VIA ELECTRONIC FILING

May 23, 2024

Rosemary Chiavetta, Secretary
Pennsylvania Public Utility Commission
Commonwealth Keystone Building
400 North Street
Harrisburg, PA 17120

Re: General Base Rate Filing for Aqua Pennsylvania, Inc. & Aqua Pennsylvania Wastewater, Inc. at Docket Nos. R-2024-3047822 and R-2024-3047824

Dear Secretary Chiavetta:

Aqua Pennsylvania, Inc. ("AP") and Aqua Pennsylvania Wastewater, Inc. ("APW"), (collectively "Aqua PA" or the "Company") herewith file for an increase in water and wastewater rates based on a fully projected future test year ("FPFTY") ending December 31, 2025. In compliance with the Pennsylvania Public Utility Commission's ("Commission") general rate case filing requirements, as set forth at 52 Pa. Code § 53.53, and the Commission's Secretary Bureau's directions for electronically filing a general rate case, the Company is submitting to the Commission: (1) one electronic copy of the following documents via the Secretary Bureau's electronic SharePoint system, and (2) one hard copy and one CD/DVD of the following documents by Federal Express:

Volume 1:	Filing Letter, Statement of Specific Reasons for Proposed Increase in Rates, Customer Notices, Press Release, Proposed Tariffs bearing a proposed effective date of July 22, 2024, Original Tariff Water-Pa. P.U.C. No. 4 and Original Tariff Sewer-Pa. P.U.C. No. 4	
Volume 2:	Exhibit 1-A	Water Base Operations - Revenue and Expense Data and Rate Base Claims – Test Years Ended December 31, 2023 (HTY), December 31, 2024 (FTY), & December 31, 2025 (FPFTY)
	Exhibit 1-B	Shenandoah Water - Revenue and Expense Data and Rate Base Claims – Test Years Ended December 31, 2023 (HTY), December 31, 2024 (FTY), & December 31, 2025 (FPFTY)
	Exhibit 1-C	Wastewater Base Operations - Revenue and Expense Data and Rate Base Claims – Test Years Ended December 31, 2023 (HTY), December 31, 2024 (FTY), & December 31, 2025 (FPFTY)

	Exhibit 1-D	Lower Makefield Wastewater - Revenue and Expense Data and Rate Base Claims – Test Years Ended December 31, 2023 (HTY), December 31, 2024 (FTY), & December 31, 2025 (FPFTY)
	Exhibit 1-E	East Whiteland Wastewater - Revenue and Expense Data and Rate Base Claims – Test Years Ended December 31, 2023 (HTY), December 31, 2024 (FTY), & December 31, 2025 (FPFTY)
Volume 3:	Exhibit 2	Payroll Calculations
	Exhibit 3	Original Cost Data for New Acquisitions Closed Subsequent to Last Rate Case
Volume 4:	Exhibit 4-A	Cost of Capital
	Statement No. 7	Direct Testimony of Paul R. Moul
Volume 5:	Exhibit 5-A, Parts I, II, Appendix A – Cost of Service Allocation Study, Operating Revenues from the Sales of Water, & Application of Present and Proposed Rates	
	Exhibit 5-B, Parts I & II, Appendix A – Cost of Service Allocation Study, Operating Revenues from the Sales of Wastewater, & Application of Present and Proposed Rates	
Volume 6:	Exhibit 6-A, Part I – Water Base Operations Depreciation Study - Calculated Annual Depreciation Accruals Related to Utility Plant at December 31, 2023	
Volume 7:	Exhibit 6-A, Part II – Water Base Operations Depreciation Study - Calculated Annual Depreciation Accruals Related to Utility Plant at December 31, 2024	
Volume 8:	Exhibit 6-A, Part III – Water Base Operations Depreciation Study - Calculated Annual Depreciation Accruals Related to Utility Plant at December 31, 2025	
Volume 9:	Exhibits 6-B, Parts I, II, III – Shenandoah Water Depreciation Study - Calculated Annual Depreciation Accruals Related to Utility Plant at December 31, 2023, December 31, 2024, and December 31, 2025	
Volume 10:	Exhibits 6-C, Parts I, II, III – Wastewater Base Operations Depreciation Study - Calculated Annual Depreciation Accruals Related to Utility Plant at December 31, 2023, December 31, 2024, and December 31, 2025	
Volume 11:	Exhibits 6-D, Parts I, II, III – Lower Makefield Wastewater Depreciation Study - Calculated Annual Depreciation Accruals Related to Utility Plant at December 31, 2023, December 31, 2024, and December 31, 2025	

Volume 12:	Exhibits 6-E, Parts I, II, III – East Whiteland Wastewater Depreciation Study - Calculated Annual Depreciation Accruals Related to Utility Plant at December 31, 2023, December 31, 2024, and December 31, 2025	
Volume 13:	Exhibit 7	Calculation of Cash Working Capital Based on Lead-Lag Study
Volume 14:	Statement No. 1	Direct Testimony of William C. Packer
	Statement No. 2	Direct Testimony of Renee T. Marquis
	Statement No. 3	Direct Testimony of Christopher E. Manning
	Statement No. 4	Direct Testimony of Michael S. Ercolino
	Statement No. 5	Direct Testimony of Constance E. Heppenstall
	Statement No. 6	Direct Testimony of John J. Spanos
	Statement No. 8	Direct Testimony of Panpilas Fischer
	Statement No. 9	Direct Testimony of Harold C. Walker III
	Statement No. 10	Direct Testimony of Gregory R. Herbert
	Statement No. 11	Direct Testimony of Todd M. Duerr
	Statement No. 12	Direct Testimony of Michael L. Convery
	Statement No. 13	Direct Testimony of Rita F. Black
Volume 15:	Minimum Filing Requirements (A) through (F)	
Volume 16:	Minimum Filing Requirements (G)	
Volume 17:	Minimum Filing Requirements (H) through (K)	
Volume 18:	Documents Marked Confidential	

As noted above, the Company's general rate filing includes information that the Company considers to be proprietary and confidential. Both the electronic and hard copies of these documents have been conspicuously labeled as "CONFIDENTIAL" have been separately compiled and submitted to the Commission in electronic and hard copy format. The Company requests that the copies of the materials that have been labeled "CONFIDENTIAL" and that have been separately submitted to the Commission as "CONFIDENTIAL" documents be given confidential treatment by the Commission, including its various offices and bureaus. That is, the Company requests that the confidential materials be excluded from the Commission's public document folder and that the confidential copies not be disclosed to the public.

In addition, and in accordance with the Commission's regulations, the Company is concurrently serving copies of the above-captioned general rate increase filing, comprised of the documents listed above upon the Commission's Bureau of Technical Utility Services ("TUS"), the Commission's Bureau of Investigation and Enforcement ("I&E"), the Commission's Office of the Administrative Law Judge ("OALJ"), the Office of Consumer Advocate ("OCA") and the Office of Small Business Advocate ("OSBA"), as follows:

- By prior agreement, filing letter only via email will be provided to TUS;

- By prior agreement, three hard copies of the filing will be provided to I&E;
- By prior agreement, one electronic copy of the filing will be provided to OALJ (paper copy if requested);
- By prior agreement, one electronic copy will be provided to the OCA; and
- By prior agreement, four electronic copies will be provided to the OSBA via USB flash drives.

The Company is being represented in this proceeding by the following counsel and requests that they be included on the official service list:

Michael W. Hassell, Esquire
Garrett Lent, Esquire
Nicholas Stobbe, Esquire

AQUA PENNSYLVANIA, INC.
AQUA PENNSYLVANIA WASTEWATER, INC.

STATEMENT OF SPECIFIC REASONS FOR PROPOSED INCREASE IN RATES

Aqua Pennsylvania, Inc. ("Aqua PA" or the "Company") on its own behalf and on behalf of its wholly-owned subsidiary Aqua Pennsylvania Wastewater, Inc., filed, respectively, Original Tariff Water – PA P.U.C. No. 4 ("Tariff Water No. 4") and Original Tariff Sewer – PA P.U.C. No. 4 ("Tariff Sewer No. 4") to become effective on July 22, 2024. Based on the financial and accounting data submitted in support of those tariffs, the Company's proposed base rates will produce an increase in total annual operating revenues of $126,675,472, or approximately 18.88% over the level of revenues anticipated for the fully projected future test year ending December 31, 2025. The proposed base rates set forth Tariff Water No. 4 and Tariff Sewer No. 4 in the majority of the Company's divisions will have a proposed rate increase in charges for water and wastewater service by varying amounts. The specific reasons for the proposed increase in total operating revenues are summarized below.

Rate Increase

The Company last filed for base rate increases for its water and wastewater operations in August 2021 - almost three years ago. During the intervening period since the end of the fully projected future test year in the last case, the Company will have invested approximately $950 million in utility infrastructure through December 31, 2025, which represents an increase of approximately 16% in the original cost of the Company's physical assets (property, plant and equipment) used and useful in providing utility service. These substantial investments in new utility infrastructure, include, but are not limited to, distribution main replacement, water and wastewater treatment plant rehabilitation, addressing emerging contaminants, well rehabilitation, and upgrades to pumping facilities. Investments such as this and similar projects are crucial to maintain the indispensable service the Company's customers have come to expect. This includes addressing aging infrastructure and enabling the Company to meet increasingly stringent state and federal environmental regulations.

The Company has invested in projects that have reduced its production costs and purchased water expense. In addition, the Company has engaged in concerted efforts to control discretionary operating expenditures. However, various operating expenses have increased consistent with national trends, increasingly stringent standards and regulations related to emerging contaminants, and these increases are reflected in the filing.

Due in large part to its substantial additional investment in utility plant and increases in various non-discretionary cost items, the Company's overall rate of return, at present rates, is projected to be only 6.02% for the fully projected future test year. More importantly, the indicated return on common equity under present rates is anticipated to be 7.47%, which is inadequate and less than required to provide the Company with a reasonable opportunity to attract the additional capital needed to finance future water and wastewater plant improvements.

The requested rate levels would produce an overall rate of return of 7.90% and a rate of return on common equity of 10.95% on the Company's claimed original cost measure of value. These return levels are consistent with those recommended by Mr. Paul R. Moul – an expert on the subject of rate of return.[1]

Supporting Data

Along with Tariff Water No. 4 and Tariff Sewer No. 4, the Company filed all of the supporting data required by the Pennsylvania Public Utility Commission's ("PUC" or the "Commission") regulations for the historical test year ended December 31, 2023, the future test year ending December 31, 2024, and the fully projected future test year ending December 31, 2025. The Company is submitting separate revenue requirement studies for its water and wastewater operations (*see* AP Exhibit Nos. 1-A through 1-B (Water) and 1-C through 1-E (Wastewater)). The Company has included the revenue requirement studies in a consolidated rate increase filing pursuant to authority conferred by Section 1311(c) of the Pennsylvania Public Utility Code, 66 Pa.C.S. § 1311(c). Because the Company is basing its claim principally on the

[1] Mr. Moul's rate of return recommendations are being filed herewith as Exhibit 4 and are summarized as follows:

	Ratio	Cost Rate	Weighted Cost Rate
Debt	46.05%	4.32%	1.99%
Common Equity	53.95%	10.95%	5.91%
Total	100%		7.90%

level of operations for the fully projected future test year, pursuant to Section 315(e) of the Pennsylvania Public Utility Code, 66 Pa.C.S. § 315(e), the discussion that follows will address the fully projected future test year data.

The revenue and expense data for the fully projected future test year have been prepared in a manner consistent with the Company's prior rate filings and in accordance with the accepted practices of the Commission. To establish anticipated operating revenues under the proposed rates, operating revenues for the historic test year ended December 31, 2023, were adjusted to reflect (1) changes in the number of customers, as well as the consumption by specific customers, during the twelve-month periods ending December 31, 2023, December 31, 2024, and December 31, 2025, and (2) required annualization adjustments and system acquisitions; and (3) adjustments for declining usage.

After extensive and careful review of the Company's accounts, actual operating expenses for the historic test year ended December 31, 2023, were increased to reflect currently effective and anticipated expense levels, as summarized at page C-2 of Exhibits 1-A through Exhibits 1-E. Such adjustments capture, among other things: chemical costs; group insurance costs; labor and labor related costs; healthcare costs; and the impact of inflation on expense items not otherwise specifically adjusted to fully projected future test year levels. Certain other adjustments were also made, including downward adjustments to reflect reductions in expense levels from those experienced during the year ended December 31, 2023. In addition, an adjustment has been made to reflect the increase in the Company's annual depreciation expense accrual under the straight-line remaining life method.

The rate base elements that are reflected in the Company's proposed revenue requirement in this filing have also been determined on a basis that is consistent with past rate filings and in accordance with accepted practices of the Commission. Fully projected future test year plant levels reflect the original cost of the Company's utility plant, as taken from the Company's continuing property records, together with the anticipated additions and retirements during the years ending December 31, 2024, and December 31, 2025. Gannett Fleming Valuation and Rate Consultants, LLC computed the applicable accrued depreciation under the straight-line remaining life method, which was then deducted from the original cost of the Company's

depreciable plant. The resulting claim for depreciated utility plant in service equals $5,381,519,964, consisting of $4,840,309,962 for water and $541,210,003 for wastewater.

From the depreciated utility plant in service figures, the Company has deducted contributions in aid of construction, customer advances for construction, and deferred income taxes. The Company has added an allowance for materials and supplies and cash working capital. The resulting claimed original cost measure of value as of December 31, 2025 is $4,838,116,230, consisting of $ $4,334,260,435 for water and $503,855,795 for wastewater. This represents an approximate 16% increase over the Company's combined rate base claims in its last water and wastewater base rate proceedings.

As is evident from the foregoing and the voluminous supporting data filed herewith, the proposed rate increase is just and reasonable and represents the minimum rate increase necessary to enable the Company to earn a reasonable return on its investment in property devoted to the public service, to maintain the integrity of existing capital and to attract new capital.

Rate Structure

The Company's rate structure proposal was developed in accordance with system-wide cost of service studies for water and wastewater service performed by Gannett Fleming Valuation and Rate Consultants, LLC. A copy of that study was submitted with this filing as Aqua Exhibits 5-A and 5-B.

The Company's long-term goal is to charge all customers a uniform set of rates regardless of geographic location. The Company's acquisition of smaller systems across the state has presented unique circumstances that require it to maintain separate rates for certain systems with the long-term goal of consolidation. For specific information on certain rate zones, please refer to Tariff Water No. 4 and Tariff Sewer No. 4.

Public fire hydrant rates in a small number of rate divisions currently exceed 25% of the indicated cost of service and, consistent with Section 1328(b) of the Pennsylvania Public Utility Code, 66 Pa.C.S. § 1328(b), have been held at existing levels. The Company has, however, proposed to increase public hydrant rates in rate divisions where the present charges are below the 25% benchmark.

The Company has also proposed combining a portion of the revenue requirement of its wastewater operations with the revenue requirement of its water operations, as permitted by Section 1311(c) of the Pennsylvania Public Utility Code, 66 Pa.C.S. § 1311(c).

Finally, Tariff Water No. 4 and Tariff Sewer No. 4 will reset the respective water and wastewater Distribution System Improvement Charges to zero at the effective date of new base rates.

Summary

In summary, the instant filing was prepared in a manner substantially consistent with the Commission's findings in many prior rate proceedings and in accordance with the accepted practices of the Commission. The proposed increase in revenues is the minimum increase necessary to permit the Company to provide reliable utility service and to maintain the integrity of its existing capital, attract additional necessary capital at reasonable costs, and have an opportunity to actually achieve a fair rate of return, particularly on its common equity capital. For these and other reasons set forth above, the rates proposed in Tariff Water No. 4 and Tariff Sewer No. 4 should be permitted to become effective as filed.

An Essential Utilities Company

Press Release

For Release: May 23, 2024

Aqua Pennsylvania Files Rate Request Based on Water and Wastewater Operations, Infrastructure Improvements and Repairs Across the Commonwealth

Request reflects Aqua's commitment to reliability and service for customers

BRYN MAWR, Pa. [May 23, 2024]-- Aqua Pennsylvania Inc. (Aqua) filed an application with the Pennsylvania Public Utility Commission (PUC) today requesting an adjustment in water and wastewater rates for its customers. This rate request reflects recovery of the $953 million in infrastructure investments through the end of 2025 and highlights Aqua's commitment to improving reliability and service for its customers across the commonwealth.

"We are at a critical point when it comes to our water and wastewater infrastructure here in Pennsylvania and across the country," said Aqua Pennsylvania President Marc Lucca. "I am proud to share that our replacement of older pipes that deliver drinking water not only improves customer service by reducing the number of water main breaks and leaks, but also decreases environmental impacts that may occur from these breaks. In addition, we are aggressively responding to new regulations requiring treatment of source water to remove PFAS and replacement of lead service lines, as well as defending against threats from cyber-attacks, which is becoming a more common occurrence throughout our industry."

The request, Aqua's first in almost three years, covers capital investments and system repairs that Aqua has made since April 2023 and is projected to make through the end of 2025. This includes the replacement of approximately 200 miles of aging water main, as well as associated valves and customer service lines, throughout the approximately 5,900-mile distribution system. Aqua has also replaced hundreds of fire hydrants, drastically improving public safety in the communities we serve.

"While I'm proud of the work we have done, and will continue to do, in modernizing our water and wastewater infrastructure, I also understand rate changes can be difficult for our customers," said Lucca. "That's why we are aggressively seeking grants and low-interest loans to moderate rate impacts. In fact, in the past few years, we have successfully secured approximately $32 million in state grants and low-interest loans and have an additional pending request for nearly $85 million to benefit our customers. We commit to continue pursuing these grants and low-interest loans."

Aqua also offers several options for customers seeking financial assistance. "We want to help our customers with limited incomes connect with programs and resources that make utility bills more affordable," said Director of Community Assistance Programs Rita Black. "Anyone who is concerned about being unable to pay their bill is encouraged to learn more about these programs on our website."

Aqua's requested base rate increase requires investigation and approval by the PUC. The rate review process can take up to nine months, which means customers can expect any approved increases to take effect at the end of February, 2025.

If the company's full request were to be approved, it would increase the residential water bill for a typical customer using 3,870 gallons per month from $80.91 to $97.01, an increase of about $16.10 per month (54 cents per day). The average monthly residential wastewater bill would increase from $81.18 to $96.10. The typical Aqua residential customer would still be able to have a day's worth of water, approximately 129 gallons, for approximately $2.44 - or about 2 cents per gallon for quality water delivered directly to the customer's home. This usage includes cooking, drinking, showering, washing clothes and dishes, and sanitation. Aqua is requesting an overall rate increase of $126.7 million per year for our water and wastewater operations.

The process to modify base rates is transparent and involves multiple opportunities for public participation. Customers can call Aqua at 877.987.2782 for more information about the rate request.

About Aqua Pennsylvania
Aqua Pennsylvania provides water and wastewater service to approximately 1.5 million people in 32 counties throughout the Commonwealth of Pennsylvania. Visit AquaWater.com for more information or follow @MyAquaWater on Facebook and @MyAquaWater on X.

About Essential
Essential Utilities, Inc. (NYSE:WTRG) ("Essential" or the "Company") delivers safe, clean, reliable services that improve quality of life for individuals, families, and entire communities. With a focus on water, wastewater and natural gas, Essential is committed to sustainable growth, operational excellence, a superior customer experience, and premier employer status. We are advocates for the communities we serve and are dedicated stewards of natural lands, protecting more than 7,600 acres of forests and other habitats throughout our footprint.

Operating as the Aqua and Peoples brands, Essential serves approximately 5.5 million people across nine states. Essential is one of the most significant publicly traded water, wastewater service and natural gas providers in the U.S. Learn more at www.essential.co.

Forward-Looking Statements
This release contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, which generally include words such as “believes,” “expects,” “intends,” “anticipates,” “estimates” and similar expressions. The Company can give no assurance that any actual or future results or events discussed in these statements will be achieved. Any forward-looking statements represent its views only as of today and should not be relied upon as representing its views as of any subsequent date. Readers are cautioned that such forward-looking statements are subject to a variety of risks and uncertainties that could cause the Company’s actual results to differ materially from the statements contained in this release. Such forward-looking statements include, but are not limited to, statements relating to the capital to be invested in Aqua’s water and wastewater infrastructure, that it will continue to seek and receive grants and low-interest loans, and that it will receive its requested rate increase. There are important factors that could cause actual results to differ materially from those expressed or implied by such forward-looking statements including the factors discussed in the Company’s Annual Report on Form 10-K and our Quarterly Reports on Form 10-Q, which are filed with the Securities and Exchange Commission. For more information regarding risks and uncertainties associated with the Company’s business, please refer to the Company’s annual, quarterly and other SEC filings. The Company is not under any obligation - and expressly disclaims any such obligation - to update or alter its forward-looking statements whether as a result of new information, future events or otherwise.

NOTICE OF PROPOSED WATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST
Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY
The investments Aqua has made in our water and wastewater systems have increased system reliability and capacity and helped prevent service interruptions. The rates you pay for are used for repairs and improvements including, but not limited to, the following:

- Replacement and rehabilitation of approximately 200 miles of aging water mains
- Replacement and repair of valves, fire hydrants, customer service lines and other parts of our approximately 5,900-mile distribution system
- Replacement and repair of treatment plants and wells, the installation of critical equipment, including laboratory equipment, that ensures compliance with all water quality regulations, disinfection, treatment for PFAS and other contaminants
- Replacement and repair of pumping stations, water storage tanks, emergency generators to ensure the continued ability to meet system demands and all regulatory requirements
- Focus on protecting system operations and customer information from cyberattack

Aqua's commitment to ongoing system investments helps ensure water quality and uninterrupted service. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical water bill for:

- Residential customers with a 5/8-inch meter using 3,870 gallons a month would increase from $78.21 to $97.01 per month.
- Commercial customers with a 5/8-inch meter using 37,900 gallons a month would increase from $512.33 to $634.36 per month.
- Industrial customer with a 5/8-inch meter using 227,600 gallons a month would increase from $2,519.88 to $3,129.86 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE
The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE
You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you

may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

- Commercial customers with a 5/8" meter using 13,900 gallons a month would increase from $226.54 to $276.22 per month.
- Industrial customers with a 5/8" meter using 51,300 gallons a month would increase from $664.49 to $820.64 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE
The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE
You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony

under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE OF PROPOSED WATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST
Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY
The investments Aqua has made in our water and wastewater systems have increased system reliability and capacity and helped prevent service interruptions. The rates you pay for are used for repairs and improvements including, but not limited to, the following:

- Replacement and rehabilitation of approximately 200 miles of aging water mains
- Replacement and repair of valves, fire hydrants, customer service lines and other parts of our approximately 5,900-mile distribution system
- Replacement and repair of treatment plants and wells, the installation of critical equipment, including laboratory equipment, that ensures compliance with all water quality regulations, disinfection, treatment for PFAS and other contaminants
- Replacement and repair of pumping stations, water storage tanks, emergency generators to ensure the continued ability to meet system demands and all regulatory requirements
- Focus on protecting system operations and customer information from cyberattack

Aqua's commitment to ongoing system investments helps ensure water quality and uninterrupted service. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical water bill for:

- Residential customers with a 5/8" meter using 3,870 gallons a month would increase from $80.63 to $97.01 per month.
- Commercial customers with a 5/8" meter using 13,900 gallons a month would increase from $226.54 to $276.22 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

NOTICE OF PROPOSED WATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST
Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY
The investments Aqua has made in our water and wastewater systems have increased system reliability and capacity and helped prevent service interruptions. The rates you pay for are used for repairs and improvements including, but not limited to, the following:

- Replacement and rehabilitation of approximately 200 miles of aging water mains
- Replacement and repair of valves, fire hydrants, customer service lines and other parts of our approximately 5,900-mile distribution system
- Replacement and repair of treatment plants and wells, the installation of critical equipment, including laboratory equipment, that ensures compliance with all water quality regulations, disinfection, treatment for PFAS and other contaminants
- Replacement and repair of pumping stations, water storage tanks, emergency generators to ensure the continued ability to meet system demands and all regulatory requirements
- Focus on protecting system operations and customer information from cyberattack

Aqua's commitment to ongoing system investments helps ensure water quality and uninterrupted service. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical water bill for:

- Residential customers with a 5/8" meter using 3,870 gallons a month would increase from $45.93 to $66.80 per month.
- Commercial customers with a 5/8" meter using 39,800 gallons a month would increase from $275.11 to $465.04 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE
The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE
You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE OF PROPOSED WATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST
Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY
The investments Aqua has made in our water and wastewater systems have increased system reliability and capacity and helped prevent service interruptions. The rates you pay for are used for repairs and improvements including, but not limited to, the following:

- Replacement and rehabilitation of approximately 200 miles of aging water mains
- Replacement and repair of valves, fire hydrants, customer service lines and other parts of our approximately 5,900-mile distribution system
- Replacement and repair of treatment plants and wells, the installation of critical equipment, including laboratory equipment, that ensures compliance with all water quality regulations, disinfection, treatment for PFAS and other contaminants
- Replacement and repair of pumping stations, water storage tanks, emergency generators to ensure the continued ability to meet system demands and all regulatory requirements
- Focus on protecting system operations and customer information from cyberattack

Aqua's commitment to ongoing system investments helps ensure water quality and uninterrupted service. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical water bill for:

- Residential customers with a 5/8" meter using 3,870 gallons a month would increase from $58.14 to $88.01 per month.
- Commercial customers with a 5/8" meter using 46,200 gallons a month would increase from $461.69 to $789.30 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE
The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE

NOTICE OF PROPOSED WATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST

Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY

The investments Aqua has made in our water and wastewater systems have increased system reliability and capacity and helped prevent service interruptions. The rates you pay for are used for repairs and improvements including, but not limited to, the following:

- Replacement and rehabilitation of approximately 200 miles of aging water mains
- Replacement and repair of valves, fire hydrants, customer service lines and other parts of our approximately 5,900-mile distribution system
- Replacement and repair of treatment plants and wells, the installation of critical equipment, including laboratory equipment, that ensures compliance with all water quality regulations, disinfection, treatment for PFAS and other contaminants
- Replacement and repair of pumping stations, water storage tanks, emergency generators to ensure the continued ability to meet system demands and all regulatory requirements
- Focus on protecting system operations and customer information from cyberattack

Aqua's commitment to ongoing system investments helps ensure water quality and uninterrupted service. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical water bill for:

- Residential customers using 3,870 gallons a month would increase from $38.69 to $65.36 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE

The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE

You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE OF PROPOSED WATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST
Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY
The investments Aqua has made in our water and wastewater systems have increased system reliability and capacity and helped prevent service interruptions. The rates you pay for are used for repairs and improvements including, but not limited to, the following:

- Replacement and rehabilitation of approximately 200 miles of aging water mains
- Replacement and repair of valves, fire hydrants, customer service lines and other parts of our approximately 5,900-mile distribution system
- Replacement and repair of treatment plants and wells, the installation of critical equipment, including laboratory equipment, that ensures compliance with all water quality regulations, disinfection, treatment for PFAS and other contaminants
- Replacement and repair of pumping stations, water storage tanks, emergency generators to ensure the continued ability to meet system demands and all regulatory requirements
- Focus on protecting system operations and customer information from cyberattack

Aqua's commitment to ongoing system investments helps ensure water quality and uninterrupted service. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical water bill for:

- Residential customers with a 5/8" meter using 3,870 gallons a month would increase from $78.21 to $97.01 per month.
- Commercial customers with a 5/8" meter using 7,400 gallons a month would increase from $128.68 to $157.46 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE
The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE
You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE OF PROPOSED WASTEWATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST

Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY

The investments Aqua has made in our water and wastewater systems throughout the state have increased reliability and capacity and helped prevent service interruptions. These improvements include, but are not limited to, the following: collection system replacement and repair, treatment plant rehabilitation, electrical and power system improvements, installation of remote monitoring systems, and installation of emergency generators.

Aqua's commitment to ongoing system investments helps ensure uninterrupted service and the appropriate treatment of wastewater to protect the environment. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical wastewater bill for:

- Residential customers using 3,870 gallons a month would decrease from $94.62 to $92.85 per month.
- Unmetered Residential customers would decrease from $96.17 to $92.85 per month.
- Non-Residential customers using 160,600 gallons a month would decrease from $2,030.48 to $1,995.17 per month.
- Unmetered Non-Residential customers would decrease from $94.46 to $92.04 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE

The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some, or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE

You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE OF PROPOSED WASTEWATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST

Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY

The investments Aqua has made in our water and wastewater systems throughout the state have increased reliability and capacity and helped prevent service interruptions. These improvements include, but are not limited to, the following: collection system replacement and repair, treatment plant rehabilitation, electrical and power system improvements, installation of remote monitoring systems, and installation of emergency generators.

Aqua's commitment to ongoing system investments helps ensure uninterrupted service and the appropriate treatment of wastewater to protect the environment. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical wastewater bill for:

- Residential customers using 3,870 gallons a month would decrease from $105.40 to $104.63 per month.
- Unmetered Residential customers would decrease from $102.54 to $101.80 per month.
- Non-Residential customers using 9,800 gallons a month would decrease from $177.39 to $176.11 per month.
- Unmetered Non-Residential customers would decrease from $100.73 to $100.00 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE

The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some, or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE

You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical wastewater bill for:

- Residential customers using 3,870 gallons a month would increase from $77.92 to $92.85 per month.
- Commercial customers using 5,700 gallons a month would increase from $93.02 to $113.04 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE

The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some, or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE

You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE OF PROPOSED WASTEWATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST

Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY

The investments Aqua has made in our water and wastewater systems throughout the state have increased reliability and capacity and helped prevent service interruptions. These improvements include, but are not limited to, the following: collection system replacement and repair, treatment plant rehabilitation, electrical and power system improvements, installation of remote monitoring systems, and installation of emergency generators.

Aqua's commitment to ongoing system investments helps ensure uninterrupted service and the appropriate treatment of wastewater to protect the environment. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical wastewater bill for:

- Residential customers using 3,870 gallons a month would increase from $103.78 to $104.63 per month.
- Non-Residential customers using 88,700 gallons a month would increase from $1,070.72 to $1,152.53 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE

The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some, or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE OF PROPOSED WASTEWATER RATE CHANGES

Dear Customer:

Aqua Pennsylvania, Inc. ("Aqua" or "Company") filed a request with the Pennsylvania Public Utility Commission ("PUC") on May 23, 2024 to increase your water rates as of July 22, 2024. A full investigation of this request by the PUC could delay the change until February 2025. This notice describes our request, the PUC's role, and what actions you can take.

AQUA'S RATE REQUEST

Aqua is requesting a total overall rate increase of $126.7 million per year for our water and wastewater operations. This covers capital investments in system repairs and improvements that Aqua made since April 2023 and are projected through December 2025. It also covers the cost of operation and maintenance, like chemicals and power, essential to providing reliable utility service. Since the last rate case, Aqua plans to invest approximately $950 million in infrastructure and other service improvements.

THE RATES YOU PAY DIRECTLY BENEFIT YOUR COMMUNITY

The investments Aqua has made in our water and wastewater systems throughout the state have increased reliability and capacity and helped prevent service interruptions. These improvements include, but are not limited to, the following: collection system replacement and repair, treatment plant rehabilitation, electrical and power system improvements, installation of remote monitoring systems, and installation of emergency generators.

Aqua's commitment to ongoing system investments helps ensure uninterrupted service and the appropriate treatment of wastewater to protect the environment. It also helps protect our customers from critical systems failures that many U.S. communities are now facing due to aging water and wastewater infrastructure.

If the Company's entire request is approved, the typical wastewater bill for:

- Residential customers using 3,870 gallons a month would increase from $65.96 to $92.69 per month.
- Commercial customers using 54,100 gallons a month would increase from $485.99 to $666.33 per month.
- Unmetered customers would increase from $79.14 to $92.53 per month.

Aqua's filing with the PUC also requests a combined revenue requirement for the Company's water and wastewater operations.

To learn more about our request, or to address any other questions you might have, contact Aqua at 877.987.2782. You can find the rates we asked for in Original Tariff Water – PA P.U.C. No. 4 and Original Tariff Sewer – PA P.U.C. No. 4, filed with the PUC or on our website at Aquawater.com. You may review the material we filed with the PUC at our office in Bryn Mawr, Pennsylvania. You can also ask us to send you a copy of our Statement of Reasons, which is a plain-language summary of why we need to raise our rates.

PUC ROLE

The state agency that approves rates for public utilities is the PUC. The PUC will review and investigate the requested rate increase. Aqua must prove that the requested rates are reasonable. After examining the evidence, the PUC may grant all, some, or none of the request or may reduce existing rates. **As a result, the final effect on your bill may be different than Aqua's request.**

ACTIONS YOU CAN TAKE

You may challenge the Company's request by:

1. Sending a letter to the PUC. You can tell the PUC why you object to the requested rate increase in your letter. You can also tell the PUC about any other concerns you have about the Company. This information can be helpful when the PUC investigates the rate request. Send your letter to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265.

2. Attending or presenting testimony at PUC public input hearings. You can attend or be a witness at a PUC public hearing. The PUC holds public input hearings if it opens an investigation of the Company's rate increase request and if there is enough interest in the case. At these hearings you may present your views in person to the PUC judge and to Company representatives. Testimony under oath becomes part of the rate case record. The PUC holds these hearings in the service area of the Company. For more information, call the PUC at 800.692.7380.

3. Becoming a party by filing a formal complaint. If you want to be a party to the case, you must file a formal complaint. You then have an opportunity to take part in all hearings about the rate increase request. You can receive copies of all materials distributed by the other parties. Formal complaints should be filed with the PUC before Jul. 22, 2024. If no one files a formal complaint, the PUC may grant all, some or none of the request without holding a hearing before a PUC judge. You can request a formal complaint form by writing to the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA 17105-3265, or by going to its website: www.puc.pa.gov.

NOTICE

THIS TARIFF PROPOSES INCREASES IN RATES AND CHANGES IN RULES AND REGULATIONS OF SERVICE.

LIST OF CHANGES MADE BY THIS TARIFF

This proposed TARIFF WATER-PA P.U.C. NO. 4 as filed by Aqua Pennsylvania, Inc. on May 23, 2024 supersedes TARIFF WATER-PA P.U.C. NO. 3 and its related supplements.

This proposed tariff also resets both the Distribution System Improvement Charge (DSIC) to zero percent and the State Tax Adjustment Surcharge (STAS) to zero percent, simultaneously with the effective date of new base rates.

Shenandoah		20.23

SCHEDULE OF RATES

INDUSTRIAL STANDBY RATE

I. Applicability

This rate applies throughout the territory served under this tariff.

II. Availability

This rate is available to a new industrial customer that has an alternative supply source or an existing industrial customer that purchases water from the Company and develops or obtains a new source of supply. In order to obtain service under this rate, the customer must execute a Service Agreement with the Company for a period of not less than two (2) years.

An alternative source of supply for a new customer or a new source of supply for an existing customer, for purposes of this tariff, means any external or internal source of water supply other than the Company, including expansion of, or additions to, an existing source of water supply, that has capacity available to supply the customer with at least 100,000 gallons per day of water on average and, in the case of an existing customer, was added after the effective date of Supplement 21 to Tariff Water Pa. P.U.C. No. 1 (January 3, 2000).

III. Nomination of Standby Service

The Service Agreement with the Company will identify the nature and amount of the customer's requirements for Stand by Service. Standby Service will be available on a firm basis, an interruptible basis or combinations thereof.

The amounts of Standby Service to be nominated are the customer's requirements to meet Average Day Demand, Maximum Day Demand and Maximum Hour Demand. The sum of the customer's nominated firm and interruptible Maximum Day Demand shall be equal to the maximum day capacity of the new customer’s alternative supply or the existing customer's new source of supply or such other reasonable amount agreed to by the Company and the customer.

IV. Rate

Service Charge: The monthly Service Charges under this rate schedule will be the same as those set forth on the Schedule of Rates applicable to Rate Zone 1 - Main Division for the Industrial rate classification.

Demand Charges: The monthly Demand Charges under this rate schedule will be applied to the customer’s nominated firm and interruptible standby demands in hundred gallons as set forth in the Service Agreement and are as follows:

	Firm Standby Service	Interruptible Standby Service
Average Day Demand	10.8601	2.0658
Maximum Day Demand	1.3260	0.3320
Maximum Hour Demand	21.9230	2.3868

SCHEDULE OF RATES

INDUSTRIAL STANDBY RATE

IV. Rate (cont'd)

Consumption Charges: In addition to the Service Charges and the Demand Charges, Consumption Charges will be rendered for all water delivered during the standby event in accordance with the following schedule:

Up to Average Daily Deliveries by Company during the seven days preceding the beginning of the standby event multiplied by the days during the standby event	Rate Zone 1 - Main Division Industrial Rates
Next gallons – Firm Average Day Demand Nomination multiplied by the days during the standby event	0.0709 per hundred gallons
Next gallons – Interruptible Average Day Demand Nomination multiplied by the days during the standby event	0.5377 per hundred gallons
All amounts above sum of previously described amounts	Rate Zone 1 - Main Division Industrial First Block

V. Terms and Conditions

Initial Notification of Company: Each customer that develops or obtains a new source of supply and retains a connection to the Company's system becomes a Standby Service customer and shall notify the Company within ten (10) days of so doing. The notification shall include the Maximum Day capacity of the source of supply and the customer's nominations of firm and interruptible standby demand requirements. The customer shall within thirty (30) days of developing or obtaining such new source of supply enter into a Service Agreement with the Company for Standby Service.

Each customer that is taking service under a Standby Service Agreement and increases the capacity of its source of supply shall be subject to the same notification requirements with respect to the additional capacity.

Notification of Standby Event: When a customer requires deliveries of water pursuant to this rate schedule, the customer shall notify the Company representative designated in the Service Agreement as soon as practical. The customer shall advise the Company representative of the probable daily quantities and the expected duration of the standby event. The customer also shall provide the Company with a notarized affidavit within thirty (30) days of the beginning of the standby event that describes the cause of the interruption of the customer's alternative supply. When the customer no longer requires deliveries of water pursuant to this rate schedule, the customer shall notify the Company representative. The time between these two notifications shall constitute the duration of the standby event.

SCHEDULE OF RATES

INDUSTRIAL STANDBY RATE

V. Terms and Conditions (cont'd)

Use in Excess of Contractual Demands: If and when the actual amounts of Standby Service Demands exceed the nominated amounts set forth in the Service Agreement, the actual demands shall become the nominated demands for the remainder of the term of the Service Agreement. Further, the customer will be billed an additional charge equal to the difference between the actual demand and the previously nominated demand multiplied by the applicable demand charge and the number of months since the beginning of the term of the Service Agreement.

Metering Equipment: The customer shall pay the Company the cost, including installation, of all metering equipment, including meter interface units, that the Company, in its sole judgment, determines is necessary to properly implement Standby Service and to monitor the customer's compliance with its terms and conditions.

SCHEDULE OF RATES

RESALE AND ELECTRIC GENERATION STANDBY RATE

I. Applicability

This rate applies throughout the territory served under this tariff.

II. Availability

This rate is available to a new customer that has an alternative supply source or an existing customer that purchases water from the Company and develops or obtains a new source of supply. In order to obtain service under this rate, the customer must purchase water from the Company for resale or electric generation purposes and execute a Service Agreement with the Company for a period of not less than ten (10) years.

An alternative source of supply for a new customer or a new source of supply for an existing customer, for purposes of this tariff, means any external or internal source of water supply other than the Company, including expansion of, or additions to, an existing source of water supply, that has capacity available to supply the customer with at least 100,000 gallons per day of water on average and, in the case of an existing customer, was added after the effective date of Supplement 21 to Tariff Water Pa. P.U.C. No. 1 (January 3, 2000).

III. Nomination of Standby Service

The Service Agreement with the Company will identify the nature and amount of the customer's requirements for Standby Service. Standby Service will be available on a firm basis.

The amounts of Standby Service to be nominated are the customer's requirements to meet Average Day Demand, Maximum Day Demand and Maximum Hour Demand. The customer's nominated firm Maximum Day Demand shall be equal to the maximum day capacity of the new customer's alternative supply or the existing customer's new source of supply or such other reasonable amount agreed to by the Company and the customer.

IV. Rate

Service Charge: The monthly Service Charges under this rate schedule will be the same as those set forth on the Schedule of Rates applicable to Rate Zone 1 - Main Division for the customer's rate classification.

Demand Charges: The monthly Demand Charges under this rate schedule will be applied to the customer's nominated firm standby demands in hundred gallons as set forth in the Service Agreement and are as follows:

	Firm Standby Service
Average Day Demand	10.8601
Maximum Day Demand	1.3260
Maximum Hour Demand	21.9230

SCHEDULE OF RATES

RESALE AND ELECTRIC GENERATION STANDBY RATE

IV. Rate (cont'd)

Consumption Charges: In addition to the Service Charges and the Demand Charges, Consumption Charges will be rendered for all water delivered during the standby event in accordance with the following schedule:

Up to Average Daily Deliveries by Company during the seven days preceding the beginning of the standby event multiplied by the days during the standby event	Rate Zone 1 - Main Division Rates
Next gallons – Firm Average Day Demand Nomination multiplied by the days during the standby event	0.0709 per hundred gallons
All amounts above sum of previously described amounts	Rate Zone 1 - Main Division First Block

V. Terms and Conditions

Initial Notification of Company: Each customer that develops or obtains a new source of supply and retains a connection to the Company's system becomes a Standby Service customer and shall notify the Company within ten (10) days of so doing. The notification shall include the Maximum Day capacity of the source of supply and the customer's nominations of firm standby demand requirements. The customer shall within thirty (30) days of developing or obtaining such new source of supply enter into a Service Agreement with the Company for Standby Service.

Each customer that is taking service under a Standby Service Agreement and increases the capacity of its source of supply shall be subject to the same notification requirements with respect to the additional capacity.

Notification of Standby Event: When a customer requires deliveries of water pursuant to this rate schedule, the customer shall notify the Company representative designated in the Service Agreement as soon as practical. The customer shall advise the Company representative of the probable daily quantities and the expected duration of the standby event. The customer also shall provide the Company with a notarized affidavit within thirty (30) days of the beginning of the standby event that describes the cause of the interruption of the customer's alternative supply. When the customer no longer requires deliveries of water pursuant to this rate schedule, the customer shall notify the Company representative. The time between these two notifications shall constitute the duration of the standby event.

SCHEDULE OF RATES

RESALE AND ELECTRIC GENERATION STANDBY RATE

V. Terms and Conditions (cont'd)

Use in Excess of Contractual Demands: If and when the actual amounts of Standby Service Demands exceed the nominated amounts set forth in the Service Agreement, the actual demands shall become the nominated demands for the remainder of the term of the Service Agreement. Further, the customer will be billed an additional charge equal to the difference between the actual demand and the previously nominated demand multiplied by the applicable demand charge and the number of months since the beginning of the term of the Service Agreement.

Metering Equipment: The customer shall pay the Company the cost, including installation, of all metering equipment, including meter interface units, that the Company, in its sole judgment, determines is necessary to properly implement Standby Service and to monitor the customer's compliance with its terms and conditions.

SCHEDULE OF RATES

RIDER DIS – DEMAND BASED INDUSTRIAL SERVICE

I. Applicability

This rate applies throughout the territory served under this tariff.

II. Availability

This rider is available to a customer or prospective customer that:

1. purchases or intends to purchase water from the Company for industrial purposes;

2. enters into a Service Agreement for a term of not less than 2 years;

3. during the original and any renewal terms of the Service Agreement, agrees to purchase a minimum of 10 million gallons of water per month at a daily load factor of not less than 0.60; and

4. has a viable competitive alternative to service from the Company and intends to select that alternative to the detriment of the Company and its other customers.

The Company shall require documentation to establish, to the Company's satisfaction, the existence of a competitive alternative. Such documentation may include, but is not limited to, an affidavit of the customer or, if the customer is a corporation, an affidavit of one or more of its officers.

III. Rate

The rate(s) to be charged qualifying customers under this rider will be as set forth in the Service Agreement, provided, however, that such rate(s): (1) shall not exceed the Maximum Rate; (2) shall not be less than the Minimum Rate; and (3) shall be subject to an Escalation Clause, as hereafter defined.

Maximum Rate: The Maximum Rate shall be the charges specified in the Company's Rate Schedule that would otherwise apply to the qualifying customer absent this rider.

Minimum Rate: The Minimum Rate shall be sufficient to recover: (1) the Production Cost of Water; (2) the fixed costs (depreciation and pre-tax return) associated with the facilities necessary to serve the customer; and (3) some portion of the fixed costs of the Company's other facilities. For purposes of this rider, the Production Cost of Water shall be the variable cost the Company incurs to produce additional treated water, which consists of expenses for electric power, chemicals and purchased water (where applicable).

Escalation Clause: The rate set forth in the Service Agreement shall be subject to an Escalation Clause, during the original and any renewal terms of the Service Agreement, based upon changes in published price indices and/or changes in the Company's cost of service, as the Company and the qualifying customer shall agree.

Filing With The Pennsylvania Public Utility Commission/Confidentiality: Service Agreements entered into between the Company and qualifying customers under this rider shall be filed with the Commission on a confidential basis within thirty (30) days of their execution and shall not be subject to disclosure except by Petition made to and granted by the Commission pursuant to 52 PA Code §1.74.

SCHEDULE OF RATES

RIDER DRS – DEMAND BASED RESALE SERVICE

I. Applicability

This rate applies throughout the territory served under this tariff.

II. Availability

This rider is available to a customer or prospective customer that:

1. purchases or intends to purchase water from the Company for resale purposes;

2. enters into a Service Agreement for a term of not less than 10 years;

3. during the original and any renewal terms of the Service Agreement, agrees to maintain a daily load factor of not less than 0.60; and

4. has a viable competitive alternative to service from the Company and intends to select that alternative to the detriment of the Company and its other customers.

The Company shall require documentation to establish, to the Company's satisfaction, the existence of a competitive alternative. Such documentation may include, but is not limited to, an affidavit of the customer or, if the customer is a corporation, an affidavit of one or more of its officers.

III. Rate

The rate(s) to be charged qualifying customers under this rider will be as set forth in the Service Agreement, provided, however, that such rate(s): (1) shall not exceed the Maximum Rate; (2) shall not be less than the Minimum Rate; and (3) shall be subject to an Escalation Clause, as hereafter defined.

Maximum Rate: The Maximum Rate shall be the charges specified in the Company's Rate Schedule that would otherwise apply to the qualifying customer absent this rider.

Minimum Rate: The Minimum Rate shall be sufficient to recover: (1) the Production Cost of Water; (2) the fixed costs (depreciation and pre-tax return) associated with the facilities necessary to serve the customer; and (3) some portion of the fixed costs of the Company's other facilities. For purposes of this rider, the Production Cost of Water shall be the variable cost the Company incurs to produce additional treated water, which consists of expenses for electric power, chemicals and purchased water (where applicable).

Escalation Clause: The rate set forth in the Service Agreement shall be subject to an Escalation Clause, during the original and any renewal terms of the Service Agreement, based upon changes in published price indices and/or changes in the Company's cost of service, as the Company and the qualifying customer shall agree.

Filing With The Pennsylvania Public Utility Commission/Confidentiality: Service Agreements entered into between the Company and qualifying customers under this rider shall be filed with the Commission on a confidential basis within thirty (30) days of their execution and shall not be subject to disclosure except by Petition made to and granted by the Commission pursuant to 52 PA Code §1.74.

SCHEDULE OF RATES

RIDER EGS – ELECTRIC GENERATION SERVICE

I. Applicability

This rate applies throughout the territory served under this tariff.

II. Availability

This rider is available to the electric generating facilities of a customer or prospective customer that:

1. is engaged in the business of generating electric power for sale to the public or public utilities;

2. enters into a Service Agreement for a term of not less than 10 years;

3. during the original and any renewal terms of the Service Agreement, agrees to purchase a minimum of 10 million gallons of water per month; and

4. has a viable competitive alternative to service from the Company and intends to select that alternative to the detriment of the Company and its other customers.

The Company shall require documentation to establish, to the Company's satisfaction, the existence of a competitive alternative. Such documentation may include, but is not limited to, an affidavit of the customer or, if the customer is a corporation, an affidavit of one or more of its officers.

III. Rate

The rate(s) to be charged qualifying customers under this rider will be as set forth in the Service Agreement, provided, however, that such rate(s): (1) shall not exceed the Maximum Rate; (2) shall not be less than the Minimum Rate; and (3) shall be subject to an Escalation Clause, as hereafter defined.

Maximum Rate: The Maximum Rate shall be the charges specified in the Company's Rate Schedule that would otherwise apply to the qualifying customer absent this rider.

Minimum Rate: The Minimum Rate shall be sufficient to recover: (1) the Production Cost of Water; (2) the fixed costs (depreciation and pre-tax return) associated with the facilities necessary to serve the customer; and (3) some portion of the fixed costs of the Company's other facilities. For purposes of this rider, the Production Cost of Water shall be the variable cost the Company incurs to produce additional treated water, which consists of expenses for electric power, chemicals and purchased water (where applicable).

Escalation Clause: The rate set forth in the Service Agreement shall be subject to an Escalation Clause, during the original and any renewal terms of the Service Agreement, based upon changes in published price indices and/or changes in the Company's cost of service, as the Company and the qualifying customer shall agree.

Filing With The Pennsylvania Public Utility Commission/Confidentiality: Service Agreements entered into between the Company and qualifying customers under this rider shall be filed with the Commission on a confidential basis within thirty (30) days of their execution and shall not be subject to disclosure except by Petition made to and granted by the Commission pursuant to 52 PA Code §1.74.

SCHEDULE OF RATES

RIDER OPI – OFF PEAK/INTERRUPTIBLE RATE SERVICE

I. Applicability

This rate applies throughout the territory served under this tariff where the capacity exists to provide this service.

II. Availability

This rider is available to a customer or prospective customer that:

1. purchases or intends to purchase water from the Company for any purposes;
2. purchases at least 80% of its water from the Company during the off-peak hours of 10:00PM to 5:00AM;
3. purchases a minimum of six million gallons of water per year during the contracted period; and
4. enters into a Service Agreement for a term of not less than one year.

III. Rate

The rate(s) to be charged qualifying customers under this rider will be as set forth in the Service Agreement, provided, however, that such rate(s): (1) shall not exceed the Maximum Rate; (2) shall not be less than the Minimum Rate; (3) may include a Minimum Charge upon the discretion of the Company, if it is anticipated that there are other customer expenses to be incurred besides the Metering Equipment; and (4) shall be subject to an Escalation Clause, as hereafter defined. If during the month, the customer purchases less than 80% of its water during the off-peak hours, the rate to be charged for consumption will be the Maximum Rate.

Maximum Rate: The Maximum Rate shall be the otherwise applicable volumetric charges specified in the Company's Rate Schedule for the Main Division.

Minimum Rate: The Minimum Rate shall be sufficient to recover: (1) the Production Cost of Water and (2) some portion of the fixed costs of the Company's other facilities. For purposes of this rider, the Production Cost of Water shall be the variable cost the Company incurs to produce additional treated water, which consists of expenses for electric power, chemicals and purchased water (where applicable).

Escalation Clause: The rate set forth in the Service Agreement shall be subject to an Escalation Clause, during the original and any renewal terms of the Service Agreement, based upon changes in published price indices and/or changes in the Company's cost of service, as the Company and the qualifying customer shall agree.

SCHEDULE OF RATES

RIDER OPI – OFF PEAK/INTERRUPTIBLE RATE SERVICE

I. Terms and Conditions

Interruption of Service: The Company may require the customer to interrupt its water usage to assist the Company in addressing a system emergency, including insufficiency, for any reason, of the Company's source of supply, treatment/purification, pumping, transmission, storage, or distribution capacity to serve other customers' demands. The customer will be provided not less than one hour's notice before an interruption is expected to begin. Notice may be by telephone to the customer contact identified in the Service Agreement.

Failure to Interrupt: Failure to comply with the Company's request for interruption shall result in all usage by the customer, during the billing period in which such interruption was requested, being billed at the Company's otherwise applicable Schedule of Rates for the Rate Zone 1 - Main Division plus $0.05 per hundred gallons. If the customer fails to comply with the Company's requests for interruption three times during any one year period, measured in twelve month intervals commencing on the effective date of the Service Agreement, the customer shall cease to be eligible for service under this rider and shall thereafter be billed under the otherwise applicable Schedule of Rates.

Metering Equipment: The customer shall pay the Company the cost, including installation, of all metering equipment, including meter interface units, that the Company, in its sole judgment, determines is necessary to properly implement the rate and to monitor the customer's compliance with the availability criteria and terms and conditions hereof.

Inspection: The customer shall permit Company personnel and the Company's authorized agents, representatives, consultants and experts access to the customer's facilities during regular business hours and upon not less than 24 hours' notice and shall permit inspection thereof to determine, to the Company's satisfaction, whether the customer is in compliance with the availability criteria and terms and conditions hereof.

Filing With The Pennsylvania Public Utility Commission/Confidentiality: Service Agreements entered into between the Company and qualifying customers under this rider shall be filed with the Commission on a confidential basis within thirty (30) days of their execution and shall not be subject to disclosure except by Petition made to and granted by the Commission pursuant to 52 PA Code §1.74.

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a surcharge of 0.00% shall apply to all bills issued, excluding public fire hydrants, on or after the Effective Date at the bottom of this page.

I. General Description

Purpose: To recover the reasonable and prudent costs incurred to repair, improve or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems. The costs of extending facilities to serve new customers are not recoverable through the DSIC. Utility projects receiving PENNVEST funding or using PENNVEST surcharges are not DSIC-eligible property.

Eligible Property: The DSIC-eligible property will consist of the following:

- Services (account 3330), meters (account 3340) and hydrants (account 3350) installed as in-kind replacements for customers;

- Mains and valves (account 3310) installed as replacements for existing facilities that have worn out, are in deteriorated condition, or upgraded to meet Chapter 65 regulations of Title 52;

- Main extensions (account 3310) installed to eliminate dead ends and to implement solutions to regional water supply problems that have been documented as presenting a significant health and safety concern for customers currently receiving service from the Company or the acquired Company;

- Main cleaning and relining (account 3310) projects;

- Unreimbursed funds related to capital projects to relocate Company facilities due to highway relocations (account 3310); and

- Other related capitalized costs.

Effective Date: The DSIC will become effective for bills issued on and after January 1, 1997.

II. Computation of the DSIC

Calculation: The initial charge, effective January 1, 1997, will be calculated to recover the fixed costs of eligible plant additions that have not previously been reflected in the Company's rates or rate base and will have been placed in service between September 1, 1996 and November 30, 1996. Thereafter, the DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three month periods ending one month prior to the effective date of each DSIC update. Thus, changes in the DSIC rate will occur as follows:

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

II. Computation of the DSIC (cont'd)

Effective Date of Change	Date to Which DSIC Eligible Plant Additions Reflected
April 1	December 1 to February 28/29
July 1	March 1 to May 31
October 1	June 1 to August 31
January 1	September 1 to November 30

The fixed costs of eligible distribution system improvement projects will consist of depreciation and pre-tax return, calculated as follows:

Depreciation: The depreciation expense will be calculated by applying to the original cost of DSIC-eligible property the annual accrual rates employed in the Company's last base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded.

Pre-tax Return: The pre-tax return will be calculated using the statutory state and federal income tax rates, the Company's actual capital structure and actual cost rates for long-term debt and preferred stock as of the last day of the three month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in the Company's last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission staff in the latest Quarterly Report on the Earnings of Jurisdictional Utilities released by the Commission.

DSIC Surcharge Amount: The charge will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for service under the Company's otherwise applicable rates and charges, excluding amounts billed for public fire protection and the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by the Company's projected revenue for sales of water (including all applicable clauses and riders) for the quarterly period during which the charge will be collected, exclusive of revenues from public fire protection service and STAS.

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

II. Computation of the DSIC (cont'd)

Formula: The formula for calculation of the DSIC surcharge is as follows:

$$DSIC = \frac{(DSI * PTRR + STFT + Dep + e) \times 1/(1-T)}{PQR}$$

Where:

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences resulting from the use of accelerated depreciation per Internal Revenue Code, 26 U.S. Code § 168.

PTRR = Pre-tax return rate applicable to DSIC-eligible property.

STFT = (State Tax Flow Through) Pre-tax flow through calculated on book-tax timing differences between accelerated tax depreciation and book depreciation net of federal tax.

Dep = Depreciation expense related to DSIC-eligible property.

e = Amount calculated (+/-) under the annual reconciliation feature or Commission audit, as described below.

T = If applicable, Pennsylvania Gross Receipts Tax rate in effect during the billing month, expressed in decimal form.

PQR = Projected quarterly revenue will be based on the applicable three-month period, (including all applicable clauses and riders) including revenue from existing customers plus netted revenue from any customers which will be gained or lost by the beginning of the applicable service period.

Quarterly Updates: Supporting data for each quarterly update will be filed with the Commission and served upon the Bureau of Investigation & Enforcement, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

III. Safeguards

All Customer Classes: The DSIC shall be applied equally to all customer classes, with the exception of any future customers with negotiated contracts for which a reduction or exemption is shown to be reasonably necessary.

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

III. Safeguards (cont'd)

Cap: The DSIC will be capped at 7.50% of the amount billed to customers (including all applicable clauses and riders) under otherwise applicable rates and charges.

Audits/Reconciliation: The DSIC will be subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1350, et seq., shall be credited to customer accounts. It will also be subject to an annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or the utility may elect to subject the DSIC to quarterly reconciliation but only upon request and approval by the Commission. The revenue received under the DSIC for the reconciliation period will be compared to the Company's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period commencing on April 1 of each year, or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on the over-collections and credits will be calculated at the residential mortgage-lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P. S. sec.101, et seq.) and will be refunded in the same manner as an over-collection. The utility is not permitted to accrue interest on under collections.

New Base Rates: The charge will be reset at zero, as of the effective date of new base rates that provide for prospective recovery of the annual costs that had theretofore been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in the Company's rates or rate base would be reflected in the quarterly updates of the DSIC.

Earning Reports: The charge will also be reset at zero if, in any quarter, data filed with the Commission in the Company's then most recent Annual or Quarterly Earnings Report show that the Company will earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the DSIC as described in the Pre-tax return section. The utility shall file a tariff supplement implementing the reset to zero due to overearnings on one days' notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that the utility has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.

Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change. An explanatory bill insert shall also be included with the first billing.

Residual E-Factor Recovery Upon Reset to Zero: The utility shall file with the Commission interim rate revisions to resolve the residual over/under collection or E-factor amount after the DSIC rate has been reset to zero. The utility can collect or credit the residual over/under collection balance when the DSIC rate is reset to zero. The utility shall refund any over-collection to customers and is entitled to recover any under collection as set forth in Section III Safeguards – Audits/Reconciliations. Once the utility determines the specific amount of the residual over or under collection amount after the DSIC rate is reset to zero, the utility shall file a tariff supplement with supporting data to address that residual amount. The tariff supplement shall be served upon the Commission's Bureau of Investigation and Enforcement, the Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the supplement.

Public Fire Protection: The DSIC of a water utility will not apply to public fire protection customers.

SCHEDULE OF RATES

STATE TAX ADJUSTMENT SURCHARGE (STAS)

In addition to the net charges provided for in this Tariff, a surcharge of 0.00% will apply to all bills issued on or after the Effective Date at the bottom of this page.

The above surcharge will be recalculated using the element prescribed by the Commission in its policy at 52 PA Code section 69.51 et seq.:

- On or before March 31 of each year; and/or

- Whenever the Company experiences a material change in any of the taxes used in calculation of the surcharge due to a change in the applicable tax rates, or in the basis of calculating such tax rates, or due to changes in the state tax liability arising under the law.

The recalculation will be submitted to the Commission within 10 days after the occurrence of the event which occasions such recalculation or as prescribed in the Commission's regulations or orders. If the recalculated surcharge is less than the one in effect, the Company will, or if the recalculated surcharge is more than the one in effect, the Company may, submit with such recalculation a tariff or supplement to reflect such recalculated surcharge. The effective date of such tariff or supplement shall be 10 days after filing or as prescribed in the Commission's regulations or orders. In the event that the Company files an increased surcharge subsequent to 10 days after the occurrence of an event which occasions a recalculation, the effective date of such tariff or supplement shall be 60 days after filing in accordance with section 1308(a) of the Public Utility Code, 66 Pa.C.S. § 1308(a) (regarding voluntary changes in rates), unless otherwise directed by the Commission.

The surcharge shall be rolled into base rates when increased or decreased base rates are made effective.

CUSTOMER ASSISTANCE PROGRAM RIDER

Customer Assistance Program ("CAP"):

I. Availability

The CAP is a program designed to enroll residential Customers who satisfy the criteria set forth below ("CAP Program").

Processing and verification by authorized agencies upon referral by the Company's offices, other agencies, or the Commissions Bureau of Consumer Services.

Residential Customer of the Company.

Annual income no greater than 200 percent of the federal poverty limit ("FPL"). For payment purposes Customers will be defined as follows:

a. Tier 1 – Customers whose annual income has been verified as being at or below 100 percent of FPL.

b. Tier 2 – Customers whose annual income has been verified as being at or above 100 percent FPL or less than 150 percent of FPL.

c. Tier 3 – Customers whose annual income has been verified as being at or above 150 percent FPL or less than 200 percent of FPL.

II. Rate Table

Eligible Customers will receive the discounted rates in the rate zone where service is rendered as set forth below:

Tier	Customer Charge	Consumption Charge
1	100% discount on Customer Charge	100% discount on first 2,000 gallons per month
2	100% discount on Customer Charge	50% discount on first 2,000 gallons per month
3	100% discount on Customer Charge	0% discount on first 2,000 gallons per month

SCHEDULE OF RATES

CUSTOMER ASSISTANCE PROGRAM RIDER (cont'd)

III. Surcharges

All surcharges applicable under the Company's Rules and Regulations shall still apply to Customers under the CAP Program.

IV. Late Payment Charges

No late payment charges shall be applied to arrearages existing at the time the Customer begins receiving service under the CAP Program. Late payment charges will not be applied during participation in the CAP Program.

V. Rules and Regulations

If, at any time after acceptance into CAP, a Customer's family size or income changes, the Customer must notify the Company of the change within 30 days of the change. Failure to do so may result in the Company ending the Customer's opportunity to receive service under the CAP Program.

If a balance is owed at the time of enrollment such balance will be frozen as preprogram arrears and is eligible for a monthly credit of $25.00 for each on-time monthly payment.

If a Customer no longer satisfies the criteria set forth under Availability, the Customer will no longer be eligible to receive service under the CAP Program and any pre-program arrearages will become due.

At the time of application to the CAP Program, the Customer will be advised of the importance of timely payments and water conservation. The CAP Program screening administrator will review relevant assistance programs and offer help in applying for such programs.

Failure to make payments will result in the Company returning the participant to the regular collection cycle and may lead to termination of service. To avoid termination, the participant must pay the amount set forth in the termination notice prior to the scheduled termination date.

RULES AND REGULATIONS

INTRODUCTION

1. Effect of Rules and Regulations: These Rules and Regulations, filed as part of the Company's Tariff, shall govern the manner in which water service is provided to all Applicants and Customers. The Company may supplement these Rules and Regulations, and may revise and amend these Rules and Regulations from time to time subject to the approval of the Pennsylvania Public Utility Commission ("Commission"). The Company will follow Commission regulations not specifically addressed in these Rules and Regulations.

2. Types of Service Provided: There are four general types of service that are provided by the Company, as follows:

General Metered Service: Water service provided for general use by any of the following customer classes: residential, commercial, industrial, other water utility, or public. This type of service is also referred to as "domestic" service.

Fire Service: Water service provided to an unmetered fire hydrant, whether public or private, or through a separately metered service line to be utilized exclusively for fire protection of a building and/or property.

Qualified Private Fire Protection Service: Water service provided to an unmetered, privately-owned fire hydrant located in the public right-of-way which does not otherwise qualify for Public Fire Hydrant rates. Said hydrant shall be located on a service line serving that hydrant exclusively, and must be in the open, be visible, and shall not be more than fifty (50) feet from the Company main servicing the hydrant

Combined Fire & Domestic Service: Water service provided at the request of the Customer, subject to the Company's approval for all non-residential Customer classifications which utilize a single service line for both fire and domestic service. This service can be provided in accordance with the requirements of Rule 41 when the fire/domestic meter size is at least 4 inches.

In addition to the general application of these Rules and Regulations, special rules for the provision of fire service are contained in Rules 41 through 50, and special Rules for the provision of Construction Service are contained in Rules 39 and 40.

INTRODUCTION (cont'd)

3. Classes of General Metered Service: There are five classes of general metered service, based on the nature of the Customer and the use of the property receiving service, as follows:

Residential Class: An individually metered dwelling unit intended for human habitation (including a detached house, row home, townhouse, condominium and mobile home) or an individually metered home or building consisting of not more than two dwelling units.

Commercial Class: A building, store, restaurant, or office which is primarily a site for the buying or selling of goods or the provision of professional or consumer services. In addition, apartments, condominium complexes, colleges, private and public schools, car washes, laundromats, construction sites, hotels, motels, and tanks filled at the Company's premise are included in this class.

Industrial Class: A building or factory which is primarily a site for the manufacture or production of goods.

Other Water Utility: A public water utility, Municipal Corporation, or water authority which purchases water for resale to its customers.

Public: A public building, library, park or playground which is owned by a governmental unit which has the power of taxation.

RULES AND REGULATIONS

DEFINITIONS

4. Definitions: Wherever used in the Rules and Regulations or elsewhere in the Company's tariff, the following terms shall have the meanings hereinafter set forth:

Applicant: A person, at least 18 years of age, who is not currently receiving service but has applied to the Company for service and whose name appears on the mortgage, deed, or lease of the property for which service is requested.

Auxiliary Water Supply: A water supply, other than that provided by the Company, that is on or available to the Customer's premises, including, but not limited to, a supply from another public water supply agency, from a natural source such as a well, lake or spring, or from a source containing used water or industrial fluids.

Builder: Any person(s) requesting an extension to provide service to an existing lot or group of lots, either existing or to be subdivided, where service is to be provided to something other than a preexisting Residential Structure; namely, a newly constructed structure, structures to be constructed in the future, or to a preexisting non-residential structure.

Commission: The Pennsylvania Public Utility Commission

Company: Aqua Pennsylvania, Inc. and its duly authorized officers, agents, and employees; each acting within the scope of his/her authority and employment.

Company Service Line: The service line owned by the Company that extends from the water main to the curb stop or curb line or such point as designated by the Company.

Construction Costs: All direct and indirect costs attributable to the material and installation of the subject main extension, services and appurtenances, and/or removal of existing Company facilities (including the net book value of property replaced or retired) whether incurred by the Builder or the Company.

Construction Services: Water service provided for construction purposes.

Creditworthiness: An assessment of an applicant's or customer's ability to meet bill payment obligations for utility service.

Curb Box: A cylindrical device with a lid, normally placed by the curb which affords access to the curb stop. Normally, this device is initially installed by the Company, but may be subject to having its condition or position adjusted by natural forces or the work of the developer or a plumber. Accordingly, it is the responsibility of the Customer to maintain the Curb Box in a safe condition, or to notify the Company either in writing or by telephone to make the necessary repairs or relocation to the Curb Box or Curb Box lid.

Curb Stop: A device owned, installed, maintained and controlled by the Company that can be turned to an open or closed position for the purpose of controlling the supply of water to the service property.

Customer: A person at least 18 years of age whose name is listed on the account and who is primarily responsible for the utility bill OR adult occupant whose name appears on the mortgage, deed, or lease for the service address.

DEFINITIONS (cont'd)

Customer Service Line: The service line owned by the Customer that extends from the Curb Stop or curb-line (or such point as designated by the Company) to the property or building being served.

Depositor: Any person(s) acting on behalf of Prospective Customer(s) for the purpose of entering into any type of agreement that requires a deposit of funds for extension of the Company's facilities.

Meter: A device furnished, installed, maintained and owned by the Company to register the consumption or use of water at the Customer's Property.

Meter Box/Vault: A structure which is owned and maintained by the Customer, having been installed by an agent for or on behalf of the Customer, in accordance with Company specifications, for the purpose of housing the Meter outside of the Customer's building, at an underground location mutually agreed upon between the Customer and Company. It is the responsibility of the Customer, as the owner of the Meter Box/Vault to maintain the Meter Box/Vault and lid in a safe condition.

Metered Manifold: A domestic service line that contains more than one metered service. When more than one meter is installed upon a Customer's premise at the request of a Customer or due to conditions existing upon the premise of the Customer, then each meter shall be treated separately as if it belonged to a separate Customer.

Person: Any individual, firm, company, association, society, corporation, institution, group, or any other legal entity.

Plumbing Fixture Standards: The water use standards that have been adopted by the Delaware River Basin Commission (at Resolution 88-2 Revised) and subsequently recommended by the Commission for plumbing fixtures installed in new construction and in existing structures undergoing renovations involving replacement of such fixtures, as follows:

Plumbing Fixture	Water Use Standard
Showerheads	3.0 gallons/minute
Lavatory faucet	3.0 gallons/minute
Kitchen faucet	3.0 gallons/minute
Water closets	1.6 gallons/flush
Urinals	1.5 gallons/minute

Premise: A single lot or piece of ground consisting of a single residential unit, together with all buildings and structures erected thereon.

Private Fire Hydrant: A fire hydrant furnished, installed, owned and maintained by the Company that has been requested by an Applicant and approved by the municipality, but where the municipality has refused to accept payment of the applicable rate as set forth in the Company's rate schedule.

DEFINITIONS (cont'd)

Property: In general terms, a separate parcel of land owned in fee simple absolute, including any home(s), condominium(s), Home Owner's Association or building(s) affixed thereto, which is delineated by the description contained on the recorded deed, and which may be further delineated by any public roads.

Prospective Customer: Any owner, tenant, or lessee of a Property that is expected to be receiving water service for at least one year following the commencement of water service.

Public Fire Hydrant: A fire hydrant furnished, installed, owned and maintained by the Company that has been requested by the municipality, or requested by an Applicant and approved by the municipality, where the municipality has accepted responsibility for payment of the applicable rate as set forth in the Company's rate schedule.

Qualified Private Fire Protection Service: Water service provided to an unmetered, privately-owned fire hydrant located in the public right-of-way which does not otherwise qualify for Public Fire Hydrant rates. Said hydrant shall be located on a service line serving that hydrant exclusively and must be in the open, be visible, and shall not be more than fifty (50) feet from the Company main servicing the hydrant.

Residential Structure: When used with respect to metered Residential Fire Service, a home or building which contains metered dwelling units intended for human habitation.

Service Connection: The installation by the Company of the Company Service Line. See Definition for Company Service Line.

Shall: is mandatory; May is permissive

Special Devices: Devices that are owned and maintained by the Customer on the Customer's plumbing system at the requirement of the Company. Special Devices include, but are not limited to, the following:

Backflow Preventer: A device designed to prevent a potential backflow of contaminants from the Customer's activities or property into the Company's distribution system.

Check Valve: A device designed to allow the flow of water only in one direction.

Control Valve: A device designed to stop the flow of water when the valve is closed.

Pressure Reducing Valve: A device designed to reduce the water pressure within the Customer's building below that which exists on the Company's distribution system.

Pressure Relief Valve: A device designed to relieve pressure on the internal plumbing system of the Customer's property.

RULES AND REGULATIONS

APPLICATION FOR SERVICE

5. Notification of Change in Ownership or Occupancy at an Existing Service Property: Upon any change in ownership of property where the owner is the Customer, or in the tenancy where the tenant is the Customer, or in the type of service rendered, the Customer must so advise the Company which shall thereafter have the right to discontinue the water supply until a new application has been made and approved for the new Customer.

6. Application for Water Service by a New Owner or Occupant at an Existing Service Property: Where a Customer's Service Line exists on a property to be served in compliance with the Company's rules, water service will be furnished by the Company as soon as reasonably practicable after written application of the owner or tenant of the property or such person's properly authorized agent. The Customer receiving service takes such service subject to the Company's Tariff, including its Rules and Regulations.

7. Application for Water Service to a Proposed Service Property: Where an adequate water distribution main abuts the Customer's property, a service connection will be made as soon as reasonably practicable after the appropriate application forms have been completed by the property owner or the owner's properly authorized agent and subsequently submitted to, and approved by, the Company. Where an adequate water distribution main does not abut the Customer's Property, the Customer must make necessary arrangements with the Company's New Business Office for the extension of a water distribution main in accordance with the Company's Rules and Regulations. Service Connection application forms will be furnished by the Company on request.

DEPOSITS AND CREDIT STANDARDS

8. General: Deposits may be required from Applicants for new service and extension of service. Residential Customers will not be required to pay a security deposit in order to receive service from the Company. The Company will pay income tax on any deposit, advance, contribution or other like amounts received from an Applicant which shall constitute taxable income to the Company as defined by the Internal Revenue Service and required by the Pennsylvania Public Utility Commission. Such income taxes shall be segregated in a deferred account for inclusion in rate base in a future base rate case proceeding. Such income tax associated with a deposit, advance, or contribution will not be charged to the Person providing such deposit, advance, or contribution.

9. Creditworthiness: Upon application for water service, the Company may require the Applicant/Customer to provide valid identification, a valid deed lease or mortgage evidencing the Applicant/Customer's residency at the Property/Premise, and/or payment of an outstanding balance owed by the Customer which accrued within the past 4 years for which the Applicant/Customer is legally responsible.

The Company may determine liability for a past due balance by:

- Use of Company records that contain information previously provided to the Company;
- Information contained on a valid mortgage, lease or deed;
- Use of commercially available public records databases; and
- Government and property ownership record.

10. Reserved for Future Use

RULES AND REGULATIONS

BILLING AND PAYMENT

11. Methods of Payment: Bills are payable by mail, by direct debit, in person at any authorized pay agency or as otherwise authorized by the Company. Amounts due for services must be made in one of the following formats: cash at a valid payment center, credit card, debit card, atm card, or personal check, business check, or money order issued by a properly licensed financial institution, or other commercially acceptable form of payment as determined by the Company.

12. Landlord Assumption of Responsibility: If an Applicant for service, who is a landlord, assumes responsibility for rates and charges related to water or wastewater service provided to tenants and is billed for such service, the landlord must assume responsibility and be billed for both water and wastewater service, if such service is provided or billed by the Company.

13. Bills and Billing History: Bills based on estimated water use shall be subject to review upon the Customer's request and submission by the Customer of information as to unusual water use**.** In all other cases, billing shall be made as soon as practicable after the reading of respective meters. In the case of fire hydrants, bills will be rendered for each applicable period. Where a Customer receives water service during a period when a water meter is not installed at the Property, the Company may issue the Customer a bill based on the estimated usage for that period. A Customer may obtain from the Company, at no charge to the Customer, the billing history for up to ten accounts per year in the name of the Customer, provided that the Customer submits a written request for such information directly to the Company. Additional requests will be processed subject to the Company's right to charge the Customer its incremental costs of providing such billing histories.

14. Delinquent Bills: If a rendered bill remains unpaid for a period of 20 days for residential Customers and 15 days for non-residential Customers, it shall be classified as delinquent. However, if the last day of such period falls on a Saturday, Sunday, a holiday or day when the Company's offices are closed, the delinquency date shall be the next succeeding business day. Payments by mail will be deemed made on the date of the postmark. Payments to the Company drop box or authorized payment agent will be deemed received when paid at that location. Service may be terminated for non-payment of bills in accordance with the Commission's regulations. If service is thus terminated it will not be restored until all outstanding charges provided by the Commission's regulations and the tariff of the Company are paid or satisfactory arrangements are entered for payment. If a dispute of a water bill has arisen as defined in the Commission's regulations, the Customer is responsible for paying the undisputed portion of such bill and termination of service may occur if the undisputed billings become delinquent.

15. Late Payment Charge: If payment has not been received by the Company for five days after the bill has been classified as delinquent, a late charge (penalty) of 1.50% will be applied to the account and such late charge (penalty) will be calculated every thirty days thereafter only on the overdue portion of the bill excluding previous late charges (penalties), and in no event shall the late charge (penalty) exceed more than 18% annually (simple interest).

BILLING AND PAYMENT (cont'd)

16. Return Check and Return Electronic Payment Charge: The Customer will be responsible for the payment of a charge of $20.00 per incident where a check or electronic payment, which has been presented to the Company for payment of any bill, is returned by the bank for any reason including, but not limited to, non-sufficient funds, account closed, payment stopped, two signatures required, postdated, stale date, account garnished, no account, drawn against uncollected funds, balance held, and unauthorized signature. This charge is in addition to any and all charges assessed against the Customer by the bank. If a Customer's account shows a history of submitting payments that have been returned for insufficient funds or any other reason outlined above, the Company may require turn-on charges to be paid by cash, certified check, money order, or credit card or service may be terminated without additional notice in accordance with Commission regulations.

17. Turn-on Charge: When service has been terminated to any premise because of violation of the Company's Rules and Regulations or at the Customer's request, a charge of fifty dollars ($50.00) payable in advance will be made for restoration of service. If the Company incurs out of the ordinary expense to affect termination of service for non-payment of bills or due to lack of access to the Company's facilities, or for restoration of service outside of normal business hours, the Customer must reimburse the Company for those expenses in addition to the $50.00 turn-on charge prior to service reconnection. This charge applies to new Customers only when service is required to be physically restored to the Premise. If the Company terminates water service for an emergency purpose, no turn-on fee will be applied to restore service. This charge applies to new Customers who require service to be physically restored to the Premise.

18. Turn-off at Customer's Request: Customers desiring to avoid payment for water service during periods when Properties are vacant or during extended absences shall give notice in writing at the office of the Company requesting the water to be shut off. A turn-on charge as set forth in Rule 17 shall be applied to the Customer's account when the Customer requests restoration of water service. If a minimum charge or Customer charge for water use is applicable, the bill will be based on the proportion that the period when water service was available bears to the entire period on which such minimum charge or Customer charge is based. Metered consumption in excess of such adjusted minimum shall be billed at normal rates.

RULES AND REGULATIONS

SERVICE CONNECTIONS

19. Company's Service Lines:

Except for service connections made in accordance with Rule 65, the Company will make all connections to its mains and furnish, install and maintain the Company's service main to and including the Curb Stop, which under normal circumstances will be placed inside the curb-line. The Company's service line will be the property of the Company and under its control. The point of delivery and sale for any water service furnished to the Customer shall be at the Curb Stop.

The maximum Company investment per Company service line shall be calculated using the same formula set forth in the definition of Company Contribution in Rule 62.

The cost of any Company service line in excess of the applicable maximum Company investment shall be paid by the Customer, plus all applicable taxes including income taxes occasioned by the contract. The Company may require payment of the estimated amount of such excess cost in advance of the installation and will make a partial repayment of the extent the actual cost is determined to be less than the estimate.

Whenever it is necessary to install a service line in advance of the date on which the premises are occupied and a meter is set, a deposit may be required in an amount not to exceed the estimated cost of installation, which deposit will be refunded to the depositor when the service becomes active (i.e., the meter has been set and the premises occupied), provided that event occurs within five years from the date of deposit.

20.1. Customer Service Line: The Customer's service line shall extend from the Property to the Curb Stop or curb line or such point as designated by the Company. All connections, service lines and fixtures owned by the Customer shall be maintained by the Customer in good order, and all meters and appurtenances owned by the Company and located on the Property of the Customer shall be protected properly by the Customer. All leaks in or other deteriorated condition of the Customer's service line or any other pipe or fixture in or upon the premises supplied must be repaired immediately by the owner or occupant of the premises.

a. Notwithstanding the terms and conditions set forth in Rules 20.1, 20.2, and 25, the Company is authorized to replace customer-owned lead service lines ("COLSLs") in Mercer County in accordance with the Pennsylvania Public Utility Commission Order at Docket No. P-2020-3021766 entered on July 15, 2021.

SERVICE CONNECTIONS (cont'd)

20.2. Customer Owned Lead Service Line Replacements: Notwithstanding Rules 20.1, 21, and 25, the Company shall, provided the customer provides consent, replace lead Customer Owned Service Lines ("COLSLs") pursuant to the Company's Lead Service Line Replacement Program ("Replacement Program"). Pursuant to Part 1 of the Company's Replacement Program, the Company will replace COLSLs it encounters when replacing its mains, up to 200 COLSL replacements per year within a maximum budgeted amount of $800,000 per year. Pursuant to Part 2 of the Company's Replacement Program, the Company will replace a COLSL upon a Customer's request subject to the following requirements: (i) verification that the Customer has a COLSL, (ii) the date that the Company will replace the COLSL will depend on the number of other customer requests in the same operating division, (iii) the annual cap of 200 COLSL replacements, and (iv) availability of funds in the annual budget allotment of $800,000.

Replacements under Part 1 of the Company's Replacement Program will have priority over replacements under Part 2 of the Company's Replacement Program. For replacements under Part 2 of the Company's Replacement Program, the Company will seek to prioritize replacements for low-income customers. Any portion of the annual budgetary allotment of $800,000 that is not spent on COLSL replacements in that year will roll over to the next subsequent year, subject to annual cap of 200 COLSL replacements per year. If the Company does not use the excess budgeted amount that carried over from the previous year, that excess budgeted amount will not carry forward into the following year. The Company may petition the Commission to modify its annual budgeted amount and/or the cap on COLSL replacements per year if, in the Company's sole discretion, the Company determines these amounts are not adequate to meet the needs of the Replacement Program. Any petition to modify the budgeted amount or maximum number of COLSLs replaced per year is subject to Commission approval. Costs incurred by the Company under the Replacement Program shall be subject to Act 120 of 2018 (P.L. 738, No. 120) and the accounting and ratemaking treatment approved by the Pennsylvania Public Utility Commission entered July 15, 2021 at Docket No. P-2020-3021766. After a COLSL is replaced by the Company or the Company's contractor, the Customer shall own and have full responsibility for the repair, replacement, and maintenance of the new Customer Service Line installed, and which, thereafter, Rules 20.1, 21, and 25 shall apply.:

a. The Customer shall enter into an Agreement for the replacement of the COLSL for either a Part 1 or Part 2 replacement, in a form provided by the Company, prior to the initiation of any work by the Company or its contractors to replace a COLSL. The Company shall provide a two-year warranty on workmanship and materials for any COLSL that the Company or its contractor replaces.

b. For Customer requests under Part 2 of the Company's Replacement Program, the Company will verify the Customer has a COLSL, and if verified, the Company will provide the Customer with testing materials within seven business days of the verification of the COLSL. The Company will notify the Customer within five business days of the results of the test. Notwithstanding Rule 20.1, a Customer who has a verified COLSL and has requested that the Company replace the COLSL, the Customer will not be responsible for repairing a leaking COLSL prior to the Company's replacement of that Customer's COLSL.

SERVICE CONNECTIONS (cont'd)

20.2. Customer Owned Lead Service Line Replacements (cont'd):

c. The Company will provide a National Sanitation Foundation approved water filter (pitcher or tap filter) to residential customers who request (or if the Customer occupies a rental property, the property-owner has made, or authorized the Customer to make, such request) that the Company replace the COLSL provided that:

1. The Company has verified that the Customer has a COLSL; and

2. The Company's testing of water from the customer's tap shows that the water has a lead level above the action level established by the Pennsylvania Department of Environmental Protection under the Environmental Protection Agency's Lead and Copper Rule.

The Company will offer a reimbursement under Part 1 of the Company's Replacement Program to a Customer or property owner (as applicable), at the lower of the Customer's or property owner's (as applicable) actual cost or what it would have cost the Company to replace the COLSL, who paid for the replacement of the COLSL if the Company commences a main replacement project that would have affected the Customer or property owner as follows:

a. 100% for work performed within one year of the commencement of a main replacement project.

b. 50% for work performed within two years of the commencement of a main replacement project.

c. 25% for work performed within three years of the commencement of a main replacement project.

The sliding scale reimbursement related to a Part 1 main replacement project will be applicable until the 3rd anniversary of the effective date of Aqua's Lead Service Line replacement program, after which customers will only be eligible for reimbursement if the customer replaced their COLSL within one year of the commencement of a main replacement project. For acquired systems the same sliding scale time period will apply from the date of closing the acquired system and will cease after the 3rd anniversary of the acquisition of the system, and thereafter customer will only be eligible for reimbursement if the customer replaced their COLSL within one year of the commencement of a main replacement project.

SERVICE CONNECTIONS (cont'd)

20.2. Customer Owned Lead Service Line Replacements (cont'd):
The Company will also offer a reimbursement under Part 2 of the Company's Replacement Program to a Customer or property owner (as applicable), at the lower of the Customer's or property owner's (as applicable) actual cost or what the Company would have incurred to replace the COLSL, who paid for the replacement of the COLSL within one year prior to the start of Part 2 of the Company's Replacement Program. The Company will also provide a sliding scale reimbursement to customers, at the lower of the actual cost or what the Company would have incurred to replace the COLSL, as follows:

a. 100% for work performed within one year of the commencement of a main replacement project.

b. 50% for work performed within two years of the commencement of a main replacement project.

c. 25% for work performed within three years of the commencement of a main replacement project.

The reimbursement for replacements under Part 2 of the Company's Replacement Program will cease after the 3rd anniversary of the effective date of the Company's COLSL Replacement Program. For acquired systems the same sliding scale time period will apply from the date of closing the acquired system and will cease after the 3rd anniversary of the acquisition of the system.

For any reimbursement under Part 1 or Part 2, the Customer or property owner must provide the Company with a paid invoice, a certification from a certified plumber, and other documentation required by the Company, in its sole discretion, to verify the replacement. The reimbursement (or portion thereof as set forth above) will be at the lower of the customer's actual costs for the replacement of the COLSL as supported and verified by documentation sufficient for the Company or the cost the Company would have incurred to replace the customer service line with a similar size and material.

A main replacement project under Part 1 will commence on the date the Company begins physical excavation for pipe installation for a main replacement project in the project area that includes the Customer or property owner's (as applicable) premise, and a Part 2 program will begin upon the date the Commission issues an order approving the Company's petition at Docket No. P-2020-3021766.

RULES AND REGULATIONS

SERVICE CONNECTIONS (cont'd)

21. Size, Kind, and Location of Service Lines: The Company reserves the right to determine the size, kind and location of the service line, from the main to the curb, and from the curb to the property to be served. However, the determination of the size of the fire service line shall be the responsibility of a professional engineer or similar professional retained by the Customer. The Customer's Service Line shall not cross intervening properties unless the property is landlocked and there is no other way in which service can be provided (for example, because the property does not abut a public road) and an appropriate easement is obtained by the Customer for the Customer's benefit, a copy of which must be furnished to the Company. The service line from the curb stop to the property shall be furnished, installed, owned, and maintained by the owner of the property, and where possible shall be laid in a straight line at right angles to the curb line within the building limits of the structure to be served and at a minimum depth of cover specified by the Company, and bedded in at least 6 inches of sand, in property owned in fee simple absolute. Type K Copper shall be used throughout for service lines up to three inches in diameter. At the Company's discretion, other industry approved materials may be used should field conditions, water quality requirements, or regulatory permit requirements dictate the use of non-metallic materials. Service lines over three inches in diameter shall be cement-lined ductile or cement-lined cast iron pipe. The minimum size of a Customer's domestic Service Line shall be 3/4 inch in diameter. The Company reserves the right to inspect the installation of the Customer's Service Line to ensure its conformity with the specifications in this paragraph.

22. Separate Trench: No water service line shall be laid in the same trench with a gas pipe, electric line, drain or sewer pipe, or any other facility of another public service company, nor within three feet of any open excavation, retaining wall or vault.

23. Renewal of Company Service Line: Where renewal of the Company's Service Line from the street main to the curb is found to be necessary in the Company's opinion due to age or condition, the Company will renew said service in the same location as the old one at its own expense. If, in connection with such renewal, the property owner, or Customer, for his own convenience, desires the new service line to be installed at some other location or in a larger size and agrees to pay all expenses of such work in excess of the cost of renewing the originally-sized service line in its original location, the Company will install the new service line at the location desired, provided that the new line complies with all applicable Rules and Regulations.

24. Replacement of Abandonment of Company Service Lines: Where the Company Service Line needs to be replaced, relocated, removed or abandoned for the convenience of the Customer or due to any reason other than a routine Company renewal due to age or condition, the Company will perform such work and the Customer shall pay all expenses in connection with such work.

25. Company Not Responsible: The Company shall in no event be responsible for the condition of, or for maintaining or replacing, any portion of the Customer's Service Line or other lines or fixtures on the Customer's Property, or for damage done by water or other matter passing through said lines or fixtures or escaping therefrom. The Customer shall at all times comply with all federal, state, local and municipal laws, codes and regulations with reference thereto, and make changes therein, required on account of change of grade, relocation of mains, or otherwise.

SERVICE CONNECTIONS (cont'd)

26. Single Service Line for each Property: A Customer's Service Line (whether fire or domestic) shall not supply more than one property, as hereinafter defined, but any such property upon proper application of the owner may be supplied by two or more metered service connections, each of which for billing purposes shall be considered as being separate customer accounts, and provided that the supply of each such service connection has an individual control valve at or near the curb. A separate service line shall be required for each of the following types of "property", as defined herein, unless an exemption to the Rule applies, as determined by the Company in its sole discretion:

a. A residential dwelling unit - either detached, or one side of a double house, or a house in a row of houses; provided, that a garage, and similar features incidental to the family life, shall be considered as a portion of the dwelling.

b. A building or complex of buildings containing residential dwelling units not divided by a public road or property line, which are either rental apartments, condominiums, or cooperative units and the commercial and service facilities incidental thereto.

c. An industrial, commercial or manufacturing establishment held in common ownership and not divided by a public road or property line and not covered by subparagraphs (b) and (d) of this Rule.

d. Each of the premises within a single building (stores or offices or any combination thereof) entirely separated from other premises within said building by a party wall or walls.

e. A detached building comprised of stores or offices or any combination thereof, not separated by a party wall or walls.

f. A Housing Development owned and operated as a unit by the United States Government.

27. Single Service Line with Two or More Customers: Where two or more Customers are now supplied through a single service line, any violation of the Rules and Regulations of the Company, with reference to either or any of said Customers, shall be deemed a violation as to all, and unless said violation is corrected after reasonable notice, the Company may take such action as can be taken for a single Customer, except that such action will not be taken until either or all of said Customers who have not violated the Company's Rules and Regulations have been given a reasonable opportunity to apply to the Company for separate service lines in accordance with these Rules and Regulations.

RULES AND REGULATIONS

METERS AND METER LOCATIONS

28. Responsibility for Meter and Meter/Box Vault: All Company Meters will be furnished, installed, maintained and owned by the Company and remain the property of the Company and be accessible to and subject to its control.

Meter Boxes/Vaults shall be owned, furnished, installed, and maintained by the Customer, unless otherwise agreed to by the Company. At the Company's discretion, the Company has the right to install a Meter Box/Vault for a Customer's property.

29. All Services to Be Metered: A Meter shall be installed on each domestic and on each fire service line owned by the Customer. The Company reserves the right to determine the size and type of Meter to be installed in the Customer's Property, including whether such Meter shall be a manual read Meter or a Meter that can be read remotely from outside the building being served, or automatically using TV cable, telephone, or similar lines or radio signal communication. As a condition of providing service and continuing to provide service, the Company shall have the right to install such equipment, connections and wiring in the manner and location it deems appropriate. The equipment necessary to read Meters using the designated mode of communication will be installed by the Company and will remain the property of the Company.

30. Location: For new services the Meter shall be required to be installed outside the building in a Meter Box/Vault. The location of the Meter Box/Vault shall be subject to the express approval of the Company; in most cases, the Meter Box/Vault shall be located inside the Property line by the Customer.

For existing Premises and circumstances, subject to the Company's approval, a Meter may be set within the structure to be served, at a location approved by the Company, after the Customer has had the plumbing arranged (including the installation of Special Devices if required by the Company) to receive the Meter at a convenient point inspected and approved by the Company so as to control the entire supply of water to the Property. At the Company's discretion, the Company has the right to install a Meter Box/Vault for a Customer's Property, and dedicate the Meter Box/Vault to the Customer who shall thereafter own, operate, and maintain the Meter Box/Vault. A Meter Box/Vault shall be required to be installed, furnished, owned, and maintained by the Customer at the Customer's expense when circumstances at an existing Premise change including but not limited to: a) building renovations (including demolitions/rebuilds) or b) renewal of or repair of Company or Customer Service Lines.

In cases where the Meter is located outside the building, a concrete vault, with a suitable iron cover, or other approved Meter Box/Vault, shall be located inside the Property line by the Customer. The size and dimensions of the Meter Box/Vault shall be as approved by the Company, give adequate access to the Meter, and permit its installation or removal. When a concrete vault is used, a 10 foot wide (min.) paved surface from the road to the vault, including curb depression, must be provided and maintained for vehicle access. The Company has the authority to require a Customer or owner, at their expense, to install a Meter Box/Vault where there has been unauthorized use of water after the Company shut off service and the Customer or owner, or their agent has restored the service without authorization.

METERS AND METER LOCATIONS (cont'd)

31. Valves Required: A Control Valve shall be placed by the Customer on the Customer Service Line on the inlet and outlet sides of the Meter. When required, a suitable Check Valve should be placed by the Customer between the Meter and the Control Valve on the outlet side of the Meter. When a Check Valve, backflow preventer or Pressure Reducing Valve is installed, the Customer shall install a Pressure Relief Valve or thermal expansion tank (to be sized and designed by the Customer or his agent) at some convenient point on the house piping to relieve pressure fluctuations and/or excess pressure due to heating water. In accordance with the specifications of the Company, the Customer shall install a Pressure Reducing Valve, to be set at a pressure not to exceed the applicable limits, as follows: 1) on the domestic service line when the pressure on the Company's distribution system exceeds 80 pounds per square inch (psi); 2) on the residential fire service line when the pressure exceeds 100 psi; 3) on the commercial fire service line when the pressure exceeds 150 psi; or 4) when required in the discretion of the Company where it is believed that the pressure may exceed either limit. The Customer or his authorized agent shall check with the Company to determine whether a Pressure Reducing Valve is required prior to finalizing the design of the internal plumbing system. In all cases, the Pressure Reducing Valve must be installed at an approved location after the inlet control valve and before the Meter, but in the case of the domestic service line an additional Control Valve must be installed between the Pressure Reducing Valve and the Meter. When approved for a manifold set-up, the inlet control valve (2-inch and smaller) that abuts the Meter must be a full-port, locking ball device.

32. Responsibility for Damage: Meters and other related equipment owned by the Company will be maintained by the Company so far as ordinary wear and tear are concerned; but the cost to repair damage caused by the Customer or due to freezing, hot water or causes not within the reasonable control of the Company shall be paid by the Customer.

33. Cost of Re-installation: The charge for the re-installation, reconnection or changing of a Meter or other related equipment owned by the Company when removed by the Customer or because of damage in any way due to the negligence or intentional conduct of the Customer shall be assessed against the Customer at cost.

34. Minimum Charge/Customer Charge: In Divisions with a minimum charge and a water allowance, customers will be subject to a fixed minimum charge in accordance with the rates thereof, for which certain quantities of water will be allowed, without additional charge. Such minimum charges shall be non-refundable for non-use of water, and non-cumulative against subsequent consumption. In the case of fractional bills covering less than a billing period, minimum charges and allowances shall be prorated.

In Divisions with a customer charge and no water allowance, customers will be subject to a fixed customer charge in accordance with the rates thereof, for which no quantity of water will be allowed without additional charge. The customer charge will be non-refundable and payable whether or not the customer uses any water. In the case of fractional bills covering less than a billing period, the customer charge shall be prorated.

METERS AND METER LOCATIONS (cont'd)

35. Company Notified Meter Not Working: The Customer shall immediately notify the Company of damage to, or the non-working of, the Meter as soon as it comes to his/her knowledge.

36. Registration Conclusive: The quantity recorded by the Meter shall be conclusive on both the Customer and the Company, except when the meter has been found to be registering inaccurately or has ceased to register. In such case, the quantity may be determined by the average registration of the Meter when in order.

37. Disputed Account: In case of a disputed account involving the accuracy of a Meter, such Meter will be tested upon the request of the Customer in conformity with the regulations of the Commission. In the event that the test of the Meter shows an error in registration in excess of the permissible range, an appropriate adjustment to the bill will be made in accordance with the Commission's regulations. Bills will not be adjusted if the Meter tests within the permissible tolerance limit.

38. Request Test: Upon a written request of a Customer, or that of the Customer's authorized representative, the Company shall test the accuracy of the Meter in service at the involved Premises. When a Customer desires, either personally or through a representative, to witness the testing of a Meter, the Meter may be required by the Customer to be sealed before removal, in the presence of the witness, which seal shall not be broken until the test is made. If the Meter so tested is found to be accurate within the limits specified above, a fee determined from the schedule provided in the Commission's regulations shall be paid to the Company by the Customer requesting such test, but if not so found then the cost thereof shall be borne by the Company. When making such requests, the Customer shall agree to the basis of payment herein specified. A report of such test shall be made to the Customer and a complete record of such test shall be kept as specified in the Commission's regulations. The results of such tests shall be conclusive upon the Company and Customer unless a written objection thereto is received by the Company or Customer, as appropriate, within thirty days of notice of the test results. If the Meter tested is found to be accurate, the Company has the absolute right to re-install that same Meter at the Customer's property.

RULES AND REGULATIONS

CONSTRUCTION SERVICE

39. Metered Building Construction Service: Where service has been requested by a Builder for purposes of construction of a building to be served by the Company and service is to be provided through a Company Service Line that will be retained to provide service to the building after construction is completed, metered water service shall be provided. Each such metered service will be subject to these Rules and Regulations and the charges for Commercial Service shown in the rate schedule. Installation of the Company Service Line shall be in accordance with the "SERVICE CONNECTIONS" provisions of this tariff. The Builder is responsible for protecting the Meter during construction. If the Meter is damaged due to construction activities, the Builder will be responsible for any costs associated with repairing or replacing the Meter.

40. Temporary Metered Construction Service: Where metered service is required or requested for temporary construction purposes, or where the Company Service Line will not be retained to provide service after construction, the Applicant shall pay the estimated cost of installation and removal of the service line, which costs are not refundable. In addition, the Applicant shall pay a deposit for the Meter, which will be refunded upon return of the Meter. Each such metered service will be subject to these Rules and Regulations and the charges for Commercial Service shown in the rate schedule. The Builder is responsible for protecting the Meter during construction. If the Meter is damaged due to construction activities, the Builder will be responsible for any costs associated with repairing or replacing the Meter.

METERED FIRE SERVICE

41. Metered Fire Service for Non-Residential Structures: For automatic fire sprinklers or other automatic fire service devices located inside of a non-residential structure or for fire hydrants located on a fire service line, a separate service line will be required to be used exclusively for fire service when Combined Fire and Domestic Service Rule (see Rule 2) does not apply. Each such fire line shall be metered and subject to the charges shown in the rate schedule. Subject to the approval of the Company, fire hydrants that are owned and maintained by the Customer outside of buildings may be connected to said service line, provided they are located downstream of the Meter and backflow prevention device. The Customer will be responsible for paying the Company for the cost of installing the Company Service Line in excess of the maximum Company investment, as set forth in Rule 19 of this tariff. Company reserves the right to refuse an application for metered fire service where, in the judgment of the Company, the size and pressure of the street main is not sufficient to render proper service. The Customer shall be responsible for the design and sufficiency of the fire protection system (including the installation of a pressure tank and pumps, if required) and shall submit appropriate certification of such to the Company at the time of application. The Customer shall not use a dedicated fire line for domestic service and shall not allow a cross-connection between the domestic and fire systems. The Company shall have the right to require Special Devices as deemed necessary on Customer fire service lines. Meters for fire service will be furnished and maintained by the Company. Meters will be located as specified by the Company on the Property of the Customer, and if Meter Boxes/Vaults are required, they shall be constructed and maintained in accordance with the Company’s specifications at the expense of the Customer.

42. Metered Fire Service for Residential Structures: To obtain service for automatic fire sprinklers or other automatic fire suppression related devices located inside a Residential Structure, the Customer must install a separate Customer fire service line from the curb to the fire protection system. Each such fire line shall be metered in accordance with the Company's Rules and Regulations. Both the Customer's fire service line and domestic line shall be connected to a single Company Service Line. To accommodate service to the Customer's fire line in addition to the domestic line, the Company may install a larger Company Service Line than it would otherwise install. The Customer will be responsible for paying the Company for the costs of upsizing the Company Service Line and appurtenances, and for the cost of the fire meter and its installation, together with any and all applicable taxes. Recovery of these costs by the Company shall be achieved through the application of the Company's rate schedule for "Residential Multiple Meter Sets", which shall be applicable to all Residential Structures equipped with residential fire service under these Rules and Regulations. The Company reserves the right to refuse an application for automatic fire service where, in the judgment of the Company, the size and pressure of the street main is not sufficient to render proper service. The Customer shall be responsible for the design and sufficiency of the fire protection system (including the installation of a pressure tank and pumps, if required) and shall submit appropriate certification of such to the Company. The Customer shall not use the fire line for domestic service and shall not allow a cross-connection between the domestic and fire systems. The Company shall have the right to require Special Devices as deemed necessary on residential fire service lines.

RULES AND REGULATIONS

UNMETERED FIRE SERVICE

43. Payment of Applicable Rate: All fire hydrants installed by the Company are subject to the payment of the applicable rate. A hydrant will not be installed without the request or the approval of the appropriate municipality. If the municipality agrees to pay the applicable rate, the hydrant shall be a public fire hydrant; otherwise a private entity must agree to pay the applicable rate in which case the hydrant shall be a private hydrant. In the event the applicable rate is not paid, the Company, at its option, may remove the hydrant.

44. Payment of Installation Costs:

Hydrants installed on new or proposed water mains: All fire hydrants, whether public or private, to be installed in connection with a main extension shall be paid for by the Applicant or Depositor pursuant to any type of agreement for the extension of the Company's water mains.

Hydrants installed on existing water mains: The installation costs of all private, or public fire hydrants where a municipality requires a public fire hydrant for an Applicant, to be installed on an existing water main shall be paid for by the Applicant. The installation costs of a public fire hydrant to be installed on an existing water main at the request of a municipality shall be paid for by the Company provided that no existing fire hydrant is located within a 600-foot radius of the requested fire hydrant, and provided that all other Rules and Regulations of the Company are complied with. Fire hydrants requested at closer intervals of spacing shall be reviewed by the Company and these installations shall be paid for by the municipality or Applicant. Payment for the installation of a fire hydrant shall include the entire cost for material and installation and all applicable taxes pursuant to an agreement prepared by the Company.

45. Hydrant Location: Upon written request to the Company's New Business Office from the duly authorized officials of any municipality supplied by the Company, the Company (subject to its Rules and Regulations on the payment of installation costs and the applicable rate), will install a standard fire hydrant at a location mutually agreed upon by the municipality and the Company, provided that the size of the existing main and surrounding distribution system and the available pressure and flow in said main is, in the judgment of the Company, sufficient to enable the provision of proper service at the fire hydrant under normal and ordinary conditions. Where a requested fire hydrant would be connected to a water main located in the public right-of-way, the hydrant shall be located within close proximity to the nearest curb line, and where a requested fire hydrant would be connected to a water main located in an easement held by the Company, the hydrant shall be located within that easement area.

46. Availability of Supply: With regard to public fire hydrant service or private hydrant sprinkler and hose service, the Company shall have no greater duty than to supply only such volumes of water at such pressures as may be available at the time of operation.

RULES AND REGULATIONS

UNMETERED FIRE SERVICE

47. Maintenance and Obstructions: All fire hydrants owned by the Company will be maintained by the Company. Said maintenance shall include, but not be limited to, painting as required. Painting of hydrants by parties other than the Company personnel or its authorized contractor is strictly forbidden. The Company shall not be responsible for the condition of the hydrant following intervening use by a fire department or any authorized or unauthorized person.

It is the responsibility of the Customer paying the fire hydrant rental to keep the area directly surrounding the hydrant free of all obstructions (including, but not limited to trees, bushes, snow, dirt, mailboxes or other obstructions) that would impact the safe operations or would not allow the hydrant to be easily seen from or accessed by an emergency vehicle.

Municipalities, at their own expense, are allowed to attach marking devices on public fire hydrants owned and operated by the Company solely to facilitate the location of such hydrants. The Company shall be notified and shall approve in advance the municipality's plans to install hydrant markers and will permit plan designs that are consistent with normal, intended, and safe operation of such hydrants. Municipalities that take advantage of this provision shall be responsible for the maintenance of all markers that they install.

48. Allowable Use: Only persons authorized by the Company shall take water from any fire hydrant, except for the use of the Fire Department in case of fire, and no fire hydrant shall be used for any reason other than firefighting or training purposes without the consent of the Company. The use of fire hydrants, whether owned by the Company or by the Customer, will be restricted to the taking of water for the extinguishing of above-ground fires. Water shall not be taken from any fire hydrant for construction purposes, extinguishing underground fires, sprinkling streets, flushing sewers or gutters or for any other use unless specifically permitted by the Company for the particular time and occasion. If the Company grants permission to use fire hydrants for purposes other than the extinguishment of fires, such use will be applied only if an approved backflow prevention device is attached to the hydrant. Said device shall be furnished by the Customer.

49. Change of Location: Whenever a municipality desires a change in the location of any fire hydrant, the Company, upon written notice from the municipality to the Company's New Business Office, will make such change at the expense of the municipality pursuant to an agreement prepared by the Company.

50. Inspection: In addition to its periodic program of inspection and testing, the Company will, upon request of the duly authorized officials of any municipality, make inspections of specific hydrants at convenient times and at reasonable intervals as determined by the Company to determine the condition of the fire hydrant in question. Flow testing will be conducted by the Company, upon request, following the completion of changes to the supporting distribution system either due to capital construction or operational modifications. Inspections shall be made by a representative of the Company and a duly authorized representative of the municipality.

RULES AND REGULATIONS

RESPONSIBILITY FOR SERVICE

51. Liability of Company: In the course of furnishing service that needs to be adequate, but not perfect, it is recognized that there will be times when service is subject to interruption or disruption as a result of water main breaks, the failure of equipment or facilities, and for other reasons. Accordingly, the liability of the Company shall be limited to two thousand dollars ($2,000.00) in any legal action brought against the Company for damages in connection with: 1) a service interruption or delay, or cessation or lack of adequate, efficient, safe and reasonable service and facilities; and/or 2) a failure of equipment or supply, including, but not limited to, a break or leak in a water main, service line or Meter owned by the Company.

In any legal action where a court does not recognize, or is being asked to interfere with or hamper, the jurisdiction of the Commission to authorize limitations of liability or to exclusively determine whether the service and facilities of a public utility are in conformity with the regulations and Orders of the Commission, the public utility may certify to the Commission the question of the appropriateness of such court action by filing a petition for declaratory judgment with the Commission.

Furthermore, the Company shall not be liable in any action where the loss or damage involves an act of God or does not involve a duty of the Company, including breaks or leaks on facilities that are not owned by the Company, such as breaks, leaks, defects or conditions in the Customer's Service Line, Meter Box/Vault, internal plumbing or fixtures, or due to the materials out of which those facilities are made. Further, the Company shall not be liable in any action where the loss or damage does not involve a breach of a duty of the Company, including where the Company does not receive actual notice, either written or oral, that a Company facility (located within the public right-of-way, in a sidewalk or on a Customer's Property) is in need of repair, such as the condition or elevation of a Curb Box or valve box that is not proven to have been in that condition at the time of installation or that is caused by a plumber, developer, or the person or event.

From time to time, the Company may provide public notices, specific notices, correspondence or other notifications ("Notices") regarding the presence of conditions affecting the quality and/or quantity of water service provided by the Company. (Examples of such Notices include, but are not limited to, boil water alerts, notice of hydrant and main flushing, and notice of water quality testing results.) These Notices may contain information about actions members of the public may wish to, are recommended to, or should take in response to the conditions identified in the Notice. In the event the Company issues a Notice, the Company will not be liable for any expenses or costs incurred by a Customer or end-user for any action taken in response to any condition identified in the Notice.

52. Complaints: Complaints with regard to the character of the service furnished or the reading of Meters, or of the bills rendered, must be to the Company's office either orally, by telephone, in person with appointment, or in writing, and a record of such complaint will be kept by the Company, giving the name and address of the complainant, the date, the nature of the complaint and the response.

SYSTEM INSPECTION AND INTEGRITY

53. Inspections: All pipes, Meters, Special Devices and fixtures shall be subject, at all reasonable hours, to inspection by properly identified employees of the Company. In addition, the Company shall have the right, upon reasonable notice and at reasonable times, to gain access into the Customer's Premises for the purpose of taking water samples in order to determine the quality of the water. No plumber, owner or other unauthorized person shall turn the water on or off at any corporation stop, Curb Stop, or disconnect, or remove the Meter without the consent of the Company. No agent or employee of the Company has authority to bind it by any promise, agreement or representation not provided for in these Rules and Regulations.

54. Right to Refuse Connections: The Company may refuse to connect with any piping system or furnish water through one already connected: 1) if the Customer's Service Line is not a sufficient depth to prevent freezing or is installed in too close proximity to any other utility line; 2) if lead-based solder or a lead-based fixture has been used in the Customer's plumbing system in contravention of any national, state or local regulation; 3) where the intended use of the water delivered to the Customer's Property would involve the return of water directly back to the Company's distribution system; 4) where the Customer's Service Line is connected to a separate or auxiliary water supply that could constitute a cross-connection; or 5) if such system has not otherwise been properly installed and maintained. It shall be the Customer's responsibility to assure compliance with these requirements. The Company may, from time to time, require the Customer to provide verification that the Customer's piping system complies with these requirements.

55. Cross-Connection Control: A cross-connection is created when a Customer connects to the Company's distribution system. To prevent contamination of the public water supply from a cross-connection, all new Customer connections to the Company's distribution system must be equipped with backflow prevention, cross-connection control or other Special Device approved by the Company and furnished, installed, and maintained at the Customer's expense in accordance with Company specifications and at a location and in the manner approved by the Company. A Customer with an existing connection to the Company's distribution system will furnish, install, and maintain a Company approved backflow prevention, cross-connection control, or other Special Device at the Company's request. The furnishing, installation, and maintenance of the backflow prevention, cross-connection control or other Special Device at existing connections will be made at the Customer's expense in accordance with Company specifications and at a location and in the manner approved by the Company. The Company shall have the right, upon reasonable notice and at reasonable times to conduct surveys and investigations of water use and practices at a Customer's Premises to determine the backflow prevention, cross-connection control or other Special Device appropriate for Customer's connection. In addition, the Customer shall be required, at such Customer's expense, to comply with the yearly testing and overhauling requirements of the Company for backflow prevention, cross-connection control or other Special Devices. The Company may authorize persons (with the appropriate training or certification) to inspect Premises, perform installations and testing of such Special Device or make corrections of adverse existing conditions. A yearly administrative fee of $10.50 will be required per return certification.

TERMINATION OF SERVICE

56. By Company: Service may be terminated for any of the following reasons which shall constitute a violation of the Rules and Regulations of the Company:

a. For the use of water for any other Property or purpose other than that described in the application.

b. For willful waste of water through improper or imperfect pipes, fixtures or otherwise, including failure to promptly repair a leak on the Customer Service Line.

c. For molesting any service pipe, Meter, Meter interface unit, Curb Stop or seal, or any other appliance of the Company.

d. For non-payment of any charge accruing under the Company's tariff or Rules and Regulations.

e. For refusal of reasonable access to Property for purposes of inspecting or for reading, caring for, removing, or installing Meters, including remote and automatic Meters and the associated wiring and connections to the Customer's telephone line.

f. For making, or refusing to sever, any cross-connection between a pipe or fixture carrying water furnished by the Company, and a pipe or fixture carrying water or other substances from any other source.

g. For failing to comply with the inspection, installation, maintenance or testing requirements of the Company under its back-flow prevention and cross-connection control program instituted for the purpose of protecting the public water supply.

h. For vacancy of a Premises.

i. For failure to make payments under the Company's Water System Connection Loan Program, as described in Rule 66.

j. For violation of any other Rules or Regulations of the Company.

k. For violation of Pennsylvania law (Criminal Code 18 PA C.S.A. Section 3926) which prohibits the activation of a public utility service line without a measuring device (water Meter).

l. For any other reasons set forth in the Commission's regulations.

m. In accordance with the terms of any agreement with a non-Company wastewater provider for non-payment of wastewater service when due.

Service termination will be performed in the manner prescribed by the Commission's regulations. In addition, service may be terminated for nonpayment of a sewer bill upon proper request of the municipality or municipal authority and receipt of a fifty dollar ($50.00) fee per account. The terms and conditions for termination of water for non-payment of sewer are found in Attachment A and conform to the Water Services Act 53 P.S. §3102.201 et seq.

If you are a victim of domestic violence and have a Protection From Abuse Order or other court order that shows clear evidence of domestic violence, there are special protections available.

TERMINATION OF SERVICE (cont'd)

57. Turn-Off Without Authority: The Customer shall not turn the water on or off at any corporation stop or Curb Stop, or disconnect or remove the Meter, or permit its disconnection or removal, without the consent of the Company.

58. Due to Emergency: As necessity may arise in case of breakdown, emergency, or for any other unavoidable cause, the Company shall have the right to suspend services temporarily, in order to make necessary repairs, connections, etc.; but, the Company will use all reasonable and practical measures to notify the Customer of such discontinuance of service. The Company shall not be liable for any damage or inconvenience suffered by the Customer or any claim against it at any time for interruption in service, or for any causes beyond its control. When a supply of water is to be temporarily cut off, notice will be given, when practicable, to all Customers affected by the shutting off, stating the probable duration of the interruption of service, and also the purpose for which the shut-off is made.

59. Restoration of Service: After termination of service it will not be reconnected until all amounts due to the Company have been paid plus the cost of a fifty dollar ($50.00) turn-on charge prior to service reconnection (with the exception of the Masthope Division) subject to the provisions of Section 1407(c)(2) of the Public Utility Code, 66 Pa.C.S. § 1407(c)(2) (regarding payment to restore service) unless otherwise directed by the Commission.

WATER CONSERVATION AND DROUGHT EMERGENCY

60. Water Conservation Contingency Plan:

General: The Company shall have the right to reserve a sufficient supply of water at all times in its reservoirs, to provide for fire and other emergencies, or may restrict or regulate the quantity of water used by the Customer in case of scarcity, or whenever the public welfare may require it. If the Company is experiencing a short-term supply shortage, the Company may request general conservation measures to reduce or eliminate nonessential uses of water.

Voluntary Conservation: The Company shall first request voluntary curtailment of all nonessential uses of water.

Mandatory Conservation: If voluntary cooperation does not achieve satisfactory results, mandatory compliance with a ban on nonessential uses will be imposed. If any Customer refuses to comply with such mandatory measures, the Company may adjust the outside water valve connection in a manner which will restrict water flow by up to 1/2, otherwise restrict flow such as by the insertion of a plug device, or terminate service.

Nonessential uses of water may include, but are not limited to, the following items:

a. The use of hoses, sprinklers, or other means for sprinkling or watering of shrubbery, trees, lawns, grass, plants, vines, garden, vegetables, flowers, or any other vegetation.

b. The use of water for washing automobiles, trucks, trailers, trailer houses, or any other type of mobile equipment.

c. The washing of streets, driveways, parking lots, service station aprons, office buildings, exteriors of homes, sidewalks, apartments, or other outdoor surfaces.

d. The operation of any ornamental fountain or other structures making a similar use of water.

e. The use of water for filling of swimming or wading pools.

f. The operation of any water-cooled comfort air conditioning which does not have water-conserving equipment.

g. The use of water from fire hydrants for construction purposes or fire drills.

h. The use of water to flush a sewer line or sewer manhole.

i. The use of water for commercial farms and nurseries other than a bare minimum to preserve plants, crops, and livestock.

WATER CONSERVATION AND DROUGHT EMERGENCY (cont'd)

60. Water Conservation Contingency Plan (cont'd):

Water Rationing Plan: In addition to the provisions as set forth above, the Pennsylvania Emergency Management Agency is authorized to promulgate, adopt, and enforce a Water Rationing Plan by virtue of the Emergency Management Services Code, 35 Pa.C.S. § 1701 et seq. as implemented by the Drought Emergency Proclamation dated November 6, 1980.

Excess Use Charges: In the event of a drought emergency (as declared by a river basin commission and/or by a proclamation or executive order issued by the Governor), the Company is authorized to collect fines and/or excess use charges set forth in its Local Water Rationing Plan as filed with and approved by the Pennsylvania Emergency Management Agency.

RULES AND REGULATIONS

MAIN EXTENSIONS

61. Main Extensions to Existing Residential Structures: Where an adequate water distribution main does not abut a Prospective Customer's Property such that a service connection cannot be made to serve such Property in accordance with these Rules and Regulations, the Prospective Customer (or an authorized agent for the Prospective Customer) must apply to the Company for a main extension.

Any required or requested main extension to serve a Prospective Customer at a preexisting structure will be paid for by the Depositor or Prospective Customer in accordance with the provisions of the subsections below:

a. When an extension to serve a Prospective Customer is required or requested, such extension will be made under the terms of an "Extension Agreement". The Company shall have the exclusive right to determine the type, the material, the size, the routing and the location of mains to be installed and the other facilities required to render adequate service. No main(s) smaller than 6" in diameter shall be installed, except at the Company's sole discretion.

b. The terminal point of the required or requested extension shall be a point in the curb line equidistant from the side building lines of the last building or dwelling to be served. As a further condition of extending the existing distribution mains, the Company shall be provided with, at no cost to the Company, any rights of way, temporary construction easements, or permanent construction easements necessary to complete the extension of the distribution mains, Company Service Line(s), appurtenances and other facilities, or to provide future access for repair, maintenance, replacement, or for other related reasons. Where the Prospective Customer's Property is landlocked, the Prospective Customer may be required to obtain, at no cost to the Company, an easement or right-of-way that shall not cross multiple properties. The Prospective Customer shall present the Company with a certified copy of a duly recorded instrument that is recorded in the County Office of the Recorder of Deeds.

c. The Company reserves the right to require the Depositor or Prospective Customer to pay for the extension of the main beyond the last building in a street in order to connect to an existing main which would provide more adequate and reliable service.

d. The Prospective Customer must have complied with all other conditions of service provided elsewhere in these Rules and Regulations in order to receive water service from the main extension.

Any required or requested main extension to serve a lot or lots that do not contain an existing Residential Structure shall be installed by the Builder in accordance with the provisions of Rule 65.

RULES AND REGULATIONS

MAIN EXTENSIONS

62. Main Extensions to Bona Fide Service Applicants:

62.1 Where an adequate water distribution main does not abut a Bona Fide Service Applicant's ("Applicant") Property such that a service connection cannot be made to serve such Property in accordance with these Rules and Regulations, the Applicant (or an authorized agent for the Applicant) must apply to the Company for a main extension. Such extension will be made under and pursuant to the terms of an Extension Agreement (which may include a reasonable allowance for overhead costs) subject to applicable provisions of these Rules and Regulations. The construction of facilities to serve such Applicant will not commence until an Extension Agreement has been executed and all applicable terms and conditions therein have been satisfied by the Applicant.

In conjunction with executing an Extension Agreement, an Applicant shall deposit with the Company an amount totaling $1,000, representing a Service Line Deposit. If the total cost to connect the Applicant exceeds the total of the Service Line Deposit and the Company's contribution to the extension, the Applicant will be required to pay the difference. However, if the Company's contribution to the extension fully funds the amount needed to connect the Applicant, the Service Line Deposit will be refunded to the Applicant within 90 days after the Applicant's requesting and receiving water service from the Company, provided, however, that if the Applicant does not request connection to the Company's main extension within six months of the completion of the main extension, the Service Line Deposit shall become non-refundable.

Where a proposed main extension is capable of serving multiple structures or facilities and at least 80% of the Prospective Customers who could receive service from the main extension become Bona Fide Service Applicants and satisfy all applicable terms and conditions of the foregoing provisions, the Customer Advance, if any, required of each Bona Fide Service Applicant shall be calculated as if 100% of such Prospective Customers had become Bona Fide Service Applicants.

For a period of ten (10) years following completion of the main extension, the Company shall refund to each Bona Fide Service Applicant his/her pro rata share of an amount equal to the Company Contribution for each additional Customer who attaches a service line to the main extension and requests service. No refunds shall be made, however, in those situations where at least 80%, but less than 100%, of the Prospective Customers who could receive service from the main extension become Bona Fide Service Applicants and their Customer Advances are calculated as if 100% of such Prospective Customers had participated in the initial funding of the project. In addition, the total amount refunded shall not exceed the amount of the Customer Advance paid by the Bona Fide Service Applicant.

62.2 The Company shall have the exclusive right to determine the type, the material, the size, the routing and the location of mains to be installed and the other facilities required to render adequate service. No main(s) smaller than 6" in diameter shall be installed except at the Company's sole discretion, and where called for by good engineering practices.

62.3 The terminal point of the required extension shall be a point in the curb line equidistant from the side property lines of the last lot to be served or the side building lines of the last building or dwelling to be served, whichever is greater. As a further condition of extending the existing distribution mains, the Company shall be provided with, at no cost to the Company, any rights of way, temporary construction easements, or permanent construction easements necessary to complete the extension of the distribution mains, Company Service Line(s), appurtenances and other facilities, or to provide future access for repair, maintenance, replacement, or for other related reasons.

RULES AND REGULATIONS

MAIN EXTENSIONS (cont'd)

62. Main Extensions to Bona Fide Service Applicants (cont'd):

62.4 The Bona Fide Service Applicant must have complied with all other conditions of service provided elsewhere in these Rules and Regulations in order to receive water service from the main extension.

62.5 Any required or requested main extension to serve an Applicant other than a Bona Fide Service Applicant shall be installed in accordance with the provisions of Tariff Rule 65.

62.6 Definitions:

Bona Fide Service Applicant: shall mean a person or entity applying for General Metered Service to an existing or proposed structure or facility within the Company's certificated service territory, and which is either: (1) the primary residence of the Applicant; (2) a place of business; or (3) a public school, building, library, park or playground which is owned by a governmental unit or school district having the power of taxation. A person or entity shall not be deemed a Bona Fide Service Applicant if: (1) applying for water service to a building lot, subdivision, or a secondary residence; (2) the request for water service is part of a plan for the development of a residential dwelling or subdivision; (3) the request is for service other than the main water supply for the primary residence, such as service for external landscaping or agricultural purposes only; or (4) requesting Special Utility Service. To become an Applicant, a person or entity must file a signed application to connect the qualifying structure or facility with the Company's distribution system and request water service to begin immediately following such connection.

Company Contribution: shall mean that portion of the main extension costs which generate annual line extension costs equal to annual revenue from the line extension and that the Company will fund based upon the following formula, where X equals the Company Contribution attributed to each Bona Fide Applicant:

$$X = \frac{AR - O\&M}{(P*I) + D}$$

Whereby:

AR = the expected average annual revenue from the Bona Fide Service Applicant based upon the Company's currently effective tariff rates as established in the Company's last base rate case and on the average annual usage of customers similar in nature and size to the Bona Fide Service Applicant.

O&M = the average annual operating and maintenance expenses associated with serving an additional Customer, including customer accounting, billing and collection, water purchased, power purchased, chemicals, and other variable costs based on the current total Company level of such costs, as well as any costs particular to the specific needs of the Bona Fide Service Applicant.

I = the Company's current debt ratio multiplied by its weighted cost of long-term debt as established in the Company's last base rate case; and

D = the Company's depreciation accrual rate for facilities to be installed, as established in the Company's last base rate case.

MAIN EXTENSIONS (cont'd)

62. Main Extensions to Bona Fide Service Applicants (cont'd):

Customer Advance: shall mean (1) the Estimated Cost of the water main extension less (2) the Company Contribution.

Line extensions to Bona Fide Service Applicants shall be funded without Customer Advance where the annual revenue from the line extension will equal or exceed the Company's line extension costs.

If the annual revenue from the line extension will not equal or exceed the Company's line extension costs, a Bona Fide Service Applicant may be required to provide a Customer Advance to the Company's cost of construction for the line extension.

Where a Customer Advance is required, and the Bona Fide Service Applicant is unable to advance the entire amount due, the Company, at its sole option, will either (1) allow the Bona Fide Service Applicant to pay the remaining portion of the Customer Advance ratably over a period of not less than three years beginning with the Applicant's first bill for water service, or (2) provide information to the Applicant on financial institutions that may offer financing to the Bona Fide Service Applicant for the line extension. If the Company chooses option (1), it may require that up to one-third of the total Customer Advance be deposited prior to extending its facilities and may recover from the Bona Fide Service Applicant, over the payment term selected, its costs of financing the construction by applying to the amount outstanding interest charges calculated at the then-prevailing residential mortgage lending rate specified by the Secretary of Banking in accordance with the act of January 30, 1974 (P.L. 13, No. 6), known as the Loan Interest and Protection Law.

Special Utility Service: shall mean residential or business service which exceeds that required for ordinary residential purposes. By way of illustration and not limitation, Special Utility Service shall include: the installation of facilities such as over-sized mains, booster pumps and storage tanks as necessary to provide adequate flows or to meet specific pressure criteria, or service to large water consuming commercial and industrial facilities. An otherwise Bona Fide Service Applicant requesting service which includes a "Special Utility Service" component is entitled to a Bona Fide Service Applicant status, including the corresponding Company Contribution toward the costs of the line extension which does not meet the Special Utility Service criteria.

63. Economic Development Main Extension Policy: The Company may negotiate and enter into customized Extension Deposit Agreements for the purpose of promoting economic development or enhancing the efficiency and operation of the waterworks system. These agreements may include special provisions that differ from the standard terms of the "Extension Agreement". Where substantial public need exists and the public health and safety may be compromised by the absence of a public water supply in a portion of the Company's authorized service territory, the Company, subject to the Commission's prior approval, may install main extensions and Special Utility Services without the payment of the Customer Contribution that would otherwise be required hereunder.

64. Main Extensions with Governmental Bodies: The Company may negotiate and enter into customized Extension Agreements with Governmental Agencies where the main extension is for a public purpose and is funded entirely with public funds. These agreements may include a waiver of the tax requirements of the "Extension Agreement;" provided, however, that where such waiver is given, the Company will not refund any portion of the cost of the main extension.

RULES AND REGULATIONS

MAIN EXTENSIONS (cont'd)

65. Main Extensions and Services by Builder: In the event any main extension is requested or required to provide service to newly constructed structure(s) to be constructed in the future on existing or subdivided lots, or to preexisting non-Residential Structures except as provided below, the Builder shall be required to install the water main and service lines through a pre-qualified contractor retained by the Builder and to pay all costs related thereto. The Company has the sole right to accept or reject the proposed contractor. At the sole discretion of the Company, the Company may undertake construction of facilities otherwise subject to this Rule, in which event, the "Extension Agreement", referred to in the provisions of Rule 61 and Rule 62 pertaining to construction of facilities to serve existing Residential Structures, shall be applicable except that the Builder will retain financial responsibility for the installation of service lines and appurtenances as specified herein.

Under the provisions of this Rule, prior to construction, the Builder must enter into a Builder's Main Extension Agreement, in a form acceptable to the Company, detailing the terms and conditions under which the Company will accept, and provide service through, facilities constructed by Builder. All construction costs, whether initially incurred by the Company or the Builder, related to the main extension shall be the responsibility of the Builder. The Builder's Main Extension Agreement shall contain, at a minimum, the following terms and conditions:

a. Main and service line installation work shall be performed in accordance with the specifications and conditions of the Company.

b. All costs of material and installation required to serve Builder's lots shall be the responsibility of Builder. Builder shall contract directly with a pre-qualified contractor, recognized and approved by the Company, for all main and service line installation work, and all appurtenances (including fire hydrants) required to serve the project.

c. Any specialty material required to interconnect with the Company's existing facilities shall be provided by the Company.

d. Any construction involving preexisting facilities of the Company, including but not limited to relocation of existing facilities and connections of mains or services with existing facilities, shall be performed only by the Company except where otherwise agreed upon by the Company in its sole discretion.

e. Builder's estimate of the cost of construction must be acceptable to the Company. Estimates which appear to be understated may be rejected by the Company in its sole discretion.

f. Builder shall obtain all necessary permits from federal, state and local authorities. If any of these authorities require the Company to obtain such permits, the Builder shall do all engineering, design, research and complete the application for the Company's submittal. Any fees associated with any such permits shall be the sole responsibility Builder.

g. All construction shall be subject to inspection by Company personnel. No trenches shall be backfilled prior to approval from Company representatives.

MAIN EXTENSIONS (cont'd)

66. Water System Connection Loan Program: Where the Company offers a Bona Fide Service Applicant the option to apply for a loan from the Company for a new single family-residential service connection under Rule 7 or for a main extension under Rule 61 for single-family residential service to cover Eligible Costs (as defined herein), such loan shall be subject to the terms and conditions set forth in this Rule.

To be eligible for a loan, an Applicant must (a) own a single-family residence which will take water service from the Company; (b) demonstrate intent to be the continuing Customer of the Company at the residence; and (c) enter into a financing agreement.

For purposes of this Rule, Eligible Costs include actual costs for (a) a water main extension in accordance with Rule 61; (b) the Customer Service Line; (c) a Meter Box/Vault; (d) shut-off valves and/or Special Devices required under these Rules; (e) alterations of or additions to plumbing within the Customer's residence which are necessary to permit the Customer to take service from the Company; or (f) any other facilities necessary to permit the Customer to take water service from the Company. The maximum principal balance of a loan made under this Rule will be $8,000.

Any such loan shall be subject to the following terms and conditions.

a. The existence of a loan made under this Rule does not alter the responsibility of the Customer for maintenance or replacement of the Customer Service Line or any other facilities as determined by the applicable provisions of the Company's Rule(s).

b. The initial principal balance of the loan shall be the amount of Eligible Costs which the Customer elects to borrow from the Company. The principal balance of the loan plus interest will be repaid to the Company through a fixed surcharge added to the Customer's regular monthly bill for water service. The surcharge will be reflected as a separate service type for the Customer's account.

c. The Customer will enter into a financing agreement with the Company which specifies, inter alia, the initial principal balance of the loan, the applicable interest rate determined in accordance with subsection (e) of this Rule, the term of the loan and the amount of the monthly surcharge. The Company in its sole discretion will determine whether a financing agreement should be established for a loan related to facilities owned and maintained by the Customer under the applicable provisions of the Company's Rules. The Customer will agree to repay the loan over a term selected by the Customer, which is no less than three years (36 months), nor greater than 8 years (96 months).

d. Through the surcharge, the Customer will make equal monthly installments over the loan term to pay the principal amount of the loan together with daily simple interest on the unpaid balance of the principal amount from time to time outstanding at the applicable rate of interest determined in accordance with subsection (e) of this Rule. The Customer's payment schedule will amortize the unpaid balance over the loan term. Daily simple interest means that interest is charged each day after applying any payment the Customer has made. All payments will be first applied to interest that is due and then to principal and other charges. Prepayment of the loan will be permitted without penalty.

e. The interest rate will be fixed for the term of a loan, at the weighted cost of long-term debt.

MAIN EXTENSIONS (cont'd)

66. Water System Connection Loan Program (cont'd):

f. Notwithstanding the provisions of subsection (e), the interest rate shall not exceed 8% per annum. In the event that the weighted cost of long term debt as calculated pursuant to subsection (e) would, except for the provisions of this subsection (f), exceed 8% per annum, the Company shall have the option to suspend the making of loans under this Rule.

g. A Customer account which includes a loan payment surcharge will not be transferred to any tenant or non-owner occupant of the residence for which a loan is made. During the loan term, the owner of the residence will remain the Customer in whose name the bill for water service will be issued. If the residence is sold, a new owner who demonstrates intent to be the continuing Customer of the Company at the residence may elect in writing on a form provided by the Company to assume responsibility for the loan payments, subject to the terms of the financing agreement. A copy of the election form will be returned to the Company prior to sale of the residence. If the new owner does not elect in writing on a form provided by the Company to assume responsibility for the loan payments or does not demonstrate intent to be the continuing Customer at the residence, the loan and accrued interest shall become immediately due and payable upon sale of the premises.

h. The loan surcharge reflected on Customer bills will be collected by the Company, subject to all provisions of Rules 11 through 18 and 54 regarding billing for water service, terms of payment, late-payment charges and discontinuance of water service for non-payment. A partial payment of a bill for water service shall be first applied to cover the Customer's obligation under the loan and then to charges for other water service.

For accounting purposes, the Company will establish subaccounts in which loan payments shall be recorded. In one subaccount, the Company will record amounts applied to principal and interest for the portion of the loan, if any, which relates to facilities owned and maintained by the Company under the applicable Rules. In another subaccount, the Company will record amounts applied to principal and interest for the portion of the loan, if any, which relates to facilities owned and maintained by the Customer under the applicable Rules. Loan payments shall be allocated between the two subaccounts based upon the relative initial cost of the facilities covered by that subaccount as compared to the total amount of the loan. For each subaccount, amounts received as loan payments will be first applied to interest that is due and then to principal and other charges.

If a loan becomes uncollectible, the unpaid principal balance of the portion of the loan, if any, which relates to facilities owned and maintained by the Company will be recorded as a debit to Contributions-In-Aid-Of-Construction, and as a credit to Accounts Receivable. The unpaid balance of interest with respect to such portion of the loan (as of the time of the debit) shall be recorded as an uncollectible account. The unpaid balance of principal and interest for the portion of a loan, if any, which relates to facilities owned and maintained by the Customer, shall be recorded as a non-utility expense.

The Company's capital structure used for rate-making purposes will not include short-term debt issued by the Company to finance loans under this Rule.

PRO-RATION OF BASE RATES ON CUSTOMER BILLS

67. Pro-ration of Base Rates on Customer Bills: During a period of changes to base rates, billing of base rates for Customers involves proration of the different base rates based on days of invoice. The fixed charge and the consumption for the entire period is divided by the number of service days to develop an average rate per day for purposes of bifurcating the consolidated charges at the old rate and at the new rate.

WAIVERS

68. Waivers: The Company may, at its sole discretion, waive any of the Rules contained herein that operate for the benefit of the Company; provided, that no such waiver will be valid unless in writing and signed by an authorized representative of the Company, and provided that no waiver will be allowed where the waiver would constitute a violation of the Public Utility Code, the regulations of the Commission or of any other applicable statute, law or regulation.

AMENDMENT OF COMMISSION REGULATIONS

69. Amendment of Commission Regulations: Whenever Commission regulations in Title 52 of the Pennsylvania Code are duly amended in such a way as would produce a difference between Commission regulations and this tariff, the tariff is deemed to be amended so as to be consistent with the amendments to the regulations, except that if application of the amendment to Title 52 is discretionary, this tariff will remain unchanged.

PRIVILEGE TO INVESTIGATE/RIGHT TO ACCESS

70. Privilege to Investigate/Right to Access: The Company shall have the right by its employees to have access at all reasonable times to all parts of any Premises connected with the system, including Meters, service connections and other property owned by it on the Premises of the Customer for the purpose of examining and inspecting the connections and fixtures, including the water and/or wastewater metering arrangement, or for disconnecting service for any proper cause or for purposes of replacement, maintenance, operation or repair thereof.

RULES AND REGULATIONS

Intentionally Blank

ATTACHMENT A

WATER SERVICE TERMINATION

TERMS AND CONDITIONS

NOW, THEREFORE, in consideration of the terms and conditions herein stated, the parties hereto, intending to be legally bound, agree as follows:

1. In order to initiate water service termination to a customer of the Water Company, by reason of that customer's delinquent sewer charges payable to the Authority, an authorized and responsible officer of the Authority shall cause to be delivered to the Water Company a written request for such termination, together with the following information:

    a. The name and address of the sewer service customer; if premises is tenant occupied, the name and address of the landlord and the name and address of the tenant;

    b. The address and lot number of the premises for which water service termination is sought;

    c. A statement that the sewer charges for such premises remain unpaid for a period of at least thirty days from the due date thereof;

    d. A statement setting forth: (i) that the Authority has fulfilled all applicable notice and procedural steps required of it by law, statute, regulations ordinances and other authorities, including, without limitation those mandated by the Water Services Act (53 P.S. §3102.501 et seq) and (ii) that the Authority has not received written or other information the effect of which would be to make water service termination unlawful.

2. Upon receipt of the information specified under Paragraph 1 hereof, the Water Company will promptly initiate water service termination procedures, in accordance with

the procedures outlined in this Agreement, unless it should decline to do so, in which event the Water Company shall notify the Authority of the reasons therefore.

3. The Water Company may decline to initiate water service termination in the following instances:

a. The involved premises is not receiving water service from the Water Company;

b. The Water Company's customer at the involved premises is a different person or entity than the Authority's sewer customer;

c. The water service to be terminated will adversely affect service to other Water Company customers, other premises served by the Water Company or the Water Company's delivery system;

d. The Water Company has received verbal or written notice prohibiting or requiring deferral of water service termination;

e. The nature of the facilities at the involved premises makes service termination impracticable;

f. The Water Company receives advice from its legal counsel that water service should not be terminated under the particular circumstances;

g. The termination of water service under the particular circumstances would be a violation of law or of applicable regulations;

h. Other reasons mutually agreed between the Authority and the Water Company.

In the event that the Water Company so declines to initiate water service termination procedures for any reason, the Water Company shall, upon request from the Authority, supply the Authority with a written statement of the reasons why the Water Company has declined to terminate water service at the particular premises. If the Authority should desire to contest the reasons offered by the Water Company, then such dispute shall be

resolved pursuant to the provisions of the Public Utility Code and/or the regulations of the Commission.

4. Under circumstances where the Authority initiates a request for water service termination procedures, it is understood and agreed that the Authority will comply with all applicable notice and procedural requirements relative to water service termination contained in the Water Services Act, the Utility Services Tenants Rights Act, the Pennsylvania Public Utility Code, the rules and regulations of the Commission, and the Water Company's rules and regulations contained in its tariff on file with the Commission

5. Exclusive of contact between the Water Company and its customer required to effect termination, it is understood that the Authority shall conduct all interaction and negotiations with the involved sewer customer, including without limitation, negotiations for payment of arrearages and all contact regarding pre-termination through post-termination procedures for dispute resolution. In addition, the Authority shall prepare and deliver to the Water Company a copy of the notice to the involved sewer customer, notifying such customer that inquiries as to the arrearage or any dispute relative thereto should be directed to a named representative or department of the Authority at a given telephone number and that no contact should be made to the Water Company. Furthermore, the Authority shall, at the request of the Water Company, cause an authorized representative to be present at the involved premises at the time of water service termination and at any time when the premises must be visited to effectuate required notices or perform service termination procedures. Such representative of the Authority will be the participant exclusively in any discussions with the involved customer. The final decision whether to terminate water service shall be made by the Authority representative in attendance, and the Water Company employee may rely exclusively upon that decision.

6. Concurrent with the delivery of the written request required under Paragraph 1 hereof, the Authority shall pay to the Water Company the fee as set forth in the Water Company's Tariff (see Termination of Service), as amended from time to time, per involved premises, which shall not be refundable unless the Water Company should decline to initiate water service termination. It is understood that the fee described above shall be automatically increased to coincide with the charges for shutting off water service contained in the Company's tariff as on file with and approved by the Commission. Except as otherwise provided herein, said sum shall constitute payment in full to the Water Company for its services hereunder, including conducting service termination and restoration visits to the involved premises and completing water service termination procedures. In addition, the Authority shall pay to the Water Company the fee as set forth in Rule 56 in Aqua's Water Tariff on file with the Commission, as amended from time to time, for each visit beyond the two visits per premises, which are required to effectuate water service termination at a particular premises. Furthermore, in the event that more than one hour is required to perform either the termination or restoration of water service to any involved premises, including travel time and time actually spent at the premises, the Authority shall pay the Water Company's actual costs of such visit, including labor, material, transportation and other fixed charges to the extent that such actual costs exceed the fee as set forth Rule 56 in Aqua's Water Tariff on file with the Commission, unless such additional costs are the result of error or lack of effort on the part of the Water Company or Water Company personnel.

7. As to each premises for which water service is terminated hereunder, the Authority shall pay to the Water Company the estimated loss of water revenues resulting therefrom which shall be calculated in the same manner that the Water Company uses in the ordinary course of business to calculate estimated monthly water bills. The estimated monthly consumption per premises shall be applied to the Water Company's tariff rates in effect

during the estimation period, including all minimum charges and surcharges. The total monthly estimated bill, so calculated, will be divided by 30 to determine the estimated daily rate. Estimated lost revenues shall be equal to the product of the estimated daily rate and the number of days water service was actually terminated at the involved premises. Estimated lost revenues shall be billed by the Water Company to the Authority, periodically, and at approximately the same time as the Water Company would have billed the involved customer if water service had not been terminated. The Authority shall pay each such bill within 30 days of receipt thereof. Upon request the Water Company will provide to the Authority the estimated daily rate of lost revenue for specific premises for which service termination is contemplated. The Authority's liability for the estimated loss of water revenues resulting from such shut off shall terminate when the Authority authorizes the Water Company to restore water service or when water service is actually restored, whichever is earlier.

8. The Authority agrees to hold the Water Company harmless from any liability that the Water Company may incur in performing or attempting to perform water service termination and the procedures therefore in accordance with the terms of this Agreement. The Authority further agrees that it will, at its sole expense, legally defend and prosecute any action arising out of such performance or attempted performance, brought against the Authority, the Water Company or their respective agents or employees as a result of which the Water Company may incur any such liability. The Water Company reserves the right to retain its own counsel and participate independently in such proceedings.

9. If a dispute shall arise between the Authority and the Water Company regarding the cost of the Water Company's services hereunder, the amount of revenues lost, or the interpretation of the provisions of this or any subsequent agreement between the Water Company and the Authority concerning payment for such services and lost revenues, such

dispute shall be submitted by either party to the Commission, pursuant to the Water Services Act (53 P.S. §3102.505(d)).

10. This Agreement shall continue until terminated by either party on not less than 30 days written notice to the other party.

11. The Water Company complies with the Commission's heat-related moratorium that runs from December 1 to April 1. The Authority may request that the Water Company discontinue water service for non-payment of sewer charges for non-heat related accounts between December 1 to April 1.

NOTICE

THIS TARIFF PROPOSES INCREASES IN RATES AND CHANGES IN RULES AND REGULATIONS OF SERVICE.

LIST OF CHANGES MADE BY THIS TARIFF

This proposed TARIFF SEWER-PA P.U.C. NO. 4 as filed by Aqua Pennsylvania Wastewater, Inc. on May 23, 2024 supersedes TARIFF SEWER-PA P.U.C. NO. 3 and its related supplements.

This proposed tariff also resets both the Distribution System Improvement Charge (DSIC) to zero percent and the State Tax Adjustment Surcharge (STAS) to zero percent, simultaneously with the effective date of new base rates.

RATE ZONE 1 – (cont'd)

Sewer Charge Adjustment for the Limerick Division

The Company is authorized to allow deductions on sewer bills for water which is used but does not enter the Company's system from April through October. A request for deduction shall be subject to the following regulations:

A. To be an eligible Customer for this credit, the Customer shall have applied for or shall have been currently using the credit as of the execution date of November 16, 2016, of the Asset Purchase Agreement between the Company and Limerick Township.

B. No deduction shall be granted for customers who do not have a metered water supply

C. No deduction shall be granted for customers who are delinquent in their payment for service.

D. One hundred percent of any used water for which a deduction is requested must have been prevented from entering the system.

E. It is the responsibility of the customer to purchase, install, and maintain the Company approved deduct meter at the approved and inspected water outlet on their property. The meter shall measure water not entering the system and shall be eligible for deduction of that used water monthly.

F. Customers are responsible for the installation and removal of their meters at the approved service locations each year to prevent freezing and damage. Deduct meters shall be inspected by the Company at the time of installation at which time the customer agrees to allow the Company the right to enter upon their property for inspection. Every deduct meter shall be required to be inspected annually by the Company in order for the customer to be eligible for sewer adjustment charges. The administrative fee charged by the Company to the customer is $50.00.

G. All deduct meters shall be of a design approved by the Company, shall be registered with the Company prior to use, and shall be used only by the customer to whom it is registered and at the service location to which it is assigned in accordance with the Company's records.

H. Eligible Customers are required to submit, or cause to be submitted, all data required to calculate the credit in a manner approved by the Company within a time period determined by the Company. The Company shall then credit the customer's total gallons consumed by the gallons recorded from the customer's deduct meter.

I. The Company shall be authorized to inspect meters for accuracy and calibration at any time the meter readings are suspect and/or not considered representative of usage. The customer shall be responsible for obtaining calibration of the meter if the Company determines it is not accurate. Failure to make such change or provide such calibration data will result in disqualification from the program.

J. All approved meters will be subject to the Company's backflow requirements.

RATE ZONE 1 – (cont'd)

Sewer Charge Adjustment for the Cheltenham Township Division

The Company is authorized to allow deductions on sewer bills for water which is used but does not enter the Company's system. A request for deduction shall be subject to the following regulations:

A. Deductions apply within the Cheltenham Division and, in particular, to those customers identified on Exhibit G of the Application filed by Aqua Pennsylvania Wastewater, Inc., dated March 13, 2019. The Application of the Company was approved by the Pennsylvania Public Utility Commission in its Order entered on November 5, 2019, at PUC Docket Number A-2019-3008491.

B. No deduction shall be granted for customers who do not have a metered water supply

C. No deduction shall be granted for customers who are delinquent in their payment for service.

D. One hundred percent of any used water for which a deduction is requested must have been prevented from entering the system.

E. It is the responsibility of the customer to purchase, install, and maintain the deduct meter at the approved and inspected water outlet on their property. The meter shall measure water not entering the system and shall be eligible for deduction of that used water monthly.

F. Customers are responsible for the installation and removal of their meters at the approved service locations each year to prevent freezing and damage. Deduct meters shall be inspected by the Company at the time of installation at which time the customer agrees to allow the Company the right to enter upon their property for inspection. Every deduct meter shall be required to be inspected annually by the Company in order for the customer to be eligible for sewer adjustment charges. The inspection fee charged by the Company to the customer is $100.00.

G. All deduct meters shall be of a design approved by the Company, shall be registered with the Company prior to use, and shall be used only by the customer to whom it is registered and at the service location to which it is assigned in accordance with the Company's records.

H. Customers are responsible for making their meter accessible to the Company for reading on a monthly basis. The Company shall then credit the customer's total gallons consumed by the gallons recorded from the customer's deduct meter.

I. The Company shall be authorized to inspect meters for accuracy and calibration at any time the meter readings are suspect and/or not considered representative of usage. The customer shall be responsible for obtaining calibration of the meter if the Company determines it is not accurate.

Wastewater customers in Cheltenham Township are required to comply with the City of Philadelphia's wastewater control regulations adopted by Cheltenham Township and included in Exhibit H to the Application filed at Docket No. A-2019-3008491.

Sewer Charge Adjustment for the East Norriton Township Division

The Company is authorized to allow deductions on sewer bills for water which is used but does not enter the Company's system from April through October. A request for deduction shall be subject to the following regulations:

A. To be an eligible Customer for this credit, the Customer shall have applied for or shall have been currently using the credit as of the execution date of October 29, 2018, of the Asset Purchase Agreement between the Company and East Norriton Township.

B. No deduction shall be granted for customers who do not have a metered water supply

C. No deduction shall be granted for customers who are delinquent in their payment for service.

D. One hundred percent of any used water for which a deduction is requested must have been prevented from entering the system.

E. It is the responsibility of the customer to purchase, install, and maintain the Company approved deduct meter at the approved and inspected water outlet on their property. The meter shall measure water not entering the system and shall be eligible for deduction of that used water monthly.

F. Customers are responsible for the installation and removal of their meters at the approved service locations each year to prevent freezing and damage. Deduct meters shall be inspected by the Company at the time of installation at which time the customer agrees to allow the Company the right to enter upon their property for inspection. Every deduct meter shall be required to be inspected annually by the Company in order for the customer to be eligible for sewer adjustment charges. The administrative fee charged by the Company to the customer is $50.00.

G. All deduct meters shall be of a design approved by the Company, shall be registered with the Company prior to use, and shall be used only by the customer to whom it is registered and at the service location to which it is assigned in accordance with the Company's records.

H. Eligible Customers are required to submit, or cause to be submitted, all data required to calculate the credit in a manner approved by the Company within a time period determined by the Company. The Company shall then credit the customer's total gallons consumed by the gallons recorded from the customer's deduct meter.

I. The Company shall be authorized to inspect meters for accuracy and calibration at any time the meter readings are suspect and/or not considered representative of usage. The customer shall be responsible for obtaining calibration of the meter if the Company determines it is not accurate. Failure to make such change or provide such calibration data will result in disqualification from the program.

J. All approved meters will be subject to the Company's backflow requirements.

Sewer Charge Adjustment for the Lower Makefield Township Division

The Company is authorized to allow deductions on sewer bills for water which is used but does not enter the Company's system from April through October. A request for deduction shall be subject to the following regulations:

A. To be an eligible Customer for this credit, the Customer shall have applied for or shall have been currently using the credit as of the execution date of September 17, 2020, of the Asset Purchase Agreement between the Company and Lower Makefield Township.

B. No deduction shall be granted for customers who do not have a metered water supply

C. No deduction shall be granted for customers delinquent in their payment for service.

D. One hundred percent of any used water for which a deduction is requested must have been prevented from entering the system.

E. It is the responsibility of the customer to purchase, install, and maintain the Company approved deduct meter at the approved and inspected water outlet on their property. The meter shall measure water not entering the system and shall be eligible for deduction of that used water monthly.

F. Customers are responsible for the installation and removal of their meters at the approved service locations each year to prevent freezing and damage. Deduct meters shall be inspected by the Company at the time of installation at which time the customer agrees to allow the Company the right to enter upon their property for inspection. Every deduct meter shall be required to be inspected annually by the Company in order for the customer to be eligible for sewer adjustment charges. The administrative fee charged by the Company to the customer is $50.00.

G. All deduct meters shall be of a design approved by the Company, shall be registered with the Company prior to use, and shall be used only by the customer to whom it is registered and at the service location to which it is assigned in accordance with the Company's records.

H. Eligible Customers are required to submit, or cause to be submitted, all data required to calculate the credit in a manner approved by the Company within a time period determined by the Company. The Company shall then credit the customer's total gallons consumed by the gallons recorded from the customer's deduct meter.

I. The Company shall be authorized to inspect meters for accuracy and calibration at any time the meter readings are suspect and/or not considered representative of usage. The customer shall be responsible for obtaining calibration of the meter if the Company determines it is not accurate. Failure to make such change or provide such calibration data will result in disqualification from the program.

J. All approved meters will be subject to the Company's backflow requirements.

Wastewater customers in Lower Makefield Township are required to comply with the wastewater control regulations adopted by Lower Makefield Township and included in Exhibit H to the Application filed at Docket No. A-2021-3024267.

RATE ZONE 7 – (cont'd)

Commercial and Industrial Users: a "High Volume User" is any commercial and industrial user, whose total quarterly sewage discharge or water consumption is greater than 100,000 gallons.

Wastewater customers in East Whiteland Township are required to comply with the wastewater control regulations adopted by East Whiteland Township and included in Exhibit H to the Application filed at Docket No. A-2021-3026132.

Special Charges:

Customers may apply for a credit to domestic water utilized outside of the property which does not enter the Company's sanitary sewer system; provided, that to be an eligible Customer for this credit, the Customer shall have applied for or shall have been currently using the credit as of the execution date of January 8, 2021 of the Asset Purchase Agreement between the Company and East Whiteland Township. Eligible Customers must have a properly calibrated outside meter upon their premises for the purpose of recording outside usage, and such meter shall be approved by the Company. All such costs of maintenance, repair, furnishing and installation of an approved meter shall be borne by the eligible Customer. Eligible Customers are required to submit, or cause to be submitted, all data required to calculate the credit in a manner approved by the Company within a time period determined by the Company.

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a surcharge of 0.00% shall apply to all bills issued on or after the Effective Date at the bottom of this page.

I. General Description

Purpose: To recover the reasonable and prudent costs incurred to repair, improve or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems. The costs of extending facilities to serve new customers are not recoverable through the DSIC. Utility projects receiving PENNVEST funding or using PENNVEST surcharges are not DSIC-eligible property.

Eligible Property: The DSIC-eligible property will consist of the following:

- Collection sewers, collecting mains and service laterals, including sewer taps, curb stops and lateral cleanouts installed as in-kind replacements for customers. Accounts. (360 & 361)

- Collection mains and valves for gravity and pressure systems and related facilities such as manholes, grinder pumps, air and vacuum release chambers, cleanouts, main line flow meters, valve vaults, and lift stations installed as replacements or upgrades for existing facilities that have worn out, are in deteriorated condition or are required to be upgraded by law, regulation or order. Accounts (360;361;362;363;364; & 365)

- Collection main extensions installed to implement solutions to wastewater problems that present a significant health and safety concern for customers currently receiving service from the wastewater utility. Accounts (360 & 361)

- Collection Main rehabilitation including inflow and infiltration projects. (Account 361)

- Unreimbursed cost related to highway relocation projects where a wastewater utility must relocate its facilities. Account (360;361;362;363;364; & 365)

- Other related capitalized costs. Account (389.2)

Effective Date: The DSIC will become effective for bills rendered on and after October 1, 2013.

II. Computation of the DSIC

Calculation: The initial charge, effective October 1, 2013, will be calculated to recover the fixed costs of eligible plant additions that have not previously been reflected in the Company's rates or rate base and will have been placed in service between June 1, 2013 and August 31, 2013. Thereafter, the DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three month periods ending one month prior to the effective date of each DSIC update. Thus, changes in the DSIC rate will occur as follows:

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

Effective Date of Change	Date to Which DSIC Eligible Plant Additions Reflected
April 1	December 1 to February 28/29
July 1	March 1 to May 31
October 1	June 1 to August 31
January 1	September 1 to November 30

The fixed costs of eligible distribution system improvement projects will consist of depreciation and pre-tax return, calculated as follows:

Depreciation: The depreciation expense will be calculated by applying to the original cost of DSIC-eligible property the annual accrual rates employed in the Company's last base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded.

Pre-tax Return: The pre-tax return will be calculated using the statutory state and federal income tax rates, the Company's actual capital structure and actual cost rates for long-term debt and preferred stock as of the last day of the three month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in the Company's last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission staff in the latest Quarterly Report on the Earnings of Jurisdictional Utilities released by the Commission.

DSIC Surcharge Amount: The charge will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for service under the Company's otherwise applicable rates and charges, excluding amounts billed for the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by the Company's projected revenue for wastewater service (including all applicable clauses and riders) for the quarterly period during which the charge will be collected.

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

Formula: The formula for calculation of the DSIC surcharge is as follows:

$$DSIC = \frac{(DSI * PTRR + STFT + Dep + e) \times 1/(1-T)}{PQR}$$

Where:

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences resulting from the use of accelerated depreciation per Internal Revenue Code, 26 U.S. Code § 168.

PTRR = Pre-tax return rate applicable to DSIC-eligible property.

STFT = (State Tax Flow Through) Pre-tax flow through calculated on book-tax timing differences between accelerated tax depreciation and book depreciation net of federal tax.

Dep = Depreciation expense related to DSIC-eligible property.

e = Amount calculated (+/-) under the annual reconciliation feature or Commission audit, as described below.

T = If applicable, Pennsylvania Gross Receipts Tax rate in effect during the billing month, expressed in decimal form.

PQR = Projected quarterly revenue will be based on the applicable three-month period, (including all applicable clauses and riders) including revenue from existing customers plus netted revenue from any customers which will be gained or lost by the beginning of the applicable service period.

Quarterly Updates: Supporting data for each quarterly update will be filed with the Commission and served upon the Bureau of Investigation & Enforcement, the Office of Consumer Advocate, Bureau of Audits and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

III. Customer Safeguards

All Customer Classes: The DSIC shall be applied equally to all customer classes, with the exception of Woodloch Pines and any future customers with negotiated contracts for which a reduction or exemption is shown to be reasonably necessary.

SCHEDULE OF RATES

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

Cap: The DSIC is capped at 5.00% of the amount billed to customers (including all applicable clauses and riders) as determined on an annualized basis.

Audits/Reconciliation: The DSIC will be subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1350, et seq., shall be credited to customer accounts. It will also be subject to an annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or the utility may elect to subject the DSIC to quarterly reconciliation but only upon request and approval by the Commission. The revenue received under the DSIC for the reconciliation period will be compared to the Company's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period commencing on April 1 of each year, or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on the over-collections and credits will be calculated at the residential mortgage-lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P. S. sec.101, et seq.) and will be refunded in the same manner as an over-collection. The utility is not permitted to accrue interest on under collections.

New Base Rates: The charge will be reset at zero as of the effective date of new base rates that provide for prospective recovery of the annual costs that had theretofore been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in the Company's rates or rate base would be reflected in the quarterly updates of the DSIC.

Earning Reports: The charge will also be reset at zero if, in any quarter, data filed with the Commission in the Company's then most recent Annual or Quarterly Earnings Report show that the Company will earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the DSIC as described in the Pre-tax return section. The utility shall file a tariff supplement implementing the reset to zero due to overearnings on one-days' notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that the utility has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.

Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change. An explanatory bill insert shall also be included with the first billing.

Residual E-Factor Recovery Upon Reset to Zero: The utility shall file with the Commission interim rate revisions to resolve the residual over/under collection or E-factor amount after the DSIC rate has been reset to zero. The utility can collect or credit the residual over/under collection balance when the DSIC rate is reset to zero. The utility shall refund any over-collection to customers and is entitled to recover any under collections as set forth in Section III Safeguards – Audits/Reconciliations. Once the utility determines the specific amount of the residual over or under collection amount after the DSIC rate is reset to zero, the utility shall file a tariff supplement with supporting data to address that residual amount. The tariff supplement shall be served upon the Commission's Bureau of Investigation and Enforcement, the Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the supplement.

SCHEDULE OF RATES

STATE TAX ADJUSTMENT SURCHARGE (STAS)

In addition to the net charges provided for in this Tariff, a surcharge of 0.00% will apply to all bills issued on or after the Effective Date at the bottom of this page for Rate Zones 1, 2, 3, 4, 5, 6, and 7.

The above surcharge will be recalculated using the element prescribed by the Commission in its policy at 52 PA Code section 69.51 et seq.:

- On or before March 31 of each year; and/or

- Whenever the Company experiences a material change in any of the taxes used in calculation of the surcharge due to a change in the applicable tax rates, or in the basis of calculating such tax rates, or due to changes in the state tax liability arising under the law.

The recalculation will be submitted to the Commission within 10 days after the occurrence of the event which occasions such recalculation or as prescribed in the Commission's regulations or orders. If the recalculated surcharge is less than the one in effect, the Company will, or if the recalculated surcharge is more than the one in effect, the Company may, submit with such recalculation a tariff or supplement to reflect such recalculated surcharge. The effective date of such tariff or supplement shall be 10 days after filing or as prescribed in the Commission's regulations or orders. In the event that the Company files an increased surcharge subsequent to 10 days after the occurrence of an event which occasions a recalculation, the effective date of such tariff or supplement shall be 60 days after filing in accordance with Section 1308(a) of the Public Utility Code, 66 Pa.C.S. § 1308(a) (regarding voluntary changes in rates), unless otherwise directed by the Commission.

The surcharge shall be rolled into base rates when increased or decreased base rates are made effective.

CUSTOMER ASSISTANCE PROGRAM RIDER

Customer Assistance Program ("CAP"):

I. Availability

The CAP is a program designed to enroll residential Customers who satisfy the criteria set forth below ("CAP Program").

Processing and verification by authorized agencies upon referral by the Company's offices, other agencies, or the Commissions Bureau of Consumer Services.

Residential Customer of the Company.

Annual income no greater than 200 percent of the federal poverty limit ("FPL"). For payment purposes Customers will be defined as follows:

a. Tier 1 – Customers whose annual income has been verified as being at or below 100 percent of FPL.

b. Tier 2 – Customers whose annual income has been verified as being at or above 100 percent FPL or less than 150 percent of FPL.

c. Tier 3 – Customers whose annual income has been verified as being at or above 150 percent FPL or less than 200 percent of FPL.

II. Rate Table

Eligible Customers will receive the discounted rate as set forth below:

Tier	Customer Charge	Consumption Charge
1	75% discount on Customer Charge	100% discount on first 2,000 gallons per month (or 6,000 per quarter)
2	65% discount on Customer Charge	50% discount on first 2,000 gallons per month (or 6,000 per quarter)
3	50% discount on Customer Charge	0% discount on first 2,000 gallons per month (or 6,000 per quarter)

Customers billed a flat bill

Rate Zone	Tier 1 Discount	Tier 2 Discount	Tier 3 Discount
1	63.65%	45.93%	25.66%
2	64.15%	46.77%	26.73%
3	65.28%	48.67%	29.15%
4	66.53%	50.78%	31.85%
5	67.21%	51.91%	33.29%
6	71.45%	59.05%	42.40%
7	63.65%	45.93%	25.66%

SCHEDULE OF RATES

CUSTOMER ASSISTANCE PROGRAM RIDER (cont'd)

III. Surcharges

All surcharges applicable under the Company's Rules and Regulations shall still apply to Customers under the CAP Program.

IV. Late Payment Charges

No late payment charges shall be applied to arrearages existing at the time the Customer begins receiving service under the CAP Program. Late payment charges will not be applied during participation in the CAP Program.

V. Rules and Regulations

If, at any time after acceptance into CAP, a Customer's family size or income changes, the Customer must notify the Company of the change within 30 days of the change. Failure to do so may result in the Company ending the Customer's opportunity to receive service under the CAP Program.

If a balance is owed at the time of enrollment such balance will be frozen as preprogram arrears and is eligible for a monthly credit of $25.00 for each on-time monthly payment.

If a Customer no longer satisfies the criteria set forth under Availability, the Customer will no longer be eligible to receive service under the CAP Program and any pre-program arrearages will become due.

At the time of application to the CAP Program, the Customer will be advised of the importance of timely payments. The CAP Program screening administrator will review relevant assistance programs and offer help in applying for such programs.

Failure to make payments will result in the Company returning the participant to the regular collection cycle and may lead to termination of service. To avoid termination, the participant must pay the amount set forth in the termination notice prior to the scheduled termination date.

RULES AND REGULATIONS

SECTION A – INTRODUCTION

These Rules and Regulations, files as part of the Company's Tariff, shall govern the manner in which wastewater service is provided to all Applicants and Customers. The Company may supplement these Rules and Regulations, and may revise and amend these Rules and Regulations from time to time subject to the approval of the Pennsylvania Public Utility Commission ("Commission"). The Company will follow Commission regulations not specifically addressed in these Rules and Regulations.

There are four classes of general metered service, based on the nature of the Customer and the use of the property receiving service, as follows:

Residential Class: An individually-metered or flat rate billed dwelling unit intended for human habitation (including a detached house, rowhome, townhouse, condominium and mobile home) or an individually-metered or flat rate billed home or building consisting of not more than two dwelling units.

Commercial Class: A building, store, restaurant, or office which is primarily a site for the buying or selling of goods or the provision of professional or consumer services. In addition, apartments, condominium complexes, colleges, private and public schools, car washes, laundromats, construction sites, hotels, and motels are included in this class.

Industrial Class: A building or factory which is primarily a site for the manufacture or production of goods.

Public: A public building, library, park, or playground which is owned by a governmental unit having the power of taxation.

RULES AND REGULATIONS

SECTION B - DEFINITIONS

Wherever used in the Rules and Regulations or elsewhere in the Company's Tariff, the following terms shall have the meanings hereinafter set forth:

Applicant: A person, at least 18 years of age, who is not currently receiving service but has applied to the Company for service and whose name appears on the mortgage, deed, or lease of the property for which service is requested.

Authorized or Duly Authorized Representative of the User:

(1) If the User is a corporation:

(a) The president, secretary, treasurer, or a vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

(b) The manager of one or more manufacturing, production, or operating facilities, provided the manager is authorized to make management decisions that govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiate and direct other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; can ensure that the necessary systems are established or actions taken to gather complete and accurate information for individual wastewater discharge permit requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

(2) If the User is a partnership or sole proprietorship: a general partner or proprietor, respectively.

(3) If the User is a Federal, State, or local governmental facility: a director or highest official appointed or designated to oversee the operation and performance of the activities of the government facility, or their designee.

(4) The individuals described in paragraphs 1 through 3, above, may designate a Duly Authorized Representative if the authorization is in writing, the authorization specifies the individual or position responsible for the overall operation of the facility from which the discharge originates or having overall responsibility for environmental matters for entity, and the written authorization is submitted to the Company.

Best Management Practices or BMPs: means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to implement the prohibitions listed in Section 2.1 of Section H of this tariff. BMPs include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw materials storage.

RULES AND REGULATIONS

SECTION B – DEFINITIONS (cont'd)

Biochemical Oxygen Demand or BOD5: The quantity of oxygen utilized in the biochemical oxidation of organic matter under standard laboratory procedures for five (5) days at 20 degrees centigrade, usually expressed as a concentration (e.g., mg/l).

Builder: Any person(s) requesting an extension to provide service to an existing lot or group of lots, either existing or to be subdivided, where service is to be provided to something other than a preexisting Residential Structure; namely, a newly constructed structure, structures to be constructed in the future, or to a preexisting non-residential structure.

Categorical Industrial User: An Industrial User who, if it were discharging to a POTW, would be subject to a categorical pretreatment standard or categorical standard.

Categorical Pretreatment Standard or Categorical Standard: Any regulation containing pollutant discharge limits promulgated by EPA in accordance with sections 307(b) and (c) of the FWPCA (33 U.S.C. § 1317) that apply to a specific category of Users and that appear in 40 CFR Chapter I, Subchapter N, Parts 405-471.

Chemical Oxygen Demand or COD: A measure of the oxygen required to oxidize all compounds, both organic and inorganic, in water.

Commission: The Pennsylvania Public Utility Commission.

Company: Aqua Pennsylvania Wastewater, Inc. and its duly authorized officers, agents, and employees; each acting within the scope of his/her authority and employment.

Company Service Lateral: The pipe or line extending laterally out from the Company collection Main that connects to the building service line at the hypothetical or actual curb line, edge of the right-of-way, or the actual property line, or easement line in the case where the Company collection Main is located within an easement.

Company's System: The aggregate of the Company's wastewater disposal plant, pumping equipment, trunk lines or Mains, and connection facilities to the curb-line at each premise.

Construction Costs: All direct and indirect costs attributable to the material and installation of the subject Main extension, services and appurtenances, and/or removal of existing Company facilities (including the net book value of property replaced or retired) whether incurred by the Builder or the Company.

Contributory Industrial User: Any Industrial User that the Company has determined discharges specific pollutants to the treatment works at concentrations greater than are found in typical domestic/commercial wastewaters.

Customer: A person at least 18 years of age, or entity who is an owner, occupant or who contracts with the Company for or who takes or receives wastewater collection, treatment and/or disposal service.

Customer Service Lateral: The connecting facilities owned by the Customer from the Company wastewater supply lines or Mains at the curb-line, Right-of-way line, or easement line into and within the Customer's premises.

SECTION B – DEFINITIONS (cont'd)

Daily Maximum: The arithmetic average of all effluent samples for a pollutant collected during a calendar day.

Daily Maximum Limit: The maximum allowable discharge limit of a pollutant during a calendar day. Where Daily Maximum Limits are expressed in units of mass, the daily discharge is the total mass discharged over the course of the day. Where Daily Maximum Limits are expressed in terms of a concentration, the daily discharge is the arithmetic average measurement of the pollutant concentration derived from all measurements taken that day.

Domestic Wastes: A combination of water-carried wastes, consisting of wash water, culinary wastes, and liquid wastes containing only human excreta and similar matter flowing in or from a building drainage system of sewer originating from residences, business buildings, institutions, and commercial establishments.

Environmental Protection Agency or EPA: The U.S. Environmental Protection Agency.

Equivalent Dwelling Unit or "EDU"**:** Except for existing Customers acquired by the Company through a purchase or acquisition and for billing purposes only, the EDU is a measure assigned by the Company based upon the estimated average daily wastewater flow for the type of business, as calculated by the PaDEP regulation at 25 Pa. Code § 73.17(b) divided by the Company's typical estimated average daily wastewater flow from a current single-family unit. Residential Customers are designated as one (1) EDU; however, in the Company's sole discretion, the Company may assign more than one (1) EDU for a residential Property.

For existing customers without a predetermined EDU allocation, the EDU is a measure based upon the estimated average daily wastewater flow for the type of business based on water usage, divided by the typical estimated average daily wastewater flow from a current single-family unit. For other existing customers acquired by the Company through a purchase or acquisition, the number of equivalent dwelling units is available at https://www.aquawater.com/about/states-we-serve/pennsylvania/index.php.

Any Customer who modifies their properties in a manner that impacts the EDU calculation, including in areas previously acquired by the Company, will be subject to the EDU definition described above. The Company will consider a Customer's request for a change in the number of assigned EDU's upon presentation of substantial evidence, satisfactory to the Company in its sole discretion. The Customer shall bear the burden of proof for all such requests.

Existing Source: Any source of discharge that is not a "New Source."

Federal Water Pollution Control Act (FWPCA), also known as the Clean Water Act, as amended, 33 U.S.C. § 1251 et seq.

SECTION B – DEFINITIONS (cont'd)

Grab Sample: A sample that is taken from a wastestream without regard to the flow in the wastestream and over a period of time not to exceed fifteen (15) minutes.

Grinder Pump: Any mechanical or powered device used to grind, macerate or fluidize waste so that it can be discharged into the Company's System. This device is a component of the Customer Service Lateral and the sole responsibility of the Customer to own, maintain, and operate along with the balance of their Customer Service Lateral. The Customer shall be responsible for all power to operate the device in accordance with the manufacturer's specifications and guidelines. If required by the PaDEP, the Customer shall enter into an operations and maintenance agreement with the respective municipality.

Indirect Discharge or Discharge: The introduction of pollutants into the Company's System from any nondomestic source.

Industrial Waste Discharge Permit or Contract: A wastewater permit or contract issued as required by the Company to an Industrial User.

Industrial Waste Pretreatment Program: A program established by the Company that requires discharges to monitor, test, treat and control as necessary, pollutants in a Customer's wastewater prior to discharge into the sanitary and/or combined sewer.

Instantaneous Limit: The maximum concentration of a pollutant allowed to be discharged at any time, determined from the analysis of any discrete or composited sample collected, independent of the industrial flow rate and the duration of the sampling event.

Interference: A discharge that, alone or in conjunction with a discharge or discharges from other sources, inhibits or disrupts the Company's System, its treatment processes or operations or its sludge processes, use or disposal; and therefore, is a cause of a violation of the Company's NPDES permit or of the prevention of sewage sludge use or disposal in compliance with any of the following statutory/regulatory provisions or permits issued thereunder, or any more stringent State or local regulations: section 405 of the FWPCA; the Solid Waste Disposal Act, including Title II commonly referred to as the Resource Conservation and Recovery Act (RCRA); any State regulations contained in any State sludge management plan prepared pursuant to Subtitle D of the Solid Waste Disposal Act; the Clean Air Act; the Toxic Substances Control Act; and the Marine Protection, Research, and Sanctuaries Act.

Line or Main Extension: An addition to the Company's System Mains which is necessary to serve the Premises of an Applicant or Customer.

Local Limit: Specific discharge limits developed and enforced by the Company upon industrial or commercial facilities to implement the general and specific discharge prohibitions identified in Section H of this tariff.

SECTION B – DEFINITIONS (cont'd)

Main: The Company's pipe used in transporting Wastewater, excluding Service Connections, which is located in a public highway, street, alley, or private right-of-way.

Maximum Allowable Industrial Loading: The maximum mass of pollutants that is allowed to be discharged to the treatment works from all contributory Industrial Users.

Medical Waste: Isolation wastes, infectious agents, human blood and blood products, pathological wastes, sharps, body parts, contaminated bedding, surgical wastes, potentially contaminated laboratory wastes, and dialysis wastes.

Monthly Average: The sum of all "daily discharges" measured during a calendar month divided by the number of "daily discharges" measured during that month.

Monthly Average Limit: The highest allowable average of "daily discharges" over a calendar month, calculated as the sum of all "daily discharges" measured during a calendar month divided by the number of "daily discharges" measured during that month.

SECTION B – DEFINITIONS (cont'd)

New Source:

(1) Any building, structure, facility, or installation from which there is (or may be) a discharge of pollutants, the construction of which commenced after the publication of proposed pretreatment standards under section 307(c) of the FWPCA that will be applicable to such source if such standards are thereafter promulgated in accordance with that section, and if such source were to discharge to a POTW, provided that:

(a) The building, structure, facility, or installation is constructed at a site at which no other source is located; or

(b) The building, structure, facility, or installation totally replaces the process or production equipment that causes the discharge of pollutants at an Existing Source; or

(c) The production or wastewater generating processes of the building, structure, facility, or installation are substantially independent of an Existing Source at the same site. In determining whether these are substantially independent, factors such as the extent to which the new facility is integrated with the existing plant, and the extent to which the new facility is engaged in the same general type of activity as the Existing Source, should be considered.

(2) Construction on a site at which an Existing Source is located results in a modification rather than a New Source if the construction does not create a new building, structure, facility, or installation meeting the criteria of Section (1)(b) or (c) above but otherwise alters, replaces, or adds to existing process or production equipment.

(3) Construction of a New Source as defined under this paragraph has commenced if the owner or operator has:

(a) Begun, or caused to begin, as part of a continuous onsite construction program

(i) any placement, assembly, or installation of facilities or equipment; or

(ii) significant site preparation work including clearing, excavation, or removal of existing buildings, structures, or facilities which is necessary for the placement, assembly, or installation of new source facilities or equipment; or

(b) Entered into a binding contractual obligation for the purchase of facilities or equipment which are intended to be used in its operation within a reasonable time. Options to purchase or contracts which can be terminated or modified without substantial loss, and contracts for feasibility, engineering, and design studies do not constitute a contractual obligation under this paragraph.

SECTION B – DEFINITIONS (cont'd)

Noncontact Cooling Water: Water used for cooling that does not come into direct contact with any raw material, intermediate product, waste product, or finished product.

Nondomestic Waste or Industrial Waste: Any wastewater resulting from any process of industry, manufacturing, trade, or business or from the development or recovery of any natural resource, or any mixture of such waste with water or domestic wastewater, as distinct from domestic wastewater.

PaDEP: The Pennsylvania Department of Environmental Protection.

Pass Through: A discharge which exits the Company's System into waters of the United States in quantities or concentrations which, alone or in conjunction with a discharge or discharges from other sources, is a cause of a violation of any requirement of the Company's NPDES permit, including an increase in the magnitude or duration of a violation.

Person: Any individual, partnership, copartnership, firm, company, corporation, association, joint stock company, trust, estate, governmental entity, or any other legal entity; or their legal representatives, agents, or assigns. This definition includes all Federal, State, and local governmental entities.

pH: A measure of the acidity or alkalinity of a solution, expressed in standard units.

Pollutant: Dredged spoil, solid waste, incinerator residue, filter backwash, sewage, garbage, sewage sludge, munitions, Medical Wastes, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, municipal, agricultural and industrial wastes, and certain characteristics of wastewater (e.g., pH, temperature, TSS, turbidity, color, BOD5, COD, toxicity, or odor).

Premise: A single lot or piece of ground consisting of a single Residential Structure, together with all buildings and structures erected thereon.

Pretreatment: Pretreatment. The reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to, or in lieu of, introducing such pollutants into the Company's System. This reduction or alteration can be obtained by physical, chemical, or biological processes; by process changes; or by other means, except by diluting the concentration of the pollutants unless allowed by an applicable pretreatment standard.

Pretreatment Requirements: Any substantive or procedural requirement related to pretreatment imposed on a User, other than a pretreatment standard.

Pretreatment Standards or Standards: Pretreatment Standards shall mean prohibited discharge standards, categorical pretreatment standards, and local limits.

Prohibited Discharge Standards or Prohibited Discharges: Absolute prohibitions against the discharge of certain substances; these prohibitions appear in Section 2.1 of Section H of this tariff.

RULES AND REGULATIONS

SECTION B – DEFINITIONS (cont'd)

Property: In general terms, a separate parcel of land owned in fee simple absolute, including any home(s), condominium(s), Home Owner's Association or building(s) affixed thereto, which is delineated by the description contained on the recorded deed, and which may be further delineated by any public roads.

Prospective Customer: Any owner, tenant, or lessee of a Property that is expected to be receiving wastewater service for at least one year following the commencement of wastewater service.

Publicly Owned Treatment Works or POTW: A treatment works defined by EPA in 40 CFR § 403.3(q).

Residential Structure: A home or building which contains metered or flat rate dwelling units intended for human habitation.

Sanitary Sewer: A sewer which primarily carries sanitary wastewater, together with such storm, surface and ground water as may be present.

Service Connection: The point at which the Company Service Lateral connects with the Customer Service Lateral.

Septic Tank Waste: Any sewage from holding tanks such as vessels, chemical toilets, campers, trailers, and septic tanks.

Shall: is mandatory; May is permissive.

SECTION B – DEFINITIONS (cont'd)

Significant Industrial User ("SIU"): A Significant Industrial User is:

(1) An Industrial User subject to categorial pretreatment standards, if it were discharging to a POTW; or

(2) An Industrial User that:

(a) Discharges an average of twenty-five thousand (25,000) gallons per day or more of process wastewater to the Company's System (excluding sanitary, noncontact cooling and boiler blowdown wastewater;

(b) Contributes a process wastestream which makes up five (5) percent or more of the average dry weather hydraulic or organic capacity of the Company's treatment plant; or

(c) Is designated as such by the Company on the basis that it has a reasonable potential for adversely affecting the Company's System operation or for violating any pretreatment standard or requirement.

(3) The Company may determine that an Industrial User subject to categorical pretreatment standards is a Non-Significant Categorical Industrial User rather than an SIU on a finding that the Industrial User never discharges more than 100 gallons per day of total categorical wastewater (excluding sanitary, noncontact cooling and boiler blowdown wastewater, unless specifically included in the pretreatment standard) and the following conditions are met:

(a) The Industrial User, prior to the Company's finding, has consistently complied with all applicable categorial pretreatment standards and requirements;

(b) The Industrial User annually submits the certification requirement in Section 6.13 of Section H of this tariff, together with any additional information necessary to support the certification statement; and

(c) The Industrial User never discharges any untreated concentrated wastewater.

(4) Upon a finding that a User meeting the criteria in subsection 2 of this definition has no reasonable potential for adversely affecting the Company's System operation or for violating an pretreatment standard or requirement, the Company may at any time, on it is own initiative or in response to a request received from an Industrial User, determine that such User should not be considered an SIU.

RULES AND REGULATIONS

SECTION B – DEFINITIONS (cont'd)

Slug Load or Slug Discharge: Any discharge at a flow rate or concentration, which could cause a violation of the prohibited discharge standards in Section 2.1 of Section H of this tariff. A Slug Discharge is any Discharge of a non-routine, episodic nature, including but not limited to an accidental spill or a non-customary batch Discharge, which has a reasonable potential to cause Interference or Pass Through, or in any other way violate these rules, local limits or permit conditions.

Stormwater: Any flow occurring during or following any form of natural precipitation, and resulting from such precipitation, including snowmelt.

Tariff: All the service rates, rules and regulations issued by the Company, together with any supplements and revisions thereto, officially approved by the Commission and contained in this document.

Total Suspended Solids (TSS) or Suspended Solids: The total suspended matter that floats on the surface of, or is suspended in, water, wastewater, or other liquid, and that is removable by laboratory filtering.

User or Discharger: Any person that discharges, causes, or permits the discharge of wastewater into the Company's System.

Waste: Rejected, unutilized, or superfluous substances in liquid, gaseous, or solid form resulting from domestic and nondomestic activities.

Wastewater: A combination of the water-carried waste from residences, businesses, buildings, institutions, and industrial establishments, together with any ground, surface, and storm water that may be present, whether treated or untreated, discharged into or permitted to enter the Company's System.

Wastewater Treatment Plant or Treatment Plant: That portion of the Company's System which is designed to provide treatment of domestic waste and industrial waste.

RULES AND REGULATIONS

SECTION C – APPLICATION FOR SERVICE

1. Application for Wastewater Service by a New Owner or Occupant at an Existing Service Property: Where a Customer's Service Lateral exists on a Property, service will be furnished by the Company as soon as reasonably practicable after written application of the Applicant or the Applicant's authorized agent is made and such application is approved by the Company. The Customer receiving service takes such service subject to the Company's Tariff, including its Rules and Regulations.

2. Application for Wastewater Service to a Proposed Service Property: Where an adequate sewer Main abuts the Customer's Property, a Service Connection will be made as soon as reasonably practicable after written application of the Applicant or the Applicant's authorized agent and such application is approved by the Company. Service Connection application forms will be furnished by the Company on request.

Where an adequate sewer Main does not abut the Customer's Property, the Customer must make necessary arrangements with the Company's New Business Office for the extension of sewer in accordance with the Company's Rules and Regulations, as discussed further in Section I of this Tariff.

3. Application and Discharge Requirements. All applications for service must be in writing on a form provided by the Company and signed by the owner or owners of the Property to which wastewater collection service will be provided; except that where a lessee of a Property occupies or uses the Property under a lease having a fixed term of more than six (6) months, the lessee may request service as an Applicant. The Company may, at its sole discretion, require that a separate contract for service be signed by the Applicant. The Applicant must provide all necessary and required documentation as determined in Company's sole discretion to evaluate the request for service.

Non-residential service Customers which desire to discharge Nondomestic Wastes into the Company's System or existing Industrial/Commercial Users which desire to commence operations of a new facility or a new or different process that will affect the characteristics of the wastewater discharging into the Sanitary Sewer, shall notify the Company prior to the commencement of the new or different operations at the facility and provide such other information regarding the proposed discharge as the Company may request, including an application for an Industrial Waste Discharge Permit when deemed necessary.

RULES AND REGULATIONS

SECTION D – CONSTRUCTION AND MAINTENANCE OF FACILITIES

1. Provision of Service:

- Connection of a Premise to the Company's System constitutes a contract for service subject to all Rules and Regulations and rate schedules as provided for in this Tariff.

- The Company will install a Company Service Lateral from the main to the curb, or such point as determined by the Company of a size and material determined by the Company in its discretion. Any additional or larger connection facilities requested by the Customer may be installed provided the proposed discharge into the system is within the capability of the system, complies with these Rules and Regulations, and the Customer pays the additional costs for the installation.

- No owner or tenant of any Premises connected with the Mains of the Company will be allowed to permit another person or premises to use or connect with its Customer Service Lateral, except upon written permit from the Company.

- Any violation of the Rules and Regulations of the Company shall render the contract between the Customer and the Company void, and service may be discontinued after due notice, remaining so until such time as the Company is satisfied that the Customer will observe the Rules and Regulations. Service will not be connected until the actual costs of the discontinuing and reconnections are paid in full.

Customer Service Lateral Inspection Fee

- Charge for the Company’s time involved in the inspection of a Customer Service Lateral tie-in to the Company’s wastewater system shall be fifty dollars ($50.00) per Customer Service Lateral.

2. Customer Service Lateral: The Customer Service Lateral shall extend from the Property to the Curb Stop or cleanout or such point as designated by the Company. All connections, Service Laterals and fixtures owned by the Customer shall be maintained by the Customer in good order, and all meters and appurtenances owned by the Company and located on the Property of the Customer shall be protected properly by the Customer. All leaks in or other deteriorated condition of the Customer’s Service Line or any other pipe or fixture in or upon the Premises supplied must be repaired immediately by the owner or occupant of the Premises.

3. Size, Kind, and Location of Service Laterals: The Company reserves the right to determine the size, kind and location of the Service Laterals, from the main to the curb, and from the curb to the property to be served. The Customer's Service Lateral shall not cross intervening properties unless the property is landlocked and there is no other way in which service can be provided (for example, because the property does not abut a public road) and an appropriate easement is obtained by the Customer for the Customer's benefit, a copy of which must be furnished to the Company. The service line from the curb stop or cleanout to the property shall be furnished, installed, owned, and maintained by the owner of the property, and where possible shall be laid in a straight line at right angles to the curb line within the building limits of the structure to be served and at a minimum depth of cover specified by the Company, and bedded in at least 6 inches of sand, in property owned in fee simple absolute.

SECTION D – CONSTRUCTION AND MAINTENANCE OF FACILITIES (cont'd)

4. Right to Reject: The Company may refuse to connect with any Customer Service Lateral or furnish wastewater collection, treatment and/or disposal through a service already connected if such system or service is not properly installed or maintained.

5. Separate Trench: The Customer Service Lateral shall not be laid in the same trench with drain or water pipe, the facilities of any other public utility or of any municipality or municipal authority that provides a utility service.

6. Customer Grinder Pump: In areas of the Company's System where the Company has installed a pressure sewage collection system or where required as determined by the Company, the Customer, in conjunction with the construction of their Customer Service Lateral, shall install, own, operate, and maintain and replace a Grinder Pump and holding tank at the Customer's expense as specified by the Company prior to connection and shall maintain such facilities in good order and repair. The Grinder Pump shall meet specifications as provided by the Company. The failure of a Customer to properly install and maintain a Grinder Pump, including replacement, shall construe grounds for the Company to initiate action to terminate service to the Customer and seek recovery for any damage to the Company's facilities caused by an improperly functioning Grinder Pump. In the case where PaDEP approval of the grinder pump installation is required to ensure the long-term operation and maintenance of the grinder pump in accordance with PaDEP regulation Title 25 Pa Code §71.72, the Customer may have to enter into an operations and maintenance agreement with the municipality in which the Customer is located.

RULES AND REGULATIONS

SECTION D – CONSTRUCTION AND MAINTENANCE OF FACILITIES (cont'd)

7. Individual Service Lines: Except as otherwise expressly authorized by the Company, each individual Customer shall be served only through a separate Customer Service Lateral connected directly to the Company Service Lateral, and that Customer Service Lateral shall not cross over the Property of or serve any other Customer or Premise. The maximum Customer Service Lateral length shall be two hundred and fifty (250) feet from the Service Connection(s) with clean-outs every 50 feet. The Company shall have the right to waive this maximum length requirement at its sole discretion. No additional attachment may be made to any Customer Service Lateral for any purpose without the express written approval of the Company.

8. Customer Responsibilities:

a. Use shall be restricted to Domestic Wastes, unless a special agreement is made satisfactory to the Company as to other uses. No Customer shall discharge into the system roof, storm, surface or ground water, swimming pools, drainage from cesspools or drain fields, cistern, combustible gases or liquids, insoluble solids, industrial type waste or other harmful substances. Any Customer discharging any unauthorized matter into the system, which causes damage to Company facilities or interferes with the operation of the system, will be required to cease using the system and pay whatever damages and costs are incurred as a result.

b. Each Customer Service Lateral shall be installed and maintained by or on behalf of the Customer at its expense and in full accordance with the Company's specifications as to materials, size, location and underground construction, starting at the curb-line at a location designated by the Company.

c. No sewer connection, or disconnection, shall be made to the Company's Main except under the supervision, control and approval of the Company's authorized representative. All such connections shall be property of the Company and shall be accessible to it and under its control. The Company will furnish, install, and maintain all Company Service Laterals from the Main to the property line or right of way.

d. No repairs, alterations, or additions to any drain or Service Connection with the Company's System shall be made, unless the person desiring to make the same shall first receive permission from the Company for doing so.

e. Connections with sewers that run through private property shall, in all respects, be governed by these Rules and Regulations.

SECTION D – CONSTRUCTION AND MAINTENANCE OF FACILITIES (cont'd)

9. Company's Service Lateral:

Except for Service Connections made in accordance with the section, "Main Extensions", the Company will make all connections to its Mains and furnish, install and maintain the Company Service Laterals from the Main up to the hypothetical or actual curb line, edge of the right-of-way or the actual property line. The Company Service Laterals will be the property of the Company and under its control.

The maximum Company investment per Company Service Lateral to a Bona Fide Service Applicant shall be calculated under the same formula as described in the "Company Contribution" of Section I, "Main Extensions", of this Tariff.

The cost of any Company Service Lateral in excess of the applicable maximum Company investment shall be paid by the Customer. The Company may require payment of the estimated amount of such excess cost in advance of the installation and will make a partial repayment of the extent the actual cost is determined to be less than the estimate.

RULES AND REGULATIONS

SECTION E – TERMINATION, DISCONTINUANCE, RESTORATION OF SERVICE, AND SERVICE CONTINUITY

Termination and Discontinuance of Service:

Termination and Discontinuance by the Company

1. Service may be terminated by the Company for any one of the following reasons:

a. Failure of a Customer to maintain and repair its Customer Service Lateral(s);

b. Failure of a Customer to pay a bill for service in accordance with the Commission's regulations;

c. Vacancy of the Premises;

d. Violation by a Customer, or with his consent, of any of these Rules and Regulations.

2. The Company may, without notice, discontinue wastewater service if an emergency reasonably requires it in order to make necessary repairs or connections or to meet any other emergency; however, the Company will give notice of any discontinuance of service if it is reasonably possible to do so.

3. If you are a victim of domestic violence and have a Protection From Abuse Order or other court order that shows clear evidence of domestic violence, there are special protections available.

Discontinuance by the Customer

1. A Customer desiring the discontinuance of wastewater service shall give written notice to the office of the Company and the Customer will be responsible for service charges until such notice is given. A new application must be made on any change of Customers on a Property as required at the office of the Company, and the Company shall be at liberty to discontinue the service until such new application has been made and approved.

2. The Customer desiring abatement from wastewater bills shall report same in writing or call in person at the office of the Company. All vacancies shall date from the day reported at the office of the Company. When vacancy is properly reported, an allowance will be made for the period of vacancy, but not for less than one month.

Restoration of Service: After termination of service it will not be reconnected until all amounts due to the Company have been paid plus the cost of a fifty dollar ($50.00) turn-on charge prior to service reconnection (with the exception of the Masthope Division).

SECTION E – TERMINATION, DISCONTINUANCE, RESTORATION OF SERVICE, AND SERVICE CONTINUITY (cont'd)

Service Continuity and Liability:

In the course of furnishing service that needs to be adequate, but not perfect, it is recognized that there will be times when service is subject to interruption or disruption as a result of Main breaks, the failure of equipment or facilities, and for other reasons. Accordingly, the liability of the Company shall be limited to two thousand dollars ($2,000.00) in any legal action brought against the Company for damages in connection with: 1) a service interruption or delay, or cessation or lack of adequate, efficient, safe and reasonable service and facilities; and/or 2) a failure of equipment, including, but not limited to, a break or leak in a Main, service line or Meter owned by the Company.

In any legal action where a court does not recognize, or is being asked to interfere with or hamper, the jurisdiction of the Commission to authorize limitations of liability or to exclusively determine whether the service and facilities of a public utility are in conformity with the regulations and Orders of the Commission, the public utility may certify to the Commission the question of the appropriateness of such court action by filing a petition for declaratory judgment with the Commission.

Furthermore, the Company shall not be liable in any action where the loss or damage involves an act of God or does not involve a duty of the Company, including breaks or leaks on facilities that are not owned by the Company, such as breaks, leaks, defects or conditions in the Customer's Service Line, Meter, internal plumbing or fixtures, or due to the materials out of which those facilities are made. Further, the Company shall not be liable in any action where the loss or damage does not involve a breach of a duty of the Company, including where the Company does not receive actual notice, either written or oral, that a Company facility (located within the public right-of-way, in a sidewalk or on a Customer's Property) is in need of repair that is not proven to have been in that condition at the time of installation or that is caused by a plumber, developer, or the person or event.

From time to time, the Company may provide public notices, specific notices, correspondence or other notifications ("Notices") regarding the presence of conditions affecting the wastewater service provided by the Company. These Notices may contain information about actions members of the public may wish to, are recommended to, or should take in response to the conditions identified in the Notice. In the event the Company issues a Notice, the Company will not be liable for any expenses or costs incurred by a Customer or end-user for any action taken in response to any condition identified in the Notice.

SECTION F – BILLING AND COLLECTION

Methods of Payment: Bills are payable by mail, by direct debit, in person at any authorized pay agency or as otherwise authorized by the Company. Amounts due for services must be made in one of the following formats: cash at a valid payment center, credit card, debit card, atm card, or personal check, business check, or money order issued by a properly licensed financial institution, or other commercially acceptable form of payment as determined by the Company.

Landlord Assumption of Responsibility: If an Applicant for service, who is a landlord, assumes responsibility for rates and charges related to wastewater service provided to tenants and is billed for such service, the landlord must assume responsibility and be billed for both water and wastewater service, if such service is provided or billed by the Company.

Billing History: A Customer may obtain from the Company; at no charge to the Customer, the billing history for up to ten accounts per year in the name of the Customer, provided that the Customer submits a written request for such information directly to the Company. Additional requests will be processed subject to the Company's right to charge the Customer its incremental costs of providing such billing histories.

Delinquent Bills: If a rendered bill remains unpaid for a period of 20 days for Residential Customers and 15 days for Non-Residential Customers, it shall be classified as delinquent. However, if the last day of such period falls on a Saturday, Sunday, a holiday or day when the Company's offices are closed, the delinquency date shall be the next succeeding business day. Payments by mail will be deemed made on the date of the postmark. Payments to the Company drop box or authorized payment agent will be deemed received when paid at that location. Service may be terminated for non-payment of bills in accordance with the Commission's regulations. If service is thus terminated, it will not be restored until all outstanding charges provided by the Commission's regulations and the Tariff of the Company are paid or satisfactory arrangements are entered for payment.

Late Payment Charge: If payment has not been received by the Company for five days after the bill has been classified as delinquent, a late charge (penalty) of 1.50% will be applied to the account and such late charge (penalty) will be calculated every thirty days thereafter only on the overdue portion of the bill excluding previous late charges (penalties), and in no event shall the late charge (penalty) exceed more than 18% annually (simple interest).

Return Check Charge and Return Electronic Payment Charge: The Customer will be responsible for the payment of a charge of $20.00 per incident where a check or electronic payment, which has been presented to the Company for payment of any bill, is returned by the bank for any reason including, but not limited to, non-sufficient funds, account closed, payment stopped, two signatures required, postdated, stale date, account garnished, no account, drawn against uncollected funds, balance held, and unauthorized signature. This charge is in addition to any and all charges assessed against the Customer by the bank. If a Customer's account shows a history of submitting payments that have been returned for insufficient funds or any other reason outlined above, the Company may require deposit or turn-on charges to be paid by cash, certified check, money order, or credit card or service may be terminated without additional notice in accordance with Commission regulations.

RULES AND REGULATIONS

SECTION F – BILLING AND COLLECTION (cont'd)

Turn-on Charge: When service has been terminated to any Premise because of violation of the Company's Rules and Regulations or at the Customer's request, a charge of fifty dollars ($50.00) payable in advance will be made for restoration of service. If the Customer request for restoration of service requires the Company to incur overtime or holiday costs, the Company reserves the right to bill the Customer for the additional cost incurred. If the Company incurs out of the ordinary expense to affect termination of service for non-payment of bills or due to lack of access to the Company's facilities, the Customer must reimburse the Company for those expenses in addition to the $50.00 turn-on charge prior to service reconnection.

Turn-off at Customer's Request: Customers desiring to avoid payment for wastewater service during periods when Properties are vacant or during extended absences shall give notice in writing at the office of the Company requesting the wastewater to be shut off. If a minimum charge or Customer charge for water use is applicable, the bill will be based on the proportion that the period when wastewater service was available bears to the entire period on which such minimum charge or Customer charge is based. Metered consumption in excess of such adjusted minimum shall be billed at normal rates.

Pro-ration of Base Rates on Customer Bills: During a period of changes to base rates, billing of base rates for Customers involves proration of the different base rates based on days of invoice. The fixed charge and the consumption for the entire period is divided by the number of service days to develop an average rate per day for purposes of bifurcating the consolidated charges at the old rate and at the new rate.

SECTION G – DEPOSITS AND CREDIT STANDARDS

General: Deposits may be required from Applicants for new service or extension of service. Residential Customers will not be required to pay a security deposit in order to receive service from the Company. The Company will pay income tax on any deposit, advance, contribution or other like amounts received from an Applicant which shall constitute taxable income to the Company as defined by the Internal Revenue Service and required by the Commission. Such income taxes shall be segregated in a deferred account for inclusion in rate base in a future base rate case proceeding. Such income tax associated with a deposit, advance, or contribution will not be charged to the Person providing such deposit, advance, or contribution.

Creditworthiness: Upon application for wastewater service, the Company may require the Applicant/Customer to provide valid identification, a valid deed lease or mortgage evidencing the Applicant/Customer's residency at the Property/Premise, and/or payment of an outstanding balance owed by the Customer which accrued within the past 4 years for which the Applicant/Customer is legally responsible.

The Company may determine liability for a past due balance by:

- Use of Company records that contain information previously provided to the Company;
- Information contained on a valid mortgage, lease or deed;
- Use of commercially available public records databases; and
- Government and property ownership record.

SECTION H – WASTEWATER CONTROL REGULATIONS

1. GENERAL PROVISIONS

1.1 Purpose and Policy

(a) These rules set forth uniform requirements applicable to Users of the wastewater collection, treatment, and disposal services provided by the Company and the nature of wastes acceptable for discharge into the Company's System, either directly or indirectly. In developing these rules, the Company was guided by the "EPA Model Pretreatment Ordinance" (January 2007) published by the U.S. Environmental Protection Agency ("EPA") for use by municipalities operating Publicly Owned Treatment Works ("POTWs") as well as EPA regulations designed to control pollutants discharged to POTWs at 40 CFR Part 403 (General Pretreatment Regulations for Existing and New Sources of Pollution). These rules shall apply throughout the Company's service territory.

(b) The objectives of these rules are:

(i) To prohibit the introduction of pollutants into the Company's System that will interfere with its operation or impact the quality or classification of the resulting sludge;

(ii) To prohibit the introduction of pollutants into the Company's System that will pass through the treatment works, inadequately treated, into receiving waters, or otherwise be incompatible with the System;

(iii) To protect both the Company's personnel who may be affected by wastewater and sludge in the course of their employment and the general public;

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(iv) To promote reuse and recycling of industrial wastewater and sludge from the Company's System;

(v) To provide for fees for the equitable distribution of the cost of operation, maintenance, and improvement of the Company's System;

(vi) To enable the Company to comply with its National Pollutant Discharge Elimination System permit conditions, its Water Quality Management ("WQM") Permit in the case of land application treated effluent disposal systems, sludge use and disposal requirements, and any other federal or state laws to which the Company's System is subject;

(vii) To require the pretreatment of wastewater discharged into the Company's System as appropriate and consistent with standards for pretreatment of wastewater that have been promulgated by the EPA or otherwise imposed by the PaDEP; and

(viii) To otherwise provide the conditions of wastewater collection, treatment and disposal service by the Company.

(c) These rules shall apply to all Users of the Company's System. These rules authorize the issuance of wastewater discharge permits; provide for monitoring, compliance, and enforcement activities; establish administrative review procedures; require user reporting; and provide for the setting of fees for the equitable distribution of costs resulting from the program established herein.

1.2 Administration

Except as otherwise provided herein, the Company shall administer, implement, and enforce these rules. Any powers granted to or duties imposed upon the Company may be delegated by the Company a duly authorized Company employee.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

1.3 Abbreviations

The following abbreviations, when used in these rules, or in the implementation of these rules, shall have the designated meanings:

BOD5 - Biochemical Oxygen Demand (5-day)

BMP - Best Management Practice

C - Celsius

CERCLA - Comprehensive Environmental Response, Compensation and Liability Act

CFR - Code of Federal Regulations

CIU - Categorical Industrial User

COD - Chemical Oxygen Demand

PaDEP - Pennsylvania Department of Environmental Protection

EPA - U.S. Environmental Protection Agency

F - Fahrenheit

FOG - Fats, Oils and Grease

gpd - gallons per day

IU - Industrial User

IPP - Industrial Pretreatment Program

IWDC - Individual Wastewater Discharge Contract

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

mg/l - milligrams per liter

MGD - Million Gallons per Day

NH3-N - Ammonia Nitrogen

NPDES - National Pollutant Discharge Elimination System

NSCIU - Non-Significant Categorical Industrial User

RCRA - Resource Conservation and Recovery Act

SIU - Significant Industrial User

TDS - Total Dissolved Solids

TKN - Total Kjeldahl Nitrogen

TN - Total Nitrogen

TP - Total Phosphorus

TSS - Total Suspended Solids

U.S.C. - United States Code

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

2. GENERAL SANITARY SEWER USE REQUIREMENTS

2.1 Prohibited Discharge Standards

(a) General Prohibitions. No User shall introduce or cause to be introduced into the Company's System any pollutant or wastewater which causes pass through or interference or damages the Company's System. These general prohibitions apply to all Users of the Company's System whether or not they are subject to categorical pretreatment standards or any other national, state, or local pretreatment standard or requirement.

(b) Specific Prohibitions. No User shall introduce or cause to be introduced into the Company's System the following pollutants, substances, or wastewater:

(i) Liquids, solids or gases that by reason of their nature or amount are, or may be, sufficient either alone or by interaction with other substances to cause fire or explosion or be injurious in any way to persons, the Company's System or the operation of the Company's System, including, but not limited to, any discharge with a closed-cup flashpoint of less than 140° F (60°C) using the test methods specified in 40 CFR § 261.21. At no time shall any wastewater cause two successive readings on an explosion hazard meter, at the point of discharge into the Company's System (or at any point in the Company's System), to be more than five percent (5%) nor any single reading to be over ten percent (10%) of the Lower Explosive Limit (LEL) of the meter.

(ii) Wastewater having a pH less than 6.0 or higher than 9.0 as measured by a grab sample, unless otherwise specified by the Company in an IWDC, or wastewater having other corrosive properties capable of causing damage or hazard to structures, equipment, or personnel of the Company's System.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(iii) Solid or viscous substances which may cause obstruction to the flow in the Company's System or other interference with the operation of the Company's System such as, but not limited to, grease, garbage (not properly shredded), animal guts or tissues, paunch manure, bones, hair, hides or fleshings, entrails, whole blood, feathers, ashes, cinders, sand, spent limestone or marble dust, bentonite, lye, building materials, rubber, leather, porcelain, china, metal glass, straw, shavings, grass clippings, rags, spent grains, spent hops, waste paper, wood, plastics, tar, asphalt residues, residues from refining or processing of fuel or lubricating oil, mud, or glass grinding or polishing wastes or any material which can be disposed of as trash.

(iv) Pollutants, including oxygen-demanding pollutants (BODS, etc.), released in a discharge at a flow rate and/or pollutant concentration which, either singly or by interaction with other pollutants, will cause interference with the Company's System.

(v) Wastewater with a temperature at the introduction into the Company's System which exceeds 120 degrees F (49 degrees C), or less than 32°F, or which will inhibit biological activity in the treatment plant resulting in interference, but in no case wastewater which causes the temperature at the introduction into the treatment plant to exceed 104 degrees F (40 degrees C).

(vi) Petroleum oil, motor oils or lubricants removed from vehicles or machinery, non-biodegradable cutting oil, or products of mineral oil origin, in amounts that will cause interference or pass through.

(vii) Pollutants in sufficient quantity which, either alone or by interaction with other pollutants, would result in the presence of toxic gases, vapors or fumes, cause worker injury or disruption of any wastewater treatment process, including the disposal of sludge, or be in non-compliance with any categorical or pretreatment standards established in accord with 40 CFR § 403.6.

(viii) Trucked or hauled pollutants, except at discharge points designated by the Company in accordance with subsection 2.10 of Section H of this tariff.

(ix) Noxious or malodorous liquids, gases, solids, or other wastewater which, either singly or by interaction with other wastes, are sufficient to create a public nuisance or a hazard to life, or to prevent entry into the Company's System for maintenance or repair.

RULES AND REGULATIONS

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(x) Wastewater which imparts color which cannot be removed by the treatment process, and which consequently imparts color to the treatment plant's effluent.

(xi) Wastewater containing any radioactive wastes or isotopes with half-lives or concentrations that exceed (A) measured background or naturally-occurring levels or (b) limits established by the Company.

(xii) Storm water, surface water, ground water, artesian well water, roof runoff, subsurface drainage, swimming pool drainage, condensate, deionized water, noncontact cooling water, and unpolluted wastewater, unless specifically authorized by the Company.

(xiii) Sludges, screenings, or other residues from the pretreatment of industrial wastes

(xiv) Medical wastes, except as specifically authorized by the Company in an IWDC.

(xv) Wastewater causing, alone or in conjunction with other sources, the treatment plant's effluent to fail toxicity test or otherwise create a toxic effect in receiving waters.

(xvi) Detergents, surface-active agents, or other substances that might cause excessive foaming in the Company's System.

(xvii) Discharge which is or contains hazardous waste or, if otherwise disposed of, would be considered hazardous waste.

(xviii) Any substance which may cause the treatment plant's effluent or any other product of the treatment plant, such as residues, sludge or scum, to be unsuitable for reclamation and reuse or to interfere with the reclamation process. In no case shall a substance discharged to the Company's System cause the Company to be in non-compliance with sludge use or disposal criteria, guidelines or regulations developed under Section 405 of the Federal Water Pollution Control Act ("FWPCA"), nor any criteria, guidelines, or regulations affecting sludge use or disposal developed pursuant to the Solid Waste Disposal Act, the Clean Air Act, the Toxic Substances Control Act, or state criteria applicable to the sludge management methods being used by the Company.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(xix) Any pollutant, including oxygen demanding pollutants and suspended solids, released at a flow rate and/or pollutant concentration which a User knows or has reason to know will cause interference or pass through to the Company's System. In no case shall a slug load have a flow rate or contain a concentration or quantity of a pollutant that exceeds for any time period longer than fifteen (15) minutes more than five (5) times the average twenty-four (24) hour permitted concentration, quantity, or flow during normal operation.

(xx) Any wastewater which because of its chemical nature or composition causes the sewer atmosphere to contain airborne chemical concentrations in excess of concentrations established by the U.S. Department of Labor, Occupational Safety and Health Administration ("OSHA") under 29 CFR Part 1910, regardless of duration of exposure experienced by any individual, unless written authorization is granted by the Company.

(xxi) Substances which will cause pass through or interference or otherwise cause the Company to violate its NPDES permit or air quality or receiving water quality standards, or that are prohibited by any permit issued by the Company, the Commonwealth of Pennsylvania or EPA.

(xxii) Wastes which are not amenable to biological treatment or reduction in existing treatment facilities, including but not limited to nonbiodegradable complex carbon compounds.

(xxiii) Wastewater containing any organic compounds of endrin, lindane, methoxychlor, toxaphene, dichlorophenoxyacetic acide, trichlorophenoxypropionic acid or other herbicides, pesticides or rodenticides.

(xxiv) Wastewater containing any of the pollutants listed on EPA's "Priority Pollutant List" (40 CFR Part 423, Appendix A), without authorization from the Company in an IWDC.

RULES AND REGULATIONS

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(c) Pollutants, substances, or wastewater prohibited by this section shall not be processed or stored in such a manner that they could be discharged to the Company's System.

(d) No User shall discharge wastewater to the Company's System in an amount exceeding the below general prohibitions. The Company may impose different limitations depending on the needs of a particular treatment plant or the Company's System:

Wastewater raw Waste strength shall be limited to that illustrated below:

		Maximum Allowable Limits (Grab Sample)	Maximum Allowable Limits (24 Hour Composite Sample)
BOD_5	(mg/l)	250	250
TSS	(mg/l)	250	250
COD	(mg/l)	500	500
Total Kjeldahl Nitrogen	(mg/l)	50	50
Total Phosphorus	(mg/l)	8	8
Ammonia Nitrogen	(mg/l)	45	45
pH	(s.u.)	6-9	N/A
Oil and Grease	(mg/l)	100	N/A

2.2 National Categorical Pretreatment Standards

(a) The National Categorical Standards found at 40 CFR Chapter I, Subchapter N, Parts 405-471 are hereby incorporated by reference. Any industrial User that would be a categorical industrial User under the provisions of one or more categorical standards if it were discharging to a POTW is a Significant Industrial User under these rules and is required to obtain an WDC as described in subsection 4 of this Section H, unless otherwise determined by the Company pursuant to these rules. The IWDC will reflect the effluent limitations and standards of the pertinent categorical standard(s). Although the Company is not subject to EPA's pretreatment regulations, the Company will use pertinent standards and requirements contained in 40 CFR, Chapter I, Subchapter N, Part 403 as guidance in administering and applying the categorical standards. Any categorical standard or local limit, if more stringent than the limitations imposed under an IWDC, shall immediately supersede the limitations imposed under the IWDC.

RULES AND REGULATIONS

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(b) Where a categorical standard is expressed only in terms of either the mass or the concentration of a pollutant in wastewater, the Company may impose equivalent concentration or mass limits in the manner described in 40 CFR § 403.6(c).

(c) When the limits in a categorical standard are expressed only in terms of mass of pollutant per unit of production, the Company may convert the limits to equivalent limitations expressed either as mass of pollutant discharged per day or effluent concentrations for purposes of calculating effluent limitations applicable to individual industrial Users.

(d) When wastewater subject to a categorical standard is mixed with wastewater not regulated by the same standard, the Company shall impose an alternate limit using the combined waste stream formula in 40 CFR § 403.6(e).

(e) Once included in its IWDC, an industrial User must comply with the equivalent limitations developed in this subsection 2.2 of this Section H in lieu of the categorical standard from which the equivalent limitations were derived.

(f) Where a categorical standard specifies one limit for calculating maximum daily discharge limitations and a second limit for calculating maximum monthly average (or 4-day average) limitations, the same production flow figure shall be used in calculating both the average and the maximum equivalent limitation.

(g) Any industrial User operating under an IWDC incorporating equivalent mass or concentration limits calculated from a production-based standard, as provided in paragraph (c) of this subsection 2.2, shall notify the Company within two (2) business days after the User has reasonable basis to know that the production level will significantly change within the next calendar month. Any User not notifying the Company of such anticipated change will be required to meet the mass or concentration limits in its IWDC that was based on the original estimate of the long term average production rate.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

2.3 Modification of National Categorical Pretreatment Standards

The Company may modify specific limits in a categorical pretreatment standard where appropriate for purposes of these rules or an IWDC. Although not subject to EPA's pretreatment regulations, the Company will utilize the standards and requirements contained in 40 CFR, Chapter I, subchapter N, Part 403 generally, and particularly sections 403.7 (removal credits), 403.13 (fundamentally different factors), and 403.15 (net limits), as guidance in considering any such modifications.

2.4 State and Federal Requirements

Applicable state or federal requirements and limitations on discharges shall apply in any case where they are more stringent than those in these rules.

2.5 Specific Pollutant Discharge Limitations - Local Limits

(a) All industrial Users shall be subject to the local limits applicable to their service area as specified in the Company's IPP.

(b) Local limits are the highest allowable concentrations in a discharge, unless otherwise specified in an IWDC.

(c) Local limits apply at the point where wastewater is discharged to the Company's System or at the point designated by the Company.

(d) The Company reserves the right to allocate among Users the total loading applicable to a particular pollutant by establishing maximum daily industrial concentrations specific to each User, provided that the total maximum allowable daily industrial load for the treatment plant is not exceeded.

(e) In addition to industrial Users, the Company reserves the right to apply local limits to any User's wastewater.

(f) The Company reserves the right to establish alternate limits in IWDCs in order to protect against pass through or interference or to assure that the Company complies with its NPDES permit and federal and state law. The alternate limits, if more stringent than the categorical standards, shall immediately supersede the categorical standards.

(g) The Company may develop BMPs in IWDCs to implement local limits and the requirements of subsection 2.1 of this Section H.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

2.6 Reservation of Right to Impose More Stringent Requirements

The Company reserves the right to establish, in IWDCs, more stringent limits or requirements on discharges to the Company's System, if deemed necessary, consistent with the purpose of these rules.

2.7 Dilution

No User shall ever increase the use of process water, or in any way attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with a discharge limitation unless expressly authorized by an applicable pretreatment standard or requirement. The Company may impose mass limitations on Users who are using dilution to meet applicable pretreatment standards or requirements, or in other cases when the imposition of mass limitations is appropriate.

2.8 Compliance with Other Applicable Standards and Requirements

Compliance with these rules and IWDCs or compliance or cessation directives issued hereunder does not relieve the industrial user from its obligations to comply with any and all applicable local, state, and federal standards and requirements including any such applicable standard or requirement that may become effective during the term of a permit or directive or these rules.

2.9 Grease Traps

Users shall install, operate and maintain interceptor/collector devices (e.g., traps) to capture and remove fats, oils and grease prior to discharge to the treatment works whenever the Company determines that such devices are necessary for the proper handling of wastewater. All such devices shall be designed and installed so as to accommodate the maximum flow rate expected to occur and to be readily and easily accessible for cleaning and inspection. The User shall be responsible for operating and maintaining the devices, including regular cleaning, to ensure that they consistently remove FOG prior to discharge to the Company's System. Alternatively, or in addition, the Company may require users to implement BMPs in order to eliminate FOG at the point of use and thereby reduce the generation of FOG in wastewater.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

3. PRETREATMENT OF WASTEWATER

3.1 Pretreatment Facilities - General

Users shall provide wastewater treatment as necessary to comply with these rules and shall achieve compliance with all categorical pretreatment standards, local limits, and the prohibitions set out in subsection 2.1 of this Section H within the time limitations specified by EPA, the state, or the Company, whichever is more stringent. Any facilities necessary for compliance, including the design, construction, operation, and maintenance of these facilities, shall be at the User's expense. Detailed plans describing such facilities and operating procedures shall be submitted to the Company for review, and shall be acceptable to the Company before such facilities are constructed. The review of such plans and operating procedures shall in no way relieve the User from the responsibility of modifying such facilities or procedures as necessary to produce a discharge acceptable to the Company under the provisions of these rules.

3.2 Additional Pretreatment Measures

(a) Whenever Deemed necessary, the Company may require Users to restrict their discharge during peak flow periods, designate that certain wastewater be discharged only into specific sewers, relocate and/or consolidate points of discharge, separate sewage wastestreams from industrial wastestreams, and such other conditions as may be necessary to protect the Company's System and determine the User's compliance with the requirements of these rules.

(b) The Company may require any person discharging to the Company's System to install maintain, on their property and at their expense, a suitable storage and flow-control facility to ensure equalization of flow. Provisions regarding flow equalization may be required in an IWDC.

(c) Grease, oil and sand interceptors or traps shall be provided when, in the opinion of the Company, they are necessary for the proper handling of wastewater containing grease and/or oil, or sand. All interception/trap units shall be of the type and capacity acceptable to the Company, and shall be located as to be readily and easily accessible for cleaning and inspection. Such interceptors/traps shall be inspected, cleaned and repaired by the User at the User's expense.

(d) Users are prohibited from discharging combustible or flammable substances into the Company's system. Users with the potential to discharge combustible or flammable substances may be required to install and maintain an approved combustible gas detection meter. The User shall immediately notify the Company in the event of a potential combustible or flammable discharge.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

3.3 Accidental Discharge/Slug Discharge Control Plans

(a) The Company shall evaluate whether each SIU needs an accidental discharge/slug discharge control plan or other action to control slug discharges. The Company may require any User to develop, submit for approval, and implement such a plan or take such other action that may be necessary to control slug discharges. Alternatively, the Company may develop such a plan for any User. An accidental discharge/slug discharge control plan shall address, at minimum, the following:

(i) Description of discharge practices, including nonroutine batch discharges;

(ii) Description of stored chemicals;

(iii) Procedures for immediately notifying the Company of any accidental or slug discharge, as required by subsection 6.6 of this Section H; and

(iv) Procedures to prevent adverse impact from any accidental or slug discharge. Such procedures include, but are not limited to, inspection and maintenance of storage areas, handling and transfer of materials, loading and unloading operations, control of plant site runoff, worker training, building of containment structures or equipment, measures for containing toxic organic pollutants, including solvents, and/or measures and equipment for emergency response.

(b) The Company may include conditions relating to implementation of an accidental discharge/slug discharge control plan when issuing an IWDC.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

3.4 Hauled Wastewater

(a) Septic tank waste may be introduced into the Company's System only at locations designated by the Company, and at such times as are established by the Company. Such waste shall not violate subsection 2 of this Section H or any other requirements established by the Company. The Company may require septic tank waste haulers to enter a separate agreement with the Company.

(b) The Company may require haulers of industrial waste to enter into an IWDC. The Company may require generators of hauled waste to enter into an IWDC. The Company also may prohibit the disposal of hauled industrial waste. The discharge of hauled industrial waste is subject to all other requirements of these rules.

(c) Industrial waste haulers may discharge loads only at locations designated by the Company. No load may be discharged without prior consent of the Company. The Company may collect samples of each hauled load to ensure compliance with applicable standards. The Company may require the industrial waste hauler to provide a waste analysis of any load prior to discharge.

(d) Industrial waste haulers must provide a waste-tracking form for every load. This form shall include, at a minimum, the name and address of the industrial waste hauler, the IWDC (as applicable), truck identification, names and addresses of sources of waste, and volume and characteristics of waste. The form shall identify the type of industry and all known or suspected waste constituents and confirm that no wastes are RCRA hazardous wastes.

3.5 Damage Liability

The person producing or introducing waste to the Company's System shall be liable for all damages, increased costs of treatment or maintenance, or other costs incurred by the Company directly attributable to such waste, including the costs of repairs, testing, consulting and all other costs associated with the damage. Any User violating any of the provisions of these rules shall be liable to the Company for all expenses, losses, or damages occasioned by the Company by reason of such violation, whether incidental or consequential.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

4. INDIVIDUAL WASTEWATER DISCHARGE CONTRACTS

4.1 Wastewater Analysis

When requested by the Company, a User must submit information on the nature and characteristics of its wastewater. Upon receipt of a questionnaire or IWDC application from the Company, a User shall have sixty (60) days (unless extended by the Company for good reason) to return the completed questionnaire or application, signed by an authorized representative of the User. The Company may periodically require Users to update this information.

4.2 IWDC Requirements

(a) No SIU shall discharge wastewater into the Company's System without first obtaining an IWDC from the Company.

(b) No person discharging industrial waste to the treatment works shall undertake any significant wastewater modification without first notifying the Company and obtaining a new or amended IWDC from the Company, except as authorized by the Company in accordance with the provisions of these rules.

(c) The Company may require that other Users obtain IWDCs as necessary to carry out the purposes of these rules.

(d) Any violation of the terms and conditions of an IWDC shall be deemed a violation of these rules and subjects the User to the sanctions set out in subsection 10 through subsection 11 of this Section H. Obtaining an IWDC does not relieve a User of its obligation to comply with all federal and state standards or requirements or with any other requirement of federal, state, and local law.

4.3 IWDC: Existing Connections

Any User required to obtain a IWDC who was discharging wastewater into the Company's System prior to the effective date of these rules and who wishes to continue such discharges in the future, shall, within ninety 90 days after said date, apply to the Company for an IWDC, and shall not cause or allow discharges to the Company's System after 180 days after the effective date of these rules except in accordance with an IWDC issued by the Company. Any User with an existing IWDC shall comply with their existing IWDC until the term of the IWDC ends, and shall be subject to these rules for any new IWDC required by the Company.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

4.4 IWDC: New Connections

Any User required to obtain an IWDC who proposes to begin or recommence discharging into the Company's System must obtain such IWDC prior to the beginning or recommencing of such discharge. An application for this IWDC must be filed at least 180 days prior to the date upon which any discharge will begin or recommence.

4.5 IWDC Application Contents

(a) All Users required to obtain an IWDC must submit a permit application. The Company shall provide the information requirements to the User upon request for an IWDC application, including, at minimum, the following:

(i) Identifying Information

1) The name and address of the facility, including the name of the operator and owner; and

2) Contact information, description of activities, facilities, and plant production processes on the premises.

(ii) Environmental Permits. A list of any environmental control permits held by or for the facility.

(iii) Description of Operations

1) A brief description of the nature, rate of production (including each product produced by type, amount, processes, and rate of production), and standard industrial classifications of the operation(s) carried out by such User. This description should include a schematic process diagram, which indicates points of discharge to the Company's System from the regulated processes;

2) Types of wastes generated, and a list of all raw materials and chemicals used or stored at the facility which are, or could accidentally or intentionally be, discharged to the Company's System;

3) Number and type of employees, hours of operation, and proposed or actual hours of operation;

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

4) Type and amount of raw materials processed (average and maximum per day);

5) Site plans, floor plans, mechanical and plumbing plans, and details to show all sewers, floor drains, and appurtenances by size, location, and elevation, and all points of discharge.

(iv) Time and duration of discharges.

(v) The location for monitoring all wastes covered by the IWDC.

(vi) Flow Measurement. Information showing the measured average daily, maximum daily, and 30 minute flow rates, in gallons per day, including daily, monthly, and seasonal variations if any, to the Company's System from regulated process streams and other streams, as necessary, to allow use of the combined wastestream formula set out in subsection 2.2(d) of this Section H (40 CFR §403.6(e)).

(vii) Measurement of Pollutants

1) The categorical pretreatment standards applicable to each regulated process and any new categorically regulated processes for existing sources.

2) The results of sampling and analysis identifying the nature and concentration, and/or mass, where required by the standard or by the Company, of regulated pollutants in the discharge from each regulated process.

3) Instantaneous, daily maximum, and long-term average concentrations, or mass, where required, shall be reported.

4) The sample shall be representative of daily operations and shall be analyzed in accordance with procedures set out in subsection 6.9 of this Section H. Where the standard requires compliance with a BMP or pollution prevention alternative, the User shall submit documentation as required by the Company or the applicable standards to determine compliance with the standard.

5) Sampling must be performed in accordance with procedures set out in subsection 6.10 of this Section H.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(b) Incomplete or inaccurate applications will not be processed and will be returned to the User for revision.

(c) Applicants wishing to claim confidentiality of information required in the application shall indicate on the application which information is of a confidential nature. Wastewater constituents and characteristics shall not be considered as confidential information.

4.6 Application Signatories and Certifications

(a) All wastewater IWDC applications, User reports and certification statements must be signed by an authorized representative of the User and comply with the requirements of the Company.

(b) If the designation of an authorized representative of the User is no longer accurate because a different individual or position has responsibility for the overall operation of the facility or overall responsibility for environmental matters for the User, a new written authorization satisfying the requirements of this Section must be submitted to the Company prior to or together with any reports to be signed by the authorized representative of the User.

(c) A facility determined to be a non-SIU by the Company must annually submit the signed certification statement in subsection 6.13 of this Section H.

4.7 IWDC Decisions

The Company will evaluate the data furnished by the User and may require additional information. The Company will determine whether to issue IWDC and may deny any application for an IWDC.

4.8 IWDC Renewal

(a) A user with an expiring IWDC shall apply for an IWDC reissuance by submitting an application to the Company a minimum of one hundred twenty (120) days prior to the expiration of the User's existing IWDC, unless the deadline is extended in writing by the Company.

(b) In the event that a timely and complete application to renew an IWDC has been submitted and the IWDC cannot be reissued before the expiration date, through no fault of the User, the terms and conditions of the existing IWDC will be automatically continued and will remain fully effective and enforceable pending the granting or denial of the application for IWDC renewal.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

5. INDIVIDUAL WASTEWATER DISCHARGE CONTRACT ISSUANCE

5.1 IWDC Duration

Individual IWDCs shall be issued for a specified time period, not to exceed five (5) years. A IWDC may be issued for a period less than five (5) years at the discretion of the Company. Each IWDC will indicate a specific date upon which it will expire.

5.2 IWDC Contents

(a) IWDCs shall be expressly subject to all provisions of these rules, the Company's IPP, and such other conditions as are deemed reasonably necessary by the Company to prevent pass through or interference, protect the quality of the water body receiving the treatment plant's effluent, protect worker health and safety, facilitate sludge management and disposal, and protect against damage to the Company's System.

5.3 IWDC Modification

(a) The Company may modify an IWDC for good cause, including, but not limited to, the following reasons:

(i) To incorporate any new or revised federal, state, or local pretreatment standards or requirements;

(ii) To address significant alterations or additions to the User's operation, processes, or wastewater volume or character since the time of the IWDC issuance;

(iii) A change in the Company's System that requires either a temporary or permanent reduction or elimination of the authorized discharge;

(iv) Information indicating that the permitted discharge poses a threat to the Company's System, Company personnel or the receiving waters;

(v) Violation of any terms or conditions of the IWDC;

(vi) Misrepresentations or failure to fully disclose all relevant facts in the IWDC application or in any required reporting;

(vii) Revision of or a grant of variance from categorical pretreatment standards as provided in 40 CFR § 403.13;

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(viii) To correct typographical or other errors in the IWDC; or

(ix) To reflect a transfer of the facility ownership or operation to a new owner or operator where requested in accordance with subsection 5.4 of this Section H;

5.4 IWDC Transfer

(a) IWDCs may be transferred to a new owner or operator only if the User gives at least thirty (30) days advance notice to the Company and the Company approves the IWDC transfer. The notice to the Company must include a written certification by the new owner or operator which:

(i) States that the new owner and/or operator has no immediate intent to change the facility's operations and processes;

(ii) Identifies the specific date on which the transfer is to occur; and

(iii) Acknowledges full responsibility for complying with the existing IWDC.

(b) Failure to provide advance notice of a transfer renders the IWDC void as of the date of facility transfer.

5.5 IWDC Revocation

(a) The Company may revoke an IWDC for good cause, including, but not limited to, the following reasons:

(i) Failure to notify the Company of significant changes to the wastewater prior to the changed discharge;

(ii) Failure to provide prior notification to the Company of changed conditions pursuant to subsection 6.5 of this Section H;

(iii) Misrepresentation or failure to fully disclose all relevant facts in an IWDC application;

(iv) Falsifying self-monitoring reports and certification statements;

(v) Tampering with monitoring equipment;

(vi) Refusing to allow the Company timely access to the facility premises and records;

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(vii) Failure to meet effluent limitations;

(viii) Failure to pay fees or sewer charges;

(ix) Failure to meet compliance schedules;

(x) Failure to complete a wastewater survey or the IWDC application;

(xi) Failure to provide advance notice of the transfer of business ownership of a facility with an IWDC; or

(xii) Violation of any pretreatment standard or requirement or any terms of an IWDC or these rules.

(b) If an IDWC is revoked, the Company may take steps it deems advisable, including severance of the sewer connection to terminate service, in order to promote compliance with these rules. The Company reserves the right to terminate wastewater service for violation of any provision of these rules, subject to the Commission's rules and regulations.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

6. REPORTING REQUIREMENTS

6.1 Baseline Monitoring Reports

(a) Within either one hundred eighty (180) days after the effective date of a categorical pretreatment standard, or the final administrative decision on a category determination under 40 CFR § 403.6(a)(4), whichever is later, existing categorical industrial Users currently discharging to or scheduled to discharge to the Company's System shall submit to the Company a report which contains the information listed in paragraph (b), below. At least ninety (90) days prior to commencement of their discharge, new sources, and sources that become categorical industrial Users subsequent to the promulgation of an applicable categorical standard, shall submit to the Company a report which contains the information listed in paragraph (b), below. A new source shall report the method of pretreatment it intends to use to meet applicable categorical standards. A new source also shall give estimates of its anticipated flow and quantity of pollutants to be discharged.

(b) Users described above shall submit the information set forth below.

(i) All information required in subsections 4.5(a)(i)(1), 4.5(a)(ii), 4.5(a)(iii)(1), and 4.5(a)(vi).

(ii) Measurement of pollutants.

1) The user shall provide the information required in subsection 4.5(a)(vii)(1) through 4.5(a)(vii)(4)

2) The User shall take a minimum of one representative sample to compile that data necessary to comply with the requirements of this paragraph.

3) Samples should be taken immediately downstream from pretreatment facilities if such exist or immediately downstream from the regulated process if no pretreatment exists. If other wastewaters are mixed with the regulated wastewater prior to pretreatment, the User should measure the flows and concentrations necessary to allow use of the combined wastestream formula in 40 CFR § 403.6(e) to evaluate compliance with the pretreatment standards. Where an alternate concentration or mass limit has been calculated in accordance with subsection 2.2 and 40 CFR § 403.6(e) this adjusted limit along with supporting data shall be submitted to the Company;

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

4) Sampling and analysis shall be performed in accordance with subsections 6.9 and 6.10;

5) The Company may allow the submission of a baseline report which utilizes only historical data so long as the data provides information sufficient to determine the need for industrial pretreatment measures;

6) The baseline report shall indicate the time, date and place of sampling and methods of analysis, and shall certify that such sampling and analysis is representative of normal work cycles and expected pollutant discharges to the Company's System.

(iii) Compliance Certification. A statement, reviewed by the authorized representative of the User and certified by a qualified professional, indicating whether pretreatment standards are being met on a consistent basis, and, if not, whether additional operation and maintenance ("O&M") and/or additional pretreatment is required to meet the pretreatment standards and requirements.

(iv) Compliance Schedule. If additional pretreatment and/or O&M will be required to meet the pretreatment standards, the shortest schedule by which the user will provide such additional pretreatment and/or O&M must be provided. The completion date in this schedule shall not be later than the compliance date established for the applicable pretreatment standard. A compliance schedule pursuant to this section must meet the requirements set out in subsection of this Section H.

(v) Signature and Report Certification. All baseline monitoring reports must be certified in accordance with subsection 6.13 of this Section H and signed by an authorized representative of the user.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

6.2 Compliance Schedule Progress Reports

The following conditions shall apply to the compliance schedule required by subsection 6.1(b)(iv) of this Section H.

(a) The schedule shall contain progress increments in the form of dates for the commencement and completion of major events leading to the construction and operation of additional pretreatment required for the User to meet the applicable pretreatment standards (such events include, but are not limited to, hiring an engineer, completing preliminary and final plans, executing contracts for major components, commencing and completing construction, and beginning and conducting routine operation);

(b) No increment referred to above shall exceed nine (9) months;

(c) The User shall submit a progress report to the Company no later than fourteen (14) days following each date in the schedule and the final date of compliance including, as a minimum, whether or not it complied with the increment of progress, the reason for any delay, and, if appropriate, the steps being taken by the User to return to the established schedule; and

(d) In no event shall more than nine (9) months elapse between such progress reports to the Company.

6.3 Reports on Compliance with Categorical Pretreatment Standard Deadline

Within ninety (90) days following the date for final compliance with applicable categorical pretreatment standards, or in the case of a new source following commencement of the introduction of wastewater into the Company's System, any User subject to such pretreatment standards and requirements shall submit to the Company a report containing the information described in subsections 4.5(a)(vi), 4.5(a)(vii) and 6.1(b)(ii) of this Section H. For Users subject to equivalent mass or concentration limits established in accordance with the procedures in Section 2.2(d) of this Section H, this report shall contain a reasonable measure of the User's long-term production rate. For all other users subject to categorical pretreatment standards expressed in terms of allowable pollutant discharge per unit of production (or other measure of operation), this report shall include the User's actual production during the appropriate sampling period. All compliance reports must be signed and certified in accordance with subsection 6.13 of this Section H. All sampling will be done in conformance with subsection 6.10.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

6.4 Periodic Compliance Reports

(a) All SIUs must submit reports to the Company on a quarterly basis, within thirty (30) days following the end of each calendar quarter, or on a more frequent basis as specified in the User's IWDC, indicating the nature, concentration of pollutants in the discharge which are limited by pretreatment standards and the measured or estimated average and maximum daily flows for the reporting period. In cases where the pretreatment standard requires compliance with BMPs or pollution prevention alternatives, the User must submit documentation required by the Company or the pretreatment standard necessary to determine the compliance status of the User.

(b) All periodic compliance reports must be signed and certified in accordance with subsection 6.13 of this Section H.

(c) All wastewater samples must be representative of the User's discharge. Wastewater monitoring and flow measurement facilities shall be properly operated, kept clean, and maintained in good working order at all times. The failure of a User to keep its monitoring facility in good working order shall not be grounds for the User to claim that sample results are unrepresentative of its discharge.

(d) If a User subject to the reporting requirement in this section monitors any regulated pollutant at the appropriate sampling location more frequently than required by the Company, using the procedures prescribed in subsection 6.10 of this Section H, the results of this monitoring shall be included in the report.

(e) SIUs not subject to categorical pretreatment standards under these rules shall submit periodic compliance reports as specified by the User's IWDC.

6.5 Reports of Changed Conditions

(a) Each User must notify the Company of any significant wastewater modification at least ninety (90) days before the change.

(b) The Company may require the User to submit such information as may be deemed necessary to evaluate the changed condition, including the submission of an IWDC application.

(c) The Company may issue a new IWDC or modify an existing IWDC in response to changed conditions or anticipated changed conditions.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

6.6 Reports of Potential Problems

(a) In the case of any discharge, including, but not limited to, an accidental discharge, a discharge of a nonroutine, episodic nature, a non-customary batch discharge, or a slug discharge or slug load, that might cause potential problems for the Company's System, the User, upon discovery, and after assessing the situation and taking initial corrective action, shall immediately telephone and notify the Company of the incident. This notification shall include the location of the discharge, type of waste, concentration and volume, if known, and corrective actions taken by the User.

(b) Within five (5) days following such discharge, the User shall, unless waived by the Company, submit a detailed written report including the date, time and duration of the discharge and describing the cause(s) of the discharge, all corrective actions implemented or attempted, and the measures to be taken by the User to prevent similar future occurrences. Such notification shall not relieve the User of any expense, loss, damage, or other liability which might be incurred as a result of damage to the Company's System, natural resources, or any other damage to person or property; nor shall such notification relieve the User of any fees or other liability which may be imposed pursuant to these rules.

(c) A notice shall be permanently posted on the User's bulletin board or other prominent place advising employees who to call in the event of a discharge described in paragraph (a), above. Employers shall ensure that all employees are advised of the emergency notification procedure.

(d) SIUs are required to notify the Company immediately of any changes at its facility affecting the potential for a slug discharge.

6.7 Reports from Users without an IWDC

All Users not required to obtain an IWDC shall provide appropriate reports to the Company as the Company may require.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

6.8 Notice of Violation/Repeat Sampling and Reporting

If sampling performed by a User indicates a violation, the User must notify the Company within twenty-four (24) hours of becoming aware of the violation. The User shall also repeat the sampling and analysis and submit the results of the repeat analysis to the Company within thirty (30) days after becoming aware of the violation. Resampling by the User is not required if the Company performs sampling at the User's facility at least once a month, or if the Company performs sampling at the User between the time when the initial sampling was conducted and the time when the User or receives the results of this sampling, or if the Company has performed the sampling and analysis in lieu of the User.

6.9 Analytical Requirements

All pollutant analyses, including sampling techniques, to be submitted as part of a IWDC or report shall be performed in accordance with the techniques prescribed in 40 CFR Part 136 and amendments thereto, unless otherwise specified in an applicable categorical pretreatment standard. If 40 CFR Part 136 does not contain sampling or analytical techniques for the pollutant in question, or where the Company determines that the Part 136 sampling and analytical techniques are inappropriate for the pollutant in question, sampling and analyses shall be performed by using validated analytical methods or any other applicable sampling and analytical procedures, including procedures suggested by the Company. The Company may specify appropriate alternative procedures in a User's IWDC.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

6.10 Sample Collection

(a) Samples collected to satisfy reporting requirements must be based on data obtained through appropriate sampling and analysis performed during the period covered by the report, based on data that are representative of conditions occurring during the reporting period.

(b) Except as indicated in subsections (c) and (d) below, the User must collect wastewater samples using 24-hour flow-proportional composite sampling techniques, unless time-proportional composite sampling or grab sampling is authorized by the Company. Where time-proportional composite sampling or grab sampling is authorized by the Company, the samples must be representative of the discharge. Using protocols (including appropriate preservation) specified in 40 CFR Part 136 and appropriate EPA guidance, multiple grab samples collected during a 24-hour period may be composited prior to the analysis as follows: for cyanide, total phenols, and sulfides, the samples may be composited in the laboratory or in the field; for volatile organics and oil and grease, the samples may be composited in the laboratory. Composite samples for other parameters unaffected by the compositing procedures as documented in approved EPA methodologies may be authorized by the Company, as appropriate. In addition, grab samples may be required to show compliance with instantaneous limits.

(c) Samples for oil and grease, temperature, pH, cyanide, total phenols, sulfides, and volatile organic compounds must be obtained using grab collection techniques.

(d) For sampling required in support of baseline monitoring and 90-day compliance reports required in subsections 6.1 and 6.3, a minimum of four (4) grab samples must be used for pH, cyanide, total phenols, oil and grease, sulfide and volatile organic compounds for facilities for which historical sampling data do not exist; for facilities for which historical sampling data are available, the Company may authorize a lower minimum. For the reports required by subsection 6.4, the User is required to collect the number of grab samples necessary to assess and assure compliance with applicable pretreatment standards and requirements.

6.11 Date of Receipt of Reports

Written reports will be deemed to have been submitted on the date postmarked. For reports which are not mailed, postage prepaid, into a mail facility serviced by the United States Postal Service, including reports submitted by electronic mail, the date of receipt of the report shall govern.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

6.12 Recordkeeping

Users subject to the reporting requirements of these rules shall retain, and make available for inspection and copying, all records of information obtained pursuant to any monitoring activities required by these rules, any additional records of information obtained pursuant to monitoring activities undertaken by the User independent of such requirements, and documentation associated with BMPs established under subsection 2.5(g) of this Section H. Records shall include the date, exact place, method, and time of sampling, and the name of the person(s) taking the samples; the dates analyses were performed; who performed the analyses; the analytical techniques or methods used; and the results of such analyses. These records shall remain available for a period of at least three (3) years. This period shall be automatically extended for the duration of any litigation concerning the User or the Company, or where the User has been specifically notified of a longer retention period by the Company.

6.13 Certification Statements

(a) Certification of Permit Applications, User Reports and Initial Monitoring Waiver - The following certification statement is required to be signed and submitted by Users submitting permit applications in accordance with subsection 4.6; Users submitting baseline monitoring reports under subsection 6.1(b)(v); Users submitting reports on compliance with the categorical pretreatment standard deadlines under subsection 6.3; and Users submitting periodic compliance reports required by subsection 6.4. The following certification statement must be signed by an authorized representative of the User:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

(b) A facility determined by the Company to be a non-SIU must annually submit the following certification statement signed an authorized representative of the User. This certification must accompany an alternative report required by the Company:

Based on my inquiry of the person or persons directly responsible for managing compliance with the Categorical Pretreatment Standards under 40 CFR_____, I certify that, to the best of my knowledge and belief that during the period from_____ to_____ [months, days, year]:

(a) The facility described as_____ [facility name] met the definition of a Non-Significant Categorical Industrial User as described in Section B of the rules and regulations specified in Aqua Pennsylvania Wastewater, Inc.'s Tariff under the definition of SIU; and

(b) The facility complied with all applicable Pretreatment Standards and requirements during this reporting period; and

(c) *The facility never discharged more than 100 gallons of total categorical wastewater on any given day during this reporting period*.

This compliance certification is based on the following information:

_____

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

7. COMPLIANCE MONITORING

7.1 Right of Entry: Inspection and Sampling

(a) In addition to the rights afforded to the Company as set forth in this tariff, the Company shall have the right to enter the premises of any User to determine whether the User is complying with all requirements of these rules and any IDWC or compliance directive issued hereunder. Users shall allow the Company ready access to all parts of the premises for the purpose of inspection, sampling, records examination and copying, and the performance of any additional duties.

(b) Where a User has security measures in force which require proper identification and clearance before entry into its premises, the User shall make necessary arrangements with its security guards so that, upon presentation of suitable identification, the Company shall be permitted to enter without delay for the purposes of performing specific responsibilities.

(c) The Company shall have the right to set up on the User's property, or require installation of, such devices as are necessary to conduct sampling or metering of the User's operations.

(d) The Company may require the User to install monitoring equipment as necessary. The facility's sampling and monitoring equipment shall be maintained at all times in a safe and proper operating condition by the User at its own expense. All devices used to measure wastewater flow and quality shall be calibrated at least one per year, and more frequently if necessary, to ensure their accuracy.

(e) Any temporary or permanent obstruction to safe and easy access to the facility to be inspected or sampled shall be promptly removed by the User at the written or verbal request of the Company and shall not be replaced. The costs of clearing such access shall be borne by the User.

(f) Unreasonable delays in allowing the Company access to the User's premises shall be a violation of these rules.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

8. CONFIDENTIAL INFORMATION

Information and data on a User obtained from reports, surveys, IWDC applications, IWDCs, and monitoring programs, and from the Company's inspection and sampling activities, shall be made available at the discretion of the Company, unless the User specifically requests, and is able to demonstrate to the satisfaction of the Company that the release of such information would divulge information, processes, or methods of production entitled to protection as trade secrets under applicable state or federal law. Any such request must be asserted at the time of submission of the information or data. When requested and demonstrated by the User furnishing a report that such information should be held confidential, the portions of a report which might disclose trade secrets or secret processes shall not be made available for inspection by the public, but shall be made available immediately upon request to governmental agencies for uses related to the NPDES program or pretreatment program, and in enforcement proceedings involving the person furnishing the report. Wastewater constituents and characteristics and other effluent data, as defined at 40 CFR § 2.302, shall not be recognized as confidential information and may be available to the public.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

9. FEES AND CHARGES

9.1 General Fees.

(a) IWDC Application Fee: $500.00

(b) IWDC Transfer/Modification/Renewal Fee: $200.00

(c) Facility Inspection Fee: $200.00 per inspection.

(d) Monitoring Report Review Fee: $200.00 per report.

(e) Accidental Discharge, Slug Control, and/or Monitoring Fee: Actual cost of response to accidental discharges or discharges of slugs loads, including but not limited to the costs incurred for any additional treatment or other actions required to manage such discharges, monitor and respond to such discharges, correct any resulting contamination or other impacts to the Company's System.

(f) Compliance and Enforcement Fee: Administrative and Legal: Actual cost incurred by the Company for investigation and actions to address a User's non-compliance with the terms of these rules or any IWDC.

(g) Damage Repair: Actual cost for cleaning, repair, replacement or correction of any damage to the Company's System caused or contributed to by a User's discharge.

9.2 Administration.

(a) All fees shall be payable by the User within forty-five (45) days of notification, or the User will be subject to such enforcement action deemed appropriate by the Company, including, but not limited to, termination of service and a revocation of the IWDC.

(b) Fees may be modified or amended as the Company deems necessary, subject to review and approval by the Commission.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

10. ADMINISTRATIVE ENFORCEMENT REMEDIES

10.1 General

Users of the Company's System are obligated to comply with applicable provisions of these rules, pretreatment standards, and the terms and conditions of IWDCs issued by the Company. Failure to comply with these requirements may lead to suspension or termination of service, IWDC revocation, assessment of costs, and/or legal action. In determining what enforcement remedies are appropriate, the Company, in its discretion, may consider the nature and extent of the violation, the harm or threat of harm presented by the discharge, the compliance history of the user, and whether the user is in "significant noncompliance" as defined by 40 CFR § 403.8(f)(2)(viii)(A)-(H), among other factors.

10.2 Notice of Violation

When the Company finds that a User has violated, or continues to violate, any provision of these rules, an IWDC, a compliance or cessation directive issued hereunder, or any pretreatment standard or requirement, the Company may deliver to that User a written notice of violation stating the nature of the violation(s). Within the timeframe set forth in such notice, an explanation of the violation and a plan for the satisfactory correction and prevention thereof, to include specific remedial actions, shall be submitted by the User to the Company. Submission of such a plan in no way relieves the User of liability for any violations occurring before or after receipt the notice. Nothing in this section shall limit the authority of the Company to take any action, including emergency actions or any other enforcement action, without first issuing a notice of violation.

10.3 Compliance Orders

When the Company finds that a User has violated, or continues to violate, any provision of these rules, an IDWC, a compliance order or Discontinue Notice issued hereunder, or any pretreatment standard or requirement, the Company may issue a compliance order to the User responsible for the discharge directing that the User come into compliance within a specified time. If the User does not come into compliance within the time provided, sewer service may be discontinued unless adequate treatment facilities, devices, or other related appurtenances are installed and properly operated. Compliance orders also may contain other requirements to address the noncompliance, including additional self-monitoring and management practices designed to minimize the amount of pollutants discharged to the Company's System. A compliance order may not extend the deadline for compliance established for a pretreatment standard or requirement, nor does a compliance order relieve the User of liability for any violation, including any continuing violation. Issuance of a compliance order shall not be a bar against, or a prerequisite for, taking any other action against the User.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

10.4 Discontinue Notice

(a) When the Company finds that a User has violated, or continues to violate, any provision of these rules, an IWDC, a compliance order or Discontinue Notice issued hereunder, or any pretreatment standard or requirement, or that the User's past violations are likely to recur, the Company may issue a Discontinue Notice to the User directing it to cease and desist all such violations and directing the User to:

(i) Immediately comply with all requirements; and

(ii) Take such appropriate remedial or preventive action as may be needed to properly address a continuing or threatened violation, including halting operations and/or terminating the discharge. Issuance of a cessation directive shall not be a bar against, or a prerequisite for, taking any other action against the user.

10.5 Emergency Response

(a) The Company may immediately suspend a User's discharge or the IWDC of any User, upon notice to the User, whenever such suspension is necessary, in the opinion of the Company, to stop an actual or threatened discharge, which presents or reasonably appears to present, or cause, an imminent or substantial endangerment to the health or welfare of persons. The Company may also immediately suspend a User's discharge, upon notice to the User, that causes or contributes to a violation of any condition of the Company's NPDES permit, or threatens to interfere with the operation of the Company's System, or which presents, or may present, an endangerment to the environment.

(b) Any User notified of a suspension of its discharge shall immediately stop or eliminate its discharge to the Company's System. In the event of a User's failure to immediately comply voluntarily with the suspension notice, the Company may take such steps as deemed necessary, including immediate severance of the sewer connection, to prevent or minimize damage to the Company's System, its receiving stream, or endangerment to any individuals or the environment.

SECTION H – WASTEWATER CONTROL REGULATIONS (cont'd)

11. JUDICIAL ENFORCEMENT REMEDIES

11.1 Injunctive Relief and Civil Actions

When the Company finds that a User has violated, or continues to violate, any provision of these rules, an IWDC, a compliance order or Discontinue Notice issued hereunder, or any pretreatment standard or requirement, the Company may petition the Court of Common Pleas in the county in which the User is located for the issuance of a temporary or permanent injunction, as appropriate, which restrains or compels the specific performance of the IWDC, compliance order, Discontinue Notice, or other requirement imposed by these rules. The Company also may seek such other action as is appropriate for legal or equitable relief, including a requirement for the User to conduct environmental remediation. A petition for injunctive or other judicial relief shall not be a bar against, or a prerequisite for, taking any other action against a User.

11.2 Remedies Nonexclusive

The remedies provided for in these rules are not exclusive and the Company may take any, all, or any combination of actions against a noncompliant User. As a general policy, however, the Company will seek to resolve compliance matters informally with a User before pursuing formal enforcement proceedings.

12. PROTECTION OF COLLECTION SYSTEMS

12.1 Service Areas Where the Company Provides Collection and Conveyance Only Service

In circumstances where the Company provides wastewater collection and conveyance services but not wastewater treatment services within a service territory, all Users shall comply with all rules, regulations and requirements established by the treatment plant operator and/or the municipality where wastewater is treated, including but not limited to requirements specifying prohibited discharges, assuring compliance with applicable pretreatment standards and discharge limitations, providing for user permitting, and assessing administrative and pollutant loading fees with respect to wastewaters that are not composed entirely of sanitary sewage.

RULES AND REGULATIONS

SECTION I – MAIN EXTENSIONS

General Provisions:

1. A Bona Fide Service Applicant ("Applicant") or Builder must include with the initial written request for a Main extension to the Company, the following information: location for service, gallons/day flow, and type of use. The Company will evaluate its ability to serve for the requested Main extension. Applicant or Builder must provide all necessary and required documentation as determined in Company's sole discretion to determine whether Main extension can be made. Once the Company has determined the Main extension can be made, Application and Company will develop and enter into an appropriate agreement(s).

2. The Company shall have the exclusive right to determine the type and size of Mains to be installed, and any other facilities or fixtures required to render adequate service

3. In determining the length and size of, and necessity for Main extensions, the terminal point of such extensions will, in all cases, be at that point in the curb-line which is equidistant from the side property lines of the lot for which wastewater service is requested. A street Service Connection will be provided only for service lines from the curb to the premises to be served, and will be installed in a straight line, at right angles, to the curb line. Where the Prospective Customer's Property is landlocked, the Prospective Customer may be required to obtain, at no cost to the Company, an easement or right-of-way that shall not cross multiple properties. The Prospective Customer shall present the Company with a certified copy of a duly recorded instrument that is recorded in the County Office of the Recorder of Deeds.

4. Should it be necessary, at the Company's sole discretion, to extend beyond the last lot in any street to connect to an existing Main to provide more adequate and reasonable service, this additional extension shall be considered part of the total and orderly system development so long as the last lot in the street is not more than one hundred fifty (150) feet from that existing Main, and may be included in the cost of the extension to be paid for by the Applicant or Potential Customer.

SECTION I – MAIN EXTENSIONS (cont'd)

Bona Fide Service Applicant Initiated Main Extensions:

1. Where an adequate wastewater collection Main does not abut an Applicant's Property such that a service connection cannot be made to serve such Property in accordance with these Rules and Regulations, the Applicant (or an authorized agent for the Applicant) must apply to the Company for a Main extension. Such extension will be made under and pursuant to the terms of a Sewer Extension Agreement (which may include a reasonable allowance for overhead costs) subject to applicable provisions of these Rules and Regulations. The construction of facilities to serve such Applicant will not commence until a Sewer Extension Agreement has been executed and all applicable terms and conditions therein have been satisfied by the Applicant.

   In conjunction with executing a Sewer Extension Agreement, an Applicant shall deposit with the Company an amount totaling $1,000, representing a Service Line Deposit. If the total cost to connect the Applicant exceeds the total of the Service Line Deposit and the Company's contribution to the extension, the Applicant will be required to pay the difference. However, if the Company's contribution to the extension fully funds the amount needed to connect the Applicant, the Service Line Deposit will be refunded to the Applicant within 90 days after the Applicant's requesting and receiving wastewater service from the Company, provided, however, that if the Applicant does not request connection to the Company's Main extension within six months of the completion of the Main extension, the Service Line Deposit shall become non-refundable.

   Where a proposed Main extension is capable of serving multiple structures or facilities and at least 80% of the Prospective Customers who could receive service from the Main extension become Bona Fide Service Applicants and satisfy all applicable terms and conditions of the foregoing provisions, the Customer Advance, if any, required of each Bona Fide Service Applicant shall be calculated as if 100% of such Prospective Customers had become Bona Fide Service Applicants.

   For a period of ten (10) years following completion of the Main extension, the Company shall refund to each Applicant his/her pro rata share of an amount equal to the Company Contribution for each additional Customer who attaches a service line to the main extension and requests service. No refunds shall be made, however, in those situations where at least 80%, but less than 100%, of the Prospective Customers who could receive service from the Main extension become Applicants and their Customer Advances are calculated as if 100% of such Prospective Customers had participated in the initial funding of the project. In addition, the total amount refunded shall not exceed the amount of the Customer Advance paid by the Applicant.

2. The Applicant must have complied with all other conditions of service provided elsewhere in these Rules and Regulations in order to receive wastewater service from the Main extension.

SECTION I – MAIN EXTENSIONS (cont'd)

Definitions:

Bona Fide Service Applicant ("Applicant"): shall mean a person or entity applying for wastewater service to an existing or proposed structure or facility within the Company's certificated service territory, and which is either: (1) the primary residence of the Applicant; (2) a place of business; or (3) a public school, building, library, park or playground which is owned by a governmental unit or school district having the power of taxation. A person or entity shall not be deemed a Bona Fide Service Applicant if: (1) applying for service to a building lot, subdivision, or a secondary residence; (2) the request for service is part of a plan for the development of a residential dwelling or subdivision; or (3) requesting Special Utility Service. To become an Applicant, a person or entity must file a signed application to connect the qualifying structure or facility with the Company's distribution system and request service to begin immediately following such connection.

Builder: Any person(s) requesting an extension to provide service to an existing lot or group of lots, either existing or to be subdivided, where service is to be provided to something other than a preexisting Residential Structure; namely, a newly constructed structure, structures to be constructed in the future, or to a preexisting non-Residential Structure.

Company Contribution: shall mean that portion of the Main extension costs which generate annual line extension costs equal to annual revenue from the line extension and that the Company will fund based upon the following formula, where X equals the Company Contribution attributed to each Bona Fide Service Applicant:

$$X = \frac{AR - O\&M}{(P*I) + D}$$

Whereby:

AR = the expected annual revenue from the Bona Fide Service Applicant based upon the Company's currently effective Tariff rates as established in the Company's last base rate case and on the average annual usage of customers similar in nature and size to the Bona Fide Service Applicant.

O&M = the average annual operating and maintenance expenses associated with serving an additional Customer, including customer accounting, billing and collection, wastewater treated, power purchased, chemicals, and other variable costs based on the current total Company level of such costs, as well as any costs particular to the specific needs of the Bona Fide Service Applicant.

I = the Company's current debt ratio multiplied by its weighted cost of long-term debt as established in the Company's last base rate case; and

D = the Company's depreciation accrual rate for facilities to be installed, as established in the Company's last base rate case.

RULES AND REGULATIONS

SECTION I – MAIN EXTENSIONS (cont'd)

Customer Advance: shall mean (1) the Estimated Cost of the wastewater Main extension less (2) the Company Contribution.

Line extensions to Bona Fide Service Applicants shall be funded without Customer Advance where the annual revenue from the line extension will equal or exceed the Company's line extension costs. If the annual revenue from the line extension will not equal or exceed the Company's line extension costs, a Bona Fide Service Applicant may be required to provide a Customer Advance to the Company's cost of construction for the line extension.

Where a Customer Advance is required, and the Bona Fide Service Applicant is unable to advance the entire amount due, the Company, at its sole option, will either (1) allow the Bona Fide Service Applicant to pay the remaining portion of the Customer Advance ratably over a period of not less than three years, or (2) provide information to the applicant on financial institutions that may offer financing to the Bona Fide Service Applicant for the line extension. If the Company chooses option (1), it may require that up to one-third of the total Customer Advance be deposited prior to extending its facilities and may recover from the Bona Fide Service Applicant, over the payment term selected, its costs of financing the construction by applying to the amount outstanding interest charges calculated at the then-prevailing residential mortgage lending rate specified by the Secretary of Banking in accordance with the act of January 30, 1974 (P.L. 13, No. 6), known as the Loan Interest and Protection Law.

RULES AND REGULATIONS

SECTION I – MAIN EXTENSIONS (cont'd)

Special Utility Service: shall mean residential or business service which exceeds that required for ordinary residential purposes. By way of illustration and not limitation, Special Utility Service shall include: the installation of facilities such as oversized mains, lift stations, disposal systems, wastewater treatment facility ("WWTF") expansion, etc., as necessary to handle increased flows, hydraulic loading and / or organic loading, or service to large wastewater producing commercial and industrial facilities. An otherwise Bona Fide Service Applicant requesting service which includes a "Special Utility Service" component is entitled to a Bona Fide Service Applicant status, including the corresponding Company contribution toward the costs of the line extension which does not meet the Special Utility Service criteria.

Builder Initiated Main Extensions: In the event any Main extension is requested or required to provide service to newly constructed structure(s) to be constructed in the future on existing or subdivided lots, or to preexisting non-Residential Structures except as provided below, the Builder shall be required to install the wastewater Main and service lines through a pre-qualified contractor retained by the Builder and to pay all costs related thereto. The Company has the sole right to accept or reject the proposed contractor. At the sole discretion of the Company, the Company may undertake construction of facilities otherwise subject to this Rule, in which event, a Builder's Extension Agreement shall be applicable except that the Builder will retain financial responsibility for the installation of the wastewater Main, service lines and appurtenances as specified herein.

Under the provisions of this Rule, prior to construction, the Builder must enter into a Builder's Extension Agreement, in a form acceptable to the Company, detailing the terms and conditions under which the Company will accept, and provide service through, facilities constructed by Builder. All construction costs, whether initially incurred by the Company or the Builder, related to the Main extension shall be the responsibility of the Builder. The Builder's Extension Agreement shall contain, at a minimum, the following terms and conditions:

1. Main and service line installation work shall be performed in accordance with the specifications and conditions of the Company.

2. All costs of material and installation required to serve Builder's lots shall be the responsibility of Builder. Builder shall contract directly with a pre-qualified contractor, recognized and approved by the Company, for all Main and service line installation work, and all appurtenances required to serve the project.

3. Any specialty material required to interconnect with the Company's existing facilities shall be provided by the Company.

4. Any construction involving preexisting facilities of the Company, including but not limited to relocation of existing facilities and connections of Mains or services with existing facilities, shall be performed only by the Company except where otherwise agreed upon by the Company in its sole discretion.

5. Builder's estimate of the cost of construction must be acceptable to the Company. Estimates which appear to be understated may be rejected by the Company in its sole discretion.

RULES AND REGULATIONS

SECTION I – MAIN EXTENSIONS (cont'd)

6. Builder shall obtain all necessary permits from federal, state and local authorities. If any of these authorities require the Company to obtain such permits, the Builder shall do all engineering, design, research and complete the application for the Company's submittal. Any fees associated with any such permits shall be the sole responsibility Builder.

7. All construction shall be subject to inspection by Company personnel. No trenches shall be backfilled prior to approval from Company inspectors.

Main Extensions to Governmental Bodies: The Company may negotiate and enter into customized Extension Agreements with Governmental Agencies where the main extension is for a public purpose and is funded entirely with public funds. These agreements may include a waiver of the tax requirements of the "Extension Agreement;" provided, however, that where such waiver is given, the Company will not refund any portion of the cost of the main extension.

SECTION J – WAIVERS

The Company may, at its sole discretion, waive any of the Rules and Regulations contained herein that operate for the benefit of the Company; provided, that no such waiver will be valid unless in writing and signed by an authorized representative of the Company, and provided that no waiver will be allowed where the waiver would constitute a violation of the Public Utility Code, the regulations of the Commission or of any other applicable statute, law or regulation.

SECTION K – AMENDMENT OF COMMISSION REGULATIONS

Whenever Commission regulations in Title 52 of the Pennsylvania Code are duly amended in such a way as would produce a difference between Commission regulations and this Tariff, the Tariff is deemed to be amended so as to be consistent with the amendments to the regulations, except that if application of the amendment to Title 52 is discretionary, this Tariff will remain unchanged.

SECTION L – PRIVILEGE TO INVESTIGATE/RIGHT TO ACCESS

The Company shall have the right by its employees to have access at all reasonable times to all parts of any Premises connected with the Company's System, including meters, Service Connections and other Property owned by it on the Premises of the Customer for the purpose of examining and inspecting the connections and fixtures, including the water and/or wastewater metering arrangement, or for disconnecting service for any proper cause or for purposes of replacement, maintenance, operation or repair thereof. The existing ground grade over any Sanitary Sewer in the utilities right of way shall not be changed nor shall any manhole be covered with earth and no shrubbery or trees be placed over Sanitary Sewer lines or facilities.

SECTION M – INDUSTRIAL AND COMMERCIAL SERVICE LIMITATIONS

Pretreatment: At the User's expense, all industrial and commercial waste proposed for discharge into the wastewater system shall be studied to determine the degree of Pretreatment, if any, necessary in order that the Waste will not adversely affect the Company's System, and for compliance with Section H of this tariff. The Company will have the authority to properly control any Waste discharged into the Company's System by regulating the rate of any Waste discharged into the Company's System by requiring necessary Pretreatment, and excluding certain Waste, if necessary, to protect the integrity of the Company's System.

Customer Limitations: Users specifically agree that service applies exclusively for domestic/household sewage. If any User discharges industrial or commercial Waste that:

- The existing wastewater treatment plant is unable to satisfactorily treat; or,

- Is not in compliance with discharge permit standards, disrupts the normal functioning of the existing wastewater treatment plant; or

- Requires the utilization of more wastewater treatment plant capacity per gallon of effluent than that required by average typical domestic wastewater.

Then the User shall provide, at the User's own expense, such Pretreatment as may be necessary before such Waste is discharged into the Company's System. No commercial or industrial Waste, whether pretreated or not, may be discharged without prior written authorization from the Company.

Company Limitations: The Company will not be liable nor bound to increase wastewater treatment plant operations to accommodate industrial or commercial Waste.

Specific Dangers: In general, any Waste will be considered harmful to the Company's System if it may cause any of the following damaging effects:

- Chemical reaction either directly or indirectly with the materials of construction of the Company's System in such a manner as to impair the strength or durability of the sewer structures;

- Mechanical action that will destroy the sewer structures;

- Restriction of the hydraulic capacity of the sewer structures;

- Restriction of the normal inspection or maintenance of the sewer structures;

- Danger to public health and safety; or

- Obnoxious condition contrary to public interest.

E	**Interest Expense**		
	Interest On Long-Term Debt	E-1	William C. Packer
	Amortization Of Debt Issuance & Premium/Discount On Debt	E-2	William C. Packer
	Other Interest Charges	E-3	William C. Packer
	Interest During Contruction	E-4	William C. Packer
F	**Income Taxes**		
	Summary Of Adjustments To Income Taxes	F-1	Panpilas Fischer
	Computation Of Federal And State Income Taxes Under Present And Proposed Rates	F-2	Panpilas Fischer
G	**Rate Base**		
	Rate Base As Of December 31, 2023, December 31, 2024 And December 31, 2025 Under Present And Proposed Rates	G-1	William C. Packer
	Rate Base - Utility Plant In Service & Accumulated Depreciation	G-2	Renee T. Marquis & John J. Spanos
	Rate Base - Utility Plant Acquisition Adjustments	G-3	Renee T. Marquis
	Rate Base - Materials And Supplies	G-4	William C. Packer
	Rate Base - Cash Working Capital Summary	G-5	Harold C. Walker
	Rate Base - Cash Working Capital - Calculation Of Lag Days In Receipt Of Revenue	G-5.1	Harold C. Walker
	Rate Base - Cash Working Capital - Calculation Of Lag Days In Payment Of Expenses	G-5.2	Harold C. Walker
	Rate Base - Cash Working Capital - Calculation Of Lag Days In Payment Of Taxes	G-5.3	Harold C. Walker
	Rate Base - Cash Working Capital - Calculation Of Lag Days In Payment Of Interest	G-5.4	Harold C. Walker
	Rate Base - Contributions In Aid Of Construction (CIAC) And Customer Advances For Construction (CAC)	G-6	Renee T. Marquis & John J. Spanos
	Rate Base - Deferred Income Taxes	G-7	Panpilas Fischer

Docket No. R-2024-3047822

AQUA PENNSYLVANIA, INC. - WATER BASE

WATER AND WASTEWATER REVENUE REQUIREMENT - SUMMARY

		Total Company	Water Base Operations	Water Shenandoah	Wastewater Base Operations	Wastewater Lower Makefield	Wastewater East Whiteland
Present Rate Revenue	(1)	$ 670,994,640	$ 596,344,820	$ 1,828,304	$ 57,682,604	$ 11,613,830	$ 3,525,082
Additional Revenue Requirement	(2)	126,675,472	87,930,589	2,267,908	25,957,548	3,526,708	6,992,719
Cost of Service Allocation	(3)	-	1,465,438	(1,465,438)	-	-	-
Act 11 Allocation	(4)	-	21,850,629	-	(17,747,873)	(958,164)	(3,144,592)
Proposed Revenues		$ 797,670,111	$ 707,591,475	$ 2,630,774	$ 65,892,280	$ 14,182,374	$ 7,373,208
Rate Increase/(Decrease) - $		$ 126,675,472	$ 111,246,656	$ 802,470	$ 8,209,676	$ 2,568,544	$ 3,848,126
Rate Increase/(Decrease) - %		18.88%	18.65%	43.89%	14.23%	22.12%	109.16%

Notes:

(1) Present Rate Revenues are developed in the schedules of Exhibits 1-A through 1-E that relate to each of these operations.

(2) Additional Revenue Requirement are developed in the schedules of Exhibits 1-A through 1-E that relate to each of these operations.

(3) Cost of Service Allocation from Water Shenandoah to Water Base Operations.

(4) Act 11 Allocation is the allocation between wastewater operations and water operations is achieved by the proposed consolidation of water and wastewater revenue requirements to derive the water and wastewater rates proposed by the Company in this case.

ELIMINATE TWIN LAKES AND VENANGO REVENUE

Beginning January 15, 2021, the Company was appointed receiver for Twin Lakes Utilities, Inc. at Docket No. P-2020-3020914.
Beginning August 12, 2023, the Company was appointed receiver for the Venango Water Company at Docket No. M-2023-3042180.
The following adjustment removes the revenue collected from Twin Lakes and Venango during the test year which
was recorded above the line. Refer to Schedule C-10.1 and Schedule C-10.2 of this exhibit for the removal of Twin Lakes and Venango expenses.

OPERATING EXPENSES

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of water customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

CHEMICALS

The company utilizes various chemicals in the water treatment process. The chemical expense claim is based on the total production gallons for the twelve months ended December 31, 2023 multiplied by the normalized chemical treatment cost per million gallons. The cost per million gallons for the historic test year was increased by a normalized average year over year growth rate to arrive at the treatment cost per million gallons for the future and fully projected future test years.

NOTES TO STATEMENT OF INCOME

AMORTIZATION OF DEBT ISSUANCE & PREMIUM/DISCOUNT ON DEBT

Since the debt discount and expense is considered in calculating the cost rate of debt used to calculate interest on long-term debt, it should be eliminated.

OTHER INTEREST CHARGES

Other Interest Charges for the year ending December 31, 2023 were principally for funds borrowed through bank loans to finance the Company's capital expenditures. The bank loans outstanding are anticipated to be refinanced with long-term debt prior to the end of the future test year. Therefore, the interest on bank loans is eliminated.

(1) Washington Park and Sleepy Hollow are exceptions to the treatment of negative acquisition adjustments as provided for in Section 1327 of the Public Utility Code because it was stipulated in the order approving their acquisition (Docket No. A-230550F2000) that rate base for rate making purposes would be limited to purchase price. To accomplish that requirement, the negative acquisition adjustment had to be included as a deduction to rate base.

AQUA PENNSYLVANIA, INC. - WATER BASE

NOTES TO RATE BASE ELEMENTS

MATERIALS AND SUPPLIES

The Company's claim for materials and supplies at December 31, 2024 and December 31, 2025 is calculated on the basis of the average monthly balances in the materials and supplies account during the period December 2022 to December 2023.

LINE NO.	MONTH	YEAR		BALANCE
1	December	2022	$	19,696,718
2	January	2023		19,374,554
3	February	2023		18,714,106
4	March	2023		18,112,695
5	April	2023		16,948,305
6	May	2023		16,750,637

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of water customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

LINE NO.	DESCRIPTION

CHEMICALS

The company utilizes various chemicals in the water treatment process. The chemical expense claim is based on the total production gallons annualized for the twelve months ended December 31, 2023 multiplied by the normalized chemical treatment cost per million gallons. The cost per million gallons for the historic test year was increased by an average year over year growth rate to arrive at the treatment cost per million gallons for the future and fully projected future test years.

NOTES TO STATEMENT OF INCOME

OPERATING EXPENSES

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of wastewater customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

CALCULATION OF LAG DAYS IN RECEIPT OF REVENUE

The time between rendering of a bill and receipt of payment is determined by dividing the average accounts receivable balances for the test year by the average daily billing as follows:

LINE NO.	MONTH	YEAR	BALANCE
	(1)	(2)	(3)
1	December	2022	$ 7,130,340
2	January	2023	5,536,846
3	February	2023	6,855,431
4	March	2023	4,756,415
5	April	2023	5,397,316
6	May	2023	4,930,228
7	June	2023	5,908,335
8	July	2023	5,719,491
9	August	2023	5,352,732
10	September	2023	6,678,882
11	October	2023	5,473,376
12	November	2023	5,448,339
13	December	2023	6,470,309
14	Total		$ 75,658,040
15	Average Accounts Receivable Balance		$ 5,819,849
16	Gross Utility Wastewater Revenues recorded		
17	During the Twelve Months Ended 12/31/2023		$ 58,270,675
16	Average Daily Billing		$ 159,646
18	Lag in Receipt of Payment		36.5
19	Average Use Period (a)		15.2
20	Bill Issue Period		2.0
21	Lag Days in Receipt of Revenue		53.7

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of wastewater customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of wastewater customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

LINE NO.	DESCRIPTION

CALCULATION OF LAG DAYS IN RECEIPT OF REVENUE

The time between rendering of a bill and receipt of payment is determined by dividing the average accounts receivable balances for the test year by the average daily billing as follows:

LINE NO.	MONTH	YEAR	BALANCE
	(1)	(2)	(3)
1	December	2022	$ 405,947
2	January	2023	359,706
3	February	2023	395,951
4	March	2023	394,182
5	April	2023	407,203
6	May	2023	354,454
7	June	2023	339,041
8	July	2023	346,628
9	August	2023	343,027
10	September	2023	332,120
11	October	2023	332,592
12	November	2023	356,121
13	December	2023	365,270
14	Total		$ 4,732,241
15	Average Accounts Receivable Balance		$ 364,019
16	Gross Utility Wastewater Revenues recorded		
17	During the Twelve Months Ended 12/31/2023		$ 3,516,854
16	Average Daily Billing		$ 9,635
18	Lag in Receipt of Payment		37.8
19	Average Use Period (a)		15.2
20	Bill Issue Period		2.0
21	Lag Days in Receipt of Revenue		55.0

Re: Docket No. M-2018-2645983
Pa. P.U.C. v. North Heidelberg Sewer Company

Docket No. I-2018-3001161
Section 529 Investigation – North Heidelberg Sewer Company

Dear Secretary Chiavetta:

Pursuant to the Commission's Statement Policy relating to water and wastewater system acquisitions at 52 Pa. Code § 69.721(f) enclosed is a copy of the original plant-in-service valuation of the wastewater system assets acquired from the North Heidelberg Sewer Company on March 31, 2023. Aqua Pennsylvania Wastewater, Inc. is also serving these documents to the Bureau of Technical Utility Services.

Should you have any questions regarding this filing, please contact me at (610) 520-6359.

Sincerely,

Erin Feeney

Attention William C. Packer
Vice President, Regulatory Accounting & Regional Controller

Gentlemen:

Pursuant to your request, we have determined the original cost and related accrued depreciation as of December 31, 2022, of the wastewater assets of the North Heidelberg Wastewater System.

The attached report includes a brief description of the system, a description of the methods used in the determination of original cost and accrued depreciation, the itemized original cost of wastewater system facilities by account and installation year, and the detailed calculations of accrued depreciation.

Respectfully submitted,

GANNETT FLEMING VALUATION

PART I. INTRODUCTION

AQUA PENNSYLVANIA, INC.

ORIGINAL COST AND RELATED ACCRUED DEPRECIATION OF
NORTH HEIDELBERG WASTEWATER SYSTEM
AS OF DECEMBER 31, 2022

PART I. INTRODUCTION

PLAN OF REPORT

The purpose of the study was to determine the original cost and related accrued depreciation as of December 31, 2022, of the wastewater assets for the North Heidelberg wastewater system.

The study is presented in three parts. Part I, Introduction, contains statements with respect to the plan of the report, the system facilities, the procedures employed, and a summary of the results of the study. Part II, Original Cost, presents the detailed analysis of the original cost by account and vintage year. Part III, Calculation of Accrued Depreciation, develops the accrued depreciation related to the original cost as of December 31, 2022.

DESCRIPTION OF SYSTEM

The North Heidelberg Wastewater System provides service to approximately 273 wastewater customers in Berks County, PA. The wastewater system assets include land and land rights, a wastewater treatment facility, PVC, cast iron and vitrified clay mains of varying sizes, services, manholes and four pump stations. The system originally began to provide service in 1971.

DETERMINATION OF ORIGINAL COST

The cost of system facilities was determined from the North Heidelberg records and unit costs typical of other wastewater utilities in the region. The unit costs were developed from typical unit costs experienced by other wastewater companies within the same region or published unit costs.

CALCULATION OF ACCRUED DEPRECIATION

The accrued depreciation calculation in Part III of the report was based on recognized methods using estimated survivor characteristics and the straight line depreciation method. The estimated survivor curves are similar to those used by other Pennsylvania wastewater companies. The average service life procedure was used to apply the methods of depreciation to group properties for which a survivor curve was used to recognize the existence of life dispersion.

A summary table of accrued depreciation applicable to original cost is set forth in Part III of the report. The detailed calculations by account and vintage follow the summary table.

RESULTS OF STUDY

The table on page II-2 summarizes the original cost and related accrued depreciation by account for the North Heidelberg wastewater system as of December 31, 2022. The original cost was brought forward from Part II of the report and the accrued depreciation from Part III of the report.

Capitalization and Financial Statistics
2018-2022, Inclusive

Notes:

(1) Excluding Accumulated Other Comprehensive Income ("OCI") from the equity account.

(2) Total operating expenses, maintenance, depreciation and taxes other than income as a percentage of operating revenues.

(3) Coverage calculations represent the number of times available earnings, both including and excluding AFUDC (allowance for funds used during construction) as reported in its entirety, cover fixed charges.

(4) Internal cash generation/gross construction is the percentage of gross construction expenditures provided by internally-generated funds from operations after payment of all cash dividends divided by gross construction expenditures.

(5) Gross Cash Flow (sum of net income, depreciation, amortization, net deferred income taxes and investment tax credits, less AFUDC) as a percentage of average total debt.

(6) Gross Cash Flow (sum of net income, depreciation, amortization, net deferred income taxes and investment tax credits, less total AFUDC) plus interest charges, divided by interest charges.

(7) Common dividend coverage is the relationship of internally generated funds from operations after payment of preferred stock dividends to common dividends paid.

Comparable Earnings Approach
Screening Parameters

Timeliness Rank

The rank for a stock's probable relative market performance in the year ahead. Stocks ranked 1 (Highest) or 2 (Above Average) are likely to outpace the year-ahead market. Those ranked 4 (Below Average) or 5 (Lowest) are not expected to outperform most stocks over the next 12 months. Stocks ranked 3 (Average) will probably advance or decline with the market in the year ahead. Investors should try to limit purchases to stocks ranked 1 (Highest) or 2 (Above Average) for Timeliness.

Safety Rank

A measure of potential risk associated with individual common stocks rather than large diversified portfolios (for which Beta is good risk measure). Safety is based on the stability of price, which includes sensitivity to the market (see Beta) as well as the stock's inherent volatility, adjusted for trend and other factors including company size, the penetration of its markets, product market volatility, the degree of financial leverage, the earnings quality, and the overall condition of the balance sheet. Safety Ranks range from 1 (Highest) to 5 (Lowest). Conservative investors should try to limit purchases to equities ranked 1 (Highest) or 2 (Above Average) for Safety.

Financial Strength

The financial strength of each of the more than 1,600 companies in the VS II data base is rated relative to all the others. The ratings range from A++ to C in nine steps. (For screening purposes, think of an A rating as "greater than" a B). Companies that have the best relative financial strength are given an A++ rating, indicating ability to weather hard times better than the vast majority of other companies. Those who don't quite merit the top rating are given an A+ grade, and so on. A rating as low as C++ is considered satisfactory. A rating of C+ is well below average, and C is reserved for companies with very serious financial problems. The ratings are based upon a computer analysis of a number of key variables that determine (a) financial leverage, (b) business risk, and (c) company size, plus the judgment of Value Line's analysts and senior editors regarding factors that cannot be quantified across-the-board for companies. The primary variables that are indexed and studied include equity coverage of debt, equity coverage of intangibles, "quick ratio", accounting methods, variability of return, fixed charge coverage, stock price stability, and company size.

Price Stability Index

An index based upon a ranking of the weekly percent changes in the price of the stock over the last five years. The lower the standard deviation of the changes, the more stable the stock. Stocks ranking in the top 5% (lowest standard deviations) carry a Price Stability Index of 100; the next 5%, 95; and so on down to 5. One standard deviation is the range around the average weekly percent change in the price that encompasses about two thirds of all the weekly percent change figures over the last five years. When the range is wide, the standard deviation is high and the stock's Price Stability Index is low.

Beta

A measure of the sensitivity of the stock's price to overall fluctuations in the New York Stock Exchange Composite Average. A Beta of 1.50 indicates that a stock tends to rise (or fall) 50% more than the New York Stock Exchange Composite Average. Use Beta to measure the stock market risk inherent in any diversified portfolio of, say, 15 or more companies. Otherwise, use the Safety Rank, which measures total risk inherent in an equity, including that portion attributable to market fluctuations. Beta is derived from a least squares regression analysis between weekly percent changes in the price of a stock and weekly percent changes in the NYSE Average over a period of five years. In the case of shorter price histories, a smaller time period is used, but two years is the minimum. The Betas are periodically adjusted for their long-term tendency to regress toward 1.00.

Technical Rank

A prediction of relative price movement, primarily over the next three to six months. It is a function of price action relative to all stocks followed by Value Line. Stocks ranked 1 (Highest) or 2 (Above Average) are likely to outpace the market. Those ranked 4 (Below Average) or 5 (Lowest) are not expected to outperform most stocks over the next six months. Stocks ranked 3 (Average) will probably advance or decline with the market. Investors should use the Technical and Timeliness Ranks as complements to one another.

GLOSSARY OF ACRONYMS AND DEFINED TERMS	
ACRONYM	**DEFINED TERM**
AFUDC	Allowance for Funds Used During Construction
AP	Aqua Pennsylvania, Inc.
b	Represents the retention rate that consists of the fraction of earnings that are not paid out as dividends
β	Beta
b x r	Represents internal growth
CAPM	Capital Asset Pricing Model
CCR	Corporate Credit Rating
CE	Comparable Earnings
CWIP	Construction Work in Progress
DCF	Discounted Cash Flow
DDBP	Disinfectants/Disinfection By-Products
EPA	Environmental Protection Agency
ESWTR	Enhanced Surface Water Treatment Rule
EU	Essential Utilities, Inc.
FOMC	Federal Open Market Committee
G	Growth rate
FPFTY	Fully Projected Future Test Year
FTY	Future test year
GDP	Gross Domestic Product
HTY	Historic test year
IGF	Internally generated funds
Lev	Leverage modification
M&A	Merger and Acquisition
M&M	Modigliani & Miller
PFAS	Per- and Polyfluoroalkyl Substance, also known as “forever chemicals”
PPUC	Pennsylvania Public Utility Commission
r	Represents the expected rate of return on common equity
Rf	Risk-free rate of return

GLOSSARY OF ACRONYMS AND DEFINED TERMS	
ACRONYM	**DEFINED TERM**
Rm	Market return
Rm-Rf	Market premium
RP	Risk Premium
s	Represents the new common shares expected to be issued by a firm
s x v	Represents external growth
S&P	Standard & Poor's
SDWA	Safe Drinking Water Act Amendments of 1996
v	Represents the value that accrues to existing shareholders from selling stock at a price different from book value.

INTRODUCTION AND SUMMARY OF RECOMMENDATIONS

1. Q. PLEASE STATE YOUR NAME, OCCUPATION AND BUSINESS ADDRESS.

A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road, Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P. Moul & Associates, an independent financial and regulatory consulting firm. My educational background, business experience and qualifications are provided in Appendix A that follows my direct testimony.

2. Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. My testimony presents evidence, analysis and a recommendation concerning the appropriate cost of equity and overall rate of return that the Pennsylvania Public Utility Commission ("PPUC" or the "Commission") should recognize in the determination of the revenues that Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "AP" or the "Company") should realize as a result of this proceeding. My analysis and recommendation are supported by the detailed financial data contained in AP Exhibit 4-A, which is a multi-page document divided into fourteen (14) schedules.

3. Q. BASED UPON YOUR ANALYSIS, WHAT IS YOUR CONCLUSION CONCERNING THE APPROPRIATE RATE OF RETURN FOR THE COMPANY?

A. Based upon my independent analysis, my conclusion is that the Company should be afforded an opportunity to earn a rate of return on common equity of at least 10.95%. The 10.95% rate of return on common equity that the Company employed to develop its proposed revenue requirement in this case is within the range of returns indicated by the various models I used to determine the Company's cost of equity. However, the Company determined that it would select an equity return rate within the lower end of my range. The Company has

indicated that it selected its proposed equity return rate to moderate the customer impact of its proposed rate increase. Although the Company needs a material increase in rates, and it has been approximately three years since it filed its last base rate case, the Company believes that its proposed equity return rate will support its ability to continue to furnish its customers with high-quality water and wastewater service and enable it to continue to make substantial investments in water and wastewater infrastructure while also mitigating the impact of its proposed increase.

My cost of equity determination should be viewed in the context of the need for supportive regulation at a time of increased infrastructure improvements now underway for the Company. As shown on page 1 of Schedule 1, I have presented the weighted average cost of capital for the Company, which is calculated with the December 31, 2025 Fully Projected Future Test Year ("FPFTY"). The Company's proposed rate of return is shown below:

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	46.05%	4.32%	1.99%
Common Equity	53.95%	10.95%	5.91%
Total	100.00%		7.90%

The resulting overall cost of capital, which is the product of weighting the individual capital costs by the proportion of each respective type of capital, should establish a compensatory level of return for the use of capital and, if achieved, will provide the Company with the ability to attract capital on reasonable terms.

4. Q. WHAT NOTEWORTHY FACTORS HAVE INFLUENCED YOUR COST OF EQUITY ANALYSIS?

A. My cost of equity analysis reflects the impact of high levels of inflation, which have not been seen for four decades. Indeed, the rate of inflation spiked upward to 9.1% in June 2022, and by March 2024 it had fallen to 3.5%, yet above recent historical levels. High levels of inflation, i.e., those above the Federal Open Market Committee ("FOMC") policy goal of 2%, have an impact on the level of economic activity, the cost of capital – particularly the interest cost of debt, and the need for more cautious financial practices, such as a prudent level of borrowing. While short-term interest rates were at historically low levels during much of the Pandemic, longer-term interest rates began to rise in February 2021 and have continued at higher levels to date. Following the Pandemic, the accommodative policy by the FOMC ended, and higher interest rates have occurred. The FOMC uses its open market operations to control the Fed Funds rate as a means of implementing its dual mandate of healthy employment and price stability. This was revealed by the Fed Funds rate, which increased 525 basis points since the beginning of 2022 through 11 increases in 24 months. The FOMC paused its rate increases and held rates steady at its meeting on June 14, 2023. Thereafter, another rate increase occurred on July 26, 2023. The FOMC paused again at its meetings on September 20, November 1, and December 13, 2023, and January 31, and March 20, 2024. It appears that we are at the end of the current interest rate tightening cycle. Modest reductions in the Fed Funds rate in the future, however, would not reduce the rate to Pandemic or pre-Pandemic levels, which were very low after the financial crisis of 2007-08.

5. Q. WHAT BACKGROUND INFORMATION CONCERNING THE COMPANY HAVE YOU CONSIDERED AS PART OF YOUR TESTIMONY?

A. AP provides water service to approximately 450,000 customers in the five counties that comprise the Philadelphia suburbs, as well as in twenty-seven (27)

additional counties in the northwestern, central, and Pocono Mountains regions of Pennsylvania. The Company meets its customers' needs from surface and ground water supplies and from purchases. The Company also furnishes wastewater service to approximately 53,000 wastewater customers located throughout Pennsylvania. Its service areas are concentrated in Southeastern, Northeastern, and Western areas of the Commonwealth; however, most are not contiguous and are operated independently.

AP has been a leader in implementing the Commission's policy of consolidating separate water utility systems throughout Pennsylvania. The Company's first major acquisition occurred in 1985 with the purchase of the assets of Great Valley Water Company. AP has completed over 200 acquisitions since 1995. Some of these acquisitions included multiple systems.

The benefits of regionalization accrue to all of the Company's constituencies. New customers benefit from the Company's management expertise and access to capital needed for system improvements, which enhances service reliability and water quality of the acquired systems; existing customers benefit from the economies of scale derived from adding new customers; the Company's employees benefit from a wider scope of responsibilities and opportunities for professional development; and investors benefit from the additional growth obtained by Essential Utilities, Inc. ("EU"), the parent company of AP.

6. Q. IN YOUR OPINION, WHAT FACTORS SHOULD THE COMMISSION CONSIDER WHEN DETERMINING THE COMPANY'S COST OF CAPITAL IN THIS PROCEEDING?

A. The Commission's rate of return allowance must be set to cover the Company's interest and dividend payments, provide a reasonable level of earnings retention,

produce an adequate level of internally-generated funds to meet capital requirements, be commensurate with the risk to which the Company's capital is exposed, assure confidence in the financial integrity of the Company, support reasonable credit quality, and allow the Company to raise capital on reasonable terms. The return the Company has selected fulfills these established standards of a fair rate of return set forth by the landmark Bluefield and Hope cases.[1] That is to say, the proposed rate of return is commensurate with returns available on investments having corresponding risks.

7. **Q. HOW HAVE YOU DETERMINED THE COST OF EQUITY FOR THE COMPANY?**

A. My cost of equity recommendation was developed using capital market and financial data relied upon by investors when assessing the relative risk, and hence cost of equity, for a water utility, such as AP. In analyzing the Company's cost of equity, I have relied on four well-recognized measures: the Discounted Cash Flow ("DCF") model, the Risk Premium ("RP") analysis, the Capital Asset Pricing Model ("CAPM"), and the Comparable Earnings ("CE") approach. By considering the results of a variety of approaches, my analysis is consistent with well-recognized principles for determining a fair rate of return. I have measured the cost of equity for the Company using data from a proxy group of eight (8) water companies that are identified on page 2 of Schedule 3. I will refer to my proxy group of eight water companies as the "Water Group."

8. Q. HOW HAVE YOU PERFORMED YOUR COST OF EQUITY ANALYSIS WITH THE MARKET DATA FOR THE WATER GROUP?

A. I have applied the models/methods for estimating the cost of equity using the

[1] Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia, 262 U.S. 679 (1923) and F.P.C. v. Hope Natural Gas Co., 320 U.S. 591 (1944).

average data for the Water Group. I have not measured separately the cost of equity for the individual companies within the Water Group, because the determination of the cost of equity for an individual company has become increasingly problematic. By employing group average data, rather than individual company analysis, I have helped to minimize the effect of extraneous influences on the market data for an individual company.

9. Q. PLEASE SUMMARIZE THE BASIS FOR YOUR COST OF EQUITY RECOMMENDATION IN THIS PROCEEDING.

A. My recommendation is derived from the results of the four methods/models previously identified. In general, the use of more than one approach provides a superior foundation to arrive at the cost of equity. At any point in time, a single method can provide an incomplete measure of the cost of equity depending upon extraneous factors which may influence market sentiment. The specific application of these methods/models will be described later in my testimony.

The following table provides a summary of the indicated costs of equity using each of these approaches.

	Water Group
DCF	10.58%
Risk Premium	11.50%
CAPM	13.80%
Comparable Earnings	12.90%
Average	12.20%
Median	12.20%
Mid-point	12.19%

As shown above, the market models of the cost of equity (*i.e.*, DCF, RP and CAPM) provide a range of equity returns of 10.58% to 13.80%. Focusing more narrowly on the DCF and RP, the equity return is within the range of 10.58% to 11.50%. It is noteworthy that the Commission has determined in a prior AP base rate cases that the Company's cost of equity should reflect the exemplary performance of its management, including AP's efforts to help the Commission deal with the problems created by small and non-viable water and wastewater systems throughout the Commonwealth. In this regard, I have not made an independent evaluation of the Company's management effectiveness. The Company's excellent management performance once again has been exhibited since its last base rate case, as Mr. Packer and Mr. Duerr explain in their direct testimony (AP Statement No. 1 and No. 11). Witnesses Packer and Duerr have shown that the Company ranks high in customer service and management efficiency. Because of the Company's decision to employ an equity return rate closer to the low end of my recommended range in order to moderate its proposed rate increase, I have not quantified the increment to recognize the Company's superior management performance. The superior performance of AP's management and the increments that the Commission has added to recognize excellent management performance in prior cases, including AP's, are factors the Commission should consider in assessing all of the evidence presented on the issue of cost of capital in this case. That is to say, if the Commission were to select an equity return that is less than the 10.95% that I recommend in this case, then the Commission should make an explicit provision for the Company's superior management performance.

My cost of equity recommendation of 10.95% makes no provision for the prospect that the rate of return may not be achieved due to unforeseen events.

Furthermore, general inflationary pressures can produce cost increases that will negatively impact the Company's return unless provision for them is recognized in the ratesetting process.

10. Q. WHAT INCREMENTS HAS THE COMMISSION RECOGNIZED IN THE PAST FOR SUPERIOR PERFORMANCE OF UTILITY MANAGEMENT?

A. Increments for recognition of superior management performance granted by the Commission have ranged from 0.05% to 0.25%, and the Commission granted AP an increment for superior management performance of 0.25% in its 2021 base rate case at Docket No. R-2021-30277385. The Company's excellent management performance has continued since its last base rate case, as Mr. Packer and Mr. Duerr explain in their direct testimony (AP Statement No. 1 and No. 11). The superior performance of AP's management and the increments that the Commission has added to recognize excellent management performance in prior cases, including AP's, are factors the Commission should consider in assessing all of the evidence presented on the issue of cost of capital in this case.

WATER UTILITY RISK FACTORS

11. Q. PLEASE IDENTIFY SOME OF THE RISK FACTORS WHICH IMPACT THE WATER UTILITY INDUSTRY.

A. The business risk of water utilities has been, and continues to be, strongly influenced by water quality concerns. The Safe Drinking Water Act Amendments of 1996 ("SDWA"), which re-authorized the SDWA for the second time since its original passage in 1974, instituted more rigorous policies and procedures governing water quality. Significant aspects of the 1996 Act provide that the federal Environmental Protection Agency ("EPA"), in conjunction with other interested parties, will develop a list of contaminants for possible regulation that

must be updated every 5 years. From that list, EPA must select at least five contaminants and determine whether to regulate them. This process must be repeated every five years. The EPA may bypass this process and adopt interim regulations for contaminants which pose an urgent health threat.

EPA's current priorities include regulations directed to: microbial, disinfectants and disinfection byproducts, perchlorate, and other contaminants, such as pharmaceuticals, lead and copper, and radionuclides. The regulations EPA issues concerning potentially hazardous substances, such as those noted above, together with the requirements imposed by the Federal Clean Water Act and the Resource Conservation and Recovery Act, contribute directly to the total business risk faced by water utilities. Moreover, most of these regulations affect the entire water industry in contrast with the disparate impact on electric utilities of regulations issued under the Clean Air Act, which may affect only a subset of the individual companies in that industry. Investors are also increasingly sensitive to the business risk water suppliers would face from the range of possible adverse effects of global climate change. All of these business risk factors, together with the inherent importance of maintaining sound and reliable water and wastewater infrastructure capable of meeting customers' current and future needs, has focused increasing public policy attention on the unique challenges faced by water and wastewater utilities.

One of the challenges water utilities face is the legacy of utility-owned and customer-owned lead service lines that remain in service. This issue achieved national prominence after lead pipes and service lines were identified as a source of possible lead contamination in the drinking water of the municipally-owned Flint, Michigan, water system. However, even before the events in Flint – and certainly thereafter – investors have had a heightened awareness of the

implications for public health of exposure to lead and of the steps that water utilities would need to take to deal with this issue, including possible government mandates to remove and replace lead service lines. Significantly, water utilities deliver a product that is ingested by the public and, therefore, they are the only type of utility that faces public health issues related to a product intended for human consumption. As Mr. Packer and Mr. Duerr explains (AP Statement No. 1 and 11), the Company has been vigilant in dealing with the potential risks posed by the presence of lead in both service lines and customers' interior plumbing. AP's efforts have included the use of sound water-treatment processes to prevent the lead from leaching into the water it delivers. For that reason, the Company has consistently complied with the Lead and Copper Rule[2] imposed by the EPA and the Pennsylvania Department of Environmental Protection. Nonetheless, because of the increasing concerns about the need to eliminate the risk of lead in drinking water, the Company is taking proactive steps to remove and replace the lead service lines, both Company-owned and customer-owned, that remain in service.

12. Q. ARE THERE EMERGING WATER QUALITY ISSUES THAT WILL AFFECT THE COMPANY'S RISK PROFILE?

A. Yes. On April 10, 2024, the EPA issued new primary drinking water regulations to deal with Pre- and Polyfluoroalkyl Substances ("PFAS"), commonly known as "forever" chemicals. These regulations will require additional treatment of the Company's drinking water within the next five years. Essential Utilities estimates that system-wide, $450 million of additional capital expenditures will be necessary to comply with these regulations, of which $304 million will be required in

[2] 25 Pa. Code §§ 109.1101 through 109.1108.

Pennsylvania. This will add additional pressure to the Company's capital attraction ability, and could impact the Company's credit quality depending upon the timeliness of rate recovery of these investments.

13. Q. HOW DO THESE ISSUES IMPACT THE WATER UTILITY INDUSTRY?

A. The Company must conform its operations to the requirements of the SDWA, and comply with the Lead and Copper Rule, the Disinfectants/Disinfection By-Products rule, "forever" chemicals, and other contaminant standards. Managers of water utilities have in the past, and will in the future, focus increased attention on environmental and related regulatory issues. Drinking water quality has also received heightened attention out of concern over the integrity of the source of supply, which is often threatened by changing land use and the permissible level of discharged contaminants established by state and federal agencies, and now potential threats from terrorists. Moreover, water companies have experienced increased water treatment and monitoring requirements and escalating costs in order to comply with the increasingly stringent regulatory requirements noted above. Water utilities may also be required to expend resources to undertake research and employ technological innovations to comply with potential regulatory requirements. These factors are symptomatic of the changing business risk faced by water utilities.

14. Q. ARE THERE OTHER FACTORS THAT INFLUENCE THE BUSINESS RISK OF WATER UTILITIES?

A. Yes. Being the sole purveyor of potable water from an established infrastructure does not insulate a water utility's operations from general business conditions, regulatory policy, the influence of weather, and customers' usage habits. It is also important to recognize that water companies face higher degrees of capital intensity than other utilities, more costly waste disposal requirements, and threats

to their sources of supply. Notably, the Company's investment in net plant is 7.85 times its revenue, as compared to the Water Group's investment in net plant which is 4.27 times its revenue. This shows that AP is among the most capital intensive utilities.

15. Q. ARE THERE OTHER STRUCTURAL ISSUES THAT AFFECT THE BUSINESS RISK OF WATER UTILITIES?

A. Yes. As noted above, the high fixed costs of water utilities make earnings vulnerable to significant variations when usage fluctuates with weather, the economy, and customer conservation efforts. Conservation efforts can take the form of low water-use clothes washers, toilets and shower heads, and other reductions due to changes in usage. While the wise use of water is always the objective, the business risk of the water utility industry can be affected by increased customer awareness of conservation. Moreover, current building standards have mandated the use of fixtures which must comply with more stringent water use requirements.

16. Q. HOW IS THE COMPANY'S RISK PROFILE AFFECTED BY ITS CONSTRUCTION PROGRAM?

A. The Company is engaged in a continuing capital expenditure program necessary to meet the needs of its customers and to comply with various regulations. For the future, the Company expects its capital expenditures to be:

Year	Capital Expenditures
2024	$ 333,289,236
2025	$ 362,690,497
2026	$ 438,879,695
2027	$ 441,707,241
2028	$ 377,646,128
Total	$ 1,954,212,797

The Company's total capital expenditures over the next five years will represent approximately 40% ($1,954,212,797 ÷ $4,947,003,706) of its net utility plant in service at December 31, 2023. As previously noted, a fair rate of return for the Company represents a key to a financial profile that will provide the Company the ability to raise the capital necessary to meet its capital needs on reasonable terms.

17. Q. HOW SHOULD THE COMMISSION RESPOND TO THE INCREASED BUSINESS RISK FACING THE COMPANY?

A. The Company faces the need to continue to invest in new facilities and to maintain and upgrade existing facilities in its service territory. Where substantial ongoing capital investment is required to continue to furnish the high-quality service that customers demand, supportive regulation is absolutely essential.

FUNDAMENTAL RISK ANALYSIS

18. Q. IS IT NECESSARY TO CONDUCT A FUNDAMENTAL RISK ANALYSIS TO PROVIDE A FRAMEWORK FOR DETERMINATING A UTILITY'S COST OF EQUITY?

A. Yes. It is necessary to establish a company's relative risk position within its industry through a fundamental analysis of various quantitative and qualitative factors that bear upon investors' assessment of overall risk. The qualitative factors have already been discussed. The quantitative risk analysis follows. For

this purpose, I have compared the Company to the Standard & Poor's Corporation's ("S&P") Public Utilities Index ("S&P Public Utilities") and the Water Group.

19. Q. WHAT ARE THE COMPONENTS OF THE S&P PUBLIC UTILITIES?

A. The S&P Public Utilities is a widely recognized index that is comprised of electric power and natural gas companies contained in the S&P 500 Index. It is recognized as a reasonable proxy for the gas and electric utility industry overall. The companies in the S&P Public Utilities are identified on page 3 of Schedule 4.

20. Q. WHAT CRITERIA HAVE YOU EMPLOYED TO ASSEMBLE YOUR WATER GROUP?

A. The companies in the Water Group have the following common characteristics: (i) they are listed in the "Water Utility Industry" section (basic and expanded) of The Value Line Investment Survey and (ii) their stock is publicly traded. The members of my Water Group are: American States Water, American Water Works Co., Artesian Resources Corp., California Water Serv. Grp., Essential Utilities, Inc., Middlesex Water Company, SJW Corporation, and The York Water Company.

21. Q. IS KNOWLEDGE OF A UTILITY'S CREDIT-QUALITY RATING AN IMPORTANT FACTOR IN ASSESSING ITS RISK AND COST OF CAPITAL?

A. Yes. It is important to know a company's credit quality rating because the cost of each type of capital is directly related to the associated risk of the firm. Therefore, although the yield on a company's bonds and the ratings assigned to those instruments by credit rating agencies measure a company's credit-quality risk, these relative credit risk assessments are also relevant to its cost of equity. This is because a firm's cost of equity is represented by its borrowing cost plus the additional compensation to equity investors that is necessary to recognize the higher risk of owning an equity investment as compared to a debt instrument in

the same company.

22. Q. HOW DO THE CREDIT-QUALITY RATINGS COMPARE FOR AP, THE WATER GROUP, AND THE S&P PUBLIC UTILITIES?

A. S&P provides a corporate credit-quality rating ("CCR"), while Moody's provides a Long-Term ("LT") issuer rating. Both ratings focus upon the credit quality of the issuer of the debt, rather than upon the debt obligation itself. The CCR assigned to AP by S&P is A. For the Water Group, the average CCR assigned by S&P is A, and the average Long Term ("LT") issuer rating assigned by Moody's is A3. For the S&P Public Utilities, the average composite rating is BBB+ by S&P and A3 by Moody's. Many of the financial indicators that I will subsequently discuss are considered during the rating process.

23. Q. HOW DO THE FINANCIAL DATA COMPARE FOR AP, THE WATER GROUP, AND THE S&P PUBLIC UTILITIES?

A. The broad categories of financial data that I will discuss are shown on Schedules 2, 3, and 4. The data cover the five-year period 2018-2022. The important categories of relative risk may be summarized as follows:

Size. In terms of capitalization, the Company is fairly similar to the average size of the Water Group. The average size of the S&P Public Utilities is, however, many times larger than the Water Group and AP. All other things being equal, a smaller company is riskier than a larger company because a given change in revenue and expense has a proportionately greater impact on a small firm. As I will demonstrate later, the size of a firm can impact its cost of equity.

Market Ratios. Market-based financial ratios, such as earnings/price ratios and dividend yields, provide a partial measure of the investor-required cost of equity. If all other factors are equal, investors will require a higher return on equity for companies that exhibit greater risk as compensation for that risk. That

is to say, a firm that investors perceive to have higher risks will experience a lower price per share in relation to expected earnings.

There are no market ratios available for AP because its stock is owned by EU. The five-year average price-earnings multiple for the Water Group was higher than that of the S&P Public Utilities. The five-year average dividend yield was lower for the Water Group than for the S&P Public Utilities. On average, the historical market-to-book ratios were higher for the Water Group than the S&P Public Utilities.

Common Equity Ratio. The level of financial risk is measured by the proportion of long-term debt and other senior capital that is contained in a company's capitalization. Financial risk is also analyzed by comparing common equity ratios (the complement of the ratio of debt and other senior capital). That is to say, a firm with a high common equity ratio has lower financial risk, while a firm with a low common equity ratio has higher financial risk. The five-year average common equity ratios, based on permanent capital, were 53.3% for the Company, 51.1% for the Water Group, and 40.5% for the S&P Public Utilities. The financial risk of AP and the Water Group is similar.

Return on Book Equity. Greater variability (*i.e.*, uncertainty) of a firm's earned returns signifies relative levels of risk, as shown by the coefficient of variation (standard deviation ÷ mean) of the rate of return on book common equity. The higher the coefficient of variation, the greater the degree of variability. For the five-year period, the coefficients of variation were 0.067 (0.7% ÷ 10.5%) for the Company, 0.059 (0.6% ÷ 10.1%) for the Water Group, and 0.040 (0.4% ÷ 10.0%) for the S&P Public Utilities. The earnings variability for the Company was higher than the Water Group and S&P Public Utilities, indicating that the Company has higher risk.

Operating Ratios. I have also compared operating ratios (the percentage of revenues consumed by operating expense, depreciation and taxes other than income).[3] The five-year average operating ratios were 50.1% for the Company, 71.1% for the Water Group, and 81.0% for the S&P Public Utilities. The Company's lower operating ratio (and correspondingly higher operating margin) is a function of its high capital intensity. Because the Company is more capital intensive, a larger percentage of each dollar of revenue is attributed to return and income taxes on that return.

Coverage. The level of fixed charge coverage (*i.e.*, the multiple by which available earnings cover fixed charges, such as interest expense and preferred stock dividends) provides an indication of the earnings protection for creditors. Higher levels of coverage, and hence earnings protection for fixed charges, are usually associated with superior grades of creditworthiness. The five-year average pre-tax interest coverage (excluding AFUDC) was 3.64 times for the Company, 3.76 times for the Water Group, and 2.94 times for the S&P Public Utilities. The credit risk for AP is higher than the Water Group and less than the S&P Public Utilities.

Quality of Earnings. Measures of earnings quality are usually revealed by the percentage of Allowance for Funds Used During Construction ("AFUDC") related to income available for common equity, the effective income tax rate, and other cost deferrals. These measures of earnings quality usually influence a firm's internally generated funds because poor quality of earnings would not generate high levels of cash flow. The Company's low historical effective income tax rate reflects a tax accounting method that permits the expensing of qualifying utility

[3] The complement of the operating ratio is the operating margin, which provides a measure of profitability. The higher the operating ratio, the lower the operating margin.

asset improvement costs that were previously being capitalized and depreciated for book and tax purposes. This accounting provides for flow-through treatment of qualifying income tax benefits, generating a reduction in income tax expense and reducing the amount of taxes currently payable. On balance, AP, the Water Group and the S&P Public Utilities all have similar quality of earnings.

Internally Generated Funds. Internally generated funds ("IGF") provide an important source of new investment capital for a utility and represent a key measure of credit strength. Historically, the five-year average percentage of IGF to capital expenditures was 75.3% for the Company, 49.4% for the Water Group, and 62.3% for the S&P Public Utilities. The Company expects that it will continue to require external capital to finance construction expenditures. Historically, the Company's cash flow to construction has been better than the Water Group and the S&P Public Utilities. The improvement in the IGF to construction in the years 2021 and 2022, shown on Schedule 2, page 1 can be traced to a lack of dividend payments by AP in those years.

Betas. The financial data I have been discussing relate primarily to company-specific risks. Market risk for firms with traded stock is measured by beta coefficients. Beta coefficients attempt to identify systematic risk, *i.e.*, the risk associated with changes in the overall market for common equities. Value Line publishes such a statistical measure of a stock's relative historical volatility to the rest of the market.[4] A comparison of market risk is shown by the average betas of 0.82 for the Water Group (see page 2 of Schedule 3) and 0.90 for the S&P Public Utilities (see page 3 of Schedule 4). The systematic risk is lower for the

[4] The procedure used to calculate the beta coefficient published by Value Line is described on page 3 of Schedule 14. A common stock that has a beta less than 1.0 is considered to have less systematic risk than the market as a whole and would be expected to rise and fall more slowly than the rest of the market. A stock with a beta above 1.0 would have more systematic risk.

Water Group than the S&P Public Utilities.

24. Q. PLEASE SUMMARIZE YOUR RISK EVALUATION OF THE COMPANY AND THE WATER GROUP.

A. The risk of the Company parallels that of the Water Group in certain respects. The Company's size and financial risk are fairly similar to the Water Group. The Company's IGF to construction has been stronger than the Water Group. The Company's operating ratio is lower than the Water Group, but this is the product of much higher capital intensity. The Company's earnings variability is higher, and its interest coverage is weaker, thus pointing to higher risk compared to the Water Group. For the future, the risk of the water industry will be strongly influenced by the regulatory requirements associated with the SDWA, the need to maintain adequate supply, the need to rehabilitate infrastructure, high capital intensity, a low rate of capital recovery, and relatively low percentages of IGF to construction. As such, the Water Group provides a reasonable basis for measuring the Company's cost of equity.

CAPITAL STRUCTURE RATIOS

25. Q. PLEASE EXPLAIN THE SELECTION OF CAPITAL STRUCTURE RATIOS FOR AP.

A. If a public utility raises its own debt directly in the capital markets, as is the case for the Company, it is proper to employ the capital structure ratios and senior capital cost rates of the regulated public utility for rate of return purposes. Furthermore, consistency requires that the embedded cost rate of the Company's senior securities also be employed. This procedure is consistent with the ratesetting procedures used by the Commission in numerous prior rate cases for AP.

26. Q. DOES SCHEDULE 5 PROVIDE THE CAPITALIZATION AND CAPITAL

STRUCTURE RATIOS YOU HAVE CONSIDERED?

A. Yes. Schedule 5 presents the Company's capitalization and related capital structure ratios based upon investor-provided capital. The December 31, 2023 capitalization corresponds with the end of the historic test year ("HTY") and December 31, 2024 is the end of the future test year ("FTY"). The December 31, 2025 capitalization is an estimate of the Company's capitalization as of the end of the FPFTY. The forecast of the Company's December 31, 2025 capital structure reflects redemptions and maturities of $31.680 million of existing debt ($13.897 million in the FTY and $17.784 million in the FPFTY) and the issuance of $125 million of new First Mortgage Bonds in the FPFTY. The Company is also projecting a $77 million equity contribution in the FTY. Retained earnings as of December 31, 2025 are forecasted to increase based upon net income of $482.765 million less common stock dividend payments of $206 million for the next two fiscal years.

27. Q. WHAT CAPITAL STRUCTURE RATIOS DO YOU RECOMMEND BE ADOPTED FOR RATE OF RETURN PURPOSES IN THIS PROCEEDING?

A. Since ratesetting is prospective, the rate of return should, at a minimum, reflect known or reasonably foreseeable changes that will occur during the course of the FTY and FPFTY. As a result, I will adopt the Company's FPFTY-ending (December 31, 2025) capital structure ratios of 46.05% long-term debt and 53.95% common equity. The common equity ratio of 53.95% that I propose in this case is well within the range of the actual capital structure ratios of the Water Group, which provides common equity ratios of 40.8% to 60.2%. It is also compatible with the 53.95% common equity ratio accepted by the Commission in the Company's last case.

These capital structure ratios are the best approximation of the mix of

capital the Company will employ to finance its rate base during the period new rates are in effect. I have excluded short-term debt from these ratios because the amount is less than the balance of construction work in progress ("CWIP"). Short-term debt provides bridge financing for CWIP, until the magnitude of short-term debt reaches a point where a permanent financing with long-term debt and equity is economic. That is to say, short-term debt is temporary financing pending the issuance of long-term debt and equity in the desired proportions that support the Company's capital structure goals. The Company uses a formula for computing AFUDC that assigns short-term debt first to the AFUDC rate and additional amounts, if any, above the CWIP balance are assigned the overall rate of return. Given the Company's procedure of calculating its AFUDC, it has been the Commission's policy to exclude short-term debt from the capital structure.

COST OF SENIOR CAPITAL

28. Q. WHAT COST RATE HAVE YOU ASSIGNED TO THE LONG-TERM DEBT PORTION OF AP'S CAPITAL STRUCTURE?

A. Consistent with the capital structure ratios of the Company, the embedded cost of AP's senior securities must also be employed. As I previously explained, this procedure is consistent with the ratesetting procedures used by the Commission in numerous prior AP rate cases. The determination of the cost of debt is essentially an arithmetic exercise. This is due to the fact that the Company has contracted for the use of this capital for a specific period of time at a specified cost rate. As shown on page 1 of Schedule 6, the actual embedded cost rate of long-term debt was 4.24% on December 31, 2023. By December 31, 2025, the embedded debt cost rate is estimated to be 4.32%, as shown on page 3 of Schedule 6. The Company's FPFTY embedded cost of debt reflects new issuances of First Mortgage Bonds. For the 2025 debt issue of $125 million of

new First Mortgage Bonds to be issued in the FPFTY, the nominal coupon rate is 6.05%. The forecast interest rate is based on a 4.75% yield on 30-year Treasury bonds plus a spread of 1.30%. The details leading to the development of the individual effective cost rates for each series of long-term debt, using the cost rate to maturity technique, are shown on pages 4 of Schedule 6. The cost rate, or yield to maturity, is the rate of discount that equates the present value of all future interest and principal payments with the net proceeds of the bond.

I will use the 4.32% prospective embedded cost of long-term debt for rate of return purposes. The 4.32% long-term debt cost rate is related to the amount of long-term debt shown on Schedule 5 that provides the basis for the 46.05% long-term debt ratio at December 31, 2025.

COST OF EQUITY – GENERAL APPROACH

29. Q. PLEASE DESCRIBE HOW YOU DETERMINED THE COST OF EQUITY FOR THE COMPANY.

A. Although my fundamental financial analysis provides the required framework to establish the risk relationships among AP, the Water Group and the S&P Public Utilities, the cost of equity must be measured by standard financial models I identified above. Differences in risk traits, such as size, business diversification, geographical diversity, regulatory policy, financial leverage and bond ratings, must be considered when analyzing the cost of equity.

It is also important to reiterate that no one method or model of the cost of equity can be applied in an isolated manner. Rather, informed judgment must be used to take into consideration the relative risk traits of the firm. It is for this reason that I have used more than one method to measure the Company's cost of equity. As I describe below, each of the methods used to measure the cost of equity contains certain incomplete and/or overly restrictive assumptions and

constraints that are not optimal. Therefore, I favor considering the results from a variety of methods. In this regard, I applied each of the methods with data taken from the Water Group and arrived at a cost of equity of at least 10.95% for AP, excluding an increment for management performance.

DISCOUNTED CASH FLOW

30. Q. Please describe the DCF model.

A. The DCF model seeks to explain the value of an asset as the present value of future expected cash flows discounted at the appropriate risk-adjusted rate of return. In its simplest form, the DCF-determined return on common stock consists of a current cash (dividend) yield and future price appreciation (growth) of the investment. The dividend discount equation is the familiar DCF valuation model, which assumes that future dividends are systematically related to one another by a constant growth rate. The DCF formula is derived from the standard valuation model: P = D/(k-g), where P = price, D = dividend, k = the cost of equity, and g = growth in cash flows. By rearranging the terms, we obtain the familiar DCF equation: k= D/P + g. All of the terms in the DCF equation represent investors' assessment of expected future cash flows that they will receive in relation to the value that they set for a share of stock (P). The DCF equation is sometimes referred to as the "Gordon" model.[5] My DCF results are provided on page 2 of Schedule1 for the Water Group. The DCF return is 10.58% with the leverage adjustment and 9.38% without the leverage adjustment for the Water Group. The leverage adjustment is discussed more fully below.

Among the limitations of the model, there is a certain element of

[5] Although the popular application of the DCF model is often attributed to the work of Myron J. Gordon in the mid-1950s, J.B. Williams exposited the DCF model in its present form nearly two decades earlier.

circularity in the DCF method when applied in rate cases. This is because investors' expectations for the future depend upon regulatory decisions. In turn, when regulators depend upon the DCF model to set the cost of equity, they rely upon investor expectations that include an assessment of how regulators will decide rate cases. Due to this circularity, the DCF model may not fully reflect the true risk of a utility. Other limitations of the DCF include the constant P-E multiple assertion that does not conform with actual stock market performance. And, indeed, the FERC has moved to using multiple methods for measuring the cost of equity due to the limitations of the DCF.

31. Q. WHAT IS THE DIVIDEND YIELD COMPONENT OF A DCF ANALYSIS?

A. The dividend yield reveals the portion of investors' cash flow that is generated by the return provided by the dividends an investor receives. It is measured by the dividends per share relative to the price per share. The DCF methodology requires the use of an expected dividend yield to establish the investor-required cost of equity. For the 12 months ended March 2024, the monthly dividend yields are shown on Schedule 7. The month-end prices were adjusted to reflect the buildup of the dividend in the price that has occurred since the last ex-dividend date (i.e., the date by which a shareholder must own the shares to be entitled to the dividend payment – usually about two to three weeks prior to the actual payment).

For the 12 months ended March 2024, the average dividend yield was 2.35% for the Water Group based upon a calculation using annualized dividend payments and adjusted month-end stock prices. The dividend yields for the more recent six-month and three-month periods were 2.55% and 2.66%, respectively. In applying the DCF model, I have used the six-month average dividend yield of 2.55% for the Water Group. The use of this dividend yield will reflect current

capital costs while avoiding spot yields. For the purpose of a DCF calculation, the average dividend yield must be adjusted to reflect the prospective nature of the dividend payments, i.e., the higher expected dividends for the future. Recall that the DCF is an expectational model that must reflect investors' anticipated cash flows. I have adjusted the six-month average dividend yield in three different but generally accepted manners and used the average of the three adjusted values as calculated in the lower panel of data presented on Schedule 7.[6] This adjustment adds 8 basis points to the six-month average historical yield, thus producing the 2.63% adjusted dividend yield for the Water Group.

32. Q. WHAT FACTORS INFLUENCE INVESTORS' GROWTH EXPECTATIONS?

A. As noted previously, investors are interested principally in the dividend yield and future growth of their investment (i.e., the price per share of the stock). Future growth in earnings per share is the DCF model's primary focus because, under the model's assumption that the P-E multiple remains constant, the price per share of stock will grow at the same rate as earnings per share. A growth rate analysis considers a variety of variables to reach a consensus on prospective growth, including historical data and widely available analysts' forecasts of earnings, dividends, book value and cash flow (all stated on a per-share basis). A fundamental growth rate analysis is frequently based upon internal growth ("b x

[6] These adjustments are the 1/2 growth approach, the discrete approach, and the quarterly approach. Under the 1/2 approach, the procedure to adjust the average dividend yield for the expectation of a dividend increase during the initial investment period will be at a rate of one-half the growth component, which assumes that half of the dividend payments will be at the expected higher rate during the initial investment period. Under the discrete approach, the "*g*" in the DCF model reflects the discrete growth in the quarterly dividend, which is required for the periodic form of the DCF to properly recognize that dividends are expected to grow on a discrete basis. The quarterly approach takes into account that investors have the opportunity to reinvest quarterly dividend receipts. Recognizing the compounding of the periodic quarterly dividend payments (D_0) results in this third DCF formulation. This DCF equation provides no further recognition of growth in the quarterly dividend. A compounding of the quarterly dividend yield recognizes the necessity for an adjusted dividend yield.

r"), where "r" is the expected rate of return on common equity and "b" is the retention rate (a fraction representing the proportion of earnings not paid out as dividends). To be complete, the internal growth rate should be modified to account for sales of new common stock (external growth), which is represented by the formula s x v, where "s" is the number of new common shares that the firm expects to issue and "v" is the value that accrues to existing shareholders from selling stock at a price above book value. Fundamental growth, which combines internal and external growth, encompasses the factors that cause book value per share to grow over time.

Growth also can be expressed in multiple stages. This expression of growth consists of an initial "growth" stage during which a firm enjoys rapidly expanding markets, high profit margins and abnormally high growth in earnings per share. Thereafter, a firm enters a "transition" stage during which fewer technological advances and increased product saturation begin to reduce the growth rate and profit margins come under pressure. During the "transition" stage, investment opportunities begin to mature, capital requirements decline and a firm begins to pay out a larger percentage of earnings to shareholders. Finally, the mature or "steady-state" stage is reached when a firm's earnings growth, payout ratio and return on equity stabilize at levels where they remain for the life of a firm. The three stages of growth assume a step-down of high initial growth to lower sustainable growth. Even if these three stages of growth can be envisioned for a firm, the third "steady-state" growth stage, which is assumed to remain fixed in perpetuity, represents an unrealistic expectation because the three stages of growth can be repeated. That is to say, the stages can be repeated where growth for a firm ramps up and ramps down in cycles over time. For these reasons, there

is no need to analyze growth rates individually for each cycle but rather to rely upon analysts' growth forecasts used by investors when pricing common stocks.

33. Q. WHAT FACTOR SHOULD BE CONSIDERED IN THE DETERMINATION OF AN APPROPRIATE GROWTH RATE?

A. The growth rate used in a DCF calculation should measure investor expectations. Investors consider both company-specific variables and overall market sentiment (i.e., level of inflation rates, interest rates, economic conditions, etc.) when balancing their capital gains expectations with their dividend yield requirements. Investors are not influenced solely by a single set of company-specific variables weighted in a formulaic manner. Therefore, all relevant growth rate indicators should be evaluated using a variety of techniques when formulating a judgment of investor-expected growth.

34. Q. WHAT DATA FOR THE WATER GROUP HAVE YOU CONSIDERED IN YOUR GROWTH RATE ANALYSIS?

A. I considered the growth in the financial variables shown on Schedule 8 and Schedule 9, which reflect historical (Schedule 8) and projected (Schedule 9) rates of growth in earnings per share, dividends per share, book value per share and cash flow per share for the Water Group. While analysts will review all measures of growth, as I have done, earnings per share growth directly influences the expectations of investors for the future performance of utility stocks. Forecasts of earnings growth are required because the DCF model is forward-looking, and with the constant P-E multiple and constant payout ratio that the DCF model assumes, all other measures of growth will mirror earnings growth. The historical growth rates, which were also reviewed to gain a perspective on the industry, were obtained from the Value Line publication that provides this data. While historical data cannot be ignored, they are much less significant when applying the DCF

model than projections of future growth. Investors cannot purchase the past earnings of a utility. To the contrary, they are only entitled to future earnings, which are the focus of growth projections. Furthermore, if significant weight is assigned to historical performance, the historical data are double-counted because they are already factored into analysts' forecasts of earnings growth.

35. Q. IS A FIVE-YEAR INVESTMENT HORIZON ASSOCIATED WITH THE ANALYSTS' FORECASTS CONSISTENT WITH THE TRADITIONAL DCF MODEL?

A. Yes, it is. Although the constant form of the DCF model assumes an infinite stream of cash flows, investors do not expect to hold an investment indefinitely. Rather than viewing the DCF in the context of an endless stream of growing dividends (e.g., a century of cash flows), the growth in the share value (i.e., capital appreciation or capital gains yield) is most relevant to investors' total return expectations. Hence, the sale price of a stock can be viewed as a liquidating dividend that can be discounted along with the annual dividend receipts during the investment-holding period to arrive at the investors' expected return. The growth in the price per share will equal the growth in earnings per share if, as the DCF model assumes, there is no change in the P-E multiple. As such, my company-specific growth analysis, which focuses principally on five-year forecasts of earnings per share growth, conforms with the type of analysis that influences investors' expectations of their actual total return. Moreover, academic research also focuses on five-year growth rates specifically because market outcomes occurring over that investment horizon are what influence stock prices. Indeed, if investors required forecasts beyond five years in order to properly value common stocks, then it would be reasonable to expect that some investment advisory service would begin publishing that information for individual stocks to

meet the demands of the marketplace. The absence of such a publication suggests that there is no market for this information because investors do not require forecasts for an infinite series of future data points to make informed decisions to purchase and sell stocks.

36. Q. WHAT ARE THE ANALYSTS' FORECASTS OF FUTURE GROWTH THAT YOU CONSIDERED?

A. Schedule 9 provides projected earnings per share growth rates taken from analysts' five-year forecasts compiled by IBES/First Call, Zacks, and Value Line. These are all reliable authorities of projected growth that investors use to make buy, sell and hold decisions. The IBES/First Call and Zacks estimates are obtained from the Internet and are widely available to investors. The growth rates reported by IBES/First Call and Zacks are consensus forecasts taken from a survey of analysts that make growth projections for these companies. Notably, First Call's earnings forecasts are frequently quoted in the financial press. The Value Line forecasts are also widely available to investors and can be obtained by subscription or free of charge at most public and collegiate libraries. The IBES/First Call and Zacks forecasts are limited to earnings per share growth, while Value Line makes projections of other financial variables. The Value Line forecasts of dividends per share, book value per share, and cash flow per share for the Water Group are also included on Schedule 9.

37. Q. WHAT ARE THE PROJECTED GROWTH RATES PUBLISHED BY THE SOURCES YOU DISCUSSED?

A. Schedule 9 shows the prospective five-year earnings per share growth rates projected for the Water Group by IBES/First Call (5.88%), Zacks (6.80%) and Value Line (6.58%).

38. Q. ARE CERTAIN GROWTH RATE FORECASTS ENTITLED TO GREATER WEIGHT IN DEVELOPING A GROWTH RATE FOR USE IN THE DCF MODEL?

A. Yes. While various factors should be examined to reach a reasonable conclusion on the DCF growth rate, growth in earnings per share should receive the greatest emphasis. Growth in earnings per share is the primary determinant of investors' expectations of the total returns they will obtain from stocks because the capital gains yield (i.e., price appreciation) will track earnings growth if the P-E multiple remains constant, as the DCF model assumes. Moreover, earnings per share (derived from net income) are the source of dividend payments and are the primary driver of retention growth and its surrogate, i.e., book value per share growth. As such, under these circumstances, greater emphasis must be placed upon projected earnings per share growth. In fact, Professor Gordon, the foremost proponent of the use of the DCF model in setting utility rates, concluded that the best measure of growth for use in the DCF model is a forecast of earnings per-share growth.[7] Consistent with Professor Gordon's findings, projections of earnings per share growth, such as those published by IBES/First Call, Zacks and Value Line, provide the best indication of investor expectations.

39. Q. WHAT GROWTH RATE DO YOU USE IN YOUR DCF MODEL?

A. The forecasts shown on Schedule 9 for the Water Group exhibit a range of average earnings per share growth rates from 5.88% to 6.80%. DCF growth rates should not be established by mathematical formulation, and I have not done so. In my opinion, a growth rate of 6.75% is a reasonable estimate of investor-expected growth for the Water Group. This value is within the array of analysts' forecasts of five-year earnings per share growth rates. The reasonableness of

[7] Gordon, Gordon & Gould, "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management (Spring 1989).

this growth rate is also supported by the expected continuation of water utility infrastructure spending.

40. Q. ARE THE DIVIDEND YIELD AND GROWTH COMPONENTS OF THE DCF ADEQUATE TO ACCURATELY DEPICT THE RATE OF RETURN ON COMMON EQUITY WHEN IT IS USED TO CALCULATE A UTILITY'S WEIGHTED AVERAGE OVERALL COST OF CAPITAL?

A. The components of the DCF model are adequate for that purpose only if the capital structure ratios are measured by the market value of debt and equity. In the case of the Water Group, average capital structure ratios are 27.88% long-term debt, 0.02 preferred stock, and 72.10% common equity, as shown on Schedule 10. If book values are used to compute the capital structure ratios, then a leverage adjustment is required.

41. Q. WHAT IS A LEVERAGE ADJUSTMENT?

A. If a firm's capitalization, as measured by its stock price, diverges from its capitalization, measured at book value, the potential exists for a financial risk difference. Such a risk difference arises because a market-valued capitalization contains more equity and less debt than a book-value capitalization and, therefore, has less risk than the book-value capitalization. A leverage adjustment properly accounts for the risk differential between market-value and book-value capital structures.

42. Q. WHY IS A LEVERAGE ADJUSTMENT NECESSARY?

A. In order to make the DCF results relevant to the capitalization measured at book value (as is done for rate-setting purposes), the market-derived cost rate must be adjusted to account for this difference in financial risk. The only perspective that is important to investors is the return they can realize on the market value of their investment. As I have measured the DCF, the simple yield (D/P) plus growth (g)

provides a return applicable strictly to the price (P) that an investor is willing to pay for a share of stock. The need for the leverage adjustment arises when the results of the DCF model (k) are to be applied to a capital structure that is different from the capital structure indicated by the market price (P). From the market perspective, the financial risk of the Water Group is accurately measured by the capital structure ratios calculated from the market-valued capitalization of a firm. If the ratemaking process utilized the market capitalization ratios, then no additional analysis or adjustment would be required, and the simple yield (D/P) plus growth (g) components of the DCF would satisfy the financial risk associated with the market value of the equity capitalization. Because the ratemaking process uses ratios calculated from a firm's book value capitalization, further analysis is required to synchronize the financial risk of the book capitalization with the required return on the book value of the firm's equity. This adjustment is developed through precise mathematical calculations using well-recognized analytical procedures that are widely accepted in the financial literature. To arrive at that return, the rate of return on common equity is the unleveraged cost of capital (or equity return at 100% equity) plus one or more terms reflecting the increase in financial risk resulting from the use of leverage in the capital structure. The calculations presented in the lower panel of data shown on Schedule 10, under the heading "M&M,"[8] provide a return of 8.53% when applicable to a capital structure with 100% common equity.

[8] Franco Modigliani and Merton H. Miller, "The Cost of Capital, Corporation Finance, and the Theory of Investments," American Economic Review, June 1958, at 261-97. Franco Modigliani and Merton H. Miller, "Taxes and the Cost of Capital: A Correction," American Economic Review, June 1963, at 433-43.

43. Q. ARE THERE SPECIFIC FACTORS THAT INFLUENCE MARKET-TO-BOOK RATIOS THAT DETERMINE WHETHER THE LEVERAGE ADJUSTMENT SHOULD BE MADE?

A. No. The leverage adjustment is not intended, nor was it designed, to address the reasons that stock prices vary from book value. Hence, any observations concerning market prices relative to book value are not on point. The leverage adjustment deals with the issue of financial risk and does not transform the DCF result to a book value return through a market-to-book adjustment. Again, the leverage adjustment that I propose is based on the fundamental financial precept that the cost of equity is equal to the rate of return for an unleveraged firm (i.e., where the overall rate of return equates to the cost of equity with a capital structure that contains 100% equity) plus the additional return required for introducing debt and/or preferred stock leverage into the capital structure.

Further, as noted previously, the relatively high market prices of utility stocks cannot be attributed solely to the notion that these companies are expected to earn a return on the book value of equity that differs from their cost of equity determined from stock market prices. Stock prices above book value are common for utility stocks, and indeed, the stock prices of non-regulated companies exceed book values by even greater margins. It is difficult to accept that the vast majority of all firms operating in our economy are generating returns far in excess of their cost of capital. Certainly, in our free-market economy, competition should contain such “excesses” if they actually exist.

Finally, the leverage adjustment adds stability to the final DCF cost rate. That is to say, as the market capitalization increases relative to its book value, the leverage adjustment increases while the simple yield (D/P) plus growth (g) result declines. The reverse is also true: when the market capitalization declines, the

leverage adjustment also declines as the simple yield (D/P) plus growth (g) result increases.

44. Q. IS THE LEVERAGE ADJUSTMENT THAT YOU PROPOSE DESIGNED TO TRANSFORM THE MARKET RETURN INTO ONE THAT IS DESIGNED TO PRODUCE A PARTICULAR MARKET-TO-BOOK RATIO?

A. No, it is not. What I label a "leverage adjustment" is merely a convenient way of showing the amount that must be added to (or subtracted from) the result of the simple DCF model (i.e., D/P + g) when the DCF return applies to a capital structure used for ratemaking that is computed with book-value weighting rather than market-value weighting. Although I specify a separate factor, which I call the leverage adjustment, there is no need to do so other than to identify this factor. If I were to express my return solely in the context of the book value weighting that we use to calculate the weighted average cost of capital and ignore the familiar D/P + g expression entirely, then a separate element in the DCF cost of equity determination would not be needed to reflect the differential in financial leverage between a market-value and book-value capitalization. As shown in the bottom panel of data on Schedule 10, the equity return applicable to the book value common equity ratio is equal to 8.53%, which is the return for the Water Group appropriate for a capital structure with no debt (i.e., a 100% equity ratio) plus 2.07% to compensate investors for the risk of 48.27% debt ratio and 0.00% for a 0.03% preferred stock ratio. These are the book-value ratios that differ markedly from the market-value based ratios I discussed previously. Under this approach, the parts add up to 10.58% (8.53% + 2.07% + 0.00%), and there is no need to even address the cost of equity in terms of D/P + g. To express this same return in the context of the familiar DCF model, I added the 2.63% dividend yield, the 6.75% growth rate, and 1.20% for the leverage adjustment to arrive at the same

10.58% return computed directly with the M&M formula. I know of no means to mathematically solve for the 1.20% leverage adjustment by expressing it in the terms of any particular relationship of market price to book value. The 1.20% adjustment is merely a convenient way to compare the 10.58% return computed using the Modigliani & Miller formulas to the 9.38% return generated by the DCF model (i.e., D_1/P_0 + g, or the traditional form of the DCF shown on Schedule 7) based on a market-value capital structure. A 9.38% return assigned to anything other than the market value of equity cannot equate to a reasonable return on book value that has higher financial risk. My point is that when we use a market-determined cost of equity developed from the DCF model, it reflects a level of financial risk that is different (in this case, lower) from the capital structure stated at book value. This process has nothing to do with targeting any particular market-to-book ratio.

45. Q. PLEASE PROVIDE THE DCF RETURN BASED UPON YOUR PRECEDING DISCUSSION OF DIVIDEND YIELD, GROWTH, AND LEVERAGE.

A. As explained previously, I have utilized a six-month average dividend yield (D_1/P_0) adjusted in a forward-looking manner for my DCF calculation. This dividend yield is used in conjunction with the growth rate (g) previously developed. The DCF also includes the leverage modification (Lev.) required when the book value equity ratio is used in determining the weighted average cost of capital in the ratemaking process rather than the market value equity ratio related to the price of stock. The resulting DCF cost rate is 10.58%, computed as follows:

	D_1/P_0	+	g	+	*lev.*	=	k
Water Group	2.63%	+	6.75%	+	1.20%	=	10.58%

The DCF result shown above represents the simplified (i.e., Gordon) form of the model that contains a constant-growth assumption. I should reiterate, however, that the DCF-indicated cost rate provides an explanation of the rate of return on common stock market prices without regard to the prospect of a change in the P-E multiple. An assumption that there will be no change in the P-E multiple is not supported by the realities of the equity market because P-E multiples do not remain constant. This is one of the constraints of this model that makes it important to consider the results of other models when determining a company's cost of equity.

RISK PREMIUM ANALYSIS

46. Q. PLEASE DESCRIBE YOUR USE OF THE RISK PREMIUM APPROACH TO DETERMINE THE COST OF EQUITY.

A. With the Risk Premium approach, the cost of equity capital is determined by corporate bond yields plus a premium to account for the fact that common equity is exposed to greater investment risk than debt capital. The result of my Risk Premium study is shown on page 2 of Schedule1. That result is 11.50%.

47. Q. WHAT LONG-TERM PUBLIC UTILITY DEBT COST RATE DID YOU USE IN YOUR RISK PREMIUM ANALYSIS?

A. In my opinion, and as I will explain in more detail further in my testimony, a 5.00% yield represents a reasonable estimate of the prospective yield on long-term, public utility bonds. The 5.00% public utility bond yield I used in the Risk Premium method is very conservative given current interest rates.

48. Q. WHAT HISTORICAL DATA ARE SHOWN BY THE MOODY'S DATA?

A. I have analyzed the historical yields on the Moody's index of long-term public utility debt as shown on Schedule 11, page 1. For the 12 months ended March 2024 the average monthly yield on Moody's index A-rated public utility bonds was

5.60%. For the six- and three-month periods ended March 2024, the yields were 5.72% and 5.53%, respectively. During the 12 months ended March 2024, the range of the yields on A-rated public utility bonds were 5.13% to 6.34%. Page 2 of Schedule11 shows the long-run spread in yields between A-rated public utility bonds and long-term Treasury bonds. As shown on page 3 of Schedule 11, the yields on A-rated public utility bonds have exceeded those on Treasury bonds by 1.36% on a twelve-month average basis, 1.26% on a six-month average basis, and 1.20% on a three-month average basis. With these data, 1.25% represents a reasonable, albeit conservative, spread for the yield on A-rated public utility bonds over Treasury bonds.

49. Q. WHAT FORECASTS OF INTEREST RATES HAVE YOU CONSIDERED IN YOUR ANALYSIS?

A. I have determined the prospective yield on A-rated public utility debt by using the Blue Chip Financial Forecasts ("Blue Chip") along with the spread in the yields that I describe above. Blue Chip is a reliable authority and contains consensus forecasts of various interest rates compiled from a panel of banking, brokerage and investment advisory services. In early 1999, Blue Chip stopped publishing forecasts of yields on A-rated public utility bonds because the Federal Reserve deleted these yields from its Statistical Release H.15. To independently project a forecast of the yields on A-rated public utility bonds, I have combined the forecast yields on long-term Treasury bonds published on April 1, 2024, and a yield spread of 1.25%, derived from recent historical data.

50. Q. HOW HAVE YOU USED THESE DATA TO PROJECT THE YIELD ON A-RATED PUBLIC UTILITY BONDS FOR THE PURPOSE OF YOUR RISK PREMIUM ANALYSES?

A. Shown below is my calculation of the prospective yield on A-rated public utility

bonds using the building blocks discussed above, i.e., the Blue Chip forecast of Treasury bond yields and the public utility bond yield spread. For comparative purposes, I have also shown the Blue Chip forecasts of Aaa-rated and Baa-rated corporate bonds. These forecasts are:

		Blue Chip Financial Forecasts				
		Corporate		30-Year	A-rated Public Utility	
Year	Quarter	Aaa-rated	Baa-rated	Treasury	Spread	Yield
2024	Second	5.0%	5.9%	4.3%	1.25%	5.55%
2024	Third	4.9%	5.8%	4.2%	1.25%	5.45%
2024	Fourth	4.9%	5.8%	4.2%	1.25%	5.45%
2025	First	4.8%	5.8%	4.1%	1.25%	5.35%
2025	Second	4.8%	5.8%	4.1%	1.25%	5.35%
2025	Third	4.8%	5.7%	4.0%	1.25%	5.25%

51. Q. ARE THERE ADDITIONAL FORECASTS OF INTEREST RATES THAT EXTEND BEYOND THOSE SHOWN ABOVE?

A. Yes. Twice yearly, Blue Chip provides long-term forecasts of interest rates. In its December 1, 2023 publication, Blue Chip published longer-term forecasts of interest rates, which were reported to be:

	Blue Chip Financial Forecasts		
	Corporate		30-Year
Averages	Aaa-rated	Baa-rated	Treasury
2025-2029	4.9%	6.0%	4.1%
2030-2034	5.0%	6.0%	4.2%

The longer-term forecasts by Blue Chip suggest that interest rates will continue to be above pre-Pandemic levels. A 5.00% yield on A-rated public utility bonds represents a reasonably conservative benchmark for measuring the cost of equity in this case. All the data I used to formulate my conclusion as to a prospective yield on A-rated public utility debt are available to investors, who regularly rely upon such data to make investment decisions.

52. Q. WHAT EQUITY RISK PREMIUM HAVE YOU DETERMINED FOR PUBLIC UTILITIES?

A. To develop an appropriate equity risk premium, I analyzed the results from 2022 SBBI Yearbook, Stocks, Bonds, Bills and Inflation. My investigation reveals that the equity risk premium varies according to the level of interest rates. That is to say, the equity risk premium increases as interest rates decline, and it declines as interest rates increase. This inverse relationship is revealed by the summary data presented below and shown on Schedule12, page 1.

Common Equity Risk Premiums	
Low Interest Rates	7.13%
Average Across All Interest Rates	5.96%
High Interest Rates	4.76%

Based on my analysis of the historical data, the equity risk premium was 7.13% when the marginal cost of long-term government bonds was low (i.e., 2.83%, which was the average yield during periods of low rates). Conversely, when the yield on long-term government bonds was high (i.e., 7.03% on average during periods of high interest rates), the spread narrowed to 4.76%. Over the entire spectrum of interest rates, the equity risk premium was 5.96% when the average government bond yield was 4.91%. From these data, I have utilized a 6.50% equity risk premium. The equity risk premium of 6.50% is between the premiums associated with low interest rates (i.e., 7.13%) and average for the entire historical period interest rates (i.e., 5.96%).

53. Q. WHAT COMMON EQUITY COST RATE DID YOU DETERMINE BASED ON YOUR RISK PREMIUM ANALYSIS?

A. The cost of equity (i.e., “k”) is represented by the sum of the prospective yield for

long-term public utility debt (i.e., "i") and the equity risk premium (i.e., "RP"). The Risk Premium approach provides a cost of equity of:

	i		*RP*		*k*
Water Group	5.00%	+	6.50%	=	11.50%

CAPITAL ASSET PRICING MODEL

54. Q. HOW IS THE CAPM USED TO MEASURE THE COST OF EQUITY?

A. The CAPM uses the yield on a risk-free interest-bearing obligation plus a rate of return premium that is proportional to the systematic risk of an investment. As shown on page 2 of Schedule 1, the result of the CAPM is 13.80% for the Water Group with the leverage adjustment. Without the leverage adjustment, the CAPM result is 11.50% (13.80% - (0.28 x 8.21%)) through use of the Value Line beta excluding the leverage adjustment (i.e., 1.10 - 0.82 = 0.28). Further excluding the size adjustment, the CAPM result would be 10.48%. To compute the cost of equity with the CAPM, three components are necessary: a risk-free rate of return ("Rf"), the beta measure of systematic risk ("β") and the market risk premium ("Rm-Rf") derived from the total return on the market of equities reduced by the risk-free rate of return. The CAPM specifically accounts for differences in systematic risk (i.e., market risk as measured by the beta) between an individual firm or group of firms and the entire market of equities.

55. Q. WHAT BETAS HAVE YOU CONSIDERED IN THE CAPM?

A. For my CAPM analysis, I initially considered the Value Line betas. As shown on page 2 of Schedule 3, the average beta is 0.82 for the Water Group.

56. Q. DID YOU USE THE VALUE LINE BETAS IN THE CAPM DETERMINED COST OF EQUITY?

A. I used the Value Line betas as a foundation for the leverage-adjusted betas that I used in the CAPM. The Value Line betas are measured over a five-year period. The betas must be reflective of the financial risk associated with the ratemaking capital structure that is measured at book value. Therefore, Value Line betas cannot be used directly in the CAPM, unless the cost rate developed using those betas is applied to a capital structure measured with market values. Since we used book values in this case, the Value Line betas must be adjusted for the higher financial risk associated with the book value capital structure. To develop a CAPM cost rate applicable to a book-value capital structure, the Value Line (market value) betas have been unleveraged and re-leveraged for the book value common equity ratios using the Hamada formula,[9] as follows:

$$\beta l = \beta u \, [1 + (1 - t) \, D/E + P/E]$$

ßl = the leveraged beta, ßu = the unleveraged beta, t = income tax rate, D = debt ratio, P = preferred stock ratio, and E = common equity ratio. The betas published by Value Line have been calculated with the market price of stock and are related to the market value capitalization. By using the formula shown above and the capital structure ratios measured at market value, the beta would become 0.63 for the Water Group if it employed no leverage and was 100% equity financed. Those calculations are shown on Schedule 10 under the section labeled "Hamada," who is credited with developing those formulas. With the unleveraged

[9] Robert S. Hamada, "The Effects of the Firm's Capital Structure on the Systematic Risk of Common Stocks;" The Journal of Finance, Vol. 27, No. 2; Papers and Proceedings of the Thirtieth Annual Meeting of the American Finance Association, New Orleans, Louisiana, Dec. 27-29, 1971. (May 1972), pp. 435-52.

beta as a base, I calculated the leveraged beta of 1.10 for the book value capital structure of the Water Group.

57. Q. WHAT RISK-FREE RATE HAVE YOU USED IN THE CAPM?

A. As shown on page 1 of Schedule 13, I provided the historical yields on Treasury notes and bonds. For the 12 months ended March 2024, the average yield on 30-year Treasury bonds was 4.24%. For the six- and three-months ended March 2024, the yields on 30-year Treasury bonds were 4.46% and 4.33%, respectively. During the 12 months ended March 2024, the range of the yields on 30-year Treasury bonds was 3.68% to 4.95%.

Due to high inflation rates above the policy goal of the FOMC, the accommodative policy was ended by the FOMC in the first quarter of 2022. A tighter monetary policy exists today and has caused higher interest rates that have already occurred. After the FOMC ended its bond-buying program (i.e., quantitative easing) in March 2022, it is in the process of running off its $9 trillion asset portfolio, which will keep interest rates at elevated levels.

Following the extraordinary events associated with the Pandemic that jolted the capital markets, a tighter monetary policy was put in place and resulted in higher interest rates. High interest rates clearly point to high capital costs, as indicated by recent bond yields. The yield on 10-year Treasury bonds moved above the 3% level on May 2, 2022, for the first time since late 2018. By December 2023, the yield on 30-year Treasury bonds moved to 4.14%, or an increase of 2.47% (or 148%) since December 2020.

As shown on page 2 of Schedule 13, forecasts published by Blue Chip on April 1, 2024, indicate that the yields on long-term Treasury bonds are expected to be in the range of 4.0% to 4.3% during the next six quarters. This means that elevated interest rates will continue near current levels. The longer-

term forecasts show that the yields on 30-year Treasury bonds will average 4.1% from 2025 through 2029 and 4.2% from 2030 to 2034. Hence, I have used a conservative 3.75% risk-free rate of return for CAPM purposes, which considers the possibility of some moderation of rates prospectively.

58. Q. WHAT MARKET PREMIUM HAVE YOU USED IN THE CAPM?

A. As shown in the lower panel of data presented on page 2 of Schedule 13, the market premium is derived from historical data and the forecast returns. For the historically based market premium, I have used the arithmetic mean obtained from the data presented on page 1 of Schedule 13. On that schedule, the market return was 12.21% (12.40% + 12.02% = 24.42% ÷ 2) as the midpoint of the "low" and "average" interest rate environments. During those periods, the yield on long-term government bonds was 3.87% (2.83% + 4.91% = 7.74% ÷ 2). The resulting market premium is 8.34% (12.21% - 3.87%) based on historical data, as shown on page 2 of Schedule 13. As also shown on page 2 of Schedule 13, I calculated the forecast returns, which show a 11.83% total market return based on the Value Line forecasts. With these data, I calculated a market premium of 8.08% (11.83% - 3.75%) using the forecast data by Value Line. The resulting market premium applicable to the CAPM derived from these sources equals 8.21% (8.08% + 8.34% = 16.42% ÷ 2).

59. Q. ARE THERE ADJUSTMENTS TO THE CAPM THAT ARE NECESSARY TO FULLY REFLECT THE RATE OF RETURN ON COMMON EQUITY?

A. Yes. The technical literature supports an adjustment relating to the size of the company or portfolio for which the calculation is performed. As the size of a firm decreases, its risk and required return increases. Moreover, in his discussion of the cost of capital, Professor Eugene F. Brigham has indicated that smaller firms have higher capital costs than otherwise similar larger firms. Also, the

Fama/French study (see "The Cross-Section of Expected Stock Returns"; The Journal of Finance, June 1992) established that the size of a firm helps explain stock returns. In an October 15, 1995 article in Public Utility Fortnightly, entitled "Equity and the Small-Stock Effect," it was demonstrated that the CAPM could significantly understate the cost of equity according to a company's size. Indeed, it was demonstrated in the SBBI Yearbook that the returns for stocks in lower deciles (i.e., smaller stocks) had returns in excess of those shown by the simple CAPM. To recognize this fact, I used the mid-cap adjustment of 1.02%, as revealed on page 3 of Schedule 13, for the CAPM calculation. The adjustment here is related to the size of the Water Group.

60. Q. WHAT DOES YOUR CAPM ANALYSIS SHOW?

A. Using the 3.75% risk-free rate of return, the leverage adjusted beta of 1.10 for the Water Group, the 8.21% market premium, and the 1.02% size adjustment, the following result is indicated.

	Rf	**+**	***ß***	***x (Rm-Rf)***	**+**	***size***	**=**	***k***
Water Group	3.75%	+	1.10	x (8.21%)	+	1.02%	=	13.80%

COMPARABLE EARNINGS APPROACH

61. Q. WHAT IS THE COMPARABLE EARNINGS APPROACH?

A. The Comparable Earnings approach estimates a fair return on equity by comparing returns realized by non-regulated companies to returns that a public utility with similar risk characteristics would need to realize to compete for capital. Because regulation is a substitute for competitively determined prices, the returns realized by non-regulated firms with comparable risks to a public utility provide useful insight into investor expectations for public utility returns. The firms selected for the Comparable Earnings approach should be companies whose

prices are not subject to cost-based price ceilings (i.e., non-regulated firms) so that circularity is avoided.

There are two avenues available to implement the Comparable Earnings approach. One method involves the selection of another industry (or industries) with comparable risks to the public utility in question, and the results for all companies within that industry serve as a benchmark. The second approach requires the selection of parameters that represent similar risk traits for the public utility and the comparable risk companies. Using this approach, the business lines of the comparable companies become unimportant. The latter approach is preferable with the further qualification that the comparable risk companies exclude regulated firms in order to avoid the circular reasoning implicit in the use of the achieved earnings/book ratios of other regulated firms. The United States Supreme Court has held that:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. Bluefield Water Works v. Public Service Commission, 262 U.S. 668 (1923).

It is important to identify the returns earned by firms that compete for capital with a public utility. This can be accomplished by analyzing the returns of non-regulated firms that are subject to the competitive forces of the marketplace.

62. Q. DID YOU COMPARE THE RESULTS OF YOUR DCF AND CAPM ANALYSES TO THE RESULTS INDICATED BY A COMPARABLE EARNINGS APPROACH?

A. Yes. I selected companies from The Value Line Investment Survey for Windows that have six categories of comparability designed to reflect the risk of the Water Group. These screening criteria were based upon the range as defined by the rankings of the companies in the Water Group. The items considered were Timeliness Rank, Safety Rank, Financial Strength, Price Stability, Value Line betas, and Technical Rank. The definition for these parameters is provided on page 3 of Schedule 14. The identities of the companies comprising the Comparable Earnings group and their associated rankings within the ranges are identified on Schedule 14, page 1.

I relied upon Value Line data because it provides a comprehensive basis for evaluating the risks of the comparable firms. As to the returns calculated by Value Line for these companies, there is some downward bias in the figures shown on page 2 of Schedule 14, because Value Line computes the returns on year-end rather than average book value. If average book values had been employed, the rates of return would have been slightly higher. Nevertheless, these are the returns considered by investors when taking positions in these stocks. Because many of the comparability factors, as well as the published returns, are used by investors in selecting stocks, and the fact that investors rely on the Value Line service to gauge returns, it is an appropriate database for measuring comparable return opportunities.

63. Q. WHAT DATA DID YOU CONSIDER IN YOUR COMPARABLE EARNINGS ANALYSIS?

A. I used both historical realized returns and forecasted returns for non-utility companies. As noted previously, I have not used returns for utility companies to avoid the circularity that arises from using regulatory-influenced returns to determine a regulated return. It is appropriate to consider a relatively long measurement period in the Comparable Earnings approach to cover conditions over an entire business cycle. A ten-year period (five historical years and five projected years) is sufficient to cover an average business cycle. Unlike the DCF and CAPM, the results of the Comparable Earnings method can be applied directly to the book value capitalization. In other words, the Comparable Earnings approach does not contain the potential misspecification contained in market models when the market capitalization and book value capitalization diverge significantly. A point of demarcation was chosen to eliminate the results of highly profitable enterprises, which the Bluefield case stated were not the type of returns that a utility was entitled to earn. For this purpose, I used 20% as the point where those returns could be viewed as highly profitable and should be excluded from the Comparable Earnings approach. The average historical rate of return on book common equity was 12.7% using only the returns that were less than 20%, as shown on page 2 of Schedule 14. The average forecasted rate of return, as published by Value Line, is 13.1% also using values less than 20%, as provided on page 2 of Schedule 14. Using the average of these data, my Comparable Earnings result is 12.90%, as shown on page 2 of Schedule1.

CONCLUSION ON COST OF EQUITY

64. Q. WHAT IS YOUR CONCLUSION REGARDING THE COMPANY'S COST OF COMMON EQUITY?

A. Based upon the application of a variety of methods and models described previously, it is my opinion that the return rate on common equity of 10.95% being employed in this case is within – in fact, nearer the low end – of the range of reasonable equity return rates for AP. The rate of return on common equity used by AP to develop its proposed revenue requirement in this case should be considered in the context of AP's risk characteristics, as well as the general condition of the capital markets. It is essential that the Commission employ a variety of techniques to measure AP's cost of equity because of the limitations/infirmities that are inherent in each method. It is also important that the Commission consider the exemplary performance of the Company's management when making a final determination on the equity return in this case.

65. Q. DOES THIS COMPLETE YOUR DIRECT TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony, if necessary, and to respond to witnesses presented by other parties.

EDUCATIONAL BACKGROUND, BUSINESS EXPERIENCE AND QUALIFICATIONS

I was awarded a degree of Bachelor of Science in Business Administration by Drexel University in 1971. While at Drexel, I participated in the Cooperative Education Program which included employment, for one year, with American Water Works Service Company, Inc., as an internal auditor, where I was involved in the audits of several operating water companies of the American Water Works System and participated in the preparation of annual reports to regulatory agencies and assisted in other general accounting matters.

Upon graduation from Drexel University, I was employed by American Water Works Service Company, Inc., in the Eastern Regional Treasury Department where my duties included preparation of rate case exhibits for submission to regulatory agencies, as well as responsibility for various treasury functions of the thirteen New England operating subsidiaries.

In 1973, I joined the Municipal Financial Services Department of Betz Environmental Engineers, a consulting engineering firm, where I specialized in financial studies for municipal water and wastewater systems.

In 1974, I joined Associated Utility Services, Inc., now known as AUS Consultants. I held various positions with the Utility Services Group of AUS Consultants, concluding my employment there as a Senior Vice President.

In 1994, I formed P. Moul & Associates, an independent financial and regulatory consulting firm. In my capacity as Managing Consultant and for the past forty-two years, I have continuously studied the rate of return requirements for cost of service-regulated firms. In this regard, I have supervised the preparation of rate of return studies, which were employed, in connection with my testimony and in the past for other individuals. I have presented direct testimony on the subject of fair rate of return, evaluated rate of return testimony of other witnesses, and presented rebuttal testimony.

My studies and prepared direct testimony have been presented before thirty-seven (37) federal, state and municipal regulatory commissions, consisting of: the Federal Energy Regulatory Commission; state public utility commissions in Alabama, Alaska, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Virginia, West Virginia, Wisconsin, and the Philadelphia Gas Commission, and the Texas Commission on Environmental Quality. My testimony has been offered in over 300 rate cases involving electric power, natural gas distribution and transmission, resource recovery, solid waste collection and disposal, telephone, wastewater, and water service utility companies. While my testimony has involved principally fair rate of return and financial matters, I have also testified on capital allocations, capital recovery, cash working capital, income taxes, factoring of accounts receivable, and take-or-pay expense recovery. My testimony has been offered on behalf of municipal and investor-owned public utilities and for the staff of a regulatory commission. I have also testified at an Executive Session of the State of New Jersey Commission of Investigation concerning the BPU regulation of solid waste collection and disposal.

I was a co-author of a verified statement submitted to the Interstate Commerce Commission concerning the 1983 Railroad Cost of Capital (Ex Parte No. 452). I was also co-author of comments submitted to the Federal Energy Regulatory Commission regarding the Generic Determination of Rate of Return on Common Equity for Public Utilities in 1985, 1986 and 1987 (Docket Nos. RM85-19-000, RM86-12-000, RM87-35-000 and RM88-25-000). Further, I have been the consultant to the New York Chapter of the National Association of Water Companies, which represented the water utility group in the Proceeding on Motion of the Commission to Consider Financial Regulatory Policies for New York Utilities (Case 91-M-0509). I have also submitted comments to the Federal Energy Regulatory Commission in

its Notice of Proposed Rulemaking (Docket No. RM99-2-000) concerning Regional Transmission Organizations and on behalf of the Edison Electric Institute in its intervention in the case of Southern California Edison Company (Docket No. ER97-2355-000). Also, I was a member of the panel of participants at the Technical Conference in Docket No. PL07-2 on the Composition of Proxy Groups for Determining Gas and Oil Pipeline Return on Equity.

In late 1978, I arranged for the private placement of bonds on behalf of an investor-owned public utility. I have assisted in the preparation of a report to the Delaware Public Service Commission relative to the operations of the Lincoln and Ellendale Electric Company. I was also engaged by the Delaware P.S.C. to review and report on the proposed financing and disposition of certain assets of Sussex Shores Water Company (P.S.C. Docket Nos. 24-79 and 47-79). I was a co-author of a Report on Proposed Mandatory Solid Waste Collection Ordinance prepared for the Board of County Commissioners of Collier County, Florida.

I have been a consultant to the Bucks County Water and Sewer Authority concerning rates and charges for wholesale contract service with the City of Philadelphia. My municipal consulting experience also included an assignment for Baltimore County, Maryland, regarding the City/County Water Agreement for Metropolitan District customers (Circuit Court for Baltimore County in Case 34/153/87-CSP-2636).

PART I. INTRODUCTION

AQUA PENNSYLVANIA, INC.

COST OF SERVICE ALLOCATION STUDY
AS OF DECEMBER 31, 2025

PLAN OF REPORT

The report sets forth the results of the cost of service allocation study based on pro forma costs as of December 31, 2025, for Aqua Pennsylvania, Inc. Part I, Introduction, contains statements with respect to the basis of the study, the procedures employed, the customer class demand study, and a summary of the results of the studies. Part II presents the Cost of Service Study for both the Water Base Operations and Shenandoah Water by Customer Classification, including detailed schedules of the allocation of costs to customer classifications, as well as the bases for the allocations. Schedules A and A-S in Part II summarizes the cost allocation and the revenues produced under present and proposed rates. Responses to rate structure and cost of service filing requirements are provided in the Appendix.

BASIS OF STUDY

The purpose of the cost allocation studies are to determine the relative cost of service responsibilities of the several customer classifications based on considerations of quantity of water consumed, variability of rate of consumption, and costs associated with customer metering, billing and accounting. The allocation study incorporated generally-accepted principles and procedures for allocating the several categories of cost to customer classifications in proportion to each classification's use of facilities, commodities and services required in providing water service.

ALLOCATION PROCEDURES

The allocation studies were based on the Base-Extra Capacity Method for allocating costs to customer classifications. The method is described in the 2017 and prior editions of the Water Rates Manual, published by the American Water Works Association. The four basic categories of cost responsibility are base, extra capacity, customer, and fire protection costs. The following discussion presents a brief description of these costs and the manner in which they were allocated.

Base Costs are costs that tend to vary with the quantity of water used, plus costs associated with supplying, treating, pumping, and distributing water to customers under average load conditions, without the elements necessary to meet peak demands. Base costs were allocated to customer classifications on the basis of average daily usage.

Extra Capacity Costs are costs associated with meeting usage requirements in excess of the average. They include operating and capital costs for additional plant and system capacity beyond that required for average use. The extra capacity costs in this study are subdivided into costs necessary to meet maximum day extra demand and costs to meet maximum hour extra demand. The extra capacity costs were allocated to customer classifications on the bases of each classification's maximum day and hour usage in excess of average usage.

Customer Costs are costs associated with serving customers regardless of their usage or demand characteristics. Customer costs include the operating and capital costs related to meters and services, meter reading costs, and billing and

collecting costs. The customer costs were allocated on the bases of capital cost of meters and services and the number of customer bills.

Fire Protection Costs are costs associated with providing the facilities to meet the potential peak demand of fire protection service. Fire Protection costs are subdivided into costs to meet Public Fire Protection and Private Fire Protection demands. The extra capacity costs assigned to fire protection service were allocated to Public and Private Fire Protection and Residential General Service on the basis of the total relative demands of the hydrants, fire service lines, and residential service lines sized to provide fire protection, as well as general service.

RESULTS OF STUDIES

The results of the cost of service allocation studies are set forth in Part II. The data summarized in Schedules A and A-S, "Comparison of Pro Forma Cost of Service with Revenues Under Present and Proposed Rates for the Twelve Months Ending December 31, 2025", constitute the principal results of the cost allocation study and subsequent rate design.

The cost of service by customer classification shown in column 2 of Schedules A and A-S are developed in Schedules D and D-S, "Allocation of Cost of Service to Customer Classifications for the Twelve Months Ended December 31, 2025". The allocation of the total cost of service to the several customer classifications was performed by applying the allocation factors referenced in column 3 of Schedules D and D-S to the cost of service set forth in column 3. The bases for the allocation factors are presented in Schedules E and E-S.

Schedule F, "Summary of Average Daily Send Out, Maximum Daily Use, and Maximum Hourly Use for the Years 1962-2020", presents the determination of the maximum day and hour ratios for the overall system. Schedules G and G-S, "Basis for Allocating Demand Related Costs of Fire Service to Residential and Private and Public Fire Protection Customer Classifications", presents the calculation of the total relative demand of fire hydrants and fire service lines.

Schedule H sets forth the calculation of the firm and interruptible standby rates based on the functional allocation provided in the Appendix. Also provided in the Appendix are responses to Rate Structure and Cost of Service Filing Requirements RS1a through RS1j and RS2.

PART II. COST OF SERVICE BY CUSTOMER CLASSIFICATION

WATER BASE OPERATIONS

AQUA PENNSYLVANIA, INC. - WATER BASE

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma, future test year average daily consumption for each customer classification.

Customer Classification	Average Daily Consumption, 100 Gallons	Allocation Factor
(1)	(2)	(3)
Residential	505,230	0.589166
Commercial	277,340	0.323416
Industrial	52,299	0.060988
Public	16,833	0.019630
Other Water Utilities	7	0.000008
Private Fire Protection	2,256	0.002631
Public Fire Protection	3,569	0.004162
Total	857,534	1.000000

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capapcity demand for each customer classification , as follows:

	Average Daily Consumption		Maximum Day Extra Capacity		
Customer Classification	Allocation Factor 1	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2)x 0.714286	(4)	(5)=(4)x 0.285714	(6)=(3)+(5)
Residential	0.589166	0.420833	0.626879	0.179108	0.59994
Commercial	0.323416	0.231011	0.312834	0.089381	0.32039
Industrial	0.060988	0.043563	0.041295	0.011798	0.05536
Public	0.019630	0.014021	0.018987	0.005425	0.01945
Other Water Utilities	0.000008	0.000006	0.000006	0.000002	0.00001
Private Fire Protection	0.002631	0.001879			0.00188
Public Fire Protection	0.004162	0.002973			0.00297
Total	1.000000	0.714286	1.00000	0.285714	1.00000

The derivation of the maximum day extra capapcity factors in column 4 and the basis for the column 3 and 5 weightings are presented on the following page.

AQUA PENNSYLVANIA, INC.- BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS, cont.

		Maximum Day Extra Capacity		
Customer Classification	Average Daily Consumption, 100 Gallons	Factor*	Rate of Flow, 100 Gallons Per Day	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)
Residential	505,230	1.1	555,753.0	0.626879
Commercial	277,340	1.0	277,340.0	0.312834
Industrial	52,299	0.7	36,609.3	0.041295
Public	16,833	1.0	16,833.0	0.018987
Other Water Utilities	7	0.7	4.9	0.000006
Total	851,709		886,540.2	1.000000

The weightings of the factos is based on the maximum day ratio of 1.40, based on a review of maximum day ratios experienced during the period 1966 through 2017 (see Schedule F)

	Maximum Day Ratio	Weight
Average Day	1.00	0.7143
Maximum Day Extra Capacity	0.40	0.2857
Total	1.40	1.0000

* Ratio of maximum day to average day minus 1.0.

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS.

Factors are based on the weighting of the average daily consumption, the maximum day extra capacity demand, and the fire protection demand for each customer classification.

	Average Daily Consumption		Maximum Day Extra Capacity		Fire Protection		
Customer Classification	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2) X 0.665337	(4)	(5)=(4) X 0.266135	(6)	(7)=(6) X 0.068528	(8)=(3)+(5)+(7)
Residential	0.589166	0.391994	0.626879	0.166834	0.022042	0.001511	0.560338
Commercial	0.323416	0.215180	0.312834	0.083256			0.298436

Public Fire Protection	0.004162	0.002769			0.612701	0.041987	0.044757
Total	1.000000	0.665337	1.000000	0.266135	1.000000	0.068528	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weightings of the factors is based on the potential demannd of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.40 and the total system sendout for the test year of 116.5 mgd. The rato is based on a review of the experienced maximum day ratios during the period 1966 through 2023 (see Schedule F). The system demand for fire protection is 20,000 gpm for 10 hours.

	Ratio	Rate of Flow, (GPD)	Weight
Average Day	1.00	116,506,992	0.665337
Maximum Day Extra Capacity	0.40	46,602,797	0.266135
Subtotal	1.40	163,109,789	0.931472
Fire Protection		12,000,000	0.068528
Total		175,109,789	1.000000

The public and private fire protection allocation factors in column 6 on the previous page are based on the relative potiential demands (see Schedule G).

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the average daily consumption, the maximum day extra capapcity demand, and the fire protection demand for each customer classification.

	Average Hourly Consumption			Maximum Hour Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3) X 0.444998	(5)	(6)=(5) X 0.445000	(7)	(8)=(7) X 0.110002	(9)=(4)+(6)+(8)
Residential	21,051.3	0.589167	0.262178	0.659593	0.293519	0.022042	0.002425	0.558122
Commercial	11,555.8	0.323415	0.143919	0.289659	0.128898			0.272817
Industrial	2,179.1	0.060987	0.027139	0.033163	0.014758			0.041897
Public	701.4	0.019630	0.008735	0.017581	0.007824			0.016559
Other Water Utilities	0.3	0.000008	0.000004	0.000004	0.000002			0.000006
Private Fire Protection	94.0	0.002631	0.001171			0.365256	0.040179	0.041349
Public Fire Protection	148.7	0.004162	0.001852			0.612701	0.067398	0.069250
Total	35,730.6	1.000000	0.444998	1.000000	0.445000	1.000000	0.110002	1.000000

The maximum hour extra capacity factors in column 5 are determined as follows:

AQUA PENNSYLVANIA, INC.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weightings of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maixmum hour ratio of 2.0 and the total system sendout for the test year of 116.5 mgd. The ratio is based on a review of the experienced maximum hour ratios during the period 1966 through 2023 (see Schedule F) The system demand for fire protection is 20,000 gpm.

	Ratio	Rate of Flow, (GPM)	Weight
Average Hour	1.00	80,908	0.4450
Maximum Hour Extra Capacity	1.00	80,908	0.4450
Subtotal	2.00	161,816	0.8900
Fire Protection		20,000	0.1100
Total		181,816	1.0000

The maximum hour extra capacity factors in column 5 of the previous page are determined as follows:

Customer Classification	Average Hourly Consumption 100 Gals.	Maximum Hour Extra Capacity Factor*	Maximum Hour Extra Capacity 100 Gals. Per Hour	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)
Residential	21,051.3	3.5	73,679.6	0.659593
Commercial	11,555.8	2.8	32,356.2	0.289659
Industrial	2,179.1	1.7	3,704.5	0.033163
Public	701.4	2.8	1,963.9	0.017581
Other Water Utilities	0.3	1.5	0.5	0.000004
Total	35,487.9		111,704.6	1.000000

* Ratio of Maximum Hour To Average Hour Minus 1.0.

The public and private fire protection allocation factors in column 7 on the previous page are based on the relative potential demands (see Schedule G).

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES.

Factors are based on the weightings of the average hourly consumption, the maximum hour extra capacity demand, and the fire protection demand for each customer classification.

		Average Hourly Consumption		Maximum Hour Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3) X 0.472742	(5)	(6)=(5) X 0.472742	(7)	(8)=(7) X 0.054516	(9)=(4)+(6)+(8)
Residential	21,051.3	0.589167	0.278524	0.659593	0.311817	0.022042	0.001202	0.591543
Commercial	11,555.8	0.323415	0.152892	0.289659	0.136934			0.289826
Industrial	2,179.1	0.060987	0.028831	0.033163	0.015678			0.044509
Public	701.4	0.019630	0.009280	0.017581	0.008311			0.017591
Other Water Utilities	0.3	0.000008	0.000004	0.000004	0.000002			0.000006
Private Fire Protection	94.0	0.002631	0.001244			0.365256	0.019912	0.021156
Public Fire Protection	148.7	0.004162	0.001967			0.612701	0.033402	0.035369
Total	35,730.6	1.000000	0.472742	1.000000	0.472742	1.000000	0.054516	1.000000

The weighting of the factors is based on the ratio of the capacity required for a 10-hour dmenad of fire flow, as related to total storage capacity. The calculation is shown on the following page.

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES, cont.

The weighting of the factors is based on the ratio of the capacity required for a 10-hour demand of fire flow, as related to total storage capacity.

Fire Protection Weight = $\frac{\text{20,000 GPM X 60 Min. X 10 Hours}}{\text{220,120,710 Gallons}}$ = 0.0545

General Service Weight = 1.0000 - 0.0545 = 0.9455

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows:

	Maximum Hour Ratio	Percent	Weight
Average Hour	1.00	50.00	0.4727
Extra Capacity Maximum Hour	1.00	50.00	0.4727
Total	2.00	100.00	0.9455

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH FIRE HYDRANTS.

Factors are based on the number of hydrants, as follows:

Customer Classification	Number of Hydrants	Allocation Factor
(1)	(2)	(3)
Private Fire Protection	2,680	0.1121
Public Fire Protection	21,237	0.8879
Total	23,917	1.0000

FACTOR 7 AND 7A. ALLOCATION OF COSTS ASSOCIATED WITH METERS.

Factors are based on the relative cost of meters by size and customer classification, as developed on the following page and summarized below:

Customer Classification	5/8" Dollar Equivalents	Factor 8 Allocation Factor	Factor 8A Allocation Factor
(1)	(2)	(3)	(3)
Residential	402,260	0.868553	0.894152
Commercial	42,032	0.090755	0.093430
Industrial	2,149	0.004640	0.004777
Public	3,420	0.007384	0.007602
Other Water Utilities	18	0.000039	0.000040
Private Fire Protection	13,259	0.028629	
Total	463,138	1.000000	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 8. ALLOCATION OF COSTS ASSOCIATED WITH SERVICES.

Factors are based on the relative cost of services by size and customer classification, as developed on the following page and summarized below:

Customer Classification	3/4" Dollar Equivalents	Allocation Factor
(1)	(2)	(3)
Residential	402,254	0.886774
Commercial	30,956	0.068243
Industrial	1,164	0.002566
Public	1,973	0.004350
Other Water Utilities	7	0.000015
Private Fire Protection	17,261	0.038052
Total	453,615	1.000000

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 9. ALLOCATION OF BILLING AND COLLECTING COSTS.

Factors are based on number of bills

Customer Classification	Total Bills	Allocation Factor
(1)	(2)	(3)
Residential	4,798,449	0.940718
Commercial	277,242	0.054352
Industrial	8,481	0.001663
Public	14,088	0.002762
Other Water Utilities	32	0.000006
Private Fire Protection	682	0.000134
Public Fire Protection	1,864	0.000365
Total	5,100,839	1.000000

FACTOR 10. ALLOCATION OF METER READING COSTS.

Factors are based on number of bills for metered customers

Customer Classification	Total Bills	Allocation Factor
(1)	(2)	(3)
Residential	4,798,449	0.941062
Commercial	277,242	0.054372
Industrial	8,481	0.001663
Public	14,088	0.002763
Other Water Utilities	32	0.000006
Private Fire Protection	682	0.000134
Total	5,098,975	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 11. ALLOCATION OF CUSTOMERS' ACCOUNTING AND COLLECTING EXPENSES, MATERIALS AND SUPPLIES.

Factors are based on customers' accounting and collecting expenses, meter reading and billing and collecting expenses as follows:

Customer Classification	Operating Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 10,737,714	0.962697
Commercial	381,486	0.034202
Industrial	11,670	0.001046
Public	19,385	0.001738
Other Water Utilities	44	0.000004
Private Fire Protection	938	0.000084
Public Fire Protection	2,542	0.000228
Total	$ 11,153,780	1.000000

FACTOR 12. ALLOCATION OF TRANSMISSION AND DISTRIBUTION OPERATION AND MAINTENANCE SUPERVISION AND ENGINEERING, MAPS AND RECORDS AND OTHER DEPARTMENTAL EXPENSES.

Factors are based on transmission and distribution operation expenses other than those being allocated, as follows:

Customer Classification	Transmission and Distribution Operating Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 3,605,464	0.748282
Commercial	685,853	0.142343
Industrial	76,659	0.015910
Public	47,179	0.009792
Other Water Utilities	126	0.000026
Private Fire Protection	161,040	0.033422
Public Fire Protection	242,004	0.050226
Total	$ 4,818,325	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 13. ALLOCATION OF TRANSMISSION AND DISTRIBUTION MAINTENANCE EXPENSES.

Factors are based on transmission and distribution maintenance expenses other than those being allocated, as follows:

Customer Classification	Transmission & Distribution Maintenance Labor	Allocation Factor
(1)	(2)	(3)
Residential	$729,237	0.5835
Commercial	224,490	0.1796
Industrial	32,002	0.0256
Public	13,811	0.0111
Other Water Utilities	11	0.0000
Private Fire Protection	59,455	0.0476
Public Fire Protection	190,795	0.1527
Total	$1,249,802	1.0000

FACTOR 14. ALLOCATION OF ADMINISTRATIVE AND GENERAL EXPENSES

Factors are based on the allocation of all other operation and maintenance expenses excluding purchased water, power and chemicals.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$32,871,070	0.7587
Commercial	7,396,397	0.1707
Industrial	1,108,817	0.0256
Public	454,077	0.0105
Other Water Utilities	435	0.0000
Private Fire Protection	484,465	0.0112
Public Fire Protection	1,008,190	0.0233
Total	$43,323,451	1.0000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 15. ALLOCATION OF CASH WORKING - EXPENSES

Factors are based on the allocation of total operation and maintenance expenses.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$104,197,428	0.7192
Commercial	29,931,414	0.2066
Industrial	4,907,737	0.0339
Public	1,829,798	0.0126
Other Water Utilities	1,383	0.0000
Private Fire Protection	1,317,249	0.0091
Public Fire Protection	2,695,633	0.0186
Total	$144,880,642	1.0000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 16. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of direct labor expense.

Customer Classification	Direct Labor Expense	Allocation Factor
(1)	(2)	(3)
Residential	$27,495,255	0.7273
Commercial	7,334,890	0.1940
Industrial	1,125,554	0.0298
Public	453,072	0.0120
Other Water Utilities	427	0.0000
Private Fire Protection	471,102	0.0125
Public Fire Protection	924,697	0.0245
Total	$37,804,996	1.0000

FACTOR 17. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, MISCELLANEOUS INTANGIBLE PLANT AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciaton other than those items being allocated, as follows:

Customer Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Residential	$2,785,254,921	##########
Commercial	1,146,197,290	##########
Industrial	179,813,416	##########
Public	69,856,058	##########
Other Water Utilities	35,976	##########
Private Fire Protection	149,452,282	##########
Public Fire Protection	275,724,195	##########
Total	$4,606,334,138	##########

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 18. ALLOCATION OF INCOME TAXES AND INCOME AVAILABLE FOR RETURN.

Factors are base on the allocation of the original cost measure of value rate base as shown on the following pages and summarized below.

Customer Classification	Original Cost Measure of Value	Allocation Factor
(1)	(2)	(3)
Residential	$2,610,603,159	0.604913
Commercial	1,073,310,881	0.248701
Industrial	168,370,610	0.039014
Public	65,414,473	0.015157
Other Water Utilities	33,722	0.000008
Private Fire Protection	139,869,333	0.032410
Public Fire Protection	258,063,540	0.059797
Total	$4,315,665,718	1.000000

FACTOR 19. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS AND OTHER WATER REVENUES.

The factors are based on the allocation of the total cost of service, excluding those items being allocated.

Customer Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Residential	$451,357,952	0.668240
Commercial	162,720,651	0.240910
Industrial	25,466,675	0.037704
Public	9,979,745	0.014775
Other Water Utilities	5,705	0.000008
Private Fire Protection	17,733,671	0.026255
Public Fire Protection	8,178,597	0.012108
Total	$675,442,996	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 20. ALLOCATION OF UNRECOVERED PUBLIC FIRE PROTECTION.

These costs are deducted directly from the Public Fire Protection Classification.

Customer Classification	Allocation Factor
(1)	(2)
Public Fire Protection	1.0000

FACTOR 21. REALLOCATION OF UNRECOVERED PUBLIC FIRE PROTECTION.

These costs are allocated based on meter equivalents.

Customer Classification	5/8" Dollar Equivalents	Allocation Factor
(1)	(2)	(3)
Residential	402,260	0.894187
Commercial	42,032	0.093433
Industrial	2,149	0.004777
Public	3,420	0.007602
Total	449,861	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 22. ALLOCATION OF SOURCE OF SUPPLY BENEFITS AND OTHER COSTS

These costs are allocated based on the Source of Supply labor allocation.

Customer Classification	Source of Supply Labor	Allocation Factor
(1)	(2)	(3)
Residential	574,838	0.596684
Commercial	306,923	0.318587
Industrial	53,034	0.055049
Public	18,628	0.019336
Other Water Utilities	7	0.000007
Private Fire Protection	3,783	0.003927
Public Fire Protection	6,174	0.006409
Total	963,388	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

AQUA PENNSYLVANIA, INC. - SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma, future test year average daily consumption for each customer classification.

Customer Classification	Average Daily Consumption, 100 Gallons	Allocation Factor
(1)	(2)	(3)
Residential	2,605	0.650567
Commercial	606	0.151341
Industrial	526	0.131362
Public	240	0.059937
Other Water Utilities	0	0.000000
Private Fire Protection		0.002631
Public Fire Protection		0.004162
Total	3,977	1.000000

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capapcity demand for each customer classification , as follows:

	Average Daily Consumption		Maximum Day Extra Capacity		
Customer Classification	Allocation Factor 1	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2)x 0.714286	(4)	(5)=(4)x 0.285714	(6)=(3)+(5)
Residential	0.650567	0.464691	0.702380	0.200680	0.66537
Commercial	0.151341	0.108101	0.148540	0.042440	0.15054
Industrial	0.131362	0.093830	0.090252	0.025786	0.11962
Public	0.059937	0.042812	0.058828	0.016808	0.05962
Other Water Utilities	0.000000	0.000000	0.000000	0.000000	0.00000
Private Fire Protection	0.002631	0.001879			0.00188
Public Fire Protection	0.004162	0.002973			0.00297
Total	1.000000	0.714286	1.00000	0.285714	1.00000

The derivation of the maximum day extra capapcity factors in column 4 and the basis for the column 3 and 5 weightings are presented on the following page.

AQUA PENNSYLVANIA, INC.- SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS, cont.

		Maximum Day Extra Capacity		
Customer Classification	Average Daily Consumption, 100 Gallons	Factor*	Rate of Flow, 100 Gallons Per Day	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)
Residential	2,605	1.1	2,865.5	0.702380
Commercial	606	1.0	606.0	0.148540
Industrial	526	0.7	368.2	0.090252
Public	240	1.0	240.0	0.058828
Other Water Utilities	0	0.7	0.0	0.000000
Total	3,977		4,079.7	1.000000

The weightings of the factos is based on the maximum day ratio of 1.40, based on a review of maximum day ratios experienced during the period 1966 through 2017 (see Schedule F)

	Maximum Day Ratio	Weight
Average Day	1.00	0.7143
Maximum Day Extra Capacity	0.40	0.2857
Total	1.40	1.0000

* Ratio of maximum day to average day minus 1.0.

AQUA PENNSYLVANIA, INC. - SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS.

Factors are based on the weighting of the average daily consumption, the maximum day extra capacity demand, and the fire protection demand for each customer classification.

	Average Daily Consumption		Maximum Day Extra Capacity		Fire Protection		
Customer Classification	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2) X 0.665337	(4)	(5)=(4) X 0.266135	(6)	(7)=(6) X 0.068528	(8)=(3)+(5)+(7)
Residential	0.650567	0.432846	0.702380	0.186928	0.000000	0.000000	0.619774

Public Fire Protection	0.004162	0.002769			0.874421	0.059923	0.062692
Total	1.000000	0.665337	1.000000	0.266135	1.000000	0.068528	1.000000

AQUA PENNSYLVANIA, INC. - SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weightings of the factors is based on weightings in the base water cost allocation.

	Weight
Average Day	0.665337
Maximum Day Extra Capacity	0.266135
Subtotal	0.931472
Fire Protection	0.068528
Total	1.000000

The public and private fire protection allocation factors in column 6 on the previous page are based on the relative potiential demands (see Schedule G).

AQUA PENNSYLVANIA, INC. - SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the average daily consumption, the maximum day extra capapcity demand, and the fire protection demand for each customer classification.

	Average Hourly Consumption			Maximum Hour Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3) X 0.444998	(5)	(6)=(5) X 0.445000	(7)	(8)=(7) X 0.110002	(9)=(4)+(6)+(8)
Residential	108.5	0.650567	0.289501	0.736206	0.327612	0.000000	0.000000	0.617113
Commercial	25.3	0.151341	0.067346	0.137335	0.061114			0.128460
Industrial	21.9	0.131362	0.058456	0.072176	0.032118			0.090574
Public	10.0	0.059937	0.026672	0.054283	0.024156			0.050828
Other Water Utilities	0.0	0.000000	0.000000	0.000000	0.000000			0.000000
Private Fire Protection	0.0	0.002631	0.001171			0.125579	0.013814	0.014985
Public Fire Protection	0.0	0.004162	0.001852			0.874421	0.096188	0.098040
Total	165.7	1.000000	0.444998	1.000000	0.445000	1.000000	0.110002	1.000000

The maximum hour extra capacity factors in column 5 are determined as follows:

AQUA PENNSYLVANIA, INC.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weightings of the factors is based on weightings in the base water cost allocation.

	Weight
Average Hour	0.4450
Maximum Hour Extra Capacity	0.4450
Subtotal	0.8900
Fire Protection	0.1100
Total	1.0000

The maximum hour extra capacity factors in column 5 of the previous page are determined as follows:

	Average Hourly	Maximum Hour Extra Capacity		
Customer Classification	Consumption 100 Gals.	Factor*	100 Gals. Per Hour	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)
Residential	108.5	3.5	379.8	0.736206
Commercial	25.3	2.8	70.8	0.137335
Industrial	21.9	1.7	37.2	0.072176
Public	10.0	2.8	28.0	0.054283
Other Water Utilities	0.0	1.5	0.0	0.000000
Total	165.7		515.8	1.000000

* Ratio of Maximum Hour To Average Hour Minus 1.0.

The public and private fire protection allocation factors in column 7 on the previous page are based on the relative potential demands (see Schedule G).

AQUA PENNSYLVANIA, INC. - SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES.

Factors are based on the weightings of the average hourly consumption, the maximum hour extra capacity demand, and the fire protection demand for each customer classification.

		Average Hourly Consumption		Maximum Hour Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3) X 0.472742	(5)	(6)=(5) X 0.472742	(7)	(8)=(7) X 0.054516	(9)=(4)+(6)+(8)
Residential	108.5	0.650567	0.307550	0.736206	0.348036	0.000000	0.000000	0.655586
Commercial	25.3	0.151341	0.071545	0.137335	0.064924			0.136469
Industrial	21.9	0.131362	0.062100	0.072176	0.034121			0.096221
Public	10.0	0.059937	0.028335	0.054283	0.025662			0.053996
Other Water Utilities	0.0	0.000000	0.000000	0.000000	0.000000			0.000000
Private Fire Protection	0.0	0.002631	0.001244			0.125579	0.006846	0.008090
Public Fire Protection	0.0	0.004162	0.001968			0.874421	0.047670	0.049637
Total	165.7	1.000000	0.472742	1.000000	0.472742	1.000000	0.054516	1.000000

The weighting of the factors is based on the ratio of the capacity required for a 10-hour dmenad of fire flow, as related to total storage capacity. The calculation is shown on the following page.

AQUA PENNSYLVANIA, INC. - SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES, cont.

The weighting of the factors is based on the ratio of the capacity used in the Water Base cost of service study.

Fire Protection Weight = 0.0545

General Service Weight = 0.9455

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows:

	Maximum Hour Ratio	Percent	Weight
Average Hour	1.00	50.00	0.4727
Extra Capacity Maximum Hour	1.00	50.00	0.4727
Total	2.00	100.00	0.9455

AQUA PENNSYLVANIA, INC. - SHENANDOAH WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH FIRE HYDRANTS.

Factors are based on the number of hydrants, as follows:

Customer Classification	Number of Hydrants	Allocation Factor
(1)	(2)	(3)
Private Fire Protection	15	0.0947
Public Fire Protection	143	0.9053
Total	158	1.0000

FACTOR 7 AND 7A. ALLOCATION OF COSTS ASSOCIATED WITH METERS.

Factors are based on the relative cost of meters by size and customer classification, as developed on the following page and summarized below:

Customer Classification	5/8" Dollar Equivalents	Factor 8 Allocation Factor	Factor 8A Allocation Factor
(1)	(2)	(3)	(3)
Residential	2,662	0.898414	0.898414
Commercial	234	0.078974	0.078974
Industrial	14	0.004725	0.004725
Public	53	0.017887	0.017887
Other Water Utilities	0	0.000000	0.000000
Private Fire Protection	0	0.000000	
Total	2,963	1.000000	1.000000

APPENDIX A

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

a. A description of the allocation methods used. A comparison of the allocated cost of service by class with the present and proposed revenues. A cost of service schedule showing the rate of return produced by present and proposed rates by class of service.

RESPONSE

A description of the methods used for the cost of service study is provided on pages 3 through 5 of Exhibit 5-A, Part I and in APA Statement No. 5. A comparison of the allocated cost of service by class with the present and proposed revenues is provides on Schedules A and A-S of Exhibit 5-A, Part I. Schedules B, B-S, C and C-S showing the rate of return produced by present and proposed rates by customer classification are provided in Exhibit No. 5-A, Part I.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

b. Indicate if the method used for establishing the allocation factors in the cost of service study deviates from the previous study submitted in the last rate case. If yes, indicate which allocation factors were changed and discuss the reason for the changes.

RESPONSE

The methods used for establishing the allocation factors in the cost of service study have not deviated from the previous study submitted in the last case.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

c. Supply the average day, the maximum day and the maximum hour deliveries to the system adjusted for storage for the historic test year and 2 prior years. Also provide workpapers, analyses, comparative data or other documentation supporting the estimated maximum day and peak hour demands by customer class reflected in the company's cost of service study.

RESPONSE

Refer to Schedule F of Exhibit 5-A, Part I for the average day and maximum day and maximum hour system deliveries for the years 1962 through 2023, as available. Support for the customer class demand factors is provided on the following pages, which were taken from the discussion of the customer class demand study submitted in the Company's filing at Docket No. R-00973952.

CUSTOMER CLASS DEMAND STUDY

The purpose of the customer class demand study is to develop empirical bases for the maximum day and hour extra capacity factors used in the cost allocation study. The study of customer demands is being conducted in accordance with the plans submitted by the Company to the Pennsylvania Public Utility Commission during the course of the rate proceeding at Docket No. R-911892.

Previous reports on the customer class demand study were submitted as Exhibit No. 9-A in Docket No. R-00922476, and as part of Exhibit No. 50-B in Docket Nos. R-00932868, R-00953343 and R-00973952. The initial report sets forth descriptions of the selection of customers, the initial experience with data collection in 1991, and the data obtained in 1992. Subsequent reports included the observed maximum day and hour use for each customer or group of customers being monitored during the 1992 through 1996 data collection periods.

This report sets forth the data through the 1996 monitoring period as shown in the schedule on pages 7 through 22 of this response. Data during each period were reviewed to determine the maximum day and hour use for each customer or group of customers being monitored. The maximum use was divided by the average use for the year in which the monitoring was performed to develop indications of maximum day and hour ratios for the customer's classification.

The customers and customer groups, i.e., residential neighborhoods, were classified based on their revenue or billing category or, with respect to residential

neighborhoods, the housing density and annual use. The monitoring results were organized in this manner, inasmuch as data related to the proportions of the customer classification represented by these categories were available. For example, the Company prepares an analysis of consumption in each of its load control areas which indicates the housing density, high, medium or low, the number of residential customers and their annual consumption. The neighborhoods were grouped according to housing density and annual consumption, e.g., medium density housing with customers whose average annual use is between 60,000 and 70,000 gallons. Similarly, commercial and public customers were organized by revenue categories such as apartments, colleges, etc., and industrial customers were organized based on their billing frequency, quarterly or monthly.

Average ratios were calculated for each category and also are presented in the schedule on pages 7 through 22 of this response. The average ratios of the categories for which empirical data were available, and estimated ratios for six residential categories representing 3.49 percent of residential consumption, are weighted to determine the composite ratios for the several classifications in the schedule on pages 23 and 24 of this response.

Residential. The residential maximum day and hour ratios used in the most recent cost allocation study were 2.1 and 4.5, respectively. The maximum day ratio used in studies of other water utilities which were based on empirical demands is 2.5 and the maximum hour ratios range from 4.5 to 6.0.

The observed maximum day ratios of selected Philadelphia Suburban residential neighborhoods range from 0.76 to 5.27. The observed maximum hour ratios range from 1.31 to 33.86. The average maximum day and hour ratios by residential neighborhood category range from 1.23 to 3.87 and from 2.57 to 7.31, respectively. The weighted ratios, as shown in the schedule on page 23 of this response, are 2.119 for maximum day and 4.508 for maximum hour. The weighted maximum day and hour ratios of 2.1 and 4.5 confirm their continued use in the cost allocation study.

Commercial and Public. The commercial and public maximum day and hour ratios used in the most recent study were 2.0 and 3.8, respectively. Maximum day and hour ratios used in studies of other water utilities which were based on empirical demands range from 1.6 to 2.5 and 3.3 to 5.0, respectively.

The observed maximum day ratios of selected commercial and public customers range from 0.70 to 9.88. The observed maximum hour ratios range from 1.85 to 39.95. The average maximum day and hour ratios by revenue category range from 1.28 to 6.36 and from 2.52 to 23.84, respectively. The upper end of each range represents data for a golf course. A review of the data indicates that the golf course would likely contribute to the peak day load; however, its peak hour occurs in the early morning and would not occur at the same time as the peak hour of other commercial and public customers.

Thus, the weighted maximum day ratio of 2.0, as shown in the schedule on page 24 of this response, continues to be used for the commercial and public classifications. It includes the effect of the golf course and is within the range of

ratios used in other studies. The weighted maximum hour ratio excluding the golf course data of 3.8 is maintained for use in the cost allocation study and also is within the range of ratios used in other studies.

The weighted ratios for commercial and public customers do not reflect the initial data obtained in 1996 for six small commercial customers as shown in the schedule on page 18 of this response. The ratios for the small customers are generally higher than the weighted ratios of the other commercial and public customers. However, inasmuch as limited data are available, no further increase in the ratios for these classifications is proposed.

Industrial. The industrial maximum day and hour ratios used in the most recent study were 1.7 and 2.7, respectively. Maximum day ratios used in studies of other water utilities which were based on empirical demands range from 1.5 to 1.8 for day and the maximum hour ratio is 2.7.

The observed maximum day ratios of selected industrial customers range from 1.03 to 3.10. The observed maximum hour ratios range from 1.43 to 6.25. The average maximum day ratios by billing frequency are 1.68 and 1.73 and the weighted maximum day ratio is 1.69. The average maximum hour ratios by billing frequency are 2.58 and 3.12 and the weighted maximum hour ratio is 2.73.

Based on the current estimates, estimates of other utilities and the observed ratios during 1992-1996; maximum day and hour ratios of 1.7 and 2.7, respectively, continue to be used in the allocation study.

Sales to Other Water Utilities. The Sales to Other Water Utilities maximum day and hour ratios used in the most recent cost allocation study were

10.0 and 20.0, respectively, for the customers located in the Main Division. Maximum day and hour ratios used in a study for another water utility which were based on empirical demands range from 2.0 to 10.0 for maximum day and 5.0 to 20.0 for maximum hour. The observed maximum day ratios of selected resale customers range from 1.46 to 20.23. The observed maximum hour ratios range from 4.80 to 52.52. The maximum day and hour ratios for the Bristol Division customers in the last study were estimated at 1.5 and 2.0, respectively.

As a result of acquisitions since the last study, the Company has lost and gained Sales to Other Water Utilities customers. There are now several customers with relatively uniform demand characteristics. These customers have been assigned maximum day and hour ratios of 1.50 and 2.00, respectively, and designated as Group A. There also are several customers whose demand characteristics are less favorable, but collectively, not as high as the Main Division customers in the last study. Maximum day and hour ratios of 3.00 and 5.00, respectively, have been assigned to these customers, designated as Group B.

PHILADELPHIA SUBURBAN WATER COMPANY

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

d. Explain thoroughly the methodology employed if the company distinguishes between transmission and distribution or collection mains in its allocation of costs.

RESPONSE

For cost allocation purposes, mains that are 12-inch and larger are considered to be transmission mains and are allocated using Factor 3, which is based on average and maximum day extra capacity demands plus the daily requirement for fire demand. Mains sized under 12-inch are considered distribution mains and are allocated using Factor 4, which is based on average and maximum hour extra capacity demands plus the hourly requirement for fire demands.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

e. Provide a detailed explanation of how storage is utilized to meet base, maximum day and maximum hour demands.

RESPONSE

Storage is utilized to meet base, maximum day and maximum hour demands.

The Storage tanks play a major role in supplementing the maximum hourly demands. These facilities are located strategically throughout the Company's service territory to provide peak hour and emergency fire flow demands to all areas. Many of the facilities are also supplied with booster pumping stations, which automatically sense low pressures in the system and operate to pump water from the tanks to meet these peak demands.

For maximum day demands, the tanks are intended primarily to supplement demands during peak periods that exceed maximum send-out capacities are maintained at a level below the industry standard of 150% of average day demand. The Company's storage tank capacity is sufficient to meet at least a 30-day period of system demands in excess of plant capacity.

For meeting base day demands, the tanks are mainly relied on to stabilize pressures in the distribution system. They may be filing or emptying over the course of the day depending on local and system-wide demands. It is difficult to identify the extent to which <u>each</u> facility meets daily or hourly demands because their use varies continuously depending on the location and extent of the demands. Also, the storage facilities often serve areas beyond their actual pressure zones.

AQUA PENNSYLVANIA, INC.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

g. Provide all workpapers and supporting documentation for the fire flow requirement and duration utilized in the cost of service study.

RESPONSE

The source for the estimated fire protection demand of 20,000 gpm is published fire flow criteria for the population served. The 20,000 gpm estimate is the maximum fire flow requirement generally accepted by published authorities, regardless of population size. This maximum has been established by the National Board of Fire Underwrites (now the American Insurance Association).

General fire-fighting requirements, based on population established by the National Board of Fire Underwrites, are as follows:

a) For populations of 200,000 or less,

$$Q = 1020\sqrt{P}\ (1-0.01\ \sqrt{P})$$

Where Q is the fire draft in gpm and P is the population in thousands.

b) For populations in excess of 200,000

Q = 12,000 gpm plus 2,000 to 8,000 gpm for a potential second fire.

Inasmuch as AQUA Pennsylvania serves a population of over 1,000,000, the maximum fire flow of 12,000 gpm would apply. Also, in consideration of the population being well over 200,000, the maximum of the additional allowance to provide for a second fire was selected for a maximum fire flow of 20,000 gpm.

RS1g. cont.

The foregoing requirements were published in Volume I, “Water and Wastewater Engineering,” by Fair, Geyer & Okon, published in 1966 by John Wiley & Sons, Inc.

The required 10 hour fire duration is based on the Insurance Services Office, “Grading Schedule for the Municipal Fire Protection” dated 1974.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. OPERATING REVENUE FROM SALES OF WATER
FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2025

PLAN OF EXHIBIT

Exhibit 5-A sets forth the summaries of the results of applying the proposed rates for sales of water to a detailed analysis of water customers' billing determinants, and the application of proposed rates to the bill analysis.

Schedule 1 and Schedule 1-S present a summary of the pro forma revenues for the consolidated divisions and Shenandoah Operations under proposed rates, for the twelve months ending December 31, 2025. The pro forma revenues under proposed rates are developed in Schedule 2 for the water divisions. Schedule 3 and Schedule 3_S present a summary of the pro forma revenues for the consolidated divisions and Shenandoah Operations under present rates, for the twelve months ending December 31, 2023, 2024 and 2025. The revenues under present rates are developed in Schedule 4 for the water divisions. The application of proposed rates to the consumption analysis for each division are presented on Schedule 5. Schedule 6 presents adjustments to the application of present and proposed rates to account for growth. The application of proposed rates to metered private fire customers, private hydrants and public fire hydrants are shown in Schedules 7A and 7B, respectively.

The results of the application of proposed rates are summarized in Schedule 2 of Exhibit No. 5-A are brought forward to column 3 of Schedule 1 and Schedule 1-S. Schedule 2 sets forth the application of proposed rates to the detailed analysis of bill and consumption by meter size and customer classification for each water division. The

revenues in column 3 of Schedule 1 and Schedule 1-S incorporate the revenue adjustments during the twelve months ended December 31, 2025 shown on Schedule 5, to develop the total revenues projected for the twelve months ended December 31, 2025, under present and proposed rates of Schedule 1 and Schedule 1-S.

A comparison of the present and proposed rates for sales of water for each division is provided in the response to Standard Data Request No. OR-3 and shown in Schedule 8. The response also provides a comparison of the billing for various levels of consumption under present (including DSIC surcharge) and proposed rates for 5/8-inch Residential customers in each division and also for the average Commercial and Industrial customers.

WASTEWATER
COST OF SERVICE ALLOCATION STUDY

AQUA PENNSYLVANIA, INC.

WASTEWATER OPERATION

WASTEWATER COST OF SERVICE ALLOCATION STUDIES
AS OF DECEMBER 31, 2025
AND PROPOSED CUSTOMER RATES

PLAN OF REPORT

The reports set forth the results of the cost of service allocation studies for the Wastewater Operations based on pro forma costs as of December 31, 2025, for Aqua Pennsylvania, Inc. The studies include cost of service studies for the Company's Wastewater Base Operations and separately for the wastewater divisions of LLower Makefield and East Whiteland. The introduction contains statements with respect to the basis of the study, the procedures employed, and a summary of the results of the study. Schedule A of each study summarizes the cost allocation for the wastewater operations and total revenues under present and proposed rates. Cost of Service by Customer Classification of each area presents detailed schedules of the allocation of costs to customer classifications, as well as the basis for the allocations. Schedule WW-F, Comparisons of Present and Proposed Customer Rates, sets forth the proposed rate schedules for wastewater service.

BASIS OF STUDY

The method used for the allocation of wastewater cost of service incorporates the functional cost allocation methodology described in the text "Financing and Charges for Wastewater Systems," Manual of Practice No. 27, published by the Water Environment

Federation. This method is recognized for allocating the cost of providing wastewater service to customer classifications in proportion to the classifications' use of the commodity, facilities, and services. It is generally accepted as a sound method for allocating the cost of wastewater service. Under the functional cost method, costs are assigned to cost components using predominant operational purposes as cost-causative factors.

Each element of the cost of service is allocated to customer classifications according to the functional categories. The cost functions are flow, infiltration and inflow (I&I), customer facilities and customer accounting. The functional costs are allocated to customer classifications based on the amount of flow contributed to the system, the amount of I&I allocated to each class, and the number and relative size of customers.

The results of the allocation of wastewater cost of service is summarized on Schedule A of each study, column 4. The cost allocation results can be compared with revenues under present and proposed rates in columns 6 and 8 of Schedule A. The proposed increase and percentage increase in revenues are shown in columns 10 and 11.

The cost of service by customer classification is developed in Schedule D of each study. The allocation factors referenced in column 2 are applied to the costs by account in column 3. The allocation factors are set forth in Schedule E of each study.

The comparison of present and proposed wastewater rates by wastewater service areas are shown in Schedule WW-F for all areas.

FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR A. ALLOCATION OF FLOW COLLECTION COSTS.

Factors are based on the pro forma test year average daily consumption for each customer classification.

Classification	Average Daily Consumption, 100 gallons	Allocation Factor
(1)	(2)	(3)
Residential	45,087	0.6216
Non-Residential	27,443	0.3784
Total	72,530	1.0000

FACTOR A1. ALLOCATION OF FLOW TREATMENT COSTS.

Factors are based on the pro forma test year average daily consumption for each customer

Classification	Average Daily Consumption, 100 gallons	Allocation Factor
(1)	(2)	(3)
Residential	45,087	0.6216
Non-Residential	27,443	0.3784
Total	72,530	1.0000

AQUA PENNSYLVANIA, INC
WASTEWATER BASE OPERATIONS
FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR B. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

Customer Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Residential	40,611	0.7690
Non-Residential	12,198	0.2310
Total	52,809	1.0000

FACTOR C. ALLOCATION OF COSTS ASSOCIATED WITH INFILTRATION AND INFLOW.

Factors are based on a 1/3-2/3 weighting of flow and number of customers.

Customer	Average Daily Flow		Number of Bills		Allocation
Classification	Factor A	Weight	Factor C	Weight	Factor
(1)	(2)	(3)=(2) x 0.3333	(4)	(5)=(4) x 0.6667	(6)=(3)+(5)
Residential	0.6216	0.2072	0.7690	0.5127	0.7199
Non-Residential	0.3784	0.1261	0.2310	0.1540	0.2801
Total	1.0000	0.3333	1.0000	0.6667	1.0000

WASTEWATER OPERATIONS - LOWER MAKEFIELD
FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR A. ALLOCATION OF FLOW COLLECTION COSTS.

Factors are based on the pro forma test year average daily consumption for each customer classification.

Classification	Average Daily Consumption, 100 gallons	Allocation Factor
(1)	(2)	(3)
Residential	15,077	0.8885
Non-Residential	1,892	0.1115
Total	16,969	1.0000

FACTOR A1. ALLOCATION OF FLOW TREATMENT COSTS.

Factors are based on the pro forma test year average daily consumption for each customer

Classification	Average Daily Consumption, 100 gallons	Allocation Factor
(1)	(2)	(3)
Residential	15,077	0.8885
Non-Residential	1,892	0.1115
Total	16,969	1.0000

AQUA PENNSYLVANIA, INC
WASTEWATER OPERATIONS - LOWER MAKEFIELD
FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR B. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

Customer Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Residential	11,134	0.9252
Non-Residential	900	0.0748
Total	12,034	1.0000

FACTOR C. ALLOCATION OF COSTS ASSOCIATED WITH INFILTRATION AND INFLOW.

Factors are based on a 1/3-2/3 weighting of flow and number of customers.

Customer	Average Daily Flow		Number of Bills		Allocation
Classification	Factor A	Weight	Factor C	Weight	Factor
(1)	(2)	(3)=(2) x 0.3333	(4)	(5)=(4) x 0.6667	(6)=(3)+(5)
Residential	0.8885	0.2961	0.9252	0.6168	0.9129
Non-Residential	0.1115	0.0372	0.0748	0.0499	0.0871
Total	1.0000	0.3333	1.0000	0.6667	1.0000

AQUA PENNSYLVANIA, INC
WASTEWATER OPERATIONS - EAST WHITELAND
FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR A. ALLOCATION OF FLOW COLLECTION COSTS.

Factors are based on the pro forma test year average daily consumption for each customer classification.

Classification	Average Daily Consumption, 100 gallons	Allocation Factor
(1)	(2)	(3)
Residential	4,373	0.4126
Non-Residential	6,225	0.5874
Total	10,598	1.0000

FACTOR A1. ALLOCATION OF FLOW TREATMENT COSTS.

Factors are based on the pro forma test year average daily consumption for each customer

Classification	Average Daily Consumption, 100 gallons	Allocation Factor
(1)	(2)	(3)
Residential	4,373	0.4126
Non-Residential	6,225	0.5874
Total	10,598	1.0000

AQUA PENNSYLVANIA, INC
WASTEWATER OPERATIONS - EAST WHITELAND
FACTORS FOR ALLOCATING COSTS BY FUNCTION TO CUSTOMER CLASSIFICATIONS

FACTOR B. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

Customer Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Residential	3,350	0.4133
Non-Residential	4,756	0.5867
Total	8,105	1.0000

FACTOR C. ALLOCATION OF COSTS ASSOCIATED WITH INFILTRATION AND INFLOW.

Factors are based on a 1/3-2/3 weighting of flow and number of customers.

Customer	Average Daily Flow		Number of Bills		Allocation
Classification	Factor A	Weight	Factor C	Weight	Factor
(1)	(2)	(3)=(2) x 0.3333	(4)	(5)=(4) x 0.6667	(6)=(3)+(5)
Residential	0.4126	0.1375	0.4133	0.2755	0.4130
Non-Residential	0.5874	0.1958	0.5867	0.3912	0.5870
Total	1.0000	0.3333	1.0000	0.6667	1.0000

APPENDIX A

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

a. A description of the allocation methods used. A comparison of the allocated cost of service by class with the present and proposed revenues. A cost of service schedule showing the rate of return produced by present and proposed rates by class of service.

RESPONSE

A description of the methods used for the cost of service study is provided in Exhibit No. 5-B, Part I and in Statement No. 5. A comparison of the allocated cost of service by class with the present and proposed revenues is provided on Schedules A, A-LM and A-EW of Exhibit No. 5-B, part I.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

b. Indicate if the method used for establishing the allocation factors in the cost of service study deviates from the previous study submitted in the last rate case. If yes, indicate which allocation factors were changed and discuss the reason for the changes.

RESPONSE

The method used for establishing the allocation factors in the cost of service study does not deviate from the previous study submitted in the last rate case.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

c. Supply the average day, the maximum day and the maximum hour deliveries to the system adjusted for storage for the historic test year and 2 prior years. Also provide workpapers, analyses, comparative data or other documentation supporting the estimated maximum day and peak hour demands by customer class reflected in the company's cost of service study.

RESPONSE

Not applicable.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

d. Explain thoroughly the methodology employed if the company distinguishes between transmission and distribution or collection mains in its allocation of costs.

RESPONSE

Not applicable.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

e. Provide a detailed explanation of how storage is utilized to meet base, maximum day and maximum hour demands.

RESPONSE

There is no storage for the wastewater system.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

f. Provide workpapers, calculations and supporting documentation which develop the equivalent meters and equivalent service line weights reflected in the company's cost of service study.

RESPONSE

There are no meter or service equivalents calculated for this study.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

g. Provide all workpapers and supporting documentation for the fire flow requirement and duration utilized in the cost of service study.

RESPONSE

Because this is a wastewater operation, there is no fire flow requirement.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water uses (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

h. Provide a breakdown of the number and size of private fire services according to the general water service class of customer.

RESPONSE

Not applicable.

AQUA PENNSYLVANIA, INC.

RESPONSES TO RATE STRUCTURE

AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study and shall include the following.

h. Provide a calculation of the company's base cost of water or wastewater per unit of consumption or usage.

RESPONSE

Please refer to the functional allocation schedule attached. The calculation of the average flow cost per hundred gallons for the Wastewater Base Operations is as follows:

Total Flow Costs (includes collection and treatment expenses and 1/3 of I&I Expenses)	$52,071,256
Pro Forma Usage	26,473,447
Flow Cost per 100 gallons	$1.97

AQUA PENNSYLVANIA, INC.

OPERATING REVENUE FROM SALES OF WASTEWATER
FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2025

PLAN OF EXHIBIT

Exhibit 5-B sets forth the summaries of the results of applying the present rates for sales of wastewater to a detailed analysis of wastewater customers' billing determinants, and the application of proposed rates to the bill analysis.

WASTEWATER BASE OPERATIONS

Schedule 1-WW presents a summary of the pro forma revenues for the wastewater base divisions under proposed rates, for the twelve months ending December 31, 2025. The revenues under proposed rates are developed in Schedule 2-WW for each wastewater division. Schedule 3-WW presents a summary of the proforma revenues for the wastewater base divisions under present rates, for the twelve months ending December 31, 2023, 2024 and 2025. The pro forma revenues under present rates are developed in Schedule 4-WW for each wastewater division. The application of proposed rates to the consumption analysis for each division are presented on Schedule 5-WW. Schedule 6-WW presents adjustments to the application of present and proposed rates to account for customer growth.

The results of the application of proposed rates are summarized in Schedule 2-WW of Exhibit No. 5-B are brought forward to column 3 of Schedule 1-WW. Schedule 5-WW sets forth the application of proposed rates to the detailed analysis of bill and consumption by meter size or per number of EDUs and customer classification for each wastewater rate division. The revenues in column 3 of Schedule 1 include pro forma

adjustments during the twelve months ended December 31, 2025, to develop the total revenues projected for the twelve months ended December 31, 2025, under present and proposed rates of Schedule 1.

A comparison of the present and proposed rates for sales of water for each division is provided in the response to Standard Data Request No. OR-3 and is included in Schedule 7-WW. The response also provides a comparison of the billing for various levels of consumption under present (including DSIC surcharge) and proposed rates for 5/8-inch or per EDU customers in each division.

LOWER MAKEFIELD WASTEWATER OPERATIONS

Schedule 1-LM presents a summary of the pro forma revenues for the Lower Makefield Wastewater Operations under present and proposed rates, for the twelve months ending December 31, 2025. Schedule 3-LM presents a summary of the proforma revenues for Lower Makefield under present rates, for the twelve months ending December 31, 2023, 2024 and 2025.

EAST WHITELAND WASTEWATER OPERATIONS

Schedule 1-EW presents a summary of the pro forma revenues for the East Whiteland Wastewater Operations under present and proposed rates, for the twelve months ending December 31, 2025. Schedule 3-WW presents a summary of the proforma revenues for East Whiteland under present rates, for the twelve months ending December 31, 2023, 2024 and 2025.

Attention: William C. Packer
Vice President, Regulatory Accounting & Regional Controller

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to water plant as of December 31, 2023. Summaries of the original cost, annual accruals, the book depreciation reserve and amortization of net salvage are presented in Tables 1 and 2, beginning on page I-3 of the attached report.

A description of the methods and procedures upon which the study was based, as well as support for the service life estimates, is set forth in a companion report "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of December 31, 2024".

Respectfully submitted,

GANNETT FLEMING VALUATION

PART I. RESULTS OF STUDY

AQUA PENNSYLVANIA, INC.

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

SUMMARY OF RESULTS

Table 1 summarizes the results of the depreciation study, which sets forth the book reserve and the calculated annual depreciation expense related to original cost as of December 31, 2023, and the annual amortization of negative net salvage. Table 2 presents the calculation of the amortization of experienced net salvage, by account, based on the five-year period, 2019-2023.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-9. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage, and cost of removal are set forth by account for the years 2019 through 2023, on pages III-2 through III-6.
