Reason for the interruption or outages: Beginning on Tuesday July 16, 2024, a weather system producing strong thunderstorms moved through the Met-Ed service territory. In addition to the thunderstorms, the National Weather Service confirmed that a series of downbursts and a microburst occurred in the Met-Ed service territory the evening of July 16, 2024. The maximum estimated wind speeds associated with the downbursts were between 80 and 90 mph. See Attachment B for the maximum wind gusts and the 24-hour total precipitation for July 16 and July 17, 2024.

Damage as a result of the weather system included downed trees and wires, damaged or broken poles and crossarms, and tree damage. Challenges during the restoration efforts included difficulty accessing the hardest hit areas due to the large scale damage as well as daytime temperatures of 95 to 100 degrees on July 16 and July 17, 2024. See Attachment B for the maximum/minimum temperatures for July 16 and July 17, 2024. The Easton, Hanover and York districts were the hardest hit areas. Approximately 65% of the total outages that occurred were tree related with an additional 12% related to

line and equipment failure.

Preliminary data indicates the reliability impact of the storm was 55 minutes of SAIDI, 0.09 of SAIFI frequency, and an overall storm CAIDI of 625.81 minutes.

(g) Projected time of restoration: It was estimated that the majority of customers affected would be restored by July 19, 2024 at 2300. See Attachment C for the restoration curve and Attachment D for the order restoration graphs.
