A. Please refer to the direct testimonies of Gregory R. Herbert and Constance E. Heppenstall and the accompanying Exhibit 5-A, Appendix A for water, and Exhibit 5-B, Appendix A for wastewater for the above cost of service study filing requirements.

AQUA PENNSYLVANIA, INC. & AQUA PENNSYLVANIA WASTEWATER, INC.

TABLE OF CONTENTS TO MINIMUM FILING REQUIREMENTS
I. QUALITY OF SERVICE

MFR	Description
QS1	PA Safe Drinking Water Act
QS2	Operating Pressure Stds
QS3	Service Interruption
QS4	Customer Complaint Policy
QS5	Distribution System Mapping
QS6	Water Conservation
QS7	Meter Replacement

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

QS1. Indicate whether the company is in violation of any provision of the Pennsylvania Safe Drinking Water Act (SDWA) or any rule, regulation or order, or any condition of any permit, variance or exemption granted by the Pennsylvania Department of Environmental Protection (PA-DEP), or its predecessor.

a. Provide information indicating whether the company is in compliance with SDWA provisions at 25 Pa. Code § 109.407 regarding general public notification requirements:

(i) Provide a copy of each public notification given in accordance with this section, since the last rate proceeding.

(ii) Provide a detailed explanation of all actions taken to remedy an acute violation, and to comply with the requirements prescribed by a variance or exemption.

(iii) State whether any fines or penalties were assessed by PA-DEP, and indicate the amounts paid by the company.

b. Provide the most recent copies of all annual consumer confidence reports issued pursuant to SDWA Amendments of 1996 since the last rate proceeding.

(i) Provide any annual consumer confidence reports which reflect violations of State and Federal safe drinking water requirements.

(ii) Explain how these violations were resolved.

A. The Company is regularly subject to PADEP inspections and sanitary surveys which may result in findings that once identified are corrected or the Company works with PADEP to reach an acceptable solution.

a. The Company is in compliance with the Chapter 109 regulations regarding public notification.

(i) Copies of all public notices given in accordance with Chapter 109 regulations since the last rate proceeding were electronically submitted to the Secretary's Bureau as "QS1a.1 – Public Notices Consol - Attachment 1" and are available for review on the electronic docket associated with this filing. Table 1, which is in the front of "QS1a.1 - Public Notices Consol - Attachment 1", lists SDWA violations covered by these notices and the resolution of each item.

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

(ii) Acute violations and the corrective actions:

1. Tier 1 PN's related to Boil Water Advisories - No remedy required - these are pro-active requirements to protect public health if the Company believes low pressure, low disinfection levels, or other circumstances have the potential to introduce contamination into the water system.
2. Exceedance of HAL for managese - Hillcrest System - the distribution system was flushed, the well cleaned, and a problem corrective notice issued. Subsequent to the initial corrective actions, treatment was installed and there have not further concerns.
3. Breakdown in Chlorine disinfection in Honesdale (Fawn lake); White Haven (Hamilton System); White Haven (Factoryville System) - in all cases, the root cause of the low disinfection level was corrected.

The Company does not have any variances or exemptions from Chapter 109 regulations. The Company has applied for, and received, monitoring waivers for synthetic organic contaminants and asbestos for many systems where historical monitoring and/or other available information has demonstrated no occurrence or no susceptibility of the source to these contaminants.

(iii) Fines paid:
The Company paid a fine of $4,000 on 11/16/2021 for failure to obtain a permit/failure to monitor bulk water hauler at the Friendship System

The Company paid a fine of $10,000 on 4/7/2021 as a penalty for placing Secane and Fern Hill tanks into service without operating permits (2 NOVs).

b. Electronic copies of the 2022 CCRs (mailed in 2023) were electronically submitted to the Secretary's Bureau as "QS1b – CCRs Consol - Attachment 2." The 2020-2022 CCRs with violations (distributed between March 2021 and February 2024) were electronically submitted to the Secretary's Bureau as and "QS1b - CCRs with violations Consol - Attachment 3." Both attachments are available for review on the electronic docket associated with this filing. The CCRs are also posted on the internet at the following address: www.aquawater.com. The search function will retrieve CCRs by state, system name, town or zip code.

(i) Table 2, in the front of Attachment 3 (referenced in subpart b above), lists the 2020-2022 CCRs (distributed between March 2021 and February 2024) that reflected violations.

(ii) Table 2 also lists the resolution of each violation listed on 2020 through 2022 CCRs. The majority of the violations are for boil water notices and monitoring violations. All the violations have been addressed.

Table 1 - Public Notices Distributed Between March 1, 2021 and February 1, 2024

PWSID	SYSTEM NAME	DIVISION	TYPE OF NOTICE	DATE OF PUBLIC NOTICE	RESOLUTION
PA2400083	Applewood	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	10/27/2021	Collected routine sample on 2/8/21, and results were satisfactory.
PA1150126	Franklin	Southeast	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA1090078	Bensalem	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly disinfection byproducts samples.	4/1 - 4/30/2023	Four of the 8 required disinfection byproducts samples were collected after the required deadline. Results were satisfactory.
PA1090001	Bristol	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly synthetic organic contaminant samples.	3/1 - 3/31/2021	Collected samples in the 2nd - 4th quarters of 2020, and results were satisfactory.
PA2580010	Brooklyn	White Haven	Tier 3 PN: Monitoring requirement not met for 9-year entry point asbestos sample, due to laboratory error.	4/1 - 4/30/2023	Sampling was completed it 2022.
PA2350004	Chinchilla	White Haven	Tier 3 PN: Reporting requirement not met for monthly chlorine report	4/1 - 4/30/2022	Reported results to DEP.
PA2350004	Chinchilla	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	4/1 - 4/30/2022	Collected routine sample on 6/9/21, and results were satisfactory.
PA2350025	Glenburn	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	4/1 - 4/30/2022	Collected routine sample on 6/9/21, and results were satisfactory.
PA2350025	Glenburn	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level for Haloacetic Acids and Total Trihalomethanes.	9/24/2021	One well was taken offline for assessment to reduce potential for disinfection byproduct formation.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	12/10/2021	A carbon filtration system was installed to improve water quality.
PA2350029	Sunset Hills	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	4/1 - 4/30/2022	Collected routine sample on 6/9/21, and results were satisfactory.
PA2350029	Sunset Hills	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2350034	Elmbrook	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2350055	Edgewood	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	4/1 - 4/30/2022	Collected routine sample on 6/9/21, and results were satisfactory.
PA2350055	Edgewood	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4490011	East Cameron	Roaring Creek Contiguous	Tier 1 PN: Boil water notice due to a water service line break which caused loss of positive pressure in the distribution system.	9/11/2021	The service line was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 9/14/2021
PA2350055	Edgewood	White Haven	Tier 3 PN: Monitoring requirement not met for daily entry point chlorine sample	10/27/2021	Collected routine sample on 1/22/21, and results were satisfactory.
PA2350057	Jefferson Heights	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2350070	Mount Cobb	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400029	Shickshinny Lake	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400053	Hex Acres	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2520037	Fawn Lake	Honesdale	Tier 1 PN: Boil water notice for 1000 customers due to chlorine disinfection levels which dropped below the state required minimum level.	3/16/2021	The disinfection system issue has been corrected. After satisfactory microbiological results, the boil water order was lifted on 3/18/2021.
PA2520037	Fawn Lake	Honesdale	Tier 3 PN: Monitoring requirements not met for monthly total coliform samples.	7/26/2023	Routine samples were collected in May 2023. Additional staff training was performed to prevent future violations.
PA2400078	Forest Park	White Haven	Tier 3 PN: Monitoring requirements not met for monthly total coliform samples.	9/28/2023	Routine samples were collected in May 2023. Additional staff training was performed to prevent future violations.
PA2400066	Wapwallopen	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400078	Forest Park	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.

Table 1 - Public Notices Distributed Between March 1, 2021 and February 1, 2024

PA2400079	Penn Lake	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400085	Barrett	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400089	Garbush	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400095	Oakhill	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400102	Warden Place	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400111	Laurel Lakes	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	3/1 - 3/31/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2450044	Hamilton	White Haven	Tier 1 PN: Boil water notice due to chlorine disinfection levels which dropped below the state required minimum level.	7/8/2021	The disinfection system issue has been corrected. After satisfactory microbiological results, the boil water order was lifted on 7/10/2021.
PA2400147	Greenbriar	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2450054	Sun Valley	White Haven	Tier 3 PN: Monitoring requirement not met for triennial Dioxin sample	4/1 - 4/30/2022	Sample was collected in the 4th quarter of 2021, and results were satisfactory.
PA3060133	Hillcrest Estates	Southeast	Health Advisory Level (HAL) PN: Manganese exceeded the HAL in sample results received on 9/23/2021.	9/24/2021	The distribution system was flushed and the well was cleaned. A Problem Corrected notice was issued on 9/26/21. Additional treatment was installed at the well station to decrease manganese levels.
PA2450054	Sun Valley	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2450093	Robin Hood Lakes	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2520051	Twin Lakes Utilities (Receivership)	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2350057	Jefferson Heights	Honesdale	Tier 2 PN: Failure to conduct a Level 1 Assessment, required when repeat total coliform samples were not collected within the required timeframe following a routine total coliform-positive sample.	4/22/2021	Collected follow up samples for total coliform, and results were satisfactory. Level 1 Assessment was completed.
PA2521031	Woodledge	Honesdale	Tier 1 PN: Boil water notice due to well pump failure which caused loss of positive pressure in the distribution system.	8/29/2022	A new well pump was installed and service restored. After satisfactory microbiological results, the boil water order was lifted on 8/31/2022.
PA2580012	Hop Bottom	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA6430059	Lake Latonka	Shenango	Tier 2 PN: Failure to respond to a disinfection treatment breakdown, caused by a chlorine pump issue.	4/11/2023	The chlorine pump was repaired. Upon restart, it took 28 minutes for the analyzer to detect the chlorine. PN later issued to customers.
PA2640018	Honesdale	Honesdale	Tier 3 PN: Monitoring requirement not met for annual volatile organics sample.	4/1 - 4/30/2022	Collected VOC sample in 01/2022, and results were satisfactory.
PA2640022	Gouldsboro	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA7010057	Links at Gettysburg	Roaring Creek Remote	Tier 3 PN: Monitoring requirements not met for monthly total coliform distribution samples.	4/1 - 4/30/2023	Collected routine sample in December 2022. Results were satisfactory.
PA1460073	Main	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly synthetic organic contaminant samples.	2/1 - 2/28/2021	Collected samples in the 2nd - 4th quarters of 2020, and results were satisfactory.
PA1460073	Main	Southeast	Tier 1 PN: Boil water notice due to loss of power which caused loss of positive pressure in the distribution system.	9/3/2021	System power and pressure were restored. After satisfactory microbiological results, the boil water order was lifted on 9/10/2021.
PA1460073	Main	Southeast	Tier 1 PN: Boil water notice for 5 customers due to a water main break which caused a loss of positive pressure in the distribution system.	12/14/2023	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 12/16/23.
PA2640031	Wayne County Prison	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.

Table 1 - Public Notices Distributed Between March 1, 2021 and February 1, 2024

PA4190016	Mifflinville	Roaring Creek Remote	Tier 2 PN: Failure to conduct a Level 1 Assessment, required when repeat total coliform samples were not collected within the required timeframe following a routine total coliform-positive sample.	6/28/2021	A Level 1 Assessment was completed on 6/14/21.
PA4550009	Monroe Manor	Roaring Creek Remote	Tier 1 PN: Boil water notice for a section of the system due to a water main break which caused loss of positive pressure in the distribution system.	5/8/2023	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 5/10/2023.
PA2350070	Mount Cobb	Honesdale	Tier 1 PN: Boil water notice due to a water main break which caused a loss of positive pressure in the distribution system.	12/10/2023	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 12/13/23.
PA2641005	Pine Beach	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2660016	Washington Park	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3540071	Oneida	White Haven	Tier 1 PN: Boil water notice due to a water main break which caused loss of positive pressure in the distribution system.	8/23/2021	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 8/26/2021.
PA3540071	Oneida	White Haven	Tier 1 PN: Boil water notice due to a water main break from contractor activities which caused a loss of positive pressure in the distribution system.	9/7/2023	Service was restored. After satisfactory microbiological results, the boil water order was lifted on 9/9/23.
PA2660018	Bunker Hill	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2660036	Factoryville	White Haven	Tier 1 PN: Boil water notice due to a chemical feed pump failure which caused chlorine disinfection levels to drop below the state required minimum level.	11/14/2022	The chemical feed pump was repaired. After satisfactory microbiological results, the boil water order was lifted on 11/16/22.
PA3060030	Geigertown	Southeast	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3060133	Hillcrest Estates	Southeast	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3060133	Hillcrest Estates	Southeast	Tier 3 PN: Monitoring requirement not met for routine total coliform samples. Samples invalidated due to laboratory quality control error. Senn Trucking violation (PWSID 1156608).	12/1/2022	Public Notice issued to customers.
PA4490024	Roaring Creek	Roaring Creek Contiguous	Tier 1 PN: Boil Water Notice due to water main break.	5/17/2023	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 5/19/2023.
PA3060134	Stonecroft	Southeast	Tier 1 PN: Boil water notice due to well pump failure which caused loss of positive pressure in the distribution system.	2/5/2022	The well pump was repaired and service restored. After satisfactory microbiological results, the boil water order was lifted on 2/7/2022.
PA3540044	Shenandoah	Roaring Creek	Tier 1 PN: Boil water notice for a section of the system due to a water main break which caused loss of positive pressure in the distribution system.	8/19/2023	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 8/21/23.
PA6430054	Shenango	Shenango	Tier 1 PN: Boil water notice for 5 customers due to a water main break which caused a loss of positive pressure in the distribution system.	1/10/2024	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 1/12/24.
PA3390028	Country Club Gardens	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3390049	Maple Hills	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3390068	Springhouse Farms	White Haven	Tier 1 PN: Boil water notice for a section of the system due to a water main break which caused loss of positive pressure in the distribution system.	2/2/2022	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 2/5/2022.
PA3480030	Christian Springs	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4340018	Meribah	Roaring Creek Remote	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4490011	East Cameron	Roaring Creek Contiguous	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and results were satisfactory.

Table 1 - Public Notices Distributed Between March 1, 2021 and February 1, 2024

PA4490024	Roaring Creek	Roaring Creek Contiguous	Tier 1 PN: Boil water notice for approximately 10 customers due to loss of positive pressure in the distribution system.	1/20/2022	Emergency construction work was performed and service restored. After satisfactory microbiological results, the boil water order was lifted on 1/25/2022.
PA2080028	Susquehanna	Susquehanna	Tier 3 PN: Monitoring requirements not met for quarterly synthetic organic contaminant samples.	3/1 - 3/31/2021	Collected samples in the 2nd - 4th quarters of 2020, and results were satisfactory.
PA4550008	Kratzerville	Roaring Creek Remote	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4550024	Pennsview	Roaring Creek Remote	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	3/14/2022	Abandoned one well due to increased organics. Continued efforts to evaluate and permit additional improvements to water system, following installation of carbon filtration system. Though running annual average exceeded, 1st quarter 2022 results were below the MCL.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	6/15/2022	Continued efforts to evaluate and permit additional improvements to water system, following installation of carbon filtration system. Though running annual average exceeded, 1st and 2nd quarter 2022 results were below the MCL.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	9/16/2022	Continued efforts to evaluate and permit additional improvements to water system, following installation of carbon filtration system. Though running annual average exceeded the MCL, water quality has improved.
PA1150098	West Chester	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly synthetic organic contaminant samples.	3/1 - 3/31/2021	Collected samples in the 2nd - 4th quarters of 2020, and results were satisfactory.
PA7210048	White Rock	Roaring Creek Remote	Tier 3 PN: Monitoring requirements not met for monthly total coliform distribution samples.	4/1 - 4/30/2023	Collected routine sample in December 2022. Results were satisfactory.
PA7010057	Links at Gettysburg	Roaring Creek Remote	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	4/1 - 4/30/2022	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.

Table 2 - CCRs with Violations Noted Distributed Between March 1, 2021 and February 1, 2024

PWSID	SYSTEM NAME	DIVISION	VIOLATION DESCRIPTION	CCR YEAR	RESOLUTION
PA2400083	Applewood	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	2021	Collected routine sample on 2/8/21, and results were satisfactory.
PA2400085	Barrett	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA1090078	Bensalem	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly disinfection byproducts samples.	2022	Four of the 8 required disinfection byproducts samples were collected after the required deadline. Results were satisfactory.
PA1090001	Bristol	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly synthetic organic contaminant samples.	2020	Collected samples in the 2nd - 4th quarters of 2020, and results were satisfactory.
PA2580010	Brooklyn	White Haven	Tier 3 PN: Monitoring requirement not met for 9-year entry point asbestos sample, due to laboratory error.	2022	Sampling was completed it 2022.
PA2660018	Bunker Hill	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2350004	Chinchilla	White Haven	Tier 3 PN: Reporting requirement not met for monthly chlorine report	2021	Reported results to DEP.
PA2350004	Chinchilla	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	2021	Collected routine sample on 6/9/21, and results were satisfactory.
PA3480030	Christian Springs	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level for Haloacetic Acids and Total Trihalomethanes.	2021	One well was taken offline for assessment to reduce potential for disinfection byproduct formation.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	2021	A carbon filtration system was installed to improve water quality.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	2022	Abandoned one well due to increased organics. Continued efforts to evaluate and permit additional improvements to water system, following installation of carbon filtration system. Though running annual average exceeded, 1st quarter 2022 results were below the MCL.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	2022	Continued efforts to evaluate and permit additional improvements to water system, following installation of carbon filtration system. Though running annual average exceeded, 1st and 2nd quarter 2022 results were below the MCL.
PA6620021	Clarendon	Shenango	Tier 2 PN: Exceedance of the maximum contaminant level (MCL) for Haloacetic Acids and Total Trihalomethanes	2022	Continued efforts to evaluate and permit additional improvements to water system, following installation of carbon filtration system. Though running annual average exceeded the MCL, water quality has improved.
PA3390028	Country Club Gardens	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4490011	East Cameron	Roaring Creek Contiguous	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and results were satisfactory.
PA4490011	East Cameron	Roaring Creek Contiguous	Tier 1 PN: Boil water notice due to a water service line break which caused loss of positive pressure in the distribution system.	2021	The service line was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 9/14/2021
PA2350055	Edgewood	White Haven	Tier 3 PN: Monitoring requirement not met for daily entry point chlorine sample	2021	Collected routine sample on 1/22/21, and results were satisfactory.
PA2350055	Edgewood	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	2021	Collected routine sample on 6/9/21, and results were satisfactory.
PA2350055	Edgewood	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.

Table 2 - CCRs with Violations Noted Distributed Between March 1, 2021 and February 1, 2024

PA2350034	Elmbrook	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2660036	Factoryville	White Haven	Tier 1 PN: Boil water notice due to a chemical feed pump failure which caused chlorine disinfection levels to drop below the state required minimum level.	2022	The chemical feed pump was repaired. After satisfactory microbiological results, the boil water order was lifted on 11/16/22.
PA2520037	Fawn Lake	Honesdale	Tier 1 PN: Boil water notice for 1000 customers due to chlorine disinfection levels which dropped below the state required minimum level.	2021	The disinfection system issue has been corrected. After satisfactory microbiological results, the boil water order was lifted on 3/18/2021.
PA2400078	Forest Park	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA1150126	Franklin	Southeast	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400089	Garbush	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3060030	Geigertown	Southeast	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2350025	Glenburn	White Haven	Tier 3 PN: Monitoring requirement not met for weekly distribution chlorine sample	2021	Collected routine sample on 6/9/21, and results were satisfactory.
PA2350025	Glenburn	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2640022	Gouldsboro	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400147	Greenbriar	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2450044	Hamilton	White Haven	Tier 1 PN: Boil water notice due to chlorine disinfection levels which dropped below the state required minimum level.	2021	The disinfection system issue has been corrected. After satisfactory microbiological results, the boil water order was lifted on 7/10/2021.
PA2400053	Hex Acres	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3060133	Hillcrest Estates	Southeast	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3060133	Hillcrest Estates	Southeast	Health Advisory Level (HAL) PN: Manganese exceeded the HAL in sample results received on 9/23/2021.	2021	The distribution system was flushed and the well was cleaned. A Problem Corrected notice was issued on 9/26/21. Additional treatment was installed at the well station to decrease manganese levels.
PA3060133	Hillcrest Estates	Southeast	Tier 3 PN: Monitoring requirement not met for routine total coliform samples. Samples invalidated due to laboratory quality control error. Senn Trucking violation (PWSID 1156608).	2022	Public Notice issued to customers.
PA2640018	Honesdale	Honesdale	Tier 3 PN: Monitoring requirement not met for annual volatile organics sample.	2021	Collected VOC sample in 01/2022, and results were satisfactory.
PA2580012	Hop Bottom	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2350057	Jefferson Heights	Honesdale	Tier 2 PN: Failure to conduct a Level 1 Assessment, required when repeat total coliform samples were not collected within the required timeframe following a routine total coliform-positive sample.	2021	Collected follow up samples for total coliform, and results were satisfactory. Level 1 Assessment was completed.
PA2350057	Jefferson Heights	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4550008	Kratzerville	Roaring Creek Remote	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.

Table 2 - CCRs with Violations Noted Distributed Between March 1, 2021 and February 1, 2024

PA6430059	Lake Latonka	Shenango	Tier 3 PN: Reporting requirements not met for daily entry point chlorine.	2021	Reporting error was corrected and submitted to DEP.
PA2400111	Laurel Lakes	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA7010057	Links at Gettysburg	Roaring Creek Remote	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA7010057	Links at Gettysburg	Roaring Creek Remote	Tier 3 PN: Monitoring requirements not met for monthly total coliform distribution samples.	2022	Collected routine sample in December 2022. Results were satisfactory.
PA1460073	Main	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly synthetic organic contaminant samples.	2020	Collected samples in the 2nd - 4th quarters of 2020, and results were satisfactory.
PA1460073	Main	Southeast	Tier 1 PN: Boil water notice due to loss of power which caused loss of positive pressure in the distribution system.	2021	System power and pressure were restored. After satisfactory microbiological results, the boil water order was lifted on 9/10/2021.
PA3390049	Maple Hills	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4340018	Meribah	Roaring Creek Remote	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA4190016	Mifflinville	Roaring Creek Remote	Tier 2 PN: Failure to conduct a Level 1 Assessment, required when repeat total coliform samples were not collected within the required timeframe following a routine total coliform-positive sample.	2021	A Level 1 Assessment was completed on 6/14/21.
PA2350070	Mount Cobb	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2400095	Oakhill	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA3540071	Oneida	White Haven	Tier 1 PN: Boil water notice due to a water main break which caused loss of positive pressure in the distribution system.	2021	The water main was fixed and service restored. After satisfactory microbiological results, the boil water order was lifted on 8/26/2021.
PA2640048	Paupackan Lake Est	Honesdale	Tier 3 PN: Reporting requirements not met for radiological samples at EP 105.	2021	Reported results to DEP after the required deadline. Results were satisfactory.

PA2400102	Warden Place	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2660016	Washington Park	White Haven	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA2640031	Wayne County Prison	Honesdale	Tier 3 PN: Monitoring requirement not met for triennial disinfection byproducts sample	2021	Collected special samples in 4th quarter of 2021, and compliance samples in 3rd quarter 2022. Results were satisfactory.
PA1150098	West Chester	Southeast	Tier 3 PN: Monitoring requirements not met for quarterly synthetic organic contaminant samples.	2020	Collected samples in the 2nd - 4th quarters of 2020, and results were satisfactory.
PA7210048	White Rock	Roaring Creek Remote	Tier 3 PN: Monitoring requirements not met for monthly total coliform distribution samples.	2022	Collected routine sample in December 2022. Results were satisfactory.
PA2521031	Woodledge	Honesdale	Tier 1 PN: Boil water notice due to well pump failure which caused loss of positive pressure in the distribution system.	2022	A new well pump was installed and service restored. After satisfactory microbiological results, the boil water order was lifted on 8/31/2022.

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

QS2. Indicate whether the company is in compliance with 52 Pa. Code, § 65.6(a) regarding normal operating pressure standards, and with 52 Pa. Code, § 65.6(d) regarding pressure surveys at regular intervals.

a. Provide details on any water pressure problems, lasting longer than 5 days, which had occurred since the last rate proceeding in any part of the water transmission and distribution system.

b. Describe any action taken on a temporary basis, and the long term solutions developed to address any water pressure problems.

Response:

a. The Company believes that it is in compliance with 52 Pa. Code, § 65.6(a) regarding normal operating pressure standards. Pressures in our systems do exceed the paramaters set forth in 52 Pa. Code, § 65.6(a). Concerns related to this were reviewed and disposed of in PA PUC Order dated May 12 2022 (pages 350 to 355).

The Company has not experienced any significant pressure problems lasting longer than five days since the last rate proceeding in any part of the water transmission and distribution system, with the exception of the Roaring Creek Division as noted below.

In 2023, Aqua's Roaring Creek division had difficulty finding and then repairing a main break due to it's very remote location in an abandoned coal mine and below freezing weather conditions. Seven (7) customers were affected and experienced periodic water pressure problems for more than five (5) days. The Company addressed the water supply problem within seven (7) days by abandoning an old cast iron water main, constructing a new ductile iron main extension as well as designing, permitting and installing a booster pump station to serve the seven (7) impacted customers. Customers were provided with bottled water throughout the duration of this event.

b. The Company believes that it is in compliance with 52 Pa. Code, § 65.6(a) regarding normal operating pressure standards, and with 52 Pa. Code, § 65.6(d) regarding pressure surveys at regular intervals. Concerns related to this were reviewed and disposed of in PA PUC Order dated May 12 2022 (pages 350 to 355).

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

QS3. Provide support to demonstrate that water or wastewater service is being furnished on a continuous basis by supplying a summary of the company's records of each service interruption greater than 24 hours since the last rate proceeding.

A. Except for the periodic low pressure issue in our Roaring Creek Division in 2023 that follows, since the last reporting period, there were no interruptions of service lasting more than 24 hours for water or wastewater service.

In 2023, Aqua's Roaring Creek division had difficulty finding and then repairing a main break due to it's very remote location in an abandoned coal mine and below freezing weather conditions. Seven (7) customers were affected and experienced periodic water pressure problems for more than five (5) days. The Company addressed the water supply problem within seven (7) days by abandoning an old cast iron water main, constructing a new ductile iron main extension as well as designing, permitting and installing a booster pump station to serve the seven (7) impacted customers. Customers were provided with bottled water throughout the duration of this event.

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

QS4. Provide a discussion of the company's policy, or provide a copy of the policy if in written form, on tracking and responding to customer complaints.

a. Provide a summary report demonstrating the company's compliance with 52 Pa. Code, § 65.3 regarding the full and prompt investigation of service or facility complaints and the recordkeeping requirements of such complaints.

A. Customer complaints are received through a variety of different channels. No matter which avenue the customer complaint or escalation is received it is routed to the appropriate party for investigation. Once the issue is received, the individual fielding the concern is instructed to record notes regarding the customer contact in the notes section of the CIS system. If the complaint cannot initially be resolved to the customer's satisfaction, they are instructed to escalate the issue to the next level of support for a solution. When necessary, the issue is escalated to supervisors and/or managers for handling. If these complaints involve activity from other departments then the supervisor/manager will seek information from those departments to help resolve the customer issue. Since 2021 we have reduced our PUC complaint response time from 10.67 to 1.16 days.

a. Service and facility complaints are handled in the same manner as outlined above. Anyone who fields the customer complaint is instructed to record notes regarding each customer contact in the notes section of the CIS system. All pertinent account records are maintained for a minimum of six years. *Additionally, we track PA customer complaints using an excel spreadsheet that enables us to conduct root cause analysis, identify trends and find solutions to prevent future complaints.*

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

QS5. Indicate whether the company is in compliance with 52 Pa. Code, § 65.4(b) regarding complete and current mapping of the entire distribution or collection system.

A.

The Company is in compliance with 52 Pa. Code §65.4(b) requiring maintenance of complete and current records of its distribution infrastructure. Aqua PA's Engineering Department headquartered in Bryn Mawr maintains record drawing files and digital GIS mapping that collectively show the size, character and location of all mains, street valves and key "as-built" features for the facilities located in its Pennsylvania operating regions. Each project involving a change to these facilities is inspected, and the inspector provides a marked up drawing and notes showing actual construction details and variations from the design conditions. These documents are used by a CAD Operator to prepare a record drawing of the project. This information is also used to update Aqua PA GIS mapping that show the location of all PA infrastructure within specific geographic grids covering all distribution infrastructure. The GIS mapping is the primary source used to initially locate Aqua PA pipelines, and when available, hyperlinks to a record drawing for the pipe allow easy access to additional information if needed. These drawings are maintained in Aqua PA's Engineering Office, and are made available to authorized individuals for use in on-going maintenance of Aqua PA facilities and in meeting utility location information requirements.

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

QS6. Provide a summary report demonstrating the company's efforts in water conservation, since the last rate proceeding, pursuant to 52 Pa. Code, § 65.20.

Response:

The Company's water conservation program includes pro-active programs for Non-Revenue Water monitoring and reactions to the same, our LTIIP, customer communications and tools, and resources focused on the same.

The company has metrics on each water system for NRW which are regularly monitored, reported on internally and used to plan operational and capital improvements.

The Company employs three full time leak detection operators in Southeast PA, and others are utilized on a part time basis. These technicians perform a survey of approximately 1,250 miles of distribution and transmission mains each year (i.e., each year 25% of Southeast PA is completed for leak survey). In some areas, outside leak detection companies may also be used. Leak detection efforts are prioritized on the systems with the highest Non Revenue Water (NRW). Discovered leaks are scheduled for repair through our work order system, often addressed within 24 to 48 hours. Systems are analyzed and prioritized for water loss control measures based on volume and production cost of the lost water. In some cases, small systems with few customers may have a high NRW percentage (e.g., >25%) but the value of water lost does not warrant extensive and costly leak detection efforts.

All Greater PA Divisions use a combination of in-house and 3rd party leak detection firms to proactively identify small leaks (e.g., customer service lines) and larger leaks.

In 2023, the Company added to it's Non-Revenue Water program by selecting two "target systems" where a high level of resources would focus their attention to reduce the NRW. In 2023, the Roaring Creek system (GPA) and the West Chester system (SEPA) were selected as the targeted systems. By the end of 2023, the Roaring Creek system reduced NRW by 25% (from 99 gal/connection/day to 83 gal/connection/day) and the West Chester system reduced NRW by 30% (from 71 gal/connection/day to 55 gal/connection/day). For 2024, the two selected systems are Roaring Creek (GPA) and Upper Providence (SEPA). In addition, advanced work has begun on the Fawn Lake system (GPA-Honesdale) in anticipation of it being a targeted system in 2025.

The Company has a Water Main Renewal Program, which is a continuous program to replace pipes per our approved LTIIP. Pipeline replacement projects are prioritized and selected through the use of information management systems. Specifically, the Company's AIMS (Asset Information Management System) is a web-based system that managers use for detailed information related to the water distribution system(s). Additionally, a GIS (Geographic Information System) allows managers to visually retrieve and display much of the same information using a map-based system including pipe size, pipe age, pipe material, and historic break locations.

The Company also utilizes Water-Use Tracking Reports, whereby Managers complete a monthly NRW report that tracks water supplied, water sold, unmetered uses, and losses for each system. The reports allow visibility into trends and outliers which could be indicative of real or apparent losses. The reports provide in-depth looks at each system as well as on a broader Divisional level. Managers also evaluate water uses that affect NRW % calculation. Specifically, line flushing, bulk water sales, fire company uses, leak estimation and authorized unmetered uses.

Specific projects are also implemented to help reduce water loss. Where feasible, District Meter Areas (DMA) are established to reduce pressure to the area. Pressure reduction serves to reduce water loss through small leaks and weeps in the system. Depending on system and storage constraints, pressure can be reduced throughout the day or just during off-peak times when demands are low.

All master meters are monitored by the Company since their accumulated volume is used to produce the send-out and consumption reports that are generated and monitored daily. Under-registration or over-registration of these meters will serve to distort the actual metered ratio used in unaccounted-for-water calculations. Meter calibration is accomplished by a portable flow meter which is placed at a nearby corporation stop and compared with the meter's flow totalizer. All meters found to be inaccurate are immediately scheduled for repair or replacement. The electronics of sendout meter installations at sources of supply are calibrated on an annual basis. Wells are a frequency of once per year. Surface water plants are quarterly (per PUC regulation). All sources are done by a qualified outside contractor.

In an effort to assist the customers with water conservation, the Company has transitioned from quarterly to monthly billing in all of its divisions; with the exception of a few recent acquisitions, thereby enabling customers to see unusual usage in their household over a 30 day period rather than upon receipt of a quarterly bill. Monthly billing allows customers to identify a potential leakage problem and correct it quickly. If a bill is extremely high (250% of the average trailing twelve months), a notice will print on the customers' bills alerting them to the high usage.

The Company is dedicated to customer education and awareness, which includes conservation. On their website, www.aquawater.com, Aqua has a "Guides & Tips" page with sections dedicated to conservation, in addition to messages shared elsewhere on the website. Additionally, the Company has LinkedIn, Facebook, Instagram and Twitter pages, as well as a blog and YouTube channel, where content about conservation topics are posted and shared. The company has also used print and digital advertising, TV and radio, press releases, local media hits and bill inserts. Across these channels, the Company shares education, tips, how-to guides and preventative communication around leaks, drought conditions, preventing frozen pipes, etc.

The Company has a program where we will pay the plumbing bills, typically for minor repairs, for customers with limited income. The objective is two-fold; to help customers avoid high water bills due to small leaks interior to their premises (e.g. leaking toilet or faucet) and to conserve water lost through such leaks.

In accordance with tariff requirements the Company has an active customer meter replacement program such that customer meters are targeted for replacement on a 20-year basis. This serves to reduce the contribution of underreporting meters to apparent NRW loss.

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

I. Quality of Service

QS7. Provide a discussion of the company's policy regarding meter requirements, replacements and testing. State if the company's procedures are in compliance with 52 Pa. Code, § 65.8(b).

a. Provide meter test records as required in 52 Pa. Code, § 65.8(c) for the 50 meters most recently removed from service.

b. Provide a discussion of the company's policy and history of compliance with 52 Pa. Code, § 65.9 regarding adjustment of bills for meter error within the last year.

A. Yes, the Company exchanges meters within the required timeframe. Meter exchange is included in the five-year capital budget and the plan is reviewed annually. The status of annual meter replacements is reviewed monthly. The average age of meters in PA as of December 2023:

- 5/8" thru 1" is 8.5 years (max age requirement = 20 yrs.)
- 1.5" to 2" is 5 years. (max age requirement = 8 yrs.)
- 3" and larger is 6.2 years (max age requirement = 8 yrs.)

a. Please see the attached meter test records as required in 52 Pa. Code, § 65.8(c) for the 50 meters most recently removed from service.

b. The Company has not had to adjust any bills due to over registration within the last year (January 1, 2023 to December 31, 2023) due to meter inaccuracy.

In the Meter Details section, subtests shaded gray indicate the meter's accuracy was outside the specified tolerance for that subtest.

* Act Vol - The volume of water run through the meters during the subtest.
Volume - The volume of water registered by the meter during the subtest.
Comp - "Yes" if the meter has two registers, "No" otherwise.

AQUA PENNSYLVANIA, INC.

(a wholly owned subsidiary of Essential Utilities, Inc.)

Consolidated Financial Statements
As of and for the years ended
December 31, 2021 and 2020

Report of Independent Auditors

To the Board of Directors and Stockholder of Aqua Pennsylvania, Inc.

Opinion

We have audited the accompanying consolidated financial statements of Aqua Pennsylvania, Inc. and its subsidiaries, (the "Company"), which comprise the consolidated balance sheets as of December 31, 2021 and 2020, and the related consolidated statements of income, of cash flows, of capitalization, and of stockholder's equity for the years then ended, including the related notes (collectively referred to as the "consolidated financial statements").

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2021 and 2020, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (US GAAS). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date the financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with US GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional

omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with US GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

PricewaterhouseCoopers LLP

See accompanying notes to consolidated financial statements.

1. Summary of Significant Accounting Policies

Nature of Operations

Aqua Pennsylvania, Inc. ("the Company") is a regulated public utility which supplies water to residential, commercial and industrial customers. The Company's customers are principally located in the suburban areas north and west of the City of Philadelphia and in 27 other counties in Pennsylvania. No single customer accounted for more than one percent of the Company's operating revenues in 2021 or 2020. The Company is a wholly owned subsidiary of Essential Utilities, Inc. ("the Parent"). The Company has wholly owned subsidiaries that are regulated public utilities which provide water and wastewater services to customers in Pennsylvania.

The consolidated financial statements include the accounts of the Company and its subsidiaries. All intercompany accounts and transactions have been eliminated in consolidation.

Basis of Presentation

The Company's consolidated financial statements are presented in accordance with U.S. generally accepted accounting principles.

The Company has evaluated the period from December 31, 2021, the date of the consolidated financial statements, through April 29, 2022, the date the consolidated financial statements were available for issuance, for subsequent events and determined that no material subsequent events occurred that would affect the information presented in these consolidated financial statements or require additional disclosures.

Use of Estimates in Preparation of Consolidated Financial Statement

The preparation of consolidated financial statements in conformity with accounting principles accepted in the United States of America requires

1. Summary of Significant Accounting Policies (Continued)

Use of Estimates in Preparation of Consolidated Financial Statement (Continued)

management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from those estimates.

The current novel coronavirus ("COVID-19") pandemic has caused significant social and economic restrictions that have been imposed in the United States and abroad, which has resulted in significant volatility in the global economy and led to reduced economic activity in some industries. In the preparation of these financial statements and related disclosures, we have assessed the impact that the COVID-19 pandemic has had on our estimates, assumptions, forecasts, and accounting policies. Because of the essential nature of our business, we do not believe the COVID-19 pandemic had a material impact on our estimates, assumptions and forecasts used in the preparation of our financial statements, except for the change in the allowance for doubtful accounts, although we continue to monitor this closely. As the COVID-19 situation is unprecedented and ever evolving, future events and effects related to the COVID-19 pandemic cannot be determined with precision, and actual results could significantly differ from our estimates or forecasts.

Recognition of Revenues

The Company recognizes revenue as water and wastewater services are provided to our customers, which happens over time as the service is delivered and the performance obligation is satisfied. Operating revenues include amounts billed to customers on a cycle basis and unbilled amounts based on estimated usage from the date of the latest meter read to the end of the accounting period. The Company's actual results could differ from these estimates. Unbilled amounts are included in unbilled revenues on the consolidated balance sheet.

Generally, payment is due within 30 days once a bill is issued to a customer. Sales tax and other taxes we collect on behalf of government authorities, concurrent with our revenue-producing activities, are primarily excluded from revenue. The following table presents our revenues disaggregated by major source and customer class:

1. Summary of Significant Accounting Policies (Continued)

1. Summary of Significant Accounting Policies (Continued)

Recognition of Revenues (Continued)

Revenues from Contracts with Customers – These revenues are composed of three main categories: water, wastewater, and other. Water revenues represent revenues earned for supplying customers with water service. Wastewater revenues represent revenues earned for treating wastewater and releasing it into the water supply. Other revenues are associated fees that relate to the regulated business but are not water and wastewater revenues. See description below for a discussion on the performance obligation for each of these revenue streams:

- Tariff Revenues – These revenues are categorized by customer class: residential, commercial, fire protection, industrial, other water, and other wastewater. The rates that generate these revenues are approved by the respective state utility commission, and revenues are billed cyclically and accrued for when unbilled. Other water and other wastewater revenues consist primarily of fines, penalties, surcharges, and availability lot fees. Our performance obligation for tariff revenues is to provide potable water or wastewater treatment service to customers. This performance obligation is satisfied over time as the services are rendered. The amounts that the Company has a right to invoice for tariff revenues reflect the right to consideration from the customers in an amount that corresponds directly with the value transferred to the customer for the performance completed to date.

- Other Utility Revenues – Other utility revenues represent revenues earned primarily from: antenna revenues, which represent fees received from telecommunication operators that have put cellular antennas on our water towers, operation and maintenance and billing contracts, which represent fees earned from municipalities for our operation of their water or wastewater treatment services or performing billing services, and fees earned from developers for accessing our water mains. The performance obligations vary for these revenues, but all are primarily recognized over time as the service is delivered.

1. Summary of Significant Accounting Policies (Continued)

Regulation

As a regulated public water and wastewater utility, the Company is subject to regulation by the Pennsylvania Public Utility Commission ("PAPUC"), which has jurisdiction with respect to rates, service, accounting procedures, acquisitions and other matters. Regulated public utilities follow the Financial Accounting Standards Board's ("FASB") accounting guidance for regulated operations, which provides for the recognition of regulatory assets and liabilities as allowed by regulators for costs or credits that are reflected in current rates or are considered probable of being included in future rates. Costs for which the Company has received or expects to receive prospective rate recovery are deferred as regulatory assets and amortized over the period of rate recovery in accordance with the FASB's accounting guidance for regulated operations. The regulatory assets or liabilities are then relieved as the cost or credit is reflected in Company's rates charged for utility service. If, as a result of a change in circumstances, it is determined that the Company no longer meets the criteria to apply regulatory accounting, the Company would have to discontinue regulatory accounting and write-off the respective regulatory assets and liabilities. See Note – 5 *Regulatory Assets and Liabilities* for further information regarding the Company's regulatory assets.

The Company makes significant judgments and estimates to record regulatory assets and liabilities. For each regulatory jurisdiction with regulated operations, the Company evaluates at the end of each reporting period whether the regulatory assets and liabilities continue to meet the probable criteria for future recovery or refund. The evaluation considers factors such as regulatory orders or guidelines, in the same regulatory jurisdiction, of a specific matter or a similar matter, as provided to the Company in the past or to other regulated utilities. In addition, the evaluation may be impacted by changes in the regulatory environment and pending or new legislation that could impact the ability to recover costs through regulated rates. There may be multiple participants to rate or transactional regulatory proceedings who might offer different views on various aspects of such proceedings, and in these instances may challenge the prudence of our business policies and practices, seek cost disallowances or request other relief.

1. Summary of Significant Accounting Policies (Continued)

Utility Plant and Depreciation

Utility plant is stated at cost which includes contracted cost, direct labor and fringe benefits, materials, overheads, and for certain utility plant, an allowance for the cost of funds used during construction. Water systems acquired are recorded at estimated original cost when first devoted to utility service and the applicable depreciation is recorded in accumulated depreciation. Utility plant acquisition adjustment represents the difference between the estimated original cost, less applicable depreciation and the purchase price of utility plant assets acquired through business acquisitions. Acquisition adjustments are amortized over 20 years if recoverable in rate base.

Utility expenditures for maintenance and repairs, including major maintenance projects and minor renewals and betterments, are charged to operating expenses when incurred in accordance with the Uniform System of Accounts prescribed by the PAPUC. The cost of new units of property and betterments are capitalized.

The cost of software upgrades and enhancements are capitalized if they result in added functionality which enable the software to perform tasks it was previously incapable of performing. Certain information technology costs associated with major system installations, conversions and improvements, such as software training, data conversion and business process re-engineering costs, are deferred as a regulatory asset if the Company expects to recover these costs in future rates. If these costs are not deferred, then these costs are charged to operating expenses when incurred. As of December 31, 2021, $13,319 costs have been incurred and deferred since the last rate proceedings as a regulatory asset, and the deferral is reported as a component of net property, plant and equipment.

1. Summary of Significant Accounting Policies (Continued)

Utility Plant and Depreciation (Continued)

When units of property are replaced, retired or abandoned, the recorded value thereof is credited to utility plant and such value, together with the net cost of removal, is charged to accumulated depreciation. To the extent the Company recovers cost of removal or other retirement costs through rates after the retirement costs are incurred, a regulatory asset is recorded.

The straight-line remaining life method is used to compute depreciation on utility plant. The straight-line method is used with respect to transportation and mechanical equipment, office equipment and laboratory equipment. Depreciation is recorded over the estimated useful lives of the assets which range from 14 to 94 years for utility plant and 5 to 64 years for both transportation and mechanical equipment and all non-utility plant, office equipment and laboratory equipment.

Long-lived assets of the Company, which consist primarily of utility plant in service, operating lease right-of-use assets and intangible assets, are reviewed for impairment when changes in circumstances or events occur. These circumstances or events could include a decline in the market value or physical condition of a long-lived asset, an adverse change in the manner in which long-lived assets are used or planned to be used, a change in historical trends, operating cash flows associated with the long-lived assets, changes in macroeconomic conditions, industry and market conditions, or overall financial performance. When these circumstances or events occur, the Company determines whether it is more likely than not that the fair value of those assets is less than their carrying amount. If the Company determines that it is more likely than not (that is, the likelihood of more than 50 percent), the Company would recognize an impairment charge if it is determined that the carrying amount of an asset exceeds the sum of the undiscounted estimated cash flows. In this circumstance, the Company would recognize an impairment charge equal to the difference between the carrying amount and the fair value of the asset. Fair value is estimated to be the present value of future net cash flows associated with the asset, discounted using a discount rate commensurate with the risk and remaining life of the asset. During the year ended December 31, 2021, there have been no such circumstances or events.

Regulatory assets are reviewed for the continued application of the FASB accounting guidance for regulated operations. The Company’s review determines whether there have been changes in circumstances or events, such as regulatory disallowances, or abandonments, that have occurred that require adjustments to the carrying value of these assets. Adjustments to the carrying value of these assets would be

1. Summary of Significant Accounting Policies (Continued)

made in instances where their inclusion in the rate-making process is unlikely. For utility plant in service, we would recognize an impairment loss for any amount disallowed by the PAPUC.

As of December 31, 2021, and 2020, property, plant and equipment additions purchased at the period end, but not yet paid for are $27,793 and $31,134, respectively.

Allowance for Funds Used During Construction

The allowance for funds used during construction ("AFUDC") is a credit to income which represents the estimated cost of funds used to finance the construction of utility plant. AFUDC is applied to construction projects requiring more than one month to complete. No AFUDC is applied to projects funded by customer advances for construction or contributions in aid of construction. AFUDC includes the net cost of borrowed funds and a rate of return on other funds when used, and is recovered through water rates as the utility plant is depreciated.

Cash and Cash Equivalents

The Company considers all highly liquid investments with an original maturity of three months or less, which are not restricted for construction activity, to be cash equivalents.

Accounts Receivable

Accounts receivable are recorded on the invoiced amounts. The allowance for doubtful accounts is the Company's best estimate of the amount of probable credit losses in our existing accounts receivable, and is determined based on lifetime expected credit and the aging of account balances. The Company reviews the allowance for doubtful accounts quarterly. Account balances are written off against the allowance when it is probable the receivable will not be recovered. When utility customers request extended payment terms, credit is extended based on regulatory guidelines and collateral is not required. During 2021 and 2020, the Company increased its allowance for doubtful accounts as a result of its decline in its accounts receivable aging due to COVID-19.

1. Summary of Significant Accounting Policies (Continued)

Deferred Charges

Deferred charges consist of preliminary survey costs, retirement work in progress expenses and other expenses.

Other expenses, for which the Company has received or expects to receive prospective rate recovery, are deferred and amortized over the period of rate recovery.

Funds Restricted for Construction Activity

The proceeds received from certain financings for construction and capital improvement of utility facilities are held in escrow until the designated expenditures are incurred. These amounts are reported as funds restricted for construction activity and are expected to be released over time as the capital projects are funded.

Goodwill

Goodwill represents the excess cost over the fair value of net tangible and identifiable intangible assets acquired through acquisitions. Goodwill is not amortized but is tested for impairment annually, or more often if circumstances indicate a possible impairment may exist. When testing goodwill for impairment, the Company may assess qualitative factors, including macroeconomic conditions, industry and market considerations, cost factors, overall financial performance and entity specific events, to determine whether it's more likely than not that the fair value of a reporting unit is less than its carrying amount. Based on the assessment of the qualitative factors previously noted or on a voluntary basis, the Company may perform a quantitative goodwill impairment test by determining the fair value of a reporting unit, which we would estimate based on a discounted cash flow analysis and a market comparison analysis. If the Company performs a quantitative test and determines that the reporting unit's fair value is less than its carrying amount, the Company would record an impairment loss for the amount by which a reporting unit's carrying amount exceeds its fair value not to exceed the carrying amount of goodwill.

1. Summary of Significant Accounting Policies (Continued)

Goodwill (Continued)

The Company tested the goodwill attributable for its reporting unit for impairment as of July 31, 2021, in conjunction with the timing of its annual strategic business plan and concluded that the reporting unit's estimated fair value exceeded its carrying amount, indicating that the Company's goodwill was not impaired.

Income Taxes

The Company accounts for some income and expense items in different time periods for financial reporting than for tax reporting purposes. Deferred income taxes are provided on the temporary differences between the tax basis of the assets and liabilities and the amounts at which they are carried in the consolidated financial statements. The income tax effect of temporary differences not reflected currently in rates is recorded as deferred taxes with an offsetting regulatory asset or liability. These deferred income taxes are based on the enacted tax rates expected to be in effect when such temporary differences are projected to reverse. Investment tax credits are deferred and amortized over the estimated useful lives of the related properties.

The Company's earnings are included with those of the Parent and affiliated companies for purposes of filing a consolidated Federal income tax return. The allocation of the Federal income tax to the Company is computed on a stand-alone basis. See Note 13 for additional information regarding the Company and Parent company activity.

Judgment is required in evaluating the Company's Federal and state tax positions. Despite management's belief that the Company's tax return positions are fully supportable, the Company establishes reserves when it believes that its tax positions are likely to be challenged and it may not fully prevail in these challenges. The Company's provision for income taxes includes interest, penalties and reserves for uncertain tax positions.

The tax accounting method permits the expensing of qualifying utility asset improvement costs that were previously being capitalized and depreciated for book and tax purposes ("the Repairs"). The Repairs accounting authorized for the Company by the Pennsylvania Public Utility Commission ("PAPUC") provides for the

1. Summary of Significant Accounting Policies (Continued)

Income Taxes (Continued)

flow-through treatment of qualifying income tax benefits, generating a reduction in income tax expense, and reduces the amount of taxes currently payable in both 2021 and 2020. For repair expense qualifying capital expenditures made prior to 2012 ("catch - up adjustment" or "481 Adjustment"), the Company was permitted by the PAPUC to amortize the resulting deferred tax benefits over ten years as a reduction to income tax expense that commenced in 2013. As a result of the May 2019 rate order, the amortization period of the catch-up adjustment was slightly shortened to align with the Company's expected rate filing cadence and result in an expiration of the amortization in approximately 2022. Both the catch-up and current benefits attributable to tax repairs expense are now included in the Company's cost of service and accounted for in the utility rates charged to customers. Additionally, as a result of the settlement, the current benefit recognized by the Company is limited to within a range of tax benefit ("the Collar"), which is between $155,865 and $161,865. Amounts recognized above or below the Collar are required to be recorded as either a regulatory asset or liability, subject to disposition in the next base rate case.

Customers' Advances for Construction

Water mains or, in some instances, cash advances to reimburse the Company its costs to construct water mains, are contributed to the Company by customers, real estate developers and builders in order to extend water service to their properties. The value of these contributions is recorded as Customers' Advances for Construction. The Company makes refunds on these advances over a specific period of time based on operating revenues related to the main or as new customers are connected to and take service from the main. After all refunds are made, any remaining balance is transferred to Contributions in Aid of Construction. Non-cash property, in the form of water mains, has been received as advances or contributions of $11,269 in 2021 and $10,413 in 2020.

Contributions in Aid of Construction

Contributions in aid of construction include direct non-refundable contributions and the portion of customers' advances for construction that have become non-refundable. The Company depreciates contributed property and amortizes contributions in aid of construction at the composite rate of the related property. Contributions in aid of construction are deducted from the Company's rate base for rate-making purposes, and therefore, no return is earned on contributed property.

1. Summary of Significant Accounting Policies (Continued)

Contributions in Aid of Construction (Continued)

Non-cash property, in the form of water mains, has been received, generally from developers as contributions of $411 in 2021 and $1,271 in 2020.

Materials and Supplies

Materials and supplies are stated at cost under the first-in, first-out method.

Other Comprehensive Income ("OCI")

For the periods presented, the Company does not have any OCI and therefore, comprehensive income equals net income. In addition, there is no accumulated comprehensive income.

Recent Accounting Pronouncements

Pronouncements to be adopted upon the effective date:

In August 2020, the FASB issued updated accounting guidance on accounting for convertible instruments and contracts in an entity's own equity. The updated guidance reduces the number of accounting models for convertible debt and convertible preferred stock instruments and makes certain disclosure amendments intended to improve the information provided to users. Additionally, the guidance also amends the derivative guidance for the "own stock" scope exception, which exempts qualifying instruments from being accounted for as derivatives if certain criteria are met. Further, the standard changes the way certain convertible instruments are treated when calculating earnings per share. The updated accounting guidance is effective for fiscal years beginning after December 15, 2021 with early adoption permitted beginning in 2021. The adoption of this standard is not expected to have a material impact to the Company's consolidated financial statements.

In October 2021, the FASB issued accounting guidance on accounting for revenue contracts with customers acquired in a business combination. The guidance specifies for all revenue contracts acquired in a business combination, regardless of their timing of payment, the circumstances in which the acquirer should recognize contract assets and contract

1. Summary of Significant Accounting Policies (Continued)

Recent Accounting Pronouncements (Continued)

liabilities, as well as how to measure those contract assets and contract liabilities. The updated accounting guidance is effective for fiscal years beginning after December 15, 2022 with early adoption permitted. The Company is evaluating the requirements of the updated guidance to determine the impact of adoption.

Pronouncements adopted during the fiscal year:

In March 2020, the FASB issued accounting guidance that provides companies with optional guidance, including expedients and exceptions for applying generally accepted accounting principles to contracts and other transactions affected by reference rate reform, such as the London Interbank Offered Rate (LIBOR). The accounting guidance was effective upon issuance and generally can be applied to applicable contract modifications through December 31, 2022. The Company adopted the guidance in the fourth quarter of 2021, and there was no impact on its consolidated financial statements upon adoption.

In December 2019, the FASB issued updated accounting guidance that simplifies the accounting for income taxes. The updated guidance removes certain exceptions to the general principles of accounting for income taxes to reduce the cost and complexity of its application, including the accounting for intraperiod tax allocation when there is a loss from continuing operations and income or a gain from other items, deferred tax liabilities for equity method investments when a foreign subsidiary becomes an equity method investment or when a foreign equity method investment becomes a subsidiary, and calculating income taxes in an interim period when a year-to-date loss exceeds the anticipated loss for the year. Additionally, the updated guidance clarifies and amends the existing guidance over accounting for franchise taxes and other taxes partially based on income, an entity's tax basis of goodwill, separate entity financial statements, interim recognition of enactment of tax laws or rate changes, and improvements to the Codification for income taxes related to employee stock ownership plans and investments in qualified affordable housing projects accounted for using the equity method. The updated accounting guidance is effective for fiscal years beginning after December 15, 2020 and interim periods within those fiscal years with early adoption permitted. As permitted, we adopted this updated guidance on January 1, 2021, which did not have a material impact on our consolidated financial statements.

2. Utility Plant

Utility Plant is composed of the following:

	December 31, 2021	December 31, 2020	Approximate range of remaining lives
Utility plant			
Mains and accessories	$ 2,979,145	$ 2,814,412	32 to 94 years
Services, hydrants, treatment plants and reservoirs	1,503,530	1,375,598	15 to 74 years
Operations structures and water tanks	182,676	167,847	14 to 59 years
Miscellaneous pumping and purification equipment	462,101	457,529	18 to 58 years
Meters, data processing, transportation and operating equipment	500,510	461,458	5 to 57 years
Land and other non-depreciable assets	57,853	80,749	
Utility plant	5,685,815	5,357,593	
Utility construction work-in-progress	152,319	119,467	
Net utility plant acquisition adjustment	(502)	(1,575)	3 to 19 years
Total utility plant	5,837,632	5,475,485	
Accumulated depreciation	(1,262,083)	(1,146,869)	
Utility plant, net of accumulated depreciation	$ 4,575,549	$ 4,328,616	

3. Acquisitions

Water and Wastewater Utility Acquisitions – Completed:

In December 2020, the Company acquired the wastewater utility system assets of New Garden Township, Pennsylvania, which serves 1,965 customers. The total purchase price for the utility system, which was funded by a capital contribution from the Parent, was $29,944. The preliminary purchase price allocation for this acquisition consisted primarily of acquired property, plant and equipment, net of accumulated depreciation totaling $29,500. In June 2020, the Company acquired the wastewater utility system assets of East Norriton Township, Pennsylvania which serves 4,947 customers. The total purchase price for the utility system acquired was $21,000 in cash. The preliminary purchase price allocation for this acquisition consisted primarily of acquired property, plant and equipment, net of accumulated depreciation totaling $20,755.

3. Acquisitions (Continued)

Water and Wastewater Utility Acquisitions – Pending Completion:

In October 2021, the Company entered into a purchase agreement to acquire the wastewater utility assets of the City of Beaver Falls, Pennsylvania which consists of approximately 7,600 customers for $41,250. In July 2021, the Company entered into a purchase agreement to acquire the water utility assets of Shenandoah Borough, Pennsylvania which consists of approximately 2,930 customers for $12,000. In January 2021, the Company entered into purchase agreements to acquire, in separate transactions, the wastewater utility system assets of East Whiteland Township, Pennsylvania and Willistown Township, Pennsylvania which consist of approximately 10,500 customers for $72,400. In September 2020, the Company entered into a purchase agreement to acquire the wastewater utility system assets of Lower Makefield Township, Pennsylvania, which consists of approximately 11,000 customers for $53,000.

The purchase price for these pending acquisitions are subject to certain adjustments at closing, and are subject to regulatory approval, including the final determination of the fair value of the rate based acquired. The closing for the wastewater assets of Lower Makefield Township occurred in the first quarter of 2022, and the closings of our acquisitions of East Whiteland Township, Willistown Township, and Shenandoah Borough are expected to occur in the second half of 2022. The closings of our Beaver Falls and Southern Oaks acquisitions are expected to occur late in 2022 or in early 2023. Closing for our utility acquisitions are subject to the timing of the regulatory approval process.

3. Acquisitions (Continued)

In September 2019, the Company entered into a purchase agreement to acquire the wastewater utility system assets of the Delaware County Regional Water Quality Control Authority ("DELCORA"), which consists of approximately 16,000 customers, or the equivalent of 198,000 retail customers, in 42 municipalities in Southeast Pennsylvania for $276,500. In May 2020, Delaware County, Pennsylvania filed a lawsuit alleging that DELCORA does not have the legal authority to establish and fund a customer trust with the net proceeds of the transaction. In December 2020, the judge in the Delaware County Court lawsuit issued an order that (1) the County cannot interfere with the purchase agreement between DELCORA and the Company, (2) the County cannot terminate DELCORA prior to the closing of the transaction, and (3) that the establishment of the customer trust was valid. Delaware County appealed this decision to Commonwealth Court of Pennsylvania. A three-judge panel heard oral arguments on October 18, 2021. On March 3, 2022, the Commonwealth Court issued a decision finding that Delaware County can dissolve the Authority if it so chooses but that the purchase agreement must be upheld regardless of who owns the system. At the Pennsylvania Public Utility Commission ("PUC"), the administrative law judges in the regulatory approval process recommended that the Company's application be denied, and subsequently, the Company provided exceptions to the recommended decision. On March 30, 2021, the PUC ruled that the case be remanded back to the Office of Administrative Law Judge and vacated the original administrative law judges' recommended decision. The March 30, 2021 order was also appealed to the Commonwealth Court by Delaware County and a decision is expected in the next several months.

After the PUC issued its March 30, 2021 order, the administrative law judge issued an order on April 16, 2021 staying the proceeding until the Delaware County Court lawsuit is final and unappealable. On March 25, 2022, the Company sent a letter notifying the PUC of the March 3, 2022 Commonwealth Court's decision and requested that the PUC move forward with processing the application. Several parties responded to the Company's letter and referenced the issues in the second appeal before Commonwealth Court regarding the March 30, 2021 PUC order. The purchase price for this pending acquisition is subject to certain adjustments at closing, and is subject to regulatory approval, including the final determination of the fair value of the rate base acquired. Closing of our acquisition of DELCORA is expected to occur in late 2022 or early 2023, subject to the timing of the regulatory approval process and Delaware County's on-going litigation.

See Note 13 for additional information regarding the Company and Parent company activity.

4. Income Taxes

The provision for income taxes is composed of the following:

	Years ended December 31,	
	2021	2020
Current:		
Federal	$ 6,258	$ 10,715
State	690	5,205
	6,948	15,920
Deferred:		
Federal	(2,055)	(9,755)
State	(2,706)	(6,045)
	(4,761)	(15,800)
Total tax expense	$ 2,187	$ 120

The statutory Federal tax rate is 21% for both 2021 and 2020, and the Pennsylvania Corporate Net Income tax rate is 9.99% for both years presented.

The primary components of the net deferred tax liability and investment tax credits of $967,749 and $904,910 at December 31, 2021 and 2020, respectively, include basis differences in utility plant, partially offset by advances and contributions, and income taxes recoverable.

4. Income Taxes (Continued)

At December 31, 2021, the Company has a cumulative state NOL of $546,133 without regard to unrecognized tax benefits. The Company believes that the state NOLs are more likely than not to be recovered and require no valuation allowance. The state NOLs do not begin to expire until 2032.

As of December 31, 2021 and 2020, the reserve for uncertain tax position is $18,546 and $17,593, respectively, excluding accrued interest and penalties. The unrecognized tax benefits relate to the income tax accounting change to adopt the IRS temporary tangible property regulations, and the tax position is attributable to a temporary difference. As a result of the regulatory treatment afforded by the income tax accounting change and despite this position being a temporary difference, as of December 31, 2021 and 2020, $34,443 and $33,050, respectively, of these tax benefits would have an impact on the Company's effective income tax rate in the event the Company does sustain all, or a portion, of its tax position. The Company does not expect a material change in this estimate in the next twelve months. The reserve for uncertain tax positions could increase or decrease for things such as the expiration of statutes of limitations, audit settlements, or tax examination activities. The Company has elected to recognize accrued interest and penalties related to uncertain tax positions as income tax expense. The Company has not recognized any penalties and interest due to the available Net Operating Losses ("NOLs") of other members within its consolidated Federal filing group.

As of December 31, 2021, the Parent's federal income tax returns remain subject to examination by federal tax authorities for the 2018 through 2021 tax years.

5. Regulatory Assets and Liabilities

Regulatory assets represent costs that are expected to be fully recovered from customers in future rates while regulatory liabilities represent amounts that are expected to be refunded to customers in future rates. Except for income taxes and utility plant retirement costs, regulatory assets and regulatory liabilities are excluded from the Company's rate base and do not earn a return. As of December 31, 2021 and 2020, the current portion of regulatory assets of $91 and $456, respectively, are included in prepayments and other current assets. The components of regulatory assets and liabilities are as follows:

	December 31, 2021		December 31, 2020	
	Regulatory Assets	Regulatory Liabilities	Regulatory Assets	Regulatory Liabilities
Income taxes	$ 830,327	$ 241,703	$ 776,023	$ 261,797
Postretirement benefits -Pension	-	100,879	-	85,979
Postretirement benefits-OPEB	(2,500)	-	(1,069)	-
Utility plant retirement costs	9,632	-	9,380	-
Accrued vacation	91	-	456	-
Rate case filing expenses & other	23,126	-	19,698	-
	$ 860,676	$ 342,582	$ 804,488	$ 347,776

5. Regulatory Assets and Liabilities (Continued)

Items giving rise to deferred state income taxes as well as a portion of deferred Federal income taxes related to certain differences between tax and book depreciation expense are recognized in the rate setting process on a cash or flow-through basis and will be recovered as they reverse. Amounts include differences that arise between certain utility asset improvement costs capitalized for book and deducted as a repair expense for tax purposes. On December 22, 2017, the Tax Cuts and Job Act ("TCJA") was enacted, which reduced the Federal corporate income tax rate from 35% to 21%. Reductions in accumulated deferred income tax balances due to the reduction in the corporate income tax rate to 21% under the provisions of the TCJA will result in amounts previously collected from utility customers for these deferred taxes to be refundable to such customers, generally through reductions in future rates. The TCJA includes provisions that stipulate how these excess deferred taxes relating to certain accelerated tax depreciation benefits are to be passed back to customers. In 2019, the amortization of the excess deferred income taxes was incorporated into the Company's cost of service by a rate order issued in May 2019.

The regulatory liability related to the catch-up component of the Company's repair tax accounting change represents the tax benefits realized, which have not yet flowed-through as a reduction to income tax expense due to the ten-year amortization period which began in 2013.

Postretirement benefits include pension and other postretirement benefits. The regulatory liability for postretirement benefits related to pension represents amounts recovered through rates before the costs are incurred. The regulatory balance related to postretirement benefits other than pensions includes deferred amounts funded by customers in excess of required amounts needing funding through an actuarial study. Excess funding of postretirement benefits since the Company's last base rate case and included as a reduction to cost of service postretirement benefits expense through an amortization. Postretirement benefits expense funding excess or deficit is periodically reviewed during each rate case filed by the Company and fully recoverable in future rates charged to customers.

5. Regulatory Assets and Liabilities (Continued)

The regulatory asset for utility plant retirement costs, representing cost of removal, represents costs already incurred that are expected to be recovered in future rates over a five-year recovery period.

The regulatory asset for accrued vacation represents costs that would otherwise be charged to operations and maintenance expense for vacation that is earned by employees, which is recovered as a cost of service.

The regulatory asset related to rate case filing expenses represents the costs associated with filing for rate increases that are deferred and amortized over periods that range from one to three years. Other represents costs incurred by the Company for which it has received or expects to receive rate recovery.

6. Commitments and Contingencies

The Company maintains agreements with other water purveyors for the purchase of water to supplement its water supply, particularly during periods of peak demands. The agreements stipulate purchases of minimum quantities of water or charge a monthly commitment fee through the year 2026. The Company is committed to a total of $14,301 in water purchase payments: $3,390 in 2022, $3,386 in 2023, $3,361 in 2024, $3,212 in 2025, $621 in 2026 and $331 thereafter. The Company purchased approximately $4,732 and $4,808 of water under these agreements during the years ended December 31, 2021 and 2020, respectively.

The Company is routinely involved in condemnation procedures and legal matters during the ordinary course of business. Although the results of legal proceedings cannot be predicted with certainty, there are no other pending legal proceedings to which the Company is a party or to which any of its properties is the subject that are material or are expected to have a material effect on the Company’s financial position, results of operations or cash flows.

7. Leases

The Company leases facilities and other equipment for use in its operations, which are accounted for as operating leases. Leases with a term of 12 months or less are not recorded on the balance sheet; rather, lease expense is recognized over the lease term. Our leases have remaining lives of 1 year to 32 years.

Some of the Company's leases can be extended on a month-to-month basis, which allow us to terminate the lease at any given month without penalty while others include options to extend the leases for up to 50 years. The renewal of a month-to-month lease is at our sole discretion.

The Company accounts for lease and non-lease components of lease arrangements separately. For calculating lease liabilities, we may deem lease terms to include options to extend or terminate the lease when it's reasonably certain that we will exercise that option. The Company's lease agreements do not contain significant residual value guarantees, restrictions or covenants.

Lease liabilities and corresponding right-of-use assets are recorded based on the present value of the lease payments over the expected lease term, including leases with variable payments that are based on a market rate or an index. All other variable payments are expensed as incurred. Since the Company's lease agreements do not provide an implicit interest rate, the Company utilized the Parent's incremental borrowing rate to determine the discount rate used to present value the lease payments.

	Years Ended December 31,	
Components of lease expense were as follows:	2021	2020
Operating lease cost	$ 684	$ 661

	Year Ended December 31,	
	2021	2020
Supplemental cash flow information related to leases was as follows:		
Cash paid for amounts included in the measurement of lease liabilities:		
Operating cash flows from operating leases	$ 610	$ 628

7. Leases (continued)

Supplemental balance sheet information related to leases was as follows:	Year Ended December 31,	
Operating leases:	2021	2020
Operating lease right-of-use assets	$ 8,408	$ 8,556
Other accrued liabilities	267	241
Operating lease liabilities	8,141	8,315
Total operating lease liabilities	$ 8,408	$ 8,556

	Year Ended December 31,	
Weighted average remaining lease term:	2021	2020
Operating leases	25 years	26 years
Weighted average discount rate:		
Operating leases	4.22%	4.22%

	Operating Leases
2022	$ 597
2023	570
2024	525
2025	525
2026	525
Thereafter	10,394
Total operating lease payments	$ 13,136
Total operating lease payments	$ 13,136
Less operating lease liabilities	8,408
Present value adjustment	$ 4,728

8. Long-term Debt and Loans Payable

The consolidated Statements of Capitalization provide a summary of long-term debt as of December 31, 2021 and 2020. The supplemental indentures with respect to certain issues of the First Mortgage Bonds restrict the ability of the Company to declare dividends, in cash or property, or repurchase or otherwise acquire the Company's stock. Approximately $1,929,339 and $1,729,269 of the Company's retained earnings were free of these restrictions as of December 31, 2021 and 2020, respectively. Certain supplemental indentures also prohibit the Company from making loans to, or purchasing the stock of the Parent. Loan agreements for the Company contain restrictions on minimum net assets. As of December 31, 2021, there were restrictions on the Company's net assets of $1,523,351 of their total net assets of $2,158,272.

8. Long-term Debt and Loans Payable (Continued)

Sinking fund payments are required for certain issues of long-term debt. The future sinking fund payments and debt maturities of the Company's long-term debt are as follows:

Interest Rate Range	2022	2023	2024	2025	2026	Thereafter
1.00% To 1.99%	947	826	755	766	776	5,271
2.00% To 2.99%	1,965	2,017	1,619	1,427	1,304	153,566
3.00% To 3.99%	2,470	1,836	1,530	598	553	700,874
4.00% To 4.99%	-	-	-	-	-	847,705
5.00% To 5.99%	-	10,000	10,000	-	-	21,940
6.00% To 6.99%	-	-	-	-	-	20,000
7.00% To 7.99%	-	-	-	15,000	-	-
9.00% To 9.99%	-	-	-	-	11,801	-
Total	5,382	14,679	13,904	17,791	14,434	1,749,356

In November 2021, the Company renewed its $100,000 364-day unsecured revolving credit facility with four banks. The funds borrowed under this agreement are classified as loans payable and are used to provide working capital. As of December 31, 2021, and 2020, funds borrowed under the Company's revolving credit agreement were $35,000, and $49,198, respectively. Prior to November 2021, interest under this facility is based, at the borrower's option, on the prime rate, an adjusted federal funds rate, an adjusted London Interbank Offered Rate corresponding to the interest period selected, an adjusted Euro-Rate corresponding to the interest period selected or at rates offered by the banks. Effective November 2021, interest under this facility is based, at the borrower's option, on the prime rate, an adjusted overnight bank funding rate, or an adjusted Bloomberg Short-Term Bank Yield Index (BSBY) floating rate. This agreement restricts short-term borrowing of the Company. A renewal fee of 5.0 basis points was charged on the total commitment amount of the revolving credit agreement. The average cost of borrowing under this facility was 0.78% and 1.12%, and the average borrowing was $40,312 and $37,166 during 2021 and 2020, respectively. The maximum amount outstanding at the end of any one month was $70,000 in 2021 and $54,669 in 2020.

8. Long-term Debt and Loans Payable (Continued)

In November 2020, the Company issued $150,000 of first mortgage bonds, of which $50,000 is due in 2053, $50,000 is due in 2057 and $50,000 is due in 2058 with interest rates of 2.85%, 2.89% and 2.90%, respectively. The proceeds from these bonds were used to repay existing indebtedness and for general corporate purposes.

In September 2020, the Company provided notice for the early redemption of $25,910 of tax exempt bonds at 5.00% that were originally maturing 2033, $19,270 of tax-exempt bonds at 5.00% that were originally maturing in 2034, $15,000 of tax-exempt bonds at 4.50% that were originally maturing in 2042 and $81,205 of tax-exempt bonds at 5.00% that were originally maturing in 2043.

In May 2020, the Company issued $175,000 of first mortgage bonds, of which $75,000 is due in 2051, $50,000 is due in 2055 and $50,000 is due in 2056 with interest rates of 3.49%, 3.54% and 3.55%, respectively. The proceeds from these bonds were used to repay existing indebtedness and for general corporate purposes.

9. Fair Value of Financial Instruments

The carrying amount of current assets and liabilities that are considered financial instruments approximates their fair values as of the dates presented. The carrying amount of the Company's long-term debt as of December 31, 2021 and 2020 is $1,815,546 and $1,827,114 respectively. The estimated fair value of the Company's long-term debt as of December 31, 2021 and 2020 is $2,118,674 and $2,193,824 , respectively. The fair value of long-term debt has been determined by discounting the future cash flows using current market interest rates for similar financial instruments of the same duration.

The Company's customers' advances for construction and related tax deposits have carrying values of $60,489 and $55,059 at December 31, 2021 and 2020, respectively. Their relative fair values cannot be accurately estimated since future refund payments depend on several variables, including new customer connections, customer consumption levels and future rate increases. Portions of these non-interest bearing instruments are payable annually through 2030 and amounts not paid by the contract expiration dates become non-refundable. The fair value of these amounts would, however, be less than their carrying value due to the non-interest bearing feature.

10. Pension Plans and Other Postretirement Benefits

The Company participates in a noncontributory qualified defined benefit pension plan sponsored by the Parent covering non-union employees hired prior to April 1, 2003 and select union employees. The eligibility of union employees is determined by the collective bargaining agreements covering those employees. Benefits under the plan are based on the participant's years of service and the annual average of the applicable compensation during the five consecutive computation periods of the final 10 computation periods as an active participant yielding the highest such average. Pension cost of the Company is based on amounts contributed to the pension plan as approved by the Parent and incorporated in rates approved by the PAPUC. Information regarding accumulated and projected benefit obligations is not prepared at the subsidiary level.

In August 2014, the Parent announced changes to the way it will provide future retirement benefits to employees acquired through a prior acquisition. Effective January 1, 2015, the Parent will provide future retirement benefits for these employees through its deferred contribution plan. As a result, no further

10. Pension Plans and Other Postretirement Benefits (Continued)

service will be considered in future accruals in the qualified defined benefit pension plan after December 31, 2014.

The funding amount for the pension plan for Essential Utilities, Inc. Retirement Income Plan will be determined each year based on the recommendation of management and subject to approval by the Parent's Pension Committee. The funding amount will be an amount greater than or equal to the minimum required contribution and less than or equal to the maximum tax deductible contribution. The Company recorded pension funding and expense of $12,000 and $9,780 in 2021 and 2020, respectively.

The Company participates in two postretirement benefit plans sponsored by the Parent that provide certain life insurance benefits for retired employees and certain health care benefits for retired employees and their dependents. Employees may become eligible for these benefits if they have completed at least fifteen years of service and retire from the Company after reaching age 55 while still working for the Company. Retirees and their dependents under age 65 are covered by a point-of-service managed care plan that requires co-payments or an HMO. Employees hired after April 1, 2003 are not eligible for benefits.

Employees who elect to retire prior to attaining age 65 are generally required to make contributions towards their medical coverage until attaining 65. Retirees and their dependents age 65 and over are required to purchase their own medical and drug coverage. The cost of this coverage is offset by Company contributions deposited in the plan's Premium Reimbursement Account. Costs of the Company are based on amounts contributed to the plans and incorporated in rates approved by the PAPUC.

The Company's funding policy is to contribute the lower of the other postretirement benefits cost or the maximum allowed by the Internal Revenue Code. The Company recorded costs for postretirement benefits other than pensions of $1,924 and $1,924 in 2021 and 2020, respectively. The Company funded postretirement benefits other than pensions of $0 in 2021 and $253 in 2020. Information regarding accumulated and projected benefit obligations is not prepared at the subsidiary level.

The Parent has 401(k) savings plans, which are defined contribution plans and cover substantially all employees. The Company makes matching contributions that are based on a percentage of the employee's contribution,

10. Pension Plans and Other Postretirement Benefits (Continued)

subject to specific limitations, as well as certain other Company contributions. Participants may diversify their Company matching account balances into other investments offered under 401(k) savings plans. The Company's contributions, which are recorded as compensation expense, were $2,379 and $2,136 for 2021 and 2020, respectively.

11. Employee Stock and Incentive Plan

The Company's employees participate in an Equity Compensation Plan sponsored by the Parent. Under the Essential Utilities, Inc. 2009 Omnibus Equity Compensation Plan, as approved by the Parent's shareholders to replace the 2004 Equity Compensation Plan, stock options, stock units, stock awards, stock appreciation rights, dividend equivalents, and other stock-based awards may be granted to the Company's employees, non-employee directors and consultants and advisors. During 2019, the Parent granted stock options, which are based upon the common stock of the Parent. Options are exercisable in installments of 33% annually, starting one year from the date of the grant and expire 10 years from the date of the grant. The Parent determines the grant date fair value per stock option using the Black-Scholes option-pricing model.

The fair value of each stock option is amortized into compensation expense using the graded vesting method, which results in the recognition of compensation costs over the requisite service period for each separately vesting tranche of the stock options as though the stock options were, in substance, multiple stock option grants. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs. Since the Company is not obligated to reimburse the Parent for stock-based compensation costs incurred, the Company records these liabilities resulting from compensation costs to paid-in capital.

For the year ended December 31, 2021, the Company's stock-based compensation related to stock options resulted in the following: operations and maintenance expense of $52 and lowered income tax expense by $15. For the year ended December 31, 2020, the Company's stock-based compensation related to stock options resulted in the following: operations and maintenance expense of $141 and lowered income tax expense by $41.

11. Employee Stock and Incentive Plan (Continued)

During 2021 and 2020, the Parent granted performance share units ("PSU"). A PSU represents the right to receive a share of the Parent's common stock if specified performance goals are met over the three year performance period specified in the grant, subject to exceptions through the respective vesting periods. The fair value of each PSU grant is amortized into compensation expense on a straight-line basis through the respective vesting period, which is generally three years. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. During the year ended December 31, 2021, the Company recorded stock-based compensation related to PSU's as a component of operations and maintenance expense of $521 and recorded an income tax benefit of $150. During the year ended December 31, 2020, the Company recorded stock-based compensation related to PSU's as a component of operations and maintenance expense of $358 and recorded an income tax benefit of $104. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs.

During 2021 and 2020, the Parent granted restricted share units ("RSU"). A RSU represents the right to receive a share of the Parent's common stock and are valued based on the fair market value of the Parent's stock on the date of grant. RSUs are eligible to be earned at the end of a specified restriction period, generally three years, beginning on the date of grant. In some cases, the right to receive the shares is subject to specific performance goals established at the time the grant is made. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. During the year ended December 31, 2021, the Company recorded stock-based compensation related to awards of RSUs as a component of operations and maintenance expense of $282 and recorded income tax benefit of $81. During the year ended December 31, 2020, the Company recorded stock-based compensation related to awards of RSUs as a component of operations and maintenance expense of $265 and recorded income tax benefit of $77. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs.

12. Water and Wastewater Rates

On August 20, 2021, Aqua Pennsylvania, filed an application with the PAPUC designed to increase water and wastewater rates by $97,685 or 17.9% on an annual basis. The Company anticipates a final order to be issued by May 2022.

In May 2019, the Pennsylvania Public Utility Commission granted Aqua Pennsylvania a water and wastewater increase of base rates designed with $158,865 of tax benefits to be flowed-through to income for qualifying utility asset improvement costs, subject to $3,000 either above or below this target amount. To the extent actual tax benefits are outside this range, tax benefits will either be deferred or accrued, and settled in the next rate filing.

The Distribution System Improvement Charges ("DSIC") enables water and wastewater utilities in Pennsylvania to add a surcharge to customer bills to offset the additional depreciation and capital costs related to infrastructure system replacement and rehabilitation projects completed and placed into service between base rate filings. The Company is permitted to request adjustments to the DSIC quarterly to reflect subsequent capital expenditures and it is reset to zero when new base rates that reflect the costs of those additions become effective or when the Company's earnings exceed a PAPUC benchmark. The maximum DSIC that can be in effect at any time is 7.5% for water and 5.0% for wastewater. The DSIC provided revenues of $22,043 and $3,817 in 2021 and 2020, respectively.

In addition to its base rates and the DSIC, the Company has utilized a surcharge or credit on its bills to reflect certain changes in Pennsylvania State Taxes, called the State Tax Adjustment Surcharge ("STAS') until such time as the tax changes are incorporated into base rates. The Company's STAS surcharge rates remained at zero during 2021 and 2020.

13. Affiliated Company Transactions

The Company has service agreements with the Parent and subsidiaries of the Parent ("other affiliates"). The types of services rendered between these entities relate to general supervision and administrative functions, long-range planning, tax, accounting, financing, engineering, legal, data processing services and other specialized support. Expenditures recorded for these services from the Parent and other affiliates amounted to approximately $36,696 and $35,633 for 2021 and 2020, respectively, and of those amounts, $25,102 and $24,910, respectively, have been recorded within Operations, maintenance and administrative expenses on the Consolidated Statements of Income with the remainder recorded to net utility plant on the Consolidated Balance Sheets. The Company also provides various management, advisory, and other services for other affiliates and is reimbursed by these affiliates. The amounts billed were $262 and $588 in 2021 and 2020, respectively. Additionally, the Parent may fund acquisitions on behalf of the Company, and such amounts would be included in the accounts payable-affiliates account.

The Company participates in the Parent's centralized treasury function whereby the Company transfers its cash to the Parent. Under this arrangement, available cash is used to fund accounts payable due from the Company and to pay-down accounts payable-affiliate, or available cash would be reflected as amounts due from the Parent and other affiliates to the Company. The reduction of the accounts payable-affiliates will also be settled through the collection of cash on behalf of the Company and capital contributions. The Parent made cash contributions of $100,000 and $20,000 to the Company in 2021 and 2020, respectively, which is disclosed in the Consolidated Statement of Stockholder's Equity.

The amounts owed to the Parent and other affiliates by the Company were $76,786 and $44,804 at December 31, 2021 and 2020, respectively. Amounts owed to the Parent and other affiliates are reflected in the accompanying balance sheet.

Amounts due from the Parent and other affiliates to the Company amounted to $41 and $75 at December 31, 2021 and 2020, respectively. Amounts due from the Parent and other affiliates are reflected in the accompanying balance sheet.

The Company returned noncash equity contributions to the Parent of $54,502 and $51,437 in 2021 and 2020, respectively, which is reported on the Statements of Consolidated Stockholder's Equity as return of capital contributions. In 2021 and 2020, the return of these noncash equity contributions related to the settlement of certain net intercompany receivables due from the Parent.

AQUA PENNSYLVANIA, INC.

(a wholly owned subsidiary of Essential Utilities, Inc.)

Consolidated Financial Statements
As of and for the years ended
December 31, 2022 and 2021

Report of Independent Auditors

To the Board of Directors and Stockholder of Aqua Pennsylvania, Inc.

Opinion

We have audited the accompanying consolidated financial statements of Aqua Pennsylvania Inc. and its subsidiaries (the "Company"), which comprise the consolidated balance sheets as of December 31, 2022 and 2021, and the related consolidated statements of income, of cash flows, of capitalization, and of stockholder's equity for the years then ended, including the related notes (collectively referred to as the "consolidated financial statements").

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2022 and 2021, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (US GAAS). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date the consolidated financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with US GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are

considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.

In performing an audit in accordance with US GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Philadelphia, Pennsylvania

1. Summary of Significant Accounting Policies

Nature of Operations

Aqua Pennsylvania, Inc. ("the Company") is a regulated public utility which supplies water to residential, commercial and industrial customers. The Company's customers are principally located in the suburban areas north and west of the City of Philadelphia and in 27 other counties in Pennsylvania. No single customer accounted for more than one percent of the Company's operating revenues in 2022 or 2021. The Company is a wholly owned subsidiary of Essential Utilities, Inc. ("the Parent"). The Company has wholly owned subsidiaries that are regulated public utilities which provide water and wastewater services to customers in Pennsylvania.

The consolidated financial statements include the accounts of the Company and its subsidiaries. All intercompany accounts and transactions have been eliminated in consolidation.

Basis of Presentation

The Company's consolidated financial statements are presented in accordance with U.S. generally accepted accounting principles.

The Company has evaluated the period from December 31, 2022, the date of the consolidated financial statements, through April 28, 2023, the date the consolidated financial statements were available for issuance, for subsequent events and determined that no material subsequent events occurred that would affect the information presented in these consolidated financial statements or require additional disclosures.

Use of Estimates in Preparation of Consolidated Financial Statement

The preparation of consolidated financial statements in conformity with accounting principles accepted in the United States of America requires

1. Summary of Significant Accounting Policies (Continued)

Use of Estimates in Preparation of Consolidated Financial Statement (Continued)

management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from those estimates.

Recognition of Revenues

The Company recognizes revenue as water and wastewater services are provided to our customers, which happens over time as the service is delivered and the performance obligation is satisfied. Operating revenues include amounts billed to customers on a cycle basis and unbilled amounts based on estimated usage from the date of the latest meter read to the end of the accounting period. The Company's actual results could differ from these estimates. Unbilled amounts are included in unbilled revenues on the consolidated balance sheet.

Generally, payment is due within 30 days once a bill is issued to a customer. Sales tax and other taxes we collect on behalf of government authorities, concurrent with our revenue-producing activities, are primarily excluded from revenue. The following table presents our revenues disaggregated by major source and customer class:

1. Summary of Significant Accounting Policies (Continued)

Recognition of Revenues (Continued)

Revenues from Contracts with Customers – These revenues are composed of three main categories: water, wastewater, and other. Water revenues represent revenues earned for supplying customers with water service. Wastewater revenues represent revenues earned for treating wastewater and releasing it into the water supply. Other revenues are associated fees that relate to the regulated business but are not water and wastewater revenues. See description below for a discussion on the performance obligation for each of these revenue streams:

- Tariff Revenues - These revenues are categorized by customer class: residential, commercial, fire protection, industrial, other water, and other wastewater. The rates that generate these revenues are approved by the state utility commission, and revenues are billed cyclically and accrued for when unbilled. Other water and other wastewater revenues consist primarily of fines, penalties, surcharges, and availability lot fees. Our performance obligation for tariff revenues is to provide potable water or wastewater treatment service to customers. This performance obligation is satisfied over time as the services are rendered. The amounts that the Company has a right to invoice for tariff revenues reflect the right to consideration from the customers in an amount that corresponds directly with the value transferred to the customer for the performance completed to date.

- Other Utility Revenues - Other utility revenues represent revenues earned primarily from: antenna revenues, which represent fees received from telecommunication operators that have put cellular antennas on our water towers, operation and maintenance and billing contracts, which represent fees earned from municipalities for our operation of their water or wastewater treatment services or performing billing services, and fees earned from developers for accessing our water mains. The performance obligations vary for these revenues, but all are primarily recognized over time as the service is delivered.

1. Summary of Significant Accounting Policies (Continued)

Regulation

As a regulated public water and wastewater utility, the Company is subject to regulation by the Pennsylvania Public Utility Commission ("PAPUC"), which has jurisdiction with respect to rates, service, accounting procedures, acquisitions and other matters. Regulated public utilities follow the Financial Accounting Standards Board's ("FASB") accounting guidance for regulated operations, which provides for the recognition of regulatory assets and liabilities as allowed by regulators for costs or credits that are reflected in current rates or are considered probable of being included in future rates. Costs for which the Company has received or expects to receive prospective rate recovery are deferred as regulatory assets and amortized over the period of rate recovery in accordance with the FASB's accounting guidance for regulated operations. The regulatory assets or liabilities are then relieved as the cost or credit is reflected in Company's rates charged for utility service. If, as a result of a change in circumstances, it is determined that the Company no longer meets the criteria to apply regulatory accounting, the Company would have to discontinue regulatory accounting and write-off the respective regulatory assets and liabilities. See Note – 5 *Regulatory Assets and Liabilities* for further information regarding the Company's regulatory assets.

The Company makes significant judgments and estimates to record regulatory assets and liabilities. For each regulatory jurisdiction with regulated operations, the Company evaluates at the end of each reporting period whether the regulatory assets and liabilities continue to meet the probable criteria for future recovery or refund. The evaluation considers factors such as regulatory orders or guidelines, in the same regulatory jurisdiction, of a specific matter or a similar matter, as provided to the Company in the past or to other regulated utilities. In addition, the evaluation may be impacted by changes in the regulatory environment and pending or new legislation that could impact the ability to recover costs through regulated rates. There may be multiple participants to rate or transactional regulatory proceedings who might offer different views on various aspects of such proceedings, and in these instances may challenge the prudence of our business policies and practices, seek cost disallowances or request other relief.

1. Summary of Significant Accounting Policies (Continued)

Utility Plant and Depreciation

Utility plant is stated at cost which includes contracted cost, direct labor and fringe benefits, materials, overheads, and for certain utility plant, an allowance for the cost of funds used during construction. Water systems acquired are recorded at estimated original cost when first devoted to utility service and the applicable depreciation is recorded in accumulated depreciation. Utility plant acquisition adjustment represents the difference between the estimated original cost, less applicable depreciation and the purchase price of utility plant assets acquired through business acquisitions. Acquisition adjustments are amortized over 20 years if recoverable in rate base.

Utility expenditures for maintenance and repairs, including major maintenance projects and minor renewals and betterments, are charged to operating expenses when incurred in accordance with the Uniform System of Accounts prescribed by the PAPUC. The cost of new units of property and betterments are capitalized.

The cost of software upgrades and enhancements are capitalized if they result in added functionality which enable the software to perform tasks it was previously incapable of performing. Certain information technology costs associated with major system installations, conversions and improvements, such as software training, data conversion and business process re-engineering costs, are deferred as a regulatory asset if the Company expects to recover these costs in future rates. If these costs are not deferred, then these costs are charged to operating expenses when incurred. As of December 31, 2022, $7,038 costs have been incurred and deferred since the last rate proceedings as a regulatory asset, and the deferral is reported as a component of net property, plant and equipment.

1. Summary of Significant Accounting Policies (Continued)

Utility Plant and Depreciation (Continued)

When units of property are replaced, retired or abandoned, the recorded value thereof is credited to utility plant and such value, together with the net cost of removal, is charged to accumulated depreciation. To the extent the Company recovers cost of removal or other retirement costs through rates after the retirement costs are incurred, a regulatory asset is recorded.

The straight-line remaining life method is used to compute depreciation on utility plant. The straight-line method is used with respect to transportation and mechanical equipment, office equipment and laboratory equipment. Depreciation is recorded over the estimated useful lives of the assets which range from 14 to 94 years for utility plant and 5 to 64 years for both transportation and mechanical equipment and all non-utility plant, office equipment and laboratory equipment.

Long-lived assets of the Company, which consist primarily of utility plant in service, operating lease right-of-use assets and intangible assets, are reviewed for impairment when changes in circumstances or events occur. These circumstances or events could include a decline in the market value or physical condition of a long-lived asset, an adverse change in the manner in which long-lived assets are used or planned to be used, a change in historical trends, operating cash flows associated with the long-lived assets, changes in macroeconomic conditions, industry and market conditions, or overall financial performance. When these circumstances or events occur, the Company determines whether it is more likely than not that the fair value of those assets is less than their carrying amount. If the Company determines that it is more likely than not (that is, the likelihood of more than 50 percent), the Company would recognize an impairment charge if it is determined that the carrying amount of an asset exceeds the sum of the undiscounted estimated cash flows. In this circumstance, the Company would recognize an impairment charge equal to the difference between the carrying amount and the fair value of the asset. Fair value is estimated to be the present value of future net cash flows associated with the asset, discounted using a discount rate commensurate with the risk and remaining life of the asset. During the year ended December 31, 2022, there have been no such circumstances or events.

Regulatory assets are reviewed for the continued application of the FASB accounting guidance for regulated operations. The Company's review determines whether there have been changes in circumstances or events, such as regulatory disallowances, or abandonments, that have occurred that require adjustments to the carrying value of these assets. Adjustments to the carrying value of these assets would be

1. Summary of Significant Accounting Policies (Continued)

made in instances where their inclusion in the rate-making process is unlikely. For utility plant in service, we would recognize an impairment loss for any amount disallowed by the PAPUC.

As of December 31, 2022, and 2021, property, plant and equipment additions purchased at the period end, but not yet paid for are $42,711 and $27,793, respectively.

Allowance for Funds Used During Construction

The allowance for funds used during construction ("AFUDC") is a credit to income which represents the estimated cost of funds used to finance the construction of utility plant. AFUDC is applied to construction projects requiring more than one month to complete. No AFUDC is applied to projects funded by customer advances for construction or contributions in aid of construction. AFUDC includes the net cost of borrowed funds and a rate of return on other funds when used, and is recovered through water rates as the utility plant is depreciated.

Cash and Cash Equivalents

The Company considers all highly liquid investments with an original maturity of three months or less, which are not restricted for construction activity, to be cash equivalents.

Accounts Receivable

Accounts receivable are recorded on the invoiced amounts. The allowance for doubtful accounts is the Company's best estimate of the amount of probable credit losses in our existing accounts receivable, and is determined based on lifetime expected credit losses and the aging of account balances. The Company reviews the allowance for doubtful accounts quarterly. Account balances are written off against the allowance when it is probable the receivable will not be recovered. When utility customers request extended payment terms, credit is extended based on regulatory guidelines and collateral is not required. During 2022 and 2021, the Company increased its allowance for doubtful accounts as a result of its deterioration in its accounts receivable aging due to COVID-19.

1. Summary of Significant Accounting Policies (Continued)

Deferred Charges

Deferred charges consist of preliminary survey costs, retirement work in progress expenses and other expenses.

Other expenses, for which the Company has received or expects to receive prospective rate recovery, are deferred and amortized over the period of rate recovery.

Funds Restricted for Construction Activity

The proceeds received from certain financings for construction and capital improvement of utility facilities are held in escrow until the designated expenditures are incurred. These amounts are reported as funds restricted for construction activity and are expected to be released over time as the capital projects are funded. There are no restrictions outstanding as of December 31, 2022 or December 31, 2021.

Goodwill

Goodwill represents the excess cost over the fair value of net tangible and identifiable intangible assets acquired through acquisitions. Goodwill is not amortized but is tested for impairment annually, or more often if circumstances indicate a possible impairment may exist. When testing goodwill for impairment, the Company may assess qualitative factors, including macroeconomic conditions, industry and market considerations, cost factors, overall financial performance and entity specific events, to determine whether it's more likely than not that the fair value of a reporting unit is less than its carrying amount. Based on the assessment of the qualitative factors previously noted or on a voluntary basis, the Company may perform a quantitative goodwill impairment test by determining the fair value of a reporting unit, which we would estimate based on a discounted cash flow analysis and a market comparison analysis. If the Company performs a quantitative test and determines that the reporting unit's fair value is less than its carrying amount, the Company would record an impairment loss for the amount by which a reporting unit's carrying amount exceeds its fair value not to exceed the carrying amount of goodwill.

1. Summary of Significant Accounting Policies (Continued)

Goodwill (Continued)

In 2022, the Company changed the annual goodwill impairment test date from July 31 to October 1, which is a change in accounting principle, that management believes is preferable as the new test date better aligns with the long-term planning and forecasting process. The change did not delay, accelerate or avoid an impairment charge nor did it change the requirement to assess goodwill on an interim date between scheduled annual testing dates if triggering events are present. To ensure that no lapse in an assessment occurred since the prior period, during the third quarter of 2022, the Company performed qualitative tests as of July 31, 2022, and determined that it was more likely than not that the fair value exceeded carrying value at the time of the change in impairment test date. The Company also tested the goodwill attributable to its reporting unit for impairment as of October 1, 2022 in conjunction with the timing of its annual strategic business plan and concluded that the reporting unit's estimated fair value exceeded its carrying amount, indicating that the Company's goodwill was not impaired.

Income Taxes

The Company accounts for some income and expense items in different time periods for financial reporting than for tax reporting purposes. Deferred income taxes are provided on the temporary differences between the tax basis of the assets and liabilities and the amounts at which they are carried in the consolidated financial statements. The income tax effect of temporary differences not reflected currently in rates is recorded as deferred taxes with an offsetting regulatory asset or liability. These deferred income taxes are based on the enacted tax rates expected to be in effect when such temporary differences are projected to reverse. Investment tax credits are deferred and amortized over the estimated useful lives of the related properties.

The Company's earnings are included with those of the Parent and affiliated companies for purposes of filing a consolidated Federal income tax return. The allocation of the Federal income tax to the Company is computed on a stand-alone basis. See Note 13 for additional information regarding the Company and Parent company activity.

Judgment is required in evaluating the Company's Federal and state tax positions. Despite management's belief that the Company's tax return positions are fully supportable, the Company establishes reserves when it believes that its tax positions are likely to be challenged and it may not fully prevail in these challenges. The Company's provision for income taxes includes interest, penalties and reserves for uncertain tax positions.

The tax accounting method permits the expensing of qualifying utility asset improvement costs that were previously being capitalized and depreciated for book and tax purposes ("the Repairs"). The Repairs accounting authorized for the Company by the Pennsylvania Public Utility Commission ("PAPUC") provides for the

1. Summary of Significant Accounting Policies (Continued)

Income Taxes (Continued)

flow-through treatment of qualifying income tax benefits, generating a reduction in income tax expense, and reduces the amount of taxes currently payable in both 2022 and 2021. For repair expense qualifying capital expenditures made prior to 2012 ("catch - up adjustment" or "481 Adjustment"), the Company was permitted by the PAPUC to amortize the resulting deferred tax benefits over ten years as a reduction to income tax expense that commenced in 2013. As a result of the May 2022 rate order, the remaining amortization period of the catch-up adjustment was extended to align with the Company's expected rate filing cadence and results in the expiration of the amortization in 2025. Both the catch-up and current benefits attributable to tax repairs expense are now included in the Company's cost of service and accounted for in the utility rates charged to customers. Additionally, as a result of the settlement, the current benefit recognized by the Company is limited to within a range of tax benefit ("the Collar"), which is between $155,060 and $163,060. Amounts recognized above or below the Collar are required to be recorded as either a regulatory asset or liability, subject to disposition in the next base rate case.

Customers' Advances for Construction

Water mains or, in some instances, cash advances to reimburse the Company its costs to construct water mains, are contributed to the Company by customers, real estate developers and builders in order to extend water service to their properties. The value of these contributions is recorded as Customers' Advances for Construction. The Company makes refunds on these advances over a specific period of time based on operating revenues related to the main or as new customers are connected to and take service from the main. After all refunds are made, any remaining balance is transferred to Contributions in Aid of Construction. Non-cash property, in the form of water mains, has been received as advances or contributions of $8,415 in 2022 and $11,269 in 2021

Contributions in Aid of Construction

Contributions in aid of construction include direct non-refundable contributions and the portion of customers' advances for construction that have become non-refundable. The Company depreciates contributed property and amortizes contributions in aid of construction at the composite rate of the related property. Contributions in aid of construction are deducted from the Company's rate base for rate-making purposes, and therefore, no return is earned on contributed property.

1. Summary of Significant Accounting Policies (Continued)

Contributions in Aid of Construction (Continued)

Non-cash property, in the form of water mains, has been received, generally from developers as contributions of $932 in 2022 and $411 in 2021

Materials and Supplies

Materials and supplies are stated at cost under the first-in, first-out method.

Other Comprehensive Income ("OCI")

For the periods presented, the Company does not have any OCI and therefore, comprehensive income equals net income. In addition, there is no accumulated comprehensive income.

Recent Accounting Pronouncements

Pronouncements to be adopted upon the effective date:

In October 2021, the FASB issued accounting guidance on accounting for acquired revenue contracts with customers in a business combination. The guidance specifies for all acquired revenue contracts, regardless of their timing of payment, the circumstances in which the acquirer should recognize contract assets and contract liabilities that are acquired in a business combination, as well as how to measure those contract assets and contract liabilities. The updated accounting guidance is effective for fiscal years beginning after December 15, 2022 with early adoption permitted. The Company adopted this guidance effective January 1, 2023, and will apply it prospectively to business combinations occurring on or after that date.

1. Summary of Significant Accounting Policies (Continued)

Recent Accounting Pronouncements (Continued)

Pronouncements adopted during the fiscal year:

In August 2020, the FASB issued updated accounting guidance on accounting for convertible instruments and contracts in an entity's own equity. The updated guidance reduces the number of accounting models for convertible debt and convertible preferred stock instruments and makes certain disclosure amendments intended to improve the information provided to users. Additionally, the guidance also amends the derivative guidance for the "own stock" scope exception, which exempts qualifying instruments from being accounted for as derivatives if certain criteria are met. Further, the standard changes the way certain convertible instruments are treated when calculating earnings per share. As permitted, we adopted this updated guidance on January 1, 2022, which did not have a material impact on our consolidated financial statements.

Recently issued accounting standards or pronouncements not disclosed above have been excluded as they are not relevant to the Company.

2. Utility Plant

Utility Plant is composed of the following:

	December 31, 2022	December 31, 2021	Approximate range of remaining lives
Utility plant			
Mains and accessories	$ 3,107,754	$ 2,979,145	26 to 84 years
Services, hydrants, treatment plants and reservoirs	1,660,468	1,503,530	18 to 73 years
Operations structures and water tanks	189,352	182,676	10 to 60 years
Miscellaneous pumping and purification equipment	532,273	462,101	9 to 47 years
Meters, data processing, transportation and operating equipment	539,272	500,510	5 to 44 years
Land and other non-depreciable assets	64,515	57,853	
Utility plant	6,093,634	5,685,815	
Utility construction work-in-progress	180,776	152,319	
Net utility plant acquisition adjustment	553	(502)	10 to 35 years
Total utility plant	6,274,963	5,837,632	
Accumulated depreciation	(1,364,230)	(1,262,083)	
Utility plant, net of accumulated depreciation	$ 4,910,733	$ 4,575,549	

3. Acquisitions

Water and Wastewater Utility Acquisitions – Completed:

In August 2022, the Company acquired the municipal wastewater assets of East Whiteland Township, Chester County, Pennsylvania, which serves 4,018 customers, for a cash purchase price of $54,374. Additionally, in March 2022, the Company acquired the wastewater system of Lower Makefield Township, which serves 11,323 customer connections in Lower Makefield, Falls, and Middletown townships, and Yardley Borough, Bucks County, Pennsylvania, for a cash purchase price of $53,000.

The purchase price allocation for these acquisitions consisted primarily of property, plant and equipment. The operating revenues included in the consolidated financial statements of the Company during the period owned by the Company for these utility systems acquired in 2022 are $11,120.

3. Acquisitions (Continued)

Water and Wastewater Utility Acquisitions – Pending Completion:

In October 2021, the Company entered into a purchase agreement to acquire the wastewater utility assets of the City of Beaver Falls, Pennsylvania which consists of approximately 7,600 customers for $41,250. In July 2021, the Company entered into a purchase agreement to acquire the water utility assets of Shenandoah Borough, Pennsylvania, which consists of approximately 2,930 customers for $12,000. In January 2021, the Company entered into purchase agreement to acquire the wastewater utility system assets of Willistown Township, Pennsylvania, which consist of approximately 2,300 customers for $17,500.

The purchase price for these pending acquisitions are subject to certain adjustments at closing, and are subject to regulatory approval, including the final determination of the fair value of the rate based acquired. These pending acquisitions are expected to close in 2023 and in early 2024. Closing for our utility acquisitions are subject to the timing of the regulatory approval process.

3. Acquisitions (Continued)

In September 2019, the Company entered into a purchase agreement to acquire the wastewater utility system assets of the Delaware County Regional Water Quality Control Authority ("DELCORA"), which consists of approximately 16,000 customers, or the equivalent of 198,000 retail customers, in 42 municipalities in Southeast Pennsylvania for $276,500. In May 2020, Delaware County, Pennsylvania filed a lawsuit alleging that DELCORA does not have the legal authority to establish and fund a customer trust with the net proceeds of the transaction. In December 2020, the judge in the Delaware County Court lawsuit issued an order that (1) the County cannot interfere with the purchase agreement between DELCORA and the Company, (2) the County cannot terminate DELCORA prior to the closing of the transaction, and (3) the establishment of the customer trust was valid. Delaware County appealed this decision to Commonwealth Court of Pennsylvania. On March 3, 2022, the Commonwealth Court issued a decision finding that Delaware County can dissolve the Authority if it so chooses, but the purchase agreement must be upheld regardless of who is operating the system. The case was remanded back to the trial court for the entry of an order consistent with the Commonwealth Court's opinion. This order was issued on September 8, 2022 ("Remand Order). Since then, the County has challenged the Remand Order through two separate actions:

First, Delaware County filed an Application for Determination of Finality ("Application") on October 13, 2022. The Company filed its opposition to the Application on October 27, 2022, and on November 2, 2022, the Delaware County Court of Common Pleas denied Delaware County's Application for Determination of Finality indicating that its previous order already constituted a final order that addressed the claims of all parties. On December 2, 2022, following the denial of its Application, Delaware County filed a Petition for Permission to Appeal ("Petition") the Remand Order in the Commonwealth Court of Pennsylvania. On December 16, 2022, the Company filed an Answer in opposition to the Petition, and the matter is currently pending before Commonwealth Court.

3. Acquisitions (Continued)

Second, on November 2, 2022, Delaware County filed a Notice of Appeal ("Notice of Appeal") from the Remand Order. On December 2, 2022, the Delaware County of Common Pleas issued an Opinion concluding that the County Court did not err in issuing the Remand Order. On January 13, 2023, Delaware County filed an Application in Commonwealth Court seeking confirmation of briefing deadlines with respect to the Notice of Appeal. In response, by Order dated January 24, 2023, the Commonwealth Court stated that "the record received from the Court of Common Pleas of Delaware County is currently under review for finality. A briefing schedule will be issued upon completion of this review."

On January 25, 2023, DELCORA filed in the Delaware Court of Common Pleas a complaint for Declaratory Judgment seeking resolution of whether the County Ordinance dissolving DELCORA is a final action prohibiting DELCORA from carrying out the material transaction of the Asset Purchase Agreement and, in the event that DELCORA retains the ability to close the transaction, whether DELCORA is permitted to exist as a trust.

The administrative law judges in the regulatory approval process recommended that the Company's application be denied, and subsequently, the Company provided exceptions to the recommended decision. On March 30, 2021, the Pennsylvania Public Utility Commission ("PUC") ruled that the case be remanded back to the Office of Administrative Law Judge ("ALJ") and vacated the original administrative law judges' recommended decision ("2021 Order"). This 2021 Order was also appealed to the Commonwealth Court by Delaware County. The County appealed the 2021 Order on April 29, 2022. A decision was issued by the Commonwealth Court on September 12, 2022 which dismissed the appeal of the County.

After the PUC issued the 2021 Order, on April 16, 2021, the administrative law judge issued an order staying the proceeding until the Delaware County Court lawsuit is final and unappealable. On March 25, 2022, the Company sent a letter notifying the PUC of the March 3, 2022 Commonwealth Court decision (that originated in Delaware County Court of Common Pleas) and requested that the PUC move forward with processing the application. On July 14, 2022, the Commission moved to lift the stay imposed by the ALJ, and required the ALJ to establish a schedule on remand for the proceeding. The published procedural schedule has the proceeding concluding in June 2023.

3. Acquisitions (Continued)

On January 26, 2023, several parties involved in the PUC case filed a joint motion for stay based on DELCORA's filing of the January 25, 2023 complaint for Declaratory Judgment filed by DELCORA, and referenced the City of Chester's bankruptcy filing in which the City of Chester has asserted reversionary contract interests regarding to DELCORA's wastewater assets. On February 6, 2023, the ALJ stayed the PUC DELCORA application proceedings again. The Company will be filing a Petition for Interlocutory Review to the PUC asking to review the ALJ's February 6, 2023 decision to stay the current proceedings.

The purchase price for this pending acquisition is subject to certain adjustments at closing, and is subject to regulatory approval, including the final determination of the fair value of the rate base acquired. Closing of our acquisition of DELCORA is expected to occur in 2023, subject to the timing of the regulatory approval process and Delaware County's on-going litigation.

See Note 13 for additional information regarding the Company and Parent company activity.

4. Income Taxes

The provision for income taxes is composed of the following:

	Years ended December 31,	
	2022	2021
Current:		
Federal	$ 21,484	$ 6,258
State	6,273	690
	27,757	6,948
Deferred:		
Federal	(465)	(2,055)
State	(1,048)	(2,706)
	(1,513)	(4,761)
Total tax expense	$ 26,244	$ 2,187

The statutory Federal tax rate is 21% for both 2022 and 2021, and the Pennsylvania Corporate Net Income tax rate is 9.99% for both years presented.

The primary components of the net deferred tax liability and investment tax credits of $860,101 and $967,749 at December 31, 2022 and 2021, respectively, include basis differences in utility plant, partially offset by advances and contributions, and income taxes recoverable.

On July 8, 2022, Pennsylvania enacted House Bill 1342 into law, which among other things, reduces Pennsylvania's corporate income tax rate from 9.99% to 8.99% beginning January 1, 2023, and an additional 0.5% annually through 2031, when it reaches to 4.99%. The Company evaluated the impacts of the tax rate change and recorded a reduction to deferred tax liabilities of $178,438 with a corresponding reduction primarily to regulatory assets.

4. Income Taxes (Continued)

At December 31, 2022, the Company has a cumulative state NOL of $523,727 without regard to unrecognized tax benefits. The Company believes that the state NOLs are more likely than not to be recovered and require no valuation allowance. The state NOLs do not begin to expire until 2032.

As of December 31, 2022 and 2021, the reserve for uncertain tax position is $17,567 and $18,546, respectively, excluding accrued interest and penalties. The unrecognized tax benefits relate to the income tax accounting change to adopt the IRS temporary tangible property regulations, and the tax position is attributable to a temporary difference. As a result of the regulatory treatment afforded by the income tax accounting change and despite this position being a temporary difference, as of December 31, 2022 and 2021, $37,121 and $34,443, respectively, of these tax benefits would have an impact on the Company's effective income tax rate in the event the Company does sustain all, or a portion, of its tax position. The Company does not expect a material change in this estimate in the next twelve months. The reserve for uncertain tax positions could increase or decrease for things such as the expiration of statutes of limitations, audit settlements, or tax examination activities. The Company has elected to recognize accrued interest and penalties related to uncertain tax positions as income tax expense. The Company has not recognized any penalties and interest due to the available Net Operating Losses ("NOLs") of other members within its consolidated Federal filing group.

As of December 31, 2022, the Parent's federal income tax returns remain subject to examination by federal tax authorities for the 2019 through 2022 tax years.

5. Regulatory Assets and Liabilities

Regulatory assets represent costs that are expected to be fully recovered from customers in future rates while regulatory liabilities represent amounts that are expected to be refunded to customers in future rates. Except for income taxes and utility plant retirement costs, regulatory assets and regulatory liabilities are excluded from the Company's rate base and do not earn a return. As of December 31, 2022 and 2021, the current portion of regulatory assets of $0 and $91, respectively, are included in prepayments and other current assets. The components of regulatory assets and liabilities are as follows:

	December 31, 2022		December 31, 2021	
	Regulatory		Regulatory	
	Assets	Liabilities	Assets	Liabilities
Income taxes	$711,705	$229,216	$830,327	$241,703
Postretirement benefits	-	117,708	(2,500)	100,879
Utility plant retirement costs	9,305	-	9,632	-
Accrued vacation	-	-	91	-
Rate case filing expenses & other	25,346	-	23,126	-
	$746,356	$346,924	$860,676	$342,582

5. Regulatory Assets and Liabilities (Continued)

Items giving rise to deferred state income taxes as well as a portion of deferred Federal income taxes related to certain differences between tax and book depreciation expense are recognized in the rate setting process on a cash or flow-through basis and will be recovered as they reverse. Amounts include differences that arise between certain utility asset improvement costs capitalized for book and deducted as a repair expense for tax purposes. On December 22, 2017, the Tax Cuts and Job Act ("TCJA") was enacted, which reduced the Federal corporate income tax rate from 35% to 21%. Reductions in accumulated deferred income tax balances due to the reduction in the corporate income tax rate to 21% under the provisions of the TCJA will result in amounts previously collected from utility customers for these deferred taxes to be refundable to such customers, generally through reductions in future rates. The TCJA includes provisions that stipulate how these excess deferred taxes relating to certain accelerated tax depreciation benefits are to be passed back to customers. The amortization of the excess deferred income taxes is incorporated into the Company's cost of service.

The regulatory liability related to the catch-up component of the Company's repair tax accounting change represents the tax benefits realized, which have not yet flowed-through as a reduction to income tax expense due to the ten-year amortization period which began in 2013.

Postretirement benefits include pension and other postretirement benefits. The regulatory liability for postretirement benefits related to pension represents amounts recovered through rates before the costs are incurred. The regulatory balance related to postretirement benefits other than pensions includes deferred amounts funded by customers in excess of required amounts needing funding through an actuarial study. Excess funding of postretirement benefits since the Company's last base rate case is included as a reduction to cost of service postretirement benefits expense through an amortization. Postretirement benefits expense funding excess or deficit is periodically reviewed during each rate case filed by the Company and is fully recoverable in future rates charged to customers.

5. Regulatory Assets and Liabilities (Continued)

The regulatory asset for utility plant retirement costs, representing cost of removal, represents costs already incurred that are expected to be recovered in future rates over a five-year recovery period.

The regulatory asset related to rate case filing expenses represents the costs associated with filing for rate increases that are deferred and amortized over periods that range from one to three years. Other represents costs incurred by the Company for which it has received or expects to receive rate recovery.

6. Commitments and Contingencies

The Company maintains agreements with other water purveyors for the purchase of water to supplement its water supply, particularly during periods of peak demands. The agreements stipulate purchases of minimum quantities of water or charge a monthly commitment fee through the year 2027. The Company is committed to a total of $11,265 in water purchase payments: $3,492 in 2023, $3,459 in 2024, $3,299 in 2025, $642 in 2026, $134 in 2027 and $239 thereafter. The Company purchased approximately $4,344 and $4,732 of water under these agreements during the years ended December 31, 2022 and 2021, respectively.

The Company is routinely involved in condemnation procedures and legal matters during the ordinary course of business. Although the results of legal proceedings cannot be predicted with certainty, there are no other pending legal proceedings to which the Company is a party or to which any of its properties is the subject that are material or are expected to have a material effect on the Company's financial position, results of operations or cash flows.

7. Leases

The Company leases facilities and other equipment for use in its operations, which are accounted for as operating leases. Leases with a term of 12 months or less are not recorded on the balance sheet; rather, lease expense is recognized over the lease term. Our leases have remaining lives of 1 year to 33 years.

Some of the Company's leases can be extended on a month-to-month basis, which allow us to terminate the lease at any given month without penalty while others include options to extend the leases for up to 50 years. The renewal of a month-to-month lease is at our sole discretion.

The Company accounts for lease and non-lease components of lease arrangements separately. For calculating lease liabilities, we may deem lease terms to include options to extend or terminate the lease when it's reasonably certain that we will exercise that option. The Company's lease agreements do not contain significant residual value guarantees, restrictions or covenants.

Lease liabilities and corresponding right-of-use assets are recorded based on the present value of the lease payments over the expected lease term, including leases with variable payments that are based on a market rate or an index. All other variable payments are expensed as incurred. Since the Company's lease agreements do not provide an implicit interest rate, the Company utilized the Parent's incremental borrowing rate to determine the discount rate used to present value the lease payments.

Components of lease expense were as follows:	Years Ended December 31, 2022	2021
Operating lease cost	$ 663	$ 684

	Year Ended December 31, 2022	2021
Supplemental cash flow information related to leases was as follows:		
Cash paid for amounts included in the measurement of lease liabilities:		
Operating cash flows from operating leases	$ 611	$ 610

7. Leases (continued)

Supplemental balance sheet information related to leases was as follows:	Year Ended December 31,	
Operating leases:	2022	2021
Operating lease right-of-use assets	$ 8,141	$ 8,408
Other accrued liabilities	248	267
Operating lease liabilities	7,893	8,141
Total operating lease liabilities	$ 8,141	$ 8,408

	Year Ended December 31,	
Weighted average remaining lease term:	2022	2021
Operating leases	24 years	25 years
Weighted average discount rate:		
Operating leases	4.22%	4.22%

	Operating Leases
2023	$ 570
2024	525
2025	525
2026	525
2027	525
Thereafter	9,869
Total operating lease payments	$ 12,539
Total operating lease payments	$ 12,539
Less operating lease liabilities	8,141
Present value adjustment	$ 4,398

8. Long-term Debt and Loans Payable

The consolidated Statements of Capitalization provide a summary of long-term debt as of December 31, 2022 and 2021. The supplemental indentures with respect to certain issues of the First Mortgage Bonds restrict the ability of the Company to declare dividends, in cash or property, or repurchase or otherwise acquire the Company's stock. Approximately $2,158,501 and $1,929,339 of the Company's retained earnings were free of these restrictions as of December 31, 2022 and 2021, respectively. Certain supplemental indentures also prohibit the Company from making loans to, or purchasing the stock of the Parent. Loan agreements for the Company contain restrictions on minimum net assets. As of December 31, 2022, there were restrictions on the Company's net assets of $1,678,703 of their total net assets of $2,462,532.

Sinking fund payments are required for certain issues of long-term debt. The future sinking fund payments and debt maturities of the Company's long-term debt are as follows:

Interest Rate Range	2023	2022	2025	2026	2027	Thereafter
	-	-	-	-	-	-
1.00% To 1.99%	872	712	766	776	787	4,455
2.00% To 2.99%	2,182	1,268	1,428	1,305	1,113	152,460
3.00% To 3.99%	1,849	1,731	598	555	332	700,544
4.00% To 4.99%	-	-	-	-	-	972,571
5.00% To 5.99%	10,000	10,000	-	-	-	22,003
6.00% To 6.99%	-	-	-	-	20,000	-
7.00% To 7.99%	-	-	15,000	-	-	-
8.00% To 8.99%	-	-	-	-	-	-
9.00% To 9.99%	-	-	-	11,800	-	-
Total	14,903	13,711	17,792	14,436	22,232	1,852,033

8. Long-term Debt and Loans Payable (Continued)

In June 2022, the Company renewed its $100,000 364-day unsecured revolving credit facility with four banks. The funds borrowed under this agreement are classified as loans payable and are used to provide working capital. As of December 31, 2022, and 2021, funds borrowed under the Company's revolving credit agreement were $20,000, and $35,000, respectively. Interest under this facility is based, at the borrower's option, on the prime rate, an adjusted overnight bank funding rate, or an adjusted Bloomberg Short-Term Bank Yield Index (BSBY) floating rate. This agreement restricts short-term borrowing of the Company. A renewal fee of 2.5 basis points was charged on the total commitment amount of the revolving credit agreement. The average cost of borrowing under this facility was 2.40% and 0.78%, and the average borrowing was $31,555 and $40,312 during 2022 and 2021, respectively. The maximum amount outstanding at the end of any one month was $55,000 in 2022 and 70,000 in 2021.

In October 2022, the Company issued $125,000 of first mortgage bonds due in 2052 with an interest rate of 4.50%. The proceeds from these bonds were used repay existing indebtedness and for general corporate purposes.

In January 2023, the Company issued $75,000 of first mortgage bonds, due in 2043 with an interest rate of 5.60% The proceeds from these bonds were used repay existing indebtedness and for general corporate purposes.

9. Fair Value of Financial Instruments

The carrying amount of current assets and liabilities that are considered financial instruments approximates their fair values as of the dates presented. The carrying amount of the Company's long-term debt as of December 31, 2022 and 2021 is $1,935,107 and $1,815,546 respectively. The estimated fair value of the Company's long-term debt as of December 31, 2022 and 2021 is $1,544,071 and $2,118,674, respectively. The fair value of long-term debt has been determined by discounting the future cash flows using current market interest rates for similar financial instruments of the same duration.

The Company's customers' advances for construction and related tax deposits have carrying values of $59,927 and $60,489 at December 31, 2022 and 2021, respectively. Their relative fair values cannot be accurately estimated since future refund payments depend on several variables, including new customer connections, customer consumption levels and future rate increases. Portions of these non-interest bearing instruments are payable annually through 2030 and amounts not paid by the contract expiration dates become non-refundable. The fair value of these amounts would, however, be less than their carrying value due to the non-interest bearing feature.

10. Pension Plans and Other Postretirement Benefits

The Company participates in a noncontributory qualified defined benefit pension plan sponsored by the Parent covering non-union employees hired prior to April 1, 2003 and select union employees. The eligibility of union employees is determined by the collective bargaining agreements covering those employees. Benefits under the plan are based on the participant's years of service and the annual average of the applicable compensation during the five consecutive computation periods of the final 10 computation periods as an active participant yielding the highest such average. Pension cost of the Company is based on amounts contributed to the pension plan as approved by the Parent and incorporated in rates approved by the PAPUC. Information regarding accumulated and projected benefit obligations is not prepared at the subsidiary level.

In August 2014, the Parent announced changes to the way it will provide future retirement benefits to employees acquired through a prior acquisition. Effective January 1, 2015, the Parent will provide future retirement benefits for these employees through its deferred contribution plan. As a result, no further

10. Pension Plans and Other Postretirement Benefits (Continued)

service will be considered in future accruals in the qualified defined benefit pension plan after December 31, 2014.

The funding amount for the pension plan for Essential Utilities, Inc. Retirement Income Plan will be determined each year based on the recommendation of management and subject to approval by the Parent's Pension Committee. The funding amount will be an amount greater than or equal to the minimum required contribution and less than or equal to the maximum tax deductible contribution. The Company recorded pension funding and expense of $12,000 and $12,000 in 2022 and 2021, respectively.

The Company participates in two postretirement benefit plans sponsored by the Parent that provide certain life insurance benefits for retired employees and certain health care benefits for retired employees and their dependents. Employees may become eligible for these benefits if they have completed at least fifteen years of service and retire from the Company after reaching age 55 while still working for the Company. Retirees and their dependents under age 65 are covered by a point-of-service managed care plan that requires co-payments or an HMO. Employees hired after April 1, 2003 are not eligible for benefits.

Employees who elect to retire prior to attaining age 65 are generally required to make contributions towards their medical coverage until attaining 65. Retirees and their dependents age 65 and over are required to purchase their own medical and drug coverage. The cost of this coverage is offset by Company contributions deposited in the plan's Premium Reimbursement Account. Costs of the Company are based on amounts contributed to the plans and incorporated in rates approved by the PAPUC.

The Company's funding policy is to contribute the lower of the other postretirement benefits cost or the maximum allowed by the Internal Revenue Code. The Company recorded costs for postretirement benefits other than pensions of $(1,270) and $1,924 in 2022 and 2021, respectively. The Company funded postretirement benefits other than pensions of $416 in 2022 and $0 in 2021. Information regarding accumulated and projected benefit obligations is not prepared at the subsidiary level.

The Parent has 401(k) savings plans, which are defined contribution plans and cover substantially all employees. The Company makes matching contributions that are based on a percentage of the employee's contribution,

10. Pension Plans and Other Postretirement Benefits (Continued)

subject to specific limitations, as well as certain other Company contributions. Participants may diversify their Company matching account balances into other investments offered under 401(k) savings plans. The Company's contributions, which are recorded as compensation expense, were $2,709 and $2,379 for 2022 and 2021, respectively.

11. Employee Stock and Incentive Plan

The Company's employees participate in an Equity Compensation Plan sponsored by the Parent. Under the Essential Utilities, Inc. 2009 Omnibus Equity Compensation Plan, as approved by the Parent's shareholders to replace the 2004 Equity Compensation Plan, stock options, stock units, stock awards, stock appreciation rights, dividend equivalents, and other stock-based awards may be granted to the Company's employees, non-employee directors and consultants and advisors. During 2019, the Parent granted stock options, which are based upon the common stock of the Parent. Options are exercisable in installments of 33% annually, starting one year from the date of the grant and expire 10 years from the date of the grant. The Parent determines the grant date fair value per stock option using the Black-Scholes option-pricing model.

The fair value of each stock option is amortized into compensation expense using the graded vesting method, which results in the recognition of compensation costs over the requisite service period for each separately vesting tranche of the stock options as though the stock options were, in substance, multiple stock option grants. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs. Since the Company is not obligated to reimburse the Parent for stock-based compensation costs incurred, the Company records these liabilities resulting from compensation costs to paid-in capital.

For the year ended December 31, 2022, the Company's stock-based compensation related to stock options resulted in the following: operations and maintenance expense of $15 and lowered income tax expense by $4. For the year ended December 31, 2021, the Company's stock-based compensation related to stock options resulted in the following: operations and maintenance expense of $52 and lowered income tax expense by $15.

11. Employee Stock and Incentive Plan (Continued)

During 2022 and 2021, the Parent granted performance share units ("PSU"). A PSU represents the right to receive a share of the Parent's common stock if specified performance goals are met over the three year performance period specified in the grant, subject to exceptions through the respective vesting periods. The fair value of each PSU grant is amortized into compensation expense on a straight-line basis through the respective vesting period, which is generally three years. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. During the year ended December 31, 2022, the Company recorded stock-based compensation related to PSU's as a component of operations and maintenance expense of $505 and recorded an income tax benefit of $146. During the year ended December 31, 2021, the Company recorded stock-based compensation related to PSU's as a component of operations and maintenance expense of $521 and recorded an income tax benefit of $150. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs.

During 2022 and 2021, the Parent granted restricted share units ("RSU"). A RSU represents the right to receive a share of the Parent's common stock and are valued based on the fair market value of the Parent's stock on the date of grant. RSUs are eligible to be earned at the end of a specified restriction period, generally three years, beginning on the date of grant. In some cases, the right to receive the shares is subject to specific performance goals established at the time the grant is made. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. During the year ended December 31, 2022, the Company recorded stock-based compensation related to awards of RSUs as a component of operations and maintenance expense of $194 and recorded income tax benefit of $56. During the year ended December 31, 2021, the Company recorded stock-based compensation related to awards of RSUs as a component of operations and maintenance expense of $282 and recorded income tax benefit of $81. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs.

12. Water and Wastewater Rates

On May 16, 2022, the Company's regulated water and wastewater operating subsidiary in Pennsylvania, Aqua Pennsylvania, received an order from the Pennsylvania Public Utility Commission that allowed base rate increases that would increase total annual operating revenues by $69,251. New rates went into effect on May 19, 2022.

The Distribution System Improvement Charges ("DSIC") enables water and wastewater utilities in Pennsylvania to add a surcharge to customer bills to offset the additional depreciation and capital costs related to infrastructure system replacement and rehabilitation projects completed and placed into service between base rate filings. The Company is permitted to request adjustments to the DSIC quarterly to reflect subsequent capital expenditures and it is reset to zero when new base rates that reflect the costs of those additions become effective or when the Company's earnings exceed a PAPUC benchmark. The maximum DSIC that can be in effect at any time is an increase of base rates of 7.5% for water and 5.0% for wastewater. At the time the rate order was received, the rates in effect also included $35,470 in Distribution System Improvement Charges ("DSIC"), which was 7.2% above prior base rates. Consequently, the aggregate annual base rates increased by $104,721 since the last base rate increase and DSIC was reset to zero.

In addition to its base rates and the DSIC, the Company has utilized a surcharge or credit on its bills to reflect certain changes in Pennsylvania State Taxes, called the State Tax Adjustment Surcharge ("STAS") until such time as the tax changes are incorporated into base rates. The Company's STAS surcharge rates remained at zero during 2022 and effective January 1, 2023 a surcredit was implemented to reflect the change in the Pennsylvania state tax rate.

13. Affiliated Company Transactions

The Company has service agreements with the Parent and subsidiaries of the Parent ("other affiliates"). The types of services rendered between these entities relate to general supervision and administrative functions, long-range planning, tax, accounting, financing, engineering, legal, data processing services and other specialized support. Expenditures recorded for these services from the Parent and other affiliates amounted to approximately $60,696 and $36,696 for 2022 and 2021, respectively, and of those amounts, $27,971 and $25,102, respectively, have been recorded within Operations, maintenance and administrative expenses on the Consolidated Statements of Income with the remainder recorded to net utility plant on the Consolidated Balance Sheets. The Company also provides various management, advisory, and other services for other affiliates and is reimbursed by these affiliates. The amounts billed were $591 and $262 in 2022 and 2021, respectively. Additionally, the Parent may fund acquisitions on behalf of the Company, and such amounts would be included in the accounts payable-affiliates account. Acquisitions funded by Parent in 2022 were considered equity contributions, refer to Footnote 3 for more detail regarding acquisitions.

The Company participates in the Parent's centralized treasury function whereby the Company transfers its cash to the Parent. Under this arrangement, available cash is used to fund accounts payable due from the Company and to pay-down accounts payable-affiliate, or available cash would be reflected as amounts due from the Parent and other affiliates to the Company. The reduction of the accounts payable-affiliates will also be settled through the collection of cash on behalf of the Company and capital contributions. The Parent made cash contributions of $70,000 and $100,000 to the Company in 2022 and 2021, respectively, which is disclosed in the Consolidated Statement of Stockholder's Equity.

The amounts owed to the Parent and other affiliates by the Company were $97,319 and $76,786 at December 31, 2022 and 2021, respectively. Amounts owed to the Parent and other affiliates are reflected in the accompanying balance sheet.

Amounts due from the Parent and other affiliates to the Company amounted to $87,496 and $41 at December 31, 2022 and 2021, respectively. Amounts due from the Parent and other affiliates are reflected in the accompanying balance sheet.

The Company returned noncash equity contributions to the Parent of $100,000 and $54,502 in 2022 and 2021, respectively, which is reported on the Statements of Consolidated Stockholder's Equity as return of capital contributions. In 2022 and 2021, the return of these noncash equity contributions related to the settlement of certain net intercompany receivables due from the Parent.

AQUA PENNSYLVANIA, INC.

(a wholly owned subsidiary of Essential Utilities, Inc.)

Consolidated Financial Statements
As of and for the years ended
December 31, 2023 and 2022

Report of Independent Auditors

To the Board of Directors and Stockholder of Aqua Pennsylvania, Inc.

Opinion

We have audited the accompanying consolidated financial statements of Aqua Pennsylvania, Inc. and its subsidiaries (the "Company"), which comprise the consolidated balance sheets as of December 31, 2023 and 2022 and the related consolidated statements of income, of cash flows, of capitalization, and of stockholder's equity for the years then ended, including the related notes (collectively referred to as the "consolidated financial statements").

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2023 and 2022 and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (US GAAS). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date the consolidated financial statements are available to be issued.

Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with US GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are

considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the consolidated financial statements.

In performing an audit in accordance with US GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the consolidated financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

AQUA PENNSYLVANIA, INC.
Notes to Consolidated Financial Statements
December 31, 2023 and 2022
(In thousands of dollars)

1. Summary of Significant Accounting Policies

Nature of Operations

Aqua Pennsylvania, Inc. ("the Company") is a regulated public utility which supplies water to residential, commercial and industrial customers. The Company's customers are principally located in the suburban areas north and west of the City of Philadelphia and in 27 other counties in Pennsylvania. No single customer accounted for more than one percent of the Company's operating revenues in 2023 or 2022. The Company is a wholly owned subsidiary of Essential Utilities, Inc. ("the Parent"). The Company has wholly owned subsidiaries that are regulated public utilities which provide water and wastewater services to customers in Pennsylvania.

The consolidated financial statements include the accounts of the Company and its subsidiaries. All intercompany accounts and transactions have been eliminated in consolidation.

Basis of Presentation

The Company's consolidated financial statements are presented in accordance with U.S. generally accepted accounting principles.

The Company has evaluated the period from December 31, 2023, the date of the consolidated financial statements, through April 26, 2024, the date the consolidated financial statements were available for issuance, for subsequent events and determined that no material subsequent events occurred that would affect the information presented in these consolidated financial statements or require additional disclosures.

Use of Estimates in Preparation of Consolidated Financial Statement

The preparation of consolidated financial statements in conformity with accounting principles accepted in the United States of America requires

1. Summary of Significant Accounting Policies (Continued)

Use of Estimates in Preparation of Consolidated Financial Statement (Continued)

management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from those estimates.

Recognition of Revenues

The Company recognizes revenue as water and wastewater services are provided to our customers, which happens over time as the service is delivered and the performance obligation is satisfied. Operating revenues include amounts billed to customers on a cycle basis and unbilled amounts based on estimated usage from the date of the latest meter read to the end of the accounting period. The Company's actual results could differ from these estimates. Unbilled amounts are included in unbilled revenues on the consolidated balance sheet.

Generally, payment is due within 30 days once a bill is issued to a customer. Sales tax and other taxes we collect on behalf of government authorities, concurrent with our revenue-producing activities, are primarily excluded from revenue. The following table presents our revenues disaggregated by major source and customer class:

1. Summary of Significant Accounting Policies (Continued)

Recognition of Revenues (Continued)

Twelve Months Ended December 31,2023

Total	$ 544,734	$ 60,675	$ 6,010

1. Summary of Significant Accounting Policies (Continued)

Recognition of Revenues (Continued)

Revenues from Contracts with Customers – These revenues are composed of three main categories: water, wastewater, and other. Water revenues represent revenues earned for supplying customers with water service. Wastewater revenues represent revenues earned for treating wastewater and releasing it into the water supply. Other revenues are associated fees that relate to the regulated business but are not water and wastewater revenues. See description below for a discussion on the performance obligation for each of these revenue streams:

- Tariff Revenues – These revenues are categorized by customer class: residential, commercial, fire protection, industrial, other water, and other wastewater. The rates that generate these revenues are approved by the state utility commission, and revenues are billed cyclically and accrued for when unbilled. Other water and other wastewater revenues consist primarily of fines, penalties, surcharges, and availability lot fees. Our performance obligation for tariff revenues is to provide potable water or wastewater treatment service to customers. This performance obligation is satisfied over time as the services are rendered. The amounts that the Company has a right to invoice for tariff revenues reflect the right to consideration from the customers in an amount that corresponds directly with the value transferred to the customer for the performance completed to date.

- Other Utility Revenues – Other utility revenues represent revenues earned primarily from: antenna revenues, which represent fees received from telecommunication operators that have put cellular antennas on our water towers, operation and maintenance and billing contracts, which represent fees earned from municipalities for our operation of their water or wastewater treatment services or performing billing services, and fees earned from developers for accessing our water mains. The performance obligations vary for these revenues, but all are primarily recognized over time as the service is delivered.

1. Summary of Significant Accounting Policies (Continued)

Regulation

As a regulated public water and wastewater utility, the Company is subject to regulation by the Pennsylvania Public Utility Commission ("PAPUC"), which has jurisdiction with respect to rates, service, accounting procedures, acquisitions and other matters. Regulated public utilities follow the Financial Accounting Standards Board's ("FASB") accounting guidance for regulated operations, which provides for the recognition of regulatory assets and liabilities as allowed by regulators for costs or credits that are reflected in current rates or are considered probable of being included in future rates. Costs for which the Company has received or expects to receive prospective rate recovery are deferred as regulatory assets and amortized over the period of rate recovery in accordance with the FASB's accounting guidance for regulated operations. The regulatory assets or liabilities are then relieved as the cost or credit is reflected in Company's rates charged for utility service. If, as a result of a change in circumstances, it is determined that the Company no longer meets the criteria to apply regulatory accounting, the Company would have to discontinue regulatory accounting and write-off the respective regulatory assets and liabilities. See Note – 5 *Regulatory Assets and Liabilities* for further information regarding the Company's regulatory assets.

The Company makes significant judgments and estimates to record regulatory assets and liabilities. For each regulatory jurisdiction with regulated operations, the Company evaluates at the end of each reporting period whether the regulatory assets and liabilities continue to meet the probable criteria for future recovery or refund. The evaluation considers factors such as regulatory orders or guidelines, in the same regulatory jurisdiction, of a specific matter or a similar matter, as provided to the Company in the past or to other regulated utilities. In addition, the evaluation may be impacted by changes in the regulatory environment and pending or new legislation that could impact the ability to recover costs through regulated rates. There may be multiple participants to rate or transactional regulatory proceedings who might offer different views on various aspects of such proceedings, and in these instances may challenge the prudence of our business policies and practices, seek cost disallowances or request other relief.

1. Summary of Significant Accounting Policies (Continued)

Utility Plant and Depreciation

Utility plant is stated at cost which includes contracted cost, direct labor and fringe benefits, materials, overheads, and for certain utility plant, an allowance for the cost of funds used during construction. Water systems acquired are recorded at estimated original cost when first devoted to utility service and the applicable depreciation is recorded in accumulated depreciation. Utility plant acquisition adjustment represents the difference between the estimated original cost, less applicable depreciation and the purchase price of utility plant assets acquired through business acquisitions. Acquisition adjustments are amortized over 20 years if recoverable in rate base.

Utility expenditures for maintenance and repairs, including major maintenance projects and minor renewals and betterments, are charged to operating expenses when incurred in accordance with the Uniform System of Accounts prescribed by the PAPUC. The cost of new units of property and betterments are capitalized.

The cost of software upgrades and enhancements are capitalized if they result in added functionality which enable the software to perform tasks it was previously incapable of performing. Certain information technology costs associated with major system installations, conversions and improvements, such as software training, data conversion and business process re-engineering costs, are deferred as a regulatory asset if the Company expects to recover these costs in future rates. If these costs are not deferred, then these costs are charged to operating expenses when incurred. As of December 31, 2023, $1,643 costs have been incurred and deferred since the last rate proceedings as a regulatory asset, and the deferral is reported as a component of net property, plant and equipment.

1. Summary of Significant Accounting Policies (Continued)

Utility Plant and Depreciation (Continued)

When units of property are replaced, retired or abandoned, the recorded value thereof is credited to utility plant and such value, together with the net cost of removal, is charged to accumulated depreciation. To the extent the Company recovers cost of removal or other retirement costs through rates after the retirement costs are incurred, a regulatory asset is recorded.

The straight-line remaining life method is used to compute depreciation on utility plant. The straight-line method is used with respect to transportation and mechanical equipment, office equipment and laboratory equipment. Depreciation is recorded over the estimated useful lives of the assets which range from 14 to 94 years for utility plant and 5 to 64 years for both transportation and mechanical equipment and all non-utility plant, office equipment and laboratory equipment.

Long-lived assets of the Company, which consist primarily of utility plant in service, operating lease right-of-use assets and intangible assets, are reviewed for impairment when changes in circumstances or events occur. These circumstances or events could include a decline in the market value or physical condition of a long-lived asset, an adverse change in the manner in which long-lived assets are used or planned to be used, a change in historical trends, operating cash flows associated with the long-lived assets, changes in macroeconomic conditions, industry and market conditions, or overall financial performance. When these circumstances or events occur, the Company determines whether it is more likely than not that the fair value of those assets is less than their carrying amount. If the Company determines that it is more likely than not (that is, the likelihood of more than 50 percent), the Company would recognize an impairment charge if it is determined that the carrying amount of an asset exceeds the sum of the undiscounted estimated cash flows. In this circumstance, the Company would recognize an impairment charge equal to the difference between the carrying amount and the fair value of the asset. Fair value is estimated to be the present value of future net cash flows associated with the asset, discounted using a discount rate commensurate with the risk and remaining life of the asset. During the year ended December 31, 2023, there have been no such circumstances or events.

Regulatory assets are reviewed for the continued application of the FASB accounting guidance for regulated operations. The Company's review determines whether there have been changes in circumstances or events, such as regulatory disallowances, or abandonments, that have occurred that require adjustments to the carrying value of these assets. Adjustments to the carrying value of these assets would be made in instances where their inclusion in the rate-making process is unlikely. For utility plant in service, we would recognize an impairment loss for any amount disallowed by the PAPUC.

1. Summary of Significant Accounting Policies (Continued)

As of December 31, 2023, and 2022, property, plant and equipment additions purchased at the period end, but not yet paid for are $29,083 and $42,711, respectively.

Allowance for Funds Used During Construction

The allowance for funds used during construction ("AFUDC") is a credit to income which represents the estimated cost of funds used to finance the construction of utility plant. AFUDC is applied to construction projects requiring more than one month to complete. No AFUDC is applied to projects funded by customer advances for construction or contributions in aid of construction. AFUDC includes the net cost of borrowed funds and a rate of return on other funds when used, and is recovered through water rates as the utility plant is depreciated.

Cash and Cash Equivalents

The Company considers all highly liquid investments with an original maturity of three months or less, which are not restricted for construction activity, to be cash equivalents.

Accounts Receivable

Accounts receivable are recorded on the invoiced amounts. The allowance for doubtful accounts is the Company's best estimate of the amount of probable credit losses in our existing accounts receivable, and is determined based on lifetime expected credit losses and the aging of account balances. The Company reviews the allowance for doubtful accounts quarterly. Account balances are written off against the allowance when it is probable the receivable will not be recovered. When utility customers request extended payment terms, credit is extended based on regulatory guidelines and collateral is not required.

1. Summary of Significant Accounting Policies (Continued)

Deferred Charges

Deferred charges consist of preliminary survey costs, retirement work in progress expenses and other expenses.

Other expenses, for which the Company has received or expects to receive prospective rate recovery, are deferred and amortized over the period of rate recovery.

Funds Restricted for Construction Activity

The proceeds received from certain financings for construction and capital improvement of utility facilities are held in escrow until the designated expenditures are incurred. These amounts are reported as funds restricted for construction activity and are expected to be released over time as the capital projects are funded. There are no restrictions outstanding as of December 31, 2023 or December 31, 2022.

Goodwill

Goodwill represents the excess cost over the fair value of net tangible and identifiable intangible assets acquired through acquisitions. Goodwill is not amortized but is tested for impairment annually, or more often if circumstances indicate a possible impairment may exist. When testing goodwill for impairment, the Company may assess qualitative factors, including macroeconomic conditions, industry and market considerations, changes to regulatory environment, recent regulatory and legislative proceedings, cost factors, overall financial performance and entity specific events, to determine whether it's more likely than not that the fair value of a reporting unit is less than its carrying amount. Based on the assessment of the qualitative factors previously noted or on a voluntary basis, the Company may perform a quantitative goodwill impairment test by determining the fair value of a reporting unit, which we would estimate based on a discounted cash flow analysis and a market comparison analysis. If the Company performs a quantitative test and determines that the reporting unit's fair value is less than its carrying amount, the Company would record an impairment loss for the amount by which a reporting unit's carrying amount exceeds its fair value not to exceed the carrying amount of goodwill.

During the fourth quarter of 2023, we completed our annual impairment assessment. We elected to perform a qualitative assessment for the Company, and based on our analysis, we determined that none of the goodwill was impaired.

1. Summary of Significant Accounting Policies (Continued)

Income Taxes

The Company accounts for some income and expense items in different time periods for financial reporting than for tax reporting purposes. Deferred income taxes are provided on the temporary differences between the tax basis of the assets and liabilities and the amounts at which they are carried in the consolidated financial statements. The income tax effect of temporary differences not reflected currently in rates is recorded as deferred taxes with an offsetting regulatory asset or liability. These deferred income taxes are based on the enacted tax rates expected to be in effect when such temporary differences are projected to reverse. Investment tax credits are deferred and amortized over the estimated useful lives of the related properties.

The Company's earnings are included with those of the Parent and affiliated companies for purposes of filing a consolidated Federal income tax return. The allocation of the Federal income tax to the Company is computed on a stand-alone basis. See Note 13 for additional information regarding the Company and Parent company activity.

Judgment is required in evaluating the Company's Federal and state tax positions. Despite management's belief that the Company's tax return positions are fully supportable, the Company establishes reserves when it believes that its tax positions are likely to be challenged and it may not fully prevail in these challenges. The Company's provision for income taxes includes interest, penalties and reserves for uncertain tax positions.

The tax accounting method permits the expensing of qualifying utility asset improvement costs that were previously being capitalized and depreciated for book and tax purposes ("the Repairs"). The Repairs accounting authorized for the Company by the PAPUC provides for the

1. Summary of Significant Accounting Policies (Continued)

Income Taxes (Continued)

flow-through treatment of qualifying income tax benefits, generating a reduction in income tax expense, and reduces the amount of taxes currently payable in both 2023 and 2022. For repair expense qualifying capital expenditures made prior to 2012 ("catch - up adjustment" or "481 Adjustment"), the Company was permitted by the PAPUC to amortize the resulting deferred tax benefits over ten years as a reduction to income tax expense that commenced in 2013. As a result of the May 2022 rate order, the remaining amortization period of the catch-up adjustment was extended to align with the Company's expected rate filing cadence and results in the expiration of the amortization in 2025. Both the catch-up and current benefits attributable to tax repairs expense are now included in the Company's cost of service and accounted for in the utility rates charged to customers. Additionally, as a result of the settlement, the current benefit recognized by the Company is limited to within a range of tax benefit ("the Collar"), which is between $155,060 and $163,060. Amounts recognized above or below the Collar are required to be recorded as either a regulatory asset or liability, subject to disposition in the next base rate case.

Customers' Advances for Construction

Water mains or, in some instances, cash advances to reimburse the Company its costs to construct water mains, are contributed to the Company by customers, real estate developers and builders in order to extend water service to their properties. The value of these contributions is recorded as Customers' Advances for Construction. The Company makes refunds on these advances over a specific period of time based on operating revenues related to the main or as new customers are connected to and take service from the main. After all refunds are made, any remaining balance is transferred to Contributions in Aid of Construction. Non-cash property, in the form of water mains, has been received as advances or contributions of $12,602 in 2023 and $8,415 in 2022

Contributions in Aid of Construction

Contributions in aid of construction include direct non-refundable contributions and the portion of customers' advances for construction that have become non-refundable. The Company depreciates contributed property and amortizes contributions in aid of construction at the composite rate of the related property. Contributions in aid of construction are deducted from the Company's rate base for rate-making purposes, and therefore, no return is earned on contributed property.

1. Summary of Significant Accounting Policies (Continued)

Contributions in Aid of Construction (Continued)

Non-cash property, in the form of water mains, has been received, generally from developers as contributions of $1,188 in 2023 and $932 in 2022

Materials and Supplies

Materials and supplies are stated at cost under the first-in, first-out method.

Other Comprehensive Income ("OCI")

For the periods presented, the Company does not have any OCI and therefore, comprehensive income equals net income. In addition, there is no accumulated comprehensive income.

Recent Accounting Pronouncements

Pronouncements to be adopted upon the effective date:

In December 2023, the FASB issued Accounting Standards Update ("ASU") 2023-09, *"Income Taxes* (Topic 740): *Improvements to Income Tax Disclosures"*. The ASU enhances the transparency and decision usefulness of income tax disclosures and is effective for annual periods beginning after December 15, 2024 on a prospective basis. Early adoption is permitted. The Company is currently evaluating the impact of this ASU on its consolidated financial statements and related disclosures.

Pronouncements adopted during the fiscal year:

In October 2021, the FASB issued accounting guidance on accounting for acquired revenue contracts with customers in a business combination. The guidance specifies for all acquired revenue contracts, regardless of their timing of payment, the circumstances in which the acquirer should recognize contract assets and contract liabilities that are acquired in a business combination, as well as how to measure those contract assets and contract liabilities. The updated accounting guidance is effective for fiscal years beginning after December 15, 2022 with early adoption permitted. The Company adopted this guidance effective January 1, 2023, and will apply it prospectively to business combinations occurring on or after that date.

Recently issued accounting standards or pronouncements not disclosed above have been excluded as they are not relevant to the Company.

2. Utility Plant

Utility Plant is composed of the following:

	December 31, 2023	December 31, 2022	Approximate range of remaining lives
Utility plant			
Mains and accessories	$ 3,314,669	$ 3,107,754	26 to 84 years
Services, hydrants, treatment, plants and reservoirs	1,736,366	1,660,468	18 to 73 years
Operations structures and water tanks	201,911	189,352	15 to 60 years
Miscellaneous pumping and purification equipment	553,704	532,273	18 to 47 years
Meters, data processing, transportation and operating	554,312	539,272	5 to 44 years
Land and other non-depreciable assets	65,032	64,515	
Utility plant total	6,425,994	6,093,634	
Utility construction work-in-progress	153,976	180,776	
Net utility plant acquisition adjustment	1,527	553	10 to 35 years
Total utility plant	6,581,497	6,274,963	
Accumulated depreciation	(1,454,545)	(1,364,230)	
Utility plant, net of accumulated depreciation	$ 5,126,952	$ 4,910,733	

3. Acquisitions

Water and Wastewater Utility Acquisitions – Completed:

In July 2023, the Company completed the water utility asset acquisition of Shenandoah Borough, Pennsylvania, which serves approximately 2,900 customers for $12,291. In March 2023, the Company acquired the North Heidelberg Sewer Company in Berks County, Pennsylvania, which serves approximately 300 customer connections for a cash purchase price of $136. The purchase price allocation for these acquisitions consisted primarily of property, plant and equipment. The operating revenues included in the consolidated financial statements of the Company during the period owned by the Company for these utility systems acquired in 2023 are $902.

In August 2022, the Company acquired the municipal wastewater assets of East Whiteland Township, Chester County, Pennsylvania, which serves 4,018 customers, for a cash purchase price of $54,374. Subsequent to the August 2022 closing on the acquisition of the municipal wastewater assets of East Whiteland Township, a party filed an appeal to the Pennsylvania Public Utility Commission's order of approval. On July 31, 2023, a decision was issued by the Pennsylvania Commonwealth Court that agreed with the party's appeal and reversed the order which approved the acquisition. In an effort to resolve the matter, the Company pursued and is continuing to pursue certain legal actions. Management believes the final resolution of this matter is not expected to have a material adverse effect on the Company's financial position, results of operations or cash flows.

3. Acquisitions (Continued)

Additionally, in March 2022, the Company acquired the wastewater system of Lower Makefield Township, which serves 11,323 customer connections in Lower Makefield, Falls, and Middletown townships, and Yardley Borough, Bucks County, Pennsylvania, for a cash purchase price of $53,000. The purchase price allocation for these acquisitions consisted primarily of property, plant and equipment. The operating revenues included in the consolidated financial statements of the Company during the period owned by the Company for the utility systems acquired in 2022 were $15,326 in 2023 and $11,120 in 2022.

Water and Wastewater Utility Acquisitions – Pending Completion:

In December 2023, the Company entered into a purchase agreement to acquire North Versailles wastewater assets in North Versailles Township, Pennsylvania which serves approximately 4,400 customers for between $25,000 and $30,000. In September 2023, the Company entered into a purchase agreement to acquire Greenville Municipal Water Authority's water system in Greenville, Pennsylvania which serves approximately 3,000 customers for $18,000. In April 2023, the Company entered into a purchase agreement to acquire Greenville Sanitary Authority's wastewater utility assets, which serves approximately 2,300 customers in Greenville, Pennsylvania for $18,000.

The purchase price for these pending acquisitions are subject to certain adjustments at closing, and are subject to regulatory approval, including the final determination of the fair value of the rate based acquired. These pending acquisitions are expected to close in 2024 or 2025. Closing for our utility acquisitions are subject to the timing of the regulatory approval process.

DELCORA Purchase Agreement

In September 2019, the Company entered into a purchase agreement to acquire the wastewater utility system assets of the Delaware County Regional Water Quality Control Authority ("DELCORA"), which consists of approximately 16,000 customers, or the equivalent of 198,000 retail customers, in 42 municipalities in Southeast Pennsylvania for $276,500. There are several legal proceedings involving the Company as a result of the purchase agreement:

In 2020, Delaware County, Pennsylvania (the "County") filed a lawsuit alleging that DELCORA did not have the legal authority to establish and fund a customer trust with the net proceeds of the transaction (the "County Lawsuit"). In 2020, the judge in the Delaware County Court lawsuit issued an order that (1) the County cannot interfere with the purchase agreement between DELCORA and the Company; (2) the County cannot terminate DELCORA prior to the closing of the transaction; and (3) the establishment of the customer trust was valid. The County appealed this decision to the Commonwealth Court of Pennsylvania.

3. Acquisitions (Continued)

On March 3, 2022, the Commonwealth Court issued a decision finding that the County can dissolve DELCORA if it so chooses, but the purchase agreement must be upheld regardless of who is operating the system. The case was remanded back to the trial court for the entry of an order consistent with the Commonwealth Court's opinion and the order was issued in September 2022 ("Remand Order"). Since then, the County has challenged the Remand Order that has resulted in the Remand Order being on appeal to the Commonwealth Court. The Commonwealth Court has scheduled oral argument on this appeal for April 2024.

On January 25, 2023, DELCORA filed in the Delaware Court of Common Pleas a complaint for Declaratory Judgment against the Company and the County seeking resolution of whether the County Ordinance dissolving DELCORA is a final action prohibiting DELCORA from carrying out the material transaction of the Asset Purchase Agreement and, in the event that DELCORA retains the ability to close the transaction, whether DELCORA is permitted to exist as a trust (the "DELCORA Complaint"). The Company filed preliminary objections to the DELCORA complaint, which were scheduled for a hearing on October 12, 2023. However, prior to the scheduled hearing, the Court notified the parties that the hearing was canceled and would be re-listed after the parties receive the benefit of the Commonwealth Court's decision on the appeal addressed above. The administrative law judges ("ALJ") in the regulatory approval process (the "PUC Process") recommended that the Company's application to acquire DELCORA be denied, and subsequently, the Company provided exceptions to the recommended decision.

On March 30, 2021, the PAPUC ruled that the case be remanded back to the ALJ and vacated the original administrative law judges' recommended decision ("2021 Order"). This 2021 Order was also appealed to the Commonwealth Court by the County on April 29, 2021. A decision was issued by the Commonwealth Court on September 12, 2022, which dismissed the appeal of the County.

After the PAPUC issued the 2021 Order, on April 16, 2021, the ALJ issued an order staying the proceeding until the County Lawsuit is final and unappealable. On March 25, 2022, the Company sent a letter notifying the PAPUC of the March 3, 2022, Commonwealth Court decision (that originated in Delaware County Court of Common Pleas) and requested that the PAPUC move forward with processing the application.

On July 14, 2022, the Commission moved to lift the stay imposed by the ALJ and required the ALJ to establish a schedule on remand for the proceeding. The ALJ established a procedural schedule for the remand proceeding, which was subsequently stayed.

On August 17, 2022, the Receiver for the City of Chester filed suit in Delaware County Common Pleas Court against DELCORA premised upon the claimed reversionary interest of the City of Chester in some of DELCORA's assets. The Company intervened in that matter and filed preliminary objections. Following a hearing on the Company's preliminary objections, the Receiver for the City of Chester discontinued the case without prejudice.

3. Acquisitions (Continued)

On January 26, 2023, several parties involved in the PAPUC case filed a joint motion for stay based on the DELCORA Complaint and referenced the City of Chester's bankruptcy filing in which the City of Chester has asserted reversionary contract interests regarding some of DELCORA's wastewater assets. On February 6, 2023, the ALJ stayed the PAPUC Process.

On May 23, 2023, the United States Bankruptcy Court issued an order in the City of Chester's bankruptcy filing staying the PAPUC Process until relief from the stay is granted by the Bankruptcy Court. The Company appealed the Bankruptcy Court stay order to the United States District Court for the Eastern District of Pennsylvania and is awaiting the Court decision whether oral argument will be scheduled or a decision rendered based solely on the briefing.

On June 16, 2023, the Company filed a Complaint against DELCORA in the Delaware County Court of Common Pleas requesting a declaratory judgment and injunctive relief regarding breach of the Asset Purchase Agreement in acting outside the ordinary course of business by attempting to enter into a new agreement with Philadelphia Water Department ("PWD") for the treatment of wastewater without the Company's consent. DELCORA filed an answer, new matter and counterclaim against the Company, alleging that the Company has tortiously interfered with DELCORA's contract with PWD. The Company filed preliminary objections to the counterclaim, and DELCORA filed an amended counterclaim. The Company filed preliminary objections to the amended counterclaim, and on October 9, 2023, DELCORA filed a second amended counterclaim, to which the Company filed preliminary objections. The preliminary objections remain pending before the Court.

The purchase price for this pending acquisition is subject to certain adjustments at closing, and is subject to regulatory approval, including the final determination of the fair value of the rate base acquired. We plan to finance the purchase price of this acquisition with a mix of equity and debt financing, utilizing our revolving credit facility until permanent debt is secured. Closing of our acquisition of DELCORA is subject to the timing of the above-described regulatory approval process and on-going litigation.

4. Income Taxes

The provision for income taxes is composed of the following:

	Years ended December 31,	
	2023	2022
Current:		
Federal	$ 7,178	$ 21,484
State	3,338	6,273
	10,516	27,757
Deferred:		
Federal	67	(465)
State	17,370	(1,048)
	17,437	(1,513)
Total tax expense	$ 27,953	$ 26,244

The statutory Federal tax rate is 21% for both 2023 and 2022 and the Pennsylvania Corporate Net Income tax rate is 8.99% for 2023 and 9.99% for 2022.

The primary components of the net deferred tax liability and investment tax credits of $944,670 and $860,101 at December 31, 2023 and 2022, respectively, include basis differences in utility plant, partially offset by advances and contributions, and income taxes recoverable.

On July 8, 2022, Pennsylvania enacted House Bill 1342 into law, which among other things, reduces Pennsylvania's corporate income tax rate from 9.99% to 8.99% beginning January 1, 2023, and an additional 0.5% annually through 2031, when it reaches to 4.99%. The Company evaluated the impacts of the tax rate change and recorded a reduction to deferred tax liabilities of $178,438 with a corresponding reduction primarily to regulatory assets.

4. Income Taxes (Continued)

At December 31, 2023, the Company has a cumulative state Net Operating Loss ("NOL") of $489,238 without regard to unrecognized tax benefits. The Company believes that the state NOLs are more likely than not to be recovered and require no valuation allowance. The state NOLs do not begin to expire until 2029.

As of December 31, 2023, and 2022, the reserve for uncertain tax position is $7,219 and $17,567, respectively, excluding accrued interest and penalties. The unrecognized tax benefits relate to the income tax accounting change to adopt the IRS temporary tangible property regulations, and the tax position is attributable to a temporary difference. As a result of the regulatory treatment afforded by the income tax accounting change and despite this position being a temporary difference, as of December 31, 2023 and 2022, $6,591 and $37,121, respectively, of these tax benefits would have an impact on the Company's effective income tax rate in the event the Company does sustain all, or a portion, of its tax position. The reserve for uncertain tax positions could increase or decrease for things such as the expiration of statutes of limitations, audit settlements, or tax examination activities. The Company has elected to recognize accrued interest and penalties related to uncertain tax positions as income tax expense. The Company has not recognized any penalties and interest due to the available NOLs of other members within its consolidated Federal filing group.

As of December 31, 2023, the Parent's federal income tax returns remain subject to examination by federal tax authorities for the 2020 through 2023 tax years.

5. Regulatory Assets and Liabilities

Regulatory assets represent costs that are expected to be fully recovered from customers in future rates while regulatory liabilities represent amounts that are expected to be refunded to customers in future rates. Except for income taxes and utility plant retirement costs, regulatory assets and regulatory liabilities are excluded from the Company's rate base and do not earn a return. The components of regulatory assets and liabilities are as follows:

	December 31, 2023		December 31, 2022	
	Regulatory		Regulatory	
	Assets	Liabilities	Assets	Liabilities
Income taxes	$ 837,951	$ 270,411	$ 711,705	$ 229,216
Postretirement benefits	-	126,086	-	117,708
Utility plant retirement costs	9,333	-	9,305	-
Rate case filing expenses & other	6,923	-	25,346	-
	$ 854,207	$ 396,497	$ 746,356	$ 346,924

5. Regulatory Assets and Liabilities (Continued)

Items giving rise to deferred state income taxes as well as a portion of deferred Federal income taxes related to certain differences between tax and book depreciation expense are recognized in the rate setting process on a cash or flow-through basis and will be recovered as they reverse. Amounts include differences that arise between certain utility asset improvement costs capitalized for book and deducted as a repair expense for tax purposes. On December 22, 2017, the Tax Cuts and Job Act ("TCJA") was enacted, which reduced the Federal corporate income tax rate from 35% to 21%. Reductions in accumulated deferred income tax balances due to the reduction in the corporate income tax rate to 21% under the provisions of the TCJA will result in amounts previously collected from utility customers for these deferred taxes to be refundable to such customers, generally through reductions in future rates. The TCJA includes provisions that stipulate how these excess deferred taxes relating to certain accelerated tax depreciation benefits are to be passed back to customers. The amortization of the excess deferred income taxes is incorporated into the Company's cost of service.

The regulatory liability related to the catch-up component of the Company's repair tax accounting change represents the tax benefits realized, which have not yet flowed-through as a reduction to income tax expense due to the ten-year amortization period which began in 2013.

Postretirement benefits include pension and other postretirement benefits. The regulatory liability for postretirement benefits related to pension represents amounts recovered through rates before the costs are incurred. The regulatory balance related to postretirement benefits other than pensions includes deferred amounts funded by customers in excess of required amounts needing funding through an actuarial study. Excess funding of postretirement benefits since the Company's last base rate case is included as a reduction to cost of service postretirement benefits expense through an amortization. Postretirement benefits expense funding excess or deficit is periodically reviewed during each rate case filed by the Company and is fully recoverable in future rates charged to customers.

5. Regulatory Assets and Liabilities (Continued)

The regulatory asset for utility plant retirement costs, representing cost of removal, represents costs already incurred that are expected to be recovered in future rates over a five-year recovery period.

The regulatory asset related to rate case filing expenses represents the costs associated with filing for rate increases that are deferred and amortized over periods that range from one to three years. Other represents costs incurred by the Company for which it has received or expects to receive rate recovery.

6. Commitments and Contingencies

The Company maintains agreements with other water purveyors for the purchase of water to supplement its water supply, particularly during periods of peak demands. The agreements stipulate purchases of minimum quantities of water or charge a monthly commitment fee through the year 2028. The Company is committed to a total of $10,327 in water purchase payments: $4,633 in 2024, $4,461 in 2025, $845 in 2026, $146 in 2027, $146 in 2028 and $96 thereafter. The Company purchased approximately $5,505 and $4,344 of water under these agreements during the years ended December 31, 2023 and 2022, respectively.

The Company is routinely involved in condemnation procedures and legal matters during the ordinary course of business. Although the results of legal proceedings cannot be predicted with certainty, there are no other pending legal proceedings to which the Company is a party or to which any of its properties is the subject that are material or are expected to have a material effect on the Company's financial position, results of operations or cash flows.

7. Leases

The Company leases facilities and other equipment for use in its operations, which are accounted for as operating leases. Leases with a term of 12 months or less are not recorded on the balance sheet; rather, lease expense is recognized over the lease term. Our leases have remaining lives of 1 year to 29 years.

Some of the Company's leases can be extended on a month-to-month basis, which allow us to terminate the lease at any given month without penalty while others include options to extend the leases for up to 50 years. The renewal of a month-to-month lease is at our sole discretion.

The Company accounts for lease and non-lease components of lease arrangements separately. For calculating lease liabilities, we may deem lease terms to include options to extend or terminate the lease when it's reasonably certain that we will exercise that option. The Company's lease agreements do not contain significant residual value guarantees, restrictions or covenants.

Lease liabilities and corresponding right-of-use assets are recorded based on the present value of the lease payments over the expected lease term, including leases with variable payments that are based on a market rate or an index. All other variable payments are expensed as incurred. Since the Company's lease agreements do not provide an implicit interest rate, the Company utilized the Parent's incremental borrowing rate to determine the discount rate used to present value the lease payments.

Components of lease expense were as follows:	Years Ended December 31, 2023	2022
Operating lease cost	$ 620	$ 663

	Years Ended December 31, 2023	2022
Supplemental cash flow information related to leases was as follows:		
Cash paid for amounts included in the measurement of lease liabilities:		
Operating cash flows from operating leases	$ 628	$ 611

7. Leases (Continued)

Supplemental balance sheet information related to leases was as follows:	Year Ended December 31, 2023	2022
Operating leases:		
Operating lease right-of-use assets	$ 7,954	$ 8,141
Other accrued liabilities	233	248
Operating lease liabilities	7,721	7,893
Total operating lease liabilities	$ 7,954	$ 8,141

	Year Ended December 31, 2023	2022
Weighted average remaining lease term:		
Operating leases	23 years	24 years
Weighted average discount rate:		
Operating leases	4.23%	4.22%

	Operating Leases
2024	$ 547
2025	547
2026	537
2027	533
2028	529
Thereafter	9,343
Total operating lease payments	$ 12,036

Total operating lease payments	$ 12,036
Less operating lease liabilities	7,953
Present value adjustment	$ 4,083

8. Long-term Debt and Loans Payable

The consolidated Statements of Capitalization provide a summary of long-term debt as of December 31, 2023 and 2022. The supplemental indentures with respect to certain issues of the First Mortgage Bonds restrict the ability of the Company to declare dividends, in cash or property, or repurchase or otherwise acquire the Company's stock. Approximately $2,393,249 and $2,158,501 of the Company's retained earnings were free of these restrictions as of December 31, 2023 and 2022, respectively. Certain supplemental indentures also prohibit the Company from making loans to, or purchasing the stock of, the Parent. Loan agreements for the Company contain restrictions on minimum net assets. As of December 31, 2023, there were restrictions on the Company's net assets of $1,747,255 of their total net assets of $2,354,604.

Sinking fund payments are required for certain issues of long-term debt. The future sinking fund payments and debt maturities of the Company's long-term debt are as follows:

Interest Rate	2024	2025	2026	2027	2028	Thereafter
1.00% To 1.99%	$ 748	$ 759	$ 769	$ 780	$ 791	$ 3,691
2.00% To 2.99%	1,619	1,427	1,304	1,111	906	151,550
3.00% To 3.99%	1,530	598	553	331	217	700,325
4.00% To 4.99%	-	-	-	-	-	972,437
5.00% To 5.99%	10,000	-	-	-	3,000	319,066
6.00% To 6.99%	-	-	-	20,000	-	-
7.00% To 7.99%	-	15,000	-	-	-	-
8.00% To 8.99%	-	-	-	-	-	-
9.00% To 9.99%	-	-	11,800	-	-	-
Total	$ 13,897	$ 17,784	$ 14,426	$ 22,222	$ 4,914	$ 2,147,069

8. Long-term Debt and Loans Payable (Continued)

In June 2023, the Company renewed its $100,000 364-day unsecured revolving credit facility with four banks. The funds borrowed under this agreement are classified as loans payable and are used to provide working capital. As of December 31, 2023, and 2022, funds borrowed under the Company's revolving credit agreement were $23,123, and $20,000, respectively. Interest under this facility is based, at the borrower's option, on the prime rate, an adjusted overnight bank funding rate, or an adjusted Bloomberg Short-Term Bank Yield Index (BSBY) floating rate. This agreement restricts short-term borrowing of the Company. A renewal fee of 5 basis points was charged on the total commitment amount of the revolving credit agreement. The average cost of borrowing under this facility was 5.36% and 2.40%, and the average borrowing was $19,275 and $31,555 during 2023 and 2022, respectively. The maximum amount outstanding at the end of any one month was $54,472 in 2023 and $55,000 in 2022.

In August 2023, the Company issued $225,000 in aggregate principal amount of first mortgage bonds. The bonds consisted of $175,000 of 5.48% first mortgage bonds due in 2053; and $50,000 of 5.56% first mortgage bonds due in 2061. The proceeds from these bonds were used repay existing indebtedness and for general corporate purposes.

In January 2023, the Company issued $75,000 of first mortgage bonds, due in 2043 with an interest rate of 5.60% The proceeds from these bonds were used repay existing indebtedness and for general corporate purposes.

In October 2022, the Company issued $125,000 of first mortgage bonds due in 2052 with an interest rate of 4.50%. The proceeds from these bonds were used repay existing indebtedness and for general corporate purposes.

9. Fair Value of Financial Instruments

The carrying amount of current assets and liabilities that are considered financial instruments approximates their fair values as of the dates presented. The carrying amount of the Company's long-term debt as of December 31, 2023 and 2022 is $2,220,312 and $1,935,107 respectively. The estimated fair value of the Company's long-term debt as of December 31, 2023 and 2022 is $1,864,551 and $1,544,071, respectively. The fair value of long-term debt has been determined by discounting the future cash flows using current market interest rates for similar financial instruments of the same duration.

The Company's customers' advances for construction and related tax deposits have carrying values of $65,399 and $59,927 at December 31, 2023 and 2022, respectively. Their relative fair values cannot be accurately estimated since future refund payments depend on several variables, including new customer connections, customer consumption levels and future rate increases. Portions of these non-interest bearing instruments are payable annually through 2030 and amounts not paid by the contract expiration dates become non-refundable. The fair value of these amounts would, however, be less than their carrying value due to the non-interest bearing feature.

10. Pension Plans and Other Postretirement Benefits

The Company participates in a noncontributory qualified defined benefit pension plan sponsored by the Parent covering non-union employees hired prior to April 1, 2003 and select union employees. The eligibility of union employees is determined by the collective bargaining agreements covering those employees. Benefits under the plan are based on the participant's years of service and the annual average of the applicable compensation during the five consecutive computation periods of the final 10 computation periods as an active participant yielding the highest such average. Pension cost of the Company is based on amounts contributed to the pension plan as approved by the Parent and incorporated in rates approved by the PAPUC. Information regarding accumulated and projected benefit obligations is not prepared at the subsidiary level.

In August 2014, the Parent announced changes to the way it will provide future retirement benefits to employees acquired through a prior acquisition. Effective January 1, 2015, the Parent will provide future retirement benefits for these employees through its deferred contribution plan. As a result, no further service will be considered in future accruals in the qualified defined benefit pension plan after December 31, 2014.

10. Pension Plans and Other Postretirement Benefits (Continued)

The funding amount for the pension plan for Essential Utilities, Inc. Retirement Income Plan will be determined each year based on the recommendation of management and subject to approval by the Parent's Pension Committee. The funding amount will be an amount greater than or equal to the minimum required contribution and less than or equal to the maximum tax deductible contribution. The Company records expense in an amount equal to the planned funding amount. The Company recorded pension expense of $6,000 and $12,000 in 2023 and 2022, respectively.

The Company participates in two postretirement benefit plans sponsored by the Parent that provide certain life insurance benefits for retired employees and certain health care benefits for retired employees and their dependents. Employees may become eligible for these benefits if they have completed at least fifteen years of service and retire from the Company after reaching age 55 while still working for the Company. Retirees and their dependents under age 65 are covered by a point-of-service managed care plan that requires co-payments or an HMO. Employees hired after April 1, 2003 are not eligible for benefits.

Employees who elect to retire prior to attaining age 65 are generally required to make contributions towards their medical coverage until attaining 65. Retirees and their dependents age 65 and over are required to purchase their own medical and drug coverage. The cost of this coverage is offset by Company contributions deposited in the plan's Premium Reimbursement Account. Costs of the Company are based on amounts contributed to the plans and incorporated in rates approved by the PAPUC.

The Company's funding policy is to contribute the lower of the other postretirement benefits cost or the maximum allowed by the Internal Revenue Code. The Company recorded costs for postretirement benefits other than pensions of $39 and $(1,270) in 2023 and 2022, respectively. The Company funded postretirement benefits other than pensions of $0 in 2023 and $416 in 2022. Information regarding accumulated and projected benefit obligations is not prepared at the subsidiary level.

The Parent has 401(k) savings plans, which are defined contribution plans and cover substantially all employees. The Company makes matching contributions that are based on a percentage of the employee's contribution, subject to specific limitations, as well as certain other Company contributions.

10. Pension Plans and Other Postretirement Benefits (Continued)

Participants may diversify their Company matching account balances into other investments offered under 401(k) savings plans. The Company's contributions, which are recorded as compensation expense, were $3,197 and $2,709 for 2023 and 2022, respectively.

11. Employee Stock and Incentive Plan

The Company's employees participate in an Equity Compensation Plan sponsored by the Parent. Under the Essential Utilities, Inc. 2009 Omnibus Equity Compensation Plan, as approved by the Parent's shareholders to replace the 2004 Equity Compensation Plan, stock options, stock units, stock awards, stock appreciation rights, dividend equivalents, and other stock-based awards may be granted to the Company's employees, non-employee directors and consultants and advisors. During 2019, the Parent granted stock options, which are based upon the common stock of the Parent. Options are exercisable in installments of 33% annually, starting one year from the date of the grant and expire 10 years from the date of the grant. The Parent determines the grant date fair value per stock option using the Black-Scholes option-pricing model.

The fair value of each stock option is amortized into compensation expense using the graded vesting method, which results in the recognition of compensation costs over the requisite service period for each separately vesting tranche of the stock options as though the stock options were, in substance, multiple stock option grants. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs. Since the Company is not obligated to reimburse the Parent for stock-based compensation costs incurred, the Company records these liabilities resulting from compensation costs to paid-in capital.

For the year ended December 31, 2023, the Company's stock-based compensation related to stock options resulted in the following: operations and maintenance expense of $18 and lowered income tax expense by $5. For the year ended December 31, 2022, the Company's stock-based compensation related to stock options resulted in the following: operations and maintenance expense of $15 and lowered income tax expense by $4.

11. Employee Stock and Incentive Plan (Continued)

During 2023 and 2022, the Parent granted performance share units ("PSU"). A PSU represents the right to receive a share of the Parent's common stock if specified performance goals are met over the three year performance period specified in the grant, subject to exceptions through the respective vesting periods. The fair value of each PSU grant is amortized into compensation expense on a straight-line basis through the respective vesting period, which is generally three years. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. During the year ended December 31, 2023, the Company recorded stock-based compensation related to PSU's as a component of operations and maintenance expense of $394 and recorded an income tax benefit of $114. During the year ended December 31, 2022, the Company recorded stock-based compensation related to PSU's as a component of operations and maintenance expense of $505 and recorded an income tax benefit of $146. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs.

During 2023 and 2022, the Parent granted restricted share units ("RSU"). A RSU represents the right to receive a share of the Parent's common stock and are valued based on the fair market value of the Parent's stock on the date of grant. RSUs are eligible to be earned at the end of a specified restriction period, generally three years, beginning on the date of grant. In some cases, the right to receive the shares is subject to specific performance goals established at the time the grant is made. The Company assumes that forfeitures will be minimal, and recognizes forfeitures as they occur, which results in a reduction in compensation expense. During the year ended December 31, 2023, the Company recorded stock-based compensation related to awards of RSUs as a component of operations and maintenance expense of $174 and recorded income tax benefit of $50. During the year ended December 31, 2022, the Company recorded stock-based compensation related to awards of RSUs as a component of operations and maintenance expense of $194 and recorded income tax benefit of $56. Compensation expense recognized by the Parent is allocated to its subsidiaries based on actual employee costs.

12. Water and Wastewater Rates

On May 16, 2022, the Company received an order from the PAPUC that allowed base rate increases that would increase total annual operating revenues by $69,251. New rates went into effect on May 19, 2022. The Distribution System Improvement Charges ("DSIC") enables water and wastewater utilities in Pennsylvania to add a surcharge to customer bills to offset the additional depreciation and capital costs related to infrastructure system replacement and rehabilitation projects completed and placed into service between base rate filings. The Company is permitted to request adjustments to the DSIC quarterly to reflect subsequent capital expenditures and it is reset to zero when new base rates that reflect the costs of those additions become effective or when the Company's earnings exceed a PAPUC benchmark. The maximum DSIC that can be in effect at any time is an increase of base rates of 7.5% for water and 5.0% for wastewater. At the time the rate order was received, the rates in effect also included $35,470 in DSIC, which was 7.2% above prior base rates. Consequently, the aggregate annual base rates increased by $104,721 since the last base rate increase and DSIC was reset to zero.

13. Affiliated Company Transactions

The Company has service agreements with the Parent and subsidiaries of the Parent ("other affiliates"). The types of services rendered between these entities relate to general supervision and administrative functions, long-range planning, tax, accounting, financing, engineering, legal, data processing services and other specialized support. Expenditures recorded for these services from the Parent and other affiliates amounted to approximately $53,017 and $60,696 for 2023 and 2022, respectively, and of those amounts, $28,888 and $27,971, respectively, have been recorded within Operations, maintenance and administrative expenses on the Consolidated Statements of Income with the remainder recorded to net utility plant on the Consolidated Balance Sheets. The Company also provides various management, advisory, and other services for other affiliates and is reimbursed by these affiliates. The amounts billed were $296 and $591 in 2023 and 2022, respectively. Additionally, the Parent may fund acquisitions on behalf of the Company, and such amounts would be included in the accounts payable-affiliates account. Acquisitions funded by Parent in 2023 were considered equity contributions, refer to Footnote 3 for more detail regarding acquisitions.

The Company participates in the Parent's centralized treasury function whereby the Company transfers its cash to the Parent. Under this arrangement, available cash is used to fund accounts payable due from the Company and to pay-down accounts payable-affiliate, or available cash would be reflected as amounts due from the Parent and other affiliates to the Company. The reduction of the accounts payable-affiliates will also be settled through the collection of cash on behalf of the Company and capital contributions. The Parent made cash contributions of $0 and $70,000 to the Company in 2023 and 2022, respectively, which is disclosed in the Consolidated Statement of Stockholder's Equity.

The amounts owed to the Parent and other affiliates by the Company were $38,564 and $97,319 at December 31, 2023 and 2022, respectively. Amounts owed to the Parent and other affiliates are reflected in the accompanying balance sheet.

Amounts due from the Parent and other affiliates to the Company amounted to $18,225 and $87,496 at December 31, 2023 and 2022, respectively. Amounts due from the Parent and other affiliates are reflected in the accompanying balance sheet.

The Company returned equity contributions to the Parent of $343,397 and $100,000 in 2023 and 2022, respectively, which is reported on the Statements of Consolidated Stockholder's Equity as return of capital contributions. In 2023, $200,000 of the return of these cash equity contributions were paid in cash to parent, and $143,397 related to noncash settlement of net intercompany positions with the Parent.

Net income	$ 54,107	$ 44,058	$ 50,861	$ 10,049	22.8%	$ 3,246	6.4%

AQUA PENNSYLVANIA, INC. – March 31, 2023
(In"000" unless otherwise stated)

Net income for the first quarter was $54,107, an increase of $3,246 or 6.4% compared to budget and an increase of $10,049 or 22.8% compared to prior year. The favorable first quarter net income variance to budget is due to favorable changes in operations and maintenance expenses of $4,575, depreciation and amortization of $563, AFUDC of $192, taxes other than income of $41, benefits of $33, gains of $118, and income taxes of $83; partially offset by unfavorable changes in revenue of ($1,775) and interest of ($584). The $10,049 favorable variance to prior year is primarily due to favorable revenue of $19,159, favorable operations and maintenance expense reductions of $3,389, gains of $212 and favorable AFUDC of $106; partially offset by unfavorable depreciation ($3,585), interest expense ($1,933), other benefits ($1,521) and taxes ($5,767).

Operating revenues for the first quarter were $150,801, a decrease of ($1,775) or 1.2% compared to budget and an increase of $19,159 or 14.6% compared to prior year. Utility revenue is favorable compared to prior year due to the rate case, acquisitions and increased consumption. The decrease compared to budget is due to lower than expected consumption.

Operating and maintenance expenses for the first quarter were $4,575 or 11.5% lower than budget and $3,389 or 8.8% lower than prior year. The favorable variance from prior year and budget is related to changing the bad debt reserve policy back to normal levels based on company history prior to Covid-19, this resulted in a $2,440 benefit. The remaining variance relative to budget is primarily due to favorable purchased wastewater and labor. Then the remaining variance related to prior year is primarily due to pension contributions being made in the prior year but not the current year.

Depreciation expense for the first quarter was $466 or 1.4% lower than budget and ($3,389) or 8.8% higher than prior year. The favorable variance to budget is due to slightly less capital additions than anticipated. The unfavorable variance to prior year is due to additional assets placed in service during 2022 and 2023.

AQUA PENNSYLVANIA, INC. – March 31, 2023
(In"000" unless otherwise stated)

Taxes other than income for the first quarter were favorable by $41 or 1.3% compared to budget and unfavorable by ($42) or 1.4% compared to prior year. Variances are a result of fluctuations in PURTA and real estate taxes.

Interest expense for the first quarter was unfavorable by ($584) or 3% compared to budget and unfavorable by ($1,933) or 10.6% compared to prior year. The unfavorable variance from budget is due to a $75,000 bond issuance in January 2023. The unfavorable variance from prior year is due to the issuance in January and the $125,000 bond issuance in October 2022.

AFUDC - Allowance for Funds Used During Construction for the first quarter was favorable by $192 or 8.2% compared to budget and unfavorable by $106 or 4.4% compared to prior year. The favorable variance to budget and from prior year is due to higher than anticipated CWIP balances.

Provision for income taxes for the first quarter was favorable by $88 or 1% compared to budget and unfavorable ($5,767) or 208.6% compared to prior year. Variances are due to pre-tax income, FIN 48 and tax repairs.

AQUA PENNSYLVANIA, INC. – JUNE 30, 2023
(In"000" unless otherwise stated)

Net income for the second quarter was $60,698, an increase of $1,945 or 3.3% compared to budget and an increase of $5,849 or 10.7% compared to prior year. The favorable second quarter net income variance to budget is due to favorable changes in in revenue of $3,913, depreciation and amortization of $1,098, AFUDC of $237, benefits of $33, gains of $105 and income taxes of $742; partially offset by unfavorable changes in operations and maintenance expenses of ($2,619), and interest of ($1,459) and taxes other than income of ($104). The $5,849 favorable variance to prior year is primarily due to favorable revenue of $16,666; partially offset by unfavorable depreciation ($2,944), operations and maintenance ($1,077), interest expense ($2,745), other benefits ($829), income taxes ($1,597), AFUDC of ($1,339) and less gains of ($238). Year-to-date net income was $114,806, an increase of $5,192 or 4.7% compared to budget and an increase of $15,899 or 16.1% compared to prior year.

Operating revenues for the second quarter were $166,888, an increase of $3,913 or 2.4% compared to budget and an increase of $16,666 or 11.1% compared to prior year. Utility revenue is favorable compared to budget and prior year due to the rate case, acquisitions and increased consumption. Year-to-date operating revenues were $317,689, an increase of $2,138 or 0.7% compared to budget and an increase of $35,825 or 12.7% compared to prior year.

Operating and maintenance expenses for the second quarter were ($2,619) or 6.7% unfavorable to budget and ($1,077) or 2.6% unfavorable to prior year. The unfavorable variance from budget is primarily a result of increased chemicals expense. The unfavorable variance from prior year is primarily a result of increased chemicals expense ($2,828); partially offset by favorable outside services of $1,345. Year-to-date operating expenses were $1,956 or 2.5% favorable to budget and $2,312 or 2.9% favorable to prior year primarily due to a benefit realized in Q1 from reverting back to pre-covid bad debt reserves.

Depreciation expense for the second quarter was $1,011 or 3% favorable to budget and ($2,944) or 9.9% unfavorable to prior year. The favorable variance to budget is due to less capital additions than anticipated. The unfavorable variance to prior year is due to additional assets placed in service during 2022 and 2023. Year-to-date depreciation expense was $1,477 or 2.2% favorable to budget and ($6,529) or 11% unfavorable to prior year.

Taxes other than income for the second quarter were unfavorable ($104) or 3.5% compared to budget and unfavorable by ($143) or 4.9% compared to prior year. Variances are from fluctuations in PURTA and real estate taxes. Year-to-date taxes other than income were unfavorable ($63) or 1% compared to budget and unfavorable $185 or 3.1% compared to prior year.

Interest expense for the second quarter was unfavorable by ($1,459) or 7.5% compared to budget and unfavorable by ($2,745) or 15.1% compared to prior year. The unfavorable variance from budget is due to a $75,000 bond issuance in January 2023. The unfavorable variance from prior year is due to the issuance in January and the $125,000 bond issuance in October 2022. Year-to-date interest expense was unfavorable ($2,043) or 5.2% compared to budget and unfavorable ($4,678) or 12.8% compared to prior year.

AFUDC - Allowance for Funds Used During Construction for the second quarter was favorable by $237 or 26% compared to budget and unfavorable by $(1,339) or 53.8% compared to prior year. Variances are driven by actual and expected CWIP balances (AFUDC increases with CWIP). Year-to-date AFUDC was favorable $429 or 13.2% compared to budget and unfavorable (1,233) or 25.1% compared to prior year.

Provision for income taxes for the second quarter was favorable by $742 or 7.4% compared to budget and unfavorable ($1,597) or 20.9% compared to prior year. Variances are due to pre-tax income, FIN 48 and tax repairs. Year-to-date income taxes were favorable $826 or 4.4% compared to budget and unfavorable ($7,363) or 70.7% compared to prior year.

AQUA PENNSYLVANIA, INC. – SEPTEMBER 30, 2023
(In"000" unless otherwise stated)

Net income for the third quarter was $61,157, a decrease of ($7,155) or 10.5% compared to budget and a decrease of ($11,670) or 16% compared to prior year. The unfavorable third quarter net income variance to budget is due to unfavorable changes in revenue of ($3,602) and unfavorable operations and maintenance of ($9,626); partially offset by favorable depreciation and amortization of $1,144, AFUDC of $189, nonutility benefits of $2,240, interest expense of $243, and income and other taxes of $2,343. The ($11,670) unfavorable variance to prior year is primarily due to unfavorable revenue ($3,365), depreciation ($1,514), operations and maintenance ($4,357), interest expense ($3,093) and AFUDC ($2,095); partially offset by favorable other nonutility benefits $710 and income taxes $2,139. Year-to-date net income was $175,963, a decrease of ($1,963) or 1.1% compared to budget and an increase of $4,229 or 2.5% compared to prior year.

Operating revenues for the third quarter were $168,385, a decrease of ($3,602) or 2.1% compared to budget and a decrease of ($3,365) or 2% compared to prior year. Utility revenue is unfavorable compared to budget and prior year due to decreased consumption. Year-to-date operating revenues were $486,074, a decrease of ($1,464) or 0.3% compared to budget and an increase of $32,460 or 7.2% compared to prior year.

Operating and maintenance expenses for the third quarter were ($9,626) or 27% unfavorable to budget and ($4,357) or 10.6% unfavorable to prior year. The unfavorable variance from budget and prior year is primarily a result of increased chemicals expense and a catch-up pension contribution made during the third quarter. Also, specific to the variance against budget, PA anticipated a $3 million credit from closing the Delcora acquisition which did not occur as planned. Year-to-date operating expenses were ($7,670) or 6.7% unfavorable to budget and ($2,045) or 1.7% unfavorable to prior year.

Depreciation expense for the third quarter was $1,144 or 3.4% favorable to budget and ($1,514) or 4.8% unfavorable to prior year. The favorable variance to budget is due to less capital additions than anticipated. The unfavorable variance to prior year is due to additional assets placed in service during 2022 and 2023. Year-to-date depreciation expense was $2,621 or 2.6% favorable to budget and ($8,043) or 8.9% unfavorable to prior year.

Taxes other than income for the third quarter were favorable $292 or 9.2% compared to budget and $149 or 4.9% compared to prior year. Variances are from fluctuations in PURTA and real estate taxes. Year-to-date taxes other than income were favorable $229 or 2.5% compared to budget and unfavorable ($36) or 0.4% compared to prior year.

Interest expense for the third quarter was favorable by $243 or 1.1% compared to budget and unfavorable by ($3,093) or 16.9% compared to prior year. The favorable variance from budget is due timing of planned bond issuances. The unfavorable variance from prior year is due to the $225,000 issuance in August 2023, the $75,000 issuance in January 2023, and the $125,000 bond issuance in October 2022. Year-to-date interest expense was unfavorable ($1,800) or 3% compared to budget and unfavorable ($7,771) or 14.2% compared to prior year.

AFUDC - Allowance for Funds Used During Construction for the third quarter was favorable by $189 or 8.9% compared to budget and unfavorable by $(2,095) or 47.6% compared to prior year. Variances are driven by actual and expected CWIP balances (AFUDC increases with CWIP). Year-to-date AFUDC was favorable $618 or 11.5% compared to budget and unfavorable ($3,328) or 35.7% compared to prior year.

Provision for income taxes for the third quarter was favorable by $2,051 or 17.7% compared to budget and $2,139 or 18.4% compared to prior year. Variances are due to pre-tax income, FIN 48 and tax repairs. Year-to-date income taxes were favorable $2,877 or 9.5% compared to budget and unfavorable ($5,224) or 23.7% compared to prior year.

Income before taxes	262,701	255,407	273,321	7,294	2.9%	(10,620)	(3.9%)
Provision for income taxes	27,954	26,245	39,592	(1,709)	(6.5%)	11,638	29.4%
Net income	$ 234,747	$ 229,162	$ 233,729	$ 5,585	2.4%	$ 1,018	0.4%

Net income for the fourth quarter was $58,784, an increase of $2,981 or 5.3% compared to budget and an increase of $1,356 or 2.4% compared to prior year. The favorable fourth quarter net income variance to budget is due to favorable taxes of $8,761, depreciation and amortization of $1,301, other benefits of $1,127, and $55 in gains on sales. This favorability is partially offset by unfavorable revenue of ($3,651), operations and maintenance of ($1,567), interest expense of ($2,192), AFUDC of ($737), and nonincome taxes ($116). The $1,356 favorable variance to prior year is due to favorable taxes of $3,515, operations and maintenance $4,620, other benefits of $867, revenue of $131, and favorable nonincome tax of $30. This favorability is partially offset by unfavorable depreciation of ($1,842), interest expense of ($5,061), AFUDC of ($866), and less gains on sale ($38). Year-to-date net income was $234,747, an increase of $1,018 or 0.4% compared to budget and an increase of $5,585 or 2.4% compared to prior year.

Operating revenues for the fourth quarter were $157,936, a decrease of ($3,651) or 2.3% compared to budget and an increase of $131k or 0.1% compared to prior year. Utility revenue is unfavorable compared to budget due to decreased consumption. Year-to-date operating revenues were $644,010, a decrease of ($5,115) or 0.8% compared to budget and an increase of $32,591 or 5.3% compared to prior year.

Operating and maintenance expenses for the fourth quarter were ($1,567) or 4% unfavorable to budget and $4,620 or 10.1% favorable to prior year. The unfavorable variance from budget is primarily a result of increased chemicals expense and higher than anticipated pension contributions. Favorability from prior year is primarily due to an insurance receipt from property damage caused by Hurricane Ida in 2021, and from less pension contributions in 2023 compared to 2022. Year-to-date operating expenses were ($9,237) or 6% unfavorable to budget and $2,575 or 1.6% favorable to prior year.

Depreciation expense for the fourth quarter was $1,232 or 3.6% favorable to budget and ($1,908) or 6.1% unfavorable to prior year. The favorable variance to budget is due to less capital additions than anticipated. The unfavorable variance to prior year is due to additional assets placed in service during 2022 and 2023. Year-to-date depreciation expense was $3,853 or 2.8% favorable to budget and ($9,951) or 8.2% unfavorable to prior year.

Taxes other than income for the fourth quarter were unfavorable ($116) or 3.7% compared to budget and favorable $30 or 0.9% compared to prior year. Variances are from fluctuations in PURTA and real estate taxes. Year-to-date taxes other than income were favorable $113 or 0.9% compared to budget and unfavorable ($6) or 0% compared to prior year.

Interest expense for the fourth quarter was unfavorable by ($2,192) or 9.9% compared to budget and unfavorable by ($5,061) or 26.1% compared to prior year. The unfavorable variances are due to the $225,000 issuance in August 2023, the $75,000 issuance in January 2023, and the $125,000 bond issuance in October 2022. Year-to-date interest expense was unfavorable ($3,992) or 4.8% compared to budget and unfavorable ($12,832) or 17.3% compared to prior year.

AFUDC - Allowance for Funds Used During Construction for the fourth quarter was unfavorable by ($737) or 27.2% compared to budget and unfavorable by $(866) or 30.5% compared to prior year. Variances are driven by actual and expected CWIP balances (AFUDC increases with CWIP). Year-to-date AFUDC was unfavorable ($119) or 1.5% compared to budget and unfavorable ($4,194) or 34.5% compared to prior year.

Provision for income taxes for the fourth quarter was favorable by $8,761 or 92.9% compared to budget and $3,515 or 84% compared to prior year. Variances are due to pre-tax income, FIN 48 and tax repairs. Year-to-date income taxes were favorable $11,638 or 29.4% compared to budget and unfavorable ($1,709) or 6.5% compared to prior year.

K. Other Data

OD4. Provide a copy of the company's most recent operating and capital budgets.

A. Please refer to the Company's response to RR8 for the most recent operating budget and the Company's response to RR26 for the most recent capital budget.

AQUA PENNSYLVANIA, INC.
2024 RATE CASE
FILING REQUIREMENTS

K. Other Data

OD5. Provide a schedule that shows the percentage of unaccounted for water for the test year and 2 prior years. Describe how this amount was determined and explain any steps taken to reduce unaccounted for water. Provide a similar analysis of infiltration for wastewater utilities.

A. Unaccounted for water:

Aqua PA utilizes the metered ratio method for determining unaccounted-for water (non-revenue water). This is the most conservative method in that there is no estimate for flushing, company use or water used for fires. The metered ratio calculation for 2021, 2022 and historic test year and its concomitant unaccounted-for water factor are listed below.

	2021	2022	2023
Metered Sales (gallons)	33,634,341,297	34,446,129,806	34,364,098,852
Send-Out (gallons)	42,197,376,941	42,665,585,842	42,525,052,082
Metered Ratio	79.71%	80.74%	80.81%
Unaccounted for Water Ratio	20.29%	19.26%	19.19%

Aqua PA has a dedicated Water Conservation Group which operates three vehicles that are fully equipped with state-of-the-art acoustic leak detection equipment. There are three field operators dedicated to the controlling of unaccounted for water. They perform valve by valve surveys on stream crossings, limestone areas, and transmission mains and assist maintenance crews on main breaks to mitigate water loss. Send-out accuracy is controlled by the quarterly calibrating of send-out master meters at treatment plants. These devices are also used to observe any abnormal flows during off peak hours. In addition, the company's SCADA system facilitates the identification of potential problem areas.

Infiltration for wastewater *(000,000 gallons)* :

	2021	2022	2023
Total Plant Flow	2,952	2,950	3,466
Estimated Customer Flow	2,459	2,470	3,033
Estimated I&I	493	480	433

Data is for facilities for which PADEP Chapter 94 Municipal Waste Load Management Reports are required and prepared as well as DMR effluent discharge reports.

With respect to Inflow and Infiltration (I&I) reduction efforts, the Company has conducted manhole inspections on all known and accessible manholes throughout all of their wastewater systems. This field work involved utilizing a GPS unit to document asset locations and inspecting the manholes for I&I and structural concerns. With this field information, the Company was able to develop a Geographical Information System (GIS) database and system map to document investigation and rehabilitation/replacement measures.

The Company also monitors the Discharge Monitoring Reports (DMRs) and are in constant contact with operations staff regarding wet weather induced peak flows at each of the systems. Based upon these reviews and this dialogue, several of the wastewater systems warranted further I&I investigation. Due to the size of the larger systems, the Company has engaged flow metering companies to further pinpoint the I&I in these systems and to develop sub-basins.

Based upon system knowledge, results of the manhole inspections, and flow metering, additional investigation measures are being selected including but not limited to closed circuit mainline inspections, which are being coded via the NASSCO Pipeline Assessment and Certification Program (PACP) system. To date, the Company has essentially completed all of their NE and Western wastewater systems and a significant portion of the larger SE systems. Additional investigation is currently being planned.

Based upon these investigations, rehabilitation / replacement work is being prioritized to address the most critical deficiencies and a further reduction in I&I.

XII. CONCLUSION.....32

I. INTRODUCTION

Q. Please state your name and business address.

A. William C. Packer. My business address is 762 W. Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. Did you previously submit testimony in this proceeding on behalf of Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively, "Aqua" or the "Company")?

A. Yes. I submitted my direct testimony, Aqua Statement No. 1, on May 23, 2024.

Q. What is the purpose of your rebuttal testimony?

A. My testimony responds to certain portions of the direct testimony submitted by the Pennsylvania Public Utility Commission's ("PUC" or "Commission") Bureau of Investigation and Enforcement ("I&E"), the Office of Consumer Advocate ("OCA"), and the Office of Small Business Advocate ("OSBA").

Specifically, I will be responding to the following pieces of testimony and the identified issues raised therein:

- OCA Statement No. 1, the direct testimony of Christine Hoover, regarding Perfluoroalkyl and Polyfluoroalkyl Substances ("PFAS") deferral, the East Whiteland acquisition, notices, and general ratemaking issues.
- OCA Statement No. 2, the direct testimony of Ralph Smith, regarding Overall Financial Summary, Cash Working Capital, PFAS deferral, and COVID-19 Deferral.
- OCA Statement 3, the direct testimony of Aaron Rothschild, regarding fair market value.
- OCA Statement No. 5, the direct testimony of Jerome D. Mierzwa, regarding Act 11 subsidization and revenue allocation.
- OCA Statement No. 6, the direct testimony of Roger Colton, regarding CAP cost offsets.

- OCA Statement No. 7, the direct testimony of Barbara Alexander, regarding management performance.

- I&E Statement No. 1, the direct testimony of Zachari Walker, regarding overall I&E Position, PFAS, and COVID Deferral.

- I&E Statement No. 2, the direct testimony of Christopher Keller, regarding management performance.

- I&E Statement No. 3, the direct testimony of Ethan Cline, regarding Act 11 revenue allocation and post rate case capital reporting.

- OSBA Statement No. 1 (REVISED), the direct testimony of Jason Hails, regarding management performance.

- OSBA Statement No. 2 (REVISED), the direct testimony of Roger Cathcart, regarding Act 11 revenue allocation.

Q. Are you sponsoring any exhibits associated with your rebuttal testimony?

A. Yes, I am sponsoring the Company's revised accounting exhibits. Specifically, Exhibit WCP-1-R, Exhibit 1-A(a) through Exhibit 1-E(e) present the Company's revised revenue, expense and rate base claims for water and wastewater operations, respectively. These exhibits contain all of the pages found in Exhibit Nos. 1-A through Exhibit 1-E, which are the fully projected future test year ("FPFTY") accounting exhibits that the Company originally filed in this proceeding. The pages that have been revised are so marked. In addition, Schedule A-1.1 to the exhibits sets forth all of the changes that were made in Exhibit 1-A(a) through Exhibit 1-E(e) from the Company's original accounting exhibits (Exhibit Nos. 1-A through Exhibit 1-E). Also included in Schedule A-1.1 is a list of the Company's original and revised claims and references to the source of the change and the responsible Company witness. As a result, Exhibit 1-A(a) through Exhibit 1-E(e) fully reflect the Company's final revenue, expense and rate base claims in this case for water and wastewater operations, respectively.

Q. Please generally describe the revisions set forth in Exhibit 1-A(a) through Exhibit 1-E(e).

A. The revisions presented in Exhibit Nos. 1-A(a) through Exhibit 1-E(e) are intended to reflect: (1) corrections to the Company's initial filing; (2) the Company's decision to adopt certain adjustments proposed by the active parties; and (3) more recent data or the Company's revised position on certain issues, as previously set forth in interrogatory responses.

II. PFAS DEFERRAL

Q. Please describe why the Company has requested a deferral of PFAS related costs.

A. The Company is using an accepted method in the regulatory and accounting world frequently utilized for significant, non-recurring type events affecting utilities – that absent deferred authorization – the economic impacts of the investments made and expense incurred would significantly impair the Company's opportunity to realize a Commission authorized fair rate return. As I stated in my direct testimony, capital investments to deal with the federal PFAS mandate are approximately $300 million and incremental operations and maintenance ("O&M") expenses occasioned by PFAS solutions are estimated to be as much as five percent of the capital invested, or approximately $15 million.

Q. Is Aqua seeking guaranteed recovery of these costs in its requests for deferred accounting treatment?

A. No, it is not seeking guaranteed recovery and the Company will have to support its prudent spending related to these costs in its next base rate case. OCA Witness Smith acknowledged this on page 62 of his Direct Testimony. Utilizing a commonly accepted deferral tool allows the Company to ask the Commission to recover the investments and

expenses made at a future point in time. It is not seeking a new and ongoing recovery surcharge to be collected on a quarterly basis. Quarterly, immediate recovery -- with 100% debt and equity -- would have required the Company to propose a tracking surcharge similar to what Pennsylvania American Water Company ("PAWC") proposed in its last rate case at Docket Nos. R-2023-3043189, *et al*. and the Commission disallowed. I believe the Company's proposal is a conversative but necessary approach.

Q. Do you agree with OCA Witnesses Hoover[1] and Smith,[2] and I&E Witness Walker[3] on the proposed rejection of the Company's proposed request to defer PFAS related costs?

A. I do not. I believe that the Company's request is the exact reason why deferred accounting treatment is utilized. This is a health-related issue that the Company is trying to address, and the Company is on a very tight timeline. No one in the Company or anyone in the industry could have anticipated the Environmental Protection Agency's ("EPA") intention when it set a 4 parts per trillion ("ppt") standard or that the compliance date for the PFAS National Primary Drinking Water Regulation ("NPDWR"), other than the maximum contaminant levels ("MCL"), would be April 26, 2029. The determination for compliance is based upon the last 4 quarters running annual average for the prior 4 quarters. Hence the Company's compliance on April 26, 2029 will be measured on all samples collected between April 26, 2028 and April 26, 2029. Therefore, all treatment has to be operational in Q1 2028. I cannot recall an environmental rule impacting the Company in this fashion regarding size, timeline, and pace in my career. These are not just "normal" capital

[1] OCA St. No. 1, p. 38.
[2] OCA St. No. 2, pp. 61-63.
[3] I&E St. No. 1, pp. 42-44.

investments to comply with the EPA's PFAS rule. The Company's request meets the standards for deferral as stated by I&E Witness Walker in his testimony on page 42 stating deferred accounting treatment may be granted if the expense is: (1) extraordinary; (2) unanticipated; (3) non-recurring; and (4) substantial. I address each of these alleged requirements in kind below:

Extraordinary – This is a human health issue mandated by the EPA with a fast-tracked compliance deadline of April 26, 2029. The determination for compliance is based upon the last 4 quarters running annual average for the prior 4 quarters. Hence the Company's compliance on April 26, 2029 will be measured on all samples collected between April 26, 2028 and April 26, 2029. Therefore, all treatment has to be operational in Q1 2028.

Unanticipated – The EPA is the first agency that I am aware of that moved the MCL level to 4 ppt which is a stricter standard that what Pennsylvania and other states have adopted. This is essentially a non-detect standard. I understand that the industry was aware the current EPA administration was working on this issue. However, the industry had no idea it would be required to meet a level of non-detection coupled with being on a with having treatment online by Q1 2028.

Non-recurring – The level of needed capital to meet the new federal mandate will be a one-time event. Admittedly, operational expense associated with operating this new equipment will be ongoing. However, that does not negate the initial investment of $300 million that will not be recurring in this size or capacity related to this new federal mandate.

Substantial – As previously mentioned, approximately $300 million in capital for Aqua is, by any measure, substantial. Based on my experience, I have never seen any health-related EPA mandate that created this capital need and that has a very real impact on the

financials of the Company.

Q. OCA Witness Hoover attempts to argue against the use of a deferred accounting tool because use of this tool for PFAS related costs unreasonably shifts risks to customers, Aqua has been incurring these PFAS costs for many years, and that Aqua's request generally does not meet standards for deferral.[4] Please respond.

A. Ms. Hoover expounds on several reasons why she disagrees with the Company's request for deferred accounting treatment for a period of time for PFAS capital and costs. First, I do not believe there are any unreasonable shifts of risk to customers as suggested by Witness Hoover. In fact, our PFAS capital plan and the associated accounting proposal is meant to help customers and the Company avoid the need to file additional rate cases at a substantial cost in order to preserve its opportunity to earn fair and reasonable returns on invested capital afforded to it by virtue of the regulatory compact Ms. Hoover opines on. I acknowledge that the Company's request decreases regulatory lag associated with the costs of compliance with the EPA rules. This request to decrease regulatory lag is not taken lightly and the Company would not request it if it was not important to do so. As I stated earlier, I cannot recall an environmental rule impacting the Company in this fashion regarding size, timeline, and pace in my career. These are not just "normal" capital investments to comply with the EPA's new PFAS rule. Unfortunately, this new rule promulgated by the EPA will increase costs for Aqua customers and residents through the Commonwealth and the country. In regard to Ms. Hoover's acknowledgement that PFAS regulations occasioning this deferred accounting request are being challenged in federal court, the Company submits that deferred accounting is still warranted as the need to

[4] OCA St. No. 1, p. 38.

address PFAS treatment is both a question of need and timing. While the required compliance could be impacted to allow for more time, the significance of the capital investments to address this lower standard cannot be ignored.

Q. Please respond to OCA Witness Hoover and I&E Witness Walker's argument that Aqua has address a limited number of wells with PFAS treatment since 2017.

A. I agree that Aqua has put filters on a limited number of wells – in total four wells - and has increased expenses related to those particular upgrades, but that was solving for a different problem, that is, state standards of 13 ppt. This does not override the need for Aqua's request now relating to the new EPA standard at 4 ppt which results in more wells and now including some surface water treatment plants, which are approximately 90% of the Company's annual water production source, needing significant investments to achieve compliance. Utilizing these circumstances as a basis for asserting that Aqua does not meet the regulatory requirements for deferral authorization is not supported by her arguments. She presents a case of comparing apples and oranges in the amount of capital needed and costs incurred needed to address different problems. Being proactive to address a health-related issue in certain wells in our service territory should not be a penalty for seeking deferral treatment. Leaving these important key facts out does not provide the reader with the full picture of what the Company is required to do to address water quality for its customers.

Q. Please respond to OCA Witness Hoover's suggestion and I&E Witness Walker's argument(s) that addressing PFAS over time might cause decreases in other expenses when the overall filtration process to the system is improved.

A. Mr. Walker states that this cost should be addressed in a base rate case proceeding where

the impact can be fully evaluated to affected rate base and expense items implying that that costs related to addressing PFAS will somehow lower expenses. As I noted previously, addressing PFAS as required by the EPA is a costly endeavor. As discussed in Mr. Duerr's testimony added costs include regular process control testing, compliance testing, maintenance equipment, increased electric costs due to higher pressure through the vessels, and cost of the filter change outs and disposal of rinse water. These are not changing out certain costs, they are additional costs. Based on my experience, adding $300 million of capital to run and additional incremental costs operate a water system with new PFAS treatment equipment will increase costs, not decrease them.

Q. Please respond to I&E witness Walker's recommendation that the PUC address deferral treatment of PFAS costs on statewide basis.

A. Mr. Walker's recommendation may have made sense several years ago assuming someone anticipated the EPA would enact a rule requiring basically non-detection of PFAS and the accelerated timeline to complete the capital investments. Unfortunately, and realistically, there is no time for a separate statewide PUC docketed proceeding in this matter to effectively address the issue. Aqua must comply with the EPA rule by April 26, 2029, with all treatment online by Q1 2028, or face non-compliance and potential lawsuits. Construction to reach compliance with the EPA's PFAS mandate is happening already.

Q. What could happen if the Commission does not allow a deferral of the PFAS costs?

A. Given the extraordinary nature of the investments and operating expenses related to comply with this new federal mandate, it is likely that the Company will have to seek more immediate rate relief following the conclusion of this case. To avoid significant additional rate case expense that is occasioned by this issue, the Company strongly advocates for the

approval of its request for deferred accounting treatment so that it can avoid multiple base rate cases in quick succession. Mr. Walker also questions the impact on Aqua's net earnings. I believe the impacts are very real. For instance, the Company's estimate of approximately $300 million in capital investments between 2025 and 2029 result in an average of $75 million per year in investments. Those investments have an annual cost or revenue requirement of approximately $9 million pre-tax and approximately $6.5 million after tax. This is significant and has an impact on Aqua's ability to preserve its opportunity to earn its allowed return on equity afforded to it as a regulated utility.

Q. Does OCA Witness Smith[5] provide any other arguments for the rejection of the request to defer PFAS costs?

A. Mr. Smith recognizes the important public health and safety nature of these investments and costs. He also acknowledges the magnitude of them. I agree. He then asserts that isolating and tracking PFAS capital costs and expenses runs counter to ratemaking principles in that the Company is somehow guaranteed recovery. He also acknowledges that the Company is not seeking a guarantee, but it will likely get recovery of these costs and that the Company will not then work as hard to receive any available funding to offset the costs.

To the contrary, the Company is exhausting all of its resources to address a health issue that it did not create. Isolating and tracking these costs, and the Company's efforts to pursue funding sources, whether through grants, loans, litigation or other sources, would happen regardless of the Company's proposed deferred accounting treatment and approving a deferral request will actually provide more oversight, transparency, and review

[5] OCA St. No. 2, pp. 61-63.

of these costs. I believe this type of health-related capital endeavor is exactly the type of expense deferred accounting treatment should be used for.

III. COVID-19

Q. I&E Witness Walker recommends reduction of $1,465,568 to COVID-19 expense claim due to the 48-month amortization period proposed by Mr. Walker.[6] Would you like to comment?

A. I do not agree with Mr. Walker's recommendations on this point. The Company is focusing on when the costs were incurred while it appears that Mr. Walker is focused on rate case timing using a simple historical average which is no longer appropriate going forward. Furthermore, his use of a historical average includes the time period between the 2011 base rate case and 2018 base rate case which included a tax repair provision that enabled the Company to stay out of rate cases for extended periods of time. This seven year long stay out should at the very least, be excluded from Mr. Walker's averaging exercise.

Q. Why do you believe two years is an appropriate amortization period?

A. The costs were incurred over a two year period and the amounts deferred are not being requested as a component of rate base. Therefore, the carrying cost is being borne by the Company. Please see the Rebuttal Testimony of Christopher E. Manning, Aqua Statement No. 3-R, for further discussion on the Company's rate case timing. As stated in responses to discovery, the Company will be filing its next base rate case in 2026 and will be on a two-year rate cycle for the foreseeable future.

IV. RATE BASE ADJUSTMENTS

[6] I&E St. No. 1, pp. 28, 30.

Q. Can you summarize the adjustment to Rate Base proposed by OCA Witness Smith in his direct testimony?

A. Yes. While this topic is covered specifically by the Company's expert tax witness Panpilas Fischer, I will offer a few points on the matter. Mr. Smith is opposed to the Company's inclusion of an approximate $30 million addition to rate base for a deferred tax asset on the Company's books related to PA State Income Tax Net Operating Losses accumulated, and not yet monetized in the form of a cash tax benefit to the Company, which is due to state mandated limitations on annual utilization. Mr. Smith makes an adjustment to reduce rate base by approximately $30 million.

Q. How was this PA Net Operating Loss ("NOL") created?

A. The NOL was created by the Company's previously authorized treatment related to its change in tax accounting method of its tangible property ("Tax Repairs"). The Company in its 2011 Rate Case was authorized to use flow-through accounting for any tax benefits resulting from this change. In return, the Company agreed to delay its next rate case filing, normally expected rate case in 2 years and amortize that tax repair 481(a) ("Catch-up") adjustment over a period of 10 years. In the end, the Company was able to stay out of rates for nearly 7 years, eliminate its Distribution System Improvement Charge ("DSIC") effective January 1, 2013 from 2.82% to zero and remained so until October 1, 2017. In August of 2018, the Company filed its first base rate case since 2011 and that rate case resulted in new base rates effective in May of 2019, which reflected and memorialized all of the tax benefits associated its previously authorized tax repair accounting treatment in base rates, including negative deferred tax expense for PA State Income.

Q. Is it appropriate to include the PA State NOL deferred tax asset in rate base?

A. Yes, it is appropriate. Customers benefited in multiple ways. Notably, as directed by the Commission, the Company amortized the 481(a) adjustment over a period of 10 years, which is an accelerated level of benefit return to customers in advance of the cash realization by the Company. This is one of the reasons why there is an NOL in the first place. To disregard its inclusion in rate base to at least allow a return on investment to offset carrying costs is not proper rate making nor justified given the record established in multiple rate cases over the past 13 years. It is my recommendation that OCA Witness Smith's proposed adjustment to reduce rate base be disregarded.

V. TAX REPAIR

Q. Please summarize OCA Witness Smith recommended related adjustment to the level tax repair deduction benefit utilized in the calculations of Income Tax Expense on Schedule F-2?

A. This again is covered by the Company's expert tax witness Panpilas Fischer, but I will offer a few complementing points. OCA Witness Smith recommends increasing the forecasted level of expected tax repair deduction benefits in the fully projected future test year ("FPFTY") from approximately $163 million as filed by Aqua, to approximately $194 million. The basis of his adjustment was an abnormally high level of tax repair benefit expected to be realized by the Company for its tax year 2023.

Q. Is it appropriate to use an historical year to forecast the level of tax repair benefit?

A. No, it is not. Doing so comes with significant rate risk to customers while at the same time imputing a tax benefit that is not matched with additional corresponding investment increasing rate base and depreciation expense. In other words, his recommendation only imputes the tax benefit to reduce rates, while not considering the projects necessary to

support such a recommendation. In short, the Company's projected capital included in this rate case and its resulting tax benefits are matched based on our application of the tax repair methods of accounting, units of property, pressure zones, and non-network. It is not something that should be based on prior year experience for rate making. Moreover, the establishment of the collar protects both the Company and the customers from any large variances from the amounts set in rates, that is, if there are any today outside of the $4 million above or below the level set, those amounts are deferred to the next rate case. Simply said, this recommendation is not necessary.

Q. What is the rate risk associated with setting an arbitrarily high tax repair benefit?

A. The risk is that when the Company's actual tax repair expense is more in line with our $163 million per year projections, or $30 million less per year, than the levels recommended by Mr. Smith. The Company is replacing less mains annually, which is the largest single category of associated tax repair benefits, and that trend is expected to continue, hence there are more justified reasons to forecast lower future tax repairs expense than increase it. The result of an incorrect level of repairs expense benefit set in this rate case will likely trigger an under the collar recovery being deferred that will increase customer rates to recover the benefit lost due to an incorrect projection in the next rate case. Combine that likely result along with a potential lowering of future benefit (i.e., instead of $163 million per year ongoing, dropping to $143 million) would likely result in a significant increase in the next rate case just to recover the tax expense both from this rate case and the next one. For example, assume the Company is only able to produce tax repair benefits of $163 million per year as we propose, but the level in this case is set to Mr. Smith's $194 million per year. That incorrect projection would be in place for at least two years before the next

rate case, or accumulate to approximately $62 million ($194 million less $163 million = $31 million per year x 2 = $62 million). Combine that with another $20 million per year of reduced ongoing level of future tax repair benefits in the next case and there is a real potential for a total of $82 million of pre-tax cost benefit needing future recovery from customers. After accounting for tax impacts and grossed up in terms of revenue requirement, that equates to an approximate $30 million increase in revenues just to cover the tax. I strongly recommend the Commission not adopt Mr. Smith's recommendation as further explained by Witness Fischer.

VI. CAP COST OFFSETS

Q. Please summarize the testimony of OCA Witness Colton[7] regarding his proposed CAP offsets related specifically to bill discounts and arrearage forgiveness amounts claimed in this rate case by the Company.

A. Mr. Colton starting on page 48 of his testimony and continuing through page 61 outlines his proposed CAP Cost offsets related to bill discounts and arrearage forgiveness claims made by the Company in this rate application. He recommends a $2,455,931.82 offset to revenue for water bill discounts and a $352,626.60 offset to revenue for wastewater bill discounts. Lastly, Mr. Colton recommends offsets to arrearage forgiveness impacts to bad debt expense in the amounts of $812,620 for water and $89,774 for wastewater. Mr. Colton raises the issue of the Company's non-compliance to Commission directives from its last base rate case proceeding, specifically where it was directed to work with the OCA and other statutory advocates as to the type of data collection and analysis that would be necessary to calculate an appropriate offset later.

[7] OCA St. No. 6.

Q. Do you agree with Mr. Colton that the Company did not comply with a Commission directive regarding this issue because it may have disagreed with the order?

A. No. The Company is committed to ensuring that the appropriate implementation and cost offsets are reflected in the CAP program such that the desired impacts and necessary bill relief is realized by customers. The Company meets with the Advocates and holds periodic meetings with them through its Aqua Assistance Collaborative Group which focuses on customer initiatives not necessarily germane to this topic. However, this topic was not discussed and was an oversight on the Company's part.

Q. Please respond to Mr. Colton's recommendation for CAP cost offsets related to bill discounts and arrearage forgiveness?

A. I have reviewed Mr. Colton's recommendations on CAP offsets and take no issue with them as proposed for this case.

VII. INTEREST SYNCHRONIZATION

Q. OCA Witness Smith has proposed substantial increases in the interest deduction reflected in the calculation of income tax expense for water and wastewater operations, with a resulting substantial deduction in state and federal income tax expense.[8] What are the bases for this increase to the interest deduction?

A. The interest expense deductions for income tax purposes reflect the use of interest synchronization, which calculates the pro forma interest expense deduction by multiplying rate base times the weighted cost of debt. The Company used interest synchronization in its calculation of the interest expense deduction for income tax purposes, using the Company's FPFTY rate base for its water and wastewater operations times the weighted

[8] OCA St. No. 2, p. 52; OCA Exhibit LA-1, Schedule C-4.

cost of debt provided by Company witness Mr. Moul.

OCA's adjustments reflect the proposed weighted cost of debt proposed by OCA Witness Rothschild, partially offset by reductions to rate base proposed by OCA Witness Smith.

Q. Does the Company agree with these adjustments?

A. No. With respect to the proposed change to the weighted cost of debt, this is a result of Mr. Rothschild's recommended use of a 49.47% debt ratio in the capital structure, rather than the use of the projected actual capital structure of the Company for the FPFTY, which reflects a debt ratio of 46.05%. Mr. Moul explains in his rebuttal testimony (Aqua Statement No. 7-R) the errors of Mr. Rothschild in proposing a hypothetical capital structure.

VIII. ACT 11

Q. Can you generally respond to how and why the Company made the Act 11 allocation that it did?

A. Aqua proposed to allocate a portion of the wastewater revenue requirement to its water customers in order to provide a path for gradualism for the subject systems. This is similar to the Company's proposal in its last base rate. The intent is to avoid substantial rate hikes to wastewater customers that will be subject to rate increase as a part of this case. I note that the Company understands the sensitivity and fairness issues related to the Act 11 allocation and endeavors to provide proposals that are balanced and fair to both our current water customers and wastewater customers. I also note that no party asserts that Aqua should not be permitted to allocate any of the wastewater revenues for its Wastewater Base and other operating divisions to the combined wastewater and water customer base, and no

party asserts that an allocation of wastewater revenues to water customers is not in the public interest. Rather, various parties have disputed the amount of the wastewater revenue requirement to be allocated to water customers.

Q. OCA Witness Smith,[9] I&E Witness Cline,[10] and OSBA Witness Cathcart,[11] recommend lowering the Act 11 allocation from Wastewater to Water. Please briefly describe their adjustments.

A. Aqua proposed a shift of $21.9 million Act 11 shift or 20% shift of the wastewater revenue requirement to water including East Whiteland. OCA Witness Smith recommends reduction to $1.715 million to that proposed allocation, I&E Witness Cline recommends a reduction to $3.5 million to that proposed allocation and OSBA Witness Cathcart recommends a reduction to $19.7 million to that proposed allocation.

Q. What is the OCA's rationale for its proposal?

A. OCA Witness Mierzwa, states that the Act 11 shift should be no higher than 10% of the wastewater cost of service, which would be a 50% decrease from that approved by the Commission in the Company's last base rate case proceeding.[12] It appears that the OCA Witnesses are proposing a 2.48% Act 11 allocation of the wastewater base and Lower Makefield revenue requirements.

Q. What is I&E's rationale for its proposal?

A. I&E Witness Kline disagrees with the amount of the shift and states that he believes that because not many wastewater customers are water customers, the water customers should not be subsidizing as much and that each separate utility should be responsible for its own

[9] OCA St. No. 2.
[10] I&E St. No. 3
[11] OSBA St. No. 2 (REVISED).
[12] OCA St. No. 5, p. 6.

cost of service.[13] In addition, he argues that water customers should not be subsidizing a rate decrease.

Q. Please respond to both the OCA and I&E's adjustments.

A. From the Company's perspective, we disagree with both I&E and OCA and submit that the Company's proposal is the most reasonable approach. As stated above, the Company's overall proposal was a 20% allocation of the revenue requirement from wastewater to water. I note that this is a lower requested allocation than in prior Aqua base rate cases. I believe this is reasonable because, as the wastewater business has grown over the past decade and realized economies of scale, it has been able to spread the wastewater cost of service across its much larger customer base thereby lowering the need for the Act 11 regulatory tool. A similar Act 11 allocation has been proposed in the past. The Company's proposal of allocation via Act 11 are intended to provide a path of gradualism for these systems. In Aqua's last litigated base rate case, the Commission approved a 16.83% Act 11 allocation. PAWC requested a $71.1 million or 26.97% Act 11 allocation shift, and the Commission approved a $23.3 million or 11.2% based on my review PAWC's most recent litigated case. Both of these allocations are substantially larger than what is proposed by OCA and I&E, respectively, and their proposals on this point should be rejected.

Further, the Company does not believe that the measure of the appropriate allocation should be simply whether the percentage revenue shift is half of the approved shift in the last case. Mr. Mierzwa has offered no support for why 10% is a reasonable shift. Aqua Witness Ms. Heppenstall explains why the proposed individual rate zone increases, and proposed rate zone consolidations, are reasonable and should be adopted.

[13] I&E St. No. 3, pp. 12-13.

Q. OSBA Witness Cathcart states that he does not oppose Act 11, but states "Act 11 does not supersede the cost-of-service principles established by the Commonwealth Court's decision in Lloyd."[14] Please respond.

A. Mr. Cathcart makes this statement in the context of asserting that Act 11 does not authorize a permanent shift in revenue responsibility from wastewater to water customers. Aqua has not proposed in this, or any case, that Act 11 be used to permanently shift revenues. Therefore, I am advised by counsel that the scope of the Commission's authority under Act 11 in future proceedings is not relevant here.

IX. EAST WHITELAND

Q. I&E Witness Cline, and OCA Witnesses Mierzwa, Hoover, and Smith all discuss the East Whiteland acquisition and assert that it should not be included in this case.[15] Do you agree with these recommendations?

A. I disagree. The Commission supported Aqua purchasing the East Whiteland wastewater system in an order issued on July 29, 2022. Certificates of Public Convenience were issued to Aqua to own and operate the East Whiteland system by the Commission. East Whiteland and Aqua closed on the transaction on August 12, 2022 and Aqua currently owns and operates the East Whiteland wastewater system subject to the Commission's jurisdiction, including jurisdiction over rates to be charged. To be clear, Aqua has been providing wastewater service to these customers since August 12, 2022, including billing and collections, investment and expansion of the customer base, and making sure that East Whiteland customers have safe and reliable service. The Company also has incurred and continues to incur investment in the plant serving East Whiteland customers. The rate base

[14] OSBA St. No. 2 (REVISED), p. 11.
[15] I&E St. No. 3, pp. 7-8; OCA St. No 5, p. 14; OCA St. No. 1, p. 10; OCA St. No. 2, pp. 9-10.

associated with these assets are used and useful in the public service. So long as the Commission regulates the rates that Aqua is allowed to charge East Whiteland customers, Aqua should be permitted to increase the rates to East Whiteland customers as supported by the cost of service.

Q. OCA Witness Smith argues that the criteria to be used to determine whether a proposed acquisition is reasonably likely to occur by the end of the FPFTY prior to or at the close of the record in this case are: (1) a final Commission order approving the acquisition; and (2) there is a lack of uncertainly that the utility will close the acquisition for reasons other than PUC approval.[16] Please respond.

A. Mr. Smith's criteria are just that – his. As many of the parties have acknowledged, the OCA has appealed the Commission's decision approving this transaction. However, I am advised by counsel that this appeal does not undue the approved transaction at this time. The Commission is supporting its decision to approve the purchase of the East Whiteland wastewater system on appeal. If the Pennsylvania Supreme Court ultimately decides in the OCA's favor, or remands the proceeding back to the PUC, or offers some other alternative, the Commission can follow those Supreme Court directives at that time.

Q. OCA Witness Hoover offers her perspective of the regulatory compact, asserts traditional ratemaking reflects the regulatory compact, argues that Aqua is attempting to move away from traditional ratemaking to reduce risk, asserts that there is not a focus on consumer needs, and argues that use of the DSIC, FPFTY, and Section 1329 and Section 1311(c) of the Public Utility Code move away from traditional ratemaking.[17] Please respond.

[16] OCA St. No. 2, p. 26.
[17] OCA St. No. 1, pp. 17-37.

A. My general observation is that Witness Hoover disagrees with laws passed by the Pennsylvania General Assembly and the Orders issued by the Commission implementing those laws. Witness Hoover's testimony regarding these subjects will be addressed more fully in the Rebuttal Testimony of Paul J. Hibbard (Aqua Statement No. 15-R).

X. MISCELLANEOUS ITEMS

Q. OCA Witness Mierzwa recommends Aqua immediately pursue obtaining water usage data for customers served by Chester Water Authority ("CWA") in Thompson Tract, the Bancroft Subdivision, and Honeycroft Village and report on the results of its efforts and costs it incurs to obtain this data.[18] Please provide some context.

A. Mr. Mierzwa and the OCA are likely aware of the issue recently regarding water usage data in relation to CWA. I refer Mr. Mierzwa to Docket Nos. A-2022-3036095 and A-2024-3046777. Unfortunately, CWA will not enter into a written contract with any wastewater provider to provide water usage data. This includes Aqua. In the decision referenced above, the Commission directed the Company to charge a flat rate since a written contract is required.

Q. Please comment on the concerns raised that the rate decrease proposed for New Garden customers will not be realized by most customers.

A. The Company performed an analysis of the New Garden billing data regarding what customers would see a decrease in rates based upon the Company's proposal. The analysis showed, for the historic test year ("HTY"), there were about 446 residential bills out of 8,055 total bills for the year where consumption was fewer than 3,000 gallons a quarter, which is about 5.5% of the cumulative HTY bills. Or in other words, 94.5% of the

[18] OCA St. No. 5, p. 39.

residential customers are using over 3,000 gallons a quarter and would receive a decrease to their bill under proposed rates.

For the commercial customers, there were about 99 bills out of 1,616 total bills for the HTY where consumption was fewer than 3,000 gallons a quarter, which is about 6% of the cumulative HTY bills. Mr. Duerr also addresses the New Garden system in his Rebuttal Testimony (Aqua Statement No 11-R).

Q. OCA Witness Rothschild states that Aqua has indicated that Fair Market Value ("FMV") acquisitions present a competitive advantage, thereby making Aqua Witness Moul's recommended ROE overstated.19 Please respond.

A. Section 1329 authorizes the establishment of FMV as rate base for certain acquisitions. Importantly, under the provisions of Section 1329, Aqua cannot include in rate base amounts in excess of its actual investment in the acquisitions, as the Company may only include the lesser of actual acquisition price or FMV. As such, Aqua is including no more in rate base than it would include whenever it purchases a new asset – the amount it paid. There is no reason Aqua should get a lowered return on its actual investment.

Q. OCA Witness Rothschild states that the Commission should use the low end of range of reasonableness to address concerns related to affordability.[20] Do you agree?

A. I do not. The Company is entitled to a fair and reasonable rate of return. While I certainly recognize the affordability concerns raised by various of the parties, Aqua must also provide safe and reliable service to all of its customers. The requested rate increase in this proceeding would allow Aqua to do exactly that, while balancing affordability and rate

[19] OCA St. No. 3, pp. 97-100.
[20] OCA St. No. 3, p. 103.

gradualism concerns. Further, I note that Aqua's low-income customer assistance programs provide assistance to customers with payment difficulties.

Q. OCA Witness Alexander describes the Company's limitation of liability tariff provisions and recommends certain changes to the same.[21] Please elaborate.

A. Witness Alexander reviews the claims made against the Company from 2019-2024 and recommends that the limitation of liability amount be increased in the Company's tariff from $2,000 to $6,000 based on the fact that the Company has made payments to settle claims in excess of the $2,000. Ms. Alexander also recommends that the tariff be adjusted to clarify "Act of God" liability language to exclude situations where the Company is negligent or falls short of the requirements in Section 1501 of the Public Utility Code.

Q. Do you agree with Ms. Alexander's recommendations related to the liability provisions in the Company's Tariff?

A. No. The Company is not willing to accept Ms. Alexander's recommendations at this time. In the Company's opinion, it is unclear what ramifications would ensue with such a change, and Ms. Alexander has not presented any testimony related to the same. It is certainly possible to assume that, with more liability exposure in Aqua's tariff, the Company's insurance costs would increase. As such, Aqua does not accept Ms. Alexander's recommendation. As to Ms. Alexander's second recommendation on this point, the Act of God liability language present in the Tariff does <u>not</u> include situations where the Company is negligent or fails to satisfy the mandates of Section 1501 of the Public Utility Code and, as such, this recommendation is an unnecessary change. While I am not a lawyer, and this will be further explained in the Company's Main Brief, I am advised by counsel that an

[21] OCA St. No. 7, pp. 22-25.

"Act of God" already does not include situations where the Company was negligent or failed to satisfy Section 1501 of the Public Utility Code.

Q. Please respond to the portion of OCA Witness Hoover's Direct Testimony describing current base rate case notice requirements and how she would like them to be changed.[22]

A. Witness Hoover spends a significant part of her testimony discussing how best to communicate with customers with respect to base rate case filings. I fully respect and appreciate the importance of how Aqua and all utilities communicate with its customers. Based on my experience, there is no one perfect way to notice customers and no one perfect way to explain rate impacts to all the diverse households the Company serves.

Q. Can you further elaborate?

A. I believe the current regulations and practices strike the appropriate balance between using technology and publications to notify customer of a proposed base rate increase. I do not believe the intent of a base rate case notice is to answer every unique and individual customer's question about rate increases, usage, service, infrastructure improvements in their community, how to file a complaint, or explanations about the cause of the rate increase. Rather, I believe the intent of the base rate case notice is to make sure customers are aware that a base rate increase is being requested and to signal their opportunities to ask questions and participate in the proceeding and, in a general fashion, understand how the rate increase affects them. Following a base rate case notice, the customer is free to contact Aqua – or several other entities - to discuss questions they may have with their service or how the rate case filing may affect them.

[22] OCA St. No. 1, pp. 41-48.

Q. Witness Hoover asserts that, by providing rate impacts only at one usage level, Aqua's rate case notice likely underestimates the rate impact for many customers.[23] Do you agree?

A. I agree that there are probably hundreds of pieces of information that could be put on a notice. I have been a part of base rate proceedings in other jurisdictions that require more and less information on the notice. I believe that the vast majority of customers that want to see and understand their usage and a possible increase can review their bill, look at the usage, and then look at the usage used as proxy on the notice to gain perspective on how a rate increase will impact them in a general fashion.

Additionally, providing many different levels of usage for residential customers may confuse customers. As noted above, customers have the option, as indicated in the notice, to contact Aqua to determine how the proposed rate changes would impact their bill or to visit the Company's website to review the proposed rates in the tariffs.

Providing rate impact calculations at different levels is not required by the Commission's regulations (*see* 52 Pa. Code § 53.45). The Company does not agree with the OCA's attempt to challenge the current Commission regulations that would only apply to Aqua. The Commission has also similarly discussed the notice requirements in its recent implementation order of Section 1329 of the Public Utility Code and did not adopt the OCA's proposed multi-level usage notice. I also disagree with adding new notice requirements including a required press release and separate billing insert. The Company is in compliance with existing notice provisions and those provisions provide ample information to customers over the course of a nine month time period.

[23] OCA St. No. 1, p. 8.

Q. Does OCA Witness Hoover take issue with the customer notices regarding the Act 11 shift?

A. Yes. First, I note that the Company's Act 11 shift was conservative in that it was consistent with what Aqua has proposed in the past and did not shift 100% of their base wastewater operation increase to its water customers. Ms. Hoover states the Company should have shown what it wants to charge for wastewater service before the Act 11 shift. To respond, I note that notices sent to the Company's customers must be consistent with the proposed tariffs filed in the case. Notices sent to customers in this case reflected average monthly bills at those proposed rates, consistent with those proposed tariffs. Ms. Hoover's recommendation on this point would create notices that do not square with the proposed tariffs. I believe this would serve to further confuse customers. As was recently noticed in the PAWC rate case, Aqua also has provided notice to customers of its proposed rates, inclusive of the impact of Act 11. There is not an alternative set of rates as Ms. Hoover suggests and the notices reflect the rates shown in the proposed tariff as described above.

Q. OCA Witness Hoover asserts the same issue with respect to notice and cost sharing for Shenandoah water customers. Please respond.

A. My response is similar to that above, noting also that every water acquisition that the Company has completed since single tariff pricing was adopted in the Commonwealth would have some revenue deficiency that is being paid for by other water customers. All of the Company's water customers have been noticed in the same way for decades which includes some aspect of water to water allocation.

Q. Please address comments regarding including the amount of Act 11 on customer bills that was requested in testimony provided at public input hearings.

A. The Public Utility Code and the Commission's regulations do not require the Company to do so. The Act 11 component of the revenue requirement is embedded in the rates of the Company's tariff thus, it is split between the service charges and volumetric charges and not separately identifiable to provide an exact quantification required when reporting billable charges on a customer bill. The Act 11 allocation is identified when the Company files an application for an increase in base rates, specifically Exhibit 1-A in this proceeding, such that the Commission and any interested parties can understand the revenue requirement movements between the wastewater and water utilities. In order to address this, the Commission would have to issue regulations to establish a calculation of each customer's bill to determine what portion of a bill is attributable to the overall impact of Act 11 allocations.

In summary, the charges that the Company includes on a customer bill must have reference to, or line of sight of, an applicable tariff rate or Rider. In this instance, Act 11 as a component of cost of service has neither, thus any recommendation regarding this should be rejected.

Q. On page 4-5 of Mr. Cline's Rebuttal Testimony (I&E Statement No. 3), he recommends that the Company provide an update to Schedule G-2 of Exhibits 1-A through 1-E. Do you agree with Mr. Cline's recommendation?

A. Yes. The Company will agree to provide an update to Schedule G-2 of Exhibits 1-A through 1-E no later than April 1, 2025 which will include actual capital expenditures, plant additions, and retirements by month for the twelve months ending December 31, 2024, and

will provide a subsequent update for the same data no later than April 1, 2026[24] for the twelve months ending December 31, 2025.

XI. EXEMPLARY MANAGERIAL PERFORMANCE

Q. Did the Company provided evidence of exemplary management performance in this proceeding?

A. Yes. My Direct Testimony specifically addresses the performance of Aqua's management (Aqua Statement No. 1, pp. 25-33) and provides detailed information regarding the Company's efforts to provide safe and reliable water and wastewater service. Those efforts include: (1) optimization of water quality and proactive efforts to improve system reliability; (2) wastewater treatment compliance; (3) system reliability and infrastructure rehabilitation including lead service line replacement; (4) customer service focus and upgrades including an interactive map and customer assistance programs; (5) acting to assist the Commission, OCA, and the Pennsylvania Department of Environmental Protection to address issues on small systems and acting as a receiver for the North Heidelberg Sewer Company, Bell Aire Acres, Venango Water Company and Twin Lakes Utilities, Inc.; and (6) recognition for excellence of operations including the Partnership for Safe Water. Aqua is a mission-based utility focused on providing safe and reliable service to its customers. I reiterate that Aqua consistently makes prudent and necessary investments in its infrastructure to serve customers. With the approval of an adequate Return on Equity ("ROE"), Aqua will be able to continue to address the formidable tasks of rehabilitating its infrastructure, acquiring and repairing aging and troubled systems, and maintaining quality service for all of its customers. The Commission has given clear

[24] I note that Mr. Cline's Direct Testimony stated that the Company should provide an update by April 1, 2025 for the year ending December 1, 2025. I believe this was an inadvertent error and should have been April 1, 2026.

signals that service quality is a critical component in establishing rates. For all of these reasons and those reasons listed in Aqua Witness Todd Duerr's Direct and Rebuttal Testimonies (Aqua Statement No. 11; 11-R), an increment for exemplary management effectiveness has been fully supported and should be adopted if, for any reason, the Commission were to consider adopting an ROE of less than 10.95%.

Q. Have any parties acknowledged the receipt of additional basis points in recognition of management performance?

A. Yes. I&E Witness Keller notes that the Commission awarded Aqua an addition of 25 basis points for its management performance efforts in its last base rate case.[25] I note that since the last base rate case, Aqua has been asked to address three more troubled systems which include Venango Water, Deer Haven Water and Deer Haven Wastewater. While Witness Keller acknowledges that the Commission has granted additional basis points to the ROE for management performance, he fails recognize the troubled systems that the Company is currently acting as receive for. Most recently, the Commission asked the Company to act as receiver for Deer Haven Water and Wastewater. Aqua Witness Duerr further describes the Deer Haven Receiverships in his Rebuttal Testimony.

I further note that it does not appear that Mr. Keller disputes my direct testimony about Aqua's various initiatives and accomplishments that demonstrate superior management effectiveness in several areas. While Mr. Keller points to language which focuses on Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement, the Commission did not say this was the only factor that led to the 25 basis point award in its last base rate case.

[25] I&E St. No. 2, p. 68.

Q. Do you agree with Mr. Keller's assertions about recognizing management performance?

A. No. Essentially, Mr. Keller asserts that Aqua should not be recognized for many of the initiatives I described in my Direct Testimony, including infrastructure improvement programs, because they are either funded by customers or required by the Public Utility Code. Rather, he contends that Aqua's level of performance is legally required and therefore no recognition of its management effectiveness is necessary.

Initially, I note that no witness has articulated objective criteria for determining where the line should be drawn between a utility doing what the law requires and going the extra mile to contain costs, provide excellent service and dedicate itself to vigorously pursuing the policy goals of the Commission, environmental regulators, and other government agencies. The attempts to recharacterize exemplary performance are contradicted by Section 523 of the Public Utility Code.

In PPL Electric Utilities Corporation's ("PPL") 2012 base rate case, the OCA also argued that "all regulated utilities are required to provide safe, adequate, reasonable and efficient service as a matter of law" and "a utility must be doing more than providing efficient and reasonable service in order to receive more than the indicated rate of return." *See Pa. PUC, et al. v. PPL Electric Utilities Corporation,* Docket Nos. R-2012-2290597, *et al*., p. 95 (Order entered Dec. 5, 2012) ("*PPL 2012 Order*). Similarly, in UGI Utilities, Inc. – Electric Division's ("UGI Electric") 2018 base rate case, I&E contended that no utility should reap additional rewards for programs funded by customers or for meeting the company's statutory obligation to provide safe and reliable service See *Pa. PUC, et al. v. UGI Utilities Inc. - Electric Division*, Docket Nos. R-2017-2640058, *et al*., p. 111 (Order

entered Oct. 25, 2018) ("*UGI 2018 Order"*). The Commission rejected I&E's and the OCA's position in the aforementioned PPL and UGI Electric base rate cases, and likewise rejected such contentions in Aqua's last base rate case. It should do the same in this case.

Q. OCA Witness Alexander acknowledges the Company uses call center performance metrics that correlate to incentive compensation, however, takes issue with a particular discovery response.[26] Please respond.

A. The Company does link call center performance to its incentive compensation and this is tracked and measured. Nothing in the Aqua-Peoples Merger Settlement directed that compliance with the call center metrics was to be a specific criterion for management incentive compensation. The absence of a specific link between incentive compensation and call center performance criteria provides no basis for claiming that Aqua management is not attentive to customer service issues, or to disallow basis point recognition for exemplary management in the rate of return on common equity. I would observe that OCA admits that the Company met the call center metrics.

Q. OSBA Witness Hails recommends an ROE no higher than 10.58% by computing an implied management performance adder in Mr. Moul's testimony.[27] Do you agree?

A. Mr. Moul's testimony speaks for itself, and it is inappropriate to infer that his recommendation includes something not specified. Aqua supports the addition of a management performance adder in the Commission's final ROE allowance. Mr. Hails' objections to a management performance adder have been rejected in prior Commission orders, as explained previously.

Q. Is there anything else you would like to add regarding this topic?

[26] OCA St. No. 7, pp. 8-9.
[27] OSBA St. No. 1, pp. 4-5 (REVISED).

A. Yes. The witnesses opposing recognition of management performance do not acknowledge the Company's eligibility for performance factor recognition under the Commission's Policy Statement at 52 Pa. Code § 69.711(b)(1). Notwithstanding their erroneous position with regard to Section 523 of the Public Utility Code, the Company certainly has demonstrated that its performance deserves recognition based on the Company's long history of aggressively implementing the Commission's and the Pennsylvania Department of Environmental Protection's policies to continuously address troubled water and wastewater systems and upgrading the facilities in those systems to furnish safe and reliable service.

Q. OCA Witness Mierzwa refers to a report analyzing whether different methods of calculating a flat rate would be more reasonable for some rate zones in reference to a performance adder.[28] Can you please comment?

A. The Company takes directives from the Commission very seriously. Witness Manning and Witness Heppenstall provide a response to this issue.

XII. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does, but I reserve the right to supplement my Rebuttal Testimony as needed during this proceeding.

(b) Move from Flat Rate to Unmetered
(c) Private Fire Adjustment
(d) Contract Customer inflation. Refer to AP Statement No. 10

AQUA PENNSYLVANIA, INC. - WATER BASE

NOTES TO STATEMENT OF INCOME

OPERATING REVENUES

ELIMINATE TWIN LAKES AND VENANGO REVENUE

Beginning January 15, 2021, the Company was appointed receiver for Twin Lakes Utilities, Inc. at Docket No. P-2020-3020914.
Beginning August 12, 2023, the Company was appointed receiver for the Venango Water Company at Docket No. M-2023-3042180.
The following adjustment removes the revenue collected from Twin Lakes and Venango during the test year which
was recorded above the line. Refer to Schedule C-10.1 and Schedule C-10.2 of this exhibit for the removal of Twin Lakes and Venango expenses.

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of water customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

CHEMICALS

The company utilizes various chemicals in the water treatment process. The chemical expense claim is based on the total production gallons for the twelve months ended December 31, 2023 multiplied by the normalized chemical treatment cost per million gallons. The cost per million gallons for the historic test year was increased by a normalized average year over year growth rate to arrive at the treatment cost per million gallons for the future and fully projected future test years.

OTHER INTEREST CHARGES

Other Interest Charges for the year ending December 31, 2023 were principally for funds borrowed through bank loans to finance the Company's capital expenditures. The bank loans outstanding are anticipated to be refinanced with long-term debt prior to the end of the future test year. Therefore, the interest on bank loans is eliminated.

(1) Washington Park and Sleepy Hollow are exceptions to the treatment of negative acquisition adjustments as provided for in Section 1327 of the Public Utility Code because it was stipulated in the order approving their acquisition (Docket No. A-230550F2000) that rate base for rate making purposes would be limited to purchase price. To accomplish that requirement, the negative acquisition adjustment had to be included as a deduction to rate base.

AQUA PENNSYLVANIA, INC. - WATER BASE

NOTES TO RATE BASE ELEMENTS

MATERIALS AND SUPPLIES

The Company's claim for materials and supplies at December 31, 2024 and December 31, 2025 is calculated on the basis of the average monthly balances in the materials and supplies account during the period December 2022 to December 2023.

LINE NO.	MONTH	YEAR		BALANCE
1	December	2022	$	19,696,718

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of water customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

CASH WORKING CAPITAL

CALCULATION OF LAG DAYS IN RECEIPT OF REVENUE

The time between rendering of a bill and receipt of payment is determined by dividing the average accounts receivable balances for the test year by the average daily billing as follows:

LINE NO.	MONTH (1)	YEAR (2)	BALANCE (3)
1	December	2022	
2	January	2023	
3	February	2023	
4	March	2023	
5	April	2023	
6	May	2023	
7	June	2023	
8	July	2023	
9	August	2023	253,457
10	September	2023	207,135
11	October	2023	172,072
12	November	2023	139,782
13	December	2023	196,001
14	Total		$ 968,447
15	Average Accounts Receivable Balance		$ 193,689
16	Gross Utility Water Revenues recorded		
17	During the Five Months Ended 12/31/2023		$ 732,434
16	Average Daily Billing		$ 4,819
18	Lag in Receipt of Payment		40.2
19	Average Use Period (a)		15.2
20	Bill Issue Period		2.0
21	Lag Days in Receipt of Revenue		57.4

Reference:
(a) One-half of monthly billing period.

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of wastewater customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

OPERATING EXPENSES

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of wastewater customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

LINE NO.	DESCRIPTION

CALCULATION OF LAG DAYS IN RECEIPT OF REVENUE

The time between rendering of a bill and receipt of payment is determined by dividing the average accounts receivable balances for the test year by the average daily billing as follows:

LINE NO.	MONTH	YEAR	BALANCE
	(1)	(2)	(3)
1	December	2022	$ 532,241
2	January	2023	504,968
3	February	2023	398,494
4	March	2023	431,567
5	April	2023	459,800
6	May	2023	396,920
7	June	2023	527,916
8	July	2023	481,674
9	August	2023	436,388
10	September	2023	631,454
11	October	2023	509,073
12	November	2023	473,408
13	December	2023	475,768
14	Total		$ 6,259,671
15	Average Accounts Receivable Balance		$ 481,513
16	Gross Utility Wastewater Revenues recorded		
17	During the Twelve Months Ended 12/31/2023		$ 11,809,110
16	Average Daily Billing		$ 32,354
18	Lag in Receipt of Payment		14.9
19	Average Use Period (a)		15.2
20	Bill Issue Period		2.0
21	Lag Days in Receipt of Revenue		32.1

Reference:
(a) One-half of monthly billing period.

RATE CASE EXPENSE

The following adjustment reflects the estimated cost of this rate case as summarized below. The total cost is being allocated based on the ratio of wastewater customers served to total water and wastewater customers. The Company proposes to normalize this cost over a twenty-four month period, which is consistent with the rate treatment in previous cases.

LINE NO.	DESCRIPTION

PREPARED REBUTTAL TESTIMONY OF CHRISTOPHER E. MANNING

Topics Addressed:

Certain Expense Adjustments
EDU/Flat Rate Billing

DATE SERVED: September 12, 2024 **Aqua Statement No. 3-R**
DATE ADMITTED: _____

TABLE OF CONTENTS

I. INTRODUCTION AND SCOPE OF TESTIMONY 1
II. OPERATING EXPENSE ADJUSTMENTS 1
III. EDU/FLAT RATE BILLING 15
IV. CONCLUSION 25

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. What is your name and business address?

A. My name is Christopher. E. Manning. My business address is 762 W. Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Aqua Pennsylvania, Inc. ("AP") as a Finance and Rate Analyst II.

Q. Have you previously provided testimony in this proceeding?

A. Yes. I provided Direct Testimony on behalf of AP and Aqua Pennsylvania Wastewater, Inc. ("APW") (collectively "Aqua PA," or the "Company") as Statement No. 3 with the Company's filing to the Pennsylvania Public Utility Commission ("PUC" or the "Commission").

Q. What is the purpose of your Rebuttal Testimony?

A. The purpose of my testimony is to address the Direct Testimonies of Office of Consumer Advocate ("OCA") witness Ralph Smith (OCA Statement No. 2), the Commission's Bureau of Investigation and Enforcement ("I&E") witnesses Zachari Walker (I&E Statement No. 1) and Ethan Cline (I&E Statement No. 3), and SCH USA LLC's ("SCH USA") witnesses Carlos Padilla (SCH USA Statement No. 1) and Frank Lacey (SCH USA Statement No. 3).

II. OPERATING EXPENSE ADJUSTMENTS

Q. Has any party recommended an adjustment to the Company's claimed payroll expense?

A. Yes. Both I&E witness Walker and OCA witness Smith proposed adjustments to payroll expense based upon an employee vacancy adjustment. OCA also proposes an adjustment

to remove seasonal positions based upon the Company's actual hiring of seasonal positions in the future test year ("FTY").

Q. Please summarize I&E witness Walker's proposed adjustment.

A. Mr. Walker's proposed adjustment is based on the utilization of a vacancy rate percentage of 4.26%. I&E St. 1 at 12-13. I&E witness Walker asserts that this rate is representative of the Company's 3-year average full-time employee vacancies for the years 2021, 2022, and 2023.

Mr. Walker calculates his proposed vacancy rate by summing the average non-union and union employees that the Company had employed in each year and subtracting that amount from the Company's authorized full time head count for each year to derive a number of vacant positions for that year (*e.g.*, 196 Non-Union Employees + 368 Union Employees = 564 Full Time Employees in 2023; 590 Authorized Full Time Employees in 2023 – 564 Actual Full Time Employees = 26 Vacant Positions in 2023). The number of vacant positions that Mr. Walker had calculated for each year was 28 positions in 2021, 23 positions in 2022, and 26 positions in 2023. Mr. Walker averaged his three years of vacant positions to arrive at an average vacant position amount of 26 positions.

Mr. Walker carried this amount of 26 vacant positions forward into the fully projected future test year ("FPFTY") and applied that to the 610 budgeted full-time positions claimed in the FPFTY, resulting in a vacancy rate of 4.26% (26/610 = 4.26%). Mr. Walker then multiplied this percentage by the claimed labor expense for each division. I&E St. 1 at 14. These adjustments amount to proposed expense decreases of $1,613,321 for the Company's Water Base Operations, $14,916 for the Company's Shenandoah

Operations, $150,117 for the Company's Wastewater Base Operations and $6,856 for the Company's Lower Makefield Operations.

Q. Please summarize OCA witness Smith's proposed adjustment.

A. Mr. Smith's proposed adjustment is based on the utilization of a vacancy rate percentage of 4.57% for Water Base Operations and 4.69% for Wastewater Base Operations. Mr. Smith derives these rates by utilizing the Company's response to OCA-IX-1 in addition to the information provided as part of Exhibit 2 of the Company's initial filing. OCA St. 2 at 46. The Company's response to OCA-IX-1 provides all labor related costs in the Company's filing that are for positions that had not been filled as of May 31, 2024, but for which the Company projects would be filled at various points during the FTY and FPFTY.

Mr. Smith calculates his proposed vacancy rates by taking the gross dollars in each rate division associated with the vacant full-time positions provided in the response to OCA-IX-1 and dividing them by the Company's claimed gross dollars for each respective rate division. From there, Mr. Smith applied his proposed vacancy rates that he calculated to the Company's gross payroll claim to arrive at his proposed gross payroll amounts for the Company. Mr. Smith then applies the Company's capital and non-operating labor rates to his proposed gross payroll amounts to calculate what he proposes the Company's expense payroll claims should be. Mr. Smith then subtracts the Company's claimed expense payroll amounts from his calculated expense payroll amounts to arrive at his adjustments. These adjustments amount to proposed expense decreases of $1,760,230 for the Company's Water Base Operations and $167,998 for the Company's Wastewater Base Operations.

In addition to the proposed adjustment for the Company's full time labor complement, Mr. Smith also recommends that the Company remove 25 seasonal positions from its claim. OCA St. 2 at 43. These 25 positions are viewed as a separate adjustment and were not subject to the vacancy percentages that Mr. Smith utilized for his proposed adjustment to the Company's full time employee labor claim.

Q. Does the Company agree with any of the adjustments proposed by I&E and OCA related to payroll expense?

A. No. The Company does not agree with the 4.26% full time vacancy rate adjustment proposed by I&E, as it is not reasonable. The Company also does not agree with the 4.57% full time vacancy rate for Water Base Operations, the 4.69% full time vacancy rate for Wastewater Base Operations proposed by OCA, or with the proposed reduction of number of seasonal employees to 10.

Q. Please explain why I&E witness Mr. Walker's proposed vacancy rate adjustment should be rejected.

A. Mr. Walker fails to recognize or take into account the vacancy credit that the Company has already reflected in its FTY and FPFTY claim (see Exhibit CEM-1-R). Thus, his adjustment double counts the vacancy adjustment already built into the Company's expense claim because he does not apply his rate to unadjusted gross labor.

Mr. Walker's calculation of the full-time vacancy rate is inaccurate for additional reasons. First, Mr. Walker applied his vacancy rate and adjusted the payroll claim for all full-time, part-time, co-op and seasonal employees even though his vacancy rate was computed using only full-time employees. While the Company does not agree that Mr. Walker's adjustment should be adopted, if it is adopted by the Commission, then the

Company submits it is only appropriate to apply this adjustment to the full-time labor expense aspect of its payroll expense claim.

Second, Mr. Walker fails to address and/or account for how the growth of the Company through the acquiring of new systems impacts his calculations or may impact his calculations. For example, in his calculation of the average number of full-time union employees in HTY, Mr. Walker averages four quarters of data together. However, the Company acquired Shenandoah in July 2023, which accounted for 7 additional union employees. This growth in union employees is not appropriately reflected in Mr. Walker's average because these employees simply did not exist before the closing of the Shenandoah system in the 2023 Q1 or Q2 data. Thus, the 2023 Q1 and Q2 data that Mr. Walker utilized in his calculation should not be considered unless it was appropriately adjusted. As noted in the Company's response to I&E-RE-35, the Company has employed 373, 376, 380, and 380 union employees in its last four quarters of operations. If an average of these numbers were to be utilized, which consists of operations with no employee growth through acquisition, the resulting number is substantially different than what Mr. Walker utilized for his number of HTY union employees in his calculation.

Q. Please explain why OCA witness Mr. Smith's proposed vacancy rate adjustment should be rejected.

A. Mr. Smith fails to recognize or take into account the vacancy credit that the Company has already reflected in its FTY and FPFTY claim. Thus, his adjustment double counts the vacancy adjustment already built into the Company's expense claim because he does not apply his rate to unadjusted gross labor. Mr. Smith does acknowledge that he would continue to review additional information pertaining to the Company's labor vacancy rate

and labor claims upon the receipt of the Company's response to discovery question OCA-XXIII-1 (OCA St. 2 at 47), which the due date of OCA Set 23 was after the due date of the OCA's direct testimony, and is attached to my Rebuttal Testimony as Exhibit CEM-1-R.

Mr. Smith's calculation of the full-time vacancy rate is inaccurate for additional reasons. First, Mr. Smith's vacancy rates were derived by utilizing the Company's response to OCA-IX-1 as well as payroll information contained within Exhibit 2 of the Company's initial filing which the Company provided to support its labor claims. OCA St. 2 at 46. By utilizing the vacant positions provided in response to OCA-IX-1, which provides vacancies as of May 31, 2024 for both FTY and FPFTY positions, to derive a vacancy rate, Mr. Smith includes 15 full time positions which will not be hired until the start of the FPFTY in his calculations. These positions are noted in Exhibit 2 of the Company's initial filing as not starting until 2025 and should not be included in any vacancy rate calculation as the positions are not set to be filled until then. It is inappropriate to include positions that will not start until the FPFTY in a vacancy rate calculation based upon FTY or 2024 data. If these positions (unique IDs of PA-0640 through PA-0654), which will not start until the FPFTY, were to be removed from Mr. Smith's calculation in his supporting files, the vacancy rates that would result would be 1.95% for Water Base Operations and 2.75% for Wastewater Base Operations. Please see Exhibit CEM-2-R showing the removal of these positions and the resulting vacancy calculation.

Q. Please respond to OCA witness Mr. Smith's further adjustment related to seasonal position vacancies.

A. I do not agree with Mr. Smith's proposal to reduce the number of seasonal positions to reflect the number that the Company has actually hired in the FTY. The Company has hired

15 seasonal positions in the FTY, or 5 additional seasonal employees than what was provided in its response to OCA-IX-1 per the Company's response to OCA-XXIII-3. If the Commission agrees with Mr. Smith, the seasonal adjustment should be based off of the FTY seasonal employees actually hired by the Company. As such, the $201,500 that Mr. Smith proposed be removed should be reduced accordingly by $40,300 to reflect the five additional seasonal employees that have been hired, or a total adjustment of $161,200. As mentioned earlier, Mr. Smith does acknowledge that he would continue to review and revise information based upon additional information that is provided.

However, the 15 seasonal positions that the Company has hired this year are an anomaly and do not reflect the historical seasonal hiring practices of the Company. The Company hired 21 seasonal positions in 2022 and 23 seasonal positions in the 2023. The Company always actively strives to fill each respective authorized seasonal position, of which there are 35 for the FTY.

Q. Do I&E and OCA propose adjustments to the Company's Payroll Tax Expense claim?

A. Yes. I&E witness Walker proposes to reduce the Company's Payroll Tax Expense claim for Water Base Operations by 4.26% or $141,565, based upon his proposed vacancy rate. I&E St. 1 at 18.

OCA also proposes to reduce the Company's Payroll Tax Expense claim. OCA witness Smith proposes to reduce the Company's Payroll Tax Expense claim for Water Base Operations by $150,072 and Wastewater Base Operations by $12,852. Mr. Smith's adjustment is primarily based upon his proposed vacancy rates of 4.57% for Water Base

Operations and 4.69% for Wastewater Base Operations, but also accounts for his proposed removal of 25 seasonal positions from the Water Base Operations. OCA St. 2 at 48.

Q. Does the Company agree with these adjustments?

A. The Company does not agree with I&E Witness walker's adjustment to payroll tax for the same reasons as previously discussed regarding the flaws in his proposed vacancy rate adjustment. As for OCA's proposals, the Company also does not agree with OCA Witness Smith's adjustment to payroll tax for the same reasons as previously discussed regarding the flaws in his proposed vacancy rate adjustment. Finally, the Company does not agree with the adjustment made by witness Smith that reflects the impact of the proposed reduction to seasonal employees.

Q. Has any party recommended an adjustment to the Company's claimed 401k expense?

A. Yes. OCA witness Smith proposed an adjustment to decrease 401k expense for Water Base Operations by $136,152 based upon his proposed employee vacancy rate of 4.57% for Water Base Operations. OCA St. 2 at 48.

Q. Does the Company agree with OCA witness Smith's adjustment to 401k Expense?

A. No. The Company does not agree with OCA witness Smith's adjustment to 401k Expense for the same reasons as previously discussed regarding the flaws in his proposed vacancy rate adjustment.

Q. Has any party recommended an adjustment to the Company's claimed group insurance expense in Water Base Operations?

A. Yes. OCA witness Smith proposed an adjustment to decrease group insurance expense for Water Base Operations by $289,226 based upon his proposed employee vacancy rate of 4.57% for Water Base Operations. OCA St. 2 at 49-50.

Q. Does the Company agree with OCA witness Smith's adjustment to Group Insurance Expense?

A. No. The Company does not agree with OCA witness Smith's adjustment to Group Insurance Expense for the same reasons as previously discussed regarding the flaws in his proposed vacancy rate adjustment.

Q. Does OCA witness Smith make a corresponding adjustment to Wastewater Intracompany Benefits to account for his proposed adjustment to Wastewater employee benefits?

A. Yes. OCA witness Smith proposed an adjustment to decrease Wastewater Intracompany Benefits Expense for Wastewater Base Operations by $100,799 based upon his proposed employee vacancy rate of 4.69% for Wastewater Base Operations. OCA St. 2 at 51-52.

Q. Does the Company agree with OCA witness Smith's adjustment to Wastewater Intracompany Benefits?

A. No. The Company does not agree with OCA witness Smith's adjustment to Wastewater Intracompany Benefits for the same reasons as previously discussed regarding the flaws in his proposed vacancy rate adjustment. The Company does acknowledge that the calculations and impacts provided by OCA witness Smith are mathematically accurate and that any decrease to Wastewater Intracompany benefits would increase pre-tax operating expense for Water Base Operations.

Q. Has I&E witness Walker recommended an adjustment to the Company's claimed Employee Benefits Expense?

A. Yes. Mr. Walker proposes an adjustment to decrease total Employee Benefit Expense for Water Base Operations, Shenandoah, Wastewater Base Operations, and Lower Makefield

based upon his proposed vacancy rate of 4.26%. Mr. Walker applies his proposed vacancy rate of 4.26% to each of the Company's proposed total Employee Benefits Expense found on Schedule C-2 of each respective exhibit. I&E St. 1 at 16-17. This proposed adjustment would reduce employee benefit expense by $331,934 for Water Base Operations, $8,968 for Shenandoah, $90,070 for Wastewater Base Operations, and $4,113 for Lower Makefield. I&E St. 1 at 16-17.

Q. Does the Company agree with I&E witness Walker's adjustment to Employee Benefits Expense?

A. No. The Company does not agree with I&E witness Walker's adjustment to Employee Benefit Expense for the same reasons as previously discussed regarding the flaws in his proposed vacancy rate adjustment.

Q. Please describe the Company's General Price Level Adjustment.

A. This adjustment reflects the anticipated effect of price increases on operating expenses, like transportation, supplies, outside services, and other small expense categories that were not specifically adjusted for elsewhere in this case. The adjustment was described in my direct testimony, Aqua Statement No. 3 at 2-3.

Q. Has any party proposed that the Company's General Price Level Adjustment be disallowed?

A. Yes. Both I&E witness Walker and OCA witness Smith recommend that this proposed adjustment, to specific categories of expenses not otherwise adjusted, be disallowed and removed in its entirety. I&E St. 1 at 33-36; OCA St. 2 at 38-40.

Q. Please summarize the basis for Mr. Walker and Mr. Smith's recommendation to disallow the General Price Level Adjustment.

A. Both Mr. Walker and Mr. Smith assert that the adjustment is a "blanket" or "generalized" inflation adjustment which does not utilize a targeted approach. Both witnesses cite cases where the Commission disallowed blanket generalized inflation adjustments. OCA witness Smith does acknowledge that there was a recent case where the Commission allowed an inflation adjustment, but noted that the approach utilized in that case was more targeted than the approach utilized by the Company in this case.

Q. Do you agree with I&E witness Walker and OCA witness Smith's adjustment to remove the Company's use of a General Price Level Adjustment?

A. No, I do not agree with I&E witness Walker and OCA witness Smith's assertion that the proposed adjustment is a blanket generalized inflation adjustment. The Company's adjustment reflects the anticipated effect of inflation only on operating expenses that were not specifically adjusted in this case.

The Company believes that the summary level accounts (e.g., Transportation and Supplies) that fall under the General Price Level Adjustment are better suited for a general price level adjustment as it represents a conservative approach. Given the current economic conditions and the Company's analysis of historical costs associated within these summary accounts, the Company deems it reasonable and appropriate to utilize such an adjustment. The overall percentage increases to summary level accounts such as Transportation and Materials and Supplies over the past three years are significantly greater than the requested CPI inflation amounts requested in the FTY and FPFTY as shown below in Table 1 which was provided in response to I&E-RE-33 to highlight and support the increased costs.

Neither Mr. Walker nor Mr. Smith make any mention or take into consideration any historical data or present economic conditions. Both witnesses fail to address the macro conditions in which the world is currently operating in and fail to make any mention of actual inflation rates seen over the past few years. All of the expenses that the Company is requesting be increased under the general price level adjustment are directly and adversely impacted by inflation. The Commission should not adopt I&E Witness Walker and OCA Witness Smith's recommendation.

Q. Has any party proposed an adjustment to the Company's claim for normalized rate case expense?

A. Yes. I&E witness Walker has proposed an adjustment to reduce the Company's Rate Case Expense claim in the FPFTY by a combined $647,268 in Exhibits 1-A through 1-D. This amount excludes another $5,232 that the Company believes Mr. Walker would have adjusted out for East Whiteland in Exhibit 1-E. I&E St. 1 at 24-27.

Mr. Walker does not dispute the total amount of the Company's Rate Case Expense claim, but rather the normalization period over which the Company is to expense the costs associated with the rate case. Mr. Walker proposes that a normalization period of 4 years,

or 48 months, should be used in lieu of the two-year, or 24-month, normalization period that the Company proposed.

Q. Do you agree with I&E witness Walker's adjustment and proposed normalization period for the Company's rate case expense claim?

A. I do not. Mr. Walker argues that the historical cadence in which the Company has filed its last four rate cases is 48 months and that 48 months should be the appropriate time frame to normalize rate case expense over. However, Mr. Walker fails to take into consideration the reasoning for why the Company was able to stay out between its 2011 and 2018 cases. As discussed at pages 88-90 of the Commission's Order in *PA PUC v. Aqua Pennsylvania, Inc., et al.,* Docket Nos. R-2021-3027385 and R-2021-3027386, the Company was able to avoid filing a rate case for an extended period after the 2011 rate case due to a provision in that settlement regarding the use of tax repair deduction for income tax purposes. That situation will not recur in the future. This stay-out period does not reflect the Company's rate filing interval, nor should it be used to evaluate the Company's historical filing cadence.

The interval between the Company's last two case filings were 36 months (2018 Rate Case) and 33 months (2021 Rate Case), respectively, and highlight the Company's ability to stick to the normalization periods that it requests. The Company had requested normalization periods of 36 months in both of its last two cases. The Company intends to file its next case approximately 24 months from the filing of the current case and requests that the normalization period for Rate Case Expense align with that expected time frame. A 24-month filing interval is expected due to the need to address PFAS requirements, as explained further by Mr. Packer.

Q. Has any party recommended an adjustment to the Company's claimed legal expense?

A. Yes. OCA witness Smith proposes an adjustment to remove legal fees associated with the Company's appeal of Commission orders which would reduce the Company's legal expense claim by $66,685 for Water Base Operations and $18,206 for Wastewater Base Operations. OCA St. 2 at 41.

Q. Do you agree with OCA witness Smith's proposed adjustment to the Company's legal expense claim?

A. Yes. While appeals are undoubtedly a part of business operations for the Company, the Company accepts Mr. Smith's proposed adjustment to decrease legal expense in its' Water and Wastewater Base Operations based upon the nature of these appeals. The expense reductions that have been proposed by Mr. Smith have been reflected in the Company's rebuttal models (AP Exhibit 1-A(a) through 1-E(e)). The Company will note however, that after the appellate process for Twin Lakes Utilities, Inc. is completed, it will be making a claim in the first base rate case for expenses associated with defending its position in Twin Lakes case.

Q. Please discuss the adjustment made by I&E witness Walker to Membership Dues.

A. Mr. Walker made an adjustment to the Company's Water Base Operations of $374,364 and the Company's Wastewater Base Operations of $332. Mr. Walker made this adjustment based upon the removal of the Company's membership dues to the Chamber of Commerce and Service/Social Other organizations. I&E St. 1 at 20-21.

Q. Do you agree with Mr. Walker's adjustment to Membership Dues?

A. No. The Company's dues to the Chamber of Commerce allow for the Company to be a partner with local businesses and municipalities in the areas the Company serve. It also

provides the opportunity to interact with business leaders across the Commonwealth of Pennsylvania to promote a strong business climate which will promote jobs, increase population in the state and in turn support the areas we serve.

Q. Does any party make expense adjustment claims based on the removal of the East Whiteland system from the Company's base rate case?

A. Yes. I&E and OCA both make adjustments throughout their testimonies regarding the removal of certain expenses based on their belief that East Whiteland should be removed from this case. The subject of East Whiteland and its inclusion in this case are described in the Rebuttal Testimony of William C. Packer (Aqua Statement No. 1-R). However, I will note that for the reasons set forth in Mr. Packer's Rebuttal Testimony those adjustments should be rejected by the Commission. If East Whiteland is excluded from this case, certain allocated costs will need to be re-allocated back to Aqua.

III. EDU/FLAT RATE BILLING

Q. Who is SCH USA and what is the nature of their complaint?

A. SCH USA is a commercial, unmetered wastewater customer of the Company that owns and operates a large commercial resort known as the "Split Rock Resort". The resort is situated in Kidder Township, Carbon County, Pennsylvania. SCH USA provides water service to itself via its own private wells and the Company provides wastewater service to SCH USA. SCH USA is located within Rate Zone 4 of the Company's current Wastewater Tariff and is billed on a flat per equivalent dwelling unit or "EDU" basis monthly.

SCH asserts that the Company's current and proposed wastewater tariff results in unjust and unreasonable rates being charges to SCH USA. SCH USA St. 1 at 3. SCH also asserts that the number of EDUs that the Company is billing to SCH USA and that would

be billed to SCH USA under the proposed tariff do not have any relationship to the flows that are coming from the properties. SCH USA St. 3 at 3. SCH USA witness Padilla argues that if the resort is operating at anything less than 100% occupancy, which he claims that flat EDU rates are based on, that SCH USA is being charged for more wastewater usage than the Company is collecting and treating. SCH USA St. 1 at 3-4. SCH USA also claims that the Settlement Agreement (SCH USA St. 3 Exhibit FL-2), which stipulates the number of EDUs associated with their resort, does not provide an accurate basis for billing. SCH USA St. 3 at 3-7.

SCH USA therefore proposes that the Company evaluate alternate methods of billing SCH USA. Mr. Padilla claims that the Company can do this in a number of ways including: (1) measuring actual water consumption, (2) measuring actual wastewater discharges into Aqua's system; (3) adjusting the EDUs used for billing purposes to better reflect actual usage and occupancy; or (4) assigning a different proxy that more accurately reflects actual usage and occupancy. SCH USA St. 1 at 4. Mr. Padilla further notes that the Company should be required to provide billing options for currently unmetered customers such as SCH USA to be billed for actual usage rather than using EDUs which he claims are an unfair and inaccurate estimation. SCH USA St. 1 at 5.

Q. Do you agree with SCH USA's claims?

A. No, I do not. I will describe why the number of EDUs being charged to SCH USA is appropriate, why it is appropriate to utilize the number of EDUs from the Settlement Agreement for SCH USA's billing, and why SCH USA is billed on a flat rate per EDU basis as an unmetered customer. These issues are also addressed in the Rebuttal Testimony of Gregory R. Herbert (Aqua Statement No. 10-R). SCH USA's issues, from an

operational aspect, are addressed in the Rebuttal Testimony of Todd M. Duerr (Aqua Statement No. 11-R).

Q. Does SCH currently have outstanding balances owed to the Company?

A. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** and is the focus of the current compliant filing SCH USA made against Aqua in Docket Nos. C-2022-3036893 and C-2022-3037118.

Q. What are the number of EDUs that the Company charges SCH USA on a monthly basis?

A. SCH USA is currently billed 330 EDUs on a monthly basis. These EDUs are broken out amongst four accounts as noted in the Company's response to SCH-I-7. These accounts are as follows: Willowbrook (128 EDUs), Galleria and Water Park (145 EDUs), Lodge-Remaining Uses (53 EDUs), and Laundromat (4 EDUs).

Q. Do SCH USA witnesses Padilla and Lacey explain how the EDUs associated with SCH USA were originally determined?

A. Yes. Witnesses Padilla and Lacey assert that the number of EDUs were originally set by a Settlement Agreement between Split Rock's original owner and Kidder Township in 2010.

Q. Do you agree with witnesses Padilla and Lacey as to how the EDUs associated with SCH USA were determined?

A. Yes, I do. At the time of the Company's acquisition of the wastewater assets of Kidder Township by Aqua in 2012, the number of EDUs that were transferred to Aqua from Kidder Township were taken from the Settlement Agreement, which was entered into between the Kidder Township and Vacation Charters Ltd., Split Rock Country Club, Inc., and Summit

Management and Utilities, Inc. As was reflected in the Company's Compliance Tariff at Docket No. A-2012-2298067, included in my Rebuttal Testimony as Exhibit CEM-3-R, Willowbrook at Lake Harmony would be billed 128 EDUs, the Galleria and Water Park would be billed 145 EDUs and the Remaining Uses or what is known as the Lodge would be billed 53 EDUs. SCH USA also acquired another property, a Laundromat, which consisted of 4 EDUs at the time of acquisition. The aforementioned number of EDUs comprise 330 of the 430 EDUs noted in the Settlement Agreement. The remaining EDUs were not purchased by SCH USA and are currently billed to another customer of the Company.

Q. Does SCH USA witness Lacey further comment on how the EDUs associated with SCH USA were originally determined?

A. Yes. Witness Lacey notes that as part of the Settlement Agreement that the number of EDUs was determined before a proposed expansion of 192 units (384 rooms) at the resort was started. Mr. Lacey asserts that the proposed expansion was included in the derivation of EDUs included in the Settlement Agreement and that the expansion was never built. Mr. Lacey further asserts that the Company is currently (and has always been) billing SCH USA for wastewater throughput from those unbuilt rooms that were planned when the Settlement Agreement was negotiated.

Q. Do you agree with witness Lacey's claim that the Company is currently billing SCH USA for unbuilt rooms that were planned but never built?

A. No, I do not. At the time that the Settlement Agreement was entered into, all parties acknowledged that the 320 units had been approved for construction at Willowbrook per

the Agreement. At the time of the agreement, 128 units were built and in use. 192 units were still not constructed and had yet to been built.

All parties of the Settlement Agreement agreed that each of the 320 Willowbrook Units were to be **1** EDU. The Company, from the time of the acquisition and up through present time, is only billing Willowbrook **128** EDUs meaning that the Company is not billing or charging for any of the unbuilt rooms that Mr. Lacey is claiming. The Settlement Agreement also states that the number of EDUs that were set at the time were based on all the currently existing improvements at the premises that were owned, operated, and or occupied by the Plaintiffs (SCH St. 3, Exhibit FL-2, Settlement Agreement, Paragraph 12). Paragraph 13 of the Settlement Agreement further provides that future EDUs added to the system by the Plaintiffs would be billed at then existing rates by Kidder Township or its successor.

Q. Why was it appropriate to establish the number of EDUs for SCH USA based upon the Settlement Agreement?

A. The Settlement Agreement was appropriate to utilize for the number of the EDUs associated with the Split Rock Resort as Kidder Township had been charging the resort this exact number of EDUs prior to the Company's ownership of the Kidder Wastewater system. As is commonplace with any acquisition, the number of EDUs, or billing determinants, associated with a customer remain consistent with what the system's previous owner had been charging. The assigned EDUs from Kidder Township's billing system were transferred to the Company for billing purposes. As previously mentioned, the Commission approved the Company's acquisition of the Kidder Township wastewater system in 2012 at Docket No. A-2012-2298067, and the Compliance Tariff that was filed

as part of this proceeding explicitly lists out the number of EDUs that were coming over with the Split Rock Resort.

Q. Has the Commission reviewed the EDUs billed to the SCH USA accounts since the Company's acquisition of the Kidder Township Wastewater Assets?

A. Yes. As part of the Company's past two base rate cases in 2018 and 2021 at Docket Nos. R-2018-3003561 and R-2021-3027386, the number of EDUs billed to SCH USA were reviewed and included in the revenue requirements as set forth in the respective Commission orders in both the 2018 and 2021 wastewater rate cases. The Commission approved those rates through the Compliance Tariffs filed in the dockets referenced above and those rates were determined by the Commission to be just and reasonable.

Q. Why is it not appropriate to establish the number of EDUs for SCH USA based upon occupancy rate?

A. Occupancy rates have never been used by the Company to determine the number of EDUs associated with a customer's premise. Factoring in occupancy rate for an unmetered customer is impossible as the customers' usage is not tracked. SCH USA is an unmetered customer that only asserts that their occupancy rates impact the amount of wastewater they are producing. SCH USA provides no auditable, numerical data pertaining to its water and wastewater usage, but claims that their actual wastewater usage is much lower than what is being billed by Aqua. SCH USA has offered no substantiation or validation of this claim.

The Company is required to handle the maximum amount of flow that could come from this customer. EDUs are not a variable number and do not ebb and flow with each and every customer's usage at their premise. Once an EDU assignment is set, it does not

change unless there is a material and quantifiable change in the nature of operations associated with the premise in question.

Q. Has the nature of the Split Rock Resort that is now owned by SCH USA changed since the Company's acquisition of the Kidder Township Wastewater system?

A. Not to Aqua's knowledge. The Split Rock Resort has not changed the nature of its operations since the Company acquired the Kidder Township Wastewater system. SCH USA is running and operating a resort that has the ability to produce as much wastewater as the day that the Company acquired the Kidder Township Wastewater System as it does today. Thus, there is no reasoning or fact based evidence to change the assignment of EDUs associated with SCH USA.

Q. Why is SCH billed on a flat rate per EDU basis?

A. SCH USA is billed on a flat rate per EDU basis as their water sources – privately owned wells – are not metered. A discussion on the operational reasons why SCH USA is not billed on a metered basis are included in the Rebuttal Testimony of Todd M. Duerr (Aqua Statement No. 11-R).

Q. Please respond to Public Input Hearing witness John Day regarding his concerns on flat rate billing in Lake Harmony.

A. I have reviewed Mr. Day's written complaint and testimony at the public input hearing. Mr. Day wants the Commission to establish a lower flat rate for seasonal communities, or require investor owned utilities to put water meters on private wells to provide metered rates for flat rate customers. The Company respectfully disagrees and notes that any changes from prior Commission precedent will have a significant impact on all investor owned wastewater utilities. I will first provide some general background on Mr. Day's

previous complaints and Commission decisions on this matter. Then I will discuss his complaints in this case more specifically.

Q. Did Mr. Day file a similar complaint in 2021 regarding flat rate billing?

A. Yes. At Docket No. C-2021-3026213, Mr. Day filed a complaint wherein he argued that as a seasonal/second home resident, he is only at his Lake Harmony property 5-10 days per month, and therefore should not be charged the full monthly rate due to the limited time spent at the Lake Harmony property. The Administrative Law Judge Joel H. Cheskis and the Commission denied his complaint stating:

> Mr. Day's complaint will be denied because he has failed to satisfy his burden of demonstrating that Aqua violated the Public Utility Code, a Commission order or regulation or a Commission-approved tariff of the company.[1]

Moreover the ALJ, in his reasoning which was adopted by the Commission, stated:

> Furthermore, Mr. Day has not presented any evidence demonstrating that Aqua's tariff is unreasonable as applied to him. For example, Mr. Day's primary argument is that he is only at the service address for 5-10 days per month and that, as a result, he should not be required to pay the monthly service charge as if he were at the service address every day of the month. Mr. Day testified: "We are not full-time residents and the rates as it's been implemented are metered rates, is charging us at a higher level, an unequitable level, for the services that we're receiving." Tr. 10-11. This argument is without merit and will be rejected.[2]
>
> . . .
>
> The fact that Mr. Day is present at the service address only 5-10 days a month is irrelevant to whether the $100 sewer charge is reasonable. Aqua has no control over when its customers are present at the service address. Yet, Aqua still is required to have its sewer service

[1] *John Day v. Aqua Pennsylvania Wastewater, Inc.*, Docket No. C-2021-3026213, Initial Decision at 7 (Oct. 28, 2021). The Initial Decision became final without further action of the Commission on November 30, 2021 at Docket No. C-2021-3026213.
[2] *Id*. at 8.

> available for whenever the customer desires to use it. Mr. Day is required to pay the monthly sewer charge whether he is present at the service address every day of the month or no days of the month. If Mr. Day were present at the service address every day of every month, he would still pay the $100 sewer charge. Mr. Day's argument to the contrary will be rejected.[3]
>
> In fact, if Aqua were to do what Mr. Day is requesting, then the company could be giving Mr. Day preferential treatment over other existing customers which could be a violation of the Public Utility Code. *See*, 66 Pa.C.S. § 1303 ("No public utility shall, directly or indirectly, by any device whatsoever, or in any wise, demand or receive from any person, corporation, or municipal corporation a greater or less rate for any service rendered or to be rendered by such public utility than that specific in the tariffs of such public utility applicable thereto."). In addition, if Aqua were to do what Mr. Day is requesting, and Aqua then has to provide the same service to all of its customers, the cost to provide service to all Aqua customers would likely increase exorbitantly. Aqua's tariffs are in place to enable Aqua to provide a reliable system for all its customers. Aqua must treat all customers consistently to ensure that such service is provided.[4]

Q. Did the Commission also address unmetered residential wastewater rates and Mr. Day's concern in the Company's 2021 Base Rate Case?

Yes. Mr. Duerr references this case in which the Commission ultimately agreed to maintain the existing billing practice for Lake Harmony as a part of his rebuttal testimony (Aqua Statement No. 11-R). The Company acknowledges that in that rate case order it was directed to "study and report the results in the next base rate case proceeding in order to determine whether different methods of calculating a flat rate would be more reasonable for some systems rather than applying a system wide average to each system." The Company takes directives from the Commission very seriously. The OCA asked a

[3] *Id*.
[4] *Id.* at 9.

discovery question about this topic and the Company responded with the analysis that it had performed to support its proposal (OCA-XIII-16).

As witness Heppenstall states in her Rebuttal Testimony (Aqua Statement No. 5-R), in studying whether different methods of calculating a flat rate would be more reasonable for some systems, Witness Heppenstall found that in an effort to move all systems toward consolidated rates, using average consumption across the systems was appropriate in determining wastewater flat rates.

The Company did perform an analysis of average usage in each rate zone. *See* Aqua Exhibit CEM-4-R. This analysis first recognized that there is no other known methodology utilized across the industry other than to utilize a system average to calculate a flat rate. Second, the order states whether a different method would be more reasonable than applying a system wide average. Rather than solely relying on the 2024 water average, we evaluated each respective wastewater rate zone to see what each rate zone's usage was. That review revealed that if you look at Lake Harmony which is at Rate Zone 4 currently, you would see that the average residential customer in Rate Zone 4 uses 3,835 gallons based off of billing determinants for 2023. What we are proposing in this base rate case is a wastewater flat rate based on 3,870 gallons per month, which is the system average residential water usage. The Company then analyzed and compared this usage to average usage in Rate Zone 4. Due to the closeness of these two data points, the Company is proposing that 3,870 gallons be used as the appropriate average usage to be used in designing the flat rates. Further, in proposing and designing rates for Rate Zone 4 specifically, the Company proposed a rate that would mitigate the size of the rate increase – which under the Company's proposal would go from $133.35 per month to $135.20 per

month. The Company performed the analysis in compliance with the Commission's order but did not include the analysis in its main filing in this case. This was an oversight, but the analysis has since been provided to the parties through discovery in this proceeding.

IV. CONCLUSION

Q. Does that conclude your Rebuttal Testimony at this time?

A. Yes, it does, but I reserve the right to supplement my Rebuttal Testimony as needed during this proceeding.

to
SEWER-PA. P.U.C. NO. 1

LITTLE WASHINGTON WASTEWATER COMPANY

d/b/a SUBURBAN WASTEWATER COMPANY

RATES AND RULES

GOVERNING THE COLLECTION

OF

WASTE WATER

IN PORTIONS OF

ADAMS, BUCKS, CARBON, CHESTER, DELAWARE, LACKAWANNA, LUZERNE, MONROE, MONTGOMERY, PIKE, SCHUYLKILL AND WYOMING COUNTY

ISSUED: October 11, 2012
by
NICHOLAS DeBENEDICTIS, Chairman
762 West Lancaster Avenue
Bryn Mawr, Pennsylvania 19010

EFFECTIVE: October 1, 2012

NOTICE

THIS SUPPLEMENT ESTABLISHES WASTEWATER RATES FOR CUSTOMERS OF THE LAKE HARMONY DIVISION IN A PORTION OF KIDDER TOWNSHIP, CARBON COUNTY, PA.

LIST OF CHANGES MADE BY THIS TARIFF

LWWC acquired the community wastewater system serving the Lake Harmony area ("Lake Harmony Division") effective at 12:01AM on Monday, October 1, 2012. This tariff creates rates for Lake Harmony Division customers. Also included in this tariff are additions to LWWC's Rules and Regulations governing the provision of service within the Lake Harmony Division.

SCHEDULE OF RATES

Unmetered Rates

Customer Charge / Equivalent Domestic Unit ("EDU" – also referred to as "Equivalent Dwelling Unit")

Quarterly	Monthly
$ 187.50	$ 62.50

For the purpose of this Lake Harmony Division Schedule of Rates, EDU is defined to have the following wastewater characteristics:

- Flow: 225 gpd
- CBOD: 250 mg/l
- Total Phosphorous: 8 mg/l
- Total Suspended Solids: 250 mg/l
- TKN: 40 mg/l as N
- Grease: 100 mg/l

The following Groupings are Accounts for service currently billed in the name of Vacation Charters and all sewage emanating from these Groupings either traverses through a collection system owned by another entity and into LWWC's Lake Harmony Division Assets or may be directly connected to the Lake Harmony Division Assets that delivers the sewage to LWWC's wastewater treatment plant (also a Lake Harmony Division Asset) located within the Split Rock community. These Accounts are billed based upon the current EDU values to the right of each Grouping.

Grouping:

- Westwood Condominium Association, Inc. @ 90 EDUs
- Willowbrook at Lake Harmony @ 128 EDUs
- The Galleria and the Water Park @ 145 EDUs
- Split Rock Country Club (for Club House and the Cart Barn) @ 14 EDUs
- Remaining Uses @ 53 EDUs

The following apply within the Lake Harmony Division and together with the balance of LWWC's tariff represent the Rules and Regulations governing service to the Lake Harmony Division:

DEFINITIONS:

1. **Grinder Pump**: Any mechanical or powered device used to grind, macerate or fluidize waste so that it can be discharged into the Company's facilities. This device is a component of the Customer service line and the sole responsibility of the Customer to own, maintain and operate along with the balance of their Customer service line. The Customer shall be responsible for all power to operate the device in accordance with the manufacture's specifications and guidelines.

The following apply within the Lake Harmony Division and, in particular, to those Lake Harmony Division customers identified on Attachment 6 of the Assets Purchase Agreement ("APA") between The Township of Kidder and Little Washington Wastewater Company d/b/a Suburban Wastewater Company ("LWWC"), dated March 15, 2012. This APA was included in LWWC's Application filing of April 5, 2012, which was approved via the Pennsylvania Public Utility Commission's ("PUC") Order entered on July 19, 2012 at Docket Number A-2012-2298067. The Township of Kidder advised their customers within the Lake Harmony Division of the APA and filing with the PUC through their letter of May 15, 2012.

1. Those customers within the Lake Harmony Division whose addresses do not appear on Attachment 6 of the APA own their Customer service line in its entirety, including the grinder pump on their Customer service line should one exist.
2. Those customers within the Lake Harmony Division whose addresses appear on Attachment 6 of the APA will ultimately be the owners of their Customer service line in its entirety effective on January 1, 2018, including the grinder pump and that portion of the Customer service line from the curb-line or edge-of-road to and including the grinder pump.
3. All customers shall comply with the following guidelines to ensure that the grinder pump on their Customer service line will function properly for its typical useful life of ten (10) years.
    a. The grinder pump shall be protected from excessive moisture, freezing and prolonged non-use
    b. The grinder pump shall not be disassembled, modified, abused or tampered with by someone other than a licensed plumber authorized to install and maintain the device and related equipment
    c. Water containing sand, lime, cement, gravel or other abrasives shall not be discharged to the grinder pump
    d. Chemicals, hydrocarbons, gasoline, explosives, and strong chemicals shall not be discharged to the grinder pump
    e. Other foreign matter not typically discharged from normal residential uses shall not be discharged to the grinder pump
4. Any customer whose address is identified on Attachment 6 and who fails to comply with the guidelines enumerated in 3 above, shall be liable for any and all resulting damages to the grinder pump, including replacement cost of the grinder pump and related equipment.
5. Any customer whose address appears on Attachment 6 agrees to allow the Company the right to enter upon their property (absent any formal easement of record) to maintain that portion of the Customer service line owned by the Company until such time as the grinder pump and related equipment as well as that portion of the Customer service line from the curb-line or edge-of-road to and including the grinder pump are assumed as components of the Customer service line by the Customer on January 1, 2018 as enumerated in 2 above.

PREPARED REBUTTAL TESTIMONY OF CONSTANCE E. HEPPENSTALL

Topics Addressed:

Cost of Service Allocation
Customer Rate Design

DATE SERVED: September 12, 2024 **Aqua Statement No. 5-R**
DATE ADMITTED: _____

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: AQUA PENNSYLVANIA, INC.
DOCKET R-2024-3047822 AND R-2024-3047824

REBUTTAL TESTIMONY OF CONSTANCE E. HEPPENSTALL

Q. Please state your name and address.

A. My name is Constance E. Heppenstall. My business address is 1010 Adams Avenue, Audubon, Pennsylvania.

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Are you the same Constance E. Heppenstall who submitted direct testimony in this case?

A. Yes. I submitted Aqua Statement No. 5 and Exhibit Nos. 5-A Part I and 5-B, Part I.

Q. What is the purpose of your rebuttal testimony in this proceeding?

A. I will address the proposed the cost of service, revenue distribution and rate design issues for both water and wastewater rate filings raised in the direct testimonies and exhibits of Pennsylvania Office of Consumer Advance ("OCA") Witness Jerome D. Mierzwa, the Pennsylvania Public Utility Commission's ("PUC" or "Commission") Bureau of Investigation and Enforcement ("I&E") Witness Ethan Cline, Pennsylvania Office of Small Business Advocate ("OSBA") Witness Roger Cathcart and the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Harry S. Geller.

Q. Have you prepared an exhibit related to your rebuttal testimony?

A. Yes, I have prepared Exhibits CEH-1-R, CEH-2-R, and CEH-3-R.

Q. Do you have any corrections to your exhibits?

A. Yes, during the course of the rate proceeding, certain corrections to the cost of service study came to light.

Q. Please describe the changes and the impact to the cost of service study.

A. In Exhibit CEH-1-R, the Water Base Cost of Service Study was updated to reflect the correct amount of customer assistance program (CAP) costs in Account 636.8. This change to the cost of service study creates a minimal change to the results of the cost of service study. The study was also revised to correct the average daily flow for 2022 and 2023 as shown on Schedule F. This change had no effect on the cost of service study. Finally, Schedules A and A-1 reflect the revised contract revenues as described in the rebuttal testimony of Greg R. Herbert (Aqua Statement No. 10-R).

Rebuttal of OCA Witness Jerome D. Mierzwa

Q. Did Mr. Mierzwa comment on the Company's water and wastewater cost of service studies?

A. Yes, Mr. Mierzwa states that the cost of service studies reasonably reflect the class cost responsibilities in the filing. *See* OCA St. No. 5, at pp. 10, 12-13.

Q. Does Mr. Mierzwa agree with the Company's water revenue allocation under proposed rates?

A. Yes, Mr. Mierzwa finds that the overall proposed revenue allocations are reasonable. However, he finds that certain rates should be adjusted.

Q. Please describe these adjustments.

A. For the Bunker Hill, Sun Valley and Phoenixville areas, he proposes limiting the increases to 60%, rather than 75% as recommended by the Company. OCA St. No. 5, at p. 26.

Q. How do you respond?

A. I disagree. These areas have very low rates as compared to Rate Zone 1. The average residential bill under present rates ranges from $23.66 per month for Phoenixville to $40.26 per month for Bunker Hill. In comparison, the average monthly bill for Rate Zone 1 residential customers is presently $80.91. As these areas have been part of the system through several rate cases (Bunker Hill was acquired in 2015, Sun Valley in 2018 and Phoenixville in 2019), a larger increase is warranted to move their rates closer to Rate Zone 1 rates. Finally, the Company's proposed actual increase to these customers is 63.3% due to the Distribution System Improvement Charge ("DISC") rate currently being paid by these customers under present rates. This increase is very close to the increase of 60% recommended by Mr. Mierzwa.

Q. Mr. Mierzwa states that your support for the water customer charge was not included in your Exhibit 5-A. OCA St. No. 5, at pp. 28-29. How do you respond?

A. Please see Appendix A of Exhibit 5-A that includes the cost of service related filing requirements for the PUC. Pages A37 to A39 include the two calculations of customer costs. The first is a calculation based on total customer costs and the second calculation only includes direct costs. The second calculation supports the

Company's recommended proposed 5/8-inch customer charge of $23.90.

Q. Does Mr. Mierzwa support the Company's proposed customer charges?

A. No, on page 29 of his direct testimony, he states that "Aqua's direct cost analysis includes costs that are not direct customer costs and do not change with the addition or subtraction of a customer."

Q. Has his method of calculation of customer charges been supported by the PUC?

A. No. Most recently, the Commission's order for the most recent Pennsylvania American Water Company ("PAWC") rate case (Docket No. R-2023-3043189), states on page 241, "With regard to the alternative proposal of the OCA, which relies on the OCA's assertion that PAWC's customer cost analysis is flawed because it includes costs that are not direct customer costs and do not change with the addition or subtraction of a customer, we find it to be without merit. Rather, we concur with the ALJs and Commission orders that have previously rejected such limitations on cost recovery through the fixed customer charge, as proposed by the OCA. *See Pa. PUC, et al. v. UGI Utilities, Inc. – Electric Division*, Docket Nos. R-2017-2640058, et al., at pp 168-75 (Order entered Oct. 25, 2018); *see also Pa. PUC, et al. v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 and R-2021-3027386, et al., at pp. 268-69 (Opinion and Order entered May 16, 2022). Therefore, based upon our consideration of the evidence and record herein, we shall adopt the ALJs' recommendation on this issue. Accordingly, we shall deny the OCA's Exception No. 15." Therefore, I recommend that the Commission reject Mr. Mierzwa's proposal regarding the water customer charge.

Q. As to the Wastewater Cost of Service, does OCA recommend removing East Whiteland from the revenue requirements and pro forma present and proposed revenue in this case?

A. Yes. Aqua witness Mr. Packer will further address this issue in rebuttal (Aqua Statement No. 1-R).

Q. Please describe Mr. Mierzwa's recommended wastewater rate design.

A. Mr. Mierzwa recommends a 20% increase to Rate Zone 1 and 1A rates, while maintaining the Company's recommended rate design for Rate Zones 7, 9, 10, 12 and 14. OCA St. No. 5, at p. 22.

Q. Do you agree with his wastewater rate design?

A. No, in his direct testimony, Mr. Mierzwa recognizes that his rate design delays rate consolidation for Rate Zones 7, 9, 10, 12, and 14 with Rate Zone 1. As a matter of fairness, the Company's goal is to consolidate rates as quickly as possible. Each wastewater customer receives the same level of service by the Company, and therefore should pay the same charge for that service. This uniform service for all customers includes wastewater collection, wastewater treatment, centralized customer service and billing that should be the same cost for each customer. In addition, each rate zone has been part of the Aqua system through at least one rate case. Further delaying rate consolidation just "kicks the can down the road" to future rate cases. In addition, a 20% rate increase would bring the average monthly bill for a residential wastewater customer in Rate Zones 1 and 1A above $100, a level that would be mitigated through the use of Act 11.

Q. Mr. Mierzwa recommends that Act 11 contribution from Water Base proposed

revenues be limited to 10% of wastewater revenue requirements as this was the level approved by the Commission in the Company's prior rate case. OCA St. No. 5, at pp. 10, 22. Do you agree?

A. No, Mr. Mierzwa's 10% limitation appears to be a number based on the outcome of a prior case and is not connected to this caser. Act 11 revenue sharing of 20% of the wastewater revenue requirement, lower than the amount requested in the prior case, allows the Company to mitigate the increases to its wastewater customers while minimally impacting rates for water customers.

Q. As to unmetered customer wastewater rates, Mr. Mierzwa states that the Company did not follow the direction of the Commission Order in the prior case on page 273 to "study and report the results of in the next base rate proceeding in order to determine whether different methods of calculating a flat rate would be more reasonable for some systems rather than applying a system wide average to each system." OCA St. No. 5, at pp. 38-39. How do you respond?

A. The Company examined the issue and as shown in response to data request OCA-XIII-16, filed as Exhibit CEH-2-R, found that based on similar average usage across the system and on the desired movement toward consolidated rates, a system wide usage level was appropriate in determining the wastewater flat rate.

<u>Rebuttal of I&E Witness Ethan Cline</u>

Q. Did Mr. Cline comment on the Company's water and wastewater cost of service studies?

A. No, he did not. Therefore, I assume that he finds the cost of service studies

sufficient as a guideline for rate design.

Q. For water rate design, Mr. Cline recommends a smaller increase to Shenandoah Public Fire Rates. I&E St. No. 3, at pp. 46-47. Please discuss.

A. Mr. Cline recommends that the Public Fire rate be lowered to 25% of the Shenandoah Operations Public Fire cost of service. I have no argument with this change. I had set the Shenandoah Public Fire rate to the rate for all water operations, rather than just examining the rate for the Shenandoah Operations.

Q. Mr. Cline also recommends raising the residential rates for Shenandoah customers to equal Rate Zone 1 rates. I&E St. No. 3, at pp. 48-49. Do you agree?

A. No. As the cost of service study shows, Shenandoah residential customers are already subsidizing the other non-residential classes. By raising the residential rates further, I&E witness Cline's proposed revenues are moving away from cost of service. Exhibit CEH-3-R shows the result of the cost of service, without subsidy from the Water Base Operations, showing both the Company's proposed revenues and I&E's proposed revenues. The percentage of costs related to the residential class is 68.9%. Under present rates, the residential class supplies 79.2% of the revenue and under the Company's proposed rates, this percentage of revenue dropped slightly to 78.9% (see page 1 of Exhibit CEH-3-R). The Company's rates move revenues marginally closer to the cost of service. However, under Mr. Cline's rates, the percentage is 82.9% (see page 2 of Exhibit CEH-3-R), moving away from the cost of service. Therefore, based on the cost of service study, which was not opposed by Mr. Cline, the Company rejects Mr. Cline's revised rates for

the Shenandoah residential customers.

Q. As to the Wastewater Cost of Service, does I&E recommend removing East Whiteland from the revenue requirements and pro forma present and proposed revenue in this case?

A. Aqua witness Mr. Packer will address this issue in his rebuttal testimony (Aqua Statement No. 1-R).

Q. Please describe Mr. Cline's goal related to his wastewater rate design.

A. Mr. Cline's goal in his wastewater rate design is to reduce, to the extent possible, the Act 11 shift in revenues from wastewater to water. He performs this by increasing proposed wastewater rates well above the wastewater rates proposed by the Company**.** A comparison of his proposed monthly residential bill increases to the Company's proposed increases are shown below:

Rate Zone	Present Monthly Bill	Company Proposed Bill		Company Increase	I&E Proposed Bill		I&E Increase
RZ 1	$ 95.19	RZ 1	$ 92.85	-2.5%	RZ 1	$ 116.58	22.5%
RZ 1A	$ 95.19	RZ 1	$ 92.85	-2.5%	RZ 1	$ 116.58	22.5%
RZ 2	$ 106.04	No Increase	$ 104.63	-1.3%	Combine with RZ 3	$ 123.66	16.6%
RZ 3	$ 115.36	No Increase	$ 113.83	-1.3%	Combine with RZ 2	$ 123.66	7.2%
RZ 4	$ 137.01	No Increase	$ 135.20	-1.3%	Combine with RZ 5	$ 147.73	7.8%
RZ 5	$ 150.62	No Increase	$ 148.63	-1.3%	Combine with RZ 4	$ 147.73	-1.9%
RZ 6	$ 71.17	RZ 1 increase	$ 69.41	-2.5%	Usage Rates to RZ 1	$ 93.41	31.2%
RZ 7	$ 78.39	RZ 1	$ 92.85	18.4%	RZ 1	$ 116.58	48.7%
RZ 8	$ 104.41	RZ 2	$ 104.63	0.2%	RZ 1	$ 116.58	11.7%
RZ 9	$ 61.68	RZ 1	$ 92.85	50.5%	Combine with RZ 10	$ 110.79	79.6%
RZ 10	$ 66.35	RZ 1	$ 92.85	39.9%	Combine with RZ 9	$ 110.79	67.0%
RZ 11	$ 137.29	RZ 2	$ 104.63	-23.8%	EDU Charge to RZ 1	$ 138.86	1.1%
RZ 12	$ 70.51	RZ 1	$ 92.85	31.7%	Combine with RZ 14	$ 106.90	51.6%
RZ 13	$ 45.17	EW	$ 73.90	63.6%	No change	$ 45.17	0.0%
RZ 14	$ 65.48	RZ 1	$ 92.85	41.8%	Combine with RZ 12	$ 106.90	63.3%

As seen above, Mr. Cline's rate design increases rates for all but one rate zone, and results in monthly bills larger than $100 for all but two rate zones and proposes increases of 48% or higher for five rate zones. In comparison, the Company's rate design attempted to maintain monthly residential bills to a level

lower than $100 per month and for those customers whose bill is already over $100 per month, the Company proposed no increase. In addition, the Company is only recommending that one rate zone experience an increase over 50%. Mr. Cline attempts to move proposed rates toward consolidated rates and at the same time reducing the Act 11 subsidy from the $21,850,629 (3% of the total water revenue requirement) to $3,547,094 (0.5% of the total water revenue requirement. As a result, his rate design creates an overall increase to the wastewater customers of 45.22% rather than the Company proposed increase of 20.09%. In summary, by adding an additional 3% to the water revenue requirement through Act 11 (equivalent to approximately $2.90 per month for a Rate Zone 1 residential customer), the Company's rate design allows for more affordable wastewater rates for its wastewater customers. See chart above.

Q. Do both the Company's proposed rate designs and I&E's proposed rate designs move closer to consolidated rates?

A. The Company's rate design moves from a total of fourteen different rate zones under present rates to seven rate zones. These include the moving of Rate Zones 1A, 7, 9, 10,12 and 14 to Rate Zone 1 rates and Rate Zones 8 and 11 to Rate Zone 2 rates, leaving Rate Zones 3, 4, 5, 6, and 13 as separate rate zones. Similarly, I believe that Mr. Cline's proposed rate design recommends nine different rate zones, albeit at much higher rates.

Q. Why does Mr. Cline believe that large increases are reasonable in certain rate zones?

A. He argues that it is reasonable for Rate Zones 9, 10, 12 and 14 to receive large

increases because of movement toward consolidated pricing and due to the fact that these systems were acquired under Section 1329 and, therefore, they received benefits from this acquisition that makes it reasonable to assign them a greater than average increase in rates. I&E St. No. 3, at p. 42; *see also* I&E St. No. 3, at pp. 34-35 (Rate Zone 9), 35-36 (Rate Zone 10), 39-40 (Rate Zone 12), and 40-42 (Rate Zone 12).

Q. How do you react?

A. I agree that rates should move toward consolidation, which the Company's proposed rate design partially accomplishes. However, I disagree with Mr. Cline's argument that as these areas were acquired under Section 1329, with its associated benefits, these areas should have larger increases. Several of these areas have already had their rates increased in prior rate case(s). For example, in the Company's prior rate case, the average residential customer in Rate Zones 9 and 10 received an increase of 68% and 75% respectively, both higher than the Rate Zone 1 average residential increase of 48%. At some point, these customers should be treated as any other customer group and not be treated as outliers.

Q. Please describe Mr. Cline's recommendation regarding rates for wastewater flat rate customers.

A. Mr. Cline states that the Company's methodology for determining the flat rates is reasonable. I&E St. No. 3, at pp. 14-16. However, he recommends that the nonresidential flat rate be calculated based on usage of 4,666 gallons per month.

Q. Do you agree?

A. The Company does not oppose Mr. Cline's recommendation.

Q. Finally, Mr. Cline recommends that revenue from forfeited discounts should be revised as rate design is finalized. I&E St. No. 3, at pp. 45-46. Do you agree?

A. Yes, I do.

Rebuttal of OSBA Witness Roger Cathcart

Q. Does Mr. Cathcart appear to have any typos in his testimony?

A. Yes, on page 4, line 61, Mr. Cathcart states that the Company plans to recover "$20.8 million" in wastewater revenue from the water operations. OSBA St. No. 2 (REVISED), at p. 4. The amount is actually $21,850,629. He makes a similar typo on page 10, line 185. OSBA St. No. 2 (REVISED), at p. 10. The amount is correct on line 184. Also, on page 14, he lists OSBA's revised Act 11 revenue requirement as $18.651 million, but in the chart above the amount is $19,651,288, the same that is on Schedule Q5 (W). OSBA St. No. 2 (REVISED), at p. 14. In addition, he lists one of his schedules as BK-4WW when I believe it should be listed as Schedule Q-4WW.

Q. Mr. Cathcart presented his proposed water revenue allocation in Schedule Q-4 (W). Is his revenue allocation different than what is proposed by the Company?

A. No, it appears, by comparing Schedule Q-1 (W) to Schedule Q-4 (W), Mr. Cathcart's recommended water revenue allocation is the same as the Company's proposed recommendation.

Q. Does Mr. Cathcart discuss the rates and Water Base Operations contribution for Shenandoah Water Operations?

A. No, he does not discuss the rates or contributions related to Shenandoah Water Operations. Therefore, it appears that he accepts the Shenandoah Water rate design and the contribution from Water Base Operations.

Q. Please discuss Mr. Cathcart's recommended changes to wastewater rate design.

A. Mr. Cathcart recommends adjusting the overall increase to wastewater to 23.3% from the Company's recommendation of 20.0%. He recommends lowering the increase for East Whiteland to 40% from 109% and raising the increase to the Wastewater Base Operations to 22.4%. As his overall adjustments are small and he provides no specific rate design to accomplish his recommendations in his workpapers, the Company recommends that his rate recommendations be rejected.

Rebuttal of CAUSE-PA Witness Harry S. Geller

Q. On page 7 of his direct testimony, Mr. Geller states that the Company proposes that Shenandoah Water customers' rates will move to Rate Zone 1 rates in this case. CAUSE-PA St. No. 1, at p. 7. Is that correct?

A. No, the Company is proposing that only the customer charge for Shenandoah customers move to Rate Zone 1 rates. The volumetric rates will be lower that Rate Zone 1 rates for residential customers.

Q. Mr. Geller also states that the Company's current rate structure that includes inclining block rates disadvantages low income and rental customers. CAUSE-PA St. No. 1, at p. 9. Please respond.

A. The Company's rate design of inclining block rates for residential customers has historically been implemented to encourage conservation and to maintain a low "lifeline" rate for senior citizens and other low water users, such as apartment dwellers. If this rate structure is eliminated in favor of a one block rate, the rate for the first 2,000 gallons rate would necessarily be higher for these customers as the one block rate would be a weighted average of the low "lifeline" rate and the higher second block rate.

Scale Back Proposals

Q. Please summarize the parties' respective positions on the scale back of water and wastewater rates.

A. A form of scale back seems to be agreed to by the parties. The scale back would first scale back Act 11 contributions to each of its wastewater divisions. Then it would scale back the contribution from Water Base Operations to Shenandoah Water Operations while maintaining customer charges at the Rate Zone 1 level. Finally, the Company stated that after calculating revised Act 11 contributions, the revised contributions to Shenandoah, and after reviewing the decrease to revenue requirement, the Company would scale back the rates by customer class to continue to move revenues under proposed rates toward the cost of service by customer class. The Company agrees with Mr. Cline's further clarification that rate zones that receive no increase under proposed rates would not receive any scale

back.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does

EXHIBIT NO. CEH-1-R

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma, future test year average daily consumption for each customer classification.

Customer Classification	Average Daily Consumption, 100 Gallons	Allocation Factor
(1)	(2)	(3)
Residential	505,230	0.589166
Commercial	277,340	0.323416
Industrial	52,299	0.060988
Public	16,833	0.019630
Other Water Utilities	7	0.000008
Private Fire Protection	2,256	0.002631
Public Fire Protection	3,569	0.004162
Total	857,534	1.000000

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capapcity demand for each customer classification , as follows:

	Average Daily Consumption		Maximum Day Extra Capacity		
Customer Classification	Allocation Factor 1	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2)x 0.714286	(4)	(5)=(4)x 0.285714	(6)=(3)+(5)
Residential	0.589166	0.420833	0.626879	0.179108	0.59994
Commercial	0.323416	0.231011	0.312834	0.089381	0.32039
Industrial	0.060988	0.043563	0.041295	0.011798	0.05536
Public	0.019630	0.014021	0.018987	0.005425	0.01945
Other Water Utilities	0.000008	0.000006	0.000006	0.000002	0.00001
Private Fire Protection	0.002631	0.001879			0.00188
Public Fire Protection	0.004162	0.002973			0.00297
Total	1.000000	0.714286	1.00000	0.285714	1.00000

The derivation of the maximum day extra capapcity factors in column 4 and the basis for the column 3 and 5 weightings are presented on the following page.

AQUA PENNSYLVANIA, INC.- BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS, cont.

		Maximum Day Extra Capacity		
Customer Classification	Average Daily Consumption, 100 Gallons	Factor*	Rate of Flow, 100 Gallons Per Day	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)
Residential	505,230	1.1	555,753.0	0.626879
Commercial	277,340	1.0	277,340.0	0.312834
Industrial	52,299	0.7	36,609.3	0.041295
Public	16,833	1.0	16,833.0	0.018987
Other Water Utilities	7	0.7	4.9	0.000006
Total	851,709		886,540.2	1.000000

The weightings of the factos is based on the maximum day ratio of 1.40, based on a review of maximum day ratios experienced during the period 1966 through 2017 (see Schedule F)

	Maximum Day Ratio	Weight
Average Day	1.00	0.7143
Maximum Day Extra Capacity	0.40	0.2857
Total	1.40	1.0000

* Ratio of maximum day to average day minus 1.0.

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS.

Factors are based on the weighting of the average daily consumption, the maximum day extra capacity demand, and the fire protection demand for each customer classification.

	Average Daily Consumption		Maximum Day Extra Capacity		Fire Protection		
Customer Classification	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2) X 0.665337	(4)	(5)=(4) X 0.266135	(6)	(7)=(6) X 0.068528	(8)=(3)+(5)+(7)
Residential	0.589166	0.391994	0.626879	0.166834	0.022042	0.001511	0.560338

Public Fire Protection	148.7	0.004162	0.001852			0.612701	0.067398	0.069250
Total	35,730.6	1.000000	0.444998	1.000000	0.445000	1.000000	0.110002	1.000000

The maximum hour extra capacity factors in column 5 are determined as follows:

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weightings of the factors is based on the potential demannd of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.40 and the total system sendout for the test year of 116.5 mgd. The rato is based on a review of the experienced maximum day ratios during the period 1966 through 2023 (see Schedule F). The system demand for fire protection is 20,000 gpm for 10 hours.

	Ratio	Rate of Flow, (GPD)	Weight
Average Day	1.00	116,506,992	0.665337
Maximum Day Extra Capacity	0.40	46,602,797	0.266135
Subtotal	1.40	163,109,789	0.931472
Fire Protection		12,000,000	0.068528
Total		175,109,789	1.000000

The public and private fire protection allocation factors in column 6 on the previous page are based on the relative potiential demands (see Schedule G).

AQUA PENNSYLVANIA, INC.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weightings of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maixmum hour ratio of 2.0 and the total system sendout for the test year of 116.5 mgd. The ratio is based on a review of the experienced maximum hour ratios during the period 1966 through 2023 (see Schedule F) The system demand for fire protection is 20,000 gpm.

	Ratio	Rate of Flow, (GPM)	Weight
Average Hour	1.00	80,908	0.4450
Maximum Hour Extra Capacity	1.00	80,908	0.4450
Subtotal	2.00	161,816	0.8900
Fire Protection		20,000	0.1100
Total		181,816	1.0000

The maximum hour extra capacity factors in column 5 of the previous page are determined as follows:

Customer Classification	Average Hourly Consumption 100 Gals.	Maximum Hour Extra Capacity Factor*	Maximum Hour Extra Capacity 100 Gals. Per Hour	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)
Residential	21,051.3	3.5	73,679.6	0.659593
Commercial	11,555.8	2.8	32,356.2	0.289659
Industrial	2,179.1	1.7	3,704.5	0.033163
Public	701.4	2.8	1,963.9	0.017581
Other Water Utilities	0.3	1.5	0.5	0.000004
Total	35,487.9		111,704.6	1.000000

* Ratio of Maximum Hour To Average Hour Minus 1.0.

The public and private fire protection allocation factors in column 7 on the previous page are based on the relative potential demands (see Schedule G).

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES.

Factors are based on the weightings of the average hourly consumption, the maximum hour extra capacity demand, and the fire protection demand for each customer classification.

	Average Hourly Consumption			Maximum Hour Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3) X 0.472742	(5)	(6)=(5) X 0.472742	(7)	(8)=(7) X 0.054516	(9)=(4)+(6)+(8)
Residential	21,051.3	0.589167	0.278524	0.659593	0.311817	0.022042	0.001202	0.591543
Commercial	11,555.8	0.323415	0.152892	0.289659	0.136934			0.289826
Industrial	2,179.1	0.060987	0.028831	0.033163	0.015678			0.044509
Public	701.4	0.019630	0.009280	0.017581	0.008311			0.017591
Other Water Utilities	0.3	0.000008	0.000004	0.000004	0.000002			0.000006
Private Fire Protection	94.0	0.002631	0.001244			0.365256	0.019912	0.021156
Public Fire Protection	148.7	0.004162	0.001967			0.612701	0.033402	0.035369
Total	35,730.6	1.000000	0.472742	1.000000	0.472742	1.000000	0.054516	1.000000

The weighting of the factors is based on the ratio of the capacity required for a 10-hour dmenad of fire flow, as related to total storage capacity. The calculation is shown on the following page.

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES, cont.

The weighting of the factors is based on the ratio of the capacity required for a 10-hour demand of fire flow, as related to total storage capacity.

Fire Protection Weight = $\frac{\text{20,000 GPM X 60 Min. X 10 Hours}}{\text{220,120,710 Gallons}}$ = 0.0545

General Service Weight = 1.0000 - 0.0545 = 0.9455

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows:

	Maximum Hour Ratio	Percent	Weight
Average Hour	1.00	50.00	0.4727
Extra Capacity Maximum Hour	1.00	50.00	0.4727
Total	2.00	100.00	0.9455

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH FIRE HYDRANTS.

Factors are based on the number of hydrants, as follows:

Customer Classification	Number of Hydrants	Allocation Factor
(1)	(2)	(3)
Private Fire Protection	2,680	0.1121
Public Fire Protection	21,237	0.8879
Total	23,917	1.0000

FACTOR 7 AND 7A. ALLOCATION OF COSTS ASSOCIATED WITH METERS.

Factors are based on the relative cost of meters by size and customer classification, as developed on the following page and summarized below:

Customer Classification	5/8" Dollar Equivalents	Factor 8 Allocation Factor	Factor 8A Allocation Factor
(1)	(2)	(3)	(3)
Residential	402,260	0.868553	0.894152
Commercial	42,032	0.090755	0.093430
Industrial	2,149	0.004640	0.004777
Public	3,420	0.007384	0.007602
Other Water Utilities	18	0.000039	0.000040
Private Fire Protection	13,259	0.028629	
Total	463,138	1.000000	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 8. ALLOCATION OF COSTS ASSOCIATED WITH SERVICES.

Factors are based on the relative cost of services by size and customer classification, as developed on the following page and summarized below:

Customer Classification	3/4" Dollar Equivalents	Allocation Factor
(1)	(2)	(3)
Residential	402,254	0.886774
Commercial	30,956	0.068243

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 9. ALLOCATION OF BILLING AND COLLECTING COSTS.

Factors are based on number of bills

Customer Classification	Total Bills	Allocation Factor
(1)	(2)	(3)
Residential	4,798,449	0.940718
Commercial	277,242	0.054352
Industrial	8,481	0.001663
Public	14,088	0.002762
Other Water Utilities	32	0.000006
Private Fire Protection	682	0.000134
Public Fire Protection	1,864	0.000365
Total	5,100,839	1.000000

FACTOR 10. ALLOCATION OF METER READING COSTS.

Factors are based on number of bills for metered customers

Customer Classification	Total Bills	Allocation Factor
(1)	(2)	(3)
Residential	4,798,449	0.941062
Commercial	277,242	0.054372
Industrial	8,481	0.001663
Public	14,088	0.002763

Private Fire Protection	682	0.000134
Total	5,098,975	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 11. ALLOCATION OF CUSTOMERS' ACCOUNTING AND COLLECTING EXPENSES, MATERIALS AND SUPPLIES.

Factors are based on customers' accounting and collecting expenses, meter reading and billing and collecting expenses as follows:

Customer Classification	Operating Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 10,737,714	0.962697
Commercial	381,486	0.034202
Industrial	11,670	0.001046
Public	19,385	0.001738
Other Water Utilities	44	0.000004
Private Fire Protection	938	0.000084
Public Fire Protection	2,542	0.000228
Total	$ 11,153,780	1.000000

FACTOR 12. ALLOCATION OF TRANSMISSION AND DISTRIBUTION OPERATION AND MAINTENANCE SUPERVISION AND ENGINEERING, MAPS AND RECORDS AND OTHER DEPARTMENTAL EXPENSES.

Factors are based on transmission and distribution operation expenses other than those being allocated, as follows:

Customer Classification	Transmission and Distribution Operating Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 3,605,464	0.748282
Commercial	685,853	0.142343
Industrial	76,659	0.015910
Public	47,179	0.009792
Other Water Utilities	126	0.000026
Private Fire Protection	161,040	0.033422
Public Fire Protection	242,004	0.050226
Total	$ 4,818,325	1.000000

ALTERNATE FACTOR 13. ALLOCATION OF TRANSMISSION AND DISTRIBUTION MAINTENANCE SUPEF AND ENGINEERING AND MISCELLANEOUS PLANT.

Factors are based on transmission and distribution maintenance expenses other than those being allocated, as follows:

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 13. ALLOCATION OF TRANSMISSION AND DISTRIBUTION MAINTENANCE EXPENSES.

Factors are based on transmission and distribution maintenance expenses other than those being allocated, as follows:

Customer Classification	Transmission & Distribution Maintenance Labor	Allocation Factor
(1)	(2)	(3)
Residential	$729,237	0.5835
Commercial	224,490	0.1796
Industrial	32,002	0.0256
Public	13,811	0.0111
Other Water Utilities	11	0.0000
Private Fire Protection	59,455	0.0476
Public Fire Protection	190,795	0.1527
Total	$1,249,802	1.0000

FACTOR 14. ALLOCATION OF ADMINISTRATIVE AND GENERAL EXPENSES

Factors are based on the allocation of all other operation and maintenance expenses excluding purchased water, power and chemicals.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$32,871,070	0.7587
Commercial	7,396,397	0.1707
Industrial	1,108,817	0.0256
Public	454,077	0.0105
Other Water Utilities	435	0.0000
Private Fire Protection	484,465	0.0112
Public Fire Protection	1,008,190	0.0233
Total	$43,323,451	1.0000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 15. ALLOCATION OF CASH WORKING - EXPENSES

Factors are based on the allocation of total operation and maintenance expenses.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$104,147,816	0.7189
Commercial	29,966,521	0.2068
Industrial	4,913,000	0.0339
Public	1,831,953	0.0126
Other Water Utilities	1,385	0.0000
Private Fire Protection	1,319,548	0.0091
Public Fire Protection	2,700,418	0.0186
Total	$144,880,642	1.0000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 16. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of direct labor expense.

Customer Classification	Direct Labor Expense	Allocation Factor
(1)	(2)	(3)
Residential	$27,495,255	0.7273
Commercial	7,334,890	0.1940
Industrial	1,125,554	0.0298
Public	453,072	0.0120
Other Water Utilities	427	0.0000
Private Fire Protection	471,102	0.0125
Public Fire Protection	924,697	0.0245
Total	$37,804,996	1.0000

FACTOR 17. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, MISCELLANEOUS INTANGIBLE PLANT AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciaton other than those items being allocated, as follows:

Customer Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Residential	$2,785,254,921	##########
Commercial	1,146,197,290	##########
Industrial	179,813,416	##########
Public	69,856,058	##########
Other Water Utilities	35,976	##########
Private Fire Protection	149,452,282	##########
Public Fire Protection	275,724,195	##########
Total	$4,606,334,138	##########

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 18. ALLOCATION OF INCOME TAXES AND INCOME AVAILABLE FOR RETURN.

Factors are base on the allocation of the original cost measure of value rate base as shown on the following pages and summarized below.

Customer Classification	Original Cost Measure of Value	Allocation Factor
(1)	(2)	(3)
Residential	$2,610,603,159	0.604913
Commercial	1,073,310,881	0.248701
Industrial	168,370,610	0.039014
Public	65,414,473	0.015157
Other Water Utilities	33,722	0.000008
Private Fire Protection	139,869,333	0.032410
Public Fire Protection	258,063,540	0.059797
Total	$4,315,665,718	1.000000

FACTOR 19. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS AND OTHER WATER REVENUES.

The factors are based on the allocation of the total cost of service, excluding those items being allocated.

Customer Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Residential	$451,312,619	0.668173
Commercial	162,756,205	0.240962
Industrial	25,471,961	0.037711
Public	9,981,937	0.014778
Other Water Utilities	5,707	0.000008
Private Fire Protection	17,735,971	0.026258
Public Fire Protection	8,178,597	0.012108
Total	$675,442,996	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 20. ALLOCATION OF UNRECOVERED PUBLIC FIRE PROTECTION.

These costs are deducted directly from the Public Fire Protection Classification.

Customer Classification	Allocation Factor
(1)	(2)
Public Fire Protection	1.0000

FACTOR 21. REALLOCATION OF UNRECOVERED PUBLIC FIRE PROTECTION.

These costs are allocated based on meter equivalents.

Customer Classification	5/8" Dollar Equivalents	Allocation Factor
(1)	(2)	(3)
Residential	402,260	0.894187
Commercial	42,032	0.093433
Industrial	2,149	0.004777
Public	3,420	0.007602
Total	449,861	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 22. ALLOCATION OF SOURCE OF SUPPLY BENEFITS AND OTHER COSTS

These costs are allocated based on the Source of Supply labor allocation.

Customer Classification	Source of Supply Labor	Allocation Factor
(1)	(2)	(3)
Residential	574,838	0.596684
Commercial	306,923	0.318587
Industrial	53,034	0.055049
Public	18,628	0.019336
Other Water Utilities	7	0.000007
Private Fire Protection	3,783	0.003927
Public Fire Protection	6,174	0.006409
Total	963,388	1.000000

AQUA PENNSYLVANIA, INC. - BASE WATER
