Supply Cost Summary

Notes
$/MWH values are not grossed up for line losses or gross receipts tax (GRT).
$/MWH values do not include "Administrative Cost", "Working Capital Adjustment", etc.
The values for the CCI procurement class reflect the spot-priced product.
Publicly released procurement price data is used for assumptions regarding the prices of supply already procured.

Default Service Supply Cost ($/MWH)

Annual Supply Cost Summary

Notes
$/MWH values are not grossed up for line losses or gross receipts tax (GRT).
$/MWH values do not include "Administrative Cost", "Working Capital Adjustment", etc.
The values for the CCI procurement class reflect the spot-priced product.
Publicly released procurement price data is used for assumptions regarding the prices of supply already procured.

SURREBUTTAL TESTIMONY OF KARL R. RÁBAGO

ON BEHALF OF THE

ENERGY JUSTICE ADVOCATES

May 29, 2024

EJA Statement No. 1-SR

Contents

I. Introduction 1

II. Response to the Rebuttal Testimony of OCA Witness Dr. Serhan Ogur 2

III. Response to the Rebuttal Testimony of PECO Witness Mr. Scott Fisher 8

IV. Response to the Rebuttal Testimony of PECO Witness Ms. Sulma Dalessio 21

I. Introduction

Q. Please state your name, business name and address, and role in this proceeding.

A. My name is Karl R. Rábago. I am the principal of Rábago Energy LLC, a Colorado limited liability company, located at 1350 Gaylord Street, Denver, Colorado. I appear here in my capacity as an expert witness on behalf of POWER Interfaith ("POWER"), Vote Solar, Clean Air Council, Sierra Club, Physicians for Social Responsibility, and PennEnvironment. Collectively, these organizations are the Energy Justice Advocates or EJA.

Q. Are you the same Karl R. Rábago who previously submitted Direct Testimony on behalf of Energy Justice Advocates?

A. Yes.

Q. What is the purpose of this Surrebuttal Testimony?

A. In this Surrebuttal Testimony, I offer a response to the Rebuttal Testimony of the Pennsylvania Office of the Consumer Advocate ("OCA") witness Dr. Serhan Ogur,[1] PECO Energy Company ("PECO") witness Mr. Scott Fisher,[2] and PECO witness Ms. Sulma Dalessio.[3]

[1] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur (May 15, 2024).

[2] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher (May 15, 2024).

[3] PECO St. No. 1-R, Rebuttal Testimony of Sulma Dalessio (May 15, 2024).

II. Response to the Rebuttal Testimony of OCA Witness Dr. Serhan Ogur

Q. Have you reviewed the Rebuttal Testimony offered by Dr. Serhan Ogur?

A. Yes.

Q. What position does Dr. Ogur take on the Renewable Energy Supply Procurement ("RESP") program that you recommended in your Direct Testimony?

A. Dr. Ogur testified that while he found PECO's proposed plan for Default Service Program ("DSP") VI "broadly consistent with the applicable standards for default service,"[4] if the RESP were modified to add two conditions, he "could support Mr. Rábago's proposal because procuring a portion of the residential default service load requirements under long-term PPAs [power purchase agreements] would increase rate stability and certainty for residential default service customers, and rate stability is a very important element for residential customers."[5]

Q. What is the first condition Dr. Ogur recommends adding to the RESP?

A. Dr. Ogur's first condition is that "the long-term renewable energy PPAs be incorporated into PECO's residential default service portfolio in a way that does not raise the cost of procuring the remaining (approximately 93 percent under Mr. Rábago's proposal) portion of the residential default service product portfolio."[6]

[4] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 8:13–14 (May 15, 2024).

[5] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 8:15–19 (May 15, 2024).

[6] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 8:19–22 (May 15, 2024).

Q. How does Dr. Ogur explain his recommendation for this condition?

A. Dr. Ogur recommends this condition out of a concern that if renewable energy procured through the RESP is applied (along with PECO's hydropower allocation) directly to meet residential default service load, with the remaining balance of load divided into 1.6% tranches for fixed-price full requirements ("FPFR") suppliers, the FPFR suppliers may experience uncertainty as to what volume of renewable energy will be delivered and when due to the potential for project construction delays and the inherent variability of renewable generation. Dr. Ogur states that this uncertainty may cause FPFR suppliers to raise their prices.

Q. Does Dr. Ogur offer any recommendations on implementing the first condition?

A. Yes. Dr. Ogur describes two mechanisms to avoid any delivery or production-related uncertainties associated with renewable procurement. First, Dr. Ogur notes that PECO could conduct a procurement under the RESP for bundled energy and Alternative Energy Credits ("AECs"), but then resell the energy and use the proceeds to offset the cost of service for residential customers, rather than using the energy to serve residential customers.[7]

Second, Dr. Ogur notes that PECO "could procure fewer tranches (e.g., 58 tranches for a total of 92.8% of the post-NYPA [New York Power Authority hydropower allocation] residential default service load) in recognition of the energy to be delivered to the

[7] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 10:15–11:5 (May 15, 2024).

residential default service portfolio from the long-term renewable energy PPAs."[8] Dr. Ogur notes that "[u]nder this approach, PECO would be a net seller of energy into the PJM real-time market in some hours and a net buyer of energy from the PJM real-time market in other hours, depending on the amount of energy delivered by the PPAs in any specific hour."[9]

Q. What is the second condition Dr. Ogur recommends adding to the RESP, and how does he recommend implementing it?

A. Dr. Ogur's second condition is that "the RESP should be designed to minimize the generation supply and administrative costs of the renewable energy PPA procurements."[10] To implement this condition, Dr. Ogur recommends "exploring PPA durations longer than the 10 years proposed by Mr. Rábago (e.g., 15 years, 20 years)."[11]

Q. What is your position on the conditions proposed by Dr. Ogur?

A. With regard to the first condition, which is designed to reduce the risk of uncertainty-based cost increases from the FPFR suppliers, I believe the risk at issue is low. To address uncertainty relating to when renewable energy projects will come online, PECO could provide information about this to FPFR suppliers so that they can plan accordingly. Similarly, while the production profile of wind and solar is variable, it is also predictable, and PECO could provide sufficient information about renewable energy projects

[8] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 11:7–9 (May 15, 2024).

[9] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 11:14–16 (May 15, 2024).

[10] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 8:23–24 (May 15, 2024).

[11] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 8:24–9:2 (May 15, 2024).

providing default service supply such that FPFR suppliers could plan for it. Since FPFR suppliers compete on price, PECO-supplied RESP production information will incentivize FPFR suppliers to better price in RESP impacts, creating a competitive opportunity for suppliers who are both competitive and flexible. Further, the RESP will create additional market opportunities for FPFR suppliers that also want to be RESP suppliers, enabling these suppliers to take advantage of portfolio management opportunities.

I am mindful that the RESP would represent a substantial and material change to PECO's historical procurement practices which may require a learning curve for suppliers. I am also mindful that Dr. Ogur's modifications represent a reasonable middle ground between EJA's original RESP as proposed and PECO's complete opposition to the RESP.[12] As such, while I believe that the original RESP recommended in my Direct Testimony has merit, I am agreeable to amend it to incorporate the first condition described in Dr. Ogur's Rebuttal Testimony.

With regard to Dr. Ogur's second condition, reducing the costs of the RESP by exploring 15- and 20-year contracts, I agree that this modification will spread the administrative costs of developing and implementing the RESP over a longer contract time horizon and will reduce supply costs if such contracts are offered in response to a Request for Proposals, and I am agreeable to amending the RESP to incorporate it.

[12] *See infra* at Part III.

Q. Can you describe the RESP as so modified?

A. Yes. In the section of my Direct Testimony describing the RESP,[13] I recommended that PECO take the steps necessary to procure a quantity of energy and AECs equivalent to 7% of the projected residential default service load by the end of DSP VI through ten-year contracts with zero emission renewable energy resources (which would be approximately 787,132 megawatt-hours ("MWh") annually). I described in detail the process I recommended for PECO to do so, which included phasing in the procurement of about 150 MW in Year 2 of DSP VI, 175 MW in Year 3 of DSP VI, and 200 MW in Year 4 of DSP VI (all figures in DC nameplate capacity, and using solar as an illustrative zero emission technology).[14]

In the process as I originally described it, the zero emission renewable energy so procured would be applied, along with PECO's New York Power Authority hydropower allocation, to meet the needs of residential default service load before the remaining unmet residential load is divided up into 62 tranches to be served with FPFR contracts supplemented by spot market purchases.[15]

In order to implement the two conditions Dr. Ogur describes (slotting the zero emission renewable energy procurement into the FPFR framework and exploring longer PPA tenors), I recommend the following modifications to the original RESP proposal. To start,

[13] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 72:8–80:18 (Apr. 25, 2024).

[14] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 73:6–78:6 (Apr. 25, 2024).

[15] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 74:9–75:4 (Apr. 25, 2024).

I recommend framing the interim procurement targets in terms of annual MWh in order to facilitate the process of meshing RESP procurement with the FPFR framework. This would result in interim procurement targets of approximately 227,281 MWh annually starting in Year 2, an additional approximately 265,161 MWh annually starting in Year 3, and an additional approximately 303,041 MWh annually starting in Year 4. To the extent that for reasons outside PECO's control, these interim procurement targets cannot be met, PECO should take the steps necessary to meet them as soon as practicable.

In my original recommendation, energy procured via RESP PPAs would be applied directly once delivered to meet residential load (alongside the NYPA hydropower allocation), with the residential load remaining divided up among the 62 FPFR tranches. Instead, to implement Dr. Ogur's first condition, I provide the following modified recommendation, which accounts for the 6-month cycle of FPFR contracts and assumes that RESP PPA energy will begin to be delivered at some point within an existing FPFR cycle. When delivery commences under an RESP PPA, PECO should (1) use the supplied AECs to offset AEC requirements for the residential customer class; (2) use any other energy, capacity, and ancillary services from the PPA that it can to avoid the need for spot purchasing to meet the needs of the 1% of default service load reserved for spot purchasing; and (3) sell any other supplied products that cannot be so used, including energy, in PJM real-time markets until the next twice-yearly round of FPFR procurement occurs and use the sale proceeds to offset the cost of default service supply for residential customers.

Prior to the next round of FPFR procurement, PECO should evaluate the maximum number of 1.6% tranches that do not need to be procured if the RESP PPAs that have commenced delivery are used to meet the default service supply needs of residential customers to the greatest degree possible (complemented as needed by market purchases).

At the next round of FPFR procurement, PECO should omit procurement of the number of 1.6% FPFR tranches that this evaluation determines do not need to be procured. PECO should then use the energy, capacity, and ancillary services supplied by the RESP PPAs that have commenced delivery to meet the needs of residential customers not served by FPFR tranches to the greatest degree possible (complemented as needed by market purchases). PECO should sell into the PJM real-time markets any energy or other services supplied by the RESP PPAs that cannot be so used and use the sale proceeds to offset the cost of default service supply for residential customers.

III. Response to the Rebuttal Testimony of PECO Witness Mr. Scott Fisher

Q. Have you reviewed the Rebuttal Testimony offered by Mr. Scott Fisher?

A. Yes.

Q. What position does Mr. Fisher take on the RESP program that you recommended in your Direct Testimony?

A. Mr. Fisher opposes it and defends PECO's proposed DSP VI procurement plan as filed.

Q. Do you agree with Mr. Fisher's contention that PECO's DSP VI as filed will adequately protect customers from unnecessary costs and price volatility?[16]

A. No, I do not. As I testified, long-term contracts from zero emission renewables are an essential part of a prudent mix of contracts. The fact remains that PECO's energy supply portfolio consists 100% of one- and two-year contracts, exposing customers to the impacts of significant pricing movements as DSP rates are changed, even if the transition to higher prices is padded through the laddering of contracts. Diversifying contract tenors will help reduce customer exposure to volatility and PECO exposure to price risk. PECO has a duty to design a procurement plan to ensure least cost over time, not simply to track market movements up and down while modestly cushioning the blows on customers. PECO's total omission of any long-term energy supply contracts in their mix is imprudent and reflects a neglect of that duty.

More broadly, as EJA witness Mr. Kujala demonstrated in his modelling, had PECO listened to the recommendations of intervenors in the DSP V proceeding and incorporated long-term renewable energy contracts, it would have saved residential customers millions of dollars.[17] And, as Mr. Kujala also shows, the incorporation of long-term renewable energy contracts into DSP VI is projected to drive substantial savings for residential customers going forward.[18] In addition, this approach will provide important environmental co-benefits, which I discuss in detail in my Direct Testimony.[19]

[16] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 12:4–13:2 (May 15, 2024).

[17] EJA St. No. 2, Direct Testimony of Ben Kujala, at 9:7–10:3 (Apr. 25, 2024).

[18] EJA St. No. 2, Direct Testimony of Ben Kujala, at 13:4–17 (Apr. 25, 2024).

[19] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 24:4–36:8 (Apr. 25, 2024).

Q. Does Mr. Fisher address the supply price hedging benefits that long-term contracts can have on DSP prices?

A. Mr. Fisher does not recognize that a DSP tenor of four years is not enough to generate long-term price hedging and volatility reduction benefits. As I pointed out graphically in my Direct Testimony,[20] the approach taken by PECO and endorsed by Mr. Fisher exposes DSP customers to a high degree of electricity supply price volatility. Adding long-term generation supply contracts provides hedging and volatility reduction value that is essential in a prudent mix of long- and short-term supply contracts.

Q. Do you agree with Mr. Fisher's contention that PECO's DSP VI as filed will adequately ensure reliable service?[21]

A. No, I do not. Mr. Fisher contends, essentially, that in the event its FPFR suppliers fail to deliver, adequate replacement energy will be available from PJM to ensure reliable service.[22] As I discussed in my Direct Testimony, however, events like Winter Storm Elliot illustrate that the PJM grid, which heavily relies on fossil fuels at present, is not immune to risk of disruption.[23] As I discuss, during a storm event that caused 46,000 megawatts of power (most of it natural gas power plants) to go offline over Christmas, renewables continued to perform as expected by grid managers, providing a stable and

[20] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 46, Figure KRR-6 (Apr. 25, 2024).

[21] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 13:6–15:11 (May 15, 2024).

[23] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 19:20–21:2 (Apr. 25, 2024).

predictable production of electricity during a time in which gas plants failed en masse.[24]

Mr. Fisher notes that a Duke Energy executive complained that solar generation facilities in the Duke Energy service territory did not produce electricity at night during Winter Storm Elliot, and Mr. Fisher uses this to justify his contention that renewables do not improve grid reliability.[25] However, Mr. Fisher's reliance on this anecdote is misplaced.

First, Winter Storm Elliot impacted the PJM footprint from December 23 to December 25, 2022,[26] and the severe grid stresses it imposed occurred both during the day and during the evening, meaning that solar resources that continued to perform during the day while gas plants failed still had a valuable role to play in contributing to reliability. As PJM has explained, "Measured by megawatt-hours, which indicates the availability over the course of the three days Dec. 23 – Dec. 25, natural gas plants had the most outages. This includes both gas and gas/diesel dual-fuel plants. About 63% of all outages were natural gas, 28% coal, 4% oil, 2% nuclear, 1% hydro, and about 1% other."[27] Second, Mr. Fisher neglects to consider zero emission renewables other than solar, such as wind, geothermal, and tidal energy, which can help ensure that zero emission renewable energy

[24] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 21:4–7 (Apr. 25, 2024) (citing Robert Zullo, *How did renewables fare during Winter Storm Elliot?*, Pennsylvania Capital-Star (Jan. 31, 2023), https://penncapital-star.com/energy-environment/how-did-renewables-fare-during-winter-storm-elliott-analysis/).

[26] PJM, *Winter Storm Elliot Frequently Asked Questions*, at 3 (Apr. 12, 2023), https://www.pjm.com/-/media/markets-ops/winter-storm-elliott/faq-winter-storm-elliott.ashx.

[27] PJM, *Winter Storm Elliot Frequently Asked Questions*, at 6 (Apr. 12, 2023), https://www.pjm.com/-/media/markets-ops/winter-storm-elliott/faq-winter-storm-elliott.ashx.

is available on a continuous basis.

Accordingly, the RESP program I recommend can help ensure reliable service by diversifying the types of generation that provide default service supply, which will help diversify risk and increase resilience to disruptive events like Winter Storm Elliot.

Q. Do you agree with Mr. Fisher's contention that DSP VI is adequately designed to prepare for potential future changes in climate-related policies?

A. No. While PECO's exclusive reliance on short-term energy supply contracts allows flexibility of a kind, since contracts turn over frequently, fully adapting to the high-renewables future needed to mitigate climate change will require preparation, which will be most cost-effective to do over time, rather than abruptly in the future. There will be a learning curve associated with PECO shifting away from a short-term contracting approach that is optimized for procurement from gas to a procurement approach that integrates higher levels of renewables, which is why I recommend that PECO start now.

Q. Do you agree with Mr. Fisher's contention that the RESP will not advance the concerns of PECO customers raised at the public input hearings in this proceeding?

A. No. As I discuss in my Direct Testimony, PECO customers repeatedly called on PECO to procure more electricity from solar and wind, to help new solar and wind projects get built through investing in long-term contracts with them, and to improve rate stability

through procurement of renewable energy via long-term contracts.[28] Implementation of the RESP I recommend will substantially advance all of these customer preferences as compared to PECO's DSP VI proposal as filed.

In his rebuttal, Mr. Fisher conflates FPFR suppliers purchasing AECs and then pairing them with energy of unspecified sources (but likely gas, given the PJM system mix) with the bundled procurement of AECs and energy via long-term contracts with zero emission renewable generation facilities that the RESP would effectuate. Mr. Fisher argues that because the RESP will not result in PECO procuring AECs in excess of Alternative Energy Portfolio Standards ("AEPS") requirements, it will not advance the preferences of customers as articulated at the public input hearings.

This is mistaken for several reasons. To start, the AEPS allows for Tier I AECs to be

[28] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 64:1–7 ("We have a clear and urgent need to transition how we procure electricity to clean renewable sources and we have an opportunity to invest in the affordable alternatives of solar and wind through this default service plan. PECO can negotiate for the best prices for its customers on the default service plan and enter into stable long-term contracts with renewable energy generators . . . PECO must make a substantial shift to clean affordable energy and we can only get there collectively through updating this default service plan.") (quoting public witness Senator Nikil Saval), 65:4–9 ("PECO has enormous resources, has enormous power in the market, and if it wanted to go out and seek the lowest cost renewable energy, it could do it, and it could influence the market because of the size of its purchasing. It can do that better than I, as an individual, even though I had the time and energy to be able to do it. So that's another reason why I urge the PUC to reject the current plan.") (quoting public witness Norman Janes), 66:7–12 ("I'm testifying today to ask the PUC to act to protect the public interest and balance the needs of consumers by requiring PECO to use as much renewable energy as possible in the default service plan. I realize that the DSP needs to strike a balance between renewable energy and fossil fuels. But renewable energy doesn't suffer from the wild price swings we've seen in natural gas the past couple of years.") (quoting public witness Richard Posmontier) (Apr. 25, 2024).

sourced from any "Tier I alternative energy source."[29] Importantly, the AEPS does not define "Tier I alternative energy sources" as renewable energy, but instead calls them "alternative energy," and with good reason. Eligible Tier I alternative energy sources include solar, wind, hydropower, and geothermal, but also "[b]iologically derived methane gas," fuel cells, biomass energy, and "[c]oal mine methane."[30]

In contrast, members of the public were emphatic in their calls for PECO to procure more solar and more wind.[31] There was, notably, no public testimony calling for PECO to procure more electricity from biologically derived methane gas and coal mine methane. Accordingly, the RESP will advance customer preferences by setting up a process by which PECO can cost-effectively meet its AEPS requirements through zero emission renewables like wind and solar, rather than leaving it open to the discretion of FPFR suppliers to purchase AECs from "alternative energy" sources like coal mine methane. The RESP was designed to and will increase the supply of zero emission renewables even if PECO procures AECs to the compliance level.

Next, in addition to incorrectly equating "alternative energy" with zero emission renewable energy, Mr. Fisher also neglects to consider how the RESP's long-term, bundled energy and AEC contracts will help support investment in new zero emission renewable projects as compared to the DSP VI status quo. PECO presently relies on its

[29] AEPS, 73 P.S. § 1648.2.

[30] AEPS, 73 P.S. § 1648.2.

[31] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 63:16–68:2 (Apr. 25, 2024).

FPFR suppliers to provide a proportional amount of Tier I AECs along with energy on 1- and 2-year contract terms.

However, under the RESP, long-term contracts for both energy and AECs (as well as capacity and ancillary services) from renewable generators provide a bankable source of revenue that can enable investment in new renewable energy generation projects. While it is true that a flow of electrons cannot be traced between a renewable generation facility in one part of PJM with end users in another part of PJM, flows of money definitely can—and it matters a great deal for the viability of new project development whether money is flowing to a project for just the AECs or for bundled AECs and energy. In addition to bundling, the length of the contract also matters a great deal for the bankability of the supply contract—and the RESP provides a clear improvement over the DSP VI's short-term status quo for Tier I AEC procurement in this regard as well.

Finally, Mr. Fisher also neglects the rate stability benefits of long-term contracts that bundle AECs and energy from zero emission renewables. Mr. Fisher attempts to equate FPFR suppliers supplying Tier I AECs and energy via 1- and 2-year contracts with the RESP, but this omits consideration of the rate stability benefits of the actual energy that is supplied via long-term contract with a renewable energy provider. As I discuss in my Direct Testimony, zero emission renewable generators, who do not face fuel price risk, can offer stable rates over a long contract tenor.[32] Taking a MWh of gas-fired electricity, pairing it with 0.075 MWh of "alternative energy" Tier I AECs, and supplying it over a

[32] EJA St. No. 1, Direct Testimony of Karl R. Rábago, at 60:17–19 (Apr. 25, 2024).

2-year window does not synthesize, replicate, or replace this rate stability.

Mr. Fisher's concerns need not be an excuse for sweeping aside the clear preference of customers for an increase in the renewable energy supply procured to provide electric service. The RESP's bundled zero emission renewable energy and AECs approach aligns with customer preferences. A renewable portfolio standard like the AEPS uses AECs to achieve and measure compliance but also allows for compliance with AECs from renewable energy sources less preferred by PECO customers.

Again, PECO's customers stated both an awareness of the AEPS compliance levels *and* a desire for more zero emission renewables. The RESP was designed to and will increase the supply of zero emission renewables even if PECO procures AECs to the compliance level. And the RESP requirement for procurement of energy, capacity, and ancillary services from zero emission renewable energy facilities will bring more of those kinds of facilities into the PECO generation supply mix.

Q. How does Mr. Fisher's rebuttal address customer preferences for PECO to use its DSP procurements to address climate change in a more meaningful way and at a more meaningful rate?

A. Mr. Fisher also ignores the additional stated desire by PECO customers at the public input hearings for PECO to move more aggressively in addressing the causes and impacts of climate change. Again, the RESP program to procure PPAs with zero emission

renewable energy generation supply and AECs addresses a fundamental gap in PECO's proposed DSP supply mix.

Q. How does Mr. Fisher address the effect that the RESP will have in encouraging development of new zero emission renewable energy generation facilities?

A. Mr. Fisher does not address the way in which a targeted procurement for zero emission renewable energy generation supply under long-term PPAs will support and accelerate development of such facilities. I have considerable experience managing market transformation programs and the development of building energy codes and serving as a regulatory affairs utility executive supporting renewable energy development in several clean and renewable energy portfolio standard jurisdictions. I know, and my experience shows, that long-term contracts for energy and capacity production, as well as for compliance credits, provide stronger financial support for new zero emission renewable energy development than contracts for renewable energy certificates, like AECs, alone.

Mr. Fisher's failure to recognize this market and financial reality further undermines his assertion that the RESP as proposed, if properly implemented, will not lead to more development of the kind of zero emission renewable energy generation supply that PECO's customers want. Simply stated, development funding goes where investors are confident of earning targeted returns. PECO's DSP has not provided investors or suppliers with confidence that building zero emission renewable energy generation facilities to serve DSP load is a bankable opportunity; the RESP is designed to start addressing that failure.

Q. Do you agree with Mr. Fisher's assertion that long term renewables contracts impose undue risks on customers?[33]

A. No. While there is a possibility, however unlikely, that a long-term contract procured via the RESP program could become uneconomic over time, there is also possibility that savings may be greater than expected. Given the small portion of residential default service load that would be served under the RESP, it is unlikely that any market divergence from a long-term contract would result in effects on the default service price per kWh of such a magnitude that it induces switching on a large scale. PECO's residential default service customer base has been remarkably stable in recent years (Mr. Fisher acknowledges this "historical stability"[34]), despite fluctuations in the default service price.

Additionally, independent of total savings, long-term energy contracts serve as a prudent hedge and provide rate stability benefits, and long-term renewable energy contracts also provide reliability and environmental benefits that I describe in my Direct Testimony. Moreover, the Commission has previously considered and rejected the argument "that the price under the Solar PPA may deviate from the market in some future years" as a basis for disapproving a long-term solar PPA, and approved a long-term solar PPA as part of a prudent mix of default service supply contracts.[35] As the Commission noted, "Given that Act 129 specifically contemplates contracts as long as twenty years, this argument does

[33] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 45:18–47:15 (May 15, 2024).

[34] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 47:3–15 (May 15, 2024).

[35] Opinion and Order on Exceptions, PA PUC Docket No. P-2020-3019522, at 82-83 (Jan. 14, 2021).

not hold up well. We agree with Duquesne Light that if price variability were a valid basis for objecting, then all long-term contracts should be prohibited. Such is not the case under the Code."[36]

Q. Do you agree with Mr. Fisher's assertion that the potential for renewables project construction delays will impose undue risks on customers?[37]

A. No. As a general matter, while it is possible that renewable projects in development may encounter delays in their commercial operation dates, the risk of any uncertainty could be mitigated by PECO communicating information regarding project status and projected commercial operation date regularly to FPFR providers.

However, the RESP as modified by incorporation of Dr. Ogur's proposals will avoid the potential for this delivery timing risk entirely. As I discuss above, supply from a RESP PPA will only be slotted into the FPFR tranche system after delivery has actually commenced. Accordingly, no FPFR supplier will be required to plan for any uncertainty relating to the commercial operation date of a renewables project.

Moreover, to the extent that Mr. Fisher is concerned over reports regarding lags before commercial operation dates for new renewable generation projects, this is all the more reason for PECO to act expeditiously to implement the RESP. The RESP is designed to provide long-term benefits (extending up to 20 years, as modified), and it will serve its

[36] Opinion and Order on Exceptions, PA PUC Docket No. P-2020-3019522, at 82-83 (Jan. 14, 2021).

[37] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 47:16–50:7 (May 15, 2024).

purpose of providing those benefits even if unavoidable delays in delivery from new projects occur. I also note that the RESP's preference for new generation projects is a preference, and not a requirement.

Q. In summary, does Mr. Fisher's testimony effectively rebut your RESP proposal?

A. No, and for several reasons. First, Mr. Fisher ignores the fact that my testimony recommends the procurement of generation energy supply and AECs from *zero emission renewable energy* resources. The RESP program proposes that PECO obtain both energy and AECs from these resources, materially changing the composition of its procurement approach and better aligning PECO's DSP with customer preferences.

Second, Mr. Fisher fails to recognize that my RESP proposal was designed to start the process of PECO cleaning up its default supply mix in line with customer preferences, which he would have PECO ignore. Given PECO's inexperience in contracting for the zero emission renewable energy generation supply or for any supply under long-term contracts, it is only prudent that PECO start its learning and growth process as I recommended.

Third, Mr. Fisher ignores my recommendation that PECO engage with renewable energy suppliers and other stakeholders in developing its RESP program to learn from renewable energy experts about how to overcome the concerns he identifies.

Fourth, Mr. Fisher does not account for the positive impacts on energy and AEC markets that would accrue from implementing the RESP and from attempting to address my recommendation that any supply and AECs be sourced from within the Commonwealth.

Fifth, Mr. Fisher ignores several of the benefits that my RESP is designed to produce, including reduced price volatility exposure compared to PECO's current and proposed approach, improvements in the supply mix to reduce greenhouse gas emissions and the impacts of climate change, proactive DSP program development to accommodate a high-renewables future, and a better renewable energy mix for customers enrolled in the customer assistance program.

IV. Response to the Rebuttal Testimony of PECO Witness Ms. Sulma Dalessio

Q. Have you reviewed the Rebuttal Testimony offered by Ms. Sulma Dalessio?

A. Yes.

Q. What position does Ms. Dalessio take on the RESP program that you recommended in your Direct Testimony?

A. Ms. Dalessio opposes it and defends PECO's proposed DSP VI procurement plan as filed.

Q. Do you agree with Ms. Dalessio's contention that the RESP would not result in affordability and reliability benefits?

A. No. Ms. Dalessio supports her contention by quoting at length from Mr. Fisher's Rebuttal

Testimony that critiques Mr. Kujala's Direct Testimony regarding his modelling and my Direct Testimony regarding the reliability benefits of zero emission renewables. Mr. Kujala addresses Mr. Fisher's critiques relating to modelling in his surrebuttal, and I addressed Mr. Fisher's critiques relating to reliability above.

Q. Do you agree with Ms. Dalessio's contention that PECO is adequately considering climate change issues in the design of DSP VI?

A. No. While Ms. Dalessio cites a number of sustainability initiatives that Exelon and PECO have engaged in, such initiatives are not a substitute for designing DSP VI in a way that includes more zero emission renewable energy. As I discuss in my Direct Testimony, procurement of energy from zero emission renewable energy resources is in the public interest because reducing the impacts of climate change is in the public interest. The RESP I recommend is a reasonable, prudent, and cost-effective means of beginning such procurement.

Q. Do you agree with Ms. Dalessio's contention that PECO adequately considered customer preferences in designing DSP VI?

A. No. Ms. Dalessio states that my views may not be the same as all of PECO's customers, but this does not rebut my recommendation that PECO must take action to engage with its customers in order to discover their preferences. Ms. Dalessio also attempts to minimize the importance of the public testimony at the public input hearing by noting that several PECO customers who testified were EJA members, but she provides no rationale for why the views of such PECO customers are not just as valid and important

as the views of any other PECO customers.

More broadly, Ms. Dalessio does not identify any way in which PECO engaged with its customers to discover their preferences as part of preparing DSP VI, and PECO confirmed in discovery that it did not conduct any kind of poll or survey to assess customer preferences as part of its preparation of DSP VI.[38]

Q. Does this conclude your Surrebuttal Testimony?

A. Yes.

[38] Exh. KRR-3, PECO Interrogatory Responses, Response to EJA-III-25.

VERIFICATION

I hereby verify that the facts contained in the foregoing testimony are true and accurate to the best of my knowledge and that I am duly authorized to make this verification, and that I expect to be able to prove the same at any hearing held in this matter. I understand that the statements herein are made subject to penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PECO Energy Company for Approval of Its Default Service Plan for the Period from June 1, 2025 Through May 31, 2029	Docket No. P-2024-3046008

SURREBUTTAL TESTIMONY OF BEN KUJALA

ON BEHALF OF

THE ENERGY JUSTICE ADVOCATES

May 29, 2024

EJA Statement No. 2-SR

Contents

I. Introduction 1

II. Response to the Rebuttal Testimony of OCA Witness Dr. Serhan Ogur 2

III. Response to the Rebuttal Testimony of PECO Witness Scott Fisher 3

A. Overview 3
B. Mr. Fisher's Concerns about Conceptual Flaws are Misplaced..... 5
C. Mr. Fisher's Concerns about Technical Flaws are Misplaced 10

IV. Conclusion 17

I. Introduction

Q. Please state your name, business name and address, and role in this proceeding.

A. My name is Ben Kujala. I am employed by 6893449 CANADA INC (doing business as Dunsky Energy + Climate Advisors), and my business address is 50 Saint-Catherine St W, Montreal, Quebec H2X 3V4. I appear here as an expert witness for POWER Interfaith ("POWER"), Vote Solar, Clean Air Council, Sierra Club, Physicians for Social Responsibility, and PennEnvironment. Collectively, these organizations are the Energy Justice Advocates or EJA.

Q. Are you the same Ben Kujala who previously submitted Direct Testimony on behalf of EJA?

A. Yes.

Q. What is the purpose of this Surrebuttal Testimony?

A. In this Surrebuttal Testimony, I offer a response to the Rebuttal Testimony of the Pennsylvania Office of the Consumer Advocate ("OCA") witness Dr. Serhan Ogur[1] and PECO Energy Company ("PECO") witness Scott Fisher.[2]

[1] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur (May 15, 2024).

[2] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher (May 15, 2024).

II. Response to the Rebuttal Testimony of OCA Witness Dr. Serhan Ogur

Q. Have you reviewed the Rebuttal Testimony of OCA witness Dr. Serhan Ogur?

A. Yes.

Q. Are there any aspects of that testimony you would like to address?

A. Yes. I would like to address two proposed modifications to the RESP proposal raised by Dr. Ogur in his Rebuttal Testimony, which Mr. Rábago proposes for implementation in his Surrebuttal Testimony. First, I will address Dr. Ogur's proposal to integrate the procurement of long-term renewable energy PPAs into the framework of the fixed-price full requirements ("FPFR") tranche system and formulate the procurement in a manner that will ensure the FPFR suppliers are "not affected by the presence, absence, variability, or profile of renewable energy deliveries" from these PPAs.[3] Second, I will address Dr. Ogur's proposal to consider procurements longer than 10 years.

Q. Do you anticipate that implementation of Dr. Ogur's first condition would provide a similar or better savings benefit to PECO as the original RESP?

A. Yes. I anticipate that altering the RESP such that renewable PPA generation combined with real-time market balancing purchases would replace tranches formerly served by FPFR contracts would present at minimum similar or potentially better savings benefit to PECO as the original RESP. As discussed in the Surrebuttal Testimony of Mr. Rábago, the modified RESP will enable PECO to retain the full value of the AECs procured by the RESP, and will allow for using the energy, capacity, and ancillary services procured by

[3] OCA St. No. 1-R, Rebuttal Testimony of Serhan Ogur, at 11:6–11 (May 15, 2024).

the RESP to meet the needs of residential customers not served by FPFR tranches to the greatest degree possible, complemented by PJM realtime market purchases. PECO would sell any excess energy that cannot be so used during predominantly on-peak periods when power prices are higher than off-peak periods (based on current forward prices) and use the proceeds to offset the costs of serving residential default service load. Additionally, by avoiding any alteration to the load served by FPFR tranches, this avoids any risk of FPFR suppliers raising costs out of concerns about uncertainty.

Q. Did you analyze procurements with a duration of longer than 10 years?

A. No.

Q. Do you anticipate that implementation of Dr. Ogur's second condition would provide a similar or better savings benefit to PECO as the original RESP?

A. Yes, I would expect that PPAs with durations longer than 10 years would be available at a price similar to or better than a 10-year PPA and thus lead to at minimum similar or potentially better estimated savings outcomes. Nothing in my testimony and analysis would preclude exploring longer-duration PPAs as an approach to minimizing the generation supply and administrative costs.

III. Response to the Rebuttal Testimony of PECO Witness Scott Fisher

A. Overview

Q. Have you reviewed the Rebuttal Testimony of PECO witness Scott Fisher?

A. Yes.

Q. What are Mr. Fisher's conclusions regarding your Direct Testimony?

A. Mr. Fisher concludes that the modelling I performed in my Direct Testimony is flawed in several respects. Mr. Fisher claims to identify two conceptual flaws and three technical flaws.[4]

The first conceptual flaw Mr. Fisher cites is that he claims that the modelling does not show that procurement of a portion of residential default service load from renewable resources will be "systematically" least cost.[5] The second conceptual flaw that Mr. Fisher cites is that since the historical modelling I performed used historical pricing data, he claims that the hypothetical renewables procurement I modelled represents a "super-optimal" portfolio that is unrealistic to attain on a forward-looking basis.[6]

The first technical flaw that Mr. Fisher cites is that Mr. Fisher believes that I should have used higher megawatt-hour prices for the modelling I performed.[7] The second technical flaw that Mr. Fisher cites is that he believes I may have over-credited the production of solar in my modelling.[8] The third technical flaw that Mr. Fisher cites is that he believes my modelling does not address costs associated with the increased uncertainty Mr. Fisher

[4] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at Parts VI and VII (May 15, 2024).

[5] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 22:11–15 (May 15, 2024).

[6] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 28:10–15 (May 15, 2024).

[7] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 30:8–16 (May 15, 2024).

[8] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 34:15–35:6 (May 15, 2024).

believes FPFR suppliers would experience if the RESP is implemented.[9]

Q. Do you agree with these critiques?

A. I do not.

B. Mr. Fisher's Concerns about Conceptual Flaws are Misplaced

Q. Do you agree with Mr. Fisher's contention that accepting the proposed Renewable Energy Supply Procurement ("RESP") based on your analysis would require one to accept a hypothesis that procuring energy by bundling it in a long-term contract is a systematically lower-cost approach than procuring the same energy through shorter-term FPFR product solicitations?[10]

A. No. I make no general statements about the relative costs of longer or shorter-term contracts for electricity; rather, I compare estimated costs of particular contracts, namely the FPFR contracts and the cost of a solar PPA and additional supporting services that PECO would need to procure as an alternative to the historical procurement of Default Service Program ("DSP") V contracts and the future proposed procurement strategy for DSP VI. I do not agree with Mr. Fisher's contention that my analysis requires the establishment of any underlying generalized principle about the pricing of different durations of electricity contracts. Mr. Fisher's critique that I do not provide adequate support for a generalized conclusion that I do not make is misplaced.

[9] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 35:7–36:3 (May 15, 2024).

[10] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 22:11–15 (May 15, 2024).

Q. Do you agree with Mr. Fisher's statement that the price of energy purchased via long-term contracts would be comparable to that of the same energy purchased via solicitations for shorter-term products?[11]

A. No, based on my experience and understanding of the fundamental underlying theory of power system economics as applied in organized markets like PJM, there are long- and short-run factors of production that influence the cost of producing electricity. Short-run costs are more likely to be influenced by variable costs, such as the cost of purchasing fuel for thermal power plants, whereas long-run costs are more likely to be influenced by activities like the construction of a new power plant.[12]

Q. Does the existence of the PJM capacity market preclude the existence of long-run savings available to PECO?

A. It does not. PJM operates a capacity market to help ensure a price signal that reduces the long-run market costs of meeting reliability criteria. However, while the capacity market shares the cost of reliability, it doesn't guarantee that all potential long-run cost savings are distributed optimally to every market participant. A participant who is a resource provider and a Load Serving Entity ("LSE") in the market will have a different net cost than a participant who is solely an LSE.

[11] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 23:12–14 (May 15, 2024).

[12] For example, see the discussion of short- and long-run costs in: Daniel S. Kirschen and Gordon Strbac, *Fundamentals of Power System Economics*, at 30–33 (Wiley 2nd ed. 2018).

Q. Wouldn't FPFR suppliers participate in capacity markets and thus offer all potential long-run savings to PECO through FPFR contracts?

A. I do not know the position of every FPFR supplier nor the logic they use to formulate the supply for the contracts. However, no theory ensures these contracts would contain all possible long-run savings.

In fact, there may be complications in creating contracts that involve offsetting revenue from the PJM capacity market. The PJM Reliability Pricing Model ("RPM") Auctions are set up so that the Base Residual Auction takes place 3 years before the start of delivery in May.[13] This means that if an FPFR supplier wants to use a resource that was part of the PJM RPM Base Residual Auction in their FPFR contract, they would have needed to offer that resource into the auction at least 2 years and 6 months before offering the FPFR contract to PECO with the intent of using the resource to supply electricity to the residential load.

Q. Are you making any statement about the use of FPFR contracts as part of a prudent strategy to serve PECO residential load?

A. No. My testimony, analysis, and surrebuttal should only be interpreted as saying there is no guarantee that all possible long-run savings have been captured when solely using FPFR contracts to supply residential load. It should not be seen as critiquing the use of these contracts for serving a portion or even a majority of PECO's residential load.

[13] PJM, *PJM Manual 18: PJM Capacity Market, Revision 58*, at 14 (Nov. 15, 2023), https://www.pjm.com/~/media/documents/manuals/m18.ashx.

Q. Do you agree with Mr. Fisher's implication that a price difference between long and short-term contracts would lead to an arbitrage opportunity in energy markets?[14]

A. No. Setting aside arguments about convergence between pricing for short and long-term contracts, arbitrage is the nearly simultaneous purchase and sale of the same product at a profit. Short and long-term contracts are not the same product; thus, buying a long-term contract and selling a short-term contract within the duration covered by the long-term contract is not arbitrage, but instead would leave the party purchasing the long-term contract with an open position for the balance of the long-term contract. Similarly, the idea that an FPFR contract supplier could purchase a long-term contract and then use that contract to supply multiple contracts of a shorter term does not meet the concept of simultaneous purchase and sale. Mr. Fisher's contention that the mismatch in delivery period duration between long and short-term contracts does not offer a plausible explanation to support a cost difference is neither supported by any evidence nor is it material to my Direct Testimony and analysis.

Q. Do you agree with Mr. Fisher's implication that energy traders can buy long-term contracts and easily break them into multiple short-term contracts to be resold for a reliable profit where there are differences in pricing between short- and long-term contracts?[15]

A. No. Energy traders would either have to resell non-standard contracts or standard

[14] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 24:4–25:1 (May 15, 2024).

[15] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 24:15–25:1 (May 15, 2024).

contracts with limited liquidity, e.g., a contract starting 3 years and ending 5 years in the future, or they would need to hold an open position keeping the purchased energy in their portfolio to be sold later. An open position would leave them exposed to the potential for losses and tie up capital until they would be able to fully unload the position.

Q. Would PECO purchasing long-term PPAs result in PECO taking the same risk as an FPFR supplier purchasing a long-term PPA and subsequently reselling it to PECO as part of an FPFR contract?

A. No, FPFR suppliers do not have a long-term obligation to serve load. Therefore, holding contracts for future electricity deliveries leaves them with something they will be forced to sell. In contrast, PECO has an ongoing obligation to serve load, which gives it a distinctly different risk profile and offers PECO additional purchasing optionality when compared to an FPFR supplier.

Q. Do you agree with Mr. Fisher's statement that the historical period studied is unlikely to represent the universe of potential market outcomes that could have occurred or that are likely to occur in the future?[16]

A. I can see no logic behind the statement that implies the historically observed market outcome is unlikely to represent the universe of potential market outcomes that could have occurred. Since these market outcomes were observed, they are completely certain and did indeed occur. Regarding the likelihood of similar conditions occurring in the future, back-testing contracts against historical prices is standard practice in financial

[16] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 28:2–5 (May 15, 2024).

analysis. The contention that something that has occurred in the past is outside the "universe of potential market outcomes"[17] is unsupportable. Mr. Fisher provides no evidence for this statement.

Q. Do you agree with Mr. Fisher's implication that the historical analysis should not be relied upon because it represents a "super-optimal"[18] portfolio?

A. I did not use any optimization in my analysis, nor would I represent the alternative examined in my historical analysis as a least-cost historical portfolio. The historical analysis was formulated to provide a simple counter-example to the implication that the FPFR contracts will always provide PECO with the lowest possible supply cost.

C. Mr. Fisher's Concerns about Technical Flaws are Misplaced

Q. Do you agree with Mr. Fisher's statement that the derivation of the range of PPA prices in your testimony and analysis contains a technical flaw because it does not use Mr. Fisher's preferred price?

A. I do not agree. The principle behind my analysis was to show a range of potential prices rather than represent certainty in pricing. I do not see any one price value as perfect market information about future PPA pricing. The fact that PPA prices could be different than those used in my analysis is directly addressed using a range of pricing scenarios. My analysis is illustrative and supports implementing a process to discover the PPA price available to PECO, a recommendation which is put forth within the RESP proposal in

[17] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 28:2 (May 15, 2024).

[18] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 28:12–15 (May 15, 2024).

EJA's witness Karl R. Rábago's Direct Testimony.

Q. Is your approach to deriving a high price unreasonable?

A. No. The Level10 index reflects prices that have recently increased significantly, and it is also important to note that the Level10 index is based on executed PPA deals and does not represent a forecast of future PPA prices. Because PJM currently differs greatly from other North American markets in terms of PPA pricing, I believe there is a strong possibility that the prices would return to previous levels. This belief is also supported by the prices derived from underlying material and labor costs, such as the National Renewable Energy Laboratory ("NREL") Annual Technology Baseline ("ATB") pricing, which has not shown a significant price increase. Additionally, the Inflation Reduction Act provides substantial tax incentives to offset the cost of building renewable energy.

BEGIN CONFIDENTIAL. [redacted] **END CONFIDENTIAL.**

I believe this approach, which integrates two recent data points rather than simply relying on one price snapshot, is more robust, particularly given that the objective is not to model PPA prices today but to develop a reasonable "high price" for a procurement occuring in spring 2026. Mr. Fisher's comparison of my high price modelling approach to using data from over the past year to "calculate one's 401(k) balance today" is misplaced.[19] My

[19] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 32:12–15 (May 15, 2024).

modelling is not designed to calculate the price of a solar PPA in PJM "today," but is instead, as I have explained, designed to establish a reasonable high price for solar PPAs in PJM two years from now, an exercise for which multiple recent data points are highly relevant.

Level10 is regarded as an industry "gold standard" for PPA price sourcing, and I believe it is reasonable to rely upon multiple recent data points from Level10 to develop a high price scenario. Mr. Fisher cites an alternative PJM solar PPA price value, $79.50 for Q1 2024, which he found in a report by Trio, but the existence of higher price quotes does not disturb the reasonableness of relying on Level10 data to establish a reasonable future high price scenario. My analysis does not assume that every future solar PPA bid will fall within the ranges analyzed, but I do assess that it is highly likely that some will.

Q. Are your low and medium prices for the PPA price range unreasonable?

A. No. The NREL ATB approach has been well-vetted in multiple publications.[20] It is heavily used as a point of comparison for all renewable pricing throughout North America. The derivation based on underlying fundamentals affords a view of the cost of building renewables with a reasonable rate of return. While it does not incorporate temporary market deviations based on scarcity or speculation, that makes it a good resource to use for a mid-level forecast focused more on technological innovation than temporary market dynamics. It reflects many years of investment in research and

[20] For more detail on their methodology, *see* NREL, *Annual Technology Baseline: 2023 ATB Approach and Methodology* (2024), https://atb.nrel.gov/electricity/2023/approach_&_methodology.

refinement from the Department of Energy and would not be dismissed by any serious analysts looking at renewable pricing in North America. Thus, these medium prices are reasonable as part of an analysis looking at a broad range of potential PPA prices that could occur in the future.

The low prices derived from the LBNL report reflect the market conditions that resulted in extremely low PPA pricing. Although PECO did not take advantage of this pricing during DSP V, I cannot predict the future of the market well enough to say that similar circumstances leading to the pricing in the LBNL report will never occur again. Therefore, I acknowledge that those prices were indeed "low," but I don't rule out the possibility of them being repeated. Thus, these low prices are reasonable as part of an analysis looking at a broad range of potential PPA prices that could occur in the future.

Q. Can you guarantee that PPA prices offered in an RESP program would fall within the range of prices in your analysis?

A. No. Using the currently available information, I assess that it is highly likely that some offers would fall within the range, but the only way to know with certainty what prices would be available would be to implement a program like the RESP to discover those prices. If the RESP is run multiple times and prices are adjusted for inflation, it becomes more likely that there will be some offers within the range of prices in my analysis. However, my analysis is intended to demonstrate the potential for savings from implementing the RESP. Further detailed analysis should be completed once offers are received to assess the benefits and costs to PECO of the specific PPA or PPAs being

considered.

Q. Do you agree with Mr. Fisher's "correction" to the savings figures from your testimony and analysis?

A. No. The supposed correction provided by Mr. Fisher replaces the range of PPA prices from my analysis with a single PPA price at a single point in time. It is neither a correction nor an accurate representation of any flaw in my analysis. **BEGIN CONFIDENTIAL.** [redacted] **END CONFIDENTIAL.** It is important to note that this comparison focuses solely on total dollars expended and does not include other benefits. Such benefits encompass areas such as rate stability, public health, improved air quality, and climate change mitigation, to name a few. These positive impacts are directly linked to the increased adoption of renewable PPAs within an energy system.

[21] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 33:8 (May 15, 2024).

[22] **BEGIN CONFIDENTIAL.** [redacted] **END CONFIDENTIAL.**

Q. Do you agree with Mr. Fisher's statement that your analysis assumes all of the energy provided via the long-term solar generation contract could be purchased instead at on-peak wholesale block energy prices?[23]

A. No. My analysis looks at the potential generation from a solar PPA and assigns the generation into on- and off-peak energy blocks as defined by PJM in its Cost Development Guidelines while also accounting for weekends and NERC holidays.[24] Mr. Fisher incorrectly assumes that my analysis relies on solar generation being exclusively purchased at on-peak wholesale prices resulting in overvaluing 29% of the energy generated from solar. My analysis clearly accounts for on-peak and off-peak pricing considerations for every single hour of the year for each year within the DSP VI period.[25]

Q. Do you agree with Mr. Fisher's implication that changing the FPFR products solicited to accommodate the proposed long-term solar generation contract would require additional compensation for the FPFR product suppliers and result in higher prices for the FPFR contracts?

A. No. For example, the solar generation output we used in our analysis shows that 67% of the hours where generation is present are Heavy-Load Hours. Because the FPFR products are procured competitively, the price offered by at least some of the suppliers should account for reduced market purchases during these peak hours. Moreover, the production

[23] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 34:13–20 (May 15, 2024).

[24] PJM, *PJM Manual 15: Cost Development Guidelines, Revision 44*, at 83 (Aug. 1, 2023), https://www.pjm.com/~/media/documents/manuals/m15.ashx.

[25] There are 8760 hours in a regular year and 8784 hours in a leap year every four years (2024, 2028, etc.).

profiles of solar and wind are predictable and information about RESP PPA production projections could be provided by PECO to FPFR suppliers. While there may be some additional uncertainty that would need to be considered, competitive discipline will incentivize FPFR suppliers to make the most use of available production profile information. There will also likely be countervailing savings on energy needs during Heavy-Load Hours, and there is no evidence that net costs to FPFR procurement from the RESP would result.

Moreover, as I discuss above, Mr. Rábago's response to Dr. Ogur's Rebuttal Testimony incorporates proposed modifications from Dr. Ogur that will eliminate the potential for impacts to FPFR service from RESP PPAs by slotting such PPAs into the FPFR tranche framework.[26]

Q. Does your testimony or analysis consider purchasing renewable energy and not using the associated Alternative Energy Credits ("AECs") to meet the PECO AEC obligation?

A. No, Mr. Fisher introduces and then critiques a scenario whereby the AECs associated with the RESP would be not be applied to offset AEPS compliance obligations.[27] This scenario is entirely of his devising. My testimony and analysis assume that any AECs that would be associated with the solar PPA would be used by PECO to offset AEPS compliance obligations.

[26] EJA St. No. 1-SR, Surrebuttal Testimony of Karl R. Rábago, at Part II (May 29, 2024).

[27] PECO St. No. 3-R, Rebuttal Testimony of Scott G. Fisher, at 40:5–43:4 (May 15, 2024).

Q. Does Mr. Fisher's testimony effectively rebut your analysis of the cost of different procurement strategies that could serve the PECO's residential default service load?

A. No. Mr. Fisher's testimony misrepresents the approach of my analysis, posits generalized arguments about contract pricing that are immaterial to my testimony, and cites a single source relevant to future PPA pricing. My testimony and analysis address the fundamental uncertainty in future PPA pricing by establishing a range of potential outcomes. My analysis illustrates a general principle that there are potential cost savings from including the procurement of renewable energy from long-term PPAs based on a range of plausible PPA prices rather than picking an individual price. The RESP proposal in EJA's witness Karl R. Rábago's Direct Testimony, as modified in Surrebuttal Testimony, describes a process to discover what pricing for renewable energy would be available to PECO rather than asserting a single price or a narrow range of potential prices and drawing conclusions based on unfounded and unsupported certainty about future market conditions.

IV. Conclusion

Q. Does this conclude your Surrebuttal Testimony?

A. Yes.

VERIFICATION

I hereby verify that the facts contained in the foregoing testimony are true and accurate to the best of my knowledge and that I am duly authorized to make this verification, and that I expect to be able to prove the same at any hearing held in this matter. I understand that the statements herein are made subject to penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Dated: May 29, 2024
