New Issuance:

One-time issuance for cells that would not normally warrant an alert because their risk is so low to produce isolated wind damage. However, they are still highlighted given they will occur on a system potentially stressed during this early season stretch of abnormal heat.

Tuesday June 18, 2024 @ 0844

Changes. Very much a cut and paste of yesterday with timing and risk of damage potential. North of the faint gray line is an area we are monitoring for a low risk of afternoon damaging cells Wed. Heat continues through the weekend.

Tuesday, June 18, 2024 @ 1235

Changes. Things off to a slower start today due to high cloud cover (slower to heat up) – still expecting activity – but with the later start lowers the risk – especially near the edges of the outlined area. Still monitoring for tomorrow for activity north of the faint gray line. Heat continues through the weekend.
