing of this acquisition at this time.
m. Please refer to Volume 03, Exhibit No. 3-A, page 25-43 and Volume 05, Exhibit No. 3-C, pages 77-78 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. Please refer to OCA 12-012_Attachment 1 for the requested costs incurred through October 2023 YTD.

o-p. There are no consulting expenses or affiliated service company charges to PAWC to date related to this acquisition.

q. PAWC has not received any legal or consulting expense invoice to over $5,000 to date related to this acquisition.

r-t. Please refer to OCA 12-012_Attachment 2.

u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the Audubon water system acquisition.

Question:

Acquisition of BASA (wastewater)

For purposes of PAWC's historic test year (HTY), future test year (FTY), and fully projected future test year (FPFTY) utility revenue requirement presentations in its current rate case, concerning the impact on such revenue requirements for the acquisition of the BASA wastewater utility system by PAWC, please provide the following information:

a. The amounts of rate base for acquired plant, by account, reflected by PAWC in its HTY, FTY and FPFTY rate base related to this acquisition.
b. The amounts of rate base for new utility plant for, relating to, or caused by BASA system (assuming post-acquisition), by account, reflected by PAWC in its HTY, FTY and FPFTY.
c. The amounts of operating expenses, by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses relating to this acquisition.
d. The amounts of other taxes expenses (such as but not limited to property taxes), by account, reflected by PAWC in its HTY, FTY and FPFTY operating expenses for this acquisition.
e. The amounts of revenues by account, reflected by PAWC in its HTY, FTY and FPFTY revenues related to this acquisition.
f. The amounts of any other costs related to this acquisition, by account, that have been reflected by PAWC in its HTY, FTY and FPFTY utility revenue requirement calculations.
g. The date that PAWC assumed this acquisition transaction would be closed.
h. Detailed listings of all projected utility plant additions, by account, that PAWC has assumed would occur, by month, after PAWC's assumed acquisition closing date.
i. The number of customers by type by month that PAWC has reflected for this acquisition.
j. The quantities of utility sales by type by month that PAWC has reflected for this acquisition.
k. A citation to, and copy of, the Commission Order approving or denying this acquisition.
l. A complete copy of all accounting entries related to closing this acquisition.
m. All supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n. A detailed itemization of all legal expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
o. A detailed itemization of all consulting expenses, by amount and account, that PAWC has incurred to date related to this acquisition.
p. A detailed itemization of all affiliated service company charges to PAWC to date, by amount and account, related to this acquisition.

q. A copy of each legal and consulting expense invoice to PAWC over $5,000 related to this acquisition.
r. The number of work force positions that PAWC expects to acquire from this acquisition, including job titles for each position.
s. The amounts of salary and wages for each workforce position that PAWC expects to acquire from this acquisition.
t. The amounts for employee benefits for each workforce position that PAWC expects to acquire from this acquisition.
u. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, PAWC's allocation of costs between PAWC's water and wastewater utility operations.
v. A detailed explanation and supporting calculations concerning how this acquisition has affected, and is projected to affect, the allocation and charging of costs to PAWC from the affiliate American Water Works Service Company.
w. Any and all additional information that PAWC believes should be considered in determining the impact on PAWC's calculated HTY, FTY and FPFTY utility revenue requirements from this acquisition.

Response:

a-b. Please refer to Volume 03, Exhibit No. 3-A, page 146.
c. Please refer to Volume 03, Exhibit No. 3-A, page 155-158, as well as Volume 04, Exhibit No. 3-B, page 307.
d. Please refer to Volume 03, Exhibit No. 3-A, page 139, lines 6-19.
e. Please refer to Volume 03, Exhibit No. 3-A, page 140-141.
f. Please refer to parts c-d.
g. The BASA Wastewater system acquisition is anticipated to close December 2023.
h. Please refer to Volume 05, Exhibit No. 3-C, pages 32 and 34.
i-j. Please refer to Volume 06 - Filing Requirements I-V, page 79.
k. Please see OCA 12-014_Attachment 1 for the Commission Order of the BASA Wastewater system acquisition.
l. The acquisition of BASA Wastewater assets is anticipated to close December 2023, and therefore any accounting entries related to the closing of this acquisition are not available at this time.
m. Please refer to Volume 03, Exhibit No. 3-A, page 145-154 and Volume 05, Exhibit No. 3-C, page 68 and pages 82-85 for supporting workpapers and calculations for the related rate base amounts that PAWC has assumed for this acquisition.
n-p. Please refer to OCA 12-014_Attachment 2 for the requested costs incurred through October 2023 YTD.
q. Please refer to OCA 12-014_Attachment 3.
r-t. Please refer to OCA 12-014_Attachment 4.
u-v. PAWC's allocation of costs between PAWC's water and wastewater utility operations is affected by the number of customers for each respective operation. Acquisitions will result in a new proportioned allocation of cost based on the new level of customers. Please refer to Volume 08 - Statements Nos. 1-9, PAWC Statement No. 4, Schedule SDG-1, Page 1. Factor 1 has the

allocations percentages as of 06/30/2023 and Factor 2 has the allocation percentages as of 06/30/2025 including the acquisitions reflected in the filing.

w. The Company has provided all information relevant to the calculated revenue requirement for the BASA wastewater system.

Office of Consumer Advocate Set 15

OCA 15-013

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

SERP Expense. Refer to the responses to OCA 09-012 and OCA 09-039, Attachment 4. The response to OCA 09-012 states that the Company does not offer SERP as a benefits plan and that there is no information to report. However, Attachment 4, page 1 to the response to OCA 09-039 indicates the line item "Pension Expense – SERP in Account No. 50630000. Please explain and reconcile this discrepancy. Identify, quantify and explain each reconciling item, including whether the Company's filing reflects SERP expense charged to PAWC from the Service Company.

Response:

The Company does not offer SERP as a benefits plan but does offer ERP (Executive Retirement Plan). Upon further research, the amount listed under Account No. 50630000 in the HTY was recorded to the Service Company in error and should have been booked to the parent company which would not have any amounts passed down to PAWC. Therefore, the amounts will be removed from Service Company for the FTY and FPFTY in the rebuttal phase of this proceeding.

Question:

Payroll Expense. Refer to the response to OCA 09-070 and the Volume 4, 4c Compensation Adjustment Excel file. According to the response to OCA 09-070, there are 49 unfilled positions remaining in the Company's filing, including: (1) 3 positions that PAWC is actively recruiting, (3) 3 positions that the Company believes will be filled by June 30, 2024, and (3) 43 positions that relate to positions that PAWC states will be added upon the time of the closing of the BASA wastewater, Brentwood wastewater, Farmington water and wastewater and Audubon water acquisitions.

a. Please reconcile the three positions that PAWC is actively recruiting to Volume 4, 4c Compensation Adjustment Excel file. Identify, quantify and explain each reconciling item and state the current status of each position.

b. Please reconcile the three positions that PAWC anticipates filing by June 30, 2024 to Volume 4, 4c Compensation Adjustment Excel file. Identify, quantify and explain each reconciling item and state the current status of each position.

c. Please confirm that the 43 positions related to the acquisitions are not reflected in the 4c Compensation Adjustment Excel file and are instead reflected on Exhibit 3-B, pages 303-308. If not confirmed, explain fully why not, including where the 43 positions are reflected in the 4c Compensation Adjustment Excel file.

Response:

a. Please refer to the table below for the three positions that PAWC is actively recruiting:

Position Title	Location in 4c Compensation Adjustment file	Status
Operator UWUA 433	'3B Wastewater CSS Salary&Wage' tab, Collective Bargaining Unit section - line 86	Offer extended to candidate
Sr Mgr Business Dev	'3B Water Salary&Wages' tab, Non-Collective Bargaining Unit Salary section - line 298	Recruiting, job posted internally
Environmental Program Lead	'3B Water Salary&Wages' tab, Non-Collective Bargaining Unit Salary section - line 299	Creating offer for internal candidate

b. Please refer to the table below for the three positions that PAWC anticipates filling by June 30, 2024:

Position Title	Location in 4c Compensation Adjustment file	Status
Compliance Analyst	'3B Water Salary&Wages' tab, Non-Collective Bargaining Unit Hourly section - line 228	Vacant - expected to be filled by 6/30/2024
Compliance Analyst	'3B Water Salary&Wages' tab, Non-Collective Bargaining Unit Hourly section - line 229	Vacant - expected to be filled by 6/30/2024
Compliance Representative	'3B Water Salary&Wages' tab, Non-Collective Bargaining Unit Hourly section - line 230	Vacant - expected to be filled by 6/30/2024

c. The 43 positions related to acquisitions are reflected in Exhibit 3-B, pages 303-308. The labor & labor related amounts for each acquisition are broken out on the pages referenced below:

Acquisition	Exhibit 3-B Location	# of Employees
Farmington Water	page 303	1
Audubon Water	page 304	7
Farmington Wastewater	page 305	1
BASA WW Operations	page 307	33
Brentwood WW Operations	page 308	1
Total		43

Question:

Acquisition of the Brentwood wastewater system. Refer to the responses to OCA 12-06 and OCA 12-07, which requested information specific to the acquisition of the Brentwood Wastewater system in the HTY, FTY and FPFTY.

a. As it relates to the amounts for acquired plant in service and new utility plant in service (post-acquisition), the response to OCA 12-06(a) refers to Volume 3, Exhibit 3-A, page 179, which reflects plant in service of $22.695 million for the Brentwood wastewater system acquisition in the FPFTY. Please provide a breakout of FPFTY plant in service amount of $22.695 million between (1) the purchase price in the related Section 1329 proceeding (Docket No. A-2021-3024058), and (2) the post-acquisition costs included in PAWC's filing in the current rate case proceeding.

b. As it relates to the amounts reflected in HTY, FTY and FPFTY operating and tax expenses for the Brentwood wastewater system acquisition, the response to OCA 12-06(c) refers to Exhibit 3-A, page 172 (lines 6-19), Exhibit 3-A, pages 187-190 and Exhibit 3-B, page 308. Why does Exhibit 3-B, page 308 not reflect the FPFTY amounts for (1) Bad Debt expense of $63,404, (2) Miscellaneous expense of $8,863, (3) Transportation expense of $3,551, and (3) Amortization of Rate Case expense of $5,370? Explain fully.

c. Referring to the response to OCA 12-06(e), which referenced Exhibit 3-A, pages 173-174, is the amount that is included in FPFTY operating revenue for the Brentwood wastewater system acquisition at current rates the $1,824,191 that is shown on Exhibit 3-A, page 173, column 9, line 26? If not, explain fully why not and provide the amount included in FPFTY operating revenue for the Brentwood wastewater system acquisition.

d. Pursuant to the amounts included in plant in service for the Brentwood wastewater acquisition, please provide the related depreciation and amortization expense included in the HTY, FTY and FPFTY.

e. Pursuant to the amounts included in plant in service for the Brentwood wastewater acquisition, please provide the related ADIT included in rate base for the HTY, FTY and FPFTY.

Response:

a. In Exhibit 3-A, page 179, the purchase price in the related Section 1329 proceeding in the amount of $19,364,443, is shown in the "Acquisition" column, line 10, and the post-acquisition

costs are shown in the "Additions" columns, line 10. The total of the purchase price, plus additions, less retirements, equals the FPFTY amount of $22.695 million.

b. Exhibit 3-B, page 308 only reflects certain incremental O&M expenses related to the Brentwood acquisition that are not otherwise included in other exhibits. To include the referenced adjustments for Bad Debt, Miscellaneous expense, Transportation expense, or Amortization of Rate Case expense in this schedule would lead to double counting when rolled into the full revenue requirement calculation. For (1) Bad Debt expense, there are three separate adjustments included in the filing; one for uncollectible expense related to the revenues billed by PAWC for the collection system (Exhibit 3-A page 196), a second for the incremental uncollectible expense associated with the billing of the ALCOSAN treatment charges (Exhibit 3-B, page 337), and a third, related to the costs associated with the Company's Arrearage Management Plan (Exhibit 3-B, page 336). For (2) Miscellaneous expense, the amount of $8,863 related specifically to the expense for credit card and echeck transaction costs (Exhibit 3-B, page 326). For (3) Transportation expense, please refer to Exhibit 3-B, page 265 for Transportation expenses calculated for Brentwood. Finally, for (4) Amortization of Rate Case expense $5,370, please refer to Exhibit 3-B, page 295.

c. Yes, the amount reflects the Present Rate revenue at the FTY and FPFTY.

d. Please refer to Exhibit 3-A, pages 197 and 198 and Exhibit 3-B, pages 348 and 354 for the FTY and FPFTY amounts. The Brentwood wastewater system was not acquired during the HTY.

e. Please refer to Exhibit 3-A, page 178, line 24 and page 186 for the FTY and FPFTY amounts. The Brentwood wastewater system was not acquired during the HTY.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 21

OCA 21-004

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of Sadsbury Township Municipal Authority (STMA). Refer to the responses to OCA 12-08 and OCA 12-09, which requested information specific to the acquisition of the STMA in the HTY, FTY and FPFTY. Many of the documents referred to in the Company's response to OCA 12-08 relate to *overall* Wastewater SSS General Operations as a whole, and the amounts related to the STMA acquisition are presumably embedded in the overall amounts.

a. Please confirm that all requested amounts in OCA 12-08 and OCA 12-09 for the STMA acquisition are embedded in the overall Wastewater SSS General Operations amounts shown in the Company's Exhibit 3-A references.

b. As it relates to plant in service, the response to OCA 12-08(a) refers to Volume 3, Exhibit 3-A, page 97, which reflects plant in service of $3.390 million for the STMA acquisition. However, Exhibit 3-C, pages 80-81 (referred to part "m" of OCA 12-08) reflects plant in service for the STMA acquisition of $1.936 million, or a difference of $1.454 million. Please explain and reconcile this discrepancy, including identifying with specificity, the amount included in plant in service for the STMA acquisition. Identify, quantify and explain each reconciling item.

c. As it relates to the amounts included in rate base for the STMA acquisition, the response to OCA 12-08(m) refers to Exhibit 3-A, pages 96-108 for the supporting workpapers and calculations. However, the amounts shown on pages 96-108 of Exhibit 3-A relate to Wastewater SSS General Operations in which the STMA acquisition amounts are embedded. In a format similar to Exhibit 3-A, pages 96-108, provide the amounts in rate base in Wastewater SSS General Operations that relate specifically to the STMA acquisition for the HTY, FTY and FPFTY.

d. As it relates to the amounts reflected in HTY, FTY and FPFTY operating and tax expenses for the STMA acquisition, the response to OCA 12-08(c) refers to Exhibit 3-A, page 76 (lines 6-19), Exhibit 3-A, pages 109-112 and Exhibit 3-B, page 306. The amounts shown on the referenced pages of Exhibit 3-A pertain to *overall* Wastewater SSS General Operations in which the STMA acquisition amounts are presumably embedded, but the amounts shown on Exhibit 3-B, page 306 are specific to the STMA acquisition.

    1. Do the amounts shown on Exhibit 3-B, page 306 (which total $244,841 for the FTY and $249,288 for the FPFTY) reflect the entirety of the amounts in operating and tax expenses for the STMA acquisition? If not, explain fully why not.

    2. If the answer to part 1 is no, in a format similar to Exhibit 3-A, page 76 (lines 6-19) and pages 109-112, provide the amounts included in operating and tax expenses for Wastewater SSS

General Operations that relate specifically to the STMA acquisition for the HTY, FTY and FPFTY.

e. Referring to the response to OCA 12-08(e), which referenced Exhibit 3-A, pages 79 (line 19) and page 94, please confirm that the amount included in FPFTY operating revenue for the STMA acquisition totals $471,228. If not confirmed, explain fully why not and provide the amount included in FPFTY operating revenue for the STMA acquisition.

f. Pursuant to the amounts included in plant in service for the STMA acquisition, please provide the related depreciation and amortization expense included in the HTY, FTY and FPFTY.

g. Pursuant to the amounts included in plant in service for the STMA acquisition, please provide the related property tax expense included in the HTY, FTY and FPFTY.

h. Pursuant to the amounts included in plant in service for the STMA acquisition, please provide the related ADIT included in rate base for the HTY, FTY and FPFTY.

Response:

a. Yes, all requested amounts for the STMA acquisition are included in the Wastewater SSS General Operations amounts.

b. Please refer to Exhibit 3-C, pages 30-31. The difference between the $3.390 million of plant in service (original cost) and $1.936 million (total depreciated original cost) is equal to $849,730 of accumulated depreciation, plus $604,851 of CIAC.

c. All amounts that are specifically related to STMA are found on the pages referenced. Page 97 shows the original cost of plant expected to be recorded upon close of the acquisition, page 98 shows the amount of acquired contributions, and page 106 shows the projected transaction costs all associated with STMA. As discussed in the response to OCA 21-010, the Company did not calculate a separate revenue requirement for STMA, and therefore all workpapers used to calculate rate base were not broken out specifically for STMA.

d. Yes, the O&M expense amounts shown in Exhibit 3-B, page 306 reflect the projected level of incremental expense related specifically to STMA. Expense amounts such as income taxes are not separately calculated for this system but are included in the Wastewater SSS General Operations amounts.

e. Yes, the amount included in FPFTY operating revenue for the STMA acquisition totals $471,228.

f. Refer to part c. Since a separate revenue requirement was not completed for STMA, depreciation expense was calculated for WW SSS General Operations in total. Please refer to Exhibit 3-A, page 130 and Exhibit 3-B, page 344 for amortization expense related to STMA transaction costs claimed in the FTY and FPFTY. The STMA wastewater system was not acquired during the HTY.

g. Please refer to Exhibit 3-B, page 306 for the amount of property tax expense projected in the FPFTY. The STMA wastewater system was not acquired during the HTY.

h. Refer to part c. Since a separate revenue requirement was not completed for STMA, the related ADIT included in rate base was calculated for WW SSS General Operations in total, as shown in Exhibit 3-A, page 96, line 24 and page 108.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 21

OCA 21-005

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of Farmington Township (water system). Refer to the responses to OCA 12-10 and OCA 12-11, which requested information specific to the acquisition of the Farmington Township water system in the HTY, FTY and FPFTY. Many of the documents referred to in the Company's response to OCA 12-10 relate to PAWC's *overall* Water Operations, and the amounts related to the Farmington Township water system acquisition are presumably embedded in the overall amounts.

a. Please confirm that all requested amounts in OCA 12-10 and OCA 12-11 for the Farmington Township (water system) acquisition are embedded in the overall Water Operations amounts shown in the Company's Exhibit 3-A references.

b. As it relates to plant in service, the response to OCA 12-10(a) refers to Volume 3, Exhibit 3-A, page 26, which reflects plant in service of $5.257 million for the Farmington Township water system acquisition. However, Exhibit 3-C, page 74 (referred to part "m" of OCA 12-10) reflects plant in service for the Farmington Township water system acquisition of $2.503 million, or a difference of $2.754 million. Please explain and reconcile this discrepancy, including identifying with specificity, the amount included in plant in service for the Farmington Township water system acquisition. Identify, quantify and explain each reconciling item.

c. As it relates to the amounts included in rate base for the Farmington Township water system acquisition, the response to OCA 12-10(m) refers to Exhibit 3-A, pages 25-43 for the supporting workpapers and calculations. However, the amounts shown on pages 25-43 of Exhibit 3-A relate to PAWC's overall Water Operations in which the Farmington Township water system acquisition amounts are embedded. In a format similar to Exhibit 3-A, pages 25-43, provide the amounts in rate base in PAWC's Water Operations that relate specifically to the Farmington Township water system acquisition for the HTY, FTY and FPFTY.

d. As it relates to the amounts reflected in HTY, FTY and FPFTY operating and tax expenses for the Farmington Township water system acquisition, the response to OCA 12-10(c) refers to Exhibit 3-A, page 1 (lines 6-19), Exhibit 3-A, pages 44-47 and Exhibit 3-B, page 303. The amounts shown on the referenced pages of Exhibit 3-A pertain to PAWC's *overall* Water Operations in which the Farmington Township water system acquisition amounts are presumably embedded, but the amounts shown on Exhibit 3-B, page 303 are specific to the Farmington Township water system acquisition.

1. Do the amounts shown on Exhibit 3-B, page 303 (which total $149,338 for the FTY and $152,385 for the FPFTY) reflect the entirety of the amounts in operating and tax expenses for the Farmington Township water system acquisition? If not, explain fully why not.

2. If the answer to part 1 is no, in a format similar to Exhibit 3-A, page 1 (lines 6-19) and pages 44-47, provide the amounts included in operating and tax expenses for PAWC's Water Operations that relate specifically to the Farmington Township water system acquisition for the HTY, FTY and FPFTY.

e. Referring to the response to OCA 12-10(e), which referenced Exhibit 3-A, page 4 (line 15) and page 23, please confirm that the amount included in FPFTY operating revenue for the Farmington Township water system acquisition totals $266,371. If not confirmed, explain fully why not and provide the amount included in FPFTY operating revenue for the Farmington Township water system acquisition.

f. Pursuant to the amounts included in plant in service for the Farmington Township water system acquisition, please provide the related depreciation and amortization expense included in the HTY, FTY and FPFTY.

g. Pursuant to the amounts included in plant in service for the Farmington Township water system acquisition, please provide the related property tax expense included in the HTY, FTY and FPFTY.

h. Pursuant to the amounts included in plant in service for the Farmington Township water system acquisition, please provide the related ADIT included in rate base for the HTY, FTY and FPFTY.

Response:

a. Yes, all requested amounts for the Farmington Township (water system) acquisition are included in the Water Operations amounts.

b. Please refer to Exhibit 3-C, pages 14-15. The difference between the $5.257 million of plant in service (original cost) and $2.502 million (total depreciated original cost) is equal to $1.079 million of accumulated depreciation, plus $1.675 million of CIAC.

c. All amounts that are specifically related to Farmington Township are found on the pages referenced. Page 26 shows the original cost of plant expected to be recorded upon close of the acquisition, page 27 shows the amount of acquired contributions, and page 36 shows the projected transaction costs and UPAA all associated with the Farmington Township water system acquisition. As discussed in the response to OCA 21-012, the Company did not calculate a separate revenue requirement for Farmington Township Water, and therefore all workpapers used to calculate rate base were not broken out specifically for this acquisition.

d. Yes, the O&M expense amounts shown in Exhibit 3-B, page 303 reflect the projected level of incremental expense related specifically to the Farmington Township water system acquisition. Expense amounts such as income taxes are not separately calculated for this system, but are included in the Water Operations amounts.

e. Yes, the amount included in FPFTY operating revenue for the Farmington Township water system acquisition totals $266,371.

f. Refer to part c. Since a separate revenue requirement was not completed for the Farmington Township water system acquisition, depreciation expense was calculated for Water Operations in total. Please refer to Exhibit 3-A, page 67 and Exhibit 3-B, page 341 for amortization expense related to Farmington Township water transaction costs and UPAA claimed in the FTY and FPFTY. The Farmington Township water system was not acquired during the HTY.

g. Refer to part c. Property tax amounts were not separately identified for the Farmington Township water acquisition. Please refer to Exhibit 3-A, page 69 and Exhibit 3-C, page 101 for Water Operations total property taxes. The Farmington Township water system was not acquired during the HTY.

h. Refer to part c. Since a separate revenue requirement was not completed for the Farmington Township water system acquisition, the related ADIT included in rate base was calculated for Water Operations in total, as shown in Exhibit 3-A, page 25, line 25 and page 43.

R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 21

OCA 21-006

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of Farmington Township (wastewater system). Refer to the responses to OCA 12-10 and OCA 12-11, which requested information specific to the acquisition of the Farmington Township wastewater system in the HTY, FTY and FPFTY. Many of the documents referred to in the Company's response to OCA 12-10 relate to *overall* Wastewater SSS General Operations, and the amounts related to the Farmington Township wastewater system acquisition are presumably embedded in the overall amounts.

a. Please confirm that all requested amounts in OCA 12-10 and OCA 12-11 for the Farmington Township (wastewater system) are embedded in the overall Wastewater SSS General Operations amounts shown in the Company's Exhibit 3-A references.

b. As it relates to plant in service, the response to OCA 12-10(a) refers to Volume 3, Exhibit 3-A, page 97, which reflects plant in service of $5.720 million for the Farmington Township water system acquisition. However, Exhibit 3-C, page 74 (referred to part "m" of OCA 12-10) reflects plant in service for the Farmington Township wastewater system acquisition of $2.827 million, or a difference of $2.893 million. Please explain and reconcile this discrepancy, including identifying with specificity, the amount included in plant in service for the Farmington Township wastewater system acquisition. Identify, quantify and explain each reconciling item.

c. As it relates to the amounts included in rate base for the Farmington Township wastewater system acquisition, the response to OCA 12-10(m) refers to Exhibit 3-A, pages 96-108 for the supporting workpapers and calculations. However, the amounts shown on pages 96-108 of Exhibit 3-A relate to Wastewater SSS General Operations in which the Farmington Township wastewater system acquisition amounts are embedded. In a format similar to Exhibit 3-A, pages 96-108, provide the amounts in rate base in Wastewater SSS Generation Operations that relate specifically to the Farmington Township wastewater system acquisition for the HTY, FTY and FPFTY.

d. As it relates to the amounts reflected in HTY, FTY and FPFTY operating and tax expenses for the Farmington Township water system acquisition, the response to OCA 12-10(c) refers to Exhibit 3-A, page 76 (lines 6-19), Exhibit 3-A, pages 109-112 and Exhibit 3-B, page 305. The amounts shown on the referenced pages of Exhibit 3-A pertain to PAWC's overall Water Operations in which the Farmington Township water system acquisition amounts are embedded, but the amounts shown on Exhibit 3-B, page 305 are specific to the Farmington Township wastewater system acquisition.

1. Do the amounts shown on Exhibit 3-B, page 305 (which total $259,725 for the FTY and $264,176 for the FPFTY) reflect the entirety of the amounts in operating and tax expenses for the Farmington Township wastewater system acquisition? If not, explain fully why not.

2. If the answer to part 1 is no, in a format similar to Exhibit 3-A, page 76 (lines 6-19) and pages 109-112, provide the amounts included in operating and tax expenses for PAWC's Water Operations that relate specifically to the Farmington Township water system acquisition for the HTY, FTY and FPFTY.

e. Referring to the response to OCA 12-10(e), which referenced Exhibit 3-A, page 79 (line 18) and page 93, please confirm that the amount included in FPFTY operating revenue for the Farmington Township water system acquisition totals $322,926. If not confirmed, explain fully why not and provide the amount included in FPFTY operating revenue for the Farmington Township water system acquisition.

f. Pursuant to the amounts included in plant in service for the Farmington Township wastewater system acquisition, please provide the related depreciation and amortization expense included in the HTY, FTY and FPFTY.

g. Pursuant to the amounts included in plant in service for the Farmington Township wastewater system acquisition, please provide the related property tax expense included in the HTY, FTY and FPFTY.

h. Pursuant to the amounts included in plant in service for the Farmington Township wastewater system acquisition, please provide the related ADIT included in rate base for the HTY, FTY and FPFTY.

Response:

a. Yes, all requested amounts for the Farmington Township wastewater system acquisition are included in the Wastewater SSS General Operations amounts.

b. Please refer to Exhibit 3-C, pages 28-29. The difference between the $5.720 million of plant in service (original cost) and $2.827 million (total depreciated original cost) is equal to $1.689 million of accumulated depreciation, plus $1.204 million of CIAC.

c. All amounts that are specifically related to the Farmington Township wastewater acquisition are found on the pages referenced. Page 97 shows the original cost of plant expected to be recorded upon close of the acquisition, page 98 shows the amount of acquired contributions, and page 106 shows the projected transaction costs associated with the Farmington Township wastewater system acquisition. As discussed in the response to OCA 21-011, the Company did not calculate a separate revenue requirement for Farmington Township Wastewater, and therefore all workpapers used to calculate rate base were not broken out specifically for this acquisition.

d. Yes, the O&M expense amounts shown in Exhibit 3-B, page 305 reflect the projected level of incremental expense related specifically to the Farmington Township wastewater system

acquisition. Expense amounts such as income taxes are not separately calculated for this system, but are included in the Wastewater SSS General Operations amounts.

e. Yes, the amount included in FPFTY operating revenue for the Farmington Township wastewater system acquisition totals $322,926.

f. Refer to part c. Since a separate revenue requirement was not completed for the Farmington Township wastewater system acquisition, depreciation expense was calculated for WW SSS General Operations in total. Please refer to Exhibit 3-A, page130 and Exhibit 3-B, page 344 for amortization expense related to Farmington Township wastewater transaction costs claimed in the FTY and FPFTY. The Farmington Township wastewater system was not acquired during the HTY.

g. Refer to part c. Property tax amounts were not separately identified for the Farmington Township wastewater acquisition. Please refer to Exhibit 3-A, page 132 and Exhibit 3-C, page 101 for WW SSS General Operations total property taxes. The Farmington Township wastewater system was not acquired during the HTY.

h. Refer to part c. Since a separate revenue requirement was not completed for the Farmington Township wastewater system acquisition, the related ADIT included in rate base was calculated for WW SSS General Operations in total, as shown in Exhibit 3-A, page 96, line 25 and page 108.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 21

OCA 21-007

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of Audubon Water Company. Refer to the responses to OCA 12-12 and OCA 12-13, which requested information specific to the acquisition of the Audubon Water Company in the HTY, FTY and FPFTY. Many of the documents referred to in the Company's response to OCA 12-12 relate to PAWC's *overall* Water Operations, and the amounts related to the Audubon Water Company system acquisition are presumably embedded in the overall amounts.

a. Please confirm that all requested amounts in OCA 12-12 and 12-13 for the Audubon Water Company acquisition are embedded in the overall Water Operations amounts shown in the Company's Exhibit 3-A references.

b. As it relates to plant in service, the response to OCA 12-12(a) refers to Volume 3, Exhibit 3-A, page 26, which reflects plant in service of $9.187 million for the Audubon Water Company acquisition. However, Exhibit 3-C, page 77 (referred to part "m" of OCA 12-12) reflects plant in service for the Audubon Water Company acquisition of $360,229, or a difference of $8.827 million. Please explain and reconcile this discrepancy, including identifying with specificity, the amount included in plant in service for the Audubon Water Company acquisition. Identify, quantify and explain each reconciling item.

c. As it relates to the amounts included in rate base for the Audubon Water Company acquisition, the response to OCA 12-12(m) refers to Exhibit 3-A, pages 25-43 for the supporting workpapers and calculations. However, the amounts shown on pages 25-43 of Exhibit 3-A relate to PAWC's overall Water Operations in which the Audubon Water Company acquisition amounts are embedded. In a format similar to Exhibit 3-A, pages 25-43, provide the amounts in rate base in PAWC's Water Operations that relate specifically to the Audubon Water Company acquisition for the HTY, FTY and FPFTY.

d. As it relates to the amounts reflected in HTY, FTY and FPFTY operating and tax expenses for the Audubon Water Company acquisition, the response to OCA 12-12(c) refers to Exhibit 3-A, page 1 (lines 6-19), Exhibit 3-A, pages 44-47 and Exhibit 3-B, page 304. The amounts shown on the referenced pages of Exhibit 3-A pertain to PAWC's *overall* Water Operations in which the Audubon Water Company acquisition amounts are embedded, but the amounts shown on Exhibit 3-B, page 304 are specific to the Audubon Water Company acquisition.

    1. Do the amounts shown on Exhibit 3-B, page 304 (which total $1.542 million for the FTY and $1.586 million for the FPFTY) reflect the entirety of the amounts in

operating and tax expenses for the Audubon Water Company acquisition? If not, explain fully why not.

2. If the answer to part 1 is no, in a format similar to Exhibit 3-A, page 1 (lines 6-19) and pages 44-47, provide the amounts included in operating and tax expenses for PAWC's Water Operations that relate specifically to the Audubon Water Company acquisition for the HTY, FTY and FPFTY.

e. Referring to the response to OCA 12-12(e), which referenced Exhibit 3-A, page 4 (line 14) and page 22, please confirm that the amount included in FPFTY operating revenue for the Audubon Water Company acquisition totals $2,965,024. If not confirmed, explain fully why not and provide the amount included in FPFTY operating revenue for the Audubon Water Company acquisition.

f. Pursuant to the amounts included in plant in service for the Audubon Water Company acquisition, please provide the related depreciation and amortization expense included in the HTY, FTY and FPFTY.

g. Pursuant to the amounts included in plant in service for the Audubon Water Company acquisition, please provide the related property tax expense included in the HTY, FTY and FPFTY.

h. Pursuant to the amounts included in plant in service for the Audubon Water Company acquisition, please provide the related ADIT included in rate base for the HTY, FTY and FPFTY.

Response:

a. Yes, all requested amounts for the Audubon Water acquisition are included in the Water Operations amounts.

b. Please refer to Exhibit 3-C, pages 16-23. The difference between the $9.817 million of plant in service (original cost) and $360,229 (total depreciated original cost) is equal to $6.101 million of accumulated depreciation, plus $2.726 million of CIAC.

c. All amounts that are specifically related to the Audubon Water Company acquisition are found on the pages referenced. Page 26 shows the original cost of plant expected to be recorded upon close of the acquisition, page 27 shows the amount of acquired contributions, and page 36 shows the projected transaction costs and UPAA associated with the Audubon Water Company acquisition. As discussed in the response to OCA 21-009, the Company did not calculate a separate revenue requirement for Audubon Water, and therefore all workpapers used to calculate rate base were not broken out specifically for this acquisition.

d. Yes, the O&M expense amounts shown in Exhibit 3-B, page 304 reflect the projected level of incremental expense related specifically to Audubon Water Company. Expense

amounts such as income taxes are not separately calculated for this system but are included in the Water Operations amounts.

e. Yes, the amount included in FPFTY operating revenue for the Audubon Water Company acquisition totals $2,965,024.

f. Refer to part c. Since a separate revenue requirement was not completed for Audubon Water Company, depreciation expense was calculated for Water Operations in total. Please refer to Exhibit 3-A, page67 and Exhibit 3-B, page 341 for amortization expense related to Audubon transaction costs and UPAA claimed in the FPFTY.

g. Please refer to Exhibit 3-B, page 304 for the amount of property tax expense projected in the FPFTY. The Audubon Water Company was not acquired during the HTY.

h. Refer to part c. Since a separate revenue requirement was not completed for Audubon, the related ADIT included in rate base was calculated for Water Operations in total, as shown in Exhibit 3-A, page 25, line 25 and page 43.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 21

OCA 21-009

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

What amount of revenue requirement in the FPFTY is PAWC requesting related to the Audubon Water Company acquisition? Explain in detail and show calculations.

Response:

The Company has not performed a revenue requirement calculation that includes only the Audubon system. The revenue requirements calculated in this case include Water, Wastewater Sanitary Sewer Systems, Wastewater Combined Sewer Systems, BASA Wastewater and Brentwood Wastewater. The separation of the wastewater revenue requirements into sanitary and combined sewer was required by a prior rate case settlement. The separate revenue requirements for BASA and Brentwood are the result of commitments made by the Company in each acquisition proceeding. PAWC does not calculate a separate revenue requirement for each individual operating area and the Commission typically does not require a separate revenue requirement for its non-Fair Market Value ("FMV") acquisitions. For example, refer to the recent non-FMV acquisitions which did not require the calculation of a separate revenue requirement: Docket Nos. A-2018-3004191, A-2018-3004189, I-2018-3006498, I-2016-2526085, A-2020-3023369, A-2021-3028676, and A-2022-3031020.

This rate case filing includes a revenue requirement calculation for PAWC's water operations which includes Audubon. Specific adjustments for the inclusion of Audubon in the revenue requirement include rate base-Volume 03, Exhibit 3-A, pages 26, 27, 36, and operating expenses-Volume 03, Exhibit 3-A, pages 63 & 67.

Pennsylvania-American Water Company

Office of Consumer Advocate Set 21

OCA 21-010

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

What amount of revenue requirement in the FPFTY is PAWC requesting related to the Sadsbury Township Municipal Authority wastewater acquisition? Explain in detail and show calculations.

Response:

The Company has not performed a revenue requirement calculation that includes only the Sadsbury Township Municipal Authority ("STMA") wastewater system. The revenue requirements calculated in this case include Water, Wastewater Sanitary Sewer Systems, Wastewater Combined Sewer Systems, BASA Wastewater and Brentwood Wastewater. The separation of the wastewater revenue requirements into sanitary and combined sewer was required by a prior rate case settlement. The separate revenue requirements for BASA and Brentwood are the result of commitments made by the Company in each acquisition proceeding. PAWC does not calculate a separate revenue requirement for each individual operating area and the Commission typically does not require a separate revenue requirement for its non-Fair Market Value ("FMV") acquisitions. For example, refer to the recent non-FMV acquisitions which did not require the calculation of a separate revenue requirement: Docket Nos. A-2018-3004191, A-2018-3004189, I-2018-3006498, I-2016-2526085, A-2020-3023369, A-2021-3028676, and A-2022-3031020.

This rate case filing includes a revenue requirement calculation for PAWC's Wastewater SSS Operations which includes STMA. Specific adjustments for the inclusion of STMA in the revenue requirement include rate base-Volume 03, Exhibit 3-A, pages 97, 98, 106, and operating expenses-Volume 03, Exhibit 3-A, pages 126 & 130.

Question:

What amount of revenue requirement in the FPFTY is PAWC requesting related to the Farmington Township wastewater system acquisition? Explain in detail and show calculations.

Response:

The Company has not performed a revenue requirement calculation that includes only the Farmington wastewater system. The revenue requirements calculated in this case include Water, Wastewater Sanitary Sewer Systems, Wastewater Combined Sewer Systems, BASA Wastewater and Brentwood Wastewater. The separation of the wastewater revenue requirements into sanitary and combined sewer was required by a prior rate case settlement. The separate revenue requirements for BASA and Brentwood are the result of commitments made by the Company in each acquisition proceeding. PAWC does not calculate a separate revenue requirement for each individual operating area and the Commission typically does not require a separate revenue requirement for its non-Fair Market Value ("FMV") acquisitions. For example, refer to the recent non-FMV acquisitions which did not require the calculation of a separate revenue requirement: Docket Nos. A-2018-3004191, A-2018-3004189, I-2018-3006498, I-2016-2526085, A-2020-3023369, A-2021-3028676, and A-2022-3031020.

This rate case filing includes a revenue requirement calculation for PAWC's Wastewater SSS Operations which includes Farmington wastewater. Specific adjustments for the inclusion of Farmington wastewater in the revenue requirement include rate base-Volume 03, Exhibit 3-A, pages 97, 98, 106, and operating expenses-Volume 03, Exhibit 3-A, pages 126 & 130.

Responsible Witness: Ashley E. Everette, Senior Director of Rates and Regulatory for PAWC

Question:

Refer to the Management and Operations Audit ("MOA") report in Docket No. D-2022-3035217.

a. Was PAWC aware of the recommendations in the MOA report when PAWC prepared its application in the current PAWC rate case?

b. Show in detail and explain fully how PAWC has reflected the recommendations in the MOA report in PAWC's rate case application.

c. Were any of the recommendations in the MOA report not reflected by PAWC in PAWC's development of its rate case application? If so, which ones?

d. To the extent that any of the recommendations in the MOA report not reflected by PAWC in PAWC's development of its rate case application, please quantify and explain the impact of each of those recommendations on the FTY and FPFTY being used by PAWC in the rate case.

Response:

A. PAWC became aware of recommendations of the MOA report during the preparation of this rate case.

B-D. It is unclear what this question is referencing regarding "how PAWC has reflected the recommendations." Many of the recommendations PAWC accepted have no direct correlation to the rate case or the proposed revenue requirement. The management audit is a separate proceeding and PAWC will implement recommendations as outlined in the Implementation Plan. PAWC has provided extensive support for this rate filing through its initial filing and direct testimony, as well as through responses to a voluminous number of data requests.

As noted in the response to OCA 22-003, PAWC has eliminated its external board and will reflect the removal of these expenses in the rebuttal stage of this proceeding.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 22

OCA 22-003

Responsible Witness: Ashley E. Everette, Senior Director of Rates and Regulatory for PAWC

Question:

Refer to the PAWC Implementation Plan concerning: Recommendation IV-1 "Perform a market comparison for local board compensation to ensure PAWC Board fees are at market rates." Also refer to PAWC's Response which states that: "The Company accepts this recommendation." And states in the discussion that: "PAWC is in the process of evaluating whether it should continue to maintain external Board members. If PAWC continues with external Board members, PAWC will re-evaluate whether its external Board compensation fees are at market rates."

a. How much expense has PAWC reflected in the HYT, FTY and FPFTY for external PAWC board members? Show the amounts by account for each period.

b. How many external PAWC board members did PAWC have in the HTY?

c. Provide the amount of compensation (by type of compensation recorded in each account) of each PAWC external board member in the HTY.

d. Explain the functioning of each PAWC external board member in the HTY.

e. Identify the amount of compensation (by type of compensation recorded in each account) of each PAWC external board member in the FTY and FPFTY.

f. How many external PAWC board members would PAWC have in the FPFTY if PAWC determines that having external board members is not necessary?

g. Do any of the other American Water Works operating utilities have external board members? If so, which ones and how many external board members does each have?

h. Were any of the PAWC external board members in the HTY also board members of American Water Works? If so, identify each PAWC external board member who was also an American Water Works board member.

i. Is the cost of American Water Works board members allocated to PAWC? If so, identify the amount of expense by account for AWW board members charged and allocated to PAWC for each period: (1) HTY, (2) FTY and (3) FPFTY.

Response:

A. The annual expense reflected in account 675.8 is $123,250 for each of the test years. PAWC has eliminated its external board as of December 31, 2023 and will reflect the removal of the $123,250 annual expense in the rebuttal stage of this proceeding.

B-H. As noted in the response to part A, PAWC no longer has an external board and therefore will not be claiming any costs associated with an external board.

I. Please see below table for the cost of American Water Works board members allocated to PAWC.

Account	Account Description	HTY	FTY	FPFTY
52527000	Directors Fees	$252,356	$263,190	$274,488
52527100	Directors Expenses	41,374	43,151	45,003
Total		$293,731	$306,340	$319,491

Office of Consumer Advocate Set 22

OCA 22-008

Responsible Witness: Ashley E. Everette, Senior Director of Rates and Regulatory for PAWC

Question:

Refer to the MOA report, which states at page 4 that: " The audit report contains identifiable potential quantifiable cost savings of approximately $3.13 million in annual savings and $4 million in one-time savings from effective implementation of the recommendations."

a. How much of those identifiable and quantifiable cost savings has PAWC reflected in the FTY? Explain fully and show the amounts in detail.

b. How much of those identifiable and quantifiable cost savings has PAWC reflected in the FPFTY? Explain fully and show the amounts in detail.

Response:

The "potential quantifiable cost savings" estimated by the Bureau of Audits are composed of savings to inventory costs and production costs. These amounts were not specifically incorporated into the FTY or FPFTY. In the Implementation Plan, the Company noted that it continues to evaluate its inventory turnover and reduce stockpiled materials as supplier shortages and materials availability improves. Regarding unaccounted for water, the Company noted in the Implementation Plan that it continues to strive to reduce its UFW below the 20% threshold. PAWC's UFW reduction efforts include, but are not limited to, documenting UFW within the Company's Work Management Program; offering a robust UFW training program on unmetered and unbilled water loss; and repairing leaks sensed by fixed based logger systems.

Please note that one-time items are not included in the revenue requirement and therefore one-time savings would not be appropriately reflected in the revenue requirement.

Source: OCA 09-070_Attachment, page 3 of 3

a. Referring to the above table (from page 3 of the OCA 09-070 Attachment), please reconcile each of the 49 positions listed to the Volume 4, 4c Compensation Adjustment Excel file. Identify, quantify and explain each reconciling item.

b. For each of the 49 terminated/vacant positions listed in the above table, which positions have been filled to date? For each such position, identify the annual payroll amount in the FPFTY and the date upon which each position was filled.

c. Please identify in a manner similar to page 3 of the OCA 09-070 Attachment, any additional positions that became vacant after November 27, 2023. For each additional position that has become vacant, provide the related annual payroll amounts in the FPFTY.

Response:

a. Please refer to OCA 26-001_Attachment 1 which provides the location in Volume 4, 4c Compensation Adjustment file where each of the 49 positions can be found. Please note that there have been updates made to the termination dates as several were incorrect when provided in the response to OCA 09-070.

b. Of the 49 positions, there have been 27 filled as of the date of this response. Please refer to OCA 26-001_Attachment 1 which provides the status of each position along with the FPFTY annualized payroll amount as well as the dates for when each position had been filled.

c. Please refer to OCA 26-001_Attachment 2.

Question:

Accounting Information Related to Oncourse Home Solutions and American Water Resources

Refer to the responses to OCA 20-016, OCA 20-018, OCA 20-010 and OCA 20-023.

For the HTY and separately for calendar 2022 and calendar 2023, what amounts of (1) revenue and (2) expenses did PAWC record related to warranty services?

Response:

PAWC records revenue related to the Utility Fee as described in OCA 26-004. The amounts recorded for this revenue for the HTY, calendar year 2022, and calendar year 2023 amounted to $659,624, $663,147 and $659,197, respectively. Except for this Utility Fee revenue, PAWC records no other revenue or expenses related to Oncourse Home Solutions' warranty services.

Executive Compensation. Refer to American Water Works Company's 2023 Proxy Statement and the table below.

Name and Principal Position	Year	Salary	Bonus	Stock Awards	Non-Equity Incentive Plan Compensation	Change in Pension Value and Nonqualified Deferred Compensation Earnings	All Other Compensation	Total
M. Susan Hardwick President and CEO	2022	$ 975,096	$ 100,000	$ 4,067,077	$ 1,335,400	$ -	$ 243,180	$ 6,720,753
Walter J. Lynch Retired President and CFO	2022	$ 108,407		$ 290,791	$ -	$ -	$ 1,123,635	$ 1,522,833
John C. Griffith Executive VP and CFO	2022	$ 460,099	$ 950,000	$ 1,812,518	$ 554,618	$ -	$ 234,602	$ 4,011,837
Cheryl Norton Executive VP and COO	2022	$ 613,750	$ -	$ 1,099,808	$ 557,974	$ -	$ 37,887	$ 2,309,419
James H. Gallegos Executive VP and General Counsel	2022	$ 452,305	$ 100,000	$ 1,960,109	$ 411,593	$ -	$ 643,096	$ 3,567,103
Melanie M. Kennedy Executive VP and Chief Human Resource Officer	2022	$ 435,545	$ -	$ 536,434	$ 343,585	$ -	$ 101,460	$ 1,417,024

The amounts shown below reflect the grant date fair value of PSUs and RSUs granted in 2022:

Name and Principal Position	PSUs	RSUs	Total
M. Susan Hardwick - President and CEO	$ 2,867,085	$ 1,199,992	$ 4,067,077
Walter J. Lynch - Retired President and CEO	$ 290,791	$ -	$ 290,791
John C. Griffith - Executive VP and CFO	$ 1,268,780	$ 543,738	$ 1,812,518
Cheryl Norton - Executive VP and COO	$ 784,840	$ 314,968	$ 1,099,808
James H. Gallegos - Executive VP and General Counsel	$ 672,029	$ 1,288,080	$ 1,960,109
Melanie M. Kennedy - Executive VP and Chief Human Resource Officer	$ 383,500	$ 152,934	$ 536,434

Source: American Water Works Company, Inc. 2023 Proxy Statement

a. For each AWWC executive position listed in the above table, as it relates to the amounts shown for the 2022 Stock Awards, identify and provide a breakout of the PSU and RSU amounts that were allocated to PAWC.

b. For each AWWC executive, identify the PSU and RSU amounts in total, and allocated to PAWC for each period: (1) HTY ended June 30, 2023, (2) FTY ending June 30, 2024, and (3) FPFTY ending June 30, 2025.

c. For each AWWC executive position, please identify and quantify the amounts of Stock Awards (broken out between PSUs and RSUs) that are included in the Company's filing for the FTY ending June 30, 2024 and the FPFTY ending June 30, 2025, and show the amounts for June 30,

2024 and June 30, 2025, and show in detail how they are allocated to PAWC, and show the PAWC amounts by account.

d. Please identify each other AWWC executive position by name and job title and provide compensation information in similar detail to the table above from the AWWC 2023 Proxy Statement. Provide this information for each period: (1) calendar 2022, (2) HTY ended June 30, 2023, (3) FTY ending June 30, 2024, and (4) FPFTY ending June 30, 2025.

e. For each amount and component of each AWWC executive's compensation, show in detail how such amounts are being allocated and charged to PAWC for each period: (1) calendar 2022, (2) HTY ended June 30, 2023, (3) FTY ending June 30, 2024, and (4) FPFTY ending June 30, 2025.

f. Please identify each PAWC officer position by name and job title in 2022 and provide compensation information in similar detail to the table above from the AWWC 2023 Proxy Statement.

g. For each amount and component of each other PAWC officer's compensation, show in detail how such amounts are recorded (if actual) or estimated (if forecast) to PAWC for each period: (1) calendar 2022, (2) HTY ended June 30, 2023, (3) FTY ending June 30, 2024, and (4) FPFTY ending June 30, 2025.

Response:

a. Please refer to the table below for the amounts of AWWC executive stock-based compensation broken out by PSU and RSU amounts allocated to PAWC in 2022. Please note that the Proxy statement lists amounts granted to executives in 2022 whereas the table below shows the amount of expense allocated to PAWC during 2022.

	Expense Allocated to PAWC		
Position	**PSU**	**RSU**	**Total**
President and CEO	$618,100	$152,783	$770,883
Retired President and CEO	487,228	4,682	491,909
Executive VP and CFO	127,042	25,476	152,518
Executive VP and COO	220,655	44,829	265,483
Executive VP and General Counsel	64,131	62,246	126,377
Executive VP and Chief Human Resources Officer	126,304	25,639	151,943
	$1,643,459	$315,654	$1,959,113

b. Please refer to the table below for the amounts of AWWC executive stock-based compensation allocated to PAWC in the HTY, FTY and FPFTY. The amounts are allocated based on the percentage of labor hours charged to PAWC during the HTY ended June 30, 2023.

Stock Awards Allocated to PAWC
HTY ended 06/30/2023

Position	PSU	RSU	Total
President and CEO	$580,568	$165,881	$746,448
Retired President and CEO	225,574	-	225,574
Executive VP and CFO	214,162	54,365	268,527

Source: American Water Works Company, Inc. 2023 Proxy Statement

a. For each AWWC executive position listed in the above table, as it relates to the amounts shown for All Other Compensation in 2022, identify the amounts that were allocated to PAWC.

b. Also show the comparative amounts in total, and as allocated to PAWC in each period: (1) calendar 2022, (2) HTY ended June 30, 2023, (3) FTY ending June 30, 2024, and (4) FPFTY ending June 30, 2025.

c. For each executive position, break out the amounts by (1) Savings Plan Company Match, (2) Savings Plan Company Defined Contribution Account, (3) Company Contributions to Employee Deferred Compensation Plan, (4) Executive Physical, (5) Dividend Equivalents, (6) Company Paid Life Insurance, (7) Severance Payments, and (8) Relocation, and show the amounts for each period: (1) calendar 2022, (2) HTY ended June 30, 2023, (3) FTY ending June 30, 2024, and (4) FPFTY ending June 30, 2025, and for each period show in detail how such amounts are allocated to PAWC.

d. For each AWWC executive position listed in the above table, please identify and quantify the amounts of All Other Compensation (broken out between the eight categories listed in part "a") that are included in each period: (1) HTY ended June 30, 2023, (2) FTY ending June 30, 2024, and (3) FPFTY ending June 30, 2025.

e. Please identify each other AWWC executive position by name and job title in 2022 and provide compensation information in similar detail to the table above from the AWWC 2023 Proxy Statement.

f. For each amount and component of each other AWWC executive position, show in detail how such amounts are being allocated and charged to PAWC in each period: (1) calendar 2022, (2) HTY ended June 30, 2023, (3) FTY ending June 30, 2024, and (4) FPFTY ending June 30, 2025.

g. Please identify each PAWC officer position by name and job title in 2022 and provide compensation information in similar detail to the table above from the AWWC 2023 Proxy Statement.

h. For each amount and component of each PAWC officer, show in detail how such amounts are being recorded (if actual) or estimated (if forecast) by PAWC for each period: (1) calendar 2022, (2) HTY ended June 30, 2023, (3) FTY ending June 30, 2024, and (4) the FPFTY ending June 30, 2025.

Response:

a. Please refer to the table below for the amounts that were allocated to PAWC for All Other Compensation in 2022:

Position	% Allocated to PAWC	401(k) Company Match	Company Defined Contribution Account	Company Contributions to Employee Deferred Compensation Plan	Executive Physical	Dividend Equivalents	Company-Paid Life Insurance	Severance	Relocation	Total All Other Compensation
President and CEO	21.90%	$2,672	$3,507	$40,469	$0	$6,507	$101	$0	$0	$53,255
Retired President and CEO	19.86%	484	-	-	-	18,141	11	204,564	-	223,200
Executive VP and CFO	20.52%	2,289	3,286	-	-	-	55	-	42,511	48,140
Executive VP and COO	21.50%	1,639	-	1,646	613	4,149	99	-	-	8,145
Executive VP and General Counsel	18.49%	2,048	2,961	-	-	-	59	-	113,851	118,920
Executive VP and Chief Human Resources Officer	19.60%	2,391	3,138	8,587	-	5,678	90	-	-	19,885

b. Please refer to part (a) above for 2022. Please refer to OCA 17-002_Attachment CONFIDENTIAL for HTY ended June 30, 2023, FTY ending June 30, 2024, and FPFTY ending June 30, 2025.
c. Please refer to part (b) above.
d. Please refer to part (b) above.
e. There are no other AWWC executives beyond those listed in the chart.
f. Please refer to the response in part (e) above.
g. Please refer to the Company's response to OCA 17-001.
h. Please refer to the table below for the percentages allocated to PAWC for each officer in the calendar year 2022, and the HTY ended June 30, 2023. Amounts for the FTY ending June 30, 2024, and the FPFTY ending June 30, 2025 are allocated based on the percentage of labor hours charged to PAWC during the HTY ended June 30, 2023.

Principal Position	2022 % Allocated to PAWC	06/30/2023 % Allocated to PAWC	06/30/2024 % Allocated to PAWC	06/30/2025 % Allocated to PAWC

Question:

Depreciation Rates and Depreciation Expense

For PAWC's proposed acquisition of BASA in Docket No. A-2022-3037047, please confirm that Gannett Fleming used the following depreciation rates for each of the accounts listed in the following table. If any of this cannot be confirmed, please show what PAWC believes were the Gannett Fleming depreciation rates in the BASA acquisition case for each of the following accounts:

Account No.	Description	Survivor Curve
353.00	LAND AND LAND RIGHTS	NONDEPRECIABLE
354.30	STRUCTURES AND IMPROVEMENTS - PUMPING	65-R3
354.40	STRUCTURES AND IMPROVEMENTS - TREATMENT	70-R2.5

Notes and Source:
PAWC-BASA Section 1329, Docket No. A-2022-3037047, Gannett Fleming Exhibit 7, page 3

Response:

Neither Gannett Fleming nor PAWC proposed depreciation rates in the BASA acquisition proceeding. Additionally, the table above does not represent depreciation rates. The table sets forth the survivor curve for each account. The survivor curves set forth in the table are the confirmed life estimates used in Docket No. A-2022-3037047.

Question:

Depreciation Rates and Depreciation Expense

For PAWC's current rate case, for BASA sewer depreciation rates, please confirm that Gannett Fleming shows the following depreciation rates for each of the accounts listed in the following table. If any of this cannot be confirmed, please show what PAWC believes are the BASA depreciation rates that are being proposed in the current PAWC rate case based on the Gannett Fleming depreciation rate study for each of the following accounts in each period (HTY, FTY and FPFTY):

		2023 Rate Case	
Account No.	Description	June 30, 2024	June 30, 2025
		(A)	(B)
354.20	STRUCTURES AND IMPROVEMENTS - COLLECTION	45-R3	45-R3
354.30	STRUCTURES AND IMPROVEMENTS - SPP	55-S0	55-S0
354.40	STRUCTURES AND IMPROVEMENTS - TDP	55-S0	55-S0
354.70	STRUCTURES AND IMPROVEMENTS - GENERAL	35-S1	35-S1
355.00	POWER GENERATING EQUIPMENT	35-S0.5	35-S0.5
360.10	COLLECTION SEWERS - FORCE MAINS	75-R3	75-R3
361.10	COLLECTION SEWERS - GRAVITY MAINS	80-R2.5	80-R2.5
361.20	MANHOLES	50-S2.5	50-S2.5

395.00	POWER OPERATED EQUIPMENT	22-R2	22-R2
396.00	COMMUNICATION EQUIPMENT	15-SQ	15-SQ
397.00	MISCELLANEOUS EQUIPMENT	15-SQ	

Notes and Source:
Col. A: 2023 PAWC Rate Case, Exhibit 11-G
Col. B: 2023 PAWC Rate Case, Exhibit 11-H

Response:

The table above does not represent depreciation rates. The table sets forth the survivor curve for each account. The survivor curves set forth in the table are the confirmed life estimates proposed for the FTY

and FPFTY. BASA was not owned by PAWC during the HTY, so there were no rates in the place during that time period.

The depreciation rates for BASA wastewater operations in the current rate case can be found in Volume 14, Exhibits 11-G and 11-H, on Table 2, column 7 for the FTY and FPFTY, respectively.

Question:

Depreciation Rates and Depreciation Expense

For PAWC's proposed acquisition of Brentwood in Docket No. A-2021-3024058, please confirm that Gannett Fleming used the following depreciation rates for each of the accounts listed in the following table. If any of this cannot be confirmed, please show what PAWC believes were the Gannett Fleming depreciation rates in the Brentwood acquisition case for each of the following accounts:

Account No.	Description	Survivor Curve
353.20	LAND AND LAND RIGHTS	NONDEPRECIABLE
361.10	GRAVITY MAINS	70-R2.5
361.12	COLLECTION SEWERS - GRAVITY - MAINS RELINING	50-R2.5
361.20	GRAVITY MAINS MANHOLES	65-R3
363.20	SERVICES TO CUSTOMERS	60-R2.5

Notes and Source:
PAWC-Brentwood Section 1329, Docket No. A-2021-3024058, Gannett Fleming Exhibit 7, page 3

Response:

Neither Gannett Fleming nor PAWC proposed depreciation rates in the Brentwood acquisition proceeding. Additionally, the table above does not represent depreciation rates. The table sets forth the survivor curve for each account. The survivor curves set forth in the table are the confirmed life estimates used in Docket No. A-2021-3024058.

LA-7, Selected Non-Confidential Documents Referenced in the Testimony

I. INTRODUCTION

Q. Please state your name, position and business address.

A. Ralph C. Smith. I am a Senior Regulatory Consultant at Larkin & Associates, PLLC, 15728 Farmington Road, Livonia, Michigan 48154.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. My direct testimony concerning the rate request of Pennsylvania American Water Company ("PAWC" or "Company") on behalf of the Pennsylvania Office of Consumer Advocate ("OCA") was served on February 1, 2024 and pre-marked OCA Statement 2. My qualifications were set forth in that statement.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal testimony responds to the rebuttal testimony of PAWC witnesses Ashley E. Everette, James Runzer, Stacey D. Gress, Lori, O'Malley, E. Christopher Abruzzo, J. Cas Swiz, John J. Spanos, Paul Hibbard, and Justin L. Lander on various issues.

Q. What exhibits are being filed with your surrebuttal testimony?

A. Exhibits LA-7 is being filed with my surrebuttal testimony.

Q. What is shown on that exhibit?

A. Exhibit LA-7 presents selected non-confidential documents that are referenced in my testimony.

II. PAWC ADOPTED AND CONTESTED ADJUSTMENTS

Q. What adjustments recommended by the OCA has PAWC adopted in its rebuttal filing?

A. As described at PAWC Statement No. 5-R, the rebuttal testimony of Company witness O'Malley, PAWC has adopted the following adjustments:

- Vacancies – Salaries and Wages Expense[1]
- Annualized Performance Plan Expense
- Group Insurance Expense
- 401K, Defined Contribution Plan and Employee Stock Purchase Plan
- PAWC external Board Members expense[2]
- American Water Works Service Company – Supplemental Executive Retirement Plan expense[3]

Q. What issues and adjustments that you addressed in your direct testimony has PAWC contested?

A. As discussed in the rebuttal testimonies of various Company rebuttal witnesses, PAWC is contesting these issues:

- Excluding from the base rate revenue requirement costs related to PAWC's proposed acquisition of Audubon Water
- Excluding from the base rate revenue requirement costs related to PAWC's proposed acquisitions of the Farmington Township Water and Wastewater utilities.

[1] PAWC witness Lori O'Malley's rebuttal testimony at page 3. The Company's acceptance of my recommended vacancy rate also impacts my adjustments to (1) Annualized Performance Expense, (2) Group Insurance Expense, and (3) 401K, Defined Contribution Plan and Employee Stock Purchase Plan Expense.
[2] PAWC witness Lori O'Malley's rebuttal testimony at page 7.
[3] PAWC witness Lori O'Malley's rebuttal testimony at page 6 states that the Company removed the AWWSC related SERP expense that was erroneously included in PAWC's filing and her Exhibit LNO-3R reflects the removal of $31,348. OCA had removed $152,769 as shown on Exhibit LA-2, Schedule C-20. In response to OCA 35-008, PAWC stated that the $152,769 was the total Service Company amount of SERP expense, and that the $31,348 amount reflects the amount that was allocated to PAWC.

- Excluding from the base rate revenue requirement costs related to PAWC's proposed acquisition of the Sadsbury Township Municipal Authority Wastewater utility
- Excluding from the base rate revenue requirement costs related to PAWC's proposed acquisition of the Butler Area Sewer Authority ("BASA") Wastewater utility
- Excluding from the base rate revenue requirement costs related to PAWC's proposed acquisition of the Brentwood Wastewater utility
- Cash Working Capital
- Audubon Water related O&M expense and depreciation expense
- Farmington Township Water and Wastewater related O&M expense and depreciation expense
- Sadsbury Township Municipal Authority Wastewater related O&M expense and depreciation expense
- Uncollectibles Expense
- Interest Synchronization
- Insurance Other Than Group
- Depreciation expense – Water Operations
- Stock-Based Compensation Expense/Long-Term Performance Plan Costs for American Water Works ("AWW") executives
- Expense allocated to PAWC for AWW executives dividend equivalents
- Call Center Expense
- Arrearage Management Plan Credits – Uncollectibles Expense
- American Water Resources – Revenues
- Pension and OPEB Expense Tracker and Production Cost Tracker

Q. If some point raised in PAWC's rebuttal is not specifically addressed in your surrebuttal testimony, should it be presumed that you agree with the Company?

A. No.

III. PAWC REBUTTAL CONCERNING PROPOSED ACQUISITIONS

Revenue Requirements for Acquisitions Not Yet Completed

Q. In its initial filing dated November 8, 2023, did the Company include ratemaking claims for costs related to certain pending but not yet completed acquisitions in the FPFTY?

A. Yes. In its initial filing dated November 8, 2023, the Company made ratemaking claims in the FPFTY related to the following six pending acquisitions:

1. Audubon Water,
2. Farmington Water,
3. Farmington Wastewater,
4. Sadsbury Wastewater,
5. BASA Wastewater, and
6. Brentwood Wastewater.

PAWC's ratemaking claims through the end of the FPFTY seek to include rate base for all six pending acquisitions based on the purchase prices of the systems as originally reflected in the asset purchase agreements ("APAs") and post-acquisition capital investments for the Brentwood and BASA systems. The claims also include transaction costs, return on the anticipated rate base, and expenses (i.e. depreciation and O&M).

Q. As a result of PAWC's rebuttal testimony have you changed your position on whether the ratemaking claims for any of those not yet completed acquisitions should be included in the Company's revenue requirement in the current case?

A. No. For the reasons discussed in my direct testimony, I recommend that PAWC's ratemaking claims related to each of the six acquisitions listed above not be included in PAWC's FPFTY for rate setting purposes. More specifically, given that there is no reasonable certainty that the acquisitions will likely close in the FPFTY, I recommend for ratemaking purposes that: (1) the rate base values for each not yet acquired system be removed from the FPFTY; and (2) all expenses associated with these systems be removed from the FPFTY, including removal of (i) the transaction costs related to the acquisitions and (ii) expenses related to owning the (not yet acquired) systems (*i.e.*, depreciation and O&M expenses).

Q. In its rebuttal filing, did PAWC agree with your recommendations to remove PAWC's ratemaking claims associated with the six not yet completed acquisitions from the Company's FPFTY revenue requirement?

A. No. In its rebuttal filing, PAWC did not agree with my recommendations to remove its ratemaking claims associated with the six not yet completed acquisitions from its FPFTY revenue requirement. PAWC witness Mr. Abruzzo and I disagree over the issue of the likelihood of the utility plant that is targeted by PAWC for acquisition will be acquired and used and useful in the FPFTY. The two objective and bright line criteria that I discussed in my direct testimony for determining the likelihood of the utility plant being used and useful in the FPFTY are as follows: by the close of the record in this base rate proceeding, (1) the Commission has issued a final,

unappealable order approving the transaction, and (2) there is no uncertainty as to whether the closing will occur.

On pages 11-12 of his rebuttal testimony, Company witness, Mr. Abruzzo disagrees with my two criteria, stating:

> The relevant cut-off date should not be when the record closes. After the record closes, any party can petition to reopen the record to introduce additional evidence. 52 Pa. Code § 5.571(a). Instead, the test should be whether the acquisition is likely to close within the FPFTY.

Q. Do you agree with Mr. Abruzzo's assertion that the only relevant question is whether the acquisitions are likely to close during the FPFTY?

A. No. I do not agree with Mr. Abruzzo's assertion that the only relevant question is whether the acquisitions will or are likely to close during the FPFTY based on events that may (or may not) likely occur after the record closes in this base rate proceeding. In my opinion, that is a flawed premise for several reasons.

First, including the pending acquisitions in the FPFTY for purposes of establishing a revenue requirement is fundamentally different from including capital expenditures for systems that are already owned by a utility and the O&M expense related to the utility's existing operations and maintenance of utility-owned plant. This is the case because (1) the assets proposed to be acquired are not owned by PAWC, and (2) the Commission has to issue an order granting Certificate of Public Convenience ("CPC") authority in accordance with Sections 1102-1103 of the Public Utility Code.

Next, in order for Mr. Abruzzo's assertion that the acquisitions are certain enough to include them in FPFTY rate base and operating expense, the parties and the Commission would have to assume that (1) the transactions will at some point inevitably be determined to meet the requirements of Code Sections 1102-1103, and potentially Section 1329 (for relevant acquisitions), based on the applications as filed, regardless of the positions of parties in the separate application dockets, and (2) none of the things that could prevent the acquisitions from closing by the end of the FPFTY will occur. PAWC has not demonstrated, and it is not entitled to the presumption, that its desire to acquire a system will mean that the acquisition will be determined to satisfy the requirements of the Public Utility Code and all impediments to closing will be resolved.

Finally, Mr. Abruzzo argues that the close of the record in this proceeding should not be the cut-off point because PAWC can petition to reopen the record before and after the Commission issues an order. However, petitioning to reopen a record should not be presumed to produce PAWC's desired outcome because other parties to a base rate case have due process rights, and the outcome may not be the straightforward, predictable path Mr. Abruzzo assumes. Indeed, in petitioning to reopen the record, PAWC would have to (1) prevail in its petition to reopen the record, and (2) prevail in making its case to the Commission on the merits that the acquisitions should be included in the FPFTY revenue requirement for ratemaking purposes.

Q. Please discuss other reasons as to why Mr. Abruzzo's assertion that the only relevant question for including the acquisitions in the FPFTY is whether they will likely close during the FPFTY is flawed.

A. Mr. Abruzzo's assertion that the only relevant question for including the acquisitions in the FPFTY is whether they will likely close during the FPFTY is flawed for several reasons. First, it is speculative and uncertain whether a particular attempted acquisition transaction will be approved by the Commission, or if such approval is granted, whether it will be upheld on appeal. The following examples illustrate this point:

- PAWC has attempted to include costs related to its proposed acquisition of the Brentwood Wastewater utility in PAWC's proposed rate base and operating expenses. However, the Commission recently rejected PAWC's application for the Brentwood acquisition on a 5-0 vote on the grounds that the transaction did not meet the requirements of Public Utility Code Sections 1102/1103.

- PAWC's application to acquire the BASA acquisition was modified by a settlement of the parties in that application proceeding, and the Commission approved that settlement; however, the Commission's final order was appealed to the Commonwealth Court by Center and Summit Townships, Butler County, on due process grounds.

- A settlement was filed on February 21, 2024 in the Sadsbury acquisition proceeding (A-2023-3042058), however, there is no statutory deadline for the Administrative Law Judge to issue a recommendation and for the Commission to enter an Order, and it is not known whether the Commission will ultimately approve or modify the settlement.

- The evidentiary records for the proposed Audubon Water and Farmington Water and Wastewater acquisitions have not yet been developed. The parties are in the early phases of litigation in Audubon Water, and no litigation schedule has been determined for Farmington.

Second, it is speculative whether and when PAWC's proposed acquisition transactions will close. The APAs for the six acquisitions at issue include

contractual rights that permit PAWC and the sellers to terminate the APAs for various reasons prior to closing. Even if a final, unappealable Commission or Court Order existed for each of those six PAWC proposed acquisitions, and such Orders do not currently exist for any of those acquisitions, such termination rights give discretion to PAWC, as buyer, and to the system seller as to whether to exercise these rights prior to closing.

Q. Can you describe the termination rights under the APAs for the six transactions?

A. Yes. I have reviewed the APAs for all of those PAWC acquisitions except Audubon since it is not publicly available. The following termination rights exist in all the transactions:

- **By mutual agreement**: Prior to closing, and for any reason, PAWC and Farmington Water and Wastewater, Sadsbury, BASA and Brentwood can mutually agree to terminate their respective APAs. See Farmington APA 14.01(a); Sadsbury APA 10.1(a); BASA APA 14.01(a); and Brentwood APA 14.01(a).

- **Failure to obtain Governmental Approvals**: Prior to actual closing, PAWC or any of the sellers in the not completed acquisitions (i.e., Farmington, Sadsbury, BASA, or Brentwood) can terminate their respective APAs if any "Governmental Authority" issues an order, decree or ruling or taken any other action, in each case permanently restraining, enjoining or otherwise prohibiting the material transactions contemplated by the APA and such order, decree, ruling or other action becomes final and non-appealable, but only if the terminating party is not then in material breach of the APA. See Farmington APA 14.01(b)(ii); Sadsbury APA 10.1 (e); BASA APA 14.01 (c)(ii); and Brentwood APA 14.01 (b)(ii).

    - The term "Governmental Approval" is defined more broadly than just PUC approval to include any consent, approval, authorization, notice, filing, registration, submission, reporting, order, adjudication or similar item of, to or with any "Governmental Authority." See Brentwood APA, Article I; BASA APA, Article I; Farmington APA, Article I; Sadsbury Wastewater APA 11.14. Additionally, the term

"Governmental Authority" is defined more broadly than just the PUC to include also the EPA, PADEP, any court, any municipality or municipality authority, and the Seller itself. See Brentwood APA, Article I; BASA APA, Article I; Farmington APA, Article I; Sadsbury Wastewater APA 11.14.

Additionally, in the Sadsbury Wastewater APA, the following specific termination rights exist:

- **Timing:** Prior to the actual closing, and for any reason, PAWC or Sadsbury Wastewater can terminate the APA if the closing does not occur on or prior to June 30, 2024, provided that the terminating party is not in material breach of the APA. See Sadsbury Wastewater APA 10.1(b).

- **Material Breach:** Sadsbury Wastewater can terminate the APA (if Sadsbury is not then in material breach of any of its representations, warranties, covenants and agreements under the APA) and PAWC committed a material breach of any representation, warranty, covenant or agreement contained in the APA and PAWC has not cured such breach within five (5) business days after receipt of notice of such breach (provided, however, that, no cure period shall be required for a breach which by its nature cannot be cured). See Sadsbury Wastewater APA 10.1(d).

- Likewise, PAWC can terminate the APA with Sadsbury Wastewater (if PAWC is not then in material breach of any of its representations, warranties, covenants and agreements under the APA) and Sadsbury has committed a breach of representation, warranty, covenant or agreement contained in the APA and Sadsbury has not cured such breach within five (5) business days after receipt of notice of such breach (provided, however, that, no cure period shall be required for a breach which by its nature cannot be cured). See Sadsbury Wastewater APA 10.1(c).

In the Brentwood, BASA and Farmington APAs, the following additional specific termination rights exist:

- **Timing:** Prior to the actual closing, and for any reason, PAWC or Brentwood/ BASA/ Farmington can terminate their respective APA if the closing does not occur 365 days after the date the application to the PUC is accepted as complete by the PUC and the statutory 6-month consideration period is initiated (the term for this is the "Outside Date"). See Brentwood APA 14.01(b)(i); BASA APA 14.01(c)(i); Farmington APA 14.01(b)(i).

- **Material Breach:** Brentwood/ BASA/ Farmington can terminate the APA (if not then in material breach of any provision of the APA Agreement) if PAWC commits a material breach of any covenant or agreement to be

performed or complied with by PAWC pursuant to the terms of the APA or of any representation or warranty of PAWC contained in the APA, which breach (i) has continued without cure for a period of sixty (60) days following notice thereof by Seller to Buyer or if such breach cannot be cured and (ii) would result in a condition precedent to Closing not being satisfied (which condition has not been waived by Seller in writing). See Brentwood APA 14.01(c); BASA APA 14.01(d); Farmington APA 14.01(c).

- Likewise, PAWC can terminate the APA (if PAWC is not then in material breach of any provision of the APA) if Brentwood/ BASA/ Farmington commits a material breach of any covenant or agreement to be performed or complied with by Seller pursuant to the terms of the APA or of any representation or warranty of Seller contained in the APA, which breach (i) has continued without cure for a period of sixty (60) days following notice thereof by PAWC to Seller or if such breach cannot be cured and (ii) would result in a condition precedent to Closing not being satisfied (which condition has not been waived by PAWC in writing). See Brentwood APA 14.01(d); BASA APA 14.01(e); Farmington APA 14.01(d).

Q. Are you aware of an example where an acquisition had been approved by the Commission but the parties terminated the agreement prior to closing?

A. Yes. An example is Aqua's attempted acquisition of the Willistown Township wastewater system (A-2021-3027268). Aqua PA had a Commission order approving its acquisition of the Township's wastewater system assets. While the order was on appeal, Aqua filed a letter notifying the Commission that the Township had exercised the seller's rights under the APA to terminate the transaction and that the transaction would not close as a result.[4] This example illustrates that a transaction can fail to close even if the transaction had been approved by the Commission. Indeed, while I defer to the lawyers and their legal Briefs, I am advised by OCA counsel that a Commission final order granting CPC authority to PAWC to acquire a system does not mean that PAWC and the buyer must close the acquisition. Rather,

[4] https://www.puc.pa.gov/pcdocs/1785100.pdf

the order granting CPC authority functions as permission for the utility to proceed with closing the transaction. Typically, the Commission order would require the utility to notify the Commission after the closing takes place and only after that notice is given can the Secretary then issue the CPC evidencing the utility's authority to acquire the assets and serve the customers of the acquired system. Hence, the existence of a final, unappealable Commission Order is not sufficient alone to determine the likelihood of utility plant being acquired and used and useful in the FPFTY. This is the purpose of my second criterion: that there is no uncertainty as to whether the closing will occur.

Q. Can you provide examples of other acquisitions that have not followed a predictable straight path to closing?

A. Yes. Even where the parties do not exercise termination rights, there is uncertainty whether a transaction will close by the end of the FPFTY. This point is illustrated by Aqua PA's attempted acquisition of the Delaware County Regional Water Quality Control Authority (DELCORA) system (A-2019-3015173). DELCORA, the seller, signed an APA with Aqua PA on September 17, 2019, and jointly they filed an application with the Commission on March 3, 2020 for approval of the acquisition. The filing was "accepted" by the Commission on July 27, 2020. As of the date of my surrebuttal testimony, there is no Commission order approving the transaction. That proceeding has been stayed multiple times due in part to civil litigation brought by Delaware County, DELCORA, and Aqua PA, and due in part to an order of the

Bankruptcy Court for the Eastern District of Pennsylvania.[5] The Bankruptcy Court stayed the application before the Commission relating to the City of Chester's unresolved reversionary interest in the same DELCORA assets which Aqua proposed to acquire in the acquisition application before the Commission. In short, the separate but related litigation has been a major pitfall for that acquisition, causing significant delay and a great deal of uncertainty as to whether and when the Commission will approve it or whether that transaction will proceed to closing.

As another example of significant delay, the City of Beaver Falls, as the seller, signed an APA on October 20, 2021 and filed its application with the Commission on February 17, 2023. The application was conditionally accepted on June 28, 2023, but as of February 29, 2024, that application has not been finally accepted (Docket No. A-2024-3033138).

Q. Are there reasons that an attempted acquisition can fail prior to closing that do not relate to the existence of a final, unappealable Commission or Court Order?

A. Yes. As I discussed in my direct testimony, there are many reasons that an attempted acquisition can fail prior to closing that do not relate to the existence of a final, unappealable Commission or Court Order. To expand, an attempted acquisition can fail to close for any of the following reasons:

- Unrealistic expectations by either party as to the value, benefits, or challenges of the potential acquisition.
- Financial concerns of either party as to valuation and financing related to the acquisition.

[5] The status of civil and bankruptcy litigation is addressed in the status reports filed with the Commission in A-2019-3015173, most recently on February 5, 2024. https://www.puc.pa.gov/pcdocs/1815422.pdf, https://www.puc.pa.gov/pcdocs/1815375.pdf, https://www.puc.pa.gov/pcdocs/1815374.pdf

- Changes in leadership at PAWC or changes in political leadership as to the seller.

- Insufficient or inadequate due diligence that led to the signing of the APA, where further due diligence may reveal additional issues and/or create a desire on either party not to proceed to closing.

- External economic downturns that may impact the viability of the deal due to unaffordability of service post-acquisition.

- Lack of stakeholder buy-in – opposition by key stakeholders (community, consumers, employees) can create resistance and hinder the ability of an acquisition to take place.

- Failure of PAWC or seller to obtain other necessary governmental approvals by government authorities other than the Commission.

All one has to do to understand the level of uncertainty with regard to these transactions is to logically combine any of the above-noted factors with the seller's or buyer's contractual rights that allow a party to terminate the APA by mutual agreement with the other party, based on timing, or due to the material breach of the other party, and it becomes clear that there is no reasonable certainty that the transactions at issue in this case will close, despite PAWC's strong desire for a predictable straight path to acquisition closing.

Q. Did PAWC discuss an alternative proposal with regard to rate case treatment for the yet completed BASA and Brentwood acquisitions in the Company's rebuttal testimony?

A. Yes. PAWC discussed an alternative proposal with regard to rate case treatment for the BASA and Brentwood acquisitions in its rebuttal. Specifically, on pages 4-5 of her rebuttal, Company witness Everette states as follows:

> The Company maintains that the BASA and Brentwood acquisitions are likely to close prior the end of the FPFTY and therefore should be reflected in this rate case on the effective date of new rates. Alternatively, if the Commission agrees with OCA, I&E and OSBA with respect to the certainty of closing the BASA and Brentwood acquisitions before the end of the FPFTY, rather than disallowing recovery in this rate case which would factor into the timing of the Company's next rate case, the Company proposes that the Commission approve revenue requirements in this proceeding as follows: (1) a revenue requirement that excludes BASA and Brentwood acquisitions; (2) a revenue requirement that excludes the Brentwood acquisition but includes the BASA acquisition; and (3) a revenue requirement that includes the Brentwood and BASA acquisitions.

On page 5 of her rebuttal, Ms. Everette refers to the three scenarios for PAWC's alternative revenue requirement treatments that are listed in the above passage as "Step 1", "Step 2" and "Step 3."

Q. How does PAWC propose to apply its three-step alternative proposal for the BASA and Brentwood acquisitions?

A. As discussed on page 5 of Ms. Everette's rebuttal, under the Step 1 scenario, in which BASA and Brentwood are excluded from the FPFTY revenue requirement, rates would become effective on August 7, 2024. Under the Step 2 scenario, in which Brentwood only would be excluded from the FPFTY revenue requirement, rates would become effective on one day's notice, no earlier than August 7, 2024, and only after the Company has certified to the Commission that the BASA acquisition has closed. In addition, if, for any reason, BASA does not close, the Step 2 rates would never become effective.

Under PAWC's Step 3 scenario, in which PAWC proposes that both BASA and Brentwood would be included in the FPFTY revenue requirement, rates would become effective on one day's notice, no earlier than August 7, 2024, and only after the Company has certified to the Commission that both the BASA and Brentwood acquisitions have closed. In addition, if, for any reason, Brentwood does not close, the Step 3 rates would never become effective.

Q. Do you agree with the Company's alternative proposal as it relates to the BASA and Brentwood acquisitions?

A. No. I do not agree with the Company's alternative proposal as it relates to the BASA and Brentwood acquisitions. The Company's alternative proposal should be rejected for several reasons, including the following:

First, it is not known under what terms or conditions any of these transactions would ultimately close. This applies to all of the pending acquisitions since none of them have a final, unappealable order. For example, BASA could be remanded and conditions and/or renegotiations could impact rate base or result in other costs (e.g., transaction and closing costs) not being recovered in rates. Furthermore, the matter could be remanded and the parties to the underlying settlement in that case could withdraw from the settlement thus causing the matter to return to a state of litigation. Under PAWC's proposed alternative Step 2 scenario, rates would increase with no recognition of any such changes.

Second, as it relates to Brentwood, OCA requested that the Commission condition approval on the requirement that Allegheny County Sanitary Authority ("ALCOSAN") treatment costs should be recovered in base rates rather than through

pass-through bills. Moreover, as discussed in more detail below, the Commission recently rejected the Company's application to acquire Brentwood. If PAWC appeals the case, it could be remanded to the Commission again. Under PAWC's proposed alternative Step 3 scenario, rates for Brentwood would go into effect as proposed by PAWC in its filing (*i.e.*, with a pass-through).

Third, as it relates to the Commission's recent rejection of PAWC's proposed acquisition of the Brentwood Wastewater system under Section 1329, PAWC could consider renegotiating the APA with Brentwood and could file under Public Utility Code Section 1102/1103 for Commission approval of a renegotiated acquisition transaction. If this were to occur, the rate base and expense claims for Brentwood could differ significantly from those that PAWC would receive approval for if its proposed Step 3 alternative is not rejected.

PAWC's alternative proposal should be rejected because it asks the Commission to put rates into effect despite the parties having no reasonable opportunity to litigate the underlying revenue requirement, Act 11 shift, or class revenue allocation and rate design issues.

Q. How has the OCA treated PAWC's proposed acquisitions?

A. As it relates to BASA and Brentwood, the OCA simply removed the Company's claimed revenue requirement. Since there are no final, unappealable orders for any of the six pending acquisitions (the first of my two criteria), OCA has excluded the related costs from the revenue requirement for PAWC.

Q. Are there additional reasons why PAWC's alternative proposal regarding the BASA and Brentwood acquisitions should be rejected?

A. Yes. As noted above, the Company argues that the close of the record in this proceeding should not be the cut-off point because PAWC can petition to reopen the record before and after the Commission issues an order. However, as I discuss above, PAWC would need to: (1) prevail in its petition to reopen the record, and (2) prevail in making its case to the Commission on the merits that the acquisitions should be included in the revenue requirement. The Company's alternative proposal would circumvent those procedural rules as well as the due process provided by those rules. For these reasons, and those discussed above, PAWC's alternative proposal for BASA and Brentwood should be rejected.

Additionally, there are related issues that would need to be addressed if either BASA or Brentwood were to be included in PAWC's wastewater utility revenue requirement in the current case include the Act 11 shift, the proposed class revenue allocation and the rate design.

Q. You stated above that the Company's application for the Brentwood acquisition was recently rejected by the Commission. Please elaborate.

A. In Docket No. A-2021-3024058, in the Recommended Decision dated January 17, 2024, the Administrative Law Judge ("ALJ") in that proceeding recommended that the Commission deny the Company's application to acquire the Brentwood wastewater utility due to PAWC not meeting its burden of establishing that there is an affirmative public benefit resulting from that proposed acquisition. In a public meeting held on February 22, 2024, the Commission considered Exceptions that

were filed both by PAWC and by the Borough of Brentwood and ultimately voted 5-0 to reject the Company's application for the Brentwood acquisition. While an official Order in that other proceeding has not yet been issued, in her Motion filed on February 22, 2024 in response to the Exceptions filed by PAWC and the Borough of Brentwood, Vice Chair Kimberly Barrow stated:[6]

> I agree with the ALJ's recommendation to deny the Application because PAWC failed to present sufficient evidence to sustain a finding that substantial affirmative public benefits will result from the acquisition of the Brentwood System and the issuance of a Certificate of Public Convenience, pursuant to 66 Pa. C.S. §§ 507, 1102, 1103 and 1329. I also agree with the ALJ's conclusion that because there is not sufficient proof of a public benefit, the request to approve the APA, with the First Amendment, became moot because the APA is relevant only if the acquisition is approved. Furthermore, the ALJ determined that the other corollary issues became moot and so decided not to address them. I agree. Specifically, based upon the analyses under 66 Pa. C.S. §§ 1102 and 1103, that the alleged benefits to be realized from the proposed acquisition do not outweigh the resulting harms from it, it is not necessary to consider the additional approval requests under 66 Pa. C.S. §§ 507 and 1329.
>
> For the above-mentioned reasons: (1) the Exceptions of PAWC and the Exceptions of Brentwood are denied; (2) the Recommended Decision is adopted; and (3) the Application of PAWC is denied, consistent with this Motion.

In addition, Chairman Stephen M. DeFrank issued a Statement on February 22, 2024, which included the following on page 2:[7]

> In summary, balancing the numerous variables on the record with a particular focus on the issues highlighted above support denial of this application. While no single concern in the Application individually disqualifies the transaction from approval, the collective aggregate of each of these

[6] https://www.puc.pa.gov/pcdocs/1817353.pdf.
[7] https://www.puc.pa.gov/pcdocs/1817412.pdf.

circumstances warrant a denial. More specifically, the 1329 premium is not warranted when balanced with the operational circumstances and asset condition of the Borough of Brentwood's wastewater conveyance system. Therefore, I must concur with the Recommended Decision and vote to deny the Application.

Finally, I encourage PAWC and Brentwood to consider filing an 1102 application should they wish to further pursue this transaction.

Q. How does PAWC's alternative proposal address the Audubon, Farmington and Sadsbury acquisitions?

A. It does not address those acquisitions. The Company's alternative proposal does not address the ratemaking treatment for the Audubon, Farmington and Sadsbury acquisitions.

Q. Has the Commission already ruled on the merits of those PAWC-proposed acquisitions?

A. No. The Commission has not yet ruled on the merits of any of these acquisitions under Section 1102/1103, including the reasonableness of the purchase price that PAWC has *already* included in its proposed rate base and amortization claims in the current base rate case. That is a concern because it appears that PAWC is attempting to usurp the Commission's authority by including the Audubon, Farmington and Sadsbury acquisitions in the FPFTY as if the Commission's approval has already been obtained.

Q. What is your conclusion regarding the proposed acquisitions based on the Company's rebuttal filing?

A. There are virtually no boundaries if PAWC were to prevail with its argument that the only criteria to consider for including the proposed acquisitions in the FPFTY revenue requirement is whether "it is likely the transactions will close within the FPFTY" especially when the sole criteria of likelihood that can be gleaned from PAWC is that PAWC has a signed APA that it believes will result in a final order before the end of the FPFTY. In contrast, the two criteria I offered in my direct testimony for determining the reasonable certainty of an acquisition are both objective and bright lines; none of PAWC's six proposed acquisition transactions has met those criteria. Therefore, as of the close of the record, there is no reasonable certainty that the property that PAWC wishes to acquire will actually be acquired and would be used and useful in the FPFTY. Therefore, PAWC's claims for all of its pending acquisitions should be removed from the FPFTY revenue requirements that are being used to set rates in this proceeding. In addition, for the reasons discussed above, the Company's alternative proposal should be rejected.

<u>Not Yet Completed Acquisitions and Other Capital Improvements</u>

Q. Are you responding to any other witnesses with regard to the inclusion of the not yet completed acquisitions in the FPFTY?

A. Yes. I am responding to PAWC witness, Mr. Hibbard but mainly for clarification purposes.

Q. What is Mr. Hibbard's testimony to which you are responding?

A. On page 15 of his rebuttal testimony (PAWC St. 16-R), Mr. Hibbard states that "no one in this case has challenged these investments as not used and useful for reliable water and wastewater services, and no one has alleged that the Company's investments or management of construction projects has been imprudent." In terms of "these investments" I believe Mr. Hibbard is referring to the plant additions in excess of $1 billion through the FPFTY ending June 30, 2025 that PAWC witness Aiton had described in his direct testimony.

Q. What is your response to Mr. Hibbard's statement?

A. I agree with Mr. Hibbard's statement. Even though the OCA has proposed to remove the rate base and related expense claims associated with the six acquisitions, the OCA has not proposed to exclude any of the utility plant additions in excess of $1 billion that PAWC has planned through the FPFTY ending June 30, 2025, to improve PAWC's existing water and wastewater utility operations. However, I believe additional clarification is required given the OCA's recommendations regarding the exclusion of the acquisitions and concerning PAWC's presentation of its revenue requirement in PAWC's Exhibit 3-A.

Q. Please explain.

A. PAWC witness Aiton stated in his direct testimony (PAWC St. 3) that PAWC has reflected plant additions in excess of $1 billion through the FPFTY ending June 30, 2025. Specifically, as discussed on page 9 of his direct testimony, Mr. Aiton stated that for the FTY ending June 30, 2024, the Company included gross utility plant

additions totaling $742,020,740. For the FPFTY ending June 30, 2025, the Company included gross utility plant additions totaling $797,874,110, for overall gross utility plant additions totaling $1,539,894,850 through June 30, 2025, the end of the FPFTY.

Q. Were the gross plant additions totaling $1,539,894,850 offset by projected retirements?

A. Yes. Page 9 of Mr. Aiton's direct testimony indicates that the gross plant additions totaling $1,539,894,850 are offset by projected retirements in the FTY and the FPFTY totaling $253,536,706. After consideration of the projected retirements, the increase in utility plant through June 30, 2025 reflected by PAWC totals $1,286,358,144.

Q. Were you able to break out the Company's proposed utility plant additions and projected retirements between PAWC's Water Operations and Wastewater Operations?

A. Yes. I was able to break out the Company's gross utility plant additions and projected retirements between PAWC's Water Operations and Wastewater Operations. Using the information shown on PAWC's Exhibit 3-A, I compiled the gross plant additions and projected retirements as shown in the following table:

PAWC's Projected Utility Plant Additions Before and After Associated Projected Retirements

Line No.	Description	FTY Ending 6/30/2024	FPFTY Ending 6/30/2025	Total
		(A)	(B)	(C)
	Gross Plant Additions			
1	Water Operations	$ 615,681,581	$ 676,288,188	$ 1,291,969,769
2	Wastewater SSS General Operations	$ 43,782,754	$ 46,408,989	$ 90,191,743
3	BASA Wastewater Operations	$ 839,400	$ 15,405,600	$ 16,245,000
4	Brentwood Wastewater Operations	$ 227,010	$ 3,484,490	$ 3,711,500
5	CSS Wastewater Operations	$ 81,489,995	$ 56,286,842	$ 137,776,837
6	Total Gross Additions	$ 742,020,740	$ 797,874,110	$ 1,539,894,850
	Retirements			
7	Water Operations	$ (102,089,453)	$ (125,966,017)	$ (228,055,470)
8	Wastewater SSS General Operations	$ (4,231,348)	$ (5,444,755)	$ (9,676,103)
9	BASA Wastewater Operations	$ (91,206)	$ (1,085,468)	$ (1,176,674)
10	Brentwood Wastewater Operations	$ (22,494)	$ (358,189)	$ (380,683)
11	CSS Wastewater Operations	$ (8,459,041)	$ (5,788,735)	$ (14,247,776)
12	Total Retirements	$ (114,893,542)	$ (138,643,164)	$ (253,536,706)
	Net Plant Additions			
13	Water Operations	$ 513,592,128	$ 550,322,171	$ 1,063,914,299
14	Wastewater SSS General Operations	$ 39,551,406	$ 40,964,234	$ 80,515,640
15	BASA Wastewater Operations	$ 748,194	$ 14,320,132	$ 15,068,326
16	Brentwood Wastewater Operations	$ 204,516	$ 3,126,301	$ 3,330,817
17	CSS Wastewater Operations	$ 73,030,954	$ 50,498,107	$ 123,529,061
18	Total Net Plant Additions	$ 627,127,198	$ 659,230,945	$ 1,286,358,144
	Source: Exhibit 3-A, pages 26, 97, 146, 179 and 218			

As shown in the above table, PAWC's projected utility plant additions and retirements tie to the amounts that were discussed on page 9 of Mr. Aiton's direct testimony.

Q. Does the revenue requirement proposed by the Company in PAWC's Exhibit 3-A reflect in FPFTY utility plant in service the purchase prices of the six not yet completed acquisitions?

A. Yes. PAWC's revenue requirement as presented in PAWC's Exhibit 3-A reflects in "utility plant in service" in the FPFTY the purchase prices of each of the six not yet completed acquisitions.

Q. Does the $1.286 billion amount of proposed utility plant additions that Mr. Aiton references in his direct testimony include the purchase prices of the six acquisitions?

A. No. The $1.286 billion amount of proposed utility plant additions that Mr. Aiton references in his direct testimony does not include the purchase prices for utility plant associated with the six acquisitions.

Q. Please explain.

A. Based on the manner in which PAWC presented its utility plant in service on Exhibit 3-A for Water and Wastewater Operations, from which the information in the above table was compiled, the amounts shown in the above table do not include the purchase price for any of the acquisitions that PAWC proposes to include in FPFTY rate base as utility plant in service. For example, Exhibit 3-A, page 26 (*i.e.*, FTY and FPFTY plant in service for Water Operations) from PAWC's filing includes separate columns for the purchase prices related to the Audubon Water and Farmington Township Water acquisitions.[8] Specifically, the purchase price for Audubon Water (shown in a separate column on Exhibit 3-A) is $9.187 million, and the purchase price for Farmington Water (also shown in a separate column on Exhibit 3-A) is $5.257 million.[9] However, these amounts are not reflected in the amounts for PAWC's utility plant additions mentioned in Mr. Aiton's direct

[8] The purchase price amounts included in plant in service do not reflect what is included in rate base for the acquisitions as such amounts are offset by accumulated depreciation and CIAC.
[9] Exhibit 3-A, page 97 shows separate columns for the purchase prices related to Farmington Township Wastewater and Sadsbury Wastewater. Exhibit 3-A, pages 146 and 179 show separate columns for the purchase prices related to BASA and Brentwood, respectively.

testimony at page 9, and thus are not included in the $1.286 billion of plant additions net of retirements through June 30, 2025 shown in the above table.

Q. Does Mr. Aiton's referenced $1.286 billion of utility plant additions, as shown in the above table, include projected post-acquisition utility plant additions for any of the Company's proposed acquisitions?

A. Yes, but only as it relates to BASA and Brentwood. In its response to OCA 21-008(a), the Company indicated that the FPFTY amount of $15.406 million shown in column B, line 3 in the above table reflects post-acquisition costs for the BASA acquisition. In PAWC's response to OCA 21-003, the Company indicated that the FPFTY amount of $3.484 million shown in column B, line 4 in the above table reflects post-acquisition costs for the Brentwood acquisition. According to PAWC's responses to OCA 12-008, OCA 12-010 and OCA 12-012, there are no post-acquisition costs for Audubon Water, Farmington Township Water and Wastewater, or Sadsbury Township Wastewater included in the Company's proposed FPFTY plant in service.[10]

Q. How were PAWC's projected post-acquisition utility plant additions for BASA and Brentwood treated in the OCA's revenue requirement presentation?

A. The OCA's revenue requirement presentation on Exhibits LA-1 and LA-2 filed with my direct testimony removes PAWC's projected costs for BASA and Brentwood,

[10] See the responses to OCA 12-008, OCA 12-010 and OCA 12-012, which are included in Exhibit LA-3, which was attached to my Direct Testimony.

which includes the removal of PAWC's projected post-acquisition utility plant additions for those systems.

Q. Please summarize how much of the FTY and FPFTY plant additions discussed in Mr. Aiton's direct testimony that total $1.540 billion before retirements and $1.286 billion after retirements relate to the not yet completed acquisitions.

A. The only amounts included in the $1.540 billion of FTY and FPFTY plant additions that relate to the acquisitions are the amounts shown for BASA and Brentwood in the above table, which are (1) $839,400 and $15.406 million for BASA in the FTY and FPFTY for a total of $16.245 million before retirements, respectively, and (2) $227,010 and $3.484 million for Brentwood in the FTY and FPFTY for a total of $3.712 million before retirements, respectively. As previously noted, each acquisition purchase price is shown in a separate column on the respective pages of PAWC's Exhibit 3-A, and thus has not been included in the $1.540 billion or the $1.286 billion utility plant addition amounts.

Q. What is the dollar impact of your recommendation to exclude the Brentwood and BASA post-acquisition plant additions?

A. It reduces PAWC's proposed $1.286 billion amount of plant additions net of retirements through June 30, 2025 by $18.89 million. Thus, with the OCA's recommendations to remove the acquisitions, the increase in utility plant additions through the end of the FPFTY June 30, 2025, is $1.267 billion for PAWC's existing Water Operations, Wastewater SSS General Operations, and CSS Wastewater Operations.

IV. RESPONSE CONCERNING CONTESTED ADJUSTMENTS

Organization of Surrebuttal Testimony Addressing Contested Issues

Q. How is your surrebuttal testimony organized to address these issues?

A. My surrebuttal addresses the issues that are being contested by PAWC generally in the same order that such issues were addressed in my direct testimony. As noted in my direct testimony, a FPFTY ending June 30, 2025 is being used to determine PAWC's revenue requirement. I address revenue requirement issues with respect to PAWC's Water and Wastewater operations.

Acquisition – Audubon Water

Q. Are you revising your adjustment to remove the costs related to the Audubon Water acquisition from rate base as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the costs related to the not-yet-completed Audubon acquisition be excluded from the FPFTY in the current proceeding.

Acquisition – Farmington Township Water

Q. Are you revising your adjustment to remove the costs related to the Farmington Township Water acquisition from rate base as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the costs related to the not-yet-completed Farmington Township Water acquisition be excluded from the FPFTY in the current proceeding.

Acquisition – Farmington Township Wastewater

Q. Are you revising your adjustment to remove the costs related to the Farmington Township Wastewater acquisition from rate base as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that that the costs related to the not-yet-completed Farmington Township Wastewater acquisition be excluded from the FPFTY in the current proceeding.

Acquisition – Sadsbury Township Municipal Authority Wastewater

Q. Are you revising your adjustment to remove the costs related to the Sadsbury Township Wastewater acquisition from rate base as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the costs related to the not-yet-completed Sadsbury Township Wastewater acquisition be excluded from the FPFTY in the current proceeding.

Cash Working Capital

Q. How did the Company respond to your adjustment to cash working capital?

A. Pages 6-7 of Company witness Stacey Gress's rebuttal testimony (PAWC St. 4-R) states that while she agrees that cash working capital needs to be adjusted for the Company's updates to labor expense and rate case expense, the Company disagrees with most of OCA's adjustments to expenses, and thus disagrees with the amounts my adjustments to cash working capital for the Company's Water and Wastewater Operations.

Q. Are you revising your adjustments to cash working capital for Water and Wastewater Operations as a result of PAWC's rebuttal?

A. No. Since no cash expenses are being revised at this time in OCA's revenue requirement presentation, I am not revising my adjustments to cash working capital.

Acquisition Revenues and Expenses – Audubon Water Company

Q. Are you revising your adjustment to remove the revenues and expenses related to the Audubon Water acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the revenues and costs related to the not-yet-completed Audubon acquisition be excluded from the FPFTY in the current proceeding.

Acquisition Revenues and Expenses – Farmington Township – Water

Q. Are you revising your adjustment to remove the revenues and expenses related to the Farmington Township Water acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the revenues and costs related to the not-yet-completed Farmington Township Water acquisition be excluded from the FPFTY in the current proceeding.

Acquisition Revenues and Expenses – Farmington Township Wastewater

Q. Are you revising your adjustment to remove the revenues and expenses related to the Farmington Township Wastewater acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the revenues and costs related to the not-yet-completed

Farmington Township Wastewater acquisition be excluded from the FPFTY in the current proceeding.

Acquisition Revenues and Expenses – Sadsbury Township Municipal Authority

Q. Are you revising your adjustment to remove the revenues and expenses related to the Sadsbury Wastewater acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the revenues and costs related to the not-yet-completed Sadsbury Township Wastewater acquisition be excluded from the FPFTY in the current proceeding.

Depreciation Expense – Audubon Water

Q. Are you revising your adjustment to remove the depreciation expense related to the Audubon Water acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the depreciation expense related to the not-yet-completed Audubon acquisition be excluded from the FPFTY in the current proceeding.

Depreciation Expense – Farmington Township Water

Q. Are you revising your adjustment to remove the depreciation expense related to the Farmington Township Water acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the depreciation expense related to the not-yet-completed Farmington Township Water acquisition be excluded from the FPFTY in the current proceeding.

Depreciation Expense – Farmington Township Wastewater

Q. Are you revising your adjustment to remove the depreciation expense related to the Farmington Township Wastewater acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the depreciation expense related to the not-yet-completed Farmington Township Wastewater acquisition be excluded from the FPFTY in the current proceeding.

Depreciation Expense – Sadsbury Township Municipal Authority

Q. Are you revising your adjustment to remove the depreciation expense related to the Sadsbury Wastewater acquisition as a result of PAWC's rebuttal?

A. No. As discussed in Section III of my surrebuttal testimony, I am still recommending that the depreciation expense related to the not-yet-completed Sadsbury Township Wastewater acquisition be excluded from the FPFTY in the current proceeding.

Uncollectibles Expense

Q. How did the Company respond to your adjustment to uncollectibles expense?

A. On pages 2-3 of Company witness J. Cas Swiz's rebuttal testimony (PAWC St. 8-R), the Company disagrees with my recommendation of using a three-year historic average ratio of net write-offs to calculate going level uncollectibles expense. Rather, Mr. Swiz maintains that a two-year percentage of net write-offs ending June 30, 2023, which he states eliminates the impacts of the Covid-19 pandemic from July

1, 2020 through June 30, 2021, should be used to calculate going level uncollectibles expense.

Q. Did you include the period July 1, 2020 through June 30, 2021 in the calculation of your recommended three-year average historic ratio?

A. No. As shown on Exhibit LA-2, Schedule C-9, which was filed in conjunction with my Direct Testimony, my recommended three-year average historic ratio was calculated based on the following periods: (1) July 1, 2019 through June 30, 2020, (2) July 1, 2021 through June 30, 2022, and (3) July 1, 2022 through June 30, 2023. To eliminate the impacts of the Covid-19 pandemic on customer collections, the period July 1, 2020 through June 30, 2021 should not be used in the calculation of going level Uncollectibles Expense, and I did not use that period.

Q. Did Mr. Swiz discuss an alternative calculation for determining going level Uncollectibles Expense in his rebuttal?

A. Yes. On page 3 of his rebuttal, Mr. Swiz states that if the Commission wishes to maintain historical practice and utilize a three-year average ratio of net write-offs for determining going level Uncollectibles Expense, the Company suggests removing the 12-month period ending June 30, 2021 from the three-year average calculation and instead use the three-year average shown in the following table:

Description	7-1-2018/ 6/30/2019	7-1-2021/ 6/30/2022	7-1-2022/ 6/30/2023	3-Year Average
Net Write-Off Activity	$ 8,505,570	$ 10,174,929	$ 9,374,665	$ 9,351,721
Total Billed Revenues	$ 683,968,732	$ 775,900,531	$ 886,675,101	$ 782,181,455
Average Write-Off Percentage	1.244%	1.311%	1.057%	1.196%

Source: Table 1 on page 3 of Swiz Rebuttal Testimony

As shown in the above table, the Company's alternative three-year average is 1.196 percent, which is calculated based on the following periods: (1) July 1, 2018 through June 30, 2019, (2) July 1, 2021 through June 30, 2022, and (3) July 1, 2022 through June 30, 2023. Mr. Swiz does not explain why the Company's alternative three-year average calculation did not use the 12 months ended June 30, 2020 as I did in my adjustment shown on Exhibit LA-2, Schedule C-9, and instead attempted to use older information from the 12 months ended June 30, 2019.

Q. Are you revising your adjustment to Uncollectibles Expense as a result of PAWC's rebuttal?

A. No. Three years has historically been used by PAWC for calculating pro forma Uncollectibles Expense. Averaging the annual write-off information using the 12 month periods ended June 30, 2020, June 30, 2022 and June 30, 2023, is reasonable in the context of the current PAWC rate case. Mr. Swiz's attempt to substitute older data for the 12 month period ended June 30, 2019 for the 12 month period ended June 30, 2020 to set a higher uncollectible percentage is not an improvement to my calculation and should be rejected.

Interest Synchronization

Q. How did the Company respond to your interest synchronization adjustment?

A. On page 7 of Company witness Stacey Gress's rebuttal testimony (PAWC St. 4-R), the Company disagrees with OCA's adjustments to rate base and the weighted cost of debt, and states that my adjustment to income tax expense for interest synchronization should be rejected.

Q. Does the use of a different rate base or weighted cost of debt have an impact on interest synchronization?

A. Yes. The interest synchronization adjustment is the result of applying the weighted cost of debt to the adjusted rate base. The resulting amount of interest is reflected for ratemaking purposes as the "synchronized" interest deduction used to compute income tax expense.

Q. With regard to the weighted cost of debt that is reflected in your interest synchronization adjustment shown on Exhibit LA-2, Schedule C-14, which was filed in conjunction with your Direct Testimony, does OCA witness Garrett continue to support his recommendations regarding PAWC's weighted cost of debt for its Water and Wastewater Operations in his surrebuttal testimony?

A. Yes. In his surrebuttal testimony, OCA witness Garrett continues to support his recommendations regarding PAWC's weighted cost of debt for its Water and Wastewater Operations.

Q. Please discuss the appropriateness of interest synchronization as a regulatory method to assure proper matching of various components that are used to compute a utility's revenue requirement.

A. The interest synchronization is a standard ratemaking approach used to assure that the amount of income taxes allowed for ratemaking purposes is properly matched with the rate base and weighted cost of debt. To not make the interest synchronization adjustment within the context of OCA's overall revenue requirement presentation would result in those elements – income taxes, rate base

and the weighted cost of debt – not matching. The interest synchronization method is appropriate and well-established. In adopting the OCA's proposed rate base and weighted cost of debt, the Commission should use its interest synchronization adjustment for purposes of calculating the income tax allowance for each PAWC utility in the current rate case.

Insurance Other Than Group

Q. How did PAWC respond to your adjustment to Insurance Other Than Group?

A. As discussed in the rebuttal testimony of Company witness O'Malley at pages 7-8, PAWC disagrees with my adjustment to Insurance Other Than Group in which I used the actual percentage change from the test year ended June 30, 2023 rather than the Company proposed five-year average percentage change, which was calculated based on the 12 month periods from June 30, 2019 through June 30, 2023. Ms. O'Malley states that it is common for averages to be used to normalize costs that fluctuate from year to year to forecast them for ratemaking purposes.

Q. Are you revising your adjustment to Insurance Other Than Group as a result of PAWC's rebuttal?

A. No. While I generally agree that averages can be used to normalize costs, consideration should also be given to trends and to current information. As discussed in my direct testimony, the annual percentage change for the 12-month ending periods of June 30, 2019, June 30, 2021, and June 30, 2022, were abnormally high or low as compared to the 12-month ending periods June 30, 2020, and the HTY ended June 30, 2023, which is the most recent 12 month period ending June 30 for which actual information is available. Consequently, I continue to recommend

that the HTY percentage change be used to calculate Insurance Other Than Group for the FPFTY.

Depreciation Expense – Water Utility

Q. How did PAWC respond to your adjustment to Depreciation Expense for the Water Utility?

A. On pages 1-2 of his rebuttal testimony (PAWC St 11-R), Company witness Spanos states that my adjustment to Depreciation Expense related to the following three water utility accounts: (1) Account 304.15 – Other Water Source Structures, (2) Account 331 – Mains and Accessories, and (3) Account 335 – Fire Hydrants uses the life parameters from a service life study completed as of December 31, 2016 ("2016 Service Life Study") when instead the life parameters from PAWC's 2021 Service Life Study should have been utilized. Specifically, Mr. Spanos states that the standard practice in Pennsylvania is for each regulated utility to conduct a life service study every five years and that for PAWC, the 2021 Service Life Study was completed as of December 31, 2021 and filed in August 2022.

Q. Has PAWC made substantial changes to its plant investment subsequent to the 2016 Service Life Study being conducted?

A. On page 5 of his rebuttal, Mr. Spanos states that PAWC had made significant acquisitions and considerable amounts of capital improvements to all of its asset classes over the last 5-6 years and that such investments are expected to continue going forward.

Q. Did PAWC identify each water utility acquisition that it has made since the 2016 Gannett Fleming depreciation rate study?

A. Yes. PAWC identified each water utility acquisition that is has made since the 2016 Gannett Fleming depreciation rate study. Those water utility acquisitions are summarized in the table below:

Water Utility Acquisition	Docket Number	Closing Date
Turbotville Water	A-2018-3004191	7/24/2019
Steelton Borough Authority	A-2019-3006880	10/9/2019
Winola Water Company	P-2018-3006216, C-2018-2644592, I-2018-3006498	12/17/2020
Valley Township Water	A-2020-3019859	11/19/2021
SLIBCO Inc. (GCC) Water	A-2020-3023369	11/19/2021
Creekside (Lancaster Home Builders) Water System	A-2022-3031020	6/21/2023
Source: OCA 35-002		

According to the response to OCA 35-002(b), of the water utility acquisitions listed in the above table, the Steelton Borough Authority ("Steelton") and Valley Township Water ("Valley Township") acquisitions were acquired pursuant to Section 1329. As it relates to the depreciation rates, depreciation lives and survivor curves proposed by PAWC's sponsored witness in the Section 1329 acquisitions (*i.e.*, Steelton and Valley Township) listed above, the Company's response to OCA 35-002(c) stated:

> The Company and its witness in these § 1329 water utility acquisition cases did not propose any depreciation lives, depreciation rates or survivor curves as part of the acquisition proceedings. The independent appraiser utilized depreciation lives, depreciation rates and survivor curves in order to compute their appraisal of each system.

Notably, the depreciable lives for at least three water utility plant accounts that the appraiser sponsored by PAWC used in the Valley Township Water Section 1329

acquisition case, Mr. Jerome Weinert, are consistent with and support the useful lives that I have recommended by used in the current PAWC rate case for those accounts, rather than the significantly shortened lives proposed by Mr. Spanos.

Q. Was Mr. Spanos aware of the depreciation lives, depreciation rates and survivor curves that were proposed by PAWC in Docket No. A-2020-3019859, the Section 1329 acquisition case involving the Valley Township Water System?

A. Yes. PAWC's response to OCA 35-003[11] stated that Mr. Spanos is aware of the depreciation lives, depreciation rates, and survivor curves that were proposed by PAWC in Docket No. A-2020-3019859, the Section 1329 acquisition case involving the Valley Township Water System:

> Mr. Spanos is aware of how the average service lives and survivor curves were determined by Valley Township Water System. The average lives and survivor curves were based on a range of lives and curves utilized by other water companies, including PAWC, in the region. Mr. Spanos is also aware of PAWC's sponsored witness average lives, however, he was not directly involved in the determination of those parameters. However, neither of these life and curve parameters are consistent with how depreciable lives and curves should be determined for the assets in the rate case because there are different components for determining the future life characteristics under PAWC management, as well as different depreciation methods and procedures for depreciating the remaining net plant.

[11] The response to OCA 35-003 is included in Exhibit LA-7 attached to my surrebuttal testimony.

Q. What proposed/used depreciation lives, depreciation rates and survivor curves did the PAWC's sponsored witness in Docket No. A-2020-3019859 use for each of the following water utility plant accounts: (1) Water Treatment Plant – Large Structures, (2) Distribution-Mains-Ductile Iron, and (3) Fire Hydrants?

A. According to the response to OCA 35-004,[12] the depreciation lives, depreciation rates and survivor curves that PAWC's witness sponsored in Docket No. A-2020-3019859 for the referenced water utility plant accounts are as follows:

- Account 354.40 , 304.3 – Water Treatment Plant – Large Structures: 60 year normal service life, 63.73 year total life expectancy, and R2.5 survivor curve shape.
- Account 363.20 , 331.4 – Distribution-Mains-Ductile Iron: 110 year normal service life, 112.58 year total life expectancy and R2.0 survivor curve shape.
- Account 363.20, 335.00 – Fire Hydrants: 75 year normal service life, 76.89 total life expectancy and R2.5 survivor curve shape.

Q. How much water utility plant in service has PAWC proposed as of (1) the HTY ended June 30, 2023, (2) December 31, 2023, (3) the FTY ending June 30, 2024, and (4) the FPFTY ending June 30, 2025 for those three water utility plant accounts?

A. According to the response to OCA 35-005,[13] for the period ending dates referenced, the amount of water utility plant in service that PAWC has proposed for the three water utility plant accounts are as follows:

[12] The response to OCA 35-004 is included in Exhibit LA-7 attached to my surrebuttal testimony.
[13] The response to OCA 35-005 is included in Exhibit LA-7 attached to my surrebuttal testimony.

Account Number	Account Title	Estimated Book Cost 12/31/2023	Estimated Book Cost 6/30/2024	Estimated Book Cost 6/30/2025
304.30	Purification Buildings	$ 341,412,320	$ 341,634,694	$ 341,634,694
331.00	Mains and Accessories	$ 3,494,952,338	$ 3,629,756,124	$ 3,841,993,932
335.00	Fire Hydrants	$ 147,080,419	$ 152,728,748	$ 163,733,934
Source: OCA 35-005				

In its response to OCA 35-005, PAWC also stated that accounts 354.40 and 363.20 are wastewater utility plant accounts and that there is no associated water utility plant in these accounts.

Q. What specific depreciation rates has PAWC used and how much depreciation expense has PAWC reflected as of (1) the HTY ended June 30, 2023, (2) the FTY ending June 30, 2024, and (3) the FPFTY ending June 30, 2025 for those three water utility plant accounts?

A. According to the response to OCA 35-006,[14] for the period ending dates referenced, the specific depreciation rates and depreciation expense that PAWC has proposed for each of the referenced water utility plant accounts is as follows:

Account Number	Account Title	HTY 6/30/2023 Rate	HTY 6/30/2023 Expense	FTY 6/30/2024 Rate	FTY 6/30/2024 Expense	FPFTY 6/30/2025 Rate	FPFTY 6/30/2025 Expense
304.30	Purification Buildings	2.35	$ 7,848,433	2.37	$ 8,202,208	2.38	$ 8,684,270
331.00	Mains and Accessories	1.52	$ 46,324,768	1.53	$ 50,981,834	1.54	$ 54,371,951
335.00	Fire Hydrants	2.28	$ 3,065,466	2.27	$ 3,298,422	2.26	$ 3,532,857
Source: OCA 35-006							

As shown in the above table, the depreciation rates that PAWC used for each of the referenced accounts were relatively consistent in the noted periods.

[14] The response to OCA 35-006 is included in Exhibit LA-7 attached to my surrebuttal testimony.

Q. How have the useful lives for those three water utility accounts changed from PAWC's 2016 depreciation rate study, to the useful lives used by PAWC's witness in the Valley Township water utility acquisition Section 1329 case (A-2020-3019859), to what PAWC is currently proposing in this rate case?

A. The following table shows the respective estimated service lives for utility plant in those three accounts in each of those three PAWC filings:

		PAWC Proposed Service Lives				
			Service Lives Used PAWC's Sponsored Witness in Docket No.			OCA Proposed Service Life
Account Number	Account Title	2016 Service Life Study Survivor Curve	A-2020-3019859 Valley Township § 1329 Acquisition	PAWC Current Case Proposed Service Life		In PAWC's Current Rate Case
304.30	Purification Buildings	60-S0.5	60-R2.5	50-S0.5		60-S0.5
	Difference in Years		0	(10)		
331.00	Mains and Accessories	110-R2	110-R2.0	90-R2		110-R2
	Difference in Years		0	(20)		
335.00	Fire Hydrants	75-R2	75-R2.5	60-R2		75-R2
	Difference in Years		0	(15)		

Q. Is there a drastic shortening of the estimated useful lives for each of those PAWC water utility accounts that PAWC has used to compute depreciation expense in the current rate case?

A. Yes. For the Purification Buildings account, the service life proposed by PAWC in the current case is 10 years shorter than the life used in those previous PAWC filings.

For the Mains and Accessories account, the service life proposed by PAWC in the current case is 20 years shorter than the life used in those previous PAWC filings.

For the Fire Hydrants account, the service life proposed by PAWC in the current case is 15 years shorter than the life used in those previous PAWC filings.

Q. What is the concern about PAWC's proposal to use significantly shortened estimated useful lives for those three water utility plant accounts?

A. There are two concerns. One concern is that PAWC has used drastically different and much shorter service lives for the three water utility plant accounts noted above. The second concern is that by drastically shortening the useful lives, that causes the depreciation rate and the depreciation expense to be significantly higher. Because depreciation expense is a component of the Company's cost of providing water utility service, the increases in that expense that PAWC has proposed in its current rate case related to the significant shortening of the expected useful lives of those water utility plant assets are contributing to the rate increases that PAWC has requested.

Q. Are you revising your adjustment to Water Utility Depreciation Expense based on a review of PAWC's rebuttal and of the additional information noted above on the PAWC-sponsored use of estimated useful lives for those three water utility plant accounts?

A. No. Based on a review of PAWC's rebuttal testimony and the useful life information for those three water utility plant accounts discussed above, I do not agree with PAWC's proposal to significantly increase Depreciation Expense in the current rate case by shortening the expected lives of those water utility assets by 10, 20 and 15 years, respectively.

Lead Service Line Inventory Plant Account Reclassification

Q. Has PAWC corrected the classification of the water utility plant account for the rate base item Lead Service Line Inventory?

A. Yes. As discussed on pages 8-9 of her rebuttal testimony, Company witness Gress, citing the Company's response to OCA 24-003[15], states that the Company identified that Project No. I24-610022 PA Lead Service Line Inventory, in the amount of $11,163,718, was incorrectly classified in utility plant account 348 – Other Tangible Equipment in PAWC's filing, and the Company has reclassified this item into utility plant account 340.3 – Computer Software.

Q. Does the reclassification of that Lead Service Line Inventory from utility plant account 348 to 340.3 impact Depreciation Expense and Accumulated Depreciation?

A. Yes. The reclassification of Lead Service Line Inventory from utility plant account 348 and into account 340.3 impacts Depreciation Expense and Accumulated Depreciation. Specifically, on page 8 of her rebuttal, Ms. Gress states that the reclassification from utility plant account 348 to utility plant account 340.3 results in an increase to FPFTY Depreciation Expense in the amount of $1,660,367 for Water Operations. In addition, Ms. Gress states that this reclassification results in an increase to FPFTY Accumulated Depreciation (thus decreasing rate base) in the amount of $1,258,893 for PAWC's Water Operations.

[15] The response to OCA 24-003 is included in Exhibit LA-7 attached to my surrebuttal testimony.

Q. Did PAWC provide calculations that show how the $1,660,367 increase to Depreciation Expense and $1,258,893 increase to Accumulated Depreciation were derived?

A. Yes. The Company provided where those calculations can be found in its response to OCA 35-007.[16]

Q. Do you agree with PAWC's correction of the classification of the Lead Service Line Inventory from utility plant account 348 to utility plant account 340.3?

A. Yes. I agree with the Company's reclassification of Project No. I24-610022 PA Lead Service Line Inventory from utility plant account 348 to utility plant account 340.3. At this time, I am not updating my recommended revenue requirement for PAWC's Water Operations to reflect this reclassification; however, I do agree with PAWC that the related adjustments identified above for water utility Depreciation Expense and Accumulated Depreciation should be made.

Stock-Based Compensation Expense – AWW Executives

Q. How did PAWC respond to your adjustment to remove expenses related to the stock-based compensation associated with the Company's Long-Term Performance Plan ("LTPP") for American Water Works top executive officers?

A. PAWC witness Runzer's rebuttal testimony (PAWC St. 2-R) at page 9 claims that the Company's total compensation expense for its employees, including that of top American Water executives, is reasonable and market-based and should therefore be allowed. Mr. Runzer's rebuttal testimony at pages 4-7 asserts that the LTPP consists

[16] The response to OCA 35-007 is included in Exhibit LA-7 attached to my surrebuttal testimony.

of restricted stock units (RSUs) and performance stock units (PSUs). He acknowledges that RSUs are not based on financial metrics. He states that PSUs are directly tied to the parent company, AWW's financial performance and that RSUs are based on continued employment with the Company rather than upon customer-related goals such as drinking water quality or customer satisfaction. (PAWC St. 2-R at 4).

Q. Are you revising your position on whether ratepayers should be required to pay for the Company's stock-based compensation for top American Water Works executives as a result of PAWC's rebuttal?

A. No. I continue to recommend that shareholders, and not ratepayers, bear the costs of the stock-based compensation for the parent company's top executives. The purpose of those stock-based incentive plans is to align the interests of the participants with those of AWW shareholders. As PAWC witness Runzer has conceded, the stock-based compensation expense referred to as the LTPP consists of RSUs and PSUs. Mr. Runzer acknowledges that performance under the LTPP is stock-based. Receiving American Water Works stock puts the recipients in the same position as other AWW stockholders. Consequently, this stock-based compensation should be paid for by stockholders, not by ratepayers.

Additionally, the PSUs are comprised of two components, Total Shareholder Return and adjusted compounded earnings per share, both of which relate to AWW shareholder returns and earnings for AWW's common shareholders. As such, the stock-based compensation in the form of PSUs should be paid for by the stockholders who benefit from the total shareholder return and earnings per share on

AWW's common stock. It is unreasonable to charge this stock-based compensation expense to ratepayers. For the reasons stated in my direct testimony and above, the portion of stock-based compensation paid to top American Water Works executives and charged from AWW to PAWC should be removed from operating expenses.

AWW Executives – Dividend Equivalents

Q. How did PAWC respond to your adjustment to remove expenses related to the executive perquisites associated with Dividend Equivalents for top American Water Works executives?

A. PAWC disagrees with my adjustment to remove executive perquisites associated with Dividend Equivalents. Company witness Runzer, at page 9 of his rebuttal testimony, provides the same arguments as he did with regard to my adjustment to remove stock-based compensation for top AWW executives.

Q. Are you revising your position on whether ratepayers should be required to pay for the executive perquisites in the form of Dividend Equivalents for top American Water Works executives as a result of PAWC's rebuttal?

A. No. As discussed in my direct testimony, dividend equivalents, which are tied to PSUs and RSUs, are paid in cash at such time, if ever, when the executive compensation provided in the form of PSUs or RSUs are converted to American Water Works common stock. I maintain that charging the Dividend Equivalents portion of all Other Compensation received by AWW's top executives to PAWC's ratepayers is not reasonable, nor does it promote reliable and effective public utility service. This is an additional executive perquisite that relates to stock-based compensation and is beyond the normal compensation paid to PAWC's own, non-

management employees. It is not reasonable to charge such parent company executive perquisite costs to ratepayers.

Call Center Expense

Q. Are you revising the adjustment to remove Call Center Expense as a result of PAWC's rebuttal?

A. No. As discussed in my direct testimony, this adjustment is based on the recommendation of OCA witness Barbara Alexander to eliminate expenses totaling $3.082 million related to the third party call centers that have routinely failed to meet reasonable call performance standards. As discussed in her surrebuttal testimony (OCA Statement 6-SR), Ms. Alexander has not changed her position and continues to recommend the elimination of third party call center expenses from PAWC's FPFTY revenue requirement.

Arrearage Management Plan (AMP) Credits – Uncollectible Expense

Q. Are you revising the adjustment to reduce uncollectibles expense as a result of PAWC's rebuttal?

A. No. As discussed in my direct testimony, this adjustment is based on the recommendation of OCA witness Roger C. Colton, in which Mr. Colton recommended that PAWC's addition of dollars to uncollectibles to reflect AMP credits should be reduced by the percentage of Bill Discount Program (BDP) dollars already historically included in uncollectibles. As discussed in his surrebuttal testimony (OCA Statement 5-SR), Mr. Colton has not changed his position with regard to his recommendation to reduce PAWC's FPFTY expense by $2.162 million related to the Company's proposed AMP.

American Water Resources – Revenues

Q. Did Ms. Everette respond to OCA testimony concerning American Water Resources?

A. Yes. Ms. Everette on page 21 of her rebuttal states that the PAWC's $659,624 miscellaneous revenue claim related to revenues it receives from American Water Resources for billing and marketing services that PAWC provides to this entity should be removed from PAWC's revenue requirement in the event the Commission determines that PAWC is not allowed to continue to bill for AWR in this proceeding.

Q. Are you revising your testimony on American Water Resources?

A. No. Ms. Alexander recommended in direct and maintains her recommendation in surrebuttal that the Commission should open an investigation into PAWC's existing billing and marketing arrangement with American Water Resources and suspend new customer enrollments while such investigation is ongoing. Further, Ms. Alexander's recommendation is that existing PAWC customers should not be harmed if her recommendation for an investigation is adopted. As stated in my direct testimony, I did not remove PAWC's $659,624 miscellaneous revenue that is associated with PAWC's billing and marketing arrangement with American Water Resources. As a general matter, amounts that a utility has been receiving for other revenue offset the amount of revenue requirement that is to be recovered in the utility's base rates. This is essentially the opposite of utility expense claims that add to the overall revenue requirement to be recovered in rates. The $659,624 revenue from AWR is being received by PAWC and is fully substantiated by PAWC for the FPFTY and reflecting that miscellaneous revenue benefits consumers by offsetting

the Company's proposed base rate revenue requirement. In rebuttal, no PAWC witness testified that PAWC should stop the billing and marketing arrangement with American Water Resources based on the concerns stated in Ms. Alexander's direct testimony. Hence, if the Commission adopts Ms. Alexander's recommendation to open an investigation, it would be speculative to say what the outcome of that Commission investigation would be, how it would impact rates, or when the outcome will occur. Given this uncertainty and given that the amount of miscellaneous revenue that PAWC has been collecting from AWR is fully substantiated and benefits consumers, I have not changed my position.

V. NEW PENSION AND OPEB EXPENSE TRACKER AND PRODUCTION COST TRACKER

Q. How did PAWC respond to your recommendation that PAWC's proposed new Pension and OPEB Expense Tracker and Production Cost Tracker be rejected?

A. PAWC witness Swiz's rebuttal testimony at pages 4-6 continues to advocate for having both a Pension/OPEB Tracker and a Production Cost Tracker. Mr. Swiz states at page 5 of his rebuttal that the Company is requesting defer Pension/OPEB and Production costs for accounting purposes and is not requesting recovery of these amounts at this time. He states that Pension, OPEB and production costs will still be subject to a detailed ratemaking review in the Company's next base rate case.

Q. Please respond.

A. As discussed in my direct testimony, isolating and tracking the Pension and OPEB expenses as well as Production costs for eventual recovery via a special rate recovery mechanism or in future base rates, runs counter to a fundamental principle of ratemaking – that a utility should be afforded the opportunity to recover its costs of providing service but not guaranteed such recovery. This is particularly so for PAWC in this case given that the Company is utilizing a FPFTY that anticipates the Company's future costs of providing service.

Q. At page 5 of his rebuttal testimony, PAWC witness Swiz asserts that deferral mechanisms are not single-issue ratemaking. Please respond.

A. Deferrals of fluctuations in one particular cost or cost category in isolation from all other cost fluctuations is by definition single-issue ratemaking because it focuses only on one cost or a single group of costs, typically where the utility expects such costs to increase, and ignores fluctuations between rate cases in other costs.

Q. At page 6 of his rebuttal testimony, PAWC witness Swiz asserts that the principles that justify natural gas and electric utilities' Section 1307 mechanisms also applies to the Company's proposed Pension/OPEB Tracker and Production Cost Tracker. Please respond.

A. On pages 5-6 of his rebuttal, Mr. Swiz states that electric utilities in Pennsylvania (and other states) are afforded the opportunity to adjust rates for variations in purchased power, transmission services, and fuel costs to generate electricity and that in Pennsylvania, such adjustment clauses are explicitly authorized by Section

1307 of the Public Utilities Code. However, there is no specific similar statute that applies to PAWC's pension, OPEB and production cost recovery. Mr. Swiz's attempt to bootstrap electric utility default service cost recovery mechanisms to apply to PAWC's pension, OPEB and production costs is therefore off point, lacks merit and should be rejected.

Q. Are there additional concerns that deferring Pension/OPEB expense and Production costs into the future could result in over-earnings for PAWC?

A. Yes. The Company's single-issue proposal for deferring Pension/OPEB expense and Production costs into the future is not even bounded by an earnings test. PAWC could be earning in excess of its authorized rate of return during the same accounting periods in which it is recording additional build-ups of deferred Pension/OPEB expense and Production cost, thus increasing profits for shareholders and placing an unreasonable burden upon ratepayers who have already been subject to multiple rounds of rate increases from PAWC, with no end in sight. All of these considerations should result in denial of PAWC's request for deferring Pension/OPEB expense and Production cost fluctuations between rate cases.

Q. Has the West Virginia Public Service Commission recently rejected requests for expense trackers and deferred accounting similar to those that PAWC has requested?

A. Yes. In its Decision dated February 23, 2024, the West Virginia PSC rejected similar requests that were made by PAWC's affiliate, West Virginia American

Water Company in that case. At page 36 of that Decision, the West Virginia Commission stated as follows:

> The Company proposed what it called "fair and reasonable mechanisms to combat the negative effects of volatility in (1) production costs and (2) pension and OPEB expense." (Company Initial Brief at 000066.) This included a production cost tracker that it argued would protect both its customers and the Company against sustained volatility in production expenses, including chemical expense. Id.
>
> In addition, the Company proposed a Pension and OPEB Tracker. The Company argued through Dr. Chard that this tracker would allow the Company to address fluctuations in pension and OPEB expense. (Company initial Brief at 000069.)
>
> Staff and CAD objected to these cost trackers. Staff witness Mr. Cooke recommended the Commission deny the Company's proposed production cost tracker because the Company's "production costs" do not compare in nature or magnitude to the costs utilities pass through in the current ENEC and PGA rate mechanisms. (Staff Initial Brief at 000020.) Mr. Cooke further noted "both the Company and Staff have included adjustments to the Company's per books amounts related to these costs." (Direct Testimony of Geoffrey M. Cooke, Cooke Direct, at 19.) Staff asserted that this proposed tracker does not encourage the Company "to reign in cost and to efficiently seek to keep the cost of certain items in check." (Staff Initial Brief at 000020.)
>
> Similarly, Staff recommended the Commission deny the Company's proposed pension and OPEB tracker. Mr. Cooke noted that "the Company and Staff have included adjustments to the Company's per books amounts related to these costs." (Cooke Direct at 20.) Moreover, CAD stated that "[t]hese trackers are part of a slew of mechanisms the Company has proposed in this case that are designed to benefit stockholders with little to no benefit to ratepayers." (CAD Initial Brief at 000027.)
>
> The Commission has reviewed the positions of the parties, and agrees with Staff and CAD. The Commission will deny the Company's request to include the production cost tracker and pension and OPEB expense tracker.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does. I reserve the right to supplement this testimony either in writing or orally if additional relevant information is received.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water) and R-2023-3043190 (Wastewater)
Exhibit LA-7
Copies of Non-Confidential Material Referenced in the
Surrebuttal Testimony of
Ralph C. Smith

Document	Subject	Confidential	No. of Pages	Page No.
OCA 21-003	As related to the Brentwood wastewater system: As it relates to the amounts for acquired plant in service and new utility plant in service, the breakout of FPFTY plant in service amount of $22.695 million between the purchase price in the related §1329 proceeding and the post-acquisition costs included in PAWC's filing in the current rate case proceeding; As it relates to the amounts reflected in HTY, FTY, and FPFTY operating and tax expenses, the reasoning of why Exhibit 3-B, page 308 does not reflect the FPFTY amounts for Bad Debt expense of $63,404, Miscellaneous expense of $8,863, Transportation expense of $3,551, and Amortization of Rate Case expense of $5,370; Referring to the response to OCA 12-06(e), the amount that is included in FPFTY operating revenue at current rates is the $1,824,191 that is shown on Exhibit 3-A, page 173; Pursuant to the amounts included in plant in service, the related depreciation and amortization expense included in the FTY and FPFTY; Pursuant to the amounts included in plant in service, the related ADIT included in rate base for the FTY and FPFTY; The Brentwood wastewater system was not acquired during the HTY.	No	2	2 - 3
OCA 21-008	As related to the BASA wastewater system: As it relates to the amounts for acquired plant in service and new utility plant in service, the breakout of FPFTY plant in service amount of $243.068 million between the approved purchase price in the related §1329 proceeding and the post-acquisition costs included in PAWC's filing in the current rate case proceeding; As it relates to the amounts reflected in HTY, FTY, and FPFTY operating and tax expenses, the reasoning of why Exhibit 3-B, page 307 does not reflect the FPFTY amounts for Bad Debt expense of $191,749, Transportation expense of $58,011, and Amortization of Rate Case expense of $20,057; Referring to the response to OCA 12-14(e), the amount of amount of Present Rate revenues at the FPFTY of $11,847,402 is shown in Exhibit 3-A, page 141; Reconciliation of the amounts for the acquisition in the Settlement that were approved in Docket No. A-2022-30374047 to the amounts that are included in PAWC's filing in the current proceeding is located in the response to I&E RB-016; Pursuant to the amounts included in plant in service, the related depreciation and amortization expense included in the FTY and FPFTY; Pursuant to the amounts included in plant in service, the related ADIT included in rate base for the FTY and FPFTY; The BASA wastewater system was not acquired during the HTY.	No	2	4 - 5
OCA 24-003	PAWC included Project Number 124-610022, which has the title "PA Lead Service Line Inventory", in utility account 348 - Other Tangible Equipment for the FPFT. The correct account should have been 340.3 - Computer Software.	No	1	6
OCA 35-002	Identification of each water utility acquisition that PAWC has made since the 2016 Gannett Fleming depreciation rate study; For each such water utility acquisition, identification of which were pursuant to §1329; For each §1329 water utility acquisition identified, identification of the depreciation lives, depreciation rates and survivor curve that were proposed by PAWC sponsored witnesses in each such §1329 water utility acquisition case.	No	1	7
OCA 35-003	Company witness Spanos' explanation of the depreciation lives, depreciation rates and survivor curves that were proposed by PAWC's sponsored witness in Docket No. A-2020-3019859, the §1329 Valley Township Water System acquisition case.	No	1	8
OCA 35-004	Confirmation that PAWC's sponsored witness in Docket No. A-2020-3019859 used the following depreciation lives, depreciatin rates and survivor curves for each of the water utility plant accounts: 60 year normal service life (NSL), 63.73 year total life expectancy, and R2.5 survivor curve shape for account 354.40, 304.3, Water Treatment Plant – Large Structures; 110 year normal service life (NSL), 112.58 year total life expectancy, and R2.0 survivor curve shape for account 363.20, 331.4, Distribution – Mains – Ductle Iron; 75 year normal service life (NSL), 76.89 year total life expectancy, and R2.5 survivor curve shape for account 363.20, 335.00, Fire Hydrants.	No	1	9
OCA 35-005	Amount of water utility plant in service that PAWC proposed as of 12/31/23, end of the FTY, and end of the FPFTY for each of the following accounts: Account 354.40, Account 304.3, Account 363.20, Account 331.4, Account 335, and Account 331.	No	1	10
OCA 35-006	Specific depreciation rates PAWC used and the amount of deprection expense PAWC reflected for the HTY, calendar year 2023, FTY, and the FPTY for each of the following water utility plant accounts: Account 354.40, Account 304.3, Account 363.20, Account 331.4, Account 335, and Account 331.	No	1	11
OCA 35-007	Referring the the Rebuttal Testimony of Company witness Gress: Explantion showing how the $1,660,367 increase to depreciation expense was derived; Explanation showing how the $1,258,893 increase to accumulated depreciation was derived.	No	1	12
OCA 35-008	Referring to the Rebuttal Testimony of Company witness O'Malley, Exhibit LNO-3R: Based on the responses to OCA 09-039 and OCA 15-013, explanation of why PAWC only removed SERP expense of $31,348 and not $152,169.	No	1	13

Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 21

OCA 21-003

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of the Brentwood wastewater system. Refer to the responses to OCA 12-06 and OCA 12-07, which requested information specific to the acquisition of the Brentwood Wastewater system in the HTY, FTY and FPFTY.

a. As it relates to the amounts for acquired plant in service and new utility plant in service (post-acquisition), the response to OCA 12-06(a) refers to Volume 3, Exhibit 3-A, page 179, which reflects plant in service of $22.695 million for the Brentwood wastewater system acquisition in the FPFTY. Please provide a breakout of FPFTY plant in service amount of $22.695 million between (1) the purchase price in the related Section 1329 proceeding (Docket No. A-2021-3024058), and (2) the post-acquisition costs included in PAWC's filing in the current rate case proceeding.

b. As it relates to the amounts reflected in HTY, FTY and FPFTY operating and tax expenses for the Brentwood wastewater system acquisition, the response to OCA 12-06(c) refers to Exhibit 3-A, page 172 (lines 6-19), Exhibit 3-A, pages 187-190 and Exhibit 3-B, page 308. Why does Exhibit 3-B, page 308 not reflect the FPFTY amounts for (1) Bad Debt expense of $63,404, (2) Miscellaneous expense of $8,863, (3) Transportation expense of $3,551, and (3) Amortization of Rate Case expense of $5,370? Explain fully.

c. Referring to the response to OCA 12-06(e), which referenced Exhibit 3-A, pages 173-174, is the amount that is included in FPFTY operating revenue for the Brentwood wastewater system acquisition at current rates the $1,824,191 that is shown on Exhibit 3-A, page 173, column 9, line 26? If not, explain fully why not and provide the amount included in FPFTY operating revenue for the Brentwood wastewater system acquisition.

d. Pursuant to the amounts included in plant in service for the Brentwood wastewater acquisition, please provide the related depreciation and amortization expense included in the HTY, FTY and FPFTY.

e. Pursuant to the amounts included in plant in service for the Brentwood wastewater acquisition, please provide the related ADIT included in rate base for the HTY, FTY and FPFTY.

Response:

a. In Exhibit 3-A, page 179, the purchase price in the related Section 1329 proceeding in the amount of $19,364,443, is shown in the "Acquisition" column, line 10, and the post-acquisition

costs are shown in the "Additions" columns, line 10. The total of the purchase price, plus additions, less retirements, equals the FPFTY amount of $22.695 million.

b. Exhibit 3-B, page 308 only reflects certain incremental O&M expenses related to the Brentwood acquisition that are not otherwise included in other exhibits. To include the referenced adjustments for Bad Debt, Miscellaneous expense, Transportation expense, or Amortization of Rate Case expense in this schedule would lead to double counting when rolled into the full revenue requirement calculation. For (1) Bad Debt expense, there are three separate adjustments included in the filing; one for uncollectible expense related to the revenues billed by PAWC for the collection system (Exhibit 3-A page 196), a second for the incremental uncollectible expense associated with the billing of the ALCOSAN treatment charges (Exhibit 3-B, page 337), and a third, related to the costs associated with the Company's Arrearage Management Plan (Exhibit 3-B, page 336). For (2) Miscellaneous expense, the amount of $8,863 related specifically to the expense for credit card and echeck transaction costs (Exhibit 3-B, page 326). For (3) Transportation expense, please refer to Exhibit 3-B, page 265 for Transportation expenses calculated for Brentwood. Finally, for (4) Amortization of Rate Case expense $5,370, please refer to Exhibit 3-B, page 295.

c. Yes, the amount reflects the Present Rate revenue at the FTY and FPFTY.

d. Please refer to Exhibit 3-A, pages 197 and 198 and Exhibit 3-B, pages 348 and 354 for the FTY and FPFTY amounts. The Brentwood wastewater system was not acquired during the HTY.

e. Please refer to Exhibit 3-A, page 178, line 24 and page 186 for the FTY and FPFTY amounts. The Brentwood wastewater system was not acquired during the HTY.

Office of Consumer Advocate Set 21

OCA 21-008

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Acquisition of the BASA wastewater system. Refer to the responses to OCA 12-14 and OCA 12-15, which requested information specific to the acquisition of the BASA Wastewater system in the HTY, FTY and FPFTY.

a. As it relates to the amounts for acquired plant in service and new utility plant in service (post-acquisition), the response to OCA 12-14(a) refers to Volume 3, Exhibit 3-A, page 146, which reflects plant in service of $243.068 million for the BASA wastewater system acquisition in the FPFTY. Please provide a breakout of FPFTY plant in service amount of $243.068 million between (1) the approved purchase price in the related Section 1329 proceeding (Docket No. A-2022-3037047), and (2) the post-acquisition costs included in PAWC's filing in the current rate case proceeding.

b. As it relates to the amounts reflected in HTY, FTY and FPFTY operating and tax expenses for the BASA wastewater system acquisition, the response to OCA 12-14(c) refers to Exhibit 3-A, page 139 (lines 6-19), Exhibit 3-A, pages 155-158 and Exhibit 3-B, page 307. Why does Exhibit 3-B, page 307 not reflect the FPFTY amounts for (1) Bad Debt expense of $191,749, (2) Transportation expense of $58,011, and (3) Amortization of Rate Case expense of $20,057? Explain fully.

c. Referring to the response to OCA 12-14(e), which referenced Exhibit 3-A, pages 140-141, is the amount that is included in FPFTY operating revenue for the BASA wastewater system acquisition at current rates the $11,720,908 that is shown on Exhibit 3-A, page 140, column 9, line 26? If not, explain fully why not and provide the amount included in FPFTY operating revenue for the BASA wastewater system acquisition.

d. Please reconcile the amounts for the BASA wastewater acquisition in the Settlement was approved in Docket No. A-2022-3037047 to the amounts for the BASA wastewater system that are included in PAWC's filing in the current rate case proceeding. Identify, quantify and explain each reconciling item.

e. Pursuant to the amounts included in plant in service for the BASA wastewater acquisition, please provide the related depreciation and amortization expense included in the HTY, FTY and FPFTY.

f. Pursuant to the amounts included in plant in service for the BASA wastewater acquisition, please provide the related ADIT included in rate base for the HTY, FTY and FPFTY.

Response:

a. In Volume 3, Exhibit 3-A, page 146, the approved ratemaking rate base in the related Section 1329 proceeding in the amount of $228 million is shown in the "Acquisition" column, line 24, and the post-acquisition costs are shown in the "Additions" columns, line 24. The total of the purchase price, plus additions, less retirements, equals the FPFTY amount of $243.068 million.

b. Exhibit 3-B, page 307 only reflects certain incremental O&M expenses related to the BASA acquisition that are not otherwise included in other exhibits. To include the referenced adjustments for Bad Debt, Transportation expense, or Amortization of Rate Case expense in this schedule would lead to double counting when rolled into the full revenue requirement calculation. For (1) Bad Debt expense, there are two separate adjustments included in the filing; one for uncollectible expense related to the incremental revenues billed by PAWC (Exhibit 3-A page 164) and a second related to the costs associated with the Company's Arrearage Management Plan (Exhibit 3-B, page 336). For (2) Transportation expenses, please refer to Exhibit 3-B, page 264 for Transportation expenses calculated for BASA. For (3) Amortization of Rate Case expense $20,057, please refer to Exhibit 3-B, page 295.

c. The amount of $11,720,908 reflects the Present Rate revenue at the FTY. Present Rate revenues at the FPFTY are shown in Exhibit 3-A, page 141, column 16, line 26, in the amount of $11,847,402.

d. Please refer to the Company's response to I&E RB-016.

e. Please refer to Exhibit 3-A, pages 165 and 166 and Exhibit 3-B, pages 347 and 354 for the FTY and FPFTY amounts. The BASA wastewater system was not acquired during the HTY.

f. Please refer to Exhibit 3-A, page 145, line 24 and page 154 for the FTY and FPFTY amounts. The BASA wastewater system was not acquired during the HTY.

R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 24

OCA 24-003

Responsible Witness: Bruce W. Aiton, Vice President of Engineering for PAWC

Question:

Lead Service Line Inventory. Refer to Exhibit 3-C – Plant Additions and Retirements by Month for water operations. On page 9 of Exhibit 3-C, the Company has included Project Number 124-610022, which has the title "PA Lead Service Line Inventory", in utility account 348 – Other Tangible Equipment in the amount of $11,163,718 for the FPFTY ending June 30, 2025.

What accounting guidance did PAWC follow for recording costs for the lead service lines inventory as utility plant in Account 348?

Response:

The Company misidentified the utility account as 348 – Other Tangible Equipment. The correct utility plant account should be 340.3 – Computer Software. The Company will provide updated schedules to reflect this change during the rebuttal phase of this proceeding.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 35

OCA 35-002

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Refer to Mr. Spanos rebuttal testimony at page 5, lines 17-18.

a. Identify each water utility acquisition that PAWC has made since the 2016 Gannett Fleming depreciation rate study.

b. For each such water utility acquisition, identify which were pursuant to §1329.

c. For each §1329 water utility acquisition identified in response to part b, identify the depreciation lives, depreciation rates and survivor curve that were proposed by PAWC sponsored witnesses in each such §1329 water utility acquisition case.

Response:

a. Since the 2016 Gannett Fleming depreciation rate study, the following water utility acquisitions were closed by PAWC:

Water Utility Acquisition	**Docket Number**	**Close Date**
Turbotville Water	A-2018-3004191	07/24/19
Steelton Borough Authority	A-2019-3006880	10/09/19
Winola Water Company	P-2018-3006216, C-2018-2644592, and I-2018-3006498	12/17/20
Valley Twp Water	A-2020-3019859	11/19/21
SLIBCO Inc. (GCC) Water	A-2020-3023369	11/19/21
Creekside (Lancaster Home Builders) Water System	A-2022-3031020	06/21/23

b. Steelton Borough Authority and Valley Township water system acquisitions were both pursuant to §1329.

c. The Company and its witness in these §1329 water utility acquisition cases did not propose any depreciation lives, depreciation rates or survivor curves as part of the acquisition proceedings. The independent appraiser utilized depreciation lives, depreciation rates and survivor curves in order to compute their appraisal of each system. Please refer to the Docket Numbers listed above for the appraisals of the Valley and Steelton water systems.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 35

OCA 35-003

Responsible Witness: John J. Spanos, President of Gannett Fleming Valuation and Rate Consultants

Question:

Is Mr. Spanos aware of the depreciation lives, depreciation rates and survivor curves that were proposed by PAWC's sponsored witness in Docket A-2020-3019859, the §1329 Valley Township Water System acquisition case? Explain fully.

Response:

Mr. Spanos is aware of how the average service lives and survivor curves were determined by Valley Township Water System. The average lives and survivor curves were based on a range of lives and curves utilized by other water companies, including PAWC, in the region. Mr. Spanos is also aware of PAWC's sponsored witness average lives, however, he was not directly involved in the determination of those parameters. However, neither of these life and curve parameters are consistent with how depreciable lives and curves should be determined for the assets in the rate case because there are different components for determining the future life characteristics under PAWC management, as well as different depreciation methods and procedures for depreciating the remaining net plant.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Please confirm that PAWC's sponsored witness in Docket A-2020-3019859 proposed/used the following depreciation lives, depreciation rates and survivor curves for each of the water utility plant accounts listed below.

a. 60 year normal service life (NSL), 63.73 year total life expectancy, and R2.5 survivor curve shape for account 354.40, 304.3, Water Treatment Plant – Large Structures.

b. 110 year normal service life (NSL), 112.58 year total life expectancy, and R2.0 survivor curve shape for account 363.20, 331.4, Distribution – Mains – Ductle Iron.

c. 75 year normal service life (NSL), 76.89 year total life expectancy, and R2.5 survivor curve shape for account 363.20, 335.00, Fire Hydrants.

d. If any of the above, a, b and c, cannot be confirmed explain fully why not.

Response:

a-c. Confirmed to reflect the depreciation lives, depreciation rates and survivor curves that were used by the independent appraiser to complete the appraisal included at Docket A-2020-3019859.

d. N/A

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)

OCA 35-005

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

How much water utility plant in service has PAWC proposed as of each of these dates: (1) 12/31/2023, (2) end of the FTY, and (3) end of the FPFTY for each of the following accounts:

a. Account 354.40
b. Account 304.3
c. Account 363.20
d. Account 331.4
e. Account 335
f. Account 331

Response:

a, c. Accounts 354.40 and 363.20 are wastewater utility accounts and therefore there is no associated water utility plant in these accounts.

b, e, f. See table below.

ACCT. NO.	ACCOUNT TITLE	ESTIMATED BOOK COST 12/31/2023	ESTIMATED BOOK COST 6/30/2024	ESTIMATED BOOK COST 6/30/2025
304.30	Purification Buildings	$ 341,412,320	$ 341,634,694	$ 341,634,694
331.00	Mains and Accessories	3,494,952,338	3,629,756,124	3,841,993,932
335.00	Fire Hydrants	147,080,419	152,728,748	163,733,934

d. Account 331.40 Distribution Mains – Ductile Iron has no proposed water utility plant in service for the specified dates.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 35

OCA 35-006

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

What specific depreciation rates has PAWC used and how much depreciation expense has PAWC reflected for each of these periods: (1) the HTY, (2) calendar 2023, (3) the FTY, and (4) the FPFTY for each of the following water utility plant accounts:

a. Account 354.40
b. Account 304.3
c. Account 363.20
d. Account 331.4
e. Account 335
f. Account 331

Response:

Depreciation rates and the associated depreciation expense were calculated by test year and annualized. Therefore, calendar year 2023 data was not used as part of this filing.

a, c. Accounts 354.40 and 363.20 are wastewater utility accounts and therefore there is no associated water utility plant depreciation rate or expense in these accounts.

b, e, f. See table below.

ACCT. NO.	ACCOUNT TITLE	(1) HTY 6/30/2023 Depreciation Rate	(1) HTY 6/30/2023 Depreciation Expense	(3) FTY 6/30/2024 Depreciation Rate	(3) FTY 6/30/2024 Depreciation Expense	(4) FPFTY 6/30/2025 Depreciation Rate	(4) FPFTY 6/30/2025 Depreciation Expense
304.30	Purification Buildings	2.35	$ 7,848,433	2.37	$ 8,202,208	2.38	$ 8,684,270
331.00	Mains and Accessories	1.52	46,324,768	1.53	50,981,834	1.54	54,371,951
335.00	Fire Hydrants	2.28	3,065,466	2.27	3,298,422	2.26	3,532,857

d. Account 331.40 Distribution Mains – Ductile Iron has no proposed water utility plant in service for the specified dates, and therefore no associated depreciation rates or expense.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 35

OCA 35-007

Responsible Witness: Stacey D. Gress, Director of Rates and Regulatory for PAWC

Question:

Depreciation Expense - Lead Service Line Inventory. Refer to the Rebuttal Testimony of Company witness Gress. On page 8 of her rebuttal, Ms. Gress states that the reclassification of Project Number 124-610022 PA Lead Service Line Inventory (in the amount of $11,163,718) from plant account 348 – Other Tangible Equipment to plant account 340.3 – Computer Software results in an increase to FPFTY depreciation expense in the amount of $1,660,367. In addition, on pages 8-9 of her rebuttal, Ms. Gress states that this reclassification results in an increase to FPFTY accumulated depreciation in the amount of $1,258,893.

a. Please provide a schedule in Excel with formulas intact that shows how the $1,660,367 increase to depreciation expense was derived. Show detailed calculations.

b. Please provide a schedule in Excel with formulas intact that shows how the $1,258,893 increase to accumulated depreciation was derived. Show detailed calculations.

Response:

a. The increase of $1,660,367 was derived by taking the difference between the total depreciable plant in column 6 found in the depreciation schedule in Exhibit 11-C 2025 – Table 2, provided as part of the direct testimony of witness John Spanos and the revised depreciation schedule in Exhibit JSS-1R-Table 1, provided in the rebuttal testimony of witness John Spanos. The Excel files can be accessed on the MLB ClientSite.

b. The increase of $1,258,893 was derived by taking the difference between the total depreciable plant in column 4 found in the depreciation schedule in Exhibit 11-C 2025 – Table 2, provided as part of the direct testimony of witness John Spanos and the revised depreciation schedule in Exhibit JSS-1R-Table 1, provided in the rebuttal testimony of witness John Spanos. The Excel files can be accessed on the MLB ClientSite.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 35

OCA 35-008

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

Service Company SERP Expense. Refer to the Rebuttal Testimony of Company witness O'Malley, Exhibit LNO-3R and the responses to OCA 09-039 and OCA 15-013. On page 6 of her rebuttal, Ms. O'Malley states that as part of the update to Service Company labor and labor related expenses, the Company removed SERP expense that was erroneously included in the Company's filing. Exhibit LNO-3R shows that the Company removed SERP expense totaling $31,348 in its Service Company expense update. However, the response to OCA 09-039, Attachment 4 reflects the line item "Pension Expense – SERP in Account 50630000 in the amount of $152,769 as of the test year ended June 30, 2023. In addition, the response to OCA 15-013 (in reference to the $152,769 of SERP expense recorded in Account 50630000 in the HTY) stated that that amount was recorded to the Service Company in error and would be removed from the FTY and FPFTY in the rebuttal phase of this proceeding.

a. Based on the responses to OCA 09-039 and OCA 15-013, why did the Company only remove SERP expense of $31,348 and not $152,169? Explain fully.

Response:

a. The Pension Expense – SERP amount of $152,169 provided in the response to OCA 09-039_Attachment 4 was reflected on the AWWSC income statement and therefore was the total expense for Service Company, not the amount that was allocated to PAWC. The Pension Expense – SERP amount that was allocated to PAWC for the historical test year is $31,348. The Service Company expenses allocated to PAWC were provided in the response to OCA 09-039_Attachment 1, which reflects the HTY amount of $31,348 plus adjustments for merit increases into the future test years.

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is David J. Garrett. My business address is 101 Park Avenue, Suite 1125, Oklahoma Borough, Oklahoma 73102.

Q. By whom are you employed and in what capacity?

A. I am the managing member of Resolve Utility Consulting, PLLC. I am an independent consultant specializing in public utility regulation.

Q. Please summarize your educational background and professional experience.

A. I received a B.B.A. degree with a major in Finance, an M.B.A. degree, and a J.D. degree from the University of Oklahoma. I worked in private legal practice for several years before working as assistant general counsel at the Oklahoma Corporation Commission in 2011. At the commission, I worked in the Office of General Counsel in regulatory proceedings. In 2012, I worked for the Public Utility Division as a regulatory analyst providing testimony in regulatory proceedings. After leaving the Oklahoma commission I formed Resolve Utility Consulting PLLC, where I have represented numerous consumer groups and state agencies in utility regulatory proceedings, primarily in the areas of cost of capital and depreciation. I am a Certified Depreciation Professional with the Society of Depreciation Professionals. I am also a Certified Rate of Return Analyst with the Society of Utility and Regulatory Financial Analysts. A more complete description of my qualifications and regulatory experience is included in my curriculum vitae.[1]

[1] Exhibit DJG-1.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. Describe the purpose and scope of your testimony in this proceeding.

A. The primary purpose of my testimony is to provide my opinion on the estimated cost of capital and awarded rate of return recommendation for Pennsylvania-American Water Company ("PAWC" or the "Company"). I am responding to the direct testimony of Company witness Ann Bulkley and Company witness Ashley Everette.

Q. Please describe the organization of your testimony.

A. In the executive summary below, I provide an overview of cost of capital issues, my recommendations, and my response to the Company's testimony on these issues. In the sections that follow, I discuss the legal standards governing the awarded return issue as well as the general concepts involved in estimating the cost of equity. I discuss the concepts of risk and return, and in this context, I address the Company's proposed Environmental Compliance Infrastructure Charge ("ECIC") and Revenue Decoupling Mechanism ("RDM"). I provide detailed analysis of the Discounted Cash Flow ("DCF") Model, the Capital Asset Pricing Model ("CAPM"), including my results for these models and my responses to Ms. Bulkley's results. I also address capital structure, which is a key component to the cost of capital.

II. EXECUTIVE SUMMARY

Q. Please summarize your recommendation to the Commission.

A. My testimony can be distilled to the following recommendations and conclusions:

- The Commission should reject the Company's proposed return on equity ("ROE") of 10.95% as excessive and unsupported. An objective cost of equity analysis shows that the Company's market-determined cost of equity is notably lower than the Company's proposed ROE.

- Based on the results of my financial modeling using the DCF and CAPM models, I recommend that the Commission set the Company's market-determined cost of equity at 9.1%, which is based on the average of my CAPM result (8.7%) and my DCF Model result (9.4%). However, if the Commission accepts the Company's proposed capital structure and/or adopts either of the Company's proposed alternative ratemaking proposals, then I recommend the Commission grant only the 8.7% ROE supported by my models. If the Commission were to adopt the Company's proposed 10.95% ROE over my recommended 9.1% ROE, at PAWC's claimed rate base, it would cost consumers an additional $87 million per year in rates.[2]

- The Commission should reject the Company's request for a performance-based adder of up to 25 basis points to its market-determined ROE[3] as an award for its managerial performance. The requested increment in return on equity is unsupported and excessive, and at the Company's as filed request it would impose up to $11.8 million of additional costs on ratepayers per year.[4]

[2] *See* Exhibit LA-6 at 5-6, attached to the Direct Testimony of OCA witness Ralph Smith (OCA Statement 2).

[3] PAWC witness Everette states: "[I]f the Commission were to approve a rate of return on equity that is lower than the upper end of Ms. Bulkley's recommended range [of 10.95%], it should add no less than 25 basis points to its market-determined rate of return." [fn. 11]: Of course, if the Commission's market-determined rate of return on equity is greater than 10.70%, then the performance-based increment could be less than 25 basis points to achieve a final equity return rate of 10.95%." PAWC St. 1 at 33, n. 11.

[4] *See* OCA Statement 2, Exhibit LA-6 at 2.

- I recommend the Commission reject the Company's proposed capital structure consisting of 44.7% debt and 55.3% equity (total company). The average debt ratio of PAWC's proxy group is 49%. In order for the results of the CAPM to be accurate, any discrepancy between the utility's capital structure and the proxy group's capital structure must be reconciled either through a capital structure adjustment for ratemaking purposes or a lower authorized ROE as estimated through the Hamada model. In this case, since I am proposing an ROE that exceeds the results of the CAPM; thus, it is even more imperative that the Commission adjust the Company's proposed ratemaking capital structure so that the overall rate of return is not unfairly high.

- PAWC's proposed capital structure deviates from the average debt ratio of its own proxy group, and it substantially deviates from the debt ratio of its parent (55%). If the Commission were to adopt PAWC's proposed capital structure, it would unreasonably increase the revenue requirement by $30.7 million per year, at PAWC's claimed rate base and ROE, for water and wastewater operations combined.[5]

- I propose the Commission impute a capital structure that is equal to the average capital structure of the total proxy group, which consists of 51% debt and 49% equity.[6]

- My proposed adjustments to the Company's ROE and capital structure result in an overall weighted average rate of return of 6.97% for water operations and 6.79% for wastewater operations,[7] which better balances the interests of consumers and shareholders in contrast to the Company's excessive rate of return proposal.

[5] *See id.* at 3-4.

[6] *See id*. at 7-8. OCA witness Ralph Smith incorporates this recommended capital structure adjustment into the overall rate of return calculations for both water and wastewater operations. Wastewater operations also include a 4.46% debt ratio for specific wastewater debt issuances, which is incorporated into the total imputed debt ratio recommendation.

[7] *See id*.

III. LEGAL STANDARDS AND THE AWARDED RETURN

Q. Discuss the legal standards governing the awarded rate of return on capital investments for regulated utilities.

A. In *Wilcox v. Consolidated Gas Co. of New York*, the U.S. Supreme Court first addressed the meaning of a fair rate of return for public utilities.[8] The Court found that "the amount of risk in the business is a most important factor" in determining the appropriate allowed rate of return.[9] As referenced earlier, in two subsequent landmark cases, the Court set forth the standards by which public utilities are allowed to earn a return on capital investments. First, in *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, the Court held:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public. . . but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.[10]

Then, in *Federal Power Commission v. Hope Natural Gas Company*, the Court expanded on the guidelines set forth in *Bluefield* and stated:

---

[8] *Wilcox v. Consolidated Gas Co. of New York*, 212 U.S. 19 (1909).

[9] *Id.* at 48.

[10] *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679, 692–93 (1923).

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[11]

The cost of capital models I have employed in this case are designed to be in accordance with the foregoing legal standards.

Q. Is it important that the awarded rate of return be based on the Company's actual cost of capital?

A. Yes. The U.S. Supreme Court in *Hope* makes it clear that the allowed return should be based on the actual cost of capital. Moreover, the awarded return must also be fair, just, and reasonable under the circumstances of each case. Among the circumstances that must be considered in each case are the broad economic and financial impacts to the cost of equity and awarded return caused by market forces and other factors. Scholars agree that the actual cost of capital must be considered:

> Since by definition the cost of capital of a regulated firm represents precisely the expected return that investors could anticipate from other investments while bearing no more or less risk, and since investors will not provide capital unless the investment is expected to yield its opportunity cost of capital, the correspondence of the definition of the cost of capital with the court's definition of legally required earnings appears clear.[12]

The models I have employed in this case closely estimate the Company's market-based cost of equity. The rate of return that I calculated more closely aligns with the U.S.

---

[11] *Federal Power Commission v. Hope Natural Gas Co*., 320 U.S. 591, 603 (1944) (emphasis added) (internal citations omitted).

[12] A Lawrence Kolbe, James A. Read, Jr. & George R. Hall, *The Cost of Capital: Estimating the Rate of Return for Public Utilities* 21 (The MIT Press 1984).

Supreme Court's standards, will allow the Company to maintain its financial integrity, and achieve reasonable returns for its investors. On the other hand, if the Commission sets the allowed rate of return much higher than the market-based cost of capital, as requested by the Company, it will result in an inappropriate transfer of wealth from ratepayers to the Company.[13]

Q. What does this legal standard mean for determining the awarded return and the cost of capital?

A. The awarded return and the cost of capital are different but related concepts. On the one hand, the legal and technical standards encompassing this issue require that the awarded return reflect the market-based cost of capital. Yet on the other hand, the two concepts differ in that the legal standards do not mandate that awarded returns exactly match the cost of capital. Instead, awarded returns are set through the regulatory process and may be influenced by various factors other than objective market drivers. By contrast, the cost of capital should be evaluated objectively and be closely tied to economic realities, such as stock prices, dividends, growth rates, and, most importantly, risk. The cost of capital can be estimated by financial models used by firms, investors, and academics around the world for decades. The problem is, with respect to regulated utilities, there has been a trend in which awarded returns fail to closely track with market-based cost of capital, as further discussed below. To the extent this occurs, the results are detrimental to ratepayers and the state's economy.

[13] Roger A. Morin, *New Regulatory Finance* 23–24 (Public Utilities Reports, Inc. 2006) (1994) ("[I]f the allowed rate of return is greater than the cost of capital, capital investments are undertaken and investors' opportunity costs are more than achieved. Any excess earnings over and above those required to service debt capital accrue to the equity holders, and the stock price increases. In this case, the wealth transfer occurs from ratepayers to shareholders.").

Q. Describe the economic impact that occurs when the awarded return deviates significantly from the U.S. Supreme Court's applicable cost of equity standards.

A. When the awarded ROE is divorced from the cost of equity, it runs the risk of violating the U.S. Supreme Court's standards. Ratepayers pay too much to support the utilities' essential operations with the net effect of diverting dollars from ratepayers for their internal or business uses that would otherwise support the local or state economy. Moreover, establishing an awarded return that far exceeds the cost of capital effectively prevents the awarded returns from changing along with economic conditions. This is especially true given that regulators may be influenced by the awarded returns in other jurisdictions, regardless of the various unknown factors influencing those awarded returns. If regulators rely too heavily on the awarded returns from other jurisdictions, they can create a self-perpetuating cycle over time that bears little relation to the market-based cost of equity.

Q. Please summarize the legal standards governing the awarded ROE issue.

A. The Commission should strive to move the awarded return to a level more closely aligned with the Company's actual, market-derived cost of capital while keeping in mind the following two legal principles outlined below.

1. Risk is the most important factor when determining the awarded return. The awarded return should be commensurate with those returns on investments of corresponding risk.

The legal standards articulated in *Hope* and *Bluefield* demonstrate that the U.S. Supreme Court understands one of the most basic, fundamental concepts in financial theory: the more (or less) risk an investor assumes, the more (or less) return the investor requires. Since utility stocks are low risk, the return required by equity investors should be relatively low. I have used financial models to closely estimate the Company's cost of equity, and these financial models account for risk. The cost of equity models confirm the industry

experiences relatively low levels of risk by producing relatively low cost of equity results. In turn, the awarded ROE in this case should reflect the Company's relatively low market risk.

2. The awarded return should be sufficient to assure financial soundness and integrity under efficient management.

Because awarded returns in the regulatory environment have not closely tracked market-based trends and commensurate risk, utility companies have been able to remain more than financially sound, perhaps despite management inefficiencies. In fact, the transfer of wealth from ratepayers to utilities has been so far removed from actual cost-based drivers that a utility could remain financially sound, even under relatively inefficient management. Therefore, regulatory commissions should strive to set utilities' returns based on actual market conditions to promote prudent and efficient management and minimize economic waste.

IV. GENERAL CONCEPTS AND METHODOLOGY

Q. Discuss your approach to estimating the cost of equity in this case.

A. While a competitive firm must estimate its own cost of capital to assess the profitability of competing capital projects, regulators determine a utility's cost of capital to establish a fair rate of return. The legal standards set forth above do not include specific guidelines regarding the models that must be used to estimate the cost of equity for utilities. Over the years, however, regulatory commissions have consistently relied on several models. The models I have employed in this case have been the two most widely used and accepted in regulatory proceedings for many years. The specific inputs and calculations for these models are described in more detail below.

Q. Please explain why you used multiple models to estimate the cost of equity.

A. These models attempt to measure the return on equity required by investors by estimating several different inputs. It is preferable to use multiple models because the results of any one model may contain a degree of imprecision, especially depending on the reliability of the inputs used at the time of conducting the model. By using multiple models, the analyst can compare the results of the models and look for outlying results and inconsistencies. Likewise, if multiple models produce a similar result, it may indicate a narrower range for the cost of equity estimate. For the results of any cost of equity model to be considered reasonable, it is necessary to use reasonable inputs and apply the models properly.

Q. Please discuss the benefits of choosing a proxy group of companies in conducting cost of capital analyses.

A. The cost of equity models in this case can be used to estimate the cost of capital of any individual, publicly traded company. There are advantages, however, to conducting cost of capital analysis on a proxy group of companies that are comparable to the target company. First, it is better to assess the financial soundness of a utility by comparing it to a group of other financially sound utilities. Second, using a proxy group provides more reliability and confidence in the overall results because there is a larger sample size. Finally, the use of a proxy group is often a pure necessity when the target company is a subsidiary that is not publicly traded. This is because the financial models used to estimate the cost of equity require information from publicly traded firms, such as stock prices and dividends.

Q. Describe the proxy group you selected in this case.

A. In this case, I chose to use the same group of water utilities used by Ms. Bulkley. In addition to water utilities, Ms. Bulkley included six additional electric and natural gas

utilities. According to Ms. Bulkley, her inclusion of non-water utilities in the proxy group was due to the relatively small number of water utilities available for analysis. I do not believe it is necessary to include non-water utilities in the proxy group when analyzing the cost of equity of a water utility. I based my recommendation on the modeling results from the water utility group. However, I have included the same non-water utilities selected by Ms. Bulkley in my analyses and exhibits in order to contrast the different results I obtained when using reasonable inputs to the models. Thus, for my DCF and CAPM results, I present three different calculations: (1) the water group; (2) the non-water group; and (3) the entire group combined. However, I believe it is reasonable for the Commission to focus on the results of the water utility group. In this particular case, the results of my CAPM and DCF Models were not materially different when applied to the water-only proxy group and total proxy group.[14]

V. RISK AND RETURN CONCEPTS

Q. Discuss the general relationship between risk and return.

A. Risk is among the most important factors for the Commission to consider when determining the allowed return. Thus, it is necessary to understand the relationship between risk and return. There is a direct relationship between risk and return: the more (or less) risk an investor assumes, the larger (or smaller) return the investor will demand. There are two primary types of risk: firm-specific risk and market risk. Firm-specific risk

[14] See Exhibit DJG-12.

affects individual companies, while market risk affects all companies in the market to varying degrees.

Q. Discuss the differences between firm-specific risk and market risk.

A. Firm-specific risk affects individual companies, rather than the entire market. For example, a competitive firm might overestimate customer demand for a new product, resulting in reduced sales revenue. This is an example of a firm-specific risk called "project risk."[15] There are several other types of firm-specific risks, including: (1) "financial risk" – the risk that equity investors of leveraged firms face as residual claimants on earnings; (2) "default risk" – the risk that a firm will default on its debt securities; and (3) "business risk" – which encompasses all other operating and managerial factors that may result in investors realizing less than their expected return in that particular company. While firm-specific risk affects individual companies, market risk affects all companies in the market to varying degrees. Examples of market risk include interest rate risk, inflation risk, and the risk of major socio-economic events. When there are changes in these risk factors, they affect all firms in the market to some extent.[16]

Analysis of the U.S. market in 2001 provides a good example for contrasting firm-specific risk and market risk. During that year, Enron Corp.'s stock fell from $80 per share to its low when the company filed for bankruptcy at the end of the year. If an investor's portfolio had held only Enron stock at the beginning of 2001, this irrational investor would have lost the entire investment by the end of the year due to assuming the full exposure of

---

[15] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 62–63 (3rd ed., John Wiley & Sons, Inc. 2012).

[16] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 149 (9th ed., McGraw-Hill/Irwin 2013).

Enron's firm-specific risk (in that case, imprudent management). On the other hand, a rational, diversified investor who invested the same amount of capital in a portfolio holding every stock in the S&P 500 would have had a much different result that year. The rational investor would have been relatively unaffected by the fall of Enron because his or her portfolio included about 499 other stocks. Each of those stocks, however, would have been affected by various market risk factors that occurred that year. Thus, the rational investor would have incurred a relatively minor loss due to market risk factors, while the irrational investor would have lost everything due to firm-specific risk factors.

Q. Can equity investors reasonably minimize firm-specific risk?

A. Yes. A fundamental concept in finance is that firm-specific risk can be eliminated through diversification.[17] If someone irrationally invested all his or her funds in one firm, he or she would be exposed to all the firm-specific risk and the market risk inherent in that single firm. Rational investors, however, are risk-averse and seek to eliminate risk they can control. Investors can eliminate firm-specific risk by adding more stocks to their portfolio through a process called "diversification." There are two reasons why diversification eliminates firm-specific risk.

First, each stock in a diversified portfolio represents a much smaller percentage of the overall portfolio than it would in a portfolio of just one or a few stocks. Thus, any firm-

[17] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 179–80 (3rd ed., South Western Cengage Learning 2010).

specific action that changes the stock price of one stock in the diversified portfolio will have only a small impact on the entire portfolio.[18]

The second reason why diversification eliminates firm-specific risk is that the effects of firm-specific actions on stock prices can be either positive or negative for each stock. Thus, in large, diversified portfolios, the net effect of these positive and negative firm-specific risk factors will be essentially zero and will not affect the value of the overall portfolio.[19] Firm-specific risk is also called "diversifiable risk" because it can be easily eliminated through diversification.

Q. Is it well-known and accepted that, because firm-specific risk can be easily eliminated through diversification, the market does not reward such risk through higher returns?

A. Yes. Because investors eliminate firm-specific risk through diversification, they know they cannot expect a higher return for assuming the firm-specific risk in any one company. Thus, the risks associated with an individual firm's operations are not rewarded by the market. In fact, firm-specific risk is also called "unrewarded" risk for this reason. Market risk, on the other hand, cannot be eliminated through diversification and as such investors expect a return for assuming this type of risk. Market risk is also called "systematic risk." Scholars recognize the fact that market risk, or systematic risk, is the only type of risk for which investors expect a return for bearing:

---

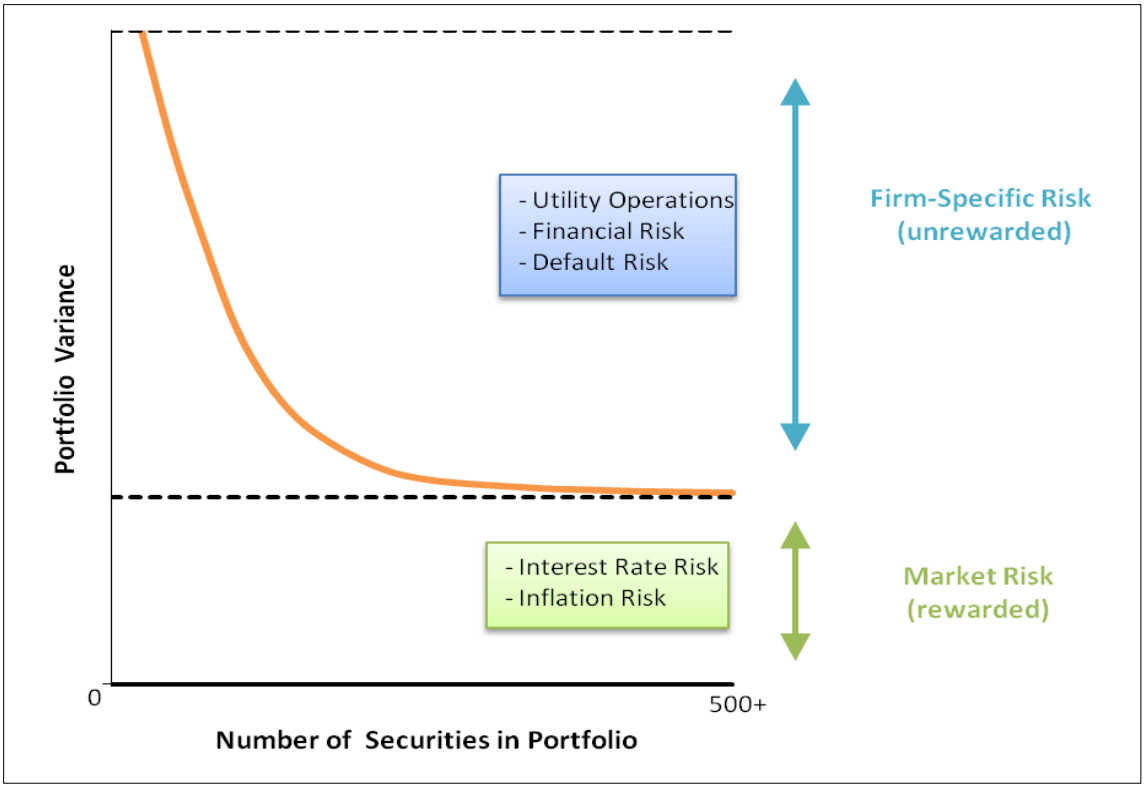
[18] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 64 (3rd ed., John Wiley & Sons, Inc. 2012).

[19] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 64 (3rd ed., John Wiley & Sons, Inc. 2012).

> If investors can cheaply eliminate some risks through diversification, then we should not expect a security to earn higher returns for risks that can be eliminated through diversification. Investors can expect compensation only for bearing systematic risk (i.e., risk that cannot be diversified away).[20]

These important concepts are illustrated in the figure below. Some form of this figure is found in many financial textbooks.

Figure 1:
Effects of Portfolio Diversification



This figure shows that as stocks are added to a portfolio, the amount of firm-specific risk is reduced until it is essentially eliminated. No matter how many stocks are added, however, there remains a certain level of fixed market risk. The level of market risk will

[20] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180 (3rd ed., South Western Cengage Learning 2010) (emphasis added).

vary from firm to firm. Market risk is the only type of risk that is rewarded by the market and is thus the primary type of risk the Commission should consider when determining the allowed return.

Q. Describe how market risk is measured.

A. Investors who want to eliminate firm-specific risk must hold a fully diversified portfolio. To determine the amount of risk that a single stock adds to the overall market portfolio, investors measure the covariance between a single stock and the market portfolio. The result of this calculation is called "beta."[21] Beta represents the sensitivity of a given security to the market as a whole. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than 1.0 are relatively more sensitive to market risk than the average stock. For example, if the market increases (or decreases) by 1.0%, a stock with a beta of 1.5 will, on average, increase (or decrease) by 1.5%. In contrast, stocks with betas of less than 1.0 are less sensitive to market risk, such that if the market increases (or decreases) by 1.0%, a stock with a beta of 0.5 will, on average, only increase (or decrease) by 0.5%. Thus, stocks with low betas are relatively insulated from market conditions. The beta term is used in the CAPM to estimate the cost of equity, which is discussed in more detail later.[22]

[21] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180–81 (3rd ed., South Western Cengage Learning 2010).

[22] Though it will be discussed in more detail later, Exhibit DJG-8 shows that the average beta of the proxy group was less than 1.0. This confirms the well-known concept that utilities are relatively low-risk firms.

Q. Are public utilities characterized as defensive firms that have low betas, have low market risk, and are relatively insulated from overall market conditions?

A. Yes. Although market risk affects all firms in the market, it affects different firms to varying degrees. Firms with high betas are affected more than firms with low betas, which is why firms with high betas are riskier. Stocks with betas greater than one are generally known as "cyclical stocks." Firms in cyclical industries are sensitive to recurring patterns of recession and recovery known as the "business cycle."[23] Thus, cyclical firms are exposed to a greater level of market risk. Securities with betas less than one, on the other hand, are known as "defensive stocks." Companies in defensive industries, such as public utility companies, "will have low betas and performance that is comparatively unaffected by overall market conditions."[24] In fact, financial textbooks often use utility companies as prime examples of low-risk, defensive firms.[25] The figure below compares the betas of several industries and illustrates that the utility industry is one of the least risky industries in the U.S. market.[26]

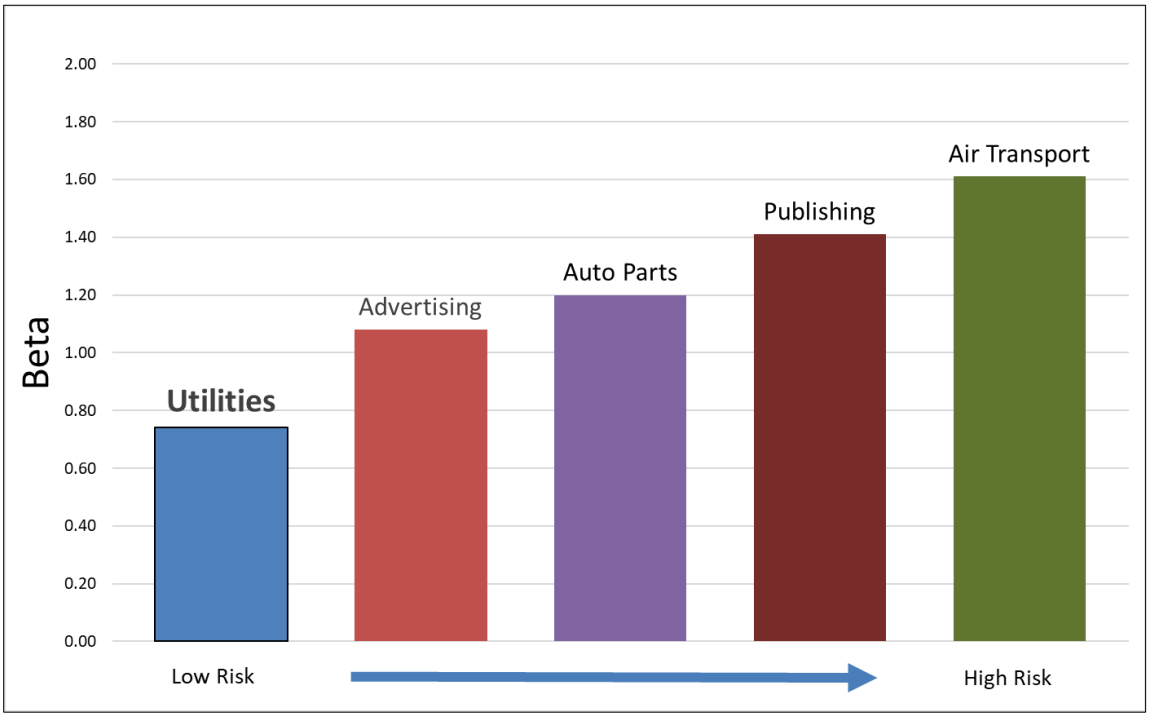
[23] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 382 (9th ed., McGraw-Hill/Irwin 2013).

[24] Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 383 (9th ed., McGraw-Hill/Irwin 2013).

[25] *See e.g.*, Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 382 (9th ed., McGraw-Hill/Irwin 2013); *see also* Aswath Damodaran, Investment Valuation: Tools and Techniques for Determining the Value of Any Asset 196 (3rd ed., John Wiley & Sons, Inc. 2012).

[26] *See* Betas by Sector (US) at http://pages.stern.nyu.edu/~adamodar/. The exact beta calculations are not as important as illustrating the well-known fact that utilities are low-risk companies. The fact that the utility industry is one of the lowest risk industries in the country should not change from year to year.

Figure 2:
Beta by Industry



The fact that utilities are defensive firms that are exposed to little market risk is beneficial to society. When the business cycle enters a recession, consumers can be assured that their utility companies will be able to maintain normal business operations and provide safe and reliable service under prudent management. Likewise, utility investors can be confident that utility stock prices will not fluctuate widely. So, while it is preferable for utilities to be defensive firms that experience little market risk and relatively insulated from market conditions, this should also be appropriately reflected in the Company's awarded return.

Q. The Company has proposed an Environmental Compliance Investment Charge and a Revenue Decoupling Mechanism. What is the effect of these proposals?

A. These proposals shift the risk of operating a water/wastewater utility from investors to ratepayers. The ECIC and RDM are discussed in the testimony of OCA witnesses Hoover (OCA Statements 1), Mierzwa (OCA Statement 4) and Colton (OCA Statement 5).

Q. Should the Commission adopt the Company's proposed ECIC and RDM?

A. No. These proposals improperly shift the risk from the Company, which is compensated for risk, to ratepayers who would be forced to bear this risk for no compensation. As such, these proposals represent an unjust and unreasonable shifting of risk and should be rejected. If the Commission would decide to adopt these proposals, PAWC's risk would greatly decrease. This decrease in risk would then need to be reflected in the cost of equity estimate and awarded ROE. Thus, if the Commission decides to adopt these proposals, then it should adopt an ROE at the lower end of my modeling range at the 8.7% ROE, , which is the result of my CAPM applied to the water utility group only.[27] However, the OCA's primary recommendation is that these proposals be rejected.

Q. Have other state commissions addressed similar regulatory mechanisms and their effects on risk and the authorized ROE?

A. Yes. In the application of Aquarion Water Company of Connecticut ("Aquarion"), the Public Utilities Regulatory Authority ("Authority") of Connecticut addressed Aquarion's revenue adjustment mechanism, which reconciles in rates the difference between actual revenues and allowed revenues.[28] The Authority found that there "must be a reduction in

[27] Exhibit DJG-12.

[28] Decision, Docket No. 13-02-20 before the Public Utilities Regulatory Authority of Connecticut, Sep. 24, 2013, p. 110.

risk from the revenue adjustment mechanism"[29] and deducted 10 basis points from the company's allowed ROE accordingly.[30] Likewise, if the Commission adopts ECIC or RDM, there should be a corresponding reduction to the allowed ROE.

VI. DISCOUNTED CASH FLOW (DCF) ANALYSIS

Q. Describe the DCF Model.

A. The DCF Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends.

Q. Describe the inputs to the DCF Model.

A. There are three primary inputs in the DCF Model: (1) stock price; (2) dividend; and (3) the long-term growth rate. The stock prices and dividends are known inputs based on recorded data, while the growth rate projection must be estimated. I discuss each of these inputs separately below.

A. Stock Price

Q. How did you determine the stock price input of the DCF Model?

A. For the stock price (P_0), I used 30-day averages of adjusted closing stock prices for each company in the proxy group.[31] Analysts sometimes rely on average stock prices for longer periods (e.g., 60, 90, or 180 days). According to the efficient market hypothesis, however,

---

[29] *Id*.

[30] *Id*. at 115.

[31] Exhibit DJG-3.

markets reflect all relevant information available at a particular time, and prices adjust instantaneously to the arrival of new information.[32] Past stock prices, in essence, reflect outdated information. The DCF Model used in utility rate cases is a derivation of the dividend discount model, which is used to determine the current value of an asset. Thus, according to the dividend discount model and the efficient market hypothesis, the value for the "P_0" term in the DCF Model should technically be the current stock price, rather than an average.

Q. Why did you use a 30-day average for the current stock price input?

A. Using a short-term average of stock prices for the current stock price input adheres to market efficiency principles while avoiding any irregularities that may arise from using a single current stock price. In the context of a utility rate proceeding there is a significant length of time from when an application or advice letter is filed and testimony is due. Choosing a current stock price for one particular day could raise a separate issue concerning which day was chosen to be used in the analysis. In addition, a single stock price on a particular day may be unusually high or low. It is arguably ill-advised to use a single stock price in a model that is ultimately used to set rates for several years, especially if a stock is experiencing some volatility. Thus, it is preferable to use a short-term average of stock prices, which represents a good balance between adhering to well-established principles of market efficiency while avoiding any unnecessary contentions that may arise from using a

[32] Eugene F. Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, Vol. 25, No. 2 The Journal of Finance 383 (1970); *see also Corporate Finance: Linking Theory to What Companies Do*, p. 357. The efficient market hypothesis was formally presented by Eugene Fama in 1970 and is a cornerstone of modern financial theory and practice.

single stock price on a given day. The stock prices I used in my DCF analysis are based on 30-day averages of adjusted closing stock prices for each company in the proxy group.[33]

B. Dividend

Q. Please describe how you determined the dividend input of the DCF Model.

A. The dividend term in the DCF Model represents dividends per share (d_0). I used forward-looking annualized dividends published by Yahoo! Finance for the dividend input to my constant growth DCF Model.[34] Dividing these dividends by the stock prices for each proxy company results in the dividend yield for each company.

Q. Are the stock price and dividend inputs for each proxy company a significant issue in this case?

A. No. Although my stock price and dividend inputs are more recent than those used by Ms. Bulkley, there is not a statistically significant difference between them because utility stock prices and dividends are generally quite stable because of their low-risk nature. This is another reason that cost of capital models such as the CAPM and the DCF Model are well-suited to be conducted on utilities. The differences between the DCF Model results in this case are primarily affected by the difference in growth rate estimates.

[33] Exhibit DJG-3. Adjusted closing prices, rather than actual closing prices, are ideal for analyzing historical stock prices. The adjusted price provides an accurate representation of the firm's equity value beyond the mere market price because it accounts for stock splits and dividends.

[34] Exhibit DJG-3.

C. Growth Rate

Q. Please Summarize the growth rate input in the DCF Model.

A. The most critical input in the DCF Model is the growth rate. Unlike the stock price and dividend inputs, the growth rate input (g) must be estimated. As a result, the growth rate is often the most contentious issue related to DCF model inputs in utility rate cases. The DCF model used in this case is based on the sustainable growth valuation model. Under this model, a stock is valued by the present value of its future cash flows in the form of dividends. Before future cash flows are discounted by the cost of equity, however, they must be "grown" into the future by a sustainable growth rate. As stated above, one of the inherent assumptions of this model is that these cash flows in the form of dividends grow at a sustainable rate forever. For young, high-growth firms, estimating the growth rate to be used in the model can be especially difficult, and may require the use of multi-stage growth models. For mature, low-growth firms such as utilities, however, estimating the sustainable growth rate is more transparent. The growth term of the DCF Model is one of the most important, yet least understood, aspects of cost of equity estimations in utility regulatory proceedings. I provide a more detailed explanation on the various determinants of growth below.

Q. Describe the various determinants of growth that can be considered for the growth rate input in the DCF Model.

A. Although the DCF Model directly considers the growth of dividends, there are a variety of growth determinants that should be considered when estimating growth rates. It should be noted that these various growth determinants are used primarily to determine the short-term growth rates in multi-stage DCF models. For utility companies, it is necessary to

focus primarily on a long-term growth rate in dividends. This is also known as a "sustainable" growth rate, since this is the growth rate assumed for the company's dividends in perpetuity. That is not to say that these growth determinants cannot be considered when estimating sustainable growth; however, as discussed below, sustainable growth must be constrained much more than short-term growth, especially for young firms with high growth opportunities. Additionally, I briefly discuss these growth determinants here because it may reveal some of the sources of confusion in this area.

(1) Historical Growth

Looking at a firm's actual historical experience may theoretically provide a good starting point for estimating short-term growth. However, past growth is not always a good indicator of future growth. Some metrics that might be considered here are a historical growth in revenues, operating income, and net income. Since dividends are paid from earnings, estimating historical earnings growth may provide an indication of future earnings and dividend growth.

(2) Analyst Growth Rates

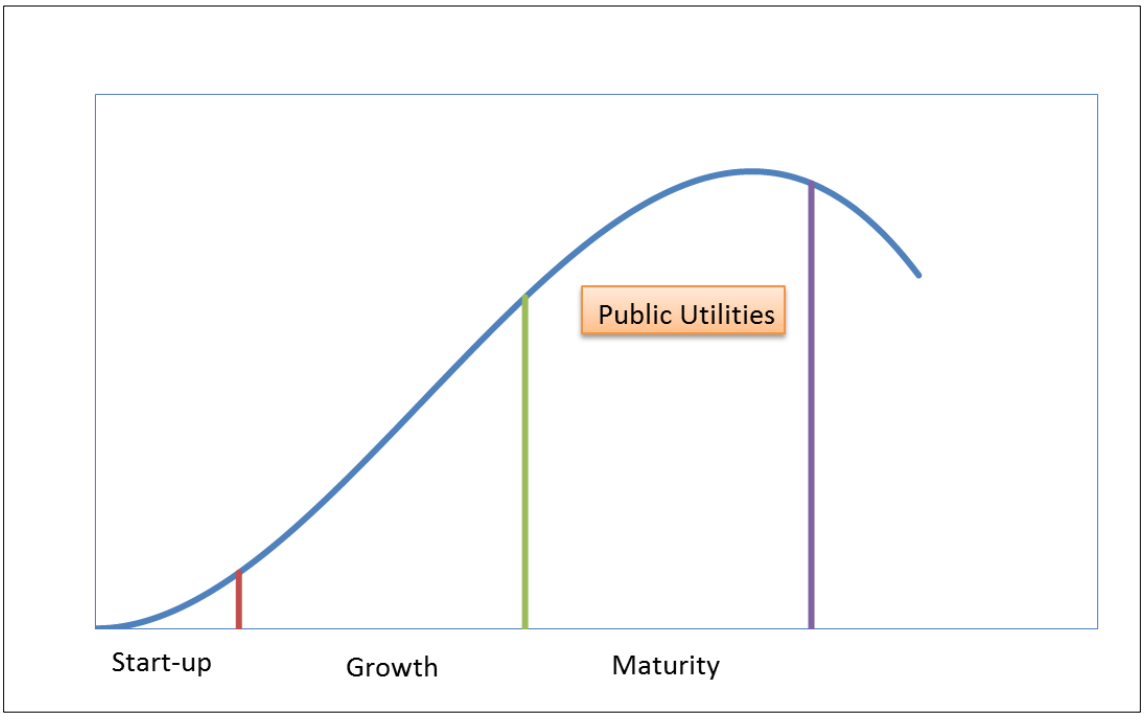
Analyst growth rates refer to short-term projections of earnings growth published by institutional research analysts such as Value Line and Bloomberg. Analyst growth rates, including the limitations with using them in the DCF Model to estimate utility cost of equity, are discussed in more detail below.

(3) Sustainable Growth Rates

In order to make the DCF Model a viable, practical model, an infinite stream of future cash flows must be estimated and then discounted back to the present. Otherwise, each annual cash flow would have to be estimated separately. Some analysts use "multi-

stage" DCF Models to estimate the value of high-growth firms through two or more stages of growth, with the final stage of growth being sustainable. However, it is not necessary to use multi-stage DCF Models to analyze the cost of equity of regulated utility companies. This is because regulated utilities are already in their "sustainable," low growth stage. Unlike most competitive firms, the growth of regulated utilities is constrained by physical service territories and limited primarily by ratepayer and load growth within those territories. The Figure below illustrates the well-known business/industry life-cycle pattern.

Figure 3:
Industry Life Cycle



In an industry's early stages, there are ample opportunities for growth and profitable reinvestment. In the maturity stage however, growth opportunities diminish, and firms choose to pay out a larger portion of their earnings in the form of dividends instead of

reinvesting them in operations to pursue further growth opportunities. Once a firm is in the maturity stage, it is not necessary to consider higher short-term growth metrics in multi-stage DCF Models; rather, it is sufficient to analyze the cost of equity using a stable growth DCF Model with one sustainable growth rate.

Q. Is the aggregate growth rate of the economy typically a limiting factor for the terminal growth rate in the DCF Model?

A. Yes. A fundamental concept in finance is that no firm can grow forever at a rate higher than the growth rate of the economy in which it operates.[35] Thus, the terminal growth rate used in the DCF Model should not exceed the aggregate economic growth rate. This is especially true when the DCF Model is conducted on public utilities because these firms have defined service territories. As stated by Dr. Damodaran: "[i]f a firm is a purely domestic company, either because of internal constraints . . . or external constraints (such as those imposed by a government), the growth rate in the domestic economy will be the limiting value."[36]

In fact, it is reasonable to assume that a regulated utility would grow at a rate that is less than the U.S. economic growth rate. Unlike competitive firms, which might increase their growth by launching a new product line, franchising, or expanding into new and developing markets, utility operating companies with defined service territories cannot do any of these things to grow. Gross Domestic Product ("GDP") is one of the most widely used measures of economic production and is used to measure aggregate economic growth.

[35] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 306 (3rd ed., John Wiley & Sons, Inc. 2012).

[36] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 306 (3rd ed., John Wiley & Sons, Inc. 2012).

According to the Congressional Budget Office's Budget Outlook, the long-term forecast for nominal U.S. GDP growth is about 4%, which includes an inflation rate of 2%.[37] For mature companies in mature industries, such as utility companies, the terminal growth rate will likely fall between the expected rate of inflation and the expected rate of nominal GDP growth.

Q. Do water utilities have unique growth opportunities that most electric and gas utilities do not have?

A. Yes. Water utilities are in a unique position to adopt growth strategies which include the potential acquisition of many smaller water and wastewater systems from various municipalities and other localized government entities. My analysis of the dividend yields of the proxy group shows that these companies are likely retaining more capital in order to pursue these types of growth strategies.

Q. Given these unique growth opportunities, did you also consider a variation of the DCF Model that incorporates analysts' growth rate projections?

A. Yes. In this case, I present the results of analyst growth variation of my DCF Model because it is commonly presented in rate proceedings and because of the unique growth opportunities of water utilities.

Q. Please describe the results of your DCF Models?

A. For my DCF Models, I considered two variations: one using a sustainable growth rate and one using analysts' growth rates. These results are summarized in the following table.

[37] Congressional Budget Office Long-Term Budget Outlook, https://www.cbo.gov/publication/59014.

Figure 4:
DCF Results Summary

	DCF Result (Analyst Growth)	DCF Result (Sustainable Growth)
Average (Total)	9.4%	7.3%
Average (Water Group)	9.4%	6.3%
Average (Non-Water Group)	9.3%	8.3%

The sustainable growth rate DCF model produced a cost of equity indication as high as 8.3% for the non-water group. As discussed above, however, given the unique growth opportunities of water utilities, I gave more consideration to the results of the analyst growth variation of the DCF Model in this case. Applying the analyst growth variation of the DCF Model to the water group indicates of cost of equity of 9.4%. However, this does not mean that PAWC's cost of equity is as high as 9.4%. In order to get an accurate assessment of the cost of equity, a model that measures market risk and its impact on individual companies must be used. This is exactly what the CAPM does. As discussed below, the results of the CAPM indicate a lower cost of equity for PAWC, and these results must be considered in the overall analyses.

D. Response to Ms. Bulkley's DCF Model

Q. Please summarize the results of Ms. Bulkley's DCF Model.

A. Ms. Bulkley conducted several variations of the DCF Model, which produced results ranging from 8.5% - 11.3%.[38] The results of Ms. Bulkley's DCF Model are overstated primarily because her reliance on several non-sustainable growth rate assumptions that are unreasonably high. Ms. Bulkley also considered flotation costs in making her final ROE recommendation. Flotation costs increased Ms. Bulkley's cost of equity estimates by 6 basis points.[39] Despite the fact that the high-end of Ms. Bulkley's DCF Model results are unreasonably high and exceed PAWC's cost of equity, it is worth noting that my proposed ROE for PAWC falls within Ms. Bulkley's overall DCF Model range.

1. Growth Rates

Q. Do you believe the results of Ms. Bulkley's DCF Models indicate a reasonable cost of equity estimate for PAWC?

A. The results of some of Ms. Bulkley's DCF Model variations overlap with my DCF results and ranges. In fact, several of her DCF results are lower than my proposed ROE in this case. I believe several of these results are reflective of reasonable cost of equity estimates for PAWC, including results such as 8.9%, 8.91%, and 9.28%, among other results.[40] However, the results toward the upper end of her range of results clearly exceed any reasonable estimate for PAWC's cost of equity.

---

[38] Direct Testimony of Ann Bulkley, p. 36, Fig. 6.

[39] Direct Testimony of Ann Bulkley, p. 49, lines 1-2.

[40] *See id*.

Q. Ms. Bulkley's DCF Model yielded much higher results. Did you find any errors in her analysis?

A. Yes. Ms. Bulkley's DCF Model produced cost of equity results as high as 11%. The results of Ms. Bulkley's DCF Model are overstated primarily because her reliance on non-sustainable growth rate assumptions.

Q. Describe the problems with Ms. Bulkley's long-term growth input.

A. Ms. Bulkley used long-term growth rates in her proxy group as high as 9.5%,[41] which is more than two times as high as projected, long-term nominal U.S. GDP growth. This means Ms. Bulkley's growth rate assumption violates the basic principle that no company can grow at a greater rate than the economy in which it operates over the long term, especially a regulated utility company with a defined service territory. Furthermore, Ms. Bulkley used short-term, quantitative growth estimates published by analysts. These analysts' estimates are inappropriate to use in the DCF Model as long-term growth rates because they are estimates for *short-term* growth. For example, Ms. Bulkley considered a growth rate estimate of 9.5% for NiSource, as reported by Value Line.[42] This means that an analyst at Value Line apparently thinks that Ni Source's earnings will quantitatively increase by 9.5% *each year* over the next *several* years (*i.e.*, the short-term). However, it is Ms. Bulkley, not the commercial analyst, who is suggesting to the Commission that NiSource's earnings will grow by more than two times the amount of U.S. GDP each and every year over the long run. This demonstrates why it is important not to utilize long-term growth rates that are unreasonably high in a DCF Model.

---

[41] *Id.*

[42] Direct Testimony of Ann Bulkley, Exhibit No. 13-A, Sch. 3.

2. Flotation Costs

Q. What are flotation costs?

A. When companies issue equity securities, they typically hire at least one investment bank as an underwriter for the securities. "Flotation costs" generally refer to the underwriter's compensation for the services it provides in connection with the securities offering.

Q. Did Ms. Bulkley consider flotation costs as part of her awarded ROE recommendation?

A. Yes. Ms. Bulkley considered flotation costs when assessing her final ROE recommendation (though she did not make an explicit adjustment for flotation costs).

Q. Do you believe flotation costs should have any impact on PAWC's cost of equity estimate or awarded ROE determination?

A. No. I do not believe flotation costs should have any impact on PAWC's cost of equity estimate or awarded ROE determination for several reasons, as further discussed below.

(1) Flotation costs are not actual, "out-of-pocket" costs.

It is my understanding that the Company has not experienced any out-of-pocket expense for flotation cost; if it has, those costs should be included in the Company's expense schedules in this case. Underwriters are not typically compensated in this fashion. Instead, underwriters are compensated through an "underwriting spread." An underwriting spread is the difference between the price at which the underwriter purchases the shares from the firm, and the price at which the underwriter sells the shares to investors.[43] Furthermore, PAWC is a wholly owned subsidiary of American Water Works Company ("AWK"), which means it does not issue securities to the public and thus would have no

[43] *Corporate Finance: Linking Theory to What Companies Do*, p. 509.

need to retain an underwriter. Accordingly, the Company has not experienced any out-of-pocket flotation costs, and if it has, those costs should be included in the Company's expense schedules.

(2) The market already accounts for flotation costs.

When an underwriter markets a firm's securities to investors, the investors are well aware of the underwriter's fees. In other words, the investors know that a portion of the price they are paying for the shares does not go directly to the company, but instead goes to compensate the underwriter for its services. In fact, federal law requires that the underwriter's compensation be disclosed on the front page of the prospectus.[44] Thus, investors have already considered and accounted for flotation costs when making their decision to purchase shares at the quoted price. As a result, there is no need for the Company's shareholders to receive additional compensation to account for costs they have already considered and agreed to. We see similar compensation structures in other kinds of business transactions. For example, a homeowner may hire a realtor and sell a home for $100,000. After the realtor takes a six percent commission, the seller nets $94,000. The buyer and seller agreed to the transaction notwithstanding the realtor's commission. Obviously, it would be unreasonable for the buyer or seller to demand additional funds from anyone after the deal is completed to reimburse them for the realtor's fees. Likewise, investors of competitive firms do not expect additional compensation for flotation costs. Thus, it would not be appropriate for a commission standing in the place of competition to

[44] Regulation S-K, 17 C.F.R. § 229.501(b)(3) (requiring that the underwriter's discounts and commissions be disclosed on the outside cover page of the prospectus). A prospectus is a legal document that provides details about an investment offering.

award a utility's investors with this additional compensation that shareholders of competitive firms never expect to receive.

(3) It is inappropriate to add any additional basis points to an awarded ROE proposal that is already far above the Company's cost of equity.

For the reasons discussed above, flotation costs should be disallowed from a technical standpoint; they should also be disallowed from a practical standpoint. the Company is asking this Commission to award it a cost of equity that is at least 200 basis points above its market-based cost of equity. Under these circumstances, it is especially unreasonable to consider any additional premiums to the cost of equity estimate or awarded ROE to account for flotation costs.

VII. CAPITAL ASSET PRICING MODEL (CAPM) ANALYSIS

Q. Describe the CAPM.

A. The CAPM is a market-based model founded on the principle that investors expect higher returns for incurring additional risk.[45] The CAPM estimates this expected return. The various assumptions, theories, and equations involved in the CAPM are discussed further in Appendix B. Using the CAPM to estimate the cost of equity of a regulated utility is consistent with the legal standards governing the fair rate of return. The U.S. Supreme Court has recognized that "the amount of risk in the business is a most important factor" in determining the allowed rate of return,[46] and that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding

[45] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277–93 (Management Science IX 1963).

[46] *Wilcox*, 212 U.S. at 48.

risks."[47] The CAPM is a useful model because it directly considers the amount of risk inherent in a business. It is arguably the strongest of the models usually presented in rate cases because, unlike the DCF Model, the CAPM directly measures the most important component of a fair rate of return analysis – risk.

Q. Describe the inputs for the CAPM.

A. The basic CAPM equation requires only three inputs to estimate the cost of equity: (1) the risk-free rate; (2) the beta coefficient; and (3) the equity risk premium. Here is the CAPM formula:

Equation 1:
Basic CAPM

Cost of Equity = Risk-free Rate + (Beta × Equity Risk Premium)

Each input is discussed separately below.

A. The Risk-Free Rate

Q. Explain the risk-free rate.

A. The first term in the CAPM is the risk-free rate (R_F). The risk-free rate is simply the level of return investors can achieve without assuming any risk. The risk-free rate represents the bare minimum return that any investor would require on a risky asset. Even though no investment is technically void of risk, investors often use U.S. Treasury securities to represent the risk-free rate because they accept that those securities essentially contain no default risk. The Treasury issues securities with different maturities, including short-term Treasury Bills, intermediate-term Treasury Notes, and long-term Treasury Bonds.

[47] *Hope Natural Gas Co.*, 320 U.S. at 603.

Q. Is it preferable to use the yield on long-term Treasury bonds for the risk-free rate in the CAPM?

A. Yes. In valuing an asset, investors estimate cash flows over long periods of time. Common stock is viewed as a long-term investment, and the cash flows from dividends are assumed to last indefinitely. Thus, short-term Treasury Bill yields are rarely used in the CAPM to represent the risk-free rate. Short-term rates are subject to greater volatility and thus can lead to unreliable estimates. Instead, long-term Treasury Bonds are usually used to represent the risk-free rate in the CAPM. I considered a 30-day average of daily Treasury yield curve rates on 30-year Treasury Bonds in my risk-free rate estimate, which resulted in a risk-free rate of 4.42%.[48]

B. The Beta Coefficient

Q. How is the beta coefficient used in this model?

A. As discussed above, beta represents the sensitivity of a given security to movements in the overall market. The CAPM states that in efficient capital markets, the expected risk premium on each investment is proportional to its beta. Recall that a security with a beta greater (or less) than one is more (or less) risky than the market portfolio. An index such as the S&P 500 Index is used as a proxy for the market portfolio. The historical betas for publicly traded firms are published by various institutional analysts. Beta may also be calculated through a linear regression analysis, which provides additional statistical information about the relationship between a single stock and the market portfolio. As discussed above, beta also represents the sensitivity of a given security to the market as a

[48] Exhibit DJG-7.

whole. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than 1.0 are relatively more sensitive to market risk than the average stock. For example, if the market increases (or decreases) by 1.0%, a stock with a beta of 1.5 will, on average, increase (or decrease) by 1.5%. In contrast, stocks with betas of less than 1.0 are less sensitive to market risk. For example, if the market increases (or decreases) by 1.0%, a stock with a beta of 0.5 will, on average, only increase (or decrease) by 0.5%.

Q. Describe the source for the betas you used in your CAPM analysis.

A. I used betas recently published by Value Line Investment Survey. The beta for each proxy company used in Ms. Bulkley's proxy group is less than 1.0. Thus, we have an objective measure to prove the well-known concept that utility stocks are less risky than the average stock in the market. While there is evidence suggesting that betas published by sources such as Value Line may actually overestimate the risk of utilities (and thus overestimate the CAPM), I used the betas published by Value Line to be conservative.[49]

C. The ERP

Q. Describe the Equity Risk Premium ("ERP").

A. The final term of the CAPM is the ERP, which is the required return on the market portfolio less the risk-free rate ($R_M - R_F$). In other words, the ERP is the level of return investors expect above the risk-free rate in exchange for investing in risky securities. Many experts would agree that "the single most important variable for making investment decisions is

[49] Exhibit DJG-8; *see also* Appendix B for a more detailed discussion of raw beta calculations and adjustments.

the equity risk premium."[50] Likewise, the ERP is arguably the single most important factor in estimating the cost of capital in this matter. There are three basic methods that can be used to estimate the ERP: (1) calculating a historical average; (2) taking a survey of experts; and (3) calculating the implied ERP. I will discuss each method in turn, noting advantages and disadvantages of these methods.

1. Historical Average

Q. Describe the historical ERP.

A. The historical ERP may be calculated by simply taking the difference between returns on stocks and returns on government bonds over a certain period of time. Many practitioners rely on the historical ERP as an estimate for the forward-looking ERP because it is easy to obtain. However, there are disadvantages to relying on the historical ERP.

Q. What are the limitations of relying solely on a historical average to estimate the current or forward-looking ERP?

A. Many investors use the historic ERP because it is convenient and easy to calculate. What matters in the CAPM model, however, is not the actual risk premium from the past, but rather the current and forward-looking risk premium.[51] Some investors may think that a historic ERP provides some indication of the prospective risk premium; however, there is empirical evidence to suggest the prospective, forward-looking ERP is actually lower than the historical ERP. In a landmark publication on risk premiums around the world, *Triumph of the Optimists*, the authors suggest through extensive empirical research that the

[50] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns* 4 (Princeton University Press 2002).

[51] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 330 (3rd ed., South Western Cengage Learning 2010).

prospective ERP is lower than the historical ERP.[52] This is due in large part to what is known as "survivorship bias" or "success bias" – a tendency for failed companies to be excluded from historical indices.[53] From their extensive analysis, the authors make the following conclusion regarding the prospective ERP: "[t]he result is a forward-looking, geometric mean risk premium for the United States . . . of around 2½ to 4 percent and an arithmetic mean risk premium . . . that falls within a range from a little below 4 to a little above 5 percent."[54] Indeed, these results are lower than many reported historical risk premiums. Other noted experts agree:

> The historical risk premium obtained by looking at U.S. data is biased upwards because of survivor bias. . . . The true premium, it is argued, is much lower. This view is backed up by a study of large equity markets over the twentieth century (*Triumph of the Optimists*), which concluded that the historical risk premium is closer to 4%.[55]

Regardless of the variations in historic ERP estimates, many scholars and practitioners agree that simply relying on a historic ERP to estimate the risk premium going forward is not ideal. Fortunately, "a naïve reliance on long-run historical averages is not the only approach for estimating the expected risk premium."[56]

[56] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 330 (3rd ed., South Western Cengage Learning 2010).

Q. Did you rely on the historical ERP as part of your CAPM analysis in this case?

A. No. Due to the limitations of this approach, I relied on the ERP reported in expert surveys and the implied ERP method discussed below.

2. Expert Surveys

Q. Describe the expert survey approach to estimating the ERP.

A. As its name implies, the expert survey approach to estimating the ERP involves conducting a survey of experts including professors, analysts, chief financial officers, and other executives around the country and asking them what they think the ERP is. The IESE Business School conducts a periodic survey that asks experts around the country about their opinions on the ERP. Their 2023 expert survey reported an average ERP of 5.7%.[57]

3. Implied ERP

Q. Describe the implied ERP approach.

A. The implied ERP relies on the stable growth model proposed by Gordon, often called the "Gordon Growth Model," which is a basic stock valuation model widely used in finance for many years.[58] This model is a mathematical derivation of the DCF Model. In fact, the underlying concept in both models is the same: the current value of an asset is equal to the present value of its future cash flows. Instead of using this model to determine the discount rate of one company, we can use it to determine the discount rate for the entire market by

---

[57] Pablo Fernandez, et al., Survey: Market Risk Premium and Risk-Free Rate used for 80 countries in 2023, IESE Business School, p. 3 (2015), copy available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4407839. IESE Business School is the graduate business school of the University of Navarra. IESE offers Master of Business Administration (MBA), Executive MBA and Executive Education programs. IESE is consistently ranked among the leading business schools in the world.

[58] Myron J. Gordon and Eli Shapiro, *Capital Equipment Analysis: The Required Rate of Profit* 102–10 (Management Science Vol. 3, No. 1 Oct. 1956).

substituting the inputs of the model. Specifically, instead of using the current stock price (P_0), we will use the current value of the S&P 500 (V_{500}). Similarly, instead of using the dividends of a single firm, we will consider the dividends paid by the entire market. Additionally, we should consider potential dividends. In other words, stock buybacks should be considered in addition to paid dividends, as stock buybacks represent another way for the firm to transfer free cash flow to shareholders. Focusing on dividends alone without considering stock buybacks could understate the cash flow component of the model, and ultimately understate the implied ERP. The market dividend yield plus the market buyback yield gives us the gross cash yield to use as our cash flow in the numerator of the discount model. This gross cash yield is increased each year over the next five years by the growth rate. These cash flows must be discounted to determine their present value. The discount rate in each denominator is the risk-free rate (R_F) plus the discount rate (K). The following formula shows how the implied return is calculated. Since the current value of the S&P is known, we can solve for K: the implied market return.[59]

Equation 2:
Implied Market Return

$$V_{500} = \frac{CY_1(1+g)^1}{(1+R_F+K)^1} + \frac{CY_2(1+g)^2}{(1+R_F+K)^2} + \cdots + \frac{CY_5(1+g)^5 + TV}{(1+R_F+K)^5}$$

where:
- V_{500} = *current value of index (S&P 500)*
- $CY_{1\text{-}5}$ = *average cash yield over last five years (includes dividends and buybacks)*
- g = *compound growth rate in earnings over last five years*
- R_F = *risk-free rate*
- K = *implied market return (this is what we are solving for)*
- TV = *terminal value* $= CY_5 (1+R_F) / K$

[59] *See* Exhibit DJG-9 for detailed calculation.

The discount rate is called the "implied" return here because it is based on the current value of the index as well as the value of free cash flow to investors projected over the next five years. Thus, based on these inputs, the market is "implying" the expected return; or in other words, based on the current value of all stocks (the index price), and the projected value of future cash flows, the market is telling us the return expected by investors for investing in the market portfolio. After solving for the implied market return (K), we simply subtract the risk-free rate from it to arrive at the implied ERP.

Equation 3:
Implied Equity Risk Premium

$$Implied\ Expected\ Market\ Return - R_F = Implied\ ERP$$

Q. Discuss the results of your implied ERP calculation.

A. After collecting data for the index value, operating earnings, dividends, and buybacks for the S&P 500 over the past six years, I calculated the dividend yield, buyback yield, and gross cash yield for each year. I also calculated the compound annual growth rate (g) from operating earnings. I used these inputs, along with the risk-free rate and current value of the index to calculate a current expected return on the entire market of 7.5%. I subtracted the risk-free rate to arrive at the implied equity risk premium of 5.0%.[60] Dr. Damodaran, one of the world's leading experts on the ERP, promotes the implied ERP method discussed above. He calculates monthly and annual implied ERPs with this method and publishes

[60] Exhibit DJG-9.

his results. Dr. Damodaran's highest ERP estimate for December 2023 using several implied ERP variations was 4.5%.[61]

Q. What are the results of your final ERP estimate?

A. For the final ERP estimate I used in my CAPM analysis, I considered the results of the ERP surveys along with the implied ERP calculations and the ERP reported by Duff & Phelps.[62] The results are presented in the following figure:

Figure 5:
Equity Risk Premium Results

IESE Business School Survey	5.7%
Kroll (Duff & Phelps) Report	5.5%
Damodaran (average)	4.5%
Garrett	5.3%
Average	**5.3%**

In my CAPM analysis, I used the average ERP result of 5.3%.

Q. Please explain the final results of your CAPM analysis.

A. Using the inputs for the risk-free rate, beta coefficient, and ERP discussed above, I estimate that the Company's CAPM cost of equity is 8.7% (assuming the proxy group's average debt ratio is implemented).[63] The CAPM can be displayed graphically through what is known as the Security Market Line ("SML"). The following figure shows the expected

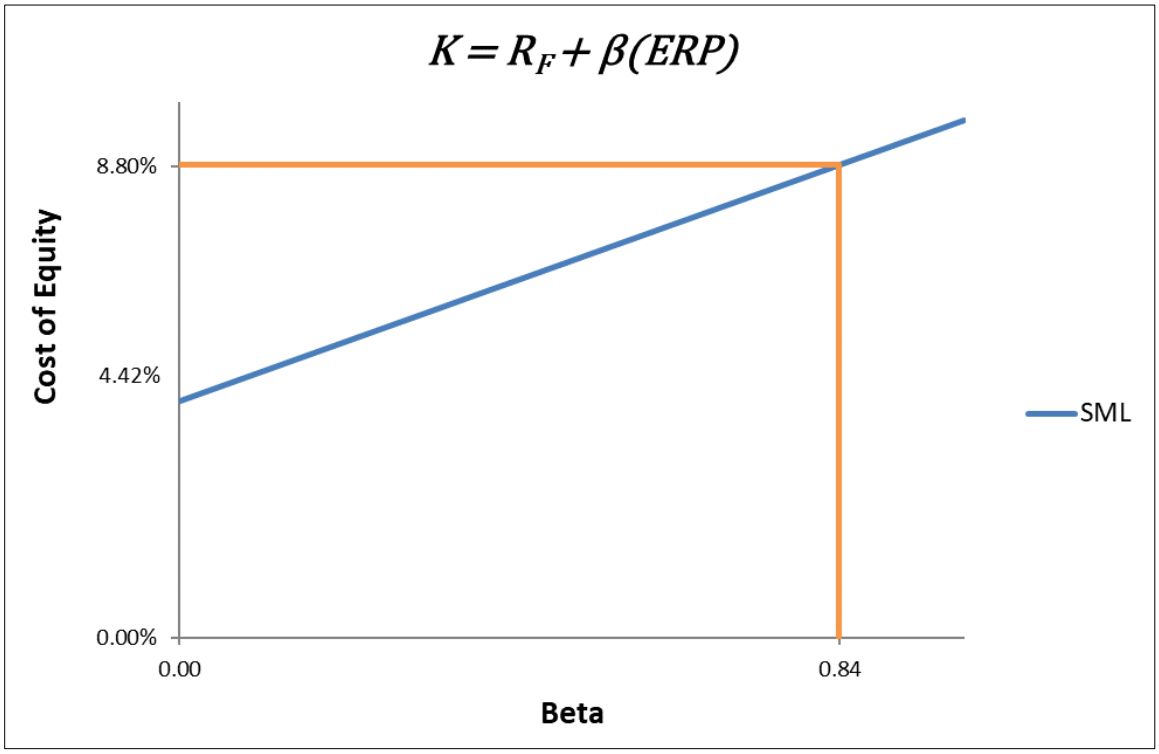
[61] Aswath Damodaran, *Implied Equity Risk Premium Update*, DAMODARAN ONLINE http://pages.stern.nyu.edu/~adamodar/.

[62] Exhibit DJG-10.

[63] Exhibit DJG-12.

return (cost of equity) on the y-axis, and the average beta for the proxy group on the x-axis. The SML intercepts the y-axis at the level of the risk-free rate. The slope of the SML is the equity risk premium.

Figure 6:
CAPM Graph



The SML provides the rate of return that will compensate investors for the beta risk of that investment. Thus, at an average beta of 0.84 for the proxy group, the estimated CAPM cost of equity for the Company is 8.8%.

D. Response to Ms. Bulkley's CAPM Analysis

Q. Please summarize the results of Ms. Bulkley's CAPM analyses.

A. Ms. Bulkley presented several variations of the CAPM, with results ranging as high as 11.5%.[64]

Q. Do you believe the results of Ms. Bulkley's CAPM analyses indicate a reasonable cost of equity estimate for PAWC?

A. No. The primary problem with Ms. Bulkley's CAPM cost of equity result stems from her ERP estimate. In this section, I also discuss Ms. Bulkley's empirical CAPM variation.

1. Equity Risk Premium

Q. Did Ms. Bulkley rely on a reasonable measure for the ERP?

A. No. Ms. Bulkley used an input as high as 8.69% for the ERP. This estimate is not reasonable. The ERP is one of only three inputs in the CAPM equation, and it is one of the single most important factors for estimating the cost of equity in this case. As discussed above, I used three widely accepted methods for estimating the ERP, including consulting expert surveys, calculating the implied ERP based on aggregate market data, and considering the ERPs published by reputable analysts. The average ERP calculated from my sources is 5.3%. This means that Ms. Bulkley's ERP is significantly higher than the ERP estimate reported by thousands of expert survey respondents and other sources.

Q. Why is Ms. Bulkley's ERP so much higher than the ERPs estimated and reported by thousands of survey respondents and other experts around the country?

A. Instead of relying on one of the three reasonable approaches for estimating the ERP discussed above, Ms. Bulkley instead chose to essentially conduct a DCF analysis on every

[64] Direct Testimony of Ann Bulkley, p. 45, Fig. 8.

company in the S&P 500. This means that Ms. Bulkley made 500 separate growth rate inputs for each company in her market portfolio. If her growth inputs for each company were reasonable, then Ms. Bulkley's model could theoretically produce reasonable results for the ERP. Instead, however, many of Ms. Bulkley's growth rate inputs were not realistic. For example, Ms. Bulkley estimated an annual long-term growth rate of 83% for Marathon Petroleum Corp. That level of annual growth is simply not possible to sustain over the long-run, which is what Ms. Bulkley's model assumes. Many of Ms. Bulkley's other long-term growth estimates are similarly too high to be considered realistic. Thus, the Commission should reject her CAPM results.

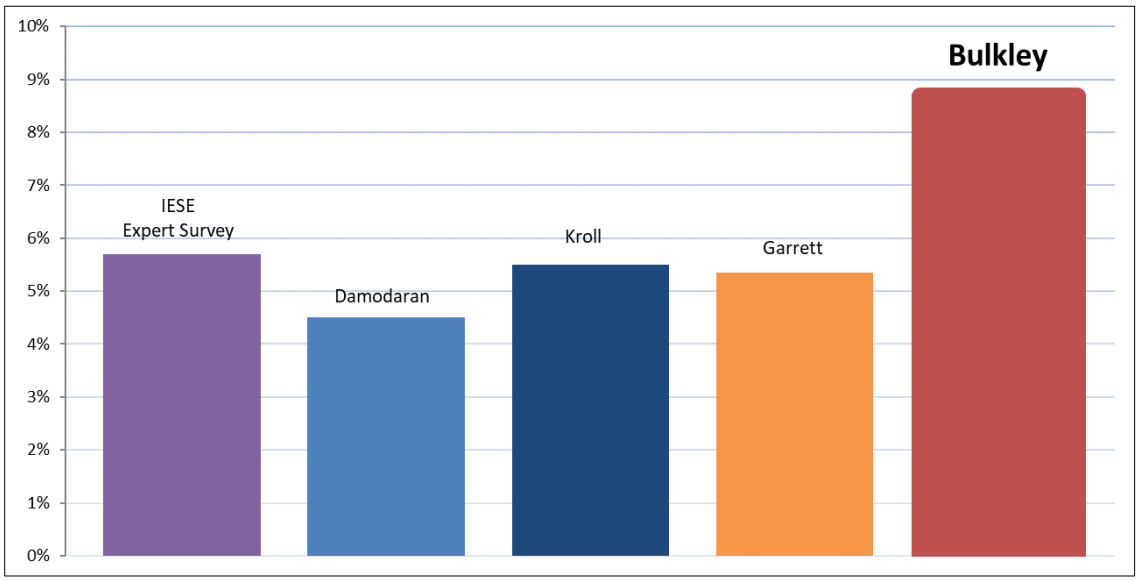
Q. Please discuss and illustrate how Ms. Bulkley's ERP compares with other estimates for the ERP.

A. As discussed above, the 2023 IESE Business School expert survey reports an average ERP of 5.7%. Similarly, Kroll (formerly Duff & Phelps) recently estimated an ERP of 5.5%.[65] Dr. Damodaran, one of the leading experts on the ERP, recently estimated an average ERP of 5.3%.[66] The following chart illustrates that Ms. Bulkley's ERP estimate is far out of line with other reasonable, objective estimates for the ERP.

[65] Exhibit DJG-10.

[66] Damodaran Online, http://pages.stern.nyu.edu/~adamodar/. Dr. Damodaran estimates several ERPs using various assumptions.

Figure 7:
Equity Risk Premium Comparison



When compared with other independent sources for the ERP (as well as my estimate), Ms. Bulkley's ERP estimate is clearly not within the range of reasonableness. As a result, her CAPM cost of equity estimate is overstated.

2. Empirical CAPM

Q. Please summarize Ms. Bulkley's Empirical CAPM ("ECAPM") analysis.

A. Ms. Bulkley offers another version of the CAPM called ECAPM. The premise of the ECAPM is that the standard CAPM underestimates the return required from low-beta securities, such as those of the proxy group. The results of Ms. Bulkley's ECAPM are even higher than her traditional CAPM results.

Q. Do you agree with Ms. Bulkley's ECAPM results?

A. No. The premise of Ms. Bulkley's ECAPM is that the standard CAPM underestimates the return required from low-beta securities. There are several problems with this concept, however. First, the Value Line betas both Ms. Bulkley and I used in the real CAPM have

already been adjusted upward to account for the theory that low-beta stocks might have a tendency to be underestimated.[67] Second, there is empirical evidence suggesting that the type of beta-adjustment method used by Value Line actually overstates betas from consistently low-beta industries like utilities.[68] According to this research, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average, which ultimately would result in betas that are lower than those published in Value Line.[69] Finally (and most pertinently), Ms. Bulkley's ECAPM still suffers from the same overestimated ERP input discussed above. Regardless of the differing theories regarding the mean reversion tendencies of low-beta securities, Ms. Bulkley's ECAPM should be disregarded for its ERP inputs alone.

Q. What is the monetary value of Ms. Bulkley's recommendation of a 10.95% ROE compared to your recommendation of a 9.1% ROE?

A. If the Commission were to adopt Ms. Bulkley's proposed 10.95% ROE over my recommended 9.1% ROE, at PAWC's claimed rate base, it would cost consumers an additional $87 million per year in rates.[70]

[67] *See* Appendix B for further discussion on adjusted betas.

[68] *Id*.

[69] *See* Appendix B for further discussion on these theories.

[70] *See* OCA Statement 2, Exhibit LA-6 at 5-6.

VIII. MANAGEMENT PERFORMANCE

Q. Ms. Bulkley suggests that management performance was taken into account in selecting her final authorized ROE recommendation. Do you agree with this approach?

A. No. According to Ms. Bulkley, she took into consideration "superior management performance" in proposing a 10.95% authorized ROE for the Company.[71] Managerial performance should not have an increasing effect on a utility's authorized ROE. As discussed in my testimony, the primary driver of the cost of equity and required rate of return is how market risk impacts individual firms. Managerial performance and the risk of imprudent management is related to firm-specific risks, which are not rewarded by the market because investors can eliminate such risk through diversification of portfolio, and do not have a material effect on the cost of equity. As investors in competitive firms in the marketplace cannot expect an additional return on equity simply due to prudent managerial performance, the Company as a regulated firm should not receive any premium in addition to an authorized market-based ROE due to prudent managerial performance.

Q. What does Ms. Everette recommend regarding the ROE and the Company's management performance?

A. Ms. Everette recommends an incremental increase in the ROE of up to 25 basis points for the Company's management performance. PAWC witness Everette states: "[I]f the Commission were to approve a rate of return on equity that is lower than the upper end of Ms. Bulkley's recommended range [of 10.95%], it should add no less than 25 basis points to its market-determined rate of return." [fn. 11]: Of course, if the Commission's market-

[71] Direct Testimony of Ann E. Bulkley, p. 8, lines 10-13.

determined rate of return on equity is greater than 10.70%, then the performance-based increment could be less than 25 basis points to achieve a final equity return rate of 10.95%." PAWC St. 1 at 33, n. 11.

Q. Do you agree with Ms. Everette's recommendation?

A. No. While Section 523 of the Public Utility Code gives the Commission the discretion to consider the efficiency, effectiveness and adequacy of service when determining just and reasonable rates, it requires the Commission to "give effect to this section by making such adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate." In my opinion, it would be neither proper nor appropriate for the Commission to award an ROE bump for prudent managerial performance when investors themselves cannot expect an additional return on equity simply due to prudent managerial performance when they invest in competitive firms in the marketplace. For all the reasons I have explained in my testimony, and despite any contrary notion advocated for by regulated utilities, ROE is not a "quid-pro-quo" concept. Increments to cost of equity should not be awarded in return for a utility's management operating the public utility company in a prudent manner as required by law.

Q. What is the monetary value of Ms. Everette's recommendation for an ROE increase for managerial performance?

A. Ms. Everette's recommendation for a performance-based increment of up to 25 basis points in the Company's ROE would cost consumers up to an additional $11.8 million per year in rates, which is excessive and unsupported.[72]

Q. What is your conclusion?

A. In conclusion, for the reasons stated above, the Commission should reject the Company's request for an ROE at 10.95% or a performance-based adder of up to 25 basis points to its market-determined ROE as an award for its managerial performance. The request for the 25-basis point increment to return on equity is unsupported, excessive, and inappropriate. An objective cost of equity analysis shows that the Company's market-determined return of equity is notably lower than the Company's proposed ROE at 10.95%. Based on the results of my financial modeling using the DCF and CAPM models, I recommend that the Commission set the Company's market-determined cost of equity at 9.1%, which is based on the average of my CAPM result (8.7%) and my DCF Model result (9.4%).

IX. CAPITAL STRUCTURE

Q. Describe in general the concept of a company's "capital structure."

A. "Capital structure" refers to the way a company finances its overall operations through external financing. The primary sources of long-term, external financing are debt capital and equity capital. Debt capital usually comes in the form of contractual bond issues that

[72] *See* OCA Statement 2, Exhibit LA-6 at 2.

require the firm to make payments, while equity capital represents an ownership interest in the form of stock. Because a firm cannot pay dividends on common stock until it satisfies its debt obligations to bondholders, stockholders are referred to as "residual claimants." The fact that stockholders have a lower priority to claims on company assets increases their risk and the required return relative to bondholders. Thus, equity capital has a higher cost than debt capital. Firms can reduce their WACC by recapitalizing and increasing their debt financing. In addition, because interest expense is deductible, increasing debt also adds value to the firm by reducing the firm's tax obligation.

Q. Please explain the concept of the "weighted average cost of capital."

A. The term "cost of capital" refers to the weighted average cost of all the components of a company's capital structure, including debt and equity. Determining the cost of debt is relatively straightforward. Interest payments on bonds are contractual, "embedded costs" that are generally calculated by dividing total interest payments by the book value of outstanding debt. Determining the cost of equity, on the other hand, is more complex. Unlike the known, contractual cost of debt, there is no explicit "cost" of equity; the cost of equity must be estimated through various financial models. Thus, the overall weighted average cost of capital includes the cost of debt and the estimated cost of equity. It is a "weighted average" because it is based upon the Company's relative levels of debt and equity, or "capital structure." Companies in the competitive market often use their WACC as the discount rate to determine the value of capital projects, so it is important that this figure be closely estimated. The basic WACC equation used in regulatory proceedings is presented as follows:

Equation 4:
Weighted Average Cost of Capital

$$WACC = \left(\frac{D}{D+E}\right) C_D + \left(\frac{E}{D+E}\right) C_E$$

where: $WACC$ = *weighted average cost of capital*
D = *book value of debt*
C_D = *embedded cost of debt capital*
E = *book value of equity*
C_E = *market-based cost of equity capital*

Thus, the three components of the weighted average cost of capital include the following:

(1) Cost of Equity

(2) Cost of Debt

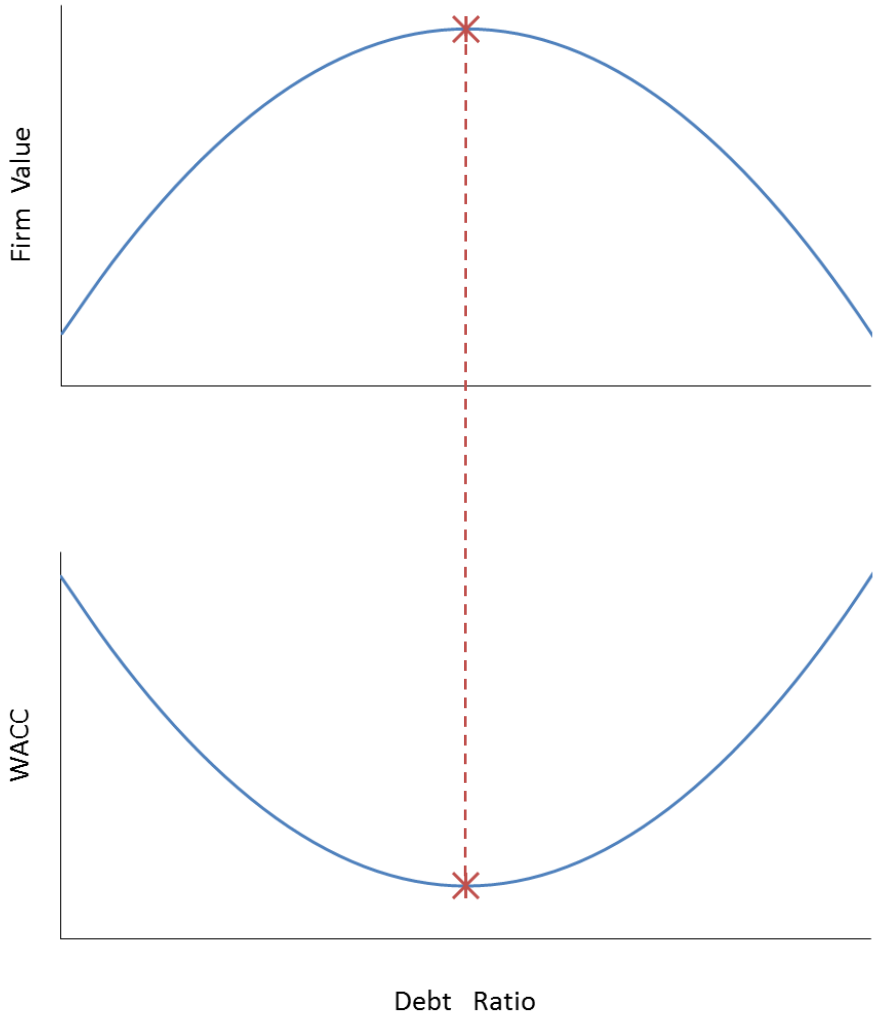
(3) Capital Structure

The term "cost of capital" is necessarily synonymous with the "weighted average cost of capital," and the terms are used interchangeably throughout this testimony.

Q. Is it true that, by increasing debt, competitive firms can add value and reduce their WACC?

A. Yes, it is. A competitive firm can add value by increasing debt. After a certain point, however, the marginal cost of additional debt outweighs its marginal benefit. This is because the more debt the firm uses, the higher interest expense it must pay, and the likelihood of loss increases. This also increases the risk of non-recovery for both bondholders and shareholders, causing both groups of investors to demand a greater return on their investment. Thus, if debt financing is too high, the firm's WACC will increase instead of decrease. The following Figure illustrates these concepts.

Figure 8:
Optimal Debt Ratio



As shown in this figure, a competitive firm's value is maximized when the WACC is minimized. In both graphs, the debt ratio is shown on the x-axis. By increasing its debt ratio, a competitive firm can minimize its WACC and maximize its value. At a certain point, however, the benefits of increasing debt do not outweigh the costs.

Q. Does the rate base rate of return model effectively incentivize utilities to operate at the optimal capital structure?

A. No. While it is true that competitive firms maximize their value by minimizing their WACC, this is not the case for regulated utilities. Under the rate base rate of return model,

a higher WACC results in higher rates, all else held constant. The basic revenue requirement equation is as follows:

Equation 5:
Revenue Requirement for Regulated Utilities

$$RR = O + d + T + \boldsymbol{r}(A - D)$$

where:	*RR*	=	*revenue requirement*
	O	=	*operating expenses*
	d	=	*depreciation expense*
	T	=	*corporate tax*
	r	=	***weighted average cost of capital (WACC)***
	A	=	*plant investments*
	D	=	*accumulated depreciation*

As shown in this equation, utilities can increase their revenue requirement by *increasing* their WACC, not by minimizing it. Thus, because there is no incentive for a regulated utility to minimize its WACC, a commission standing in the place of competition must ensure that the regulated utility is operating at the lowest reasonable WACC. Left unrestrained, utilities will increase their equity and decrease their debt to unreasonably increase their profits that flow through to shareholders.

Q. Can utilities generally afford to have higher debt levels than other industries?

A. Yes. Because regulated utilities have large amounts of fixed assets, stable earnings, and low risk relative to other industries, they can afford to have relatively higher debt ratios (or "leverage"). As aptly stated by Dr. Damodaran:

> Since financial leverage multiplies the underlying business risk, it stands to reason that firms that have high business risk should be reluctant to take on financial leverage. It also stands to reason that firms that operate in stable businesses should be much more willing to take on financial leverage. *Utilities*, for instance, have historically had high debt ratios but have not had high betas, mostly because their underlying businesses have been stable and fairly predictable.[73]

Note that Dr. Damodaran explicitly contrasts utilities with firms that have high underlying business risk. Because utilities have low levels of risk and operate a stable business, they should generally operate with relatively high levels of debt to achieve their optimal capital structure.

A. Proxy and Parent Utility Debt Ratios

Q. Please describe the debt ratios of the proxy group.

A. According to the debt ratios recently reported in Value Line for the utility proxy group, the average debt ratio of the proxy group is 49%.[74] This is notably higher than PAWC's proposed debt ratio of only 45%.

Q. What is the debt ratio of PAWC's parent company, AWK?

A. AWK, has a debt ratio of 55% as reported by Value Line.

B. Competitive Industry Debt Ratios

Q. Please describe the debt ratios recently observed in competitive U.S. industries.

A. There are nearly 2,000 firms in U.S. industries with higher debt ratios than 50%, and with an average debt ratio of about 61%.[75] The following figure shows a sample of these industries with debt ratios higher than 56%.

---

[73] *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, p. 196 (emphasis added).

[74] Exhibit DJG-13.

[75] *See* Exhibit DJG-14.

Figure 9:
Industries with Debt Ratios Greater than 56%

Industry	# Firms	Debt Ratio
Air Transport	21	84%
Hotel/Gaming	69	82%
Hospitals/Healthcare Facilities	34	82%
Retail (Automotive)	30	78%
Brokerage & Investment Banking	30	76%
Computers/Peripherals	42	71%
Bank (Money Center)	7	68%
Cable TV	10	68%
Food Wholesalers	14	67%
Advertising	58	67%
Oil/Gas Distribution	23	66%
Rubber& Tires	3	65%
Transportation (Railroads)	4	65%
Real Estate (Operations & Services)	60	64%
Retail (Grocery and Food)	13	64%
Retail (Special Lines)	78	64%
Recreation	57	62%
Insurance (Life)	27	61%
Trucking	35	61%
Packaging & Container	25	61%
Power	48	60%
Telecom. Services	49	60%
Telecom (Wireless)	16	60%
R.E.I.T.	223	60%
Auto & Truck	31	59%
Utility (General)	15	59%
Household Products	127	58%
Office Equipment & Services	16	58%
Environmental & Waste Services	62	57%
Utility (Water)	16	57%
Retail (Distributors)	69	57%
Transportation	18	57%
Green & Renewable Energy	19	57%
Total / Average	**1,349**	**65%**

Many of the industries shown here, like public utilities, are generally well-established industries with large amounts of capital assets. The shareholders of these industries

generally prefer these higher debt ratios in order to maximize their profits. There are several notable industries that are relatively comparable to public utilities. For example, the Cable TV, Telecom, Power, and Water Utility industries all have an average debt ratio of about 60%.

Q. Please summarize the results of your capital structure analyses.

A. As described above, I analyzed PAWC's proposed debt ratio under several approaches. The results of my analyses are summarized in the following table:

Figure 10:
Capital Structure Analysis – Summary of Results

Source	Debt Ratio
Cable TV	68%
Power	60%
Telecom (Wireless)	60%
PAWC Parent Company (AWK)	**55%**
Proxy Group of Utilities	**49%**
PAWC Proposed	**45%**

As shown in this figure, PAWC's proposed debt ratio is clearly too low. This results in excessively high capital costs and utility rates. Specifically, PAWC's excessive equity ratio alone would impose $30.7 million per year of additional expense to ratepayers, at PAWC's claimed rate base and ROE.[76] Moreover, customers do not receive an additional benefit from the utility's excessively high capital costs; rather, it exclusively benefits the

[76] *See* OCA Statement 2, Exhibit LA-6 at 3-4 for detailed calculations.

Company's shareholders. Thus, there is no fair or reasonable basis on which to authorize PAWC's proposed capital structure. My analysis indicates that PAWC's debt ratio for ratemaking should be at least 49%. Thus, I recommend the Commission adopt a capital structure for PAWC consisting of 49% debt.

C. The Hamada Model: Capital Structure's Effect on ROE

Q. Have you considered the impact that your capital structure recommendation could have on the company's indicated cost of equity?

A. Yes. I assessed the impact of my capital structure proposal on the Company's cost of equity estimate by using the Hamada model.

Q. What is the premise of the Hamada model?

A. The Hamada formula can be used to analyze changes in a firm's cost of capital as it adds or reduces financial leverage, or debt, in its capital structure by starting with an "unlevered" beta and then "relevering" the beta at different debt ratios. As leverage increases, equity investors bear increasing amounts of risk, leading to higher betas. Before the effects of financial leverage can be accounted for, however, the effects of leverage must first be removed, which is accomplished through the Hamada formula. The Hamada formula for unlevering beta is stated as follows:[77]

[77] Damodaran *supra* n. 22 at 197. This formula was originally developed by Hamada in 1972.

Equation 6:
Hamada Formula

$$\beta_U = \frac{\beta_L}{\left[1 + (1 - T_c)\left(\frac{D}{E}\right)\right]}$$

where: β_U = *unlevered beta (or "asset" beta)*
β_L = *average levered beta of proxy group*
T_C = *corporate tax rate*
D = *book value of debt*
E = *book value of equity*

Using this equation, the beta for the firm can be unlevered, and then "relevered" based on various debt ratios (by rearranging this equation to solve for β_L).

Q. Please summarize the results of the Hamada formula based on your proposed capital structure for the company.

A. The average capital structure of the proxy group consists of 49% debt and 51% equity. Because PAWC's water and wastewater debt ratios are so much lower than that of the proxy group, when we "relever" PAWC relative to the proxy group, it results in a much lower ROE than if PAWC had been operating with a capital structure equal to that of the proxy group. This makes sense because PAWC is much less risky relative to the proxy group due to the decreased amount of debt in its capital structure. The results of my Hamada model are presented in the following figure.

Figure 11:
Hamada Model ROE

Unlevering Beta	
Proxy Debt Ratio	49%
Proxy Equity Ratio	51%
Debt / Equity Ratio	96%
Tax Rate	26%
Equity Risk Premium	5.3%
Risk-free Rate	4.4%
Proxy Group Beta	0.84
Unlevered Beta	0.49

Relevered Betas and Cost of Equity Estimates

Debt Ratio	D/E Ratio	Levered Beta	Cost of Equity
0%	0%	0.49	7.0%
20%	25%	0.58	7.5%
30%	43%	0.65	7.8%
45%	81%	0.78	8.5%
49%	96%	0.84	8.8%
53%	113%	0.90	9.2%
60%	150%	1.04	9.9%

According to the results of the Hamada model, if the Commission were to adopt my capital structure recommendation, PAWC's indicated cost of equity estimate (under the CAPM) would be 8.8%. However, if the Commission's accepts the PAWC's proposed capital structure, the Company's cost of equity estimate would be 8.5% under the CAPM.[78]

[78] *See* Exhibit DJG-15.

X. CONCLUSION

Q. Please summarize your recommendation to the Commission.

A. I recommend the Commission authorize a ROE of 9.1% for PAWC. This is based on the average of my CAPM and DCF Model results (8.7% and 9.4%, respectively). I also recommend the Commission impute a ratemaking capital structure for PAWC that is equal to the proxy group average, which consists of 49% debt and 51% equity.

Q. What is the monetary value of your above proposed adjustments?

A. As quantified by OCA witness Ralph Smith in Exhibit LA-6, the monetary value of my proposed adjustments are as follows:

- If the Commission were to adopt the Company's proposed 10.95% ROE over my recommended 9.1% ROE, at PAWC's claimed rate base, it would cost consumers an additional $87 million per year in rates.

- The Commission should reject the Company's request for a performance-based adder of up to 25 basis points to its market-determined ROE as an award for its managerial performance. The requested increment in return on equity is unsupported and excessive, and at the Company's as filed request it would impose up to $11.8 million of additional costs on ratepayers per year.

- If the Commission were to adopt PAWC's proposed capital structure, it would unreasonably increase the revenue requirement by $30.7 million per year, at PAWC's claimed rate base and ROE, for water and wastewater operations combined.

Q. Does this conclude your testimony?

A. Yes. I reserve the right to update or supplement my testimony, if necessary and appropriate. Also, to the extent I have not addressed an issue or proposal raised by the Company in this proceeding, it should not be construed that I agree with the same.

APPENDIX A:

DISCOUNTED CASH FLOW MODEL THEORY

The Discounted Cash Flow ("DCF") Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. In its most general form, the DCF Model is expressed as follows:[1]

Equation 1:
General Discounted Cash Flow Model

$$P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + \cdots + \frac{D_n}{(1+k)^n}$$

where: P_0 = *current stock price*
$D_1 \ldots D_n$ = *expected future dividends*
k = *discount rate / required return*

The General DCF Model would require an estimation of an infinite stream of dividends. Since this would be impractical, analysts use more feasible variations of the General DCF Model, which are discussed further below.

The DCF Models rely on the following four assumptions:

1. Investors evaluate common stocks in the classical valuation framework; that is, they trade securities rationally at prices reflecting their perceptions of value;
2. Investors discount the expected cash flows at the same rate (K) in every future period;

[1] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 410 (9th ed., McGraw-Hill/Irwin 2013).

3. The K obtained from the DCF equation corresponds to that specific stream of future cash flows alone; and

4. Dividends, rather than earnings, constitute the source of value.

The General DCF can be rearranged to make it more practical for estimating the cost of equity. Regulators typically rely on some variation of the Constant Growth DCF Model, which is expressed as follows:

Equation 2:
Constant Growth Discounted Cash Flow Model

$$K = \frac{D_1}{P_0} + g$$

where: K = *discount rate / required return on equity*
D_1 = *expected dividend per share one year from now*
P_0 = *current stock price*
g = *expected growth rate of future dividends*

Unlike the General DCF Model, the Constant Growth DCF Model solves directly for the required return (K). In addition, by assuming that dividends grow at a constant rate, the dividend stream from the General DCF Model may be essentially substituted with a term representing the expected constant growth rate of future dividends (g). The Constant Growth DCF Model may be considered in two parts. The first part is the dividend yield (D_1/P_0), and the second part is the growth rate (g). In other words, the required return in the DCF Model is equivalent to the dividend yield plus the growth rate.

In addition to the four assumptions listed above, the Constant Growth DCF Model relies on four additional assumptions as follows:[2]

[2] *Id.* at 254-56.

1. The discount rate (K) must exceed the growth rate (g);
2. The dividend growth rate (g) is constant in every year to infinity;
3. Investors require the same return (K) in every year; and
4. There is no external financing; that is, growth is provided only by the retention of earnings.

Because the growth rate in this model is assumed to be constant, it is important not to use growth rates that are unreasonably high. In fact, the constant growth rate estimate for a regulated utility with a defined service territory should not exceed the growth rate for the economy in which it operates.

APPENDIX B:

CAPITAL ASSET PRICING MODEL THEORY

The Capital Asset Pricing Model ("CAPM") is a market-based model founded on the principle that investors demand higher returns for incurring additional risk.[1] The CAPM estimates this required return. The CAPM relies on the following assumptions:

1. Investors are rational, risk-adverse, and strive to maximize profit and terminal wealth;
2. Investors make choices based on risk and return. Return is measured by the mean returns expected from a portfolio of assets; risk is measured by the variance of these portfolio returns;
3. Investors have homogenous expectations of risk and return;
4. Investors have identical time horizons;
5. Information is freely and simultaneously available to investors.
6. There is a risk-free asset, and investors can borrow and lend unlimited amounts at the risk-free rate;
7. There are no taxes, transaction costs, restrictions on selling short, or other market imperfections; and,
8. Total asset quality is fixed, and all assets are marketable and divisible.[2]

[1] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277-93 (Management Science IX 1963); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 208 (3rd ed., South Western Cengage Learning 2010).

[2] *Id*.

While some of these assumptions may appear to be restrictive, they do not outweigh the inherent value of the model. The CAPM has been widely used by firms, analysts, and regulators for decades to estimate the cost of equity capital.

The basic CAPM equation is expressed as follows:

Equation 1:
Capital Asset Pricing Model

$$K = R_F + \beta_i(R_M - R_F)$$

where: K = *required return*
R_F = *risk-free rate*
β = *beta coefficient of asset i*
R_M = *required return on the overall market*

There are essentially three terms within the CAPM equation that are required to calculate the required return (K): (1) the risk-free rate (R_F); (2) the beta coefficient (β); and (3) the equity risk premium ($R_M - R_F$), which is the required return on the overall market less the risk-free rate.

Raw Beta Calculations and Adjustments

A stock's beta equals the covariance of the asset's returns with the returns on a market portfolio, divided by the portfolio's variance, as expressed in the following formula:[3]

Equation 2:
Beta

$$\beta_i = \frac{\sigma_{im}}{\sigma_m^2}$$

where: β_i = *beta of asset i*
σ_{im} = *covariance of asset i returns with market portfolio returns*
σ^2_m = *variance of market portfolio*

[3] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180-81 (3rd ed., South Western Cengage Learning 2010).

Betas that are published by various research firms are typically calculated through a regression analysis that considers the movements in price of an individual stock and movements in the price of the overall market portfolio. The betas produced by this regression analysis are considered "raw" betas. There is empirical evidence that raw betas should be adjusted to account for beta's natural tendency to revert to an underlying mean.[4] Some analysts use an adjustment method proposed by Blume, which adjusts raw betas toward the market mean of one.[5] While the Blume adjustment method is popular due to its simplicity, it is arguably arbitrary, and some would say not useful at all. According to Dr. Damodaran: "While we agree with the notion that betas move toward 1.0 over time, the [Blume adjustment] strikes us as arbitrary and not particularly useful."[6] The Blume adjustment method is especially arbitrary when applied to industries with consistently low betas, such as the utility industry. For industries with consistently low betas, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average. Vasicek proposed such a method, which is preferable to the Blume adjustment method because it allows raw betas to be adjusted toward an industry average, and also accounts for the statistical accuracy of the raw beta calculation.[7] In other words, "[t]he Vasicek adjustment seeks to overcome one weakness of the Blume model by not applying the same adjustment to every security; rather, a security-specific adjustment is made depending on the

[7] Oldrich A. Vasicek, *A Note on Using Cross-Sectional Information in Bayesian Estimation of Security Betas* 1233-1239 (Journal of Finance, Vol. 28, No. 5, December 1973).

statistical quality of the regression."[8] The Vasicek beta adjustment equation is expressed as follows:

Equation 3:
Vasicek Beta Adjustment

$$\beta_{i1} = \frac{\sigma^2_{\beta i0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta i0}} \beta_0 + \frac{\sigma^2_{\beta 0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta i0}} \beta_{i0}$$

where:	β_{i1}	=	*Vasicek adjusted beta for security i*
	β_{i0}	=	*historical beta for security i*
	β_0	=	*beta of industry or proxy group*
	$\sigma^2_{\beta 0}$	=	*variance of betas in the industry or proxy group*
	$\sigma^2_{\beta i0}$	=	*square of standard error of the historical beta for security i*

The Vasicek beta adjustment is an improvement on the Blume model because the Vasicek model does not apply the same adjustment to every security. A higher standard error produced by the regression analysis indicates a lower statistical significance of the beta estimate. Thus, a beta with a high standard error should receive a greater adjustment than a beta with a low standard error. As stated in Ibbotson:

> While the Vasicek formula looks intimidating, it is really quite simple. The adjusted beta for a company is a weighted average of the company's historical beta and the beta of the market, industry, or peer group. How much weight is given to the company and historical beta depends on the statistical significance of the company beta statistic. If a company beta has a low standard error, then it will have a higher weighting in the Vasicek formula. If a company beta has a high standard error, then it will have lower weighting in the Vasicek formula. An advantage of this adjustment methodology is that it does not force an adjustment to the market as a whole. Instead, the adjustment can be toward an industry or some other peer group. *This is most useful in looking at companies in industries that on average have high or low betas*.[9]

[8] 2012 Ibbotson Stocks, Bonds, Bills, and Inflation Valuation Yearbook 77-78 (Morningstar 2012).

[9] *Id*. at 78 (emphasis added).

Thus, the Vasicek adjustment method is statistically more accurate, and is the preferred method to use when analyzing companies in an industry that has inherently low betas, such as the utility industry. The Vasicek method was also confirmed by Gombola, who conducted a study specifically related to utility companies. Gombola concluded that "[t]he strong evidence of auto-regressive tendencies in *utility* betas lends support to the application of adjustment procedures such as the . . . adjustment procedure presented by Vasicek."[10] Gombola also concluded that adjusting raw betas toward the market mean of 1.0 is *too high*, and that "[i]nstead, they should be adjusted toward a value that is less than one."[11] In conducting the Vasicek adjustment on betas in previous cases, it reveals that utility betas are even lower than those published by Value Line.[12] Gombola's findings are particular important here, because his study was conducted specifically on utility companies. This evidence indicates that using Value Line's betas in a CAPM cost of equity estimate for a utility company may lead to overestimated results. Regardless, adjusting betas to a level that is *higher* than Value Line's betas is not reasonable, and it would produce CAPM cost of equity results that are too high.

EDUCATION

University of Oklahoma — Norman, OK
Master of Business Administration — 2014
Areas of Concentration: Finance, Energy

University of Oklahoma College of Law — Norman, OK
Juris Doctor — 2007
Member, American Indian Law Review

University of Oklahoma — Norman, OK
Bachelor of Business Administration — 2003
Major: Finance

PROFESSIONAL DESIGNATIONS

Society of Depreciation Professionals
Certified Depreciation Professional (CDP)

Society of Utility and Regulatory Financial Analysts
Certified Rate of Return Analyst (CRRA)

WORK EXPERIENCE

Resolve Utility Consulting PLLC — Oklahoma City, OK
Managing Member — 2016 – Present
Provide expert analysis and testimony specializing in depreciation and cost of capital issues for clients in utility regulatory proceedings.

Oklahoma Corporation Commission — Oklahoma City, OK
Public Utility Regulatory Analyst — 2012 – 2016
Assistant General Counsel — 2011 – 2012
Represented commission staff in utility regulatory proceedings and provided legal opinions to commissioners. Provided expert analysis and testimony in depreciation, cost of capital, incentive compensation, payroll and other issues.

Perebus Counsel, PLLC — Oklahoma City, OK
Managing Member — 2009 – 2011
Represented clients in the areas of family law, estate planning, debt negotiations, business organization, and utility regulation.

Moricoli & Schovanec, P.C. — Oklahoma City, OK
Associate Attorney — 2007 – 2009
Represented clients in the areas of contracts, oil and gas, business structures and estate administration.

TEACHING EXPERIENCE

University of Oklahoma — Norman, OK
Adjunct Instructor – "Conflict Resolution" — 2014 – 2021
Adjunct Instructor – "Ethics in Leadership"

Rose State College — Midwest City, OK
Adjunct Instructor – "Legal Research" — 2013 – 2015
Adjunct Instructor – "Oil & Gas Law"

PROFESSIONAL ASSOCIATIONS

Oklahoma Bar Association — 2007 – Present

Society of Depreciation Professionals — 2014 – Present
Board Member – President — 2017
Participate in management of operations, attend meetings, review performance, organize presentation agenda.

Society of Utility Regulatory Financial Analysts — 2014 – Present

REBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

February 21, 2024

Q. Please state your name and business address.

A. My name is David J. Garrett. My business address is 101 Park Avenue, Suite 1125, Oklahoma Borough, Oklahoma 73102.

Q. By whom are you employed and in what capacity?

A. I am the managing member of Resolve Utility Consulting, PLLC.

Q. Did you file direct testimony in this proceeding?

A. Yes. I submitted direct testimony (OCA Statement 3) in this proceeding on February 1, 2024 on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). My direct testimony addressed my opinion on the estimated cost of capital and awarded rate of return recommendation for Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony addresses portions of the direct testimony of Kevin Higgins, who submitted direct testimony on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"), D.C. Patel, who submitted testimony on behalf of the Bureau of Investigation & Enforcement ("I&E"), and Billie S. LaConte, who submitted testimony on behalf of the Pennsylvania-American Water Large Users Group ("PAWLUG").

Q. Please summarize the issues in Mr. Higgins's testimony you are addressing.

A. In his direct testimony, Mr. Higgins recommends a reduction to the Company's total revenue requirement, which includes a "proxy" return on equity ("ROE") of 9.65%.

Q. Does Mr. Higgins make any recommendations in his testimony regarding the Company's estimated cost of equity or an appropriate authorized rate of return?

A. No. My understanding of Mr. Higgins's testimony is that he used an ROE of 9.65% as a proxy for calculating a revenue requirement for PAWC, which was based on the ROE

authorized for PAWC's Distribution System Improvement Charges ("DSIC").[1] However, Mr. Higgins does not make any recommendations regarding an appropriate authorized ROE or capital structure for PAWC in this proceeding.

Q. Please summarize the issues in Ms. LaConte's testimony you are addressing.

A. In her direct testimony, Ms. LaConte states that PAWC's requested ROE is excessive.[2] Like Mr. Higgins, she references the 9.65% ROE approved by the Commission for calculating the DSIC where the utility has not had an equity return rate – specific to that utility – approved in a fully litigated base rate proceeding within a certain timeframe.[3] It is my understanding of Ms. LaConte's testimony that she does not recommend what ROE is appropriate for PAWC, only that the most recent DSIC ROE of 9.65% is one of several indicators that show PAWC's proposed ROE is excessive.

Q. Does your analysis of PAWC's cost of equity indicate that its authorized ROE should be lower than 9.65%?

A. Yes. As discussed in my direct testimony (OCA Statement 3), PAWC's estimated cost of equity is only 9.1% based on my analyses. However, if the Commission accepts the Company's proposed capital structure and/or adopts either of the Company's proposed alternative ratemaking proposals, then a fair authorized ROE for the Company would be 8.7%.

---

[1] Direct Testimony of Kevin Higgins, p. 8, lines 1-8.

[2] Direct Testimony of Billie S. LaConte, p. 5, line 1 through p. 7, line 8.

[3] 66 Pa. C.S. § 1357(b)(2).

Q. Please summarize the issues in Mr. Patel's testimony you are addressing.

A. In his direct testimony, Mr. Patel recommends "using the Company's claimed capital structures"[4] which consists of 44% debt for water operations and 43% debt for wastewater operations.

Q. Do you agree with Mr. Patel's recommendation regarding PAWC's capital structure?

A. No. I disagree with Mr. Patel's recommended capital structure because it would result in an unreasonably high authorized rate of return and would be unfair to ratepayers. The average debt ratio of PAWC's proxy group of utilities is 49%, as discussed in my direct testimony. In order for costs of equity estimates produced by financial modeling which relies on a proxy group to be accurate, any discrepancy between the average debt ratio of the proxy group and the debt ratio of the subject utility (PAWC) must be mathematically reconciled by adjusting the modeling results and/or imputing a ratemaking capital structure that is commensurate with the proxy group. According to Mr. Patel, PAWC's proposed capital structure falls within the "range" of his proxy group's capital structures. In my experience, cost of capital analysts almost always rely on proxy group averages (or medians) for their financial modeling (e.g., average stock price, average dividend yield, average beta, etc.). It is only for the capital structure that analysts (typically representing utility companies) will switch to emphasizing that their proposed capital structure falls within the proxy's "range." Clearly, it would be more fair and objective to use an average rather than a range for this analysis. Otherwise, it sends a signal to regulated utilities that they can simply add to their proxy group just one outlier utility with a low current debt

[4] Direct Testimony of D. C. Patel, p. 16, line 20 through p. 17, line 4.

ratio to justify their unfairly low debt ratio. In this case, for example, Atmos Energy recently reported a low debt ratio of 38%, which is much lower than the proxy group average of 49%.[5] It is not reasonable to conclude that PAWC's proposed capital structure is fair simply because it falls within the proxy group range. A fairer and more objective approach would be to use the average proxy debt ratio, as averages (and medians) are used for other inputs to the financial modeling.

Q. What is your recommendation to the Commission regarding PAWC's capital structure?

A. I recommend the Commission reject the Company's proposed capital structure. In order for the results of the ROE models to be accurate, any discrepancy between the utility's capital structure and the proxy group's capital structure must be reconciled either through a capital structure adjustment for ratemaking purposes or a lower authorized ROE. PAWC's proposed capital structure deviates from the average debt ratio of its own proxy group. As discussed further in my direct testimony, if the Commission were to adopt PAWC's proposed capital structure, it would result in an unreasonably high and unfair authorized rate of return.

Q. Does this conclude your rebuttal testimony?

A. Yes. I reserve the right to update or supplement my testimony, if necessary and appropriate. Also, to the extent I have not addressed an issue or proposal raised by the other parties in this proceeding, it should not be construed that I agree with the same.

SURREBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

March 4, 2024

I. INTRODUCTION

Q. State your name and occupation.

A. My name is David J. Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed direct testimony in OCA Statement 3 on February 1, 2024, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). A summary of my qualifications is included in my direct testimony.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal testimony responds to the rebuttal testimony of Pennsylvania-American Water Company ("PAWC" or the "Company") witness Ann Bulkley regarding cost of capital and rate of return issues, including the Company's claim for a management adder. I will also respond to PAWC witness Ashely Everette and Justin Ladner regarding the management adder.

Q. Did the Company's rebuttal testimony cause you to change any of your positions or recommendations discussed in your direct testimony?

A. No. Additionally, to the extent I do not specifically address a statement made in the company's rebuttal testimony filed in this case, it should not constitute my agreement with such testimony.

Q. Are you sponsoring any exhibits to your surrebuttal testimony?

A. No.

Q. Please summarize your surrebuttal testimony directed to the rebuttal testimony of Ms. Bulkley.

A. In my surrebuttal testimony to Ms. Bulkley, I will address the assertions made in her rebuttal testimony regarding the Discounted Cash Flow ("DCF") Model, the Capital Asset Pricing Model ("CAPM"), and capital structure.

II. DCF Analysis

Q. Please summarize Ms. Bulkley's updated DCF results.

A. In her rebuttal testimony, Ms. Bulkley updated her cost of equity results. Her updated DCF results range from 8.65% - 11.34%.

Q. Do you believe the results of Ms. Bulkley's updated DCF Model indicated a reasonable cost of equity estimate for PAWC?

A. As stated in my direct testimony, I believe a reasonable cost of equity estimate for PAWC is 9.1%. The results of my CAPM analysis indicate PAWC's cost of equity could be as low as 8.7% for the water group. Thus, I believe the results of some of Ms. Bulkley's DCF Model variations do indicate a reasonable cost of equity for PAWC. Specifically, any of her modeling results ranging from 8.65% (the bottom of her range) to 9.1% would be reasonable cost of equity indication for the Company, and they would also equate to much more reasonable authorized ROEs than the one proposed by Ms. Bulkley (10.95%). The variation in outcomes of Ms. Bulkley's DCF Model variations are primarily due to the wide range in her long-term growth rate estimates. As discussed in my direct testimony, any long-term growth projection in earnings or dividends that exceed long-term growth

projections of the aggregate economy's growth rate (measured in U.S. GDP) should be viewed with caution if not rejected outright. Using analysts' long-term dividend growth rate projections, the "analyst growth" variation of my DCF Model produced a result of 9.4% (both water and total proxy groups).[1] This DCF result was based on an average long-term growth rate of 6.9% for the water group. Even an annual growth rate of 6.9% in earnings and/or dividends is not sustainable from a qualitative perspective (a concept discussed in my direct testimony), as it exceeds long-term GDP annual growth estimates by nearly 300 basis points. Accordingly, any of Ms. Bulkley's DCF Model variations exceeding these results should be rejected by the Commission as unreasonably high.

III. CAPM Analysis

Q. Please summarize Ms. Bulkley's criticisms of your CAPM analysis.

A. The primary contentious issue under the CAPM is the equity risk premium ("ERP") (referred to as the "market risk premium" in Ms. Bulkley' testimony). Ms. Bulkley disagrees with the ERP of 5.3% that I used in my CAPM. She also disagrees with my rejection of her ECAPM analysis.

Q. Please briefly reiterate the sources you considered for the ERP estimate.

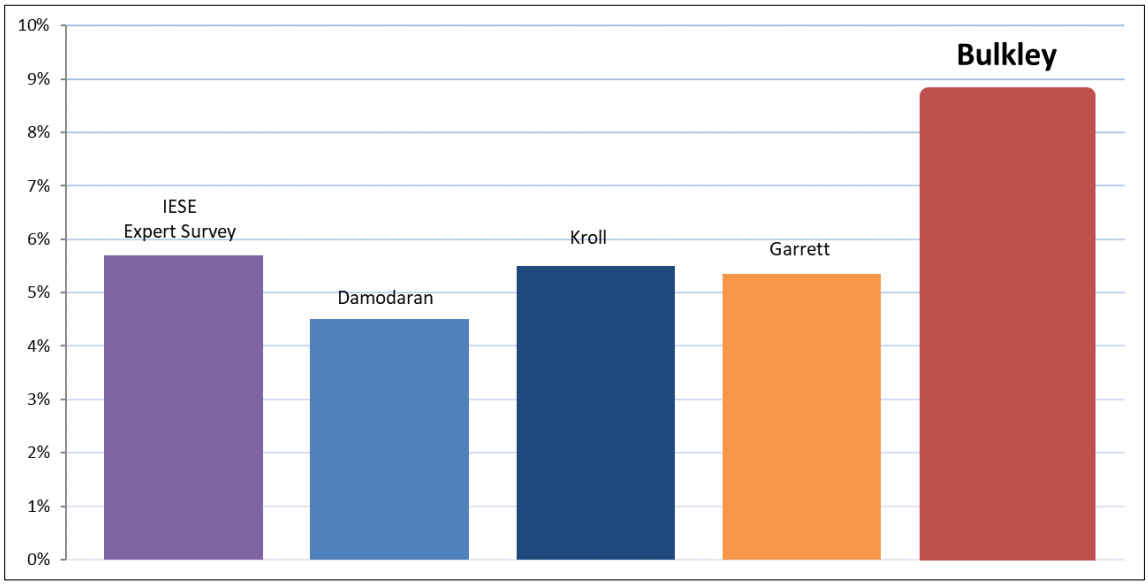
A. The ERP is an important figure for financial and market analysts in all industries, not just utility regulation. Thus, many analysts, managers, investors, and academics are constantly

[1] Exhibit DJG-6.

studying and are concerned with obtaining a reliable and accurate estimate of this important number, which can be used in a variety of financial analyses, including the CAPM. All else held constant, a higher ERP will result in a higher indicated higher cost of equity and apply upward pressure on the authorized ROE. I considered three reliable and objective sources to include in my overall ERP estimate, including the result of the IESE Business School survey of experts, the estimate published by Kroll (formerly Duff & Phelps), and the estimate published by one of the world's leading experts on the issue, Dr. Aswath Damodaran. I also conducted and presented my own ERP estimate, the result of which is similar to those from the other sources. The figure below contrasts the ERP estimates from these sources with the ERP estimated by Ms. Bulkley.[2]

[2] *See also* Exhibit DJG-10.

Figure 1:
Equity Risk Premium Comparison



When compared with other independent sources for the ERP (as well as my estimate), which do not have a wide variance, Ms. Bulkley' ERP estimate is clearly not within the range of reasonableness.[3] In her rebuttal testimony, Ms. Bulkley offers various criticisms of the ERP estimate from these other sources. Ultimately, however, Ms. Bulkley is suggesting to the Commission that her ERP estimate is more accurate than the aggregate opinions of more than 1,300 expert survey respondents, a leading global provider of risk management and valuation, and one of the world's leading academics on the ERP.

[3] Ms. Bulkley's ERP estimate in her initial cost of equity estimate filed in her direct testimony was as high as 8.69%. In her updated cost of equity analysis, her ERP results range is as high as 8.12%. *See* PAWC Exhibit No. 13-R, Sch. 3. The graph in Figure 1 is from my direct testimony, which represents an ERP estimate of 8.69% from Ms. Bulkley's direct testimony.

Q. Are the ERP estimates from the IESE Business School survey of experts, Kroll, and Dr. Damodaran immune to any criticism?

A. No, of course not. The ERP cannot be directly measured; thus, it must be estimated, which can be done through a variety of different methods. Nonetheless, the end result will necessarily be an estimate. Thus, any estimate of the ERP can be criticized. In her rebuttal testimony, Ms. Bulkley offers various critiques of the ERP estimates from each of these sources. Ultimately, however, Ms. Bulkley is asking the Commission to accept her ERP estimate over the estimates published by these other sources. In my opinion, the ERP estimates provided by the survey of experts, Kroll, and Dr. Damodaran are more objective, reasonable, and unbiased than Ms. Bulkley' ERP estimate. Moreover, the ERP results from these sources do not have a wide variance, which provides further indication of a fairly tight, reasonable range for the ERP, from which Ms. Bulkley's ERP estimate clearly and significantly diverges.

IV. Capital Structure

Q. Please summarize Ms. Bulkley's criticisms of your capital structure adjustment.

A. Ms. Bulkley disagrees with my recommendation to impute a capital structure for the Company that is equal to the proxy group average. Ms. Bulkley suggests that capital structure comparisons should be made to the operating subsidiaries of the proxy group rather than the proxy companies themselves (i.e., the holding companies).

Q. What is your response to Ms. Bulkley's rebuttal testimony on this issue?

A. I disagree with Ms. Bulkley's argument that it is more appropriate to consider the operating subsidiaries of the proxy group companies rather than the holding companies. The reason she is incorrect is because all of the other inputs to the financial models employed in this case (the CAPM and DCF Model) are derived directly from the proxy holding companies. There is a direct relationship between risk and cost of equity. The more financial risk (or debt) a company has in its capital structure, it will have an increasing effect on its cost of equity. The fact that PAWC has less debt in its capital structure relative to the proxy group is significant, and it means that PAWC has less financial risk than the proxy group. Since we are obtaining all of the other metrics used to estimate PAWC's cost of equity from the proxy group, it would be inaccurate to reject the capital structure of that same proxy group as part of the analyses.

Q. Please summarize your recommendation to the Commission regarding PAWC's authorized rate of return.

A. None of the arguments raised in Ms. Bulkley's rebuttal testimony caused me to change my recommendations as stated in my direct testimony. That is, the Commission should adopt a 9.1% for PAWC and a ratemaking capital structure for PAWC consisting of 49% debt and 51% equity.

V. Management Performance Adder

Q. Please summarize your direct testimony regarding PAWC's claim for a management performance adder of up to 25 basis points to the market-based return on equity.

A. In my direct testimony, I stated that managerial performance should not have an increasing effect on a utility's authorized ROE because the primary driver of the cost of equity and required rate of return is how market risk impacts individual firms. Managerial performance and the risk of imprudent management is related to firm-specific risks, which are not rewarded by the market because investors can eliminate such risk through diversification of portfolio, and do not have a material effect on the cost of equity. As investors in competitive firms in the marketplace cannot expect an additional return on equity simply due to prudent managerial performance, the Company as a regulated firm should not receive any premium in addition to an authorized market-based ROE due to prudent managerial performance.[4]

I also stated that while Section 523 of the Public Utility Code gives the Commission the discretion to consider the efficiency, effectiveness and adequacy of service when determining just and reasonable rates, it requires the Commission to "give effect to this section by making such adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate." In my opinion, it would be *neither proper nor appropriate* for the Commission to award an ROE bump for prudent

[4] OCA St. 3 at 48.

managerial performance when investors themselves cannot expect an additional return on equity simply due to prudent managerial performance when they invest in competitive firms in the marketplace.[5]

Q. Please summarize PAWC's rebuttal testimony regarding the management performance adder.

A. In rebuttal, Ms. Bulkley criticized my direct testimony stating that there is a range of results that occur when using multiple analytical approaches to estimating the cost of equity and the analyst needs to determine where best within that range of results the authorized ROE should fall, and considering management performance is one factor that reasonably should be considered when setting the authorized ROE.[6] Ms. Everette responds to my testimony by saying that Section 523 of the Code would serve "no point" and be contrary to legislative intent if it were neither proper nor appropriate to reward a utility with an ROE bump for superior performance.[7] Mr. Ladner states that the Company has focused its attention on many areas where superior performance has not necessarily yielded a direct economic benefit to shareholders, but where superior performance will deliver direct benefits to customers, such as the Company's recognized excellence in addressing water quality and environmental issues, its success in streamlining field operations and reducing response

[5] OCA St. 3 at 49 (emphasis added).

[6] PAWC St. No. 13-R at 84.

[7] PAWC St. 1-R at 9.

times, and the Company's unwavering commitment to employee safety and employee training and development.[8]

Q. How do you respond?

A. In response to Ms. Bulkley, within the range of results of my analyses, I maintain my recommendation that a reasonable and fair return on equity is the market-determined cost of equity at 9.1%. In response to Ms. Everette, I will defer to the attorneys and their legal Briefs about the issue of the interpretation of Section 523, but I do not change my direct testimony, and I add in response that the request by the Company for an up to 25 basis point adder is completely arbitrary and not market based. The Company could have asked for any amount of adder, including one that would have set the Company's return on equity at the top of Ms. Bulkley's range at 11.34%. However, one can only guess why the Company asked for 25 basis points – one can surmise that it was for the sake of optics so as to appear as capping itself at the 10.95% ROE rather than at the top of Ms. Bulkley's range of 11.34%. However, because it is not supported, I can only guess, which demonstrates that the specific request for 25 basis points is arbitrary. The Company has not substantiated the specific amount of 25 basis points other than to say that adopting it would place the Company's return on equity within Ms. Bulkley's range, but this does not explain the specific request for 25 basis points. Given the arbitrary nature of the Company's requested amount of the adder, it would likewise be arbitrary for the

[8] PAWC St. 15-R *passim*.

Commission to award that requested amount. Mr. Ladner's testimony explains how PAWC is behaving in order to comply with its public service obligations under the law. However, Ms. Everette's and Mr. Ladner's testimonies about how the Company is going about meeting its public service obligations do not demonstrate why it would be appropriate or proper for the Commission to add an arbitrary adder to the return on equity as a reward to the Company. As discussed in my direct testimony, the legal standards of *Bluefield* and *Hope* do not establish the fair rate of return as a "quid-pro-quo" concept where arbitrary increments to cost of equity are awarded in return for a utility's management operating the public utility company in a prudent manner as required by law.

OCA witnesses Hoover, Colton, and Alexander (OCA Statements 1SR, 5SR, 6SR) provide further response to PAWC regarding the management performance adder.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does at this time.

I. INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Jerome D. Mierzwa. I am a Principal and Vice President of Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE.

A. I graduated from Canisius College in Buffalo, New York, in 1981 with a Bachelor of Science Degree in Marketing.[1] In 1985, I received a Master's Degree in Business Administration with a concentration in finance, also from Canisius College. In July 1986, I joined National Fuel Gas Distribution Corporation ("NFG Distribution") as a Management Trainee in the Research and Statistical Services Department ("RSS"). I was promoted to Supervisor RSS in January 1987. While employed with NFG Distribution, I conducted various financial and statistical analyses related to the Company's market research activity and state regulatory affairs. In April 1987, as part of a corporate reorganization, I was transferred to National Fuel Gas Supply Corporation's ("NFG Supply") rate department where my responsibilities included utility cost of service and rate design analysis, expense and revenue requirement forecasting, and activities related to federal regulation. I was also responsible for preparing NFG Supply's Federal Energy Regulatory Commission ("FERC") Purchase Gas Adjustment ("PGA") filings and developing interstate pipeline and spot market

[1] Effective August 1, 2023, Canisius College became Canisius University.

supply gas price projections. These forecasts were utilized for internal planning purposes as well as in NFG Distribution's Pennsylvania purchased gas cost proceedings under Section 1307(f) of the Public Utility Code.

In April 1990, I accepted a position as a Utility Analyst with Exeter. In December 1992, I was promoted to Senior Regulatory Analyst. Effective April 1, 1996, I became a principal of Exeter. Since joining Exeter, my assignments have included water and wastewater utility class cost of service and rate design analysis, evaluating the gas purchasing practices and policies of natural gas utilities, sales and rate forecasting, performance-based incentive regulation, revenue requirement analysis, the unbundling of utility services and the evaluation of customer choice natural gas transportation programs.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS ON UTILITY RATES?

A. Yes. I have provided testimony on more than 450 occasions in proceedings before FERC, utility regulatory Commissions in Arkansas, Connecticut, Delaware, Georgia, Illinois, Indiana, Louisiana, Maine, Maryland, Massachusetts, Montana, Nevada, New Jersey, Ohio, Pennsylvania, Rhode Island, South Carolina, Texas, and Virginia, as well as before the Pennsylvania Public Utility Commission ("Commission").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. On November 8, 2023 the Pennsylvania-American Water Company ("PAWC" or "Company") filed an application to increase rates for water utility service by $199.2 million, or 24.2%, and to increase rates for wastewater service by $4.7 million, or 2.5%. These amounts are not cost of service based, rather they reflect PAWC's decision to shift $71 million in PAWC's calculated wastewater revenue requirement to water customers. Thus, realistically, at PAWC's calculated revenue requirement, an actual

cost of service based proposal would have increased water rates by approximately $128 million and wastewater rates by $75 million. Exeter was retained by the Pennsylvania Office of Consumer Advocate ("OCA") to review and analyze the water and wastewater class cost of service ("CCOS") studies and the rate design proposals included in PAWC's application. My testimony addresses the Company's water and wastewater CCOS studies, its revenue allocations, and rate design proposals.

Q. HAVE YOU PREPARED EXHIBITS TO ACCOMPANY YOUR TESTIMONY?

A. Yes, I have. Schedules JDM-1 through JDM-7 are attached to my testimony.

Q. PLEASE DESCRIBE THE REVENUE REQUIREMENT PRESENTATION BY PAWC IN THIS CASE.

A. As discussed in the direct testimony of OCA witness Ralph Smith (OCA Statement 2), PAWC has presented revenue increases for one water utility operations (Water Operations) revenue requirement and for four wastewater utility operations (Wastewater Operations) revenue requirement. The Company's four separate Wastewater Operations revenue requirements in this proceeding reflect a wastewater sanitary sewer system ("Wastewater SSS General Operations") general group and a combined sewer system ("CSS Wastewater Operations") group. PAWC is also presenting separate revenue requirements for the wastewater systems that the Company expects to acquire from the Butler Area Sewer Authority ("BASA Wastewater Operations") and for the Borough of Brentwood ("Brentwood Wastewater Operations"), pursuant to the pending acquisition applications.

Q. PLEASE DESCRIBE THE SERVICES AND RATES ZONES CURRENTLY PROVIDED BY PAWC?

A. PAWC currently provides water utility service through its Water Operations in five different rate zones. Those rate zones are as follows:

- Rate Zone 1 - General Statewide Rate
- Rate Zone 2 - Valley
- Rate Zone 3 - SLIBCO
- Rate Zone 4 - Turbotville
- Rate Zone 5 - Steelton

The largest of these rate zones by far is Rate Zone 1, with over 99% of the Company's total water revenue. PAWC has filed applications with the Commission to acquire two water systems, the Audubon Water Company ("Audubon Water") and Farmington Township Water System ("Farmington Water"), and proposes to establish those systems as separate rate zones. These acquisitions are included in PAWC's revenue requirement claim for its Water Operations in this proceeding. Consistent with the testimony of OCA witness Ralph Smith (OCA Statement 2), the OCA believes that these systems should be excluded from ratemaking rate base and revenue requirement because it is premature to judge what the PUC will do with the pending applications.

PAWC currently provides Sanitary Sewer System ("SSS") wastewater service through its Wastewater SSS General Operations in six different rate zones. Those rate zones are as follows:

- Rate Zone 1 – General Statewide Rate
- Rate Zone 2 – New Cumberland
- Rate Zone 5 – Valley
- Rate Zone 7 – York
- Rate Zone 8 – Foster Township

- Rate Zone 9 – Royersford

The largest of these rate zones is Rate Zone 1, with approximately 60% of the Company's total current SSS wastewater revenue. PAWC has filed applications to acquire four wastewater systems, the Farmington Township Wastewater System ("Farmington Wastewater"), Sadsbury Township Municipal Authority ("Sadsbury Wastewater"), Butler Area Sewer Authority ("BASA Wastewater"), and the wastewater operations of the Borough of Brentwood ("Brentwood Wastewater"). As filed, each acquisition would be established as a separate rate zone. Farmington Wastewater and Sadsbury Wastewater are included in PAWC's revenue requirement for Wastewater SSS General Operations. However, BASA Wastewater and Brentwood Wastewater are presented by PAWC as separate revenue requirement claims in this proceeding. I would note Brentwood Wastewater and Sadsbury Wastewater are collection systems that convey wastewater to third-party-owned and operated treatment facilities (*i.e.*, facilities that are not owned by PAWC). PAWC has requested fair market valuation of the BASA Wastewater and Brentwood Wastewater assets under Section 1329 of the Public Utility Code, 66 Pa. C.S. § 1329. Like the pending water acquisitions, consistent with the testimony of OCA witness Ralph Smith, the inclusion of these systems into the ratemaking rate base and revenue requirement for PAWC is premature as it is too early to know whether the PUC will allow the acquisitions to occur and whether any legal challenges will be resolved.

PAWC currently provides combined sanitary sewer system and stormwater ("CSS") wastewater service through its CSS Wastewater Operations in three different rate zones. Those rate zones are as follows:

- Rate Zone 3 - Scranton
- Rate Zone 4 - Kane

- Rate Zone 6 – McKeesport

The largest of these rate zones is Rate Zone 3, with approximately 70% of the Company's total current CSS wastewater revenue.

Q. HOW MANY CCOS STUDIES DID PAWC FILE IN ITS APPLICATION?

A. PAWC filed one CCOS study for its Water Operations (PAWC Exhibit No. 12-A), and four CCOS studies for its Wastewater Operations. PAWC filed a CCOS study for its General SSS Wastewater Operations (PAWC Exhibit No. 12-B), for its CSS Wastewater Operations (PAWC Exhibit No. 12-C), and it prepared separate wastewater service CCOS studies for the Brentwood Wastewater Operations (PAWC Exhibit No. 12-D) and the BASA Wastewater Operations (PAWC Exhibit No. 12-E). PAWC submitted a separate CCOS study for BASA Wastewater Operations to comply with the settlement filed in the acquisition proceeding on August 14, 2023. According to PAWC, a separate COSS was submitted for Brentwood Wastewater Operations to be consistent with PAWC's past practice for systems acquired under Section 1329 of the Public Utility Code.

Regarding its separate CCOS study for its CSS Wastewater Operations (PAWC Exhibit No. 12-C), as part of the settlement that was approved in PAWC's last base rate proceeding at Docket No. R-2022-3031673, the Company agreed to provide in its next base rate filing a separate revenue requirement study for its CSS operations and a CCOS study that separately identified all stormwater costs for CSS customers. The CCOS study for the CSS Wastewater Operations separately identifies the costs of providing stormwater service to be $41.0 million out of a total CSS cost of service of $93.7 million. The Company's CCOS studies for its Water and Wastewater Operations are sponsored by Constance E. Heppenstall of Gannett Fleming Valuation and Rate Consultants, LLC.

Q. DOES THE OCA AGREE WITH PAWC'S PROPOSAL TO INCLUDE THE ACQUISITIONS OF AUDUBON WATER, FARMINGTON WATER, FARMINGTON WASTEWATER, SADSBURY WASTEWATER, BRENTWOOD WASTEWATER, AND BASA WASTEWATER IN ITS REVENUE REQUIREMENT CLAIM IN THIS PROCEEDING?

A. No. As explained in greater detail in the direct testimony of OCA witness Ralph Smith (OCA Statement 2), the acquisitions of Audubon Water, Farmington Water, Farmington Wastewater, Sadsbury Wastewater, and Brentwood Wastewater have not been approved by the Commission, and there is lack of certainty whether the acquisition will be approved or close by the close of the record in this proceeding. Furthermore, in the case of BASA Wastewater, while that acquisition has been approved, the matter is currently on appeal and, thus, there remains significant regulatory uncertainty. Therefore, the revenue requirement claims of PAWC in this proceeding should be adjusted to remove the costs associated with serving these acquisitions.

Q. IS PAWC PROPOSING TO RECOVER ANY PORTION OF ITS WASTEWATER REVENUE REQUIREMENT FROM WATER CUSTOMERS IN THIS PROCEEDING?

A. Yes. PAWC is proposing to recover $71.1 million, or 27.0%, of its total wastewater revenue requirement through the rates for water service, subject to Commission approval under Section 1311(c) of the Public Utility Code. This also represents 94% of its total revenue requirement increase for wastewater that PAWC claims is necessary in this case.

Q. PLEASE SUMMARIZE YOUR FINDINGS AND RECOMMENDATIONS.

A. A summary of my findings and recommendations are as follows, and consistent with the OCA's position just discussed, are based on excluding the Audubon Water, Farmington Water, Farmington Wastewater, Sadsbury, Brentwood Wastewater, and BASA Wastewater acquisitions from this proceeding:

- While the water CCOS study initially filed by PAWC in this proceeding is generally reasonable, the system-wide maximum day and maximum hour extra capacity demand factors used in that CCOS study are outdated and should be modified as discussed in my testimony;

- The revised water CCOS study filed by PAWC in response to OCA 04-012 to exclude interruptible Industrial usage from the extra capacity factor allocations is unreasonable and should be rejected;

- PAWC has not updated its analysis of system wide *maximum hour* extra capacity demands since 1988. PAWC should be required to update this analysis prior to its next base rate proceeding and include the results of that analysis in the CCOS study filed in the next base rate proceeding;

- In its next base rate proceeding, the Company should include Rider Demand Industrial Sales ("DIS") and Rider Demand Resale Sales ("DRS") customers as separate customer classes in its water CCOS study. This will assist in ensuring that the rates charged to Rider DIS and DRS customers are reasonable;

- PAWC should continue to prepare separate CCOS studies for its existing Section 1329 acquisitions, either individually for each acquisition or as a group, and separate CCOS studies for new acquisitions not included in the current rate case;

- Any Act 11 shift that is authorized by the PUC should be made based on the OCA's adjusted revenue requirement. Consistent with the recommendation of OCA witness Smith (OCA Statement 2), the OCA recommends a pre-Act 11 revenue increase for water operations of $16.1 million, an increase of $20.3 million for wastewater SSS, and an increase of $7.3 million for wastewater

CSS for a total increase of no more than $43.7 million;

- If the Commission determines that it is appropriate to shift any wastewater revenue requirement to water customers, I recommend a few options that the Commission could utilize that focus on the principles of fairness and efficiency in its determination about how much to shift from each of the SSS and CSS classes so as not to overburden those classes with rate increases and not to overburden PAWC's water customers;

- If the Commission determines in this proceeding that it is appropriate to assign a portion of the wastewater revenue requirement to water customers, the Company's proposed method for allocating the shifted wastewater revenue requirement to the various water customer classes is generally reasonable, with the exception that the allocation should be based on the water CCOS study that I sponsor rather than the CCOS sponsored by the Company;

- I recommend that the existing $17.50 monthly charge for Residential water customers with a 5/8-inch, 3/4-inch, 1-inch or 1 1/2-inch meters be maintained, unless, as explained in my testimony, the increase authorized by the Commission is sufficient to justify a higher charge;

- To provide for gradualism and reduce rate shock, I recommend that the usage charge for Valley water customers currently in Rate Zone 2 be established at 70% of the proposed usage charge;

- The Rate Zone 1 Residential water usage charge established in this proceeding should be designed to recover the Residential water revenue requirement approved by the Commission in this proceeding not recovered through my recommended Residential customer charges, and my proposed usage charge for current Valley Rate Zone 2 Residential customers;

- The monthly wastewater customer service charge for all SSS Residential customers in Rate Zones 1, 2, and 5, and all CSS Residential customers in Rate Zones 3, 4, 7, and 9 should be set at $14.30;

- I generally recommend that PAWC's volumetric rate proposals be proportionately adjusted to recover the cost of service approved by the Commission for each current SSS and CSS customer class, and for Residential

customers, any revenue deficiency resulting from the adoption of my monthly Residential customer charge recommendation;

- PAWC's proposal to adopt winter average billing for Residential wastewater customers should be rejected;

- If the Commission approves a delayed effective date for any acquired systems, it should also adopt PAWC's proposal and require the Company to impute revenues to customers in those systems by calculating the proof of revenue based on the new rates that will become effective after the delay;

- The Revenue Decoupling Mechanism ("RDM") proposed by PAWC should be rejected; and

- The Environmental Compliance Investment Charge ("ECIC") proposed by PAWC should be rejected.

The OCA objects to the inclusion of any of the contested acquisitions to be included in this proceeding. However, if the Commission elects to nonetheless include speculative acquisitions, I have the following recommendations for purposes of cost allocation and rate setting:

- For the Farmington Water and Audubon Water systems, my recommended rate design would be consistent with my proposals for all water systems. That is, Residential customer charges should not exceed $17.50 for customers with 5/8-inch, 3/4-inch, 1-inch or 1½-inch meters, and any additional revenue to be recovered from Residential customers should be recovered through increases in volumetric usage charges; and

- For Farmington Wastewater, BASA Wastewater, and Brentwood Wastewater, my recommended rate design would be consistent with my proposals for Rate Zones 1, 2, 5 and 6, i.e. Residential customer charges should not exceed $14.30 for customers with 5/8-inch, ¾-inch, 1-inch, or 1½-inch meters, and any additional revenue to be recovered from Residential customers should be recovered through increases in volumetric usage charges.

Q. HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?

A. The remainder of my testimony is divided into eight additional sections. The second section of my testimony describes and evaluates the Company's water CCOS study. The third section describes and evaluates the Company's wastewater CCOS studies. The fourth section addresses PAWC's proposal to recover a portion of the costs associated with providing wastewater service through the rates for water utility service pursuant to Section 1311(c) of the Public Utility Code. The next section presents my recommended distribution of the revenue increase authorized by the Commission for water service in this proceeding and rate design for water service. The sixth section of my testimony addresses wastewater service rate design, including PAWC's proposal to determine the volumetric component of the monthly wastewater bill for Residential customers based on average water usage during the winter months of January, February, and March ("winter averaging"). The seventh section of my testimony addresses PAWC's proposal to delay the effective date of the rate increase in certain rate zones where the system was recently acquired. Next, I address PAWC's proposed Revenue Decoupling Mechanism ("RDM"). The last section of my testimony addresses PAWC's proposed Environmental Compliance Investment Charge ("ECIC").

II. WATER CLASS COST OF SERVICE STUDY

Q. WHAT IS THE OBJECTIVE OF A CCOS STUDY?

A. A CCOS study is conducted to assist a utility or Commission in determining the level of costs properly recoverable from each of the various classes of customers to which the utility provides service. Allocation of recoverable costs to each class of service is generally based on cost causation principles.

Q. WHAT ARE THE PRIMARY CCOS STUDY METHODOLOGIES UTILIZED FOR WATER UTILITIES?

A. The two most commonly used and widely recognized methods of allocating costs to customer classes for water utilities are the base-extra capacity method and the commodity-demand method. Both methods are set forth in the American Water Works Association's ("AWWA") Manual, M1, *Principles of Water Rates, Fees, and Charges* ("AWWA M1 Manual").

Q. WHAT METHODOLOGY HAS THE COMPANY UTILIZED FOR ITS WATER CCOS STUDY?

A. PAWC has utilized the base-extra capacity method in preparing its water CCOS study. Under the base-extra capacity method, investment and costs are first classified into four primary functional cost categories: base or average capacity, extra capacity, customer, and fire protection. Once investment and costs are classified to these functional categories, they are allocated to the various customer classes.

Q. PLEASE DESCRIBE IN GREATER DETAIL THE FOUR PRIMARY FUNCTIONAL COST CATEGORIES AND HOW THEY ARE ALLOCATED TO THE VARIOUS CUSTOMER CLASSES UNDER THE BASE-EXTRA CAPACITY METHOD.

A. **Base Costs** are costs that tend to vary with the quantity of water used, plus costs associated with supplying, treating, pumping, and distributing water to customers under average load conditions. Base costs were allocated to customer classes on the basis of average daily usage in PAWC's CCOS study.

Extra Capacity Costs are costs associated with meeting usage requirements in excess of average usage. This includes operating and capital costs for additional plant and system capacity beyond that required for average usage. Extra capacity costs in the

Company's study have been subdivided into costs necessary to meet maximum day extra demand and maximum hour extra demand. These extra capacity costs were allocated to customer classes on the basis of each class's maximum day and maximum hour usage in excess of average usage.

Customer Costs are costs associated with serving customers regardless of their usage or demand characteristics. Customer costs include the operating costs related to meters and services, meter reading costs, and billing and collection costs. Customer costs were allocated on the basis of capital cost of meters and services and the number of customer bills.

Fire Protection Costs are costs associated with providing the facilities to meet the potential peak demand of fire protection service. In the Company's study, fire protection costs have been subdivided into the costs associated with meeting Public Fire Protection and Private Fire Protection demands. The extra capacity costs assigned to fire protection were allocated to Public and Private Fire Protection on the basis of the total relative demands of hydrants and fire service lines. In accordance with Section 1328 of the Public Utility Code, public fire costs exceeding 25% of the public fire cost of service were reallocated to other customer classes.

Q. PLEASE IDENTIFY THE CUSTOMER CLASSES THAT THE COMPANY HAS INCLUDED IN ITS WATER CCOS STUDY.

A. The Company has separately identified the cost of serving eight customer classes in its water CCOS study: Residential; Commercial; Industrial; Public (Municipal), Other Water Utilities Group A, Other Water Utilities Group B, Private Fire Protection; and Public Fire Protection.

Q. HAS PAWC REVISED THE WATER CCOS STUDY THAT IT INITIALLY FILED IN THIS PROCEEDING?

A. Yes. In response to OCA 04-012, PAWC indicated that it developed extra capacity factor (maximum day and maximum hour) allocations for the Industrial class in its water CCOS study which included interruptible usage. The Company claims that the usage of certain Industrial customers that are subject to curtailment should have been excluded from the extra capacity factor allocations since these customers can be interrupted during periods of peak demand. The response to OCA 04-012 includes a revised water CCOS study which excludes interruptible Industrial usage from the extra capacity factor allocations.

Q. DO YOU AGREE THAT THE WATER CCOS STUDY INITIALLY FILED BY PAWC SHOULD BE REVISED TO EXCLUDE INTERRUPTIBLE INDUSTRIAL USAGE FROM THE EXTRA CAPACITY FACTOR ALLOCATIONS?

A. No. If these interruptible Industrial customers were regularly interrupted during periods of peak demand, I would agree with PAWC's proposal to revise its initial CCOS study. However, the response to OCA 04-012 indicates that these interruptible Industrial customers are not regularly interrupted and have not been interrupted in at least three years. Therefore, since these interruptible Industrial customers are regularly served during periods of peak demand, PAWC's CCOS study should not be revised as proposed by PAWC, and interruptible Industrial customers should not be excluded from the extra capacity factor allocations.

Q. DO YOU AGREE WITH THE FUNCTIONALIZATION AND ALLOCATION OF COSTS IN THE INITIAL WATER CCOS STUDY FILED BY PAWC?

A. I generally agree with PAWC's use of the base-extra capacity methodology in its initial CCOS study. However, I believe that modifications to the system-wide maximum day and maximum hour extra capacity factors utilized to allocate functionalized costs to the various customer classifications are necessary.

Q. WHAT SYSTEM-WIDE MAXIMUM DAY AND MAXIMUM HOUR EXTRA CAPACITY DEMAND FACTORS DID THE COMPANY USE IN ITS INITIAL WATER CCOS STUDY?

A. The Company used a maximum day extra-capacity demand factor of 1.4 and a maximum hour extra capacity factor of 2.1 in both its initial and revised water CCOS study.

Q. WHAT WAS THE BASIS FOR THE SELECTION OF THESE EXTRA-CAPACITY FACTORS?

A. Ms. Heppenstall claims that the *maximum day* extra-capacity demand factor of 1.4 is reflective of actual maximum day to average day demands observed for the years 1988, 1995, 1996, 1999 and 2003. The actual *maximum day* extra-capacity demand factors experienced by the Company for the years 1987 through 2022 are identified in PAWC Exhibit No. 12-A, Schedule G. Ms. Heppenstall claims the *maximum hour* extra capacity demand factor of 2.1 is based on an analysis of peak hour consumption experienced by the Company in its three largest operating districts. This peak hour analysis was conducted in 1988. As indicated in Schedule G and confirmed by the Company's response to OCA 04-015, PAWC does not have recent actual maximum peak hour demand data for its water system.

Q. WHAT IS YOUR CONCERN WITH THE SYSTEM-WIDE MAXIMUM DAY AND MAXIMUM HOUR DEMAND FACTORS USED IN THE COMPANY'S WATER CCOS STUDY?

A. My concern with the system-wide demand factors used by the Company is that they are outdated. The system-wide *maximum day* extra capacity demand factor used in PAWC's CCOS study was last experienced in 2003, which was over 20 years ago. Since 2003, water demand on the PAWC system has changed due to aggressive water conservation, legislation, development, and changing land uses. As shown on Schedule G, since 2011, PAWC's recent actual *maximum day* extra capacity demand factor has been approximately 1.2. The system-wide *maximum hour* extra capacity demand factor used in PAWC's water CCOS study is based on an analysis from 1988, which is 35 years old.

Q. WHAT DO YOU RECOMMEND WITH RESPECT TO THE SYSTEM-WIDE DEMAND FACTORS THAT SHOULD BE USED IN THE COMPANY'S WATER CCOSS STUDY?

A. With respect to the *maximum day* extra capacity demand factor, for the reasons just discussed, I recommend that a demand factor of 1.2 be utilized in the Company's water CCOS study. As just indicated, recent actual *maximum hour* demand usage data is not available for PAWC.

Presented as Schedule JDM-1 is maximum day and maximum hour demand data for the York Water Company ("York Water"). This data is the most recent demand factor data filed with the Commission in a base rate proceeding by a major water utility of which I am aware. Based on this demand data for York Water, I believe it would be reasonable to utilize a *maximum day* extra capacity demand factor of 1.35, and a maximum hour extra-capacity demand factor of 1.65. Based on these factors, the

maximum hour extra capacity factor for York Water is approximately 125% of the maximum day extra-capacity factor (1.65/1.35). Applying this 125% ratio to PAWC's maximum day extra-capacity factor of 1.2 results in a *maximum hour* demand factor of 1.50, and I recommend that this factor be used in PAWC's CCOS study.

Q. HAVE YOU REVISED THE COMPANY'S INITIAL WATER CCOS STUDY TO REFLECT YOUR RECOMMENDED SYSTEM-WIDE DEMAND FACTORS?

A. Yes. Schedule JDM-2 presents a summary of the Company's initial CCOS study revised to reflect my recommended system-wide demand factors.

Q. HOW DO THE RESULTS OF YOUR CCOS STUDY COMPARE WITH THE RESULTS OF THE COMPANY'S INITIAL CCOSS?

A. A comparison of the results of the Company's CCOS study and my revised study is presented in Table 1. This comparison is based on PAWC's claimed level of revenue requirement but excludes any assignment of the wastewater revenue requirement to water service customers. I subsequently discuss that assignment in Section IV of my testimony.

Table 1. Water Cost of Service Study Comparison			
Classification	**Initial Company**	**OCA**	**Difference**
Residential	$603,126,055	$596,775,486	($6,350,570)
Commercial	232,115,036	228,424,759	(3,690,276)
Industrial	45,115,631	49,544,130	4,428,498
Public (Municipal)	35,175,459	37,856,691	2,681,233
Other Water Utilities – Group A	11,335	11,913	578
Other Water Utilities – Group B	624,708	449,960	(174,748)
Private Fire Protection	5,777,625	7,063,962	1,286,336
Public Fire Protection	11,847,471	13,666,421	1,818,949
Total:	**$933,793,321**	**$933,793,321**	**($0)**

It is the OCA's recommendation that costs associated with serving the Audubon Water and Farmington Water systems should be excluded from PAWC's revenue requirement claim in this proceeding. I address excluding the costs associated with serving Audubon Water and Farmington Water from PAWC's revenue requirement later in Section V of my testimony in which I discuss the allocation of the water revenue increase authorized by the Commission in this proceeding to the various customer classes served by PAWC.

Q. DO YOU HAVE ANY RECOMMENDATIONS CONCERNING THE WATER CCOS STUDY TO BE FILED BY PAWC IN ITS NEXT BASE RATE PROCEEDINGS?

A. Yes. First, as discussed above, PAWC has not conducted an analysis of its system wide *maximum hour* extra capacity demands since 1988. PAWC should be required to update its analysis of system wide *maximum hour* extra capacity demands prior to its next base rate proceeding and include the results of its updated analysis in the CCOS study filed in its next base rate proceeding . Second, as explained by Ms. Heppenstall in PAWC

Exhibit No. 12-A, page 13, lines 12 -18, PAWC currently provides contract sales service under Rider Demand Industrial Sales ("DIS") and Rider Demand Resale Sales ("DRS"). In the water CCOS study filed by PAWC in this proceeding, the Company did not separately determine the costs associated with serving Rider DIS and DRS customers. The revenues from Rider DIS and DRS customers were simply reflected as a credit to the overall cost of service. In its next base rate proceeding, I recommend that the Company include Rider DIS and DRS customers as separate customer classes and determine the cost of providing service to Rider DIS and DRS customers. This will assist in ensuring that the rates charged to Rider DIS and DRS customers are reasonable.

III. WASTEWATER COST OF SERVICE STUDIES

Q. WHAT METHODOLOGY DID THE COMPANY UTILIZE IN PREPARING ITS FOUR WASTEWATER CCOS STUDIES?

A. Ms. Heppenstall used the functional cost allocation methodology described in *Financing and Charges for Wastewater Systems; Manual of Practice No. 27* published by the Water Environment Federation ("WEF Manual of Practice No. 27"). This method allocates the cost of providing wastewater service to customer classifications in proportion to each classification's use of the service provider's facilities and services. Costs are assigned to cost components using predominant operational purposes as cost-causative factors. The functional cost allocation method is generally accepted as a sound method for allocating the cost of wastewater service.

Q. PLEASE IDENTIFY THE CUSTOMER CLASSES INCLUDED IN PAWC'S SSS AND CSS CCOS STUDIES.

A. PAWC has separately identified the cost of serving five customer classes in its SSS and CSS wastewater CCOS studies: Residential, Commercial, Industrial, Public (Municipal), and Bulk.

Q. IS EACH CUSTOMER CLASS CURRENTLY ASSESSED A SEPARATE SET OF RATES?

A. No. For most rate zones, a separate set of rates is currently assessed to Residential customers, and a separate set of rates is assessed to Commercial, Industrial, and Municipal customers (Non-Residential customers). A separate set of rates is also assessed to Bulk customers in those rate zones with Bulk customers. PAWC is not proposing to change the current rate structure in this proceeding.

Q. HAS PAWC REVISED ANY OF THE WASTEWATER CCOS STUDIES THAT IT INITIALLY PRESENTED IN ITS APPLICATION?

A. Yes. As discussed in the response to OSBA 02-003, there was a formula error in the CCOS study for SSS wastewater service presented by PAWC (PAWC Exhibit No. 12-B). This formula error was corrected in the revised SSS CCOS study included in the response to OSBA 02-003.

Q. ARE YOU RECOMMENDING ANY ADJUSTMENTS TO THE WASTEWATER CCOS STUDIES PRESENTED BY PAWC, INCLUDING THE REVISED SSS CCOS STUDY PRESENTED IN OSBA 02-003?

A. PAWC's wastewater revenue requirement claim in this proceeding includes the costs associated with the Farmington Wastewater, Sadsbury Wastewater, Brentwood Wastewater, and BASA Wastewater acquisitions. The SSS CCOS study includes the costs associated with serving Farmington Wastewater and Sadsbury. Separate CCOS

studies have been performed for Brentwood and BASA. I am not recommending any adjustments directly to the Company's SSS or CSS wastewater CCOS studies. However, I address excluding the costs associated with serving Farmington Wastewater and Sadsbury Wastewater from PAWC's revenue requirement later in Section VI of my testimony in which I discuss the allocation of the wastewater revenue increase authorized by the Commission in this proceeding to the rate zones and customer classes served by PAWC. I am not recommending any adjustments to the Brentwood Wastewater and BASA Wastewater CCOS studies as these two acquisitions should be excluded from PAWC's revenue requirement claim in this proceeding. However, as previously explained, the Company is proposing to recover 27.0% of its total wastewater cost of service, or revenue requirement, from water customers. I address this issue in the next section of my testimony.

Q. SHOULD PAWC CONTINUE TO PREPARE SEPARATE CCOS STUDIES FOR ITS SECTION 1329 ACQUISITIONS AS IT DID IN THIS PROCEEDING?

A. Yes. PAWC should continue to prepare separate CCOS studies for new Section 1329 acquisitions in the first base rate proceeding where those systems are included in PAWC's wastewater system. For Section 1329 acquisitions that are included in the current base rate case, PAWC should continue to prepare separate CCOS studies either individually for each acquisition or as a group.[2] This requirement is reasonable given the amount of revenue requirement at issue and the principle that rates should be reasonably cost-based.[3] This recommendation should be read to require PAWC to

[2] The group should not include Section 1329 acquisitions that are combined sewer systems. The combined systems (whether or not acquired under Section 1329) should be included in the separate CCOS study for CSS.
[3] PAWC claims that the full cost of service for the two Section 1329 systems (BASA and Brentwood) is $41.9 million. See PAWC Exhibit Nos. 12-D and 12-E.

provide the CCOS studies for all of the proposed acquisitions excluded in this case in any future rate case, if finally approved by the PUC and without reasonable risk of appeal or other challenge, in which they are properly included.

IV. ASSIGNMENT OF WASTEWATER AND STORMWATER COST OF SERVICE TO WATER CUSTOMERS

Q. PLEASE DESCRIBE PAWC'S PROPOSAL IN THIS PROCEEDING WITH RESPECT TO THE RECOVERY OF ITS WASTEWATER REVENUE REQUIREMENT FROM WATER CUSTOMERS.

A. PAWC is proposing to recover a portion of its wastewater revenue requirement from water customers pursuant to Section 1311(c) of the Public Utility Code. PAWC is proposing to increase wastewater rates – after its shift – by 2.5%, or $4.7 million. Essentially this entire increase has been assigned to the Brentwood and BASA Section 1329 acquisition systems, and no increases have been proposed for SSS or CSS wastewater customers. The unrecovered wastewater revenue requirement proposed to be allocated to water service is $71.1 million. Absent an allocation of any portion of the wastewater revenue requirement to PAWC's water service, on average, rates to wastewater customers, including CSS customers, would need to increase by 40.4%.[4]

Q. WHAT DOES SECTION 1311(c) PROVIDE?

A. Section 1311 reads as follows:

> § 1311 Valuation of and return on the property of a public utility.
>
> * * *
>
> (c) Segregation of property. When any public utility furnishes more than one of the different types of

[4] As discussed below, according to PAWC's filing, the indicated cost for serving the three systems in CSS is $94.4 million, or 31% of the Company's entire wastewater revenue requirement. Also see Table 2.

> utility service, the Commission shall segregate the property used and useful in furnishing each type of such service, and shall not consider the property of such public utility as a unit in determining the value of the rate base of such public utility for the purpose of fixing base rates. A utility that provides water and wastewater service shall be exempt from this subsection upon petition of a utility to combine water and wastewater revenue requirements. The Commission, when setting base rates, after notice and an opportunity to be heard, may allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base **if in the public interest**.
>
> * * *
>
> (e) Definition. As used in this section, the term "utility that provides both water and wastewater service" shall include separate Companies that individually provide water and wastewater service so long as the Companies are wholly owned by a common parent company.

66 Pa. C.S. § 1311 (effective April 16, 2012) (emphasis added).

Q. SPECIFICALLY, HOW MUCH OF THE WASTEWATER REVENUE REQUIREMENT OF EACH OF THE COMPANY'S SERVICE AREAS DOES PAWC PROPOSE TO ASSIGN TO WATER CUSTOMERS?

A. As shown in Table 2, 27.0% of the total wastewater cost of service is being assigned to water customers. This includes $41 million for stormwater costs.

Table 2. PAWC Wastewater and Stormwater Cost of Service and Allocation to Water Service

Service Area	COST OF SERVICE			Water Allocation	Net Revenue Requirement
	Wastewater	Stormwater	Total		
Sanitary Systems	$127,264,017	$0	$127,264,017	$31,962,411	**$95,301,606**
Combined Systems	53,389,162	41,027,181	94,416,343	16,007,052	**78,409,291**
Brentwood	3,758,828	0	3,758,828	1,565,232	**2,193,596**
BASA	38,135,710	0	38,135,710	21,552,699	**16,583,011**
Total	**$222,547,717**	**$41,027,181**	**$263,574,898**	**$71,087,394**	**$192,487,504**

Q. HOW HAS PAWC ALLOCATED THE WASTEWATER/STORMWATER COSTS ASSIGNED TO WATER CUSTOMERS TO EACH OF THE CUSTOMER CLASSES INCLUDED IN THE COMPANY'S WATER CCOS STUDY?

A. PAWC has assigned the wastewater/stormwater costs to the Residential, Commercial, Industrial, Public (Municipal), and Private Fire Protection classes based on the cost of providing water service as indicated by its water CCOS study. None of the costs assigned to water customers have been assigned to the Other Water Utilities Group A or Group B classes. However, such assignments would have been immaterial. PAWC has also not assigned any of the wastewater revenue requirement to the Public Fire Protection classes. This is consistent with the requirement of Section 1328 of the Public Utility Code which limits Public Fire Protection charges to 25% of the indicated cost of service.

Q. BASED ON YOUR EXPERIENCE AS EXPERT WITNESS ON RATE DESIGN AND COST ALLOCATION, DO YOU HAVE ANY RECOMMENDATIONS TO THE COMMISSION FOR HOW TO DETERMINE WHETHER SUCH AN ALLOCATION IS IN THE PUBLIC INTEREST?

A. Yes. At the outset, I recognize that defining the "public interest" can be difficult. There can be more than one aspect of "the public" that is interested in, and affected by, any public policy issue including recent rate increases approved by the PUC for PAWC and allocated to wastewater customers. Furthermore, there are at least two distinct elements of the affected public: the utility's wastewater customers and the utility's water customers that must be considered. So the "public interest" should remain a flexible concept, but could include a consideration of policies that promote the cost-effective provision of safe and reliable water and wastewater service throughout the Commonwealth as well as questions about rate shock and affordability.

Q. IS THERE A RANGE OF OPTIONS THAT THE COMMISSION COULD CHOOSE TO IMPLEMENT 1311(c)?

A. Yes, the Commission can choose from a wide variety of options that would be consistent with the language in Section 1311(c), but that might not be consistent with well-established regulatory principles. At one extreme, the Commission could do nothing. As I understand it, Section 1311(c) is discretionary, not mandatory. So the Commission could choose to allocate none of the wastewater revenue requirement to water customers. Such a decision would be lawful, but would not accomplish an important purpose of Act 11, which is to provide some relief to wastewater customers in relatively small or overburdened service areas.

At the other extreme, the Commission could allocate almost the entire wastewater revenue requirement to water customers as was proposed by PAWC. This subsidy would benefit SSS and CSS customers, but it would come at the expense of PAWC's water customers who would be required to pay not only for their own wastewater service but that of others because of the Act 11 shift.

Q. IS PAWC'S PROPOSAL TO ALLOCATE A PORTION OF THE WASTEWATER REVENUE REQUIREMENT TO WATER CUSTOMERS REASONABLE, AND IS THE PROPOSED AMOUNT ALLOCATED TO THE WATER CUSTOMER CLASSES REASONABLE?

A. It is reasonable to allocate a portion of the revenue requirement increase to water customers, but not at the percentage (94%) chosen by PAWC. PAWC proposes – at its cost of service – to allocate $71.1 million of the $75.8 million total revenue requirement for wastewater to water customers. At the OCA's calculated revenue requirement, the total revenue requirement authorized for wastewater is $20,310,880 for SSS and $7,333,212 for CSS for a combined total of $27,644,092. Allocating PAWC's percentage would shift approximately $25.9 million of this amount to water. I do not believe this significant of a shift is necessary or reasonable as wastewater service may only be assigned to water customers if doing so is in the public interest.

Q. PLEASE EXPLAIN WHY AN ASSIGNMENT OF 94% OF THE WASTEWATER REVENUE REQUIREMENT INCREASE TO WATER CUSTOMERS IS NOT REASONABLE.

A. Most of PAWC's water customers do not obtain wastewater service from PAWC. PAWC currently has more than nine times as many water customers as wastewater customers. Further, there are several PAWC wastewater systems whose customers do not purchase their water from PAWC. Allocating such a significant percentage of the

wastewater revenue requirement to water operations moves all customers further from paying rates that reflect their indicated cost of service and would result in wastewater rates that have no reasonable relationship to the utility's cost of serving those customers. In addition, Exhibit 3-A of the Company's filing (attached to my testimony as Schedule JDM-3), indicates that at the Company's proposed rates, PAWC is proposing a 24.2% increase in revenues for water customers, a 0.2% decrease in revenues for SSS wastewater customers, and a 0.3% decrease in revenues for CSS wastewater customers. Without the $71.1 million assignment of the wastewater revenue requirement, the revenue increase for water customers would be 15.5%. It is not reasonable to increase the revenue increase assigned to water customers *by over 50%* by assigning a portion of the wastewater revenue requirement to water customers, and to then essentially assign no revenue increase to wastewater customers.

Q. HAS THE COMMISSION PREVIOUSLY ADDRESSED THE RECOVERY OF WASTEWATER REVENUE REQUIREMENTS FROM WATER CUSTOMERS?

A. Yes. In Aqua Pennsylvania, Inc.'s ("Aqua") most recent base rate case at Docket No. R-2021-3027385, Aqua proposed to recover approximately 30% of its wastewater revenue requirement from water customers.[5] In its Order in that proceeding, the Commission found Aqua's proposal to assign 30% of its wastewater revenue requirement to water customers not to be in the public interest.[6] In that proceeding, the Commission adopted a proposal presented by the Bureau of Investigation and Enforcement ("I&E") that assigned approximately 20% of the proposed wastewater revenue requirement to water customers.

[5] Order entered May 16, 2022, at 225-226.
[6] Id., at 227.

Q. IN YOUR OPINION, IN THIS PROCEEDING, WHAT IS A REASONABLE ALLOCATION OF THE WASTEWATER/ STORMWATER REVENUE REQUIREMENT TO WATER CUSTOMERS?

A. In my opinion, it would be reasonable to shift up to 75% of the OCA's calculated SSS wastewater revenue requirement increase and up to 50% of the OCA's calculated CSS wastewater revenue requirement increase to water customers. At the OCA's calculated revenue requirement increase, this would shift $15,233,160 from SSS and $3,666,606 from CSS to water service and would result in an approximate 4.2% increase for water customers, a 5.3% increase for SSS customers, and a 4.7% increase for CSS customers.[7]

To the extent that the Commission authorizes a wastewater revenue requirement increase which is more than the OCA's calculated amount, the Commission will have to determine what amount of that increase is reasonable for wastewater customers to bear given the recent PAWC rate increases and the relatively few wastewater customers. Regardless, I do not think it is reasonable – as proposed by PAWC – for the wastewater customers to be assigned no increase, as wastewater cost of service is a significant driver of the rate increase request in this proceeding.

Q. IS THE METHOD THAT PAWC USES TO ASSIGN WASTEWATER REVENUE REQUIREMENT TO THE WATER CLASSES REASONABLE?

A. If the Commission determines in this proceeding that it is in the public interest to assign any portion of the wastewater revenue requirement to water customers, the Company's proposed allocation to the various water customer classes based on the water cost of service is generally reasonable; however, my water CCOS study rather than the Company's CCOS study should be utilized for this allocation.

[7] See OCA Exhibit LA-1, Schedule A.

V. WATER SERVICE REVENUE DISTRIBUTION AND RATE DESIGN

Q. WHAT ARE SOME OF THE PRINCIPLES OF A SOUND REVENUE ALLOCATION?

A. A sound revenue allocation should:

- Utilize class cost-of-service study results as a guide;
- Provide stability and predictability of the rates themselves, with a minimum of unexpected changes that are seriously adverse to ratepayers or the utility (gradualism);
- Yield the total revenue requirement;
- Provide for simplicity, certainty, convenience of payment, understandability, public acceptability, and feasibility of application; and
- Reflect fairness in the apportionment of the total cost of service among the various customer classes.[8]

Q. WHAT IS YOUR RECOMMENDATION WITH RESPECT TO THE ALLOCATION OF THE WASTEWATER REVENUE REQUIREMENT ASSIGNED TO WATER SERVICE TO THE VARIOUS WATER CUSTOMER CLASSES?

A. As previously explained, the Company allocated the wastewater revenue requirement it has proposed to assign to water service to the Residential, Commercial, Industrial, Public Authority and Private Fire Protection customer classes based on the direct cost of service for each class indicated by its water CCOS study. I recommend that the wastewater revenue requirement that the Commission determines should be assigned to water service be allocated to the Residential, Commercial, Industrial, Public

[8] *Principles of Public Utility Rates*, Second Edition, James C. Bonbright; Albert L. Danielsen; David R. Kamerschen; Public Utility Reports, Inc., 1988, pages 383-384.

(Municipal), and Private Fire Protection customer classes based on the direct cost of service indicated by the water CCOS study I presented earlier in my testimony.[9]

Q. HOW SHOULD THE RESULTS OF YOUR WATER CCOS STUDY BE ADJUSTED TO REFLECT A LOWER THAN REQUESTED WATER REVENUE REQUIREMENT INCREASE AUTHORIZED BY THE COMMISSION IN THIS PROCEEDING?

A. I recommend that the direct cost of service, which would exclude the Act 11 shift, indicated by my water CCOS study for each customer class be proportionately scaled-back to reflect the actual water revenue increase authorized by the Commission in this proceeding. The water increase authorized by the Commission should exclude any increase for the proposed Audubon and Farmington Water acquisitions. To determine the total cost of service for each customer class, as previously explained, the wastewater revenue requirement assigned to water service should be allocated to the customer classes to which it was initially assigned by the Company based on the direct cost of service indicated by my cost of service study.

[9] See Schedule JDM-2 and Table 1.

Q. PLEASE SUMMARIZE THE RESULTS OF THE COMPANY'S WATER CCOS STUDY, THE PRESENT RATE REVENUES FOR EACH CUSTOMER CLASS, AND THE COMPANY'S PROPOSED REVENUE FOR EACH CUSTOMER CLASS BASED ON PAWC'S CLAIMED COST OF SERVICE IN ITS REVISED CCOS STUDY FILED IN RESPONSE TO OCA 04-012.

A. Table 3 summarizes the results of the Company's revised water CCOS study at present and proposed rate revenues based on PAWC's claimed cost of service.

Table 3. Summary of PAWC Cost of Service Study and Present and Proposed Rates for Water Service

Classification	Direct Cost of Service	Wastewater to Water Allocation	Total Cost of Service	Present Rates	Proposed Rates	Increase	Percent
Residential	$603,782,117	$46,505,573	$650,287,690	$528,290,043	$657,085,231	$128,795,188	24.4%
Commercial	232,462,967	18,320,153	250,783,120	202,779,636	254,604,000	51,824,364	25.6%
Industrial	44,092,705	3,939,176	48,031,881	37,580,738	48,143,784	10,563,046	28.1%
Public (Municipal)	35,192,089	1,635,240	36,827,329	22,559,539	26,209,929	3,650,390	16.2%
Other Water Utilities - Group A	11,343	0	11,343	51,822	53,666	1,844	3.6%
Other Water Utilities - Group B	627,003	0	627,003	202,436	277,021	74,585	36.8%
Private Fire Protection	5,777,625	341,990	6,119,615	5,301,032	6,304,285	1,003,253	18.9%
Public Fire Protection	11,847,471	0	11,847,471	9,519,368	11,847,068	2,327,700	24.5%
Other	18,473,554	345,262	18,818,816	17,832,568	18,829,276	996,708	5.6%
Total	**$952,266,876**	**$71,087,394**	**$1,023,354,270**	**$824,117,182**	**$1,023,354,261**	**$199,237,079**	**24.2%**

Q. DID THE COMPANY REVISE ITS PROPOSED CLASS RATES OR PROPOSED REVENUES AS A RESULT OF ITS MODIFICATION TO ITS INITIAL STUDY TO EXCLUDE INTERRUPTIBLE USAGE FROM THE EXTRA CAPACITY FACTOR ALLOCATIONS, OR OTHERWISE INDICATE THAT IT WOULD BE REVISING ITS PROPOSED CLASS RATES AND PROPOSED REVENUES?

A. No. The Company did not revise its proposed class rates or proposed revenues in its revised CCOS study that excluded interruptible Industrial usage from the extra capacity factor allocations. However, as indicated in Table 3, the rates proposed by PAWC significantly under-recover the cost of service indicated for the Public (Municipal) customer class. In response to discovery request OSBA 03-004, the Company recognized that a larger increase than the proposed increase for the Public (Municipal) class may be warranted. In the proposed revenue distribution I subsequently discuss, I assign an increase to the Public (Municipal) class consistent with the results of my CCOS study.

Q. PLEASE SUMMARIZE THE RESULTS OF YOUR WATER CCOS STUDY, THE PRESENT RATE REVENUES FOR EACH CUSTOMER CLASS, AND YOUR PROPOSED REVENUES FOR EACH CUSTOMER CLASS BASED ON PAWC'S CLAIMED COST OF SERVICE, ADJUSTED TO REFLECT THE OCA'S RECOMMENDED ACT 11 SHIFT.

A. Table 4 summarizes the results of my CCOS study, at present and proposed rate revenues based on PAWC's claimed cost of service, adjusted to reflect the OCA's recommended Act 11 shift.

Table 4. Summary of OCA Cost of Service Study and Present and Proposed Rates for Water Service

Classification	Direct Cost of Service	Wastewater to Water Allocation	Total Cost of Service	Present Rates	Proposed Rates	Increase	Percent
Residential	$596,775,486	$11,844,282	$608,619,768	$528,290,043	$615,589,568	$87,299,525	16.5%
Commercial	288,424,759	4,533,576	232,958,335	202,779,636	235,626,131	32,846,495	16.2%
Industrial	49,544,130	983,309	50,527,439	37,580,738	50,527,439	12,946,701	34.5%
Public (Municipal)	37,856,691	751,347	38,608,038	22,559,539	30,331,382	7,771,843	34.5%
Other Water Utilities - Group A	11,915	236	12,151	51,822	53,666	1,844	3.6%
Other Water Utilities - Group B	449,960	8,930	458,890	202,436	272,176	69,740	34.5%
Private Fire Protection	7,063,962	140,199	7,204,161	5,301,032	7,127,257	1,826,225	34.5%
Public Fire Protection	13,666,421	271,239	13,937,660	9,519,368	12,798,825	3,279,457	34.5%
Other	18,473,554	366,647	18,840,201	17,832,568	18,840,201	1,007,633	5.7%
Total	**$952,266,878**	**$18,899,766**	**$971,166,644**	**$824,117,182**	**$971,166,644**	**$147,049,462**	**17.8%**

Q. PLEASE EXPLAIN HOW YOU DETERMINED YOUR PROPOSED REVENUE DISTRIBUTION?

A. In this proceeding, PAWC claims it is proposing rates for water service for each customer class based on the CCOS study sponsored by Ms. Heppenstall, with the exception of the Other Water Utilities - Group B class. The Company capped the rate increase for that class at 30% to provide for gradualism. While there is no hard and fast rule with respect to applying the concept of gradualism, typically an increase of 1.5 to 2.0 times the system average increase is consistent with the concept of gradualism.

The revenue distribution I have proposed for water service is based on the CCOS study I am sponsoring in this proceeding, adjusted to provide for gradualism. More specifically, I initially set the proposed revenues for each class equal to the cost of service indicated by the water CCOS study I presented in this proceeding. I then limited the increase to the Industrial, Public (Municipal), Other Water Utilities Group B, and Public Fire Protection classes to 34.5% which is the increase indicated as

appropriate for the Industrial class by my CCOS study. An increase of 34.5% results in an increase of 1.9 times the system average increase of 17.8% for each of these classes which is consistent with the concept of gradualism. I maintained the increase proposed by the Company for the Other Water Utilities - Group A class as a significant decrease was indicated by both the Company's revised and my CCOS study. The revenue deficiency resulting from limiting the increase to 34.5% was then assigned to the Residential and Commercial customer classes based on the indicated cost of service for each class.

Q. PLEASE DESCRIBE PAWC'S WATER RATE DESIGN PROPOSAL FOR THE RESIDENTIAL CLASS IN THIS PROCEEDING.

A. As indicated in Section I of this testimony, PAWC currently serves five water rate zones (Rate Zones 1-5), and the largest of these rate zones is Rate Zone 1. The Company is proposing to consolidate the rates for all customer classes for all five rate zones into Rate Zone 1. The Company is also proposing to move rates for its Farmington Township water acquisition toward Rate Zone 1 rates, and a new Rate Zone 2 will be established to serve Farmington Township. No rate changes to current rates are proposed for the Audubon acquisition, and PAWC is proposing to establish a new Rate Zone 3 to serve former Audubon customers. As shown in PAWC Exhibit CBR-3, for Residential customers in each rate zone, except for Audubon, the Company is proposing a monthly customer charge of $20.00 for those Residential customers served by a 5/8-inch, 3/4-inch, 1-inch, or 1½-inch meter. The current monthly customer charge for Residential customers served by these meters in Rate Zones 1-5 is $17.50. Most Residential water customers in PAWC's service territory are served by a 5/8-inch meter. For most rate zones, the current Residential usage charge is $1.6108 per 100

gallons, and the Company is proposing to increase the Rate Zone 1 Residential usage charge to $2.1319 per 100 gallons.

Q. IS PAWC'S PROPOSED RESIDENTIAL RATE DESIGN REASONABLE?

A. PAWC's proposal to increase the current Residential customer charge of $17.50 to $20.00 for customers in Rate Zones 1-5 is not reasonable. Only those costs that vary directly with the addition or subtraction of a customer should be included in the calculation of a customer charge. It is the OCA's recommendation that the revenue requirement and rates for Audubon and Farmington Water be excluded from consideration in this proceeding. Therefore, I do not address the rate design for these two pending acquisitions. Generally, however, my recommendations for those rate zones would be consistent with my proposals for all water systems. That is, Residential customer charges should not exceed $17.50, and any additional revenue to be recovered from Residential customers should be recovered through increases in volumetric usage charges.

Q. DOES PAWC PRESENT A CUSTOMER COST ANALYSIS BASED ON DIRECT COSTS?

A. The Company presents a direct customer cost analysis which it claims only reflects direct costs in PAWC Exhibit No. 12-A, Attachment RS1j, pages 2 and 3. That analysis indicates that a cost-based monthly customer charge for a 5/8-inch meter would be $19.31. This is less than PAWC's proposed charge of $20.00.

Q. DOES THIS ANALYSIS JUSTIFY INCREASING THE MONTHLY CUSTOMER CHARGE FOR A 5/8-INCH METER TO $19.31?

A. No. PAWC's direct customer cost analysis includes costs that are not direct customer costs and do not change with the addition or subtraction of a customer. For example, PAWC's direct customer cost analysis includes office building and furniture expenses.

In addition, the calculated direct cost of $19.31 is based on the Company's requested revenue requirement increase. Under the revenue increase authorized by the Commission in this proceeding, a cost-based charge would certainly be further reduced. For example, adjusting PAWC's overall requested pre-tax rate of return to reflect the OCA's recommended pre-tax return of 8.71% would further reduce the calculated customer charge. A calculation adjusting the Company's calculated direct customer charge to remove the improperly included office building and furniture costs and to reflect the OCA's recommended rate of return is presented on Schedule JDM-4. As shown there, these adjustments reduce the calculated charge to $18.21. Other Commission-approved adjustments to PAWC's revenue requirement claim are likely to further reduce the calculated direct customer charge. Therefore, I recommend that the existing $17.50 monthly charge for Residential customers with a 5/8-inch, 3/4-inch, 1-inch or 1 1/2-inch meter be maintained, unless the increase authorized by the Commission is sufficient to justify a higher charge which under no circumstances should be higher than $19.31.

Q. DO YOU HAVE ANY CONCERNS REGARDING THE RESIDENTIAL WATER USAGE RATES PROPOSED BY PAWC IN THIS PROCEEDING?

A. Yes. I have a concern regarding the Residential usage charge proposed for Valley customers currently in Rate Zone 2. In this proceeding, PAWC is proposing to assess current customers in Rate Zone 2 the proposed consolidated Rate Zone 1 usage charge. As shown in PAWC Exhibit 10-A, page 77, this results in a significant 63.64% rate increase for a Residential customer using 3,201 gallons per month, which PAWC states is the average monthly usage. As previously indicated, there is no hard and fast rule with respect to applying the concept of gradualism, and typically an increase of 1.5 to

2.0 times the system average increase is considered consistent with this concept. As shown on PAWC Exhibit 12-A, Schedule A, PAWC is proposing an increase of 24.4% for a Residential customer using 3,201 gallons per month, and as shown on Table 4, based on the Company's proposed revenue requirement claim, I have proposed an increase of 17.4%. To provide for gradualism and to reduce rate shock, I recommend that the usage charge for Valley customers currently served under Rate Zone 2 be set at 70% of the Rate Zone 1 usage charge established in this proceeding. This reduction in the usage charge would limit the increase for a Valley Residential customer currently in Rate Zone 2 using 3,201 gallons per month to approximately 1.70 times my proposed system average increase, which is consistent with the concept of gradualism. The Rate Zone 1 Residential usage charge in this proceeding should be designed to recover the Residential revenue requirement approved by the Commission in this proceeding not recovered through my recommended Residential customer charges and my proposed usage charge for current Valley Rate Zone 2 Residential customers.

VI. WASTEWATER SERVICE REVENUE DISTRIBUTION AND RATE DESIGN

Q. HOW ARE YOU RECOMMENDING THAT THE WASTEWATER REVENUE DISTRIBUTION PROPOSED BY PAWC BE ADJUSTED TO REFLECT THE OCA'S WASTEWATER REVENUE REQUIREMENT RECOMMENDATION AND ACT 11 SHIFT?

A. The wastewater revenue allocations proposed by PAWC for SSS and CSS customers are presented on page 1 of PAWC Exhibits 10-B and 10-C. As indicated in Section IV of my testimony, the OCA is recommending a SSS revenue requirement increase of $20.3 million, and a CSS revenue requirement increase of $7.3 million for a combined total increase of $27.6 million. As also indicated in Section IV of my testimony, I am

recommending that 75% of the SSS revenue requirement increase and 50% of the CSS revenue requirement increase be assigned to water service. My proposed assignment of the initial revenue requirement increase of $27.6 million to each rate zone and my proposed assignment of the revenue requirement increase to water service are presented in Table 5 below. I have allocated the initial revenue requirement increase to all current SSS and CSS customers based on PAWC's revenues at proposed rates. Consistent with the OCA's recommendation that the revenue requirement and rates for Farmington Wastewater, Sadsbury, Brentwood, and BASA be excluded from consideration in this proceeding, I have excluded these pending acquisitions from Table 5.

Table 5. OCA Wastewater Revenue Allocation

Service Type	OCA-Pre-Act 11 Present Rates	Increase	Proposed Rates	Percent	OCA Revenue Distribution Act 11 Reduction	Proposed Rates	Total Increase	Percent
Sanitary Sewer Service								
Zone 1 - Most WW Areas	$54,207,581	$11,370,577	$65,578,158	21.0%	($8,527,932)	$57,050,225	$2,842,644	5.2%

Q. WHY DID PAWC PROPOSE NO INCREASE FOR SCRANTON IN RATE ZONE 3, ITS LARGEST CSS SERVICE AREA?

A. In the Scranton application proceeding, the Commission approved an Amended Asset Purchase Agreement. As described in PAWC Statement No. 4 (Gress), page 40, lines 10-23, PAWC is proposing no increase for Scranton to comply with the Amended Asset Purchase Agreement.

Q. CAN THE COMMISSION AUTHORIZE A RATE INCREASE FOR RATE ZONE 3 WHICH IS GREATER THAN THE INCREASE IDENTIFIED IN PAWC'S AMENDED ASSET PURCHASE AGREEMENT?

A. Counsel for OCA informs me that the Commission has authority to approve rates that exceed or otherwise differ from those identified in PAWC's Amended Asset Purchase Agreement with Scranton. Therefore, as shown in Table 5, based on the OCA's calculated revenue requirement, I have proposed an increase of 4.7% for Scranton, which is consistent with the OCA's recommended increase for all CSS systems and less than the OCA's recommended increase for the SSS systems.

Q. IS THE COMPANY PROPOSING ANY CHANGES TO ITS WASTEWATER RATE DESIGN IN THIS PROCEEDING?

A. Yes. The Company is proposing to change the way it determines the volumetric component of bills for Residential customers from the method currently utilized. Under the current method, volumetric charges are based on total monthly metered water usage. The Company is proposing to adopt a volumetric billing method referred to as winter averaging.

Q. PLEASE DESCRIBE THE CONCEPT OF WINTER AVERAGING.

A. Winter averaging is a method of determining the volumetric component of a wastewater bill that attempts to separately meter water usage that is likely to go through the wastewater system from water usage that is used for outdoor purposes in the summer (e.g., watering lawns, filling pools, etc.). Under winter averaging, a customer's bill in the winter is determined by actual metered water usage for the month, and in the summer the customer's bill is determined by the lesser of actual metered water usage for the month or the average water consumption for that customer in the winter months.

For example, in the winter period, if a customer's metered water usage is 4,000 gallons, the customer is billed for 4,000 gallons of water usage on their wastewater bill. In the summer period, if a customer's metered water usage is 6,000 gallons and their average winter usage over the previous winter months was 4,000 gallons per month, the customer would only be billed for 4,000 gallons on their wastewater bill. If that customer's metered usage during a summer month was 3,000 gallons and their average winter usage over the previous winter months was 5,000 gallons per month, they would be billed for 3,000 gallons of usage on their wastewater bill.

Q. HOW IS THE COMPANY DEFINING WINTER MONTHS UNDER ITS WINTER AVERAGING PROPOSAL?

A. The Company is defining the winter months for the winter averaging period to be January, February, and March. These three months are the months for which the baseline usage will be determined for the purposes of billing for the rest of the year.

Q. WILL THE WINTER AVERAGE CALCULATION BE THE SAME FOR EVERY CUSTOMER?

A. No. The winter averaging calculation will be customized for each individual customer.

Q. WHAT HAPPENS IN CASES WHERE THE CUSTOMER IS NEW OR OTHERWISE DOES NOT HAVE ANY WINTER BILLING HISTORY TO DETERMINE WINTER AVERAGE USAGE?

A. In cases where the customer is new or there is no winter average billing data upon which to base a calculation, the Company would assume a standard usage level of 3,000 gallons per month for a comparison point for billed summer usage.

Q. WHY IS THE COMPANY PROPOSING A WINTER AVERAGE RATE DESIGN FOR RESIDENTIAL WASTEWATER SERVICE?

A. The Company claims that the winter averaging methodology will more closely align summertime wastewater bills with cost-causation rate design principles. Under the current rate structure, the Company claims that customers are charged for wastewater service in the summer based on metered water usage that is not actually going through the wastewater system, and the winter averaging methodology remedies that inconsistency.

Q. WHAT EFFECT DOES WINTER AVERAGING HAVE ON THE VOLUMETRIC RATES FOR WASTEWATER SERVICE?

A. The winter average methodology results in volumetric rates that are higher than they otherwise would have been for the same revenue requirement. This is because the volumetric billing determinants used for wastewater rate design will be lower than they otherwise would have been as the Company claims that water usage that would have been included in the summer that was being used for outdoor purposes will now be excluded from the rate calculation.

Q. SHOULD PAWC'S PROPOSAL FOR WINTER AVERAGING BE APPROVED BY THE COMMISSION?

A. No. In response to OCA 04-005, the OCA requested and was provided the monthly number of customers served by PAWC and billed water consumption for each customer class. Table 6 below provides a comparison of the average monthly water usage of a Residential customer during the months of January through March that PAWC proposes to utilize under its winter averaging methodology, and the average monthly usage for the remaining months of the year. As shown in Table 6, the difference between the winter average period usage and usage during the remaining months of PAWC's Residential customers is de minimus, and for the last two years ranged from 100 to 173 gallons per month. I would expect that during the summer months customers are likely to take more showers and wash clothes more often. The average shower uses 17.2 gallons of water.[10] A standard washing machine uses 20 gallons of water per load.[11] A few extra showers and clothes washing loads per month would totally account for the historic difference between Residential winter and summer water usage. Therefore, it does not necessarily follow that PAWC's Residential customer outdoor water usage during the summer is sufficiently significant to justify adopting winter averaging and the resulting increase in volumetric rates and should be rejected.

OCA witness Roger Colton (OCA Statement 5) also addresses PAWC's winter averaging proposal. Mr. Colton demonstrates that the Company's winter averaging proposal will disproportionately harm low-income customers, and he found that the

[10] https://www.thewaterscrooge.com/blog/how-many-gallons-of-water-does-a-shower-use#.~.text=The%20average%20American%20shower%20uses,the%20rise%20across%20the%20US.

number of Residential customers that have no water consumption because they are away from their homes ("snowbirds") increases substantially in the months PAWC proposes to utilize in its winter averaging calculation. For such snowbird customers, it would be unreasonable to bill customers that are away from their homes during the winter months for wastewater service during the non-winter months of the year based on the assumption that any water usage by these customers in excess of their winter average usage did not flow through PAWC's wastewater system.

Table 6. Average Residential Customer Water Usage Comparison (gallons)

Period	Usage
January - March 2021	3,425
April - December 2021	3,525
Difference	*100*
Ratio	103%
January - March 2022	3,308
April - December 2022	3,481
Difference	*173*
Ratio	105%

Q. PLEASE DESCRIBE PAWC'S WASTEWATER RATE DESIGN PROPOSAL FOR THE RESIDENTIAL CLASS IN THIS PROCEEDING, IN ADDITION TO ADOPTING WINTER AVERAGING, AND PAWC'S RATE DESIGN PROPOSAL FOR NON-RESIDENTIAL CUSTOMERS.

A. The current Residential monthly customer charge for most Rate Zones is $14.30 per month. As discussed on pages 41 and 42 of Mr. Rea's testimony (PAWC Statement No. 10), PAWC is proposing:

- To set all Residential monthly customer service charges at $20 per month,

with the exception of:

a. BASA where the Residential service charge is proposed at $10 per month;

b. Brentwood where the Residential service charge is proposed at $10 per month, and the non-residential service charge is proposed at $20 per month; and

c. PAWC is proposing to set the Scranton Rate Zone 3 Residential customer charge at $19.72 per month.

- No changes are proposed for Scranton rates except for the roll-in of the Distribution System Improvement Charge ("DSIC") mechanism, which results in the same percentage increase for all rate components in Scranton.

- The Company is proposing to merge rates for Kane and McKeesport customers into a single rate design that results in Residential bills at average usage levels of approximately $110 per customer, which is approximately $10 higher per customer than SSS rates, which PAWC claims recognizes the differences in operating systems between CSS and SSS systems. Volumetric rates for non-residential customers for Kane and McKeesport are set at $1.90 per hundred gallons. No increase is proposed for McKeesport bulk customers.

- SSS volumetric rates are increased to a level that brings Residential bills for average levels of usage for Zone 1 customers to approximately $100 per month with proportional increases to non-residential volumetric rates.

- The Company is proposing to phase-out the allowance for the first 2,000 gallons in York rates by setting the volumetric rates for York at $0.75 per hundred gallons for the first 2,000 gallons for Residential customers. Volumetric rates above 2,000 gallons are set equal to Rate Zone 1 rates; and

- Royersford volumetric rates are increased to a level that results in Residential bills for average usage at approximately $65 per month, which is a $15 increase and is consistent with average bills and increases for York customers. Non-residential volumetric rates in Royersford are increased to $0.75 per 100 gallons.

Q. DOES PAWC'S PROPOSAL TO SET ALL RESIDENTIAL MONTHLY CUSTOMER SERVICE CHARGES AT $20.00 REFLECT AN INCREASE IN THAT CHARGE FOR EACH WASTEWATER RATE ZONE?

A. No. The current Residential monthly service charge in SSS Rate Zones 1, 2, and 5 and CSS Rate Zone 6 is $14.30, and PAWC's proposal to set that charge at $20.00 reflects an increase for each of those rate zones. The current Residential monthly service charge for SSS Rate Zone 7 is $18.00, and PAWC's proposal to set that charge at $20.00 also reflects an increase. In SSS Rate Zone 8 all customers are currently assessed a flat charge, and PAWC does not assess separate customer service and usage charges. In SSS Rate Zone 8, PAWC is proposing to reduce the flat rate charge from $106.00 to $100.00. In SSS Rate Zone 9, the current Residential monthly customer charge is $48.00, and PAWC is proposing to reduce that charge to $20.00. In CSS Rate Zone 3, as indicated above, PAWC is proposing to increase the customer service charge from $19.50 to $19.72. Finally, in CSS Rate Zone 4, the current Residential monthly service charge is $40.00, and the Company is proposing to reduce that charge to $20.00.

Q. DOES PAWC PRESENT A CUSTOMER COST ANALYSIS TO JUSTIFY A MONTHLY RESIDENTIAL CUSTOMER CHARGE OF $20.00?

A. The Company presents a customer cost analysis which it claims only reflects direct costs in PAWC Exhibit No. 12-B, Attachment RS1j, page 2. That analysis indicates that a cost-based monthly customer charge for a 5/8-inch meter would be $43.50.

Q. DOES THIS ANALYSIS JUSTIFY A MONTHL RESIDENTIAL CUSTOMER CHARGE OF $20.00 AS PROPOSED BY PAWC?

A. No. As shown on Attachment RS1j, page 2, PAWC's direct customer charge calculation includes the costs associated with collecting and treating Infiltration and

Inflow ("I/I"). As defined in the WEF Manual of Practice No. 27, Infiltration is the flow entering the sanitary sewer system resulting from high groundwater or precipitation that occurred days or weeks before the observed flow in the sanitary system, and inflow results from the rainfall that enters the sanitary collection system through a number of direct connections such as catch basins, roof drains, foundation drains, and manhole covers. PAWC's calculation of I&I related costs is presented in Schedule JDM-5. As just explained, I/I is largely a function of precipitation. Therefore, I/I does not vary directly with the addition or subtraction of a customer. As previously explained in addressing PAWC's proposed water customer charges, only costs that vary directly with the addition or subtraction of a customer should be included in the calculation of customer charges.

Q. WHAT IS YOUR RECOMMENDATION CONCERNING MONTHLY RESIDENTIAL CUSTOMER CHARGES?

A. For most wastewater rate zones, the current monthly Residential customer charge is $14.30. Exclusive of I/I costs, the Company's calculation of customer costs would indicate a direct cost of $13.87 at the Company's proposed revenue requirement. Therefore, I recommend that the current monthly Residential customer charges in Rate Zones 1, 2, 5, and 6 be maintained, and the current Residential customer service charges in Rate Zones 3, 4, 7, and 9 be reduced to $14.30. While I do not address rate design for the Rate Zones where acquisitions are pending, my objection to PAWC's proposed customer charges and my recommendation that those charges should not exceed $14.30 for Residential customers with 5/8-inch, ¾-inch, 1-inch or 1½-inch meters would apply.

Q. DO YOU AGREE WITH PAWC'S VOLUMETRIC RATE PROPOSALS AS DESCRIBED BY MR. REA?

A. PAWC is proposing to increase SSS volumetric rates to a level that brings the Residential bill for a customer using 3,201 gallons per month to approximately $100, and to increase CSS volumetric rates to a level that brings the Residential bill for the same usage to approximately $110 with proportional increases to non-residential rates; to maintain the existing Scranton volumetric rate; to merge the volumetric rates for Kane and McKeesport; to phase out the allowance for York; and to increase Royersford volumetric rates to a level that results in bills for the average Residential customer of approximately $65 per month, and increase non-residential volumetric rates to $0.75 per 100 gallons.

I agree with PAWC's proposal to phase out the allowance for York customers. The remainder of PAWC's volumetric rate proposals are based on the Company-proposed assignment of a significant 27% of the wastewater revenue requirement to water service customers. Under this proposed assignment, SSS and CSS wastewater customers receive no rate increase and, in fact, a slight decrease in rates. As previously explained in Section IV of my testimony, this is unreasonable. I recommend that PAWC's volumetric rate proposals be proportionately adjusted to recover the cost of service approved by the Commission for each current SSS and CSS customer class, and for SSS and CSS Residential customers, any revenue deficiency resulting from the adoption of my monthly Residential customer charge recommendations.

Q. ARE YOU PROPOSING ANY OTHER MODIFICATIONS TO PAWC'S WASTEWATER RATE DESIGN THAT WERE NOT DISCUSSED BY MR. REA IN HIS TESTIMONY?

A. No.

Q. IN THIS SECTION OF YOUR TESTIMONY, YOU DISCUSS WASTEWATER RATE DESIGN AND IN THE PRIOR SECTION YOU DISCUSS WATER RATE DESIGN. DO ANY OTHER OCA WITNESSES DISCUSS RATE DESIGN IN THEIR DIRECT TESTIMONY?

A. Yes. OCA witness Roger Colton (OCA Statement 5) addresses PAWC's low-income bill discount.

VII. IMPUTED REVENUES FOR ACQUIRED SYSTEMS

Q. IS PAWC PROPOSING TO DELAY THE EFFECTIVE DATE FOR THE RATE INCREASES IT HAS PROPOSED FOR CERTAIN CUSTOMERS?

A. Yes. The Company proposes to delay the effective date for rate changes to customers in certain rate zones where the system was recently acquired (Foster and York) or the acquisition is still pending (Brentwood and BASA).[12] However, PAWC has calculated revenues as if those customers were paying the new rates without any delay to the effective date.[13]

Q. HAS THE COMPANY ACTUALLY PROPOSED A RATE INCREASE FOR EACH OF THESE FOUR RATE ZONES?

A. No. Effective January 1, 2025, the currently approved tariff for Foster provides for a rate of $106 per equivalent dwelling unit ("EDU") per month.[14] In this proceeding,

[12] PAWC Statement No. 4, p. 42.
[13] PAWC Statement No. 4, p. 42.
[14] PAWC Statement No. 10, p.38.

PAWC is proposing to decrease this rate to $100 per EDU.[15] This rate is equal to the flat rate in Rate Zone 1.[16]

Q. IF THE COMMISSION APPROVES A DELAYED EFFECTIVE DATE FOR THESE RATE ZONES, SHOULD IT ALSO ADOPT PAWC'S PROPOSAL AND REQUIRE THE COMPANY TO IMPUTE REVENUES BY CALCULATING THE PROOF OF REVENUES BASED ON THE NEW RATES THAT WILL BECOME EFFECTIVE AFTER THE DELAY?

A. Yes. While the BASA and Brentwood Wastewater systems should not be included in revenue requirement at all in this proceeding for the reasons outlined in OCA witnesses Hoover and Smith (OCA Statements 1 and 2), if the Commission does include them they need to impute revenues for these systems to prevent existing PAWC customers from subsidizing the revenue requirement required to keep the acquired system rates lower than the new rates established for those systems in this base rate case. For the same reason, to avoid subsidization by existing PAWC customers, the Commission should adopt PAWC's proposal and require the Company to impute revenues for the Foster and York systems by calculating the proof of revenues based on the new rates that will become effective after the delay.

VIII. REVENUE DECOUPLING MECHANISM

Q. IS THE COMPANY PROPOSING A REVENUE DECOUPLING MECHANISM ("RDM") IN THIS PROCEEDING?

A. Yes. PAWC is proposing an RDM for both water and wastewater service. As discussed in the testimony of PAWC witness Mr. Rea (PAWC Statement No. 10), the Company

[15] PAWC Exhibit 10-B, p. 21.
[16] PAWC Statement No. 10, p. 38.

claims that RDM is an alternative rate design mechanism that will more reliably recover the revenue requirement and associated fixed costs approved by the Commission in this proceeding.

Q. WHAT IS THE COMPANY'S RATIONALE FOR PROPOSING THE RDM?

A. According to Mr. Rea, approximately 81% of the Company's water and wastewater service revenues will be collected through volumetric rates under the Company's proposed rate structure in this case, which means that revenues will vary up or down depending on how much water customers use. Mr. Rea contends that over 95% of the Company's costs are fixed costs, and do not vary depending on how much water customers use. Given the nature of the Company's fixed costs, Mr. Rea believes that the RDM will provide the Company with a better opportunity to recover the revenue requirement and fixed costs authorized in this case as the difference between those amounts and actual revenues will be charged or credited back to customers in the subsequent year under the RDM.

Q. PLEASE DESCRIBE THE COMPANY'S PROPOSED RDM.

A. As discussed by Mr. Rea, the RDM is an administrative rate design mechanism that couples traditional rate design with Straight Fixed Variable ("SFV") pricing. SFV pricing is a rate design that collects fixed costs through fixed charges and variable costs through volumetric changes. The RDM compares the revenues collected under the actual Commission approved rates customers pay with the revenues that would have been collected through an SFV rate design on a forward-looking basis and accrues the differences, which are either credited to customers or collected from customers at a later time. The proposed RDM identifies three cost components as the basis for

revenues that would be collected through the SFV rate design that form the basis of the revenue comparisons going forward. These three cost components are:

- Volumetric Charge (VC): A charge in dollars per hundred gallons that applies to all water volumes sold to customers.
- Residential Fixed Charge (RC): A flat dollar charge per month that applies to all Residential customers.
- Non-Residential Fixed Charge (NC): A flat dollar amount that applies to all non-residential customers.

Q. HOW IS THE COMPANY PROPOSING TO DETERMINE THE COST COMPONENTS OF ITS PROPOSED RDM?

A. As discussed by Mr. Rea, the three different cost components are calculated based on the allocated revenue requirements to customer class, the level of production costs identified in the Company's class cost of service studies and the total volumes of water and wastewater approved in this proceeding that form the basis of the billing determinants for water and wastewater service. The calculation for the different cost components is as follows:

- Volumetric Charge (VC): Total Production Costs allocated to eligible customers divided by total volumetric sales associated with eligible customers.
- Residential Fixed Charge (RC)**:** Total revenue requirement allocated to Residential customers for rate design purposes less the Volumetric Charge multiplied by total volumetric sales associated with residential customers divided by the total number of residential customers in the case.
- Non-Residential Fixed Charge (NC): Total revenue requirement allocated to eligible non-residential customers for rate design purposes less the Volumetric Charge multiplied by total volumetric sales associated with eligible non-residential eligible customers divided by the total number of non-residential customers in the case.

Q. HOW WOULD THE RDM WORK ON A FORWARD-LOOKING BASIS?

A. As described by Mr. Rea, the proposed RDM would compare actual revenues recovered from eligible customers in a given month or year to the revenues that would result from applying the RDM cost-components previously described above. If actual revenues are higher than would have been collected under the RDM formula, the difference is credited to customers in the following year. If actual revenues are lower than would have been collected under the RDM formula, the difference is collected from customers in the following year. The calculation of the proposed RDM is presented on page 93 of Mr. Rea's Direct Testimony.

Q. HOW DOES THE COMPANY PROPOSE TO IMPLEMENT THE RDM?

A. The Company's proposed RDM will apply to both water and wastewater service, with separate tariffs and a separate recovery/credit mechanism for each service. The recovery/credit mechanisms are proposed to be volumetric and apply separately for each customer class. Amounts accrued over the course of the year that will be credited to or collected from customers will be applied in the following year to forecasted sales volumes and a volumetric credit or surcharge, as applicable, will be calculated on a dollars per hundred gallons basis.

Q. ARE THE COST COMPONENTS OF THE RDM CALCULATION FIXED OR DO THEY CHANGE OVER TIME DEPENDING ON CHANGES IN REVENUE REQUIREMENTS?

A. The cost components of the RDM are fixed and will not change until a future rate case with a different set of revenue requirements and calculations for cost components.

Q. WHAT CUSTOMER CLASSES ARE INCLUDED IN THE COMPANY'S PROPOSED RDM?

A. The RDM will apply to all customers in the Residential, Commercial, Industrial, Public (Municipal), and Sales for Resale classes except for those customers taking service under contract rates.

Q. HAS THE COMMISSION ADOPTED A STATEMENT OF POLICY RELATED TO ALTERNATIVE RATE MAKING MECHANISMS SUCH AS PAWC'S PROPOSED RDM?

A. Yes. In its Order dated July 18, 2019, in Docket No. M-2015-2518883, the Commission set forth its Statement of Policy as it relates to alternative ratemaking methodologies. Specifically, the Commission identified 14 factors that it would consider in its evaluation of alternative ratemaking mechanisms. The Statement of Policy requires a utility proposing an alternative ratemaking mechanism to explain how each of these 14 factors impact the rates of each customer class.

Q. DID MR. REA SPECIFICALLY ADDRESS THE 14 FACTORS AS THEY RELATE TO PAWC'S PROPOSED RDM IN HIS DIRECT TESTIMONY?

A. Yes. Mr. Rea claims that the 14 factors are satisfied (PAWC Exhibit CBR-10).

Q. IN YOUR OPINION, DOES THE RDM SATISFY THE 14 FACTORS OF THE PUC'S POLICY STATEMENT?

A. No. In my opinion, the RDM does not meet the 14 factors of the PUC's Policy Statement for the following reasons:

1. The RDM provides for the recovery of fixed costs on a volumetric basis; therefore, it does not align utility revenues with cost causation principles as to both fixed and variable costs.

2. The proposed RDM is unlikely to impact the fixed utility's capacity utilization.

3. The RDM adjustment or "true-up" mechanism creates the anomaly where customers see rate increases when they reduce consumption and rate decreases when they increase consumption.

4. OCA witness Roger Colton explains that, with respect to interclass cost shifting, the RDM could shift revenue within the residential class from customers who are financially able to invest in water conservation measures to low-income customers who are not financially able to make those same investments.

5. The Company has not demonstrated that the lack of an RDM has been a major obstacle for the promotion of water conservation and efficiency. The Company has been able to implement methods to improve water efficiency without an RDM. Moreover, there has been a long-term trend of per-customer declining water consumption (i.e. improved water efficiency use) without an RDM.

6. The proposed RDM could provide a disincentive to ratepayers to undertake water conservation efforts because they would be required to pay for water they did not use. Revenue savings to individual customers that would ordinarily be achieved through usage reductions would be offset by surcharges to all customers under the RDM. Hence, if customers save money on their monthly water bill due to efficient consumption, customers will be forced to share their bill savings with the utility. Moreover, with the high and apparently never-ending rate increases that PAWC has implemented and will apparently continue to seek, customers are already incented to conserve water without a new RDM surcharge.

7. OCA witness Colton addresses how the RDM could affirmatively harm low-income customers that do not have the financial means to pursue investments in water conservation measures.

8. Under the current regulatory standard in Pennsylvania, base rate cost under and over recoveries are currently not tracked and are not eligible for recovery in future base rate proceedings. The proposed RDM would add another surcharge to customers' bills and would not reduce the frequency of PAWC base rate or DSIC rate filings. Thus, it does not appear that a new RDM surcharge would improve rate stability. In contrast, under traditional cost-of-service ratemaking, if a utility experiences sales reductions and under-recovery, it cannot simply achieve the same result as an RDM true-up by filing another base rate case with adjusted sales forecasts. When a utility files a general rate increase, all relevant information is reviewed to determine just and reasonable rates, not just sales forecasts. Traditional ratemaking produces rate stability.

9. The RDM adjustment or true-up mechanism creates the anomaly where customers see rate increases when they reduce consumption due to weather variations and rate decreases when they increase consumption due to weather variations.

10. The RDM will have no impact on the magnitude of base rate increases requested by the Company in the future. The RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

11. The RDM will interact with the Company's DSIC because the DSIC is a percentage applied to the total bill and the RDM will impact a customer's total bill.

12. The proposed RDM does not include appropriate consumer protections and should be rejected for the reasons discussed in my testimony and the testimony of OCA witness Colton.

13. PAWC has not provided any evidence that the proposed RDM will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed ECIC, significant customer confusion is likely.

14. The proposed RDM does not provide a direct incentive to increase the safety and reliability of the PAWC system.

My detailed analysis of the 14 factors is presented in Schedule JDM-6.

Q. AT PAGE 99 OF PAWC STATEMENT NO. 10, MR. REA CLAIMS THAT IF A CUSTOMER TAKES ACTIONS TO USE LESS WATER IN AN ATTEMPT TO REDUCE THEIR BILL, THE RDM WILL NOT TAKE THOSE SAVINGS AWAY FROM THE CUSTOMER.

A. Mr. Rea states that where an average customer uses 4,000 gallons per month and reduces that usage to 3,800 gallons per month, or a 5% reduction in usage, the customer's bill would decrease by $4.26 for the usage reduction. The RDM adjustment that month would be a bill increase by $1.01 for the RDM ($0.0266 x 38) for a net bill savings of $3.25 per month. Rea, pp. 99-100, OCA-4-30 (Rea corrected the number from $4.16 to $4.26).

Q. DO YOU AGREE WITH THIS CLAIM?

A. No. If a customer reduces their consumption in an attempt to reduce their bill but the reduction is less than the reduction in usage of all other customers, the RDM will take those savings away from the customer, and in fact, the customer's bill will be higher. This is because the RDM charges all customers for usage reductions based on the aggregate reduction in usage by all customers. For a customer to continually experience bill savings under the RDM, the customer would need to ***continuously*** reduce their consumption by a ***greater amount*** than the average customer.

Q. SO WHAT DOES THIS MEAN FOR MOST CONSUMERS?

A. It means that under traditional ratemaking, a consumer can save money on their monthly water bill by improving their water efficiency and reducing consumption, and the consumer keeps those savings. In contrast, under the RDM, the consumer will be forced to share some of their bill savings with the utility, if enough customers reduce their usage such that the company does not meet its revenue target. For many consumers, it could mean being forced to return nearly all of their bill savings to the utility.

Q. DOES RDM REDUCE RISK FOR THE COMPANY?

A. Yes. The RDM, if approved, would remove the risk of not achieving allowed revenues, a risk which the Company faces under traditional ratemaking. Removing the risk of recovery lowers overall business risk for the Company.

Q. SHOULD THE RDM PROPOSED BY PAWC BE APPROVED BY THE COMMISSION?

A. No. As discussed in Schedule JDM-6, the proposed RDM provides a disincentive to ratepayers to undertake water conservation efforts because they would be required to

pay for water they did not use. PAWC has not provided any evidence that the proposed RDM will be understandable to customers, and when combined with the quarterly rate changes that occur under PAWC's DSIC and potentially the proposed ECIC, significant confusion is likely. In addition, PAWC's proposal to implement the proposed RDM will likely result in increases in customer rates between rate cases and potentially increases in customer bills for customers who have actually reduced their consumption. It would shift the risk of revenue fluctuations between rate cases away from investors, where it is currently borne, and place that risk onto ratepayers. In addition, as explained in greater detail in the direct testimony of OCA witness Colton, the RDM disproportionately adversely affects low-income customers. I recommend that PAWC's proposed RDM be rejected for the following additional reasons:

- The proposed RDM would lock in a revenue stream that would inure to the benefit of the Company's investors;
- The risk associated with fluctuations in water sales and revenue levels between rate cases would shift from the Company's investors, where it lies now, to ratepayers;
- If the proposed RDM was implemented and if revenues decreased as a result of a downturn in the economy, ratepayers would be required to make up the resultant shortfall in revenues. Under traditional ratemaking, utilities and their investors bear the risks of such economic downturns, as is the case with many other types of business and industries;
- PAWC has not proposed to reduce its equity return to reflect the reduction in risk associated with implementation of an RDM. In fact, PAWC affirmatively opposes any reduction related to the RDM.[17] This is also addressed in the testimony of OCA witness David Garrett (OCA Statement 3); and

[17] See pages 53-54 of the Direct Testimony of Company witness Bulkley.

- Ratepayers would be inappropriately held fully responsible for decreases in revenues due to a downturn in the economy and changes in revenues due to weather variations.

Q. WAS A SIMILAR REVENUE DECOUPLING MECHANISM PROPOSAL BY AN AFFILIATE OF PAWC RECENTLY REJECTED BY THE WEST VIRGINIA PUBLIC SERVICE COMMISSION?

A. Yes. In an Order dated February 24, 2022, the West Virginia Public Service Commission ("WV PSC") rejected a revenue decoupling mechanism proposed by West Virginia American Water Company, an affiliate of PAWC, stating as follows from page 55 of that Order.[18]

> WVAWC is proposing a radical change in regulatory policy in West Virginia that would, based on WVAWC's evidence on declining usage and customer count and Mr. Rea's testimony, guarantee annual rate increases for customers. As pointed out by Staff and the WVEUG, the Commission has addressed declining usage and customer count by approving WVAWC's proposed declining usage and customer attrition adjustments. A RSM implicitly shifts risk from investors to customers that would require an adjustment to the authorized rate of return. Additional surcharge mechanisms such as the RSM and, as discussed below, the UEX should not be approved at this time.

Q. DOES WEST VIRGINIA HAVE A STATUTE THAT ALLOWS CONSIDERATION OF A UTILITY PROPOSAL FOR ALTERNATIVE RATEMAKING?

A. Yes. The West Virginia Code (W.Va. Code §24-1-1) and the West Virginia Commission's Tariff Rules permit the use of alternative ratemaking approaches where

[18] West Virginia-American Water Co., Rule 42t Tariff Filing to Increase Water and Sewer Rate and Charges, 2022 W. Va PUC LEXIS 102, *55-57.

application would appropriately balance the interests of current and future utility customers, the general interests in that state's economy and the interests of the regulated public utility. W.Va. Code §24-1-1(b) and (c) state as follows:

> (b) The Legislature creates the Public Service Commission to exercise the legislative powers delegated to it. The Public Service Commission is charged with the responsibility for appraising and balancing the interests of current and future utility service customers, the general interests of the state's economy and the interests of the utilities subject to its jurisdiction in its deliberations and decisions. (c) The Legislature directs the Public Service Commission to identify, explore and consider the potential benefits or risks associated with emerging and state-of-the-art concepts in utility management, rate design and conservation. The commission may conduct inquiries and hold hearings regarding such concepts in order to provide utilities subject to its jurisdiction and other interested persons the opportunity to comment and shall report to the Governor and the Legislature regarding its findings and policies to each of these areas not later than the first day of the regular session of the Legislature in the year 1985, and every two years thereafter.

IX. ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE

Q. PLEASE DESCRIBE THE COMPANY'S PROPOSAL TO IMPLEMENT AN ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE ("ECIC").

A. As explained by witness J. Cas Swiz (PAWC Statement No. 8), PAWC seeks approval to establish an ECIC pursuant to Sections 1307 and 1330(b)(2) of the Public Utility Code. The ECIC is an alternative rate adjustment clause designed to reflect and recover, between rate cases, the costs imposed on the Company to address and comply with government-mandated environmental standards. Under PAWC's proposal, for

inclusion in the ECIC, the costs must be consistent with the set of projects and activities set forth in PAWC's annual environmental compliance plan ("Environmental Plan") that is subject to Commission review and approval.

Q. WHY DOES THE COMPANY BELIEVE IT APPROPRIATE TO RECOVER ENVIRONMENTAL PLAN COSTS THROUGH AN ALTERNATIVE RATEMAKING MECHANISM?

A. The Company contends that its proposed ECIC will provide a reasonable mechanism for adjusting the Company's rates between base rate cases to ensure full and timely rate recognition of PAWC's investments and measures undertaken to comply with new environmental regulatory mandates as they emerge. PAWC claims it has no control over the need for or timing of costs to comply with these new or changed regulatory requirements. PAWC claims that the ECIC will also help avoid customer exposure to less frequent but more significant rate increases in a general base rate case by producing smaller, more gradual increases to customer bills, and permitting PAWC to recover ECIC-eligible capital costs and expenses through an automatic adjustment clause, which will reduce a major driver of the need for rate relief that would otherwise trigger a base rate case filing. PAWC believes that the ECIC will help ensure that it receives adequate revenue to maintain safe, reliable, and compliant water and wastewater service that both meets government requirements and advances environmental policy objectives.

Q. HAS PAWC PROVIDED AN ESTIMATE OF THE COSTS THAT WILL BE REQUESTED FOR RECOVERY THROUGH THE ECIC?

A. No, not specifically. PAWC is a subsidiary of American Water Works Company, Inc. ("Parent Company"). The Parent Company has subsidiaries that operate in 13

jurisdictions. PAWC claims its compliance with new drinking water regulations will require significant capital investment, currently estimated at over $1 billion of capital expenditures for all of the Parent Company's 13 regulated jurisdictions, along with ongoing annual operating expenses estimated at approximately $50 million.

Q. HOW WILL THE ECIC REVENUE REQUIREMENT BE CALCULATED?

A. Mr. Swiz claims that the ECIC will capture the fixed costs of the Environmental Plan capital investments placed in-service after the end of the fully projected future test year ("FPFTY") in this case. The fixed costs will include the pre-tax return on the capital investment, the annual depreciation expense associated with the capital investment, incremental operating expenses within the Environmental Plan, and any associated deferrals associated with the capital investments. The fixed costs will be captured quarterly, with the ECIC effective one month after this date, as shown in the table below:

Environmental Plan Plant Additions As of	ECIC Rate Effective Date
March 31	May 1
June 30	August 1
September 30	November 1
December 31	February 1

Q. IS PAWC REQUESTING AUTHORIZATION TO DEFER ANY ECIC-RELATED COSTS UNTIL INCLUSION IN THE ECIC RIDER?

A. Yes. Until such point as the Environmental Plan investments and the associated fixed costs are included for recovery in the ECIC, PAWC is requesting authorization to defer depreciation expense and post-in-service carrying costs ("PISCC") from the period the investment is placed in-service until it is included in the ECIC rates for recovery. The depreciation expense deferred will be calculated consistent with the recoverable

depreciation expense in the quarterly revenue requirement. The PISCC will be calculated using the Company's actual after-tax rate of return for the previous ECIC quarter, applied to the net plant value (gross plant less accumulated depreciation) of eligible Environmental Plan investments in-service.

Q. HOW WILL THESE ECIC DEPRECIATION EXPENSE DEFERRALS BE RECOVERED?

A. Mr. Swiz claims PAWC will amortize the deferred balances over the remaining life of the investments, with only the annual amortization expense recovered within the ECIC. The Company is not seeking a return on these deferred balances.

Q. PLEASE DESCRIBE THE PROPOSED SCHEDULE FOR ECIC RIDER UPDATES.

A. The ECIC will be updated quarterly, with supporting data for each quarterly update filed with the Commission and served upon the Commission's Bureau of Investigation and Enforcement, Commission's Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

Q. HOW WILL THE ECIC RIDER BE ASSESSED TO CUSTOMERS?

A. The ECIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for service under the Company's otherwise applicable rates and charges, excluding amounts billed for public fire protection service, the State Tax Adjustment Surcharge ("STAS"), and the DSIC (collectively, "excluded amounts"). One-fourth of the annual fixed costs associated with the Environmental Plan projects will be divided by the Company's projected revenue for sales for water (including all applicable clauses and riders and

less the excluded amounts) for the quarterly period during which the charge will be collected. The ECIC will be applied equally to all customer classes.

Q. WILL THE ECIC BE AUDITED AND RECONCILED?

A. Yes, the ECIC will be subject to audit at intervals determined by the Commission and to reconciliation annually for the twelve (12) months ending December 31 of each year. With respect to reconciliation, the revenue received under the ECIC for the reconciliation period will be compared to the Company's eligible costs for that period, with any difference between revenues and costs recouped from or credited to customers, as appropriate, over a one-year period commencing on May 1 of each year. The Company may elect to reconcile the ECIC quarterly, but only upon request and approval by the Commission.

Any over- or under-collection of revenues compared to ECIC eligible costs will be subject to interest, calculated at the Residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. § 101, et seq.). Interest will be refunded to or collected from customers in the same manner as any over- or under-recovery collection.

Q. WILL THE ECIC RESET WITH THE IMPLEMENTATION OF FUTURE BASE RATES?

A. Yes. Under the Company's proposal, the ECIC will be reset to zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had theretofore been recovered under the ECIC.

Q. WILL THE ECIC BE SUBJECT TO AN EARNINGS EVALUATION?

A. Under the Company's proposal, the ECIC *may* be reset to zero if, in any quarter, data filed with the Commission in the Company's then most recent Annual or Quarterly

Earnings reports show that the Company will earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the ECIC.

Q. IN ADDRESSING THE REVENUE DECOUPLING MECHANISM PROPOSED BY PAWC, YOU REFERENCE THE COMMISSION STATEMENT OF POLICY RELATED TO ALTERNATIVE RATEMAKING METHODOLOGIES, AND THE 14 FACTORS THE COMMISSION INDICATED IT WOULD CONSIDER IN EVALUATING AN ALTERNATIVE RATEMAKING MECHANISM SUCH AS THE ECIC. DID MR. SWIZ ADDRESS THE 14 FACTORS AS THEY RELATE TO PAWC'S PROPOSED ECIC IN HIS DIRECT TESTIMONY?

A. Yes. The 14 factors are addressed in PAWC Exhibit JCS-1. The Company's response to the 14 factors, and my response to the 14 factors are presented in Schedule JDM-7.

Q. DID MR. SWIZ SPECIFICALLY ADDRESS THE 14 FACTORS AS THEY RELATE TO PAWC'S PROPOSED RDM IN HIS DIRECT TESTIMONY?

A. Yes. Mr. Swiz claims that the 14 factors are satisfied. PAWC Exhibit JCS-1.

Q. IN YOUR OPINION, DOES THE ECIC SATISFY THE 14 FACTORS OF THE PUC'S POLICY STATEMENT?

A. No. In my opinion, the ECIC does not meet the 14 factors of the PUC's Policy Statement for the following reasons:

1. The ECIC does not align revenues with cost causation principles as to both fixed and variable costs. The ECIC will be assessed as a percentage applied to each customer's total bill. Over 80% of the Company's water and wastewater revenues will be collected under volumetric rates under the Company's proposed rate structure in this case. However, 95% of the

Company's costs associated with providing water and wastewater service are fixed.

2. It is unlikely that the ECIC will impact PAWC's capacity utilization.

3. As explained in factor one above, the ECIC does not align revenues with cost causation principles as to both fixed and variable costs.

4. The costs PAWC is proposing to recover through the ECIC would ordinarily be assigned to each customer class based on the results of a cost of service study. In a cost-of-service study, costs are assigned to each customer class based on class responsibility for the incurrence of those costs. The ECIC will be assessed to each customer as a percentage applied to each customer's total bill, without consideration as to the extent that customer's class is responsible for the incurrence of those costs. Therefore, interclass cost shifting is likely to result.

5. The proposed ECIC is unlikely to impact efficiency programs or incentives.

6. Same answer as for factor 5 above.

7. In his Direct Testimony, OCA witness Colton addresses the adverse impact the ECIC would have on low-income customers and concludes that the ECIC will harm low-income customers.

8. Under the ECIC, the number of rate increases experienced by customers will increase significantly.

9. The ECIC is not designed to address weather impacts on utility revenue.

10. While the ECIC *may* reduce base rate case frequency, it is almost certainly going to lead to more frequent rate changes as the ECIC moves predominantly upward. The ECIC will provide for the recovery of certain Environmental Compliance investments made by the Company without consideration of any

potential cost of service reductions that PAWC may experience. The proposed ECIC does not permit parties to investigate cost reductions that may have been experienced by the Company. Cost reductions are currently investigated and evaluated in base rate proceedings.

11. The proposed ECIC will interact with the Company's DSIC because the DSIC is a percentage applied to the total bill and the ECIC will impact a customer's total bill.

12. The proposed ECIC does not include appropriate consumer protections and should be rejected for the reasons discussed in my testimony and the testimony of OCA witness Colton.

13. PAWC has not provided any evidence that the proposed ECIC will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed RDM, significant customer confusion is likely.

14. The proposed ECIC does not provide PAWC a direct incentive to increase the reliability of its systems.

My detailed analysis of the 14 factors is presented in Schedule JDM-7.

Q. SHOULD THE COMMISSION APPROVE PAWC'S PROPOSED ECIC?

A. No. The Commission should reject the proposed ECIC. I have two major concerns. The first major concern is that the ECIC unreasonably shifts the risk of recovery from shareholders to consumers. The challenges that PAWC faces in complying with new and emerging environmental regulations or regulatory policy objectives is typical of any of the challenges faced by any utility management. As OCA witness Christine Hoover discusses in her Direct Testimony, for water utilities, delivering safe drinking water that complies with environmental mandates is part and parcel of PAWC's

statutory obligation to provide safe and reasonable service and is a key underpinning of the regulatory compact. The ECIC unreasonably places greater risk onto consumers for the benefit of stakeholders because through the ECIC, PAWC would be able to immediately recover costs, including a return to investors, under the surcharge subject to a reconciliation. Such risk is and can be in the future appropriately addressed under traditional ratemaking. Indeed, should PAWC's management find in the future that its existing rates are insufficient to comply with any environmental rules or regulations, the Company may elect to file a rate case.

Q. WHAT IS YOUR SECOND MAJOR CONCERN?

A. My second major concern is the very broad and ambiguous scope of the qualifying costs under the ECIC. PAWC states that investments under ECIC would represent a significant portion of the Company's annual capital budget. ECIC is a broad capital investment rate surcharge that would provide PAWC with authority to recover very large and wide-ranging capital investments in new infrastructure in water production, treatment, storage infrastructures to address vague environmental concerns. Investments in infrastructure can provide positive economic results that benefit consumers, but only if those investments are reasonable, prudent, and used and useful. Determinations of whether such utility plant investments meet these legal standards for the protection of consumers are made in the context of base rate proceedings, in which the OCA as a statutory advocate devotes substantial resources. While PAWC has proposed an entire set of procedural rules to enable parties to review and potentially challenge their ECIC filings, PAWC's proposal misses the point that consumers and statutory advocates have very limited resources and cannot realistically expect to

review these recurring filings with the same type of scrutiny given to base rate case filings.

Q. DO YOU HAVE ANY OTHER CONCERNS?

A. Yes. My other concerns with the ECIC, in support of the Commission's rejection of the ECIC, are as follows:

- The ECIC does not align revenues with cost causation as to both fixed and variable costs;
- The proposed ECIC is likely to result in interclass and intraclass cost shifting. These shifts will occur because the ECIC will be assessed as a percentage increase to the total amount billed to each customer, and will not be assigned based on cost causation principles;
- The ECIC could affirmatively harm low-income customers that do not have the financial means to pursue investment in water conservation measures;
- The number of rate increases experienced by customers will increase significantly under the ECIC and PAWC has not provided any evidence that the proposed ECIC will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed RDM, significant customer confusion is likely;
- The ECIC will provide for the recovery of certain environmental compliance investments made by the Company without consideration of any potential cost of service reductions that PAWC may experience. The proposed ECIC does not permit parties to investigate cost reductions that may have been experienced by the Company; and
- As discussed in greater detail in the direct testimony of OCA witness Colton, the ECIC will harm low-income customers.

Q. DOES MR. SWIZ CLAIM THAT OTHER JURISDICTIONS HAVE APPROVED ENVIRONMENTAL COMPLIANCE RIDERS OR ALTERNATIVE RATEMAKING MECHANISMS SIMILAR TO THE ECIC?

A. Yes. Mr. Swiz claims that utility Commissions in 30 states have approved various forms of environmental compliance riders or similar alternative ratemaking mechanisms. Witness Swiz claims that these riders and mechanisms are more prevalent for fully-integrated energy utilities often for electric utilities with generating assets to comply with Environmental Protection Agency ("EPA") mandates under the Clean Air Act.

Q. HAS PENNSYLVANIA ADOPTED SUCH RIDERS OR MECHANISMS?

A. No.[19]

Q. HAVE ANY OF AMERICAN WATER'S 13 SUBSIDIARIES PROPOSED ADJUSTMENT CLAUSES SIMILAR TO THE ECIC WHICH WERE REJECTED BY THEIR COMMISSION?

A. Yes. In Docket No. 22-0210, the Illinois-American Water Company proposed an Environmental Surcharge Rider ("Rider ESR") to provide for the recovery between rate cases of the revenue requirement associated with capital investments made to comply with new and emerging state and federal environmental standards or to advance state and federal environmental regulatory policy objectives.

In an order issued December 15, 2022, the Illinois Commerce Commission ("ICC") rejected Rider ESR for many of the reasons I have explained above, stating:

[19] https://www.spglobal.com/marketintelligence/en/documents/adjustment-clauses-state-by-state-overview.pdf.

Compliance with state and federal regulations is a requirement for all public utilities and is not unique to IAWC. As parties indicate, these regulations are on some level always in flux. Regulations governing the treatment of contaminants in water do change, as do federal and state environmental policy objectives. While specific changes themselves may be unpredictable, they are not unexpected. As the AG notes, two of the 'emerging contaminants' that IAWC refers to have been under consideration by the EPA for over a decade.

The Commission agrees with Staff, the AG, and the Municipalities that the challenges that IAWC faces in complying with new and emerging regulations or regulatory policy objectives is typical of any of the challenges faced by any utility management. The Commission finds it unreasonable to approve a rider mechanism that would arguably place greater risk on the ratepayer for the benefit of stakeholders because IAWC would be able to immediately recover costs, including a return to investors, under the rider subject to a reconciliation. Should IAWC's management find in the future that its existing rates are insufficient to comply with any environmental rules or regulations, the Company may elect to file a rate case.

Also concerning is the potential scope of the qualifying costs under Rider ESR. IAWC states that investments under Rider ESR would represent a significant portion of the Company's annual capital budget. As Staff correctly notes, Rider ESR is a broad capital investment rider that would provide IAWC with authority to make large capital investments in new infrastructure to address vague environmental concerns. While investments in infrastructure provide positive economic results that benefit ratepayers, that does not mean that such investments are reasonable or prudent, especially considering the broad scope and ambiguity of Rider ESR. Accordingly, the Commission rejects IAWC's proposed Rider ESR. (Order, page 173).

Q. DOES PAWC CURRENTLY HAVE AN ADJUSTMENT CLAUSE MECHANISM IN PLACE WHICH AUTHORIZES THE COMPANY TO RECOVER THE COSTS ASSOCIATES WITH CERTAIN INVESTMENTS OUTSIDE A BASE RATE PROCEEDING?

A. Yes. PAWC's water and wastewater customers are assessed a Distribution System Improvement Charge ("DSIC") which is generally designed to recover the fixed costs (depreciation and pre-tax return) associated with non-revenue producing, non-expense reducing, distribution system improvement projects between rate cases. The DSIC is a percentage which is applied to a customer's bill.

Q. ARE PAWC'S WATER AND WASTEWATER DSICS SUBJECT TO A RATE CAP?

A. Yes. The water DSIC is subject to a 7.5% rate cap and the wastewater DSIC is subject to a 5% rate cap. These rate caps are generally applied to all water and wastewater DSICs in Pennsylvania.

Q. HAS THE COMMISSION INDICATED WHY THESE RATE CAPS HAVE BEEN ADOPTED?

A. The Commission has indicated that the rate caps have been adopted to prevent any long-term evasion of a base rate review of the costs which are eligible for recovery (cite). The Commission also found that the rate caps will not evade the Section 1308 base rate process and its extensive top-to-bottom review of all of a Company's revenue, expense, rate base, and return claims (cite). In other words, that rate caps will ensure that the DSIC will not allow a company to avoid a base rate review of the eligible property in perpetuity (cite).

Q. HAS PAWC PROPOSED A RATE CAP FOR ITS ECIC?

A. No.

Q. ARE THERE REASONS WHY AN AUTOMATIC ADJUSTMENT CLAUSE LIKE THE ECIC IS DISFAVORED?

A. Yes. In a base rate case all of a utility's revenues, expenses, and capital costs are simultaneously reviewed so that increases in one category that are offset by decreases in another are considered in determining rates that are just and reasonable. An adjustment clause like PAWC's proposed ECIC, on the other hand, singles out a line item in a utilities base rate to account for expense attributable to capital investment, while ignoring the other components of the base rate. This may result in the establishment of an unjust and unreasonable rate.

Q. PLEASE PROVIDE AN EXAMPLE OF THE COSTS FOR WHICH PAWC IS SEEKING RECOVERY IN THIS PROCEEDING WHICH MAY DECLINE AND WOULD NOT BE TAKEN INTO CONSIDERATION UNDER THE ECIC?

A. PAWC's debt costs may decline from those approved in this proceeding. Interest rates are currently at higher levels compared to those in recent years and are likely to decline. Any decline in interest rates and PAWC's debt costs would not be taken into consideration in the rate setting process under the ECIC.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does. I reserve the right to update my testimony based on additional information received in the course of discovery.

Pennsylvania-American Water Company

3-A Combined Water and Wastewater Revenue Requirement - Summary

		Total Company	Water Operations	Wastewater SSS General Operations	BASA Wastewater Operations	Brentwood Wastewater Operations	CSS Wastewater Operations
Present Rate Revenue	(1)	$1,011,895,862	$824,117,186	$95,470,867	$11,847,402	$1,824,191	$78,636,216
Additional Revenue Requirement	(2)	203,945,911	$128,149,690	$31,793,150	$26,288,308	$1,934,637	$15,780,126
Act 11 - Wastewater Allocation	(3)	0	71,087,394	(31,962,411)	(21,552,699)	(1,565,232)	(16,007,052)
Proposed Revenues		$1,215,841,773	$1,023,354,270	$95,301,606	$16,583,011	$2,193,596	$78,409,290
Rate Increase/(Decrease)		$203,945,911	$199,237,084	($169,261)	$4,735,609	$369,405	($226,926)
		20.2%	24.2%	-0.2%	40.0%	20.3%	-0.3%

Notes:

(1) Present Rate Revenue: Present Rate Revenues are developed in the sections of Exhibit 3-A that relate to each of these operations.

(2) Additional Revenue Requirement: The Additional Revenue Requirement are developed in subsequent sections of this Exhibit 3-A for each of the operations.

(3) Act 11 - Wastewater Allocation is the allocation between wastewater operations and water operations achieved by the proposed consolidation of water and wastewater revenue requirements to derive the water and wastewater rates proposed by the Company in this case.

Schedule JDM-3

Schedule JDM-4

PENNSYLVANIA AMERICAN WATER COMPANY - WATER OPERATIONS

CALCULATION OF THE 5/8-INCH CUSTOMER COSTS PER MONTH
INCLUDING THE UNRECOVERED PUBLIC FIRE COSTS

Cost Function	Cost of Service*	Number of Units	Unit Cost Per Month
Meters	38,545,799	1,028,826 5/8 Equivalents	$ 3.12
Services	71,193,457	766,889 3/4 Equvalents	7.74
Billing/Collecting	31,160,580	9,040,521 Bills	3.45
Meter Reading	5,238,395	9,040,521 Bills	0.58
Subtotal	146,138,230		14.89
Unrecovered Public Fire	40,999,262	1,028,826 5/8 Equivalents	3.32
Total	187,137,492		$ 18.21

* Includes only direct customer costs.

Pennsylvania-American Water Company
Response to Distribution Rates – Statement of Policy
Proposed Revenues Stabilization Mechanism

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa. C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

PAWC
The RDM better aligns actual revenue collection with authorized revenues for all customer classes. The RDM specifically treats fixed and variable costs separately by customer class using rate design concepts associated with Straight-Fixed Variable ("SFV") pricing. The RDM is calculated and administered separately for residential and non-residential customer classes and treats fixed cost and variable cost separately so that fixed cost recovery is aligned with approved fixed costs (per customer) and variable cost recovery is aligned with approved variable costs (per hundred gallons of water). The recovery mechanism is on a volumetric basis.

OCA
The RDM provides for the recovery of fixed costs on a volumetric basis and, therefore, does not align revenues with cost causation principles as to both fixed and variable costs.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

PAWC
The Company's proposed RDM is not expected to impact the fixed utility's capacity utilization.

OCA
The Company's proposed RDM is unlikely to impact the fixed utility's capacity utilization.

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

PAWC
The Company's proposed RDM directly reflects changing consumption levels in variable cost recovery. As consumption levels increase, the Company's variable

cost recovery increases, but only by the approved level of production cost per unit delivered or billed. The opposite is true whereas consumption levels decrease, the Company's variable cost recovery decreases, but only by the approved level of production cost per unit delivered or billed.

OCA
The adjustment mechanism creates the anomaly where customers see rate increases when they reduce consumption and rate decreases when they increase consumption.

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

PAWC
The proposed RDM would apply to both water and wastewater service with separate tariffs and separate recovery/credit mechanisms for residential nonresidential customers. The proposed RDM will not affect interclass or intraclass cost shifting between residential and non-residential customer classes.

OCA
It does not appear that the proposed RDM will cause interclass shifting between residential and non-residential customers. With respect to intraclass cost shifting, as explained in the Direct Testimony of OCA witness Colton (OCA Statement 5), the RDM could shift revenue within the residential class from customers who are financially able to invest in water conservation measures to low-income customers who are not financially able to make those investments.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

PAWC
The proposed RDM reduces the throughput incentive, which gives the Company an incentive to collect more revenue when customers increase consumption. By connecting variable cost recovery directly to approved levels of production cost but not to fixed cost, the RDM removes this incentive from the Company and therefore eliminates any disincentives for the promotion of water efficiency efforts.

OCA
PAWC has not proposed any new efficiency or conservation programs for customers in this proceeding. Furthermore, the Company has not demonstrated that the lack of an RDM has been a major obstacle to the promotion of water efficiency. The Company has been able to implement methods to improve water efficiency without an RDM. Moreover, there has been a long-term trend of per-customer declining water consumption (i.e. improved water efficiency use) without an RDM.

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

PAWC

See response to item (5). The proposed mechanism encourages water efficiency by reducing the throughput incentive. In addition, if customers employ efficiency measures, those measures will far outweigh any surcharges that may result from the proposed RDM.

OCA

The proposed RDM could provide a disincentive to ratepayers to undertake water conservation efforts because they would be required to pay for water they did not use. Revenue savings to individual customers that would ordinarily be achieved through usage reductions would be offset by surcharges to all customers under the RDM. Hence, under the RDM, if customers improve their water efficiency and reduced their consumption, customers will be forced to share their bill savings with the utility, and in many cases, return all, or nearly all, of those savings to the utility. Moreover, with the high and apparently never-ending rate increases that PAWC has implemented and will apparently continue to seek, customers are already incented to conserve water without a new RDM surcharge.

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

PAWC

The proposed RDM does not have any specific impacts on low-income customers that do not apply to residential customers generally. Because the recovery mechanism is volumetric in nature, lower-use low-income customers will not be adversely impacted.

OCA

In his Direct Testimony, OCA witness Colton addresses how the RDM could affirmatively harm low-income customers that do not have the financial means to pursue investments in water conservation measures.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

PAWC

The proposed RDM will, by definition, improve rate stability. In years where revenues are relatively low relative to SFV pricing and fixed costs are under recovered, rates would increase slightly in the next year to bring actual revenues back up. The opposite would be true in years where usage resulted in revenues that were higher than that implied by SFV pricing, which represents a scenario where fixed costs are over-recovered. In higher revenue years, the RDM will reduce rates which would offset higher revenues from the year before

and "smooth out" revenues over the longer term.

OCA

Under the current regulatory standard in Pennsylvania, base rate cost under and over recoveries are currently not tracked and are not eligible for recovery in future base rate proceedings. The proposed RDM would add another surcharge to customers' bills and would not reduce the frequency of PAWC base rate or DSIC rate filings. Thus, it does not appear that a new RDM surcharge would improve rate stability. In contrast, under traditional cost-of-service ratemaking, if a utility experiences sales reductions and under-recovery, it cannot simply achieve the same result as an RDM true-up by filing another base rate case with adjusted sales forecasts. When a utility files a general rate increase, all relevant information is reviewed to determine just and reasonable rates, not just sales forecasts. Traditional ratemaking produces rate stability.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

PAWC

Weather will still have an impact on revenues but only to the extent that variable costs are impacted. Under the proposed RDM, volatility of utility revenue and customer bills would be reduced over the long term. Increases in fixed cost recovery revenue due to abnormal weather variations (e.g., drought conditions) would be returned to customers in the following year, and reductions in fixed cost recovery due to abnormal weather variations (e.g., excessive rainfall) would be collected from customers in the following year.

OCA

The RDM adjustment or true-up mechanism creates the anomaly where customers see rate increases when they reduce consumption due to weather variations and rate decreases when they increase consumption due to weather variations.

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

PAWC

To the extent that future rate cases are driven by lower-than-expected usage, the RDM likely would result in fewer rate cases, or at least rate cases seeking lower rate increases. However, the RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

OCA
The RDM will have no impact on the magnitude of base rate increases requested by the Company in the future. The RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa. C.S. § 1307(relating to sliding scale of rates; adjustments), riders such as 66 Pa. C.S. § 2804(9)(relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa. C.S. § 1353 (relating to distribution system improvement charge).

PAWC
The Company's proposed RDM does not interact with other revenue sources.

OCA
The proposed RDM will interact with the Company's DSIC because the DSIC is a percentage applied to the total bill and the RDM will impact a customer's total bill.

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

PAWC
The RDM proposal includes consumer protections through the formal reconciliation process which includes audits and external stakeholder review. Tariff administration of the mechanism will contain consumer protections to make sure that the appropriate levels of revenue are being collected. Customers still can control their bill through controlling usage because the standard rate design still applies.

OCA
The proposed RDM does not include appropriate consumer protections and should be rejected for the reasons discussed in my testimony and the testimony of OCA witness Colton.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

PAWC
The Company does not anticipate that there would be any issues related to customer confusion over the proposed RDM. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they

would be for any other rate design element that makes up a part of the customer's bill.

OCA
PAWC has not provided any evidence that the proposed RDM will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed ECIC, significant customer confusion is likely.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

PAWC
The proposed RDM will support improvements in utility reliability by permitting the Company to more reliably recover fixed costs that can't be avoided by customers using less water, and will therefore enhance the Company's ability to prudently invest in and manage the business.

OCA
The proposed RDM does not provide a direct incentive to increase the safety and reliability of the PAWC system.

Pennsylvania-American Water Company
Response to Distribution Rates – Statement of Policy
Proposed Revenues Compliance Investment Charge (ECIC)

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa. C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

PAWC
The ECIC recovers the costs associated with eligible environmental compliance costs from all customer classes via a percentage applied to the total amount billed. The ECIC is thus applied consistent with PAWC's base rates.

OCA
The ECIC does not align revenues with cost causation principles as to both fixed and variable costs. The ECIC will be assessed as a percentage applied to each customer's total bill. Over 80% of the Company's water and wastewater revenues will be collected under volumetric rates under the Company's proposed rate structure in this case. However, 95% of the Company's costs associated with providing water and wastewater service are fixed.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

PAWC
This factor is not applicable to water and wastewater utilities.

OCA
In response to this same question concerning PAWC's proposed RDM, the Company responded that the RDM is unlikely to impact the fixed utility's capacity utilization. It is unlikely that the ECIC will impact PAWC's capacity utilization.

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

PAWC
See the response to item (1).

OCA
See the response to item (1).

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

PAWC
The proposed ECIC will be applied equally to all customer classes and will not affect interclass or intraclass cost shifting.

OCA
The costs PAWC is proposing to recover through the ECIC would ordinarily be assigned to each customer class based on the results of a cost of service study. In a cost of service study, costs are assigned to each customer class based on class responsibility for the incurrence of those costs. The ECIC will be assessed to each customer as a percentage applied to each customer's total bill, without consideration as to the extent that customer's class is responsible for the incurrence of those costs. Therefore, interclass cost shifting is likely to result.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

PAWC
The proposed ECIC will not impact efficiency programs or incentives.

OCA
The proposed ECIC is unlikely to impact efficiency programs or incentives.

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

PAWC
See response to item (5).

OCA
See response to item (5).

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

PAWC
The proposed ECIC does not have any specific impacts on low-income customers that do not apply to residential customers (or other customers) generally. Without the ECIC, the same costs for environmental projects would be borne by the same ratepayers effective after the next base rate case. The ECIC will allow for rates to increase as certain environmental projects are undertaken, and thus those increases will be more gradual than if deferred between base rate cases.

OCA
In his Direct Testimony, OCA witness Colton addresses the adverse impact the

ECIC would have on low-income customers, and concludes that the ECIC will harm low-income customers.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

PAWC
The proposed ECIC, updated quarterly and reconciled annually, will provide gradual changes to customer rates and bills as opposed to more significant increases typically experienced in base rate cases.

OCA
Under the ECIC, the number of rate increases experienced by customers will increase significantly.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

PAWC
The ECIC, like the Company's existing DSIC mechanism, will be reconciled annually whereby actual recoveries are compared to authorized/required recoveries, with any variances recovered from or credited to customers in subsequent ECIC charges. Specific to any weather variability in customer usage, this reconciliation ensures that no more or less than what the Company is required or authorized to recover is actually recovered in rates and charges to customers.

OCA
The ECIC is not designed to address weather impacts on utility revenue.

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

PAWC
The company's environmental compliance requirements are continuously evolving and is one of the drivers that increases the costs of water and wastewater service and the need for rate relief. As discussed in more detail in PAWC Statement Nos. 3 and 8, the need for and timing of measures to comply with new or changed government mandates under applicable environmental laws are outside of the Company's control The Company's proposed ECIC will provide a reasonable mechanism for gradually adjusting the Company's rates between base rate cases to ensure full and timely rate recognition of PAWC's investments and related operating costs undertaken to comply with new environmental mandates in a prudent and efficient manner as they emerge. Permitting PAWC to recover ECIC-eligible capital costs and expenses through an automatic adjustment clause will reduce a major driver of the need for rate relief that would otherwise trigger a base rate case filing.

OCA

While the ECIC *may* reduce base rate case frequency, it is almost certainly going to lead to more frequent rate changes as the ECIC moves predominantly upward. The ECIC will provide for the recovery of certain Environmental Compliance investments made by the Company without consideration of any potential cost of service reductions that PAWC may experience. The proposed ECIC does not permit parties to investigate cost reductions that may have been experienced by the Company. Cost reductions are currently investigated and evaluated in base rate proceedings.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa. C.S. § 1307(relating to sliding scale of rates; adjustments), riders such as 66 Pa. C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa. C.S. § 1353 (relating to distribution system improvement charge).

PAWC

The Company's proposed ECIC does not interact with other revenue sources. The proposed ECIC excludes assets that are currently eligible for recovery under the existing DSIC mechanism, and will function similar to the DSIC in design, applicability, and recovery. The proposed ECIC will be reset to zero at the implementation of new base rates in future proceedings.

OCA

The proposed ECIC will interact with the Company's DSIC because the DSIC is a percentage applied to the total bill and the ECIC will impact a customer's total bill.

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

PAWC

The proposed ECIC incorporates consumer protection by:

(1) Requiring that costs recoverable through the ECIC be consistent with the set of projects and activities set forth in an annual environmental compliance plan to be filed by the Company and approved by the Commission; and

(2) Requiring the audit and reconciliation annually of the ECIC, to ensure that all costs included for recovery are eligible and appropriate, and that customers in total pay no more or less over the course of a year than the authorized level of costs associated with the Environmental Plan.

OCA

The proposed ECIC does not include appropriate consumer protections and

should be rejected for the reasons discussed in my testimony and the testimony of OCA witness Colton.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

PAWC

The Company does not anticipate that there would be any issues related to customer confusion over the proposed ECIC. Infrastructure mechanisms like the ECIC exist today and are not new to the utility industry. The ECIC is separate and distinct from other existing mechanisms. An explanatory bill insert will be included with the first billing, and customers will be notified of changes in the ECIC by including appropriate information of the first bill they receive following any change.

OCA

PAWC has not provided any evidence that the proposed ECIC will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed RDM, significant customer confusion is likely.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

PAWC

The proposed ECIC will support improvements in the ability of PAWC to continue providing safe, adequate, and reliable water quantity and quality, while complying with applicable drinking water and environmental regulation. The ECIC will support investment in PAWC's water and wastewater system to address emerging contaminants in a cost-effective manner.

OCA

The proposed ECIC does not provide PAWC a direct incentive to increase the reliability of its systems.

IV.	WITNESS: KEVIN HIGGINS	10
V.	WITNESS: BILLIE S. LACONTE	15
VI.	WITNESS: RICHARD A. BAUDINO	18

I. INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Jerome D. Mierzwa. I am a Principal and Vice President of Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony was filed as OCA Statement 4 on February 1, 2024.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to certain aspects of the direct testimony presented by Bureau of Investigation and Enforcement ("I&E") witnesses Ethan H. Cline and Joseph Kubas; Office of Small Business Advocate ("OSBA") witness Kevin Higgins; Pennsylvania-American Water Large Users Group ("PAWLUG") witness Billie S. LaConte; and Cleveland-Cliffs Steel witness Richard A. Baudino.

II. WITNESS: ETHAN H. CLINE

Bureau of Investigation and Enforcement

Q. MR. CLINE RECOMMENDS A CUSTOMER CHARGE OF $19.50 FOR A 5/8-INCH METER, AND FOR 3/4-INCH, 1-INCH, AND 1 1/2 INCH METERS. WHAT IS THE BASIS FOR THIS RECOMMENDATION?

A. The Company presents a direct customer cost analysis which it claims only reflects direct costs in PAWC Exhibit No. 12-A, Attachment RS1j, pages 2 and 3. That analysis indicates that a cost-based monthly customer charge for a 5/8-inch meter would be $19.31. Mr.

Cline's recommended $19.50 per month customer adopts the Company's customer cost analysis rounded to the nearest half dollar. Currently, the monthly customer charge for a 5/8-inch meter, and 3/4-inch, 1-inch, and 1 1/2-inch meters are the same, and Mr. Cline has proposed to keep the charge for each of these four meter sizes the same.

Q. SHOULD THE COMPANY'S DIRECT CUSTOMER COST ANALYSIS BE RELIED UPON TO ESTABLISH MONTHLY CUSTOMER CHARES IN THIS PROCEEDING AND SHOULD THE $19.50 CHARGE PROPOSED BY MR. CLINE BE ADOPTED?

A. No. As explained in my direct testimony, only those costs that vary directly with the addition or subtraction of a customer should be included in the calculation of a customer charge. PAWC's direct customer cost analysis includes costs that are not direct customer costs and do not change with the addition or subtraction of a customer. For example, PAWC's direct customer cost analysis includes office building and furniture expenses. In addition, the calculated direct cost of $19.31 is based on the Company's requested revenue requirement increase. Under the revenue increase authorized by the Commission in this proceeding, a cost-based charge would certainly be further reduced. For example, adjusting PAWC's overall requested pre-tax rate of return to reflect the OCA's recommended pre-tax return of 8.17% would further reduce the calculated customer charge. A calculation adjusting the Company's calculated direct customer charge to remove the improperly included office building and furniture costs and to reflect the OCA's recommended rate of return was presented on Schedule JDM-4 in my direct testimony. As shown there, these adjustments reduce the calculated charge to $17.77. Other Commission-approved adjustments to PAWC's revenue requirement claim are likely to further reduce the calculated direct customer charge. Therefore, I recommend that the existing $17.50

monthly charge for Residential customers with a 5/8-inch, 3/4-inch, 1-inch or 1 1/2-inch meter should be maintained, unless the increase authorized by the Commission is sufficient to justify a higher charge which under no circumstances should be higher than $19.31.

Q. WHAT ARE MR. CLINE'S RECOMMENDATIONS CONCERNING WATER USAGE CHARGES?

A. With the exception of the Rate Zone 2 Residential and Commercial usage charges and the Rate Zone 4 Commercial usage charge which I subsequently discuss, Mr. Cline accepts the Company's proposed usage charges, subject to adjustment for the reduction in revenue resulting from his recommended decrease in customer charges.

Q. IS MR. CLINE'S USAGE CHARGE RECOMMENDATION REASONABLE?

A. No. The usage charges proposed by the Company are based on the water class cost-of service ("CCOS") study initially filed by the Company in this proceeding.[1] As explained in my direct testimony, while the CCOS study initially filed by PAWC in this proceeding is generally reasonable, the system-wide maximum day and maximum hour extra capacity factor used in that CCOS study are outdated and should be revised. In my direct testimony I presented a CCOS study that reflects updated and revised extra capacity factors. The CCOS study I presented in my direct testimony should be utilized to determine rates in this proceeding, not the CCOS study initially presented by the Company. Therefore, since Mr. Cline's usage charges are based on the Company's initial CCOS study, his recommendation should not be adopted. I would note that with respect to Mr. Cline's concerns related to Rate Zone 2 and Rate Zone 4 usage charges, I share and subsequently discuss those concerns.

[1] In discovery, the Company subsequently modified the CCOS study it initially presented in this proceeding. However, PAWC did not modify its proposed allocation of the revenue increase customer class or its proposed rates.

Q. IN YOUR DIRECT TESTIMONY YOU EXPRESSED A CONCERN WITH RESPECT TO THE RESIDENTIAL USAGE CHARGE PROPOSED FOR VALLEY CUSTOMERS IN RATE ZONE 2. WHAT WAS THAT CONCERN?

A. In my direct testimony I noted that PAWC is proposing to consolidate Residential usage charges in this proceeding and assess all Residential customers the Rate Zone 1 usage charge. This would result in a significant 63.64% increase for the average Residential Rate Zone 2 customer. To mitigate this significant increase, I recommended that the Rate Zone 2 usage charge be set at 70% of the Rate Zone 1 usage charge established in this proceeding.

Q. DOES MR. CLINE EXPRESS A SIMILAR CONCERN REGARDING THE RATE ZONE 2 RESIDENTIAL USAGE CHARGE?

A. Yes, and he also expresses a concern regarding Rate Zone 2 and Rate Zone 4 Commercial usage charges. With respect to the Rate Zone 2 Residential usage charge and based on PAWC's proposed revenue increase, Mr. Cline is proposing a Rate Zone 2 usage charge of $1.60 per 100 gallons. Based on my recommendation and PAWC's proposed revenue requirement, the Rate 2 usage charge would be $1.50 per 100 gallons. Mr. Cline's proposal would result in establishing a Rate Zone 2 usage charge that is 75% of the Rate Zone 1 usage charge and, therefore, I would not consider Mr. Cline's proposal to be unreasonable. With respect to the Rate Zone 2 and Rate Zone 4 Commercial usage charges, Mr. Cline has proposed similar adjustments to mitigate the magnitude of the rate increase for Rate Zone 2 and Rate 4 Commercial customers. The impact of these adjustments appears to result in overall percentage increases for Commercial customers in Rate Zones 2 and 4 that are reasonable. Any revenue shortfall resulting from the adoption of my Rate Zone 2 or Mr. Cline's Rate Zone 2 and Rate Zone 4 usage charge modifications should be recovered from the customer class responsible for generating the revenue shortfall.

Q. PURSUANT TO ACT 11, PAWC IS PROPOSING TO ASSIGN A PORTION OF THE WASTEWATER REVENUE REQUIREMENT TO WATER CUSTOMERS. WHAT IS MR. CLINE'S RECOMMENDATION WITH RESPECT TO THE ACT 11 ASSIGNMENT IN THE EVENT THAT THE COMMISSION GRANTS PAWC LESS THAN THE FULL REVENUE REQUIREMENT INCREASE IT IS REQUESTING FOR WASTEWATER OPERATIONS?

A. Mr. Cline recommends that any reduction to the wastewater revenue requirement increase be netted against the Act 11 assignment. I would note that the amount of the wastewater revenue requirement which PAWC has proposed to assign to water customers is $71.1 million. As shown on Exhibit No. 3, Schedule 1, I&E witness Mr. Kubas has proposed to essentially eliminate the Act 11 assignment of the wastewater revenue requirement, reducing the assignment to $357,517 at PAWC's filed-for revenue requirement increase for SSS and CSS operations. If Mr. Kubas' proposal is adopted, Mr. Cline's recommendation would effectively have no impact on water or wastewater rates.

Q. IF MR. KUBAS' RECOMMENDATION TO ESSENTIALLY ELIMINATE THE ACT 11 ASSIGNMENT IS NOT ADOPTED, IS MR. CLINE'S RECOMMENDATION THAT ANY REDUCTION TO THE WASTEWATER REVENUE REQUIREMENT BE NETTED AGAINST THE ACT 11 ASSIGNMENT REASONABLE?

A. Without knowing the water and wastewater revenue increases authorized by the Commission in this proceeding, the reasonableness of Mr. Cline's recommendation cannot be assessed. In my direct testimony, I present a recommendation concerning the Act 11 assignment of the wastewater revenue requirement to water customers based on the OCA's

calculated water and wastewater revenue requirement increases. To the extent that the Commission authorizes a pre-Act 11 assignment wastewater revenue requirement increase which is more than the OCA's calculated amount, the Commission will have to determine what amount of that increase is in the public interest to shift and is reasonable for both water and wastewater customers to bear given the recent PAWC rate increases and the relatively few wastewater customers. Regardless, as the wastewater cost of service is a significant driver of the rate increase request in this proceeding, it would unreasonable for the Commission to assign no increase to those customers as proposed by PAWC.

III. WITNESS: JOSEPH KUBAS

Bureau of Investigation and Enforcement

Q. THE CURRENT MONTHLY RESIDENTIAL CUSTOMER CHARGE IN MOST SANITARY SEWER SYSTEM ("SSS") RATE ZONES IS $14.30, AND PAWC IS PROPOSING TO INCREASE THE MONTHLY CHARGE TO $20.00. WHAT IS MR. KUBAS' RECOMMENDATION?

A. Mr. Kubas recommends increasing the current monthly Residential SSS customer charge to $15.00.

Q. DO YOU AGREE WITH MR. KUBAS' RECOMMENDATIONS?

A. No. As explained in detail in my direct testimony, exclusive of Infiltration and Inflow ("I/I") costs which should be excluded from a direct customer cost analysis, the Company's calculation of direct customer costs indicates a cost of $13.87 at the Company's proposed revenue requirement. At the Commission approved revenue requirement authorized in this proceeding, the cost based charge will certainly be less than $13.81. Therefore, in those rate zones with a current Residential SSS customer charge of $14.30, the $14.30 customer

charge should be maintained. In those rate zones with a current Residential SSS customer charge which exceeds $14.30, the charge should be reduced to $14.30.

Q. AS PREVIOUSLY DISCUSSED, MR. KUBAS IS PROPOSING TO ESSENTIALLY ELIMINATE THE ELIMINATE ACT 11 ASSIGNMENT OF THE WASTEWATER REVENUE REQUIREMENT TO WATER CUSTOMERS AND HAS PROPOSED A REVENUE ALLOCATION AND RATES THAT REFLECT THIS RECOMMENDATION. IS THIS RECOMMENDATION REASONABLE?

A. I agree with Mr. Kubas that it is not reasonable for the wastewater customers to be assigned no increase, as I have stated above and in my direct testimony. However, the determination of whether to assign any portion of the wastewater revenue requirement to water customers is a public policy consideration and is not a cost-based consideration. Given the recent rate increases that PAWC has proposed and been granted, given the relatively small CSS and SSS populations over which to spread an increase, I maintain that the shift I proposed in direct would, at the OCA calculated water and wastewater revenue requirement, allow the Commission to meet its public interest determination. Thus, at the level of water and wastewater revenue requirement increases that the OCA calculated for water and for wastewater SSS and CSS, I maintain that it would be reasonable to shift up to 75% of the SSS wastewater revenue requirement increase and up to 50% of the CSS wastewater revenue requirement increase to water customers ($15,233,160 + $3,666,606 = $18,899,766). This results in an approximate increase in revenue requirement of 5.4% for SSS operations and 4.7% for CSS operations. This is comparable to a post-assignment increase of 4.3% for water customers. Mr. Kubas' recommendations for wastewater rate design and elimination of any Act 11 assignment result in an approximate increase in

revenue requirement of 33% for SSS operations and 22% for CSS operations, at the Company's proposed revenue requirement. While those percentage increases will be smaller at the wastewater revenue requirement increase that I&E or the OCA recommended,[2] I disagree with Mr. Kubas' position that essentially zero relief should be provided to wastewater customers through an Act 11 assignment.

Q. DOES MR. KUBAS OPPOSE PAWC'S WINTER AVERAGING PROPOSAL FOR RESIDENTIAL CUSTOMERS?

A. No.

Q. SHOULD PAWC'S WINTER AVERAGING PROPOSAL BE ADOPTED?

A. No. PAWC's winter averaging proposal assumes that outdoor Residential winter usage during the summer is sufficiently significant to justify adopting winter averaging. As explained in greater detail in my direct testimony, it does not necessarily follow that Residential customer outdoor during the summer usage is sufficiently significant to justify winter averaging. In addition, as explained by OCA witness Roger Colton (OCA Statement 5) and CAUSE-PA witness Harry S. Geller (CAUSE-PA Statement 1), winter averaging will also disproportionately harm low-income customers, and the number of Residential customers that have no water consumption because they are away from their homes ("snowbirds") increases substantially in the months PAWC proposes to utilize in its winter averaging calculation. For such snowbird customers, it would be unreasonable to bill customers that are away from their homes during the winter months for wastewater service during the non-winter months of the year based on the assumption that any water usage by

[2] As summarized in the testimony of I&E witness Vanessa Okum, I&E recommends a total increase of $26.6 million for wastewater operations ($19,863,234 for SSS + 6,733,087 for CSS = $26,596,321) compared to the OCA's $27.7 million recommendation.

these customers in excess of their winter average usage did not flow through PAWC's wastewater system.

Q. FOR COMBINED SEWER SYSTEM ("CSS") RESIDENTIAL CUSTOMERS IN RATE ZONES 4 AND 6, MR. KUBAS RECOMMENDS THAT THE COMPANY'S PROPOSED MONTHLY CUSTOMER CHARGE OF $20.00 BE ADOPTED AND THAT THE CUSTOMER CHARGE FOR RATE ZONE 3 ALSO BE INCREASED. WHAT IS YOUR RESPONSE?

A. As previously explained and explained in detail in my direct testimony, exclusive of I/I costs, the Company's calculation of direct customer costs which includes both SSS and CSS customers indicates a cost of $13.87 at the Company's proposed revenue requirement. At the Commission approved revenue requirement authorized in this proceeding, the cost based charge will certainly be less than $13.81. Therefore, in those rate zones with a current Residential CSS customer charge of $14.30, the $14.30 customer charge should be maintained. In those rate zones with a current Residential customer charge which exceeds $14.30, the charge should be reduced to $14.30.

Q. WHAT DID MR. KUBAS RECOMMEND WITH RESPECT TO PROVIDING WASTEWATER COST-OF-SERVICE STUDIES IN ITS NEXT BASE RATE CASE?

A. Mr. Kubas recommends that the Company continue to provide separate cost-of-service studies for Water Operations, SSS Operations, and CSS Operations. He also recommends that the Company provide separate studies for the BASA and Brentwood systems in the next case if these systems are acquired. Mr. Kubas also recommends that the Company continue to separate the Bulk User class and the Bulk Contract classes from the other classes.

Q. DO YOU AGREE WITH THESE RECOMMENDATIONS?

A. Yes. I will add a clarification that, if PAWC includes the BASA and Brentwood systems in its next base rate filing, whether or not those systems have been "acquired," the Company should provide separate cost of service studies. As indicated in my direct testimony, I also recommend that in its next base rate proceeding, PAWC should include Rider Demand Industrial Sales and Rider Demand Resale Sales customers as separate customer classes in its next water cost-of-service study. This will assist in ensuring that the rates charged to Rider DIS and DRS customers are reasonable and meet PAWC's tariffed requirements for discounted rates.

IV. WITNESS: KEVIN HIGGINS

Office of Small Business Advocate

Q. MR. HIGGINS RECOMMENDS THAT TO THE EXTENT THAT THE COMMISSION APPROVES THE RECOVERY OF A PORTION OF THE WASTEWATER REVENUE REQUIREMENT FROM WATER CUSTOMERS PURSUANT TO ACT 11, COST RESPONSIBILITY TO WATER CUSTOMERS SHOULD CORRESPOND TO THE WASTEWATER CLASSES THAT CREATE THE REVENUE SHORTFALL. DO YOU AGREE WITH THIS RECOMMENDATION?

A. No. As stated above the determination about whether to shift wastewater revenue requirement to water customers is a public policy determination not a cost causation determination. Water customers do not cause the wastewater revenue requirement. Moreover, most of PAWC's water customers do not obtain wastewater service from PAWC. PAWC currently has seven times as many water customers as wastewater

customers.[3] Further, there are several PAWC wastewater systems whose customers do not purchase water service from PAWC. There is simply no cost causation basis to assign wastewater cost responsibility to water customers based on the wastewater class responsible for the revenue shortfall. The majority of the water customers to whom the wastewater revenue requirement would be assigned pursuant to Act 11 do not purchase wastewater service from PAWC and have no responsibility for PAWC's wastewater revenue requirement.

Q. HAS THE COMMISSION PREVIOUSLY ADDRESSED THIS RECOMMENDATION?

A. Yes. OSBA made the same recommendation in the most recent Aqua Pennsylvania, Inc. base rate case at Docket Nos. R-2021-3027385 and R-2021-3027386. There, the Commission agreed with the ALJ and the other parties who took a position that the revenue shifted under Act 11 should be allocated to water customers based on the results of the adopted *water* class cost allocation study.[4]

[3] In my direct testimony I indicated that PAWC serves nine times as many water customers as wastewater customer (page 26, line 23). That number should be revised to seven.
[4] Pa. PUC v. Aqua Pennsylvania, Inc., May 16, 2022 Order at pp. 228-229. OSBA filed an appeal of the Order that is pending.

Q. MR. HIGGINS CONTENDS THAT PAWC HAS PROPOSED INCREASES FOR THE RESIDENTIAL, COMMERCIAL, INDUSTRIAL, AND PUBLIC FIRE PROTECTION CLASS THAT ARE CLOSE TO THE SYSTEM AVERAGE INCREASE, BUT IS PROPOSING SIGNIFICANTLY BELOW AVERAGE INCREASES FOR THE PUBLIC (MUNICIPAL) AND PRIVATE FIRE CLASSES. WHAT IS MR. HIGGIN'S RECOMMENDED ALLOCATION OF THE WATER REVENUE INCREASE?

A. Mr. Higgins notes that PAWC had proposed a revenue allocation which results in an increase to the Public class which is below the increase suggested by that class's cost of service. Mr. Higgins recommends a revenue allocation that he claims will improve the alignment of revenues with the cost of service. Specifically, at PAWC's proposed revenue requirement, Mr. Higgins recommends that the Commercial class increase be reduced by $5.3 million, and the Public class increase be increased by $5.3 million. Mr. Higgins does not specifically address modifying the increase to the Private Fire class.

Q. DO YOU AGREE WITH MR. HIGGIN'S PROPOSED ADJUSTMENTS TO PAWC'S REVENUE ALLOCATIONS?

A. No. As noted in my direct testimony, PAWC has recognized that a larger increase than the proposed increase for the Public class may be warranted. Under PAWC's proposed revenue distribution and CCOS study, both the Residential and Commercial customer classes will be paying rates which exceed the cost-of-service. There is no basis to limit the allocation of the additional revenue assignment to the Public class to the Commercial class only as Mr. Higgins has proposed.

In my direct testimony, I recommended that the allocation of the revenue increase to customer classes be based on the OCA's CCOS study, and presented a revenue allocation

based on the OCA CCOS study. That allocation is presented in Table 4 of my direct testimony, and significantly increases the allocation of the revenue increase to the Public class and, therefore, addresses Mr. Higgins' concern with respect to the increase proposed for the Public class. As shown in Table 1 in my direct testimony and shown below, my recommended allocation also decreases the allocation of the revenue increase to the Commercial class.

Table 1. Water Cost of Service Study Comparison

Classification	Initial Company	OCA	Difference
Residential	$603,126,055	$596,775,486	($6,350,570)
Commercial	232,115,036	228,424,759	(3,690,276)
Industrial	45,115,631	49,544,130	4,428,498
Public (Municipal)	35,175,459	37,856,691	2,681,233
Other Water Utilities – Group A	11,335	11,913	578
Other Water Utilities – Group B	624,708	449,960	(174,748)
Private Fire Protection	5,777,625	7,063,962	1,286,336
Public Fire Protection	11,847,471	13,666,421	1,818,949
Total:	**$933,793,321**	**$933,793,321**	**($0)**

Q. WHILE MR. HIGGINS RECOMMENDS THAT PAWC'S PROPOSED REVENUE DECOUPLING MECHANISM ("RDM") BE REJECTED, HE CLAIMS IT IS PARTICULARLY PROBLEMATIC FOR NON-RESIDENTIAL CUSTOMERS. WHAT IS THE BASIS FOR MR. HIGGINS' CLAIM?

A. Mr. Higgins contends that under the RDM formula proposed by PAWC, all Non-Residential revenues will be consolidated through a single straight-fixed variable ("SFV") rate design irrespective of customer size or type of usage. Mr. Higgins recommends that if the RDM is not rejected by the Commission it should not apply to Non-Residential

customers. This is because Non-Residential customers are not homogenous, and range from "mom and pop" retail stores to golf courses to industrial operations. Mr. Higgins claims that average usage for Non-Residential customers will be sensitive not only to the consumption patterns of the existing set of customers, but also to changes in the composition of the group. Mr. Higgins notes that under PAWC's proposal, the loss in revenue from the shutdown of a large industrial customer will immediately be shifted to all other Non-Residential customers through the RDM deferral calculation.

Mr. Higgins contends that while the logic of targeting "revenues per customer" may be defensible when dealing with classes that have large numbers of similarly sized customers within the class, such as target makes little sense for classes populated by a broad range of heterogeneous customers. He further contends that revenues per customer in such classes are susceptible to change simply by a change in the composition of the customers in the group, irrespective of whether customers are modifying their own water consumption. He further claims that changes in revenues per customer for Commercial and Industrial customers will be particularly sensitive to changes in economic activity. Therefore, Mr. Higgins recommends that the RDM should not apply to Non-Residential customers.

Q. WHAT IS YOUR RESPONSE TO MR. HIGGINS RECOMMENDATION TO ELIMINATE NON-RESIDENTIAL CUSTOMERS FROM THE RDM?

A. I agree with Mr. Higgins that Non-Residential customers are not homogeneous. However, Residential customers are also not homogeneous. Residential customers can range from apartment dwellers with little to no outdoor irrigation requirements to customers with large homes with extensive irrigation requirements which would result in significant cost shifting. For this reason and the additional reasons discussed in my direct testimony and

the direct testimony of Roger Colton (OCA Statement 5), the RDM should be rejected in its entirety.

V. WITNESS: BILLIE S. LACONTE

Pennsylvania American Water Large Users Group

Q. DOES MS. LACONTE EXPRESS ANY CONCERNS WITH THE WATER CCOS STUDY FILED BY PAWC IN THIS PROCEEDING?

A. Yes. Ms. LaConte disagrees with the maximum day and maximum hour extra capacity factors (demand statistics) used to allocate certain costs in PAWC's water CCOS study. First Ms. LaConte notes that the demand statistics reflected in PAWC's water CCOS study are almost a decade old, and post pandemic, it is likely that Residential demand has increased due to more people working at home. As such the demand statistics utilized in PAWC's water CCOS study are too low, and under assign costs to the Residential class. Second, Ms. LaConte claims that PAWC has used the incorrect maximum demand hour ratio for the Residential class, resulting in an under allocation of costs to the Residential class.

Q. DO YOU AGREE WITH MS. LACONTE THAT BECAUSE MORE PEOPLE ARE NOW WORKING FROM HOME, THE DEMAND STATISTICS OF THE RESIDENTIAL CLASS ARE UNDERSTATED IN PAWC'S WATER CCOS STUDY?

A. No. I agree with Ms. LaConte that it is likely that total Residential demand has increased due to more people working and home. However, when people work at home, the days and number of hours that water can be used increases significantly. Because of this the maximum day and maximum hour demands of Residential customers are likely to decrease.

This is because Residential customer no longer need to concentrate their use of water to days and hours they are not at work.

Q. WHY DOES MS. LACONTE CLAIM THAT PAWC HAS USED THE INCORRECT MAXIMUM HOUR DEMAND RATIO FOR THE RESIDENTIAL CLASS IN ITS WATER CCOS STUDY?

A. The maximum hour demand ratios utilized in PAWC's CCOS study are based on the results of a demand study that was conducted over the period 2013-2015. Ms. LaConte claims that the maximum hour demand ratio in that study for the Residential class was 6, but PAWC opted to use a ratio of 5 due to what it claimed were certain anomalies in the data for the Residential class. Ms. LaConte contends that a maximum hour demand ratio of 6 should have been utilized for the Residential class in the water CCOS study, and has revised the Company's CCOS study to include a ratio of 6.

Q. DO YOU AGREE WITH MS. LACONTE'S PROPOSAL TO MODIFY PAWC'S CCOS STUDY TO REFLECT A MAXIMUM HOUR DEMAND RATIO OF 6 FOR THE RESIDENTIAL CLASS?

A. No. The demand study referenced by Ms. LaConte included the following with respect to utilization of a maximum hour demand ratio of 5 rather 6 for the Residential class:

- The maximum hour ratios exhibit considerably greater variation than the maximum day ratios. Maximum hour ratios were available for six of the monitored system. Four of the systems used tanks or had substantial non-residential deductions that made hourly flow data unreliable. As shown in Table 11-4 and Figure 11-4, the average of the maximum hour ratios ranged from 5.32 in 201 to 6.17 in 2015. Some of the monitored system ratios are very high. An examination of the pattern of hourly peaks over each day of the study period, presented in the daily flow graphs in Appendix B, indicated that some of these high hours were very anomalous events. Based on the study results, the maximum hour ratio for the residential class is estimated as 5.0.

(Response to PAWLUG 01-002 Attachment at 21).

As explained above, the ratio of 6 was based on unreliable flow data and anomalous events. Therefore, the ratio of 6 should not be relied upon as recommended by Mr. LaConte.

Q. MS. LACONTE RECOMMENDS THAT PRIOR TO ITS NEXT BASE RATE CASE, PAWC SHOULD CONDUCT A NEW DEMAND STUDY TO ENSURE CURRENT USAGE AND DEMAND PATTERNS ARE PROPERLY REFLECT IN PAWC'S NEXT PROCEEDING. DO YOUI AGREE WITH THIS RECOMMENDATION?

A. Yes, and I presented the same recommendation in my direct testimony.

Q. MS. LACONTE FINDS THAT THE $71.1 MILLION WASTEWATER COST OF SERVICE WHICH PAWC PROPOSES TO ASSIGN TO WATER PURSUANT TO ACT 11 CUSTOMERS SHOULD BE REDUCED. DO YOU AGREE?

A. Yes, and in my direct testimony, based on the OCA revenue requirement recommendations, I recommended that $18.9 million of the wastewater revenue requirements should be assigned to water customers. Ms. LaConte recommends that the $71.1 million be reduced by the amount which the Commission determines that the wastewater cost of service should be reduced. Whether this recommendation is reasonable, as previously explained in responding to Mr. Cline, will depend on the water and wastewater revenue requirement increases approved by the Commission in this proceeding, if any.

Q. PAWC HAS PROPOSED TO ASSIGN THE WASTEWATER REVENUE REQUIREMENT ASSIGNED TO THE WATER CUSTOMER CLASSES BASED ON EACH WATER CUSTOMER CLASSES' COST OF SERVICE. DOES MS. LACONTE AGREE WITH THIS APPROACH?

A. No. Ms. LaConte proposes that the water customer classes should pay their share of the Act 11 subsidy based on the wastewater class that causes the subsidy.

Q. DO YOU AGREE WITH THIS APPROACH?

A. No, I do not and I previously responded to the same argument presented by OSBA witness Mr. Higgins. However, as shown on Table 2 of Ms. LaConte's testimony, the Residential class is unaffected by this recommendation.

VI. WITNESS: RICHARD A. BAUDINO

Cleveland – Cliffs Steel

Q. MR. BAUDINO HAS PROPOSED TO ASSIGN THE ACT 11 SHIFT BASED ON EACH WATER SERVICE CLASS'S PROPORTIONATE SHARE OF TOTAL WATER SERVICE COST RESPONSIBILITY UNDER CURRENT RATES. IS THIS THE APPROACH USED BY PAWC?

A. No. PAWC is proposing to assign the Act 11 shift to the water customer classes based on each class's total water cost of service as established in this proceeding.

Q. DO YOU AGREE WITH MR. BAUDINO'S PROPOSAL?

A. No. The present rates for each customer class are generally based on a cost of service which is now outdated. Therefore, I agree with PAWC's proposal to assign the Act 11 shift based on each water class's total cost of service. However, as explained in my direct testimony,

the cost of service for each water class should be based on the OCA's water CCOS study rather than the Company's.

Q. HAS MR. BAUDINO RERUN THE COMPANY'S WATER CCOS STUDY TO REFLECT HIS ACT 11 ALLOCATION?

A. Yes.

Q. UNDER MR. BAUDINO'S RERUN WATER CCOS AND UNDER THE COMPANY'S REVISED CCOS STUDY, THE RETURN OF THE PUBLIC (MUNICIPAL) CLASS IS SIGNIFICANTLY BELOW THE SYSTEM AVERAGE RATE OF RETURN. THAT IS, THE RELATIVE RATE OF RETURN ("RROR") IS SIGNIFICANTLY LESS THAN 1.0. IS THIS A SIGNIFICANT CHANGE FROM PAWC'S LAST BASE RATE PROCEEDING?

A. Yes. In PAWC's last base rate proceeding the RROR of the Public customer class was greater than 1.0, meaning the return of this class was higher than the system average return. Mr. Baudino attributes this change to a significant increase in the allocation of meters and services costs to the Public class. Mr. Baudino found this significant increase to be highly unusual. Therefore, Mr. Baudino recommends a revenue allocation which limited the increase for the Public class to 1.25 times the system average.

Q. DO YOU AGREE WITH MR. BAUDINO'S PROPOSAL TO LIMIT THE INCREASE TO THE PUBLIC CLASS TO 1.25 TIMES THE SYSTEM AVERAGE INCREASE?

A. No. As previously explained in responding to Mr. Higgins, the amount of the revenue increase assigned to the Public class should be increased, and I present a revenue distribution which moves each rate class toward the CCOS indicated by the OCA's CCOS

study. Under Mr. Baudino's proposal to limit the increase to the Public class to 1.25 times the system average increase, the return of the Public class would be significantly less than the system average return. Under my proposed revenue distribution, which is consistent with the concept of gradualism, the return of the Public class would move closer to the system average return.

Q. MR. BAUDINO RECOMMENDS THAT PAWC'S RDM BE REJECTED; HOWEVER, IF IT IS APPROVED, HE RECOMMENDS THE INDUSTRIAL CLASS SHOULD BE EXCLUDED FROM THE RDM. WHAT IS THE BASIS FOR MR. BAUDINO'S RECOMMENDATION?

A. The RDM is designed to recover reductions in the revenues collected by PAWC due to factors such as customer conservation measures, weather, or declining numbers of customers. Mr. Baudino recommends that the Industrial class be excluded from the RDM because he claims there is no evidence in this case that the Industrial class is affected by conservation measures, weather, or declining number of customers. Mr. Baudino also claims that the RDM presents significant problems with interclass allocations of lost revenues.

Q. WHY DOES MR. BAUDINO CLAIM THAT THE PROPOSED RDM WOULD CAUSE PROBLEMS WITH INTER-CLASS REVENUE ALLOCATIONS?

A. As explained by Mr. Baudino, the RDM would be applied to all customers in the Residential, Commercial, Industrial, Municipal, and Sales for Resale classes except for those customers taking service under contract rates. For purposes of the RDM, any revenue shortfall would be collected from all customers. According to Mr. Baudino, what this means is that if due to continued conservation the Residential class's revenue declined from the Commission authorized level in this case, that revenue shortfall would be collected

from all customers, not just from the Residential class. Commercial and Industrial customers would have to pay a portion of the Residential class revenue shortfall, even though Commercial and Industrial customers were not responsible for it. Likewise, if both Commercial and Residential classes experienced revenue shortfalls due to declining usage, once again the Industrial customers would have to pay a portion of that revenue shortfall. Mr. Baudino concludes that it is unfair and unreasonable to expect Industrial customers to pay for usage declines in the Residential and Commercial classes.

Q. IF THE RDM IS APPROVED BY THE COMMISSION, SHOULD THE INDUSTRIAL CLASS BE EXCLUDED FROM THE RDM AS RECOMMENDED BY MR. BAUDINO?

A. I previously responded to a similar recommendation presented by OSBA witness Mr. Higgins. For the reasons presented in that response the RDM should be rejected for all customer classes. Specifically, with respect to Mr. Baudino's recommendation that the Industrial class be excluded from the RDM, he has presented no evidence that Industrial class usage is not affected by conservation, weather, or a decline in the number of customers. However, Mr. Baudino is correct that under the RDM declines in usage experienced by one customer class will be recovered from all customer classes and this is unreasonable. Therefore, the RDM should be rejected in its entirety.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does. I reserve the right to update my testimony based on additional information received in the course of discovery. Also, to the extent I have not addressed an issue or proposal raised by the other parties in this proceeding, it should not be construed that I agree with the same.

I. INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Jerome D. Mierzwa. I am a Principal and Vice President of Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony was served as OCA Statement 4 on February 1, 2024, and my rebuttal testimony was served as OCA Statement 4R on February 21, 2024.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to certain aspects of the rebuttal testimony presented by Pennsylvania American Water Company ("PAWC" or "Company") witnesses Constance E. Heppenstall, Charles B. Rea, J. Cas Swiz, and Ashley E. Everette; Bureau of Investigation and Enforcement ("I&E") witness Joseph Kubas; Office of Small Business Advocate ("OSBA") witness Kevin C. Higgins; Cleveland-Cliffs Steel witness Richard A. Baudino; and Pennsylvania American Water Large Users Group ("PAWLUG") witness Billie S. LaConte.

II. PAWC WITNESS: CONSTANCE E. HEPPENSTALL

Q. MS. HEPPENSTALL HAS REVISED THE WATER CLASS COST-OF-SERVICE ("CCOS") STUDY INITIALLY PRESENTED IN HER DIRECT TESTIMONY TO INCORPORATE SEVERAL REVISIONS. PLEASE DESCRIBE THOSE REVISIONS.

A. As discussed in her rebuttal testimony in additional detail, Ms. Heppenstall has revised the water CCOS study initially presented in her direct testimony to reflect an adjustment to the calculation of maximum day and maximum hour demands for allocation Factors 2, 3, and 4 to account for interruptible usage. In addition, Ms. Heppenstall's revised the allocation factors for meters and services for the Public class due to an error in linking to PAWC Exhibit 10-A. Finally, Ms. Heppenstall has corrected the amounts of the Act 11 wastewater revenue requirement that were re-allocated to the water rate classes in PAWC Exhibit 12-A, Schedule A, column 3 to tie to the data presented in PAWC Exhibit 3-A, Schedule.[1]

Q. DO YOU AGREE WITH THESE REVISIONS?

A. I do not agree that the revision to interruptible customer usage is appropriate. I agree with the revision to the allocation factors for meters and services for the Public class. Finally, I agree that the Act 11 wastewater revenue requirement re-allocated to the water rate classes in Exhibit 12-A and Exhibit 3-A should match, but I disagree with the total amount of the wastewater revenue requirement to be re-allocated to the water rate classes. I address the revisions to PAWC's water CCOS study to reflect interruptible usage and the re-allocation of the Act 11 wastewater revenue requirement to the water rate classes later in this surrebuttal testimony.

[1] PAWC Statement No. 12-R, p. 3, lines 6-21.

Q. ON PAGES 9 THROUGH 11 OF YOUR DIRECT TESTIMONY, YOU FOUND THE SYSTEMWIDE MAXIMUM DAY AND MAXIMUM HOUR EXTRA CAPACITY DEMAND FACTORS USED IN THE COMPANY'S WATER CLASS CCOS STUDY TO BE OUTDATED AND RECOMMENDED ALTERNATIVES TO THOSE FACTORS. DOES MS. HEPPENSTALL AGREE THAT THE ALTERNATIVE MAXIMUM DAY EXTRA CAPACITY FACTOR YOU HAVE PROPOSED IS REASONABLE?

A. No. My alternative maximum day extra capacity factor was based on the highest factor experienced by PAWC in the last 12 years. Ms. Heppenstall claims that water systems must be designed to meet the highest peak demand that potentially could be experienced, not just the highest peak demand that was experienced within a recent historical period. She claims it is not reasonable to ignore the maximum day ratios that the Company has actually experienced by proposing a limit (12 years) on the data set that is examined to determine the system maximum day ratio.[2]

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL?

A. As shown in PAWC Exhibit No. 12-A, Schedule G (page 42), PAWC's actual annual maximum day extra capacity demand factor has been approximately 1.2 for the last 12 years, and the maximum day extra capacity demand factor of 1.4 utilized by the Company has not been experienced since 2003, which was 20 years ago. With respect to the developing demand factors to be used in a CCOS Study, the American Water Works Association ("AWWA") M1 Manual indicates that "demand data over a representative number of recent years" should be utilized.[3] I believe that 12 years meets

[2] PAWC Statement No. 12-R, p. 5, line 19-p. 6, line 15.
[3] AWWA M1 Manual, p. 373.

the standard identified in the AWWA M1 Manual, and the 20 years relied upon by PAWC does not. Demands experienced 20 years ago are not representative of current demands.

With respect to the need to meet the highest peak demand ever actually experienced by the Company, I would note that PAWC witness Mr. Rea presents an analysis in his direct testimony that indicates that there has been a pervasive decline in customer usage over the last 10 years, and Mr. Rea believes that this trend will continue.[4] Given the declines in customer usage estimated by Mr. Rea, it is unreasonable to assume that extra capacity demand factors and usage will return to historic levels experienced 20 years ago.

Q. ON PAGE 6 OF HER REBUTTAL TESTIMONY, MS. HEPPENSTALL NOTES THAT WATER USAGE ON THE MAXIMUM DAY OF 2022 IN SEVERAL AREAS WITHIN THE COMPANY'S OVERALL WATER OPERATIONS WAS MORE THAN 1.4 TIMES THE AVERAGE USAGE FOR THAT YEAR. WHAT IS YOUR RESPONSE?

A. It is not surprising that maximum day usage in several areas was more than 1.4 times the average usage. Under the base-extra capacity method set forth in the AWWA M1 Manual, the maximum day usage in specific areas are not considered, the system-wide maximum day usage is considered. Also considered are the maximum day usage of the individual customer classes. Therefore, maximum day usage in individual areas is not relevant.

[4] PAWC Statement No. 10, p. 72, lines 1-8.

Q. ON PAGE 5 OF HER REBUTTAL TESTIMONY, MS. HEPPENSTALL ALSO NOTES THAT WITH RESPECT TO A SYSTEM-WIDE MAXIMUM DAY EXTRA CAPACITY FACTOR, THE AWWA M1 MANUAL SETS FORTH A METHOD TO ASSESS THE REASONABLENESS OF EXTRA CAPACITY FACTORS. PLEASE DESCRIBE THIS METHOD.

A. The AWWA M1 Manual sets forth a calculation of a diversity ratio which provides for the assessment of the reasonableness of extra capacity factors. The diversity ratio is calculated by dividing the non-coincident peaking factor of the customer classes served by the water utility by the system peaking factor. Ms. Heppenstall claims that the AWWA M1 Manual recommends that a diversity ratio should be between 1.1 and 1.4.[5]

Q. ACCORDING TO MS. HEPPENSTALL, HOW DOES THE DIVERSITY RATIO FOR THE MAXIMUM DAY EXTRA CAPACITY FACTOR YOU HAVE PROPOSED COMPARE TO THE DIVERSITY RATIO OF THE COMPANY'S FACTOR?

A. Ms. Heppenstall claims that the diversity ratio for the maximum day extra capacity factor of 1.2 which I have proposed is 1.64, while the diversity ratio for the factor of 1.4 utilized in the Company's CCOS study is 1.41. Because the diversity factor of the maximum day factor I have proposed is not within the 1.1 to 1.4 range suggested in the AWWA M1 Manual, Ms. Heppenstall finds my proposed 1.2 maximum day demand factor to be unreasonable.[6]

[5] PAWC Statement No. 12-R, p. 6, lines 22-23.
[6] PAWC Statement No. 12-R, p. 8, lines 1-6.

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL?

A. First, with respect to the diversity ratio, the AWWA M1 Manual states that: "[t]he system diversity ratio is *often* in the range of 1.1 to 1.4, though different system diversity measures may arise for communities with more atypical customer usage patterns."[7] Therefore, because the diversity ratio associated with my maximum day demand factors is outside the 1.1 to 1.4 range does not mean my demand factor is unreasonable.

In addition, to calculate the maximum day diversity ratio, the projected non-coincident peak demands of each customer class are totaled and divided by the system coincident maximum day demand. The non-coincident peak demands of each customer class reflected in the Company's CCOS study are based on a demand analysis prepared by the Company for the years 2013-2015 and, therefore, do not reflect the declines in customer usage estimated by Mr. Rea's analysis previously discussed. Adjusting the non-coincident maximum day peak demands of each customer class would certainly reduce the diversity ratio of 1.64 associated with my maximum day demand factor recommendation.

Q. WHAT IS MS. HEPPENSTALL'S RESPONSE TO YOUR PROPOSAL TO USE A SYSTEM-WIDE MAXIMUM HOUR EXTRA CAPACITY DEMAND FACTOR OF 1.5 IN LIEU OF THE 2.1 FACTOR REFLECTED IN THE COMPANY'S CCOS STUDY?

A. Ms. Heppenstall claims that the 2.1 factor was calculated by PAWC based on a detailed analysis of actual maximum hour demands. Ms. Heppenstall claims that I have not identified any errors or inaccuracies in PAWC's analysis, and rather than addressing

[7] AWWA M1 Manual, p. 377 (emphasis added).

the results of that analysis which has been accepted in a number of prior cases, I reject that analysis because it was conducted too long ago. She claims my recommended maximum hour factor should be rejected because it was based on demand data for another company, the York Water Company ("York Water"), and not on an analysis of PAWC demand data.[8]

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL CONCERNING YOUR SYSTEM-WIDE MAXIMUM HOUR DEMAND FACTOR RECOMMENDATION?

A. First, the concern I have with PAWC's maximum hour demand factor is that it was based on an analysis of customer demands conducted in 1988 and, therefore, does not reflect the declines in customer usage that have occurred since the analysis was conducted. When asked for maximum hour demand data for the last three years in order to evaluate the reasonableness of the 2.1 demand factor used by PAWC in its water CCOS study in OCA-04-015, the Company indicated that it did not have actual maximum hour demand data.

In addition, with respect to utilizing York Water data to develop my maximum hour demand hour ratio recommendation, I would note that Ms. Heppenstall was the cost allocation and rate design witness in York Water's most recent base rate proceeding (Docket No. R-2022-3031340). In that proceeding, Ms. Heppenstall used data from other water utilities to support her class maximum day and maximum hour demand factor recommendations.

[8] PAWC Statement No. 12-R, p. 8, lines 7-18.

Q. ON PAGE 18 OF YOUR DIRECT TESTIMONY, YOU RECOMMEND THAT THE COMMISSION REQUIRE PAWC TO PERFORM AN ANALYSIS OF ITS SYSTEMWIDE MAXIMUM HOUR EXTRA CAPACITY DEMANDS PRIOR TO ITS NEXT RATE CASE. DOES MS. HEPPENSTALL AGREE WITH THIS RECOMMENDATION?

A. No. Ms. Heppenstall claims that I have not contended that the Company's 1988 study of system-wide maximum hour demands was inaccurate. In addition, she claims that the Company faces challenges in accurately measuring maximum hour demands in certain districts.[9]

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL'S CLAIMS?

A. Ms. Heppenstall is correct that I have not contended that the 1988 study of system-wide maximum hour demands was inaccurate. My point is that the 1988 study is over 35 years old and out of date. As shown on Exhibit 12-A, Schedule G (page 42), since 1988, PAWC's system-wide maximum day ratio has declined from 1.4 to 1.2, and it is almost certain that PAWC's system-wide maximum hour ratio has also declined. I agree with Ms. Heppenstall that there may be challenges to updating the Company's analysis. However, because a task may be challenging is not a reason to not undertake the task.

[9] PAWC Statement No. 12-R, p. 10, lines 1-8.

Q. ON PAGE 14 OF YOUR DIRECT TESTIMONY, YOU RECOMMENDED THE INITIAL WATER CCOS STUDY FILED BY PAWC NOT BE MODIFIED AS PROPOSED BY MS. HEPPENSTALL TO EXCLUDE INDUSTRIAL CURTAILMENT USAGE FROM THE EXTRA CAPACITY FACTOR ALLOCATIONS. WHAT IS MS. HEPPENSTALL'S RESPONSE?

A. Ms. Heppenstall claims that PAWC's water system was built so that in the event of a water shortage, these customers could be curtailed. In addition, Ms. Heppenstall claims this adjustment to the cost of service for interruptible Industrial customers has been reflected in the Company's CCOS studies since 2007, and has long been accepted by the Commission.[10]

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL?

A. As explained on page 14 of my direct testimony, these interruptible Industrial customers are not regularly interrupted, and are regularly served during periods of peak demand. In fact, based on recent additional discovery (OCA-35-009), the Company has acknowledged that these customers have not been required to curtail their usage in the last 20 years. As subsequently discussed in responding to PAWLUG witness Ms. LaConte, in the most recent Philadelphia Gas Works ("PGW") rate case, the Commission found that interruptible demand should be included with firm industrial in PGW's CCOS study based on a record showing no interruptions over 20 years.[11] My recommendation is consistent with this Commission finding.

[10] PAWC Statement No. 12-R, p. 10, lines 9-21.
[11] PAWLUG Statement No. 1-R, p.7, lines 8-16.

Q. IN HIS DIRECT TESTIMONY, MR. HIGGINS RECOMMENDS DIRECT ASSIGNMENT OF $2.8 MILLION OF AMP COSTS AND CUSTOMER ASSISTANCE-RELATED ADMINISTRATIVE COSTS TO THE RESIDENTIAL CLASS IN THE COMPANY'S WATER CCOS STUDY.12 HAS MS. HEPPENSTALL ACCEPTED THESE RECOMMENDATIONS?

A. Yes, and the revised water CCOS study presented in Exhibit CEH-1R reflects this modification.

Q. ARE THESE PROPOSED MODIFICATIONS REASONABLE?

A. No. For the reasons explained in the rebuttal testimony of OCA Witness Roger Colton, Mr. Higgins' direct assignments are not reasonable.[13]

Q. ON PAGES 18-19 OF YOUR DIRECT TESTIMONY, YOU RECOMMENDED THAT THE COMPANY INCLUDE NEGOTIATED RATE RIDER DEMAND INDUSTRIAL SALES ("DIS") AND RIDER DEMAND RESALE SALES ("DRS") CUSTOMERS AS SEPARATE CUSTOMER CLASSES IN THE WATER CCOS STUDY PRESENTED IN PAWC'S NEXT BASE RATE PROCEEDING. DOES MS. HEPPENSTALL AGREE WITH THIS RECOMMENDATION?

A. No. Ms. Heppenstall claims that Rider DIS and DRS customers have competitive alternatives to service from PAWC and provide benefits for all other water customers by preserving or attracting incremental sales. Therefore, revenues derived from Rider DIS and DRS customers should continue to be reflected as a reduction to the cost of service to all other customer classes.[14]

[12] PAWC Statement No. 12-R, p. 10, line 22 – p. 11, line 2.
[13] OCA Statement 5R, p. 1-6. Mr. Colton also recommended an adjustment to the *amount* of AMP costs (OCA Statement 5), which is reflected in the expense adjustments made by OCA Witness Ralph Smith (OCA Statement 2 and 2SR).
[14] PAWC Statement 12-R, p. 11, lines 3-16.

Q. DO YOU AGREE WITH MS. HEPPENSTALL THAT RIDER DIS AND DRS CUSTOMERS SHOULD NOT BE REFLECTED AS SEPARATE CUSTOMER CLASSES IN THE WATER CCOS STUDY PRESENTED BY PAWC IN ITS NEXT BASE RATE PROCEEDING?

A. No. Including Rider DIS and DRS customers as a separate customer class in the CCOS study filed in PAWC's next base rate proceeding will assist in ensuring that the rates charged to Rider DIS and DRS customers are reasonable. Including Rider DIS and DRS customers in the water COSS study will not prejudge whether negotiated rates for these customers should be discontinued.

Q. HAVE YOU MODIFIED THE WATER CCOS STUDY PRESENTED BY MS. HEPPENSTALL IN HER REBUTTAL TESTIMONY TO REFLECT YOUR RECOMMENDATIONS?

A. Yes. Schedule JDM-2SR presents a summary of the Company's rebuttal CCOS study modified to reflect my system wide maximum demand factors, include interruptible Industrial customer usage, and provided for the allocation of AMP costs and customer assistance-related administrative costs as recommended by Mr. Colton. A comparison of the results of the Company's CCOS study and my modified study is presented in Table 1-SR. This comparison is based on PAWC's claimed level of revenue requirement but excludes the Act 11 assignment of the wastewater revenue requirement to water service customers. I subsequently discuss the Act 11 assignment in Section III of this surrebuttal testimony.

Table 1SR. Water Cost of Service Study Comparison			
Classification	**Company**	**OCA**	**Difference**
Residential	$612,997,598	$606,110,184	($6,887,414)
Commercial	233,858,828	230,359,742	(3,499,086)
Industrial	44,198,427	49,618,335	5,419,908
Public (Municipal)	24,425,618	26,459,930	2,034,312
Other Water Utilities - Group A	11,845	12,399	554
Other Water Utilities - Group B	628,455	450,547	(177,908)
Private Fire Protection	5,808,618	7,115,758	1,307,140
Public Fire Protection	11,863,933	13,666,426	1,802,493
Total:	**$933,793,321**	**$933,793,321**	**$0**

Q. DID MS. HEPPENSTALL PROPOSE ANY CHANGES TO THE COMPANY'S INITIAL WASTEWATER CCOS STUDIES IN HER REBUTTAL TESTIMONY?

A. Yes. Ms. Heppenstall modified the Company's wastewater CCOS study initially presented in her direct testimony. Those modified studies are presented in Exhibits 12-B Revised, 12-C Revised, 12-D Revised, and 12-E Revised. The modified CCOS studies reflect the AMP and customer assistance program administrative cost allocations recommendations presented by Mr. Higgins which provided for the direct assignment of these costs to Residential customers.

Q. SHOULD THE MODIFICATIONS RECOMMENDED BY MR. HIGGINS AND REFLECTED IN THE REVISED CCOS STUDIES PRESENTED BY MS. HEPPENSTALL BE ADOPTED?

A. No. As with PAWC's water CCOS study, for the reasons presented in Mr. Colton's rebuttal testimony, Mr. Higgins' recommendations should not be adopted.

Q. ON PAGE 23 OF YOUR DIRECT TESTIMONY, MS. HEPPENSTALL CLAIMS THAT YOU INFER THAT $41 MILLION OF STORMWATER COSTS ARE BEING ASSIGNED TO WATER CUSTOMERS. DOES SHE AGREE WITH THIS CLAIM AND WHAT IS YOUR RESPONSE?

A. Ms. Heppenstall claims that no stormwater costs are reallocated to water customers in this case.[15] As shown on Table 2 of my direct testimony, the stormwater cost of service is $41.0 million, the total wastewater cost of service is $222.5 million, and PAWC has proposed to reallocate $71.1 million to water customers. It is unreasonable to contend that the $71.1 million reallocated to water customers does not include any stormwater costs.

Q. ON PAGES 35-36 OF YOUR DIRECT TESTIMONY, YOU RECOMMEND THAT THE EXISTING CUSTOMER CHARGES FOR RESIDENTIAL WATER CUSTOMERS WITH A 5/8-INCH, 3/4-INCH, 1-INCH, OR 1 1/2-INCH METER BE MAINTAINED. WHAT WAS THE BASIS FOR THIS RECOMMENDATION?

A. As explained on pages 35-36 of my direct testimony, this recommendation was based on an analysis of direct customer costs.

Q. DOES MS. HEPPENSTALL AGREE WITH YOUR RESIDENTIAL CUSTOMER CHARGE RECOMMENDATION?

A. No. Ms. Heppenstall claims that my analysis improperly omits office building and furniture expenses and is based on an unreasonable pre-tax return. Therefore, she recommends my analysis not be used to determine Residential water customer charges.[16]

[15] PAWC Statement 12-R, p. 12, line 22-23.
[16] PAWC Statement No. 12-R, p. 14, lines 2-11.

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL?

A. As explained on pages 35-36 of my direct testimony, office building and furniture expenses do not vary with the addition and subtraction of a customer and, therefore, should not be included in an analysis of direct customer costs. With respect to the pre-tax return used in my calculation, I would agree that the actual pre-tax return approved by the Commission in this proceeding should be reflected in the Residential customer charge calculation, in addition to all other adjustments to the Company's revenue requirement claim determined to be appropriate by the Commission.

The Residential customer charge approved in this proceeding should be based on my customer charge calculation presented in Schedule JDM-4SR of my direct testimony, adjusted to reflect the water revenue requirement determined to be appropriate by the Commission. Schedule JDM-4SR modifies the customer charge calculation initially presented in Schedule JDM-4 of my direct testimony, which already reflected my maximum demand, interruptible Industrial usage, and AMP customer assistance cost recommendations, to reflect Ms. Heppenstall's revised allocations for meters and services for the Public class.

III. PAWC WITNESS: CHARLES B. REA

Q. WITH RESPECT TO THE ACT 11 ALLOCATION TO WATER CUSTOMER CLASSES, WHAT RECOMMENDATION DID YOU PRESENT IN YOUR DIRECT TESTIMONY?

A. On page 28 of my direct testimony, I recommended that the Act 11 allocation should be assigned to various water customer classes based on the cost of service indicated by my water CCOS study.

Q. DOES MR. REA GENERALLY SUPPORT THIS RECOMMENDATION?

A. No. Mr. Rea claims it is appropriate to match a class for class reallocation as much as possible.[17]

Q. DO YOU AGREE THAT A CLASS FOR CLASS REALLOCATION IS APPROPRIATE?

A. No. As already previously explained on pages 10 and 11 of my rebuttal testimony, such a reallocation is not appropriate. In addition, in the most recent Aqua Pennsylvania, Inc. base rate proceeding at Docket No. R-2021-3027385 and R-20217386, the Commission found that the Act 11 reallocation should be based on the results of the adopted water CCOS study. Finally, I note that in PAWC's most recent prior water and wastewater base rate proceedings (Docket Nos. R-2022-3031672 and R-2022-3031673), Mr. Rea agreed with the Company's Act 11 reallocation to water customer classes, which was based on a cost of service approach.[18]

Q. TABLE 4 IN YOUR DIRECT TESTIMONY PRESENTED A SUMMARY OF THE OCA'S COST OF SERVICE STUDY AND PRESENT AND PROPOSED RATES FOR WATER SERVICE, INCLUSIVE OF THE ACT 11 REALLOCATION. HAVE YOU REVISED TABLE 4 TO REFLECT THE WATER CCOS STUDY YOU HAVE PRESENTED IN YOUR SURREBUTTAL TESTIMONY?

Yes, Table 4-SR (below) revises Table 4 in my direct testimony to reflect the water CCOS study I present in this surrebuttal testimony and includes revenues at present and proposed rates at PAWC's requested water revenue requirement increase. The amount of the Act 11 reallocation reflected in Table 4-SR has not changed from the amount of

[17] PAWC Statement 10-R, p. 34, lines 19-21.
[18] Docket Nos. R-2022-3031672 and R-2022-3031673; PAWC Statement No. 10-R, p. 27, line 21 - p. 28, line 3.

the Act 11 reallocation presented in Table 4 as the wastewater revenue requirement recommendation presented by the OCA has not changed.

Table 4-SR. Summary of OCA Cost of Service Study and Present and Proposed Rates for Water Service

Classification	Direct Cost of Service	Wastewater to Water Allocation	Total Cost of Service	Present Rates	Proposed Rates	Increase	Percent
Residential	$606,110,184	$12,306,954	$618,417,138	$528,290,043	$619,195,214	$90,905,171	17.2%
Commercial	230,359,742	4,677,412	235,037,154	202,779,636	235,332,871	32,553,235	16.1%
Industrial	49,618,335	1,007,491	50,625,826	37,580,738	50,625,826	13,045,088	34.7%
Public (Municipal)	26,459,930	543,497	26,997,194	22,559,539	27,031,161	4,471,622	19.8%
Other Water Utilities - Group A	12,399	252	12,651	51,822	53,666	1,844	3.6%
Other Water Utilities - Group B	450,547	9,148	459,696	202,436	272,706	70,270	34.7%
Private Fire Protection	7,115,758	144,484	7,260,242	5,301,032	7,141,135	1,840,103	34.7%
Public Fire Protection	13,666,426	0	13,666,426	9,519,368	12,823,747	3,304,379	34.7%
Other	18,473,554	216,761	18,690,315	17,832,568	18,690,315	857,747	4.8%
Total	**$952,266,876**	**$18,899,766**	**$971,166,642**	**$824,117,182**	**$971,166,642**	**$147,049,460**	**17.8%**

Q. WHAT IS THE COMPANY'S POSITION ON THE SCALE BACK OF RATES?

A. The Company's position for the scale back of rates is that in the event that the Commission approves a revenue requirement that is less than that proposed by the Company, the Company proposes to proportionally reduce the revenue requirements for water service and wastewater service, and to proportionally reduce the proposed amount of reallocation from wastewater to water under Act 11 so that the same relative percentage to the total of water service revenue requirement, wastewater service revenue requirement, and Act 11 reallocation amounts be maintained at proposed levels.[19]

[19] PAWC Statement No. 10-R, p. 37, lines 11-18.

Q. DO YOU AGREE WITH THE COMPANY'S SCALE BACK PROPOSAL?

A. To a certain extent. For water service, the Company is proposing a scale back of the revenue increases it has proposed for each class. I am proposing a scale back of the revenue increases I have proposed for each class which is based on my CCOS study and, therefore, differs from the Company's proposed revenue increases for each class. I have accepted the Company's proposed CCOS for wastewater service and, consistent with the Company's allocation proposal, a scale back would be appropriate. With respect to the Act 11 reallocation, for the reasons expressed on pages 26-27 of my direct testimony, the Act 11 reallocation should be reduced. As discussed on page 28 of my direct testimony, a scale back of the Act 11 reallocation will need to be determined by the Commission based on the wastewater revenue requirement authorized by the Commission in this proceeding.

Q. MR. REA CONTENDS THAT A RUNNING THEME OF ALL THE SCALE BACK PROPOSALS IS THAT ANY REDUCTION IN THE WASTEWATER REVENUE REQUIREMENT FIRST BE APPLIED TO THE ACT 11 REALLOCATION. HAVE YOU MADE THIS RECOMMENDATION?[20]

A. No, I have not made that recommendation. As explained on page 25 of my direct testimony, an important purpose of Act 11 is to provide some relief to wastewater customers in relatively small or overburdened areas. On page 28 of my direct testimony, I presented an Act 11 recommendation to shift 75% of the OCA's calculated SSS revenue requirement and up to 50% of the OCA's calculated CSS revenue requirement increase to water customers. To the extent that the Commission authorizes

[20] PAWC Statement No. 10-R, p. 40, lines 20-22.

a wastewater revenue requirement increase which is more than the OCA's calculated amount, the Commission will have to determine what amount of that increase is reasonable for wastewater customers to bear given the recent PAWC rate increases and the relatively few wastewater customers. Under a scale back proposal in which any reduction in the wastewater revenue requirement is first applied to the Act 11 reallocation may not provide an adequate level of relief to wastewater customers.

Q. ON PAGES 36 AND 37 OF YOUR DIRECT TESTIMONY, CITING GRADUALISM, YOU RECOMMEND THAT THE RESIDENTIAL VOLUMETRIC WATER RATES IN RATE ZONE 2 (VALLEY) BE SET AT 70% OF RATE ZONE 1 RATES. DOES MR. REA AGREE WITH YOUR RECOMMENDATION?

A. No. Mr. Rea contends the proposed increase in the rates for Rate Zone 2 (Valley) Residential customers is not unreasonable.[21]

Q. DO YOU AGREE WITH MR. REA?

A. No. As explained on page 36 of my direct testimony, PAWC's proposed volumetric rates for Rate Zone 2 would increase the rates of the average Residential customer by nearly 65%. This is more than two times the system average increase and cannot be considered reasonable. Finally, I would note that in PAWC's prior water and wastewater base rate proceeding, Mr. Rea found that an increase of 40% for a rate zone moved too quickly toward cost of service rates without sufficiently recognizing the importance of gradualism.[22]

[21] PAWC Statement No. 10-R, p. 47, lines 13-15.
[22] Docket Nos. R-2022-3031672 and R-2022-3031673; PAWC Statement No. 10-R, p. 15, lines 19-20.

Q. ON PAGES 51-55 OF HIS REBUTTAL TESTIMONY, MR. REA SUMMARIZES THE POSITIONS OF THE VARIOUS PARTIES CONCERNING THE COMPANY'S WINTER AVERAGING PROPOSAL. BASED ON THOSE POSITIONS, WHAT DOES HE CONCLUDE CONCERNING WINTER AVERAGING?

A. Mr. Rea concedes that the beneficiaries of the Company's winter averaging proposal are likely to be higher income customers because it is these customers that are more likely to have seasonal water usage in the summertime that would no longer be billed for wastewater service. However, he contends that cost causation principles clearly indicate that water used by customers that does not enter the wastewater system in the summertime should not be charged for wastewater service. Based on that, he concludes that cost causation principles indicate that it is not appropriate to charge customers for wastewater usage in the summertime based on water that does not go through the sewer system.[23]

Q. WHAT IS YOUR RESPONSE TO MR. REA'S CONCLUSIONS CONCERNING WINTER AVERAGING?

A. I agree that basing wastewater rates on water that does not go through the sewer system is not a cost-based method for setting wastewater rates. However, the "snowbird" example shows that for some customers, PAWC's proposal has the effect of understating summer months usage that flows through the sewer system, which is counter to cost-causation principles. Mr. Rea does not dispute this effect.[24] He also concedes that the Company's winter averaging proposal will disproportionately harm low-income customers.[25] Under the methodology proposed by PAWC, any benefits are

[23] PAWC Statement No. 10-R, p. 55, lines 1-6.
[24] PAWC Statement No. 10-R, p. 55, lines 12-15.
[25] PAWC Statement No. 10-R, p. 55, lines 1-4.

outweighed by the disproportionate harm that PAWC's method would cause to low-income customers. OCA Witness Colton provides additional response in his surrebuttal testimony.[26]

Q. ON PAGE 47 OF YOUR DIRECT TESTIMONY, YOU RECOMMENDED THAT THE SSS AND CSS RESIDENTIAL CUSTOMER CHARGE FOR A 5/8-INCH METER BE ESTABLISHED AT $14.30, WHICH IS THE CURRENT RATE FOR MOST WASTEWATER RATE ZONES. DOES MR. REA AGREE WITH THIS RECOMMENDATION?

A. No. Mr. Rea contends that the Company's proposed 5/8-inch meter charge of $20 for wastewater service is consistent with the Company's proposed charge for water service.[27]

Q. SHOULD PAWC'S PROPOSED 5/8-INCH METER CHARGE OF $20 BE ADOPTED BY THE COMMISSION?

A. No. As explained on page 46 of my direct testimony, the proposed $20 customer charge is based on an analysis of customer costs that include the costs associated with collecting and treating Infiltration and Inflow ("I/I"). I/I does not vary directly with the addition or subtraction of a customer, and only costs that vary directly with the addition or subtraction of a customer should be included in the calculation of customer charges. Exclusive of I/I costs, the Company's calculation of customer costs would indicate a direct cost of $13.87 at the Company's proposed revenue requirement. Since monthly customer charges should be based on direct customer costs and those costs are less than the current charges, the current $14.30 should be maintained.

[26] OCA Statement 5SR, p. 9, lines 9 – p. 11, line 14.
[27] PAWC Statement No. 10-R, p. 58, lines 8-10; p. 61, lines 14-17.

Q. IN THIS PROCEEDING, PAWC HAS PROPOSED A REVENUE DECOUPLING MECHANISM ("RDM"), AN ALTERNATIVE RATEMAKING MECHANISM. HAS THE COMMISSION ADOPTED A STATEMENT OF POLICY RELATED TO ALTERNATIVE RATEMAKING MECHANISMS SUCH AS PAWC'S PROPOSED RDM?

A. Yes. In its Order dated July 18, 2019, in Docket No. M-2015-2518883, the Commission set for its Statement of Policy as it relates to alternative ratemaking methodologies. Specifically, the Commission identified 14 factors that it would consider in its evaluation of alternative ratemaking mechanisms. The Statement of Policy requires a utility proposing an alternative ratemaking mechanism to explain how each of these 14 factors impact the rates of each customer class.

Q. DID MR. REA SPECIFICALLY RESPOND TO THE 14 FACTORS AS THEY RELATE TO PAWC'S PROPOSED RDM IN HIS DIRECT TESTIMONY?

A. Yes, Mr. Rea responded to the 14 factors in PAWC Exhibit CBR-10. In Schedule JDM-6 of my direct testimony, I addressed each of Mr. Rea's responses and found for the reasons presented on pages 54 through 57 of my direct testimony that the RDM did not satisfy the 14 factors of the Commission's Statement of Policy.

Q. IN HIS REBUTTAL TESTIMONY, DID MR. REA RESPOND TO YOUR RESPONSES PRESENTED IN SCHEDULE JDM-6?

A. Yes. In Exhibit CBR-10R, Mr. Rea responded to Schedule JDM-6. Exhibit CBR-10R also responds to arguments presented by I&E witness Mr. Cline with respect to the 14 factors.

Q. HAVE YOU RESPONDED TO MR. REA'S RESPONSES PRESENTED IN SCHEDULE JDM-6SR.

A. Yes. My responses to Mr. Rea's responses in Exhibit CBR-10R are presented in Schedule JDM-6SR.

Q. MR. REA CLAIMS THAT THE RDM DOES NOT DISCOURAGE CONSERVATION.[28] DO YOU AGREE?

A. No. The proposed RDM provides a disincentive to ratepayers to undertake water conservation efforts because they would be required to pay for water they did not use. If a customer reduces their consumption in an attempt to reduce their bill, but the reduction is less than the reduction in usage of all other customers, the RDM will take those savings away from the customer, and in fact, the customer's bill will be higher.

Q. MR. REA CLAIMS THAT THE RDM WILL NOT RESULT IN RATE INSTABILITY AND RATE CONFUSION.[29] DO YOU AGREE?

A. No. The proposed RDM would add another surcharge to customers' bills, which would change on a monthly basis, and is unlikely to reduce the frequency of PAWC base rate or Distribution System Improvement Charge ("DSIC") rate filings. Therefore, it does not appear that a new RDM surcharge would improve rate stability. PAWC has not provided any evidence that the proposed RDM will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed ECIC, significant customer confusion is likely.

[28] PAWC Statement No. 10-R, p. 72, lines 14-2_.
[29] PAWC Statement No. 10-R, p. 73, lines 3-13.

Q. MR. REA CLAIMS THAT THE RDM DOES NOT IMPROPERLY SHIFT REVENUE RISK FROM THE COMPANY TO CUSTOMERS.[30] DO YOU AGREE?

A. No. Under the RDM, the risk of recovery of PAWC's revenue requirement due to declines in customer consumption is shifted to customers. Currently, between rate cases, that risk is borne by the Company. Customers receive no compensation under the RDM for now bearing the cost recovery risk. The risks associated with declines and consumption can now and in the future be appropriately addressed under traditional ratemaking. PAWC's fully projected future test year ("FPFTY") consumption projections in this proceeding reflect declining per-customer water usage.

Q. MR. REA CONTENDS THAT PARTIES HAVE CLAIMED THAT THE RDM IS NOT NEEDED BECAUSE PAWC HAS ACCESS TO A DSIC, THE FPFTY, AND OTHER MECHANISMS THAT ADDRESS REVENUE REGULATORY LAG.[31] DOES MR. REA AGREE WITH THESE CLAIMS?

A. No. Mr. Rea acknowledges that the DSIC mechanism helps the Company recover the cost of ongoing system improvements in a timely manner between rate cases. He contends that it does not address declines in consumption that affect revenues or the volatility in revenues that occur from year to year. With respect to the FPFTY, Mr. Rea claims that the FPFTY only allows for the recognition of declining use through the end of the FPFTY.

Q. WHAT IS YOUR RESPONSE TO THESE CLAIMS?

A. The point of tools like the DSIC and FPFTY is to make recovery more timely, not to eliminate regulatory risk. For PAWC, investors already benefit from the reduction in

[30] PAWC Statement No. 10-R, p. 73, line 17 p. 74, line 3.
[31] PAWC Statement No. 10-R, p. 75, line 14; p. 76, line 6.

regulatory lag associated with investments in DSIC-eligible infrastructure projects (DSIC) and investments and expenses generally (FPFTY), by increasing revenues between and through base rate cases. The RDM would reduce another form of risk that is currently borne by investors, and for which investors are being compensated to bear, by shifting the risk of revenue fluctuations between rate cases onto ratepayers.

Q. MR. REA BELIEVES THAT THE RDM IS NOT OVERLY COMPLEX.[32] DO YOU AGREE?

A. No. The RDM calculation formula and components are identified and discussed on pages 93 and 91-92, respectively, of Mr. Rea's direct testimony. Clearly, as shown there, the RDM calculation is not a simple calculation.

Q. MR. REA BELIEVES THAT THE RDM WILL NOT NEGATIVELY IMPACT CROSS-SUBSIDIZATION OF COSTS BETWEEN CUSTOMER CLASSES.[33] DO YOU AGREE?

A. No. As OCA witness Mr. Roger Colton has explained, with respect to class cost shifting, the RDM could shift revenue within the Residential class for customers who are financially able to invest in water conservation measures to low-income customers who are not financially able to make similar investments.

Q. ON PAGES 77-78 OF HIS REBUTTAL TESTIMONY, MR. REA PRESENTS A RECAP OF WHY THE RDM SHOULD BE APPROVED. WHAT DOES HE CLAIM IN THE RECAP?

A. Mr. Rea claims that adoption of the Company's proposed RDM is in the long-term best interest of the Company and its customers, and that rate designs that tie a utility's revenue recovery directly to sales volume have prompted concerns in modern utility

[32] PAWC Statement No. 10-R, p. 76, lines 13-18.
[33] PAWC Statement No. 10-R, p. 76, line 22; p. 77, line 3.

regulation. Because of seasonal variability and declining use per customer, Mr. Rea claims that volumetric rates that collect the majority of a Company's fixed cost do not give water utilities a reasonable opportunity to recover the fixed costs associated with providing service to customers. Mr. Rea contends that an alternative rate design mechanism that couples elements of SFV pricing with traditional rate designs brings the best of both worlds to both the Company and its customers. Mr. Rea believes that implementing the RDM: (1) makes the Company indifferent to selling less water; (2) promotes water efficiency and conservation; (3) reduces the adverse impact of weather variability for both the utility and its customers; and (4) reasonably ensures that sufficient revenue for continued investment in the system are available. Mr. Rea concludes that the RDM results in a better alignment of all stakeholder interests, and the Company respectfully urges the Commission to authorize its proposed RDM.

Q. WHAT IS YOUR RESPONSE TO MR. REA'S RECAP?

A. I agree with Mr. Rea that the RDM makes the Company indifferent to selling less water. However, as just explained, the RDM: (1) provides a disincentive to ratepayers to undertake water conservation measures; (2) would not reduce the frequency of PAWC base rate or DSIC rate filings; (3) would likely result in significant customer confusion; (4) improperly shifts the risk of recovery of PAWC's revenue requirement to customers with customers receiving no compensation for bearing this risk; and (5) will likely shift costs to low income Residential customers. Simply put, the RDM should not be adopted.

IV. PAWC WITNESS: J. CAS SWIZ

Q. IN ADDITION TO THE RDM, PAWC IS ALSO PROPOSING ANOTHER ALTERNATIVE RATE MECHANISM, THE ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE ("ECIC"). HAVE THE PARTIES TO THIS PROCEEDING GENERALLY OPPOSED THE ECIC?

A. Yes. Several parties to this proceeding, including the OCA, have recommended that the ECIC not be adopted. Mr. Swiz summarizes the reasons for the parties' opposition as follows:

- Recovery of environmental compliance costs through an automatic rate adjustment mechanism would improperly shift the risk of recovery of those costs that are incurred as part of the Company's obligation to provide and maintain adequate, safe and reliable service to customers;
- The ECIC proposal is premature because PAWC does not have detailed forecasts of the costs that will be requested for recovery through the ECIC at this time to justify alternative ratemaking treatment;
- The proposed ECIC will unfairly impact low-income customers and create intra- and interclass subsidies; and
- The ECIC proposal does not satisfy the 14 factors set forth in the Commission's Policy Statement on alternative ratemaking.[34]

Q. WHAT IS MR. SWIZ'S RESPONSE TO THE PARTIES' CLAIM THAT THE ECIC UNFAIRLY SHIFTS RISKS AWAY FROM THE COMPANY TO CUSTOMERS?

A. Mr. Swiz agrees that the provision of service that complies with environmental regulations to help ensure safe, clean drinking water is a requirement for PAWC. However, he claims emerging regulations or re-interpretations of existing regulations often result in new environmental compliance obligations that disrupt PAWC's five-

[34] PAWC Statement No. 8-R, p. 9, line 15 – p. 10, line 2.

year plan of construction work and require the Company to undertake additional projects on an expedited basis to comply with those changes that increase the cost of water and wastewater service. Mr. Swiz claims that the impending federal per and polyfluoroalkyl substances ("PFAS") regulations will require American Water's utilities to spend over $1 billion within three years. As discussed by PAWC witness Mr. Aiton, Mr. Swiz contends that for the Company, these new requirements will require investments in the range of $200 million before the end of 2027 based on preliminary estimates. He concludes that the ECIC will provide the Company a reasonable opportunity to recover the capital costs and expenses incurred after June 30, 2025, to meet the challenges of removing PFAS from drinking water systems across the Commonwealth in an efficient and prudent manner.[35]

Q. WHAT IS YOUR RESPONSE TO MR. SWIZ'S CLAIM CONCERNING THE UNFAIR SHIFTING OF RISK?

A. Under the ECIC, the risk of recovery of environmental compliance costs is shifted 100% to customers. Currently, a portion of that risk is borne by the Company. Customers receive no compensation under the ECIC for now bearing 100% of the cost recovery risk. The Company's current risks associated with environmental compliance cost recovery can now and in the future be appropriately addressed under traditional ratemaking.

[35] PAWC Statement No. 8-R, p. 10, lines 7-23.

Q. MR. SWIZ CONTENDS THAT SEVERAL PARTIES HAVE CLAIMED THAT THE ECIC MECHANISM WILL LESSEN THE SCRUTINY OF THE COMPANY'S ENVIRONMENTAL COMPLIANCE COSTS. WHAT IS MR. SWIZ'S RESPONSE TO THIS CLAIM?

A. Mr. Swiz claims that if the Company's proposed ECIC is approved, the Commission and all parties will have the opportunity to proactively evaluate PAWC's proposed investments and measures to comply with new environmental mandates before any costs are incurred.[36]

Q. WHAT IS YOUR RESPONSE TO THE CLAIM THAT SCRUTINY OF ENVIRONMENTAL COMPLIANCE COSTS WILL NOT BE LESSENED UNDER THE ECIC?

A. PAWC has proposed an entire set of new procedural rules to impose on parties to review its ECIC filings. While the Company treats this as beneficial to parties, Mr. Swiz misses the point that consumers and statutory advocates have very limited resources and cannot realistically expect to review recurring ECIC filings with the same degree of scrutiny given to base rate filings. Nor would they be afforded the time to do so. PAWC proposes for quarterly updates to go into effect on only 10 days-notice. The proposed Plans would require review and discovery in an "expedited" timeframe, during which consumers and statutory advocates would also be required to respond to two different sets of revisions the Company has the option of filing within the same period.[37]

[36] PAWC Statement No. 8-R, p. 11, lines 1-10.
[37] PAWC Statement No. 8-R, p. 25-26.

Q. ON PAGE 74 OF YOUR DIRECT TESTIMONY, YOU POINT TO DEBT COSTS AS AN EXAMPLE OF A PAWC COST THAT MAY DECLINE AND WOULD NOT BE TAKEN INTO CONSIDERATION OUTSIDE OF A GENERAL BASE RATE CASE UNDER THE ECIC. DOES MR. SWIZ FIND THIS TO BE A VALID CRITICISM OF THE ECIC?

A. No. Specifically, Mr. Swiz claims that any changes in PAWC's debt costs would be included in the ECIC. He notes that in the ECIC Tariff, the determination of the pre-tax return "will be calculated using the state and federal income tax rates, *the Company's actual capital structure and actual cost rates for long-term debt preferred stock as of the last day for the three-month period ending one month prior to the effective date* of the ECIC and subsequent updates" (emphasis added).[38]

Q. DOES MR. SWIZ'S RESPONSE REASONABLY ADDRESS YOUR CONCERN?

A. No. Mr. Swiz misses the point of my concern. In a base rate case, ***all*** of a utility's revenues, expenses, and capital costs are simultaneously reviewed so that increases in one category that are offset by decreases in another are taken into account in determining rates that are just and reasonable. An adjustment clause like PAWC's proposed ECIC, on the other hand, changes a line item in a utilities' base rate to account for expenses attributable to capital investment, while ignoring the other components of base rate. This may result in the establishment of unjust and unreasonable rates. PAWC's debt costs may decline from those approved in this proceeding. Interest rates are currently at higher levels compared to those in recent years and are likely to decline. While the ECIC would take into consideration the cost of the debt utilized to finance

[38] PAWC Statement No. 8-R, p. 11, lines 11-19.

environmental compliance investment, any decline in interest rates and PAWC's remaining debt costs would not be taken into consideration in the rate setting process under the ECIC.

Q. ON PAGE 70 OF YOUR DIRECT TESTIMONY, YOU EXPRESS CONCERN REGARDING THE POTENTIAL FOR INTERCLASS CROSS-SUBSIDIZATION UNDER THE ECIC. WHAT IS MR. SWIZ'S RESPONSE?

A. Mr. Swiz claims I have raised these concerns about interclass cost shifting because the ECIC will be assessed as a flat percentage increase across PAWC's customer base. However, he claims I cite no evidence supporting his assertions that the ECIC will necessarily result in subsidization among customers classes.

Mr. Swiz further notes that the ECIC is modeled upon the DSIC, with a similar formula and customer safeguards. He claims that the Commission-approved DSICs of PAWC and other utilities do not draw a distinction between customer classes in calculating their percentage of billed revenues charged to customers, and all customers are charged the same percentage on the theory that the revenue requirement was fairly allocated between customers classes in setting rates in the prior base rate. Mr. Swiz does not believe the Commission has found that the DSIC causes cross-subsidization or is discriminatory.

Q. WHAT IS YOUR RESPONSE TO MR. SWIZ'S CLAIM THAT THE ECIC WILL NOT RESULT IN CROSS-SUBSIDIZATION?

A. Cross-subsidization occurs when the rates of a particular customer class do not recover the cost of serving that customer class. Under the ECIC, revenues will be assessed as a percentage increase to each customer's non-ECIC billed charges. It is

unlikely that customer class cost responsibility will match current class revenue responsibility. With respect to DSICs under which charges are assessed as a percentage increase to each customer's non-DSIC billed charges, rate caps are in place to minimize any potential cross-subsidization. No rate cap has been proposed for the ECIC.

Q. ALSO ON PAGE 70 OF YOUR DIRECT TESTIMONY, YOU CLAIM THAT THE ECIC WILL NOT PROMOTE RATE STABILITY AND COULD RESULT IN CUSTOMER CONFUSION. WHAT IS MR. SWIZ'S RESPONSE TO THIS CLAIM?

A. Mr. Swiz claims that the ECIC will promote rate stability through gradual changes to customers' rates and bills as opposed to more significant increases typically experienced in base rate cases. He further claims that rate adjustment mechanisms for infrastructure investments are not new to the utility industry, and there is no reason to think that customers would be more confused about an ECIC surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill, including the DSIC.[39]

Q. WHAT IS YOUR RESPONSE TO MR. SWIZ'S CLAIM THAT THE ECIC WILL PROMOTE RATE STABILITY AND WILL NOT RESULT IN CUSTOMER CONFUSION?

A. Gradual increases in rates through the ECIC that do not receive the same scrutiny of a rate case are not a benefit to consumers in the abstract. While I agree that gradual increases are typically better than abrupt ones, there is no indication that the ECIC will reduce base rate frequency, and it is almost certainly going to lead to more frequent rate changes as the ECIC moves predominantly upward. When combined with the rate

[39] PAWC Statement No. 8-R, p. 13, lines 3-12.

changes that occur under PAWC's DSIC and potentially the RDM, the number of rate changes a customer will experience will increase significantly, and significant customer confusion is likely.

Q. MR. SWIZ CLAIMS THAT ON PAGES 66-68 OF YOUR DIRECT TESTIMONY YOU ASSERT THAT THE COMPANY'S ECIC PROPOSAL DOES NOT SATISFY THE 14 FACTORS OF THE COMMISSION'S ALTERNATIVE RATEMAKING POLICY STATEMENT. WHAT IS MR. SWIZ'S RESPONSE?

A. Mr. Swiz claims that the Commission's Policy Statement on alternative ratemaking mechanisms lists a number of factors that may be considered when evaluating an alternative ratemaking mechanism such as the ECIC, but it does not prescribe how or the extent to which each factor must be "satisfied." He claims that the Company provided a detailed analysis of how the specific factors listed by the Commission apply to the Company's proposed ECIC to aid in the Commission's review and consideration of these factors as it pertains to the ECIC.[40]

Q. WHAT IS YOUR RESPONSE TO MR. SWIZ'S CLAIM THAT THE COMPANY PROVIDED A DETAIL ANALYSIS OF HOW THE SPECIFIC FACTORS LISTED BY THE COMMISSION APPLIED TO THE COMPANY'S PROPOSED ECIC?

A. The analysis of Commission factors was presented by Mr. Swiz in Exhibit JSC-1. Schedule JDM-7, included in my direct testimony addresses the analysis referenced by Mr. Swiz, and demonstrates that the ECIC does not meet the 14 factors of the Commission's Policy statement on alternative ratemaking.

[40] PAWC Statement No. 8-R, p. 14, lines 3-11.

Q. MR. SWIZ CONTENDS THAT YOU HAVE RECOMMENDED THAT THE COMMISSION IMPOSE AN ANNUAL PERCENTAGE CAP ON ECIC REVENUES IF THE COMPANY'S PROPOSAL IS ADOPTED. DOES MR. SWIZ FIND A REVENUE CAP TO BE APPROPRIATE IF THE ECIC IS ADOPTED?

A. No, he does not. Mr. Swiz notes that the Company's existing DSIC does have applicable water and wastewater revenues caps; however, the DSIC investments are ongoing and programmatic, with ratable plans. He contends that, in contrast, the ECIC would have costs and investments that could be similar in magnitude, but greater in scope and potentially over a much shorter time period. As such, he finds that the application of rate caps for the ECIC presents challenges as each Environmental Plan could be different. Mr. Swiz offers, as an option that could be considered, a limitation on the Environmental Plan and ECIC recovery that requires a base rate proceeding to be filed within a certain time period, and absent the base rate proceeding, the ECIC would be set to zero.

Q. WHAT IS YOUR RESPONSE TO MR. SWIZ'S RECOMMENDATION THAT AN ANNUAL PERCENTAGE CAP ON ECIC REVENUE SHOULD NOT BE ADOPTED?

A. It is my recommendation that the ECIC not be adopted. It is not my recommendation that the ECIC should be adopted with a revenue cap. While a rate cap would reduce the potential impact of the ECIC, a rate cap would not address the concerns raised by adopting an ECIC, including:

- The unreasonable shifting of the risk of recovery from shareholders to consumers;
- The very broad and ambiguous scope of the qualifying cost under the ECIC;

- The failure of the ECIC to align revenues with cost causation;
- The resulting interclass and intraclass cost shifting;
- The potential harm the ECIC would cause low-income customers;
- The significant customer confusion that is likely to result; and
- The failure to consider potential cost of service reductions.

V. PAWC WITNESS: ASHLEY E. EVERETTE

Q. MS. EVERETTE FINDS THAT THE PROPOSALS BY SEVERAL OF THE PARTIES TO THIS PROCEEDING TO REDUCE THE ACT 11 REALLOCATION ARE NOT IN THE PUBLIC INTEREST.[41] WHAT IS THE BASIS FOR HER CLAIM?

A. Ms. Everette claims that the proposals would result in large increases in the rates of wastewater customers, which the Company believes may result in rate shock.[42]

Q. WHAT IS YOUR RESPONSE TO MS. EVERETTE'S CLAIM?

A. Under the Company's proposed Act 11 reallocation, at the Company's proposed water and wastewater revenue requirement, water customers would essentially receive a 24% rate increase, while wastewater customers would receive a slight rate decrease.[43] I do not believe it is in the public interest to essentially maintain wastewater revenue at the current level, and reallocate the entire increase in the wastewater revenue requirement to water customers. Remember that PAWC argues for a winter averaging proposal to more align rates with cost-causation while simultaneously recommending an Act 11 shift to decrease wastewater rates and increase water customer rates to recover $71 million to subsidize the wastewater revenue deficiency.

[41] PAWC Statement No. 1-R, p. 23, lines 19-20.
[42] PAWC Statement No. 1-R, p. 24, lines 1-2.
[43] Exhibit 10-A, B, C.

Under the OCA's proposed Act 11 reallocation, as explained on page 28 of my direct testimony, at the OCA's proposed revenue requirement recommendations, water and wastewater customers would receive comparable percentage increases. I believe this is in the public interest. If the Commission determines to approve a revenue requirement higher than recommended by the OCA, I continue to recommend that an Act 11 reallocation that maintains comparable percentage increases for water and wastewater customers would be in the public interest.

Q. ON PAGE 21 OF YOUR DIRECT TESTIMONY, YOU RECOMMENDED THAT PAWC PREPARE SEPARATE CCOS STUDIES FOR FUTURE SECTION 1329 ACQUISITIONS IN THE FIRST BASE RATE CASE THAT INCLUDES THOSE SYSTEMS. DOES MS. EVERETTE AGREE WITH THIS RECOMMENDATION?

A. No. Ms. Everette claims that the current base rate proceeding is not the appropriate place to determine whether or not PAWC should be required to provide separate CCOS studies for future acquisitions. She claims there are circumstances when a separate CCOS study is inappropriate or unnecessary, and the Commission should have the flexibility to only require a separate CCOS study when the situation merits it.[44]

Q. WHAT IS YOUR RESPONSE TO MS. EVERETTE'S RECOMMENDATION CONCERNING CCOS STUDIES FOR FUTURE SECTION 1329 ACQUISITIONS?

A. I recommend that PAWC be required to prepare separate CCOS studies for each future Section 1329 acquisition, unless the Commission determines in the Section 1329

[44] PAWC Statement No. 1-R, p. 29, line 29 – p. 30, line 3.

proceeding that a separate CCOS study should not be required. This would maintain flexibility for the Commission.

Q. ON PAGE 21 OF YOUR DIRECT TESTIMONY, YOU ALSO RECOMMEND THAT PAWC SHOULD CONTINUE TO PREPARE SEPARATE CCOS STUDIES EITHER INDIVIDUALLY FOR EACH ACQUISITION OR AS A GROUP FOR SECTION 1329 ACQUISITIONS THAT ARE INCLUDED IN THE CURRENT CASE. DOES MS. EVERETTE AGREE?

A. No. If the Commission rejects the inclusion of BASA and Brentwood in the current rate case, and PAWC claims them in a future rate case, the Company should be required to provide a separate CCOS study for each. Valley Township notwithstanding, it is consistent with common and current practice in the application proceedings for the buyer to be required to provide a separate CCOS for acquired systems in the "first" base rate case in which they are included. As demonstrated in the current rate case, having the revenue requirement associated with those acquisitions separately calculated does three things: (1) provides information to establish rates that reflect the costs for the system, (2) shows the magnitude of the subsidy proposed for those systems (see below, Table 5 from PAWC Statement No. 10, page 47), and (3) facilitates the review and recommended removal of those systems from revenue requirement by parties challenging their inclusion in the FPFTY.

TABLE 5
Wastewater Reallocation by

Wastewater System	Amount
Group SSS	$31,962,411
Group CSS	$16,007,052
Brentwood	$1,565,232
BASA	$21,552,699

If PAWC does not provide a separate CCOS study for BASA and Brentwood in its next base rate case, those systems will be rolled into the Group SSS CCOS study and (1) the parties and Commission will not have system-specific information to determine rates that reflect the costs for the systems, (2) the magnitude of the proposed subsidy for those Section 1329 acquisitions will be disguised and (3) if there is any challenge to their inclusion in the FPFTY, the parties will have to overcome the same obstacles faced in the current case to isolate the revenue requirement for the Audubon, Farmington and Sadsbury systems that were rolled into group CCOS studies.

Q. OTHER THAN FOR BASA AND BRENTWOOD, DO YOU MAINTAIN YOUR RECOMMENDATION THAT PAWC SHOULD CONTINUE TO PREPARE SEPARATE CCOS STUDIES EITHER INDIVIDUALLY FOR EACH ACQUISITION OR AS A GROUP FOR SECTION 1329 ACQUISITIONS THAT ARE INCLUDED IN THE CURRENT RATE CASE?

A. Yes, with two clarifications responsive to Ms. Everette's rebuttal. I do not recommend that PAWC be required to provide separate or group CCOS studies for the ten systems acquired under Section 1329 that have already been consolidated into Water Operations, Wastewater SSS Operations and Wastewater CSS Operations. My recommendation, the details of which are provided in my direct testimony, applies going-forward.[45] This would remove one issue from every Section 1329 application proceeding and provide some certainty for all parties.

[45] After the initial case in which the Section 1329 system is properly included, the non-CSS Section 1329 systems could be grouped into one separate CCOS study rather than individual CCOS studies. OCA Statement 4, page 21, lines 16-22, page 22, lines 1-3.

Also, I agree with I&E Witness Kubas that the Company should continue to provide separate CCOS studies for Water Operations, SSS Operations, and CSS Operations. Ms. Everette agrees that approach should continue.[46]

VI. I&E WITNESS: JOSEPH KUBAS

Q. AS SHOWN ON PAGE 33, TABLE 4 OF YOUR DIRECT TESTIMONY, AND AS DESCRIBED ON PAGE 28, THE OCA IS RECOMMENDING AN ACT 11 REALLOCATION OF $18.9 MILLION BASED ON THE OCA'S REVENUE REQUIREMENT RECOMMENDATIONS. DOES MR. KUBAS FIND THIS RECOMMENDATION TO BE REASONABLE?

A. No. Mr. Kubas believes the OCA was not aggressive enough in reducing the wastewater subsidy. Therefore, he recommends that the OCA's proposed Act 11 reallocation or wastewater subsidy of $18.9 million be rejected.[47] As explained on page 5 of my rebuttal testimony, Mr. Kubas has proposed that at I&E's proposed revenue requirement, the Act 11 subsidy essentially be eliminated and reduced to $357,577. As noted on page 8 of my rebuttal testimony, the OCA's and I&E's wastewater revenue requirement recommendations are comparable (I&E – $26.6 million; OCA – $27.7 million).

Q. WHAT IS YOUR RESPONSE TO MR. KUBAS' CLAIM THAT THE OCA WAS NOT AGGRESSIVE ENOUGH IN ELIMINATING THE ACT 11 SUBSIDY?

A. As shown on Table 5 of my direct testimony, at the OCA's recommended revenue requirement, completely eliminating the Act 11 reallocation would have resulted in a rate increase of 22.0% for SSS wastewater customers, and a rate increase of 9.3% for

[46] PAWC Statement No. 1-R, page 31, lines 12-15.
[47] I&E Statement No. 3-R, p. 3, lines 19-22.

CSS wastewater customers. With the Act 11 reallocation, the increases are 5.4% and 4.7%, respectively. As shown on page 2 of Exhibit LA-1 which is sponsored by OCA witness Ralph Smith, the rate increase to water customers based on the OCA's water revenue requirement recommendation with the Act 11 reallocation is 4.2%. Without the Act 11 reallocation, the increase would be 2.0%. As explained in my direct testimony, the basis for the OCA's proposed $18.9 million shift, at the OCA's recommended revenue requirement, is to maintain comparable percentage increases for water and wastewater customers and also provide some relief to wastewater customers.

Q. FOR MOST WASTEWATER RATE ZONES, THE CURRENT MONTHLY CUSTOMER CHARGE FOR A 5/8-INCH METER IS $14.30, AND ON PAGE 47 OF YOUR DIRECT TESTIMONY, YOU RECOMMENDED THAT THAT CURRENT CHARGE IN RATE ZONES, 1, 2, 5, AND 6 BE MAINTAINED AT $14.30, AND THE CHARGE IN RATE ZONES 3, 4, 7, AND 9 BE REDUCED TO $14.30. DOES MR. KUBAS AGREE WITH YOUR CUSTOMER CHARGE RECOMMENDATIONS?

A. No. Mr. Kubas disagrees with the recommended $14.30 monthly charge for the CSS customers in Rate Zones 3, 4, and 6. As explained on pages 46-47 of my direct testimony, under my recommendation, the present Rate Zone 3 customer charge would be reduced from $19.50 per month to $14.30 per month, the Rate Zone 4 customer charge be reduced from $40.00 per month to $14.30 per month, and the Rate Zone 6 customer charge of $14.30 would remain at $14.30 per month. Mr. Kubas disagrees with my CSS customer charge recommendations for several reasons. First, 72% of present rate CSS revenues are generated by Rate Zone 3 (PAWC Volume 9, Ex. 10-C, p. 2). Therefore, granting a $5.20 per month reduction in the Rate Zone 3 Residential

customer charge will have a large impact on total CSS Operations revenue. Second, for Rate Zone 4, Residential customers currently pay a charge of $40.00 per month and would experience a decrease of $25.70 ($40.00 -$14.30) per month under the OCA proposal, which he believes is too large of a decrease and will also reduce CSS revenue. Third, for Rate Zone 6, Mr. Kubas believes these customers can absorb a larger increase in the customer charge because under present rates, Rate Zone 6 customers pay the highest CSS Residential usage rates.

Q. DO ANY OF THE REASONS PRESENTED BY MR. KUBAS JUSTIFY NOT ADOPTING A $14.30 MONTHLY CUSTOMER CHARGE FOR ALL CSS 5/8-INCH METERS?

A. No. First, Mr. Kubas has proposed a monthly customer charge of $20 for all CSS Rate Zones. As previously explained in responding to Mr. Rea, the $20 charge is not cost-based and maintaining the $14.30 charge would set the charge at a level that was comparable to a cost-based rate. Second, in Rate Zone 3, the reduction in the charge would decrease CSS revenues by approximately 6%. This would only require a small increase in volumetric usage charges of approximately $0.16 per 100 gallons, or 7%. Third, in Rate Zone 4, customers would experience a decrease of $5.70 from the $20 rate proposed by the Company. This would only require a small increase in volumetric usage charges of approximately $0.20 per 100 gallons, or 10%. Finally, in Rate Zone 6, under my recommendation, customers would also experience a decrease of $5.70 in the customer charge from the $20 rate proposed by the Company. This would only require a small increase in the volumetric charge of approximately $0.22 per 100 gallons, or 8%.

VII. OSBA WITNESS: KEVIN C. HIGGINS

Q. MR. HIGGINS DISAGREES WITH YOUR POSITION THAT INTERRUPTIBLE USAGE SHOULD NOT BE EXCLUDED FROM THE MEASUREMENTS OF EXTRA CAPACITY BECAUSE NO INTERRUPTIONS HAVE OCCURRED FOR AT LEAST THREE YEARS.[48] WHAT IS YOUR RESPONSE?

A. Ms. Heppenstall also disagreed with my position, and I have already addressed Mr. Higgins' position in responding to Ms. Heppenstall. I incorporate my response to Ms. Heppenstall by reference and will not reiterate the position.

Q. ON PAGE 16 OF YOUR DIRECT TESTIMONY, YOU NOTED THAT THE SYSTEM-WIDE MAXIMUM DAY AND MAXIMUM HOUR BASE-EXTRA CAPACITY FACTORS REFLECTED IN PAWC'S WATER CCOS STUDY WERE OUTDATED AND RECOMMENDED ALTERNATIVES. DOES MR. HIGGINS AGREE WITH THESE ALTERNATIVES?

A. Mr. Higgins agrees with my alternative maximum day factor. He does not agree with my alternative maximum hour factor, and recommends an alternative.[49]

Q. WHAT DOES MR. HIGGINS RECOMMEND CONCERNING THE MAXIMUM HOUR FACTOR?

A. While Mr. Higgins agrees that the 2.1 maximum hour factor utilized by PAWC is outdated, he recommends utilizing a maximum hour factor of 1.8 rather than the 1.5 factor I have proposed. Mr. Higgins claims that the 1.8 factor scales the maximum hour factor in proportion to my recommended adjustment to the maximum day factor which he has accepted.[50]

[48] OSBA Statement No. 1-R, p. 8, lines 1-14.
[49] OSBA Statement No. 1-R, p. 10, lines 13-18; p. 13, lines 9-17.
[50] OSBA Statement No. 1-R, p. 13, lines 9-17.

Q. DO YOU AGREE WITH MR. HIGGINS' PROPOSED MAXIMUM HOUR EXTRA CAPACITY FACTOR?

A. No. Mr. Higgins' recommendation assumes that maximum day and maximum hour factors are proportionately related. He has made no such demonstration. My recommended maximum hour factor of 1.5 is based on the maximum day to maximum hour ratio actually experienced by a water utility with a service territory in close proximity to PAWC's service territory.

Q. WHAT IS MR. HIGGINS' RECOMMENDATION WITH RESPECT TO HOW THE ACT 11 ALLOCATION APPROVED BY THE COMMISSION SHOULD BE ALLOCATED TO THE VARIOUS WATER CUSTOMER CLASSES?

A. Mr. Higgins recommends that the Act 11 reallocation approved by the Commission in this proceeding be allocated to water customer classes utilizing the approach offered in PAWC's response to OSBA03-001.[51] Under this approach, the Act 11 reallocation would be based on the corresponding wastewater classes that gives rise to the Act 11 shortfall.

Q. WHAT IS YOUR RESPONSE TO THIS RECOMMENDATION?

A. Mr. Higgins is recommending the Act 11 reallocation approach recommended by PAWC. I have previously addressed PAWC's approach in responding to Mr. Rea, and shown why this approach should be rejected. PAWC's water customer classes have little, if any, responsibility for the Act 11 wastewater revenue requirement being reallocated to water customers.

[51] OSBA Statement No. 1-R, p. 16, lines 1-5.

Q. MR. HIGGINS HAS PRESENTED AN UPDATED WATER CCOS STUDY AND REVENUE ALLOCATION WHICH HE CLAIMS REFLECTS HIS CORRECTIONS AND RECOMMENDATIONS TO THE COMPANY'S STUDY.[52] DO YOU AGREE WITH HIS CCOS STUDY AND REVENUE ALLOCATION?

A. No. Mr. Higgins' CCOS study fails to include interruptible usage, inappropriately reflects a direct assignment of AMP costs and customer assistance-related administrative costs to the Residential class, and utilizes an unsupported systemwide maximum hour extra capacity factor. Therefore, Mr. Higgins' CCOS study, and revenue allocation which is based on his CCOS study, should be rejected.

VIII. CLEVELAND CLIFFS STEEL WITNESS: RICHARD A. BAUDINO

Q. MR. BAUDINO RECOMMENDS THAT THE ACT 11 ASSIGNMENT OF THE WASTEWATER SUBSIDY TO WATER CUSTOMERS BE BASED ON THE COST OF SERVICE PERCENTAGES FROM PAWC'S WATER CCOS STUDY.[53] DO YOU AGREE WITH THIS RECOMMENDATION?

A. Not entirely. The wastewater Act 11 reallocation should be based on percentages from the CCOS study approved by the Commission in this proceeding. The CCOS study approved in this proceeding should be the study I sponsor rather than the study sponsored by the Company.

[52] OSBA Statement No. 1-R, p. 16, lines 8-12.
[53] Cleveland Cliffs Steel Statement No. 1-R, p. 3, lines 8-10.

Q. LIKE PAWC AND THE OSBA, MR. BAUDINO DISAGREES WITH YOUR RECOMMENDATION THAT INTERRUPTIBLE INDUSTRIAL CUSTOMERS SHOULD BE INCLUDED IN THE EXTRA CAPACITY FACTOR ALLOCATIONS. WHAT IS YOUR RESPONSE?

A. I have previously addressed this issue in responding to PAWC witness Ms. Heppenstall, and for the reasons presented in responding to Ms. Heppenstall, continue to recommend that interruptible Industrial customers be included in the extra capacity factor allocations.

Q. MR. BAUDINO RECOMMENDS THAT THE COMMISSION REJECT YOUR LOWER SYSTEM-WIDE MAXIMUM DAY AND MAXIMUM HOUR EXTRA CAPACITY FACTORS BECAUSE THEY ARE BASED ON DATA FROM YORK WATER.[54] WHAT IS YOUR RESPONSE?

A. First, I have not proposed the use of a system-wide maximum day extra capacity factor based on data from York Water. I have based my maximum day recommendation on PAWC's actual experience over the last 12 years. With respect to the maximum hour extra capacity factor, the factor used by PAWC is based on an analysis that is 35 years old. As shown on Exhibit 12-A, Schedule G, PAWC's maximum day extra capacity factor has steadily declined since 1987, and my recommended maximum hour factor reflects similar declines.

[54] Cleveland Cliffs Steel Statement No. 1-R, p. 6, line 21 – p. 7, line 2.

IX. PAWLUG WITNESS: BILLIE S. LACONTE

Q. MS. LACONTE DISAGREES WITH YOUR PROPOSED ADJUSTMENT TO THE MAXIMUM DAY AND MAXIMUM HOUR EXTRA CAPACITY FACTOR UTILIZED IN PAWC'S WATER CCOS STUDY.[55] WHAT IS YOUR RESPONSE?

A. Although Ms. LaConte concedes that my proposed maximum day factor is reflective of more current data, she disagrees with my proposed maximum day and maximum hour factors for reasons similar to those presented by PAWC witness Ms. Heppenstall and OSBA witness Mr. Higgins. I have previously addressed the positions expressed by Ms. Heppenstall and Mr. Higgins on this issue, and for the reasons presented in responding to Ms. Heppenstall and Mr. Higgins, my maximum day and maximum hour extra capacity factors should be adopted.

Q. LIKE PAWC WITNESS MS. HEPPENSTALL, OSBA WITNESS MR. HIGGINS, AND CLEVELAND CLIFFS STEEL WITNESS MR. BAUDINO, MS. LACONTE DOES NOT AGREE WITH YOUR RECOMMENDATION TO INCLUDE INTERRUPTIBLE INDUSTRIAL USAGE IN THE DEVELOPMENT OF EXTRA CAPACITY FACTORS.[56] DOES MS. LACONTE OFFER ANY REASONS TO REJECT YOUR RECOMMENDATION NOT PREVIOUSLY PROVIDED BY OTHER WITNESSES?

A. No. However, Ms. LaConte does recognize that in the most recent Philadelphia Gas Works ("PGW") rate case, the Commission found that interruptible demand should be

[55] PAWLUG Statement No. 1-R, p. 3, lines 17-20.
[56] PAWLUG Statement No. 1-R, p. 7, lines 1-7.

included with the firm industrial demand in PGW's CCOS study based on a record showing no interruptions over 20 years.[57]

Q. MS. LACONTE RECOMMENDS THAT THE COMMISSION REJECT YOUR PROPOSAL TO REQUIRE PAWC TO INCLUDE RIDER DIS AND RIDER DRS AS SEPARATE CUSTOMERS IN PAWC'S CCOS STUDY IN THE NEXT BASE RATE PROCEEDING.[58] HAVE ANY OTHER WITNESSES ALSO RECOMMENDED THAT THIS PROPOSAL BE REJECTED?

A. Yes. Ms. Heppenstall also made the recommendation, and Ms. LaConte essentially presents the same arguments as Ms. Heppenstall. Since I have previously responded to Ms. Heppenstall's recommendation, there is no need to separately respond to Ms. LaConte's recommendation.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does. I reserve the right to update my testimony based on additional information received in the course of discovery.

[57] PAWLUG Statement No. 1-R, p. 7, lines 8-16.
[58] PAWLUG Statement No. 1-R, p. 8, lines 18-21.

Pennsylvania-American Water Company

Response to Distribution Rates – Statement of Policy
Proposed Revenue Stabilization Mechanism
Summary of Positions

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa. C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

The RDM better aligns actual revenue collection with authorized revenues for all customer classes. The RDM specifically treats fixed and variable costs separately by customer class using rate design concepts associated with Straight-Fixed Variable ("SFV") pricing. The RDM is calculated and administered separately for residential and non-residential customer classes and treats fixed cost and variable cost separately so that fixed cost recovery is aligned with approved fixed costs (per customer) and variable cost recovery is aligned with approved variable costs (per hundred gallons of water). The recovery mechanism is on a volumetric basis.

Mierzwa Direct: The RDM provides for the recovery of fixed costs on a volumetric basis; therefore, it does not align utility revenues with cost causation principles as to both fixed and variable costs.

Company Response: *As explained in the direct testimony of Charles Rea, PAWC Statement No. 10, the RDM cost components continue to reflect cost of service allocation as determined by the Company, which take into account cost causation principles. Further, although the costs are recovered on a volumetric basis, the surcharge or credit takes into account the Company's fixed costs as part of the RDM calculation.*

Mierzwa Surrebuttal: The Company concedes that fixed costs will be recovered on a volumetric basis under the RDM and, therefore, the RDM does not align utility revenues with cost causation principles as to both fixed and variable costs.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

The Company's proposed RDM is not expected to impact the fixed utility's capacity utilization.

Mierzwa Direct: The proposed RDM is unlikely to impact the fixed utility's capacity utilization.

Company Response: *N/A*

Mierzwa Surrebuttal: N/A

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

The Company's proposed RDM directly reflects changing consumption levels in variable cost recovery. As consumption levels increase, the Company's variable cost recovery increases, but only by the approved level of production cost per unit delivered or billed. The opposite is true whereas consumption levels decrease, the Company's variable cost recovery decreases, but only by the approved level of production cost per unit delivered or billed.

Mierzwa Direct: The RDM adjustment or "true-up" mechanism creates the anomaly where customers see rate increases when they reduce consumption and rate decreases when they increase consumption.

Company Response: *It is not clear what Mr. Mierzwa's concern is with the alleged anomaly he cites. This is a symmetrical mechanism that considers and stabilizes the impacts of changing consumption levels for both customers and the Company.*

Mierzwa Surrebuttal: The proposed RDM provides a disincentive to ratepayers to undertake water conservation efforts because they would be required to pay for water they did not use. If a customer reduces their consumption in an attempt to reduce their bill, but the reduction is less than the reduction in usage of all other customers, the RDM will take those savings away from the customer, and in fact, the customer's bill will be higher.

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

The proposed RDM would apply to both water and wastewater service with separate tariffs and separate recovery/credit mechanisms for residential and nonresidential customers. The proposed RDM will not affect interclass or intraclass cost shifting between residential and non-residential customer classes.

Mierzwa Direct: OCA witness Roger Colton explains that, with respect to interclass cost shifting, the RDM could shift revenue within the residential class from customers who are financially able to invest in water conservation measures to low-income customers who are not financially able to make those same investments.

Company Response: *Please see the rebuttal testimony of Charles Rea, PAWC Statement No. 10-R, pp. 74-75.*

Mierzwa Surrebuttal: Please see the Surrebuttal Testimony of Roger Colton, OCA Statement 5SR, pp. 11-13.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

The proposed RDM reduces the throughput incentive, which gives the Company an incentive to collect more revenue when customers increase consumption. By connecting variable cost recovery directly to approved levels of production cost but not to fixed cost, the RDM removes this incentive from the Company and therefore eliminates any disincentives for the promotion of water efficiency efforts.

Mierzwa Direct: The Company has not demonstrated that the lack of an RDM has been a major obstacle for the promotion of water conservation and efficiency. The Company has been able to implement methods to improve water efficiency without an RDM. Moreover, there has been a long-term trend of per-customer declining water consumption (i.e. improved water efficiency use) without an RDM.

Company Response: *While the Company has been able to improve water efficiency in the past, the bulk of these efficiencies have been achieved through supply-side practices (as discussed by Mr. Runzer and Mr. Aiton in their direct testimonies). To encourage additional demand-side strategies beyond those currently employed by the Company, it is critical to reduce the throughput incentive for the Company to sell more water.*

Mierzwa Surrebuttal: The Company has experienced a trend in declining per-customer water consumption without any RDM or revenue decoupling mechanism. Although there is some disagreement about how to properly quantify the impact of declining water usage on 2025 FPFTY test year revenue at current rates, both PAWC and the OCA have reflected declining per-customer water usage in projecting 2025 water sales and associated revenue. Per-customer water usage is declining without the RDM. Consequently, there is no compelling need for an RDM to promote water conservation.

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

See response to item (5). The proposed mechanism encourages water efficiency by reducing the throughput incentive. In addition, if customers employ efficiency measures, those measures will far outweigh any surcharges that may result from the proposed RDM.

Mierzwa Direct: The proposed RDM could provide a disincentive to ratepayers to undertake water conservation efforts because they would be required to pay for water they did not use. Revenue savings to individual customers that would ordinarily be achieved through usage reductions would be offset by surcharges to all customers under the RDM. Hence, if customers save money on their monthly water bill due to efficient consumption, customers will be forced to share their bill savings with the utility. Moreover, with the high and apparently never-ending rate increases that PAWC has implemented and will apparently continue to seek, customers are already incented to conserve water without a new RDM surcharge.

Cline: Q. WILL THE RDM ENCOURAGE WATER EFFICIENCY AND CONSERVATION FROM CUSTOMERS?

A. Not at all. From the perspective of a customer, the RDM will appear as a random surcharge or credit on their bill that is completely removed from their own usage. Specifically, by calculating the RDM based on a total class-wide (or multiple classes in the case of non-residential customers) basis, a single customer, particularly low-usage customers, will have zero ability to affect whether they are assessed an additional surcharge or a credit on their bill in the subsequent year. Therefore, it is the bill based on base charges that would encourage water efficiency and conservation. The only thing the RDM provides customers is the worry that the next year's RDM would erode the savings derived from conservation efforts.

Company Response: *Customers will continue to be encouraged to engage in water efficiency measures. Regardless of what the volumetric rate happens to be, customers who use less water will have lower bills. See the rebuttal testimony of Charles Rea, PAWC Statement No. 10-R, p. 72 for further discussion.*

Mierzwa Surrebuttal: See the response to Item 3.

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

The proposed RDM does not have any specific impacts on low-income customers that do not apply to residential customers generally. Because the recovery mechanism is volumetric in nature, lower-use low-income customers will not be adversely impacted.

Mierzwa Direct: OCA witness Colton addresses how the RDM could affirmatively harm low- income customers that do not have the financial means to pursue investments in water conservation measures.

Cline: Q. COULD THE RDM NEGATIVELY IMPACT LOW-INCOME CUSTOMERS?

A. Yes. As I stated above, there are potentially many customers, who cannot

themselves enact cost-saving water conservation measures, whose ability to pay may be compromised as their rates increase to address conservation efforts undertaken by more affluent customers or from more low-income customers enrolling in the BDP than was originally anticipated.

Company Response: *Mr. Mierzwa and Mr. Cline have provided no evidence that low-income customers will be harmed or negatively impacted by the RDM. RDM credits or surcharges will be subject to discounts through the Company's BDP because it is applied after the BDP discount is applied to the bill, which further dampens the effects on lower income customers. In other words, a customer eligible for the BDP will have the discount applied to all base charges (Service Charge per Month and Consumption Charge) before the RDM would be applied. This will result in a reduced RDM charge (in dollars) compared to the RDM absent the BDP.*

Mierzwa Surrebuttal: Please see the direct testimony of OCA witness Roger Colton, OCA Statement 5, pp. 79-90.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

The proposed RDM will, by definition, improve rate stability. In years where revenues are relatively low relative to SFV pricing and fixed costs are under recovered, rates would increase slightly in the next year to bring actual revenues back up. The opposite would be true in years where usage resulted in revenues that were higher than that implied by SFV pricing, which represents a scenario where fixed costs are over-recovered. In higher revenue years, the RDM will reduce rates which would offset higher revenues from the year before and "smooth out" revenues over the longer term.

Mierzwa Direct: Under the current regulatory standard in Pennsylvania, base rate cost under and over recoveries are currently not tracked and are not eligible for recovery in future base rate proceedings. The proposed RDM would add another surcharge to customers' bills and would not reduce the frequency of PAWC base rate or DSIC rate filings. Thus, it does not appear that a new RDM surcharge would improve rate stability. In contrast, under traditional cost-of-service ratemaking, if a utility experiences sales reductions and under-recovery, it cannot simply achieve the same result as an RDM true-up by filing another base rate case with adjusted sales forecasts. When a utility files a general rate increase, all relevant information is reviewed to determine just and reasonable rates, not just sales forecasts. Traditional ratemaking produces rate stability.

Cline: Q. COULD THE RDM RESULT IN RATE INSTABILITY AND RATE CONFUSION FOR CUSTOMERS?

A. Yes. As I described above, the Company's proposal to determine the credit or surcharge based on a total class basis result in customers being completely unaware and unable to control or predict whether they will be receiving a surcharge or credit

from the RDM for the following year. Additionally, the entire concept of the RDM introduces rate confusion for customers. Essentially, PAWC is telling customers that it will charge one set of rates from January through March, but that in April their rates will be adjusted based on the comparison of their revenues (but not just theirs, the revenue from all of the other customers as well) from the previous year to the revenues generated by some other rate that was not included or mentioned on their bill at all.

Company Response: *As discussed above, the RDM smooths out revenues over the long term, improving rate stability for both the Company and the customer. Further, all else being equal, it would be inefficient to file a rate case for the sole purpose of reconciling variations in revenue. As discussed on page 99 of the direct testimony of Charles Rea, PAWC Statement No. 10, "[a]n analysis of the historical data shows that in any given year water revenues at the Company's proposed rates in this proceeding can swing from the projected amount by as much as plus or minus approximately $11.1 million." Alternative regulatory mechanisms such as the RDM have been recognized in the regulatory community as effective means to address policy concerns recognized by NARUC after a recognition that traditional cost of service ratemaking no longer adequately addresses current challenges. See the direct testimony of Charles Rea, PAWC Statement No. 10, pp. 103-105.*

Mierzwa Surrebuttal: Please see the direct testimony of Jerome D. Mierzwa, OCA Statement No. 4, pp. 60-61, which discusses the regulatory community's (West Virginia Public Service Commission) rejection of a PAWC revenue decoupling mechanism similar to the RDM proposed by PAWC in this proceeding.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

Weather will still have an impact on revenues but only to the extent that variable costs are impacted. Under the proposed RDM, volatility of utility revenue and customer bills would be reduced over the long term. Increases in fixed cost recovery revenue due to abnormal weather variations (*e.g.*, drought conditions) would be returned to customers in the following year, and reductions in fixed cost recovery due to abnormal weather variations (*e.g.*, excessive rainfall) would be collected from customers in the following year.

Mierzwa Direct: The RDM adjustment or true-up mechanism creates the anomaly where customers see rate increases when they reduce consumption due to weather variations and rate decreases when they increase consumption due to weather variations.

Company Response: *Again, it is not clear what Mr. Mierzwa's concern is with the alleged anomaly he refers to. This is a symmetrical mechanism that stabilizes the impacts of weather for both customers and the Company.*

Mierzwa Surrebuttal: See the response to Item 3.

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

To the extent that future rate cases are driven by lower-than-expected usage, the RDM likely would result in fewer rate cases, or at least rate cases seeking lower rate increases. However, the RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

Mierzwa Direct: The RDM will have no impact on the magnitude of base rate increases requested by the Company in the future. The RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.

Company Response: *It is true that there may be various factors that contribute to rate case timing. As noted above, the RDM could result in fewer rate cases, or at least rate cases seeking lower rate increases, to the extent that future rate cases are driven by lower-than-expected usage. See also response to #8 above.*

Mierzwa Surrebuttal: As explained on p. 98, lines 19-23, of Mr. Rea's direct testimony, PAWC Statement No. 10, at proposed rates in this proceeding, water service revenues will be expected to decline by approximately $5.8 million per year based on the current trends in declining usage. In this proceeding, PAWC is requesting a water revenue increase of nearly $200 million. Clearly, usage reductions are not a significant factor in PAWC's determinations to file a rate case, and adoption of the RDM is unlikely to result in fewer rate cases, or significantly impact the amount of the rate increases requested by PAWC in is rate cases.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa. C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa. C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa. C.S. § 1353 (relating to distribution system improvement charge).

The Company's proposed RDM does not interact with other revenue sources.

Mierzwa Direct: The RDM will interact with the Company's DSIC because the DSIC is a percentage applied to the total bill and the RDM will impact a customer's total bill.

Company Response: *The RDM and DISC would each be applied to the total bill prior to the application of either surcharge.*

Mierzwa Surrebuttal: With this clarification, the proposed RDM would not interact with other revenue sources.

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

The RDM proposal includes consumer protections through the formal reconciliation process which includes audits and external stakeholder review. Tariff administration of the mechanism will contain consumer protections to make sure that the appropriate levels of revenue are being collected. Customers still can control their bill through controlling usage because the standard rate design still applies.

Mierzwa Direct: The proposed RDM does not include appropriate consumer protections and should be rejected for the reasons discussed in my testimony and the testimony of OCA witness Colton.

Company Response: *In addition to the protections previously described, it is also important to specifically note that the RDM is a symmetrical mechanism that may result in a surcharge, or a credit to customers – an additional protection to ensure customers don't only get charged in the event of an under-collection but receive the benefits of an over-collection of revenues.*

Mierzwa Surrebuttal: The proposed RDM does not include appropriate consumer protections and should be rejected for the reasons discussed in my direct and this surrebuttal testimony, and the direct and surrebuttal testimony of OCA witness Colton.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

The Company does not anticipate that there would be any issues related to customer confusion over the proposed RDM. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill.

Mierzwa Direct: PAWC has not provided any evidence that the proposed RDM will be understandable to customers. When combined with the rate changes that occur under PAWC's DSIC and potentially the proposed ECIC, significant customer confusion is likely.

Cline: See response to #8 above.

Company Response: *The Company does not believe that the proposed RDM will cause*

rate confusion for customers. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill.

Mierzwa Surrebuttal: The RDM calculation formula and components are identified and discussed on pages 93 and 91-92, respectively, of Mr. Rea's direct testimony. Clearly, as shown there, the RDM calculation is not a simple calculation.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

The proposed RDM will support improvements in utility reliability by permitting the Company to more reliably recover fixed costs that can't be avoided by customers using less water, and will therefore enhance the Company's ability to prudently invest in and manage the business.

Mierzwa Direct: The proposed RDM does not provide a direct incentive to increase the safety and reliability of the PAWC system.

Company Response: *The RDM gives the Company a tool to reliably collect the revenues necessary to invest in the safety and reliability of the system more effectively through more consistent planning and deployment of the most efficient resources.*

Mierzwa Surrebuttal: The proposed RDM does not provide a direct incentive to increase the safety and reliability of the PAWC system.

Exhibit RDC-1: Summary Vitae Roger Colton.		127

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger D. Colton. My business address is 34 Warwick Road, Belmont, MA.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

A. I am owner of the firm of Fisher Sheehan & Colton, Public Finance and General Economics of Belmont, Massachusetts. In that capacity, I provide technical assistance to a variety of federal and state agencies, consumer organizations and public utilities on rate and customer service issues involving water/sewer, natural gas and electric utilities.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of the Office of Consumer Advocate.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND.

A. I work primarily on low-income utility issues. This involves regulatory work on rate and customer service issues, as well as research into low-income usage, payment patterns, and affordability programs. At present, I am working on various projects in the states of Connecticut, Maryland, Pennsylvania, Ohio, Michigan, Wisconsin and Illinois, as well as in the Canadian province of Nova Scotia. My clients include state agencies (e.g., Pennsylvania Office of Consumer Advocate, Maryland Office of People's Counsel, Connecticut Office of Consumers Counsel), federal agencies (e.g., the U.S. Department of Health and Human Services), community-based organizations (e.g., Cleveland Legal Aid Society, Legal Action of Chicago, Sierra Club), and private utilities (e.g., Toledo Water, Entergy Services, Xcel Energy d/b/a Public Service of Colorado). In addition to state-specific and utility-specific work, I engage in national work throughout the United States. For example, in 2020, I represented a coalition of major national consumer

organizations to comment on the Environmental Protection Agency's proposed framework by which to judge community financial capability. I have recently completed a project with the Natural Resources Defense Council to develop a tool by which to assess the financial impact of differing types of low-income bill assistance. In 2020, I completed a study of water affordability in twelve U.S. cities for the London-based newspaper, The Guardian. In 2021, I authored a Water Affordability Plan for the City of Toledo (OH) under contract with the City. I continue to be of counsel to the National Coalition for Legislation on Affordable Water (NCLA-Water). A brief description of my professional background is provided in Exhibit RDC-1.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A. After receiving my undergraduate degree in 1975 (Iowa State University), I obtained further training in both law and economics. I received my law degree in 1981 (University of Florida). I received my Master's Degree (Regulatory Economics) from the MacGregor School (Antioch University) in 1993.

Q. HAVE YOU EVER PUBLISHED ON PUBLIC UTILITY REGULATORY ISSUES?

A. Yes. I have authored three books and more than 80 articles in scholarly and trade journals, primarily on low-income utility and housing issues. I have authored more than 200 technical reports for various clients on energy, water, telecommunications and other associated low-income utility issues. A summary of my publications is included in Exhibit RDC-1.

Q. HAVE YOU EVER TESTIFIED BEFORE THIS OR OTHER UTILITY COMMISSIONS?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("PUC" or "Commission") on numerous occasions regarding utility issues affecting low-income customers and customer service. My testimony has specifically included testimony in various proceedings involving low-income issues relating to Pennsylvania American Water Company (PAWC), Pittsburgh Water and Sewer Authority (PWSA), and Aqua Pennsylvania, Inc. (Aqua PA). In addition to this PUC testimony, I have testified on issues related to customer service and low-income bill affordability for the City of Philadelphia's Public Advocate in each rate case involving the Philadelphia Water Department since 1990. I have also testified in regulatory proceedings in 43 states and various Canadian provinces on a wide range of utility issues. A list of the jurisdictions in which I have testified is listed in Exhibit RDC-1.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR DIRECT TESTIMONY.

A. The purpose of my Direct Testimony is to review the impact of PAWC rates on low-income customers. I will further review the reasonableness of the design and implementation of the low-income bill payment assistance programs offered by PAWC. More specifically, I will examine:

- The reasonableness of PAWC's "affordability analysis" presented by Company witness Rea;
- A series of recommendations regarding the appropriate PAWC rate response to the unaffordability of water and wastewater bills;

- The adverse impact that the proposed increases in the water and wastewater customer charges will have on low-income customers;
- The adverse impact that PAWC's proposed Revenue Decoupling Mechanism (RDM) will have on low-income customers;
- The adverse impact that PAWC's proposed Environmental Compliance Investment Charge (ECIC) will have on low-income customers;
- The adverse impact that PAWC's proposed "winter averaging" mechanism will have on low-income customers;
- The reasonableness of PAWC's request to place the Company's allowed Return on Equity (ROE) at the high end of the ROE range to compensate PAWC its claims of exemplary management; and
- Modifications that should reasonably be made to PAWC's proposed recovery of costs associated with implementation of the Company's Arrearage Management Program (AMP).

Q. PLEASE SUMMARIZE THE RECOMMENDATIONS YOU MAKE FOR PAWC.

A. Based on the data and discussion presented throughout my Direct Testimony, I make the following findings and recommendations:

1. I find that Mr. Rea's "enterprise level" affordability analysis is fatally flawed and recommend that it not be relied upon to assess the impact of PAWC rates on the affordability of rates to the Company's residential customers.

2. I recommend that the concerns I identify with respect to the unaffordability of PAWC rates should be considered in the balancing of consumer and investor interests in setting a return on equity, even outside the consideration of the specific proposals I advance with respect to PAWC's Bill Discount Program (BDP), AMP, and other specific low-income initiatives.

3. I recommend that the tiered discounts offered by PAWC should be increased to reflect the discounts set forth in Table 10 of my Direct Testimony.

4. I recommend that PAWC's proposal to adopt a "fourth tier" to its low-income discounts should be approved, with the modest increase to the discount that I present in Table 10 of my Direct Testimony.

5. I recommend that PAWC be required to make personal contact with any Confirmed Low-Income customer facing the imminent disconnection of service for nonpayment. At the time of that personal contact, the Confirmed Low-Income customer should be informed of the customer's right to enroll in the BDP *and* enroll in the AMP as an alternative to the disconnection of service for nonpayment. Disconnections to these customers should be frozen until PAWC has received a response to the offer of BDP/AMP participation.

6. I recommend that customers enrolled in the BDP in the future should also be enrolled in the Company's Arrearage Management Program. Moreover, the Company should not be disconnecting customers that it not only knows to be low-income, but knows sufficient information to be able to identify which BDP tier they would fall into, without first attempting to enroll these customers in AMP.

7. I recommend that PAWC be directed to enroll a customer in its BDP and AMP where doing so would be more favorable to a customer and only offer a payment arrangement if a customer rejects BDP and AMP enrollment, after being informed of the benefits of the programs.

8. I recommend that PAWC be directed to regularly report to its Low-income Advisory Group (LIAG) on the progress of the review of options for speech pattern and linguistic analysis, and how that review is incorporating such options into potential low-income outreach. PAWC should seek regular LIAG input into how such analysis can be incorporated and utilized.

9. I recommend that PAWC increase the maximum income eligibility for its hardship grants to 250% of Federal Poverty Level.

10. I recommend that PAWC adopt a process that would allow multiple hardship grants in a given twelve month period, so long as those grants do not exceed the annual maximum benefit amount of $500.

11. I recommend that PAWC should develop a written "universal service plan" and file that plan with the PUC's Bureau of Consumer Services. That written plan should include not only a description of each low-income program component PAWC offers, but should also identify: (1) the objectives which PAWC is seeking to accomplish through its various program components (including but not limited to participation levels); (2) the metrics by which PAWC will seek to measure whether those objectives are being accomplished; (3) the manner in which, if at all, the differing program components interact with each other; and (4) the evaluation process by which PAWC proposes to determine whether its objectives are being met and what remedies the Company will pursue in the event they are not. The plan should further include: (5) the qualifications for each program; (6)

the proposed means of outreach and intake; (7) the current and projected participation levels; and (8) the expected annual budgets. The plan should be subject to review and comment not only by BCS, but by other stakeholders who request to be involved in a review process.

12. I recommend that the customer charge recommendations of OCA witness Mierzwa (OCA Statement 4) be adopted.

13. I recommend that PAWC be directed to develop and submit to BCS, no later than six months after a final order in this proceeding, a plan through which the Company will use the federal WAP agencies, as well as the natural gas and/or electric LIURP agencies, as partners through which to deliver water conservation investments to low-income customers.

14. I recommend that the recommendation of OCA witness Mierzwa (OCA Statement 4) and OCA witness Hoover (OCA Statement 1) be adopted with respect to PAWC's proposed RDM and that the proposed RDM should be denied. If the RDM is not denied in its entirety, the RDM should exempt both BDP revenues and BDP customers from its application. Also, if the RDM is approved, it should be made subject to the same low-income discounts that all other PAWC volumetric charges are subject to. Finally, if the RDM *is* approved, it should not be used to collect revenue reductions attributable to either the BDP or the AMP.

15. I recommend that the testimony of OCA witness Mierzwa (OCA Statement 4) and OCA witness Hoover (OCA Statement 1) be adopted with respect to the proposed ECIC: the ECIC should be rejected. In the alternative, if the ECIC is approved, I recommend that it be made subject to the same low-income bill discounts that PAWC's other volumetric charges are subject to.

16. I recommend that the winter averaging proposal of PAWC be disapproved. The recommendation of OCA witness Mierzwa (OCA Statement 4) should instead be adopted. In the alternative, should the winter averaging proposal be adopted, it should be made subject to the same low-income discounts that other PAWC volumetric charges are made subject to.

17. I recommend that the return on equity recommendation of OCA witness David Garrett (OCA Statement 3) should be adopted, and that PAWC should not be rewarded with a higher return based on its management performance.

18. With respect to customer satisfaction surveys, I recommend that the population targeted by PAWC's "targeted surveys" be expanded to include: (1) customers seeking to enroll in the BDP and/or AMP; (2) customers seeking to enroll in a deferred payment arrangement; (3) customers expressing a difficult paying, or an inability-to-pay their bills in a full and timely manner; and (4) customers responding to the pending (or already completed) disconnection of service for nonpayment. The results of these targeted surveys should be compiled, provided to the PAWC LIAG at each quarterly meeting, and subject to discussion at LIAG

should a member of the group have questions or identify issues flowing from the targeted surveys.

19. I recommend that the total AMP credit cost recovery be reduced to $214,728 based on (1) known and measurable data for historic AMP credits versus the unreasonable assumption that 100% of the possible AMP credits will be provided each year and (2) eliminating double-recovery of dollars added to uncollectibles to reflect AMP credits where those dollars are already historically included in uncollectibles for the BDP.

Part 1. The Continuing Unaffordability of PAWC Rates.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. I will explain below how the affordability analysis presented by PAWC witness Rea is inadequate to support the conclusion he reached that PAWC bills are affordable when viewed from both the community level and the household level.

A. PAWC's "Enterprise Level" Affordability Analysis.

Q. PLEASE EXPLAIN THE "ENTERPRISE LEVEL" AFFORDABILITY ANALYSIS PRESENTED BY PAWC WITNESS REA.

A. PAWC Witness Rea explains his Enterprise Level affordability analysis as follows:

> The Enterprise-Level analysis of affordability for water and wastewater service is a historical comparison of average monthly bills for PAWC residential customers to household income for the Company's residential customers. The metric used to describe affordability is the Bill-to-Income (BTI) Ratio, which is defined as annual water bills divided by estimated annual household income. This view looks at average residential monthly bills for all customers over time compared to MHI [Median Household Income] for the Company's residential customer base.

(PAWC St. 10, at 6). There are two elements to Mr. Rea's analysis that I will address. First, I will address whether it is meaningful to use Median Household Income (MHI) to address affordability issues. Second, I will address whether it is

meaningful to use Mr. Rea's "Bill-to-Income" (BTI) Ratio to address affordability issues.

Q. IS MR. REA'S "ENTERPRISE LEVEL" ANALYSIS BASED ON MEDIAN INCOME SUPPORTED BY THE ACADEMIC LITERATURE HE CITES IN HIS DIRECT TESTIMONY?

A. No. In fact, the academic article cited by Mr. Rea himself in his Direct Testimony concluded that Mr. Rea's approach was wrong.[1] That article stated:

> The conventional approach measures affordability as a community's average cost of water and sewer service as a percentage of that community's median household income (%MHI), with values <2.0 or 2.5%—4.0 or 4.5% combined—deemed "affordable." Originally intended as a means of gauging a community's overall financial capability for purposes of negotiating regulatory compliance, this standard has been *widely misapplied to household affordability*. As a result, evaluations of household water and sewer utility affordability *are inaccurate at best and misleading at worst*.

(Teodoro, at 13) (emphasis added) (internal citations omitted). (OCA-06-031, Attachment 1). An article finding that use of Median Household Income involves "misapplying" that standard, thus yielding results that "are inaccurate at best and misleading at worst," can hardly be said to be academic research that supports Mr. Rea's use of precisely that standard.

[1] PAWC Statement 10, at footnote 1, citing Teodoro (January 2018). Measuring Household Affordability for Water and Sewer Utilities, Journal of the AWWA. 110:13-24.

Q. IS IT APPROPRIATE TO USE THE MEDIAN HOUSEHOLD INCOME OF HOMEOWNERS IN PARTICULAR TO CONSIDER THE AFFORDABILITY OF WATER OVER A PERIOD OF YEARS?

A. It is particularly inappropriate to use the Median Household Income of homeowners (MHI-HO) as a basis for assessing the affordability of water service over time. I reach that conclusion based on several lines of analysis.

First, when one considers the growth in MHI-HO over time, it would also be necessary to consider *why* MHI-HO is growing as it is and whether such growth represents a real improvement in financial circumstances. In fact, the growth in MHI-HO frequently does not represent an improvement in financial circumstances, but instead represents a growth in the underlying cost of housing. As a general rule, becoming a homeowner requires a household to have income that is sufficiently high so that the home purchase price is no more than 30% of income. To the extent that housing values in a particular jurisdiction sharply increase, therefore, it requires an ever-increasing income for a household to afford to become a homeowner. The question is not merely one of the "affordability" of housing. The question is one of gaining access to the funds necessary to purchase the home with which to begin.

I have examined the zip codes that comprise the PAWC service territory. In doing so, I looked at both the MHI-HO for each year from 2012 through 2021 and the housing value by year for the same time period. I calculated the growth in MHI-HO along with the growth in housing values. I found that, while not true in every zip code, a substantial growth in housing values from 2012 to 2021 was matched by a corresponding substantial growth in the Median Household Income for homeowners in that same time period (and

vice versa). I found further that high housing values in 2021 were matched by a corresponding growth in Median Household Income for homeowners from 2012 to 2021. The same conclusion is bolstered by an examination of the changes in Median Household Income for homeowners and for renters in the PAWC service territory as well.

In nearly 160 of the 304 PAWC zip codes for which the Census reported housing value data from 2012 through 2021, housing values increased by more than $25,000 from 2012 to 2021. In nearly 60 zip codes, housing values increased by more than $50,000 in that same time period.

In sum, an increase in the MHI-HO is not an indicator of improved financial circumstances for PAWC customers as whole. It instead simply indicates that, because of sharply increasing housing price, home ownership is becoming increasingly limited to households with higher and higher incomes. So while it may be true that PAWC customers who are homeowners have higher incomes, it is not true that PAWC customers who are homeowners represent the income trend for PAWC customers as a whole.

Q. DO YOU HAVE A SECOND CONCERN ABOUT USING MEDIAN HOUSEHOLD INCOME AS AN INDICATOR OF THE AFFORDABILITY OF WATER IN A COMMUNITY?

A. Yes. Over time, Median Household Income for homeowners becomes less and less representative of the total population of households in a community. I examined the change in Median Household Incomes for homeowners in the zip codes comprising the PAWC service territory for 2012 through 2021, along with the change in Median Household Incomes for renters in those same zip codes in that same time period. The

results are set forth in Table 1 below. The data shows, for example, that while MHI for homeowners increased by more than $20,000 in 112 PAWC zip codes, MHI for renters increased by more than $20,000 in only 45 zip codes from 2012 to 2021. In contrast, while MHI for homeowners either decreased, or increased by less than $10,000, in 69 of PAWC's zip codes, MHI decreased, or increased by less than $10,000 in 136 of PAWC's zip codes during the same time period.

Table 1. Change in Median Household Income (MHI) by Owner/Renter Status (PAWC Zip Codes) (2012 vs. 2021)

	Number of PAWC Zip Codes	
	Homeowners	Renters[2]
MHI declined	22	34
MHI increased		
Less than $10,000	47	102
$10,000 - $20,000	120	90
$20,000 - $50,000	103	39
Greater than $50,000	9	6

Overall, to base an assessment of water affordability entirely, or in large part, on the MHI-HO, as PAWC has largely done, has the impact of asserting that as owner-occupied housing in a community becomes increasingly less affordable, thereby limiting ownership to increasingly higher income households in that community, water service becomes increasingly more affordable when measured by bills as a percentage of homeowner income. That conclusion does not reasonably flow, given that what is *really*

[2] Data not reported for all zip codes. For some zip codes, data is withheld for privacy reasons due to an insufficient number of renters reporting data.

being measured is only the affordability of water to an increasingly more wealthy population.

Q. WHY DO YOU FOCUS ON THE MEDIAN INCOME OF HOMEOWNERS?

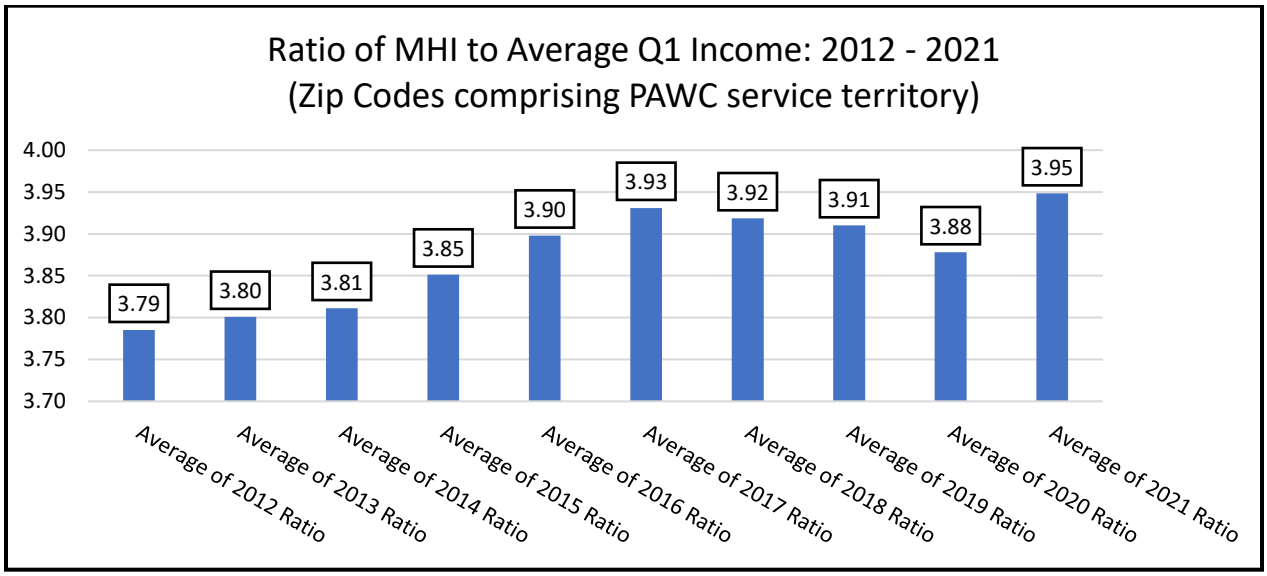
A. Mr. Rea asserts that he uses the "median household income in each of [PAWC's] communities for 1-family owner-occupied and single-unit, renter-occupied homes as reported by data in the ACS based on the most recent year's available data (2021 in this proceeding). (PAWC St. 10, at 6 – 7). That is, however, not correct. The American Community Survey (ACS) data cited by Mr. Rea (OCA-06-027)[3] does not report median incomes of occupants of single-unit, renter-occupied homes. Mr. Rea does weight the median income of renters and homeowners. However, in his weighting, homeowners represented more than 60% of the households in 354 of the 362 zip codes he used and, they represented more than 80% of the households in 292 of the 362 zip codes he used. (OCA-06-027, Attachment 1).

Q. IS THERE ANY OTHER COMMONLY USED METRIC BY WHICH TO MEASURE THE RELATIONSHIP BETWEEN TWO MEASURES OF INCOME?

A. Yes. One common way to measure the relationship between two different levels of income is to examine the ratio of higher incomes to lower incomes. If the ratio becomes bigger over time, the disparities between the two income levels are increasing. In this instance, I have examined the ratio of Median Household Income by year to the average

[3] While PAWC's response to OCA discovery references ACS Table S2053 (OCA-06-027), I assume that was a typographical error and the intent was to reference ACS Table S2503. Table S2503 was the ACS Table provided in the PAWC attachment.

First Quintile (Q1) income by year[4] for the period 2012 through 2021.[5] The results can be seen in the Chart below. There is a noticeable upward trend from 2012 through 2021. From 2012 through 2014, the ratio of the MHI to the average Q1 income stayed reasonably constant (3.79, 3.80, 3.81). The ratio increased to about 3.9 for the years 2016 through 2020, before increasing further (to 3.95) by 2021. What this data reveals is that the MHI income (for all households, not merely for homeowners) in the zip codes comprising the PAWC service territory is nearly four times higher than the average Q1 income within those zip codes. Moreover, the gap between the MHI and the average Q1 income has become increasingly larger over time.



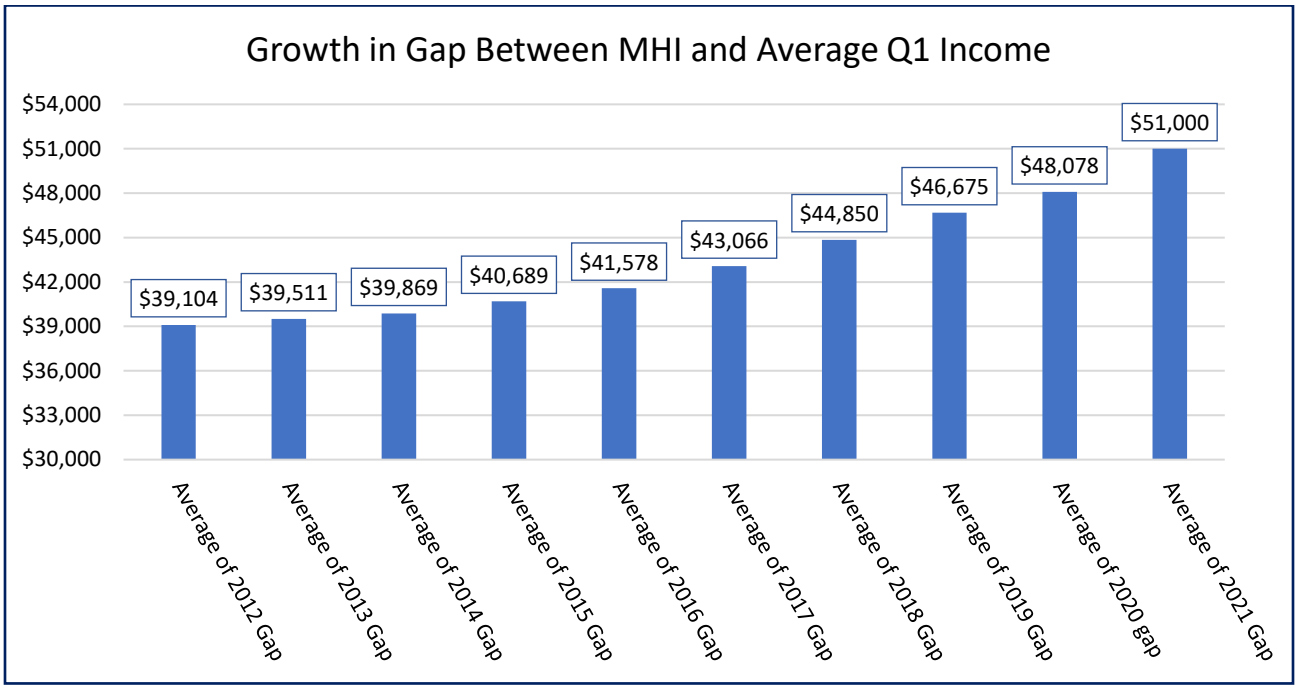
To base any "community" analysis of water "affordability" on the MHI, in other words, reveals little about the impact of water bills on the community as a whole. The

[4] Mean income for each income quintile is obtained from the American Community Survey (ACS) (5-year data), Table B19081. Median Household Income is obtained from the ACS, Table B19013. ACS data for Pennsylvania zip codes is available at https://data.census.gov/advanced?g=040XX00US42$8600000&y=2021&d=ACS%205-Year%20Estimates%20Detailed%20Tables

[5] Q1 is households with the bottom one-fifth of income (1 – 20%).

households in a community that are most likely to face unaffordable burdens are not only well behind households with median income, but they are also falling further and further behind every year.

The growing mismatch between MHIs and average Q1 incomes can be dollarized as well. The Chart below shows the dollar amount by which the average MHI of zip codes comprising the PAWC service territory exceeds the average Q1 income of PAWC zip codes. The data shows that the dollar gap between MHI and average Q1 incomes has grown by more than 30% from 2012 to 2021. This growth, remember, is *not* the growth in the underlying MHI. It is instead the growth in the dollar amount by which the MHI *exceeds* the average Q1 income. Given this disparate growth in the MHI over time, to base an analysis of community affordability on MHI yields a misleading, if not outright erroneous, conclusion.



Q. DO YOU HAVE FURTHER REASON TO BELIEVE THAT THE MEDIAN HOUSEHOLD INCOME IN A COMMUNITY DOES NOT ACCURATELY REFLECT THE AFFORDABILITY OF WATER SERVICE WITHIN THE COMMUNITY OVER TIME?

A. Yes. It is generally accepted, including by the Pennsylvania PUC, that as a household's income increases, the household not only has an increased ability to pay a higher dollar amount for their home utility bills, but they also have an increased ability to pay a higher percentage of their income for their home utility bills. Table 2 below shows the average MHI for the zip codes that comprise the PAWC service territory. The Table further shows, for each year, what that MHI represents as a percentage of Federal Poverty Level (FPL). In the time frame that was examined by PAWC, not only has the MHI increased in absolute dollar terms, it has increased as a percentage of FPL by more than 35% (from 275% FPL to 311% FPL). In contrast, not only has the average Q1 income in the PAWC service territory increased only $3,544, but the average Q1 income as a percentage of FPL (3-person household) increased only 6% (from 76% FPL to 82% FPL).

Table 2. Growth in MHI (in dollars) Q1 Incomes and MHI and Q1 Incomes as Federal Poverty Level (3-person household) (PAWC Zip Codes) (2012 – 2021)

	Median Household Income			First Quintile (Q1) Income		
	MHI	100% FPL (3-person)	MHI as % FPL	Avg Q1 Income	100% FPL (3-person)	Avg Q1 as % FPL
Avg Income (2012)	$52,494	$19,090	275%	$14,559	$19,090	76%
Avg Income (2013)	$53,057	$19,530	272%	$14,631	$19,530	75%
Avg Income (2014)	$53,931	$19,790	273%	$14,779	$19,790	75%
Avg Income (2015)	$55,263	$20,090	275%	$14,866	$20,090	74%
Avg Income (2016)	$56,570	$20,160	281%	$15,057	$20,160	75%
Avg Income (2017)	$58,071	$20,420	284%	$15,480	$20,420	76%
Avg Income (2018)	$60,851	$20,780	293%	$16,082	$20,780	77%
Avg Income (2019)	$63,081	$21,330	296%	$16,827	$21,330	79%
Avg Income (2020)	$64,547	$21,720	297%	$17,460	$21,720	80%
Avg Income (2021)	$68,346	$21,960	311%	$18,104	$21,960	82%

What I conclude is that to use the MHI as the measure of the affordability of water service in a community over time, without adjusting the definition of what represents an affordable burden, as well as without considering how representative the MHI is of the community as a whole, is unreasonable.

Q. DO YOU SEE ANY OTHER FLAW IN THE "ENTERPRISE LEVEL" AFFORDABILITY ANALYSIS PRESENTED BY MR. REA?

A. Yes. Mr. Rea's "enterprise level" analysis compares non-comparable years. Rather than examining the impact of increasing rates given a uniform consumption from year to year, Mr. Rea instead applies the annual PAWC rates to a decreasing level of consumption. The constant level of Bill-to-Income Ratio that he reports would not have occurred in the absence of this declining consumption.

Q. DID MR. REA MAKE ANY TECHNICAL MISTAKES IN HIS ANALYSIS?

A. Yes. Mr. Rea made several technical mistakes in his analysis. For example, in nearly ten percent of the calculations where he weighted the homeowner and renter median incomes, he multiplied the percentage of renters times a renter median income even though the renter median income was not reported. As a result, the renter income in those instances was calculated as being $0.

Moreover, although Mr. Rea stated that he excluded rental multi-family housing since residents of multi-family homes were not likely to have individual meters (and thus be direct customers of PAWC), he did not exclude the corresponding owner-occupied multi-family housing units.

Finally, the reason Mr. Rea excluded multi-family housing does not withstand closer scrutiny. He excluded all multi-family housing because he reasoned that these units would be master-metered by landlords, with PAWC bills included in rent rather than being directly paid by the occupants of the residence. This reasoning may be reasonable for large apartment complexes, but breaks down when applied to other multi-family housing. "Multi-family housing," in other words, includes not only apartment complexes, but includes housing structures with 2 units and 3 to 4 units as well. These structures with from two to four housing units are more likely to be individually metered. By excluding them, Mr. Rea reduces the penetration of rental housing that should have been included in his weighting of renter and homeowner median incomes. As a result, Mr. Rea's calculated median household income is systematically artificially high given that it includes a disproportionate (and erroneous) percentage of the higher homeowner median household incomes. Indeed, in 65 of PAWC's zip codes served with water

service, the percentage of renters living in housing structures with two to four units is greater than the percentage of renters living in single-family homes. In eleven of PAWC's zip codes, the occupants of housing structures with two to four units is more than 65% of all rental units. I conclude that Mr. Rea's decision to exclude renters who live in any type of housing unit other than a single-family home, particularly while not applying the same restriction to owner-occupied homes, artificially and substantially inflates the Median Household Income which he calculates for purposes of his "Enterprise Level" affordability analysis.

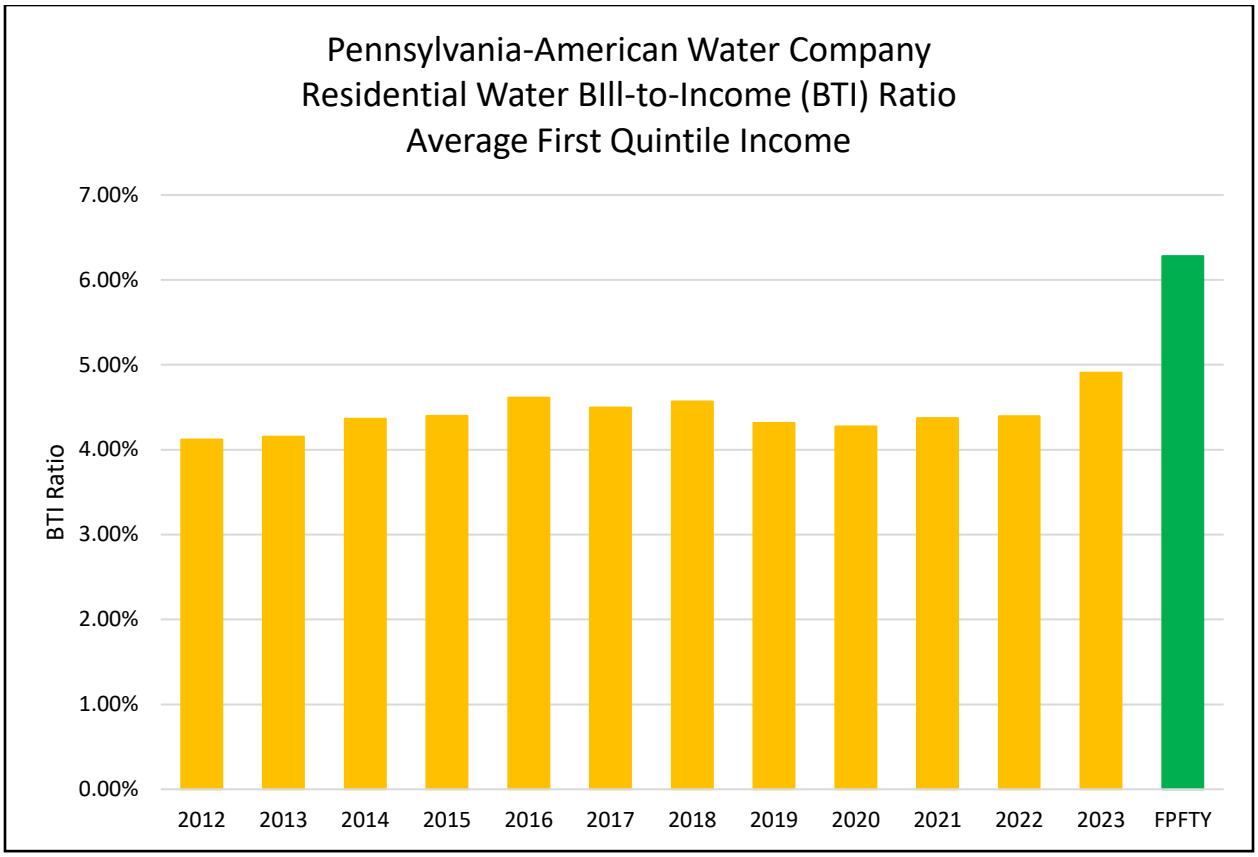
Q. WHAT DO YOU CONCLUDE?

A. I conclude that Mr. Rea's "enterprise level" affordability analysis is fatally flawed. It should not be relied upon to assess the impact of PAWC rates on the affordability of rates to the Company's residential customers.

B. An Appropriate Enterprise Level Affordability Analysis.

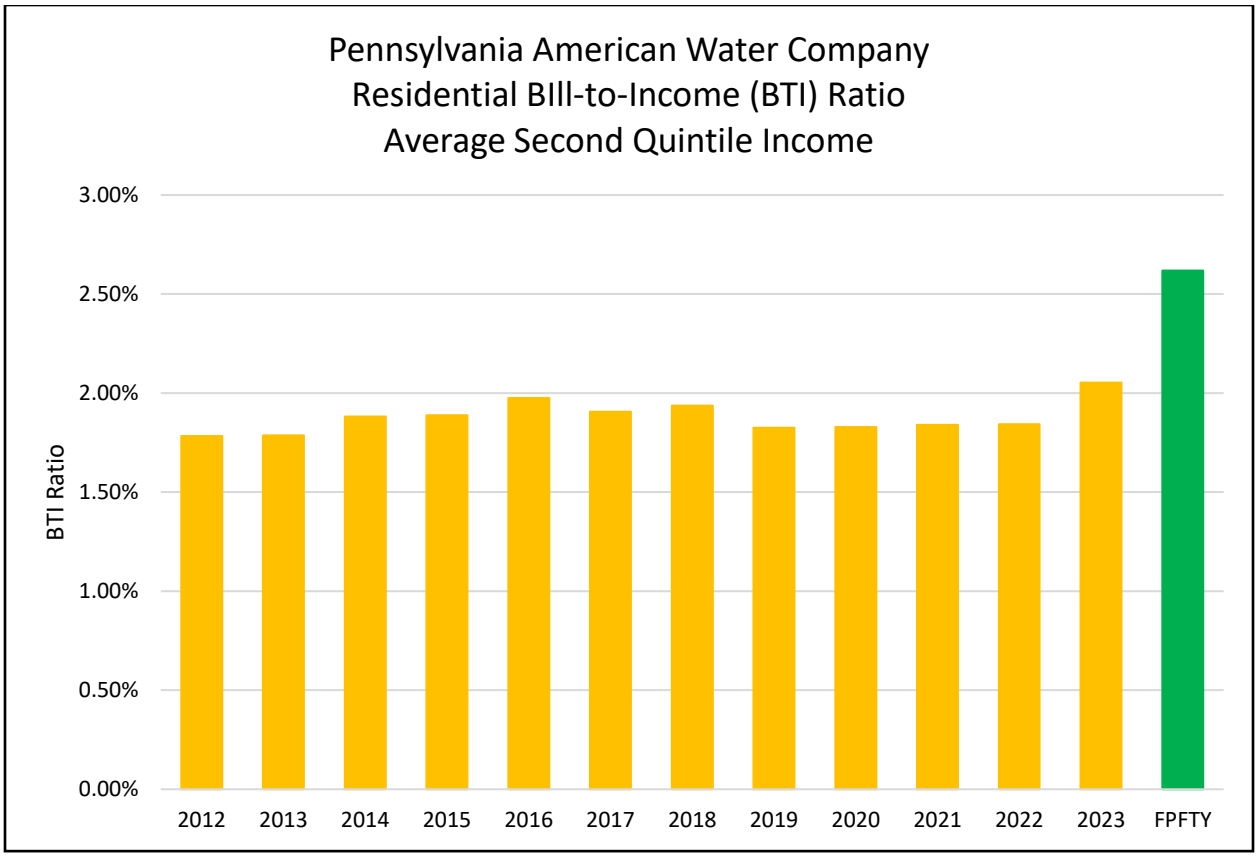
Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the affordability of PAWC bills while avoiding the analytic errors that I identified above with respect to Mr. Rea's "enterprise level" affordability analysis. The question of affordability is not presented by reference to the "median" household. The question of affordability is instead presented by reference to customers who would likely face difficulties in paying their bills. I have examined this question from two different perspectives. First, I examine the BTI Ratios at the average income in the First Quintile and Second Quintile given a constant usage over the years. Second, I determine what income would be needed in order to achieve a BTI Ratio of 2.0% each year and examine the number of zip codes within the PAWC service territory that have those incomes at the average Q1 and average Q2 income levels. The Chart below shows, for water bills, the BTI Ratio for average Q1 incomes by year for the years 2012 through 2023. The Chart shows that the households in the PAWC service territory with incomes in the First Quintile, on average, have BTI Ratios of more than two times higher than the affordable BTI Ratio of 2.0%. Given the proposed rates in 2024, the BTI Ratio will increase to more than three times the affordable level. The Chart uses the same water bills used by Mr. Rea in his "enterprise level" affordability analysis. (OCA-06-029).



This lack of affordability is not, however, simply a question of unaffordability at the *lowest* income level. The Chart below instead looks at the BTI Ratios for households with average income in the *second* quintile (the 21st to 40th percentiles).[6] The data shows that while households falling in the Second Quintile had BTI Ratios of between 1.5% and 2.0% through 2022, beginning in 2023, even PAWC households in the Second Quintile were experiencing BTI Ratios exceeding the 2.0% demarcation of affordability.

[6] Just as the First Quintile examines households with the bottom one-fifth of income (1% - 20%), the Second Quintile examines households examines households with the second one-fifth of income (21% – 40%).



The implication of this data is that at least 40% of PAWC's residential customers face a BTI Ratio exceeding the affordable 2.0% mark. Moreover, both Charts identify the dramatic jump in BTI Ratios subsequent to 2022 for both Q1 PAWC households and Q2 PAWC households. This corresponds to the recent rate increases granted to PAWC and would continue a significant upward trajectory if the current request is granted.

Q. DOES YOUR INCOME ANALYSIS TAKE INTO ACCOUNT THE DIFFERENCE BETWEEN HOMEOWNERS AND RENTERS?

A. No. But contrary to the assertion by Mr. Rea, neither does his analysis take into account those differences. While Mr. Rea asserts that his analysis includes only the income of renters of single-family homes, the Census data he uses reports the income of renters as a whole. In reporting median incomes, the Census does not distinguish between the types

of unit that a household rents. There is no separate median income data, in other words, for a household who rents a single-family housing unit and a household who rents an apartment in a multi-family building.

Q. PLEASE EXPLAIN YOUR SECOND AFFORDABILITY ANALYSIS AT THE "ENTERPRISE LEVEL."

A. In my second tier of community affordability analysis, I begin with the monthly water bills identified by Mr. Rea for 2023 and for the Fully Projected Future Test Year (FPFTY) at Mr. Rea's reported rates and Mr. Rea's reported usage levels. I convert those monthly bills into an annual bill (monthly bill x 12 months = annual bill). Accordingly, using Mr. Rea's data, the annual 2023 bill is $811.12 ($67.59/month x 12 months), while the annual FPFTY bill is $1,038.35 ($86.53/month x 12 months). I then determine what income is required in order for a customer to be able to afford that bill. In 2023, a residential customer would need an annual income of $40,556 to achieve an affordable burden of 2% of income for water ($40,556 x 0.02 = $811.12), while that residential customer would need an income of $51, 187 in the FPFTY to achieve a 2% burden. I next compare those two income levels to the average Q1 and average Q2 incomes for each of PAWC's zip codes to assess how many zip codes have average Q1 and/or Q2 incomes at those levels. I finally compared these two incomes to the average Third Quintile (Q3) income within each zip code.

Q. WHAT DID YOU FIND?

A. The Census reported average Q1 income for 265 zip codes in PAWC's water service territory. Of those 265 zip codes, only one (1) had an average Q1 income sufficiently high for Q1 households to afford the PAWC water bill reported by Mr. Rea either in 2023

or in the FPFTY. Similarly, the Census reported average Q2 incomes for 265 zip codes. Of those zip codes, only half (n=133) had average Q2 incomes sufficient to afford the PAWC water bill in 2023, and only one-fifth (n=57) (21%) had average Q2 incomes sufficient to afford the PAWC water bill in the FPFTY. Indeed, in one of every five (n=51) (20%) PAWC zip codes, PAWC FPFTY water bills would be unaffordable at the average *third* quintile (Q3) income (i.e., households at the 41st to 60th percentiles of income).

Table 3. Number and Percent of Zip Codes where Average Income at First, Second and Third Quintiles of Income are Insufficient to Result in PAWC Water Bills Affordable at 2% of Income

	Q1 (1 - 20 percentiles)	Q2 (21 - 40 percentiles)	Q3 (41 - 60 percentiles)
Number of zip codes	265	265	265
# of zip codes with unaffordable PAWC water bills in 2023	264	132	8
# of zip codes with unaffordable PAWC water bills in FPFTY	264	208	51
Pct zip codes with unaffordable PAWC water bills in 2023	99.6%	49.8%	3.0%
Pct zip codes with unaffordable PAWC water bills in FPFTY	99.6%	78.5%	19.2%

Contrary to Mr. Rea's conclusion that PAWC has affordable bills at a community level (PAWC St. 10, at 22) ("The Company's water and wastewater service. . .is, and is expected to continue to be, affordable for the majority of its residential customers, including under the rates proposed in this case"), I conclude that a water utility charging bills that would be unaffordable to people with income between the 21st and 40th percentiles of income in four out of every five (208 of 265) of the zip codes comprising

its service territory, or at one out of every five (51 of 265) of its zip codes at the 41st to 60th percentiles of income, has a serious community affordability problem.

Q. PLEASE EXPLAIN WHY IT IS IMPORTANT TO APPROPRIATELY CONSIDER THE AFFORDABILITY OF PAWC BILLS IN THIS RATE PROCEEDING.

A. A consideration of affordability is a critical task to undertake within the structure of a utility rate case. As bills become increasingly unaffordable, the payment difficulties of those customers who face unaffordability become increasingly substantial as well. As I demonstrate later in this testimony, this conclusion can be well-documented for PAWC as I discuss throughout my testimony below. One impact of the unaffordability I discuss, in other words, is its impact on the operating costs (e.g., collection costs, working capital, uncollectible expenses) that are then normalized and passed on to other ratepayers. Also, PAWC proposals such as increasing the residential customer charge, and adoption of the Revenue Decoupling Mechanism (RDM), Environmental Compliance Investment Charge (ECIC), and Winter Averaging proposal, all have disproportionate adverse effects on low-income customers who already are facing substantial unaffordability.

Moreover, establishing a return on equity is fundamentally predicated on balancing customer and investor interests. It is necessary for the Pennsylvania PUC to understand the customer interests in order to appropriately balance them against the competing investor interests. The obligation of the Commission in deciding on the appropriate return on equity (ROE) and the reasonable mix of debt and equity securities should balance consumer and investor interests. (*FPC v. Natural Gas Pipeline Co.*, 315 U.S. 575, 606-607 - 608). Indeed, of the consumer issues that are important drivers of the just and reasonable ROE determination, one of the most significant is the concern about

affordability. If a significant portion of customers cannot afford to pay the rates imposed by the PUC, the PUC can hardly be said to have approved just and reasonable rates. Such concerns should bear directly on the determination of the fair ROE. In addition, as a utility such as PAWC adds more and more expensive plant, this increases rates, which may in turn put downward pressure on the just and reasonable ROE not for financial reasons, but because of affordability concerns.

In sum, the concerns I identify with respect to the unaffordability of PAWC rates can (and should) be considered even outside the consideration of the specific proposals I advance with respect to PAWC's Bill Discount Program, Arrearage Management Program, and other specific low-income initiatives.

C. PAWC's "Community Affordability" Analysis.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review the "Affordability Index" analysis presented by PAWC witness Rea. I find that Mr. Rea's analysis substantially *under*states the unaffordability of PAWC bills at the household level.

Q. PLEASE EXPLAIN MR. REA'S "AFFORDABILITY INDEX" ANALYSIS AND CONCLUSIONS.

A. PAWC witness Rea asserts that his Affordability Index is designed to determine the extent to which customers in PAWC's service territory receive an affordable water (or wastewater) bill. He states that "The Affordability Index ("AI") is a metric that reflects the percentage of a group of customers for whom Basic Water Service is expected to be

less than a given percentage of annual household income." (PAWC St. 10, at 17). Mr. Rea uses a Bill-to-Income (BTI) Ratio of 2% of household income, limited to his definition of "Basic Water Service," as the benchmark for affordability. Using that limited Affordability Index, Mr. Rea explains that "As an example, if, for a certain group of customers, it is estimated that 80% of those customers will have bills for Basic Water Service less than 2% of annual household income, the AI value for that group of customers is 80%." (Id.)

Q. DOES MR. REA MIS-STATE THE EXTENT OF HIS AFFORDABILITY ANALYSIS?

A. Yes. Mr. Rea describes his "community level" analysis as one which "takes a deeper dive into the affordability of water and wastewater service at a local level *across different customer demographics and proposed rates* for each community that the Company serves." (PAWC St. 10, at 12) (emphasis added). He asserts that his "goal" is to "identify customer groups where affordability of service may be an issue." (Id.) Mr. Rea subsequently concedes in discovery, however, that the "different customer demographics" he uses are quite limited. "The customer demographics considered specifically in the Company's Community-Level analysis other than the communities themselves is (sic) household income and household size." (OCA-06-035). Thus, in other words, while Mr. Rea is quick to use a plural ("demographics," "customer groups"), in fact, his analysis does not extend that far.

Q. DOES MR. REA MIS-STATE THE EXTENT OR NATURE OF HIS ANALYSIS IN ANY ADDITIONAL IMPORTANT WAY?

A. Yes. Mr. Rea unequivocally states in his Direct Testimony that his "goal" is "to analyze affordability at the individual customer level and identify customer groups where affordability of service may be an issue." (PAWC St. 10, at 12). Mr. Rea's analysis, however, does not consider "affordability at the individual level" in any fashion, let alone doing so by considering "different customer demographics." Instead, Mr. Rea considers affordability, both at the community level and at the "individual customer level," using only *one* customer attribute. And that attribute is provided by assumption, not by empirical inquiry related to PAWC customers. Mr. Rea's analysis looks only at what he refers to as "basic water service" in relation to income.

Q. PLEASE COMMENT ON PAWC'S USE OF "BASIC WATER SERVICE" AS THE FOUNDATION FOR THE COMPANY'S AFFORDABILITY ANALYSIS.

A. PAWC witness Everette asserts that the Company defines "basic water service" to be the "service that is necessary and reasonable to meet basic household needs for drinking, cooking, sanitation, and general health service that does not include seasonal discretionary water use." (PAWC St. 1, at 11). Mr. Rea, however, admits that PAWC makes *no* effort to identify what water is needed for drinking, cooking, sanitation, and general health service, let alone to assess which of those uses are "necessary and reasonable to meet basic household needs." He concedes that, contrary to Ms. Everette's testimony, "the definition of basic service is *not* built from the ground up by identifying end uses and the water consumption associated with those end uses. . ." (OCA-011-005) (emphasis added). Not identifying any particular end uses, also contrary to Ms. Everette's testimony, PAWC thus does not attempt to base its determination of what represents the level of service "necessary and reasonable to meet" particular end

household needs. When asked to describe all "standards and/or metrics applied to determine what service is 'necessary and reasonable,'" PAWC witness Rea conceded that the Company does not use a process "identifying end uses and the water consumption associated with those end uses and thus *does not rely on standards or metrics as described*. . ." (OCA-011-005) (emphasis added).

The fact that Mr. Rea did not consider "affordability at the individual level," let alone consider "different customer demographics" is evident from the fact that, according to Mr. Rea's analysis, each of the following families would have an identical "basic water and/or wastewater service" of 3,600 gallons per month: (1) a three-person household with one adult, one school-age child, and one teen-age child; (2) a three-person household with two adults, and one school-age child; (3) a three-person household with one adult, and two teen-age children; (4) a three-person household with one adult, one infant, and one school-age child; (5) a three-person household with one adult, and two infants; and (6) a three-person household with one adult, and two school-age children. (OCA-011-03).

Mr. Rea did not consider "affordability at the individual level," let alone consider "different customer demographics." He instead asserts that "basic water and/or wastewater use" is comprised of 40 gallons of water consumption per day, irrespective of any individual or demographic characteristic of the household. Mr. Rea was asked to explain the relationship between his "basic water and/or wastewater service" and: (1) the age of children in a household; (2) the age of adults in a household; (3) the number of children in a household; (4) the number of adults in a household; (5) the income of a household; (6) the size of a housing unit; (7) the owner/renter status of a household; and

(8) the housing unit type occupied by a household. (OCA-011-002). He responded that ". . . Basic Water Service is defined as 40 gallons of water per household member per day. . . Mr. Rea did not make adjustments to this definition based on the factors listed in this request." (Id.).

Even though Ms. Everette asserted that "basic water and/or wastewater service" was the service "that is necessary and reasonable to meet basic household needs" (PAWC St. 1, at 11), Mr. Rea's analysis did not consider that definition. Mr. Rea was asked how the "service that is necessary and reasonable varies" based on: (1) the age of children in a household; (2) the number of children in a household; (3) the age of adults in a household; and (4) the number of adults in a household. (OCA-011-006). Mr. Rea said that such factors were not considered. He defined "basic water service" to be 40 gallons per household member per day. Period. "The definition of basic water service, as described in Mr. Rea's Direct Testimony, is *assumed* to be 40 gallons per household member per day. That definition does not depend on the age or number of children in the household, or the age or number of adults in the household." (Id.) (emphasis added). Note not merely that Mr. Rea concedes that he does not consider individual circumstances, let alone "different customer demographics," he also concedes that his number is *not* a measurement of PAWC consumption, but rather merely an assumption ("basic water service. . .is *assumed to be* 40 gallons per household member per day") (emphasis added).

Mr. Rea's "assumption" of a basic water use of 40 gallons per household member per day does not even consider how many household members are at home at any given time, or for how long. When asked, for example, what increase would occur in "basic water

service" during the summer months when school age children are not in school, but are instead at home all day, Mr. Rea again asserted that "basic water usage. . .instead is based on 40 gallons of water per household member per day. . ." (OCA-011-007). He conceded that "the Company is not able to identify usage amounts in summer months that occur over and above winter usage levels that is specifically caused by school-age children being home in the summer." (Id.).

Q. HOW DOES MR. REA'S ASSUMED USAGE OF 40 GALLONS PER HOUSEHOLD MEMBER PER DAY COMPARE TO GENERALLY-ACCEPTED USAGE ESTIMATES?

A. Mr. Rea's assumed consumption of 40 gallons per household member per day is significantly lower than the daily water consumption generally reported on a per-person basis. What is perhaps considered to be the seminal study on residential water consumption is the 2016 Water Research Foundation's report "Residential End Uses of Water, Version 2." That WRF report found that "per capita water use has decreased 15 percent, from 69.3 gpcd[7] to 58.6 gpcd. This does *not* include the outdoor water usage which Mr. Rea references as "seasonal usage" that would exceed his "basic water service." The WRF research found water consumption by end use as follows:

Table 4. Average Daily Indoor Per Capita Water Use by End Use[8]	
Toilet	14.2
Clothes washer	9.6
Shower	11.1

[7] "GPCD" is "gallons per capita per day."

[8] Water Research Foundation (2016). Residential End Uses of Water, Version 2, Executive Report, at 8, available at https://www.waterrf.org/research/projects/residential-end-uses-water-version-2

Faucet	11.1
Leak	7.9
Other	2.5
Bath	1.5
Dishwasher	0.7
Total	58.6

Remember that Mr. Rea stated that he made no effort to build his "basic water service" up by identifying individual end uses. (OCA-11-005) ("the definition of basic service is not built from the ground up by identifying end uses and the water consumption associated with those end uses. . ."). If he had, he would have discovered that his assumption of 40 gallons of water use per person per day would have allowed a person to use the toilet (14.2 gppd), take a shower (11.1 gppd), and use a home's faucets (11.1 gppd), but would not allow that person to wash their clothes (9.6 gppd). Even if one were to exclude "leaks" from the discussion (7.9 gppd), the WRF research found a usage of 50.7 gppd.[9]

The WRF estimated consumption of 50 gppd is aligned with other authoritative estimates of average consumption per person per day. The U.S. Environmental Protection Agency (EPA), for example, reports that "each American uses an average of 82 gallons of water a day at home," but reports, further, that "more than 30%" of that usage is for "outdoor" consumption.[10] If we set EPA's "more than 30%" ***equal*** to 30%, the indoor water use would be 57.4 gppd consumption. If we set EPA's "more than 30%" equal to 35%, the indoor water use would be 53.3 gppd.

[9] "Gppd" is "gallons per person per day."

[10] U.S. EPA, Water Sense, Statistics and Facts, at 1, 3, available at https://www.epa.gov/watersense/statistics-and-facts

Q. DOES PAWC'S USAGE DATA OTHERWISE SUPPORT THE CONCLUSION THAT BASIC WATER SERVICE IS EQUAL TO 40 GALLONS PER PERSON PER DAY (GPPD)?

A. No. Basic Water Service of 40 gppd yields a monthly consumption of 1,200 gallons per person per month.[11] That would mean that a 1-person household has a usage of 1,200 gallons per month; a 2-person household has a usage of 2,400 gallons per month; and a 3-person household has a usage of 3,600 gallons per month. Mr. Rea reports that 28.2% of PAWC's customers are 1-person households, while an additional 34.8% of PAWC's customers are 2-person households (63.0% of PAWC customers are either 1-person or 2-person households). PAWC's residential winter usage (for customers having 12 complete months of usage), however, shows that the distribution of consumption using Mr. Rea's assumption of 40 gppd breaks down when applied to PAWC's real world data. The data is set forth in the Table below. The percentage of customers comprised of 1-person households far exceeds the percentage of customers with monthly consumption of only 1,200 gallons. Similarly, the percentage of customers comprised of 2-person households consistently exceeds the percentage of customers with 2,400 gallons of consumption.[12] The percentage of bills with usage at 2,400 gallons or less is substantially less than would be expected given the percentage of customers with either one or two household members.

[11] 40 gppd x 30 days/month = 1,200 gallons per person per month; 40 gppd x 365 days per year = 14,600 gallons per year / 12 months per year = 1,217 gallons per person per month.

[12] The amount by which the percentage of 2-person households exceeds the percentage of customers with usage of 2,400 gallons would be even greater when one recognizes that part of the percentage of bills with monthly usage of 2,00 gallons would, in fact, be 1-person households with usage of more than 40 gppd.

Table 5. Percent of PAWC Customers by 1-person and 2-person HH size vs. Percent of Bills with Usage at Gallons Per Person Per Day (OCA_05-003, Attachment 1) (confidential)[13]

	Pct Customers by HH Size	Percent of Bills by Gallons of Usage Per Month			
		December	January	February	March
1-person (0 - 1200 gals)	28.2%	10.9%	8.9%	12.1%	13.4%
2-person (>1200 - 2400 gals)	34.8%	25.7%	22.1%	26.8%	28.7%
Total 1+2-person (0 - 2400 gals)	63.0%	36.6%	31.0%	38.9%	42.1%

The same conclusion can be drawn at the high end of the spectrum as well. The data is set forth in the Table below. At each household size, the percentage of accounts with usage that would correspond to Mr. Rea's 40 gppd far exceeds the percentage of customers at that household size. Overall, while Mr. Rea's own estimate is that 9.1% of PAWC's customers are comprised of households with 5 or more household members, the smallest percentage of bills with usage corresponding to his 40 gppd of "basic water service" is 18.8% (February), while the highest percentage of bills with usage corresponding to his 40 gppd is March (24.4%).

[13] The response to this OCA request was marked "confidential." By agreement with the Company, however, only the underlying personal account identifiers were deemed to be confidential. Data that was aggregated or used in calculations was agreed to be public.

Table 6. Percent of PAWC Customers by 5-person, 6-person and 7+-person HH size vs. Percent of Bills with Usage at 40 Gallons Per Person Per Day (OCA_05-003, Attachment 1)

	Pct Customers by HH Size	Percent of Bills by Gallons of Usage Per Month			
		December	January	February	March
5-person (>4800 – 6000 gals)	5.7%	9.7%	11.6%	9.0%	10.9%
6-person (>6000 – 7200 gals)	2.2%	5.0%	6.6%	4.6%	6.0%
7+ persons (>7,200 gals)	1.2%	5.8%	8.7%	5.2%	7.5%
5 + 6 + 7+ persons (>4800 gals)	9.1%	20.5%	26.9%	18.8%	24.4%

Whether viewed from the bottom of the continuum of usage (1-person/2-person households with usage from 0 to 2,400 gallons per month), or from the top of the continuum (5-person/6-person/7+-person households with usage of >4,800 gallons per month), Mr. Rea's estimate of "basic water consumption" does not hold water.

Q. DOES MR. REA CITE LITERATURE IN HIS OWN DIRECT TESTIMONY THAT REACHES ANY CONCLUSION ABOUT HIS APPROACH TO MEASURING COMMUNITY AFFORDABILITY?

A. Yes. Mr. Rea cites one article that he asserts is "academic research that supports the Company's approach to assessing affordability of service."[14] Rather than supporting "the Company's approach," Cardoso and Wichman disagree with Mr. Rea's definition of the consumption level which represents basic water service. Mr. Rea asserted that his use of

[14] PAWC Statement 10, at footnote 2, page 12, citing Cardoso, Diego S. and Wichman, Casey J., "*Water Affordability in the United States*," Water Resources Research, vol. 58, issue 12 (2020).

40 gallons per person per day is supported by his review of "the relevant literature on the subject," (PAWC St. 10, at 14), "all of which supports the definition of 40 gallons of water per household member per day." (Id.) When Mr. Rea was asked to provide copies of "all the relevant literature" he had reviewed, his response was "Literature reviewed at Rea 14:1-3 is referenced in Footnotes 1 and 2 in Mr. Rea's Direct Testimony." (OCA-06-040). It was the Cardoso and Wichman report that Mr. Rea cited in footnote 1 of his Direct Testimony.

Cardoso and Wichman, however, *disagree* with the "basic water service level" of 40 gallons per household member per day. They also establish what they reference as "a fixed level of water consumption deemed essential." (Id., at 6). They define that level, however, as *fifty* gallons per person per day (50 GPPD). They go on to "consider alternative scenarios for levels at 25, 75, and 100 gppd." (Id.) (emphasis added). The usage of 50 gppd is important in that it is virtually identical to the usage (in gppd) reported by the WRF report discussed above and close to the EPA estimate.

In short, Mr. Rea provides no "support" for his suppositions and methodology in the articles which he, himself, cites in his Direct Testimony.

Q. IS THERE ANY ADDITIONAL SHORTCOMING YOU FIND IN MR. REA'S COMMUNITY AFFORDABILITY TESTIMONY?

A. Yes. Mr. Rea's community affordability testimony considers the unaffordability of PAWC bills from only one dimension, the breadth of unaffordability. Through his community affordability testimony, he identifies the percentage of residential customers with water bills greater than 2% of household income by Federal Poverty Level (PAWC

St. 10, at 25, Chart 7), as well as the percentage of residential customers with wastewater bills greater than 2% of income by FPL (PAWC St. 10, at 26, Chart 8). What he does *not* do, however, is to identify by how much – the depth of unaffordability – water and wastewater burdens exceed the affordable 2% burden at each Poverty Level.[15]

D. An Appropriate Community Affordability Analysis.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the affordability of PAWC water and wastewater bills while avoiding the errors that I identified above with respect to Mr. Rea's community affordability analysis. More specifically, I examine not merely the breadth of unaffordability within the Company's low-income population, I examine the depth of unaffordability as well. Both attributes of unaffordability must be considered for there to be an appropriate analysis. The "breadth" of unaffordability considers how many customers face unaffordable bills. The "depth" of unaffordability considers how unaffordable a bill is. Under this second measure, a BTI Ratio of 15% is a "deeper" unaffordability than a BTI Ratio of 5%.

The data for a more appropriate analysis is presented in Table 7 below. Using data provided by PAWC witness Rea (OCA-06-050), the table disaggregates BTI Ratios by Federal Poverty Level within the population of water and wastewater customers that are

[15] Conversely, when on an "enterprise level" (looking at the service territory as a whole, Mr. Rea identifies the percentage of customers with varying Bill-to-Income (BTI) Rates, he does so only for the population of water (PAWC St. 10, at 16, Chart 5) and wastewater (PAWC St. 10, at 16, Chart 6) customers as a whole. Again, he fails to identify the BTI ratios by FPL.

likely to have difficulty paying their bills. Limited to an examination of bills without PAWC's low-income discounts being applied - the Bill Discount Program reaches a small fraction of income-eligible customers - the data shows that zero customers with income at or below 100% FPL have affordable PAWC bills. Indeed, only 72 of the 51,175 customers with income between 100% and 150% FPL have an affordable bill without the PAWC discount, while only 4,785 of the 51,252 (9.3%) with income between 150% and 200% FPL do.

While the PAWC data demonstrates that 446,206 of PAWC's total number of 623,083 customers (72%) have BTI Ratios at or below 2% of income without any discount, in making that observation, Mr. Rea fails to go on to explain that 441,348 of those 446,206 customers with affordable bills have income greater than 200% FPL.

Table 7. Water Bill-to-Income (BTI) Ratio by Federal Poverty Level (without discount) (OCA-06-050)

BTI Ratio	0 – 50% FPL	51- 100% FPL	101 -1 50% FPL	151 -200% FPL	Grand Total

Average of BTI	79.1%				79.1%
Sum Customers	**21,906**	**35,081**	**51,175**	**51,252**	**623,083**
Average of FPL Ratio	**25%**	**76%**	**124%**	**174%**	**299%**
Average of BTI	**43%**	**6%**	**4%**	**3%**	**7%**

Table 7 shows that by disaggregating PAWC's population by FPL ranges, I have examined the varying depth of PAWC water bill unaffordability as well. For example, it

becomes clear that 13,544 of the 21,906 customers with income less than 50% FPL (62%) not only have BTI Ratio greater than 2% of income, but have BTI Ratios greater than 14% of income, seven times higher than Mr. Rea's demarcation of affordability. More than 22,000 of the 35,081 customers with income between 50% and 100% FPL do not merely have BTI Ratios higher than 2%, but have BTI Ratios of between 5% and 11%, three to six times higher than the 2% affordability marker. The data shows that 19,782 PAWC customers with incomes between 50% and 100% FPL have an average BTI Ratio of 6.3%, with an additional 2,440 having an average BTI Ratio of 8.8%. Of the 21,906 PAWC customers with income less than 50% FPL, 9,593 have BTI Ratios averaging 79.1% of income, 40 times higher than the affordable 2% level.

To report, as Mr. Rea does, that 100% of PAWC customers with income less than 50% FPL have BTI Ratios (water) greater than 2% provides a very limited insight into unaffordability. In contrast, it is a very different insight to recognize that of those 21,906 customers (with income less than 50% FPL and BTI Ratios greater than 2%):

- 4,232 have an average BTI Ratio of 9.8%;
- An additional 3,510 have an average BTI Ratio of 12.3%;
- An additional 2,497 have an average BTI Ratio of 15.4%;
- An additional 1,455 have an average BTI Ratio of 18.8%; and
- An additional 9,593 have an average BTI Ratio of 79.1%;

As can be seen from Table 7 above, an appropriate affordability analysis documents that PAWC is facing a much more serious problem with the lack of affordability than the problem articulated by PAWC witness Rea.

Part 2. Modifications to Specific PAWC Low-Income Initiatives.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. Given the problems I identified above with respect to PAWC's affordability analysis, in this section of my testimony, I recommend a series of necessary modifications to PAWC's low-income initiatives.

A. The Levels of PAWC Bill Discounts.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the level of the bill discount proposed by PAWC for the differing levels of PAWC's Bill Discount Program (BDP). PAWC does not propose any changes to its bill discounts; it proposes only to expand eligibility to customers at the 151% to 200% FPL level. (PAWC St. 10, at 24). I find that the bill discounts should be modestly increased.

Q. DOES PAWC'S DISCOUNT PROVIDE ADEQUATE RATE RELIEF TO LOW-INCOME CUSTOMERS?

A. No. Table 8 shows the affordability impacts of PAWC's bill discounts at the rates the Company proposes in this proceeding. Several observations stand out.

First, while the vast majority of PAWC customers may have bills that represent a BTI Ratio of less than 2% of income given the discounts proposed by PAWC in this proceeding (487,980 of 623,083), a relatively small number of those have incomes less than 200% of Federal Poverty Level. Fewer than 10% of the 487,980 customers with a

BTI Ratio of less than 2% (46,632 of 487,980) have income at or below 200% FPL. In contrast, more than 25% of *all* PAWC customers have income at or below 200% FPL (159,414 of 623,083). Of the 46,632 customers with income under 200% FPL and an affordable 2% BTI Ratio, 27,249 (58%) have incomes in the highest FPL tier (151% to 200% FPL).[16]

Second, the PAWC discounts help very few of the lowest income customers achieve an affordable BTI Ratio. Only 3,319 of the 21,906 (16%) customers with income at or below 50% FPL achieve an affordable BTI Ratio, even after receiving the PAWC discount. Indeed, there are more customers in this FPL tier with BTI Ratios of 11% or more than there are with an affordable BTI Ratio of 2% or less. Moreover, there are: (1) only 6,935 of the 35,081 (20%) customers with income at 51 – 100% FPL who achieve an affordable BTI Ratio; and (2) only 9,129 of 51,175 (18%) customers with income of 101 to 150% FPL who achieve an affordable 2% BTI Ratio. Even for customers with income at 151 to 200% FPL, only somewhat more than half (27,249 of 51,252) (53%) achieve the 2% affordable BTI Ratio with the discounts proposed by PAWC in this proceeding.

[16] Note the difference between this discussion of the data in Table 8 (BTI Ratios after applying the discounts proposed by PAWC in this proceeding) and the discussion of the data in Table 7 (BTI Ratios with no discount applied).

Table 8. Water Bill-to-Income (BTI) Ratio by Federal Poverty Level (with PAWC proposed discount) (OCA-06-050)

Average of BTI	46%				46%
Total Sum of Customers	**21,906**	**35,081**	**51,175**	**51,252**	**623,083**
Total Average FPL Ratio	**25%**	**76%**	**124%**	**174%**	**299%**
Total Average of BTI	**8.6%**	**2.9%**	**2.7%**	**2.2%**	**2.5%**

Third, the PAWC discounts fail to achieve, *even on average*, an affordable 2% BTI Ratio in all four of the discount tiers, including the new fourth tier (151 – 200% FPL). At

PAWC's discounts, the average BTI Ratio would be: (1) 8.6% at 0 – 50% FPL; (2) 2.9% at 51 – 100% FPL; (3) 2.7% at 101 – 150% FPL; and (4) 2.2% at 151 – 200% FPL. Even if the discounts would have been effective at PAWC's *current* rates, given the 25.60% increase in water bills (at 2025-FPFTY rates) as proposed in this case, the efficacy of the bill discounts would be severely degraded.[17]

Q. DOES THIS SAME ANALYSIS APPLY TO PAWC'S WASTEWATER BILLS?

A. Yes. The wastewater data corresponding to the water data I discussed above is presented in the Table below. As can be seen, each of the conclusions I reached with respect to the unaffordability of water bills applies with equal force to PAWC wastewater bills. Again, as I concluded with respect to PAWC's water discounts, I conclude with respect to PAWC's wastewater discounts that even if PAWC's discounts would have been effective at the time PAWC's existing wastewater rates were adopted, the rate increases proposed in this proceeding result in the efficacy of the wastewater bill discounts being severely degraded.

[17] Even if PAWC's water rates were kept at the current customer charge, with the volumetric charge increased by only half of what PAWC has requested, the existing discounts would result in unaffordable BTI ratios for each income range below 150% FPL. Of the low-income population (0% - 200% FPL), only the income tier at 150% to 200% FPL would have a BTI Ratio of less than 2% of income (1.9%).

Table 9: Wastewater Bill-to-Income (BTI) Ratio by Federal Poverty Level (with discount) (OCA-06-050)

Total Average of BTI	**8.7%**	**3.0%**	**2.8%**	**2.0%**	**2.7%**

Again, as I concluded with respect to PAWC's water discounts, I conclude with respect to PAWC's wastewater discounts that even if PAWC's discounts would have been effective at PAWC's current wastewater rates, the rate increases proposed in this proceeding result in the efficacy of the wastewater bill discounts being severely degraded.

Q. WHAT DO YOU RECOMMEND?

A. I recommend the modified discounts set forth in Table 10 be incorporated into the PAWC Bill Discount Program. That Table compares the recommended modified discounts to PAWC's proposed discounts.

Table 10. Comparison of PAWC Proposed Discounts to Recommended Discounts for PAWC's Bill Discount Program (water and wastewater)

Water	PAWC Proposed Discounts[18]		Recommended Modified Discounts	
Discount Tier	Fixed Charge	Volumetric Charge	Fixed Charge	Volumetric Charge
Tier 1 (0 – 50% FPL)	80%	80%	90%	80%
Tier 2 (51 – 100% FPL)	65%	50%	75%	65%
Tier 3 (101 – 150% FPL)	40%	25%	60%	40%
Tier 4 (151 – 200% FPL)	30%	15%	30%	20%
Wastewater	PAWC Proposed Discounts		Recommended Modified Discounts	
Discount Tier	Total Bill		Total bill

Tier 2 (51 – 100% FPL)	55%		73%	
Tier 3 (101 – 150% FPL)	30%		55%	
Tier 4 (151 – 200% FPL)	20%		37%	

[18] PAWC's proposed discounts for Tier 1 through Tier 3 can be found at PAWC St. 10, at 23. PAWC's proposed discounts for Tier 4 can be found at PAWC St. 10, page 24.

Q. WHAT IS THE IMPACT OF YOUR PROPOSED MODIFICATIONS ON THE AFFORDABILITY OF LOW-INCOME BILLS?

A. The proposed modifications to the PAWC rate discounts result in substantially more affordable BTI Ratios for low-income customers. When my modifications are applied, the data in Table 11 shows that more than 70% of customers with income less than 50% FPL have BTI Ratios less than or equal to 5% and one-third have BTI Ratios of 2% or less. In the remaining three FPL tiers, roughly three-quarters of customers have BTI Ratios of 2% or less, and 100% have BTI Ratios of 5% or less.

Table 11. Impacts of Modified Water Discounts on BTI Ratios by Federal Poverty Level

Row Labels	0-50%	51 – 100%	101 – 150%	151 – 200%	Grand Total
<2%					
Average of BTI	1.7%	1.7%	1.7%	1.8%	1.3%
Sum of Customers	6,878	26,357	37,218	37,159	555,250

Sum of Customers	93				93
0.23% or more					
Average of BTI	46.7%				46.7%
Sum of Customers	1,507				1,507
Total Average of BTI	**7.5%**	**2.1%**	**2.1%**	**2.1%**	**2.2%**
Total Sum of Customers	**21,906**	**35,081**	**51,175**	**51,252**	**623,082**

Similarly, the data in Table 12 shows that nearly 40% of customers with income at or below 50% FPL have an affordable 2% burden, and nearly three-quarters have BTI Ratios of less than 5%. In the remaining three FPL tiers, nearly 85% of customers with income in the Tier 2 FPL range (51 – 100%) have an affordable 2% BTI, while nearly

90% in Tier 3 (101 – 150%) and Tier 4 (151 – 200%) ranges do. In all three FPL tiers above 50% of FPL, 100% of customers have BTI Ratios of less than 5% of income.

Table 12: Impacts of Modified Wastewater Discounts on BTI Ratios by Federal Poverty Level

Total Average of BTI	**6.5%**	**1.8%**	**1.8%**	**1.8%**	**2.1%**

In sum, I conclude that it is not reasonable simply to continue the discount levels adopted in PAWC's last rate case if the Commission is to take seriously its role of only approving rates that are just and reasonable. Contrary to the discount levels carried over from

PAWC's existing rates, the discounts I recommend generate reasonably affordable BTI Ratios for all four FPL tiers.

B. The Proposed Tier 4 Discount.

Q. PLEASE EXPLAIN THE RECOMMENDATION TO WHICH YOU RESPOND IN THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to PAWC's proposal to add a "fourth tier" to the Company's BDP. (PAWC St. 1, at 34; PAWC St. 10, at 24). This fourth tier would expand the PAWC BDP to include customers with income above 150% but at or below 200% of FPL. (PAWC St. 10, at 24). According to PAWC witness Rea, PAWC proposes this discount because 91% of PAWC's water customers with income at 151% to 200% FPL would have unaffordable bills (PAWC St. 10, at 25), while 81% of wastewater customers with income in this tier would receive unaffordable bills. (Id., at 26). Mr. Rea explains:

> For water customers in this fourth tier of eligibility, the Company is proposing to offer discounts of 30% on the 5/8" meter charge and 15% on the volumetric rate. For wastewater customers in this fourth tier of eligibility, the Company is proposing to offer a discount of 20% on the total wastewater bill.

(PAWC St. 10, at 24). According to Mr. Rea, with the proposed "fourth tier:"

> For water service, more than half of the customers in the 151% to 200% FPL group whose bills were 1 expected to be more than 2% of household income will now be below that threshold. For wastewater service, approximately one third of the customers in the 151% to 200% FPL group whose bills were expected to be more than 2% of household income will now be below that threshold.

(PAWC St. 10, at 27-28). Mr. Rea stated that without the discount, 9% of water customers falling into the fourth tier would have an affordable bill, while 53% would

with the discount. (OCA-06-057). He stated that without the discount, 19% of wastewater customers falling into the fourth tier would have an affordable bill, while 66% would with the discount. (OCA-06-058).

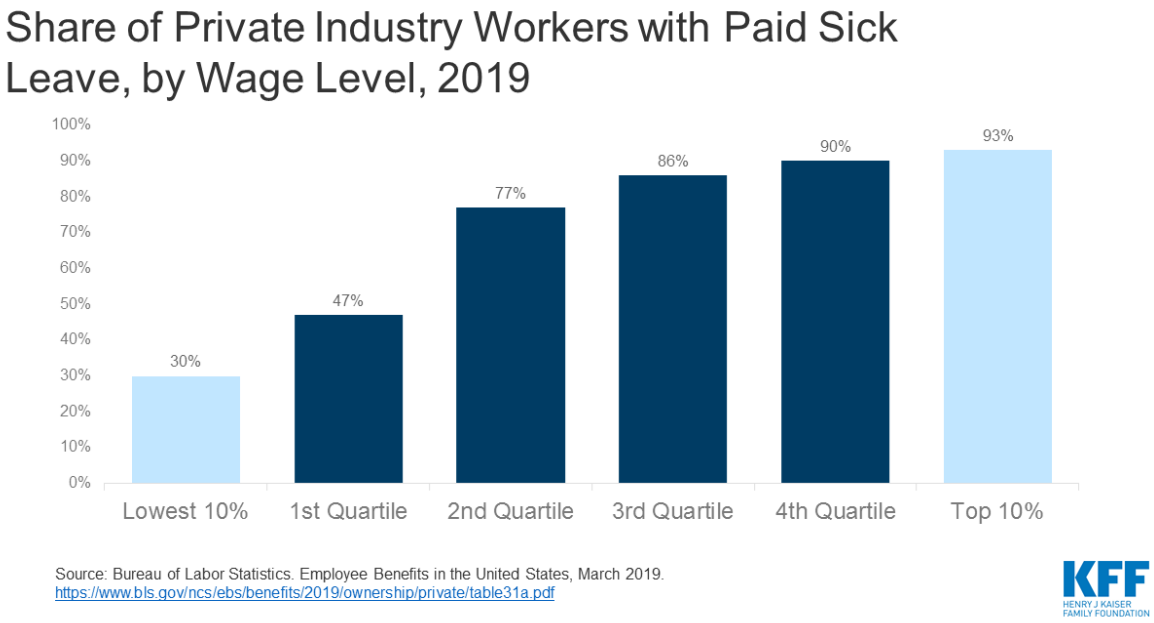
I support the proposed expansion of the BDP to include a fourth tier as defined by PAWC should be approved with the modification I present in Table 10 above. I explained the basis for that modification in my discussion of that Table. Without adoption of the discount, I reach the same conclusion that Mr. Rea reached with respect to the Tier 4 water and wastewater customers. The Tier 4 water customers would face the level of unaffordability I present in Table 7 above. Without a discount, even at existing rates, Tier 4 customers would face unaffordable water and wastewater bills. To the extent that rates are increased above existing rates, even if those increases do not reflect the full level of increase requested by PAWC, the water and wastewater unaffordability to this tier of customers would increase.

Q. IS THERE ANY ADDITIONAL REASON WHY PAWC'S PROPOSED EXPANSION TO A FOURTH TIER IS REASONABLE?

A. Yes. One attribute of the income of households who may not traditionally be considered "low-income" is not merely the level of income, but also what is known as the "fragility" of income. Customers who fall into PAWC's "fourth tier" are those customers who tend to be known as the "working poor." Low-income workers can have their ability to pay utility bills threatened due to unavoidable disruptions in their economic lives. A personal illness requiring time off or the illness of a child requiring time off generally represents a permanent loss of income. The jobs of low-wage workers simply do not provide the paid

leave required to respond to such circumstances.[19] The Chart below, for example, shows the percentage of workers with paid sick leave by wage level as reported by the U.S. Census Bureau.

Figure 1



The vulnerabilities faced by low wage workers to economic disruptions due to the lack of paid leave have been well-documented.[20] The difference is particularly evident for

[19] Claxton and Levitt (March 2020). Paid Sick Leave is Much Less Common for Lower-Wage Workers in Private Industry, Kaiser Family Foundation.

[20] Claxton (March 2020). Paid Sick Leave is much less common for lower-wage workers in private industry, Kaiser Family Foundation (Lower wageworkers are much more likely to lack access to paid sick leave. "Among the 25% of private industry occupations with the lowest wages ($13.25 per hour or less) 47% have access to paid sick leave; for the 10% of private industry occupations with the lowest wages ($10.48 per hour or less), the percentage with access to paid sick leave falls to 30%. Workers in higher-wage occupations are much more likely to have access to this benefit. For example, 77% of private industry workers with occupations in the second wage quartile ($13.25 to $19.00 per hour) have access to paid sick leave, with the percentage rising up to 90% of private industry workers with occupations in the top wage quartile.") See also, Ranji, et al. (Dec. 2020). Coronavirus puts a spotlight on paid leave policies, Kaiser Family Foundation; Boyens, Karpman, and Smalligan (July 2022). Access to paid leave is lowest among workers with the greatest needs: Findings from the December 2021 well-being and basic needs survey, Urban Institute.

women. The Kaiser Family Foundation (KFF) reports that "across the board, low-income women and those with part-time employment are less likely to be offered any of these benefits compared to their higher income and full-time counterparts."[21] The KFF data is set forth in the Table below. KFF reports that "low-income mothers who must miss work when their child is sick are far more likely to lose pay (75%) compared to higher income mothers (33%).[22]

Table 13. Working Women who are low-income or in part-time jobs are less likely to be offered employer benefits such as paid sick leave and parental leave[23]

	Paid Vacation	Paid Sick Leave	Paid Parental Leave	Paid Family and Medical Leave
Income				
<200% FPL	51%	46%	27%	28%
=>200% FPL	74%	73%	48%	45%
Work Status				
Part-time	37%	35%	20%	19%
Full-time	78%	75%	50%	48%

It is not, however, simply the lack of paid leave that presents situations leading to a potential inability to pay utility bills at a particular time. It is the lack of flexible work arrangements. One study reports that "many lower-wage workers are caring for multiple children, generally in homes where both parents are working or in single parent homes.

[21] Ranji, et al. (April 2021). Difficulty Tradeoffs: Key Findings on Workplace Benefits and Family Health Care Responsibilities from the 2020 KFF Women's Health Survey, Kaiser Family Foundation.

[22] Id.

[23] Id.

Many also provide care to elderly relatives or other family members with significant health conditions. Yet others have acute or chronic medical conditions themselves that often require medical treatment or time away from work. Thus, like higher-wage worker, many lower-wage workers need flexible scheduling, alternative start and end times, compressed workweeks, and the ability to work some hours at home (providing the job can be done at home)."[24] Nonetheless, "lower wage and lower-income workers have fewer options and less access to flexible work arrangements than higher-wage and higher-income workers."[25]

The point where the vulnerability to these income disruptions may routinely occur can be set at what is known as the Self-Sufficiency Standard. In Pennsylvania, the Self-Sufficiency Standard generally reaches to between 200% and 300% of Poverty.[26] While households at this income range may not always require a discount to reduce their bills to an affordable burden as a percentage of income, a minimum level of assistance is appropriate to reflect the affordability needs of these households as reflected in their income fragility. Accordingly, PAWC's proposal to include a minimum, but appropriate, discount for households with income in the income range of up to 200% of Poverty should be approved.

C. BDP and AMP Outreach and Intake.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I consider different ways in which PAWC can, and should, improve the outreach and intake for its Bill Discount Program and Arrearage Management Program (AMP).

Q. IS RELYING ON THE FEDERAL LOW-INCOME HOUSEHOLD WATER AFFORDABILITY PROGRAM (LIHWAP) A REASONABLE OUTREACH STRATEGY FOR BDP AND AMP?

A. No. While PAWC does not rely exclusively on LIHWAP as an outreach tool for its BDP and AMP (PAWC St. 9, at 14-16), it largely uses LIHWAP for such outreach. (PAWC St. 9, at 18). PAWC notes that the Pennsylvania Department of Human Services indicated that it will make supplemental LIHWAP payments in December 2023, the Company did not know whether it would receive any of those payments or how much those grants would be. Moreover, it further conceded that it was not aware of any future LIHWAP funding. (OCA-06-021). Indeed, PAWC agreed with both the statement that: (1) "the federal government has ended the Low-Income Household Water Assistance Program (LIHWAP) program, with no plans or promises of future ongoing funding"; and the statement that (2) "LIHWAP was established in December 2020 to help low-income customers manage their water bills during the COVID-19 pandemic." (OCA-06-023).

There is no question but that LIHWAP was an important source of assistance while it existed. From January 2022 through December 2022, 11,706 PAWC customers received nearly $7.7 million in LIHWAP grants. (OCA-06-021). From January 2023 through June

2023, however, PAWC customers received *nothing*. (Id.) There was a slight uptick in LIHWAP distribution in July through September, 2023 (2,000 customers received roughly $1.1 million in grants). By October, however, LIHWAP was virtually exhausted, and only 65 PAWC customers received grants, totaling $41,532.50. (Id.) This limited receipt of LIHWAP grants in 2023 occurred despite the fact that PAWC mailed 37,153 letters in July 2023, and sent 39,375 e-mails customers in July and August 2023, to customers who were in arrears and potentially eligible to receive help from the LIHWAP program. (OCA-06-024).

Q. PLEASE EXPLAIN THE EXTENT TO WHICH PAWC HAS ENROLLED CUSTOMERS IN ITS BDP AND AMP?

A. First, I acknowledge that PAWC's AMP was just recently approved by the Pennsylvania PUC. Accordingly, it is too soon to assess the extent to which, if at all, PAWC has enrolled AMP participants.[27]

Regarding the BDP, I have examined the new enrollments for the past 24 months. This time period considers new enrollments after the COVID-19 economic shutdown that may have impeded new program enrollment. From November 2021 to October 2023 (the most recent month available), PAWC enrolled 10,715 low-income water customers in its BDP.

[27] "The proposed settlement of the AMP proceeding provides that the Company will implement the plan no later than twelve months after the Commission issues a Final Order in the AMP proceeding. The Company anticipates implementing the AMP as close to the effective date of new rates as possible, dependent on when Commission approval of the settlement is received." (PAWC St. 1, at 16). "If the Company receives approval of the AMP in 2023, the Company anticipates the AMP being available to customers in late 2024." (PAWC St. 1, at 13). The Final Order in the AMP proceeding, Docket P-2021-3028195, was entered December 7, 2023.

Table 14. New Bill Discount Program (BDP) Enrollment by Month for Most Recent 24 Months (OCA-05-008)

	Water Only	Wastewater Only	Combination		Water Only	Wastewater Only	Combination
202111	248	2	46	202301	106	11	22
202112	250	2	36	202302	206	6	45
202201	178	4	20	202303	174	9	50
202202	216	7	20	202304	167	8	45
202203	1,003	51	248	202305	152	30	47
202204	1,306	91	253	202306	184	22	37
202205	861	41	147	202307	131	29	33
202206	763	80	169	202308	752	84	208
202207	798	60	120	202309	565	58	162
202208	593	39	121	202310	429	8	123
202209	559	21	96	Total	10,715	730	2,254
202210	500	35	125				
202211	425	24	67				
202212	149	8	14				

The success of this enrollment can be reviewed by comparing the BDP enrollment to the total number of Confirmed Low-Income customers that PAWC has identified on its system. For purposes of identifying Confirmed Low-Income customers, PAWC states that "the company defines 'confirmed low-income customer' as a customer that *has provided income information to the company* indicating that the customer has a household income at or below 150% of the Federal Poverty Level." (OCA-05-001) (emphasis added). Using this definition, PAWC reports that it has 48,765 Confirmed Low-Income customers receiving only water service, 2,351 Confirmed Low-Income customers receiving only wastewater service, and 9,544 Confirmed Low-Income customers receiving combination water/wastewater service. (OCA-05-001). Of the 60,660 customers who, according to the Company's own definition, have "provided

income information to the company indicating that the customer has a household income at or below 150% of the Federal Poverty Level," PAWC has enrolled fewer than 13,700 (17.6%) in its BDP in the past 24 months.

In contrast to this lack of enrollment of Confirmed Low-Income customers into BDP, from January 2021 through October 2023, PAWC disconnected 35,488 Confirmed Low-Income customer accounts (OCA-05-025, Revised) (with a total arrearage of $14,550,181 at the time of disconnection), and provided 412,518 disconnection notices to Confirmed Low-Income customers. (OCA-05-025). These numbers, of course, do not necessarily reflect unique customers; some customers may have received more than one disconnect notice or have had service disconnected more than once. As shown in Table 15 below, the Confirmed Low-Income customers who had service disconnected for nonpayment were substantially further in arrears than the overall arrears of Confirmed Low-Income accounts in arrears. PAWC, in other words, disconnected nearly 10,000 more customers who had provided information establishing their low-income status than it enrolled in its BDP.

Table 15. Average Arrears of Confirmed Low-Income Accounts Experiencing a Nonpayment Disconnection Compared to Average Arrears of All Confirmed Low-Income Customers Having Arrears (OCA-05-024)

Year-Month	Average arrears at the time of a confirmed low-income account disconnection for nonpayment	Average arrearage of confirmed low-income accounts in arrears	Year-Month	Average arrears at the time of a confirmed low-income account disconnection for nonpayment	Average arrearage of confirmed low-income accounts in arrears
202101	$0.00	$546.04	202206	$818.78	$418.50
202102	$0.00	$564.52	202207	$754.93	$400.33
202103	$0.00	$598.33	202208	$606.45	$375.63
202104	$1,670.75	$544.58	202209	$667.06	$351.56
202105	$891.27	$334.06	202210	$532.34	$341.62
202106	$604.35	$243.60	202211	$505.90	$317.01
202107	$651.38	$239.33	202212	$503.36	$298.38
202108	$481.03	$236.99	202301	$696.54	$307.66
202109	$503.60	$224.34	202302	$766.46	$314.96
202110	$551.84	$224.47	202303	$907.69	$320.71
202111	$602.18	$264.59	202304	$652.89	$292.32
202112	$688.16	$217.54	202305	$561.30	$280.64
202201	$663.33	$234.38	202306	$582.59	$245.42
202202	$568.57	$247.20	202307	$411.38	$246.47
202203	$931.24	$283.65	202308	$524.24	$258.72
202204	$744.61	$280.68	202309	$555.65	$250.89
202205	$710.32	$447.29	202310	$566.96	$266.22

I conclude that PAWC has substantial opportunity to enroll additional customers in its BDP and/or AMP where the Company has stated the customer already "*has provided income information to the company* indicating that the customer has a household income at or below 150% of the Federal Poverty Level." This opportunity presents itself to an

even greater extent now that PAWC will offer an AMP in addition to offering its Bill Discount Program.

Q. WHAT DO YOU RECOMMEND?

a. I recommend that PAWC be required to make personal contact with any Confirmed Low-Income customer facing the imminent disconnection of service for nonpayment. At the time of that personal contact, the Confirmed Low-Income customer should be informed of the customer's right to enroll in the BDP *and* enroll in the AMP as an alternative to the disconnection of service for nonpayment. Disconnections to these customers should be paused until PAWC has received a response to the offer of BDP/AMP participation.

Q. IS THERE A SECOND WAY BY WHICH YOU REVIEW THE ENROLLMENT IN PAWC'S BILL DISCOUNT AND ARREARAGE MANAGEMENT PROGRAMS?

A. Yes. Again acknowledging that the AMP is a new program and my recommendation is forward-looking, I have reviewed the number of Confirmed Low-Income customers who "received a payment arrangement" by month for the same time period I examined BDP new enrollment above (November 2021 through October 2023). As the data shows, PAWC continues to enroll Confirmed Low-Income customers (i.e., customers who "*ha[ve] provided income information to the company* indicating that the customer has a household income at or below 150% of the Federal Poverty Level") into deferred payment arrangements with*out* also enrolling those Confirmed Low-Income customers into the Company's BDP.

Table 16. Number of Confirmed Low-Income Customers who Received a Payment Arrangement by Month Compared to Number of New BDP Enrollees by Month (CAUSE-PA-01-032, OCA-05-008)

Year and Month	Confirmed low income customers Receiving Payment Arrangement	BDP New Enrollee	Year and Month	Confirmed low income customers Receiving Payment Arrangement	BDP New Enrollee
202111	2,474	296	202211	4,275	516
202112	1,871	288	202212	4,030	171
202201	1,551	202	202301	3,133	139
202202	1,603	243	202302	3,575	257
202203	2,633	1,302	202303	3,784	233
202204	3,612	1,650	202304	3,777	220
202205	6,127	1,049	202305	5,130	229
202206	4,413	1,012	202306	5,299	243
202207	3,598	978	202307	5,142	193
202208	4,209	753	202308	5,537	1,044
202209	4,302	676	202309	4,702	785
202210	4,074	660	202310	4,336	560

Particularly now that PAWC will offer a low-income AMP in addition to its BDP, there should be no reason that PAWC would enroll a Confirmed Low-Income customer into a Payment Arrangement without also in the case of BDP (or alternatively the case of AMP) enrolling that customer into the BDP and/or AMP. Recognizing that water utilities do not report data exclusive to Confirmed Low-Income customers, PAWC reports that the average arrearage subject to payment agreements for all customers was: (1) $994.63 (15.96 bills behind) in 2022; (2) $1,203.27 (19.08 bills behind) in 2021; and (3)

$1,044.99 (17.89 bills behind) in 2020.[28] Based on this data, I conclude that it is reasonable to expect Confirmed Low-Income customers who have received payment arrangements to have arrears of sufficient size and age to be qualified for PAWC's AMP.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that, particularly given that extending a payment arrangement requires contact with the customer receiving that payment arrangement, PAWC be directed to enroll a customer in its BDP and AMP where doing so would be more favorable to a customer and only offer a payment arrangement if a customer rejects BDP and AMP enrollment after being informed of its benefits..

Q. PLEASE EXPLAIN YOUR NEXT RECOMMENDATION REGARDING OUTREACH AND INTAKE FOR THE COMPANY'S BDP AND AMP.

A. When PAWC was asked to "provide a detailed description of any software used within the immediately preceding 36 months, or intended to be used in the coming 36 months, by the Company which engages in speech pattern analytics or linguistic analytics, used to review call center conversations" for either its in-house call center or for any third party contractor call center staff, PAWC responded that: "PAWC and the CSO do not currently use any software that engages in speech pattern or linguistic analytics." (OCA-06-013). However, PAWC continued to state that "The CSO is evaluating options to utilize speech and linguistic analytics in the future." (Id.) Similarly, when asked for a "description of all terms, phrases, or other speech patterns searched for or otherwise," PAWC reiterated

[28] PA PUC, Collections Data for the Major Electric, Gas, and Water Companies (annual). https://www.puc.pa.gov/filing-resources/reports/quinquennial-report-pursuant-to-section-1415/

that it "does not utilize any speech pattern analytics or linguistic software to review call center calls." (OCA-06-014). Since PAWC does not utilize any speech pattern analytics or linguistic software to review call center calls, it thus does not have any "internal processes, procedures, or practices employed to determine what terms, phrases, or other speech patterns will be employed in the application of the speech pattern analytics or linguistic analytics software to the review of call center calls. . ." (OCA-06-016).

As can be seen, while PAWC does not *currently* use speech pattern or linguistic analysis, it *is* currently evaluating options to do so in the future. PAWC's discovery response refers to its evaluation of options in the present tense ("the CSO *is evaluating* options. . ."). (OCA-06-013) (emphasis added).

In its ongoing evaluation of "options to utilize speech and linguistics analysis in the future," PAWC should be directed to incorporate searches of speech pattern and linguistics analysis to help direct Call Center engagement of customers toward identifying the potential need for and eligibility for the Company's BDP and/or AMP. Speech patterns regarding inability to pay, income constraints, payment difficulties, or the utilization of programs and/or agencies that can reasonably be associated with the provision of low-income assistance, all could be indicators of the potential eligibility for, and need for, enrollment in the BDP and/or AMP. PAWC should be directed to regularly report to its Low-income Advisory Group (LIAG) on the progress of the review of options for speech pattern and linguistic analysis, and how that review is incorporating such options into potential low-income outreach. It should seek regular LIAG input into how such analysis can be incorporated and utilized.

Q. WHY DO YOU SUGGEST THAT PAWC NEEDS TO BE DIRECTED TO REPORT TO THE LIAG AND TO SOLICIT LIAG INPUT?

A. While PAWC routinely argues that it relies on its LIAG to provide input on issues affecting low-income customers, that opportunity to provide input is substantially more limited than the Company indicates. While LIAG meetings unquestionably serve a useful function to a limited degree, given the limited time allotted for each meeting and the infrequency of the meetings (OCA-05-012, Attachment), they have not historically been used to allow members of the LIAG to introduce new issues to PAWC or to the group. In particular, PAWC does not seek input into what items should be put before the LIAG or added to the agenda. (OCA-05-012(b)). Moreover, issues are not introduced to the LIAG with an opportunity for LIAG members to consider those issues outside the meeting and to provide feedback or input to PAWC. (OCA-05-013). Without overstating this critique of how PAWC interacts with its LIAG, I offer these observations simply to explain why it is necessary for the Commission to direct PAWC to present to LIAG the issue of how to use linguistic and speech pattern analysis to advance the identification of low-income customers and their enrollment in the BDP and/or AMP.

D. PAWC's Hardship Grant Program.

Q. DO YOU RECOMMEND MODIFICATIONS TO THE PAWC HARDSHIP GRANT PROGRAM?

A. Yes. I recommend that PAWC increase the maximum income eligibility for its hardship grants to 250% of Federal Poverty Level. The current maximum income eligibility is 200% of FPL. (CAUSE-PA-01-007).

In addition, I recommend that PAWC adopt a process that would allow multiple hardship grants in a given twelve-month period, so long as those grants do not exceed the annual maximum benefit amount of $500. Current PAWC program rules allow a customer to receive only one grant per year, with that single grant being no more than $500 (the $500 cap being applied separately for water and wastewater service). (CAUSE-PA-01-007). The Settlement of PAWC's 2022 rate proceeding provided in relevant part that "PAWC agrees to work with its CAAG members to develop a solution to allow an eligible customer to receive multiple Hardship Fund grant awards each year, up to the maximum grant amount of $500 for water and $500 for wastewater." (Pennsylvania PUC v. PAWC, Docket R-2022-3031672 & R-2022-3031673 (cons.), Joint Petition for Settlement, at ¶52, page 14). PAWC's description of its hardship fund in this proceeding, however, documents that this modification has yet to be made. PAWC's description of its hardship fund states that "Each customer account is eligible for *one grant award per year*." (CAUSE-PA-01-007) (emphasis added). I recommend that PAWC be directed to continue to comply with the 2022 Settlement until the referenced "solution" is achieved.

Q. WHY SHOULD PAWC EXPAND ITS HARDSHIP ELIGIBILITY FROM 200% TO 250% OF FEDERAL POVERTY LEVEL?

A. Expanding the eligibility for hardship grants to 250% FPL has three foundations. First, as I explain in detail in my response to PAWC's proposed addition of a Tier 4 rate discount, one attribute of customers at this level of income is not merely the *level* of their income, but is also the *fragility* of their income. As I explained above with respect to customers having income between 150% and 200% FPL, and which is equally true for customers with income up to 250% FPL, these customers are frequently, if not generally, the working poor. They lack paid leave, and work for hourly wages that can easily be subject to disruptions that would give rise to a reasonable need for a hardship grant.

Second, while income at between 200% and 250% FPL may by sufficiently high to no longer merit a rate discount, those income levels do not provide sufficient income to allow households to comfortably meet their basic needs. The income needed to meet basic household needs is measured by Pennsylvania's "self-sufficiency standard" (SSS).[29] The SSS varies by county and by household size and composition. Within each county, for example, a three-person household comprised of an adult with two infants would have a different self-sufficiency income than a three-person household with two adults and a school age child. To illustrate, I have selected nine different counties served by PAWC[30] and examined the SSS for a three-person household with three different household compositions (one-adult, two infants; one adult, two school-age; one adult, one infant, one school-age).[31] The data is set forth in Table 17 below.

[29] Self-Sufficiency Standard: Pennsylvania (2021). https://selfsufficiencystandard.org/pennsylvania/

[30] I have tried to select counties in the following regions of PAWC's service territory: Northeast, Central, Northwest, Southeast, and Southwest.

[31] Overall, the SSS sets forth income levels for households with 719 different sizes and composition.

Table 17. 2021 Self-Sufficiency Standard (SSS) In Dollars and FPL Percent for Selected PAWC Counties And 3-Person Households with Selected Compositions

Counties	100% FPL (2023)	1 Adult—2 Infant		1 Adult-2 Pre-School		1 Adult-2 School Age	
		SSS	As % FPL	SSS	As % FPL	SSS	As % FPL
Adams	$24,860	$62,212	250%	$60,931	245%	$55,756	224%
Armstrong	$24,860	$53,292	214%	$52,414	211%	$46,949	189%
Berks	$24,860	$69,627	280%	$64,232	258%	$57.505	231%
Dauphin	$24,800	$68,084	275%	$56,956	230%	$64,520	260%
Fayette	$24,860	$52,213	210%	$51,399	207%	$44,778	180%
Luzerne	$24,860	$55,546	223%	$54,086	218%	$48,317	194%
Monroe	$24,800	$61,575	248%	$58,864	237%	$53,394	215%
Union	$24,860	$66,017	266%	$63,837	257%	$57,183	230%
Washington	$24,860	$62,042	250%	$60,753	244%	$52,695	212%

The data shows that, in the 27 scenarios examined, SSS incomes fall between 200% and 250% FPL 18 times. SSS incomes fall above 250% FPL in an additional six (6) instances. These are all instances where a minor or temporary economic disruption to the household might result in such households having difficulties in making a PAWC payment. And, once behind, their incomes are sufficiently low that it would be difficult to catch-up without external assistance such as through PAWC's hardship fund.

I conclude that it is reasonable for PAWC to extend the maximum income eligibility for hardship grants from 200% to 250% FPL. I recommend that PAWC do so.

E. Developing a Written "Universal Service" Plan.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I explain why PAWC should develop a written "universal service plan" and file that plan with the PUC's Bureau of Consumer Services. That written plan should include not only a description of each low-income program component PAWC offers, but should also identify: (1) the objectives which PAWC is seeking to accomplish through its various program components (including but not limited to participation levels); (2) the metrics by which PAWC will seek to measure whether those objectives are being accomplished; (3) the manner in which, if at all, the differing program components interact with each other; and (4) the evaluation process by which PAWC proposes to determine whether its objectives are being met and what remedies the Company will pursue in the event they are not. The plan should further include: (5) the qualifications for each program; (6) the proposed means of outreach and intake; (7) the current and projected participation levels; and (8) the expected annual budgets. The plan should be subject to review and comment not only by BCS, but by other stakeholders who request to be involved in a review process. These elements of a written universal service plan are no less than the fundamental components of prudent, and successful, utility program planning.

Q. DOES PAWC PREPARE A WRITTEN LOW-INCOME PLAN AT PRESENT?

A. No. When asked whether it prepares such a plan, PAWC responded:

> Unlike electric and gas utilities, water and wastewater utilities are not required to have a written plan identifying their universal service programs and related outreach efforts. Nevertheless, PAWC voluntarily provides

> quarterly presentations to all Customer Assistance Advisory Group members, including the Commission's Bureau of Consumer Services, the Office of Consumer Advocate, [and] the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania, among others, which provides extensive updates regarding each of its customer assistance programs and outreach efforts.

(OCA-05-014). PAWC's rationale for not preparing such a plan, however, should be rejected. The need to prepare and file this written plan is not dependent upon a specific PUC regulation or statute requiring such preparation. The need to prepare and file this plan is based on reasonably prudent planning for any expenditures by PAWC. Note that whether or not it is "required to have a written plan" akin to the state's electric and gas utilities, PAWC's response indicates that it does not even have an ***internal*** Company document or process that addresses the fundamental planning issues identified above.

The extent to which failing to engage in this fundamental planning process evidences a lack of prudent planning is apparent within the context of PAWC's Bill Discount Program. When asked to identify "all metrics used to measure the outcomes of the Bill Discount Program" along with "all data collected and evaluated using these outcome metrics," PAWC responded by stating: "PAWC does not have specific "outcome" metrics for the Bill Discount Program (BDP). However, the Company does collect and share a range of BDP ***operational*** information. . ." (OCA-05-015) (emphasis added).

PAWC can tell you what it is doing, in other words ("a range of BDP operational information"), but cannot tell you why it is doing this or what it is seeking to accomplish by engaging in those activities (OCA-05-015), let alone what, if anything, those activities are accomplishing in fact. (OCA-05-016).

Q. CAN YOU ILLUSTRATE THE FAILURE OF THE LACK OF A COMPREHENSIVE WRITTEN UNIVERSAL SERVICE PLAN?

A. Yes. PAWC has not laid out in any written form a plan identifying how the Company intends to use its universal service programs to address the payment difficulties of its Confirmed Low-Income customers. Remember, PAWC has said that "the company defines 'confirmed low-income customer' as a customer that *has provided income information to the company* indicating that the customer has a household income at or below 150% of the Federal Poverty Level." (OCA-05-001, emphasis added). Indeed, the Company states in response to CAUSE-PA:

> The Company defines "confirmed low income customer" to mean a customer for which the Company has received income information indicating that the customer has an annual income at or below 150 percent of the Federal Poverty Guidelines. The customer segments included in the designation of confirmed low income customers are the same as the tier levels in the tariff: 0-50%, 51%-100%, and 101%-150%.

(CAUSE-PA-01-04). According to the Company, in other words, not only has the Company *received* income information about the customer, but, in addition, that information has been sufficient to determine the tier of Poverty into which the customer falls. Given that knowledge about what the Company knows about a customer deemed to be a "Confirmed Low-Income" customer, I note:

- From January 2023 through October 2023, PAWC disconnected 8,724 Confirmed Low-Income customers (OCA-05-025, Revised). During that same time period, PAWC enrolled only 2,866 Confirmed Low-Income customers into its Bill Discount Program. (OCA-05-008). In no month in 2023 did the number of Confirmed Low-Income customers enrolling in the BDP equal or exceed the number of Confirmed Low-Income Disconnections.

Table 18. Number of Confirmed Low-Income Disconnections Compared to Number of New BDP Enrollees by Month (January through October 2023)
(OCA-05-025 Revised, OCA-05-008)

	Number Nonpayment Disconnections of Confirmed Low-Income	New Bill Discount Program Water Enrollees
202301	606	106
202302	317	206
202303	344	174
202304	920	167
202305	1,192	152
202306	1,366	184
202307	1,077	131
202308	1,431	752
202309	748	565
202310	723	429

Customers enrolled in the BDP in the future, of course, should also be enrolled in the Company's Arrearage Management Program. The Company should not be disconnecting customers that it not only knows to be low-income, but knows sufficient information to be able to identify which BDP tier they would fall into, without first attempting to enroll these customers in AMP.

- In similar fashion, PAWC reports that it disconnected service for nonpayment to 14,562 Confirmed Low-Income water accounts in 2022; and to 8,724 Confirmed Low-Income water accounts in 2023 (YTD). (OCA-05-025 [Revised]). Despite these nonpayment disconnections, PAWC further reports that it provided only 961 hardship grants to water accounts in 2022; and 1,916 hardship grants to water accounts in 2023 (YTD). (OCA-05-031 [Revised], see also, OCA-011-012, OCA-011-008). PAWC reports, however, that for its hardship funds:

  > During the 2020-2021 program year: No applications were denied for insufficient funds.

> During the 2021-2022 program year: Records indicate one application was denied for insufficient funds, but this appears to be an error because sufficient funds remained available throughout the program year. PAWC's assumption is that this customer's application was denied for ineligibility.
>
> During the 2022-2023 program year: Forty (40) applications were denied for insufficient funds.
>
> During the 2023-2024 program year: No applications were denied for insufficient funds.

(OCA-011-009). As can be seen, in other words, PAWC is disconnecting service to customers from whom PAWC had already received information establishing their low-income status despite the fact that the Company had sufficient funds in nearly every year to provide additional hardship grants.

- From January through October 2023, PAWC averaged 2,546 BDP participants who had consumption falling in PAWC's highest usage range (3,000 gallons or more). Nonetheless, during 2023, PAWC distributed only 959 water conservation kits. (OCA-011-018).

- From November 2021 through October 2023 (the most recent 24 months available), PAWC had an average of 37,620 Confirmed Low-Income customers. (OCA-11-001) During the same time period, on average, 53.91% of those Confirmed Low-Income customers were in arrears, carrying an average arrears of $303. (OCA-05-025). Despite having information that established not only the ***fact*** of their income eligibility for each of these customers, but also their specific FPL tier (CAUSE-PA-01-01), PAWC had enrolled fewer than half of those customers in its Bill Discount Program.

As can be seen, even setting aside the opportunities for improved outreach and intake, innumerable opportunities exist to use each component of PAWC's suite of universal service programs to help advance the objective of improving affordability, as well as improving bill payment patterns and even controlling the cost of the programs.

Moreover, as can be seen, the Company's suite of universal service programs as a whole can be better coordinated so that the synergistic impact of the programs as a whole will

be amplified, if not maximized, in contrast to the sum of each program's impacts when viewed individually.

PAWC says that it should not be ordered to prepare such a plan because there is no specific PUC regulation mandating such a plan. The plan, however, should not be required based on a specific mandatory regulation. It should instead be required as an element of fundamental prudent program planning and management.

Part 3. Impact of Increasing Customer Charges on Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. PAWC proposes to increase its residential water customer charge by 14.3%, from $17.50 to $20.00 per month. It also proposes to set its residential wastewater service charge at $20 per month. The increase in customer charge impedes the ability of low-income customers to pursue an improvement in bill affordability by reducing their bills through the implementation of conservation efforts. Given PAWC's proposed increased water customer charge of $20, when coupled with a volumetric charge of $2.1319/100 gallons, the customer charge imposes an irreducible portion of the low-income, low-use customer bill. Table 19 shows that PAWC's proposed increase in its water customer charge, even at a monthly usage of 3,600 gallons, results in more than one-fifth of the low-income bill being irreducible.

Table 19. Percentage of Monthly Water Bill Attributable to Fixed Customer Charge Given PAWC's Proposed Customer Charge and Volumetric Charge

Monthly Usage	Pct fixed	Pct Volumetric	Total
1,200	42%	58%	100%
2,400	27%	73%	100%
3,600	19%	81%	100%
4,800	15%	85%	100%

This impediment is particularly important to PAWC's Confirmed Low-Income customers. According to PAWC, for the period November 2021 through October 2023, 31% of its Confirmed Low-Income customers (11,536 of 37,620) have monthly water usage of 1,500 gallons or less, while an additional 52% (19,700 of 37,620) have monthly water usage of between 1,500 and 3,000 gallons. (OCA-011-001).

Q. DOES PAWC PROVIDE MEANINGFUL ASSISTANCE TO HELP LOW-INCOME CUSTOMERS CONSERVE WATER?

A. No. PAWC does not contract with third parties to provide conservation assistance to low-income customers, nor does it provide any funding to third parties to deliver water conservation assistance. (OCA-011-013). The significance of that is that PAWC does not piggy-back any water conservation efforts on top of low-income weatherization delivered through Community Action Agencies as funded by the U.S. Department of Energy's Weatherization Assistance Program (WAP), nor does it seek to partner with agencies providing low-income usage reduction investments through the PUC's Low-Income Usage Reduction Program (LIURP) delivered through Pennsylvania's natural gas and electric distribution utilities.

The only "conservation" investments that PAWC makes in low-income households involve the provision of "water conservation kits." (OCA-011-014). PAWC does not develop annual budgets for any water conservation investments. (OCA-011-015). Indeed, for the year ending June 30, 2025, it "anticipates" spending $32,500 on "conservation kits" for its low-income population. (OCA-011-015).

From November 2021 through October 2023, PAWC averaged 36,884 Confirmed Low-Income customers per month. (OCA-011-001). From 2020 through 2023 (YTD), PAWC distributed: (1) 1,639 conservation kits in 2020; (2) 1,556 conservation kits in 2021; (3) 1,788 conservation kits in 2022; and (4) 959 conservation kits in 2023 (YTD). (CAUSE-PA-1-016). In 2020 through 2023, PAWC has not separately budgeted for its conservation kit. (OCA-011-015, OCA-011-020). The most that PAWC can say is that it "anticipates" that its projected expenditure of $32,500 will be a "normal level" of expenditure. (OCA-011-015).

Indeed, PAWC does not even attempt to serve its confirmed low-income population; PAWC states that it provides water conservation kits only to BDP participants. (OCA-011-018(e)). Even then, PAWC serves but a small fraction of this population. In 2022, PAWC averaged 16,849 BDP participants per month, (OCA-011-001), compared to the 1,788 water conservation kits it delivered to BDP participants in 2022. (OCA-011-018). PAWC did even less in 2023. In 2023 (YTD), PAWC averaged 23,122 BDP participants each month (OCA-005-002), compared to the 959 water conservation kits it delivered in 2023 (YTD). (OCA-011-018). PAWC does not track the dollar investment per household. (OCA-011-018). Nor does PAWC track either the total usage reduction or the

per household usage reduction achieved through its "water conservation kit." (OCA-011-018).

Q. IS THERE ANY FINAL REASON WHY IMPEDING LOW-INCOME INVESTMENT IN WATER CONSERVATION THROUGH AN INCREASE IN RESIDENTIAL CUSTOMER CHARGES IS TO THE DETRIMENT OF PAWC'S LOW-INCOME CUSTOMERS?

A. The failure of PAWC to deliver meaningful water conservation assistance to low-income customers means that, to the extent that water conservation occurs at all, it must occur through low-income customers making out-of-pocket expenditures on that conservation. As I discuss elsewhere in my testimony, however, PAWC's low-income customers bear unaffordable bills as a percentage of income. Customers who are facing water bill burdens of 6% to nearly 80% of income do not have the discretionary income to "invest" in bill-reducing conservation with the hopes that that conservation will generate bill reductions greater than the cost of the investment. Moreover, as I discuss elsewhere in my testimony, Pennsylvania's low-income customers have reported through the Census PULSE Survey that they are facing moderate to extreme difficulties in paying their "usual household expenses" in the past seven days. These households also do not have the discretionary income to invest in water conservation on their own.

Q. DO YOU HAVE ANY FINAL OBSERVATION ABOUT THE IMPACTS THAT INCREASING RESIDENTIAL CUSTOMER CHARGES WILL HAVE ON LOW-INCOME CUSTOMERS?

A. Yes. PAWC is proposing to increase the irreducible portion of the bill to customers who have a demonstrable inability to pay their bills with which to begin. Table 20 shows that,

since January 2022, consistently more than 50% of Confirmed Low-Income customers (not distinguishing between water and wastewater customers) have arrears on their PAWC bills. In only one of those 22 months (April 2022), did the percentage of Confirmed Low-Income customers in arrears fall below 50%. The Table further shows that not only were low-income accounts in arrears, they were ***deeply*** in arrears, with the average monthly arrears since January 2022 being more than $300.

Table 20. Percentage of Confirmed Low-Income Customers in Arrears and Average Arrears of Confirmed Low-Income Accounts in Arrears (OCA-05-025)

Year-Month	The percentage of confirmed low-income accounts in arrears	The average arrearage of confirmed low-income accounts in arrears
202201	51.88%	$234.38
202202	54.70%	$247.20
202203	52.36%	$283.65
202204	46.58%	$280.68
202205	52.18%	$447.29
202206	53.92%	$418.50
202207	54.10%	$400.33
202208	57.84%	$375.63
202209	53.73%	$351.56
202210	53.74%	$341.62
202211	55.86%	$317.01
202212	57.26%	$298.38
202301	53.59%	$307.66
202302	56.89%	$314.96
202303	57.71%	$320.71
202304	53.38%	$292.32
202305	56.87%	$280.64
202306	54.72%	$245.42
202307	51.95%	$246.47
202308	55.41%	$258.72
202309	50.94%	$250.89
202310	56.94%	$266.22

Despite these demonstrated difficulties in paying their bills, PAWC is proposing to increase the irreducible part of the bill by increasing fixed monthly customer charges for PAWC water and wastewater customers in most rate divisions.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the customer charge recommendations of OCA witness Mierzwa (OCA Statement 4) be adopted. In addition, I recommend that PAWC be directed to develop and submit to BCS, no later than six months after a final order in this proceeding, a plan through which the Company will use the federal WAP agencies, as well as the natural gas and/or electric LIURP agencies, as partners through which to deliver water conservation investments to low-income customers.

Part 4. Impact of the Revenue Decoupling Mechanism on Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the impact of PAWC's proposed Revenue Decoupling Mechanism (RDM) on low-income customers. I find that the proposed RDM will disproportionately adversely affect low-income customers.

Q. WHAT IS PAWC'S RATIONALE FOR THE RDM?

A. According to the Company:

> Seasonal weather conditions can cause water sales to either increase or decrease from expected going-forward levels, which, in turn, cause revenues to increase or decrease from expected going-forward levels. Cold winters and hot, dry summers tend to increase water sales, and warmer winters and cooler, wetter summers tend to decrease water sales. Weather volatility in either direction causes volatility in revenues.

(PAWC St. 10, at 87).

Q. HOW WOULD THE RDM OPERATE?

A. According to Mr. Rea, PAWC would first calculate a residential fixed charge. It would do so by determining the "Total revenue requirement allocated to residential customers for rate design purposes less the Volumetric Charge multiplied by total volumetric sales associated with residential customers divided by the total number of residential customers in the case." (PAWC St. 10, at 91). Mr. Rea then explained:

> The proposed RDM works by comparing actual revenues recovered from eligible customers in a given month or year to the revenues that would result from applying the RDM cost-components that I described above. If actual revenues are higher than would have been collected under the RDM formula, the difference is credited to customers in the following year. If actual revenues are lower than would have been collected under the RDM formula, the difference is collected from customers in the following year.

(Id., at 92). The RDM would apply to both water and wastewater bills. (Id.)

Q. HOW AND WHY WOULD THE RDM DISPROPORTIONATELY ADVERSELY AFFECT LOW-INCOME CUSTOMERS?

A. The RDM results in a transfer of costs from higher income customers to lower income households. This occurs because the actions that customers take to reduce water consumption, thus resulting in a readjustment of rates to that consumption which remains, are actions that are disproportionately taken by higher income households. I base this conclusion on the following observations.

First, as I discuss in more detail below, income is associated with different housing attributes. Higher income households in the PAWC service territory tend disproportionately to be homeowners. Moreover, higher income households in the

PAWC service territory tend also disproportionately to live in single-family homes. As a result, in addition to having basic indoor water use, these customers will also tend disproportionately to have outdoor water use (and non-basic water consumption). This consumption is the consumption that would be more discretionary in nature and subject to reduction. As usage varies downward, the resulting unrecovered costs are passed on to that consumption which remains. The customers who will bear these costs are those who have irreducible consumption. These customers will most likely include lower-income customers.

Second, as I discuss in detail above, low-income households tend to have extremely high BTI Ratios. When households are devoting a high percentage of income to paying their basic bills, they will be less likely to invest in water conservation measures, even if those measures might be cost-effective in the long-term. These customers are not looking for ways to invest in water conservation measures.

Third, as I establish below, although PAWC does not distinguish between homeowner and tenant customers (OCA-05-011), there is a relationship in the PAWC service territory between income and tenant status. For these tenants, in addition to the barriers presented by the lack of available income to invest in water conservation measures, there is the barrier which is referred to as the lack of "dominion interest" over their housing unit. The lack of dominion interest refers to the fact that tenants, even if they had the financial wherewithal to make water conservation investments, do not have the authority to make decisions about replacing the major water consuming systems in the home. Tenants, for

example, would not be authorized to replace older toilets with newer water-conserving toilets.

Q. HOW DOES THIS DISCUSSION RELATE TO PAWC'S PROPOSED RDM?

A. PAWC's proposed RDM in essence takes revenue that has historically been billed to all customers and, as more customers take steps to reduce their consumption (and thus reduce the revenue billed to them) reallocates those dollars to the customers (and their consumption) that remain. The data above shows that the customers who are left behind by such a reallocation process are disproportionately low-income customers. In other words, PAWC proposes to take those revenues that had been billed to higher income households and to reallocate those dollars to those low-income households who do not have the financial capacity to pursue investments in water conservation measures.

Q. COULD NOT PAWC APPLY ITS RDM ONLY TO NON-BDP REVENUES?

A. PAWC could and should exempt BDP revenues, and BDP customers from the operation of the RDM should it be adopted. I recommend such an exemption. However, the issues I describe above apply to low-income customers generally, not to BDP customers in particular. As I document in detail above, BDP customers represent a small portion of the low-income customer base of PAWC. Exempting BDP billings and usage from the RDM, while necessary if the PUC permits PAWC to shift risk to customers through approving the RDM, does not address the shortcomings I have identified.

Q. IS THERE ANY OTHER REASON WHY THE RDM OPERATION BREAKS DOWN AS APPLIED TO LOW-INCOME CUSTOMERS?

A. Yes. The RDM proposed by PAWC examines only one aspect of the ratemaking process, the determination of revenues. Rates, however, are not set simply through an examination of the level of revenues, but rather through an examination of the relationship between revenues and expenses. With low-income customers in particular, reducing usage would not only reduce billed revenue, but would reduce the expenses associated with billed revenue. The Table below shows the difference between payment patterns for residential customers and for low-income customers. The percentage of accounts in arrears is from 270% to 320% higher for PAWC's low-income customers than for its residential customers as a whole. In the three years examined (2021, 2022, 2023), the average low-income arrears (for accounts having arrears) were from 150% to 185% times the average arrears for residential customers as a whole. Over the three year period, the rate of nonpayment service disconnections for low-income customers having received a disconnect notice was from four times to nearly eight times higher for low-income customers than it was for residential customers as a whole.

Table 21. Payment Patterns of Low-Income and Residential Customers (OCA-5-24, OCA-5-25)

	2021		2022		2023 (YTD)	
	Residential	Low-Income	Residential	Low-Income	Residential	Low-Income
Percent accounts in arrears	18.6%	49.9%	18.3%	53.7%	17.0%	54.8%
Average arrears	$196.19	$353.20	$180.67	$333.02	$179.86	$278.40
Percent of accounts receiving disconnection notices actually disconnected	1.6%	7.6%.	1.6%	4.9%.	2.0%	4.2%.

By reducing low-income usage, PAWC will not only reduce its revenue, but it will reduce its expenses as well. Usage reduction is a particularly effective mechanism to use to

control utility expenses because arrears do not have to be reduced to $0 in order to achieve expense reductions. For example, with working capital, PAWC would experience a reduction in expenses by decreasing the level of arrears; by decreasing the percentage of either accounts or billings in arrears; or by accelerating payments. A $200 arrearage imposes fewer working capital costs than a $300 arrearage all other things equal. Moreover, a 90-day arrears will impose fewer working capital costs than a 150-day arrears all other things equal. It does not matter whether the usage reduction can be attributed to energy efficiency investments, to weather, or to some other cause. The results are the same.

By implementing the proposed RDM to take into consideration the reduction in revenue, without also considering the corresponding reduction in expenses, PAWC is not making an accurate adjustment to maintain stability in earnings. While reductions in expenses are allocated to all customers, reductions in revenues are disproportionately allocated to those customers left behind (with no opportunity to engage in conservation). Accordingly, even if expenses are incorporated as an offset, low-income customers will bear the costs imposed by the RDM without being allowed the corresponding savings.

Q. IS THERE AN ADDITIONAL REASON WHY THE RATIONALE FOR A REVENUE DECOUPLING ADJUSTMENT DOES NOT APPLY TO LOW-INCOME CUSTOMERS IN PARTICULAR?

A. Yes. Particularly when applied to low-income customers, the RDM formula compares non-comparable dollar figures. The Company proposes to begin the process by determining the RDM "cost components." The "Residential Fixed Charge" cost component is calculated as follows: "Total *revenue requirement* allocated to residential customers for rate design purposes less the Volumetric Charge multiplied by the total volumetric sales associated with residential customers divided by the total number of residential customers in the case." (PAWC St. 10, at 91) (emphasis added). The RDM then works by "comparing *actual revenues* recovered from eligible customers in a given month or year to the revenue that would result from applying the RDC cost-components. . ." (Id., at 92) (emphasis added).

As can be seen, the "cost components" that form the basis for the RDM do *not* consider the collectability of dollars actually billed to customers. In contrast, the revenues that form the basis for the RDM *do* consider collectability. The difference is not simply a question of taking write-offs or uncollectibles into account. The write-offs (or uncollectibles) that have been incorporated into rates would be included in the "actual revenues recovered" from customers. What is not included in the "actual revenues recovered," however, are outstanding arrearages.[32] By comparing "actual revenues recovered" to the RDM fixed cost component of the revenue requirement, PAWC is

[32] Arrearages that have been written off as uncollectible are not included in the level of active arrears.

recovering not merely revenues that have been reduced due to weather or conservation investments, but it is *also* recovering the revenues the payment of which have merely been delayed to a future period.

As I explained in more detail in my discussion of collections above, the PUC's annual report on collections for major electricity, gas and water utilities[33] reports that in 2022, PAWC had 6.3% of its residential billings in debt. Indeed, the percentage of PAWC residential billings in debt increased from 4.4% in 2018 to 6.3% in 2022. Had PAWC been operating its RDM during that period, its collection of dollars through the RDM would have increased not because its revenues were permanently lost due to conservation or weather, but rather because its rate of collections was declining.

This reasoning is particularly applicable to billings to low-income customers. Table 22 below shows the average arrears (of accounts in arrears) for all residential water customers compared to the average arrears (of accounts in arrears) for confirmed low-income customers. As can be seen, the average arrears of confirmed low-income customers is consistently nearly two-times higher than the average arrears of residential customers generally. To the extent that PAWC is proposing to base its RDM recovery on the use of "actual revenues recovered," it is clear that it will be transferring proportionately more low-income arrearages into its RDM than residential arrears overall.

202201	$147.56	$234.38	1.59	202306	$168.48	$245.42	1.46
202202	$152.23	$247.20	1.62	202307	$176.04	$246.47	1.40
202203	$169.68	$283.65	1.67	202308	$175.33	$258.72	1.48
202204	$161.53	$280.68	1.74	202309	$173.25	$250.89	1.45
202205	$214.82	$447.29	2.08	202310	$180.57	$266.22	1.47

By transferring these unpaid arrears to the RDM, low-income customers will remain responsible for paying their arrears. However, being the customer left behind and disproportionately bearing the costs of the RDM, they will also be called upon to bear a disproportionate burden of paying the RDM. The low-income customers thus get hit twice.

Q. IS THERE ANY FINAL WAY IN WHICH THE RATIONALE OF THE PROPOSED RDM BREAKS-DOWN WHEN CONSIDERING LOW-INCOME CUSTOMERS?

A. There are two final ways in which the rationale for the RDM breaks down when applied to low-income customer accounts. First, as discussed, the Pennsylvania PUC recently approved the implementation of a PAWC Arrearage Management Program. Under this program, the arrears of program participants will be frozen and will, as participants make full and timely payments, be "forgiven" over time. After a participant's eligible arrears are frozen, they will no longer generate "actual revenues recovered" to PAWC. As low-income customers enter the program, there will be a reduction in gross revenues to PAWC. While PAWC has yet to implement its AMP, according to PAWC, new BDP participants (which are expected to represent the bulk of AMP participants) brought substantial pre-program arrears into the program. From November 2021 through October 2023 (the most recent 24 months available), PAWC reported that new BDP participants had a total of $2,478,461.26 in preprogram arrears (that would be subject to the AMP once implemented). Under the RDM, however, those unrecovered preprogram arrears will be recovered as lost revenues through the RDM since they would be one component of any reduction in "actual revenues collected" as described by Mr. Rea. PAWC has proposed a specific dollar amount ($2,864,700, PAWC St. 1, at 16) to be recovered for the AMP in this proceeding.[34] To the extent that the frozen arrears will reduce "actual revenues collected," however, those costs would already be recovered through the RDM. It would be inappropriate to recover the AMP credits once through the RDM as a

[34] A portion of this recovery would be for set-up and administrative costs.

reduction in "actual revenues collected" and then again through a specific AMP revenue requirement adjustment.

The same reasoning would apply to bill credits provided through increasing participation in PAWC's Bill Discount Program. As BDP participation increases, PAWC will provide increasingly higher levels of bill credits. The BDP tiered discount was implemented on January 28, 2023, and PAWC began to report costs by tier in April 2023. (OCA-V-019). From April 2023 through October 2023, PAWC had provided $6,380,938 of BDP credits. (OCA-V-19). As participation in the BDP increases, the total reduction of "actual revenues recovered" would increase as well. Unless those lost revenues are excluded from the calculation of the RDM, and there is no indication that they would be, to reflect those lost revenues in the RDM would be to double-collect the BDP discount credits, once through the RDM and again through a specific recovery of BDP credits. The Company concedes this result, noting that "the RDM does not specifically account for low-income participants. The fixed RDM fixed component (sic) and the RDM volumetric component applies the same way to Bill Discount Program participants as it does to other customers." (OCA-06-059). The Company states that:

> If participation in the bill discount program is higher than assumed in the development of billing determinants, revenues would be reduced from expected levels and the difference would be reflected in the RDM as the RDM does not contain a specific low-income discount component. The same is true if participation in the bill discount program is lower than assumed in the development of billing determinants, in which case revenues would be increased from expected levels and the difference would be reflected in the RDM.

(OCA-06-060). The Company finally states that "*Any* increase or decrease in the number of customers participating in the Bill Discount Program would cause reductions or

increases in revenues that would be reflected in the RDM calculation. This is one of a number of factors that could cause revenue fluctuations that would be reflected in the proposed RDM." (OCA-06-61) (emphasis added).

What the RDM does, in other words, is to take the revenue associated with low-income bill discounts and charge that lost revenue back to ratepayers through the RDM. Since low-income customers are bearing a disproportionate share of the RDM, since they are the customers left behind, they are, in essence, being charged the costs of their own discounts.

Q. WHAT DO YOU CONCLUDE?

A. I conclude that the RDM collects some "lost revenues" that are not lost at all as a function of a reduction in "actual revenues recovered." Revenues not recovered because they are being paid late rather than not being paid at all skew the amount of revenue included in the RDM upwards. Revenues that are not being collected because they represent frozen arrears subject to PAWC's new AMP would also skew the amount of revenue included in the RDM upwards. Revenues that are not being collected because they represent BDP discounts of new BDP enrollees would also skew the amount of revenue included in the RDM upwards. Because low-income customers do not have the same capacity for conservation as higher income customers have, they bear the brunt of paying each of these costs.

Q. WHAT DO YOU RECOMMEND?

A. I recommend, consistent with the testimony of OCA witness Mierzwa (OCA Statement 4) and OCA witness Hoover (OCA Statement 1) that the proposed RDM should be

denied. If the RDM is not denied in its entirety, the RDM should exempt both BDP revenues and BDP customers from its application. Also, if the RDM is approved, it should be made subject to the same low-income discounts that all other PAWC volumetric charges are subject to. Finally, if the RDM *is* approved, it should not be used to collect revenue reductions attributable to BDP discounts, AMP frozen arrearages, or customer arrearages.

Part 5. The Impact of the Environmental Compliance Investment Charge (ECIC) on Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the impacts of PAWC's proposed Environmental Compliance Investment Charge (ECIC) on low-income customers in particular. I conclude that the ECIC will harm low-income customers.

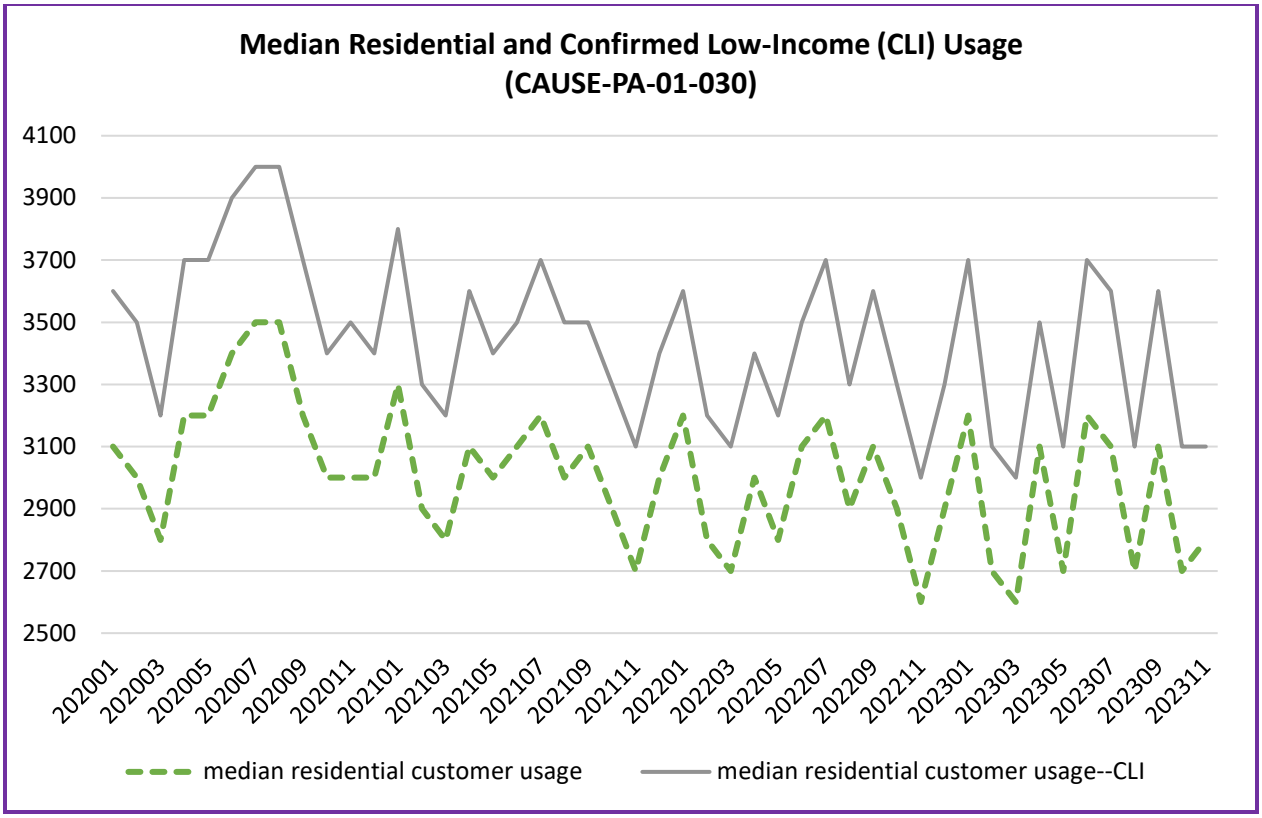
Q. UPON WHAT DO YOU BASE THIS CONCLUSION?

A. As PAWC concedes, the proposed ECIC is a charge that would be imposed above and beyond the normal fixed and volumetric charges imposed on residential customers. (OCA-11-021, OCA-11-022). By creating the ECIC, in other words, PAWC is removing those environmental compliance costs from the set of charges that would otherwise be subject to reduction through the Company's Bill Discount Program. At the same time, PAWC proposes to maintain the low-income bill discounts at their historic levels even though the Company is proposing to substantially increase its fixed and volumetric charges. To impose a non-discounted ECIC is simply to increase low-income bills even further. To that extent, the unaffordable Bill-to-Income (BTI) Ratios identified both by

myself, and by PAWC's own witness, would be even higher than determined both by myself and by Mr. Rea. Those BTI Ratios do not include the additional environmental compliance costs proposed by PAWC to be collected through the ECIC.

Q. WILL LOW-INCOME CUSTOMERS PAY A GREATER PROPORTION OF THE ENVIRONMENTAL COMPLIANCE CHARGES THAN RESIDENTIAL CUSTOMERS GENERALLY?

A. Yes. To the extent that low-income customers have monthly consumption greater than residential customers overall, they will also pay a higher amount of the environmental compliance costs. According to PAWC's data, low-income customers do have somewhat higher monthly usage than do residential customers overall. The Chart below shows the median use of residential and low-income customers by month for January 2020 through November 2023. While low-income median usage fluctuated somewhat between 3,300 gallons and 3,700 gallons per month, residential consumption overall fluctuated between 2,700 and 3,100 gallons per month. (CAUSE-PA-01-030).



In no month since January 2020 did the median usage for residential customers overall exceed the median usage for Confirmed Low-Income customers in particular. Given that higher monthly usage equates to a higher monthly bill, and given that PAWC proposes to apply the ECIC charge as a percentage of a customer's monthly bill, low-income customers will pay a higher amount of the environmental compliance costs compared to residential customers overall given that low-income customers have monthly consumption greater than residential customers overall.

Q. DO LOW-INCOME CUSTOMERS BEAR THE IMPACTS OF ENVIRONMENTAL DEGRADATION IN ANY OTHER WAY?

A. Yes, there are two ways in which environmental degradation imposes harms on the lowest income communities. First, low-income households have the least ability to take steps to protect themselves from the environmental contamination of their water through

the installation of water infiltration. Customers who do not have the financial resources to afford to pay their day-to-day household bills as I described in detail above, also lack the financial resources to install the technologic fixes to improve their water quality through infiltration systems.

Q. UPON WHAT DO YOU BASE YOUR OBSERVATION THAT LOW-INCOME CUSTOMERS LACK THE FINANCIAL RESOURCES TO PAY THEIR DAY-TO-DAY BILLS?

A. The U.S. Census Bureau publishes its short-term "Household PULSE Survey" that considers, amongst other things, the extent of difficulty consumers have had in paying their "usual household expenses" in the "past seven days." The most recent period for which data is published is "Week 64," the period of October 18 through October 30, 2023.[35] While the PULSE Survey is not specific to individual utility service territories, it does provide state-specific data. The most recent Pennsylvania data is presented in the Table below. The PULSE Survey shows that more than 60% of households with income less than $25,000 have had either a "somewhat difficult" or "very difficult" time paying for their usual household expenses, while roughly 45% to more than 50% of households with income at or below $75,000 have. More than half of households with income between $25,000 and $50,000 have had either a "somewhat difficult" or "very difficult" time paying their usual household expenses in Pennsylvania.

[35] U.S. Census Bureau, Household PULSE Survey, Week 63, October 18 – 30, 2023, available at https://www.census.gov/data/tables/2023/demo/hhp/hhp63.html

Table 23. Difficulty paying for usual household expenses in the last 7 days (Pennsylvania) (October 18 – 30, 2023) (PULSE Survey Week 63)

	Not at all difficult	A little difficult	Somewhat difficult	Very difficult	Total of reporting
Less than $25,000	9.6%	30.2%	21.3%	38.8%	100.0%
$25,000 - $34,999	10.3%	29.0%	38.4%	22.4%	100.0%
$35,000 - $49,999	20.7%	30.1%	19.4%	29.9%	100.0%
$50,000 - $74,999	32.8%	21.6%	22.4%	23.2%	100.0%
$75,000 - $99,999	29.6%	39.2%	16.3%	14.9%	100.0%
$100,000 - $149,999	40.4%	30.7%	22.4%	6.5%	100.0%
$150,000 - $199,999	42.3%	29.8%	25.7%	2.2%	100.0%
$200,000 and above	71.6%	23.0%	3.1%	2.4%	100.0%

Given their difficulties simply in paying their "usual household expenses," these households could not reasonably be expected to invest in water infiltration systems to protect against high levels of water contaminants.

Q. WHAT IS THE SECOND WAY IN WHICH LOW-INCOME CUSTOMERS BEAR THE IMPACT OF WATER CONTAMINATION?

A. Second, there are the health impacts of environmental degradation. In reaching this conclusion, it is inappropriate to measure the "health impacts" exclusively in terms of violations of the Safe Drinking Water Act (SDWA). In its seminal study of the relationship between environmentally degraded water and low-income households, the Natural Resources Defense Council (NRDC) reported:

> Although our analysis identified disproportionate risk from drinking water contamination in counties with high racial, economic, and housing/transportation vulnerability, it is likely that our research underestimates the true burden that Environmental Justice communities across the country face. The EPA regulates only a small subset of drinking water contaminants, and the agency has failed to adopt a single new standard for an unregulated contaminant since 1996. Therefore, many serious drinking

water contamination threats (including polyfluoroalkyl and perfluoroalkyl substances or PFASs) are not violations of the law. In addition, monitoring and compliance data on regulated substances are woefully incomplete and occasionally even falsified. Finally, for most contaminants, drinking water is monitored at the point of entry into the distribution system, which does not detect contamination that enters the water or multiplies after that (as is the case with some microbial contaminants that can grow in the distribution system and certain chemical contaminants that can infiltrate into or leach from system pipes). For all of these reasons, it is likely that the true scope and severity of drinking water contamination, and the full picture of disproportionate effects, is greater than this study found.[36]

Q. DOES THIS CONCLUSION APPLY TO THE PAWC SERVICE TERRITORY?

A. Yes. Using the Environmental Working Group's (EWG) Tap Water Database (Sources, Transport, Exposure and Effects of PFAs [STEEP], a partnership between Harvard and the University of Rhode Island),[37] and the zip code specific data provided by PAWC witness Rea (PAWC St. 10, Exh. 10A), I examined data for the PAWC operations serving the 30 zip codes with the highest percentage of customers with income below 100% of FPL. The PAWC data as reported by STEEP is presented in the Table below. The data compares the total number of contaminants detected along with the total number of contaminants that exceed the EWG's health guidelines. The STEEP database reports:

- Legal does not necessarily equal safe. Getting a passing grade from the federal government does not mean the water meets the latest health guidelines.
- Legal limits for contaminants in tap water have not been updated in almost 20 years.

(Id.).

[36] NRDC (2019). Watered Down Justice, at 9-10, NRDC: Washington D.C.

[37] TAP Water Database, available at https://www.ewg.org/tapwater/?gad_source=1&gclid=EAIaIQobChMI8srTtZ64gwMVsU5HAR2SZA5FEAAYASAAEgJmufD_BwE; see also, New Data Show Severity of Water Contamination in Poor Neighborhoods, available at https://web.uri.edu/steep/new-data-show-severity-of-water-contamintion-in-poor-neighborhoods/

Table 24. URI/Harvard Report of Water Contaminants Identified and Water Contaminants Exceeding EWG Health Guidelines
(PAWC areas serving 30 lowest income PAWC zip codes)

PAWC Office	No. Contaminants Detected	No. Exceeding EWG Health Guidelines
PA American Water Punxsy	13	9
PA American Water Brownsville	17	10
PA American Water Brownell	14	8
PA American Water Nesbitt	13	9
PA American Water Clarion	19	11
PA American Water West	17	10
PA American Water Lake Scranton	30	14
PA American Water White Deer	17	12

As can be seen, water contamination has been found to exist in the PAWC service territory irrespective of whether SDWA violations have been found. This water contamination has been found to disproportionately affect low-income communities in particular. Through its proposed ECIC, PAWC proposes to charge those customers who bear the brunt of the contamination, and who have the least capacity to absorb additional costs, the ***most*** for remediating this contamination in the future.

Q. WHAT DO YOU RECOMMEND?

A. I recommend, consistent with the testimony of OCA witness Mierzwa (OCA Statement 4) and OCA witness Hoover (OCA Statement 1) that the ECIC should be rejected. In the alternative, if the ECIC is approved, I recommend that it be made subject to the same low-income bill discounts that PAWC's other volumetric charges are subject to.

Part 6. The Impact of Winter Averaging on Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. PAWC's Winter Averaging rate design proposal is likely to result in a transfer of costs from higher-income customers to lower-income customers served by PAWC. The proposal involves placing a cap on non-winter wastewater bills equal to the average water bill for the three months of January, February, and March. The stated theory underlying the proposal is that consumption above that used in these three months is likely to involve outdoor water usage that would not flow through the household's sewer system. Before turning to the distributional impacts of the proposal, however, I first examine the need for the recommendation.

Q. HAVE YOU HAD OCCASION TO REVIEW PAWC WATER BILLS DURING THE WINTER AND NON-WINTER MONTHS?

A. Yes. Data provided by PAWC indicates that there is not a substantial variability in residential water bills (and thus in residential consumption) between the three winter months (as defined by PAWC) and the remaining nine months (deemed to be "non-winter months"). PAWC provided median residential water bills by month for the most recent twelve months available (along with the bills for each individual PAWC account upon which the median was calculated). (OCA-V-003).[38]

[38] The response to this OCA request was marked "confidential." By agreement with the Company, however, only the underlying personal account identifiers were deemed to be confidential. Data that was aggregated or used in calculations was agreed to be public.

The three-month average median bill (i.e., the average of the median bills for January through March) ($62.06) did not substantially differ from the average of the median bills for the remaining nine months ($63.49). In fact, the January 2023 median residential bill ($67.43) was identical to the median residential bills in both June 2023 and July 2022 and *higher* than the median residential bills in each of the other seven non-winter months.

The same is true for low-income customers. The winter average bill ($35.10) is higher than two of the nine non-winter months (November and May: $33.45) and nearly identical to August and December ($35.12). The January median low-income bill ($38.29) is identical to the September median bill, and nearly identical to the July median bill ($38.24). It is higher than each of the bills in the seven other non-winter months. The February median low-income bill ($34.31) was higher than the November and May low-income median bills ($33.45) and nearly identical to the low-income median bill in October ($33.45).

Table 25. Median Residential and Confirmed Low-Income Residential Water Bills by Month for Most Recent Twelve Months
(OCA-05-003, Attachment 1, **CONFIDENTIAL**)[39]
(winter months marked by dashed lines)

	Residential		Confirmed Low-Income[40]	
07-2022	$67.43		$38.34	
08-2022	$62.60		$35.12	
09-2022	$65.82		$38.29	
10-2022	$62.60		$35.87	
11-2022	$57.77		$33.45	
12-2022	$62.60		$35.12	
01-2023	$67.43	Winter average: $62.06	$38.29	Winter average: $35.10
02-2023	$60.99		$34.31	
03-2023	$57.77		$32.70	
04-2023	$65.82		$37.08	
05-2023	$59.38		$33.45	
06-2023	$67.43		$36.73	

Even the data above does not tell the entire story of the failure of the Winter Averaging proposal. Table 26 below shows the number of residential accounts, by month, that are active accounts (represented by receiving a bill), but which have zero consumption (represented by the fact that they receive a bill equal to the monthly service charge but no bill for any volumetric charges). As can be seen, the number of residential accounts that have no volumetric charges on their bills substantially increases during the winter months. While in February 2022, there were 26,701 accounts with no volumetric

[39] While the Attachment to the discovery response was marked as "confidential," by agreement with the Company, only the personal account identifiers were considered confidential, and not aggregated data.
[40] The fact that the median *bills* by Confirmed Low-Income customers are lower than the median bills of residential customers overall does not reflect upon the relative *usage*. A significant proportion of Confirmed Low-Income customers are Bill Discount Program participants who are receiving discounted bills.

charges, in March 2022, there were 27,690 accounts with no volumetric charges. The average winter bill for such accounts, in other words, will be less than the non-winter charges not because the account has usage limited to what PAWC refers to as "Basic Water Service," but rather because the account receives a bill, but *has no usage at all*, in at least one of the three winter months.[41]

Table 26. Number of Residential Water Bills with Zero Usage (Only Meters Charge) By Month for Most Recent Twelve Months (OCA-05-003, Attachment 1, **CONFIDENTIAL**) [42] (winter months marked by dashed lines)	
07-2022	21,471
08-2022	23,017
09-2022	21,256
10-2022	22,305
11-2022	23,206
12-2022	23,173
01-2023	22,381
02-2023	26,701
03-2023	27,690
04-2023	24,265
05-2023	23,465
06-2023	20,635
0 consumption in all 3 winter months (Jan/Feb/Mar)	13,038

Capping warm weather wastewater bills based on the water bills experienced in the winter months of January-February-March will, in other words, involve a direct transfer

[41] It is not the case that the same accounts have zero usage in each month of the winter months. Usage data derived from PAWC bills found that only 13,038 accounts had zero usage during all three months of January-February-March 2023. (OCA-V-003, Attachment 1).

[42] While the Attachment to the discovery response was marked as "confidential," by agreement with the Company, only the personal account identifiers were considered confidential, and not aggregated data.

of costs from those households who can afford to be away from their homes during those months. By being absent from a home, and thus having no volumetric charge, a customer's winter charges will be artificially lower than they are during the non-winter months. As a result, the non-winter bills are capped at a lower level, with the previously billed revenues being reallocated to those customers who are not absent from their homes.

Being able to afford extended absence, in turn, has two aspects to it. On the one hand, the household needs to have sufficient income to be able to afford the out-of-pocket expenses of being away from home, including another place to live. On the other hand, the household needs to have a source of income that provides paid leave. Neither of those two attributes counsels that low-income households will be amongst the households who have extended, but temporary, winter absences from their homes.

Q. IS THERE A SECOND WAY IN WHICH THE WINTER AVERAGING PROPOSAL WILL ADVERSELY AFFECT LOW-INCOME CUSTOMERS?

A. Yes. According to PAWC witness Rea, when a customer is "new" or has "no winter averaging billing data upon which to base a calculation," "the Company will assume a standard usage level of 3,000 gallons per month for a comparison point for billed summer usage." (PAWC St. 10, at 44). This use of a "standard usage level of 3,000 gallons per month" will harm low use customers. If monthly usage during the three winter months is lower than 3,000 gallons, no adjustment will be made to the customer's bill. While these customers will pay the increase in charges due to the reduction in non-winter billed revenue attributable to the use of winter averaging, they will receive none of the benefits of the winter averaging process.

There are a substantial number of low use customers on the PAWC system. Table 27 below shows, for the most recent twelve months available, the usage level by deciles of consumption at or below the 50th percentile (i.e., the median). The Table shows that in only five of these twelve months did the 50th percentile (median) usage reach 3,000 gallons. In only one of the three winter months did the median usage reach 3,000 gallons. The average mean usage for the three winter months was only 2,767.

Table 27. PAWC Residential Usage by Percentile by Month for Most Recent Twelve Months[43]
(of customers have consumption greater than zero in a given month)
(OCA-05-03, Attachment 1 **CONFIDENTIAL**) [44]

Pctile	07/2022	08/2022	09/2022	10/2022	11/2022	12/2022	01/2023	02/2023	03/2023	04/2023	05/2023	06/2023
10th	800	700	800	700	700	700	800	700	600	700	700	800
20th	1,500	1,300	1,400	1,300	1,200	1,300	1,500	1,200	1,200	1,400	1,200	1,400
30th	2,000	1,800	2,000	1,800	1,700	1,800	2,000	1,700	1,600	1,900	1,700	2,000
40th	2,600	2,300	2,500	2,300	2,100	2,300	2,600	2,200	2,100	2,400	2,100	2,500
50th	3,100	2,800	3,000	2,800	2,600	2,800	3,100	2,700	2,500	3,000	2,600	3,100
n=	626,880	627,770	627,381	627,880	627,989	627,648	622,903	628,145	628,640	627,692	629,722	629,323

Applying a "standard usage level of 3,000 gallons per month for a comparison point for billed summer usage," in other words, would deny more than half of PAWC's customers a summer adjustment based on average usage during the three winter months being less than the non-winter month consumption. In all twelve months, customers with

[43] Residential usage by account was calculated from the residential bills provided by PAWC. For accounts with a monthly bill exceeding the standard service charge (of $17.50/month), usage was determined by subtracting the monthly service charge from the bill, and dividing the remainder by the volumetric charge of $1.6108 per hundred gallons).

[44] While the Attachment to the discovery response was marked as "confidential," by agreement with the Company, only the personal account identifiers were considered confidential, and not aggregated data.

consumption *less* than the 50th percentile would not receive a winter averaging adjustment. In only two of the twelve months (July 2022, June 2023) would there be an adjustment even for customers *with* the median usage (given that their usage in those two months is more than the 3,000 "standard usage level").

This result works to disproportionately disadvantage low-income customers who are more likely to be new or have no winter averaging data. In the PAWC service territory, low-income customers are more likely to have changed residences within the last twelve months, thus falling within the category of customers who PAWC labels as being "new" or having "no winter averaging billing data upon which to base a calculation." The mobility of low-income households is 75% higher than the mobility of higher income households. While 14% of households in the PAWC service territory with income of less than $15,000 did not live in the same house they had lived in one year previously, only 8% of households with income more than $75,000 did not do so (0.14 / 0.08 = 1.75).[45]

Q. DO YOU HAVE REASON TO BELIEVE THAT HOUSEHOLDS WITH MOBILITY HAVE A LOWER WATER CONSUMPTION?

A. Yes. I again begin with the population of all PAWC accounts that have received a bill within the most recent twelve months. (OCA-05-003, Attachment 1). From those customers, I delete all accounts that had at least some usage in each of the three winter months. The remaining accounts either did not receive a bill in at least one winter month, or received a bill with zero gallons of consumption in at least one winter month. I deemed these customers to be "new" or as having "no winter averaging billing data upon

[45] American Community Survey (5-year data), Table B07010, 2021.

which to base a calculation." For these customers, PAWC states that it will assign a standard usage of 3,000 gallons per month in the implementation of its winter averaging proposal.

Table 28. Median Consumption (gallons) in April, May and June
For Accounts Missing One or More Winter Months of Usage
(OCA-05-003, Attachment 1 **CONFIDENTIAL**) [46]

Number of winter months missing usage data	April 2022	May 2022	June 2022
1 month missing	2,100	2,000	2,400
2 months missing	1,300	1,509	2,000
3 months missing	800	1,300	1,800
1, 2 or 3 months missing	1,600	1,700	2,000

As can be seen, households that are either "new" or having "no winter averaging billing data upon which to base a calculation" have median consumption that is substantially lower than the 3,000 gallons that PAWC proposes to apply to such households to determine whether they should have their non-winter bills capped under the Company's winter averaging proposal. These low-use customers, which are likely to be disproportionately low-income, are unfairly and unreasonably excluded from receiving PAWC's proposed winter averaging adjustments.

Q. IS THERE ANOTHER WAY IN WHICH THE WINTER AVERAGING PROCEDURE WILL DISPROPORTIONATELY HARM LOW-INCOME CUSTOMERS?

[46] While the Attachment to the discovery response was marked as "confidential," by agreement with the Company, only the personal account identifiers were considered confidential, and not aggregated data.

A. Yes. As I demonstrate below, low-income customers are less likely to be residents of homes with substantial outdoor summer consumption. As a result, low-income customers will be less likely to have their summer wastewater bills capped at a lower level than those bills historically have been. These customers, in other words, will fall within that population of customers who are called upon to bear the burden of the foregone revenue from having non-water bills capped, with little opportunity to be a recipient of any of the reduced bills. There is little question but that low-income customers in the PAWC service territory are less likely to be residents of single family homes with substantial outdoor water consumption affected by the winter averaging proposal. While the Census Bureau does not directly report the number of units per housing structure disaggregated by income, it does provide data that allows me to reach conclusions about the relationship between dwelling types and income. Within the PAWC service territory, nearly 95% of homeowner units are comprised of single-family homes (82% single-family detached homes; 12% single-family attached homes).[47] When two-family homes are also considered, the percentage increases to more than 95%. In contrast, fewer than 40% of rental units are single-family homes (including both attached homes and detached homes).

I then examined the relationship between rental status and income. Only 4.2% of owner-occupied homes are occupied by households with an annual income less than $15,000.[48] In contrast, more than 62% of households with an annual income of less than $15,000

[47] American Community Survey (5-year data), Table B25032, 2021.

[48] American Community Survey (5-year data), Table B25118, 2021.

live in rental housing.[49] Clearly, when PAWC identifies its population of customers who have "water usage that is used for outdoor purposes in the summertime (e.g., watering lawns, filling pools, etc.)," it is identifying a higher income population. Even if incomes are considered up to $35,000, more than half of those households are renters rather than homeowners.[50]

Q. IS THERE A FINAL WAY IN WHICH YOU QUESTION THE LEGITIMACY OF THE RATIONAL FOR A WINTER AVERAGING PROCESS?

A. Yes. PAWC data supports the conclusion that customers who have non-winter usage capped at no more than their winter usage have substantial upward variability in their consumption. The customers who would not benefit from the winter averaging process, however, have extremely low usage. In reaching this conclusion, I began by looking at the usage implicit in the residential bills provided by PAWC at existing rates. (OCA-05-003, Attachment 1).[51] For the most recent 12 months from these accounts provided, I deleted any account that had one or more months with no bills as well as any account that reported receiving only a service charge (but no volumetric charges). The end result was the population of customers with twelve full months of bills with at least some reported volumetric usage (n=521,003 bills). For each of these accounts, for each non-winter month, I determined whether the non-winter month bill was more or less than the 3-month average winter bill. I finally compared: (1) the usage for the months in which the

[49] Id.

[50] Id.

[51] In looking at this consumption, I could not, of course, determine which months involved a unit with a full month of occupancy and which months might have had partial months of occupancy.

non-winter bill would be higher than the 3-month winter average, to (2) the usage in months where the non-winter bill would be lower. The first look at this data is set forth in Table 29 below.

Table 29. Average Median Usage of Accounts where Non-Winter Usage is Higher or Lower than 3-month Winter Average Usage (12 most recent months) (accounts with 12 complete months of bills with usage >0 gallons) (OCA-05-003, Attachment 1 **CONFIDENTIAL**)[52]

Month	Total No. Bills with 12 Months Use >0	Median Use All Accounts	Median Use For Accounts with:	
			Non-Winter Usage Higher than Winter Avg	Non-Winter Usage Lower than Winter Avg
Jul 2022	521,003	3,400	3,900	2,500
Aug 2022	521,003	3,000	3,700	2,500
Sep 2022	521,003	3,200	3,700	2,600
Oct 2022	521,003	3,000	3,500	2,600
Nov 2022	521,003	2,700	3,200	2,500
Dec 2022	521,003	3,000	3,300	2,700
Jan 2023	521,003	3,300	---	---
Feb 2023	521,003	2,800	---	---
Mar 2023	521,003	2,700	---	---
Apr 2023	521,003	3,200	3,500	2,500
May 2023	521,003	2,800	3,300	2,500
Jun 2023	521,003	3,300	4,000	2,400
All months	521,003	2,967	---	---

The data in the Table above shows that accounts that would not benefit from the winter averaging procedure have median usage below the median usage for all accounts. They

[52] While the Attachment to the discovery response was marked as "confidential," by agreement with the Company, only the personal account identifiers were considered confidential, and not aggregated data.

have median consumption each month substantially below the median consumption of customers that would benefit from winter averaging.

Overall, as I discussed above, by capping non-winter bills at no more than winter consumption, what PAWC is doing is redistributing dollars from higher use customers to lower use customers. Moreover, as I discussed above, these chronically low use customers are disproportionately likely to be low-income customers.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the winter averaging proposal of PAWC be disapproved. The recommendation of OCA witness Mierzwa (OCA Statement 4) should instead be adopted. In the alternative, should the winter averaging proposal be adopted, it should be made subject to the same low-income discounts that other PAWC volumetric charges are made subject to.

Part 7. An Increased Return on Equity for Exemplary Management is Not Warranted.

Q. PLEASE DESCRIBE THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review PAWC's management performance with respect to customer service and credit and collection to assess whether the Company merits a higher return on equity to compensate it for exemplary management. Company witnesses Everette and Buckley have argued that PAWC should be granted an equity return at the "upper end" of the range determined by PAWC's witness to be reasonable. (PAWC St. 1, at 3, 33-46 and PAWC St. 13, at 57-59). If an equity return lower than that "upper end" is approved, Everette and Buckley recommended an equity adder of "no less than" 0.25%

be approved to reflect claims of superior management. (PAWC St. 1, at 33 and PAWC St. 13, at 59). I conclude that such additional compensation is not warranted.

Q. IS THE CONTROL OF COLLECTIBLES AN ELEMENT OF MANAGEMENT PERFORMANCE?

A. Yes. PAWC has been cautioned for years about its need to improve management in particular areas. Consider, for example, its need to control long-term receivables. The Commission staff's Performance Management Audit issued in December 2018, noted that PAWC had previously been told that it needed to "explore additional strategies to accelerate the recovery of overdue customer accounts receivable and continue collection measures already in place."[53] The Audit stated that "[g]enerally, older accounts receivable balances are less likely to be collected and increase the risk of incurring bad debt expense."[54] Staff added that "Due to the constantly changing size of total receivables, the amounts within a category are less important than the percentage of total receivables that category represents."[55] Staff examined the percent of total receivables by the age of those receivables.[56] Based on this examination, Staff concluded that "although PAWC and AWWSC improved aged receivable balances, *more work is necessary*."[57] It

[53] 2018 Management Audit, at 80 (Finding X-2), Docket No. D-2018-2646503.

[54] Id., at 81 – 82.

[55] Id., at 81.

[56] The aging buckets Staff used were: (1) current to 30 days; (2) 31 – 60 days; (3) 61 – 90 days; and (4) 91 days or more. Id., at 81.

[57] Id. (emphasis added).

recommended that PAWC "implement *additional strategies* to reduce customer accounts receivables more than 90 days overdue."[58]

Q. DID PAWC PROPOSE OR ADOPT "ADDITIONAL STRATEGIES" IN RESPONSE TO THE PUC AUDIT RECOMMENDATION?

A. No. Rather than proposing any specific "additional strategies," PAWC merely indicated that it would "meet with local state operations monthly to review [accounts receivable] and collections strategies." [59] This agreement to hold "monthly meetings" was the same response PAWC had made to the previous PUC management efficiency audit. However, those "monthly meetings" were discontinued in 2018. PAWC asserted that "management believes these efforts have helped to reduce long-term overdue balances."[60] The Staff findings, however, showed this "belief" to be in error, with reductions in short-term receivables being more than offset by increases in long-term (i.e., 90+ day) receivables.[61]

Q. DID THE 2023 PUC MANAGEMENT AUDIT OF PAWC ADDRESS THE COMPANY'S TREATMENT OF RECEIVABLES?

A. Yes. The 2023 Management Audit stated that "despite measures to address payment difficulties, customer account balances aged more than 150 days increased significantly since early-2020. . . Although PAWC's efforts are commendable, as of February 2023, the company's over 150-day customer receivables continue to reflect substantially higher

[58] Id. (emphasis added).

[59] PAWC (January 2019). Implementation Plan in Response to the 2018 Management Efficiency Investigation, at 43.

[60] 2018 Audit, at 80.

[61] Id., at 81-82.

balances than those experienced prior to the pandemic."[62] While "this trend" is "not caused by the company," the 2023 Audit stated, "its effects must be addressed by PAWC."[63] In response to this Audit language, PAWC chose not to adopt any new or additional strategies to address its long-term receivables. Instead, as in response to the prior PUC Management Audit, PAWC committed simply to continue doing what it has previously been doing.[64]

Q. HAVE YOU REVIEWED PAWC'S LONG-TERM ARREARS WITHIN THE RESIDENTIAL CLASS OVER TIME?

A. Yes. While the Staff's last management audit did not focus exclusively on residential arrears, I have focused exclusively on long-term residential arrears. The issues which Staff raised in the 2018 Management Audit regarding long-term arrears remain valid concerns with respect to the residential class today. In my examination, I use the same data used by Staff's 2018 Management Audit, in that I examine: (1) the percentage of receivables by age (rather than the absolute dollar amounts); (2) the arrears that are 90 days old or more; and (3) the arrears over a multi-year period. While Staff examined arrears for the four years (2014, 2015, 2016, 2017) preceding 2018, I examine arrears for the five years following the Staff Management Audit (2018, 2019, 2020, 2021, 2022, 2023 YTD).

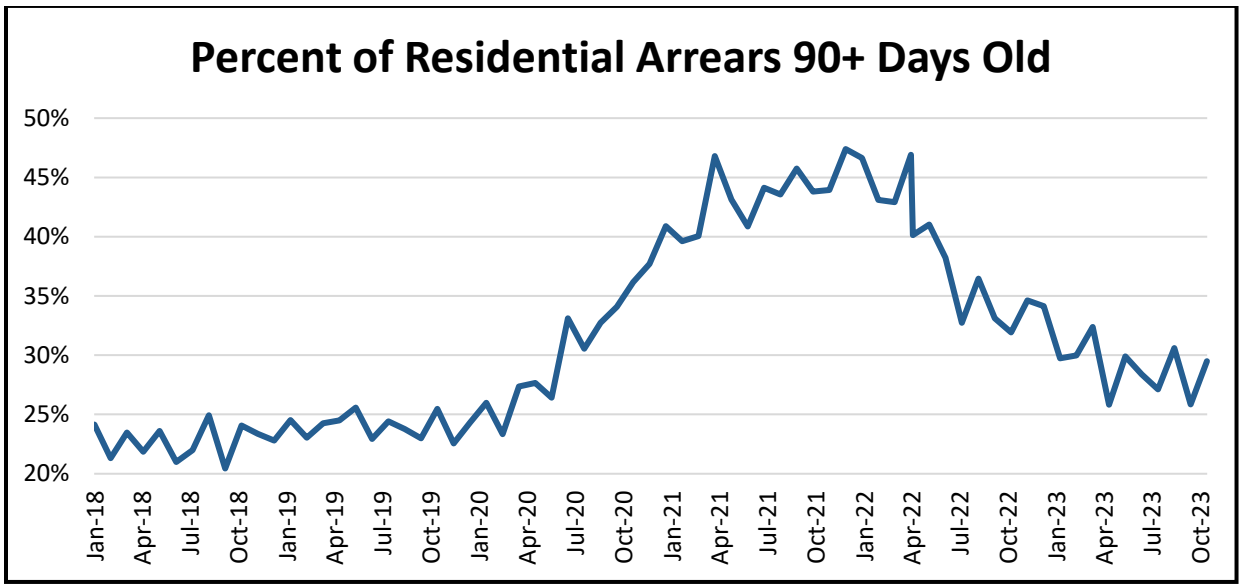
Q. WHAT DO YOU FIND?

[62] PAPUC, Bureau of Audits (October 2023). Pennsylvania-American Water Company, Management and Operations Audit, at 83 – 84, Docket No. D-2022-3035217.

[63] Id.

[64] PAWC (October 2023). Implementation Plan in Response to the 2022-2023 Focused Management and Operations Audit, at 39.

A. I reach the same conclusion that the Staff reached in its 2018 Management Audit. While PAWC has seen a decline in long-term arrears from the spike it experienced during the economic crisis associated with the COVID-19 pandemic (in 2020 and 2021), it has not reduced its long-term arrears to pre-pandemic levels. Prior to March 2020, 90+ day arrears consistently represented less than 25% of PAWC's total accounts receivable. Beginning in March 2020, and continuing through March 2022, long-term arrears spiked to more than 45% of total accounts receivable. The average 2023 long-term arrears, however, of 29% (through October), while lower than the 38% in 2022 and 44% in 2021, are nonetheless substantially in excess of the 2018 level of 23% and the 2019 level of 24%.



On a month-over-month basis, the average percentage of total accounts receivable comprised of long-term arrears is higher in 2023 (YTD) than it was in either 2018 or 2019 (prior to the COVID-19 pandemic). For example, the percentage of long-term arrears in January 2023 (30%) was higher than either January 2018 (24%) or 2019 (25%),

while June 2023 (28%) was higher than either June 2018 (21%) or June 2019 (23%). October 2023 (29%) was higher than either October 2018 (24%) or October 2019 (25%).

Q. DO YOU HAVE OTHER REASON TO CONCLUDE THAT PAWC HAS EXHIBITED LESS THAN EXEMPLARY MANAGEMENT IN ITS CONTROL OF RESIDENTIAL ARREARS?

A. Yes. The PUC reports annual data on collections performance for the major electric, gas, and water companies. Table 30 presents a comparison of PAWC's collections metrics for 2018 through 2022 to the metrics for Aqua PA, Pennsylvania's other large water utility.

Table 30. Selected Collections Metrics (2018 – 2022) [65]
PAWC vs. Aqua PA
(Penn PUC, Collections Data for Major Electric, Gas, and Water Companies [annual])

	Net Write-Off Ratio		Pct Nonpayment Disconnections per Customer		Pct Accounts Overdue		Percent Billings in Debt	
	PAWC	Aqua	PAWC	Aqua	PAWC	Aqua	PAWC	Aqua
2018	1.82%	0.66%	4.06%	1.85%	18.15%	14.23%	4.44%	3.47%
2019	1.73%	0.55%	4.16%	1.76%	17.02%	13.83%	4.52%	3.32%
2020	0.92%	0.25%	0.38%	0.31%	18.37%	13.82%	6.22%	3.93%
2021	1.55%	0.81%	3.21%	1.75%	16.73%	13.00%	7.56%	4.70%
2022	1.35%	0.58%	3.83%	1.35%	17.36%	13.76%	6.29%	4.03%

The PUC's annual report on collections data documents that:

- In 2022, PAWC had 6.3% of its residential billings in debt, more than two percent higher than Aqua (the next highest). The percentage of PAWC residential billings in debt has increased from 4.4% in 2018 to 6.3% in 2022.
- PAWC had over 17% of its residential customers in debt, nearly 4% higher than Aqua (the next highest) (17.4% vs. 13.8%). After dipping somewhat in 2021, the

[65] Collections Data for Major Electric, Gas, and Water Companies (annual). Available at https://www.puc.pa.gov/filing-resources/reports/quinquennial-report-pursuant-to-section-1415/

percentage of residential customers in debt were, in 2022, nearly as high as it was before the COVID pandemic.

- PAWC's percentage of gross residential write-offs (1.35%) was nearly two-and-a-half times higher than Aqua PA's percentage of residential gross write-offs (0.58%).

- PAWC had nearly 80% (78%) of all Class A water utility shutoffs in Pennsylvania, despite having only somewhat over half (52%) of residential customers. It had more than 60% of the residential accounts in arrears in the state.

- Not only does PAWC have a disproportionate number of disconnections, it disconnects service to its residential customers at a disproportionate rate. PAWC disconnects roughly 4% (3.83%) of its residential customers, a rate that is nearly three times higher than Aqua PA, the next highest water utility (1.35%).

Overall, PAWC's collections performance has been declining since 2018. The Pennsylvania PUC measures arrearages by a metric called "weighted arrears" (also known as "bills behind"). Measuring "bills behind" allows a utility not only to compare its collection performance between time periods (which may have differing bill levels), but between utilities as well. The PAWC weighted residential arrears has increased from 2.85 bills behind in 2018 to 4.20 in 2022, an increase of nearly 50% in just four years.

Based on this data and discussion, I conclude that a water utility that has such poor collections performance, a critical function of management, does not merit a higher return on equity for superior management performance.

Q. DO YOU HAVE ANY FINAL CONCERNS ABOUT PAWC'S MANAGEMENT OF ITS RESIDENTIAL COLLECTIBLES?

A. Yes. PAWC is experiencing a continuing growth in the dollars of arrears on residential accounts at the time those accounts are disconnected for nonpayment. While in 2018 and 2019, the average arrears at the time of a nonpayment disconnection were roughly $350

($342.98 and $347.98 respectively), by 2022, the average arrears at the time of disconnection had grown to $549.29. In the first ten months of 2023, the average arrears at the time of disconnection were $495.26. (OCA-V-24).[66] Controlling the growth of arrears at the time of disconnection relates to management performance in much the same way that controlling the growth of long-term arrears does, as considered in the Commission's Management Performance Audit of PAWC. Minimizing the level of arrears at the time of disconnection is a management strategy relating to both the control of costs to be paid by all other ratepayers and the retention of revenue. To the extent that the level of arrears at the time of disconnection is growing over time, the risk of the permanent loss of revenue from the payment of those arrears is growing as well. To the extent that the level of arrears at the time of disconnection is growing over time, future revenue stability is growing as well, due to the increased risk of future lost revenue occurring when accounts are disconnected and thus not contributing to future sales.

Q. HAVE YOU EXAMINED ANY ASPECT OF PAWC'S CUSTOMER SERVICE PERFORMANCE, NOT RELATED TO CREDIT AND COLLECTION?

A. Yes. The first metric I examined involves the handling of complaints by PAWC. In 2022, the most recent year for which complete data is available, the PUC's Bureau of Consumer Services (BCS) received 681 consumer complaints from PAWC customers. Of those complaints, BCS found 25% to be to be "justified." That rate of justified complaints is 25% higher than Aqua PA (which had a 2022 justified complaint rate of

[66] Due to COVID-related restrictions, PAWC (as with other Pennsylvania utilities) did not disconnect service for nonpayment during much of 2020 and 2021.

20%) and nearly two times higher than the justified complaint rate of other Class A water utilities.[67]

A "justified complaint" is a "consumer complaint where, prior to BCS intervention, the company did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, tariffs or guidelines when the consumer brought the complaint to the company's attention."[68] A water utility that has one of the highest percentages of justified consumer complaints in the state amongst water utilities, after having a disproportionate number of complaints in the first instance, cannot be found to be exhibiting exemplary management.

In the first three quarters of 2023, the total number of justified complaints actually increased over the corresponding quarters of 2022. The 686 PAWC complaints found to be justified in the first three quarters of 2023 represented a 29% increase from the 532 justified complaints in the first three quarters of 2022, a rate of growth far higher than the growth in its overall customer count.

Q. IS THERE ANY OTHER ASPECT OF CUSTOMER SERVICE THAT YOU HAVE EXAMINED?

A, Yes. Not only does PAWC lead the state in residential complaints, the Company also leads the state in forcing residential customers to seek BCS relief in the provision of payment arrangements. In 2022, the last year for which complete data is available,

[67] UCARE Report, January through December 2022, at 12, available at https://www.puc.pa.gov/filing-resources/reports/consumer-activities-report-evaluation/.

[68] 2022 UCARE Quarterly Update, 4th Quarter [January – December], at 20, Glossary of Terms.

customers of Pennsylvania Class A water utilities filed a total of 1,940 Payment Arrangement Requests (PARs) with BCS. Of those, 1,499 (77%) were filed by PAWC residential customers. While the percentage of justified PARs by PAWC customers (18%) was lower than the percentage of justified PAR requests by Aqua PA (28%), the *number* of PAWC's justified PAR requests to BCS was more than four times higher than the number of Aqua PA requests.

A justified Payment Arrangement Request is one, "where, prior to BCS intervention, the company did not comply with Commission regulations, reports, Secretarial Letters, tariffs or guidelines."[69]

The difference in numbers does not simply reflect the relative size of the respective utilities. According to the PUC's data on collection performance, PAWC had just over half (53%) of all residential water customers (642,776 of 1,209,856).[70]

Q. PLEASE EXPLAIN THE NEXT METRIC OF CUSTOMER SERVICE THAT YOU HAVE EXAMINED.

A. I have examined the number of "verified infractions" for PAWC. Pennsylvania's BCS tracks the number of "verified infractions" by year and by utility. A "verified infraction" involves a finding by BCS that the utility engaged in a "misapplication or infringement of a Commission regulation, particularly the standards and billing practices for residential utility service."[71] Through the first three quarters of 2023, PAWC had 191 "verified

[69] Id.

[70] Pennsylvania PUC (updated October 18, 2023). 2022 Collections Data for the Major Electric, Gas and Water Companies, available at https://www.puc.pa.gov/media/2603/2022-master-collections-data-website-version.pdf.

[71] 2023 UCARE Quarterly Update, at 20.

infractions," 50% more than Aqua PA had (130). Of those "verified infractions," 185 (97%) involved Chapter 56 infractions.

PAWC's performance with respect to verified infractions demonstrates a sharp decline in recent years. In the first three quarters of 2019,[72] BCS reported that PAWC had only 34 verified infractions. That number fell to 27 in 2020 before climbing to 88 in the first three quarters of 2021. In 2022, however, the number of PAWC verified infractions more than tripled (from 88 to 295) with the 2023 data (191) remaining at a level nearly six times higher than prior to the COVID pandemic.

A water utility that has half again more "verified infractions" than the next largest water provider cannot be found to have superior management regarding customer service.

Q. HAVE YOU EXAMINED PAWC'S "CUSTOMER SATISFACTION" AS AN ELEMENT OF ITS CUSTOMER SERVICE?

A. Yes. According to PAWC witness Deborah Degillio, PAWC and the Customer Service Organization (CSO):

> leverage multiple sources of customer feedback to monitor overall customer satisfaction and satisfaction with individual service experiences, including targeted surveys taken immediately after phone, field and customer portal interactions and a customer satisfaction survey of all PAWC customers conducted quarterly. This approach allows the Company and the CSO to stay abreast of changing customer expectations and align performance goals to meet those customer needs.

(PAWC St. 9, at 8). Very few results are compiled from the "targeted and quarterly surveys" referenced by Ms. Degillio, however. When asked for "the results of all 'targeted

[72] I examine the first three quarters to make the data comparable to the 2023 data.

surveys' (as that phrase is used by Ms. Degillio) since January 1 2020," no separate results for targeted surveys were provided. (OCA-06-018(b), referencing the same confidential attachment provided for OCA-06-018(a)). When asked for the "results of each 'quarterly customer satisfaction survey' undertaken since January 1, 2020," the "results" were limited to the **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** (OCA-06-018(a), Attachment 1, Confidential). **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

As such, based on what was provided by PAWC regarding the "quarterly surveys" or "targeted surveys" referenced by Ms. Degillio, PAWC has not compiled information that could have been used to assess how PAWC might improve its customer satisfaction, or even improve its collections outcomes from customers, (OCA-006-018(a) – (b), Attachment 1 (Confidential)).

Q. DOES PAWC MEASURE CUSTOMER SATISFACTION WITH RESPECT TO LOW-INCOME CUSTOMERS SEEKING TO ENROLL IN THE BDP OR SEEKING OTHER RELIEF FROM AN INABILITY-TO-PAY?

A. No. No quarterly survey is directed either toward Confirmed Low-Income customers or toward Bill Discount Program participants. (OCA-06-019, OCA-06-020). Moreover, of the quarterly survey that is performed, or the "targeted survey" directed toward customers having particular transactions with PAWC, no survey questions are included with respect to a

[BEGIN CONFIDENTIAL] [redacted] **[END CONFIDENTIAL]** (OCA-06-018(b), Attachment 1, confidential, OCA-06-018, Attachment 2, Confidential). **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. DO YOU HAVE A RESPONSE TO THE COMPANY'S CHARACTERIZATION OF ITS MANAGEMENT PERFORMANCE ON UNIVERSAL SERVICE?

A. Yes. PAWC witness Everette asserts that "the Company's H2O program ranks at the top of the Pennsylvania water utility customer assistance programs for the types of benefits provided under the program." (PAWC St. 1, at 34). This observation was reasserted by PAWC witness Bulkley. (PAWC St. 13, at 58).

These statements are indicative of nothing and should be disregarded in assessing PAWC's management performance. In fact, no such "ranking" has occurred by anyone. When asked to "provide a complete listing of ranking of Pennsylvania water customer assistance programs, which listing has PAWC ranked 'at the top,'" the Company responded that it "is not aware of any such 'listing' and the referenced statement is not based on a list." (OCA-011-023). [73] When asked what Pennsylvania water utilities were

[73] PAWC did not explain how it could be "ranked at the top" given the lack of a "listing."

not included in the comparisons which had PAWC "rank[ed] at the top," PAWC further conceded that:

> there is no such list. The statement that "The Company's H2O Program ranks at the top of the Pennsylvania water utility customer assistance programs for the types of benefits provided under the program" was based on the fact that the Company's hardship grant amount ($500) is the highest of any Pennsylvania water utility. PAWC also offers a bill discount program which provides discounts to both fixed and volumetric charges to customers up to 150% of the federal poverty level.

(OCA-11-025). Contrary to the assertions of PAWC witnesses Everette and Bulkley, in other words, there is no-one who has made a comparison of Pennsylvania water utilities and "rank[ed] [PAWC] at the top" with respect to the "types of benefits provided" under its customer assistance program. Other Pennsylvania water companies offer low-income bill discount programs (e.g., Aqua PA, PWSA, CUPA). Other water utilities offer arrearage forgiveness (e.g., Aqua PA, PWSA). The statements are nothing more than spin and marketing rather than an assessment of relative ranking between programs.

Finally, Ms. Everette's citation of the size of its hardship grant amount is hardly reason to find superior management when it is viewed in light of a comparison of PAWC's collections problems. According to the PUC's 2022 "Collections Data for the Major Electric, Gas and Water Companies," PAWC had 52% of the residential customers of Pennsylvania's water companies. In contrast, it had 78% of the residential nonpayment disconnections. A comparison of the total terminations shows that while PAWC disconnected 24,625 residential accounts in 2022, Aqua PA disconnected only 5,585 accounts and all other Class A water companies combined disconnected only 1,226 residential accounts. Indeed, in 2023 (YTD--October), PAWC issued 129,379 disconnect notices to water customers who had already provided information to the Company establishing their low-income status (OCA-05-025), disconnected 8,724 residential water customers who had provided information to the

Company establishing their low-income status (OCA-05-025, Revised), and yet provided only 1,916 hardship grants in that same time period (CAUSE-PA-1-013). In 2022, PAWC issued 182,239 disconnect notices to customers known by PAWC to be low-income (OCA-05-025), disconnected 14,562 accounts known by PAWC to be low-income (OCA-05-025, Revised.), and yet provided only 961 hardship grants. (AUSE-PA-01-013). PAWC's use of its hardship grants to respond to the arrears of low-income customers, and to prevent the loss of service due to nonpayment disconnections of those customers, is hardly indicative of exemplary management.

Q. WHAT DO YOU RECOMMEND?

A. My testimony and that of OCA witness Alexander (OCA Statement 6) support the recommendation by OCA witness David Garrett (OCA Statement 3) that PAWC should not be rewarded with a higher return on equity based on its management performance. (OCA St. 6, OCA St. 3).

In addition, with respect to customer satisfaction surveys, I recommend that the population targeted by PAWC's "targeted surveys" be expanded to include: (1) customers seeking to enroll in the BDP and/or AMP; (2) customers seeking to enroll in a deferred payment arrangement; (3) customers expressing a difficult paying, or an inability-to-pay their bills in a full and timely manner; and (4) customers responding to the pending (or already completed) disconnection of service for nonpayment. The results of these targeted surveys should be compiled, provided to the PAWC LIAG at each quarterly meeting, and subject to discussion at LIAG should a member of the group have questions or identify issues flowing from the targeted surveys. By compiling information that can be used to assess how PAWC might improve its customer satisfaction or improve its collections outcomes from customers,

PAWC will improve its management control of costs and revenues, improve the stability of its earnings, and thus control the need for future rate relief.

Part 8. Arrearage Management Program (AMP) Cost Recovery.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I explain why PAWC should modify its request for the recovery of costs associated with its implementation of the Arrearage Management Program. PAWC has included $2,864,700 in its cost of service to fund the AMP. (PAWC St. 1, at 16). Of that, $2,377,200 is PAWC's claim of costs associated with the AMP credits. (OCA-11-029). PAWC claims 100% of the AMP credits as an "uncollectible expense." (Id.) In calculating its claim of AMP credit expenses, PAWC assumes that there will be 7,924 BDP participants with arrears in excess of $150, that 100% of those customers will have arrears exceeding the AMP threshold of $150, and that 100% of the credits will be grant each year. (OCA-11-029).[74] The adjustment I make to PAWC's claimed cost recovery for AMP occurs in two steps.

Q. WHAT IS THE FIRST ADJUSTMENT YOU PROPOSE TO THE AMP COST RECOVERY?

A. PAWC assumes that 100% of the possible AMP credits that might be earned each year will, in fact, be provided each year. It is possible to see that assumption in PAWC's claim of a $300 credit per participant. A $300 annual credit assumes 100% of the credits are earned because PAWC's AMP provides a $25/month credit for each full and timely payment made ($25/month x 12 months = $300). This is an unreasonable assumption. PAWC

[74] 7,924 BDP participants with arrears greater than $150 x 100% participation x 100% grant of $300 credit per year. 7,924 x 1 x $300 = $2,377,200.

reports that from November 2021 through October 2023 (the most recent 24 months available), it issued a monthly average of 3,853 bills to BDP water participants with pre-program arrears, while issuing an additional 264 bills to BDP wastewater participants with pre-program arrears (a combined total of 4,116 BDP participants with pre-program arrears). During that same 24-month period, PAWC received a monthly average of 426 full and timely payments from BDP water participants with pre-program arrears, and a monthly average of 17 full and timely payments from wastewater participants with pre-program arrears (a combined total of 443 BDP participants with pre-program arrears making full and timely payments). (OCA-05-010). Rather than having 100% compliance with PAWC's requirement that AMP participants make "full and timely" payments in order to receive an AMP credit, PAWC had a payment compliance of only 10.8%) (443 / 4,116 = 0.10754). Rather than merely *assuming* a 100% compliance in calculating its AMP credit costs, therefore, PAWC should use the known and measurable historic payment compliance it has experienced rounding the historic experienced rate up from 10.8% to 11%).

Q. WHAT IS THE SECOND STEP UNDERLYING THE ADJUSTMENT YOU PROPOSE TO THE RECOVERY OF AMP ARREARS?

A. According to PAWC, from November 2021 through October 2023 (the most recent 24 months available), PAWC billed BDP participants $20,407,449 for water service and $181,826 for wastewater service ($20,589,275 total) (OCA-05-010). During that same time period, PAWC reports that it wrote-off $3,682,087 from H2O program participants (CAUSE-PA-033), a write-off rate of 17.9% ($3,682/087 / $20,589,275 – 0.179). PAWC, however, did not adjust its proposed addition to uncollectibles for those dollars that would have already been in uncollectibles even without the AMP. Using this known and measurable historic data, PAWC's addition of dollars to uncollectibles to reflect AMP credits should be reduced by the percentage of BDP dollars already historically included in uncollectibles.

Q. WHAT IS THE RESULT OF THE TWO STEP ADJUSTMENT YOU EXPLAIN ABOVE?

A. Based on the two steps I explain above, I recommend that the total AMP credit cost recovery be reduced to $214,728.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does at this time. However, I reserve the right to supplement my testimony as necessary should new information or issues be provided.

Rebuttal Testimony of Roger Colton

on behalf of

Pennsylvania Office of Consumer Advocate

OCA Statement 5R

February 21, 2024

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger D. Colton. My business address is 34 Warwick Road, Belmont, MA.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED DIRECT TESTIMONY ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes, I am.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR REBUTTAL TESTIMONY.

A. The purpose of my testimony is to respond to the Direct Testimony of Kevin Higgins as it relates to universal service costs. Mr. Higgins argues that these costs should be allocated exclusively to the residential class through a "direct assignment." (OSBA St. 1, at 31-32).

Q. HOW DOES PAWC ALLOCATE ITS AMP COSTS?

A. According to Mr. Higgins, PAWC allocates its AMP costs (credits, administrative costs) among its water customer classes based on the historical incurrence of net charge offs. It allocates its wastewater AMP costs based on customer count. (OSBA St. 1, at 31). [1] PAWC allocates its H2O Grant and Discount administrative costs among customer classes using an operations and maintenance (O&M) composite factor. (Id.).

Q. HOW DO YOU RESPOND?

A. PAWC's inter-class allocation of the costs of its AMP, as well as the allocation of its administrative costs for the H2O Grant and Discount programs should be based on the allocation of uncollectibles. Several reasons support this conclusion.

[1] While I proposed an adjustment to this figure in my Direct Testimony, the nature of that adjustment does not affect the reasoning I present here with respect to cost allocation.

Arrears that will be written off as "bad debt" through the AMP are caused by the pre-program nonpayment of bills. That nonpayment of bills by low-income customers is not caused by the existence of the Company's program. They are part of the uncollectible costs historically incurred by the residential class as a whole. They do not represent *new* costs.

Further, by isolating these credits for different treatment than the rest of PAWC's uncollectible expense, Mr. Higgins is treating these amounts as if they were known rather than projections. As I discuss in my Direct Testimony, PAWC's estimate of AMP annual credits is based on the assumption that the participation rate will be 100% and all participants will earn 12 months of forgiveness in every year. As I demonstrated, the actual credits will very likely be less.

Finally, if anything, the Company's program will *reduce* overall residential uncollectibles after it is in place. The program certainly does not *cause* new uncollectibles that would not have existed in the absence of the program. What it does is to trade-off a more immediate write-off of *pre-program* arrears in exchange for future in-full BDP payments.

The Table below shows the average arrears of PAWC's BDP participants at the time those program participants enroll in the BDP. While there will likely not be a complete overlap between BDP participants and arrearage forgiveness, there is expected to be a substantial overlap. The Table shows that the arrears that would be made subject to arrearage forgiveness are substantial. While in 2022, those arrears may be somewhat smaller due to the receipt of temporary emergency assistance through various federal COVID relief

programs (LIHWAP, ERAP), those programs are recognized as being temporary. They will not provide future relief to low-income PAWC customers.

Table 1. Average Arrears of Bill Discount Participants at Time of Enrollment
(Water-only, Wastewater-Only, Combined Water/Wastewater)
(OCA-05-008)

Month	Water Only	Wastewater Only	Combined Water/Wastewater
202111	$578.69	$472.74	$668.70
202112	$561.27	$232.78	$540.81
202201	$432.56	$400.33	$405.37
202202	$535.71	$1247.48	$544.71
202203	$320.08	$564.18	$468.69
202204	$292.97	$382.30	$407.98
202205	$327.83	$370.36	$363.51
202206	$307.59	$511.45	$329.69
202207	$245.95	$258.41	$313.04
202208	$229.72	$336.84	$220.38
202209	$213.17	$238.92	$190.78
202210	$191.08	$289.32	$248.66
202211	$317.14	$480.12	$262.94
202212	$301.32	$268.42	$334.15
202301	$287.50	$387.29	$450.71
202302	$318.05	$669.89	$276.65
202303	$348.16	$631.92	$504.55
202304	$381.49	$558.22	$481.14
202305	$401.89	$697.32	$519.71
202306	$240.05	$595.72	$578.48
202307	$337.32	$327.23	$470.21
202308	$253.20	$527.80	$328.55
202309	$272.23	$394.15	$388.41
202310	$533.27	$625.65	$488.03

The importance of this Table is that it shows that the arrears carried by customers who are likely to participate are consistently sufficiently high that PAWC will have already contributed to its reserve for write-offs *before* these low-income customers enter the

arrearage forgiveness program. To the extent that the program succeeds in prompting future in-full payments toward current bills (plus a copayment toward arrears), PAWC will *reduce* the dollars that will ultimately be found to be uncollectible. Contrary to what Mr. Higgins says, in other words, there would be no new, and no incremental, arrearage forgiveness program costs to be directly assigned to the residential customer class.

If Mr. Higgins wishes there to be a direct assignment of AMP costs, there would also need to be a direct assignment of additional new revenue as generated by the program to the residential class. Moreover, if AMP costs were to be directly assigned to the residential class, the current allocation of existing uncollectibles included within the dollars directly assigned would need to be identified and removed from the current allocation of uncollectibles to residential customers.

Q. WHAT DO YOU CONCLUDE?

A. Bad debt expenses associated with low-income AMP participants are not separate, new or incremental costs. They are simply part of bad debt expenses associated with the residential class as a whole. There is no reason, and certainly no cause-related reason, to isolate the bad debt Mr. Higgins discusses and directly assign it to the residential class. I conclude that the AMP costs identified by Mr. Higgins should be allocated as part of total uncollectible expenses for both its water and wastewater programs.

Q. DO YOU AGREE WITH MR. HIGGINS THAT THE AMORTIZATION OF THE REGULATORY LIABILITY FOR AMP COSTS ANTICIPATED IN THE LAST RATE CASE, BUT NEVER INCURRED, SHOULD BE DIRECTLY CREDITED TO THE RESIDENTIAL CLASS?

A. Yes. As Mr. Higgins notes, while the AMP costs anticipated in the last PAWC base rate case were not directly assigned to the residential class, as proposed by OSBA, in the settlement of PAWC's last base rate proceeding those costs were collected from residential customers. Having been collected from residential customers, these costs – which were included in rates but never incurred – should be refunded to residential customers.

Q. PLEASE ADDRESS THE ALLOCATION OF THE ADMINISTRATIVE COSTS OF THE H2O AND DISCOUNT PROGRAMS.

A. The Company's proposed allocation of administrative costs by PAWC based on an O&M composite factor is reasonable. These administrative costs do not differ in-kind from the O&M costs associated with providing other types of payment options. For example, the costs of working with customers in order to defer payment, or to provide budget billing or deferred payment plans, are not directly assigned to particular customer classes.

Moreover, just as the forgiveness of arrears through AMP is expected to generate new revenues to PAWC, which would need to be identified as directly assigned to residential customers should the overall AMP costs be directed assigned, the administration of the H2O and Discount programs are expected to result in a corresponding decrease in PAWC's administrative costs associated in addressing the nonpayment of bills. OSBA's

proposal to directly assign the administrative expenses associated with these programs, without also identifying and directly assigning the administrative savings, would impose the costs without also crediting the benefits. The fact that there are both costs and cost reductions associated with these programs demonstrates how inextricably interrelated the programs are with other aspects of PAWC operations. The only way to appropriately capture, and to allocate, both the costs and the cost reductions, is to allocate the costs as PAWC has proposed to do.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger D. Colton. My business address is 34 Warwick Road, Belmont, MA.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED DIRECT AND REBUTTAL TESTIMONY ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes, I am.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY.

A. The purpose of my testimony is to respond to the Rebuttal Testimony of the following PAWC witnesses: (1) Charles Rea (PAWC St. 10-R); (2) Ashley Everette (PAWC St. 1-R); (3) J. Cas Swiz (PAWC St. 8-R); (4) Deborah Degillio (PAWC St. 9-R); (5) Kori O'Malley (PAWC St. 5-R); and (6) Tawana Dean (PAWC St. 14-R).

Part 1. Response to PAWC Rebuttal Witness Charles Rea.

Q. PLEASE RESPOND TO MR. REA'S REBUTTAL TESTIMONY REGARDING HIS "ENTERPRISE AFFORDABILITY" ANALYSIS.

A. Mr. Rea continues to testify that PAWC rates are "generally affordable" on an enterprise level. He defines "general affordability" to exist when average bills are affordable to households at the median household income (MHI). He asserts that he "believe[s] that the Company's proposed rate design in this proceeding results in water and wastewater service that is affordable for our customers." (PAW St. 10-R, at 8). He continues to assert that:

> Company's proposed rates in this proceeding are affordable, not only because the BTI [Bill-to-Income] Ratio at MHI falls below the 2% level, but because the Company's proposed rate design in this case, which includes the bill

> Discount Program ("BDP"), give virtually every residential customer the opportunity for Basic Water Service for both water and wastewater service at an affordable level.

(Id., at 9). He then almost immediately backs away from this assertion that PAWC's rates give "virtually every residential customer" the opportunity to receive service "at an affordable level." He instead asserts that "there are, and will always be, groups of customers for whom affordability of water and wastewater service may be challenging." (Id.) He asserts that:

> The question of affordability is not one of whether that percentage of customers falls below a certain level. . .The question of affordability instead depends on whether a robust sustainable tariff program, like the BDP, is in place to help customers with affordability issues, gives these customers the opportunity for Basic Water Service at a level deemed to be affordable. . ., and whose existence improves the overall affordability of service for all customers as measured by an index like the Affordability Index.

(Id.) Given this conflicting testimony by Mr. Rea (e.g., virtually every residential customer has the opportunity to receive affordable service, but "there will always be groups of customers for whom affordability may be challenging," but "the question of affordability is not one of whether those groups of customers fall below a certain level"), when all is said and done, after presenting his testimony, Mr. Rea's ultimate conclusion is that "while PAWC continues to support its BDP, as proposed by the Company, *it does not oppose the modifications recommended by Mr. Colton or Mr. Geller*. The proposed discounts to the BDP offered by Mr. Colton and Mr. Geller would provide greater levels of affordability for customers at the lowest end of the income scale." (PAWC St. 10-R, at 31) (emphasis added).

This ultimate conclusion is well supported by my Direct Testimony, which Mr. Rea does not dispute. As my Direct Testimony demonstrated, rather than Mr. Rea's assertion that the Company's proposed rates "give virtually every residential customer the opportunity for Basic Water Service for both water and wastewater service at an affordable level," the current information before the Commission supports the undisputed observations that, even *after applying PAWC's existing discounts*:

- fewer than 10% of customers with an affordable bill have income less than 200% of Poverty Level. (OCA St. 5, at 40 – 41).
- 84% of customers with income less than 50% of Poverty Level fail to achieve an affordable water bill. (OCA St. 5, at 41).
- 80% of customers with income between 50% and 100% of Poverty Level, and 82% of customers with income between 100% and 150% of Poverty, fail to achieve an affordable water bill. (OCA St. 5, at 41).
- The same impacts arise for wastewater customers. (OCA St. 5, at 45).

There are not merely, in Mr. Rea's words, "groups of customers for whom affordability of water and wastewater may be challenging." More than 80% of PAWC's customers with income less than 150% of Poverty face unaffordable bills even if they all were to receive the PAWC discount. Stated another way, what Mr. Rea dismisses as "groups of customers for whom affordability may be challenging," *even after receiving PAWC's proposed discount*, nearly 113,000 (112,785) customers with income less than 200% of Poverty Level would face unaffordable PAWC bills.

Moreover, not only does the discount (as proposed by PAWC) fail to result in an affordable bill for these low-income customers, in addition, PAWC fails to enroll the vast majority of its low-income customers in its Bill Discount Program.

Q. DO YOU HAVE SPECIFIC RESPONSES TO THE VARIOUS RESPONSES THAT MR. REA OFFERS TO YOUR ANALYSIS?

A. As stated above, the ultimate conclusion of Mr. Rea was that PAWC "does not oppose the modifications recommended by Mr. Colton or Mr. Geller. The proposed discounts to the BDP offered by Mr. Colton and Mr. Geller would provide greater levels of affordability for customers at the lowest end of the income scale." (PAWC St. 10-R, at 31).

However, Mr. Rea and I have identified a number of areas in which he and I disagree with the appropriate way to determine the general affordability of water and wastewater rates on an enterprise level. Most importantly:

- Mr. Rea in rebuttal continues to assert that rates are "generally affordable" if they are affordable at average bills and at Median Household Income. (PAWC St. 9-R, at 8). He does not dispute my data showing that the households in the PAWC service territory with incomes in the First Quintile, on average, have BTI Ratios of more than two times higher than the affordable BTI Ratio of 2.0%. Given the proposed rates in 2024, the BTI Ratio will increase to more than three times the affordable level. Moreover, while households falling in the Second Quintile had BTI Ratios of between 1.5% and 2.0% through 2022, beginning in 2023, even PAWC households in the Second Quintile were experiencing BTI Ratios exceeding the 2.0% demarcation of affordability. The implication of this data is that at least 40% of PAWC's residential customers face a BTI Ratio exceeding the affordable 2.0% mark.

- Mr. Rea continues to assert that using the MHI as the demarcation of affordability "is a commonly used standard for affordability" and "serves as a general standard of affordability." (PAWC St. 9-R, at 8). When asked for the "literature" which he asserts supports these assertions, however, the only literature he cites were the two publications in his footnotes on page 14. (OCA-06-040). Those two publications are significant because they ***both*** criticized the use of MHI. Indeed, the conclusion that affordability analyses using MHI are "misleading at best and inaccurate at worst," was not ***my*** language, but rather was the conclusion of the very article that Mr. Rea cites in his own footnote. (OCA St. 5, at 8). Even Mr. Rea ultimately acknowledges that "use of the 2% standard at MHI as a single point estimate

can be misleading because it may not be representative of affordability generally." (PAWC St. 9-R, at 8) (emphasis added).

- Mr. Rea disagrees with my critique of his primary reliance on homeowner income in his analysis, arguing that this critique "would only be relevant if these conditions would result in systematic and significant changes in the calculated multiplier over time." (PAWC St. 9-R, at 11). He attributes a purpose to my testimony, however, that I did not assert. My testimony was not that the difference between the rate of owner-occupied and tenant-occupied housing would change over time. My testimony was that his primary reliance on homeowner median income overstates the median income he uses in his affordability analysis (and thus understates the extent of unaffordability). Moreover, it results in reaching the conclusion that as homeownership becomes less and less affordable, water bills using his analysis will correspondingly become more and more affordable given that higher income would be needed to become a homeowner.

- Mr. Rea disagrees with my critique that he seeks to limit his consideration of median household income to PAWC customers, but does so by limiting his analysis to single family homeowners. (PAWC St. 9-R, at 12 – 13). In his response, he asserts that my critique would actually increase his median household income because the median income of renters of single family homes would exceed the median income of renters of apartments. His critique, however, makes an erroneous comparison. The correct comparison is not between renters of single family homes and renters of apartments, but rather between owners of single family homes and renters of housing units that are likely to be PAWC customers (e.g., renters of single-family homes, renters of two-family homes, renters of housing units of 3 – 4 units). The income of residents of these rental properties would be less than the income of owners of single-family homes, thus lowering his calculation of median household income and decreasing the "general affordability" which he purports to find.

- Finally, in responding to my critique of his "community analysis," Mr. Rea states that considering various demographic factors that might affect Basic Water Service would be "nearly impossible to perform." (PAWC St. 9-R, at 19). In responding to my critique, however, Mr. Rea assigns a statement to me that I did not make. He asserts that I recommend developing a "water usage per household per day" to be used in an affordability analysis. (PAWC St. 9-R, at 19). That is not what I suggested or recommended. I merely noted that Mr. Rea's use of what he claims is a single level of water consumption

> that reflects "Basic Water Service" for all households is a meaningless number, given that there are, as he concedes, a multitude of factors that result in actual household consumption differing from his single number. My affordability analysis more closely tracks how the level of water service differs by various demographics.

Mr. Rea acknowledges that the incomes of higher income households are increasing faster than the incomes of lower income households (PAWC St. 9-R, at 13), but dismisses this as being unimportant. (Id.) He does not attempt to respond to my observation that his analysis based on median homeowner incomes simply indicates that, because of sharply increasing housing price, home ownership is becoming increasingly limited to households with higher and higher incomes. So, while it may be true that PAWC customers who are homeowners have higher incomes, it is not true that PAWC customers who are homeowners represent the income trend for PAWC customers as a whole. (OCA St. 5, at 10).

Nor does Mr. Rea attempt to respond to my conclusion that his analysis based on median homeowner income leads to the strained conclusion that as owner-occupied housing in a community becomes increasingly less affordable, thereby limiting ownership to increasingly higher income households in that community, water service becomes increasingly more affordable when measured by bills as a percentage of homeowner income. That conclusion does not reasonably flow, given that what is *really* being measured is only the affordability of water to an increasingly more wealthy population. (OCA St. 5, at 11 – 12).

Moreover, Mr. Rea does not even attempt to respond to my observation that using median incomes in an affordability analysis does not reflect affordability to the community as a

whole. Median household incomes are nearly four times higher than First Quintile incomes, and the difference has been growing over time. (OCA St. 5, at 12 – 13).

Finally, Mr. Rea does not even attempt to respond to my observation that MHI in the PAWC service territory equals nearly 300% of Federal Poverty Level, an inappropriate income level by which to assess the "general affordability" of water service to a community. (OCA St. 5, at 15 – 16).

Q. ARE THERE ARGUMENTS RAISED BY MR. REA THAT YOU DO NOT RESPOND TO?

A. Yes. My failure to respond to each and every one of Mr. Rea's responses should not be construed as agreement with his responses. It should instead be construed as an observation on my part that his response lacks sufficient merit to individually address.

Q. DOES MR. REA'S REBUTTAL RESPOND DIRECTLY TO YOUR CONCLUSIONS IN YOUR DIRECT TESTIMONY?

A. No. Mr. Rea continues to assert that PAWC rates are "generally affordable" because they are affordable given his calculations of Median Household Income (and primarily the MHI of homeowners). His responses serve to further that basic approach to reach his conclusion. Despite his responses, he does not, at any point, dispute my conclusions that: (1) households in the PAWC service territory with incomes in the First Quintile, on average, have BTI Ratios of more than two times higher than the affordable BTI Ratio of 2.0%; (2) given the proposed rates in 2024, the BTI Ratio will increase to more than three times the affordable level; (3) while households falling in the Second Quintile had BTI Ratios of between 1.5% and 6 2.0% through 2022, beginning in 2023, even PAWC

households in the Second Quintile were experiencing BTI Ratios exceeding the 2.0% demarcation of affordability; and (4) the implication of this data is that at least 40% of PAWC's residential customers face a BTI Ratio exceeding the affordable 2.0% mark. (OCA St. 5, at 19 – 21).

Q. WHAT DO YOU ULTIMATELY CONCLUDE WITH RESPECT TO MR. REA'S REBUTTAL TESTIMONY REGARDING HIS ASSESSMENT OF AFFORDABILITY?

A. For the reasons detailed in my direct and surrebuttal testimonies, the affordability analysis presented by PAWC witness Rea at the enterprise level and community level is inadequate and unreasonable and, therefore, Mr. Rea's conclusion that PAWC bills are generally affordable when viewed from both the community level and the household level is unreasonable and not supported.

My recommended affordability analysis, at a high level, is as follows:

- Enterprise level: First, examine BTI Ratios at the average income in the First Quintile and Second Quintile given a constant usage over the years. Second, rather than measuring affordability using Median Household Income (and primarily Median Household Income of homeowners), determine what income would be needed in order to achieve a BTI Ratio of 2.0% each year and examine the number of zip codes within the PAWC service territory that have those incomes at the average Q1 and average Q2 income levels.

- Community level: First, reject the limitation of any "affordability analysis" to use of a minimal "Basic Water Service." Second, do not examine affordability only for the PAWC population as whole, but rather measure it at different income levels. Finally, do not consider only the ***breadth*** of affordability (i.e., the number of customers with Bill-to-Income Ratios exceeding 2% of income), but also consider the ***depth*** of affordability (i.e., recognizing that a substantial number of the customers with unaffordable bills, do not merely have a Bill-to-Income Ratio "over 2%," but have a Bill-to-Income Ratio of over 20%.

I fully supported my recommendations for this affordability analysis in my direct testimony. Mr. Rea in his rebuttal did not credibly respond to the affordability analysis that I recommend be adopted.

Further, as stated in my direct testimony and below in this surrebuttal testimony, the concerns I identify with respect to the unaffordability of PAWC rates should be considered in the balancing of consumer and investor interests in setting a return on equity, even outside the consideration of the specific proposals I advance with respect to PAWC's BDP, AMP, and other specific low-income initiatives.

Q. HOW DOES MR. REA RESPOND TO YOUR CONCLUSION THAT PAWC'S WINTER AVERAGING PROPOSAL WILL ADVERSELY AFFECT LOW-INCOME CUSTOMERS?

A. Mr. Rea concedes each of my observations that lead to the conclusion that PAWC's winter averaging proposal will disproportionately affect low-income customers. He argues that the PAWC proposal should nonetheless be adopted.

- Mr. Rea states that he "concede[s] that the beneficiaries of the Company's winter averaging proposal are likely to be higher income customers because it is these customers that are more likely to have seasonal water usage in the summertime that would no longer be billed for wastewater service." (PAWC St. 10-R, at 55). He argues, however, that "introducing a stronger cost causation element" merits the imposition of these adverse impacts. He does not acknowledge all the ways in which the averaging of costs in the development of rates works to the detriment of low-income customers and the multitude of ways in which a deaveraging could occur to benefit low-income customers.

- Mr. Rea characterizes my Direct Testimony as claiming "that there are a significant number of residential customers that have usage in the summer but

no usage in the winter" whom he labels 'snowbirds.'[1] Mr. Colton claims that usage for these customers in the summer is higher than in the winter, not because this usage is outdoor usage, but that [sic] because these customers aren't home during the winter and, therefore, it is incorrect to assume that their summer usage does not go through the wastewater system." (PAWC St. 10-R, at 52, footnote added). Mr. Rea dismisses that argument by asserting that "there will always be a group of customers whose usage patterns may provide advantages under certain rate structures and disadvantages under other rate structures." (Id., at 55). He does not dispute the data I present indicating that the "group of customers" whose usage patterns will provide disadvantages is not only large, but is disproportionately low-income. (OCA St. 5, at 100 – 103).

- Mr. Rea acknowledges my observation that PAWC's assumption of using a standard usage level of 3,000 gallons per month for new customers with no winter usage history unfairly penalizes new customers as those customers are likely to have usage levels lower than 3,000 gallons per month. (Id., at 56). He does not dispute that PAWC's use of a standard usage level of 3,000 gallons per month would unfairly penalize new customers (which would disproportionately affect low-income customers). He merely states that "if it is determined that the most likely levels of usage for new customers is less than 3,000 gallons per month, the Company is open to proposing a lower standard." (Id., at 55 – 56). He does not, however, make that proposal for a lower standard and does not recommend either a process or timeframe for making the determination that would lead to such a proposal. Given the unreasonably adverse impacts on low-income customers I have identified, with no remedy proposed by PAWC, the PAWC proposal should be denied.

- Mr. Rea acknowledges my argument that lower-income customers are less likely to be residents of homes with substantial outdoor summer consumption. As a result, low-income customers will be less likely to have their summer wastewater bills capped at a lower level than those bills historically have been and these customers will be called upon to bear the burden of the foregone revenue from having non-winter bills capped, with little opportunity to be a recipient of any of the reduced bills. (Id., at 56). He does not respond specifically to this argument, merely noting (as he did above) that under any proposal, there will be winners and losers (without acknowledging that PAWC's winter deaveraging proposal systematically makes low-income customers the losers).

[1] While Mr. Rea attributes this "snowbird" label to me, that term does not appear in my Direct Testimony.

- Mr. Rea acknowledges my testimony that by capping non-winter bills at no more than winter consumption, the Company is redistributing dollars from higher use customers to "chronically" lower use customers which are disproportionately likely to be low-income customers (Id., at 56). He does not dispute my observation, instead explicitly "concede[s] that the beneficiaries of the Company's winter averaging proposal are likely to be higher income customers."

Q. WHAT DO YOU CONCLUDE?

A. I conclude that neither the criticisms of my Direct Testimony advanced by Mr. Rea, nor the countervailing arguments that he propounds, present a legitimate basis to overcome the findings in my Direct Testimony that PAWC's winter averaging proposal should be rejected because of its adverse impact on low-income customers. Particularly given the systematic unaffordability of PAWC's rates to customers in the bottom two quintiles of income (OCA St. 5, at 19 – 20), unnecessarily adding to those burdens is unreasonable.

Q. PLEASE RESPOND TO MR. REA'S REBUTTAL TESTIMONY REGARDING THE ADVERSE IMPACT THAT THE PAWC PROPOSED REVENUE DECOUPLING MECHANISM WILL HAVE ON LOW-INCOME CUSTOMERS.

A. Mr. Rea asserts that the Rate Decoupling Mechanism (RDM) will not have an adverse impact on low-income customers for two reasons. First, Mr. Rea asserts that, "Regarding affordability, I do not expect that any surcharges or credits that result from the Company's RDM will be of the magnitude that *overall affordability* of service will be significantly affected." (PAWC St. 10-R, at 74) (emphasis added). It is unclear how Mr. Rea reached this conclusion given that he previously declined to assess "overall affordability" with respect to low-income households. Instead, even Mr. Rea's Rebuttal Testimony asserts that his "Enterprise-Level Analysis provided a long-term view of the *overall affordability* of the Company's water and wastewater service. . .by *comparing*

average residential bills by year for all residential customers to estimated median household income." (PAWC St. 10-R, at 3) (emphasis added). His testimony about the lack of impact on "overall affordability" should not be used as a basis for assessing the impacts on low-income customers in particular.

Moreover, his argument that "surcharges will be subject to discounts through the Company's BDP" fails to address the broader impact on low-income customers. The PAWC Bill Discount Program (BDP) reaches a fraction of the total number of low-income customers on the PAWC system. Even if RDM credits are subject to BDP discounts, that impact is limited to a very small portion of PAWC's low-income population.

Q. DOES MR. REA ACCURATELY ASSESS THE IMPACT OF IMPLEMENTING WATER REDUCTION MEASURES ON LOW-INCOME HOUSEHOLDS?

A. No. Mr. Rea asserts that "there is no evidence to suggest that the fundamental dynamics that are causing usage to decline over time for residential customers is more concentrated in higher income households than lower income households. The move toward more efficient appliances, showerheads, toilets, faucet aerators, etc. that use less water over time affects all customers, not just higher income customers. . ." (PAWC St. 10-R, at 75). To the contrary, in making this assertion, Mr. Rea simply chooses to ignore the testimony establishing that low-income customers are less likely to be those customers who are implementing water reduction strategies. (OCA St. 5, at 79 – 81).

Finally, Mr. Rea acknowledges that "It is true that higher income customers tend to use more water for outdoor seasonal purposes and that water usage is dependent on weather

which can fluctuate from year-to-year and cause variations in revenue as compared to lower-income customers," but asserts that "there is no evidence, however, to suggest that seasonal use of water is trending upward or downward over time as there is with non-seasonal usage." (PAWC St. 10-R, at 75).

This argument is at fundamental odds with PAWC's definition of "basic water consumption" upon which Mr. Rea bases so much of his Direct Testimony. Mr. Rea argues in his Direct Testimony that this seasonal usage is of particular importance in his justification of the proposed RDM. There, he stated that PAWC's proposed rates designs "provide price signals that better reflect cost-causation principles for customers that use more water for seasonal discretionary purposes. Implementing these beneficial alternative rate designs *normally could have significant short-term and longer-term impacts on usage and revenues* that may be detrimental to the Company's legitimate financial objectives without an RDM mechanism. . ." (PAWC St. 10, at 103) (emphasis added). Contrary to his Rebuttal Testimony, in other words, Mr. Rea's Direct Testimony is that this "seasonal use" is precisely the usage which PAWC is seeking to reduce through its rate design.

Q. DO YOU HAVE ANY FINAL OBSERVATION ABOUT MR. REA'S REBUTTAL TESTIMONY?

A. Yes. The Rebuttal Testimony of Mr. Rea with respect to the modified discounts that I recommended in my Direct Testimony was also rearticulated by, and supported by, the Rebuttal Testimony of PAWC witness Justin Ladner (PAWC St. 15-R, at 6). Mr. Ladner states: "as discussed in Company witness Rea's rebuttal testimony, the Company is not opposed to the proposals of OCA witness Roger D. Colton and CAUSE-PA witness Harry

S. Geller that would increase the BDP's existing discount levels to provide greater levels of affordability for qualifying customers." (PAWC St. 15-R, at 6).

Part 2. Response to PAWC Rebuttal Witness Ashley Everette.

Q. PLEASE RESPOND TO THE REBUTTAL TESTIMONY OF PAWC WITNESS ASHLEY EVERETTE.

A. PAWC Rebuttal Witness Ashley Everette (PAWC St. 1-R) offers rebuttal testimony with respect to PAWC's request for an additional equity return based on its claim of superior company management. Ms. Everette seeks to minimize my concerns by describing them simply as based on the observation that PAWC has not reduced its collectibles to pre-COVID levels. (PAWC St. 1-R, at 16). She notes that the Commission recognized that this concern was not unique to PAWC. (Id.) These two assertions, however, do not capture the full range of concerns I identified with respect to PAWC's credit and collection performance. First, I noted that the Commission's management audit noted that the effects of COVID on long-term arrears "must be addressed by PAWC." (OCA St. 5, at 111 – 112). Despite this Commission directive, PAWC chose not to respond to the ongoing adverse impacts of long-term arrears. This came after the December 2018 PUC Management Audit (in pre-COVID days) concluded that PAWC should "implement *additional strategies* to reduce customer accounts receivables more than 90 days overdue," with PAWC not doing so. (OCA St. 5, at 110 – 111).

In addition, the management issue is not simply that all utilities are facing long-term post-COVID arrears higher than pre-COVID long-term arrears. I noted in my Direct Testimony that, based on the Commission's Chapter 14 data reporting, "Overall, PAWC's collections performance has been declining *since 2018*." (OCA St. 5, at 115).

PAWC's poor performance, in other words, did not begin with the impacts of COVID. Moreover, even if PAWC had reduced its long-term arrears to pre-COVID levels, it was those pre-COVID levels which the PUC's 2018 Management Audit had found to present management concerns. It was those pre-COVID levels of long-term arrears which gave rise to the PUC Management Audit's conclusion that "*more work is necessary*" and its conclusion that PAWC should "implement *additional strategies* to reduce customer accounts receivables more than 90 days overdue." (OCA St. 5, at 110).

Finally, I noted in my Direct Testimony that it is not simply PAWC's poor performance relative to its pre-COVID performance that is of concern.

Rather than rebutting the concerns I expressed in my Direct Testimony, the Rebuttal Testimony of PAWC witness Everette is instead further evidence that PAWC did not respond, and is not responding, to the issues relating to long-term arrears that have now been presented in the last two PUC Management Audits.

Additionally, I noted in my Direct Testimony, PAWC's collections performance is poor when compared to the performance of Pennsylvania's other large water utility. When compared to Aqua PA, PAWC has a higher percentage of its residential billing in debt; a higher percentage of its residential customers in debt; and a disproportionate number of residential disconnections. PAWC disconnects its residential customers at a rate three times higher than Aqua PA, the next highest water utility, while its percentage of write-offs is nearly two-and-a-half times higher than Aqua PA's. None of these indicators relate to whether long-term arrears have been reduced to pre-COVID levels, the only issue that Ms. Everette addressed. (OCA St. 5, at 113 – 114).

Q. DID MS. EVERETTE ADDRESS YOUR CONCERNS WITH RESPECT TO VERIFIED INFRACTIONS?

A. Yes, but not adequately. Ms. Everette dismisses my concerns with respect to the number of verified infractions by asserting that such "infractions occasionally occur." She refers to the number of verified infractions as "occasional lapses." (PAWC St. 1-SR, at 18). PAWC's problems, however, are not merely "occasional lapses." In 2022, PAWC's rate of "justified complaints" was 25% higher than Aqua PA's (the next largest water utility) and more than two times higher than the rate of other Class A water utilities. Moreover, in the first three quarters of 2023 (the most recent time period for which data is available), PAWC's rate of verified infractions *grew further* by nearly 30% over the first three quarters of 2022. These were not "occasional lapses." In the first three quarters of 2023, PAWC had 686 justified complaints. (OCA St. 5, at 117). Remember, a "justified complaint" represents an instance where, prior to BCS intervention, the company did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, tariffs or guidelines when the consumer brought the complaint to the company's attention."

Q. PLEASE RESPOND TO MS. EVERETTE'S REBUTTAL TESTIMONY REGARDING THE NUMBER OF RESIDENTIAL DISCONNECTIONS.

A. Ms. Everette responds to my Direct Testimony regarding the very high rate of residential disconnections by asserting that "with respect to its number of disconnections, the company has an obligation to collect amounts billed to mitigate uncollectible expense." (PAWC St. 1-R, at 19). She makes no effort to draw a connection between PAWC's rate of disconnections and any reduction in uncollectibles. Indeed, as I note above, precisely the opposite can be seen. PAWC disconnects its residential customers at a rate three times higher than Aqua PA, the next highest water utility, while its percentage of write-offs is nearly two-and-a-half times higher than Aqua PA's.

Q. PLEASE RESPOND TO MS. EVERETTE'S TESTIMONY REGARDING PAWC'S LOW-INCOME PROGRAMS.

A. Ms. Everette's Rebuttal Testimony does nothing more than to repeat her Direct Testimony with respect to PAWC's low-income programs. Ms. Everette continues to make assertions about PAWC's low-income programs that are nothing more than spin. She cites PAWC's low-income discount program, even though other Pennsylvania water utilities offer similar programs. (OCA St. 5, at 122). She also cites PAWC's arrearage management program, even though, again, other Pennsylvania water utilities offer similar programs. (Id.)

Finally, Ms. Everette's testimony regarding what she refers to as "significant shareholder contributions" to PAWC's hardship fund simply repeats her direct testimony rather than responding to my critiques. She does not dispute, for example, that:

> in 2023 (YTD-October), PAWC issued 129,379 disconnect notices to water customers who had already provided information to the Company establishing their low-income status (OCA-05-025), disconnected 8,724 residential water customers who had provided information to the Company establishing their low-income status (OCA-05-025, Revised), and yet provided only 1,916 hardship grants in that same time period (CAUSE-PA-1-013). In 2022, PAWC issued 182,239 disconnect notices to customers known by PAWC to be low-income (OCA-05-025), disconnected 14,562 accounts known by PAWC to be low-income (OCA-05-025, Revised.), and yet provided only 961 hardship grants. (CAUSE-PA-01-013).

(OCA St. 5, at 122 – 123).

Q. WHAT DO YOU CONCLUDE?

A. I conclude that Ms. Everette failed to rebut the information, data and analysis presented in my Direct Testimony and, accordingly, the findings and recommendations in my Direct Testimony regarding management performance should be adopted.

Part 3. Response to PAWC Rebuttal Witness J. Cas Swiz.

Q. PLEASE RESPOND TO MR. SWIZ'S REBUTTAL TESTIMONY REGARDING IMPLEMENTATION OF PAWC'S PROPOSED ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE (ECIC).

A. Mr. Swiz's only response to my Direct Testimony regarding PAWC's proposed Environmental Compliance Investment Charge (ECIC) is that "for BDP-eligible customers the discount will be applied in a manner that reduces the ECIC impact to these customers compared to non-BDP customers." (PAWC St. 8-R, at 13). He does not, however, respond to my fundamental objections to the ECIC, including the fact that the proposed ECIC is a charge that would be imposed above and beyond the normal fixed and volumetric charges imposed on residential customers. (OCA-11-021, OCA-11-022). Correspondingly, in addition to the substantial proposed increases in its fixed and

volumetric charges, to impose a non-discounted ECIC is simply to increase low-income bills even further. Nor does he respond to the fact that, as I established in my Direct Testimony, to the extent that low-income customers have monthly consumption greater than residential customers overall, they will also pay a higher amount of the environmental compliance costs (as my Direct Testimony established, according to PAWC's own data, low-income customers do have somewhat higher monthly usage than do residential customers overall). Finally, he does not respond to the fact that, as I established in my Direct Testimony, through its proposed ECIC, PAWC proposes to charge those customers who bear the brunt of the contamination, and who have the least capacity to absorb additional costs, the ***most*** for remediating this contamination in the future.

Q. DO YOU HAVE ANY FINAL RESPONSE TO MR. SWIZ'S REBUTTAL TESTIMONY REGARDING THE IMPACT OF THE PROPOSED ECIC ON LOW-INCOME CUSTOMERS?

A. Yes. Mr. Swiz seeks to equate "low-income" customers with "Bill Discount Program participants." He thus makes a factually incorrect statement based on this effort to equate those two populations (i.e, low-income and BDP participants). He asserts that "for BDP-eligible customers the discount will be applied in a manner that reduces the ECIC impact to these customers compared to non-BDP customers." (PAWC St. 8-R, at 13) (emphasis added). That statement is not accurate. It may well be true that for BDP participants, the BDP will be applied in a manner that reduces the ECIC impact. . However, as I discuss in detail in my Direct Testimony, BDP serves a relatively small percentage of PAWC's total low-income customer population. The majority of PAWC's low-income customers,

customers who are merely "BDP-eligible," and not BDP participants, will not be protected in the way Mr. Swiz asserts.

Part 4. Response to PAWC Rebuttal Witness Deborah Degillio.

Q. PLEASE RESPOND TO PAWC WITNESS DEBORAH DEGILLIO'S REBUTTAL TESTIMONY REGARDING THE USE OF CUSTOMER SATISFACTION SURVEYS.

A. In my Direct Testimony, I recommended that "PAWC be required to make personal contact with any Confirmed Low-Income customer facing the imminent disconnection of service for nonpayment. At the time of that personal contact, the Confirmed Low-Income customer should be informed of the customer's right to enroll in the BDP *and* enroll in the AMP as an alternative to the disconnection of service for nonpayment. Disconnections to these customers should be paused until PAWC has received a response to the offer of BDP/AMP participation." (OCA St. 5, at 59).

PAWC rebuttal witness Degillio states that this requirement is not necessary. She asserts that "PAWC already trains its CCAs to advise customers having trouble paying their bills about the BDP and the Company's other assistance programs and to facilitate enrollment of eligible customers in those programs." (PAWC St. 9-R, at 9). Ms. Degillio's rebuttal fails to address the issue which I raised in my Direct Testimony. PAWC concedes that from January 2021 through October 2023, PAWC disconnected service for nonpayment to 21,950 Confirmed Low-Income customers. (OCA-05-025).[2] A Confirmed Low-Income customer is a customer that PAWC *knows* to be low-income. The Table below

[2] The number of customers disconnected may be fewer than this number to the extent that some customers may have had service disconnected more than once during that time period.

shows the disconnections of Confirmed Low-Income customers by month during that time period (January 2021 – October 2023).

Number of Confirmed PAWC Low-Income Disconnections by Month (January 2021 – October 2023) (OCA-05-025)

Month	The number of confirmed low-income disconnections for nonpayment;	Month	The number of confirmed low-income disconnections for nonpayment;
202101	0	202207	646
202102	0	202208	1,361
202103	0	202209	894
202104	932	202210	993
202105	744	202211	894
202106	683	202212	367
202107	749	202301	371
202108	1,488	202302	195
202109	1,076	202303	217
202110	952	202304	565
202111	742	202305	699
202112	283	202306	852
202201	242	202307	675
202202	259	202308	911
202203	285	202309	470
202204	1,151	202310	500
202205	913		
202206	841		

What Ms. Degillio asserts PAWC does and what I recommend are distinctly different things. Ms. Degillio's testimony limits the Company's efforts to those instances where a

Confirmed Low-Income customer contacts the Company prior to a disconnection. If this were not the case, her testimony would imply that PAWC has offered to enroll customers in the low-income Bill Discount Program, and offered to facilitate that enrollment, and that customers instead *chose* to have their service disconnected rather than receiving a bill discount. Moreover, on a going-forward basis, PAWC would have the option of offering Confirmed Low-Income customers an opportunity to enroll in the Arrearage Management Program (AMP) rather than having their service disconnected.

The difference between my recommendation and the existing PAWC process is the difference between proactive outreach and only being responsive if a customer makes contact. The Company's existing process is simply backward. A customer who doesn't know about the BDP and/or the AMP may well choose not to contact PAWC and, as a result, would never learn about the BDP and/or AMP. My recommendation is that PAWC be directed to: (1) affirmatively make personal contact with a customer in imminent danger of having service disconnected; (2) affirmatively offer enrollment in the BDP and/or AMP as an alternative to that service disconnection; and (3) to freeze collection activities pending completion of the Confirmed Low-Income customer's application for the BDP and/or AMP. Having done that, if the Confirmed Low-Income customer chooses to have service disconnected rather than to have their arrears forgiven, so be it. It would be likely, however, that some substantial number of these Confirmed Low-Income customers would choose program enrollment as an alternative to losing their PAWC service.

Ms. Degillio's rebuttal testimony does not respond to my recommendation, let alone demonstrate a lack of need for my recommendation.

My recommendation would not impose a substantial burden on PAWC. It is important to remember that PAWC, itself, states that "the company defines 'confirmed low-income customer' as a customer that *has provided income information to the company* indicating that the customer has a household income at or below 150% of the Federal Poverty Level." (OCA-05-001) (emphasis added).

Q. IS THERE ANY OTHER ASPECT OF MS. DEGILLIO'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Yes. Ms. Degillio asserts that my Direct Testimony "contends that [PAWC's] transaction surveys are inadequate because they do not include specific questions for customers seeking bill assistance, requesting payment arrangements, raising inability to pay issues, or responding to disconnection notices and cannot sufficiently be used to improve customer satisfaction." (PAWC St. 9-R, at 10). She responds by asserting that "The CSO's targeted surveys are performed immediately after all phone and myWater portal interactions and *do not exclude the four categories of customer contacts* highlighted by Mr. Colton." (Id.) (emphasis added).

Ms. Degillio's rebuttal, however, doesn't respond to my Direct Testimony. My Direct Testimony stated:

> No quarterly survey is directed either toward Confirmed Low-Income customers or toward Bill Discount Program participants. (OCA-06-019, OCA-06-020). Moreover, of the quarterly survey that is performed, or the "targeted survey" directed toward customers having particular transactions with PAWC, no survey questions are included with respect to a **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** (OCA-06-018(b), Attachment 1, confidential, OCA-06-018, Attachment 2, Confidential). **[BEGIN CONFIDENTIAL]** [redacted]

[redacted] **[END CONFIDENTIAL]**

The surveys cited in my Direct Testimony demonstrate that, whether or not PAWC "excludes the four categories of customer contacts" Ms. Degillio cites, my Direct Testimony remains accurate. The survey does not include any of the questions my Direct Testimony discusses.

Finally, Ms. Degillio asserts "PAWC and the CSO identify trends from customer feedback provided via phone surveys, field service representative surveys, and the net promoter score surveys. . ." (PAWC St. 9-R, at 10). But, if the surveys do not include the appropriate questions as I have identified, no "trends" can be derived. My Direct Testimony also indicates that no such "trends" have been identified, and no compilation or assessment of surveys has been made. (OCA St. 5, at 119 – 120).

In sum, Ms. Degillio's Rebuttal Testimony does not respond to, let alone rebut the need for, my recommendation that with respect to the questions asked in customer satisfaction surveys, the population targeted by PAWC's "targeted surveys" should be expanded to include: (1) customers seeking to enroll in the BDP and/or AMP; (2) customers seeking to enroll in a deferred payment arrangement; (3) customers expressing a difficult paying, or an inability-to-pay their bills in a full and timely manner; and (4) customers responding to the pending (or already completed) disconnection of service for nonpayment. The results of these targeted surveys should be compiled, provided to the PAWC LIAG at each quarterly meeting, and subject to discussion at LIAG should a member of the group have questions or identify issues flowing from the targeted surveys.

Part 5. Response to PAWC Rebuttal Witness Lori O'Malley.

Q. PLEASE RESPOND TO THE REBUTTAL TESTIMONY OF PAWC WITNESS LORI O'MALLEY.

A. Ms. O'Malley argues that the Company's claim for cost recovery of its Arrearage Management Program (AMP) is "consistent with the cost recovery permitted by the Further Amended Joint Petition for Full Settlement of the Arrearage Management Plan." (PAWC St. 5-R, at 8). She argues that the terms of the Settlement provide that the Company will record a regulatory asset or liability for amounts over or under the amount included in rates for recovery or refund in the next base rate case. (Id., at 8 – 9).

That argument does not address the issue I raise with respect to the unreasonable amount of dollars that PAWC claims for its AMP cost recovery. The Settlement which Ms. O'Malley cites explicitly states that "The Company will propose a dollar amount to be included in base rates to fund the AMP. This amount will be subject to review and approval by the Commission." As can be seen, the Settlement did not provide that whatever amount proposed by the Company would be accepted. Rather, the dollar amount which the Company "propose[s]" is "subject to review and approval by the Commission."

The Recommended Decision approving the Joint Settlement which Ms. O'Malley noted specifically that: "OCA's ability to review the costs in the regulatory asset or liability is not restricted by this provision. OCA's position on cost recovery included the position that the costs recovered should be the incremental costs related to implementing the program. *OCA asserts that these issues are not resolved here and will be addressed in a future base rate case*." (Recommended Decision, at 25) (emphasis added). Not only that,

but the Recommended Decision noted that PAWC agreed with this resolution of cost recovery. (Id., at 20) ("PAWC also maintains that the clarifications and modifications regarding the implementation and cost recovery for the program directly address the concerns raised by the OCA and CAUSE-PA witnesses and represent a reasonable compromise of the parties' position on these issues. For these reasons, PAWC believes that the modifications are in the public interest and should be approved.")

PAWC witnesses provided no justification for assuming that AMP participants will make 100% of their payments in a full and timely fashion. Given the near complete overlap between AMP participants and BDP participants, it is more reasonable to expect AMP payment patterns to reflect the historic payment patterns of BDP participants.

The same issue is presented by Ms. O'Malley's testimony with respect to uncollectibles. Ms. O'Malley states that "The AMP Settlement allows the cost of the AMP to be included in rates." (PAWC St. 5-R, at 9). That is not correct. As the Recommended Decision stated (citing OCA's Statement of Position in Support of the Joint Settlement), "OCA's position on cost recovery included the position that *the costs recovered should be the incremental costs* related to implementing the program." (Recommended Decision, at 25). The Settlement provided that these issues were to be "addressed in a future rate case." The Settlement thus provided that PAWC could "propose a dollar amount" which could be disputed by OCA and which, accordingly, would be "subject to review and approval by the Commission."

Ms. O'Malley argues that my proposed adjustment "is unsubstantiated as it cannot be determined at this time what impact, if any, AMP will have on uncollectible expense."

(PAWC St. 5-R, at 9). That argument does not respond to the issue I raised in my Direct Testimony. I did ***not*** argue that the AMP would reduce future uncollectibles. I argued that ***past*** uncollectibles include the uncollectibles associated with the arrears of Confirmed Low-Income customers. The arrears that will be subject to AMP credits are part of those arrears that are already included in rates and would thus not be "incremental costs" of the AMP. The AMP does not create those costs, in other words, it simply moves those pre-existing costs into the dollars known as AMP credits. AMP arrears that are already included in rates to again be collected as AMP credits would allow PAWC to collect those costs in both places (i.e., through their inclusion in past uncollectibles and again through their inclusion in AMP credits). Whether the AMP results in future changes in the level of uncollectibles is not a consideration in this calculus. The impact of improved bill payment patterns, if any, by Confirmed Low-Income customers will be captured in future rate cases. In sum, Ms. O'Malley's argument responds to an argument that I did not make.

Part 6. Response to PAWC Rebuttal Witness Tawana Dean.

Q. PLEASE RESPOND TO THE TESTIMONY OF PAWC REBUTTAL WITNESS DEAN WITH RESPECT TO YOUR RECOMMENDED MODIFICATIONS TO PAWC'S RATE DISCOUNT LEVELS.

A. Ms. Dean's Rebuttal Testimony specifically defers to the Rebuttal Testimony of Charles Rea with respect to the proposed modifications to PAWC's discount levels. (PAWC St. 1-R, at 4) ("PAWC Witness Rea will be addressing Mr. Geller and Mr. Colton's recommended changes to the BDP discount amounts in his Direct Testimony"). Moreover, in turn, as noted above, Mr. Rea's Rebuttal Testimony states that "While PAWC continues to support its BDP, as proposed by the Company, it does not oppose the modifications recommended by Mr. Colton or Mr. Geller. The proposed discounts to the BDP offered by Mr. Colton and Mr. Geller would provide greater levels of affordability for customers at the lowest end of the income scale." (PAWC St. 10-R, at 31). This lack of opposition was reiterated by PAWC Rebuttal Witness Ladner. (PAWC St. 15-R, at 6).

Despite the explicit testimony by two different PAWC witnesses that the Company does not oppose the modified discounts proposed for PAWC, Ms. Dean asserts that:

> . . .the Company notes that it would be useful to have implementation data on the BDP (with the Company's proposed changes) and the AMP to allow the Company and stakeholders to evaluate the impact of these changes before additional changes to the Company's assistance programs are considered.

(PAWC St. 14-R, at 5). This comment appears simply to undo the statements of Mr. Rea and Mr. Ladner regarding the lack of opposition to the proposed modifications to PAWC's discount levels. The current information before the Commission, none of which PAWC has disputed, supports the undisputed observations that:

- After applying the PAWC BDP discounts, fewer than 10% of customers with an affordable bill have income less than 200% of Poverty Level. (OCA St. 5, at 40 – 41).

- After applying the PAWC BDP discounts, 84% of customers with income less than 50% of Poverty Level fail to achieve an affordable water bill. (OCA St. 5, at 41).

- After applying the PAWC BDP discounts, 80% of customers with income between 50% and 100% of Poverty Level, and 82% of customers with income between 100% and 150% of Poverty, fail to achieve an affordable water bill. (OCA St. 5, at 41).

- The same impacts arise for wastewater customers. (OCA St. 5, at 45).

In contrast, the modified discounts that I propose, and which PAWC witnesses Rea and Ladner state that PAWC does not oppose, would generate affordable water and wastewater bills for more than 70% of customers with income less than 50% of Poverty Level, and affordable water and wastewater bills for roughly three-quarters of all customers with income between 50% and 200% of Poverty.

Moreover, PAWC's data shows that *before* increasing rates without increasing its corresponding BDP discount levels:

- From January 2021 through October 2023, PAWC disconnected service to 8,299 BDP participants (OCA-05-026);

- From January 2021 through October 2023, the average arrears of a BDP participant who had service disconnected was $1,060. (OCA-05-026);

- From January 2021 through October 2023, more than 55% of all BDP participants were in arrears, with an average arrears of $546.

Despite these results, PAWC proposes to increase its residential rates to these program participants while leaving the discount levels the same. It thus comes as no surprise that the two PAWC witnesses who assessed the reasonableness of my recommended

modifications to the bill discount levels testified in their Rebuttal Testimony that PAWC does not oppose those recommended modifications.

Q. PLEASE RESPOND TO MS. DEAN'S REBUTTAL TESTIMONY REGARDING BDP OUTREACH AND ACCESSIBILITY.

A. In her Rebuttal Testimony, Ms. Dean opposes my recommendation that PAWC make personal contact with any Confirmed Low-Income customer facing the imminent disconnection of service for nonpayment, inform them of their right to enter into PAWC's BDP and AMP as an alternative to that disconnection of service, and pause collection efforts while the customer undertakes the process of enrolling in those programs. (PAWC St. 14-R, at 7). Her testimony, however, mirrors the rebuttal testimony of Deborah Degillio (PAWC St. 14-R, at 10, citing PAWC St. 9-R, at 9) ("PAWC witness Deb Degillio addresses this recommendation in her Rebuttal Testimony"). I responded to those arguments in my response to the Rebuttal Testimony of Ms. Degillio.

In addition, while Ms. Dean opposes my recommendation that PAWC develop a comprehensive written "universal service" plan (PAWC St. 14-R, at 12), her only rationale for this opposition is that, unlike Pennsylvania's natural gas and electric distribution utilities, PAWC is not required to prepare such a plan (PAWC St. 14-R, at 12) ("PAWC should not be required to adopt a universal service plan unless Pennsylvania law is modified to expand this requirement. . ."). Ms. Dean mischaracterizes the recommendation that I made in my Direct Testimony. I did not recommend that PAWC be directed to develop the same comprehensive Universal Service and Energy Conservation Plan (USECP) required of natural gas and electric utilities. Rather, my Direct Testimony stated:

> PAWC has not laid out in any written form a plan identifying how the Company intends to use its universal service programs to address the payment difficulties of its Confirmed Low-Income customers. . . .
>
> As can be seen, even setting aside the opportunities for improved outreach and intake, innumerable opportunities exist to use each component of PAWC's suite of universal service programs to help advance the objective of improving affordability, as well as improving bill payment patterns and even controlling the cost of the programs. Moreover, as can be seen, the Company's suite of universal service programs as a whole can be better coordinated so that the synergistic impact of the programs as a whole will be amplified, if not maximized, in contrast to the sum of each program's impacts when viewed individually. . .
>
> The plan, however, should not be required based on a specific mandatory regulation. It should instead be required as an element of fundamental prudent program planning and management.

(OCA St. 5, at 69, 71 – 72). My Direct Testimony discussed in detail how the synergistic impacts would be "amplified" by developing a written plan. (OCA St. 5, at 69 – 71). Ms. Dean did not respond to, let alone rebut, these beneficial impacts of developing a written plan as I recommended.

Q. PLEASE RESPOND TO MS. DEAN'S REBUTTAL TESTIMONY REGARDING YOUR RECOMMENDED INCREASE IN PAWC'S HARDSHIP FUND ELIGIBILITY THRESHOLD.

A. Ms. Dean responded to my recommended increase in the income eligibility for PAWC's hardship fund by stating that, in the settlement of PAWC's acquisition of the Butler Area Sewer Authority's ("BASA") wastewater system assets (Docket A-2022-3037047), "the Company has already agreed to increase eligibility for hardship grants to include customers up to 250% of FPL. . ." (PAWC St. 1-R, at 16). Review of the Settlement shows that the increase in hardship eligibility will apply to all customers (i.e., existing

customers as well as customers in the acquired BASA system). I understand from counsel that parties who did not join the BASA settlement have filed an appeal of that case to the Commonwealth Court creating uncertainty about the acquisition and the settlement reached in that proceeding. However, Ms. Dean's Rebuttal Testimony appears to be an agreement for that increase in the hardship fund income eligibility to be applicable systemwide and she appears to accept the premise that such an increase is needed. Thus, to the extent that any increase in rates is approved in this proceeding, despite the uncertainty surrounding the BASA settlement, the Commission should condition that increase in rates on an increase in the hardship fund eligibility system wide so as to benefit additional households in need of assistance.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

DIRECT TESTIMONY

OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

PUBLIC VERSION

Date Served: February 1, 2024

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. PLEASE DESCRIBE YOUR BACKGROUND AND QUALIFICATIONS.

A. I have over 30-years' experience as an expert in consumer protection, service quality, and low-income customer programs for public utilities and the regulation of retail alternative energy suppliers in markets that have adopted restructuring for electric and/or natural gas supply service. I was the Director of the Consumer Assistance Division for the Maine Public Utilities Commission from 1986-1996 and have operated my own consulting practice for public advocates and consumers since that time. I have testified in over 30 U.S. state jurisdictions, including Pennsylvania, and Canadian jurisdictions, in many proceedings. My C.V. is attached to this testimony as Exhibit BA-1, and it lists all my publications and testimony associated with my consulting practice.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?

A. Yes. I have filed testimony on behalf of the OCA before the Pennsylvania Public Utility Commission (Commission) in investigations, base rate proceedings, mergers and acquisitions, and default service proceedings, on issues relating to customer service, service quality and reliability of service, low-income customer programs, and retail market programs. With regard to Pennsylvania's water and wastewater utilities, I have evaluated customer service and consumer protection programs in proceedings before the

Commission involving Pennsylvania American Water Company (PAWC), Pittsburgh Water and Sewer Authority, York Water, and Aqua Water.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY REGARDING PAWC?

A. Yes. I filed Direct and Surrebuttal Testimony on behalf of the OCA in PAWC's immediately prior base rate case that resulted in a $138 million revenue increase and that took effect only nine months prior to PAWC's filing in this proceeding (Docket Nos. R-2022-3031672 and R-2022-3031673) (2022 BRC). I also filed Direct and Surrebuttal Testimony on behalf of the OCA in the pending proceeding in which PAWC seeks to acquire the wastewater system currently operated by the Borough of Brentwood (Docket No. A-2021-3024058).

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I am filing Testimony on my review of PAWC's customer service policies and programs and, specifically, the following topics in the following order:

- The Company's service quality and call center's customer service performance quality is directly related to the Company's general rate increase request;
- The Company's consumer protection policies and programs to ensure that the Service Company's call center representatives are complying with Chapter 14 of the Public Utility Code and Chapter 56 of the Commission's regulations, particularly with regard to handling and evaluating customer complaints;
- The Service Company's call center's customer service performance, including performance trends, internal training, management oversight, including the findings of the most recent Management Audit conducted by the Commission;

- The Company's program to terminate water service provided by PAWC for nonpayment of charges related to non-Company, third-party providers of sewer services;
- The Company's billing arrangement with a non-affiliated, third-party provider of what are labeled on PAWC's customer bills as "protection" services for customer-owned service lines and in-home plumbing and PAWC's billing of charges for such services on PAWC customer bills; and
- The Company's request for a reward in its rate of return in light of the Company's customer service performance;

These issues are important themselves, but particularly so in this case given the magnitude of PAWC's proposed rate increases and the fact that PAWC's customers have seen rate increases in 2021, 2022, and 2023 resulting from a two-stage significant rate increase from its 2020 rate case and the increase that just took effect in January 2023 from the 2022 rate case. This is in addition to its proposed rate design changes, and the proposal for various trackers and rate increases outside of the normal base rate case (*i.e.*, Section 1308(d) general rate increase request) review process.

Q. DO YOU INCLUDE EXHIBITS WITH YOUR TESTIMONY?

A. Yes. I attach the following Exhibits to my Testimony:

- Exhibit BA-1: Barbara Alexander C.V.
- Exhibit BA-2 CONFIDENTIAL: PAWC Response to OCA-08-028 and 20-024, Attachment CONFIDENTIAL
- Exhibit BA-3: PAWC Response to OCA-08-010 and 20-001.
- Exhibit BA-4 CONFIDENTIAL: PAWC Response to OCA-08-007 and Attachment CONFIDENTIAL

- Exhibit BA-5: PAWC Response OCA-08-038 and Attachment.
- Exhibit BA-6: PAWC Response to OCA-08-021, Attachment
- Exhibit BA-7 CONFIDENTIAL: PAWC Response to OCA-25-003 CONFIDENTIAL
- Exhibit BA-8 CONFIDENTIAL: PAWC Response to OCA-20-016, Attachment 1 and 2 CONFIDENTIAL
- Exhibit BA-9 CONFIDENTIAL PAWC Response to OCA-08-023. Attachment CONFIDENTIAL

Q. PLEASE SUMMARIZE PAWC'S GENERAL RATE INCREASE PROPOSALS.

A. As of November 10, 2023, PAWC serves 779,292 water and wastewater customers located in 37 counties across Pennsylvania. PAWC's proposed tariffs would increase the Company's total annual operating revenues by approximately $203.9 million, or 20.2% ($199.2 million from water operations and $4.7 million from wastewater operations) based on a fully projected future test year (FPFTY) ending June 30, 2025. For water service, according to the Company's customer notices provided as part of the filing, if the Company's entire request is approved as filed, a residential water customer using 3,201 gallons per month would see increases in their monthly bill ranging by Rate Zone between approximately 25% to 64%. For wastewater service, according to the Company's customer notices provided as part of the filing, if the Company's entire request is approved as filed, a residential wastewater customer using 3,122 gallons of water per month would see increases to their monthly bill ranging by Rate Zone between approximately 3% to 121%, although some customers in certain Rate Zones would see a decrease by approximately 5%. The actual bill impacts vary widely based on the location of the customer in PAWC's

service territory as well as proposals to change the structure of several rate zones.

Q. HAVE CUSTOMERS COMPLAINED IN THIS CASE?

A. Yes. According to OCA's most recent compilation of customer response to this rate increase, 286 formal consumer complaints with approximately 149 different complainants and 535 informal complaints have been submitted to the Commission. This level of customer opposition to the rate increase proposed by PAWC is highly unusual based on my extensive experience in base rate cases in Pennsylvania and it far exceeds complaints submitted in prior PAWC rate cases. As a result of these significant bill increases, the Commission should carefully examine the adequacy and quality of customer service provided by PAWC, as well as the specific investments that form the basis for most of PAWC's proposed rate increases.

I. PAWC'S SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE IS DIRECTLY RELATED TO THIS RATE CASE

Q. WHAT IS THE CONNECTION BETWEEN YOUR DISCUSSION OF SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE AND THE RATE INCREASE PROPOSED BY PAWC?

A. As explained in OCA witness Christine Maloni Hoover's Direct Testimony (OCA Statement 1), under the regulatory compact, a public utility in Pennsylvania is statutorily obligated to provide adequate and reasonable service to its customers. A public utility must justify its rates based on, among other things, its ability to perform its essential quality of service and customer service functions at an adequate and reasonable performance level. Accordingly, where a public utility is seeking a rate increase – especially a significant one, and, where, as in this case, the utility is asking for a reward in the form of a higher rate of return based on its performance, it is appropriate to review

the performance of that utility and to compare such performance to other Pennsylvania utilities. Therefore, my evaluation of PAWC's customer service and consumer protection policies is directly related to the Commission's consideration of Company's general rate increase. In effect, it is part of the consideration of the Commission about whether PAWC is upholding its end of the bargain.

Furthermore, PAWC seeks an incentive in this case under Section 523 of the Public Utility Code in the form of the Commission's adoption of the higher end of the Company's requested return on equity of 10.95% based on its management performance in offering low-income and payment-troubled customer programs and in its community engagement and consumer education. PAWC St. 1 at 33-36, 40-41; PAWC St. 13 at 57-59. My evaluation of PAWC's customer service and consumer protection policies is directly related to the Commission's consideration of Company's request for the higher return on equity.

My analysis and findings should inform the Commission on the reasonableness of PAWC's significant rate increase request. Where I identify deficiencies in PAWC's customer service performance, I recommend that the Commission order improvements in specific areas as a condition of any rate increase and consider adopting any rate increase and rate of return that reflects the inadequate customer service I have documented. In some areas, I recommend that the Commission disallow certain incurred costs on the basis of the Company's continuing poor management performance or management negligence. This approach is mandated by the statutory guidelines of Section 523 governing public utility rate cases in which the Commission must evaluate the

"efficiency, effectiveness, and adequacy of service."[1] I address the implications for customer service performance below.

II. PAWC'S CONSUMER PROTECTION POLICIES AND COMPLIANCE WITH CHAPTER 14 OF THE PUBLIC UTILITY CODE AND CHAPTER 56 OF THE COMMISSION'S REGULATIONS AND RELATED OBLIGATIONS

Q. HAVE YOU EXPLORED HOW PAWC ENSURES COMPLIANCE WITH PENNSYLVANIA-SPECIFIC CONSUMER PROTECTION POLICIES?

A. I have explored how PAWC, ensures that its interactions with Pennsylvania customers complies with the Pennsylvania consumer protection and customer rights laws and regulations. In order to evaluate PAWC's compliance programs and management oversight, it is important to understand the corporate organization and the various means by which Pennsylvania customers interact with PAWC and its affiliate, American Water Works Service Company, Inc. (Service Company).

Q. CAN YOU PLEASE EXPLAIN YOUR UNDERSTANDING OF THIS STRUCTURE?

A. Yes, based on the Company's filing, the Company's responses to discovery, and Section XI of the PUC's 2023 Management Audit Report[2] and the Company's filed response to the Management Audi[3]t, my understanding of the corporate structure is as follows:

- PAWC is the subsidiary of American Water Works Company, Inc. (Parent Company), a parent company headquartered in Camden, New Jersey, that manages and operates many geographically disparate water and sewer utility subsidiary companies

[1] 66 Pa. C.S. 523.
[2] Pennsylvania-American Water Company, Pennsylvania Public Utility Commission's 2023 Management Audit Report, Docket No. D-2022-3035217 (Issued October 2023) (Released to Public on December 28, 2023). Section XI of the Management Audit Report presented call center performance from 2019-2022.
[3] Pennsylvania-American Water Company, Implementation Plan in Response to the 2022-23 Focused Management and Operations Audit, Docker No. D-2022-3035217 (Issued October 2023) (Released to public on December 28, 2023).

with service territories in 14 states and 1,600 communities[4], primarily in Pennsylvania, Illinois, New Jersey, Missouri, Indiana, West Virginia, and in other states.

- The Parent Company, through the Service Company, provides PAWC with call answering and customer service with a management structure that is responsible for multiple state activities. The Service Company's Customer Service Organization (CSO) provides call handling, billing, field services coordination, and other customer service functions for all the Parent Company's regulated operations, including PAWC.
- The Service Company's CSO is led and overseen by a Vice President and Chief Customer Officer of the Service Company; this executive is not dedicated to PAWC's customer service operations, instead performing the management and oversight functions for the CSO for all the regulated utility subsidiaries of the Parent Company, including PAWC.
- There is no physical customer service office in Pennsylvania where PAWC's customers can go to and interact in a personal manner with employees to resolve questions or complaints or engage in payment arrangements related to PAWC's service.
- PAWC customer calls are answered by call centers staffed by Service Company employees, and such employees are located at multiple locations, most of which are not located in Pennsylvania. The vast majority of Service Company's customer service representatives work virtually from home (telework). In addition, the Service Company has contracted with several third-party entities to handle customer calls, both outbound and inbound calls, and most of those contractors rely on agents who telework as well.[5]

[4] American Water Works 2022 Annual Report, https://s26.q4cdn.com/750150140/files/doc_financials/2022/ar/American-Water-Works-Company-Inc-2022-Annual-Report.pdf

[5] PAWC Response to OCA-20-001 confirms that, "There is no physical location of calls centers as vast majority of

- The Service Company employees and contractors are not dedicated to PAWC's customer service operations, instead performing their duties for all the regulated utility subsidiaries of the Parent Company, including PAWC.
- The calls handled by Service Company's employees and third-party contractors make use of internal software that tracks interactions with customers across all utility subsidiaries of the Parent Company, including PAWC. The software reflects service issues, billing issues, collection issues, and related policies in all state utility subsidiaries' operations.
- Calls from PAWC customers are directed to a customer service representative (whether to an employee or third-party contractor) who has passed a "test" that is intended to reflect the individual representative's passing knowledge of Pennsylvania specific collection rights and remedies.
- As a result of this corporate structure, where the Service Company – not PAWC – performs the call center operations on behalf of PAWC and is led by an executive of the Service Company, it is my opinion that PAWC's management oversight and compliance is needed and necessarily requires audits or root cause analysis of customer complaints to identify any failure by the Service Company to properly comply with or implement Pennsylvania laws, regulations, or policies.

Q. DOES PAWC CONDUCT THE PROPER LEVEL OF MANAGERIAL OVERSIGHT OF THE SERVICE COMPANY FOR COMPLIANCE WITH PENNSYLVANIA REGULATIONS AND POLICIES VIA AUDITS AND ROOT CAUSE COMPLAINT

our agents work remotely from home." This response also confirms that all Intelogix agents are working remotely and all but 13 of Transworld systems agents are remote. The latter two entities are third party contractors for call services that serve PAWC and other American Water Works customers in multiple states.

ANALYSIS?

A. No. PAWC does not conduct audits or root cause analyses of the Service Company's call center operations to affirmatively evaluate whether the call center performance complies with Pennsylvania specific consumer protection regulations and policies. Had PAWC entered an arms-length contract with a non-affiliated, third-party contractor to "contract out" or "farm out" its call center operations, it would seem reasonable, necessary, and appropriate that PAWC obtain contractual protection that would allow PAWC to audit the performance of the contractor from time-to-time to ensure compliance with PAWC's statutory and regulatory obligations and to impose contractual remedies, including termination of the contract, should the contractor's performance not be satisfactory. In contrast, the fact that PAWC does not audit the performance of the Service Company's call center operations and has undertaken no actions under its contracts to respond to inadequate or unreasonable performance, as outlined in my testimony below, indicates that this affiliated arrangement is lacking a very important arms-length protection for PAWC and PAWC's customers.

Q. WHAT DOES PAWC DO TO OVERSEE SERVICE COMPANY'S CALL CENTER OPERATIONS?

A. PAWC's complaint spreadsheet reflects a very short summary of the complaint and what steps were taken in response. The complaint data is organized by date and is capable of being sorted by complaint categories. There is no internal documentation of any analysis done of this complaint data or whether any steps were taken to respond to any analysis of the complaint trends or findings. The spreadsheet does contain a column that states whether the complaint is the "fault" of the Company but there is no analysis of what steps

have been taken in response to these determinations. PAWC's reaction to any complaint that PAWC determines is due to a "fault" of the Company is to discuss the matter with the customer service representative or that individual's manager, relying on counseling.

Q. DO YOU HAVE CONCERNS WITH PAWC'S OVERSIGHT OF SERVICE COMPANY'S CALL CENTER OPERATIONS?

A. Yes. PAWC's complaint analysis is seriously inadequate and does not reflect any root cause analysis or actions taken to reflect the analysis of customer complaints, whether they are internally handled disputes or the Commission's Bureau of Consumer Services (BCS) informal complaints. While PAWC enters customer disputes and complaints into a database, there is no analysis of the database to identify trends, underlying causes, or track performance. Finally, there are no performance standards that are applicable internally or with the third-party contractors that reflect compliance with Pennsylvania policies and programs or that tracks noncompliance in a manner that could be relied upon to determine acceptable performance or that is used to determine rewards or penalties. The reliance on "counseling" a particular customer service representative is not a reflection of any root cause analysis of complaint data and may or may not satisfy the occurrence or reoccurrence of a "fault."

Q. PLEASE DESCRIBE THE IMPORTANCE OF UTILITY TRACKING AND EVALUATING ALL COMPLAINTS.

A. Every Pennsylvania public utility is required to educate customers about how to register informal and formal complaints. Informal complaints get resolved informally by the Commission's BCS. Formal complaints get initiated by a customer or group of customers' filing a formal complaint with the Secretary's Bureau and the formal

complaints get formally adjudicated by an Administrative Law Judge (ALJ) and ultimately the Commission. Utilities also receive "disputes" directly from customers and are obligated to investigate and respond to those issues or indications of dissatisfaction. Customer complaints as a group form a hierarchy or pyramid, where at the bottom level of the pyramid is a large volume or majority of disputes that are handled and resolved by the utility call center representatives; at the next level up the pyramid is a smaller group of informal complaints that get resolved by BCS; and, at the top of the pyramid is yet a relatively smaller number of formal complaints that get resolved through a formal adjudication of the Commission. Tracking and evaluating disputes and informal or formal complaints are key to ensuring ongoing improvements in customer service because that evaluation is likely to spot the "red flag" that indicates a systemic issue or concern that requires PAWC's management's attention and, in some cases, a change in policy or procedure. In addition, of course, this type of evaluation may also identify violations of the Public Utility Code or the Commission's regulations.

Q. PLEASE SUMMARIZE THE COMMISSION'S BCS REPORTS ON COMPLAINTS AND COMPLIANCE FOR PAWC.

A. The Commission's BCS publishes a quarterly Consumer Activities and Report Evaluation for Pennsylvania electric, gas, telephone, and water utilities.[6] These reports typically include historical information to allow for a trend analysis. The BCS reports show that PAWC's complaint rate was 3.89 in 2021 and 4.22 in 2022, which exceeds any other Class A water utilities with the exception of one other smaller Class A utility.[7]

[6] http://www.puc.state.pa.us/filing_resources/consumer_activities_report_evaluation.aspx
[7] Utility Consumer Activities Report and Evaluation 2022, BCS, Pennsylvania Public Utility Commission, page 59.

PAWC's "justified"[8] residential complaint numbers and rates reflect a similar pattern of exceeding other Class A water utilities.[9] PAWC's residential payment arrangement request (PAR) rate is above average and 18.2% were determined to be "justified."[10] The BCS 2022 reports show that PAWC's "infraction rate"[11]of 0.58 exceeds all other major Class A water utilities.[12] According to the BCS reports, PAWC's infractions are categorized as 30% relating to reconnection of service, 23% dispute handling, 13% termination procedures, and 10% for credit standards and deposits.[13] The 3rd Quarter UCARE report for 2023 to date indicates an increase in residential complaints and PARs, justified complaints, and PARs compared to the same period in 2022.[14] A total of 158 verified infractions relating primarily to Chapter 56 are identified for PAWC, far in excess of other Class A water utilities.[15] This data evidences significant concern with PAWC's customer service performance, yet, there is no record or other indication of PAWC's management performing any root cause analysis of these complaints or other complaint trends of the issues reflected in BCS reports.

Q. DOES PAWC ANALYZE CUSTOMER COMPLAINTS TO ENSURE COMPLIANCE?

A. No. The Company compiles large spreadsheets of customer disputes and complaints but there is no record of any analysis that identifies trends or "root cause." According to the Company, a 699-page PDF document that lists customer complaints and their results in a

[8] The BCS deems a complaint "justified" if it is found by BCS that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters or tariffs. Ibid, page 20.
[9] Ibid., page 60 and 61.
[10] Ibid., Page 63 and 64.
[11] A verified infraction is a violation of a statute or regulation and provides written clarifications of Chapters 14, 30, 56, 63 or 64 and the policies of the Commission and BCS. Ibid., Page 19.
[12] Ibid., Page 70.
[13] Ibid, page 71.
[14] UCARE, 3rd Quarter, page 12.
[15] Ibid., page 19.

spreadsheet format is a "root cause" analysis.[16] The Company has implemented a "new quality assurance program."[17] However, "There has been no changes, reforms, or revisions to the Company's internal training programs and/or policies as a result of Pennsylvania specific results or complaint data. Any training or mentoring discussions as a result of feedback from quality assurance review is performed on an individual basis with identified call agents."[18] When asked to identify changes, reforms, or revision to internal training programs and/or policies that occurred due to any analysis of complaint data, the response was similar and failed to identify any specific response or change.[19] As a result, PAWC does not conduct a proper root cause analysis and has no record of any evaluation or analysis other than spreadsheets that list customer complaints with columns that identify its internal response on an individual complaint basis.[20]

Q. PLEASE EXPLAIN WHAT A PROPER ROOT CAUSE ANALYSIS LOOKS LIKE.

A. A root cause analysis is a fact-based exercise in which the underlying cause or causes of an undesirable outcome are identified and specific remedial steps are identified and determined to result in correcting or improving the previously identified undesirable result. A list of customer complaints with notations on how that particular complaint was resolved is not a root cause analysis.

> A root cause is defined as a factor that caused a nonconformance and should be permanently eliminated through process improvement. The root cause is the core

[16] PAWC Response to OCA-08-017, narrative response. At no point in the Confidential Attachment listing these complaints is there any summary, identification of trends, determination of a root cause of any trend or a reflection of the data in the spreadsheet. Listing and identifying the results of an individual complaint is not a root cause analysis.

issue—the highest-level cause—that sets in motion the entire cause-and-effect reaction that ultimately leads to the problem(s).

Root cause analysis (RCA) is defined as a collective term that describes a wide range of approaches, tools, and techniques used to uncover causes of problems. Some RCA approaches are geared more toward identifying true root causes than others, some are more general problem-solving techniques, and others simply offer support for the core activity of root cause analysis.

There are many methodologies, approaches, and techniques for conducting root cause analysis, including:

1. **Events and causal factor analysis:** Widely used for major, single-event problems, such as a refinery explosion, this process uses evidence gathered quickly and methodically to establish a timeline for the activities leading up to the accident. Once the timeline has been established, the causal and contributing factors can be identified.
2. **Change analysis:** This approach is applicable to situations where a system's performance has shifted significantly. It explores changes made in people, equipment, information, and more that may have contributed to the change in performance.
3. **Barrier analysis:** This technique focuses on what controls are in place in the process to either prevent or detect a problem, and which might have failed.
4. **Management oversight and risk tree analysis:** One aspect of this approach is the use of a tree diagram to look at what occurred and why it might have occurred.
5. **Kepner-Tregoe Problem Solving and Decision Making:** This model provides four distinct phases for resolving problems:
    1. Situation analysis
    2. Problem analysis
    3. Solution analysis
    4. Potential problem analysis[21]

According to the publications developed by the American Society for Quality, and other comparable publications[22], a proper analysis of any "root cause" requires the identification of "symptoms," which are not actual causes but signs of existing problems, and "first level causes," which are the causes that directly lead to a problem; and "higher

[21] https://asq.org/quality-resources/root-cause-analysis

[22] There is an extensive body of literature used in the medical community to conduct root cause analysis and develop plans to prevent adverse events. See, e.g., https://www.cms.gov/medicare/provider-enrollment-and-certification/qapi/downloads/guidanceforrca.pdf

level causes," which are links in the chain of cause-and-effect relationships that ultimately create the problem. PAWC compilation of individual customer complaints and their identification of the individual complaint resolution reflects "symptoms" and not the actual underlying cause of that reflects identification of patterns and the underlying facts that contributed to the complaint and complaint patterns.

Q. PLEASE DISCUSS PAWC'S RESPONSE TO OCA-20-024 AS AN EXAMPLE OF THE FAILURE TO CONDUCT APPROPRIATE ROOT CAUSE ANALYSIS OF ITS COMPLAINT DATA.

A. As a clear example of PAWC's failure to track and evaluate customer complaints or determine the root cause of verified infractions, PAWC was requested to provide information in OCA-08-028 as follows, "In calendar years 2021, 2022, and 2023, how many times has PAWC restored service after identifying that an account was not properly coded as being tenant-occupied at the time of termination?" PAWC's response stated, "PAWC does not track the requested information." In data request OCA-20-024, PAWC was asked to confirm that there is no root cause analysis of disputes or complaints that reflect the lack of proper coding of a tenant-occupied building. PAWC's response provided a Confidential attachment "for the analysis of informal complaints received from 2021, 2022, and 2023." This Confidential attachment consisted of 4 pages of a PDF document that was also provided in electronic spreadsheet format. I attach PAWC's response to OCA-08-028 and 20-024 with the **CONFIDENTIAL** Attachment as Exhibit BA-2. This document purports to reflect a root cause analysis but it was apparently created in response to this data request and not as a result of any routine business practice

to analyze PAWC complaint activity.[23] More importantly, this document reflects a listing of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** specific instances of clear violations without any root cause analysis that would identify trends, point to the ultimate cause of the complaints or occurrences, and fails to document any internal reaction to infractions other than **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. WERE THERE ANY OTHER FINDINGS OR RECOMMENDATIONS FROM THE 2023 MANAGEMENT AUDIT RELEVANT TO YOUR TESTIMONY?

A. Yes. The 2023 Management Audit Report recommended that PAWC file a new or amended affiliated interest agreement (AIA) that accurately reflects the current company structure and intercompany transactions occurring between PAWC and the Service Company. PAWC has stated that it believes the AIA does not need to be updated. However, in its Opinion and Order releasing the 2023 Management Audit Report to the public, the Commission directed PAWC to file a new or amended AIA that accurately reflects the current company structure and the intercompany transactions occurring between PAWC and the Service Company.

Q. WHAT IS YOUR RECOMMENDATION IN RESPONSE TO YOUR FINDINGS?

A. My recommendations are as follows:

1. Any rate increase granted in this proceeding should reflect PAWC's failure to structure its arrangements with the Service Company in an arms-length manner that protects PAWC and its customers from poor call center performance and PAWC's failure to properly manage and oversee the call center performance

[23] The electronic version of this Confidential document reflects a creation date of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** in the "properties" tab.

by tracking and evaluating its customer disputes and BCS findings or respond to the obvious trends of infractions and verified violations. These failures refute PAWC's claim of superior management performance and should be considered by the Commission under Section 523 in setting just and reasonable rates. I note that OCA witness Colton also identifies concerns with PAWC's management performance in OCA Statement 5. Specifically, in my opinion, these failures support adoption of OCA witness David Garrett's recommended return on equity in this proceeding (OCA Statement 3).

2. PAWC should conduct root cause analysis of all customer complaint data on a regular basis and track complaints and analysis for specific call centers, whether operated by the parent company or a third-party contractor.

3. Any new or amended AIA approved by the Commission should contain an arms-length contractual provision that grants PAWC the contractual protection to perform audits of the Service Company's CSO's performance based on defined call center metrics and to use specific call center complaint data to determine, in part, penalties and payments under the contract.

4. Any new or amended AIA approved by the Commission should contain an arms-length contractual provision that (1) will require the Service Company in its contracts with third-party contractors to reduce the fees it owes to the third-party contractor so that Service Company is not responsible for the payment of fees related to services that fail to meet the metrics; and (2) the Service Company will not allocate costs to PAWC for services that fail to meet the call center metrics.

5. PAWC should be required to provide managerial oversight of the Service

Company's CSO's call center performance, including but not limited to conducting audits of the Service Company's CSO's performance based on defined metrics and conducting a proper root cause analysis of its internal disputes and BCS related findings and update its findings and conclusions on a quarterly basis.

III. PAWC'S CALL CENTER CUSTOMER SERVICE PERFORMANCE

Q. PLEASE DISCUSS THE IMPORTANCE OF THE CALL CENTER FOR PAWC'S CUSTOMER SERVICE QUALITY.

A. As I described above, PAWC relies on employees and agents who handle calls from PAWC customers working from their home as the main method by which customers can communicate individually with PAWC. Therefore, the performance of these call centers and the supervision of the disparately located employees and agents is crucial to the Company's ability to deliver a reasonable level of customer service that complies with Pennsylvania's customer service and consumer protection requirements.

Q. PLEASE DISCUSS THE PERFORMANCE OF PAWC'S CUSTOMER CALL CENTER.

A. I attach the PAWC customer call center data showing the combined results provided in response to OCA-08-010 and separate results for two third-party contractors as provided in response to OCA-20-001, attached as Exhibit BA-3. This data shows the percentage of calls answered by a customer service representative within 60 seconds or 1 minute (reflecting how long the customer waits in the queue once the customer asks to speak to a live agent) and the call abandonment rate (referring to the percentage of calls in which the customer abandons the calls after entering the queue to speak to a customer representative).

During the period January 2022 through November 2023 the percentage of calls answered within 60 seconds NEVER met their internal standard of answering 80% of the customer calls within 60 seconds. The call abandonment rate improved from double digit percentages routinely experienced in 2022 and early 2023, but only recorded 8% or lower in five of these months. While there is some evidence of gradual improvement in call answering performance in 2023 compared to 2022, the overall historical pattern continues to reflect a poor performance. For example, the October 2023 results reflected that only 61% of calls were answered within 60 seconds and a 13% abandonment rate. Furthermore, as documented in Exhibit BA-3, the call center performance results for the two third-party contractors are very poor and far below the call center average as a whole. These results do not reflect the contractual performance standards included in the Service Company's contracts[24] with these entities **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**, but neither the Service Company nor PAWC has undertaken any actions to enforce those standards.[25,26] For example, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** The Service Company's failure to enforce this provision of the contract in turn impacts the costs allocated by the Service Company to PAWC for poor

[24] See, e.g., PAWC Response to OCA-06-006, Attachment 1 (Confidential), **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

[25] PAWC Response to OCA-06-010 provided the Confidential Attachments with these contracts.

[26] PAWC Response to OCA-20-003 requested documentation of any performance penalties or failures to achieve the required performance metrics and response to those failures. PAWC's response merely referred to the contract terms. PAWC Response to OCA-20-005 confirms that PAWC has not conducted any audit or evaluation of the third-party contractors and states, "We interact with the third party contractors on a daily basis including any concerns regarding performance." Also, see PAWC Response to OCA-20-007 that documents that PAWC does not track complaints based on whether an employee or third-party contractor's agent handled the call.

call center performance.

Furthermore, the monthly results reflect a dramatic swing in call center performance that indicates the annual average masks poor performance that should not be tolerated. The key variable in predicting reasonable versus unreasonable call center performance is the volume of calls and the number of available call center representatives on hand to answer the calls. Performance can be improved with better prediction of call volume and ensuring sufficiently trained personnel are available to respond to call volumes at predicted high call volumes days and times. Both these criteria are within the ability of PAWC and the Service Company to predict and control.

Q. IS THIS POOR CALL CENTER PERFORMANCE CONSISTENT WITH PRIOR EVALUATIONS OF THE CALL CENTER?

A. Yes. I documented PAWC's below average call center performance in the last base rate case. This performance was also the subject of the Commission's most recent Management Audit that documented poor call center performance for 2019-2022.[27]

Q. WHAT WERE THE FINDINGS OF THE 2023 MANAGEMENT AUDIT REPORT IN RELATION TO CALL CENTER PERFORMANCE?

A. The Commission's Bureau of Audits found that since 2019, PAWC experienced a sustained decline in call handling performance and recommend that the PAWC "initiate or devote additional efforts to improve the efficiency and/or effectiveness of its customer service function" and "improve customer service performance at minimum to pre-pandemic levels." The Bureau of Audits evaluated the Service Company's call center

[27] Pennsylvania Public Utility Commission, Pennsylvania American Water Company Management and Operations Audit, Docket No. D-2022-3035217 (Issued October 2023), Section XI, Customer Service. The report presented call center performance from 2019-2022.

performance using the following metrics of: (1) percentage of calls answered within 30 seconds, and (2) call abandonment rate. According to the Report, the call center's performance when evaluated against both of these metrics declined significantly. As the Table below shows, and as the Report indicated, the percentage of calls answered within 30 seconds declined by 28% between 2019 and 2020 and the call abandonment rate more than doubled in the same period.

Exhibit XI-1, Management Audit at page 82.

	2019	2020	2021	2022
Calls answered within 30 seconds	24%	16%	8%	14%
Call abandonment rate	6%	15%	24%	22%

Q. DID THE COMPANY RESPOND TO THE FINDINGS IN THE MANAGEMENT AUDIT REPORT?

A. Yes, however, my concern about the relatively poor performance of the customer call center(s) is heightened by PAWC's response to the Commission's Management Audit that documented PAWC's poor call center performance. The Company's response was to state that it would "strive" to achieve a performance of answering 80% of the calls within 60 seconds by December 31, 2024, but without any mention of how to address the documented high abandonment call rate in the Management Audit.[28] Ms. Degillio's Direct testimony in support of this rate increase stated that the Company's internal standard was to answer 80% or less

[28] PAWC Implementation Plan, page 38, Docket No. D-2022-3035217 (October 2023).

abandonment rate.[29] While Ms. Degillio characterized this standard as an "industry standard," the Company is not able to defend this reference based on any "industry standard."[30] All Pennsylvania electric and gas utilities are evaluated based on answering 80% of customer calls within 30 seconds as reflected in the annual BCS Reports and that standard has been routinely relied upon for PAWC's own presentation of call center results as reflected in my Exhibit BA-3.

Q. HOW DOES PAWC ENSURE THAT PENNSYLVANIA CUSTOMER CALLS ARE HANDLED IN COMPLIANCE WITH PENNSYLVANIA CONSUMER PROTECTION AND CUSTOMER RIGHTS POLICIES?

A. PAWC has developed a "test" that any customer call agent must pass to handle PAWC calls. I attach this "test" as provided in response to OCA-08-007 (**CONFIDENTIAL**) as Exhibit BA-4. **[BEGIN CONFIDENTIAL]** [redacted]

[29] PAWC Statement No. 9, pages 9-10.

[30] PAWC Response to OCA-20-012 states when asked to identify the "industry data" relied upon for this performance standard as stated in Ms. Degillio's Testimony (PAWC Statement No. 9), "The "industry data" referenced is knowledge obtained during industry conferences and networking with other call center executives."

[redacted] **[END CONFIDENTIAL]**

Q. HOW DOES PAWC MEASURE CUSTOMER SATISFACTION GENERALLY WITH PAWC'S SERVICES?

A. PAWC conducts customer satisfaction surveys and Ms. Degillio's Direct Testimony in support of this rate increase specifically mentioned these surveys as a key performance metric for her customer service operations, referencing a 70% response rate of "good" or "very good" from PAWC customers.[31] However, the actual survey results data reflects a different story. When asked to rate the overall customer phone customer service, the top two box response has **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.[32] The results of the survey of those interacting with PAWC's "myWater" web portal reflects **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.[33] The results of customer satisfaction with field services is **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** in most results.[34] The survey results for the call center are below those reflected in customer satisfaction surveys conducted pursuant to a BCS-supervised survey instrument by electric and gas utilities in Pennsylvania, who regularly reflect a satisfaction rating for

[31] PAWC Statement No. 9 at 8.
[32] PAWC Response to OCA-06-018, Attachment 1 (confidential).
[33] Ibid.
[34] Ibid.

recent call center transactions at over 80%.[35] As a result, there is no evidence that PAWC's customer satisfaction rating is anything other than below average.

Q. AS A RESULT OF YOUR EVALUATION OF PAWC'S CALL CENTER PERFORMANCE, WHAT DO YOU RECOMMEND?

A. I recommend the following:

1. The Commission should adopt specific performance standards as a condition of any rate increase approved in this proceeding. Specifically, the Commission should require PAWC to comply with the monthly and annual average of answering 80% of PAWC calls within 30 seconds and a 4% call abandonment rate, performance that is routinely met by Pennsylvania's electric and natural gas utilities. In light of the historical documentation of poor performance and the lack of managerial attention to this issue with inadequate oversight and enforcement of any reasonable standard, PAWC should be held to specific performance standards. Reporting results alone is insufficient in light of this history.

2. PAWC should be required to reform its Pennsylvania-specific "test" and training for its customer representatives to address the full scope of Chapter 56 and Chapter 14 rights and remedies that I have identified are lacking, as well as more detailed monitoring programs that reflect Pennsylvania-specific rights and remedies. This condition should require PAWC to routinely audit and evaluate the performance of its third-party contractors.

3. PAWC's revenue requirement should also be adjusted as recommended by

[35] BCS, Customer Service Performance Report, Appendix A and B, https://www.puc.pa.gov/media/2566/2022-customer-service-performance-report-final-092623.pdf

OCA Witness Ralph Smith (OCA Statement 2) to eliminate expenses for third party call centers that have routinely failed to meet reasonable call performance standards for PAWC's customers.

4. Finally, any rate increase granted in this proceeding should reflect the poor performance of the call center operations since 2019. These failures refute PAWC's claim of superior management performance and should be considered by the Commission under Section 523 in setting just and reasonable rates. Specifically, in my opinion, the poor performance coupled with PAWC's failure to oversee and evaluate the Service Company's performance should be reflected in the return on equity granted in this proceeding. These failures – in addition to the poor performance identified by OCA witness Colton (OCA Statement 5) – support rejection of PAWC's proposal for a higher return on equity based on its management performance and support adoption of OCA witness Garrett's recommended return on equity.

IV. PAWC'S POLICY TO TERMINATE SERVICE TO PAWC CUSTOMERS ON BEHALF OF "NON-COMPANY" WASTEWATER PROVIDERS NEEDS MORE OVERSIGHT.

Q. PLEASE DESCRIBE WHY PAWC DISCONNECTS ITS WATER CUSTOMERS FOR NONPAYMENT OF "NON-COMPANY" WASTEWATER SERVICE PROVIDERS.

A. I understand there is a Pennsylvania law referred to as the Water Services Act or Act of April 14, 2006, codified at 53 P.S. §§ 3102.501 – 3102.507, that authorizes water public utilities, like PAWC, to enter into long-term agreements with municipalities, municipal authorities, cities, boroughs, or townships (non-utility sewer providers) for shut-off services for sewer services. This law obligates water public utilities, including PAWC, to

terminate water service to a customer at the request and direction of non-utility sewer provider until all overdue amounts owed to the non-utility sewer provider are paid. I understand based on advice of OCA counsel that the shut-off services that PAWC provides on behalf of non-utility sewer providers are governed by the provisions of the Water Services Act, and not by Chapter 56 of the Commission's regulations or Chapter 14 of the Public Utility Code.

Q. PLEASE DESCRIBE PAWC'S PROPOSAL IN THIS CASE RELATED TO THE SHUT-OFF SERVICES IT PROVIDES PURSUANT TO THE WATER SERVICES ACT.

A. PAWC has various agreements with approximately 178 non-utility sewer providers to terminate service to PAWC water customers for nonpayment of sewer services at the request and direction of non-utility sewer providers.[36] The Company's PUC-approved form of shut-off agreement was provided by PAWC in response to OCA-08-038 and is attached as Exhibit BA-5. While this practice has been in effect for many years, PAWC in this case has submitted a specific amendment to Rule 12.1 in its Tariff to recognize this situation. PAWC's proposed addition to Tariff Rule 12.1(H) authorizes termination of service by the Company: "In accordance with the terms of any agreement with a non-Company wastewater provider for non-payment of wastewater service when due."

Q. DOES PAWC COLLECT FEES FOR SHUT-OFF SERVICES IT PROVIDES PURSUANT TO THE WATER SERVICES ACT?

A. Yes. PAWC charges a fee for this service and in 2023 these fees totaled $414,595.[37]

[36] PAWC Response to OCA-08-037 asking to identify the "non-Company" entities for whom PAWC has such agreements consists of a 5-page PDF that lists approximately 178 municipalities and sewer authorities.
[37] PAWC Response to OCA-08-40.

For January 2023 through November 2023, PAWC received 3,613 requests to terminate service from these "non-Company" entities and PAWC terminated water service for 1,950 customers or 54% of those requests.[38] This is a very high termination rate.

Q. DOES PAWC MONITOR COMPLIANCE WITH ITS OWN SHUT OFF AGREEMENT?

A. No. PAWC has not conducted an audit, investigation, or evaluation of whether these providers have correctly or properly identified the landlord/tenant services, have not included non-basic services in the amounts submitted for termination of water service by PAWC, or any other aspect of the conditions of the Shut-Off Agreement.[39] Nor has PAWC evaluated or investigated compliance with the "Shut Off Agreement."[40]

Q. PLEASE DESCRIBE THE PROCESS BY WHICH CUSTOMERS ARE GIVEN NOTICE OF THESE SHUT-OFFS,

A. The notices that are given to customers prior to a shut-off are governed by the Water Services Act and the agreements that PAWC has in place with the non-utility service providers. Pursuant to the law and the agreements, the non-utility service provider is required to give prior notice to their sewer customers prior to PAWC shutting off the water service. However, once the notice is issued, if a customer disputes the shut-off for non-payment, the non-utility service provider is obligated under the Water Services Act and the agreements to inform PAWC to stop the shut-off until the customer's claim has been judicially determined (the jurisdiction for such disputes between sewer customers and the non-utility service provider is with the Court of Common Pleas not with the

[38] PAWC Response to OCA-08-037.
[39] PAWC Response to OCA-20-025.
[40] PAWC Response to OCA-20-028.

Commission).

Given the very high termination rate that I note above, to protect consumers from unauthorized water shut-offs under the Water Services Act, I recommend that PAWC should be required to have a process to confirm that no customer dispute is filed – it can be as simple as taking the step of verifying with the non-utility sewer provider that no customer dispute has been filed.

Q. DO YOU HAVE OTHER RECOMMENDATIONS?

A. Yes. I have three additional recommendations. My first recommendation is like my recommendation above. Upon review of PAWC's shut-off agreements, there is a common provision that requires the non-utility service provider to not direct the Company to terminate service if the customer produces a medical certification. That provisions states:

> "AND FURTHER PROVIDED that no occupant of said premises has produced a medical certification by a physician to be seriously ill or affected with a medical condition which will be aggravated by a cessation of water service or failure to restore water service, as provided for in 52 Pa. Code §§ 56.111-56.118, as amended."[41]

Given the very high termination rate that I note above, to protect consumers from unauthorized water shut-offs under the Company's agreements, I recommend that PAWC should be required to have a process to confirm that a customer did not produce a medical certification to the sewer provider – it can be as simple as taking the step of verifying with the non-utility sewer provider that no medical certification has been produced.

[41] [Provide U-dockets]

Q. WHAT IS YOUR NEXT RECOMMENDATION?

A. My next recommendation is that PAWC should be required to post notice at the customer's premises at the time it performs the water shut-off. The notice should make it clear to customers that the water service has been shut off due to the customer's non-payment of sewer services owed to its non-utility service provider, not due to non-payment of water services provided by PAWC. The notice should name the non-utility service provider and provide the number to contact that provider. Additionally, the posted shut-off notice should direct the customer to PAWC's tariff provisions governing shut-offs pursuant to the Water Services Act (as I discuss below). Based on advice of OCA counsel, while I understand shut offs done pursuant to the Water Services Acts are not subject to Chapter 56 or Chapter 14, I understand that nothing prevents PAWC from providing this type of reasonable notice to customers as "reasonable service" under the Public Utility Code.

Q. WHAT IS YOUR FINAL RECOMMENDATION?

A. My final recommendation is that PAWC's Proposed Tariff Rule 12.1(H) should be rejected. The placement of this rule in Section 12.1 of the Company's Tariff is misleading and confusing. Section 12.1 governs terminations upon prior notice; however, except for the newly proposed (H), all of the subsections relate to terminations with prior notices provided by PAWC, not by some third-party. Accordingly, I recommend that the Company craft a new Section 12.3 that governs solely the process of PAWC's termination of water service performed pursuant to the Water Services Act and agreements in place between PAWC and the non-utility service provider due to the customer's non-payment of sewer charges owed to the customers non-utility service

provider. The tariff section should explain the PAWC customer's right that once notice is issued by the non-utility service provider, that the Company cannot go forward with the termination if a customer dispute is filed in accordance with the Water Services Act or if the customer produces a medical certification. It should further state that the Company will post notice at the customer's premises at the time of shut-off.

V. PAWC COLLECTS CHARGES FOR THIRD-PARTY WARRANTY SERVICES ON PAWC CUSTOMER BILLS. PLEASE DISCUSS YOUR CONCEERNS WITH THIS PROGRAM.

Q. DOES PAWC BILL CUSTOMERS FOR NON-UTILITY SERVICES?

A. Yes. PAWC provides billing services for a third-party, non-affiliated company, named American Water Resources, LLC (American Water Resources) for insurance products or warranty services (Warranty Services) provided by this company in return for a service fee.[42] American Water Resources is not an affiliate of PAWC nor a subsidiary of the Parent Company. American Water Resources provides the Warranty Services to PAWC customers with whom it has a service contract. The Warranty Services offered by American Water Resources include repair and maintenance services for covered water service lines owned by customers, sewer service laterals owned by customers, and in-home plumbing.

Q. PLEASE EXPLAIN HOW THESE CHARGES APPEAR ON THE CUSTOMER BILL.

A. The sample bill provided by PAWC shows such charges listed on the first page as "protection programs" and that charge is included in the "total amount due."[43] I attach the PAWC response to OCA-08-021 and associated customer bill as Exhibit BA-6. On

[42] PAWC Response to OCA-08-021, narrative.
[43] PAWC Response to OCA-08-021, Attachment consisting of 9 pages.

page 2 of this bill in fine print and as the 7th of 8 items under "explanation of fees and other terms," it states, "Protection programs for water, sewer, and in home plumbing are offered by American Water Resources" and states that these charges are not regulated by the Commission and that regulated services will not be disconnected for nonpayment of "protection program charges" or charged late fees. The toll-free telephone number for American Water Resources is provided. On page 3 the Account Detail states a line item, "Protection Programs: For inquiries, please call [toll free number]." These charges are then included in "total current period charges." This page also repeats the explanation quoted above that is on page 2 of the bill in the "understanding your bill" section.

Q. WHAT IS THE RELATIONSHIP BETWEEN ONCOURSE HOME SOLUTIONS AND AMERICAN WATER RESOURCES?

A. American Water Resources appears to be owned by and controlled by Oncourse Home Solutions, but this entity is not identified in any PAWC bills or other information that PAWC provides to its customers. Rather, the web portal for Oncourse Home Solutions provides a link to one of their "brands," as American Water Resources.[44] A hot link to American Water Resources is provided and that web portal identifies water line protection programs, sewer line protection programs, and a combination water and sewer line protection program.[45] The web portal for American Water Resources includes the following disclosure that is headed by the logo used by American Water Works with the title, "American Water Resources, An Oncourse Company," with emphasis in the original:

> American Water Resources (AWR) offers service line protection contracts to homeowners in 43 states and Washington, D.C., and currently services more than

[44] https://oncoursehome.com/
[45] https://www.awrusa.com/

2 million contracts. The company has been providing protection contracts since the year 2000 with more than 9 out of 10 customers satisfied and an A- Rating from the Better Business Bureau. American Water Resources also provides its protection contracts to homeowners through municipal partnerships with the New York City Department of Environmental Protection, Orlando Utilities Commission, Nashville Metro Water Services and others. **American Water Resources is a trademark of American Water and used under license, but is not owned by American Water. As such, AWR's optional programs are not provided or guaranteed by American Water or its affiliates, and any changes in AWR's prices are not determined or controlled by American Water or its affiliates.** American Water Resources conducts business in California as American Water Resources Insurance Services and administers home protection contracts, provided by Virginia Surety Company, Inc., CA Lic. No. 0F65279. In Virginia, American Water Resources administers insurance policies, underwritten by Virginia Surety Company, Inc., VA Lic. No. 109751.

Q. WHAT IS THE RELATIONSHIP BETWEEN AMERICAN WATER WORKS OR PAWC AND AMERICAN WATER RESOURCES?

A. While there is no formal corporate relationship between American Water Resources and PAWC or the Parent Company, there are pertinent contractual relationships. The first is a trademark license agreement between the Parent Company and American Water Resources (and its affiliates) giving American Water Resources (and its affiliates) the right to use the "American Water" name, logo, and branding when marketing to PAWC's consumers its warranty services for consumer-owned service lines and in-home plumbing. The second relevant contractual relationship is a utility billing agreement between PAWC and American Water Resources. I attach (1) the Trademark License Agreement between the Parent Company and American Water Resources dated December 9, 2021 ("License Agreement") as provided by PAWC in response to OCA-03-025 **(CONFIDENTIAL)** as Exhibit BA-7, and (2) the Utility Agreement executed by and between PAWC and American Water Resources dated December 9, 2021 ("Utility Billing Agreement") as provided in response to OCA-20-016 **(CONFIDENTIAL)** as

Exhibit BA-8.

Q. PLEASE DESCRIBE THE LICENSE AGREEMENT BETWEEN THE PARENT COMPANY AND AMERICAN WATER RESOURCES AND YOUR CONCERNS.

A. When the Parent Company sold its non-regulated subsidiary business that marketed and sold warranty services to PAWC customers on or around December 9, 2021, the Parent Company and American Water Resources (and its affiliates) entered into the License Agreement that allows American Water Resources (and its affiliates) to use the Parent Company's logos and other trademarked insignia when marketing and selling warranty services for consumer-owned service lines and in-home plumbing. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

I have concerns with the License Agreement because American Water Resources' use of the "American Water" name and logo undoubtedly gives consumers the false impression that American Water Resources is an affiliate of PAWC and a subsidiary of the Parent Company. This presentation is misleading to consumers about the true nature of the relationship and has no doubt induced PAWC's consumers to purchase warranty services products from this company under the false impression of buying from a recognized brand and that the product's price is regulated or approved by the Commission. In my experience, consumers are not usually aware of the differences between regulated and unregulated services when they appear on the customer's

regulated utility bill and the cost of the product or service is included in the total amount due.

Q. PLEASE DESCRIBE THE UTILITY BILLING AGREEMENT BETWEEN PAWC AND AMERICAN WATER RESOURCES AND YOUR CONCERNS.

A. This Utility Billing Agreement allows American Water Resources to **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.

A. I have concerns because these contractual provisions would explain the high rate of enrollment in these services by PAWC customers, and would indicate that consumers are being induced to buy American Water Resources' services as a result of this **[BEGIN CONFIDENTIAL]** [redacted]. **[END CONFIDENTIAL]**

Q. CAN YOU SUMMARIZE AND FULLY DESCRIBE THIS ARRANGEMENT?

A. Yes.

a. PAWC bills for warranty services (Warranty Services) that are offered and provided by this third party, non-affiliated company, named American Water Resources, in return for a service fee.

b. PAWC provides these billing services on behalf of American Water Resources pursuant to the Utility Billing Agreement.

c. American Water Resources provides the Warranty Services to PAWC customers with whom it has a service contract. The Warranty Services offered by

American Water Resources include repair and maintenance services for covered water service lines owned by customers, sewer service laterals owned by customers, and in-home plumbing.

d. The Warranty Services appear as a line item on PAWC's customer bills as "Protection Programs" and these fees are included in the total amount due on the bill. In fine print on the customer bill, a disclaimer states that the "Protection programs for water, sewer, and in-home plumbing are offered by American Water Resources" and explains that the charges are not regulated by the Commission and that PAWC's regulated services will not be disconnected for nonpayment or charged late fees in connection with non-payment of the Protection Programs charges.

e. American Water Resources uses the American Water name, logo, and branding; however, American Water Resources has no legal affiliation with PAWC or its Parent Company.

f. The Parent Company previously owned American Water Resources as a subsidiary, which means American Water Resources was once an affiliate of PAWC. However, the Parent Company sold American Water Resources to Oncourse Home Solutions in December 2021 and, therefore, American Water Resources is currently neither a subsidiary of Parent Company nor an affiliate of PAWC.

k. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. DOES PAWC RECEIVE REVENUES FOR PROVIDING THIS BILLING SERVICE?

A. Yes. PAWC received $663,147.12 from Oncourse Home Services in 2022 and has received payments of $548,412.24 to date in 2023.[47]

Q. HOW MANY PAWC CUSTOMERS ARE ENROLLED IN THESE PROTECTION PLANS?

A. As of October 2023, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

[46] No arrangement for legal services can be valid or effective unless it receives written approval from the Commission. 66 Pa.C.S. § 2012.
[47] PAWC Response to OCA-08-025.

residential customers were enrolled in one or more protection services with an average monthly fee of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.[48]

Q. WHAT INSTRUCTIONS ARE GIVEN TO CUSTOMER SERVICE REPRESENTATIVES IF A CUSTOMER CALLS TO DISCUSS OR QUESTION THESE PROTECTION SERVICES?

A. PAWC's training materials state **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** I attach these materials provided in response to OCA-08-023 **CONFIDENTIAL** as Exhibit BA-9.

Q. PLEASE IDENTIFY YOUR CONCERNS AND RECOMMENDATIONS CONCERNING THIS PROGRAM.

A. Yes, I have four specific concerns. My first concern is that I believe that the use of the shared name and logo by American Water Resources would mislead the average PAWC consumer to believe that American Water Resources is legally affiliated with PAWC under the common ownership and management of the Parent Company, but in fact there is no affiliation. American Water Resources stands to benefit from this false impression as it gives it an unfair advantage over competitors offering similar warranty services to customers in the unregulated market for warranty services and induces consumers to buy from American Water Resources under the false impression that they are buying from a trusted brand. Likewise, PAWC stands to benefit from this false impression as PAWC's collects additional service fees from American Water Resources under the Utility Billing

[48] PAWC Response to OCA-08-022, Attachment (Confidential).

Agreement as the number of customers being billed for Warranty Services increases.

Q. WHAT IS YOUR SECOND CONCERN?

A. My second concern is that American Water Resources' exclusive marketing and billing arrangement with PAWC is discriminatory to any other provider of these services in PAWC's service territory. The potential effect of discriminatory practices is that consumers pay more for warranty services than might be available from other competitive providers of warranty services in PAWC's service territory. Clearly, American Water Resources is able to promote its services to PAWC customers and collect the fees for its services in a manner not available to any other provider for these non-basic services. The corporate policy that allows this unregulated entity to **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** raises serious concerns about the impact on customer expectations about the privacy of their customer relationship with PAWC.

Q. WHAT IS YOUR THIRD CONCERN?

A. My third concern is that, while I have no basis to assume that these charges are included in PAWC's termination notices, these charges are presented on the bill in a manner that does not conspicuously explain that the charges are "non-basic" or that they are not related to PAWC's regulated services except in small print. Pursuant to the Utility Agreement, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** but it would appear that PAWC is *not* verifying whether American Water Resources is charging the rates it advertises to PAWC's customers via marketing

materials approved by PAWC.

Q. WHAT IS YOUR FINAL CONCERN?

A. My final concern is that pursuant to the Utility Agreement **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** yet there does not appear to be an affiliated interest agreement in place between PAWC and the Parent Company as to these legal services that PAWC is performing on behalf of the Parent Company. PAWC is required under the Public Utility Code to document and file all of its affiliated interest arrangements. PAWC's failure to be transparent with the Commission while at the same time engaging in a program that is overall misleading to its captive consumer base is a problem.

Q. BASED ON YOUR CONCERNS, WHAT IS YOUR RECOMMENDATION?

A. As a result of my concerns, I recommend that the Commission promptly initiate an investigation of this program and its implementation and direct PAWC to suspend this program until the Commission concludes its investigation. In the context of this rate case, the reliance on the revenues produced by this program is questionable but any defect associated in revenues by eliminating these revenues should be borne by shareholders and not PAWC's ratepayers. I refer to the direct testimony of Ralph Smith (OCA St. 2), as he explains that removal of the revenues that PAWC receives from American Water Services would serve to increase the revenue requirement and costs that consumers ultimately must pay. My recommendations regarding American Water Resources are intended to benefit consumers, not harm them, by ending the misleading practice of giving utility consumers the false impression that American Water Resources

is affiliated with PAWC and ensuring consumer access to competitive pricing and terms of warranty services by ending PAWC's discriminatory billing practices.

VI. CUSTOMER NOTICES REGARDING PRESSURE REDUCING VALVES

Q. CAN YOU EXPLAIN THE RECOMMENDATION OF OCA WITNESS FOUGHT WITH RESPECT TO PRESSURE REDUCING VALVES AND CONSUMERS?

A. OCA witness Fought (OCA St. 7) recommends that for water customers who have been identified by PAWC as having normal operating pressure that exceeds 125 psi, that PAWC should inform customers when to replace their pressure reducing valve and describe how to determine when a pressure reducing valve is nearing the end of its service life. Mr. Fought recommends that such information also be provided to households with pressures below 125 psi where PAWC has identified that household as utilizing a pressure reducing valve. OCA St. 7 at 10.

Q. DO YOU SUPPORT HIS SUGGESTIONS FOR CUSTOMER EDUCATION ON PRESSURE REDUCING VALVES?

A. Yes. I support his recommendation for informing consumers on pressure reducing valves and offer my recommendations as to how PAWC should inform customers. A public utility – while not responsible for the consumer side equipment or plumbing – is in a unique position to and should educate consumers regarding equipment that is used to support the customer's connection to the utility's system. In this instance, this relates to utility system pressure and the consumer's use of pressure reducing valves.

Q. WHAT IS YOUR RECOMMENDATION AS TO THE CUSTOMER EDUCATION THAT SHOULD BE OFFERED BY PAWC REGARDING PRESSURE REDUCING VALVES?

A. I recommend that PAWC develop a customer education program concerning pressure reducing values, when they are appropriate, how they work, and what consumers should do to monitor their performance for safety and reliability of water service from PAWC. This program should include a consideration of customer-specific communications relating to complaints about water pressure, general customer information on PAWC's website, and potentially bill inserts. PAWC should develop this outreach and education program as a compliance filing in this proceeding after review and input from stakeholders.

VII. SUMMARY OF CONDITIONS THAT SHOULD BE ATTACHED TO ANY RATE INCREASE

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS FOR PAWC'S CUSTOMER SERVICE PERFORMANCE AS A CONDITION OF ANY RATE INCREASE.

A. PAWC's failure to include any customer service or consumer protection performance goals and criteria for its claim of management excellence and reward of a higher rate of return is a serious defect and should contribute to the overall rejection of this proposal by the Company. In addition, there are certain areas that need to be addressed as requiring improvement and reform as conditions for allowing PAWC to increase its rates:

- After years of poor call center performance as documented in the last rate case and the Commission's Management Audit, PAWC should be required to meet specific monthly and annual performance standards. Specifically, PAWC's internal metrics do not reflect reasonable performance and I recommend that PAWC must meet a call performance standard of answering 80% of its calls within 30 seconds with an abandonment rate that is 4% or less. The Service Company's contracts with third-party call operators should be revised to impose automatic penalties for the failure to

meet these standards to avoid ratepayer funding for poor performance in the future. A plan to promptly achieve this objective should be required as a condition of any rate increase at no additional expense to PAWC customers due to the long-standing failure to reach reasonable performance requirements.

- PAWC's analysis of customer complaints, whether handled internally as disputes, or externally by BCS as informal complaints, needs to improve. PAWC should be required to conduct a regular and proper root cause analysis of its complaint trends, both for internal disputes and BCS informal complaints that document infractions and verified violations. This recommendation should require a professionally conducted root cause analysis and report on findings, including identification of trends, evaluation, steps to reform or avoid repeated trends, and internal steps taken to take proper internal enforcement action where needed within 3 months and quarterly updates to stakeholders.
- PAWC should be required to reform its Pennsylvania-specific "test" and training for its customer representatives to address the full scope of Chapter 56 and Act 14 rights and remedies that I have identified are lacking, as well as more detailed monitoring programs that reflect Pennsylvania-specific rights and remedies. This condition should require PAWC to routinely audit and evaluate the performance of its third-party contractors.
- In line with the suggestion made my OCA Witness Terry Fought (OCA St. 7) PAWC should be required to provide customer education to water customers about the lifespan of pressure reducing valves, consistent with my recommendations in my testimony above.

- I recommend that the Commission require PAWC to undertake certain reforms in its implementation of termination of water service to its customers on behalf of "non-Company" sewer service providers. PAWC should post a notice upon termination of service to explain the basis for the termination and how to get water service reconnected. In addition, PAWC should explicitly obtain information from the sewer authority that no dispute has been filed and that a medical emergency has not been declared. Finally, PAWC should reform its proposed tariff amendment to make clear these essential consumer protections associated with the disconnection of PAWC's water service to its customers for nonpayment of a sewer bill incurred by a municipality or sewer authority.
- As a result of my documentation of seriously misleading and improper conduct in the implementation of PAWC's billing for "protection services" provided by American Water Resources, I recommend that the Commission promptly initiate an investigation of PAWC's program to bill for non-basic services and direct PAWC to suspend the program until the investigation is complete and that such program require substantial reforms if allowed to proceed in the future. In the context of this rate case, the reliance on the revenues produced by this program is questionable but any defect associated in revenues by eliminating these revenues should be borne by shareholders and not PAWC's ratepayers.

Q. WHAT SHOULD OCCUR IF PAWC FAILS TO MEET ONE OR MORE PERFORMANCE STANDARDS?

A. At a minimum, the Commission should open an investigation of persistent failure to meet reasonable performance standards or conditions I have identified and recommended in my

testimony. The Commission should make clear as well that the failure to address these concerns and recommendations may have an impact on PAWC's future revenues and earnings.

Q. DOES THIS COMPLETE YOUR TESTIMONY AT THIS TIME?

A. Yes. However, I reserve the right to supplement this testimony based on pending discovery.

DIRECT TESTIMONY

OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

CONFIDENTIAL VERSION

Date Served: February 1, 2024

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. PLEASE DESCRIBE YOUR BACKGROUND AND QUALIFICATIONS.

A. I have over 30-years' experience as an expert in consumer protection, service quality, and low-income customer programs for public utilities and the regulation of retail alternative energy suppliers in markets that have adopted restructuring for electric and/or natural gas supply service. I was the Director of the Consumer Assistance Division for the Maine Public Utilities Commission from 1986-1996 and have operated my own consulting practice for public advocates and consumers since that time. I have testified in over 30 U.S. state jurisdictions, including Pennsylvania, and Canadian jurisdictions, in many proceedings. My C.V. is attached to this testimony as Exhibit BA-1, and it lists all my publications and testimony associated with my consulting practice.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?

A. Yes. I have filed testimony on behalf of the OCA before the Pennsylvania Public Utility Commission (Commission) in investigations, base rate proceedings, mergers and acquisitions, and default service proceedings, on issues relating to customer service, service quality and reliability of service, low-income customer programs, and retail market programs. With regard to Pennsylvania's water and wastewater utilities, I have evaluated customer service and consumer protection programs in proceedings before the

Commission involving Pennsylvania American Water Company (PAWC), Pittsburgh Water and Sewer Authority, York Water, and Aqua Water.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY REGARDING PAWC?

A. Yes. I filed Direct and Surrebuttal Testimony on behalf of the OCA in PAWC's immediately prior base rate case that resulted in a $138 million revenue increase and that took effect only nine months prior to PAWC's filing in this proceeding (Docket Nos. R-2022-3031672 and R-2022-3031673) (2022 BRC). I also filed Direct and Surrebuttal Testimony on behalf of the OCA in the pending proceeding in which PAWC seeks to acquire the wastewater system currently operated by the Borough of Brentwood (Docket No. A-2021-3024058).

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I am filing Testimony on my review of PAWC's customer service policies and programs and, specifically, the following topics in the following order:

- The Company's service quality and call center's customer service performance quality is directly related to the Company's general rate increase request;
- The Company's consumer protection policies and programs to ensure that the Service Company's call center representatives are complying with Chapter 14 of the Public Utility Code and Chapter 56 of the Commission's regulations, particularly with regard to handling and evaluating customer complaints;
- The Service Company's call center's customer service performance, including performance trends, internal training, management oversight, including the findings of the most recent Management Audit conducted by the Commission;

- The Company's program to terminate water service provided by PAWC for nonpayment of charges related to non-Company, third-party providers of sewer services;
- The Company's billing arrangement with a non-affiliated, third-party provider of what are labeled on PAWC's customer bills as "protection" services for customer-owned service lines and in-home plumbing and PAWC's billing of charges for such services on PAWC customer bills; and
- The Company's request for a reward in its rate of return in light of the Company's customer service performance;

These issues are important themselves, but particularly so in this case given the magnitude of PAWC's proposed rate increases and the fact that PAWC's customers have seen rate increases in 2021, 2022, and 2023 resulting from a two-stage significant rate increase from its 2020 rate case and the increase that just took effect in January 2023 from the 2022 rate case. This is in addition to its proposed rate design changes, and the proposal for various trackers and rate increases outside of the normal base rate case (*i.e.*, Section 1308(d) general rate increase request) review process.

Q. DO YOU INCLUDE EXHIBITS WITH YOUR TESTIMONY?

A. Yes. I attach the following Exhibits to my Testimony:

- Exhibit BA-1: Barbara Alexander C.V.
- Exhibit BA-2 CONFIDENTIAL: PAWC Response to OCA-08-028 and 20-024, Attachment CONFIDENTIAL
- Exhibit BA-3: PAWC Response to OCA-08-010 and 20-001.
- Exhibit BA-4 CONFIDENTIAL: PAWC Response to OCA-08-007 and Attachment CONFIDENTIAL

- Exhibit BA-5: PAWC Response OCA-08-038 and Attachment.
- Exhibit BA-6: PAWC Response to OCA-08-021, Attachment
- Exhibit BA-7 CONFIDENTIAL: PAWC Response to OCA-25-003 CONFIDENTIAL
- Exhibit BA-8 CONFIDENTIAL: PAWC Response to OCA-20-016, Attachment 1 and 2 CONFIDENTIAL
- Exhibit BA-9 CONFIDENTIAL PAWC Response to OCA-08-023. Attachment CONFIDENTIAL

Q. PLEASE SUMMARIZE PAWC'S GENERAL RATE INCREASE PROPOSALS.

A. As of November 10, 2023, PAWC serves 779,292 water and wastewater customers located in 37 counties across Pennsylvania. PAWC's proposed tariffs would increase the Company's total annual operating revenues by approximately $203.9 million, or 20.2% ($199.2 million from water operations and $4.7 million from wastewater operations) based on a fully projected future test year (FPFTY) ending June 30, 2025. For water service, according to the Company's customer notices provided as part of the filing, if the Company's entire request is approved as filed, a residential water customer using 3,201 gallons per month would see increases in their monthly bill ranging by Rate Zone between approximately 25% to 64%. For wastewater service, according to the Company's customer notices provided as part of the filing, if the Company's entire request is approved as filed, a residential wastewater customer using 3,122 gallons of water per month would see increases to their monthly bill ranging by Rate Zone between approximately 3% to 121%, although some customers in certain Rate Zones would see a decrease by approximately 5%. The actual bill impacts vary widely based on the location of the customer in PAWC's

service territory as well as proposals to change the structure of several rate zones.

Q. HAVE CUSTOMERS COMPLAINED IN THIS CASE?

A. Yes. According to OCA's most recent compilation of customer response to this rate increase, 286 formal consumer complaints with approximately 149 different complainants and 535 informal complaints have been submitted to the Commission. This level of customer opposition to the rate increase proposed by PAWC is highly unusual based on my extensive experience in base rate cases in Pennsylvania and it far exceeds complaints submitted in prior PAWC rate cases. As a result of these significant bill increases, the Commission should carefully examine the adequacy and quality of customer service provided by PAWC, as well as the specific investments that form the basis for most of PAWC's proposed rate increases.

I. PAWC'S SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE IS DIRECTLY RELATED TO THIS RATE CASE

Q. WHAT IS THE CONNECTION BETWEEN YOUR DISCUSSION OF SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE AND THE RATE INCREASE PROPOSED BY PAWC?

A. As explained in OCA witness Christine Maloni Hoover's Direct Testimony (OCA Statement 1), under the regulatory compact, a public utility in Pennsylvania is statutorily obligated to provide adequate and reasonable service to its customers. A public utility must justify its rates based on, among other things, its ability to perform its essential quality of service and customer service functions at an adequate and reasonable performance level. Accordingly, where a public utility is seeking a rate increase – especially a significant one, and, where, as in this case, the utility is asking for a reward in the form of a higher rate of return based on its performance, it is appropriate to review

the performance of that utility and to compare such performance to other Pennsylvania utilities. Therefore, my evaluation of PAWC's customer service and consumer protection policies is directly related to the Commission's consideration of Company's general rate increase. In effect, it is part of the consideration of the Commission about whether PAWC is upholding its end of the bargain.

Furthermore, PAWC seeks an incentive in this case under Section 523 of the Public Utility Code in the form of the Commission's adoption of the higher end of the Company's requested return on equity of 10.95% based on its management performance in offering low-income and payment-troubled customer programs and in its community engagement and consumer education. PAWC St. 1 at 33-36, 40-41; PAWC St. 13 at 57-59. My evaluation of PAWC's customer service and consumer protection policies is directly related to the Commission's consideration of Company's request for the higher return on equity.

My analysis and findings should inform the Commission on the reasonableness of PAWC's significant rate increase request. Where I identify deficiencies in PAWC's customer service performance, I recommend that the Commission order improvements in specific areas as a condition of any rate increase and consider adopting any rate increase and rate of return that reflects the inadequate customer service I have documented. In some areas, I recommend that the Commission disallow certain incurred costs on the basis of the Company's continuing poor management performance or management negligence. This approach is mandated by the statutory guidelines of Section 523 governing public utility rate cases in which the Commission must evaluate the

"efficiency, effectiveness, and adequacy of service."[1] I address the implications for customer service performance below.

II. PAWC'S CONSUMER PROTECTION POLICIES AND COMPLIANCE WITH CHAPTER 14 OF THE PUBLIC UTILITY CODE AND CHAPTER 56 OF THE COMMISSION'S REGULATIONS AND RELATED OBLIGATIONS

Q. HAVE YOU EXPLORED HOW PAWC ENSURES COMPLIANCE WITH PENNSYLVANIA-SPECIFIC CONSUMER PROTECTION POLICIES?

A. I have explored how PAWC, ensures that its interactions with Pennsylvania customers complies with the Pennsylvania consumer protection and customer rights laws and regulations. In order to evaluate PAWC's compliance programs and management oversight, it is important to understand the corporate organization and the various means by which Pennsylvania customers interact with PAWC and its affiliate, American Water Works Service Company, Inc. (Service Company).

Q. CAN YOU PLEASE EXPLAIN YOUR UNDERSTANDING OF THIS STRUCTURE?

A. Yes, based on the Company's filing, the Company's responses to discovery, and Section XI of the PUC's 2023 Management Audit Report[2] and the Company's filed response to the Management Audit[3], my understanding of the corporate structure is as follows:

- PAWC is the subsidiary of American Water Works Company, Inc. (Parent Company), a parent company headquartered in Camden, New Jersey, that manages and operates many geographically disparate water and sewer utility subsidiary companies

[1] 66 Pa. C.S. 523.
[2] Pennsylvania-American Water Company, Pennsylvania Public Utility Commission's 2023 Management Audit Report, Docket No. D-2022-3035217 (Issued October 2023) (Released to Public on December 28, 2023). Section XI of the Management Audit Report presented call center performance from 2019-2022.
[3] Pennsylvania-American Water Company, Implementation Plan in Response to the 2022-23 Focused Management and Operations Audit, Docker No. D-2022-3035217 (Issued October 2023) (Released to public on December 28, 2023).

with service territories in 14 states and 1,600 communities[4], primarily in Pennsylvania, Illinois, New Jersey, Missouri, Indiana, West Virginia, and in other states.

- The Parent Company, through the Service Company, provides PAWC with call answering and customer service with a management structure that is responsible for multiple state activities. The Service Company's Customer Service Organization (CSO) provides call handling, billing, field services coordination, and other customer service functions for all the Parent Company's regulated operations, including PAWC.
- The Service Company's CSO is led and overseen by a Vice President and Chief Customer Officer of the Service Company; this executive is not dedicated to PAWC's customer service operations, instead performing the management and oversight functions for the CSO for all the regulated utility subsidiaries of the Parent Company, including PAWC.
- There is no physical customer service office in Pennsylvania where PAWC's customers can go to and interact in a personal manner with employees to resolve questions or complaints or engage in payment arrangements related to PAWC's service.
- PAWC customer calls are answered by call centers staffed by Service Company employees, and such employees are located at multiple locations, most of which are not located in Pennsylvania. The vast majority of Service Company's customer service representatives work virtually from home (telework). In addition, the Service Company has contracted with several third-party entities to handle customer calls, both outbound and inbound calls, and most of those contractors rely on agents who telework as well.[5]

[4] American Water Works 2022 Annual Report, https://s26.q4cdn.com/750150140/files/doc_financials/2022/ar/American-Water-Works-Company-Inc-2022-Annual-Report.pdf

[5] PAWC Response to OCA-20-001 confirms that, "There is no physical location of calls centers as vast majority of

- The Service Company employees and contractors are not dedicated to PAWC's customer service operations, instead performing their duties for all the regulated utility subsidiaries of the Parent Company, including PAWC.
- The calls handled by Service Company's employees and third-party contractors make use of internal software that tracks interactions with customers across all utility subsidiaries of the Parent Company, including PAWC. The software reflects service issues, billing issues, collection issues, and related policies in all state utility subsidiaries' operations.
- Calls from PAWC customers are directed to a customer service representative (whether to an employee or third-party contractor) who has passed a "test" that is intended to reflect the individual representative's passing knowledge of Pennsylvania specific collection rights and remedies.
- As a result of this corporate structure, where the Service Company – not PAWC – performs the call center operations on behalf of PAWC and is led by an executive of the Service Company, it is my opinion that PAWC's management oversight and compliance is needed and necessarily requires audits or root cause analysis of customer complaints to identify any failure by the Service Company to properly comply with or implement Pennsylvania laws, regulations, or policies.

Q. DOES PAWC CONDUCT THE PROPER LEVEL OF MANAGERIAL OVERSIGHT OF THE SERVICE COMPANY FOR COMPLIANCE WITH PENNSYLVANIA REGULATIONS AND POLICIES VIA AUDITS AND ROOT CAUSE COMPLAINT

our agents work remotely from home." This response also confirms that all Intelogix agents are working remotely and all but 13 of Transworld systems agents are remote. The latter two entities are third party contractors for call services that serve PAWC and other American Water Works customers in multiple states.

ANALYSIS?

A. No. PAWC does not conduct audits or root cause analyses of the Service Company's call center operations to affirmatively evaluate whether the call center performance complies with Pennsylvania specific consumer protection regulations and policies. Had PAWC entered an arms-length contract with a non-affiliated, third-party contractor to "contract out" or "farm out" its call center operations, it would seem reasonable, necessary, and appropriate that PAWC obtain contractual protection that would allow PAWC to audit the performance of the contractor from time-to-time to ensure compliance with PAWC's statutory and regulatory obligations and to impose contractual remedies, including termination of the contract, should the contractor's performance not be satisfactory. In contrast, the fact that PAWC does not audit the performance of the Service Company's call center operations and has undertaken no actions under its contracts to respond to inadequate or unreasonable performance, as outlined in my testimony below, indicates that this affiliated arrangement is lacking a very important arms-length protection for PAWC and PAWC's customers.

Q. WHAT DOES PAWC DO TO OVERSEE SERVICE COMPANY'S CALL CENTER OPERATIONS?

A. PAWC's complaint spreadsheet reflects a very short summary of the complaint and what steps were taken in response. The complaint data is organized by date and is capable of being sorted by complaint categories. There is no internal documentation of any analysis done of this complaint data or whether any steps were taken to respond to any analysis of the complaint trends or findings. The spreadsheet does contain a column that states whether the complaint is the "fault" of the Company but there is no analysis of what steps

have been taken in response to these determinations. PAWC's reaction to any complaint that PAWC determines is due to a "fault" of the Company is to discuss the matter with the customer service representative or that individual's manager, relying on counseling.

Q. DO YOU HAVE CONCERNS WITH PAWC'S OVERSIGHT OF SERVICE COMPANY'S CALL CENTER OPERATIONS?

A. Yes. PAWC's complaint analysis is seriously inadequate and does not reflect any root cause analysis or actions taken to reflect the analysis of customer complaints, whether they are internally handled disputes or the Commission's Bureau of Consumer Services (BCS) informal complaints. While PAWC enters customer disputes and complaints into a database, there is no analysis of the database to identify trends, underlying causes, or track performance. Finally, there are no performance standards that are applicable internally or with the third-party contractors that reflect compliance with Pennsylvania policies and programs or that tracks noncompliance in a manner that could be relied upon to determine acceptable performance or that is used to determine rewards or penalties. The reliance on "counseling" a particular customer service representative is not a reflection of any root cause analysis of complaint data and may or may not satisfy the occurrence or reoccurrence of a "fault."

Q. PLEASE DESCRIBE THE IMPORTANCE OF UTILITY TRACKING AND EVALUATING ALL COMPLAINTS.

A. Every Pennsylvania public utility is required to educate customers about how to register informal and formal complaints. Informal complaints get resolved informally by the Commission's BCS. Formal complaints get initiated by a customer or group of customers' filing a formal complaint with the Secretary's Bureau and the formal

complaints get formally adjudicated by an Administrative Law Judge (ALJ) and ultimately the Commission. Utilities also receive "disputes" directly from customers and are obligated to investigate and respond to those issues or indications of dissatisfaction. Customer complaints as a group form a hierarchy or pyramid, where at the bottom level of the pyramid is a large volume or majority of disputes that are handled and resolved by the utility call center representatives; at the next level up the pyramid is a smaller group of informal complaints that get resolved by BCS; and, at the top of the pyramid is yet a relatively smaller number of formal complaints that get resolved through a formal adjudication of the Commission. Tracking and evaluating disputes and informal or formal complaints are key to ensuring ongoing improvements in customer service because that evaluation is likely to spot the "red flag" that indicates a systemic issue or concern that requires PAWC's management's attention and, in some cases, a change in policy or procedure. In addition, of course, this type of evaluation may also identify violations of the Public Utility Code or the Commission's regulations.

Q. PLEASE SUMMARIZE THE COMMISSION'S BCS REPORTS ON COMPLAINTS AND COMPLIANCE FOR PAWC.

A. The Commission's BCS publishes a quarterly Consumer Activities and Report Evaluation for Pennsylvania electric, gas, telephone, and water utilities.[6] These reports typically include historical information to allow for a trend analysis. The BCS reports show that PAWC's complaint rate was 3.89 in 2021 and 4.22 in 2022, which exceeds any other Class A water utilities with the exception of one other smaller Class A utility.[7]

[6] http://www.puc.state.pa.us/filing_resources/consumer_activities_report_evaluation.aspx
[7] Utility Consumer Activities Report and Evaluation 2022, BCS, Pennsylvania Public Utility Commission, page 59.

PAWC's "justified"[8] residential complaint numbers and rates reflect a similar pattern of exceeding other Class A water utilities.[9] PAWC's residential payment arrangement request (PAR) rate is above average and 18.2% were determined to be "justified."[10] The BCS 2022 reports show that PAWC's "infraction rate"[11]of 0.58 exceeds all other major Class A water utilities.[12] According to the BCS reports, PAWC's infractions are categorized as 30% relating to reconnection of service, 23% dispute handling, 13% termination procedures, and 10% for credit standards and deposits.[13] The 3rd Quarter UCARE report for 2023 to date indicates an increase in residential complaints and PARs, justified complaints, and PARs compared to the same period in 2022.[14] A total of 158 verified infractions relating primarily to Chapter 56 are identified for PAWC, far in excess of other Class A water utilities.[15] This data evidences significant concern with PAWC's customer service performance, yet, there is no record or other indication of PAWC's management performing any root cause analysis of these complaints or other complaint trends of the issues reflected in BCS reports.

Q. DOES PAWC ANALYZE CUSTOMER COMPLAINTS TO ENSURE COMPLIANCE?

A. No. The Company compiles large spreadsheets of customer disputes and complaints but there is no record of any analysis that identifies trends or "root cause." According to the Company, a 699-page PDF document that lists customer complaints and their results in a

[8] The BCS deems a complaint "justified" if it is found by BCS that the utility did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters or tariffs. Ibid, page 20.

[15] Ibid., page 19.

spreadsheet format is a "root cause" analysis.[16] The Company has implemented a "new quality assurance program."[17] However, "There has been no changes, reforms, or revisions to the Company's internal training programs and/or policies as a result of Pennsylvania specific results or complaint data. Any training or mentoring discussions as a result of feedback from quality assurance review is performed on an individual basis with identified call agents."[18] When asked to identify changes, reforms, or revision to internal training programs and/or policies that occurred due to any analysis of complaint data, the response was similar and failed to identify any specific response or change.[19] As a result, PAWC does not conduct a proper root cause analysis and has no record of any evaluation or analysis other than spreadsheets that list customer complaints with columns that identify its internal response on an individual complaint basis.[20]

Q. PLEASE EXPLAIN WHAT A PROPER ROOT CAUSE ANALYSIS LOOKS LIKE.

A. A root cause analysis is a fact-based exercise in which the underlying cause or causes of an undesirable outcome are identified and specific remedial steps are identified and determined to result in correcting or improving the previously identified undesirable result. A list of customer complaints with notations on how that particular complaint was resolved is not a root cause analysis.

> A root cause is defined as a factor that caused a nonconformance and should be permanently eliminated through process improvement. The root cause is the core

[16] PAWC Response to OCA-08-017, narrative response. At no point in the Confidential Attachment listing these complaints is there any summary, identification of trends, determination of a root cause of any trend or a reflection of the data in the spreadsheet. Listing and identifying the results of an individual complaint is not a root cause analysis.
[17] PAWC Response to OCA-08-005.
[18] PAWC Response to OCA-20-010.
[19] PAWC Response to OCA-20-014.
[20] PAWC Response to OCA-08-17 includes a Confidential 699-page PDF document listing customer complaints from 7/1/2022 through 10/31/2023.

issue—the highest-level cause—that sets in motion the entire cause-and-effect reaction that ultimately leads to the problem(s).

Root cause analysis (RCA) is defined as a collective term that describes a wide range of approaches, tools, and techniques used to uncover causes of problems. Some RCA approaches are geared more toward identifying true root causes than others, some are more general problem-solving techniques, and others simply offer support for the core activity of root cause analysis.

There are many methodologies, approaches, and techniques for conducting root cause analysis, including:

1. **Events and causal factor analysis:** Widely used for major, single-event problems, such as a refinery explosion, this process uses evidence gathered quickly and methodically to establish a timeline for the activities leading up to the accident. Once the timeline has been established, the causal and contributing factors can be identified.
2. **Change analysis:** This approach is applicable to situations where a system's performance has shifted significantly. It explores changes made in people, equipment, information, and more that may have contributed to the change in performance.
3. **Barrier analysis:** This technique focuses on what controls are in place in the process to either prevent or detect a problem, and which might have failed.
4. **Management oversight and risk tree analysis:** One aspect of this approach is the use of a tree diagram to look at what occurred and why it might have occurred.
5. **Kepner-Tregoe Problem Solving and Decision Making:** This model provides four distinct phases for resolving problems:
    1. Situation analysis
    2. Problem analysis
    3. Solution analysis
    4. Potential problem analysis[21]

According to the publications developed by the American Society for Quality, and other comparable publications[22], a proper analysis of any "root cause" requires the identification of "symptoms," which are not actual causes but signs of existing problems, and "first level causes," which are the causes that directly lead to a problem; and "higher

[21] https://asq.org/quality-resources/root-cause-analysis

[22] There is an extensive body of literature used in the medical community to conduct root cause analysis and develop plans to prevent adverse events. See, e.g., https://www.cms.gov/medicare/provider-enrollment-and-certification/qapi/downloads/guidanceforrca.pdf

level causes," which are links in the chain of cause-and-effect relationships that ultimately create the problem. PAWC compilation of individual customer complaints and their identification of the individual complaint resolution reflects "symptoms" and not the actual underlying cause of that reflects identification of patterns and the underlying facts that contributed to the complaint and complaint patterns.

Q. PLEASE DISCUSS PAWC'S RESPONSE TO OCA-20-024 AS AN EXAMPLE OF THE FAILURE TO CONDUCT APPROPRIATE ROOT CAUSE ANALYSIS OF ITS COMPLAINT DATA.

A. As a clear example of PAWC's failure to track and evaluate customer complaints or determine the root cause of verified infractions, PAWC was requested to provide information in OCA-08-028 as follows, "In calendar years 2021, 2022, and 2023, how many times has PAWC restored service after identifying that an account was not properly coded as being tenant-occupied at the time of termination?" PAWC's response stated, "PAWC does not track the requested information." In data request OCA-20-024, PAWC was asked to confirm that there is no root cause analysis of disputes or complaints that reflect the lack of proper coding of a tenant-occupied building. PAWC's response provided a Confidential attachment "for the analysis of informal complaints received from 2021, 2022, and 2023." This Confidential attachment consisted of 4 pages of a PDF document that was also provided in electronic spreadsheet format. I attach PAWC's response to OCA-08-028 and 20-024 with the **CONFIDENTIAL** Attachment as Exhibit BA-2. This document purports to reflect a root cause analysis but it was apparently created in response to this data request and not as a result of any routine business practice

to analyze PAWC complaint activity.[23] More importantly, this document reflects a listing of [redacted] specific instances of clear violations without any root cause analysis that would identify trends, point to the ultimate cause of the complaints or occurrences, and fails to document any internal reaction to infractions other than [redacted]

Q. WERE THERE ANY OTHER FINDINGS OR RECOMMENDATIONS FROM THE 2023 MANAGEMENT AUDIT RELEVANT TO YOUR TESTIMONY?

A. Yes. The 2023 Management Audit Report recommended that PAWC file a new or amended affiliated interest agreement (AIA) that accurately reflects the current company structure and intercompany transactions occurring between PAWC and the Service Company. PAWC has stated that it believes the AIA does not need to be updated. However, in its Opinion and Order releasing the 2023 Management Audit Report to the public, the Commission directed PAWC to file a new or amended AIA that accurately reflects the current company structure and the intercompany transactions occurring between PAWC and the Service Company.

Q. WHAT IS YOUR RECOMMENDATION IN RESPONSE TO YOUR FINDINGS?

A. My recommendations are as follows:

1. Any rate increase granted in this proceeding should reflect PAWC's failure to structure its arrangements with the Service Company in an arms-length manner that protects PAWC and its customers from poor call center performance and PAWC's failure to properly manage and oversee the call center performance

[23] The electronic version of this Confidential document reflects a creation date of [redacted] in the "properties" tab.

by tracking and evaluating its customer disputes and BCS findings or respond to the obvious trends of infractions and verified violations. These failures refute PAWC's claim of superior management performance and should be considered by the Commission under Section 523 in setting just and reasonable rates. I note that OCA witness Colton also identifies concerns with PAWC's management performance in OCA Statement 5. Specifically, in my opinion, these failures support adoption of OCA witness David Garrett's recommended return on equity in this proceeding (OCA Statement 3).

2. PAWC should conduct root cause analysis of all customer complaint data on a regular basis and track complaints and analysis for specific call centers, whether operated by the parent company or a third-party contractor.

3. Any new or amended AIA approved by the Commission should contain an arms-length contractual provision that grants PAWC the contractual protection to perform audits of the Service Company's CSO's performance based on defined call center metrics and to use specific call center complaint data to determine, in part, penalties and payments under the contract.

4. Any new or amended AIA approved by the Commission should contain an arms-length contractual provision that (1) will require the Service Company in its contracts with third-party contractors to reduce the fees it owes to the third-party contractor so that Service Company is not responsible for the payment of fees related to services that fail to meet the metrics; and (2) the Service Company will not allocate costs to PAWC for services that fail to meet the call center metrics.

5. PAWC should be required to provide managerial oversight of the Service

Company's CSO's call center performance, including but not limited to conducting audits of the Service Company's CSO's performance based on defined metrics and conducting a proper root cause analysis of its internal disputes and BCS related findings and update its findings and conclusions on a quarterly basis.

III. PAWC'S CALL CENTER CUSTOMER SERVICE PERFORMANCE

Q. PLEASE DISCUSS THE IMPORTANCE OF THE CALL CENTER FOR PAWC'S CUSTOMER SERVICE QUALITY.

A. As I described above, PAWC relies on employees and agents who handle calls from PAWC customers working from their home as the main method by which customers can communicate individually with PAWC. Therefore, the performance of these call centers and the supervision of the disparately located employees and agents is crucial to the Company's ability to deliver a reasonable level of customer service that complies with Pennsylvania's customer service and consumer protection requirements.

Q. PLEASE DISCUSS THE PERFORMANCE OF PAWC'S CUSTOMER CALL CENTER.

A. I attach the PAWC customer call center data showing the combined results provided in response to OCA-08-010 and separate results for two third-party contractors as provided in response to OCA-20-001, attached as Exhibit BA-3. This data shows the percentage of calls answered by a customer service representative within 60 seconds or 1 minute (reflecting how long the customer waits in the queue once the customer asks to speak to a live agent) and the call abandonment rate (referring to the percentage of calls in which the customer abandons the calls after entering the queue to speak to a customer representative).

During the period January 2022 through November 2023 the percentage of calls answered within 60 seconds NEVER met their internal standard of answering 80% of the customer calls within 60 seconds. The call abandonment rate improved from double digit percentages routinely experienced in 2022 and early 2023, but only recorded 8% or lower in five of these months. While there is some evidence of gradual improvement in call answering performance in 2023 compared to 2022, the overall historical pattern continues to reflect a poor performance. For example, the October 2023 results reflected that only 61% of calls were answered within 60 seconds and a 13% abandonment rate. Furthermore, as documented in Exhibit BA-3, the call center performance results for the two third-party contractors are very poor and far below the call center average as a whole. These results do not reflect the contractual performance standards included in the Service Company's contracts[24] with these entities [redacted] but neither the Service Company nor PAWC has undertaken any actions to enforce those standards.[25,26] For example, [redacted] The Service Company's failure to enforce this provision of the contract in turn impacts the costs allocated by the Service Company to PAWC for poor

[24] See, e.g., PAWC Response to OCA-06-006, Attachment 1 (Confidential), [redacted]

[25] PAWC Response to OCA-06-010 provided the Confidential Attachments with these contracts.

[26] PAWC Response to OCA-20-003 requested documentation of any performance penalties or failures to achieve the required performance metrics and response to those failures. PAWC's response merely referred to the contract terms. PAWC Response to OCA-20-005 confirms that PAWC has not conducted any audit or evaluation of the third-party contractors and states, "We interact with the third party contractors on a daily basis including any concerns regarding performance." Also, see PAWC Response to OCA-20-007 that documents that PAWC does not track complaints based on whether an employee or third-party contractor's agent handled the call.

call center performance.

Furthermore, the monthly results reflect a dramatic swing in call center performance that indicates the annual average masks poor performance that should not be tolerated. The key variable in predicting reasonable versus unreasonable call center performance is the volume of calls and the number of available call center representatives on hand to answer the calls. Performance can be improved with better prediction of call volume and ensuring sufficiently trained personnel are available to respond to call volumes at predicted high call volumes days and times. Both these criteria are within the ability of PAWC and the Service Company to predict and control.

Q. IS THIS POOR CALL CENTER PERFORMANCE CONSISTENT WITH PRIOR EVALUATIONS OF THE CALL CENTER?

A. Yes. I documented PAWC's below average call center performance in the last base rate case. This performance was also the subject of the Commission's most recent Management Audit that documented poor call center performance for 2019-2022.[27]

Q. WHAT WERE THE FINDINGS OF THE 2023 MANAGEMENT AUDIT REPORT IN RELATION TO CALL CENTER PERFORMANCE?

A. The Commission's Bureau of Audits found that since 2019, PAWC experienced a sustained decline in call handling performance and recommend that the PAWC "initiate or devote additional efforts to improve the efficiency and/or effectiveness of its customer service function" and "improve customer service performance at minimum to pre-pandemic levels." The Bureau of Audits evaluated the Service Company's call center

[27] Pennsylvania Public Utility Commission, Pennsylvania American Water Company Management and Operations Audit, Docket No. D-2022-3035217 (Issued October 2023), Section XI, Customer Service. The report presented call center performance from 2019-2022.

performance using the following metrics of: (1) percentage of calls answered within 30 seconds, and (2) call abandonment rate. According to the Report, the call center's performance when evaluated against both of these metrics declined significantly. As the Table below shows, and as the Report indicated, the percentage of calls answered within 30 seconds declined by 28% between 2019 and 2020 and the call abandonment rate more than doubled in the same period.

Exhibit XI-1, Management Audit at page 82.

	2019	2020	2021	2022
Calls answered within 30 seconds	24%	16%	8%	14%
Call abandonment rate	6%	15%	24%	22%

Q. DID THE COMPANY RESPOND TO THE FINDINGS IN THE MANAGEMENT AUDIT REPORT?

A. Yes, however, my concern about the relatively poor performance of the customer call center(s) is heightened by PAWC's response to the Commission's Management Audit that documented PAWC's poor call center performance. The Company's response was to state that it would "strive" to achieve a performance of answering 80% of the calls within 60 seconds by December 31, 2024, but without any mention of how to address the documented high abandonment call rate in the Management Audit.[28] Ms. Degillio's Direct testimony in support of this rate increase stated that the Company's internal standard was to answer 80% or less

[28] PAWC Implementation Plan, page 38, Docket No. D-2022-3035217 (October 2023).

abandonment rate.[29] While Ms. Degillio characterized this standard as an "industry standard," the Company is not able to defend this reference based on any "industry standard."[30] All Pennsylvania electric and gas utilities are evaluated based on answering 80% of customer calls within 30 seconds as reflected in the annual BCS Reports and that standard has been routinely relied upon for PAWC's own presentation of call center results as reflected in my Exhibit BA-3.

Q. HOW DOES PAWC ENSURE THAT PENNSYLVANIA CUSTOMER CALLS ARE HANDLED IN COMPLIANCE WITH PENNSYLVANIA CONSUMER PROTECTION AND CUSTOMER RIGHTS POLICIES?

A. PAWC has developed a "test" that any customer call agent must pass to handle PAWC calls. I attach this "test" as provided in response to OCA-08-007 (**CONFIDENTIAL**) as Exhibit BA-4. [redacted]

[29] PAWC Statement No. 9, pages 9-10.

[30] PAWC Response to OCA-20-012 states when asked to identify the "industry data" relied upon for this performance standard as stated in Ms. Degillio's Testimony (PAWC Statement No. 9), "The "industry data" referenced is knowledge obtained during industry conferences and networking with other call center executives."

[redacted]

Q. HOW DOES PAWC MEASURE CUSTOMER SATISFACTION GENERALLY WITH PAWC'S SERVICES?

A. PAWC conducts customer satisfaction surveys and Ms. Degillio's Direct Testimony in support of this rate increase specifically mentioned these surveys as a key performance metric for her customer service operations, referencing a 70% response rate of "good" or "very good" from PAWC customers.[31] However, the actual survey results data reflects a different story. When asked to rate the overall customer phone customer service, the top two box response has [redacted][32] The results of the survey of those interacting with PAWC's "myWater" web portal reflects [redacted][33] The results of customer satisfaction with field services is [redacted] in most results.[34] The survey results for the call center are below those reflected in customer satisfaction surveys conducted pursuant to a BCS-supervised survey instrument by electric and gas utilities in Pennsylvania, who regularly reflect a satisfaction rating for

[31] PAWC Statement No. 9 at 8.
[32] PAWC Response to OCA-06-018, Attachment 1 (confidential).
[33] Ibid.
[34] Ibid.

recent call center transactions at over 80%.[35] As a result, there is no evidence that PAWC's customer satisfaction rating is anything other than below average.

Q. AS A RESULT OF YOUR EVALUATION OF PAWC'S CALL CENTER PERFORMANCE, WHAT DO YOU RECOMMEND?

A. I recommend the following:

1. The Commission should adopt specific performance standards as a condition of any rate increase approved in this proceeding. Specifically, the Commission should require PAWC to comply with the monthly and annual average of answering 80% of PAWC calls within 30 seconds and a 4% call abandonment rate, performance that is routinely met by Pennsylvania's electric and natural gas utilities. In light of the historical documentation of poor performance and the lack of managerial attention to this issue with inadequate oversight and enforcement of any reasonable standard, PAWC should be held to specific performance standards. Reporting results alone is insufficient in light of this history.

2. PAWC should be required to reform its Pennsylvania-specific "test" and training for its customer representatives to address the full scope of Chapter 56 and Chapter 14 rights and remedies that I have identified are lacking, as well as more detailed monitoring programs that reflect Pennsylvania-specific rights and remedies. This condition should require PAWC to routinely audit and evaluate the performance of its third-party contractors.

3. PAWC's revenue requirement should also be adjusted as recommended by

[35] BCS, Customer Service Performance Report, Appendix A and B, https://www.puc.pa.gov/media/2566/2022-customer-service-performance-report-final-092623.pdf

OCA Witness Ralph Smith (OCA Statement 2) to eliminate expenses for third party call centers that have routinely failed to meet reasonable call performance standards for PAWC's customers.

4. Finally, any rate increase granted in this proceeding should reflect the poor performance of the call center operations since 2019. These failures refute PAWC's claim of superior management performance and should be considered by the Commission under Section 523 in setting just and reasonable rates. Specifically, in my opinion, the poor performance coupled with PAWC's failure to oversee and evaluate the Service Company's performance should be reflected in the return on equity granted in this proceeding. These failures – in addition to the poor performance identified by OCA witness Colton (OCA Statement 5) – support rejection of PAWC's proposal for a higher return on equity based on its management performance and support adoption of OCA witness Garrett's recommended return on equity.

IV. PAWC'S POLICY TO TERMINATE SERVICE TO PAWC CUSTOMERS ON BEHALF OF "NON-COMPANY" WASTEWATER PROVIDERS NEEDS MORE OVERSIGHT.

Q. PLEASE DESCRIBE WHY PAWC DISCONNECTS ITS WATER CUSTOMERS FOR NONPAYMENT OF "NON-COMPANY" WASTEWATER SERVICE PROVIDERS.

A. I understand there is a Pennsylvania law referred to as the Water Services Act or Act of April 14, 2006, codified at 53 P.S. §§ 3102.501 – 3102.507, that authorizes water public utilities, like PAWC, to enter into long-term agreements with municipalities, municipal authorities, cities, boroughs, or townships (non-utility sewer providers) for shut-off services for sewer services. This law obligates water public utilities, including PAWC, to

terminate water service to a customer at the request and direction of non-utility sewer provider until all overdue amounts owed to the non-utility sewer provider are paid. I understand based on advice of OCA counsel that the shut-off services that PAWC provides on behalf of non-utility sewer providers are governed by the provisions of the Water Services Act, and not by Chapter 56 of the Commission's regulations or Chapter 14 of the Public Utility Code.

Q. PLEASE DESCRIBE PAWC'S PROPOSAL IN THIS CASE RELATED TO THE SHUT-OFF SERVICES IT PROVIDES PURSUANT TO THE WATER SERVICES ACT.

A. PAWC has various agreements with approximately 178 non-utility sewer providers to terminate service to PAWC water customers for nonpayment of sewer services at the request and direction of non-utility sewer providers.[36] The Company's PUC-approved form of shut-off agreement was provided by PAWC in response to OCA-08-038 and is attached as Exhibit BA-5. While this practice has been in effect for many years, PAWC in this case has submitted a specific amendment to Rule 12.1 in its Tariff to recognize this situation. PAWC's proposed addition to Tariff Rule 12.1(H) authorizes termination of service by the Company: "In accordance with the terms of any agreement with a non-Company wastewater provider for non-payment of wastewater service when due."

Q. DOES PAWC COLLECT FEES FOR SHUT-OFF SERVICES IT PROVIDES PURSUANT TO THE WATER SERVICES ACT?

A. Yes. PAWC charges a fee for this service and in 2023 these fees totaled $414,595.[37]

[36] PAWC Response to OCA-08-037 asking to identify the "non-Company" entities for whom PAWC has such agreements consists of a 5-page PDF that lists approximately 178 municipalities and sewer authorities.
[37] PAWC Response to OCA-08-40.

For January 2023 through November 2023, PAWC received 3,613 requests to terminate service from these "non-Company" entities and PAWC terminated water service for 1,950 customers or 54% of those requests.[38] This is a very high termination rate.

Q. DOES PAWC MONITOR COMPLIANCE WITH ITS OWN SHUT OFF AGREEMENT?

A. No. PAWC has not conducted an audit, investigation, or evaluation of whether these providers have correctly or properly identified the landlord/tenant services, have not included non-basic services in the amounts submitted for termination of water service by PAWC, or any other aspect of the conditions of the Shut-Off Agreement.[39] Nor has PAWC evaluated or investigated compliance with the "Shut Off Agreement."[40]

Q. PLEASE DESCRIBE THE PROCESS BY WHICH CUSTOMERS ARE GIVEN NOTICE OF THESE SHUT-OFFS,

A. The notices that are given to customers prior to a shut-off are governed by the Water Services Act and the agreements that PAWC has in place with the non-utility service providers. Pursuant to the law and the agreements, the non-utility service provider is required to give prior notice to their sewer customers prior to PAWC shutting off the water service. However, once the notice is issued, if a customer disputes the shut-off for non-payment, the non-utility service provider is obligated under the Water Services Act and the agreements to inform PAWC to stop the shut-off until the customer's claim has been judicially determined (the jurisdiction for such disputes between sewer customers and the non-utility service provider is with the Court of Common Pleas not with the

[38] PAWC Response to OCA-08-037.
[39] PAWC Response to OCA-20-025.
[40] PAWC Response to OCA-20-028.

Commission).

Given the very high termination rate that I note above, to protect consumers from unauthorized water shut-offs under the Water Services Act, I recommend that PAWC should be required to have a process to confirm that no customer dispute is filed – it can be as simple as taking the step of verifying with the non-utility sewer provider that no customer dispute has been filed.

Q. DO YOU HAVE OTHER RECOMMENDATIONS?

A. Yes. I have three additional recommendations. My first recommendation is like my recommendation above. Upon review of PAWC's shut-off agreements, there is a common provision that requires the non-utility service provider to not direct the Company to terminate service if the customer produces a medical certification. That provisions states:

> "AND FURTHER PROVIDED that no occupant of said premises has produced a medical certification by a physician to be seriously ill or affected with a medical condition which will be aggravated by a cessation of water service or failure to restore water service, as provided for in 52 Pa. Code §§ 56.111-56.118, as amended."[41]

Given the very high termination rate that I note above, to protect consumers from unauthorized water shut-offs under the Company's agreements, I recommend that PAWC should be required to have a process to confirm that a customer did not produce a medical certification to the sewer provider – it can be as simple as taking the step of verifying with the non-utility sewer provider that no medical certification has been produced.

[41] [Provide U-dockets]

Q. WHAT IS YOUR NEXT RECOMMENDATION?

A. My next recommendation is that PAWC should be required to post notice at the customer's premises at the time it performs the water shut-off. The notice should make it clear to customers that the water service has been shut off due to the customer's non-payment of sewer services owed to its non-utility service provider, not due to non-payment of water services provided by PAWC. The notice should name the non-utility service provider and provide the number to contact that provider. Additionally, the posted shut-off notice should direct the customer to PAWC's tariff provisions governing shut-offs pursuant to the Water Services Act (as I discuss below). Based on advice of OCA counsel, while I understand shut offs done pursuant to the Water Services Acts are not subject to Chapter 56 or Chapter 14, I understand that nothing prevents PAWC from providing this type of reasonable notice to customers as "reasonable service" under the Public Utility Code.

Q. WHAT IS YOUR FINAL RECOMMENDATION?

A. My final recommendation is that PAWC's Proposed Tariff Rule 12.1(H) should be rejected. The placement of this rule in Section 12.1 of the Company's Tariff is misleading and confusing. Section 12.1 governs terminations upon prior notice; however, except for the newly proposed (H), all of the subsections relate to terminations with prior notices provided by PAWC, not by some third-party. Accordingly, I recommend that the Company craft a new Section 12.3 that governs solely the process of PAWC's termination of water service performed pursuant to the Water Services Act and agreements in place between PAWC and the non-utility service provider due to the customer's non-payment of sewer charges owed to the customers non-utility service

provider. The tariff section should explain the PAWC customer's right that once notice is issued by the non-utility service provider, that the Company cannot go forward with the termination if a customer dispute is filed in accordance with the Water Services Act or if the customer produces a medical certification. It should further state that the Company will post notice at the customer's premises at the time of shut-off.

V. PAWC COLLECTS CHARGES FOR THIRD-PARTY WARRANTY SERVICES ON PAWC CUSTOMER BILLS. PLEASE DISCUSS YOUR CONCEERNS WITH THIS PROGRAM.

Q. DOES PAWC BILL CUSTOMERS FOR NON-UTILITY SERVICES?

A. Yes. PAWC provides billing services for a third-party, non-affiliated company, named American Water Resources, LLC (American Water Resources) for insurance products or warranty services (Warranty Services) provided by this company in return for a service fee.[42] American Water Resources is not an affiliate of PAWC nor a subsidiary of the Parent Company. American Water Resources provides the Warranty Services to PAWC customers with whom it has a service contract. The Warranty Services offered by American Water Resources include repair and maintenance services for covered water service lines owned by customers, sewer service laterals owned by customers, and in-home plumbing.

Q. PLEASE EXPLAIN HOW THESE CHARGES APPEAR ON THE CUSTOMER BILL.

A. The sample bill provided by PAWC shows such charges listed on the first page as "protection programs" and that charge is included in the "total amount due."[43] I attach the PAWC response to OCA-08-021 and associated customer bill as Exhibit BA-6. On

[42] PAWC Response to OCA-08-021, narrative.
[43] PAWC Response to OCA-08-021, Attachment consisting of 9 pages.

page 2 of this bill in fine print and as the 7th of 8 items under "explanation of fees and other terms," it states, "Protection programs for water, sewer, and in home plumbing are offered by American Water Resources" and states that these charges are not regulated by the Commission and that regulated services will not be disconnected for nonpayment of "protection program charges" or charged late fees. The toll-free telephone number for American Water Resources is provided. On page 3 the Account Detail states a line item, "Protection Programs: For inquiries, please call [toll free number]." These charges are then included in "total current period charges." This page also repeats the explanation quoted above that is on page 2 of the bill in the "understanding your bill" section.

Q. WHAT IS THE RELATIONSHIP BETWEEN ONCOURSE HOME SOLUTIONS AND AMERICAN WATER RESOURCES?

A. American Water Resources appears to be owned by and controlled by Oncourse Home Solutions, but this entity is not identified in any PAWC bills or other information that PAWC provides to its customers. Rather, the web portal for Oncourse Home Solutions provides a link to one of their "brands," as American Water Resources.[44] A hot link to American Water Resources is provided and that web portal identifies water line protection programs, sewer line protection programs, and a combination water and sewer line protection program.[45] The web portal for American Water Resources includes the following disclosure that is headed by the logo used by American Water Works with the title, "American Water Resources, An Oncourse Company," with emphasis in the original:

> American Water Resources (AWR) offers service line protection contracts to homeowners in 43 states and Washington, D.C., and currently services more than

[44] https://oncoursehome.com/
[45] https://www.awrusa.com/

2 million contracts. The company has been providing protection contracts since the year 2000 with more than 9 out of 10 customers satisfied and an A- Rating from the Better Business Bureau. American Water Resources also provides its protection contracts to homeowners through municipal partnerships with the New York City Department of Environmental Protection, Orlando Utilities Commission, Nashville Metro Water Services and others. **American Water Resources is a trademark of American Water and used under license, but is not owned by American Water. As such, AWR's optional programs are not provided or guaranteed by American Water or its affiliates, and any changes in AWR's prices are not determined or controlled by American Water or its affiliates.** American Water Resources conducts business in California as American Water Resources Insurance Services and administers home protection contracts, provided by Virginia Surety Company, Inc., CA Lic. No. 0F65279. In Virginia, American Water Resources administers insurance policies, underwritten by Virginia Surety Company, Inc., VA Lic. No. 109751.

Q. WHAT IS THE RELATIONSHIP BETWEEN AMERICAN WATER WORKS OR PAWC AND AMERICAN WATER RESOURCES?

A. While there is no formal corporate relationship between American Water Resources and PAWC or the Parent Company, there are pertinent contractual relationships. The first is a trademark license agreement between the Parent Company and American Water Resources (and its affiliates) giving American Water Resources (and its affiliates) the right to use the "American Water" name, logo, and branding when marketing to PAWC's consumers its warranty services for consumer-owned service lines and in-home plumbing. The second relevant contractual relationship is a utility billing agreement between PAWC and American Water Resources. I attach (1) the Trademark License Agreement between the Parent Company and American Water Resources dated December 9, 2021 ("License Agreement") as provided by PAWC in response to OCA-03-025 **(CONFIDENTIAL)** as Exhibit BA-7, and (2) the Utility Agreement executed by and between PAWC and American Water Resources dated December 9, 2021 ("Utility Billing Agreement") as provided in response to OCA-20-016 **(CONFIDENTIAL)** as

Exhibit BA-8.

Q. PLEASE DESCRIBE THE LICENSE AGREEMENT BETWEEN THE PARENT COMPANY AND AMERICAN WATER RESOURCES AND YOUR CONCERNS.

A. When the Parent Company sold its non-regulated subsidiary business that marketed and sold warranty services to PAWC customers on or around December 9, 2021, the Parent Company and American Water Resources (and its affiliates) entered into the License Agreement that allows American Water Resources (and its affiliates) to use the Parent Company's logos and other trademarked insignia when marketing and selling warranty services for consumer-owned service lines and in-home plumbing. [redacted]

I have concerns with the License Agreement because American Water Resources' use of the "American Water" name and logo undoubtedly gives consumers the false impression that American Water Resources is an affiliate of PAWC and a subsidiary of the Parent Company. This presentation is misleading to consumers about the true nature of the relationship and has no doubt induced PAWC's consumers to purchase warranty services products from this company under the false impression of buying from a recognized brand and that the product's price is regulated or approved by the Commission. In my experience, consumers are not usually aware of the differences between regulated and unregulated services when they appear on the customer's

regulated utility bill and the cost of the product or service is included in the total amount due.

Q. PLEASE DESCRIBE THE UTILITY BILLING AGREEMENT BETWEEN PAWC AND AMERICAN WATER RESOURCES AND YOUR CONCERNS.

A. This Utility Billing Agreement allows American Water Resources to [redacted]

A. I have concerns because these contractual provisions would explain the high rate of enrollment in these services by PAWC customers, and would indicate that consumers are being induced to buy American Water Resources' services as a result of this [redacted]

Q. CAN YOU SUMMARIZE AND FULLY DESCRIBE THIS ARRANGEMENT?

A. Yes.

a. PAWC bills for warranty services (Warranty Services) that are offered and provided by this third party, non-affiliated company, named American Water Resources, in return for a service fee.

b. PAWC provides these billing services on behalf of American Water Resources pursuant to the Utility Billing Agreement.

c. American Water Resources provides the Warranty Services to PAWC customers with whom it has a service contract. The Warranty Services offered by

American Water Resources include repair and maintenance services for covered water service lines owned by customers, sewer service laterals owned by customers, and in-home plumbing.

d. The Warranty Services appear as a line item on PAWC's customer bills as "Protection Programs" and these fees are included in the total amount due on the bill. In fine print on the customer bill, a disclaimer states that the "Protection programs for water, sewer, and in-home plumbing are offered by American Water Resources" and explains that the charges are not regulated by the Commission and that PAWC's regulated services will not be disconnected for nonpayment or charged late fees in connection with non-payment of the Protection Programs charges.

e. American Water Resources uses the American Water name, logo, and branding; however, American Water Resources has no legal affiliation with PAWC or its Parent Company.

f. The Parent Company previously owned American Water Resources as a subsidiary, which means American Water Resources was once an affiliate of PAWC. However, the Parent Company sold American Water Resources to Oncourse Home Solutions in December 2021 and, therefore, American Water Resources is currently neither a subsidiary of Parent Company nor an affiliate of PAWC.

g. [redacted]

[redacted]

h. [redacted]

[redacted]

i. [redacted]

[redacted]

j. [redacted]

[redacted]

[redacted]

k. [redacted]

[redacted]

Q. DOES PAWC RECEIVE REVENUES FOR PROVIDING THIS BILLING SERVICE?

A. Yes. PAWC received $663,147.12 from Oncourse Home Services in 2022 and has received payments of $548,412.24 to date in 2023.[47]

Q. HOW MANY PAWC CUSTOMERS ARE ENROLLED IN THESE PROTECTION PLANS?

A. As of October 2023, [redacted]

[46] No arrangement for legal services can be valid or effective unless it receives written approval from the Commission. 66 Pa.C.S. § 2012.
[47] PAWC Response to OCA-08-025.

residential customers were enrolled in one or more protection services with an average monthly fee of [redacted].[48]

Q. WHAT INSTRUCTIONS ARE GIVEN TO CUSTOMER SERVICE REPRESENTATIVES IF A CUSTOMER CALLS TO DISCUSS OR QUESTION THESE PROTECTION SERVICES?

A. PAWC's training materials state [redacted] I attach these materials provided in response to OCA-08-023 **CONFIDENTIAL** as Exhibit BA-9.

Q. PLEASE IDENTIFY YOUR CONCERNS AND RECOMMENDATIONS CONCERNING THIS PROGRAM.

A. Yes, I have four specific concerns. My first concern is that I believe that the use of the shared name and logo by American Water Resources would mislead the average PAWC consumer to believe that American Water Resources is legally affiliated with PAWC under the common ownership and management of the Parent Company, but in fact there is no affiliation. American Water Resources stands to benefit from this false impression as it gives it an unfair advantage over competitors offering similar warranty services to customers in the unregulated market for warranty services and induces consumers to buy from American Water Resources under the false impression that they are buying from a trusted brand. Likewise, PAWC stands to benefit from this false impression as PAWC's collects additional service fees from American Water Resources under the Utility Billing

[48] PAWC Response to OCA-08-022, Attachment (Confidential).

Agreement as the number of customers being billed for Warranty Services increases.

Q. WHAT IS YOUR SECOND CONCERN?

A. My second concern is that American Water Resources' exclusive marketing and billing arrangement with PAWC is discriminatory to any other provider of these services in PAWC's service territory. The potential effect of discriminatory practices is that consumers pay more for warranty services than might be available from other competitive providers of warranty services in PAWC's service territory. Clearly, American Water Resources is able to promote its services to PAWC customers and collect the fees for its services in a manner not available to any other provider for these non-basic services. The corporate policy that allows this unregulated entity to [redacted] raises serious concerns about the impact on customer expectations about the privacy of their customer relationship with PAWC.

Q. WHAT IS YOUR THIRD CONCERN?

A. My third concern is that, while I have no basis to assume that these charges are included in PAWC's termination notices, these charges are presented on the bill in a manner that does not conspicuously explain that the charges are "non-basic" or that they are not related to PAWC's regulated services except in small print. Pursuant to the Utility Agreement, [redacted] but it would appear that PAWC is *not* verifying whether American Water Resources is charging the rates it advertises to PAWC's customers via marketing

materials approved by PAWC.

Q. WHAT IS YOUR FINAL CONCERN?

A. My final concern is that pursuant to the Utility Agreement [redacted] yet there does not appear to be an affiliated interest agreement in place between PAWC and the Parent Company as to these legal services that PAWC is performing on behalf of the Parent Company. PAWC is required under the Public Utility Code to document and file all of its affiliated interest arrangements. PAWC's failure to be transparent with the Commission while at the same time engaging in a program that is overall misleading to its captive consumer base is a problem.

Q. BASED ON YOUR CONCERNS, WHAT IS YOUR RECOMMENDATION?

A. As a result of my concerns, I recommend that the Commission promptly initiate an investigation of this program and its implementation and direct PAWC to suspend this program until the Commission concludes its investigation. In the context of this rate case, the reliance on the revenues produced by this program is questionable but any defect associated in revenues by eliminating these revenues should be borne by shareholders and not PAWC's ratepayers. I refer to the direct testimony of Ralph Smith (OCA St. 2), as he explains that removal of the revenues that PAWC receives from American Water Services would serve to increase the revenue requirement and costs that consumers ultimately must pay. My recommendations regarding American Water Resources are intended to benefit consumers, not harm them, by ending the misleading practice of giving utility consumers the false impression that American Water Resources

is affiliated with PAWC and ensuring consumer access to competitive pricing and terms of warranty services by ending PAWC's discriminatory billing practices.

VI. CUSTOMER NOTICES REGARDING PRESSURE REDUCING VALVES

Q. CAN YOU EXPLAIN THE RECOMMENDATION OF OCA WITNESS FOUGHT WITH RESPECT TO PRESSURE REDUCING VALVES AND CONSUMERS?

A. OCA witness Fought (OCA St. 7) recommends that for water customers who have been identified by PAWC as having normal operating pressure that exceeds 125 psi, that PAWC should inform customers when to replace their pressure reducing valve and describe how to determine when a pressure reducing valve is nearing the end of its service life. Mr. Fought recommends that such information also be provided to households with pressures below 125 psi where PAWC has identified that household as utilizing a pressure reducing valve. OCA St. 7 at 10.

Q. DO YOU SUPPORT HIS SUGGESTIONS FOR CUSTOMER EDUCATION ON PRESSURE REDUCING VALVES?

A. Yes. I support his recommendation for informing consumers on pressure reducing valves and offer my recommendations as to how PAWC should inform customers. A public utility – while not responsible for the consumer side equipment or plumbing – is in a unique position to and should educate consumers regarding equipment that is used to support the customer's connection to the utility's system. In this instance, this relates to utility system pressure and the consumer's use of pressure reducing valves.

Q. WHAT IS YOUR RECOMMENDATION AS TO THE CUSTOMER EDUCATION THAT SHOULD BE OFFERED BY PAWC REGARDING PRESSURE REDUCING VALVES?

A. I recommend that PAWC develop a customer education program concerning pressure reducing values, when they are appropriate, how they work, and what consumers should do to monitor their performance for safety and reliability of water service from PAWC. This program should include a consideration of customer-specific communications relating to complaints about water pressure, general customer information on PAWC's website, and potentially bill inserts. PAWC should develop this outreach and education program as a compliance filing in this proceeding after review and input from stakeholders.

VII. SUMMARY OF CONDITIONS THAT SHOULD BE ATTACHED TO ANY RATE INCREASE

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS FOR PAWC'S CUSTOMER SERVICE PERFORMANCE AS A CONDITION OF ANY RATE INCREASE.

A. PAWC's failure to include any customer service or consumer protection performance goals and criteria for its claim of management excellence and reward of a higher rate of return is a serious defect and should contribute to the overall rejection of this proposal by the Company. In addition, there are certain areas that need to be addressed as requiring improvement and reform as conditions for allowing PAWC to increase its rates:

- After years of poor call center performance as documented in the last rate case and the Commission's Management Audit, PAWC should be required to meet specific monthly and annual performance standards. Specifically, PAWC's internal metrics do not reflect reasonable performance and I recommend that PAWC must meet a call performance standard of answering 80% of its calls within 30 seconds with an abandonment rate that is 4% or less. The Service Company's contracts with third-party call operators should be revised to impose automatic penalties for the failure to

meet these standards to avoid ratepayer funding for poor performance in the future. A plan to promptly achieve this objective should be required as a condition of any rate increase at no additional expense to PAWC customers due to the long-standing failure to reach reasonable performance requirements.

- PAWC's analysis of customer complaints, whether handled internally as disputes, or externally by BCS as informal complaints, needs to improve. PAWC should be required to conduct a regular and proper root cause analysis of its complaint trends, both for internal disputes and BCS informal complaints that document infractions and verified violations. This recommendation should require a professionally conducted root cause analysis and report on findings, including identification of trends, evaluation, steps to reform or avoid repeated trends, and internal steps taken to take proper internal enforcement action where needed within 3 months and quarterly updates to stakeholders.
- PAWC should be required to reform its Pennsylvania-specific "test" and training for its customer representatives to address the full scope of Chapter 56 and Act 14 rights and remedies that I have identified are lacking, as well as more detailed monitoring programs that reflect Pennsylvania-specific rights and remedies. This condition should require PAWC to routinely audit and evaluate the performance of its third-party contractors.
- In line with the suggestion made my OCA Witness Terry Fought (OCA St. 7) PAWC should be required to provide customer education to water customers about the lifespan of pressure reducing valves, consistent with my recommendations in my testimony above.

- I recommend that the Commission require PAWC to undertake certain reforms in its implementation of termination of water service to its customers on behalf of "non-Company" sewer service providers. PAWC should post a notice upon termination of service to explain the basis for the termination and how to get water service reconnected. In addition, PAWC should explicitly obtain information from the sewer authority that no dispute has been filed and that a medical emergency has not been declared. Finally, PAWC should reform its proposed tariff amendment to make clear these essential consumer protections associated with the disconnection of PAWC's water service to its customers for nonpayment of a sewer bill incurred by a municipality or sewer authority.
- As a result of my documentation of seriously misleading and improper conduct in the implementation of PAWC's billing for "protection services" provided by American Water Resources, I recommend that the Commission promptly initiate an investigation of PAWC's program to bill for non-basic services and direct PAWC to suspend the program until the investigation is complete and that such program require substantial reforms if allowed to proceed in the future. In the context of this rate case, the reliance on the revenues produced by this program is questionable but any defect associated in revenues by eliminating these revenues should be borne by shareholders and not PAWC's ratepayers.

Q. WHAT SHOULD OCCUR IF PAWC FAILS TO MEET ONE OR MORE PERFORMANCE STANDARDS?

A. At a minimum, the Commission should open an investigation of persistent failure to meet reasonable performance standards or conditions I have identified and recommended in my

testimony. The Commission should make clear as well that the failure to address these concerns and recommendations may have an impact on PAWC's future revenues and earnings.

Q. DOES THIS COMPLETE YOUR TESTIMONY AT THIS TIME?

A. Yes. However, I reserve the right to supplement this testimony based on pending discovery.

PUBLIC VERSION EXHIBIT BA-2

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 8

OCA 08-028

Responsible Witness: Jim Runzer, Vice President of Operations for PAWC

Question:

In calendar years 2021, 2022, and 2023, how many times has PAWC restored service after identifying that an account was not properly coded as being tenant-occupied at the time of termination?

Response:

PAWC does not track the requested information.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 20

OCA 20-024

Responsible Witness: Jim Runzer, Vice President of Operations for PAWC

Question:

Is it correct to interpret the response to OCA-08-028 as meaning that there has been no "root cause" analysis of disputes or complaints that reflect the lack of proper coding of a tenant-occupied dwelling? If this is not a correct assumption, identify any internal analysis of disputes and/or informal and formal complaints that have resulted from an improper coding of a tenant occupied dwelling in 2021, 2022, and 2023.

Response:

Please see OCA-20-024_Attachment_1_Confidential for the analysis of informal complaints received from 2021, 2022 and 2023.

Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 20

OCA 20-001

Responsible Witness: Deb Degillio, VP, Customer Service

Question:

With regard to the third-party contractors that handle "all types of inbound calls" from Pennsylvania residential customers, please provide the following information separately for Transworld Systems, Inc. and Intelogix for each month of 2022 and 2023:

1. The location of each call center handling calls for Pennsylvania PAWC customers;
2. the call volumes handled from Pennsylvania customers of PAWC;
3. the percentage of all calls from Pennsylvania PAWC customers;
4. the percentage of calls answered by a live operator within 30 seconds;
5. the call abandonment rate.

Response:

1. There is no physical location of call centers as vast majority of our agents work remotely from home. We have a handful of agents who work in Camden, NJ office at 1 Water Street (less than five agents as of Dec 2023). Intelogix agents are all remote. All but 13 of Transworld Systems agents are remote. Please refer to response for OCA 06-005 to obtain the business address of the third party contractors.

2 – 5. Please refer to OCA 20-001_Attachment. The customer care data is combined in total for American Water agents and third-party contractors. The collection data is provided for each third-party contractor.

Response:

See OCA 08-007_Attachment_CONFIDENTIAL.

EXHIBIT BA-5

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 8

OCA 08-038

Responsible Witness: Jim Runzer, Vice President of Operations for PAWC

Question:

Reference PAWC Statement No. 4 (Gress):

Provide the termination notice issued to a PAWC customer for disconnection of water service as a result of nonpayment of wastewater service to a "non-Company" entity.

Response:

PAWC only issues termination notices to "non-Company" Landlord/Ratepayer customers as outlined in the company's Commission-approved form of shut off agreement (Please refer to OCA 08-038_Attachment). Refer to Exhibit A for a copy of said termination notice. The "non-Company" entity is responsible for providing termination notices to all non-Landlord/Ratepayer customers for disconnection of water service as a result of nonpayment of wastewater services, pursuant to the attached shut off agreement.

SHUT-OFF AGREEMENT

THIS AGREEMENT, made this day of , 20___, by and between the _____, a municipal _____ of the Commonwealth of Pennsylvania, having an office for the transaction of business at _____ (hereinafter called the "Municipality") and PENNSYLVANIA-AMERICAN WATER COMPANY, a public utility corporation of the Commonwealth of Pennsylvania, with its principal place of business at 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055, (hereinafter called the "Water Company").

W I T N E S S E T H

THAT WHEREAS, the Municipality is engaged in supplying sewage service to the citizens and residents of the _____, _____ County, Pennsylvania; and

WHEREAS, the Water Company, a corporation as aforesaid, is the owner and operator of a water distribution system serving the customers in the aforesaid area, under the applicable Rules and Regulations of the Pennsylvania Public Utility Commission; and

WHEREAS, the Water Company is authorized and required at the request and direction of the Municipality pursuant to the provisions of the Act of April 14, 2006, P.L. 85, 53 P.S. Sections 3102.501 et. seq., to shut-off the supply of water from its system to any premises in which the rentals, rates and charges for sewer, sewage or sewage treatment service supplied by the Municipality are unpaid and the claim or lien for such service has been assigned to the Municipality.

WHEREAS, certain notice requirements relating to the shut-off of the supply of water are set forth therein and the Utility Service Tenants Rights Act of November 26, 1978, P.L. 1255, No. 299, 68 P.S. Sections 399.1 et seq. ("USTRA"); and

WHEREAS, both parties believe that they should enter into a written agreement specifically setting forth the duties, obligations, responsibilities and liabilities of each party to each other and such agreement is specifically authorized by the Act of April 14, 2006, P.L. 85, 53 P.S. Section 3102.501 et seq.

NOW THEREFORE, in consideration of the sum of ONE DOLLAR ($1.00) and other good and valuable consideration, and the covenants hereinafter expressed, the parties hereto do mutually agree as follows:

1. Upon written request by the Municipality specifying a premises in the Municipality's service area with regard to which the rentals, rates and charges for sewer, sewage or sewage treatment service shall not have been paid for a period of at least thirty days from the due date thereof, the Water Company shall proceed to shut-off the supply of water to such premises until it is advised in writing by the Municipality that all such overdue rentals, rates and charges, together with any interest thereon, have been paid or the Municipality directs otherwise; PROVIDED HOWEVER:

A. For any premises other than a residential building for which the landlord is the party responsible for the payment of sewer service, said written request must be accompanied by a statement in writing by a responsible officer of the Municipality setting forth:

i. that the Municipality has given ten (10) days' written notice of its intention to request the Water Company to shut-off the supply of water from its system to such premises has been mailed to the person liable for the payment of such rentals and charges and the owner of the property or property manager,

ii. that the Municipality has posted, at least ten days, a written notice to this effect at the main entrance to the premises, and

iii. that the Municipality has not received, during the ten day period, a written statement under oath or affirmation from the person liable for the payment of the said rentals and charges stating that the said owner has a just defense to the claim or part thereof;

B. For any residential building for which the landlord is responsible for the payment of sewer service, said written request must:

i. Be provided to an agent of the Water Company at least 45 days in advance of the proposed date for service to be shut-off;

ii. Be accompanied by a 37-day notice and 30-day notice in the form attached hereto as Exhibit A on the Municipality's letterhead for each customer for which shut-off of service is being requested to be posted by the Water Company;

iii. Be accompanied by a copy of the bill for the prior billing period for each customer for which shut-off of service is being requested; and

iv. Provide the agency names, addresses and phone numbers for: (i) the Department of Licenses and Inspections of any city of the first class; (ii) the Department of Public Safety of any city of the second class, second class A, or third class; and (iii) the city or county Public Health Department or in the event that such a department does not exist, the Department of Health office responsible for that county.

AND FURTHER PROVIDED that no occupant of said premises has produced a medical certification by a physician to be seriously ill or affected with a medical condition which will be aggravated by a cessation of water service or failure to restore water service, as provided for in 52 Pa. Code §§56.111-56.118, as amended.

2. The Water Company shall invoice the Municipality on a monthly basis for each of the premises for which shut-off was requested in the previous month and the Municipality shall pay to the Water Company the invoiced amount within thirty (30) days of receipt. Shut-off of service to any premises other than a residential building for which the landlord is the party responsible for the payment of sewer service under Section 1.A, above, shall be charged the sum

of Thirty Dollars ($30.00). Shut-off of service to a residential building for which the landlord is responsible for the payment of sewer service under Section 1.B, above, shall be charged the sum of One Hundred and Twenty Dollars ($120.00) each for multi-dwellings and Seventy- Five Dollars ($75.00) for single dwellings, provided that such request for shut-off of service is completed. For shut-off requests that are not able to be completed because the 37-day notice sent by certified mail is unclaimed, the sum of Seventy-Five Dollars ($75.00) will be charged. All of the aforementioned amounts are intended to cover the Water Company's cost of providing required notice, where applicable, and shutting off the water supply to each premises listed in such request. The Municipality shall also pay to the Water Company, upon its request therefore, the further sum of Thirty Dollars ($30.00) to cover the Water Company's cost of restoring water service to each such premises. In the event that the actual cost incurred by the Water Company in discontinuing and restoring water service to any such premises is more than the charges described above, the Municipality shall remit the actual cost thereof to the Water Company based on time, material, transportation and other fixed charges. The fees fixed hereunder may be amended from time to time as agreed by the parties hereto.

3. The Water Company shall not be liable for any loss, damage or other claim asserted by the owner, person or corporation based on or arising out of the shutting off of such supply of water. The Municipality shall indemnify and save harmless the Water Company, its agents, officers, servants or employees from any such loss, damage or other claim arising out of said activity pursuant to the terms of the Agreement. Notwithstanding the aforementioned language, the Municipality shall not be responsible for any loss, damage or claim asserted by said owner, person or corporation due to negligence on the part of the Water Company, its agents, officers, servants or employees, while performing any services for the Municipality pursuant to this agreement.

4. If a dispute shall arise between the parties hereto regarding any of the provisions of this Agreement, such dispute may be submitted by either of the parties to the Pennsylvania Public Utility Commission whose decision, unless reversed on appeal, shall be final.

5. This Agreement may be terminated by either of the parties hereto by ten (10) days' written notice given to the other party at its principal place of business.

6. This Agreement shall become effective thirty (30) days after the Water Company has filed a copy thereof with the Pennsylvania Public Utility Commission or, in the event that the said Commission institutes an investigation, at such time as the said Commission grants its approval thereof.

7. The Water Company shall have the right to increase the charged amounts in Section 2, above, from time to time, in the event that the cost to the Water Company for performing the service hereunder increases, upon sixty (60) days' written notice to the Municipality. It is further understood and agreed that the aforesaid amount of Thirty Dollars ($30.00) for the shutting off and restoring of water service under the provisions of this Agreement shall be automatically increased to coincide with the charges for shutting off water service and restoring water service contained in the Company's tariff as on file with and approved by the Pennsylvania Public Utility Commission from time to time.

8. Notwithstanding the provisions of this Agreement, it is understood and agreed by the parties hereto that the Water Company shall be required to comply with any existing regulations of the Pennsylvania Public Utility Commission, including but not limited to those

relating to notice before termination, and in addition to providing any notice that might otherwise be required under this contract or any applicable law or ordinance.

9. This Agreement supersedes and repeals any prior agreement, contracts, and understanding, written or oral, by or among the parties hereto with respect to the subject matter contained herein. This Agreement contains the entire agreement among the parties hereto, and no oral statements or representations or prior written matter not contained in this instrument shall have any force and effect.

IN WITNESS WHEREOF, the parties hereto have caused these presents to be signed and attested by their proper officers and their respective seals to be hereto affixed the day and year first above written.

This Agreement will be effective on the _____ day of _____, 20__.

Pay This Amount: $_____

IMPORTANT: 37 DAY SHUT OFF NOTICE

Please read and take the steps needed to prevent your water service from being shut off. Payment on your sewer account is overdue. If payment is not received, your water service may be shut off on or after _____ (PAWC to fill in). You can prevent discontinuation of water service by paying the amount printed above.

TO STOP THE SHUT OFF, YOU MUST PAY THE AMOUNT OVERDUE OR YOU MUST CALL US AT _____. You may also contact us for payment options.

YOUR TENANTS WILL BE NOTIFIED. We will notify your tenants on or after _____ (PAWC to fill in) that service will be shut off. At that time, we will also inform them of their rights under the Utility Service Tenants Rights Act ("USTRA"). USTRA states that within seven (7) days of the date you receive this notice, you must give us the names and addresses of the affected tenants, unless you pay the total past due amount or make satisfactory payment arrangements with us. You may have to pay liquidated damages of not less than $500 for each day you do not give us this tenant information. To provide the names and addresses of the affected tenants, call us at _____ or write to us at _____. To avoid the notification of your tenants, you may file a petition in court to dispute the right to discontinue service.

If we shut off your tenants' service, you will have to pay the past due amount and a Turn-On Charge of $_____.

Please Note: We may not be able to restore your service until 5:00 p.m. the next business day after receiving payment. If you have questions about this notice or your bill, please call us at the number listed above.

Sincerely,
Sewer Municipal Entity's Name

30 DAY SHUT OFF NOTICE TO OCCUPANT

Please read and take the steps needed to prevent your water service from being shut off.

IMPORTANT NOTICE TO TENANTS WARNING: YOUR WATER SERVICE MAY BE SHUT OFF ON OR AFTER _____ (PAWC to fill in) BECAUSE OF NON-PAYMENT OF SEWER CHARGES.

TO STOP THE SHUTOFF OF YOUR UTILITY SERVICE, YOU MUST DO ONE OF THE FOLLOWING THINGS:

1. You can join with the other tenants to apply to have service continued or resumed. Service will not be discontinued or will be resumed if the tenants pay the amount equal to your landlord's sewer bill for the 30-day period preceding this notice. A copy of that bill is enclosed. Payments may be made only by check or money order payable to: _____.

2. By law, you may deduct the amount that you made for the sewer bill from your rent due now or in the future. We will tell your landlord how much you paid for the utility service. Your landlord may not retaliate against you for exercising your right to make payment to prevent the shut-off. You have the right to recover monetary damages from the landlord for any retaliation that the landlord takes against you for exercising your rights as a result of this notice.

ADDITIONAL INFORMATION:

1. The amount of the bill which must be paid to continue service is $_____.
2. Your landlord cannot punish you if you pay the utility bill. Your landlord cannot raise your rent, cannot evict you and cannot retaliate against you in any other way for paying the utility bill and deducting it from your rent.
3. You have the right to dispute the accuracy of the bill and have certain other rights.

FOR MORE INFORMATION

If you have any questions about this notice or bill, please call us at _____.

Sincerely,

Sewer Municipal Entity's Name

Question:

Does PAWC include non-basic service charges on its residential customer bills? If so, provide a sample bill that identifies each such non-basic service are presented and disclosed as non-basic on the customer bills.

Response:

Yes. For the convenience of its customers and at their election, PAWC provides on-bill billing for utility related insurance products provided by Oncourse Home Solutions ("Oncourse"). PAWC includes non-basic service charges for Oncourse on residential customer bills. Please see OCA 08-021_Attachment, page 3, for a sample and explanation of the charges.

SERVICES

Go Paperless: Save time. Save money. Sign up for **Paperless Billing** and **Auto Pay** on MyWater at amwater.com/mywater. Not registered? Log in and be sure to have your account number handy.

Water Quality: We take water quality seriously. When it comes to complying with federal drinking water standards, we consistently score better than the industry average. For a copy of the annual water quality report for your area, visit pennsylvaniaamwater.com. Under Water Quality, select Water Quality Reports.

H2O Help To Others: This program helps low-income customers who qualify with their water bills. For more information, contact our program administrator, the Dollar Energy Fund, at 1-888-282-6816.

EXPLANATION OF FEES AND OTHER TERMS

Distribution System Improvement Charge (DSIC): A charge to replace aging facilities, such as mains, meters, fire hydrants, valves, etc. This charge, as approved by the Pennsylvania Public Utility Commission (PUC), will change every three months based on work completed. It will not exceed 7.5% of your bill.

Payment by Check: Paying by check authorizes American Water to send the information from your check electronically to your bank for payment. The transaction will appear on your bank statement. The physical check will not be presented to your financial institution or returned to you.

State Tax Surcharges: This PUC-approved charge allows the company to recover costs specific to state taxes.

Estimated Bill: This occurs when we are unable to read the water meter. Your usage from the same billing period the prior year is used to calculate the estimated bill. The next actual meter reading corrects any over or under estimates.

Inquiries/Disputes: For inquiries about your bill, please register any question or complaint about the bill prior to the due date. Contact customer service Monday–Friday from 7 a.m. to 7 p.m. by calling 1-800-565-7292. To register your complaint by mail, send written correspondence to PO Box 2798, Camden, NJ 08101.

Rates: A detailed listing of charges that make up your bill is available upon request by contacting Customer Service or visiting us online at pennsylvaniaamwater.com. Under Customer Service & Billing, select Your Water and Wastewater Rates.

Protection programs for water, sewer and in-home plumbing are offered by American Water Resources. Charges for these services are not regulated by the Pennsylvania Public Utility Commission. Regulated services will not be disconnected as a result of non-payment of protection program charges. Customers with protection program charges will not be assessed a late payment charge for late or unpaid protection plan charges. For inquiries about protection programs, please contact American Water Resources at 1-888-378-4458.

Correspondence: Please send written correspondence to PO Box 2798, Camden, NJ 08101. Be sure to include your name, account number, service address, mailing address and phone number including area code. Please do not send correspondence with your payment, as it may delay processing your payment and correspondence.

Understanding Your Bill

The information below defines some of the new terms you may find on your bill:

- **Service Related Charges:** This section includes charges for services related to water, wastewater and fire protection. If applicable, credits and debits for correction to previously billed charges are itemized in this section.
- **Fees and Adjustments:** This section provides details related to additional charges or adjustments for the service period referenced. Fees, when applicable, would include items such as service activation and late payment charges.
- **Billing Units:** One billing unit equals 100 gallons of water used. If the meter serving your property measures your water use in cubic feet or a different unit of measure, we convert the usage to gallons to make it easier to understand.
- **Average Daily Use:** The gallons shown in the water droplet above represent your average daily water use for the current billing period. Tracking the amount of water you use can help you manage your overall water use from month to month.
- **Protection programs for water, sewer and in-home plumbing** are offered by American Water Resources. Charges for these services are not regulated by the Pennsylvania Public Utility Commission. Regulated services will not be disconnected as a result of non-payment of protection program charges. Customers with protection program charges will not be assessed a late payment charge for late or unpaid protection plan charges. For inquiries about protection programs, please contact American Water Resources at 888-378-4458.
- **Still have questions?** We are here to help. Our customer service representatives are available M–F, 7 a.m. to 7 p.m. More information on understanding your bill and charges can also be found on our website. See the link below.

PENNSYLVANIA AMERICAN WATER

LESS PAPER. MORE TREES.

We'll plant one tree for every customer who converts to paperless billing during the month of August for National Water Quality Month!

Last year, Pennsylvania American Water launched a campaign to reduce paper usage and plant trees across the Commonwealth. Because of the program's success, we're doing it again this year.

Keystone
10 MILLION TREES
PARTNERSHIP

We're pledging to donate $12 to the Chesapeake Bay Foundation's Keystone 10 Million Trees Partnership for every customer (up to 2,000) who switches from paper to electronic bills this month.

Each contribution underwrites the full cost of planting one tree, including a reusable stake and shelter.

This collaborative project provides sustainable benefits to watersheds across Pennsylvania: Limiting the impact on forests; reducing waste, energy and fuel use; and improving water quality and aquatic life in streams near tree plantings.

Enroll in Paperless on MyWater Today

Not registered for MyWater? Visit **amwater.com/mywater** and click on **Sign Up**. Have your account number handy.

Let's beat 2022's results!

1,947 customers switched to paperless billing

$19,470 contributed to the Chesapeake Bay Foundation by Pennsylvania American Water

1,947 new trees planted across the Commonwealth

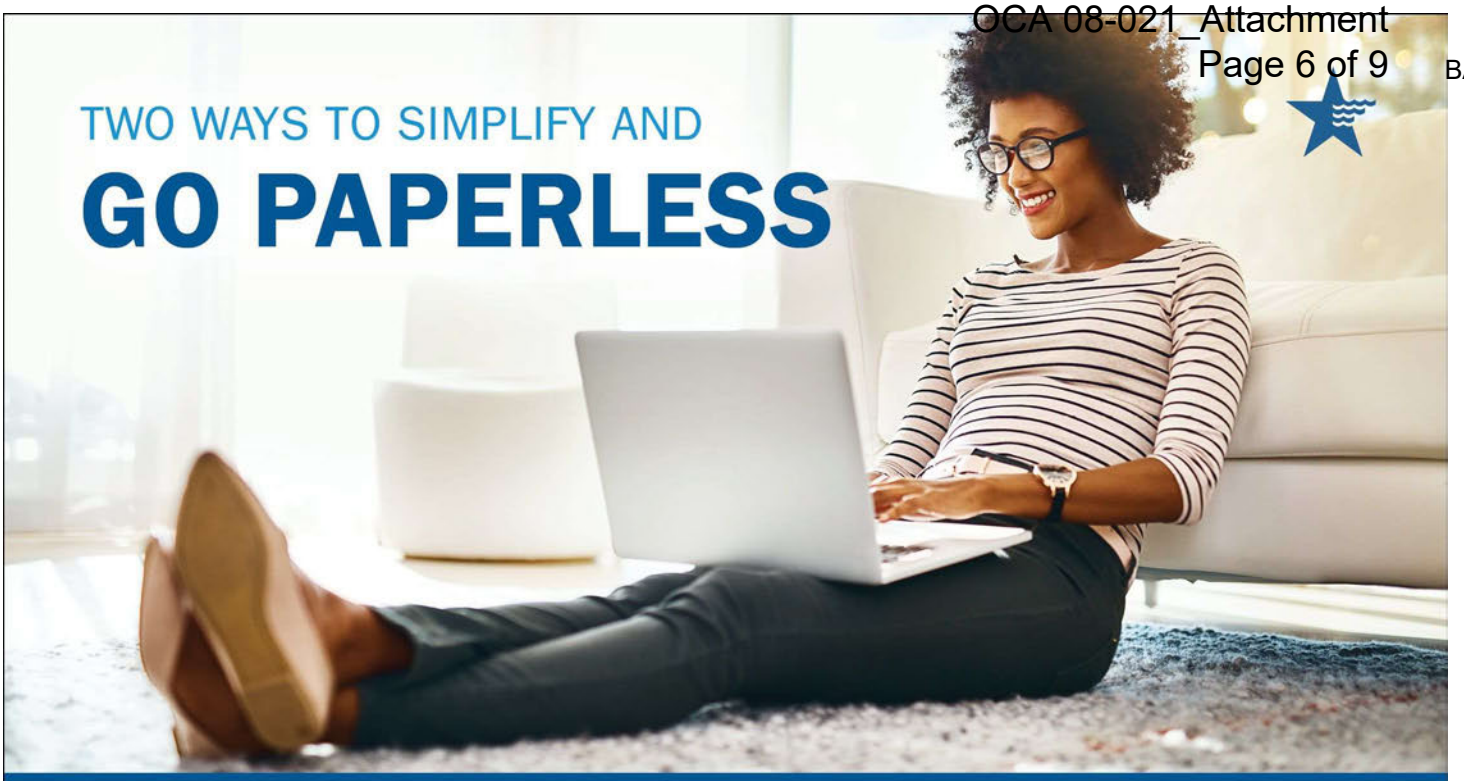
Pennsylvania American Water received the 2023 Governor's Award for Environmental Excellence for its 2022 paperless billing/tree planting campaign.

Request trees for your property

Take your environmental commitment a step further and request free trees to plant on your property! Trees can help clean your local water, improve your living conditions, create natural shade and privacy, and increase your property value. Visit: https://tenmilliontrees.org/get-involved/landowners. Be sure to note that you are a Pennsylvania American Water customer on the online request form at https://tenmilliontrees.org/contact/landowners.

TWO WAYS TO SIMPLIFY AND

GO PAPERLESS



MORE CONVENIENCE. LESS CLUTTER. SECURE.

Receive your bill electronically with

PAPERLESS BILLING

We'll send you an email with the amount due, the due date and a link to view your bill online (along with any materials that would have been included with your paper bill). We'll also email service-related communications to you. **It's simple, secure and clutter-free!**

Enroll in **Paperless Billing** and **Auto Pay** on MyWater at **amwater.com/mywater**.

Pay your bill electronically with

AUTO PAY

Take it one step further and go entirely paperless. Enroll in **Auto Pay**, and your bill will be paid on time, every time, automatically on the due date.

NEW **Customers can now enroll in Auto Pay using their credit card!**

Now, you can choose to have your monthly bill automatically applied to your credit card or deducted directly from your checking or savings account. **No stamps required!**

NOTICE OF PROPOSED WASTEWATER ACQUISITION AND RATE BASE ADDITION (Docket No. A-2021-3024058)

PENNSYLVANIA AMERICAN WATER

Dear Customer:

On July 20, 2023, the Pennsylvania Public Utility Commission ("PUC") conditionally accepted for filing the application of Pennsylvania-American Water Co. ("Pennsylvania-American") for approval to acquire the Borough of Brentwood ("Brentwood") wastewater system assets. Brentwood serves approximately 3,980 customers in Allegheny County. Pennsylvania-American's application also requests that the PUC authorize an addition of $19,364,443 to Pennsylvania-American's rate base pursuant to 66 Pa. C.S. § 1329. A utility's rate base is the value of property used by the utility to provide service to its customers and is one of many components used to establish customer rates.

This acquisition will not immediately, but may in the future, affect water and/or wastewater bills of Pennsylvania-American customers, including Brentwood wastewater customers. Pennsylvania-American is not requesting a rate increase as part of the acquisition. Your current rates will not change as a result of this acquisition until the conclusion of Pennsylvania-American's first base rate case where Pennsylvania-American requests and receives PUC approval to increase its rates. Based on a non-binding estimate of the potential rate impacts, Pennsylvania-American anticipates that the potential rate impact could be as follows:

PAWC WASTEWATER				
Rate Class	**Average Usage**	**Average Monthly Bill at PAWC Zone 1 Current Rates**	**Average Monthly Bill at PAWC Zone 1 Rate Adjusted for Potential Impact of Acquisition**	**Potential Increase**
Residential	3,212 gal/month	$106.65	$106.97	$0.32 or 0.3%
Commercial	22,561 gal/month	$509.46	$510.99	$1.53 or 0.3%
Industrial	528,207 gal/month	$11,143.19	$11,176.62	$33.43 or 0.3%

PAWC WATER				
Rate Class	**Average Usage**	**Average Monthly Bill at PAWC Zone 1 Current Rates**	**Average Monthly Bill at PAWC Zone 1 2023 Rate Adjusted for Potential Impact of Acquisition**	**Potential Increase**
Residential	3,212 gal/month	$69.24	$69.24	$0.00 or 0.0%
Commercial	22,561 gal/month	$371.82	$371.82	$0.00 or 0.0%
Industrial	528,207 gal/month	$5,985.09	$5,985.08	$0.00 or 0.0%

These amounts could change and will depend on how the PUC chooses to apportion any increase among different types of utility service, rate zones and classes of customers. For Pennsylvania-American customers in a rate zone other than Rate Zone 1, the potential rate impact could vary from the chart above.

PUC ROLE

The state agency that approves acquisitions and rates for regulated public utilities is the PUC. The PUC will review and investigate the proposed acquisition. After examining the evidence, the PUC may approve, modify or deny the acquisition and may approve, modify or deny the requested addition to rate base.

ACTIONS YOU CAN TAKE

You can support or challenge Pennsylvania-American's request by:

1. **Sending a letter to the PUC.** You can tell the PUC why you support or object to the application in your letter. This information can be helpful when the PUC investigates the application. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.
2. **Attending or presenting testimony at a PUC public input hearing.** You can attend or be a witness at a PUC public input hearing. The PUC holds public input hearings if it opens an investigation of Pennsylvania-American's transaction and if there is enough interest in the case. At these hearings, you can present your views in person to the PUC judge and to company representatives. Testimony under oath becomes part of the application case record. The PUC holds these hearings in the service area of the company. For more information, call the PUC at 1-800-692-7380.
3. **Filing a protest or a petition to intervene.** If you want to be a party to the case, you must file a protest or a petition to intervene. You then have an opportunity to take part in all the hearings about the proposed acquisition. You can receive copies of all materials distributed by the other parties. Protests and petitions to intervene must be filed in accordance with 52 Pa. Code (relating to public utilities) on or before October 16, 2023. Filings must be made with the Secretary of the Pennsylvania Public Utility Commission at P.O. Box 3265, Harrisburg, PA 17105-3265, with a copy served on Pennsylvania-American's counsel at:

   David P. Zambito, Esq.
   Cozen O'Connor
   17 North Second Street, Suite 1410
   Harrisburg, PA 17101

The documents filed in support of the application are available on the PUC's website at www.puc.pa.gov, and for inspection and copying at the Office of the Secretary of the PUC between 8 a.m. and 4:30 p.m., Monday through Friday, and at Pennsylvania-American's offices at 852 Wesley Drive, Mechanicsburg, PA 17055. The PUC docket number is A-2021-3024058. For more information, you may contact the PUC's Bureau of Consumer Services at 1-800-692-7380.

SUPPLEMENTAL DIRECT TESTIMONY

OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

Date Served: February 13, 2024

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. WHAT IS THE PURPOSE OF THIS TESTIMONY?

A. I am submitting Supplemental Direct Testimony to highlight certain testimony by PAWC's customers submitted at the public input hearings on PAWC's proposed rate increase. Specifically, I will supplement my Direct Testimony on PAWC's inconsistent billing cycle and PAWC's billing for non-basic protection services on behalf of American Water Resources.

Q. IS YOUR TESTIMONY INTENDED TO BE A FULL AND COMPLETE SUMMARY OF THE PUBLIC INPUT HEARINGS ON THE TOPICS DESCRIBED ABOVE?

A. No. My supplemental Direct Testimony is not intended to be a full and complete summary of the consumer testimony provided at the public input hearings held in this case on the topics of PAWC's billing periods or PAWC's billing and marketing of American Water Resources protection plan services. The sworn consumer testimony has been transcribed and is evidence in this record. To the extent that I do not discuss or make a specific recommendation here, PAWC should respond to all of the customer service concerns raised by customers during the Public Input Hearings, and provide its response in Rebuttal Testimony.

Q. CAN YOU SUMMARIZE THE RELEVANT CONSUMER TESTIMONY AT THE PUBLIC INPUT HEARINGS REGARDING THE INCONSISTENT BILLING CYCLES?

A. Consumers complained about PAWC's inconsistent billing periods, ranging from 35 days to 27 days, and how some bill amounts appear less than other bill amounts but that it is due to the billing period being shorter, making it difficult for consumes to budget. (Transcript at pages 824, 835, 867 1045, 1072, 1092, 1705, 1845-1846, 1879).

Q. WHAT DO YOU RECOMMEND AS A RESULT OF THIS PATTERN OF TESTIMONY CONCERNING INCONSISTENT BILLING PERIODS FOR PAWC BILLS?

A. I recommend that PAWC respond to this concern in its Rebuttal Testimony and specifically document the frequency of such inconsistent billing periods and what steps can be taken to avoid this pattern, as well as how customers can avoid the payment and budgeting difficulties with this pattern.

Q. CAN YOU SUMMARIZE THE RELEVANT CONSUMER TESTIMONY AT THE PUBLIC INPUT HEARINGS REGARDING PAWC'S BILLING FOR AMERCIAN WATER RESOURCES' PROTECTION PLAN SERVICES?

A. The following testimony submitted by members of the public described PAWC bills that contain unregulated charges on behalf of American Water Resources:

- Jodi Asay testified at the public input hearing held on February 6, 2024, at 1PM (starting at Transcript, page 1473) that PAWC's system is over-pressurized in her neighborhood resulting in multiple breakages of consumer-owned service line and that PAWC simultaneously sends direct marketing mailings to these consumers to purchase

service line protection plans from American Water Resources. (Transcript at page 1513, line 8 through page 1514, line 9; page 1515, line 13, through page 1517, line 4). Ms. Asay testified that she received mailings as a PAWC customer from "American Water Service Line Protection." She stated. "*Everybody thinks that it's American Water Company, but then they found out that it was not American Water Company."* ((Transcript at 1517, lines 20-21). She also described complaints associated with the quality and timing of the work done under this program. This testimony confirms that PAWC issues marketing materials or provides PAWC's customer list to American Water Resources. Even more troubling, the attorney for PAWC attending this hearing directed Ms. Asay to discuss her concerns with a representative of American Water Resources in attendance at the hearing, stating, "*He may be able to clear up some of the concerns and confusion surrounding homeowner services and the protection they offer*". (Transcript at 1522). Ms. Asay's testimony and the statement by PAWC's attorney confirm my concern about the misrepresentation of the relationship between PAWC, American Water Works, and American Water Resources to PAWC's customers.

- William Clark testified at the public input hearing on January 31, 2024, held at 6PM concerning the communications and billing for AWR services on the PAWC bill:

> *One of the subsidiaries they offer is American Water resources. They're the ones the insurance company basically to handle the sewage pipe going across my property, across the road to the main sewer lines. Insurance. It's not regulated by the PUC at all, but the rates are increasing just as well. Twenty-one (21), 20 years ago it was $9 a pay period. I'd say monthly. American Water - Pennsylvania-American Water doesn't bill by the month. They bill by whatever days they want to.*

But anyway, it was $9. The following year in March it went up to $10.50. And then it jumped up to $12.25 in six - June of '22. And this February it's going to go up to $17.99. It almost sounds like they're in the same group categories of Pennsylvania American Water. As far as just, oh, let everybody pay for it. We'll just keep going. And that's the way you feel. Doing, you're digging into your pocket and loving every minute of it. And they don't care. (Transcript at pages 1072-1073)

Mr. Clark also recognized that this service is billed by PAWC and that PAWC receives a benefit from billing for this service. (Transcript at page 1074)

- Mary Tanealian testified at the public input hearing held on January 30, 2024, at 1PM that she assumed that American Water Resources was a subsidiary of American-Water (Transcript at pages 453, 454 ["*I was told it was."])* and noted that the charges had increased and that other customers based on her knowledge had stopped those payments due to the failure to repair their pipes. (Id., at page 454). Ms. Tanealian could not remember if she had received marketing materials for this program from PAWC, but she also confirmed that the charges on the bill were identified as "protection services" and not American Water Resources.

- James McDermott testified at the public input hearing held on January 30, 2024, at 1PM, explaining that American Water Resources did not respond timely to his service call for work needed on his sewer line and he had to call a competitor of American Water Resources, which did timely respond and take care of his sewer line problem. He said that while he waited on the phone line with American Water Resources, representatives attempted to sell him additional interior sewer line protection services. (Transcript at page 529, lines 2 -18).

- Pauline Bryner testified at the public input hearing held on January 29, 2024, at 6PM, that the payment protection plan that is on her bill started at $4.99 but then increased significantly to $12.99 the following year, then to $16.99 within two months, and eventually it went to $21 and then to $27 and that she has seen advertisements through PAWC's marketing bill inserts for $30.99 She said consumers should be aware that Duquesne Light offers a competitive service for consumer-owned outside lines for $4.99. She also said she is paying a higher price than her friend who also is a customer of American Water Resources. She implied that the common knowledge among some consumers is to call and complain and American Water Resources will give the consumer a deep discount on the $30.99 price. She asked the Office of Consumer Advocate to look into this practice, which she referred to as "*not really ethical*". She also testified that PAWC is allowing American Water Resources to use the American Water name, "*but they're not affiliated*." She said that the use of the name should make PAWC responsible for the overbilling, making the argument that "*[i]f they are allowing their name to be used in a service that is not really ethical, then they also have some form of liability*." She asked for "*some to look into that*." During cross-examination conducted by the PAWC's attorney, the consumer asked the PAWC attorney if she could explain how Duquesne Light can offer a $4.99 plan for the same service, and American Water Resources is offering a $30.99 plan with an increase. The PAWC attorney said she could not explain it, and she further directed the consumer to "*folks at the back of the room*." (Transcript at page 316, line 25, through page 320, line 5; page 324, lines 20-25 through page 325, lines 1-14).

Q. DOES THIS TESTIMONY CONFIRM YOUR CONCERNS AND RECOMMENDATIONS CONCERNING PAWC'S RELATIONSHIP WITH AMERICAN WATER RESOURCES?

A. Yes. These statements by PAWC customers support my recommendation that the Commission halt PAWC's participation in this billing program until or unless significant reforms are required to prevent improper interactions between PAWC, American Water Resources, and consumers.

Q. DOES THIS CONCLUDE YOUR SUPPLEMENTAL TESTIMONY?

A. Yes.

SURREBUTTAL TESTIMONY

OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

PUBLIC VERSION

March 4, 2024

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I have filed Direct Testimony on behalf of the OCA in response to Pennsylvania American Water's (PAWC) base rate case filing on February 1, 2024.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I am filing Surrebuttal Testimony in response to PAWC's Rebuttal Testimony on the following topics in the following order:

- The Company's service quality and customer service performance quality should be considered given the Company's request for a significant rate increase and additional profits due to its management performance.
- The Company's lack of consumer protection policies and programs to ensure that the Service Company's call center representatives are complying with Chapter 14 of the Public Utility Code and Chapter 56 of the Commission's regulations, particularly with regard to handling and evaluating customer complaints.
- The Service Company's call center's customer service performance, including below average performance trends and lack of management oversight of its third-party call center contractors.

- The Company's program and proposed tariff to terminate water service provided by PAWC for nonpayment of charges related to non-Company, third-party providers of sewer services.
- The Company's billing arrangement with American Water Resources, a non-affiliated, third-party provider, which uses the American Water name and logo, of charges that are labeled on PAWC's customer bills as "protection" services for customer-owned service lines and in-home plumbing and PAWC's billing of charges for such services on PAWC customer bills.
- The Company's lack of reasonable customer education concerning high water pressure and pressure reducing valve operations.
- The Company's inability to document the volatility of the number of days included in customer bills.

These issues are important themselves, but particularly so in this case given the magnitude of PAWC's proposed rate increases and the fact that PAWC is proposing its fourth increase in rates in four years.[1] This is in addition to its proposed rate design changes, and the proposal for various trackers and automatic rate increases outside of the normal base rate case (*i.e.*, Section 1308(d) general rate increase request) review process.

Q. DO YOU INCLUDE EXHIBITS WITH YOUR TESTIMONY?

A. Yes. I attach the following Exhibits to my Testimony:

- Exhibit BA-10: PAWC Response to OCA-34-001

[1] OCA Witness Hoover provided a detailed analysis of the number and amount of PAWC's recent rate increases in here Direct Testimony (OCA Statement 1).

- Exhibit BA-11: PAWC Response to OCA-34-003, 2 Confidential Attachments
- Exhibit BA-12: PAWC Response to OCA-34-016, 2 Confidential Attachments

I. PAWC'S SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE IS DIRECTLY RELATED TO THIS RATE CASE AND ITS PROPOSAL FOR AN ADDITIONAL PROFIT IN ITS RATE OF RETURN

Q. PLEASE RESPOND TO PAWC'S REBUTTAL TESTIMONY THAT REJECTS THE CONNECTION BETWEEN SERVICE QUALITY, CUSTOMER SERVICE PERFORMANCE, AND CUSTOMER COMPLAINTS AND ITS PROPOSAL FOR THIS RATE INCREASE AND AN ADDER FOR MANAGEMENT PERFORMANCE.

A. PAWC's Rebuttal generally rejects the notion that the Commission should consider criteria for its rate increase and its request for an additional profit due to its management performance other than those it has self-selected for this purpose. According to Mr. Justin Ladner, PAWC has supported its request for high profits through a "management efficiency adder" with "extensive evidence."[2] Mr. Ladner then summarizes this "evidence" as its Customer Assistance Programs, programs paid for by ratepayers,[3] its environmental protection and water quality program and infrastructure spending, and its "industry leader in buying small and troubled systems," again, all of which are reflected in higher rates paid by its customers. Moreover, with regard to acquisitions, Mr. Ladner omits mention of the pending litigation concerning some of these acquisitions or that on February 22, 2024, the Commission voted 5-0 to reject PAWC's proposed purchase of

[2] PAWC St. No. 15-R, page 6, lines 14-20.

[3] Ratepayers, specifically residential ratepayers, fund PAWC's bill discount program and arrearage management program and grants from the Low Income Household Water Assistance Program are taxpayer-funded. PAWC St. 10, page 27, lines 18-19; OSBA Sch. KCH-13; PAWC St. 01, page 13, lines 19-20, page 14, lines 1-4.

the Borough of Brentwood wastewater system. Also, Mr. Ladner points to positive testimony by about a dozen people at the Public Input Hearings, most of whom do not receive service from PAWC or pay its rates (as they are not ratepayers), without the context that most customer testimony was negative and that approximately 498 formal and 614 informal complaints have been filed against PAWC's in this docket.[4] At no time has the Company accepted that its customer service performance as measured and reported to the Commission and that has been summarized by myself and OCA Witness Roger Colton concerning call answering performance, complaint handling, collection efficiency, and compliance with essential consumer protection rules are reasonable criteria to consider in justifying the significant rate increase or that should factor into the request for additional profits in this "management efficiency adder." In fact, PAWC Witness Ashley Everette states that the assertions of OCA Witnesses Colton and Alexander "…should have no bearing on the Commission's decision to approve a management performance adjustment for the Company."[5]

Q. DO YOU AGREE WITH PAWC'S POSITION THAT ONLY PAWC CAN IDENTIFY THE CRITERIA TO JUSTIFY A MANAGEMENT PERFORMANCE ADJUSTMENT?

A. I firmly reject such an approach and there is no basis for the Company's position on this matter. I understand that PAWC has selected certain criteria to justify its request to increase its rate of return. However, those self-selected criteria should not be the controlling factors. The Commission should take into consideration the full range of customer experiences and interactions with PAWC in considering this request. The

[4] These numbers are based on the OCA's most recent count of complaints.
[5] PAWC St. No. 1-R, page 16, lines 18-19.

unprecedented volume of customer opposition to this rate increase and the poor performance in several key areas as documented with actual evidence must: (1) counter the high-level assertions reflected in the Company's testimony relating to expenditures that it recovers in rates (2) reduce the Company's overall rate increase; and (3) result in a denial of the request for an additional profit (*i.e.*, the management adder) beyond what is absolutely necessary to achieve the public service obligations. The suggestion that ratepayers should incur higher rates to make sure that their publicly regulated utility does its job in a responsible and efficient manner should be rejected.

Q. WHAT IS YOUR RESPONSE TO PAWC'S STATEMENTS THAT THE COMMISSION DOES NOT HAVE THE AUTHORITY OR SHOULD NOT ADOPT ANY SPECIFIC CUSTOMER SERVICE PREFORMANCE STANDARDS OR REFORM POOR PERFORMANCE IN THIS BASE RATE CASE?

A. According to PAWC Witness Everette, my recommendations for certain improvement in customer service performance as a condition of any rate increase is not within the Commission's authority in a base rate case, claiming that any such proposals must be done in the context of a specific alternative rate plan pursuant to Act 58.[6] I defer to OCA counsel's analysis of this claim in its Briefs. However, the suggestion that the Commission cannot consider and react to evidence of poor or less than acceptable customer service performance in its evaluation of PAWC's current or proposed rates is on its face unreasonable and inconsistent with Section 523 governing public utility rate cases in which the Commission must evaluate the "efficiency, effectiveness, and

[6] Ibid., page 33, lines 7-11.

adequacy of service" and Section 1501 which requires all changes and improvements to service "necessary to make such service adequate, efficient, safe and reasonable."[7] It frankly is also inconsistent with the Company's claim for a management adder due to its superior management performance.

My analysis and findings should inform the Commission on the reasonableness of PAWC's significant rate increase request. Where I identify deficiencies in PAWC's customer service performance, I continue to recommend that the Commission order improvements in specific areas as a condition of any rate increase and consider adopting any rate increase and rate of return that reflects the inadequate customer service I have documented. In some areas, I also recommend that the Commission disallow certain incurred costs on the basis of the Company's continuing poor management performance or management negligence.

II. PAWC'S CALL CENTER PERFORMANCE HAS BEEN BELOW AVERAGE AND SHOULD BE IMPROVED AS A CONDITION OF ANY RATE INCREASE.

Q. IN LIGHT OF PAWC'S BELOW AVERAGE CALL CENTER PERFORMANCE, DO YOU STILL RECOMMEND A SPECIFIC LEVEL OF IMPROVEMENT AS A CONDITION OF ANY RATE INCREASE?

A. Yes. I recommended that PAWC be held to improve its call center performance to the level typically achieved by Pennsylvania's electric and natural gas utilities and that the poor performance of the third-party contractors hired by PAWC result in a disallowance of their costs in rates.

[7] 66 Pa. C.S. §§ 523, 1501.

Q. HOW DID PAWC RESPOND TO YOUR FINDINGS ABOUT PAWC'S CALL CENTER PERFORMANCE AND ITS OVERSIGHT OF ITS THIRD-PARTY CALL CENTER PERFORMANCE?

A. As I documented in my Direct, the call center performance in general is below average and the performance of its third-party call centers is even worse. See Exhibit BA-3. However, rather than focus on the actual performance in terms of answering customer calls, PAWC responded by providing general testimony about how difficult it is to staff a call center to answer calls in a timely manner and alleging that improving call center performance would necessarily raise expenses and rates.[8] Ms. Degillio's focus on "daily and hourly call volumes" that would require substantially more costs and higher rates does not reflect the tools available to any large call center to allocate full and parttime staffing to reflect call volume trends.[9] However, Ms. Degillio has not provided any actual plan or analysis of costs and benefits to improve PAWC's call center performance.

Q. HAS PAWC'S CALL CENTER PERFORMANCE IMPROVED RECENTLY?

A. Yes. PAWC Witness Degillio documented the improvement in recent months in her Rebuttal, but she only provided the average of both Service Company call centers and the third-party contractors.[10] Improvement is a welcome development, and my proposal would only ensure that this improvement continues and is implemented in the future rate year in which these new rate increases will occur. That seems to be a reasonable approach given the poor performance I documented in PAWC's prior rate cases and in

[8] PAWC St. No. 09-R, pages 5-6.
[9] PAWC Response to OCA-34-008 confirms the PAWC experience that reflects the normal irregularities of all large call centers in call volumes (e.g., higher volume on Mondays).
[10] Ibid., pages 3-4.

the Commission's Management Audit of PAWC.

Q. PLEASE COMMENT ON MS. DEGILLIO'S CLAIM THAT THE MEASUREMENT OF THE COMMISSION'S CALL CENTER DATA INCLUDES CUSTOMERS WHO REACH THE COMPANY'S AUTOMATED VOICE RESPONSE MENU.

Q. The Commission's Customer Service Performance Report (September 2023) correctly states the measurement that is reported:

> For the calls that are "received" by the company, the caller has several options. One option is to choose to speak to a company representative. When a caller chooses this option, the caller enters a queue to begin a waiting period until a company representative is available to take the call. Once a call enters the queue, it can take one of three routes: it will either be abandoned (the caller chooses not to wait and disconnects the call); it will be answered within 30 seconds; or it will be answered in a time period that is greater than 30 seconds. The percent of those calls answered within 30 seconds is reported to the Commission.[11]

Ms. Degillio's source for her understanding is from a statement from the Commission's Management Audit of Aqua Pa, Peoples Natural Gas Co., and Peoples Gas Co. published in April 2021 (as identified in fn. 1 in Ms. Degillio's Rebuttal, page 5). Ms. Degillio's statement that suggests measuring call center performance under the "answer within 30 second" standard using calls answered by interactive voice response (IVR) automated system rather than a live agent is nonsensical and incorrect. It would not make any sense to count the "answer" of the call by the interactive voice response (IVR) for any purpose in this performance area. It would make sense to count the customer who uses the IVR to select the option to speak to a customer representative as the start of the 30 second period in the performance data, which appears to be how BCS and the electric and gas utilities measure it. Nonetheless, the data in the Commission's September 2023 Report

[11] Customer Service Performance Report (September 2023), page 4.

(reflecting 2022 and prior year performance) shows that Pennsylvania electric and natural gas utilities typically answer by agent (not IVR) over 80% of the calls within 30 seconds on an annual average. There is no basis for holding PAWC, a multi-state utility with access to multiple call centers to a different standard. The same, 80% of calls answered by an agent in 30-seconds standard that the Commission relies upon to monitor the call center performance for Pennsylvania electric and natural gas utilities is a reasonable objective for PAWC to meet and, in so doing, to manage its call center resources to achieve this objective with reasonable costs and expenses. A public utility that does not currently meet the standard should not be rewarded with a higher profit without at least establishing a commitment that ensures a reasonable level of performance when the higher rates are in effect.

Q. HOW DOES PAWC RESPOND TO YOUR SUPPORT FOR THE DISALLOWANCE OF THE COSTS OF ITS THIRD-PARTY CALL CENTERS DUE TO THE DOCUMENTED LACK OF OVERSIGHT AND ACHIEVEMENT OF REASONABLE PERFORMANCE RESULTS?

Q. PAWC Witness Degillio claims that the Company oversees the third-party call centers in the same manner as if they were employees. Putting aside the analysis of complaints, a related issue that I will discuss below, the actual performance of the third-party call centers in answering calls is below the performance of the corporate call centers operated by American Water Works via employees. And, as I documented, the performance level in the contracts themselves has been ignored.[12] Ms. Degillio's claim that the current

[12] OCA St. No. 6, page 20 (Confidential).

contracts allow PAWC to reduce staffing levels, seek damages, or terminate the contract is not responsive to this concern.[13] What would be responsive is if PAWC ever exercised these contractual remedies to address the very poor performance. However, these contractual remedies have not been implemented. Moreover, the contracts do not allow PAWC to reduce payments in response to poor performance. Further, PAWC's contractual remedies are cumbersome, time consuming, and would require litigation to resolve.

The more prudent approach is to build in actual performance requirements that are linked to payment for performance. PAWC's Rebuttal ignores this evidence and provided no updated information on the actual performance of its third-party call centers compared to Service Company call operations. PAWC refuses to agree to any changes in its current call center contracts. [14] Instead, PAWC continues to emphasize meetings, staffing levels, tools related to use of the Company's software, changes in call routing, and training of agents,[15] as opposed to concrete steps to ensure adequate performance. As a result, incurring expenses for the use of the contractors who are allowed to perform at less than reasonable levels and below the level tolerated for in-house call centers is imprudent and unreasonable. PAWC's refusal to recognize the limitations of its current contracts and its continuing acceptance of poor performance supports my recommendation to eliminate these expenses from the revenue requirement.

[13] PAWC St. No. 09-R, page 8, lines 11-14.
[14] Ibid., page 8, lines 15-16: Ms. Degillio rejects any suggestion that the Service Company contracts with the call center contractors should be revised or reformed.
[15] OAWC's Response to OCA-34-009 lists these steps taken to support her Rebuttal testimony that "monitoring and improving CSO performance" occurs. None of these steps link performance to revenues paid to the contractor.

Q. DO YOU AGREE THAT MAINTAINING YOUR RECOMMENDED CUSTOMER CALL CENTER PERFORMANCE STANDARD WOULD BE DIFFICULT TO ACHIEVE ON A MONTHLY BASIS AND, IF SO, WHAT IS YOUR RESPONSE?

A. I agree that maintaining a customer call center performance standard is difficult to achieve every single month. The Commission's reports only provide an annual average performance result for answering calls within 30 seconds and the call abandonment rate. I will modify my recommendation to eliminate the requirement for monthly compliance and instead recommend that performance be reflected in PAWC's annual average. However, it is important to recognize that customers who experience a very poor answering experience in some months do not benefit from an improved or above average result in other months. PAWC should strive to achieve a more balanced experience every month.

III. PAWC'S COMPLAINT HANDLING PRACTICES ARE DEFICIENT AND DO NOT COMPLY WITH STANDARD ROOT CAUSE ANALYSIS

Q. HOW DID PAWC REPOND TO YOUR EVIDENCE CONCERNING THE LACK OF PERFORMANCE STANDARDS, COMPLIANCE AUDITS AND ROOT CAUSE COMPLAINT ANALYSIS?

A. PAWC's Rebuttal continues to allege that the Company conducts a "root cause analysis" of its customer complaints as the primary method to detect the failure to comply with the Commission's consumer protection and service quality regulations or to monitor for compliance with the Company's training materials. See, e.g., Rebuttal Testimony of Ms. Degillio who continues to rely on "coaching" as the Company's primary method of

responding to indicators of customer dissatisfaction[16] and the Rebuttal Testimony of Ms. Dean who continues to describe the Company's response to complaints and BCS findings as a "root cause analysis."[17] This Rebuttal testimony repeats the process reflected in the Company's responses to the OCA's prior data requests on this issue that I described in my Direct Testimony.[18] PAWC has not provided any new information.

Q. DO YOU AGREE THAT THE PAWC RESPONSE TO CUSTOMER COMPLAINTS AND BCS FINDINGS OF INFRACTION AND POTENTIAL VIOLATIONS REFLECTS A ROOT CAUSE ANALYSIS?

A. No. As I explained in my Direct Testimony, the review of individual complaints and the lack of any documentation that identifies trends or reflects any systemic response to an analysis of complaint trends is not a "root cause analysis." PAWC provides no professional basis for the process it describes, which fails to provide any internal reporting on customer complaint trends or identification of underlying causes and does not reflect any management response other than "coaching" individual customer service personnel as a proper root cause analysis would provide. When asked to provide references to professional publications or other resources to support PAWC's definition of a "root cause analysis," the Company is unable to do so.[19] I attach PAWC's Response to OCA-34-001 as Exhibit BA-10. When asked to provide the documentation that reflects any analysis of "root cause trends," the Company responded with a document previously

[16] PAWC St. No. 09-R, page 9, lines 5-13.
[17] PAWC St. No. 14-R, page 21, line 6-7: "PAWC analyzes customer complaints to ensure compliance and perform root cause analyses on its customer complaints."
[18] OCA St. 6, page
[19] PAWC Response to OCA-34-001.

provided that purports to show the root cause analysis of complaints reflected in internal documents since June 1, 2022 and another document that is a "running log" that is updated continuously to track root cause determinations by various regulation categories.[20] I attach PAWC's Response to OCA-34-003 and both attachments as Exhibit BA-11. Neither document is a proper root cause analysis. The first document previously provided in response to OCA-08-017 is a list of complaints by categories without any information on the underlying causes of the complaints or any action undertaken to respond to any analysis of the complaints themselves. The second document is another spreadsheet that includes basic information about the complaint. There is a column listed as **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** I provided a summary of a proper root cause analysis in my Direct Testimony that PAWC's Rebuttal ignores. It bears repeating that a spreadsheet that counts customer complaints and reflects an opaque process to determine "fault" and without any summary of trends and management response to the data is not a root cause analysis. As stated in response to a request to document actions taken in response to its complaint monitoring program, PAWC stated, "There has been no changes, reforms, or revisions to the Company's internal training programs and/or policies as a result of Pennsylvania specific results or complaint data. Any training or mentoring discussions as a result of feedback from quality assurance review is performed on an individual basis

[20] PAWC Response to OCA-34-002, Confidential Attachment to OCA-08-017 and Confidential Attachment to OCA-34-002.

with identified call agents."[21]

Q. DID THE PAWC'S REBUTTAL RESPOND TO THE SUMMARY OF THE BCS COMPLAINT DATA AND FINDINGS OF INFRACTIONS AND POTENTIAL VIOLATIONS CAUSE YOU TO CHANGE YOUR RECOMMENDATIONS?

A. No. There is no record or other indication of PAWC's management performing any root cause analysis of customer complaints or other complaint trends identified in the BCS reports. Furthermore, PAWC's Rebuttal to my interpretation of PAWC's Response to OCA-20-024[22] confirms my overall conclusion and supports my recommendation.

This so-called example of root cause analysis was created for the purposes of responding to the OCA data request. And as I documented in my Direct, this document reflects a listing of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** [redacted] **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. PLEASE RESPOND TO PAWC'S REBUTTAL THAT RELIES ON ITS RESPONSE TO OCA-08-017 AS THE BASIS FOR ITS CLAIM THAT IT CONDUCTS A ROOT CAUSE ANALYSIS OF COMPLAINTS.

A. PAWC provided two attachments of complaints logs in this data response, reflecting the Company's tracking of BCS complaints and internal customer disputes. According to the

[21] PAWC Response to OCA-20-010.
[22] PAWC St. No. 14-R, page 23.

response, these spreadsheets reflect their root cause analysis. I agree that each complaint is identified, categorized, and the internal determination of whether the complaint is "true" or "false" is recorded. Each document contains a column entitled "what can we do better?" However, the conclusion that these documents constitute a root cause analysis is not correct. There is no analysis of the trends of the information reflected in these tracking logs. There is no evidence that a summary of complaint trends results in a review and potential change of how its policies are being applied or whether the policies should be amended or changed. In fact, every attempt to obtain that type of actual use of the raw data in these tracking logs did not result in any further internal documents. PAWC's policy to have the Compliance Supervisor "analyze the Complaint Log," and schedule "periodic meetings with Senior Operations Managers to discuss the root cause of the trends identified through the analysis of informal complaints."[23] However, PAWC is not able to provide any internal documents to support this description and the only results that the Company can document is that employees or contractors are "coached" to assure further compliance. This approach is far too informal and without any evidentiary basis for actual auditing or monitoring by management for improper handling of a customer complaint.

When asked to document reports to management of "root cause trends," PAWC's response included several presentations provided to Operations Senior Management to discuss "root cause trends."[24] These materials present a compilation of **[BEGIN CONFIDENTIAL]** [redacted]

[23] PAWC St. No. 14-R, page 22, lines 7-9.
[24] PAWC Response to OCA-34-003, Attachment 2 Confidential.

[redacted] **[END CONFIDENTIAL].** There is no evidence that PAWC routinely or indeed ever produces summaries of complaint trends (such as, complaints related to coding of tenant-occupied buildings for a specific time frame) and then investigates the underlying reasons for the complaints to determine if policies or procedures should be changes or updated. The management reports provide raw data without any identification of underlying cause(s) or that identifies management's response.

Q. HOW DID PAWC RESPOND TO YOUR CONCERNS ABOUT THE TRAINING MATERIALS AND "TEST" USED TO ALLOW CALL CENTER STAFF TO ANSWER AND RESPOND TO PAWC CALLS?

A. Ms. Dean's Rebuttal emphasized its lengthy 80-page training materials[25] but the Company did not respond to my testimony concerning the actual "test" that is used to allow its customer service representatives to handle PAWC calls.

Q. DID PAWC RESPOND TO THE CUSTOMER SATISFACTION SURVEY DATA YOU INCLUDED IN YOUR TESTIMONY AND THAT SUPPORTS YOUR OVERALL RECOMMENDATION TO ELIMINATE ANY MANAGEMENT EFFICIENCY ADDER TO THE RATE OF RETURN?

A. No. While OCA Witness Degillio responded to the design of the surveys and their content in response to OCA Witness Colton, she did not respond to my documentation that the actual customer satisfaction results reflect a below average level of customer

[25] PAWC St. No. 09-R, pages 8-9.

satisfaction with key interactions with PAWC. I see no basis for ignoring PAWC's poor results compared to other Pennsylvania public utilities. I certainly would not agree that the PAWC results should be relied upon to support the Company's claim for additional profit due to its management efficiency.

IV. PAWC'S RESPONSE TO MY RECOMMENDATIONS ON THE TERMINATION OF SERVICE TO PAWC CUSTOMERS ON BEHALF OF "NON-COMPANY" WASTEWATER PROVIDERS IS GENERALLY REASONABLE.

Q. HOW DID PAWC RESPOND TO YOUR RECOMMENDATIONS CONCERNING THE TERMINATION OF PAWC WATER CUSTOMERS FOR NONPAYMENT OF "NON-COMPANY" WASTEWATER SERVICE PROVIDERS?

A. In general, PAWC agrees with my recommendations by either confirming that its current practice already complies or agreeing to implement certain new procedures.[26] In addition, the Company has agreed to revise its proposed Tariff language to reflect my recommendations with one exception.

Q. WHAT IS YOUR REMAINING CONCERN?

A. PAWC's proposed tariff does not limit its right to terminate water service on behalf of the entities named in the Water Services Act but injects the term "non-Company wastewater provider."[27] PAWC's justification for this broader term is that it has a Joint Services Agreement with Aqua that is approved by the Commission.[28] I do not

[26] PAWC St. No. 14-R, pages 19-20.
[27] PAWC St. No. 4-R, PAWC Exhibit SDG-4R.
[28] PAWC Response to OCA-34-006.

recommend, however, the broader language proposed by PAWC. Rather, I recommend that the Tariff refer to entities named in the Water Services Act and other non-Company entities as approved by the Commission. Additionally, I find the language in Ms. Gress' proposed Section 12.8 to not be clear enough to be understood by the average consumer. Finally, the Company must follow its own tariff rules and regulations, and the tariff should specify the required content of the termination notice that gets posted at the customer's premise. This will provide future guidance to PAWC management of what the notice should state.

As a result, I recommend revision to Ms. Gress' proposed Section 12.8 as follows (strikeouts represent recommended deletions and underline text represents recommended language):

> **12.8 Termination by Company for Non-Payment of Wastewater Service to a Non-Company Wastewater Provider**
>
> ~~The Company may also terminate service in accordance with the terms of any agreement between the Company and a non-Company wastewater provider for non-payment of wastewater service when due upon prior notice by the non-Company wastewater provider.~~
> The Company may terminate a customer's water service due to the customer's non-payment of charges owed to a non-Company wastewater provider, provided that: (1) the Company has an effective agreement with the non-Company wastewater provider pursuant to the Water Services Act or Act of April 14, 2006, codified at 53 P.S. §§ 3102.501 – 3102.507, or a Commission-approved agreement with the non-Company wastewater provider; and (2) the customer received prior notice from the non-Company wastewater provider of the past due amounts owed to the non-Company wastewater provider.
>
> Following the issuance of termination notice by the non-Company wastewater provider, the Company will not ~~move forward with termination of~~ terminate the customer's water service upon notification to the Company by the non-Company wastewater provider that the customer does either of the following: (1) disputes the termination for non-payment; or (2) ~~if the customer~~ produces a medical certification.

Upon termination, the Company will post the termination notice at the customer's premises. The Company's termination notice shall provide the following information in conspicuous format and plain language: (1) a statement that PAWC terminated the customer's water service due to the customer's non-payment of non-Company wastewater charges; (2) a statement that the termination of service is not the result of customer's non-payment of water charges owed to PAWC; (3) the name and contact number of the non-Company wastewater provider; (4) the contact information for the Company; and (5) a citation to Section 12.8 of PAWC's Water Tariff and the weblink for accessing the Company's tariff webpage.

V. THE COMMISSION SHOULD OPEN AN INVESTIGATION OF PAWC'S RELATIONSHIP WITH AMERICAN WATER RESOURCES AND ITS BILLING FOR NON-BASIC WARRANTY SERVICES ON PAWC CUSTOMER BILLS.

Q. DOES PAWC'S REBUTTAL PROVIDE ANY BASIS FOR CHANGING YOUR RECOMMENDATIONS CONCERNING THE BILLING OF AMERICAN WATER RESOURCE SERVICES ON ITS CUSTOMER BILLS?

A. No. PAWC's Rebuttal from Ms. Degillio confirms that it has a contractual relationship with American Water Resources (AWR) to bill non-basic warranty or insurance services in return for a fee.[29] This relationship is exclusive between PAWC and AWR in that no other provider of these services appears on PAWC bills.[30] The nature of this relationship is akin to one of an affiliated interest, but the actual legal relationship is not one of corporate affiliation. I documented the close nature of this relationship in the interactions between PAWC's representative and an AWR representative who attended the public input hearings in my Supplemental Direct Testimony. **[BEGIN CONFIDENTIAL]**

[redacted]

[29] PAWC St. No. 09-R, page 12.
[30] PAWC Response to OCA-34-013.

[redacted]

[END CONFIDENTIAL]

Q. PLEASE COMMENT ON THE NATURE OF THE MARKETING MATERIALS SENT TO PAWC CUSTOMERS BY AWR.

A. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** These materials raise several concerns, and I do not purport to make recommendations about the content of these marketing materials in this proceeding but rather recommend their consideration by the Commission in the investigation that I recommended in my direct testimony and maintain in my surrebuttal. However, I point out the following significant issues that

[31] PAWC St. No. 09-R, page 14.

[32] [redacted]

should raise red flags and support my recommendation for an investigation:

- **[BEGIN CONFIDENTIAL]** [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]
- [redacted]

[redacted] **[END CONFIDENTIAL]**

Q. MS. DEGILLIO POINTED TO A COMMISSION APPROVAL OF A PRIOR CONTRACT WITH AWR. IS THAT PRIOR CONTRACT AND COMMISSION APPROVAL RELEVANT TO THE CURRENT CONTRACTUAL RELATIONSHIP?

A. No. The prior contract cited by Ms. Degillio reflects the affiliated interest contract with AWR. The current contract and interactions between PAWC and AWR post-date that contract and reflect an attempt to continue a relationship based on a contract between unaffiliated entities that raises serious consumer protection implications as I have

documented in my Direct and in this Surrebuttal. I am not aware of any Commission approval of the current contract between PAWC and AWR.

Q. MS. DEGILLIO CLAIMS THAT THE RELATIONSHIP BETWEEN PAWC AND AWR IS TYPICAL OF OTHER PUBLIC UTILITIES WHO BILL FOR NON-BASIC HOME REPAIR SERVICES. IS THIS CORRECT?

A. Not necessarily. Ms. Degillio's Rebuttal pointed to the relationship between another home services repair provider, HomeServe, and another Pennsylvania water utility to support the relationship between PAWC and AWR.[33] According to HomeServe's web portal, one of their "partners" is Aqua (a unit of Essential Utilities), but the information on that program states that HomeServe's products will not appear on Aqua's customer bills.[34] According to this web portal, HomeServe does provide non-basic utility services to several FirstEnergy companies in Pennsylvania[35] but FirstEnergy does not include HomeServe charges on its bills.[36] Even if that were not the case, this attempt to point to other relationships that allow a favored partner to bill for repair services on the utility bill does not resolve the specific nature of the relationship between PAWC and AWR. In particular, the products and services marketed by HomeServe do not attempt to improperly link the corporate entity by using the logo and marketing language of their partner public utilities as exists between PAWC and AWR. **[BEGIN CONFIDENTIAL]**

[redacted]

[33] Ibid., page 14. This information about HomeServe is marked Confidential in her testimony but the publicly available website for HomeServe and what it sells, and the identity of its utility "partners" is not confidential.
[34] "If I'm an Aqua customer, will HomeServe charges show up on my Aqua bill? No. Customers who sign up for these plans will be billed directly by HomeServe." https://www.homeserve.com/en-us/partners/aqua/
[35] https://www.homeserve.com/en-us/partners/firstenergy/
[36] *Interstate Gas Supply, Inc. v. Metropolitan Edison Co., et al*, C-2019-3013805 et al., April 14, 2022 Opinion and Order, page 18. https://www.puc.pa.gov/pcdocs/1740689.pdf

[redacted] **[END CONFIDENTIAL]** and, thus, obtain a marketing advantage that is potentially deceptive and misleading as I documented by comments from several customers at the public input hearings in my Supplemental Direct Testimony, many of whom had originally assumed these entities were connected legally.

Q. MS. DEGILLIO TESTIFIES AS TO THE VALUE OF AWR'S SERVICES AND BENEFIT TO PAWC'S CUSTOMERS. PLEASE COMMENT ON HER DESCRIPTIONS.

A. Ms. Degillio waxes enthusiastic on AWR's services and value to PAWC's customers, describes how customers avoid significant costs, and asserts that customers view this service favorably.[37] I find it difficult to understand how Ms. Degillio has this information or on what it is based. It is certainly inconsistent with the testimony by State Representative Donahue and customers at the Public Input Hearing who complained about the cost and value of the line protection plans billed by PAWC.[38] This type of speculative opinion supports my concern about the integrated nature of the relationship between PAWC and AWR that is reflected in the contract terms and that makes clear that PAWC treats this company as if it was still an affiliated interest.

Q. TURNING TO THE RATEMAKING ISSUE, IS THERE ANY IMPACT ON PAWC'S REVENUES OR REVENUE REQUIREMENT WITH YOUR RECOMMENDATION?

A. No. The OCA's proposed revenue requirement includes the current level of revenues associated with this program and if, as I have recommended, PAWC is directed to

[37] PAWC St. No. 09-R, page 12, lines 9-17.
[38] PAWC St. No. 02-R, page 17, lines 17-20; Tr. pages 1516-1518.

suspend marketing activities under the Billing Agreement and not bill additional (new) enrollees for AWR services pending a full Commission investigation of this billing and marketing arrangement, PAWC has presented no evidence to demonstrate that the current level of revenue will not continue until or unless there is any future order. I do not recommend that PAWC immediately halt the use of its billing system for currently enrolled customers. My recommendation is to bring this matter to the Commission's attention and propose that a fuller investigation occur, particularly with regard to the use of the American Water Works logo and trademark symbols, whether or under what conditions customer information is provided to AWR, whether or under what conditions PAWC can provide marketing or billing services for AWR, and the need for additional disclosures provided to PAWC's customers about their ability to select other providers of these services. I refer to the surrebuttal testimony of OCA witness Ralph C. Smith for this recommendation to keep PAWC's claimed revenues from AWR for the FPFTY.

VI. THE RECOMMENDATION THAT PAWC DEVELOP A CUSTOMER EDUCATION PROGRAM REGARDING PRESSURE REDUCING VALVES IS REASONABLE

Q. DID PAWC ACCEPT YOUR RECOMMENDATION TO DEVELOP A CUSTOMER EDUCATION PROGRAM FOR ITS CUSTOMERS ABOUT PRESSURE REDUCING VALVES?

A. No. PAWC Witness Runzer's Rebuttal points to the Company's tariff language and states that field representatives educate customers about this tariff language and its only impacts a small percentage of customers.[39]

[39] PAWC St. No. 2-R, page 11, lines 11-17.

Q. DO YOU AGREE WITH PAWC'S REFUSAL TO CREATE A CUSTOMER EDUCATION PROGRAM ON HIGH PRESSURE SITUATIONS AND THE ROLE OF PRESSURE REDUCING VALVES?

A. No. I don't understand why a publicly regulated water utility would not want to educate its customers on the causes and remedies associated with high water pressure, when pressure reducing valves are appropriate, how they work, and what consumers should do to monitor their performance. The Company has a unique ability to educate customers on the distinctions between customer and utility responsibilities and the opportunity, through that education, to avoid preventable to damages to customer property and reduce the burden and cost on PAWC to respond to questions and complaints after a problem occurs. There is also the concern that some customers may not have the opportunity or cause to interact with field service representatives and, thus, do not receive information about pressure reducing valves through that conduit. PAWC's view is that it has an obligation to provide information to customers only when a field representative responds to a customer who calls about a pressure complaint.[40] I am surprised that the utility that is claiming management efficiency and excellence in its pursuit of customer satisfaction would take such a narrow view of this issue and summarily reject my modest proposal.

[40] PAWC Response to OCA-34-005.

VII. PAWC RESPONSE TO CUSTOMER CONCERNS ABOUT THE IRREGULAR BILLING CYCLES AT THE PUBLIC INPUT HEARINGS IS UNREASONABLE.

Q. HOW DID PAWC RESPOND TO THE CUSTOMER CONCERNS ABOUT IRREGULAR BILLING CYCLES YOU DOCUMENTED IN YOUR SUPPLEMENTAL DIRECT TESTIMONY?

A. PAWC's Rebuttal merely recited the Commission's regulations that require that monthly bills reflect a billing system of not less than 26 days and not more than 35 days. PAWC evidently interprets this regulation to allow customers to receive bills that differ significantly in the number of days within their billing period as opposed to an internal system that routinely uses the same billing period or at least a practice of not deviating significantly in the number of days for billing. When asked to document the volume of customer bills that reflect each of these billing periods (26 days to 35 days), PAWC is unable to provide this information.[41] As a result, I recommend that PAWC conduct an analysis of how widely its customer billing cycles vary and consider steps to reduce the volatility of billing cycles to respond to a legitimate public concern. When customers are faced with widely divergent billing cycles, the billed amount will naturally vary, resulting in customer billing inquires to the call center as well as concerns about making payment in full to avoid late fees or collection action. I realize that budget billing is an option for some customers, but that should not be the sole response to this concern.

[41] PAWC Response to OCA-34-004.

VIII. SUMMARY OF CONDITIONS THAT SHOULD BE ATTACHED TO ANY RATE INCREASE

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS BASED ON YOUR REVIEW OF THE COMPANY'S REBUTTAL TESTIMONY.

A. The majority of my recommendations have not changed. For ease of reference the updates are italicized:

1. Any rate increase granted in this proceeding should reflect PAWC's failure to structure its arrangements with the Service Company in an arms-length manner that protects PAWC and its customers from poor call center performance and PAWC's failure to properly manage and oversee the call center performance by tracking and evaluating its customer disputes and BCS findings or respond to the obvious trends of infractions and verified violations. These failures refute PAWC's claim of superior management performance and should be considered by the Commission under Section 523 in setting just and reasonable rates as recommended by OCA witness David Garrett's recommended return on equity in this proceeding (OCA Statement 3-R).

2. PAWC should conduct root cause analysis of all customer complaint data on a regular basis and track complaints and analysis for specific call centers, whether operated by the parent company or a third-party contractor.

3. Any new or amended affiliate interest agreements approved by the Commission should contain an arms-length contractual provision that grants PAWC the contractual protection to perform audits of the Service Company's CSO's performance based on defined call center metrics and to use specific call center complaint data to determine, in part, penalties and payments under the contract.

4. Any new or amended affiliate interest agreements approved by the Commission should contain an arms-length contractual provision that (1) will require the Service Company in its contracts with third-party contractors to reduce the fees it owes to the third-party contractor so that Service Company is not responsible for the payment of fees related to services that fail to meet the metrics; and (2) the Service Company will not allocate costs to PAWC for services that fail to meet the call center metrics.

5. PAWC should be required to provide managerial oversight of the Service Company's CSO's call center performance, including but not limited to conducting audits of the Service Company's CSO's performance based on defined metrics and conducting a proper root cause analysis of its internal disputes and BCS related findings and update its findings and conclusions on a quarterly basis.

6. The Commission should adopt specific performance standards as a condition of any rate increase approved in this proceeding. Specifically, the Commission should require PAWC to comply with an annual average of answering 80% of PAWC calls within 30 seconds and a 4% call abandonment rate, performance that is routinely met by Pennsylvania's electric and natural gas utilities. *The original recommendation for a monthly standard is eliminated.* In light of the historical documentation of poor performance and the lack of managerial attention to this issue with inadequate oversight and enforcement of any reasonable standard, PAWC should be held to specific performance standards. Reporting results alone is insufficient in light of this history.

7. PAWC should be required to reform its Pennsylvania-specific "test" and training for its customer representatives to address the full scope of Chapter 56 and Chapter 14 rights and remedies that I have identified are lacking, as well as more detailed monitoring programs that reflect Pennsylvania-specific rights and remedies. This condition should require PAWC to routinely audit and evaluate the performance of its third-party contractors.

8. PAWC's revenue requirement should also be adjusted as recommended by OCA Witness Ralph Smith (OCA Statement 2-R) to eliminate expenses for third party call centers that have routinely failed to meet reasonable call performance standards for PAWC's customers and in part due to PAWC's failure to implement reasonable measures to respond to poor performance.

9. Finally, any rate increase granted in this proceeding should reflect the poor performance of the call center operations since 2019. These failures refute PAWC's claim of superior management performance and should be considered by the Commission under Section 523 in setting just and reasonable rates. Specifically, in my opinion, the poor performance coupled with PAWC's failure to oversee and evaluate the Service Company's performance should be reflected in the return on equity granted in this proceeding. These failures – in addition to the poor performance identified by OCA witness Colton (OCA Statement 5-R) – support rejection of PAWC's proposal for a higher return on equity based on its management performance and support adoption of OCA witness Garrett's recommended return on equity.

10. PAWC should be required to provide customer education to water customers about high water pressure situations and the lifespan of pressure reducing valves, consistent with my recommendations in my testimony above.

11. The Commission should adopt PAWC's proposed tariff revision with respect to the implementation of termination of water service to its customers on behalf of only those entities providing wastewater service identified in the Water Services Act.

12. As a result of my documentation of seriously misleading and improper conduct in the implementation of PAWC's billing for "protection services"

provided by American Water Resources, I recommend that the Commission promptly initiate an investigation of PAWC's program to bill for non-basic services and direct PAWC to suspend the billing for this program for any new customers and cease marketing activities until the investigation is complete and that such program require substantial reforms if allowed to proceed in the future. In the context of this rate case, the reliance on the revenues produced by this program is questionable, however, *the current level of revenues should remain in the revenue requirement pending any results of the Commission's investigation*.

13. [New] *I recommend that PAWC conduct an analysis of how widely its customer billing cycles vary and consider steps to reduce the volatility of billing cycles to respond to a legitimate public concern.*

Q. DOES THIS COMPLETE YOUR TESTIMONY AT THIS TIME?

A. Yes. However, I reserve the right to supplement this testimony based on pending discovery. Also, to the extent that I did not respond to a specific argument or statement made by other witnesses in Rebuttal does not indicate my agreement.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 34

OCA 34-001

Responsible Witness: Tawana Dean, Senior Manager, Customer Compliance

Question:

Ms. Dean states that PAWC conducts a "root cause" of its customer complaints (PAWC St. 14-R, page 2, line 7). Please provide Ms. Dean's definition of a "root cause analyses" with citations to any professional publication or resource that supports her definition.

Response:

The Company assumes that the intended testimony citation is PAWC St. 14-R, page 21, line 7. When Ms. Dean refers to a "root cause analysis" of customer complaints, she is referring to a process that is designed to determine: (1) the basis of the customer complaint; (2) any regulatory non-compliance associated with the basis of the customer complaint; and (3) any changes that could be made to better address the basis of the customer complaint. Ms. Dean specifically describes the activities that contribute to PAWC's "root cause analysis" of customer complaints on pages 21-24 of her rebuttal testimony (including cited exhibits and attachments).

DIRECT TESTIMONY

OF

TERRY L. FOUGHT

ON BEHALF OF

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

FEBRUARY 1, 2024

TABLE OF CONTENTS
PAWC WATER SUPPLY & WASTEWATER SYSTEMS

PRESSURES AND PRESSURE SURVEYS..... 4
CUSTOMER COMPLAINTS..... 10

EXHIBITS

EXHIBIT TLF-1 – VITA
EXHIBIT TLF-2 (CONFIDENTIAL) – FORMAL COMPLAINTS
EXHIBIT TLF-3 (CONFIDENTIAL) – INFORMAL COMPLAINT

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS FOR THE RECORD.

A. Terry L. Fought, 780 Cardinal Drive, Harrisburg, Pennsylvania, 17111.

Q BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a self-employed consulting engineer retained by the Office of Consumer Advocate (OCA) for the purposes of providing testimony in this proceeding.

Q. PLEASE DESCRIBE YOUR BACKGROUND AND QUALIFICATIONS.

A. Exhibit TLF-1, which is attached to this testimony, describes my educational background and applicable experience.

Q. WHAT ISSUES HAVE YOU BEEN ASKED TO INVESTIGATE REGARDING THIS PENNSYLVANIA AMERICAN WATER COMPANY'S (PAWC) RATE CASE?

A. The OCA requested that I investigate: (1) quality of service issues, and (2) customer complaints.

Q. WHAT DID YOUR INVESTIGATION CONSIST OF?

A. My investigation included: (1) reviewing portions of PAWC's filing applicable to Quality of Service; (2) reviewing informal and formal complaints filed by PAWC customers with the PUC; (3) reviewing customer complaints received by PAWC; (4) reviewing customer complaints received by OCA; (5) reviewing the Direct Testimony of PAWC witnesses Ashley E. Everette, PAWC Statement No.1; Jim Runzer, PAWC Statement No. 2; Bruce W. Aiton, PAWC Statement No. 3; E. Christopher Abruzzo, PAWC Statement No. 6, and Constance E. Heppenstall,

PAWC Statement No. 12; (6) reviewing the Management Audit made public in December 2023 and PAWC's Implementation Plan where they address PAWC's quality of service, in Docket No. D-2022-3035217; and (7) reviewing PAWC's responses to the OCA's interrogatories regarding quality of service issues. My investigation will also include reviewing the transcripts of the attending the twelve (12) Public Input Hearings (PIH) when those are available.

PAWC'S WATER SUPPLY & WASTEWATER SYSTEMS

Q. BRIEFLY DESCRIBE PAWC'S WATER AND WASTEWATER OPERATIONS.

A. PAWC owns, operates, and maintains potable water production, treatment, storage, transmission and distribution systems, and wastewater collection, pumping, and/or treatment systems, for furnishing water and wastewater services to approximately 780,000 residential, commercial, industrial, and governmental customers in communities located in 37 of the 67 counties across Pennsylvania.[1]

PAWC's utility plant accounts include land and land rights, structures and improvements, wells, pumping equipment and associated facilities, purification plant equipment, sludge disposal facilities, transmission and distribution mains, collection pipes, distribution storage facilities, service lines, meters, hydrants, and other facilities, including material and supplies.[2]

[1] PAWC Statement No. 2, pp. 2-3.
[2] PAWC Statement No. 2, p. 4.

Q. WHAT QUALITY OF SERVICE ISSUES ARE ADDRESSED IN YOUR TESTIMONY?

A. Pressures and pressure surveys, and customer complaints including PAWC's listing of customer complaints (Complaint Log), formal complaints and letters to the PUC. Because my testimony will be finalized before the PIHs are concluded, I will address the PIH testimony in Supplemental Direct testimony that is currently due by February 13, 2024.

PRESSURES AND PRESSURE SURVEYS

Q. WHAT ARE THE PUC'S REQUIREMENTS FOR PRESSURES AND PRESSURE SURVEYS?

A. According to 52 Pa. Code § 65.6. Pressures:

> (a) *Variations in pressure.* The utility shall maintain normal operating pressures of not less than 25 p.s.i.g. nor more than 125 p.s.i.g. at the main, except that during periods of peak seasonal loads the pressures at the time of hourly maximum demand may be not less than 20 p.s.i.g. nor more than 150 p.s.i.g. and that during periods of hourly minimum demand the pressure may be not more than 150 p.s.i.g. A utility may undertake to furnish a service which does not comply with the foregoing specifications where compliance with such specifications would prevent it from furnishing adequate service to any customer or where called for by good engineering practices. The Company of the Commission to require service improvements incorporating standards other than those set forth in this subsection when, after investigation, it determines that such improvements are necessary is not hereby restricted.
>
> (b) *Pressure gauges.* Within 2 years after the effective date of this section, each utility shall obtain one or more recording pressure gauges for each separately operated pressure zone for the purpose of making pressure surveys as required by this section. These gauges shall be able to record the pressure experienced on the zones and shall be able to record a continuous 24-hour test. Each utility serving 1,000 or more customers or 1,000 or more customers in any separately operated zone of a multi-zone utility shall maintain one or more of these recording pressure gauges in service at some representative point or points in each of the pressure zones of the utility.

(c) Telemetering. An utility may make the pressure surveys required by this section by means of telemetered information electronically transferred to printed copy instead of using recording pressure gauges.

(d) Pressure surveys. At regular intervals, but not less than once each year, each utility shall make a survey of pressures in its distribution system of sufficient magnitude to indicate the pressures maintained at representative points on its system. The surveys should be made at or near periods of maximum and minimum usage. Records of these surveys shall show the date and time of beginning and end of the test and the location at which the test was made. Records of these pressure surveys shall be maintained by the utility for a period of at least three years and shall be made available to representatives, agents, or employes of the Commission upon request.

Notes of Decisions

Adequate Pressure

The 25 p.s.i.g. minimum expressed in subsection (a) is not intended to restrict the Company of the PUC to order improvements where service is inadequate; therefore, the PUC has the power to order needed improvements notwithstanding that the pressure in a utility's main meets the standard of the regulation. *Barone v. Pennsylvania Public Utility Commission*, 485 A.2d 519 (Pa. Cmwlth. 1984).

Q. WHAT ARE DEP'S REQUIREMENTS FOR SYSTEM PRESSURES?

A. According to DEP's Public Water Supply Manual, Part II, Community System Design Standards:

1. Pressure[3]

All water mains, including those not designed to provide fire protection, shall be sized after a hydraulic analysis based on flow demands and pressure requirements. The pipe system and its appurtenances shall be designed to maintain a minimum pressure of 20 pounds per square inch, gauge (psig) at ground level at all points in the distribution system under all conditions of flow. The normal working pressure in the distribution system should be approximately 60 psig.

[3] Public Water Supply Manual, Part II, Community System Design Standards, May 6, 2006, pp. 186-187.

Q. WHAT ARE THE DIFFERENCES BETWEEN THE PUC AND DEP PRESSURE REQUIREMENTS?

A. The PUC has a maximum and minimum pressure criterion while DEP has a minimum and normal working pressure criterion. The PUC has a minimum criterion of 25 psi at the main while DEP's minimum criteria is 20 psi at ground level. Assuming the main is buried 4.5 feet below ground, the DEP minimum criteria is equivalent to 22 psi at the main.

Instead of having a pressure survey requirement for all water systems, DEP imposes a pressure survey requirement on specific systems with known pressure problems.

Q. WHAT ARE THE REPRESENTATIVE POINTS ON THE SYSTEM WHERE PRESSURE SURVEYS SHOULD BE CONDUCTED?

A. In general, the representative points are highest and lowest ground elevations of each distribution system in each pressure zone.

Q. HOW HAVE PRESSURE SURVEYS CHANGED SINCE 1984?

A. The latest modification to 52 Pa. Code § 65.6. Pressures occurred in 1984 when the typical technology consisted of either: (1) installing one or more recording pressure gauges in each separately operated pressure zone or (2) transferring electronic telemetered pressure information to printed copy. In both options, it was intended that the highest and lowest pressures experienced by a customer in each pressure zone would be determined by recording the pressures at representative points. Generally, the highest pressures will be located in the portion of the

pressure zone with a water main at the lowest ground elevation, and the lowest pressures will be located in the portion of the pressure zone with a water main at the highest ground elevation.[4]

PAWC, like most water supply utilities, now has Supervisory Control and Data Acquisition (SCADA) systems and hydraulic computer models capable of checking pressures throughout its distribution systems. The OCA has accepted utility-provided pressures at fire hydrants, from hydraulic models and/or SCADA data in lieu of "pressure surveys" if there haven't been any customer complaints that indicate non-compliance with 52 Pa. Code § 65.6. Having utilities provide this data is more cost effective than conducting pressure surveys, assuming the utility provides a complete Customer Complaint Log that includes all customer complaints regarding pressure.

For example, if the complaint log shows that a customer has complained about water pressure, the pressure taken at a nearby fire hydrant can be used to determine compliance with 52 Pa. Code § 65.6 by adjusting the pressure for the difference in ground elevation. If the change in elevation estimated by on-line mapping indicates a possible violation, a field survey can resolve the issue.

[4] This statement may not consider low pressures due to pressure drops in mains with pipe sizes under 4-inches.

Q. HAS PAWC PROVIDED INFORMATION REGARDING CUSTOMER PRESSURE COMPLAINTS?

A. Yes, in response to OCA-7-005, the PAWC submitted in Attachment 5 a Confidential Customer Complaint Log that contained 1,809 customer contacts regarding pressure for the period July 12, 2022 through July 31 2023.[5]

Q. DID YOU REVIEW PAWC'S LISTING OF CUSTOMER PRESSURE COMPLAINTS?

A. Yes. I reviewed each listing in the Complaint Log.

Q. IS THE INFORMATION PROVIDED BY THE PAWC SUITABLE TO REPLACE PRESSURE SURVEYS?

A. Yes.

Q. DO YOU HAVE ANY COMMENTS REGARDING THE COMPLETENESS OF THE COMPLAINT LOG REGARDING PRESSURES?

A. In its response to many complaints, PAWC did not always report the pressure available to the customer at the water main once PAWC decided that the customer had a leak or needed to install, adjust, or replace a pressure reducing valve (prv). In a few cases, the customer was advised to install an expansion tank. A statement that a customer's pressure is within an acceptable range should not be considered sufficient for either low- or high-pressure complaints. In all pressure cases, PAWC

[5] The number of contacts include rescheduling contacts due to customers not being available and follow up contacts by the Company.

should provide the pressure available at its water main to the customer and record it in the Complaint log. This would allow the customer to make sure that their plumber is providing an acceptable prv and/or expansion tank and the reviewer of the Complaint Log to determine if PAWC's advice is reasonable.

Q. DO YOU HAVE ANY COMMENTS REGARDING THE COMPLETENESS OF THE COMPLAINT LOG REGARDING PRESSURES HIGHER THAN 125 PSI?

A. Yes, ten customers reported pressures ranging from 130 psi to 180 psi. PAWC reported pressures ranging from 130 psi to 176 psi in nine complaints and did not report pressure available at its water main in 15 cases.

Q. ACCORDING TO THE COMPLAINT LOGS, HOW WERE CUSTOMERS INSTRUCTED TO ADDRESS HIGH PRESSURES?

A. According to the Complaint Log, the customers were instructed to either install, adjust, or replace their prv and sometimes an expansion tank regardless of what pressures are provided by PAWC.

Q. CAN A PRV FAIL IN SUCH A MANNER TO CAUSE CONSIDERABLE DAMAGE TO THE CUSTOMER'S HOME?

A. Yes. A prv is a mechanical device that does not have a permanent life span. PAWC's Pressure Complaint Log indicated that high pressure complaints are resolved by the customers either installing, adjusting, or replacing the pvc. Considerable damage can be caused by a prv failing to reduce a pressure exceeding 125 psi.

Q. DO YOU HAVE ANY SUGGESTIONS FOR PAWC TO PROTECT WATER CUSTOMERS FROM DAMAGE DUE TO HIGH PRESSURES?

A. Yes. Where PAWC has identified a household with normal operating pressure that exceeds 125 psi, PAWC should inform customers when to replace their prv and describe how to determine when a prv is nearing the end of its service life. This information would also be valuable for customers with prvs that have pressures less than 125 psi where PAWC has identified that household as utilizing a prv. I refer to the Direct Testimony of OCA witness Barbara R. Alexander (OCA Statement 6) for her recommendations on how PAWC should inform water customers about prvs.

Q. DID THE COMPLAINT LOG INDICATE THAT PAWC ACTED IN A RESPONSIBLE MANNER WHEN THE CAUSE OF THE PRESSURE COMPLAINT WAS PAWC'S PROBLEM?

A. Yes.

CUSTOMER COMPLAINTS

Q. WHAT ARE THE PUC'S REQUIREMENTS FOR CUSTOMER COMPLAINTS?

A. According to 52 Pa. Code § 65.3. Complaints:

(a) *Investigations.* A public utility shall make a full and prompt investigation of complaints made by the Commission or by others, including customers, relating to service or facilities.

(b) *Records of complaints.* A public utility shall preserve for a period of at least 5 years, written service complaints showing the name and address of the complainant, the date and character of the complaint and the final disposition of the complaint.

Q. WHAT INFORMATION HAS PAWC SUBMITTED CONCERNING WATER AND WASTEWATER CUSTOMER COMPLAINTS?

A. In response to OCA-7-005[6], in addition to the 1,806 pressure complaints, PAWC provided the following Confidential customer contacts regarding the water system: 4191 water quality[7]; and 1,325 restoration[8] contacts received during from January 1, 2020 through June 30, 2022.

In response to OCA-7-25, the PAWC provided a listing of 36 customer contacts from wastewater customers received during July 2022 and July 2023 that were categorized as follows: 17 water quality, 6 restoration, and 13 pressure. I reviewed the 36 contacts and found that PAWC addressed them responsibly.

Q. DESCRIBE YOUR PROCESS FOR REVIEWING PAWC'S LISTING OF CUSTOMER COMPLAINTS FOR ISSUES OTHER THAN PRESSURE?

A. I sorted the complaints by date, category, and zip code to find if there were any concentrations of similar nearby complaints occurring around the same time.

Q. DID YOU NOTICE ANY CONCENTRATIONS OF SIMILAR NEARBY WATER SYSTEM WATER QUALITY COMPLAINTS OCCURING AROUND THE SAME TIME?

A. No.

[6] The attachments to PAWC's response to OCA-7-005 is marked confidential. My discussion and Exhibit TLF-1 do not disclose customer specific information from that attachment.
[7] During July 15, 2022 through July 31, 2023.
[8] During July 12, 2022 through July 31, 2023.

Q. DID YOU NOTICE ANY CONCENTRATIONS OF SIMILAR NEARBY WATER SYSTEM RESTORATION COMPLAINTS OCCURING AROUND THE SAME TIME?

A. Yes. This would be considered normal because construction projects can affect many nearby customers around the same time. I checked to make sure the restoration complaints were addressed by PAWC, and they were.

Q. DID YOU NOTICE ANY CONCENTRATIONS OF SIMILAR NEARBY WASTEWATER SYSTEM COMPLAINTS OCCURING AROUND THE SAME TIME?

A. No.

Q. DID PAWC PROVIDE OTHER CUSTOMER COMPLAINT INFORMATION?

A. Yes. PAWC provided information on 4,537 water and 222 wastewater complaints submitted to the PUC during February 2022 through October 2023. Excluding the customer complaints for high rates, billing and payment issues, the number of PUC complaints amounted to 262 for the water system and two for the wastewater system.

Q. ARE YOU AWARE OF OTHER CUSTOMER COMPLAINTS TO THE PUC THAN THOSE PAWC LISTED?

A. Yes. During the rate case, more customers have submitted Formal and Informal Complaints and letters to the PUC, and I expect that more will testify at public input hearings (PIHs).

In its Rebuttal Testimony, PAWC should respond to the customer complaints regarding quality of service contained in Formal and Informal Complaints and PIH testimony that have occurred during this rate case.

For example, there are a number of formal complaints from customers in the Exeter Township area that raise concerns about their unwillingness to drink the water due to taste and/or hardness. See, for example, C-2023-3044218, C-2023-3044354, C-2023-3044365, C-2023-3044380, C-2023-3044565 and C-2024-3045278, which are attached as Exhibit TLF-2 (Confidential).

Where PAWC filed an answer to these complaints, the answer did not specifically address the customers' quality concerns. In response to C-2023-304454, for example, PAWC stated:

> "In further answer to Complainant's averment that water quality is undrinkable and hard, the Company provides safe, adequate, and reliable service in accordance with Commission requirements. Additionally, the Company has taken steps to improve water quality. As fully described in the Direct Testimony of Jim Runzer (PAWC Statement No. 2), the Company has received multiple awards and been recognized for its dedication to and achievements in attaining exemplary water quality. To date, PAWC has received nine Phase IV Presidents Award recognitions, the highest honor under the Partnership for Safe Water Treatment Optimization. In addition, since the Company's last base rate case filing, PAWC's Clarion Water Treatment Plant was presented with the Directors 15-year Longevity Award, and Shady Lane Water Treatment Plant was recognized with the Directors 10-year Longevity Award."

PAWC's Rebuttal Testimony should provide a more specific response to the concentration of water quality complaints in the Exeter service area.

As another example, I noticed complaints from the Scranton area where customers said that the water is periodically discolored, brown, or rust-colored in appearance, and sometimes related to main breaks. PAWC's Rebuttal Testimony should provide a more specific response to dirty water complaints in the Scranton service area.

In its Rebuttal Testimony, PAWC should also provide a response to the informal complaint attached to my Direct Testimony as Exhibit TLF-3 (Confidential) that asks PAWC to extend water service.

Finally, the OCA has an outstanding interrogatory, OCA-29-001 (Confidential), that addresses an event in February 2023 that was identified in its Complaint Log.[9] As that discovery response is not likely to be received soon enough for me to review and discuss in this Direct Testimony, PAWC should address the requested information in its Rebuttal Testimony.

Q. DOES THIS COMPLETE YOUR WRITTEN DIRECT TESTIMONY?

A. Yes, at this time. I reserve the right to supplement this testimony either in writing or orally if additional relevant information is received. As noted above, because my testimony will be finalized before the PIHs are concluded, I will address the PIH testimony in Supplemental Direct testimony that is currently due by February 13, 2024.

[9] PAWC response to OCA-7-005_Attachment 5 (Confidential).

EXHIBIT TLF-1

BACKGROUND AND QUALIFICATIONS

TERRY L. FOUGHT, P.E.

Education

Cleveland State University, Cleveland, Ohio, Bachelor of Civil Engineering, 1967

Professional Registrations

Professional Engineer, Pennsylvania, PE-023343-E, 1975

Professional Engineer, New Jersey, GE 25392, 1978 (Inactive)

Professional Engineer, Virginia, 10850, 1979 (Inactive)

Professional Land Surveyor, Pennsylvania, SU-000194-A, 1980 (Inactive)

Employment

From March 1983 to date, I have been a self-employed consulting engineer engaged in providing consulting engineering services to water and wastewater utilities, both private and municipal.

From May 1969 to March 1983, I was employed be E. H. Bourquard & Associates, Inc. as a project engineer to water and wastewater clients. At the time I left the firm I was a vice-president.

From 1962 to 1969, I was employed by the State of Ohio, Department of Highways and the Geauga County Ohio Sanitary Engineers Office as an engineer's assistant to assistant sanitary engineer with breaks in employment to attend college and 1½ years active duty military service.

Experience

I have prepared studies related to and designed water supply, treatment, transmission, distribution and storage facilities. I have provided services to the following private and municipal water suppliers: Amber Hill Mobile Home Park, Brockway Borough Municipal Authority, Dallas Water Company, Eastern Gas and Water Investment Company, Haddonfield Hills Development, Halifax Borough, Langhorne Spring Water Company, Mifflintown Municipal Authority, Neshaminy Water Resources Authority, Newberry Water Company, Pleasant View Mobil Home Park, H. B. Reese Candy Company, Shavertown Water Company, Smethport Water Company, Tunkhannock Water Company, and Watts Business Center.

I have prepared studies related to and designed wastewater collection and interceptor sewers, pumping stations and force mains, and treatment plants. I have provided services to the following private and municipal sewerage utilities: Brockway Glass Company, Central Dauphin School District, Clean Waste Technologies, Inc., Dauphin Borough, Dauphin Borough Municipal Authority, Halifax Area School District, Halifax Municipal Authority, Mercersburg Borough, Middle Paxton Township, Newberry Sewer Company, Newberry Township Municipal Authority, Park-a-way Park Family Campground, Reading Township Municipal Authority, Reynoldsville Borough, Saint Thomas Township, and Watts Business Center.

I have prepared over 100 stormwater management and drainage plans for land development and subdivision plans in Cumberland, Dauphin, and York Counties. Most of these plans included the design of storm sewer collection systems.

SUPPLEMENTAL DIRECT TESTIMONY

OF

TERRY L. FOUGHT

ON BEHALF OF

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

February 13, 2024

TABLE OF CONTENTS

QUALITY OF SERVICE **2**
MAIN EXTENSIONS **8**

EXHIBITS

EXHIBIT TLF-4 – Jefferson Township Municipal Authority Complaint

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS FOR THE RECORD.

A. Terry L. Fought, 780 Cardinal Drive, Harrisburg, Pennsylvania, 17111.

Q MR. FOUGHT, DID YOU SUBMIT DIRECT TESTIMONY IN THE PROCEEDING ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SUPPLEMENTAL DIRECT TESTIMONY?

A. To address testimony by customers at the twelve Public Input Hearings (PIH) on January 29, 30, 31, and February 5, 6, and 7, 2024 regarding quality of service and main extensions.

QUALITY OF SERVICE

The Company should respond to the testimony regarding quality of service issues by customers who testified at the PIHs, including:

1. The customer testified that there are many metal plates in their street containing Company sewer lines and sinkholes. Tr. 236-243. East 28th Street, McKeesport.
2. The customer testified about (1) people's water getting shut off without notice and (2) how bills are generated for new customers. Tr. 298-309. Greenwood, Port Vue.
3. A Borough manager testified about lack of cooperation with the Company in fixing water mains and the Borough road repairing. Tr. 444-449. Pleasant Avenue, Peckville.
4. The customer testified that they drink and make ice with bottled water because the water tastes horrible. Tr. 450-444. Westwood Drive, Tobyhanna.
5. The customer testified that (1) the water is not good to drink; (2) water is not clear in coffee pot; (3) there is so much chlorine in the water. Tr. 513–517 South 9th Avenue, Scranton.
6. The customer testified that that they make ice and drink bottled water. Tr. 528-530. Woodlawn Street, Scranton.
7. The customer testified that in November they had a whole wash load ruined by water with rust and stains. The claim for damages was denied by the Company's insurance company. Tr. 537- 540. Cedar Avenue, Scranton.
8. The customer testified that they filled pool with cloudy water and took a sample to a pool place that said the PH and chlorine were off. A company employee said the water looks fine but would not drink the water. Tr. 552-556. Harrison Avenue, Scranton.

9. The customer testified that (1) the water is dirty and has been dirty for a long time; and (2) stomachaches stopped when they quit drinking coffee made with Company water. Tr. 573-580. Church Avenue, Scranton.

10. The customer (Dunmore Borough Council member) testified that: (1) “when the water main burst on Grove Street in Dunmore on Thanksgiving Day, 11/23/23, the water inundated houses on the 1200 block of Monroe Avenue, destroying basements and driveways; (2) a family of four with two toddlers was displaced for two months; (3) flooding had occurred several times previously in that exact location in 2021 and 2022; (4) on those occasions, the homeowner said that the representative from PAWC told them it would never be fixed because it was too expensive; (5) when PAWC finally put dye down the manhole behind the garage, the dye came right back up because it had no place to go; (6) the family still has not been made whole; (7) the back fence is still broken; (8) the finished basement is still without walls or flooring; (9) they have no washer or dryer or playroom; (10) the homeowner also questioned how much the value of his house has declined. Tr. 611-617. Monroe Avenue, Dunmore.

11. The customer (Scranton City Council member) testified that: (1) just recently, she knows specifically on East Mountain, there was a water outage, pipes broke or what have you, and some people went anywhere from 10 to 48 hours without water; (2) and then once the water was turned on, it took anywhere from four to five days of running brown water; (3) you couldn't drink it, so they suffered with brown water; (4) every time she would go to Gary's on Meadow Avenue, people were buying jugs of water for a week; (5) you had to run the water to get all that filth through it; (6) and then what's happening when you're running that water? It's ticking. Tr. 626-638. Ridgewood Avenue, Scranton.

12. The customer (Scranton City Council member) testified that (1) “I've had numerous streets that I've had to bring up as concerns because they were Pennsylvania American Water projects and the paving was not done properly”; (2) “I have dirty water. Just last week, my daughter was bathing in the tub. My mother-in-law was giving her a bath, and as the water was running, it started to come out dirty”; (3) she sees complaints in the Hill section of Scranton about dirty water at least weekly; (4) after replacing water and sewage lines the entire length of Myrtle Street, the repaving does not appear to have been done properly, quickly develops potholes and is difficult to drive on; (5) when they contacted Pennsylvania American Water, they corrected one block of Myrtle Avenue, which does have a lot of traffic, but the rest of Myrtle Street is still in disrepair until they have better weather; (6) doesn’t think that a project is Southside that went on for many years that had large bumps causing trouble driving over is still up to par. Tr. 641-649 . East Gibson Street, Scranton.

13. The customer testified that their water on East Mountain has been really dirty. His wife and daughter won’t drink the water and buy bottled water by the case. Tr. 652-655. East Locust Street, Scranton, East Mountain.

14. The customer testified that: (1) they removed all the black top curbs and they never came back and put them back in; (2) now when it rains, the water just pours down their sidewalk and goes in their basements; (3) the Company refuses to come back and put the blacktop curbs in front of these homes; (4) he had to get his sidewalk done over because they did such a terrible job and he had to fight for months to get that. Tr. 656-664. Railroad Avenue, Scranton.

15. The customer testified that he lived on East Mountain and last month he had terrible water for four days. After some difficulty, he got $20 credit for four days of dirty water. Customer buys bottled water in 5 gallon jugs. Tr. 665-669. Froude Avenue, Scranton.

16. The customer (School Board Director) testified that multiple times throughout the summer, he had dirty water. Also, the Company was working on changing pipes every day for weeks at the bottom of his street. Tr. 669-675. North Garfield Ave., Scranton.

17. The customer testified that the Company is digging up the streets and she has been having a lot of dirt in the water. She has two filters. If she runs unfiltered water in the sink, on certain days, it's all cloudy, it's dirty, it's yellowing. If she runs filtered water, it's fine. Also, she has had (1) expensive plumbing bills when the Company's mains break and they were replacing pipes because her filters were so clogged with dirt that it affected and broke the main filter under the sink, which is much more expensive filter; (2) an only three-year old toilet that started making noise that the plumbers said that also was from the dirt, from the water; (3) on the 1700 block of Olive Street, last year the pipes were replaced, potholes paved, fixed and then within two weeks, the street was blocked off again to re-dig up the streets because the pipe was leaking again. And then maybe about five months later, they were digging it up again. Tr. 675-681. Colfax Avenue, Scranton.

18. The customer testified that there has been no compensation for getting brown and unusable water, being required to buy drinking water, and delaying clothes washing and showering that occurs every other week. The brown water causes the whole house filter to be changed more often. Tr. 684-691. 17th Avenue, Scranton.

19. The customer testified that he has installed a $12,000 whole house filter system for cold water and still had to install carbon filter under every sink in his house and still gets dirty hot water. He has had to put a backflow preventer on his home. Tr. 691-698. Alpine Drive, Moosic.

20. The customer testified that she wants to wash her dishes, clothes, body, and expects to be clean, not dirty after using the water. Tr. 699-703. Jordan Hollow Road, Dalton.

21. The customer testified that when Pennsylvania American Water is contacted about outages or flushing these groundwaters, the Company will not give you any kind of a discount. Tr. 715-720. Whitetail Drive, Scranton.

22. The customer testified that the water has a strong chlorine smell and has experienced shut offs, line breaks and notices to flush pipes. Tr. 725-730. Oak Avenue, Scranton.

23. The witness (a renter) testified that she, like a ratepayer, has to drink the same unpalatable water; buy bottled water; take the same stinky shower; wash clothes in the same stinky water, and so on and so forth. The witness also defined the smell as chlorine and testified that after flushing the toilet, the water still looks yellow; and the dirty water occurs for a couple of days two or three times per month. Tr 745-750. Penn Avenue, Scranton.

24. The customer previously testified and added the following: (1) In 2017, he applied for a water hookup in a garage he built and he still doesn't have water in that garage and (2) every couple of months he has to change the filter in his filter system. Tr. 750-753. Alpine Drive, Moosic.

25. The customer previously testified and added the following: the Company should provide a warning prior to doing something in your area. Tr. 758-760. Colfax Avenue, Scranton.

26. The customer previously testified and added the following: because of the brown water, yellow water issue white fabric or clothing, towels or anything become dingy and yellow another example of damage by the Company. Tr. 761-762. 17th Avenue, Scranton.

27. The customer testified that her community has had issues with water quality and in some areas of Exeter Township the water is undrinkable, and people are supplementing undrinkable water with bottled water. Tr. 797-806. Pond View Drive, Birdsboro.

28. The customer testified that: (1) they buy drinking water (bottled) because the water quality is absolute garbage; (2) Exeter has extremely hard water. There is calcium and lime buildup on everything; (3) having a water softener is a must, but had to turn it off because the water is so hard that his softener cycles constantly, which of course, counts towards wastewater. He also testified that the water pressure is abysmal and cuts off in the middle of a laundry cycle for no reason. If the washer is running, it's not possible to take a shower or use the sink. Tr. 806-811. Constitution Avenue, Reading.

29. The customer testified that: (1) the water quality is pretty darn hard and they have to buy bottled water for a baby to drink; (2) they have a water softener because in preparation to retire, they thought ahead and saved up to upgrade their water heater, their air conditioner, heater, doing everything responsible so they can age in place in this house that they saved a lifetime of savings for; and (3) they have to use the water softener to protect the washer, the dishwasher and their tankless hot water heater. Tr. 816-819. Stonehenge Drive in Farming Ridge, Exeter.

30. The customer testified that: the water pressure varies from hour to hour; (2) they should be able to not wash clothes and still get full water pressure out of your sink; (3) they don't know about the water quality because they spent $4,000 to install a water system because of the hard and unusable water. Tr 827-832 Eden Drive, Reading.

31. The customer testified that they replaced two toilets, three faucets, two shower heads, one hot water heater, one dishwasher and one washing machine. They also added an over $3,000 water softener system and drinking filtration system due to the extremely hard water destroying all the faucets and things they had to replace and because of the less appealing taste of the water. Tr. 832-839. Warwick Court, Reading.

32. The customer testified that her water is fine except for the hardness. Her appliances wear out way too soon. But she doesn't have any of the other problems. Tr. 844-849. Arrowhead Trail, Spring Township.

33. The customer testified that the water was atrocious before installing the water softener. Now they have a water softener and have extra water going through that. Tr 866-868. Kerr Road, Reading.

34. The customer testified that many of her neighbors, as well as herself, experience periods of poor water quality. This has led many of them to be forced to purchase expensive filtration systems or buy bottled water for safety concerns. Tr. 868-875. Escoll Drive, East Stroudsburg.

35. The customer testified that they replaced the dishwasher and two faucets in the last couple of years just because of the quality of the water. Tr. 901-907. Craig Drive, Reading.

36. The customer (township supervisor) testified that her big problem is the water quality and she gets white rings around her dishes and pans. She also testified that the water quality is terrible and uses plastic bottles for the dogs and herself because "You can't drink the water." It tastes horrible." The customer also testified that the water tastes moldy and smells musty and the water pressure goes up and down. Tr. 955-961. Stonehenge Drive, Exeter Township.

37. The customer testified about the difficulties he had when the Company delayed replacing a faulty meter after they contacted the Company numerous times and the Company ended up billing the customer $1,800. After some difficulty, the customer got the Company to admit that it was their mistake and drop the $1,800 bill. Tr. 1016-1023. Winchester Court, Reading.

38. The customer testified that the quality of water is also an issue. They moved in 2013, and in 2015 installed water softener because the water is hard. Tr. 1034-1041. Bent Brook Circle, Reading.

39. The customer testified that they have bad water that has a bad taste and hardness, which is not only unpleasant but also damaging to appliances requiring additional expenses for repairs, changing filters before it's time. They are compelled to buy bottled water for drinking because they cannot drink the water out of the faucets. The witness also testified that the water has many minerals, has an odor and low pressure. Tr. 1041-1047. Scotland Drive, Reading.

40. The witness, a wastewater customer, testified that they use well water and the Company wanted to check their water meter (that doesn't exist) and billed them for water they didn't use because the Company was not allowed to check the water meter. With great difficulty, the customer succeeded in getting a resolution from PAWC. Tr. 1077-1081. West 37th Street, Reading.

41. The customer testified that she doesn't use the water for cooking, drinking and there is a lot of dirt in the water. The customer also testified that she has been smelling chlorine for a year now. Tr. 1167-1174. Foote Avenue, Duryea.

42. The customer testified that there's no way they can drink the tap water because it tastes bad and reeks of chlorine as if it's coming from an indoor swimming pool. Also, they use a well rated filter for any water that they consume, even if it's to boil pasta. The hardness of the water damages their appliances. The witness also stated that the taste and smell is getting worse. Tr. 1267-1277. Winding Brook Lane, Reading.

43. The customer testified that she had her water softener removed to try to save on the water usage. Now the water is so hard and her faucets and washing machine have calcium buildup and she has to spend money on lotion because now she is really dry too. The witness said she hasn't drank the water for years, it tastes terrible, even the ice cubes taste terrible. Tr. 1277-1286. Holly Drive, Reading.

44. The customer testified that in the Saw Creek Estates community in Bushkill there are documented broken service lines causing water bills from $1,000 a month to $6,000 a month. The Company raised pressure on existing customers to serve additional customers on higher ground. The normal higher pressure on some of the existing customers now exceeds 130 psi (a photo of a gauge indicates 147 psi) which is greater than PUC regulations. The higher pressures caused a current event of flooded basements, broken water pipes, some being replaced twice or more within three years. All repairs were at the homeowners' expense, and they were additionally billed for the unused and wasted water. Tr. 1472-1524. Manchester Drive, Bushkill.

45. The customer testified that water quality levels seem to only decline. They stated that their direct experience with the water quality has been an odor and mineral deposits in their toilet water tanks, which result in so much caking that at times the automatic fill and flush mechanism's operation is impeded. The witness also testified that this is the first time the mineral buildup in the toilet tanks impedes the operation of the flushing mechanism and the chlorine odor is quite new. Tr. 1695-1703. East 38th Street, Reading.

46. The customer testified that in early 2022 they requested the Company to investigate a sudden and intense increase in the chlorine odor and taste. The Company field rep took samples and determined their chlorine levels were within the approved parameter and the intensity was likely due to colder temperatures. After no change in the spring, they had a water filtration system installed to remove the chlorine taste. The witness also testified that they filter just the water they drink but still have chlorine smell from faucets and showers. The filter system cost $750 and every replacement filter costs $200. Tr. 1703-1715. Mint Tier, Reading.

47. The customer testified that they do not drink the water here because it tastes nasty. They are going on 14 years at their home, and drink bottled water. It's hard water. It's also on the skin, also on the appliances. She testified that since they moved here, they had to replace four toilets, a water heater, and a dishwasher. They are on their second washing machine. The witness also testified that the water has a funny taste and they even give bottled water to their pets. Tr. 1742-1746. Apple Drive, Reading.

48. The witness testified that he is part of the Jefferson Township Municipal Authority formal complaint requesting water main extensions in Washington County; he depends solely on a cistern for all of his water needs. He stated that he tried to have a well drilled but the driller drilled into an abandoned coal mine and told him that he cannot have a well through a coal mine. He also testified that a vast majority of the people on Bethel Ridge Road struggle with reliable water supply, a lot with quantity and some with quality; "Many people have coyote cisterns, which is a holding tank for their wells since they flow so little." He stated that he contacted PA-American Water about extending the mainline; they said it is feasible, yet they will only provide funding as required by the tariffs, which will not cover the entire project cost. Tr. 1838-1843. Bethel Ridge Road, Avella. (This customer's testimony is discussed below and the Jefferson Township Municipal Authority Formal Complaint is included in Exhibit TLF-4.)

49. The customer testified their area is plagued with hard water. People who run water softeners are plagued with excessive water consumption due to the regeneration cycle. Because he opted to not install a softener, his water heater only lasted ten years and replaced all faucets, shower heads and went through two dishwashers. In 2018, he had to have a meter replaced because mineral deposits locked up the device and it would not read. Upon replacement PA-American back billed him what they thought he would have used all at once. The water has a strong chlorine smell and taste to it. They do not even drink tap water from PA-American. Tr. 1843-1855. Farming Ridge Boulevard, Reading.

50. The Customer testified within a few years, in their newly constructed home, they began noticing hard water, white residue all over their glasses, a dishwasher stopped working, faucets being replaced; refrigerators being replaced because of the waterline being clogged due to the hard water. They put in a water softener at that time. They have now replaced two water softeners. Tr. 1856-1861. Pickwick Place, Reading.

This summary may not be exhaustive and PAWC should respond to all of the customer complaints regarding quality of service that were raised in PIH testimony. While this supplemental testimony is limited to PIH testimony, I am aware that since I finalized my Direct Testimony, additional customers have filed Formal and Informal Complaints with the PUC and, as stated in my Direct Testimony, PAWC should respond to complaints regarding quality of service.

MAIN EXTENSIONS

Q. IN YOUR LIST ABOVE, YOU MENTION A REQUEST FOR PAWC TO EXTEND WATER SERVICE. DO YOU HAVE ANY COMMENTS?

A. Yes. Mr. Phil Choff owns a home on Bethel Ridge Road in Avella, PA. He stated that he solely depends on a cistern and rainwater and/or water hauling for all his water needs since the well driller drilled into an abandoned coal mine and told Mr. Choff he cannot have a well through a coal mine. He testified that an online map shows there is a prevalence of coal mines under his property and a large majority of the street. He also testified that many of his neighbors struggle with reliable water supply, a lot with quantity and some with quality. According to Mr. Choff, PAWC already serves customers on Bethel Ridge Road and his home is about two and a half miles away from that existing PAWC water line. He also testified that PAWC said the extension is feasible "yet they will only provide funding as required by the tariffs, which will not cover the entire project cost." Tr. 1840-1841.

According to PAWC's Tariff Rule 27.1(F), "Where substantial public need exists and the public health and safety may be compromised by the absence of a public water supply in a portion of the Company's authorized service territory, the Company, subject to the Commission's prior approval, may install main extensions and Special Utility Service facilities without the payment of the Customer Contribution …".

Based on the information provided by Mr. Choff and in the Formal Complaint that he testified in support of, it appears that there may be a "substantial public need" for the extension of water service. The referenced Complaint is attached as Exhibit

TLF-4. I am aware, and it was also discussed during the PIHs that PAWC has a current project to extend water service in Avella PA. Tr. 175-178 (Paris); Tr. 1216-1220 (Midler); Tr. 1681-1686 (Powers). I testified in support of that extension in PAWC's last base rate case.[1] In Settlement, PAWC committed to construct a water main extension on Route 50 on Avella Road in Cross Creek Township, Washington County pursuant to Rule 27.1(F) of its water tariff."[2]

I recommend that PAWC (1) evaluate whether the above main extension is eligible for construction under the requirements of Tariff Rule 27.1(F); (2) allow the OCA to survey the potential customers and submit pertinent information to PAWC prior to starting the evaluation; (3) submit the conclusions of its evaluation to OCA and other parties within six months of receiving the survey data from the OCA and (4) submit an estimated construction cost and remaining contribution required for those main extensions that are determined not eligible under Tariff Rule 27.1(F). PAWC should also seek grant funding or contributions from other sources to help offset the costs of the main extension project, whether or not the extension is funded under Rule 27.1(F).

The OCA has sent interrogatories to PAWC (OCA Set 32) that seek additional information about the requested extension. As those discovery responses will not

[1] Pa. PUC v. PAWC, Docket No. R-2022-3031672, OCA Statement No. 7 at 14-19, OCA Statement 7SR at 7-15.
[2] Pa. PUC v. PAWC, Docket No. R-2022-3031672, Joint Petition for Settlement of Rate Investigation, Paragraphs 57-58.

be received soon enough for me to review and discuss in this testimony, PAWC should address the requested information in its Rebuttal Testimony.

Q. DOES THIS COMPLETE YOUR WRITTEN SUPPLEMENTAL DIRECT TESTIMONY?

A. Yes, at this time. I reserve the right to supplement this testimony either in writing or orally if additional relevant information is received.

EXHIBIT TLF-4

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Formal Complaint to Proposed Rate Increase

Filing this form will make you a party to a legal proceeding or case.
If you do not wish to be a party to the case, consider filing a Comment to Proposed Rate Increase.

To complete this form, please type or print legibly in ink.

1. Customer (Complainant) Information (required)

Provide your name, mailing address, county, telephone number(s), e-mail address and utility account number. It is your responsibility to update the Commission with any changes to your address and to where you want documents mailed to you. Failure to provide this information may cause your complaint to be considered as deficient.

Name Jefferson Township Municipal Authority, Patricia Lawrence, Secretary

Street/P.O. Box 670 Cedar Grove Rd Apt # _____

City Burgettstown, State PA Zip 15021

County Washington

Telephone Number(s) Where We Can Contact You During the Day (**required**):

(724) 947-3771 (home) (724) 747-8391 (mobile)

E-mail Address (**required**): pattylawrence2@icloud.com

Utility Account Number (from your bill): Municipal Authority for residents, no number

If your complaint involves utility service provided to a different address or in a different name than your mailing address, please list this information below.

Name _____

Street/P.O. Box _____

City _____ State _____ Zip _____

2. Name of Utility

Provide the full name of the utility who filed the proposed rate increase about which you are complaining. The name of your utility is on your bill.

Pennsylvania American Water Company

3. PUC Case Docket Number

Provide the Public Utility Commission case docket number (if known). It begins with the letter "R" and contains the year of filing and a 7-digit code, such as R-2014-1234567.

R-2023-3043189

4. **Type of Utility Service**

Check the box listing the type of utility service that is the subject of your complaint (check only one):

□ ELECTRIC	□ STORM WATER
□ GAS	□ WASTEWATER/SEWER
X WATER	□ TELEPHONE/TELECOMMUNICATIONS (local, long distance)
□ STEAM HEAT	□ MOTOR CARRIER (*e.g.* taxi, moving company, limousine)

5. **Reason for Complaint**

Explain why you oppose the company's proposed rate increase. Use additional paper if you need more space.

The Pennsylvania American Water Company (PAWC) has notified us of a very large rate increase that will affect all township residents who currently obtain their water from the PAWC. The PAWC states in their notice that the increase is needed to "improve service reliability, water quality, and fire protection for your community".

We complain that this rate increase is very high and we support the formal complaints entered by the Office of the Consumer Advocate (C-2023-3044289) and the Office of the Small Business Advocate (C-2023-3044375) Additionally, we complain that there is no provision to help our community, as we have no lead service lines requiring replacement, no new service will be included, resident requests for service have not been acted upon, and there are significant unprotected fire risks that are not served by hydrants.

Numerous residents have requested water line extensions due to water quantity, quality and fire fighting concerns. The specific areas are shown on the map included with this submission and include extending an existing water line on Bethel Ridge Road to the state line with West Virginia, with spurs to serve Shades of Death Road, Locust and Carter lanes and Penobscot Road (all off Bethel Ridge). Three large natural gas well pads are located on Bethel Ridge and Shades of Death. A list of residents interested in water with their signatures is included in this package. Several of these residents have sent applications for water service directly to the PAWC and not been served.

Range Resources requests service at the three large natural gas well pads that pose significant fire hazard and are not served by hydrants. Their letters of support and service request are included in this package.

The Jefferson Township Municipal Authority makes this request on behalf of the township residents who need water and on behalf of Range Resources, which operates several natural gas well pads in the area, and our letter is in this package.

The Jefferson Township Volunteer Fire Department supports our request and their letter stating their concerns is in this package.

The Jefferson Township Board of Supervisors recognizes the water issues of the residents and the increased difficulty of fighting both residential and well pad fires in the area of concern and have provided their letter of support for the project, which is in this package.

Our State representative and State Congresswoman have expressed support, and a letter from Senator Bartolotta is included in this package.

We have worked with PAWC's Michael Ricciuti to specify the project and obtain preliminary cost information, and he has stated that they will not fund the project.

Jefferson Township does not operate its own water plant and Is not eligible for the grants/loans for small water projects including those made available by the state and county, or PENNVEST.

We requested that the PAWC fund this project using PENNVEST funding as they have for the previous projects in our Township, or by whatever means they prefer. The PAWC, specifically Michael Ricciuti, has stated that the PAWC does not intend to finance this project.

Enclosures:

Map of project
Resident signatures on service request petition
Range Resources service request and support letters
Support letters from the JTVFD and JT Board of Supervisors
Support letter from State Senator Bartolotta

6. **Requested Relief**

How do you want your complaint to be resolved? Use additional paper if you need more space.

We request that the PA PUC moderate the rate increase request to no more than a 10% increase, and require the PAWC to fund and build our requested project, or failing that, to reject their rate increase in its entirety.

7. Legal Representation

If you are filing a Formal Complaint to Proposed Rate Increase as an individual on your own behalf, you are not required to have a lawyer. You may represent yourself at the hearing.

If you are represented by a lawyer **in this matter**, provide your lawyer's name, address, telephone number, and e-mail address, (all required contact information). Please make sure your lawyer is aware of your complaint. If represented by a lawyer, both you and your lawyer must be present at your hearing.

Lawyer's Name Makel and Associates, LLC

Street/P.O. Box 98 E. Maiden St

City Washington State PA Zip 15301

Area Code/Phone Number (724) 222-7639

E-mail Address dennis@makelandassociates.com

Note: Corporations, associations, partnerships, limited liability companies and political subdivisions are required to have a lawyer represent them at a hearing and to file any motions, answers, briefs or other legal pleadings.

8. Verification and Signature

You must sign your complaint. Individuals filing a Formal Complaint to Proposed Rate Increase **must** print or type their name on the line provided in the verification paragraph below and **must** sign and date this form in **ink.** **If you do not sign the Formal Complaint to Proposed Rate Increase, the PUC will not accept it.** By filing this Formal Complaint to Proposed Rate Increase, you will be a party to the case. If you efile your formal rate complaint, an electronic signature is acceptable.

Verification:

I, Patricia Lawrence, hereby state that the facts above set forth are true and correct (or are true and correct to the best of my knowledge, information and belief) and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Patricia Lawrence 1/2/2024

(Signature of Complainant) **(Date)**

_Secretary_____

Title of authorized employee or officer (only applicable to corporations, associations, partnerships, limited liability companies or political subdivisions)

Note: If the Complainant is a corporation, association, partnership, limited liability company or political subdivision, the verification must be signed by an authorized officer or authorized employee. If the Formal Complaint to Proposed Rate Increase is not signed by one of these individuals, the PUC will not accept it.

9. How to File and Receive Service

You should electronically file your Formal Complaint to the Proposed Rate Increase with the Secretary. To do so, establish an account free of charge on the PUC's eFiling system, which may be accessed at http://www.puc.pa.gov/efiling/default.aspx.

If you do not electronically file your Formal Complaint to Proposed Rate Increase, mail the completed form (along with any attachments) to the address listed below:

By overnight delivery, certified, priority mail – retain tracking information as proof of submission.

Secretary
Pennsylvania Public Utility Commission
400 North Street 2nd Floor
Harrisburg, Pennsylvania 17120

Note: Formal Rate Complaints sent by fax or e-mail will not be accepted.

Methods of Service by the Commission

You have three options on how you would like to receive all communication from the Commission about your Complaint. By selecting one of the following three options, you are agreeing to receive all hearing notices, orders, and related documents about your Complaint in the manner selected.

Select one of the following options for receiving all communications from the Commission:

a. **eFiling**: You agree to open and use an eFiling account – free of charge through the Commission's website. By selecting this method you will be eServed. (This is the best way to receive, file, and submit documents).

Initial here if you are selecting eFiling: DKL
(And create an eFiling account at http://www.puc.pa.gov/efiling/default.aspx.

b. **Email:** You agree to receive all documents by email (using the email you provided on page 1). Please note that you will only be able to receive documents from the Commission by email and will not be able to file documents by Email or Fax. To submit documents to the Commission you must create an eFiling account accessed at http://www.puc.pa.gov/efiling/default.aspx or mail your submissions.

Initial here if you are selecting Email service:_____

c. **First Class Mail:** You agree to be served only by First Class Mail (at the address on page 1 of this form).

Initial here if you are selecting First Class Mail service:_____

***If you do not select one of the three options above, the Commission will serve all documents to you by First Class Mail at the address listed on page 1 of this form.**

If you have any questions about filling out this form, please contact the Secretary's Bureau at 717-772-7777.

Keep a copy of your Formal Complaint to Proposed Rate Increase for your records.

December 19, 2023

Pennsylvania PUC
PO Box 3265
Harrisburg, PA 17105-3265

Dear Pennsylvania PUC,

The Pennsylvania American Water Company (PAWC) has requested a significant rate increase, citing service reliability, water quality and fire protection for our community. We wish to register a formal complaint regarding this rate increase. There will be no benefit to Jefferson Township, as we have no lead water lines to be replaced, and there is no extension of water lines and fire hydrants to unserved residents. We request that the Pennsylvania PUC join in our request to the PAWC to extend their lines and service to our most seriously water-challenged residents along Bethel Ridge Road, Carter Lane, Locust Lane, Penobscot Road, and Shades of Death Road, and to provide fire hydrants along these roads to enable efficient fire fighting for the benefit of the residents and the three major natural gas well pads located here. Only in this way will we receive any benefit of water quality and fire protection to justify any rate increase.

Jefferson Township is a small rural township without a municipal water or sewer plant. We depend on the PAWC to provide clean drinking water and sufficient water to fight fires. We will not benefit from this proposed rate increase, as the Township has no lead pipes (PA American ran all water lines in this Township within the past 20 years and Congress banned lead pipes in 1986). The last extension of water service to a group of Township residents in dire need of service was in 2014, when the PAWC ran water to Meadowcroft Village and the village of Jefferson. There are other areas of our Township where residents are patiently awaiting the extension of service, and have not gotten it yet. We have requested that the PAWC extend service to our most seriously water-challenged residents along Bethel Ridge Road, Carter Lane, Locust Lane, Penobscot Road, and Shades of Death Road. There are three producing natural gas well pads (Galaran, Walasik, Miller) located along these roads, and large quantities of water would be needed in the event of fires at these locations. Trucking it in is not acceptable.

The residents here do not enjoy reliable water service, good water quality or good fire protection. They do not have access to public water and are in fact struggling with carrying on the daily activities. The area is also undermined, and some wells drilled there hit voids from the mine shafts and cannot obtain water. Several have had to install cisterns and have to rely on hauled water to fill them, as their wells do not produce enough. Some also struggle with serious water quality issues and have had to install and maintain expensive softening and purifying systems. The residents are rightly concerned that, should a fire start, the Jefferson Township Volunteer Fire Department (JTVFD) would not be able to access sufficient water under

sufficient pressure to successfully fight a fire, thus putting lives and property at significantly higher risk than areas served by public water and fire hydrants. Some of these residents have already submitted applications for service and not gotten a positive response.

Therefore, we are seeking your assistance in obtaining an extension of service to a group of our unserved citizens, specifically those residing along Bethel Ridge Road, Carter Lane, Locust Lane, Penobscot Road, and Shades of Death Road. The JTVFD has also expressed their concern about the lack of fire hydrants in this area. The Board of Supervisors concurs with these residents' and fire department concerns.

Would you please assist us in requesting the PAWC to add these streets to their water line extension plans immediately and at their expense?

Sincerely yours,

Alan Gould, Chairman
The Jefferson Township Municipal Authority

Members: Dawn Bartoletti, Phil Choff, Bob Maltony, Patty Lawrence

RE: *PA American Water Line Extension*

Dear Mrs. Lawrence:

Range Resources-Appalachia, LLC ("Range Resources") is writing this letter to confirm it's support of the PA American water line extension in Jefferson Township along Bethel Ridge Road and Shades of Death Road. Range Resources has a number of well site locations within Jefferson Township including several within close proximity of these two roads: the Miller, Walasik, Galaran, and Burkett. There are also several well site locations within the neighboring Smith Township in close proximity to Bethel Ridge Road and Shades of Death Road. Thank you for being a wonderful partner to work with. Please let me know how Range Resources can be of any assistance in this process.

RE: *PA American Water Line Extension – Commitment to being a Customer*

Dear Mrs. Lawrence:

Range Resources-Appalachia, LLC ("Range Resources") is writing this letter to confirm its support of the PA American water line extension in Jefferson Township along Bethel Ridge Road and Shades of Death Road and commit to being a customer in the area. The existing wells in the area and future proposed development shows that there is a need great enough to warrant this commitment. If installed, we would be able to use the water line extension for two wells that are currently on our five-year planning schedule and two additional proposed wells. Please let me know how Range Resources can be of any assistance in this process. We hope that this project in partnership with PA American Water will be successful.

Pennsylvania PUC
PO Box 3265
Harrisburg, PA 17105-3265

Dear Pennsylvania PUC,

We have been notified that the Pennsylvania American Water Company has requested a significant rate increase, citing service reliability, water quality and fire protection for our community. We depend on Pennsylvania American Water to provide clean drinking water for our residents without good wells, and fire hydrants to support effective fire fighting.

We object to this rate increase, as there is no direct benefit to our residents or our ability provide better fire fighting. The Jefferson Township Municipal Authority has requested that the Pennsylvania American Water Company run additional water line service to a specific group of unserved residents with significant water quantity and quality issues, and we support this request. Our department has challenges trying to move water from the existing fire hydrants to the unserved areas, and this is complicated by the manpower available at any time to carry on the operation of refilling the tankers at a distance from the fire. There are also three large gas well pads along these roads that pose heightened risk for which fire hydrants are needed. Statistics show that fire damage is higher when there are no nearby hydrants. Property owners also have to pay higher insurance rates due to the lack of nearby hydrants and distance to transport water. The areas in which the residents are requesting the extension of public water lines is an area of significant concern for the JTVFD, in that there is a significant distance from these homes to the nearest fire hydrant, and there are no nearby alternate sources of water.

JTVFD supports the Jefferson Township Municipal Authority and residents in seeking an extension of the water lines along Bethel Ridge Road, Carter Lane, Locust Lane, Penobscot Road, and Shades of Death Road. Because the Pennsylvania American Water Company has not agreed to run the additional lines, we join in the Township's objections to the Pennsylvania American Water Company's rate increase.

Sincerely,

Brady Mermon, Chief

Frank Karch, President

Dave Stiffler, Secretary

Jefferson Township Board of Supervisors

December 19, 2023

Pennsylvania PUC
PO Box 3265
Harrisburg, PA 17105-3265

Dear Pennsylvania PUC,

We have been notified that the Pennsylvania American Water Company has requested a significant rate increase, citing service reliability, water quality and fire protection for our community. We depend on Pennsylvania American Water to provide clean drinking water for our residents without good wells, and fire hydrants to support fire fighting.

It has been several years since the Pennsylvania American Water Company has added service lines in our Township, most recently the extension of service to Meadowcroft Village and to the village of Jefferson, along with some residences along the path of those lines. We have additional residents who have been waiting for a long time to have service extended to them. The most pressing areas at this time are those along Bethel Ridge Road, Carter Lane, Locust Lane, Penobscot Road, and Shades of Death Road, areas where residents report water quantity and quality issues, and some are entirely dependent on cisterns because wells do not produce at all. The ability to fight fire is seriously jeopardized due to the need to haul water significant distances with limited manpower. Our fire department is concerned that, without fire hydrants, any fire emergency at the three natural gas well pads in the area would be disastrous, due to lack of sufficient water readily available through hydrants. We have requested that the Pennsylvania American Water Company extend their water lines to provide service to these residents, and for them to use PENNVEST funding, with the repayment cost borne by the Pennsylvania American Water Company. To date, they have not agreed to do so.

Because the Pennsylvania American Water Company has not agreed to provide the requested service, the Jefferson Township Board of Supervisors objects to the Pennsylvania American Water Company's rate increase request, as there are no benefits to any of our residents or fire department and the company has not met its obligations to add service to our unserved areas.

Sincerely,

Chris Lawrence, Chairman

Brady Mermon, Supervisor

Dave Stiffler, Supervisor

Jefferson Township Municipal Authority
670 Cedar Grove Road
Burgettstown, PA 15021

Dear Mrs. Lawrence:

I am writing to share my support of a Pennsylvania American Water (PAW) line extension in Jefferson Township along Bethel Ridge Road and Shades of Death Road. The township depends on PAW to provide clean drinking water for their residents without good wells and hydrants for fighting fire.

The residents that PAW serves are located within my senatorial district. Having clean, reliable drinking water is essential for their well-being, and for future planned growth and economic vitality of these communities. The most pressing areas for service extension are those along Bethel Ridge Road, Carter Lane, Locust Lane, Penobscot Road, and Shades of Death Road. These are areas where residents report water quantity and quality issues, and some are entirely dependent on cisterns because wells do not produce at all. It is of great importance that the quality and reliability of drinking water for residents be held to high standards for years to come.

Sincerely,

Camera Bartolotta
State Senator
46th Senatorial District

To whom it may concern:

I am a resident of Jefferson Township, Washington County, PA. The Jefferson Township Municipal Authority has requested that Pennsylvania American Water extend their water lines to enable us to access public water.

Our drinking water is currently obtained from a ✓ well ___ cistern (trucked in). I wish to express my support for the requested water line extension because:

___ The quantity of water produced by my well is insufficient for my needs
Comments:

___ The quality of water produced by my well is poor
Comments:

✓ I am concerned that there is insufficient water to effectively fight a fire, thus increasing my insurance rates and putting my family and property at higher risk.

___ Additional comments or reasons

Sincerely,

Signature: D Bert

To whom it may concern:

I am a resident of Jefferson Township, Washington County, PA. The Jefferson Township Municipal Authority has requested that Pennsylvania American Water extend their water lines to enable us to access public water.

Our drinking water is currently obtained from a ___ well X cistern (trucked in). I wish to express my support for the requested water line extension because:

X The quantity of water produced by my ~~well~~ cistern is insufficient for my needs
Comments:
I survive on rain water and having water hauled in by truck.

X The quality of water produced by my well is poor
Comments:
I have a rain diverter barrel which breeds mosquitos in the summer that then goes into my cisterns.

X I am concerned that there is insufficient water to effectively fight a fire, thus increasing my insurance rates and putting my family and property at higher risk.

X Additional comments or reasons
I don't have a well due to the coal mines under my property. The mines are very prevalent in the area and my neighbors that do have wells still struggle with quantity

Sincerely,

LIST OF WRITTEN STATEMENTS AND EXHIBITS BY THE OFFICE OF SMALL BUSINESS ADVOCATE

The Office of Small Business Advocate ("OSBA") intends to introduce the following evidence into the record in the above-captioned proceedings at the evidentiary hearings scheduled for March 7th and 8th, 2024:

- OSBA Statement No. 1 with Schedules KCH-1 through KCH-10, Direct Testimony, Exhibits, and signed Verification of Kevin C. Higgins
- OSBA Statement No. 1-R with Schedules KCH-11 through KCH-13, Rebuttal Testimony, Exhibits and signed Verification of Kevin C. Higgins
- OSBA Statement No. 1-S, with Schedule KCH-14, Surrebuttal Testimony and signed Verification of Kevin C. Higgins
- OSBA Executed Appendix A by Kevin C. Higgins to Protective Order dated January 5, 2024

Please note, the OSBA will not be submitting Confidential Testimony at the evidentiary hearings.

Environmental Compliance Investment Charge

Deferred Accounting Treatment for Production Expenses

DIRECT TESTIMONY OF KEVIN C. HIGGINS

INTRODUCTION

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND QUALIFICATIONS.

A. My academic background is in economics, and I have completed all coursework and field examinations toward the Ph.D. in Economics at the University of Utah. In addition, I have served on the adjunct faculties of both the University of Utah and Westminster College, where I taught undergraduate and graduate courses in economics. I joined Energy Strategies in 1995, where I assist private and public sector clients in the areas of energy-related economic and policy analysis, including evaluation of electric and gas utility rate matters.

Prior to joining Energy Strategies, I held policy positions in state and local government. From 1983 to 1990, I was an economist, then assistant director, for the Utah Energy Office, where I helped develop and implement state energy policy. From 1991 to 1994, I was chief of staff to the chairman of the Salt Lake County Commission, where I was responsible for development and implementation of a broad spectrum of public policy at the local government level. My qualifications are attached in the Appendix to this testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes. In 2006, I testified in a proceeding concerning the rate transition plans filed by Metropolitan Edison Company and Pennsylvania Electric Company, Docket Nos. P-00062213 *et al*. In 2022, I filed testimony on behalf of the Pennsylvania OSBA on revenue requirement issues in the Leatherstocking Gas Company LCC general rate case, Docket No. R-2022-3032764. In 2023, I testified in National Fuel Gas Distribution Corporation's general rate case, Docket No. R-2022-3035730, Pennsylvania-American Water Company's ("PAWC") Butler Area Sewer Authority acquisition case, Docket No. A-2022-3037047, and Pittsburg Water and Sewer Authority's general rate case, Docket Nos. R-2023-3039920, *et al.*

Q. HAVE YOU TESTIFIED BEFORE UTILITY REGULATORY COMMISSIONS IN OTHER STATES?

A. Yes. I have testified in approximately 285 proceedings on the subjects of utility rates and regulatory policy before state utility regulators in Alaska, Arizona, Arkansas, Colorado, Florida, Georgia, Idaho, Illinois, Indiana, Kansas, Kentucky, Michigan, Minnesota, Missouri, Montana, Nevada, New Mexico, New York, North Carolina, Ohio, Oklahoma, Oregon, South Carolina, Texas, Utah, Virginia, Washington, West Virginia, and Wyoming. I have also filed affidavits in proceedings before the Federal Energy Regulatory Commission and prepared expert reports in state and federal court proceedings involving utility matters.

OVERVIEW AND CONCLUSIONS

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. My testimony responds to the general rate case filed by PAWC on the topics of revenue requirement, cost allocation, and revenue allocation, as well as PAWC's proposed Revenue Decoupling Mechanism ("RDM") and Environmental Compliance Investment Charge ("ECIC") and request for deferred accounting for production expenses.

Q. WHAT CONCLUSIONS AND RECOMMENDATIONS DO YOU OFFER IN YOUR TESTIMONY?

A. (1) I recommend that PAWC's revenue requirement be reduced by $94.9 million relative to the $203.9 million rate increase proposed by the Company. My recommended adjustments are itemized in Tables KCH-1 and KCH-2, presented later in my testimony. My recommended reduction does not take into account or incorporate any other adjustments that may be offered by other parties that are not addressed in my testimony.

(2) I recommend that all costs associated with PAWC's proposed residential Arrearage Management Plan ("AMP") and administrative costs associated with its residential low-income programs be directly assigned to the residential class in the Company's water and wastewater class cost-of-service studies.

(3) I recommend that any approved Act 11 revenues be allocated among the Water customer classes based on the corresponding wastewater classes that give rise to the Act 11 revenue shortfall.

(4) I recommend adopting a revenue allocation among Water customer classes that will improve alignment with cost. Specifically, I recommend a lower revenue requirement increase for the Commercial class and a greater revenue requirement increase for the Public (Municipal) class than proposed by PAWC. Under my recommendation, the Public class would still receive a subsidy relative to cost, and the resulting Public rates would be lower than the corresponding Commercial rates. My recommended revenue allocation, at PAWC's requested revenue requirement, is presented in Schedule KCH-9, page 1.

(5) If the Commission approves a lower revenue requirement increase than proposed by PAWC, I recommend that the decrease be applied principally to the Water rates. So long as the cost-based wastewater increase associated with the approved revenue requirement is greater than PAWC's proposed wastewater rates, the incremental revenue requirement reduction should not reduce PAWC's proposed wastewater rates. This means that a lower revenue requirement will reduce Act 11 revenues and PAWC's proposed Water rates generally.

At a lower revenue requirement, I recommend scaling each Water class's revenues in proportion to each class's share of the total proposed non-Act 11 revenues in my revenue allocation from Schedule KCH-9, page 1, which I calculated at PAWC's requested revenue requirement. I present OSBA's recommended Water revenue allocation, at OSBA's recommended revenue requirement, in Schedule KCH-9, page 2.

(6) I recommend that the Commission reject PAWC's proposed RDM, ECIC, and request for deferred accounting for production expenses.

PROPOSED REVENUE INCREASE

Q. PLEASE SUMMARIZE THE REVENUE REQUIREMENT INCREASE REQUESTED BY PAWC IN THIS CASE.

A. PAWC proposes to increase its water and wastewater revenues by $203.9 million, or 20.2% over current annualized revenues including projected Distribution System Improvement Charge ("DSIC") revenue. The Company's proposed revenue requirement is based on a fully projected future test year ("FPFTY") ending June 30, 2025.[1]

Q. HAS PAWC CALCULATED SEPARATE REVENUE REQUIREMENTS FOR ITS WATER AND WASTEWATER OPERATIONS?

A. Yes. PAWC produced five separate revenue requirement studies, one for its water operations and four for its wastewater operations. These five studies are: Water Operations ("Water"), Wastewater Sanitary Sewer Systems General Operations ("WW SSS"), Butler Area Sewer Authority Wastewater Operations ("BASA"), Brentwood Wastewater Operations ("Brentwood') and Wastewater Combined Sewer System Operations ("WW CSS").[2] The Company has also separately calculated five class cost-of-service studies corresponding to its respective revenue requirement studies.[3]

Q. PLEASE PROVIDE A BREAKDOWN OF THE REVENUE REQUIREMENT INCREASES CALCULATED IN THE FIVE SEPARATE STUDIES.

[1] Direct Testimony of Ashley E. Everette (PAWC Statement No. 1), pp. 7-8.
[2] The CSSs consist of the Scranton, McKeesport, and Kane combined sewer (wastewater and stormwater) systems. Direct Testimony of Ashley E. Everette (PAWC Statement No. 1), pp. 17-19.
[3] Direct Testimony of Constance E. Heppenstall (PAWC Statement No. 12), p. 3.

A. Of PAWC's requested $203.9 million revenue requirement increase, $128.1 million is related to Water, $31.8 million is related to WW SSS, $26.3 million is related to BASA, $1.9 million is related to Brentwood, and $15.8 million is related to WW CSS. On a percentage basis, PAWC's calculated revenue requirements represent increases over present rates of 15.5% for Water, 33.3% for WW SSS, 221.9% for BASA, 106.1% for Brentwood, and 20.1% for WW CCS.[4]

Q. IS PAWC PROPOSING TO RECOVER THESE RESPECTIVE REVENUE REQUIREMENTS FROM THE CUSTOMERS ASSOCIATED WITH EACH STUDY?

A. No. PAWC is proposing to recover $71.1 million of its wastewater revenue requirement from its water customers based on Act 11 of 2012 ("Act 11"),[5] which provides that the Commission may approve a utility's request to allocate a portion of its wastewater revenue requirement to its combined water and wastewater customer base, if deemed in the public interest.[6] After accounting for its proposed Act 11 revenue shift, PAWC proposes to increase water revenues by $199.2 million and wastewater revenues by $4.7 million in total. The proposed wastewater revenue changes consist of a $169 thousand decrease for WW SSS, a $4.7 million increase for BASA, a $369 thousand increase for Brentwood, and a $227 thousand decrease for WW CSS.[7] I will further address PAWC's Act 11 proposal later in my testimony.

[4] Based Volume 03, Exhibit No. 3-A.
[5] Direct Testimony of Ashley E. Everette (PAWC Statement No. 1), p. 20.
[6] See 66 Pa. C.S. § 1311(c).
[7] Volume 03, Exhibit No. 3-A.

Q. DO YOU HAVE ANY RECOMMENDED ADJUSTMENTS TO PAWC'S REVENUE REQUIREMENT?

A. Yes. I am recommending an overall reduction of **$94,857,413** to the total revenue requirement increase requested by PAWC. As explained in greater detail later in my testimony, this reduction includes a "proxy" return on equity ("ROE") of 9.65%, based on the ROE authorized for PAWC's DSIC in the Bureau of Technical Utility Services' most recent Report on the Quarterly Earnings of Jurisdictional Utilities.[8]

The impact of my recommended adjustments is summarized in Table KCH-1, below, and is also provided in Schedule KCH-1, page 1.

Table KCH-1
Summary of OSBA Adjustments to PAWC Revenue Requirement

	Total Company	
	Adjustment Impact	Increase
PAWC As-Filed Revenue Req. Increase		$203,945,911
OSBA Recommended Adjustments		
Annual Performance Plan Expense	($5,153,394)	$198,792,517
Long Term Performance Plan Expense	($5,230,156)	$193,562,362
Employee Stock Purchase Plan Expense	($457,009)	$193,105,353
Service Co. Executive Retirement Plan	($35,106)	$193,070,247
External Board Expense	($126,792)	$192,943,455
Proxy Return on Equity	($61,540,957)	$131,402,498
BASA Mitigation Adjustment	($19,091,395)	$112,311,103
Brentwood Mitigation Adjustment	($1,309,219)	$111,001,884
Audubon Water Acquisition Adjustment	($1,913,386)	$109,088,498
Total OSBA Adjustments	($94,857,413)	$109,088,498

I summarize the impact of my proposed revenue requirement adjustments relative to PAWC's calculated revenue requirement for each of the five studies in

[8] Docket Number: M-2023-3044811, Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2023, Public Meeting Held January 18, 2024, p. 15, Attachment D.

Table KCH-2, below. I provide greater detail of these impacts in Schedule KCH-1, pages 1-6. These impacts are presented relative to the revenue requirement increase calculated by PAWC in its five studies, prior to the effects of the proposed Act 11 revenue shift, which I will discuss later in my testimony.

I will discuss my recommendations regarding the pending acquisitions associated with BASA, Brentwood, and Audubon Water Company in the section of my testimony called Adjustments Related to the Acquisitions of Other Utilities. I have included the impact of my adjustments on the BASA and Brentwood revenue requirements for completeness, and I recommend that such adjustments be reflected in PAWC's revenue requirement if the proposed acquisitions ultimately close.

Table KCH-2
Summary of OSBA Adjustment Impacts
to PAWC Revenue Requirements

	Water	WW SSS	BASA	Brentwood	WW CSS
PAWC As-Filed Rev. Req. Increase	$128,149,690	$31,793,150	$26,288,308	$1,934,637	$15,780,126
OSBA Recommended Adjustments					
APP Expense	($4,597,034)	($235,832)	($127,579)	($17,090)	($175,859)
LTPP Expense	($4,899,767)	($140,063)	($92,987)	($25,040)	($72,299)
ESPP Expense	($422,185)	($16,760)	($3,163)	($769)	($14,132)
Service Co. ERP	($33,492)	($1,046)	$0	$0	($568)
External Board Expense	($120,953)	($3,778)	$0	$0	($2,061)
Proxy ROE	($48,087,598)	($6,275,122)	($2,237,574)	($213,115)	($4,727,548)
BASA Mitigation	$0	$0	($19,091,395)	$0	$0
Brentwood Mitigation	$0	$0	$0	($1,309,219)	$0
Audubon Water Acquisition Adj.	($1,913,386)	$0	$0	$0	$0
Total OSBA Adjustments	($60,074,414)	($6,672,602)	($21,552,698)	($1,565,232)	($4,992,466)
Rev. Req. Increase with OSBA Adj.	$68,075,276	$25,120,548	$4,735,610	$369,405	$10,787,660

Annual Performance Plan Expense

Q. DOES THE COMPANY OFFER PERFORMANCE-BASED COMPENSATION TO ITS EMPLOYEES?

A. Yes. According to the Direct Testimony of Mr. Jim Runzer, the Company provides performance-based compensation under two plans: the Annual Performance Plan ("APP"), applicable to all full-time employees, and the Long-Term Performance Plan ("LTPP"), which is limited to certain exempt employees.[9] I will first address the APP.

Q. PLEASE DESCRIBE THE APP.

A. The Company provides cash awards to employees for achievement of business objectives under the APP. As Mr. Runzer explains, the APP's goals are related to financial performance, safety, customer satisfaction, environment (drinking water quality), and workforce diversity.[10]

Q. PLEASE EXPLAIN THE FINANCIAL PERFORMANCE COMPONENT OF THE APP.

A. As described the 2023 Proxy Statement of PAWC's parent company, American Water Works Company, Inc. ("American Water"), APP awards are determined using a corporate performance multiplier. The largest single component, 50%, of this calculation is based on Adjusted Earnings Per Share ("EPS"). Each year, the APP sets out the threshold, target and maximum EPS levels that are used in the

[9] Direct Testimony of Jim Runzer (PAWC Statement No. 2), pp. 40-41. PAWC provided copies of the plans in Confidential Filing Requirement III.22 (Volume 6b).
[10] Direct Testimony of Jim Runzer (PAWC Statement No. 2), p. 41.

performance calculation. In addition, no APP awards are paid out at all if the actual EPS is less than 90% of the target.[11]

Q. IN YOUR OPINION, IS IT APPROPRIATE TO RECOVER THE COST OF ANNUAL PERFORMANCE PROGRAMS IN UTILITY RATES?

A. It can be appropriate to recover the cost of annual performance programs in utility rates to the extent that the compensation in such plans is not excessive and to the extent the goals of such plans are not tied to utility financial performance, but rather to goals such as customer satisfaction, operating efficiency, and safety. While rewarding employees for financial performance can be entirely appropriate, the responsibility for funding such awards rests most appropriately with shareholders, who are the primary beneficiaries of meeting or exceeding financial targets.

Q. WHAT DO YOU RECOMMEND REGARDING THE APP?

A. I recommend that 50% of the APP expense be removed from the revenue requirement, based on the weight of the EPS goal included in the APP corporate performance calculation.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF YOUR ADJUSTMENT?

A. This adjustment decreases the FPFTY revenue requirement by approximately **$5,153,394** in total, comprised of decreases of **$4,597,034** for Water, **$235,832** for WW SSS, **$127,579** for BASA, **$17,090** for Brentwood, and **$175,859** for WW CSS. These impacts include the estimated reduction to payroll tax as a result of

[11] American Water Works Company, Inc. 2023 Proxy Statement (March 28, 2023), pp. 42-43.

removing 50% of APP expense from the revenue requirement. Additional details of this adjustment are provided in Schedule KCH-2.

Long-Term Performance Plan Expense

Q. PLEASE DESCRIBE THE LTPP.

A. Under the LTPP, eligible employees are awarded restricted stock units ("RSUs") and performance stock units ("PSUs"). RSU awards are based on a three-year vesting period while the participant remains employed with the Company and PSU awards are based on performance vesting conditions. The PSU component of the LTPP is determined based on a combination of compounded EPS growth and relative total shareholder return compared to a peer group over a three-year performance period.[12]

Q. WHAT IS THE BREAKDOWN BETWEEN RSU AND PSU AWARDS UNDER THE LTPP?

A. According to American Water's 2023 Proxy Statement, LTPP awards are generally allocated 30% to RSUs and 70% to PSUs.[13] The actual breakdown of LTPP awards for the historic test year ended June 30, 2023 (which PAWC assumes for the FPFTY) was approximately 22% RSUs and 78% PSUs.[14]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE LTPP?

A. I recommend that LTPP expense be removed from the revenue requirement and instead funded by shareholders. The majority of the LTPP cost, the PSU

[12] Direct Testimony of Jim Runzer (PAWC Statement No. 2), p. 41; American Water Works Company, Inc. 2023 Proxy Statement (March 28, 2023), p. 44.
[13] American Water Works Company, Inc. 2023 Proxy Statement (March 28, 2023), pp. 44.
[14] PAWC response to OCA 09-011 c., included in Schedule KCH-10.

component, is directly based on American Water's financial performance. The time-based RSU component is based on continued employment with the Company, rather than any explicit customer-related goals such as customer satisfaction or drinking water quality. I recommend that the costs of the Company's LTPP awards are most appropriately borne by shareholders rather than ratepayers.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF YOUR ADJUSTMENT?

A. This adjustment decreases the FPFTY revenue requirement by approximately **$5,230,156** in total, comprised of decreases of **$4,899,767** for Water, **$140,063** for WW SSS, **$92,987** for BASA, **$25,040** for Brentwood, and **$72,299** for WW CSS. These impacts include the estimated reduction to payroll tax as a result of removing LTPP expense from the revenue requirement. Additional details of this adjustment are provided in Schedule KCH-3.

Employee Stock Purchase Plan Expense

Q. WHAT IS THE COMPANY'S EMPLOYEE STOCK PURCHASE PLAN ("ESPP")?

A. The Company provides a 15% discount on purchases of American Water stock by employees who are enrolled in the ESPP.[15] Participating employees elect to purchase American Water stock at a discount through payroll deductions. PAWC

[15] Direct Testimony of Lori O'Malley (PAWC Statement No. 5), p. 14.

proposes to include the cost of providing this employee benefit in its revenue requirement.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE ESPP?

A. I do not believe that ratepayers should fund the stock purchase discount provided by the ESPP. The ESPP incentivizes employees to purchase stock rather than receive cash compensation, for the portion of compensation eligible for the ESPP. The stock purchase discount provided under the ESPP increases payroll costs for the portion of an employee's compensation that is used to purchase stock. This provides no tangible benefit for customers. If the Company wishes to provide this stock purchase incentive, it is most appropriately funded by (fellow) shareholders, who may benefit from the closer alignment of employee interests with their own. Therefore, I recommend that the ESPP expense be removed from the revenue requirement.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF YOUR ADJUSTMENT?

A. This adjustment decreases the FPFTY revenue requirement by approximately **$457,009** in total, comprised of decreases of **$422,185** for Water, **$16,760** for WW SSS, **$3,163** for BASA, **$769** for Brentwood, and **$14,132** for WW CSS.[16] Additional details of this adjustment are provided in Schedule KCH-4.

[16] My ESPP adjustment does not include a payroll tax component because PAWC did not identify the ESPP as contributing to its payroll tax expense calculation in its response to Bureau of Investigation and Enforcement ("I&E") RE-023-D (included in Schedule KCH-10). However, it is possible that FICA and Medicare taxes do apply to this compensation.

Service Company Executive Retirement Plan Expense

Q. PLEASE EXPLAIN YOUR ADJUSTMENT FOR EXECUTIVE RETIREMENT PLAN ("ERP") EXPENSE.

A. In response to discovery, PAWC indicated that Executive Retirement Plan expense in Account No. 50630000 was erroneously recorded to its Service Company rather than its parent company in the historic test year, and then allocated to PAWC. PAWC explains that these costs will be removed in its rebuttal filing.[17] My adjustment estimates the revenue requirement impact of removing this improperly booked expense.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF YOUR ADJUSTMENT?

A. This adjustment decreases the FPFTY revenue requirement by approximately **$35,106** in total, comprised of decreases of **$33,492** for Water, **$1,046** for WW SSS, **$0** for BASA and Brentwood, and **$568** for WW CSS.[18] Additional details of this adjustment are provided in Schedule KCH-5.

PAWC External Board Expense

Q. PLEASE DESCRIBE THE BOARDS THAT GOVERN PAWC.

A. As explained in the PAWC Management and Operations Audit conducted by the Commission's Bureau of Audits in Docket No. D-2022-3035217, PAWC is governed by both a corporate board (American Water board) and a local board

[17] PAWC response to OCA 15-013, included in Schedule KCH-10.
[18] My adjustment is based on the Account No. 50630000 amount provided by PAWC in OCA 09-039 Attachment 1, included in Schedule KCH-10. My adjustment may require revision if PAWC identifies other components of this expense, including costs allocated to its acquisitions.

(PAWC Board). The PAWC Board consists of three independent directors and a former president of PAWC, as well as officers of PAWC. PAWC officers are not specifically compensated for their board participation, while non-officer board members are compensated through a retainer and a per-meeting fee. The audit staff questioned whether the level of compensation for PAWC's independent board members was at market rates and recommended that a market comparison be performed. [19]

Q. HOW DID PAWC RESPOND TO THE AUDIT STAFF'S CONCERNS REGARDING ITS BOARD?

A. In response to discovery, PAWC indicates that it has eliminated its external board as of December 31, 2023, and that it will remove $123,250 in external board expense in the rebuttal stage of this proceeding.[20]

Q. HAVE YOU ESTIMATED THE IMPACT OF REMOVING THE EXTERNAL BOARD EXPENSE FROM PAWC'S REVENUE REQUIREMENT?

A. Yes. I estimate that this adjustment decreases the FPFTY revenue requirement by approximately **$126,792** in total, comprised of decreases of **$120,953** for Water, **$3,778** for WW SSS, **$0** for BASA and Brentwood, and **$2,061** for WW CSS.[21] Additional details of this adjustment are provided in Schedule KCH-6.

[19] Report Issued October 2023, pp. 23-25.
[20] PAWC Response to OCA 22-003, included in Schedule KCH-10.
[21] I allocated this adjustment between Water, WW SSS and WW CSS based on the method used by PAWC in its workpaper "4p Service Company Costs."

Proxy Return on Equity Adjustment

Q. WHAT RETURN ON EQUITY IS PAWC REQUESTING IN THIS PROCEEDING?

A. Ms. Ann E. Bulkley recommends an ROE of 10.95%, which is at the higher end of the 10.00% to 11.25% range that she argues is reasonable.[22] According to the Direct Testimony of Ms. Ashley E. Everette, PAWC is requesting an ROE at the higher end of this range in recognition of PAWC's "superior management performance." In addition, Ms. Everette argues that if the Commission were to approve an ROE that is lower than the upper end of Ms. Bulkley's recommended range, it should add no less than 25 basis points to its market-determined rate of return.[23]

Q. HAVE YOU CONDUCTED AN ORIGINAL ANALYSIS OF THE APPROPRIATE ROE FOR PAWC?

A. No. Rather, I am utilizing the 9.65% ROE authorized for PAWC's DSIC in the Bureau of Technical Utility Services' most recent Report on the Quarterly Earnings of Jurisdictional Utilities as a proxy in my revenue requirement calculation.[24] The use of this proxy ROE is not intended to supplant the Commission's consideration of traditional cost of capital analyses that has been presented by the Company and will be offered by other parties in this proceeding such as the Office of Consumer Advocate ("OCA"). Based on my experience in

[22] Direct Testimony of Ann E. Bulkley (PAWC Statement No. 13), p. 8.
[23] Direct Testimony of Ashley E. Everette (PAWC Statement No. 1), p. 33.
[24] Docket Number: M-2023-3044811, Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2023, Public Meeting Held January 18, 2024, p. 15, Attachment D.

other proceedings, I would not be surprised if other parties present credible analyses indicating that PAWC's ROE should be set lower than 9.65%.

Q. WHAT IS YOUR REASON FOR PRESENTING THE OSBA'S RECOMMENDED REVENUE REQUIREMENT USING THE PROXY ROE OF 9.65%?

A. The proxy ROE is useful as it provides context for the OSBA's overall revenue requirement recommendation in this case. Absence of an ROE adjustment in my testimony could be mistaken for implicit endorsement of PAWC's proposed ROE. The use of the proxy ROE as a placeholder helps to avoid that misimpression. Moreover, the cost of capital has implications for the adjustments I am recommending regarding PAWC's acquisitions of other utilities, discussed below. Using the proxy ROE in the calculation of the revenue requirement impacts of my acquisition-related adjustments provides a more realistic measurement of their impact.[25]

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF CALCULATING PAWC'S REVENUE REQUIRMENT USING A 9.65% ROE?

A. This adjustment decreases the FPFTY revenue requirement by approximately **$61,540,957** in total, comprised of decreases of **$48,087,598** for Water, **$6,275,122** for WW SSS, **$2,237,574** for BASA, **$213,115** for Brentwood, and **$4,727,548** for WW CSS.

[25] All things being equal, using PAWC's requested ROE to measure the revenue requirement impact of my acquisition-related adjustments would make my adjustments larger.

Adjustments Related to the Acquisitions of Other Utilities

Q. PLEASE DESCRIBE YOUR ADJUSTMENTS RELATED TO PAWC'S ACQUISITIONS OF OTHER UTILITIES.

A. PAWC is seeking to recover certain costs related to its proposed acquisitions of other utilities. I am recommending adjustments related to three of these proposed acquisitions:

(1) PAWC's proposed acquisition of BASA's wastewater assets;

(2) PAWC's proposed acquisition of the Borough of Brentwood's wastewater assets; and

(3) PAWC's proposed acquisition of Audubon's water assets.

Q. AT THE TIME OF YOUR DIRECT TESTIMONY, HAS PAWC FINALIZED THE ACQUISITION OF ANY OF THESE THREE UTILITIES?

A. No, not at this time. It is my understanding that the Commission approved PAWC's acquisition of BASA on a 3-2 vote, but the acquisition is being challenged in the Commonwealth Court.

Regarding PAWC's proposed acquisition of Brentwood's wastewater assets, on January 17, 2024, Administrative Law Judge Katrina L. Dunderdale recommended that PAWC's application be denied. As of the date my direct testimony was filed, the Commission had not yet acted on Judge Dunderdale's recommendation.

PAWC's proposed acquisition of Audubon's water assets is currently before the Commission in Docket Nos. A-2023-3043194 and A-2023-3043196.

Q. HOW SHOULD YOUR ADJUSTMENTS BE INTERPRETED IN RELATION TO THE APPROVAL STATUS OF THESE PROPOSED ACQUISITIONS?

A. If, after receiving final approval from the Commission, or Commonwealth Court, as applicable, any of these three proposed acquisitions ultimately close, I recommend that my adjustment for that acquisition as described below be adopted. On the other hand, if any of the proposed acquisitions do not proceed to closure, then 100% of the costs associated with such acquisitions should be removed from the revenue requirement.

BASA Acquisition

Q. PLEASE DESCRIBE YOUR ADJUSTMENT RELATED TO THE BASA ACQUISITION.

A. One of the conditions to which PAWC agreed in the Settlement Agreement approved in Docket No. A-2022-3037047 ("BASA Settlement"), is that the Company would propose to move BASA rates to 1.4 times the current BASA rates or PAWC's proposed Rate Zone 1 system-average wastewater rates, whichever is lower, upon the later of (a) the first anniversary of Closing or (b) January 1, 2025.[26] PAWC has adhered to this condition in its filing in this case but is seeking to recover $21.6 million in annual Act 11 revenues from water customers associated with the acquisition of BASA. I recommend that the portion

[26] Docket Nos. A-2022-3037047 et al., Joint Petition for Approval of Unanimous Settlement of All Issues (August 14, 2023), III. C. 19. e.

of the acquisition cost that PAWC is proposing to recover from water customers be excluded from the revenue requirement in this case.

Q. PLEASE EXPLAIN THE REASONS FOR YOUR RECOMMENDATION.

A. PAWC has agreed to acquire BASA at a substantial premium above net book value. Pursuant to the BASA Settlement, PAWC seeks to include $228.0 million in rate base associated with the acquisition,[27] whereas the original cost of the BASA assets as of June 30, 2024 is $146.0 million, and the original cost less accumulated depreciation ("net book value") is approximately $90.1 million.[28] Thus, the proposed rate base addition exceeds the original cost of the BASA assets by $82.0 million and exceeds the net book value by $137.9 million.

Recovery of this substantial premium would have a dramatic impact on BASA customers' rates if the entirety of that cost were recovered from BASA wastewater customers. Indeed, in its acquisition application, PAWC estimated that the potential impact of the proposed transaction on BASA wastewater customer rates would be an increase of 94.4%.[29] That dramatic increase does not include the cost of future needed investments in BASA's system.[30]

Specifically, in its acquisition application, PAWC calculated that the revenue requirement increase to support the transaction would be $17,895,000 – which would more than double the current BASA wastewater revenues of $12,698,000. At the same time, PAWC indicated that it would propose to shift

[27] Docket Nos. A-2022-3037047 et al., Joint Petition for Approval of Unanimous Settlement of All Issues (August 14, 2023), III. E. 21.
[28] PAWC Exhibit 11-G 2024, Table 2. Net Book Value calculated as June 30, 2024 Original Cost minus Book Depreciation Reserve.
[29] Docket Nos. A-2022-3037047 et al., PAWC Exhibit AEE-1, p. 3.
[30] Docket Nos. A-2022-3037047 et al., Direct Testimony of Duane McKee, pp. 8-10.

33% of the resulting revenue requirement increase ($5,905,350) to water customers, resulting in a net increase to BASA wastewater rates of $11,989,650 (*i.e.*, 94.4%).[31]

In the current case, PAWC calculates that the cost-based increase related to BASA is $26,288,308 (rather than the projected $17,895,000) and has proposed to shift $21,552,699 of that increase to water customers (rather than $5,905,350).[32]

As I noted above, in the BASA Settlement, PAWC agreed to limit the rate impact on BASA wastewater customers in this case to a 40% increase over current rates. While such an increase will recover a portion of the premium above net book value that PAWC agreed to pay to acquire BASA, it will not recover all of it. PAWC proposes in this case to recover the majority of the BASA-related increase from water customers.

In my opinion, it is unreasonable to shift this cost burden to water customers in this case. PAWC negotiated the BASA acquisition price, not its customers, and further agreed to mitigate the impact on BASA customers in this rate case. In agreeing to an acquisition price significantly greater than the net book value of BASA's assets, PAWC is able to build up its rate base separate and apart from making needed investments in new facilities required for safe and reliable service. The burden of funding the rate mitigation for BASA wastewater customers – which is necessitated by the acquisition price PAWC agreed to –

[31] Docket Nos. A-2022-3037047 et al., PAWC Exhibit AEE-1, p. 3.
[32] Volume 03, Exhibit No. 3-A.

most appropriately rests with PAWC shareholders until such time that BASA rates can be revisited consistent with the BASA Settlement.

Q. IS THE OSBA SIGNATORY TO THE BASA SETTLEMENT?

A. Yes.

Q. IS THE OSBA OBLIGATED TO SUPPORT PAWC'S PROPOSED RECOVERY OF ITS BASA ACQUISITION COSTS FROM WATER CUSTOMERS IN THIS CASE?

A. No. The BASA Settlement reserves the rights of the OSBA (as well as OCA and I&E) to address PAWC's rate case proposals fully, and to make other rate proposals.[33] Thus, while PAWC is free to seek recovery of the BASA acquisition costs from its water customers in this case, the OSBA is not obligated to support that position. Indeed, I recommend against it.

Q. DID YOU PARTICIPATE IN THE BASA ACQUISITION CASE?

A. Yes. In my direct testimony, in that case I recommended that the proposed acquisition be rejected by the Commission, due to the large potential rate impacts caused by the proposed acquisition price of $231.5 million, which was later reduced to $230 million.[34] In my testimony I pointed out that, normally, in a pricing negotiation, the economic incentives for each party to the transaction are opposite one another: the seller is incentivized to attain the highest price possible, whereas the buyer has an incentive to attain the lowest price possible. A price

[33] Docket Nos. A-2022-3037047 et al., Joint Petition for Approval of Unanimous Settlement of All Issues (August 14, 2023), III. E. 21.

[34] As noted above, PAWC agreed in the BASA Settlement to use $228.0 million as the ratemaking rate base for the acquisition. Docket Nos. A-2022-3037047 et al., Joint Petition for Approval of Unanimous Settlement of All Issues (August 14, 2023), III. C. 19. g.

resulting from negotiations between sophisticated and informed parties conducted under such conditions may be presumed to represent a fair and genuine compromise.

However, perversely, the parties to BASA transaction struck me as having similar, if not identical, incentives, which was to attain as *high* a "negotiated" price as possible, so long as the acquisition price is approved for inclusion in rate base. In my opinion, a negotiated price arranged between parties that each have an incentive for the price to be as high as possible does not represent a fair and genuine compromise in a normal economic sense. Rather, the result of such an arrangement can be expected to be biased towards the upper end of plausible prices.

In the case of the seller, BASA, the incentive to obtain as high a price as possible is the normal economic incentive for a selling party, although one would expect that to be tempered somewhat by a concern for the impacts on its customers. The perverse incentive to attain a high acquisition price occurred for the buyer in this case, PAWC, which would be rewarded with an increase in rate base based on the acquisition price, so long as it does not exceed the fair market value of the assets as established by the required appraisals. Since the basic building block for a public utility to earn profits is the size of its rate base, PAWC was incentivized to attain as high an acquisition price as possible within this constraint. Indeed, that is exactly what occurred in this case, as the final negotiated price of $230.0 million is nearly 99% of the lesser of the appraised

values.[35] The stipulated rate base value of $228.0 million is 98% of the lesser of the appraised values.

In the absence of the normal economic incentive for PAWC to negotiate as low a price as possible for the BASA assets, the rate mitigation provision in the BASA Settlement takes on a critical role in assuring that customers are treated equitably. The rate impact cap of 1.4 times the current rates provides temporary relief for BASA customers from the full rate impact of the acquisition cost that PAWC negotiated. It is reasonable and appropriate for this temporary relief to be provided by PAWC's shareholders, not its water customers.

Q. HOW DOES YOUR ADJUSTMENT IMPACT PAWC'S REVENUE REQUIREMENT?

A. For the purposes of this case, I recommend setting the BASA-related revenue requirement increase at the 40% capped increase for BASA wastewater customers, or $4,735,610, with no Act 11 revenue shift to water customers. Considered in isolation, this adjustment would decrease PAWC's proposed revenue requirement by $21.6 million, which is equal to PAWC's proposed Act 11 revenue shift related to BASA. Taking account of my recommended revenue requirement adjustments described above, including my proxy ROE adjustment, the revenue requirement decrease from this adjustment is **$19,091,395,** which will limit the BASA-related revenue requirement increase to $4,735,610, with no Act 11 revenue shift.

[35] Based on BASA's utility valuation expert appraisal of $232,429,000. Docket Nos. A-2022-3037047 et al., Joint Petition for Approval of Unanimous Settlement of All Issues (August 14, 2023), Attachment 6, Proposed Findings of Fact, 39.

Q. IS YOUR RECOMMENDED ADJUSTMENT INTENDED TO BE A PERMANENT DISALLOWANCE OF A PORTION OF THE ACQUISITION COST?

A. No. I recognize that in approving the BASA Settlement, the Commission has allowed PAWC to include $228 million in rate base for the BASA acquisition. At the same time, the Commission has approved the BASA rate mitigation to which PAWC agreed, which limits the increase to BASA wastewater customers in this proceeding. My recommended revenue requirement adjustment related to BASA is intended to correspond to the period for which PAWC has committed to mitigate the rate impact on BASA wastewater customers and can be revisited in PAWC's next general rate case.

Brentwood Acquisition

Q. PLEASE EXPLAIN YOUR RECOMMENDATION CONCERNING THE BRENTWOOD ACQUISITION.

A. PAWC is proposing to recover the revenue requirement associated with the Brentwood acquisition from water customers that exceeds the targeted increase to Brentwood wastewater customers. In the Brentwood acquisition case, PAWC projected that the Brentwood acquisition would result in a revenue requirement increase of $664,000, of which $444,880 would be recovered from Brentwood wastewater customers. This represented an increase of 11.0% over current Brentwood wastewater revenues, including ALCOSAN charges.[36] In addition,

[36] Docket No. A-2021-3024058, Direct Testimony of Ashley E. Everette, p. 13, footnote 6; PAWC Exhibit AEE-1 (Revised), p. 3.

the Asset Purchase Agreement provides for a base "rate freeze" period for Brentwood customers for two years following the closing.[37] In the Brentwood acquisition case, PAWC projected that 33%, or $219,120, of the Brentwood-related revenue requirement increase would be allocated to water customers.[38]

In the current case, PAWC's proposed Brentwood-related revenue requirement increase is $1,934,637 (rather than $664,000). PAWC proposes to increase Brentwood wastewater rates by $369,405 (close to the $444,880 increase projected in the acquisition case) and to recover the remaining $1,565,232 as Act 11 revenue from water customers.[39]

Q. HOW DOES THE BRENTWOOD PURCHASE PRICE COMPARE TO THE NET BOOK VALUE OF THE ASSETS?

A. Similar to the BASA system, the Brentwood purchase price greatly exceeds the net book value of the assets. PAWC has agreed to pay $19.4 million for the Brentwood acquisition, which the Company proposes to add to rate base in this case.[40] The original cost of the assets as of June 30, 2024 is $10.1 million and the net book value is $7.4 million.[41] This means that the purchase price exceeds the original cost by $9.2 million and the net book value by $11.9 million.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT FOR PAWC'S PROPOSED BRENTWOOD ACQUISITION.

[37] APA Section 7.03(a).
[38] Docket No. A-2021-3024058, PAWC Exhibit AEE-1 (Revised), p. 3.
[39] Volume 03, Exhibit No. 3-A. In this case, PAWC's proposed increase to Brentwood customers is presented as 20.3% over current revenues excluding ALCOSAN charges.
[40] Direct Testimony of E. Christopher Abruzzo, Esq. (PAWC Statement No. 6), p. 6.
[41] PAWC Exhibit 11-I 2024, Table 2. Net Book Value calculated as June 30, 2024 Original Cost minus Book Depreciation Reserve.

A. My recommendation in this case mirrors that which the OSBA recommended in the Brentwood acquisition docket, namely that if the Commission approves the rate freeze provision of the Brentwood acquisition, PAWC should be required to impute the revenues to its Brentwood service area to make up for any revenue shortfall associated with the two-year rate freeze. This ensures that general ratepayers do not bear the cost associated with PAWC's commitment to freeze Brentwood's rates.[42] In this case, I recommend that the incremental Brentwood revenue requirement that exceeds the targeted increase to Brentwood customers should be absorbed by shareholders rather than shifted to water customers.

Like my recommended BASA adjustment, my Brentwood adjustment should not be viewed as a permanent disallowance but rather a temporary mitigation of the cost shift from the acquisition on water customers.

Q. HOW DOES YOUR ADJUSTMENT IMPACT PAWC'S REVENUE REQUIREMENT?

A. For the purposes of this case, I recommend setting the Brentwood-related revenue requirement increase equal to the increase PAWC proposes for Brentwood wastewater customers, or $369,405, with no Act 11 revenue shift. Considered in isolation, this adjustment would decrease PAWC's proposed revenue requirement by $1.6 million, which is equal to PAWC's proposed Act 11 revenue shift related to Brentwood. Taking account of my recommended revenue requirement adjustments described above, including my proxy ROE adjustment, the revenue requirement decrease from this adjustment is **$1,309,219,** which will limit the

[42] Docket No. A-2021-3024058, Direct Testimony of Brian Kalcic (OSBA Statement No. 1), p. 7.

Brentwood-related revenue requirement increase to $369,405, with no Act 11 revenue shift.

Audubon Water Company Acquisition

Q. PLEASE EXPLAIN PAWC'S AUDUBON ACQUISITION ADJUSTMENT PROPOSAL.

A. Audubon is a privately owned water utility regulated by the Commission. PAWC is proposing to acquire Audubon's assets through a merger transaction valued at $8.0 million[43] even though the net book value of the Audubon assets is only $360,229 as of December 31, 2024.[44] PAWC proposes to amortize the difference between the purchase price and the net book value, $7,639,771, over ten years as a utility plant acquisition adjustment and to include the unamortized balance in rate base.[45]

Q. WHAT DO YOU RECOMMEND REGARDING THE AUDUBON ACQUISITION ADJUSTMENT?

A. The Audubon acquisition case is still before the Commission, but at this time, I find the great disparity between the net book value of the Audubon assets and the proposed acquisition price to be of great concern for customers. Therefore, I recommend against any recovery of Audubon acquisition adjustment costs in this rate case. Instead, PAWC's proposed Audubon acquisition adjustment

[43] Direct Testimony of E. Christopher Abruzzo, Esq. (PAWC Statement No. 6), pp. 11-12, 18.
[44] Volume 05, Exhibit No. 3-C, Plant Additions and Retirements by Month, p. 23. This amount is net of Contributions in Aid of Construction.
[45] Direct Testimony of Stacey D. Gress (PAWC Statement No. 4), p. 6; Volume 05, Exhibit 3-B, p. 341.

amortization expense and rate base should be removed from the revenue requirement.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF YOUR ADJUSTMENT?

A. This adjustment is presented in Schedule KCH-10. This adjustment decreases the FPFTY revenue requirement by approximately **$1,913,386**, the entirety of which is related to Water operations.[46] Additional details of this adjustment are provided in Schedule KCH-7.

CLASS COST OF SERVICE STUDIES

Q. DO YOU HAVE ANY RECOMMENDED ADJUSTMENTS TO PAWC'S COST-OF-SERVICE STUDIES?

A. Yes. I recommend that all costs associated with PAWC's proposed residential Arrearage Management Plan ("AMP")[47] and administrative costs associated with its residential low-income programs be directly assigned to the residential class.

Q. HOW DOES PAWC ALLOCATE THE COSTS OF ITS RESIDENTIAL LOW-INCOME PROGRAMS?

[46] This adjustment impact is calculated based on the information provided in PAWC's responses to OSBA 06-001, OSBA 06-001_Attachment and OSBA 06-002, OSBA 06-002_Attachment (included in Schedule KCH-10) and is calculated including my preceding recommended adjustments, including my proxy ROE adjustment. My adjustment removes the associated ADIT as originally filed by PAWC, which the Company has acknowledged contains an error. I further note that PAWC claims its acquisition adjustment amortization expense is tax deductible in response to OSBA 06-004 (included in Schedule KCH-10), yet its revenue requirement calculation in OSBA 06-001_Attachment does not reflect the tax deductibility of the amortization expense. My adjustment attempts to remove the associated revenue requirement as-filed based on PAWC's responses.

[47] Under the AMP, qualifying residential customers will receive $25 of arrearage forgiveness monthly. Direct Testimony of Ashley E. Everette (PAWC Statement No. 1), pp. 15-16.

A. The direct revenue shortfall from residential low-income discounts is recovered from the residential class in the Company's rate design. However, PAWC allocates $3,180,090 in AMP costs and administrative costs associated with its H2O Grant and Discount and Dollar Energy programs among both residential and non-residential customer classes in its cost-of-service studies.[48]

Specifically, PAWC allocates $2,031,317 for its proposed AMP and $416,569 in Dollar Energy administrative costs among its Water classes based on the historical incurrence of net charge offs (bad debt).[49] For wastewater, PAWC allocates a total of $345,883 in AMP expense and $70,931 in Dollar Energy administrative costs among classes within its four wastewater cost-of-service studies based on customer count.[50]

In addition, PAWC allocates $315,390 in administrative costs for its H2O Grant and Discount program among water customer classes using an operations & maintenance ("O&M") composite factor.[51]

Q. DID PAWC INTEND TO ALLOCATE THESE COSTS IN THIS MANNER?

A. It is unclear. In response to discovery, PAWC initially claimed that costs associated with its AMP are recovered in base rates from residential customers.[52]

[48] See Volume 04, Exhibit 3-B, page 336; PAWC responses to OSBA 01-005 and OSBA 03-002, included in Schedule KCH-10.
[49] See Volume 04, Exhibit 3-B, page 336; PAWC responses to OSBA 01-005 and OSBA 03-002, included in Schedule KCH-10. Exhibit 12-A under Proposed Rates
[50] Exhibit 12-B, 12-C, 12-D, and 12-E under Proposed Rates.
[51] Exhibit 12-A under Proposed Rates.
[52] PAWC response to OCA 11-028, included in Schedule KCH-10.

However, the Company later acknowledged that these costs are not directly assigned to the residential class in its cost-of-service study.[53]

Q. WHAT DO YOU RECOMMEND REGARDING RESIDENTIAL AMP AND LOW-INCOME PROGRAM ADMINISTRATIVE COSTS?

A. I recommend that these costs be directly assigned to the residential class since these programs are designed to benefit residential customers.

Q. ARE THERE ANY POTENTIAL OFFSETS TO YOUR AMP ALLOCATION RECOMMENDATION IN THIS CASE?

A. Yes. PAWC has recorded a regulatory liability of $3,091,875 through June 30, 2024, associated with the AMP expense claimed in its last base rate case, Docket No. R-2022-3031672, since the AMP has not yet been implemented. This liability was recorded pursuant to the settlement in the AMP case, Docket No. P-2021-3028195. The Company proposes to refund this amount through amortization expense over two years.[54]

In the last rate case, the OSBA recommended the AMP expense be directly assigned to the residential class, which was subsequently accepted by PAWC.[55] Although the settlement in that case did not adopt a specific cost allocation approach, I recommend that the accrued liability associated with the AMP be directly credited to the residential class in order to be consistent with my recommended allocation of AMP expense.

[53] PAWC response to OSBA 03-002, included in Schedule KCH-10.
[54] Direct Testimony of Stacey D. Gress (PAWC Statement No. 4), p. 27.
[55] Docket No. R-2022-3031672, Recommended Decision (November 8, 2022), III. Findings of Fact 39-40, pp. 15-16.

Q. DO YOU PRESENT YOUR COST-OF-SERVICE RESULTS INCLUDING YOUR RECOMMENDED AMP AND LOW-INCOME PROGRAM ADMINISTRATIVE COST ALLOCATION?

A. Yes. These results are summarized in Schedule KCH-8, pages 1 through 5, for Water, WW SSS, WW CSS, Brentwood, and BASA, respectively.[56]

ACT 11 REVENUE ALLOCATION

Q. HOW DOES PAWC PROPOSE TO ALLOCATE ACT 11 REVENUE AMONG WATER CUSTOMER CLASSES IN THIS CASE?

A. PAWC's approach has evolved throughout this case. In Exhibit 12-A, Schedule A, PAWC spread the Act 11 revenue responsibility among its water classes but did not demonstrate how these amounts were derived. In response to discovery, PAWC provided a corrected allocation of Act 11 revenue among water classes that is based on the corresponding wastewater classes that give rise to the Act 11 revenue shortfall.[57]

Q. WHAT DO YOU RECOMMEND REGARDING THE ALLOCATION OF ACT 11 REVENUE AMONG WATER CLASSES?

A. To the extent that the Commission approves the recovery of a portion of the wastewater revenue requirement from water customers in this case, I recommend that the allocation of Act 11 cost responsibility to water customers should

[56] PAWC provided corrected versions of its CCOSS for WW SSS (Exhibit 12-B) and Brentwood (Exhibit 12-D) in response to OSBA 04-011. In addition, PAWC provided updated versions of its CCOSS for WW CSS (Exhibit 12-C) and BASA (Exhibit 12-E) in response to OSBA 04-016 and OSBA 04-012, respectively. These responses are the basis for my CCOSS analysis and PAWC's narrative responses are included in Schedule KCH-10.

[57] PAWC response to OSBA 03-001, OSBA 03-001_Attachment, included in Schedule KCH-10.

correspond to the wastewater classes that create the revenue shortfall. For example, the revenue shortfall that is caused by residential wastewater rates being set below residential wastewater costs should be allocated to the residential water class.

This allocation exercise is complicated by the fact that PAWC's non-residential water classes do not match the non-residential class categories used in each of its wastewater systems. However, the Act 11 allocation approach offered in PAWC response to OSBA 03-001 represents a reasonable estimation of this allocation by class. I recommend that this approach be adopted in this case, incorporating the adjustments to revenue requirement and cost allocation that I described above.

Q. HAVE YOU CALCULATED THIS REALLOCATION OF ACT 11 REVENUE?

A. Yes. This is shown in Schedule KCH-8, page 1 at PAWC's proposed revenue requirement and Act 11 revenue level, and in Schedule KCH-9, page 2 at OSBA's recommended revenue requirement and Act 11 revenue level.

REVENUE ALLOCATION

Q. PLEASE DESCRIBE PAWC'S PROPOSED REVENUE ALLOCATION AMONG WATER CUSTOMER CLASSES.

A. PAWC presents its proposed revenue allocation in Exhibit 12-A, Schedule A. As shown in this Schedule, PAWC proposes increases for the Residential, Commercial, Industrial, and Public Fire Protection classes that are close to or

somewhat above the proposed system average increase. PAWC proposes significantly below-average increases for the Public (Municipal) and Private Fire Protection classes.[58]

Q. WHAT IS YOUR RECOMMENDATION REGARDING WATER REVENUE ALLOCATION?

A. I recommend adopting a revenue allocation among water customer classes that will improve alignment with cost of service. Specifically, at PAWC's proposed revenue requirement, I recommend that the Commercial class increase be reduced by $5.3 million in order to equal its cost-based increase, including its allocation of Act 11 revenue. Concomitantly, I recommend a $5.3 million greater increase to the Public (Municipal) class, which will still result in this class receiving a significant subsidy relative to cost. My recommended revenue allocation for water customer classes is shown in Schedule KCH-9, page 1, at PAWC's proposed revenue requirement.

Q. DID OSBA ASK PAWC TO EXPLAIN WHY ITS PROPOSED INCREASE TO THE PUBLIC CLASS IS SIGNFICANTLY BELOW COST?

A. Yes. In response to discovery, PAWC indicated, "the Company reviewed the proposed increase in comparison to the cost of service and determined that a larger increase than proposed may be warranted."[59]

Q. HOW DO THE WATER RATES OF THE COMMERCIAL CLASS COMPARE TO THE PUBLIC CLASS?

[58] PAWC's proposes a below-average increase for the Other Water Utilities – Group A class and an above-average increase for the Other Water Utilities – Group B class. These classes are small and thus do not have a significant impact on the overall cost recovery.
[59] PAWC response to OSBA 03-004, included in Schedule KCH-10.

A. For Rate Zone 1 (comprising the bulk of customers), the Commercial and Municipal customer charges are the same, varying by meter size. The current average usage charge for the Commercial class is significantly greater than for the Public class. Based on PAWC's 6/30/25 billing determinants, the current average Rate Zone 1 base usage rates per 100 gallons are $1.2643 for the Commercial class and $0.9910 for the Public class.[60]

Q. WOULD THE WATER RATES FOR THE PUBLIC CLASS STILL BE LOWER THAN FOR THE COMMERCIAL CLASS UNDER YOUR RECOMMENDED REVENUE ALLOCATION?

A. Yes. While I am not advocating for a particular rate design for the Public class, at PAWC's proposed revenue requirement (and assuming PAWC's proposed Commercial and Public customer charges are adopted), the average Rate Zone 1 usage rates per 100 gallons under my proposed revenue allocation would be $1.6407 for the Commercial class and $1.4844 for the Public class.

Q. WHAT REVENUE ALLOCATION DO YOU RECOMMEND IF THE COMMISSION APPROVES A LOWER REVENUE REQUIREMENT THAN REQUESTED BY PAWC?

A. If the Commission approves a lower revenue requirement increase than proposed by PAWC, I recommend that the decrease be applied principally to the water rates. So long as the cost-based wastewater increase associated with the approved revenue requirement is greater than PAWC's proposed wastewater rates, the incremental revenue requirement reduction should not reduce PAWC's proposed

[60] Derived from Exhibit 10-A Water Operations.

wastewater rates. This means that a lower revenue requirement will reduce Act 11 revenues and PAWC's proposed water rates generally.

At a lower revenue requirement, I recommend scaling each water class's revenues in proportion to each class's share of the total proposed non-Act 11 revenues in my revenue allocation from Schedule KCH-9, page 1, which I calculated at PAWC's requested revenue requirement. I also recommend that each applicable water class be allocated its share of the Act 11 revenue consistent with the allocation approach described in the prior section of my testimony. I present OSBA's recommended water revenue allocation, at OSBA's recommended revenue requirement, in Schedule KCH-9, page 2.

REVENUE DECOUPLING

Q. PLEASE DESCRIBE PAWC'S REVENUE DECOUPLING PROPOSAL.

A. PAWC is requesting approval of a Revenue Decoupling Mechanism ("RDM") for both water and wastewater service in this proceeding. If approved, PAWC would use the RDM to compare the difference between actual revenue collected from eligible customers under the rates approved in this case against hypothetical revenues that would have been recovered using a Straight Fixed Variable ("SFV") rate design. If actual revenues are greater than would have been collected under the RDM formula, PAWC indicates that it intends to credit the difference to customers in the subsequent year through the mechanism. If actual revenues are less than would have been collected under the RDM formula, PAWC states that it

intends to collect the difference from customers in the subsequent year through the mechanism.[61]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE RDM?

A. I recommend that the RDM proposal be rejected.

Q. PLEASE EXPLAIN YOUR REASONING.

A. Fundamentally, customers do not have an obligation to backstop a utility's fixed cost recovery in between general rate cases. Mechanisms to provide such broad "revenue assurance" to utilities shift the risks associated with changes in consumption for any and all reasons, including weather and economic conditions, from shareholders to customers, even though shareholders are compensated for accepting such risks in the utility's approved return on equity.

In the specific case of PAWC, an RDM is particularly concerning given the Company's aggressive acquisition of other utilities at prices well above net book value. As is evident in this rate case, such acquisitions add to rate base and put upward pressure on rates separate and apart from the cost pressures associated with investing in needed system improvements. It is in the public interest for PAWC shareholders to bear the risk in between rate cases that customers will reduce their water consumption in response to PAWC's rate increases. A negative price response from customers should be one of the factors that PAWC takes into account when the Company contemplates the acquisition of another water or wastewater company at a substantial premium above net book value that

[61] Direct Testimony of Charles Rea (PAWC Statement No. 10), pp. 89-97.

puts upward pressure on PAWC customers' rates. It would be counterproductive to shield PAWC from this risk through the adoption of the RDM proposal.

Q. ASIDE FROM THESE GENERAL CONCERNS, DO YOU HAVE OTHER CONCERNS SPECIFIC TO PAWC'S RDM PROPOSAL?

A. Yes. PAWC's proposed RDM would apply to all customers, excluding those taking service under special contracts. While I recommend rejection of the RDM for *all* customers, the Company's proposal is particularly problematic for non-residential customers. The RDM formula proposed by PAWC attempts to reflect all non-residential revenues through a single SFV rate design irrespective of customer size or type of usage. Non-residential customers are not homogenous; they range from "mom and pop" retail stores to golf courses to industrial operations. Average usage for non-residential customers will be sensitive not only to the consumption patterns of the existing set of customers, but also to changes in the composition of the group. Under PAWC's proposal, the loss in revenue from the shutdown of a large industrial customer will immediately be shifted to all other non-residential customers through the RDM deferral calculation.

Thus, while the logic of targeting "revenues per customer" may be defensible when dealing with classes that have large numbers of similarly sized customers within the class, such a target makes little sense for classes populated by a broad range of heterogeneous customers. Revenues per customer in such classes are susceptible to change simply by a change in the composition of the customers in the group, irrespective of whether customers are modifying their

own water consumption. Further, changes in revenues per customer for commercial and industrial customers will be particularly sensitive to changes in economic activity. Clearly, PAWC's RDM proposal would have its customers backstop the normal economic risks that should be assigned to its shareholders.

Q. ARE YOU AWARE OF ANY ATTEMPTS TO INCLUDE NON-RESIDENTIAL CUSTOMERS IN A DECOUPLING MECHANISM THAT RESULTED IN FAILURE?

A. Yes. I am most familiar with these mechanisms in the context of electric utilities. Although many jurisdictions in my experience wisely exclude non-residential customers from revenue decoupling mechanisms, Michigan did not. In 2009, Detroit Edison in Michigan proposed an RDM that was applicable to all non-residential customers. I strongly opposed the proposal, arguing that Detroit Edison's proposal was fraught with peril, and should be rejected for many of the same reasons I argue in this case:

> Although I am recommending against adoption of any part of the proposal, I wish to emphasize the particular inappropriateness of its application to non-residential customers. Whereas decoupling mechanisms for residential customers can target metrics such as average usage per customer, there is no reasonable "common denominator" for setting a decoupling baseline for non-residential customers. Detroit Edison's attempt to use a target revenue requirement for this purpose creates problems far greater than the "utility disincentive problem" it is attempting to solve.[62]

Although the Proposed Decision by the Administrative Law Judge agreed with the thrust of my arguments,[63] the final Commission Order adopted a version of

[62] Michigan Public Service Commission, Case No. U-15768, Direct Testimony of Kevin C. Higgins, p. 13.
[63] Michigan Public Service Commission, Case Nos. U-15768 and U-15751, Notice of Proposal for Decision, PP. 97, 101. (November 10, 2009).

revenue decoupling that targeted average usage per customer for non-residential customers that I and others had warned against.[64]

Just nine months after issuance of that order, Detroit Edison realized that the adoption of a broad-based decoupling mechanism targeting average usage per customer for non-residential customers had been a big mistake. In the words of Detroit Edison's witness in that subsequent case:

> Based on our experience, it is clear that Edison's current RDM does not meet the requirements of a well designed RDM. Edison's current RDM is highly sensitive to changes in the number of customers, *particularly relative to Commercial and Industrial (C&I) customer classe*s, which have far fewer absolute numbers of customers than the residential class. More specifically, *small changes in numbers of customers, due to such things as plant closing, customer additions, migration among customer classes*, including migration to Electric Choice, and the like, *have a huge impact on changes in average use per customer*. As I indicated earlier, this is particularly true for the C&I customer classes which tend to have relatively low customer counts and high average electric use per customer.[65]

Q. BASED ON YOUR EXPERIENCE, WHAT DO YOU RECOMMEND IF A VERSION OF THE RDM IS ADOPTED?

A. While my primary recommendation is that the RDM should be rejected, if the Commission elects to approve a version of the RDM, it should exclude all non-residential customers.

Q. DO YOU HAVE ANY OTHER CONCERNS SPECIFIC TO PAWC'S RDM PROPOSAL?

[64] Michigan Public Service Commission, Case Nos. U-15768 and U-15751, Opinion and Order, pp. 61-68 (January 11, 2010).
[65] Michigan Public Service Commission, Case No. U-16472, Direct Testimony of Don M. Stanczak, p. 15 (emphasis added).

A. Yes, I believe that the RDM formula PAWC has proposed will have the opposite effect of what is intended. Instead of accruing revenue when actual revenues fall short of the SFV calculation, as PAWC intends, the formula proposed by PAWC will produce a negative value in such a situation, suggesting a credit to customers. Conversely, instead of calculating a negative value (or credit) when actual revenues exceed the SFV calculation, PAWC's formula will produce a positive value, indicating a charge.

Q. PLEASE EXPLAIN FURTHER.

A. For example, the RDM formula proposed by PAWC for non-residential customers is:

NON Acc = NONREV – (VC * NONUSE) – (NC * NRCUST)

Where: NON Acc = amount of non-residential revenue to be accrued
NONREV = Total revenue in the month from non-residential customers, excluding revenues from adjustments
VC = Volumetric Charge
NONUSE = Number of 100-gallon units sold to non-residential customers
NC = Non-Residential Fixed Charge
NRCUST = Average number of non-residential customers for the month [66]

Effectively, PAWC proposes to calculate the monthly revenue accrual by subtracting its monthly SFV target revenue [(VC * NONUSE) + (NC * NRCUST)] from its monthly actual revenue. It is intuitive that if the actual monthly revenue falls short of the SFV target, this formula will produce a negative deferral, *i.e.*, a *credit* to customers, which is the opposite of the additional charge that PAWC intends.

[66] Direct Testimony of Charles Rea (PAWC Statement No. 10), p. 93. *See also*, Supplement No. 45 to Tariff Water-PA P.U.C. No. 5.

What I believe PAWC intends is to subtract the monthly actual revenue from the monthly SFV target revenue [(VC * NONUSE) + (NC * NRCUST) – NONREV], *i.e.*, to reverse the sequence of the components. With this formulation, if the actual monthly revenue falls short of the SFV target, the calculation will produce a positive deferral, which I understand to be PAWC's intention.

Q. DID YOU ATTEMPT TO CLARIFY THIS QUESTION WITH PAWC?

A. Yes. OSBA queried PAWC about the proposed formula and asked PAWC to consider whether the formula was producing results that were opposite of what was intended. To ensure clarification, OSBA asked PAWC to illustrate how the Water Non-Residential RDM adjustment would be calculated, assuming that: (a) PAWC's proposed Non-Residential rates are approved, (b) Non-Residential 100-gallon units are 5% lower than those used to design rates in this case, and (c) customer counts do not change from those used to design rates in this case.

Q. HOW DID PAWC RESPOND?

A. PAWC failed to respond in a meaningful or cogent way. First, PAWC obfuscated the issue by stating:

> The adjustment amount is not dependent on whether sales increase or decrease from those used to design rates in this case. The RDM calculates an adjustment based on the difference between actual revenues and revenues that would result from a straight fixed-variable rate design.[67]

While I agree with the second sentence in this response, the first sentence makes little sense. Contrary to what the first sentence states, if sales decrease because usage-per-customer has declined below what was anticipated when rates were set,

[67] PAWC response to OSBA 04-017.b, which is included in Schedule KCH-10.

the RDM adjustment amount is very much implicated. Indeed, addressing such situations is the stated purpose of the RDM, as explained in Mr. Rea's testimony:

> Seasonal weather conditions can cause *water sales to either increase or decrease* from expected going-forward levels, which, in turn, causes revenues to increase or decrease from expected going-forward levels.[68]
>
> Continuing trends in declining use per customer in the residential, commercial, and municipal classes also cause volatility in revenues. I have previously testified to both the impact of weather conditions on annual water sales and on the continuing trends in declining use and the associated *impact of declining use on water sales*. The Company expects that water consumption per customer will continue to decline over the next several years. Both of these conditions cause declines in revenues and both total consumption on a per customer basis and revenue on a per customer basis are expected to continue to decline well beyond the period of time for which rates are set in this case.[69]

Secondly, PAWC refused to provide the illustration OSBA requested, claiming incongruously that:

> The Company cannot make the requested calculation based on the scenario provided as the scenario is not detailed enough to develop a meaningful calculation. As stated in b), The RDM calculates an adjustment based on the difference between actual revenues and revenues that would result from a straight fixed-variable rate design. Sales being higher or lower than levels approved in the case is not a relevant factor.[70]

Thus, PAWC declined to take the opportunity to provide a clarification in response to discovery. Its discovery response was unhelpful in supporting the RDM formula it is proposing to use.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS CONCERNING PAWC'S RDM PROPOSAL.

[68] Direct Testimony of Charles Rea (PAWC Statement No. 10), p. 87. Emphasis added.
[69] *Id*., pp. 87-88. Emphasis added.
[70] PAWC response to OSBA 04-017.d, which is included in Schedule KCH-10

A. I recommend that the Commission reject PAWC's RDM proposal for the reasons stated in my testimony. If, however, the Commission elects to adopt a version of the RDM proposal, I recommend that non-residential customers be excluded from the mechanism. Finally, I note that the formula PAWC proposes to use to calculate the RDM adjustment appears to have an error that would cause the calculation to have the opposite effect of the Company's stated intent. PAWC was not cooperative when asked to clarify this issue through the discovery process.

ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE ("ECIC")

Q. PLEASE DESCRIBE PAWC'S PROPOSED ECIC.

A. PAWC is proposing to implement an ECIC to recover the costs of complying with government-mandated environmental standards between rate cases. The proposed ECIC would allow for recovery of capital costs and incremental O&M expenses for projects and activities included in an annual environmental compliance plan that is subject to Commission approval.[71]

The ECIC is designed as a percentage surcharge, calculated separately for water and wastewater, to be updated quarterly for the costs incurred in a preceding period, beginning November 1, 2025.[72]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE ECIC?

[71] Direct Testimony of J. Cas Swiz (PAWC Statement No. 8), pp. 21-22.
[72] Supplement No. 45 to Tariff - Water – PA PUC No. 5, pages 40.2 through 40.5; Supplemental No. 47 to Tariff – Wastewater – PA PUC No. 16, pages 19 through 19.3.

A. I recommend that the proposed ECIC be rejected. While I recognize the importance of compliance with environmental regulations, cost recovery is best addressed in the context of a general rate case.

The proposed ECIC is a classic example of single-issue ratemaking. Single-issue ratemaking occurs when utility rates are adjusted, or costs are deferred, in response to a change in a single cost item considered in isolation. It ignores the multitude of other factors that otherwise influence rates, some of which could, if properly considered, move rates in the opposite direction from the single-issue change. Setting rates based on a single cost item runs contrary to the basic principles of traditional utility regulation. When regulatory commissions determine the appropriateness of a rate or charge that a utility seeks to impose on its customers, the standard practice is to review and consider all relevant factors, rather than just a single factor. To consider some costs in isolation might cause a commission to allow a utility to increase rates (or defer costs) to recover higher expenses in one area without recognizing counterbalancing savings in another area, or vice versa. For these reasons, single-issue ratemaking, absent a compelling public interest, is generally not sound regulatory practice.

DEFERRED ACCOUNTING FOR PRODUCTION EXPENSES

Q. WHAT ACCOUNTING TREATMENT IS PAWC REQUESTING FOR ITS PRODUCTION EXPENSES?

A. PAWC is requesting deferred accounting treatment for its production expenses. In accordance with this request, PAWC would maintain separate regulatory asset

and liability accounts for each production expense category, including (1) Purchased Water and Wastewater Treatment, (2) Fuel & Power, (3) Chemicals, and (4) Waste Disposal. Beginning the first month after rates are in effect in this proceeding, the Company would record the difference between the expense authorized in this case and the actual expense. If the actual expense is lower than the authorized amount in rates, a regulatory liability would be set up to record the difference. If the actual expense is higher than the authorized amount in rates, a regulatory asset would be recorded. At the time of its next rate case, the Company would present the net amount in these accounts for return to the customers (in the case of a net credit amount or regulatory liability) or for collection in rates (in the case of a net debit amount or regulatory asset) over a reasonable amortization period.[73]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE REQUESTED DEFERRED ACCOUNTING TREATMENT FOR PRODUCTION EXPENSES?

A. I recommend that the requested deferred accounting treatment be denied. Ratemaking is not intended to be a simple exercise in expense reimbursement. Rates are set with the expectation that utility management will run the business as efficiently as possible, while providing safe and reliable service to customers and meeting its other regulatory responsibilities. In so doing, the Company is given the opportunity to achieve or exceed its authorized return to its shareholders. As part of this arrangement, utility management should be expected to cope with normal

[73] Direct Testimony of J. Cas Swiz (PAWC Statement No. 8), pp. 19-20.

business risks and the operation of economic forces, without resorting to single-issue ratemaking, such as the requested deferred accounting treatment, except in circumstances of compelling public interest.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

OSBA Revenue Requirement Adjustment Impact Summary

SCHEDULE KCH-10

Pennsylvania-American Water Company's
Responses to
OSBA, OCA and I&E Data Requests
(With Select Attachments)

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Small Business Advocate Set 1

OSBA 01-005

Responsible Witness: Charles Rea, Senior Director of Rates and Regulatory

Question:

Please provide a detailed breakdown of the total amount of the Company's pro forma FPFTY test year cost claim for each of its low-income residential customer assistance programs for water service. Identify the line item(s) in the Company's WCOSS wherein such low-income customer assistance costs are recovered.

Response:

The total discounts assumed for rate making purposes under proposed rates and the Company's proposed low-income discount tariff for water service by zone are as follows:

Rate Zone 1:	$15,864,342
Rate Zone 2:	$4,712
Rate Zone 4:	$2,467
Rate Zone 6:	$52,100

These costs do not appear as a line item in the Company's WCOSS. These amounts are offsets to proposed rate revenues and reallocated back to the residential class for the purposes of rate design. Please see excel file Exhibit 10-A_Water Operations CONFIDENTIAL (WTR Res).

The total costs associated with the H2O grant and discount programs for water and wastewater services are below. The costs are charged to account 636.8 – Contract Services – Other – Admin & General and not allocated to wastewater on the Company's books.

H2O Grant and Discount Programs	FPFTY
Monthly Fees for Service	$219,225
Amortization of Funding & Operating Fees	77,579
Utility Admin Fees	18,211
Accruals	375
Total	$315,390

Please refer to Volume 04, Exhibit 3-B, page 336, for the costs associated with the Arrearage Management Plan and Low Income Program included in Water Operations for the FPFTY.

OSBA 03-001

Responsible Witness: Charles Rea, Senior Director of Rates and Regulatory

Question:

Reference the Attachment provided in the Company's response to OSBA-I-018.

a. Please reconcile the totals shown in the Act 11 column of the referenced attachment with the Act 11 subsidies shown in Exhibit 3-A, page A, by wastewater operating division.
b. Please provide a detailed derivation of all figures shown in lines 9-12 of the referenced attachment. Include an electronic copy of all workpapers.

Response:

a-b. Please see OSBA 03-001_Attachment for a corrected calculation of Act 11 revenues shown in Exhibit 3-A, page A, by wastewater operating division and customer class, including the derivation of all figures sourced to the applicable revenue and cost of service exhibits for each operating division. The data originally provided in OSBA-01-018 was not correct and did not tie to Exhibit 3-A, Page A.

Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

Reference the Company's response to OSBA-I-005.

a. Please confirm that the additional pro forma uncollectible expense associated with the Company's Arrearage Management Plan ("AMP") program is $2.377 million. If incorrect, please explain.
b. Please confirm that the water service portion ($2.031 million) of the additional pro forma uncollectible expense associated with the Company's AMP program is included in the line labeled Account 670.7 – Bad Debt on Schedule D, page 3 of 6, in PAWC's WCOSS (Exhibit 12-A). If incorrect, please explain where such costs are included.
c. Please confirm that the additional pro forma uncollectible expense associated with the Company's AMP program is not directly assigned to the Residential class in PAWC's WCOSS. If incorrect, please explain.
d. Please confirm that the annual administrative costs associated with the Dollar Energy Costs program, in the amount of $487,500, is separate from/in addition to the administrative costs associated with the Company's H2O Grant and Discount Programs, which total $315,390. If incorrect, please explain.

Response:

a. Yes, the additional pro forma uncollectible expense associated with the Company's AMP program is $2.377 million.
b. Yes, the water service portion of the additional pro forma uncollectible expense associated with the Company's AMP program is included in Account 670.7 – Bad Debt on Schedule D in PAWC's WCOSS (Exhibit 12-A).
c. Yes, the pro forma uncollectible expense associated with the Company's AMP program is not directly assigned to the Residential class in PAWC's WCOSS.
d. Yes, the annual administrative costs associated with the Dollar Energy Costs program are separate from/in addition to the administrative costs associated with the Company's H2O Grant and Discount Programs.

OSBA 03-004

Responsible Witness: Charles Rea, Senior Director of Rates and Regulatory

Question:

Reference Schedule A of Exhibit No. 12-A. Please explain in detail why the Company is proposing to limit the increase to the Public (Municipal) class to 16.2%, with the result that proposed Public revenues would remain ($36.8 m. minus $26.2 m. or) $10.6 m. below the Company's adjusted class cost-of-service benchmark.

Response:

In response to this data request, the Company reviewed the proposed increase in comparison to the cost of service and determined that a larger increase than proposed may be warranted.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Small Business Advocate Set 4

OSBA 04-002

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

Please refer to "4c Compensation Adjustment," "4p Service Company Costs," and "4q Acquisition O&M" (Initial Filing – Excel Files – Volume 03-04-05 [Exhibit 3-A, 3-B, 3-C] – Operating Expenses) and PAWC's responses to OCA 09-009 and OCA 09-010.

a. Please reconcile the 6/30/24 and 6/30/25 Annualized Performance Plan amounts shown in "4c Compensation Adjustment" with the 2024 Performance Pay – Forecasted and the 2025 Performance Pay – Forecasted shown in PAWC's response to OCA 09-009.

b. Are the Service Company performance pay amounts shown in OCA 09-010_Attachment included in the "4c Compensation Adjustment?" If so, please cite to where these amounts are included in the "4c Compensation Adjustment."

c. Are the Service Company performance pay amounts shown in OCA 09-010_Attachment included in "4p Service Company Costs"? If so, please cite to where these amounts are included in "4p Service Company Costs."

d. PAWC's response to OCA 09-010 states that Service Company employee compensation costs (including performance pay) for Farmington Water, Audubon Water, Farmington Wastewater, Sadsbury Wastewater, BASA Wastewater Operations and Brentwood Wastewater Operations were calculated as part of Service Company costs which can be referenced in Volume 4, Exhibit 3-B, pages 303-308 under Acquisition O&M Expense Adjustments. Please provide the specific performance pay amounts for 6/30/24 and 6/30/25 that are included in "4q Acquisition O&M" for Farmington Water, Audubon Water, Farmington Wastewater, Sadsbury Wastewater, BASA Wastewater Operations and Brentwood Wastewater Operations.

Response:

a. The amounts for Annualized Performance Plan listed in "4c Compensation Adjustment" include both APP & LTPP and are gross amounts whereas the amounts provided in PAWC's response to OCA 09-009 represent the expense after factoring in the capitalized amounts. Please refer to OSBA 04-002_Attachment which provides both the gross and net expense amounts for both periods.

b. No.

c. Yes, the Service Company performance pay amounts are included in “4p Service Company Costs” under Labor and Related Costs.

d. Please refer to OSBA 04-002_Attachment which provides the amounts of performance pay allocated to PAWC from the Service Company for both periods.

OSBA 04-007

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

Please refer to the Direct Testimony of Lori O'Malley (PAWC Statement No. 5), page 14, lines 15-21, regarding the Employee Stock Purchase Plan (ESPP).

a. Please provide, in Excel format, the 6/30/25 ESPP operating expense that is included in the Company's requested revenue requirement, separately identifying the ESPP operating expense related to PAWC employees and that allocated to PAWC from the Service Company. Please provide these amounts by USOA account for each revenue requirement study: Water Operations, Wastewater Sanitary Sewer System General Operations, Wastewater Sanitary Sewer System Butler Operations, Wastewater Sanitary Sewer System Butler Operations, and Wastewater Combined Sewer System Operations. Please cite to the specific locations where these amounts are included in PAWC's filing (including references to the tabs and cells within the Excel files).

b. Please provide, in Excel format, the projected 6/30/25 ESPP cost prior to applying the capitalization percentage (if applicable), the applicable capitalization percentage, and the projected 6/30/25 ESPP amount charged to operating expense, separately for the ESPP cost related to PAWC employees and that allocated to PAWC from the Service Company.

Response:

a. Please refer to OSBA 04-007_Attachment. The ESPP amounts for Water Operations, Wastewater SSS General Operations, and Wastewater CSS Operations can be located at "4g 401K DCP Expense" in the respective 3B tabs. The ESPP amount for BASA can be located at "4q Acquisition O&M" in the '3B BASA WW O&M' tab. Please note that ESPP expense related to PAWC employees is recorded to USOA (NARUC) account 604.8, and ESPP expense allocated from Service Company is recorded to account 634.8.
b. Please refer to the response in part a above. ESPP is not capitalized by the Company.

Responsible Witness: Connie Heppenstall, Senior Project Manager, Gannett Fleming

Question:

Please refer to the Direct Testimony of Constance E. Heppenstall (PAWC Statement No. 12) page 22, lines 9 through 12.

a. Please provide the workpapers in Excel format that were used determine that the maximum day volumes were 3.0 times total average flow for PAWC's WW SSS General Operations.

b. Please cite to where in the Excel file "Exhibit 12-B under Proposed Rates" this 3.0 ratio is reflected.

c. Please cite to where in the Excel files "Exhibit 12-C under Proposed Rates," "Exhibit 12-D under Proposed Rates", and "Exhibit 12-E under Proposed Rates" this 3.0 ratio is reflected.

Response:

a. See Appendix R, PDF pages 63 and 65 of the Coatesville Wastewater Operations Infiltration and Inflow Study supplied in response to data request OCA 04-040. These pages show the following GPD for average day and peak day flows. The ratio is calculated to be 2.79 which was rounded up to 3.0.

	Average Flow GPD	Peak Flow GPD
Valley Township	1,242,890	2,979,257
West Banrdywine Township	864,500	2,229,515
Caln Township	612,269	839,099
Sadsbury Township	520,175	1,491,817
Direct and I&I	4,082,477	12,867,416
	7,322,311	20,407,104

Ratio of Average Flow to Peak Flow	2.79

b. The ratio is used in the calculation of Factor 2, column 3, where the Peak I&I Flow equals 3.0X the Total I&I and Average Flow from column 4 in Factor 1, less the Total Adjusted Average Daily Customer Flow in column 2 of Factor 1, or 377,163 GPD. However, this amount included the Total I&I and Average Flow of Bulk Users – Contract customers, which are not included in the calculation of Factor 2. Instead of 377,163 GPD, the number should have been 275,952 GPD. The corrected Exhibit 12-B under Proposed Rates is attached as

OSBA 04-011_Attachment 1.xlsx. This correction lowers the residential cost of service by 0.10% from 52.5% to 52.4% and raised the commercial cost of service from 19.7% to 19.8%. or by 0.10%.

c. This ratio is not used in Exhibit 12-C under Proposed Rates. In Exhibit 12-C, the I&I Peak Day in column 3 of Factors 3 and 4 is equal to the total peak sanitary plant capacity of Scranton (25 MGD), McKees Rocks (20 MGD) and Kane (2 MGD) less the Total Average Daily Customer Flow in column 2. These amounts were then allocated by class based on Factor 1A.

In Exhibit 12-D, the ratio was used in calculating the Peak I&I in Factor 2. However, this amount should have been equal to 3.0 X Ave. Flow Consumption in column 2, less the Ave. Flow Consumption. Unfortunately, the calculation of the Peak I&I Flow in Exhibit 12-D did not exclude the Ave. Flow Consumption in column 2. OSBA 04-011_Attachment 2.xlsx reflects this correction. A similar problem occurred in calculating Factor 1 and is also corrected in this file. See response to OSBA 04-12 for further discussion.

This ratio is not used in Exhibit 12-E under Proposed Rates. In Exhibit 12-E, the I&I Peak Day in column 3 of Factor 2 was equal the experienced peak day of 11.557 MGD less Ave. Flow Consumption in column 2. These amounts were then allocated by class based on Factor 1A.

Question:

Please refer to the Direct Testimony of Constance E. Heppenstall (PAWC Statement No. 12) page 21, lines 19 through 23.

a. Please cite to which inputs in the allocation factor calculations in Excel file "Exhibit 12-B under Proposed Rates" reflect that 32.9% of the average daily flow was from I&I.

b. Please cite to which inputs in the allocation factor calculations in Excel file "Exhibit 12-D under Proposed Rates" reflect that 32.9% of the average daily flow was from I&I for WW SSS Brentwood Operations.

c. Please cite to which inputs in the allocation factor calculations in Excel file "Exhibit 12-E under Proposed Rates" reflect that 62.5% of the average daily flow was from I&I for WW SSS Butler Area Operations.

Response:

a. The inputs are used in developing Factor 1. See OSBA 04-011_Attachment 1 which clarifies the use of this factor.

b. The inputs are used in developing Factor 1. Excel file "Exhibit 12-D under Proposed Rates" used 1.31% rather than 32.9%. See correction in OSBA 04-011_Attachment 2.

c. The inputs are used in developing Factor 1. See detail in OSBA 04-012_Attachment.

Question:

Please refer to the Excel files "Exhibit 12-A under Proposed Rates," "Exhibit 12-B under Proposed Rates," "Exhibit 12-C under Proposed Rates," "Exhibit 12-D under Proposed Rates", and "Exhibit 12-E under Proposed Rates." Please provide the workpapers in Excel format used to derive any internally-calculated cost allocation inputs or factors utilized in the cost-of-service studies. For example, in "Exhibit 12-B under Proposed Rates," "Factor 1-3" tab, Excel column E (labeled column [3]), rows 15-19 contain pasted values with footnotes explaining how the values were derived. Please provide the Excel-format workpapers used to derive these and any other derived values used to calculate the allocation factors.

Response:

Please refer to the Excel files provided in response to OSBA 04-011 and OSBA 04-012 for Exhibits 12-B, 12-D and 12-E under proposed rates.

Please see OSBA 04-016_Attachment for the Excel file for Exhibit 12-C under proposed rates.

Office of Small Business Advocate Set 4

OSBA 04-017

Responsible Witness: Charles Rea, Senior Director of Rates and Regulatory

Question:

Please refer to the proposed Revenue Decoupling Mechanism ("RDM") tariff (SUPPLEMENT NO. 45 TO TARIFF WATER - PA PUC NO. 5 [CLEAN])

a. Please identify where in the proposed RDM tariff the defined terms "Previous Amortization Period" and "Upcoming Amortization Period" are utilized. What is the relevance of these terms to the calculation or function of the proposed RDM?

b. Please confirm that the formula presented in Section B would result in a negative adjustment (i.e., credit) if sales volumes decrease from those used to design rates in this case and a positive adjustment (i.e., charge) if sales volumes increase from those used to design rates in this case (and actual customer counts equal those used in the RDM cost component calculations in PAWC Statement No. 10 – REA Exhibit CBR-8).

c. If subpart b. is confirmed, is the Determination of Adjustment formula in Section B in error? If yes, please provide a corrected Determination of Adjustment formula.

d. Please illustrate, in Excel format, how the Water Non-Residential RDM adjustment would be calculated, assuming that PAWC's proposed Non-Residential rates are approved, Non-Residential 100-gallon units are 5% lower than those used to design rates in this case and customer counts do not change from those used to design rates in this case. Please explain any other inputs or assumptions used in this illustration.

e. Please explain what is meant by the provision that "The adjustment components above shall be summed together for billing purposes." To which "adjustment components above" does this provision refer?

f. Has PAWC developed a proposed Plan of Administration for the RDM? If so, please cite to or provide this proposed Plan of Administration.

Response:

a. The terms "Previous Amortization Period" and "Upcoming Amortization Period" are not utilized in the tariff and should be removed as definitions.

b. The adjustment amount is not dependent on whether sales increase or decrease from those used to design rates in this case. The RDM calculates an adjustment based on the difference between actual revenues and revenues that would result from a straight fixed-variable rate design.

c. N/A

d. The Company cannot make the requested calculation based on the scenario provided as the scenario is not detailed enough to develop a meaningful calculation. As stated in b), The RDM calculates an adjustment based on the difference between actual revenues and revenues that would result from a straight fixed-variable rate design. Sales being higher or lower than levels approved in the case is not a relevant factor.

e. The term "The adjustment components above shall be summed together for billing purposes" refers to the three components in the numerator of the two equations in Section B of the tariff.

f. Please see page 95 (lines 1-8) of Mr. Rea's direct testimony describing the reporting and reconciliation filings proposed for administering the RDM.

Question:

Please refer to "4u Amortization Expense" (Volume 03-04-05 [Exhibit 3A, 3B, 3C], Operating Expenses), 3A Water tab, the $763,977 amortization expense for Audubon Water on numbered row 19 (6/30/25 Amount).

a. Please provide the 6/30/25 revenue requirement impact of this amortization expense as included in the Company's revenue requirement calculation, including any state or federal income-tax related revenue requirement components. Please provide the derivation of this revenue requirement impact in Excel format.

b. Please provide the amounts and cell locations of any revenue requirement components of the $763,977 Audubon Water acquisition amortization expense included in Income Statement Revenue Requirement 2023_As Filed.

Response:

a. Please see OSBA 06-001_Attachment for an illustrative example of the revenue requirement impact of the above referenced amortization expense, applying the gross revenue conversion factor provided in I&E-RR-020.

b. The $763,977 Audubon Water acquisition amortization expense included in Income Statement Revenue Requirement 2023_As Filed, tab Water Operations, cell T20, V20 for the amortization expense, cell EH16 for tax impacts, plus columns DM and DT which calculate the uncollectible expense and general assessment impacts, respectively, on the revenue requirement.

Pennsylvania-American Water Company **OSBA 06-001_Attachment**
Revenue Requirement - Illustrative Example

		Audubon Amortization - Revenue Requirement
1	Amortization Expense	763,977
2	Gross Revenue conversion factor	1.4011
3	Revenue Increase (Decrease) requested	$1,070,408

Office of Small Business Advocate Set 6

OSBA 06-002

Responsible Witnesses: Stacey D. Gress, Director of Rates and Regulatory for PAWC
Melissa Ciullo, Vice President, Tax Reporting and Compliance

Question:

Please refer to "3n Acquisition Adjustments Expense" (Volume 03-04-05 [Exhibit 3A, 3B, 3C], Rate Base), 3A Water tab, the $6,939,459 rate base element for Audubon Water shown on numbered line 11 (6/30/25 amount).

a. Is there any Accumulated Deferred Income Tax (ADIT) included in rate base associated with this $6,939,459 rate base element? If so, please provide the amounts of associated state and federal ADIT included in the 6/30/25 rate base.

b. Please provide the proposed 6/30/25 revenue requirement impact of the net Audubon Water acquisition adjustment rate base, including any ADIT components. Please provide the derivation of this revenue requirement impact in Excel format.

Response:

a. ADIT related to the plant acquired from Audubon is included in rate base. For tax purposes in the filing, the original cost was put into service and depreciation started in 2024. The Company recognized that the net book plant of $360,229 should have been utilized to calculate the ADIT instead of the original cost of $9.1 million. See OSBA 06-002_Attachment for the calculation of ADIT as filed, as well as the revised amount to be included during rebuttal.
b. Please see OSBA 06-002_Attachment. The revenue requirement impact is presented with the as filed versus revised ADIT explained in part a.

Question:

Is the amortization/depreciation expense associated with the Audubon Water Company acquisition adjustment deductible by the Company for (a) federal or (b) state income tax purposes? If so, please provide the amount of this amortization/depreciation expense that the Company expects to deduct for (a) federal and (b) state income tax purposes for each tax year beginning in 2024 until the asset is fully amortized/depreciated for income tax purposes. If not, please explain why this amortization/depreciation expense is not tax deductible.

Response:

The amortization expense associated with the Audubon acquisition adjustment is tax deductible for federal and state income tax purposes if it is approved as a regulatory asset. However, the timing of the deduction is different for book accounting and for tax accounting. Book accounting will amortize and deduct the regulatory asset over 10 years. For income tax purposes, the full amount of the regulatory asset, less year 1 book amortization, would be tax deductible in year 1. Each year thereafter, the book amortization would be added back to taxable income.

In 2024, the Company expects to deduct $6,939,459, as shown on the schedule below, for both federal and state purposes. Each year after, the Company will add back the book amortization until the cumulative balance is zero in 2034. The book amounts were provided in OCA 09-059.

Year Ending	UPAA	Amortization	Net Book Balance	Tax (Deduction)/ Add Back
6/30/2024	7,639,771	(700,312)	6,939,459	(6,939,459)

Question:

Stock-Based Compensation.

a. Please list, by amount and account, all stock-based compensation expense charged to PAWC during the HTY, including but not limited to executive stock options, performance share awards, accruals made pursuant to Accounting Standard Codification (ASC) 718 and any other stock-based compensation awards that resulted in cost being charged to PAWC during the HTY.
b. Provide a description of each distinct stock-based compensation program that resulted in charges to PAWC during the HTY.
c. Please break out the stock-based compensation included in the HTY by (1) type of plan (e.g., stock options, performance shares, etc.), (2) stock-based compensation direct charged to PAWC, and (3) each type of stock-based compensation that was allocated to PAWC from the affiliated Service Company.
d. Please explain fully and in detail the amount of stock-based compensation that the Company has included in cost of service for the FPFTY ending June 30, 2025.
e. Provide a description of each stock-based compensation program that PAWC has requested be reflected in cost of service for the FPFTY ending June 30, 2025.
f. Please break out the stock-based compensation included in the FPFTY ending June 30, 2025 cost of service by (1) type of plan (e.g., stock options, performance shares, etc.), (2) stock-based compensation direct charged to PAWC, and (3) stock-based compensation that was allocated to PAWC from the affiliated Service Company.

Response:

a. Please refer to the table below for the breakdown of stock-based compensation expense charged to PAWC during the HTY ended June 30, 2023:

Description	GL Account	Expense Amount
Restricted Stock Units	50171800	$71,980
Performance Stock Units	50171800	250,479
Total - GL 50171800		**$322,459**

b. Please refer to Confidential Volume 6b – FR III.22 for a description of the 2022 & 2023 Long Term Performance Plan, which is a stock-based compensation program.

c. Please refer to the table below for the stock-based compensation included in the HTY ended June 30, 2023, as well as pro forma expenses for the 12 months ended June 30, 2024 and June 30, 2025. Please note that the amounts projected in the FTY and FPFTY are not available by type of stock-based compensation (i.e., restricted stock units and performance stock units) so an allocation was performed based on actual data from the HTY to break out these costs.

	GL Account Name	GL Account	12 Months Ended 6/30/2023	12 Months Ended 6/30/2024	12 Months Ended 6/30/2025
PAWC	Restricted Stock Units	50171800	$71,980	$180,590	$186,357
PAWC	Performance Stock Units	50171800	250,479	628,427	648,491
	Total - PAWC		**$322,459**	**$809,017**	**$834,848**
AWWSC to PAWC	Restricted Stock Units	50171800	$759,261	$831,673	$915,119
AWWSC to PAWC	Performance Stock Units	50171800	2,642,110	2,894,092	3,184,471
	Total - AWWSC to PAWC		**$3,401,371**	**$3,725,765**	**$4,099,590**
	Grand Total		**$3,723,830**	**$4,534,782**	**$4,934,438**

d. Please refer to the response provided in part c. Employees in salary grade 50 and above are eligible for Long Term Performance Plan awards. The pro forma expenses for 2024 & 2025 were calculated by taking annualized base salary for each year for eligible employees and multiplying it by the target award percentage by salary level.

e. Please refer to Confidential Volume 6b – FR III.22 for the 2022 and 2023 Long Term Performance Plan documents.

f. Please refer to the response provided in part c.

Question:

American Water Works Service Company (AWWSC).

a. During each of the following periods were any costs actually charged, or are any projected to be charged, to PAWC from AWWSC? If so, identify all AWWSC costs charged to PAWC by account for each period: (1) the 12 months ended December 31, 2021, (2) the HTY (3) calendar 2022, (4) calendar 2023, (5) the 12 months ending June 30, 2024 and (6) the FPFTY ending June 30, 2025.
b. Is there any written agreement between PAWC and AWWSC? If so, identify and provide it.
c. Does AWWSC have a balance sheet, income statement, statement of cash flows, general ledger, trial balance, budgets or forecasts for any of the following periods: (1) the 12 months ended December 31, 2021, (2) the HTY (3) calendar 2022, (4) calendar 2023, (5) the 12 months ending June 30, 2024 and (6) the FPFTY ending June 30, 2025.
d. If the answer to part c is "yes", identify which of those items that AWWSC has and provide a complete copy of each.

Response:

a. Please see OCA 09-039_Attachment 1 for the breakdown of AWWSC costs charged to PAWC by account for the periods requested. Please note that we did not forecast charges for the calendar year 2023 and included YTD actual charges through October 2023 in their place.

b. Yes, please see OCA 09-039_Attachment 2.

c. Yes, AWWSC has balance sheets, income statements and general ledgers available for the periods Dec 2021, Dec 2022, June 2023. There are no financial statements available for the forecast periods. Also, AWWSC budgets on a calendar year basis and no budgets are available covering the 12-month periods ending June 2024 and June 2025.

d. Please see OCA 09-039_Attachment 3 for the balance sheets; OCA 09-039_Attachment 4 for the income statements; OCA 09-039_Attachment 5 for the general ledger for the periods noted in part c above.

Office of Consumer Advocate Set 11

OCA 11-028

Responsible Witness: Charles Rea, Senior Director of Rates and Regulatory

Question:

Please provide a detailed description of how PAWC proposes to allocate, between customer classes, the cost of PAWC's:

a. Low-income Bill Discount Program;
b. Low-income Arrearage Forgiveness Program.

Response:

a-b. The Company is not proposing a change to its current approach. Costs of discounts offered through the Bill Discount Program and the costs associated with the Arrearage Forgiveness Program are recovered in base rates from residential customers.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 15

OCA 15-013

Responsible Witness: Lori O'Malley, Senior Manager Regulatory Services for AWWC

Question:

SERP Expense. Refer to the responses to OCA 09-012 and OCA 09-039, Attachment 4. The response to OCA 09-012 states that the Company does not offer SERP as a benefits plan and that there is no information to report. However, Attachment 4, page 1 to the response to OCA 09-039 indicates the line item "Pension Expense – SERP in Account No. 50630000. Please explain and reconcile this discrepancy. Identify, quantify and explain each reconciling item, including whether the Company's filing reflects SERP expense charged to PAWC from the Service Company.

Response:

The Company does not offer SERP as a benefits plan but does offer ERP (Executive Retirement Plan). Upon further research, the amount listed under Account No. 50630000 in the HTY was recorded to the Service Company in error and should have been booked to the parent company which would not have any amounts passed down to PAWC. Therefore, the amounts will be removed from Service Company for the FTY and FPFTY in the rebuttal phase of this proceeding.

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 22

OCA 22-003

Responsible Witness: Ashley E. Everette, Senior Director of Rates and Regulatory for PAWC

Question:

Refer to the PAWC Implementation Plan concerning: Recommendation IV-1 "Perform a market comparison for local board compensation to ensure PAWC Board fees are at market rates." Also refer to PAWC's Response which states that: "The Company accepts this recommendation." And states in the discussion that: "PAWC is in the process of evaluating whether it should continue to maintain external Board members. If PAWC continues with external Board members, PAWC will re-evaluate whether its external Board compensation fees are at market rates."

a. How much expense has PAWC reflected in the HYT, FTY and FPFTY for external PAWC board members? Show the amounts by account for each period.

b. How many external PAWC board members did PAWC have in the HTY?

c. Provide the amount of compensation (by type of compensation recorded in each account) of each PAWC external board member in the HTY.

d. Explain the functioning of each PAWC external board member in the HTY.

e. Identify the amount of compensation (by type of compensation recorded in each account) of each PAWC external board member in the FTY and FPFTY.

f. How many external PAWC board members would PAWC have in the FPFTY if PAWC determines that having external board members is not necessary?

g. Do any of the other American Water Works operating utilities have external board members? If so, which ones and how many external board members does each have?

h. Were any of the PAWC external board members in the HTY also board members of American Water Works? If so, identify each PAWC external board member who was also an American Water Works board member.

i. Is the cost of American Water Works board members allocated to PAWC? If so, identify the amount of expense by account for AWW board members charged and allocated to PAWC for each period: (1) HTY, (2) FTY and (3) FPFTY.

Response:

A. The annual expense reflected in account 675.8 is $123,250 for each of the test years. PAWC has eliminated its external board as of December 31, 2023 and will reflect the removal of the $123,250 annual expense in the rebuttal stage of this proceeding.

B-H. As noted in the response to part A, PAWC no longer has an external board and therefore will not be claiming any costs associated with an external board.

I. Please see below table for the cost of American Water Works board members allocated to PAWC.

Account	Account Description	HTY	FTY	FPFTY
52527000	Directors Fees	$252,356	$263,190	$274,488
52527100	Directors Expenses	41,374	43,151	45,003
Total		$293,731	$306,340	$319,491

Re: Pennsylvania Public Utility Commission v. Pennsylvania American Water Company / Docket Nos. R-2023-3043189 (Water) / R-2023-3043190 (Wastewater)

Dear Presiding Judges:

Enclosed please find the Rebuttal Testimony of Kevin C. Higgins labelled OSBA Statement No. 1-R with Schedules, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-captioned proceedings.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

Cost Allocation

Revenue Allocation

REBUTTAL TESTIMONY OF KEVIN C. HIGGINS

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Kevin C. Higgins. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Principal in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME KEVIN C. HIGGINS WHO FILED DIRECT TESTIMONY IN THIS PROCEEDING ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. My testimony responds to the concerns raised in the Direct Testimony of Mr. Richard A. Baudino on behalf of Cleveland-Cliffs Steel regarding cost allocation to the Public (Municipal) class in the water class cost-of-service study ("CCOSS"). I also address the exclusion of interruptible usage from the extra capacity component of certain allocation factors in the water CCOSS in response

to Mr. Baudino and the Direct Testimony of Mr. Jerome D. Mierzwa on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

I also respond to Mr. Mierzwa regarding the appropriate maximum day and maximum hour extra capacity weightings to utilize in certain allocation factors in the water CCOSS.

In addition, I address the appropriate allocation of the Act 11 subsidy among water classes in response to Mr. Baudino, Mr. Mierzwa, and Ms. Billie S. LaConte on behalf of Pennsylvania-American Water Large Users Group ("PAWLUG").

Finally, I utilize the results of my recommended water CCOSS to allocate the proposed revenues among water customer classes and address the appropriate scale back of revenues at a reduced revenue requirement.

Q. WHAT CONCLUSIONS AND RECOMMENDATIONS DO YOU OFFER IN YOUR REBUTTAL TESTIMONY?

A. (1) Mr. Baudino correctly observes that the water CCOSS results for the Public (Municipal) class were anomalous compared to the results from the previous general rate case, Docket No. R-2022-3031672. In response to PAWLUG 05-001, Pennsylvania-American Water Company ("PAWC") has acknowledged that its Public Authority meter count was erroneous and provided a revised water CCOSS correcting this and other errors.[1]

(2) I agree with Mr. Baudino that it is appropriate to exclude interruptible usage from the extra capacity component of the base-extra capacity allocation factors.

[1] The narrative response to PAWLUG 05-001 is included in Schedule KCH-13.

PAWC's revised water CCOSS provided in response to PAWLUG 05-001 reflects the exclusion of interruptible usage from the extra capacity component of the base-extra capacity allocation factors.

(3) I agree with Mr. Mierzwa that the weightings applied by PAWC to the maximum day and maximum hour extra capacity in the water CCOSS are outdated. I recommend adopting Mr. Mierzwa's recommended maximum day factor of 1.2 rather than PAWC's proposed 1.4 maximum day factor. In the absence of recent data concerning the maximum hour, I recommend adopting a maximum hour factor of 1.8, based on scaling PAWC's proposed 2.1 maximum hour factor by the ratio of 1.2 to 1.4. This scales the maximum hour factor proportionately to my recommended adjustment to the maximum day factor.

(4) Opinions differ regarding the appropriate allocation of the Act 11 subsidy among water classes. I continue to recommend that the allocation approach utilized by PAWC in response to OSBA 03-001 is reasonable, as updated for the Act 11 subsidy level and cost-of-service studies ultimately approved in this case.

(5) I summarize the results of the water CCOSS incorporating my recommendations in Schedule KCH-11, at PAWC's proposed Direct revenue requirement. I present my recommended revenue allocation among water classes at PAWC's proposed Direct revenue requirement in Schedule KCH-12, page 1. On page 2 of Schedule KCH-12, I present my recommended revenue allocation among water classes, scaled back to OSBA's recommended revenue requirement.

PUBLIC (MUNICIPAL) CLASS COST ALLOCATION

Q. WHAT ISSUE DOES MR. BAUDINO RAISE REGARDING COST ALLOCATION TO THE PUBLIC CLASS?

A. Mr. Baudino explains that there has been a large shift in costs allocated to the Public class since the last rate case, Docket No. R-2022-3031672. Specifically, he notes that the Public class's allocated share of meter and services costs increased dramatically since the last rate case.

Q. HAS PAWC ADDRESSED THIS ISSUE WITH THE PUBLIC CLASS ALLOCATION?

A. Yes. In response to PAWLUG 05-001, PAWC acknowledged that there was a "linking error" in the Public Authority meter count that was used as an input in the water CCOSS. The Company provided a revised water CCOSS that corrects this error, as well as several other errors, which I will discuss below.[2]

Q. DO YOU INCORPORATE PAWC'S CORRECTION TO THE PUBLIC CLASS METER COUNT IN YOUR REBUTTAL WATER CCOSS ANALYSIS AND REVENUE ALLOCATION?

A. Yes. I utilize the revised water CCOSS provided by PAWC in response to PAWLUG 05-001 as the starting point for my rebuttal CCOSS analysis. In my direct testimony, I recommended a larger increase for the Public class based on the results of PAWC's CCOSS. The correction to the Public class meter counts reduces the increase required for the Public class to recover its cost of service. I have adjusted my recommended revenue allocation to reflect this correction, as

[2] The narrative response to PAWLUG 05-001 is included in Schedule KCH-13.

well as the other corrections to PAWC errors and adjustments I discuss in my rebuttal testimony.

INTERRUPTIBLE USAGE COST ALLOCATION

Q. WHAT ISSUE DOES MR. BAUDINO RAISE REGARDING INTERRUPTIBLE USAGE?

A. Mr. Baudino explains that PAWC's original water CCOSS did not exclude interruptible usage from the extra capacity portion of Factors 2, 3, and 4.[3]

Q. WHAT IS INTERRUPTIBLE USAGE?

A. PAWC provides service under an Industrial Curtailment Rate that applies a reduced tail block rate to participating customers' usage over 15,000,000 gallons a month. In exchange, participants must curtail usage of Company-supplied water for industrial purposes when requested or be subject to penalties for failure to curtail.[4]

Q. HOW WAS INTERRUPTIBLE USAGE TREATED IN PAWC'S ORIGINAL WATER CCOSS IN THIS CASE?

A. Interruptible usage was included in extra capacity components of the base-extra capacity allocators (Factors 2, 3, and 4), as well as its weighted maximum day / maximum hour allocators (Factors 5 and 8). This increased the cost allocated to the Industrial class.

[3] Direct Testimony of Richard A. Baudino (Cleveland-Cliffs Steel Statement No. 1), pp. 3-4.
[4] Supplement No. 2 to Tariff Water-PA P.U.C. No. 5, First Revised Pages 18-19.

Q. WAS THIS TREATMENT IN ERROR?

A. Yes, according to PAWC. In response to OCA 04-012, PAWC explained that its failure to exclude interruptible usage was erroneous and provided corrected versions of its water CCOSS.[5] As discussed above, PAWC subsequently provided a further revision to its water CCOSS in response to PAWLUG 05-001. This revised CCOSS corrected the error related to interruptible usage as well as the Public class meter count error I previously discussed.[6]

In addition, PAWC's revised water CCOSS also adopts the recommendation in my direct testimony to directly assign Arrearage Management Plan costs and residential low-income program administrative costs to the Residential class. I continue to support direct assignment of these costs to the Residential class.

Q. DO YOU AGREE WITH MR. BAUDINO THAT INTERRUPTIBLE USAGE SHOULD BE EXCLUDED FROM THE MEASUREMENT OF EXTRA CAPACITY USED IN COST ALLOCATION?

A. Yes. Since interruptible customers must be prepared to curtail their water usage during peak periods when requested, it is appropriate to exclude interruptible usage from the extra capacity components of PAWC's allocation factors. Including interruptible loads in the extra capacity components of these factors would over-allocate costs to the Industrial class by failing to recognize the value of curtailment.

[5] The narrative response to OCA 04-012 is included in Schedule KCH-13.
[6] The narrative response to PAWLUG 05-001 is included in Schedule KCH-13.

Q. DO YOU WISH TO RESPOND TO ANY OTHER PARTY REGARDING THIS ISSUE?

A. Yes. OCA witness Mr. Mierzwa disagrees with PAWC's position that interruptible usage should be excluded from the measurements of extra capacity because no interruptions have occurred for at least three years.[7] I disagree with Mr. Mierzwa's contention that interruptible usage should be allocated maximum day and maximum hour cost responsibility. Although curtailment has not occurred for several years, participating customers must be prepared to curtail their usage when requested or face penalties for failure to curtail. Participants may also be subject to additional metering costs and must permit inspection of their facilities to determine compliance with the Industrial Curtailment Rate.[8] PAWC's tariff provides a reduced rate for customers served on the Industrial Curtailment Rate and it is appropriate to also reflect the value of this demand-side resource in the cost allocation process.

MAXIMUM DAY AND MAXIMUM HOUR WEIGHTING FACTORS

Q. DOES MR. MIERZWA RAISE ANY OTHER CONCERNS REGARDING THE MAXIMUM DAY AND MAXIMUM HOUR FACTORS IN PAWC'S WATER CCOSS?

A. Yes. Mr. Mierzwa explains that the maximum day and maximum hour weightings utilized by PAWC in its base-extra capacity allocation factors are outdated. Specifically, PAWC utilizes a maximum day factor of 1.4, which is

[7] Direct Testimony of Jerome D. Mierzwa (OCA Statement 4), p. 14.
[8] Supplement No. 2 to Tariff Water-PA P.U.C. No. 5, First Revised Page 19

based on the ratio of the maximum day to the average day observed in 1988, 1995, 1996, 1999 and 2003.[9] As Mr. Mierzwa explains, PAWC's maximum hour factor of 2.1 is based on a 1988 analysis of PAWC's three largest operating districts,[10] and the Company does not have recent actual maximum hour data for its water system.[11]

Q. PLEASE EXPLAIN HOW THE MAXIMUM DAY FACTOR IS UTILIZED IN PAWC'S WATER CCOSS.

A. In the base-maximum day extra capacity allocator, Factor 2, PAWC weights the average day by 1/1.4 (or 71.43%) and weights the maximum day extra capacity by 0.4/1.4 (or 28.57%). In this calculation, the maximum day component is intended to represent each class's share of the maximum day extra capacity, which is calculated using ratios from PAWC's Customer Class Demand Study conducted in 2013 to 2015. The Customer Class Demand Study identifies the highest maximum day to average day ratio for each customer class sample in 2013 to 2015, (*i.e.*, the class peaking factor). PAWC then applies each class's peaking factor to its pro forma future test year average daily consumption to develop an estimate of each class's noncoincident demand. Each class's maximum day extra capacity represents the difference between its noncoincident maximum daily demand and its average daily demand.

Factor 3 is another variation of the base-maximum day extra capacity factor which includes an additional weighting for Fire Protection.

[9] As shown in PAWC's Schedule G, the actual ratios range from 1.37 to 1.38 in the cited years.
[10] Appendix A to PAWC's Exhibit 12-A, pages A-4-A-5, RS1c.
[11] Direct Testimony of Jerome D. Mierzwa (OCA Statement 4), p. 15-16.

Factors 2 and 3 are used to allocate a variety of costs in PAWC's water CCOSS, including Purification Buildings, Purification System plant, Other Water Source Structures, Mains 10-inches and over, and certain operations & maintenance ("O&M") expenses related to purification and Source of Supply.

Q. WHAT DOES MR. MIERZWA RECOMMEND REGARDING THE MAXIMUM DAY FACTOR?

A. Mr. Mierzwa recommends utilizing a maximum day extra capacity factor of 1.2 based the actual maximum day ratios since 2011. He explains that the system-wide maximum day extra capacity factor used by PAWC of 1.4 was last experienced over twenty years ago in 2003. Mr. Mierzwa argues that water demand has changed on PAWC's system since then due to water conservation, legislation, development, and changing land uses.[12]

Q. DO YOU AGREE WITH MR. MIERZWA THAT A MAXIMUM DAY FACTOR OF 1.2 IS APPROPRIATE FOR PAWC?

A. Yes. As shown in PAWC's Schedule G, PAWC's system-wide maximum day ratios have been trending downward over time. In the most recent ten-year period available, 2013-2022, the highest annual ratio is 1.16. Based on this data, a maximum day ratio of 1.2 is more representative of PAWC's system.

Q. PLEASE EXPLAIN THE CONCEPT OF DIVERSITY OF DEMAND.

A. As explained in the American Water Works Association *Principles of Water Rates, Fees and Charges* ("AWWA Manual"), the system diversity of demand is a measurement of the relationship between noncoincident demand and coincident

[12] Direct Testimony of Jerome D. Mierzwa (OCA Statement 4), p. 16.

demand. According to the AWWA Manual, the system diversity ratio is often in the range of 1.1 to 1.4, though different system diversity measures may arise for communities with more atypical usage patterns.[13]

Q. WHAT SYSTEM DIVERSITY RATIO RESULTS FROM THE NONCOINCIDENT DEMAND USED BY PAWC AND A MAXIMUM DAY FACTOR OF 1.2?

A. The resulting ratio is 1.63, for the non-Fire Protection classes included in PAWC's Factor 2 calculation. This is calculated by first dividing the noncoincident demand used in PAWC's revised water CCOSS by the average daily demand, resulting in a ratio of noncoincident daily demand to average daily demand of 1.96.[14] Then, this ratio is divided by 1.2, resulting in a system diversity ratio of 1.63.

Q. DO YOU BELIEVE THAT THE MAXIMUM DAY FACTOR SHOULD BE SET HIGHER THAN 1.2 TO ACHIEVE A SYSTEM DIVERSITY RATIO CALCULATION NO GREATER THAN 1.4?

A. No. If anything, the resulting diversity ratio suggests that the class peaking factors from PAWC's 2013-2015 Customer Class Demand Study may not be an accurate representation of class noncoincident demand. PAWC's system maximum day ratios for 2013-2015 were 1.15, 1.14, and 1.16, respectively.[15] If PAWC does not believe that the resulting diversity ratio can be explained by

[13] AWWA Manual, Seventh Edition, (2017) Appendix A, p. 377.
[14] Noncoincident peaking ratio (excluding Fire Protection classes and Demand-Based Service) is calculated as such: (in 100 gallons) Average Daily Consumption of 1,169,719 plus Maximum Day Extra Capacity of 1,119,862, divided by Average Daily Consumption of 1,169,719. (1,169,719 + 1,119,862) / 1,169,719 = 1.96. From PAWLUG 05-001_Attachment, F1 and F2B tabs.
[15] PAWC Schedule G.

atypical class usage patterns, this suggests that the class peaking factors may be unreliable. This means that giving the maximum day extra capacity component an outsized weighting could be especially problematic.

I also note that by selecting the highest peaking factor experienced by each class sample during the 2013-2015 three-year period, the resulting noncoincident demand will skew higher than experienced in a single year. In any case, I do not recommend utilizing an inflated maximum day factor based on a targeted diversity ratio. I support utilizing the maximum day factor of 1.2, consistent with that experienced in the last decade, as recommended by Mr. Mierzwa.

Q. TURNING NOW TO THE MAXIMUM HOUR FACTOR, CAN YOU EXPLAIN HOW THIS FACTOR IS USED IN PAWC'S WATER CCOSS?

A. Yes. PAWC utilizes a base-maximum hour extra capacity allocator, Factor 4, to allocate various cost items such as Mains under 10 inches and Distribution Reservoirs and Standpipes. This factor is calculated by weighting average hourly consumption, maximum hour extra capacity, and a Fire Protection component. PAWC uses a maximum hour factor of 2.1 to weight the average hourly usage and maximum hour extra capacity components.

In addition, PAWC utilizes Factors 5 and 8, which are weighted combinations Factors 3 and 4 to allocate certain pumping-related plant and mains-related O&M expenses.

Q. WHAT DOES MR. MIERZWA RECOMMEND REGARDING THE MAXIMUM HOUR FACTOR?

A. Mr. Mierzwa explains that the 2.1 maximum hour factor utilized by PAWC is based on a 1988 analysis and recommends that PAWC should be required to update its analysis of system-wide maximum hour extra capacity demands prior to its next base rate proceeding. In this case, Mr. Mierzwa recommends utilizing a maximum hour factor of 1.5, based the ratio of the maximum hour factor to the maximum day factor from a study conducted by York Water Company.[16]

Q. HOW DO YOU RESPOND TO MR. MIERZWA'S RECOMMENDATIONS REGARDING THE MAXIMUM HOUR FACTOR?

A. I agree that the 2.1 maximum hour factor utilized by PAWC is outdated and that a new maximum hour study should be conducted prior to the next rate case. In this case, I recommend utilizing a maximum hour factor of 1.8, which scales the maximum hour factor in proportion to my recommended adjustment to the maximum day factor (*i.e.*, 1.2 / 1.4). This will maintain the same proportionate relationship between the maximum hour and the maximum day as the factors utilized by PAWC.

[16] Direct Testimony of Jerome D. Mierzwa (OCA Statement 4), pp. 16-18.

ACT 11 SUBSIDY ALLOCATION

Q. TO WHICH PARTIES ARE YOU RESPONDING REGARDING THE ALLOCATION OF THE ACT 11 SUBSIDY AMONG WATER CLASSES?

A. I am responding to Cleveland-Cliffs Steel witness Mr. Baudino, OCA witness Mr. Mierzwa, and PAWLUG witness Ms. LaConte.

Q. HOW DO MR. BAUDINO AND MR. MIERZWA RECOMMEND ALLOCATING THE ACT 11 SUBSIDY?

A. Mr. Baudino recommends that the Act 11 subsidy be allocated based on each applicable water class's share of the water cost-of-service under present rates, arguing that the wastewater subsidy cannot be tracked to specific water classes.[17] Similarly, Mr. Mierzwa recommends that if the Commission determines that any portion of the wastewater revenue requirement should be assigned to water customers, it is reasonable to allocate these costs among water classes based on the water CCOSS.[18] However, Mr. Mierzwa indicates that his recommendation is consistent with the Company's approach and may not have been aware that PAWC updated its approach in the course of this proceeding.

Q. WHAT APPROACHES DID PAWC TAKE TO ALLOCATING THE ACT 11 SUBSIDY?

A. PAWC's approach evolved throughout this case. In its original Exhibit 12-A, Schedule A, PAWC spread the Act 11 revenue responsibility among its water classes but did not demonstrate how these amounts were derived. In response to OSBA 03-001, PAWC provided a corrected allocation of Act 11 revenue among

[17] Direct Testimony of Richard A. Baudino (Cleveland-Cliffs Steel Statement No. 1), pp. 8-9.
[18] Direct Testimony of Jerome D. Mierzwa (OCA Statement 4), p. 28.

water classes that is based on the corresponding wastewater classes that give rise to the Act 11 revenue shortfall.[19] However, since the non-residential water classes do not match the non-residential class categories used in each of its wastewater systems, PAWC's updated approach also utilizes the results of the water CCOSS to allocate Act 11 cost responsibility among non-residential classes. In its revised water CCOSS provided in response to PAWLUG 05-001, PAWC presented the revised Act 11 spread from its response to OSBA 03-001 but did not further update this calculation based on its water cost allocation corrections.

Q. HOW DOES MS. LACONTE RECOMMEND ALLOCATING THE ACT 11 SUBSIDY?

A. Ms. LaConte's approach uses a combination of direct assignment, reallocation among non-residential classes based on present revenues for wastewater classes, and allocation of the "Other" Act 11 subsidy component based on a version of PAWC's Act 11 allocation that has since been revised.[20]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE ALLOCATION OF THE ACT 11 SUBSIDY AMONG WATER CLASSES?

A. The allocation of any subsidy is, by its nature, imperfect, since it is a departure from cost causation. This particular situation is further complicated by the fact that PAWC's non-residential wastewater class categories do not match those for

[19] PAWC response to OSBA 03-001, OSBA 03-001_Attachment, included in Schedule KCH-10.
[20] Direct Testimony of Billie S. LaConte (PAWLUG Statement No. 1), page 27; Ms. LaConte's Table 2 workpaper. Ms. LaConte's allocation of the "Other" component appears to be based on PAWC response to OSBA 01-018, OSBA 01-018_Attachment, which was subsequently revised in PAWC response to OSBA OSBA 03-001, OSBA 03-001_Attachment.

its water system. To the extent that the Commission approves the recovery of a portion of the wastewater revenue requirement from water customers in this case, I believe that the allocation approach offered in PAWC response to OSBA 03-001 is reasonable, as updated for the Act 11 subsidy level and cost-of-service studies ultimately approved in this case.

CCOSS SUMMARY AND REVENUE ALLOCATION

Q. HAVE YOU UPDATED THE WATER CCOSS FOR THE CORRECTIONS AND RECOMMENDATION YOU DISCUSS ABOVE?

A. Yes. These results are summarized in Schedule KCH-11, at PAWC's requested Direct revenue requirement. These results are compared to PAWC's revised water CCOSS from PAWLUG 05-001 in columns (10) – (12) of this schedule.

Q. HAVE YOU UPDATED YOUR RECOMMENDED REVENUE ALLOCATION AMONG WATER CLASSES BASED ON YOUR CCOSS RESULTS?

A. Yes. These results are summarized in Schedule KCH-12, page 1, at PAWC's requested Direct revenue requirement. My recommended revenue allocation brings most water classes close to cost, including their allocated share of the Act 11 subsidy, under my recommended water CCOSS.[21] At PAWC's requested Direct revenue requirement, my recommendation results in lower increases for the Commercial and Residential classes, and greater increases for the Industrial,

[21] I reallocated 75% of the cost associated with the Public Fire Protection class to other classes, in accordance with Section 1328 of the Public Utility Code. I also accepted PAWC's proposed increases for the Other Water Utilities classes.

Public (Municipal) and Public and Private Fire Protection classes than PAWC recommended in its Direct filing.

Q. WHAT SCALE BACK APPROACH DO YOU RECOMMEND IF THE COMMISSION APPROVES A LOWER REVENUE REQUIREMENT THAN REQUESTED BY PAWC?

A. As I explained in my direct testimony, if the Commission approves a lower revenue requirement increase than proposed by PAWC, I recommend that the decrease be applied principally to the water rates. So long as the cost-based wastewater increase associated with the approved revenue requirement is greater than PAWC's proposed wastewater rates, the incremental revenue requirement reduction should not reduce PAWC's proposed wastewater rates. This means that a lower revenue requirement will reduce Act 11 revenues and PAWC's proposed water rates generally.

At a lower revenue requirement, I recommend scaling back each water class's revenues in proportion to each class's share of the total proposed non-Act 11 revenues in my revenue allocation from Schedule KCH-12, page 1. I further recommend that each applicable water class bear its allocated share of the Act 11 subsidy.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

Docket Nos. R-2023-3043189
R-2023-3043190

SCHEDULE KCH-13

Pennsylvania-American Water Company's Responses to Discovery Referenced in the Rebuttal Testimony of Kevin C. Higgins

Pennsylvania-American Water Company
Docket Nos. R-2023-3043189 (Water)
R-2023-3043190 (Wastewater)
Office of Consumer Advocate Set 4

OCA 04-012

Responsible Witness: Connie Heppenstall, Senior Project Manager, Gannett Fleming

Question:

Reference PAWC Statement No. 12 (Heppenstall).

a. Page 13, lines 11-23, Page 14, lines 1-8, first adjustment. Please identify the specific adjustment made to each allocation factor and revenues for this adjustment;
b. Page 14, lines 9-20, second adjustment. Please identify what the extra-capacity factors of interruptible customers would have been if not excluded based on actual/estimated maximum day and maximum hour demands. Also provide a three history of the daily volumes actually curtailed.

Response:

a. The specific adjustments made to allocation Factor 1 and factors that are dependent on Factor 1. The annual consumption of the DIS customers, equaling 8,318,938 100-gallon units, was excluded from the industrial class, and the annual consumption for DRS customers, equaling 9,122,335 100-gallon units, was excluded from the sales for resale class. These volumes were excluded from the cost allocation study as these customers have contract rates, and as such, their usage should not factor into the development of the base tariff rates. Revenues were included in the cost of service study and were not adjusted. The revenues from the DIS and DRS customers are shown in other water revenues as revenues from Contract Sales.

b. Exhibit 12-A, erroneously, did not include the adjustment for interruptible customer usage. Please see OCA 04-012_Attachment1 for the revised cost of service study under proposed rates and OCA 04-012_Attachment2 for the revised cost of service study under present rates. These studies show the extra-capacity factor allocations if the usage of the curtailment industrial customer was excluded in maximum day and maximum hour demands for Factors 2, 3 and 4 in Exhibit 12-A. Exhibit 12-A in the filing shows the extra-capacity functions if the usage was not excluded. The revised cost of service study under proposed rates lowers the cost of service for the Industrial class from $45,115,631 to $44,092,705 or a difference of $1,022,926.

The Company maintains that the usage of the curtailment industrial customer should be excluded from the extra-capacity factors as the customer can be interrupted during peak demands.
The Company has not requested its curtailment customer to curtail its usage during the past three years.

Finally, both adjustments described above are consistent with adjustments made in the Company's cost of service studies in previous rate cases filed with the Commission.

R-2023-3043190 (Wastewater)
Pennsylvania-American Water Large Users Group Set 5

PAWLUG 05-001

Responsible Witness: Connie Heppenstall, Senior Project Manager, Gannett Fleming

Question:

Referring to PAWC's Response to OSBA 3-1 and OCA 4-12, provide a revised Schedule 12-A showing the proposed rate increase for each customer class.

Response:

Please see PAWLUG 05-001_Attachment for the revised Exhibit 12-A which incorporates the changes from OSBA 3-1 and OCA 4-12 as well as other changes that were identified during discovery and in reviewing non-Company direct testimony. These include the following:

1. Correction to the Public Authority meter count due to a linking error.
2. Arrearage Management Plant ("AMP") costs being directly allocated to the Residential class.

Re: Pennsylvania Public Utility Commission v. Pennsylvania American Water Company / Docket Nos. R-2023-3043189 (Water) / R-2023-3043190 (Wastewater)

Dear Presiding Judges:

Enclosed please find the Surrebuttal Testimony of Kevin C. Higgins labelled OSBA Statement No. 1-S with Schedule KCH-14, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-captioned proceedings.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

Topics:

Revenue Requirement

Cost Allocation

Revenue Allocation

Revenue Decoupling Mechanism

Date Served: March 4, 2024
Date Submitted for the Record: _____

SURREBUTTAL TESTIMONY OF KEVIN C. HIGGINS

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Kevin C. Higgins. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Principal in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME KEVIN C. HIGGINS WHO FILED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes. I submitted OSBA Statement Nos. 1 and 1-R.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. My testimony responds to the Rebuttal testimony of Pennsylvania-American Water Company ("PAWC") witnesses Mr. James Runzer, Ms. Lori O'Malley, and Ms. Stacey D. Gress on certain revenue requirement issues. I also respond to the Rebuttal Testimony of Mr. D.C. Patel on behalf of the Bureau of Investigation & Enforcement ("I&E") regarding my use of a 9.65% proxy return on equity ("ROE") in my revenue requirement calculations.

I address the allocation of residential Arrearage Management Plan ("AMP") and low-income program administrative costs in response to the Rebuttal Testimony of Mr. Roger Colton on behalf of the Pennsylvania Office of Consumer Advocate ("OCA") and Ms. Constance E. Heppenstall on behalf of PAWC. I also respond to PAWC witness Mr. Charles B. Rea and OCA witness Mr. Jerome D. Mierzwa regarding revenue allocation among water customer classes.

I also respond to Mr. Rea regarding the proposed Revenue Decoupling Mechanism ("RDM").

Q. WHAT CONCLUSIONS AND RECOMMENDATIONS DO YOU OFFER IN YOUR REBUTTAL TESTIMONY?

A. (1) I continue to recommend that the expenses associated with the Annual Performance Plan, the Long-Term Performance Plan, and the Employee Stock Purchase Plan be removed from the revenue requirement.

(2) I explain my use of a 9.65% proxy ROE in my direct revenue requirement calculation and provide the results of my revenue requirement calculation using the costs of capital recommended by I&E and OCA in Schedule KCH-14.

(3) I continue to recommend that the portion of the revenue requirement associated with PAWC's acquisitions of Butler Area Sewer Authority ("BASA") and Borough of Brentwood's ("Brentwood") wastewater assets that PAWC is proposing to recover from water customers be excluded from the revenue requirement in this case.

(4) I continue to recommend that amortization expense and rate base associated with the Audubon Water Company ("Audubon") acquisition premium be excluded from the revenue requirement.

(5) If the Commission approves the inclusion of incremental AMP expense in the revenue requirement, I continue to recommend that the AMP expense be directly assigned to the residential class. However, if the AMP expense is not truly incremental to the general uncollectible expense, then it should be removed from the revenue requirement rather than directly assigned to the residential class. I continue to recommend that the residential low-income program administrative costs be directly assigned to the residential class.

(6) I revised my recommended Water CCOSS in my rebuttal testimony to incorporate corrections to PAWC's errors as well as my recommended maximum day and maximum hour weightings. My recommended revenue allocation is guided by the results of my rebuttal Water CCOSS and is summarized in my rebuttal Schedule KCH-12.

(7) I continue to recommend that the Commission reject PAWC's proposed RDM, ECIC, and deferred accounting treatment for production expenses.

REVENUE REQUIREMENT ADJUSTMENTS

Revenue Requirement Adjustments Summary

Q. PLEASE SUMMARIZE THE IMPACTS OF YOUR RECOMMENDED REVENUE REQUIREMENT ADJUSTMENTS.

A. These impacts are summarized in Table KCH-1-S, below, relative to PAWC's direct requested revenue requirement. I note that PAWC's rebuttal filing provides a number of revisions to its revenue requirement, which have the combined effect of increasing its calculated revenue requirement deficiency by $345,253 compared to PAWC's direct filing.[1] However, PAWC did not file updated versions of its class cost-of-service studies ("CCOSS"), revenue allocation, or rate design corresponding to its revised revenue requirement in rebuttal. Due to the incomplete nature of PAWC's rebuttal request and time constraints of the procedural schedule, I continue to present the impacts of my adjustments relative to PAWC's direct revenue requirement.

Table KCH-1-S
Summary of OSBA Adjustments to PAWC Revenue Requirement

	Total Company	
	Adjustment Impact	Increase
PAWC Direct Revenue Req. Increase		$203,945,911
OSBA Recommended Adjustments		
Annual Performance Plan Expense	($5,153,394)	$198,792,517
Long Term Performance Plan Expense	($5,230,156)	$193,562,362
Employee Stock Purchase Plan Expense	($457,009)	$193,105,353
Service Co. Executive Retirement Plan	($35,106)	$193,070,247
External Board Expense	($126,792)	$192,943,455
Proxy Return on Equity	($61,540,957)	$131,402,498
BASA Mitigation Adjustment	($19,091,395)	$112,311,103
Brentwood Mitigation Adjustment	($1,309,219)	$111,001,884
Audubon Water Acquisition Adjustment	($1,913,386)	$109,088,498
Total OSBA Adjustments	($94,857,413)	$109,088,498

Q. DO YOU CONTINUE TO RECOMMEND THE ADJUSTMENTS IN TABLE KCH-1-S?

[1] PAWC's rebuttal revenue requirement increase including BASA and Brentwood is $204,291,164 (Rebuttal Testimony of Ashley E. Everette [PAWC Statement No. 1, p. 6] compared to $203,945,911 in its direct filing (Schedule AEE-2).

A. Yes. PAWC's rebuttal filing includes adjustments to remove to the Service Company Executive Retirement Plan (i.e., "SERP") expense and the External Board expense.[2] PAWC contests the remainder of my adjustments in its rebuttal filing. As I will explain in greater detail later in my testimony, the Proxy ROE adjustment shown in Table KCH-1-S is simply a placeholder based on the 9.65% ROE authorized for PAWC's Distribution System Improvement Charge ("DSIC") in the Bureau of Technical Utility Services' most recent Report on the Quarterly Earnings of Jurisdictional Utilities.[3] Incorporating the cost of capital recommendations of I&E or OCA would further reduce my recommended revenue requirement.

Annual Performance Plan ("APP") and Long-Term Performance Plan ("LTPP") Expenses

Q. PLEASE DESCRIBE YOUR ADJUSTMENTS FOR APP AND LTPP EXPENSES.

A. In my direct testimony, I recommended that 50% of the APP expense be removed from the revenue requirement, based on the weight of the earnings per share ("EPS") goal included in the APP calculation of corporate performance.[4]

I also recommended that LTPP expense be excluded from the revenue requirement.[5] The majority of the LTPP expense is comprised of performance stock units ("PSUs"), which are tied to financial performance, and the remaining

[2] Statement No. 05-R_Exhibit LNO-3R; Statement No. 05-R_Exhibit LNO-5R.
[3] Docket Number: M-2023-3044811, Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2023, Public Meeting Held January 18, 2024, p. 15, Attachment D.
[4] Direct Testimony of Kevin C. Higgins (OSBA Statement No. 1), p. 11.
[5] Direct Testimony of Kevin C. Higgins (OSBA Statement No. 1), pp. 12-13.

portion is comprised of restricted stock units ("RSUs") based on a three-year vesting period.

Q. HOW DID PAWC RESPOND TO YOUR RECOMMENDED ADJUSTMENTS?

A. Mr. Runzer disagrees with my adjustments in his rebuttal testimony, arguing that the Company's performance pay is part of a reasonable compensation package designed to attract and retain qualified employees. He argues that the financial goals of the APP and LTPP benefit customers by increasing operating efficiency, thereby aligning the interests of customers, employees, and investors. Mr. Runzer contends that every dollar of operating expense saved can fund $8 of investment, allowing PAWC to increase infrastructure investment without increasing rates. He also notes that the Commission approved APP and LTPP expenses in PAWC's 2020 base rate proceeding.[6]

Q. HOW DO YOU RESPOND TO MR. RUNZER REGARDING APP AND LTPP EXPENSES?

A. I continue to believe that the portion of the APP expense tied to financial performance and LTPP expense should be removed from the revenue requirement. While rewarding employees for financial performance can be entirely appropriate, the responsibility for funding such awards rests most appropriately with shareholders, who are the primary beneficiaries of meeting or exceeding financial targets.

[6] Rebuttal Testimony of James Runzer (PAWC Statement No. R-2), pp. 4-8.

I am not alone in my view that shareholders are the primary beneficiaries of financial targets in performance plans. For example, the Arkansas Public Service Commission, in its February 23, 2016 Order in Docket No. 15-015-U, ordered that shareholders fund 50% of Entergy Arkansas' short-term incentive compensation that was tied to an "Entergy Achievement Multiplier" – a mechanism used to determine the funding available for the annual incentive plans based on financial performance.[7]

Similarly, in its Opinion and Order issued December 31, 2020 in Docket No. E-01933A-19-0028, the Arizona Corporation Commission disallowed 40% of the costs of Tucson Electric Power's Performance Enhancement Plan, finding that "incentive compensation based on profitability benefits shareholders – not ratepayers."[8]

I am also unpersuaded by Mr. Runzer's argument that PAWC can fund increased infrastructure investments with reductions to operating expenses. PAWC enjoys both a fully projected future test year and a DSIC for eligible incremental investments. While reduced operating expenses might increase PAWC's cash flow, prudent infrastructure investments increase the Company's rate base and are not funded by reduced operating expenses from a ratemaking perspective.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS REGARDING APP AND LTPP EXPENSES.

[7] Arkansas Public Service Commission, Docket No. 15-015-U, Order No. 18 at 18-20.
[8] Arizona Corporation Commission, Docket No. E-01933A-19-0028, Decision No. 77856 at 82-84.

A. I continue to recommend that 50% of the APP expense be removed from the revenue requirement, based on the weight of the EPS goal included in the APP corporate performance calculation. I also continue to recommend that the LTPP expense be removed from the revenue requirement, which includes a PSU component tied to financial performance and an RSU component, based on a three-year vesting period. The time-based RSU component is based on continued employment with the Company, rather than any direct customer-related goals. It is appropriate for shareholders to fund these stock awards based on corporate financial performance and continued employment.

Employee Stock Purchase Plan ("ESPP") Expense

Q. PLEASE DESCRIBE YOUR ADJUSTMENT FOR ESPP EXPENSE.

A. I recommend that the ESPP expense be removed from the revenue requirement. This expense is associated with the 15% stock purchase discount provided to employees who elect to receive a portion of their compensation in the form of a stock purchase rather than cash.

Q. HOW DOES PAWC RESPOND YOUR ESPP ADJUSTMENT?

A. Ms. O'Malley disagrees with my adjustment, arguing that employees who become stockholders of American Water have an additional incentive to establish efficiencies, which benefits customers and stockholders.[9]

Q. DO YOU CONTINUE TO RECOMMEND THAT ESPP EXPENSE BE EXCLUDED FROM THE REVENUE REQUIREMENT?

[9] Rebuttal Testimony of Lori O'Malley (PAWC Statement No. 05-R), p. 5.

A. Yes. Incentivizing employees to become shareholders clearly aligns those individuals' interests with other shareholders. If the Company wishes to provide this stock purchase incentive, it is most appropriately funded by shareholders.

Proxy ROE Adjustment

Q. PLEASE DESCRIBE YOUR PROXY ROE ADJUSTMENT.

A. I utilized the 9.65% ROE authorized for PAWC's DSIC in the Bureau of Technical Utility Services' most recent Report on the Quarterly Earnings of Jurisdictional Utilities as a placeholder in my direct revenue requirement calculation.[10]

Q. DOES ANY PARTY TAKE ISSUE WITH YOUR USE OF THIS PLACEHOLDER ROE?

A. Yes. I&E witness Mr. Patel disagrees with my use of the DSIC ROE of 9.65% in this proceeding, arguing that the DSIC rate should be viewed as an incentive rate that is higher than the ROE granted in a base rate proceeding. Mr. Patel argues that it is inappropriate to suggest that the ROE must be at the DSIC rate absent a detailed ROE analysis in a base rate proceeding.[11]

Q. HOW DO YOU RESPOND TO MR. PATEL'S CONCERNS?

A. Mr. Patel appears to misconstrue the purpose of my use of a placeholder ROE. I am not suggesting that the DSIC ROE be adopted in this proceeding in the absence of a detailed ROE analysis. As I explained in my direct testimony, my use of the 9.65% DSIC ROE is not intended to supplant the Commission's

[10] Direct Testimony of Kevin C. Higgins (OSBA Statement No. 1), pp. 17-18.
[11] Rebuttal Testimony of D.C. Patel (I&E Statement No. 2-R), pp. 4-6.

consideration of traditional cost of capital analyses offered by other parties in this proceeding.[12]

Q. HAVE YOU ANALYZED THE IMPACT OF OTHER PARTIES' COST OF CAPITAL RECOMMENDATIONS ON YOUR REVENUE REQUIREMENT CALCULATIONS?

A. Yes. In Schedule KCH-14, I provide a summary of the total revenue requirements and increases that would result from utilizing I&E's and OCA's recommended costs of capital in my revenue requirement calculations (Tables 4 and 5). For comparison purposes, I also summarize the total revenue requirements and increases I recommend in my direct testimony, as well as those recommended by I&E, OCA and PAWC. Since OCA's and I&E's revenue requirement calculations exclude the costs associated with BASA and Brentwood, I also exclude the associated costs in Schedule KCH-14, column (e) to allow for apples-to-apples comparisons.

Utilizing I&E's recommended 8.45% ROE would incrementally reduce my revenue requirement calculation by $54.1 million (Table 4 compared to Table 3). I note that incorporating I&E's 8.45% ROE into my revenue requirement calculation results in a revenue requirement, excluding BASA and Brentwood, that is very close to that recommend in I&E's direct filing (Table 1).

Utilizing OCA's recommended 9.1% ROE and capital structure would reduce my revenue requirement by $46.8 million (Table 5 compared to Table 3).

[12] Direct Testimony of Kevin C. Higgins (OSBA Statement No. 1), pp. 17-18.

Adjustments Related to the Acquisitions of Other Utilities

Q. PLEASE EXPLAIN YOUR BASA AND BRENTWOOD MITIGATION ADJUSTMENTS.

A. I recommend that the portion of the revenue requirement related to BASA and Brentwood that PAWC is proposing to recover from water customers be excluded from the revenue requirement in this case.

Q. HOW DID PAWC RESPOND TO YOUR RECOMMENDED BASA AND BRENTWOOD MITIGATION ADJUSTMENTS?

A. Ms. Gress cites to the Commission's decision in PAWC's 2020 base rate case, Docket No. R-2020-3019369, which rejected the OCA's recommendation that shareholders should pay $16.7 million in revenue requirement relating to four acquired wastewater systems. The Commission found that the proposal would have violated PAWC's rights under the Pennsylvania and Federal Constitutions against taking private property without compensation. The Commission also found that, under Section 1329, once a selling utility's rate base is incorporated into the acquiring utility's rate base, that rate base is no different than any other portion of the Company's rate base and the Company is entitled to earn a reasonable rate of return on the new rate base. Ms. Gress argues that the Commission should reach the same result in this case.[13]

Q. WHAT IS YOUR RESPONSE TO PAWC REGARDING YOUR BASA AND BRENTWOOD MITIGATION ADJUSTMENTS?

[13] Rebuttal Testimony of Stacey D. Gress (PAWC Statement No. 4-R), pp. 3-5.

A. I acknowledge that my recommended mitigation adjustments differ from the Commission's disposition of similar issues in the 2020 base rate case. However, I believe that the Commission should consider my recommendations within the context of the facts of this case, which include:

(1) PAWC's voluntary commitment in the Settlement Agreement approved in Docket No. A-2022-3037047 to limit its proposed BASA rate increase to 1.4 times the current BASA rates or PAWC's proposed Rate Zone 1 system-average wastewater rates, whichever is lower;

(2) The magnitude of the premiums in excess of net book values included in the purchase prices for the BASA and Brentwood wastewater systems; and

(3) ALJ Dunderdale's Recommended Decision in Docket No. A-2021-3024058 to deny the Brentwood acquisition because PAWC failed to meet its burden of proof that the public interest will benefit from the acquisition.

While I am not an attorney, I believe that if a utility voluntarily agrees to mitigate provisionally the rate impact on customers of another utility it acquires so as to shield those customers temporarily from the full costs associated with that acquisition, it does not follow that the utility's other customers must absorb the cost of that mitigation for rates to be just and reasonable. In such a situation, it may be reasonable to view the utility's agreement to mitigate the rate impact on the acquired utility's customers as a short-term cost to shareholders that is incurred in exchange for the long-term benefit to those same shareholders of acquiring the other utility's assets at the price the acquiring utility agreed to pay. I believe that the voluntary and provisional nature of the rate mitigation to which

PAWC agreed is a factor that warrants the Commission's favorable consideration of my recommendation in this case.

Q. PLEASE EXPLAIN YOUR RECOMMENDED ADJUSTMENT RELATED TO THE AUDUBON ACQUISITION.

A. I recommend that amortization expense and rate base associated with the Audubon acquisition premium be excluded from the revenue requirement. My adjustment is limited to the acquisition cost in excess of the net book value of Audubon's assets. PAWC is proposing to acquire Audubon's assets through a merger transaction valued at $8.0 million[14] even though the net book value of the Audubon assets is only $360,229 as of December 31, 2024.[15] PAWC proposes to amortize the difference between the purchase price and the net book value, $7,639,771, over ten years as a utility plant acquisition adjustment and to include the unamortized balance in rate base.[16]

Q. HOW DID PAWC RESPOND TO YOUR RECOMMENDED AUDUBON ADJUSTMENT?

A. Ms. Gress argues that there is no statutory basis for disallowing recovery of any acquisition costs in excess of the net book value of Aububon's assets because there is allegedly too great of a difference between the purchase price and the system's original cost less depreciation.[17]

[14] Direct Testimony of E. Christopher Abruzzo, Esq. (PAWC Statement No. 6), pp. 11-12, 18.
[15] Volume 05, Exhibit No. 3-C, Plant Additions and Retirements by Month, p. 23. This amount is net of Contributions in Aid of Construction.
[16] Direct Testimony of Stacey D. Gress (PAWC Statement No. 4), p. 6; Volume 05, Exhibit 3-B, p. 341.
[17] Rebuttal Testimony of Stacey D. Gress (PAWC Statement No. 4-R), pp. 5-6.

Q. WHAT IS YOUR RESPONSE TO PAWC REGARDING YOUR AUDUBON ADJUSTMENT?

A. The Audubon acquisition case is still before the Commission. I anticipate that the great disparity between the proposed purchase price and the net book value of Audubon's assets – which PAWC intends to recover from customers – to be an issue of contention in that proceeding. The practice of building rate base through the payment of acquisition prices greatly in excess of net book value requires careful Commission scrutiny. The burden is on PAWC to prove its case that the acquisition under the proposed terms is in the public interest and at this time it has not done so. Given these circumstances, in particular the proposed acquisition price that is many times greater than the net book value of the utility assets being acquired, I cannot recommend that the proposed amortization costs be included in rates in this case.

ALLOCATION OF ARREARAGE MANAGEMENT PLAN ("AMP") AND LOW-INCOME PROGRAM ADMINISTRATIVE EXPENSE

Q. PLEASE EXPLAIN YOUR RECOMMENDATION REGARDING RESIDENTIAL AMP EXPENSE AND LOW-INCOME PROGRAM ADMINISTRATIVE EXPENSE.

A. In my direct testimony, I recommend that these costs be directly assigned to the residential class since these programs are designed to benefit residential customers.[18]

Q. HOW DID PAWC RESPOND TO YOUR RECOMMENDATION?

[18] Direct Testimony of Kevin C. Higgins (OSBA Statement No. 1), pp. 30-32.

A. PAWC accepted my recommendation and reflected this change in its rebuttal CCOSSs.[19]

Q. DID ANY PARTY DISAGREE WITH YOUR RECOMMENDATION?

A. Yes. OCA witness Mr. Colton recommends that the costs of the AMP be allocated consistent with the allocation of uncollectible cost generally, as PAWC did in its direct filing. He argues that the AMP costs are part of the historically-incurred uncollectible cost and do not represent incremental costs. Mr. Colton argues that if AMP costs are directly assigned to the residential class, the current allocation of existing uncollectible costs would need to be adjusted to account for this direct assignment. He also argues that if the AMP succeeds in prompting future in-full payments toward current bills, this will reduce the dollars ultimately found to be uncollectible.[20]

Mr. Colton also disagrees that administrative costs of H2O Grant and Discount programs should be directly assigned to the residential class, arguing that these costs do not differ in-kind from other O&M costs associated with providing other types of payment options, and are expected to result in a decrease in administrative costs related to nonpayment of bills.[21]

Q. HOW DO YOU RESPOND TO MR. COLTON REGARDING THE AMP EXPENSE?

A. I am concerned with Mr. Colton's assertion that the AMP costs do not represent incremental costs, because I believe that the AMP costs are being treated as

[19] Rebuttal Testimony of Constance E. Heppenstall (PAWC Statement No. 12-R), pp. 10-11.
[20] Rebuttal Testimony of Roger Colton (OCA Statement 5R), pp. 1-4.
[21] Rebuttal Testimony of Roger Colton (OCA Statement 5R), p. 5.

incremental in PAWC's revenue requirement calculation. It does not appear that PAWC has adjusted its uncollectible costs downward to account for bad debt that will be "forgiven" through the AMP. PAWC calculates its uncollectible expense by applying the historical two-year average uncollectible percentage of 1.176% to total proposed sales revenue.[22] To this amount, PAWC *adds* $2,377,200 in AMP-related uncollectible expense plus $487,500 in Dollar Energy administrative costs.[23]

If AMP expense is not incremental and instead represents a subset of uncollectible expense, as Mr. Colton asserts, then AMP expense should not be treated as additive in PAWC's revenue requirement.

On the other hand, if the AMP expense represents new costs that would not otherwise be accounted for as uncollectible expense, then Mr. Colton's critique is misplaced. If the Commission approves the inclusion of incremental AMP expense in the revenue requirement, I continue to recommend that the AMP expense be directly assigned to the residential class. However, if the AMP expense is not truly incremental to the general uncollectible expense, then it should be removed from the revenue requirement rather than directly assigned to the residential class. PAWC should not be permitted to recover the same uncollectible "dollar" twice: once through uncollectible expense and again through AMP expense.

I agree with Mr. Colton that if the AMP results greater in-full payments towards current bills in the future, this will reduce future uncollectibles. This

[22] Volume 04, Exhibit No. 3-B, p. 339; Income Statement_Revenue Requirement 2023_As Filed.
[23] Volume 04, Exhibit No. 3-B, p. 336.

impact should properly be reflected in the uncollectible expense and class uncollectible allocation in a future base rate case.

Q. HOW DO YOU RESPOND TO MR. COLTON REGARDING THE H2O GRANT AND DISCOUNT PROGRAMS ADMINISTRATIVE COSTS?

A. I continue to recommend that these costs be directly assigned to the residential class, on whose behalf they are incurred. PAWC appropriately adopted my recommendation in rebuttal.[24]

REVENUE ALLOCATION

Q. HOW DID PAWC RESPOND TO YOUR RECOMMENDED REVENUE ALLOCATION AMONG WATER CLASSES?

A. In my direct testimony, I recommended a higher increase to the Public (Municipal) class and a lower increase to the Commercial class based on the Water CCOSS.[25] In his rebuttal testimony, Mr. Rea states that the Company is not opposed to higher increases for the Municipal class with offsetting decreases to other customer classes.[26]

Q. HOW DID OCA ADDRESS YOUR RECOMMENDED REVENUE ALLOCATION AMONG WATER CLASSES?

A. Mr. Mierzwa agrees that the Public class should receive a greater increase, but argues that both the Residential and Commercial classes should receive lower increases.[27]

---

[24] Rebuttal Testimony of Constance E. Heppenstall (PAWC Statement No. 12-R), pp. 10-11.
[25] Direct Testimony of Kevin C. Higgins (OSBA Statement No. 1), p. 35.
[26] Rebuttal Testimony of Charles Rea (PAWC Statement No. 10-R), p. 43.
[27] Rebuttal Testimony of Jerome D. Mierzwa (OCA Statement 4R), pp. 12-13.

Q. DID YOU UPDATE YOUR RECOMMENDED REVENUE ALLOCATION IN YOUR REBUTTAL TESTIMONY?

A. Yes. The revenue allocation I recommended in my direct testimony was based on a Water CCOSS that contained significant errors made by PAWC, which the Company corrected in discovery and its rebuttal filing. PAWC's original Water CCOSS overallocated the cost of meters and services to the Public class and included interruptible usage in the extra capacity component of certain allocators.[28] In addition to correcting these errors, PAWC's rebuttal CCOSS adopted my recommendation to directly assign AMP costs and residential low-income program administrative costs to the residential class, as discussed above.[29]

As I explained in my rebuttal testimony, I have revised my recommended Water CCOSS to incorporate PAWC's corrections as well as my recommended maximum day and maximum hour weightings in the base-extra capacity allocation factors. My recommended revenue allocation is guided by the results of my rebuttal Water CCOSS and is summarized in my rebuttal Schedule KCH-12. At PAWC's requested direct revenue requirement, I recommend a reduction to PAWC's proposed increases to both the Commercial and Residential class.

REVENUE DECOUPLING MECHANISM ("RDM")

Q. HOW DID PAWC RESPOND TO YOUR RECOMMENDATION TO REJECT THE RDM?

[28] Rebuttal Testimony of Constance E. Heppenstall (PAWC Statement No. 12-R), p. 2.
[29] Rebuttal Testimony of Constance E. Heppenstall (PAWC Statement No. 12-R), pp. 10-11.

A. Despite opposition from numerous parties, Mr. Rea continues to recommend that the Commission authorize PAWC's proposed RDM. He argues that collecting the majority of fixed costs in volumetric rates does not give water utilities a reasonable opportunity to recover fixed costs. Mr. Rea contends that the RDM will reduce the adverse impact of weather variability and promote conservation.[30]

Q. WHAT IS YOUR RESPONSE TO MR. REA REGARDING PAWC'S RDM PROPOSAL?

A. I continue to recommend that the proposed RDM be rejected. Such mechanisms that provide broad "revenue assurance" to utilities shift the risks associated with changes in consumption for any and all reasons, including weather and economic conditions, from shareholders to customers, even though shareholders are compensated for accepting such risks in the utility's approved return on equity. In the specific case of PAWC, an RDM is particularly concerning given the Company's aggressive acquisition of other utilities at prices well above net book value. It is in the public interest for PAWC shareholders to bear the risk in between rate cases that customers will reduce their water consumption in response to PAWC's rate increases.

While my primary recommendation is that the RDM should be rejected, if the Commission elects to approve a version of the RDM, it should exclude all non-residential customers due to the greater heterogeneity of non-residential usage.

[30] Rebuttal Testimony of Charles Rea (PAWC Statement No. 10-R), pp. 77-78.

Q. DO YOU CONTINUE TO HAVE CONCERNS ABOUT THE SPECIFIC RDM FORMULA ITSELF?

A. Yes. As I explained in my direct testimony, the RDM formula in PAWC's proposed tariff would produce a *positive* value (*i.e.,* surcharge, presumably) when actual revenue falls *above* the straight fixed-variable target and a *negative* value (*i.e.* credit, presumably) when actual revenue falls *below* the straight fixed-variable target.

Q. HOW DID PAWC RESPOND REGARDING THE RDM FORMULA?

A. Mr. Rea insists that there is no error in the RDM formula, but clearly misses the point of my testimony regarding the formulaic error. He responds that the Company is proposing a symmetrical mechanism that may result in a surcharge or credit depending on the actual revenues collected in any given year – as if I were confused by the intended *symmetry* in the Company's proposal.[31] I fully understand that the RDM is intended to be symmetrical. The problem is that it is symmetrical in the wrong direction. It is obvious that Mr. Rea has failed to read my testimony carefully because he misstates it the question he uses in his testimony to provide his response:

> "Q. Does the RDM formula have an error that would cause the calculation to have the opposite effect of PAWC's stated intent (e.g., if actual revenues exceed the straight fixed variable ("SFV") target, the RDM formula will produce a negative result or credit to customers) as Mr. Higgins asserts?"[32]

The parenthetical Mr. Rea inserted into his question is <u>not</u> my contention. My contention is that under PAWC's formula, if actual revenues exceed the straight

[31] Rebuttal Testimony of Charles Rea (PAWC Statement No. 10-R), p. 71.
[32] *Id.*, lines 4-7.

fixed variable ("SFV") target, the RDM formula presented by PAWC will produce a *charge* to customers, not a credit. That is the error I am pointing out. PAWC has had multiple opportunities – in its direct case, in response to discovery from the OSBA, and in rebuttal – to provide a simple example that would demonstrate to parties and the Commission how its RDM formula would operate. And at each juncture PAWC has failed to do so. The RDM should be rejected.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

COMMISSION ON ECONOMIC OPPORTUNITY

CEO Statement No. 1

Direct Testimony of Jennifer Warabak

Pennsylvania Public Utility Commission

v.

Pennsylvania-American Water Company

Docket Numbers:
R-2023-3043189 (Water)
R-2022-3043190 (Wastewater)

Q. Please state your full name and business address.

A. Jennifer Warabak, 165 Amber Lane, PO Box 1127, Wilkes-Barre, Pennsylvania 18703-1127.

Q. By whom are you employed and in what capacity?

A. I am employed by the Commission on Economic Opportunity (CEO) as Executive Director.

Q. What are the interests of the Commission on Economic Opportunity in this rate case?

A. The Commission on Economic Opportunity is a non-profit organization serving the low-income and elderly in Luzerne County, PA. In a typical year, the Commission serves more than 25,000 Luzerne County residents, of which 98% are at or below 150% of the federal poverty level. It is part of our responsibility to our constituency to advocate for their interests in regulatory proceedings and this proposed request will certainly have an impact upon those low-income ratepayers. In addition to the affordability of rates, CEO is particularly interested in the ability of our clients to save money through conserving energy.

Q. **What background and experience qualify you and the Commission on Economic Opportunity to participate in this case?**

A. I was appointed as the acting Executive Director of the Commission on Economic Opportunity in October 2022. I have been employed at CEO for over 20 years and during

my tenure I have been involved in numerous energy related programs that CEO operates. From 2004 to 2016, I was CEO's Energy Services Coordinator where I supervised CEO's energy programs. During that time, I managed eight hardship utility programs and managed the LIHEAP Crisis program for Luzerne County on behalf of the Pennsylvania Department of Human Services as well as other utility customer assistance programs for a number of utility companies. In 2016 I became CEO's Program and Planning Coordinator where I evaluated program effectiveness and recommended modifications and/or improvements across the spectrum of programs offered by CEO, in the areas of energy, housing, job training etc.

During my tenure in those positions, CEO's experience and the expertise of its staff in energy programs has been recognized on state and national levels. CEO's energy related programs have been acknowledged by receipt of a Superior Achievement Award from the United States Department of Energy. CEO has weatherized more than 27,000 homes under the U.S. Department of Energy Weatherization Assistance Program. CEO also serves as a subcontractor for universal programs operated by several Pennsylvania gas and electric utility companies. CEO is also the PA Department of Public Welfare's contracted operator of the crisis component of the Low-Income Home Energy Assistance Program (LIHEAP) in Luzerne and Wyoming Counties. CEO was also a major contractor for PPL in the Low-Income Renewable Energy Pilot, and secured funding and installed several solar thermal water heating systems for the former PG Energy and UGI Gas Division.

Additionally, CEO has been an active party in many restructuring and rate cases before the PUC including both PG Energy's (R-00994783) and UGI's (R-00994786) restructuring

cases, and prior PPL Electric rate proceedings and participated in those matters to address universal service issues. CEO also has participated in prior rate cases concerning this Company including its last rate case in 2022 (R-2022-3031672, R-2022-3031673).

Q. Please describe CEO's most recent involvement in a rate case involving this Company.

A. In this Company's 2022 request for a rate increase CEO addressed many of the same issues in that case that we address now. Specifically, in that prior case CEO addressed the proposed increase in the fixed residential monthly service charge, the discount offered to low-income customers on that monthly charge and the adequacy of the Company's hardship fund in light of the requested and expected increase in residential rates.

Q. Please describe the areas of your testimony in this case.

A. My testimony will address the Company's proposal to increase its monthly service charge because the proposal to increase fixed monthly charges affects a customer's ability to conserve. Similarly, I will address the Company's proposed Revenue Decoupling Mechanism as that discourages conservation in that a customer's bill would not necessarily be a reflection of the water used by that customer. I will also address funding for the Company's hardship program, Help to Others (H2O).

Q. Before addressing the specifics of your testimony, do you have general concerns regarding this rate case?

A. Yes. My main concern is the impact of the Company's proposal on the residential

class, particularly those residential customers who are low-income. Under the Company's proposal, a typical residential water customer, and most residential customers, will see their monthly bill increase by 24.9% with some residential customers seeing their bills increase by as high as 63.9%. Additionally, part of the residential water customer's increase will be due to an increase of the monthly service charge, from $17.50 to $20.00 and most residential wastewater customers will see theirs increase from $14.30 to $20.00. This increase in the monthly service charge has concerned the Commission in recent cases, because it discourages conservation; the more a Company moves towards fixed charges and away from consumption a customer has less incentive, and ability, to conserve. One way that a family, particularly a poor family, can lessen their energy burden is to conserve – lower the thermostat, seal air leaks, change filters regularly, add more insulation, get a more efficient heating unit, use less water etc. The Company's proposal to increase a residential customer's fixed costs greatly impacts a customer's ability to lessen the impact of any rate increase through conservation.

Q. How does the effect of the Company's proposed rate increase on the residential class impact upon your testimony in this case?

A. Should a rate increase be granted, I believe there should be greater measures to provide aid to the Company's low-income customers. For a typical residential customer, a 24.9% increase is substantial, but for a low-income customer, the effects can be dramatic. Low-income customers face many financial challenges beyond high utility costs. Our agency knows firsthand from the people we serve that they face many financial challenges with housing, energy, food and health care costs and a dramatic increase in any of those

areas can have a dramatic impact. In light of that and the impact of the Company's proposal on its residential customers, greater relief is needed for the Company's low-income customers.

Q: Apart from rate design and low-income programs, does CEO take a position on whether the Company's rate increase should be granted?

A: Yes. CEO rarely takes a position on whether a rate increase should be granted but, in this case, we believe that Company's rate increase requests should be denied. CEO takes this position in light of the fact that this Company's customers had their rates increase just over a year ago as a result of the Company's late rate case and should now not be subjected to another, substantial rate increase just a short time later.

Q: What issue regarding rate design would you like to address?

A: I want to address the Company's proposal to increase the monthly service charge for residential customers. For most residential water customers, the Company is proposing to increase the fixed monthly service charge from $17.50 to $20.00, an increase of over 14%. Most wastewater residential customers will see their fixed monthly charge increase from $14.30 to $20.00, an increase of nearly 40%. CEO opposes any increase to the fixed monthly service charge.

As indicated the Company's proposal to increase those fixed cost would negatively impact a customer's motive to conserve and the ability to save money. In prior cases, the Commissioners have expressed concerns about proposals to increase the fixed portion of a customer's bill or any proposal that would impact a customer's motive and ability to

conserve. We share those concerns and believe that the Company's requests to increase the monthly customer charge for residential water and wastewater customers should be denied.

For many of the same reasons, CEO contends that the Company's proposed Revenue Decoupling Mechanism should be rejected in that it discourages conservation due to the fact that a customer's bill would not necessarily be a reflection of the water used by that customer. Further, the Revenue Decoupling Mechanism would effectively guarantee the Company's recovery of its authorized revenue requirement and shift to consumers the risks associated with recovery that are currently borne by the Company.

Q. What would you like to address concerning the Company's hardship fund, H2O?

A. I am proposing an increase in funding for the Company's hardship grant program. As a result of the 2022 rate case the Company increased the Company's annual contribution to its hardship grant program by $150,000. Should a rate increase be granted in this case I am proposing that the Company increase its contribution by $300,000.

Q. Can you summarize your recommendations?

A. I am recommending the following:

1. That the Company requested rate increase be denied;
2. That the Company's requests to increase the fixed monthly service charges for residential customers be denied;
3. That the Company's Revenue Decoupling Mechanism proposal be denied;
4. That the Company distribute its hardship funds based upon the percentage of

low-income customers within the service region or county;

5. That the Company increase its contribution to its hardship fund by $300,000 should a rate increase be granted in this case.

Q. Does this conclude your testimony?

A. Yes.

DIRECT TESTIMONY OF RICHARD A. BAUDINO

Q. Please state your name and business address.

A. My name is Richard A. Baudino. My business address is J. Kennedy and Associates, Inc. ("Kennedy and Associates"), 570 Colonial Park Drive, Suite 305, Roswell, Georgia 30075.

Q. What is your occupation and by whom are you employed?

A. I am a consultant to Kennedy and Associates.

Q. Please describe your education and professional experience.

A. I received my Master of Arts degree with a major in Economics and a minor in Statistics from New Mexico State University in 1982. I also received my Bachelor of Arts Degree with majors in Economics and English from New Mexico State in 1979. In October 1989, I joined the utility consulting firm of Kennedy and Associates as a Senior Consultant where my duties and responsibilities covered substantially the same areas as those during my tenure with the New Mexico Public Service Commission Staff. I became Manager in July 1992 and was named Director of Consulting in January 1995. Currently, I am a consultant with Kennedy and Associates. Exhibit ____(RAB-1) summarizes my expert testimony experience.

Q. On whose behalf are you testifying?

A. I am testifying on behalf of Cleveland-Cliffs Steel.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to address the following issues in Pennsylvania American Water Company's ("PAWC" or "Company") current rate proceeding:

1. Cost allocation and the Company's class cost of service study ("CCOSS").
2. PAWC's proposed allocation of its rate increase to customer classes.
3. Rate design for the Industrial class.
4. The Company's proposed Revenue Decoupling Mechanism ("RDM").

In addressing these issues I will respond to the Direct Testimony PAWC witnesses Constance Heppenstall and Charles Rea.

<u>Customer Class Cost Allocation</u>

Q. Please summarize Ms. Heppenstall's approach to the Company's proposed CCOSS.

A. Ms. Heppenstall described her approach to the Company's CCOSS beginning on page 5, line 8 of her Direct Testimony. Ms. Heppenstall utilized the base-extra capacity method as described in the 2017 and prior editions of the Water Rates Manual published by the American Water Work Association ("AWWA"). This approach to cost allocation has consistently been accepted by the Pennsylvania Public Utilities Commission ("PPUC" or "Commission") in past PAWC cases. Ms. Heppenstall provided a CCOSS for Water Operations, which is included in her Exhibit No. 12-A. In this case, Ms. Heppenstall performed CCOSS for the fully projected test year ending

June 30, 2025 and includes a portion of the Company's wastewater revenue requirement.

The extra capacity factors in the CCOSS were developed from the results of customer demand study that the Company submitted in its 2017 base rate case. Ms. Heppenstall also described several adjustments to her CCOSSs beginning on page 13 of her Direct Testimony. These changes include:

- Exclusion of contract sales under Riders DIS (Demand Industrial Sales) and DRS (Demand Resale Sales) in developing the allocation factors for the Industrial class and sales for resale – Group A class.
- Exclusion of interruptible curtailment volumes from the extra capacity portion of allocation factors 2, 3, and 4.
- Reallocation of the unrecovered portion of public fire protection costs from the residential, commercial, industrial, and public classes. Ms. Heppenstall explained that this adjustment was performed in order to comply with Section 1328 of the Public Utility Code, which provides that public fire hydrant rates may only recover 25% of the cost of public fire protection service. The unrecovered balance is then recovered in the fixed charges of other customer classes.
- Allocation of a portion of the wastewater revenue requirement to the water operations revenue requirement of its Water Operations. In this case, the wastewater cost of service allocated to the cost of service for PAWC's Water Operations totaled $71,087,394. Mr. Rea provided the basis for the allocation of this revenue requirement to water service classes in his Direct Testimony. I

will address this proposed allocation in detail later in my Direct Testimony.

Q. Were there any errors in the Company's filed water service CCOSS?

A. Yes, there was a significant error. The Company's response to OCA 04-012 indicated that the CCOSS originally filed in Exhibit 12-A erroneously did not include the adjustments for interruptible customer volumes I described above. Exhibit ___(RAB-2) includes PAWC's response to OCA 04-012 that describes the error and refers to Attachments 1 and 2 of the response that provide corrected CCOSS results. The corrected CCOSS shows that the Industrial class's cost responsibility declined by $1,022,926.

Q. What do the results of Ms. Heppenstall's proposed revenue allocation now show?

A. Please refer to Exhibit ___(RAB-3), pages 1 and 2, which show the revised customer class cost responsibilities and returns at present and proposed rates that were included in Attachments 1 and 2 to OCA 04-12. Table 1 below provides a summary of the class relative rates of return from this exhibit. The relative rate of return ("RROR") shows how close the customer classes are to the system average rate of return. For example, a class RROR of 1.0 shows that this class is returning the system average rate of return. A class RROR under 1.0 indicates a class is returning less than the system average return, while a RROR above 1.0 shows a class that is returning more than the system average rate of return.

Table 1
Corrected Class Relative Rates of Return

	RROR Current	RROR Proposed
RESIDENTIAL	1.03	1.02
COMMERCIAL	1.03	1.03
INDUSTRIAL	0.97	1.00
PUBLIC	0.33	0.34
OTHER WATER UTILITIES		
GROUP A	8.73	6.77
GROUP B	(0.17)	0.09
FIRE PROTECTION		
PRIVATE	1.17	1.05
PUBLIC	0.98	1.00

The revised CCOSS shows that the Industrial class relative rate of return under present rates increases to 0.97 from 0.93 in Ms. Heppenstall's filed Exhibit 12-A. Under proposed rates, the Industrial RROR is 1.0, or the same as they system average rate of return.

Q. Are there other issues with PAWC's CCOSS that affect customer class cost responsibility and class rates of return?

A. Yes, there are two other major issues I will discuss that affected customer class cost responsibility. These issues are:

1. The reallocation of a portion of the Company's wastewater revenue requirement to water customers.
2. The significant change in cost responsibility for the Public class of customers from PAWC's last water service rate case (Docket No. R-2022-3031672).

Q. Please describe how PAWC reallocated a portion of its wastewater revenue requirement in its CCOSS for water customers.

A. PAWC witness Rea presented the Company's position on this issue on pages 46 through 52 of his Direct Testimony. Mr. Rea explained the reasoning and rationale for the Company's proposed reallocation and presented the amounts to be paid by the water service customer classes in Table 4, page 47 of his Direct Testimony.

Q. Did Mr. Rea adequately explain the methodology for the Company's allocation of its wastewater revenue requirement to the water service rate classes?

A. No. Mr. Rea presented the results of the reallocation but did not explain how the allocation was performed. OSBA 01-018 requested a detailed explanation as to how this allocation was performed and the Company provided its explanation in its response. Please refer to Exhibit ___(RAB-4), which includes PAWC's response to OSBA-01-018. The Company's explanation was:

> Please see OSBA 01-018_Attachment. Where possible, Act 11 reallocations are directly assigned to water customer classes based on wastewater class contributions to Act 11. Where wastewater contributions are not class specific, those amounts are allocated to water customers based on relative levels of water cost of service. Act 11 revenues are calculated in Exhibits 10-B through 10-E.

The attachment to this response was in error, as noted in PAWC's response to OSBA 03-001. The Company explained the error and provided corrected numbers in OSBA 03-001_Attachment, which I have included in Exhibit ___(RAB-5).

Q. Is this a change in PAWC's method of reallocating its wastewater revenue

requirement from its last rate case?

A. Yes. In Docket R-2022-3031672, Ms. Heppenstall described the reallocation of wastewater revenue requirement as follows[1]:

> Q. How are the Wastewater Operations revenue requirements allocated to the customer classes in Exhibit No. 12-A?
>
> A. The wastewater operations revenue requirements are allocated to the customer classes in Exhibit No. 12-A based on the cost-of-service allocation of each class revenue contribution shown in the cost-of-service studies.

I should add that Private Fire was not allocated any of the wastewater revenue requirement in the Company's last rate case, whereas in the current case Private Fire receives an allocated share of the wastewater revenue requirement.

Q. Do you agree with PAWC's customer class reallocation of wastewater costs in the CCOSS for water operations?

A. No. PAWC's proposal inappropriately links wastewater class subsidies to the water service classes. The fact is that the cost of water services and wastewater services are separate and distinct and have nothing whatsoever to do with each other. Quite simply, a Residential water service customer is not directly responsible for a Residential wastewater service customer's subsidy. The same is true for Commercial and Industrial water service customers having to subsidize Commercial and Industrial wastewater customers, respectively.

For example, page 2 of Exhibit ___(RAB-5) shows that PAWC directly

[1] Heppenstall Direct Testimony, 2022 General Base Rate Case, R-2022-3031672 Water) and R-2022-3031673 (Wastewater), page 13, lines 18 – 22.

assigned a subsidy of $2,557,322 to Industrial water service customers from Industrial customers in the Combined Sewer Systems ("CSS") group. CSS includes customers in Rate Zones 3, 4, and 6. What this approach implies is that Industrial customers in Rate Zone 1 are somehow directly responsible and must pay for wastewater service subsidies created by the Company's pricing decisions in Zones 3, 4, and 6. Obviously, this is incorrect and unreasonable. I recommend that the Commission reject PAWC's proposed reallocation of its wastewater revenue requirements to water service customers.

Q. What is your recommendation for the reallocation of wastewater revenue subsidy to water service customers, assuming the Commission approves such a reallocation in this proceeding?

A. Since the total wastewater subsidy cannot be tracked to specific water service classes, I recommend that the total wastewater subsidy reallocation be based on each water service class's proportionate share of total water service cost responsibility under current rates. This is consistent with PAWC's approach in the last rate case but modified to include the Private Fire class. The water service classes included in the reallocation should be Residential, Commercial, Industrial, Public, and Private Fire. I did not include the Public Fire class as its revenue recovery is limited by statute. I also did not include the Other Water Utilities classes as they are very small and would not have contributed significantly to the wastewater subsidy recovery.

Table 2 shows the basis for my recommended reallocation of the wastewater subsidy. Column (1) shows water service class allocated costs to serve under present

rates from the Company's response to OCA 04-012, Attachment 2. Column (2) shows each class's percentage share of the allocated cost to serve. Column (3) shows each class's share of the reallocated wastewater subsidy based on the percentages in Column (2).

Table 2
Recommended Reallocation of Wastewater Subsidy

	(1) Class Cost of Service	(2) Current COS Percentage	(3) Wastewater Subsidy
Residential	$ 522,526,457	65.67%	$ 46,682,147
Commercial	$ 199,747,181	25.10%	$ 17,845,273
Industrial	$ 38,060,255	4.78%	$ 3,400,276
Public (Municipal)	$ 30,509,381	3.83%	$ 2,725,687
Private Fire Protection	$ 4,858,010	0.61%	$ 434,011
Totals	$ 795,701,284	100.00%	$ 71,087,394

Q. Did you rerun the Company's revised CCOSS with your recommended wastewater subsidy allocation?

A. Yes. I reran the revised CCOSS provided by PAWC in Attachment 1 to OCA 04-012, which shows class rates of return and relative rates of return at proposed rates. Please refer to Exhibit ___(RAB-6) with a further revised Schedule B.

Exhibit ___(RAB-6) shows that under PAWC's proposed rates, Residential, Commercial, and Industrial classes are all above the system average rate of return at the Company's proposed rates, meaning that they are contributing more than their allocated cost to serve. The Public class, which received an increase significantly below the system average increase of 24.6% is far below the system average rate of return, with a RROR of only 0.27.

Q. Please discuss your analysis of the change in the allocated cost to serve for the Public water service class from the last rate case.

A. The water service CCOSS filed by Ms. Heppenstall in this case shows a significantly higher cost of service responsibility for the Public class than the CCOSS that was filed in Docket R-2022-3031672. Please refer to Exhibit ___(RAB-7), pages 1 and 2, which show the water service class cost responsibilities and relative rates of return from Ms. Heppenstall's CCOSS filed in Docket R-2022-3031672. Note that the Public share of cost responsibility, including the reallocation of the wastewater subsidy, was 2.8%. On page 2 of Exhibit ___(RAB-7), the Public class's RROR was 1.30 under present rates and was much higher than the RRORs for the Residential, Commercial, and Industrial classes. What this means is that the Public class was paying much more than its share of costs at present rates in the last case.

Please refer to the Public class RROR on page 1 of Exhibit ___(RAB-3), the revised CCOSS results from OCA 04-012. The Public class RROR is significantly lower at 0.33, indicating that this class is significantly under recovering its allocated cost of service at present rates. This represents a dramatic shift in RROR from the last rate case for the Public class of customers.

Q. What caused such a large shift in cost responsibility for the Public class from the last rate case?

A. Based on a comparison between the two CCOSSs prepared by Ms. Heppenstall, the primary cause of the shift in cost responsibility is a huge change in the allocation of

meters and services. Please refer to page 3 of Exhibit ___(RAB-7). This page presents the allocation factors for meters and services used in the water service CCOSS from Docket R-2022-3031672. With respect to meters, the Public class allocation factor was 1.863%. With respect to services, the Public class allocation factor was 0.612%. In Ms. Heppenstall's water service CCOSS in this case, these allocation factors are substantially greater. The Public class's meter allocator is now 12.67% and its services allocator is 2.3%. Table 3 below provides a comparison between meter and services allocators from the last case and this case.

Table 3
Meters and Services Allocation Factors

	Meters		Services	
	R-2022-3031672	R-2023-3043189	R-2022-3031672	R-2023-3043189
Residential	0.77691	0.70039	0.88781	0.88575
Commercial	0.18989	0.16057	0.08705	0.07895
Industrial	0.00783	0.00636	0.00214	0.00166
Public	0.01836	0.12669	0.00612	0.02309
Other Water Utilities A	0.00017	0.00008	0.00002	0.00001
Other Water Utilities B	0.00013	0.00009	0.00002	0.00002
Private Fire Protection	0.00671	0.00583	0.01684	0.01052
Total	1.00000	1.00000	1.00000	1.00000

Sources: Exhibit 12-A, Dockets R-2022-3031672 and R-2023-3043189

With respect to the allocation of meters, the Residential class's allocator declined significantly from 77.69% in the last case to 70.04% in this case. Commercial customers also saw a decline from 18.99% to 16.06%. This table also shows the significant increase to the allocator for services for the Public class. Commercial and Industrial allocation factors for services declined from the last case.

Q. In your experience, is it unusual for a customer class to experience such a large

change in cost responsibility from one case to the next?

A. Yes, it is highly unusual. Given the large and unexpected shift in cost responsibility for the Public class, I recommend a conservative approach to revenue allocation and the increase that the Public class should bear.

Q. What is your recommended revenue allocation approach for the Commission to adopt in this case?

A. I recommend the following approach for the Commission's consideration in this case:

1. Apply a factor of 1.25 times the overall system average increase for the Public class.
2. Apply the same percentage increase to the Residential, Commercial, Industrial, and Private Fire classes.
3. Accept PAWC's proposed increases to the remaining classes.

Exhibit ___(RAB-8) presents the results of my recommended approach. At PAWC's requested percentage increase of 24.6%, the Public class receives an increase of 30.8%. Residential, Commercial, Industrial, and Private Fire receive an increase near the system average of 24.4%.

Q. Mr. Baudino, do you support PAWC's requested total revenue increase in this proceeding?

A. No. Cleveland-Cliffs takes no position with respect to the Company's requested rate increase. If the Commission reduces PAWC's rate increase request, then the percentage class increases I recommended should be adjusted downward in proportion to the Commission's reduction in total revenue requirement. For example, if the Commission reduces PAWC's requested increase of 24.6% by 50%, the resulting overall increase would be about 12%. The reduction to the Residential, Commercial, Industrial, and Private Fire class increases of 50% would result in a revised increase of 12% as well.

Industrial Class Rate Design

Q. Please describe Mr. Rea's proposal for Industrial class rate design.

A. On page 35 of his Direct Testimony, Mr. Rea explained that no increases were proposed to the existing Industrial meter charges. The entire Industrial revenue increase was collected through increases to the volumetric charges.

Q. Should the Commission adopt Mr. Rea's proposal to keep Industrial meter charges constant?

A. No. As Mr. Rea noted on page 86 of his Direct Testimony, over 95% of the Company's costs are fixed and do not vary with water consumption. Volumetric rates collect these costs based on the volumes of water consumed by the water service rate classes. As consumption varies month to month and year to year, PAWC's collection of its fixed costs will vary as well, introducing more variability in its revenues and

earnings than if more of these costs were collected from fixed charges, such as meter charges.

To the extent practicable, fixed costs should be collected by fixed charges. Mr. Rea's rate design would collect even more of the Company's fixed costs through volumetric rates, which is the opposite direction of proper rate design. I recommend that Mr. Rea's Industrial rate design proposal be rejected. I also recommend that the Commission apply an equal percentage increase to both meter charges and volumetric charges for the Industrial water service class.

Revenue Decoupling Mechanism

Q. Please describe PAWC's proposed RDM.

A. Company witness Charles B. Rea described the proposed RDM beginning on page 86 of his Direct Testimony. According to Mr. Rea, the purpose of the proposed RDM is to alternative rate design mechanism whose purpose is to "more reliably recover the revenue requirement and associated fixed costs approved by the Commission in this case."[2] Mr. Rea cited concerns relating to seasonal weather conditions and declining usage for residential, commercial, and municipal customers as reasons for the Commission to approve the RDM.

According to Mr. Rea:

> This mechanism compares the revenues collected under the actual Commission approved rates customers pay with the revenues that would have been collected through an SFV rate design on a forward-looking basis and accrues the differences, which are either credited to customers or collected from customers at a later time. The proposed RDM identifies three cost components as the basis for revenues that would

[2] Rea Direct Testimony, page 86, lines 16 – 18.

be collected through the SFV rate design that form the basis of the revenue comparisons going forward.[3]

Q. Should the Commission approve PAWC's proposed RDM?

A. No. I recommend that the Commission reject the proposed RDM.

Q. Why should the Commission reject the proposed RDM in this case?

A. The Company's proposed RDM should be rejected for the following reasons.

First, the Commission has already approved the Company's Distribution System Improvement Charge ("DSIC"), a mechanism designed to provide accelerated cost recovery to PAWC for certain system improvements. The DSIC has been and will continue to be an important ongoing source of additional revenue collection outside of traditional rate case proceedings for PAWC.

Second, the Company also has the opportunity to include forecasted costs and investments through the use of a forecasted test year. In this case, PAWC proposed using a fully projected future test year through June 30, 2025. This provides a significant benefit to PAWC compared to using an historic test period, which is this case would be a 12-month period ending June 30, 2023.

Both the DSIC and the use of a future test year serve to reduce regulatory lag and enhance PAWC's revenue stream between rate proceedings.

Q. Are there other problems with PAWC's proposed RDM?

[3] Rea Direct Testimony, page 90, lines 4 – 9.

A. Yes. The industrial class should not be included in the RDM. First, Mr. Rea only provided analysis of conservation-related revenue losses from the Residential, Commercial, and Public (Municipal) classes. There is no evidence in this case that the Industrial class is affected by conservation measures, weather, or declining numbers of customers. Second, the proposed RDM presents significant problems with interclass allocations of lost revenues.

Q. Based on your experience, would water conservation and loss of revenues be an issue for Industrial customers in the way it is with the Company's Residential customers?

A. No. Industrial customers already have an incentive to be as cost efficient as possible due to competition in the markets in which they operate. This being the case, industrial customers likely have already made investments in efficient water use, as well as use of electricity and natural gas. It is unlikely that there would be concerns with ongoing declines in consumption as there are in the Residential class. Indeed, if there were, the Company would likely have already analyzed this trend and presented it to the Commission.

Q. Did Mr. Rea present any analysis suggesting that weather influences industrial water consumption?

A. No.

Q. Did Mr. Rea propose any revenue adjustments for the Industrial class based on weather or expected declines in consumption?

A. No. Mr. Rea presented Usage Trend Adjustments on pages 78 and 79 of his Direct Testimony. He explained on page 78 that the Usage Trend Adjustments "incorporate weather normalization, COVID-19 normalization, and adjustments for trends in declining use" that he described and quantified earlier in his Direct Testimony. These adjustments were applied to the Residential, Commercial, and Public (Municipal) classes. The Industrial class was not included.

Q. Please explain how the proposed RDM would cause problems with inter-class revenue allocations.

A. The RDM would be applied to all customers in the residential, commercial, industrial, municipal, and sales for resale classes except for those customers taking service under contract rates. For purposes of the RDM, any revenue shortfall would be collected from all customers. What this means is that if due to continued conservation the residential class's revenues declined from the Commission authorized level in this case, that revenue shortfall would be collected from all customers, not just from the Residential class. Commercial and industrial customers would have to pay a portion of the residential class revenue shortfall, even though commercial and industrial customers were not responsible for it. Likewise, if both commercial and residential classes experienced revenue shortfalls due to declining usage, once again the industrial customers would have to pay a portion of that revenue shortfall.

Clearly the RDM has built-in customer class allocation inequities. It is unfair and unreasonable to expect Industrial customers to pay for usage declines in the residential and commercial classes.

Q. If the RDM were modified to confine the declines in revenue from each class to the class in which the declines occur, would this work for the Industrial class?

A. No. Industrial class revenues could rise or fall based on market conditions and on the general economy. Further, if a single industrial customer left PAWC's system, the loss in revenues from that customer would be confined to the rest of the industrial customers and would have to be picked up by those customers. This could have a devastating rate impact on those customers depending on the volumes that were lost from the departing industrial customer. Industrial customers must not be placed in such a risky and potentially damaging position by the operation of an RDM.

Q. If the Commission decides to approve some form of a RDM in this proceeding, what is your recommendation?

A. I recommend that the Commission exclude the Industrial class of customers if it decides to implement a RDM in this case. PAWC provided no support or analysis showing that the factors the Company cited in support of its proposed RDM apply to the Industrial class.

Q. Does this conclude your Direct Testimony?

A. Yes.

RICHARD A. BAUDINO

ON BEHALF OF

CLEVELAND-CLIFFS STEEL

J. KENNEDY AND ASSOCIATES, INC.

FEBRUARY 1, 2024

RESUME OF RICHARD A. BAUDINO

EDUCATION

New Mexico State University, M.A.
Major in Economics
Minor in Statistics

New Mexico State University, B.A.
Economics
English

Thirty-nine years of experience in utility ratemaking and the application of principles of economics to the regulation of electric, gas, and water utilities. Broad based experience in revenue requirement analysis, cost of capital, rate of return, cost and revenue allocation, and rate design.

REGULATORY TESTIMONY

Preparation and presentation of expert testimony in the areas of:

Cost of Capital for Electric, Gas and Water Companies
Electric, Gas, and Water Utility Cost Allocation and Rate Design
Revenue Requirements
Gas and Electric industry restructuring and competition
Fuel cost auditing
Ratemaking Treatment of Generating Plant Sale/Leasebacks

RESUME OF RICHARD A. BAUDINO

EXPERIENCE

1989 to Present: **Kennedy and Associates: Director of Consulting, Consultant** - Responsible for consulting assignments in revenue requirements, rate design, cost of capital, economic analysis of generation alternatives, electric and gas industry restructuring/competition and water utility issues.

1982 to 1989: **New Mexico Public Service Commission Staff: Utility Economist** - Responsible for preparation of analysis and expert testimony in the areas of rate of return, cost allocation, rate design, finance, phase-in of electric generating plants, and sale/leaseback transactions.
