OFFICE OF CONSUMER ADVOCATE

SET XIII INTERROGATORIES

OCA-XIII-16 Refer to page 273 of the Commission Order entered in Aqua's previous general rate increase request at Docket Numbers R-2021-3027385 and R-2021-3027386. Provide the study and report ordered by the Commission regarding "whether different methods of calculating a flat rate would be more reasonable for some systems rather than applying a system-wide average to each system." Please provide all supplemental documents, reports, supplements, workpapers in native format, or other information which supports Aqua's study and report.

RESPONSE

Please refer to the OCA-XIII-16 - Attachment for the review of average usage by class and Rate Zone.

The Company's rate design as filed utilized the standard industry practice of basing the flat rate on a system-wide average usage per month plus a customer charge in situations where metered water information was unavailable. In order to move toward the Company's goal of single tariff pricing, utilizing a system-wide average usage is reasonable to calculate a flat rate. Flat rates calculated using individual rate zone monthly averages would result in flat rate customers being further away from rate consolidation or single tariff pricing. For example, a flat rate customer in rate zone with a lower monthly usage than the monthly usage in the Main division would experience a greater increase than a metered customer of the same rate zone should they be consolidated to the Main division water or wastewater rates in future rate proceedings.

AQUA PENNSYLVANIA, INC.
AQUA PENNSYLVANIA WASTEWATER, INC.

PREPARED REBUTTAL TESTIMONY OF JOHN J. SPANOS

Topics Addressed:

Depreciation

DATE SERVED: September 12, 2024
DATE ADMITTED: _____

Aqua Statement No. 6-R

Aqua Statement No. 6-R

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: AQUA PENNSYLVANIA, INC.
AQUA PENNSYLVANIA WASTEWATER, INC.

REBUTTAL TESTIMONY OF JOHN J. SPANOS

Q. Please state your name and address.

A. My name is John J. Spanos. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania 17011.

Q. With what firm are you associated and in what capacity?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") as President.

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. Have you previously filed testimony in this matter?

A. Yes, I previously submitted Aqua Statement No. 6.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to the depreciation-related testimony of Brian C. Andrews on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). Mr. Andrews has proposed the use of the Average Life Group ("ALG") procedure to calculate depreciation expense and depreciation annual accrual rates in an effort to "mitigate the rate increases associated with Aqua PA's accelerated investment to upgrade its infrastructure."[1]

[1] OCA Statement No. 4, p. 3, lines 12-13.

Q. Please summarize your rebuttal testimony.

A. Mr. Andrews has proposed a reduction in depreciation expense of $14.1 million based on an issue that the Commission has already clearly addressed and decided consistently for almost 40 years. The issue relates to the depreciation procedure that Aqua Pennsylvania, Inc. has been utilizing for developing depreciation rates and expense for 40 years. Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua" or the "Company") uses the Equal Life Group ("ELG") procedure rather than the ALG procedure. The Average Life Group procedure is most commonly referred to, in Pennsylvania, as the Average Service Life ("ASL") procedure. The use of the ELG procedure was established with the Pennsylvania Public Utility Commission ("PUC" or the "Commission") during the 1980s and has been used by most utilities within the Commonwealth of Pennsylvania to calculate depreciation expense and annual depreciation accrual rates since that time.

In my testimony, I will address the following topics. First, I will discuss Mr. Andrews's misunderstanding of the ELG methodology and its application within the Commonwealth of Pennsylvania. Second, I will explain the impact of proposing such a radical reduction of depreciation expense for the Company. Third, I will explain why the recent decisions regarding ELG in other state jurisdictions that Mr. Andrews uses to support his ALG proposal are not applicable in this case. And lastly, I will show that the Company's proposed composite annual depreciation accrual rate of 2.39%, calculated as of December 31, 2025 for the water base operations, is consistent with the range of composite annual

depreciation accrual rates of other water utilities within the United States regardless of the depreciation procedure utilized. A similar presentation for wastewater assets will be set forth. This discussion will include all procedure and method issues surrounding other Aqua entities that Mr. Andrews presents.

II. EQUAL LIFE GROUP VS AVERAGE LIFE GROUP

Q. What is the equal life group procedure?

A. For the ELG procedure, a group of property (e.g., a vintage within a property account) is subdivided into groups having equal service lives. The size of these "equal life groups" is based on the estimated survivor characteristics of the account. Depreciation can then be calculated for each equal life group based on the straight line method, meaning that an equal amount of the group's service value is recorded as depreciation expense in each year of service. The total depreciation for an account is the summation of the calculated depreciation for each equal life group. Based on the survivor curve estimate for an account, the ELG procedure mathematically estimates the life for each unit in the account, and then depreciates each unit over its expected life. The procedure is also known as the Unit Summation Procedure.

Q. How does the ELG procedure differ from the ASL (also referred to as ALG) procedure?

A. While the ELG procedure calculates depreciation for each equal life group, the ASL (or ALG) procedure depreciates every asset within an account over the average life of the entire account. Using equal life groups, rather than an average life, as the basis for depreciation provides a more precise calculation that better

matches recovery with consumption of assets by depreciating assets that have shorter lives than the average over their shorter lives (and the longer-lived assets over their longer lives) as opposed to depreciating all assets over the average life for the group.

Q. Is ELG supported by depreciation authorities?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. For example, Robley Winfrey, who developed the Iowa survivor curves at Iowa State University and is regarded as a pioneer of utility depreciation practices, referred to the ELG procedure as "the only mathematically correct procedure."[2]

Depreciation Systems by Wolf and Fitch, also supports the appropriateness of ELG stating, "Application of the equal life group procedure is generally considered to better match the consumption of capital with service provided than does application of the average life procedure."[3]

Q. Please explain how depreciation is determined using the ELG procedure.

A. A simple two-unit example will demonstrate how the ELG procedure more appropriately matches cost recovery to consumption than the ASL procedure. In this example, each unit costs $1,000. Unit A will be in service for 5 years, and unit B will be in service for 15 years. There is no net salvage for these units.

For the ASL procedure, the average service life for the two units is 10 years ([5+15]/2), so the annual depreciation rate is 10% (1/10) throughout the lives of

[2] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71

[3] Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994); p.75

both units. For the first five years, the total annual depreciation amount is $200 ($2,000 x 10%). At the end of year 5, the total of the annual accruals for the account is $1,000 ($200 x 5). Unit A is then retired, which results in a reduction in the plant in service and accumulated depreciation of $1,000, consistent with established plant retirement procedure. At the start of year 6, Unit B remains in service with an accumulated depreciation balance of $0. At this point, one-third of Unit B's service life has expired, and its full original cost must still be recovered.

For the remaining 10 years, $100 ($1,000 x 10%) of annual expense is accumulated in depreciation, for a total of $1,000 when Unit B is retired. Thus, at the time of Unit B's retirement, the Company will have fully recovered the total depreciable cost of both units. However, at the end of year five, only one unit remained in service with two-thirds of its life expectancy left but with 100% of that unit's original investment still to be recovered. As a result, the ASL procedure is ineffective in matching cost recovery to the actual consumption of the asset. This is a characteristic deficiency of the ASL procedure.

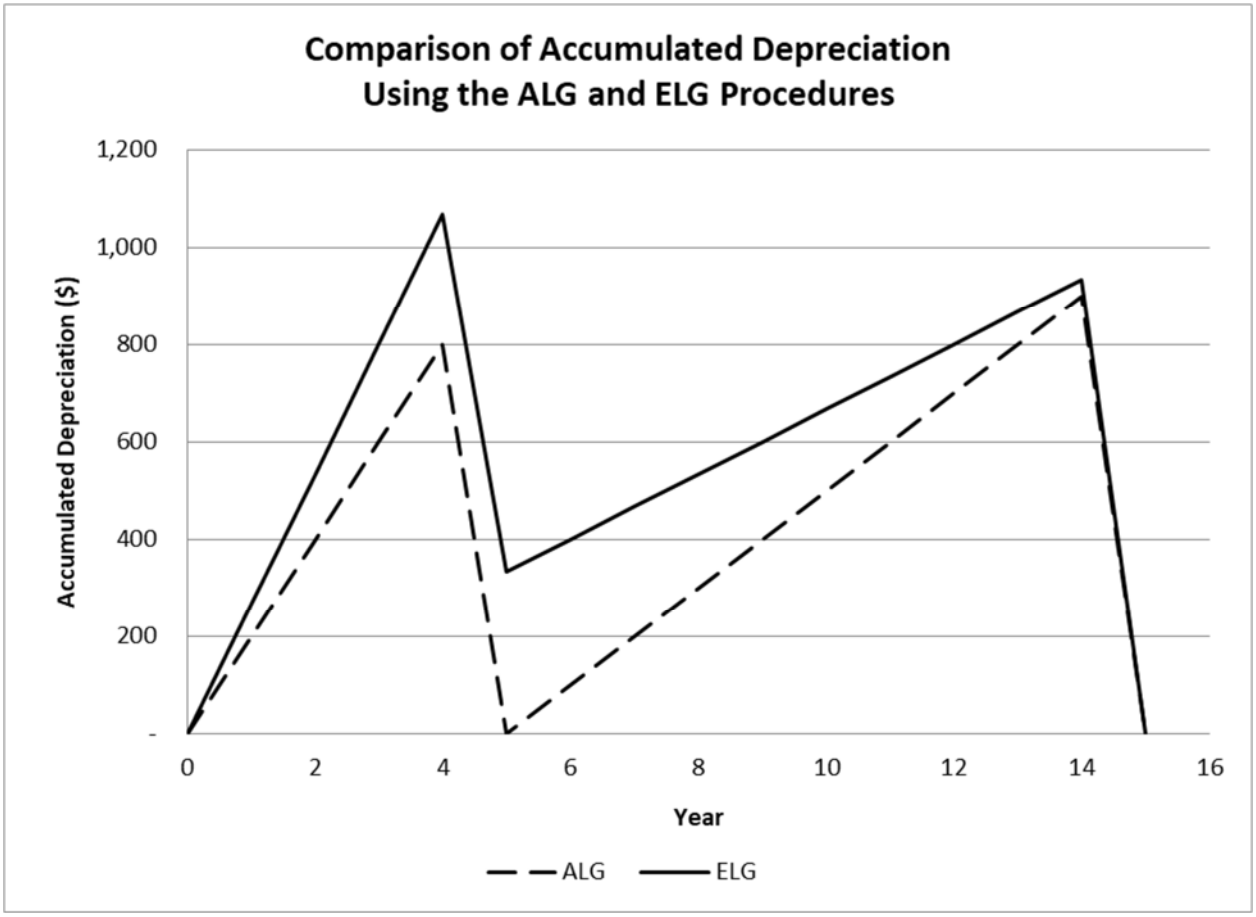
When depreciation is determined using the ELG procedure, the pattern of cost recovery better matches actual consumption. Using the same two-unit example, the annual depreciation expense under the ELG procedure is calculated by summing the annual expense for each equal life group. In this case, there are two equal life groups – one for Unit A, which has a life of 5 years, and one for Unit B, which has a life of 15 years. The annual depreciation rate for Unit A is 20% (1/5) and for Unit B is 6.67% (1/15). Thus, the annual accruals for years 1 through 5 will be $200 ($1,000 x 20%) for the first equal life group (Unit A) summed with

$66.67 ($1,000 x 6.67%) for the second (Unit B), or $266.67. At the end of year 5, when Unit A is retired, the total accruals would be $1,333.33 ($266.67 x 5). The retirement of Unit A results in a reduction of $1,000 in accumulated depreciation, and at the start of year 6, the $1,000 original cost of Unit B remains with $333.33 in accumulated depreciation. Thus, with one-third of Unit B's life consumed, accumulated depreciation is exactly one-third of the original cost for this unit.

In the years 6 through 15, the annual depreciation expense is $66.67 for a total of $666.67 over the 10-year period. After the retirement of Unit B, the accumulated depreciation is $0 ($1,000 of accruals less the $1,000 retirement of Unit B), and the full recovery of both units has been obtained.

As this example shows, the ELG procedure better matches the cost recovery of both units with their actual service lives. Figure 1 below provides a graph of the accumulated depreciation for both procedures. The end of year 5 provides the best illustration of the difference between the two procedures. Under the ELG procedure, Unit A is fully recovered when retired at the end of year 5; Unit B is one-third through its service life and has had one-third of its cost recovered. This contrasts with the ASL procedure, in which accumulated depreciation is $0 at the end of year 5, even though the only unit remaining in service has consumed one-third of its service life. Clearly, the ELG procedure provides a better match regarding the consumption of the service value for the two units. Additionally, rate base under ELG at the end of year 5 is $667 (=$1,000-$333) versus $1,000 (=$1,000 - $0) under ASL.

Figure 1. Comparison of Accumulated Depreciation Using the ALG and ELG Procedures



Q. You have provided a simple two-unit example demonstrating how ELG works. Do the same principles apply to larger property groups with many units?

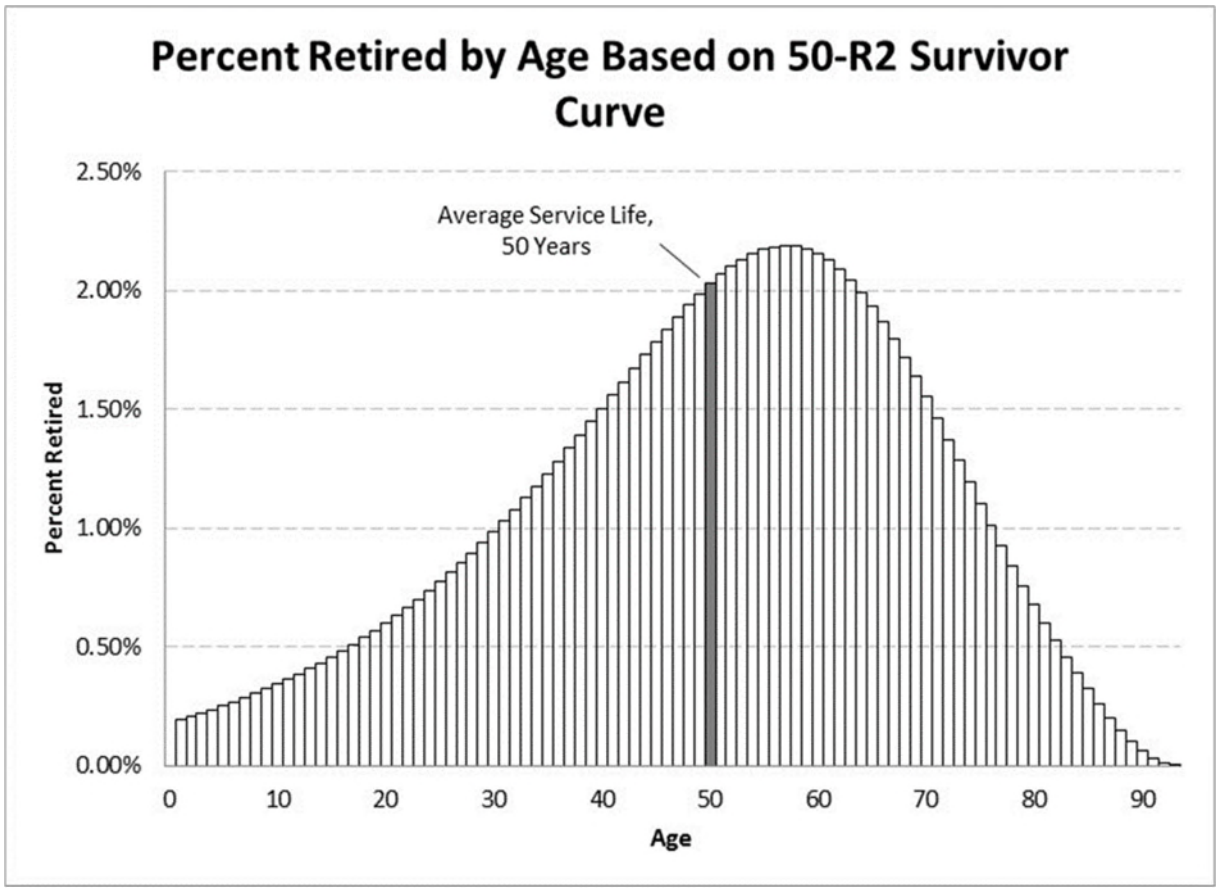
A. Yes. The same principles apply when the ELG procedure is applied to a large group of property with many units, as is typical of utility property. The survivor curve estimated for each property account can be used to divide an account into equal life groups. The survivor curve allows for the calculation of the percentage of the property account that is in each equal life group, which allows for the calculation of ELG annual depreciation accruals for the entire property group.

Under the ASL procedure, the depreciation expense for all property in the account is calculated based on the average service life for the entire group.

The ELG procedure recognizes the reality of dispersion. Specifically, it recognizes that in actual utility operations only a very small percentage of the account will be retired at the average service life. Figure 2 below is a chart of the frequency curve for the 50-R2 survivor curve. The frequency curve shows the percentage of property in this account that will be retired at each age, based on the estimated survivor curve. This percentage is also the size of each equal life group.

The shaded bar in Figure 2 represents the percentage of property that will have a life of 50 years. In other words, this shows the percentage of property that is expected to be in service for the average service life. Only 2.07% of the assets will be in service for exactly 50 years. In contrast, a majority, 97.93%, of the assets will have a service life different than 50 years.

Figure 2. Percent Retired by Age Based on 50-R2 Survivor Curve



The ELG procedure recognizes this dispersion and allocates costs for each equal life group over the expected life for that group. The service lives indicated by the 50-R2 survivor curves range from 1 year to 93 years. As a result, the ELG procedure allocates cost in a manner that approximates the result of each asset being depreciated over its actual life. Conversely, the ASL procedure depreciates every unit of property within an account over the same life, that is, the average life. As Figure 2 shows, this average life will be incorrect most of the time – in this example, the average life will be the wrong life for 97.93% of the individual assets.

Just as in the case for the two-unit example provided above, the ELG procedure better matches capital recovery with the actual lives forecast by the

estimated survivor curve.

III. PENNSYLVANIA PRECEDENT

Q. Is the ELG procedure supported by other depreciation authorities?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. As noted previously, Robley Winfrey, who developed the Iowa survivor curves that are universally used in estimating service lives based on historical retirement data, referred to the ELG procedure as "the only mathematically correct procedure." [4]

Q. Are other commissions implementing the ELG procedure given the current regulatory environment?

A. Yes. The ELG procedure is being utilized for some utilities by the Texas Railroad Commission. It is also used in jurisdictions in Canada. The Federal Communications Commission ("FCC") first adopted ELG in the 1980s in the context of rapid technological change in the telecommunications industry at that time.[5]

ELG has also been adopted recently in Colorado in response to significant technological and regulatory changes facing the gas industry.[6] For similar reasons, New York is also considering ELG in an active statewide case.[7]

[4] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71.
[5] See, Id., pages 172 through 175 for a discussion of the use of the ELG procedure in the telecommunications industry.

[7] New York State Department of Public Service Cases 24-E-0322 and 24-G-0323.

Q. Has the ELG procedure been previously adopted in Pennsylvania?

A. Yes. ELG is the predominant method used in Pennsylvania and has been for many years. Most Pennsylvania gas, electric and water utilities have used the ELG procedure since the 1980s. ELG was adopted for Aqua in the 1980s related to vintages subsequent to 1983 and then related to all vintages in a later case and has been used for depreciation since this approval.[8] Approximately every five years beginning in the mid-1980s, the Company has filed a service life study report with the PUC for approval based on Commission regulations. In 2020, Aqua submitted its most recent five-year service life study report to the Commission and all depreciation parameters and methods, including the use of the ELG procedure, were approved. Additionally, Aqua submits annual depreciation reports to the Commission each year updating the Company's depreciation accrual rates for book purposes as well as identifying the underlying depreciation parameters and calculation methods and procedures used to determine depreciation expense. Under the Commission's regulation 52 Pa. Code §73.9(c), once such depreciation reports are filed and accepted "*[i]n subsequent ratemaking proceedings, the most recent annual depreciation report or service life study approved or deemed approved for accounting purposes only under this chapter, constitutes a rebuttable presumption as to the reasonableness of the accrued depreciation claimed for ratemaking purposes, and the burden of proving the unreasonableness of the accrued depreciation shall be on the challenging party*."

[8] ELG was adopted for many Pennsylvania utilities in the 1980s on a go-forward basis. For this reason, vintages of plant subsequent to the adoption of ELG use ELG while older vintages use ASL. In the early 2000s, Aqua moved to ELG for all vintages.

Q. Are the Company's current depreciation rates based on the ELG procedure?

A. Yes. The Company's most recent annual depreciation report was filed on June 30, 2024, and its most recent service life study was filed in August 2020. All have been approved for accounting purposes using the ELG procedure. The ELG procedure was also adopted in the most recent rate case, Docket No. R-2021-3027385 and R-2021-3027386.

Q. Since the use of ELG is the predominant and longstanding practice in Pennsylvania, has Mr. Andrews provided evidentiary support for his recommendation that the Company should deviate from this practice?

A. No. Mr. Andrews has provided very little evidence to support why the ALG method is more appropriate than ELG. None of Mr. Andrews's arguments support overturning longstanding precedent despite having the burden of doing so under 52 Pa. Code §73.9(c). He appears to disagree with ELG simply because it can produce higher depreciation rates, but he provides no evidence for why lower depreciation rates are more appropriate.

He offers minimal justification to support his claim that the Company's approved depreciation rates or calculation procedures, which are based on longstanding precedent, are unreasonable. Further, Mr. Andrews ignores the issue of precedent, in effect only arguing that his proposal should be adopted because it results in lower depreciation expense and a short-term reduction in rates for current customers.

However, as I will explain, Mr. Andrews is incorrect that the longstanding use of ELG costs customers more than ASL. In fact, the opposite is true. Current

customers benefit from the continued use of ELG, because rate base is lower than had ASL been used during this time. The more precise recovery through ELG benefits customers over time, because shorter-lived assets are correctly recovered over their useful lives, resulting in a lower rate base and lower return on rate base that exceeds the higher annual depreciation expense. Further, the alleged benefit proposed by Mr. Andrews, of lower short-term rates, is the result of the *change* in procedure, not from the procedure itself. Over time, the ASL depreciation rates will result in a higher rate base and higher overall cost to customers.

IV. DEPRECIATION AND RATE BASE

Q. How does Mr. Andrews discuss the impact of ELG on customer rates?

A. Mr. Andrews states on page 22, lines 5 to 15 of his testimony "Utilities typically only update their depreciation expense recovered from customers in the context of a rate case, which is often not an every year occurrence. When depreciation rates for new assets are proposed using the ELG procedure, the rates put forward for approval would be analogous to the year 1 depreciation rate in this example. Therefore, if the ELG method were approved in a depreciation study, given this example and left in place for 10 years, the effective depreciation rate would be 34.38% every year. To be just to consumers and to produce reasonable rates, ELG depreciation rates should be updated each year and the corresponding depreciation expense adjusted in base rates; however, the ELG depreciation rates are not properly implemented and create intergenerational inequities, significantly overcharging customers in base rates based on the higher depreciation rates in earlier years."

Q. Does Aqua perform regular rate cases?

A. Yes. Including the instant rate case, Aqua has performed 3 rate cases since 2018.

Q. Is Aqua required by Pennsylvania regulations to update its depreciation expense and annual depreciation accrual rates each year by filing an Annual Depreciation Report?

A. Yes.

Q. Does Aqua's proposed ELG depreciation rates meet Mr. Andrews' stated requirements for ELG depreciation rates "to be just to consumers and to produce reasonable rates?"

A. Absolutely yes.

Q. Please explain this concept further.

A. Depreciation impacts customer rates in two ways. Depreciation expense is a direct component of the revenue requirement; however, accumulated depreciation[9] is also a *reduction* to rate base. A higher level of accumulated depreciation results in a lower rate base, a lower return on rate base and, therefore, lower customer rates when compared to a lower level of accumulated depreciation.

The implication of Mr. Andrews' testimony is that a utility has an incentive for higher depreciation because it results in higher customer rates, and thus more cash flow for the Company. However, in the long term, his description of the rate impact is fundamentally incorrect. Higher depreciation expense will, over time, result in higher accumulated depreciation. Because average depreciation rates

[9] Accumulated depreciation is the depreciation expense recorded to date, less recorded retirements and cost of removal, plus recorded gross salvage.

for a utility are typically in the 2% to 3% range and the return on rate base is higher (typically 7% to 8% or more), higher depreciation expense tends to produce lower customer rates over time. Mr. Andrews' suggestion that a utility has an incentive to "overcharge" for depreciation expense is simply incorrect.

The longstanding use of ELG depreciation rates for Pennsylvania utilities has resulted in a lower rate base than if ASL had been used. Customers today pay lower customer rates than if ASL had been used during the years since ELG's adoption. As a result, it has been in customers' interest not only to use ELG but also to use it consistently.

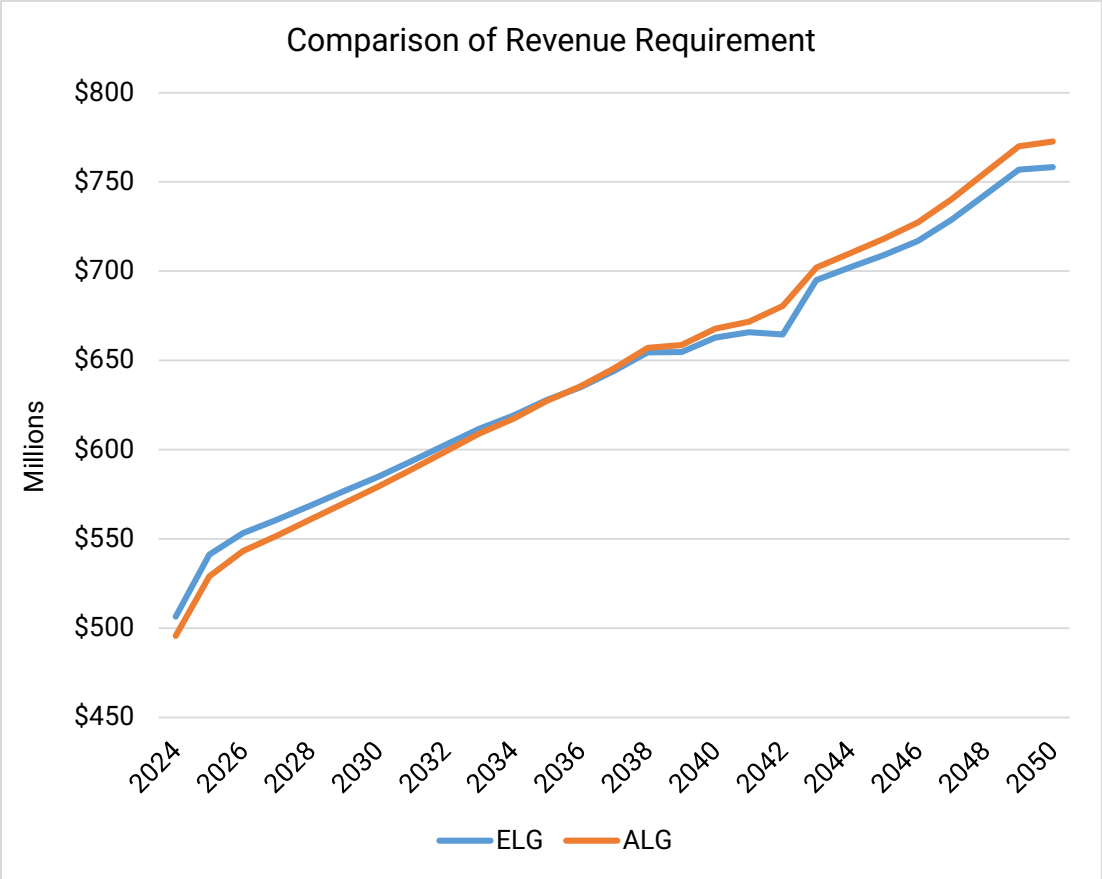
Over time ASL will result in higher customer rates than ELG. It is correct to assume that if the Company were to switch from ELG to ASL there would be a *short*-term benefit to current customers. However, this is not because ASL is in customers' best interest in the long term, but only because current customers would benefit from both lower ASL depreciation rates and from the lower rate base that exists due to the longstanding use of ELG.

Mr. Andrews' proposal is, therefore, not a recommendation that is in the long-term interest of lower customer rates. Instead, it is a short-term subsidy only to current customers who benefit from ELG depreciation rates that were paid by a previous generation of customers. The costs of a higher rate base will be paid for by future customers who will have to pay higher overall customer rates. Adopting ALG would serve as an intergenerational subsidy to current customers at the expense of other generations of customers.

Q. Can you illustrate this concept?

A. Yes. This concept is illustrated in Exhibit No. JJS-1-R, which forecasts plant and reserve balances for Aqua through 2050 under two scenarios: one adopting the ALG procedure and the other maintaining the currently-approved ELG procedure. Figure 3 below shows a high-level estimate of the Company's revenue requirement for the period 2024 through 2050 under each of these scenarios. This demonstrates that while ELG leads to higher depreciation expenses in the short term, it results in lower revenue requirements over the long term. The ELG approach is arguably more beneficial to customers as it provides more stable and lower rates over time.

Figure 3. Comparison of Revenue Requirement



V. INTERGENERATIONAL INEQUITY

Q. Please explain the concept of "intergenerational equity."

A. Intergenerational equity is a ratemaking principle in which customers receiving the benefit from the use of an asset (e.g., from water utility property used to provide water service) are the same customers who pay for the cost of that asset - no more, no less. There are two related concepts when considering intergenerational equity as it pertains to depreciation. The first is the inequity that results when customers pay for assets from which they receive no service. For example, if an asset is retired before becoming fully depreciated, then customers subsequent to the retirement will have to pay for an asset from which they are not receiving service. This is less equitable, as one generation of customers bears the cost of an asset that does not provide service to them. Depreciation rates should be designed to avoid this outcome. However, in real-world operations, circumstances can change such that assets are retired earlier than expected. This result is different than designing depreciation rates to include intergenerational inequity, which can and should be avoided.

The second concept is related to the distribution of depreciation charges over the life of an asset. For example, if depreciation expense is higher in the earlier years of an asset's life and lower in later years (or vice versa), this also is less equitable because one generation of customers pays a higher share than the next.

In my professional opinion, the first concept related to intergenerational equity can be more detrimental to customers than the second. That is, there is greater inequity resulting from a customer paying for an asset from which they

received no service than the inequity resulting from one generation paying a somewhat different share of the same asset than another generation.

Q. How does the ELG procedure calculate depreciation expense?

A. The ELG procedure calculates depreciation expense for assets with like lives within a depreciable group in accordance with the Iowa Survivor Curve proposed for the account and summing that depreciation expense for each similar life group of assets to develop an annual depreciation accrual rate applicable to the depreciable group. This procedure is designed to more appropriately match the recovery of the assets' costs to the period of time over which they are providing service to rate payers.

Q. How does the ALG procedure calculate depreciation expense?

A. The ALG procedure calculates depreciation expense by applying the same average service life from the proposed Iowa Survivor Curve to all assets within a depreciable group rather than grouping assets within a depreciable group by like lives. The ALG procedure operates with the assumption that some of the assets within a depreciable group will retire prior the average service life applied to the depreciable group and other assets will survive longer than the average service life applied to the depreciable group. Continuing, the ALG procedures assumes the over-recovery of the assets surviving longer than the average service life will offset the amount of the under-recovery of the assets retiring prior to reaching the average service life of the depreciable group.

Q. Does the use of ELG versus ALG or vice versa impact the total amount of asset cost to be recovered?

A. No. Both procedures are designed to recover the total service value of an asset over the asset's service life.

Q. Has Mr. Andrews claimed that the ELG procedure produces intergenerational inequity?

A. Yes.[10]

Q. Why does Mr. Andrews make that claim?

A. Given the precise nature of the calculation process utilized in the ELG procedure, the level of depreciation expense associated with assets that are younger than the proposed average service life is higher than depreciation expense using the ALG procedure. Conversely, as the assets mature and the lives grow longer, the level of depreciation expense associated with assets that are older than the proposed average service life is lower than depreciation expense using the ALG procedure. Mr. Andrews' claim focuses on the higher level of depreciation expense calculated for younger assets while disregarding the associated lower level of depreciation expense calculated associated with the older, more mature assets within the depreciable group. Mr. Andrews misrepresents this more accurate allocation of depreciation expense as intergenerational inequity.

Q. Does the use of the ELG procedure produce intergenerational inequity?

A. No, quite the opposite. The very nature of the ELG procedure more precisely calculates depreciation expense for assets with like lives within a depreciable group and sums that expense to develop an annual depreciation accrual rate applicable to the depreciable group. As a result, it more appropriately matches the

[10] OCA Statement No. 4, pp. 23, lines 1-9.

recovery of the asset's cost to the period of time over which it is providing service to rate payers.

In contrast, there is a stronger argument that the ASL procedure results in intergenerational inequity. Because depreciation expense on shorter-lived assets occurs over the average service life, recovery for these assets is deferred. ELG produces a more equitable recovery by recovering these costs over the actual, shorter, service lives.

Q. Does the use of the ELG procedure require the calculation of annual depreciation rates to be updated more frequently than the ALG procedure to prevent intergenerational inequity?

A. No. Regardless of the procedure selected, the calculation of depreciation expense and annual depreciation accrual rates should be updated regularly to prevent intergenerational inequity and the inherent variable of plant activity.

Q. How frequently does Pennsylvania regulation require the calculation of depreciation rates?

A. Pennsylvania regulation requires utilities operating within the state to calculate and file updated depreciation rates annually. This annual requirement alleviates concern for the development of generational inequity.[11]

VI. RATE BASE FOR FORECASTED TEST YEAR

Q. What is the appropriate process for calculating the proposed depreciation expense and annual depreciation accrual rates during a rate case in Pennsylvania?

[11] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71.

A. Pennsylvania provides for the calculation of proposed depreciation expense and annual depreciation accrual rates as of a Fully Projected Future Test Year ("FPFTY") date. This requires the development of plant and reserve balances as of the FPFTY. In the instant case, the FPFTY date is December 31, 2025.

Q. Please explain how the FPFTY levels of plant and accumulated depreciation (or "book reserve") are developed.

A. The process begins with the calculation of depreciation expense and annual deprecation accrual rates as of a Historical Test Year ("HTY") which is completed using historical, or actual, levels of plant and reserve. In the instant case, the HTY date is December 31, 2023. Once depreciation expense and annual depreciation accrual rates are calculated as of the HTY date, they are utilized along with projected levels of plant activity to develop the plant values and bring forward the book reserve to a Future Test Year ("FTY") date at which the levels of depreciation expense and annual depreciation accrual rates are calculated again. In the instant case, the FTY date is December 31, 2024. The final step to calculate the proposed depreciation expense and annual depreciation accrual rates is to utilize the FTY depreciation expense and annual depreciation accrual rates along with projected levels of plant activity to develop the plant values and bring forward the reserve to a FPFTY date where the proposed levels of depreciation expense and annual depreciation rates are calculated. In the instant case, the FPFTY date is December 31, 2025.

Q. Is it important to maintain a consistent process and procedures during the calculations described above?

A. Yes, it is. Maintaining a consistent process and procedures eliminates the possibility of unnecessary swings in the level of depreciation expense and annual depreciation accrual rates such as what Mr. Andrews is proposing.

Q. Please describe how Mr. Andrews has deviated from the Pennsylvania process described above.

A. Mr. Andrews appears to have developed a FPFTY book reserve by applying the proposed ALG alternative procedure, however, his results are not consistent with the proper methodology as he presents for December 31, 2025.

Q. What is the difference in Mr. Andrews' proposed FPFTY book reserve and depreciation expense?

A. Mr. Andrews has calculated a total book reserve that is approximately $356,000 too high for the combined water and wastewater systems. Almost all of the difference relates to the water base operations. With a book reserve that is $356,000 too high the impact on depreciation expense as of the December 31, 2025 as proposed by Mr. Andrews is not only the $14.1 million less than what is presented in the depreciation study due to the unnecessary change to the ALG procedure but also a component of the $14.1 million is due to utilization of the incorrect book reserve.

Q. What is the correct level of the book depreciation reserve as of December 31, 2025 for Aqua if Mr. Andrews proposal using the average life group is utilized?

A. The attached Exhibit JJS-2-R sets forth the proper development of the projected book reserve for Aqua as of December 31, 2025 using the ALG procedure for both

water systems and all three wastewater systems. This is a total reduction in book depreciation reserve of $356,191 compared to what Mr. Andrews has presented. The difference in the combined water base and Shenandoah Water system book reserve is $355,390. The difference in the combined wastewater base, Lower Makefield and East Whiteland system book reserve is only $801 due to the ownership for the wastewater assets has been so short. This means that the total rate base for Aqua should be increased by $356,191 for developing depreciation rates and expense as of December 31, 2025 using Mr. Andrews methodology.

Q. Has Mr. Andrews provided decisions regarding ELG procedure from other jurisdictions to support his proposed use of the ALG procedure?

A. Yes. Mr. Andrews cites decisions from Indiana and Kentucky to support his proposal of the ALG procedure in this case.

Q. Why are the Indiana and Kentucky decisions not applicable to the instant case?

A. Both the decisions referenced by Mr. Andrews were cases involving electric utilities with an asset base including electric generation, transmission and distribution assets. These are significantly different assets than those of a water or wastewater utility with significantly different costs associated with them, and more importantly, they are assets that are being recovered over much shorter remaining lives than originally planned.

Q. Was the Indiana decision referenced in Mr. Andrews's direct testimony based on a "change in landscape" and a "higher than average investment cycle"?

A. Yes. I have provided an excerpt from the Indiana decision referenced by Mr. Andrews below citing to both "a changed landscape" and "a higher than average investment cycle" as the basis of the Indiana Utility Regulatory Commission decision.

> While we have determined in the past that the ELG methodology was appropriate and acknowledge the weight given to precedent in many prior decisions, we always evaluate each case as it comes before us and do not need to approve the same methodology based on prior decisions, especially in light of a changed landscape. The use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG.[12]

Q. Does "a changed landscape" exist for Aqua?

A. No. Aqua is operating within the same "landscape" that has existed for its three most recent rate cases. The ELG procedure has been proposed and approved in each of those rate cases. There has been growth via acquisition for both water and wastewater assets, the overall landscape is not comparable to the examples provided in Mr. Andrews testimony.

Q. Is the level of growth for Aqua expected to continue into the future?

A. Yes. Aqua is not in a short term higher than average investment cycle as Mr. Andrews describes in his testimony. The current plans show considerable amounts of system improvements and there are potential acquisitions of wastewater systems that will offer improved service for customers.

Q. Is the Company's proposed 2.39% composite depreciation rate for water base operations calculated using the ELG procedure as of December 31, 2025 reasonable and consistent with comparable water utilities in the United

[12] Final Order, Cause No. 45253, p. 90.

States?

A. Yes. In fact, in reviewing the composite depreciation rate utilized by various other water utilities one can see the average exceeds 2.39%. The attached Exhibit No. JJS-3-R sets forth composite depreciation rates of comparable water utilities. Also, included within Exhibit No. JJS-3-R is a comparison of composite depreciation rates for wastewater utilities.

Q. Is the proposed 2.17% composite depreciation rate calculated by Mr. Andrews using the ALG procedure as of December 31, 2025 reasonable and consistent with other water utilities in the United States?

A. No, the 2.17% composite depreciation rate proposed by Mr. Andrews for the water base operations is unreasonably low and inconsistent with other water utilities in the industry. This is particularly low for the type of asset mix that is part of the water base operations. Additionally, the Company has been properly conducting annual depreciation updates per regulations which confirm a consistent recovery pattern for the asset utilization. It should also be noted that a composite rate for wastewater base operations below 2.00 percent is also unreasonably low.

Q. Has Mr. Andrews also attempted to compare Aqua depreciation procedures to the other Aqua entities?

A. Yes. however, he only attempts to compare the depreciation procedure and not all the other key factors that need to be considered when determining comparable information.

Q. Can you identify some of the other key factors between the Aqua entities that Mr. Andrews ignores?

A. Yes. First, some of the other Aqua entities utilize the straight line, remaining life method while others use whole life. Second, some have an asset mix that includes major treatment facilities with surface water and others utilize small treatment facilities and wells. Third, some include a net salvage accrual in rates while Pennsylvania uses amortization of net salvage after incurred approach. Fourth, some include an asset mix that has a high percentage of acquired assets that have been determined with different market values. Fifth, wastewater assets have not been regulated nearly as long as water so the development of rates will be influenced by the percentage of acquired assets to original assets.

Q. You were the witness supporting depreciation expense claims by the other Aqua entities. Is there any inconsistency in your supporting different depreciation methods in different jurisdictions?

A. No. In other jurisdictions, and at the direction of the utility involved, I presented depreciation calculations in accordance with established procedures in those jurisdictions.

Q. Does this complete your Prepared Rebuttal Testimony?

A. Yes, it does.

PREPARED REBUTTAL TESTIMONY OF

PAUL R. MOUL

Topics Addressed:

Cost of Capital

DATE SERVED: September 12, 2024 **Aqua Statement No. 7-R**
DATE ADMITTED:

REBUTTAL TESTIMONY OF PAUL R. MOUL

INTRODUCTION

1. Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road, Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P. Moul & Associates, an independent financial and regulatory consulting firm.

2. Q. DID YOU PREVIOUSLY SUBMIT TESTIMONY IN THIS PROCEEDING ON BEHALF OF AQUA PENNSYLVANIA, INC., and AQUA PENNSYLVANIA WASTEWATER, INC. (collectively "AP" OR THE "COMPANY")?

A. Yes. I submitted my direct testimony, Aqua Statement No. 7, that was filed on May 23, 2024.

3. Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony responds to the direct testimony submitted by Christopher Keller, a witness appearing on behalf of the Commission's Bureau of Investigation and Enforcement ("I&E"), Aaron L. Rothschild, a witness appearing on behalf of the Office of the Consumer Advocate ("OCA"), and Jason Hails, a witness appearing on behalf of the Office of Small Business Advocate ("OSBA"). If I fail to address each and every issue in the testimony of these witnesses, it does not imply agreement with those issues.

4. Q. WHAT RATE OF RETURN ISSUES HAVE BEEN DISPUTED IN THIS CASE?

A. The Company's capital structure has been challenged by Mr. Rothschild. Mr. Keller has accepted the Company's proposed capital structure. Each of the opposing witnesses have accepted the Company's proposed cost of debt in this case. The cost of equity has been disputed by both Messrs. Rothschild and Keller. The equity returns proposed by the I&E and OCA witnesses are entirely too low to reflect the risks of AP and the prospective cost of equity. Aside from technical issues that I will discuss later in my rebuttal testimony, the Commission should take into consideration the following:

1) A rate of return that will be reflective of the current capital cost rates, which is today higher than any time since the financial crisis of 2007-08.

2) A rate of return that will reflect and be supportive of the Company's financial and risk profile.

3) The management effectiveness displayed by AP.

As I explain below, the opposing party recommendations fail to adequately consider these points and thereby understate the required cost of common equity in this proceeding.

5. Q. PLEASE SUMMARIZE THE KEY POINTS OF YOUR COST OF EQUITY REBUTTAL TESTIMONY.

A. My key points are:

- Comparable Companies - Messrs. Keller and Rothschild have made two deletions to the members of my Water Group. I do not oppose these adjustments to the Water Group.
- Discounted Cash Flow (DCF) - A variety of DCF results derived by the opposing witnesses are too close to the cost of debt to provide a reliable measure of the cost of equity. As such, alternative models for determining the cost of equity should be considered as has been Commission practice in other recent proceedings.
- DCF Leverage Adjustment - The I&E and OCA witnesses have not refuted the accuracy of the Company's leverage adjustments to the DCF and beta component of the CAPM.
- Capital Asset Pricing Model - A reasonable application of the CAPM mandates using prospective yields on 30-year Treasury bonds, leverage adjusted betas, and size adjustment and produces a higher equity cost rate

than the DCF method.

- Risk Premium Analysis - The Risk Premium approach has previously been considered by the Commission and the results presented by the Company substantiate the Company's proposed return in this case.
- Comparable Earnings Approach - This approach verifies the Company's proposed return in this case.
- Management effectiveness of AP warrants an equity return above the midpoint of the indicated returns shown by the standard models of the cost of equity.

6. Q. WHAT ARE THE KEY ASPECTS OF THE RATE OF RETURN ISSUE THAT THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION") SHOULD CONSIDER WHEN DECIDING THIS ISSUE IN THIS CASE?

A. The issues involve the Company's cost of equity and the capital structure. Mr. Rothschild has opposed the actual capital structure and instead proposed a hypothetical capital structure. Mr. Rothschild's use of a hypothetical capital structure, rather than the Company's projected actual capital structure for the FPFTY, is factually wrong and contrary to long-standing Commission practice and precedent. I will detail the Commission recent findings on capital structure below.

7. Q. HOW SHOULD THE RATE OF RETURN SET BY THE COMMISSION SUPPORT THE COMPANY'S FINANCIAL PROFILE?

A. The Commission should set the Company's return on equity at a level that will attract investment in the Company to ensure the Company's financial ability to render safe and reliable service. Applying this principle, the Commission should reject the proposals by Messrs. Keller and Rothschild to lower the Company's return on common equity to 9.37% and 8.70%, respectively. These proposed equity returns would be viewed by investors as unsupportive of the Company's financial condition. Indeed, in

my memory, the Commission has not set a return on equity on an original cost rate base that was less than 9% for an investor-owned utility in the past 40-years. This makes Mr. Rothschild's proposal clearly an outlier and should be rejected. Indeed, the Commission approved 10.00% in the Company's last rate case in 2022. Columbia Water received a 9.75% equity return without any recognition of management performance. And, the Commission's recent order in Pennsylvania-American's rate case set a 9.45% return on equity. Recently, the water utility return on equity was set at 9.65% in the Commission's Quarterly Earnings Report issued on August 1, 2024 (Docket No. M-2024-3049527). These facts have not been adequately incorporated into the cost of equity proposals of Messrs. Rothschild and Keller. Indeed, with current interest rates, an equity return above 10% is clearly warranted today.

8. Q. IS THERE ANYTHING UNUSUAL ABOUT THE TESTIMONY OF MR. ROTHSCHILD?

A. Yes. Mr. Rothschild prepares approximately sixty (60) pages of testimony devoted to his analysis of the cost of equity using a variety of approaches (e.g., constant and non-constant DCF and CAPM). Of his results, 79% (11 of 14) of them are below 8% and just 21% (3 of 14) are above 8% (see page 15 of OCA Statement 3). He concludes that from his analysis the midpoint of his range is 7.65%. But, this is not his proposed cost of equity for AP in this case. Rather, he proposes an 8.70% equity return that is the midpoint of the top of his range and the DCF that I developed absent my leverage adjustment. It is indeed perplexing that Mr. Rothschild could only give one-half weight to his own analysis even after going to the top of his range. This seems to indicate that his analysis is woefully inadequate and cannot be relied upon in any meaningful way.

9. Q. ARE THERE ADDITIONAL ISSUES THAT THE COMMISSION SHOULD CONSIDER WHEN SETTING THE COMPANY'S RETURN?

A. Yes. The investment community would be very concerned if the Commission were to adopt the position of the OCA in this case. If it were to do so, investors would view Pennsylvania regulation as less supportive of the Company at a time of high levels of capital investment. Over the next five years, AP expects capital expenditures to be approximately $1.954 billion. If the Commission were to adopt the returns proposed by the OCA, Pennsylvania's regulatory support would certainly be placed into question by the investment community. Although cost allocations, rate design issues, and regulatory policies relative to the cost of service are important considerations, the return on equity used by the Commission to set rates embodies in a single numerical value a clear signal of regulatory support (or lack thereof) for the financial strength of the utilities that it regulates. In a single figure, the return on equity utilized to set rates provides a common and widely understood benchmark that can be compared from one company to another and is the basis by which returns on all financial assets (stocks – both utility and non-regulated, bonds, money market instruments, and so forth) can be measured. So, while varying degrees of sophistication are required to interpret the meaning of specific Commission policies on technical matters, the return on equity figure is universally understood and communicates to investors the types of returns that they can reasonably expect from an investment in utilities operating in Pennsylvania.

10. Q. SHOULD THE COMMISSION CONSIDER THE RELATIVELY HIGH LEVELS OF CAPITAL COSTS WHEN DECIDING THE RETURN ON EQUITY IN THIS CASE?

A. Yes. To gain a consensus view of future interest rates, I tabulated the forecasts of yields on 10-year Treasury notes published by a variety of well recognized and investor-influencing sources. I chose the 10-year Treasury note because it is available on a consistent basis for each source. The comparisons are:

	2025	2026	2027	2028	2029	2030
Blue Chip	4.0%	4.0%	4.0%	4.0%	4.2%	4.2%
CBO	4.1%	3.7%	3.6%	3.7%	3.8%	3.9%

The Blue Chip (June 1, 2024) and CBO (June 2024) reflect the general consensus that interest rates will remain at elevated levels in the future. The relatively high levels of interest rates represent one key factor that adds to the risk of common equity. And for comparison purposes, the yield on public utility bonds always exceeds Treasury yields. As noted in my direct testimony (see page 38 of Statement No. 7), the spread in those yields are at least 1.25%. The Commission should take into account the forecast of interest rates when it sets the cost of equity for AP.

11. Q. HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?

A. I will cover the issues of (i) capital structure, (ii) the weight to be given to the DCF method, (iii) the DCF growth rate, (iv) the leverage adjustment to the DCF and CAPM methods, (v) the CAPM method, (vi) the Risk Premium analysis, (vii) Comparable Earnings, and (viii) management performance as part of the return on equity consideration.

CAPITAL STRUCTURE RATIOS

12. Q. ARE THERE DIFFERENCES IN THE PROPOSED CAPITAL STRUCTURES UTILIZED BY THE RATE OF RETURN WITNESSES IN THIS CASE?

A. Yes. Mr. Rothschild has erroneously proposed a lower hypothetical common equity ratio than in AP's actual capital structure. Mr. Keller has accepted the Company's proposed capital structure, because it falls within the range of capital structures of the proxy group.

13. Q. IS THERE ANY BASIS TO DEVIATE FROM THE COMPANY'S ACTUAL CAPITAL

STRUCTURE TO SET THE RATE OF RETURN IN THIS CASE?

A. No. The Company's actual capital structure ratios are entirely reasonable and acceptable. That alone is sufficient to support the use of the Company's actual capital structure in this case. Mr. Rothschild's proposal is based on the average common equity from his proxy group. In reaching his conclusion on capital structure ratios, Mr. Rothschild says his 50.53% common equity ratio is based on his Water Proxy Group.

My understanding of his testimony is that he believes that the capital structure of the proxy group is the default capital structure and it would be inaccurate to reject it in this case (see page 80 of OCA Statement No. 3). But he has it backwards. The Commission has previously established that it is the prerogative of a utility's management to select its own capital structure, and as long as it is reasonable, it will be used to set rates. Mr. Rothschild's proposed hypothetical capital structure, which is essentially a generic one, should be rejected. Mr. Rothschild might have been led to a different conclusion if he had considered recently approved common equity ratios by the Commission.

Indeed, in its Order Entered on October 25, 2018 in Docket No. R-2017-2640058, the Commission adopted a 54.02% common equity ratio for UGI Utilities, Inc. – Electric Division. Furthermore, the Commission accepted a 54.19% common equity ratio in the Columbia Gas of Pennsylvania rate case at Docket No. R-2020-3018835 (Order Entered February 19, 2021) and 53.38% common equity ratio for PECO Energy Company – Gas Division at Docket No. R-2020-3018929 (Order Entered June 22, 2021). And in the Company's 2022 rate case, the Commission accepted a 53.95% common equity ratio. In the later 2023 rate case, a 63.34% common equity ratio was accepted for Columbia Water Company. The Commission likewise accepted the utility's actual common equity ratio of 52.87% in the Pennsylvania-American rate case. Indeed, the Company's proposed common equity

ratio of 53.95% is entirely reasonable based on prior Commission decisions which have approved equity ratios that are within the range employed by the barometer group. Moreover, the reasonableness of the Company's actual capital structure containing a common equity ratio of 53.95% is revealed by the data provided by Mr. Keller. His data shows that the Company's common equity ratio is within the range employed by his barometer group and, therefore, supports the level of common equity proposed by the Company. Those comparisons show that his Barometer Group has a range of common equity ratios from 41.92% to 55.63% according to Mr. Keller. This comparison supports the actual 53.95% common equity ratio for AP. Hence, the Company's actual common equity ratio conforms with Commission policy that states that the actual, not hypothetical, common equity ratio will be employed when it falls within the Barometer Group's range.

14. Q. IS THERE ANOTHER ISSUE THAT SHOULD BE CONSIDERED REGARDING MR. ROTHSCHILD'S HYPOTHETICAL CAPITAL STRUCTURE?

A. Yes. Another problem with Mr. Rothschild's approach is that when proposing a hypothetical debt ratio, he creates a mismatch between the cost of long-term debt that he accepts and his hypothetical debt ratio that he advocates. This mismatch arises because the hypothetical long-term debt ratio contains more debt than the amount of long-term debt that is actually outstanding for AP. That is to say, with more debt in the hypothetical capital structure, a higher cost of debt would be related to the higher hypothetical debt ratio. Mr. Rothschild never addresses this inconsistency in his proposal, and hence, should be rejected.

COST OF EQUITY

15. Q. THE DCF MODEL HAS BEEN USED BY MR. KELLER, MR. ROTHSCHILD AND YOU AS ONE METHOD TO MEASURE THE COST OF EQUITY. WHAT IS YOUR POSITION CONCERNING THE USEFULNESS OF THE DCF METHOD?

A. While the results of a DCF analysis should certainly be given weight, the use of more than one method provides a superior foundation for the cost of equity determination. Since all cost of equity methods contain certain unrealistic and overly restrictive assumptions, the use of more than one method will capture the multiplicity of factors that motivate investors to commit capital to an enterprise (i.e., current income, capital appreciation, preservation of capital, level of risk bearing). I am aware that the Commission usually expresses its cost of equity determination in the context of the DCF model. But the Commission also considers other methods as well. In its order entered on December 28, 2012, in Docket No. R-2012-2290597, the Commission stated:

> Sole reliance on one methodology without checking the validity of the results of that methodology with other cost of equity analyses does not always lend itself to responsible ratemaking. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived equity return calculation.[1]

Similarly, in the Aqua Pennsylvania decision entered in 2022, the Commission observed:

> In the 2012 PPL Order, the Commission considered PPL's CAPM and RP methods, tempered by informed judgment, instead of DCF-only results. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. Historically, we have relied primarily upon the DCF methodology in arriving at ROE determinations and have utilized the results of the CAPM as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will

[1] Pennsylvania Public Utility Commission v. PPL Electric Utilities, R-2012-2290597, meeting held December 5, 2012, at 80.

> consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination.[2]

Again, the Commission recognized the need for additional methods in its decision for Columbia Water in 2023:

> In *Aqua 2022*, the Commission determined the ROE by using informed judgement based on I&E's DCF and CAPM methodologies. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. We historically have primarily relied upon the DCF methodology in arriving at ROE determinations and utilized the results of the CAPM, as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our ROE determination.[3]

The Commission has acknowledged the usefulness of other methods, such as CAPM, as a means of establishing a range of reasonable returns. Indeed, it is clear that the Commission has been guided by the results of other models and other factors aside from DCF when setting the DSIC return. The Commission's selection of the rate of return on equity for use in the DSIC is usually set well above the cost of equity indicated by the DCF model alone.

Indeed, the influence of other methods must have an impact on the Commission's attitude toward the DCF model because the Commission's selection of the rate of return on equity for use in the DSIC is usually set well above the cost of equity indicated by the DCF model alone. For example, in the Quarterly Earnings Report at Docket No. M-2023-3044811, the Commission set the DSIC return at 9.65%

[2] Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc., R-2021-3027385, order entered May 16, 2022, at 154-55.

[3] Pennsylvania Public Utility Commission v. Columbia Water Company, R-2023-3040258, order entered January 18, 2024, at 108.

for the Water Companies. It is clear that the Commission has been guided by the results of the CAPM and other factors aside from DCF when setting the DSIC return, which is considerably higher than the DCF alone (i.e., 9.65% vs 8.49%).

16. Q. WHAT HAS MR. KELLER DONE WITH THE RESULTS OF MODELS OTHER THAN DCF?

A. Nothing. In this case, Mr. Keller essentially ignores the results of the CAPM, calling his CAPM results a basis for comparison, not as a check (see page 18 of I&E Statement No. 2). Unlike Mr. Keller, Mr. Rothschild acknowledges (see page 14 of OCA Statement No. 3) that the CAPM serves as a check on the DCF because it considers how inflation and interest rates are impacting the cost of equity. The use of multiple methods provides a more comprehensive and reliable basis to establish a reasonable equity return for AP. In his testimony, Mr. Keller shows that the average DCF result is too low by reference to his traditional CAPM result that show an 11.05% result using forecast market returns. As I will explain below, Mr. Keller's alternative CAPM contains unrealistic assumptions regarding future market returns that conflict with traditional CAPM applications. In this situation, the Commission should consider moving to within the top half of the range of DCF returns submitted in this case due to this understatement. This process would preserve use of DCF, but also accommodate the tendency of the DCF model to understate the required return in this market. Mr. Keller's DCF return range is from 7.03% for Middlesex to 12.87% for California. Since Mr. Keller's traditional CAPM result is 11.05% using forecast returns, then it stands to reason that the top half of the range of DCF results should be emphasized in this case, because the average DCF by itself is too low. Hence if DCF is to be used exclusively, as argued by Mr. Keller, then the proper DCF return should be 11.12% which is within the top half of the range, i.e., 9.37% + 12.87% = 22.24% ÷ 2, and is without regard to management performance.

Indeed, the CAPM and RP methods reflect directly the changes in interest rates and are an important indicator of higher equity cost rates. Although Mr. Keller claims (see page 26 of I&E Statement No. 2) that DCF sufficiently considers economic factors, including inflation, there is no input in the DCF that Mr. Keller can point to that substantiates his position. We know that CAPM and RP reflect directly changes in interest rates and those models are more responsive to inflation in this regard than DCF.

17. Q. HAS THE NATIONAL ASSOCIATION OF REGULATORY UTILITY COMMISSIONERS ("NARUC") TAKEN A POSITION ON THE USE OF MULTIPLE METHODS TO MEASURE THE COST OF EQUITY?

A. Yes. The NARUC has published a paper entitled "Cost of Capital and Capital Markets Primer for Utility Regulators." In it, the NARUC said:

> The goal of all cost of equity models is to capture the realities of the capital marketplace and each model does so from a different perspective. Because these financial models are simplifications of the real world, the ROE results are estimates rather than exact discernments of ultimate truth. Ideally, the model results will corroborate each other but may not in practice. Different estimates resulting from different models can usefully frame, bracket, or define a range or zone of estimates.
>
> Investors, investment bankers, and corporate financial professionals use multiple models when evaluating the cost of equity. Likewise, it is desirable for regulators to also use multiple models when evaluating the cost of equity.

DCF APPLICATION BY I&E

18. Q. WHAT FORM OF THE DCF MODEL HAS BEEN EMPLOYED IN THIS CASE?

A. The constant growth form of the DCF model has been used by Mr. Keller, Mr. Rothschild, and me.

19. Q. ARE THERE LIMITATIONS TO THE APPLICATION OF THE DCF THAT INDICATES THAT IT SHOULD NOT BE USED ALONE TO ESTABLISH THE

EQUITY RETURN, WHICH MR. KELLER SEEMS TO SUPPORT, ESPECIALLY IN TIMES OF RISING OR FALLING INTEREST RATES?

A. My point is that all models have their strengths and weaknesses, and it is important to rely on more than one model in determining the cost of common equity. There are many assumptions associated with the specification of the DCF. These are:

- The form of the model. A choice must be made whether to employ the continuous or discrete form of the model.
- Whether a finite or infinite form of the model realistically represents investor's horizon.
- Whether compounding of the quarterly dividend should be employed.
- The timing of the dividend payments regarding the interval from the ex-dividend date and the stock measurement date needs to be addressed.
- A choice is necessary relative to a representative price that would reasonably represent the rate effective period, e.g., 12-month average, 6-month average, 13-week average, spot, etc.
- Assumptions concerning the structure of returns which under the DCF assumes that the price-earnings multiple, dividend payout ratio, and earned return will be constant.
- Whether single or multiple growth rates better reflect investor expectations.
- Choices concerning the use of historical or forecast growth rates.
- From a historical perspective, whether 10-years, 5-years, or some other historical period is representative of investor expectations.
- Choice among variables to measure growth, e.g., earnings per share, dividends per share, book value per share, cash flow per share, retention growth, price growth, etc.

- Choice of investor influencing growth rates that are available from Yahoo! Finance, Zacks, and Value Line.
- Whether the growth rate if measured by the formula "b x r" should be modified for external growth, i.e., "sv."
- The potential misspecification of the rate of return applicable to book value when taken directly from DCF if the market price diverges from book value.

Many of the assumptions, especially the constant price-earnings multiple, constant payout rate, and constant earned return, are particularly unrealistic.

20. Q. DO THE DCF RESULTS PROPOSED BY MR. KELLER PROVIDE A REASONABLE REPRESENTATION OF THE COST OF EQUITY?

A. Not in my opinion. I&E Witness Keller concludes that the DCF cost of equity is 9.37%, while the CAPM cost rate is 11.05% using forecast returns following the traditional considerations (I&E Statement No. 2, pages 30 and 34). As noted above, the Commission has stated that it would consider other methods when the other methods showed that the DCF method understated the cost of equity. It should be noted that I&E's DCF result in this case is also too low for two reasons. First, there have been significant increases in interest rates since the Pandemic, indicating a higher cost of equity today. Second, I&E's own CAPM result of 11.05% using traditional forecast returns illustrates its DCF result is too low.

Focusing on the DCF approach, the principal purpose of assembling a barometer group is to avoid relying on data for a single company that may not be representative and to thereby smooth out any abnormalities. That said, when some of the DCF results for companies in the I&E barometer group are unreasonable on their face, the reliability of the method being used, or the witness' application of that method, must be questioned. As indicated below, the DCF results shown below fall into this category:

Company	Average: 52 wk & Spot Yield	+	Growth	=	Total
Middlesex Water	2.43%	+	4.60%	=	7.03%

It is a fundamental tenet of finance that the cost of equity must be higher than the cost of debt by a meaningful margin to compensate for the higher risk associated with a common equity investment. As noted above, the DCF return for Middlesex fails to provide a sufficient spread over the yield of on A-rated public utility bonds, which currently stands at 5.38% for the month of August 2024.

21. Q. PLEASE SUMMARIZE THE DCF GROWTH RATE ANALYSIS PERFORMED BY MR. KELLER.

A. As shown on page 29 of I&E Statement No. 2, Mr. Keller proposes a growth rate based on his review of analysts' projected earnings growth rates. His growth rate (i.e., 6.61%) is slightly below the 6.75% growth rate that I determined. Furthermore, there is a small downward bias in his group average growth rate. When Mr. Keller averaged his growth rates on Schedule 5 of I&E Exhibit No. 2, he averaged the results by source rather than across the members of his Proxy Group. Had he done so, the group average growth rate would have been 6.68%, thereby producing a DCF result of 9.44% (2.76% + 6.68%). Setting this aside, two of his growth rates are out-of-date. The most recent July 5, 2024 Value Line growth rates are 4.50% (up from 3.00%) for American Water Works and 11.50% (up from 10.00%) for California Water Service. The other Value Line growth rates remain unchanged. These current growth rates increase the Barometer Group growth rate to 7.08% (up from 6.55%) using the Value Line source. This moves the overall growth rate up to 6.78% (up from 6.61%) for the Barometer Group. The resulting DCF return would then be 9.54% (2.76% + 6.78%).

22. Q. WHAT DCF RETURN IS INDICATED FROM THE DATA PRESENTED BY MR. KELLER AFTER REMOVING THE UNDULY LOW RESULTS FOR MIDDLESEX?

A. Those results based on the current Value Line growth rates are revealed below:

Company	Average: 52 wk & Spot Yield	+	Growth	=	Total
American Water Works	2.44%	+	6.67%	=	9.11%
American States Water	2.63%	+	5.73%	=	8.36%
California Water Service	2.47%	+	11.15%	=	13.62%
SJW Group	2.95%	+	7.17%	=	10.12%
Essential Utilities	3.62%	+	6.00%	=	9.62%
Average					**10.17%**

The DCF return shown above are calculated without regard to the leverage adjustment that is necessary to align the market-determined cost of equity with the book value capital structure used for ratesetting.

DCF APPLICATION BY OCA

23. Q. PLEASE SUMMARIZE MR. ROTHSCHILD'S DCF METHODOLOGY.

A. In his DCF analyses, Mr. Rothschild uses average dividend yields for the yearly period and spot prices as of June 30, 2024 (see Exhibit ALR-3, page 1). He arrives at a dividend yield of 2.41% and 2.60% for each calculation. He employs the Retention Growth Rate as his first DCF approach. As part of his retention growth analysis, Mr. Rothschild relies upon book value returns for his proxy group (see Source [C] on page 1 of Exhibit ALR-3).

24. Q. ARE THERE ASPECTS OF MR. ROTHSCHILD'S DCF TESTIMONY WHERE HE IS INCONSISTENT IN HIS APPROACH?

A. Yes. Specific instances include:

- Mr. Rothschild states that his recommended ROE is "market-based" and "forward-looking" (page 17 of OCA Statement 3), yet he criticizes forecasts as unreliable (pages 111-112).
- He claims that he uses primarily current, forward-looking market data (e.g., stock prices, bond yields, stock option prices) and then criticizes me for relying on historical data (betas in my CAPM are based on past 5 years of data) and non-market data. Yet, he used historical data himself, which conflicts with his own criticism of historical data. Indeed, Mr. Rothschild used book value data extensively in his analysis. First, he calculates a return on book value as part of his Retention Growth Rate (see pages 57-59 of OCA Statement No. 3). Second, he also employs book value per share growth rates in his non-constant DCF (see page 61 of OCA Statement No. 3).
- Despite his asserted preference for forward-looking data, he claims that using analysts' forecasts would be speculative. He also states that his market-based cost of equity recommendation is not based on future stock prices because he cannot "predict the future" and "capital markets are unpredictable" (page 22 of OCA Statement No. 3).
- His retention method relies on historic data in part, yet he previously criticized my use of historic data.
- He states that he uses an analytical approach focused on market data while my testimony is too focused on non-market data. Yet he uses book value data in his analysis, e.g. growth rate and book value per share. Also, he uses historical data for risk free rate of return for CAPM.
- Although he criticizes analyst forecasts as speculative and unreliable (page 22), he admits to using them. Specifically, he admits to relying on Value Line

and Zacks analyst forecasts in his DCF analysis despite his own criticisms of the data.

25. Q. AT PAGE 22 OF OCA STATEMENT NO. 3, MR. ROTHSCHILD ASSERTS THAT HE USES AN ANALYTICAL APPROACH FOCUSED PRIMARILY OF MARKET DATA. HE FURTHER ALLEGES THAT MY ANALYSIS IS TOO FOCUSED ON NON-MARKET DATA. IS THIS AN ACCURATE DESCRIPTION OF THE EVIDENCE IN THIS CASE?

A. No. Both Mr. Rothschild and I have considered both historical and forecast data for this case. And, we both have used book value data and market data in our analysis. For example, the dividend yield component of the DCF and the risk-free rate of return component of the CAPM are recent averages of historical data. No other approach here is possible. Forecasts have been employed by both of us for the growth component of the DCF and the market risk premium of the CAPM. I have looked at book value measures of historical data, just like Mr. Rothschild as revealed on pages 50, 52, 59, 66, 68, 70, 71, and 90 of OCA Statement No. 3. His extensive use of history strongly indicates that Mr. Rothschild's analysis is in no way superior to my analysis.

26. Q. AT PAGE 114 OF OCA STATEMENT NO. 3, MR. ROTHSCHILD CLAIMS THAT IT IS DANGEROUS TO USE ANALYSTS' EPS GROWTH FORECASTS WITHOUT ADDITIONAL INTERPRETATION. DO YOU AGREE?

A. No. As noted above, to properly reflect investor expectations within the limitations of the DCF model, earnings per share growth, which is the basis for the capital gains yield and the source of dividend payments, must be given greatest weight. The reason that earnings per share growth is the primary determinant of investor expectations rests with the fact that the capital gains yield (i.e., price appreciation) will track earnings growth with a constant price-earnings multiple (a key assumption of the DCF model).

It is also important to recognize that analysts' forecasts significantly influence investor growth expectations and include review of historic growth rates. The theory of the model rests on the assumption that there will be a constant price-earnings multiple, and therefore the price of stock will increase at the same rate as earnings growth – that is, EPS growth is the metric that drives the DCF analysis. Moreover, with the constant payout ratio assumption of the DCF, dividend growth will equal earnings growth in the long-term. Finally, with a consistent market-to-book ratio assumption of the DCF, book value per share growth will equal the other variables of growth, i.e., earnings per share and dividends per share. It is therefore not surprising that Professor Myron Gordon found that EPS forecasts are the best measure of growth in the DCF. I cited to his work on this matter above.

27. Q. IN HIS DIRECT TESTIMONY, MR. ROTHSCHILD RELIES HEAVILY ON RETENTION GROWTH IN HIS CONSTANT GROWTH DCF ANALYSIS. PLEASE DISCUSS THE LIMITATIONS OF THIS APPROACH.

A. Retention growth, along with external financing growth, is another means of describing book value per share growth. Other factors also contribute to earnings growth that is not accounted for by the retention growth formula, such as sales of new common stock that Mr. Rothschild has included in his DCF growth rate analysis, reacquisition of common stock previously issued, changes in financial leverage, acquisition of new business opportunities, profitable liquidation of assets, and repositioning of existing assets. In my view, book value per share growth, or its surrogate retention growth, does not represent the proper financial variable to be considered when selecting the DCF growth component. The following shows how the return expected of 10.40% translates into a much lower DCF result for his Comparison Group (see page 1 of Exhibit ALR-3).

	Year Ending 6/30/2024	As of 6/30/2024
Return on Equity (Line 2c)	10.40%	10.40%
Dividend Yield on Book Value (Line 2b)	-6.24%	-6.02%
Dividend Yield on Market Value (Lines 2 & 6)	2.47%	2.67%
Result	6.63%	7.05%
New financing growth (Line 4)	1.13%	0.94%
Average DCF return	7.76%	7.99%

As shown above, the retention approach advocated by Mr. Rothschild is clearly inconsistent with the traditional form of the DCF model used by the Commission. It should be noted that the Commission has not previously adopted a retention growth approach in the DCF analysis. A key component of retention growth is the analyst's assumed return on book common equity. Mr. Rothschild does not and cannot explain why an investor expected return of 10.40%, even if that were correct, should be reduced to 7.76% or 7.99% in this case, particularly since rates are set on book value (net original cost).

28. Q. WHAT DCF RESULTS WOULD BE OBTAINED BY RELYING ON FORECASTS OF EARNINGS PER SHARE GROWTH STATED BY MR. ROTHSCHILD THAT IS TYPICALLY CONSIDERED BY THE COMMISSION?

A. Mr. Rothschild himself relied on forecast by analysts published by Value Line and Zacks (see page 59 of OCA Statement No. 3), but fails to use these forecasts directly. This violates the process used by investors that I will discuss below, which results in a mis-specified cost of equity determination by Mr. Rothschild. Mr. Rothschild declined

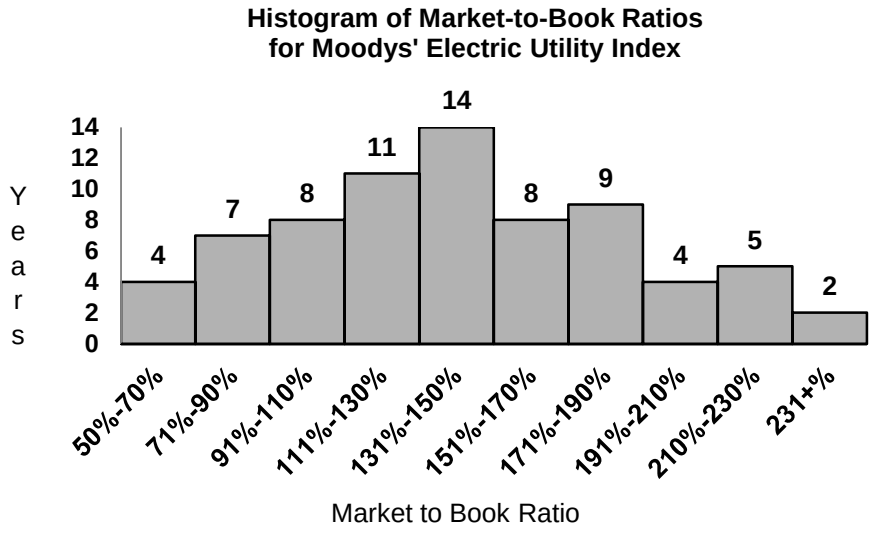
to use directly the earnings per share forecast growth rate of 6.90% by Zacks (see page 3 of Exhibit ALR-5). Had he done so, the resulting DCF return would be 9.39% ((2.41% (1 + 0.5 (0.0690)) + 6.90%) to 9.59% ((2.60% (1 + 0.5 (0.0690)) + 6.90%) with the Zacks growth rate.[4] This provides a far more reasonable, though still inadequate, DCF result than the DCF returns advocated by Mr. Rothschild (see OCA Statement No. 3 at page 15). As I describe in my pre-filed direct testimony (Statement No. 7), forecasts of the earnings growth rate are widely used by investors to set utility stock prices and are the only valid measure of growth for DCF purposes according to Professor Myron Gordon, the father of the DCF model in rate cases.

29. Q. ONE OF THE FEATURES OF MR. ROTHSCHILD'S DIRECT TESTIMONY IS HIS CONTENTION THAT WHEN STOCK PRICES ARE CONSIDERABLY HIGHER THAN THEIR BOOK VALUE THEN THE RETURN THAT INVESTORS EXPECT TO RECEIVE ON THEIR MARKET PRICES IS LESS THAN WHATEVER IS ANTICIPATED ON BOOK VALUE (APPENDIX A OF OCA STATEMENT NO. 3). PLEASE RESPOND.

A. Mr. Rothschild makes this assertion in Appendix A of his direct testimony. That is to say, when a company has a market-to-book ratio above 1, it is over earning, in Mr. Rothschild's view. But such a claim is unwarranted given the evidence of the history of market-to-book ratios I provide below. The Commission has stated that it does not believe that its rate case decisions can ensure any particular market-to-book ratios (*PUC vs. The York Water Co.*, 62 Pa.PUC 459, Order Entered November 25, 1986). Moreover, if this assertion were correct then it leads to the inevitable conclusion that if investors expected to earn their required return, then stock prices would revert to their book value. However, the market for stocks shows that Mr. Rothschild's assertion is

[4] As noted previously with regard to Mr. Keller's analysis, the Value Line earnings per share growth rate is 7.08% using the latest reports.

baseless. In the long history of market-to-book ratios for electric utilities since 1945, M/B ratios equal to 1.0 are unusual and ratios of greater than 1.0 are quite common. That data is shown below.



These data show that it is unusual for market prices to gravitate to book value. Indeed, in only about 11% of the years studied did electric utility stock prices approximate book value. In 74% of the years, electric utilities stock prices exceeded book value and sometimes by a substantial amount. The average market-to-book ratio over the past 72 years is 143%.

30. Q. MR. ROTHSCHILD ALSO USES WHAT HE IDENTIFIES AS "CONSTANT GROWTH – OPTION-IMPLIED GROWTH" MODEL OF THE DCF. WHAT VALUE DO THE RESULTS OF THE MODEL PROVIDE?

A. Very little to none. Mr. Rothschild provides virtually no explanation for this model and only divulges the result on page 15 of OCA Statement No. 3. These are the only values provided by Mr. Rothschild, i.e., 7.59% and 7.83%, and reveal that these are unrealistic return expectations as shown by the Zacks determined DCF results of 9.39% and 9.59% described above.

31. Q. MR. ROTHSCHILD ALSO SUBMITS A THIRD ALTERNATIVE DCF CALCULA-

TION, USING NON-CONSTANT GROWTH ASSUMPTIONS, TO MEASURE THE COST OF EQUITY. IS THIS DATA USEFUL IN THIS CASE?

A. Mr. Rothschild's non-constant growth DCF model suffers from the same flaw as his constant growth model, as he improperly relies on book value per share growth. When properly applied, it shows that his constant-growth DCF model results are unrealistic. As shown on Rebuttal Exhibit PRM-1-R, the non-constant DCF results are 13.64% and 11.35%, which demonstrates the unreasonable results of Mr. Rothschild's constant growth DCF model. As opposed to Mr. Rothschild's use of book value per share growth as a key input in his non-constant the DCF, I have corrected his calculation by using EPS and Price-Earnings multiple forecasts by Value Line. These inputs are essential to understanding investors future return expectations, because stock prices are a function of future earnings per share and expected Price-Earnings multiples. The corrected non-constant DCF results are shown on Rebuttal Exhibit PRM-1-R.

LEVERAGE ADJUSTMENT

32. Q. AT PAGES 48-56 OF I&E STATEMENT NO. 2, MR. KELLER RESPONDS TO YOUR LEVERAGE ADJUSTMENT AND ARGUES THAT IT SHOULD BE REJECTED. DO YOU AGREE?

A. No. Mr. Keller states that he opposes the leverage adjustment. In his discussion of my leverage adjustment, Mr. Keller mentions market-to-book ratios ("M/B") (see page 49 of I&E Statement No. 2). I need to be clear that my leverage adjustment is not designed to produce any particular M/B ratio.

33. Q. PLEASE RESPOND TO MR. KELLER'S CRITICISM OF YOUR LEVERAGE ADJUSTMENT.

A. Mr. Keller offers three reasons for not making a leverage adjustment. First, Mr. Keller

notes that the credit rating agencies assess financial risk in terms of a company's booked debt obligations in their analysis of the creditworthiness of a company (see I&E Statement No. 2 pages 50-51). I agree. But this has nothing to do with my leverage adjustment. The credit rating agencies do not measure the market required cost of equity for a company. The credit rating agencies are only concerned with the interests of lenders. They are judging risk associated with a company's ability to make timely payments of principal and interest. Hence, they are not concerned with the cost of equity or how it is applied in the rate-setting context. While Mr. Keller's observation is correct, it has no relevance to my leverage adjustment.

34. Q. SECOND, MR. KELLER ALSO QUESTIONS YOUR LEVERAGE ADJUSTMENT BY REFERENCE TO PRIOR COMMISSION ORDERS. PLEASE COMMENT.

A. Mr. Keller points to several decisions where the Commission declined to make a leverage adjustment (see I&E Statement No. 2 pages 51-53). The fact that the Commission declined to use the leverage adjustment in the Aqua Pennsylvania case cited by Mr. Keller does not invalidate its use. Notably, the Commission did not repudiate the leverage adjustment in the Aqua 2008 rate case, but instead arrived at an 11.00% return on equity for Aqua by including a separate return increment for management performance. Just like an increment for management performance is not recognized in all rate cases, so too the Commission seems to be taking a similar approach to the leverage adjustment. As to the City of Lancaster decision, the situation there was quite different than the leverage adjustment that I propose in this case. Lancaster proposed a leverage adjustment to the cost of equity measured with the Hamada formula and applied it to the DCF result, the Risk Premium result, and the CAPM. While the Hamada formula plays a role in the CAPM, it is not applicable to the DCF or the Risk Premium measures of the cost of equity. Hence, this distinguishes the City of Lancaster approach to the leverage adjustment from mine in this case. As

to the UGI Utilities – Electric Division case, there the Commission granted a management performance increment rather than a leverage adjustment when arriving at a 9.85% equity return. And for Columbia, the Company accepted the I&E's recommendation of the allowed return, which was 9.86%, in a case litigated at the height of the COVID-19 Pandemic. Thus, Columbia chose not to argue the leverage adjustment in Exceptions to the Commission. However, based upon the current inputs to the DCF that indicated a low result, the Commission should now consider using the leverage adjustment, just as it did previously when the DCF was suggesting unusual results. In the PECO - gas rate case, the Commission arrived at a 10.24% return without the leverage adjustment, because that return was already deemed to be on the higher side and no additional adjustment was warranted. Finally, the Commission set the equity return at 10.00% for Aqua Pennsylvania recently without a leverage adjustment, but with an adjustment for management performance.

35. Q. THIRD, MR. KELLER ARGUES THAT INFORMATION PROVIDED INVESTORS IS BOOK VALUES ACCORDING TO <u>VALUE LINE</u>. IS THIS CORRECT?

A. No. Mr. Keller contends that information presented to investors (see page 55 of I&E Statement No. 3), such as that included in the <u>Value Line</u> reports, argues against my leverage adjustment because investors base their investment decisions on book value. However, the <u>Value Line</u> reports clearly show the market capitalization of each company in his barometer group. This means that investors are well aware of the market capitalization of the gas utility stocks that Mr. Keller relies upon for his analysis of the cost of equity. More importantly, I fundamentally disagree that investors base their decisions on book values. To the contrary, it is the future cash flows that investors expect to realize that determines the price they are willing to pay for a share of common equity. Stated differently, investors are concerned with the return that will be earned on the dollars they invest (i.e., their market price) and not some accounting value of

little relevance to them. The financial risk associated with the book value capital structure is different from the market value of the capitalization. I clearly demonstrate this point on Schedule 10 of AP Exhibit 4-A. Hence, the observation of Mr. Keller is misplaced because I have clearly shown the difference in financial risk and that risk difference must be taken into account when arriving at an equity return that is applicable to the weighted average cost of capital using book value weights.

36. Q. MR. ROTHSCHILD CRITICIZED THE LEVERAGE ADJUSTMENT THAT YOU PROPOSE TO ACCOUNT FOR THE DIVERGENCE OF MARKET CAPITALIZATION AND BOOK VALUE CAPITALIZATION. PLEASE COMMENT.

A. Mr. Rothschild claims that the market value capital structure and the book value capital structure are two completely different ways of measuring the same thing. But it must be recognized that, in order to make the DCF results relevant in the rate-setting context, the market-derived cost rate cannot be used without modification. The importance of the leverage modification to the DCF results was fully supported in my direct testimony, wherein it was shown that the market value of the equity in the Water Group's capitalization was much higher than its book value. The market value common equity ratio was 72.10% compared to a book value common equity ratio 51.69%. The leverage adjustment is necessary to make the market-derived DCF results applicable in the rate-setting context. Because the market-based cost rate is determined based on less financial risk than that reflected in the ratemaking capital structure, and because increased financial risk justifies a higher return on equity, it is necessary to account for the higher financial risk that arises from the lower common equity ratio measured by book value capitalization.

37. Q. DO YOU AGREE WITH MR. ROTHSCHILD'S CONTENTION THAT THE MARKET VALUE CAPITAL STRUCTURE AND THE BOOK VALUE CAPITAL STRUCTURE

ARE TWO COMPLETELY DIFFERENT WAYS OF MEASURING THE SAME THING?

A. No. As Professors Modigliani and Miller proved 50 years ago (as discussed on page 33 of my direct testimony – Statement No., 7), the amount of leverage, or proportion of debt, in a firm's capital structure is directly related to the firm's financial risk and cost of equity. Mr. Rothschild's analogy to the measurement of weight on two scales (see page 87 of OCA Statement No. 3) is no analogy at all. According to Mr. Rothschild's analogy, one loses weight by merely changing the calibration of the scale from pounds to kilograms. Mr. Rothschild's position that a cost of equity derived from market-value capitalizations may be applied to a book-value capitalization is just like saying one kilogram is the same as one pound. This is, of course, incorrect, just as it is indisputable that there is more financial risk associated with a 51.69% common equity ratio than there is with a 72.10% common equity ratio. Unlike weight, there is only one scale for measuring financial risk and that is the proportion of leverage in a firm's capital structure. A firm's financial risk changes when the quantities of debt and equity capital, on which the proportion is based, are changed. For the Water Group, the average market value of their debt is $2,621 million and the book value of their debt is $2,884 million. Both of these measures are stated as dollar values; there has been no change in the units of measurement. Likewise, for their equity, the average market value of the Water Group's common equity is $5,765 million and the corresponding book value is $2,501 million. Again, both are stated in dollars and there has been no change in the units of measurement. A measurement of financial risk that is based on a market-value capitalization cannot be applied directly to book-value capitalization if there is a material difference attributed to a change in financial risk between the two. Unlike weight, where the relationship between the scales of measurement is fixed (*i.e.*, one-pound equals 0.45359 kilograms), the financial risk associated with a market-

value capitalization can be higher or lower than the financial risk associated with a book-value capitalization, depending on the quantities, stated in dollars, of debt and equity measured and their relative proportion to the total capitalization. Financial risk is measured as a percent of fixed-cost (*i.e.*, senior) capital. That is to say, the quantities that are used to measure financial risk account for the different quantities of debt and equity that result from market and book valuations of capital.

Indeed, Mr. Rothschild's own studies support this proposition. Using his adjustment noted in Source [F] shown on Exhibit ALR-1, the adjustment would be 0.82% (72.10% - 51.69% = 20.41% x 0.04%). Although less than my leverage adjustment of 1.20%, it does establish the propriety of the adjustment. Therefore, in order to apply a measurement of a return measured based on a firm's market-value capitalization to a book-value capitalization, the return measurement must be adjusted before it is applied to the firm's capitalization measured based on book value. All returns derived from the market models of the cost of equity are related to the price of stock established by investors and not based on book values.

COST OF COMMON EQUITY - CAPITAL ASSET PRICING MODEL

38. Q. AT PAGE 20 OF I&E STATEMENT NO. 2, MR. KELLER ARGUES THAT THE CAPM IS LESS RESPONSIVE THAN DCF TO CHANGES IN THE CAPITAL MARKETS, BECAUSE THE CAPM MEASURES THE RETURN ON EQUITY INDIRECTLY. DOES THIS OBSERVATION DEFEAT THE USEFULNESS OF THE RESULTS OF THE CAPM?

A. Absolutely not. The CAPM is just as responsive to changes in capital costs as is the DCF. Indeed, the CAPM is more responsive to the current level and trend in interest rates because the risk-free rate of return reflects those factors directly. The market risk premium is also forward-looking, as it is based on a DCF type calculation for the

market total return, as proposed by Mr. Keller. The bottom line is the CAPM is just as responsive to changes in capital costs as any other method.

39. Q. DO YOU HAVE CONCERNS REGARDING MR. KELLER'S APPLICATIONS OF THE CAPM?

A. Yes. Mr. Keller's CAPM analysis understates the cost of equity for a number of reasons: (i) his use of the yield on 10-year Treasury notes, (ii) his failure to use leveraged adjusted betas, and (iii) his failure to make a size adjustment. With regard to Mr. Keller's CAPM analysis, which produces a 11.05% cost rate with forecasted market returns, it can be argued that he has understated the risk-free rate. On Schedule 8 of I&E Exhibit No. 2, he uses a projected 10-year treasury note yield from Blue Chip on May 31, 2024 and June 1, 2024, producing a 4.18% risk-free rate.

40. Q. HOW DOES THE USE OF THE YIELD ON 10-YEAR TREASURY NOTES COMPARE WITH YIELDS ON LONGER-TERM TREASURY BONDS?

A. The Blue Chip report shows this comparison. For the first quarter of 2024, the gap was 0.17% (4.33% - 4.16%) between the yields on 30-year and 10-year Treasury obligations. For the period 2026-2030, that gap is projected to increase to 0.2% (4.3% - 4.1%) according to the June 1, 2024 Blue Chip. This shows a systematic understatement of Mr. Keller's CAPM returns. Shorter-term rates, such as 10-year notes, respond more to the policy initiatives of monetary officials, while long-term rates, such as 30-year bonds, are more a reflection of investor sentiment of their required returns. For this reason, long-term rates, such as those revealed by 30-year Treasury bonds, should be used to measure the risk-free rate of return.

41. Q. HOW HAS MR. KELLER UNDERSTATED THE RISK-FREE RATE OF RETURN?

A. The support for his risk-free rate of return is shown on his Schedule 8 of I&E Exhibit No. 2. There, he incorrectly gives the same weight to the yield on 10-year Treasury notes for the third quarter of 2024 as he does for the entire five-year period from 2026

through 2030. This approach leads to an understated risk-free rate of return. Even if 10-year rates are used, it is necessary to correct the weights assigned to the forecast data presented by Mr. Keller. The resulting risk-free rate of return is 4.07% using the yield on 10-year Treasury Notes and 4.28% using the yield on 30-year Treasury Bonds.

Year	10-Year Treasury Yield	30-Year Treasury Yield
2025	4.00%	4.20%
2026	4.00%	4.20%
2027	4.00%	4.20%
2028	4.00%	4.30%
2029	4.20%	4.40%
2030	4.20%	4.40%
Average	4.07%	4.28%

42. Q. HOW SHOULD THESE RESULTS BE USED IN THE CAPM?

A. The risk-free rate of return should be calculated with the data that I present above. The size adjustment of 1.02% must also be incorporated into the CAPM. I have corrected Mr. Keller's CAPM as indicated below using those inputs and the forecast yield on 30-year Treasury bond shown above:

	Rf	+	*β*	(	*Rm*	-	*Rf*	) +	*size*	=	*K*
Gas Group	4.28%	+	0.83	(	12.46%	-	4.28%	) +	1.02%	=	12.09%

Note that even without the size adjustment, revising Mr. Keller's CAPM only to reflect the 30 year bond yield would produce a cost of equity of 11.07%.

43. Q. MR. KELLER ALSO PRESENTS A CAPM CALCULATION USING THE "KROLL ERP." IS THIS CALCULATION USEFUL TO ESTABLISH THE COST OF EQUITY FOR AP IN THIS CASE?

A. No. There are three substantial flaws with this approach. First, the total market return using the "Kroll ERP" is just 9.18% (4.18% + 5.00%) using Mr. Keller's data. This return is way out of line with investor expectations. Mr. Keller calculates the investor expected total market return of 12.77% using the Value Line data source (see Schedule 10 of I&E Exhibit No. 2). My calculation produced an investor expected return of 11.83% (see Schedule 13 of AP Exhibit 4-A). Looking at historical measures, Mr. Keller established a total market return of 12.16%, and I determined a total market return of 12.21% during periods of average-to-low periods of interest rates. Moreover, recent actual stock market returns were 26.29% in 2023, 17.36% for the past five-years on an annualized basis, and 12.0% on average for the past 97 years (1926-2023). All these returns clearly demonstrate that 9.18% is just too low using the "Kroll ERP."

Second, a total market return of 9.18% using the "Kroll ERP" makes no sense when Mr. Keller calculates a 9.37% DCF return for his Water Proxy Group. Since the Water Proxy Group has a beta of 0.83, the total market return must be higher than the DCF for the Water Proxy Group, because by definition the total market has a beta of 1.00. It is nonsensical that the overall market return using the "Kroll ERP" could be less than the Water Proxy Group DCF return.

Third, based on Mr. Keller's response to AP interrogatories, the Kroll publication dated June 6, 2024 describes the considerations that go into their ERP number. The document is provided as Rebuttal Exhibit PRM-2-R. As a preliminary item, it is noteworthy that Kroll provides no empirical data to support its ERP. Their entire discussion is qualitative based, rather than quantitively based. It merely sets forth in five (5) pages an ERP number with a subjective narrative dealing with their judgment regarding macroeconomics issues and the overall state of the capital markets. There is no data presented by Kroll that would provide any verification for its

position. In particular, there is no forecasted market return or risk free return component presented by Kroll that would allow anyone to examine the validity of the stated result of 5%. This is especially important given the large divergence between the ”Kroll ERP” of 5% and the 8.28% difference between forecasted market return (12.46%) and Risk free return (4.18%) shown in Mr. Keller’s traditional calculation.

44. Q. HAS MR. KELLER PROPERLY USED THE “KROLL ERP”?

A. No. First, according to Kroll, the “Kroll ERP” should be applied to a spot yield on 20-year Treasury bonds. Mr. Keller has failed to follow this prescription, because he used yields on 10-year Treasury notes and used yield forecast stretching out to 2030. Second, Kroll opines that the ERP are inputs in the CAPM and other models used to develop “discount rates.” Discount rates are used in the valuation process to establish a dollar value of a stream of future expected cash flows. Mr. Keller has not explained how the determination of “discount rates” are relevant here because he has not developed a series of cash flows upon which to discount to “present” value. For all of the reasons stated above, the “Kroll ERP” is simply not relevant to the cost of equity determination in this case.

45. Q. MR. KELLER QUESTIONS THE NEED TO ADJUST THE CAPM RESULTS FOR SIZE DIFFERENCES. PLEASE COMMENT.

A. As a preliminary matter, it is noteworthy that CAPM provides compensation solely for systematic risk, and that the size of the Water Group must be considered separately. Just as investors have choices concerning large cap, midcap, and small cap equity investments offered by many mutual funds and ETFs, size is clearly on important investment criteria for investors. It is well recognized that the return for small cap investments outperform large cap investments. Indeed, the Ibbotson Yearbook shows that small cap stocks have outperformed large cap stocks by four percentage points (4.00%) over the past ninety-seven (97) years. As I indicated with the data presented

on Schedules 2, 3 and 4 of AP Exhibit 4-A, the water utilities are small, as they are just 12% of the size of the electric and gas utilities that comprise the S&P Public Utilities. Indeed, recent Federal Energy Regulatory Commission ("FERC") orders specifically prescribe an adjustment to the CAPM due to the size of an enterprise.[5] Mr. Keller's arguments revolve around the purported distinction between regulated utilities and unregulated industrial companies (see pages 62-63 of I&E Statement No. 2). However, the Wong article that he relies upon was authored nearly thirty (30) years ago, and employed data going back into the 1960s. Enormous changes have occurred in the industry since the 1960s that have fundamentally changed the utility business. The Wong article also noted that betas for the non-regulated companies were larger than the betas of the utilities. This, however, is not a revelation, because utilities continue to have lower betas than many other companies. This fact does not invalidate the additional risk associated with small size.

The Wong article further concludes that size cannot be explained in terms of beta. Again, this should not be a surprise. Beta is not the tool that should be employed to make that determination. Indeed, beta is a measure of systematic risk and it does not provide the means to identify the return necessary to compensate for the additional risk of small size. In contrast, the famous Fama/French study (see "The Cross-Section of Expected Stock Returns," The Journal of Finance, June 1992) identified size as a separate factor that helps explain returns.

46. Q. HOW DOES SIZE AFFECT THE FINANCIAL PERFORMANCE OF A SMALL COMPANY?

[5] *See, e.g.*, Association of Businesses Advocating Tariff Equity, 171 FERC ¶61,154 (May 21, 2020).

A. Examples of the financial consequences of external factors that can influence the financial performance of a small company include loss of a large customer and the effect of unexpected changes in expense.

47. Q. MR. ROTHSCHILD USES A VARIETY OF APPROACHES TO APPLY THE CAPM. IS THERE ANYTHING UNUSUAL IN HIS APPROACH?

A. Yes. Mr. Rothschild uses a beta that is not leverage adjusted, an unrealistic market risk premium, and ignores the size adjustment. He therefore proposes a totally unrealistic CAPM result of 7.06% to 8.03%. This compares with my CAPM of 10.48% (11.50% - 1.02%), (excluding the leverage and size adjustments), Mr. Keller's CAPM of 11.05% using forecast returns, and the Quarterly Earnings Report's CAPM of 10.72%. Aside from his consideration of yields on 3-month Treasury bills which are rarely considered in rate cases such as these, he uses a non-standard approach for the selection of his betas and an unusual approach for his market risk premium. He makes CAPM calculations that produce results in the range of 7.06% to 8.03%. By any reasonable standard, such low returns are simply not credible. All of Mr. Rothschild's CAPM results are below his DCF returns. In contrast, Mr. Keller and I have provided CAPM results that exceed the DCF. Mr. Rothschild does not use betas that are available to investors, but instead uses a "phantom" beta that invalidates his CAPM. Mr. Rothschild calculates "option implied betas" that have not and could not have any influence on the types of returns investors could expect using the CAPM, such as the Value Line betas do. Rather than use betas that are available to or used by investors, Mr. Rothschild has manufactured his own betas. It is well known that investors use the Value Line data. He says he follows the Value Line approach for calculating betas, but he ignores the actual Value Line betas. This makes no sense. There is no evidence that the betas calculated by Mr. Rothschild have any bearing on investor expected returns, and in setting rates of return that is what is relevant. Even

if Mr. Rothschild was correct that his calculations are valid, investors simply could not have relied on them. The Value Line data is relied upon by investors. As such, the Value Line betas should be used directly in the cost of capital computation.

I know of no other witness in public utility rate cases that use "Historical Blended" betas or "Forward" betas like Mr. Rothschild. Mr. Rothschild has not shown, nor could he, that investors use his betas. If they are not used by investors, they have no relevance in establishing a market-based cost of equity. His cumulative probability "Option-Implied Growth Rate" for the S&P 500 is also highly unusual and not supported in other rate cases. To show how unusual Mr. Rothschild's approach is here, just consider the overall market risk of 12.46% that Mr. Keller developed and the 7.80% (see page 6 of Exhibit ALR-4) or 7.93% (see page 4 of Exhibit ALR-4) market return that Mr. Rothschild proposes. With Mr. Rothschild's unconventional approach, it is not surprising that he develops CAPM returns that are not credible. Those returns are clearly outside the range of reasonableness when Mr. Keller develops a CAPM of 11.05% with forecasted returns and I obtained 10.48% without the size adjustment or the leveraged betas (see page 41 of Aqua Statement No. 7).

Q. MR. ROTHSCHILD ASSERTS THAT HIS "OPTIONS-IMPLIED GROWTH RATE" USES THE SAME METHODOLOGY AS USED BY THE CHICAGO BOARD OF OPTIONS EXCHANGE (PAGE 76 OF OCA STATEMENT 3). PLEASE COMMENT AS TO THE RELEVANCE OF SUCH APPROACH?

A. His "Option-Implied Market Risk Premium" for the S&P 500 is also highly unusual and not supported in other rate cases. With Mr. Rothschild's unconventional approach, it is not surprising that he develops market risk premium that are not credible given his results of 2.46% and 3.30% (see page 4 of Exhibit ALR-4) and 2.32% and 3.20% (see page 6 of Exhibit ALR-4). As I explained above regarding Mr. Keller's market risk

premium, the values calculated by Mr. Rothschild are way outside anything that investors would currently consider reasonable.

48. Q. AT PAGES 93-94 OF OCA STATEMENT 3, MR. ROTHSCHILD ALSO CHALLENGES THE ADJUSTMENT THAT YOU MADE TO THE RESULTS OF THE CAPM FOR THE SIZE OF THE WATER GROUP. PLEASE RESPOND.

A. A size adjustment is necessary because the financial impact of changes in specific dollar amounts of revenues and costs have a magnified influence on a small company because there are fewer dollars over which those revenues or costs can be spread. The SBBI/Morningstar Yearbook clearly demonstrates that the simple CAPM does not reflect the return that is associated with small size. As Ibbotson has stated:

> The security market line is based on the pure CAPM without adjusting for the size premium. Based on the risk (or beta) of a security, the expected return should fluctuate along the security market line. However, the expected returns for the smaller deciles of the NYSE/AMEX/NASDAQ lie above the line, indicating that these deciles have had returns in excess of those appropriate for their systematic risk.

COST OF COMMON EQUITY - RISK PREMIUM ANALYSIS

49. Q. DO YOU BELIEVE THE RISK PREMIUM METHOD PROVIDES SIGNIFICANT EVIDENCE OF THE COST OF EQUITY?

A. Yes. In my opinion, the Risk Premium results should be given serious consideration. The Risk Premium method is straight-forward, understandable and has intuitive appeal because it is based on a company's own borrowing rate. The utility's borrowing rate provides the foundation for its cost of equity, which must be higher than the cost of debt in recognition of the higher risk of equity (see Aqua Statement No. 7 pages 40-41). So, while Mr. Keller and Mr. Rothschild decline to use the Risk Premium approach to measure the Company's cost of equity, it is an approach that provides a direct and complete reflection of a utility's risk and return because it considers additional factors

not reflected in the beta measure of systematic risk. It is particularly useful when investors expect changes in the cost of debt prospectively, which is currently the expectation of investors, as I have explained above and in Aqua Statement No. 7, page 40. Indeed, the Risk Premium approach provides for direct reflection of prospective interest rates in the model and therefore should be given weight in determining the equity cost rate in this case.

50. Q. WHAT DOES MR. KELLER SAY ABOUT YOUR RISK PREMIUM ANALYSIS?

A. Mr. Keller makes the unfounded assertion that the Risk Premium and CAPM methods should only be used as a comparison to the results of the DCF method because they do not carry over from the investment decision-making process to the utility rate setting process (see pages 21 of I&E Statement No. 2). In fact, it is precisely because investors consider the results of other methods that they too should be used in addition to the DCF in the development of the cost of equity in this proceeding. Mr. Keller's assertion that the Risk Premium method does not measure the current cost of equity as directly as the DCF is similarly without foundation. As I explained in my direct testimony and earlier in this rebuttal testimony, we are facing the prospect of increased interest rates for the foreseeable future. I incorporated the trend toward higher interest rates when I developed my Risk Premium cost of equity of 11.50% although, as noted above on page 15 of my rebuttal, actual interest rates on A-rated public utility bonds have already exceeded the projection I used for my Risk Premium cost of equity (see page 41 of Aqua Statement No. 7, where the forecasts show 5.25% to 5.55% yields on A-rated public utility bonds, yet I used just 5.00%). Hence, my Risk Premium cost rate is fully responsive to changing market fundamentals and the credit quality of the Water Group.

51. Q. MR. ROTHSCHILD CLAIMS (SEE PAGES 89-91 OF OCA STATEMENT NO. 3) THAT YOUR RISK PREMIUM APPROACH IS FLAWED. PLEASE RESPOND.

A. Mr. Rothschild claims that a Kroll supply-side equity risk premium (see page 91 of OCA Statement No. 3) is much lower than the risk premium that I established using historical data (see page 41 of Aqua Statement No. 7). His claim is unsupported because he has not shown that his risk premium is related to the level of interest rates, i.e., it expands when interest rates decline and contracts as interest rates increase, and it is not based on actual measurable returns that are revealed by historical data.

COST OF COMMON EQUITY - COMPARABLE EARNINGS APPROACH

52. Q. PLEASE RESPOND TO THE CRITICISM OF THE COMPARABLE EARNINGS APPROACH.

A. The underlying premise of the Comparable Earnings method is that regulation should emulate results obtained by firms operating in competitive markets and that a utility must be given an opportunity cost of capital equal to that which could be earned if one invested in firms of comparable risk. For non-regulated firms, the cost of capital concept is used to determine whether the expected marginal returns on new projects will be greater than the cost of capital, i.e., the cost of capital provides the hurdle rate at which new projects can be justified, and therefore undertaken. Further, given the 10-year time frame (i.e., five years historical and five years projected) considered by my study, it is unlikely that the earned returns of non-regulated firms would diverge significantly from their cost of capital.

The Comparable Earnings approach satisfies the comparability standard established in the Hope case. In addition, the financial community has expressed the view that the regulatory process must consider the returns that are being achieved in the non-regulated sector to ensure that regulated companies can compete effectively in the capital markets. Moreover, in a 1994 study that addressed the ROE issue, John Olson (then with Merrill Lynch) established that equity returns from non-regulated

companies provide better assessment of investor requirements than those available for regulated utilities.[6]

53. Q. ON PAGES 13, 54, 60 AND 64 OF I&E STATEMENT NO. 2, MR. KELLER MAKES A SERIES OF CALCULATIONS PURPORTING TO MEASURE THE REVENUE REQUIREMENT IMPACT OF CAPITAL STRUCTURE, LEVERAGE ADJUSTMENT, BETA ADJUSTMENT AND THE SIZE ADJUSTMENT. WHAT VALUE DO THESE CALCULATIONS HAVE?

A. On their own, not much. Each of the adjustments to the DCF and CAPM are established based on objective data, not based on "bottom line" impact. Each adjustment must be considered on their own merits not a revenue requirements basis.

OSBA PROPOSAL

54. Q. MR. HAILS MAKES TWO PROPOSALS REGARDING THE COST OF EQUITY DETERMINATION IN THIS CASE. THEY ARE TO (I) MOVE TO THE LOW END OF THE RANGE OF RETURNS INDICATED BY THE VARIOUS MODELS OF THE COST OF EQUITY AND (II) REMOVE "IMPLIED MANAGEMENT PERFORMANCE ADJUSTMENT" FROM THAT LOW END RETURN. WHAT IS YOUR RESPONSE TO THESE PROPOSALS?

A. Both of these proposals should be rejected by the Commission. First, the low end of the range is represented by the DCF return. As such, Mr. Hails essentially is proposing an equity return based on the results of one model. I discussed at length the deficiency of such an approach when I rebutted the testimony of Mr. Keller. Moreover, the 10.95% return on equity that I propose

[6] "Natural Gas: The Case for ROE Reform," John E. Olson First Vice President, Merrill Lynch & Co., October 11, 1994.

for AP is already well below the midpoint of my range of returns of 12.19% (10.58% + 13.80% = 24.38% ÷ 2) or the average of all the results 12.20% (10.58% + 11.50% + 13.80% + 12.90% = 48.78% ÷ 4). There is no justification for further reducing the 10.95% equity return I propose given the significant uncertainty in the capital markets and the current level of interest rates discussed above.

As to Mr. Hails' second point, there is no justification for making a further 0.21% downward adjustment for "implied management performance." His 0.21% downward adjustment is taken from other Pennsylvania rate case that contained fundamentals that differ from AP. There is no basis to equate facts from eighteen (18) other Pennsylvania rate cases to AP. Mr. Hails has provided no linkage from those cases to AP. Furthermore, the 10.58% equity return established by the DCF has discrete components. They are the dividend yield (2.63%), the growth rate (6.75%), and the leverage adjustment (1.20%). There is no basis to remove 0.21% from any of these components for any "implied management performance." The combination of the DCF components provides a result that stands on its own, unless a reduction in the return is associated with poor management performance. There is no evidence in this case that a penalty for poor management performance is warranted in this case, which is essentially the result of Mr. Hail's proposal. It should be rejected by the Commission.

MANAGEMENT PERFORMANCE

55. Q. BOTH MR. KELLER AND MR. ROTHSCHILD OPPOSE ANY RECOGNITION FOR

MANAGEMENT PERFORMANCE IN THE DETERMINATION OF THE RETURN ON EQUITY. MR. KELLER AND MR. ROTHSCHILD ASSERT THAT AP HAS NOT DONE ANYTHING OTHER THAN WHAT IT IS REQUIRED. HOW DO YOU RESPOND?

A. As I stated in my direct testimony, I believe AP has performed in an exemplary manner, as explained by AP Witness Packer, and that performance should be recognized in this case. Mr. Keller simply disagrees, without addressing or refuting any of the items highlighted by AP' witnesses, as examples of AP's excellent performance. In each case, neither Messrs. Keller nor Rothschild have shown that AP is not entitled to some form of management performance recognition by the Commission. Mr. Packer's direct and rebuttal testimony establish that the Company's management performance warrants recognition by the Commission.

SUMMARY

56. Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A. It is my opinion that the equity allowances proposed by Mr. Keller and Mr. Rothschild seriously understate the cost of common equity for AP and, in Mr. Rothschild's case inappropriately uses a hypothetical capital structure. In an environment of high interest rates and Company-specific risk factors, an opportunity to earn a cost of equity of 10.95% is reasonable for AP.

57. Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

KROLL

June 6, 2024

Kroll Lowers its Recommended U.S. Equity Risk Premium to 5.0%, Effective June 5, 2024

Executive Summary

Kroll regularly reviews fluctuations in global economic and financial market conditions that may warrant changes to our equity risk premium (ERP) and accompanying risk-free rate recommendations. The risk-free rate and ERP are key inputs used to calculate the cost of equity capital in the context of the Capital Asset Pricing Model (CAPM) and other models used to develop discount rates. We also update country risk data on a quarterly basis for 175+ countries using various models.

The Kroll Recommended U.S. ERP is decreasing from 5.5% to 5.0% when developing USD-denominated discount rates as of June 5, 2024, and thereafter, until further notice.

Notwithstanding the current recommendation, we are monitoring economic and geopolitical events that may change our views and impact our guidance toward the end of 2024 and into 2025. In particular, the U.S. Presidential Election in November 2024 has the potential to cause turmoil in U.S. and global financial markets. Of particular concern is any potential promise of a significant increase in government spending and a corresponding rise in the U.S. budget deficit, which could place upward pressure on long-term interest rates and disrupt financial markets. Other global geopolitical events that warrant close watch include, but are not limited to, the impact of general elections in other major economies (e.g., Mexico, India, UK), trade conflicts between the U.S. and China, rising tensions in the Middle East and the protracted Russia's war on Ukraine.

Background

The Kroll U.S. Recommended ERP was last changed on June 8, 2023, when it was lowered from 6.0% to 5.5%. This ERP guidance was applicable when developing USD-denominated discount rates and was to be used in conjunction with our U.S. risk-free guidance—the higher of the spot 20-year U.S. Treasury yield (prevailing as of the valuation date) and the Kroll normalized U.S. risk-free rate of 3.5%.

In the "Kroll Cost of Capital Recommendations and Potential Upcoming Changes – February 8, 2024 Update", Kroll reaffirmed its Recommended U.S. ERP guidance at 5.5%. However, that communication also indicated that a "risk-on" attitude in U.S. equity markets meant that the ERP was likely to come down in 2024. At the time, we balanced new stock market record highs (which were partly boosted by optimism around generative artificial intelligence (GenAI), an expected improvement in earnings growth and a resilient U.S. economy), with the potential negative impact from restrictive monetary policies (keeping interest rates higher for a longer period of time) and the risk of major geopolitical events broadening to the global economy (e.g., escalating conflicts in the Middle East).

At this juncture, the U.S. economy continues to be resilient, but there are signs that the labor market is cooling, and consumer spending is slowing. These latest indicators actually increase the probability of a soft-landing scenario (i.e., lower inflation, lower real growth, but no recession) and create the conditions for the U.S. central bank (the Federal Reserve Bank, or the Fed) to start cutting interest rates. This, in turn, is likely to create more favorable financing conditions and continue to support U.S. equity markets.

Based on current economic and financial market conditions, the Kroll Recommended ERP is being lowered from 5.5% to 5.0% when developing USD-denominated discount rates as of June 5, 2024, and thereafter, until further notice. In addition, we continue to recommend using the spot 20-year U.S. Treasury yield as the proxy for the risk-free rate if the prevailing spot yield as of the valuation date is higher than the Kroll normalized U.S. risk-free rate of 3.5%.

The decision to lower the U.S. ERP Recommendation is based on the following trends in economic indicators and financial market conditions:

- In late 2023 and early in 2024, investors began pricing several cuts in the Fed funds rate—the central bank's policy interest rate—which helped fuel a surge in equity markets. However, a surprising resilience in the U.S. economy and a sudden increase in inflation readings in December 2023 and again in February and March 2024, led to a delay in expectations on the number and timing of Fed rate cuts in 2024. Markets reacted by pricing a single-rate cut later this year (contrary to prior expectations of three cuts taking place earlier in the year), with some economists even suggesting a rate hike as a possibility. More recently, however, economic activity has shown signs of slowing down. First quarter real GDP growth was downwardly revised to 1.3%, partly due to a deceleration in consumer spending, as pandemic-related excess savings have been mostly depleted and the overhang of inflation has diminished purchasing power. This slowdown (together with the inflation and unemployment trends discussed below), actually makes it more likely that the Fed will begin cutting interest rates earlier this year relative to recent expectations.

- Major equity indices have recently reached new all-time highs, supported by investors' continued optimism. The surge in technology stocks due to potential productivity gains from GenAI has broadened to other sectors in the economy. Since their respective cycle lows in late October 2023 through May 28, 2024, the S&P 500 Index (a market-cap-weighted index) has increased 28.9% in price terms, whereas the NASDAQ Composite surged by 35.1%. The S&P 500 Equal-Weight Index also gained 22.9% since its October low. For perspective, a 20% or higher increase in equity markets relative to recent lows is considered to be a "bull" market. In addition, during the month of May 2024, all major equity indices reached all-time highs: the S&P 500 Index hit a new record on May 21, 2024, while the NASDAQ Composite did so on May 28, 2024. The Dow Jones Industrial Average (DJIA), an equal-weighted index that no longer attracts significant global investment allocations, surpassed the psychological level of 40,000 for the first time on May 17, 2024.[1]

- The VIX (the volatility index on the S&P 500), also referred to as the "fear index," has been generally low during 2024. Since the beginning of 2024 through May 28, the index has averaged 14.1, with a low of 11.9 reached on May 21, 2024—the lowest level since November 2019. These levels are also much lower than the long-term historical average of 20.1 and the average observed since the height of COVID-19. For perspective, during 2022 and 2023, the VIX averaged 25.6 and 16.8, respectively.

- U.S. corporate credit spreads have been fairly tight and are currently lower than in June 2023, when we last changed our ERP recommendation. They are also significantly lower than their long-term historical average (from late 1996 through the present). The underlying corporate yields on investment-grade and speculative-grade bonds have generally been on a downward trend since 2023.

- ERP indications from forward-looking models based on Professor Aswath Damodaran are at similar levels as when we last changed our U.S. ERP recommendation, while the Default Spread model points to a sustained decline in ERP.

[1] According to an analysis by S&P Dow Jones Indices, at the end of 2019, there were over USD 11.2 trillion index-linked products and derivative contracts benchmarked to the S&P 500, which included USD 4.6 trillion passively tracking the index. In comparison, there were USD 32 billion benchmarked to the DJIA, which included USD 28 billion in passive assets. For more details see "Comparing Iconic Indices: The S&P 500® and DJIA®", S&P Dow Jones Indices – A Division of S&P Global, June 2021. Available here: https://www.spglobal.com/spdji/en/documents/education/education-comparing-iconic-indices-the-sp-500-and-djia.pdf.

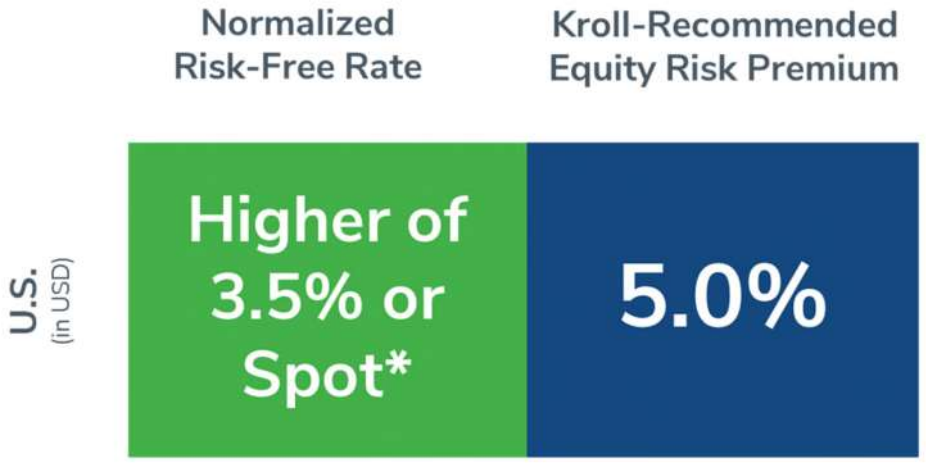
- Even though the U.S. unemployment rate has increased recently, it is still relatively low on a historical basis: in April 2024, the unemployment rate ticked up to 3.9%, from 3.8% in March 2024 and from 3.4% in April 2023, a post-pandemic low. For perspective, unemployment rates of 3.4% were last observed in the late 1960s. The persistence of low unemployment is one of the major reasons why economists believe that a soft landing is achievable, and the probability of a U.S. recession in the near term is relatively low. During past recessions, the unemployment rate saw significant increases. In the U.S., the average unemployment rate during a recession is 6.3%, which is far above the current level.

- Inflation, as measured by Consumer Price Index (CPI), is still above the Fed's 2.0% target, but far below its multiple-decades high of 9.1% (before seasonal adjustments) in the 12-month period ending in June 2022. The process of disinflation has been a bumpy one, supporting the Fed's decision to keep interest rates at their current high level for a longer period. In June 2023, CPI inflation reached a local low of 3.0%, only to continue moving range-bound between 3.1% and 3.7%. The latest CPI inflation was 3.4% as of April 2024, a downtick from the prior month and a welcome reading after two consecutive months of rate acceleration. The Fed's preferred gauge for inflation, the Personal Consumer Expenditures (PCE) Price Index, has actually accelerated in March to 2.7% and remained at that level in April 2024. The core PCE index (i.e., excluding food and energy) dropped to 2.8% in February, but has remained at that level since then. Nevertheless, wage price pressures appear to be easing and the cooling job market may bode well for inflation trends.

Notwithstanding these positive factors that support a decrease in the U.S. ERP, we are monitoring economic and geopolitical events that may change our views and impact our guidance toward the end of 2024 and into 2025. In particular, the U.S. Presidential Election in November 2024 has the potential to cause turmoil in U.S. and global financial markets. The growing level of government debt in the U.S., especially in an election year when candidates propose different fiscal packages to sway voters, may worsen the fiscal position for the country and create upward pressures on long-term interest rates. The acrimonious political debate regarding the debt ceiling that took place in the first half of 2023 was a contributing factor to Fitch Ratings' decision to lower its U.S. sovereign credit rating from AAA to AA+. S&P Global Ratings had already downgraded the U.S. credit rating to AA+ back in 2011 under similar circumstances. Moreover, Moody's Investor Services, the last major credit agency assigning the coveted Aaa rating to the U.S., has lowered its outlook, citing political and financial concerns. Therefore, this will be an area that will warrant close monitoring. Other geopolitical events with potential for escalation to global markets will also be monitored.

Summary of U.S. Cost of Capital Recommendations

- **Kroll is lowering its Recommended U.S. ERP from 5.5% to 5.0% when developing USD-denominated discount rates as of June 5, 2024, and thereafter, until further notice.** This is matched with the higher of the spot 20-year U.S. Treasury yield as of the valuation date and the Kroll normalized U.S. risk-free rate of 3.5%.



* We recommend using the spot 20-year U.S. Treasury yield as the proxy for the risk-free rate, if the prevailing yield as of the valuation date is higher than our recommended U.S. normalized risk-free rate of 3.5%. This guidance is effective when developing USD-denominated discount rates as of June 16, 2022, and thereafter.

- Regarding risk-free rates, as investors attempt to predict the pace and magnitude of potential rate cuts by major central banks, we continue to observe high levels of volatility in spot yields of government bonds of major economies. Long-term bonds yields may continue to fluctuate considerably in the near future, before stabilizing. During these periods, project teams may need to consider using a moving average of spot yields to mitigate the impact of this volatility in their valuation analyses (e.g., weekly or monthly averages).

- Notwithstanding the current recommendations, we are monitoring economic and geopolitical events that may change our views and impact our guidance toward the end of 2024 and into 2025. In particular, the U.S. Presidential Election in November 2024 has the potential to cause disruption in U.S. and global financial markets. Of particular concern is any potential promise of significant increases in government spending that lead to a significant rise in the budget deficit, which could place upward pressures on long-term interest rates and disrupt equity markets. Other global geopolitical events that warrant close watch include, but are not limited to, the impact of general elections in other major economies (e.g., Mexico, India, UK), trade conflicts between the U.S. and China, rising tensions in the Middle East and the protracted Russia's war on Ukraine.

IV. INCOME TAX IMPACTS OF INTEREST SYNCHRONIZATION 15

V. CONCLUSION 16

AQUA PENNSYLVANIA, INC.
AQUA PENNSYLVANIA WASTEWATER, INC.
REBUTTAL TESTIMONY OF PANPILAS W. FISCHER

I. INTRODUCTION AND PURPOSE OF TESTIMONY

Q. What is your name and business address?

A. My name is Panpilas W. Fischer, and my business address is 4355 Cobb Parkway, Suite J255, Atlanta, GA 30339.

Q. Did you previously submit testimony in this proceeding on behalf of Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. ("Aqua" or the "Company")?

A. Yes, I submitted my direct testimony, Aqua Statement No. 8, on May 23, 2024.

Q. What is the purpose of your rebuttal testimony?

A. Subsequent to the filing of my prepared direct testimony, Ralph C. Smith filed direct testimony on behalf of the Pennsylvania Office of the Consumer Advocate ("OCA"). My testimony responds to portions of the direct testimony submitted by Mr. Smith. Specifically, I will respond to the recommendations of Mr. Smith about 1) the PA Net Operating Loss ("NOL") deferred tax asset, 2) the level of tax repairs deduction claimed in this case, including the continued adjustment for uncertain tax positions and the repairs deduction deferral mechanism (the "collar"), and 3) the income tax expense impacts of interest synchronization and other proposed adjustments.

Q. Are you sponsoring any exhibits associated with your rebuttal testimony?

A. Yes, I am sponsoring Exhibit PWF-1-R, which provides information regarding Aqua's NOL balance and Exhibit PWF-2-R, which provides support for Aqua's negative state income tax expense.

II. PENNSYLVANIA NOL DEFERRED TAX ASSET

Q. On page 32 of Mr. Smith's Direct Testimony, Mr. Smith proposes a decrease to rate base by the removal of the PA NOL deferred tax asset in the amount of $32.728 million. Do you agree with this adjustment?

A. No, I do not. Mr. Smith asserts that the PA NOL deferred tax asset should not be included in rate base because it was not included in previous rate cases and the IRS normalization rules do not require its inclusion in rate base.

Q. Do you have a correction to this amount?

A. Yes. In the response to Aqua's discovery response to OCA-XV-25a, the Company stated that the PA NOL included in rate base was $32.728 million ($31.414 million in the Company's proposed Water base and $1.314 million in the Company's proposed Wastewater base). After further review, I determined that there was a formula error in Attachment 1 to that discovery response. The amount included in rate base in the Company's filing is actually $29.242 million ($28.305 million in the Company's proposed Water base and $0.937 million in the Company's proposed Wastewater base), not $32.728 million. Exhibit PWF-1-R supports those amounts included in rate base in the FPFTY.

Q. Why is a deferred tax asset recorded for a net operating loss?

A. When a net operating loss occurs, it indicates that the Company has taken a level of tax deductions that result in negative taxable income (a taxable loss). As a result, the taxing authority, whether it is the IRS or the PA Department of Revenue, does not allow the Company to monetize the tax deductions that generate a tax loss in the current year. In other words, the tax deductions only reduce the Company's cash payments for taxes to the taxing authority to zero and not below. For the portion of the tax liability that is below zero

(the NOL) there is no further reduction in cash payments and the Company records a "receivable" for the future reduction in cash tax payments for this amount.

Under normalization accounting, the Company records a deferred tax asset for the income tax impact of the amount of the net operating loss, offset by a credit to deferred tax expense (negative deferred tax expense). In addition, both the negative current tax expense along with the current income tax receivable recorded are reversed to zero. This example below illustrates how the $29.242 million tax impact of the NOL is recorded under the normalization method of accounting:

Normalization Accounting:				
Line No	Account	Description	Amount Dr/(Cr)	Cost of Service
1	409	Current inc tax expense	$ (29,242)	$ (29,242)
2	236	Current inc tax payable	$ 29,242	
3	409	Current inc tax expense	$ 29,242	$ 29,242
4	236	Current inc tax payable	$ (29,242)	
5	411	Deferred inc tax expense	$ (29,242)	$ (29,242)
6	190	Deferred inc tax asset (funded)	$ 29,242	
7	**Revenue rqmt increase/(reduction) before gross-up**			$ (29,242)

Lines 1 and 2 represent how the $29.242 million tax effect of the loss is reflected in cost of service prior to the recording of any net operating loss. Upon recording the future tax benefit of the net operating loss, since the negative deferred tax expense (line 5) is offset by the charge to current tax expense (line 3) and the current income tax receivable (line 4) is replaced by the NOL deferred tax asset (line 6), overall negative or reduced tax expense (line 7) results.

The $29.242 million PA NOL deferred tax asset on the balance sheet represents the

amount that the Company will be able to reduce taxes payable to the PA Department of Revenue in the future when there is positive taxable income.

Q. Please explain why the Company used normalization accounting for the PA NOL when Pennsylvania regulatory requirements generally require flow through accounting for state income tax expense?

A. The book versus tax timing differences that resulted in the FPFTY PA NOL deferred tax asset of $29.242 million is the state tax benefit of property related deductions that the Company has provided to customers in rates. In order for the Company to pass these tax benefits to customers in rates, even though the Company has not received the cash benefits yet, the Company had to reflect reduced state income tax expense in its cost of service calculation (per line 7 in the normalization accounting example above). See Exhibit PWF-2-R for Schedules F-2 from the previous rate cases, which show negative deferred state income tax expense and negative or reduced state effective tax rates. In order to reflect reduced state income tax expense in its cost of service calculation, the Company had to use normalization accounting to record the tax impact of the PA NOL in rates. Had the Company used flow through accounting for the tax impact of the PA NOL, the creation of the PA NOL would have resulted in an increase to current income tax expense, with no offsetting decrease to deferred income tax expense, thus reflecting state tax expense of $0 and negating the negative or reduced state income tax expense in cost of service. See the illustration of flow through accounting for the same $29.242 million tax impact of PA NOL example below:

Flow Through Accounting:				
Line No	Account	Description	Amount Dr/(Cr)	Cost of Service
1	409	Current inc tax expense	$ (29,242)	$ (29,242)
2	236	Current inc tax payable	$ 29,242	
3	409	Current inc tax expense	$ 29,242	$ 29,242
4	236	Current inc tax payable	$ (29,242)	
5	254	FAS 109 Regulatory liability	$ (29,242)	$ -
6	190	Deferred inc tax asset (unfunded)	$ 29,242	
7	**Revenue rqmt increase/(reduction) before gross-up**			$ -

In this example, line 5 is a credit to a FAS 109 Regulatory liability under flow through accounting and on line 7, overall tax expense is $0, resulting in no reduction to the revenue requirement, which would not achieve the desired outcome of a reduced revenue requirement/passing the tax benefits to customers. Under normalization accounting, line 5 is a negative deferred income tax expense (offset by a funded deferred tax asset) recorded to provide customers the benefit, via reduced income tax expense in cost of service, resulting in reduced rates. The $29.242 million represents state income tax benefits already passed through to customers that the Company has yet to receive (monetize).

Q. Why is it important to include the PA NOL deferred tax asset in rate base?

A. For the same reason other deferred tax liabilities and assets are included in rate base, the PA NOL deferred tax asset should be included in rate base in this case. In the case of deferred tax liabilities, these represent future amounts of income tax owed to the taxing authority by the Company, which have already been collected from customers in rates via a charge to deferred income tax expense under normalization accounting. They are a source of capital for the Company, in the form of an interest free loan from the taxing authority, that the Company can use to finance future investments in plant, so customers receive a

benefit when the deferred tax liabilities are included as a reduction to rate base. The reverse is true in the case of deferred tax assets. These represent future amounts of income tax reductions to be received by the Company, which have already been provided to customers in rates, via a credit to deferred income tax expense, if normalization accounting is used. Since these benefits have already been provided to customers, but the Company has not monetized the benefits, the PA NOL deferred tax asset should be included in rate base. When the Company is in the reverse situation, where it has collected income tax from customers that it has yet to pay to the taxing authorities and used normalization accounting, it would include those deferred tax liabilities as a reduction to rate base. The Company does not base its decision to include/exclude a deferred tax asset or liability in rate base only when the result is favorable to the Company.

Q. Mr. Smith contends that the PA NOL deferred tax asset should not be in rate base because it is not a requirement under the IRS normalization rules. Are there any tax related items included in rate base, even though the IRS normalization rules do not require their inclusion?

A. Yes, there are. The IRS normalization rules generally only pertain to federal method/life book versus tax timing differences, however Aqua includes as a reduction or increase to rate base deferred tax assets/liabilities related to many other book versus tax timing differences such cost of removal, Allowance for Funds Used During Construction ("AFUDC") debt, Contributions In Aid of Construction ("CIAC"), tax capitalized interest, tank painting costs and others. Furthermore, under the IRS normalization rules, there is a consistency requirement[1] which provides that one way the requirements of § 168(i)(9)(A)

[1] IRC Section 168(i)(9)(B)(i)

will not be satisfied is if the taxpayer, for ratemaking purposes, uses a procedure or adjustment which is inconsistent with such requirements. Under § 168(i)(9)(B)(ii), such inconsistent procedures and adjustments include the use of an estimate or projection of the taxpayer's tax expense, depreciation expense, or reserve for deferred taxes under §168(i)(9)(A)(ii), unless such estimate or projection is also used, for ratemaking purposes, with respect to all three of these items and with respect to the rate base (hereinafter referred to as the "Consistency Rule"). As discussed previously, the normalization of the PA NOL deferred tax asset enabled the refund of the 481(a) tax repair benefit and ongoing tax benefits to customers by means of negative deferred state income tax expense being recorded as an offset to the PA NOL deferred tax asset. To not include the PA NOL deferred tax asset in rate base would violate the nature of the Consistency Rules and would be contrary to established ratemaking practices whereby the inclusion of deferred income tax expense in ratemaking results in the inclusion of the offsetting deferred tax asset or liability in rate base.

Q. Are there any other issues related to the PA NOL deferred tax asset you would like to discuss?

A. Yes, I would like to point out two instances where Mr. Smith either misquoted or misinterpreted from my direct testimony and the Company's response to OCA-XV-28(d). On OCA Statement No. 2, p. 33, line 11 of the direct testimony of Mr. Smith, he quotes my direct testimony as "*the Company will discontinue the normalization of the state income taxes for the PA NOL in 2024*", but my direct testimony says "*the Company will discontinue the normalization of the state income taxes for the PA NOL in **2025***". (emphasis added).

Q. What is the second instance you referred to?

A. On OCA Statement No. 2, p. 33, lines 16-18 of Mr. Smith's direct testimony he states "*the Company's response to OCA-XV-28(d) indicates that it recorded equal amounts of a regulatory asset and a credit in the same amount related to its financial accounting for PL [sic] NOL amounts as of December 31, 2023*". This is not accurate because not all of the PA NOL amounts were recorded with equal amounts to a FAS 109 regulatory asset/liability. The FAS 109 regulatory asset recorded by the Company (and discussed in the response) is only related to the **deficient** PA NOL deferred tax asset, which as I will explain later relates to scheduled future state income tax rate changes.

This is an important distinction because the recognition of deferred income tax expense in the ratemaking process creates what is referred to as a "funded" deferred tax asset or liability. When deferred income tax expense is included in cost of service, customers have either been charged or been given a benefit because the deferred income tax expense impacts the revenue requirement/rates. The corresponding funded deferred tax assets or liabilities are then included in rate base. This is the mandate of the IRS normalization rules as it relates to federal method/life book versus tax timing differences, and as stated previously, it is the Company's historical practice applied to other normalized book versus tax timing differences in the ratemaking calculation, despite not being a requirement of the IRS normalization rules.

Q. What is the difference between the deficient PA NOL deferred tax asset and the PA NOL deferred tax asset?

A. The deficient PA NOL deferred tax asset is a result of the graduated state income tax rate decrease from 9.99% to 4.99% ultimately in 2031. Under ASC 740, companies are required

to account for changes to state income tax rates or laws during the period in which the law is enacted. FAS 109 also requires companies to adjust total deferred income tax balances to the enacted tax rates. In compliance with ASC 740, the excess or deficiency is recorded to a regulatory asset (in the case of deferred tax assets where there is a tax rate decrease) or a regulatory liability (in the case of deferred tax liabilities when there is a tax rate decrease) for future determination by the regulatory commission, the method and timing of when the amounts are to be recovered from or returned to customers.

Q. What is your recommendation regarding Mr. Smith's proposal to remove the PA NOL deferred tax asset from rate base?

A. Mr. Smith's proposal does not account for the underlying reason for normalizing the PA NOL; the reason being to provide past and ongoing state income tax benefits to customers that the Company has yet to monetize. Mr. Smith's reasoning that lack of inclusion in prior rate cases should prevent the PA NOL deferred tax asset from being included in rate base in this rate case is flawed. The Company's lack of inclusion of both the PA NOL and Federal NOL deferred tax asset in rate base in prior rate cases was completely inadvertent, and that should not preclude the Company from taking corrective action in this rate case. In addition, Mr. Smith's proposal is not consistent with the longstanding ratemaking methodology that the inclusion of deferred tax assets and liabilities in rate base be determined by which deferred tax assets and liabilities customers have funded, through the deferred income tax expense, and it should therefore be rejected.

III. INCOME TAX IMPACTS OF REPAIRS DEDUCTION

Q. What tax repair deduction has Aqua claimed for the FPFTY?

A. The Company has included a net total repair deduction of $163,060,000 ($158,600,000 for

water and $4,460,000 for wastewater). The Company has also proposed to continue the practice of recording a collar of $4 million on the repair deduction which was approved in the 2021 Base Rate Case. Under the approved collar mechanism, if the net repairs deductions for Aqua vary by more than $4 million above or below $163,060,000 (i.e., above $167,060,000, or below $159,060,000), Aqua will record a regulatory liability or asset for the related income tax expense impacts of the repair deduction variations above $167,060,000 or below $159,060,000.

Q. What is the purpose of the collar mechanism?

A. In Aqua's 2018 Base Rate Case, questions were raised regarding the accuracy of the Company's projection of the tax deductions for repairs, which impact its claimed and actual tax expense. The concern was that if the Company's projection was lower or higher than its actual deductions, then its actual tax expense could be lower or higher than the amount claimed for rate making purposes. Rather than establish a tracker mechanism, the settlement of that 2018 case established a collar mechanism, which captures effects from large differentials.

Q. Has any party proposed a change to the tax deduction for repairs in this case?

A. Yes. OCA Witness Smith proposes to increase the deduction for tax repairs to $195.428 million. As calculated by Mr. Smith, this would reduce the Company's federal and state income tax expense by approximately $8.688 million (OCA Statement No. 2, p. 53, lines 19-20).

Q. What is the basis for Mr. Smith's claimed adjustment to the tax repair deduction?

A. Mr. Smith states that he relied upon the Company's response to OCA-IX-24 showing the 2023 gross repairs deduction, which he asserts is the most current full year of information

available and is consistent with the Company's growing water and wastewater utility operations. His adjustment also removes the other components of the repair deduction: namely the collar mechanism and the provision for uncertain tax positions ("FIN 48") projected, less AFUDC.

Q. Do you agree with Mr. Smith's proposed adjustment?

A. No, I do not. The Company claims a deduction for repairs on its tax return based on many factors. These factors include the mix of capital spend between new business and replacement type work and, if there is replacement work, the amount or percentage of the unit of property that was replaced. Whether or not there are capacity increases, or other betterments, as a result of the replacement work and whether or not program type work requires analysis on an aggregated basis or not are some other factors. Another important consideration is that Aqua claims the repairs deduction based on the date the related book asset is placed in service, not when the dollars are incurred, which can result in year over year fluctuations as property is placed in service much later than when the dollars are incurred on larger projects. The table below, which shows the fluctuation in the tax repairs deduction (before and after reductions for AFUDC and FIN 48), illustrates the point that the mix of projects in any given year analyzed under numerous factors determines the level of repairs deduction.

Repairs Deduction by Year				
	Actual	Actual	Actual	Estimate
Gross Deduction	**2020**	**2021**	**2022**	**2023**
Water	149,558,191	171,048,566	161,637,003	190,410,879
WW	5,571,575	5,785,944	4,012,705	5,017,879
Subtotal	155,129,766	176,834,510	165,649,708	195,428,758
Less: AFUDC	0*	(745,782)	(1,676,841)	(2,611,236)
Repairs Deduction reported on tax return	155,129,766	176,088,728	163,972,867	192,817,522
Less: UTP	(2,898,633)	(3,278,203)	(1,407,393)	(3,353,683)
Net Repairs	$ 152,231,133	$ 172,810,525	$ 162,565,474	$ 189,463,839
*Note: The 2020 gross repairs deduction is already reduced for AFUDC.				

The 2021 and 2023 repairs deductions are higher, but the 2020 and 2022 repairs deduction are much lower. The increase in estimated deductible repairs for 2023 is a result of analyzing the specific projects that went into service in 2023 based on the various factors previously discussed and is not indicative of a normal going forward level of repairs deductions as claimed by Mr. Smith. The Company based its projection of deductible repairs included in the FPFTY by considering capital requirements for the immediate future, as well as historical data such as the qualifying repair factors, resource constraints and determined that the inventory of repairs eligible pipe is dwindling. Due to Aqua's efforts over the last eleven years to replace pipe in the age and condition category, the footage of repairs eligible pipe being replaced is expected to decline compared to historical years, where there was an emphasis on the replacement of aging pipe.

It should also be noted that if the Company did incur a higher level of spend that qualified for a repair deduction, the Company has proposed the continuation of the collar mechanism. Therefore, if the net repairs deductions for Aqua exceed $167,060,000, Aqua will record a regulatory liability for the related income tax benefit for the amount over $167,060,000. The Company's estimated net repair deduction included in the FPFTY

remains at $163,060,000, therefore resulting in no adjustment to the Company's claimed income tax expense related to the repair deduction. I note that the adjustment of the tax repair deduction was a litigated issue in the Company's 2021 base rate case and the Commission specifically rejected OCA's proposal to increase the level of the repairs deduction under the same premise as this case.

Q. Is there a consequence to overstating the repairs deduction?

A. Yes. With the collar mechanism, if the repairs deduction allowance is overstated, customers rates in the next rate case will be increased to collect the deferred balance.

Q. OCA Witness Smith also opposes the Company's netting of the provision for uncertain tax positions (FIN 48) in computing its tax repair deduction at OCA St. 2, pages 56-57. Do you agree with this?

A. I disagree with Mr. Smith's claim that the estimated income tax benefit related to the tax repair deduction should not be reduced by the provision for uncertain tax positions. As I explained in my direct testimony, the Company is required to routinely assess the need for a provision for uncertain tax positions and evaluate whether they are more likely than not to be sustained upon examination. The tax impact of any uncertain tax positions that are greater than 50 percent likely of being realized upon settlement must be recognized in the Company's financial statements and disclosed in its Federal income tax return. Although the IRS released guidance in 2023 for the natural gas industry, as of the date of this filing, the IRS still has not issued guidance regarding the repair deduction for the water industry, which means that there is no "safe harbor" or approved methodology that the IRS will accept without dispute. If disallowed, the resulting audit adjustment would be calculated on all historical deductions taken by the Company and the Company would be put on a

deemed permissible method. It would be imprudent to pass an income tax benefit to customers that has not met the threshold for financial statement recognition. This FIN 48 adjustment has been approved in both the 2018 and 2021 base rate cases. More particularly, the inclusion of the FIN 48 adjustment to the tax repair deduction was a litigated issue in the Company's 2021 base rate case and the Commission specifically rejected OCA's proposal to disallow the FIN 48 adjustment.

If the income tax benefit is not reduced by the reserve for uncertain tax positions, and the tax position is subsequently audited and disallowed, the Company would need to record a regulatory asset to recover the disallowed benefit that has been included in customer rates. If the tax position is subsequently audited and the position is partially or wholly sustained, the net reversal of the uncertain tax position will be returned to customers to the extent it was included in customer rates. By including the reduction for uncertain tax position in current rates, the benefit from the uncertain tax position is normalized to mitigate the risk of disallowance. I note that the Company deducts from rate base the reserve balance to compensate customers for the time value of money benefits of the FIN 48 exclusion.

It is the Company's position that the benefit of the repair deduction be reduced by the estimated reserve for uncertain tax positions in the ratemaking income tax calculations, which is consistent with the treatment in the 2018 rate case settlement and 2021 fully litigated rate case PUC Order and in the Company's as filed case exhibits in this proceeding. Mr. Smith's proposal to remove the FIN 48 adjust should be rejected.

Q. OCA Witness Smith recommends elimination of the collar mechanism. Alternatively, he recommends that the collar be reduced to $1,500,000 from the current $4,000,000 OCA St. 2, pages 58-59. Do you agree with this?

A. I disagree with Mr. Smith's recommendation. As demonstrated in this proceeding, there remains substantial disagreement regarding the projection of the repairs allowance deduction. Eliminating the collar entirely may incentivize parties to claim extreme deductions in order to affect tax expense. With respect to the alternative proposal, at a collar amount of $1,500,000 above or below the threshold, as recommended by Mr. Smith, a tax impact as low as $400,000 would be required to be recorded to a regulatory asset or liability for inclusion in the next base rate case. As the state income tax rate continues to decline, a tax impact as low as $374,000 would require regulatory asset or liability treatment. The level of the collar was set at $4 million annually to minimize tracking, accounting and reporting requirements for amounts that would not materially impact rates. Mr. Smith's recommendation to reduce the collar to $1,500,000 should be rejected.

IV. INCOME TAX IMPACTS OF INTEREST SYNCHRONIZATION

Q. OCA Witness Smith proposes an adjustment to income tax expense for Interest Synchronization at OCA St. 2, page 53. Please comment.

A. Mr. Smith has proposed adjustments to income tax expense based upon OCA's proposed changes to the capital structure of the Company and OCA's proposed adjustments to rate base, which impact the calculation of interest expense deductible for income taxes. While I do not disagree with Mr. Smith's calculation of the impact on tax expense of the interest expense adjustment, the Company disagrees with the OCA's proposed change to the Company's capital structure and rate base, therefore making OCA's recommended

adjustment to the tax expense for purposes of interest synchronization unnecessary. Company witness Moul addresses proposed changes to the Company's capital structure, Mr. Spanos addresses OCA's proposed changes to depreciation and the depreciation reserve and Mr. Packer address the proposed changes related to the removal of East Whiteland from rate base.

V. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes it does, but I reserve the right to supplement my rebuttal testimony as needed during this proceeding

PREPARED REBUTTAL TESTIMONY

OF

HAROLD WALKER, III

REGARDING

CASH WORKING CAPITAL

SEPTEMBER 12, 2024

TABLE OF CONTENTS

I. INTRODUCTION 1
II. SCOPE OF TESTIMONY 1
III. CASH WORKING CAPITAL 2

I. INTRODUCTION

Q. STATE YOUR NAME AND ADDRESS.

A. My name is Harold Walker, III. My business address is 1010 Adams Avenue, Audubon, Pennsylvania, 19403.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC as Manager, Financial Studies.

Q. ARE YOU THE SAME HAROLD WALKER WHO PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes.

II. SCOPE OF TESTIMONY

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. ("Aqua PA" or "Company") asked me to respond to and comment on the direct testimony submitted by Bureau of Investigation and Enforcement ("I&E") witness Zachari Walker and the direct testimony submitted by Office of Consumer Advocate ("OCA") witness Ralph C. Smith concerning the cash working capital allowance that Aqua PA should be afforded an opportunity to earn on as part of its rate base claim. My rebuttal testimony is supported by Exhibit HW-1-R, which is composed

of 1 Schedule.

III. CASH WORKING CAPITAL

Q. ARE THERE ANY AREAS OF AGREEMENT IN THE WORKING CAPITAL TESTIMONIES PRESENTED IN THESE PROCEEDINGS?

A. Yes, all parties have adopted my recommended net lag days (revenue lag days less expense lead days) presented in my direct testimony. Accordingly, the only issue regarding the Company's working capital is the amount of O&M, taxes and interest expense to be applied to the net lag days.[1]

Q. ON PAGES 35 AND 36 OCA WITNESS SMITH DISCUSSES THE INCREASE IN THE COMPANY'S CASH WORKING CAPITAL. DOES THE COMPANY REQUIRE AN UNUSUAL AMOUNT OF CASH WORKING CAPITAL?

A. No. The Company's amount of cash working capital is similar to, if not lower than, other Pennsylvania water and wastewater utilities' cash working capital. Exhibit HW-1-R, Schedule 1 shows a comparison of the amount of cash working capital required by the Company and other Pennsylvania water and wastewater utilities whose cash working capital was determined using the lead-lag methodology. The other Pennsylvania water and wastewater utilities shown in the comparison are the only Pennsylvania water and wastewater utilities that I am aware of whose cash

[1] I&E Statement No. 1 at pp. 37-38; and OCA Statement 2 at p. 35. Mr. Smith states, "It is believed that adjustments to reduce the amount of cash working capital to be included in Aqua PA's water and wastewater utility rate base will be needed; however, those have not yet been quantified" which I believe to be flow through adjustment in expenses.

working capital was determined using a lead-lag methodology.[2] The analysis shown on Exhibit HW-1-R, Schedule 1 compares the amount of cash working capital required for each utility relative to each utilities' net plant in service, proposed revenues, and proposed operating expenses and taxes other than income that was requested in each utilities most recent rate filing. The comparison shown on Exhibit HW-1-R, Schedule 1 indicates the Company's amount of cash working capital is either the lowest or second lowest of the Pennsylvania water and wastewater utilities rate filing reviewed.

Q. HAVE YOU UPDATED THE COMPANY'S CASH WORKING CAPITAL?

A. No. I agree with I&E witness Walker that all changes to the Company's revenues, expenses, taxes, and rate base will be brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. Accordingly, the Company's cash working capital is not being updated at this time.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

[2] The other Pennsylvania water and wastewater utilities' cash work capital analyzed include Community Utilities of Pennsylvania Inc., Pennsylvania-American Water Company, Veolia Water Pennsylvania, Inc., and York Water Company,

EXHIBIT NO. HW-1-R

DATE ADMITTED: _____

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: AQUA PENNSYLVANIA, INC.
AQUA PENNSYLVANIA WASTEWATER, INC.
DOCKET R-2024-3047822 AND R-2024-3047824

REBUTTAL TESTIMONY OF GREGORY R. HERBERT

Q. Please state your name and address.

A. My name is Gregory R. Herbert. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania 17011.

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Are you the same Gregory R. Herbert who submitted direct testimony in this case?

A. Yes, I submitted Aqua Statement No. 10 and Part II of Exhibit Nos. 5-A and 5-B.

Q. What is the purpose of your testimony?

A. I will address the contract customer rates and the billing determinants corrections for the water and wastewater contract customers that were raised during discovery, and I will address the issues brought forth in the testimonies and exhibits of SCH USA, LLC ("SCH USA") witnesses Carlos Padilla and Frank Lacey.

Q. Do you have any exhibits with your rebuttal testimony?

A. Yes, attached to my rebuttal testimony are Exhibits GRH-1-R, GRH-2-R, and GRH-3-R.

Q. What are these exhibits?

A. These exhibits set forth corrections to contract customer rates and billing determinants that were raised during discovery. Specifically, during discovery, the water contract rates for New Wilmington Borough were revised under present and

proposed rates for the fully projected future test year ("FPFTY") ending December 31, 2025. In addition, the Horsham Township base rates were inadvertently linked to the Schwenksville Borough base rates under present and proposed rates and were corrected to reflect the correct Horsham Township base rates under present and proposed rates. The Masury contract's 12-inch meter billing determinants showed 28 billed months, which were updated to reflect the correct billing determinants of 24 billed months. See Schedule 5 of Exhibit GRH-1-R for the corrected contract rates and billing determinants.

During discovery, the Third Party contract wastewater sales customers' rates required corrections. The proposed rates for Dennison Township, East Side Borough, Penn Lake Borough and Foster Township, developed in the Company's prior rate case, should reflect the proposed rates for this rate proceeding. The Southdown Homes, Upper Providence and Elwyn proposed rates were corrected to be increased by the rolling 5-year average of the Consumer Price Index. The corrected proposed rates are reflected in Schedule 5-WW of Exhibit GRH-2-R

Exhibit GRH-3-R includes Company sponsored responses to interrogatories that are referenced in my rebuttal testimony.

Q. Per Mr. Padilla's direct testimony (SCH USA St. No. 1), please briefly describe the acquisition of the Township of Kidder Wastewater System.

A. The Company acquired the Township of Kidder's (the "Township") wastewater system in July of 2012, at Docket No. A-2012-2298067. The Split Rock Resort is located in the Lake Harmony area of the Township. At the time of the acquisition, the Company was transferred the number of assigned equivalent dwelling units or

"EDUs" from the Township's billing system, including the EDUs for Split Rock Resort. The EDUs transferred were based on the 2010 Settlement Agreement between the Township and Vacation Charters Ltd., Split Rock Country Club, Inc., and Summit Management & Utilities, Inc. See Exhibit FL-1 in the direct testimony of SCH USA Witness Lacey.

Q. What is the Company's definition of an EDU?

A. The Company defines an EDU under the proposed tariff as, "Except for existing Customers acquired by the Company through a purchase or acquisition and for billing purposes only, the EDU is a measure assigned by the Company based upon the estimated average daily wastewater flow for the type of business, as calculated by the PaDEP regulation at 25 Pa. Code § 73.17(b) divided by the Company's typical estimated average daily wastewater flow from a current single-family unit. Residential Customers are designated as on EDU; however, in the Company's sole discretion, the Company may assign more than one (1) EDU for a residential Property."

Q. Please describe the acquisition of Split Rock Resort by SCH USA.

A. In October of 2020, SCH USA acquired parts of Split Rock Resort. The acquisition included Willowbrook at Lake Harmony, the Galleria and the Water Park, the Lodge, and the laundry that serves Willowbrook, the Galleria and the Lodge. As outlined in the direct testimony of SCH USA Witness Padilla, SCH USA operates the Lodge, which has 50 hotel rooms, a restaurant and meeting room; Willowbrook at Lake Harmony, which is a resort hotel and has 256 guest rooms; The Galleria, which has 77 hotel rooms, eight VIP rooms, a food court, shops, restaurants, movie

theater, racquetball court, waterpark, indoor pool, lobby bar, and a meeting space; and a laundry, which serves the Lodge, Willowbrook and the Galleria. In total, the resort has 383 hotel rooms and multiple amenities. SCH USA also purchased the wells that provide the drinking water to these locations of the resort.

Q. Please describe the number of EDUs and rates the Split Rock Resort is allocated/charged by the Company.

A. Aqua was transferred the assigned number of EDUs from the Township's billing system (including the EDUs for Split Rock Resort). The number of EDUs for Split Rock Resort was determined in the 2010 Settlement Agreement. Split Rock Resort falls under the Company's Rate Zone 4 wastewater tariff and is charged $131.00 per EDU under present rates (excluding the Distribution System Improvement Charge ("DSIC")), and $134.33 per EDU under proposed rates. The present flat rates were calculated based on a residential customer's average monthly usage of 4,000 gallons per month, which was the system-wide average monthly residential usage calculated in the 2021 rate case at Docket Nos. R-2021-3027385 and R-2021-3027386, and the proposed flat rates are calculated based on the calculated system-wide residential customer's average monthly usage of 3,870 gallons per month, based on this rate proceeding's historic test year ("HTY") end December 31, 2023, consumption and billing determinants. Aqua bills SCH USA the following number of EDUs per month:

Willowbrook at Lake Harmony (Willowbrook): 128 EDUs

Galleria and the Water Park (Galleria): 145 EDUs

The Lodge: 53 EDUs

Laundry (serves the above premises): 4 EDUs

Total EDUs Charged to SCH: 330 EDUs

Q. Could the Company simply agree to charging SCH USA a different level of EDUs in this case?

A. No, it cannot. First and foremost, Aqua is a regulated Company where the Pennsylvania Public Utility Commission ("Commission") sets and approves the rates, rate structures and billing determinants charged to its customers. Additionally, the Split Rock Resort is operating the same type of business that has always been present at this location. The Company has no obligation or reasoning to change the predetermined EDUs that were adopted in the 2010 Settlement Agreement and then approved by the Commission in the Company's 2021 rate case. Therefore, any requests for changes in the allocated number of EDUs must be decided upon by the Commission in this rate proceeding.

Q. What is Mr. Padilla's complaint as to Aqua's billing procedures?

A. I understand that currently SCH/Split Rock Resort **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** and that is the focus of the current compliant filing SCH USA made against Aqua in Docket Nos. C-2022-3036893 and C-2022-3037118. In this proceeding, Mr. Padilla claims the methodology of Aqua's billing assumes Split Rock Resort is at full occupancy every single day of the year. I will respond to this allegation.

Q. Does Aqua charge SCH/Split Rock Resort based on full occupancy?

A. No, it does not. The Company charges Split Rock Resort based on predetermined EDUs, which totals 330 EDUs. There are 383 total hotel rooms not counting the multiple amenities at the resort. The largest gap between EDUs and number of hotel rooms is Willowbrook, which has 256 rooms and is charged 128 EDUs or half the amount of rooms. Based on the 2010 Settlement Agreement, Willowbrook has 128 units with two rooms in each unit, and each unit counts as one EDU. The Lodge and Galleria are charged a similar number of EDUs as the number of guest rooms, but also have multiple amenities at these premises, which should also be allocated EDUs as these amenities produce wastewater consumption. Aqua acquired the Township's wastewater system and adopted the predetermined EDU allocation that was developed in the 2010 Settlement Agreement.

Q. Please provide more comments on SCH USA's ongoing assertion about EDU assignment.

A. I note that the number of guest rooms and multiple amenities is greater than the 330 EDUs the Company charges SCH USA. The Company maintains this is a reasonable number of EDUs to charge as they were defined by the 2010 Settlement Agreement. Therefore, SCH USA could very well be allocated more than 330 EDUs if the Commission does not rule in favor of maintaining a flat rate charge per EDU for SCH USA.

Q. Is SCH USA under the impression that it is being charged EDUs for an expansion of guest rooms that never materialized based on the 2010 Settlement Agreement?

A. Yes. In the Direct Testimony of SCH USA witness Lacey, he erroneously states:

> "This Settlement was agreed to, and the number of EDUs was determined before a proposed expansion of 198 units (384 rooms) at the resort was started. Importantly, the proposed expansion of 192 units (384 rooms), included in the derivation of EDUs included in the settlement, was never actually built. Aqua is currently (and has always been) billing SCH USA for wastewater throughput from those unbuilt rooms that were planned when the Settlement was negotiated." SCH USA St. No. 3, at p. 4.

The 2010 Settlement Agreement is clear that those additional 192 EDUs related to the construction at Willowbrook were not considered in setting the number of EDU's at that time, as the expansion of these 192 units would have increased the EDU count at Willowbrook from 128 EDUs (for the existing units) to 320 EDUs. However, Aqua currently charges Willowbrook for only 128 EDUs, which shows the 192 unit expansion is not considered in the EDU count for Willowbrook and Aqua is not charging SCH USA for the unbuilt units. In addition, in the Company's prior rate case at Docket Nos. R-2021-3027385 and R-2021-3027386, the number of EDUs Split Rock Resort was charged was not contested, and the Company is obligated to bill the resort the Commission approved Rate Zone 4 tariff rates.

Q. Please briefly describe the relief SCH USA is seeking.

A. Mr. Padilla states SCH USA is "seeking to pay rates based on actual wastewater service being provided." SCH USA St. No. 1, at p. 4. He provides four recommendations, (1) measuring actual water consumption; (2) measuring actual wastewater discharges to Aqua's system, (3) adjusting the EDUs for billing

purposes to better reflect actual usage and occupancy; or (4) assigning a different proxy that more accurately reflects actual usage and occupancy. SCH USA St. No. 1, at p. 4.

Q. Does the Company have any customers in a similar situation as SCH USA?

A. The Company currently has a limited number of customers it bills through metered private wells or bills based on wastewater flows. The Company sponsored responses to interrogatories SCH-I-1 and SCH-I-2, which are included in SCH USA witness Lacey's Exhibit FL-3, describe the customer classes, and the breakdown of number of customers by service area for these customers. All these customers with metered wells or metered wastewater flows were in place before Aqua acquired these systems. Aqua adopted the applicable rate structure(s) upon acquisition, similar to how Aqua has maintained the same number of predetermined EDUs to charge its unmetered customers a flat rate in the Township.

Q. What is the Company's position regarding SCH USA Witness Padilla's recommendations?

A. The recommendations Mr. Padilla provides in his direct testimony would cause a myriad of issues and increased costs for the Company and, ultimately, Aqua's customers. Split Rock Resort has privately owned wells, that are not metered, that provide water to its resort customers. If the privately owned wells or wastewater flows were metered, issues such as determining which party would own these meters (either water or wastewater meters), the responsibility and cost of the initial installation, which party would maintain the meters, shut-off procedures for

delinquency, accuracy of the readings, or performing audits of the well meter readings could arise. Furthermore, any costs the Company would incur to make these recommended changes to measure usage will increase the revenue requirement, not reduce it, and ultimately increase the rates paid by SCH USA. Lastly, Mr. Padilla's recommendations related to adjusting EDUs or assigning different proxies based on different levels of occupancy rates or usage is further discussed below in my rebuttal testimony.

Q. Please explain further the issues related to the accuracy of meter readings or performing audits of the meter readings are unique to SCH USA.

A. In situations where an independent entity provides water service and bills a customer for this service, the entity has an incentive to correctly meter a customer's usage. However, for SCH USA, who provides water service for itself through private wells has less incentive to accurately measure water usage. SCH USA's situation poses a risk for the Company to spend more time and money on ensuring accurate meter readings, and those costs would ultimately be recovered through the rates charged to SCH USA.

Q. SCH USA Witness Padilla argues that if the resort is at less than full capacity, SCH USA is charged for more wastewater flows than what Aqua collects and treats. How do you respond?

A. Since the resort is supplied water through unmetered wells, the Company has no reason to suspect, at any level of occupancy, that the resort is being overcharged, as SCH USA is under a Commission approved, flat rate charge per EDU rate structure. The resort has a laundry, water park, pool, movie theater, restaurants,

bar, and shops. Based on my review of the Split Rock Resort website, some or most of these amenities at the resort are also available to the public and are not exclusive to guests staying at the resort hotels. It is possible that the public consumption is de minimis compared to the consumption produced by its hotel guests, but I am simply pointing out another factor that would make it unreasonable to have charges based solely on occupancy rates where the business provides services to its guests and public, as both contribute to wastewater consumption. Furthermore, the Company has never used occupancy rates for the allocation of EDUs, and it is currently not authorized by the Commission and cannot bill based upon occupancy levels.

Q. If the Commission were to reduce the EDUs charged to SCH USA, explain the calculations to revenues under present and proposed rates that would be required to make.

A. An individual customer's rates cannot be considered in a vacuum, and if SCH USA's allocated number of EDUs were reduced, it would impact other customers rates in Rate Zone 4. A pro forma revenue adjustment under present and proposed rates would be required to adjust for the reduction of EDUs charged to Split Rock USA. The proposed rates would then need to be recalculated, which would result in an increase in proposed rates for all customers in Rate Zone 4 to make up for the reduction in EDUs to Split Rock Resort.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

SCH USA, LLC

SET I INTERROGATORIES

SCH-I-1 Does Aqua bill any wastewater customer(s) in its service territory based on actual usage obtained from wastewater meters? If so, for each such customer, please identify:

a. The type of customer (residential, commercial, industrial, etc.);

b. The customer's rate zone as established in Aqua's wastewater tariff; and

c. Whether the wastewater meter(s) was/were installed at Aqua's expense, the customer's expense, or a combination thereof.

d. For any customer identified in parts (a)-(c) above, provide their average wastewater usage.

e. For any average usage provided in (d) above, is that average greater or less than an EDU proxy for flow figures for that customer as identified in 25 Pa. Code § 73.17?

RESPONSE

a. through c. The Company has two commercial customers, one in Rate Zone 2 and one in Rate Zone 11 that are billed based on metered wastewater flows. The wastewater meters and associated infrastructure necessary for reading wastewater flows and billing was installed and in operation prior to the acquisition of each of the systems by Aqua PA. These customers were grandfathered in upon acquisition of these systems and Aqua PA adopted the billing structure, in place at the time of acquisition, which included either a meter size or EDU charge in addition to a volumetric charge.

d. through e. The customer in Rate Zone 2 had an average monthly flow of approximately 1,059,700 gallons for the HTY ending December 31, 2023. The

customer in Rate Zone 11 had an average monthly flow of approximately 150,800 gallons for the HTY ending December 31, 2023. The EDU proxy for flow figures for customers as identified in 25 Pa. Code § 73.17 is for design purposes and as noted in the response above, the 2 customers identified are billed using both a base charge and a volumetric charge, not solely an EDU charge, therefore the analysis requested cannot be completed as requested.

SCH USA, LLC

SET I INTERROGATORIES

SCH-I-2 Does Aqua bill any wastewater customer(s) in its service territory based on actual usage obtained from water meters, where water is provided by a well or by an entity other than a utility, municipality, or municipal authority? If so, for each such customer, please identify:

a. The type of customer (residential, commercial, industrial, etc.);
b. The customer's rate zone as established in Aqua's wastewater tariff; and
c. Whether the water meter(s) was/were installed at Aqua's expense, the customer's expense, the water provider's expense, or some combination thereof.

RESPONSE

a. The Company has limited wastewater customers who are billed based on water meter reads where the water is provided by a well. When the Company acquired the systems referenced below, the company adopted the existing rates structure and method in which these customers were billed.

b. and c. Rate Zone 7 (Limerick) – 53 Commercial accounts with customer installed meters.
Rate Zone 11 (New Garden) = 73 Residential accounts with customer installed meters at the time of acquisition, which were updated to read via radio frequency at Aqua's expense.
Rate Zone 11 (New Garden) = 24 Commercial accounts with customer installed meters at the time of acquisition, which were updated to read via radio frequency at Aqua's expense.
Rate Zone 4 – (Blakeslee) 66 Commercial accounts that at the time of acquisition, had meters that were installed by Tobyhanna Township, but have since been replaced by the Company.

VI. CONCLUSION 31

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. Please state your name and business address.

A. My name is Todd Duerr. My business address is 762 W. Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Aqua Pennsylvania, Inc., ("AP") as Vice President of Operations.

Q. Have you previously provided testimony in this proceeding?

A. Yes. I provided Direct Testimony on behalf of AP and Aqua Pennsylvania Wastewater, Inc. ("APW") (collectively "Aqua PA," or the "Company") as Statement No. 11 with the Company's filing to the Pennsylvania Public Utility Commission ("PUC" or the "Commission").

Q. What is the purpose of your Rebuttal Testimony?

A. The purpose of my testimony is to address the Direct Testimonies of (1) Office of Consumer Advocate ("OCA") Witness Jerome D. Mierzwa; and (2) SCH USA LLC's ("SCH USA") Witnesses Carlos Padilla, Ronald Carrier, and Frank Lacey. I will also be providing testimony related to various customer issues raised during this proceeding, particularly those issues raised at the various public input hearings.

Q. Are you including any other exhibits with your Direct Testimony?

A. Yes. Included with my Direct Testimony are Aqua Exhibits TMD-1-R and TMD-2-R.

II. RESPONSE TO SCH USA

Q. SCH USA is disputing the Company's method of wastewater billing for its accounts in Kidder Township. Can you please describe the service the Company provides to SCH and how the accounts are billed?

A. Yes. I will address the operational aspects of SCH USA's Direct Testimony, while Aqua Witnesses Christopher E. Manning and Gregory Herbert (Aqua Statement No. 3-R and 10-R) will address the billing and cost of service aspects of SCH USA's Direct Testimony. I will note that **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** and is the focus of the current complaint filing SCH USA made against Aqua in Docket Nos. C-2022-3036893 and C-2022-3037118.

SCH USA is a commercial wastewater customer of Aqua. SCH USA is served by a wastewater system that the Company acquired from the Township of Kidder (the "Township") in 2012. The Company provides wastewater collection and treatment services to SCH USA. SCH USA owns and operates a sewer collection system on their property that discharges to the Company's wastewater system. SCH USA has four accounts that are billed a flat rate based on assigned Equivalent Dwelling Units ("EDU") as addressed in the Rebuttal Testimonies of Mr. Christopher E. Manning (Aqua Statement No. 3-R) and Mr. Gregory R. Herbert (Aqua Statement No. 10-R). An EDU is generally accepted in the wastewater industry as the equivalent of the flow from one residential dwelling unit which is then used as a basis to bill customers as the unit of measurement for sewer service. The EDU method is used for multiple purposes including but not limited to sewer facilities capacity planning and engineering design, and to establish a normalized approach to charge for sewer services to premises without water metering by a utility

company. The EDU method considers the sewer capacity needed to treat wastewater from the customer / premises served at all times. SCH USA obtains its water from their privately owned wells. The Commission approved the Company's acquisition of the Township's wastewater assets on July 19, 2012, at Docket No. A-2012-2298067. On October 11, 2012, the Company filed its Compliance Tariff which contained the EDUs that would be charged for the properties currently owned by SCH USA. The Company does not know the water usage by SCH USA. In accordance with our Tariff, the Company bills SCH USA based on the EDUs assigned to SCH USA.

Q. What were the billing EDUs assigned to the SCH USA properties at the time of the acquisition?

A. The SCH USA accounts were assigned the following EDUs: (1) the Willowbrook at Lake Harmony would be billed at 128 EDUs; (2) the Galleria and the Water Park would be billed 145 EDUs; and (3) remaining uses (Lodge) would be billed 53 EDUs. There are 4 additional EDUs billed to the laundry which were added after Aqua acquired the system. On October 24, 2012, the PUC issued its Secretarial Letter authorizing the submitted Rate Schedule. Once Aqua acquired the Township assets, the assigned EDUs from the Township's billing system were transferred to Aqua for billing purposes and the assets were placed into Aqua rate base in the Company's 2018 Base Rate Case.[1] The number of EDUs billed to SCH USA were reviewed and included in the revenue requirements as set forth in the respective Commission order in the Aqua 2018 Base Rate Case that was entered on May 9, 2019 and the Aqua 2021 Base Rate Case[2] that was entered on May 16, 2022.

[1] *Pa. PUC, et al. v. Aqua Pennsylvania, Inc., et al.*, Docket Nos. R-2018-3003558, R-2018-3003561, et al.
[2] *Pa. PUC, et al. v. Aqua Pennsylvania, Inc., et al.*, Docket Nos. R-2021-3027385, R-2021-3027386, et al.

Q. Do you agree with SCH USA's position that the EDUs assigned to SCH USA "assumes" 100% full occupancy rate or its assertion that it is being billed for more usage than what the Company is collecting and treating?[3]

A. The Company is billing based on the EDUs agreed to under the Settlement Agreement (SCH USA Exhibit FL-1), as assigned to SCH USA and Aqua, and as approved by the Commission. SCH USA's predecessor and the Township agreed on those values, and the Company has continued using that approach. When possible, a wastewater customer is billed based on a fixed charge plus the actual water usage recorded by a Company-owned meter. Where the Company cannot bill based on water usage measured for a Company-owned meter, which is the case for SCH USA, customers are billed a flat rate based on the number of assigned EDUs, which is a common practice across the wastewater industry.

For flat rate customers, the Company does not have any meter readings to calculate actual usage for a customer's bill and the Commission has approved this flat rate as an appropriate billing method for these customers. The Company plans and constructs its facilities to provide for sewer service 365 days a year, 24 hours a day, whether customers use the service or not. Fixed costs for that readiness are incorporated into the sewer rate design. The fact that a customer is present at a service address only a few days a month, or whether a commercial customer is at 100% occupancy rate, is irrelevant to whether the flat sewer charge is reasonable. Aqua has no control over when its customers are present or whether a multi-use facility is operating at full capacity. Yet, Aqua still is required to have its sewer service available for whenever the customer desires to use it, and to be available to accommodate the full capacity of that customer's operations.

[3] *See* SCH USA St. No. 1, at pp. 3-4.

Q. SCH USA acknowledges that assignment of its EDUs are based on a the Settlement Agreement, but they complain that there are no details on how the EDUs were calculated.[4] Can you comment?

A. Yes. Foremost, while I am not a lawyer, I do not agree that because a calculation was not included in the Settlement Agreement, that makes the Settlement Agreement and the assignment of EDUs any less valid. Although Aqua was not a party to the Settlement Agreement as it was executed between Kidder Township and SCH USA's predecessor, and the Settlement Agreement outlines the basis for the EDU assignment. For example, the Settlement Agreement provides that 128 units at Willowbrook were completed at the time the Settlement Agreement was signed. Willowbrook has been, and is currently, allocated 128 EDUs whereby one completed unit equals one EDU. I would also note that the Settlement Agreement provides the context for the EDU designation. I believe that the use of the EDUs from the Settlement Agreement, which was then adopted as part of the acquisition and included in subsequent Aqua 2018 Base Rate Case and 2021 Base Rate Case, is just and reasonable.

It is also important to remember that at the time the EDUs were assigned/allocated to SCH USA's predecessor, it was based on the type and quantity of uses at the subject service locations – i.e., a combination of hotels, restaurants, recreational facilities, a waterpark and indoor pool. SCH witness Mr. Padilla describes the current Split Rock Resort property which shows there has not been a significant change in the nature the property.[5] Therefore, the assigned EDUs are reasonable and consistent with the Settlement Agreement and Commission approved rates.

[4] *See* SCH USA St. No. 1, at pp. 4-5; SCH USA St. No. 3, at pp. 3-7.
[5] SCH USA St. No. 1, at pp. 2-3.

Q. SCH USA is now requesting to disregard the Settlement Agreement and that Aqua alter its billing to bill SCH USA based on actual water consumption from water meters.[6] Can you please comment?

A. As I mention above, where possible a wastewater customer is billed based on a fixed charge plus actual water usage recorded by a Company owned / approved meter. It is not always possible, as is the case with the wastewater service provided by Aqua to SCH USA, to bill based on the water usage component. It is my understanding that SCH USA provides its own water from wells that are not metered. Aqua does not own the water distribution system serving SCH USA. Moreover, we cannot be confident where facilities may have meters and if there are any if the are maintained or accurate. As stated in the Rebuttal Testimony of Mr. Manning (Aqua Statement No. 3-R), SCH USA has not, to our knowledge, taken any steps to collect or provide data to support their claim that their usage would be less than what the Company currently charges SCH USA under the number of assigned EDUs.

Q. SCH USA witness Mr. Lacey references the Company's discovery response that there are some Aqua customers who have metered well water as a basis for SCH USA's request to be billed based on a meter to be placed on their wells.[7] Can you please respond?

A. Yes. The Company does have a limited number of wastewater customers who are billed based on water meter reads where the water is provided by a private well. These are customers from acquired systems where the Company adopted the existing rate structure

[6] *See, e.g.*, SCH USA St. No. 1, at p. 4. Other SCH USA witnesses repeat the requests for relief outlined by Mr. Padilla.
[7] *See* SCH USA St. No. 3, at pp. 13-15; SCH USA Exhibit FL-3.

and billing method from these systems. SCH USA was not billed in this manner at the time of acquisition. In addition, the customers who are grandfathered in this have individual meters measuring usage to each customer's residence or business. As stated above, Aqua does not own the water distribution system serving SCH USA and we can not be confident that any facilities are metered, nor are we confident the meters, if they exist, are maintained and accurate.

Q. SCH USA is requesting that the Settlement Agreement be ignored and for Aqua to bill SCH USA by measuring actual wastewater discharges to Aqua's system.[8] SCH USA witness Mr. Carrier describes sewer metering technology that could be used for billing purposes.[9] Can you please respond?

A. On page 9 of Mr. Carrier's direct testimony, he notes that there are two common types of metering technologies used in measurement of sewage flow; ultrasonic (doppler) flow meters and electromagnetic flow meters. For awareness, there is a third common method – open channel flow measurement.

The meter technologies noted in Mr. Carrier's direct testimony are used in application of "full pipe, pressurized flow". The SCH USA system is not a "full pipe, pressurized flow" system, it is mainly a gravity system. As such, the following discussion is for informational purposes only because the meter technologies noted by Mr. Carrier cannot be used on the system.

The SCH USA referenced metering technologies can be used on pumped flow where the pipe has a consistent velocity and is full. The technologies do not work on non-pressurized flow. Gravity based pipes are not designed for full flow operation. SCH

[8] *See, e.g.*, SCH USA St. No. 1, at p. 4.
[9] *See* SCH USA St. No. 2, at pp. 7-10.

USA's wastewater flow is a gravity flow system where it connects to Aqua's system. SCH USA may have internal partially pumped flow sections which eventually discharge to the gravity system, although Aqua has no information to confirm whether, or to what extent, there are pumped flow sections in SCH USA's wastewater collection system.

I mentioned a third meter type – "open channel flow measurement". There are several types and applications. These technologies are used for non-pressurized flow measurement in wastewater system (i.e., gravity) subject to many design and operational parameters that must be specifically engineered to ensure appropriate measurement. Typically, these meters are used at higher flow such as at an interconnection between two systems. The SCH USA system does not fit into this category. And, again, I note that SCH USA has not proposed that solution for Aqua's review and consideration.

Q. In the alternative to billing based on metered water or wastewater, SCH USA is again requesting to disregard the Settlement Agreement and that it be assigned "a different proxy that more accurately reflects actual usage and occupancy".[10] Can you please respond?

A. First, I disagree with SCH USA's claim that what the Company is billing SCH USA is inaccurate. The Company is billing them a flat rate based on the EDUs that were agreed to and adopted in the Settlement Agreement which was assigned to SCH USA. SCH USA has not produced any data or information to substantiate their claim of lower flow or usage, aside from claims of variable occupancy which I have addressed above. I have also commented above on the basis of EDUs as a normalized method of billing for non-metered sewer service and requirements for Aqua to ensure its readiness to treat allocated flows

[10] SCH USA St. No. 1, at p. 4; SCH USA St. No. 2, at pp. 7-10; SCH USA St. No. 3, at pp. 11-12.

from the property regardless of occupancy. It is important to remember that at the time the EDUs were assigned/allocated to SCH USA's predecessor it was based on the type of business at the service locations – a combination of hotels, restaurants, recreational facilities, a waterpark and indoor pool. The current operations, as described by SCH USA witness Mr. Padilla indicates there has been no significant change in the nature of the original wastewater usage at the location. Therefore, the assigned EDUs are reasonable and remain consistent with past and current information.

Q. Do you agree with SCH USA witness Mr. Lacey's claim that since Aqua has limited number of customers with metered well water usage and two customers that have bills based on metered wastewater flows that the Company admits to having all the appropriate technologies to accommodate SCH USA's requests to be billed on metered usage?[11]

A. I do not agree that the existence of a limited number of customers having metered well or wastewater service supports the conclusion that SCH USA should be afforded the same treatment. As mentioned above, the limited number of customers with metered well usage do not have the same type of service conditions as SCH USA and metered water well usage for SCH USA would involve a more involved set of circumstances. The two commercial customers who are billed based on metered wastewater flows became customers through an acquisition and the Company implemented their existing billing practice which included all of the infrastructure to bill based on wastewater metered usage. Also as discussed above, the details associated with any metering application are unique to the situation. SCH USA

[11] SCH USA St. No. 3, at pp. 12-14.

has not provided information as to why their property can be metered and ensure accuracy of wastewater usage.

Moreover, as discussed by Mr. Gregory R. Herbert (Aqua Statement No. 10-R) if SCH USA's allocated number of EDUs were reduced, it would impact other customers rates in Rate Zone 4. A pro forma revenue adjustment under present and proposed rates would be required to adjust for the reduction of EDUs charged to SCH USA. The proposed rates would then need to be recalculated, which would result in an increase in proposed rates for all customers in Rate Zone 4 to make up for the reduction in EDUs to Split Rock Resort.

Q. SCH USA witness Mr. Lacey testifies that customers should be able to provide their own meters for well water inflows or wastewater outflows.[12] What is the Company's position on customer supplied meters?

A. SCH USA witness Mr. Lacey testifies that customers supplying their own meters would be a potential solution. The suggestion is silent on the totality of the metering process. Issues that must be addressed include determining which party would own these meters (either water or wastewater meters), the responsibility and cost of the initial installation, which party would maintain the meters, shut-off procedures for delinquency, accuracy of the readings, and performing audits of the meter readings.

As I discussed above, SCH USA owns the internal collection system. How they maintain their system and the impact of extraneous flows from inflow and infiltration ("I&I") is unknown. While SCH USA argues that actual water use should be billed under the premise of low-occupancy and perhaps higher flow than the EDU assignment, it

[12] SCH USA St. No. 3, at pp. 14-15.

negates the impact of I&I that enters its system and which, in turn, is conveyed and treated by Aqua. Furthermore, the wastewater metering technologies of wastewater flows, as discussed above, do not appear to be a solution based on the gravity flow characteristics of SCH USA's system. Again, the EDU method normalizes those variables and creates a reasonable means to design facilities and appropriately bill customers for all elements of wastewater service. Furthermore, any costs the Company would incur to make these recommended changes to measure usage will increase the revenue requirement, not reduce it, and ultimately increase the rates paid by SCH USA and all customers.

Q. SCH USA witnesses Mr. Padilla and Mr. Lacey comment that the Company's proposed revisions to its definition of an EDU is an attempt to solidify its position of charging SCH USA for EDUs based on an outdated Settlement Agreement.[13] Do you agree?

A. I do not agree. In fact, the Company's proposed revisions to its tariff are to clarify its definition and to provide customers with more information, such as the number of EDUs that are assigned to them at the time of acquisition. In addition, the tariff provides a mechanism for customers, who modify their properties in a manner that the customer believes impacts its EDU calculation, to request a change to the customer's billing EDUs. For example, if a commercial establishment with a set number of EDUs changes its business operations from a large hotel to storage facility, then the customer can request the Company review its billing EDU designation.

[13] SCH USA St. No. 1, at p. 5; SCH USA St. No. 3, at pp. 8-12.

Q. SCH USA witnesses Mr. Padilla and Mr. Lacey mention SCH USA's previous request, and its active formal complaint proceeding, regarding their request to challenge the rates they are billed.[14] Can you comment?

A. There is an active PUC formal complaint proceeding, as mentioned above, filed by SCH USA challenging the Commission approved rates the Company is billing SCH USA. The Company's position in that proceeding is that SCH USA's challenge to the Company's rates is to be considered in a base rate case, because it challenges both the existing, Commission-approved rates charged to SCH USA and the proposed rates in this proceeding that will be applicable to SCH USA.

III. PFAS COMMUNICATION

Q. Please address Ms. Hoover's discussion on PFAS communication with customers on page 48 of OCA Statement No. 1.

A. The Company will continue to provide general information about PFAS on its website. However, as contemplated in prior commitments made by Aqua, now that there is a federal regulation (MCL) on PFAS the Company will comply with those federal communication requirements. The Company will not continue to post monthly sampling on its website and will comply with the federal requirements to provide information in its Consumer Confidence Reports.

IV. PUBLIC INPUT HEARINGS RESPONSE

Q. Are you aware of testimony provided by certain customers at the public input hearings held in this matter?

A. Yes.

[14] SCH USA St. No. 1, at p. 1; SCH USA St. No. 3, at pp. 12-13.

Q. How will you be addressing customer public input testimony?

A. We appreciate all the customers who testified at the public input hearings to express their thoughts concerning the Company and its proposed rates. I will address some broader issues where customers raised similar issues, including: unmetered wastewater service; wastewater service billed based on water usage, affordability; water quality concerns from customers on Elderberry Way; and the Company's rate proposal for the New Garden wastewater system. The Company reviewed all the comments made at the public input hearings and endeavored to follow-up with customers to address any specific questions or issues. Aqua Exhibit TMD-1-R to my Rebuttal Testimony addresses several specific customer service issues raised at the public input hearings.

A. Wastewater Service Billing

Q. Can you please describe how the Company bills customers for wastewater service?

A. Yes. The Company appreciates all the customers that testified at the public input hearings expressing a desire to have a metered wastewater rate. The Company understands that the lack of a metered wastewater rate can be frustrating to our customers, and we will continue to educate our customers on why they receive a flat rate and why that flat rate appropriately bills customers for the wastewater service provided.

There are a few different ways a customer is billed for wastewater services depending on the characteristics of the services provided. When possible, a wastewater customer is billed based on a fixed charge plus actual water usage recorded by a water meter. The Company uses Aqua water meter readings for customers who receive water and wastewater service from Aqua. In other cases, the Company receives water readings from another investor-owned utility or government-owned provider. However, it is not always possible to bill based on metered water usage. Where the Company cannot bill

based on metered water usage customers are billed a flat rate, which is a common practice across the wastewater industry.

Q. A number of customers at the Public Input hearings questioned the flat rate billing and also questioned whether basing their wastewater bill on water usage is appropriate. Can you respond?

A. Yes.

Flat Rate customers: The Company did receive testimony from customers about the desire to not have flat wastewater rates. The Company heard these issues from our customers in our Lake Harmony and Tobyhanna systems and in particular, Mr. Day and Mr. Delrosso. Both of these systems are in Rate Zone 4. The Company specifically tried to address the billing for Rate Zone 4 customers in its proposal in this proceeding. The Company desires to maintain the current flat rate for Rate Zone 4 and is proposing that these flat rates increase slightly from $133.35 to 135.20. As it relates to Mr. Day specifically, it appears that he either wants the Commission to: 1) establish a flat wastewater rate for seasonal/second home communities; or 2) require regulated investor owned utilities to put water meters on private wells to calculate wastewater usage – both of which it appears he assumes will provide a lower wastewater rate. For flat rate customers, the Company does not have any reliable meter readings to calculate a customer's bill and the Commission has approved this flat rate as an appropriate billing method for these customers. Mr. Manning will provide more background, context, and rebuttal in regard to this issue. It is my understanding that the Commission has addressed the issues Mr. Day raises in previous complaint proceedings.[15]

[15] Mr. Day filed a Formal Complaint against the Company at Docket No. C-2021-3026213. That complaint was denied by the Commission, with Administrative Law Judge Joel H. Cheskis finding that: (1) Aqua was following the rules

As described earlier in my Rebuttal Testimony, customers pay to have the sewer service available 365 days a year, 24 hours a day, whether they use the service or not. Fixed costs remain that are incorporated into the sewer rate design. The fact that a customer is present at a service address periodically or the number of occupants at the service address varies is not demonstrative to whether the sewer charge is reasonable. Aqua has no control over when its customers are present at the service address. Yet, Aqua still is required to have its sewer service available for whenever the customer desires to use it. We provide service to the premises whether occupied by one person or ten (for example). Initially, while it may seem unfair to customers that are not as familiar with the ratemaking process, a customer is required to pay the fixed monthly sewer charge whether they are present at the service address every day of the month or no days of the month, as Aqua incurs fixed costs so that the service is available to the customer. As I discussed above, the Company must also consider the efforts of managing individual customer situations across its customer portfolio and service territory. While each customer is understandably focused on their individual situation, the Company must consider the resources and process inefficiencies that would result if every customer objected to a flat rate billing method and the ensuing elements of site-specific occupancy to accommodate each customer's situation. The EDU method of normalizing wastewater metering promotes process efficiency that translate into the rates charged.

Additionally, as noted earlier, the Commission has addressed the billing practices for Lake Harmony and Mr. Day's concerns in the *Day Complaint*. In that case, Mr. Day

imposed by its Tariff in billing Mr. Day; and (2) that Mr. Day presented no evidence demonstrating that Aqua's Tariff was unreasonable as applied to him. *Day v. Aqua Pennsylvania Wastewater, Inc.*, Docket No. C-2021-3026213 (Recommended Decision issued Oct. 28, 2021) *adopted without further Commission action* (Order entered Nov. 30, 2021) ("*Day Complaint*").

filed testimony including various arguments that appear similar to his concerns in this base rate case, *i.e.*, a lower wastewater rate. This appears to be based on his specific situation – as he stated that he uses his Lake Harmony property five days a month (see Tr. 889, lines 12-16).

For background purposes, Mr. Day commented in his public input testimony that the Commission rejected a metering pilot program he supported in Aqua's 2022 Base Rate Case. The Commission rejected this idea for a number of reasons, including the cost of such a program. The Commission in the last case rejected a pilot program which encompassed Mr. Day's current request to install water meters, set a specific lower rate for Lake Harmony and lastly allow customers to install their own water meters. Also in the 2021 Base Rate Case, Aqua explained that, similar to many wastewater systems throughout the Commonwealth, Aqua does serve a limited number of areas where wastewater customers are billed on a flat rate. This means that unmetered customers receiving wastewater service from Aqua pay the same amount each month. Unmetered, flat-rate wastewater customers make up the communities of Tobyhanna, Pennsylvania (706 customers) and Lake Harmony, Pennsylvania (1029 customers). These communities were billed on a flat rate prior to Aqua's acquisition of these wastewater systems, and the Company has continued to bill the customers on a flat-rate basis.

The Commission held that in situations, such as this, where metered water information is unavailable, the standard industry practice is to base the flat rate on a system-wide average usage per month plus a customer charge. The Commission considered a number of factors including that the Company does not have the authority to meter a

representative sampling of customer owned private wells.[16] A pilot program or optional meter program would only benefit customers whose perceived wastewater use would be lower than the flat rate charge, and would not benefit the customers who perceive themselves to be larger users. The Commission further noted that there are concerns about the ability to access customers' property to properly install a meter on a well. There may be substantial cost involved; the Company and, ultimately, customers will bear the cost of such installations. Finally, the lack of express authority to enter private property to meter **all** privately owned wells makes this proposal very difficult to adopt as a permanent solution. The Commission further referred to testimony signaling its understanding the customer's desire to limit any rate increase, but explained that "resorting to changing the current methodology on which these customers are billed will not impact that reality. In fact, other customers will likely be billed more."[17] For wastewater only customers that receive water from private wells, the Company would be required to enter, traverse, and locate a customer's water well, to a property the Company does not have a right to enter, install a Company owned meter somewhere on a customer's property where a water well is located, and maintain that property going forward. This is further complicated by the fact that many of these water systems are owned by the community, rather than a single customer.

Moving on to other of Mr. Day's issues, I disagree with Mr. Day's accusations about our tariffed rates or billing practices. Consolidation of the water and wastewater industry has occurred over decades and a separate line item for a system acquisition

[16] *See Pa. PUC, et al., v. Aqua Pennsylvania, Inc. et al.*, Docket No. C-2021-3026213, pp. 273-274 (Opinion and Order entered May 16, 2022) ("*Aqua 2021*").
[17] *Aqua 2021*, p. 274.

assessment is not feasible. Moreover, the Commission has recognized that it is in the interest of customers and the public to consolidate and regionalize water and wastewater systems across the Commonwealth. 52 Pa. Code § 69.721. Mr. Day's concerns run counter to this policy.

Furthermore, Mr. Manning addresses Mr. Day's comments that the Company did not review alternative methods for calculating flat rates. Mr. Manning disagrees with his interpretation and responds to this issue in his Rebuttal Testimony (AP Statement No. 3-R).

Mr. Day also provides information on items including: tax bills and where residents live, data on the alleged mixed use of the community, permits by the township for short term rentals, Air DNA reports, and wastewater treatment plant flow amounts. All of this appears intended to support his contention that his community is a seasonal/second home community. While I understand Mr. Day's desire to prove his community may have a large percentage of second homes, that does not negate or show the Company's proposal is unreasonable for the reasons I set forth above.

In footnote 7 of his Direct Testimony, Mr. Day suggests it is Aqua's burden to somehow audit this community to find out if a customer has installed a water meter. My understanding is that is not our burden to do.

As stated above, I appreciate the issues raised by Mr. Day and the Company specifically tried to address the billing for Rate Zone 4 customers. The Company desires to maintain the current flat rate for Rate Zone 4 and is proposing that these flat rates increase slightly from $133.35 to 135.20.

Wastewater bills based on water usage: A number of customers whose wastewater bills are calculated using water usage questioned whether it is appropriate to use the readings to bill for both services, believing they are paying twice. Customers are not paying twice. First, they are receiving two distinct services. Water service cost, whether from Aqua or other water provider, is based on treating and delivering water to the customer's premises. Wastewater service cost is based on the collection, conveyance, and treatment and disposal of the customer's wastewater. The vast majority of wastewater service is not metered separately from water service. As discussed above, many variables affect the sizing and operations and cost of service for of a wastewater system, not just volume passing through a meter, whether regular or periodic. While wastewater usage may not precisely match water usage, water usage provides a reasonable measure to a customer's wastewater usage and this is a standard billing and rate design practice across the wastewater industry, which has been approved by the Commission as fair and reasonable in numerous Aqua and other water/wastewater utility base rate cases.

B. Affordability

Q. Customers at the public input hearings commented on the requested rate increase. Can you please comment on affordability issues?

A. The Company takes these comments very seriously and understand the impacts on customers. The Company has implemented a customer assistance program ("CAP") which is meant to assist customers that have affordability issues regarding Aqua's service. The details of the CAP program are discussed in more detail in the Direct and Rebuttal Testimonies of Rita F. Black (Aqua Statement No. 13 and 13-R). The Company also followed up with customers where a CAP enrollment could be utilized as stated in Aqua Exhibit TMD-1-R.

C. Elderberry Way Customers

Q. A few customers at the August 5, 2024 Public Input Hearing testified about smell and odor of the water at their residence. Has the Company investigated the concerns raised by these customers?

A. Yes. These customers are located on Elderberry Way in our Cheltenham system. After learning of the concerns at the public input hearing, the Company investigated our system that same week. We did not identify any water quality issues in our system based on physical evaluation of the water and from water quality tests performed in accordance with prescribed methods. Regardless, actions taken included a comprehensive flushing of the area, a field evaluation of valve positions to see if inadvertent dead ends had been created and confirmed all valves were in the correct position, and a technical review of water treatment and distribution features to this area that could correlate to taste and odor issues - none were identified. The Company's Water Quality team also contacted the customers who testified to discuss their concerns. Two of the customers (Mr. Blair and Mr. Shellhorse) said that the issue was isolated to odors from a specific sink drain in their respective bathrooms and had been going on for some time. They said they do not notice the smell anywhere else in the house where water is used. The Company offered some suggestions to the customers to correct their situation and asked that they contact us if the situation persisted. Both customers thanked Aqua for the follow-up on this matter and had no further questions or concerns, nor have they subsequently contacted us. The third customer with a similar complaint to the others was Mr. Ira Bond. He did not return our Water Quality Department's calls, and we do not have any complaints on file from him related to this issue or any other issue.

D. New Garden Wastewater Systems

Q. What did the Company propose for New Garden wastewater customers in this case?

A. The Company proposed a rate decrease for the average residential customer in New Garden. Mr. Packer will address this in his Rebuttal Testimony (Aqua Statement No. 1-R).

Q. Can you describe the condition of the New Garden Wastewater system upon closing of the transaction?

A. Yes. The wastewater collection system and the treatment facilities were in generally poor condition due to lack of maintenance, lack of re-investment, and inadequate daily operational oversight. The following are examples of conditions found that were of great concern for compliance and safety.

The South End treatment facility's treatment lagoons were full, nearly overflowing in December when they should have been nearly empty. Aqua enacted emergency pump and haul operations seven days a week for eight months to prevent lagoon overflows and to restore system operation to normal.

The East End treatment lagoons had significant accumulated sludge causing treatment challenges and Aqua deployed a floating dredge and mobile dewatering operation to remove the sludge, restoring the treatment process to normal conditions. The treatment facility's headworks building and influent screen were in poor condition creating safety risks to operators and allowing debris to enter the treatment plants causing operation and maintenance challenges such as clogged pipes, pumps and valves, and floating materials on the treatment lagoons.

The spray disposal fields had approximately 1/3rd of the spray risers clogged or broken. At the South End treatment facility, Spray zones 3 and 4 were unusable outside of

the summer growing season. New Garden Township determined that the actual permitted effluent spray disposal capacity was not 104,000 GPD but 64,000 GPD with average daily influent flow at approximately 85,000 GPD. The excess water had to be hauled to other facilities for disposal until another solution could be implemented, which they had no plans to do.

Aqua's initial evaluation of lift stations identified deferred maintenance such as deteriorated pipe, failed pumps, lack of alarms, and non-working instrumentation. I&I was significant in the system with sanitary sewer overflows occurring when moderate rainfall occurs. The force main in Route 41 regularly broke causing interruption of service to homes and business, affecting traffic on Route 41, and sewage overflows. The operations logs under New Garden Township ownership showed no testing was occurring to control the treatment process. There was no maintenance of flow meters or controls.

Q. Can you provide descriptions of the capital work that was completed in the New Garden system to address these issues?

A. I can provide a few key project examples.

I mentioned above inadequate spray disposal fields. Aqua optimized the capacity of the remaining fields by installing an automated spray control system that enabled maximum available disposal without any run-off.

I also mentioned the South End treatment facility lagoons were full when we took ownership and the emergency pump and haul operations enacted. Aqua was able to develop a project that allowed pump and haul operations to cease. It involved the refurbishment of a pipeline and pump station upgrades that transferred wastewater from the South End treatment facility to the East End treatment facility where more spray field

capacity existed and access to the Kennett Square Borough wastewater plant where some flow could be sent for treatment.

Further, I mentioned the Route 41 force main pipe that conveys sewage under pressure to Avondale for treatment. It is a long 6-inch pipe that was regularly failing. Aqua replaced a section of this 1968 vintage pipe.

Aqua upgraded the East End treatment facility with baffle curtains installed in the lagoons to eliminate short circuiting and added surface aerators which together provided a higher level of treatment and compliance with permit conditions. Aqua rehabilitated the headworks building and spray control buildings and made many repairs to eliminate safety concerns. Other projects included installation of operator fall protection apparatus, updating the lab with functioning equipment for testing, televising sewer lines to assess condition, rehabilitation of various sewer collection pipes, manhole repair, and relocation of a flow metering vault outside of the Route 41 ROW for operator safety.

E. Specific Customers

Q. Are you aware of the concern raised by customer Daniel Ely at the August 12, 2024 Public Input Hearing?

A. Yes.

Q. Can you explain Mr. Ely's concern?

A. Mr. Ely testified that his property has been damaged because the Company failed to maintain a stormwater culvert on his property and associated with a granted easement related to a sanitary sewer line on his property. He claimed the culvert is improperly designed, gets periodically blocked from debris that washed from upstream, and the blockages have caused a diversion of Hartenstein Creek resulting in damage to his property and the general environment.

Q. Based on your initial investigation, what have you found?

A. I have been in contact with Mr. Ely and Limerick Township to try to better understand this customer's assertions and concerns. We are still in the process of following up to understand why this customer believes this culvert is not his responsibility. Our initial understanding is that as this culvert is on Mr. Ely's private property, Aqua is not responsible to maintain it. As we continue to review the data associated with this, we will follow up formally to let the customer know our research. This appears to be an issue between Limerick Township and Mr. Ely.

Q. Are you aware of the concern raised by Mr. William Moyer at the August 5, 2024 Public Input Hearing?

A. Yes.

Q. Are you aware of Mr. Moyer's standing in this base rate case?

A. Yes. Mr. Moyer is the fire chief for New Hanover Township, portions of which are served by Aqua's Superior water system. Mr. Moyer testified that he was representing the interest of the public and Aqua's customers in his capacity as Fire Chief.

Q. Please describe Mr. Moyer's complaint with Aqua's water service.

A. Mr. Moyer's testimony included the entry of two exhibits. Each is a report from the Insurance Services Office ("ISO"), one dated 2017, one dated 2024. The ISO is an advisory and rating organization for the property/casualty insurance industry to provide statistical and actuarial services, to develop insurance programs, and to assist insurance companies in meeting state regulatory requirements. Relative to this matter, ISO assesses community fire protection capability and assigns a rating which is used by insurance underwriters to develop hazard insurance premiums for policy holders. Mr. Moyer stated that 40% of the

overall rating is related to water supply and that the Township's rating dropped from 18.84 in 2017 to 18.54 in 2024. Mr. Moyer attributes that drop in rating to Aqua's alleged failure to maintain its water system and causing property owner insurance rates to rise. Mr. Moyer acknowledged that he did not challenge the similar ISO rating in 2017 as this was proximal to the change in Ownership between Superior Water Company and Aqua and felt Aqua deserved time to assess and improve over Superior Water Company's performance. Mr. Moyer further expressed concern about the rates being charged to the Township for fire hydrant maintenance fees stating those fees are part of the fire department's budget and the rate increase would put further strain on the budget.

Q. Do you agree with Mr. Moyer that Aqua has not performed to requirements and caused the ISO ratings to decrease between 2017 and 2024?

A. I disagree that Aqua has not performed to required standards. The Company can only participate in the review by ISO of the Township's fire services program at the request of New Hanover Township. The Company was not asked to do so. Had the Company been asked to, we would gladly have provided requested information.

Q. Has the Company proactively reached out to Mr. Moyer?

A. On August 14, 2024, an Aqua representative met with Mr. Moyer and the New Hanover Township Manager (collectively "New Hanover Township"). New Hanover Township acknowledged that Aqua was not asked to participate in the ISO evaluation and therefore had no insight to the activity, nor ability to address any concerns prior to ISO completing its report. Aqua provided New Hanover Township with information to support that its duties as water system owner were fulfilled. For example, all fire hydrants were inspected in 2023, a new water storage tank was installed in 2023 which improved fire flow

sustainment, an interconnection with an adjacent municipal system was made to improve reliability of service for peak day demand and fire flow needs, new sources of water were added to the system, and a water hydraulic model of the system was created to assess further needs of the system. Aqua will complete an inspection of all hydrants in 2024 and annually thereafter supported by work order records. Upon learning of this information, New Hanover Township acknowledged that it should include Aqua in future involvement with ISO and apologized for the representations at the Public Input Hearings.

Q. Are you aware of the concern raised by Ms. Lee Scarborough at the August 5, 2024 Public Input Hearing?

A. Yes

Q. Please explain the nature of Ms. Scarborough's concern.

A. Ms. Scarborough testified that she experiences sewer backups in her home even when her Township owned it. She stated that since Aqua took ownership, two more blockages have occurred and no one has come out to address the problem. She further stated that the sewer lines in the road have roots and cause the backup.

Q. Have you investigated Ms. Scarborough's claim?

A. Yes. At the Public Input Hearing, an Aqua employee spoke with Ms. Scarborough. They agreed to meet at her residence to further understand the issue raised. Aqua sent a crew to Ms. Scarborough's property on Wednesday August 7, 2024. An inspection of Aqua's manhole (MH# LAV-1), which is in front of Ms. Scarborough's house, identified there was minor root intrusion into the manhole. The roots were removed during the visit. Aqua used its closed-circuit television unit to inspect the sewer main in the street. That confirmed there was no evidence of roots and the main is in good condition. Roots in the main are

not a cause of Ms. Scarborough's sewer backup problem. Ms. Scarborough's lateral connects directly into MH# LAV-1. Ms. Scarborough has large trees on her property that appear to have roots growing into the customer owned portion of the lateral which discharges into MH# LAV-1. Ms. Scarborough confirmed this to be true based on her past experiences when she engaged a plumber to investigate her sewer backups. That plumber recommended that Ms. Scarborough put copper sulfate crystals down her line to keep the roots under control, which Ms. Scarborough confirmed she is currently doing. Ms. Scarborough commented that she didn't have a current problem with backups. Aqua recommended that she replaces the sewer lateral to reduce the likelihood of roots intruding into the lateral. Aqua will add MH# LAV-1 as an area to be inspected annually for root intrusion and remove roots if needed. She thanked Aqua for their response.

Q. Are you aware of the concern raised by Ms. Zebley at the August 8, 2024 Public Input Hearing?

A. Yes.

Q. Please explain the nature of Ms. Zebley's concern.

A. Ms. Zebley testified, among other general rate case concerns, that the quality of the water in her home was objectionable. She mentioned white crystals on her faucets and in general smelly water. The Company spoke to Ms. Zebley directly, but she declined to engage with us or take us up on our offer to investigate her issue. Aqua water quality teams and operations teams evaluated the water system serving Ms. Zebley, our Unionville-East Marlborough system. That evaluation found no system wide issues apparent from our review. As of September 12, 2024, we have not received contact from Ms. Zebley.

Q. Are you aware of the concern raised by Mr. Green at the August 12, 2024 Public Input Hearing?

A. Yes.

Q. Please explain the nature Mr. Green's concerns.

A. Mr. Green testified concerning the increase in the rates as well as an issue regarding water in his yard. He believed the water may be due to a leak from Aqua's system and he has water in his basement and his sump pump runs frequently.

Q. Please explain your investigation into Mr. Green's claim.

A. Aqua sent an operational representative to Mr. Green's home on August 14, 2024. The Aqua representative noted that Mr. Green's backyard was wet and checked for water leaks in the area. He did not identify any indication of a leak using standard leak detection methods. In addition, the Aqua representative tested the water in the sump pump basin to see if chlorine could be detected which would indicate the water was originating from a leak, be it an Aqua main, or customer lateral. No chlorine was detected. He communicated this to Mr. Green. As further follow-up, a different Aqua representative went to Mr. Green's property on August 27, 2024. They confirmed the same findings as the original representative.

Q. Do you believe the source of water in Mr. Green's basement is due to failure of an Aqua owned asset?

A. No. Based on the above physical investigation findings and general knowledge from others who live in the area and Aqua's operation of the water and sewer system, it is commonly known that groundwater is high in the vicinity of Mr. Green's property. The presence of the high groundwater is likely the source of the frequent sump pump operation.

V. MANAGEMENT EFFICIENCY

Q. Please further elaborate on the troubled systems that Aqua has been asked to serve as emergency receiver.

A. Since the Company filed the current base rate case, Aqua has been asked to serve as Receiver for both the water and wastewater systems owned by Deer Haven, LLC ("Deer Haven"). The Deer Haven water system serves approximately 43 customers, and the Deer Haven wastewater system serves approximately 62 customers. Both systems abut Lake Wallenpaupack in Pike County, Pennsylvania.

Q. Please describe the troubled nature of the Deer Haven water system.

A. The Deer Haven water system has been on a boil water notice since February 2024. Failures of the water disinfection process are the cause of the boil water notice and the owner has not taken action to correct the situation. Upon becoming Receiver, Aqua assessed the situation and is taking action to correct the same. A pump in the treatment system failed and the existing operator was unable or unwilling to replace it causing insufficient chloring contact time for disinfection. Aqua is taking steps to replace the chlorine contact chamber and associated pumping system. Aqua is also making improvements and adjustments to the system to ensure reliable safe water service. Our water operators jumped into action to address the water quality in this system immediately. I am proud of the extra efforts made to make sure these Commonwealth residents have safe drinking water.

Q. Please describe the troubled nature of the Deer Haven wastewater system.

A. The Deer Haven wastewater system has several significant issues plaguing it. In my experience, this is the worst wastewater treatment plant ("WWTP") that I have ever encountered. Please see Aqua Exhibit TMD-2-R. Upon assuming operations, the

Company determined that the WWTP facility was unsafe to enter and brought in a structural engineer to validate its concern. The structural engineer agreed that the facility was unsafe to enter, and the Company locked access to the building. Moreover, the Company determined that wastewater entering the plant was only receiving primary treatment (settling) and no disinfection or secondary treatment of any kind. The Company then began pumping and hauling wastewater to prevent further discharge of minimally treated wastewater into the lake. The Company immediately contacted the Pennsylvania Department of Environment Protection ("PADEP") to confirm the situation and held meetings to discuss long-term solutions to the untreated wastewater. As of September 12, 2024, Aqua is evaluating several alternatives to the situation. There are also challenges with the collection system that include I&I, unknown asset locations, no maps, unmaintained elements, and disputes over ownership of pump stations. Aqua has invested resources to address each situation. Again, I am very proud of my team members in this area who have gone above and beyond, working extensive hours including weekends, in addition to their normal responsibilities, to make sure Lake Wallenpaupack and the surrounding environment is safe.

Q. Is the Company currently complying with the Commission's Receivership orders?

A. Yes. The Company is taking the necessary steps to protect the public safety and the environment at Lake Wallenpaupack. The Company's operations and management are working above and beyond to address the system deficiencies. They are addressing these severe operational issues in addition to their current assignments, creatively problem solving and meeting with key stakeholders to solve these two problems. I believe this

should be considered and the Commission should support the Company's request for Management Efficiency adders.

VI. CONCLUSION

Q. Does that conclude your Rebuttal Testimony?

A. Yes, it does, but I reserve the right to supplement my Rebuttal Testimony as needed during this proceeding.

EXHIBIT NO. TMD-1-R

Public Input Hearings - Customer Testimony

Exhibit TMD-1-R

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Chris Blazic	Drums	Hazleton - August 1 - 1 p.m.	Mr. Blazic raised questions regarding the charges that appear on his bill.	Mr. Blazic is a customer in the Company's Beech Mountain system located in Butler Pennsylvania. On August 8, 2024, Aqua PA President Marc Lucca spoke with the customer regarding his billing questions and Mr. Blazic appeared to be satisfied with the discussion.
Mary Bytsura	Drums	Hazleton - August 1 - 6 p.m.	Ms. Bytsura raised questions regarding the charges that appear on her bill	Aqua customer service representative attempted to contact on August 2, 2024 and left Ms. Bystura a voicemail to follow up with any questions.
Camille Byrd	Wyncote	Cheltenham - August 5 - 6 p.m.	Ms. Byrd mentioned having high usage	Aqua customer service repesentative is reviewing Ms. Byrd's account and will contact her to discuss her bill.
Patrick Blair	Cheltenham	Cheltenham - August 5 - 6 p.m.	Mr. Blair testified that to an odor in the water and some resideu in the sink and toilet	See Rebuttal Testimony of Todd Duerr
Adam Shellhorse	Cheltenham	Cheltenham - August 5 - 6 p.m.	Mr. Shellhorse testified to an odor in his water	See Rebuttal Tesitmony of Todd Duerr
Penelope Rigotas	Havertown	Delaware County Community College - August 7 - 6 p.m.	Ms. Rigotas testified concerning her usage and desire to be enrolled in LIHWAP	An Aqua customer service representative spoke with the customer at the end of the Public Input Hearing on August 7th. The represenative and Ms. Rigotas discussed the customer's water usage and explainaned that the LIHWAP is a federal program and is not longer available. The customer is enrolled in the Company's Customer Assistance Program.

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Carrie Bossi	Cochranville	Landenberg - August 8 - 1 p.m.	Ms. Bossi inquired about the Company's Customer Assistance Program during her testimony	On August 9, 2024, an Aqua customer service representative from the Company's CAP program attempted to reach Ms. Bossito discuss the the Company's assistance programs and was unable to reach her. The representative left a voicemail and sent an email to the customer.
Patricia Zebley	Kennett Square	Landenberg-August 8 - 1 p.m.	Ms. Zebley testified about a taste and odor to her water.	See Rebuttal Testimony of Todd Duerr
Larry Tornari	Kennett Square	Landenberg-August 8 - 1 p.m.		On September 6, 2024, an Aqua customer service representative contacted the customer as a follow up to his testimony and the customer was not able to talk and the Company will call him in the next week as requested by the customer. The customer was very appreciative of the follow up call.
Pauline Lewis	Landenberg	Landenberg-August 8 - 1 p.m.	Ms. Lewis testified that she is a senior citizen living on a fixed income	On September 5, 2024 an Aqua cusstomer service representative contacted the customer to discuss the Company's assistance programs but was unable to reach her and left her a voicmail with her contact information.
Erika Spott	King of Prussia/Lake Harmony	Royersford - August 12 - 1 p.m.	Ms. Spott has two accounts with the Company and testified regarding the flat rate charged for her home in Lake Harmony.	Aqua sent a letter to Ms. Spott providing her information related to analysis of the flat rate charge in Lake Harmony.

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Alison Pilotti	Royersford	Royersford - August 12 - 1 p.m.	Ms. Pilotti raised questions regarding her sewer rates that are higher than her water water rates	On August 16, 2024 an Aqua customer service representative spoke to the customer to discuss the Company's charges and assistance programs. The representative emails the customer with a list of agencies that may help her and her neighbors get assistance with their sewer bills.
Lorraine Rambo	Limerick	Royersford - August 12 - 1 p.m.	Ms. Rambo testified regarding the flat rate charged for her wastewater service. She also raised questions regarding a deduct meter.	On August 30, 2024, an Aqua customer service representative spoke with Ms. Rambo to discuss her bill.
Bill Connaway	Linfield	Royersford - August 12 - 1 p.m.	Mr. Connaway testified in reference to a water line break and the warranty service protection he purchased.	Mr. Connaway is a Pennsylvania American water customer and his warranty service protection is through Pennsylvania American Water. On September 5, 2024, n Aqua customer service representative spoke to the customer to discuss his questions and the customer requested that Aqua assist to have an representative from Home Serve attend a meeting of his homeowner's association.
William Kirkpartick	Limerick	Royersford - August 12 - 1 p.m.	Mr. Kirkpatrick testified that he received a high WW bill due to a water leak.	Mr. Kirkpatrick is a Pennsylvania American water customer. Aqua has been working with Mr. Kirkpatrick to assist with his billing issue due to a water leak. On August 30, 2024, an Aqua customer service representative spoke to Mr. Kirkpartrick who has completed the repairs for the water leak and Aqua is working with him to an adjustment to his Aqua bill based on the adjustment to the water usage provided by his water provider.

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Susan Miller	Limerick	Royersford - August 12 - 6 p.m.	Ms. Miller testified regarding her flat rate bill.	On August 30, 2024, An Aqua customer service representative attempted to reach Ms. Miller but was not able to speak to her. The representative left a voicemail with the representative's contact information.
Dan Ely	Limerick	Royersford - August 12 - 6 p.m.	Mr. Ely testified that concerning issues with the sewage system on his land and that he has been working with Aqua on this issue.	See Rebuttal Testimomy of Todd Duerr
Nathaniel Green	Glenside	Telephonic - August 14 - 1 p.m.	Mr. Green testified concerning the increase in the rates as well as an issue regarding water in his yard.	See Rebuttal Testimony of Todd Duerr
Liz Headley	Paoli	Telephonic - August 14 - 1 p.m.	Ms. Headley testified concerning the increase and had questions concerning exhibits filed in the Company's case.	The Company does not have contact information for Ms. Headley and will send her a letter to arrange for a time to speak with her.
Elizabeth Morris	Abington	Telephonic - August 14 - 6 p.m.	Ms. Morris testified about about rates and her concern regarding PFAS.	An Aqua representative attempted to contact Ms. Morris on September 3, 2024 and September 10, 2024 but was unable to speak to her. The Aqua representative left messaged for Ms. Morris, including information about Water Facts.
Louis Delrosso	Lake Harmony	Telephonic - August 14 - 6 p.m.	Mr. Delrosso testified concerning the flat rate charges to the homeowners association. He requests that occupancy should be considered in determining the billing EDUs and/or to be billed using an actual wastewater flow meter	See Rebuttal testimony Todd Duerr

PREPARED REBUTTAL TESTIMONY OF RITA F. BLACK DIRECTOR, COMMUNITY ASSISTANCE PROGRAMS ESSENTIAL UTILITIES

DATE SERVED: September 12, 2024 **Aqua Statement No. 13-R**
DATE ADMITTED:_____

PREPARED REBUTTAL TESTIMONY
OF RITA F. BLACK

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Rita F. Black and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. By whom are you employed and in what capacity?

A. I am employed by Essential Utilities, Inc. ("Essential") as the Director of Community Assistance Programs. In this role, I lead assistance programs for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua PA"), and Peoples Natural Gas Company LLC ("Peoples"), as well as the regulated utilities of Essential operating in other states.

Q. Have you previously provided testimony in this proceeding?

A. Yes. My direct testimony is provided in Aqua Statement No. 13.

Q. What is the purpose of your Rebuttal Testimony in this case?

A. I would like to respond to the direct testimony of Mr. Roger Colton, on behalf of the Office of Consumer Advocate ("OCA") and Mr. Harry Geller, on behalf of the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA"). I will respond to recommendations by both witnesses pertaining to the functioning of Aqua's low income programs, including Customer Assistance Program ("CAP"), Leak Repair, Aqua Aid and conservation kits along with issues related to affordability.

II. LOW INCOME POPULATION

Q. Do any of the parties raise issues related to Aqua PA's low-income customer population?

A. Yes. Both CAUSE-PA witness Mr. Geller and OCA witness Mr. Colton discuss Aqua PA's low-income population. Mr. Geller argues that a different standard should be used by Aqua PA to determine if a customer is low income, argues Aqua PA is undercounting its low-income customers, and makes several recommendations related to a proposed expansion of Aqua PA's definition of a "low-income customer."[1] Both Mr. Geller and Mr. Colton also analyze the Company's low-income customer population and raise concerns regarding the impacts of this rate case on low-income customers.

Q. Do you agree that Aqua PA is undercounting its low-income customers as Mr. Geller suggests or that Aqua PA's definition of a low-income customer should be changed?

A. No. As I explain below, Aqua PA's relatively new CAP program adequately identifies low-income customers.

Q. Please respond to Mr. Geller's recommendation that Aqua PA expand its definition of low income customers and provides several qualifiers.

A. Many of the additional customer collection opportunities that Mr. Geller denotes on page 13 of his testimony are already addressed by Aqua PA.[2] For example, any customer who is currently participating in CAP, Aqua Aid, Aqua's Leak repair or conservation kits have verified income at or below 200% of Federal Poverty Level ("FPL") and are therefore already counted.

[1] CAUSE PA St. No. 1, at pp. 9-13.
[2] CAUSE PA St. No. 1, at p. 13.

With respect to his recommendation that customers participating in the Low Income Household Water Assistance Program ("LIHWAP") be included in the definition, I note that this was a limited time program that is no longer available. Therefore, no customers are currently participating in it and his recommendation is moot.

In addition, Aqua PA took affirmative steps to reach a data sharing agreement with the Pennsylvania Department of Human Services ("PA DHS") to receive income data which allowed Aqua PA to auto-enroll customers into its CAP, ensuring they are already included in Aqua's PA count of low-income customers. Customers self-certifying their income or contacting the Company to discuss payment arrangements prior to termination are already counted as low income, as discussed during these contacts.

Furthermore, the Low Income Home Energy Assistance Program ("LIHEAP") is not available to Aqua PA customers. Therefore, Aqua PA has no way of knowing if a customer received the grant.

Finally, medical certificates are unrelated to income. Therefore, income information is not required to request a medical certificate and the presence of a medical certificate does not serve as a reasonable basis for determining a customer is low income.

Q. Both Mr. Colton and Mr. Geller provide varying analyses of the potential low-income population served by Aqua PA.[3] Why are these analyses important?

A. Both Mr. Colton and Mr. Geller, and Aqua PA, have used various points of widely available public data, such as census data by county or zip code or, in the case of Mr. Geller, the Self Sufficiency Standard, in their analyses of Aqua PA's low-income customer population. In all cases, we are attempting to identify the potentially CAP eligible

[3] OCA St. No. 6, at pp. 9-21; CAUSE-PA St. No. 1, at pp. 9-14.

customer population of Aqua PA so that we can then evaluate whether the Company's CAP is meeting the needs of Aqua PA's CAP eligible population. As a newer program, Aqua PA's CAP enrollment reflects only a portion of the potentially eligible population, regardless of which low income estimation method is used. As Aqua PA's program continues to gain awareness among its customers, we expect to see enrollment as a percentage of the potentially eligible population grow.

Q. Please respond to the statement by Mr. Colton that "Data provided by Aqua shows that the Company's low-income customers have substantially greater payment difficulties than do its residential customers in general."[4]

A. Mr. Colton's statement is based on data provided by Aqua PA during the discovery process regarding collections activities. It is my opinion that low-income customers, generally and regardless of utility, are more likely to experience payment difficulties than the general residential customer base. Due to their limited income, the risk of missed payments naturally increases as households may be negatively impacted by unexpected expenses, such as a car repair, for example. These challenges impact all low-income consumers and are not exclusive to Aqua PA's customers.

Q. Why is it important to point out the payment challenges of low-income customers generally?

A. In his testimony, Mr. Colton compares the residential disconnection rate against the low-income customer disconnection rate and notes "Aqua is much more likely to terminate service to a low income customer account after issuing a notice of nonpayment disconnection."[5] This statement could be interpreted that Aqua PA is pursuing termination

[4] OCA St. No. 6, at p. 32.
[5] OCA St. No. 6, at p. 33.

of low-income households more often than other residential consumers. However, low-income consumers are more likely to experience payment difficulties as I noted earlier. Further, these customers do not have access to substantial assistance as was previously afforded them by the LIHWAP to avoid termination. Aqua PA does not seek out terminations for a particular income class. Rather, termination notices and, ultimately, terminations, are a product of a customer failing to pay their bill(s).

Q. Building upon his testimony regarding the disconnection risk for low-income customers, Mr. Colton points to the establishment of payment arrangements for these consumers as a contributor to the problem. He states "Aqua's use of payment arrangements does not substantively assist low-income customers retire their arrears."[6] Would you like to respond?

A. Yes. Aqua PA offers payment arrangements as required by the Pennsylvania Public Utility Commission ("Commission"), based on verbal income information provided by the consumer at the time the payment arrangement is discussed. As mentioned earlier, due to their low-income status, maintaining a payment arrangement may be difficult or in some cases, unlikely, but these arrangements are offered as an alternative to paying the entire past due account balance. I would further note that, while CAP is offered to customers during these conversations, as referenced in response to CAUSE-PA Set I, Question 38, attached as Aqua Exhibit RFB-1-R, customers often choose the verbal agreement over enrollment in CAP as it is the easiest path to a quick resolution of the current situation. Mr. Geller agrees with my thoughts on this issue and notes on page 29, line 17 of his testimony that his "extensive experience indicates that this observation is correct." While

[6] OCA St. No. 6, at p. 37.

Aqua PA continues to anticipate that customers will gain awareness of the CAP as an alternative to payment arrangements, and will continue to offer enrollment in CAP during payment arrangement conversations as well as promote CAP through outreach activities, enrollment in this program requires effort from interested customers to assert eligibility. This is discussed further in the following section of my testimony.

III. CAP ENROLLMENT AND DESIGN

Q. Is CAP more affordable than a payment arrangement for an income qualified customer?

A. Yes.

Q. Why then would a customer choose to enroll in a payment arrangement rather than enroll in CAP?

A. When Aqua PA proposed its CAP in the 2021 Base Rate Case,[7] it was designed to be easily accessible, with verbal income information obtained to determine eligibility to participate. Aqua PA's prior assistance program, Helping Hand, operated as a verbal attestation program as well. Aqua PA's CAP is not a Percentage of Income Program ("PIP") through which ratepayers subsidize the portion of the bill that is considered unaffordable for the CAP participant. Instead, it is a discount program, reducing the overall monthly cost to a more affordable level, while also limiting the cost to ratepayers. However, in the final order approving the CAP in the Company's 2021 Base Rate Case, the determination was made that not only would Aqua PA be required to obtain income documentation to allow a customer to participate in CAP, but documentation would also be required through recertification to remain in CAP going forward.

[7] *PA PUC v. Aqua Pennsylvania, Inc., et al.,* Docket Nos. R-2021-3027385 and R-2021-3027386, et al.

Providing income documentation to participate in a utility CAP is a major barrier to enrollment. Customers facing an imminent termination or anxious to restore service that was terminated are offered CAP as an alternative, but often opt for the verbal payment arrangement which resolves their problem immediately.

Q. Mr. Colton recommends a "stand-alone written Plain Language notice informing those customers of their right, in the alternative, to enroll in the Company's CAP"[8] be provided to customers with incomes below 150% of Federal Poverty Level ("FPL"). Please respond to this recommendation.

A. I understand Mr. Colton's desire to provide these customers with the alternative of CAP in the hopes of engaging them to apply for CAP rather than continue with a deferred payment arrangement that requires the customer to pay their arrears themselves over time, when Aqua PA's CAP has an arrearage forgiveness benefit in addition to discounted monthly bills. However, I do not believe that mailing a customer another document, in the hopes that they will read the document and respond, is the best way to engage customers. Unfortunately, customers in arrears or struggling to pay utility bills often do not open envelopes with their utility's logo. At Peoples, we implemented a stand-alone Plain Language notice regarding CAP to precede all termination notices for low income customers more than 5 years ago. This notice did not increase CAP enrollment. In a recent CAP enrollment sub-committee meeting of Peoples' Universal Service Advisory Group, a leader from a social service agency stated that she did not see value in the stand-alone notice because customers are unlikely to read anything not directly related to the termination notice, including not opening monthly bills. While this is one person's opinion

[8] OCA St. No. 6, p. 38.

and is anecdotal in nature, it does point to the larger difficulty of engaging low-income households with the information they need to best manage their utility bills.

Q. What do you suggest in the alternative to a stand-alone notice?

A. I believe we should take a close look at the Aqua PA termination notice and identify ways to incorporate information regarding CAP into that particular mailing. As this is the correspondence most likely to be read by the customer facing payment difficulties, it would be the logical place to start to increase awareness of CAP as an alternative to a payment arrangement or termination of service. I also believe it would be advantageous to consider modifications to the call scripting and reference tools used by Customer Service Representatives ("CSR") when engaging customers calling in regard to collections, to ensure that CAP is emphasized as an alternative in lieu of a payment arrangement. I would like to engage the Aqua Assistance Collaborative ("AAC"), whose members include representatives from OCA and CAUSE-PA, as well as members of the Commission's Office of Communications and Bureau of Consumer Services ("BCS"), to work with us on this endeavor.

Q. Mr. Colton also suggests a personal contact procedure prior to termination to engage with the customer regarding CAP.[9] Please respond to this suggestion.

A. Aqua PA already has a personal contact procedure prior to termination to engage customers with respect to CAP. Aqua PA's field team has a stock of CAP doorhangers that they use in personal contact efforts at customer homes prior to termination. And, as noted earlier in my testimony in reference to the response included as Exhibit No. RFB-1-R hereto, CSRs speaking with customer regarding termination are also offering CAP.

[9] OCA St. No. 6, at p. 38.

I would further like to add that Mr. Colton suggests that if a customer expresses desire to apply for CAP, Aqua PA should postpone disconnection for 30 days in order for the customer to complete the application process.[10] Since the initiation of the program, if a customer contacts Aqua PA's administrator, Dollar Energy Fund, to apply for CAP, a hold is placed for 30 days to allow the customer time to complete the application process by submitted required income documentation. Thus, this recommendation is already in practice and is unnecessary.

Q. Do Mr. Geller and Mr. Colton make further recommendations regarding improvements to CAP?

A. Yes. In his testimony regarding suggestions to improve CAP enrollment, Mr. Geller calls for the Commission to require Aqua to submit a Universal Service Plan.[11] Mr. Colton similarly notes the policy regarding universal service programs should be brought forward to Pennsylvania's water and wastewater utilizes as well.[12]

Q. Please respond to these recommendations.

A. As described in detail in Mr. Colton's testimony, the policies governing universal service programs for electric and natural gas companies were initiated through the Electricity Generation Customer Choice and Competition Act and the Natural Gas Choice and Competition Act. This individual base rate proceeding for one water and wastewater entity within the Commonwealth is not the forum under which regulations regarding BCS's oversight of low income water programs should be established. If and when the Commission chooses to engage stakeholders to discuss expanding universal service

[10] OCA St. No. 6, at p. 38.
[11] CAUSE-PA St. No. 1, at p. 31.
[12] OCA St. No. 6, at pp. 19-20.

requirements to water and wastewater providers, Aqua PA will actively participate in this effort.

Q. Mr. Geller makes several other recommendations to increase participation in CAP.[13] Please describe these recommendations.

A. Mr. Geller recommends that Aqua PA screen for eligibility at the time of service establishment. He encourages call scripting to promote CAP as an alternative to payment arrangements. He also recommends engagement with AAC to discuss potential data sharing agreements with other agencies and programs. He further calls for Aqua PA to expand its partnerships with local community based organizations ("CBO"). Mr. Geller also wants Aqua PA to establish quantitative goals regarding targeted direct outreach and for Aqua PA to communicate progress to its AAC.

Q. Please respond to Mr. Geller's comments regarding CBOs and Aqua PA's work with its AAC on the issue of CAP enrollment.

A. I agree with Mr. Geller that engagement with CBOs is an important aspect of any outreach plan for utility programs. We recognize the need to communicate the availability of our programs to the organizations and agencies that work directly with vulnerable populations. These organizations are active in the communities they serve and are trusted partners to our customers. We continue to make outreach efforts to identified CBOs across Aqua PA's service territory to share posters w/tear offs regarding Aqua PA's CAP, encourage the CBOs to join Aqua PA's ACC, and to also share information with them about becoming Dollar Energy Fund intake agencies for Aqua PA CAP enrollment. In fact, this topic was part of our recent AAC discussion with representatives from OCA and the Pennsylvania

[13] CAUSE-PA St. No. 1, at pp. 31-32.

Utility Law Project ("PULP") offering to assist Aqua PA in developing these relationships. We provided a list of the top target counties to these representatives so they can support our efforts in this engagement.

At the start of each ACC meeting, which occur four times per year, we review current statistics on CAP enrollment and other program participation and benefits provided. CAP enrollment has been, and will continue to be, the cornerstone of these AAC discussions for the foreseeable future.

Q. Mr. Colton raises a number of proposed changes to CAP features that were not resolved at the time of the prior case as "Aqua explained that many of these recommendations cannot be efficiently implemented until the Company converts its current CIS to SAP in 2023."[14] Please describe the status of the Company's customer information system or "CIS" as you understand it.

A. At the time of the 2021 Base Rate Case, Aqua PA had planned to convert its CIS to SAP in 2023. As Peoples' CAP currently utilizes SAP, and some of the more involved aspects of CAP had already been programmed into SAP, it made sense to await the planned conversion before modifying the Aqua PA CAP design in more complicated ways. As any conversion of a customer billing system is a complex and expensive endeavor that requires careful planning and significant resources, Aqua PA paused the plan to convert in 2023 in order for the organization to fully adjust to SAP and is currently evaluating its options and next steps.

Q. Beginning with the tiers of discounts offered through Aqua PA's current CAP design, please describe Mr. Colton's and Mr. Geller's recommendation for modification.

[14] *Pa. PUC, et al. v. Aqua Pennsylvania Inc., et al.* Docket Nos R-2021-3027385, *et al*, p. 331 (Rewrite Opinion and Order entered May 16, 2022).

A. Both witnesses recommend a four-tiered design which would break the first tier of 0 to 100% FPL into two: 0 to 50% and 51 to 100% FPL.[15] In addition, Mr. Colton recommends an increase in the block discounts from 2,000 gallons per month to 3,200 gallons per month for water service while maintaining the 2,000 gallon limit for wastewater.[16] Mr. Geller recommends the discount on volumetric charges have no limit, thereby discounting the entire usage portion of the bill according to the discount tier the eligible household falls into.[17]

Q. How do the proposals of these witnesses compare to Aqua PA's current CAP design?

A. I created a table that compares Aqua PA's CAP design to the two proposals which is provided as Aqua Exhibit RFB-2-R. If we begin with water, the table reflects that for the fixed charge, Aqua's current program, as well as the proposals from the two witnesses, reflect a 100% discount for the fixed charge. The proposed modifications surround consumption charges. In the case of CAUSE-PA, Mr. Geller is proposing to apply a discount to all usage in a given billing month, decreasing the percentage of discount as income increases. I will note that under Aqua PA's current CAP, customers with incomes at or below 100% of FPL receive a 100% discount on their first 2,000 gallons in addition to a 100% discount on their fixed charge. As a result, customers who consume 2,000 or less gallons a month do not receive any charges for water service currently while benefiting from the $25 per month arrearage forgiveness benefit if applicable. However, under Mr. Geller's proposal, these customers with incomes below 50% FPL, would be responsible to pay 15% of their usage charges. Those with incomes between 51% and 100% would be

[15] OCA St. No. 6, at pp. 25-27; CAUSE-PA St. No. 1, at p. 27.
[16] OCA St. No. 6, at pp. 25-27.
[17] CAUSE-PA St. No. 1, at p. 25.

responsible to pay 25% of their usage charges. Mr. Colton takes a different approach in which he sets the consumption level to which the discount would apply to 3,200 gallons per month. However, the change he proposes maintains the 100% discount on those 3,200 gallons only for those with incomes at or below 50% FPL. For customers in the 51 to 100% FPL group, the discount provided is 75% of their first 3,200 gallons. Once again, a customer with income within this category using 2,000 or less gallons per month that currently pay zero under Aqua PA's CAP will see an increase in their monthly bill responsibilities.

The wastewater proposals have similar impacts for those consuming 2,000 gallons or less. Under Aqua PA's current CAP and OCA's proposal, customers with incomes between 51 and 100% FPL using 2,000 or less gallons per month are not charged for any consumption. However, under the proposal by Mr. Geller, these same customers would see an increase in their bill as their consumption would only be discounted by 75%. Unlike the water proposals, for wastewater both Mr. Geller and Mr. Colton are suggesting larger discounts to the fixed monthly charge. Generally, they maintain the same level of fixed charge discount for the customers with incomes above 100% FPL, while offering higher discounts for those below 100% FPL.

Q. What is your response to these proposals.

A. I appreciate the concern raised by both witnesses with regards to those with the lowest incomes. When Aqua PA designed its CAP, it recognized that we should not take a one-size-fits-all approach and provide one discount for all participants as other water companies were offering at that time. Aqua PA proposed and received approval for a multi-tiered approach that reflected higher discounts were needed for those with lower incomes. This

design has now been implemented by other water companies in the Commonwealth. As to whether Aqua PA's CAP current discounted tier should be modified as proposed by CAUSE-PA and OCA, I disagree. In particular, I am concerned about the impact of breaking the first tier of participation, for incomes between 0 and 100% FPL into the categories of 0 to 50% FPL and 51 to 100% FPL. All customers with income at or below the federal poverty line are facing financial hardship and aspects of these proposals would increase benefits for those 50% FPL and below by decreasing benefits for some between 51 to 100% FPL. I don't believe this is an equitable solution, given that customers in both income tiers likely face substantial financial difficulties with their household expenses.

Q. Mr. Colton also raises concerns regarding the arrearage forgiveness benefit.[18] Please describe those changes.

A. Mr. Colton would like to see an increase to the current arrearage forgiveness benefit from $25 to a tiered benefit based on income, ranging from $35 to $50 monthly.[19] He also notes that in the prior proceeding, we agreed upon completion of the planned conversion from CIS to SAP that payments made by customers that were not received by the due date would still be acceptable to obtain arrearage forgiveness benefits.[20]

Q. Please respond to his recommended changes to arrearage forgiveness.

A. First, regarding payments received after the due date, I agree that this is an important aspect of the program for us to take a close look at within the current CIS. As conversion plans are currently in a paused state, it would be appropriate for us to work with our information technology ("IT") professionals to determine if there are any options, including the

[18] OCA St. No. 6, at pp. 39-48.
[19] OCA St. No. 6, at p. 40.
[20] OCA St. No. 6, at pp. 41-43.

potential for manual interventions using reports, to apply arrearage forgiveness benefits for customers who pay beyond their due date, thereby missing the automated posting of the arrearage forgiveness benefit.

The more involved change proposed by Mr. Colton is the acceleration of arrearage forgiveness based on income tiers. The current arrearage forgiveness process within Aqua's CIS freezes the balance upon enrollment in CAP, reviews the account for payment satisfaction by the due date, and then posts a $25 credit to the pre-program balance as arrearage forgiveness. It does not consider the current tier of discount benefits the customer is receiving on current charges. Further, I will note that a customer's income may change throughout their participation in the program and it is not uncommon for a customer to move up or down in their discount tier based on updated income information.

Q. Absent an acceleration in arrearage forgiveness benefits as suggested by Mr. Colton, what are your thoughts on addressing his concern?

A. I share Mr. Colton's concern regarding high levels of arrearages for low-income customers enrolling in CAP. In my mind, these situations arise from two main causes. First, water leaks are a principal challenge to affordability, particularly for vulnerable, low income households that are unable to afford a plumber to make often simple repairs to reduce the level of water consumption in the household. Second, we want to see customers enroll in CAP before they have grown very large arrearages. Our team takes a holistic approach when working with customers that have high bills or arrears. We identify if a potential leak is leading to high water volume and if so, we can support the customer through the leak program. We can also reduce the balance with an Aqua Aid grant to provide an immediate reduction. We then enroll the customer into CAP, so that they benefit from not

only the discounted monthly bills, but also arrearage forgiveness for their remaining balance. A two-pronged approach, to identify and mitigate causes of quickly accumulating balances through leak repair and/or Aqua Aid intervention, along with enhancement of CAP engagement through input of the AAC to identify and enroll customers earlier in their life cycle, should reduce the pre-program balances subject to arrearage forgiveness in order to bring those balances closer to an elimination point within three years as recommended by Mr. Colton.

IV. AQUA AID

Q. Mr. Geller raises a concern about Aqua Aid accessibility. He recommends Aqua PA work with its AAC to improve CBO participation in Aqua Aid.[21] Please respond to his testimony on this issue.

A. I believe Mr. Geller's concerns are premature. As noted in my direct testimony, Aqua Aid recently replaced Helping Hand. Under Helping Hand, customers did not have a method by which to request assistance, nor were they typically aware that assistance was available. Under the relaunch of Aqua Aid, a bill insert was mailed to all residential customers to increase awareness and provide an opportunity for customers in need to seek assistance. The response to this effort was strong and we are seeking a marked increase in requests for assistance on a monthly basis. The benefit of using our internal team to evaluate the requests for assistance is the ability to take a holistic approach. Many of the calls and emails we received in response to the Aqua Aid bill insert were from customers who were unaware of CAP or had high bills due to a leak. Our team is able to address all of these

[21] CAUSE-PA St. No. 1, p. 34.

needs through that initial contact. We report on Aqua Aid grant progress at each AAC and will continue to work with this stakeholder group to increase use of these funds.

V. CONSERVATION

Q. Do any of the other parties' raise concerns about low-income customers' ability to conserve water usage as a means of decreasing their bills?

A. Yes. Both OCA witness Mr. Colton and CAUSE-PA witness Mr. Geller raise these concerns.

Q. Please summarize Mr. Colton's concerns.

A. Regarding conservation, Mr. Colton notes "[a]t a cost of $22 per kit ($22,000 total expenditures for 1,000 kits), it would quickly become cost effective for Aqua to distribute its conservation kits to low-income customers at the time they enroll in CAP. A reduction in CAP credits of $2/month per participant would, in a single year, more than repay the Company for its investment in conservation kits distributed to CAP participants."[22]

Q. Please respond to his concerns.

A. Aqua has enrolled roughly 6,000 customers in CAP thus far. While some of these customers may be high consumers of water, many are not. If Aqua PA were to have provided a conservation kit to all customers as they enrolled in CAP, the cost would have exceeded the annual approved budget from the prior base rate proceeding of $100,000 which was established for both the leak repair and conservation kit programs. Today, we have customers enrolled in Aqua PA's CAP with income in Tier 1 and usage less than 2,000 gallons per month, leading to zero balance due on their bill on a monthly basis. It is

[22] OCA St. No. 6, Page 66, Lines 5 through 9.

more appropriate to identify customers for whom a reduction in water usage is needed when providing a conservation kit than to provide them to all CAP enrollees.

Q. Does Mr. Colton make any recommendations regarding the conservation kit?

A. Yes, Mr. Colton recommends an increase to the conservation kit budget to $132,000 and states this budget, "would allow Aqua to deliver conservation kits to all new participants in its CAP while also providing the Company with sufficient kits to be delivered when the energy companies with overlapping service territories deliver their existing LIURP services."[23]

Q. Please respond to this recommendation.

A. In this section his testimony, Mr. Colton raises the idea of using contractors to implement conservation kits into a customer's home. He also refers to a revenue requirement adjustment of $110,000, proposed by OCA witness Ralph Smith (OCA Statement No. 2), to increase conservation kit distribution. Installation of measures is an expensive proposition. As a manager of the Low Income Usage Reduction Program ("LIURP") for Peoples, I understand how costly it is to install even minor measures, such as carbon monoxide detectors, in customer homes. I also recognize that ratepayers are covering the cost of low income programs across all of their utilities. I believe that it would be better for the utility company that is completing the LIURP visit to install low flow showerheads and aerators as part of their routine energy conservation measures. This measure would reduce the electric or gas consumption necessary to heat the water, while also benefiting the participant with lower water bills, whether that customer is served by Aqua PA or another entity.

[23] OCA St. No. 6, Page 67, lines 9 through 13.

Q. Please summarize Mr. Geller's testimony regarding conservation issues.

A. Mr. Geller made recommendations regarding an expansion of the budget for leak repair and conservation kits[24] and specifically noted ways in which Aqua PA could track performance of conservation kits.[25]

Mr. Geller also suggests tracking usage levels at three and six months following receipt of the kits to determine if the customer has implemented the kits and is experiencing a reduction in water usage. He also suggests a direct call to the customer to determine if the customer was able to install the measures on their own. He further recommends following high usage customers who received repair services to ensure their usage reflects that the leak repair was effective. And, similarly to Mr. Colton, Mr. Geller recommends coordination with utility LIURP and Act 129 programs.

Q. Please respond to Mr. Geller's recommendations.

A. As Mr. Geller noted in his opening remarks in this area of his testimony, these programs are relatively new with limited data. Our first goal following approval of these programs in the last base rate proceeding was to stand up the staff and processes necessary to operate these programs. As we move forward, continuous improvement is very important. I believe Mr. Geller's recommendations regarding reviewing accounts following their receipt of a conservation kit and/or leak repair services are sound. To learn more about how our customers are utilizing the kits and benefiting from the services, we need to track usage data. We will engage the AAC on best practices they may be aware of from other water utilities related to tracking and will begin a pilot tracking project to gather data for future use. Regarding coordination with other utility LIURPs and Act 129s, as I noted

[24] CAUSE-PA St. No. 1, p. 35. Proposed annual budget of $400,000.
[25] CAUSE-PA St. No. 1, at pp. 35-36.

earlier in my testimony, I believe the most impactful benefit could be obtained by utilities installing low flow aerators and shower heads as part of their normal energy efficiency measures which would not only reduce the water flowing in the home, but the energy needed to heat the water. Further, this change would benefit not just water customers of Aqua PA, but all consumers of water, regardless of their source.

VI. AFFORDABILITY

Q. Do any of the other parties raise affordability concerns with respect to Aqua PA's proposed base rate increase?

A. Yes. I will address these concerns below.

Q. In Part 8 of his testimony, Mr. Colton discusses the negative impacts to consumers of rate increases, particularly when those increases come through the monthly customer charge. Would you like to respond to his comments on this topic?

A. Yes. All of us who are engaged in work with low-income and limited-income customers understand the challenges these customers make on a monthly basis as priorities compete for their limited income. The proposed increase to the customer charge in this case is $3.39 per month. For most residential consumers, this customer charge increase is manageable and amounts to $0.11 per day for clean, dependable water service that provides for the cooking, cleaning, washing and hygiene that a household needs. Aqua PA is proposing this rate increase in order to continue to make investments in its infrastructure to maintain this dependable service for many years to come. That said, I do recognize that any increase for those in the lowest income categories can be more than the customer can manage. It is for this reason that enrollment in CAP is so important. Under CAP, regardless of the income tier to which the water customer belongs, they receive a 100% discount on their

customer charge. Effectively, I believe continuing to pursue increased CAP enrollment renders Mr. Colton's recommendation on this point unnecessary.

Q. Do Mr. Geller and Mr. Colton make specific recommendations regarding the use of a Percentage of Income Plan or "PIP" to provide improved affordability to its CAP participants?

A. Yes.[26] They recommend this change should be incorporated in any future conversion or system upgrade that would support this CAP design.

Q. Please respond to this recommendation.

A. PIPs have been implemented by Pennsylvania energy utilities for decades. They benefit participants as they place a limit on the amount of the bill the CAP customer is responsible for. PIPs for energy utilities have provided an important safety net for potential rate changes resulting from increases in energy costs. In the natural gas utility industry, for example, gas cost rates change quarterly in response to market changes as gas costs are a pass-through from the utility to the ratepayer. In periods of energy pricing volatility, such as occurred following Hurricane Katrina, energy rates could sharply rise, thereby increasing bills significantly. PIPs provide protection against these changes as participants' monthly payments are based on their income.

However, PIPs are costly to the other ratepayers who must in turn bear the responsibility for the portion of the bill the CAP participant is not asked to pay. In Aqua PA's 2021 Base Rate Case, Aqua PA proposed a universal service rider to track and recover the costs of its universal service programs. The rider would have followed CAP participation and limited recovery to actual costs on an annual basis. That proposal was

[26] *See* OCA St. No. 6, at pp. 30-31; *see also* CAUSE PA St. No. 1, at pp. 25-26.

not approved. Any consideration of evolving Aqua PA's CAP from a discount program to a PIP should consider two factors related to cost recovery: 1) the mechanism by which actual costs will be recovered; and 2) the level of costs that non-participant residential customers can bear. I note that it is other residential non-participants that bear the costs of these programs as recovery for universal service programs have historically been shouldered only by the residential class. When considering affordability, the impact of program design on residential ratepayers that do not benefit directly from the program is an important consideration. The current discount program design is intended to strike a balance between supporting low income households and affordability for residential non-participants as well.

VII. CONCLUSION

Q. Does this conclude your Rebuttal Testimony?

A. Yes. I reserve the right to submit supplemental testimony if additional issues arise during the course of this proceeding. Thank you.

PA Residential Restoration

Per 52 PA Code § 56.191 (c) & 66 C.S. § 1407 (c), if **PA** **Residential** service is **SONP** we must provide RCON options based on the **household's ability to pay**.

Off in Error

If a **PA** customer says service was shut off in error - they **paid their PAR catch-up** but they didn't report the payment - we must:

1. Turn on water the **same day** *even after hours*
2. Waive reconnect fee
3. Reinstate their **PAR**

Past Due Balance

Quote full past due amount + RCF and offer to process payment

- If you **process a payment**, schedule **RCON** service order for next day
- If they **can pay full past due,** *but not during your call*:
  - Advise they can **pay online** @ **aquawater.com** > Pay Bill
  - Advise them to **call back** with Payment Confirmation No. to schedule RCON

V. COMPLIANCE WITH CONSUMER PROTECTION REGULATIONS 9
VI. PAYMENT PROCESSING OPTIONS 11
VII. TERMINATION OF WATER SERVICE FOR NON-PAYMENT OF WASTEWATER SERVICE 12
VIII. CONCLUSION 13

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. Please state your name and business address.

A. My name is Heather Doyle-Conley. My business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. By whom are you employed and in what capacity?

A. I am employed by Essential Utilities, Inc. ("Essential") as the Vice President, Customer Operations. In this role, I lead customer operations for Peoples Natural Gas Company LLC ("Peoples") and Aqua Pennsylvania, Inc. ("AP") and Aqua Pennsylvania Wastewater, Inc. ("APW") (collectively "Aqua" or the "Company").

Q. Please describe your professional experience and your role with the Company.

A. I have been employed by Peoples since February of 1990 and have held various positions of increasing responsibility in Customer Service. Currently, as Vice President of Customer Operation, I lead our Customer Operation teams at Aqua and Peoples across 9 states with Pennsylvania being our largest customer base. In this role I am responsible for a number of departments including Contact Centers, Billing, Credit, Collections and Case Management teams.

Q. Have you testified previously in this proceeding?

A. No.

Q. What is the purpose of your Rebuttal Testimony in this case?

A. I will respond to aspects of the Direct Testimonies submitted by Ms. Barbara Alexander (OCA Statement No. 7) and Mr. Roger Colton (OCA No. Statement 6) on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). I will respond to the recommendations of OCA witnesses relating to call center and customer service

performance, root cause analysis ("RCA") of customer complaints, compliance with consumer protection regulations, and payment processing options.

II. CALL CENTER PERFORMANCE AND COMPLIANCE

Q. Can you describe some general concerns raised by OCA witness Alexander, as you understand them, regarding the Company's call center performance?

A. Yes. Witness Alexander testifies that the Company's call center performance meets only the minimum requirements, but fails to measure "actual customer experience."

Q. Does OCA witness Alexander acknowledge that the Company has met all call center performance commitments from the Aqua-Peoples Merger Settlement[1]?

A. Yes, on page 11 of her Direct Testimony. OCA St. 7 at 11. However, Ms. Alexander attempts to criticize Aqua's compliance with these commitments, arguing that the "performance is measured in a manner that does not reflect the actual customer experience since it includes all customer calls received by the IVR." OCA St. 7 at 11.

Q. Do you agree that the Company's use of the IVR is inappropriate?

A. No.

Q. Why not?

A. The IVR is one option available to customers to contact the Company regarding questions and to request assistance. The availability of an IVR adds value and provides valuable service to customers. I would argue that a call center metric that does not include an IVR, and only measures how quickly a call is answered by a customer service representative ("CSR"), is not reflective of customer satisfaction because it is not reflective of how

[1] Joint Petition for Approval of Non-Unanimous, Complete Settlement Among Most Parties, Docket Nos. A-2018-3006061, A-2018-3006062, and A-2018-3006063 (June 26, 2019) ("Aqua-Peoples Merger Settlement").

customers desire to interact with the Company. In fact, customers do not express dissatisfaction with the time to speak to a representative. In today's world customers want to engage with companies when convenient for them using alternate channels, such as the IVR and web portal when possible.

Q. Did the Commission agree with Ms. Alexander regarding her desire to exclude IVR performance as it relates to calls answered in the Company's last base rate case?

A. This concern is one that Ms. Alexander initially raised in Aqua's 2021 Base Rate Case[2] proceeding. In that case, Ms. Alexander actually alleged that the Company was not in compliance with the commitments made in the Aqua-Peoples Merger Settlement because it included IVR metrics in its calculation. The Commission rejected this contention. In this case, however, she now admits and agrees with the Company that the Company is in compliance with those commitments which include the IVR metrics. The Company continues to believe it is appropriate to include IVR contacts and report an aggregate percentage of calls answered for its contact center service level. This is a standard calculation in the contact center industry for service level performance. The IVR is an automated way to service customers and provide customer support. Therefore, it is appropriate to include IVR metrics to calculate total service level compliance given that the IVR provides customer support.

Q. Does witness Alexander make any recommendations regarding Aqua's call center performance with respect to this base rate case?

[2] *PA PUC v. Aqua Pennsylvania, Inc., et al.,* Docket Nos. R-2021-3027385 and R-2021-3027386, *et al.*

A. Yes. She recommends that Aqua be required to meet its 2024 call center performance as a condition of any rate increase, and to focus on improving the call answering performance for customers who request to speak to a CSR. OCA St. 7 at 11-12.

Q. Do you agree with these recommendations?

A. Aqua remains committed to achieving on an annual basis the call center performance metrics set forth in the Aqua-Peoples Merger Settlement, recognizing of course that unforeseen circumstances outside of the Company's control can create problems. The call center performance metrics are an annual average of at least 82% of calls answered within in 30 seconds; maintain a busy-out rate of no more than 0.25% and an abandonment call rate no higher than 2.5%. I do not agree, for the reasons stated above, that the Company should alter how it measures performance relating to calls answered, or that rate relief should be contingent on meeting these goals.

Q. Are there any other issues that Ms. Alexander raises that you would like to address?

A. The Company's customer service management and senior management team are located in Pennsylvania. All of the Company's billing, collections, meter testing, and field services is managed in Pennsylvania. As noted by Ms. Alexander, while the Company does not have a call center in Pennsylvania, customers have access to CSRs via phone and can interact with the Company via its web portal. Aqua is committed to quality customer service to its customers in Pennsylvania. This commitment begins with the fact that the Company has its senior customer service management team in Pennsylvania. The Company has spent a great deal of time and effort in ensuring our customers are able to interact with the Company in a manner that they choose, including through IVR and web portal options. CSR are fully trained to assist customers and the physical location of a CSR

does not impact the level of service provided to a customer. The quality of all customer interactions is important to the Company. Given that the majority of CSR interactions are done remotely, what is most important is that customers are heard and their issue(s) are addressed.

III. CUSTOMER SERVICE COMPLIANCE

Q. Both OCA witness Alexander and OCA witness Colton comment on the Company's customer service performance referencing the Pennsylvania Public Utility Commission's ("PUC" or the "Commission") Utility Consumer Activities Report & Evaluation ("UCARE") Report. OCA St. 7 at 12-13; OCA St. 6 at 71-73. Can you respond?

A. The Company did identify a high number of complaints regarding payments arrangements, which is also noted in the OCA testimony regarding the UCARE report. The Company identified, through its initial review of 2023 customer complaints as stated in OCA-XVI-1, that the high number of payment arrangement complaints stemmed from an issue with reinstating payment arrangements after payment was made. The Company implemented a short-term solution, as described below, and is in the process of automating the process.

Q. Does OCA raise other concerns regarding the Company's customer service compliance?

A. Yes. OCA witness Colton asserts that the Company has a history of non-compliance with Commission Regulations, Orders and Secretarial Letters. OCA St. 6 at 72-73. Upon review, Mr. Colton's reference to a "history of non-compliance" is related to the Commission's UCARE report, which includes all utilities throughout the Commonwealth

and all utilities have similar issues. I note this not to diminish the UCARE report, but to put some context to Mr. Colton's statement regarding a "history of non-compliance".

Q. Do you agree with OCA witness Colton's testimony regarding his allegation that the Company has a history of non-compliance with Commission Regulations, Orders and Secretarial Letters?

A. I do not agree that the Company has frequently failed to comply with Commission regulations, Orders and/or Secretarial Letters. Issues do arise and the Company takes appropriate actions when it is believed there is a compliance issue. The Company is notified by the Commission's Bureau of Consumer Services ("BCS") regarding any infractions noted in their review of Informal Complaints and the Customer Care Specialists review the alleged infractions to determine an appropriate response either to coach an individual CSR, review and update an existing process or conduct additional training. If it is determined that a regulation was not followed properly, the Quality Assurance ("QA") team will work with the Company's Training Group to conduct a review of the training materials. Regarding Mr. Colton's concerns regarding the customer assistance program ("CAP") offset (OCA St. 6 at 73), this will be addressed in the Rebuttal Testimony of Mr. William C. Packer (Aqua Statement No. 1-R).

IV. RCA OF CUSTOMER COMPLAINTS

Q. Please explain the Company's process that it utilizes to perform a RCA.

A. When conducting RCA of complaints, the Company has a thorough process to review complaints, review notes on accounts and to listen to calls, if needed, to confirm the complaints are documented correctly and then identify a root cause. After this review, the Company will identify any common root causes and review how it can improve training or

processes or better serve our customers. In addition, the Company has tracked each dispute within its Customer Information System ("CIS") and when it discovers that there is an opportunity for training or process improvement the customer service management team will review with the proper department. I note that the Company met with the OCA and I&E on October 25, 2023, to specifically discuss this topic. The Company shared the current version of the RCA, the current version of the RCA was reviewed at the meeting, and the parties exchanged further information. The Company is providing its updated RCA in an update to discovery.

Q. Does OCA witness Alexander raise any concerns regarding the RCA of customer complaints performed by the Company?

A. Yes. Ms. Alexander is critical of the Company's RCA and claims that it has failed to conduct a RCA of the customer complaints. OCA St. 7 at 14-16.

Q. Do you agree with Ms. Alexander's criticisms?

A. No.

Q. Please explain why not.

A. I disagree with OCA witness Alexander that the Company does not conduct adequate RCA of customers. The Company shared its RCA with the OCA and the Commission's Bureau of Investigation and Enforcement ("I&E") on October 25, 2023. Data was provided through 2022 at this meeting. The Company believes that its version is adequate and the proof of its adequacy is evident in the follow-up that the Company performs as a result of the RCA. For example, through the use of the RCA, the Company has been conducting an analysis of customer complaints and has been focusing on the higher complaint volume. The example provided in discovery response (OCA-XVI-1 Attachment) was a deeper dive

explanation into one of categories of concern due to the increase in payment arrangement complaints. The Company discovered one reason for the higher volume was due to payment arrangements not being reinstated after the customer paid the reconnection amount. A short-term solution was implemented creating a weekly report to reinstate payments arrangements after a payment was made that was equal to or greater than the reinstatement amount. A long-term solution is in progress and will automate the process. This demonstrates that the Company is reviewing the cause of its customer complaints and taking action to evaluate any process improvements needed.

Q. Please respond to Ms. Alexander's accusation that the Company is creating information to respond to the request regarding the RCA based on the date of the PDF file provided in response to OCA-XVI-1.

A. Ms. Alexander states that the document that was provided in response to OCA-XVI-1 was created on July 29, 2024 according to the properties of the PDF document provided. The PDF was created as a conversion from a Microsoft Word document to a PDF and therefore bears the date that it was converted – not the date that the information was developed. The conversion from Microsoft Word to PDF was to serve the response which was served on July 29, 2024.

Q. OCA witness Alexander recommends several improvements to the Company's RCA process that should be made. Do you agree with these recommendations?

A. Yes. First, I want to highlight that Ms. Alexander acknowledges that the Company has an RCA, however, she believes the Company should add additional detail. Currently, the Company is comfortable with the format of its report but there is always room for improvements to be made. Ms. Alexander highlights the following items that she believes

should be added to the Company's RCA: (1) identification of complaint data used; (2) a determination of the scope and scale of similar trends that may not be reflected in the Company's complaint data base; (3) include a discussion of solutions that have not yet been implemented along with metrics for evaluating effectiveness; and (4) expand on the nature of the complaints in the "other category".

The Company has reviewed these specific requests and notes that there is a balance between system capability, manual review of individual complaints, and costs associated with specific detail. After review, the Company can commit to (1) providing more sub-categories under the Company's definitions as shown on its customer complaint analysis, (2) the Company notes that it already includes and identifies the type of complaints in its customer complaint analysis, (3) provide more detail on what constitutes "other category", and (4) the Company agrees to identify solutions in a prudent and incremental fashion and ranking as determined by the Company.

To be clear, although the Company recognizes that improvements can be made to its RCA as discussed above, the Company does not agree that its RCA process is inadequate. As I have described above, the Company does systematically review complaints and issues raised by customers during the dispute process and does act on any needed improvements.

V. COMPLIANCE WITH CONSUMER PROTECTION REGULATIONS

Q. Does OCA raise any concerns with the Company's compliance with consumer protection regulations?

A. Yes, it does. OCA witness Alexander testifies that Aqua has not conducted an audit or investigation of compliance with Pennsylvania-specific consumer protection requirement

at its out-of-state call centers. OCA St. 7 at 16-17. She recommends that the Company be required to perform an annual audit and document its investigation and review of compliance with Chapter 56 regulations and Chapter 14 of the Public Utility Code. OCA St. 7 at 17-18.

Q. Do you agree with the recommendation?

A. No. The Company does conduct routine quality monitoring through its QA team. The QA team focuses on a variety of things, including adherence to the rules and regulations of the Commission. To ensure that Company employees are adhering to Commission regulations, new hires are monitored daily for compliance. Quality monitoring is in addition to the training provided and on-going coaching and supervision by the Company's management team. The QA team proactively conducts routine QA call monitoring and the shares this feedback weekly within the Company to ensure the rules and regulations are followed. Additionally, the Company's processes and online CSR resources—which CSRs are trained upon—are designed using the Pennsylvania regulations.

Q. Were other concerns raised by OCA witness Alexander?

A. Yes. Another concern raised by OCA witness Alexander is her claim that the Company does not track data to confirm it is compliant with the requirement of attempting to make personal contact prior to service termination. OCA St. 7 at 18-19.

Q. Can you please address the Company's compliance with the personal contact requirement?

A. Yes. Aqua has a collections manual that was created in compliance with the recommendation in the 2021 Base Rate Case. Field Services Representatives ("FSR") are trained to recognize and attempt personal contact looking for events that would suspend

termination. All FSRs are trained and required to complete the applicable work orders, which includes reasons for not continuing with termination. In situations where payment, a medical certificate, notification of a protection from abuse order, or eligibility for universal service programs are present, the FSR would not complete the termination work order and the work order would be cancelled. While the Company may not track the results of every personal contact reason, the FSRs follow the manual and any required follow up is completely timely. Most of the returned work order codes are payments, medical certificates and shared premise. This is our confirmation that personal contact is being made.

Q. Do you agree with Ms. Alexander's recommendation to develop and file a compliance document that describes the full range of consumer protections associated with attempting contact with residential customers prior to termination of service and documents as well the actual training and oversight?

A. I do not believe this recommendation is necessary. The Company maintains a collections manual which includes consumer protections. This serves as our compliance tool and check list. The Company informs consumers of their protections on all notices, postings, and during personal contact attempt.

VI. PAYMENT PROCESSING OPTIONS

Q. OCA witness Alexander offers recommendations relating to no fee payment options. OCA St. 7 at 20-21. Can you comment on this recommendation?

Q. Customers are provided many different payment methods. The options include making payments on the Aqua PA customer portal which does not charge a fee. The Company does encourage its customer to enroll in paperless billing and use the customer portal for

payments. Customers can mail their payment, use auto draft and electronic payments, all of which do not include a fee. Speedpay is one payment option available to customers. The payment charge is not an Aqua PA charge. It is clearly identified as a fee charged by Speedpay. Payment services incur fees for processing, in particular for payments made by credit and debit cards, as the issuing financial institutions have a fee for use. For these reasons, the Company does not agree to build into its revenue requirement the fees for payment options. The fees referenced by Ms. Alexander are not the Company's fees. However, the Company does agree with the recommendation to revise its termination notices, bills and IVR script relating to methods of payment.

VII. TERMINATION OF WATER SERVICE FOR NON-PAYMENT OF WASTEWATER SERVICE

Q. On page 25, Witness Alexander Cites PA Water Services Act (53 P.S. 3102.501-3102.507) and makes a recommendation regarding information to provide with a shut off for a customer's non-payment of a non-Company wastewater. Does the Company agree?

A. The Company does not object to including this language proposed by Ms. Alexander in its tariff. However, if such language is adopted it should be modified to remove the second paragraph in the proposed Rule 56A revision as the Company believes it is redundant. In addition, the language would need to be modified to allow for termination of service for non-payment of a municipal or municipal authority service provider or an effective agreement with a non-Company wastewater provider. These changes are shown in underline and strikethrough below:

> **56A.** In addition, service may be terminated for nonpayment of a sewer bill upon proper request of the municipality or municipal authority **("municipal sewer**

provider”) or a non-Company wastewater provider and receipt of a fifty dollar ($50.00) fee per account. The terms and conditions for termination of water for non- payment of sewer are found in Attachment A and conform to the Water Services Act 53 P.S. §3102.201 et seq., **which governs the relationship between Aqua and the municipal sewer Provider, or in a current effective agreement with a non-Company wastewater provider.**

~~**The Company may terminate a customer’s water service due to the customer’s non- payment of charges owed to a municipal sewer provider, provided that: (1) the Company has an effective agreement with the a municipal sewer provider pursuant to the Water Services Act or Act of April 14, 2006, codified at 53 P.S. §§ 3102.501 – 3102.507; and (2) the customer received prior notice from the municipal sewer provider of the past due amounts owed to the municipal sewer provider.**~~

Following the issuance of termination notice by the municipal sewer provider or non-Company wastewater provider, the Company will not terminate the customer’s water service upon notification to the Company by the municipal sewer provider or non-Company wastewater provider that the customer does either of the following: (1) disputes the termination for non-payment; or (2) produces a medical certification. Upon termination, the Company will post the post termination notice at the customer’s premises. The Company’s post termination notice shall provide the following information in conspicuous format and plain language: (1) a statement that Aqua terminated the customer’s water service due to the customer’s non-payment of municipal sewer provider or non-Company wastewater provider charges; (2) a statement that the termination of service is not the result of customer’s non-payment of water charges owed to Aqua; (3) the name and contact number of the municipal sewer provider or non-Company wastewater provider; (4) the contact information for the Company; and (5) a citation to Section 56A of Aqua’s Water Tariff and the weblink for accessing the Company’s tariff webpage.

VIII. CONCLUSION

Q. Does that conclude your Rebuttal Testimony at this time?

A. Yes, it does, but I reserve the right to supplement my Rebuttal Testimony as needed during this proceeding.

I. INTRODUCTION 1

II. SUMMARY 3

III. THE "REGULATORY COMPACT" 7

IV. ALTERNATIVE RATEMAKING 15

V. THE USE OF FAIR MARKET VALUE 20

REBUTTAL TESTIMONY
OF
PAUL J. HIBBARD

I. INTRODUCTION

Q. Would you please state your name, business address, and occupation?

A. My name is Paul Hibbard. I am a Principal at Analysis Group (AG), an economic, finance and strategy consulting firm headquartered in Boston, Massachusetts, where I work on energy and environmental economic and policy consulting. My business address is 111 Huntington Avenue, 14th Floor, Boston, Massachusetts 02199.

Q. Please describe your background and experience.

A. I have been with AG for nearly twenty years: first, from 2003 to April 2007, and most recently, from August 2010 to the present. In between, from April 2007 to June 2010, I served as Chairman of the Massachusetts Department of Public Utilities ("MA DPU") where I participated in deciding rate cases for electric, natural gas, and water utilities. While Chairman, I also served as a member of the Massachusetts Energy Facilities Siting Board, the New England Governors' Conference Power Planning Committee, and the NARUC Electricity Committee and Procurement Work Group. I also served as State Manager for the New England States Committee on Electricity and as Treasurer to the Executive Committee of the 41-state Eastern Interconnect States' Planning Council.

I have previously worked in energy and environmental consulting with Lexecon, Inc. from 2000 to 2003. Prior to working with Lexecon, I worked in state energy and environmental agencies for almost ten years. From 1998 to 2000, I worked for the Massachusetts

Department of Environmental Protection on the development and administration of air quality regulations, State Implementation Plans and emission control programs for the electric industry with a focus on criteria pollutants and carbon dioxide ("CO_2"), as well as various policy issues related to controlling pollutants from electric power generators within the Commonwealth of Massachusetts. From 1991 to 1998, I worked in the Electric Power Division of the DPU on cases related to the setting of company rates, restructuring of the electric industry in Massachusetts, quantification of environmental externalities, integrated resource planning, energy efficiency, utility compliance with state and federal emission control requirements, regional electricity market structure development, and coordination with other states on electricity and gas policy issues through the staff subcommittee of the New England Conference of Public Utility Commissioners.
I hold an M.S. in Energy and Resources from the University of California, Berkeley, and a B.S. in Physics from the University of Massachusetts at Amherst. My curriculum vitae is provided in Appendix A, which follows my rebuttal testimony.

Q. Have you previously testified before the Pennsylvania Public Utility Commission ("PUC," or "Commission")?

A. Yes. In November of 2011, I presented comments to the Commission in an En Banc Hearing related to auctions for retail service in the electric sector on behalf of Direct Energy. In January of 2021, I provided Rebuttal Testimony to the PUC on behalf of PECO Energy Company related to ratemaking principles. In February of 2024, I provided Rebuttal Testimony to the PUC on behalf of Pennsylvania-American Water Company related to ratemaking principles.

II. SUMMARY

Q. What is the purpose of your testimony?

A. In this testimony I respond to certain aspects of the testimony of the Pennsylvania Office of Consumer Advocate ("OCA") witness Christine Maloni Hoover. First, I discuss Ms. Hoover's framing of what she refers to as the "regulatory compact," and the principles and precedent related to the practice of reviewing and setting utility rates. Next, I review Ms. Hoover's discussion of alternative ratemaking in this context. Finally, I review Ms. Hoover's discussion related to the application of the fair market value approach in incorporating the cost of municipal water system acquisitions in the rates of Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. ("Aqua" or "Company").

Q. Please provide a summary of your views.

A. There are long-standing principles and precedent applied by the Commission in setting rates. The Commission identifies these in describing the legal framework for its decision in every rate case. They are neither ambiguous nor subject to reinterpretation. In short, the utility is allowed to recover its used and useful and prudently-incurred costs and investments, and earn a fair return on the capital it commits to discharge its public service obligations. The *Hope*[1] and *Bluefield*[2] decisions of the United States Supreme Court established the fundamental obligation in ratemaking to allow a utility the opportunity to recover its costs and earn a fair return on equity (one attendant to the risks experienced by similarly situated companies) and an overall return on investment that allows the utility to

[1] *F.P.C. v. Hope Natural Gas Co.*, 320 U.S. 591 (1944) ("*Hope*").

[2] *Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia*, 262 U.S. 679 (1923) ("*Bluefield*").

maintain financial integrity and maintain credit. In establishing rates, the Commission exercises its judgement to achieve the correct balance of utility and consumer interests and to determine just and reasonable rates based on a utility's filing and record evidence. The Commission has the latitude to consider policy objectives and has the obligation to adhere to Pennsylvania statutes that address certain specific elements allowed or required in the setting of utility rates.

Ms. Hoover narrowly defines "regulatory compact" and "traditional ratemaking" to create a distorted view of the ratemaking process and confuse the Commission's administration of its jurisdictional obligations by inducing the Commission to disregard application of long-standing and time-tested precedent and principles of ratemaking. The phrase "regulatory compact" is a shorthand simplification used to illustrate elements of the framework for utility regulation. Ms. Hoover's incomplete description of a "regulatory compact" ignores critical aspects of the regulatory structure and purports to grant the Commission broad authority under her construction to disregard application of long-standing and unambiguous ratemaking principles and precedent, and its evidence-based evaluation of specific elements included in the Company's proposal.

The use of "regulatory compact" in this proceeding by Ms. Hoover and the OCA reflects an unnecessary and exclusively consumer-focused viewpoint on Commission responsibilities that starts with the erroneous presumption that the whole ratemaking process in Pennsylvania and/or the Commission's exercise of its jurisdictional responsibilities are structurally biased in favor of regulated utilities. The OCA's application of this viewpoint leads to recommendations that are inconsistent with the appropriate application of ratemaking principles and precedent.

Similarly, Ms. Hoover uses the concept of "traditional ratemaking" to imply that the Company's filing somehow deviates from what is appropriately presented by the utility and considered by the Commission in a rate case, and systematically changes the balance of risk. In fact, the Company has filed a traditional rate case with all of the required elements, including a cost of service study, revenue requirement allocation, proposed weighted average cost of capital, rate design, and additional proposals that include assistance to low-income customers. And the Company's proposals for what Ms. Hoover refers to as "alternative ratemaking" – authorized under Pennsylvania law and by the policy statements of this Commission[3] – include specific measures designed to achieve legislated public policy objectives around infrastructure upgrades and consolidation of municipal services that provide a vital public service to achieve efficiency and reliability.

The Company has also included in the filing its prior acquisitions (including one under review by the Pennsylvania Supreme Court), which reflect the consolidation of municipal services that provide a vital public service to achieve efficiency and reliability. Ms. Hoover discusses the fair market valuation of these acquisitions as "alternative ratemaking." The Company is not requesting alternative ratemaking for these acquisitions, but rather has included systems at the ratemaking rate base as provided for under Pennsylvania law and as approved by the Commission. My testimony will respond to Ms. Hoover's arguments on fair market value as part of her "alternative ratemaking," but to be clear, I do not agree

[3] I am advised that the Company has made no "alternative ratemaking" proposals under the provisions of 66 Pa.C.S. § 1330 (authorizing alternative rates and ratemaking mechanisms) or 52 Pa. Code § 69.3301 (inviting alternative ratemaking proposals by utilities). The Company's rate filing does reflect components authorized by 66 Pa.C.S. § 315 (Fully Projected Future Test Year),66 Pa.C.S. § 1311(c) (allocation of wastewater revenue requirement), 66 Pa.C.S. § 1329 (Fair Market Value valuations), and 66 Pa.C.S. § 1350-1360 (Distribution System Improvement Charge). All references to Sections in my testimony refer to Sections of the Pennsylvania Public Utility Code unless otherwise noted.

that inclusion of an acquisition at the rate base approved by the Commission constitutes alternative ratemaking.

In my view, Ms. Hoover's testimony regarding the "regulatory compact" and "traditional ratemaking" are nothing more than an effort to misconstrue traditional ratemaking principles to try to fashion authority otherwise lacking for the specific changes the OCA proposes to the Company's proposed revenue requirement. Her testimony does not add any probative value to the decisions the Commission must make in this traditional rate case.

Finally, Ms. Hoover claims that by using a fair market value approach with respect to acquisition of municipal water companies rather than the original cost approach, the rate base associated with such acquisitions is inflated, and creates a large revenue deficiency for the customers acquired through these acquisitions.

I disagree with Ms. Hoover's and OCA's position. Aqua's use of fair market value in calculating its rate base for acquisitions is fully supported by existing laws and regulations in Pennsylvania, which were intentionally designed this way by the legislature and regulators to encourage regionalization and acquisitions of smaller, often nonviable, water and wastewater utilities by larger utilities better able to maintain acceptable service quality and meet customer needs. As I understand it, for acquisitions approved by the PUC under Section 1329,[4] the law specifies that the lower of the negotiated purchase price or fair market value of the acquired utility is to be included in the acquiring public utility's rate base. Thus, whether Commission-approved acquisition purchase prices exceed

[4] 66 Pa. C.S. § 1329.

depreciated original cost should have no impact on whether they are included in Aqua's rate base, and any associated wastewater revenue deficiency can be properly allocated to both water and wastewater companies in accordance with Section 1311. Furthermore, the inclusion in rate base of acquisitions pursuant to Section 1329 should not be a basis for reducing the authorized rate of return on common equity in this case.

Q. Are you providing a legal opinion in this proceeding?

A. No, I am not and I am not a lawyer. My discussion of regulatory precedent and practice is focused on regulatory policy based on my experience as a former Commissioner and staff person at the Massachusetts' Department of Public Utilities, and on my work as a consultant in regulatory matters.

III. THE "REGULATORY COMPACT"

Q. Are you familiar with the principles behind the setting of regulated utility rates by public utility commissions?

A. Yes, through my work as both a staff person and as Chairman of the Massachusetts Department of Public Utilities, and in private practice. The principles and precedent underlying public utility commission rate case decisions across the United States are a well-understood framework that guides this Commission's review of record evidence to set utility rates in a way that ensures efficient, safe, and reliable utility service at reasonable cost to consumers.

Q. Please provide a summary of your understanding of these principles.

A. Public utilities are generally obligated through law and regulation to reliably meet the needs of all customers within their service territory. The utilities in turn are allowed to collect the costs of serving customers through commission-approved cost of service rates, including operating expenses and a return of and on prudently-incurred capital investment. Rates are set to allow the utility an opportunity to earn a fair return on the value of the property which it employs for the convenience of the public. Additionally, rates should be designed to allow the recovery of prudently-incurred costs while promoting efficient consumption decisions by consumers, encouraging efficiency in the management and operation of the utility, and allocating costs fairly. The structure of regulated utility rate setting encourages utility managers to make reasonable operational and investment decisions on behalf of their customers, in order to provide reliable service at a reasonable cost and in a manner consistent with the ratemaking and policy directives of the state.[5]

The return on capital is designed to approximate the return being earned at the same time in businesses that face similar risks and uncertainties. This level of return on investment is designed to assure confidence in the financial soundness of the utility and to be sufficient to enable the utility to maintain credit and attract the capital needed to reliably meet customer needs over time.[6]

[5] *See, e.g.*, Dr. Karl McDermott, *Cost of Service Regulation in the Investor-Owned Electric Utility Industry*, Edison Electric Institute, June 2012 ("McDermott"), p. 7.

[6] *See*, e.g., James C. Bonbright, *Principles of Public Utility Rates*, 1961 ("Bonbright"), at 257-258; and McDermott, pp. 5-7.

The foundational principles underlying regulated utility rate setting are not new but have been used and vetted through regulatory and legal decisions since being set in place beginning almost a century ago.[7]

Q. Based on your review, do you have a view as to an appropriate approach for assessing the operational and investment decisions of the utility?

A. Yes. One cannot be cavalier in evaluating the Company's actions and investments. Rate setting involves a necessary but difficult balancing of companies' obligations to shareholders and to ratepayers; it seeks to maintain the financial integrity of regulated utilities while providing appropriate service quality and incentives for efficiency in management, operations, and customer consumption. Rate case reviews need to be based on careful review of record evidence in the context of regulatory and judicial precedent, with an eye toward sustaining a functioning and efficient service provider.[8]

Q. Have you reviewed Ms. Hoover's discussion of what she calls the "regulatory compact?"

A. Yes.

Q. Please summarize how Ms. Hoover represents the "regulatory compact."

[7] The *Bluefield* decision, one of the landmark Supreme Court decisions on ratemaking, was issued by the United States Supreme Court just over 100 years ago, in 1923.

[8] The job of a public utility commission is not to substitute its judgement for that of the utility; utilities are presumed to act in good faith and make efficient operational and prudent investment decisions absent evidence to the contrary. *See, e.g.*, McDermott, pp. 9, 13.

A. Ms. Hoover describes the "regulatory compact" as a quid-pro-quo whereby the utility receives an exclusive franchise in exchange for the obligation to provide service.[9] She claims that the Commission "enforces" the regulatory compact through a system of incentives and deterrents designed to protect consumers against the effects of monopoly power.[10] Ms. Hoover's discussion focuses on obligations of the utility to provide service at reasonable rates subject to state policing powers, with little or no reference to the obligation to allow the utility to recover the legitimate costs of meeting its public service obligation.

Q. In your view, does Ms. Hoover's discussion of the regulatory compact provide any guidance or probative value in this case?

A. No, it does not. There is no explicit compact, contract or agreement between the state and its jurisdictional utilities. The phrase "regulatory compact" has been used in various and differing ways by utility industry participants and practitioners to characterize the nature of public utility regulation and the relationship between a state and its jurisdictional utilities.

Yet, contrary to Ms. Hoover's claims, the metaphor of a "regulatory compact" does not imply an explicit utility-consumer balance that would enable the Commission to disregard reasonable and prudent costs incurred by a utility in favor of protecting customers. The purpose of utility regulation is to provide consumers with reliable utility services at the

[9] *Pennsylvania Office of Consumer Advocate*, Direct Testimony of Christine Maloni Hoover, OCA Statement No. 1, Docket Nos. R-2024-3047822 et al., August 16, 2024, p. 18.

[10] OCA St. No. 1, pp. 19-20.

lowest possible cost by providing a structure whereby a single firm in each franchise territory is able to achieve the greatest possible economies of scale and scope and avoid the duplication of infrastructure.[11] In exchange for the utility putting its capital to the public use, the regulator must grant the utility the opportunity to earn a fair return of and on its used and useful and prudently-incurred capital.[12]

The Commission identifies these long-standing principles in describing the legal framework for its decision in every rate case. They are neither ambiguous nor subject to reinterpretation. *Hope* and *Bluefield* clearly establish the fundamental obligation to allow a utility an opportunity to recover its costs and earn a fair return on equity (one attendant to the risks experienced by similarly situated companies), and an overall return on investment that allows the utility to maintain financial integrity and maintain credit.

Consistent with its obligation, the Commission exercises its judgement to determine just and reasonable rates based on the Company's filing and record evidence, balancing utility and consumer interests with respect to services provided, service quality, and costs, among other considerations.

The presentation of Ms. Hoover's view of what the "regulatory compact" might be in this proceeding only provides a manufactured premise for Ms. Hoover and the OCA to argue for their disallowance recommendations, a premise that erroneously presumes Pennsylvania's ratemaking process is structurally biased in favor of regulated utilities.

[11] Bonbright, pp. 11-13.

[12] McDermott, pp. 5-6.

Q. Ms. Hoover discusses the principles of "just and reasonable" and "zone of reasonableness" as an element of the "regulatory compact."[13] How do "just and reasonable" and "zone of reasonableness" enter into commission rate case deliberations?

A. In practice, rate setting is not formulaic; there are often variabilities and uncertainties in the data and forecasts that underlie utility and intervenor perspectives on forward-looking costs, billing determinants, and company rates. A commission must weigh record evidence against appropriate standards to determine where rates should be set within those ranges of uncertainty. In this context, principles such as "just and reasonable" and "zone of reasonableness" have evolved to guide commission deliberations and have been used in commission and court decisions. Importantly, just and reasonable is bounded; it is not meant to be used by commissions to render decisions that do not allow utilities to recover the costs they incur to provide reliable service.[14]

Q. Ms. Hoover suggests that there may be circumstances where the Commission can set rates that are outside a zone of reasonableness to "…fairly balance the interests of all parties."[15] Do you agree?

[13] OCA St. No. 1, p. 25.

[14] A "zone of reasonableness" is intended to represent both the consumer and investor interest, for example the landmark *Hope* case adopted "just and reasonable rates as a balance of the investor and the consumer interests." This balance was "gradually refined into the concept of a 'zone of reasonableness.'" Further, *Duquesne Light Co. v. Barasch*, 488 U.S. 299 (1989) describes the "lower limit of the zone of reasonableness, that is, where just and reasonable is bounded by a constitutional prohibition against confiscation." Steve Isser, *Just and Reasonable: The Cornerstone of Energy Regulation*, June 30, 2015 ("Isser"), pp. 31, 38.

[15] OCA St. No. 1, p. 25.

A. No. Ms. Hoover would have the Commission believe that they should focus primarily or exclusively on consumer interests when determining whether rates are just and reasonable, and that this provides the Commission an unbounded latitude to set rates outside a zone of reasonableness, even if the outcome does not reflect the true costs for the utility to discharge its public service obligation and attract the capital needed to safely and reliably meet customer demands on a going-forward basis. Yet "just and reasonable" is not a one-sided standard to be interpreted to define a range of rate outcomes acceptable only to the consumer. This one-sided perspective ignores or understates the fundamental balance established between requiring a utility to safely and reliably meet the needs of current and future customers in exchange for the ability to recover the costs of doing so, including a return on prudently-invested capital sufficient to attract investors.[16]

Q. You have observed that utilities should be compensated for providing reliable services. In this case the OCA has recommended a dramatic reduction of over 100 percent in Aqua's proposed revenue requirement increase.[17] Are there potential negative impacts if the Commission were to accept OCA's proposed reductions, from a public policy perspective?

A. Yes. Aqua's proposed revenue requirement increase is driven in large part by necessary investments in water and wastewater system infrastructure which are needed for the Company to continue to provide safe and reliable delivery of *vital* water and wastewater

[16] *See, e.g.*, Filipink's analysis of the Supreme Court cases *Bluefield* and *Hope*: "These decisions said that a return should be reasonably sufficient so that investors had confidence in the financial soundness of the utility and should be adequate to raise necessary financing," including "capital costs of the business." Eric Filipink, *Serving the Public Interest - Traditional vs. Expansive Utility Regulation*, December 30, 2009, pp. 12-13.
[17] OCA St. No. 1, p. 3.

services to customers in their service territory.[18] In fact, no one in this case has challenged these investments as not used and useful for reliable water and wastewater services, and no one has alleged that the Company's investments or management of construction projects has been imprudent.[19] Yet if the Commission accepts OCA's recommendations, the Company would not be able to recover the cost of prudent investments needed to discharge its public service obligation. This would threaten the financial viability of the Company and make it difficult to raise capital to fund water and wastewater service projects.

Aqua serves a critical function, providing safe and reliable water and wastewater services which are unquestionably necessary for the health, safety, and comfort of the Commonwealth's residents. In turn, providing a stable and secure revenue environment for water companies supports local economic activity both through projects funded through utility investments and support of local business activity, and it can help lower the costs incurred by utilities in attracting capital to fund such investments.

If the Commission accepts the dramatic revenue requirement reduction proposed by OCA (and other intervenors), it risks destabilizing the financial conditions for efficient operation of the Company's system, increasing the long-run cost of providing reliable service, depressing local investment in the economy, and increasing the risks of less safe and reliable water and wastewater system operations.

[18] *Aqua Pennsylvania, Inc.*, Prepared Direct Testimony of William C. Packer, Statement 1, Docket Nos. R-2024-3047822 et al., May 23, 2024, p. 3 ("Rates established in that case became effective on May 19, 2022. Since March 31, 2023 (*i.e.*, the end of the fully projected future test year used in the 2021 Base Rate Case), the Company will have invested over $950 million in water and wastewater utility infrastructure through the fully projected test year ("FPFTY") ending December 31, 2025. Investments in replacing old and installing new utility infrastructure account for approximately 60% of the requested need for rate relief in this application.").

[19] OCA St. No. 1, pp. 38-41.

IV. ALTERNATIVE RATEMAKING

Q. Have you reviewed Ms. Hoover's discussions with respect to alternative ratemaking?

A. Yes.

Q. Please summarize Ms. Hoover's position.

A. Ms. Hoover claims that alternative ratemaking provisions are a departure from "traditional ratemaking," and employing these provisions concurrently in this case unreasonably shifts risk from the Company to its customers.[20] The alternative ratemaking provisions include, "(1) the Distribution System Improvement Charge (DSIC); (2) the Fully Projected Future Test Year (FPFTY); (3) the addition of Section 1329 that permits fair market valuation for municipal acquisitions; and (4) the addition of Section 1311(c) that permits the Commission to approve the shift of wastewater revenue deficiencies to water customers if it is in the 'public interest.'"[21] She further alleges that Aqua's proposal to defer certain costs related to PFAS treatment represents an additional departure from the traditional cost-of-service paradigm, and claims that Aqua's decision to request all of these alternative ratemaking mechanisms in combination is "designed to insulate shareholders and Aqua management from the difficult job of efficient management and seeks to place nearly all the risk on Aqua's captive customers."[22]

Q. Do you agree with Ms. Hoover?

[20] OCA St. No. 1, p. 27.

[21] OCA St. No. 1, p. 27.

[22] OCA St. No. 1, p. 37.

A. No, I do not agree with Ms. Hoover's narrow view of what constitutes "traditional ratemaking." In its decision-based review of Aqua's proposed rate change, the Commission is engaged in a traditional ratemaking exercise; that the proposal employs certain specifically authorized cost recovery mechanisms does not change that. Utility inclusion and public utility commission approval of various mechanisms in rate cases to achieve public policy goals and/or meet statutory objectives is nothing new. Nor does it render the Commission unable to consider the impact of individual rate case components on the balance of risk between consumers and the Company.

In this case, Aqua has filed all the elements of a "traditional rate case," such as a cost of service study, revenue requirement allocation, proposed components of the cost of capital, rate design, mechanisms to assist low-income customers, and proposals for other utility offerings.[23] There is nothing new or "non-traditional" about these rate case elements, and they are similar to features that have been required or adopted in rate cases across many states and utilities. In my view, the OCA's treatise on "traditional ratemaking" is an exaggerated construct simply to set the stage for the very real-world and significant reductions it proposes to the Company's revenue requirement, and does not add any probative value to the decisions the Commission must make in this traditional rate case.

Q. Please describe the purpose of the ratemaking mechanisms Ms. Hoover disputes in more detail.

[23] *Aqua Pennsylvania, Inc.*, Prepared Direct Testimony of William C. Packer, Statement 1, Docket Nos. R-2024-3047822 et al., May 23, 2024, pp. 3-7, 32.

A. A Distribution System Improvement Charge ("DSIC") is a surcharge on customers' bills that is revised quarterly and allows recovery of costs to replace aging infrastructure between rate cases.[24] It thus "provides utilities with an additional rate mechanism to recover the capitalized costs related to repair, improvement and replacement [of] utility infrastructure. A DSIC can reduce regulatory lag, improve access to capital at lower rates, and accelerate infrastructure improvement and replacement."[25]

A Fully Projected Future Test Year ("FPFTY") was implemented by the Pennsylvania legislature to "reduce regulatory lag due to the use of rate case inputs that are outdated by the time new base rates become effective and, further, to provide more ratemaking flexibility for the timely recovery of prudently incurred infrastructure costs."[26] The FPFTY mechanism allows forecasted costs to be used that more accurately capture expected conditions during the period for which the rates will be effective and allows investments that will become used and useful after the date the rates become effective to be included in the utility's revenue requirement.[27] Reducing regulatory lag can reduce capital costs and facilitate infrastructure investments, particularly when costs are rising faster than usage.

Section 1329 permits fair market valuation for municipal acquisitions. As discussed in more detail in the next section, this statute was passed to allow larger utilities, with greater resources, to acquire smaller municipal utilities, many of which have heavily depreciated

[24] 66 Pa.C.S. §§ 1353, 1357.

[25] Final Implementation Order, *Implementation of Act 11 of 2012*, Docket No. M-2012-2293611 (August 2, 2012) ("2012 Implementation Order re Act 11"), p. 57.

[26] 2012 Implementation Order re Act 11, p. 4.

[27] 2012 Implementation Order re Act 11, p. 5.

assets and are in need of upgrades to maintain safe and reliable service.[28] Absent this rule, such acquisitions may have created financial hardship for such municipalities and delayed necessary improvements to the systems. This rule also mitigated the risk to the utility of not being able to recover the full cost of these acquisitions—thus encouraging larger utilities to acquire such systems.[29]

Section 1311(c) permits the Commission to approve the shift of wastewater revenue deficiencies to water customers if it is in the "public interest."[30] "The benefits of this provision are that the costs of necessary upgrades to wastewater systems to maintain safe and reliable service, which can be substantial on a stand-alone basis, can be spread among the common customer base of the water and wastewater utilities."[31] This can prevent rate shock for wastewater customers from needed infrastructure upgrades and thus facilitates the implementation of such upgrades.

Deferred accounting treatment may be granted for extraordinary expenditures that "could otherwise never be recovered in rates because, like [] weather-related expenses, it would be normalized out of the test year as abnormal."[32] Allowing deferred accounting treatment thus ensures that utilities are able to access capital at reasonable rates to fund such expenditures and recover their costs in rates from the customers that benefit from the expenditures.

[28] Final Implementation Order, *Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 (October 27, 2016) ("2016 Implementation Order re Section 1329"), p. 2.

[29] 2016 Implementation Order re Section 1329, pp. 2-3.

[30] OCA St. No. 1, pp. 33-34.

[31] 2012 Implementation Order re Act 11, p. 8.

[32] *Popowsky v. Pa. Publ. Util. Comm'n*, 642 A.2d 648, 652 (Pa. Cmwlth 1994).

Q. Do you believe that it is appropriate to allow multiple authorized ratemaking mechanisms?

A. Yes, I do. The four authorized ratemaking mechanisms in use by Aqua each relieve a different constraint in order to encourage infrastructure upgrades necessary to maintain safe and reliable service and to reduce the costs of these upgrades to consumers. The first two mechanisms work by relieving timing constraints on when certain investments and other costs can be included in rates, thus reducing long-term capital costs through the more efficient deployment of proactive capital. Moreover, a FPFTY ensures that rates are not based on outdated information but "are set to reflect the costs of providing the service," a principle of rate-setting Ms. Hoover repeats several times in her testimony.[33] The third mechanism relieves constraints on mutually beneficial acquisitions for both the small municipalities whose systems are being acquired and the buyer utilities; and the fourth ensures that potential rate shock does not further delay critical infrastructure upgrades. Lastly, Aqua's proposal to defer certain costs related to PFAS treatment would ensure Aqua is able to access the capital needed to fund its large investments in PFAS treatment infrastructure at reasonable rates and appropriately aligns customer rates with Aqua's costs. Implementing these mechanisms in combination thus ensures that no one of these constraints can hold up infrastructure investments needed to support safe, reliable service over the long-term.

Moreover, there is no theoretical or practical limit on the number of mechanisms that should be applied to encourage particular behaviors by utilities, particularly when those particular

[33] OCA St. No. 1, pp. 32, 36.

behaviors are consonant with the public interest and/or have been provided for in state law. Indeed, although the Company has not proposed any alternative ratemaking mechanisms pursuant to Section 1330, that section demonstrates that the Pennsylvania legislature did not intend to limit in any way the number of alternative ratemaking mechanisms that could be applied to meet public interest objectives, as it explicitly allowed the Commission to approve "rates based on a combination of more than one" mechanism.[34]

V. THE USE OF FAIR MARKET VALUE

Q. Have you reviewed Ms. Hoover's discussion related to the Company's use of Fair Market Value in incorporating in rates the cost of recent municipal water company acquisitions?

A. Yes.

Q. Please summarize Ms. Hoover's position.

A. Ms. Hoover states that Aqua has completed 7 acquisitions where the ratemaking rate base was calculated using fair market value along with one other that is currently on appeal.[35] She claims that by using a fair market value approach rather than the traditional original cost approach, the rate base associated with these acquisitions is inflated and creates a large revenue deficiency for the customers acquired through these acquisitions.[36] This revenue deficiency occurs because the revenue Aqua proposes to collect from the acquired customers is less than the cost of service based on the fair market value of the acquired

[34] 66 Pa. C.S. §1330(b)(1).

[35] OCA St. No. 1, p. 30.

[36] OCA St. No. 1, p. 31.

assets.[37] Consequently, she claims that the "rates for the acquired customers are disconnected from the actual cost to serve them,"[38] and argues that Aqua's proposed reallocation is not consistent with principles of fairness and efficiency.[39]

Q. Do you agree with Ms. Hoover?

A. No. Aqua's use of fair market value in calculating its rate base for acquisitions is fully supported by existing laws and regulations in Pennsylvania, which were intentionally designed this way by the legislature and regulators to encourage regionalization and acquisitions of smaller, often nonviable, water and wastewater utilities by larger utilities better able to maintain acceptable service quality.

The Pennsylvania legislature passed Section 1329 to encourage the acquisition of municipal water and wastewater systems by larger public utilities and entities, recognizing that such acquisitions "can facilitate necessary infrastructure improvements and ensure the continued provision of safe, reliable service to customers at reasonable rates."[40] Prior to the enactment of Section 1329, the method of valuing utility property as "the original construction cost less accumulated depreciation" could lead to municipalities with heavily depreciated assets being viewed as "less advantageous" acquisitions.[41] In response, the Pennsylvania legislature enacted Section 1329 which allowed for the fair market valuation

[37] OCA St. No. 1, p. 31.

[38] OCA St. No. 1, p. 32.

[39] OCA St. No. 1, p. 37.

[40] 2016 Implementation Order re Section 1329, p. 2.

[41] 2016 Implementation Order re Section 1329, p. 2.

of water and wastewater systems to be acquired.[42] Additionally, this rule mitigated the risk that the acquiring utility may not be able to recover the full cost of such acquisitions.[43]

The Pennsylvania legislature also enacted Section 1311 to permit a utility to propose to allocate a portion of wastewater systems' higher revenue requirements to water customers when such allocation is in the public interest.

Ms. Hoover's contention that the "fair market value rate base exacerbates the revenue deficiencies"[44] is irrelevant, and the associated valuations have nothing to do with "fairness" and "efficiency." The decision to allocate a portion of the wastewater revenue requirement under Section 1311 is simply a rate design question for the Commission to decide.

Q. Should the Company's inclusion of fair market value rate base provide a basis for reducing Aqua's authorized return on common equity in this case?

A. No. If the Commission were to reduce Aqua's authorized return in this case due to its use of the statutorily authorized fair market value procedure, the effect would be to undermine the Legislature's determination that Section 1329 is an appropriate ratemaking tool. It would also discourage future acquisitions under Section 1329, further undermining the purpose of that statute.

Q. Does this conclude your rebuttal testimony?

[42] 2016 Implementation Order re Section 1329, p. 2.

[43] 2016 Implementation Order re Section 1329, p. 3.

[44] OCA St. No. 1, p. 37.

A. Yes.

Boston, MA 02199

Mr. Hibbard is an expert on economics, strategy, regulation, and policy in the electric and natural gas industries. He has a comprehensive background merging business development, technical analysis, resource planning and development modeling, economics, and public policy in the energy and environmental fields. Mr. Hibbard has provided technical and strategic advice to government, industry, business, public interest groups, and trade organizations on energy market structure, electric and natural gas infrastructure planning and siting, utility resource solicitation and procurement, emission allocation and environmental policy, renewable resource program design and administration, transmission pricing, climate change policy, utility ratemaking practices, and the transfer of US federal and state emission control programs to other countries.

Prior to joining Analysis Group, Mr. Hibbard was chairman of the Massachusetts Department of Public Utilities. During his tenure, he carried out a forward-looking ratemaking and policy agenda to advance energy efficiency and renewable resources, coordinate regional efforts in the development of energy resources and associated infrastructure, and promote the administration of fair and efficient transmission pricing models in regional and national contexts. He also has provided testimony on resource planning, competitive electricity markets, and transmission pricing in hearings before committees of the Massachusetts legislature and the US House of Representatives, the Federal Energy Regulatory Commission (FERC), and state and regional planning councils.

EDUCATION

M.S.	Energy and resources, University of California, Berkeley *Thesis: Safety and Environmental Hazards of Nuclear Reactor Designs* *(Ph.D. coursework in nuclear engineering)*
B.S.	Physics, University of Massachusetts Amherst

PROFESSIONAL EXPERIENCE

2010–Present	**Analysis Group, Inc.** *Principal (2015–Present)* *Vice President (2010–2015)*
2007–2010	**Massachusetts Department of Public Utilities** *Chairman* *Member, Energy Facilities Siting Board* *Manager, New England States Committee on Electricity (NESCOE)* *Treasurer, Executive Committee, Eastern Interconnect States' Planning Council*

2007–2010 **Massachusetts Department of Public Utilities** (continued)
Representative, New England Governors' Conference (NEGC)
Power Planning Committee
Member, National Association of Regulatory Utility Commissioners (NARUC)
Electricity Committee, Procurement Work Group

2003–2007 **Analysis Group, Inc.**
Vice President (2005–2007)
Manager (2003–2005)

2000–2003 **Lexecon Inc.**
Senior Consultant (2002–2003)
Consultant (2000–2002)

1998–2000 **Massachusetts Department of Environmental Protection**
Environmental Analyst

1991–1998 **Massachusetts Department of Public Utilities**
Senior Analyst, Electric Power Division

1988–1991 **University of California, Berkeley**
Research Assistant, Safety/Environmental Factors in Nuclear Designs

SELECTED PUBLIC-SECTOR EXPERIENCE (MASSACHUSETTS)

- ***Chairman, Department of Public Utilities***
  - Chaired the state's public utilities commission during a period of aggressive change in state policies affecting the electricity and natural gas industries, including initial implementation of several new state energy laws and initiatives restructuring the setting of utility rates, promoting the expansion of energy efficiency and demand response, facilitating the retail and wholesale market integration of renewable and low-carbon resources, and revising state policy on the siting of major generation and transmission infrastructure.
  - Oversaw the issuance of initial regulations and policy related to revenue decoupling, net metering, long-term contracting for renewables, and power system emergency planning and outage restoration.
  - Led Massachusetts's work with regulators across the Northeast to pursue large-scale renewable resource development through coordinated procurement strategies to develop coordinated positions related to national transmission development proposals and establish a regional presence on transmission-related provisions in federal legislation.
  - As chairman, served as the administrative and policy head of an agency of nearly 150 employees, and was responsible for agency management and growth, budgeting, legislative matters, press inquiries, and policy agenda-setting.
  - Oversaw the completion of all dockets jurisdictional to the department, including rate cases and associated tariff matters, forecast and supply planning for electric and natural gas industries, and state oversight of natural gas pipeline safety and public transit authorities.
  - Responsible for all interaction with the governor's office, legislature, and Executive Office of Energy and Environmental Affairs, as well as representing the state in regional deliberations related to electric and natural gas utility policy, electricity market design and oversight, and regional power system reliability issues.

- ***Member, Energy Facilities Siting Board***
  Sitting member of the state board responsible for reviewing all proposals for major generation and transmission infrastructure projects within the state, as well as state intervention in federal review of natural gas pipeline infrastructure. Review involved technical, environmental, and economic evaluation of jurisdictional power plants, transmission lines, and other energy infrastructure, as well as ruling on proposals for exemption from state and local zoning ordinances.
- ***Manager, NESCOE***
  State representative of the regional group chartered to develop New England regional policy positions on electricity market and transmission planning issues. Responsibilities included consideration of group development issues, input into regional determinations of the Installed Capacity Requirement, consideration of regional approaches to transmission planning and the consideration of non-transmission alternatives, and coordinated development of a regional RFP/RFI for the solicitation of renewable power under long-term contracts for the New England states.
- ***Treasurer, Executive Committee, Eastern Interconnection States' Planning Council***
  Elected treasurer of the steering committee for the state council formed under a US Department of Energy (DOE) grant to coordinate with power system operators on developing long-range plans for a transmission system spanning 41 states in the eastern US. Coordinated New England states' approach to policy issues stemming from council efforts.
- ***Representative, NEGC Power Planning Committee***
  Represented the governor's office in all discussions related to regional energy/environmental issues, including transmission cost allocation, regional energy policy coordination, and development of mechanisms for and approaches to procurement of renewable power through long-term contracts with sources in New England and eastern Canada. Engaged in collaborative discussions with counterparts representing the Eastern Canadian Premiers.

SELECTED CONSULTING EXPERIENCE

Government, Foundations, Commissions, and Cooperatives

- ***For the Natural Resources Defense Council (NRDC)*** – Coauthored a public report on the Clean Electricity Payment Program's (CEPP) positive impact on the US economy if adopted (2021).
- ***For Advanced Energy Economy (AEE)*** – Coauthored a public report on the potential economic impacts of applying stimulus funds to electrification of the US transportation sector using estimated spending levels from President Biden's American Jobs Plan (2021).
- ***For AEE*** – Coauthored a public report on the potential economic impacts of applying stimulus funds to develop advanced energy technologies, products, and services in the US using estimated spending levels from President Biden's American Jobs Plan (2021).
- ***For the Coalition for Green Capital*** – Coauthored a white paper examining the potential of the federally authorized Clean Energy and Sustainability Accelerator that could address economic and climate crises (2021).
- ***For AEE*** – Coauthored a series of public reports on the economic impacts in select states of potential stimulus spending on clean and advanced energy resources (2020).
- ***For a municipal association*** – Drafted a white paper related to the fuel mix and emission characteristics of the portfolio of generating assets and power contracts used by municipal electric light companies in Massachusetts (2020).
- ***For the Wellesley Municipal Light Plant (WMLP)*** – Coauthored two white papers on the greenhouse gas (GHG) impacts of the WMLP power portfolio, and considerations for the WMLP associated with achieving continued reductions in carbon emissions over the ensuing decades (2020).

- ***For the Georgetown Climate Center*** – Conducted a bill impact analysis related to Virginia's proposed implementation of a carbon cap-and-trade program (2018).
- ***For Energy New England*** – Provided strategic assistance on energy market and public policy issues in New England (2017).
- ***For the Environmental Defense Fund*** – Coauthored a white paper related to historical power system emission trends (2015).
- ***For the Massachusetts Attorney General*** – Coauthored a report evaluating electric and natural gas infrastructure in New England from the perspectives of reliability, cost, and GHG emissions (2015).
- ***For AEE*** – Coauthored a report on the status of the electric industry in the State of Ohio, and developed recommendations on state energy policy in consideration of the state's market and technological circumstances at the time.
- ***For the Energy Foundation and industry groups*** – Coauthored multiple white papers on the reliability, cost, and market efficiency impacts of the US Environmental Protection Agency's (EPA's) proposed regulations to control emissions of carbon dioxide from existing electric generating facilities. Presented results in numerous conference, stakeholder, and regulatory settings.
- ***For a foundation*** – Led a study of the economic impacts of a state clean energy policy (2013–2014).
- ***For the Massachusetts Department of Energy Resources –*** Provided testimony on the ratepayer and social benefits of reducing methane leaks from a local natural gas distribution company's system (2013).
- ***For AEE*** – Facilitated a regional symposium for the New England Conference of Public Utility Commissioners and staff related to advanced energy technology development and commercialization, and the legal and regulatory structures needed to facilitate integration of emerging technologies (2013).
- ***For the Regional Greenhouse Gas Initiative (RGGI)*** – Conducted a bill impact analysis related to changes to retail customer electric bills in New England, New York, and RGGI Pennsylvania, New Jersey, and Maryland Interconnection (PJM) states associated with various changes considered by RGGI to program cap level and use of allowance revenues (2012).
- ***For AEE*** – Participated in a project advising AEE with respect to its national program to support public utility commission consideration of policies and regulations related to the development and integration of advanced energy technologies (2012–2013).
- ***For the Merck Family Fund*** – Developed an interactive tool to compare the impacts of energy, economic, environmental, legislative, and regulatory policies and programs across the US (2012).
- ***For AEE*** – Coauthored a report on the perspectives of CEOs at advanced energy companies doing business in California on California's energy policies. Conducted over 30 interviews with energy business leaders to get perspectives and recommendations for policy changes (2012).
- ***For the Barr Foundation*** – Coauthored a report on the benefits and costs associated with reducing natural gas leaks on natural gas distribution systems through implementation of targeted infrastructure replacement ratemaking mechanisms in Massachusetts, Rhode Island, and Ohio. Developed a cost-benefit model to quantify the impacts of such programs (2012–2013).
- ***For the American Clean Skies Foundation*** – Developed a dispatch price and emissions model to forecast power system outcomes in the PJM Interconnection, Midwest Independent System Operator, and Southwest Power Pool regions (2012).
- ***For a national environmental organization*** – Conducted a comprehensive national review of energy efficiency monitoring and verification programs in order to support development of a protocol that

could be used to allow energy efficiency to be used as a compliance tool in national carbon emission control regimes (2012–2013).

- ***For the Merck Family Fund –*** Co-led a project to carry out an analysis of the economic impacts of the Northeast states' use of revenues collected from the auctioning of carbon allowances associated with RGGI (2011).
- ***For AEE –*** Developed background on electric industry structure, regional planning and market structures and operations, and state energy policy organization and initiatives. Assisted with the development of a web-based information platform (2011).
- ***For the American Clean Skies Foundation –*** Authored a paper on the redesign of wholesale electricity market structures to efficiently integrate a higher level of variable resources (2012). Coauthored a white paper examining electric reliability and air emission issues associated with the potential retirement of the Potomac River Generating Station in Alexandria, Virginia (2011).
- ***For the Public Service Commission of Colorado –*** Coauthored a white paper on the design of incentives for the photovoltaic (PV) solar energy market (2011).
- ***For a national environmental organization*** – Conducted an economic analysis of key US cities that were or had been in nonattainment under the National Ambient Air Quality Standards, to explore relationships between air quality control requirements and the local economy (2011).
- ***For a national environmental organization*** – Completed a comprehensive report on the full scope of energy efficiency and demand response programs administered by New York electric utilities and the New York Independent System Operator (NYISO). Assessed the potential for additional innovative programs to improve energy efficiency and demand response in New York City (2010).
- ***For the North Carolina Attorney General –*** Managed a project in support of expert testimony on the economic and financial feasibility of requiring the installation of controls to reduce emissions of sulfur dioxide, nitrogen oxides, and mercury from coal-fired power plants owned by the Tennessee Valley Authority (TVA). The project was in the context of a public nuisance lawsuit brought by the North Carolina Attorney General against TVA (2006).
- ***For the National Commission on Energy Policy –*** Authored white papers on (1) the implications for US energy infrastructure of the damage to Gulf Coast energy facilities from Hurricanes Katrina and Rita (2006); (2) the practical and economic implications of various mechanisms for the allocation of carbon dioxide emission allowances to the electric sector under potential federal carbon control regimes (2005); and (3) national energy infrastructure needs for the electricity, natural gas, and petroleum industries, and for addressing the long-term impacts of energy production and use associated with spent nuclear fuel and carbon dioxide (2004).
- ***For the Massachusetts Health and Educational Facilities Authority (MHEFA) PowerOptions Program*** – Managed several projects providing regulatory, economic, and strategic advice to PowerOptions to assist in their selection and pricing of retail electricity products from competitive electricity suppliers. Over a three-year period, projects included analyses of forward prices and wholesale markets for capacity and reserves; analysis of contract price options, terms, and conditions; and analysis of congestion pricing implications for retail supply (2002–2004).
- ***For the Energy Foundation*** – Coauthored a report (with Dr. Susan Tierney) documenting best practices in energy facility siting regulations in the US, and analyzing in particular the impact of California's energy facility siting process on that state's electricity crisis (2002). Supported a foundation-based program to provide international assistance to China's efforts to privatize and restructure its electric industry, and to develop regulations to control air emissions from power plants in that country (2000–2003).
- ***For the Massachusetts Technology Collaborative (MTC) –*** Managed projects in support of the MTC's renewable and premium power programs, including the (1) creation of a standard financial

pro-forma for wind and landfill gas technologies in New England under various assumptions related to capital and operating costs, financing, discount rates, and the impact of state and federal policies to support renewable development; (2) development of an economic model to determine the financial impact on potential wind and combined heat and power facilities of proposed changes to utility standby service tariffs; and (3) research, strategic, and regulatory support of MTC's efforts to advance distributed generation in Massachusetts to promote renewable resources and improve power reliability for commercial and industrial customers (2000–2002).

ENERGY INDUSTRY STAKEHOLDERS

- ***For PECO Energy*** – Provided testimony on traditional ratemaking principles as applied to PECO's cost of providing gas delivery service (2021).
- ***For the Hingham Municipal Lighting Plant (HMLP)*** – Conducted an internal evaluation of the impact of decarbonization of residential and commercial energy use in the town, and its effect on HMLP's investments and operations (2020).
- ***For a natural gas interstate pipeline company*** – Coauthored a white paper and presention showing options to decarbonize the company's operations. The study included an analysis of its GHG footprint, identification of options and pathways to reduce net GHG emissions from operations to zero over time, and the development of recommendations for senior management (2020).
- ***For Oracle Corporation*** – Conducted an analysis of and report on the GHG emission reduction impacts of various types of energy efficiency programs and measures, with a focus on the comparison of structural and behavioral energy efficiency programs (2020).
- ***For NYISO*** – Conducted a study of the parameters used as the basis to set the NYISO's installed capacity demand curves for the four capability years beginning with the summer 2021 capability period (2020).
- ***For NYISO*** – Conducted an internal study of the potential reliability impacts on the electric grid due to changes in system mix and operations associated with a changing climate, and with state programs to address climate change (2020).
- ***For NYISO*** – Conducted a study of the potential risks to New York power system operations associated with an increased reliance on natural gas for power generation (2020).
- ***For Commonwealth Edison*** – Provided testimony on issues associated with a request for a certificate of public convenience and necessity by NextEra related to the proposed acquisition of the transmission assets of Rochelle Municipal Utilities (2020).
- ***For Repsol Energy North America*** – Provided strategic assistance related to the potential impacts of electric system market rules and public policy on the potential marketability of liquefied natural gas (LNG) in New England (2020).
- ***For Liberty Utilities*** – Provided testimony on the need for and economic and environmental impacts of the proposed Granite Bridge pipeline and LNG project in the State of New Hampshire (2020).
- ***For NYISO*** – Coauthored a white paper for NYISO on the potential impacts of a proposed carbon pricing mechanism in New York on power prices; energy policy; and economic, environmental, and public health impacts in New York (2020).
- ***For NTE Energy*** – Provided testimony before the Connecticut Siting Council on the need for and potential benefits associated with a proposed new natural gas-fired power plant in the State of Connecticut (2020).
- ***AltaGas*** – Provided testimony before the Maryland and District of Columbia public utility commissions on the potential environmental impacts of a proposed merger between AltaGas and Washington Gas (2017–2018).

- ***For Calpine Corporation*** – Coauthored a white paper on the design of a proposed carbon trading mechanism in Massachusetts (2017).
- ***For Vermont Gas*** – Provided testimony on the prudence of Vermont Gas' decisions and investments with respect to the Addison natural gas project (2017).
- ***For the Vermont Electric Power Company (VELCO)*** – Coauthored a white paper on VELCO's capital structure associated with its transmission assets and operations (2016).
- ***For the Merck Family Fund*** – Coauthored a white paper on economic principles associated with the trading of emission allowances associated with RGGI (2016).
- ***For a consortium of solar companies*** – Developed a white paper on the appropriate evaluation and treatment of behind-the-meter solar PV generation from the perspective of net metering policies in Massachusetts (2015).
- ***For a group of owners of electric generating facilities*** – Developed a comprehensive quantitative and qualitative critique of a utility proposal to invest in electricity storage capability in the State of Texas. Drafted a report for circulation to legislative, regulatory, and market interests stating the results of the critique and analysis (2015).
- ***For an energy resource developer*** – Conducted a financial and ratepayer analysis of the benefits of a project to develop a power plant and natural gas pipeline in the State of Maine. Submitted testimony to the Maine Public Utilities Commission describing the results (2014–2015).
- ***For an energy storage company*** – Developed an optimization analysis to evaluate the security, reliability, economic, and environmental benefits and costs of multiple battery storage installations across the Hawaiian Islands in different industry settings (renewable generator, island utility, military base, hotel/resort). Drafted a report presenting the results, considering the state's unique energy price and fuel security context (2014–2015).
- ***For NYISO*** – Developed a model to compare cost, resource, and emission outcomes of alternative designs for a capacity market in the State of New York. Coauthored a report presenting the results of the analysis and a comprehensive review of the benefits and drawbacks of moving from a spot to a forward capacity market (FCM) structure. Presented results to NYISO senior management and several meetings of New York electricity market participants and stakeholders (2014–2015).
- ***For multiple regional transmission organizations (RTOs)*** – Provided strategic support at the board-of-director and senior-management levels for considering the changing structures of retail regulation and wholesale market incentives within their regions (2014–2015).
- ***For Calpine Corporation –*** Provided testimony on the costs and benefits of different proposals for generation capacity in Florida (2014).
- ***For an RTO*** – Conducted an internal analysis of the financial risk associated with the RTO's position in administering the trading of power system transmission rights (2014).
- ***For a regional transmission operator*** – Conducted a top-to-bottom review of the content and design of the RTO's Rate Schedule 1 tariff for the collection of operational costs from market participants. Presented results of the analysis to the RTO's board of directors and senior management (2014).
- ***For a retail electricity supplier*** – Provided analytic and strategic support with respect to the supplier's participation in a state regulatory proceeding related to changing the nature of and rate structure for electric distribution service (2014).
- ***For Ambri Inc. –*** Led a study of the economic feasibility of using battery storage in conjunction with wind and solar for a micro-grid application (2013–2014).
- ***For Calpine Corporation –*** Provided testimony on the costs and benefits of different proposals for generation capacity in Minnesota (2013).

- ***For the New England Independent System Operator (ISO-NE) –*** Assisted on several projects related to addressing the codependence of electric and natural gas systems in New England through a mix of short- and long-term market rule changes and administrative actions. Assistance included review of market structures to improve unit performance, particularly under stressed natural gas system conditions; quantification of the costs of potential natural gas and electric system infrastructure, and contractual responses to market rules and administrative actions (e.g., dual-fuel capability, new pipeline investment, LNG purchasing, and firm natural gas transportation agreements); and assistance with a series of discussions between ISO-NE and regional electricity and natural gas market participants. Also quantified the potential benefits of improved performance associated with reduced system interruptions (2012–2013).
- ***For the ISO-NE*** – Developed an economic supply/demand model of the FCM to estimate the cost impact of integrating a new long-term performance incentive design element into the FCM auctions and pricing structure (2012–2013).
- ***For Calpine Corporation*** – Filed a report with the EPA on the impact of emergency generation demand response programs on the costs and emissions associated with power system dispatch in the PJM electricity market (2012).
- ***For the ISO-NE*** – Organized and helped lead a strategic planning initiative to address unit retirement, fuel mix, operational performance, and wind resource integration issues. Oversaw comprehensive generating unit performance analysis and electric-gas system risk review. Conducted a thorough internal risk assessment and key-challenge solution development. Facilitated meetings and developed organizational and concept documents to explore outcomes and assist in deliberations with states and regional industry stakeholders, and participated in external meetings to gain input and feedback (2010–2012).
- ***For an RTO*** – Conducted a top-to-bottom review of its external market monitoring function and a comprehensive best-practices survey of all internal and external market monitoring functions at US RTOs and independent system operators (ISOs) (2012).
- ***For a wind power development company*** – Conducted a regional review of wind power development projects and an assessment of potentially valuable projects for acquisition based on power system location and siting viability (2012).
- ***For an energy services company –*** Oversaw and conducted an analysis of business, legal, and regulatory conditions related to a legal dispute over the legitimacy of a contract for energy and water management services. Coauthored a report to be used in the development of legal strategy and legal proceedings (2012).
- ***For an international power company*** – Conducted a review of a regional utility's compliance with the FERC requirements for transmission open access, and developed strategies for the filing of complaints of anticompetitive conduct before the FERC (2011–2012).
- ***For an RTO*** – Comprehensively reviewed and suggested changes to the design of regional market structures; oversaw data review and analysis related to key market design features and asset performance (2011).
- ***For Direct Energy*** – Assisted with the development of strategies to increase retail choice in Pennsylvania, including the design of an opt-in descending-clock auction to increase migration from default service to competitive supply. Prepared comments and analysis on utility contract structures. Provided testimony before the Pennsylvania Public Utilities Commission (2011).
- ***For Algonquin Gas*** – Submitted affidavits and testified in bankruptcy court on the impact on power plant value of changes in market rules related to the FCM in New England. Also provided testimony on the impact on power system reliability of the availability of firm transportation contracts for natural gas supplied to power plants in New England (2010).

- ***For an RTO*** – Conducted a best-practices and performance metrics analysis to benchmark the ISO's performance against industry peers with respect to responsiveness to consumers, stakeholders, and policymakers. Drafted a report with comprehensive benchmarking and performance metric recommendations; participated in stakeholder discussions (2010).
- ***For a power generators trade association*** – Developed and facilitated an all-day group discussion concerning key economic, environmental, legal, and policy challenges to the economic viability of existing and new power generation capacity in regional wholesale electricity markets (2010).
- ***For a coalition of electric companies*** – Coauthored the report "Ensuring a Clean, Modern Electric Generating Fleet while Maintaining Electric System Reliability," which reviewed the impact on power plant operations of proposed EPA rules to reduce emissions of sulfur dioxide, nitrogen oxides, mercury, and other hazardous air pollutants. Presented findings to numerous regional and national industry and regulatory groups (2010).
- ***For an industry coalition*** – Conducted a study and coauthored a white paper (with Dr. Susan Tierney) for the New England Energy Alliance on New England energy infrastructure needs and policy issues (e.g., facility siting policies, RGGI/climate change) influencing the future addition of energy infrastructure in the region (2006).
- ***For an interstate pipeline company and offshore LNG developer*** – Authored a report related to recent developments in the supply and demand for natural gas in New England, and surveyed the development, regulatory, and commercial status of proposed LNG projects across the US (2006); coauthored a report (with Susan Tierney) providing an overview of Northeastern natural gas markets and conditions, and an assessment of natural gas supply and demand conditions (2005).
- ***For independent system operators*** – Managed several projects and coauthored reports or analyses for the Northeast region's ISOs/RTOs related to ISO/RTO annual strategic plans; market monitoring and mitigation best practices; and the links between wholesale electricity markets and local distribution company retail prices (2002–2006).
- ***For electric utilities*** – Managed or participated in numerous engagements with wires-only as well as vertically integrated electric utilities within New England and across the country related to rate case strategy and regulatory support; strategic planning; power supply resource planning and procurement (including the role of independent monitor of utility procurements); price and environmental analyses related to the siting of new high-voltage transmission lines; and evaluation of the allocation of SO_2 and NO_x emission allowances under the EPA Clean Air Interstate Rule (CAIR) program (2001–2006).
- ***For a developer of a land-based LNG facility –*** Assisted in the preparation of confidential reports on US natural gas supply/demand conditions, market pricing indices, US LNG facilities' status, Northeast interstate and intrastate pipeline infrastructure conditions and prospects, and LNG supply contract prices, terms, and conditions (2006).
- ***For retail energy providers*** – Managed projects and authored or coauthored confidential reports on the experience with retail competition in the US, a benefit/cost analysis of wholesale electricity competition, and comparative analyses of retail electricity prices for utility and competitive retail suppliers in select states (2004–2006).
- ***For merchant generating companies/coalitions*** – Managed production cost dispatching analyses for strategic planning related to the construction of new generating capacity in New England; assisted in the development of regulatory proposals for new wholesale market organizations and policies in New England (2001–2002).
- ***For a major interstate pipeline owner/operator –*** Modeled the electrical load characteristics of pipeline operations and utility rate structures to quantify the extent to which the company was being overcharged for electricity services. Supported company intervention in public utility commission proceedings and with analytical support in settlement negotiations (2002).

- ***For a renewable power developer association*** – Provided testimony on the potential negative effects – and remedial policy options – related to the impact of locational marginal pricing on the development and operation of renewable generating resources in New England (2001).

OTHER PROFESSIONAL ACTIVITIES

AEE
Advisory Board (2011)

SELECTED REPORTS, TESTIMONY, PUBLICATIONS, AND PRESENTATIONS

Testimony of Paul J. Hibbard before the Rhode Island Public Utilities Commission, Docket No. 22-20-NG on behalf of The Narragansett Electric Company, d/b/a Rhode Island Energy (September 1, 2022)

Answering Testimony of Paul J. Hibbard before FERC, Docket No. ER20-2441-002 on behalf of McKenzie Electric Cooperative, Inc. (July 15, 2022)

Testimony of Paul J. Hibbard before the US District Court, Southern District of Florida, Ft. Lauderdale Division on behalf of Simon Property Group et al., Case No. 0:20-cv-60981-AMC (June 6, 2022)

Methane Reduction Technology Electricity and Abatement Costs: The Cost to Power Zero-Emission Pneumatic Controllers and Pumps in Grid-Connected and Remote Locations, with Scott Ario and Elisa Gan (May 6, 2022)

Affidavit of Paul Hibbard and Charles Wu before FERC, Docket No. ER22-772-000 on behalf of NYISO (January 5, 2022)

Modifications to the BSM Construct in the NYISO Capacity Market: Analysis of Potential Capacity Market Competitiveness and Reliability Outcomes, with Charles Wu (December 2021)

Economic Impact of a Clean Electricity Payment Program, with Pavel Darling and Luke Daniels (September 2021)

"Why Hydrogen?," presentation during the EBC Energy Resources Webinar: Future of Green Hydrogen – Earthshot Effort to Meet the Needs of Climate Change (September 30, 2021)

"Decarbonization and The Power System," presentation during the Northeast Public Power Association RodE&O Conference and Expo, Engineering Track (September 22, 2021)

"Net Zero Carbon: What Is It and What Should It Be?," presentation during the LDC Gas Forum (September 14, 2021)

"Net Zero Carbon: What Is It and What Should It Be?," presentation during the NEPPA Annual Conference, General Session (August 23–24, 2021)

"Motivating Customers to Decarbonize with an Eye Toward Equity," presentation during the 2021 NARUC Summer Policy Summit (July 18, 2021)

Economic Impact of Stimulus Investment in Advanced Energy for America, with Pavel Darling (June 2021)

Economic Impact of Stimulus Investment in Transportation Electrification, with Pavel Darling (June 2021)

"A Step Through the Looking Glass – Outlook for Natural Gas in the Northeast," Webinar for the Northeast Gas Association (NGA) Regional Market Trends Forum, What are the Market Pathways and Their Various Implications (April 29, 2021)

Accelerating Job Growth and an Equitable Low-Carbon Energy Transition: The Role of the Clean Energy Accelerator, with Susan F. Tierney (January 2021)

"Carbon Pricing: This Is the Way," presentation on a plenary panel to the New England Restructuring Roundtable (December 11, 2020)

"Approaches to Meeting Decarbonization Mandates: Important Decisions with Cost, Equity, and Reliability Implications," presentation during the EUCI Decarbonization Summit on state decarbonization opportunities (December 9, 2020)

"Approaches to Meeting Decarbonization Mandates: Important Decisions with Cost, Equity, and Reliability Implications," presentation during the New England Energy Summit on state decarbonization opportunities (November 23, 2020)

Affidavit of Paul J. Hibbard before FERC, Docket No. ER21-502-000 on behalf of NYISO (November 30, 2020)

Economic Impact of Stimulus Investment in Advanced Energy (series of 10 state-specific reports), with Pavel G. Darling (September–October 2020)

Climate Change Impact and Resilience Study – Phase II: An Assessment of Climate Change Impacts on Power System Reliability in New York State, with Charles Wu, Hannah Krovetz, Tyler Farrell, and Jessica Landry (September 2020)

Presented virtually at the Annual NECA Conference on how New England can transition away from fossil fuels, as well as the costs, reliability, and societal implications of moving toward low-carbon alternatives (September 30, 2020)

Independent Consultant Study to Establish New York ICAP Demand Curve Parameters for the 2021/2022 through 2024/2025 Capability Years – Final Report, with Todd Schatzki, Charles Wu, Christopher Llop, Matthew Lind, Kiernan McInerney, and Stephanie Villarreal (September 9, 2020)

Utility energy efficiency program performance from a climate change perspective: A comparison of structural and behavioral programs, with Jonathan Baker, Mona Birjandi-Feriz, and Hannah Krovetz (August 2020)

"Energy Efficiency for Climate, Not Ratepayers," presentation on a plenary panel to the American Council for an Energy-Efficient Economy (ACEEE) Summer Study Session (August 19, 2020)

For the New England Power Generators Association (NEPGA), coauthored a report assessing the potential use of carbon pricing in New England; the analysis applied tested industry models to identify effective and efficient economy-wide pricing of carbon dioxide (CO_2) emissions consistent with New England states' GHG emission reduction targets (June 23, 2020)

Carbon Pricing for New England: Context, Key Factors, and Impacts, with Joseph Cavicchi (June 2020)

"Decarbonization and Wholesale Markets in New England – Looking Ahead: Achieving 80% GHG Reduction by 2050," presentation on a plenary panel to the Association of Energy Engineers Conference, "ISO-NE in 2050: Getting to an advanced energy future in New England," Boston, MA (March 18, 2020)

"Decarbonization and Natural Gas in the Northeast," panel moderator and presenter at the EUCI conference on Natural Gas Decarbonization, Denver, CO (January 22–23, 2020)

Fuel and Energy Security in New York State: An Assessment of Winter Operational Risks for a Power System in Transition, with Charles Wu (November 2019)

Clean Energy in New York State: The Role and Economic Impacts of a Carbon Price in NYISO's Wholesale Electricity Markets, with Susan F. Tierney (October 2019)

"Natural Gas in Power Generation: Role Going Forward," 7th Annual Maine Natural Gas Conference to discuss power generation in the New England region. Falmouth, ME (October 3, 2019)

Direct Testimony of Paul J. Hibbard before the New Hampshire Public Utilities Commission on the need for and economic and environmental impacts of proposed Liberty Utilities Granite Bridge pipeline and LNG project, Docket No. DG 17-152 (June 28, 2019)

Rebuttal Testimony on Reopening of Paul J. Hibbard before the Illinois Commerce Commission on Behalf of Commonwealth Edison, Docket No. 18-0843 (May 31, 2019)

Pre-filed Testimony of Paul J. Hibbard before the Connecticut Siting Council on behalf of NTE Connecticut LLC, Docket No. 470 (January 18, 2019)

Vehicle Fuel-Economy and Air Pollution Standards: A Literature Review of the Rebound Effect, with Susan F. Tierney, Benjamin Dalzell, Grace Howland, Jonathan Baker, Tom Beckford, Sarah Centanni, Asie Makarova, and Scott Ario (June 28, 2018)

"An Expanding Carbon Cap-and-trade Regime? A Decade of Experience with RGGI Charts a Path Forward," with Susan F. Tierney and Pavel G. Darling, *The Electricity Journal* (June 2018)

Testimony of Paul J. Hibbard before the District of Columbia on behalf of AltaGas, Case No. 1142 (May 25, 2018)

The Economic Impacts of the Regional Greenhouse Gas Initiative on Nine Northeast and Mid-Atlantic States, review of RGGI's third three-year compliance period (2015–2017), with Susan F. Tierney, Pavel G. Darling, and Sarah Cullinan (April 2018)

Post-Settlement Testimony of Paul J. Hibbard before the Maryland Public Service Commission on behalf of AltaGas, Case No. 9449 (January 5, 2018)

Rebuttal Testimony of Paul J. Hibbard before the Public Service Commission of the District of Columbia on behalf of AltaGas, Formal Case No. 1142 (October 27, 2017)

Capacity Resource Performance in NYISO Markets: An Assessment of Wholesale Market Options, with Todd Schatski and Sarah Bolthrunis (November 2017)

RGGI and Emissions Allowance Trading: Options for Voluntary Cooperation Among RGGI and Non-RGGI States, with Ellery Berk (July 2017)

"Analytical Issues in Linking," presentation on Virginia and the Regional Greenhouse Gas Initiative, Virginia Commonwealth University, Richmond, VA (July 12, 2017)

Electricity Markets, Reliability and the Evolving U.S. Power System, with Susan Tierney and Katherine Franklin (June 2017)

"Storage and Microgrids – New Applications," panel presentation during the Electricity Advisory Committee's Energy Storage Session (June 8, 2017)

Supplemental Affidavit of Paul J. Hibbard before FERC, Docket No. ER17-386-000 on behalf of NYISO (December 18, 2016)

Affidavit of Paul J. Hibbard before FERC, Docket No. ER17-386-000 on behalf of NYISO (November 18, 2016)

Evaluation of Vermont Transco, LLC Capital Structure, with Craig Aubuchon and Mike Cliff (October 2016)

Rebuttal Testimony of Paul J. Hibbard before the State of Vermont Public Service Board on behalf of Vermont Gas Systems Inc., Docket Nos. 8698 and 8710 (September 26, 2016)

RGGI and CO_2 Emissions Trading Under the Clean Power Plan: Options for Trading Among Generating Units in RGGI and Other States, Susan Tierney and Ellery Berk (July 12, 2016)

Affidavit of Paul J. Hibbard before the FERC, Docket No. ER16-1751-000 on behalf of the NYISO (May 20, 2016)

Declaration of Paul J. Hibbard and Andrea M. Okie in the US Court of Appeals for the District of Columbia Circuit, Case No. 15-1363 (and consolidated cases) on behalf of multiple parties (December 8, 2015)

Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas, report for the Massachusetts Office of the Attorney General, with Craig Aubuchon (November 2015)

Testimony of Paul J. Hibbard before the Senate Committee on Global Warming and Climate Change, *Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas* (November 24, 2015)

The Economic Impacts of the Regional Greenhouse Gas Initiative on Nine Northeast and Mid-Altantic States, review of RGGI's Second Three-Year Compliance Period (2012–2014), with Andrea Okie, Susan Tierney, and Pavel Darling (July 14, 2015)

Electric System Reliability and EPA's Clean Power Plan: The Case of MISO, report for the Energy Foundation, with Susan Tierney and Craig Aubuchon (June 8, 2015)

Net Metering in the Commonwealth of Massachusetts: A Framework for Evaluation (May 2015)

NYISO Capacity Market: Evaluation of Options, report for the NYISO, with Todd Schatzki, Craig Aubuchon, and Charles Wu (May 2015)

Ohio's Electricity Future: Assessment of Context and Options, report for Advanced Energy Economy, with Andrea Okie (April 2015)

Electric System Reliability and EPA's Clean Power Plan: The Case of PJM, report for the Energy Foundation, with Susan Tierney and Craig Aubuchon (March 16, 2015)

Electric System Reliability and EPA's Clean Power Plan: Tools and Practices, report for the Energy Foundation, with Susan Tierney and Craig Aubuchon (February 2015)

Tools States Can Utilize for Managing Compliance Costs and the Distribution of Economic Benefits to Consumers Under EPA's Clean Power Plan, Electricity Forum, with Andrea Okie and Susan Tierney (February 2015)

The Economic Potential of Energy Efficiency, report for the Environmental Defense Fund, with Katherine Franklin and Andrea Okie (December 2014)

DATE SERVED: September 26, 2024 **Aqua Statement No. 5-SR**
DATE ADMITTED: _____

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: AQUA PENNSYLVANIA, INC.
DOCKET R-2024-3047822 AND R-2024-3047824

SURREBUTTAL TESTIMONY OF CONSTANCE E. HEPPENSTALL

Q. Please state your name and address.

A. My name is Constance E. Heppenstall. My business address is 1010 Adams Avenue, Audubon, Pennsylvania.

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Are you the same Constance E. Heppenstall who submitted direct and rebuttal testimony in this case?

A. Yes. I submitted Aqua Statement No. 5 and Exhibit Nos. 5-A Part I and 5-B, Part I and Aqua Statement No. 5-R and Exhibits Nos. CEH-1-R, CEH-2-R and CEH-3-R.

Q. What is the purpose of your surrebuttal testimony in this proceeding?

A. I will address the rate design issue raised in the rebuttal testimony of Pennsylvania Office of Small Business Advocate ("OSBA") Witness Roger Cathcart and the supplemental direct testimony of Office of Consumer Advocate ("OCA") Witness Christine Maloni Hoover.

Surrebuttal of OSBA Witness Roger Cathcart

Q. Did Mr. Cathcart comment on the OCA Witness Mierzwa's recommendation for the volumetric charge for Bunker Hill, Sun Valley and Phoenixville areas?

A. Yes, Mr. Cathcart agrees with limiting the increases for these areas.

For the Bunker Hill, Sun Valley and Phoenixville areas, he proposes limiting the increases to 35.1%, rather than 60% increase recommended by Mr. Mierzwa and the 75% increase recommended by the Company. OSBA Cathcart Rebuttal, at p. 5.

Q. How do you respond?

A. I disagree. As I stated in my rebuttal testimony, these areas have very low rates as compared to Rate Zone 1. The average residential bill under present rates ranges from $23.66 per month for Phoenixville to $40.26 per month for Bunker Hill. In comparison, the average monthly bill for Rate Zone 1 residential customers is presently $80.91. As these areas have been part of the system through several rate cases (Bunker Hill was acquired in 2015, Sun Valley in 2018 and Phoenixville in 2019), a larger increase is warranted to move their rates closer to Rate Zone 1 rates. If the goal is single tariff pricing, a 35% increase for these customers is insufficient to move toward consolidation. For example, if the Bunker Hill residential monthly bill is increased by 35% in this case, then again in the next rate case, the rate would be only $73.40, well below Rate Zone 1 customer bills under current present rates of $80.91 ($40.26 X 1.35^2 = $73.37).

Q. If proposed rates are reduced for Phoenixville, Bunker Hill and Sun Valley, does that increase the rates for other water customers?

A. Yes, any decrease to these customers' proposed rates would result in a larger increase for other water customers, who already pay much more than the customers in Bunker Hill, Phoenixville and Sun Valley, and even further frustrate the goal of single tariff pricing. The Company recommends that the Commission

reject OSBA's recommendation regarding the rate increase for Bunker Hill, Phoenixville and Sun Valley.

Supplement Direct Testimony of OCA Witness Christine Hoover

Q. What is the purpose of Ms. Hoover's supplemental direct testimony?

A. Ms. Hoover's supplemental direct testimony presents and summarizes testimony by the Company's customers submitted at the public input hearings regarding the Company's proposed rate increase.

Q. Which portion of Ms. Hoover's testimony will you discuss?

A. I would like to focus on Ms. Hoover's discussion of customer complaints regarding flat rate wastewater charges beginning on page 5 of her supplemental direct testimony.

Q. Which of the Company's customers are billed based on a flat rate?

A. The Company only bills a customer based on a flat rate if it does not have the customer's water usage data, based on meter readings. This lack of data could be due to the customer being on private well service or receiving water service from an entity who does not supply the water metering data to the Company.

Q. What is your concern regarding Ms. Hoover's testimony?

A. My concern is that it is evident that many of the customers that Ms. Hoover cites in her testimony regarding complaints about flat rate charges are not actually billed using a flat rate but are billed on water usage for water and/or wastewater service.

Q. Please elaborate.

A. Ms. Hoover cites the testimony of Christine Maddalo (Tr. 103) as an example of a

customer being unhappy with their flat rate charge, but it appears that this customer is a metered customer and pays the Company for both water and wastewater service. Ms. Hoover quotes the following “she does not wash her car or use hose that much to avoid a large bill” (page 6), so evidently her usage is metered as her bill rises when she washes her car. If she were a flat rate customer, her bill would not change with usage. I am not discounting Ms. Maddalo’s concerns, but it appears that her concerns are not regarding a flat rate for her wastewater service. The Company has confirmed that she is actually not a flat rate customer.

Ms. Hoover also cites the testimony of Fran Kingsley (Tr. 155) on page 6. Again, this customer does not appear to be a flat rate customer as she is concerned about the water used outside of her home, so evidently her water usage is metered, and her water usage is used to calculate her wastewater bill. The Company has confirmed that she is not a flat rate customer.

Again, Ms. Hoover cites the testimony of Joseph Casey (Tr. 204) and he complains that that he is charged for sewer service based on water usage, so evidently he is also not a flat rate customer. The same is true for the testimony of Frank Donovan (Tr 404-405) and John Muscari (Tr. 377-379), cited by Ms. Hoover on page 6. These customers complain that their sewer bills are based on their water usage, so they cannot be flat rate customers. The Company has confirmed that these customers are not flat rate customers. Ms. Hoover also cites the testimony of Ron Dungey and, as he can point out the portion of his bill related to water usage, he also must be a metered customer, not a flat rate

customer. A flat rate customer is billed as one amount, so it would not be possible to note the portion of the bill related to water usage. The Company has confirmed that Mr. Dungey is not a flat rate customer.

Ms. Hoover cites the testimony of Kathryn Barto (Tr. 584) and it appears that Ms. Barto is in the New Garden area and is not flat a rate customer. This has been confirmed by the Company. On page 8, Ms. Hoover cites the testimony of Sandy Ponticello (Tr. 743) who is complaining that her sewer bill is based on her water consumption. It is evident that Ms. Ponticello is not a flat rate customer as her water is metered and her sewer bill is based on that water usage. Also on page 8, Ms. Hoover cites the testimony of Raymond Sadowniczak (Tr. 776) who was also at the hearing to complain about metering. Therefore Mr. Sadowniczak cannot be a flat rate customer. The Company has confirmed that both Ms. Ponticello and Mr. Sadowniczak are not flat rate customers.

Q. Please summarize your concern with Ms. Hoover's supplemental direct testimony.

A. I am concerned that she has misrepresented the above customers' concerns. Out of the sixteen witnesses that she cites from the public hearing, based on their testimony, only seven are billed based on a flat rate. My testimony is not meant to discount the customer concerns above, but to point out that Ms. Hoover seems to mischaracterize their concerns to bolster her testimony regarding flat rate billing.

Q. As an aside, many of the customers she cites complain about their

wastewater bill being based on their water consumption. Is this type of billing standard practice?

A. Yes, in my experience, most wastewater bills are based on water consumption when the water consumption data is available, as metering wastewater flow is difficult and not reliable. See the rebuttal testimony of Aqua Pennsylvania Witness Todd M. Duerr for further discussion regarding this issue.

Q. How does a wastewater utility typically bill for wastewater service if water consumption is not available?

A. Again, in my experience of performing cost of service and rate design studies since 2006, the only equitable way to bill these customers is based on a flat rate which is calculated based on the rates for metered customers and using an assumed average usage. It is understood that some customers will use less water than the average, and some will use more water than the average, but without detailed metering data, this method is the only fair alternative.

Q. Did the Company study this issue prior to its rate filing?

A. Yes, per the request of the Commission in the order from the prior case, the Company reviewed the process of setting the level of flat rates. As Company Witness Manning stated in his rebuttal testimony on page 24, the analysis (that was undertook prior to the filing) was provided in response to a data request. This analysis is included as Exhibit CEM-4-R to Mr. Manning's rebuttal testimony and shows the average usage by customer class by rate division for use in calculating the monthly flat rate charge. As I stated before, the method of calculating a flat rate is standardized, and based on metered customers'

customer charge plus the volumetric charge multiplied by the average monthly customer usage. This standardized method is used by other water utilities in the Commonwealth.

Q. Ms. Hoover recommends that "(c)onsidering the public hearing testimony on flat wastewater rate issues that the Company submit a study regarding flat wastewater rates within 30 days of the end of the suspension period" (page 9) with additional meetings including a working group, etc. Please comment.

A. First, identifying that the level and calculation of wastewater flat rates as a large issue in this rate case proceeding is misleading. Of the 173 witnesses who participated in the public hearings, Ms. Hoover only found seven (though she listed sixteen) that mentioned flat rate billing as an issue. In fact, only 4,806 out of 52,809 of the Company's total wastewater customers are flat rate customers (less than 10%) and 2,097 of these flat rate customers are in Rate Zone 4, which received a minimal increase under proposed rates. Second, the content of the study would only reiterate what has already been stated by the Company in this rate case, that the method of determining a flat rate is straightforward (customer charge plus volumetric rate X average usage). I recommend that Ms. Hoover's recommendation be rejected.

Q. Finally, if the proposed flat rates are reduced for these customers, does that increase the rates for other water customers?

A. Yes, any decrease to the proposed flat rates for these customers would result in a larger increase for other wastewater customers.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does

BEFORE THE

PENNSYLVANIA PUBLIC UTILITY COMMISSION

PREPARED SURREBUTTAL TESTIMONY OF TODD M. DUERR P.E., L.O.

Topics Addressed:

Additional Public Input Hearing Responses

DATE SERVED: September 26, 2024 **Aqua Statement No. 11-SR**
DATE ADMITTED: _____

TABLE OF CONTENTS

I. INTRODUCTION AND SCOPE OF TESTIMONY 1

II. PUBLIC INPUT HEARINGS RESPONSE 2

III. CONCLUSION.....6

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. Please state your name and business address.

A. My name is Todd Duerr. My business address is 762 W. Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Aqua Pennsylvania, Inc., ("AP") as Vice President of Operations.

Q. Have you previously provided testimony in this proceeding?

A. Yes. I provided Direct Testimony on behalf of AP and Aqua Pennsylvania Wastewater, Inc. ("APW") (collectively "Aqua," or the "Company") as Statement No. 11 with the Company's filing to the Pennsylvania Public Utility Commission ("PUC" or the "Commission") and Rebuttal Testimony as Statement 11-R.

Q. What is the purpose of your Surrebuttal Testimony?

A. The purpose of my Surrebuttal Testimony is to address the Supplemental Direct Testimony of Office of Consumer Advocate ("OCA") Witness Christine M. Hoover (OCA Statement No. 1 (Supplemental Direct)) related to various customer issues raised during this proceeding, particularly those issues raised at the various public input hearings. In my Rebuttal Testimony, Aqua Statement 11-R and in Aqua Exhibit TMD-1-R to my Rebuttal Testimony, I addressed a number of customer issues raised at the public input hearings. I also broadly addressed issues surrounding billing for a subset of our wastewater customers. I will not repeat that testimony here. However, Witness Hoover referenced some customers that the Company did not individually follow up with. I will address those limited number of customers identified by Ms. Hoover in my Surrebuttal Testimony.

Q. Are you including any other exhibits with your Surrebuttal Testimony?

A. Yes. Included with my Surrebuttal Testimony is Aqua Exhibit TMD-1-SR and TMD-2-SR.

II. PUBLIC INPUT HEARINGS RESPONSE

Q. How will you be addressing the additional customer public input testimony included in Ms. Hoover's Supplemental Direct?

A. We appreciate all the customers who testified at the public input hearings to express their thoughts concerning the Company and its proposed rates. The Company reviewed all the comments made at the public input hearings and endeavored to follow-up with customers to address any specific questions or issues. Aqua Exhibit TMD-1-R to my Rebuttal Testimony addresses several specific customer service issues raised at the public input hearings. Aqua Exhibit TMD-1-SR addresses additional customer concerns raised by Witness Hoover except for a couple of exceptions that are more easily responded to below. For any customer listed by Ms. Hoover addressing an affordability issue, we have reached out to those customers via U.S. mail to provide information on ways to help address affordability concerns. Copies of the letters are available if needed. The details of the customer assistance program ("CAP") are discussed in more detail in the Direct and Rebuttal Testimonies of Rita F. Black (Aqua Statement No. 13 and 13-R). The Company also followed up with customers where a CAP enrollment could be utilized as stated in Exhibit TMD-1-R.

Q. Are you aware of the concern raised by customer Mr. Gage at the telephonic Public Input Hearing?

A. Yes.

Q. Can you explain Mr. Gage's concern?

A. Mr. Gage's concerns are about high pressures in his home. Mr. Gage has participated in Aqua 2021 Base Rate Case[1] and in the AP's midpoint review of its Long-Term Infrastructure Improvement Plan ("LTIIP").[2]

Q. Is this a new concern or something that Mr. Gage has raised in the prior proceedings?

A. First, we appreciate Mr. Gage's participation in this case and in the prior proceedings. Mr. Gage has raised his concerns in prior proceedings and the Company responded to his concerns. One item that Mr. Gage referenced is his several previous complaints concerning damages caused by the water pressure at his home. Richard Gage is a water customer located on Treaty Drive in Chesterbrook who filed a formal complaint in response to the rate application filing and testified twice both at the telephonic public input hearings held on August 14 at 1 p.m. and 6 p.m. In the Aqua *2021 Rate Case*, the Company addressed its history with Mr. Gage—as a part of my rebuttal testimony in that case—and I will restate what occurred. The Company has been in contact with this customer on a number of occasions and, in all interactions, has attempted to resolve Mr. Gage's issues. In 2008, Mr. Gage filed his first complaint as part of that rate case[3] alleging high water pressure concerns. The Company, in good faith, entered into settlement negotiations and arrived at a mutually acceptable resolution of his pressure-related issue and Mr. Gage executed a release confirming that the Company had addressed the same. Twelve years later, Mr. Gage filed a second formal complaint in 2020 and the Company again engaged in good

[1] *Pa. PUC, et al. v. Aqua Pennsylvania, Inc., et al.*, Docket Nos. R-2021-3027385, R-2021-3027386, et al. (*"2021 Rate Case"*).
[2] Periodic Review of Aqua Pennsylvania, Inc.'s Long-Term Infrastructure Improvement Plan, Docket No. M-2022-3031218.
[3] *See Pa. PUC, et al., v. Aqua Pennsylvania, Inc.* 2008 PA PUC LEXIS 50, Docket Nos. R-00072711, *et al*. (Order entered July 31, 2008).

faith settlement discussions with Mr. Gage and resolved his complaint.[4] Mr. Gage signed a letter release in March 2021 confirming that the Company addressed his issue. Mr. Gage filed his third formal complaint in the Company's *2021 Rate Case*, raising the issue that had been previously settled in March 2021. At all times, from 2008 to present, Aqua has responded to Mr. Gage's concerns in a timely, thorough, and professional manner.

Q. Please describe Mr. Gage's involvement in AP's LTIIP midpoint review filing.

A. Mr. Gage filed comments in AP's midpoint review of it LTIIP. Therein, Mr. Gage's comments again addressed pressure issues at his residence and, among other things, requested that AP not be permitted to charge a Distribution System Improvement Charge ("DSIC") and that AP's LTIIP should be denied. Aqua responded to Mr. Gage in Reply Comments in the midpoint review proceeding citing prior Commission orders addressing this issue.

Q. What did the Commission order in the midpoint review proceeding regarding Mr. Gage's comments?

A. The Commission ordered that the Commission's Bureau of Technical Utility Services ("TUS") examine the issue raised by Mr. Gage and to take further actions as necessary.

Q. Did TUS examine the issue?

A. Yes. TUS asked three sets of data requests regarding Aqua's Chesterbrook system, wherein the Company re-iterated the engineering reasons why this area was supplied at pressures above those stated in the Commission's regulations. Furthermore, the Company stated that it would be able to address the issue in Chesterbrook, but it would require substantial capital.

[4] *Richard Gage v. Aqua Pennsylvania, Inc.*, Docket No. C-2020-3021899, Certificate of Satisfaction (Mar. 22, 2021).

Q. What was the ultimate conclusion regarding the Chesterbrook system?

A. The Company stated that to solve this issue for this customer the Company would have to implement approximately $1.23 million in capital expenditures to install PRVs to reduce pressure to the system, but then also complete a main extension tie-in to ensure adequate fire flow protection for this system. The Company will not jeopardize adequate fire flow to sections of the Chesterbrook system to reduce pressure in other parts of the system.

Q. Did the Company provide a timeline for when this would be completed?

A. Yes. The Company indicated that the project would begin in October and that it expected the project would be completed by the end of 2024.

Q. Was Mr. Gage aware of this timeline?

A. Yes. Mr. Gage acknowledged at both the August 14, 2024, 1:00 p.m. and 6:00 p.m. telephonic public input hearings[5] that the Company communicated that it would move forward with the project. The Company provided a letter on April 30, 2024, included in my Surrebuttal Testimony as Aqua Exhibit TMD-2-SR to Mr. Gage and several other members of the Chesterbrook community which indicated that the project would begin in October 2024 and be completed approximately 2-3 months later.

Q. Witness Hoover referenced Ms. Catherine Moran in her Supplemental Direct Testimony. Can you respond to this customer's concern?

A. Yes. Ms. Moran testified at the August 14th telephonic public hearing at 1:00 p.m. She testified to a previous complaint concerning an issue with her curb stop that needed to be located and marked for her to have work done at her property. It did take some time to complete the work order due in part for the need for a PA One Call ticket to be completed.

[5] Mr. Gage testified twice at two different public input hearings.

Ms. Moran did file an Informal Complaint in May 2023 with the Commission's Bureau of Consumer Services ("BCS") regarding this issue and the Company was able to resolve the customer's informal complaint, as the work to the curb box was completed and Ms. Moran indicated that she was satisfied and agreed to verbally close the informal complaint.

III. CONCLUSION

Q. Does that conclude your Surrebuttal Testimony?

A. Yes, it does, but I reserve the right to supplement my Surrebuttal Testimony as needed during this proceeding.

EXHIBIT NO. TMD-1-SR

Public Input Hearings - Customer Testimony

Exhibit TMD-1-SR

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Timothy Burrows	Hazleton	Hazleton - August 1 - 1 p.m.	Mr. Burrows testified about his concerns with the increase and affordability	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs.
Stephanie Shumlas	Drums	Hazleton - August 1 - 1 p.m.	Ms. Shumlas testified about her concerns with the increase and affordability.	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs
Sue Hennigan	Hazleton	Hazelton August 1 - 6 p.m.	Ms. Henningan testified about her concerns with the increase and affordability.	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs
Philip Steinberg	Elkins Park	Cheltenham - August 5 - 6 p.m.	Mr. Steinberg testified about his concerns with the increase and affordability	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs
Jan Novia	Royersford	Royersford - August 12- 6 p.m.	Mr. Novia testified about his concerns with the increase and affordability.	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs
Bernard Mazer	Hazleton	Hazleton - August 1 - 1 p.m.	Mr. Mazer testified about his concerns with the increase and affordability.	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs

Public Input Hearings - Customer Testimony

Exhibit TMD-1-SR

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Ms. Dignazio	Various location	Telephonic - August 14, 6 p.m.	Ms. Dignazio testified about the increases to the monthly bills for herself and family members.	The customer did not provide an address at the Public Input Hearing and the Company could not locate contact information for this customer.
Bobbi Penniman	Elkins Park	Cheltenham - August 5 - 1 p.m.	Ms. Penniman tetified about her concerns with the increase	The customer did not provide an address at the Public Input Hearing and the Company could not locate contact information for this customer.
Donald Campbell		Cheltenham - August 5 - 1 p.m.	Mr. Campbell testified about his concerns with the proposed increase.	The customer did not provide an address at the Public Input Hearing and the Company could not locate contact information for this customer.
Jerome Cammarata	Landenberg	New Garden - August 8 - 1 p.m.	Mr. Cammarata testified about his concerns with the proposed increase.	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs
Branan Cooper	Landenberg	Telephonic - August 14 - 1 p.m.	Mr. Cooper testified about his concerns with the proposed increase.	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs
Elaine Somers		Telephonic - August 14 - 1 p.m	Ms. Sommer testified on behalf of her client who provides assistance to low income customers.	The Company sent Ms. Somers a letter offering to discuss its low income assistance programs.
Timothy Dethloff	Gettysburg	Telephonic - August 14 -1 p.m.	Mr. Dethloff testified about his concerns about the proposed increase.	The Company sent the customer a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs

Public Input Hearings - Customer Testimony

Exhibit TMD-1-SR

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Keith Gabage	East Bradford	New Garden - August 8 - 1 p.m.	Mr. Gabage testified about his concerns about the billing.	See Rebuttal Testimony of William Packer (pg. 26 ln. 22-23 through pg. 27 ln. 1-15)
Robert McMahon	Lansdowne	Delaware County Community Colletge- August 7 - 1 p.m.	Mr. McMahon discussed proposed alternative PFAS funding.	The customer did not provide an address at the Public Input Hearing and the Company could not locate contact information for this customer.
Christine Maddalo	Hazleton	Hazleton - August 1 - 1 p.m.	Ms. Maddalo testified about some concerns with her water and about her concerns with the proposed increase.	On September 17, 2024, an Aqua customer service representative spoke with Ms. Maddalo and the Company will arrange to have a water sample tested and to follow up with her with the results and to answer any additional questions she may had. Ms. Maddalo was very appreciate of the call from Aqua.
Peter Beisser	Media	Delaware County Community College - August 7 - 1 p.m.	Mr. Beisser testified about his concerns with the Company and the proposed increase.	The customer did not provide an address at the Public Input Hearing and the Company could not locate contact information for this customer.
Margo Woodacre	Landenberg	New Garden - August 8 - 1 p.m.	Ms. Woodacre testified about her concerns with the Company	The Company sent the customers a follow up letter offering to discuss any additional questions he may have and providing a link to information on the Company's assistance programs.
Catherine Washko	Landenberg	New Garden - August 8 - 1 p.m.	Ms. Washko testified about her concerns with the Company	On September an Aqua representative spoke with Ms. Washko to address her concerns. Ms. Washko was very appreciate of the call from Aqua and asked for some additional information and the Company will follow up with a letter to her.

Public Input Hearings - Customer Testimony

Exhibit TMD-1-SR

Name	City	Public Input Hearing	Testimony	Company Follow-Up
Kevin Kelley	Linfield	Royersford - August 12 - 1 p.m.	Mr. Kelley testified concerning an odor at the Company's wastewater treatment plant.	The Company has sent a follow up letter to Mr. Kelly with information about the Company's facilities.
Catherine Moran	West Chester	Telephonic - August 14 - 1 p.m.	Ms. Moran testified concerning an issue she had with work needed for her curb stop	See Surrebuttal testimony of Todd Duerr
Richard Gage	Chesterbrook	Telephonic - August 14 - 1 p.m. and 6 p.m.	Mr. Gage testified concerning the water pressure supplied to his home.	See Surrebuttal testimony of Todd Duerr
Fran Kingsley	Hazleton	Hazleton - August 1 - 6 p.m.	Ms. Kingsley testified about the water used outside of her home and that her wastewater bill is based on water usage. Ms. Kingsley is not a flat rate customer.	See Rebuttal testimony of Todd Duerr
Joseph Casey	Glenside	Cheltenham - August 5 - 1 p.m.	Mr. Casey testified that he is charged for sewer service based on water usage. Mr. Casey is not a flat rate customer.	See Rebuttal testimony of Todd Duerr
Johb Muscari	West Chester	Delaware County Community College - August 7 - 1 p.m.	Mr. Muscari testified that he is charged for sewer service based on water usage. Mr. Muscari is not a flat rate customer.	See Rebuttal testimony of Todd Duerr
Frank Donovan	Newtown Square	Delaware County Community College - August 7 - 1 p.m.	Mr. Donovan testified that he is charged for sewer service based on water usage. `Mr. Donovan is not a flat rate wastewater customer.	See Rebuttal testimony of Todd Duerr
Wayne Weismandel	Conchranville	New Garden - August 8 - 1 p.m.	Mr. Weismandel testified about his concerns with the rate increase and his bill for flat rate sewer.	See Rebuttal testimony of William C. Packer (pg. 21 ln. 6-15)
Ron Dungey	Avondale	New Garden -August 8 - 1 p.m.	Mr. Dungey testified that he is charged for sewer service based on water usage.	See Rebuttal testimony of Todd Duerr
Carri Bocci	Cochranville	New Garden - August 8 - 1 p.m.	Ms. Bocci testified about her concerns with the increase and her bill for flat rate sewer	See Rebuttal testimony of William C. Packer (pg. 21 ln. 6-15)

Public Input Hearings - Customer Testimony

Enrico Guiliante	Landenberg	New Garden - August 8 - 1 p.m.	Mr. Guilanta testified about the line protection services.	See Surrebuttal testimony of Alexis Rodriguez

EXHIBIT NO. TMD-2-SR

Dear neighbors,

Aqua Pennsylvania is pleased to share news about improvements in your area that will help improve our overall service. First, we will soon install 3 pressure-reducing valves surrounding the Chesterbrook community which will help regulate pressures within the immediate area. Second, we will be completing a main (pipeline) extension project to improve reliability. This will ensure service in the event of an unexpected outage and result in adequate pressure for fire protection throughout the system. We anticipate the work will begin in October and will take between 2 and 3 months to complete. We do not expect any major disruptions to the community while the upgrades are being made. If you have any questions or concerns, please contact Aqua Customer Service at 1.877.987.2782.

Sincerely,

Scott Steffy, P.E.
Project Manager, Aqua Pennsylvania

PREPARED SURREBUTTAL TESTIMONY OF ALEXIS RODRIGUEZ

Topics Addressed:

Customer Service Line Warranty Program

DATE SERVED: September 26, 2024 **Aqua Statement No. 16-SR**
DATE ADMITTED: _____

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. What is your name and business address?

A. My name is Alexis Rodriguez and my business address is 762 W. Lancaster Avenue, Bryn Mawr PA 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Essential Utilities, Inc. ("Essential") and my title is Director of Strategy and Corporate Development.

Q. Please describe your education and business experience.

A. I graduated from the University of Florida with a B.S. in electrical engineering in 2005 and received a Master of Business Administration from New York University in 2016. I started my career as an electrical engineer at Siemens from 2005 to 2014. In 2016, I started as an investment banker at Credit Suisse and worked there through 2020. In 2020, I was hired by Essential as a Manager of Strategy and Corporate Development and was promoted to my current role in 2022. My responsibilities include providing analysis and strategic planning for Essential related to various projects including capital planning.

Q. Have you previously provided testimony in this proceeding?

A. I have not. This is my first time providing testimony before the Pennsylvania Public Utility Commission.

Q. What is the purpose of your Surrebuttal Testimony?

A. My testimony is to address Office of Consumer Advocate ("OCA") witness Alexander's supplemental direct testimony on the warranty coverage provided by HomeServe.

II. CUSTOMER SERVICE LINE WARRANTY PROGRAM

Q. Through Supplemental Direct or Rebuttal Testimony, did any Party raise concerns with respect to non-basic services?

A. OCA witness Alexander submitted testimony with respect to the public input hearing testimony of Enrico Guiliante from August 8, 2024, at 1:40 p.m.[1] Mr. Guiliante stated that he and his wife bought insurance coverage at almost a hundred dollars a year. I reached out to HomeServe regarding this customer to determine whether Mr. Guiliante purchased insurance coverage from HomeServe. According to their records, Mr. Guiliante's address is not a current customer of HomeServe.

Q. Please summarize OCA witness Alexander's concerns.

A. OCA witness Alexander states that she wanted to explore the reference to insurance coverage more after hearing Mr. Guiliante's testimony. I understand that Ms. Alexander raised similar concerns and suggested an investigation was needed in Pennsylvania-American Water Company's ("PA American") recent litigated base rate case at Docket Nos. R-2023-3043189, *et al*. The Commission rejected this request.

Q. What is Aqua Pennsylvania, Inc's. ("Aqua PA" or the "Company") relationship with HomeServe?

A. Aqua PA has no contractual relationship with HomeServe USA Corp. ("HomeServe"). HomeServe is an independent company that provides emergency home repair solutions and protection solutions to homeowners.

[1] Tr. pp. 524-536; OCA St. No. 7 Supp., p. 6.

Q. At the outset, does Aqua PA have a line item on its bill for any type of warranty coverage?

A. No, Aqua PA does not. Aqua PA does not bill or collect warranty coverage on its customers' utility bills. My understanding is that PA American includes a line item on their utility bill(s) for the warranty program that they partner with.

Q. Also, does Aqua PA provide HomeServe with Aqua PA's customer names and address?

A. No, Aqua PA does not. HomeServe uses zip codes for the Aqua PA service territory and uses an outside entity to gather names and addresses that may be within the Company's service territory.

Q. Has Aqua PA's relationship, or lack thereof, with HomeServe changed over time?

A. As noted above, Aqua PA has no contractual relationship with HomeServe. The original 2003 contract between HomeServe and Philadelphia Suburban Corporation describing the basic relationship has remained the same in that HomeServe pays a commission for customers that sign up for its services.

Q. Do Aqua PA's customers have the right to reject HomeServe's services?

A. Yes. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. Can Aqua PA's customers enter into contracts for similar services with non-HomeServe entities?

A. Yes. In fact, I am aware that other competitors of HomeServe make solicitations within Aqua PA's service territory.

Q. OCA witness Alexander asserts that Aqua PA uses its call center to market HomeServe non-basic services to its customers. Please respond.

A. When a customer contacts the Company's call center for service, at the end of the call a customer service representative may offer to transfer that customer to HomeServe. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. Do you agree with OCA witness Alexander that Aqua PA markets HomeServe's non-basic products and services with Aqua's corporate name and logo?

A. HomeServe markets its own product. The materials cited by Ms. Alexander show that the letter HomeServe provided to certain of Aqua PA's customers educates customers on the responsibility for wastewater repairs that run on their property, mentions several times that HomeServe is an independent company, and further clarifies that the program is optional. The information is clear and legible.

Q. OCA witness Alexander asserts that it is unclear whether the revenues from marketing activities for non-basic services are credited to Aqua PA's ratepayers. Please respond.

A. The Company was clear. First, Aqua Resources receives a commission for customers that sign up for the program. That commission is not included in the Company's revenue requirement. **[BEGIN CONFIDENTIAL]** [redacted]

[redacted] **[END CONFIDENTIAL]**

Q. Why are commission revenues associated with HomeServe's services not recorded to Aqua PA?

A. HomeServe is not an affiliate of Aqua PA or any other subsidiary of Essential. HomeServe provides the warranty service to Aqua PA customers with whom it has a service contract. Any payments for commissions related to the contract with HomeServe are paid to Aqua Resources, which is an unregulated subsidiary of Essential.

Q. OCA witness Alexander recommends that the Commission "initiate an investigation of Aqua's contractual relationship with HomeServe to determine the proprietary [sic] of allowing HomeServe to issue marketing materials that are designed to imply that Aqua has mailed these marketing materials, the use of Aqua's logo on HomeServe's marketing materials, the reasonableness of Aqua's expenses and revenue associated with these promotion activities, and the lack of any regulatory review of this contractual arrangement since 2003…"[2] Do you agree with this recommendation?

A. I do not. The services that HomeServe provides are valuable to Aqua PA's customers, especially those with older homes and Ms. Alexander offers no evidence that the program violates any Commission rule or regulation. The materials cited by Ms. Alexander show that the letter HomeServe has provided to certain of Aqua PA's customers mentions several times that HomeServe is an independent company and further, it mentions that the program is optional.

[2] OCA St. No. 7 Supp, p. 5.

Q. Does OCA witness Alexander make any other recommendations?

A. Yes, Ms. Alexander recommends a revision of marketing materials. I note that the OCA made similar recommendations in the recent PA American and Peoples rate case and these types of warranty programs for each utility remain in place. The Company periodically reviews the marketing materials of HomeServe and will continue to review mailings, taking into consideration the concerns raised by OCA witness Alexander.

III. CONCLUSION

Q. Does that conclude your Surrebuttal Testimony at this time?

A. Yes, it does, but I reserve the right to supplement my Surrebuttal Testimony as needed during this proceeding.

PREPARED WRITTEN REJOINDER TESTIMONY OF CHRISTOPHER E. MANNING

Topics Addressed:

Payroll Expense and Vacancy Related Expenses
Amortization of Rate Case Expense and COVID 19 Expense Recovery

DATE SERVED: October 3, 2024
DATE ADMITTED: _____

Aqua Statement No. 3-RJ

TABLE OF CONTENTS

I. INTRODUCTION AND SCOPE OF TESTIMONY 1

II. PAYROLL EXPENSE AND VACANCY RELATED ADJUSTMENTS 2

III. AMORTIZATION OF RATE CASE EXPENSE AND COVID 19 EXPENSE RECOVERY 7

IV. SCH USA 8

V. CONCLUSION 8

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. What is your name and business address?

A. My name is Christopher. E. Manning. My business address is 762 W. Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Aqua Pennsylvania, Inc. ("AP") as a Finance and Rate Analyst II.

Q. Have you previously provided testimony in this proceeding?

A. Yes. I provided Direct Testimony on behalf of AP and Aqua Pennsylvania Wastewater, Inc. ("APW") (collectively "Aqua PA," or the "Company") as Statement No. 3 with the Company's filing to the Pennsylvania Public Utility Commission ("PUC" or the "Commission"). I also provided rebuttal testimony, Aqua Statement No. 3-R, on September 12, 2024.

Q. What is the purpose of your written rejoinder testimony?

A. Subsequent to the filing of my prepared rebuttal testimony, surrebuttal testimony was served on behalf of the Pennsylvania Office of the Consumer Advocate ("OCA") by Ralph C. Smith and the Bureau of Investigation and Enforcement ("I&E") by Zachari Walker. Specifically, I will respond to portions of Mr. Smith and Mr. Walker's testimony about payroll expense and expenses impacted by each respective witnesses' vacancy rate calculations. I will also respond to Mr. Walker's testimony about expenses impacted by the cadence at which the Company files base rate cases. Additionally, I will address the surrebuttal testimony of SCH USA, LLC ("SCH USA") witness Frank Lacey.

II. PAYROLL EXPENSE AND VACANCY RELATED ADJUSTMENTS

Q. On page 9 of OCA witness Smith's surrebuttal testimony, does Mr. Smith acknowledge that the Company included a 2% vacancy rate within its payroll expense claim?

A. Yes. Mr. Smith acknowledges that the Company included a 2% vacancy rate within its' payroll expense claim and appropriately revised his proposed payroll expense adjustment to account for the Company's inclusion of a 2% vacancy rate.

Q. As part of OCA witness Smith's surrebuttal testimony, does Mr. Smith adjust his proposed vacancy rate?

A. No, Mr. Smith does not revise his originally proposed vacancy rates of 4.56% for Water Operations and 4.69% percent for Wastewater Operations, which were derived from full time position vacancies and dollars provided in the Company's response to OCA-IX-1 and Exhibit 2 of Aqua PA's initial filing.

Q. Does witness Smith adjust his proposed vacancy rates to adjust out the 15 full-time positions that are not slated to start until 2025, or the beginning of the FPFTY?

A. No, he does not. Mr. Smith does not acknowledge that his vacancy rate calculations include 15 full time positions that do not start until 2025. This is the only fundamental issue that the Company has with Mr. Smith's vacancy rate calculations and full-time labor expense adjustment. These positions should not be considered in a vacancy rate calculation as they do not have any expense included in 2024, or the FTY, and will not be part of the Company's complement until the beginning of 2025. Please refer to Exhibit CEM-2-R provided as part of my rebuttal testimony which provides the vacancy rates excluding these 15 full time positions.

Q. Does Witness Smith adjust his proposed expense adjustment for seasonal employees?

A. Yes, Mr. Smith updated his original proposed expense adjustment for seasonal employees which he handles as an entirely separate adjustment from the full-time labor vacancy rate previously mentioned. Mr. Smith adjusts his original proposed expense decrease of $201,500 down to $161,200 to reflect the Company's updated seasonal positional employees that it had hired in 2024 which was provided in OCA-XXVIII-1.

Q. Is it appropriate to address seasonal employee adjustments separate from full time labor expense adjustments and vacancy rate calculations?

A. Yes, it is. OCA witness Smith's adjustment to address seasonal employees separately from a full-time vacancy rate adjustment is appropriate. While the Company maintains that Mr. Smith's seasonal employee expense adjustment should not be accepted as it does not reflect the Company's historical seasonal hiring practices, it agrees that seasonal employee adjustments should be handled separately from full time labor vacancy calculations and adjustments as seasonal employees are not employed by the Company for the entire year. Including seasonal employees in any vacancy rate calculation is inappropriate and should not be considered.

Q. Does I&E witness Walker update his vacancy rate calculations as part of his surrebuttal testimony?

A. Yes, he does. Mr. Walker updates his vacancy rate calculations from his originally proposed 4.26% to 8.36% to include part-time, seasonal and co-op positions in his vacancy rate calculations which had only originally been subject to full time positions.

Q. Is it appropriate to include part-time, seasonal and co-op positions when calculating a vacancy rate?

A. No, it is not. As noted earlier in my testimony with respect to OCA witness Mr. Smith, these positions, in particular seasonal positions and co-ops, are not employed by the Company for the entire year. Thus, these positions should be a separate adjustment and not included in any vacancy rate calculation. The problem with Mr. Walker's approach is that a vacancy in a part-time position only affects part time wages. I note that only Mr. Walker includes all of these positions in his vacancy rate calculation; neither I nor OCA witness Smith make this error.

Q. What is the proposed expense impact of Mr. Walker's surrebuttal vacancy rate adjustment from his original vacancy rate adjustment provided in his direct testimony?

A. Mr. Walker's proposed expense impact of including part-time, seasonals and co-ops in his vacancy rate calculations per his surrebuttal testimony are an expense decrease for Water Operations of $3,166,048 compared to an expense decrease of $1,613,321 in his direct testimony, an expense decrease for Shenandoah of $29,331 compared to an expense decrease of $14,916 in his direct testimony, an expense decrease for Wastewater Base of $294,595 compared to an expense decrease of $150,117 in his direct testimony, and an expense decrease for Lower Makefield of $13,454 compared to an expense decrease of $6,856 in his direct testimony. This incremental expense reduction totals an additional expense reduction of $1,718,218 from Mr. Walker's original expense reduction claim in his direct testimony.

Q. How much does the Company claim for part time, seasonal and co-op positions in the FPFTY?

A. The Company claims $562,358 in gross labor costs for part time, seasonal and co-op positions in the FPFTY.

Q. Should I&E witness Walker's incremental proposed labor expense reduction of $1,718,218 in his surrebuttal position to account for part time, seasonal and co-op positions be considered?

A. No, it should not. A $1,718,218 expense adjustment to account for costs that the Company claims will only be $562,358 in total should not be considered by the Commission as his adjustment is more than 3 times the Company's claim for these seasonal positions.

Q. On page 11 of I&E witness Walker's surrebuttal testimony, does Mr. Walker acknowledge your rebuttal testimony where the Company attempted to address the fact that Mr. Walker's calculation double counts the Company's 2% vacancy rate claim that the Company built into its original filing?

A. Yes, he does.

Q. Does Mr. Walker update his labor expense adjustment calculations in his surrebuttal testimony to reflect the 2% vacancy rate that the Company has already included within its' filing?

A. No, he does not. Mr. Walker continues to double count the 2% vacancy rate that the Company had already built into its claim.

Q. Is there another error in Mr. Walker's adjustment?

A. Yes. Mr. Walker applies his 8.36% vacancy rate to the expense amounts of the Company's labor claim, but fails to apply it to the Company's gross labor costs which is the appropriate way to handle such an adjustment. A portion of the Company's total labor cost is capitalized and a portion of it is charged to non-operating accounts. Mr. Walker does not

account for the capitalized and non-operating pieces of the Company's labor when making his adjustment. He solely applies his vacancy rate to the Company's expense claim and not its total gross claim.

Q. Should I&E witness Walker's methodology for making a vacancy rate adjustment and expense adjustment be considered?

A. No, it should not. Mr. Walker does not appropriately calculate a vacancy rate which should only include full time positions. Mr. Walker also continues to double count the vacancy rate which the Company had included within its original claim. Furthermore, Mr. Walker does not appropriately calculate what the expense adjustment would be under any of his proposals as he disregards the Company's capital labor rate and non-operating labor rate.

Q. Should the methodology utilized by OCA and the Company be adopted when computing a vacancy rate?

A. Yes. While the Company continues to maintain that OCA witness Smith should exclude the 15 full-time positions that do not start until the FPFTY from his vacancy rate calculation, the Company believes that the methodology employed by OCA witness Smith is appropriate for calculating a vacancy rate and labor expense adjustment for full-time employees. The method used by I&E witness Walker, which is in error for the reasons explained above, should not be used.

Q. Does the vacancy rate impact have "downstream impacts" on other expenses meaning that the vacancy rate has a direct impact on other expenses?

A. Yes, the vacancy rate has a direct impact on other expenses. Expenses such as employee benefits, payroll taxes, 401(k) expenses, group insurance, and intracompany benefits are all impacted by the vacancy rate. For the reasons that Aqua PA continues to disagree with

the vacancy rate adjustments proposed by OCA and I&E, Aqua PA continues to disagree with the adjustments to these expense categories that are derived from the vacancy rate adjustment.

III. AMORTIZATION OF RATE CASE EXPENSE AND COVID 19 EXPENSE RECOVERY

Q. Does I&E witness Walker update his calculation to update the historical cadence at which the Company files base rate cases?

A. Yes, he does. Witness Walker updates his calculation to include the actual dates of the Company's Filing of its 2011, 2018, 2021 and 2024 base rate cases and claims that the Company historically files for rates every 50 months.

Q. Should Mr. Walker's calculation include the time frame between the 2011 and 2018 base rate cases?

A. No, it should not. The length of time between the Company's 2011 and 2018 base rate cases was due to one-time implementation of the tax repair deduction for income tax purposes which was part of the Company's settlement in the 2011 base rate case. This time frame does not accurately represent the cadence at which the Company files base rate cases.

Q. Over what period of time, should the Company be allowed to amortize Rate Case Expense and recover COVID 19 costs?

A. The Company will file its next case in approximately 24 months, subject to that timeline being shortened based upon the outcome of the Company's claim for deferred accounting for PFAS costs. Twenty-four months, or 2 years reflects the appropriate amount of time that the Company should be allowed to recover rate case expense and expenses associated with COVID 19. If a historical cadence is to be used, it would be more appropriate to base

the calculation off of the 36 and 33 months between the Company's 2018 and 2021 cases and 2021 and 2024 cases, respectively.

Q. In Aqua's 2021 rate case, was the issue of rate case frequency litigated?

A. Yes. In that case, the Commission rejected the use of 2011 base rate case time from the rate case frequency. The Commission accepted a 36 month rate case frequency rate. In fact, the Company filed this case 33 months after the 2021 rate case was filed.

IV. SCH USA

Q. Does SCH USA Witness Lacey misconstrue Aqua's Witnesses Manning and Herbert's testimony as inconsistent pertaining to whether the Company is charging SCH USA assuming full occupancy?

A. Yes, he does. Mr. Lacey misconstrues the statement in my rebuttal testimony that notes that the Company is required to handle the maximum amount of flows as having an impact on how the Company bills SCH USA. It does not and should not be understood to play a role in the Company's billing practices. This statement about maximum flows only pertains to the Company's treatment plant being required to handle all of the flows coming from SCH USA. As noted in Company Witness Herbert's rebuttal testimony, the flat rate per EDU rate that SCH USA is currently billed is based off of 4,000 gallons which was the system wide residential average at the time of the Company's 2021 base rate case and the number of EDU's associated with SCH USA are predetermined and have been in place since the Settlement Agreement.

V. CONCLUSION

Q. Does that conclude your written rejoinder testimony at this time?

A. Yes, it does, but I reserve the right to supplement my rejoinder testimony as needed during this proceeding.

RE: AQUA PENNSYLVANIA, INC.
DOCKET R-2024-3047822 AND R-2024-3047824

WRITTEN REJOINDER TESTIMONY OF CONSTANCE E. HEPPENSTALL

Q. Please state your name and address.

A. My name is Constance E. Heppenstall. My business address is 1010 Adams Avenue, Audubon, Pennsylvania.

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Are you the same Constance E. Heppenstall who submitted direct, rebuttal and surrebuttal testimony in this case?

A. Yes. I submitted Aqua Statement No. 5 and Exhibit Nos. 5-A Part I and 5-B, Part I, Aqua Statement No. 5-R and Exhibits Nos. CEH-1-R, CEH-2-R and CEH-3-R and Aqua Statement No. 5-SR.

Q. What is the purpose of your rejoinder testimony in this proceeding?

A. I will address the issue of water customer charges raised in the surrebuttal testimony of Pennsylvania Office of Consumer Advocate ("OCA") Witness Jerome Mierzwa and Bureau of Investigation and Enforcement ("I&E") Witness Ethan Cline.

OCA Witness Jerome Mierzwa

Q. In his surrebuttal testimony, Mr. Mierzwa continues to support his assertion that the calculation of the customer charge should only include costs that change with the addition or subtraction of a customer. Please

respond.

A. Mr. Mierzwa's definition of direct costs is similar to the definition of marginal costs, i.e., costs that are not fixed but vary with the addition or subtraction of a customer. Due to his definition of customer costs, Mr. Mierzwa omits costs related to office building and furniture expenses that I included in the Company's customer cost analysis. The cost of these facilities needs to be included in the calculation of the customer charge as they are essential for the Company's billing and collection personnel to perform their jobs. Consequently, these categories of costs are directly related to customer cost functions, though they may not be marginal costs. OCA's assertion to only include these specific costs was not only denied in the most recent Pennsylvania American Water Company Rate Case, Docket No. R-2023-3043189, but was also denied by the Commission in the 2021 Aqua Pennsylvania rate case, Docket No. R-2021-3027385, as these limitations are "unreasonably narrow" (page 269 of Opinion and Order).

<u>OCA Witness Ethan Cline</u>

Q. In his surrebuttal testimony, Mr. Cline revises his wastewater rate design. Please discuss.

A. Yes, in his surrebuttal testimony, Mr. Cline admits that his wastewater rate design was "aggressive." I&E St. No. 3-SR, at p. 9. As a result, he adjusts the usage rates for Rate Zones 9, 10, 12 and 14.

Q. Do you agree with Mr. Cline's adjustments.

A. Mr. Cline's adjustments are a step in the right direction. All four of his adjustments brings the monthly rate for these customers below $100, which is

the Company's goal. However, his rate design consolidates into fewer rate zones and also maintains the increase in the average monthly residential customer bill in Rate Zone 1 and 1a of 22.5% or a monthly bill of $116.58, well above the Company's goal of $100. In addition, he continues to increase the rates for customers whose bill is already over $100 in Rate Zones 2, 3, 7 and 8. See the chart below that highlights in yellow the average monthly bills that changed in Mr. Cline's surrebuttal testimony.

Rate Zone	Present Monthly Bill	Company Proposed Bill		Company Increase	I&E Proposed Bill - Surrebuttal		I&E Surrebuttal Increase	I&E Rebuttal Increase

RZ 14	$ 65.48	RZ 1	$ 92.85	41.8%	Stand alone	$ 96.35	47.1%	63.3%

Q. The four rate zones that he adjusts were acquired under Section 1329. Does Mr. Cline still believe that these rate zones should experience large increases?

A. He indicates that these rate zones typically have lower rates and higher costs and, therefore, these zones should see larger increases in order to achieve rate consolidation. I agree with that sentiment and recommend that in the Company's rate design. However, I disagree that these areas should be considered outliers.

Q. How does OSBA Witness Cathcart respond to Mr. Cline's treatment of rate zones acquired under Section 1329?

A. Mr. Cathcart agrees with the Company that these areas should not experience

rate shock. He states that "(g)radualism should be taken into consideration to avoid rate shock" for these areas. OSBA St. No. 2-S, at p. 5.

Q. Mr. Cline refers to the Company's goal of keeping wastewater rates under $100 per month for most customers as having "no basis or support". I&E St. No. 3-SR, at p. 5. How do you respond.

A. The Company does not need basis or support for an average monthly wastewater bill of $100 except for keeping the interests of its customers in the forefront. For a 3% increase in water rates, the Company can significantly mitigate the monthly wastewater rates for its customers. Mr. Cline states that the 3% increase is "in addition" to the increase already being allocated to the water customers. I&E St. No. 3-SR, at p. 7. To be clear, the overall requested rate increase to water customers is 18.9%, including the Act 11 allocation. The 3% increase due to the Act 11 allocation is not in addition to the requested 18.9% increase.

Q. Mr. Cline supports his rate design that increases rates over $100 per month by citing Pennsylvania-American Water Company's rates approved in its most recent rate case. I&E St. No. 3-SR, at p. 6. Is that relevant to this case?

A. Another company's wastewater rate design is not relevant in this case. Pennsylvania-American Water Company has a different cost structure than Aqua PA.

Q. Does this conclude your written rejoinder testimony?

A. Yes, it does

Aqua Statement No. 6-RJ

Aqua Statement No. 6-RJ

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: AQUA PENNSYLVANIA, INC.
AQUA PENNSYLVANIA WASTEWATER, INC.

WRITTEN REJOINDER TESTIMONY OF JOHN J. SPANOS

Q. Please state your name and address.

A. My name is John J. Spanos. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania 17011.

Q. With what firm are you associated and in what capacity?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") as President.

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. Have you previously filed testimony in this matter?

A. Yes, I previously submitted Aqua Statements No. 6 and 6-R.

Q. What is the purpose of your rejoinder testimony?

A. The purpose of my rejoinder testimony is to respond to the arguments and positions presented by Mr. Brian Andrews in his surrebuttal testimony concerning the depreciation methodologies, specifically the appropriateness of continuing the longstanding practice of using the Equal Life Group ("ELG") procedure rather than the Average Life Group ("ALG") procedure for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively, "Aqua" or "Company"). My testimony will address each of Mr. Andrews' key points as it relates to the development of

the most appropriate depreciation rates and expense which is supported by reasoning that considers all the elements of not only the ELG procedure but the process of determining depreciation rates. Many of Mr. Andrews points in his surrebuttal are a component of the topics I discuss in this rejoinder so if a topic was not specifically identified that does not mean I agree with Mr. Andrews.

Q. Does Mr. Andrews dispute that ELG results in more accurate depreciation rates?

A. No, however, he disputes that the accuracy of the ELG procedure can be achieved. Mr. Andrews takes issue with well-researched depreciation textbooks and he claims the opposite of Wolf and Fitch and Robley Winfrey, two well-respected authorities on depreciation. The issues with the accuracy of the ELG procedure which he expresses as a result of the survivor curve selection would exist with the Average Service Life ("ASL"), also known as ALG, Procedure as well. There is no survivor curve that will perfectly match the historical activity and, more importantly, life analysis should not be a replication of the past but an estimation of the future. Mr. Andrews utilizes the analysis for Account 331.02, Mains and Accessories – 6" to 10" to discuss the topic.

Q. Do you agree with Mr. Andrews' position on the life estimate for Account 331.02?

A. No. First, as discussed previously, the process of determining the most appropriate survivor curve is not just a mathematical fit of historical data but a combination of historical data and informed judgment. The survivor curve is an estimation of the future. Therefore, I completely disagree with Mr. Andrews'

opinion that the 65-S2.5 curve is not only a very good match of the historical data, but it is also a very good indicator of the future. This includes the portion of the curve that Mr. Andrews challenges as there are equal portions of the smooth curve that are above the original curve and that are below the original curve. Second, the calculation of depreciation for an account that utilizes the ASL procedure is also affected by the survivor curve so attempting to just say that the survivor curve affects the ELG procedure is misleading.

Q. Does Mr. Andrews' testimony demonstrate that ELG is not accurate?

A. No. Mr. Andrews' position related to the differences between the 65-S2.5 survivor curve and the original curve being a poor match are not supported as shown by his graph. Also, he attempts to say that I did not follow the Wolf and Fitch authoritative text, which is inaccurate. His testimony also does not explain why his survivor curve discussion should illustrate that ELG is not more precise nor do his points explain why ELG should not be used for more accurate depreciation expense. Mr. Andrews further attempts to state that ELG procedure will only be more precise if there is an exact match of the smooth curve to the original curve. That is false. Finally, Mr. Andrews states that the ELG procedure was primarily of academic interest until the 1970s. This is not accurate as the ELG procedure was formerly known as the "unit of summation" method which has been utilized well before the 1970s and was developed prior to the ASL procedure.

Q. Please discuss Mr. Andrews's claims regarding the use of the ALG procedure in other jurisdictions.

A. Mr. Andrews argues that the use of ALG (i.e., the ASL Procedure) in other jurisdictions means that ELG should no longer be approved for Aqua.[1] Historically, most regulatory commissions had used ALG prior to the 1980s due to the complexity of ELG calculations. While many utilities did not move to ELG once computing technology allowed for its adoption, some states, such as Pennsylvania, did. This provides more accurate depreciation rates and is beneficial to customers. As I have explained in my rebuttal testimony, ELG provides a more accurate recovery of costs. This, correctly, means higher depreciation in the earlier years of the life of a property group and lower depreciation in later years. ALG is most correctly thought of as a deferral of the recovery of shorter-lived assets.

Used consistently, both ELG and ALG can result in intergenerational equity, although ALG is more costly to customers. This is because customers pay a return on the deferral resulting from ALG depreciating over *average* life rather than *actual* life. Stated differently, ELG results in a lower rate base than ALG, which results in a lower return on rate base than under ALG. Because the rate base impact is larger than the difference in depreciation expense, ELG results in lower customer rates than ALG. Aqua customers today have benefited from the use of ELG for close to four decades, as rate base is lower than had ALG been used. Customers in other jurisdictions for which ALG has been the longstanding practice do not receive such benefit.

[1] OCA St. No. 4SR, at p. 5.

Q. Has Mr. Andrews accurately described the use of ELG in all jurisdictions as well as my experience in his testimony on page 5?

A. No. First, Indiana has not exclusively gone to ASL (also known as ALG) and disregarded the ELG procedure. There was the Duke Energy Indiana case where the depreciation expense was changed to ASL instead of ELG based on the specific circumstances in that case, and the order explained that future determinations of depreciation procedure would be on a case-by-case basis. It should also be noted that all the utilities in Indiana have generation assets which are experiencing a very different scenario than what occurs for utilities in Pennsylvania. Second, he misrepresents the cases in my Appendix A that utilized ELG among the 46 states. There are other states besides the three that he mentions that are included in the 460 cases that I have submitted testimony. Therefore, stating 47 other states use ALG is inaccurate. Additionally, his statement that 43 other regulatory commissions that have approved the use of ALG where I have testified is also inaccurate based on my Appendix A. Mr. Andrews does not discuss the other components of developing a depreciation rate when claiming that Pennsylvania is an outlier when he attempts to establish commonality.

Q. Mr. Andrews also references that based on your list of cases that only 3 of 46 regulatory commissions have approved the use of the ELG procedure. Is this accurate?

A. No. There are other jurisdictions other than Texas, Colorado and Canada that have approved the ELG procedure as part of the list of cases where I have been

involved. He does not reflect others such as Oregon, Alabama, Indiana, Louisiana and Arkansas which approved ELG within some of the cases that I have submitted testimony in my career.

Q. Please explain how net salvage is deferred in Pennsylvania.

A. Mr. Andrews notes that future net salvage is not included in depreciation rates in Pennsylvania. As a result of a 1962 Superior Court Decision,[2] Pennsylvania is one of the only states in the country that defers the recovery of net salvage until after assets are retired. Industry standard depreciation practices (which Mr. Andrews typically follows) are to estimate future net salvage and include these estimates in depreciation rates. This approach, referred to as the "Traditional Method" for net salvage, results in intergenerational equity because customers pay for net salvage costs over the life of property (*i.e.,* during the time they provide service to customers). Pennsylvania, in contrast, defers recovery until after the assets are retired, meaning that current customers have to pay the costs of assets that no longer provide service. Mr. Andrews argues that this is one of the causes of Aqua's depreciation rates being lower than average. This argument raises a problem not a reason to defer costs further by changing from ELG to ALG.

Q. How does the deferral of the recovery of net salvage impact the Company's depreciation rates?

A. The Company's depreciation rates are too low to equitably recover the full service value of property.[3] Mr. Andrews is surely aware of this since he includes future

[2] *Penn Sheraton Hotel v. Pennsylvania Public Utility Commission*, 202 Pa. Super. 403, 195 A.2d 180 (Pa. Super. Ct. 1962).
[3] Service value is equal to the original cost less net salvage, where net salvage is gross salvage less cost of removal.

net salvage in almost all of his proposed depreciation rates across the country. The use of the ELG procedure does help mitigate these deferrals. Mr. Andrews' proposal to move away from ELG would create further inequity and push a significant share of costs to future customers.

Q. Please discuss other misleading statements in Mr. Andrews surrebuttal testimony that should be clarified.

A. Mr. Andrews discusses the higher than average investment cycle for Aqua in the last few years, but his statistics are very misleading. First, he states that Aqua has assets that are 140 years old and the average age of assets is 13.6 years. His statement that Aqua has assets that are still in service since 1882 is accurate. However, he then goes on to say the average age of the assets is 13.6 years which is not accurate for the assets. The 13.6 years is a close approximation for the dollars, but comparing a dollar weighted age to the overall life of assets in service is not a reasonable comparison. The footage of mains in the ground, for example, is much closer to a 50-60 year old average. Another key element that Mr. Andrews does not consider is much of Aqua's growth has been in acquisitions of other water and wastewater facilities which brings on additional customers so again his focus on capital investment in total is quite misleading**.**

Q. Please address Mr. Andrews' comments related to the low composite rate for Aqua PA as compared to other companies.

A. Mr. Andrews attempts to once again ignore some of the key elements of depreciation expense when he challenges my testimony. A depreciation rate is based on all of the key factors such as procedure, method, life estimates, net

salvage percentages, surviving plant by age and plant to reserve ratio. Therefore, when comparing rates between utilities you have to include all components as that is what the utility is recovering and the basis for how they are viewed in the industry. Mr. Andrews suggests ignoring the manner at which a Pennsylvania company recovers it full service value which includes net salvage is not a component for comparison. His position is just not reasonable and why trying to compare decisions in other jurisdictions should be clearly understood. Additionally, Mr. Andrews challenges the companies that are listed in my rebuttal testimony as not being comparable. However, he reviewed my Appendix A as he stated in his surrebuttal, so he is aware many of the utilities are other Aqua or American Water companies.

Q. Please also elaborate on your disagreement with Mr. Andrews testimony about the 2.17% composite rate.

A. On pages 8 and 9 of his surrebuttal, Mr. Andrews discusses his 2.17% composite rate not being considered too low even though I provided numerous examples that his 2.17% composite rate is lower than other comparable water companies. The composite rate is for all asset classes, however, Mr. Andrews in his surrebuttal gives an example related to the life estimate of mains. The accounts related to mains are the longest-lived asset classes so attempting to use a theoretical analysis of one of the longest lived accounts to justify his position for the entire asset base is once again not reasonable. Additionally, he tries to bring in the net salvage component of full service value recovery and does not properly include the full amount that is included due to the amortization of net salvage that is part

of recovery for all assets.

Q. Please summarize your written rejoinder testimony.

A. My written rejoinder testimony discusses many of the positions that Mr. Andrews has taken in his attempt to change the ELG procedure to the ASL (also known as ALG) procedure. However, many of the factors that he discusses are based on misleading concepts or statements that do not accurately represent the ELG procedure or the circumstances within Pennsylvania for Aqua PA. A change from ELG to ALG would be more costly to customers in the long run, create an unnecessary intergenerational inequity, restrict Aqua from being able to make necessary improvements to the system in order to provide quality service and does not consider all the factors of the development of depreciation rates for Aqua.

Q. Does this complete your prepared written rejoinder testimony?

A. Yes, it does.

1. Q. PLEASE STATE YOUR NAME, OCCUPATION AND BUSINESS ADDRESS.

A. My name is Paul R. Moul and I am Managing Consultant at the firm P. Moul & Associates. My business address is 251 Hopkins Road, Haddonfield, NJ 08033-3062.

2. Q. MR. MOUL, HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony AP Statement No. 7 was submitted with the Company's case-in-chief on May 23, 2024 and my rebuttal testimony AP Statement No. 7R was submitted on September 12, 2024.

3. Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. Aqua Pennsylvania, Inc. ("AP" or the "Company") has requested that I respond to the surrebuttal testimony presented by Mr. Christopher Keller, a witness appearing on behalf of the Bureau of Investigation and Enforcement ("I&E"), and Mr. Aaron L. Rothschild a witness appearing on behalf of the Office of Consumer Advocate ("OCA"). If I fail to address each and every issue in the surrebuttal testimony of Mr. Keller and Mr. Rothschild, it does not imply agreement with those issues.

4. Q. BASED ON YOUR REVIEW OF THE SURREBUTTAL TESTIMONY OF MR. KELLER AND MR. ROTHSCHILD, DO YOU PROPOSE ANY CHANGE IN YOUR RECOMMENDED RETURN FOR AP IN THIS PROCEEDING?

A. No. There was nothing contained in the surrebuttal testimony of Messrs. Keller and Rothschild that changes my position that AP is entitled to a 10.95% rate of return on common equity. The proposals of Messrs. Keller and Rothschild of 9.37% and 8.70%, respectively, are entirely too low by reference to returns set by the Commission in recent rate cases and DSIC proceedings that I describe in my rebuttal testimony. Mr. Keller's argument that the DSIC rate is merely a benchmark

to identify "overearning" (see page 14 of I&E Statement No. 2-SR) and that it provides an incentive for investment in infrastructure rehabilitation is misplaced (see page 13 of I&E Statement No. 2-SR). The actual collection of revenues from the DSIC can only occur if earnings are below the DSIC rate. And it makes no sense that once DSIC assets enter the rate base that they should be penalized with a lower return which seems to be Mr. Keller's position because his 9.37% equity return is below the 9.65% DSIC rate for water utilities. Furthermore, Mr. Keller is incorrect to believe that the DSIC serves to lower a utility's risk (see page 14 of I&E Statement No. 2-SR). The cost of capital for AP is not affected by the DSIC. I say this because six of the eight companies is my proxy group whose data has been used to develop the cost of equity for AP in this proceeding have at least some form of a DSIC or similar infrastructure rehabilitation mechanisms. Hence, whatever the benefit of a DSIC, or other regulatory mechanisms, that impact is already reflected in the market evidence of the cost of equity for the proxy group.

5. Q. AT PAGES 11-12 OF HIS SURREBUTTAL TESTIMONY (I&E STATEMENT NO. 2-SR), MR. KELLER ATTEMPTS TO EXPLAIN HOW HIS CAPM RESULTS ARE TO BE USED IN THIS PROCEEDING WHEN HIS RECOMMENDATION IS COMPLETELY BASED ON THE DCF MODEL. PLEASE RESPOND.

A. Mr. Keller essentially repeats his position from his direct testimony (I&E Statement No. 2). What he never explains is how the CAPM results should be used, if the DCF results are to be used exclusively to set the equity return in this case. As a result, CAPM results would play no role in this case according to Mr. Keller's position. If the CAPM is to be employed at all in

this case, it must perform some role in setting the return on equity, otherwise it would be ignored entirely according to Mr. Keller.

6. Q. AND, MR. KELLER CLAIMS AT PAGES 12-13 OF I&E STATEMENT NO. 2-SR THAT RECENT INFLATIONARY TRENDS ARE REFLECTED IN THE DCF THROUGH USE OF A SPOT STOCK PRICE AND ANALYSTS' GROWTH FORECASTS. HAS HE SHOWN HOW THIS COULD OCCUR?

A. No. As I explained in my Rebuttal Testimony (see Aqua Statement No. 7-R), Mr. Keller has not shown how this has, or could occur. The fact is that inflationary trends are revealed direct in the yields on Treasury and public utility bonds that are used as direct inputs in the Risk Premium and CAPM methods. The same is not the case for the DCF model.

7. Q. ON PAGE 17 OF I&E STATEMENT NO. 2-SR, MR. KELLER ATTEMPTS TO JUSTIFY THE REASONABLENESS OF HIS DCF ANALYSIS BY COMPARING HIS RESULTS TO THE EMBEDDED COST OF DEBT FOR AP. IS THIS COMPARISON VALID?

A. No. Using the Company's embedded cost of debt as a benchmark is not valid. The correct comparison is with the marginal (i.e., current) cost of debt. The current cost of A-rated public utility debt, i.e. 5.38%, is what investors use to benchmark returns on alternative investments, because the current cost of equity must exceed the current yield on public utility bonds. The embedded cost of debt contains yields on public utility debt issued at a variety of times when interest rates could have been different than today's public utility bond yields. And it is doubtful that current investors know or

care about AP embedded cost of debt. Hence, Mr. Keller's comparison is invalid.

8. Q. AT PAGE 19 OF HIS SURREBUTTAL TESTIMONY (I&E STATEMENT NO. 2-SR), MR. KELLER CLAIMS THAT "FINANCIAL RISK DOES NOT RELATE TO THE CAPITAL STRUCTURE OF A COMPANY." IS THIS CORRECT?

A. This statement is unquestionably incorrect. The recognized measure of a company's financial risk is revealed by the balance sheet of a company. And, Mr. Rothschild apparently agrees with that proposition. Indeed, it is the balance sheet that provides the foundation for calculating the weighted average cost of capital, which is the basis for a public utility's weighted average cost of capital established in rate cases. As stated in The Regulation of Public Utilities[1]:

> …it is widely held that the cost of capital is related to a utility's capital structure. As the proportion of debt increases, "the added *financial risks* for both the debt and equity holders result in higher and higher costs for both debt and equity capital.

9. Q. AT PAGE 25 OF I&E STATEMENT NO. 2-SR, MR. KELLER CLAIMS THAT THE MARKET CAPITALIZATION OF A UTILITY DOES NOT OFFER SUPPORT FOR MY LEVERAGE ADJUSTMENT. PLEASE RESPOND.

A. Mr. Keller cites to Value Line reports where those amounts are related to the market value of equity and excludes debt. However, the Yahoo! Finance (a source used by Mr. Keller) reports show that the "Enterprise Value" of a utility includes both its debt capital as well as the market value of equity. This supports the fact that investors are well aware of the market value of a utility's total capitalization, including both debt and equity.

[1] Charles F. Phillips, Jr., The Regulation of Public Utilities (Public Utilities Reports, Inc. 1993) 233.

10. Q. ON PAGE 28 OF HIS SURREBUTTAL TESTIMONY (I&E STATEMENT NO, 2-SR), MR. KELLER CLAIMS THAT LESS WEIGHT SHOULD BE GIVEN TO MORE DISTANT FORECASTS BECAUSE THEY ARE "LESS RELIABLE AND MORE SPECULATIVE." PLEASE RESPOND.

A. This observation conflicts with his use of five-year projections of earnings growth in his DCF analysis. Given that five-year projections are relied upon by Mr. Keller, and many experts, for DCF purposes, there is no reason to discount any of the projections of Treasury yields when looking for the appropriate risk-free rate of return in the CAPM.

11. Q. AT PAGES 31-35 OF I&E STATEMENT NO. 2-SR, MR. KELLER SEEMS TO IMPLY THAT THE EVIDENCE YOU USED TO SUPPORT THE SIZE ADJUSTMENT IN THE CAPM IS NOT SPECIFIC TO UTILITY STOCKS. IS THIS CORRECT?

A. No. The article by Annie Wong was deficient because it attempted to correlate betas with size. As Fama/French subsequently established as published in the Journal of Finance in 1992, beta is not the correct measure to identify returns associated with the relative size of a company, either utility or non-regulated. Betas measure systematic risk, and the size of a company is an unsystematic risk.

12. Q. WHAT ISSUES WERE CONTAINED IN THE SURREBUTTAL TESTIMONY OF OCA WITNESS ROTHSCHILD THAT REQUIRE A RESPONSE?

A. Mr. Rothschild has addressed a variety of issues, including the following: the discounted cash flow model, market-to-book ratios, analyst's growth projections, betas, and capital structure.

13. Q. MR. ROTHSCHILD ATTEMPTS TO RESPOND (*SEE* PAGES 5-8 OF OCA STATEMENT NO. 3-SR) TO YOUR OBSERVATION CONCERNING THE MANY INCONSISTENCIES IN HIS DIRECT TESTIMONY. HAS HE SUCCESSFULLY DONE SO?

A. For the most part, no. Many of his responses in his surrebuttal testimony attempt to distinguish investor expectations from expert forecasts and the necessary use of historical data due to the limitations of capital market data. But what Mr. Rothschild has failed to explain is how his testimony addresses these factors in any way that is superior to my use of these data. That is to say, expert forecasts are the only hard data that we can use to gain insight into investor expectations, and historical data provides the foundation upon which expectations are formed. As is often repeated, past performance provides no guarantee of future returns. But what it does is to provide a basis for judgments on how the future will diverge from the past given changing fundamentals that impact the capital markets. And that is how I used historical data in my testimony. Moreover, Mr. Rothschild states that markets are influenced by the behavior of millions of people. But he never reveals how many of the millions of people he surveyed to ascertain investor expectations.

14. Q. BEGINNING ON PAGE 10 OF HIS SURREBUTTAL TESTIMONY, MR.

ROTHSCHILD ATTEMPTS TO DIMINISH THE USEFULNESS OF ANALYSTS' PROJECTED GROWTH RATES IN THE DCF. PLEASE RESPOND.

A. Mr. Rothschild sets forth two arguments. He claims at page 13 that analysts' projected growth rates are overly optimistic and that the retention rate must be considered in the DCF. First, in an article published in The Wall Street Journal on April 26, 2010, it was reported that 64% of companies had beaten analysts' forecasts since the start of 1999. More importantly, however, investors rely heavily on analysts' forecasts in determining the price they are willing to pay for a particular stock. Consequently, if the forecasted earnings growth rates were to be discounted, a downward adjustment would also have to be made to the stock prices that reflect those forecasts. This, in turn, would generate higher dividend yields in the DCF analysis. I have specifically noted that Myron Gordon established that analysts' forecasts of earnings growth is the best growth rate measures in the DCF, and retention growth was not the preferred approach. Second, there is no requirement in the DCF model that the growth rate must include a retention rate factor/percentage. Mr. Rothschild's paycheck analogy is way off the mark. The paycheck in his example (see page 14 of OCA Statement 3-SR) is represented by the dividend receipts component that establishes the dividend yield in the DCF equation. This is distinct from the expected growth in future paychecks that an individual might expect. Hopefully, an individual will realize a growing paycheck in the future attributed to (i) inflation, and (ii) recognition of increased productivity. Hence, paycheck growth occurs

mostly from these two factors and has nothing to do with the amount an individual retains in his/her bank account.

15. Q. IN HIS SURREBUTTAL TESTIMONY (*SEE* PAGE 14 OF OCA STATEMENT NO. 3-SR), MR. ROTHSCHILD CLAIMS TO HAVE USED A "HOLISTIC ANALYSIS" WHEN EMPLOYING ANALYSTS' FIVE-YEAR GROWTH RATE FORECASTS. HAS HIS "HOLISTIC ANALYSIS" IMPROVED UPON USE OF ANALYSTS' FORECASTS DIRECTLY?

A. No. My understanding of holism is that the whole is worth more than merely the sum of the parts. Mr. Rothschild used many parts in his analysis, i.e., earnings per share, dividends per share, book value per share, dividend payout ratios, earnings book ratios, market to book ratios, and analysts' forecasts. In his use of these data sets, Mr. Rothschild has missed some key components in pursuit of a truly holistic outcome. We know this because the sum of all the parts used by Mr. Rothschild produces a result that fails the holistic analysis because it is less than the analysts' forecasts used directly.

16. Q. REGARDING THE ISSUE OF MARKET-TO-BOOK RATIOS, MR. ROTHSCHILD CLAIMS ON PAGES 17-19 OF HIS SURREBUTTAL TESTIMONY (OCA STATEMENT NO. 3-SR) THAT WHEN INVESTORS PAY MORE THAN BOOK VALUE, THEY REQUIRE A LOWER RETURN THAN WHAT THEY EXPECT A UTILITY WILL EARN. IS THIS CORRECT?

A. No. Since utility stock prices are today, and have been generally throughout history, considerably higher than book value, Mr. Rothschild's apparent

desire to reduce those prices to book value is unjustified. Of course, no rational investor would take a position in a utility stock with the expectation that the price would decline, thereby losing capital. So while utility stock prices exceed book value, the stock prices of many non-utilities exceed their book values by even larger amounts. Hence, stock prices above book value for utilities provide no basis for reducing market determined returns because they must compete in the capital markets with these other companies. Nevertheless, Mr. Rothschild does exactly that in his analysis.

17. Q. AT PAGES 26-27 OF OCA STATEMENT NO. 3-SR, MR. ROTHSCHILD COMPLAINS ABOUT THE HISTORICAL NATURE OF THE VALUE LINE BETAS. ARE HIS COMPLAINTS VALID?

A. No. What Mr. Rothschild fails to acknowledge is that Value Line adjusts its betas in recognition of the regression bias associated with use of historical data. What Value Line has done is to recognize that the betas of low beta stocks must be adjusted upward, and high beta stocks must be adjusted downward. These adjustments recognize that high and low beta stocks will revert to the mean beta of 1.0 moving from historical performance to expectations. So Value Line has already acknowledged Mr. Rothschild's observation and adjusted for it.

18. Q. IN HIS SURREBUTTAL TESTIMONY (*SEE* PAGES 37-39 OF OCA STATEMENT NO. 3-SR), MR. ROTHSCHILD OPINES THAT THE COMPANY'S PROPOSED CAPITAL STRUCTURE IS UNREASONABLE AND UNFAIRLY PREJUDICES RATEPAYERS. DO YOU AGREE?

A. No. Mr. Rothchild adopts a hypothetical capital structure for AP in place of its actual capital structure. His proposal provides a generic capital structure that would apply to any and all water utilities. But, he is entirely wrong on this matter. Moreover, his approach drives down his equity return on AP's actual equity to 8.42% (6.53% - 1.99% = 4.54% ÷ 53.95%) from 8.70% that he proposes. The Commission's policy on capital structure, which adopts the projected equity ratio if it is the range employed by the barometer group companies, places a limit on the common equity ratio that triggers the imposition of a hypothetical capital structure. As revealed below, the range of common equity ratios is 44.7% to 57.5% for 2023 and 45.0% to 63.0% for 2027-29 based on Value Line forecasts.

	Common Equity Ratio			
Company	2023	2024	2025	2027-29
American States Water Co (AWR)	57.4%	57.0%	56.5%	57.0%
American Water Works Co Inc (AWK)	45.5%	44.0%	42.5%	60.0%
California Water Service Group (CWT)	57.5%	60.5%	61.0%	63.0%
Essential Utilities, Inc. (WTRG)	46.3%	46.0%	45.5%	45.0%
Middlesex Water Co (MSEX)	54.0%	57.0%	58.5%	59.5%
SJW Corp (SJW)	44.7%	47.5%	50.0%	57.0%
Range:				
High	57.5%	60.5%	61.0%	63.0%
Low	44.7%	44.0%	42.5%	45.0%

For a majority of companies, the common equity ratios are trending upward based on the Value Line forecasts. And for the period 2027-2029, the average common equity ratio for the group is 56.92%. Hence, the common equity ratio for AP in this case of 53.95% is clearly reasonable and should be accepted.

19. Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes.

V. CONCLUSION 9

AQUA PENNSYLVANIA, INC.
AQUA PENNSYLVANIA WASTEWATER, INC.
WRITTEN REJOINDER TESTIMONY OF PANPILAS W. FISCHER

I. INTRODUCTION AND PURPOSE OF TESTIMONY

Q. What is your name and business address?

A. My name is Panpilas W. Fischer, and my business address is 4355 Cobb Parkway, Suite J255, Atlanta, GA 30339.

Q. Did you previously submit testimony in this proceeding on behalf of Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. ("Aqua" or the "Company")?

A. Yes, I submitted my direct testimony, Aqua Statement No. 8, on May 23, 2024 and my rebuttal testimony, Aqua Statement No. 8-R, on September 12, 2024.

Q. What is the purpose of your written rejoinder testimony?

A. Subsequent to the filing of my prepared rebuttal testimony, Ralph C. Smith filed surrebutal testimony on behalf of the Pennsylvania Office of the Consumer Advocate ("OCA"). My testimony responds to portions of the surrebuttal testimony submitted by Mr. Smith. Specifically, I will respond to portions of Mr. Smith's testimony about the PA Net Operating Loss ("NOL") deferred tax asset, the repairs deduction and uncertain tax positions.

Q. Are you sponsoring any exhibits associated with your rebuttal testimony?

A. Yes, I am attaching Exhibit PWF-1RJ to support the inventory of property related deferred taxes included in rate base, Exhibit PWF-2RJ to support the level of Aqua's FPFTY repairs deduction and Exhibit PWF-3RJ to support the recalculation of tax expense and deferred income tax in rate base based on OCA's proposed adjustments.

II. PENNSYLVANIA NOL DEFERRED TAX ASSET

Q. On page 27 of Mr. Smith's Surrebuttal Testimony, Mr. Smith states the balance of the PA NOL deferred tax asset in rate base as $32.728 million. Is this correct?

A. No, Mr. Smith missed the correction that was provided in rebuttal testimony, Aqua Statement 8-R at page 2, lines 9-15. The amount that is included in Aqua's rate base is $29,241,593, not $32.728 million. This correction was also reflected in Exhibit PWF-1 attached to Aqua Statement 8-R, which is being including below for ease of reference. This is a difference of $3,485,908:

AQUA PENNSYLVANIA, INC. **Exhibit PWF-1**
AQUA PENNSYLVANIA WASTEWATER, INC.

PA NOL included in Rate Base (due to historical deferral treatment)

	HTY		FTY		FPFTY Corrected	OCA-XV-25a Attachment 1	
Co	12/31/2023 DTA	NOL Utilization 12/31/2024	Balance 12/31/2024	NOL Utilization 12/31/2025	Balance 12/31/2025	Balance 12/31/2025	Difference
5500	32,121,572						
5510	1,559,290						
Subtotal-Water	33,680,863	(3,109,318)	30,571,545	(2,267,005)	28,304,540	31,413,858	(3,109,318)
Wastewater	937,053	-	937,053	-	937,053	1,313,644	(376,590)
Total					**29,241,593**	32,727,501	(3,485,908)

Q. Why is a PA NOL deferred tax asset in rate base unusual in Pennsylvania?

A. Pennsylvania is generally a flow through state for ratemaking purposes, so naturally there would not be many instances where the related deferred tax would be included in rate base so pragmatically there would not normally be a need for testimony to include a PA NOL deferred tax asset in rate base. Normalization treatment of the PA NOL beginning in 2012 was not the preference of the Company, but the size of the past and ongoing tax benefits of the repairs deduction to customers were so significant, generating large NOL's, necessitated extraordinary measures to provide customers these millions of dollars of

benefits. As a result of the normalization treatment of the PA NOL, the Company was able to reduce customer rates and stay out of rate cases for an extended period of time, even though the Company has yet to monetize the $29.214 million of PA tax benefits with the PA Department of Revenue. All other deferred taxes receiving normalization treatment are included in rate base according to the standard of normalization accounting for deferred taxes in ratemaking. This includes state deferred taxes for tank painting and method/life differences that have been included in rate base previously and are included in this case as discussed in Aqua Statement No. 8, page 10, lines 22-23 and page 11, lines 1-3. See Exhibit PWF-1RJ for the inventory of account 282 property related deferred taxes from the PowerTax system included in rate base. The state deferred taxes included in rate base are the four rows highlighted in grey.

Q. Does witness Smith believe there is a regulatory asset associated with the PA NOL deferred tax asset of $29.214 million and why does this matter?

A. Yes, he does. This belief is erroneous. First, the PA NOL deferred tax asset is an "asset" on the balance sheet and it is not proper accounting for the offset to a deferred tax asset to be a regulatory asset, it would have to be a regulatory liability. Second, the balance of the regulatory liability offsetting the PA NOL deferred tax asset is $0. You would not have a "funded" deferred tax asset or liability in rate base in conjunction with a "FAS 109" regulatory asset or liability. The term "FAS 109" is used to preface a regulatory asset or liability because all regulatory assets/liabilities are recorded to the same accounts 182 or 254, but a FAS 109 regulatory asset or liability is grossed-up for taxes and is associated with a non-rate base deferred tax asset or liability. FAS 109 does not alter the normalization rules in any way, rather it provides transparency between the two types of deferred tax

assets and liabilities ("ADIT") that exist and their treatment as rate base vs non rate base ADIT as shown below:

Description	Account	Flow Through	Normalization	PA NOL Def Tax Asset
Cur Income Tax Exp	409	Cost of service	Cost of service	Cost of service
Cur Income Tax Payable	236	N/A	N/A	N/A
Def Income Tax Exp	410/411	N/A	Cost of service	Cost of service
ADIT Funded	190/282/283	N/A	Rate Base	Rate Base
ADIT FAS 109	190/282/283	Non Rate Base	N/A*	N/A*
FAS 109 Reg Asset/Liability	182/254	Non Rate Base	N/A*	N/A*
*Exception is for tax rate changes.				

Under the normalization rules it would not be proper to include a FAS 109 ADIT in rate base, nor would it be proper to exclude a funded ADIT, like the PA NOL, from rate base.

Q. Is it inconsistent to include the PA NOL deferred tax asset in rate base and then discontinue the normalization of the PA NOL in 2025?

A. No, it is not. The PA NOL deferred tax asset of $29.214 million represents the benefits customers already received but the Company has not monetized. Discontinuing the normalization of the PA NOL in 2025 only affects *new* PA NOL and does not impact this historical PA NOL amount. Aqua will monetize the historical PA NOL under normalization accounting as it generates sufficient taxable income in the future and the $29.214 million balance will be reduced as the historical PA NOL is utilized. The extraordinary circumstances that surrounded the normalization of the PA NOL no longer exist given the benefits already passed back to customers and the expected decline of the repairs deduction in the future. While Aqua does not anticipate generating PA NOLs in the future, if future deductions were to create negative PA taxable income once again, and *new* PA NOL is generated, not normalizing the new PA NOL will limit the benefit the customers receive to the amount the Company actually monetizes. The treatment of any new PA NOL

will then follow general Pennsylvania regulatory policy, which is to charge customers a level of tax expense equal to the taxes the utility expects to pay currently beginning in 2025.

Q. Is it inconsistent to include the PA NOL deferred tax asset in rate base when the Company no longer expects to generate NOLs after 2024?

A. No, not at all. As previously stated, the PA NOL deferred tax asset of $29.214 million is generated from historical repairs deductions. When the Company is no longer generating new NOLs, (i.e. the Company has positive taxable income) this does not change the fact that the historical PA NOL balance will decline and with it the amount of the historical deferred tax asset in rate base.

Q. Are Mr. Smith's reasons for excluding the PA NOL deferred tax asset in rate base valid?

A. No, they are not. There will regularly be situations resulting in new property related book vs tax timing difference deferred tax assets or liabilities to be included in rate base which have not been before. Aqua is not seeking retroactive relief for previously not including the PA NOL deferred tax asset in rate base. Aqua is making a prospective correction to adhere to the precepts of normalization accounting and to recognize the fact that customers have in past rate cases received the tax benefits from the repairs deductions that Aqua has not realized. As previously stated, there are other deferred tax liabilities and assets that have been included in rate base absent explicit requirements necessitating such treatment. Inclusion of the PA NOL deferred tax asset in rate base is consistent with Aqua's longstanding ratemaking methodology. Mr. Smith's recommendation should be rejected.

III. REPAIRS DEDUCTION

Q. Do you agree with witness Smith's proposed adjustment to Aqua's repairs deduction?

A. No for reasons explained in Aqua Statement 8-R, pages 11-12, I do not. The repairs deduction cannot be estimated by simply extrapolating a percentage of capital spend based on historical experience to future capital spend. Only replacement type work that does not materially increase capacity passes the first hurdle and then there are additional hurdles under the tax laws to be passed. In the response to OCA-XXVII-18 part1, Attachment 1, the Company provided a breakdown of plant investments by major category and their repairs eligibility in the FPFTY in support of its claimed repairs deduction in this case. Exhibit PWF-2RJ is a copy of that attachment.

Q. Do you agree with witness Smith's calculation of the tax impacts on his proposed adjustment to Aqua's repairs deduction?

A. No I do not. Mr. Smith's calculation only accounts for the current income tax effect of his proposed adjustment. It does not include the impacts to tax depreciation, flow through book depreciation and ADIT in rate base as a result of a different repairs deduction. The tax expense decrease would not be $8,127,142 but $4,523,023, a difference of $3,604,119 because the OCA's proposed repairs deduction changes the amount of book depreciation that is flowed through vs normalized which in turn changes the level of deferred income tax expense. The change in deferred tax expense would create an ADIT increase, which would result in a rate base decrease of $2,031,681. See Exhibit PWF-3RJ attached for the supporting calculations.

Q. Do you agree with witness Smith's recommendation to discontinue the use of the collar mechanism?

A. No, I do not. Without a collar mechanism, when the actual repairs deduction is over the amount included in the FPFTY, customers are harmed because they do not receive the tax benefits and vice versa if the actual repairs deduction is under the amount included in the FPFTY, Aqua is not permitted to recover the additional associated tax expense. Mr. Smith accuses the Company of being one-sided on this issue, but he is the one recommending setting an artificially high level of repairs deduction as well as elimination of the collar mechanism so that the Company cannot recover the additional tax expense it will incur when Mr. Smith's excessive repairs deduction is not experienced. Contrary to Mr. Smith's claim that the collar mechanism was established in a settlement, the propriety of the collar mechanism was presented by Mr. Smith in Aqua's 2021 rate case, and the Commission approved the mechanism.

IV. UNCERTAIN TAX POSITIONS

Q. Is there any application of the FERC's position on UTPs in this case?

A. No. The FERC's position is to exclude deferred tax assets or liabilities for UTPs from rate base and include what the utility has monetized in rate base which is a very different scenario than Aqua's. The FERC generally does not follow flow through tax accounting. Under FERC accounting deferred tax liabilities for cumulative repairs deductions reduce rate base and any repairs related UTP deferred tax assets would not be allowed as a partially offsetting increase to rate base. Compare this to Aqua, where the repairs deductions as well as the UTP on the repairs deductions are treated as flow through, hence there are no related rate base deferred tax assets or liabilities for the cumulative repairs reductions flowed through or the offsetting repairs UTPs. Most importantly Aqua has not monetized all the tax benefits of the repairs deduction, yet still provides customers the benefit of the time

value of money by including UTP reserves as a reduction to rate base, whereas the FERC sets the rate base deduction equal to what has been monetized.

Q. Does the fact that the Company has not been audited since the 2010-2011 tax years have any bearing on the Company's repairs UTP treatment in this case?

A. No. Aqua did not start taking the repairs deduction until the 2012 tax returns, therefore the IRS has not had the opportunity to audit Aqua's repairs deduction yet. This renders Mr. Smith's claim that the reduction to the tax benefit of repairs for UTP is unnecessary because "the repairs deduction has never been reversed under audit" to be a moot point. In fact, there is a greater likelihood Aqua will be audited since it has not been for an extended period of time.

Q. Would it be inequitable if some of Aqua's repairs deduction is disallowed and Aqua records a regulatory asset as claimed by OCA witness Smith?

A. What Mr. Smith describes would be inequitable, but his statement is not a correct interpretation of Aqua's UTP position. See the table below for a summary of the two options to reflect the UTP in ratemaking and their respective outcomes:

	Tax Deduction	Outcome	Regulatory Asset or Liability	Customer Bill Impact
Option 1	Repairs, less UTP	a. Reversed	N/A	0
Option 1	Repairs, less UTP	b. Allowed	Reg Liability	Decrease
Option 2	Repairs - no UTP	a. Reversed	Reg Asset	Increase
Option 2	Repairs - no UTP	b. Allowed	N/A	0

Consistent with what was accepted by the Commission in Aqua's previous rate case, Aqua has reflected Option 1 in this case. If the tax position is audited and disallowed (Option 1a), then there is no additional recovery of tax expense from customers. If the tax position is audited and sustained (i.e. repairs deduction is allowed as claimed-Option 1b), then the Company would set up a regulatory LIABILITY to pass back tax benefits to

customers. This is what Aqua has reflected in this rate case as described in Aqua Statement No. 8, page 16, lines 3-12. Aqua recorded a regulatory liability and is proposing to refund to customers uncertain tax positions that were released, via a credit to deferred income tax expense in this case. OCA Witness Smith wants to change to Option 2 where customer bills would increase if part of the repairs deduction is disallowed.

V. CONCLUSION

Q. Does this conclude your written rejoinder testimony?

A. Yes, it does, but I reserve the right to supplement my written rejoinder testimony as needed during this proceeding.

PREPARED WRITTEN REJOINDER TESTIMONY OF TODD M. DUERR P.E., L.O.

Topics Addressed:

Wastewater Billing

DATE SERVED: October 3, 2024
DATE ADMITTED: _____

Aqua Statement No. 11-RJ

TABLE OF CONTENTS

I. INTRODUCTION AND SCOPE OF TESTIMONY 1

II. RESPONSE TO SCH USA WITNESS CARRIER 2

III. CONCLUSION 4

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. Please state your name and business address.

A. My name is Todd Duerr. My business address is 762 W. Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Aqua Pennsylvania, Inc., ("AP") as Vice President of Operations.

Q. Have you previously provided testimony in this proceeding?

A. Yes. I provided Direct Testimony on behalf of AP and Aqua Pennsylvania Wastewater, Inc. ("APW") (collectively "Aqua," or the "Company") as Statement No. 11 with the Company's filing to the Pennsylvania Public Utility Commission ("PUC" or the "Commission"), Rebuttal Testimony as Statement 11-R, and Surrebuttal Testimony as Statement 11-SR.

Q. What is the purpose of your written rejoinder testimony?

A. The purpose of my Written Rejoinder Testimony is to address the surrebuttal testimony of SCH USA, LLC ("SCH USA") witness Ronald Carrier (SCH USA St. No. 2-SR). I further note that, while my rejoinder testimony is limited to addressing Mr. Carrier's surrebuttal, Aqua continues to disagree with SCH USA's testimony unless specifically stated otherwise.

Q. Are you including any other exhibits with your written rejoinder testimony?

A. No.

II. RESPONSE TO SCH USA WITNESS CARRIER

Q. Does SCH USA witness Carrier agree with you that ultrasonic and electromagnetic flow meters can be used in pressurized flow pipes?

A. Yes. However, Mr. Carrier disagrees with my rebuttal testimony that these types of meters cannot be used in the case of SCH USA's system.

Q. Why does he disagree?

A. For electromagnetic flow meters, Mr. Carrier states there are several manufacturers that offer electromagnetic flow meters for use in non-pressurized, partially-filled pipes. SCH USA St. No. 2-SR, at p. 2.

Q. Do you agree with this?

A. As I discussed in my rebuttal testimony (Aqua Statement No. 11-R), when I referred to electromagnetic meters, I was referring to the meters that are most typically used in full pipe flow application. However, as I also stated in my rebuttal testimony there are other types of open channel flow measuring devices, which appear to be the meter type that Mr. Carrier is describing when he discusses electromagnetic meters on non-pressurized, partially filled pipes. While there are some manufacturers that provide these types of electromagnetic flow meters, the application of these meters must be specifically engineered for the flow volume. I cannot determine that the existence of such meters will be conclusive of appropriate metering technology use in the case of SCH USA's system. Again, those types of meters are subject to many design and operational parameters that must be specifically engineered to ensure appropriate measurement.

Q. What does SCH USA witness Carrier suggest regarding the use of ultrasonic meters on gravity systems?

A. Mr. Carrier suggests that it could be possible to configure a sewer line that creates a section of the pipe that dips below the lowest part of the sewer line then reconnects to the downstream section of the sewer line (a U-bend), thereby providing a section of the pipe that will remain full to measure flow through. SCH USA St. No. 2-SR, at p. 2.

Q. Do you agree with Mr. Carrier?

A. No. The U-bend in a pipe is not typically used for raw (i.e., untreated) wastewater flow measuring. This is because the U-bend in the pipe will cause solids in the raw wastewater to settle in the bottom of the pipe that will build up and then not allow for accurate reading of flow. Moreover, this will cause the pipe to backup causing other issues within the system. In my experience, the type of U-bend that Mr. Carrier is describing for use in wastewater flow measure is for treated effluent, where solids have already been removed and there is not anything in the treated effluent that could build up in the U-bend.

Q. Mr. Carrier also discusses using water meter readings and the use of customer owned water meters as an alternative to EDU based billing. SCH USA St. No. 2-SR, at p. 2. Please respond.

A. Mr. Carrier notes that it would allow Aqua to verify the installation of any water meters and that testing should occur before installation and periodically to ensure accuracy. SCH USA is not, as far as I am aware, subject to Commission jurisdiction or Chapter 65 regarding meter installation or testing requirements. As such, enforcement of testing requirements would need to be done through a separate agreement specifically for SCH USA. SCH USA would also have to allow access rights to the meter, and if SCH USA does not provide reads or allow Aqua the ability to read the meters, Aqua does not have the ability to terminate SCH USA's water service because Aqua is not the water provider

– SCH USA is. In that instance the only other option would be to dig up and sever or plug each entry point to Aqua's wastewater system from SCH USA's system. Moreover, simply because SCH USA's requested relief may or may not be feasible does not demonstrate the existing service and rates of Aqua are unjust or unreasonable such that they must be revised.

III. CONCLUSION

Q. Does that conclude your written rejoinder testimony?

A. Yes, it does, but I reserve the right to supplement my written rejoinder testimony as needed during this proceeding.

Q. Please state your name and business address.

A. My name is Rita F. Black, and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. By whom are you employed and in what capacity?

A. I am employed by Essential Utilities, Inc. ("Essential") as the Director of Community Assistance Programs. In this role, I lead assistance programs for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua"), and Peoples Natural Gas Company LLC ("Peoples"), as well as the regulated utilities of Essential operating in other states.

Q. Have you previously provided testimony in this proceeding?

A. Yes. My direct testimony is provided in Aqua Statement No. 13 and my rebuttal testimony is provided in Aqua Statement No. 13-R.

Q. What is the purpose of your written rejoinder testimony in this case?

A. I would like to respond to the surrebuttal testimony of Mr. Roger Colton, on behalf of the Office of Consumer Advocate ("OCA") and Mr. Harry Geller, on behalf of the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA").

II. RESPONSE TO CAUSE-PA WITNESS HARRY GELLER (CAUSE-PA STATEMENT NO. 1-SR)

Q. On pages 4 through 8 of his testimony, Mr. Geller discusses the counting and tracking of low-income households. Would you like to respond?

A. Yes. Aqua's customer information system does not have the ability to classify customers' potential low-income status based on income type alone. Its system relies on a dollar amount assigned to the type of income verbally provided by the customer. Therefore, Aqua is unable to track participation in other federal, state or utility programs as indicators of low-income status, for example. Customers who are participating in any of Aqua's programs are counted as low-income households. Further, I would like to clarify that income information provided during the medical certification process to establish payment arrangements, for example, is recorded in the customer's record. If it is reflective of low-income, the customer's record would indicate that status. Existence of a medical certificate alone, however, is not indicative of low-income status as medical certificates are available to customers regardless of income.

Q. Mr. Geller responded to your rebuttal testimony regarding his proposed modifications to the discount structure and benefit levels offered under Aqua's Customer Assistance Program ("CAP"). Please respond to his surrebuttal testimony on this issue.

A. Mr. Geller reiterated his proposal to expand Aqua's current discount design to four tiers from three. As noted in my rebuttal testimony, Aqua understood a one-size-fits-all approach of providing one discount to all participants as was in place at other utilities at the time was not the best approach to CAP design and therefore proposed its tiered discount design to provide the highest level of discounts to those with the lowest incomes. Aqua's program is still relatively new, and its participation is gaining traction. Once the program was approved in 2022, work began on establishing the program from a functional

standpoint, as well as developing an outreach plan and educating employees. It is important to consider that roughly half of Aqua's current participants are Low Income Household Water Assistance Program ("LIHWAP") recipients. LIHWAP was operated in Pennsylvania as a crisis program, requiring applicants to have arrears sufficient to receiving a termination notice or loss of service. As Aqua CAP participation grows and diversifies to include other low income customers who do not have arrears, we will gain a fuller picture of whether the discounts provided in Aqua's CAP are sufficient to improving affordability. This is an important consideration in the balance between customers who receive these discounts and the customers whose bills are increased to subsidize these discounts.

Q. On pages 14 and 15 of his surrebuttal testimony, Mr. Geller raises concerns about the availability and use of Aqua Aid. Please respond to these concerns.

A. Mr. Geller states, "For example, in 2023, Aqua reported a total of 20 grants processed, despite 4,179 confirmed low-income customers experiencing an involuntary service termination for nonpayment."[1] This statistic is misleading. The low number of grants that Mr. Geller speaks of occurred before the former Helping Hand grant was relaunched as Aqua Aid. With the relaunch, Aqua Aid was promoted widely to all residential customers through a dedicated bill insert in the spring of 2024. Information was also added to the Company's website and customer service agents at both Aqua and Aqua's CAP administrator, Dollar Energy Fund, were trained in Aqua Aid to increase awareness and use of the funds. As a result, grant participation has grown substantially. By comparison, in the month of August alone, 20 grants were issued -- the same amount of grants processed

[1] CAUSE-PA St. No. 1-SR, p. 15, lines 15 through 17.

in 2023 in its entirety. The current model of using Aqua personnel to interact with interested Aqua Aid applicants is beneficial, not only to ensuring that grants are provided expeditiously, but also in providing a holistic approach. We find that many of the customers contacting us to apply for Aqua Aid are actually better served by enrolling in CAP and deferring their arrears for future arrearage forgiveness while receiving monthly discounted bills.

III. RESPONSE TO OCA WITNESS ROGER COLTON (OCA STATEMENT NO. 6SR)

Q. Mr. Colton responded to your rebuttal testimony regarding outreach elements and raised five additional elements that would be required for your proposed alternative to be acceptable.[2] Please describe those elements and respond to them.

A. Mr. Colton first notes that there should be more specificity in my recommendations to incorporate CAP information into termination notices and to work with the Aqua Assistance Collaborative ("AAC") to identify call scripting and call center reference tools. As the AAC meets on a quarterly basis and outreach is a key component of our discussions, I will commit to beginning this work with the AAC at the next scheduled meeting which will occur in November.

Second, Mr. Colton suggest that Aqua "should pursue a study of its low-income customers to inquire why nonpaying customers do not make contact with the utility, when, in response to bill nonpayment, those nonpaying customers receive a request to contact the utility."[3] I think such a study is unnecessary. The "request to contact the utility" in response to nonpayment is typically a collections or termination letter. Customers also

[2] OCA St. No. 6SR, pp. 9-10.
[3] OCA St. No. 6SR, p. 9, lines 26 through 28.

receive phone calls or field posted notices regarding nonpayment of bills. Customers who are unable to pay the amount due often do not respond to these efforts for a number of reasons including their inability to pay the bill, their lack of awareness of assistance programs, unwillingness to work with utility personnel, and often multiple competing financial priorities including rent and other utility bills that may also be in arrears. Rather than conducting a study of the topic described by Mr. Colton, I believe it would be more productive to engage the AAC on the topic of customer engagement to identify methods that these professionals, working with low income populations, may have already found to better connect payment-troubled customers with CAP and other assistance programs.

Mr. Colton also suggests that Aqua should engage an adult education professional to assist in the development of communications. Aqua employs adult education professionals as trainers in its Customer Service organization. I understand Mr. Colton's point that these types of professionals can benefit our outreach communications and will include them in our upcoming AAC discussions on outreach and engagement.

Fourth, Mr. Colton suggests a timeline of twelve months from the final order in this proceeding for Aqua to adopt the work I proposed in my rebuttal testimony. This timeline is reasonable.

Finally, Mr. Colton states that reporting and accountability to the Bureau of Consumer Services ("BCS") should be incorporated through reporting within 18 months or as part of Aqua's next base rate proceeding, whichever comes first. I would like to note that BCS is part of the AAC and participants in all meetings. Further, Aqua already provides a report to BCS on an annual basis through its Consumer Education and Outreach

Plan ("CEOP") which was implemented following the last base rate proceeding. Therefore, I do not believe any further reporting is necessary at this time.

Q. Please respond to Mr. Colton's surrebuttal testimony in response to your rebuttal regarding Aqua filing a Universal Service Plan.[4]

A. I would like to clarify that in my rebuttal testimony I was responding to the suggestion by Mr. Geller that Aqua should be required to file a Universal Service Plan, a point Mr. Geller continues to make in his surrebuttal testimony[5]. In response, Mr. Colton suggests that Aqua "has never articulated the policy basis for its low-income programs. That failure to articulate the basis for its program leaves the Company free to change the policy foundation for its program to fit its needs at a particular point in time. It also leaves the Company free from any accountability regarding whether it is, or is not, fulfilling the reasons why it has adopted the low-income program with which to begin."[6] I disagree with Mr. Colton's characterization that Aqua is attempting to avoid accountability by stating its unwillingness to file a Universal Service Plan, a document whose regulations are not applicable to Aqua. I further dispute his statement that "Ms. Black objects to having the Commission tell Aqua what the policy basis for its low-income CAP should be"[7]. Not only has Aqua been fully transparent in this and prior proceedings regarding its foundation for the programs developed and offered, it files an annual CEOP reiterating its outreach efforts and meets quarterly with stakeholders through AAC including members of OCA, PULP and BCS.

[5] CAUSE-PA St. No. 1-SR, p. 21, beginning on line 9.
[6] OCA St. No. 6R, p. 10, line 26 through Page 11 line 5.
[7] OCA St. No. 6R, p. 11, lines 6 and 7.

Q. Mr. Colton states, "Ms. Black does not object to increasing the number of conservation kits distributed to low-income customers."[8] Do you agree with this statement?

A. I do not. In my rebuttal testimony, I note that Mr. Colton proposed to send a conservation kit to all new CAP enrollees. I disagree with this proposal as the costs would be more than the annual funding of the leak repair and conservation budget in total. I believe the current process, of prioritizing kits to high users, is a better use of limited resources.

Q. Similar to CAUSE-PA witness Mr. Geller, Mr. Colton responded to your rebuttal testimony regarding modifying the current CAP design. Would you like to respond to his testimony on this topic?

A. Mr. Colton's recommendations are very similar in nature to Mr. Geller's, which I have already addressed earlier in my testimony.

IV. CONCLUSION

Q. Does this conclude your Rejoinder Testimony?

A. Yes. I reserve the right to submit supplemental testimony if additional issues arise during the course of this proceeding. Thank you.

I. INTRODUCTION 1

II. THE "REGULATORY COMPACT" 2

III. ALTERNATIVE RATEMAKING 5

IV. THE USE OF FAIR MARKET VALUE 7

WRITTEN REJOINDER
OF
PAUL J. HIBBARD

I. INTRODUCTION

Q. Would you please state your name, business address, and occupation?

A. My name is Paul Hibbard. I am a Principal at Analysis Group ("AG"), an economic, finance and strategy consulting firm headquartered in Boston, Massachusetts, where I work on energy and environmental economic and policy consulting. My business address is 111 Huntington Avenue, 14th Floor, Boston, Massachusetts 02199.

Q. Have you previously provided testimony in this proceeding before the Pennsylvania Public Utility Commission ("PUC," or "Commission")?

A. Yes. On September 12, 2024, I provided Rebuttal Testimony as Aqua St. No. 15-R to the PUC on behalf of Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively, "Aqua" or "Company") related to ratemaking principles. In my Rebuttal Testimony, I set forth my qualifications, which have not changed.

Q. What is the purpose of your written rejoinder?

A. In this written rejoinder, I respond to certain aspects of the Surrebuttal Testimony of the Pennsylvania Office of Consumer Advocate ("OCA") witness Christine Maloni Hoover,[1] including her surrebuttal regarding the "regulatory compact," alternative ratemaking, and the use of the fair market value approach in incorporating the cost of municipal water system acquisitions.

[1] *Pennsylvania Office of Consumer Advocate*, Surrebuttal Testimony of Christine Maloni Hoover, OCA Statement No. 1-SR, Docket Nos. R-2024-3047822 *et al.,* September 26, 2024.

Q. Initially, does anything in Ms. Hoover's Surrebuttal Testimony change the opinions you stated in your rebuttal testimony?

A. No.

II. THE "REGULATORY COMPACT"

Q. Ms. Hoover claims that she does not narrowly define the regulatory compact and traditional ratemaking.[2] Can you explain in more detail why you came to the conclusion that her definitions were overly narrow?

A. Ms. Hoover's application of the phrase regulatory compact in this proceeding focuses on the obligations of the utility to provide service at reasonable rates subject to state policing powers,[3] with little or no reference to the obligation to allow the utility to recover the legitimate costs of meeting its public service obligation. For example, she answers the question of what is regulatory compact as "in return for the public utility company being granted an exclusive franchise to operate in a specific service territory without rival, the public utility company in turn has the duty to provide service to all customers under certain governmental direction and oversight as to rates and service quality, subject to due process constraints."[4] Nowhere in her answer to the question does she mention the obligation to allow the utility to recover its legitimate costs. Additionally, she stated in her Direct Testimony that "[i]n this case, the OCA seeks to present a clear focus on the needs of consumers to safe and reliable drinking water and wastewater at just and

[2] OCA St. No. 1-SR, p. 4.

[3] *See, e.g.*, OCA St. No. 1, pp. 18-19 ("Foundationally, the state's authority to regulate public utilities stems from the state's police powers… the regulatory compact or framework in Pennsylvania, as set forth in the Public Utility Code, permits the Commission to grant a public utility company the legal privilege to exclusively serve in a defined service area, and in turn, the public utility is obligated within that area to provide consumers adequate, efficient, safe, and reasonable utility service and to maintain adequate, efficient, safe, and reasonable utility facilities at rates that are just and reasonable and not unreasonably discriminatory.").

[4] OCA St. No. 1, p. 18.

reasonable rates that they can afford."[5] Notably, these quotes come from pages she cited to dispute my statement that she makes little or no reference to the obligation to allow the utility to recover its legitimate costs.[6]

She further claims that the Company's proposal to use certain ratemaking mechanisms that she refers to as "alternative" "undermine[s] the regulatory compact" because they "shift the risk of uncertainties from the public utility to captive consumers who have no choice but to purchase water and wastewater from Aqua due to its monopoly status."[7] However, in focusing on the risks, she neglects to fairly assess the benefits of using these mechanisms to customers, including improvements to service quality, reliability, and efficiency.

Q. You stated in your Rebuttal Testimony that Ms. Hoover and the OCA make an "erroneous presumption that the whole ratemaking process in Pennsylvania and/or the Commission's exercise of its jurisdictional responsibilities are structurally biased in favor of regulated utilities."[8] Ms. Hoover claims that you are incorrect.[9] Can you explain in more detail why you reached this conclusion?

A. In her Direct Testimony, Ms. Hoover stated repeatedly that the ratemaking process in Pennsylvania fails to adequately account for consumers interests relative to regulated utilities. For example, she specifically stated that: "Consumers' interests are often overlooked in both the nuts and bolts and the big picture of rate setting"[10] and that "the

[5] OCA St. No. 1, p. 26.

[6] OCA St. No. 1-SR, p. 5.

[7] OCA St. No. 1, pp. 11, 27.

[8] Aqua St. No. 15-R, p. 4.

[9] OCA St. No. 1-SR, p. 6.

[10] OCA St. No. 1, p. 25.

focus of the rate case is usually on the investors' needs, missing from the focus is defining the consumers' needs."[11]

Q. In your Rebuttal Testimony, you stated that Ms. Hoover's testimony suggests that the Commission should focus primarily or exclusively on consumer interests and that this provides the Commission with latitude to set rates that are outside a zone of reasonableness.[12] Ms. Hoover claims that this is not a reasonable conclusion or supported by what is in her testimony.[13] Can you explain the basis for your conclusion?

A. In her Direct Testimony, Ms. Hoover specifically emphasized the need to consider consumer interests and stated that in balancing utility and consumer interests, the Commission can set rates outside the zone of reasonableness: "Thus, the fact that consumer interest must be considered in the assessment of whether rates are just and reasonable is a well-founded concept in both the regulatory compact as established in case law and in Pennsylvania statutory authority… Within that zone of reasonableness, the interests of consumers and investors should overlap. There may be circumstances where the rates are outside of a normal range of reasonableness, but the regulators must still fairly balance the interests of all parties."[14]

[11] OCA St. No. 1, pp. 25-26.

[12] Aqua St. No. 15-R, p. 13.

[13] OCA St. No. 1-SR, p. 6.

[14] OCA St. No. 1, p. 25.

Q. Ms. Hoover testified in her Surrebuttal Testimony that: "I did not testify that reasonable and prudent costs should be disregarded."[15] Does that accord with your understanding of the impact the OCA's recommendations would have on Aqua?

A. No. As I understand the OCA's recommendations, if the Commission adopts the OCA's recommended revenue requirement,[16] then Aqua will not be able to recover reasonable and prudently incurred costs necessary to provide service to its customers, jeopardizing its ability to obtain financing at reasonable rates, invest in its systems, and provide high quality service to its customers.

III. ALTERNATIVE RATEMAKING

Q. Ms. Hoover states in her Surrebuttal Testimony that she did not claim there should be a numerical limit on alternative ratemaking measures but only that they should not be viewed in isolation.[17] Does that accord with her previous testimony?

A. Ms. Hoover's Direct Testimony stated that "Aqua could have chosen any of these [alternative ratemaking provisions] or none of them, but the fact that they chose to employ them *all* in coordination with each other… present unreasonable choices by Aqua that seeks to insulate shareholders and Aqua management from the difficult job of efficient management and seeks to place nearly all the risk on Aqua's captive customers."[18] In other words, Ms. Hoover's statement implies that employing multiple ratemaking mechanisms is unreasonable.

[15] OCA St. No. 1-SR, p. 6.

[16] OCA St. No. 1, p. 3.

[17] OCA St. No. 1-SR, p. 8.

[18] OCA St. No. 1, p. 37.

Q. Does Ms. Hoover correctly characterize your discussion of Section 1311(c)[19] when she claims that you stated that the wastewater costs in this matter are "spread among the common customer base of the water and wastewater utilities"?[20]

A. No, Ms. Hoover mischaracterizes my testimony. The quote Ms. Hoover cites to comes directly from a quote from the Commission's 2012 Final Implementation Order regarding Act 11 of 2012 that was simply part of a description of Section 1311(c)'s purpose according to the Commission.[21] I did not claim that Aqua's water and wastewater customers are the same or that the wastewater costs in this case are "spread among the common customer base of the water and wastewater utilities."

Q. In her Surrebuttal Testimony, Ms. Hoover continues to claim that the four "alternative ratemaking mechanisms" cited in her Direct Testimony are "outside of traditional ratemaking because each creates an exception to traditional ratemaking."[22] Do you agree?

A. Ms. Hoover's distinction between traditional and alternative ratemaking continues to be forced and exaggerated to set the stage for the very real-world and significant reductions the OCA proposes to the Company's revenue requirement.[23] Whether a mechanism is labeled traditional or alternative, its effects and justifications are what the Commission must consider. Moreover, the various ratemaking mechanisms the Company proposes

[19] Aqua St. No. 15-R, p. 18.

[20] OCA St. No. 1-SR, p. 9.

[21] Aqua St. No. 15-R, p. 18 citing Final Implementation Order, *Implementation of Act 11 of 2012*, Docket No. M-2012-2293611 (August 2, 2012) ("2012 Implementation Order re Act 11"), p. 8.

[22] OCA St. No. 1-SR, p. 9.

[23] OCA St. No. 1, p. 3.

are designed to manage the risks associated with major forthcoming capital investments and ensure the Company's financial viability and ability to attract capital.

IV. THE USE OF FAIR MARKET VALUE

Q. Ms. Hoover states that you "characterize[] the revenue requirement deficiencies created by the FMV acquisitions as 'irrelevant.'"[24] Please clarify what you found to be irrelevant and why.

A. I stated that "Ms. Hoover's contention that the 'fair market value rate base exacerbates the revenue deficiencies' is irrelevant"[25] because the Commission previously approved the inclusion in rate base of the fair market value of the acquisitions to which she refers.[26] Thus, the use of fair market value for these acquisitions should not be an issue in this case.

Q. Does this conclude your written rejoinder?

A. Yes.

PREPARED WRITTEN REJOINDER TESTIMONY OF ALEXIS RODRIGUEZ

Topics Addressed:

Customer Service Line Warranty Program

DATE SERVED: October 3, 2024
DATE ADMITTED: _____

Aqua Statement No. 16-RJ

I. INTRODUCTION AND SCOPE OF TESTIMONY

Q. What is your name and business address?

A. My name is Alexis Rodriguez and my business address is 762 W. Lancaster Avenue, Bryn Mawr PA 19010.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. My surrebuttal testimony AP Statement No. 16-SR was submitted on September 12, 2024.

Q. What is the purpose of your Written Rejoinder Testimony?

A. My testimony is to address Office of Consumer Advocate ("OCA") witness Smith's revenue adjustment for HomeServe USA Corp. ("HomeServe") and OCA witness Alexander's testimony on this topic.[1]

II. RESPONSE TO OCA WITNESS SMITH

Q. Please explain OCA witness Smith's adjustment related to HomeServe.

A. In witness Smith's surrebuttal testimony, he added a new $5,061,510 revenue adjustment related to HomeServe revenues received by Aqua Resources, Inc. ("Aqua Resources"), which I disagree with.[2]

Q. Please explain why Mr. Smith's adjustment is not appropriate.

A. First, it is inappropriate for the reasons set forth in my surrebuttal and which is further supported by the Pennsylvania Public Utility Commission ("Commission") in the recent Pennsylvania-American Water base rate case.[3] Aqua PA has no contractual relationship with HomeServe. HomeServe is an independent company that provides emergency home

[1] *See* OCA St. Nos. 2SR and 7SR.
[2] OCA St. No. 2SR, p. 20.
[3] *Pa. PUC, et al. v. Pennsylvania-American Water Company*, Docket Nos. R-2023-3043189, *et al.* (Order entered July 22, 2024).

repair solutions and protection solutions to homeowners. Aqua PA does not bill or collect warranty coverage on its customers' utility bills. Nor does Aqua PA provide customer name or address information to HomeServe.

Q. If the Commission were to reverse its precedent on this matter, is Mr. Smith's revenue adjustment appropriate?

A. No, it is not. The number provided in discovery and as stated in that discovery applies to all of the Aqua subsidiaries where marketing occurs.[4] [**BEGIN CONFIDENTIAL**] [redacted] [**END CONFIDENTIAL**] Again, I disagree with any type of adjustment and change in course of prior Commission practice and precedent on this matter.

III. RESPONSE TO OCA WITNESS ALEXANDER

Q. Does Ms. Alexander discuss HomeServe in her surrebuttal testimony?

A. Yes. However, Ms. Alexander's discussion of HomeServe mainly reiterates her prior recommendations she stated in Supplemental Direct Testimony. The Company continues to disagree with the adjustments and the recommendations of the OCA for the reasons set forth in my Surrebuttal Testimony, and in this written Rejoinder Testimony.

IV. CONCLUSION

Q. Does that conclude your written Rejoinder Testimony at this time?

A. Yes, it does, but I reserve the right to supplement my written Rejoinder Testimony as needed during this proceeding.

Introduction

Q. Please state your name and business address.

A. My name is Christine Maloni Hoover. My business address is 555 Walnut Street, 5th Floor, Harrisburg, PA 17101.

Q. By whom are you employed and in what capacity?

A. I am employed by the Office of Consumer Advocate (OCA) currently with the title Of Counsel. When I retired on March 31, 2024, I was the Deputy Consumer Advocate.

Q. What is the purpose of your testimony in this case?

A. I have been asked to provide an overview of this case from the consumers' perspective, including a discussion of how Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (Aqua PA or Company) proposals that, when taken together, result in large bill increases and other harms to its customers. I will also introduce and synthesize the OCA's other witnesses who address the rate requests filed by the Company and provide an overall recommendation.

Q. Have you previously provided testimony before the Pennsylvania Public Utility Commission?

A. Yes. I provided direct (corrected), supplemental, rebuttal, and surrebuttal testimony in Pennsylvania-American Water Company's base rate cases at Docket Nos. R-2023-3043189 (water) and R-2023-3043190 (wastewater). I am also currently serving as a witness for the OCA in Aqua's application to purchase the assets of the Greenville Sanitary Authority at Docket No. A-2023-3041695. Prior to those cases, my appearances before the Commission have been as an attorney on behalf of the Office of Consumer Advocate.

Q. What are your qualifications to provide this testimony in this case?

A. I was employed by the OCA from 1987 through March 2024 in increasingly responsible roles as an attorney, then a senior attorney, and then as the Deputy Consumer Advocate. I also

served as the Interim Acting Consumer Advocate for slightly more than 6 months from June 2021 through mid-December 2021. I have concentrated my legal career on cases and public policy issues that have been before the Public Utility Commission (PUC or Commission). I also have been involved in public policy issues at the state and federal level, concentrating on water and wastewater issues. During my career at OCA, I had increasing responsibilities and had a role in setting the OCA's policy positions on a wide range of utility issues. In addition, during my career at OCA I was responsible for supervising the technical staff and the support staff of the office, and responsible for the operations of the office.

During my career, I developed expertise relating to the regulation of public utilities. I have presented many times relating to regulatory issues and have prepared testimony for the legislature. I have participated as a faculty member in educational programs for the Institute of Public Utilities at Michigan State University and presented before the American Water Works Association (AWWA), the Society of Utility and Regulatory Financial Analysts, the National Conference of Regulatory Attorneys, and the Pennsylvania Bar Institute. My complete curriculum vitae is provided as Appendix A.

Q. Do you have any experience that is particularly relevant to the issues in these cases?

A. Yes, I do. During my career at OCA, I developed specific expertise in the regulation of water and wastewater issues. In addition to my case work on water and wastewater utilities, including appellate work, I was involved in several activities that are not tied to specific legal proceedings. I was the OCA's representative on the Department of Environmental Protection's Technical Assistance Center. I have participated on behalf of the National Association of State Utility Consumer Advocates (NASUCA) in negotiations for rulemakings on Stage 2 Disinfection By Products, Total Coliform Rule, and the National Drinking Water Advisory Committee's Small Systems Implementation Working Group. I was a member and chair of

American Water Works Association (AWWA)'s Public Interest Advisory Forum for many years. I also served as a consumer representative on the Water Research Foundation's Public Council. I was a member of, and past chair of, NASUCA's Water Committee.

Q. Have you prepared Exhibits to accompany your testimony?

A. Yes, I have Exhibits CMH-1 through CMH-4 attached to my testimony.

Q. Do you have any other preliminary matters to address?

A. Yes, there are occasions where I may refer to decisions by regulatory agencies, courts, statutes and regulations. Although I am a licensed attorney, this should not be considered a legal opinion as I am not acting as an OCA attorney in this proceeding. Any reference or citation would be related to supporting my opinion about the public policy that I discuss below.

Summary

Q. Please summarize your conclusions and recommendations.

A. I summarize my conclusions and recommendations of OCA witnesses as follows:

- Consistent with the testimony of OCA's Accounting witness Ralph Smith at OCA Statement 2, based on witness Smith's and other OCA witnesses' recommendations, Aqua shows an overall net revenue excess of $9.0 million on a total company basis. Aqua has not supported its requested $126,675,472 (18.88%) of additional annual revenues;

- Consistent with the testimony of OCA's witness Brian C. Andrews at OCA Statement 4, Aqua's proposed rate increase is overstated in part due to its use of the Equal Life Group (ELG) depreciation procedure which drives up the depreciation expense amount especially in the context of Aqua's accelerated investment period. Aqua's total proposed 2025 depreciation expense of $161.1 million represents 20% of its proposed total revenue requirement;

- Aqua's proposed rate increase is overstated in part due to its high cost of equity in an equity rich capital structure, as addressed by OCA witness Rothschild in OCA Statement 3;

- Aqua's overstated rate of return is applied to a rate base that includes seven fair market value acquisitions (three acquisitions for the first time), including one that has been appealed to the Pennsylvania Supreme Court;

- Aqua already uses at least four different alternative ratemaking provisions of the Public Utility Code, namely the Fully Projected Future Test Year, the shift of wastewater revenue deficiency to water customers, the use of fair market value for municipal acquisitions, and the Distribution System Improvement Charge each which individually and all of which collectively shift risk to its customers and provide higher returns to its investors. 66 Pa. C.S. §§ 315(e), 1311(c), 1329, 1350-1360. The impact of all four of these provisions is to reduce regulatory lag and move the rate setting away from cost of service;

- Aqua is requesting approval of deferral accounting for capital and operating costs related to the treatment of PFOA related to an existing Pennsylvania regulation and a recently promulgated federal regulation that has been challenged in federal court by multiple stakeholders and has compliance deadlines starting in 2027. Aqua's request violates sound ratemaking principles and should be denied;

- For its existing wastewater base operations that already include five fair market value acquisitions, Aqua proposes to shift 60% of the annual wastewater revenue deficiency, or $21.85 million, to its water customers. This represents 20% of the total wastewater cost of service. (Aqua Filing Vol. 2, Schedule Act 11, p. 1);

- Aqua's three acquisitions (one water and two wastewater) with ratemaking rate base valued under Section 1329 that have been added since its last base rate cases, have added a cumulative annual revenue deficiency of $12,787,335 (water acquisition revenue deficiency is $2,267,908; wastewater acquisitions (Lower Makefield and East Whiteland Townships) annual revenue deficiency is $11,321,897), calculated as of the end of the fully projected future test year. (Aqua Filing Vol. 2, Schedule Act 11, p. 1);

- Consistent with the rate base and related adjustments made by OCA witness Smith, Aqua should not be permitted to include the uncertain East Whiteland acquisition in ratemaking rate base in this proceeding and should be required to remove all capital and expense costs, as well as any transaction costs relating to that transaction from this case;

- Consistent with the recommendation of OCA witness Roger Colton, OCA Statement 6, Aqua's bill discount and arrearage forgiveness programs should be modified to better address the needs of its low-income customers;

- Aqua has customers throughout its 32 counties it serves who are struggling to pay utility bills because of the large burden of their **current** utility bills; and those customers are not eligible for its customer assistance programs;

- OCA witness Alexander, OCA Statement 7, discusses the identification and evaluation of compliance with previous commitments/orders on customer service performance, complaint handling and root cause analysis, consumer protection (Ch. 56 and Chapter 14) compliance; updating actual customer service performance and compliance issues: call center; internal training, response to BCS infractions and verified complaints, etc.; and evaluating internal performance objectives and results;

- Aqua should be directed to add additional usage levels for residential customers in its rate case notices for its next case;

- Aqua should be directed to provide information to its customers at the end of this proceeding to inform them of the result of the case and the impact on their bills;

- Aqua should be directed to continue to operate its PFAS website;

- Aqua's third rate case in 5 years (second rate case filed two years after its last rate increase became effective) seeks to increase rates that many customers are struggling to pay;

- The OCA's recommendations reflect the consumers' interests and still ensure that Aqua has sufficient ability to attract capital and the opportunity to earn a fair rate of return. The Commission's adoption of the OCA's recommendations in this case would comport with the regulatory compact.

Overview of this Case

Q. Please provide an overview of Aqua's rate request.

A. Aqua has proposed to increase its annual revenues in February 2025 by $126.7 million (18.88%). The proposed increase would take effect approximately thirty-three months after its most recent rate increase of approximately $69.25 million.

Aqua provided rate case notices to its customers, but these notices very likely significantly underestimate the impact that many consumers will experience because the notices use only what Aqua considered a "typical" residential customer usage level of 3,870 gallons of water per month. Increases for a residential water bill based on 3,870 gallons of water per month, by zone, are reflected below and range from 20.32% to 69%.

Water

Noticed Area	Current*	Proposed*	Percent Increase/(Decrease)	Amount Increase/ (Decrease)
Main Division	$78.21	$97.01	24.04%	$18.80
Eagle Rock	$80.63	$97.01	20.32%	$16.38

*Aqua Notices to Water Customers from Aqua filing Exh. Vol. 1, PDF pp. 56-87; last two columns calculated by OCA

The impact on individual customers varies by their water usage. By presenting data about the anticipated rate impact only using 3,870 gallons per month, Aqua's notice has likely underestimated the impact of the proposed rate increase for many customers.

Q. Of the total $126.7 million, please provide a breakdown of the request as between water and wastewater utilities.

A. Aqua proposes that $112.05 million of the total increase of $126.7 million would be collected from water operations and $14.6 million from wastewater operations (or $10.78 million without East Whiteland Township's revenue requirement). The calculated cost of service for wastewater customers is equal to $36.48 million per year, and thus, Aqua only arrived at their proposed $14.6 million request due to its proposal to shift $21.85 million of the calculated wastewater revenue deficiency to its water customers. Aqua's proposal reflects a shift of approximately 60% of the annual wastewater revenue increase to its water customers and 20% of the total wastewater revenue requirement. Aqua Filing Vol. 2, Sch. Act 11, p. 1; OCA St. 5, Table 3. Aqua currently has more than eight times as many water customers as wastewater customers.[1] Further, there are several Aqua wastewater systems whose customers do not purchase their water from Aqua.

Q. Does this decision by Aqua explain why some wastewater customers will see a proposed decrease in their rates if Aqua's shift is accepted?

A. It would seem so, yes. Instead of accurately reflecting a cost of service based wastewater increase of $36.5 million that are contained in its schedules, Aqua's notices to its wastewater customers reflect what the resulting rates would be if Aqua's proposed shift of approximately 60% of the wastewater deficiency is adopted by the Commission. In my

[1] Aqua Filing Vol. 2, Sch. A-2 of Exhibits 1-A through 1-E. I have excluded East Whiteland Township's 4,024 customers for purposes of this comparison to be consistent with the OCA's position that the East Whiteland revenue requirement should not be included in this case.

view, this presents an inaccurate and unrealistic picture for wastewater customers as it is not very likely that the PUC will shift such a large percentage. This means that Aqua's notices to its customers are likely misleading and that customers who may be expecting a *decrease* in their rates based on what they were told by Aqua, will actually see an *increase* in their rates because of the unlikelihood that the Commission will find that this large of a shift is consistent with the public interest.

Q. Please explain what other elements of Aqua's proposal about which you have concerns?

A. In addition to seeking an inflated rate base based on the East Whiteland Township acquisition that reversed the Commission's approval of the transaction and that is on appeal to the Pennsylvania Supreme Court[2], as outlined below, Aqua seeks a 10.95% return on equity which results in overall rate of return of 7.90% using a capital structure that has a significantly higher equity ratio than other water utility companies in the country and its parent company's consolidated capital structure.

Aqua is proposing deferred accounting treatment for the cost of deferred depreciation on new assets, incremental operation and maintenance (O&M) above the FPFTY levels, and a carrying cost of capital until the deferred costs are included in rates related to the treatment of PFOA. Aqua St. No. 1 at 19-20.

Finally, Aqua has added three fair market value acquisitions to its already large rate base, along with two acquisitions using depreciated original cost (James Black Water Company (Belle Aire) and North Heidelberg Sewer Company). Aqua St. No. 1 at 15. One

[2] *Application of Aqua Pennsylvania Wastewater, Inc. to acquire the wastewater system assets of East Whiteland Township*, Docket No. A-2021-3026132 (Order entered July 29, 2022), rev'd on appeal *Cicero v. Pa. PUC*, 300 A.3d 1106 (Pa. Cmwlth Ct. 2023), appeal docketed at 568 MAL 2023, No. 569 MAL 2023, No. 570 MAL 2023 (June 14, 2024)

of the fair market value acquisitions has a final Commission order that was reversed by Commonwealth Court and was recently granted review by the Pennsylvania Supreme Court.[3] Despite the reversal of the Commission Order, and given the ongoing litigation, Aqua has included the rate base, O&M, and return costs in its requested revenue requirement. Aqua Filing Vol. 2, Schedule Act-11. The East Whiteland revenue requirement is $10,517,801 with a deficiency of $6,992,719. *Id.* In addition, one-third of the cost of service related to this proposed acquisition, or $3,144,592, is proposed to be shifted to water customers pursuant to Aqua's Section 1311(c) shift. *Id*. Aqua has not met its burden of proof regarding the East Whiteland acquisition that is on appeal should be included in rates. It cannot be presumed that the Pennsylvania Supreme Court decision will reverse the Commonwealth Court decision and affirm the Commission's order approving the proposed acquisition. It is the OCA's position that the East Whiteland Township revenue requirement should not be included in this proceeding because Commonwealth Court's decision stands and the Pennsylvania Supreme Court decision will likely not be known before the record closes in this proceeding, as I discuss in more detail below.

Q. What is the OCA's response to the various proposals that you have outlined above?

A. The OCA is opposed to all of them. As I describe below, in addition to me, the OCA has six witnesses addressing each of these proposals along with the Company's claims for rate base, cash working capital, operations and maintenance expense claims, rate of return, cost of service and rate design, bill discount programs, customer service, management performance, and Aqua's water and wastewater operations. Aqua's proposals represent what it and its investors want: limited risk, but with a return on equity that does not reflect

[3] *Id.*

that limited risk. Aqua's proposals shift risk to its customers by requiring the customers to pay rates that ensure that Aqua is awarded high returns on equity despite the lack of support, the large portion of Aqua's rate base that is based on fair market value, and the ratemaking proposals that will reduce its risk.

In addition to the deferred accounting proposal made in this case, there are existing alternative ratemaking provisions built into Aqua's existing and proposed revenue requirements, such as the DSIC, the fully projected future test year ending December 31, 2025, Section 1329, and Section 1311(c). 66 Pa. C.S. §§ 315, 1311(c), 1329, 1350-1360. Aqua's proposed deferral mechanism for PFOA-related cost of capital and expenses would be layered on top of those existing mechanisms.

Setting a revenue requirement that is based on layer upon layer of alternative or special ratemaking that reduces risk to the utility and its investors, without recognition that all these proposals burden ratepayers and undermine the regulatory compact is neither reasonable nor necessary.

Q. Why does the OCA oppose the inclusion of the East Whiteland system in this case?

A. As I stated above, Aqua should not be authorized to recover costs associated with the East Whiteland acquisition because it is too uncertain for inclusion in the FPFTY. The history of the proceeding is as follows: The Commission granted certificate of public convenience (CPC) authority to permit Aqua's acquisition of the East Whiteland system by Final Order July 29, 2022. Following the entry of the Commission's Final Order, but prior to the running of the appeal period, Aqua closed on the transaction. The OCA appealed the Commission's Order, and on appeal, the Commonwealth Court reversed the Commission's Order on July 31, 2023. The Commission and Aqua appealed the Commonwealth Court's

Order to the Pennsylvania Supreme Court. On June 14, 2024, the Pennsylvania Supreme Court decided to hear the appeal. That appeal is currently pending before the Pennsylvania Supreme Court, and as of the time I write this testimony, the case has not been briefed before the Supreme Court. There are multiple possible outcomes of the case on appeal, including that the Supreme Court could affirm the Commonwealth Court. If that outcome were to happen, it would mean that the Commission's Order granting a certificate of public convenience authority is reversed, which means that Aqua does not have certificate authority to acquire/own the East Whiteland system or serve the customers of the system. And while the appellants, the Commission, Aqua, and East Whiteland Township, will argue for the outcome where the Supreme Court will affirm the Commission's Final Order, it cannot be presumed that the Pennsylvania Supreme Court decision will reverse the Commonwealth Court decision and affirm the Commission's order approving the proposed acquisition. I have been informed by counsel that the Pennsylvania Supreme Court's willingness to review a decision of the Commonwealth Court, as indicated through a grant of allocatur, is not considered precedential and the decision of the Commonwealth Court remains binding until explicitly reversed by the Supreme Court. If the courts cannot act as if a decision *may* not be binding until explicitly reversed, I see no reason why the Commission should be able to.

Given all of this uncertainty that foreseeably results from the appeals process, in my opinion, it would have been prudent for Aqua to wait until the appeal period ran before it closed on the transaction. Given the uncertainty associated with the question of whether Aqua's ownership of the East Whiteland is certificated, the East Whiteland revenue requirement should be removed from this case. Additionally, given the lack of prudency

on Aqua's decision to close the transaction prior to the appeal period running to expiration, Aqua's transactions costs should not be recoverable in rates in this proceeding given the uncertainty that still exists.

Q. Are there others opposed to the Company's proposed increases?

A. In addition to the formal parties represented by counsel, there have been approximately 72 formal complainants who filed complaints at the Commission.[4] Also, as of August 2, 2024, the OCA has reviewed approximately 52 informal complaints sent to the Commission. The formal and informal complaints raise general complaints about the rate increase, question the size of the rate increase, affordability of bills, and other issues.

Q. Does the public have an opportunity to comment on the rate proposals?

A. Yes. Eleven public input hearings were held in August 2024.

Q. Are you addressing testimony from the public input hearings?

A. Not at this time. OCA will address the public input testimony in supplemental direct testimony that will be served on September 12, 2024.

Financial Demographic Information for Aqua's Service Territory

Q. What information do you have that will assist the Commission in understanding the impact of the proposed rate increases on Aqua's customers?

A. OCA witness Roger Colton (OCA Statement 6) provides testimony regarding the impacts of Aqua's proposal on low-income customers. This information is critical as the adverse impact of Aqua's proposals on low-income customers cannot be emphasized enough as Mr. Colton explains in his testimony. However, low-income customers are not the only ones struggling and the impact of Aqua's proposals on customers who are not at or below the federal poverty income thresholds but may be struggling to cover their bills, rent, and other

[4] There are some overlaps for customers who filed formal complaints and are water and wastewater customers.

costs should be considered as well. Mr. Colton provides detailed information and analysis of those customers who are in Aqua's service areas across the Commonwealth. Mr. Colton examines the most recent county-level and statewide data provided by United for ALICE[5] through the ALICE (Asset Limited, Income Constrained, Employed) Report for Pennsylvania. Mr. Colton concludes that the lack of sufficient resources to pay household necessities extends well into the "working poor" population. Mr. Colton found that the number of households in Aqua's service territory that would struggle to pay increased Aqua bills associated with this rate case because they have income lower than the ALICE income **is more than two times higher** than the number of households below Poverty. OCA Statement 6. Mr. Colton explained that in the 32 counties served by Aqua there are 673,012 total population with incomes below the ALICE threshold **in addition to** 240,015 population below Poverty. As a percentage of population, those living below the ALICE threshold is 28.7% in the Aqua counties in addition to 10.2% of the population living below Poverty. OCA St. 6.

Q. What does this information show?

A. For many customers, whether an ALICE household or not, the **current** utility bills at a "typical" level far exceed the amount estimated by ALICE for the cost of utilities for a household of four in Pennsylvania and is even higher using the proposed water and wastewater bills, even if Aqua's reduced wastewater rates are adopted. It is likely that many of Aqua's water and wastewater customers are struggling to meet their household bills, including their current water and wastewater bills yet do not qualify for Aqua's bill discount programs that Mr. Colton addresses in his testimony.

[5] An overview of United for Alice is available at https://www.unitedforalice.org/overview.

Q. What is the impact on Aqua customers who also face proposed rate increases from PECO Electric and PECO Gas?

A. Mr. Colton found that the combined rate increases sought by PECO (electric), PECO (gas), and Aqua in 2024 would cause residents seeking rental units in Aqua's counties which overlap with PECO (gas) and PECO (electric) to need an additional income of $2,133 each year simply to pay their utility bill hikes if all of the rate increases are approved as requested. This example of what customers face due to proposed rate increases by multiple utilities is a critical piece of what the Commission should consider in each of these cases.

Q. Why are you raising these concerns in this case?

A. This case represents Aqua's second case in less than three years and third case in less than six years. It has received base rate increases in May 2019, and May 2022. Looking at the rate cases filed since mid-2018, base rates for Aqua customers have increased substantially and more frequently over the last six years and Aqua proposes to increase the rates again in 2025. The two rate increases from 2018 and 2021 are not insignificant as can be seen below.

In the four rate cases prior to 2024, Aqua increased rates in June 2010, June 2012, May 2019, and May 2022. As shown in the chart below, over the longer period, 2010-2022, the revenue requirement increases were substantial. Importantly, the impact on customers' bills often is well more than the percentage increase in revenues.

Aqua Rate Increase History							
Year	Effective date	Docket Number	Increase Requested	Increase Allowed	Revenue Increase		Noticed Usage
					Water	Wastewater	
2009	6/16/2010	R-2009-2132019	$ 43,200,000	$ 23,600,000	6.46%		
2011	6/7/2012	R-2011-2267958	$ 38,600,000	$ 16,700,000	4.10%		none provided
2018	5/9/2019	R-2018-3003558 R-2018-3003561	$ 71,768,833	$ 47,000,000	9.80%	34.60%	4,080
2021	5/16/2022	R-2021-3027385 R-2021-3027386	$ 86,118,612	$ 50,510,192	9.88%	50.55%	4,000

Q. Considering these concerns about the financial demographics of those living in Aqua's service territory and the multiple increases in bills over the last 15 years, what is your concern about Aqua's proposals in these rate cases?

A. Coming after the rate increases in 2021, the concerns about rising utility costs are magnified. In this case, Aqua has claimed a high return on equity, applied to a rate base that has a large portion of fair market-valued plant, and added special ratemaking treatment on top of alternative ratemaking treatment that it already has. I will discuss each of these briefly below while OCA's other witnesses address these requests in detail. It is my opinion that Aqua's requests inappropriately shift risk to ratepayers and deviate from the regulatory compact that governs regulated monopolistic necessities such as water and wastewater service. The Commission must fully consider the interests of the customers who are struggling to pay their current utility bills and household expenses, the low income customers, and all customers of Aqua in reaching its determinations on Aqua's multitude

of requests.[6] This includes in considering whether to grant the overstated rate of return on equity, the overall return, the inclusion of an acquisition where the Commission's Order has been reversed and is on appeal to the Pennsylvania Supreme Court, the special accounting treatment for PFOA, cost of service, rate design, and the proposed Section 1311shift that all impact the bills that the customers pay. Keeping the rates as low as reasonably possible while ensuring that the service is consistent with the obligations under Section 1501 should be the primary objective of the Commission in its job as the regulatory scrutineer of Aqua's claims.

Purpose of this and all Rate Cases

Q. What is your understanding of the purpose of this proceeding?

A. As I understand it, the purpose of this case is to determine the "just and reasonable" rates for Aqua under Chapter 13, and other provisions, of the Public Utility Code. In this section of my testimony, I will address the regulatory compact and related legal and policy concepts. This foundation is necessary because when put into proper context it is evident that Aqua's specific claims and proposals as filed, would produce unjust and unreasonable rates and, when taken together, would result in larger bills than necessary to maintain service obligations and would substantially harm Aqua's customers.

The Regulatory Compact

Q. What is the purpose of this section of your testimony?

A. The purpose of this section of my testimony is to explain the regulatory compact and the economics and legal principles that underlie and support it.

[6] Indeed, consideration of the interests of consumers is a legal requirement. *See* 71 Pa. Stat. Ann. §309-5(2) (When reaching a decision on whether to grant Aqua's rate increase as well as its various rule and tariff changes, the Public Utility Commission must give "due consideration to the interests of consumers.").

Q. What is the regulatory compact?

A. The regulatory compact is a public policy concept that fundamentally recognizes that public utility companies such as Aqua are natural monopolists, and that in return for the public utility company being granted an exclusive franchise to operate in a specific service territory without rival, the public utility company in turn has the duty to provide service to all customers under certain governmental direction and oversight as to rates and service quality, subject to due process constraints. As described in *A Guide to Utility Ratemaking*, former Pennsylvania Commissioners James Cawley and Norman Kennard described the regulatory framework:

> Modern utility regulation grants monopoly status and represents an agreement between the public and the business enterprise model. In exchange for a generally exclusive, monopolistic market position granted to the utility, society receives the assurance that an essential service will be available, adequately produced to meet demand, provided to all who require it, and priced at a reasonable level. The utility assumes the obligation to serve a defined region; to serve all customers within this area; and to charge only the rates permitted by the government.

A Guide to Utility Ratemaking at 1 (2018).

Q. Is the regulatory compact unique to the Commonwealth of Pennsylvania?

A. No. As a public policy concept, the regulatory compact is not unique to the Commonwealth of Pennsylvania. It is the public policy concept that underlies the state regulatory frameworks which exist across the country governing the rights and responsibilities of public utility companies.

Q. Please explain the state's authority to regulate public utilities.

A. Foundationally, the state's authority to regulate public utilities stems from the state's police powers, which is a term that refers to the broad governmental regulatory power to enact

laws to regulate behaviors to protect and improve the health, safety, and general welfare of the state's citizenry.

Q. Can you explain the Pennsylvania statutory framework?

A. The Pennsylvania General Assembly has sought to protect consumers from the effects of natural monopoly power by enacting the Public Utility Code and granting the Commission comprehensive authority to oversee and regulate a public utility's service, rates, certificates of public convenience (service territory, entry into the public utility business, abandonment of utility service), and dealings with affiliated interests.

Q. How does the regulatory compact work in the Pennsylvania statutory framework?

A. As described above, the regulatory compact or framework in Pennsylvania, as set forth in the Public Utility Code, permits the Commission to grant a public utility company the legal privilege to exclusively serve in a defined service area, and in turn, the public utility is obligated within that area to provide consumers adequate, efficient, safe, and reasonable utility service and to maintain adequate, efficient, safe, and reasonable utility facilities at rates that are just and reasonable and not unreasonably discriminatory.

Q. What statutory authority and discretion does the Commission have to enforce the regulatory compact?

A. To enforce a certificated public utility company's statutory responsibility, the General Assembly has given the Commission the statutory authority and discretion to use a combination of incentives and deterrents.

Q. What do you mean by deterrents?

A. A deterrent is a tool that the Commission can use to force a public utility company's compliance with statutory and regulatory obligations. In theory, the effectiveness of any deterrent cannot be measured by the frequency with which it is used by the Commission.

Rather, the severity of the punishment and likelihood, or degree of certainty, of getting caught for non-compliance can have a deterrent effect.

Q. Can you provide examples of deterrents?

A. Yes. For example, the Commission has the authority to reject a rate increase request in whole or in part due to inadequate quality or quantity of service. 66 Pa. C.S. § 526. The Commission is required to consider the "efficiency, effectiveness and quality of service of each utility when determining just and reasonable rates." 66 Pa. C.S. § 523. The Commission has the discretion to provide a downward adjustment to the return on equity in recognition of a public utility's lack of "efficiency, effectiveness and adequacy of service." *Id.* It also has the authority to require a utility to prove that its existing rates are just and reasonable and to fix just and reasonable rates upon its own investigation or upon complaint and order refunds (66 Pa C.S. §§ 1309(a), 315(a), 1312). These examples are merely illustrative, not exhaustive.

Q. What do you mean by incentives?

A. Incentive regulation is a tool that the Commission can use to motivate a public utility company's compliance with its statutory and regulatory obligations. In terms of incentive regulation, the Public Utility Code gives the Commission the power and discretion to, after notice and hearing, approve any of the following:

- Deferred regulatory accounting treatment to recover certain costs;
- use of Future Test Year or Fully Projected Future Test Year for setting rates to reduce regulatory lag between plant investment and recovery; (§ 315(e))
- inclusion in rate base amounts paid in excess of original cost less depreciation in acquisition of troubled water or wastewater systems; (§ 1327)
- use of a rate base value that exceeds original cost less depreciation for ratemaking purposes in acquisitions of municipal water or wastewater systems; (§1329)
- alternative ratemaking; (§ 1330)
- adjustment to the return on equity in recognition of a public utility's "efficiency, effectiveness and adequacy of service." (§ 523).

Traditional Cost-of-Service Ratemaking and the Regulatory Compact in Pennsylvania

Q. Does traditional cost-of-service ratemaking support the regulatory compact in Pennsylvania?

A. Yes. Traditional cost-of-service ratemaking is a longstanding support to the regulatory compact in Pennsylvania. Cost-of-service ratemaking involves a set of well-established methodologies, norms, and standards for analyzing and determining a utility's cost of providing service and setting just and reasonable rates. Foundationally, under cost-of-service ratemaking, a utility's rates are based on costs either experienced or projected in a test year, including the utility's prudent and necessary expenses, used and useful plant investment, reasonable debt financing costs, and no more than a reasonable profit sufficient to keep a private company in the public utility business. A private company that wishes to be in the public utility business and wishes to earn a return on equity should be fully knowledgeable of the governmental interest in the utility's provision and maintenance of adequate, efficient, safe, and reasonable utility service and facilities as are necessary or proper for the accommodation, convenience, and safety of consumers and the public. This means that these companies are subject to significant oversight to restrain the power of their monopoly to ensure that they do not charge rates for services that are excessive. The regulatory power of the Commission is a check on this excess and cost-of-service ratemaking supports the regulatory compact.

Q. Does traditional cost-of-service ratemaking benefit consumers and public utility companies?

A. Yes. Traditional cost-of-service ratemaking should benefit both consumers and public utility companies.

Q. Please explain.

A. As I explained above, there is no competition in the public utility industry since the industry is a natural monopoly. Traditional cost-of-service ratemaking serves as a substitute for the beneficial effects of competition by setting rates on a prospective basis. Because the utility can recover its authorized costs (or authorized revenue requirement) on a prospective basis, the utility is given the opportunity to recover its authorized profit, but such recovery *is not* guaranteed – just as recovery of costs and profits are not guaranteed in a competitive marketplace. To fully recover the authorized costs and return on equity, once rates are set, the utility must go forward and operate efficiently and control its costs and pace of growth, if any. All of this must be done while providing and maintaining adequate, efficient, safe, and reasonable service and facilities.

Q. What is the most beneficial aspect of traditional cost-of-service ratemaking for consumers?

A. The most beneficial aspect of traditional cost-of-service ratemaking is the lack of guaranteed recovery for the utility while the utility remains obligated to provide and maintain adequate, efficient, safe, and reasonable service and facilities. This means that the public utility company faces the risk of under recovery due to normal business risks and management underperformance if it fails to control costs or if it asks for rates to be set based on inaccurate sales projections. Under traditional ratemaking, the utility – not its guaranteed consumer base – bears the risk of recovery until it files for another base rate increase and reflect the increased costs or decreased sales in new prospective rates granted by the Commission after a record is developed by parties to that case.

Q. Why is it beneficial for consumers that the risk of recovery be placed with the public utility company?

A. Placing the risk of recovery of authorized costs (or authorized revenue requirement) on the public utility company creates an incentive for the utility's management to manage its normal business risks and perform its service duties efficiently – just as competition would place similar pressure on performance in a competitive marketplace when firms compete for consumers and sales. The utility also faces normal business risks impacting recovery in between rate cases, such as weather, recessions, changing technologies, and other sources of sales fluctuations. Indeed, the utility management is faced with having to operate efficiently, control costs, and achieve growth at a sustainable pace. While the utility is and should be given the opportunity to earn its authorized return on equity to remain financially stable based on efficient management performance, the lack of guaranteed recovery protects consumers from having to overpay for a utility management's underperformance. As I will discuss below, regulatory lag and risk to the utility's shareholders has been minimized or eliminated in Pennsylvania ratemaking, and Aqua seeks to reduce its risk even more.

Q. Given this background information, what concerns do you have about how Aqua seeks to have rate set in this case?

A. Aqua seeks to move even farther away from this paradigm in several significant ways building on years of the entire utility industry seeking to shift risk from where it belongs – on the utility – to where it does not – on consumers. I want to emphasize that almost all the parties presenting testimony will quote the same seminal cases about rate setting, but it is in the decision-making process by the utility in planning for their rate case and making choices about what to pursue and by the Commission in its regulatory oversight that the consideration of the consumers' interests often falls away.

As a rule, a public utility, with facilities and assets dedicated to public service, is entitled to **no more than** a reasonable opportunity to earn a fair rate of return on its investment. The United States Supreme Court established the standard by which to evaluate what is a fair rate of return in *Bluefield Waterworks & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923) (*Bluefield*):

> The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to raise the money necessary for the proper discharge of public duties.

Bluefield at 693.

Twenty-one years later, the United States Supreme Court reviewed the issue of fair rate of return in *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591 (1944) (*Hope*). In *Hope*, the Court held that a fair rate of return "should be commensurate with returns on investments in other enterprises having corresponding risks" while being sufficient "to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and attract capital." *Hope* at 603. This attraction of capital quote is used frequently to support rate of return requests. The Court also noted, however, that:

> The rate-making process under the Act, i.e., the fixing of 'just and reasonable' rates, involves a **balancing of the investor and consumer interests** and does not insure that the business shall produce revenues.

Id. (emphasis added). The Supreme Court added that **consumers are obliged to rely upon regulatory commissions to protect them from excessive rates and charges.** *See Permian Basin Area Rate Cases*, 390 U.S. 747, 794-95 (1968) (*Permian Basin*) (citing *Atlantic Refining Co. v. Public Serv. Comm'n,* 360 U.S. 378, 388 (1981)).

Protecting consumers from excessive rates and charges is part of the setting of just and reasonable rates. The legal arguments often focus on the investors and utility's

interests. The ability of the utility to attract capital is but one part of the rate setting process, not the only criterion. Consumers' interests are often overlooked in both the nuts and bolts and the big picture of rate setting. If the test of the overall rates is confined to the utility's interests, then it is not a reasonable process. Moreover, in Pennsylvania, the statute that created the OCA also created obligations on the Commission to consider the consumer interests. Specifically, it requires that:

> Section 905-A. Duties of the Commission. -- In dealing with any proposed action which may substantially affect the interest of consumers, including but not limited to a proposed change of rates and the adoption of rules, regulations, guidelines, orders, standards or final policy decisions, the commission shall:
>
> . . .
>
> (2) Consistent with its other statutory responsibilities, take such action with due consideration to the interest of consumers.

71 Pa. Stat. Ann. §309-5.

Thus, the fact that consumer interest must be considered in the assessment of whether rates are just and reasonable is a well-founded concept in both the regulatory compact as established in case law and in Pennsylvania statutory authority. Often, in setting just and reasonable rates, regulators, parties, and the courts refer to a zone of reasonableness. *Permian Basin,* 390 U.S. at 797. Within that zone of reasonableness, the interests of consumers and investors should overlap. There may be circumstances where the rates are outside of a normal range of reasonableness, but the regulators must still fairly balance the interests of all parties.[7] Thus, as outlined above, while the focus of the rate case

[7]For example, *in Market Street Railway Co. v. Railroad Commission*, 324 U.S. 548, 566 (1945) the Court refused to overturn a rate reduction for a failing street railway company noting that *Hope* recognized that "regulation does not assure that the regulated business make a profit.

is usually on the investors' needs, missing from the focus is defining the consumers' needs. While the need to attract capital is important, it is not paramount and in no way is it superior to the needs of consumers.

In this case, the OCA seeks to present a clear focus on the needs of consumers to safe and reliable drinking water and wastewater at just and reasonable rates that they can afford. The OCA's witnesses' testimony contains the customary adjustments to the components of Aqua's rate filings as well as analysis of a reasonable rate of return, rate design, and customer service. The OCA is focused on providing evidence of the consumers' needs too. In plain language, Aqua's rates are already too high for many consumers. The case presented by Aqua in so many ways adds insult to injury because it is driven by multiple layers of excessive and overreaching claims such as, by way of example, the overstated return on equity, and a request by the Company to include in rate base an acquisition that is on appeal. On top of those and other aspirational ratemaking claims, the Company is asking for approval now to defer normal capital and operation and maintenance expenses related to the treatment of PFAS. Aqua also seeks to shift a substantial portion of its wastewater revenue requirement to its water customers, most of whom are not Aqua wastewater customers. None of this is in the public interest and all of it deviates significantly from the regulatory compact as outlined above.

Alternative Ratemaking, and the Regulatory Compact in Pennsylvania

Q. You referenced traditional ratemaking. Is that what is in place in Pennsylvania?

A. Not in the strictest sense. There have been modifications to the Public Utility Code that have introduced alternative ratemaking. I will discuss four major changes that were made to the Public Utility Code, between 2012 and 2016 that established several alternative ratemaking provisions.

Q. What are the four major changes that you are discussing here?

A. The four major changes are: (1) the Distribution System Improvement Charge (DSIC); (2) the Fully Projected Future Test Year (FPFTY); (3) the addition of Section 1329 that permits fair market valuation for municipal acquisitions; and (4) the addition of Section 1311(c) that permits the Commission to approve the shift of wastewater revenue deficiencies to water customers if it is in the "public interest". Each of these individually is a departure from traditional ratemaking and when layered together as Aqua has done, they significantly shift the risk of uncertainties from the public utility to captive consumers who have no choice but to purchase water and wastewater from Aqua due to its monopoly status. As such, they require far more exacting scrutiny from the Commission in a rate case than under principles of traditional ratemaking.

Distribution System Improvement Charge (DSIC)

Q. Briefly explain the DSIC and how it is different from traditional ratemaking.

A. In Act 11 of 2012, the legislature added new DSIC provisions that permitted a DSIC for electric, natural gas, and wastewater utilities and replaced the existing DSIC provisions for water utilities. 66 Pa. C.S. §§ 1350-1360. A DSIC had been in place for water utilities via Commission Orders that were appealed by OCA, followed by an amendment to the Public Utility Code (66 Pa. C.S. § 1307(g)).[8] Traditional ratemaking rate cases used a test year period that provided a snapshot of the components that make up the revenue requirement formula including utility plant in service, depreciation, revenues, operation and maintenance expenses, cost rates of debt and equity, taxes, and there was no provision for the recovery of capital in between rate cases. The DSIC when first implemented for water

[8] Initially, by order entered on August 26, 1996, the Commission approved a Petition filed by Aqua seeking to establish a Distribution System Improvement Charge under Section 1307(a), at Docket No. P-00961036.

utilities and again when expanded for electric, natural gas, and wastewater utilities provided for capital recovery in between rate cases and on a quarterly basis to reduce lag was seen as an exception to the traditional ratemaking. The DSIC permitted capital recovery and return in between rate cases for eligible capital.

Q. Why is it your opinion that the DSIC was an exception to traditional ratemaking?

A. Because when I look at the provisions of the Public Utility Code governing DSIC and LTIIP, at 66 Pa. C.S. §§ 1350-1360, these provisions provide a good illustration of alternative ratemaking that carry out the policy objective of to *enhance the safety, security, reliability, or availability of utility infrastructure*.

The DSIC is an alternative ratemaking mechanism because it transfers the risk of recovery of the utility's capital costs and depreciation expense, subject to a cap, related to the utility's investment in underground mains, lines, and the like. By enabling the utility to recover these costs through a surcharge on customers' bills that is updated quarterly and in between base rate cases, the utility need not wait nor carry these costs until it can reflect these capital costs in new rates granted by the Commission in the next base rate case. Thus, the DSIC accelerates the utility's cost recovery of new plant investment in underground mains and lines and related appurtenances. This may make sense when it is tied to the accelerated replacement of aging infrastructure that otherwise would have taken longer under traditional ratemaking. If properly implemented and overseen by the Commission, a DSIC can provide public benefit because of its nexus to safety, security and reliability. That is, it is not designed to be growth for growth's sake between rate cases.

Fully Projected Future Test Year (FPFTY)

Q. Why do you characterize the FPFTY as a departure from traditional ratemaking?

A. The use of a fully projected future test year was added to the Public Utility Code in Act 11 of 2012 by amending Section 315. 66 Pa. C.S. § 315. Prior to the 2012 amendment, utilities filing a base rate case could use a historic test year or a future test year.[9] The fully projected future test year that is defined as the 12-month period beginning with the first month that the new rates will be placed in effect after the application of the full suspension period under Section 1308(d). 66 Pa. C.S. § 315(e). The rates that go into effect are based on the utility plant that is projected to be in service at the end of the FPFTY, along with projected expenses at the end of the FPFTY. All the revenue requirement components are determined using the end date of the FPFTY. In its Implementation Order, the Commission recognized import of this change, stating, "Under this approach, the risks associated with regulatory lag will be substantially reduced because the new rates will be consistent with the test year used to establish those rates for at least the first year at using the FPFTY."[10] Thus, the ability to use the FPFTY is another break from traditional ratemaking and is alternative ratemaking. It effectively eliminates regulatory lag for all components of the revenue requirement because it permits rates to be set using a point in time that is one year beyond the rate effective date thus reflecting any projected changes in costs or sales.

[9] An historic test year is complete, and all data is known when the utility files its rate case. If a future test year used it is based on estimates for the 12 months following the end of the historic test year. It is partially historic and partially projected when the rate case is filed. 52 Pa. Code § 53.56(a). If the utility uses a future test year, the regulations require quarterly updates during the rate proceeding. 52. Pa. Code § 53.56(b).

[10] *Implementation of Act 11 of 2012,* Docket No. M-2012-2293611, Order at 5 (Aug. 2, 2012) (*Act 11 of 2012 Implementation Order*). *See* Costello, Ken, *Future Test Year: Evidence from State Utility Commissions*, National Regulatory Review Institute, NRRI Report 13-10 (October 2013) at 8, n. 24 (regulatory lag is defined as the time gap between when a utility undergoes a change in cost or sales levels and when the utility can reflect these changes in new rates). , https://pubs.naruc.org/pub/FA86C105-05F5-9766-BC78-29829AC50361, last viewed August 7, 2024.

Section 1329

Q. Why do you characterize the addition of Section 1329 as a departure from traditional ratemaking?

A. In Pennsylvania, rate base has been calculated using original cost less depreciation since the mid-1980s. Section 1329 provides an option for a water and wastewater utility to add, after approval by the Commission under Section 1103, an acquisition of a municipal water or wastewater provider at "fair market value" rather than depreciated original cost. 66 Pa. C.S. § 1329.

Q. What transactions has Aqua completed using Section 1329 as the valuation method?

A. Not including the East Whiteland acquisition that remains contested, Aqua has completed 7 acquisitions[11] where the ratemaking rate base for the acquired assets has been calculated using fair market value. The additional ratemaking rate base, as determined under Section 1329, was approximately $229,181,637. Exhibit CMH-1, Col. J, line 12 minus Col. H, line 12. The ratemaking base was almost double the depreciated original cost of these assets.[12] Exhibit CMH-1, Col. J, line 12/ Col. J, line 10.

The revenues of the acquired customers do not recover the revenue requirement associated with the ratemaking rate base as of the closing date, and inclusive of the first

[11] The 7 acquisitions reflect five where Aqua has closed on the transaction and has already included the acquired ratemaking ratebase in its 2021 rate case (New Garden, Limerick, East Bradford, Cheltenham and East Norriton) plus Lower Makefield and Shenandoah Water which are being included for the first time in this case. I did not include East Whiteland even though Aqua also proposes to include East Whiteland Township acquisition in this proceeding. The Commission order approving that application was reversed by Commonwealth Court and that decision is on appeal to the Pennsylvania Supreme Court. *Application of Aqua Pennsylvania Wastewater, Inc. to acquire the wastewater system assets of East Whiteland Township*, Docket No. A-2021-3026132 (Order entered July 29, 2022), rev'd on appeal *Cicero v. Pa. PUC*, 300 A.3d 1106 (Pa. Cmwlth Ct. 2023), appeal docketed at 568 MAL 2023, No. 569 MAL 2023, No. 570 MAL 2023 (June 14, 2024). If the East Whiteland acquisition is included, that additional ratemaking rate base would be increased by $54,413,365 as of closing, or a total ratemaking rate base of $283,595,002. Exh. CMH-1, Col J, l. 12.

[12] The depreciated original cost of the acquired assets was $158,007,997 as calculated pursuant to Section 1329(d)(5) which does not require the subtraction of contributed capital. That is also a change from traditional rate base calculation. The ratemaking rate base exceeded the depreciated original cost by $124,371,748. Exhibit CMH-1.

year of capital expenditures. Exhibit CMH-2. As a result, in Aqua's 2018 and 2021 rate cases there was a revenue deficiency for the customers acquired under Section 1329 valuation. *Id.* Then, when the cost to serve the acquired customers was calculated using the FPFTY, including Aqua's return and taxes, capital expenditures, and O&M, the acquired customers' revenues did not cover that additional cost of service.

The same is true in this case. In this case, the annual revenue deficiency calculated by Aqua for the Lower Makefield wastewater operations is $3,526,708, and for East Whiteland Wastewater is $6,992,719. Aqua Filing Vol. 2, Sch. Act 11, p. 1. The revenue shortfall for Shenandoah Water is $2,267,907, although that is not being shifted pursuant to Section 1311(c), more than half of it is proposed to be shifted to the existing water customers. *Id.*

It is important to compare the revenue requirement calculated in the rate case to the revenue deficiency calculated as of closing on the three transactions that are proposed to be included in this case for the first time. All three acquisitions (Lower Makefield, East Whiteland, and Shenandoah Water) have even greater annual revenue shortfalls in this first rate case compared to the revenue deficiencies at closing, a deficiency that will likely continue to grow.

Although I point to East Whiteland revenue deficiency as an example of the ratemaking impact of the Section 1329 valuations, as discussed by OCA witness Mr. Smith, the OCA's recommendation is that the costs for this acquisition be removed from the calculated revenue requirements.

Q. What impact does that have in the rate cases?

A. It has several impacts but one of the issues in this case is a revenue requirement shortfall from both the ratemaking rate base and from the increased cost of service for each of the acquisitions as of the end of the FPFTY. The revenue deficiency, if placed on the acquired customers, may mean very large increases. Aqua's proposal is to shift 20% of the wastewater revenue deficiency to water customers pursuant to Section 1311(c), as discussed below and in Mr. Mierzwa's testimony. What Section 1311(c) shift, if any, is in the public interest is one of the issues that must be addressed in each case and Mr. Mierzwa presents OCA's recommendation. However, it is critical to understand that the use of fair market value to set the ratemaking rate base of the qualifying acquisitions under Section 1329 has, in all but one of Aqua's acquisitions, resulted in a large revenue deficiency as of closing. That deficiency grows in the rate cases when the cost of service for each acquired system using the FPFTY is calculated. To the extent that the acquired customers do not see part or all that revenue requirement deficiency in the rates that they are paying, those rates become more disconnected from the actual cost to serve them. The revenue deficiency that exists at closing and grows in the rate cases impacts existing water customers in that they are being asked to bear all or part of the revenue deficiency in their rates, as discussed below and in Mr. Mierzwa's testimony.

The interplay between the fair market valuation when it is multiples of depreciated original cost and Section 1311(c) cost shifting is an example of how it is important to view the layering of the alternative regulatory provisions included in Aqua's rate proceedings.

Section 1311 (c)

Q. Why do you characterize the amendments to Section 1311(c) as a departure from traditional ratemaking?

A. Section 1311(c) was amended in Act 11 of 2012. The amendment exempted certain water and wastewater utilities from the existing requirement to segregate utility property and a definition was added as subsection (e). This exemption permits the combination of water and wastewater revenue requirement while other utilities that provide more than one type of service continue to follow the requirement to segregate the property used to provide two different utility services.

The relevant portions of Section 1311 read as follows:

> § 1311 Valuation of and return on the property of a public utility.
>
> * * *
>
> (c) Segregation of property. When any public utility furnishes more than one of the different types of utility service, the commission shall segregate the property used and useful in furnishing each type of such service, and shall not consider the property of such public utility as a unit in determining the value of the rate base of such public utility for the purpose of fixing base rates. A utility that provides water and wastewater service shall be exempt from this subsection upon petition of a utility to combine water and wastewater revenue requirements. The commission, when setting base rates, after notice and an opportunity to be heard, may allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if in the public interest.
>
> * * *
>
> (e) Definition. As used in this section, the term "utility that provides both water and wastewater service" shall include separate companies that individually provide water and wastewater service so long as the companies are wholly owned by a common parent company.

66 Pa. C.S. § 1311 (effective April 16, 2012). The statutory language does not contain any guidelines, nor has the Commission promulgated regulations.[13] The determination of what is in the public interest in Section 1311(c) is within the Commission's discretion. The concept of taking wastewater revenue requirement based on the wastewater cost of service and placing additional revenue requirement onto water customers, who are already paying rates that collect the water cost of service was a break from traditional ratemaking.

There are principles of ratemaking that should be used to guide the Commission's determination of whether and in what amount a shift of wastewater revenue requirement to water customers should occur based on the record in each case.[14] In defining the public interest, the affected public certainly includes Aqua's wastewater customers and its water customers. The public interest also could include policies regarding the acquisition of small, nonviable wastewater systems. For example, when acquiring a small, troubled wastewater system that would need a complete rebuild of its system, it may be that the customers of that system could not bear the costs of the rehabilitation and replacement of the system. In that instance, the costs could be spread among the other wastewater systems as part of rate consolidation of wastewater systems. Or, under Section 1311(c), the utility could ask that a portion of the small wastewater systems higher revenue requirement be allocated to water customers.

Section 1311(c) was enacted four years before Section 1329. In my opinion, it was not meant for large shifts of wastewater revenue requirements onto the utility's water

[13] In the *Act 11 of 2012 Implementation Order* the Commission clarifies two points regarding notice and the definition contained in 1311(e).

[14] The first case that was filed using Section 1311(c) was in 2013. *Pa. PUC v. Pennsylvania-American Water Co.*, Docket No. R-2013-2355276 (Order entered Dec. 19, 2013). Aqua's first case in which it sought permission to use Section 1311(c) was its 2018 base rate case at Docket Nos. R-2018-3003558 R-2018-3003561 (Order May 9, 2019).

customers. As discussed below, the Commission has discretion in what shift it approves. Mr. Mierzwa's recommendation in this case that no more than 10% of the wastewater revenue requirement should be shifted under Section 1311(c) is explained in OCA Statement 5.

Q. Does the Commission have a range of options when looking at requests for Section 1311(c) shifts from wastewater to water?

A. Yes. I see the Commission as having a range of options under 1311(c). The question is whether the options are consistent with established regulatory principles. For example, the Commission could choose to not approve any shift. It also could approve a shift of the entire wastewater revenue requirement. In that instance it is hard to support that as being consistent with established regulatory principles. Although this range of possibilities under Section 1311(c) exists, it has not been addressed in regulations since the enactment of Section 1311(c).

Q. What framework do you recommend that the Commission use to choose what shift, if any, should be approved?

A. Professor James Bonbright provides a useful framework for setting and evaluating utility rates:

- Practicality, including simplicity, understandability, ability to implement, and public acceptability;
- Clarity in its interpretation;
- Effectiveness in yielding the total revenue requirement;
- Revenue stability from year to year;
- Continuity of rates, including the concept of gradualism;
- Fairness in relation to the cost of serving different types of customers;[15]

[15] The "fairness" of a utility rate generally means that the rate bears a reasonable relationship to the utility's cost of serving the customer without exceeding the value of service to the customer. See, e.g., James C. Bonbright, *Principles of Public Utility Rates* (New York, NY, 1961) (hereafter "Bonbright"), pp. 82-92.

- Avoidance of undue discrimination among similarly situated customers; and
- Encouragement of efficient consumption practices.[16]

According to Bonbright, the most important criteria are adequacy of collection of the revenue requirement, fairness to all customer classes, and efficiency to encourage economically efficient consumption and discouragement of waste.[17] He notes that these criteria are primary "not only because of their widespread acceptance but also because most of the more detailed criteria are ancillary" to these three principles.[18] Mr. Mierzwa addresses a framework in OCA Statement 5.

Q. How does this framework apply in this proceeding?

A. The OCA has focused on the principles of efficiency and fairness. Mr. Mierzwa discusses these issues in OCA Statement 5. I would note that the review of Aqua's proposal must include an examination of whether similarly situated customers are being treated similarly. This is significant when most of Aqua's water customers do not receive wastewater service from Aqua. Aqua has more than eight times as many water customers as wastewater customers. Those water customers are paying their own wastewater bills to other entities, or they have on-lot septic systems that they must install and cover maintenance costs. They also have been paying a portion of the wastewater deficiency for Aqua's wastewater customers since May 2019 at the conclusion of Aqua's 2018 rate cases. Proper price signals are sent through rates meaning that rates are set to reflect the cost of providing the service. Mr. Mierzwa addresses these issues in his testimony (OCA Statement 5).

[17] Bonbright, p. 292.

[18] *Id.*

Q. What do you conclude regarding Aqua's proposal to shift $21.85 million of wastewater revenue requirement to its water customers?

A. Aqua's proposal fails to meet the fundamental principles of fairness and efficiency in setting rates for water and wastewater customers. The impact of more than $229 million of fair market value rate base exacerbates the revenue deficiencies on wastewater revenue requirement and is one of the causes for a large shift. However, shifting 20% of the wastewater revenue deficiency is not reasonable.

Q. You have reviewed numerous changes to the Public Utility Code through Act 11 of 2012 and Act 12 of 2016. What do you conclude about these changes as applied to Aqua's proposals in this proceeding?

A. Each of the changes represented a change to traditional ratemaking and represent alternative ratemaking provisions that Aqua has used since the passage of these changes including in leading up to this case (DSIC, FPFTY, 1311(c), and 1329 acquisitions) and in this case (discretionary selection of the FPFTY, proposed 1311(c) shift, and seeking to include not yet final acquisitions in rate base). The OCA does not agree with many of Aqua's proposals in this proceeding as set forth above and, in the testimony, provided by the OCA witnesses. However, as explained below, Aqua proposes additional alternative ratemaking treatments that will further reduce its risk, shift unknown rate increases onto its customers, and unreasonably increase the rates and bills for its customers.

It is important to note that Aqua could have chosen any of these or none of them, but the fact that they chose to employ them *all* in coordination with each other and its selection of the FPFTY and 1311(c) shift present unreasonable choices by Aqua that seeks to insulate shareholders and Aqua management from the difficult job of efficient management and seeks to place nearly all the risk on Aqua's captive customers. This should be looked at with a great deal of skepticism by the Commission when reaching a determination about the justness, reasonableness, and lawfulness of Aqua's proposals.

Aqua's Deferred Accounting Request for PFAS Costs

Q. Please explain Aqua's request for deferred accounting for PFAS costs.

A. Aqua is proposing that it receive approval to defer costs related to remediation for per- and poly-fluoroalkyl (PFAS). Aqua St. No. 1 at 19-20. Aqua's justification is that the federal Environmental Protection Agency has promulgated a new rule that sets new standards for PFAS in drinking water. *Id.* OCA witness Smith addresses Aqua's proposal in his testimony. I raise it here to round out the discussion of choices Aqua has made with its proposals in this case. To request special accounting treatment for costs that it has been incurring over multiple rate cases would unreasonably shift risk to ratepayers who would then be responsible for a dollar-for-dollar recovery of those costs at some point in the future. Notably, Aqua has installed treatment since 2017 and in the seven years since at certain facilities. Exh. CMH-3 (Aqua response to OCA 10-28). These are costs that Aqua has incurred over at least the last nine years and will continue to incur going forward. *Id.* Aqua already can project its PFOA costs through the end of the FPFTY and is able to continue to recover its existing cost and capital expended for PFOA remediation. As Mr. Smith discusses, in OCA Statement 2, these costs do not meet the standards for deferral and the proposed deferral treatment should be denied. OCA Statement 2.

Introduction of OCA's Other Witnesses

Q. Who are the OCA's other expert witnesses?

A. I summarize the testimony of each of the OCA's witnesses below:

- In OCA Statement 2, Ralph C. Smith supports the OCA's traditional revenue requirement recommendations, including adjustments to rate base, operation and maintenance expenses, and return. Mr. Smith's proposed revenue requirements incorporate adjustments

from Mr. Andrews, Mr. Colton, and Mr. Rothschild, as described below. OCA St. 2, Exh. LA-2. Mr. Smith also discusses the reasons why Aqua has not met its burden of proving the reasonableness of its FPFTY projections. Mr. Smith removes the East Whiteland Township wastewater revenue requirement because the Commission order approving that acquisition has been reversed on appeal and it is now pending before the Pennsylvania Supreme Court. There is no certainty that Commission's order will be reinstated before the close of the record in this proceeding. Mr. Smith's revenue requirements also reflect Mr. Mierzwa's recommendation regarding the Act 11 shift for wastewater and the shift for Shenandoah Water.

Mr. Smith's Exhibit LA-1 provides a summary of the OCA's revenue requirement recommendations that result in his recommendation that Aqua has a revenue **sufficiency** of $9,401,802,or -1.3% on a total (water and wastewater) company basis.[19] For water base operations, after the Act 11 shift recommended by OCA witness Mierzwa, there would be a revenue **sufficiency** of $25,282,230, or -4.2%. OCA St. 2, Exh. LA-1, l. 15 and 17. After OCA's adjustments (OCA St. 2, Exh. LA-2), Shenandoah Water would see part of its revenue requirement shifted to water base operations and have a revenue **deficiency** of $803,054, or 43.9%. OCA St. 2, Exh. LA-1, l. 18 and 19.

For wastewater operations, as described above, Mr. Smith has removed the East Whiteland Township revenue requirement from the case. Regarding wastewater base operations, after the Act 11 shift recommended by OCA witness Mierzwa, there would be a revenue **deficiency** of $13,335,570, or 23.1%. OCA St. 2, Exh. LA-1, l. 15 and 17. For

[19] To be clear, a revenue sufficiency means that revenues should be reduced, and a revenue deficiency means that revenues should be increased.

Lower Makefield Wastewater, after the Act 11 shift recommended by OCA witness Mierzwa, there would be a revenue **deficiency** of $2,101,804, or 18.1%. OCA St. 2, Exh. LA-1, l. 15 and 17.

- In OCA Statement 3, Aaron L. Rothschild addresses the appropriate capital structure for ratemaking, debt cost, and the return on equity, recommending a return on equity of 8.70%. Mr. Rothschild also recommends an adjustment to Aqua's proposed capital structure due to the substantial deviation from its parent and its proxy group. However, if the Commission accepts the Company's capital structure or the Company's alternative ratemaking proposals, Mr. Rothschild recommends a return on equity of 8.56%. Mr. Rothschild's adjustments reduce Aqua's overstated return on equity and adjust Aqua's capital structure. Mr. Rothschild also addresses the impact of Aqua's fair market value acquisitions on its risk. Mr. Rothschild's return recommendations are incorporated in Mr. Smith's revenue requirement schedules. OCA St. 2, Exhibit LA-1. In addition, Mr. Smith provided the individual revenue requirement impact of each of Mr. Rothschild's recommendations as well. OCA St. 2, Exhibit LA-6.
- In OCA Statement 4, Brian Andrews discusses depreciation rates and their impacts on depreciation expense and rate base in 2025. Mr. Smith incorporates the depreciation adjustments made by Mr. Andrews in his revenue requirement exhibits. OCA St. 2, Exhs. LA-1 and LA-2.
- In OCA Statement 5, Jerome Mierzwa provides recommendations regarding Aqua's proposed rate designs, and recommendations regarding an evaluation that Aqua was required to submit by this rate case, and that Aqua obtain metered water usage data for some of its currently flat-rate wastewater customers. Mr. Mierzwa also addresses the

Company's proposed shift of $21.9 million or 60% of the wastewater revenue requirement increase to water customers pursuant to Section 1311(c) of the Public Utility Code. He recommends that 10 percent of the wastewater revenue deficiency amounts be allocated to Aqua's water base utility revenue requirement under Act 11.

- In OCA Statement 6, Roger Colton addresses the impact of the Company's current rates and their requested increase on low-income customers. He recommends changes in the Company's bill discount and arrearage forgiveness programs, CAP cost offsets, and related matters to help all Aqua customers afford essential utility service. He also addresses the impact of Aqua's rate increase proposals on the customers who do not qualify for the low-income program but may struggle to pay their utility bills. Mr. Colton also recommends an expansion of Aqua's budget for its Low-Income Conservation Program to provide for more conservation kits for low-income customers.
- In OCA Statement 7, Barbara Alexander discusses the identification and evaluation of compliance with previous commitments/orders on customer service performance, complaint handling and root cause analysis, consumer protection (Ch. 56 and Chapter 14) compliance; updating actual customer service performance and compliance issues: call center; internal training, response to BCS infractions and verified complaints, etc.; and evaluating internal performance objectives and results.

Information in Customer Notices

Q. Do you have any other concerns about Aqua's filing?

A. Yes. I am concerned about Aqua's rate case notices to its customers. There are two issues that impact the accuracy of the bill impacts and the notice that I discuss below:

1) The impact of Aqua's proposed revenue deficiency shift (under Section 1311(c)) on the proposed bill impact, and

2) the residential customer usage level used by Aqua

Impact of Section 1311(c)

Q. You mentioned that the notices provided by Aqua reflect its proposal to shift $21.9 million or 20% of the wastewater revenue requirement to water customers. What is your concern?

A. While Mr. Mierzwa discusses the OCA's recommendation about what shift, if any, is in the public interest under Section 1311(c), I will discuss Aqua's rate case notices that reflect the rate impacts **after** its proposed shift.[20]

The notices Aqua provided to its wastewater customers reflect 40% of the calculated cost of service revenue deficiency because Aqua is proposing to shift 60% of the wastewater revenue deficiency to its water customers. It is highly probable that Aqua's proposed shift of 60% of its calculated wastewater cost of service increases will not be granted by the Commission. That means that the wastewater customers from the inception of this case, have not received a notice that accurately reflects the impact on their bills of the revenue deficiency for their service as calculated in Aqua's rate filing. As Mr. Mierzwa discusses in his testimony (OCA Statement 5), the shift results in some wastewater rate zones showing decreases. In reviewing the notices provided in Aqua's filing, there are 7 wastewater zone notices that inform customers that they will see a decrease, and 7 that inform customers that they will see increases. Aqua Filing Vol. 1, pdf pages 56-87.

The total dollars proposed to be shifted is 60% of the total wastewater revenue deficiency(and 20% of the total wastewater costs), the breakdown by revenue deficiency calculation for the three cost of service studies conducted by Aqua is as follows:

[20] I discuss Section 1311(c) in the alternative ratemaking section of my testimony, *supra*.

Cost of service study	Deficiency	Amount Shifted	% of deficiency shifted to water[21]
Wastewater base operations	$25,957,548	$17,747,873	68.4%
Lower Makefield	$3,526,708	$958,164	27%
East Whiteland	$6,992,719	$3,144,592	45%
Total	$36,476,975	$21,850,629	60%

Q. What should Aqua use in the wastewater notices to estimate the impact of its filings on wastewater customers?

A. The notices should use the revenue requirement deficiencies that Aqua calculated for each of its wastewater costs of service. That is, Aqua should have shown what it wants to charge for wastewater service *before* the shift. Aqua provides cost of service studies for three wastewater service areas and two for water. [22] Aqua provides testimony and exhibits from witness Heppenstall to support the data and results of the cost of service studies for the three wastewater divisions and two water divisions. The additional revenues needed to provide service to those customers, as calculated in the cost of service studies, should be used to reflect the proposed rate increases for each rate zone within that division. If that were done in the notices to customers, the wastewater customers would get a realistic picture of what rate increases they would be facing if their rates were set on the cost to serve them. Aqua's notices already state that it is requesting approval of a "combined revenue requirement for the Company's water and wastewater operations." Aqua Filing Vol.1, PDF pp. 14-87. Nowhere in any of the wastewater notices does Aqua disclose that the **proposed rates** shown in the notices are calculated **after** Aqua's proposed shift of 60% of the wastewater revenue requirement deficiency.

[21] Excerpt from Aqua Filing Vol. 2, Sch. Act 11 with percentages calculated by dividing amount shifted by total deficiency.
[22] Wastewater Base, Lower Makefield wastewater, East Whiteland wastewater, Water Base, and Shenandoah Water.

Q. What should have been provided to wastewater customers to provide an accurate level of proposed rates that could result from Aqua's filing?

A. The notice should have based the proposed rates on the calculated cost of service, not on the "post" shift rate levels. Aqua already has language in the notice that the final effect on your bill may be different than Aqua's requests and Aqua includes language that it is requesting a combined revenue requirement for its water and wastewater operations.

Q. What changes would be necessary for the notices to water customers?

A. I recommend the same change as I recommend for the wastewater notices. Aqua should be required to calculate the proposed bill using the water only revenue deficiency, including for Shenandoah Water. For Shenandoah, Aqua calculated a revenue deficiency of $2,267,908, and then proposes to shift $1,465,438 or 64.6% of the deficiency to other water customers. The notice to Shenandoah customers reflects a proposed bill increase of $21.22, from $56.14 to $77.36. Although Aqua already includes the same language on the water notice as the wastewater notices (that the final effect on your bill may be different than Aqua's request) the notice language following the bill impact could be modified to state that Aqua's request for approval of a shift from wastewater to water could increase the final level of rates and the bills for water customers.

Residential Customer Usage Level

Q. Turning to another concern about the rate case notices, what usage level does Aqua use in its rate case notice to customers?

A. In its rate case notice for each water and wastewater rate zone, Aqua uses 3,870 gallons per month water usage for a residential customer to calculate the impact of its proposed rate increases. Aqua Filing, Vol. 1, PDF pp. 14-87. The rate impact is calculated based on a "typical water bill" or "typical wastewater bill" for residential customers of 3,870 gallons

per month. *Id.* Aqua derives the "typical" level of usage by using Rate Zone 1 monthly average for customers with 5/8-inch meters. Aqua response to I&E RS-6.

Q. Why is this a concern?

A. Aqua has residential customers who have usage levels ranging above the "typical" usage level, yet its notice does not show what the bill impact of its proposed rate increase will be. For example, a customer using 5,000 gallons per month (perhaps a small family) would see a different bill impact. A customer using 10,000 gallons per month (perhaps a larger family) would see a different impact. There is no information in the rate case notice that would permit a customer with different usage levels to calculate the impact on their bill.[23]

Q. Can you provide an example of what that would look like?

A. Yes. The chart below is an example of what could be used in the rate case notice to provide the bill impacts for additional residential usage levels. I used Rate Zone 1, water to calculate this example.

Gallons per month	Current Bill	Proposed Bill
3,870	$78.21	$97.01
5,000	$92.96	$120.22
10,000	$170.22	$222.92

This chart should be used for each rate case notice that Aqua sends to its customers.[24]

[23] The notice tells customers who want to find the rates that Aqua asked for to look at the water and wastewater tariffs filed with the PUC or on Aqua's website at Aquawater.com. To access the tariffs on the website, a customer would need to click on Pennsylvania on the Map, then the Discover Aqua Pennsylvania link, then scroll down to Aqua Pennsylvania Documentation and click Tariff drop-down menu to get the current tariff. Scrolling down one more link on the documentation page would get a customer to the base rate case link, that would then, after another link, get to the proposed tariff links.

[24] For any existing flat rate zones, this recommendation would not apply if Aqua proposes to continue the flat rate.

Q. Why did you choose 5,000 and 10,000 gallons per month for additional usage levels?

A. I used those amounts as an estimate that falls at or near the middle of a range of usage for 2 and 4-person households and a range of daily usage of 5-100 gallons per day (gpd). This range is based on information contained in Penn State Extension: Estimating Water Needs.[25] Although this paper is based on designing water systems, using 50 gallons per day per person (gppd) as the minimum and 100 gppd for a 30 day month would equal 3,000-6,000 gallons per month for a 2-person household and 6,000-12,000 gallons per day for a 4-person household. By choosing a level close to the middle of each range, I think it is a reasonable approach to show the impact of the proposed rate increases on customers at different usage levels.

Q. Is your recommendation the same for the wastewater notices?

A. Yes.

Q. Aqua is required to use the Commission's rate case notice form at 52 Pa. Code § 53.45. Does your recommendation conflict with that requirement?

A. No. This recommendation would require information in addition to what the Commission's rate case notice requires. It is relevant information that will help residential customers better understand the impact on their bills. Aqua already provides additional information in its notices (regarding how the rates that customers pay benefit the ratepayer's community, for example) so this would not be any different than its current practice.

[25] https://extension.psu.edu/water-system-planning-estimating-water-needs

Information about the bill impact of the Final Order in the case

Q. What is your recommendation for information to be provided to customers at the end of the case?

A. At the end of the rate proceeding, upon entry of the final order and the filing of the compliance tariffs and schedules, the Commission and Aqua will likely issue press releases that provide the overall revenue increase granted by the Commission and include an overall percentage increase. The press releases will likely include the impact on the "typical" residential, commercial, and industrial customers, like what is found in the rate case notices at the beginning of the case.

My recommendation is that any press release issued by Aqua include the impact on customers' bills at multiple usage levels as I described above. In addition, customer bill impact information should be provided via bill insert at the end of the rate proceeding that shows the final revenue requirement approved by the Commission and includes the impact on customers' bills at multiple usage levels as I described above. This should be implemented at the end of this case.

Q. Why do you recommend this information be provided at the end of the case?

A. The information would provide the customers with the resolution of the rate filing including the Commission's decision on the rate filing and the rate adjustments and the resulting bill impact. It would "close the loop" for the customers.

By providing the bill impact, the additional information would provide not only the final revenue requirement but also the impact of any rate design changes that were adopted by the Commission. Customers will not have to wait until they receive their first bill after the rate case ends to find out what the bill impact is from the rate case. The basic

information that is included in press releases is not sufficient to inform customers of the impact on their bills.

Q. Can you summarize your recommendations regarding notices?

A. Yes. Customer notices should provide relevant information about the impact on their bill if Aqua's cost of service revenue deficiencies are used to set rates. I also recommend that a chart, using three usage levels, be included in the rate case notices for water and wastewater in Aqua's next base rate filing. My final recommendation about notices is that information be sent at the end of the proceeding that shows customers what the final order's impact is on their bills. This notice can include the two other recommendations as well as the information regarding any Section 1311(c) shift, and any other proposals that are adopted in the final order.

Other Issues

Q. Aqua has determined to discontinue its PFAS monitoring website. Aqua St. 11 at 14. Please comment.

A. Aqua voluntarily created the PFAS monitoring website in 2016 to provide real time data related to areas in Southeastern PA near areas with known military base PFAS contamination. Exh. CMH-4 (Aqua response to OCA 10-27). Aqua's claim is that it will report PFAS testing in its Consumer Confidence Report rather than the website and that will "maintain consistency with the EPA and DEP requirements and avoid confusion." *Id.*

Q. Do you agree with Aqua's determination?

A. No. The website[26] is a tool for consumers to be able to see the latest **monthly** PFAS testing information for certain Aqua facilities in southeast Pennsylvania. The website was subject

[26]When accessing WaterFacts.com, you see a message directing you to AquaWater.com. The link takes you to a page titled Aqua PFAS Monitoring Results on the Aqua Water website.

to certain commitments by Aqua in the settlement of Aqua's 2018 base rate proceeding that was approved by the Commission. *Pa. PUC v. Aqua Pennsylvania*, Docket Nos. R-2018-3003558, R-2018-3003561 slip op. at 24 (Order May 9, 2019). I do not think that continuing the specific PFAS Monitoring Results page under AquaWater.com would cause confusion among customers. I also do not see any evidence that maintaining the specific page, along with meeting the CCR requirements, would be inconsistent with EPA and DEP requirements. Aqua's current website includes information about PFAS, what it is doing, and includes a link to find local results.[27] I recommend that Aqua's website and specific PFAS Monitoring Results page be continued at least through its next base rate case. At that time, the continuation can be determined after experience with reporting PFAS reporting in the CCR.

Conclusion

Q. What is your overall recommendation?

A. Aqua's proposals unreasonably increase its customers' rates through a layering of claims including excessive rate of return, overstated rate base, operation and maintenance expenses, and taxes. Aqua's proposed revenue increases should be rejected, and it should be granted an increase of no more than that which was presented by OCA witness Smith, incorporating the depreciation adjustments recommended by OCA witness Andrews.

Aqua's proposal for a 10.95% return on equity should be rejected and Mr. Rothschild's recommended return on equity of 8.70% should be adopted, in combination with his recommendation that a capital structure of 50.53% equity and 49.47% debt be used for ratemaking. In combination, Mr. Rothschild's recommendations will reduce Aqua's

[27] https://www.aquawater.com/about-water/water-quality/pfas.php. Last accessed August 8, 2024.

revenue requirement claim by $91.48 million. OCA St. 2, Exh. LA-6. Aqua's capital structure and return on equity are major drivers of its proposed increase. OCA's adjustments to both should be adopted to reflect the consumers' interests in not paying an excessive return as explained by OCA witness Rothschild.

Aqua's proposal to shift 60% of the wastewater revenue deficiency to water customers should be rejected. Its rate design proposals are not reasonable and unreasonably increase the bills that its customers will have to pay while reducing bills for some wastewater rate zones, as explained by OCA witness Mierzwa.

Aqua's bill discount and arrearage forgiveness programs need to be revised so that eligible low-income customers' needs are adequately addressed. In addition, OCA recommends an expansion of Aqua's low-income conservation efforts, as explained by OCA witness Colton.

Aqua's compliance with previous commitments/orders on customer service performance, complaint handling and root cause analysis, consumer protection (Ch. 56 and Chapter 14) is lacking, in addition to needing to update actual customer service performance and compliance issues: call center; internal training, response to BCS infractions and verified complaints, etc.; and evaluating internal performance objectives and results as addressed by OCA witness Alexander.

The OCA's recommendations reflect an overall result that adequately balances consumers' interests and shareholders' interests and is consistent with the Public Utility Code and legal precedent.

Q. Does this complete your direct testimony?

A. Yes, at this time.

APPENDIX A

Christine Maloni Hoover
Pennsylvania Office of Consumer Advocate
555 Walnut Street, 5th Floor
Harrisburg, PA 17101-1923
717-783-5048

Of Counsel, Pennsylvania Office of Consumer Advocate, Harrisburg PA. May 2024-Present. In my current role I work a part time annuitant on a variety of cases and issues for the Pennsylvania Office of Consumer Advocate (OCA). I am providing testimony in some cases and in other cases, I work as an attorney representing the OCA.

Previous Positions

- Deputy Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg PA. March 2023-March 2024 (retired). As Deputy Consumer Advocate, I oversaw and coordinated the legal work of the office, including the work of the Senior Assistant Consumer Advocates, to make recommendations to the Consumer Advocate regarding legal and policy matters; represented the office and the Consumer Advocate at hearings, events, meetings, boards, councils; and served as a primary resource to the Consumer Advocate, along with the Director of Operations, regarding office policies, administration, budget, assessments, personnel, and other duties as necessary.

- Interim Acting Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg PA. June 2021-December 2021. As Interim Acting Consumer Advocate, I represented the interest of consumers as a party to proceedings before the Public Utility Commission, state and federal courts, and agencies working with Senior Assistant Consumer Advocates and OCA staff; provided testimony at the General Assembly.

- Senior Assistant Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg PA. 1999-May 2021, December 2021-March 2023. Work on all aspects of utility law and regulation, acting as one of the directors of the office's policies and litigation strategies. Responsible for water and wastewater cases. Responsible for coordinating and supervising administrative staff, IT, support staff, consumer outreach, education, and call center staff.

- Assistant Consumer Advocate, Pennsylvania Office of Consumer Advocate, Harrisburg, PA. 1987-1999. Increasing levels of responsibility, including the water coordinator for Pa. OCA's work on water and wastewater cases, including small companies, from 1990-1994. In 1994 became the small utilities project coordinator.

Bar Admission

- Admitted to practice law before the Supreme Court of Pennsylvania, and the United States District Court for the Middle District of Pennsylvania.

Past Professional Activities

- Representative for Pennsylvania OCA, Technical Assistance Center Board, Pennsylvania Department of Environmental Protection, Harrisburg, PA.
- Member, Planning Committee for Pennsylvania Bar Institute's Public Utility Law Conference, Mechanicsburg, PA
- Member, Pennsylvania Public Utility Commission's Small Water Task Force, Harrisburg, PA
- Member, Water Committee, National Association of State Utility Consumer Advocates (NASUCA), Washington, DC
- Presenter or faculty member in educational programs for the Institute for Public Utilities at Michigan State University, the Society of Utility and Regulatory Financial Analysts, the National Conference of Regulatory Attorneys, the Pennsylvania Bar Institute American Water Works Association, National Association of Water Companies, NASUCA, NARUC, PA Department of Environmental Protection conferences and training sessions.
- Faculty member and presenter, NARUC Eastern Rate School and Western Rate School
- Member, Federal Advisory Committee on Total Coliform Rule/Distribution System Advisory, U.S. Environmental Protection Agency, Washington, DC.
- Member, Federal Advisory Committee on Stage 2 Disinfectants and Disinfection By-Products in Drinking Water, U.S. Environmental Protection Agency, Washington, DC.
- Member, on behalf of Pennsylvania OCA, NDWAC Small Systems Implementation Working Group, Washington, DC

Education

- J.D. American University's Washington College of Law, Washington, DC. 1987.
- B.A. in Political Science and Public Policy, University of Pennsylvania, Philadelphia, PA. 1984.

Testimony

- *Pa. P.U.C. v Pennsylvania-American Water Co*., Docket Nos. R-2023-3043189, R-2023-3043190
- *Application of Aqua Pennsylvania, Inc. to acquire Greenville Sewer Authority Pursuant to Sections 1102 and 1329 of the Public Utility Code,* Docket No. A-2023-3041695

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET X INTERROGATORIES

OCA-X-27 Refer to Aqua Statement 11 at 14:20-21. Please explain why Aqua will discontinue its PFAS monitoring website.

RESPONSE

The current PFAS monitoring website was voluntarily designed and implemented in 2016 to provide data specific to Southeastern PA near areas with known military base PFAS contamination. This was years before PFAS regulations came into effect.

EPA and PADEP have promulgated maximum contaminant levels that requires the data to be reported in Consumer Confidence Reports like all other contaminants. To maintain consistency with the EPA and PADEP requirements and avoid confusion, Aqua PA will report the data as required in the format by EPA and PADEP instead of via a separate mechanism. This provides a consistent statewide PFAS reporting framework and does not require a customer to seek out a website.

SUPPLEMENTAL DIRECT TESTIMONY

OF

CHRISTINE MALONI HOOVER

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

Date Served: September 12, 2024

Table of Contents

Introduction 1

Summary 1

Customer Testimony 1

Conclusions and Recommendations 11

Introduction

Q. Please state your name and business address.

A. My name is Christine Maloni Hoover. My business address is 555 Walnut Street, 5th Floor, Harrisburg, PA 17101. I am employed by the Office of Consumer Advocate (OCA) as an annuitant with the title Of Counsel. I appear in this case as a witness on behalf of the OCA.

Q. What is the purpose of your supplemental direct testimony in this case?

A. I am submitting Supplemental Direct Testimony with regard to testimony by Aqua's customers submitted at the public hearings on Aqua's proposed rate increases.

Summary

Q. Please summarize your conclusions and recommendations.

A. The testimony provided at the public input hearings focused on consumers' concerns about: (1) the affordability of Aqua's rates, currently and as proposed; (2) costs of acquisitions borne by the customers; (3) flat rate wastewater charges; and (4) service quality issues. There were approximately 173 consumers and speakers over the course of the eleven public input hearings. The transcripts for the eleven hearings are transcript pages 53-1094. I will summarize aspects of the public input testimony about certain areas of rates and service. However, I am not addressing all testimony or concerns raised at the Public Input Hearings, recognizing that the sworn consumer testimony was transcribed and is part of the evidentiary record.

Customer Testimony

Q. Please describe consumer testimony that requested the Commission to reject Aqua's proposed rate increase.

A. An overwhelming number of consumers and public officials requested that the Commission outright reject or deny Aqua's proposed rate increase. *See*, e.g., Tr. 173, 79-

80, 90-91, 99, 102, 137, 145, 166-67, 188, 195, 201, 214-15, 225, 458, 543-44, 552, 558, 590, 615-16, 781, 795, 846, 863, 898, 966, 1011, 1056, 1075-76. The customers who are on fixed incomes expressed the difficulty they have in making ends meet. For example, Mr. Burrows (Tr. 73) and Stephanie Shumlas (Tr. 90-91) testified that the anticipated $30 per month increase in Aqua's rates do not match the Cost-of-Living-Adjustment (COLA) increases for pensioners. Other customers including Susan Hennigan (Tr. 137) and Philip Steinberg (Tr. 188) addressed the impact of the proposed rate increase on those on fixed incomes. Jan Novia expressed concern about the impact that the rate increase would have on young families (Tr. 795). Others expressed concern about the large increases in their monthly bills, including Bernard Mazer (Tr. 79-80), Teri Dignazio (Tr. 1075-76), and Bobbi Penniman (Tr. 201). Ms. Penniman paid approximately $280 in 2017/18 and now pays $430. The sewer rates are moving from $277 in 2019 to $671 in 2023. She called this rate increase "highway robbery." Tr. 202. Others expressed concerns about the large increases in their bills since their systems were acquired by Aqua, including Donald Campbell (Tr. 214-15), Gerry Cammarata (Tr. 558), Larry Tonari (Tr. 590) and Branan Cooper (Tr. 833-838). Mr. Cooper testified about the increases in his Aqua bill, his efforts to use less water, and that he will pay more to Aqua than for phone, Internet, trash, and soon, his electric bill. Tr. 837. He then expressed what it feels like to be a captive customer with no power of choice, stating, "So I urge you, please say no to this increase. If you lived in our neighborhood, I think you feel the same way. The notion that we can't do anything because you have us by the wallet is true in the case of Aqua, in this case, you have us not only by the wallet, but by the water and the sewer and we can't live without it." Tr. 837.

Eileen Somers provided testimony regarding the lack of affordability for Delaware County's low-income families. Tr. 965-972. Tim Dethloff testified about the large bills even when they do not use any water stating, "we could be out of town for an entire billing cycle, not use a drop of water, and we would still have to pay that $88.39 just for being an Aqua customer." Tr. 863. Cindy Owens (Tr. 853-61) explained that she and neighbors pay $119.46 for water and wastewater customer charges even before the charges for water or wastewater usage. Owen Exh. 4. She also provided a $335.18 bill for a family of five using 7,500 gallons per month, a $195.47 bill for a retired couple using 2,700 gallons per month, and her $167.12 bill for 1,700 gallons per month. Owen Exhs. 1, 2, and 3. Ms. Owens also said that she is facing an increase in electric bill from PECO in addition to the proposed Aqua increases to water and wastewater rates. Tr. 857.

Keith Gabage (Tr. 493) asked for a better breakdown of costs and where they go on bills. Mr. Gabage was particularly concerned that since Aqua has been acquiring different systems, the wastewater customers are "feeling the pinch" of the same, despite the company also adding "about $260 million[s] worth of rate base that the customers were supporting." Mr. Gabage wants to make sure he is not subsidizing the costs of acquisitions nor contributing to the wastewater revenue. He also fears what future bills might look like should Act 11 be repealed.

State Representative Joseph Ciseri testified that Aqua's sewer bills are already higher than the average in the United States, that the seniors cannot afford the current rates and that the company is asking for "another 20 percent." Tr. 615-16. Robert McMahon (Tr. 383) asked that the PUC ensure Aqua is finding alternative ways to handle PFA issues and more through alternative funding, rather than increased rates.

In my opinion, the above summarized consumer testimony from the public input hearings in this case supports the OCA's recommendations in this proceeding, including a substantial reduction to the Company's requested revenue requirement increase, the responsibility that Aqua has to control its costs and claims, and OCA witness Colton's recommendations for meaningful changes to Aqua's customer assistance program (CAP).

Q. Please describe your concern regarding consumer testimony that raised quality of service and customer service issues.

A. A number of customers testified about quality of service and customer service concerns. I highlight some of that testimony here:

Christine Maddalo (Tr. 104-05) testified that she drinks bottled water "Because I don't know how healthy that water is for me. I don't know what's in it. I know they truck water in sometimes. I don't know where it's being trucked from." "[T]here's levels of things in it I don't want to drink, so I buy bottled water."

Chris Blazic (Tr. 157-58) testified that the wastewater increase is crushing the household. When he called to complain, was told by Aqua that there wasn't anyone he could talk to.

Lee Scarborough (Tr. 311) testified that the neighborhood has experienced two sewage blocks since Aqua took over the system.

Peter Beisser (Tr. 392) testified that he reviewed data from the Better Business Bureau (BBB) and found many customer complaints regarding poor water quality, frequent outages, and unresponsive customer service. He stated, "Are we getting our money's worth as it is?"

Penelope Rigatos (Tr. 447) called Aqua for help and did not receive a response.

Patty Zebley (Tr. 535) testified that "[There is] horrible chemical tasting in [] water. It leaves white residue in my sinks and my tub."

Margot Woodacker (Tr. 573) testified that Aqua customer service does not provide answers to consumers. Consumers are also told to call their township for answers. Customer service has also blamed the PUC on customer calls.

Katherine Washko (Tr. 578) testified that customer service unable to explain bills to consumers and stated that there is "no easy way to connect with Aqua."

Bill Conaway (Tr. 670) testified of multiple leaks, with a leak costing a homeowner over $20,000 to fix. He also stated that consumers are unsure what the line insurance actually protects them from/for.

Kevin Kelly (Tr. 688) observed that the sewer treatment plant has a noticeable and bad smell and does not walk past it anymore. I believe he is served in the Limerick Township service area.

Dan Ely (Tr. 791) testified that he had to complain multiple times about water diversion onto his land and specifically into his pond.

Catherine Moran (Tr. 842) testified that she had an urgent health situation last year and it took Aqua's crew "19 days to locate [her] curb stop… it resolved only after contacting the PUC."

Susan Miller (Tr. 766) testified that she had asked Aqua what happens if she cannot afford to pay and was told that they would come out and plug her sewage line so she cannot use it.

Richard Gage (Tr. 878, 1064) testified that he incurred approximately $3,800 in damages due to excessively high water pressures beyond limits that are required in title 52 Chapter 65, 52 Pa Code Section 65.6(d). Pressures in his neighborhood run from 190-200 psi. Has received communications from Aqua that say the Company is going to do multi-million dollar improvements to reduce the pressure in Chesterbrook, but nothing has happened.

The quality of service issues raised by these and other customers at the public input hearings should be addressed by Aqua in the record of this case.[1] The customer service issues raised by consumers should be addressed as well. It is also important to recognize that the customer testimony regarding customer service supports Ms. Alexander's recommendations. OCA St. 7.

Q. Please describe your concern regarding consumer testimony that raised issues related to flat wastewater charges.

A. There were numerous customers who receive flat rate wastewater charges from Aqua who testified at the public input hearings, asserting that their bill should be based on metered

[1] In the Aqua 2021 base rate case order, the Commission, in denying the OCA's exception regarding high pressure areas, stated, "we encourage Aqua to identify and explore ways to target areas that may benefit from system improvements as it investigates and tracks individual pressure complaints." 2021 Aqua Order at 355.

usage. Issues related to the flat rate wastewater charge were raised in Aqua's 2021 rate case. In the Commission's final order, as OCA witness Mierzwa explained in his direct testimony,

> Aqua was ordered to perform a study in its Order in the last proceeding, the Commission adopted the ALJ's recommendation that directed Aqua to prepare and submit its next base rate proceeding a report evaluating whether different methods of calculating a flat rate would be more reasonable for some rate zones rather than applying a system-wide usage average to each rate zone.

OCA St. 5 at 38-39 (footnote omitted) (citing *Pa. PUC v. Aqua, Pennsylvania*, Docket R-2021-3027385 et al., Order at 273.) Customer testimony at the public input hearings again raised many concerns and issues tied to the flat rate for wastewater service as summarized below.

Christine Maddalo (Tr. 103) testified that she has requested meter for wastewater, explains that she does not wash her car or use hose that much to avoid a large bill – "I dread them taking showers."

Fran Kingsley (Tr. 155) testified that she is upset because the water that she used outside of the home (pool, washing cars, lawn) does not go into wastewater system yet she is charged for that usage.

Joseph Casey (Tr. 204) testified that he was away for four weeks and turned off service, but he was charged for sewer based on water usage. He calls it double dipping. He raised concerns about the high "flat rate" charges (or customer charges) that he is charged even with no usage.

John Muscari (Tr. 377-379) testified, "Any resident of East Bradford that has Aqua for both services that uses any water outside their home is paying Aqua for wastewater treatment services. Aqua is getting paid wastewater services they are not providing."

Frank Donovan (Tr. 404-405) testified, "The fact that they basically charge you your sewer based on the amount of water that you consume, certainly it makes - there is a certain factor to that that makes sense, except it doesn't account for things like watering lawns, shrubs, flowerbeds, car washes. People might even own pools. Those are basically all errors that they work to the Company's advantage and against the customer."

Wayne Weismandel (Tr. 509 – 515) offered testimony and evidence to support that Aqua is charging $402 for sewer usage that would be charged $95 elsewhere/nearby. Mr. Weismandel proffered four exhibits to support his position:

1. Exhibit 1 is a Map of Chester County showing the individual municipalities within the County.
2. Exhibit 2 is Resolution 18 Number 823 of London Grove Township, dated December 13, 2023, effective January 15th, 2024. Among other things, this Resolution establishes metered residential sewer rates in a neighboring township.
3. Exhibit 3 is a copy of his most recent Water Bill from the Chester Water Authority showing that he uses 6,000 gallons of water per quarter.
4. Exhibit 4 is a copy of his most recent monthly Wastewater Bill from Aqua Pennsylvania Wastewater, Inc., showing the flat rate charge of $134.20 per month.

Using simple mathematics and these exhibits, Mr. Weismandel explained that he is overpaying Aqua as is, and requested that the PUC condition the proposed wastewater tariff in this case upon the Company's commitment to provide metered wastewater service in his area – Honeycroft Village – before its next rate case is filed.

Ron Dungey (Tr. 516) asked if the consumer impact study was done. He also stated that his wastewater bill is $145, but his usage is just under $7 dollars.

Carrie Bocci (Tr. 539) echoed the testimony of Mr. Weismandel. She also testified that Aqua does not help her understand the billing; and that the website does not have helpful information for sewer-only customers.

Gary Davis (Tr. 594) wants to pay for usage by and through a meter.

Kathryn Barto (Tr. 584) testified that her sewer bill is 3x the water bill.

Erika Spott (Tr. 621) testified that the unmetered flat rate for sewer in Lake Harmony is approximately $134 a month regardless of usage and that it is the highest unmetered residential flat rate in Pennsylvania. She testified:

> Aqua's methodology for Kidder Township's unmetered flat rate is in total disregard and lacking in even in the most rudimentary inquiry into the mixed-use profile of that community. Its methodology for Kidder Township is wholly devoid of any relevant fact-based data or other rational foundation to support the application of a standard system-wide average and I would submit, is contrary to any conceivable public interest.
>
> Aqua has now had several years to undertake the study and report on it, but to the best of my knowledge, that has not happened. But in the meantime, Kidder Township homeowners have continued to pay $134.20 as an unmetered residential flat rate, based on

> assumptions of standard average uses that bear no resemblance to that community.

Lorraine Rambo (Tr. 664) Ms. Rambo previously had a meter and when her system was acquired by Aqua, the meter was not used to calculate her bill. She is upset that she is absorbing additional costs in her sewer bill. She would like a deduct meter again.

Charles Baver (Tr. 685) testified that flat rate for wastewater means that, as a pensioner, he is paying same rate as a family of six across the street

Sandy Ponticello (Tr. 743) testified that she buys water at the store to avoid a double charge for consumption (sewage customer only).

Raymond Sadowniczak (Tr. 776) testified that he had/used a deduct meter that would take account for water out of outside spigots and not put that use on the sewage bill. When Aqua took over, that stopped appearing on his bill. When he called to find out what happened, Aqua said they had never heard of a deduct meter. When he formally complained and asked for a deduct meter, he was told that it would cost $50 to install, and so he had to conduct a cost/benefit analysis.

John Day (Tr. 886-896), an active formal complainant in this case provided written testimony (Day Exh. 1), and analyses, including a white paper, and data (Day Exh. 3-6), as well as Aqua discovery responses regarding the issues that he raised in his testimony (Day Exh. 2). Mr. Day's testimony focused primarily on the flat rate charged to wastewater customers in Lake Harmony. He testified that he presented his analyses and data to establish the inequity of Aqua's flat rate for the high percentage part-time or seasonal customers in Lake Harmony that are charged a flat rate based on the average water usage across Aqua's service territory. Mr. Day pointed out that Aqua had not studied the issue as it was directed to do by the Commission in its final order in Aqua's 2021 base rate case. He stated, "It's most astonishing and disappointing that Aqua's initial response to the 2022 Commission Order consisted of just a single paragraph and an Excel table. I am participating with active party status for the second time in three years. Not because I enjoyed it so much the first time around, hardly, but there's a fundamental unjustness and inequity that must be redressed." Tr. 893.

The consumer testimony provided at the public input hearings clearly establish that the issues of flat rate wastewater bills continue to be a problem for many Aqua customers. *See also* OCA St. 5 at 37-38, 40-41. In direct testimony, OCA witness Mierzwa recommended no increase be permitted until Aqua completes the study that it was directed to perform in the 2021 rate case order. OCA St. 5 at 39. He noted that Aqua's failure to comply with the Commission's Order means, among other things, that the parties in this

case do not have data to review, analyze, and consider in making recommendations in this case. *Id.*

Considering the public input hearing testimony on the flat wastewater rate issues, and that Aqua must be accountable to the Commission's final order in the 2021 rate case, I recommend[2]:

- That Aqua be directed to conduct the study that it was directed to do in the 2021 rate case order within 30 days of the end of the rate suspension period, February 22, 2025.
- I also recommend that the Commission in its final order in this proceeding direct Aqua to provide a copy of the study and related workpapers to the parties in this proceeding and the Commission and make the study available on its website.
- Additionally, I recommend that the Commission provide the parties with 60 days to review the study and to request that the Commission either reopen the record or establish a small working group of the parties to this case to address the study and identify possible solutions for its customers.
- In the event of establishing a working group, the OCA would support a requirement for Aqua to produce the required study at a series of meetings held publicly in locations where unmetered flat rate customers were deprived of the report in this case, including but not limited to Lake Harmony and Honeycroft Village. Aqua shall notify unmetered flat rate wastewater customers, including but not limited to customers residing in Lake Harmony and Honeycroft Village of the availability of

[2] OCA witness Mierzwa recommended that Aqua's rate increase be denied until it complies with the Commission's Order, in its 2021 base rate case, prepares and submits the report it was directed to provide in its prior base rate proceeding evaluating whether different methods of calculating a flat rate would be more reasonable for some rate zones. OCA St. 5 at 7, 39. My recommendations are complementary and in addition to his recommendation.

the study on Aqua's website and the date, time, and location of the working group meetings. At the meetings, Aqua also should be required to present plans to address the concerns identified by unmetered flat rate customers that do not require those customers to wait for another rate case when the information was required to be available here.

- At the conclusion of the working group meetings, Aqua must file with the Commission a report of the working group indicating the date, time, and location of the meetings, discussion topics, and any tariff changes, service and/or facilities modifications, or action items that Aqua agrees to implement. Said report must be served on all customers who partook in the Public Interest Hearings for this case and all parties.
- After said report is filed, the Commission shall issue a secretarial letter seeking comment from any and all affected customers and parties within a 60-day period. Participation in the public comment would not and does not prejudice consumers from filing formal complaints.

Conclusions and Recommendations

Q. Please summarize your conclusions and recommendations.

A. The overwhelming majority of the consumer testimony provided at the public input hearings supports or complements recommendations made by the OCA's witnesses. As discussed above, customers throughout Aqua's service areas are concerned about the affordability of the current rates and Aqua's proposed rates. Some of the customers raised quality of service issues that they experience as either water or wastewater customers. Some of the customers raised concerns about what is shown on their bills and experience with customer service. Many flat rate wastewater customers raised concerns about Aqua's failure to complete the study that was required in Aqua's 2021 base rate case order and the bill impacts that they face on every bill.

Regarding the impact of Aqua's proposed rate increase, OCA's witnesses provide a number of recommendations that address the proposed revenue requirements, the customer assistance program design, the possible shift of wastewater revenue requirement to water customers, rate design issues, customer service, and other issues that are important to customers. I recommend that quality of service and customer service issues raised by customers at the public input hearings be addressed by Aqua in the record of this case. I recommend a specific timeline and process for the study of options for flat rate wastewater customers and subsequent steps that should be put into the order in this proceeding.

Q. Does this complete your supplemental direct testimony?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

VERIFICATION

I, Christine Maloni Hoover, hereby state that the facts above set forth in my Supplemental Direct Testimony, OCA Statement I Supp, are true and correct to the best of my knowledge, information and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: September 12, 2024

Conclusion 21

Introduction

Q. Please state your name and business address.

A. My name is Christine Maloni Hoover. My business address is 555 Walnut Street, 5th Floor, Harrisburg, PA 17101. I am employed by the Office of Consumer Advocate (OCA) as an annuitant with the title Of Counsel. I appear in this case as a witness on behalf of the OCA.

Q. Have you previously submitted testimony in this case?

A. Yes. I prepared Direct Testimony and Supplemental Direct Testimony.

Q. What is the purpose of your surrebuttal testimony in this case?

A. The purpose of my Surrebuttal Testimony is to provide an overview of the OCA's surrebuttal testimony and to respond to certain aspects of the Rebuttal testimony of Aqua witnesses Packer (Aqua St. No. 1-R), Duerr (Aqua St. No. 11-R), and Hibbard (Aqua St. No. 15-R). Other OCA witnesses submitting surrebuttal testimony are Mr. Smith (OCA St. 2SR), Mr. Andrews (OCA St. 3SR), Mr. Rothschild (OCA St. 4SR), Mr. Mierzwa (OCA St. 5SR), Mr. Colton (OCA St. 6SR) and Ms. Alexander (OCA St. 7 SR).

Summary

Q. Please provide an overview of OCA's surrebuttal testimony.

A. The OCA's revenue requirement position has been updated by Mr. Smith as a result of Aqua's rebuttal testimony and the receipt of additional information. OCA St. 2SR, Exhs. LA-4, Sch. A, p. 2. Mr. Smith shows an updated revenue excess of approximately $12.250 million for the total operations. OCA St. 2SR, Exh. LA-4, Sch. A, p. 2. The updated revenue excess for Aqua's water base utility is approximately $31.251 million. *Id.* The updated revenue deficiency for Shenandoah is approximately $1.885 million. *Id.* The updated revenue requirement deficiencies for Aqua's wastewater operations are

$14,780,660 (wastewater base) and $2,335,337 (Lower Makefield), prior to any Section 1311(c) shift. OCA St. 2SR, Exh. LA-4, Sch. A, p. 2.

Aqua's rebuttal position of a proposed $126,675,472 revenue increase (total company) and related proposals will have a substantial adverse impact on its customers. The OCA's surrebuttal addresses Aqua's arguments, but I highlight a few points below.

As I stated in my direct testimony, in addition to the protection that consumers rely on from the Public Utility Commission (PUC or Commission) under the Public Utility Code, in Pennsylvania the OCA's authorizing statute creates obligations on the Commission to consider consumer interests in rate determinations. OCA St. 1 at 25; 71 Pa. Stat. Ann. § 309-5.

The overview of OCA's surrebuttal testimony is:

- Mr. Smith (OCA St. 2SR) addresses Aqua's rebuttal testimony of William Packer, Christopher Manning, and Panpilas Fischer. Mr. Smith updated his revenue requirement calculations due to Aqua's rebuttal testimony and additional information.

- Mr. Andrews (OCA St. 3SR) addresses Aqua's rebuttal of John Spanos regarding depreciation rates and expense and to reiterate his support and recommendation to use the Average Life Group ("ALG") procedure to calculate depreciation rates.

- Mr. Rothschild (OCA St. 4SR) addresses Aqua's rebuttal of Aqua witness Paul Moul regarding cost of capital and rate of return issues as well as the Company's claim for a management adder to its return on equity.

- Mr. Mierzwa (OCA St. 5SR) responds to Aqua's rebuttal testimony of Constance E. Heppenstall and William C. Packer submitted on behalf of Aqua, and the rebuttal testimony of Roger Cathcart submitted on behalf of the Office of Small Business Advocate (OSBA).

- Mr. Colton (OCA St. 6SR) responds to rebuttal testimony of Aqua witnesses Heather Doyle-Conley and Rita Black and I&E witness Zachari Walker.

- Ms. Alexander (OCA St. 7SR) responds to Aqua's rebuttal testimony of Aqua witness Packer regarding her conclusions and recommendations with respect to Aqua's claim for higher profits due to its claim for exemplary management performance and Mr. Packer's response to her recommendation concerning the liability provisions in the Company's tariff. Additionally, Ms. Alexander will address Ms. Doyle-Conley's Rebuttal testimony regarding Aqua's customer service performance and compliance with certain settlement provisions in prior proceedings.

Q. Please provide an overview of your surrebuttal testimony.

In my direct testimony, I concluded that Aqua's proposed revenue requirements and related proposals, including its proposed deferred accounting for PFAS costs, and the resulting layering of alternative ratemaking mechanisms: (1) unreasonably burden consumers; (2) do not adequately address service quality, customer service, and affordability of service for low-income customers, and (3) undermine the regulatory compact. OCA St. 1 at 3-11. The OCA's direct testimony and recommendations addressed all of these issues in detail.

Aqua's rebuttal position has not materially changed from its direct testimony and for the most part repeated generalized statements that do not address the actual facts in this case. My conclusion about Aqua's proposals, and the impact those have on its customers, has not changed. As noted above, the OCA's overall revenue requirement calculations have changed as described by Mr. Smith in OCA Statement 2SR (related to accounting recommendations).

My surrebuttal testimony addresses Aqua rebuttal testimony that disagrees with my conclusions that Aqua's proposals in this case reduce it and its investors' risks at the expense of its customers, while its requested rate of return does not reflect that shift. I also address rebuttal testimony that responds to arguments that I did not make.

Q. If some point raised in Aqua's rebuttal is not specifically addressed in your surrebuttal testimony, should it be presumed that you agree with the Company?

A. No.

Response to Specific Aqua Witnesses

Aqua witness Hibbard, Aqua St. No. 15-R

Regulatory Compact

Q. Do you have a preliminary comment regarding Mr. Hibbard's testimony on the regulatory compact (Aqua St. No. 15-R at 3-14)?

A. Yes. The regulatory compact is a guiding policy and generally accepted by stakeholders in the Pennsylvania regulatory community. Yet Mr. Hibbard makes sweeping statements about my testimony on the regulatory compact, including that I narrowly define the regulatory compact and traditional ratemaking. I disagree with Mr. Hibbard's characterization of my testimony and the OCA's position. His testimony is filled with straw man fallacies that are not tied directly to my testimony. For example, he states that I and the OCA reflect an "unnecessary and exclusively consumer-focused viewpoint on Commission responsibilities". Aqua St. No. 15-R at 4. This statement is incorrect. Throughout my testimony, I refer to regulation's benefits to both consumers and utilities (p. 21-23), the fair rate of return standard in seminal cases (p. 23-26), and that the setting of just and reasonable rates includes consideration of investors and consumers (p. 10-11, 27). I explained that the OCA's focus is on providing evidence of consumers' needs while recognizing the requirements of the utility. OCA St. 1 at 26.

Mr. Hibbard also states that I use traditional ratemaking "to imply that the Company's filing somehow deviates from what is appropriately presented by the utility and considered by the Commission in a rate case, and systematically changes the balance of risk." Aqua St. No. 15-R at 5. My testimony does not imply that the Company's filing

"deviates" from what is appropriately presented. Rather, my testimony recommends denial of what is presented because the proposals shift more risk to consumers, and are otherwise inconsistent with the setting of just and reasonable rates. The facts of the case and the choices made by Aqua in this case are what require the Commission to restrain Aqua's request as monopolistic excesses.

I provide these two examples of Mr. Hibbard's rebuttal because there are many such statements in Mr. Hibbard's testimony that take my testimony (usually not cited by Mr. Hibbard) and refute straw man arguments that he creates.

Q. What is your recommendation on these rate filings?

A. This proceeding clearly presents an opportunity for the Commission to exercise constraint in deciding Aqua's proposals. The OCA's recommendations provide an opportunity for recovery of a reasonable return while protecting customers from unreasonable bill impacts, along with an expansion of the bill discount program and other recommendations that will protect customers from unreasonable rates and service.

Q. At pages 10-11, when Mr. Hibbard begins his discussion of the regulatory compact he states that you have "little or no reference" to the utility's recovery of legitimate costs of meeting its public service obligation (p. 10, lines 6-8). Is he correct?

A. No. I referenced the utility's recovery of legitimate costs numerous times in my testimony. OCA St. 1 at 18, 26, 21-22, 26.

Q. At page 10, lines 9-11, Mr. Hibbard opines that your testimony does not provide any guidance or have probative value in this case. What is your response?

A. This is Mr. Hibbard's opinion, and it is baseless as he has no authority in this proceeding to make such a declaration as he is neither sitting as an Administrative Law Judge nor as a Commissioner. The ALJs and the Commissioners will determine the probative value of all of the testimony in this case, including mine as well as Mr. Hibbard's.

Mr. Hibbard refutes supposed statements that are not in my testimony, essentially creating straw man arguments. For example, he states that there is no utility-consumer balance under the regulatory compact that would enable the Commission to disregard reasonable and prudent costs in favor of protecting customers. (Aqua St. No. 15-R, at 10). This is a truism and irrelevant as I did not testify that reasonable and prudent costs should be disregarded.

Q. Mr. Hibbard accuses you and the OCA of erroneously presuming that the ratemaking process is structurally biased in favor of regulated utilities. Aqua St. No. 15-R at 11, lines 16-19. What is your response?

A. Mr. Hibbard appears to believe that hyperbole is a substitute for fact. I stated that traditional cost of service ratemaking should benefit both consumers and public utilities. OCA St. 1 at 21-22. One of the most beneficial aspects of cost of service ratemaking is the lack of guaranteed recovery for the utility while the utility is obligated to provide adequate, efficient, safe, and reasonable service and facilities. *Id.* As the basis for setting rates moves away from the traditional ratemaking process to alternative mechanisms that guarantee certain cost recovery or otherwise reduces or removes risk for the utility, the impact on consumers becomes greater and the process tilts towards the utility and its investors.

Q. Mr. Hibbard states that you would have the Commission believe that they should focus primarily or exclusively on consumer interests and that the zone of reasonableness that you discuss would be one-sided. (Aqua St. No. 15-R at 13). Is that accurate?

A. No. Once again, as discussed above, Mr. Hibbard reaches conclusions that are not reasonable or supported by what is in my testimony.

Q. Mr. Hibbard claims that OCA's dramatic reduction in Aqua's proposed increases would have potential negative impacts and repeats the Company's statement that the increase is driven in large part by necessary investments. Aqua St. No. 15-R at 13-14. Is that accurate?

A. No. The OCA's recommendations result in reasonable revenue requirements that would permit an opportunity for Aqua to recover its reasonable and prudent expenses and earn a reasonable return on its prudent capital investments that are likely to be used and useful in the FPFTY. The only OCA adjustments to Aqua's proposed rate base, including $360 million of gross water and wastewater plant additions through the end of the FPFTY was to depreciation service lives and tax assets. *See* OCA St. 2SR, LA-4, Sch. A, p. 8, lines 2, 3, and 4. Mr. Hibbard even acknowledges that no party challenged the proposed capital expenditures.[1]

The OCA's proposed adjustments to Aqua's claimed rate base, depreciation, rate of return, expenses, Act 11 allocation, and rate design are consistent with ratemaking principles and precedent. Mr. Hibbard's claims that OCA's recommendations would cause potential negative impacts are unsupported and should be rejected. The OCA's recommendations, using a reasonable cost of capital, with reasonable ratemaking adjustments, and a reasonable 1311(c) shift, reflect a water base revenue excess, and Shenandoah water and wastewater revenue deficiencies

[1] As explained by Mr. Smith, the OCA's recommended revenue requirement reflects the removal of the rate base, and related expenses for the wastewater acquisition where the Commission Order was appealed and is before the Pennsylvania Supreme Court. *See* OCA St. 2SR, Exh. LA-4, Sch. A, p. 2.

Alternative Ratemaking

Q. Mr. Hibbard thinks there should be no limit on the number of mechanisms that should be applied, and that Section 1330[2] demonstrates his position (Aqua St. No. 15-R at 19-20). What is your response?

A. I did not state that there should be a numerical limit. I discussed the multiple alternative ratemaking mechanisms that Aqua already uses to emphasize that these incentive mechanisms cannot be viewed in isolation. Rather, each incentive mechanism has an impact on customers' bills. Some, like deferral accounting, which OCA argues Aqua has not met the standard for it in this instance, ensure that recovery will be granted for prudent expenses, the DSIC ensures return on and of capital costs between rate cases, Section 1311(c) shifts revenue requirement from customers of one utility service to primarily different customers of a different utility service. The cumulative impact of existing mechanisms[3] is layered over a ratemaking rate base set at the end of the FPFTY or one year after rate go into effect.[4] It is telling that Mr. Hibbard fails to acknowledge that the existing mechanisms, and the deferred accounting proposal have an impact to increase customers' rates.

[2] Mr. Hibbard opines that Section 1330 provides support for his position that there is no theoretical or practical limit on the number of mechanisms that can be used to encourage behavior by utilities. Aqua St. No. 15-R at 19-20. Utility proposals of alternative ratemaking mechanisms under Section 1330, 66 Pa. C.S. § 1330, are neither entitled to a presumption of being just and reasonable nor are they automatically approved. The determination of whether a proposed alternative ratemaking mechanism should be approved must be addressed in a rate case, based on the facts as presented by the utility subject to the challenge of others and the scrutiny of the PUC as a regulator whose job it is to restrain a utility's monopolistic tendencies. Likewise, Aqua's proposals, including its proposed deferred accounting mechanism should be subject to the same scrutiny.

[4] At page 19, Mr. Hibbard is explaining his position that the FPFTY ensures that rates are not based on outdated information and points to my statement that the FPFTY is used to reflect the costs of providing service without acknowledging that the point in time that is used, the **end** of the FPFTY, is one full year after the new rates go into effect. That does not just reduce regulatory lag as stated by Mr. Hibbard, but rather removes it altogether, placing the customers at risk on day one of new rates if the capital and expenses projected in the FPFTY are overstated.

Q. Mr. Hibbard discusses Section 1311(c) on page 18 and states that the wastewater costs are "spread among the common customer base of the water and wastewater utilities." Is that accurate?

A. No. The large majority of Aqua water customers are not Aqua wastewater customers. Nor has the Commission required that the wastewater and water customer base be the same. Given these facts, Aqua's proposals to shift 60% of its wastewater revenue requirement to water customers and to recover little, or no increase from existing wastewater customers are not reasonable, as addressed in the testimony of Mr. Mierzwa.

Q. Mr. Hibbard characterizes your position on traditional ratemaking as narrow and that the use of alternative ratemaking renders the ratemaking process non-traditional. (Aqua St. No. 15-R at 16). Do you agree?

A. No. I disagree that I have a "narrow view" of traditional ratemaking or that the use of some alternative ratemaking provisions in the Public Utility Code makes the entire rate regulation system "non-traditional." I described the current ratemaking in Pennsylvania as not traditional ratemaking "in the strictest sense" because of certain existing statutory provisions. OCA St. 1 at 26. Traditional ratemaking for water and wastewater utilities in Pennsylvania has been rate base/rate of return for a very long time. Since the 1980s, that has included the use of depreciated original cost to calculate the rate base. In my direct testimony, I described four alternative ratemaking provisions – DSIC, FPFTY, fair market value of rate base, and Section 1311(c) subsidy – that were added to the Public Utility Code between 2012 and 2016 and are used by Aqua and reflected in its rates. OCA St. 1 at 4, 27-37. Those four statutory provisions are outside of traditional ratemaking because each creates an exception to traditional ratemaking. The DSIC permits a return on and of capital costs between rate cases, which moves that recovery outside of the test year used in a rate case and increases rates between rate cases. It also permits capital cost recovery through a

surcharge. The FPFTY permits a full year projection to be included in rates as of day one and thus permits property that is not (but projected to be) used and useful as of the time rates are set to be reflected in rates. The use of fair market valuation as defined in Section 1329 and in the type of acquisition covered by Section 1329 is an exception to the use of depreciated original cost to set rates. Section 1311(c) permits the shift of wastewater revenue requirement to water customers and is the exception added to a section that prohibits utilities that provide two types of service from combining the revenue requirements.

These statutory provisions created exceptions to traditional ratemaking concepts of test years, valuation, and recovery of separate utility service revenue requirements.

Fair Market Value

Q. Mr. Hibbard opines on fair market valuation under Section 1329. (Aqua St. 15-R at 20-22). What is your response?

A. Once again, Mr. Hibbard creates a straw man argument about Section 1329 valuations. The OCA did not propose any adjustments to the ratemaking rate base that was approved in the seven acquisitions that are already closed and reflected in Aqua's rate base in its filing.[5] Notably, Mr. Hibbard did not provide any evidence to refute the revenue requirement shortfall that is created and that is shifted to water customers under Aqua's proposed Section 1311(c) shift.

At page 22, line 7-8, Mr. Hibbard characterizes the revenue requirement deficiencies created by the FMV acquisitions as "irrelevant". This statement is incorrect. I provided the annual revenue requirement shortfall that existed at closing on the eight FMV

[5] The OCA removed the East Whiteland Township acquisition entirely for the reasons set forth in OCA Statements 1 and 2.

acquisitions that are reflected in Aqua's rate filing and that are pending. OCA St. 1, Exhibit CMH-2. Those revenue deficiencies grow in each rate case due to increased O&M and capital expenditures projected in the rate case. The revenue deficiency for the two FMV acquisitions included in this case,[6] and at the OCA's revenue requirement, is $4.22 million excluding East Whiteland Township.[7] At Aqua's calculated revenue requirement at rebuttal, the shortfall would be $38.74 million, including East Whiteland Township and $31.75 million without East Whiteland Township. I would not characterize that revenue requirement shortfall as irrelevant for the customers who will bear those costs.

Q. Mr. Hibbard also claims that the fair market value rate base should not provide a basis for reducing Aqua's authorized return on equity in this case. Aqua St. No. 15-R at 22. Do you agree?

A. No. Mr. Hibbard claims a reduced return on equity would "undermine" the legislative intent and discourage future acquisitions. Mr. Hibbard does not provide any analysis for his statement. Section 1329 establishes the ratemaking rate base but does not determine any other component of the revenue requirement formula. There is nothing in Section 1329 that would prohibit an equity return at the lower end of the range to reflect the much higher rate base (as compared to depreciated original cost) resulting from the Section 1329 acquisitions. Mr. Rothschild also discusses this issue in his surrebuttal. OCA St. 4SR.

[6] Regarding the one acquisition (East Whiteland Township) that does not meet the criteria set forth by Mr. Smith, the OCA removed the rate base additions and ratemaking claims, and Aqua's proposed Section 1311(c) related shift to water customers. OCA St. 2 and 2SR.

[7] Exhibit CMH-2 shows seven closed FMV acquisitions (excluding East Whiteland Township) and the related revenue requirement shortfall at the time of closing. Six of the seven are wastewater acquisitions. In the current rate filing, only two of the seven FMV acquisitions (excluding East Whiteland Township) can be identified in the revenue requirement calculations, the others have been rolled into wastewater base operations. OCA St. 1, Exh. CMH-2(New Garden, Limerick, East Bradford, Cheltenham, and East Norriton).

Aqua witness Packer, Aqua St. No. 1-R

Deferred Accounting Proposal for PFAS costs (Aqua St. No. 1-R at 3-10)

Q. Mr. Packer responds to your testimony and Mr. Smith's regarding the OCA recommendation that Aqua's proposed deferred accounting for PFAS be rejected. Please address his statements.

A. First, I want to be clear that the OCA has not made any adjustments to the PFAS-related capital and O&M costs in the FPFTY. I understand that these are part of the Company's obligations to provide safe and adequate service. That does not mean that the Company's proposed special accounting treatment is reasonable.

Mr. Packer claims that the Company's request for approval of deferral of capital and O&M related to PFAS meets the standards for deferral. Aqua St. No. 1-R at 5-6. OCA witness Smith addressed the standards for deferral in his direct testimony (OCA St. 2 at 60-63) and will respond in his surrebuttal testimony. I addressed Aqua's request for deferral of these costs to point out that by requesting deferral, Aqua adds another mechanism that will further decrease regulatory lag for recovery of the costs, on top of its use of the FPFTY which means rates established in this case will cover all capital and O&M related to PFAS through December 31, 2025, the end of the FPFTY. Those projected costs are on top of existing rate base and O&M included in rates for these costs.

Mr. Packer acknowledges that the request decreases regulatory lag but claims Aqua would not request it if it was not important to do so. Aqua St. No. 1-R at 6. As I stated above, OCA understands the importance of the PFAS treatment. That does not equate to justifying deferred accounting for the costs related to the treatment. Aqua witness Manning testified that Aqua will file another base rate case in 2026. Aqua St. No. 3-R at 12. That would mean that there will be no lag as the FPFTY in this case (2025) will be the HTY in

the next case filed in 2026. As stated above, Mr. Packer acknowledges that there is reduced regulatory lag. Aqua St. No. 1-R at 6. Based on this, it is not at all clear why Aqua needs deferred accounting treatment for these costs at all given their planned rate case timing.

These costs are not "nonrecurring" costs as Aqua has been expending capital and O&M for PFAS treatment since 2017. OCA St. 1 at 38. In rebuttal, Mr. Packer claims that the different treatment level in the EPA rule, of 4 parts per trillion (ppt), rather than the state standard of 13 ppt is a "different problem". Aqua St. No. 1-R at 7. I disagree. When Aqua began treatment in 2017, there was no state standard of 13 ppt. There may be more sources that may need to be treated to 4 ppt may, but neither the PFAS treatment nor the problem is different. He also states that being proactive [by treating for PFAS since 2017] should not be a "penalty for seeking deferral treatment." Aqua St. No. 1-R at 7. Denying the request for deferral treatment is not a "penalty" because it does **not** prevent recovery of Aqua's PFAS-related costs (past and future). Aqua can and has collected these treatment costs in rates since it has been incurring them.

These costs are not unanticipated. The Pennsylvania Department of Environmental Protection rule took effect on January 14, 2023, or 11 months after it was published[8]. 53 Pa.B. 333; 52 Pa.B. 1245. The EPA rule took effect on April 26, 2024, 3 years after EPA published its final determination to regulate PFAS 86 FR 12272), and 13 months after the proposed rule was published (88 FR 18638).

Mr. Packer claims that the deferred accounting proposal will avoid the need for the Company to file additional rate cases. *Id.* The likelihood that the deferral mechanism for

[8] In its Final Rule, Background and Purpose section, DEP reviews the regulatory history of PFAS including EPA's listing of six PFAS in the Third Unregulated Contaminant Monitoring Rule in 2013, the creation of Pennsylvania's PFAS Action Team in 2018 that issued its Initial Report in December 2019, as well as DEP's PFAS Sampling Plan and Toxicology Services Contract in 2019. 53 Pa.B. 333-34.

PFAS costs would extend the time between Aqua's rate filings is not supported. Aqua's projected PFAS capital costs from 2025 through 2029, are $300 million with an additional estimated O&M of $15 million. Aqua St. No. 1-R at 3. The PFAS capital investment included in the FPFTY is $27,595,069. Aqua response to I&E RE-6. That represents 0.639% of Aqua's total capital expenditures in the FPFTY.[9]

Mr. Packer estimates that the average of $75 million of PFAS-related investments per year for 2026-2029 is approximately $9 million of revenue requirement (pre-tax)/$6.5 million (after tax) which he characterizes as "significant". Aqua St. No. 1-R at 9. The $9 million represents approximately 1.3% of Aqua's proposed total water revenues of $688,303,840[10] in this case. Also, in that same time frame, Aqua projects that it will file rate cases in 2026 and 2028 (Aqua St. No. 3-R at 12) which would permit inclusion and recovery of PFAS-related costs in a timely manner, contrary to Mr. Packer's statements.

Mr. Packer also claims that the PFAS costs are not normal capital investments and that therefor is not an unreasonable shift of risks to customers. Aqua St. 1-R at 6. Water customers' rates already reflect PFAS-related costs and would continue to do so without Aqua's proposed deferral accounting. These are normal capital investments and have been since 2017. It makes the shift to customers associated with the deferred recovery of normal capital investment unreasonable. In my view, there is no reasonable basis to allow Aqua to incur deferred recovery of ongoing costs that it knows how to treat and has been treating since at least 2017 and where it plans to file rate cases on a two year cycle going forward that would permit it to recover all prudently incurred and projected costs in those cases.

[9] $27,595,069/$4,318,244,093=0.00639 x100=0.639%. Pro forma rate base is taken from Aqua St. 1-R, Exh. 1-A, Sch. A-3.
[10] $684,207,690 (Exh. 1-A, Sch. A-1, Col. 10, l. 1) + $4,096,150 (Exh. 1-B, Sch. A-1, Col. 10, l. 1)=$688,303,840.

East Whiteland Township Acquisition (Aqua St. No. 1-R at 19-20)

Q. Mr. Packer disagrees with the recommendation that the East Whiteland acquisition should not be included in this case. Please address his rebuttal testimony.

A. Mr. Packer ignores the uncertainty of the acquisition by focusing on the Commission order that the OCA appealed and stating that if the Pennsylvania Supreme Court decides in the OCA's favor, that can be dealt with at that time. However, as stated in my direct testimony, I am advised by OCA counsel that the Commonwealth Court's reversal of the Commission order stands and remains binding – the Pennsylvania Supreme Court's grant of allocatur has no effect on the binding nature of the Commonwealth Court's decision. I discussed the background of the East Whiteland acquisition in my direct testimony (OCA St. 1 at 11-13) including Aqua's decision to close on the transaction before the appeal period ran in August 2022. By closing on the transaction before the appeal period ran, Aqua assumed the risk of an appellate court reversing the Commission's final order.

There are multiple possible outcomes of the case before the Supreme Court, including an affirmance of the Commonwealth Court which would uphold the reversal of the Commission order. However, none of the possible outcomes will be known while this case is pending. OCA St. 1 at 11-13; OCA St. 2 and 2SR. Given the existing state of things and given the uncertainty about the future, it is reasonable to remove the East Whiteland revenue requirement from the case, including any portion shifted to water customers pursuant to Section 1311(c), and the related transaction costs, and to not allow Aqua to establish new rates for the East Whiteland customers. OCA St. 1 at 11-13.

Regulatory Compact (Aqua St. No. 1-R at 20-21)

Q. Mr. Packer claims that you disagree with the laws passed by the Pennsylvania General Assembly and Commission orders and regulations. Do you agree with his general observation?

A. No. I did not challenge the legality of any section of the Public Utility Code, a Commission Order, or regulations in my testimony, nor does Mr. Packer point to anything specific in my testimony to support his claim. My testimony on the regulatory compact, traditional ratemaking, and the use of statutory mechanisms that created exceptions to traditional ratemaking focuses on the cumulative impact that the use of those mechanisms has on Aqua's consumers (all of those mechanisms raise customers rates in a rate case and in between rate cases) and the benefits that Aqua's shareholders derive from those mechanisms. Mr. Packer then refers to Aqua rebuttal witness Hibbard's testimony which I address above.

Rate Case Notices (Aqua St. No. 1-R at 24-27)

Q. Mr. Packer disagrees with your testimony regarding the notices that Aqua provides. Is he correct?

A. No. Although he acknowledges the importance of communications with Aqua's customers, he thinks that the current practices "strike an appropriate balance". For the reasons I discussed in my direct testimony, the current information that Aqua provides should be modified to add two additional usage levels that would provide meaningful information to its customers. OCA St. 1 at 41-46. I will also respond to his rebuttal testimony regarding other notice issues that I addressed in my direct testimony. OCA St. 1 at 47-48.

Regarding the two additional usage levels of 5,000 and 10,000 gallons that I recommend be included in the notice (not hundreds of pieces of information as Mr. Packer references at page 25), Aqua should not be afraid to accurately disclose the rate impact of

its proposed rate increase at different, realistic usage levels.[11] Aqua currently benefits from the obscurity that is provided by merely showing what a typical customer's bill would be. Aqua could choose to show usage at multiple levels but has made the choice not to do so. I disagree that customers would be confused by two additional usage levels being shown on the notice. Customers are not getting an accurate disclosure when Aqua uses the typical customer usage because their usage is likely different. *See* Tr. 904 ("My bill is actually three times Aqua purported rate that they base their estimates on. I paid $269 for July's bill for a three adult household…."), Tr. 320, 1023-24; 1090-91.

Q. Mr. Packer also states that the customer can visit Aqua's website. (Aqua St. No. 1-R, at 25). Do you agree?

A. I agree that a customer can visit Aqua's website, but as I pointed out in my direct testimony, there is no rate calculation provided there, let alone bill impact calculations at different usage levels. OCA St. 1 at 45, ftnote 23. Rather, the website provides Aqua's current and proposed tariffs that are multiple pages into the website, which the customer would then have to review to find the right rate zone and then calculate their bill at the proposed rate.

Q. Mr. Packer states that you are challenging the Commission's rate case notice regulation. Aqua St. No. 1-R at 25. Is he correct?

A. No. There is no need to change the notice regulation at 52 Pa. Code § 53.45 to have the customer notice show multiple usage levels. As I explained in my direct testimony, Aqua already makes additions to the notice regarding its position that ratepayers receive benefits from the rates that they pay, and it did not seek a change to the PUC's regulations to do so. *See* OCA St. 1 at 46.

[11] The chart using Zone 1 Water on page 45 of my direct testimony shows the impact of Aqua's proposal on different usage levels. The bill impact for a customer at 5,000 gallons is a 29% increase, and for a customer at 10,000 gallons it is a 31% increase compared to a 24% increase for a typical customer at 3,870 gallons.

Q. Mr. Packer disagrees with your testimony regarding information at the end of the base rate case. Aqua St. No. 1-R at 25. Please comment.

A. Mr. Packer's characterization of my recommendations regarding information at the end of the case is not accurate. He says that he disagrees with "new notice requirements including a required press release and separate billing insert." I did not recommend that Aqua be "required" to issue a press release. Rather, I stated that is was likely that Aqua would issue a press release that would likely include the impact of the Commission order on a typical customer. I recommended that the two additional usage levels (5,000 and 10,000) be included in any press release issued by Aqua at the end of the rate case.

Regarding a separate billing insert, Mr. Packer states that customers are provided "ample information" over the nine months of the rate case. As I explained in my direct testimony, that is clearly not the case. OCA St. 1 at 47-48. Customers receive the notice of the filing and then at the end of the case, they receive a bill with higher rates. If they see a press release, it might include the typical customer impact language which will vary by usage and may vary for different rate zones compared to rate zone 1 or it might talk only about the overall increase approved by the Commission compared to what was requested.[12]

Q. In response to your recommendation that Aqua include rates that reflect the revenue deficiencies for the wastewater ratemaking divisions (that it calculates in its rate filing), Mr. Packer claims that Aqua must reflect rate impacts after its proposed Act 11 shift in the notices to its wastewater customers. Aqua St. No. 1-R at 26. Please comment.

A. I addressed my recommendation in my direct testimony emphasizing that the information provided in the notice obfuscates the potential impact on wastewater customers. OCA St.

[12] For example, the Commission's press release provided no specific customer usage levels at the end of Aqua's 2021 base rate case. https://www.puc.pa.gov/press-release/2022/puc-approves-substantially-lower-than-requested-rate-increases-for-aqua-pennsylvania-and-aqua-pennsylvania-wastewater

1 at 42-44. In this case, Aqua proposes to shift $21.8 million or 60% of the wastewater revenue deficiency to water customers. *Id.* Aqua's rate case notices reflect rates (including rate decreases for some wastewater customers) that it is proposing **after** the 1311(c) shift. There is nothing in the notice that explains to wastewater customers that the proposed rates are **after** Aqua's proposed shift and that the rates that are set **may be higher** than what is shown in the notice (and may not be a rate decrease for some wastewater customers).

If Aqua provided the revenue deficiency and percentage increase of the deficiency that it calculates based on its cost of service studies, along with an explanation of what its request for a "combined water and wastewater revenue requirement" means for each of the wastewater divisions, that would provide meaningful information to the wastewater customers.

I made a similar recommendation for the notice to water customers, including Shenandoah. OCA St. 1 at 44. Mr. Packer's rebuttal was that every water acquisition has a sharing of the acquired company's revenue deficiency. Aqua St. No. 1-R at 26. However, this case represents the first Section 1329 water acquisition to be included in Aqua's rates and there is a cost of service study for the acquired system which differentiates it from other water acquisitions.

Management Performance (Aqua St. No. 1-R at 28-32)

Q. Mr. Packer addresses the evidence the Company has provided to support its claim for exemplary management performance. Please comment.

A. Aqua proposes additional basis points on its return on equity based on claimed exemplary management performance if the Commission does not grant its requested 10.95% return on equity. The OCA provided direct testimony opposing that unquantified request and

provides surrebuttal to Mr. Packer's rebuttal testimony.[13] OCA witness Mierzwa addressed Aqua's failure to provide a study of flat wastewater rate alternatives in direct and in surrebuttal to Aqua witness Heppenstall explains that the Company's evaluation did not satisfy the requirements of the Commission's order in the last base rate case. OCA St. 5SR. OCA witness Colton addressed in direct testimony the Company's failure to work with parties and provide data collection and analysis to calculate the Customer Assistance Program (CAP) offsets. *See* OCA St. 6 at 48. OCA witness Alexander (OCA St. 7SR) provides a response to Mr. Packer's rebuttal testimony regarding her direct testimony regarding call center performance metrics. Aqua's claim for additional basis points on its return on equity determined by the Commission, should be denied.

Aqua witness Duerr (Aqua St. No. 11-R)

Q. Mr. Duerr addressed your recommendation that Aqua continue to provide the PFAS monthly testing on its website. Aqua St. No. 11-R at 12. Please comment.

A. Mr. Duerr simply restated Aqua's position that it would provide general information about PFAS on its website, but it would not continue to post monthly sampling on its website because there is now a federal regulation on PFAS. Mr. Duerr appears to interpret that rule as somehow prohibiting Aqua from posting updates to the monthly sampling information that it currently has on its website. I do not agree. As I explained in my direct testimony (OCA St. 1 at 48-49), the Aqua water website contains monthly PFAS testing for certain facilities in Southeastern PA while the consumer confidence reporting under the federal rule would be presented on an annual basis. I do not see anything that prohibits Aqua from continuing to post monthly sampling information. I also do not see why Aqua would now

[13] In OCA Statement 4SR, Mr. Rothschild addresses additional reasons why Aqua has not justified an adder for management performance in response to Aqua witness Moul.

seek to provide less information than it has provided since 2016. Given that the PFAS rule's reporting requirements does not take effect until 2029, my recommendation that Aqua continue to provide the monthly sampling information that is on its website through its next base rate case is reasonable.

Conclusion

Q: Does this conclude your Surrebuttal Testimony?

A. Yes.

I. INTRODUCTION

Q. Please state your name, position and business address.

A. Ralph C. Smith. I am a Senior Regulatory Consultant at Larkin & Associates, PLLC, 15728 Farmington Road, Livonia, Michigan 48154.

Q. Please describe Larkin & Associates.

A. Larkin & Associates is a Certified Public Accounting and Regulatory Consulting firm. The firm performs independent regulatory consulting primarily for public service/utility commission staffs and consumer interest groups (public counsels, public advocates, consumer counsels, attorneys general, etc.). Larkin & Associates has extensive experience in the utility regulatory field as expert witnesses in over 400 regulatory proceedings including numerous telephone, water and sewer, gas, and electric matters.

Q. Please summarize your educational background.

A. I received a Bachelor of Science degree in Business Administration (Accounting Major) with distinction from the University of Michigan - Dearborn, in April 1979. I passed all parts of the C.P.A. examination in my first sitting in 1979, received my CPA license in 1981, and received a certified financial planning certificate in 1983. I also have a Master of Science in Taxation from Walsh College, 1981, and a law degree (J.D.) cum laude from Wayne State University, 1986. In addition, I have attended a variety of continuing education courses in conjunction with maintaining my accountancy license. I am a licensed Certified Public Accountant and attorney in

the State of Michigan. I am also a Certified Financial Planner™ professional and a Certified Rate of Return Analyst ("CRRA"). Since 1981, I have been a member of the Michigan Association of Certified Public Accountants. I am also a member of the Michigan Bar Association and the Society of Utility and Regulatory Financial Analysts ("SURFA"). I have also been a member of the American Bar Association ("ABA"), and the ABA sections on Public Utility Law and Taxation.

Q. Please summarize your professional experience.

A. Subsequent to graduation from the University of Michigan, and after a short period of installing a computerized accounting system for a Southfield, Michigan realty management firm, I accepted a position as an auditor with the predecessor CPA firm to Larkin & Associates in July 1979. Before becoming involved in utility regulation, where the majority of my time for the past 42 years has been spent, I performed audit, accounting, and tax work for a wide variety of businesses that were clients of the firm.

During my service in the regulatory section of our firm, I have been involved in rate cases and other regulatory matters concerning numerous electric, gas, telephone, water, and sewer utility companies. My present work consists primarily of analyzing rate case and regulatory filings of public utility companies before various regulatory commissions and where appropriate, preparing testimony and schedules relating to the issues for presentation before these regulatory agencies.

I have performed work in the field of utility regulation on behalf of industry, state attorneys general, consumer groups, municipalities, and public service

commission staffs concerning regulatory matters before regulatory agencies in Alabama, Alaska, Arizona, Arkansas, Barbados, California, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, New Jersey, New Mexico, New York, Nevada, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, Puerto Rico, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, Washington D.C., West Virginia, and Canada as well as the Federal Energy Regulatory Commission and various state and federal courts of law. My prior testimonies have included evaluations of numerous utility rate case filings and revenue requirement determinations.

Q. Have you prepared an attachment summarizing your educational background and regulatory experience?

A. Yes. Attachment RCS-1 provides details concerning my experience and qualifications.

Q. On whose behalf are you appearing?

A. Larkin & Associates, PLLC, was retained by the Pennsylvania Office of Consumer Advocate ("OCA") to review the rate request of Aqua Pennsylvania, Inc. ("Aqua", "AP", or "Company"). Accordingly, I am appearing on behalf of the OCA.

Q. Have you previously testified before the Pennsylvania Public Utility Commission?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("PA PUC" or "Commission") previously on a number of occasions.

Q. Who are the OCA's other expert witnesses?

A. In OCA Statement 1, Christine Maloni Hoover presents a summary of OCA's position, an overview of the rate case, introductions of OCA's other witnesses, financial demographic information for Aqua's service territory, the purpose of this and all rate cases, the Regulatory Compact, traditional cost-of-service ratemaking and the Regulatory Compact in Pennsylvania, incentive regulation, alternative ratemaking and the Regulatory Compact in Pennsylvania, Distribution System Improvement Charge ("DSIC"), the fully projected future test year ("FPFTY"), Sections 1329 and 1311(c), and the impact of Section 1311(c), Aqua's deferred accounting PFOA/PFAS claim, OCA's response to Aqua's testimony on Return on Equity, Public Input Hearing testimony, quality of service, information in customer notices, residential customer usage level, and the notice of the impact of the final order in this rate case.

In OCA Statement 3, Aaron Rothschild discusses the cost of equity model results, Aqua's decision to choose an ROE at the lower end of Aqua witness Moul's COE model range, FMV legislation and its impact on Aqua and its ROE, changing capital market conditions, capital structure, Aqua's CAPM result, the DCF method, and Essential Utilities at-the-market issuance of common equity.

In OCA Statement 4, Brian Andrews discusses depreciation rates and their impacts on depreciation expense and rate base in 2025.

In OCA Statement 5, Jerome Mierzwa provides an analysis on whether the proposed increases in Residential customer charges are reasonable; whether the allocation of a portion of the Shenandoah Water and wastewater revenue requirement to water service is reasonable; whether the cost-of-service study prepared by the Company is reasonable, including an evaluation the base extra-capacity maximum day and maximum hour factors and the allocation of source of supply costs; whether the rates charged to negotiated rate customers are reasonable; and whether the proposed revenue increases for each customer class are reasonable.

In OCA Statement 6, Roger Colton discusses affordability of service and low-income customers assistance programs, the inflation factor, customer charge increase, and placing the ROE at the higher end of the range of reasonableness.

In OCA Statement 7, Barbara Alexander discusses the identification and evaluation of compliance with previous commitments/orders on customer service performance, complaint handling and root cause analysis, consumer protection (Ch. 56 and Chapter 14) compliance; updating actual customer service performance and compliance issues: call center; internal training, response to BCS infractions and verified complaints, etc.; and evaluating internal performance objectives and results.

Q. Did you receive inputs from some of those OCA witnesses for your calculations of the revenue requirements for Aqua PA's water and wastewater utilities in the current case?

A. Yes. I received inputs concerning the recommended cost of capital and return on equity from OCA witness Rothschild, OCA St. 3. I received recommended adjustments to depreciation expense and accumulated depreciation from OCA witness Andrews, OCA St. 4. I also received certain recommended adjustments that impacted Aqua PA's net operating income from OCA witness Colton, OCA St. 6.

Q. How will your testimony be organized?

A. I will present an Overall Financial Summary that addresses the revenue increases requested by Aqua for its water utility, and for its wastewater utility. I then address each of the utilities that are the subject of the Company's revenue requirement filings in this proceeding. I present an explanation of the organization and content of my summary schedule and adjustment exhibits, which are attached to my testimony, in Exhibits LA-1 and LA-2, respectively. That discussion is then followed by sections on Rate Base and Net Operating Income adjustments, where I explain each adjustment to FPFTY results that is being recommended for Aqua's water and wastewater utilities.

Q. What base rate revenue increases has Aqua requested in the current case?

A. Aqua has presented five revenue requirement calculations where the Company applies a rate of return to rate base and compares the required operating income with

its adjusted operating income and uses the difference to derive a revenue deficiency or sufficiency. The Company is proposing to increase its base rate revenues by $126.675 million on a total Company basis, or approximately 18.88%. Specifically, Aqua is requesting a base rate revenue increase of approximately $87.931 million for its Water Base Operations; and a base rate revenue increase of approximately $25.958 million for its Wastewater Base Operations. Aqua has also proposed base rate increases of $802,470 for its Shenandoah Water utility, $2.569 million for the Lower Makefield Wastewater utility and $3.848 million for the East Whiteland Wastewater utility, after allocations of portions of the revenue requirements that Aqua calculated for those utilities into the Company's Water base revenue requirement. As shown in the table below, Aqua is requesting that approximately $21.851 million of the Wastewater Operations combined revenue requirement (inclusive of Lower Makefield and East Whiteland) be allocated to its Water Base Operations:

Aqua Pennsylvania, Inc. Revenue Requirement Summary						
	Total Company	Water Base Operations	Water Shenandoah	Wastewater Base Operations	Wastewater Lower Makefield	Wastewater East Whiteland
Present Rate Revenue	$ 670,994,640	$ 596,344,820	$ 1,828,304	$ 57,682,604	$ 11,613,830	$ 3,525,082
Additional Revenue Requirement	$ 126,675,472	$ 87,930,589	$ 2,267,908	$ 25,957,548	$ 3,526,708	$ 6,992,719
Cost of Service Allocation	$ -	$ 1,465,438	$ (1,465,438)			
Act 11 Allocation	$ -	$ 21,850,629	$ -	$ (17,747,873)	$ (958,164)	$ (3,144,592)
Proposed Revenues	$ 797,670,111	$ 707,591,475	$ 2,630,774	$ 65,892,280	$ 14,182,374	$ 7,373,208
Rate Increase/(Decrease) - $	$ 126,675,472	$ 111,246,656	$ 802,470	$ 8,209,676	$ 2,568,544	$ 3,848,126
Rate Increase/(Decrease) - %	18.88%	18.65%	43.89%	14.23%	22.12%	109.16%
Notes and Source						
Exhibit 1-A, Schedule Act 11, page 1 from Aqua's filing						

Q. What is the Company's basis for allocating approximately $21.851 million of the wastewater combined revenue requirement to Water Base Operations?

A. Pursuant to Act 11, the Company is proposing to determine its revenue requirement on a combined water and wastewater basis and to mitigate some of the wastewater utility revenue increases by allocating the $21.851 million of its wastewater cost of service to Water Base Operations as authorized by Section 1311(c) of the Public Utility Code. At page 10 of her Direct Testimony, Ms. Heppenstall states that the amount of Act 11 recovery from Aqua's water utility ratepayers was determined by subtracting the proposed level of wastewater revenue after various increases from the pro forma cost of wastewater service for the twelve months ended December 31, 2025.

Q. What does Subsection (c) of Section 1311 of the Public Utility Code state?

A. Subsection (c) of Section 1311 of the Public Utility Code states as follows:

> Segregation of Property - When any public utility furnishes more than one of the different types of utility service, the Commission shall segregate the property used and useful in furnishing each type of such service, and shall not consider the property of such public utility as a unit in determining the value of the rate base of such public utility for the purpose of fixing base rates. A utility that provides water and wastewater service shall be exempt from this subsection upon petition of a utility to combine water and wastewater revenue requirements. The Commission, when setting base rates, after notice and an opportunity to be heard, may allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if in the public interest.

Q. Have you reproduced Aqua's proposed Act 11 allocation?

A. Yes. The calculations of Aqua's revenue requirement presented on my Exhibit LA-1, Schedule A, page 1, reproduce the revenue deficiency for Aqua's water and wastewater utilities that has been requested by Aqua. Aqua's proposed Act 11 reallocation of wastewater revenue deficiency amounts onto Aqua's water utility ratepayers is reproduced on line 9 of my Exhibit LA-1, Schedule A, page 1.

Q. Which OCA witness is addressing the amount from Aqua's Wastewater Base Operations to be allocated to its Water Base Operations?

A. OCA witness Jerome Mierzwa addresses that allocation.

Q. Have you incorporated an allocation of revenue requirement from Aqua's Wastewater Base Operations to its Water Base Operations in your calculation of Aqua's revenue requirement on Exhibit LA-1, Schedule A, page 2?

A. Yes. As shown on Exhibit LA-1, Schedule A, page 2 of 8, line 14, OCA witness Mierzwa's recommendation that 10 percent of the wastewater revenue deficiency amounts be allocated to Aqua's water base utility revenue requirement is reflected. .

Pursuant to that recommendation from Mr. Mierzwa, the adjusted revenue deficiency and excess amounts shown on Exhibit LA-1, Schedule A, page 2, incorporates an allocation of revenue requirement from Aqua's Wastewater Base Operations (inclusive of Base and Lower Makefield) to Aqua's Water Base Operations. Since East Whiteland Wastewater is excluded in the OCA's proposed revenue requirement, there is no revenue to shift. Please see the Direct Testimony of OCA witness Jerome Mierzwa for further discussion of OCA's proposed allocation

of revenue requirement amounts from Aqua's wastewater operations to its Water Base Operations.

Q. Has the Company proposed to allocate some of its calculated revenue requirement increase for the acquired Shenandoah Water utility to Water Base Operations?

A. Yes. As shown on Exhibit LA-1, Schedule A, page 1, line 8, this reproduces the Company's proposal to shift $1,465,438 of the Shenandoah Water utility revenue requirement to Water Base Operations. Aqua has presented this revenue requirement shift as a "cost of service allocation."

Q. Which OCA witness is addressing the allocation of the Shenandoah Water revenue requirement?

A. OCA witness Mierzwa's direct testimony provides the recommendation concerning this.

Q. How has Mr. Mierzwa's recommendation been reflected in the OCA's revenue requirement presentation?

A. Exhibit LA-1, Schedule A, page 2 of 8, lines 13, 18 and 19 reflect Mr. Mierzwa's recommendation to reduce the allocation from the acquired Shenandoah Water utility to Aqua's Water Base Operations proportionally. This results in a transfer of $1,081,839 of revenue requirement from Shenandoah Water into the Water Base revenue requirement, as shown on Schedule A, page 2, line 13. The adjusted

remaining revenue deficiency for Shenandoah Water is $803,054, which is a 43.9 percent increase over revenue at current rates for that utility.

Q. For which Aqua utilities are you addressing Aqua's revenue requirements?

A. I am addressing the revenue requirements requested by Aqua for its Pennsylvania water and wastewater operations.

Q. What is shown in Exhibit LA-1?

A. Exhibit LA-1 shows the OCA's accounting and revenue requirement summary schedules for Aqua's water and wastewater utility operations.

Q. What is shown in Exhibit LA-2?

A. Exhibit LA-2 shows the accounting and revenue requirement adjustment schedules for Aqua's water and wastewater utility operations. Exhibit LA-2 contains rate base and operating income adjustment schedules which present details for each adjustment that is recommended by me or other OCA witnesses.

Q. What is shown in Exhibit LA-3?

A. Exhibit LA-3 presents selected non-confidential documents referenced in my testimony and/or in Exhibits LA-1 and LA-2.

II. OVERALL FINANCIAL SUMMARY

Summary Schedules (Exhibit LA-1)

Q. What does Schedule A in Exhibit LA-1 show?

A. Exhibit LA-1 shows the development of the adjusted revenue requirement for Aqua's water and wastewater utility operations.

Q. What is shown on Exhibit LA-1, Schedule A, page 1?

A. Schedule A, page 1, reproduces in summary form the revenue increase amounts that Aqua is requesting in total (column A), for its water utilities (columns B and C), and for its wastewater utilities (columns D through F). As shown on Schedule A, page 1, column A, line 7, Aqua is requesting total base rate revenue increases of approximately $126.675 million based on a fully projected future test year ("FPFTY") ending December 31, 2025.

Schedule A, page 1, line 1, shows Aqua's proposed rate base in total (column A) and for each Aqua utility operation (columns B through F).

Line 2 shows the 7.90% rate of return that Aqua is requesting.

Line 3 shows the required net operating income amounts for each utility that Aqua is requesting.

Line 4 shows the achieved net operating income for the FPFTY that Aqua has proposed.

Line 5 shows the operating income deficiency for the FPFTY for each utility that Aqua has proposed.

Line 6 shows the gross revenue conversion factors for each utility that Aqua has proposed.

Line 7 shows the gross revenue deficiency amounts for each utility that Aqua has requested.

Q. What is shown on Exhibit LA-1, Schedule A, page 1, lines 8 through 10?

A. Exhibit LA-1, Schedule A, page 1, line 8, shows the cost of service allocation. Line 9 shows the Act 11 wastewater allocation. Line 10 shows the total proposed revenues in total (column A) and for each Aqua utility (columns B through F).

Q. What is shown on Exhibit LA-1, Schedule A, page 1, lines 11 and 12?

A. Exhibit LA-1, Schedule A, page 1, line 11, shows the amount of operating revenue at current rates in total (column A) and for each Aqua utility (columns B through F). Line 12 shows the percentage increase in base rate revenue that Aqua is requesting in total (column A) and for each Aqua utility (columns B through F).

Q. What is show on Exhibit LA-1, Schedule A, page 2?

A. Schedule A, page 2, shows the calculations of the revenue increase or decrease amounts that reflect the recommendations of OCA witnesses. The total revenue excess (combined water and wastewater utility results) is shown on Schedule A, page 2, line 7, in column A. The Aqua water utility revenue excess is shown on Schedule A, page 2, line 7, in column B. The revenue deficiencies for Shenandoah

Water and Aqua's wastewater utilities are shown in columns C through F, on Schedule A, page 2, line 7.

As shown on Exhibit LA-1, Schedule A, page 2, column A, line 7, my recommendations and the recommendations of other OCA witnesses produce an overall net revenue excess of approximately $9.0 million based on a fully projected future test year ("FPFTY") ending December 31, 2025.

Q. What revenue deficiency or excess do you recommend for Aqua's water utilities?

A. The water divisions have a net revenue sufficiency when accounting for both the main division and Shenandoah. The adjusted revenue sufficiency and deficiency results for Aqua's water utilities are shown on Exhibit LA-1, Schedule A, page 2, in columns B through C, on line 7, and are summarized below:

- Water Base Operations (column B): $28.1 million revenue *excess* (sufficiency)
- Shenandoah Water (column C): $1.9 million revenue deficiency

Q. What revenue deficiency or excess do you recommend for Aqua's wastewater utilities?

A. The adjusted revenue deficiency results for Aqua's wastewater utilities are shown on Exhibit LA-1, Schedule A, page 2, in columns D through F, on line 7, and are summarized below:

- Wastewater Base Operations (column D): $14.8 million revenue deficiency
- Lower Makefield Wastewater (column E): $2.3 million revenue deficiency
- East Whiteland Wastewater (column F): $0 revenue deficiency

Q. Is the OCA recommending a revenue increase for East Whiteland Wastewater?

A. No. I have removed East Whiteland from rate base and removed all expenses for East Whiteland. As explained in the Direct Testimony of OCA witness Hoover, although the acquisition of the East Whiteland Wastewater system by Aqua was approved by the Commission, that decision has been appealed. The Commonwealth Court reversed the Commission's decision, and the Supreme Court has granted allocatur to review the Commonwealth Court's decision (and it cannot be presumed that the Pennsylvania Supreme Court decision will reverse the Commonwealth Court decision and affirm the Commission's order approving the proposed acquisition). Thus, it is uncertain whether and when Aqua will ultimately have permission to retain this wastewater utility system. Until the uncertainties associated with the court cases related to this acquisition are resolved, Aqua should not be allowed to include East Whiteland in rate base or include expense costs or increase the rates for the East Whiteland Wastewater system. The remaining revenue requirement after OCA's adjustments for the East Whiteland Wastewater system, has therefore been removed on Exhibit LA-1, Schedule A, page 2.

Q. Do you discuss the criteria for whether an attempted utility system acquisition should be included in the acquiring utility's revenue requirement?

A. Yes. A discussion of criteria that OCA recommends be applied for addressing whether and when an attempted utility system acquisition should be included in the acquiring utility's revenue requirement is addressed in Section IV of my Direct Testimony and the criteria are also discussed in OCA witness Hoover's Direct Testimony.

Q. What is shown on Exhibit LA-1, Schedule A, page 3?

A. Schedule A, page 3, summarizes the differences between Aqua's request (as summarized on Schedule A, page 1) and OCA's adjusted results (as summarized on Schedule A, page 2). Schedule A, page 3, line 1, shows the differences in rate base between Aqua's request and OCA's adjusted results. Line 3 shows differences in required net operating income. Line 4 shows differences in adjusted net operating income. Line 5 shows differences in the amount of net operating income excess or deficiency. Line 7 shows differences in the revenue requirement excess or deficiency.

As shown on Schedule A, page 3, column A, line 7, the results of my recommendations and the recommendations of other OCA witnesses, reflect revenue requirement impacts that are approximately $135.7 million lower than Aqua has requested. In other words, the results of the adjustments recommended by me and other OCA witnesses produce base rate revenues for Aqua that are $135.7 million lower than the revenue increases proposed by Aqua.

Q. Have you presented a reconciliation of Aqua's proposed revenue increase with OCA's adjusted revenue excess or deficiency for each of Aqua's water and wastewater utility operations?

A. Yes. Schedule A, pages 4 through 8, present a reconciliation of the revenue requirement for Aqua's water base utility (page 4), Aqua's Shenandoah water utility (page 5) and for each of Aqua's wastewater utilities (pages 6 through 8), reflecting the approximate revenue requirement impact of the recommendations of OCA witnesses. The approximate revenue requirement impact of each adjustment is shown in column C of Schedule A, pages 4 through 8, for each utility.

Q. What is shown on Schedule A-1 of Exhibit LA-1?

A. Schedule A-1 presents the derivation of my recommended Gross Revenue Conversion Factor ("GRCF") for the Aqua water and wastewater utilities. The GRCF is used to derive the amount of revenue increase or (decrease) that is needed based upon a deficiency or (excess) in the utility's ongoing level net operating income. Any increase or decrease in net income granted in this proceeding will cause Aqua to incur additional taxes and uncollectible expenses. The GRCF "grosses up" the net operating income deficiency (sufficiency) for these items in order to derive a revenue requirement impact.

Q. Did Aqua calculate a GRCF for its water system in this proceeding?

A. Yes. In Exhibit 1-A, Aqua provided its recommended GRCF of 1.390726 for Water Base Operations and related calculations. Aqua's calculation of its GRCF is shown on Exhibit LA-1, Schedule A-1, page 1, in columns A and C.

Q. What GRCF do you recommend for Aqua's water utility?

A. Using the same data shown on Aqua Exhibit 1-A, Schedule A-1, page 1, I calculated my recommended GRCF, which is shown in Exhibit LA-1, Schedule A-1, page 1, Column D. I also recommend a GRCF of 1.390726 for Aqua's water utility. This GRCF incorporates the corporate federal income tax rate of 21 percent, which has applied for periods from January 1, 2018 forward.

Q. Did Aqua calculate a GRCF for its Wastewater Base Operations in this proceeding?

A. Yes. In Exhibit 1-B, Schedule A-3, Aqua provided its recommended GRCF of 1.399365 for Wastewater Base Operations and its related calculations. Aqua's calculation of its GRCF is shown on Exhibit LA-1, Schedule A-1, Columns A and C. In its filing, Aqua also shows the amount of revenue increase it is requesting and the components of that increase on Aqua Exhibit 1-C, Schedule A-1, page 1, in the "Adjustment" column that appears between the "Present Rates 12/31/25 Amount" and the "Proposed Rates Amount" columns.

Q. What GRCF did you recommend for Aqua's wastewater utilities?

A. Using the same data shown on Aqua Exhibits 1-C, 1-D and 1-E, Schedule A-1, page 1, I calculated my recommended GRCF for each Aqua wastewater utility operation, as shown in Exhibit LA-1, Schedule A-1, pages D through F, in column D on each page. I recommend a GRCF of 1.399365 for Aqua's wastewater utility operations. This wastewater utility GRCF incorporates the current corporate federal income tax rate of 21 percent, which has applied for periods from January 1, 2018 forward.

Q. What is shown on Schedule B of Exhibit LA-1?

A. Exhibit LA-1, Schedule B shows my recommended adjusted rate base for each Aqua utility. Page 1 shows the adjusted rate base for Aqua's water utility. Pages 2 through 7 show the adjusted rate base for each Aqua wastewater utility.

Q. What is shown on Schedule B.1 of Exhibit LA-1?

A. Exhibit LA-1, Schedule B.1, page 1, summarizes my recommended rate base adjustments for Water Base Operations. Pages 2 through 5 of Schedule B.1 summarize my recommended rate base adjustments for each Aqua water and wastewater utility. Schedules B-1 through B-2[1] which are contained in Exhibit LA-2, present the supporting calculations for each of my recommended adjustments to rate base.

[1] The contents page of Exhibit LA-2 indicates whether each adjustment pertains to Aqua's water utilities, its wastewater utilities, or both.

Q. What is shown on Schedule C of Exhibit LA-1?

A. Schedule C presents my recommended adjusted net operating income. Page 1 summarizes my recommended net operating income for Water Base Operations. Pages 2 through 5 summarize my recommended adjusted net operating income for each Aqua water and wastewater utility.

Q. What is shown on Schedule C.1 of Exhibit LA-1?

A. Schedule C.1 summarizes my recommended net operating income adjustments for each Aqua utility. Page B summarizes my recommended net operating income adjustments for the Water Base Operations. Pages C through F summarize my recommended net operating income adjustments for each Aqua water and wastewater utility. Schedule C.1 also presents the impact on income tax expense resulting from my recommended adjustments. Schedules C-1 through C-14[2], which are contained in Exhibit LA-2, present supporting calculations for the OCA's adjustments to net operating income that are addressed in my testimony.

Q. What is shown on Exhibit LA-1, Schedule D?

A. Schedule D presents OCA's recommended capital structure and overall rate of return based on the recommendations of OCA witness Aaron Rothschild.

[2] The contents page of Exhibit LA-2 indicates whether each adjustment pertains to Aqua's water utility, its wastewater utilities, or both.

Adjustment Schedules (Exhibit LA-2)

Q. What does Exhibit LA-2 show?

A. Exhibit LA-2 shows the adjustments to rate base and net operating income that I am recommending. The contents page of Exhibit LA-2 indicates whether each rate base and net operating income adjustment pertains to Aqua's water utility, wastewater utility operations, or both.

Q. What is shown on Exhibit LA-2 in Schedules B-1 through B-2?

A. Exhibit LA-2, Schedule B-1 through B-2[3] present the supporting calculations for each of the OCA adjustments to rate base.

Q. What is shown on Exhibit LA-2, Schedules C-1 through C-14?

A. Exhibit LA-2, Schedules C-1 through C-14[4] present supporting calculations for each of the OCA adjustments to net operating income.

III. FULLY PROJECTED FUTURE TEST YEAR

Q. What time period has Aqua used as the basis for determining its revenue requirements in this proceeding?

A. Aqua used the 12 months ending December 31, 2025, as the test period for determining its revenue requirements in this proceeding. This is referred to as the fully projected future test year ("FPFTY" or "rate year") approach. The use of a fully projected future test year is permitted pursuant to Act 11 of 2012 ("Act 11").

[3] There are gaps between these schedules as certain adjustments pertained only to Water Base Operations.
[4] There are gaps between these schedules as certain adjustments pertained only to Water Base Operations.

The December 31, 2025 period used as the FPFTY thus approximately corresponds with the rate effective year for the new utility rates that are being established in this Aqua rate case.

Q. How did Aqua apply Act 11 in its current rate case?

A. Aqua witness William Packer (AP Statement No. 1) states at page 8 of his Direct Testimony that:

> Exhibits 1-A and 1-B and 1-C through 1-E are being submitted in support of Aqua PA's proposed rate increase for water and Wastewater Base Operations, respectively. They present the Company's pro forma revenue, expense and rate base data based on HTY (year ended December 31, 2023), FTY (year ending December 31, 2024), and FPFTY (year ending December 31, 2025). Data for the HTY were obtained from the Company's books and records. For the FTY, revenues are based on the estimated number of customers served as of December 31, 2024. Correspondingly, for the FPFTY, revenues are based on the estimated number of customers served as of December 31, 2025. Operating expenses have been similarly adjusted to reflect FTY and FPFTY-end conditions. Aqua PA's claimed rate base includes its estimated net Utility Plant in Service at December 31, 2024 and December 31, 2025.

Q. Have you used the same FPFTY?

A. Yes. To compute the revenue requirement for Aqua's water and wastewater utilities I used the same FPFTY ending December 31, 2025.

IV. ACQUISITIONS INCLUDED IN AQUA PA'S BASE RATE CASE

Q. Has the Company presented separate revenue requirements for acquisitions in the current base rate case?

A. Yes. The Company presented separate revenue requirements for three acquisitions in the current base rate case. Specifically, as discussed on page 8 of the Direct Testimony of Company witness Packer, the Company is presenting separate revenue requirements in order to comply with the terms and conditions of the Commission's approvals of Aqua's acquisitions of certain water and wastewater systems that are being included for the first time in the current proceeding. Mr. Packer also states that under the terms of the Commission's approvals pursuant to Section 1329, the Company would submit separate cost of service studies for those systems in Aqua's next base rate case.

Q. What are the separate revenue requirements for the three acquisitions in the current base rate case?

A. The three acquisitions for which the Company is presenting separate revenue requirements in this proceeding are:

1. Borough of Shenandoah ("Shenandoah Water") – As discussed on page 27 of the Direct Testimony of Company witness Duerr, Aqua acquired the assets of Shenandoah Water on July 24, 2023. The Shenandoah Water system is comprised of approximately 3,000 customers in the Borough of Shenandoah and surrounding communities. The Company's revenue requirement for Shenandoah Water is presented as Exhibit 1-B.

2. Lower Makefield Township Wastewater ("Lower Makefield") - As discussed on page 23 of his Direct Testimony, Mr. Duerr states that Aqua acquired Lower Makefield on March 4, 2022. The Lower Makefield system is comprised of approximately 11,000 connections and is comprised of 113 miles of collection mains, 14 lift stations and the associated force mains. Mr. Duerr states that all of the Lake Makefield wastewater is conveyed to other adjacent utilities for treatment. The Company's revenue requirement for Lower Makefield is presented as Exhibit 1-D.

3. East Whiteland Township Wastewater ("East Whiteland") - As discussed on page 23 of his Direct Testimony, Mr. Duerr states that Aqua acquired East Whiteland on August 12, 2022. The East Whiteland system is comprised of approximately 3,850 connections (8,200 Equivalent Dwelling Units) and is comprised of 57 miles of collection mains, 12 lift stations and the associated force mains. Similar to Lower Makefield, Mr. Duerr states that all of the East Whiteland wastewater is conveyed to other adjacent utilities for treatment. The Company's revenue requirement for East Whiteland is presented as Exhibit 1-E.

The Company has included separately identified rate base claims for each of those three systems that it indicated have been acquired under § 1329 in its proposed revenue requirements based on its position that the utility plant is used and useful in the FPFTY. The Company has also included certain improvements for the Shenandoah Water system and the Lower Makefield and East Whiteland Wastewater systems in its proposed rate base amounts for those systems.

Q. You stated earlier in your testimony that although the East Whiteland wastewater system has been approved by the Commission, you have removed the revenue requirement for East Whiteland. Please explain.

A. As discussed in Section II of my testimony, although the acquisition of the East Whiteland Wastewater system was approved by the Commission, that decision was appealed by the OCA. The Commonwealth Court reversed the Commission's decision. The Commission and Aqua appealed the Commonwealth Court's Order to the Pennsylvania Supreme Court. The Pennsylvania Supreme Court has decided to hear the appeal, and the appeal is currently pending before the Pennsylvania Supreme Court, and as of the time I write this testimony, the case has not been briefed before the Supreme Court. The outcome of that appeal is currently unknown. Consequently, it is uncertain whether and when Aqua will ultimately acquire this wastewater utility. Until the uncertainties associated with the appeal related to this acquisition are resolved, Aqua should not be allowed to increase the rates for the East Whiteland Wastewater system. I have therefore removed the remaining revenue requirement after OCA's adjustments for the East Whiteland Wastewater system, as shown on Exhibit LA-1, Schedule A, page 2.

Q. In your opinion, what criteria should be used to determine whether an acquisition should be included in the FPFTY in this case?

A. In my opinion, the criteria that should be used to determine whether a proposed acquisition is reasonably likely to occur by the end of the FPFTY and thus can be

included in the FPFTY for ratemaking purposes are the following two criteria **prior to or at the close of the record in the base rate case**:

1. there is a Commission **final** order approving the acquisition (*i.e.*, the appeal period has run, and no appeals filed) in the acquisition proceeding docket; **AND**
2. there is a lack of uncertainty as to whether the utility will close the acquisition for reasons other than Commission approval (*i.e.*, it appears reasonably certain that the utility will close the acquisition because there is no other apparent regulatory, legal, or business risk that would prevent the transaction from closing).

Q. Why do you select these criteria for inclusion of an acquisition in the FPFTY for ratemaking purposes?

A. The PUC is obligated to approve only just and reasonable rates. Aqua PA's aspiration that the East Whiteland system be included is based on its belief that no other party will take legal steps to protect its interests to challenge Aqua's attempted acquisitions of that system. Given that the OCA prevailed on appeal before the Commonwealth Court and the ongoing uncertainty of the disposition of the appeal before the Supreme Court, in my view, that is not a reasonable belief. If customers rates are set that reflect a not yet final and acquired utility system in its revenue requirement that is later not authorized under law and therefore not eligible to be included in the utility's revenue requirement for ratemaking purposes, those rates would be unjust and unreasonable. Ensuring that there is a high degree of certainty

as to the utility acquisitions that are included in the FPFTY will avoid the aggravation and public confusion of the Commission having to later enter an order to adjust the utility's rates to remove the unauthorized transaction from the utility's revenue requirement and to issue refunds to customers for previously amounts collected under unjust and unreasonable rates. The two criteria I offer in my testimony for evaluating the certainty level of a utility acquisition are objective and reasonable and clear. Additionally, Aqua PA controls the timing of its rate filings. It could have waited for more certainty on the East Whiteland acquisition to include it in rates and, of course, the fact that it is not included in rates set in this proceeding does not negate that it can be included in rates in any future filing, if it is more certain.

Q. What if the current information that you have about the status of the proposed East Whiteland transaction changes during the course of this case and before the close of the record in this proceeding?

A. It is possible that the information about the proposed East Whiteland transaction could change and that this proposed transaction could meet the criteria I have outlined above before the close of the record in this proceeding. To the extent the uncertainties about the proposed East Whiteland transaction are sufficiently resolved before the close of the record in this proceeding, *i.e.*, the appeals concerning the Commission's Order become resolved, then I reserve the right to change my recommended revenue requirement to include the proposed East Whiteland transaction as it is more reasonably certain to be final in the FPFTY along with my

recommended adjustments relating to the Company's claimed rate base and net operating income amounts for that system. Thus, out of an abundance of caution, in the event that there is a change in status to the East Whiteland transaction, I present my recommended adjustments to the revenue requirement for East Whiteland Wastewater Operations. To be clear, my current recommendation is that this proposed acquisition should not be included in Aqua's ratemaking rate base or the calculation of revenue requirement, but the adjustments are presented only in the alternative so that if the acquisition of the East Whiteland system becomes more reasonably likely, that the necessary information is available to calculate an adjusted revenue requirement.

Q. Why do you address your recommended adjustments to the revenue requirement for East Whiteland Wastewater?

A. I present my alternative recommendation for the East Whiteland Wastewater revenue requirement because, as noted above, the Company in its direct case presented a separate revenue requirement for this system.

V. RATE BASE

Q. Please summarize your adjustments to Aqua's water utility rate base.

A. As shown in Aqua's Exhibit 1-A, Schedule G-1, the Company proposes a FPFTY rate base of approximately $4.318 billion for its Water Base Operations. As shown on Exhibit LA-1, Schedule B, page 1, I recommend FPFTY rate base of approximately $4.310 billion for Aqua's Water Base Operations, which is about $8.559 million lower than the Company's proposal.

Q. Please summarize your adjustments to Aqua's Shenandoah water utility rate base.

A. As shown in Aqua's Exhibit 1-A, Schedule G-1, the Company proposes a FPFTY rate base of approximately $16.013 million for its Shenandoah Water Operation. As shown on Exhibit LA-1, Schedule B, page 1, I recommend FPFTY rate base of approximately $16.133 million for Aqua's Shenandoah Operations, which is $119,416 higher than the Company's proposal.

Q. Please summarize your adjustments to Aqua's wastewater base utility rate base.

A. As shown in Aqua's Exhibits 1-B, Schedule G-1, the Company proposes a FPFTY rate base of approximately $392.798 million for its Wastewater Base Operations. As shown on Exhibit LA-1, Schedule B, page 3, I recommend a FPFTY rate base of $395.997 million for Aqua's Wastewater Base Operations, which is about $3.198 million higher than the Company's proposal.

Q. Have you also presented calculations of the rate base for each of the other Aqua wastewater utilities that Aqua has included in its requested revenue requirement which were acquired by Aqua pursuant to the provisions of §1329?

A. Yes. On Exhibit LA-1, Schedule B, pages 4 and 5, I present calculations of the adjusted rate base for each of the other wastewater utilities that Aqua has included in its requested revenue requirement which were acquired by Aqua pursuant to the provisions of 66 Pa. C.S. §1329. While I have excluded the East Whiteland system from rate base as can be seen in Exhibit LA-1, Schedule A, page 3, I include East

Whiteland in Schedule B only in the event that it can be included per my criteria as discussed above.

Q. Would you please discuss each of your recommended adjustments to rate base?

A. Yes, each of my recommended adjustments to rate base is discussed below.

<u>Schedule B-1, Accumulated Depreciation – Depreciable Plant and Contributions in Aid of Construction (Water and Wastewater)</u>

Q. Please explain the adjustment on Exhibit LA-2, Schedule B-1.

A. Yes. The amounts shown on Exhibit LA-2, Schedule B-1, are adjustments to the Company's proposed accumulated depreciation reserve amounts, which were calculated by OCA witness Brian Andrews. Mr. Andrews is recommending new depreciation rates that differ from those proposed by Aqua in the Company's depreciation study. As a result of his recommended depreciation rates that utilize the Average Life Group (ALG) procedure, Mr. Andrews recommends reductions in FPFTY depreciation expense (see additional discussion below) and lower amounts of FPFTY accumulated depreciation.

Q. What is the impact of the FPFTY accumulated depreciation amounts that are being recommended by OCA witness Andrews?

A. As summarized on Exhibit LA-2, Schedule B-1, page 1, lower accumulated depreciation balance in the 2025 FPFTY has the flow through effect of increasing the rate base value in 2025 FPFTY. Aqua's proposed accumulated depreciation for Water Base Operations is reduced by $24.075 million which increases rate base

value by the same amount (detail shown on Schedule B-1, page 2), Shenandoah Water is reduced by $119,416 (detail shown on Schedule B-1, page 3), Wastewater Base Operations is reduced by $4.743 million (detail shown on Schedule B-1, page 4), Lower Makefield Wastewater is reduced by $504,211 (detail shown on Schedule B-1, page 5), and East Whiteland Wastewater is reduced by $580,082 (detail shown on Schedule B-1, page 6).

Q. Is there a related adjustment for Contributions in Aid of Construction ("CIAC")?

A. Yes. As a result of his recommended depreciation rates, Mr. Andrews recommended higher amounts of CIAC for the FPFTY; thus, reducing rate base values in the 2025 FPFTY. As summarized on Exhibit LA-2, Schedule B-1, page 1, Aqua's proposed CIAC for Water Base Operations is increased by $1.221 million, which reduces rate base by the same amount (detail shown on Schedule B-1, page 2), Wastewater Base Operations is increased by $231,321, which reduces rate base by the same amount (detail shown on Schedule B-1, page 4), Lower Makefield Wastewater is increased by $404, which reduces rate base by the same amount (detail shown on Schedule B-1, page 5), and East Whiteland Wastewater is increased by $4,612 (detail shown on Schedule B-1, page 6). There is no adjustment to CIAC for Shenandoah Water.

Q. Does it make sense that based on Witness Andrews' recommended change in depreciation rates that both depreciation expense and accumulated depreciation balance reflect this change?

A. Yes. Both annual depreciation expense and accrued or accumulated depreciation should be calculated on a reasonably consistent basis.[5]

Schedule B-2, Pennsylvania Net Operating Loss Deferred Tax Asset (Water and Wastewater)

Q. Please explain the adjustment on Exhibit LA-2, Schedule B-2.

A. Aqua has attempted to increase rate base by $32.728 million for a deferred tax asset related to a Pennsylvania net operating loss carryforward. As far as we can tell, this item was never included in Aqua PA rate base in prior cases. Moreover, there is no PA state income tax normalization requirement that would require this item to be included in utility rate base. Therefore, as shown on Exhibit LA-2, Schedule B-2, this item is being removed from the Company's proposed rate base. This reduces Aqua PA's proposed Water Base rate base by $31.414 million and reduces the Company's proposed Wastewater Base rate base by $1.314 million. The dollar amounts are from the Company's response to OCA-XV-25.

[5] *Pa. Power & Light Co. v. Pa. Pub. Util. Com.*, 311 A.2d 151, 158 (Pa. Cmwlth. 1973) (*Pa. Power*).

Q. Was a similar item added to rate base in Aqua PA's rate base in the Company's last rate case?

A. No. The Company's response to OCA-XV-26 indicates that the PA NOL exited during the Company's last rate case and states that the Company inadvertently did not include it in its proposed rate base in its last base rate case.

Q. Has the Company stated that it will discontinue the normalization of state income tax expense for the PA NOL in 2025?

A Yes. Aqua PA witness Fischer's Direct Testimony at page 12, lines 12-14 states that: "the Company will discontinue the normalization of state income taxes for the PA NOL in 2024 ..."

Q. Does the Company's response to OCA-XV-28 indicate that it recorded equal amounts of a regulatory asset and a credit in the same amount related to its financial accounting for PA NOL amounts?

A. Yes. The Company's response to OCA-XV-28(d) indicates that it recorded equal amounts of a regulatory asset and a credit in the same amount related to its financial accounting for PL NOL amounts as of December 31, 2023.

Q. What is the Company's reason for attempting to include the PA NOL deferred tax asset in rate base in the current case?

A. The Company's response to OCA-XV-28(a) states that the Company normalized the PA NOL and that: "Under the normalization method of accounting, customers

receive the benefit of the NOL creation through the deferred tax expense despite the Company not actually monetizing the benefit of the NOL, hence the reason for inclusion of the NOL DTA in rate base."

Q. Do you agree that this item should be included in rate base?

A. No. The Company has not identified any requirement to normalize any PA state NOL deferred tax asset by included it in rate base. The Company's response to OCA-XV-27 states: "The Company is not aware of any PA state income tax normalization requirement addressing the inclusion of a PA NOL deferred tax asset in rate base." Nor am I aware of any such requirement. Internal Revenue Code normalization requirements apply to federal income taxes, not to PA state income taxes. There is no requirement for this item to be included in rate base and it has not been included in rate base in prior Aqua PA rate cases. Because of such reasons, no rate base addition for this item should be permitted in the current Aqua PA rate case.

<u>Cash Working Capital</u>

Q. Are there concerns about the large increase cash working capital that Aqua PA has requested be included in rate base in the current case?

A. Yes. As summarized in the table below, Aqua PA is proposing in the current rate case to increase its rate base for the cash working capital component by $6.131 million or 389 percent:

Water Base		Aqua Proposed Cash Working Capital			
Line No.	Description	2021 Rate Case Amount	2024 Rate Case Amount	Difference ($)	Difference (%)
		(A)	(B)	(C) = (B) - (A)	(D) = (C) / (A)
1	Cash Working Capital - Expenses	$ 5,976,000	$ 11,017,000	$ 5,041,000	84.35%
2	Cash Working Capital - Taxes	$ 4,315,000	$ 5,846,000	$ 1,531,000	35.48%
3	Cash Working Capital - Interest	$ (8,715,000)	$ (9,156,000)	$ (441,000)	5.06%
4	Total Cash Working Capital Requirement	$ 1,576,000	$ 7,707,000	$ 6,131,000	389.02%
Notes and Source:					
Col. A: Exhibit 1-A, Schedule G-5 from Aqua's 2021 Rate Case, Docket No. R-2021-3027385					
Col. B: Exhibit 1-A, Schedule G-5 from Aqua's Current Rate Case					

There are similar concerns about the large increase in the Company's proposed cash working capital for the wastewater base rate base, as summarized in the following table:

Wastewater Base		Aqua Proposed Cash Working Capital			
Line No.	Description	2021 Rate Case Amount	2024 Rate Case Amount	Difference ($)	Difference (%)
		(A)	(B)	(C) = (B) - (A)	(D) = (C) / (A)
1	Cash Working Capital - Expenses	$ 898,000	$ 1,707,000	$ 809,000	90.09%
2	Cash Working Capital - Taxes	$ 68,000	$ 332,000	$ 264,000	388.24%
3	Cash Working Capital - Interest	$ (412,000)	$ (792,000)	$ (380,000)	92.23%
4	Total Cash Working Capital Requirement	$ 554,000	$ 1,247,000	$ 693,000	125.09%
Notes and Source:					
Col. A: Exhibit 1-B, Schedule G-5 from Aqua's 2021 Rate Case, Docket No. R-2021-3027386					
Col. B: Exhibit 1-C, Schedule G-5 from Aqua's Current Rate Case					

Q. Have you made an adjustment to the Company's proposed cash working capital rate base amounts at this time?

A. Not at this time. As noted above, there are concerns about the very large increases to the rate base amounts being proposed by Aqua for cash working capital in the current case, particularly in comparison with amounts from the last Aqua PA rate case. It is believed that adjustments to reduce the amount of cash working capital to be included in Aqua PA's water and wastewater utility rate base will be needed; however, those have not yet been quantified.

VI. OPERATING INCOME

Q. What does Aqua show for its water base operating income?

A. On Aqua's Exhibit 1-A, page 1, line 22, in the Present Rates "12/31/25 Amount" column, the Company shows utility operating income at current rates of $277.8 million for Water Base Operations. I have summarized Aqua's proposed net operating income for Water Base Operations on Exhibit LA-1, Schedule C, page 1.

Q. What does Aqua show for its wastewater base operating income?

A. As I have summarized on Exhibit LA-1, Schedule C, page 2, in column A, Aqua's proposed utility operating income at current rates for the Wastewater Base Operations is $12.468 million.

Q. Are you recommending any adjustments that impact net operating income for Aqua's water utility?

A. Yes. As shown on Exhibit LA-1, Schedule C, page 1, column B, I am recommending adjustments that increase the Company's net operating income for Water Base Operations by approximately $21.971 million.

Q. Are you recommending any adjustments that impact net operating income for Aqua's wastewater base utility?

A. Yes. As shown on Exhibit LA-1, Schedule C, page 3, column B, I am recommending adjustments that increase the Company's net operating income for Wastewater Base Operations by approximately $2.499 million.

Q. On which Schedules in Exhibit LA-2 do you present the recommended adjustments to net operating income?

A. The recommended adjustments to net operating income for the Company's Water and Wastewater Base Operations are presented below and on Schedules C-1 through C-14 of Exhibit LA-2. Each adjustment to net operating income is also summarized, for each utility, on Exhibit LA-1, Schedule C.1, which has eight pages, one summary page and one page showing the operating income adjustments for each Aqua utility.

Schedule C-1, Depreciation Expense – New Depreciation Rates (Water and Wastewater)

Q. Did OCA calculate an adjustment to the Company's proposed depreciation expense to reflect the new depreciation rates that OCA is recommending?

A. Yes. The amounts shown on Exhibit LA-2, Schedule C-1, are adjustments to the Company's proposed depreciation expense amounts, which were calculated based on the depreciation rates supplied by OCA witness Brian Andrews. Mr. Andrews is recommending new depreciation rates based on the ALG procedure that differ from those proposed by Aqua in the Company's depreciation study.

Q. What is the impact of using the new depreciation rates that are being recommended by OCA witness Andrews?

A. As summarized on Exhibit LA-2, Schedule C-1, page 1, Aqua's proposed depreciation expense for Water Base Operations is reduced by 11.712 million (detail shown on Schedule C-1, page 2), Shenandoah Water is reduced by $51,386 (detail shown on Schedule C-1, page 3), Wastewater Base Operations is reduced by $2.295

million (detail shown on Schedule C-1, page 4), Lower Makefield Wastewater is reduced by $215,062 (detail shown on Schedule C-1, page 5), and East Whiteland Wastewater is reduced by $269,692 (detail shown on Schedule C-1, page 6). I am including East Whiteland only in the event that it is included in rate base based on my criteria outlined in this testimony.

Schedule C-2, General Inflation (Water and Wastewater)

Q. Please explain the adjustment to remove the impact of general inflation that Aqua included in deriving its FPFTY expense.

A. In Aqua's application, on Schedule C-4.1 of Aqua Exhibits 1-A through 1-E, Aqua included two years (i.e., the 12 months ending December 31, 2024 and the 12 months ending December 31, 2025) for general blanket inflation on expenses for which Aqua did not identify specific changes. My adjustment on Exhibit LA-2, Schedule C-2 removes Aqua's adjustment for estimated blanket inflation from FPFTY expenses. As shown on Schedule C-2, FPFTY expenses are reduced by $1.298 million for Water Base Operations, $27,857 for Shenandoah, $377,538 for Wastewater Base Operations, $22,660 for Lower Makefield Wastewater, and $20,649 for East Whiteland Wastewater to remove the impact of blanket general inflation.

Q. Did the Commission remove adjustments for generalized inflation in Aqua's last rate case?

A. Yes. The Commission removed adjustments for generalized inflation in Aqua's last rate case. Specifically, on page 117 of its Opinion and Order dated May 12, 2022 in Docket Nos. R-2021-3027385 and R-2021-3027386, the Commission stated:

> We agree with the ALJ that Aqua has not justified the use of a general price level adjustment to expenses "not specifically adjusted in this case or not subject to inflation." R.D. at 70. We also agree that allowing Aqua to apply a general inflation adjustment to a block of expenses could incentivize less accurate tracking of expenses and a less rigorous approach to controlling costs for those expenses. The application of a General Price Adjustment to 22% of expenses is neither targeted nor specific. We find the ALJ's recommendation to deny Aqua's use of a General Price Adjustment to be reasonable. Therefore, we shall adopt the ALJ's recommendation to remove the Company's entire claimed amount of $864,335 for Water Base Operations and $205,560 for Wastewater Base Operations.

Q. Has the Commission removed utility adjustments for generalized inflation in other cases?

A. Yes. The Commission disallowed blanket generalized inflation adjustments in Pa PUC v. PGW, 2007 Pa. PUC LEXIS 45 (2007), Pa. PUC v. Philadelphia Electric Co., 58 Pa. PUC 7 (1983), and Pa. PUC v. Philadelphia Electric Co., 1990 Pa. PUC LEXIS 155 (1990). In those cases, the Commission found that using a blanket general inflation factor is too speculative in nature. The Commission did allow an inflation adjustment in a recent case (Pa. PUC v. PECO Energy Co. – Gas Division, R-2020-3018929); however, that inflation adjustment used a more targeted approach

and was not a blanket inflation adjustment like the adjustment that Aqua has proposed in this case.

Schedule C-3, Revenue – Bill Discount Credits (Water and Wastewater)

Q. Please explain the adjustment on Exhibit LA-2, Schedule C-3 as it relates to bill discount credits?

A. This adjustment related to bill discount credits is addressed in OCA witness Colton's testimony. As shown on Exhibit LA-2, Schedule C-3, reflecting the impact of Mr. Colton's recommendation related to bill discount credits increases pre-tax operating revenue by $2.456 million for Water Base Operations and by $652,627 for an overall increase of $2.809 million.

Schedule C-4, Uncollectibles Expense – Arrearage Forgiveness (Water and Wastewater)

Q. Please Explain the adjustment on Exhibit LA-2, Schedule C-4 as it relates to arrearage forgiveness .

A. This adjustment to uncollectibles expense for arrearage forgiveness is addressed in OCA witness Colton's testimony. As shown on Exhibit LA-2, Schedule C-4, reflecting the impact of Mr. Colton's recommendations related to arrearage forgiveness for uncollectibles decreases pre-tax operating expense by $812,620 for Water Base Operations and by $89,774 for Wastewater Base Operations for an overall decrease of $902,394.

Schedule C-5, Legal Expenses for Appeals of Commission Orders (Water and Wastewater)

Q. Please explain the adjustment on Exhibit LA-2, Schedule C-5.

A. This adjustment removes legal expense included in the 2025 FPFTY related to appeals of Commission Orders in §1329 acquisition cases. Aqua's response and supplemental response to OCA-IX-19 indicates that Aqua included in the 2025 FPFTY legal expense related to appeals of Commission decisions on §1329 acquisition cases involving Twin Lakes Water, DELCORA sewer and East Whiteland sewer. Aqua's response to OCA-IX-19 lists legal expense incurred by Aqua in 2022 and 2023 related to appeals of Commission decisions on those §1329 acquisition cases. Ratepayers should not be required to pay for Aqua's legal expenses related to appeals of Commission orders in acquisition cases. Aqua's supplemental response to OCA-IX-19 indicates that Aqua based its requested FPFTY expense on a three year average, including those amounts from 2022 and 2023. Consequently, as shown on Exhibit LA-2, Schedule C-2, I am removing one-third of those 2022 and 2023 amounts in order to remove the amount for such legal expense that Aqua proposed to be included in the 2025 FPFTY. This reduces Aqua's proposed expense for the Water Base by $66,685, and reduces expense for the Wastewater Base by $18,206, for a total adjustment of $84,890.

Schedule C-6, Water Conservation Kits (Water)

Q. Please Explain your adjustment on Exhibit LA-2, Schedule C-6 as it relates to water conservation kits.

A. This adjustment for water conservation kits is addressed in OCA witness Colton's testimony. As shown on Exhibit LA-2, Schedule C-6, reflecting the impact of Mr.

Colton's recommendation related to water conservation kits increases pre-tax operating expense by $110,000 for Water Base Operations.

Schedule C-7, Payroll Expense – Seasonal Positions (Water)

Q. Does the Company's proposed FPFTY payroll expense include seasonal positions?

A. Yes. Aqua PA's highly confidential Exhibit 2-For Filing (payroll expense workpapers) lists the work force and related costs that the Company used to develop its proposed 2025 FPFTY expenses. The Company's proposed FPFTY payroll expense include 35 non-union seasonal positions. Of the 35 non-union seasonal positions, 25 such positions were vacant as of May 31, 2024.[6]

Q. Do the 25 vacant seasonal positions for which Aqua included payroll cost represent actual or authorized employees?

A. The 25 vacant seasonal positions represent authorized positions rather than actual employees. Specifically, the response to OCA-IX-1 states that the 25 open seasonal positions will be hired during the summer season and were not hired as of May 31, 2024.

Q. Has OCA requested an update with regard to the status of the 25 vacant non-union seasonal positions?

A. Yes. OCA has requested that the Company state how many of the 25 vacant seasonal positions have been filled as of (1) June 30, 2024, and (2) July 31, 2024.

[6] See the response to OCA-IX-1.

However, the response to OCA-XXIII-3 was not received as of the date of my Direct Testimony.

Q. What do you recommend as it relates to the 25 open seasonal positions included in the Company's proposed FPFTY gross payroll expense?

A. Based on the information received to date, I recommend that the cost for the 25 vacant seasonal positions as of May 31, 2024 be removed from the Company's proposed FPFTY gross payroll expense. Ratepayers should not be required to pay for labor cost for unfilled positions. My recommendation could be modified in my Surrebuttal Testimony based on the updated information that has been requested from the Company in OCA-XXIII-3.

Q. What adjustment are you recommending for payroll expense for the 25 vacant seasonal positions?

A. As shown on Exhibit LA-2, Schedule C-7, my adjustment to remove the estimated cost for the 25 open non-union seasonal positions decreases Aqua's requested payroll expense by $201,500 for Water Base Operations.

`Q. Is there a related adjustment to payroll tax expense?

A. Yes. As discussed below pursuant to Exhibit LA-2, Schedule C-9, there is a related adjustment to payroll tax expense.

Schedule C-8, Payroll Expense – Vacancies (Water and Wastewater)

Q. Did the Company make an adjustment for payroll expense?

A. Yes. As discussed above and on pages 4-7 of the Direct Testimony of Company witness Manning, the Company's filing includes an adjustment for payroll expense, which includes the salaries and wages associated with Aqua's present complement of authorized positions, which includes a number of positions that are not filled. Specifically, for non-union employees, the Company started with actual wage rates as of April 1, 2021 and annualized payroll expense using those rates. In addition, for the FPFTY, the Company reflected an anticipated wage increase for all employees and annualized payroll expense using those rates as well. These adjustments include short-term incentive compensation for eligible employees for filled and not currently filled positions.

For union employees, the Company's payroll expense was annualized based on the pay rates included in the collective bargaining agreements in place for each of Aqua's seven unions.

The non-union and union FPFTY gross payroll amounts were then reduced by the capitalized and non-operating labor reflected in the FPFTY. Finally, on page 7 of his testimony, Mr. Manning stated that the gross payroll amounts reflect a reasonable vacancy adjustment that is in line with the Company's actual experience.

Q. What vacancy rate did the Company use in its calculation of gross payroll for Water Base and Wastewater Base Operations?

A. It is unclear what, if any, vacancy rate the Company used in its calculation of gross payroll for Water Base and Wastewater Base Operations. Specifically, upon

reviewing the Company's electronic version of highly confidential Exhibit 2-For Filing (i.e., Aqua's payroll expense workpapers), there is no explicit vacancy rate referenced on any of the tabs in that Company Excel file. In addition, other than the summing of columns and flowing amounts from one tab to another, all of the data in the Company's payroll workpapers is hard-coded with no formulas showing how the amounts were derived.

Q. Has OCA requested that Aqua identify where its claimed vacancy rate is reflected in its highly confidential payroll workpapers?

A. Yes. OCA has requested that Aqua identify where its claimed vacancy rate is reflected in its highly confidential payroll workpapers and to show how it was applied to the Company's proposed FPFTY payroll expense in data request OCA-XXIII-1. However, the response to OCA-XXIII-1 has not been received as of the date of my Direct Testimony.

Q. Using the available information, have you calculated a vacancy rate?

A. Yes, as discussed below, I have calculated vacancy rates to apply to gross payroll for Water Base Operations and Wastewater Base Operations.

Q. Did Aqua provide an update to the level of vacant positions since the time of its initial filing?

A. Yes. Aqua has provided an update to the level of vacant positions since the time of its initial filing. Specifically, in its response to OCA-IX-1, the Company identified

57 vacant positions as of May 31, 2024. As discussed in the preceding section of my testimony of the 57 vacant positions as of May 31, 2024, 25 such vacant positions relate to seasonal positions that I removed on Schedule C-7. Using the vacant position information provided in the response to OCA-IX-1 as well as the payroll information shown on highly confidential Exhibit 2-For Filing, I calculated a vacancy rate of 4.57 percent for Water Base Operations and a vacancy rate of 4.69 percent for Wastewater Base Operations.

Q. Did you apply the 4.57 percent vacancy rate to the Company's proposed FPFTY gross payroll for non-union seasonal employees related to Water Base Operations?

A. No, I did not apply the 4.57 percent vacancy rate to the Company's proposed FPFTY gross payroll for non-union seasonal employees related to Water Base Operations.

Q. Does your recommended vacancy rate factor in the 25 open seasonal positions discussed in the preceding section of your testimony?

A. No. This vacancy rate for full time positions is exclusive of the 25 unfilled seasonal positions, the cost of which has been separately adjusted for, as discussed in the preceding section of my testimony.

Q. Please explain the adjustment to payroll expense as it relates to the vacancy rate for unfilled full-time positions.

A. I applied the 4.57 percent vacancy rate to the Company's FPFTY gross payroll amounts for Water Base Operations and the 4.69 percent vacancy rate to FPFTY gross payroll for Wastewater Base Operations amounts for union and non-union employees and also reduced such amounts for capitalized and non-operating labor.

As shown on Exhibit LA-2, Schedule C-8, this adjustment decreases payroll expense by $1.760 million for non-union and union employees in the Company's Water Base Operations and by $167,998 for non-union and union employees in the Company's Wastewater Base Operations.

Q. Will you continue to review additional information for Aqua PA's work force as additional responses to OCA discovery concerning this are received from Aqua?

A. Yes. I will continue to review additional information including Aqua's response to OCA-XXIII-1.

`Q. Is there a related adjustment to payroll tax expense?

A. Yes. As discussed below pursuant to Exhibit LA-2, Schedule C-9, there is a related adjustment to payroll tax expense.

Schedule C-9, Payroll Tax Expense (Water and Wastewater)

Q. Please explain the adjustment to Aqua's payroll tax expense?

A. This adjustment to Aqua's payroll tax expense is made in conjunction with the adjustments that I am recommending related to (1) removing 25 vacant non-union seasonal employees, and (2) the vacancy rate used for payroll expense from the FPFTY cost of service. As shown on Exhibit LA-2, Schedule C-9, I have reduced Aqua's payroll tax expense by $150,072 for Water Base Operations and by $12,852 for Wastewater Base Operations for an overall reduction of $162,924.

Schedule C-10, 401k Expense (Water)

Q. Please explain the adjustment to 401K expense.

A. This adjustment is related to applying a vacancy rate for the projected FPFTY 2025 work force as shown on Schedule C-8. Specifically, on Exhibit LA-2, Schedule C-10, I reduced the Company's proposed FPFTY 401K expense for Water Base Operations by applying the 4.57 percent vacancy rate shown on Schedule C-8. I then applied the Company's water capitalization rate percentage to derive the amount of adjustment to 401K expense charged to Water Base operating expenses. As shown on Exhibit LA-2, Schedule C-10, my adjustment reduces FPFTY 401k expense by $136,152 for Water Base Operations. There is no adjustment for this expense for Aqua PA's Wastewater Base Operations.

Schedule C-11, Group Insurance Expense (Water and Wastewater)

Q. Please explain the adjustment to employee group insurance expense for Aqua's Water Base and Wastewater Base Operations?

A. As discussed on page 13 of his Direct Testimony, Company witness Packer states that Aqua PA provides healthcare coverage to all of its full-time employees and that the Company's proposed adjustment to group insurance expense utilizes the coverage level associated with (1) Aqua PA's present complement of authorized positions multiplied by the contract prices, (2) less employee co-pays, (3) a vacancy credit, and (4) an adjustment for the portion of group insurance expense that is capitalized.

Q. What vacancy rate did the Company use in its calculation of group insurance expense for Water Base and Wastewater Base Operations?

A. Similar to Aqua PA's proposed adjustment to FPFTY payroll expense, it is unclear what, if any, vacancy rate the Company used in its calculation of group insurance expense for Water Base and Wastewater Base Operations.

Q. Will you review additional information on Aqua's work force vacancies as such information becomes available?

A. Yes. OCA has requested that Aqua identify where its claimed vacancy rate is reflected in Aqua's highly confidential Exhibit 2-For Filing[7] and to show how it was

[7] These workpapers also include Aqua's calculations for FPFTY group insurance expense.

applied in data request OCA-XXIII-1. I will review Aqua's response to OCA-XXIII-1 when it is received.

Q. What vacancy rate did you apply for Aqua's group insurance expense?

A. As discussed previously, I am recommending a 4.57 percent vacancy adjustment to payroll expense for Water Base Operations. This same vacancy rate should be used in the calculations of the FPFTY employee group insurance for Water Base Operations.

As shown on Exhibit LA-2, Schedule C-11, line 6, this adjustment decreases Aqua's proposed employee group insurance expense for Water Base Operations by $289,226.

Q. Did Aqua propose a similar adjustment to employee group insurance for its Wastewater Base Operations?

A. No. Schedule C-8.1 of Exhibit 1-C Wastewater Base reflects the amount of $2,114,321 million for the FPFTY, which is described by Aqua as "wastewater intracompany benefits."

Q. If Aqua did not propose a similar adjustment to employee group insurance for Wastewater Base Operations, why are you including the discussion of intracompany wastewater benefits in this section of your testimony?

A. I am including the discussion of the intracompany wastewater benefits in this section of my testimony to be consistent with how Aqua presented its proposed adjustment

for this item in its filing. Specifically, the Company's proposed adjustment for the intracompany wastewater benefits in Exhibit 1-C Wastewater Base is presented on Schedule C-8.1, which is the same schedule used by Aqua in its employee group insurance adjustment as shown on Exhibit 1-A for Water Base Operations.

Q. How did the Company calculate the wastewater intracompany benefits amount of $2,114,321?

A. The Company's calculation of the wastewater intracompany benefits is shown in the table below:

Description	Amount	Reference
Expensed Non-Union Payroll Expense	$ 1,720,692	Exhibit 1-C WW Base, Sch. C-4.5
Expensed Union Payroll Expense	$ 1,803,177	Exhibit 1-C WW Base, Sch. C-4.5
Total Expensed Payroll Expense for Wastewater Base Operations	$ 3,523,869	
Intracompany Benefits Rate	60%	Exhibit 1-C WW Base
Wastewater Base Intracompany Benefit	$ 2,114,321	Exhibit 1-C WW Base, Sch. C-8.1

Q. Are you proposing an adjustment to the Company's wastewater intracompany benefits calculation?

A. Yes, I am proposing an adjustment to the Company's wastewater intracompany benefits calculation. Specifically, as discussed above with respect to the adjustment for water and wastewater utility payroll expense presented on Exhibit LA-2, Schedule C-8, I applied a vacancy rate of 4.69 percent to derive the Company's FPFTY payroll expense for Wastewater Base Operations. Using the same method for deriving intercompany benefits expense for the wastewater base operations that Aqua used, as described above, I calculated wastewater intracompany benefits of $2,013,522 as shown in the table below:

Description	Amount	Reference
Expensed Non-Union Payroll Expense	$ 1,638,659	OCA Sch. C-11
Expensed Union Payroll Expense	$ 1,717,211	OCA Sch. C-11
Total Expensed Payroll Expense for Wastewater Base Operations	$ 3,355,871	
Intracompany Benefits Rate	60%	Exhibit 1-C WW Base
Wastewater Base Intracompany Benefit	$ 2,013,522	Exhibit 1-C WW Base, Sch. C-8.1

As shown on Exhibit LA-2, Schedule C-11, line 7, the result of using my recommended FPFTY payroll expense results in decreases the wastewater intracompany benefits expense by $100,799 ($2,114,321 - $2,013,522).

Schedule C-12, Intracompany Benefits (Water)

Q. Please explain the adjustment to Exhibit LA-2, Schedule C-12.

A. This adjustment relates to my recommendation to reduce employee benefits expense by $100,799 for Wastewater Base Operations that was discussed in the preceding section of my testimony pursuant to Schedule C-11. Specifically, as discussed on page 15 of Mr. Packer's Direct Testimony, Company Schedule 8.5 from Exhibit 1-A removes the intracompany benefits from Water Base Operations that relate to each of the Company's wastewater utilities and in turn increases employee benefits expense by the same amounts for each wastewater utility as shown on Schedule C-8.1 on Exhibits 1-B through 1-E. Thus, my recommended FPFTY employee benefits expense for Wastewater Base Operations of $2,013,522 (shown on Schedule C-11) should be the amount of intracompany benefits removed from Water Base Operations rather than the Company's proposed amount of $2,114,321, or a difference of $100,799 (i.e., the inverse of the $100,799 reduction to employee benefits expense for Wastewater Base Operations shown on Schedule C-11).

As shown on Exhibit LA-2, Schedule C-12, my adjustment increases pre-tax operating expense by $100,799 for Water Base Operations.

Schedule C-13, Income Tax Expense - Interest Synchronization (Water and Wastewater)

Q. Please explain the interest synchronization adjustment.

A. The interest synchronization adjustment applies the weighted cost of debt to the adjusted rate base to derive the interest deduction applicable to the calculation of test year income tax expense. After adjustments, my proposed rate base for Aqua's Water Base Operations and Wastewater differs from that of the Company. This results in an adjustment to the amount of synchronized interest included in the income tax calculation for each operation. The calculations of the interest synchronization adjustment for Aqua's Water Base Operations and Wastewater Base Operations are shown on Schedule C-13 of Exhibit LA-2. The interest synchronization adjustment for each Aqua utility operation is presented on a separate page of Schedule C-13.

Schedule C-14, Adjustment to Federal and State Income Tax Expense for Repairs Deductions

Q. Please explain the adjustment on Exhibit LA-2, Schedule C-14.

A. This adjustment reduces federal and state income tax expense for Aqua's Water Base by $8.688 million and for Aqua's Wastewater Base by $152,368 to use the amounts of Repairs Deductions that Aqua claimed in 2023 as the basis for the Repairs Deduction amounts for the 2025 FPFTY.

Q. How has Aqua treated the income tax impacts from Repairs Deductions?

A. Aqua PA has been applying "flow through" treatment for its tax repairs deductions.[8] This has reduced current income taxes.

Q. What amount of Repairs Deductions has Aqua proposed for the 2025 FPFTY?

A. Aqua's responses to OCA-IX-24 indicates that Aqua used an amount of $158.6 million for water utility Repairs Deductions and $4.460 million for wastewater utility Repairs Deductions.[9]

Q. What amounts of Repairs Deductions does Aqua show for 2023?

A. Aqua's responses to OCA-IX-24 shows water utility Repairs Deductions of $192.411 million and wastewater utility Repairs Deductions of $5.018 million for 2023.

Q. Were Aqua's Repairs Deductions in 2021 also notably higher than the amounts proposed by Aqua for the 2025 FPFTY?

A. Yes. Aqua's responses to OCA-IX-24 shows water utility Repairs Deductions of $171.754 million and wastewater utility Repairs Deductions of $5.081 million for 2021. Both of those amounts are also notably higher than the amounts that Aqua has proposed for the 2025 FPFTY.

[8] See, e.g., Aqua Statement 8, Direct Testimony of Ms. Fischer, at pages 13-17.
[9] These amounts are also reflected on Schedule F-2 in Aqua Exhibits 1-A and 1-C.

Q. Has Aqua explained why its proposed amounts for Repairs Deductions for the 2025 FPFTY are so much lower than its actual Repairs Deductions amounts in 2023?

A. No.

Q. Is 2023 the most current full year information available for Aqua's Repairs Deductions?

A. Yes.

Q. Should the 2023 amounts for Aqua's Repairs Deduction be used for the calculation of income tax expense in the current rate case?

A. Yes. The 2023 information is the most current full year information available for Aqua's Repairs Deductions. The larger amounts for 2023 also appear to be consistent with Aqua's growing water and wastewater utility operations and the need to repair and replace utility plant.

Q. Please explain the adjustment in Exhibit LA-2, Schedule C-14.

A. As shown on Exhibit LA-2, Schedule C-14, for the calculation of FPFTY income tax expense, I recommend using the Company's 2023 amounts for Repairs Deductions, per the Company's response to OCA-IX-24. This adjustment reduces FPFTY federal and state income tax expense by $8.688 million for Aqua's Water Base Operations and by $152,368 for Aqua's Wastewater Base Operations, as shown on Exhibit LA-2, Schedule C-14, line 3, columns E and F, respectively.

Q. At page 14, lines 17-18 of her direct testimony, Aqua PA witness Fischer refers to a "FIN 48" adjustment, for uncertain tax positions. Do you agree with the Company's offsetting the benefits of its claimed income tax deductions for repairs, to not reflect repairs deductions related to a reserve for uncertain tax positions, pursuant to FIN 48?

A. No. I recommend that the deduction amounts, such as for repairs, reflect the Company's claimed income tax deduction amounts and that those not be reduced by any reserves for uncertain tax positions.

Q. Have you quantified a specific adjustment for impacts on ADIT and income tax expense relating to eliminating the FIN 48 reserves?

A. At this time I have not made a specific adjustment for removing an attempt by Aqua to reduce the Company's claimed amounts of Repairs Deduction for a "FIN 48" reserve. As explained above, on Schedule C-14, I have used 2023 Repairs Deduction amounts from Aqua's response to OCA-IX-24, which appears to be before Aqua's application of any "FIN 48" reserve for uncertain tax positions. As discussed above, an adjustment has been quantified to reflect a normal going forward level of Repairs Deductions as shown in Exhibit LA-2, Schedule C-14 for the water utility and wastewater utility for the 2025 FPFTY based on Aqua's actual Repairs Deductions for the most recent full year available, which is from 2023.

Q. Why are you concerned that Aqua is attempting to overstate its income tax expense by not fully reflecting the federal income tax deduction for repairs?

A. Aqua's response to OCA-XV-19 lists amounts identified as "UTP" which stands for uncertain tax position, which is another term for "FIN 48" amounts. Thus, Aqua appears to be attempting to not fully reflect the income tax impacts of the uncertain portion of its repairs deductions in its proposed ratemaking income tax calculation in the current case.

To the extent that Aqua has attempted to offset the repairs deduction amount for any "FIN 48" or "UTP" amounts related to Repairs Deductions, as appears to be the case from Aqua's response to OCA-XV-19, that Company attempt to reduce the amount of repairs deductions being used for ratemaking income tax calculations should be rejected. The repairs deduction used in the income tax calculation for 2025 FPFTY income taxes should reflect the amount expected to be deducted for repairs without any offset for uncertain tax positions.

Q. Should the Repairs Deduction amounts that are used to calculate Aqua's income tax expense for ratemaking purposes be reduced by any "FIN 48" amounts for uncertain federal income tax positions?

A. No.

Q. Was Aqua allowed to record deferrals and to have a "collar" amount in a settlement in its last rate case for differences between its actually claimed Repairs Deduction amounts and the amount that was being reflected for Repairs Deductions in the calculation of income tax expense in Aqua's last rate case?

A. Yes. A settlement in Aqua's last base rate case provided for a deferral and a subsequent refund (or collection) for differences between its actually claimed Repairs Deduction amounts and the amount that was being reflected for Repairs Deductions in the calculation of income tax expense in that Aqua rate case. The deferral that was provided for in the settlement in Aqua's last rate case could generate a regulatory liability or asset based on a "collar" range of $4 million per year, i.e., annual repairs deductions within a range of $159.06 million to $163.06 million would not generate any deferral, but repairs deductions outside of that range would.

Q. Do you recommend that a similar "collar" and deferral provision be continued for Aqua in the current rate case?

A. No. Eliminating deferral accounting for annual variances in Aqua's Repairs Deductions would restore the risk of fluctuations in the annual amounts of repairs deductions between rate cases to investors, where it appropriately belongs. Eliminating the deferral also eliminates the need to have a "collar" within which no deferrals would occur.

Q. If a deferral opportunity of some type for fluctuations in Aqua's annual repairs deductions were to be continued, should the amount of the related "collar" be narrowed?

A. Yes. If a deferral were to be used prospectively, rather than continuing a $4 million "collar" or deadband from the prior case, a smaller collar range should be used.

Q. What amount of annual "collar" would you recommend?

A. Again, as stated above, I am recommending that the deferral provision and the related "collar" for Aqua's annual Repairs Deduction be eliminated prospectively. However, if a deferral were to permitted prospectively, I recommend the related deadband for annual repairs deduction fluctuations be no more than $3 million annually, i.e., $1.5 million above or below the amount of Repairs Deductions that are utilized for calculating Aqua PA's income taxes for ratemaking purposes in the current case.

Q. At pages 15-17 of her Direct Testimony, Aqua witness Fischer discusses an amortization of income tax savings that resulted from Aqua claiming Repairs Deductions that were in excess of the amounts that were used for ratemaking purposes in Aqua's last rate case, and which were outside of the $4 million annual "collar" range that was established in that case. Do you have concerns about Aqua's proposed treatment in the current rate case related to those Company-proposed deferral amounts?

A. Yes. There is a concern regarding how Aqua has attempted to apply "FIN 48" amounts to reduce the amount of income tax savings to be refunded to ratepayers

that resulted from the Company having actual repairs deductions that exceeded the top end of the "collar" range.

Q. Are you recommending an adjustment at this time related to the Company's proposal to reduce deferred income tax expense by $4.737 million per year starting in the FPFTY for the impact of the prior year Repairs Deductions that were above the top end of the "collar" as discussed in Company witness Fischer's Direct Testimony at page 16 and shown on Aqua Schedule F-2, line 23?

A. Not at this time. There are concerns about that Aqua-proposed adjustment and an adjustment may be needed; however, at this time I have not made an adjustment to that component of Aqua's proposed income tax expense.

PFAS Treatment Costs – Aqua's Deferred Accounting Request

Q. Please discuss the Company's request relating to PFAS treatment costs.

A. As described in the testimony of Company witness Packer at pages 19-21, Aqua is requesting approval to defer capital costs and expenses that it incurs beyond the 2025 FPFTY levels established in this case in the calendar year 2026 and thereafter. Mr. Packer states that absent deferred accounting treatment authorization, the economic impacts of investments in new assets and incremental O&M expenses incurred would significantly impair the Company's opportunity to earn the Commission authorized rate of return. Current estimates for capital investments to address PFAS treatment are approximately $300 million to be spent between 2024 and 2029, and O&M expenses are estimated to be up to five percent of the capital investment. Mr.

Packer testified that the Company seeks to offset these costs through pursuit of litigation against cost causers and grant funds and low interest loans through PENNVEST but given that there is no assurance of receipt of further funds or litigation proceeds, they do not project amounts in this case for the future. *See* Aqua Statement No. at 19-21.

Q. What is your recommendation concerning the Company's proposed deferred accounting treatment?

A. I recommend that the Company's proposed deferred accounting treatment for PFAS costs be rejected. I recognize that these costs are being, and will be, incurred for an important public health and safety reason. However, other than the magnitude of them, these costs are no different from other water treatment capital costs and O&M expenses. PFAS treatment costs are recurring, not new, and not outside of Aqua's control. Aqua in this case is utilizing a FPFTY that anticipates the Company's forecasted future costs of providing service, including the Company's projections for its PFAS treatment costs. Notably, OCA witness Hoover testifies that Aqua has installed PFAS treatment since 2017 and in the seven years since at certain facilities, and these are costs that Aqua has incurred over at least the last nine years and will continue to incur going forward. *See* OCA St. 1 (citing Aqua response to OCA 10-28).

Q. Do you have further reason to support your recommendation?

A. Yes. Isolating and tracking PFAS capital costs and O&M expenses for eventual recovery runs counter to a fundamental principle of ratemaking – that a utility should be afforded the opportunity to recover its costs of providing service but not guaranteed such recovery. While I recognize that an accounting deferral mechanism does not technically guarantee cost recovery, it is highly likely the Company will seek dollar for dollar rate recovery of these deferred costs in its next base rate case and it is unlikely that these costs will be denied if they are prudently incurred. Most concerning is that where there is certainty of recovery of capital costs or expenses, any incentive to manage, mitigate, or reduce those costs/expenses is diminished. Mr. Packer discussed the Company's efforts to mitigate its PFAS costs through litigation proceeds and PENNVEST funds, but once the certainty of deferred accounting treatment is established, the Company would not be as motivated to continue to aggressively pursue these offsetting funds unless some type of consumer protection mechanism is put into place, and Aqua has not proposed any such protections.

Further, by singling out these expenses for tracking and eventual recovery, Aqua is engaging in a form of single-issue, piecemeal ratemaking. Although a utility's cost of service is made up of dozens of individual cost components, which can and will vary from expected values, single-issue ratemaking ignores the fact that as a single cost component changes in one direction, other components may change in the opposite direction. Single-issue ratemaking denies customers the benefit of these offsetting cost reductions. It shifts the risk of fluctuations in between rates cases of

PFAS treatment capital costs and O&M expenses away from investors where the risk is currently and properly borne and puts that risk onto customers.

For all the above reasons, I recommend that the requested deferred accounting treatment be rejected.

Q. Does this conclude your direct testimony?

A. Yes, it does. However, I reserve the right to incorporate new information that may subsequently become available through outstanding discovery or otherwise.

Attachment RCS-1
QUALIFICATIONS OF RALPH C. SMITH

Accomplishments

Mr. Smith's professional credentials include being a Certified Financial Planner™ professional, a Certified Rate of Return Analyst, a licensed Certified Public Accountant and attorney. He functions as project manager on consulting projects involving utility regulation, regulatory policy and ratemaking and utility management. His involvement in public utility regulation has included project management and in-depth analyses of numerous issues involving telephone, electric, gas, and water and sewer utilities.

Mr. Smith has performed work in the field of utility regulation on behalf of industry, public service commission staffs, state attorney generals, municipalities, and consumer groups concerning regulatory matters before regulatory agencies in Alabama, Alaska, Arizona, Arkansas, Barbados, California, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, New Jersey, New Mexico, New York, Nevada, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, Puerto Rico, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, Washington DC, West Virginia, Canada, Federal Energy Regulatory Commission and various state and federal courts of law. He has presented expert testimony in regulatory hearings on behalf of utility commission staffs and intervenors on several occasions.

Project manager in Larkin & Associates' review, on behalf of the Georgia Commission Staff, of the budget and planning activities of Georgia Power Company; supervised 13 professionals; coordinated over 200 interviews with Company budget center managers and executives; organized and edited voluminous audit report; presented testimony before the Commission. Functional areas covered included fossil plant O&M, headquarters and district operations, internal audit, legal, affiliated transactions, and responsibility reporting. All of our findings and recommendations were accepted by the Commission.

Key team member in the firm's management audit of the Anchorage Water and Wastewater Utility on behalf of the Alaska Commission Staff, which assessed the effectiveness of the Utility's operations in several areas; responsible for in-depth investigation and report writing in areas involving information systems, finance and accounting, affiliated relationships and transactions, and use of outside contractors. Testified before the Alaska Commission concerning certain areas of the audit report. AWWU concurred with each of Mr. Smith's 40 plus recommendations for improvement.

Co-consultant in the analysis of the issues surrounding gas transportation performed for the law firm of Cravath, Swaine & Moore in conjunction with the case of Reynolds Metals Co. vs. the Columbia Gas System, Inc.; drafted in-depth report concerning the regulatory treatment at both state and federal levels of issues such as flexible pricing and mandatory gas transportation.

Lead consultant and expert witness in the analysis of the rate increase request of the City of Austin - Electric Utility on behalf of the residential consumers. Among the numerous ratemaking issues addressed were the economies of the Utility's employment of outside services; provided both written and oral testimony outlining recommendations and their bases. Most of Mr. Smith's recommendations were adopted by the City Council and Utility in a settlement.

Key team member performing an analysis of the rate stabilization plan submitted by the Southern Bell Telephone & Telegraph Company to the Florida PSC; performed comprehensive analysis of the Company's projections and budgets which were used as the basis for establishing rates.

Lead consultant in analyzing Southwestern Bell Telephone separations in Missouri; sponsored the complex technical analysis and calculations upon which the firm's testimony in that case was based. He has also assisted in analyzing changes in depreciation methodology for setting telephone rates.

Lead consultant in the review of gas cost recovery reconciliation applications of Michigan Gas Utilities Company, Michigan Consolidated Gas Company, and Consumers Power Company. Drafted recommendations regarding the appropriate rate of interest to be applied to any over or under collections and the proper procedures and allocation methodology to be used to distribute any refunds to customer classes.

Lead consultant in the review of Consumers Power Company's gas cost recovery refund plan. Addressed appropriate interest rate and compounding procedures and proper allocation methodology.

Project manager in the review of the request by Central Maine Power Company for an increase in rates. The major area addressed was the propriety of the Company's ratemaking attrition adjustment in relation to its corporate budgets and projections.

Project manager in an engagement designed to address the impacts of the Tax Reform Act of 1986 on gas distribution utility operations of the Northern States Power Company. Analyzed the reduction in the corporate tax rate, uncollectibles reserve, ACRS, unbilled revenues, customer advances, CIAC, and timing of TRA-related impacts associated with the Company's tax liability.

Project manager and expert witness in the determination of the impacts of the Tax Reform Act of 1986 on the operations of Connecticut Natural Gas Company on behalf of the Connecticut Department of Public Utility Control - Prosecutorial Division, Connecticut Attorney General, and Connecticut Department of Consumer Counsel.

Lead Consultant for The Minnesota Department of Public Service ("DPS") to review the Minnesota Incentive Plan ("Incentive Plan") proposal presented by Northwestern Bell Telephone Company ("NWB") doing business as U S West Communications ("USWC"). Objective was to express an opinion as to whether current rates addressed by the plan were appropriate from a Minnesota intrastate revenue requirements and accounting perspective, and to assist in developing recommended modifications to NWB's proposed Plan.

Performed a variety of analytical and review tasks related to our work effort on this project. Obtained and reviewed data and performed other procedures as necessary (1) to obtain an understanding of the Company's Incentive Plan filing package as it relates to rate base, operating income, revenue requirements, and plan operation, and (2) to formulate an opinion concerning the reasonableness of current rates and of amounts included within the Company's Incentive Plan filing. These procedures included requesting and reviewing extensive discovery, visiting the Company's offices to review data, issuing follow-up information requests in many instances, telephone and on-site discussions with Company representatives, and frequent discussions with counsel and DPS Staff assigned to the project.

Lead Consultant in the regulatory analysis of Jersey Central Power & Light Company for the Department of the Public Advocate, Division of Rate Counsel. Tasks performed included on-site review and audit of Company, identification and analysis of specific issues, preparation of data requests, testimony, and cross examination questions. Testified in Hearings.

Assisted the NARUC Committee on Management Analysis with drafting the Consultant Standards for Management Audits.

Presented training seminars covering public utility accounting, tax reform, ratemaking, affiliated transaction auditing, rate case management, and regulatory policy in Maine, Georgia, Kentucky, and Pennsylvania. Seminars were presented to commission staffs and consumer interest groups.

Previous Positions

With Larkin, Chapski and Co., the predecessor firm to Larkin & Associates, was involved primarily in utility regulatory consulting, and also in tax planning and tax research for businesses and individuals, tax return preparation and review, and independent audit, review and preparation of financial statements.

Installed computerized accounting system for a realty management firm.

Education

Bachelor of Science in Administration in Accounting, with distinction, University of Michigan, Dearborn, 1979.

Master of Science in Taxation, Walsh College, Michigan, 1981. Master's thesis dealt with investment tax credit and property tax on various assets.

Juris Doctor, cum laude, Wayne State University Law School, Detroit, Michigan, 1986. Recipient of American Jurisprudence Award for academic excellence.

Continuing education required to maintain CPA license and CFP® certificate.

Passed all parts of CPA examination in first sitting, 1979. Received CPA certificate in 1981 and Certified Financial Planning certificate in 1983. Admitted to Michigan and Federal bars in 1986.

Michigan Bar Association.

American Bar Association, sections on public utility law and taxation.

AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET IX INTERROGATORIES

OCA-IX-1 Indicate if the employee positions used in the Company's labor calculations are authorized or actually filled positions. Identify, quantify and explain all labor-related costs in the Company's filing that are for positions that have not been filled as of May 31, 2024 but for which the Company projects would be filled at various points during the FTY and FPFTY.

RESPONSE

The employee positions used in the Company's labor calculations are a combination of authorized positions and actually filled positions. Please refer to the Company's Highly Confidential Exhibit 2-For Filing attachment filed in response to OCA-1-1 where an individual position listing and payroll information is provided by the Company. The following positions were open as of 05/31:

Open as of 05/31 - Unique Identifiers Exhibit 2			
3	221	237	253
55	222	239	254
66	223	240	255
67	224	241	257
75	225	242	258
134	226	243	259
172	227	244	264
208	228	245	266
214	229	246	454
215	230	248	616
217	231	249	640
218	233	250	649
219	235	251	651
220	236	252	652
			654

The table above provides the Unique Identifier associated with the open positions in the Highly Confidential Exhibit-2 For Filing attachment mentioned earlier in the response.

25 of these open positions are seasonal positions which are hired for the summer season and have not been hired as of 05/31. 17 of these positions are current open positions of the Company that are long standing positions and that are currently actively being hired for. 15 of these positions are newly authorized positions which are being included within the case.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET IX INTERROGATORIES

OCA-IX-19 How much legal and consulting expense has the Company recorded in 2022 and 2023, and projected for FTY 2024 and the FPFTY 2025 for the appeal of Commission decisions?

a. Identify, quantify and explain the amount and show exactly where Aqua has reflected this in its filing.

RESPONSE

Please see the below table of legal expenses included in this filing by virtue of inclusion in Exhibit 1–A & 1–C, Schedule C 9.1, claim of $745,787 (water) and $58,328 (wastewater).

Legal Expenses - Associated with PUC Order Appeals:

	2022	2023
Legal Matter - Twin Lakes Water - 529 Proceeding Appeal	$ 118,278	$ 81,776
Legal Matter - East Whiteland Sewer - 1329 Appeal	$ 9,469	$ 27,730
Legal Matter - DELCORA Sewer - 1329 Appeal	$ 17,418	

REVISED RESPONSE

Please see on pg. 2 the below the table of legal expenses included in this filing by virtue of inclusion in Exhibit 1–A & 1–C, Schedule C 9.1, claim of $745,787 (water) and $58,328 (wastewater).

Legal Expenses - Associated with PUC Order Appeals:

	2022	2023
Legal Matter - Twin Lakes Water - 529 Proceeding Appeal	$ 118,278	$ 81,776
Legal Matter - East Whiteland Sewer - 1329 Appeal	$ 9,469	$ 27,730
Legal Matter - DELCORA Sewer - 1329 Appeal	$ 17,418	

The above costs were included in the Company's 3-year average legal expense claim from 2021 – 2023. The above costs were $200,054 (Water) and $54,617 (Sewer), which under a 3-year average would result in an impact of $66,685 (Water) and $18,206 (Sewer) for the HTY, FTY, and FPFTY.

OFFICE OF CONSUMER ADVOCATE

SET IX INTERROGATORIES

OCA-IX-24 Show the impact on Aqua's federal income tax expense and ADIT as of each of these dates of federal income tax repairs deductions and include supporting calculations:

a. 12/31/2020 actual
b. 12/31/2020 as reconciled to the as-filed 2020 federal income tax return
c. 12/31/2021 actual recorded
d. 12/31/2021 as reconciled to the as-filed 2021 federal income tax return
e. 12/31/2022 actual
f. 12/31/2022 as reconciled to the as-filed 2022 federal income tax return
g. 12/31/2023 recorded
h. 12/31/2023 as reconciled to the as-filed 2023 federal income tax return filing extension request
i. 12/31/2024 estimated, and
j. 12/31/2025 estimated

RESPONSE

Aqua utilizes flow through tax accounting to record the impact of the book to tax basis difference generated by the repair deduction, therefore there is no "funded" (rate base) federal ADIT as of each of the dates related to the federal income tax repairs deduction. Please see the below table for the impact on Aqua's federal income tax expense and "unfunded" (FAS 109/non-rate base) ADIT for the activity in each of the tax years listed above.

SET X INTERROGATORIES

OCA-X-27 Refer to Aqua Statement 11 at 14:20-21. Please explain why Aqua will discontinue its PFAS monitoring website.

RESPONSE

The current PFAS monitoring website was voluntarily designed and implemented in 2016 to provide data specific to Southeastern PA near areas with known military base PFAS contamination. This was years before PFAS regulations came into effect.

EPA and PADEP have promulgated maximum contaminant levels that requires the data to be reported in Consumer Confidence Reports like all other contaminants. To maintain consistency with the EPA and PADEP requirements and avoid confusion, Aqua PA will report the data as required in the format by EPA and PADEP instead of via a separate mechanism. This provides a consistent statewide PFAS reporting framework and does not require a customer to seek out a website.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XV INTERROGATORIES

OCA-XV-19 Identify, quantify, explain and provide the accounting entries for each impact of the tax repairs "collar" mechanism, by year, from Aqua PA's last rate case through each of the following dates:

a) 12/31/2021
b) 12/31/2022
c) 12/31/2023, and
d) 6/30/2024

RESPONSE

a) – d) The following is a typical accounting entry to record the impact of the tax repairs collar mechanism. This example accounting entry reflects the case where the Company's actual tax repairs deduction is higher than what was filed in the base rate case and exceeds the collar and a refund is due to customers, so a regulatory liability is established:

	Dr.	Cr.
Regulatory Liability		XXX
Deferred Tax Expense	XXX	
Regulatory Liability – Gross Up		XXX
Deferred Tax Asset Gross Up	XXX	

In the event that the Company's actual tax repairs deduction is lower than what was filed in the base rate case and is lower than the collar (amounts are recoverable by the Company), then a regulatory asset would be recorded and all the entries shown above would be the opposite sign.

The table below on pg. 2 shows the amount of the actual repairs deduction taken versus the repairs deduction used for ratemaking purposes and the corresponding collar limit, as approved in Aqua's 2021 base rate case. Additionally, the table shows the annual impact to the collar due to any variance between the actual

repairs deduction taken versus the repairs tax deduction used for ratemaking purposes and the corresponding collar limit.

APA - Repairs Collar
For the Years Ended 2021-FTY

	FY2021	FY2022	Projected FY2023	FTY
LOW - Collar Limit	155,864,688	155,060,000	155,060,000	155,060,000
Repairs Deduction used for Rate Making	158,864,688	159,060,000	159,060,000	159,060,000

OFFICE OF CONSUMER ADVOCATE

SET XV INTERROGATORIES

OCA-XV-25 Refer to the testimony of Aqua PA witness Fischer, Aqua Statement No. 8, at page 12, line 10. How much PA NOL has the Company proposed to include in rate base for each of the following periods:

a) HTY
b) FTY
c) FPFTY.

RESPONSE

a) See MFR TX4 and OCA-XV-25a-Attachment 1 which shows the HTY amount of the PA NOL deferred tax asset included in rate base of $33,680,863 (water) and $937,053 (wastewater).

b) See OCA-XV-25a-Attachment 1.

c) See OCA-XV-25a-Attachment 1.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XV INTERROGATORIES

OCA-XV-26 How much PA NOL was included by the Company in its proposed rate base in its last rate case? Show amounts and explain fully.

RESPONSE

The Company inadvertently did not include any PA NOL deferred tax asset in its proposed rate base in its last rate case. The balances of the PA NOL that existed during the last rate case can be seen in the response to OCA-XV-13 and in MFR TX11 Attach 2. For an explanation of why the PA NOL deferred tax asset should be included in the Company's proposed rate base see the response to OCA-XV-27.

AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XV INTERROGATORIES

OCA-XV-27 Are there any PA state income tax normalization requirements of which the Company or witness Fischer are aware that address whether a PA NOL amount is requirement to be included in a utility's rate base?

a) If not, explain fully why not.
b) If so, identify and cite each such provision in PA state income tax law that addresses the ratemaking treatment of a utility state NOL amount for utility rate base purposes.

RESPONSE

The Company is not aware of any PA state income tax normalization requirements addressing the inclusion of a PA NOL deferred tax asset in rate base.

a) As stated in my testimony, Statement 8, page 8, the IRS normalization requirements apply to federal income tax expense and not state income tax expense. The Company is, however, applying the same concepts to items of state income tax expense that have received normalization treatment through the provision of a deferred state income tax expense. The Company in its last rate case provided state income tax benefits to customers through a credit to deferred income taxes and continues to do so in this rate case (see Exhibit 1-A, Schedule F-2, line 19 from this case and line 15 from the last rate case). The state income tax benefits have not actually been monetized (received) by the Company by means of a reduction in the state income taxes it pays due to the PA state NOL, therefore it is appropriate to include the PA state NOL deferred tax asset in rate base.

b) N/A.

**AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.**

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XV INTERROGATORIES

OCA-XV-28 Refer to Aqua PA witness Fischer's direct testimony, Aqua Statement No. 8, at page 12, lines 12-14: "the Company will discontinue the normalization of state income tax expense for the PA NOL in 2025 …" and lines 16-17: "As a result of the PA tax rate decrease, the Company also recorded a regulatory asset for the deficient deferred state taxes related to the ADIT asset for the PA NOL."

a) Identify and provide all authority that was relied upon by Aqua PA for normalizing the PA NOL for years prior to 2025.
b) Identify and provide all authority that was relied upon by Aqua PA for recording a regulatory asset for the deficient state income taxes for the PA NOL for each year prior to 2025.
c) Identify and provide all amounts that Aqua PA recorded (1) as deferred income tax expense, (2) as accumulated state income taxes and (3) as regulatory assets (or regulatory liabilities) for deficient PA state income taxes.
d) Identify and provide all amounts that Aqua PA recorded (1) as deferred income tax expense, (2) as accumulated state income taxes and (3) as regulatory assets (or regulatory liabilities) for deficient PA state income taxes specifically related to the Company's claimed PA NOL amounts.

RESPONSE

a) The Company normalized the PA NOL based on the flow through treatment of the tax impact of the repairs 481(a) adjustment and ongoing benefit as discussed in my testimony. Had the PA NOL been treated as flow through, the refund of the 481(a) adjustment and ongoing current benefits being refunded to customers would have been negated/offset due to the limitation of current income tax expense not going below zero. Under the normalization method of accounting, customers receive the benefit of the NOL creation

through the deferred tax expense despite the Company not actually monetizing the benefit of the NOL, hence the reason for inclusion of the NOL DTA in rate base.

b) ASC 740 requires companies to account for changes to state income tax rates or laws during the period in which the law is enacted. FAS 109 also required companies to adjust total deferred income tax balances to the enacted tax rates. Upon so doing, the excess or deficiency is recorded to a regulatory asset or liability for future determination by the regulatory commission, the method and timing of when the amounts are to be recovered from or returned to customers.

c) See response to b). No amounts were recorded to the income statement.

d) As of 12/31/23 the Company has recorded a regulatory asset, net of tax gross-up of $3,043,460 and $106,726 for water and wastewater respectively. These amounts are offset by a credit to deferred tax asset of $3,043,460 and $106,726 for water and wastewater respectively.

I. INTRODUCTION

Q. Please state your name, position and business address.

A. Ralph C. Smith. I am a Senior Regulatory Consultant at Larkin & Associates, PLLC, 15728 Farmington Road, Livonia, Michigan 48154.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. My direct testimony concerning the rate request of Aqua Pennsylvania ("Aqua" or "Company") on behalf of the Pennsylvania Office of Consumer Advocate ("OCA") was served on August 16, 2024 and pre-marked as OCA Statement 2. My qualifications were set forth in that statement.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal testimony responds to the rebuttal testimony of Aqua witnesses William Packer, Christopher Manning, and Panpilas Fischer on various issues.

Q. What exhibits are being filed with your surrebuttal testimony?

A. Exhibits LA-4 through LA-7 are being filed with my surrebuttal testimony.

Q. What is shown in Exhibit LA-4?

A. Exhibit LA-4 presents Updated Summary Schedules showing Revenue Requirement, Rate Base, Net Operating Income and Adjustments for the Water and Wastewater utility operations.

Q. What is shown in Exhibit LA-5?

A. Exhibit LA-5 presents Updated Adjustment Schedules showing Rate Base and Net Operating Income Adjustments for the Water and Wastewater utility operations.

Q. What is shown in Exhibit LA-6?

A. Exhibit LA-6 presents selected non-confidential documents referenced in my testimony and/or in Exhibits LA-4 and LA-5.

Q. As a result of Aqua's rebuttal testimony and the receipt of additional information, has your overall Revenue Requirement recommendation changed?

A. Yes, I am presenting an updated summary of the revenue requirement excess for the Aqua PA water base utility and revenue deficiencies for Aqua PA's Shenandoah water utility and wastewater utility operations on Exhibit LA-4, Schedule A, page 2 of 8. As shown there, in column A, line 7, the updated results show an overall net revenue excess of approximately $12.250 million for Aqua PA. The updated revenue excess for Aqua PA's water base utility of approximately $31.251 million is shown in column B, on line 7. The updated revenue deficiency for Aqua PA's Shenandoah Water utility is approximately $1.885 million as shown in column C, line 7. The updated revenue requirement deficiencies for each Aqua PA wastewater utility group are shown on Exhibit LA-4, Schedule A, page 2 of 8, line 7, in columns C through F, respectively.

II. OVERALL FINANCIAL SUMMARY

Updated Summary Schedules (Exhibit LA-4)

Q. What does Schedule A in Exhibit LA-4 show?

A. Exhibit LA-4 shows the development of the adjusted revenue requirement for Aqua's water and wastewater utility operations.

Q. What revenue deficiency or excess do you recommend for Aqua's water utility?

A. As shown on Exhibit LA-4, Schedule A, page 2, line 7, the adjusted revenue sufficiency and deficiency results for Aqua's water utilities are shown on Exhibit LA-4, Schedule A, page 2, in columns B and C, on line 7, and are summarized below:

- Water Base (column B): $31.251 million revenue sufficiency
- Shenandoah Water (column C): $1.885 million revenue deficiency

Q. What revenue deficiency or excess do you recommend for Aqua's wastewater utilities?

A. The adjusted revenue deficiency results for Aqua's wastewater utilities are shown on Exhibit LA-4, Schedule A, page 2, in columns D through F, on line 7, and are summarized below:

- Wastewater Base (column D): $14.781 million revenue deficiency
- Lower Makefield Wastewater (column E): $2.335 million revenue deficiency
- East Whiteland Wastewater (column F): $0 revenue deficiency

Q. What is shown on Exhibit LA-4, Schedule A, page 3?

A. Schedule A, page 3 of 11, summarizes the differences between Aqua's request (as summarized on Schedule A, page 1) and OCA's adjusted results (as summarized on Schedule A, page 2). Schedule A, page 3, line 1, shows the differences in rate base between Aqua's request and OCA's adjusted results. Line 3 shows differences in required net operating income. Line 4 shows differences in adjusted net operating income. Line 5 shows differences in the amount of net operating income excess or deficiency. Line 7 shows differences in the revenue requirement excess or deficiency.

As shown on Exhibit LA-4, Schedule A, page 3, column A, line 7, the results of my recommendations and the recommendations of other OCA witnesses, reflect revenue requirement impacts that are approximately $138.9 million lower than Aqua has requested. In other words, the results of the adjustments recommended by me and other OCA witnesses produce base rate revenues for Aqua that are $138.9 million lower than the revenue increases proposed by Aqua.

Q. Have you presented a reconciliation of Aqua's originally filed proposed revenue increase with OCA's adjusted revenue excess or deficiency for each of Aqua's water and wastewater utility operations?

A. Yes. Exhibit LA-4, Schedule A, pages 4 and 5 present a reconciliation of the revenue requirement for Aqua's water utilities, and for each of Aqua's wastewater utilities (pages 6 through 8), reflecting the approximate revenue requirement impact of the recommendations of OCA witnesses. The approximate revenue requirement impact of each adjustment is shown in column C of Schedule A, pages 4 through 8, for each utility. Additionally, Exhibit LA-4, Schedule A, pages 4 through 8 presents an overall summary showing the approximate revenue requirement impacts of the recommendations of OCA witnesses.

Exhibit LA-4, Schedule A, pages 4 through 8, line 1, shows the impacts of OCA cost of capital recommendations, calculated using the rate base in Aqua's original application, and are shown for each utility in column C. As shown on Schedule A, pages 4 through 8, line 1, in column C, the OCA's cost of capital recommendations reduce Aqua's requested revenue increase by (1) $81.880 million for Aqua's water base utility, (2) $303,636 for Aqua's Shenandoah water utility, (3) $7.494 million for Aqua's wastewater base utility, (4) $962,494 for Aqua's Lower Makefield wastewater utility, and (5) $1.156 million for Aqua's East Whiteland wastewater utility, although the revenue deficiency for East Whiteland is zeroed out as shown on Exhibit LA-4, Schedule A, page 2.

Q. Do Schedules A-1, B, B.1, C, C.1 and D of Exhibit LA-4 present information similar to the corresponding schedules that were filed with your Direct Testimony?

A. Yes.

Updated Adjustment Schedules (Exhibit LA-5)

Q. What does Exhibit LA-5 show?

A. Exhibit LA-5 shows the adjustments to rate base and net operating income that I am recommending as updated and revised. To the extent that adjustments have been revised or added I present explanations in my surrebuttal testimony. A column has been added to the contents page of Exhibit LA-5 indicating which adjustments have been revised or added.

III. AQUA'S ACCEPTANCE OF OCA ADJUSTMENTS

Q. Has Aqua indicated that it has accepted certain OCA adjustments?

A. Yes. As an example, Aqua witness Manning states at page 14 of his rebuttal testimony that the Company is removing the legal expense for appeals, which was recommended in my direct testimony.

IV. REVISED AND ADDED ADJUSTMENTS AND RESPONSE TO AQUA'S REBUTTAL

Q. Have you revised some of the recommended adjustments that were presented with your direct testimony?

A. Yes. In response to Aqua's rebuttal testimony and as a result of additional information that was received after the filing of my direct testimony, certain adjustments were revised or added. I will address each revised and added adjustment below.

Schedule C-7, Payroll Expense – Seasonal Positions (Water and Wastewater)

Q. Did Aqua agree with your adjustment to remove seasonal positions?

A. No. Aqua witness Manning, in his rebuttal testimony at pages 6-7, generally disagreed with my recommended adjustment to remove seasonal positions.

Q. How may filled seasonal positions did Aqua have?

A. Aqua's response to OCA-XXVIII-1 indicates that Aqua had 15 filled seasonal positions.

Q. How many seasonal employees has Aqua proposed be included in the FPFTY?

A. Aqua's response to OCA-XXVIII-4 indicates that Aqua has proposed including payroll expense for 35 non-union seasonal employees in the FPFTY at a cost of $8,060 per position, or a total cost of $282,100.

Q. Have you updated your adjustment for seasonal positions?

A. Yes. As shown on Exhibit LA-5, Schedule C-7, I have updated my recommended adjustment for seasonal positions payroll expense by taking the difference between the 35 positions that Aqua included and the 15 positions that Aqua' response to OCA-XXVIII-1 indicates that Aqua actually had. This reduces FPFTY operating expenses by $161,200.

Q. What does Aqua witness Manning state in his rebuttal testimony concerning that $161,200?

A. At page 7, lines 4-8, of his rebuttal testimony, Mr. Manning states as follows:

> … the $201,500 that Mr. Smith proposed to be removed should be reduced accordingly by $40,300 to reflect the five additional seasonal employees that have been hired, or a total adjustment of $161,200. As mentioned earlier, Mr. Smith does acknowledge that he would continue to review and revise information based on additional information that is provided.

Q. Has Aqua reflected that $161,200 adjustment?

A. No. Aqua's response to OCA-XXVIII-28 states that Aqua did not reflect that $161,200 adjustment.

Q. What amount of revised payroll adjustment for unfilled seasonal positions are you now recommending?

A. As shown on Exhibit LA-5, Schedule C-7, I have updated my recommended adjustment for seasonal positions payroll expense to reflect a revised adjustment amount of $161,200.

Schedule C-8, Payroll Expense – Vacancies (Water and Wastewater)

Q. As you noted above, Aqua witness Manning's rebuttal at pages 5-7 did not agree with your recommended vacancy adjustment for payroll expense. Are you making revisions to that adjustment?

A. Yes. As explained in the Company's response to OCA-XXVIII-5, the Company's proposed payroll amount had reflected a Company-proposed vacancy rate of 2 percent. Calculations showing how the Company derived its proposed 2 percent vacancy rate were provided with that response. Aqua's response to OCA-XXVIII-8 indicates that across all utility operations, Aqua's total vacancy adjustment was $1,108,352. As shown on Exhibit LA-5, Schedule C-8, I have updated my recommended payroll expense vacancy adjustment to take into account that Aqua's proposed payroll expense had incorporated a 2 percent vacancy rate adjustment. I do not agree with Aqua's proposed 2 percent vacancy rate, which was not based on the number of projected but unfilled positions. As shown on Exhibit LA-5, Schedule C-8, I have applied my recommended water utility vacancy rate of 4.56 percent to the same amount of water utility payroll expense to which Aqua applied its proposed 2 percent vacancy rate. Aqua's proposed payroll expense for the water utility base is reduced by $1.272 million.

Similarly, as shown in column E of Schedule C-8, I applied my recommended 4.69 percent wastewater base vacancy rate to the same amount of wastewater utility payroll expense to which Aqua applied its proposed 2 percent vacancy rate. Aqua's proposed payroll expense for the wastewater utility base is reduced by $130,620.

Schedule C-9, Payroll Tax Expense (Water and Wastewater)

Q. Does Aqua agree that there is a relationship between payroll expense and payroll tax expense?

A. Yes, as described in Aqua's response to OCA-XXVIII-12. In that response, the Company stated: "Aqua PA agrees that there is a relationship between payroll expense and payroll tax expense."

Q. Is the payroll tax expense adjustment being revised in your surrebuttal?

A. Yes. As shown on Exhibit LA-5, Schedule C-9, page 1, I have replicated Aqua's calculation of payroll tax expense in column A, and have updated my calculation of payroll tax expense in column B, for Aqua's water utility. The payroll tax expense adjustment is a direct result of other adjustments to payroll expense. The updated adjustment reduces payroll tax expense for Aqua's water utility base by $87,201.

As shown on Schedule C-9, page 2, for the wastewater payroll tax adjustment, I applied the social security and Medicare tax rates to my wastewater payroll expense adjustment, which produces a reduction to wastewater payroll tax expense of $9,992.

Schedule C-10, 401(k) Plan Expense (Water and Wastewater)

Q. Did Aqua agree with your recommended adjustment to 401(k) plan expense?

A. No. Aqua witness Manning did not agree with my recommended adjustment to 401(k) plan expense. Apparently, the disagreement stems from the amount of payroll expense adjustment based on my recommended vacancy rate.

Q. Is there is a relationship between the amounts of payroll expense and the amounts of 401(k) plan expense?

A. Yes. Aqua's response to OCA-XXVIII-13 agrees that there is a relationship between the amount of payroll expense and the amount of 401(k) expense. Adjustments to Aqua's proposed payroll expense will also have a related adjustment to the Company's proposed amount of 401(k) plan expense.

Q. Have you updated the adjustment for 401(k) plan expense?

A. Yes. As shown on Exhibit LA-5, Schedule C-10, I have updated the adjustment to 401(k) plan expense to correspond with my revised adjustment to payroll expense. As shown on Exhibit LA-5, Schedule C-10, the adjustment to 401(k) expense has been revised to $100,097 for water. This adjustment does not impact wastewater.

Schedule C-11, Employee Group Insurance (Water and Wastewater)

Q. Does Aqua address your recommended adjustment for Employee Group Insurance in its rebuttal?

A. Yes. At page 9 of his rebuttal testimony, Aqua witness Manning states that he disagrees with the adjustment for the same reasons he disagreed with my recommended vacancy adjustment.

Q. Is the amount of expense for Employee Group Insurance related to the vacancy rate?

A. Yes. The amount of expense for Employee Group Insurance is related to the proposed vacancy rate. Aqua's response to OCA-XXVIII-14 acknowledges that

there is a relationship between the number of full-time employees Aqua has and the Group Insurance Expense.

Q. Are you revising the recommended amount of expense for Employee Group Insurance based on anything in Aqua's rebuttal testimony?

A. Yes. Attachment 1 to the Company's response to OCA-XXVIII-14 shows that the Company applied a 2 percent vacancy rate to its proposed Employee Group Insurance for the FPFTY included in its filing. I have revised my recommended adjustment to Employee Group Insurance using the unadjusted amounts provided in OCA-XXVIII-14 but applying my recommended vacancy rate. As shown on Exhibit LA-5, Schedule C-11, the adjustment for Employee Group Insurance has been revised to $165,638 for water and $53,552 for wastewater.

Schedule C-12, Intracompany Benefits (Water)

Q. Are you revising the recommended amount of expense for Intracompany Benefits based on your revised adjustment to Group Insurance Expense?

A. Yes. As shown on Exhibit LA-5, Schedule C-12, the adjustment for Intracompany Benefits has been revised to $53,552 for water (i.e., the inverse of the $53,552 reduction to employee benefits expense for Wastewater Base Operations shown on Schedule C-11).

Schedule C-14, Income Tax Expense – Repairs Deduction (Water and Wastewater)

Q. Have you revised the amount of reduction to income tax expense for repairs deductions?

A. Yes. In my direct testimony on Exhibit LA-2, Schedule C-14, I had reflected repairs deductions of $195.428 million based on the amounts that Aqua expects to claim on its 2023 federal income tax return. As shown in Aqua's response to OCA-XXVIII-27, Aqua has updated that amount and now expects the amount of $195.861 million to be the amount of repairs deductions to be claimed on the 2023 federal income tax return which, with extensions, is to be filed by October 15, 2024. Aqua's response to OCA-XXVIII-28 lists the $195.861 million as the expected repairs deductions to be claimed on the 2023 federal income tax return. Aqua's responses show that certain amounts within the $195.861 million are related to AFUDC, which is not income tax deductible. Consequently, I have reduced the amounts of repairs deductions for purposes of computing income taxes by removing the related amounts representing AFUDC. As shown on Exhibit LA-5, Schedule C-14, I have reflected an amount for repairs deductions of $192.818 million after removal of amounts identified for AFUDC in Aqua's response to OCA-XXVIII-28. This produces reductions to income tax expense of $7.885 million for water and $242,142 for wastewater, as shown on Exhibit LA-5, Schedule C-14, line 7.

Q. Aqua has proposed to not reflect some of the repairs deductions that the Company has claimed or expects to claim on federal income tax returns in the calculation of income tax expense, on the basis that Aqua has identified that portion of its annual repairs deductions are uncertain. Do you agree with Aqua's proposal to <u>not</u> reflect uncertain income tax deductions for ratemaking purposes for the calculation of income tax expense in the current Aqua PA rate case?

A. No. Deductions claimed or expected to be claimed by Aqua on filed tax returns should be used to compute income tax expense in the current Aqua PA rate case. The fact that an IRS audit has not yet occurred for some of the deductions that Aqua has claimed or is expected to claim on filed income tax returns should not impact the ratemaking treatment. All tax deductions that are related to Aqua PA's public utility operations that are claimed or are expected to be claimed on income tax returns should be utilized to calculate the allowance for income tax expense in Aqua's rate case.

Q. What amounts of its repair deductions has Aqua identified as being associated with uncertain tax positions?

A. Aqua's response to OCA-XXVIII-28, Attachment 1, identifies $3.354 million for 2023 income tax deductions for repairs that Aqua PA identified as being related to uncertain tax positions ("uncertain tax positions" or "UTP"). This is indicated in the UTP line on Aqua's response to OCA-XXVIII-28, Attachment 1.

Q. What is the basis for Aqua's uncertain tax positions amount?

A. Aqua's response to OCA-XXVIII-30 states that:

> The UTP amount is a reduction to the repairs deduction amount that is used to determine whether the collar threshold is exceeded or not. The UTP amount is based on the subset of work orders taken as a repairs deduction that has the potential of being reversed upon audit.

Q. Is the use of income tax deductions that that are claimed or are expected to be claimed on income tax returns consistent with the guidance that has been provided by the Federal Energy Regulatory Commission ("FERC")?

A. Yes. While Aqua is a water and wastewater utility, not an energy utility, and while Aqua PA is regulated by the PA PUC and not by FERC, the guidance provided by the FERC on the treatment of utility uncertain tax positions is very useful for reasonably addressing this issue for utility regulatory accounting and ratemaking purposes. The repairs deductions that Aqua has claimed or has indicated that it expects to claim for federal income tax purposes clearly relate to the provision of water and wastewater utility service by Aqua in Pennsylvania. Thus, reflecting the amounts of repairs deductions that Aqua expects to claim for federal income tax purposes for 2023, which is the most recent information available, reflects appropriate ratemaking treatment.

Q. When was Aqua's last federal income tax audit?

A. Aqua's response to OCA-XXVIII-32 indicates that the last tax years that were audited were 2010-2011.

Q. Are any tax years current under IRS audit?

A. No. Aqua's response to OCA-XXVIII-32 states that, as of September 16, 2024, there are no notifications of any audits of federal income tax returns in which Aqua participates.

Q. Please discuss having a reserve for potential disallowance of Aqua's uncertain tax positions.

A. Permitting a reserve to be recorded in the event that Aqua's "uncertain" tax deductions for repairs were ultimately to be disallowed by the IRS could be appropriate for ratemaking purposes but only if all of the repairs deduction amounts that are claimed or expected to be claimed are reflected in the calculation of income tax expense for ratemaking purposes. Aqua has no federal income tax audit history of its claimed repairs deductions being disallowed.

Q. If the income taxes are not reduced by the reserve for the uncertain tax position, and the tax position is subsequently audited and disallowed, should the Company be permitted to record a regulatory asset to recover the disallowed tax benefit that had been included in customer rates?

A. Not necessarily. This result would be equitable only if the Company's repairs deductions that are claimed or expected to be claimed on income tax returns are fully reflected in the calculation of income tax expense for ratemaking purposes, as I have recommended. In contrast, Aqua's position concerning the uncertain portion of its claimed repairs tax deductions is inequitable, one-sided and would be unfair to

ratepayers because (1) Aqua does not want to fully reflect the tax benefits associated with the repairs deductions that it has claimed or is expected to claim on its income tax returns, and (2) Aqua then apparently wants to be able to record a regulatory asset if any of those repairs deductions are ultimately disallowed by the IRS.

Aqua's position is inequitable because it would first deny ratepayers the benefit of reduced income tax expense from deductions claimed on its income tax returns. Then, if some portion of Aqua's repairs deductions were to be ultimately disallowed by the IRS, Aqua would propose to record regulatory assets for those income tax disallowances and to charge ratepayers to recoup the income taxes related to the disallowed repair deduction amounts. The Company's position on repairs deductions is thus unbalanced and should be rejected.

Q. In settlements in a prior Aqua PA rate case, an agreement was reached that provided for deferral into regulatory asset or liability accounts of actual amounts for repairs deductions that exceeded a specified amount above or below the amount used for repairs deductions in the rate case settlement. Should that be continued?

A. No. A settlement provision for a collar and for deferring amounts of actual repairs deductions above and below the collar was an approach used to resolve some previous Aqua PA rate cases and was not intended to become a new regulatory feature that would continue in perpetuity for Aqua.

Q. How would the discontinuation of a "collar" amount for repairs deductions prospectively affect the risk of fluctuations in Aqua's repairs deduction amounts that are claimed on the federal income tax returns in which the Company participates?

A. Aqua's response to OCA-XXVII-19 states that:

> Without prospective continuation of the collar mechanism, fluctuations in the tax repairs deductions between rate cases would result in risk/responsibility being borne by the Company if the level of tax repairs is lower and risk being borne by customers if the level of tax repairs comes in higher.

Q. If a "collar" amount were to be utilized prospectively, do you have an opinion as to what a reasonable collar amount would be appropriate?

A. In my opinion, if any "collar" amount around the repairs deduction amount that is used to compute income tax expense in the current Aqua PA rate case were to be used going-forward, the "collar" should be no wider than $4 million per year. The $4 million reflects Aqua's current estimates of the amount of its annual repairs deductions that Aqua has identified as being uncertain. Allowing a collar amount larger than $4 million could allow Aqua to unfairly manipulate its earnings between rate cases, particularly if an inadequate level of repairs deductions is used for the calculation of income tax expense in the current rate case.

Schedule C-15, Other Revenue

Q. Do Aqua and its affiliates receive revenue with respect to marketing activities for non-basic services to Aqua's Pennsylvania customers?

A. Yes. Aqua's response to OCA-XXIV-5 indicates that revenue with respect to marketing activities for non-basic services to Aqua's Pennsylvania customers of $5,061,510 were recorded by Aqua Resources, Inc. Aqua's response to OCA-XXV-1 states that those revenues were recorded by Aqua Resources. It states that: "All revenue from HomeServe are recorded into Aqua Resource" into account number 6104090, Nonutil. Inc. – Home Services."

Q. How much of that revenue was reflected in Aqua's proposed ratemaking?

A. Aqua's response to OCA-XXV-1 indicates that none of the $5,061,510 of revenue for non-basic services to Aqua's Pennsylvania customers was reflected for either the water or wastewater utility.

Q. Do those revenues relate to the use of Aqua PA's utility customer information?

A. Yes. As discussed in OCA witness Alexander's supplemental direct and surrebuttal testimony, the revenues for non-basic services received from HomeServe relate to the use of Aqua PA utility name and logo to market HomeServe's unregulated products to Aqua's customers. Only minimal amounts of "regulatory offset fees" which were $2,618 in 2023 and $5,205 in 2024 to date, are used by Aqua to offset utility expenses, as explained in Aqua's responses to OCA-XXV-1(f) and Aqua's response to OCA-XXIV-6.

Q. How were similar revenues utilized in the recent PAWC rate case?

A. My Direct Testimony in the recent PAWC rate case at page 79 and PAWC's public responses to OCA-26-005, OCA-26-015 and OCA-26-016 in that case[1] indicate that PAWC included $659,624 of miscellaneous revenue from American Water Resources/Oncourse Home Solutions) in account 471 in PAWC's FTY and FPFTY. As stated in its response to OCA-26-016 in that case, PAWC records those revenue amounts "above the line" for ratemaking purposes and that the net amounts "offset PAWC's operating expenses [that are] recovered through rates."

Q. Should the Aqua amounts similarly be imputed and reflected as Other Revenue and be used in the current Aqua PA rate case to offset Aqua's operating expenses that are being recovered through rates?

A. Yes. As shown on Exhibit LA-5, Schedule C-15, I have reflected the $5,061,510 of revenue for non-basic services to Aqua's Pennsylvania customers that was identified in Aqua PA's responses to OCA-XXV-1 and OCA-XXIV-5 as Other Revenue for Aqua PA's water utility. As such, this amount is being imputed to above the line revenue and being used to offset the cost of providing service to Aqua's utility customers. This adjustment treats these revenues similarly for Aqua to how the similar revenues were treated for ratemaking purposes in the recent PAWC rate case.

[1] Public copies of those responses are included in Attachment LA-5 to my surrebuttal testimony. Those responses are in the public record of the PAWC rate case Docket Nos. R-2023-3043189 and R-2023-3043190 in my Direct Testimony in that case as Exhibit LA-3, pages 68 and 69 of 76 and Exbibit LA-4 page 11 of 11 (redacted version).

V. ADDITIONAL RESPONSE TO AQUA'S REBUTTAL ON VARIOUS ISSUES, INCLUDING ADJUSTMENTS THAT ARE NOT BEING REVISED

Q. What do you address in this section of your surrebuttal testimony?

A. In this section of my testimony, I respond to Aqua's rebuttal testimony on selected issues that have not already been addressed above in the discussion of revised and added adjustments.

East Whiteland Wastewater Utility System Proposed to Be Acquired by Aqua

Q. The rebuttal testimony of William Packer, Aqua Statement 1-R, at page 20, lines 14-16, continues to advocate for inclusion in Aqua PA's proposed revenue requirement the East Whiteland wastewater utility system notwithstanding the Commonwealth Court's decision and the pending appeal before the Pennsylvania Supreme Court. Should the East Whiteland utility be included in Aqua's revenue requirement in the current case?

A. No. For the reasons described in my Direct Testimony and the Direct and Surrebuttal Testimony of OCA witness Hoover, the East Whiteland utility should not be included in Aqua's revenue requirement. Whether the Commonwealth Court will be reversed is too uncertain to predict, which means the system should be excluded from the FPFTY revenue requirement. Aqua effectively is asking the Commission to infer that the Pennsylvania Supreme Court will reverse the Commonwealth Court's decision simply because it granted Aqua's petition for allowance of appeal. However, I am advised by OCA counsel that such an inference is not certain. Accordingly, given the existing Commonwealth Court decision and the high degree of uncertainty related to the pending appeal, East Whiteland should be excluded from the revenue requirement for the FPFTY.

Q. Has Aqua conceded that there is no time limit under which the Pennsylvania Supreme Court must issue a decision in that case?

A. Yes. Aqua's response to OCA-XXVII-21 concedes that "there is not a time limit for the Pennsylvania Supreme Court to issue a decision."

Q. What remedy does Aqua propose if the East Whiteland wastewater utility acquisition does not occur as projected by Aqua?

A. Aqua's response to OCA-XXVII-21 indicates that Aqua's proposed remedy would be to credit customer bills should it be required to do so as a result of the pending court proceeding. Aqua's response to OCA-XXVII-21(c), for example, states that: "The Company would apply a surcredit to Aqua water customers' bills."

Q. Would applying a surcredit to Aqua water customers' bills be preferable to simply not including the East Whiteland wastewater utility in Aqua's revenue requirement until the uncertainties regarding that proposed acquisition are resolved?

A. No. Simply excluding the East Whiteland wastewater utility in Aqua's revenue requirement until the uncertainties regarding that proposed acquisition are resolved is preferrable to having subsequent bill credits to Aqua's water utility ratepayers. Not including the East Whiteland wastewater utility in Aqua's revenue requirement in the current case until the uncertainties are resolved is consistent with the OCA recommendations in PAWC relating to other uncertain acquisitions.

Q. Has the OCA changed its recommendation that the East Whiteland wastewater utility should be excluded from Aqua's revenue requirement in the current case until the uncertainties surrounding the system are resolved?

A No. Significant uncertainties continue to exist with respect to Aqua's proposed acquisition of the East Whiteland wastewater utility. Those uncertainties include the pending Pennsylvania Supreme Court case. Aqua's response to OCA XXVII-21 concedes that "there is not a time limit for the Pennsylvania Supreme Court to issue a decision." Consequently, it would be premature to include a rate increase for the East Whiteland wastewater utility in the current Aqua PA base case, and it would be premature to include a subsidization of Aqua's proposed East Whiteland wastewater utility revenue increase by Aqua's water utility customers in the current rate case.

Special Deferred Accounting for Prospective PFAS Capital Expenditures and Other Costs

Q. Aqua witness Packer's Rebuttal Testimony at pages 3-10 addresses the Company's request for deferred accounting for cost incurred by the Company for PFAS related capital spending and other PFAS related costs. Has the OCA position opposing deferred accounting for Aqua's prospective PFAS costs changed as a result of Aqua's rebuttal?

A. No. OCA continues to oppose authorization of special deferred accounting for Aqua's prospective PFAS costs, as explained in my testimony and the testimony of OCA witness Hoover.

Q. At page 5 of his rebuttal testimony, Aqua witness Packer claims that it is "extraordinary" that a utility has to incur costs to comply with Environmental Protection Agency ("EPA") requirements. Do you agree?

A. No. It is common across the utility industry for utilities to have to incur costs to comply with EPA requirements. As examples, electric utilities for years have had to comply with EPA requirements concerning emissions, coal combustion residuals, and water quality standards. Moreover, much of the cost related to complying with EPA requirements involves capital expenditures that are recorded as utility plant when placed into service.

Q. Is the EPA rule that relates to the PFAS requirements being challenged?

A. Yes, as noted in OCA witness Hoover's direct testimony, the EPA rule that relates to the PFAS requirements is being challenged in federal court.

Q. Could approval of deferred accounting lessen incentives on the Company to control the amount of PFAS spending?

A. Yes. While Aqua witness Packer states at page 3, line 20, of his rebuttal testimony that the Company is not seeking guaranteed recovery, the purpose of the deferred accounting would be for the Company to seek recovery of the deferred costs in its next rate case. Knowing that the costs being incurred would not affect the Company's earnings in the years during which the expenditures are being made due to the deferral accounting treatment could lessen the incentives that would otherwise

exist on Company management to control costs and to see the most cost-effective means of compliance.

Q. At page 5 of his rebuttal testimony, Aqua witness Packer claims that its PFAS expenditures would be "nonrecurring." Do you agree?

A. No. Mr. Packard concedes at page 5, lines 18-19 of his rebuttal that the operational expense for operating the new equipment would be ongoing, *i.e.*, recurring. Moreover, the annual depreciation expense on the utility plant in service that is installed to meet PFAS requirements would also be recurring through the useful life of that equipment.

Q. To the extent that Aqua PA has capital expenditures related to PFAS compliance, is special deferred accounting needed?

A. No. To the extent that Aqua PA has capital expenditures related to PFAS compliance, such costs would be recorded on the Company's balance sheet as utility plant in service, and, if prudently incurred, would become part of Aqua PA's rate base in subsequent rate cases. For such capital expenditures, the normal utility plant accounting would already result in those amounts being recorded as assets on Aqua PA's books. Thus, there is no need for special deferred accounting for the PFAS related capital expenditures that would be recorded by the Company as utility plant in service.

Q. At page 5 of his rebuttal testimony, Aqua witness Packer claims that its PFAS expenditures would be "substantial" and refers to the Company's estimate of $300 million of projected capital expenditures between 2025 and 2029. Can you put that in context in terms of Aqua PA's total rate base?

A. As shown on Exhibit LA-4, Schedule A, page 1 in the current rate case, Aqua has proposed a total rate base of approximately $4.838 billion. As shown on Exhibit LA-4, Schedule A, page 2, the OCA's comparable adjusted rate base is approximately $4.773 billion. Capital expenditures of $300 million that are expected by Aqua for PFAS compliance would be approximately 6.2 percent increase to Aqua's proposed rate base in the current case, or approximately 6.3 percent increase to OCA's adjusted rate base. As a means of comparison, in Aqua's 2021 rate case,[2] with reference to my Exhibit LA-1, Schedule A, page 1, in that case, Aqua's proposed rate base was approximately $4.183 billion. The change in Aqua's proposal total rate base from its 2021 rate case to its current rate case is approximately $655 million, which equates to an Aqua requested rate base increase from the 2021 rate case to the current rate case of approximately 16 percent. Consequently, in comparison with the change in Aqua's requested total rate base form its 2021 rate case to the current rate case, *i.e.*, an increase of approximately $655 million, total Aqua projected capital expenditures for PFAS compliance of $300 million, does not appear to represent an extraordinary change in the Company's rate base from one rate case to another rate case.

[2] Docket Nos. R-2021-3027385 and R-2021-3027386.

Q. At page 6 of his rebuttal testimony, Aqua witness Packer discusses regulatory lag and the need to file additional rate cases if its PFAS capital plan and the Company's associated deferred accounting request is not approved. Please respond.

A. The timing of filing of base rate cases is subject to the judgment and discretion of Aqua PA and parent company management. Importantly, Mr. Packer does not commit to any rate case stay-out or moratorium period if its request for deferred accounting were to be adopted. Moreover, as noted above, the Company's PFAS capital expenditure estimate would not represent an unusual change in total rate base between Aqua PA rate cases, as indicated by the comparison of the Company's proposed rate base amounts from its 2021 rate case to the current rate case. Finally, Mr. Packer's testimony about lag is contradicted by Aqua witness Manning who testified that Aqua will file another base rate case in early 2026. Aqua St. No. 3-R at 13. That would mean that there will be no lag as the FPFTY in this case will be the HTY in the next case. Based on this, it is not clear why Aqua needs deferred accounting treatment for these costs at all given its planned rate case timing.

<u>B-2, Pennsylvania Net Operating Loss Deferred Tax Asset (Water and Wastewater)</u>

Q. As a result of Aqua's rebuttal testimony, are you revising the adjustment on Exhibit LA-2, Schedule B-2?

A. No. Aqua has attempted to increase rate base by $32.728 million for a deferred tax asset related to a Pennsylvania net operating loss ("NOL") carryforward. As confirmed by Aqua's responses to OCA discovery, this item was never included in

Aqua PA rate base in prior cases. Moreover, there is no PA state income tax normalization requirement that would require this item to be included in utility rate base. Therefore, as shown on Exhibit LA-5, Schedule B-2, (and as was shown on Exhibit LA-2, Schedule B-2 filed with my Direct Testimony) this item is being removed from the Company's proposed rate base. This reduces Aqua PA's proposed Water Base rate base by $31.414 million and reduces the Company's proposed Wastewater Base rate base by $1.314 million. The dollar amounts are from the Company's response to OCA-XV-25.

Q. Was a similar item added to rate base in Aqua PA's rate base in the Company's last rate case?

A. No. The Company's response to OCA-XV-26 indicates that the PA NOL existed during the Company's last rate case and states that the Company inadvertently did not include it in its proposed rate base in its last base rate case. Additionally, the Company's response to OCA-XXVIII-19 states that: "There is no prior Commission Order addressing the PA NOL." Aqua's response to OCA-XXVIII-28 concedes that PA NOL inclusion in rate base is generally a non-existing issue in Pennsylvania rate cases. Moreover, Aqua PA's witness Fischer has not presented testimony for Aqua PA or any of its affiliates for a PA NOL inclusion in rate base in any cases prior to the current Aqua PA rate case.

Q. Has Aqua provided an explanation of its understanding of normalization and flow through accounting for income tax items?

A. Yes. Aqua's response to OCA-XXVIII-18, which is attached to my surrebuttal testimony in Exhibit LA-6, contains Aqua's explanation.

Q. Did Aqua include a PA NOL in rate base in its 2018 or 2021 base rate cases?

A. No. Aqua's response to OCA-XXVIII-18 indicates that Aqua omitted rate base inclusion of the PA NOL deferred tax asset in its 2018 and 2021 base rate cases. Aqua has not identified any prior rate cases in which the Company included a PA NOL deferred tax asset in rate base, and has stated in its response to OCA-XXVIII-19 that there are no Commission Orders addressing the PA NOL.

Q. Aqua witness Fischer's rebuttal testimony, Aqua Statement 8-R, at page 5 refers to FAS 109. What is FAS 109 and how does it apply for ratemaking?

A. Aqua's response to OCA-XXVIII-20 provides Aqua's explanation of FAS 109, which is a financial accounting provision. Aqua's response to OCA-XXVIII-20 also states that: "Amounts included in rate base are determined by whether or not the normalization method of accounting was used, not FAS 109 accounting." Thus, Ms. Fischer's discussion of FAS 109 in her rebuttal testimony appears to be a distraction since Aqua has stated that the amounts included in rate base are not determined by FAS 109 accounting.

Q. Without the normalization method of accounting for PA state income taxes, would there be a deferred tax asset for a PA NOL?

A. No. Aqua's response to OCA-XXVIII-19 indicates that, without the use of normalization accounting for the PA NOL, there would be no funded deferred tax asset to include in rate base.

Q. Does Aqua apply flow-through accounting for PA state income taxes?

A. Yes. Aqua's response to OCA-XXVIII-18(c) indicates that Aqua uses the flow-through method of accounting for PA state income tax book-tax differences.

Q. Does Aqua expect a PA NOL will continue after January 1, 2025?

A. No. Aqua's response to OCA-XXVIII-23 indicates that after January 1, 2025, the Company will have sufficient state taxable income so it will no longer generate PA state NOLs.

Q. Has the Company stated that it will discontinue the normalization of state income tax expense for the PA NOL in 2025?

A Yes. Aqua PA witness Fischer's Direct Testimony at page 12, lines 12-14 states that: "the Company will discontinue the normalization of state income taxes for the PA NOL in 2024 ..." Rate base inclusion of a deferred tax asset for a PA NOL in the 2025 FPFTY being used to set Aqua PA's revenue requirement in the current case would be inconsistent with the Company discontinuance of the normalization of state income taxes for the PA NOL in 2024, and with the Company's response to

OCA-XXVIII-23, which indicates that after January 1, 2025, the Company will no longer generate PA state income tax NOLs.

Q. Should Aqua's rate base in the current rate case be increased for inclusion of a PA NOL deferred tax asset?

A. No. Aqua's proposal to increase rate base in the current rate case for inclusion of a PA NOL deferred tax asset should be rejected. A deferred tax asset for a PA NOL has never been included in rate base in any prior Aqua PA rate cases. Moreover, Aqua uses flow-through accounting for PA state income tax book-tax differences, and there is no reasonable basis for applying a normalization method only to the PA NOL item. Aqua has conceded that without normalization accounting, there would be no deferred tax asset for its PA NOL. Finally, Aqua has stated in its response to OCA-XXXVIII-23 that it does not expect that it would continue to have a PA NOL after January 1, 2025. For all of the above reasons and the reasons discussed in my Direct Testimony, Aqua's proposal to increase rate base in the current rate case for inclusion of a PA NOL deferred tax asset should be rejected.

Q. Does the Company's response to OCA-XV-28 indicate that it recorded equal amounts of a regulatory asset and a credit in the same amount related to its financial accounting for PA NOL amounts?

A. Yes. The Company's response to OCA-XV-28(d) indicates that it recorded equal amounts of a regulatory asset and a credit in the same amount related to its financial accounting for PL NOL amounts as of December 31, 2023.

Q. What is the Company's reason for attempting to include the PA NOL deferred tax asset in rate base in the current case?

A. The Company's response to OCA-XV-28(a) states that the Company normalized the PA NOL and that: "Under the normalization method of accounting, customers receive the benefit of the NOL creation through the deferred tax expense despite the Company not actually monetizing the benefit of the NOL, hence the reason for inclusion of the NOL DTA in rate base."

Q. Do you agree that deferred tax asset for a PA NOL should be included in Aqua's rate base in the current case?

A. No. The Company has not identified any requirement to normalize any PA state NOL deferred tax asset by included it in rate base. The Company's response to OCA-XV-27 states: "The Company is not aware of any PA state income tax normalization requirement addressing the inclusion of a PA NOL deferred tax asset in rate base." Nor am I aware of any such requirement. Internal Revenue Code normalization requirements apply to federal income taxes, not to PA state income taxes. There is no requirement for this item to be included in rate base and it has not been included in rate base in prior Aqua PA rate cases. Because of such reasons, no rate base addition for this item should be permitted in the current Aqua PA rate case.

Schedule C-13, Income Tax Expense - Interest Synchronization (Water and Wastewater)

Q. The rebuttal testimony of William Packer, Aqua Statement 1-R, at page 15, line 14, through page 16, line 11, address the interest synchronization deduction for income tax expense. Aqua witness Fischer's rebuttal testimony at pages 15-16 also addresses the interest synchronization adjustment. Has Aqua acknowledged that the interest synchronization is standard ratemaking adjustment in Pennsylvania?

A. Yes. Aqua's response to OCA-XXVII-20 states that the "interest synchronization is a standard ratemaking procedure in Pennsylvania. Moreover, the response states that: "Aqua PA is not contesting the calculation but is contesting the weighted cost of debt and the rate base amount used by OCA in the calculation." That response also indicates that Aqua PA agrees that interest synchronization will be based on what is ultimately approved by the Commission for the weighted cost of debt and rate base.

Q. Have you revised the interest synchronization adjustment?

A. No. The interest synchronization is a standard adjustment made in utility rate cases. The weighted cost of debt is multiplied by the utility's adjusted rate base to "synchronize" or match the amount of interest deduction for ratemaking purposes to the cost of debt and rate base that is being used to establish the utility's revenue requirement. The amount of synchronized interest deduction, because it is calculated to properly match the rate base and cost of debt components being used in the utility's rate case, will typically be different than actual amounts of interest

deductions claimed on the utility's filed tax returns. The interest synchronization adjustment is thus a widely accepted method of reflecting proper matching between the ratemaking elements that produce it. The fact that the OCA's recommended rate base and cost of debt differ from Aqua's proposed amounts is not a valid reason for failing to properly match the components of the revenue requirement determination process or to reject the OCA's interest synchronization adjustment.

Schedule C-2, General Inflation Adjustment (Water and Wastewater)

Q. Aqua witness Manning's rebuttal at pages 10-12 claims that the Company's proposed General Price Level Adjustment should be allowed to adjust expense categories not otherwise adjusted. Do you agree?

A. No. Aqua PA's General Price Level Adjustment attempts to apply a general inflation rate to operating expenses for which Aqua could not identify specific adjustments. It is therefore a general inflation adjustment and I continue to recommend that it be disallowed. Cases cited in my direct testimony support the disallowance of utility blanket inflation adjustments.

Q. Was a similar utility-proposed General Price Level Adjustment recently rejected by the Commission?

A. Yes. The Commission's Decision earlier this year in the Pennsylvania American Water Company rate case, Docket Nos. R-2023-3043189 (Water) and R-2023-3043190 (Wastewater) rejected a similar general inflation adjustment.

Q. Has Aqua demonstrated that the accounts to which it has proposed to apply its General Price Level Adjustment have historically increased at the rate of the GDP Price Index?

A No. Mr. Manning presents a chart on page 12 of his rebuttal testimony showing annual changes in the cost for various expenses; however, the historic changes in the amounts of those expenses do not appear to be close to the annual changes in the Consumer Price Index. Aqua has failed to demonstrate that the accounts to which it has proposed to apply its General Price Level Adjustment have historically increased at the rate of the Consumer Price Index. Rather, Aqua has attempted to apply a general inflation rate to a blanket group of operating expense accounts to which it could not otherwise identify specific adjustments.

Q. Please summarize your recommendation for Aqua's generalized inflation adjustment.

A. I continue to recommend that Aqua's proposed generalized inflation adjustment be rejected for the reasons presented in my direct testimony and above.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does. However, I reserve the right to incorporate new information that may subsequently become available through outstanding discovery or otherwise.

Exhibit LA-6

Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc.
Docket Nos. R-2024-3047822 (Water) and R-2024-3047824 (Wastewater)
Exhibit LA-6
Copies of Non-Confidential Material Referenced in the
Surrebuttal Testimony of
Ralph C. Smith

Document	Subject	Confidential	No. of Pages	Page No.
OCA-XXIV-5	Revenues of $5,061,510 were booked to Aqua Resources, Inc. for marketing activities for non-basic service provided to Aqua's Pennsylvania customers.	No	1	2
OCA-XXV-1	Details on how Aqua Resources recorded the $5,061,510 for non-basic services to Aqua's Pennsylvania customers.	No	2	3 - 4
OCA-XXVII-16	Aqua PA did not include a PA NOL ADIT in rate base in its 2018 base rate case.	No	1	5
OCA-XXVII-19	Risks to Aqua PA if the repairs deduction collar provision is discontinued.	No	1	6
OCA-XXVII-20	Aqua concedes that interest synchronization is a standard ratemaking procedure in Pennsylvania. Clarification about which aspects of interest synchronization Aqua PA is contesting.	No	1	7
OCA-XXVII-21	There is not a time limit for the Pennsylvania Supreme Court to issue a decision on Aqua PA's attempted acquisition of the East Whiteland utility system. Aqua proposes to credit customer bills if needed.	No	1	8
OCA-XXVIII-1	Filled seasonal positions.	No	1	9
OCA-XXVIII-4	35 seasonal positions included by Aqua in the FPFTY at $8,060 gross regular payroll per position.	No	2	10 - 11
OCA-XXVIII-5	Basis for Company's calculated vacancy rate of 2%.	No	2	12 - 13
OCA-XXVIII-6	Explanation of Aqua's Non-Operating Payroll.	No	1	14
OCA-XXVIII-8	Aqua vacancy credit of $1,108,352.	No	1	15
OCA-XXVIII-11	Aqua has not reflected the $161,200 adjustment shown on Aqua statement 3-R, Manning Rebuttal Testimony, page 7, lines 4-8.	No	1	16
OCA-XXVIII-12	Relationship between payroll expense and payroll tax expense.	No	3	17 - 19
OCA-XXVIII-13	Relationship between 401(k) expense and payroll expense.	No	2	20 - 21
OCA-XXVIII-14	Group insurance for vacant positions.	No	3	22 - 24
OCA-XXVIII-17	PA NOL inclusion in rate base is generally a non-existent issue in Pennsylvania rate cases. Aqua witness Fischer has not presented testimony for Aqua PA or any of its affiliates advocating for a PA NOL inclusion in rate base prior to this case.	No	1	25
OCA-XXVIII-18	Explanations of normalization and flow-through methods. Aqua is using flow-through for PA state income taxes. Aqua omitted rate base inclusion of the PA NOL deferred tax asset in its 2018 and 2021 base rate cases.	No	2	26 - 27
OCA-XXVIII-19	Aqua states: "There is no prior Commission Order addressing the PA NOL." Without the use of normalization accounting for the PA NOL, there would be no funded tax asset to include in rate base.	No	1	28
OCA-XXVIII-20	FAS 109 accounting. Aqua states that: "Amounts included in rate base are determined by whether or not the normalization method of accounting was used, not FAS 109 accounting."	No	2	29 - 30
OCA-XXVIII-23	Aqua anticipates that after January 1, 2025 it will have sufficient state taxable income so it will no longer generate PA state NOLs.	No	2	31 - 32
OCA-XXVIII-27	Aqua has not updated the $195.428 million federal income tax repairs deduction expected to be claimed on its 2023 federal income tax return, which with extensions is due to be filed October 15, 2024.	No	1	33
OCA-XXVIII-28	Repairs deductions, reported on tax return, actual 2020, 2021, and 2022, and estimated for 2023.	No	3	34 - 36
OCA-XXVIII-30	Explanation of UTP (uncertain tax position) and impact on Aqua proposed collar. "The UTP amount is based on the subset of work orders taken as a repairs deduction that has the potential of being reversed upon audit."	No	1	37
OCA-XXVIII-32	Federal income tax amounts. The last tax years that were audited were 2021-2011. As of September 16, 2024, there are no notifications of any amounts of federal income tax returns in which Aqua PA participates.	No	1	38
	PAWC non-confidential responses to OCA 26-015, OCA 26-005, and OCA 26-016 in Docket Nos. R-2023-3043189 (water) and R-2023-30431901 (wastewater) describing how PAWC records revenue from Oncourse Home Solutions/American Water Resources "above the line" in account 471 in the FPFTY and for ratemaking purposes all of those revenues offset PAWC's operating expenses that are recovered through rates.	No	3	39 - 41

SET XXIV INTERROGATORIES

OCA-XXIV-5 Identify the revenues received by Aqua or its affiliates with respect to marketing activities for non-basic services to its Pennsylvania customers.

RESPONSE

Revenues are booked to Aqua Resources, Inc. in the amount of $5,061,510. Please also see the response to OCA-XXIV-1.

Witness: William C. Packer
Date: 09/19/2024

AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXV INTERROGATORIES

OCA-XXV-1 Refer to the responses to OCA XXIV-5 and XXIV-6, and provide the following information:

a. Identify how much of the $5,061,510 was recorded in each account.
b. Identify how much of the $5,061,510 is for Aqua's water utility.
c. Identify how much of the $5,061,510 is for Aqua's wastewater utility.
d. Were any of the $5,061,510 in revenues booked from utility systems acquired by Aqua in 2023 or 2024? If so, identify how much of that revenue relates to each utility system that was or is being acquired by Aqua in 2023 or 2024?
e. Identify and provide the Aqua Resources accounting records for 2023 and to-date in 2024 showing in detail how the revenues paid by HomeServe are recorded.
f. Are the "regulatory offset fees paid by HomeServe" mentioned in the response to OCA XXIV-6 the exact same thing as the $5,061,510 amount that was identified in the response to OCA XXIV-5? If not, identify the amount of the "regulatory offset fees paid by HomeServe" mentioned in the response to OCA XXIV-6 and explain fully and in detail how those are credited to Aqua's utility customers.
g. For the 2023 HTY, 2024 FTY and 2025 FPFTY, identify all amounts related to the "regulatory offset fees paid by HomeServe" that were reflected by Aqua as offsets to the customer service charges assigned to each Aqua PA utility by the call center.
h. For the 2023 HTY, 2024 FTY and 2025 FPFTY, identify all amounts were reflected by Aqua as customer service charges assigned to each Aqua PA utility by the call center.
i. Please provide comparable information on the revenues in each year 2020, 2021 and 2022 that are comparable to the $5,061,510 amount noted in the response to OCA-XXIV-5.

RESPONSE

a. The amount of $5,061,510 was recorded into Aqua Resources. All revenues from HomeServe are recorded into Aqua Resources. On Aqua Resources, our GL account number is 6104090 and it is called Nonutil Inc. – Home Services.
b. None.
c. None.
d. No.
e. The revenues paid by HomeServe are recorded to GL account number is 6104090 and it is called Nonutil Inc. – Home Services as non-utility revenue and booked into the unregulated affiliate Aqua Resources.
f. No, the regulatory offset fees paid by HomeServe are part of the $5,061,510 amount. The 2023 offset fee total is $2,618.00; the YTD June 2024 total is $5,205. The Company receives $0.40 per call from HomeServe which offsets the Service Company charges which are allocated to the Aqua states.
g. None. No amounts are reflected by Aqua PA water or wastewater utilities as offsets because no costs for services are being charged to Aqua PA initially. No charges associated with HomeServe are billed to Aqua PA or any regulated utility.
h. The total ACO costs billed to Aqua PA for 2023 are $6,058,548.20. The projected ACO costs for 2024 and 2025 are $6,228,779.95 and $6,404,544.24, respectively. None of these charges include any amounts related to HomeServe. As noted above, the ACO time is offset by the $0.40 per call received by HomeServe, which is moved from ACO to Aqua Resources.
i. The revenues are as follows: 2020 - $2,659,932; 2021 - $3,799,757; 2022 - $4,831,632.

OFFICE OF CONSUMER ADVOCATE

SET XXVII INTERROGATORIES

OCA-XXVII-16 Refer to the rebuttal testimony of William Packer, Aqua Statement 1-R, at page 11, lines 19-21.

a. Please confirm that Aqua PA did NOT include a PA NOL amount in its proposed rate base in the rate case that Aqua PA filed in August of 2018.
b. If part a is not confirmed by the Company, identify and provide all specific documentation from the rate case that Aqua PA filed in August of 2018 showing exactly how much PA NOL Aqua proposed to include in rate base in that rate case.
c. Please confirm that in no rate cases prior to the current Aqua PA rate case did Aqua PA propose to include in rate base a PA NOL amount.
d. If part c is not confirmed by the Company, identify and provide all specific documentation from each rate case in which Aqua PA previously included a PA NOL amount in rate base.
e. Please confirm that there are no PA state income tax normalization requirements that require a specific rate base treatment for any PA state income tax NOL carryforward amounts.
f. If part d is not confirmed by the Company, identify, cite and provide all specific PA state income tax requirements that the Company believes require a specific rate base treatment for PA state income tax NOL carryforward related amounts.

RESPONSE

a. Aqua PA did not include a PA NOL ADIT in rate base in the 2018 base rate case.
b. See response to part a.
c. Aqua PA did not record any PA NOLs until 2012. The only rate cases prior to the current case that could have included the PA NOL ADIT in rate base were the 2018 and 2021 base rate cases. The PA ADIT NOL was not included in rate base in either case.
d. See response to part c.
e. See the response to OCA-XV-26 and 27.
f. See the response to part e.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVII INTERROGATORIES

OCA-XXVII-19 Refer to the rebuttal testimony of William Packer, Aqua Statement 1-R, at page 13, line 9, through page 14, line 8.

a. Please confirm that Mr. Packer's hypothetical is based on deferred accounting treatment being allowed prospectively for variations in tax repairs deductions.
b. Please confirm that without prospective continuation of deferred accounting treatment being allowed prospectively for variations in tax repairs deductions, the risk and responsibility for fluctuations in repairs deductions between rate cases would be on the Company, not on ratepayers.
c. If parts a and b cannot be confirmed, explain in detail.

RESPONSE

a. Aqua Statement No. 1-R, page 13, line 9 through page 14, line 8 discusses the risk of setting an arbitrarily high level of tax repairs deduction and includes the impact of deferred accounting treatment (the "collar mechanism"). The risk scenarios discussed are based on both the level of tax repairs deduction itself as well as the collar mechanism being in place.

b. Without prospective continuation of the collar mechanism, fluctuations in the tax repairs deductions between rate cases would result in risk/responsibility being borne by the Company if the level of tax repairs is lower and risk being borne by customers if the level of tax repairs comes in higher.

c. See response to part a and b.

SET XXVII INTERROGATORIES

OCA-XXVII-20 Refer to the rebuttal testimony of William Packer, Aqua Statement 1-R, at page 15, line 14, through page 16, line 11.

a. Please confirm that interest synchronization is a standard ratemaking procedure in Pennsylvania that calculated a pro forma interest expense deduction for income tax expense purposes by multiplying the rate base times the weighted cost of debt.
b. Please confirm that Aqua PA is not contesting the methodology used by the OCA for calculating the interest synchronization adjustment.
c. If parts a and b cannot be confirmed, explain fully.
d. Does Aqua PA agree that the interest synchronization should use the Commission's approved weighted cost of debt multiplied by the Commission's approved rate base?
e. If the response to part d is "no" explain fully.

RESPONSE

a. Yes, interest synchronization is a standard ratemaking procedure in Pennsylvania.
b. Aqua PA is not contesting the calculation but is contesting the weighted cost of debt and the rate base amount used by OCA in the calculation.
c. See the response to part a and b.
d. Yes, Aqua PA agrees that interest synchronization will be based on what is ultimately approved by the Commission for the weighted cost of debt and rate base.
e. See the response to part d.

OFFICE OF CONSUMER ADVOCATE

SET XXVII INTERROGATORIES

OCA-XXVII-21 Refer to the rebuttal testimony of William Packer, Aqua Statement 1-R, at page 20, lines 14-16 concerning the pending Supreme Court proceeding involving Aqua PA's attempted acquisition of the East Whiteland utility system.

a. What is Mr. Packer's and Aqua's understanding of when a decision from the Pennsylvania Supreme Court is expected?
b. If Aqua PA were ultimately to not be permitted to acquire the East Whiteland utility system, how would the rate increase for the East Whiteland utility that Aqua seeks in the current rate case be unwound? Explain fully.
c. If Aqua PA were ultimately to not be permitted to acquire the East Whiteland utility system, how would the rate increase by Aqua's base water utility ratepayers that Aqua seeks under Act 11 in the current rate case to subsidize the rate increase that Aqua seeks for the East Whiteland utility be unwound? Explain fully.

RESPONSE

a. The Company understands that there is not a time limit for the Pennsylvania Supreme Court to issue a decision.

b. The Company can credit customer bills should it be required to do so as a result of the pending court proceeding.

c. The Company would apply a surcredit to Aqua water customers' bills.

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-1 How many actual filled seasonal positions did Aqua PA have as of August 31, 2024 and what were the seasonal pay amounts for each such position?

RESPONSE

As of August 31, 2024, the Company had 15 actually filled seasonal positions in the FTY. Up through August 31, 2024, the Company had incurred costs of $84,075 associated with these positions. Some of these positions are still filled and costs are still being incurred by the Company as of the filing of this response.

Witness: Christopher E. Manning

**AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.**

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-4 Refer to Exhibit CEM-1-R filed with the rebuttal testimony of Christopher Manning, Aqua Statement 3-R.

a. Is the payroll cost of seasonal positions included or shown on Exhibit CEM-1-R? If "yes" in what amounts and on what lines? Show the amount of seasonal payroll included on each line of Exhibit CEM-1-R and explain how many seasonal positions are reflected in each line of Exhibit CEM-1-R that includes payroll for seasonal positions.
b. Show in detail how each of the "Vacancy Eligible Amounts" on each Exhibit CEM-1-R were derived.
c. Show in detail how the "vacancy credit" factor proposed by Aqua PA to calculate each of the Non-Union and Union "Vacancy Credit" amounts were calculated.
d. For each "vacancy credit" that was used by Aqua PA to compute amounts on Exhibit CEM-1-R, show in detail (1) the total number of Non-Union positions, (2) the total number of Union positions, (3) the number of unfilled or vacant Non-Union positions and (4) the number of unfilled or vacant Union positions.
e. Why on Exhibit CEM-1-R is Aqua PA calculating a separate "Vacancy Credit" amount for Non-Union and Union positions?
f. As of August 31, 2024, what is the full time filled work force Non-Union positions in total and by utility system?
g. As of August 31, 2024, what is the full time filled work force Union positions in total and by utility system?

RESPONSE

a. Yes. The payroll cost of seasonal positions is included in Exhibit CEM-1-R. There are 35 seasonal positions included within both the FTY and FPFTY. The dollars associated with these seasonal positions are included within the Seasonal/Co-Ops/Part Time Employees (Non Union) lines within the attachment. Each seasonal position in the FTY and FPFTY accounts for $8,060 in gross

regular payroll cost. This amounts to $282,100 in total for all seasonal positions in both the FTY and FPFTY.

b. The Gross Dollars and Exclusions derive from Highly Confidential Exhibit 2 provided in response to OCA-I-1. The calculations to arrive at the Vacancy Eligible amounts in CEM-1-R are included in CEM-1-R.
c. Please refer to the Company's response to part B as well as the Company's response to OCA-XXVIII-5.
d. Please refer to the Company's response to part B as well as the Highly Confidential Exhibit 2 attachment provided in response to OCA-I-1 where a breakdown of the positions by rate division is provided. The Company's vacancy credit of 2% is applied uniformly across all systems to the Company's eligible gross labor amounts. It is not possible to attribute a number of positions to the Company's vacancy credit as the Company is unable to specifically pinpoint which positions will be vacant in the FTY and FPFTY.
e. The Company calculates a separate Vacancy Credit amount for Non-Union and Union positions for presentation purposes only. See Schedules C-4.5 of Exhibits 1-A through 1-E for the break out of payroll by Non-Union and Union. The Vacancy Credit percentage utilized to calculate the vacancy credits is the same for both Non-Union and Union positions.
f. The Company does not specifically track the number of Non-Union positions by Utility System, but rather at a statewide level. As of August 31, 2024 there are 199 full time Non-Union Employees employed by the Company.
g. The Company does not specifically track the number of full time Union positions by Utility System, but rather at a statewide level. As of August 31, 2024 there are 377 full time Union Employees employed by the Company.

AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-5 Refer to Exhibit CEM-1-R filed with the rebuttal testimony of Christopher Manning, Aqua Statement 3-R. Show in detail how each of the following items was calculated and provide supporting calculations in Excel:

a. Vacancy Rate of 2%
b. Non Op rate of 1.18%
c. Capital Labor Rate of 31.67%

RESPONSE

a-c. The Company's Capital Labor Rate (CAP Rate) and Non Op Rate are derived by the Company performing a position by position analysis when it constructs its operating budget. The Company evaluates each position, the nature of the position and the amount of capital work that is expected to be performed by each position with each operational manager throughout Aqua. This evaluation for the FTY and FPFTY resulted in CAP Rates of 31.67% and Non Op Rates of 1.18%. Please refer to OCA-XXVIII-5 Attachment 1 for the calculations of these rates.

As for the Vacancy Rate of 2%, the Company continually evaluates the Vacancy rate that the Company is experiencing. As of April 2024, the last month before the Company filed its Case, the Company's Gross Dollars incurred for Regular Labor April YTD were $16,099,550. The Budgeted amount for April YTD was $16,443,720. This amounts to a 2.09% Vacancy Rate through April which is representative of the actual vacancy rate that the Company is experiencing.

OCA XXVIII-5 Attachment 1

		FPFTY Water Base	FPFTY Shenandoah	FPFTY WW Base	FPFTY LM	FPFTY EW		Non OP Rate
Non Operating Labor	Non OP	$ 652,540.03	$ 6,035.63	$ 60,626.24	$ 2,770.02	$ 2,925.84	$ 724,897.76	1.18%
	Total Labor	$ 55,300,002.43	$ 511,493.86	$ 5,137,816.64	$ 234,747.74	$ 247,952.53	$ 61,432,013.19

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-6 Refer to Exhibit CEM-1-R filed with the rebuttal testimony of Christopher Manning, Aqua Statement 3-R. Explain fully and in detail what the "Non Op" rate represents.

RESPONSE

The "Non Op", or Non-Operating, rate represents the percentage of labor that the Company performs that is not recoverable through rates from customers due to the nature of the work that falls under this category. Examples of work performed under this category consist of work on developer projects and work on business development opportunities. As a result, non-operating payroll expenses are separated to ensure that these expenses are not recovered from the Company's customers.

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-8 Refer to Exhibit CEM-1-R filed with the rebuttal testimony of Christopher Manning, Aqua Statement 3-R.

a. Is there any difference between (1) what Aqua had proposed in its original application in the current rate case and (2) any of the payroll amounts shown on the FPFTY page of Exhibit CEM-1-R? If so, identify, quantify and explain each such difference.
b. Is Aqua now proposing a total "FPFTY Vacancy Credit" of $1,108,352 as show on the FPFTY page, line titled "FPFTY Vacancy Credit" of Exhibit CEM-1-R?
c. If the response to part b is "no," identify the amounts of "FPFTY Vacancy Credit" that Aqua is proposing in its rebuttal filing, and show in detail how those amounts are calculated.

RESPONSE

A. There is no difference between what Aqua had proposed in its original application in the current rate case and any of the payroll amounts shown on the FPFTY page of Exhibit CEM-1-R.
B. Yes. The Vacancy Credit of $1,108,352 is what the Company had included with its original filing as the Vacancy Claim amount. Supporting calculations were included with the excel file CEM-1-R provided with the Company's rebuttal testimony.
C. See part B.

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-11 Refer to Refer to the rebuttal testimony of Christopher Manning, Aqua Statement 3-R, at page 7, line 4-8.

a. Does Aqua PA agree that the $161,200 adjustment identified on line 6 should be made?
b. If the response to part a is "no" explain fully/.
c. Has Aqua PA reflected the $161,200 adjustment (1) on Exhibit CEM-1-R filed with the rebuttal testimony of Christopher Manning or (2) anywhere else in its rebuttal filing? If not, explain fully why not. If so, identify exactly and specifically where that adjustment is reflected on Exhibit CEM-1-R and elsewhere in Aqua PA's rebuttal filing.

RESPONSE

A. The Company does not agree that the $161,200 adjustment identified on line 6 should be made.

B. The Company does not believe that the $161,200 adjustment is appropriate as it does not reflect the Company's historical seasonal hiring practices. The $161,200 adjustment is being requested to reflect the Company's FTY, or 2024, actual hiring of seasonal employees which consisted of 15 seasonal employees. The Company actively strives to fill each seasonal position every year. In 2022 and 2023, the Company hired 21 and 23 seasonal employees respectively. While the actual hirings may vary from year, an adjustment made to reflect a year which the Company considers an anomaly rather than the normal course of operations should not be made.

C. The Company has not reflected the $161,200 adjustment on Exhibit CEM-1-R filed with the rebuttal testimony of Witness Manning. Please refer to part B for the Company's reasoning as to why the adjustment was not made.

Witness: Christopher E. Manning

SET XXVIII INTERROGATORIES

OCA-XXVIII-12 Refer to Exhibit CEM-1-R filed with the rebuttal testimony of Christopher Manning, Aqua Statement 3-R. Also refer to the rebuttal testimony of Mr. Manning at page 8, lines 4-10 concerning payroll tax expense.

a. Identify, quantify and explain the amount of Aqua PA's payroll tax expense relating to each dollar amount on each line item of that Exhibit.
b. Does Aqua PA agree that there is a relationship between (1) payroll tax expense and (2) payroll expense? If not, explain fully why not. If so, identify, quantify and explain the relationship between Aqua PA's proposed FPFTY payroll expense and Aqua PA's proposed FPFTY payroll tax expense.
c. How much payroll tax expense has Aqua PA reflected for the FPFTY (1) in Aqua PA's rebuttal filing and (2) in Aqua PA's originally filing? Show the amounts by utility (e.g., Water Base, WW Base, etc.) and in total. Include calculations showing how those payroll tax amounts were calculated.
d. How much payroll tax expense has Aqua PA reflected for the HTY (1) in Aqua PA's rebuttal filing and (2) in Aqua PA's originally filing? Show the amounts by utility (e.g., Water Base, WW Base, etc.) and in total. Include calculations showing how those payroll tax amounts were calculated.
e. How much payroll tax expense has Aqua PA reflected for the FTY (1) in Aqua PA's rebuttal filing and (2) in Aqua PA's originally filing? Show the amounts by utility (e.g., Water Base, WW Base, etc.) and in total. Include calculations showing how those payroll tax amounts were calculated.

RESPONSE

a. There are no payroll tax expense claims contained within Exhibit CEM-1-R. The Company's payroll expense claim can be found on Schedule D-2.5 of Exhibit 1-A.

b. Aqua PA agrees that there is a relationship between payroll expense and payroll tax expense. Please refer to the Company's Highly Confidential Exhibit 2 Attachment provided in response to OCA-I-1 where the Company's payroll tax expense for each

individual position is provided by the categories listed on Schedule D-2.5 of Exhibit 1-A.

c-e. Please refer to the Company's Schedule D-2.5 of Exhibit 1-A for the Company's payroll tax expense claim in the HTY, FTY, and FPFTY. These amounts are the same in the Company's original filing and rebuttal filing. The payroll tax expense claim is derived by taking the information provided in the Company's Highly Confidential Exhibit 2 Attachment provided in response to OCA-I-1 and applying the Company's vacancy rate and capitalization rate to arrive at the expense claim for the FTY and FPFTY.

OCA-XXVIII-13 Refer to Exhibit CEM-1-R filed with the rebuttal testimony of Christopher Manning, Aqua Statement 3-R. Also refer to the rebuttal testimony of Mr. Manning at page 8, lines 11-18 concerning 401(k) expense.

a. Identify, quantify and explain the amount of Aqua PA's 401(k) expense relating to each dollar amount on each line item of that Exhibit.
b. Does Aqua PA agree that there is a relationship between (1) 401(k) expense and (2) payroll expense? If not, explain fully why not. If so, identify, quantify and explain the relationship between Aqua PA's proposed FPFTY payroll expense and Aqua PA's proposed FPFTY 401(k) expense.
c. How much 401(k) expense has Aqua PA reflected for the FPFTY (1) in Aqua PA's rebuttal filing and (2) in Aqua PA's originally filing? Show the amounts by utility (e.g., Water Base, WW Base, etc.) and in total. Include calculations showing how those 401(k) amounts were calculated.
d. How much 401(k) expense has Aqua PA reflected for the HTY (1) in Aqua PA's rebuttal filing and (2) in Aqua PA's originally filing? Show the amounts by utility (e.g., Water Base, WW Base, etc.) and in total. Include calculations showing how those 401(k) amounts were calculated.
e. How much 401(k) expense has Aqua PA reflected for the FTY (1) in Aqua PA's rebuttal filing and (2) in Aqua PA's originally filing? Show the amounts by utility (e.g., Water Base, WW Base, etc.) and in total. Include calculations showing how those 401(k) amounts were calculated.

RESPONSE

a. There are no 401K Expense amounts found within Exhibit CEM-1-R. Please refer to the Company's Schedule C-8.4 of Exhibit 1-A for a breakdown of the Company's 401K expense. A breakout of the Company's 401k claim by individual position can

be found within the Company's Highly Confidential Exhibit 2 Attachment provided in response to OCA-I-1.

b. Aqua PA agrees that there is a relationship between payroll expense and 401k expense. Please refer to the Company's Highly Confidential Exhibit 2 Attachment provided in response to OCA-I-1 where the Company's 401K match percentage for each individual position is provided along each individual's pre tax deferral percentage. All pertinent Company Annualized 401k Company Match amounts for the FPFTY can be found within the aforementioned attachment along with Schedule C-8.4 of Exhibit 1-A.

c-e. Please refer to the Company's Schedule C-8.4 of Exhibit 1-A for the 401K expense included within the Company's claim at the time of filing as well as rebuttal for the HTY, FTY and FPFTY. Please refer to the Company's Highly Confidential Exhibit 2 Attachment provided in response to OCA-I-1 where the Company's Annualized 401k Company Match amounts can be found by position for the FTY and FPFTY. The calculations can be found within the Exhibit 1-A Water Base attachment provided in response to OCA-I-1.

AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-14 Refer to the rebuttal testimony of Mr. Manning at page 8, line 19 through page 9, line 5 concerning group insurance expense.

a. Does Aqua PA agree that there is no group insurance expense for vacant positions?
b. Identity the amount of group insurance expense for vacant positions that Aqua reflected for the FPFTY in (1) Aqua's original application and (2) in Aqua's rebuttal filing.
c. In its rebuttal filing, for how many full-time positions did Aqua calculate group insurance expense?
d. Are any employees in the "Seasonal/Co-Ops/Part Time Employees (Non-Union)" line item on Exhibit CEM-1-$ eligible for Aqua provided group insurance? If not, explain fully why not. If so, identify the number of "Seasonal/Co-Ops/Part Time Employees (Non-Union)" in the HTY, FTY and FPFTY which were eligible and which received Aqua paid group insurance expense.
e. Identify the number of "Seasonal/Co-Ops/Part Time Employees (Non-Union)" in the HTY, FTY and FPFTY for which Aqua reflected group insurance expense.
f. In its rebuttal filing, did Aqua apply its proposed Vacancy rate to any amounts of group insurance expense? If not, explain fully why not. If so, show in detail how Aqua applied its proposed Vacancy rate to group insurance expense in its rebuttal filing for the FTY and FPFTY.
g. In its rebuttal filing, has Aqua included in its requested operating expenses any group insurance expense related to any full time positions that are currently vacant? If so, please identify, quantify and explain the amounts. Show the amounts in total and by utility system (e.g., Water Base, WW base, etc.)

RESPONSE

a. The Company does not agree that there is no group insurance expense for vacant positions.

b. Please see OCA-XXVIII-14 Attachment 1 where the amount of group insurance costs associated with the Company's Vacancy Rate Adjustment are shown.

c. The number of full time positions that the Company calculated group insurance expense for is included within the Company's Highly Confidential Exhibit 2 attachment provided in response to OCA-I-1.

d. There are no Seasonal/Co-Ops/Part Time Employees that are eligible for Aqua provided group insurance as group insurance is provided only to full time employees. Please see the Company's Highly Confidential Exhibit 2 attachment provided in response to OCA-I-1.

e. There are no Seasonal/Co-Ops/Part Time Employees in the HTY, FTY and FPFTY for which the Company reflected group insurance expense.

f. Yes, it did. These amounts are the same in the Company's Original and Rebuttal filings. Please see OCA-XXVIII-14 Attachment 1 where the amount of group insurance costs associated with the Company's Vacancy Rate Adjustment are shown.

g. The Company's claim for requested group insurance expenses can be found by position in the Company's Highly Confidential Exhibit 2 attachment provided in response to OCA-I-1. The Company's Medical, Dental, Vision, ADD, Life and Health Advocate costs for the FTY and FPFTY are listed out by individual and in total in the aforementioned attachment. The Company applied its vacancy rate to the gross amounts to reflect the impacts of vacancies on its group insurance costs. This vacancy rate is a percentage and not specifically attributable to a certain number of positions. Please see OCA-XXVIII-14 Attachment 1.

AQUA PENNSYLVANIA WASTEWATER, INC.**

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-17 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at pages 2-9.

a. Identify and provide a copy of each prior Aqua PA rate case in which Aqua witness Fischer has presented testimony advocating for a PA NOL amount to be included in utility rate base.
b. Identify and provide a copy of each prior Aqua PA affiliated utility rate case in which Aqua witness Fischer has presented testimony advocating for a PA NOL amount to be included in utility rate base.
c. Has Aqua PA been audited by the State of Pennsylvania concerning state income taxes in any tax year in which a net operating loss or a net operating loss carry forward was shown for Aqua PA?
d. If the answer to part c is "yes" identify and explain the results of each Pennsylvania state income tax audit, and provide the related documents.

RESPONSE

a. N/A. Witness Fischer has not presented testimony for Aqua PA or any of its affiliates advocating for a PA NOL inclusion in rate base prior to this rate case. Aqua PA's NOL situation is unique in that it was necessitated to reduce Aqua PA's customer rates by the tax benefit of the repairs deduction through the normalization of the PA NOL. Generally, the tax impact of the PA NOL is flowed through and inclusion of the related deferred tax asset in rate base is a non-existent issue in Pennsylvania rate cases.

b. See response to a.

c. Aqua PA has not been audited by the state of Pennsylvania since having a state net operating loss ("NOL") or state NOL carryforward.

d. N/A.

AQUA PENNSYLVANIA WASTEWATER, INC.**

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-18 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 3, lines 7-8 where the witness refers to the "normalization method of accounting."

a. Explain what is meant by the "normalization method of accounting."
b. Explain the "flow through" method of accounting.
c. Is Aqua using the "flow through" method of accounting for PA state income tax book-tax differences?
d. Is Aqua using the "flow through" method of accounting for federal income tax repairs deductions?
e. If the response to either part c or d is "no" explain fully and provide the related documentation.
f. In each of Aqua PA's previous rate cases, were there any differences between (1) the "normalization method of accounting" and (2) amounts that were included in rate base? If so, explain the differences.

RESPONSE

a. A normalization method of accounting for ratemaking purposes spreads the income tax impacts (benefit or detriment) over the entire period of the book versus tax timing difference so that customers receive or are charged the same amount of income tax based on the amount per the regulated books of the utility regardless of when the income tax is actually paid or reduced.

b. A flow through method of accounting for ratemaking purposes is where the income tax reflected in customers rates related to a book versus tax timing difference is based on the income tax expense or benefit when incurred by the utility. No deferred income tax expense is recorded. See the response to OCA-XV-18 for additional explanation of the flow through method of accounting.

c. Yes. Aqua is using the flow through method of accounting for PA state income taxes for property related book versus tax timing differences with the exception of the differences described in Aqua Statement 8, page 8, lines 18-21.

d. Yes.

e. N/A.

f. To the best of Aqua's knowledge, the omission of the Deferred Tax Asset for the Federal and PA State NOL's from rate base had differences in normalization accounting treatment versus amounts included in rate base as explained in Aqua Statement 8-R, pages 2-6. These two items would have only been differences in the 2018 and 2021 base rate cases.

Witness: Panpilas Fischer

AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-19 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 4.

a. Identify, cite and provide specific pages from each prior Commission Order upon which Aqua PA is relying for its proposed use of normalization accounting for the PA NOL.
b. Without the use of normalization accounting for the PA NOL, would Aqua PA have any alleged rate base amount in the current rate case?
c. If the answer to part b is "yes" explain fully and in detail how a rate base amount for a PA NOL would occur without normalization accounting.

RESPONSE

a. There is no prior Commission Order addressing the PA NOL. The Commission Order approved the flow through of the income tax benefits for tax repairs to customers and the normalization accounting for the PA NOL is a result. See the testimony of Company witness Packer, Aqua State 1-R at page 11 where the impetus and basis for the treatment of the PA NOL is summarized. Also see Aqua Statement 8-R, pages 4-5.

b. No. Without the use of normalization accounting for the PA NOL, there would be no funded deferred tax asset to include in rate base.

c. N/A.

Witness: Panpilas Fischer
Date: 09/23/2024

AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-20 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 5, line 2.

a. Explain what "FAS 109" is.
b. Has Aqua PA included amounts in its rate base pursuant to FAS 109 accounting in any prior Aqua PA rate case?
c. If the answer to part b is "yes" identify and provide specific citations to each previous Aqua PA rate case in which such rate base amounts were included.
d. Is Aqua PA relying upon any Commission approval from prior Aqua PA rate cases for using FAS 109 accounting for rate base amounts? If so, please explain fully and identify the prior Commission approvals of FAS 109 based rate base amounts upon which Aqua PA is relying.
e. Identify, cite and provide specific pages from each prior Commission Order upon which Aqua PA is relying for its proposed use of FAS 109-based accounting for the PA NOL for ratemaking purposes in the current case.

RESPONSE

a. FAS 109 is short for Statement of Financial Accounting Standards No. 109. This Statement establishes GAAP financial accounting and reporting standards for the effects of income taxes that result from an enterprise's activities during the current and preceding years. It requires an asset and liability approach for financial accounting and reporting for income taxes.

b. FAS 109 accounting is required for both public regulated and non-regulated entities. It is not synonymous with the normalization method of accounting for ratemaking. The reference to FAS 109 in Aqua Statement 8-R, page 5, line 2 is to distinguish a FAS 109 regulatory liability or asset from other utility regulatory assets and liabilities.

c. N/A. Amounts included in rate base are determined by whether or not the normalization method of accounting was used, not FAS 109 accounting. The normalization accounting rules precede the issuance of FAS 109.

d. No. See the response to b. FAS 109 accounting is a GAAP requirement. Rate base inclusion of ADIT is based upon the IRS consistency rules for the use of a normalization method of accounting as discussed in Aqua Statement 8-R, pages 6-7.

e. See the response to OCA-XXVIII-19a.

Witness: Panpilas Fischer
Date: 09/23/2024

AQUA PENNSYLVANIA, INC. &
AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. R-2024-3047822 & R-2024-3047824

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-23 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 7, lines 21-23.

a. Why is the Company discontinuing the normalization in 2025?
b. Does the 2025 discontinuation commence on January 1, 2025?
c. Does the 2025 discontinuation essentially cover the entire 2025 calendar year, i.e., the FPFTY selected by Aqua PA for the current rate case?
d. When did the Company commence the normalization accounting for the PA NOL?
e. Show the amounts recorded, or projected to be recorded, in each year starting with the Company's inception of the normalization accounting for the PA NOL and continuing through the 2025 FPFTY.
f. Has the Company previously received Commission authorization for its proposed ratemaking treatment related to the normalization accounting for the PA NOL? If "yes" identify and provide the specific Commission authorization upon which the Company is relying.

RESPONSE

a. After 1/1/2025 the Company anticipates that it will have sufficient state taxable income so that it will no longer generate PA state NOLs. If a PA state NOL is generated after 1/1/2025, Aqua PA will no longer pass the ongoing state income tax benefits of property related deductions that it has not monetized (i.e. current state income tax expense will not go below zero) to mitigate risk that could result from the inability to monetize the PA state NOL due to the 40% annual utilization limitation and the 10 year carryforward limitation under current PA state income tax laws.

b. The financial statement recognition for the normalization of the PA NOL would be in effect for calendar year 2025, however should Aqua PA reflect an actual state taxable loss in the next rate case, any impact in rates would not be in effect until the effective date of rates of the next base rate case.

c. See response to b.

d. The normalization accounting treatment of the PA NOL began in 2012.

e. For the balances of the HTY, FTY and FPFTY see Aqua Statement 8-R, Exhibit 1. For the estimated total balance of the PA NOL deferred tax asset at the end of 2012 to 2022, see below. The balances shown are at the statutory state and federal (for the federal benefit of state) income tax rates that would have been in effect at the end of each year:

	Balance of PA NOL DTA net of FBOS
2012	25,947,981
2013	26,059,755
2014	26,112,713
2015	26,112,713
2016	26,271,949
2017	28,057,764
2018	28,277,687
2019	30,610,921
2020	30,716,004
2021	31,279,560
2022	31,994,447

f. See Aqua Statement 1-R, page 11 which discusses how Commission approval of the ratemaking treatment of income tax benefits of the tax repairs deduction resulting in negative deferred state tax expense via the PA State NOL was memorialized.

OFFICE OF CONSUMER ADVOCATE

SET XXVIII INTERROGATORIES

OCA-XXVIII-27 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 10, line 17.

a. Has Aqua PA updated the $195.428 million amount of expected federal income tax repairs deductions expected to be claimed on the 2023 federal corporate income tax return?
b. If the response to part a is "yes" identify the most updated amount of federal income tax repairs deductions expected to be claimed on the 2023 federal corporate income tax return and, if different, please also provide the actual amount of federal income tax repairs deductions claimed by or for Aqua PA on the 2023 federal corporate income tax return in which Aqua PA participates, which, with extensions, should be getting filed by or on September 16, 2024.

RESPONSE

a. Please see the response to OCA-XXVIII-26d. The tax repairs deduction is a complex calculation which requires analysis of thousands of projects at a work order level and is still in the process of being analyzed. Aqua PA has until October 15, 2024 to file its 2023 federal income tax return.

b. N/A.

SET XXVIII INTERROGATORIES

OCA-XXVIII-28 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 12, table between lines 1 and 2.

a. Referring to the "Estimate 2023" column, are the actual amounts of federal income tax repairs deductions available for tax year 2023?
b. Please provide actual information for 2023 corresponding to each line item in the "Estimate 2023" column.
c. Show in detail how each amount on the "Gross Deductions" line were calculated and provided the supporting calculations.
d. Why are the amounts for 2021, 2022 and 2023 reduced for AFUDC?
e. Show in detail how each of the amounts on the "less AFUDC" line were calculated.
f. Show in detail how each amount on the "Less UTP" line was calculated and provided the supporting calculations.
g. Did Aqua PA include any amounts for UTP (uncertain tax positions) in its proposed HTY, FTY or FPFTY rate base. If yes, how much rate base in the HTY, FTY and FPFTY did Aqua PA include for uncertain tax positions?

RESPONSE

a. Please see the responses to OCA-XXVIII-26c-d and OCA-XXVIII-27a.

b. See the response to a. Actuals are not available yet.

c. See OCA-XXVIII-28c Attachment 1.

d. The starting point for the tax repairs deduction calculation is book basis of capitalized plant, which includes AFUDC. Any AFUDC calculated on projects qualifying for a tax repairs deduction is removed and offsets the gross tax repairs deduction.

e. See OCA-XXVIII-28c Attachment 1.

f. See OCA-XXVIII-28c Attachment 1.

g. Yes. Included as a reduction to rate base is a regulatory liability for released FIN 48 reserves in the amount of $4,873,528 for the HTY and FTY and $2,436,764 for the FPFTY as described in Aqua Statement 8, page 14, lines 10-12 and page 16, lines 10-12.

SET XXVIII INTERROGATORIES

OCA-XXVIII-30 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 12.

a. Is there any relationship between the amount of (1) the annual "collar mechanism" proposed by Aqua PA and (2) the amounts of uncertain tax positions (i.e., the "UTP") items?
b. If not explain fully why not.
c. If so, what is the relationship?

RESPONSE

a. The UTP amount is a reduction to the repairs deduction amount that is used to determine whether the collar threshold is exceeded or not. The UTP amount is based on the subset of work orders taken as a repairs deduction that has the potential of being reversed upon audit.

b. N/A.

c. See response to a.

SET XXVIII INTERROGATORIES

OCA-XXVIII-32 Refer to the rebuttal testimony of Panpilas Fischer, Aqua Statement 8-R at page 13, line 9 through page 15, line 14.

a. Since Aqua PA began claiming federal income tax repairs deductions, have any of the amounts that were identified as "uncertain tax positions" by the Company been disallowed by the IRS?
b. If the answer to part a is "yes" identify for each tax year the specific amounts that the Company had identified as "uncertain tax positions" that have been disallowed by the IRS?
c. As of September 16, 2024, which federal income tax returns in which Aqua PA participates are still subject to being audited by the IRS?
d. As of September 16, 2024, has any audit notification been provided concerning any of the federal income tax returns in which Aqua PA participates been provided by the IRS? If so, for which specific federal income tax returns (i.e., for which tax years) have IRS audit notices been issued?

RESPONSE

a. The last tax years that were audited were 2010-2011 which are prior to the UTP tax years.

b. N/A.

c. With respect to the tax repairs deductions identified as UTP, all tax years back to 2012 when the 481(a) deduction was first claimed are considered open years. See Aqua Statement 8-R, pages 13-14 for an explanation of how an audit adjustment would impact historical tax years.

d. No.

Question:

Accounting Information Related to Oncourse Home Solutions and American Water Resources

Refer to the responses to OCA 20-016, OCA 20-018, OCA 20-010 and OCA 20-023.

For the HTY and separately for calendar 2022 and calendar 2023, what amounts of (1) revenue and (2) expenses did PAWC record related to warranty services?

Response:

PAWC records revenue related to the Utility Fee as described in OCA 26-004. The amounts recorded for this revenue for the HTY, calendar year 2022, and calendar year 2023 amounted to $659,624, $663,147 and $659,197, respectively. Except for this Utility Fee revenue, PAWC records no other revenue or expenses related to Oncourse Home Solutions' warranty services.

Refer to the responses to OCA 20-016, OCA 20-018, OCA 20-010 and OCA 20-023.

For the FTY and the FPFTY what amounts has PAWC budgeted/forecasted for (1) revenue and (2) expenses related to warranty service?

a. Show amounts that PAWC budgeted/forecasted in each account in each period.

Response:

BEGIN CONFIDENTIAL RESPONSE

END CONFIDENTIAL RESPONSE

All revenues associated with AWR's payments for the Company's services provided under the Utility Agreement are recorded "above the line" for ratemaking purposes and offset PAWC's operating expenses recovered through rates. The Company included $659,624 in Account 471 – Miscellaneous Service Revenue for the FTY and the FPFTY that reduced the Company's revenue requirement in this case.

I. STATEMENT OF QUALIFICATIONS

Q. PLEASE STATE YOUR NAME, TITLE, AND BUSINESS ADDRESS.

A. My name is Aaron L. Rothschild. My title is President, and my business address is 15 Lake Road, Ridgefield, CT.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am President of Rothschild Financial Consulting ("RFC").

Q. PLEASE STATE YOUR EDUCATIONAL ACHIEVEMENTS AND PROFESSIONAL DESIGNATIONS.

A. I have a B.A. degree in mathematics from Clark University (1994) and an M.B.A. from Vanderbilt University (1996).

Q. PLEASE DESCRIBE YOUR BUSINESS EXPERIENCE.

A. I performed financial analysis in the telecom industry in the United States and Asia Pacific from 1996 to 2001, investment banking consulting in New York, complex systems science research regarding the power sector at an independent research institute, and I have prepared rate of return testimonies since 2002. See Appendix F for my resume.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION, OR OTHER STATE COMMISSIONS? IF SO, WHICH COMMISSIONS?

A. Yes. I have testified before the Pennsylvania Public Utility Commission. My expert witness experience also includes testifying in over 75 cost of capital proceedings before

the following state commissions: California; Colorado; Connecticut; Delaware; District of Columbia; Florida; New Hampshire; New Jersey; Maryland; North Dakota; Pennsylvania; South Carolina; Tennessee; and Vermont. See Appendix G for the list of dockets for each of my testimonies.

Q. ON WHOSE BEHALF ARE YOU PROVIDING THIS TESTIMONY?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

II. PURPOSE

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. The purpose of my testimony is to address the cost of capital for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua" or the "Company") which includes the following three components:

1. Cost of Equity ("COE")
2. Cost of Debt
3. Capital Structure

Based on my analysis of these cost of capital components, I recommend an allowed rate of return for ratemaking purposes, including an appropriate authorized return on equity ("ROE"), authorized cost of debt, and authorized capital structure.

Q. PLEASE DEFINE THE COE, COST OF DEBT, AND CAPITAL STRUCTURE.

A.

1. **COE:** The United States Supreme Court established the following legal standards regarding a fair rate of return: (1) "The return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks"[1] and (2) "[S]ufficient to . . . support its credit and . . . raise the money necessary for the proper discharge of its public duties."[2] My COE calculations provide my opinion of the return investors require to provide equity capital to Aqua based on current capital markets. Based on that calculation, I conclude that a market-based return in this proceeding would be 8.03%. However, I recommend an ROE of 8.70% with a range of 8.03% to 9.38%, as discussed below, based on the OCA's position that 8.70% would be sufficient to allow Aqua to raise the capital it needs to provide safe and reliable service and ensure that rates are more affordable/less unaffordable than if Mr. Moul's 10.95% ROE recommendation is used to set rates.
2. **Cost of Debt:** My cost of debt recommendation is based on the actual cost of det paid by the utility to its sources of credit. For example, if a utility has issued a bond with a 3% interest rate three years ago, its authorized cost of debt should be 3%, even if interest rates are currently higher or lower than 3%.
3. **Capital Structure:** Capital structure is the percentage of equity and debt that makes up the finances of a utility. For example, if a utility raises $1 million of equity capital and $1 million of debt capital, we say it has a capital structure containing 50% equity and 50% debt. The utility has the burden of proof to demonstrate that its requested

capital structure for regulatory purposes produces the lowest, reasonable overall cost of capital. My capital structure recommendation is based on my review of Aqua's justification for its requested regulatory capital structure, the capital structure ratios of other water utility companies, and the capital structure of Aqua's ultimate parent, Essential Utilities, Inc.. As discussed below, the reported capital structure of a regulated subsidiary is often not representative of how the regulated utility was financed. For example, the parent of a regulated utility can report funds raised through debt financing at the holding company level as equity financing on the books of its regulated utility subsidiary. Therefore, it is important to make sure Aqua's authorized capital structure would not overcharge consumers by including a higher common equity ratio than is appropriate or reasonable.[3]

Q. WHAT IS THE DIFFERENCE BETWEEN AQUA'S COST OF EQUITY AND ITS AUTHORIZED RETURN ON EQUITY?

A. The COE is the market-based return investors expect to earn on the market value of any given stock. In other words, the COE is the return investors expect to earn on the market price of equity. As it applies to this proceeding, it is the return investors require to provide equity capital to Aqua. The appropriate authorized ROE is based on the Commission's determination of the COE at the time of the proceeding, after reviewing the evidentiary record, which incorporates investor expectations and balances the needs of ratepayers. Once the Commission issues an authorized ROE, the market-based cost of equity will

[3] A higher common equity ratio, all else equal, results in higher rates for consumers because equity is more expensive than debt.

continue to fluctuate as capital markets inevitably continue to change. The authorized ROE is based on a snapshot of the COE, which is constantly changing.

Q. PLEASE DEFINE THE APPROPRIATE RATE OF RETURN.

A. The appropriate Rate of Return (ROR) is based upon the weighted overall cost of capital (WACC) of the current costs of debt and equity at the time of this proceeding. The weighted cost rate is calculated by multiplying the capital structure ratios of the sources of capital (debt, preferred equity, and common equity) times their respective cost rates.

WACC = Cost of Debt X Debt Ratio + COE X Common Equity Ratio + Cost of Preferred Equity X Preferred Equity Ratio.

Q. CALCULATING THE COST OF EQUITY IS A HIGHLY TECHNICAL TOPIC. HOW CAN A DECISION MAKER WHO IS NOT SPECIALIZED IN FINANCE BEST USE THE CONTENT OF THIS TESTIMONY?

A. My testimony includes a thorough technical analysis, including the use of specialized mathematical models. Models are required to determine the cost of equity like a map is required to plan a road trip. Maps and models are useful because they simplify the complexity and vastness of reality into a form that is understandable and useful. A map of Pennsylvania that left out no details would be the same size as the state and thus unusable. A model that included every detail of financial markets (e.g., the trading activity of every single stock investor on earth) would be unusable as well. It is critical to remember that models are simplifications of reality and there are arguably as many "models" as there are investors. My ROE recommendation is based on the best tools I am aware of to calculate Aqua's COE; however, I urge the Commission to test the reasonableness of my model results by comparing them to model results from sources that have nothing to do with this

proceeding. For example, I recommend that the Commission consider the long-term equity return expectations of pension funds and leading financial institutions like the ones shown in Table 4 on page 19. Reviewing the return expectations for investments outside of the utility spectrum demonstrates that my recommendation will more than adequately meet investor demands in a manner that does not artificially inflate the rates for Aqua customers' water and wastewater service.

Q. HAVE YOU REVIEWED AQUA'S RATE CASE FILING AND DIRECT TESTIMONY?

A. Yes.

III. INTRODUCTION AND SUMMARY OF CONCLUSIONS

Q. HOW IS YOUR TESTIMONY ORGANIZED?

A. First, I will provide a summary of my recommendations, an overview of cost of equity concepts, and explanation of how current capital markets relate to my cost of equity calculations. Second, I will provide a more detailed discussion of current capital markets and how key parameters are impacting equity costs. Third, I will provide my capital structure and cost of debt recommendation. Fourth, I will provide an explanation of the various models I use in my cost of equity calculations. Lastly, I will provide an evaluation of Aqua's rate of return testimony.

Q. PLEASE PROVIDE A SUMMARY OF YOUR RECOMMENDATIONS.

A. I recommend the following cost of capital for Aqua's combined operations, both water and wastewater:

- An overall cost of capital of 6.53% (6.19% - 6.88%).
- An ROE of 8.70%, which is the midpoint of the range between the high end of my market-based cost of equity recommendation of 8.03% based on my COE Model results and the unlevered DCF results of Aqua's witness Moul of 9.38%. 8.03% is my market-based recommended ROE and it represents the top end of my COE Model results (7.27% - 8.03%). Additionally, I recommend that the Commission set the ROE no higher than 9.38%, which represents the top end of Aqua witness Moul's DCF Model results excluding his leverage adjustment. The OCA's litigation position in this case is to establish an ROE at 8.70% which is the midpoint between the high end of my market-based calculations and the Company's unleveraged DCF calculation of 9.38%, based on the OCA's position that 8.70% would be sufficient to allow Aqua to raise the capital it needs to provide safe and reliable service and ensure that rates are more affordable/less unaffordable than if Mr. Moul's 10.95% ROE recommendation is used to set rates.
- A capital structure containing 50.53% common equity and 49.47% long-term debt, which is an imputed capital structure for setting just and reasonable rates. The Commission should reject Aqua's requested capital structures because they are not appropriate for setting reasonable rates in this proceeding since it has a significantly higher common equity ratios (53.95%) than the average common equity ratio used by other water utility companies in the country (50.7%)[4] and the consolidated capital structure

[4] Exhibit ALR-5, page 5.

being used by its parent Aqua's parent Essential Utilities, Inc. (about 47.5%).

- If the Commission decides to use Aqua's requested capital structure of 53.95% common equity and 46.05% debt instead of my recommended capital structure, I recommend a reduced authorized ROE of 8.56% (7.89% - 9.24%) to account for the lower financial risk of a capital structure with more equity.
- A debt cost rate of 4.32%.
- Rejection of the Company's request for a management performance adder.
- When determining an appropriate ROE, the Commission should consider (1) how fair market value acquisitions in Pennsylvania provide benefits to investors; and (2) how rate unaffordability harms consumers and investors, alike.

A summary of my cost of capital recommendations for Aqua's water and wastewater combined operations is presented in Table 1 below.

TABLE 1: ALR RECOMMENDED RANGE MIDPOINT - AQUA PENNSYLVANIA, INC.
Docket No. R-2024-3047822

	Capital Structure Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	49.47%	4.32%	2.14%
Short-Term Debt	0.00%	0.00%	0.00%
Preferred Equity	0.00%	0.00%	0.00%
Common Equity	50.53%	8.70%	4.40%
Rate of Return			6.53%

Exhibit ALR-1

If the Commission decides to use Aqua's requested capital structure instead of my recommended capital structure, it would be appropriate to reduce Aqua's authorized ROE

because it has lower financial risk. A higher common equity ratio means less debt, a lower chance of financial stress (financial risk), and therefore a lower cost of equity. On the other hand, a lower common equity ratio means more debt, a higher chance of financial stress (financial risk), and therefore a higher cost of equity. Based on a regression analysis of dozens of utility companies, I found a 0.04% reduction in the cost of equity for every 1% increase in the common equity ratio. Applying the results of this regression analysis, I determined that Aqua's authorized ROE should be reduced from 8.70% (8.03% - 9.38%) to 8.56% (7.89% - 9.24%) if their requested regulatory capital structure is used to set rates.

Q. IF THE COMMISSION DECIDES TO USE MR. MOUL'S TESTIMONY TO DETERMINE AQUA'S ROE, WHAT WOULD YOU RECOMMEND?

A. As discussed throughout my testimony, I determined that Aqua's market-based cost of equity is between 7.27% and 8.03% based on my cost of equity Model results. However, I recommend that the Commission set Aqua's return on equity at 8.70%, or the midpoint of my market-based cost of equity recommendation and the unlevered, DCF results of Aqua's rate of return witness, Mr. Moul, based on the OCA's position that it would be sufficient to allow Aqua to raise the capital it needs to provide safe and reliable service and ensure that rates are more affordable/less unaffordable than if Mr. Moul's 10.95% ROE recommendation is used to set rates. However, if the Commission decides to allow Aqua an ROE that is higher than I recommend, it should be no higher than 9.38% for the following reasons:

1. It is equal to the preferred COE model result (DCF) of Mr. Moul.

2. It excludes Mr. Moul's leverage adjustment, which the Commission has rejected in the past.[5]

3. Capital market conditions have changed such that there no longer any reason for the Commission to deviate from its stated preference to rely on the DCF model. In Aqua's last rate case, the Commission stated that "where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination."[6] At the time of that decision, capital markets were very different than today. Aqua claimed that "higher inflation expectations point to higher interest rates, which will contribute to higher capital costs prospectively, given that higher inflation results in greater risk of recovery of operating costs and greater volatility of earnings."[7] At the time of the Opinion and Order in Aqua's last rate case (May, 2022) Inflation rates were over 8% in the United States, while as of June 30, 2024, the inflation rate is about 3% and as discussed more below, investors expect the Fed to start cutting interest rates soon because inflation has been declining. There is no reason I am aware for the Commission to deviate from its stated preference for the DCF model at this time.

In my opinion an authorized ROE above 9.38% is too high because it is above the market-based cost of equity. However, if my recommendation is not adopted, as an alternative, I recommend that a 9.38% ROE be established as an upper limit, as the

[5] In Aqua's last rate case the Commission found that "awarding the Company a leverage adjustment would run contrary to the public interest." Source: Docket No. R-2021-3027385, Opinion and Order.
[6] Docket No. R-2021-3027385, Opinion and Order.
[7] Docket No. R-2021-3027385, Opinion and Order.

Commission moves towards getting authorized ROEs more in line with the market-based cost of equity over time.

Q. ARE YOU RECOMMENDING A SPECIFIC ROE OF 8.70% OR AN ROE RANGE OF 8.03% TO 9.38%?

A. I recommend both a range of appropriate ROEs and a specific point within that range that I consider to be the most appropriate. It is not possible to measure Aqua's COE with the precision of measuring temperature with a thermometer. However, the low end of my recommended ROE range of 8.03% to 9.38% is equal to the high end of the results of my cost of equity models. Thus, I recommend a specific ROE of 8.70% based on the OCA's position that it would be sufficient to allow Aqua to raise the capital it needs to provide safe and reliable service and ensure that rates are more affordable/less unaffordable than if Mr. Moul's 10.95% ROE recommendation is used to set rates.

Q. PLEASE SUMMARIZE HOW YOU DETERMINED YOUR 8.70% COST OF EQUITY RECOMMENDATION FOR AQUA.

A. To arrive at my recommendations, I applied the Constant Growth form of the Discounted Cash Flow ("DCF") Model[8] to a proxy group of 6 publicly traded water utility companies ("RFC Water Proxy Group")[9] using data available through June 30, 2024, the most recently available month-end data at the time of my analysis. I also used a Capital Asset Pricing

[8] The constant growth DCF model is a variant, or version, of the single-stage DCF model that uses a consistent, never-changing growth rate component in perpetuity.

[9] The RFC Water Proxy Group consists of the following six entities: American States Water, American Water Works, California Water Service Group, Essential Utilities, Inc., Middlesex Water Company, and SJW Corporation. As I explain later in my testimony, Aqua's witness Moul included eight companies in his proxy group, including all six in the RFC Water Proxy Group; however, I excluded the other two companies Mr. Moul included because Value Line does not provide a full company report for these companies and therefore I do not have enough data to complete my sustainable growth DCF method.

Model ("CAPM") to ensure the Commission is able to consider how inflation and interest rates are impacting Aqua's cost of equity. I use a proxy group to calculate Aqua's cost of equity because Aqua does not have publicly traded stock data needed for COE models.[10] Additionally, using a proxy group provides more reliable results because it is less likely to be skewed by specific circumstances or anomalies faced by any individual company.

As shown in Table 2 on page 15, Cost of Equity Model Results, the results of my cost of equity models, including six variations of the DCF and eight variations of the CAPM, range between 7.06% and 8.09%, with a lower 85th percentile of 7.27% and an upper 85th percentile of 8.03%, which I use to determine the market-based cost of equity range. The OCA's litigation position in this case is to establish an ROE at 8.70% which is the midpoint between the high end of my market-based calculations and the Company's unleveraged DCF calculation of 9.38%, based on the OCA's position that 8.70% would be sufficient to allow Aqua to raise the capital it needs to provide safe and reliable service and ensure that rates are more affordable/less unaffordable than if Mr. Moul's 10.95% ROE recommendation is used to set rates.

While I performed CAPM analyses, these analyses were to create a check on the reasonableness of my DCF results. The purpose of the check is to ensure that the impact of interest rates and inflation on the ROE was considered – the Commission's preferred method of performing this check is a CAPM analysis – and, based on the results of my CAPM analyses which are similar to those of the DCF, I have determined that the CAPM does not necessarily need to be incorporated into the Commission's determination of a

[10] Aqua's parent Essential Utilities has publicly traded stocks, but Essential Utilities owns many utility companies in different states. Therefore, Essential Utilities' stock is not the same as Aqua.

market-based ROE in this proceeding. A properly implemented DCF alone is sufficient to produce a reasonable, sufficient, and market-based ROE determination for Aqua.

TABLE 2: COST OF EQUITY MODEL RESULTS		
DCF	**Low**	**High**
Constant Growth - Sustainable Growth	7.76%	7.99%
Constant Growth - Option-Implied Growth	7.59%	7.83%
Non-Constant Growth	7.89%	8.09%

Outer Percentile Range	**7.27%**	**8.03%**
Midpoint of Range	**7.65%**	

Exhibit ALR-2

Q. ARE YOUR COE MODELS BASED ON ESTABLISHED METHODOLOGIES?

A. Yes. My constant growth DCF model is used by major financial institutions. J.P. Morgan Chase uses the sustainable growth form of the DCF method, as I do, in its 2019 Long-Term Capital Market Assumptions publication.[11] *Principles of Corporate Finance*, a leading financial textbook used in business schools and investment banks around the world, recommends using the very same method I use to calculate the cost of equity for regulated energy utility companies.[12] As discussed in Section F. Capital Asset Pricing Model on

[11] 23rd Annual Edition, Long-Term Capital Market Assumptions - Time-tested projections to build stronger portfolios, pp. 62-63.
[12] Brealey, Myers, and Allen (2017), Principles of Corporate Finance, 12th Edition, McGraw-Hill Irwin, New York, page 86-87.

page 62, my CAPM is based on methodologies used by Value Line, the Chicago Board of Options Exchange (CBOE), and published in peer-reviewed academic journals (e.g., The Review of Financial Studies). My CAPM method has also been recognized by state utility commissions. On April 9, 2020, the Public Service Commission of South Carolina stated the following:

> Amongst the three witnesses, Consumer Affairs Rothschild's approach was unique in that he included the use of both historical and forward-looking, market-based data in his analysis. Based on the testimony and facts presented, the Commission therefore adopts the recommended ROE of 7.46% proposed by witness Rothschild.[13]

In California's 2017 Water Cost of Capital proceedings, a company witness acknowledged the validity of RFC's method. California Administrative Law Judge Bemesderfer stated the following:

> [O]n cross-examination Vilbert [California Water Service Company witness] admitted that Rothschild's use of the method [b x r method] was "reasonable" and that Rothschild had "implemented the methodology correctly" in arriving at his Water Proxy Group ROE of 8.25%.[14]

In a 2024 decision, California Commissioner John Reynolds found merit in my analysis and used my cost of equity methodology, including the CAPM and DCF methods I use in this proceeding, to determine the authorized ROEs for California's ten Independent Small Telephone Companies (ILECs).[15]

[13] Order Ruling on Application for Adjustment in Rates, Docket No. 2019-290-WS, Order No. 2020-306, April 9, 2020, page 43.
[14] Proposed Decision of ALJ Bemesderfer, p.19, Public Utility Commission of California, Application No. 17-04-001 (February 6, 2018).
[15] Alternative Proposed Decision of, p.19, California Public Utility Commissioner John Reynolds of California, Application No. 22-09-003 (August 5, 2024).

Q. HOW DO YOUR RECOMMENDATIONS COMPARE TO THE RECOMMENDATIONS OF AQUA'S WITNESS, MR. MOUL?

A. As shown in Table 3 below, my 8.70% cost of equity and capital structure recommendations result in a 6.53% overall rate of return. Mr. Moul's 10.95% cost of equity and capital structure recommendations result in an overall rate of return of 7.90%.

TABLE 3: RECOMMENDATION COMPARISON - ROTHSCHILD AND MOUL

	Cost of Equity	Cost of Debt	Common Equity %	Debt %	Rate of Return
Rothschild [1]	8.70%	4.32%	50.53%	49.47%	6.53%
Moul [2]	10.95%	4.32%	53.95%	46.05%	7.90%

[1] Exhibit ALR-1
[2] Mr. Moul's Direct Testimony, AP Exhibit 4-A, page 1 of 29.

Mr. Moul and I recommend a different cost of equity for Aqua because we have fundamentally different analytical approaches. I focus on using market data (e.g., stock prices, bond yields, stock option prices) to measure investors' expectations as much as possible. On the other hand, Mr. Moul relies almost exclusively on non-market data, including accounting returns, i.e., return on book equity, even when market data is available. He increases his DCF result from 9.38% to 10.58% by implementing his so-called leverage adjustment.[16] As discussed below, this adjustment is inappropriate and should be rejected. The Commission has denied Mr. Moul's leverage adjustment in past cases.[17]

I do not agree with Mr. Moul on the appropriate cost of equity for Aqua for many reasons. The reasons I have come to different conclusions include: (1) Mr. Moul's use of non-market data such as interest rate forecasts; (2) the growth rates applied in his Constant

[16] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 23, lines 20-22.
[17] Docket No. R-2017-2640058, Opinion and Order, Page 93

Growth DCF model; (3) the implementation of his CAPM; (4) the inclusion of a non-market-based Expected Earnings Analysis; (5) adding a leverage adjustment to his DCF and CAPM results; and (6) adding a size premium adjustment ("mid-cap adjustment") to his CAPM result.

I recommend a different ROE[18] for Aqua than its witness Mr. Moul for many reasons.

Q. PLEASE PROVIDE A SUMMARY OF HOW YOUR COST OF EQUITY RECOMMENDATION COMPARES TO THE RETURN EXPECTATIONS OF MAJOR FINANCIAL INSTITUTIONS.

A. As shown in Table 4 on page 19, major financial institutions are informing their clients to expect returns on the overall market (S&P 500) of 6.2% to 8.5%. As stated above, Aqua's authorized ROE should be based investors' expectations as indicated by capital market data, not the opinions of small groups of people including those of major financial institutions. However, I chose to include the equity return expectations of major financial institutions to encourage the Commission to consider why Mr. Moul's 10.95% ROE is significantly higher than the financial mainstream. If there is a good reason for Aqua's COE to be hundreds of basis points higher than the equity return expectations of major financial institutions, I have not seen it.

[18] My ROE recommendation is based on Aqua' current market-based COE. As stated previously, the authorized ROE is based on a snapshot of the COE which is constantly changing. In the context of this case my recommended COE and ROE are synonymous.

TABLE 4: U.S. EQUITY RETURN EXPECTATIONS AMONG MAJOR FINANCIAL INSTITUTIONS	
Duff & Phelps / Kroll (June 2024) [1]	**8.5%**
Horizon Actuarial Services, LLC Survey - 20 Year Horizon (August 2023) [2]	
U.S. Equity - Large Cap (5.6-10.2%, 50% Percentile - 7.3%)	**7.3%**
U.S. Equity - Small / Mid Cap (5.1-10.9%, 50% Percentile - 7.6%)	**7.6%**
J.P. Morgan Asset Management - Equity Long-Term Returns (2023) [3]	**7.9%**
Charles Schwab - 10-year U.S. Large Cap Returns (January 2024) [4]	**6.2%**

[4] Schwab's 2024 Long-Term Capital Market Expectations, January 2, 2024.
https://www.schwab.com/learn/story/schwabs-long-term-capital-market-expectations

The returns on equity shown in Table 4 are anticipated equity returns across the broader stock market, including sectors such as US Large Cap and companies like Tesla and Amazon. These expectations would be expected to be higher than those for utility stocks because most companies that make up the S&P 500 operate in highly competitive markets. Regulated utility companies like Aqua do not operate in a highly competitive market. Therefore, it is surprising that Mr. Moul recommends an ROE (10.95%) that is significantly higher than financial professionals expect to earn on investments in companies that are operating in highly competitive markets.

Even my ROE recommendation of 8.70% (8.03% to 9.38%) for Aqua is above the upper part of the range of these expectations, which should give the Commission more confidence that if they adopt my recommendation, Aqua will be able to raise the capital it needs to provide safe and reliable service.

Q. PLEASE COMPARE AQUA'S REVENUE REQUIREMENT IF YOUR RECOMMENDATIONS ARE ADOPTED INSTEAD OF MR. MOUL'S.

A. If my 8.70% ROE recommendation and capital structure recommendation are used to set rates for Aqua and are applied to Aqua's proposed rate base amounts, the rate of return portion of the overall annual revenue requirement will be about $440 million. On the other hand, if Mr. Moul's 10.95% cost of equity recommendation and capital structure recommendation are used to set rates, the rate of return portion of the overall annual revenue requirement will be about $532 million.

If Mr. Moul's rate of return recommendations are adopted instead of my 8.70% ROE recommendation, consumers will pay approximately $92 million more per year.

Q. PLEASE EXPLAIN MORE REGARDING THE IMPORTANCE OF DETERMINING THE MARKET-BASED COE AS ACCURATELY AS POSSIBLE.

A. As discussed above, Aqua's authorized ROE should be in line with its market-based COE. In other words, the cost of equity is the return investors expect to earn when they purchase the equity (or stock) of a company. This makes sense because investor-owned utility companies (IOUs) raise money from investors.

Q. DO ACCOUNTING FIGURES AND AUTHORIZED ROES IN OTHER PROCEEDINGS REVEAL THE MARKET-BASED COE?

A. No. It would be insufficient and inaccurate to determine the cost of equity based on accounting information (e.g., revenue, net income, equity book value, or return on book equity) alone, as doing so neglects to account for the information that is revealed through investor's actions in the market. The return investors expect can come in the form of capital gains (stock price appreciation) or dividend payments. As investors buy and sell stock in

the market, they convey information about their return expectations and therefore the underlying cost of equity (companies with different risk profiles will have different costs of equity). This is why an accurate COE can only be established by incorporating capital market prices (e.g., stocks, stock options).

Authorized ROEs in other proceedings are applied to rate base, which is nearly identical to book value. Therefore, as explained further below, authorized ROEs in other proceedings do not reflect the market-based COE alone. In fact, the ratio of market prices to book value (market-to-book ratio) indicates that the COE for water utility companies is significantly lower than authorized ROEs.

Aqua's authorized ROE in this proceeding should not be based on accounting information alone or authorized ROEs of water utility companies in other proceedings without considering the stock price of those utilities.

Q. DO ANY ROE WITNESSES USE A DIFFERENT DEFINITION FOR THE COST OF EQUITY?

A. All ROE witnesses I have encountered over my more than 20 years in the industry, including Mr. Moul, define the cost of equity as market-based somewhere in their testimony. Mr. Moul correctly states that he uses "market models."[19] However, Mr. Moul's approach significantly relies on non-market based models. For example, his Comparable Earnings approach relies on accounting returns instead of market returns.[20] Calculating the cost of equity should be an interpretive approach (e.g., using market data to measure investors' expectations as Mr. Moul did in some parts of his testimony) rather than a

[19] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 7, lines 1-2.
[20] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 47, lines 1-23.

speculative one (e.g., using interest rate forecasts instead of investors' expectations as revealed in the market yield).

Q. IS YOUR ROE RECOMMENDATION BASED ON YOUR OPINION OF FUTURE STOCK PRICE RETURNS?

A. No. I do not pretend to be able to predict the future. Capital markets are unpredictable and, as explained above, it is investors' expectations that matter since they are the ones providing the capital. Therefore, I provide an expert interpretation of investors' return expectations as indicated by the current market prices of stocks, bonds, and stock options, without attempting to predict future prices.

I do use Value Line and Zacks analyst forecasts to estimate the market-based cost of equity in my Discounted Cash Flow (DCF) analyses. However, I do not use them mechanically and I go to great lengths to distill the sustainable growth component to ensure it is in line with investors' long-term expectations, including using a DCF model that is based only on market data (stock option prices). My Capital Asset Pricing Model (CAPM) is based on a direct measurement of investors' expectations as indicated by market prices instead of analyst forecasts, which have proven to be unrealistic. On May 16, 2022, McKinsey stated that "analysts' near-term forecasts are often overly optimistic and don't always correctly reflect operating performance."[21]

[21] David Kohn, Vartika Gupta, Tim Koller, Werner Rehm, *Do consensus estimates accurately reflect operating performance?*, May 16, 2022.

Q. YOU STATED ABOVE THAT ROES AUTHORIZED IN OTHER PROCEEDINGS SHOULD NOT BE USED TO SET THE AUTHORIZED ROE IN THIS PROCEEDING. CAN YOU ELABORATE ON WHY PREVIOUS PROCEEDINGS' ROES ARE NOT AN APPROPRIATE GAUGE FOR AQUA'S COE?

A. As discussed in Appendix A, when the market to book ratio of a water utility company is significantly above one, as they are now,[22] it indicates that the utility's COE is lower than its authorized ROE.[23]

In his 1970 book *The Economics of Regulation: Principles and Institutions*, regulatory economist Alfred Kahn explained why the cost of equity is lower than authorized returns when market to book ratios are significantly above one:[24]

> [T]he sharp appreciation in the prices of public utility stocks, to one and half and then two times their book value during this period, reflected ... a growing recognition that the companies in question were in fact being permitted to earn considerably more than their cost of capital. ... The source of the discrepancy between market and book value has been that commissions have been allowing r's [returns on equity] in excess of k [market cost of equity]; if instead they had set r equal to k, or proceeded at some point to do so ... the discrepancy between market and book value ... would have disappeared, or would never have arisen.

A utility company's COE should not be based on authorized ROEs, which are accounting returns. The COE is set based on what investors in the market expect for a given risk profile. In the case of a utility stock, an increasing market value results in a lower return on market for the same expected return on book, all else equal.

[22] See Exhibit ALR-3, page 1. The market to book ratios of the companies in my proxy group averaged 2.59 over the year ending June 30, 2024.
[23] An authorized ROE is applied to rate base, which is nearly identical to the return on the book value of equity; therefore, authorized ROEs are nearly identical to return on book equity.
[24] Alfred Kahn, *The Economics of Regulation: Principles and Institutions*, Mass. Inst. Tech. at 48 (fn. 69), 50 (1970).

IV. COST OF EQUITY IN TODAY'S FINANCIAL MARKETS

Q. WHY DO YOU CONSIDER CAPITAL MARKETS IN GENERAL?

A. My COE models are designed to reflect capital market conditions. However, it is important to "cross-check" the model results because capital markets are complicated. I consider capital market data in general like a ship captain might use visual landmarks, by comparing them with electronic navigation aids like GPS, and cross-referencing with nautical charts to confirm their position. This process of cross-checking helps to identify and correct any discrepancies or errors in any single source.

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS REGARDING CURRENT CAPITAL MARKET CONDITIONS.

A. The capital market data I discuss below indicate that an authorized ROE of 8.70% for a regulated utility like Aqua is sufficient for Aqua to be able to raise capital from investors.

As discussed in detail below, interest rates have increased in recent years and remain at levels not seen since the end of 2007. Capital market data indicates that the cost of equity for water utility companies remains below that of the overall market. While the cost of equity for water utility companies has likely increased relative to the overall market in recent years, it has likely declined on an absolute basis since the end of 2022. Aqua's consumers should benefit from the downward pressure on the cost of equity in the current strong stock market.

There are many cross currents in today's capital markets. However, I would like to emphasize that since the end of 2022 there has been a downward trend in the cost of equity of both the overall market and water utility stocks, specifically. My conclusion that a 8.70% ROE is sufficient for Aqua to be able to raise capital is based primarily on the

interplay between the following four capital market factors: A) inflation and interest rates, B) the relative risk/cost of equity for water utility companies (including Aqua), C) the cost of equity for the overall market, and D) investors' volatility expectations. I will discuss each of these components in detail below. First, however, I will provide a brief summary of the individual issues.

Q. PLEASE SUMMARIZE WHY THESE FOUR CAPITAL MARKET FACTORS SUPPORT YOUR 8.70% ROE RECOMMENDATION FOR AQUA.

A. I elaborate on each of the points in the following sections. However, the following summary of each of these market factors or developments shows how they impact the COE:

A. Inflation and Interest Rates. It is reasonable to ask how interest rates are impacting the cost of equity. All else equal, higher interest rates mean a higher cost of equity. However, as discussed below, all else is not equal and we must look beyond inflation and interest rates. The Federal Reserve (the Fed) has increased short-term interest rates (the Federal Funds Rate) from near 0% to a range of 5.25% - 5.50% as of June 30, 2024, to fight inflation.[25] Long-term interest rates have increased as well. However, inflation has been easing and the Fed Chair Jerome Power stated on July 2024 that a reduction in the Federal Funds Rate is possible in September 2024.[26] As shown on Chart 2 on page 31, investors expect the Federal Reserve to start lowering the Federal Funds Rate next year. Long-term interest rates have decreased since April 30, 2023, as well, with the yield on the 30-year U.S. Treasury bond decreasing from about 4.8% to about 4.5% between April 30 and the end of

[25] Federal Reserve Bank of New York. https://www.newyorkfed.org/markets/reference-rates/effr.
[26] https://www.wsj.com/economy/central-banking/federal-reservice-interest-rate-decision-b5c39738

June. Chart 2 shows that as of April 30, 2024, investors expected the Fed to reduce the Federal Funds Rate to about 4.25% by September 2026. As of June 28, 2024, they expected the Fed to reduce this rate to a little under 4.0. As shown on Chart 3 and Chart 5 starting on page 33, investors expect inflation to decrease sharply over the next few years and long-term interest rates to remain near current levels in coming decades.[27] These recent changes in inflation and interest rate expectations is likely putting more downward pressure on Aqua's cost of equity, as water utility stocks have started to significantly outperform the overall market in the middle of July 2024.

B. Relative risk/cost of equity of water utility stocks. As shown in Chart 13 on page 47, despite relatively high volatility expectations for the companies in the RFC Water Proxy Group, investors' expectations regarding the chance of a large drop in utility stock prices, or investors' perceived downside risk, remain significantly below those for the overall market, which indicates that the relative cost of equity for water utility companies remains below the overall market.[28] However, the volatility expectations for the companies in the RFC Water Proxy Group have not declined with the overall market over the past year and remain significantly higher than for the overall market.[29]

[27] Using the yield curve to measure investors' interest rate expectations is a common technique in finance. However, it is only an approximation because other factors can impact the current shape of the yield curve. For example, investors often require an extra yield to purchase bonds with longer-maturity dates. This is known as a term-premium. It is possible that the current term-premium is impacting my calculations and investors expect the yield on the 10-year U.S. Treasury bond to remain flat in the near term or even decrease.

[28] Option-implied skewness represents investors' expectations regarding the asymmetry of the probability distribution for stock price movements. Option-implied skewness is further discussed in Section IV. D. Investor-Perceived Downside Risk (Option-Implied Skewness).

[29] As discussed more below, volatility, uncertainty and risk are synonymous. Higher volatility expectations means higher uncertainty regarding future stock prices, higher risk and generally, all else equal, a higher cost of equity.

Additionally, the beta coefficients[30] of water utility stocks remain somewhat elevated, also indicating that the cost of equity for water utility stocks has become closer when compared to the overall market.

C. Cost of equity for the overall market. Global stock markets have been increasing in recent years, with the S&P 500 rising over 40% since the end of 2022.[31] An Economist article published in July reported that "[a]ll around the world, stock markets have been rising at a breakneck pace" and "[v]aluations, or the multiples by which underlying earnings are scaled up to generate share prices, have risen from expensive to alarming."[32] Stock prices have increased at a faster clip than earnings, leading to higher price-to-earnings ratios (See Chart 7 on page 37). In other words, investors have been willing to pay a higher premium for earnings. This rise in price-to-earnings ratios (among other market data) indicates that the cost of equity for the overall market (e.g. S&P 500) has been declining over the last two years and is at historical lows.

D. Stock price volatility. As shown on Chart 11 on page 44, investors' volatility expectations for the overall market decreased considerably between October 2022 and December 2023, nearing historical lows in June 2023. Despite a spike in late September and early October 2023, market volatility expectations remain significantly lower than the highs of October 2022. Like

[30] As discussed in Section F. Capital Asset Pricing Model on page 62, a beta coefficient measures the type of risk that most impacts a firm's cost of equity, i.e., systematic risk. As also equal, the higher the beta the higher the cost of equity.

[31] S&P 500 was 3,839.5 on the last trading day of 2022 and $5,460.48 on the last trading day of June, 2024. (5,460.48-3,839)/3839.5 = 42.2%. Source: Yahoo Finance.

[32] "Stocks are on an astonishing run. Yet threats lurk", *The Economist* (published July 16, 2024), https://www.economist.com/finance-and-economics/2024/07/16/stocks-are-on-an-astonishing-run-yet-threats-lurk

high price-to-earnings ratios, the relatively low market volatility expectations of investors indicate a lower cost of equity. However, as discussed above, the volatility expectations for the companies in the RFC Water Proxy Group have not declined with the overall market over the past year and remain significantly higher than for the overall market.

A. Inflation and Interest Rates

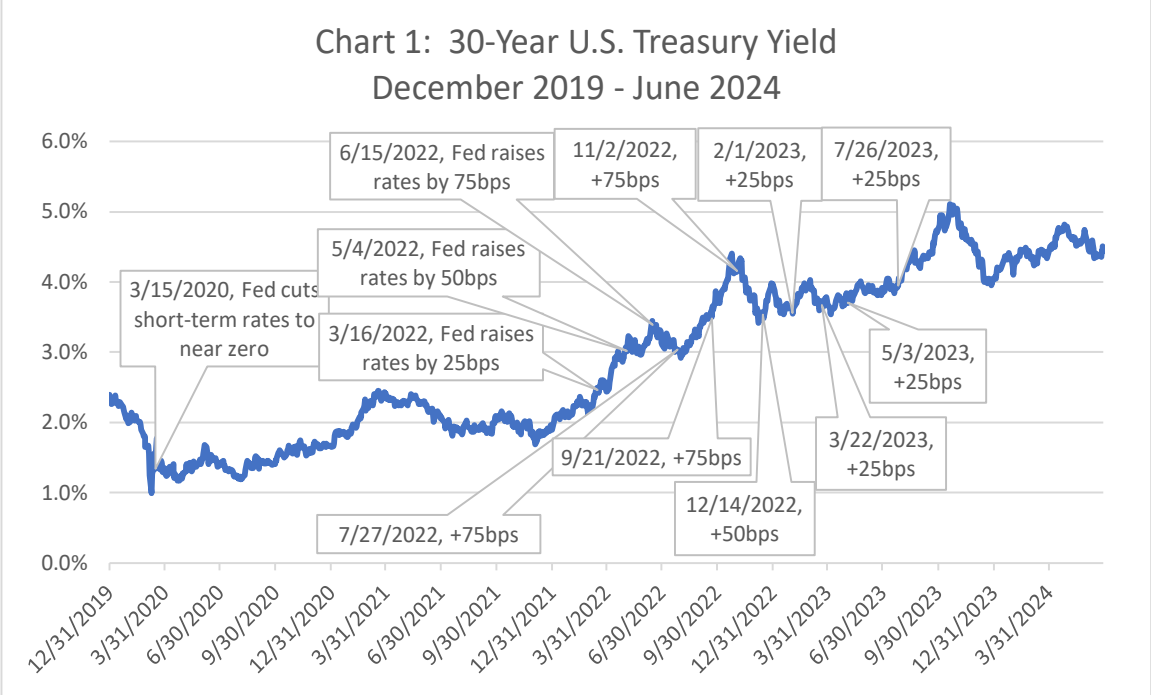
Q. PLEASE DISCUSS THE CURRENT INFLATION AND INTEREST RATE ENVIRONMENT AND WHAT IT INDICATES REGARDING THE COST OF EQUITY.

A. Starting in March 2022, the Fed has increased the benchmark federal-funds rate by a cumulative 5 percentage points (i.e., 500 basis points) to a 22-year high. As of June 30, 2024, the benchmark rate is 5.25% to 5.50%. After the Federal Reserve's last meeting in March 2024, Fed Chairman Jerome Powell stated that "Inflation has eased substantially while the labor market has remained strong, and that is very good news."[33] More good news has come in since that statement made by Chairman Powell. As discussed above, he stated that a rate cut could be on the table in the next Fed meeting. As shown in Chart 2 on page 31, market data as of June 30, 2024 shows that investors expect the Fed to cut the Federal Funds rate over the next couple years. Since Chairman Powell made these comments, market data indicates that investors have revised their expectations regarding the Federal Funds rate's downward trajectory.

[33] https://www.wsj.com/articles/transcript-fed-chief-powells-postmeeting-press-conference-29ce7b9f

Q. PLEASE EXPLAIN THE IMPORTANCE OF, AND THE RELATIONSHIP BETWEEN, THE FEDERAL FUNDS RATE AND THE COST OF EQUITY.

A. The Federal Funds rate is important because it can impact the cost of long-term borrowing and the cost of equity. As shown in Chart 1 below, the yield on the 30-year U.S. Treasury bond has increased along with the Federal Funds rate, increasing from 2% at the start of 2022 to 4.51% as of June 30, 2024. The cost of equity has increased along with the Federal Funds Rate and the yield on Treasury Bonds, but not one for one. As discussed above, the market-based COE for water utility stocks is below authorized ROEs because the market-to-book ratios of these stocks is above one.



Q. WHAT IMPACT CAN HIGHER INFLATION HAVE ON THE COST OF EQUITY?

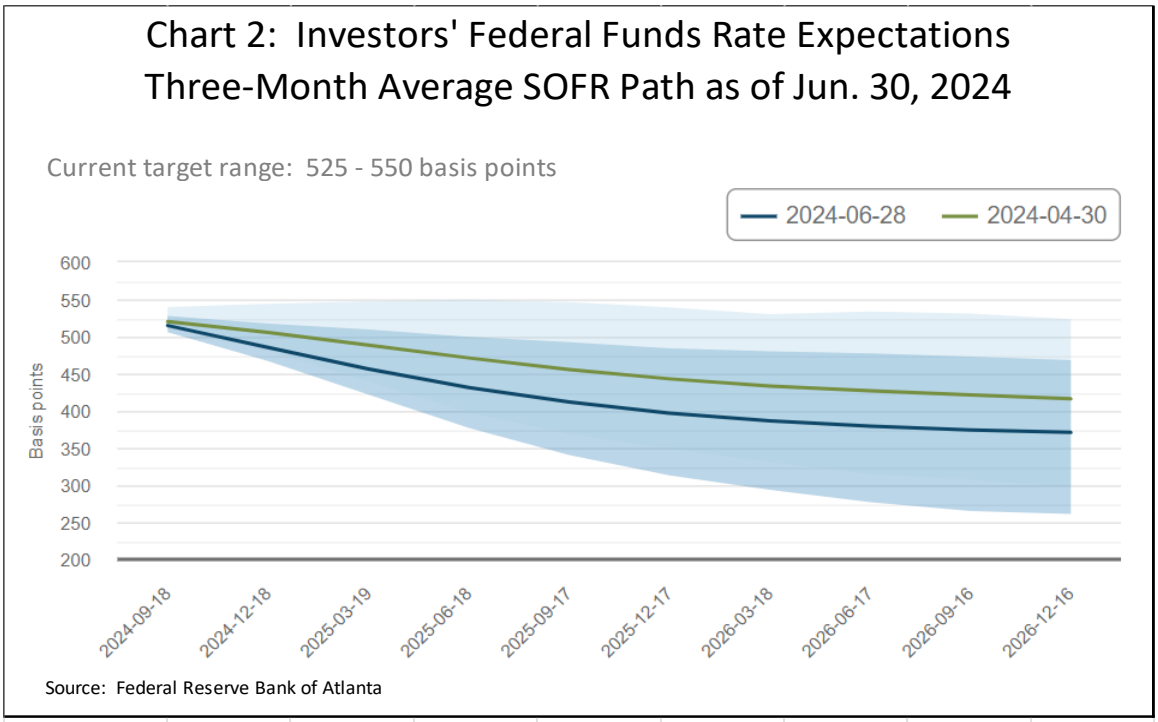
A. Higher inflation can impact the cost of equity because it can impact interest rates. Higher interest rates, all else equal, generally indicate a higher cost of equity for water utility

companies because fixed income investments become relatively more attractive when they start paying a higher rate (e.g., a bond with an interest rate of 3% is more attractive to investors, all else equal, than when they are paying a 2% rate). However, as discussed above, the cost of equity for utility companies has likely been decreasing because the cost of equity for the overall market has been declining. Additionally, the Commission can be confident that the 8.70% ROE recommendation is sufficient because it is higher than my calculations that reflect interest rate changes. My calculations reflect interest rate changes because they are based on market data, including the changing market yields on government bonds.

Q. WHAT DOES MARKET DATA INDICATE REGARDING INVESTORS' CURRENT INFLATION AND INTEREST RATE EXPECTATIONS?

A. As shown in Chart 2 on page 31, the Federal Reserve Bank of Atlanta estimated that as of June 28, 2024, investors expect the three-month average Federal Funds rate[34] will most likely decrease from its current range of 5.25%-5.50% to an expected value of under 4.0% in 2026. The same chart shows that about two months prior (April 30, 2024), investors expected the Federal Funds rate would decrease to be about 4.25% in 2026.

[34] The Federal Funds rate guides overnight lending among U.S. banks, but this short-term rate impacts the interest rates on debt with longer maturities.



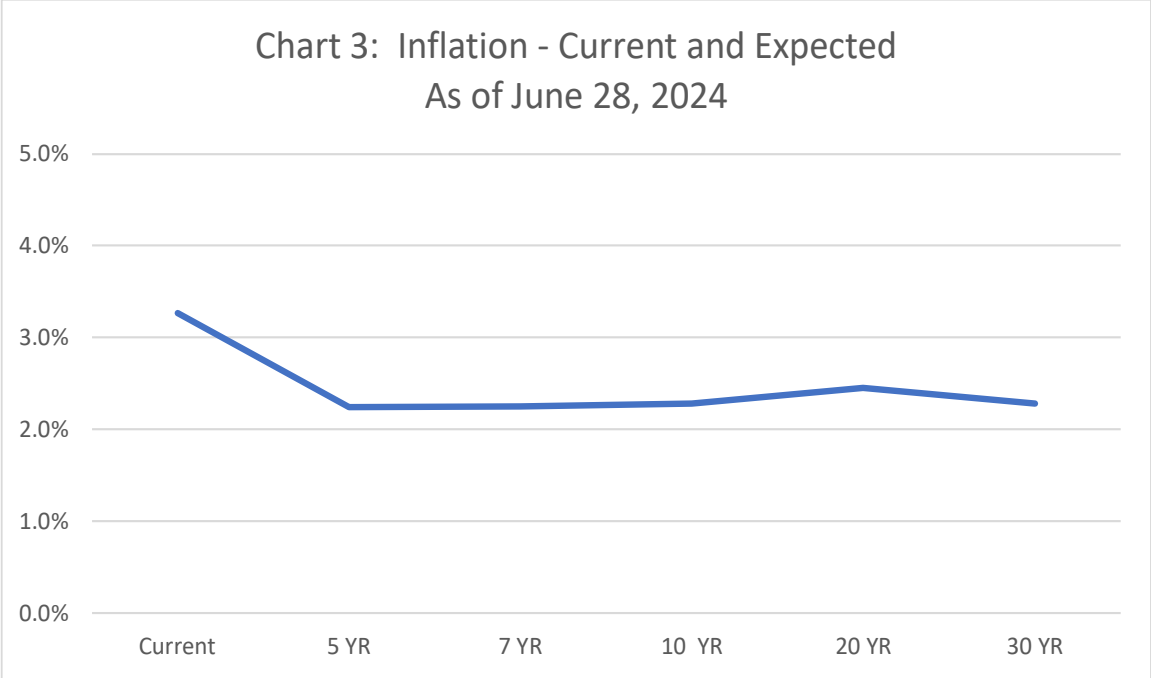
I use the Federal Reserve Bank of Atlanta's market-implied probabilities because it is based on investors' expectations as indicated by option prices, future prices, and swap spreads. As discussed considerably above, market-based expectations like those provided by the Federal Reserve Bank are more appropriate to consider when calculating the cost of equity than economist/analyst projections for many reasons, primarily because market data like that used by the Federal Reserve Bank provides a direct observation of investor expectations.

Q. YOU STATED THAT THE FEDERAL RESERVE BANK OF ATLANTA USES MARKET DATA TO CALCULATE INVESTORS' EXPECTATIONS REGARDING THE FEDERAL FUNDS RATE. IS THERE A WAY TO MEASURE INVESTORS' INFLATION AND LONG-TERM INTEREST RATE EXPECTATIONS AS WELL?

A. Yes. Regarding inflation, it is possible to measure investors' expectations directly simply by subtracting the interest rate of nominal Treasuries and TIPS (Treasury Inflation - Protected Securities) of comparable maturities. This difference is referred to as the "breakeven inflation rate" because it represents what inflation would have to be for an investor to "break even" or make the same return on both nominal Treasuries and TIPS.[35]

As indicated by the difference between nominal-treasuries and TIPS, Investors expect the Fed's actions will reduce the inflation rate substantially in the coming years. As shown on Chart 3 on page 33, the relative market price of inflation-protected bonds as compared to regular Treasury bonds as of June 30, 2024, indicates that investors expected the inflation rate to decline from the current 3.27% to only 2.24% over the next 5 years and to about 2.28% over the 30-year horizon.

[35] For example, if the yield on a nominal 10-year Treasury is 2.5% and TIPS of the same duration are 1.5%, an investor would make the same real return on both bonds if the inflation rate is 1% over the next 10 years. (Nominal yield – real yield = breakeven inflation rate) In this case, investors' breakeven inflation rate is 1% (2.5% - 1.5% = 1%). It makes sense that investors' inflation expectation is equal to the breakeven inflation rate because if investors, on average, believed that inflation was going to be 10%, in the example above, they would buy TIPS and expect to make exceptional profits. The investor who purchases TIPS would earn 1.5% + 10% inflation = 11.5%. The investor who purchased the nominal Treasury would lose 7.5% (2.5% yield — 10% inflation rate). With such large relative returns to be made buying TIPS in this hypothetical example, investors would bid up the price of TIPS and drive down the yield until investors expect the same real return on nominal Treasuries and TIPS. And in this way, the relationship between the market yields on TIPS vs. nominal Treasury bonds is a self-balancing safe measurement of investors' expectation of inflation.



Regarding interest rates, it is possible to use the yield curve to calculate investors' expectations regarding future interest rates. An upward sloping yield curve indicates investors expect higher interest rates and a downward sloping yield curve indicates investors expect lower interest rates in the future. As shown in Chart 4 on page 34, the yield curve went from being significantly upward sloping on March 31, 2021, to mostly downward sloping as of June 30, 2024.

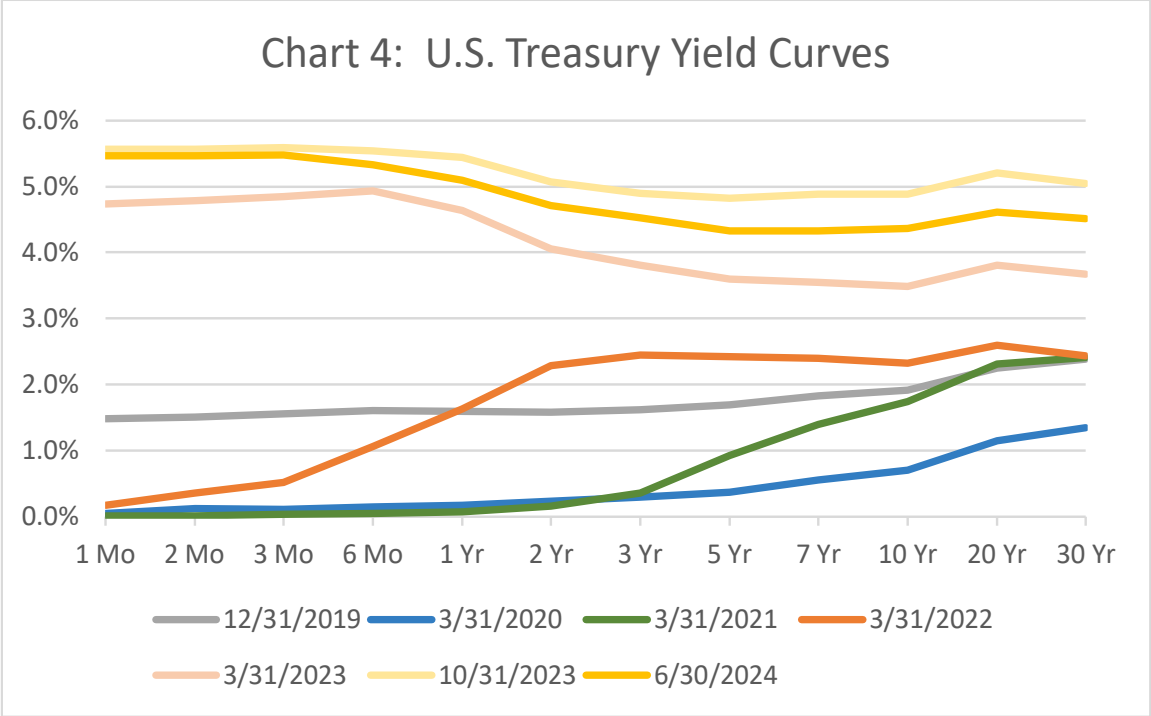


Chart 5 on page 35 shows that as of June 30, 2024, investors expected long-term interest rates (on 10-year U.S. Treasury Bond) to decline slightly over the next 20 years, increasing from 4.36% as of June 30, 2024, to 4.86% over the next ten years and then falling to 4.31% over the 20-year time frame. Investors' long-term interest rate expectations are somewhat consistent with the current flat to somewhat declining yield curve. As discussed above, using the yield curve to measure investors' interest rate expectations is a common technique in finance. However, it is only an approximation because other factors can impact the current shape of the yield curve, including a term premium.[36]

[36] Compensation demanded by investors for bearing the risk that interest rates may change over the life of the bond. If the interest rate on long-term bonds increases, investors could lose a significant amount of money.

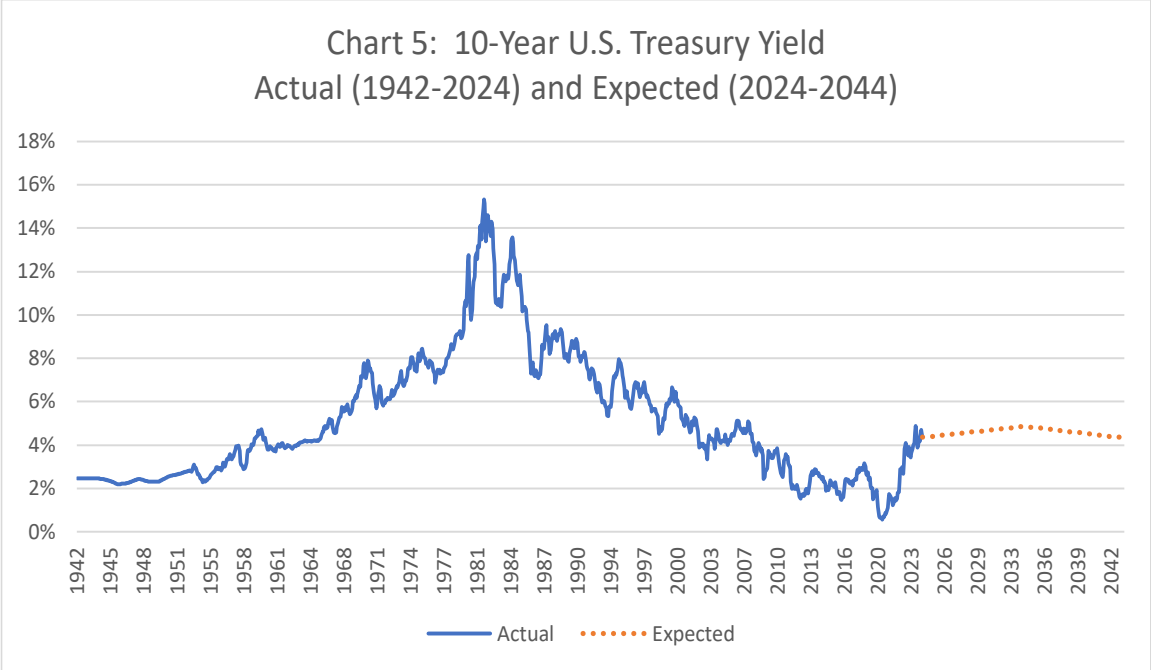

Chart 5 above also shows that although long-term interest rates have increased since reaching historical lows in 2020 and 2021, they remain far below interest rates from the 1970s and 1980s when the yield on the 10-year U.S. Treasury bond climbed over 14%.

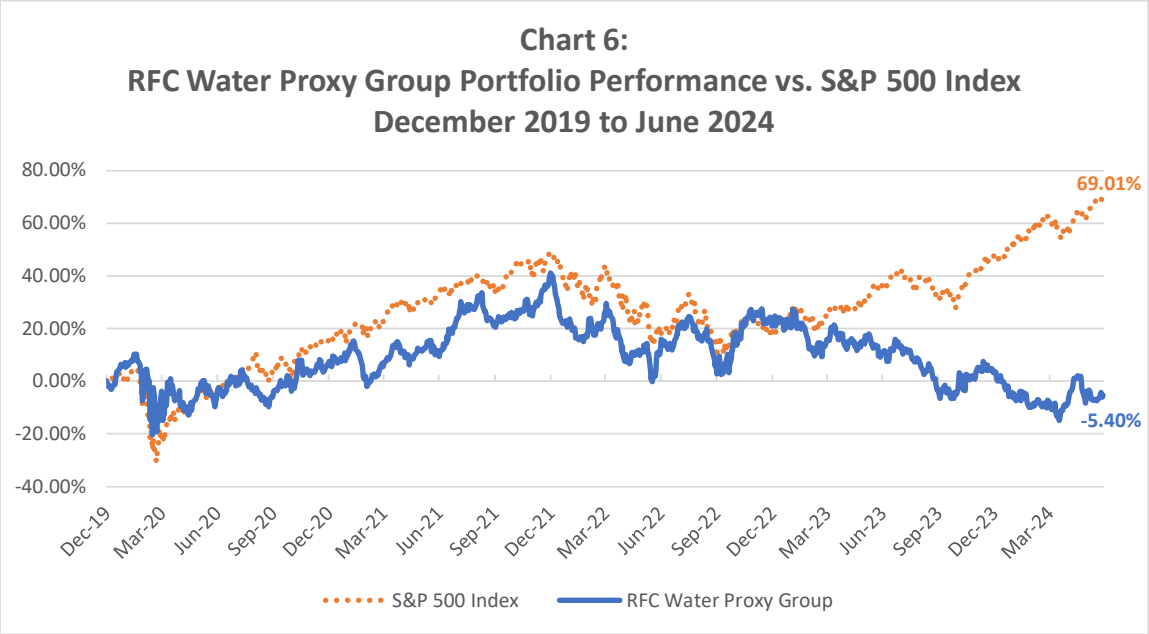
B. The cost of equity for the overall market

Q. WHAT, IF ANYTHING, DOES STOCK MARKET DATA INDICATE WITH REGARD TO THE COST OF EQUITY?

A. As discussed above, increasing stock prices have in recent years led to higher price-to-earnings ratios. All else equal, higher price-to-earnings ratios indicate that the cost of equity may be decreasing.[37] As show in Chart 6 on page 36, stock prices for the S&P 500 have increased significantly recent years, up 69.01% between December 31, 2019 and June

[37] When investors pay a higher price today for the same earnings, the immediate yield or return on investment (ROI) is lower. Using our real estate investment analogy, if you spend more on an apartment, the rental income is a smaller return relative to your investment.

28, 2024. On the other hand, the water utility stocks in the RFC Proxy Group were down 5.40% over the same time period.



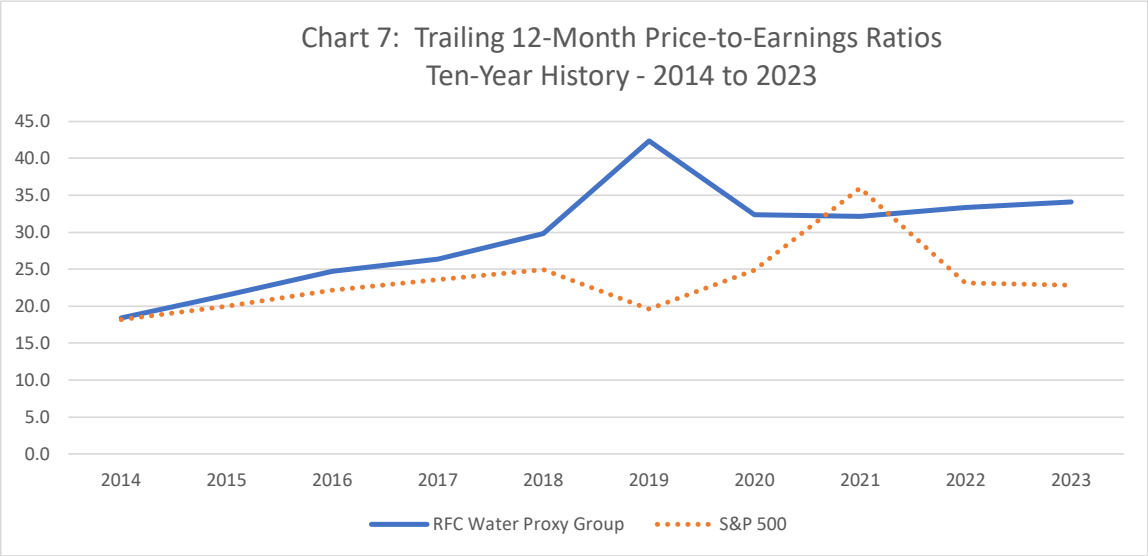
Regarding the underperformance of water utility stocks over the past one, three- and five-year periods, Value Line reported that "the stocks [of water utilities] had just become too expensive and began trading at price-to-earnings ratios that weren't appropriate for the industry's estimated earnings growth."[38]

Value line referred to price-to-earnings ratios because stock prices on their own cannot tell us how the cost of equity has changed. As discussed above, all else equal, price-to-earnings ratio and the cost of equity are inversely related – a higher price-to-earnings ratio indicates a lower cost of equity and a lower price-to-earnings ratio indicates a higher cost of equity.

As shown in Chart 7 on page 37, the price-to-earnings ratio of the S&P 500 has increased from about 18.1 in 2014 to 22.82 in 2023. Over the same time period the price-

[38] Value Line Water Utility Industry Report, July 5, 2024.

to-earnings ratio of the Proxy Group increased from 18.4 to 34.1. The ten-year (2014-2023) average of the S&P's price-to-earnings ratio is about 23.53. As investors are willing to pay more (higher price-to-earnings ratio) for the same earnings, this indicates that the cost of equity is decreasing. The price-to-earnings ratio indicates that equity costs for the overall market have been declining in recent years. Chart 7 also shows that the price-to-earnings ratio for water utility stocks has increased even more than for the S&P 500, which indicates that the cost of equiy for water utility stocks may have declined relative to the overall market over this time period.



Q. DOES ADDITIONAL EVIDENCE INDICATE THAT THE COST OF EQUITY IS RELATIVELY LOW BY HISTORICAL STANDARDS?

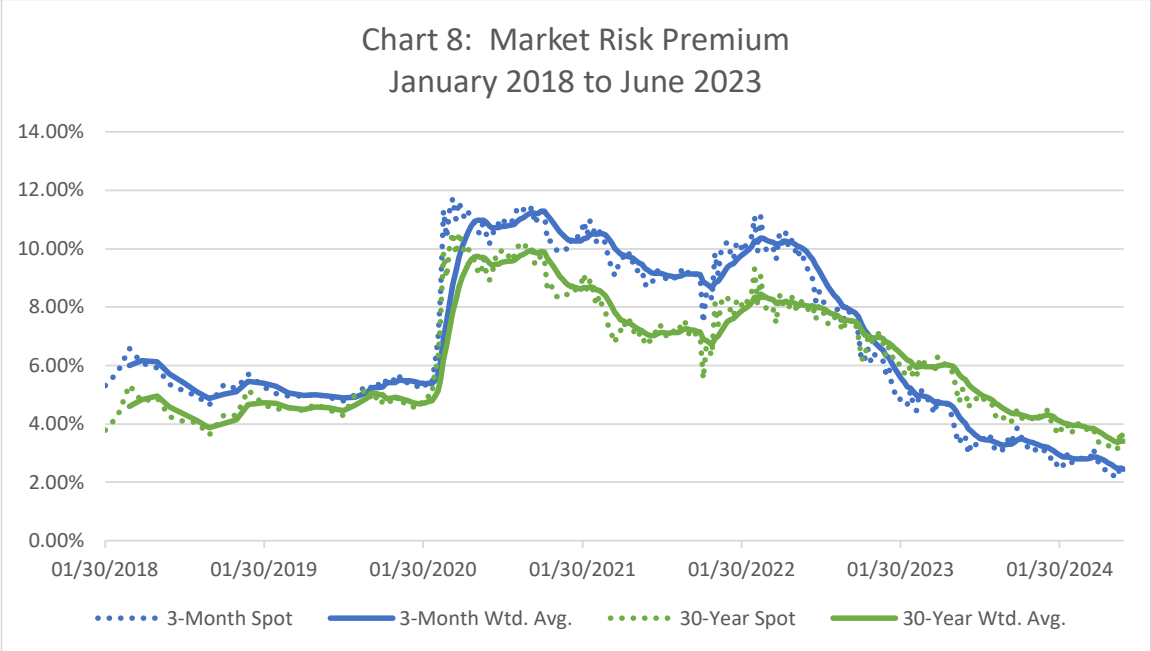
A. Yes. I discussed that increasing stock price and price-to-earning ratios show that the cost of equity for the overall market and for water utility stocks indicates that the cost of equity has been trending down and is likely low by historical standards. Another common way to think about the cost of equity is the following:

COE = risk free interest rate + market risk premium

As the equation above indicates, investors require a premium (i.e., higher return on investment) to invest in equity over debt. This makes sense because investors face more risk when they buy equity than when they buy debt. Debt holders are paid first. We often refer to this premium as the equity risk premium or market risk premium ("MRP"). Leading scholars on the topic have determined that investors generally demand an MRP of 4.0% on average. However, MRP for utilities is not always 4%; it can be higher or lower depending on current market conditions.

Q. HOW HAS THE MRP CHANGED OVER TIME?

A. As shown on Chart 8 on page 39, the market risk premium mostly declined since peaking in 2020 and as the COVID-19 pandemic spread around the world in 2020. The market risk premium over the 3-month U.S. Treasury bill exceeded 10% for portions of February 2022 and declined to just over 3% by November 2023. The market risk premium over the 30-year U.S. Treasury bond was about 8% in February 2022, declining to just over 4% by January 2023 and is 3.29% as of June 30, 2024. These calculations are discussed in more detail in the portion of my testimony regarding my CAPM analysis.



C. Volatility Expectations

Q. PLEASE DISCUSS CURRENT STOCK PRICE VOLATILITY EXPECTATIONS AND WHAT THEY INDICATE REGARDING THE COST OF EQUITY.

A. Volatility, uncertainty, and risk are synonymous. There are two primary types of volatility: "realized volatility" and "implied volatility." The former is based on historical returns, which may or may not represent future volatility. On the other hand, implied volatility is calculated from options data, which indicates investors' future expectations for volatility. As discussed below, the "term structure" of volatility indicates investors' volatility expectations over different forward-looking time periods (i.e., 1 month, 1 year, etc.).

Q. WHAT IS A STOCK OPTION, AND HOW DOES IT IMPLY VOLATILITY?

A. A stock option is the right to buy or sell a stock at a specific price for a specified amount of time. A call option is the right to buy a stock at a specified exercise or strike price on or before a maturity date. A put option is the right to sell a stock at a specified exercise or strike price on or before a maturity date. For example, a call option to purchase 100 shares

of Apple Computer stock for $230 on January 17, 2020, allows the owner the option (not the obligation) to buy Apple stock for $230 on that date. At the end of July 2019, Apple stock was trading at about $215 per share. Why would anyone pay for the right to buy a stock higher than the current price? Investors who purchased those call options thought there was a chance Apple stock would be trading higher than $230 on January 17, 2020, and those options gave those investors the right to buy Apple stock for $230 and profit by selling it at the market price on that date, if it was higher. The price of Apple's stock was $317.98 at the close of trading on January 17, 2020. Therefore, the investor who purchased this call option for $635 on July 31, 2019, earned a profit of $8,163[39] at expiry on January 17, 2020. On the other hand, the investor who purchased an Apple put option with the same expiration date and strike price on July 31, 2019, would have lost the price of the option ($2,248) and gained nothing on the expiration date because the right to sell Apple stock for $230 when the price is over $300 is worthless.

Options can be used to assess future expectations for volatility because they track the type of variation in market price that investors bet will occur within the time frame during which an option can be exercised based on what type of option is purchased and what the difference is between the market price of stock and the option price, or the price that the option bets the stock will reach. As the distance between the market price and option price grows, more volatility is implied in the value of the stock over time. I used this option data to create an "implied volatility" value.

[39] $8,163 profit from exercising call option ($31,798 from selling at $317.98 market price - $23,000 cost to purchase at $230) - $635 ($6.35 X 100) option purchase price. Note: Each call option is the right to purchase 100 shares.

Q. PLEASE EXPLAIN THE TERM "STRUCTURE OF VOLATILITY."

A. Investors can expect volatility to increase or decrease over time. In general (i.e., in "normal" financial markets), investors expect higher volatility for longer time horizons. For example, investors generally expect that the chance stock prices will increase or decrease by 10% in 1 year to be greater than the chance of a 10% (annualized) move over the next 30 days. This makes sense because there is more uncertainty regarding economic and stock market changes the further in the future you look out.

However, during the height of a crisis, when volatility generally tends to rise in the short-term, investors often expect volatility to decrease in coming months or years. In other words, investors expect the current capital market hurricane to pass and the winds to die down. During the peak of implied volatility in mid-March 2020, shortly after the World Health Organization declared COVID-19 a pandemic, the data indicated that investors expected stock price volatility to decrease over time. This implies that investors expected the riskiness of equity investments to decrease over time. As shown in Chart 9 on page 42, before the COVID-19 outbreak, investors expected volatility to increase from less than 15% annually at the 1-month time frame to about 20% annually at the 24-month time frame. Investors' volatility expectations peaked in March 2020. At that time, investors expected stock price volatility would decrease from over 70% at the 1-month time frame to about 38% at the 24-month time frame. Chart 9 also shows that investors' volatility expectations were higher for all time frames when Russia invaded Ukraine as compared to 2021, but as of June 30, 2024, volatility expectations have dropped back to 2019 levels over the 11-month time-frame and are only slightly higher than the 2019 levels over 24 months.

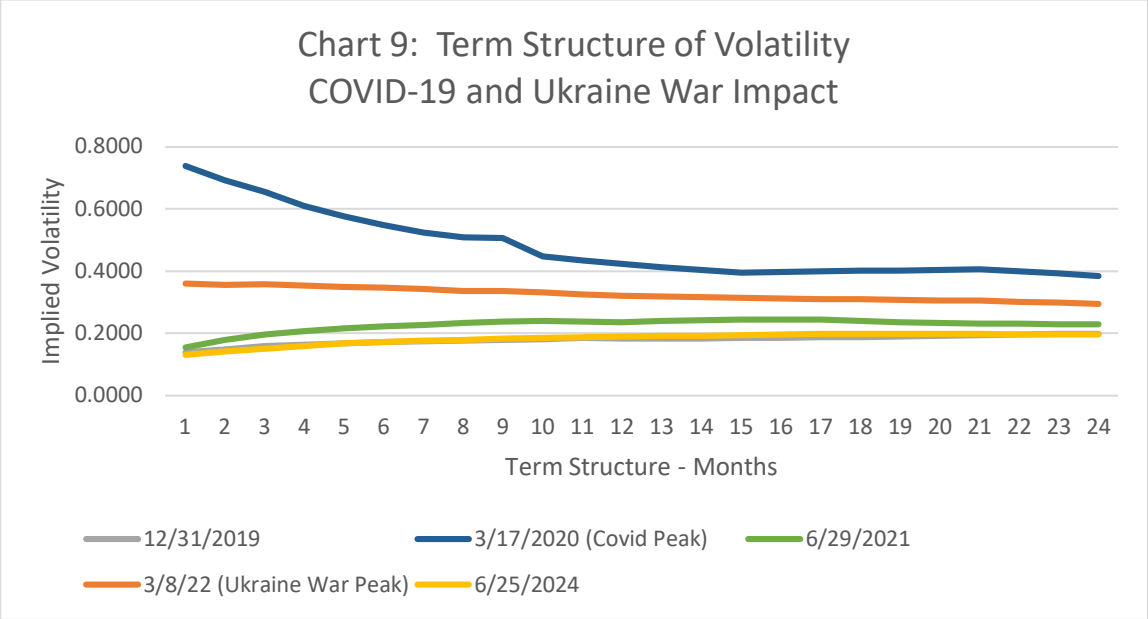


Chart 10 on page 43 provides a 3-dimensional surface[40] to show how the term structure of volatility has evolved since before the COVID-19 outbreak and how it has changed during and since the outbreak. As seen above in Chart 9 above, which shows five cross-sections of this data, during periods of low implied volatility – such as before the COVID-19 outbreak and at present – the slope of volatility expectations over time gently curves upwards, indicating lesser expectations of volatility in the short-term and greater in the long term. In Chart 10, this is represented by the surface of the line curving up and away during times of low volatility, while appearing to move downwards along the z-axis during the period of high volatility in March-April 2020 during the initial outbreak of the pandemic. Implied volatility can be seen to peak for both 1-month and 24-month time frames in mid-March 2020, with less dramatic spikes in February through October of 2022. As of the end of June 2024, the term structure of volatility has reached historic lows and is

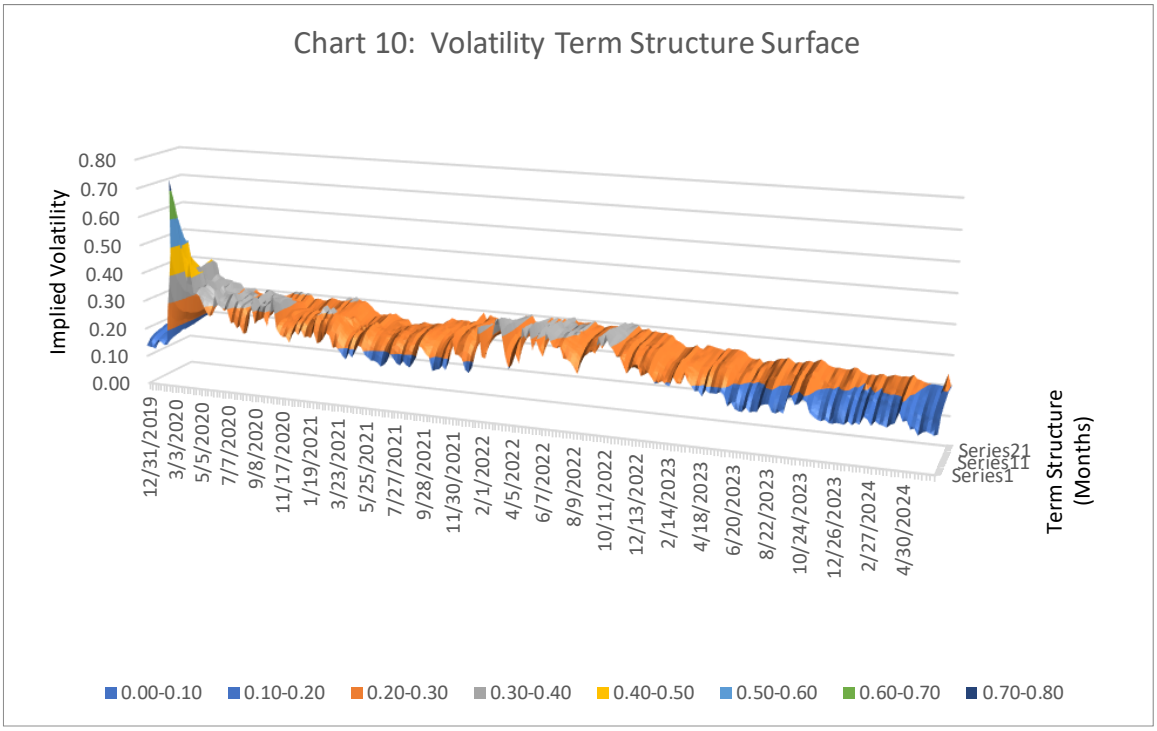
[40] The X axis shows the implied volatility. The Y axis shows the data. The Z axis shows market expectation of future implied volatility of different time frames. Series1 = 1 month, Series11 = 11 months, and Series24 = 24 months.

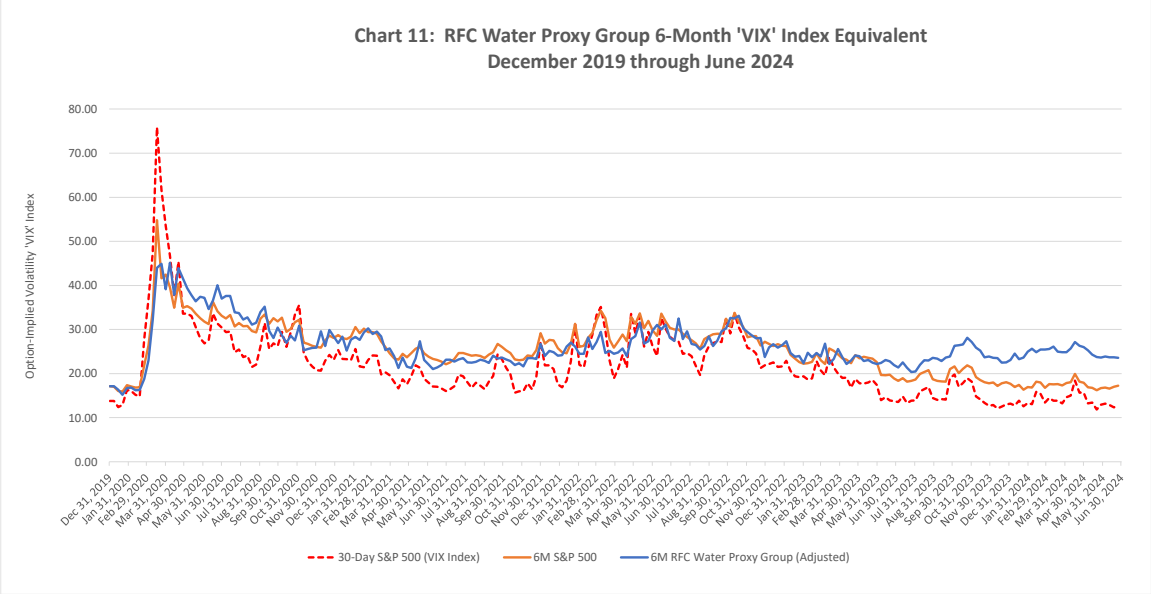
now slightly increasing over the 24-month time frame, as would be traditionally expected during times of relative stability.



Q. HOW HAVE VOLATILITY EXPECTATIONS FOR WATER UTILITY COMPANIES COMPARED TO VOLATILITY EXPECTATIONS FOR THE S&P 500?

A. Chart 11 on page 44 shows investors' stock price volatility expectations for the overall market (S&P 500) increased significantly as COVID-19 infections spread to the U.S. and continued to grow exponentially around the world. The solid orange line shows volatility expectations over the next 6 months, while the dashed red line shows volatility expectations over the next 30 days. On December 31, 2019, investors expected an annualized change of 13.78% over the next 30 days. In mid-March 2020, investors' volatility expectations peaked at over 80%. As of the end of June 25, 2024, investors expected an annualized change of 12.84%, even below pre-Covid levels.

The solid blue line in Chart 11 shows that investors' adjusted[41] 6-month volatility expectations for my RFC Water Proxy Group, as indicated by their stock option prices, increased along with the market in mid-March 2020, but to a significantly lesser degree. Investors' 6-month adjusted volatility expectations for water utility companies were for the most part higher than for the S&P 500 from May through August 2020, remained very comparable through March 2020, and have increased above the expectations for the market since then through the end of June 2024.



As discussed above, changes in implied volatility do not paint the full cost of equity picture. We must consider implied covariance, or how much investors expect the volatility of returns for water utility companies to correlate with the overall market (e.g., S&P 500 Index).

[41] The implied volatility for individual stocks and small groups of stocks is almost always higher than the overall market because of the effects of diversification, even when the underlying stocks in the smaller portfolio are less risky, as is the case with water utility companies. As a result, Chart 11 adjusts the 6-month expected volatility for the RFC Water Proxy Group by the difference with the 6-month expected volatility for the S&P 500 Index on December 31, 2019 to facilitate the comparison throughout the chart.

D. Investor-Perceived Downside Risk (Option-Implied Skewness)

Q. YOU EXPLAINED EARLIER THAT WATER UTILITY STOCKS HAVE UNDERPERFORMRED THE OVERALL MARKET RECENTLY. WHAT DOES STOCK OPTION DATA SHOW REGARDING INVESTORS' CONCERN THAT WATER UTILITY STOCKS WILL HAVE A LARGE DROP COMPARED TO THAT OF THE OVERALL MARKET?

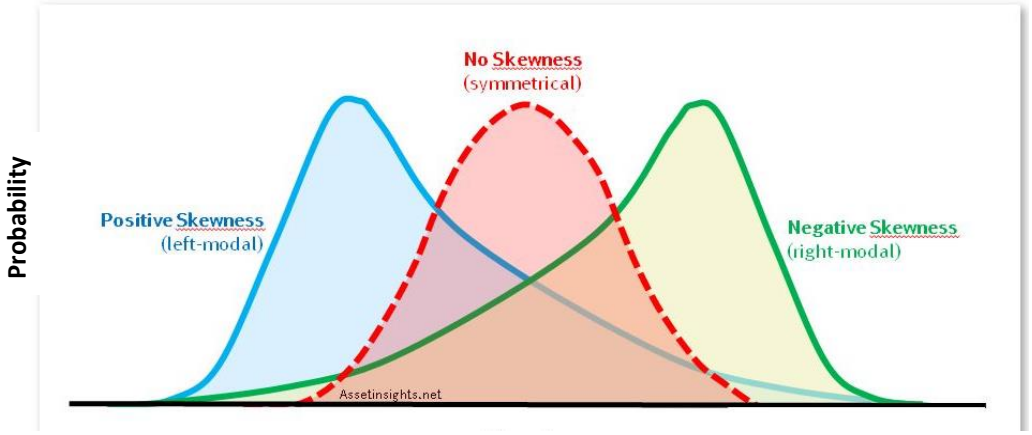
A. Stock option prices provide considerable information regarding investors' expectations. The most well-known measure of investors' expectations as measured by stock option prices is the VIX Index (or Volatility Index). The VIX Index is a measure of investors' volatility expectations and is referred to as the "fear index" because, all else equal, higher volatility expectations indicate higher uncertainty, risk, and scared investors.[42] However, volatility expectations are only one piece of a multi-dimensional puzzle that reveals the market-based cost of equity. After volatility expectations, the next dimension to explore (referred to as the "third moment" in statistics) is skewness. Option-Implied skewness reflects investors' expectations regarding the asymmetry of the probability distribution.

Option-implied probability distributions are almost always negatively skewed for stock market indices (e.g., S&P 500) and individual stocks, which means that investors almost always think there is a greater chance of a large decrease in stock prices than large increases. The Chicago Board of Options Exchange ("CBOE") also publishes an index based on option-implied skewness referred to as the SKEW Index.

[42] Some investors like high volatility because it provides the opportunity to earn a lot of money quickly if the market moves in their favor. For example, an investor that shorts Microsoft, will make a lot of money if the stock drops by a large amount. However, investors who buy utility stocks generally prefer low volatility and low risk.

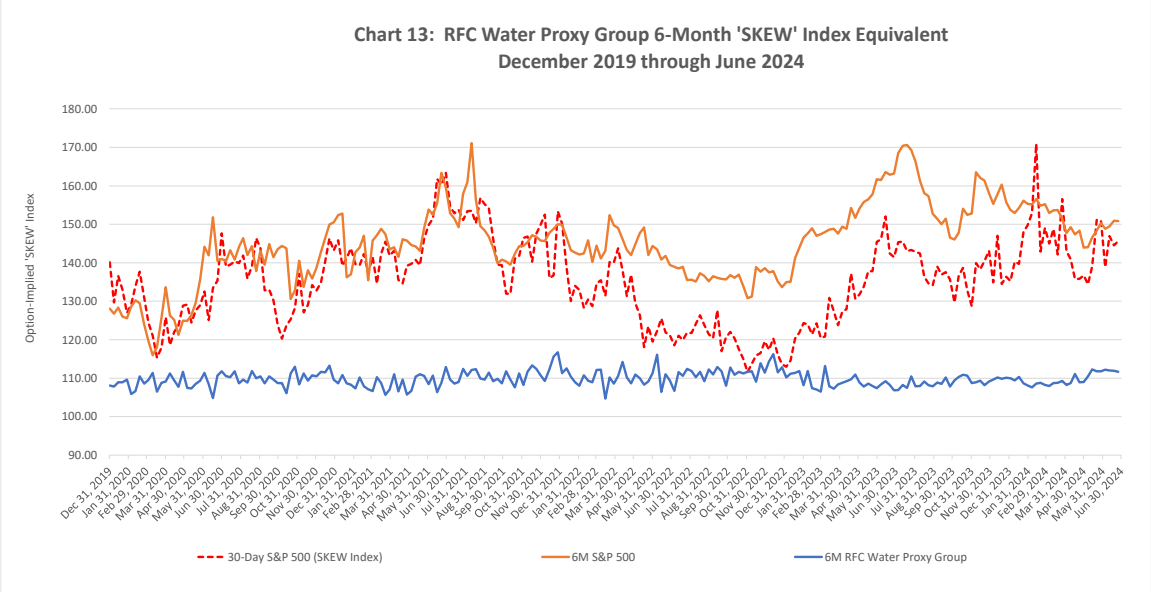
As shown in Chart 12 below, the probability distribution that is negatively skewed has a tail that is longer on the left. A probability distribution with positive skewness has a longer tail on the right. The right and left tails of a probability distribution with no skewness are symmetrical. If the option-implied skewness looked like the red probability distribution in Chart 12 below, it would mean that investors believed there was an equal chance that stock prices would move up or down by a certain amount.

Chart 12: Probability Distributions with and without Skewness



Q. WHAT DOES THE SKEW INDEX REVEAL REGARDING THE IMPACT OF THE COVID PANDEMIC AND THE WAR IN UKRAINE ON AQUA'S COST OF EQUITY?

A. As shown in Chart 13 on page 47, comparing the SKEW Index to an equivalent metric based on water utility company stock options indicates that, as 2023 came to a close, investors expected the chance of water utility stocks suffering from a large drop in investment to be much lower than the chance that the overall market will experience a large drop. This indicates the cost of equity for water utility companies has likely remained lower relative to the overall market as interest rates have increased.

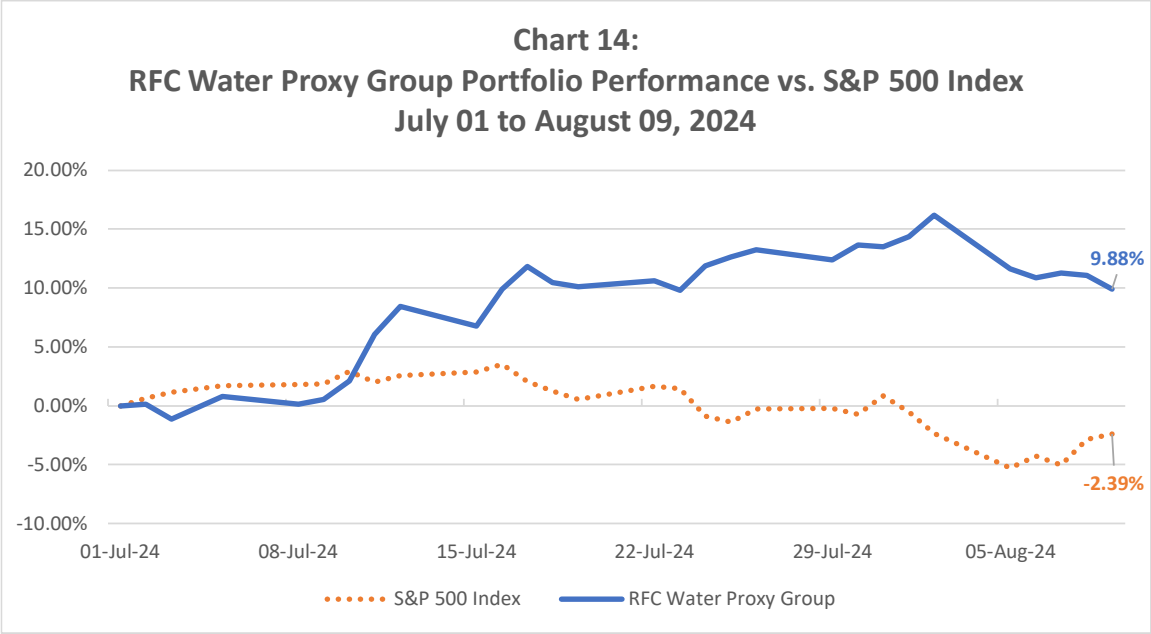


E. Recent Capital Market Developments

Q. YOUR DISCUSSION OF CAPITAL MARKETS FOCUSES ON MARKET DYNAMICS THROUGH JUNE 30, 2024. DO ANY OF THE MORE RECENT MARKET DEVELOPMENTS, INCLUDING IN PARTICULAR THE STOCK MARKET TURMOIL DURING THE FIRST WEEKS OF AUGUST 2024, CHANGE YOUR VIEW OF THE EFFECT OF CAPITAL MARKETS ON THE COST OF EQUITY OF WATER UTILITIES?

A. While it can be argued that the recent drop in equity prices translates into an increasing cost of equity for the overall market, it is important to keep in mind that trends for the overall market do not automatically apply to specific industries or sectors, and particularly not utilities, which are often considered safe havens during times of market turmoil. As can be seen in Chart 14 on page 48, in the weeks since the last date of the market data used in my cost of equity calculations, water utilities have outperformed the overall stock market

considerably, showing that if anything, the cost of equity of water utilities has decreased further since the date of my COE estimate.



Furthermore, even though I have not completed a comprehensive analysis of the options market data since June 30, 2024, preliminary numbers indicate that option-implied betas for water utilities have declined in recent weeks, further indicating that the cost of equity of water utilities has come down since then.

V. COST OF EQUITY CALCULATION

A. Overview

Q. PLEASE PROVIDE AN OVERVIEW OF YOUR PERSPECTIVE REGARDING HOW CAPITAL MARKETS RELATE TO THE COE AND THE OVERALL COST OF CAPITAL.

A. The cost of capital is the return investors require to provide capital to Aqua based on current capital markets. To measure the cost of equity accurately, it is critical to use current market

data because it increases the chance that the authorized ROE will match Aqua's market-based COE when it needs to raise equity capital. My analysis is built upon a measure of investor's forward-looking expectations using current market data.

As discussed above, my COE calculations are based on my opinion of the return investors require to provide equity capital to Aqua based on current capital markets.

Because the cost of equity is not a published figure like a bond yield, some interpretation is required to determine the appropriate market price. My cost of equity recommendation is based on my computation of what the market indicates investors require (return on investment) to provide capital to companies with comparable risk to Aqua.

As explained below, I use current market prices (e.g., stocks, bonds, options), which measure investors' expectations directly, instead of relying solely on historical data and analyst forecasts. A COE based on current market prices (market-based) is superior to a COE based on historical data (non-market-based) for two reasons:

1. **The COE that Aqua has to pay investors is based on capital markets.** Inflation and interest rate developments are not a secret and therefore market-based COE models will reflect investors' changing expectations.
2. **Capital markets are unpredictable.** Regarding capital markets' unpredictability, investment guru Warren Buffet gave the following advice to investors: "[t]hey should not listen to a lot of the jabbering about what the market is going to do tomorrow, or next week or next month because nobody knows."[43]

[43] PBS News Hour, June 26, 2017, Part 1 – America should stand for more than just wealth, says Warren Buffett available at www.pbs.org/newshour/show/pbs-newshour-full-episode-june-26-2017.

Current capital markets are our best source of investors' expectations regarding future capital markets. Current market prices of stocks and bonds reflect investors' forecasts for long-term interest rates and capital markets in general.

Q. HOW DID YOU ARRIVE AT YOUR COE RECOMMENDATION?

A. To arrive at my recommendation, I applied the DCF, including a Constant Growth and a Non-Constant Growth method, and a CAPM analysis to a group of similar companies ("RFC Water Proxy Group") using data available through June 30, 2024, as discussed below. In all of my models, I use both historical averages and the most recently available spot data for the inputs wherever it is possible and applicable.

Q. CONSIDERING THAT STOCK AND OPTION PRICES AND BOND YIELDS CHANGE DAILY, WOULD IT NOT BE BETTER TO USE HISTORICAL AVERAGES EXCLUSIVELY FOR THE INPUTS IN YOUR MODELS?

A. Not necessarily. Most people would agree that the use of spot market data, the value of a particular input on a particular day, can lead to COE results that can vary over short periods of time. It may therefore be tempting to find a more stable value based on historical averages that are not overly influenced by short-term fluctuations in capital markets. When doing a forward-looking analysis, however, it is equally important to look at the most recent market data as an indication of trends and where a given value is more likely to be in the future. This is a broad and generally accepted principle, as made clear in the following example.

If Company A's stock price were to go up linearly over the course of one year from $50 to $100, its average stock price over that year would be $75. If Company B's stock price declined linearly from $100 to $50 over the same year, it would have the same exact

average stock price of $75. But most people would agree that predicting both stock prices at $75 over the near future would be overly simplistic and leave readily accessible data unused. Without relying on any additional data, at the very least, it would stand to reason that, in the near future, Company A's stock price is more likely to be between $75 and $100 than Company B's stock price, and that Company B's stock price is more likely to be between $50 and $75 than Company A's stock price. These observations cannot be made by looking at the yearly averages alone and must take the most recent data into special consideration.

This does not eliminate concerns regarding the effect of daily fluctuations in market data, especially during periods of volatility. As a result, it is important to consider both averages and recent spot values when using market data for forward-looking analyses. That is precisely my approach when using market data that are expected to continue to fluctuate, such as stock prices, dividend yields, betas, and market risk premia.

Q. CAN A DIFFERENCE OF ONE DAY IN THE SELECTION OF SPOT DATA HAVE A SIGNIFICANT POSITIVE OR NEGATIVE EFFECT ON ROE RESULTS? IF SO, HOW DO YOU GO ABOUT CHOOSING WHICH DAY TO USE FOR MARKET-BASED SPOT DATA?

A. Yes. Daily fluctuations in stock prices, resulting dividend yields, betas, etc., all have an impact on resulting ROE calculations, especially when using recent spot values for market data. Such is the nature of market data, which change from day to day. This is rightfully noted as a potential risk of using spot data, but, given the stated benefits of using recent spot data for forward-looking analyses, there are ways to address such potential pitfalls.

For this reason, it is very important to establish consistent methodologies that eliminate the possibility of personal bias, especially when using spot market data. I consistently use the last trading day of the last full calendar month before my schedule preparations for all market-based spot data and as the last day for all historical market-data averages.

It is important to keep in mind that even averages fluctuate over time, and all responsible data analysts must find a consistent and reproducible way to "freeze time" to work with such fluctuations while eliminating bias.

It is also important to point out that I use recent spot market data to establish one benchmark for market-based inputs, which are balanced by the use of historical averages, as stated previously.

B. Proxy Group Selection

Q. WHAT PROXY GROUPS DID YOU USE TO CALCULATE AQUA'S COE?

A. My comparable proxy group, shown on Table 5 on page 53 and referred to as the RFC Water Proxy Group, consists of the following 6 publicly traded water utility companies covered by Value Line:

TABLE 5: RFC WATER PROXY GROUP COMPOSITION

	Company Name	Ticker
1	AMER. STATES WATER	AWR
2	AMERICAN WATER	AWK
3	ESSENTIAL UTIL.	WTRG
4	CALIFORNIA WATER	CWT
5	MIDDLESEX WATER	MSEX
6	SJW GROUP	SJW

My proxy group includes six of the eight companies that are in Mr. Moul's Water Group. I chose to exclude the following two companies from Mr. Moul's proxy group because Value Line does not provide the financial data required to implement my sustainable growth DCF model: (1) Artesian Resources, Corp. and (2) York Water Company. I only include companies in my proxy group that have a Value Line company report. I use this criteria, which is common practice among rate of return witnesses, because Value Line provides all of the financial projections that can be used in a sustainable growth method, including future expected return on book equity.

C. Discounted Cash Flow

Q. PLEASE SUMMARIZE THE RESULTS OF YOUR DCF MODELS.

A. I used both the constant growth form of the DCF method, which determines growth based on the sustainable retention growth procedure, and a non-constant growth DCF method. The results of my constant growth DCF model range between 7.76% and 7.99% when using a sustainable growth rate and between 7.59% and 7.83% when using an option-

implied growth rate.[44] The results of my non-constant growth DCF method indicate a COE of between 7.89% and 8.09% for the RFC Water Proxy Group.[45]

Q. WHAT IS THE DISCOUNTED CASH FLOW METHOD?

A. The DCF method is an approach to determine the COE. The method recognizes that investors purchase common stock to receive future cash payments. These payments come from: (a) current and future dividends, and (b) proceeds from selling stock. A rational investor will buy stock to receive dividends and ultimately to sell the stock to another investor at a gain. The price the new owner is willing to pay for stock is related to that buyer's expectation of future flow of dividends and the future expected selling price. The value of the stock is the discounted value of all future dividends until the stock is sold plus the value of proceeds from the sale of the stock.

D. Constant Growth Form of the DCF Model

Q. YOU STATE YOU USED THE CONSTANT GROWTH FORM OF THE DCF MODEL. WHAT IS THE CONSTANT GROWTH FORM OF THE DCF MODEL?

A. The constant growth form of the DCF model is a form of the DCF method that can be used in determining the COE when investors can reasonably expect that the growth of retained earnings and dividends will be constant.

Retained earnings are funds that a company keeps in its treasury, so that they are available for future needs, such as capital expenditures, debt payments, and new investments. These retained earnings show investors whether the company is growing,

[44] Exhibit ALR-3, page 1.
[45] Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4.

which, in turn, is a measure of the future indicator of dividends and the value of a company's stock.

Q. DESCRIBE HOW THE CONSTANT GROWTH MODEL WORKS.

A. The constant growth model is described by this equation k= D/P + g, where: [46]

k= cost of equity (COE);
D=Dividend; and
P=Market price of stock at time of the analysis

and where:

g=the growth rate, where g= br + sv;
b=the earnings retention rate;
r=return on common equity investment (referred to below as "book equity");
v=the fraction of funds raised by the sale of stock that increases the book value of the existing shareholders' common equity; and
s=the rate of continuous new stock financing

The constant growth model is therefore correctly recognized to be:

k=D/P + (br +sv)

The COE demanded by investors is the sum of two factors. The first factor is the dividend yield. The second factor is growth (dividends and stock price). The logical relationship among these factors is as follows: the dividend yield is calculated based on current dividend payments while growth indicates what dividends and stock price will be in the future.

Q. WHAT OTHER FACTORS IMPACT HOW ONE USES THE CONSTANT GROWTH FORM OF THE DCF MODEL?

A. Sufficient care must be taken to be sure that the growth rate "g" is representative of the constant sustainable growth. To obtain an accurate constant growth DCF result, the

[46] M. GORDON, *Cost of Capital to a Public Utility*, p. 32-33 (MSU Public Utility Studies 1974).

mathematical relationship between earnings, dividends, book value and stock price must be respected.

The basic difference between the use of an analysts' earnings per share growth rate in the constant growth DCF formula and using the "br" (b (the earnings retention rate) X r (rate of return on common equity investment)) approach is that the "br" form, if properly applied, eliminates the mathematical error caused by an inconsistency between the expectations for earnings per share growth and dividends per share growth. Because it eliminates that error, the results of a properly applied "br" approach will be superior to the answer obtained from other approaches to the constant growth form of the DCF model. This is not to say that even a properly applied "br" approach will be perfect. The self-correcting nature of a properly applied "br" to forecasted differences in earnings per share and dividends per share growth rates helps to mitigate the resultant error but should not be viewed as the perfect way to quantify the impact of expected non-constant growth rates.

Q. HOW HAVE YOU IMPLEMENTED THE CONSTANT GROWTH FORM OF THE DCF MODEL IN THIS CASE?

A. I have applied the constant growth form of the DCF model by staying true to the mathematically derived "k=D/P + (br + sv)" form of the DCF model. I have also taken care to fully allocate all future expected earnings to either future cash flow in the form of dividends ("D") or to retained earnings (the retention rate, "b"). This extra accuracy is obtained only when the retention rate "b" is derived from the values used for "D" and "r," rather than independently.

Q. PLEASE EXPLAIN HOW YOU OBTAINED THE VALUES YOU USED IN THE CONSTANT GROWTH FORM OF THE DCF METHOD.

A. The DCF model generally calls for the use of the dividend expected over the next year. A reasonable way to estimate next year's dividend rate is to increase the quarterly dividend rate by half of the current actual quarterly dividend rate. This is a good approximation of the rate that would be obtained if the full prior year's dividend were escalated by the entire growth rate.[47]

I obtained the stock price—"P"—used in my DCF analysis from the closing prices of the stocks on June 30, 2024. I also obtained an average stock price for the 12 months ending June 30, 2024 by averaging the high and low stock prices for the year.

I based the value of the future expected return on equity— "r" —on the average return on book equity expected by Value Line, adjusted in consideration of recent returns. I also made a computation that was based on a review of both the earned return on equity consistent with analysts' consensus earnings growth rate expectations and on the actual earned returns on equity. For a stable industry such as utility companies, investors will typically look at actual earned returns on equity as one meaningful input into what can be expected for future earned returns on book equity. See Exhibit ALR-3, page 1.

[47] For example, assume a company paid a dividend of $0.50 in the first quarter a year ago, and has a dividend growth rate of 4 % per year. This dividend growth rate equals (1.04)^4-1=0.00985 % per quarter. Thus, the dividend is $0.5049 in the second quarter, $0.5099 in the third quarter, and $0.5149 in the fourth quarter. If that 4 % per annum growth continues into the following year, then the dividend would be $0.5199 in the 1st quarter, $0.5251 in the 2nd quarter, $0.5303 in the 3rd quarter, and $0.5355 in the 4th quarter. Thus, the total dividends for the following year equal $2.111 (0.5199 + 0.5251 + 0.5303 + 0.5355). I computed the dividend yield by taking the current quarter (the $0.5149 in the 4th quarter in this example) and multiplying it by 4 to get an annual rate of $2.06. I then escalated this $2.06 by half the 4 % growth rate, which means it is increased by 2 %. $2.06 x 1.02= $2.101, which is within one cent of the $2.111 obtained in the example.

This return on book equity expectation used in the DCF method to compute growth must *not* be confused with the COE. Since the stock prices for the comparative companies are substantially higher than their book value, the return investors expect to receive on their market price investment is considerably less than the anticipated return on book value. If the market price is low relative to book value, the COE will be higher than the future expected return on book equity, and if the market price is high, then the return on book equity will be less than the COE.

In addition to growing through the retention of earnings, utility companies also grow by selling new common stock. Selling new common stock increases a company's growth. I quantified this growth caused by the sale of new common stock by multiplying the amount that the actual market-to-book ratio exceeds 1.0, by the compound annual growth rate of stock that Value Line forecasts. The results of that computation are shown on line 4 of Exhibit ALR-3, page 1.

Pure financial theory prefers concentrating on the results from the most current price because investors cannot purchase stock at historical prices. There is a legitimate concern, however, about the potential distortion of using just a single price. I present DCF results based on the most recent stock pricing data (June 30, 2024) as well as the average of the high and low stock price over the past 12 months to obtain a range of reasonable values. As shown in Exhibit ALR-3, page 1, the DCF result based on the average of the high and low stock price for the year ending June 30, 2024 is 7.76%. The DCF result based on the stock price as of June 30, 2024 is 7.99%. Exhibit ALR-3, page 1, shows more of the specifics of how I implemented the constant growth form of the DCF model for the RFC Water Proxy Group.

Q. PLEASE EXPLAIN HOW YOU DETERMINED WHAT VALUE TO USE FOR "r" WHEN COMPUTING GROWTH IN YOUR CONSTANT GROWTH FORM OF THE DCF MODEL.

A. The inputs I considered are shown in Footnote [C] of Exhibit ALR-3, page 1. The value of "r" that is appropriate to use in the DCF formula is the value anticipated by investors to be maintained on average in the future. This Exhibit shows that the average future return on equity forecasted by Value Line for the RFC Water Proxy Group between 2024 and 2027-29 is 10.33%. The same footnote also shows that the future expected return on equity derived from the Zacks consensus forecast is 10.70%, and that the actual returns on equity earned by the RFC Water Proxy Group on average were 10.13% in 2021, 11.16% in 2022, and 9.40% in 2023. Based on the combination of the forecasted return on equity derived from the Zacks consensus, the recent historical actual earned returns, and Value Line's forecast, I made the DCF growth computation using a 10.40%[48] value of "r".

Q. WHAT COE IS INDICATED BY THE CONSTANT GROWTH FORM OF THE DCF METHOD THAT YOU RELY ON FOR YOUR RECOMMENDATION?

A. The result of my DCF analysis using the Constant Growth form of the DCF indicates a COE range of between 7.76% and 7.99% for the RFC Water Proxy Group.[49] Since these DCF findings use analysts' forecasts to derive sustainable growth (in part) and on analysts' forecasts of dividend growth and book value growth in the non-constant form of the DCF method, the results should be considered as conservatively high. This is because, as

[48] I used 10.40% in consideration of historical returns, Zacks's projections, and Value Line projected returns for the RFC Water Proxy Group.
[49] Exhibit ALR-3, page 1.

previously mentioned above, analysts' forecasts of such growth have been notoriously overstated.

My results are not as influenced by overly-optimistic analysts' forecasts as would have been the case had I merely used analysts' five-year earnings growth rate forecasts as a proxy for long-term growth. This is because the DCF methods I use compute sustainable growth rates, rather than growth rates that can exaggerate the growth rate due to assuming that a relatively short-term forecast (5 years) will remain indefinitely.

E. Non-Constant Growth Form of the DCF Model

Q. PLEASE EXPLAIN HOW YOU IMPLEMENTED THE NON-CONSTANT GROWTH FORM OF THE DCF MODEL.

A. The non-constant growth form of the DCF model determines the return on investment expected by investors based on an estimate of each separate annual cash flow the investor expects to receive. For the purpose of this computation, I have incorporated Value Line's detailed annual forecasts to arrive at the specific non-constant growth expectations that an investor who trusts Value Line would expect. This implementation is shown on Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4. In the first stage, cash flow entry is the cash outflow an investor would experience when buying a share of stock at the market price. The subsequent years of cash flow are equal to the dividends per share that Value Line forecasts. For the intermediate years of the forecast period in which Value Line does not provide a specific dividend, the annual dividends were obtained by estimating that dividend growth would persist at a compound annual rate. The cash flow at the conclusion of the forecast period includes both the final year's dividend as projected by Value Line and the

proceeds from selling the stock. The stock price used to determine the proceeds from selling the stock was obtained by estimating that the stock price would grow at the same rate at which Value Line forecasts book value to grow.

Q. WHY DID YOU USE BOOK VALUE GROWTH TO PROVIDE THE ESTIMATE OF THE FUTURE STOCK PRICE?

A. For any given earned return on book equity, earnings are directly proportional to the book value. Furthermore, book value growth is the net result after the company produces earnings, pays a dividend and also, perhaps, either sells new common stock at market price or repurchases its own common stock at market price.

Once these cash flows are entered into an Excel spreadsheet, the compound annual return an investor would achieve as a result of making this investment was obtained by using the Internal Rate of Return (IRR) function built into the spreadsheet. As shown on Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4, this multi-stage DCF model produced an average indicated COE of 8.09% based on the year-end stock price, and 7.89% based on average prices for the year ending June 30, 2024 for the RFC Water Proxy Group.

Q. WHAT COST OF EQUITY DOES YOUR NON-CONSTANT GROWTH DCF METHOD INDICATE?

A. My non-constant growth DCF method indicates a cost of equity of between 7.89% and 8.09%.[50]

[50] Exhibit ALR-3, page 3 and Exhibit ALR-3, page 4.

F. Capital Asset Pricing Model

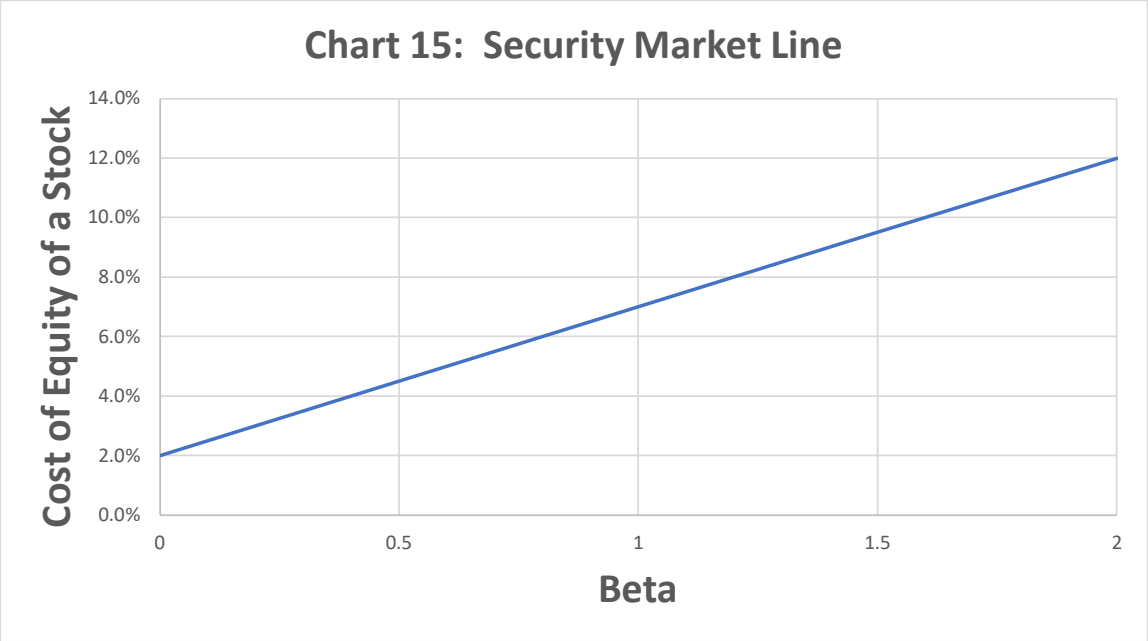
Q. PLEASE DESCRIBE THE CAPM.

A. CAPM stands for "Capital Asset Pricing Model." The CAPM relates return to risk; specifically, it relates the expected return on an investment in a security to the risk of investing in that security. The riskier the investment, the greater the expected return (i.e., the cost of equity) investors require to make that investment.

Investors in a firm's equity face two types of risks: (1) firm-specific risk and (2) market risk (financial analysts refer to this market risk as systematic risk). Firm-specific risk refers to risks unique to the firm, such as management performance and losing market share to a new competitor. Investors can reduce firm-specific risk by purchasing stocks as part of a diverse portfolio of companies if they construct the portfolio to cause the firm-specific risk of individual companies to balance out. Market-related risk refers to potential impacts from the overall market, such as a recession or interest rate changes. This risk cannot be removed by diversification, so the investor must bear it no matter what. Because the investor has no option but to bear market risk, the investor's cost of equity will reflect that risk.

The price of a stock with a beta of 1 tends to move with the market. If the market increases by 1%, the stock is also expected to increase by about 1%, and vice versa. The price of a stock with a beta greater than 1 tends to be more volatile than the market. For example, a stock with a beta of 1.5 will on average be 50% more volatile than the market. If the market rises by 1%, the price of a stock with a beta of 1.5 is expected to rise by 1.5%, and if the market falls by 1%, the stock price is expected to decrease by 1.5%. The price of a stock with a beta less than 1 tends to be less volatile than the market.

The CAPM predicts that for a given equity security, the cost of equity has a positive linear relationship to how sensitive the stock's returns are to movements in the overall market (e.g., S&P 500). A security's market sensitivity is measured by its beta.[51] As shown in Chart 15 below, the higher the beta of a stock, the higher the company's cost of equity—the return required by the investor to invest in the stock.



Here is the standard CAPM formula:

$$K = Rf + \beta i * (Rm - Rf)$$

Where:

K is the cost of equity;
Rf is the risk-free interest rate;
Rm is the expected return on the overall market (e.g., S&P 500);
[Rm – Rf] is the premium investors expect to earn above the risk-free rate for investing in the overall market ("equity risk premium" or "market risk premium"); and
βi (Beta) is a measure of non-diversifiable, or systematic, risk.

[51] The covariation of the return on an individual security with the return on the market portfolio.

Q. PLEASE EXPLAIN HOW YOU IMPLEMENTED THE CAPM.

A. First, I determined appropriate values or ranges for each of the three model inputs: (a) Risk-Free Rate, (b) Beta, and (c) Equity Risk Premium. Second, I used the equation above to calculate the cost of equity implied by the model. Below I will explain how I calculated the three model inputs and summarize the CAPM cost of equity numbers resulting from those inputs. Table 6 and Table 7 on page 79 show the results of my CAPM.

Risk-Free Rate

Q. WHAT RISK-FREE RATE DID YOU USE IN YOUR CAPM?

A. It is generally preferable to use the market yield on short-term U.S. Treasury yields as the risk-free rate because these bonds have a beta close to zero. *Principles of Corporate Finance* states: "The CAPM… calls for a short-term interest rate."[52] However, I chose to use a risk-free rate based on both long- and short-term Treasury yields because it is reasonable to consider a risk-free rate that would apply to both long- and short-term investors. My short-term risk-free rate is based on the yield of 3-month U.S. Treasury bills and my long-term risk-free rate is based on the yield of 30-year U.S. Treasury bonds. In line with my Spot and Weighted Average CAPM approaches, I use both spot values as of June 30, 2024 and weighted averages over the 3 months ending on that date for these two yields.

As outlined in Exhibit ALR-4, page 2, my spot and weighted average short-term risk-free rates are 5.48% and 5.47%, respectively. My spot and weighted average long-term risk-free rates are 4.51% and 4.63%, respectively.

[52] BREALEY, MYERS, AND ALLEN, *Principles of Corporate Finance*, p. 228, (McGraw-Hill Irwin, New York, 12th ed. 2017).

U.S. government bonds are reasonable to use as a risk-free rate because they have a negligible risk of default. The value of short-term U.S. Treasury bills has a relatively low exposure to swings in the overall market. The value of long-term U.S. Treasury bonds is relatively more exposed to the market and therefore must be used with caution.

Q. WHAT IS YOUR RESPONSE TO ANALYSTS WHO CLAIM THAT THE CAPM SHOULD BE IMPLEMENTED WITH A RISK-FREE RATE BASED ON A LONG-TERM INTEREST RATE (E.G., YIELD ON 30-YEAR TREASURY BOND) AND/OR BASED ON INTEREST RATE FORECASTS INSTEAD OF MARKET YIELDS.

A. As discussed in Appendix D, a CAPM analysis that uses a risk-free rate based only on long-term interest rates may overstate the COE because these bonds do not have a zero beta. It is not appropriate to use a risk-free rate based on interest rate forecasts because it often does not represent investors' expectations.

Q. CURRENTLY YOUR RISK-FREE RATE BASED ON SHORT-TERM INTEREST RATES IS HIGHER THAN YOUR RISK-FREE RATE BASED ON LONG-TERM INTEREST RATES. HOW DOES THIS IMPACT YOUR CAPM RESULTS?

A. It is rare for short-term interest rates to be higher than long-term interest rates because, as stated above, they are less risky than long-term bonds. At first, it seems nonsensical for an investor to accept an interest rate that is over 1% less (4.51% vs. 5.48% as of June 30, 2024). However, as shown in Chart 2 on page 31, the Federal Reserve Bank of Atlanta estimated that as of February 29, 2024, investors expect short-term interest rates to decrease in 2024 and 2025. This means that it is rational for investors to lock in a 4.51% interest rate on long-term bonds now if they expect short-term interest rates to decline below 4.51%

in the near future. It is like a homeowner deciding to lock in a 30-year mortgage at a higher rate (e.g., 5%) than to take an adjustable-rate mortgage rate with a lower interest rate (e.g., 4%) because if short-term rates increase above 5% in the future, they could end up paying more over the life of the mortgage.

As this relates to CAPM results, this is one of the rare circumstances when a short-term risk-free rate likely overstates the COE because investors expect the relatively higher short-term interest rate to be temporary. Another way to put it is the following: investors expect that the interest income from short-term treasuries (3-months) will be lower than the interest income from long-term treasuries (30-years) over the long-term.

Beta

Q. WHAT BETA DID YOU USE IN YOUR CAPM?

A. Since the cost of equity should be based on investor expectations, I chose to use two betas. My "forward beta" is based on forward-looking investor expectations of non-diversifiable risk. My "historical blended" is based on historical return data over 6-month, 2-year, and 5-year periods.

Most published betas are based exclusively on historical return data. For example, Value Line publishes a 5-year historical beta for each of the companies it covers. However, it is also possible to calculate betas based on investors' expectations of the probability distribution of future returns. This probability distribution of future returns expected by investors can be calculated based on the market prices of stock options.

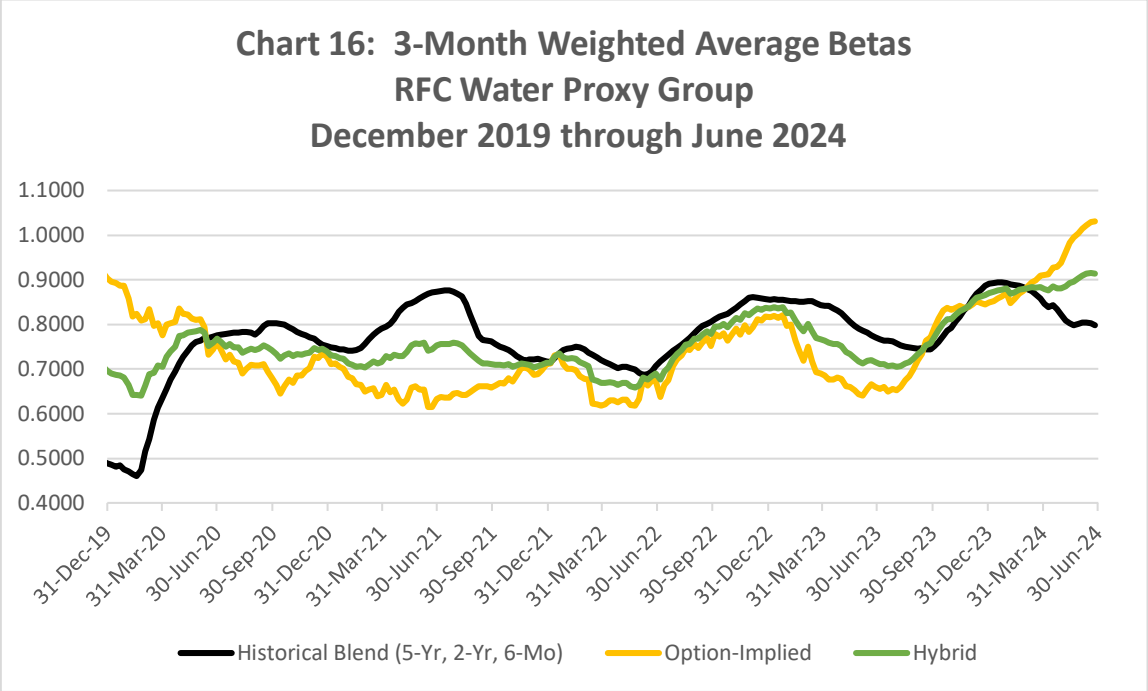
Q. WHY DID YOU USE OPTIONS DATA WHEN CALCULATING YOUR BETAS?

A. The market prices of put options and call options provide information regarding the probability distribution of future stock prices expected by investors. Using established techniques, I am able to use price data for stock options of my RFC Water Proxy Group companies and the S&P 500 Index to determine investors' return expectations, including the relationship (covariance) between the return expectations for individual RFC Water Proxy Group companies and those for the overall market (S&P 500). This covariance between the expected returns for my RFC Water Proxy Group and for the S&P 500 indicates what investors expect betas will be in the future. I refer to betas based on option price calculations as "option-implied betas."

Q. PLEASE EXPLAIN HOW YOU CALCULATED THE BETAS USED IN YOUR CAPM.

A. Traditionally, the betas used in CAPM calculations are calculated from historical returns. This approach has strengths and weaknesses. An alternative way to calculate betas is to incorporate investors' return expectations by calculating option-implied betas as explained in the previous paragraph. As discussed below, I have chosen to use both historical and option-implied betas in my CAPM analysis. I chose to use option-implied betas in my CAPM analysis because, among other reasons, studies have found that betas calculated based on investor expectations (option-implied) provide information regarding future perceived risks and expectations.[53]

[53] Bo-Young Chang & Peter Christoffersen & Kris Jacobs & Gregory Vainberg. Option-Implied Measures of Equity Risk, *Review of Finance*, Vol. 16, Issue 2, pp. 385-428 (April 2012) available at https://academic.oup.com/rof/article/16/2/385/1584560.



As shown in Chart 16 above, stock option prices indicate that investors likely expect higher historical betas for the RFC Water Proxy Group in the future.

Exhibit ALR-4, page 3 contains the last three months of data used in creating Chart 16 above, which is what I use in my CAPM analysis. Specifically, I use the following two betas in my CAPM analysis:

1. **Historical Blend:** 50% (6 months) + 30% (2 years) + 20% (5 years).
2. **Forward Beta:** 100% Option-Implied Beta (6 months).

Q. WHY DO YOU USE PERIODS OF 6 MONTHS, 2 YEARS, AND 5 YEARS FOR YOUR HISTORICAL BETA CALCULATIONS, AS OPPOSED TO RELYING EXCLUSIVELY ON THE 5-YEAR PERIOD USED BY VALUE LINE?

A. Using shorter periods for the return regression analysis portion of the historical beta calculation allows me to see if the correlation between the returns of each of the companies in my RFC Water Proxy Group and those of the S&P 500 Index has changed in the last 2

years or 6 months. Using a 5-year period exclusively tends to make recent changes in the correlation more difficult to identify because of the weight of 5 years of data.

Q. WOULD YOU AGREE THAT CHANGES IN MARKET DYNAMICS WILL HAVE A LARGER EFFECT ON 6-MONTH HISTORICAL BETAS THAN THEY WILL ON 2-YEAR OR 5-YEAR HISTORICAL BETAS?

A. Yes. As with other historical metrics based on a given time period, say, average stock prices, the longer the time horizon under consideration, the more data points are considered, and the smaller the effect of any one given change in the data set.

Q. IS THIS LARGER EFFECT ON 6-MONTH HISTORICAL BETAS FROM CHANGES IN MARKET DYNAMICS A GOOD OR A BAD THING?

A. The answer depends on what the beta will be used for. I would argue that in any attempt to forecast the beta coefficient of a company for any forward-looking analysis such as the cost of capital calculations in this proceeding, more recent historical data should be given more relevance than data from 5 or 10 years ago. The weight of 10 years of data can make a beta coefficient react extremely slowly to market developments. Even pronounced permanent market changes can take more than 6 months to have a detectable effect on a 10-year beta.

As with using spot values and averages of historical market data, I believe the right answer is not to use *either* 6-month historical betas or historical betas with longer horizons, but to consider *both*. For this reason, I have created my historical blended betas, which take into consideration 6-month, 2-year, and 5-year historical betas.

Q. DO YOU THINK IT IS A GOOD IDEA TO RELY ON 6-MONTH HISTORICAL BETAS DESPITE MARKET DEVELOPMENTS IN THE PAST YEAR THAT SOME WOULD CALL "MARKET DISLOCATIONS?"

A. Financial markets are constantly in flux due to the influence of countless factors. So-called "market dislocations," are just some of the numerous factors that are constantly affecting markets. To attempt to separate any one specific factor from "real" underlying market dynamics would be an exercise in futility.

Furthermore, predicting the duration and impact of any single influencing factor on financial markets is extremely challenging, if not impossible. In 2008, when interest rates plummeted to unprecedented lows, numerous analysts deemed this a temporary anomaly. Contrary to these expectations, rates not only persisted at these low levels for more than ten years, but dropped even further in response to the unforeseen COVID-19 pandemic, which significantly affected the global economy and financial markets.

So, in response, yes, I think it is a good idea to use 6-month historical betas to measure recent and current market dynamics regardless of recent developments. I use them as part of my historical blended betas in conjunction with longer-term historical betas and forward-looking, option-implied betas to achieve the most reasonable result.

Q. GIVEN THE SHORTER PERIOD COVERED BY 6-MONTH HISTORICAL BETAS, CAN THEY STILL BE CONSIDERED STATISTICALLY SIGNIFICANT? HOW MANY DATA POINT PAIRS ARE USED IN THE CALCULATION OF YOUR 6-MONTH HISTORICAL BETA COEFFICIENTS?

A. A 6-month historical beta based on weekly returns calculated weekly is calculated using 26 closing price points for a company and for its corresponding market index, in this case

the S&P 500 Index. This translates into 25 pairs of return data that are then used in the regression analysis. This is most certainly enough data to achieve statistical significance as addressed further below.

Furthermore, as stated above, the recent improvement in my calculation of historical betas of using weekly returns on every day of the week as opposed to using only one day of the week, as Value Line does, has the added benefit of providing significantly more data pairs to be used in the regression analysis utilized to calculate beta. For 6-month historical betas, instead of relying on 25 return pairs, the regression is performed on 117 return pairs, increasing the analysis's effectiveness.

Q. PLEASE EXPLAIN HOW YOU CALCULATED OPTION-IMPLIED BETAS.

A. Calculating option-implied betas of a company requires (1) obtaining stock option data for that company and a market index, (2) filtering the stock option data, (3) calculating the option-implied volatility for the company and for the index, (4) calculating the option-implied skewness for the company and for the index, and (5) calculating option-implied betas for the company based on implied volatility and skewness for the company and for the index. There are various ways one could choose to perform the steps above, but I chose to filter stock option data and calculate option-implied volatility[54] and skewness[55] following the same methodology used by the Chicago Board of Options Exchange (CBOE)

[54] CBOE Volatility Index White Paper (2018) available at https://cdn.cboe.com/resources/indices/srvix-white-paper.pdf. Please note that the cover page says, "proprietary information." However, this document has been in the public domain for over 3 years.
[55] The CBOE SKEW Index (2010) available at: https://cdn.cboe.com/resources/indices/documents/SKEWwhitepaperjan2011.pdf. Please note that the cover page says, "proprietary information." However, this document has been in the public domain for over 3 years.

in the calculation of their widely-used VIX (or Volatility Index) and SKEW Index, respectively.

I start my process with publicly available trading information for all the options for a given security (company or index) for a complete trading day. I then filter the option data as described by the CBOE using the following guidelines:

1. Use the mid-quote or mark (average of bid and ask) as the option price.
2. Use only out-of-the-money call and put options.
    - Determine the "moneyness" threshold where absolute difference between call and put prices is smallest (using CBOE "Forward Index Price" formula).
    - Include "at-the-money" call and put options and use average of call and put prices as price for "blended" option.
3. Exclude all zero bids.
4. Exclude remaining (more out-of-the-money) options when two sequential zero bids are found.

I then apply the series of formulas clearly described in both of the CBOE's white papers to the remaining options to calculate Option-Implied Volatility and Option-Implied Skewness. In the words of the CBOE, each of its two indices is "an amalgam of the information reflected in the prices of all of the selected options." To be clear, Implied Volatility is not exactly the same as the VIX Index, and Implied Skewness is not exactly the same as the SKEW Index, but both indices are directly based on their corresponding statistical value.

After calculating the daily option-implied values as discussed above, I calculate the weekly average of these daily values.[56] This approach results in stable weekly data points due to the weekly averaging. Even the most recent "spot" option-implied beta value represents an average of a full week of option-implied beta values.

Option-Implied Volatility reflects investors' expectations regarding future stock price movements. Option-Implied Skewness reflects investors' expectations regarding how implied volatility changes for strike prices that are closer and further to the current value of the underlying stock price.

The CBOE calculates Times to Expiration by the minute—as do I. The Time to Expiration of traded options cannot be changed and varies from day to day. For the sake of consistency, the CBOE calculates the VIX and SKEW indices on a "30-day" basis by interpolating for two sets of options with Times to Expiration closest to the 30-day mark. I prefer to focus on as long of a time horizon as possible for forecasting purposes. Option Times to Expiration vary significantly for various stocks but can consistently be found to go out to 6 months (180 days) for utility companies. Therefore, for the sake of consistency, I have chosen to calculate 6-month volatility and skewness where possible. Occasionally, Times to Expiration for a given stock do not go out to 180 days. If the greatest Time to Expiration available is 171 days (95%) or greater, I use the volatility and skewness for that group of options as a proxy for the 180-day volatility and skewness, respectively.

Finally, once I have calculated the option-implied volatility and skewness for each company and index using the methodology described above, I calculate option-implied

[56] I interpolate option-implied beta values for a given company in the rare instances where all daily values for a given company are not available for a given week. This has the effect of maintaining a constant representation of all companies in the proxy group across all periods, thus further improving the stability of proxy group option-implied betas over time.

betas using the following formula developed by Christoffersen, Chang, Jacobs and Vainberg (2011):[57]

$$\beta_i = \left(\frac{SKEW_i}{SKEW_m}\right)^{1/3} \left(\frac{VAR_i}{VAR_m}\right)^{1/2}$$

Where:

β_i: $option-implied\ beta\ of\ security\ (e.g. stock, fund)$;
$SKEW_i$: $skewness\ of\ security$;
$SKEW_m$: $skewness\ of\ overall\ market\ (S\&P\ 500)$;
VAR_i: $variance\ of\ company$;
VAR_m: $variance\ of\ overall\ market\ (S\&P\ 500)$.

Q. YOU CALCULATE YOUR OPTION-IMPLIED BETAS BASED ON A 6-MONTH HORIZON. WOULD IT NOT BE BETTER TO USE A LONGER FORECASTING HORIZON?

A. The methodology I use to calculate my option-implied betas "allows for the computation of a complete term structure of beta for each company so long as the options data are available,"[58] so there is nothing inherent in the methodology that limits it to a certain time horizon.

For many applications, including cost of capital, one could argue that the longer the time horizon for the option-implied betas, the better. However, the limitation on the forecasting horizon is always set by the longest expiration period of the options currently traded in the market. Some companies trade options with expiration periods up to 2 or 3 years into the future. As evidenced by the exhaustive option data in my working papers,

[57] Bo-Young Chang & Peter Christoffersen & Kris Jacobs & Gregory Vainberg, Option-Implied Measures of Equity Risk, *Review of Finance* Volume 16, Issue 2, pp. 385-428 (April 2012) available at https://academic.oup.com/rof/article/16/2/385/1584560.
[58] Peter Christoffersen, Kris Jacobs, and Gregory Vainberg, *Forward-Looking Betas*, p. 24 (April 25, 2008) available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=891467.

the maximum expiration period for the options of the companies in my RFC Water Proxy Group is approximately 8 months. None of the 6 companies ever trade options with expiration periods of more than 8 months. New options are issued roughly every 3 months for all of these companies, so the maximum expiration period on any given trading day is somewhere between 5 and 8 months. For consistency across companies in my proxy group and across dates within the 3-month period on which my analysis is focused (April through June 2024), I chose to use 6 months for the time horizon of my option-implied betas. If the maximum expiration period for the options of a given company on a given day is less than 6 months, I use the maximum expiration period as an approximation for the target 6-month horizon.

Simply because some may argue that it may be preferable to use longer time horizons in place of or in addition to a 6-month horizon, it does not mean that a 6-month option-implied beta is of no relevance or cannot be used. That would be tantamount to saying you cannot use a 1-year Value Line Earnings Per Share estimate, or that the minimum relevant forecast is 2 or 3 years. In fact, for purposes of option-implied betas, it would be difficult to say if a time horizon of 1 year, for instance, is necessarily always better than a time horizon of 6 months. An option-implied, forward-looking beta, even with a time horizon of less than 6 months, is still a useful tool in interpreting the current expectations of investors at any given time.

A final strong argument in support of using 6-month option-implied betas in a cost of capital calculation looking years into the future is that, as expanded upon starting on page 127, the authors of the paper on which I based my option-implied betas concluded that their predictive powers are not limited to 6 months into the future. In fact, they

conclude that 6-month option-implied betas have stronger predictive power than 6-month, 1-year, or 5-year historical betas when attempting to forecast betas 1 or 2 years into the future.

Market Risk Premium

Q. PLEASE EXPLAIN HOW YOU CALCULATED THE EQUITY RISK PREMIUM USED IN YOUR CAPM.

A. Traditionally, the risk premium used in CAPM calculations is derived from historical returns and/or equity analyst projections. The former approach is historically accurate but does not take into account investors' expectations for future market risks and returns. The latter approach is based on analyst projections, which are not appropriate since they do not reflect current investor expectations. A superior, market-based way to calculate the equity risk premium is to use option-implied return expectations, which is the approach I have used.

My equity risk premium is the expected return on the S&P 500 minus the risk-free rate. I calculate an expected return on the S&P 500 by using stock options traded on this index. To begin with, I use exactly the same methodology used by the Chicago Board of Options Exchange to filter stock option data and calculate option-implied volatility and skewness,[59] as described in detail in the Beta section on page 71. The volatility and skewness calculated in this way describe a probability function representing the possible trajectories for the S&P 500 implied by the options market. The resulting skewed probability function can be closely approximated by a log-normal function using

[59] As used in the calculation of their widely-used VIX (or Volatility Index) and SKEW Index, respectively.

established statistical formulas, which then make it straightforward to calculate the expected growth for the S&P 500 for any given cumulative probability. A cumulative probability of 50% represents the median of the probability distribution, or the option-implied market consensus, which is how I arrive at my calculation of expected market growth.

Once the option-implied growth rate of the S&P 500 has been estimated as described above, I add the dividend yield and subtract the risk-free rate to arrive at the market risk premium, as laid out in Exhibit ALR-4, page 4 and Exhibit ALR-4, page 6. In line with my Spot and Weighted Average CAPM approaches, I use both spot values as of June 30, 2024 and weighted averages over the 3 months ending on that date for option-implied growth, dividend yields, and short- and long-term risk-free rates in these calculations to arrive at a total of 4 estimated values for the market risk premium. The market risk premia I use in my Weighted Average CAPM analysis with short- and long-term risk-free rates are 2.46% and 3.30%, respectively. The market risk premia I use in my Spot CAPM analysis with short- and long-term risk-free rates are 2.32% and 3.29%, respectively.[60]

Q. DID YOU TAKE INTO CONSIDERATION THE DIFFERENCE IN VOLATILITIES ACROSS EXPIRATION PERIODS IN THE OPTIONS TRADED ON THE S&P 500?

A. Yes. The volatility implied by the options market changes over time as investors' perception of risk changes. For example, during a crisis, implied volatility generally

[60] Both market risk premia happen to be the same because short- and long-term risk free rates happen to be the same as of June 30, 2024.

increases as investors expect that stock market prices have a greater chance of large swings compared to times when there is no crisis. As discussed earlier, investors also often have different volatility expectations over different time periods. For example, on any given day, investors might expect volatility to be relatively high over the next 30 days and to decrease over the next year or longer. The same holds true for skewness, even though it is less intuitive to understand changes in skewness than in volatility. Because of these changes across option expiration periods, I take a weighted average of the entire term structure of the option-implied volatility and skewness, which for the S&P 500 typically goes out to 54 to 61 months[61], interpolating where necessary, and giving the most weight to the option expiration period of 12 months.

CAPM Results

Q. PLEASE SUMMARIZE THE RESULTS OF YOUR CAPM.

A. Table 6 and Table 7 on page 79 show the results of my Weighted Average CAPM and Spot CAPM Analyses, respectively.

[61] Prior to November 2021, the longest expiration period for stock options traded on the S&P 500 was 36 months.

Weighted Average CAPM

TABLE 6: CAPITAL ASSET PRICING MODEL (CAPM) - INDICATED COST OF EQUITY
WEIGHTED - All Inputs Weighted From April to June 2024

	3-Month Treasury Bill		30-Year Treasury Bond	
	Historical Blended Beta	Forward Beta	Historical Blended Beta	Forward Beta
Risk-Free Rate	5.47%	5.47%	4.63%	4.63%
Beta	0.80	1.03	0.80	1.03
Risk Premium	2.46%	2.46%	3.30%	3.30%
CAPM	7.43%	8.01%	7.26%	8.03%

Please see Appendix E for a chart showing how the results of my CAPM analysis applied to the RFC Water Proxy Group have changed over time since the onset of the Covid pandemic.

VI. CAPITAL STRUCTURE AND COST OF DEBT

Q. IS AQUA'S REQUESTED CAPITAL STRUCTURE OF 53.95% COMMON EQUITY AND 46.05% DEBT APPROPRIATE?

A. No. Aqua's requested capital structures are not appropriate for setting rates in this proceeding since it has a significantly higher common equity ratios (53.95%) than the average common equity ratio used by other water utility companies in the country (50.7%)[62] and the consolidated capital structure being used by its parent Aqua's parent Essential Utilities, Inc. (about 47.5%).[63]

Q. WHAT CAPITAL STRUCTURE DO YOU RECOMMEND BE USED FOR AQUA'S OVERALL COST OF CAPITAL?

A. I recommend using a capital structure consisting of 50.53% equity and 49.47% debt, based on the average common equity ratios of the companies in my proxy group. A common equity ratio of 50.53% is on the high side of reasonableness because it is above the mean 50.7% and median (41.3%) common equity ratio of the 6 gas distribution companies in the RFC Water Proxy Group. I believe, absent evidence from Aqua in support of the need for a different capital structure, using the capital structure that more closely aligns with that of the proxy group is consistent the Commission's duty to set just and reasonable rates that consider both the utility and its investor's needs as well as the needs of ratepayers. I emphasize that I recommend this capital structure is for ratemaking purposes only through the end of the fully projected future test year. I am not advocating that the Commission deprive Aqua of the ability to determine its own capital structure, only that, for ratemaking

[62] Exhibit ALR-5, page 5.
[63] Essential Utilities Value Line Report, January 5, 2024.

purposes, the Commission should utilize a more reasonable capital structure which closely mirrors the proxy group members that form the basis of my COE recommendation.

Additionally, Aqua's parent (Essential Utilities, Inc.) has common equity ratio of about 48.50%.[64] There is no reason I am aware of for Aqua to have a significantly higher common equity ratio than Essential Utilities, Inc., which includes non-utility operations.[65] Authorizing a regulatory capital structure for Aqua with a common equity ratio higher than other comparable utility companies without justification will result in unreasonably high rates. As shown in Table 3 on page 17, my recommendations, including my capital structure recommendation, result in an overall rate of return of 6.19%. Mr. Moul's recommendations result in an overall rate of return of 7.90%.

It can't be overlooked that the authorized capital structure can have a large impact on the utility company's revenue requirement. If my cost of equity recommendation is applied to Mr. Moul's recommended capital structure it will require a revenue requirement of approximately $7 million more.

If Mr. Moul's capital structure recommendations are adopted it is important to make an adjustment the overall ROR to account for the financial risk difference between her capital structure recommendation and that of the companies in the RFC Water Proxy Group which have a significantly lower average common equity ratio (50.7%) than the common equity ratios recommend by Mr. Moul. A higher common equity ratio means less debt, a lower chance of financial stress (financial risk), and therefore a lower COE. On the other

[64] Essential Utilities, Inc., Value Line Company Report, October 6, 2023.

[65] Aqua Resources is a non-utility subsidiary of Essential Utilities, Inc., providing operations and maintenance contracts, and system maintenance. You would expect a company with un-regulated operations to have a higher common equity ratio (lower percentage of debt) than a regulated subsidiary like Aqua because they are riskier. Riskier companies have less predictable earnings so they must keep their interest payments low so they can make sure they can cover their interest payments.

hand, a lower common equity ratio means more debt, a higher chance of financial stress (financial risk), and therefore a higher COE. Based on a regression analysis of dozens of utility companies, I found a 0.04% reduction in the cost of equity results for every 1% increase in the common equity ratio. Therefore, if the Commission authorizes a capital structure with a higher common equity ratio for a specific applicant, then the authorized ROE for that applicant should be reduced by 0.04% for every 1% its authorized common equity ratio exceeds that of the proxy group.[66]

Q. WHAT COST OF DEBT DO YOU RECOMMEND?

A. I recommend adopting Aqua's requested cost of debt of 4.32%.

VII. EVALUATION OF AQUA'S RATE OF RETURN TESTIMONY

Q. PLEASE SUMMARIZE THE TESTIMONY OF MR. MOUL.

A. Mr. Moul concluded that a reasonable ROE for Aqua is 10.95%, which excludes an unspecified incremental increase for the Company's management performance.[67] He claims that his ROE recommendation should be "considered in the context of AP's risk characteristics, as well as the general condition of the capital markets."[68] Mr. Moul arrived at his recommendation based upon his own versions of the Discounted Cash Flow ("DCF") model, Risk Premium analysis, Capital Asset Pricing Model ("CAPM") and the Comparable Earnings approach. Mr. Moul testified that, "At any point in time, a single method can provide an incomplete measure of the cost of equity depending upon

[66] Earlier in testimony I provide the specific adjustments required if Mr. Moul's capital structure recommendation is used to set rates.
[67] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 7, lines 9-24.
[68] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 48, lines 4-7.

extraneous factors which may influence market sentiment."[69] Mr. Moul adds a leverage adjustment to his DCF result and the size adjustment to his CAPM method.[70] Mr. Moul applied his four cost of equity methods to his "Water Group" of 8 water utility companies. The results of Mr. Moul's four cost of equity methods are shown on Table 8 below.

TABLE 8: MR. MOUL'S COST OF EQUITY RESULTS - CORE SAMPLE

METHOD	Model Results
Discounted Cash Flow (DCF)	10.58%
Risk Premium (RP)	11.50%
Capital Asset Pricing Model (CAPM)	13.80%
Comparable Earnings (CE)	12.90%

[1] Mr. Moul's Direct Testimony, AP Exhibit 4-A, Page 2 of 29.

Q. WHAT IS YOUR OVERALL REACTION TO MR. MOUL'S TESTIMONY?

A. Mr. Moul's DCF result is 9.38% before adding 1.20% for a "leverage adjustment."[71] Mr. Moul's DCF result is unreasonably above the market-based cost of equity before including his inappropriate adjustments. Below I will explain why Mr. Moul's adjustments are inappropriate and the flaws in Mr. Moul's DCF method.

A. DCF Method

Q. DOES MR. MOUL CONSIDER THE DCF METHOD HIS PRIMARY METHOD FOR DETERMINING THE COST OF EQUITY?

A. No. he claims that the DCF method has limitations.[72]

[69] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 6, lines 11-13.
[70] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, Schedule 1 [2 of 2].
[71] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, Schedule 1 [2 of 2].
[72] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 23, line 23, page 24, lines 1-9.

Q. WHAT FORMULA DOES MR. MOUL USE IN HIS DCF ANALYSIS?

A. Dividend Yield (D/P) + Growth Rate (g) + leverage Adjustment (lev).[73]

Q. DOES MR. MOUL PROPERLY APPLY THE SIMPLIFIED OR CONSTANT DCF METHOD?

A. No. Mr. Moul adds a growth component to a dividend yield even though his growth analysis gives earnings per share growth forecasts by analysts the greatest emphasis.[74] It is only a DCF method if the dividend yield is computed properly, and the growth rate used is derived from a careful study of what future sustainable growth in cash flow is anticipated by investors.

Q. HOW DID MR. MOUL CALCULATE HIS GROWTH RATE FOR HIS DCF METHOD?

A. On page 30, lines 16-17 of Mr. Moul's testimony he says "…IBES/First Call, Zacks, and Value Line provide the best indication of investor expectations."[75] Mr. Moul states, "DCF growth rates should not be established by a mathematical formulation" and he believes that a growth rate of 6.75% is a "reasonable estimate of investor-expected growth of the Water Group."[76] Below are the five-year projected earnings per share rates by the four investment research firms he chose:

IBES/First Call: 5.88%

Zacks: 6.80%

Value Line: 6.58%

[73] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, Schedule 1 [2 of 2].
[74] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 25, lines 1-7, n.6.
[75] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 30, lines 15-17.
[76] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 30, lines 20-24.

Mr. Moul's 6.75% growth rate is higher than the average of I/B/ES and Value Line's growth forecasts. The average of Value Line's earnings forecasts for the 8 companies in Mr. Moul's Water Group is 6.58%, but this includes a 10% growth rate for California Water Serv. Grp. If investors consider California Water Serv. Grp's growth rates to be an outlier and not representative of Water Group's growth prospects, Mr. Moul's DCF result of 9.38%[77] significantly overstates Aqua's cost of equity. I am not aware of any reason why California Water Serv. Grp's growth rate is substantially higher than other water utility companies. Regardless of the reason why, it is concerning that Mr. Moul's results are impacted so much by one data point.

Q. IS MR. MOUL'S METHODOLOGY TO DETERMINE THE GROWTH RATE TO USE IN HIS DCF MODEL APPROPRIATE?

A. No. Mr. Moul mentions the "b x r" method on pages 25-26 of his direct testimony but he does not use it. As stated above, Mr. Moul uses analyst five-year earnings per share growth without attempting to reconcile the retention rate used for computing growth with the retention rate he used to compute the dividend yield. This is analogous to failing to reconcile the money you are taking out of your checking account with your future balance, i.e., the basic balancing of a checkbook.

[77] Excluding 1.20% leverage adjustment.

Q. CAN YOU PLEASE SUMMARIZE WHY A FUTURE-ORIENTED "B X R" METHOD IS SUPERIOR TO A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE FORECAST IN PROVIDING A LONG-TERM SUSTAINABLE GROWTH RATE?

A. Yes. Please see Appendix B.

Q. BESIDES GROWTH RATE, ARE THERE ANY OTHER DCF ANALYSIS INPUTS THAT MR. MOUL HAS ESTIMATED INCORRECTLY?

A. Yes. Mr. Moul made an unjustifiable "leverage adjustment."

Q. PLEASE DESCRIBE THE LEVERAGE ADJUSTMENT PROPOSED BY MR. MOUL IN THIS PROCEEDING.

A. Mr. Moul has proposed a leverage adjustment addition to his DCF derived cost of equity, stating "In order to make the DCF results relevant to the capitalization measured at book value (as is done for rate setting purposes), the market-derived cost rate must be adjusted to account for the difference in financial risk."[78] He then goes on to say: "Because the ratemaking process uses ratios calculated from a firm's book value capitalization, further analysis is required to synchronize the financial risk of the book capitalization with the required return on the book value of the firm's equity."[79] Because of this alleged higher financial risk, Mr. Moul recommends adding 1.20%[80] to the DCF derived cost of equity.

Q. JUST BECAUSE THE MARKET VALUE CAPITAL STRUCTURE CONTAINS A HIGHER PERCENTAGE OF COMMON EQUITY THAN BOOK VALUE

[78] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 31, lines 22-24.
[79] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 32, lines 10-13.
[80] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 34, lines 24-26, page 35, lines 1-7.

CAPITAL STRUCTURE, DOES THIS MEAN THE MARKET VALUE CAPITAL STRUCTURE HAS LOWER FINANCIAL RISK THAN THE BOOK VALUE CAPITAL STRUCTURE?

A. No. Market value capital structure and book value capital structure are two completely different ways of measuring the same thing. Concluding that a market value capital structure is lower in risk because it contains more equity than the book value-based capital structure for the same company is as inconsistent and illogical as claiming that a person who weighs 150 pounds could lose weight simply by stepping on a scale that measures weight in kilos instead of pounds. Financial risk is determined by a company's ability to meet its cash flow obligations. The most common and perhaps most important single measure of financial risk is the pretax interest coverage ratio. The interest coverage ratio is computed by dividing the sum of interest expense and pre-tax income by interest expense. This number is useful because it gives bondholders a sense of how far earnings would have to decline before a company would not be able to meet its interest payments. For example, if a company has an interest coverage ratio of 3.0, this means that at its current earnings rate, or its earnings available for both payment of interest and pre-tax earnings, is three times as much as is needed to make its interest payments.

Q. DOES A DECLINE IN MARKET PRICE LOWER THE COVERAGE RATIO?

A. Lowering the market value does not directly cause a change in the coverage ratio computation because market value is indicative of investor expectations as to the value of a company's securities can be freely traded, it is not a direct barometer for the actual cash flow the company has in order to cover its expenses or retain for future investment or distribution. This coverage ratio is measured by dividing cash flow by interest expenses

and is not directly impacted by the market value of a company's equity.. Market value and book value should be addressed separately and not conflated, as Mr. Moul does when recommending a leverage adjustment to market value cost of equity based on book value financial risk. Therefore, changing from a market value orientation to a book value orientation does no more to change a company's financial risk than the weight of a person was influenced by switching to a scale calibrated in kilos instead of pounds.

Q. DO INVESTORS UNDERSTAND THAT, AS PART OF THE REGULATORY PROCESS, ALLOWED RETURNS ARE APPLIED TO BOOK VALUE?

A. Yes, they do. This is a process that has been going on for decades and it is hard to argue that investors are not aware of this. By recommending this leverage adjustment, Mr. Moul is implying that investors forget this after each rate case. Evaluating the cost of equity based on a comparative group is like taking a snapshot of their expectations. After this snapshot is taken, it is then applied to the individual company, so even if the allowed return affected the expectation of the investors in the comparative group, it would be after the snapshot was taken.

Q. DOES MR. MOUL'S LEVERAGE ADJUSTMENT GO AGAINST ORIGNAL COST RATEMAKING?

A. Yes. Mr. Moul claims, "The need for the leverage adjustment arises when the results of the DCF model (k) are to be applied to a capital structure that is different from the capital structure indicated by the market price (P)."[81] In other words, Mr. Moul is saying that as a consequence of original cost ratemaking, an upward adjustment is needed. When a

[81] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 32, lines 2-4.

company has a market to book value above 1, and is thus over earning, applying the correct rate of return to the book value could have downward pressure on the stock price. No matter what logic is applied to the reason for adding a value to the rate of return, the leverage adjustment distorts the natural market dynamic between a regulated utility's stock price and its allowed rate of return. This is why, as I have been informed by counsel, Mr. Moul's leverage adjustment, which he makes as a course of business in his testimonies in Pennsylvania, has been consistently rejected by the Commission, because it speaks to investor expectations that do not exist and are not supported by any market-based rationale.

B. Risk Premium Method

Q. PLEASE SUMMARIZE MR. MOUL'S RISK PREMIUM ANALYSIS.

A. Mr. Moul explains that, "With the Risk Premium approach, the cost of equity capital is determined by corporate bond yields plus a premium to account for the fact that common equity is exposed to greater investment risk than debt capital."[82] In this approach, he computes a 11.50% cost of equity by summing a prospective yield for long-term public utility debt (5.00%) and his estimate of an equity risk premium (6.50%).[83] His prospective yield for long-term public utility debt of 5.00% is based on adding a 1.25% spread to Blue Chip Financials projected yields on U.S. Treasury bonds. He claims that "1.25% represents a reasonable, albeit conservative, spread for the yield on A-rated public utility bonds over Treasury bonds."[84] Mr. Moul calculates the equity risk premium (6.50%) of this approach by measuring large company stock returns over long-term corporate bonds based between

[82] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 36, lines 13-15.
[83] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 36, lines 15-22, page 39, lines 16-19.
[84] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 37, lines 8-10.

1926-2022 and presents the results in the following three categories based on the relative level of interest rates.

- Low Interest Rate: 7.13%
- Average Across All Interest Rates: 5.96%
- High Interest Rates: 4.76%[85]

From these data, he has "utilized" a 6.50% equity risk premium, which is between the premiums during low interest rates (7.13%) and an average of the premiums during the entire historical period (5.96%).[86]

Q. DOES MR. MOUL'S RISK PREMIUM METHOD PRODUCE A REASONABLE RESULT?

A. No. Mr. Moul's equity risk premium method result of 11.50% is excessive primarily because the equity risk premium component of 6.50%[87] is unreasonably high. A 6.50% equity risk premium is out of line with market data, academic studies and the results of his own sources.

Mr. Moul uses historical data from Kroll's 2023 SBBI Yearbook to support his claim that "the equity risk premium increases as interest rates decline, and it declines as interest rates increase."[88] He claims that this historical data supports his 6.50% equity risk premium component.[89] However, his analysis based on historical data is flawed because he failed to consider if investors expect future returns to be different than past returns. This oversight is ironic because he claims the DCF model is flawed because it assumes a

[85] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 39, line 9.
[86] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 39, lines 17-19.
[87] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 39, line 17.
[88] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 39, lines 6-7.
[89] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 39, lines 10-19.

constant P-E ratio "that does not conform with actual stock market performance."[90] His own source, the Kroll SBBI Yearbook, considered if investors might consider future equity returns to be different than the past. The authors of this book looked beyond historical data and concluded that "the current [price-to-earnings] ratio is the market's best guess for the future of corporate earnings."[91] Based on this current market data, the Kroll 2023 SBBI Yearbook calculated "a…geometric supply-side equity risk premium of 4.39%."[92] In September 2023, Kroll found an equity risk premium of 5.5%, which is 1% lower than his estimate. It should be further noted that Kroll's 4.39% and 5.50% equity risk premium calculations are in comparison to U.S. Treasury bonds, not the corporate bond yields used in Mr. Moul's analysis. Since corporate bond yields are higher than U.S. Treasury bonds, Mr. Moul's equity risk premium would be expected to be lower than those calculated by Kroll. Instead, his 6.50% is significantly higher. Therefore, the results of his own source indicate that his 11.50% COE result is excessive.

Consistent with Kroll's supply-side equity risk premium analysis I found an equity risk premium to be considerably lower than claimed by Mr. Moul. As shown in Table 6 and Table 7 on page 79, I found an equity risk premium of between 2.32% and 3.30%, which provides additional evidence that his 11.50% COE result is excessive.

[91] Kroll 2023 SBBI Yearbook, Page 199.
[92] Kroll 2023 SBBI Yearbook, Page 197-199.

C. CAPM Method

Q. PLEASE SUMMARIZE MR. MOUL'S CAPM METHOD.

A. Mr. Moul explains that, "To compute the cost of equity with the CAPM, three components are necessary: a risk-free rate of return ("Rf"), the beta measure of systematic risk ("β"), and the market risk premium ("Rm-Rf") derived from the total return on the market of equities reduced by the risk-free rate of return."[93] He uses a risk free rate of 3.75% based on interest rate forecasts and recent trends in long term Treasury yields, including the possibility of some moderation in rates in the future.[94] His market premium portion of his CAPM analysis (8.21%) is based on the average of forecasted and historical returns on the S&P 500.[95] He adds a "mid-cap adjustment" of 1.02% to account for the relatively small size of Aqua relative to the companies in the Water Group.[96]

Q. DO YOU AGREE WITH THE RESULTS OF MR. MOUL'S CAPM ANALYSIS?

A. No, I do not agree with results of Mr. Moul's CAPM analysis because I believe that they significantly and inaccurately overstate the Company's cost of equity.

The arithmetic average return that Mr. Moul uses overstates the historical risk premium by over 200 basis points. The 2023 SBBI Yearbook shows that investors actually earned a compounded annual return of 10.1%[97] between 1926 and 2022. The arithmetic mean return of 12.21%[98] is possibly valuable to stockbrokers and fund managers attempting to predict future bonuses, but not for calculating the cost of equity. A Dow

[93] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 40, lines 11-15.
[94] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 43, lines 2-4.
[95] Mr. Moul's Direct Testimony, Aqua St. No. 7, AP Exhibit 4-A, page 43, lines 6-19.
[96] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Page 46, lines 18-23 and Page 47, lines 1-11.
[97] Kroll 2023 SBBI Yearbook, page 2-23.
[98] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Exhibit PRM-1, Page 25 of 29.

Jones Newswire article stated, "Some financial advisers rely too heavily on a formula known as the arithmetic average, which can be misleading when investing for the long term. Financial advisors who use this formula may be overstating your potential profit and leading you to take risks you might otherwise avoid…"[99] Mr. Moul's prospective risk premium calculation is based on a DCF analysis that is not based on sustainable growth. His DCF analysis for the S&P 500 has an unreasonably high growth component of 9.73%.[100]

Q. IS MR. MOUL'S ADDER FOR A SMALL SIZE EFFECT AN APPROPRIATE PART OF A CAPM ANALYSIS?

A. No. Mr. Moul's premium adder for the relatively small size of Aqua is unjustifiable. A proper analysis of the data from Ibbotson SBBI/Morningstar shows that size is a diversifiable risk and therefore does not impact the cost of equity. Professor Aswath Damodaran said the following regarding the supposed "small cap premium": "Even if you believe that small cap companies are more exposed to market risk than large cap ones, this is an extremely sloppy and lazy way of dealing with that risk, since risk ultimately has to come from something fundamental (and size is not a fundamental factor)."[101]

[99] Kaja Whitehouse, To Financial Advisors and Fuzzy Math, Dow Jones Newswires October 8, 2003.
[100] Mr. Moul's Direct Testimony, Peoples Statement No. 13, Schedule 13, page 2 of 3.
[101] Aswath Damodaran, Equity Risk Premiums (ERP): Determinates, Estimation and Implications – The 2014 Edition (paper updated, March 2015) page 42.

Q. DO THE RESULTS OF RECENT STUDIES PROVIDE ADDITIONAL EVIDENCE THAT SMALLER FIRMS DO NOT HAVE A HIGHER COST OF EQUITY THAN LARGE FIRMS?

A. Yes. A 2018 study conducted by scholars at AQR Capital Management and Yale University found that "the size effect diminished shortly after its discovery and publication."[102] The authors of this research found that data errors plagued the early studies regarding the relationship between firm size and return. They found that the data in the earlier studies did not include delisted companies and since smaller firms are delisted more often than larger stocks, the biased data (referred as a "delisting bias") made the returns of smaller stocks look higher than reality.[103]

Mr. Moul's CAPM is inflated because he takes steps to increase his results for a so-called small firm effect that has been put into serious question by recent research. I have been informed by counsel that a "small size adjustment" has almost never been permitted by the Pennsylvania PUC, even in cases where the public utility is substantially smaller than Aqua, one of the largest water and wastewater public utilities in Pennsylvania. It is also important to note that Mr. Moul routinely makes a size adjustment recommendation in his Pennsylvania testimonies as a seeming course of business adjustment, and his consistent use of the adjustment raises questions about objectivity all on its own. Therefore, his CAPM overstates Aqua's cost of equity because the risk premium potion of this method is impacted by these exaggerated returns.

[102] Ron Alquist, Ronen Israel, and Tobias Moskowitz, Fact, Fiction, and the Size Effect, *The Journal of Portfolio Management*, Fall 2018, page 3.
[103] Ron Alquist, Ronen Israel, and Tobias Moskowitz, Fact, Fiction, and the Size Effect, *The Journal of Portfolio Management*, Fall 2018, page 5.

D. Comparable Earnings Method

Q. PLEASE EXPLAIN THE COMPARABLE EARNINGS METHOD PRESENTED BY MR. MOUL.

A. Mr. Moul selected a group of non-regulated companies that he believes to be of comparable risk to the Electric Group. After selecting the companies, he presents the historic and Value Line expected return on book equity. See Schedule 14 [2 of 3], of Mr. Moul's direct testimony. The final column of numbers on this table is the "Projected 2027-29." However, what he labels as the projected 2027-29 return is actually the return on book equity that Value Line forecasts, not the return that Value Line projects investors will receive on their investment as a result of purchasing the common stock at current prices. According to Mr. Moul's Schedule 14, the total return expected by Value Line on the book equity of these industrial companies is between a 7.50% and a high of 85.5%, for an average of 19.0% (13.1% excluding companies with values > 20%).

Q. IS THIS METHOD VALID?

A. No. Mr. Moul has attempted to determine the cost of equity that would be demanded by investors on the market price of a company comparable to Aqua by comparing it to the historic and projected returns on book equity of a selection of industrial companies. Leaving aside the problems with actually being able to select companies that are comparable, the overriding problem with Mr. Moul's comparable earnings analysis is that it did not address the cost of equity at all. It simply considered the returns on book equity that were achieved and are expected to be achieved by Value Line in the next 3 to 5 years. The earned return on book equity is an entirely different concept from the cost of equity.

Q. SHOULD THE COMMISSION INCREASE AQUA'S AUTHORIZED ROE TO ACCOUNT FOR MANAGEMENT PERFORMANCE?

A. As explained above, the appropriate authorized ROE is based on the Commission's determination of the COE at the time of the proceeding. The COE is the market-based return investors expect to earn on the market value of any given stock. If the Commission decides to authorize Aqua an ROE that is higher than Aqua's market-based COE for its claimed superior management performance, I strongly encourage the Commission use my ROE recommendation of 8.70% (8.03% - 9.38%) without any adjustment for management performance. Mr. Moul's 10.95% ROE recommendation, without any claimed adjustment to account for management performance, is significantly above Aqua's market-based COE and should not be the starting point for any increase to Aqua's ROE to recognize management performance. I also note that OCA witnesses Hoover, Alexander and Colton have each provided rationale for rejecting Aqua's request for a management performance adder, and I will defer to those witnesses individually to explain their positions, for my purposes. It is important to recognize that my analysis here demonstrates that Aqua's requested ROE should be rejected because it is higher than its market-based COE.

Q. PLEASE SUMMARIZE YOUR ANALYSIS OF MR. MOUL'S TESTIMONY.

A. Mr. Moul recommends that the Company be allowed a return on equity of 10.95%. Mr. Moul's DCF result of 10.58% is above the market-based COE because (1) it has an unsustainable growth rate component (6.75%) and (2) he adds a leverage adjustment that misrepresents the basics of evaluating a company's cost of equity. Without his leverage adjustment, his DCF result is 9.38%, which I believe should be viewed as a ceiling for Aqua's authorized ROE in this case. Mr. Moul's Risk Premium method was developed

based upon an improper mathematical approach to quantifying historic actual returns. Mr. Moul's CAPM approach relies on an excessive market risk premium, an improper inflation of the "beta" because of a high market-to-book ratio, and an invalid "mid-cap adjustment." The incorrect claim that investors demand a higher cost of equity to invest in a small company (referred to as "size premium") is manufactured by an incorrect use of data. Mr. Moul's Comparable Earnings method is not really an equity costing method at all, as no consideration was given to investor's reactions to the earned returns on book equity.

VIII. FAIR MARKET VALUE LEGISTLATION – COST OF EQUITY IMPACT

Q. PLEASE DISCUSS HOW PENNSYLVANIA'S FAIR MARKET VALUE LEGISLATION RELATES TO YOUR COST OF EQUITY RECOMMENDATION.

A. My understanding is that Pennsylvania law permits utilities operating in the state to acquire public water and wastewater systems based on the "fair market value" of the system, even if the acquisition will result in higher costs for consumers, which provides a guaranteed addition to rate base if the acquisition is approved. However, until now Investor-owned water companies, including Aqua, have been profiting from the state's Fair Market Value legislation which allows regulated utility companies to purchase public water systems above original cost. Value Line stated the following regarding the benefits of acquiring smaller systems in their April 2024 report:

> Consolidation in the water business will be a positive for the company. There are thousands of small, inefficient municipal water districts in the United States. Essential merged seven systems into its rate base last year.

> The company is able to achieve substantial savings and increase margins when it integrates these new assets into its operations.[104]

Essential Utilities told investors that Fair Market Value legislation is a "competitive advantage"[105] and its strategy of investing in troubled water and wastewater systems as a growth opportunity.[106] If Fair Market Value legislation is a competitive advantage, as Aqua told its investors, it is possible that my ROE recommendation overstates Aqua's cost of equity because my cost of equity model results are based on financial data from a proxy group of regulated water utility companies that, on average, are not benefiting as much as Aqua from such legislation.

Q. HAVE YOU SEEN EVIDENCE REGARDING HOW FAIR MARKET VALUE LEGISLATION IMPACTS THE COST OF EQUITY OF UTILITY COMPANIES IN PENNSYLVANIA?

A. Yes. I have reviewed evidence that consumers have been The Commission's Order from the Aqua-Limerick Section 1329 proceeding claims that "Section 1329 helps mitigate the risk that a utility will not be able to fully recover its investment when water or wastewater assets are acquired from a municipality or authority."[107] Section 1329 leads some municipalities to sell their systems because it allows utilities to put the "fair market value" into rate base, which is always higher than the depreciated original cost of the system, oftentimes by multiples of two or more. This law provides a significant growth opportunity

[104] Value Line, American Water Works Company, Inc. company report, April 5, 2024.
[105] Essential Utilities' Investor Presentation, August 2024. chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://www.essential.co/static-files/39f07290-b86b-4a5f-8351-2476c649105d
[106] Essential Utilities' 2023 Annual Report, Page 1.
[107] Opinion and Order on Application of Aqua Pennsylvania Wastewater, Inc. Pursuant to Section 1102 and 1239 of the Public Utility Code for Approval of its Acquisition of the Wastewater System Assets of Limerick Township, A-2017-2605434, November 8, 2017, page 4.

for investor-owned utilities who can acquire large numbers of captive customers at a time through high-cost acquisitions passed on to those ratepayers through the guaranteed addition to rate base.

As discussed below, the passage of Section 1329 in 2016 likely reduced the cost of equity for water and wastewater companies with operations in Pennsylvania, at least for those who acquire municipal systems, which includes Aqua.

Q. PLEASE EXPLAIN WHY THE PASSAGE OF 1329 REDUCES AQUA'S COST OF EQUITY.

A. As stated earlier, volatility, uncertainty, and risk are synonymous. Less uncertainty equates to lower risk and therefore, potentially, a lower cost of equity. The passage of Section 1329 significantly reduces the risk that an investor-owned utility will be able to put the purchase price of a municipal water/wastewater system into rate base. Credit rating agencies recognize that fair market value legislation reduces investment risk. Ryan Wobbrock, a senior analyst at Moody's, stated the following regarding the impact of fair market value legislation on investor-owned utility companies:

> What is most important from a credit perspective is clarity surrounding the recoverability of the investment, and this legislation definitely helps provide that.[108]

Aqua's proposed Regionalization and Consolidation Surcharge would reduce further the risk of purchasing municipal systems by allowing them to earn a return on the purchase price before the next rate case.

[108] Investor-Owned utilities benefit as fair value legislation incentivizes system sales, Global Water Intelligence, December 2016.

Utility executives understand that fair market value legislation will make it easier for them to grow through acquisition. For example, in a recent preliminary Prospectus Supplement offered by Essential Utilities, Inc., Aqua's parent company lauded the growth in the company's customer base through acquisitions of water and wastewater utilities being the primary driver.[109] These prospectus statements accompanied an offering of senior debt securities for Essential Utilities, meaning that the company's statements regarding its growth-by-acquisition strategy were made in the context of seeking investments.

IX. AFFORDABILITY AND THE IMPACT OF INFLATION

Q. DO ANY WITNESSES ADDRESS THE ISSUES OF AFFORDABILITY AND THE IMPACT OF INFLATION ON RATEPAYERS?

A. Yes. OCA witness Colton specifically addresses in his Direct Testimony that Aqua's rates for both water and wastewater customers have grown increasingly unaffordable for its customers since Aqua's last rate increase in 2022. Mr. Colton also addresses that, while inflation may have had an impact on utility companies' expenses, the impact on ratepayers – especially low-income ratepayers – was significant and should be considered as well.

[109] Essential Utilities, Inc., Form 8-K Exhibit 99.1 at pages S-1 and S-2, filed with the Securities and Exchange Commission Aug. 5, 2024, https://www.sec.gov/Archives/edgar/data/78128/000155278124000417/e24330_ex99-1.htm.

Q. IS IT APPROPRIATE TO CONSIDER THE IMPACT OF AFFORDABILITY WHEN DETERMINING THE COE FOR A UTILITY IN A RATE PROCEEDING?

A. Yes. The impact of customers' ability to afford their utility bills, especially during times with high levels of inflation, is a concern that is raised by analysts and utility holding companies when determining the risks that a utility faces. Even though inflation has decreased recently and is expected to decline further in coming months, high inflation in recent years remains a significant impact on affordability for many consumers.

Q. WHAT SPECIFIC RISKS DOES AFFORDABILITY POSE TO A UTILITY'S COE?

A. There are two major risks that affordability poses. When a utility begins to charge unaffordable rates, that utility may be less likely to be able to meet its revenue targets as the number of unpaid and/or partial bills increases. Furthermore, there are environmental, social, and governance factors that are considered by investors and ratings agencies which can impact the utility's perceived value if its requested revenue requirements grow increasingly aggressive and pose outsized impacts on investors.

Q. CAN YOU PROVIDE SOME EXAMPLES AS TO CONSIDERATIONS OF AFFORDABILITY BY ANALYSTS OR UTILITIES?

A. Yes. Moody's Investor Service, in its rating methodology for regulated water utilities, stated "We also consider whether the tariffs [of regulated water utilities] are affordable. Affordability can be measured, for example, through the level of unpaid bills. A water utility would normally score lower on [its Business Profile – Cost and Investment Recovery subfactor] than the theoretical tariff formula may imply if the level of unpaid bills is high

or is increasingly material."[110] This concern is especially prevalent for utilities, like Aqua, that grow its revenue requirement through infrastructure investments and acquiring systems (i.e., growing its rate base). Failing to meet the cash required to meet infrastructure investments due to unaffordable rates can create a negative perception or rating of regulated utilities which indicates that investment in that utility is riskier.

Essential also informed its shareholders that "customers' inability to pay or delays in paying their utility bills. . .may lead to higher bad debt expense, increased financing costs, and reduced cash flow" as a result of "general economic conditions" when disclosing the risks that the company faces.[111] This shows that Aqua's parent company recognizes the risk that customers' ability to afford their monthly bills may have on its ability to satisfy its cash flow. Thus, unaffordable bills not only jeopardize customers' access to utility service, but they produce an investment risk that Mr. Moul fails to recognize in any of the upward adjustments he recommends in this case.

Q. HOW SHOULD THE COMMISSION CONSIDER THIS INFORMATION WHEN DETERMINING THE APPROPRIATE COE FOR AQUA?

A. As I stated above, the pretax interest coverage ratio is perhaps the most important single measure of financial risk. If customers cannot afford their bills, Aqua's risk increases because its ability to cover its interest expense and earn its authorized revenue requirement decrease. While I am not recommending that the Commission make a specific adjustment to my calculated COE in order to account for customers' ability to afford their bills, I would

[110] Moody's Investor Service, Rating Methodology: Regulated Water Utilities, published Aug. 18, 2023, https://ratings.moodys.com/api/rmc-documents/406788.
[111] Form 10-K, Essential Utilities, Inc., filed Feb. 29, 2024 at page 25, https://www.sec.gov/Archives/edgar/data/78128/000156276224000047/wtrg-20231231x10k.htm.

recommend that the Commission use data presented by Mr. Colton and others to determine what COE to select from the range of reasonable costs of equity calculated in this proceeding.

Q. IF THE COMMISSION WERE TO AUTHORIZE AN ROE ABOVE YOUR RECOMMENDED ROE OF 8.70%, HOW SHOULD THE COMMISSION ADDRESS AFFORDABILITY?

A. Mr. Moul and I both recommend a range of reasonable returns on equity, though they differ substantially. I anticipate that other parties to this proceeding which offer testimony pertaining to COE will also offer a range of reasonable returns on equity, and that the Commission, in making its final determination in this proceeding, will also establish a range of reasonable returns on equity before selecting a specific ROE to use in calculating the ultimate ROR that Aqua will be permitted to use for ratemaking purposes. My recommendation, specifically, is that, when the Commission selects that specific ROE from its range of reasonable ROEs, instead of defaulting to use of a midpoint or average value, it should select an ROE on the lower end of the range of reasonableness to incorporate the concerns raised by Mr. Colton, other parties, and Aqua's customers about the affordability of Aqua's bills. Selecting a lower ROE within the range of reasonableness would mitigate the risks seen by Aqua investors about Aqua's ability to earn its authorized revenue requirement and reduce the water and wastewater bill burden on Aqua's customers, providing a more accurate COE. Additionally, it would recognize the clear reality, which Essential utilities recognizes, of the favorable impact that fair market value legislation has produced for investors.

X. CONCLUSION

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN THIS CASE.

A. Based on the evidence presented in my testimony, I conclude that a an authorized ROE of 8.70% would be more than sufficient for Aqua to raise equity capital. 8.70% is the average of the high end of my market-based COE analysis (8.03%) and the 9.38% unlevered DCF result of Aqua witness Moul. As discussed throughout my testimony, I determined that Aqua's market-based cost of equity is between 7.27% to 8.03%. I would generally recommend an ROE no higher than 8.03%. However, I recommend an ROE of 8.70% based on the OCA's position that it would be sufficient to allow Aqua to raise the capital it needs to provide safe and reliable service and ensure that rates are more affordable/less unaffordable than if Mr. Moul's 10.95% ROE recommendation is used to set rates.

Based on my recommended common equity ratio of 50.53%, that results in an overall cost of capital of between 6.19% and 6.88% (recommended at 6.53%).

If the Commission decides to use Aqua's requested capital structure of 53.95% common equity and 46.05% debt instead of my recommended capital structure, I recommend a reduced authorized ROE of 8.56% (7.89% - 9.24%) to account for the lower financial risk of a capital structure with more equity. Consistent with the testimony of other OCA witnesses, the Company has not demonstrated that it is entitled to a management performance adder. The Commission's selection of an appropriate ROE should also take into consideration the influence of Act 12 and the affordability of customers' rates on Aqua's COE, which warrant an authorized ROE which is on the lower end of the range of reasonable returns on equity.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

APPENDIX A. MARKET TO BOOK RATIOS AND THE MARKET-BASED COE

Q. PLEASE EXPLAIN WHY A MARKET TO BOOK RATIO OF SIGNIFICANTLY ABOVE ONE INDICATES THAT THE COST OF EQUITY FOR WATER UTILITY COMPANIES IS LOWER THAN THE EXPECTED RETURN ON BOOK EQUITY?

A. Calculating the cost of equity (investors' equity return expectations) is more complicated than calculating the return on a rental property, but the same concept applies regarding the relationship between market returns and book returns. If an investor purchases an apartment for $100,000 and expects to receive $500 per month ($500 X 12 = $6,000 per year) in rent, he or she will expect an annual return of 6% ($6,000/$100,000) on their investment. When the investor purchases the apartment, he would record the book value as $100,000 and the market value as $100,000 unless he determined that the purchase price was higher or lower than the market value. If the value of the apartment increases to $350,000, for example, the market to book ratio would increase to approximately 3.5, and therefore, his return on book value would remain at about 6% while his return on the market value of the apartment would decrease to about 1.7%.

In this rental property example, an increasing market value results in a lower expected return on market (1.7%) compared to expected return on book (6%) if the rent price remains constant. Rent prices do not increase to maintain an expected 6% return on book value; they are set by what the rental market reasonably can bear. The same is true of utility stocks. You do not establish an ROE based on a constant return on book (accounting) returns, it is set based on what investors in the market expect that market to return to. In the case of a utility stock, an increasing market value results in a lower return

on market value for the same expected return on book value. As this rental property example demonstrates, there is nothing inconsistent about investors expecting a lower return on the market price of an investment than on the book value of an investment. In fact, with market to book ratios of water utility companies significantly above one, it would be surprising if investors expected a return on market equal, or anywhere close, to return on book value.

APPENDIX B. FUTURE-ORIENTED "B X R" METHOD

Q. ARE YOU AWARE OF CLAIMS ALLEGING THAT THE "BR" APPROACH TO THE CONSTANT GROWTH DCF MODEL IS FLAWED BECAUSE IT RELIES ON THE VALUE OF THE FUTURE EXPECTED RETURN ON BOOK EQUITY "R" TO ESTIMATE WHAT THE EARNED RETURN ON EQUITY SHOULD BE?

A. Yes. One common criticism is that it is not reasonable for the DCF to indicate a COE (market return) that is different (lower or higher) than the expected return on book equity (accounting). There are multiple reasons why this concern is unfounded:

1. The constant growth form of the equation using "br" is:

   $$k = D/P + (br + sv)$$

   In this equation, "k" is the variable for the COE, and "r" is the future expected return on equity. The COE, "k," is not the same variable as the future expected earned return on equity, "r." In fact, there often is a large difference between the two.

2. The correct value to use for "r" is the return on book equity expected by investors as of the time the stock price and dividend data are used to quantify the D/P term in the equation. Therefore, even if future events occur that may change what investors expect for "r," the computation of the COE "k" remains correct as of the time the computation was made.

3. The ability of a commission's ROE decision to influence future cash flow expectations is not unique to the retention growth DCF approach. The five-year analysts' earnings per share growth rate is a computation that is directly influenced by what earnings per share will be in 5 years. Allowed ROEs

impact earnings – higher allowed returns lead to higher earnings growth because the higher allowed returns the more earnings are available for reinvestment.

Q. CAN CHANGES IN THE ACTUAL EARNED RETURNS IMPACT GROWTH ABOVE AND BEYOND WHATEVER GROWTH RESULTS FROM EARNINGS RETENTION?

A. Yes, but large short-term changes in earnings per share caused by a perceived change in the future expected earned returns are unsustainable. The new perceived earned return on book equity should be part of the computation, but the one-time growth spurt to get there is no more indicative of the sustainable growth required in the constant growth DCF formula than the temporary negative growth that occurs when a company has a bad year.

Q. CAN YOU PLEASE SUMMARIZE WHY A FUTURE-ORIENTED "B X R" METHOD IS SUPERIOR TO A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE FORECAST IN PROVIDING A LONG-TERM SUSTAINABLE GROWTH RATE?

A. The primary cause of sustainable earnings growth is the retention of earnings. A company is able to create higher future earnings by retaining a portion of the prior year's earnings in the business and purchasing new business assets with those retained earnings. There are many factors that can cause short-term swings in earnings growth rates, but the long-term sustainable growth is caused by retaining earnings and reinvesting those earnings. Factors that cause short-term swings include anything that causes a company to earn a return on book equity at a rate different from the long-term sustainable rate. Assume, for example, that a particular utility company is regulated so that it is provided with a reasonable

opportunity to earn 9% on its equity. Should the company experience an event such as the loss of several key customers, or unfavorable weather conditions, which cause it to earn only 6% on equity in a given year, the drop from a 9% earned return on equity to a 6% earned return on equity would be concurrent with a very large drop in earnings per share. In fact, if a company did not issue any new shares of stock during the year, a drop from a 9% earned return on book equity to a 6% earned return on book equity would result in a 33.3% decline in earnings per share over the period.[112] However, such a drop in earnings would not be an indication of what is a long-term sustainable earnings per share growth rate. If the drop were caused by weather conditions, the drop in earnings would be immediately offset once normal weather conditions return. If the drop were from the loss of some key customers, the company would replace the lost earnings by filing for a rate increase to bring revenues up to the level required for the company to be given a reasonable opportunity to recover its cost of equity.

For the reasons above, changes in earnings per share growth rates that are caused by non-recurring changes in the earned return on book equity are inconsistent with long-term sustainable growth, but changes in earnings per share because of the reinvestment of additional assets is a cause of sustainable earnings growth. The "b x r" term in the DCF equation computes sustainable growth because it measures only the growth which a company can expect to achieve when its earned return on book equity "r" remains in equilibrium. If analysts have sufficient data to be able to forecast varying values of "r" in future years, then a complex, or multi-stage DCF method must be used to accurately

[112] By definition, earned return on equity is earnings divided by book value. Therefore, whatever level of earnings is required to produce earnings of 6% of book would have to be 33.3% lower than the level of earnings required to produce a return on book equity of 9%.

quantify the effect. Averaging growth rates over sub-periods, such as averaging growth over the first five years with a growth rate expected over the subsequent period, will not provide an appropriate representation of the cash flows expected by investors in the future and, therefore, will not provide an acceptable method of quantifying the cost of equity using the DCF method. The choices are either a constant growth DCF, in which one growth rate derived using "b x r" should be used, or a complex DCF method in which the cash flow anticipated in each future year is separately estimated. Mr. Moul has done neither. Instead, he mechanically adds analysts' five-year earnings per share growth rate to the dividend yield.

Q. WHY ARE ANALYSTS' FIVE-YEAR CONSENSUS GROWTH RATES NOT INDICATIVE OF LONG-TERM SUSTAINABLE GROWTH RATES?

A. Analysts' five-year earnings per share growth rates are earnings per share growth rates that measure earnings growth from the most currently completed fiscal year to projected earnings five years into the future. These growth rates are not indicative of future sustainable growth rates in part because the sources of cash flow to an investor are dividends and stock price appreciation. While both stock price and dividends are impacted in the long run by the level of earnings a company is capable of achieving, earnings growth over a period as short as five years is rarely in synchronization with the cash flow growth from increases in dividends and stock prices. For example, if a company experiences a year in which investors perceive that earnings temporarily dipped below normal trend levels, stock prices generally do not decline at the same percentage that earnings decline, and dividends are usually not cut just because of a temporary decline in a company's earnings. Unless both the stock price and dividends mirror every down swing in earnings,

they cannot be expected to recover at the same growth rate that earnings recover. Therefore, growth rates such as five-year projected growth in earnings per share are not indicative of long-term sustainable growth rates in cash flow. As a result, they are not applicable for direct use in the simplified DCF method.

Q. IS THE USE OF FIVE-YEAR EARNINGS PER SHARE GROWTH RATES IN THE DCF MODEL ALSO IMPROPER?

A. Yes. A raw, unadjusted, five-year earnings per share growth rate is usually a poor proxy for either short-term or long-term cash flow growth that an investor expects to receive. When implementing the DCF method, the time value of money is considered by equating the current stock price of a company to the present value of the future cash flows that an investor expects to receive over the entire time that he or he owns the stock. The discount rate required to make the future cash flow stream, on a net present value basis, equal to the current stock price is the cost of equity. The only two sources of cash flow to an investor are dividends and the net proceeds from the sale of stock at whatever time in the future the investor finally sells. Therefore, the DCF method is discounting future cash flows that investors expect to receive from dividends and from the eventual sale of the stock. Five-year earnings growth rate forecasts are especially poor indicators of cash flow growth, even over the five years being measured by the five-year earnings per share growth rate number.

Q. WHY IS A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATOR OF THE FIVE-YEAR CASH DIVIDEND GROWTH EXPECTATIONS?

A. The board of directors of a company changes dividend rates based upon long-term earnings expectations combined with the capital needs of a company. Most companies do not

decrease dividends simply because a company has a year in which earnings were below sustainable trends, and similarly they do not increase dividends simply because earnings for one year happened to be above long-term sustainable trends. Therefore, over any given five-year period, earnings growth is frequently very different from dividend growth. In order for earnings growth to equal dividend growth, at a minimum, earnings per share in the first year of the five-year earnings growth rate period would have to be exactly on the long-term earnings trend line expected by investors. Since earnings in most years are above or below the trend line, the earnings per share growth rate over most five-year periods is different from what is expected for dividend growth.

Q. WHY IS THE FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATION OF FUTURE STOCK PRICE GROWTH?

A. If a company happens to experience a year in which earnings decline below what investors believe is consistent with the long-term trend, then the stock price does not drop anywhere near as much as earnings drop. Similarly, if a company happens to experience a year in which earnings are higher than the investor-perceived long-term sustainable trend, the stock price will not increase as much as the earnings. In other words, the P/E ratio of a company will increase after a year in which investors believe earnings are below sustainable levels, and the P/E ratio will decline in a year in which investors believe earnings are higher than expected. Since stock price is one of the important cash flow sources to an investor, a five-year earnings growth rate is a poor indicator of cash flow, both because it is a poor indicator of stock price growth over the five years being examined, and because it is equally a poor predictor of dividend growth over the period.

Q. ARE YOU SAYING THAT ANALYSTS' CONSENSUS EARNINGS PER SHARE GROWTH RATES ARE USELESS AS AN AID TO PROJECTING THE FUTURE?

A. No. Analysts' EPS growth rates are, however, very dangerous if used in a simplified DCF without proper interpretation. While they are not useful if used in their "raw" form, they can be very useful in computing estimates of what earned return on equity investors expect will be sustained in the future, and as such, are useful in developing long-term sustainable growth rates. This is exactly what I do in the application of my Constant Growth DCF Analysis.

APPENDIX C. NON-CONSTANT GROWTH FORM OF THE DCF MODEL

Q. YOUR NON-CONSTANT GROWTH DCF MODEL USES ANNUAL EXPECTED CASH FLOWS. SINCE DIVIDENDS ARE PAID QUARTERLY RATHER THAN ANNUALLY, HOW DOES THIS SIMPLIFICATION IMPACT YOUR RESULTS?

A. I used the annual model because it is easier for observers to visualize what is happening. Modeling cash flows to be annual rather than when they are actually expected to occur causes a small overstatement of the COE.

Q. WHY IS IT A SMALL OVERSTATEMENT OF THE COE IF YOU HAVE MODELED DIVIDENDS TO BE RECEIVED SOME MONTHS AFTER INVESTORS ACTUALLY EXPECT TO RECEIVE THEM?

A. The process of changing from an annual model to a quarterly model would require two changes, not just one. A quarterly model would show dividends being paid sooner and would also show earnings being available sooner. A company that receives its earnings sooner, rather than at the end of the year, has the opportunity to compound them. Since revenues, and therefore earnings, are essentially received every day, a company that is supposed to earn an annual rate of 9.00% on equity would have to earn only 8.62% if the return were compounded daily.[113] This reduction from 9.00% to 8.62% would then be partially offset by the impact of the quarterly dividend payment to bring the result of switching from the simplifying annual model closer to, but still a bit below 9.00%.

[113] $(1+.0862/365)^{365}=1.09 = 9.00\%$.

Q. BY USING CASH FLOW EXPECTATIONS AS THE VALUATION PARAMETER, DOES THE NON-CONSTANT DCF MODEL STILL RELY ON EARNINGS?

A. Yes. It relies on an expectation of future cash flows. Future cash flows come from dividends during the time the stock is owned and capital gains from the sale of the stock once it is sold. Since earnings impact both dividends and stock price, the non-constant DCF model still relies on earnings.

Every dollar of earnings is used for the benefit of stockholders, either in the form of a dividend payment, or earnings reinvested for future growth in earnings and/or dividends. Earnings paid out as a dividend have a different value to investors than earnings retained in the business. Recognizing this difference and properly considering it in the quantification process is a major strength of the DCF model and is why the non-constant DCF model as I have set forth is an improvement over either the price-to-earnings ratio (P/E ratio) or dividend/price (D/P) methods. Comparing the P/E ratios and the dividend yield (D/P) are helpful as a rule of thumb, but they must be used with caution because, among other reasons, two companies with the same dividend yield can have a different COE if they have different retention rates. A DCF model is more reliable than these rules of thumb because it can account for different retention rates, among other factors.

Q. WHY IS THERE A DIFFERENCE TO INVESTORS IN THE VALUE OF EARNINGS PAID OUT AS A DIVIDEND COMPARED TO THE VALUE OF EARNINGS RETAINED IN THE BUSINESS?

A. The return on earnings retained in the business depends upon the opportunities available to that company. If a regulated utility reinvests earnings in needed "used and useful" utility assets, then those reinvested earnings have the potential to earn at whatever return is

consistent with ratemaking procedures allowed and the skill of management in prudently operating the system.

When an investor receives a dividend, he can either reinvest it in the same or another company or use it for other things, such as paying down debt or paying living expenses. Although an investor could theoretically use the proceeds from any dividend payments to simply buy more stock in the same company, when an investor increases his investment in a company by purchasing more stock, the transaction occurs at market price. However, when the same investor sees his investment in a company increase because earnings are retained rather than paid as a dividend, the reinvestment occurs at book value. Stated within the context of the DCF terminology: earnings retained in the business earn at the future expected return on book equity "r," and dividends used to purchase new stock earn at the rate "k." When the market price exceeds book value (that is, the market-to-book ratio exceeds 1.0), retained earnings are worth more than earnings paid out as a dividend because "r" will be higher than "k." Conversely, when the market price is below book value, "k" will be higher than "r," meaning that earnings paid out as a dividend earn a higher rate than retained earnings.

Q. IF RETAINED EARNINGS WERE MORE VALUABLE WHEN THE MARKET-TO-BOOK RATIO IS ABOVE 1.0, WHY WOULD A COMPANY WITH A MARKET-TO-BOOK RATIO ABOVE 1.0 PAY A DIVIDEND RATHER THAN RETAIN ALL OF THE EARNINGS?

A. Retained earnings are more valuable than dividends only if there are sufficient opportunities to profitably reinvest those earnings. Regulated utility companies are allowed to earn the cost of capital only on assets that are used and useful in providing utility

service. Investing in assets that are not needed may not produce any return at all. For unregulated companies, opportunities to reinvest funds are limited by the demands of the business. For example, how many new computer chips can Intel profitably develop at the same time?

Q. UNDER THE NON-CONSTANT DCF MODEL, IS IT NECESSARY FOR EARNINGS AND DIVIDENDS TO GROW AT A CONSTANT RATE FOR THE MODEL TO BE ABLE TO ACCURATELY DETERMINE THE COST OF EQUITY?

A. No. Because the non-constant form of the DCF model separately discounts each and every future expected cash flow, it does *not* rely on any assumptions of constant growth. The dividend yield can be different from period to period, and growth can bounce around in any imaginable pattern without harming the accuracy of the answer obtained from quantifying those expectations. When the non-constant DCF model is correctly used, the answer obtained is as accurate as the estimates of future cash flow.

APPENDIX D. CAPITAL ASSET PRICING MODEL

Risk Free Rate

Q. WHAT IS YOUR RESPONSE TO ANALYSTS WHO CLAIM THAT THE CAPM MUST BE IMPLEMENTED WITH A LONG-TERM INTEREST RATE (E.G., YIELD ON 30-YEAR TREASURY BOND) AS AN ESTIMATE OF THE RISK-FREE RATE COMPONENT OF THE CAPM?

A. When looking for a security to calculate an estimate of the risk-free rate, it could be argued that it is appropriate to find one with a term or maturity that best matches the life of the asset being financed. In that sense, the 30-year Treasury bond yield can be argued to be ideal for this specific application. However, it is equally important to find a security that has a beta coefficient with the overall market as close to zero as possible, because by the very definition of the risk-free rate in the CAPM model, its movements should have no correlation to the movements of the market. And this is where the problem with the 30-year Treasury bond yield arises, as it has an established non-zero beta. The 3-month Treasury bill yield has a considerably lower beta, and therefore is superior in that respect to the 30-year Treasury bond yield. Neither one is a perfect fit on both fronts, which is why I have chosen to consider both as proxies for the risk-free rate to establish a range for my CAPM results.

Q. HOW DO YOU RESPOND TO ANALYSTS WHO CLAIM THAT THE RISK-FREE RATE SHOULD BE BASED ON INTEREST RATE FORECASTS FROM FIRMS SUCH AS BLUE CHIP FINANCIAL?

A. It is important to recognize that current long-term Treasury bond yields represent a direct observation of investor expectations and there is no need to use “expert” forecasts such as

Blue Chip to determine the appropriate risk-free rate to use in a CAPM analysis or any other cost of equity calculations.

Many economists and forecasters will continue to be quoted in the press prognosticating on possible developments that are truly unpredictable. The Nobel Laureate Economist Daniel Kahneman stated the following regarding forecasting:

> It is wise to take admissions of uncertainty seriously, but declarations of high confidence mainly tell you that an individual has constructed a coherent story in his mind, not necessarily that the story is true.[114]

Historical Beta

Q. PLEASE EXPLAIN HOW YOU CALCULATE HISTORICAL BETAS.

A. I calculate historical betas following the methodology used by Value Line, with some modifications. Specifically, Value Line adheres to the following guidelines:

1. Returns for each security are regressed against returns for the overall market in the following form:

$$\ln (p^{I}_{t} / p^{I}_{t-1}) = a_{I} + B_{I} * \ln (p^{m}_{t} / p^{m}_{t-1})$$

Where:

- p^{I}_{t} is the price of the security I at time t
- p^{I}_{t-1} is the price of the security I one week before time t
- p^{m}_{t} and p^{m}_{t-1} are the corresponding values of the market index
- B_I is the regression estimate of Beta for the security against the market index

2. The natural log of the price ratio is used as an approximation of each return and no adjustment is made for dividends paid during the week.

[114] DANIEL KAHNEMAN, *Thinking Fast and Slow*, p. 212 (New York: Farrar, Straus, and Giroux, 2011).

3. Weekly returns are calculated on one day of the week, with a stated preference for Tuesdays to minimize the effect of holidays as much as possible.
4. Betas calculated using the regression method above are adjusted as per Blume (1971)[115] using the following formula:

$$\text{Adjusted } B_I = 0.35 + 0.67 * \text{Calculated } B_I$$

There are four differences between my historical beta calculations and Value Line's calculations:

1. The first significant difference is that whereas Value Line uses the New York Stock Exchange Composite Index as the market index, I use the S&P 500 Index.
2. Another important difference is that whereas Value Line calculates weekly returns on one day of the week, with a stated preference for Tuesdays, I calculate weekly returns on all days of the week.
3. Value Line only calculates betas every 3 months in their quarterly company reports, whereas I use the same consistent methodology to calculate betas every week during the most recent 3 complete months (April through June 2024).
4. Value Line always uses a 5-year period for the return regression,[116] whereas I calculate historical betas for periods of 6 months, 2 years, and 5 years, as shown in Chart 16 on page 68.

[115] M. Blume, On the Assessment of Risk, *The Journal of Finance*, Vol. XXVI (March 1971) available at www.stat.ucla.edu/~nchristo/Fiatlux/blume2.pdf.
[116] They offer betas calculated over different time periods on their website, including 3 years and 10 years.

In the following pages, I explain my rationale for making the four modifications above to Value Line's beta calculation methodology.

Q. WHY DO YOU CALCULATE YOUR HISTORICAL BETAS VS. THE S&P 500 INDEX INSTEAD OF THE NEW YORK STOCK EXCHANGE (NYSE) COMPOSITE INDEX, AS VALUE LINE DOES?

A. A critical factor in the calculation of a beta coefficient is the choice of index to represent the overall market. Using exactly the same beta calculation methodology with a different market index will result in different values of beta for a given company or portfolio – sometimes drastically different values. It is easy to jump to the conclusion that this points to a flaw in CAPM theory, as different values of beta would result in a different implied cost of equity. However, another key component of the CAPM, the market risk premium, also depends on the choice of the market index, which in theory would have an offsetting effect on the cost of equity calculation. This points to the most important aspect of selecting a market index for a CAPM analysis, which is to be consistent and use the same index for the calculation of beta as for the calculation of the market risk premium. This is a fundamental concept of the CAPM and using betas based on one index with a market risk premium based on a different index yields invalid results.

As stated above, Value Line calculates its published betas based on the NYSE Composite Index. Most methodologies used to calculate the market risk premium, including those I rely on, are based on the S&P 500 Index, so using them in the CAPM together with Value Line betas exactly as published would yield invalid results.

For this reason, I calculate my historical betas versus the S&P 500 Index, making my CAPM approach entirely consistent.

As an aside related to my option-implied betas, using the S&P 500 Index consistently throughout my CAPM has the added benefit that this index has a much larger number of options traded, which makes the calculation of option-implied betas more reliable.

Q. WHY DO YOU CALCULATE YOUR HISTORICAL BETAS USING WEEKLY RETURNS ON EVERY DAY OF THE WEEK AS OPPOSED TO USING ONLY ONE DAY OF THE WEEK, AS VALUE LINE DOES?

A. Using one day of the week to calculate weekly returns for use in the regression analysis used to calculate historical betas has the unintended effect of generating different values of betas depending on the day of the week that is used. To clarify, if one were to use Value Line's precise methodology for calculating a 5-year historical beta for a given company using weekly returns calculated on Tuesdays, the resulting beta value would be different than the resulting value if one were to use the same exact methodology, but using weekly returns calculated on Wednesdays, or any other day of the week. Even though 5-year historical betas should in theory be quite stable and should not change very much from one day to the next, calculating returns on only one day of the week results in differences that can be significant and make no sense conceptually.

I only became aware of this side-effect recently, but it is easy to understand why it happens. Even though there is some correlation due to some overlap, the set of weekly returns calculated on Mondays is a completely different set of numbers than the set of weekly returns calculated on Tuesdays. As a result, there are five 5-year betas that can result from Value Line's methodology, and even though the Monday beta for a given

company will change slowly from week to week, the change between the Monday beta and the Tuesday beta, calculated just one trading day apart, can be quite significant.

Since I became aware of this undesirable effect, I began calculating my historical betas based on an all-encompassing set of weekly returns calculated on every trading day in the beta calculation period. This methodology has the effect of averaging out the five possible betas that could result from using only one day of the week for the return calculations,[117] as Value Line does. In this way, a 5-year beta calculated on any two consecutive trading days would only change minimally, as it should.

Using a daily calculation of weekly returns could be criticized for the resulting overlap in a weekly return from Monday to Monday with that from Tuesday to Tuesday. However, given that the overlap is consistent and equal for the net effect of every trading day, no trading day is given undue weight in the regression. Even though the effect of each trading day appears 5 times in the weekly return data, there are also 5 times the total number of weekly returns in the overall set used in the regression, so any individual trading day has the same relative weight than in Value Line's methodology. The fact that the resulting beta value of this aggregate approach turns out to be a sort of average of the five possible values that would result from Value Line's methodology on different days of the week is the final confirmation that this is the superior approach for calculating a historical beta based on weekly returns.

Using a daily calculation of weekly returns has the added marginal benefit of providing more data pairs to be used in historical beta calculations for shorter periods, such

[117] The resulting beta is not a direct arithmetic or geometric average of the other five betas, but rather a regression based on the union of all five possible sets of weekly returns.

as for 6-month historical betas, where instead of 25 return pairs, the regression is performed on 117 return pairs.

Q. ARE THERE ADDITIONAL BENEFITS TO DOING YOUR OWN HISTORICAL BETA CALCULATIONS?

A. Doing my own historical beta calculations using Value Line's established methodology allows me to see how beta values change from week to week and to use the most up-to-date beta calculations instead of relying on stale beta values that can be more than 3 months old.

Q. HOW MANY DATA POINT PAIRS ARE NECESSARY TO ESTABLISH A STATISTICALLY SIGNIFICANT CORRELATION BETWEEN TWO VARIABLES IN A REGRESSION ANALYSIS, SUCH AS THE ONE USED TO ESTABLISH BETA COEFFICIENTS?

A. Establishing a minimum number is somewhat subjective, though various authorities on statistics argue the number is between 3 and 8 data pairs. While one can broadly correctly generalize that the more data point pairs one uses, the more certain one can be about the significance of the results of any correlation analysis, this is very different from stating that one cannot achieve statistical significance with a relatively low number of data pairs. In fact, it is important to realize that one can achieve statistical significance with less than 10 data pairs, and that even hundreds of data pairs do not guarantee statistical significance. For precisely this reason, statisticians have developed a tool that helps determine statistical significance based on the number of data pairs in a regression analysis.

A "table of critical values" of Pearson's correlation, which can be readily found online[118] or in most statistics books, tells a statistician that for 25 data point pairs (implying N-2=23 "degrees of freedom"), a correlation, or beta, coefficient of 0.505 or higher will occur *by chance* with a probability of only 0.01.[119] As explained in more detail in the text regarding how to use the table of critical values,[120] any beta coefficient above this level, and certainly above the 0.753 3-month average for the recent 6-month betas for my RFC Water Proxy Group, by definition are considered statistically significant. The threshold for statistical significance for 117 data point pairs (implying 115 "degrees of freedom"), is so low that it is not even included in the table of critical values. The maximum "degrees of freedom" listed is 100, with an already very low threshold of 0.254.

Historical Blended Beta

Q. HOW DID YOU DECIDE ON THE RELATIVE WEIGHTS YOU ALLOCATE TO EACH COMPONENT OF YOUR HISTORICAL BLENDED BETAS? IS THERE ANY ACADEMIC SUPPORT FOR YOUR APPROACH?

A. I am not aware of any academic study specifically focused on the optimal relative weight of historical betas to predict future betas. However, the authors of the paper I relied upon for guidance on the calculation of my option-implied betas did attempt to quantify the predictive power of 6-month option-implied ("forward-looking") betas as well as that of 6-month ("180-day"), 1-year, and 5-year historical betas by back-testing historical predictions with actual *ex-post* results, or "realized" betas, for the 30 companies in the Dow

[118] University of Connecticut, *r Critical Value Table*, available at: https://researchbasics.education.uconn.edu/r_critical_value_table/#
[119] In fact, many researchers use a more lenient "alpha level" of 0.05 for determinations of statistical significance.
[120] University of Connecticut, *Statistical Significance: Is there a relationship (difference) or isn't there a relationship (difference)?* available at https://researchbasics.education.uconn.edu/statistical_significance

Jones Index. In addition to using each of the betas above independently, they also measured the predictive power of a "mixed" beta consisting of a simple average of the six-month option-implied beta and the 6-month historical beta.

Their conclusions for predicting 6-month future betas are as follows:

> The forward-looking beta outperforms the other methods ten times, and the same is true for the 180-day historical beta. The mixed beta is the best performer in seven cases, and the 1-year historical beta in three cases. The 5-year historical beta is always outperformed by at least one other method, and it often ranks last. The 180-day historical beta clearly dominates the two other historical methods.[121]

Their conclusions for predicting 1-year and 2-year future betas are as follows:

> Somewhat unexpectedly, the performance of the forward-looking beta compared to that of the 180-day historical beta is much better [for the one-year prediction] than [for the six-month prediction], and this conclusion carries over to [the two-year prediction]. The mixed beta also perform [sic] well. It is perhaps not surprising that the performance of the 180-day historical beta [for the one- and two-year predictions] is poorer than [for the six-month prediction], because the horizons used in the construction of realized betas are no longer equal to 180 days. What is harder to explain is why the correlation between realized beta and forward-looking beta is in many cases higher [for the one- and two-year predictions] than [for the six-month prediction]. Finally, it is also interesting that the 1-year and 5-year historical betas do not perform well [for the one-and two-year predictions]. In summary, [for the one-year prediction] either the forward-looking beta or the mixed beta is the best performer in nineteen out of thirty cases. [For the two-year prediction], this the case twenty-two times out of thirty.[122]

Their conclusions strongly support the use of 6-month historical betas, 6-month option-implied betas, and/or an average of the two as predictors of future betas 6 months, 1 year, or 2 years into the future. Therefore, considering a historical blended beta in conjunction with option-implied betas to calculate the cost of equity is consistent with

[121] Peter Christoffersen, Kris Jacobs, and Gregory Vainberg, *Forward-Looking Betas*, p. 16 (April 25, 2008) available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=891467.
[122] Id. at 17.

research findings that coming historical and option-implied betas is the best predictor of future betas.

I decided on the composition of my historical blended betas primarily based on the conclusions of the authors above. Though the predictive power of longer-term historical betas seems to be quite reduced, it is not zero, so in an effort to preserve the effect of longer-term market trends in my historical blended betas, I chose to incorporate 5-year historical betas.

Market Risk Premium

Q. WHICH CUMULATIVE PROBABILITY DID YOU USE TO ESTIMATE THE OPTION-IMPLIED GROWTH OF THE S&P 500 IN THE CALCULATION OF YOUR MARKET RISK PREMIUM AND WHY?

A. I used a cumulative probability of 50.0% in the calculation of my option-implied growth for the S&P 500, which results in a value of 6.45% as of June 30, 2024 and a value of 6.56% for the weighted average of the 3 months ending on that date. As stated above, a cumulative probability of 50% represents the median of the probability distribution, or in this case the option-implied market consensus, which is why I have chosen to use this level.

As a matter of fact, using the same probability distribution derived from the options market described above, one can also calculate the cumulative probability implied by a given cost of capital. For instance, using the same risk-free rates and betas for the RFC Water Proxy Group in my CAPM analysis, Mr. Moul's recommended ROE of 10.95% implies an average market risk premium of 6.6%, an average overall market return of 11.6%, average growth for the S&P 500 of 10.2%, and a cumulative probability of 63.2%. In other words, to achieve the required market growth of 10.2%, reality would have to

exceed 63.2% of the scenarios investors currently see as plausible for the market in aggregate, considerably more than the median market consensus at 50%. To put this into perspective, it is important to note that values on the tails of the probability function get increasingly separated, requiring an ever-increasing growth rate for every additional percentage in the cumulative probability, and making it impossible to ever arrive at 100%.

Using exactly the same methodology using the betas of the RFC Water Proxy Group, my recommended 8.70% ROE implies an average market risk premium of 4.1%, an average overall market return of 9.1%, average growth for the S&P 500 of 7.8%, and a cumulative probability of 53.9%.

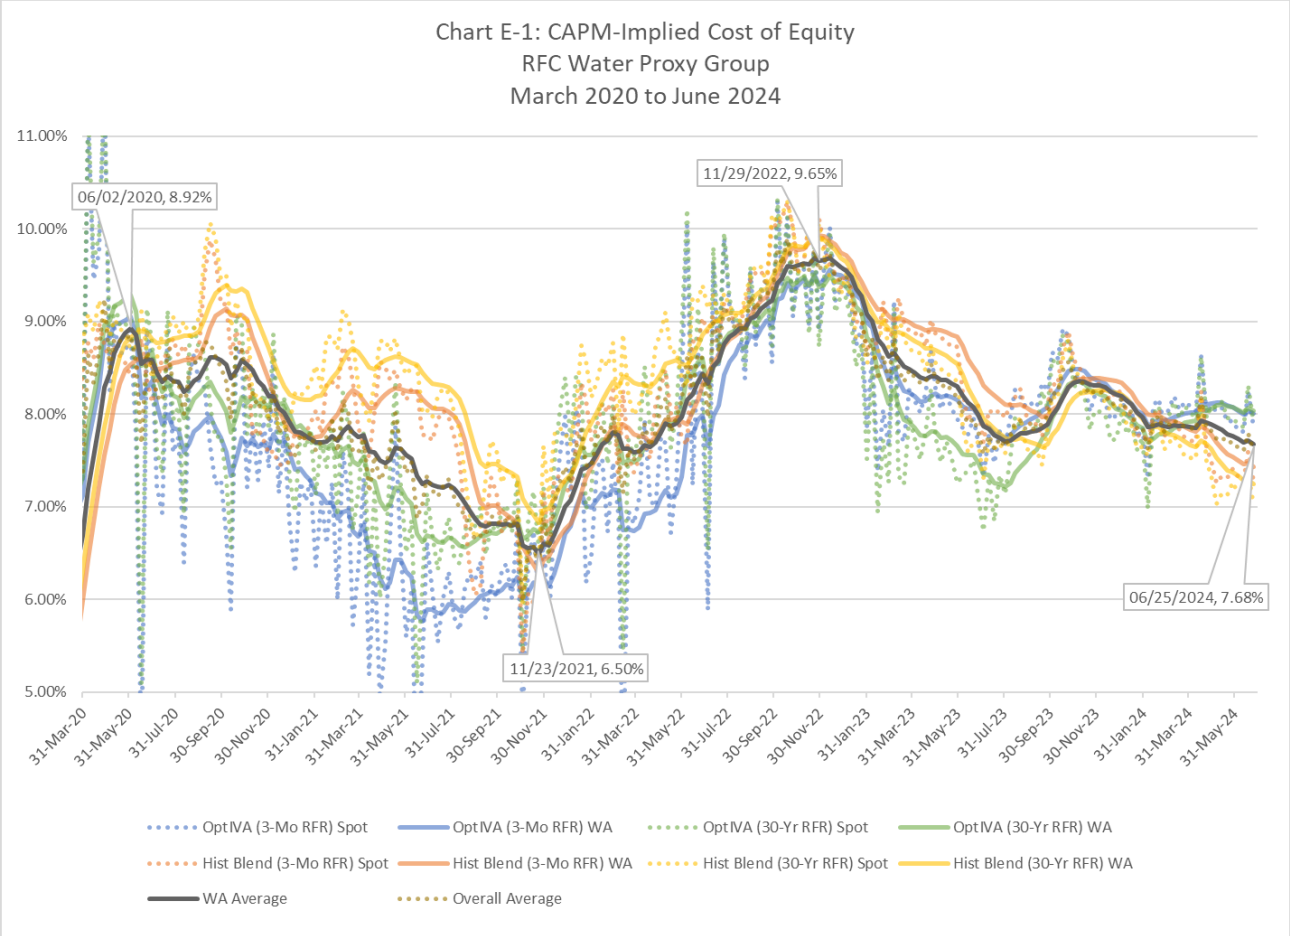
Q. ARE THE CUMULATIVE PROBABILITIES YOU REFER TO IN THIS CASE DIRECTLY COMPARABLE TO THE CUMULATIVE PROBABILITIES YOU HAVE USED OR REFERRED TO IN PRIOR TESTIMONIES YOU HAVE FILED?

A. In late 2020, after significant efforts related to the complexities in processing extremely large volumes of option data, I was finally able to use option-implied volatility and option-implied skewness to come up with a log-normal function that approximates the probability distribution of the possible trajectories for the S&P 500 implied by the options market as of any given day, as explained above. All of the testimonies I have filed since then, starting in 2021, have used this complete and superior approach along with a cumulative probability of 50%, representing the median of the probability distribution, or the option-implied market consensus, to estimate expected market growth. Any references to cumulative probability in these testimonies are directly comparable.

Prior to incorporating skewness into the approximation, I used a normal function to estimate the same probability distribution referred to above. Using a normal distribution

as an approximation is a simplification used commonly in economics, including in the Black-Scholes formula for a single option. However, unlike a skewed log-normal function, a normal function has the same median and mean, meaning that when applied in this case, the option-implied market consensus of this simplified approximation implies market growth of 0%. As a result, before using log-normal functions, I had to resort to finding an adequate level of cumulative probability above 50% to estimate market growth, which is admittedly somewhat subjective. To be conservative, I often used a cumulative probability of 68.3%, which is the probability found within one standard deviation of the mean of a normal distribution, which I understood would lead to a conservatively high estimate for market growth. It is important to point out that the cumulative probabilities of the simplified normal function approximation I used in cases before 2021 cannot be directly compared to the cumulative probabilities of the superior log-normal function approximation, which takes skewness into account. The considerably improved approximation based on a log-normal function eliminates all subjectivity in arriving at the implied market consensus and allows a much better measure of implied cumulative probabilities of deviations from that market consensus.

APPENDIX E. CAPM-IMPLIED COST OF EQUITY FOR RFC WATER PROXY GROUP OVER TIME SINCE ONSET OF COVID PANDEMIC



Notes regarding the content of this chart:

- *The information in this chart is the property of Rothschild Financial Consulting ("RFC") and may not be used for any purpose without the express written consent of RFC. Even when the underlying data are publicly available from another source, the results of analyses performed by RFC and the way of presenting the data are and remain the property of RFC.*

- *The data presented herein may not agree 100% with past recommendations by RFC for numerous reasons, including differences in the underlying proxy group and the fact that this chart represents only results based on the CAPM, whereas RFC usually bases recommendations on the CAPM and other models, such as various forms of the DCF.*

APPENDIX F. RESUME OF AARON L. ROTHSCHILD

SUMMARY

Financial professional providing U.S. public utility commissions financial tools and expert testimony to assist in rate setting for regulated utility companies (e.g., regulated electric distribution providers, natural gas pipelines). Relevant experience includes developing and applying methodologies that directly measure investors' equity return expectations based on stock option prices, applied mathematics research for utility industry as an affiliate of the New England Complex Systems Institute, and serving as Head of Business Analysis for a major U.S. telecom firm in Asia Pacific.

EXPERIENCE

Rothschild Financial Consulting, Ridgefield, CT **November 2001- present**
Independent consulting firm specializing in utility sector
President

- Provide financial expert testimony (e.g., rate of return and M&A) to regulators, policy makers, foundations, and consumer groups in utility rate case proceedings, including representing the California Public Advocates Office and the Wild Tree Foundation in the ongoing California water and energy cost of capital proceedings
- Developed cost of equity models that have been adopted by the Public Service Commission of South Carolina in 2020 (decision upheld by the South Carolina Supreme Court in September 2021) and the Connecticut Public Utilities Regulatory Authority in September 2021
- Developing market-based cost of equity methodology in ongoing regulated natural gas pipeline case before the Federal Energy Regulatory Commission (FERC), including proposing replacing equity analyst earnings per-share forecasts (IBES, Value Line) with options-implied growth expectations to determine authorized return on equity (ROE)
- Present at utility regulation conferences (NARUC/NASUCA and MARC) regarding rate of return, power purchase agreements, complex systems science, and subsidy auctions

360 Networks, Hong Kong **January 2001 - October 2001**
Pioneer of the fiber optic telecommunications industry
Senior Manager

- Business development and investment evaluation
- Negotiated landing rights and formed local partnerships in Korea, Japan, Singapore, and Hong Kong for $1 billion undersea cable project
- Structured fiber optic bandwidth swapping agreement with Enron and Global Crossing
- Established relationships with Hong Kong based Investment Bankers to communicate Asia Pacific objectives and accomplishments to Wall Street

Dantis, Chicago, IL **July 2000- December 2000**
Start-up managed data-hosting services provider
Director

- Built capital raise valuation models and negotiated with potential investors
- Team raised $100M from venture capital firm through valuation negotiations and internal strategic analysis

MFS, MCI-WorldCom, Chicago, Hong Kong, Tokyo September 1996- July 2000
American Telecommunications Company
Head of Business Analysis for Japan operations

- Managed staff of 5 business development analysts
- Raised $80M internally for Japanese national fiber network expansion plan by conducting an investment evaluation and presenting findings to CEO of international operations in London, UK
- Built financial model for local fiber optic investment evaluation that was used by business development offices in Oak Brook, IL and Sydney, Australia

EDUCATION

Vanderbilt University, Nashville, TN 1994-1996
MBA, Finance

- Completed business plan for Nextlink Communications in support of their national fiber optic network expansion, including identifying opportunities from passage of Telecom Act of 1996
- Developed analytical framework to evaluate predictability of rare events
- Provided financial and accounting analysis to Chicago's consumer advocate, the Citizens Utility Board (CUB) as a summer intern

Clark University, Worchester, MA 1990 - 1994
BA, Mathematics

APPENDIX G. TESTIFYING EXPERIENCE OF AARON L. ROTHSCHILD

Filed Rate of Return Testimonies:

California

CONSTANT GROWTH DISCOUNTED CASH FLOW (DCF) - INDICATED COST OF EQUITY
RFC Water Proxy Group (6 Companies)

			Based on Average Market Price For Year Ending 6/30/2024	Based On Market Price As Of 6/30/2024
1	Dividend Yield On Market Price	[A]	2.41%	2.60%
2	Retention Rate:			
	a) Market-to-Book Ratio	[A]	2.59	2.31
	b) Dividend Yield on Book	[B]	6.24%	6.02%
	c) Expected Return on Equity	[C]	10.40%	10.40%
	d) Retention Rate	[D]	40.01%	42.12%
3	Reinvestment Growth	[E]	4.16%	4.38%
4	New Financing Growth	[F]	1.13%	0.94%
5	Total Estimate of Investor Anticipated Growth	[G]	5.29%	5.32%
6	Increment to Dividend Yield for Growth to Next Year	[H]	0.06%	0.07%
7	**Indicated Cost of Equity**	**[I]**	**7.76%**	**7.99%**

Sources:

[A] Exhibit ALR-5, page 1

[B] Line 1 x Line 2a

[C] Some of the considerations for determining Future Expected Return on Equity:

	Median	Mean	From
Value Line Expectation	**10.25%**	**10.33%**	Exhibit ALR-5, page 2
Return on Equity to Achieve Zacks Growth	10.49%	10.70%	Exhibit ALR-5, page 3
Average Historical Growth	10.35%	10.23%	
Earned Return on Equity in 2023	9.80%	9.40%	Exhibit ALR-5, page 2
Earned Return on Equity in 2022	9.95%	11.16%	Exhibit ALR-5, page 2
Earned Return on Equity in 2021	11.31%	10.13%	Exhibit ALR-5, page 2

[D] 1 - Line 2b / Line 2c

[E] Line 2c x Line 2d

[F] S x V = (Ext. Fin Rate) x (Line 2a - 1) Ext. Fin. Rate = 0.71% From Exhibit ALR-3, page 5

S = rate of continuous new stock financing

V = fraction of funds raised by sale of stock that increases the book value of existing shareholders' common equity

[G] Line 3 + Line 4

[H] Line 1 x one-half of Line 5

[I] Line 1 + Line 5 + Line 6

[A] Value Line: Most current data available at time of schedule preparation. 2028 data is VL forecast for 2027-29.
[B] Straight line interpolation based on Value Line data, assuming constant dividend growth for 2025-28.
[C] Straight line interpolation based on Value Line data, assuming constant book value growth for 2025-28.
[D] EOD Data: Market Data as of June 30, 2024.
[E] Stock Price projected assuming constant Market to Book Ratio (Exhibit ALR-5, page 1) and using VL projected Book Value.
[F] Cash Flow from purchasing stock on July 1, 2024, receiving dividends through 2028, and selling on June 30, 2028.
Negative number in 2024 reflects cash outflow required to purchase stock.
Cash flow sources are 1) dividends and 2) proceeds of stock sale.
2 of 4 dividends assumed received in 2024 and 2 of 4 in 2028 based on purchase and sale date.
[G] Total return on equity to investor who purchased, held, and sold stock as described above,
assuming Value Line projections of Dividends and Book Value are correct and
assuming Stock Price grows at same rate as Book Value.
DCF result is an Internal Rate of Return computation made using the "IRR" function built into Microsoft Excel
based on projected cash flows from 2024 to 2028.

REBUTTAL TESTIMONY
OF
AARON L. ROTHSCHILD

ON BEHALF OF THE
PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

September 12, 2024

Q. ARE YOU THE SAME AARON L. ROTHSCHILD WHO SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING ON AUGUST 16, 2024?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony addresses the direct testimony of the Jason Hails, who submitted testimony on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA")[1] and Christopher Keller who submitted testimony on behalf of the Commission's Bureau of Investigation and Enforcement.[2]

I. RESPONSE TO OSBA WITNESS HAILS

Q. PLEASE SUMMARIZE THE RECOMMENDATIONS IN MR. HAILS' DIRECT TESTIMONY THAT YOU ARE ADDRESSING IN YOUR REBUTTAL TESTIMONY.

A. In his direct testimony, Mr. Hails recommended an authorized return on equity ("ROE") of 10.37% and a capital structure of 53.95% common equity and 46.05% long-term debt.[3] Mr. Hails' 10.37% ROE recommendation is not based on his own cost of equity analysis.[4] Instead, he relied on Mr. Moul's cost of equity model results (Mr. Moul recommended a 10.95% ROE) and made two downward adjustments. First, he stated that, with such a large,

[1] OSBA Statement No. 1 (Revised)
[2] I&E Statement No. 2.
[3] OSBA Statement No. 1 (Revised), p 6
[4] On page 4, lines 52-53 of Mr. Halls direct testimony he recommends that Aqua's ROE should be "no more than 10.58%." If Aqua's authorized ROE is set at 10.58%, it would put an even greater unnecessary burden on consumers because it is significantly higher than Aqua's market-based cost of equity and Mr. Moul's own DCF result of 9.38%.

requested rate increase, Aqua's authorized ROE should be no more than 10.58%, or the low end of the range of Mr. Moul's cost of equity model results.[5] Second, he recommended that Aqua's authorized ROE be further reduced by "at a minimum an implied management performance adjustment rate that was added by Mr. Moul." This second adjustment resulted in his recommended ROE of 10.37%.

I oppose the recommendations made by Mr. Hails in his direct testimony discussed above, and I will explain why in this rebuttal testimony. However, in response to the OCA's discovery requests, Mr. Hails explained that he does not support aspects of Mr. Moul's DCF method, including Mr. Moul's leverage adjustment.[6] Adjusting Mr. Moul's DCF method to account for Mr. Hails' positions results in an 8.51% cost of equity[7] which is lower than my 8.70% ROE recommendation and within my recommended ROE range of 8.03% to 9.38%.

Q. PLEASE EXPLAIN WHY YOU OPPOSE MR. HAILS' 10.37% ROE RECOMMENDATION.

A. After reviewing Mr. Hails' direct testimony, I continue to support an 8.70% ROE (8.03% to 9.38%) and a capital structure containing 50.53% common equity and 49.47% long-term debt. As explained in my direct testimony, an 8.70% ROE would be more than enough for Aqua to raise equity capital because it is higher than my calculated cost of equity of between 7.27% and 8.03%. I cannot support Mr. Hails' recommended ROE that is

[5] Mr. Hails' Direct Testimony (Revised), Page 4, lines 46-53.
[6] Mr. Hails response to OCA-I-2-c.
[7] In response to OCA I-3, Mr. Hails recommended that the growth rate be set at the low end of the range at 5.88% or certainly no higher than the midpoint of the range, equating to a growth rate of 6.34%. Adding the dividend yield component of Mr. Moul's DCF method (2.63%) to Mr. Hails' recommended growth rate (5.88%) results in an 8.51% DCF result.

considerably higher than Mr. Moul's own DCF result of 9.38% (before adding a leverage adjustment that has been rejected by this Commission). My key conclusions regarding Mr. Hails' direct testimony are as follows:

1. **Aqua's ROE should be no higher than Mr. Moul's DCF result of 9.38%.** As I explain in my direct testimony, if the Commission decides to allow Aqua an ROE that is higher than I recommend (8.70%), it should be no higher than 9.38% for the following two reasons: (1) it is equal to the preferred COE model result (DCF) of Mr. Moul,[8] and (2) it excludes Mr. Moul's leverage adjustment, which the Commission has rejected in the past. I&E witness Keller's recommended an ROE of 9.37% which supports a 9.38% ROE.[9]
